1/21/09 NATURAL GAS FOR INSTATE USE

Alaska Gasline
PORT AUTHORITY

Project Update

Senate Resources Committee

January 21st, 2009

Juneau, Alaska

Continued Support from the State

Alaska Gasline PORT AUTHORITY

- Legislative intent language in AGIA (July 23,2008)
  - calls for the continued advancement of the All-Alaska/LNG project within the AGIA framework
  - adopted overwhelmingly: 58-1
  - "It is the intent of the legislature that an AGIA license will enable and encourage an All Alaska gas line/liquefied natural gas (LNG) project within the TransCanada project."

- Governor Palin's Administrative Order No. 242 (August 20,2008)
  - directs State agencies to assist the development of the LNG project
  - "I…direct [DNR and DOR] to assist entities…in pursuing development of an economically and technically viable liquefied natural gas (LNG) project in this state, such as the project envisioned by the Alaska Gasline Port Authority."

➢ **Thank you for your continued support!**

Interest from Hawaii

- We continue to work with the Office of Hawaiian Affairs to bring Alaskan LNG to Hawaii

- Alaska Federation of Natives: Resolution No. 08-42 (October 2008) adopted in support of LNG project within AGIA to benefit rural Alaska and Hawaii

Port Authority Project Advancement

- The Port Authority, Mitsubishi Corporation and Sempra LNG, continue to advance the development of the All-Alaska Gasline/LNG project
  - Mitsubishi
    - Japan's largest trading company with a wide range of business activities
    - Strong experience in LNG projects (handles approximately half of Japan's LNG imports)
  - Sempra LNG
    - Owns the only LNG receiving terminal on the West Coast
    - Subsidiary of Sempra Energy, one of the largest traders of natural gas in North America

Focus on AGIA Open Season

Alaska Gasline Port Authority

- Our focus is to position our project for TransCanada's open season targeted for July 2010
- As part of the AGIA process, TransCanada committed to build a pipeline to Valdez – if sufficient gas volumes are committed – either on a standalone basis or in conjunction with a pipeline into Canada
- The Port Authority along with Mitsubishi and Sempra LNG have met with TransCanada to discuss the open season
- We anticipate further discussions with TransCanada as we seek to coordinate our effort

Focus on AGIA Open Season (continued)

- We intend to participate, either directly or through prospective gas shippers, in TransCanada's Open Season

- We are planning significant technical, environmental and other development work for the LNG terminal
  - We will develop a cost estimate for the liquefaction and other Valdez facilities that is consistent with that being prepared by TransCanada for the pipeline to Valdez
  - This cost estimation level is consistent with TransCanada's plan for the pipeline open season

- Our objective: to develop a project that provides a highly attractive economic proposition for the North Slope producers and the State of Alaska

Committed to Meeting Alaska's Gas Needs

Alaska Gasline PORT AUTHORITY

- We believe our project will maximize ANS gas wellhead value by exporting LNG out of Alaska to reach global markets, including the U.S. and Asia

- However, we have always been committed to prioritizing the needs of Alaska's domestic gas consumers. Indeed, we believe that our project provides the best opportunity to maximize in-State access to our North Slope gas resources

- We will continue to work in cooperation with ANGDA on meeting this important goal

Market Developments Favor an LNG Project

- Recent market developments have underscored the importance of the All-Alaska/LNG project as the most attractive option to monetize Alaska's gas.

- Lower 48 and Canada have experienced significant increases in production
  - shale gas has been at the forefront of increases in "non-conventional" gas production.
  - Navigant Consulting and ICF Consulting have recently estimated America's potential gas resources at about 2,000 tcf.
    - That's 100 years worth of U.S. natural gas demand.
    - "That's 50 percent more gas than the current proven reserves of Russia and twice as much as the proven reserves in Iran. Put into oil terms, that 2,200 Tcf of gas is the equivalent of one-and-a-half Saudi Arabia's."[1]

- In Canada BC shale gas is a "game changer," with projected production of 5.3 bcf/d within 10 years. [2]

- The gas market in the Lower 48 has dramatically changed. The viability and need for the LNG option has never been greater from Alaska's perspective.

[1] Energy Tribune (1/12/2009) <energytribune.com/articles.cfm?aid=1055>
[2] Calgary Herald (1/11/2009) <calgaryherald.com/business/Lure/116250/story.html>

Alaska's Competition is Not Waiting

Alaska Gasline PORT AUTHORITY

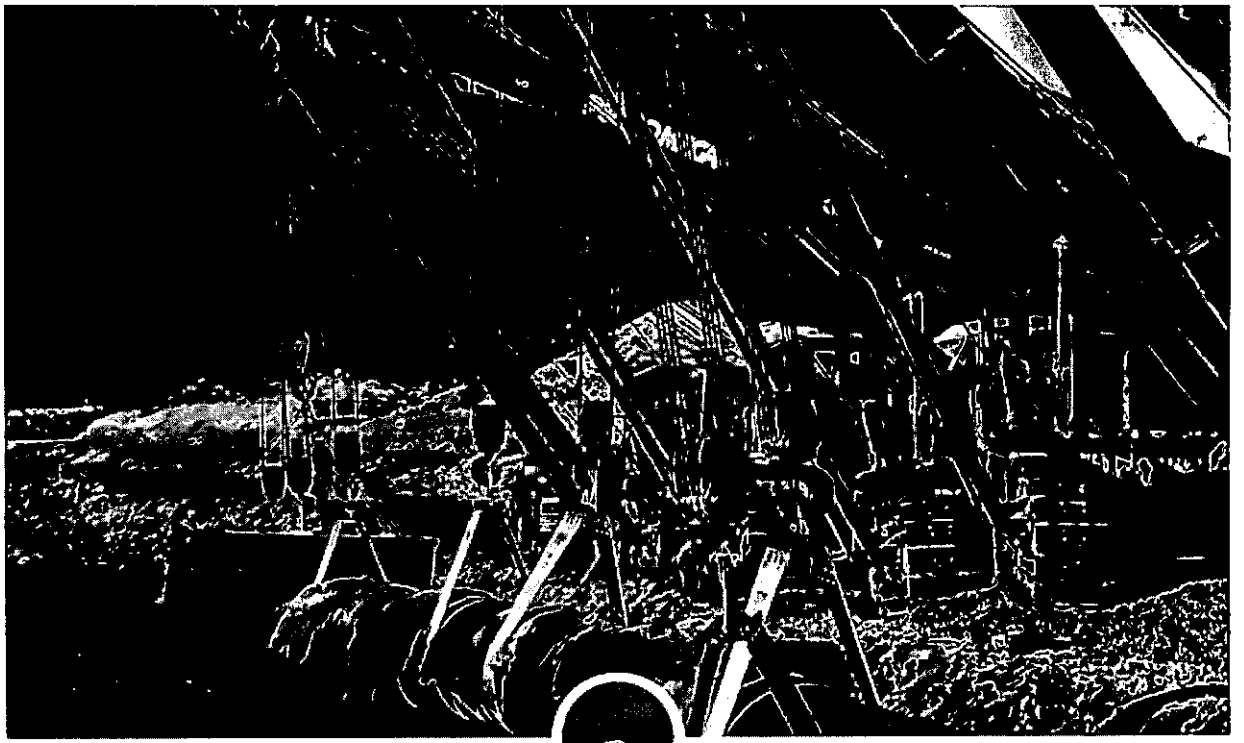
- The market changes are being acted upon by our competition
- Kitimat LNG, previously conceived as an LNG import terminal, has recently reversed their project from an LNG receiving terminal and now intends to develop an LNG export project
- Kitimat LNG will target the growing, premium LNG markets in Asia, and has partnered with Mitsubishi to try to satisfy Asian demand for North American gas
- The window of opportunity is here for Alaska to maximize the value of its gas. Our competition is not waiting!

The LNG Project is Alaska's Best Option

Alaska Gasline Port Authority

- Existing North Slope reserves are more than sufficient for an All-Alaska/LNG project (supply source proved reserves)
- LNG generates the highest netback price for North Slope producers and the State's gas
- Benefits a later Canadian line tied in at Delta Junction
- Volume not restricted to 500 mcf
- Pipeline company already selected and working on the cost estimate for open season
- Pipeline route adjacent to TAPS well studied with 3 previous EIS.
- Enjoys all of the project benefits set forth in AGIA
- A larger in-State line, "anchored" by export volumes, will reduce cost of service for Alaska's consumers
- The All-Alaska/LNG project is completely within Alaska's control

Thank you



Alaska Gasline
PORT AUTHORITY

The Lure of gas

Formations bring new life to Canadian natural gas and could be market 'game changer'

By Dina O'Meara, Calgary Herald January 11, 2009

Last November, natural gas giant EnCana Corp. quietly filed a multi billion-dollar natural gas plant proposal with provincial regulators in British Columbia.

The massive Cabin Gas Plant would process natural gas from shale plays in the Horn River basin for eight companies led by the Calgary-based producer.

Estimated to cost $400 million for the first phase, the plant's initial capacity was slated at 400 million cubic feet per day, twice as much as the province's largest natural gas processing plant.

Plans call for the plant to launch in 2011 and for up to six expansion phases, depending on future production.

Key here is "future."

Although the Horn River play in the tip of B. C.'s northeastern corner has attracted billions of dollars in investments from companies across North America, shale gas production in 2008 was small enough to be considered not commercial.

Yet some say last year was when the face of natural gas development in North America changed forever.

In the second month of the year, word of a potentially huge resource play in northeast British Columbia was unveiled at a conference in Houston. The Horn River (Muskwa) play could hold up to six trillion cubic feet (tcf) of natural gas, according to U. S. company EOG Resources.

By the end of 2008 -- and several billion dollars in land sales later -- the amount had doubled to an estimated 13 tcf of recoverable resources from a 35 tcf potential, and included the 50-tcf Montney play, just south of the Horn River formation.

The Montney play produced about 500 million cubic feet of natural gas last year. And that's just the beginning.

Across North America, nine unconventional shale gas plays could make up 260 tcf reserve potential.

"It was a game changer," Mark Leggett, with BMO Capital Markets said.

Not only has the lure of shale shifted billions of dollars into British Columbia, which saw land lease prices in its northeast corner skyrocket to $300,000 a hectare in 2008 from $300 in 2005, unconventional activity has revitalized a floundering service industry that saw conventional drilling fall some 11 per cent last year.

"Shale will have a very big impact because our basin is a conventional basin," Leggett said. "There is a need to replace declining conventional production and these will play a huge role in maintaining that growth profile and satisfy natural gas demand in the oilsands years down the road. It gives industry visible natural gas supply."

Shale rock is pretty common around the world and estimates of shale gas within the Western Canada Sedimentary Basin vary from 86 tcf to more than 1,000 tcf.

The huge potential could see half of Canada's natural gas production stem from unconventional sources by 2025, according to the Canadian Society of Unconventional Gas.

However, unconventional shale gas is as variable as the weather in Calgary -- it can be packed in a space as wide as a molecule, or spread across wide swaths of complex layers of rock, shallow or deep, prolifi c in spots, sparse in others.

Until recently, unconventional reserves were "tighter than cement," but a combination of horizontal drilling and multi-staged fractioning unlocked the rock.

"The technology enhancements on the shale gas are allowing a $7 per thousand cubic feet to be profitable because of the size of the prizes," Bruce Edgelow, with ATB Financial, said.

"These pools in certain basins are significant as to the new technology being able to produce them -- it's quite amazing, it's a quantum leap as to what we're doing on the conventional size.

"You can make reasonable money, as long as you have a good acreage play and you have followup locations. You have to have control of your infrastructure, you have to have repeatable process to get the economy of scale pricing from service companies."

Build up, build out is the credo for companies pursuing unconventional resources, such as Talisman Energy Nexen Inc., Devon Canada and ARC Energy Trust, one that natural gas

giant EnCana followed as it quietly acquired the largest land bases in the Montney play in B. C., which could hold up to 700 tcf of gas in place, and the Horn River.

"This resource represents the future," spokesman Alan Boras said.

One of the keys to unlocking unconventional sources is focusing on basins that are spread out, as opposed to conventional basins were there are small pockets of oil and gas, he said.

"The question is how do you advance the technology to make it economic," Boras said.

The firm holds close to 250,000 net lease hectares in the Montney, and has drilled seven wells, drawing on experience honed south of the border in Wyoming and on the famed Barnett shale in Texas.

But EnCana has yet to call the monstrous B. C. play commercial, saying it needs more concrete numbers on recovery factors and production rates.

The region is remote, lacks infrastructure and hasn't provided the economy of scale the company seeks. EnCana wants to see well costs fall a third from the current level of around $10 million before deeming the play economic.

Ever a canny oilpatch player, EnCana doesn't disclose much data but acknowledges the potential prize makes ongoing investments in the region worthwhile.

Unconventional gas in the U. S. represents about 11 per cent of projected demand in 2008, about 6.8 billion cubic feet per day.

Canadian shale production is in its infancy, at about 600 million cubic feet per day. The volume is expected to rise to 5.3 bcf per day within a decade, but still won't offset conventional declines during that period.

"Shale is everything," David Johnson, president of ProEx Energy Ltd. said. "I've been in this business since 1975, and unconventional has revitalized me as an engineer since the technology is quite exciting. I think it will take us beyond where we were on the conventional assets, which are solely a harvest situation. Companies involved in unconventional resource plays will have repeatability because gas is continuous, and that's the difference between the conventional."

The mid-sized which recently merged with Progress Energy Trust, started building its land base in B. C. in 2002 as it looked for semi-conventional reserves, including tight sands and shale. Land was a lot cheaper then, and the small company was able to accumulate one of the largest blocks of contiguous land in the region.

"The problem with conventional resources is they're hard to find, and the repeatability aspect, when you look at the risk-reward ratio, is the problem," Johnson said. The target size also is smaller and smaller in a maturing basin, noted.

Big companies will dominate the game, as wells average between $7 million to $10 million to drill, but "we happened to be blessed with a ton of land already, so we have a starting point and what we have to do is investigate the vertical and horizontal drilling of these opportunities."

Shale has proved a boon to the beleaguered Canadian service industry which has seen conventional drilling drop some 30 per cent since 2007. Investment house Tristone Capital estimates wells drilled in just three Canadian plays, the Montney, Muskwa and Utica in Quebec, likely will jump to more than 800 in 2009, from a measly 157 just two years before.

"As impressive as this well count growth is, growth in exploration and production spending and rig count will likely be even higher, as these wells are four to six times more service intensive than average Western Canada Sedimentary Basin wells" Tristone Capital said in its report, A Shale Gas Revolution.

"This superlative growth should have positive implications for drilling contractors, pressure pumpers and directional drillers."

By Robert Bryce

It's a Gas, Gas, Gas: The Paradigm Shift in the U.S. Natural Gas Business

The collapse in oil prices gets most of the headlines. But the corresponding collapse in natural gas prices may be the more important story for both the short- and long-term interests of the U.S.

On July 1, natural **gas futures** peaked at $13.51. On July 14, crude **oil futures** peaked at $145.16 per barrel. Today, the spot price for natural gas is about $5.67 and the spot price for oil is about $46. And those prices may go lower still. On November 24, Jen Snynder, the head of North American gas research for the energy consulting firm Wood Mackenzie, **released a report** which she claimed that the U.S. gas market should expect to see natural gas prices "in the range of $5 to $6" for the next five years.

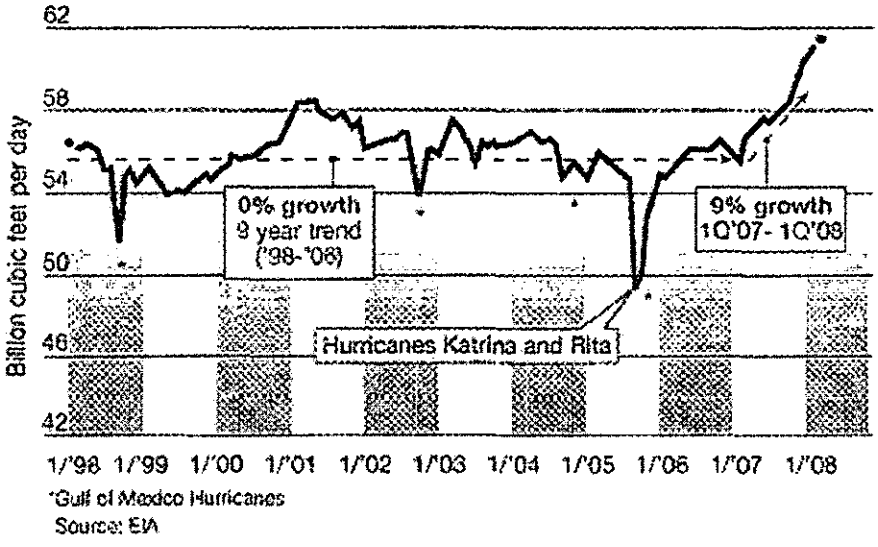
While many analysts have discounted Snyder's prediction, the potential for a long-term slowdown in natural gas drilling in the U.S. could have devastating effects on the drillers and oilfield service companies. The number of rigs drilling for gas usually outnumber those looking for oil by more than 3 to 1. But now that the U.S. is awash in gas, a drastic slowdown in drilling has begun. That can be seen by looking at the latest rig count numbers from Baker Hughes. And Texas, the biggest natural gas producer in the country, provides a good barometer for the trend. In September, an average of 946 rigs were working in the Lone Star State. By the first week in December, the number of active rigs in Texas had fallen to 852.

The bear market in gas will be exacerbated by recent announcements. Yesterday, Houston-based Petrohawk Energy announced that three of its new wells in the Haynesville Shale in Louisiana were each producing more than 20 million cubic feet of gas per day. Those are the biggest wells ever recorded in Petrohawk's history. Also yesterday, Dallas-based Exco Resources announced its own Haynesville well, which was also flowing gas at more than **20 MMcf/d**.

Those are sizable wells by any measure. Keep in mind that the U.S. produces about 19.2 billion cubic feet of gas per day from more than 448,000 wells. That means that the average U.S. gas well produces about **43,000 cubic feet per day**. These new Haynesville wells are showing initial production rates that are three orders of magnitude

larger than that. And those new wells are coming online at the same time that some gas producers in Oklahoma have shut in their wells rather than sell their gas at current prices. Furthermore, some 2 billion cubic feet of daily gas production in the Gulf of Mexico continues to be shut in due to lingering damage from this summer's hurricanes.

Natural Gas Production Lower 48 States 1998-2008



The new reality for the gas industry is one of enormous available resources, with much of that availability coming from the new shale plays like the Haynesville, Fayetteville, and Marcellus. In July, a study done by Navigant Consulting estimated that America's potential gas resources may total 2,200 trillion cubic feet. That's 50 percent more gas than the current proven reserves of Russia and twice as much as the proven reserves in Iran. Put into oil terms, that 2,200 Tcf of gas is the equivalent of one-and-a-half Saudi Arabias. A more recent **study**, published in mid-November by consulting firm ICF International, estimated U.S. gas resources at 1,830 trillion cubic feet.In petroleum terms, that's the oil equivalent of 329 billion barrels of oil or about three Kuwaits.

On November 11, during a meeting of the Independent Petroleum Association of America held in Houston, Mark Papa, the chairman and CEO of EOG Resources said the U.S. gas industry was in the midst of a "total sea change unlike anything we've seen in our careers. Don't underestimate the power of that sea change." Papa said that the Haynesville Shale, which may contain 50 trillion cubic feet of gas, the equivalent of about 9 billion barrels of oil, is one of "the biggest fields found in the entire world over the last decade." At that size, the Haynesville field would be bigger than the massive offshore Tupi

discovery in Brazil that was announced by Petrobras in 2007. Papa said that the shale gas deposits provide a "huge amount of gas that can be mined. And I use the term 'mined' because the geologic risk has been minimized."

Although the geologic risk has been minimized, other risks have come to the fore. Fifteen years ago, natural gas was "hard to find and easy to produce," says David Pursell, a managing director at Tudor, Pickering, Holt & Co., a Houston-based investment banking firm. With these new shale plays, gas is "easy to find and hard to produce.... You have traded one risk for another." In the past, the U.S. gas business was focused on geology and geophysics. Now, says Pursell, "It's a much more of a completion and engineering game."

Indeed, the ability of natural gas producers to get big production numbers from their shale wells requires them to employ multiple hydraulic fractures in a single well. The Exco well announced yesterday had a nine stage fracture on a horizontal lateral that was 4,481 feet long.

Pete Stark, the vice president of industry relations at IHS, a Denver-based data and consulting firm says these new shale plays are "an incredible plus for U.S. energy security." But he adds that the negative for the gas companies and gas drillers is that this "huge supply growth is coming onstream at the same time that demand is falling out of bed. So it's a killer for the industry going forward."

Thus, the problem for the gas industry is a familiar one: profits. During their discussion at the IPAA meeting in Houston, Papa of EOG Resources and Jeff Wojahn of EnCana said that their companies needed natural gas prices to be in the $7 to $8 range for their shale drilling programs to be profitable. Obviously, given current prices, all of the gas-focused independent companies are scaling back their drilling programs by as much as 50 percent. And it's not yet apparent how many drilling rigs will be idled in the coming months as more and more companies slash their capital expenditure budgets.

H.G. "Buddy" Kleemeier, the president and CEO of Tulsa-based Kaiser-Francis Oil Company, says that the gas industry must adapt to this new paradigm: huge available resources, minimized geologic risk, increased engineering risks, and ongoing price risk. In the past, the oil and gas industry was largely regulated by either government restrictions on production (prorationing that was administered by the Texas Railroad Commission) or restrictions on how gas could be used

(like the Powerplant and Industrial Fuel Use Act of 1978) or by pricing regimes imposed by regulators.

Today, the natural gas industry operates in a largely deregulated environment. Given that fact, Kleemeier, (who is also the current chairman of the IPAA) expects the gas industry to be governed by what he calls "prorationing by price." When prices fall, drilling rigs will be idled. And those rigs will remain idle until prices recover.

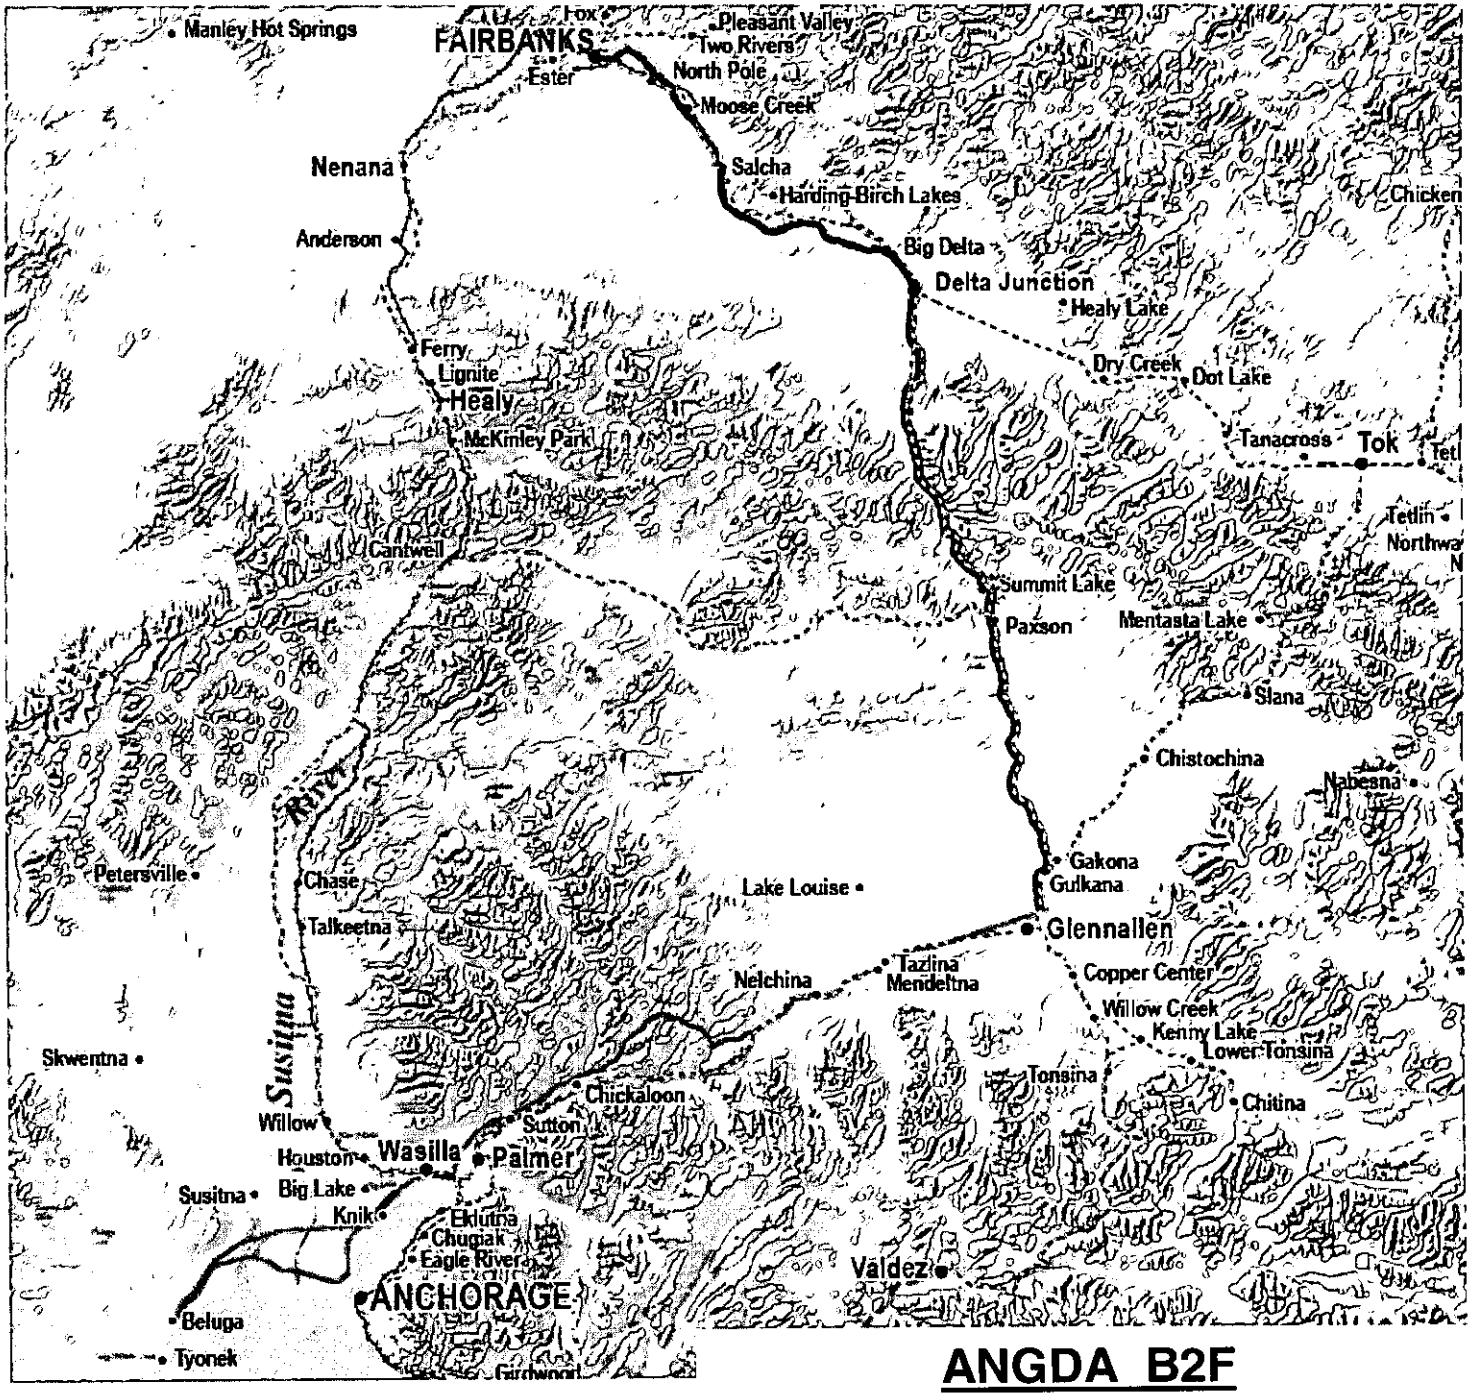
Obviously, the U.S. will need to keep drilling lots of new wells as these shale gas wells have steep decline curves. But it will take many months, or perhaps several years, before the U.S. gas industry understands the optimal rate of drilling. The hard truth about the current gas glut is that the U.S. gas industry has been victimized by its own success. The amazing technological breakthroughs in extracting natural gas from shale has led to a surfeit of gas. At the IPAA meeting last month, Porter Bennett, the president and CEO of Bentek Energy, an Evergreen, Colorado-based consulting firm, said "We have more gas that we know what to do with." That's good news for consumers. It's good news for the environment, as increased natural gas use should result in cleaner air. And more natural gas use in the truck and car fleet could help reduce U.S. oil consumption.

The irony is that the current excess of domestic natural gas is bad news for the very industry that made the gas glut possible. And now, the gas industry must look to the new Obama administration for some type of legislation that could help spur natural gas demand and therefore raise prices. That legislation could come in the form of a tax on carbon or more restrictions on coal-fired power plants. For Stark, the policy path should be obvious: "If the Obama administration is at all clever, they will capitalize on this increased gas production and use it to solve quite a few clean energy objectives for the country."

ANGDA Since July . . .

- Defined B2F Gas Line
- Finished Wetlands Field Work -- B2F
- Started Federal Environmental Impact Statement (EIS) Process – B2F
- International Gas Fed Value-Added Manufacturing Conference is April 28 in Anchorage
- Opened Mutual Interest Discussions with TransCanada
- Negotiating North Slope Propane Purchase Terms
- Announced a Gas Supply Co-op for Utilities
- Exploring Potential Private Sector Partners for PPP

Beluga To Fairbanks Gas Pipeline



ANGDA's View of Key Alaska In-State Gas Opportunities

- ANGDA will prepare & work with utilities to fully participate during 2010 initial FERC "open season" by TC Alaska or Denali
- Summer of 2010 field construction along B2F is still a possibility, BUT .... Need support now to keep window open
- Large L-48 gas pipeline company(s) considering in-state gas line commitments:
  - AGIA competitive momentum is positive

CONTRACTS NOT APPROVED	APL-5	APL-6	ConocoPhillips	Marathon WACOG	ConocoPhillips WACOG
VOLUMES	60 BCF	28 BCF	11 BCF	5 BCF	5 BCF
DATE SIGNED	October 2005	April 2008	April 2008	December 2008	December 2008
PRICE 2009*	$8.96	$9.35	$8.01	$8.94	$8.92
PRICE 2010*	$7.10	$7.43	$7.86	$7.83	$7.81
PRICE 2011*	$7.81	$8.47	Price point not available	No Gas under contract	No gas under contract
PRICE 2012*	$8.01	$8.62	Price point not available	No gas under contract	No gas under contract
PRICE 2013*	$7.98	$8.39	Price point not available	No gas under contract	No gas under contract
DELIVERABILITY	All requirements provided	% of daily req's, no peak gas 2011	Tiered delivery, % of daily req's, base gas only Q2 2011-2013	% of daily req's ENSTAR has no all req's provider	% of daily req's ENSTAR has no all req's provider
TERM OF AGREEMENT	Est. 2016	2013	2013	2010	2010
INDEX	Henry Hub 12 month trailing	PG&E, SoCal, Chicago	Cook Inlet Index	WAGOG – Avg. cost of system gas	WACOG – Avg. cost of system gas

***Price estimates based on 10/31/08 forecast forward**

- $2.3 million legal fees & other costs
- $25-$100 million of storage investments also needed (e.g., LNG-regasification equip., reservoir development and/or third-party storage service)

What Do All Of These Figures Mean?

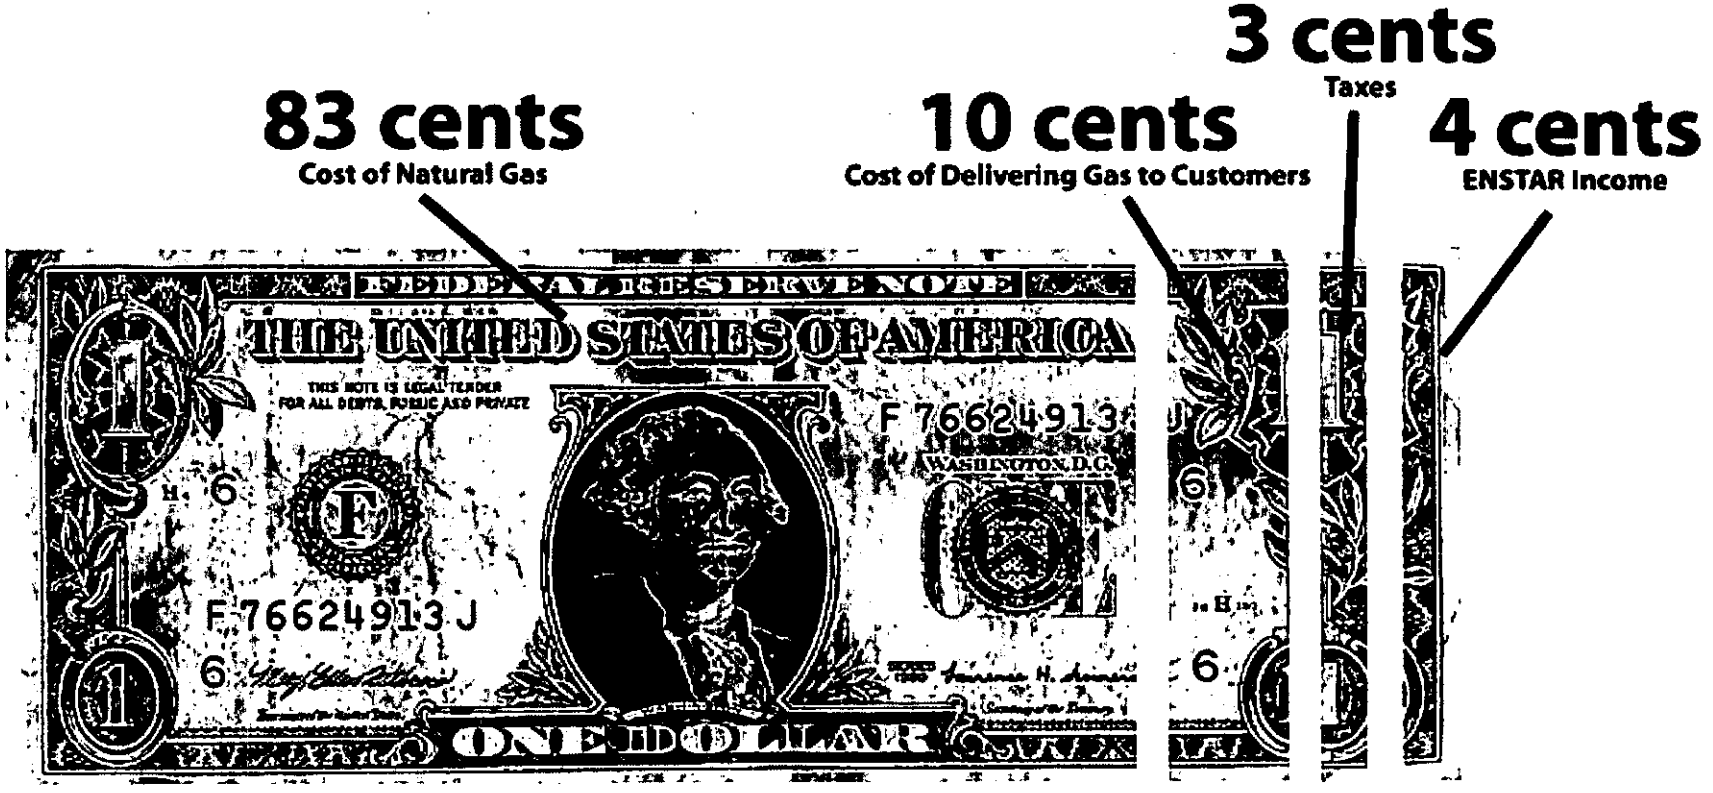
- RCA contract rejections have caused less gas to be committed to ENSTAR, and have increased the risk of deliverability to ENSTAR customers

- Producers are unwilling to sell gas at deeply discounted prices
  - Declining Cook Inlet gas supplies
  - Declining Cook Inlet deliverability
  - Declining Cook Inlet investment and perhaps lack of success

- Customers must pay fair market prices over time, to reverse the Cook Inlet market conditions and induce investment, inside and outside Cook Inlet

Impact On Customers

Where Your Heating Dollar Goes

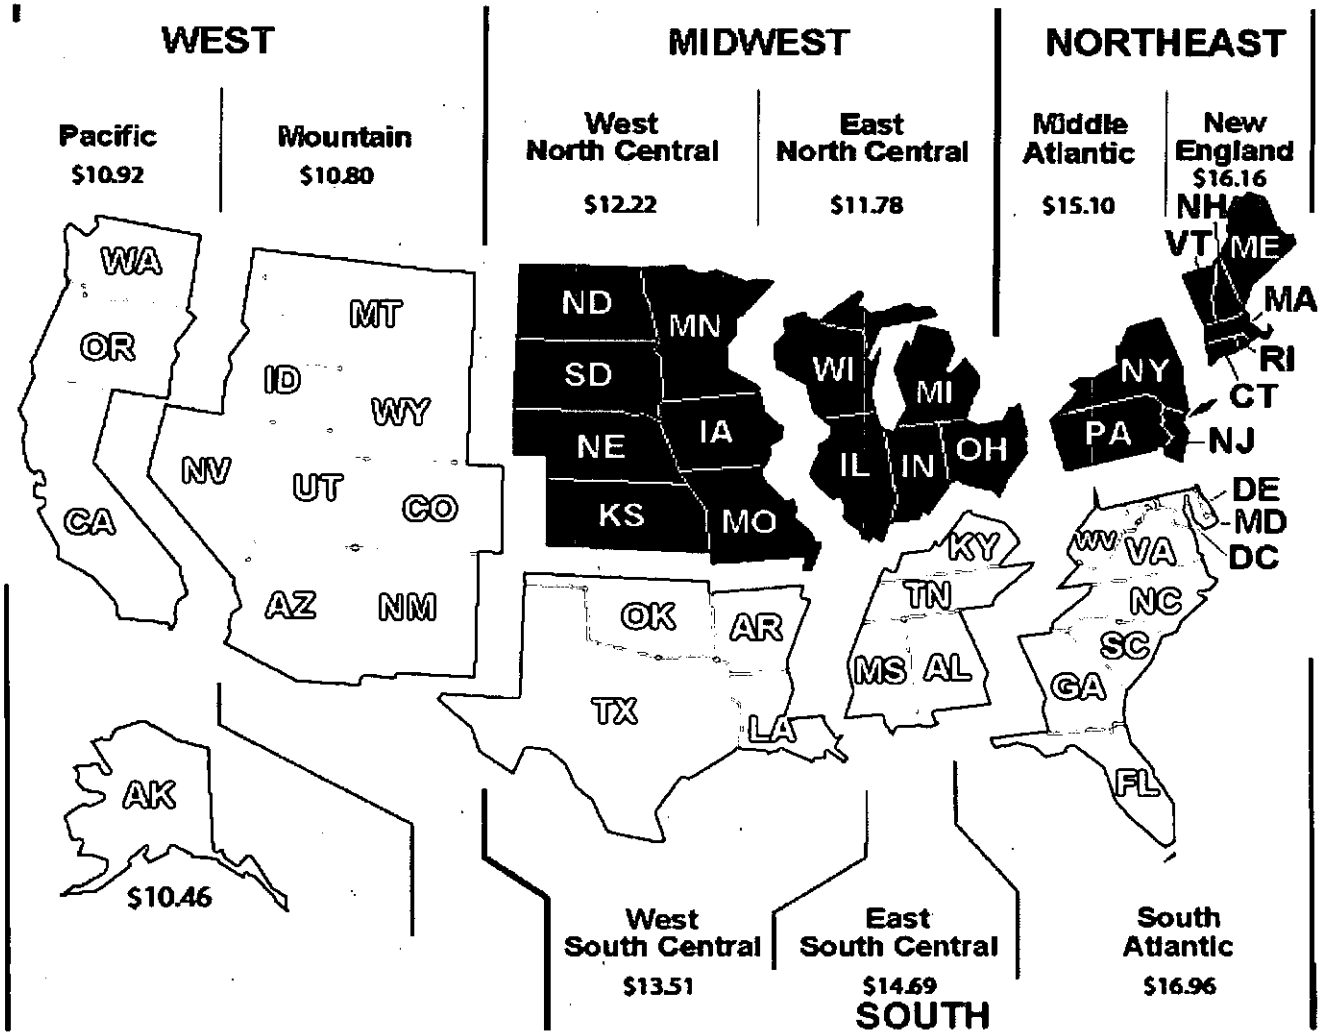


ENSTAR Natural Gas Company

All Our Energy Goes Into Our Customers

Residential Costs by Region

Average Natural Gas Cost for 2009($/Mcf)
Source: EIA of DOE



ENSTAR Natural Gas Company

All Our Energy Goes Into Our Customers

Home Heating Monthly Bill Comparison

- Natural Gas: $154.00*
- Oil: $218.64*
- Electricity: $514.79*
- Propane: $657.55*

*Assuming today's prices for each fuel source and average use per residential customers (169 mcf)

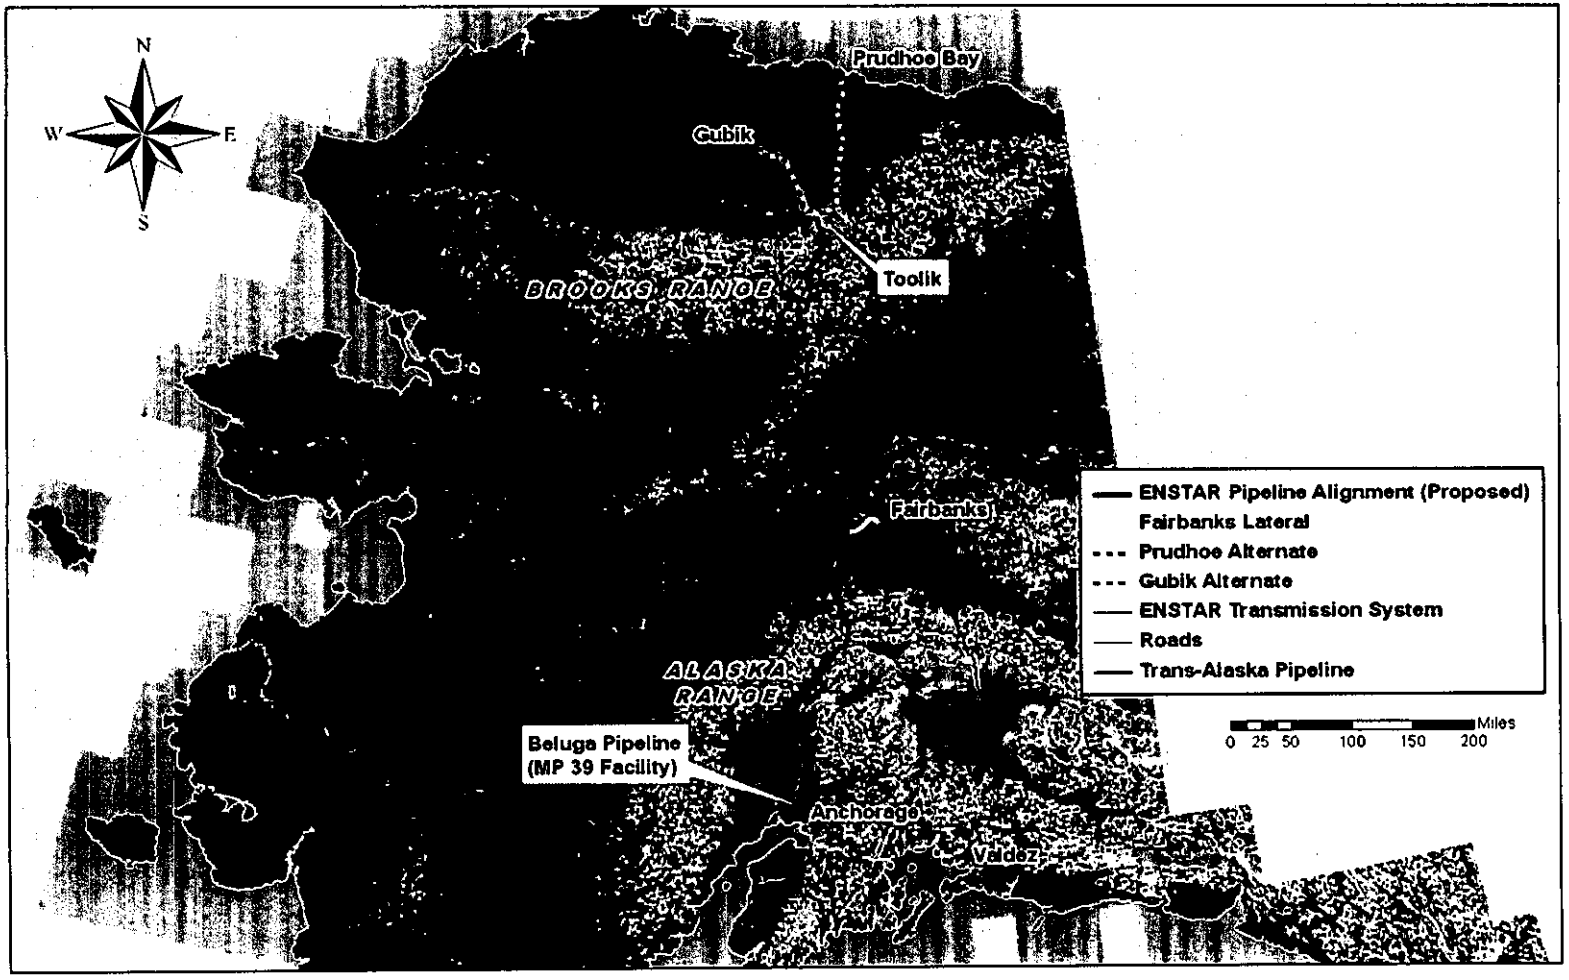
*This does not include the capital costs associated with switching to other fuel sources

ENSTAR's Proposed Course of Action

The ENSTAR Line

- ENSTAR's plan is to change the market conditions by bringing newly-discovered gas to the Interior and South Central markets
- Doing this requires the right governmental framework and conditions for investment, including paying a predictable fair market price for natural gas

ENSTAR Line - Proposed Route



ENSTAR Natural Gas Company

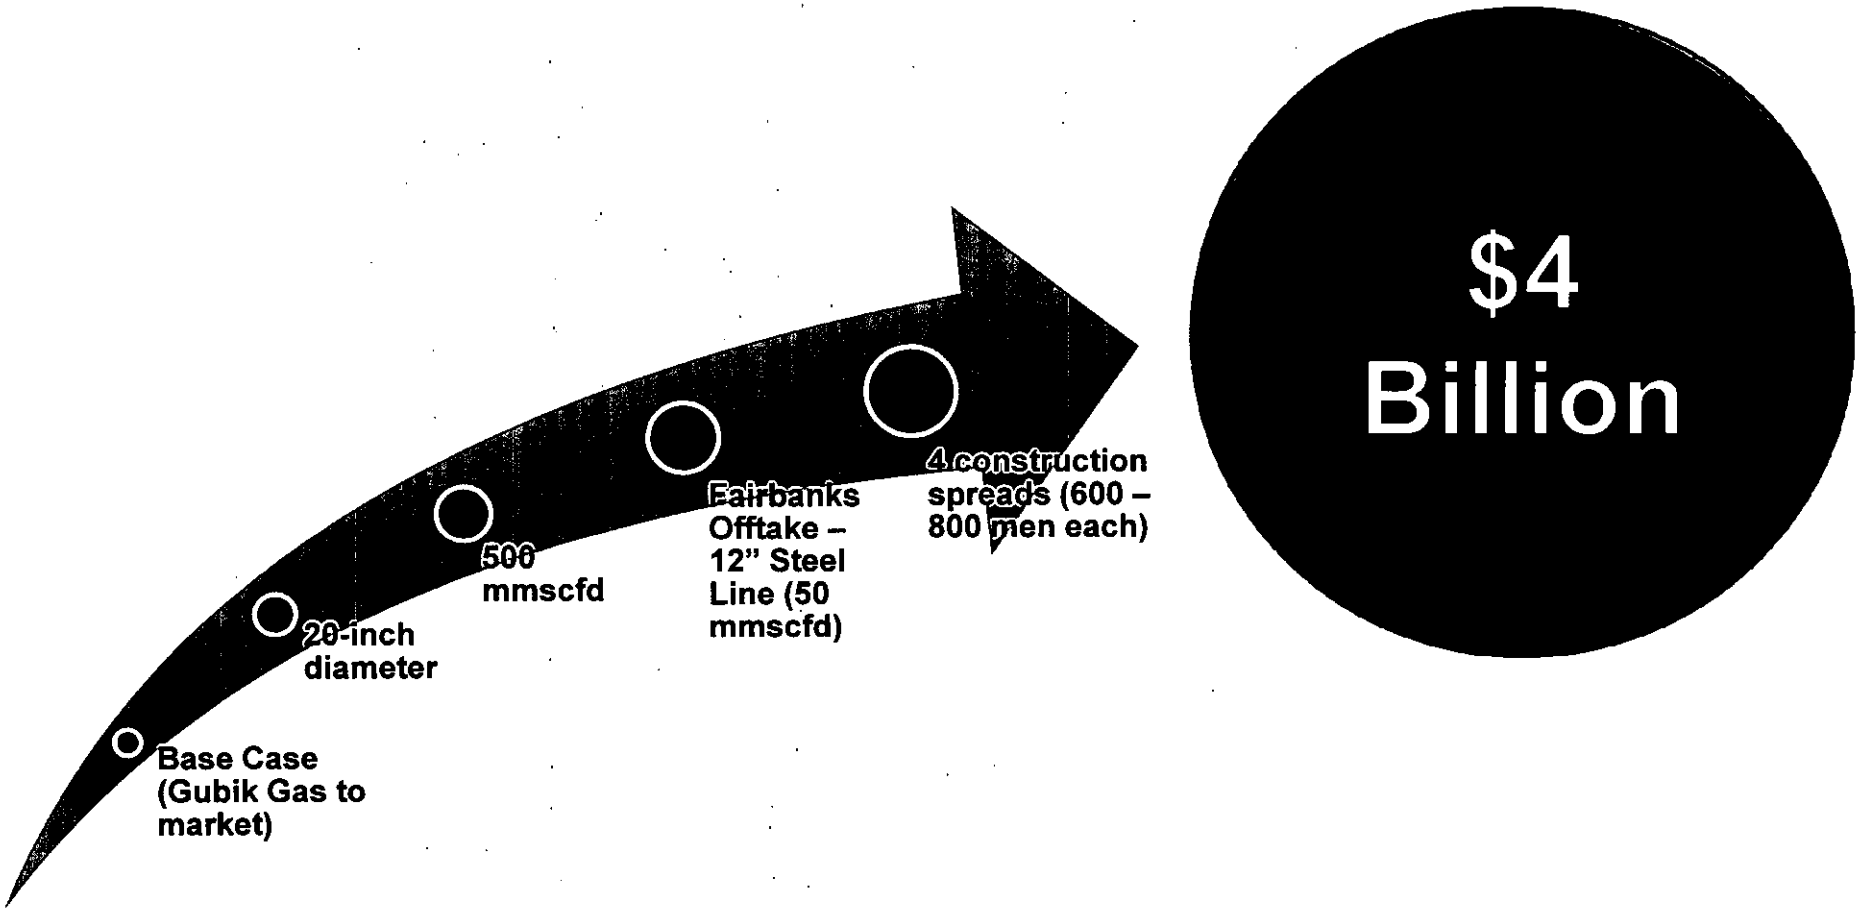
All Our Energy Goes Into Our Customers

ENSTAR Line

- Pipeline – 690 miles
- Product* - Sales Quality Natural Gas
- Gas Source** - Gubik (in Foothills near Umiat)
- Diameter - 20 inch
- Wall Thickness - 0.496 inch
- Unit Weight – 104 plf
- Steel Grade - API 5LX70
- MAOP - 2,500 psig
- Flow - 500 mmscfd
- Stations - 1-3 for startup (7 for full build out)

* **Operating pressure & design allow for additional hydrocarbon spiking**
** **Alternate source could be Prudhoe Bay area gas**

Preliminary Capital Cost



Final cost estimate will be completed in March 2009, at which time a more refined estimate will be available.

Key Milestones to Securing Additional Gas from New Sources by 2015

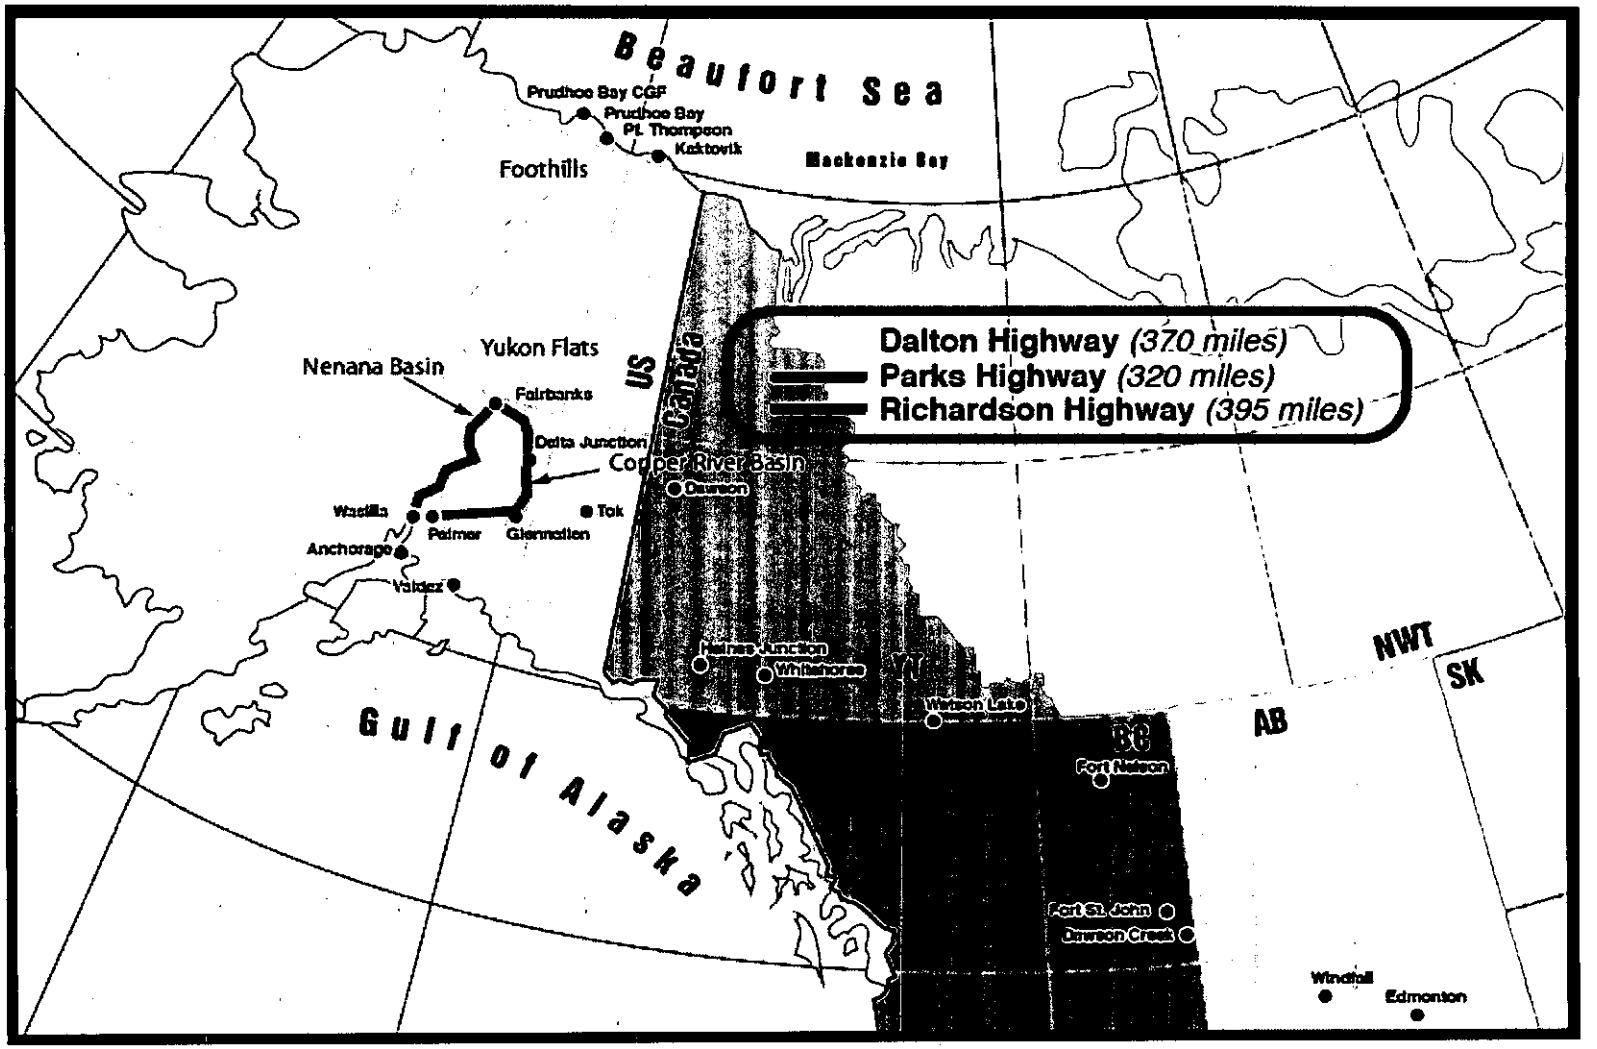
Future Supply & Demand

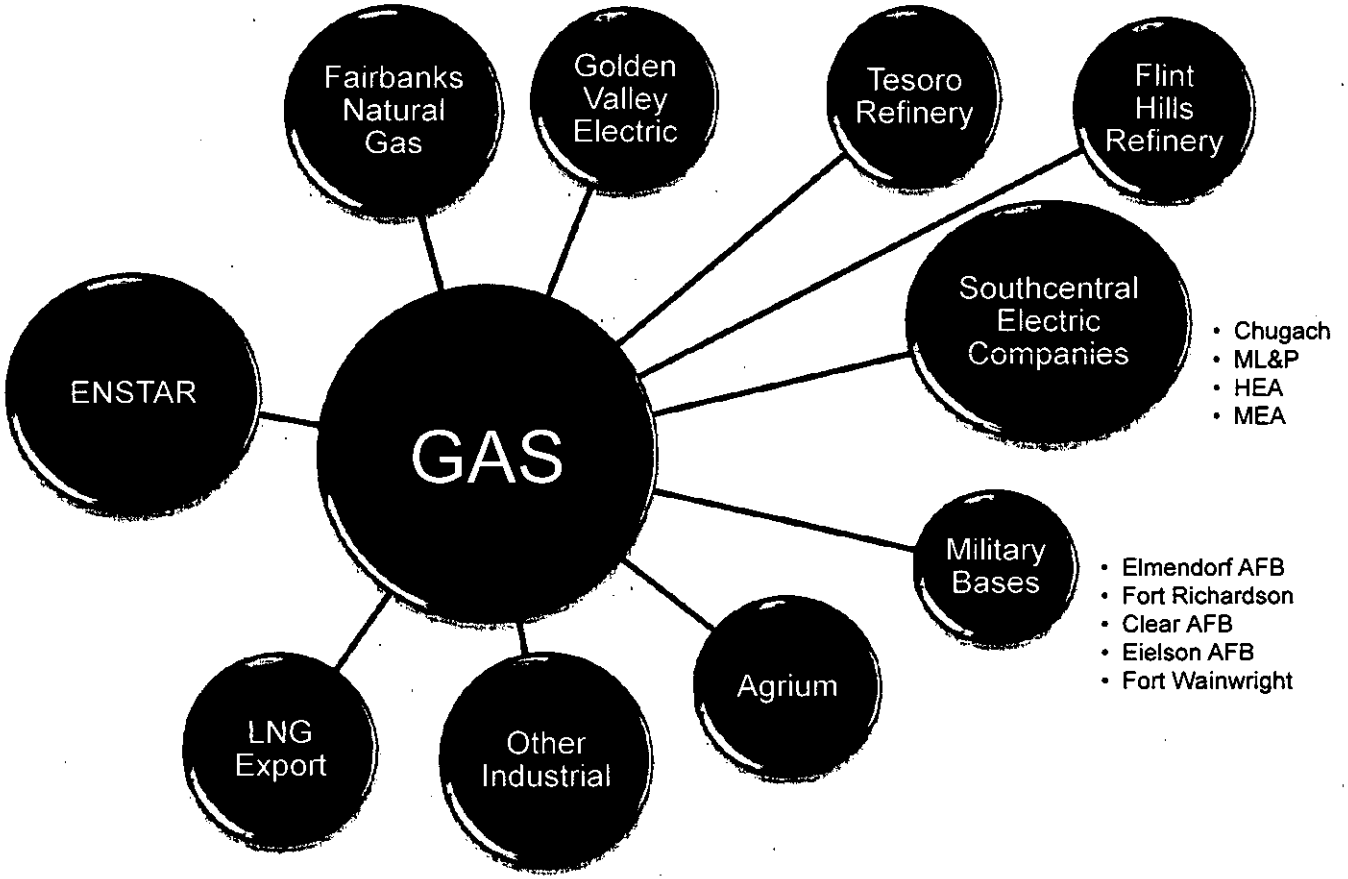
Natural Gas Options for Alaska



ENSTAR Natural Gas Company

All Our Energy Goes Into Our Customers

Accessible In-State Market



Conclusions

Conclusions

- The need for additional natural gas in Alaska has reached a critical point
- ENSTAR only has gas under contract through 2010, rather than 2016
- Natural gas consumption is vitally important to continued economic growth
- Fair market prices are important to securing future gas supplies, because paying those prices supports necessary capital expenditures
- The cost of switching to alternative energy sources for heating would hurt customers and slow Alaska's economic growth
- Government-mandated discounts won't remedy supply and deliverability challenges
- Government should set sound public policy that allows private enterprise to invest capital to find gas and build needed storage and pipeline facilities
- Time is of the essence

"Timely delivery of North Slope gas to the Cook Inlet utilities is the number one goal of the ENSTAR Line. In contrast, any of the spur line projects, are dependent upon construction of a larger diameter line. Serious gas delivery shortfalls, beginning in 2015, are best addressed by connection to a new source of gas. Current Cook Inlet gas users and conversion of the Fairbanks market cannot be put at risk awaiting a larger diameter project."

TransCanada's Alaska Pipeline Project

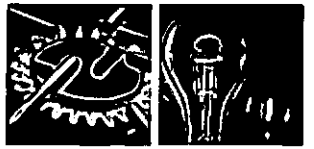
Elements of a Successful Project



- **Attractive project economics**
  - Natural gas prices are volatile and difficult to forecast
  - Conventional Lower 48 and WCSB, LNG, shale and coalbed methane all competing for market share
  - Project supporters must focus on factors that affect tolls
    - Commercial terms
    - Commercial and regulatory risk management
    - Schedule
    - Cost control
  - Current toll estimate of $US 2.76/MMBTU in 2018 to Alberta Hub
    - Important to keep tolls under $3/MMBTU (incl. fuel)

TransCanada

Elements of a Successful Project

- **Government and community support**
  - U.S. / Canada
  - Alaska / Yukon / B.C. / Alberta
  - Alaska Natives and Canadian First Nations
  - Landowners
  - Other stakeholders

- **Commercial contracts with Shippers**
  - Long-term firm agreements
  - Creditworthy parties

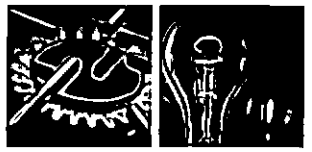
TransCanada

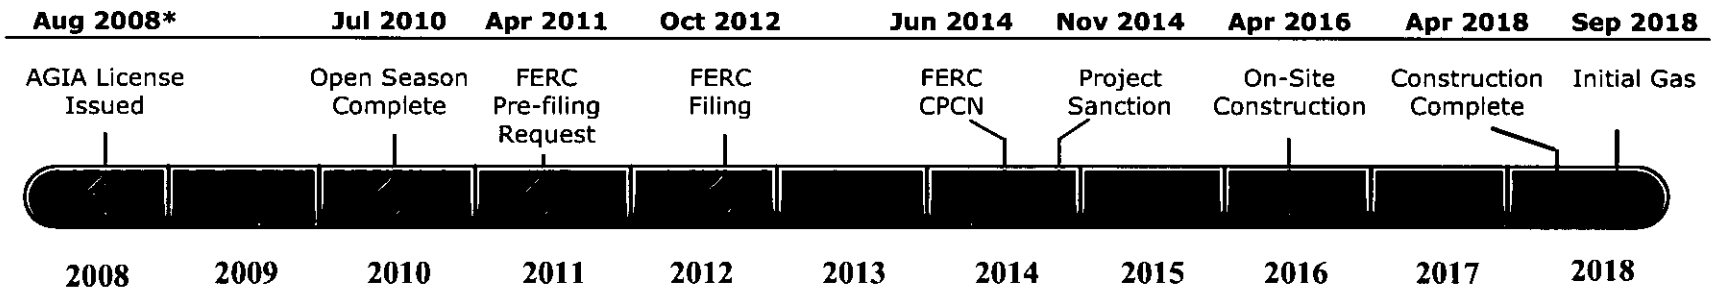
Elements of a Successful Project

- **Project execution**
  - Measured and focused project planning, structure and performance
  - Proven project developer
    - TransCanada has 50 year successful track record as developer of long-distance multi-jurisdictional pipeline projects

TransCanada

Project Schedule

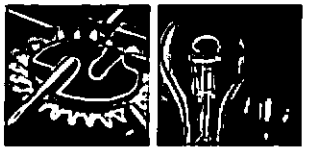




* AGIA license assumed to be issued in August 2008 – actual date December 5, 2008

TransCanada

Open Season Phase 2008 to July 2010



Key Objectives:

- Develop Class IV cost estimate to support Open Season
- Identify pipeline routing within study corridor to guide stakeholder and public engagement
- Execute preliminary environmental activities to prepare for pre-filing requirements and to develop permitting plan
- Conduct successful Open Season

TransCanada

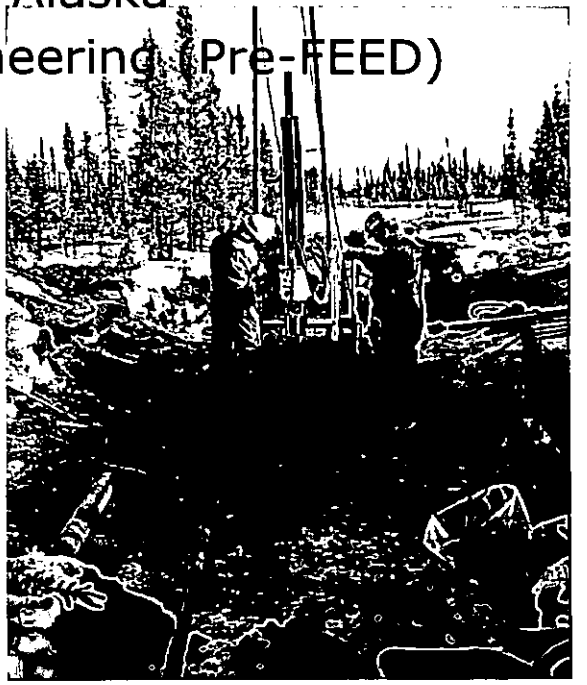
Project Status – Engineering

August 2008 – January 2009

- Developed detailed plans for technology development, engineering, construction infrastructure, logistics and cost estimating
- Aerial photography for Alaska, including LNG alternative
- Commenced terrain mapping for Alaska
- Completed 360° video in Canada
- Planned winter geotechnical field program
- Collected arctic engineering test data and research on frost heave

Outlook – Q1 & Q2 2009

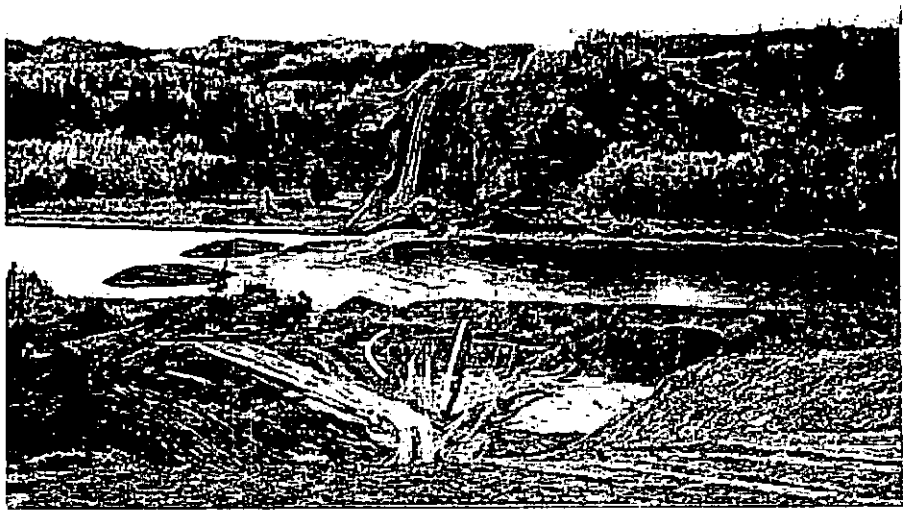
- Complete terrain mapping and winter geotechnical field program in Alaska
- Continue route reconnaissance and corridor selection in Alaska
- Begin engineering (Pre-FEED) for GTP



Project Status - Environmental

August 2008 – January 2009

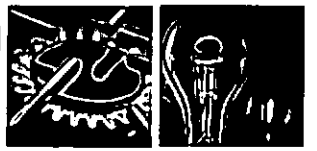
- Established GIS needs to support environmental planning and permitting
- Completed preliminary environmental constraints report for Alaska routing
- Completed initial route update review in Canada



Outlook – Q1 & Q2 2009

- Complete environmental information needs analysis with regulatory agencies
- Commence development of RFP for TransCanada environmental contractor – issuance in Q3 2009

Project Status – Regulatory / Permitting



August 2008 – January 2009

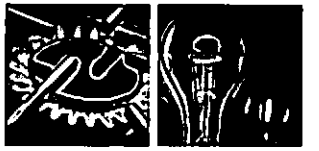
- Preliminary environmental permitting strategy for Alaska and Canada
- Submitted all permit applications to support winter geotechnical program North Slope Borough, ADNR, AF&G, USF&WS, USDOI (BLM), USACE, as well as referral to SHPO

Outlook – Q1 & Q2 2009

- Complete permitting for winter geotechnical field program
- Continue FERC discussions
- Commence discussions with individual agencies to update Environmental Information Needs Analysis

TransCanada

Project Status – Regulatory / Permitting (cont'd)



August 2008 – January 2009

- U.S. multi-agency meetings:
  - January 5 – FERC
  - January 6 – in D.C.; Office of Federal Coordinator, Departments of Defense, Energy, Homeland Security, Interior, Transportation, Commerce, State, Treasury, Advisory Council on Historic Preservation, Environmental Protection Agency, FERC, Council on Environmental Quality, Office of Management & Budget
  - January 14/15 – in Anchorage/Fairbanks; JPO/SPCO, ADNR, ADOT, ADF&G, SHPO, ADEC, NOAA, EPA, DOI (BLM), OFC, USFWS & University of Alaska Fairbanks

TransCanada

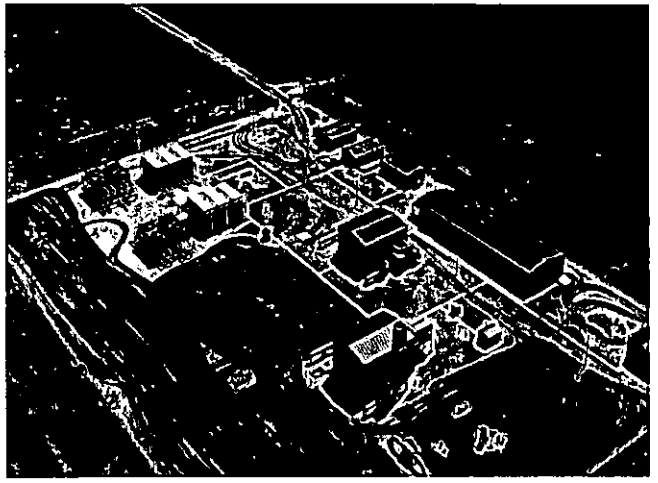
Project Status - Commercial

August 2008 – January 2009

- Continued discussions with potential shippers

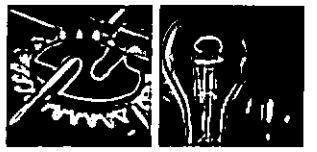
Outlook – Q1 & Q2 2009

- Select contractor for In-State Gas Study
- Continue discussions with potential shippers
- Continue to develop plans for Open Season



TransCanada

Project Status - Administrative



August 2008 – January 2009

- Office
  - Dec. 1, 2008 lease for Anchorage office
  - Dedicated project office space in Calgary
- Reimbursement
  - Initial discussions with Administration regarding AGIA reimbursement process and mechanics
  - Initiated required cost reimbursement agreements with State of Alaska and BLM for Open Season field activities including winter 2009 geotech program

Outlook – Q1 & Q2 2009

- Office
  - Anchorage Office Manager in place by early February
- Reimbursement
  - Finalize discussions with State on AGIA reimbursement details
  - Finalize reimbursement agreements with BLM and DNR (for access and permits)

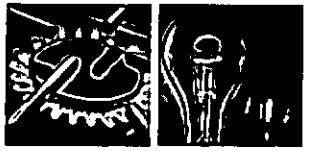
TransCanada

Project Status – Alaska Contractors

- Aerial Photography – Aero-Metric Inc., Anchorage
  - Sub-contractor - Lounsbury & Associates Inc., Anchorage
- Terrain Mapping – R&M Consultants Inc., Anchorage
- Geotechnical fieldwork – Golder Associates Inc., Anchorage,
  - Sub-contractor – Discovery Drilling Inc., Anchorage
- Environmental Planning and Permitting – ENSR AECOM, Anchorage
  - Sub-contract with Clarus Technologies LLC, Eagle River for SHPO submission
- Geothermal Modeling and Support – Northern Engineering and Scientific, Anchorage
- External relations – Jade North, Anchorage

TransCanada

Project Status – Alignment Meetings



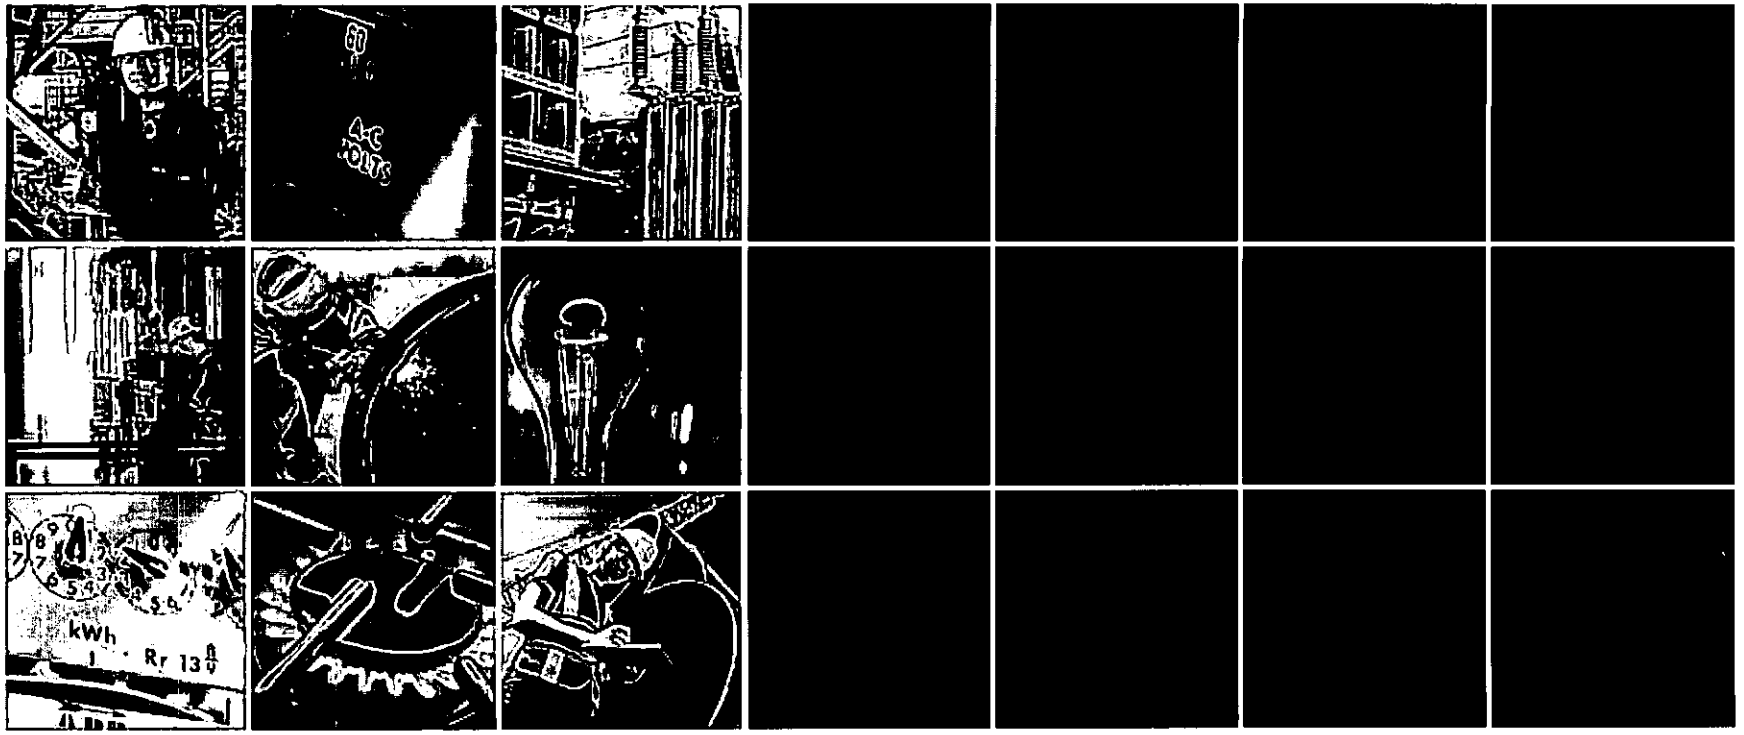
- Alyeska, ANGDA, ENSTAR
- DOT (Alaska)
  - Alaska / Yukon Infrastructure Improvements workshop
  - State Infrastructure Conference
- Department of Labor (Alaska)
  - AGIA Training Strategic Plan Steering and Implementation Committee
  - Alaska Pipeline Trades Academy Dedication & Tour
  - Alaska Workforce Investment Board
- Alaska Natives / Socio-Economic
  - Outreach and meetings with Regional Corporations, Village Corporations and Tribal Entities that are stakeholders

TransCanada

Summary

- AGIA Bill approved and License issued
- Significant work underway – Engineering / Cost Estimation, Environmental, Administrative, etc.
- Commercial and Regulatory engagement commencing
- Alaska contractors retained
- Anchorage office in-place
- Target to conclude Open Season by summer 2010
- TransCanada will continue to focus on costs, schedule and attracting customers.

TransCanada



Thank You

TransCanada
In business to deliver

1/28/09

LOCATION Bethel is located at the mouth of the Kuskokwim River, 40 miles inland from the Bering Sea. It lies in the Yukon Delta National Wildlife Refuge, 400 air miles west of Anchorage.

ECONOMY Bethel serves as the regional center for 56 villages in the Yukon-Kuskokwim Delta. Food, fuel, transportation, medical care, and other services for the region are provided by Bethel. 50% of the jobs in Bethel are in government positions. Commercial fishing is an important source of income; 200 residents hold commercial fishing permits, primarily for salmon and herring roe net fisheries. Subsistence activities contribute substantially to villager's diets, particularly salmon, freshwater fish, game birds and berries. Poor fish returns since 1997 have significantly affected the community.

HISTORY Bethel was first established by Yup'ik Eskimos who called the village Mumtrekhlogamute meaning Smokehouse People named for the nearby fish smokehouse. There were 41 people in Bethel during the 1880 U.S. Census. At that time, it was an Alaska Commercial Company Trading Post. The Moravian Church established a mission in the area in 1884. The community was moved to its present location due to erosion at the prior site. A post office was opened in 1905. Before long, Bethel was serving as a trading, transportation and distribution center for the region, which attracted Natives from surrounding villages. The City was incorporated in 1957. Over time, federal and state agencies established regional offices in Bethel.

POPULATION 721 LATITUDE: 60d 49m N LONGITUDE: 161d 26m **Unorganized**

LOCATION This is a Yup'ik community located 12 air miles east of Bethel on the Kwethluk River at its junction with the Kuskokwim. The village is the second largest along the Lower Kuskokwim River, following Bethel.

ECONOMY The largest employers are the school district, village corporation, store and health clinic. 61 residents hold commercial fishing permits. Subsistence activities play a central role in the lifestyle; salmon, moose and caribou are the staples of the diet. Seal meat and seal oil are obtained in trade with coastal relatives and neighbors. Most families travel to fish camps each summer.

HISTORY Archaeological evidence from a nearby site indicates that the area has been occupied since prehistoric times. The name Kwethluk is derived from "Kwikli," meaning "river." In the late 1800s, families from four villages on the Kwethluk River joined others living at the site. In 1889, an Eskimo lay worker for the Moravian Church was stationed at the village. A measles epidemic struck the village in the late 1890s. The Moravian Church built a chapel in 1896, followed by a Russian Orthodox Church in 1912. Discovery of gold in nearby creeks in 1909 attracted prospectors to the area, but the finds proved disappointing and most were gone by 1911. One placer deposit, discovered on the upper Kwethluk River, delivered a small yield and was worked until World War II. A Moravian orphanage was established three miles upriver. A BIA school with teacher's quarters was built in 1924. In 1939, the villagers owned 31,000 reindeers, used for food and skins. A tuberculosis epidemic at this time tragically reduced the population. A post office was established in 1947, and a Native-owned store opened in 1948. An airstrip was cleared in 1956. Snowmachines replaced dog teams in the 1960s as the principal form of winter transportation. The City was incorporated in 1975.

POPULATION 285 LATITUDE: 60d 13m N LONGITUDE: 162d 01m **Unorganized**

LOCATION Eek lies on the south bank of the Eek River, 12 miles east of the mouth of the Kuskokwim River. It is 35 air miles south of Bethel in the Yukon-Kuskokwim Delta, and 420 miles west of Anchorage.

ECONOMY Eek's economy is primarily subsistence- and commercial fishing-based. A few full-time positions are available at the school, City, and village office. All families participate in subsistence fishing; 44 residents hold commercial fishing permits. Poor fish returns and prices in recent years have significantly affected the economy.

HISTORY The village was originally located on the Apokok River, and moved to its present location in the 1930s. Constant flooding and erosion forced a relocation. A BIA school and a Moravian Church were constructed at the new site. A post office was established in 1949. The City was incorporated in 1970.

LOCATION Quinhagak is on the Kanektok River on the east shore of Kuskokwim Bay, less than a mile from the Bering Sea coast. It lies 71 miles southwest of Bethel.

ECONOMY Most of the employment is with the school, government services or commercial fishing. Trapping, basket weaving, skin sewing and ivory carving also provide income. Subsistence remains an important part of the livelihood; seal and salmon are staples of the diet. 83 residents hold commercial fishing permits for salmon net and herring roe fisheries. Coastal Villages Seafood LLC processes halibut and salmon in Quinhagak.

HISTORY The Yup'ik name is Kuinerraq, meaning "new river channel." Quinhagak is a long-established village whose origin has been dated to 1,000 A.D. It was the first village on the lower Kuskokwim to have sustained contact with whites. Gavril Sarichev reported the village on a map in 1826. After the purchase of Alaska in 1867, the Alaska Commercial Co. sent annual supply ships to Quinhagak with goods for Kuskokwim River trading posts. Supplies were lightered to shore from the ship, and stored in a building on Warehouse Creek. A Moravian Mission was built in 1893. There were many non-Natives in the village at that time; most waiting for boats to go upriver. In 1904 a mission store opened, followed by a post office in 1905 and a school in 1909. Between 1906 and 1909, over 2,000 reindeer were brought in to the Quinhagak area. They were managed for a time by the Native-owned Kuskokwim Reindeer Company, but the herd had scattered by the 1950s. In 1915 the Kuskokwim River was charted, so goods were barged directly upriver to Bethel. In 1928, the first electric plant opened; the first mail plane arrived in 1934. The City was incorporated in 1975.

POPULATION 305 LATITUDE: 60d 51m N LONGITUDE: 162d 16m **Unorganized**

LOCATION Atmautluak lies on the west bank of the Pitmiktakik River in the Yukon-Kuskokwim delta, 20 miles northwest of Bethel.

ECONOMY The school, retail businesses and the village government provide cash income to supplement the subsistence lifestyle. Thirty-one residents hold commercial fishing permits. Poor fish returns since 1997 have significantly affected the community.

HISTORY Yup'ik Eskimos have inhabited this region for thousands of years due to the area's rich resources, however Atmautluak itself was not settled until the 1960s. People moved to this site on higher ground to avoid flooding and for the rich resources of the area. A City was incorporated in 1976, but it was dissolved on Feb. 7, 1996 in favor of the traditional village council government.

Visual Simulation
Courtesy of Chugach Electric Association

Fire Island 2008 Milestones

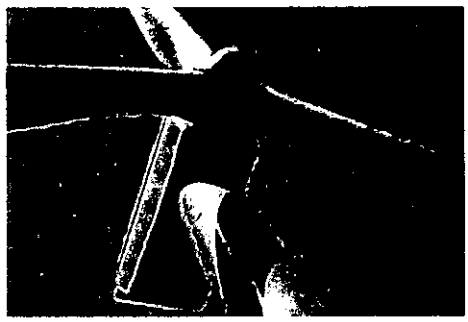
- May 2008 FAA issues determination of no hazard
- June 2008 meeting with Fire Island MOU partners, Chugach, ML&P, Homer Electric and Golden Valley Electric
- Proposals from construction contractors received in July 2008
- Draft power purchase agreements to MOU partners.

Fire Island - Recent Activity

- Staked road and power line alignments
- Applied for COE 404 permits
- Interagency meeting
- Public notice period has begun
- Meetings with prospective contractors
- MOU partners are kicking off integration studies.

Benefits

- Reduced emissions
- Diversification of resources
- Level-priced power



Wind Energy ALASKA

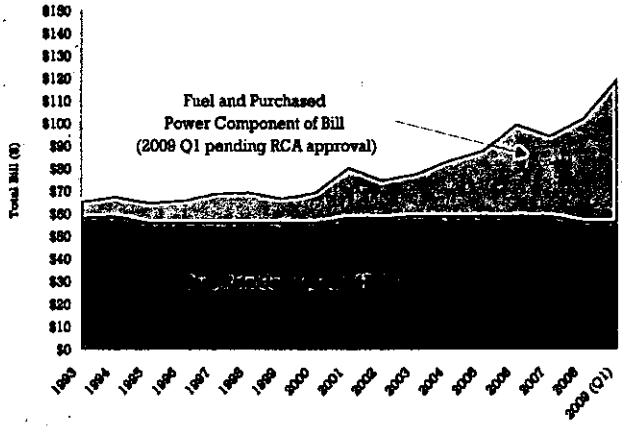
Renewables
Economic Considerations

Wind Energy ALASKA

Renewable Economic Considerations

- More than 90 percent of Southcentral Alaska's power is generated by natural gas.
- Natural gas is an excellent fuel but our community has too many eggs in one basket.
- Even a moderate size wind plant will help us diversify the investment portfolio.

Monthly Residential Bill Total, by Component
Based on 700 kWh Consumption: 1993 - 2009 (Q1)



wind energy ALASKA

Recent comparison

- Bradley Lake hydro was more expensive at first but is now among the lowest cost.
- Why ? – no fuel cost.
- Natural gas has doubled in price during the last three years.

Wind Energy ALASKA

Early Interest in Fire Island

- Developers estimated the cost of power in 2005.
- If Fire Island had been installed then, Fire Island power would be competitive with natural gas generation today.

Wind Energy ALASKA

Wind Economics

- Wind power is relatively "flat-priced" and helps to diversify community investment in power generation.
- What is needed is a policy that sets incremental goals to "graft" renewable power into the system over time.
- Fire Island will help us do that.

ALASKA'S OIL & GAS FISCAL DESIGN

Alaska Senate Resources Committee

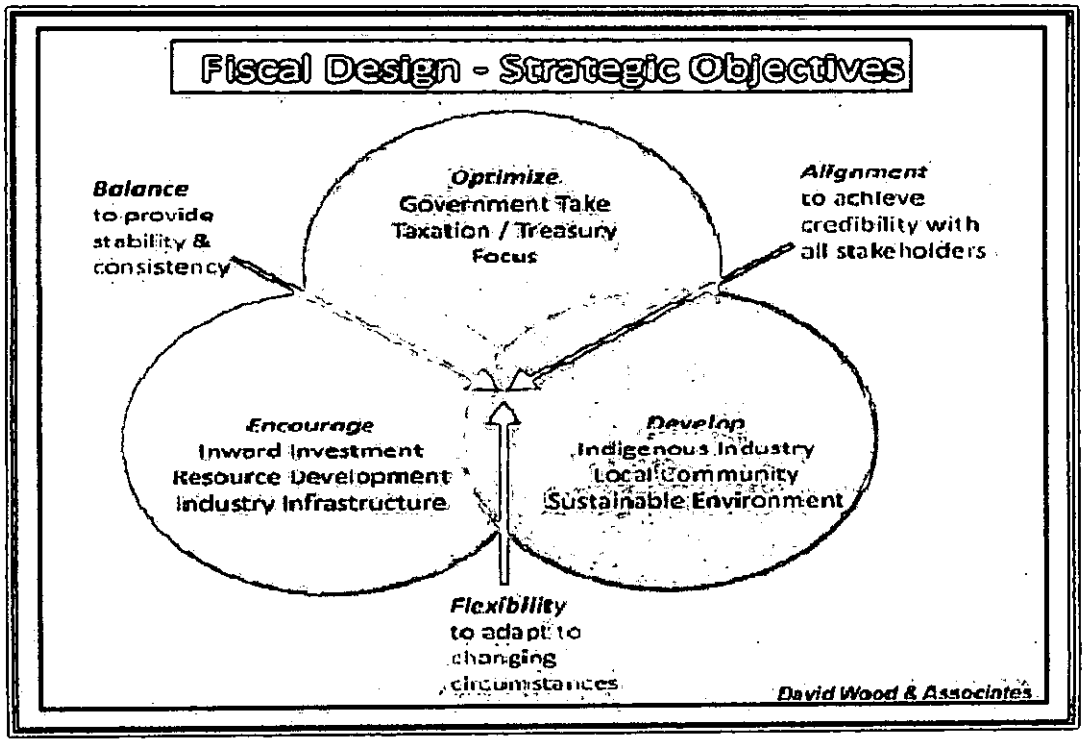
David Wood
2nd February 2009

Presented on David Wood's behalf by Dan Dickinson

Alaska: Fiscal Design Issues for Natural Gas Overview of December 2008 Report for Legislative Budget and Audit Committee

Fiscal Designs are Best Driven by Clear Fiscal Objectives & Strategies

Most countries are trying to balance all three objectives.



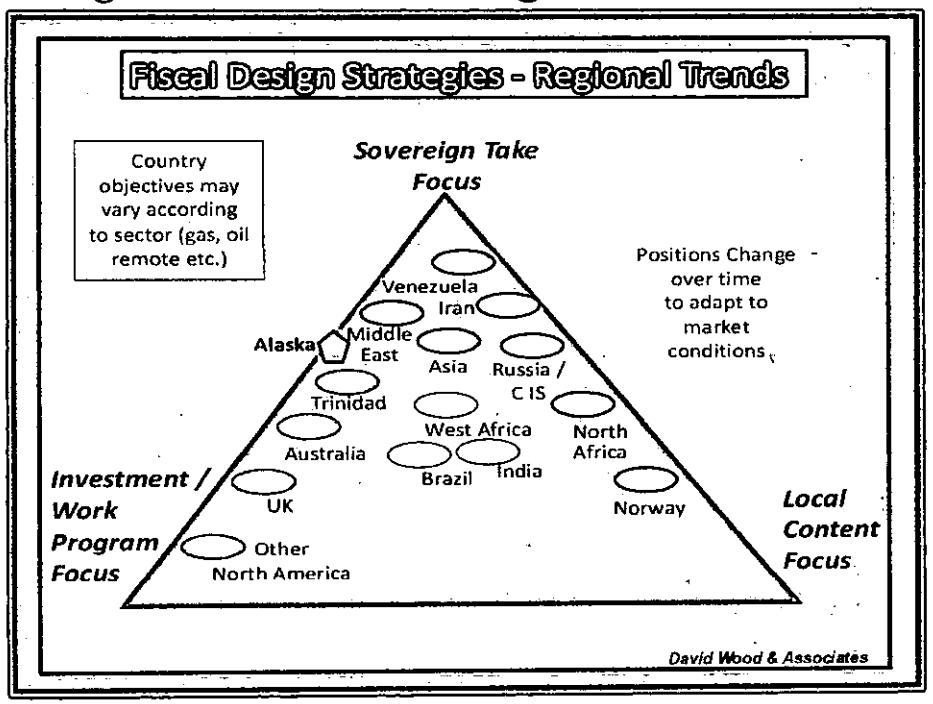
Approaches to Fiscal Design that can Improve Performance & Credibility

The following are selected recommendations for Alaska from the report:

- Develop a clear statement of fiscal strategy and objectives
- Focus on a simple, flexible and progressive fiscal design
- Some level of fiscal stability important to secure investment
- Such designs could be more effective than contractual guarantees
- Drive progressivity fiscal elements for gas with gas PTV (not boe)
- Consider return on investment drivers for progressivity taxes
- Consider offering allowances focused to offset regressive elements
- Aim to clarify and optimize fiscal revenue streams from NGLs
- Consider state equity involvement in infrastructure projects
- Involve cost control components to some fiscal incentives
- Apply time constraints to new leases to develop resources

Fiscal Design Strategies
Regional Trends

Upstream fiscal designs should reflect the broader strategies and objectives that governments are striving to achieve.



A clear statement of fiscal design strategy by a government can help to enhance its fiscal credibility.

Alaska Fiscal Take in a Global Context

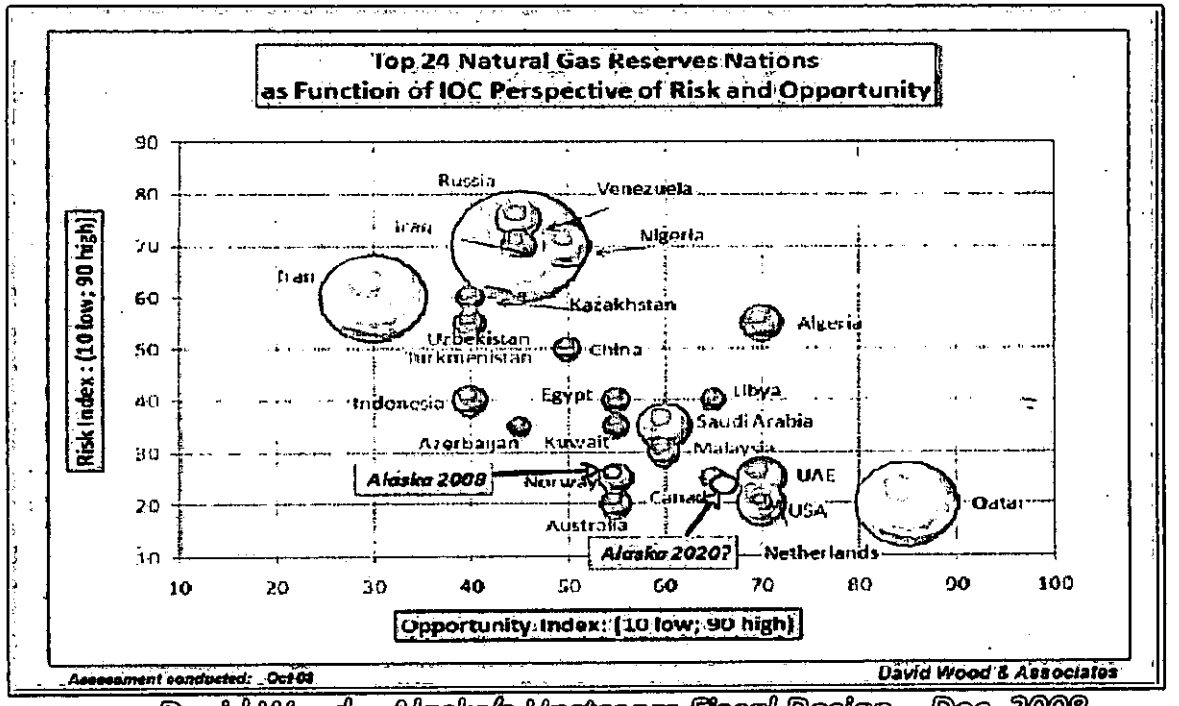
The report reviews the fiscal designs of a number of gas producing countries in some detail and reveals that a diverse range of fiscal designs and contractual structures are exploited.

- Total government takes (at assumed price) of some 67% or two-thirds of divisible profits for natural gas make Alaska:
  - harsher in terms of fiscal take than other U.S. states and large OECD gas producers and reserves holders (e.g. Australia, Canada and U.K.);
  - but more lenient in terms of fiscal take than countries in which IOCs are able to explore and produce gas in North Africa, West Africa, Caspian, and Asia.

- However, percentage fiscal takes (at assumed price) are only one issue considered by IOCs when making investment decisions. Fiscal stability, risk and progressive versus regressive tendencies are also important.

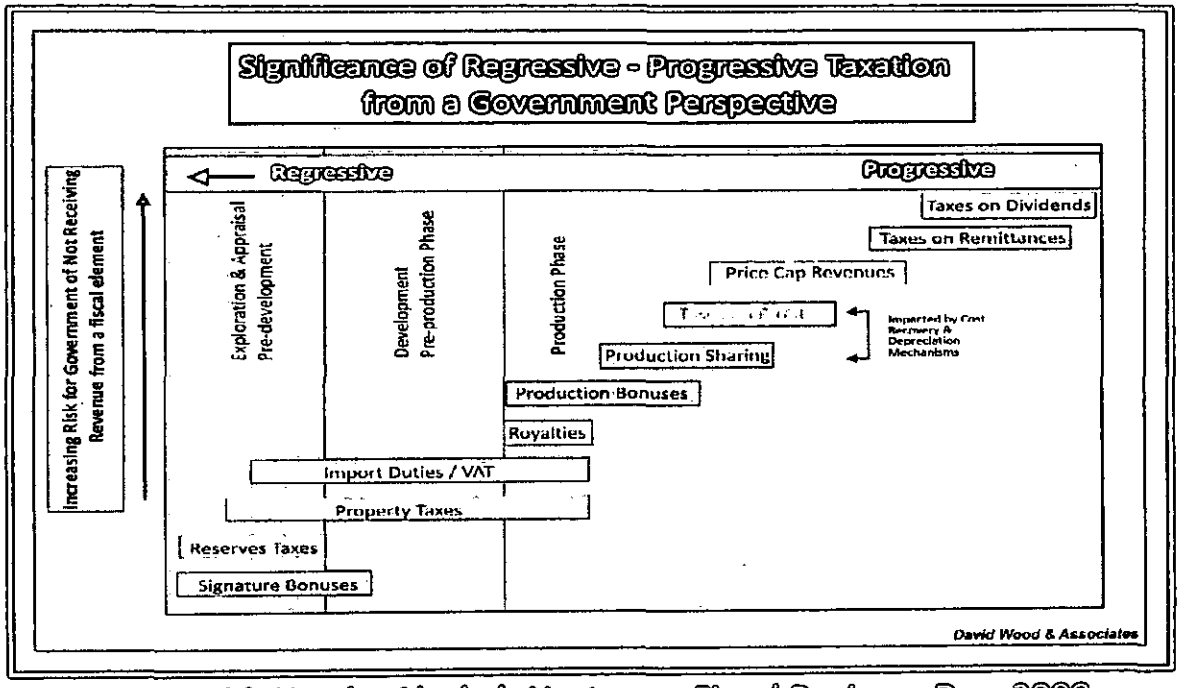
Alaska Gas Compared on International Scale of Risk versus Opportunity

The diameters of the bubbles are proportional to proved natural gas reserve holdings as reported by BP Statistical Review (June 2008).



Progressive & Flexible Fiscal Designs Help to Promote Investment

The stronger the commitment made by governments to promote a commercially attractive environment, the more likely investors are to commit investments without guarantees of fiscal stability.



Detailed Analysis of Large and Small Hypothetical Gas and Oil Fields

The report includes detailed multiple-year analysis of a wide range of gas and oil field sizes under the prevailing Alaska fiscal design with sensitivity analysis covering a wide range of prices, costs and production scenarios.

- Base case destination market price assumptions were $7.5 /mmbtu (gas) and $80/bbl (oil).
- Applying those assumptions *total government take (Alaska + FIT) of destination value* varied from 25% to 32% for gas fields versus 55% to 60% for oil fields. The main difference being due to the higher costs (TT&T) for the gas cases.
- At base case price assumptions *total government share of divisible profits* are 66% to 68% for gas fields and 74% to 76% for oil fields. Progressivity tax provided a significant contribution for oil fields, but very little progressivity paid by gas fields.

Multi-year Fiscal Model Used to Test Alternative Gas Progressivity Mechanisms

An Excel model was developed as part of this work to test alternative mechanisms for a distinct gas progressivity tax (GPT).

- Ten mechanisms evaluated (prevailing plus nine alternatives)
- Benefits of separating gas and oil production tax streams identified
- Alternative drivers, thresholds and gradients evaluated for GPT
- Each mechanism tested by sensitivity analysis using 10 field (gas and oil) and multi-year analysis at a range of prices and costs
- Analysis reveals that overall (despite progressivity mechanisms) the Alaska fiscal design has a regressive behavior due to the impact of the royalty, property tax and production tax floor in low gas price or high-cost situations.

Impact of Natural Gas on Combined Oil & Gas Production Tax

David Wood

2nd February 2009

Reponses to Questions from LB&A asked on December 9 and 10th, 2008 & presented 9th January 2009

Impact of Natural Gas on Combined Oil & Gas Production Tax

Analysis has identified that three factors are relevant to the dilution effects under prevailing production tax paid by an existing oil- only case with the addition of gas production (and vice versa – i.e. oil added to a gas-only case). These factors are:

1. Magnitude of value differential between oil and gas streams (high oil value minus low gas value, or high gas value minus low oil value);

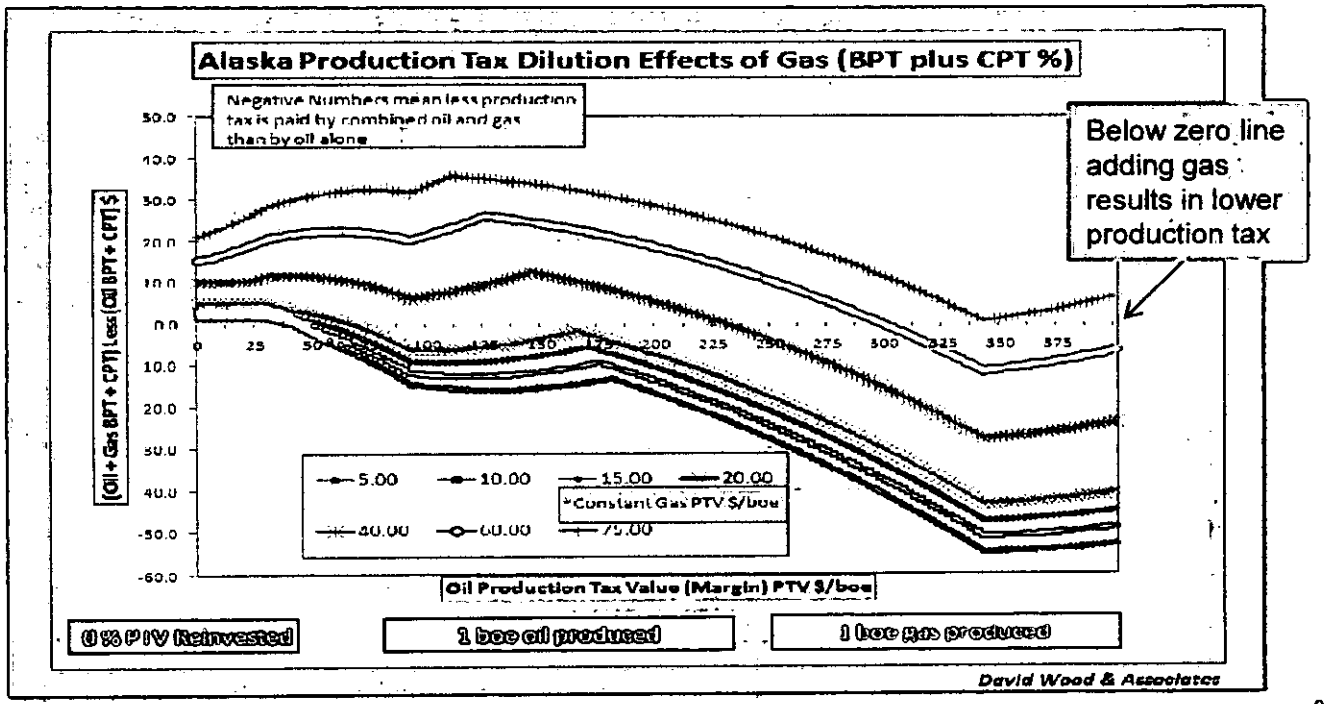
2. Relative volumes of oil and gas produced contributing to combined production tax boe stream.

3. Amount of PTV reinvested, which depending on the PTVs of each stream can have a significant impact

An Excel computer model has been developed to test these three factors.

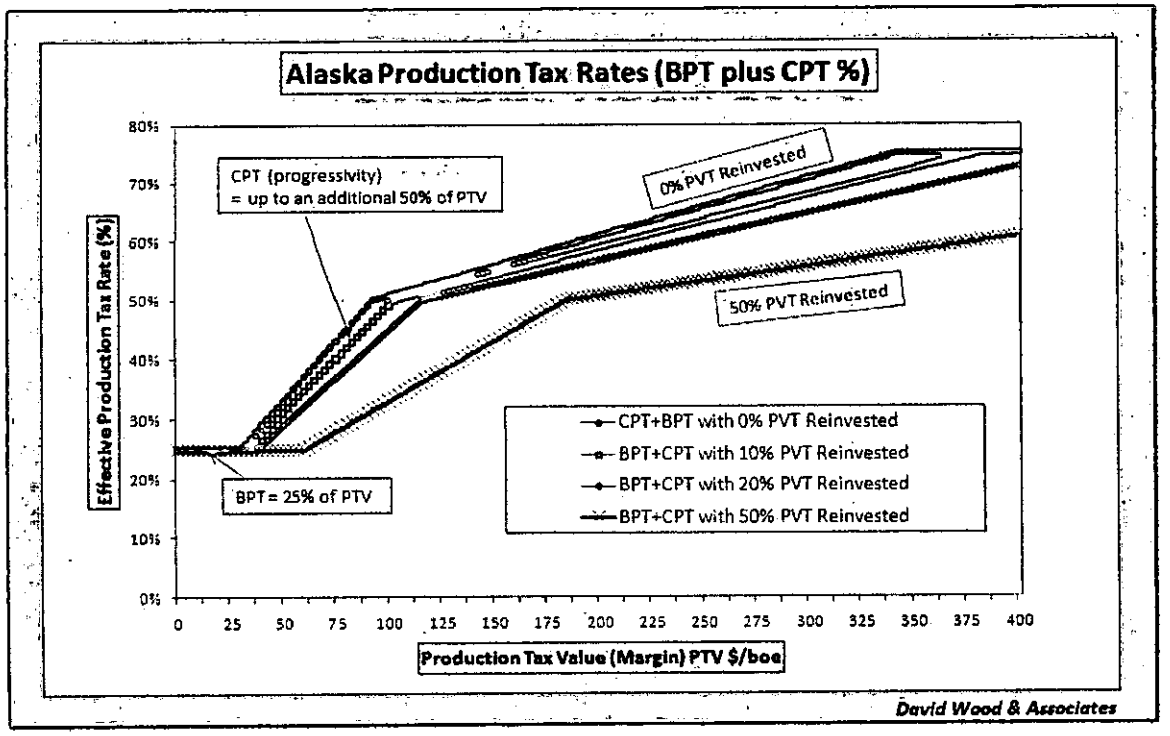
Natural Gas Dilution Effects on Combined Oil & Gas Production Tax

The trends are non-linear with slope changes because of the changing gradients of the production tax progressivity mechanism (i.e. 0.4/boe to 0.1/boe) and the threshold values at which those changes occur.



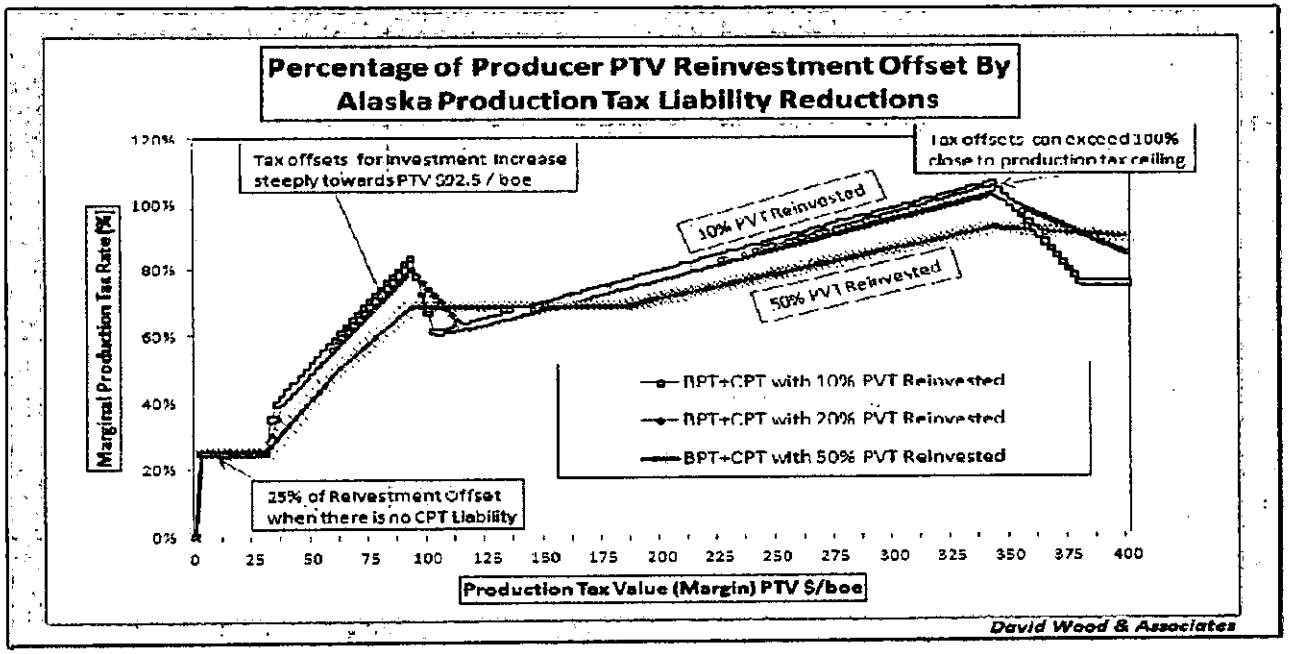
Natural Gas Production Tax Dilution
Different Reinvestment Scenarios

The impact of several reinvestment scenarios – 0% , 10%, 20% and 50% of PTV - on production tax rates are illustrated in this graphic.



Marginal Production Tax Rates Seen by a Producer for Reinvestment Dollars

The vertical axis shows the percentage tax reduction associated with the incremental re-investment (or the marginal tax rate offset by the producer by its reinvestment). Note the peak around PTV$90/boe and values above 100% at PTV $350/boe plus multiple crossover points.



Conclusions

These complications lead to the following general conclusions:

1. Under the current combined progressivity tax (CPT) rules the impact of gas revenue on the magnitude of combined production taxes is difficult to predict making tax planning difficult (for both state and producers).

2. This is likely to render the production tax structure unstable in the long term and to require future adjustments by the legislature to progressivity rates and thresholds according to prevailing conditions.

3. Such adjustments would have significant impacts on investors and risk undermining fiscal stability and credibility over the long term.

4. By separating CPT into GPT and OPT these problems are removed and incentives can be structured in a transparent way. Under separate oil and gas taxation streams the combined production taxes become more predictable, stable and flexible.

Useful Analysis to Aid Natural Gas Fiscal Design Yet to be Conducted

The dilution effect of production tax is one of several issues that suggest that the natural gas fiscal design requires some adjustment. A first step is to establish a strategy for what a revised fiscal design should achieve. In order to help this process the following analysis could be conducted.

1. Establish and compare multi-year cash flow models for Prudhoe Bay and Point Thomson fields to evaluate from a natural gas perspective the taxation outcomes a range of scenarios: 1) gasline alternatives; 2) LNG plant at Valdez; GTL plant on the slope; and others.

2. Use the information from 1. together with the ten hypothetical yet-to-find fields (presented in December Report) to test alternative gas fiscal designs.

3. Evaluate the fiscal designs and specific fiscal instruments applied in the main oil and gas producing states of the Lower 48. Alaska may be competing for investment with large-scale unconventional gas projects (e.g. shale gas). It is important to understand the incentives being offered by such projects.

What if 2004 upstream costs a billion less?								
2004	2,426.8	11,799.6	*2,659.0*	1,783.1	7,357.5	33.0%	14.6%	52.4%

Source: State take, volumes, $/bbl destination value, transportation charges and 2008 Upstream Cost from Fall 2008 DOR Revenue Sources Book; 2007 Upstream cost from Fall 2007 RSB

2.2.2009

Looking Forward: TransCanada's AGIA application suggestion:

- "TransCanada would rely on the State of Alaska to take all feasible actions exclusively within its authority as a sovereign power to ensure a favorable economic environment for potential Shippers on the Project. Those actions include:
  - engaging with the ANS producers to reach agreement on a commercially reasonable and predictable upstream fiscal regime that balances the needs of the state and the ANS producers;
  - and encouraging robust exploration for and development of new natural gas resources and the commitment of such resources to the Project."

Source: TransCanada, Application for License, Alaska Gasline Inducement Act (November 30, 2007) page 2.5-52

Looking Forward: ConocoPhillips' Proposal

- ConocoPhillips' Proposal (ConocoPhillips current owner with BP of Denali Project)

  "The predominant lessee risk that should be the focus of discussion with the State is the risk of unclear, unpredictable State taxes and royalties. In order to enable shippers to make long term shipping commitments, prospective shippers need clearly defined natural gas fiscal terms and an understanding of the period during which these terms will apply. Addressing these issues remains a critical component necessary to develop ANS natural gas resources and make this Project a reality."

Source: ConocoPhillips, ANS Natural Gas Pipeline Proposal to the State of Alaska, (November 30, 2007) section IV page 5

Looking Forward: Combined Progressivity Tax (CPT)

Gas exported from state and oil taxed at same rate – both part of combined progressivity calculation.

- Prices swings in one can effect tax on the other
- Gas converted to oil on Btu basis (roughly 6:1)
- Progressivity triggered by $30 boe PTV

	1 mcf	1 Boe Gas	Oil
Subject to progressivity June 2008	0.25	1.50	81.25
$30 no Progressivity zone	5.00	30.00	30.00
Upstream Costs ?	2.71	16.26	16.26
Downstream costs	4.73	28.38	6.27

Sources: Oil data from Spring 2008 RSB, Upstream Gas Cost is oil data on boe basis, Gas Downstream cost is Black & Veatch Estimate from Appendix G Alaska Gasline Determination. Oil price from DOR website, Gas Price from St Louis Fed Reserve website

Anadarko Operated Foothills Exploration 2008/2009

Senate Resources
Feb. 4, 2009

Anadarko Petroleum Corporation

Anadarko Forward-Looking Statement

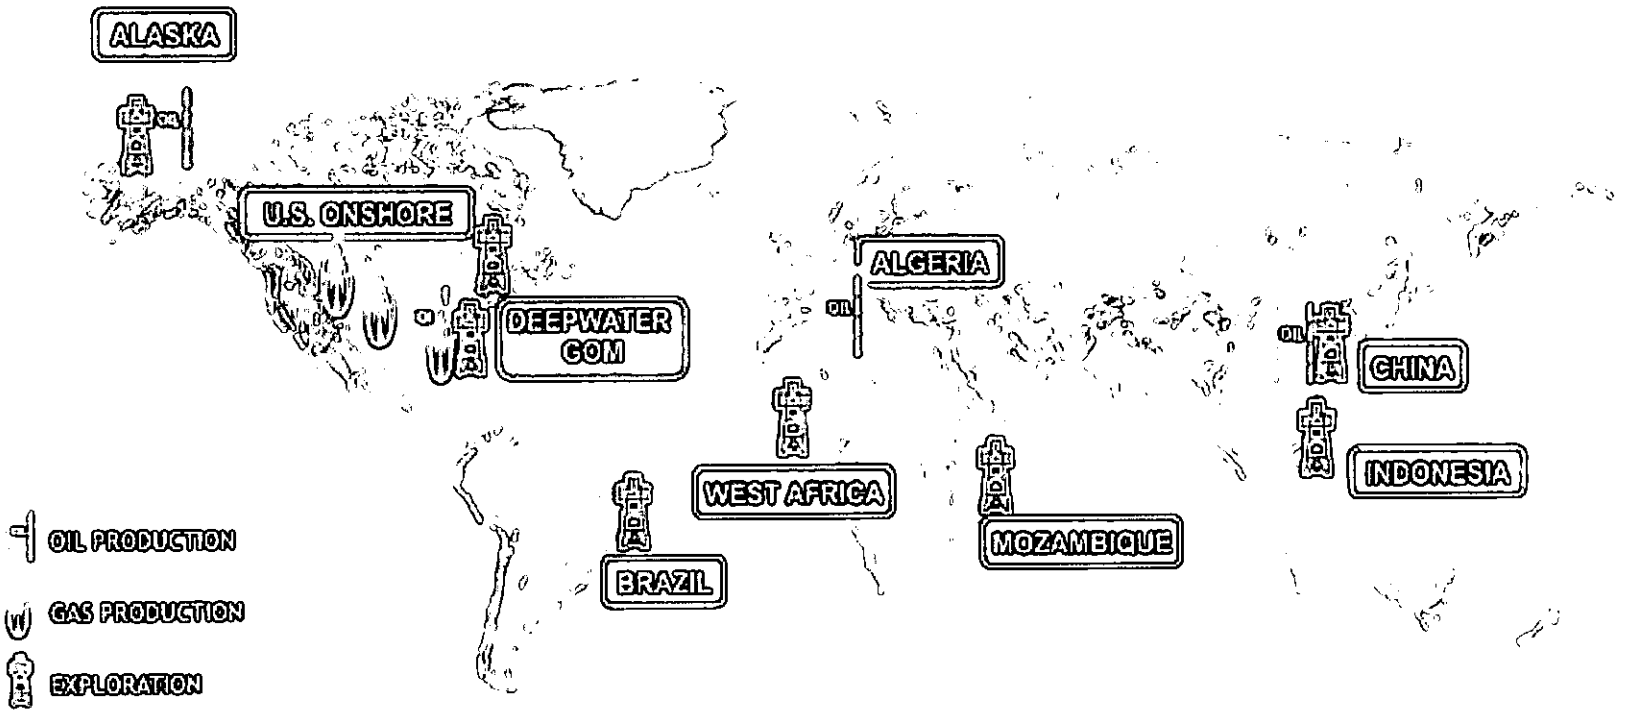
This presentation contains forward-looking statements within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. Anadarko believes that its expectations are based on reasonable assumptions. No assurance, however, can be given that such expectations will prove to have been correct. A number of factors could cause actual results to differ materially from the projections, anticipated results or other expectations expressed in this presentation. Anadarko cannot guarantee that it will successfully execute on its exploration, drilling and development plans, meet its production or reserves guidance, or successfully complete its share repurchase program. See "Risk Factors" in the company's 2007 Annual Report on Form 10-K and other public filings and press releases. Anadarko undertakes no obligation to publicly update or revise any forward-looking statements.

Cautionary Note to U.S. Investors — The United States Securities and Exchange Commission permits oil and gas companies, in their filings with the SEC, to disclose only proved reserves that a company has demonstrated by actual production or conclusive formation tests to be economically and legally producible under existing economic and operating conditions. We use certain terms in this presentation, such as "net lower-risk captured resources," "lower-risk resources," "exploration resource additions," "net risked captured opportunities," "net unrisked resources," "net discovered resources," "net annual resource additions," "resource targets," "total resources," "unbooked discoveries," "lower-risk development opportunities," and similar terms that the SEC's guidelines strictly prohibit us from including in filings with the SEC. U.S. Investors are urged to consider closely the disclosure in our Form 10-K for the year ended December 31, 2007, File No. 001-08968, available from us at www.anadarko.com or by writing us at: Anadarko Petroleum Corporation, 1201 Lake Robbins Drive, The Woodlands, Texas 77380 Attn: Investor Relations. You can also obtain this form from the SEC by calling 1-800-SEC-0330.

ANADARKO

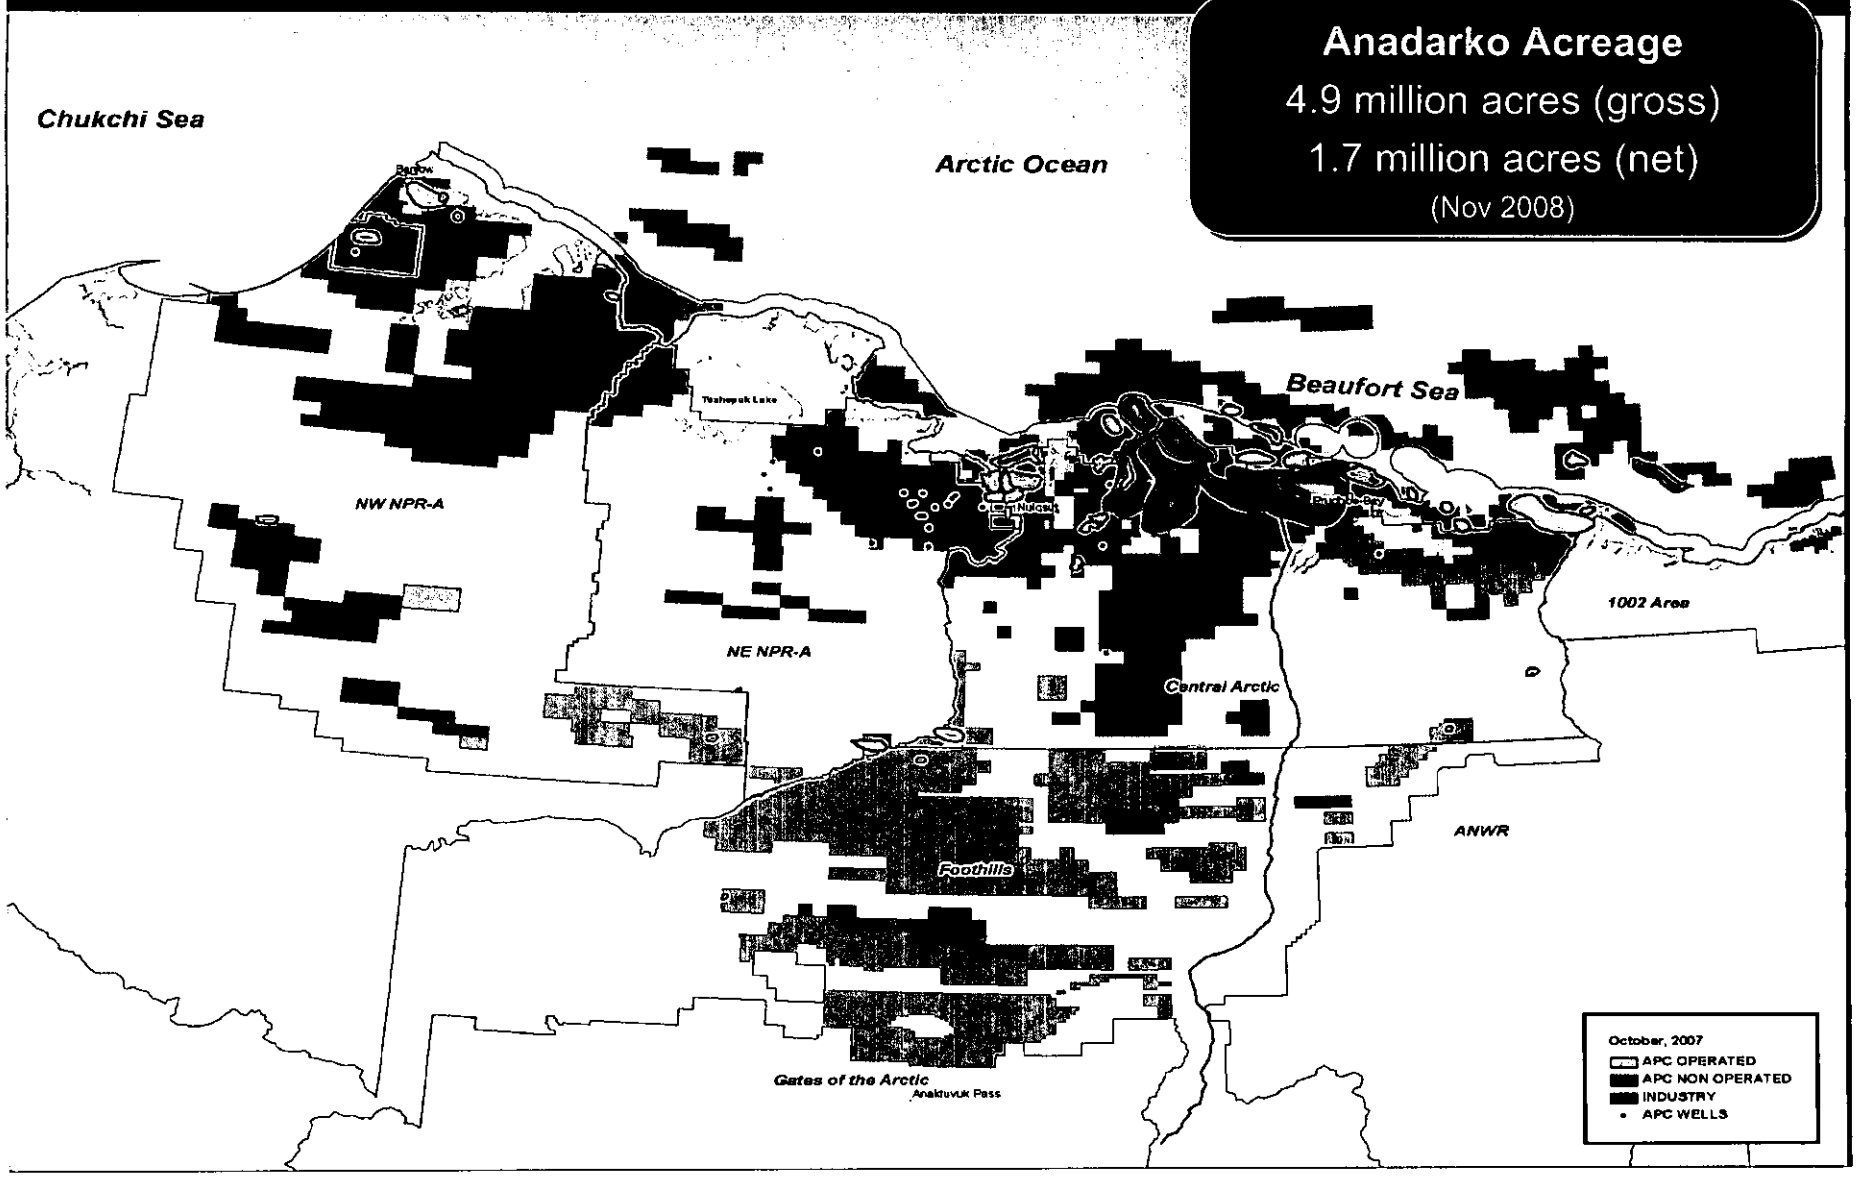
Anadarko Worldwide

- Fairway Positions in 10 Major U.S. Onshore Resource Plays
- Largest Independent Deepwater Gulf of Mexico Producer
- Global Exploration Inventory



ANADARKO

Anadarko Alaska Acreage Position

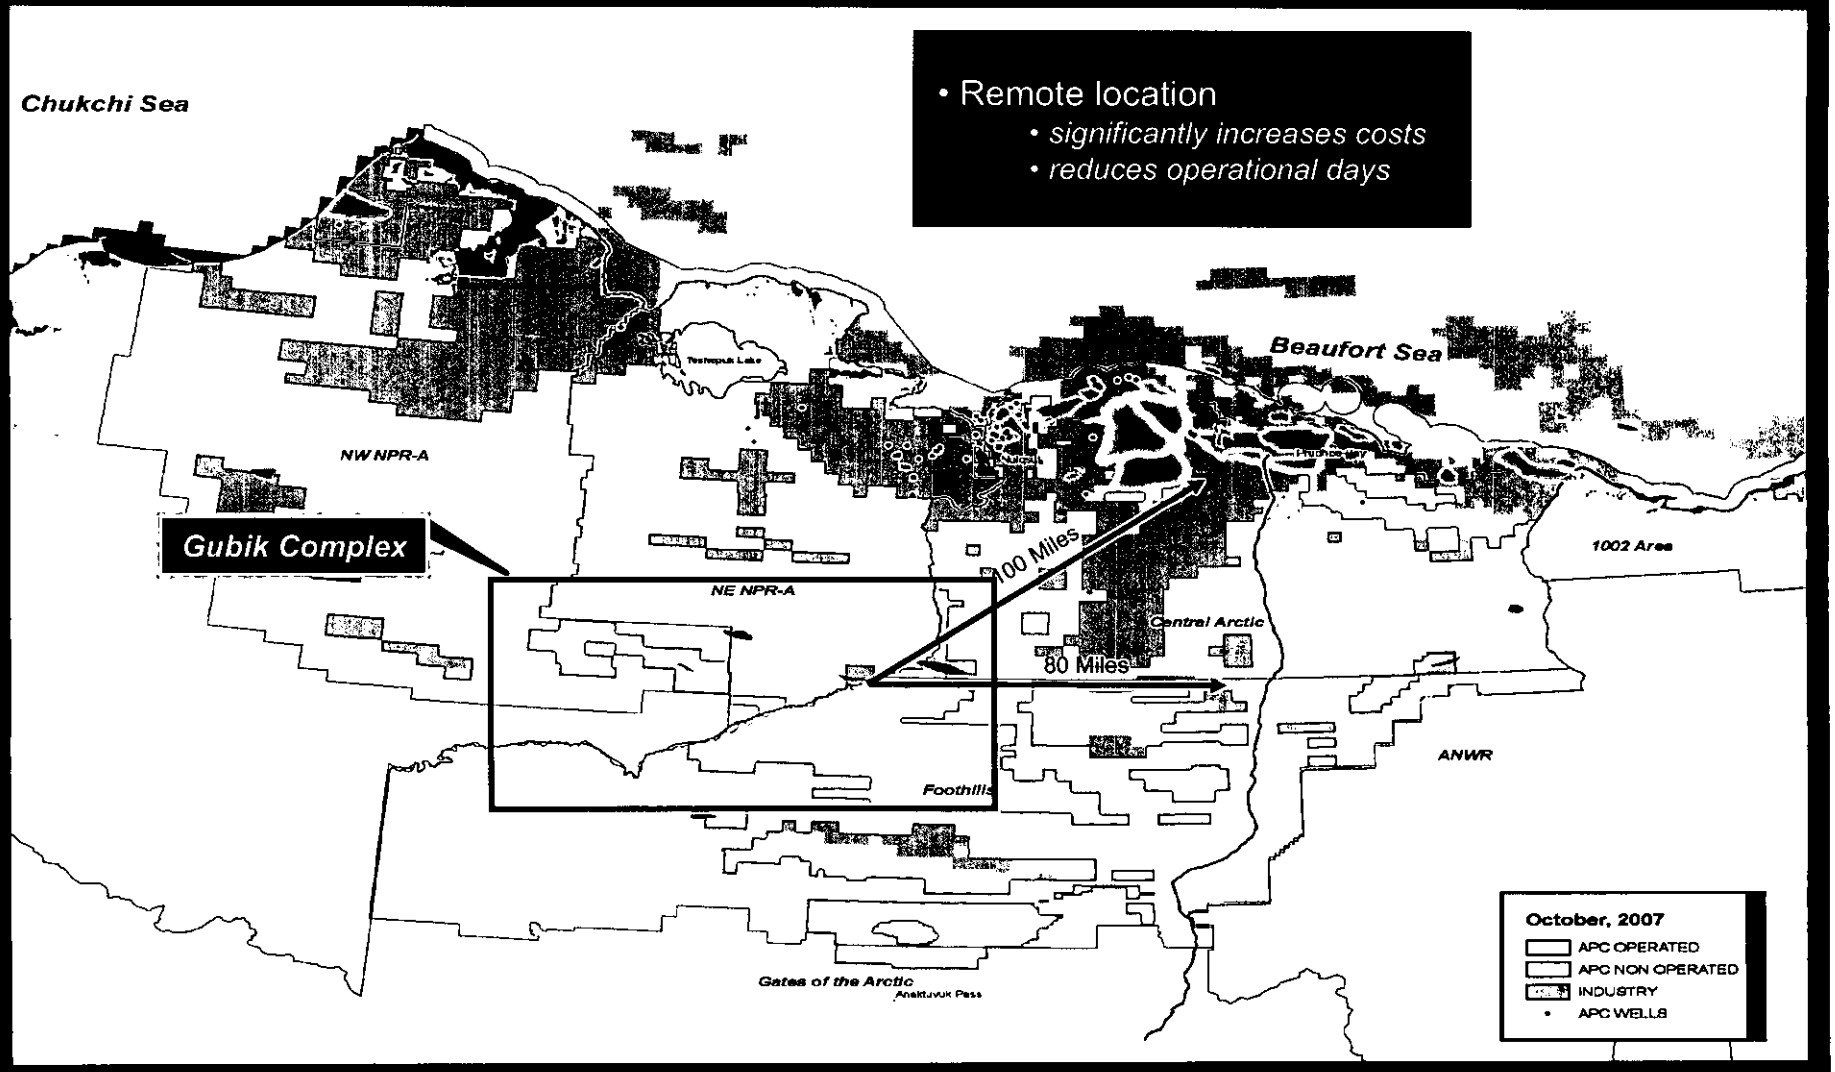


Foothills Gas Exploration Program

- Large acreage position- State, Federal & ASRC leases
  - *Partners: BG Alaska, PetroCanada*
- Gas Prone Area- Multiple previous wells discovered gas while looking for oil (1940's – 1990's)
  - *Gubik & Wolf Creek identified as gas fields*
- Key issues
  - *Volume*
  - *Deliverability*
  - *Costs*
- At least three drill seasons for reasonable understanding of potential (now in season 2)
  - *Dependent on positive results each season*

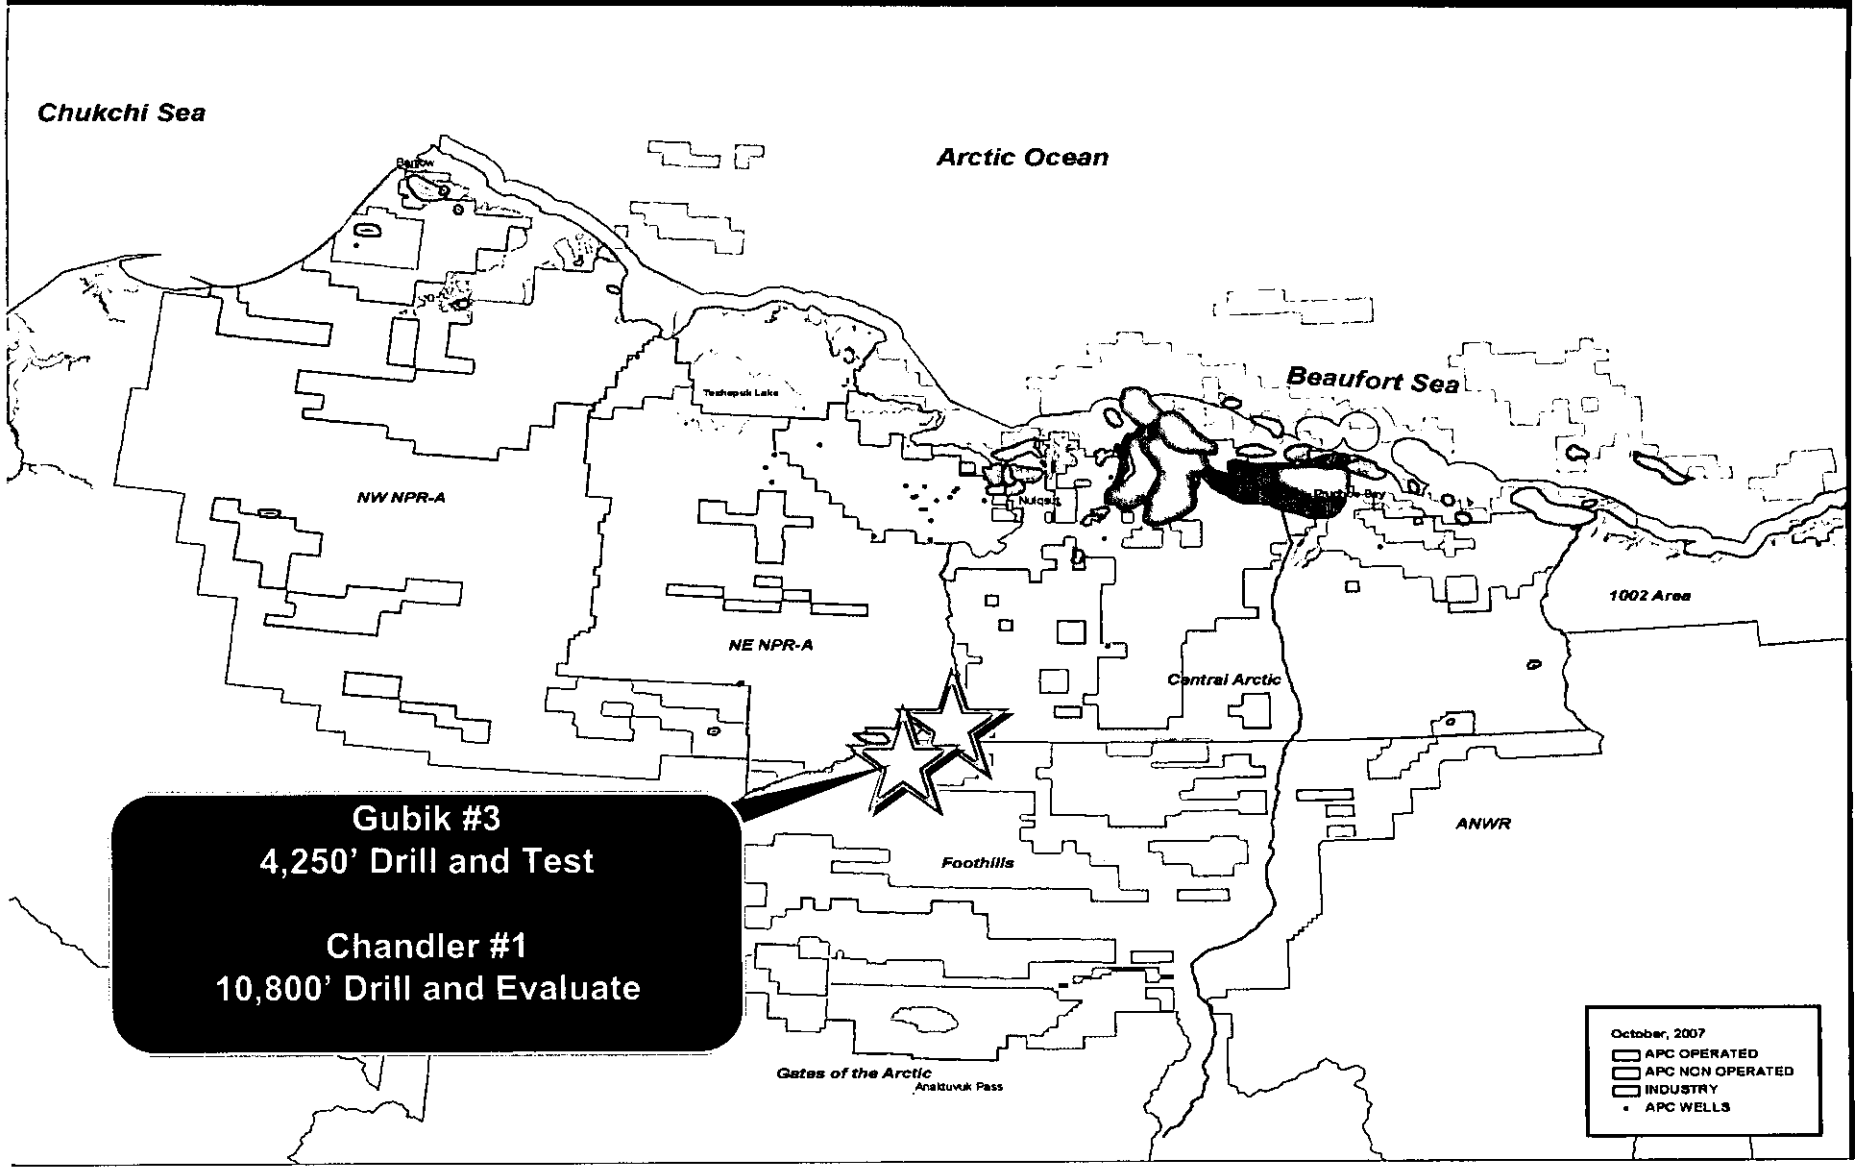
ANADARKO

Gubik Complex Prospect Area



2007/08 Foothills Exploration- Season 1

Anadarko Operated, Partners: PetroCanada & BG Alaska



Foothills Gas Exploration, Season 1, 2007-08

- Goal: Two gas wells using new Nabors rig 105

- Gubik 3 Well
  - *Relatively Shallow (~4,000')*
  - *Drilled, moved rig to Chandler, rigless tested Gubik 3*
  - *Results- multiple gas zones identified & tested*

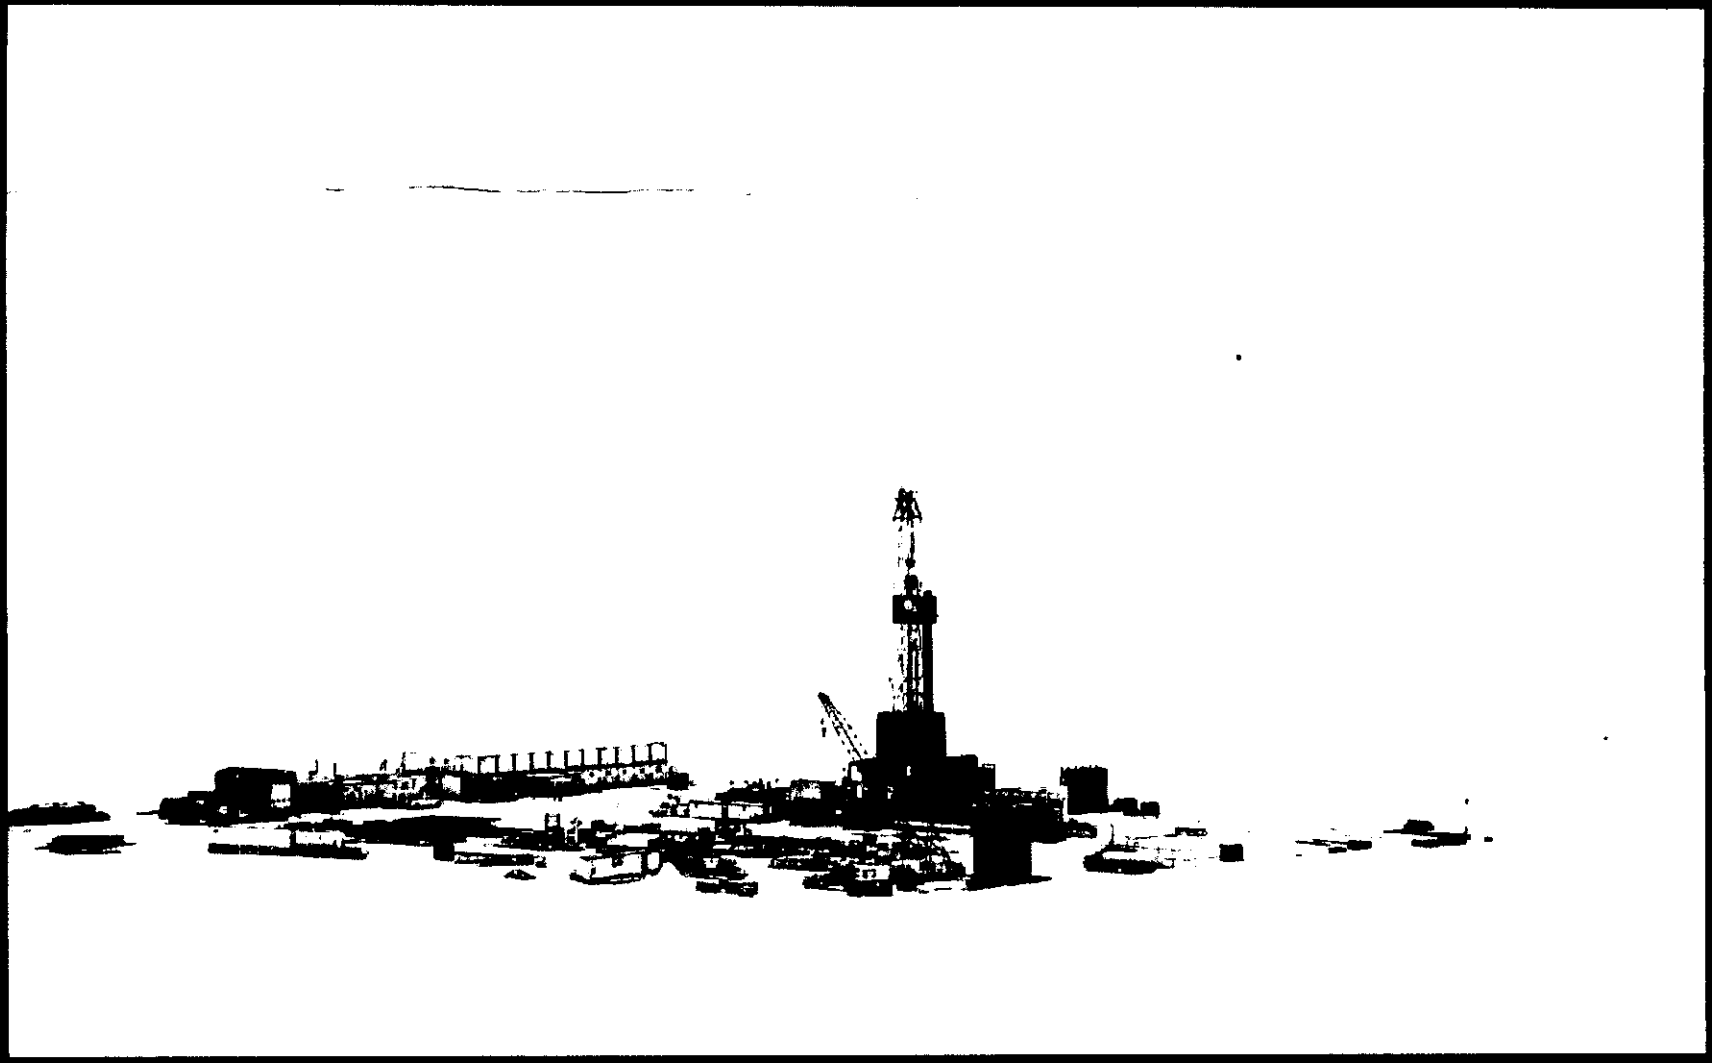
- Chandler 1 Well
  - *Deeper (~10,000')*
  - *Goal: drill & evaluate if time permits*
  - *Drilling suspended @ ~2,000' due to impending tundra closure*
  - *Rig left on insulated ice pad to save time for following season*

- Partners- BG Alaska & PetroCanada

ANADARKO

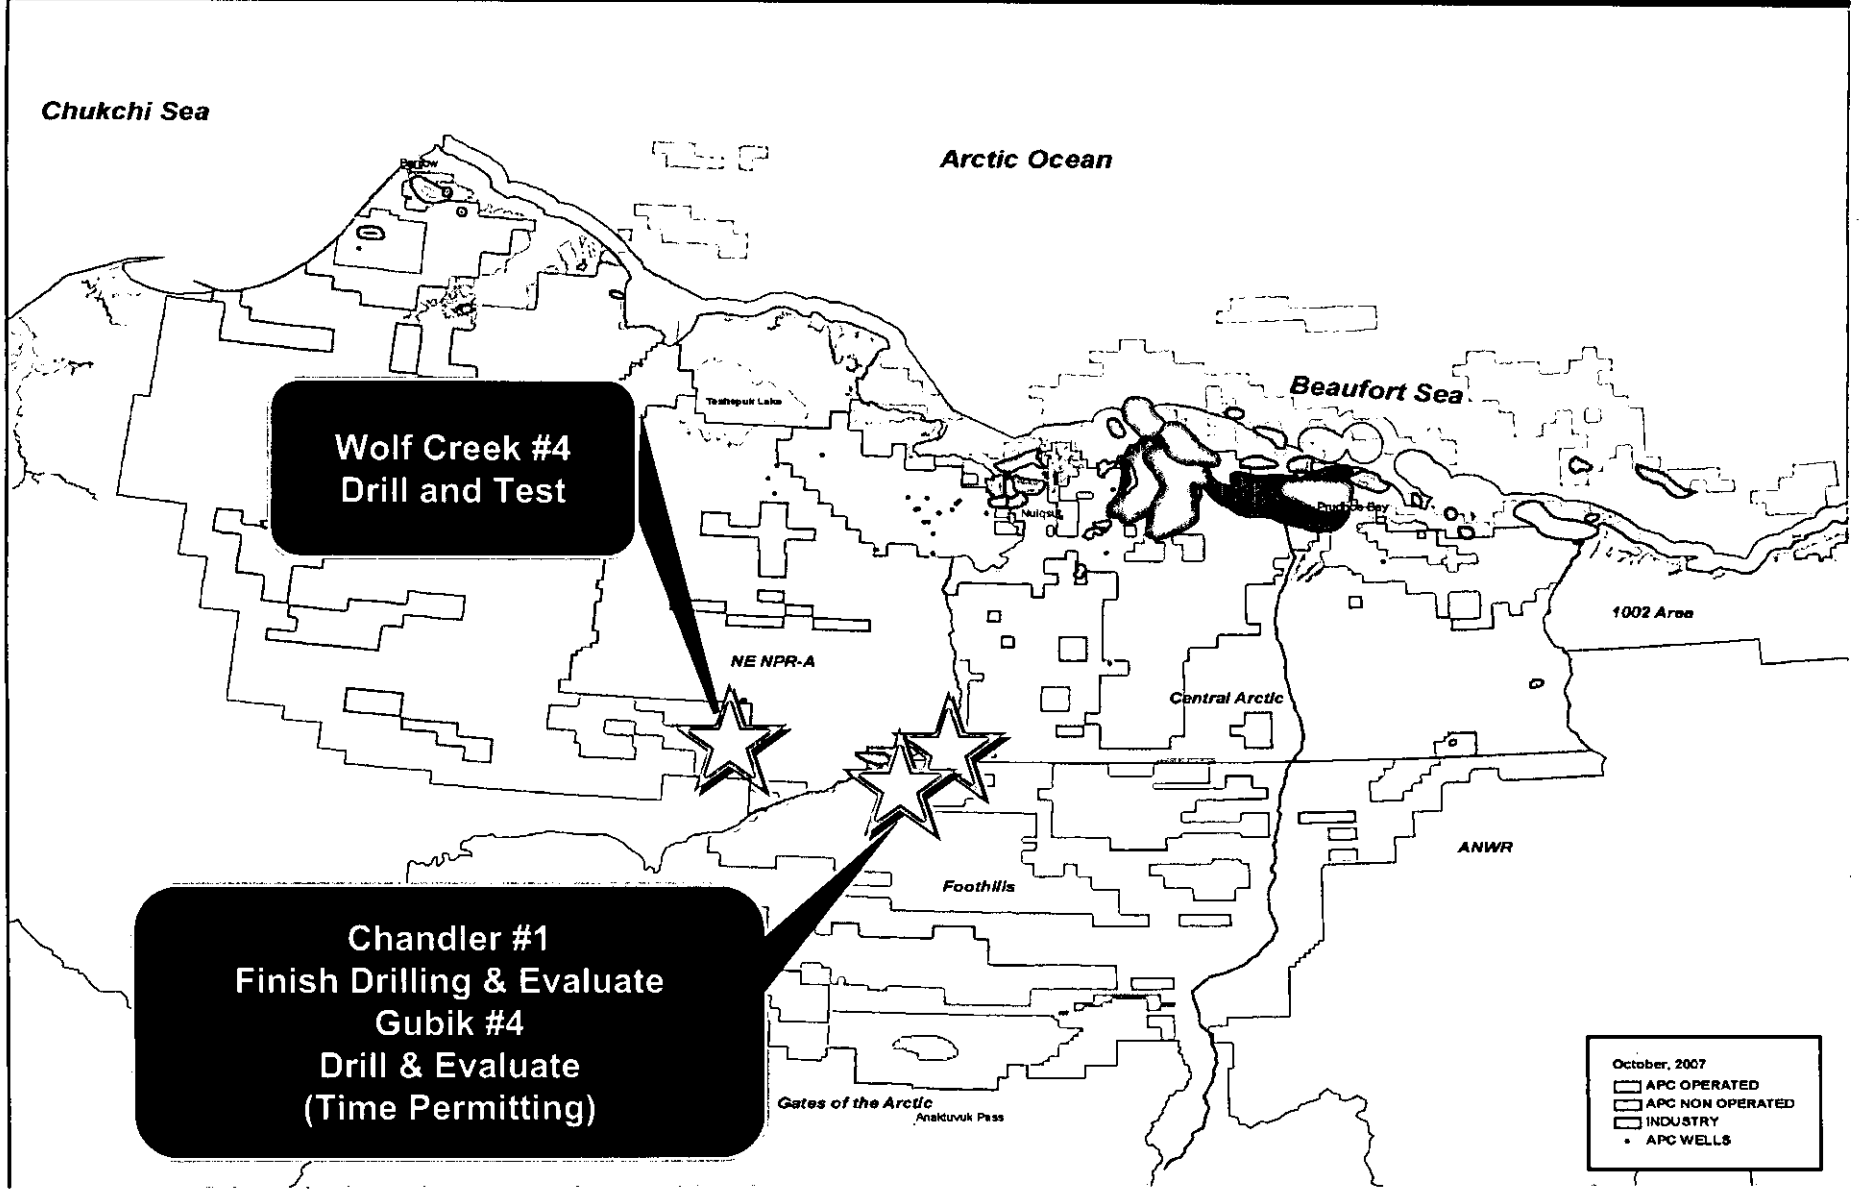
Foothills exploration Winter 2007/08

ANADARKO



2008/09 Foothills Exploration- Season 2

Anadarko Operated, Partners: PetroCanada & BG Alaska

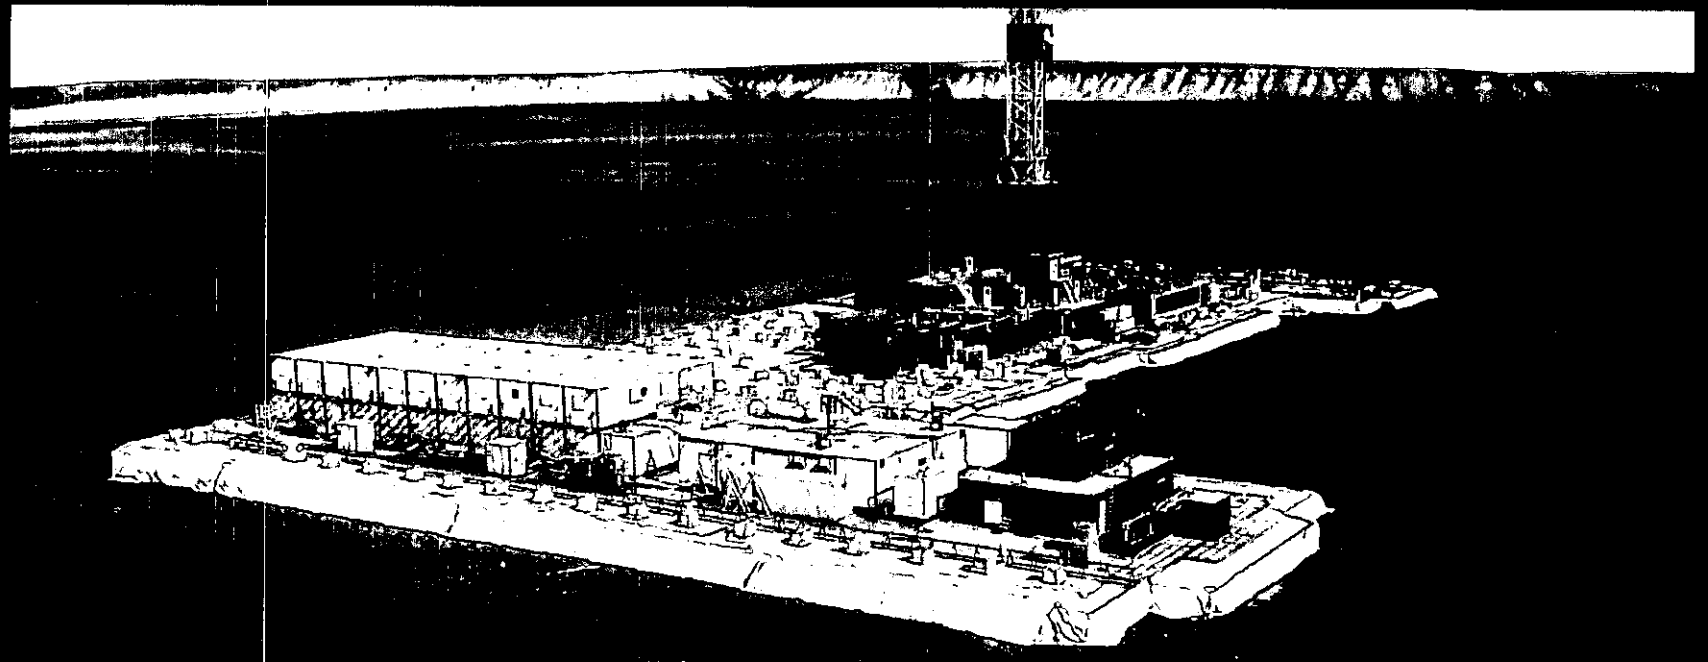


Chandler 1

- Gas Prospect
- Partners: PetroCanada, BG Alaska
- Spud during 2007-08 Season. Operations suspended. Nabors 105 Rig left on insulated pad
- 2008/09, finish drilling (10,000+ feet), log, evaluate (currently drilling)
- After Chandler 1, rig will move to Gubik 4

ANADARKO

Chandler 1, Insulated Ice Pad, Summer 2008



ANADARKO

1530

A N A D A R K O

Gubik 4

- Gas Prospect
- Step out from last year's Gubik 3 well
- Partners: PetroCanada and BG Alaska
- Drill and evaluate (time permitting)
  - *~4,000 feet*
  - *Use Nabors 105 Rig once complete Chandler 1*
- Possible insulated ice pad

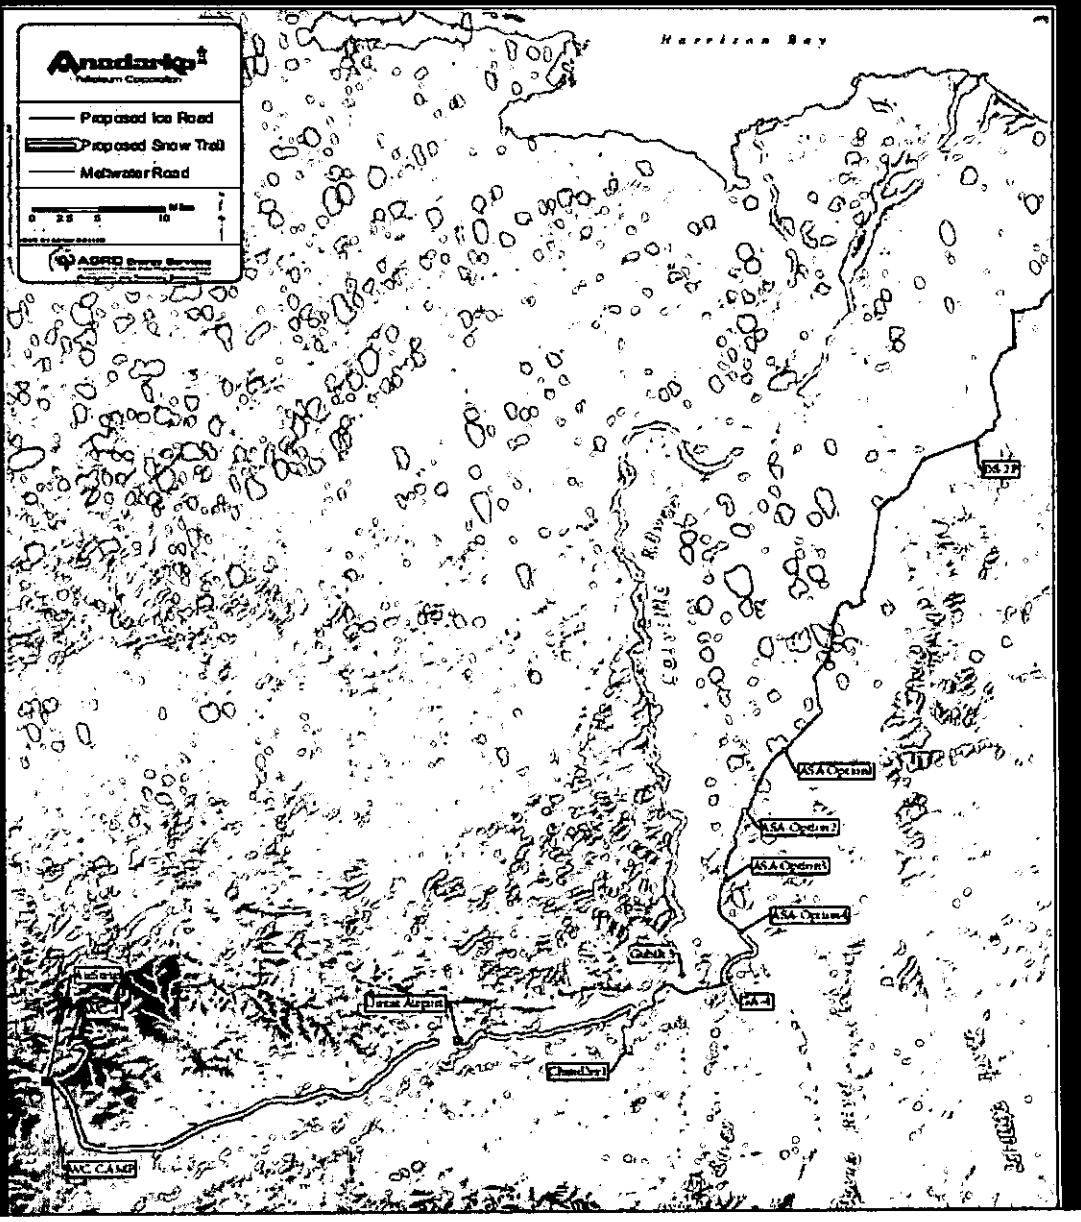
Wolf Creek 4

- Gas Prospect
- Entirely in NPR-A
- Partners: PetroCanada and BG Alaska
- Will drill, evaluate, test
  - *Using second rig, Arctic Fox*
  - *~ 4,000 feet*
- Mobilization with Herc aircraft and overland from DS 2P & Umiat
- Snow road from Umiat to Wolf Creek area (~35 miles). Ice road from Wolf Creek staging to drill site (~ 5 miles)

ANADARKO

Mobilization

- 80 + miles of ice roads
- 80 + miles of packed snow roads
- 6 + ice pads



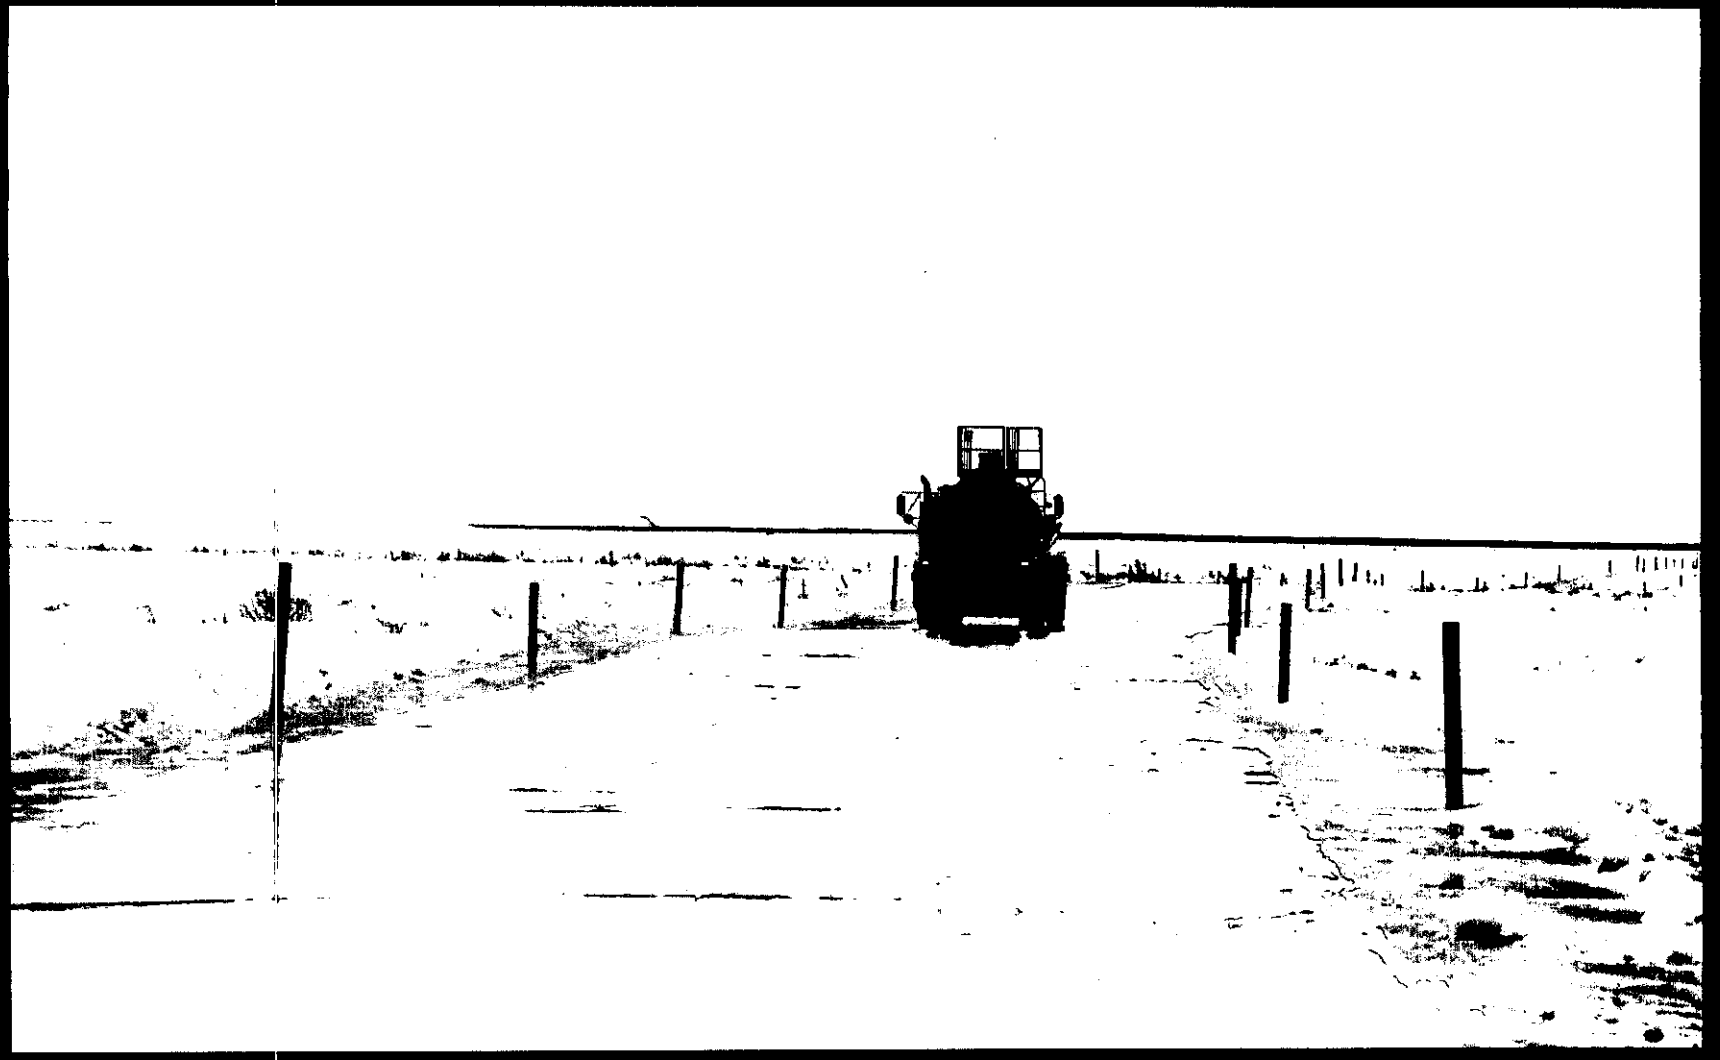
ANADARKO

Foothills Snow Road Winter 2007/08

ANADARKO

Foothills Ice Road 2007/08

ANADARKO



Potential Gubik Area Development

- Depends on positive results from each of 3 seasons
  - *Volume, deliverability, costs*
  - *Likely multiple fields tied together to reach necessary volumes*
- First Gas
  - *Earliest 2016, unless super results and/or economic improvements*
    - Road could expedite development & improve economics
    - Pipeline tariffs lowest with greater volumes
      - Greater volumes require more appraisal time
- Pipeline options
  - *TransCanada/AGIA; Denali*
    - Spur Line- ANGDA
    - We won't be ready for 2010 open season (expansions important)
  - *Enstar Bullet Line*
    - Potential in-service before large line
  - *Positive movement on pipelines encourages exploration*
  - *Pipeline tariffs affect economics*
  - *In-state market attractive*
    - Favorable tax treatment

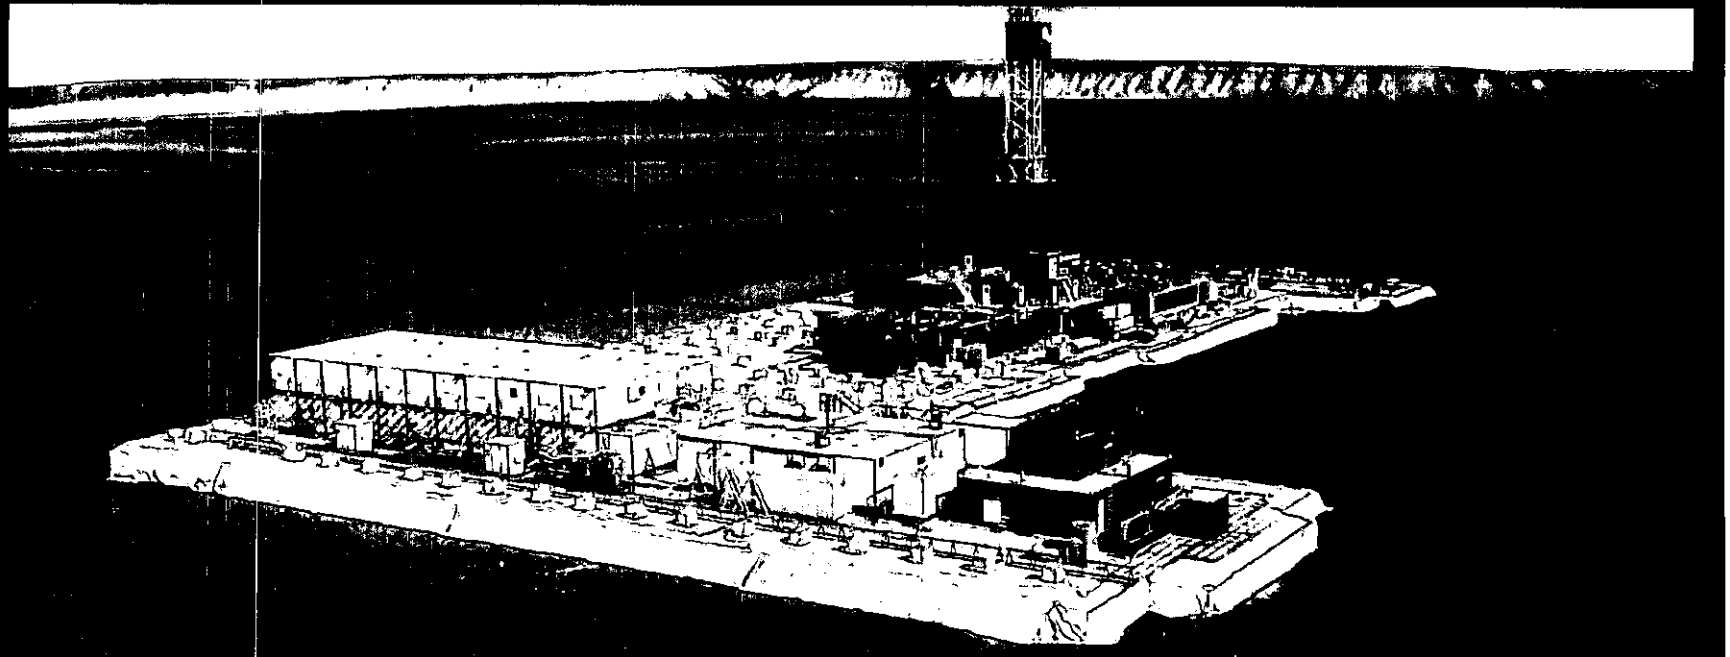
- Spud during 2007-08 Season. Operations suspended. Nabors 105 Rig left on insulated pad
- 2008/09, finish drilling (10,000+ feet), log, evaluate (currently drilling)
- After Chandler 1, rig will move to Gubik 4

ANADARKO

Chandler 1, Insulated Ice Pad, Summer 2008



ANADARKO

Gubik 4

- Gas Prospect
- Step out from last year's Gubik 3 well
- Partners: PetroCanada and BG Alaska
- Drill and evaluate (time permitting)
  - *~4,000 feet*
  - *Use Nabors 105 Rig once complete Chandler 1*
- Possible insulated ice pad

ANADARKO

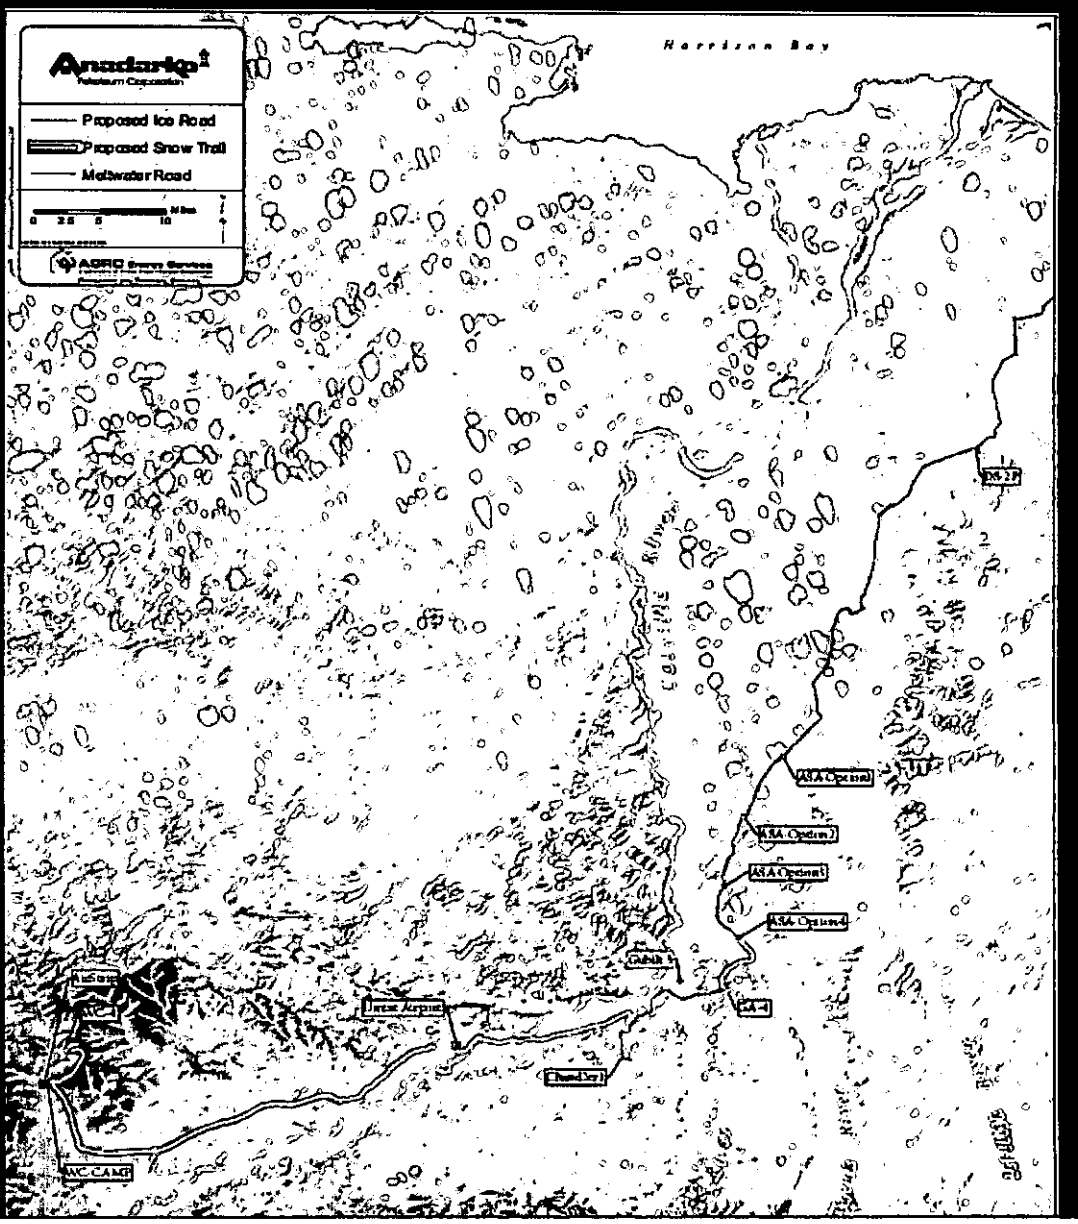
Wolf Creek 4

- Gas Prospect
- Entirely in NPR-A
- Partners: PetroCanada and BG Alaska
- Will drill, evaluate, test
  - *Using second rig, Arctic Fox*
  - *~ 4,000 feet*
- Mobilization with Herc aircraft and overland from DS 2P & Umiat
- Snow road from Umiat to Wolf Creek area (~35 miles). Ice road from Wolf Creek staging to drill site (~ 5 miles)

ANADARKO

Mobilization

- 80 + miles of ice roads
- 80 + miles of packed snow roads
- 6 + ice pads



ANADARKO

Foothills Snow Road Winter 2007/08

ANADARKO

2/9/09 COOK INLET GAS EXPLORA-TION & DEV.

Division of Oil and Gas
Senate Resources Committee

Kevin R. Banks
Director
February 2009

Cook Inlet 2008

- Administered 410 oil and gas leases (Jan. 1, 2009)
- Held Areawide Lease Sale
  - 23 bids on 18 tracts; result 9 active leases
- Managed 25 oil and gas units with 36 Participating Areas * (exploration and production)

*end of calendar year 2008

Cook Inlet Approvals issued in 2008

- Exploration
  - 3 for seismic programs in Cook Inlet.
- Development
  - 15 for Cook Inlet.

3

Cook Inlet Oil & Gas Activity 2008

- Beluga River Unit – ConocoPhillips (Gas)
  - Drilled two wells, BRU 211-26, BRU 243-34.
- Deep Creek Unit (Happy Valley) – Chevron (Gas)
  - Completed Happy Valley B-13. Beluga and Tyonek objectives.
- Granite Point– Chevron (Oil and Gas)
  - Drilled two wells, GPS 18742 32RD2, GPS 18742 24RD.
- Kasilof Unit – Marathon (Gas)
  - Two miles offshore; Extended reach drilling (17,000 ft).
  - Kasilof S #1 well turned on for winter production only, Tyonek Formation.
- Kenai Unit – Marathon (Gas)
  - Drilled 5 wells, KBU 42-07RD, KBU 41-18X, KBU 14-8, KDU 9, KU 22-6X.
- Nicolai Creek Unit – Aurora Gas (Gas)
  - Two wells are permitted, Nicolai Creek #10 and Nicolai Creek #11.

4

Cook Inlet Oil & Gas Activity 2008

- Nikolaevsk Unit – Chevron (Gas)
  - Continued evaluation for delineation and development.
  - 1st POD work commitment – drill or cause a well to be drilled by March 31, 2009 in Red Prospect.
- Ninilchik Unit – Marathon (Gas)
  - Drilled 2 wells, Paxton #2, GO #7. Tyonek Formation.
  - Currently drilling SD #6.
  - Chevron is 40% working interest owner in unit.
- North Alexander – Escopeta (Gas)
  - Permitted one exploration well, Alexander #1.
- North Cook Inlet– ConocoPhillips (Gas)
  - Drilled 3 gas wells, NCI A-14, NCI A-15, NCI A-16
- North Fork Unit – Armstrong (Gas)
  - Drilled one well, North Fork 34-26; tested gas in the Tyonek.
  - Met with Enstar to discuss possible pipeline and gas markets

5

Cook Inlet Oil & Gas Activity 2008

- Trading Bay Unit/ McArthur River Field– Chevron (Oil & Gas)
  - Drilled and completed two wells TBU M-17, TBU K-12RD2.
  - TBU M-17 targeted gas in the Tyonek, and TBU K-12RD2 targeted oil and gas in Hemlock.
- West McArthur River Unit– Pac Energy (Oil & Gas)
  - Continued evaluation of reprocessed 3D seismic data to support additional gas wells.
  - Pilot water-flood project to determine potential for additional recovery from the Hemlock reservoir (oil) under consideration.
- Additional Activity – (Oil & Gas)
  - Fowler Oil and Gas permitted a coal bed methane well at corner of Trunk Road & Bogard Road in Wasilla on fee acreage.
  - Corsair Unit Plan of Exploration in default effective December 1, 2008.
  - Kitchen Unit Plan of Exploration requires drilling by December 31, 2008.
- Activity in Units managed by Federal Government or CIRI
  - Beaver Creek Unit (Marathon): 1 well drilled for gas, Beaver Creek Unit 19.
  - Lone Creek Unit (Aurora): currently drilling for gas, Lone Creek 4.
  - Moquawkie Unit (Aurora): 1 well permitted for gas, Moquawkie 4.
  - Swanson River Unit (Chevron): currently drilling for gas, SRU 211-33.
  - Wolf Lake Unit (Marathon): 1 well permitted for gas, Wolf Lake 3.

6

Projects for 2009

- Gas Storage Expansion Plans
- Exploration and Development
- Lease Sales
- Coordination with Federal Government

7

Exploration & Development Activities

- ConocoPhillips completing two additional wells from the Tyonek platform in Cook Inlet.

8

Lease Sales

- Just issued Final Best Interest Finding for Cook Inlet
- Areawide Sale tentatively scheduled for May 2009

9

Coordination with Federal Government

- Encouraging exploration and development of federal lands.
- Continue partnering with Minerals Management Service and Bureau of Land Management in managing and oversight of jointly-owned lands (Beluga River and Cosmopolitan Units).

10

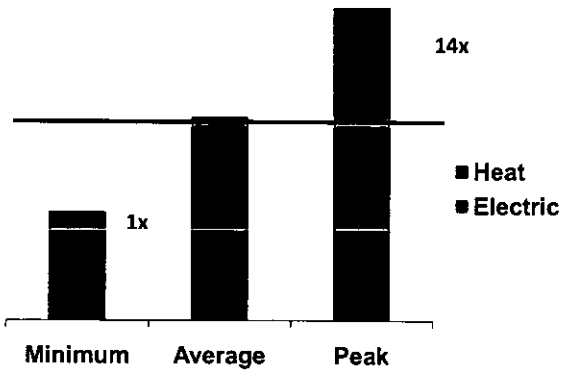
Gas Storage Expansion Plans

- Continue to develop CI storage capacity
- Engaging producers and utilities on storage
- Actively working one potential storage lease
- Potential for storage in winter 09/10

11

Why Store Natural Gas?

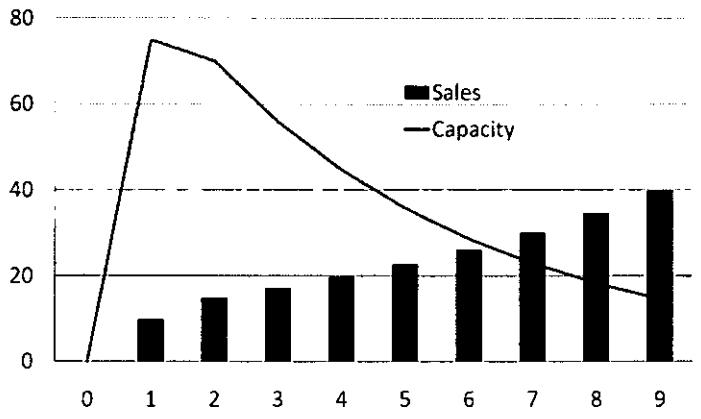
Cook Inlet Daily Gas Demand



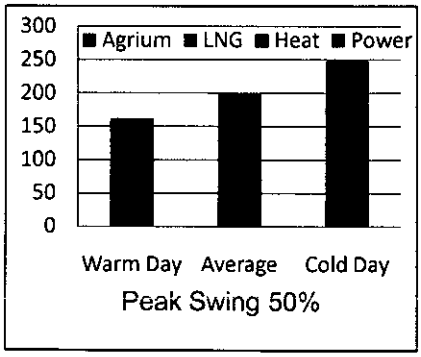
Deliverability

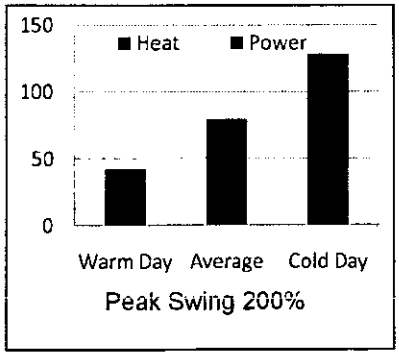
Well Deliverability
Pipeline Capacity
Compression
Interconnects
LNG, Agrium
Storage

Production Constrained by Market



Seasonal Deliverability





Kenai LNG Export Agreement

- COP – 2 wells in beluga
- MRO – 2 wells in Ninilchik, 3 wells in Kenai
- Catalog well and seismic data for sale
- RFP to buy gas for LNG plant
- Enstar contract reasonably approvable by RCA

- Fill unmet need of Chugach 5.2 BCF in 2010 through good faith negotiation approvable by RCA

Alaska Gas Exploration Potential In The Cook Inlet

Alaska Division of Geological & Geophysical Surveys

Bob Swenson
State Geologist
Monday, February 9, 2009

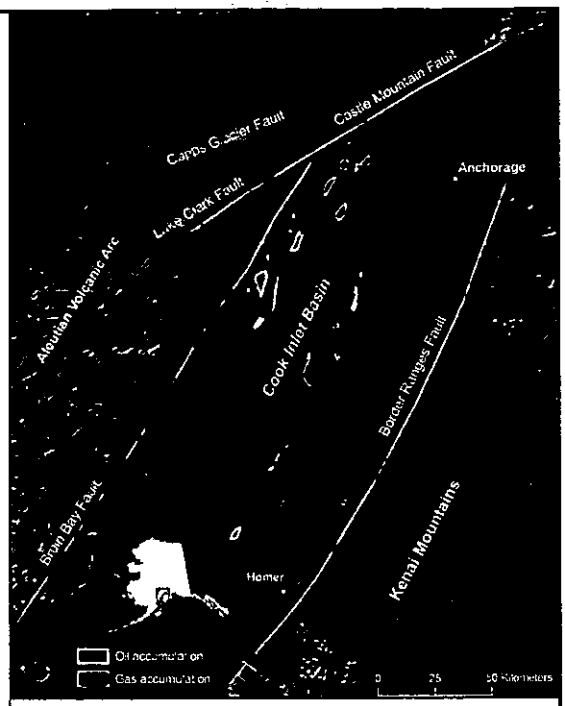


Figure 1

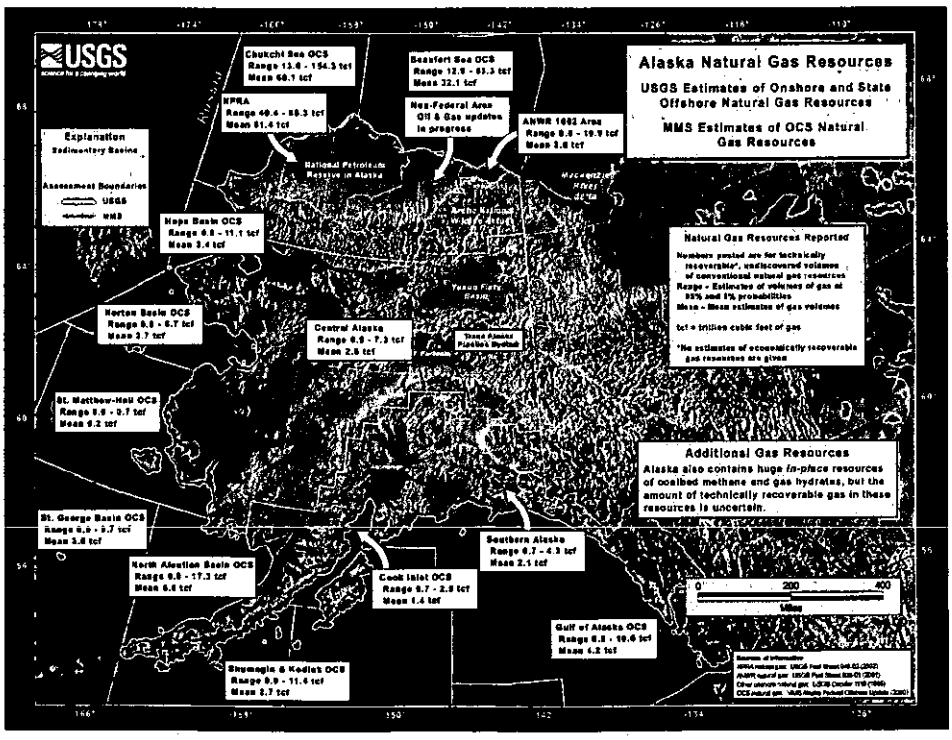
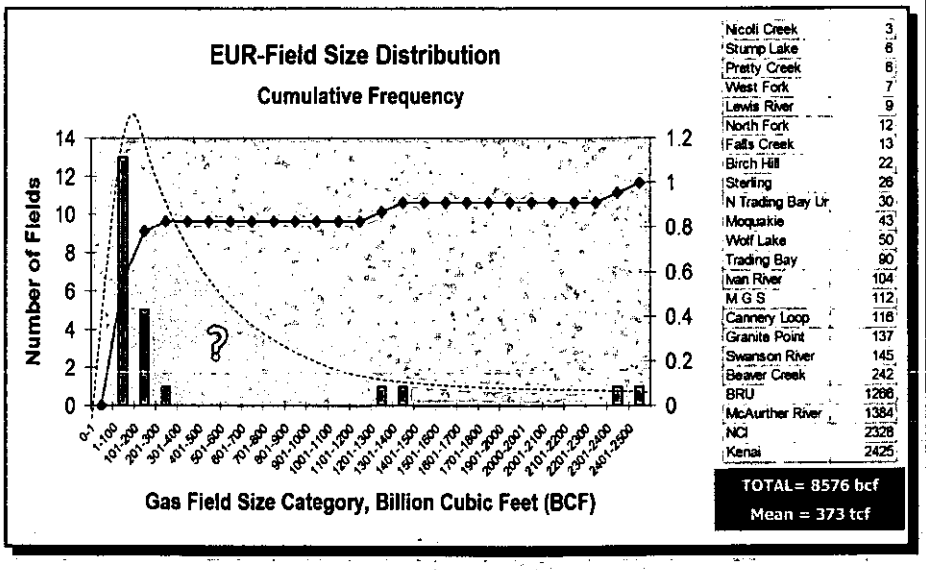


1561

Cook Inlet Gas Exploration Statistics

- 85% of gas discovered early in exploration cycle while drilling for oil
- Only structural traps had been explored for or developed – stratagraphic trap potential essentially untapped
- Nearly one in ten fields >2 tcf
- 4 largest fields have 86% of reserves
- Field-size distribution lacks discoveries in 300-1300 bcf range → yet to be discovered?

Gas Field Size Distribution – Cook Inlet



Nicoli Creek	3
Stump Lake	6
Pretty Creek	6
West Fork	7
Lewis River	9
North Fork	12
Falls Creek	13
Birch Hill	22
Sterling	26
N Trading Bay Ur	30
Moquakie	43
Wolf Lake	50
Trading Bay	90
Ivan River	104
M G S	112
Cannery Loop	116
Granite Point	137
Swanson River	145
Beaver Creek	242
BRU	1266
McArthur River	1384
NCI	2328
Kenai	2425

TOTAL = 8576 bcf
Mean = 373 tcf

Take Home Points

- Minimal focused exploration for natural gas in the Cook Inlet until recent years
- Oil and Gas exploration is inherently risky, with a low chance of economic success with long lead time
- Difficult data acquisition with thick coals and low velocity surface
- The best chance of success is achieved when numerous geologic concepts are tested, which requires access to entire sedimentary basin, numerous exploration wells
- Market certainty, modern high resolution geologic data, and non-volatile pricing are key to meeting economic risk thresholds
- In the Cook Inlet, most of the "easy" (inexpensive) gas has been found and delineated

Is there more gas to be found?

- Yes

Where will it be found?

- In existing fields
- In new exploration play types

What are the hurdles?

- Land access over all basin
- Expensive data gathering and drilling costs
- Complicated limited market

What is the State Geological Survey Doing to Help Facilitate?

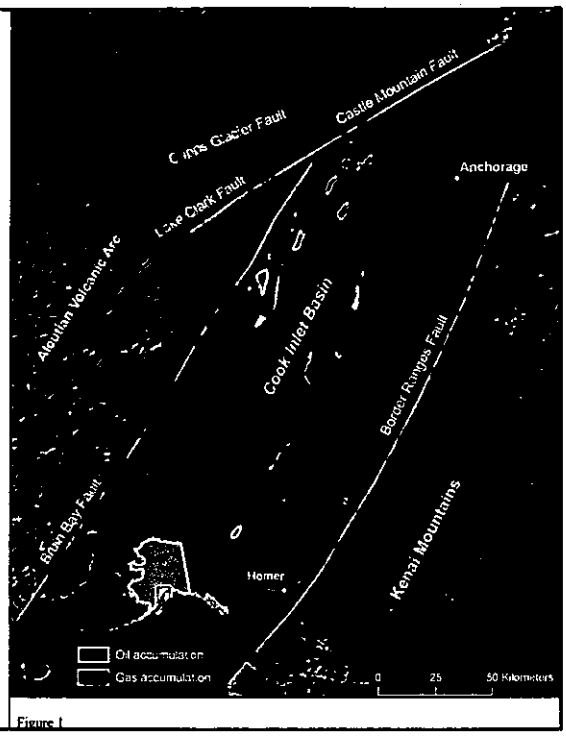

Figure 1

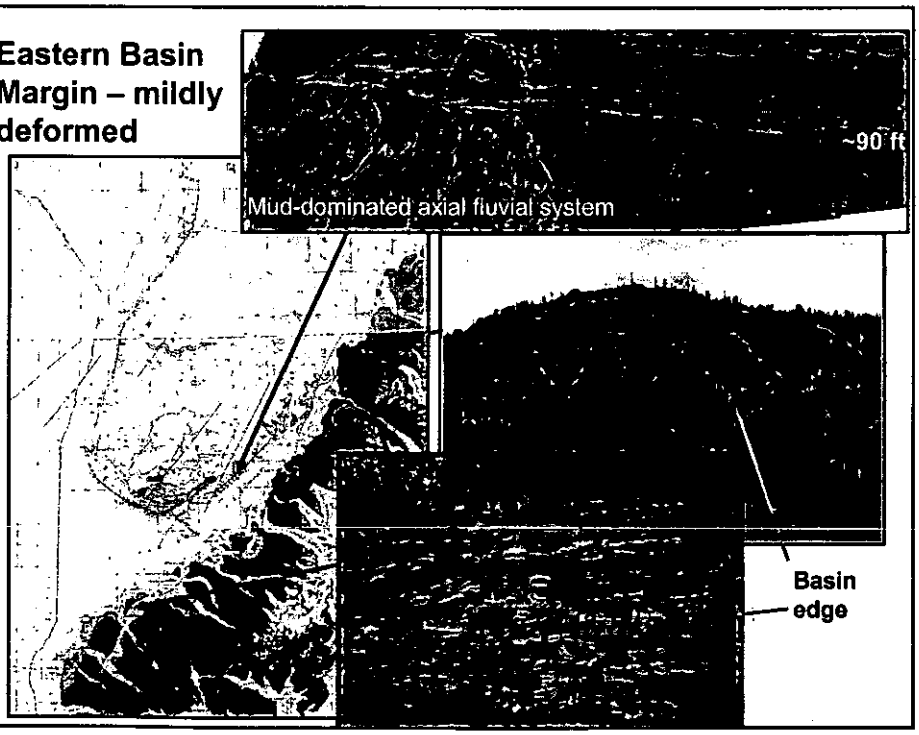
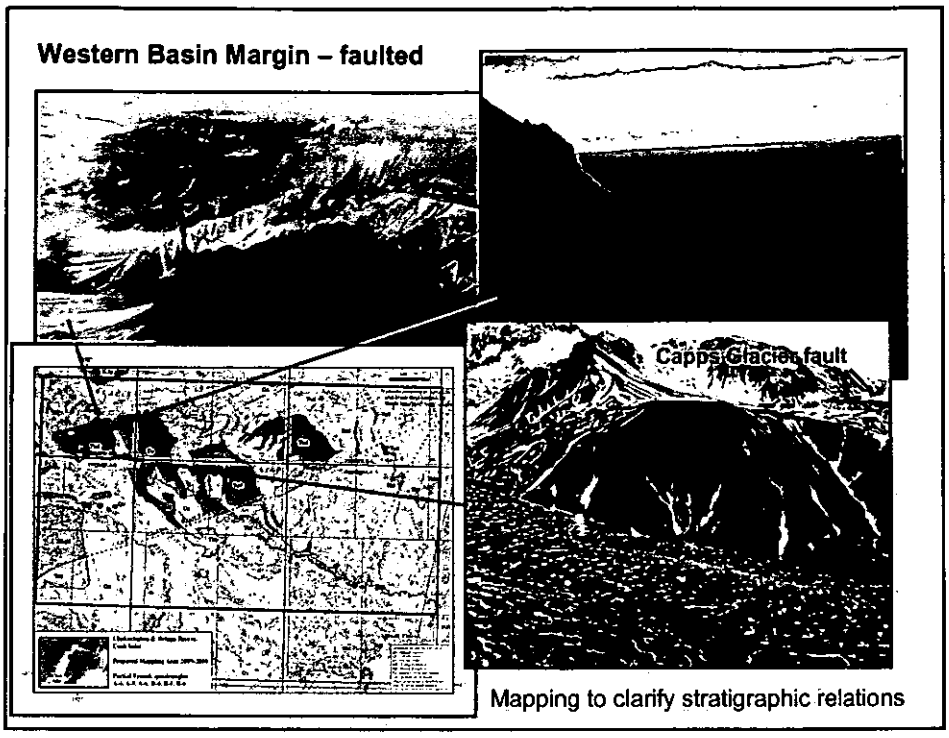
Eastern Basin Margin – mildly deformed





Cook Inlet Basin Analysis Program Goals

- Reconstruct depositional systems in Mesozoic and Tertiary strata – priority on gas-bearing sands in upper Cook Inlet
- Characterize sand body geometries
- Assess reservoir quality of sands and sealing capacity of mudstones
- Determine controls on tight gas sands and factors controlling gas producibility
- Evaluate Stratigraphic trap potential and methods for recognition using subsurface datasets
- Timely release of products in public domain to catalyze exploration investment
- Funding from SOA and industry sources
- **Work with USGS to provide realistic resource estimates**

Summary

- Of the 8+ TCF of gas reserves found, nearly all were discovered while looking for oil on big structural plays
- Because of historic over-supply and limited market, there has been minimal focused exploration for natural gas in the Cook Inlet
- Oil and Gas exploration is inherently risky, with a low chance of economic success
- The best chance of success is achieved when numerous geologic concepts are tested
- Market capacity & certainty, modern high resolution geologic data, and non-volatile pricing are key to meeting economic risk thresholds
- In the Cook Inlet, most of the "easy" (inexpensive) gas has been found and delineated

1574

2/11/09 INSTATE USE OF COOK INLET GAS

1576

Natural Gas Use
Chugach Electric Association

Bradley Evans, Chugach CEO

Senate Resources Committee

February 11, 2009

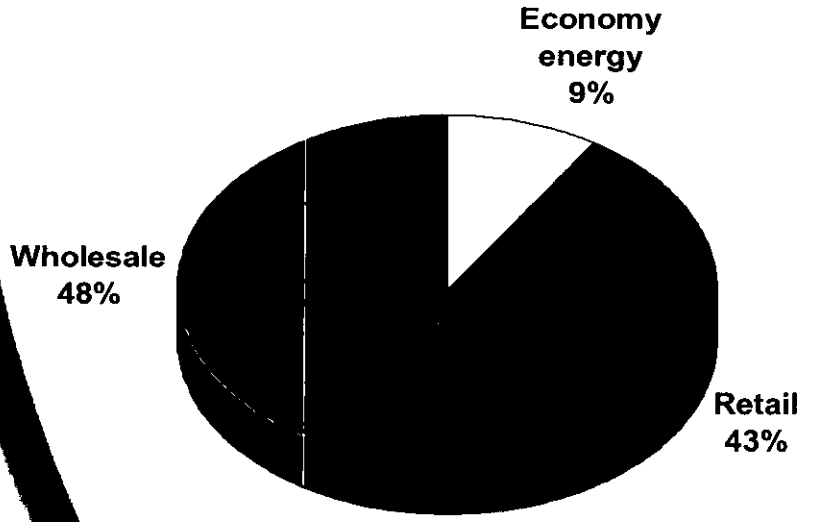
Chugach Overview

- **Alaska's largest electric utility**
- **Vertically integrated**
  - Generation, transmission, distribution
- **Retail, wholesale & economy energy sales**
  - 80,682 metered retail locations
  - Wholesale contracts with Matanuska Electric Association, Homer Electric Association, City of Seward
  - Economy energy sales to Golden Valley

2008 Power Sales

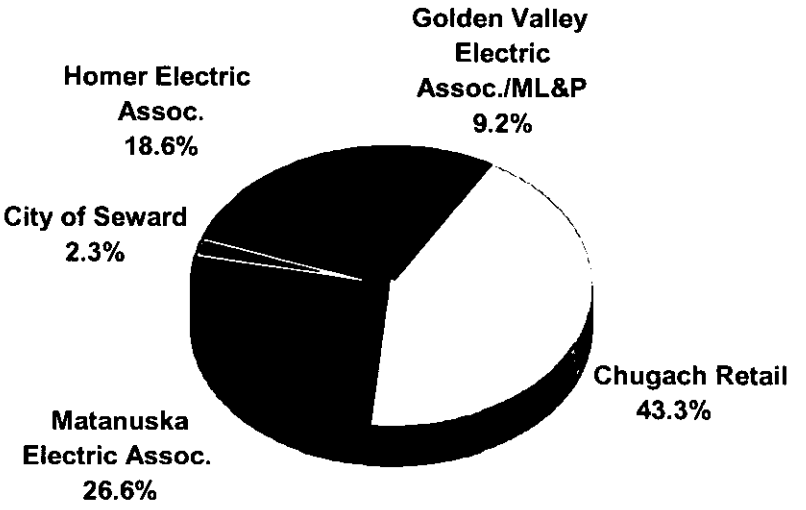
By Kilowatt-hours

Total 2,785,705,017 kwh

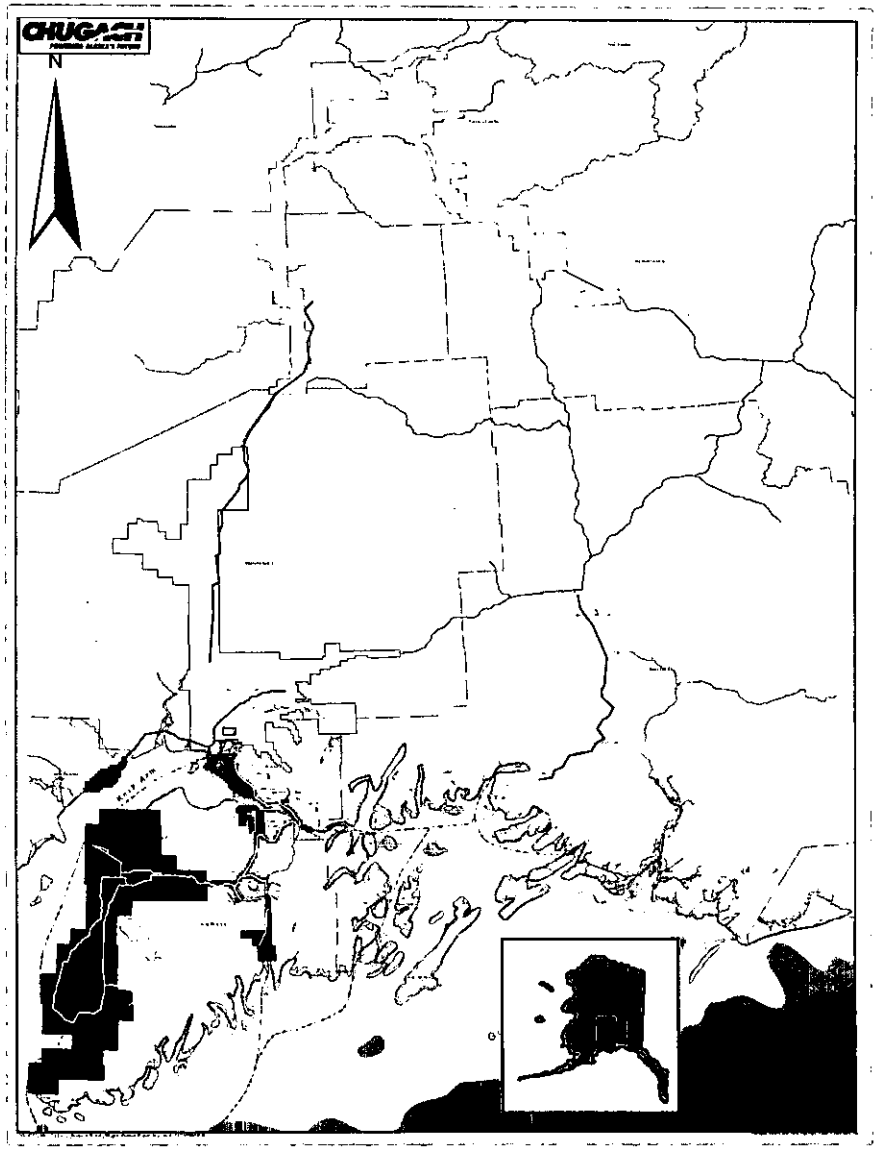


By Operating revenues

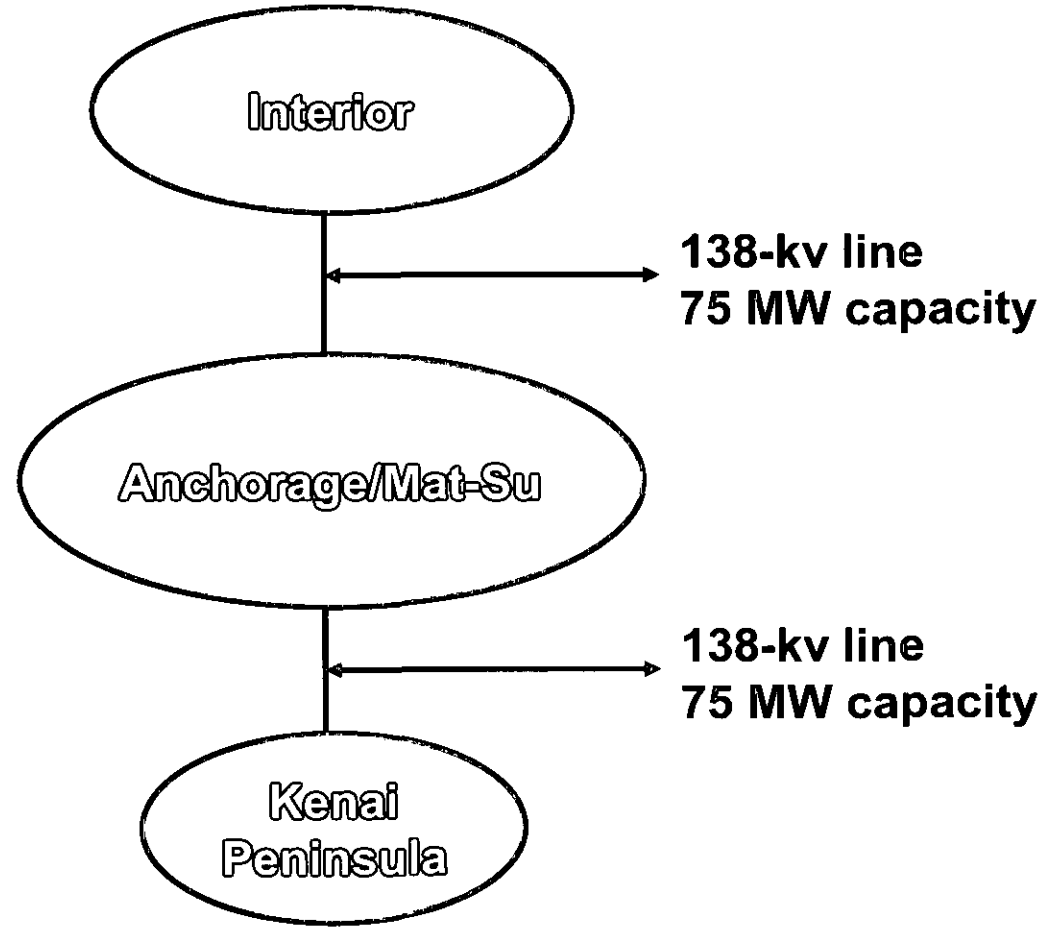
Total $288,292,112



The Railbelt Grid



The Railbelt Grid



Generation

- **Railbelt**
  - 1,550 MW of installed capacity
  - Annual peak load 850-900 MW
- **Chugach**
  - 530 MW installed capacity (Chugach-owned)
  - 629 MW total capacity including Bradley Lake & Nikiski

Chugach Fuel Mix

- **Today**
  - 90% natural gas-fired
  - 10% hydro
- **Long-term vision**
  - Reduce dependence on fossil fuels
  - 90/10 to 10/90

Current Fuel Supply

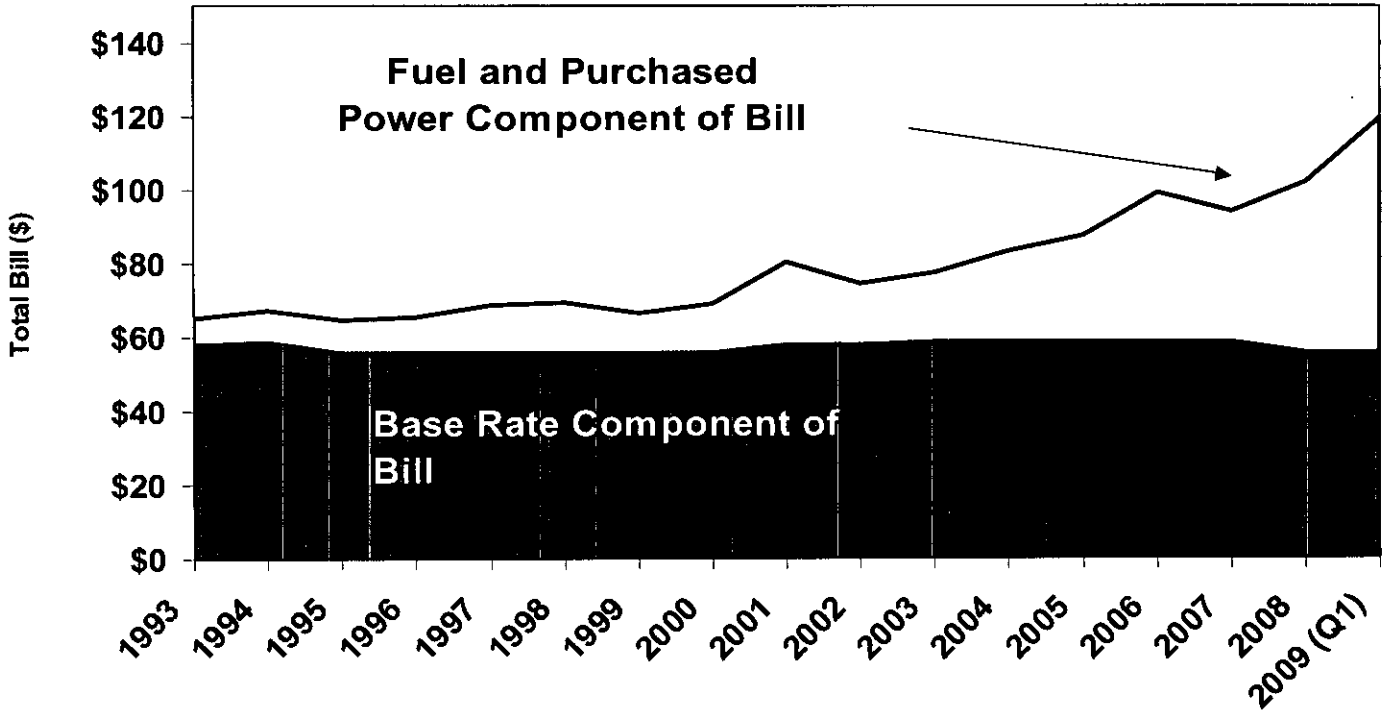
- **4 natural gas suppliers**
  - Marathon, ConocoPhillips, Chevron, ML&P
- **4 contracts**
  - Prices indexed to three commodities
  - Price changes quarterly based upon commodity changes over a rolling 12-month period
- **Volumetric contracts**
  - Volumes consumed by 2010 and 2011

Chugach Natural Gas Use

- **Annual consumption**
  - 30.8 BCF in 2008
- **2008 Natural gas purchases**
  - $137.9 million (Chugach turbines)
  - $20.3 million (Nikiski unit)
- **Current average price**
  - $6.67 per MCF in 1st Q 2009

Monthly Residential Bill Total

(based on 700 kwh)



The price of gas is the leading cause of higher monthly bills

Current Chugach Activities

- **Gas contracts**
  - Negotiations underway for volumes beyond current contracts
- **New replacement power plant**
  - 183 MW, gas-fired, efficient, combined cycle Southcentral Power Project jointly owned
- **Conservation & renewables**
- **Supporting Railbelt Unified Power Provider**
  - Plan, finance, construct, operate G&T projects
  - Vehicle to develop major renewable projects

Meeting Customer Needs

- **Conservation**
- **Renewables**
- **Negotiating new gas contracts**
- **Create UPP**

- **Electric**
  - Efficiency (SPP)
  - Unified transmission
  - Economic renewables
  - Dual fuel
- **Fuel**
  - Exploration
  - Bullet/Spur line
  - LNG imports
  - Storage

- **Major renewable project(s) developed by UPP**

2009 → **2020 & beyond**

Current Natural Gas Situation

- **Natural gas is important to regional economy**
- **Moving from an era of abundance to limited supply raises new issues**
  - Security of supply
  - Affordability
- **Many organizations are involved**
  - Chugach, Enstar, the producers, DNR, DOR
  - Parties have different priorities
  - Knowledge is stove-piped
- **Prior activities have not produced a comprehensive resource management plan**

2/18/09 ALASKA ENERGY EFFICIENCY PROGRAM

Alaska Energy Efficiency
Program & Policy Recommendations

Project managed by:
Cold Climate Housing Research Center

Project funded by:
Alaska Energy Authority
Alaska Housing Finance Corporation

INFORMATION INSIGHTS, INC.

information insights

CCHRC
COLD CLIMATE HOUSING RESEARCH CENTER

Alaska Housing
FINANCE CORPORATION

ALASKA
ENERGY AUTHORITY

Energy Efficiency

We can do it now!

Efficiency relies on advanced *technology, which is becoming more plentiful, rather than fossil fuels, which are being depleted*

Saving energy usually *costs less than buying it*

Pollution and Co2 reduction

The Project

- Literature review: Alaska energy programs (current and past)

- Key informant interviews: Alaska energy programs (expert perspectives)

- Literature review: best practices (US, Canada, other northern counties – Rocky Mountain Institute)

The Project

- Energy efficiency work session (January 16, 2008, about 30 professionals)
- Data collection and cleaning
- Interim recommendations for adoption 2008 legislative session
- Extensive feedback from 20+ energy and policy professionals
- Final recommendations

Where Alaska Ranks

- ACEEE ranks Alaska 41st in Energy Efficiency
  - Utility spending on efficiency and conservation
  - Efficiency standards for utilities
  - Combined heat and power
  - Building codes
  - Transportation policies
  - Appliance standards
  - Tax incentives
  - State lead by example

Best practices – policy mandates

	Policy Description	States
Building energy codes	Require a minimum level of efficiency from new construction of residential and commercial buildings. Build a trigger into the code so that it is frequently updated.	39 states
Appliance standards	Minimum efficiency standards for certain appliances. Federal appliance standards preempt state standard, but states may petition the feds for exemption.	12 states so far
EE Funding	There are a few kinds of efficiency funding including public benefits funds and mandatory utility spending on efficiency	Majority of states spend more than $0.50/person
EE in State facilities	Building, transportation or other energy standards set for public vehicles, buildings and other purchasing habits.	36 states

Best practices – finance & incentives

	Policy Description	States
Tax incentives	Tax credits, reductions on property or sales tax for purchase of specific equipment, tax deductions, etc.	Many states
PAYS	A third party, or utility, purchases efficient or distributed renewable energy property upfront and customers finance cost with on-bill payments using the energy savings.	Many states
Revolving loan fund	A fund that provides money for a specified purpose, here, energy efficiency. The fund is generally capitalized with dollars that do not need to be repaid. Loan repayment creates funds for additional projects.	AR, CT, ME, MD, MN, MS, OK, AL
Incentives	Fast track permitting, building envelope incentives, allowing agencies to keep money saved from reducing energy bills,	Hawaii has best program

Best practices – utility regulation

	Policy Description	Notes
Acquisition of cost-effective EE	Using the total resource cost test, utilities acquire all cost-effective energy efficiency	At l east 25 states
Align utility incentives equally	Often, utility incentive programs do not align the utility's profits equally with supply and demand resources. Examples of this includes, decoupling, lost revenues, and performance incentives.	At least nine states
Align rate payers with efficiency	Create a rate structure that rewards efficiency, such as a tiered rate system with a lower rate for less consumption. I.e. critical peak pricing and time-of-use pricing	AZ, CA, CT, VT
Systems benefit fund	A non by-passable charge on a electric or gas utility bill that is used placed into a fund to be used for energy efficiency initiatives.	At least 20 states

Best practices – education opportunities

	Policy Description	States
Consumer education	Ongoing consumer education about energy efficiency and/or renewable energy	Many states and utilities
Contractor, architect engineer education	Education for contractors, architects, and engineers to promote energy efficient building techniques.	Green advantage nationwide
School curriculum	Including curriculum in schools that informs students about the value of energy efficiency.	At least eight schools Utility: GRU, BPA, PGE DoE has lesson plans

Recommendations Presented in Nine Categories:

- State Leadership
- Funding Energy Efficiency
- Public Education and Outreach
- Baseline Data
- Existing Residential Buildings
- New Residential Construction
- Existing Commercial Buildings
- New Commercial Construction
- Public Buildings

State Leadership

1. The Governor should articulate an energy efficiency vision for Alaska.

2. The Governor should designate a sub-cabinet for State end-use efficiency programs.

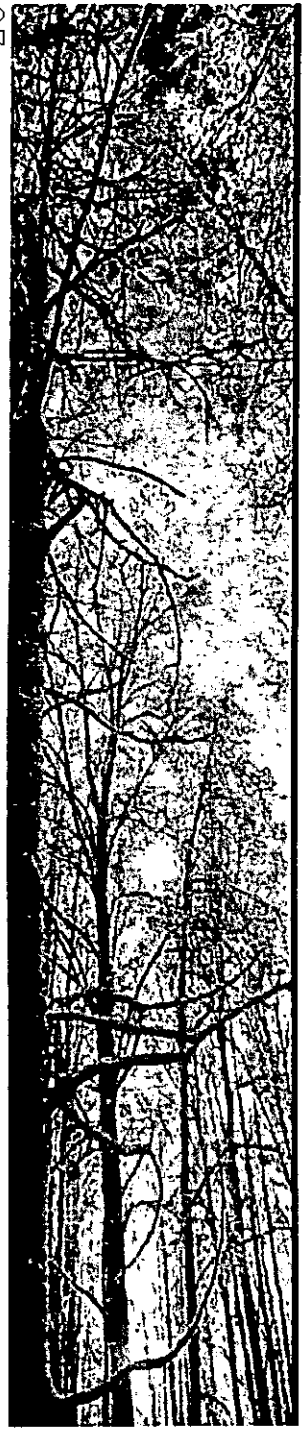
Funding Energy Efficiency

1. The state should fund energy efficiency programs through legislative appropriation.

2. The RCA should implement a System Benefit Charge to support end-use efficiency programs,

3. The state should capitalize an end-use efficiency endowment to support end-use efficiency programs.

4. The state should offer matching grants to local governments interested in creating a local energy plan that incorporates energy efficiency and conservation.



Public Education and Outreach

1. The Legislature should fund a comprehensive public awareness campaign with at least $1,000,000 per year.

Baseline Data

1. The Alaska Housing Finance Corporation and Alaska Energy Authority should conduct an end-use survey of residential and commercial energy consumers.

2. The Alaska Energy Authority should establish and report an Energy Use Index (EUI) for all public buildings.

Existing Residential Buildings

1. The Legislature should significantly increase funding for Low-Income Weatherization.

2. AHFC should create a certification and training program for energy retrofit and energy efficient new construction.

3. AHFC should subsidize up to 100 percent of costs for home energy audits for households not eligible for low-income weatherization, and offer low-interest loans for energy conservation improvements.

4. The Legislature should fund a pilot Smart Meter program through AHFC/AEA.

New Residential Construction

1. The Legislature should adopt BEES as the new state residential energy efficiency building code.
2. The State Division of Corporations, Businesses, and Professional Licensing should enforce regulations on building codes and contractor licensing to ensure quality and energy efficiency.

Existing Commercial Buildings

1. The AEA should subsidize energy audits for commercial facilities and offer loans for energy efficiency improvements.

2. The RCA should require utilities to implement Pay As You Save loan programs.

New Commercial Construction

1. AEA should contract for a stakeholder process to develop a commercial energy efficiency building code.

Public Buildings

1. The Governor should direct each state agency to reduce energy consumption in its facilities by 20 percent from 2000 levels by 2020.
2. The Board of Regents should direct the university to reduce energy consumption in its facilities by 20 percent from 2000 levels by 2020.
3. The Legislature should fund an energy audit for every school in the state.
4. The state should fund AEA to revive the Institutional Conservation Program to offer public K-12 schools energy conservation matching grants.
5. The Alaska Energy Authority should establish a low-interest loan program for public facilities to make energy efficiency improvements, with payments geared to projected savings.

Where are we today?

Legislative funding

- Weatherization - $200 million
- Rebate - $160 million
- RE - $100 million
- Market driven conservation in rural AK
- Broad awareness of energy issues
- Supply side solutions dominate

Stimulus Bill has been signed

Current Recommendations

- Adopt Statewide Building Code with energy conservation code
- Adopt Public Buildings Energy Standard and retrofit programs, including schools and UA
- Create R&D fund for renewables
- Sustainable Northern Communities

Statewide Building Code

- Number One Recommendation of Experts Panel
- Needed by AHFC
- Supported by ASHBA
- Required by Stimulus bill for SEP grants

SEP Grant Requirements

Governor letter to Sec. of Energy:

- Utility Consumer Energy Efficiency Policy
- Adopt Residential & Commercial Energy Conservation Codes
- Prioritize SEP grants to EE and RE programs

Sustainable Northern Communities

A Program to:

- Use current oil wealth to transition to an economy based on renewable energy
- Use "Integrated Design Process" to develop plan for each community
- "Whole Village Retrofit" – plan energy efficiency and supply together
- Include food production as part of energy plan (green houses to use "waste heat")

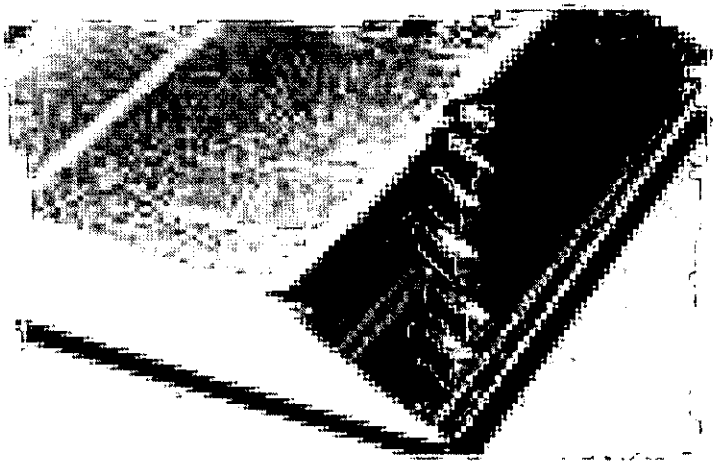
2/18/09 PERFORM-ANCE CONTRACT-ING FOR ENERGY EFFICIENCY

1620

Overview of Performance Contracting

- **Performance Contracting Definition:**
  - A vehicle that allows public and private entities to improve their facilities, by using their energy and operational budgets to fund a project, with guaranteed results



Company Confidential—Siemens Building Technologies 2008

Overview of Performance Contracting, continued

- Performance Contracting Overview
  - Energy services company (ESCO) provides a preliminary building audit and report
  - Audit is reviewed with the Customer and a letter of intent for a detailed audit is signed
  - Detailed audit identifies facility improvement measures (FIMs) and the cost and savings associated with each
  - FIMs are reviewed with the Customer and the scope of the project is defined
  - Performance contract is signed
  - Project is implemented and turned over to the Customer
  - Ongoing measurement and verification confirm savings

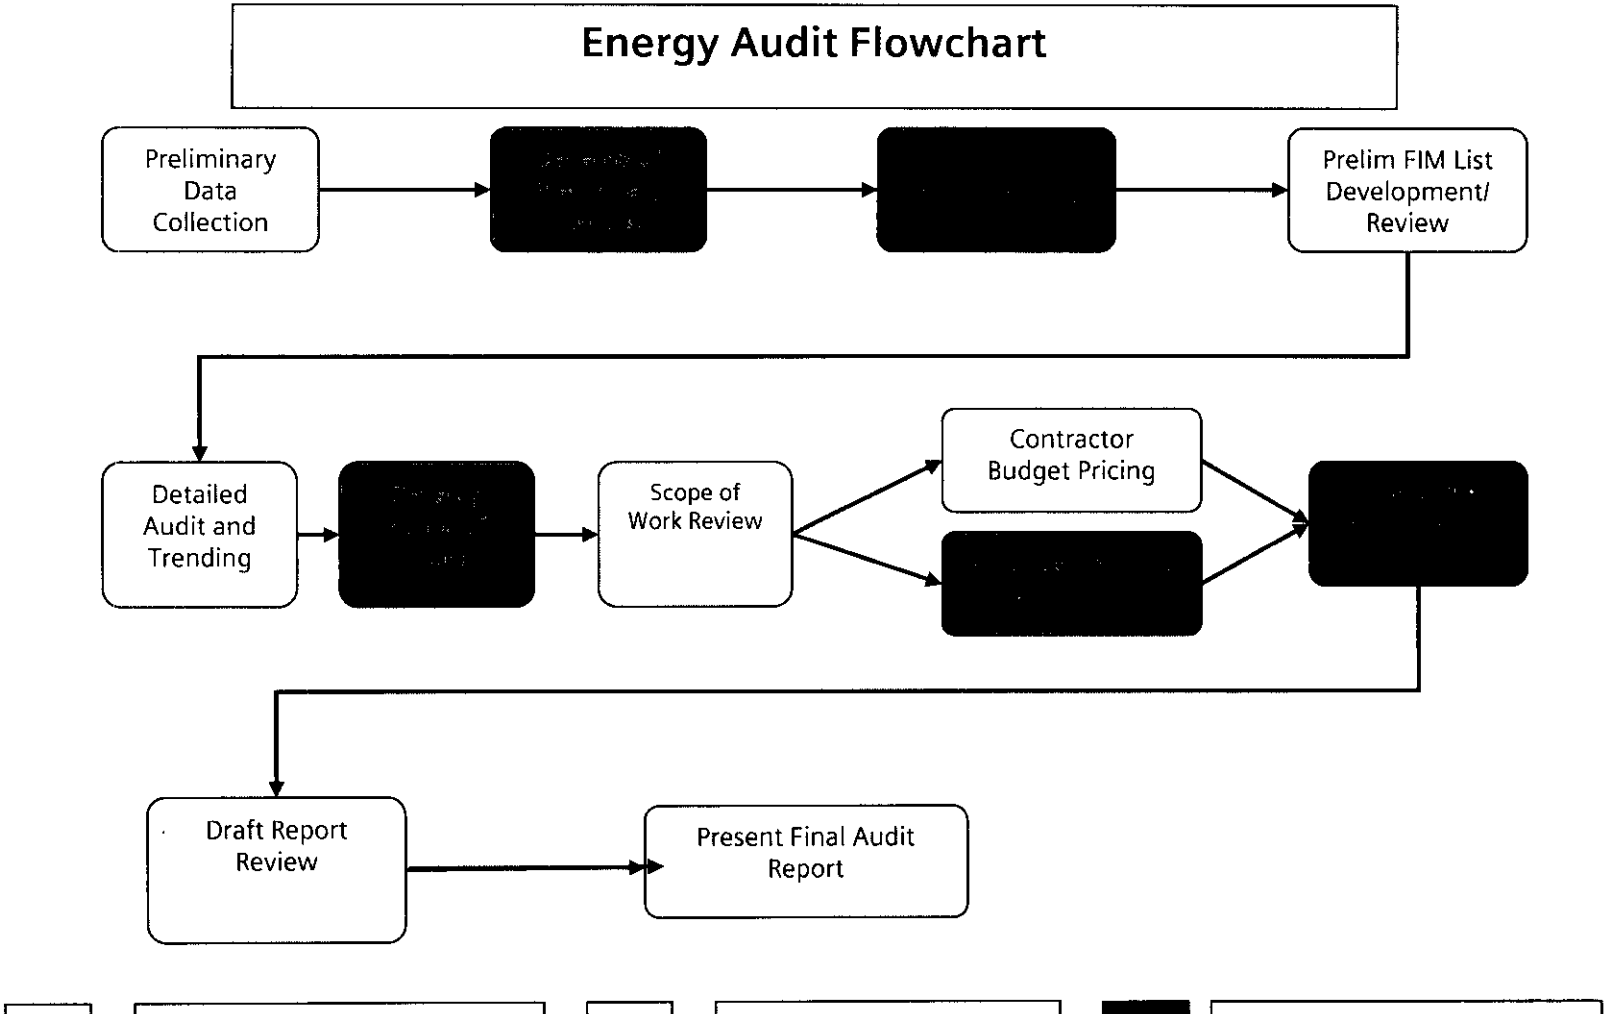
Company Confidential—Siemens Building Technologies 2008

SIEMENS
Energy and Environmental Solutions

Audit Process

LEAST IMPACT

Energy Audit Flowchart



Company Confidential—Siemens Building Technologies 2008

The PC Process

- How the program works
  - Financing is arranged with a third party or directly from the Customer
  - Energy project is implemented and the savings generated repay the financing
    - Energy savings
    - Operational savings
    - Maintenance savings
  - Siemens guarantees that the savings exceed the cost of the financing, otherwise we pay the difference
  - Ongoing measurement and verification continue to confirm the savings

Company Confidential—Siemens Building Technologies 2008

The PC Process, continued

- How the funding works
  - Funding from operational and capital budgets
  - Siemens has guaranteed funding available from third-party sources if necessary
  - Siemens can arrange for competitively bid financing from multiple sources
  - Energy and operational savings are guaranteed to offset the cost of the loan payments

Company Confidential—Siemens Building Technologies 2008

The PC Process, continued

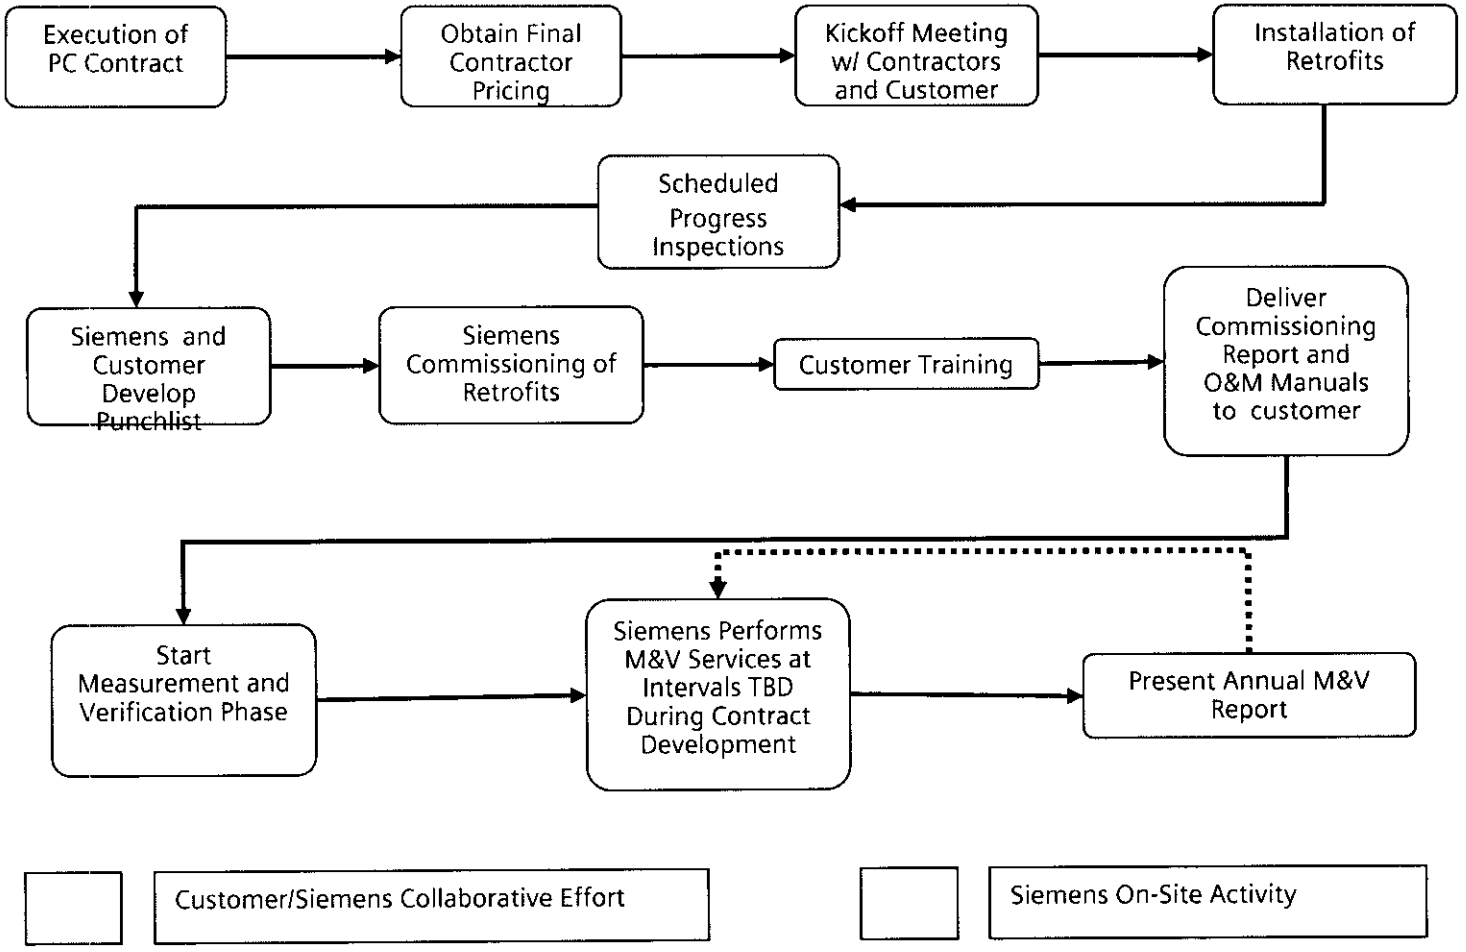
- How the guarantee works
  - Project has a guaranteed fixed price
  - Siemens has a "no change order" policy for a given scope of work
  - Energy savings are guaranteed
  - If energy savings do not meet the guaranteed amounts, Siemens will issue the customer a check in the amount of the difference
  - Siemens will implement additional FIMs to meet the energy guarantee at Siemens cost
  - Ongoing measurement and verification will ensure that guaranteed energy savings continue as promised

Company Confidential—Siemens Building Technologies 2008

Project Execution Process

LEAST IMPACT

Performance Contracting Implementation Flow Chart



Company Confidential—Siemens Building Technologies 2008

Typical Facility Improvement Measures

- Lighting – T8 lamps, motion sensors, LED exit signs, outdoor lighting
- Water – low flow fixtures
- Hot water - temperatures and generation
- Heat / Cooling System – utilization, pumping, variable frequency drives, controls sequences, equipment and system improvements
- Outside air – quantity, heat recovery
- Process/lab loads – fume hood controls, compressed air, vacuum system
- Retro commissioning
- Building Shell -

Company Confidential—Siemens Building Technologies 2008

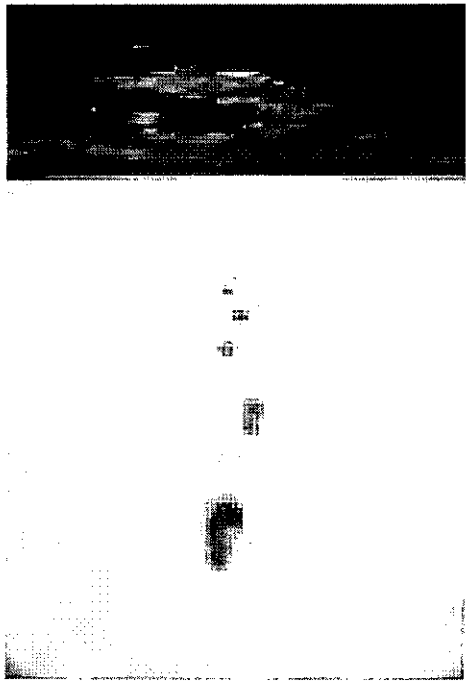
Alternative Energy

- Biomass – water heating, electricity, cogeneration
- Geothermal
- Digester and landfill gas – methane gas to heat and or electricity
- Wind

Company Confidential—Siemens Building Technologies 2008

Next Steps

- Decide which buildings are to be in preliminary audit
- Sign letter of authorization
- Complete preliminary energy audit
- Prepare and present report to the Customer
- Sign letter of intent to proceed with project



Company Confidential—Siemens Building Technologies 2008

Update on the Susitna Hydroelectric Project & New Cost Estimates

Jim Hemsath, Deputy Director, Alaska Energy Authority

Overview: Proposed Chakachamna Hydro Project

TDX Power: Nick Goodman, President
Eric Yould, Program Director

AIDEA Alaska Industrial Development and Export Authority

ALASKA ENERGY AUTHORITY

MEMORANDUM

TO: James Hemsath

FROM: Bryan Carey

DATE: February 20, 2009

SUBJECT: HDR Alaska Susitna Hydroelectric Updated Energy Cost Report Summary

Proposed Hydroelectric Projects
Watana was to be a large rockfilled embankment dam located on the Susitna River upstream of Talkeetna. Devil Canyon was to be a 646' tall double curvature thin arch concrete dam located 32 river miles downstream of Watana.

Alternatives Analyzed
Updated energy production, construction cost estimates, and price per energy unit ($/kWh) were analyzed for the following four alternatives: Low Watana (700'), Watana (885'), Watana followed by Devil Canyon, Staged Watana and Devil Canyon (Low Watana, Devil Canyon, Watana (Same as November 1985 FERC Amendment)).

Schedule
Federal Energy Regulatory Commissioning (FERC) licensing for a new hydro project is extensive. Eight years until license is thought to be similar for all the alternatives.

Energy & Economics

	Construction Completion (yrs)	Energy (billion kWhrs/yr)	Annual Average (MW)	Cost Estimate (2008 billions)	Energy Unit Cost during payment of financing (1)
Watana 700'	14 – 16	2.6	297	$6.9	$0.24 kWhr
Watana 885'	15 – 17	3.2	365	$8.4	$0.24 kWhr
Watana & Devil Canyon	15 – 20	7.2	822	$11.6	$0.16 kWhr
Staged Projects	14 – 23	7.2	822	$12.8	$0.19 kWhr

(1) Cost estimate for each alternative assumes no state funds, financed by 50 year bonds @ 5% interest.
(2) Construction completion is from start of funding for permitting & design.

After bonds repaid the cost of energy for all alternatives is $0.03-$0.04/kWhrs.

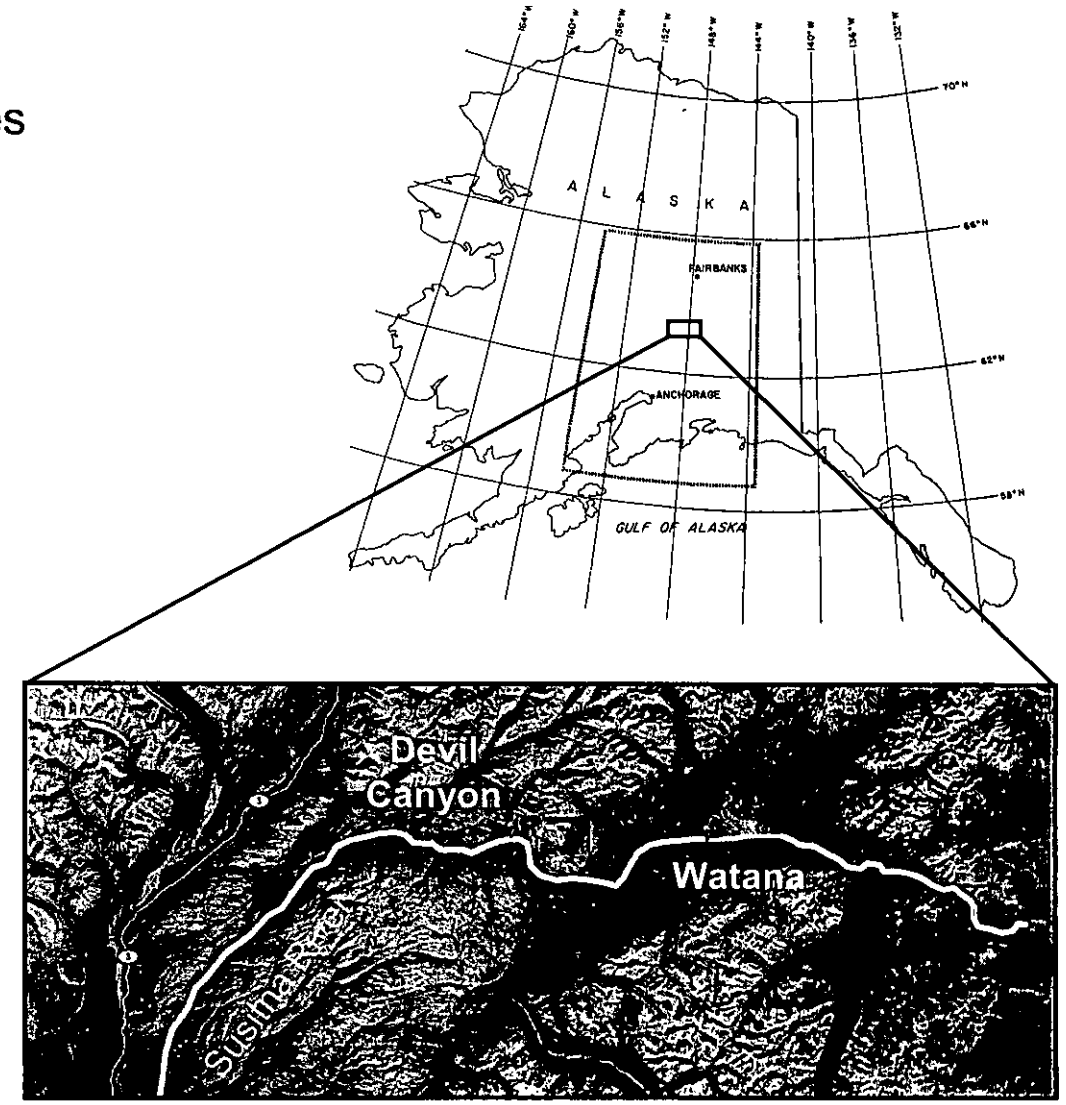
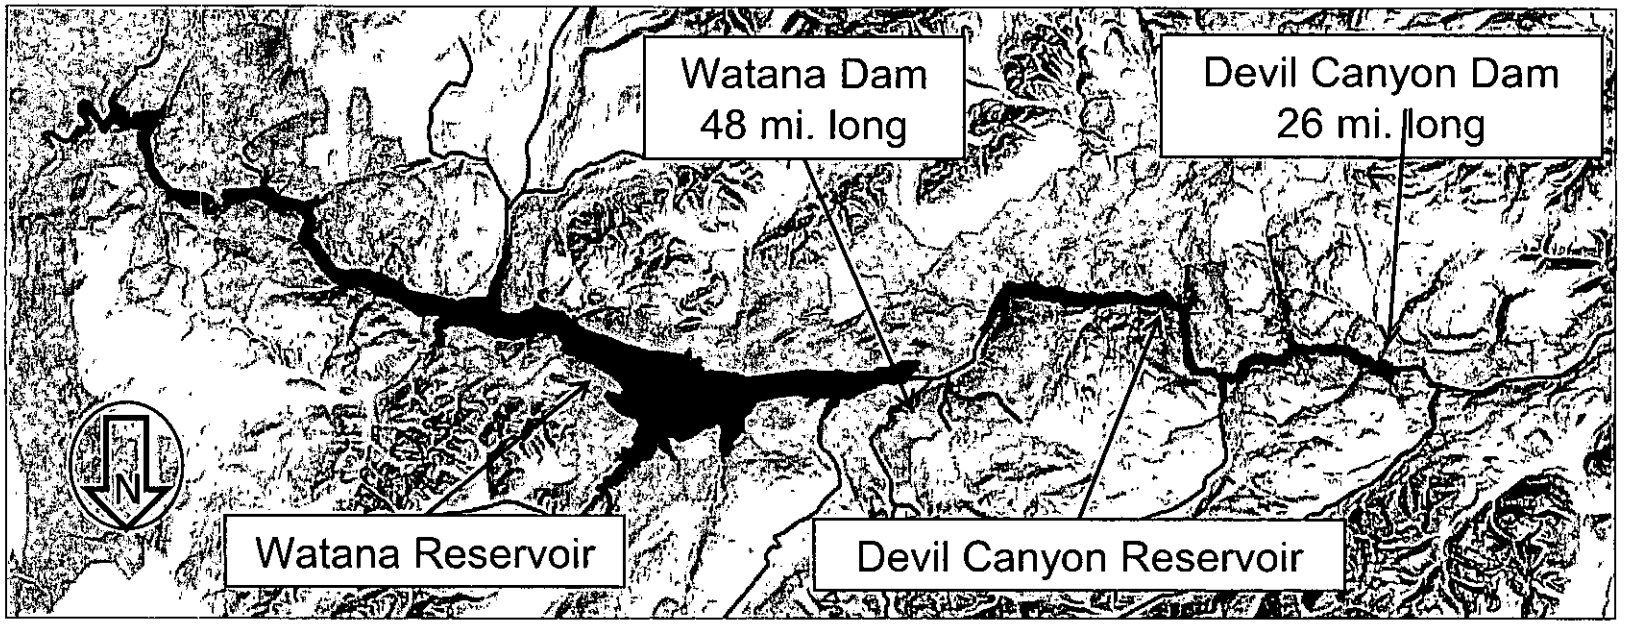
Susitna Project
Civil Works Considerations

Susitna Project - Civil Works

- Dams and related facilities
  - Spillways
  - Powerhouses
  - Tunnels
  - Intakes & outlets
  - Construction camps and villages
- Infrastructure
  - Roads and bridges
  - Rail
  - Airports
- Stage options

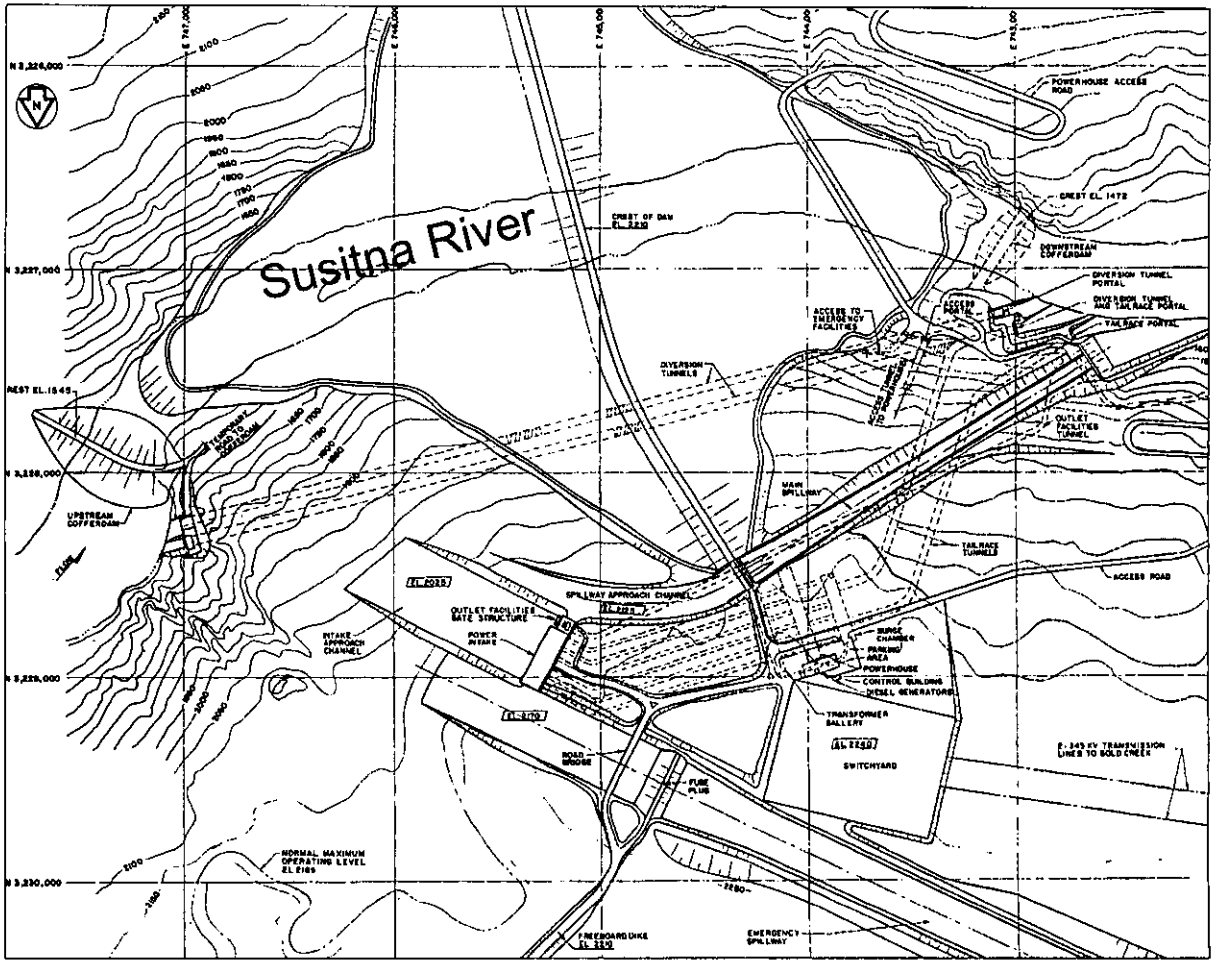


Watana and Devil Canyon Dams and Reservoirs



Watana Dam

- Rock-fill, gravity dam
- 885 feet tall
- 4,100-foot crest length

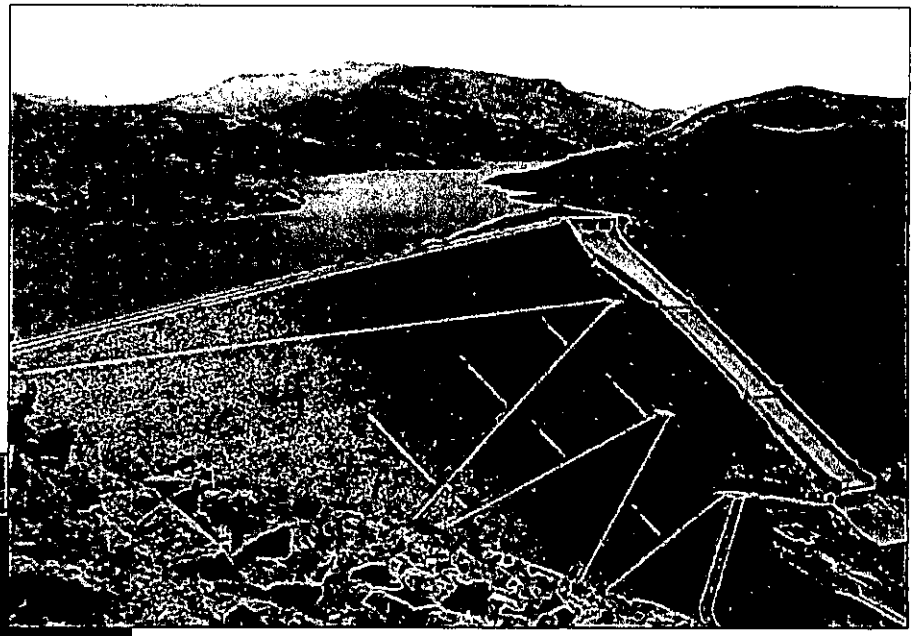


Watana Project Characteristics

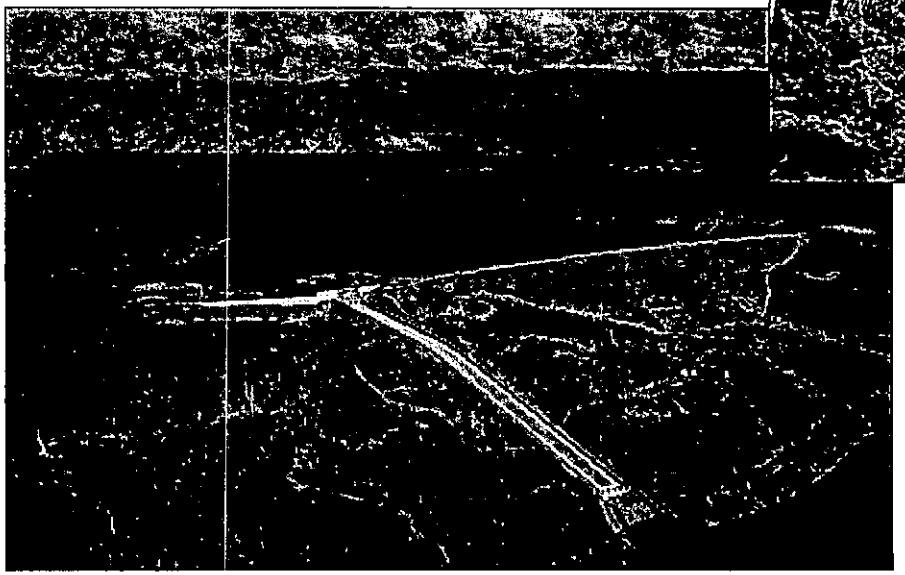
- Underground power facilities with 600-foot rockfill dam
- Dam structure: Height – 885 feet
  Crest length – 4,100 feet
- Diversion of flow during construction by two 30-foot tunnels
- Underground power facilities with six 200-MW generators
- Spillway capacity: 115,000 cfs + fuse plug 140,000 cfs

Rock-fill Embankment Dams

- Considerably more massive than arch or buttress dams but constructed with lower unit-cost materials
- Rely on weight of dam for stability and structural mass to impound water

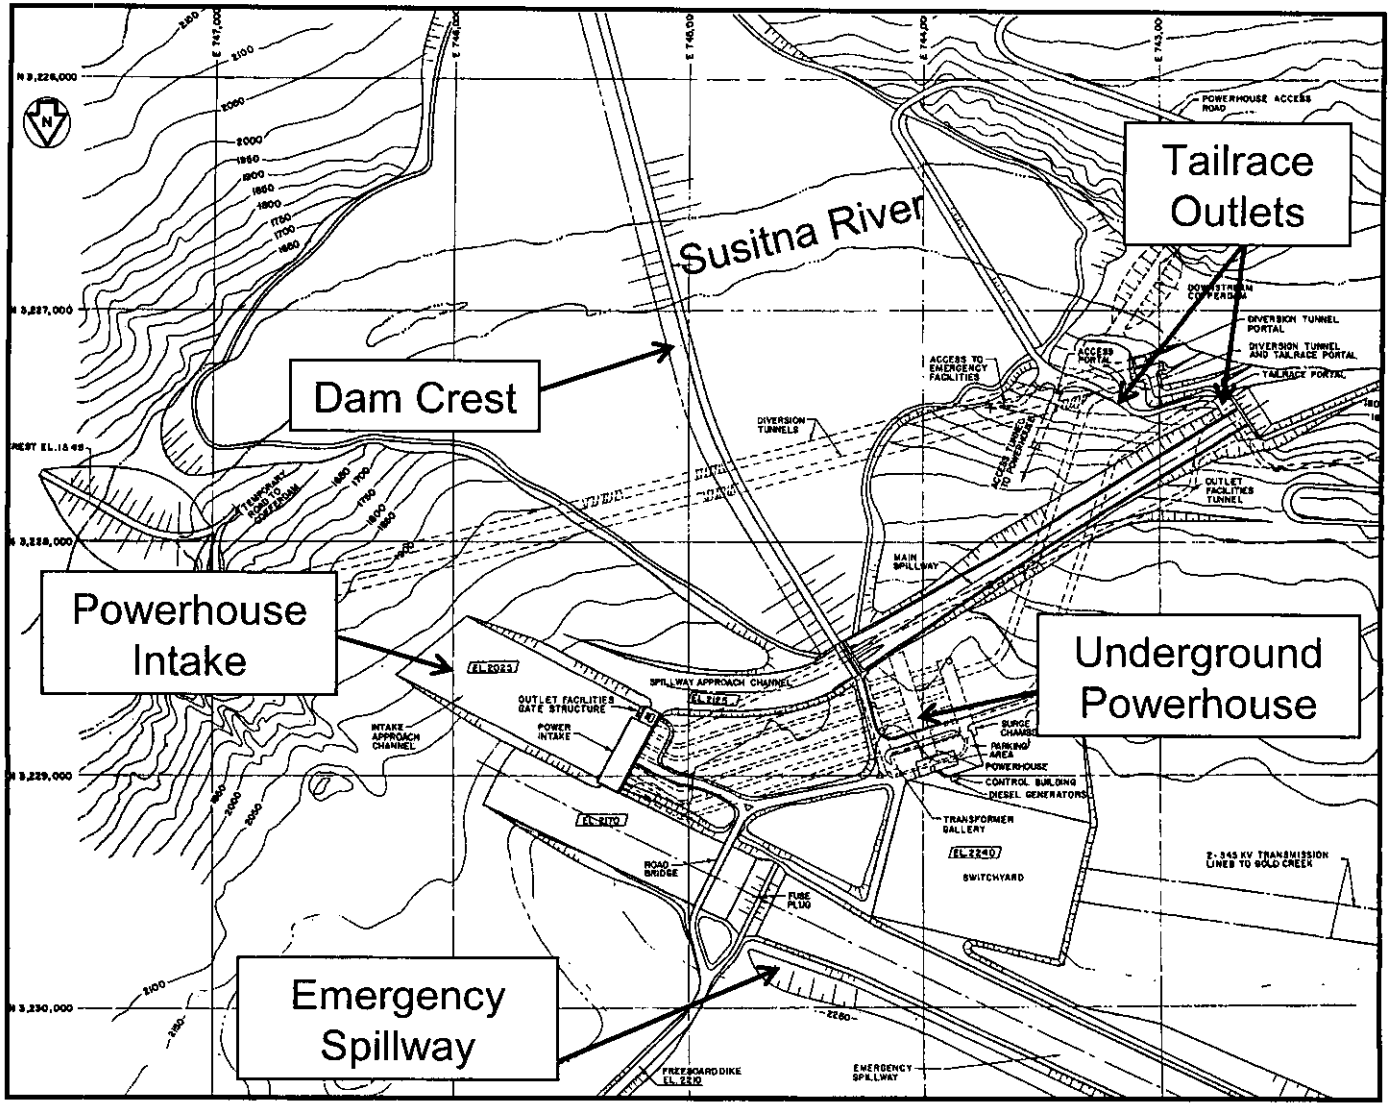


Mohle Dam, Lesotho

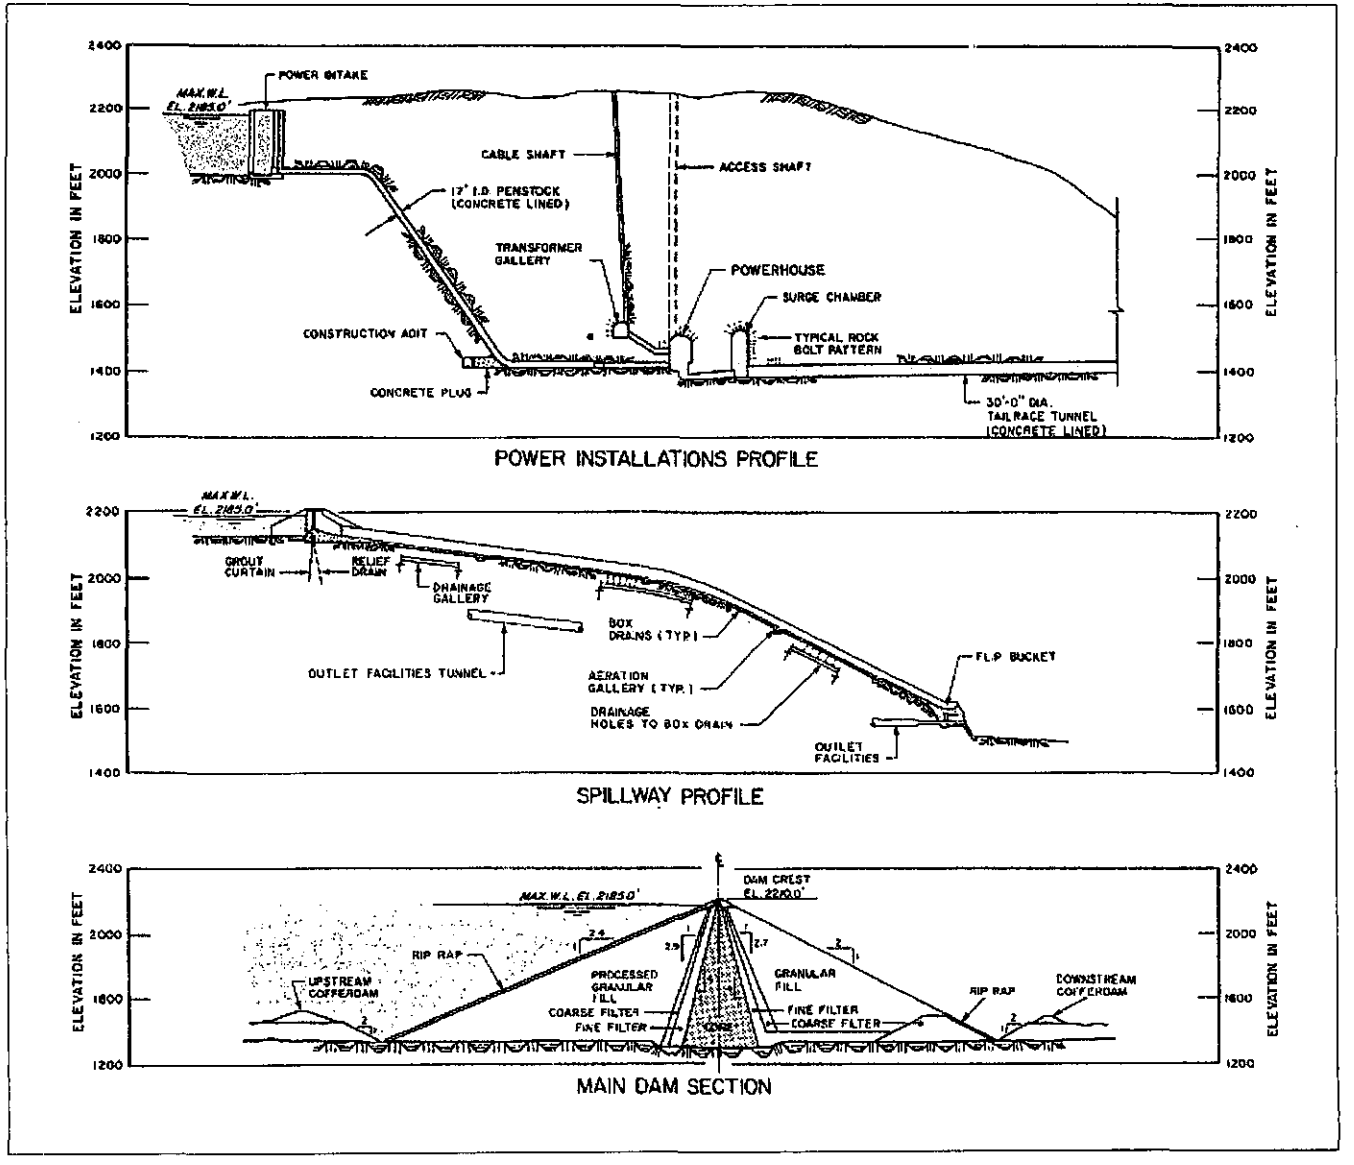


Oroville Dam, California

Project Layout: Watana

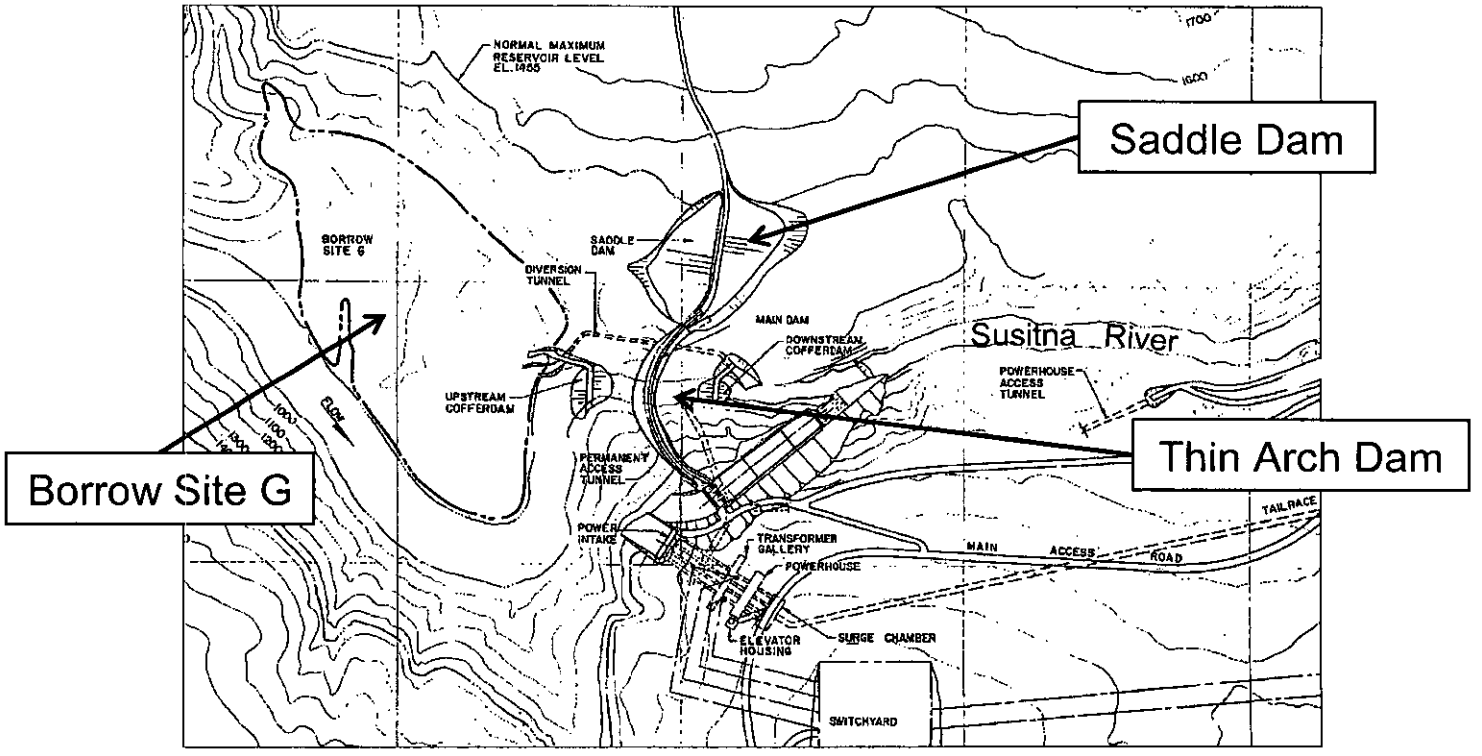


Watana Details

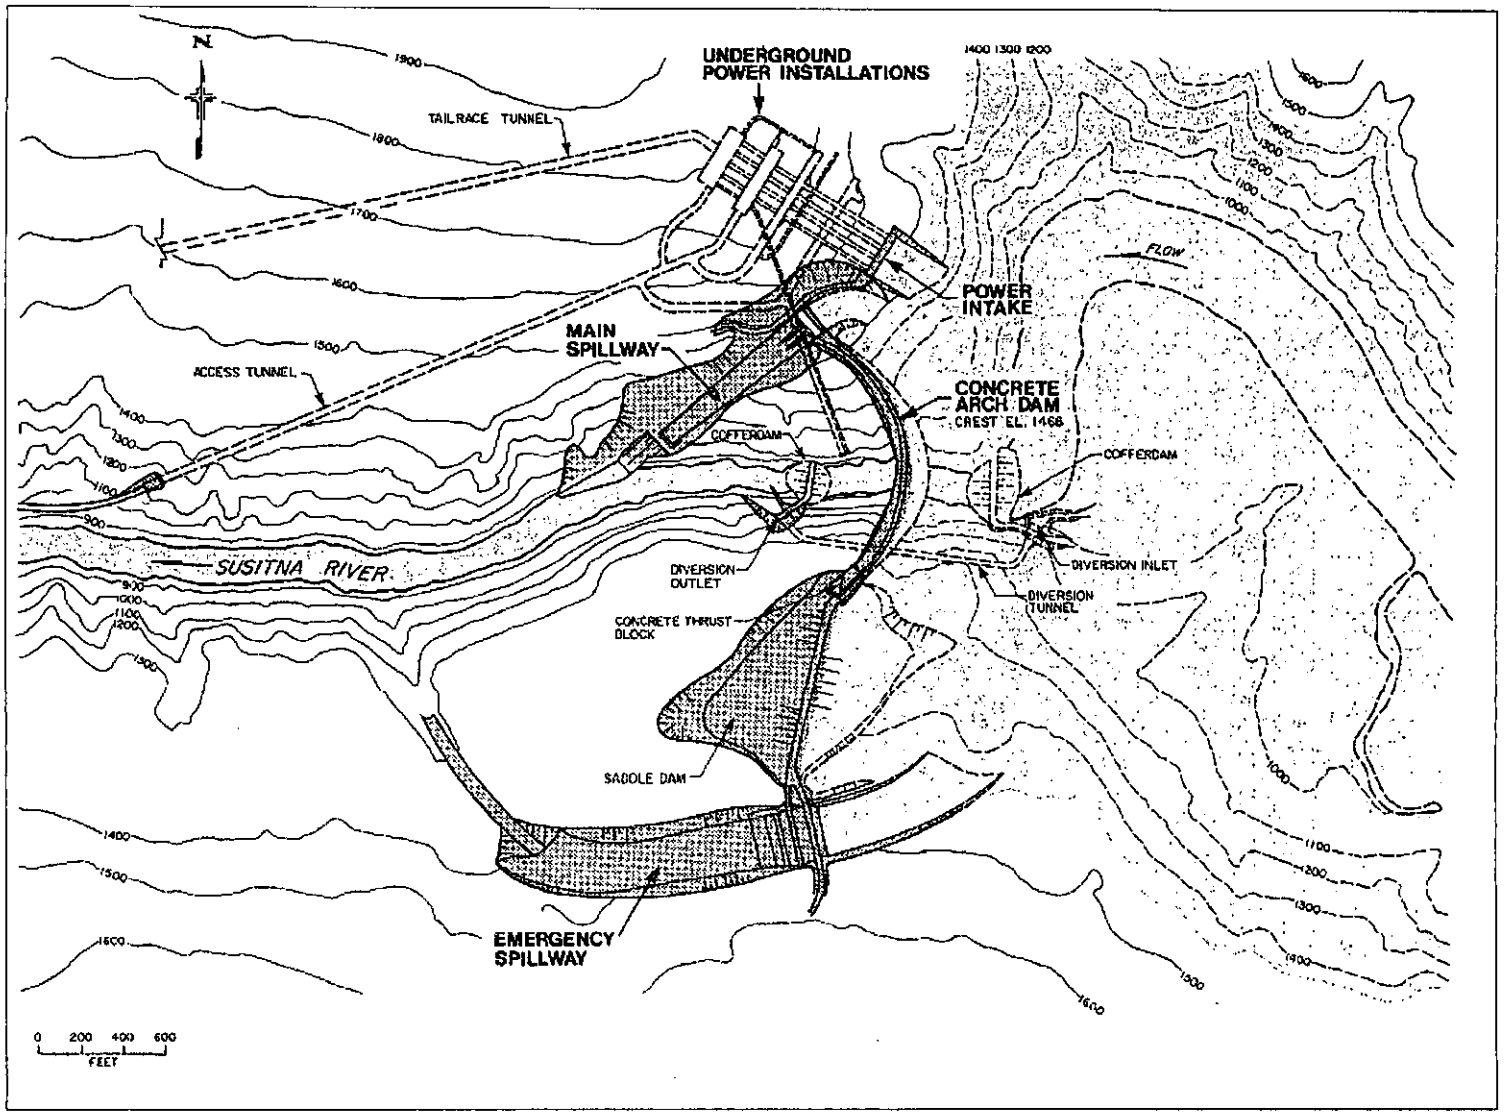


Devil Canyon Dam

- Arch concrete dam
  - 646 feet tall above foundation
  - 1,260-foot crest length
- Earth and rockfill saddle dam
  - 245 feet tall
  - 950-foot crest length
- Located in a V-shaped canyon
- Acceptable abutment and foundation geology
- Borrow site G to provide granular material for filters and concrete aggregate.



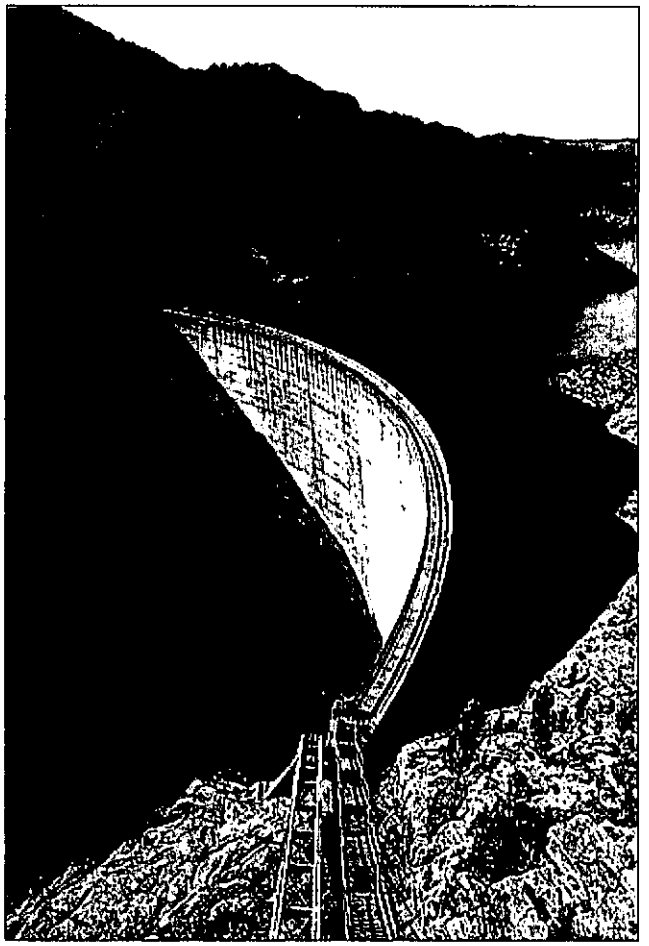
Devil Canyon General Arrangement



Arch Concrete Dams

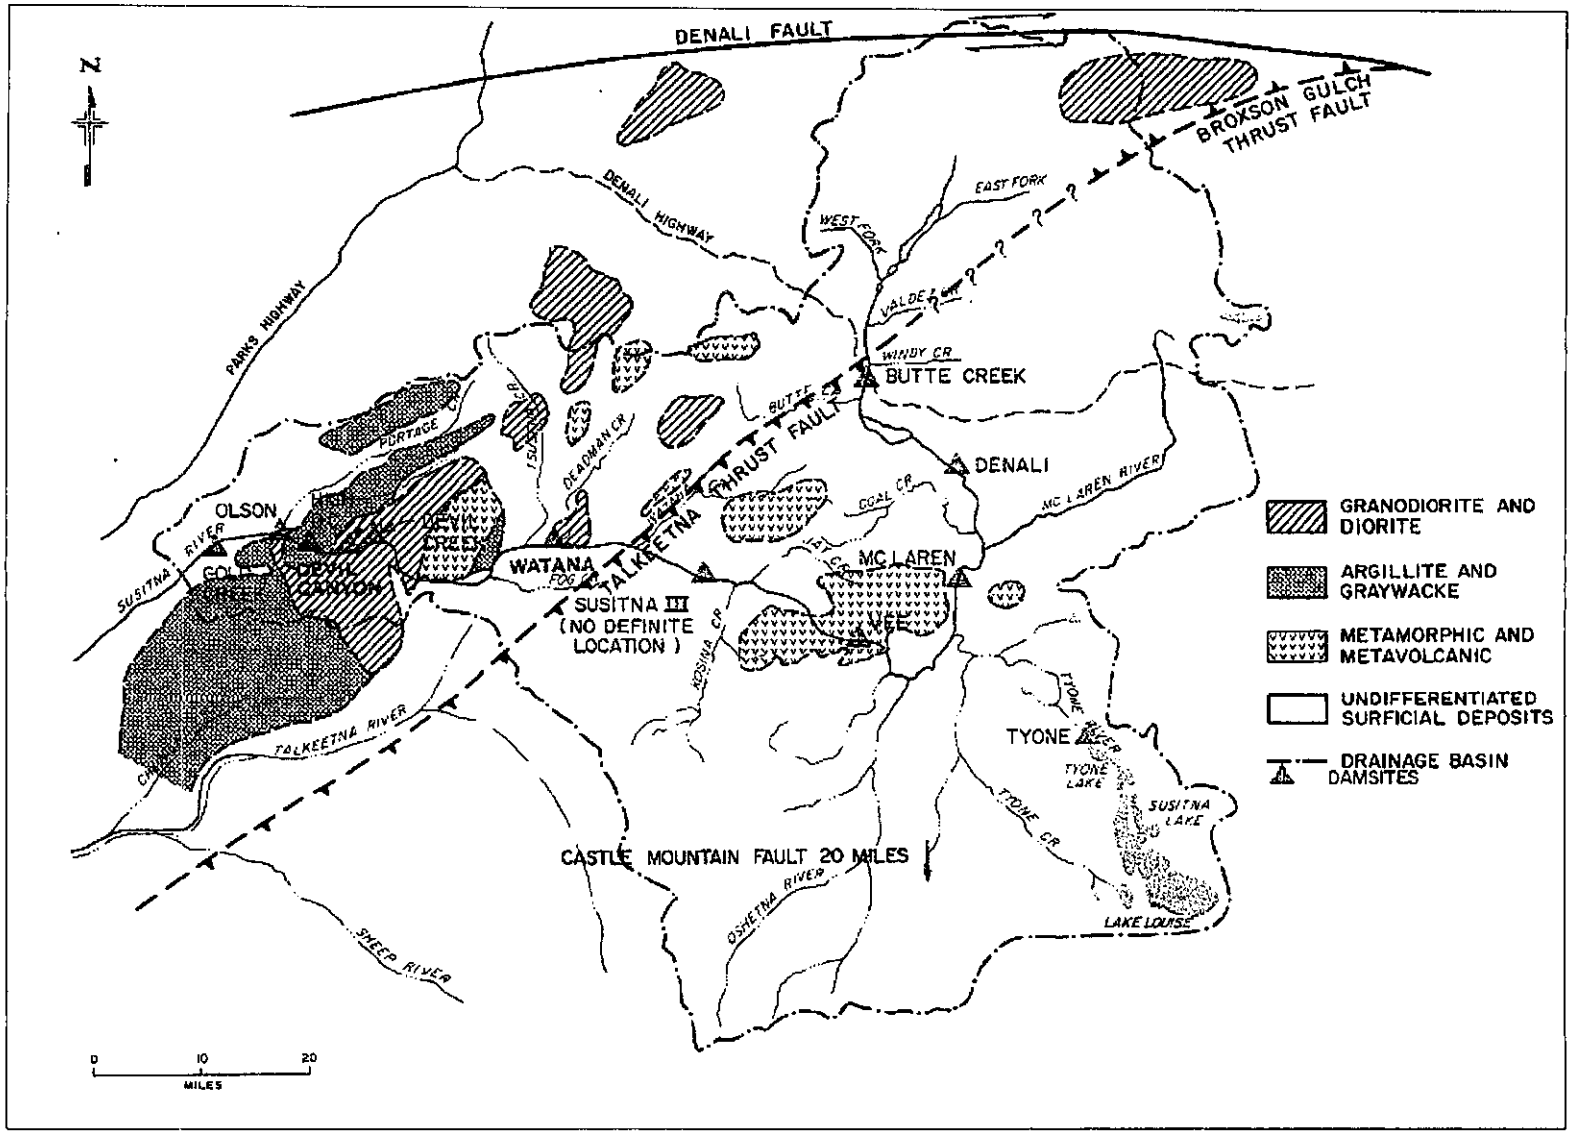
- Reduced material volume to construct
- Loads transferred to abutments
- Structurally efficient, visually appealing structures

Mauvoisin Dam, Switzerland

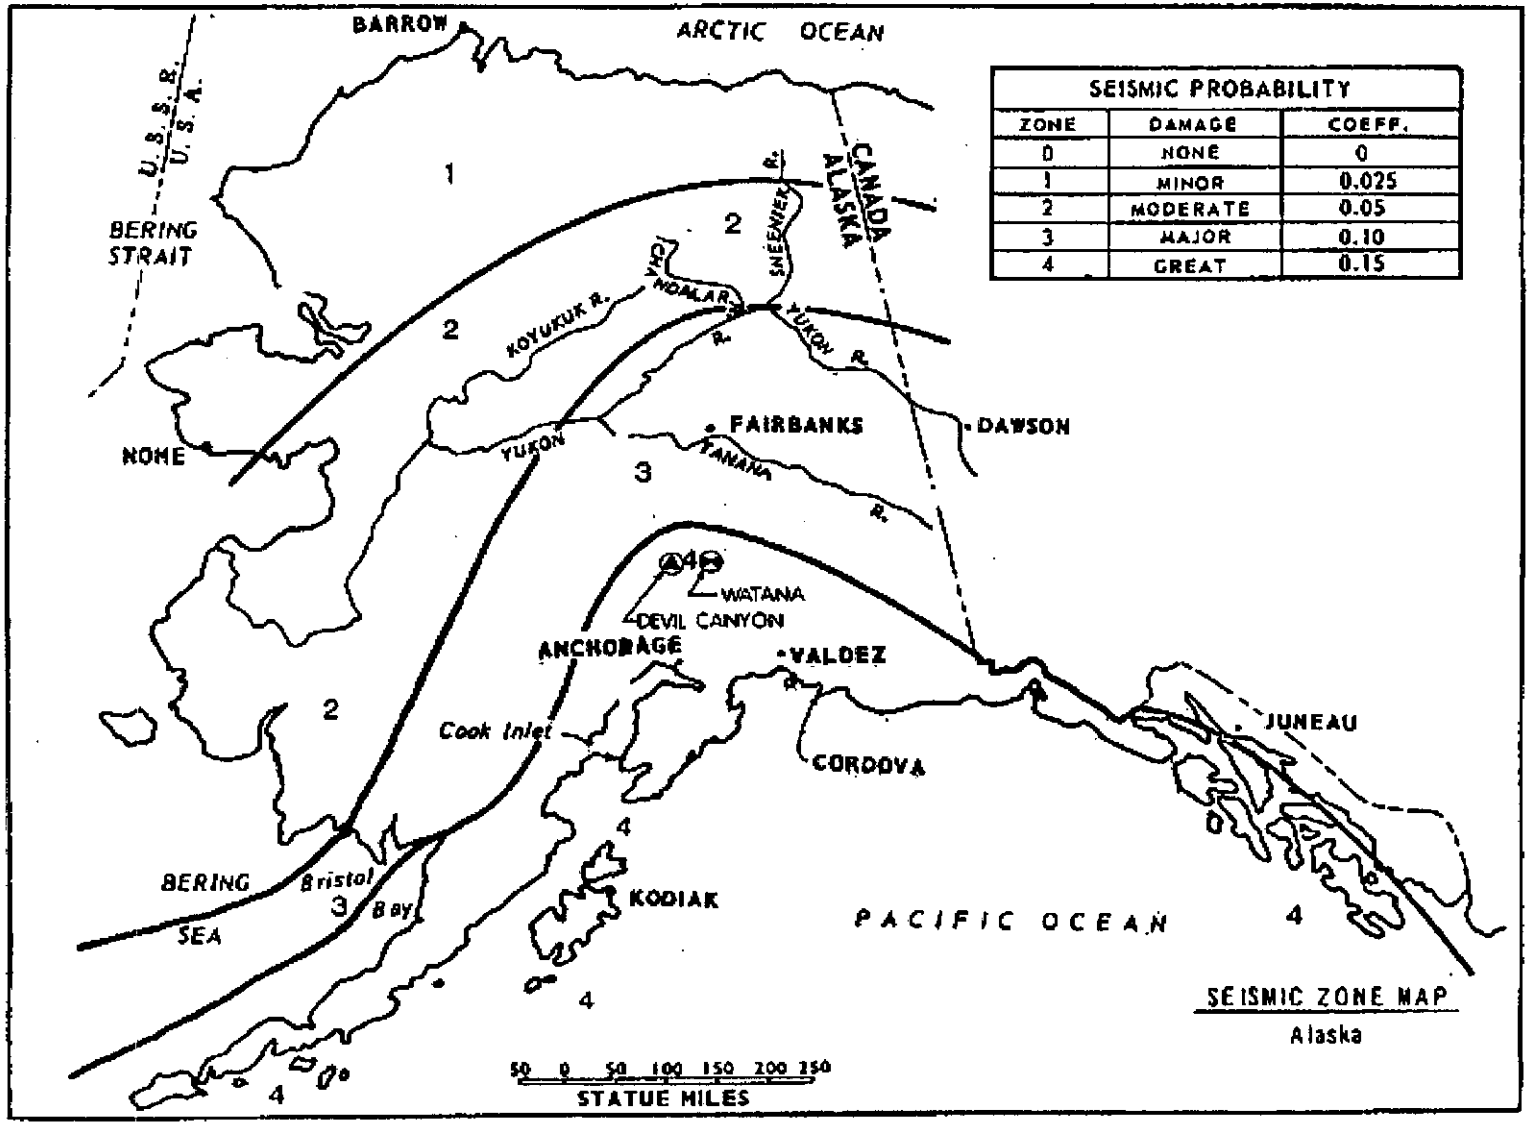


Gordon Dam, Australia

Upper Susitna Basin Geology



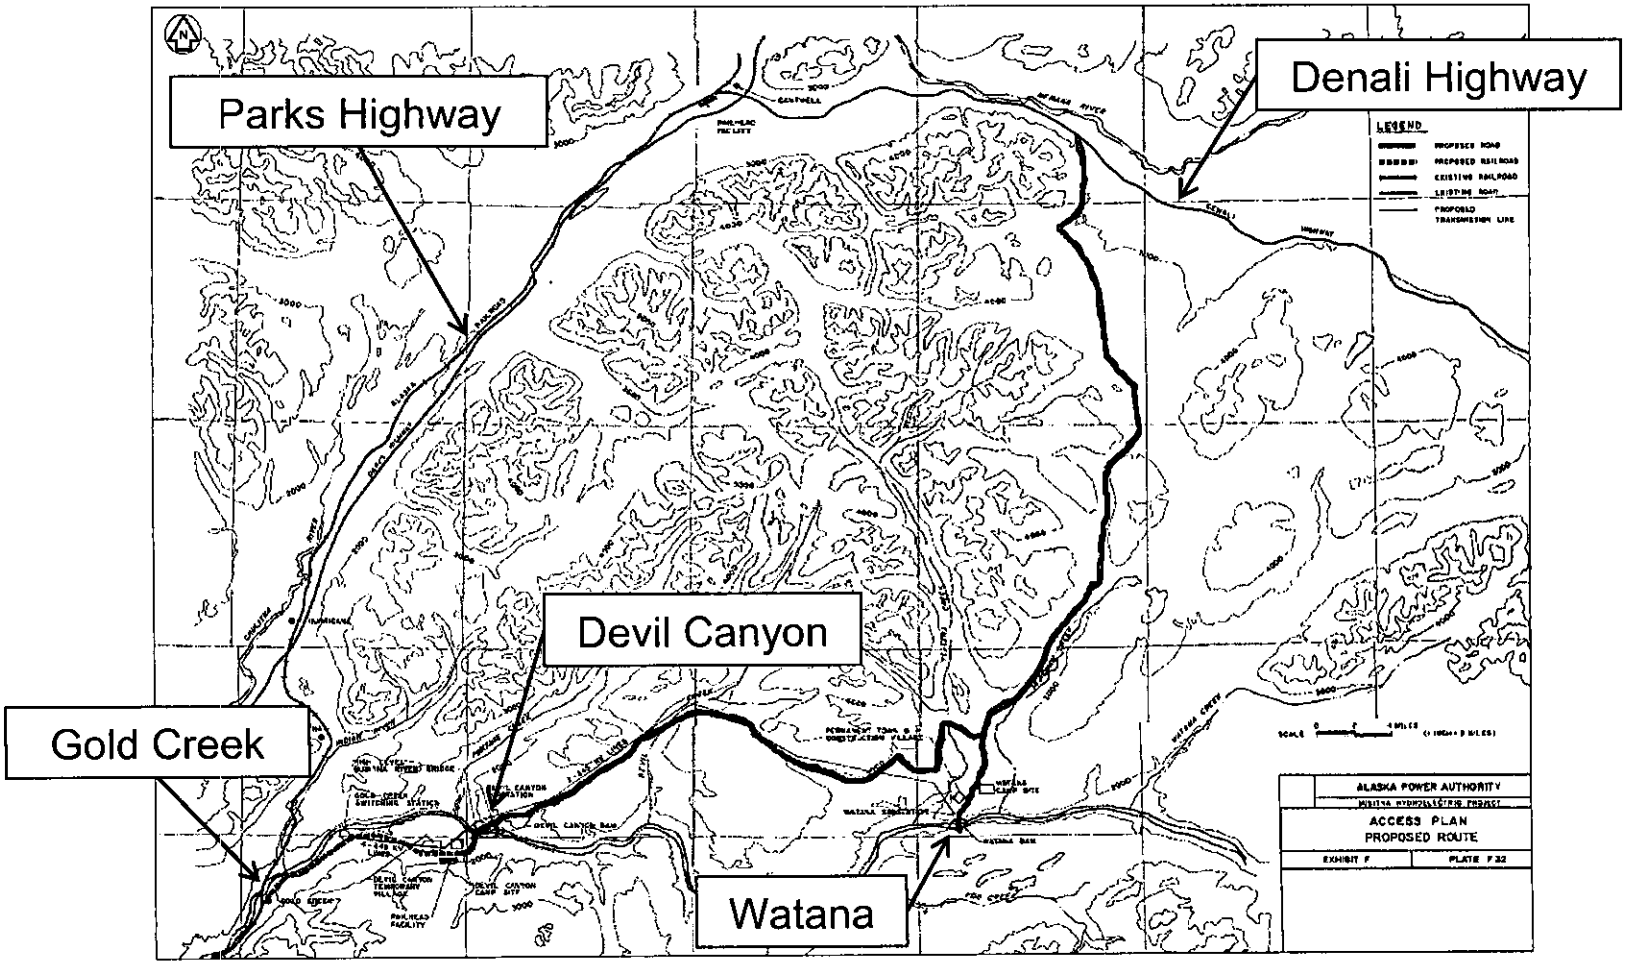
Seismicity



SEISMIC PROBABILITY		
ZONE	DAMAGE	COEFF.
0	NONE	0
1	MINOR	0.025
2	MODERATE	0.05
3	MAJOR	0.10
4	GREAT	0.15

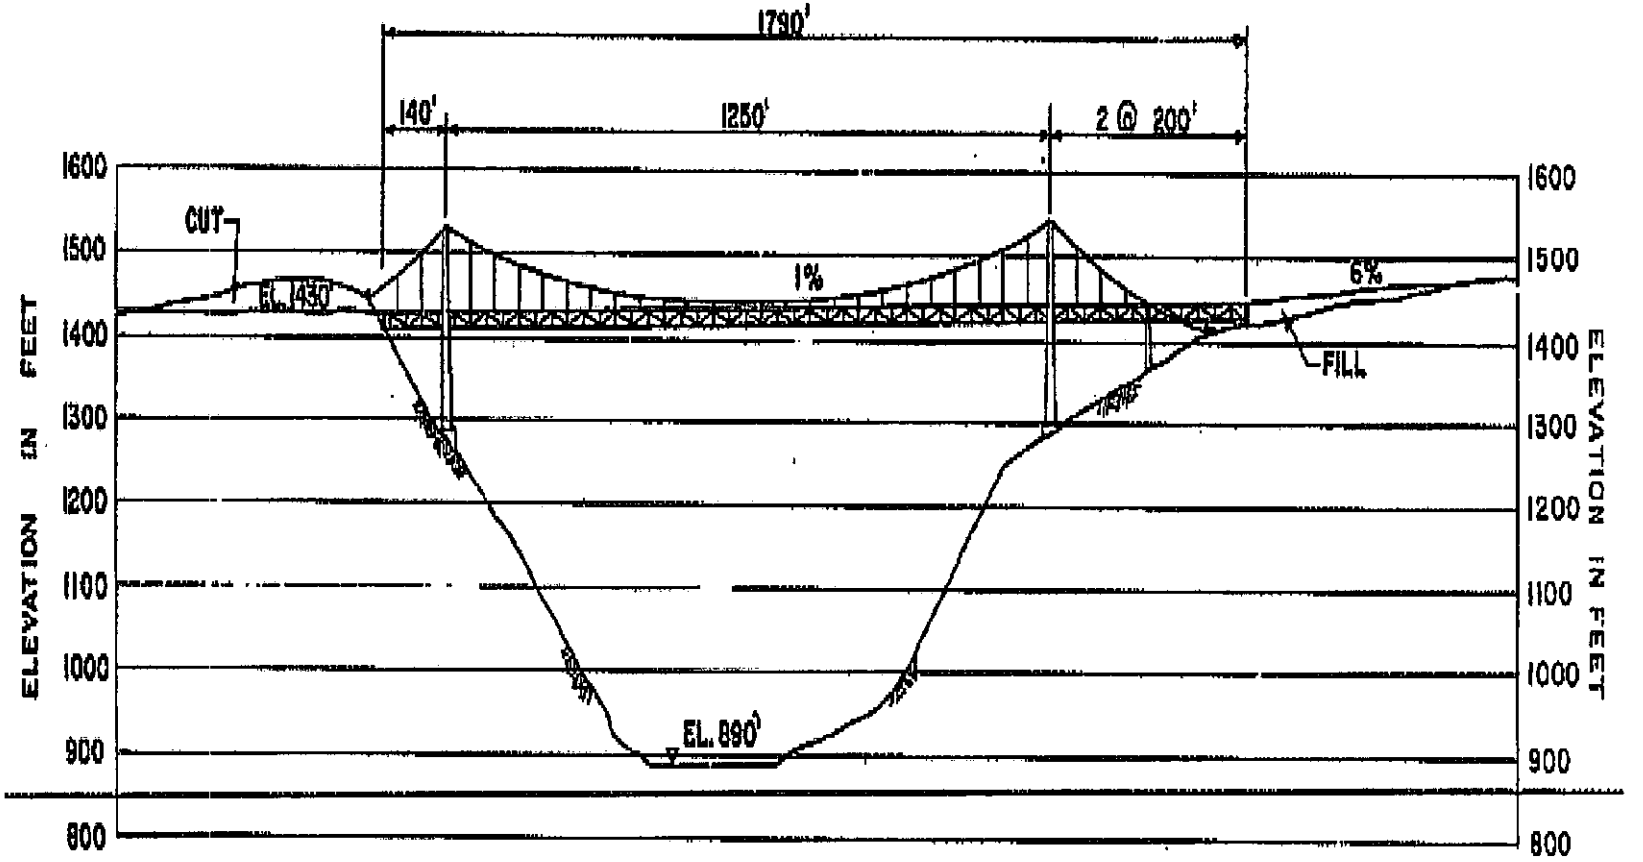
Roads

- 21 miles of road improvements along Denali Highway
- 81 miles of new permanent roadway were planned
- Additional temporary local area construction access roads necessary



Susitna River Bridge

Substantial, new long-span suspension bridge required for project

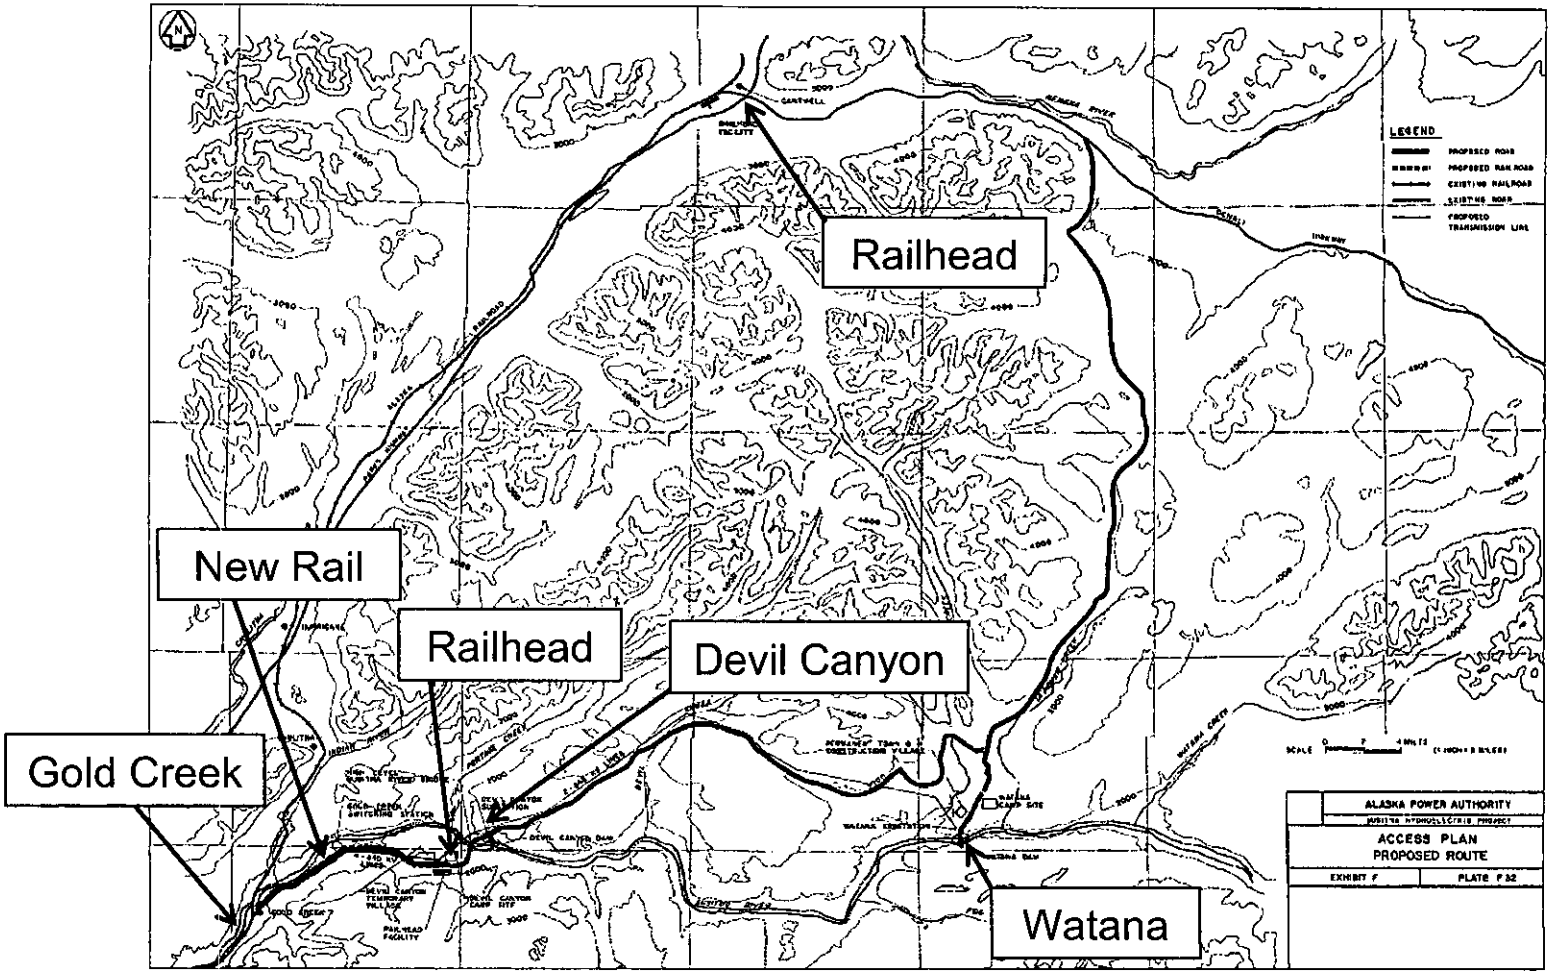


HIGH LEVEL SUSITNA RIVER BRIDGE

SCALE C

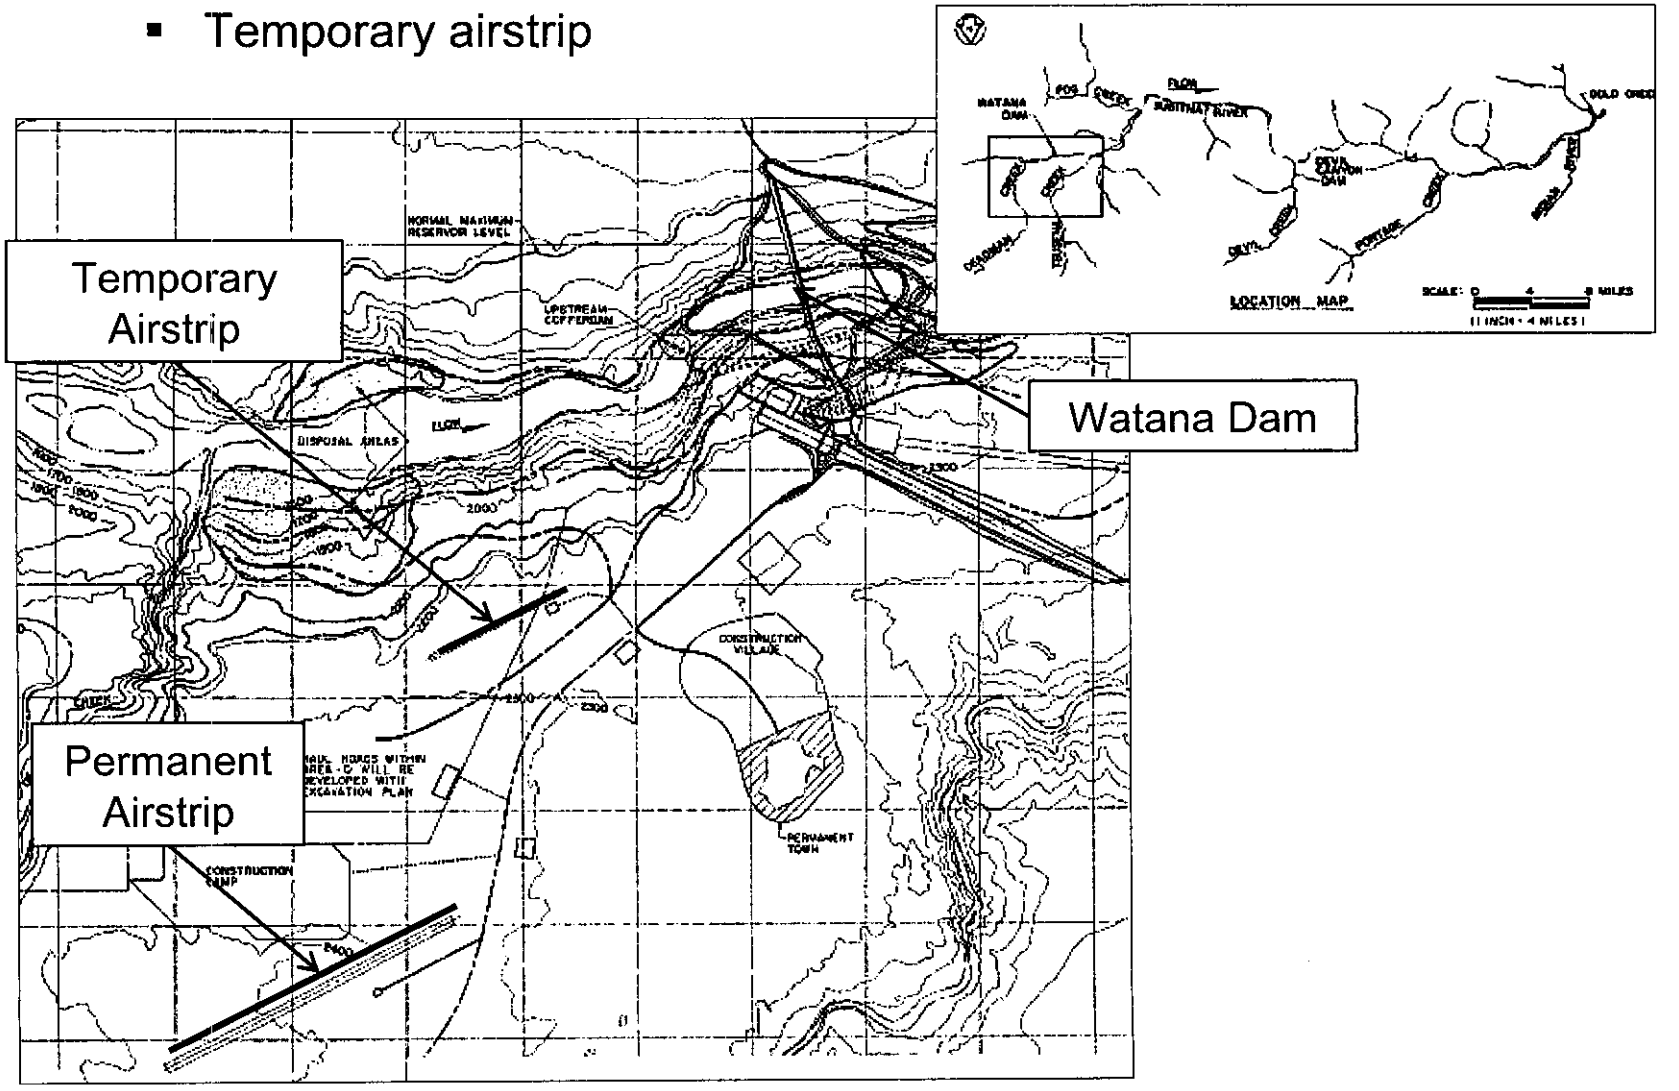
Rail

- 12-mile spur from Gold Creek to Devil Canyon
- Railhead facilities at Cantwell and Devil Canyon



Airports

- Permanent airstrip
- Temporary airstrip



Conclusions

- Remote location and large dam configurations require extensive civil works
- Large scale project, but all of these elements have been successfully done elsewhere
- Project is suited to staged construction
- Site access is particularly challenging
  - 81 miles of new road
  - 12 miles of new railroad
  - 1,200' span suspension bridge
- Technical challenges are all manageable
- Logistics and local material suitability and availability are important constructability factors

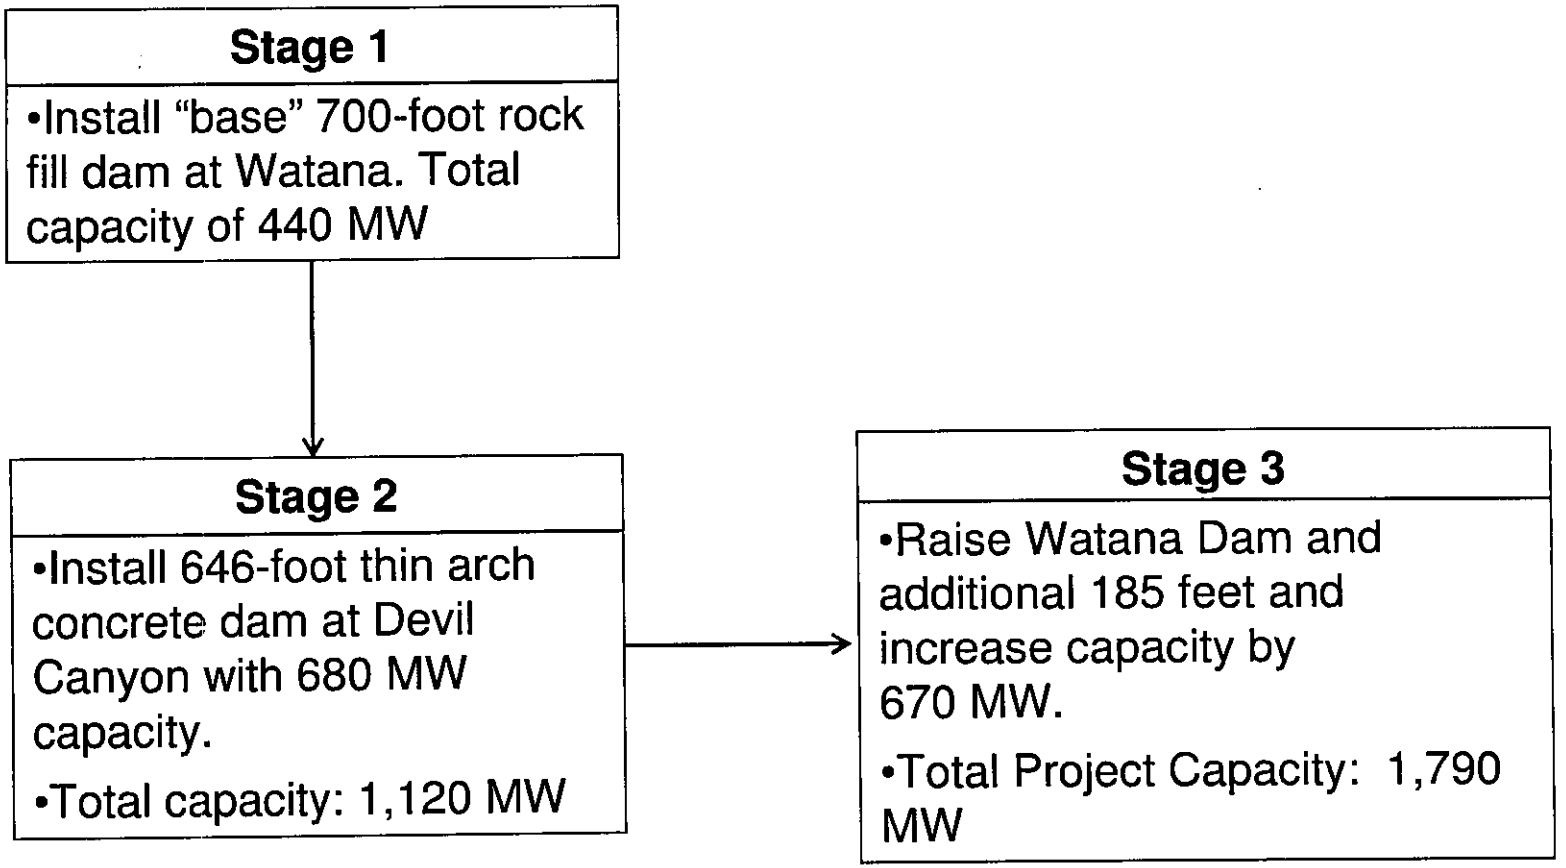
Staged Development Plan



Options Considered for Staged Development

- Option 1 – Full-scale Watana only
- Option 2 – Full-scale Watana and full Devil Canyon in stages
  - Dam, powerhouse and other features built to full-scale plans
  - Stage 1 - Install two 150-MW units, penstocks and tailraces
    Install foundations for two future 150-MW units
  - Stage 2 - Install two 150-MW units, penstocks and tailraces
- Option 3 – Watana Stage 1 only
  - Initial dam 200 feet lower than final stage
  - Powerhouse excavated to final size
  - Three150- MW units installed initially with a foundation for one more unit
- Option 4 – Full-scale Devil Canyon only

Conclusions

- Remote location and large dam configurations require extensive civil works
- Large scale project, but all of these elements have been successfully done elsewhere
- Project is suited to staged construction
- Site access is particularly challenging
  - 81 miles of new road
  - 12 miles of new railroad
  - 1,200' span suspension bridge
- Technical challenges are all manageable
- Logistics and local material suitability and availability are important constructability factors

Chakachamna Hydropower

- Statewide hydro Resources
- Susitna project
- Chakachamna project

Cook Inlet Natural Gas

- 1968 Price $0.16/MMBTU
- 2008 Utility Price $4.00/MMBTU
- Present Henry Hub $7.50/MMBTU
- Existing Know Reserves Limited
- Future Cost Uncertain
- North Slope Price/Availability Uncertain
- Half the Carbon Footprint of Coal

Cook Inlet Coal Generation

- Present day price $2.00/MMBTU
- Conventional has environmental issues
- IGCC is Expensive and no good sequestration solutions
- Future Carbon Tax
- Some potential for EOR
- Cook Inlet mining issues

Cook Inlet Renewable

- Wind
- Geothermal
- Tidal
- Solar
- Hydropower

Inventory of Alaska Hydropower Potential

- U.S. Bureau of Reclamation
- U.S. Army Corps of Engineers
- 256 sites with continuous power greater than 2500 KW
- 192 billion KWH energy potential*
- 40% of the U. S. untapped hydropower
- * Railbelt energy demand 5 billion KWH

Potential Major Alaska Hydropower Projects

Project Name	River System	Installed Capacity (Megawatts)	Energy (Million KWH/yr)
Holy Cross	Yukon	2,800	12,300
Ruby	Yukon	1,460	6,400
Rampart	Yukon	6,000	34,200
Porcupine	Porcupine	530	2,320
Woodchopper	Yukon	2,160	14,200
Yukon-Tayia	Yukon	3,200	21,000
Susitna	Susitna	1,500	6,500
Chakachamna	Chakachatna	320	1,600
Wood Canyon	Copper	3,600	21,900
Stikine	Stikine	2,260	9,900

Note: Railbelt energy demand is presently 5,000 Million KWH/yr

1688

Existing Hydropower Statewide

- 40 projects
- Most located in Southeast
- Inexpensive Electricity

Existing Hydropower Southcentral

■ Eklutna	37.5 MW
■ Bradley Lake	115 MW
■ Cooper Lake	20 MW

Susitna Hydropower Project

- Two high head dams on the upper Susitna river located 30 miles upstream from Talkeetna
- Total Cost $5.3 Billion (1985 dollars)
- 1,400 MW installed capacity and 6.5 billion KWH of energy
- Watana built first -- 870 foot high earth fill dam
- Devil Canyon built second -- 650 foot high concrete thin arch dam
- State expenditures for exploration and FERC licensing: $160 million, through the Alaska Power Authority
- License application withdrawn in 1985 when price of oil plummeted

Next Steps

■ Preliminary permit investigations	36 months
■ FERC licensing	18-36 months
■ Project construction	54 months
■ Power on line	2017

SUSITNA & CHAKACHAMNA COMPARED

Susitna	Chakachamna
6.5 billion KWH energy	**1.6 billion KWH**
$5.4 billion construction cost (1985$)	**$1.7 billion construction cost (2008$)**
880 foot dam at Watana **664 foot dam at Devil Canyon** **$1 billion for new transmission lines**	**No Dam** **12 mile power tunnel** **$90 million for new transmission lines**
Power on line 2024	**Power on line 2018**
Reservoirs floods 45,500 acres **90 miles of stream channel**	**Existing lake--no additional land flooded**

Hydropower Summary

- Significant Hydropower Potential
- State of Alaska Studying Susitna
- TDX Power Pursuing Chakachamna
  - Expensive
  - Long lead time
  - Requires utility support

2/25/09 MINING INDUSTRY BRIEFING

The Economic Benefits of

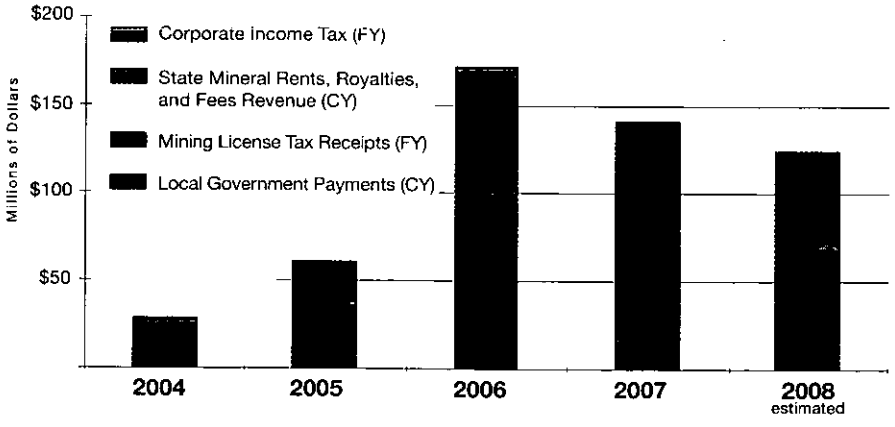
Alaska's Mining Industry

Mining is a growing force in Alaska's economy, providing jobs for thousands of Alaskans and millions of dollars of personal income throughout Alaska. Alaska's mining industry includes exploration, mine development, and mineral production. Alaska's mines produce zinc, lead, gold, silver, coal, as well as construction materials, such as sand, gravel, and rock.

In 2008, Alaska's mining industry provided:

- **3,500 direct** mining **jobs** in Alaska.
- **5,500 total** direct and indirect **jobs** attributed to Alaska mining industry.
- **$350 million** in direct and indirect **payroll**.
- Some of Alaska's highest paying jobs with an estimated **average annual wage of $82,600**, 90% higher than the state average for all sectors of the economy, second highest after oil and gas sector wages.
- **$15.6 million** in **local** government **revenue** through property taxes and payments in lieu of taxes, down 1% from 2007.
- **$105 million** to the **state** government through rents, royalties, fees, and taxes, down 17% from 2007.
- **$212 million** in payments to **Alaska Native corporations** (FY08) up 266% from FY07.
- **Jobs** for residents of more than 120 communities throughout Alaska– mostly year-round, and often in **rural areas**, where few other jobs are available.

State and Local Government Revenue Impact



2008 Economic Benefits

estimated

Exploration

- **$293 million** spent on exploration, **down 8%** from 2007.
- **59 exploration projects** spending more than **$100,000**, of which 30 exploration projects spent **more than $1 million.**

Development

- **$331 million** spent on mine construction, up 7% from 2007, on at least 7 developing and existing mines.

Production

- **$2.4 billion** in **gross mineral production value** from Usibelli Coal, Greens Creek, Red Dog, Fort Knox, and Pogo mines, placer mines, and rock, sand, and gravel operations, down 27% from 2007.
- More than **175 placer mines** produced **54,000 ounces of gold.**
- **$102 million** in production value from more than **117 active rock quarries, and sand and gravel operations.**

Exports (2007)

- **$1.3 billion** in mining exports, or **34% of Alaska's total exports.**

Usibelli Coal Mine

Coal

- Alaska's only operating coal mine, exporting a third of its production in 2008
- Fuels 40% of Interior Alaska's electricity
- Founded in 1943
- 110 employees

Greens Creek Mine

Silver, zinc, gold, and lead

- One of the largest silver producers in North America
- Largest taxpayer in the City & Borough of Juneau
- Discovered in 1979, producing from 1989 to 1993, and since 1996
- 320 employees

Red Dog Mine

Zinc, lead, and silver

- World's largest zinc concentrate producer
- Largest taxpayer in the Northwest Arctic Borough
- Discovered in 1968, producing since 1989
- 390 employees, plus 95 full-time contractors in 2008

Fort Knox Mine

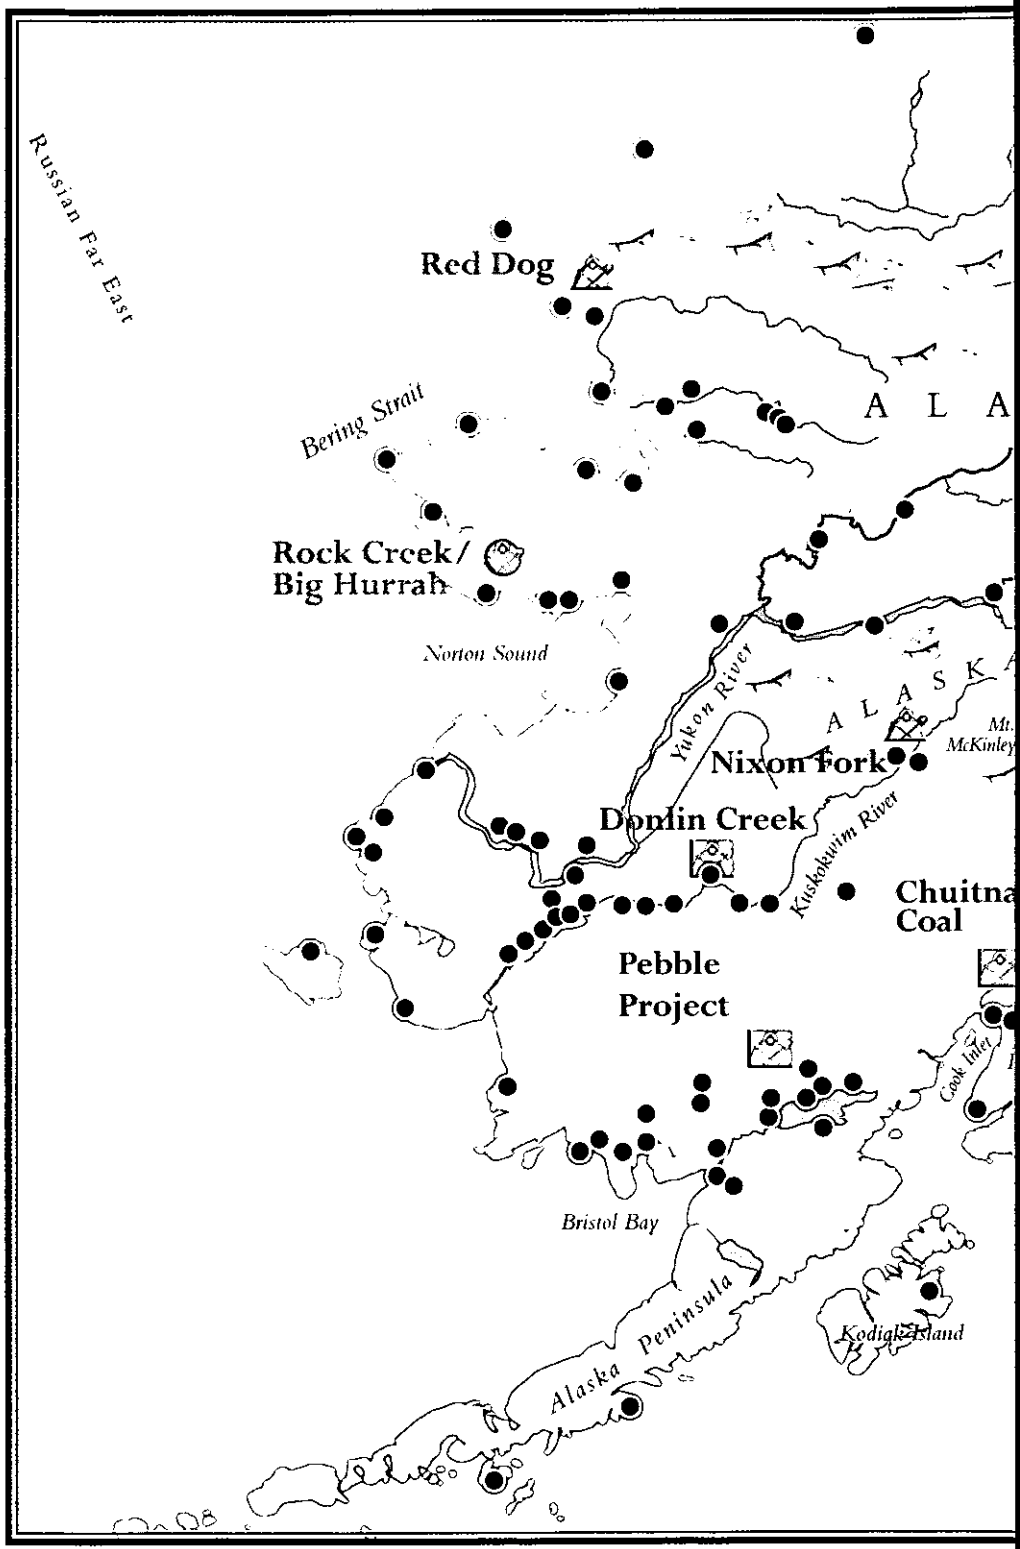
Gold

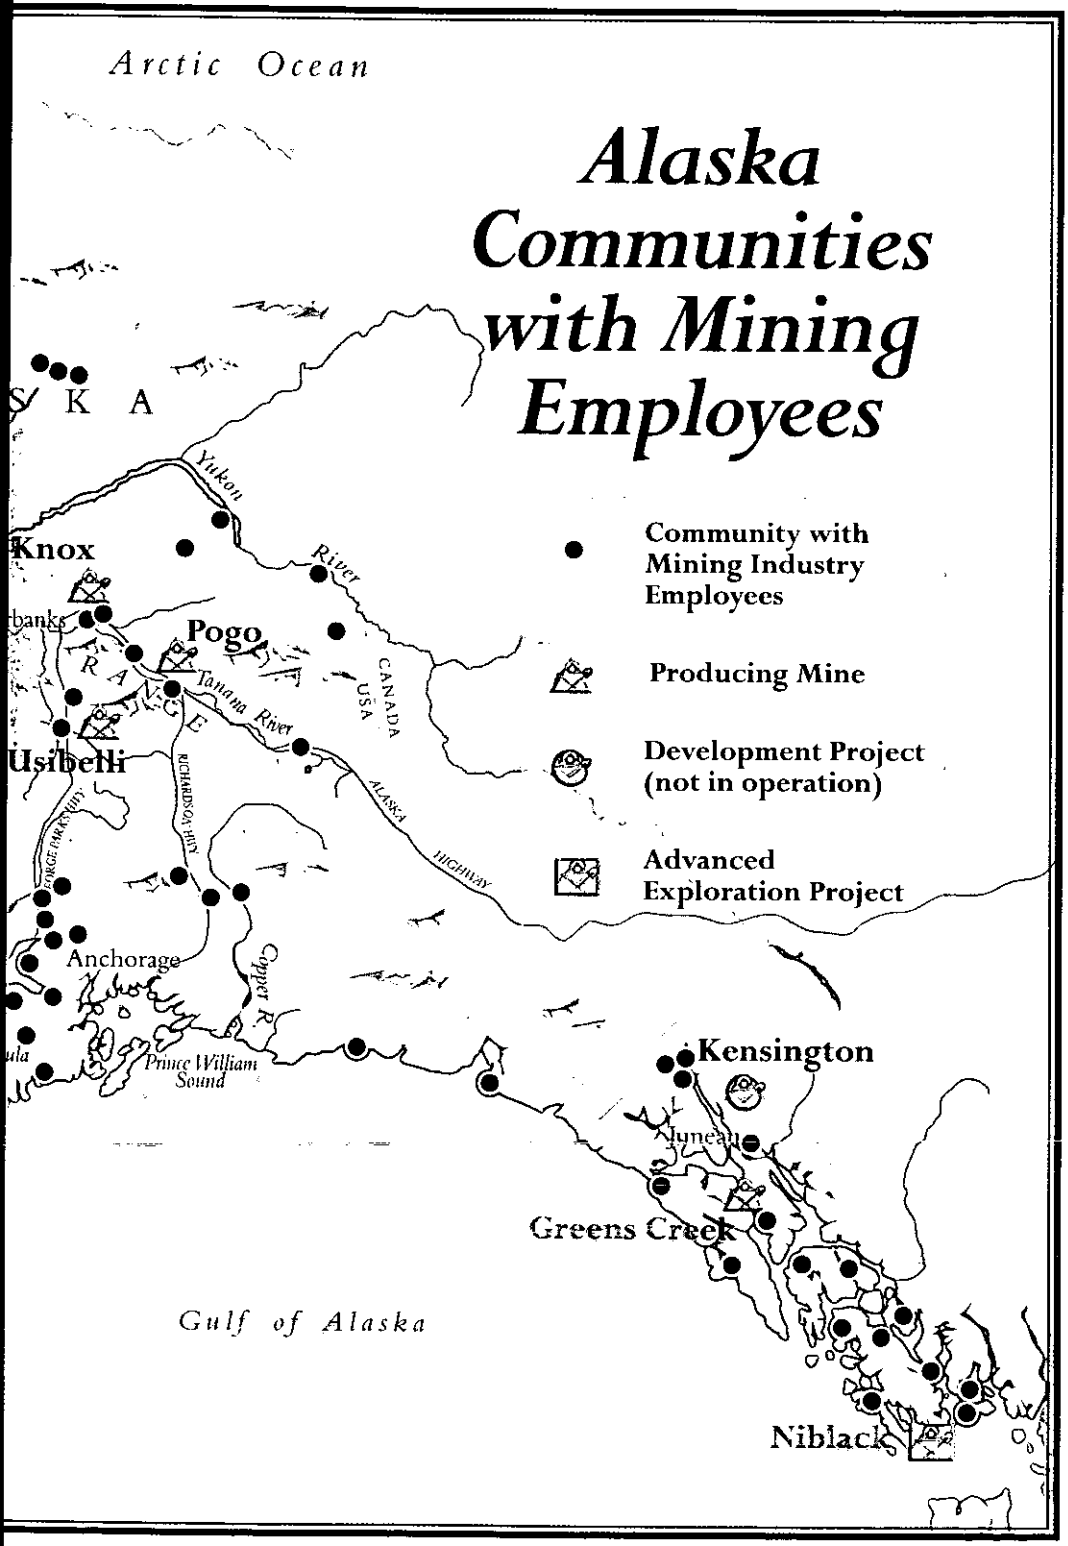
- Alaska's largest surface gold mine
- Largest single property taxpayer in the Fairbanks North Star Borough
- Discovered in 1984, producing since 1996
- 450 employees, plus 30 full-time contractors in 2008

Pogo Mine

Gold

- Approximately 700,000 ounces produced 2006 through 2008
- Significant private sector payments to the City of Delta Junction
- Discovered in 1994, producing since 2006
- 280 employees, plus 60 full-time contractors in 2008





Nixon Fork

Gold and copper

- Discovered in 1917, intermittent exploration since 1920s
- Production suspended in 2007 for additional drilling
- 75 potential production jobs

Rock Creek/Big Hurrah

Gold

- Started and suspended production in 2008
- $156 million invested through 2008
- 135 potential production jobs

Kensington

Gold

- $238 million invested through 2008
- 200 potential production jobs

Chuitna Coal

Coal

- Currently in the permitting process
- 300-350 potential production jobs

Donlin Creek

Gold

- Discovered in 1988, ongoing exploration since 1995
- 210 exploration jobs in 2008, 86% Calista shareholder hire
- 500-600 potential production jobs

Niblack

Gold, silver, copper, and zinc

- Ongoing exploration for more than 10 years
- Over $20 million invested through 2008

Pebble Project

Copper, gold, and molybdenum

- Discovered in 1987, ongoing exploration and environmental studies since 2002
- Over $300 million invested through 2008
- Over 1,000 potential production jobs

Alaska Miners Association, Inc. • 3305 Arctic Blvd., #105 • Anchorage, Alaska 99503
TEL: 907.563.9229 • FAX: 907.563.9225
WEB: www.alaskaminers.org

Strengthening Government and Communities

Mining companies strengthen Alaska's local economies by employing Alaska residents from more than 120 Alaska communities, and purchasing supplies and services from hundreds of Alaska businesses.

These mining companies are also an important source of stable revenue for local governments, as well as significant state government revenue. In 2008, Alaska's mining industry paid:

An estimated total of **$15.6 million** to **local governments**, including:

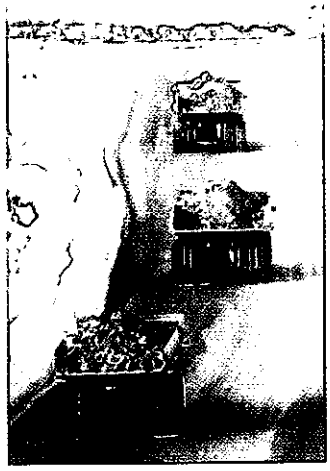
- **$11 million** in payment in lieu of taxes (PILT) by Red Dog to the Northwest Arctic Borough.
- **$2.8 million** in property taxes paid by Fort Knox to the Fairbanks North Star Borough.
- Over **$1 million** in property taxes paid by Greens Creek to the City and Borough of Juneau.
- **$500,000** in PILT paid by Pogo to the City of Delta Junction (FY08).
- **$295,400** in property taxes paid by Kensington to the City and Borough of Juneau. Once in production, the mine will be the largest taxpayer in Juneau.
- Tax payments to other local governments, including Denali Borough, City of Nome, and others.
- Mining industry employees also pay local property and sales taxes.

Largest Producing Mines State and Local Government Tax Obligations

	Land Status	State Royalty Payments	Mining License Tax	Local Govt Payments
Usibelli Coal	State	√	√	√
Greens Creek	Private		√	√
Red Dog	Private		√	√
Fort Knox	State/Mental Health Trust	√	√	√
Pogo	State	√	√	√

An estimated **$105 million to state government** in rents, royalties, fees, and taxes, including:

- **$55 million** in mining license tax, rents, royalties, fees, and other payments.
- **$50 million** in corporate income tax, making mining **Alaska's second highest corporate income tax paying sector** after the petroleum sector.



Over **$42.1 million in other state government-related revenues**, including:

- **$18.5 million** to the Alaska Railroad Corporation – $11.2 million for moving coal and $7.3 million for moving sand and gravel.
- **$22.0 million** to Alaska Industrial Development & Export Authority for the use of state-owned facilities.
- **$1.6 million** to the Alaska Mental Health Trust for rents and royalty payments, and construction material sales.

Partnering with Alaska Native Corporations

All Alaska Native corporations benefit from mining industry activity – in 7(i) and (j) **royalty sharing payments**, in **jobs** for shareholders, or through **business partnerships**.

- **$212 million** in royalties paid by Red Dog to NANA; of which $122 million was redistributed to other Alaska Native regional and village corporations
- 56% of the 485 year-round jobs at Red Dog are filled by NANA shareholders, including Teck Cominco, NANA Lynden and NANA Management Services jobs.
- Calista Corporation anticipates $700,000 in royalties for mineral agreements, including lode exploration, placer gold production, and construction material sales.
- 86% of the 210 jobs at Donlin Creek Project filled by Calista shareholders.

Projects with near-term potential will directly benefit Bering Straits Native Corporation and Sitnasuak Native Corporation (Rock Creek), as well as Goldbelt, Inc., Klukwan, Inc., and Kake Tribal Corporation (Kensington).

Special thanks to Rich Hughes, Minerals Development Specialist, Alaska Department of Commerce, Community and Economic Development, and Dave Szumigala, Senior Minerals Geologist, Alaska Department of Natural Resources for their assistance. Other sources used in this report include: State of Alaska Departments of Commerce, Community and Economic Development, Labor and Workforce Development, Natural Resources, and Revenue, Alaska Railroad Corporation, Alaska Industrial Development & Export Authority, various local and borough governments, and mining companies. Prepared by McDowell Group, Inc.

ALASKA MINERS ASSOCIATION, INC.

Issues of Concern to the Alaska Mining Industry for 2009

Actions needed by the Administration and/or the Legislature: January 2009

INTEGRITY OF PERMITTING PROCESS

Statewide Initiatives - Ensure the requirements for the ballot initiative process are open, transparent and hold proponents accountable.

State Permitting System - Support the integrity of the current, very rigorous, science-based state permitting process.

Water Quality – Support ADEC implementation of the new approved APDES program.

Water Quality Standards - Continue to revise water quality standards to ensure: 1) availability of mixing zones, 2) standards are scientifically supportable and developed using Alaska-specific criteria, and 3) are sufficient to protect water quality.

Air Quality Program - The Administration contract with air permitting experts to recommend changes that will improve DEC permit review time and address the other challenges faced by this program.

Non-Profit Foundation Money - Enact legislation to require disclosure whenever funds from 501(c)(3) non-profit foundations are involved, to include name of the source, amounts and purpose for which the moneys are given.

Wetlands - Petition the federal government to develop regulations that strictly follow the U.S. Supreme Court decisions in SWANCC, Rapanos, etc.

FISCAL ISSUES

Taxation - Maintain an equitable and stable tax structure at state and local government levels to ensure Alaska industry remains world competitive.

State Agency Funding - Provide sufficient funding for the minerals and permitting functions of the Departments of Natural Resources; Commerce, Community & Economic Development; Fish & Game; and Environmental Conservation.

Permitting Agencies - Increase salary and benefits for state agency personnel involved in minerals permitting and management so they are competitive with industry.

State Fiscal Policy - Adopt a long range fiscal plan.

State Land Entitlement - Support continued funding for DNR to process final transfer of lands from BLM.

Annual Airborne Geophysical Mapping Program - Accelerate the extremely effective program of State investment in airborne geophysical mapping along with baseline water quality mapping.

Mineral Education - Continue to support mining engineering and geological engineering, geology, the Mining and Petroleum Training Service (MAPTS), and the Delta Mine Training Center (DMTC) at levels that will ensure continued accreditation and continue funding the State's share of AMEREF (Alaska Mineral & Energy Resources Education Fund).

LAND MANAGEMENT ISSUES

State Lands - Ensure no net loss of multiple use lands and require that additions to any state parks, refuges, critical habitat areas, marine restricted areas, or any other restricted-use areas, be made only if an equal acreage of other lands already having the same designation is released and the new area being designated is first evaluated for mineral potential.

Land Transfers - Prior to any state land transfers to boroughs, land disposals/sales, or leases not required for resource development, require a detailed mineral evaluation, to include airborne geophysical surveys,

be completed to help ensure that mineralized lands or key access routes are not transferred.

Outdated Federal Withdrawals - Pursue removal of old federal land withdrawals (where purpose for withdrawal has expired) which are blocking land transfers to the State, such as PLO 5150, the outer pipeline corridor. Encourage BLM to remove such PLOs and open the lands through its land planning process.

New Federal Withdrawals - Oppose all new federal land withdrawals, roadless initiatives, marine restricted areas, Antiquities Act designations, BLM wilderness studies, etc. and fight vigorously against additional buffers or other restrictions to multiple use of federal lands in Alaska. The Alaska National Interest Lands Conservation Act (ANILCA) provides that "no more" federal land will be withdrawn for parks, preserves, monuments, wilderness designations, wild & scenic river designations, etc.

International Heritage & Biosphere Designations - Oppose establishment of international parks, biosphere reserves, and world heritage sites, such as the so-called Beringia (over the Seward Peninsula & Bering Sea), NPRA, or ANWR. International designations would - 1) surrender partial sovereignty to the United Nations, and 2) eliminate access across the affected lands and waters.

Federal Mining Law Issues - Continue to oppose changes to federal law and regulations that would be adverse to Alaska miners.

ACCESS ISSUES

Interties, Roads, Railroads, Ports - Continue investing in development of infrastructure that will help diversify the economy and encourage private investment that would benefit from such facilities.

RS-2477 Rights-of-Way - Continue to systematically and aggressively pursue the rights of the State of Alaska regarding RS-2477 rights-of-way, both administratively and in the courts. Without RS-2477s much of Alaska public lands will never have overland access.

Navigability - Continue to systematically and aggressively pursue recognition of State ownership of and authority over all navigable waters granted under the Statehood Act.

OTHER ISSUES

NEPA - The Administration develop an MOU with the Corps of Engineers to ensure timely coordination of future Environmental Impact Statements.

Energy Plan - Develop a state energy plan that addresses both local and regional needs that considers all energy sources.

Coal Development - Encourage utilization of coal liquefaction and gasification technologies for Alaska's vast coal resources.

Climate Change - Support federal actions only if they are based on sound, peer-reviewed science.

Jones Act - Because Jones Act vessels for bulk mineral shipments are not available, petition Congress to amend the Jones Act to allow use of non-Jones Act vessels for shipment of "non-petroleum bulk natural resources from Alaska".

Endangered Species Act/Essential Fish Habitat - Petition the federal government to develop new ESA and EFH regulations that strictly follow the original intent of these laws.

For further information on the above issues or for information regarding exploration and mining in Alaska please contact:

Annual Mining Industry Briefing

Joint Senate/House Resources Committees

February 25, 2009

Today's Agenda

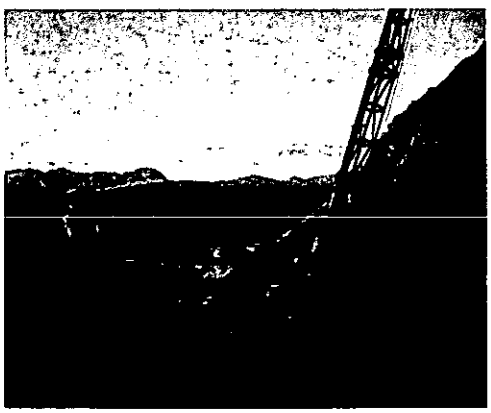
- The Economic Benefits of Alaska's Mining Industry – Jim Calvin, McDowell Group

- Review of Major Mines and Projects
- – Steve Borell, Alaska Miners Association

The Economic Benefits of Alaska's Mining Industry in 2008

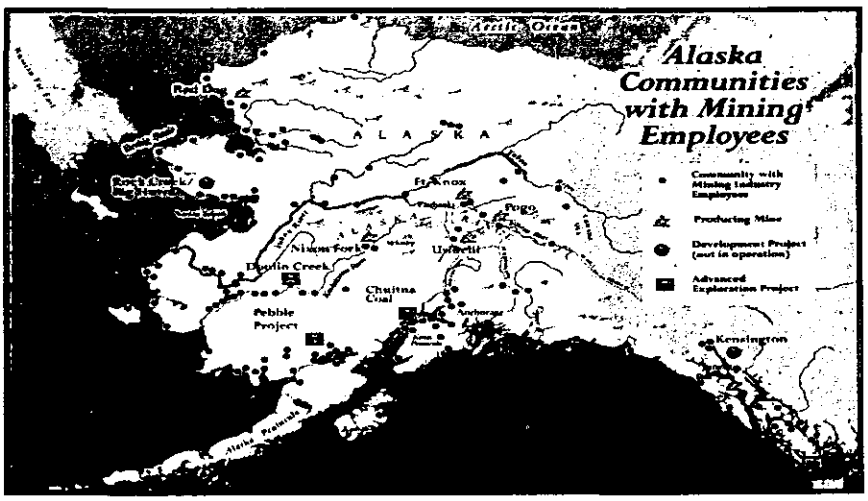
Presented by:
Jim Calvin, Principal
McDowell Group, Inc.
Anchorage • Juneau

Statewide Employment Impacts, 2008 Estimates



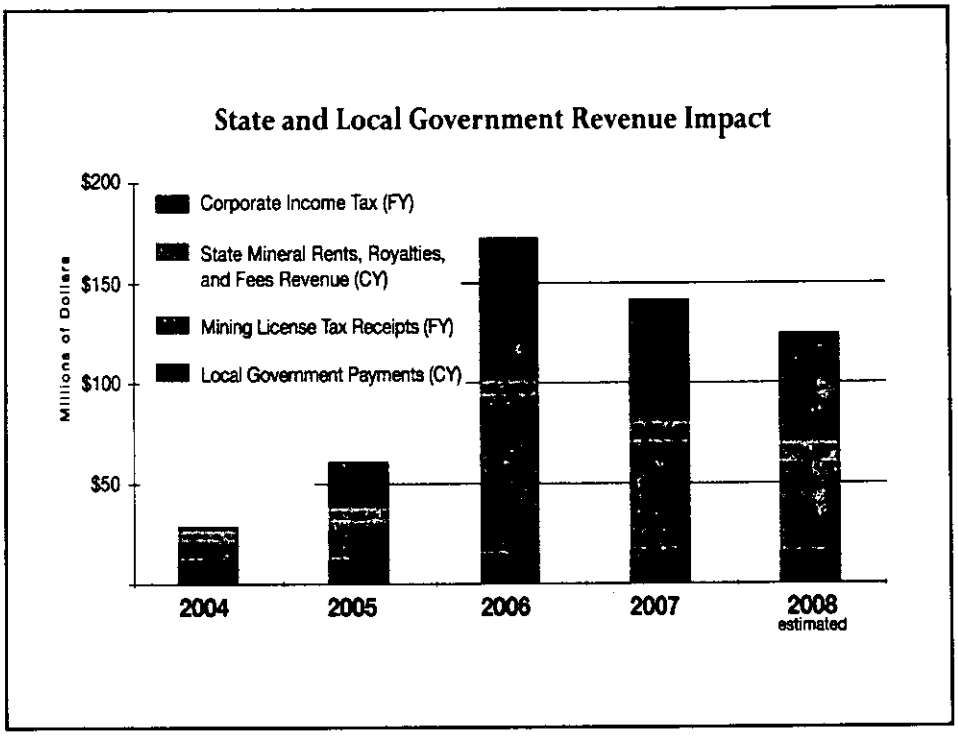
- 3,500 direct jobs
- 5,500 total jobs
- $350 million total payroll
- $82,600 average industry wage

Alaska Communities with Mining Employees



Largest Producing Mines
State and Local Government Tax Obligations

	Land Status	State Royalty Payments	Mining License Tax	Local Govt Payments
Usibelli Coal	State	√	√	√
Greens Creek	Private		√	√
Red Dog	Private		√	√
Fort Knox	State/Mental Health Trust	√	√	√
Pogo	State	√	√	√



Payments to Local Government

- $15.6 million to local governments in 2008
  - $11.0 million in PILT to NWAB (Red Dog)
  - $2.8 million in property taxes to FNSB (Fort Knox)
  - $1.3 million in property taxes to CBJ (Greens Creek and Kensington)
  - $500,000 in PILT to City of Delta Junction (Pogo)
  - Additional tax payments to Denali Borough, City of Nome and others

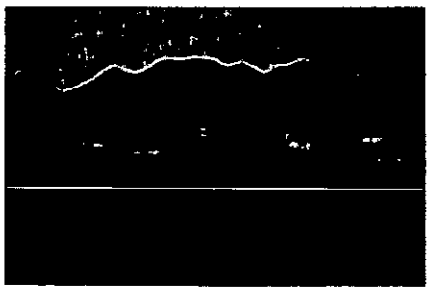
Payments to State Government

- $105 million in *estimated* 2008 state revenue
  - $55 million in mining license tax, rents, royalties, fees and other payments
  - $50 million in corporate income taxes

PLUS…

- $18.5 million to the Alaska Railroad Corporation for moving coal, sand and gravel
- $22 million to AIDEA for use of state-owned facilities (Skagway Ore Terminal and Delong Trans. System)
- $1.6 million to the Alaska Mental Health Trust for rents and royalty payments, and material sales

Rural and Native Benefits



Royalties….

- Red Dog paid royalties of $212 million to NANA in 2008
  - $122 million redistributed to other ANCSA regional and village corporations

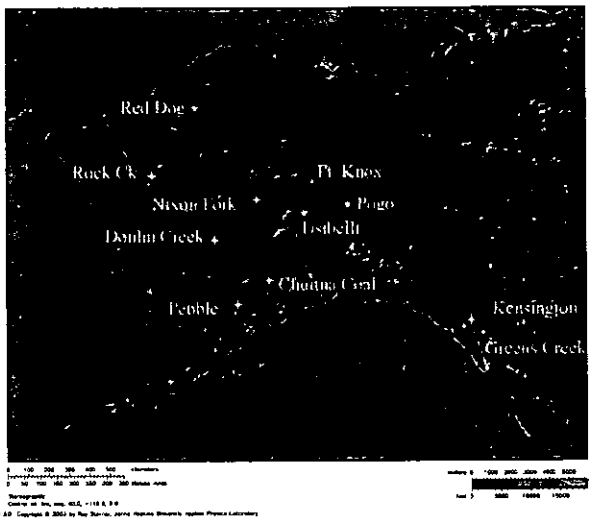
Employment….

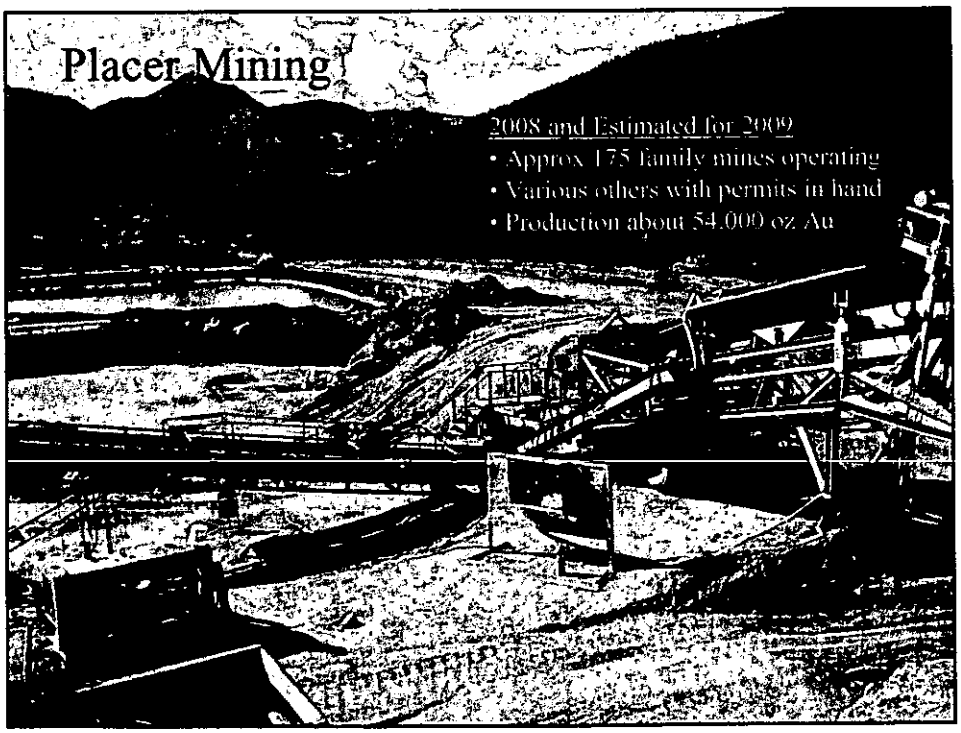
- 56% of Red Dog's 485 jobs held by NANA shareholders
- 86% of Donlin Creek's 210 jobs held by Calista shareholders

Alaska Major Mines and Projects

★ **Producing mine**

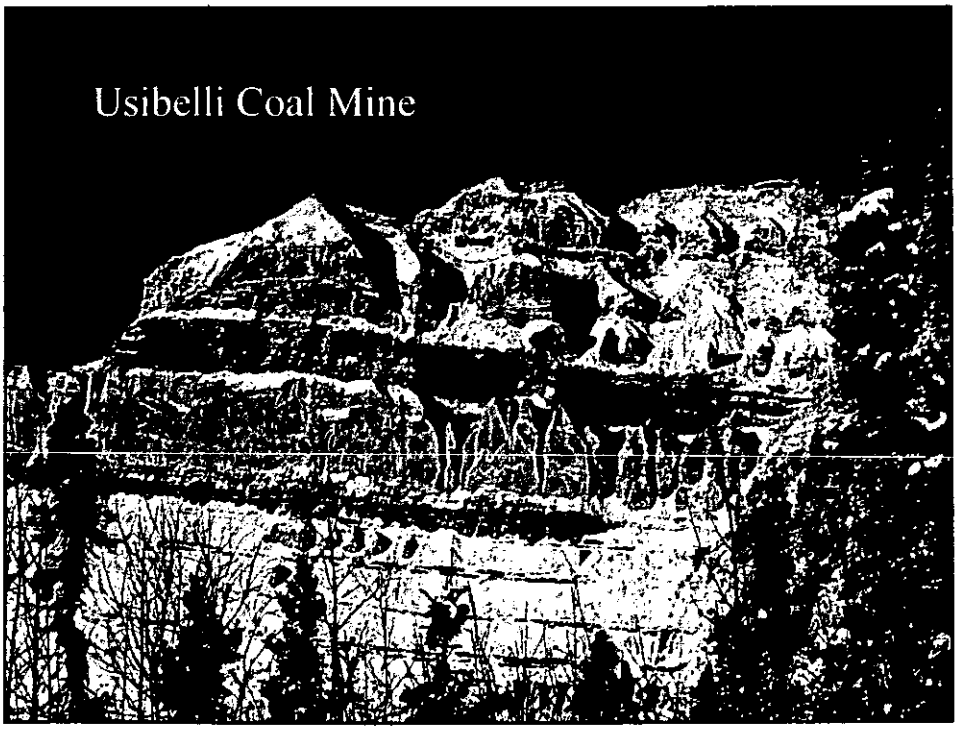
✦ **Developing and major exploration projects**

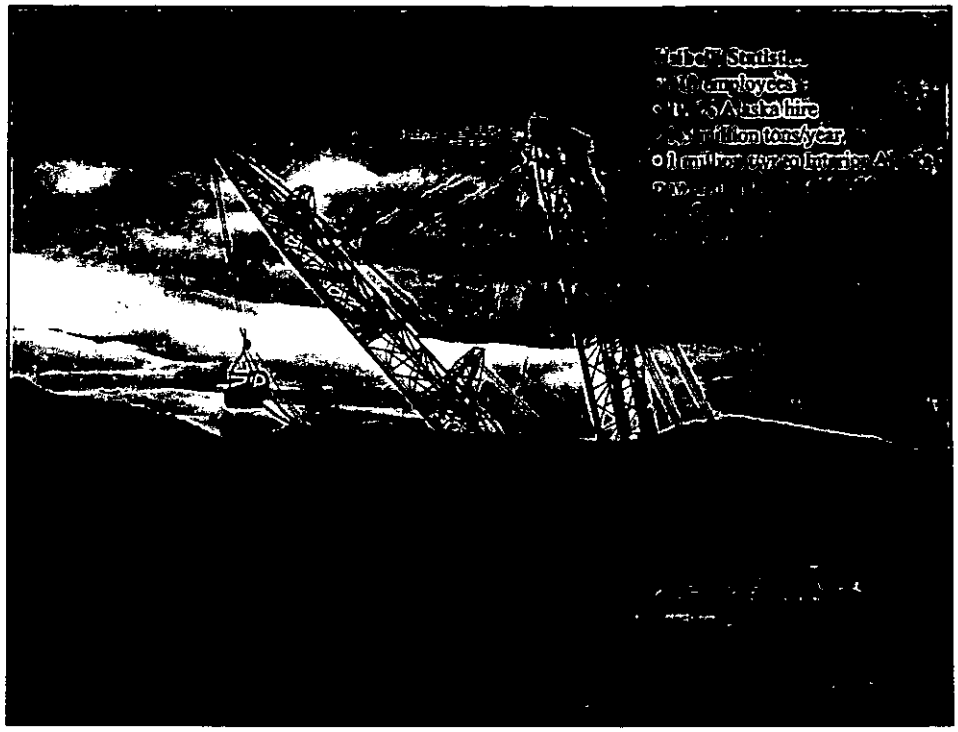




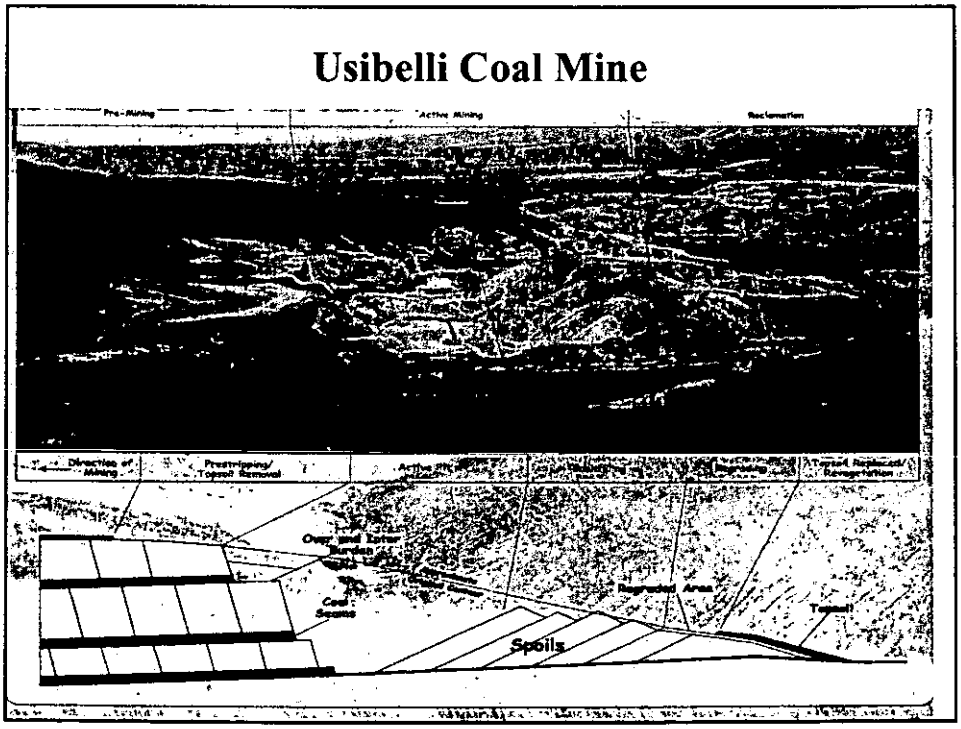
Large Operating Mines

1.	**Two Bull Ridge**	**Usibelli Coal Mine**
2.	**Greens Creek**	**Hecla**
3.	**Red Dog**	**Teck**
4.	**Fort Knox**	**Kinross Gold**
5.	**Pogo**	**Teck Pogo**

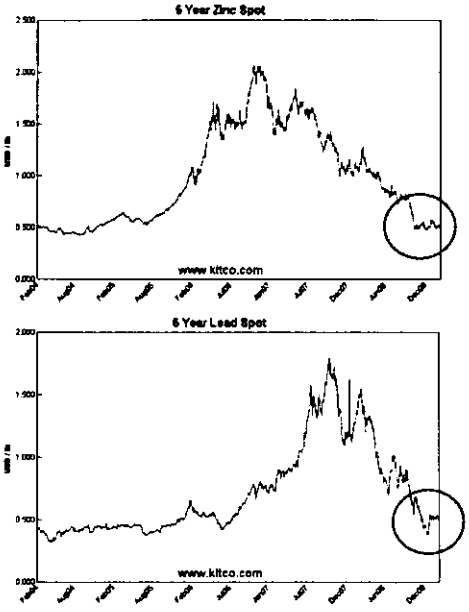




Usibelli Coal Mine

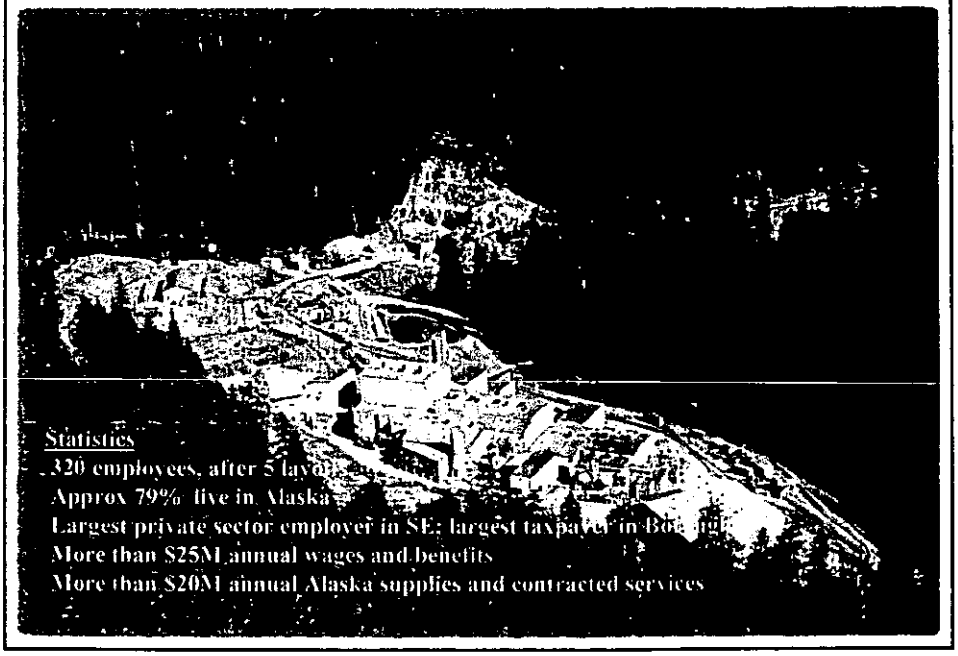


World Wide Economic Downturn - Challenges for 2009

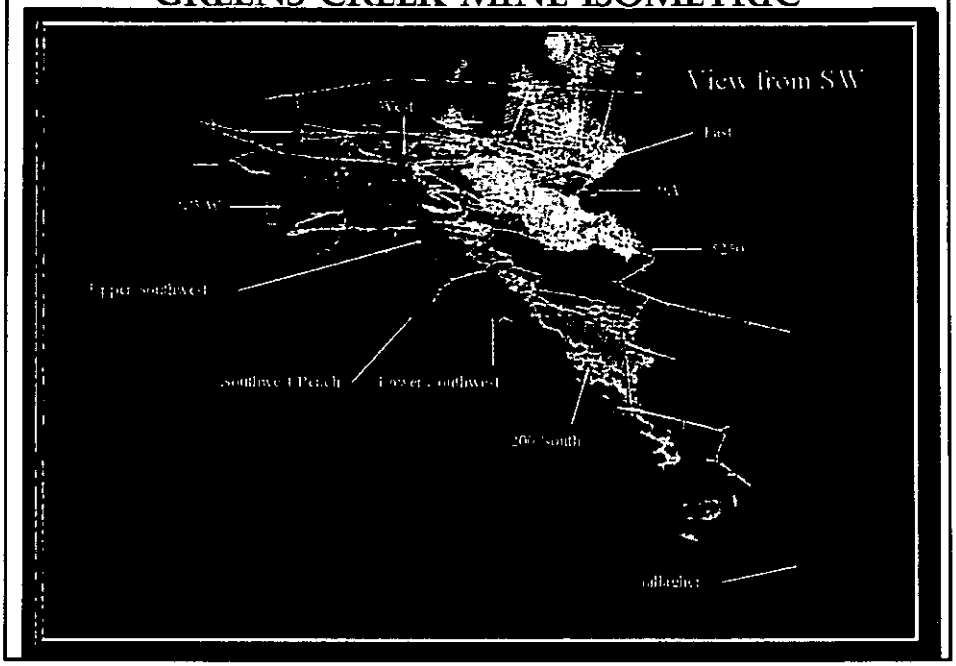


- metal prices now down to levels last seen 5 years ago
- costs still much higher than 5 years ago
- fuel purchased at the peak in July 2008 for the following year

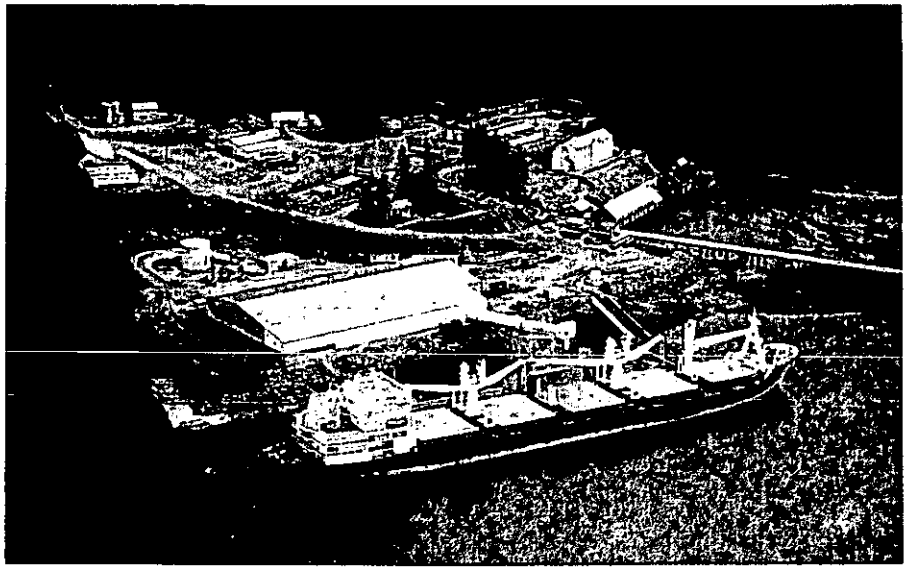
Greens Creek Mine

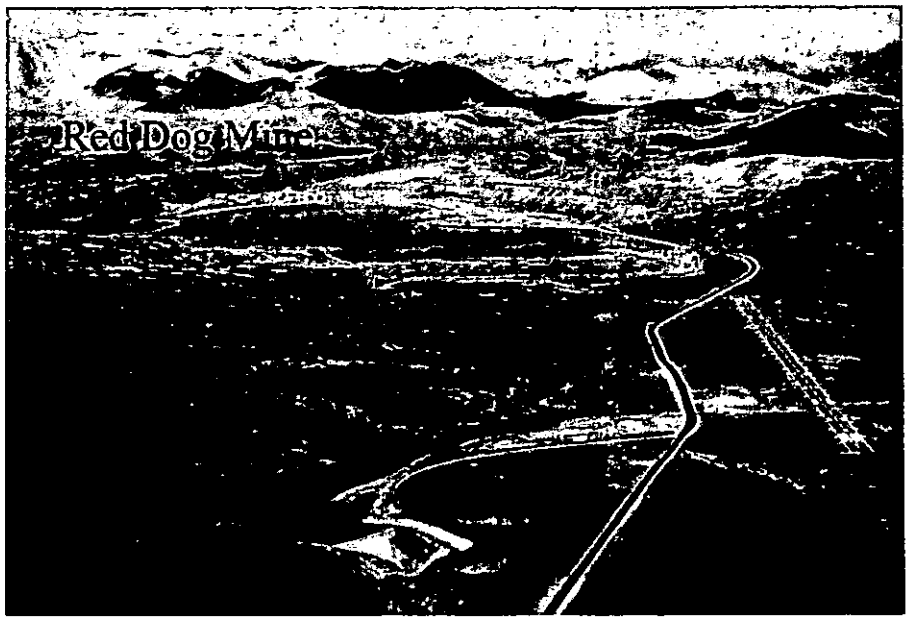


GREENS CREEK MINE ISOMETRIC

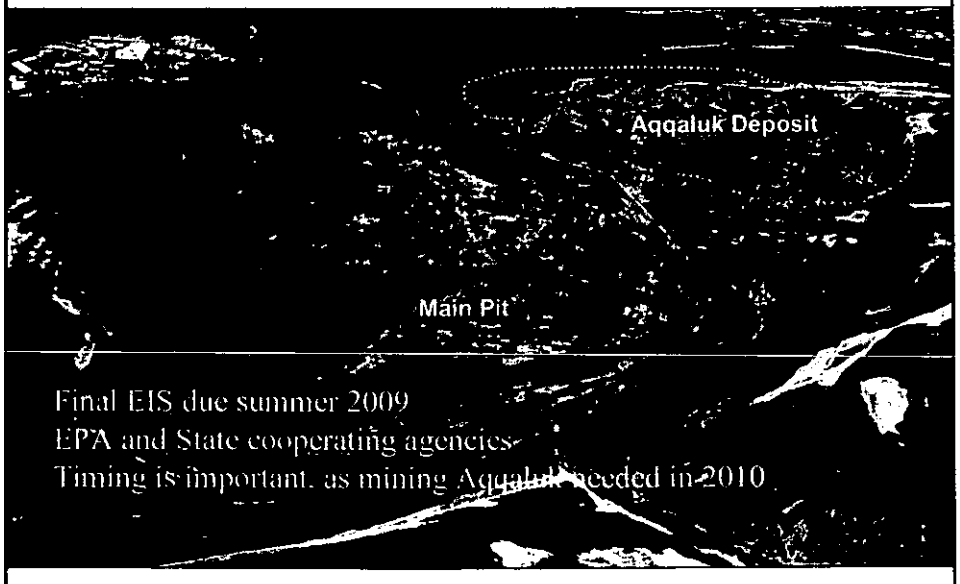


Greens Creek Ship Loading Facilities

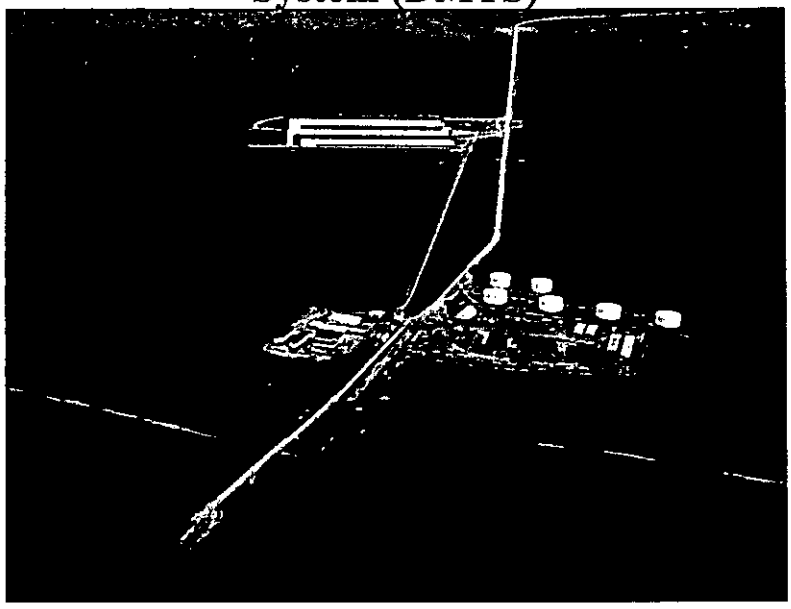




Supplemental Environmental Impact Statement
EPA studying last 20 and next 20 years operations

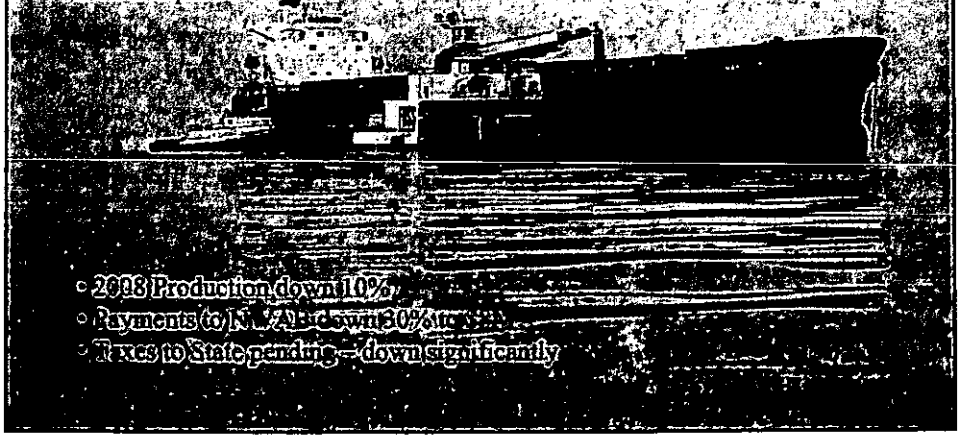


Red Dog Port Site – Delong Mts. Transportation System (DMTS)



Red Dog Statistics

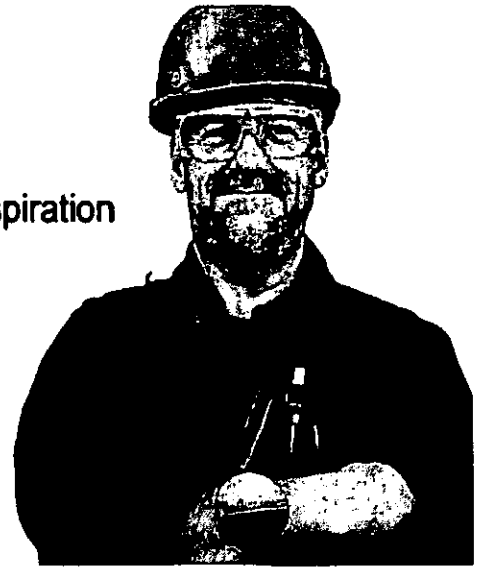
- 485 employees and full time contractors, no layoffs expected
- Improvements in safety
- 57% NANA shareholder hire
- $50M annual mine wages & benefits
- $110M with NANA JV companies
- $10.8M spent to date on search for Natural Gas
- $22.5M paid to AIDEA



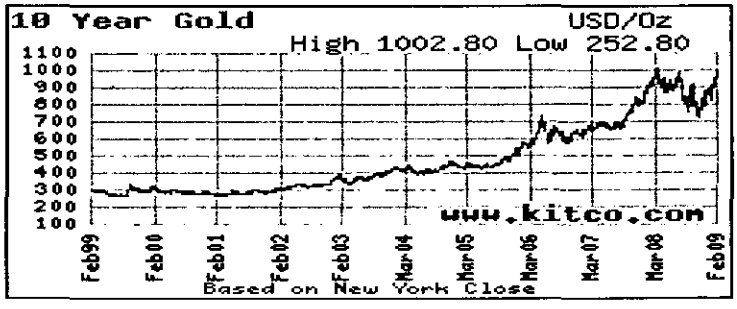
- 2008 Production down 10%
- Payments to NANA down 30% in '08
- Taxes to State pending – down significantly

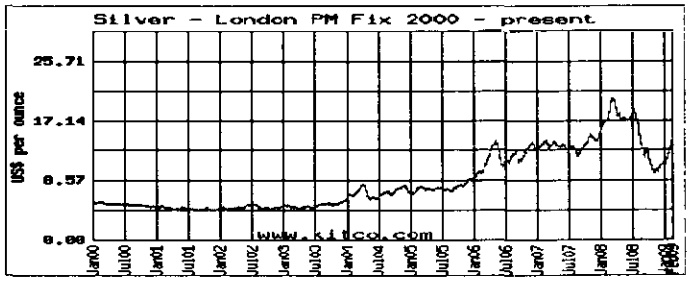
2010 Winter Olympics

Precious Medals:
The Source of Inspiration



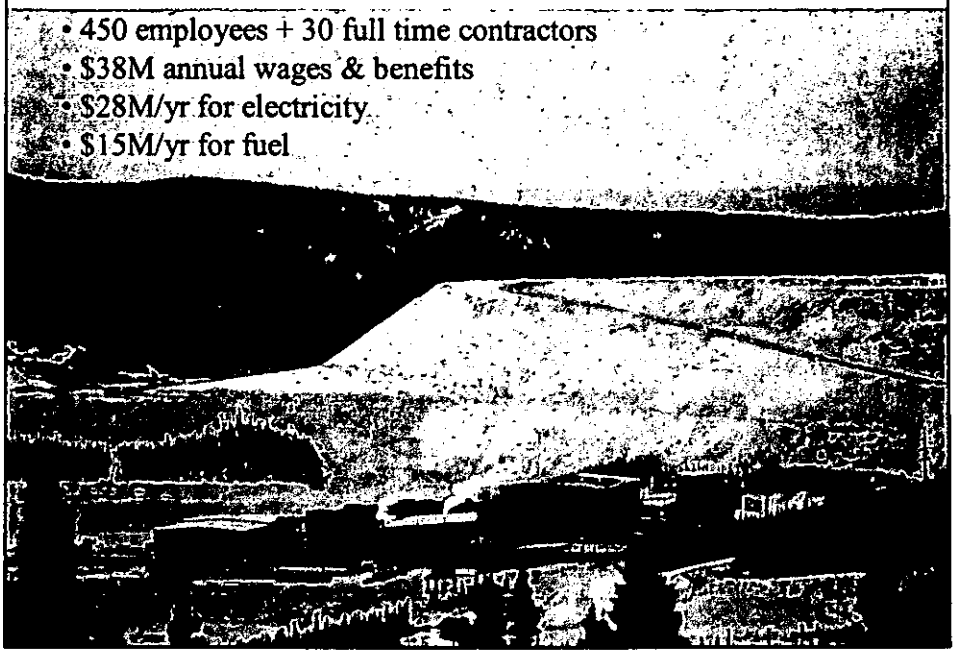
Gold & Silver Prices for Past 10 years

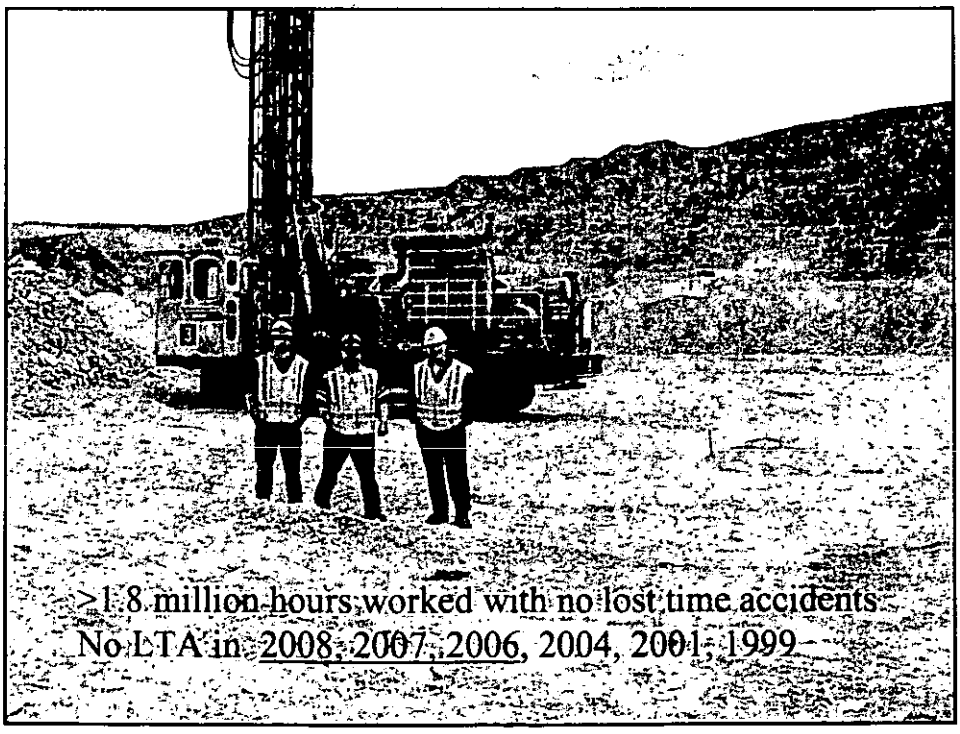




Fort Knox Statistics 2008

- 450 employees + 30 full time contractors
- $38M annual wages & benefits
- $28M/yr for electricity
- $15M/yr for fuel





> 1.8 million hours worked with no lost time accidents

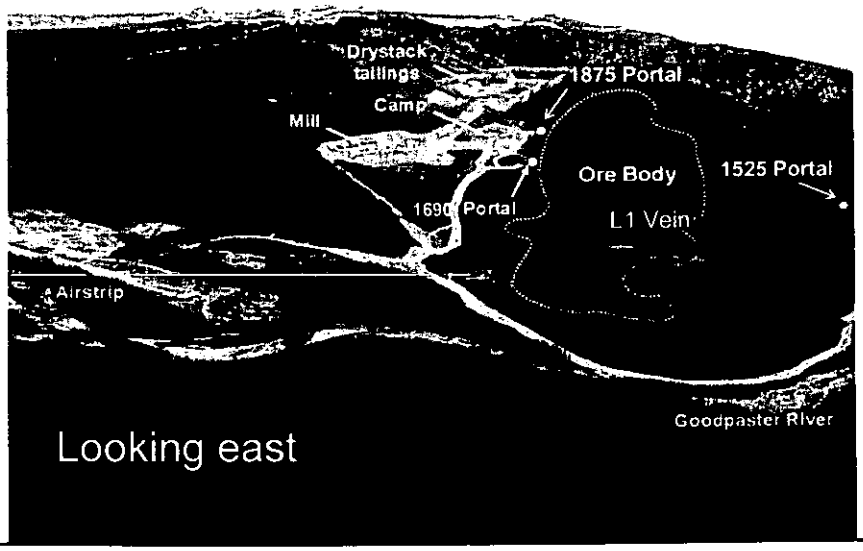
No LTA in 2008, 2007, 2006, 2004, 2001, 1999

[redacted] Fort Knox Mine

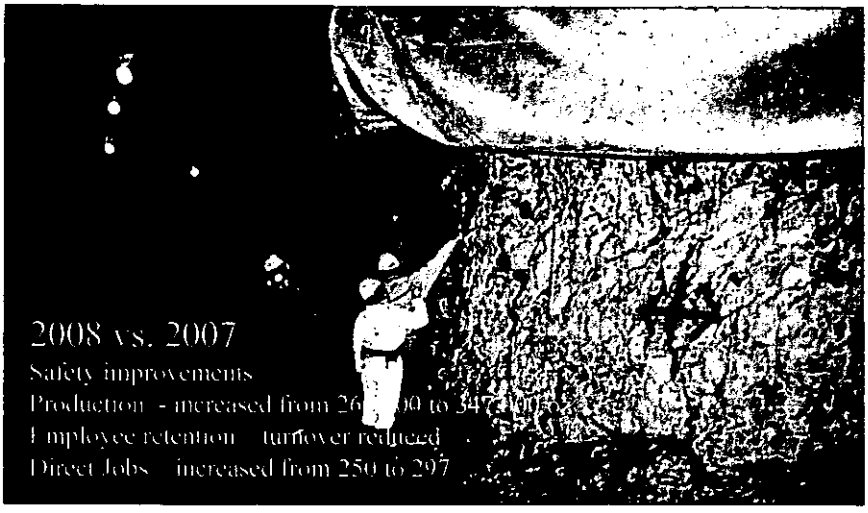
2009 Status and Plans

- Production: Approx 330,000 oz
- Heap leach facility under construction
- Phase 7 pit expansion – began Oct. 2008
- Continue exploration/drilling for potential Phase 8
- Mine life extended to 2014

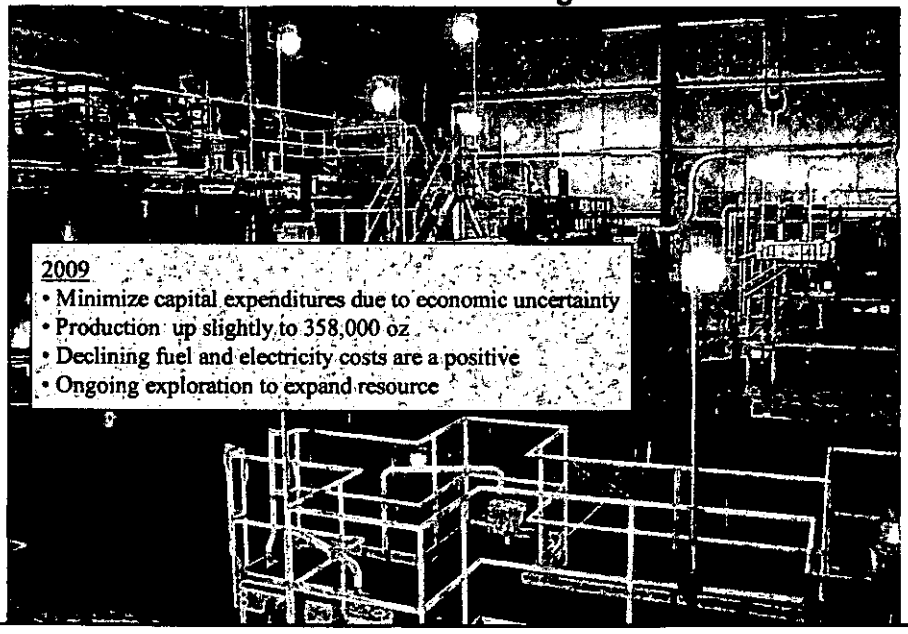
Pogo Surface Facilities & Underground Orebody



Pogo 2008 Highlights
Major Operational Improvements

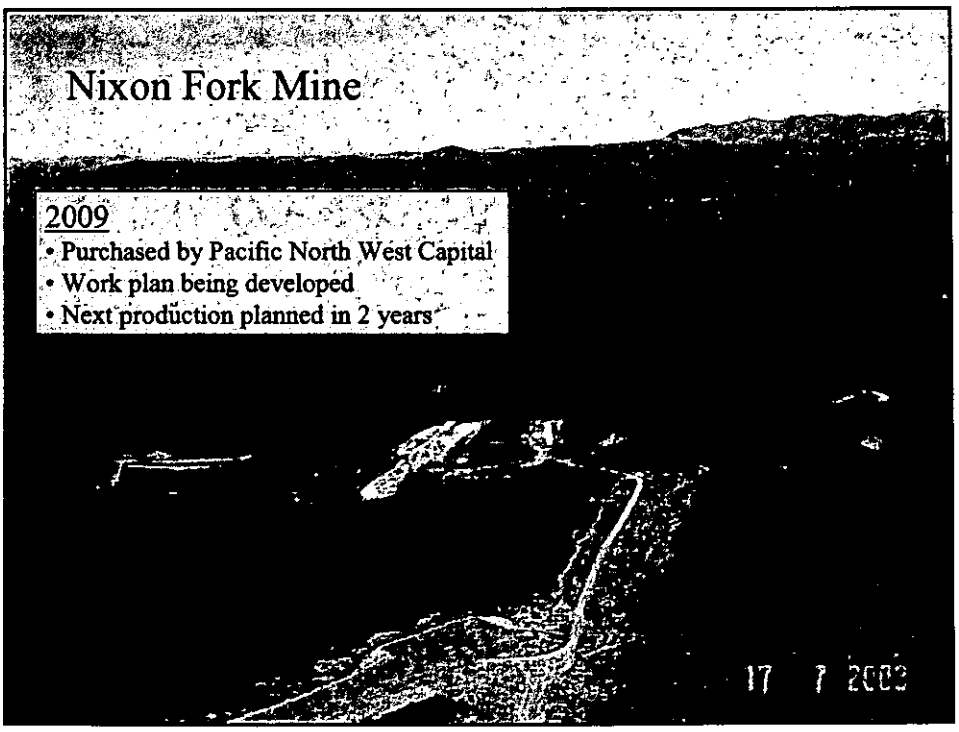


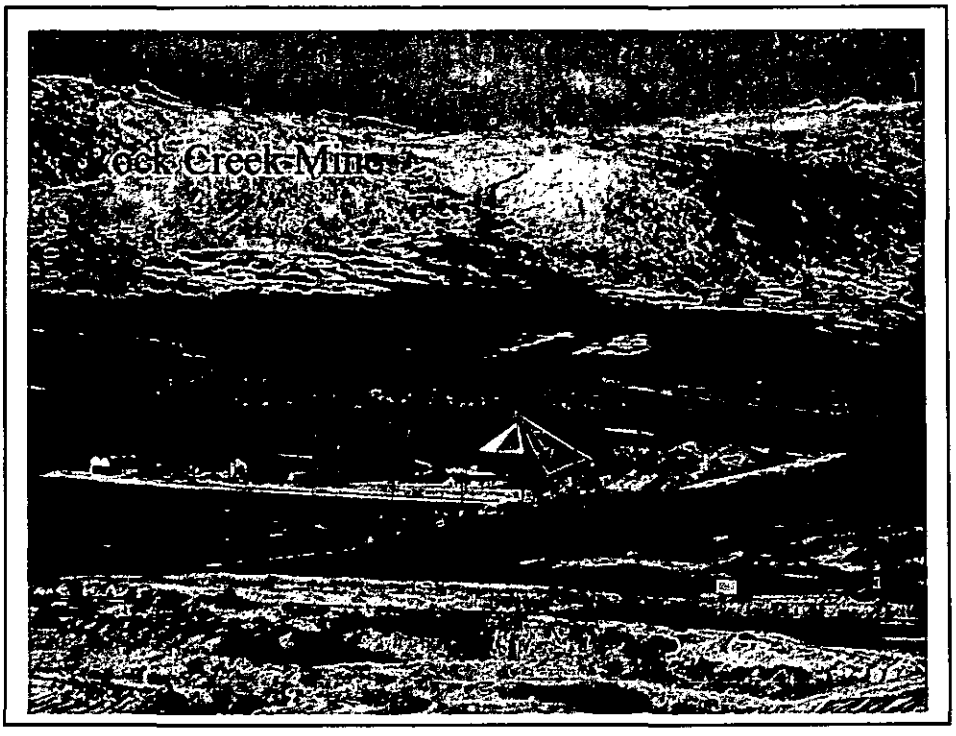
Pogo Water Treatment Plant treats mine water before discharge



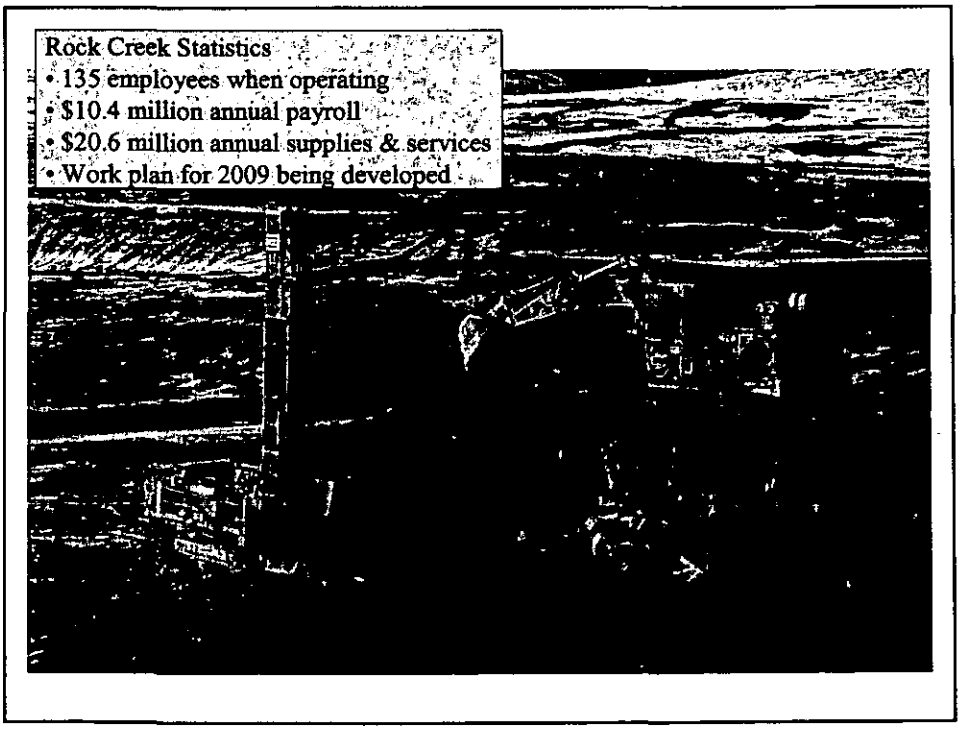
Mines Currently in Idle Status

1.	Nixon Fork	Pacific North West Capital
2.	Rock Creek	Alaska Gold/NovaGold
3.	Kensington	Coeur Alaska

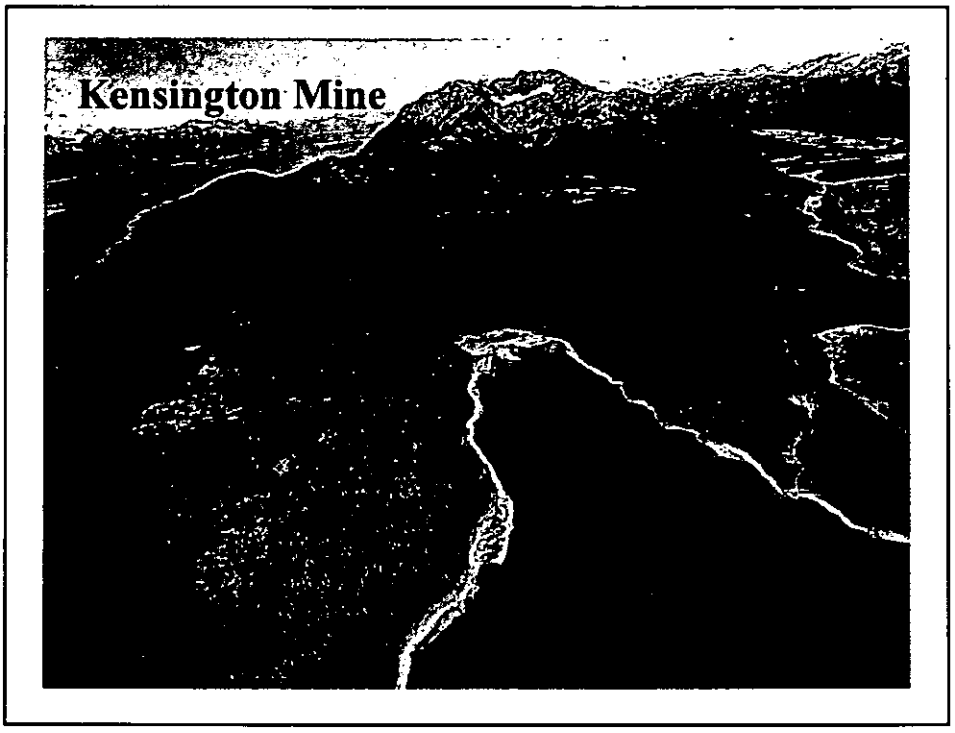




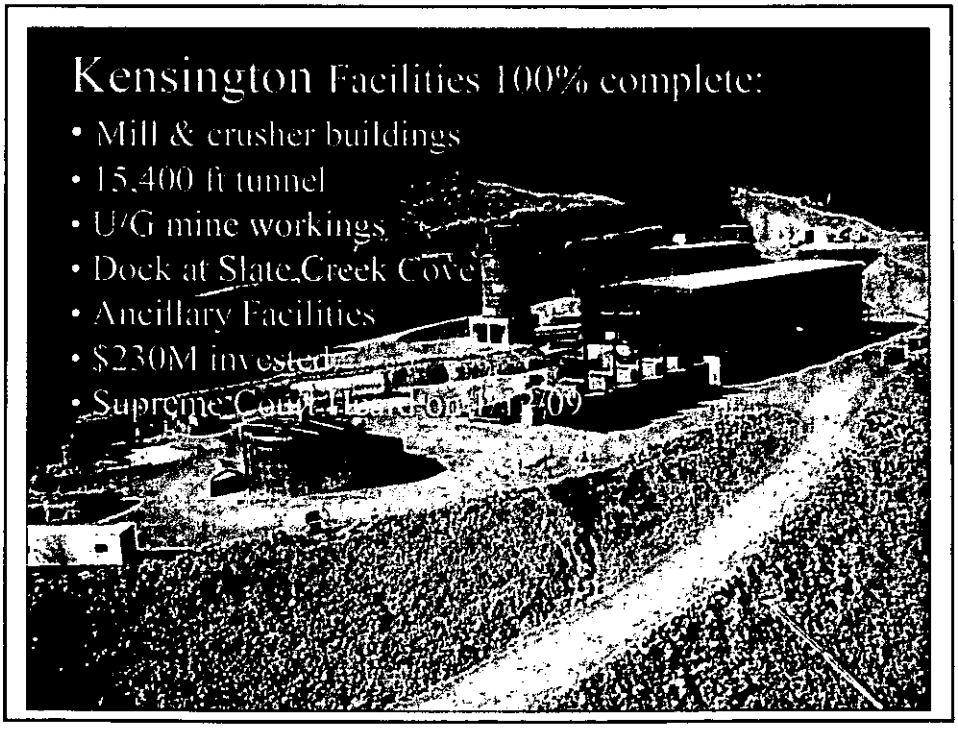
Rock Creek Mine



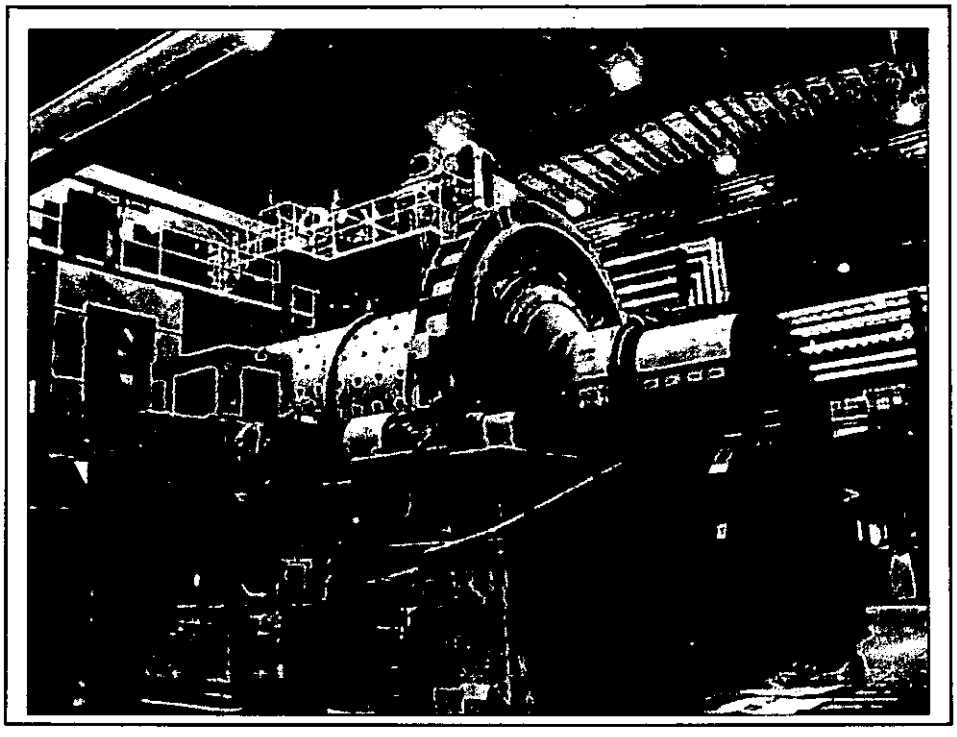
Rock Creek Statistics
• 135 employees when operating
• $10.4 million annual payroll
• $20.6 million annual supplies & services
• Work plan for 2009 being developed



Kensington Mine



Kensington Facilities 100% complete:
• Mill & crusher buildings
• 15,400 ft tunnel
• U/G mine workings
• Dock at Slate Creek Cove
• Ancillary Facilities
• $230M invested



Projects in Advanced Exploration and Permitting

Advanced Permitting:

1. Chuitna Coal PACRIM Coal

Advanced Exploration/Pre-permitting:

2. Donlin Creek Barrick/NovaGold JV
3. Pebble Partnership NDM/Anglo American JV

Chuitna Coal Project

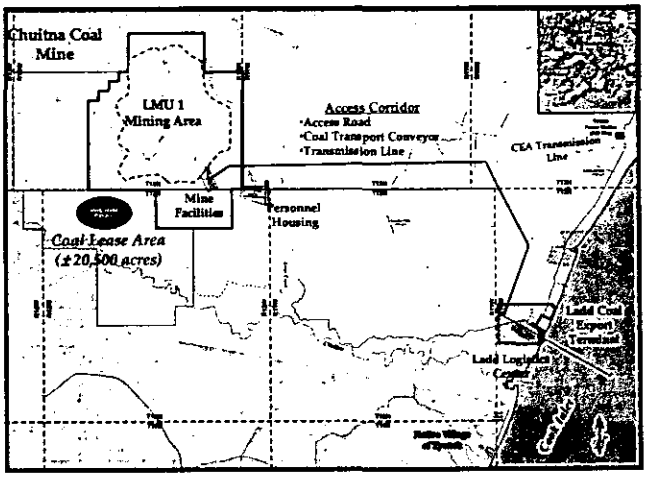
Management transition in 2008

Project Statistics
- Total Investment +$600M
- 350 full-time jobs

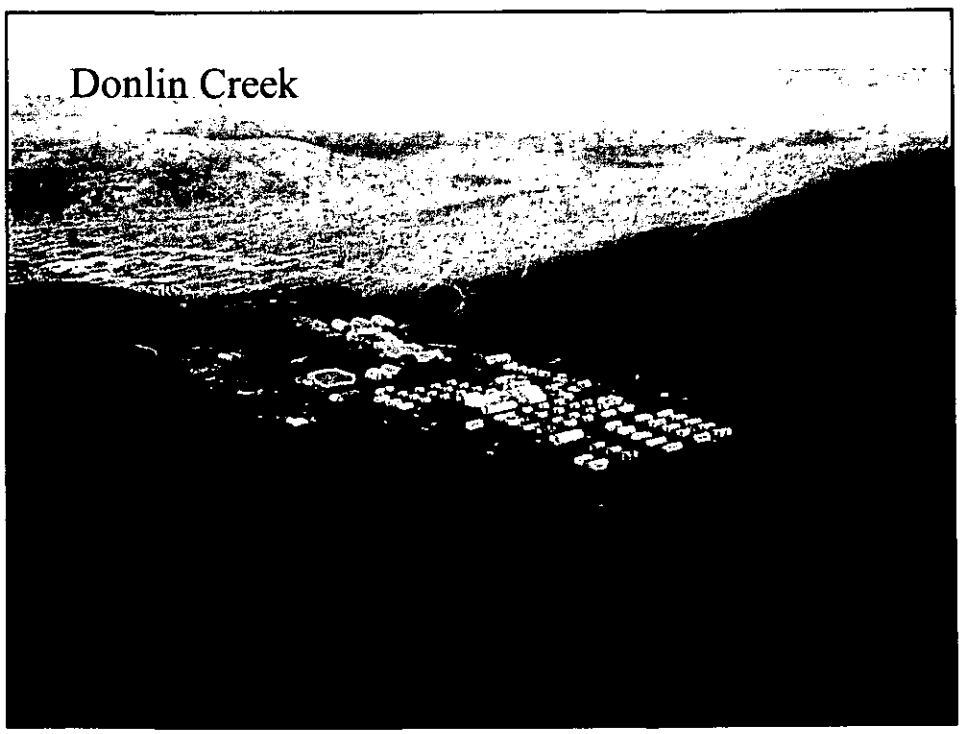
Chuitna Coal Mine
- 12MMTpy design capacity
- 300MMT mineable (LMU1)

Infrastructure
- 9 to 12 mile Access road & coal conveyor (alternatives under review)
- 138 Kv power line
- Personnel housing & airstrip

Ladd Landing
- Logistics center
- Export terminal
- Cape Class vessels 60ft draft



Permit Status
- ASCMCRA permit applications filed, public review process projected 4th Qtr 2009
- Draft SEIS in process, anticipate public review process 4th Qtr 2009
- Projected approval anticipated for late 2010



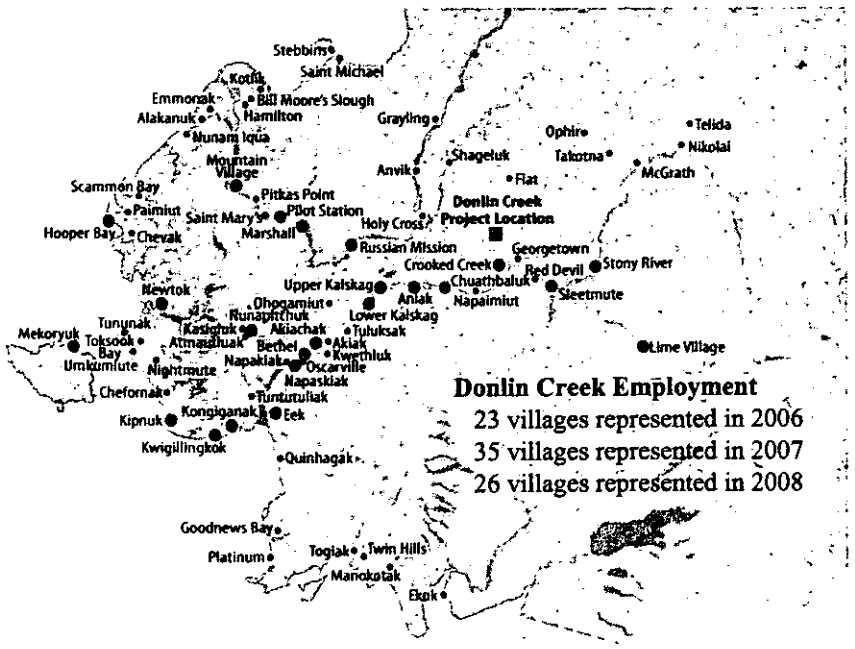
Donlin Creek Update

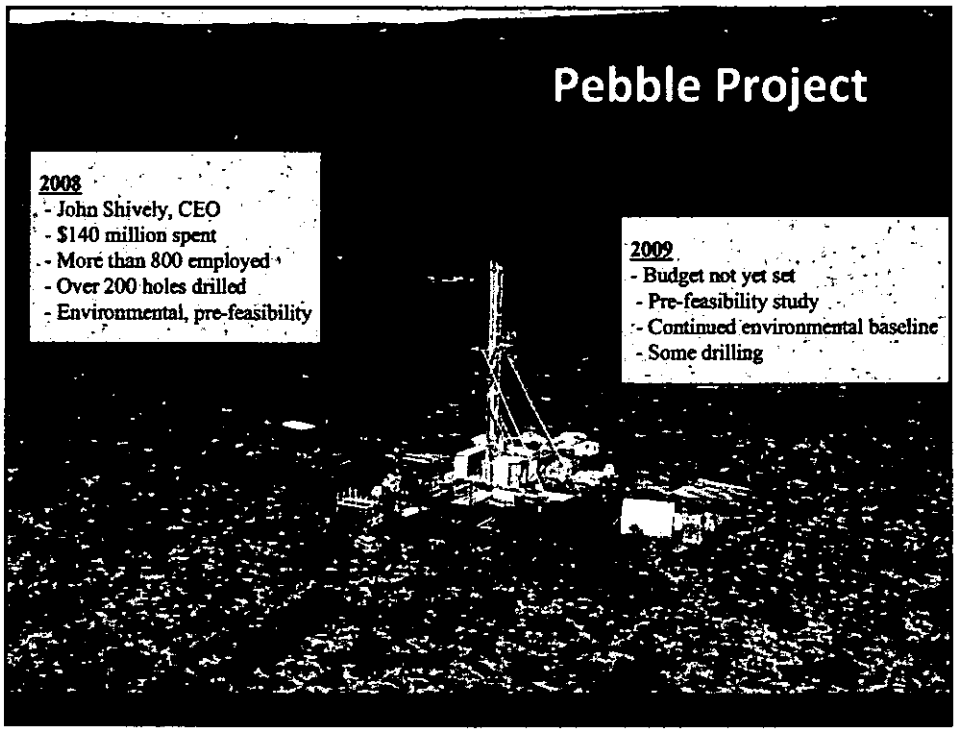
2008

- Completed 33,500 m of drilling
- 138 employees representing 26 Y-K villages
- Advanced project engineering and baseline environmental studies

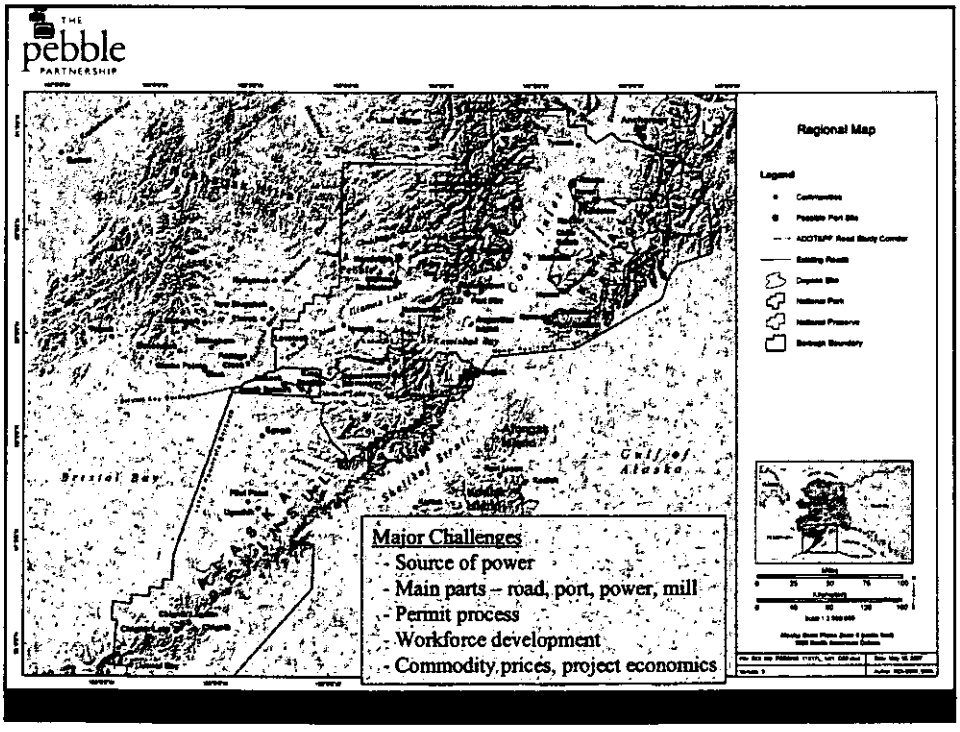
2009

- Finalize the project feasibility study
- Submit permit applications for the project
- Conduct pre-permitting meetings with Y-K region stakeholders
  - Meetings held with representatives of 35 villages to date
  - Scheduled to meet with remaining Y-K villages in March
  - Feedback will be incorporated into permit application documents and plans





Pebble Project
2008
- John Shively, CEO
- $140 million spent
- More than 800 employed
- Over 200 holes drilled
- Environmental, pre-feasibility
2009
- Budget not yet set
- Pre-feasibility study
- Continued environmental baseline
- Some drilling



THE pebble PARTNERSHIP
Regional Map
Legend
Bristol Bay
Gulf of Alaska
Major Challenges
- Source of power
- Main parts – road, port, power, mill
- Permit process
- Workforce development
- Commodity prices, project economics

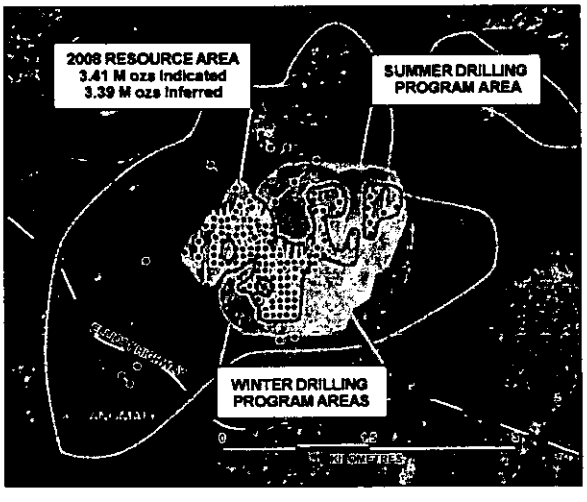
Grassroots (early stage) Exploration

- 30 projects spent >$1 million each in 2008
- Expect fewer in 2009

Examples

- International Tower Hill Mines - Livengood
- Committee Bay Resources - Niblack
- Full Metal Minerals – Lucky Shot

International Tower Hill
Livengood, Money Knob Project



Money Knob Project
Phase I & II drilling - 2008

Phase III drilling - Winter 2009

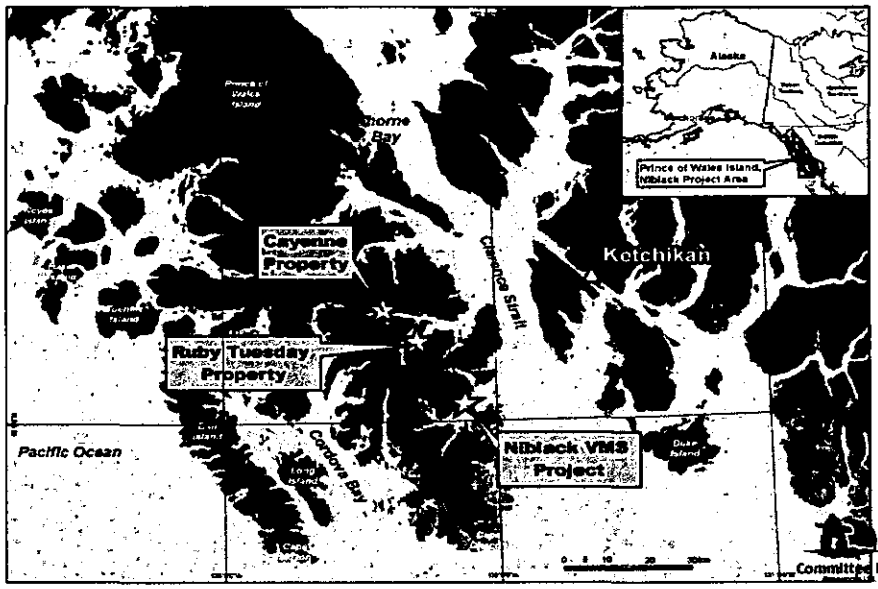
Phase IV drilling – 2009

2009 Budget = $8.5 million ($8m in 2008)

45 employees (42 in 2008)

Other Alaska Projects
$1.5m in 2009 (($2m in 2008)

Committee Bay Resources
Niblack Project



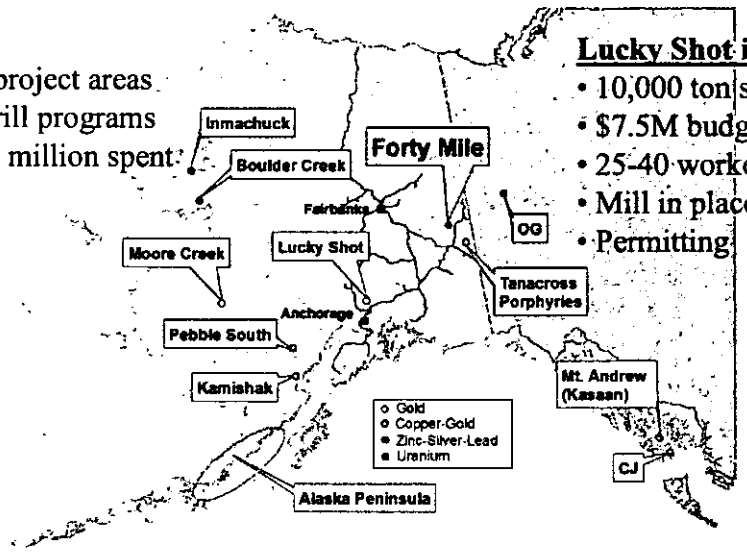
49

Niblack Project

50

Full Metal Minerals

2008
- 11 project areas
- 5 drill programs
- $21 million spent



Lucky Shot in 2009
- 10,000 ton sample
- $7.5M budgeted
- 25-40 workers
- Mill in place
- Permitting

2/26/09 WORK SESSION: COMPRE-HENSIVE ENERGY PLAN

ALASKA STATE LEGISLATURE

SENATOR LESIL McGUIRE
Chair, Senate Special Committee on Energy

MEMORANDUM

Date: February 19, 2009

To: Kirsten Waid, Senate Secretary

From: Senator Lesil McGuire, Chair
Senate Special Committee on Energy

Re: Senate Special Committee on Energy Schedule

Committee Schedule
Senate Special Committee on Energy
For the week of February 23-27

Thursday, February 26th @ 3:00 p.m. Senate Finance Room 532

Joint Senate and House Energy Committee

Work Session: Comprehensive Energy Plan

Presenters:
Gwen Holdman, Director, Alaska Center for Energy and Power
David Hobbs and Jim Meitl, Cambridge Energy Research Associates
Darrell Smith, Black Lion Energae

Friday, February 27th @ 11:00 a.m. Beltz Room 211

+ =	SB 31: GEOTHERMAL ELEC. PROD. TAX CREDIT
+	HCR 2: IN-STATE GAS PIPELINE

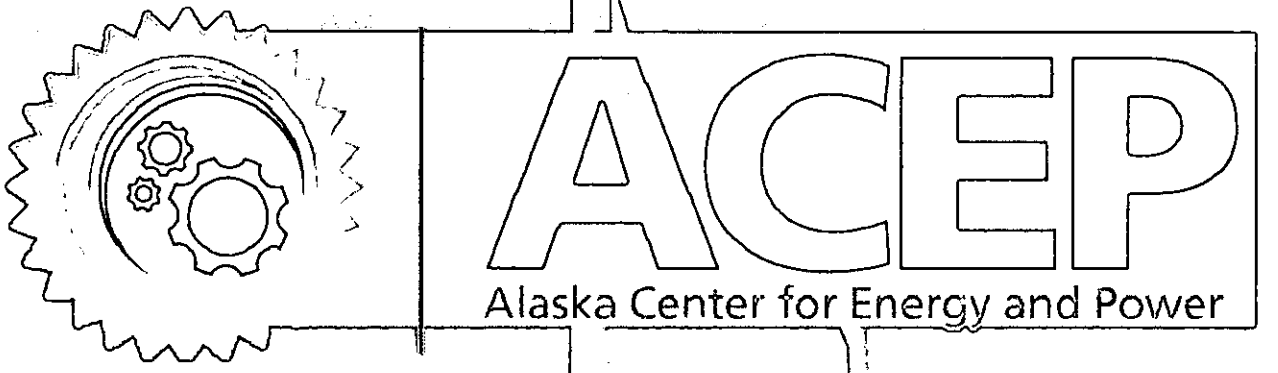
Developing Energy Policy: A Balanced Approach



Gwen Holdmann, Director
Alaska Center for Energy and Power

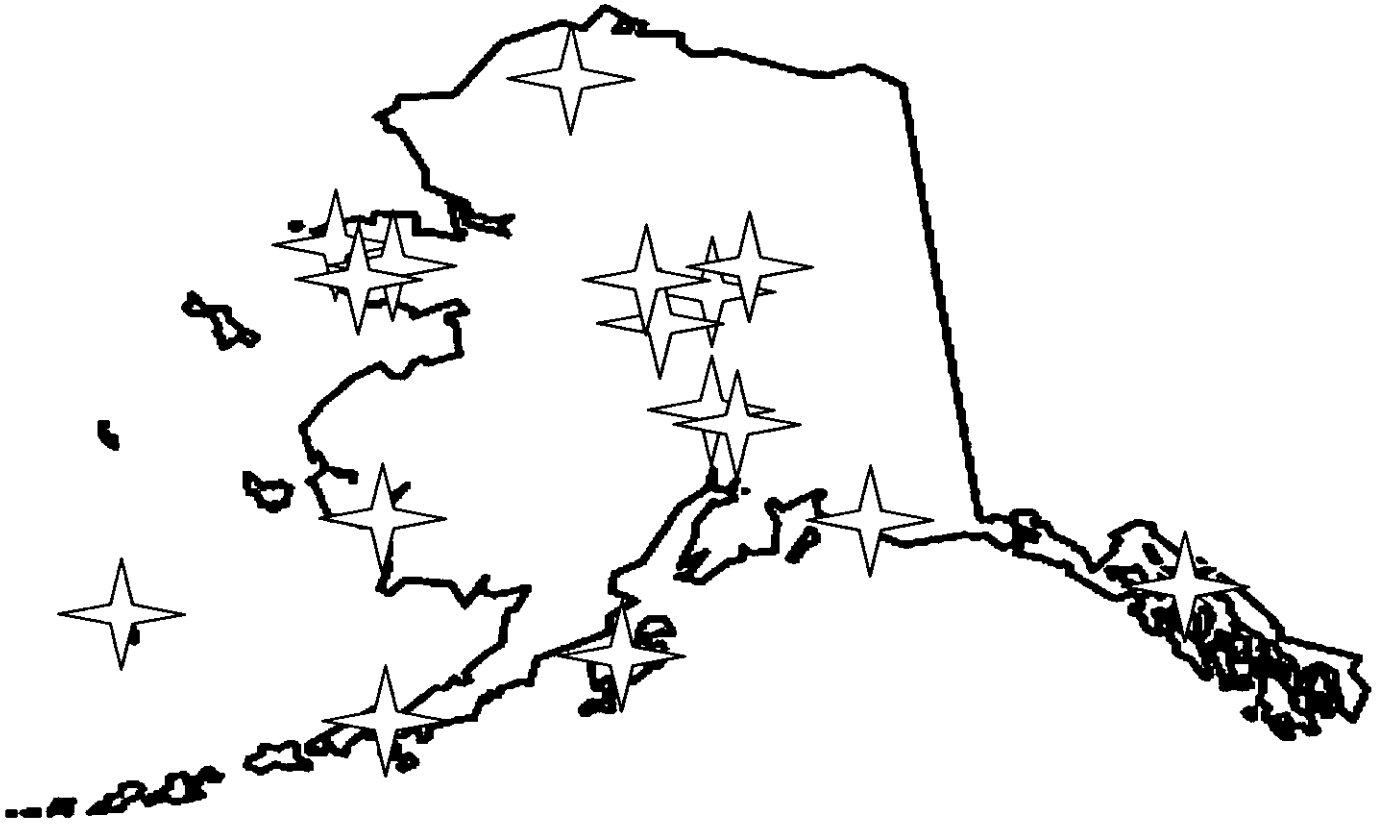
Joint Senate-House Energy Committee Meeting
Juneau, Alaska
February 26th, 2009

ACEP

Alaska Center for Energy and Power

ACEP RESEARCH MISSION: To meet state and local need for applied energy research by working towards developing, refining, demonstrating, and ultimately helping commercialize marketable technologies that provide practical solutions to real-world problems.

ACEP Current Projects



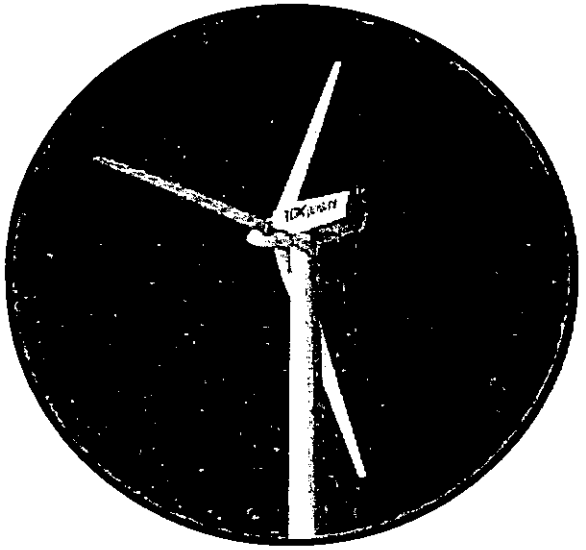
ACEP

ACEP Projects

- Waste heat capture (INE)
- Energy storage (INE, working with SNL)
- Geothermal (GI, INE, ISER)
- Tidal and In-stream hydro (SFOS, INE, UAA)
- Wind/diesel (working with NREL and AEA)
- Climate change impacts on hydro projects (GI, IARC, INE)
- Hydrogen Fuels (INE, ISER)
- Biogenic methane as an energy source (IARC, INE)
- Short-rotation woody biomass crops (AFES)
- Education and outreach (Coop. Ext)

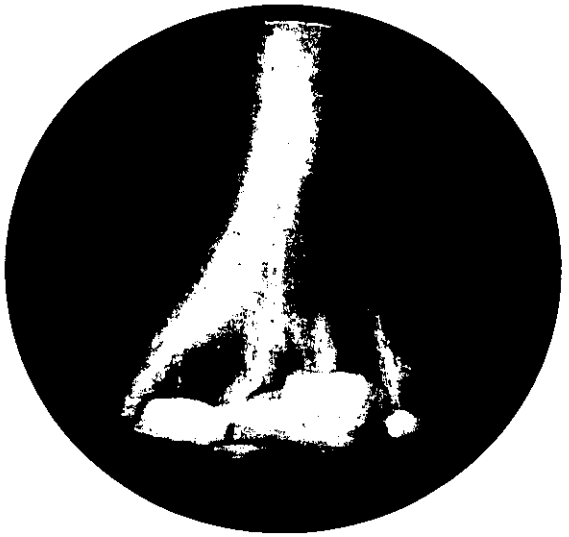
ACEP

ACEP Focus Areas



Community Energy Solutions

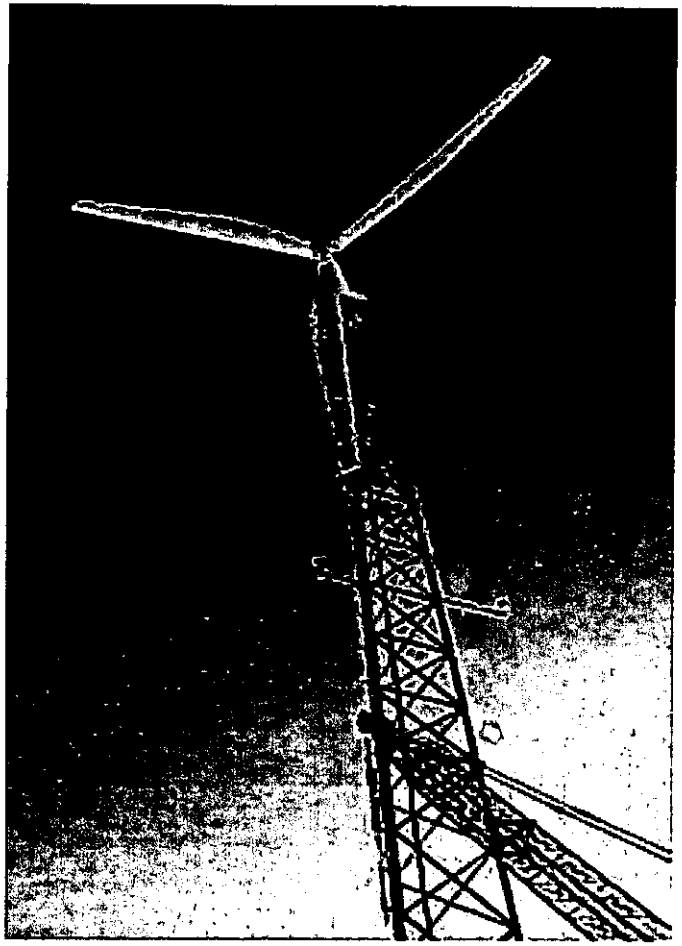
Powering the Economy



The EnergyField of the Future

ACEP

Community Energy Solutions



Diesel Efficiency
Energy Economics
Energy Storage
Geothermal
Biomass
Coal Bed Methane
Fuels
In-River Hydro
Tidal Energy
Wind Power

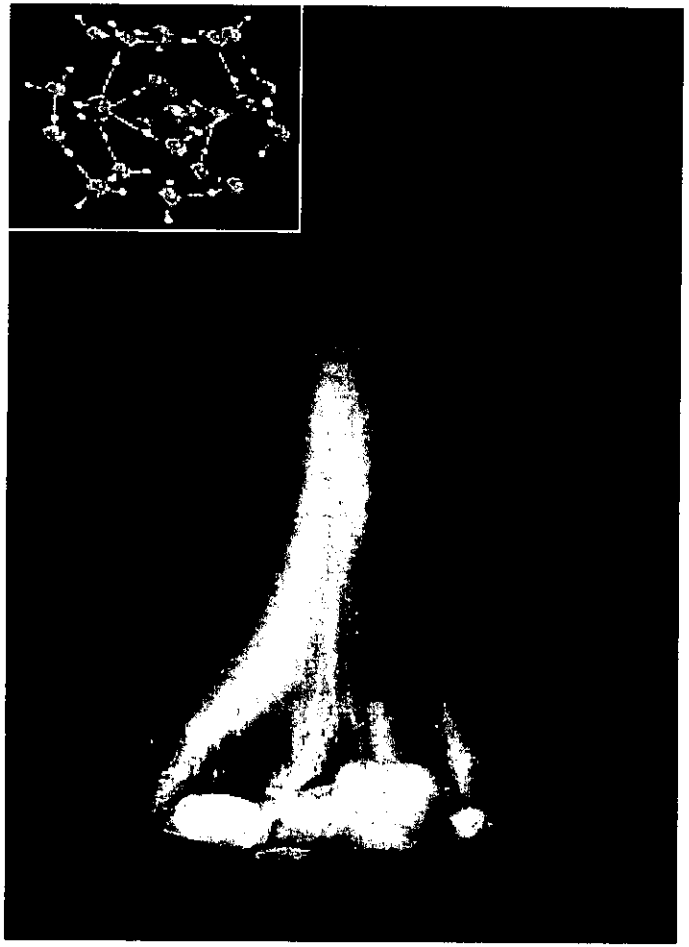
ACEP

Powering the Economy

Geothermal in the Aleutians
Susitna/Chakachamna
Mt Spurr
Power for Remote Mines
Etc.

ACEP

The 'Energyfield' of the Future



- Methane hydrates
- Gas pipeline
- Heavy oil
- Carbon Sequestration
- Advanced Coal Technologies
- Infrastructure
- Etc.

ACEP

What are our Goals?

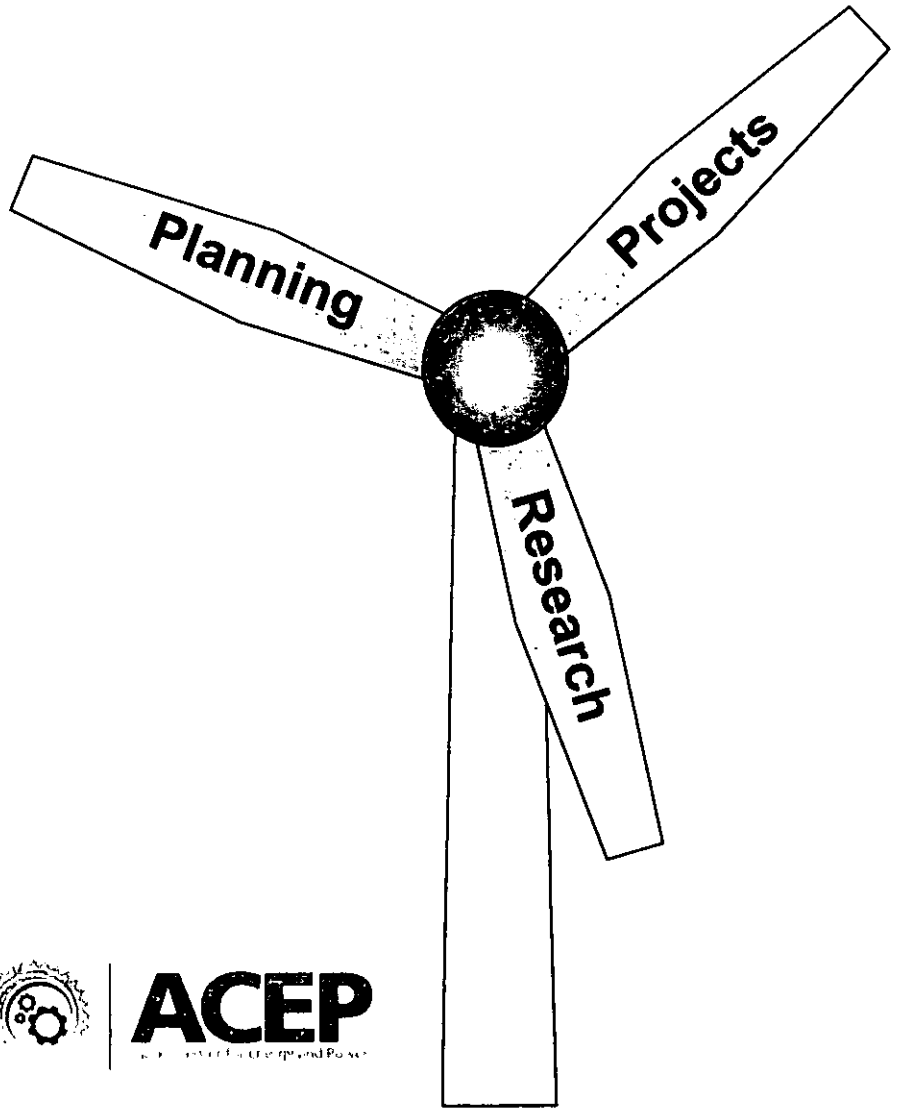
- Lower the cost of energy? For whom?
- Stabilize the cost of energy?
- Community self-sufficiency?
- Build/boost local economies?
- Create jobs?
- Develop wealth?
- Reduce greenhouse gas emissions?

ACEP

How do we get there?

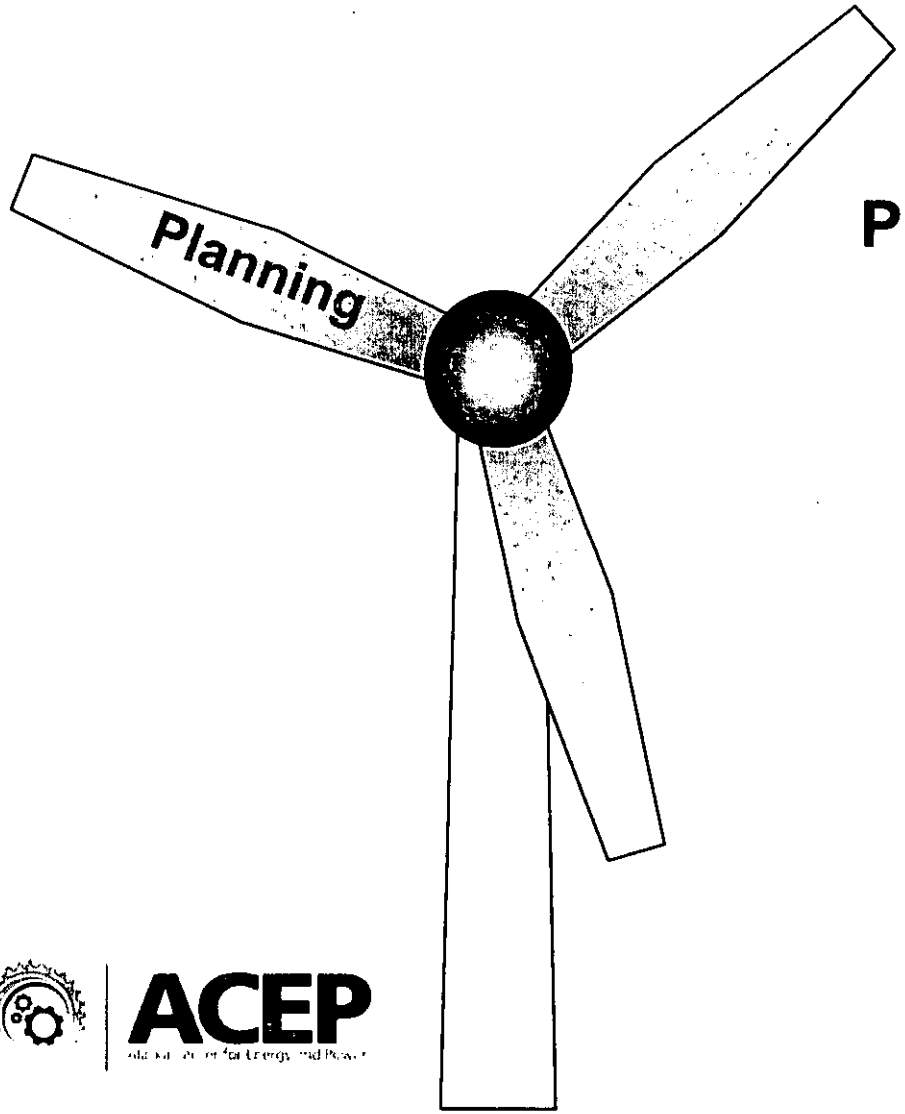
- Make smart investments
- Take calculated risks
- Start with low-hanging fruit

How do we get there?



ACEP

How do we get there?

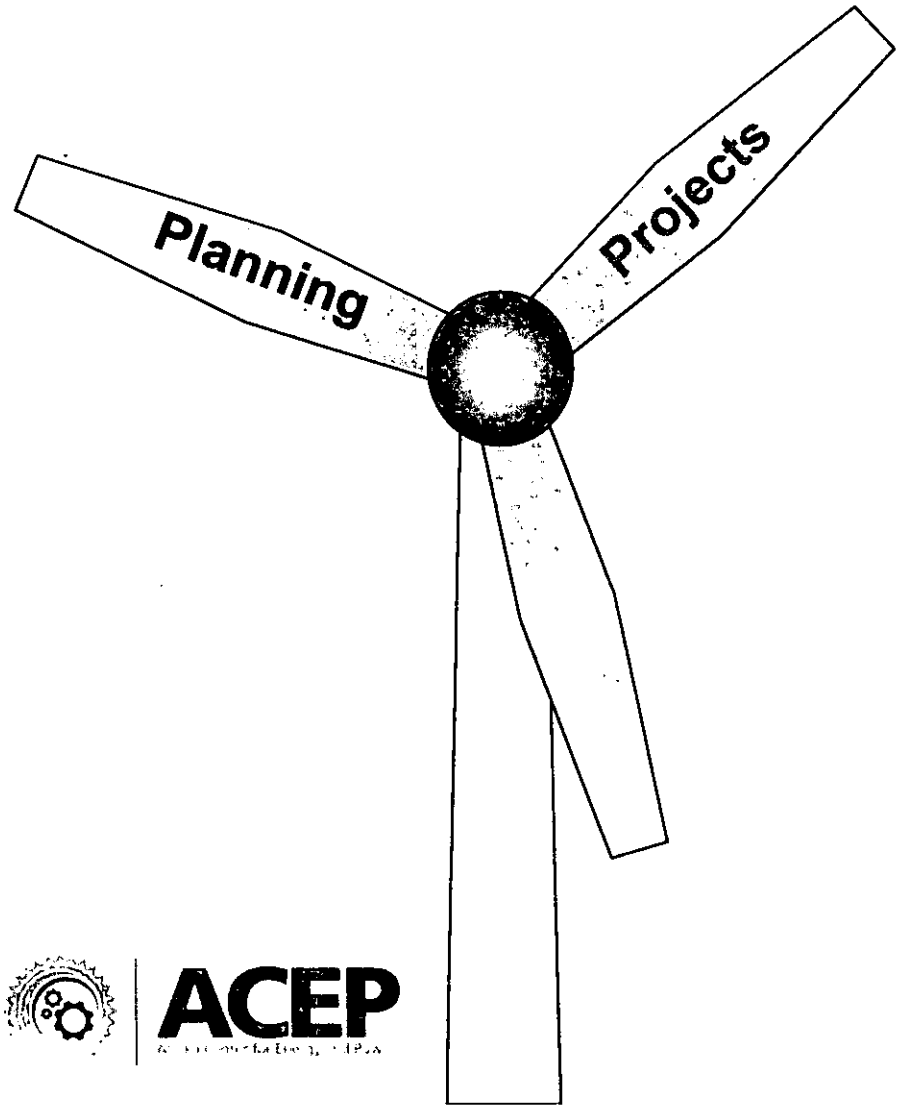


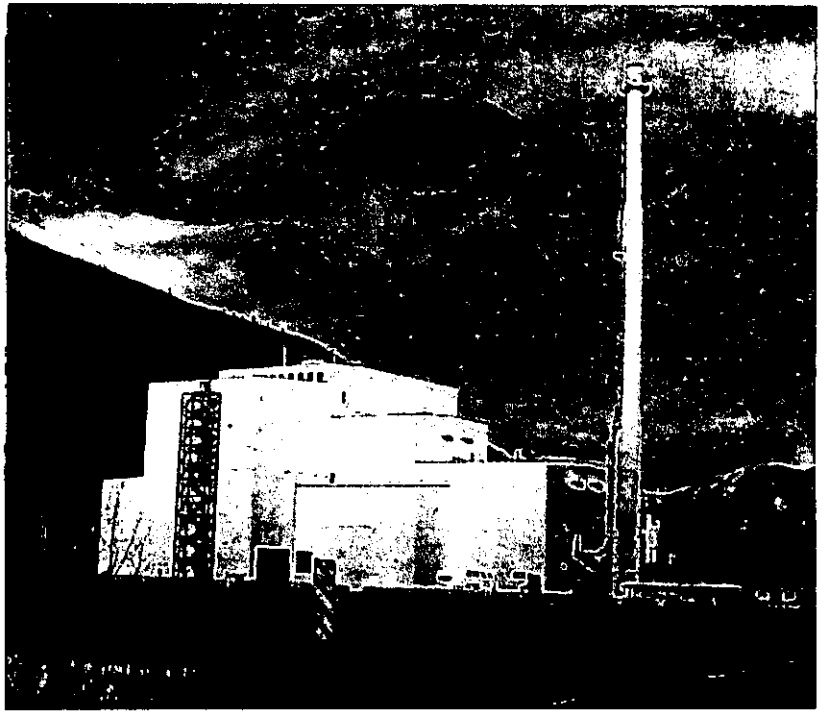
Planning:

- Community level
- Regional
- Statewide

ACEP

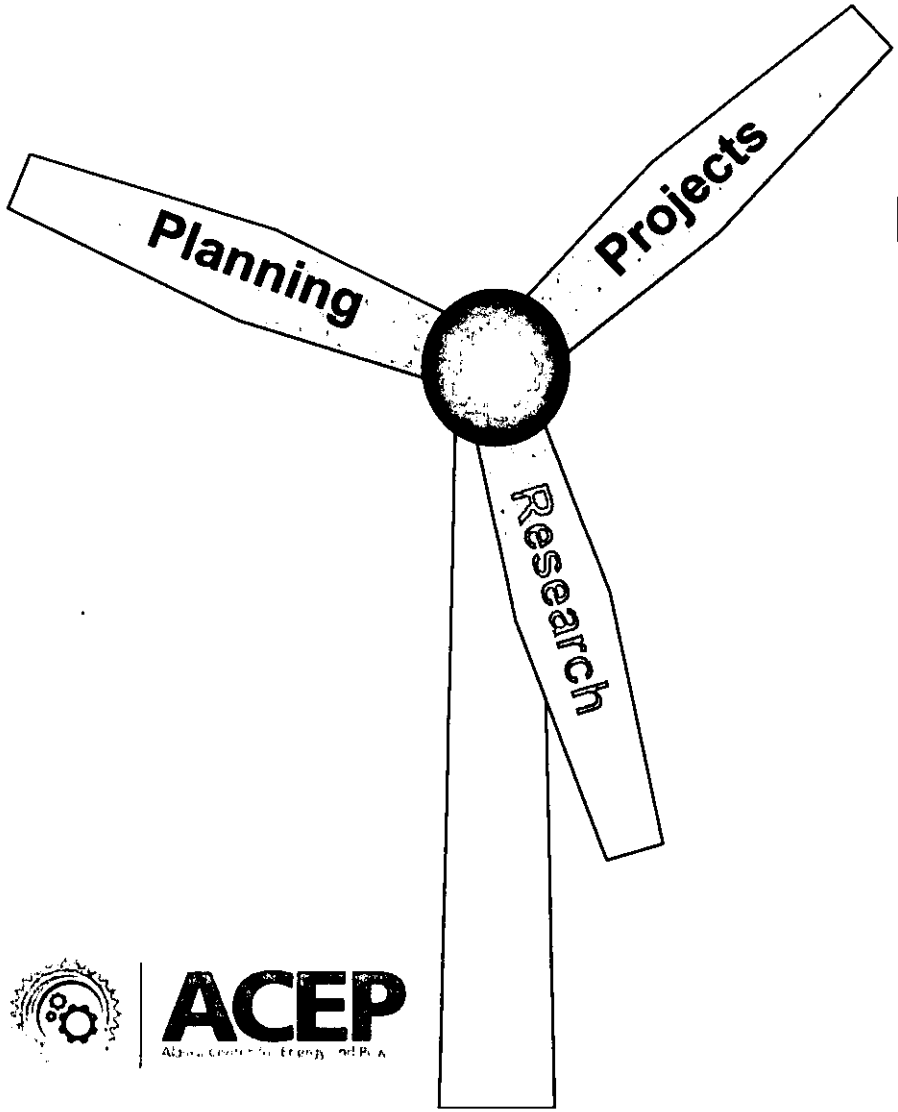
How do we get there: Projects





ACEP

How do we get there: Research



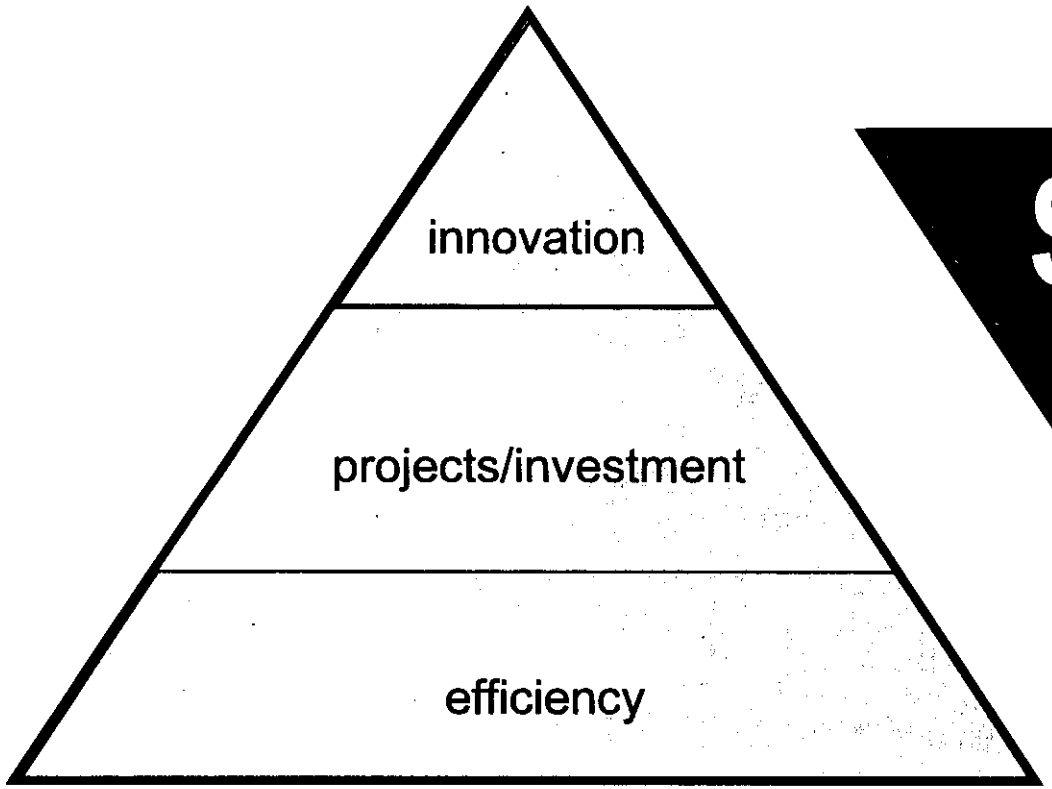
Research:

- ‘Peering over the horizon’
- Needed for long-term success
- A good investment

ACEP

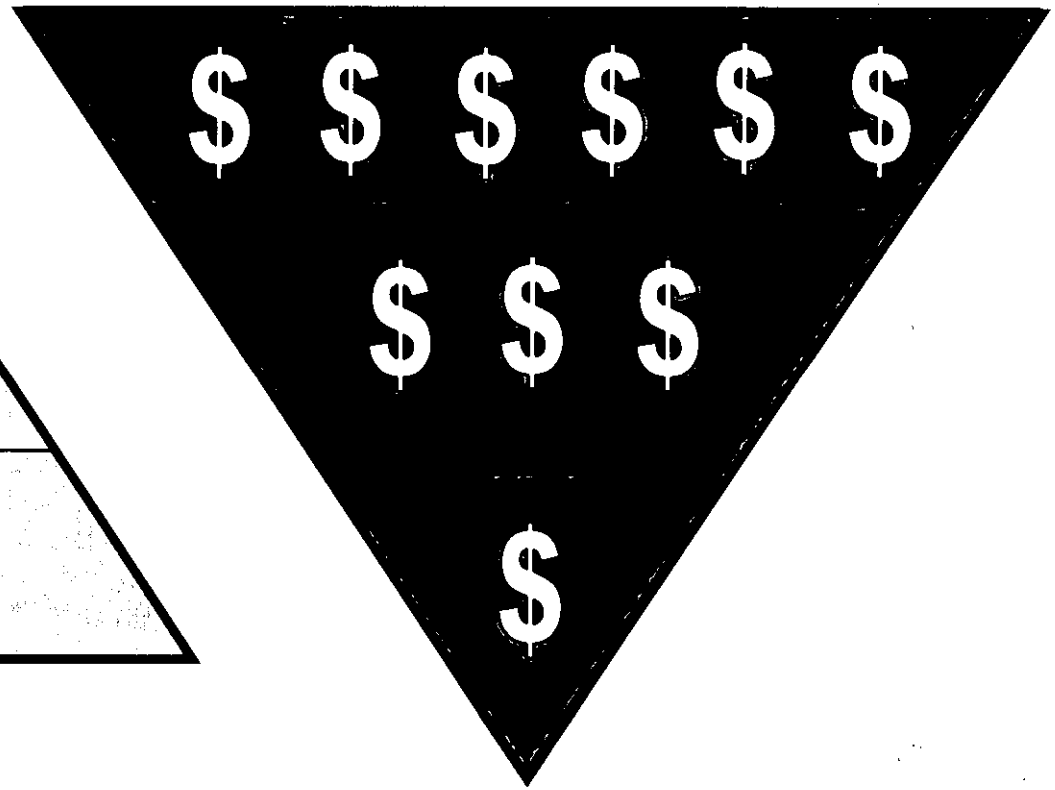
LiveLeak
LiveLeak
LiveLeak
YouTube
LiveLeak
YouTube

How do we get there?



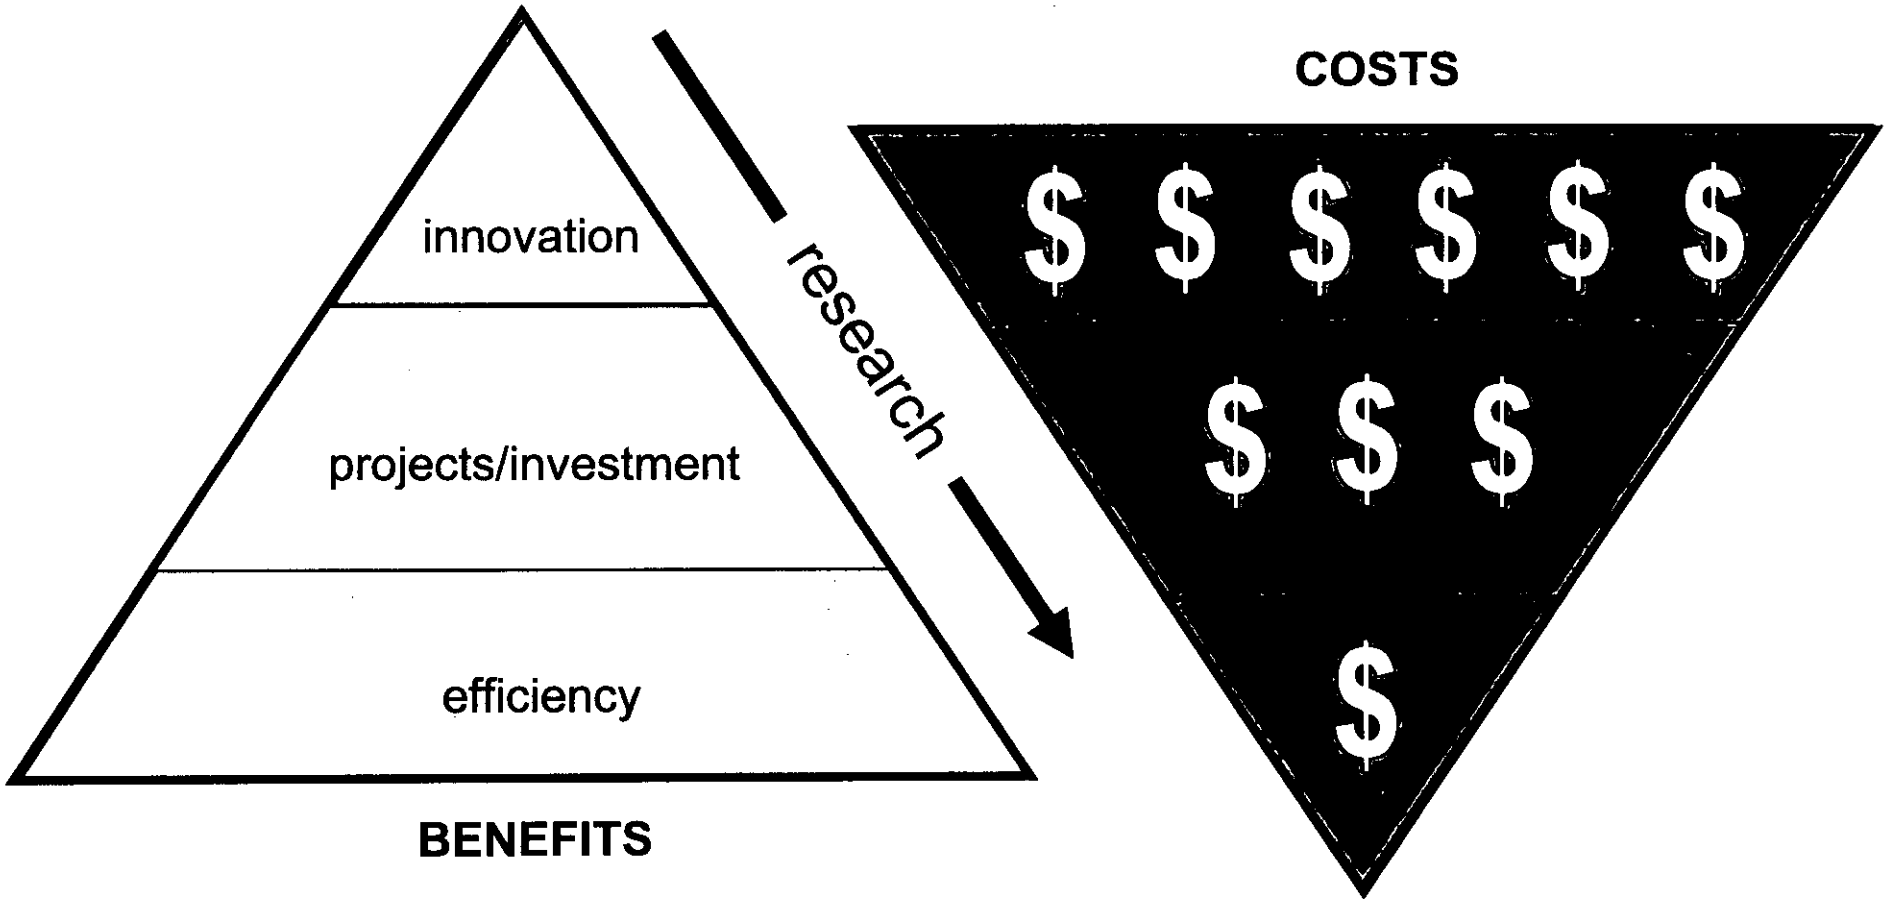
BENEFITS

COSTS



ACEP

How do we get there?



ACEP

Role of ACEP

- Verify performance and reliability of equipment
- Assess technical and economic feasibility
- Test emissions
- Integration with existing power systems
- Resource assessment
- Procurement experiments
- Work with manufacturers to improve products for use in Alaska

ACEP

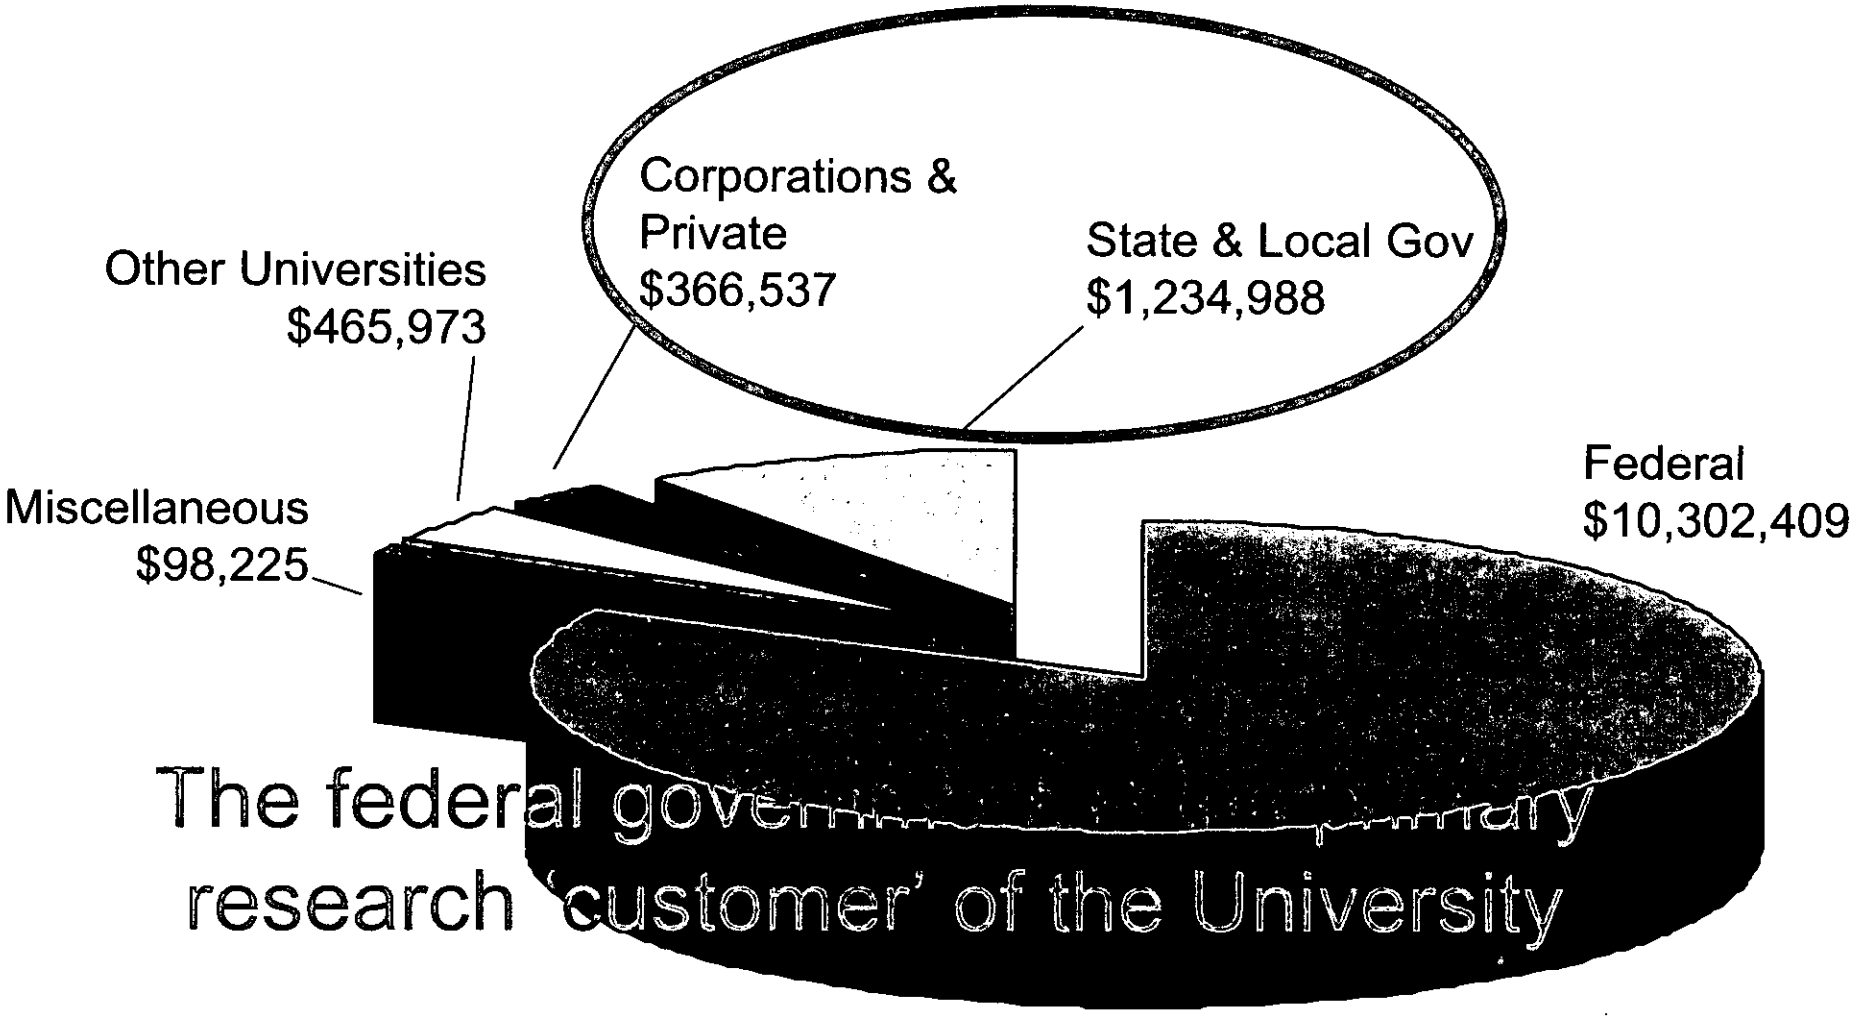
Role of ACEP

Serve as an impartial agent on behalf of Alaskan communities and agencies to ensure we are investing wisely in energy projects that make sense and that contribute to the long-term benefit of our residents

Help leverage external resources to address Alaska's energy challenges (funding, businesses, national laboratories, other universities, etc)

ACEP

Funding Energy Research



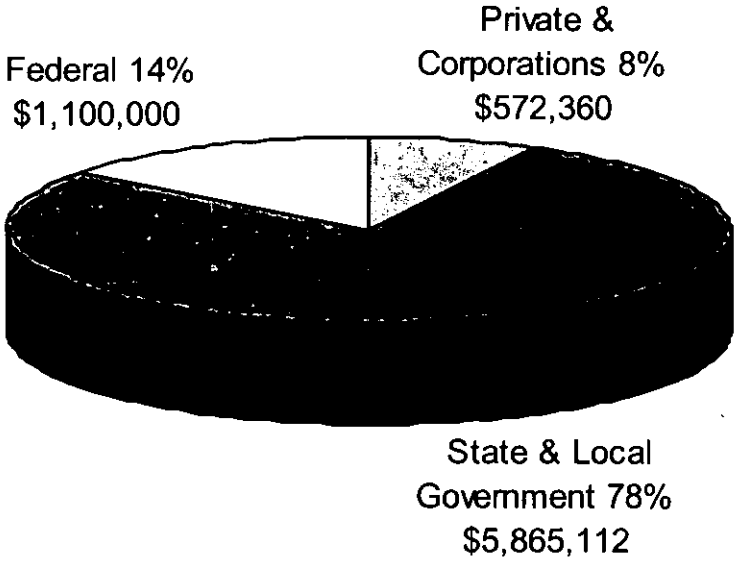
The federal government is primary research 'customer' of the University

INE 2006 Annual Report

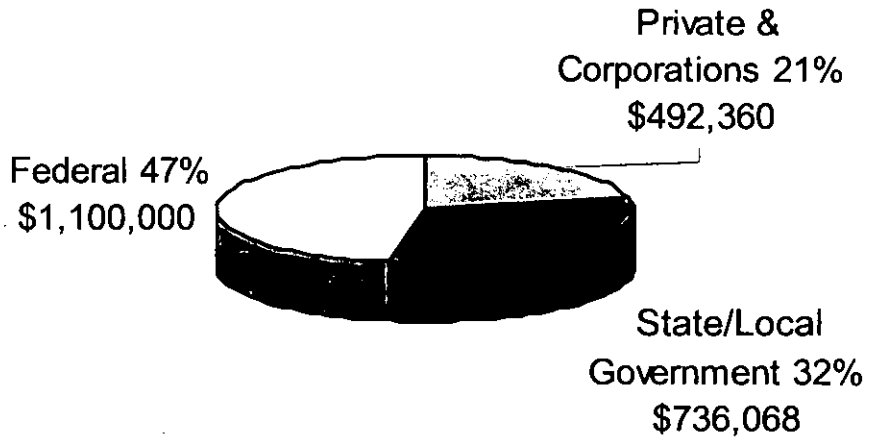
ALASKA CENTER FOR ENERGY & POWER

ACEP Funding to Date

Funding Requested
(via competitive proposals submitted)



Funding Awarded to Date



ACEP

Example from North Dakota Energy and Environmental Research Center

'The EERC is a high-tech, nonprofit branch of the University of North Dakota. The EERC operates like a business; conducts research, development, demonstration, and commercialization activities; and is dedicated to moving promising technologies out of the laboratory and into the commercial marketplace.' (from the EERC website)

ACEP

Example from North Dakota Energy and Environmental Research Center

- 84% of contracts are with private sector
- Has generated 14 spin off companies
- 290 scientists, engineers and support personnel
- Total expenditures in FY07: $27 million
- Regional impact: $94.5 million
- Receives no base state funding today – instead serves as a funding SOURCE for UND
- Substantial investment at state and federal level to develop the program initially

ACEP

FY10 University capital budget request to fund ACEP and other energy research:

- AEA-ACEP Partnership ($2M per year for 5 years)
- Rural Power Projects ($350k per year for 5 years)
- Data Information Network (ISER) ($200k per year for 5 years)
- Transportation Fuels ($250k per year for 5 years)
- Coal Technologies ($200k per year for 5 years)
- Carbon Sequestration ($250k per year for 5 years)
- Sustainable Infrastructure ($200k per year for 5 years)
- Biomass Energy ($700k per year for 5 years)

ACEP

Emerging Energy Technology Development Fund

- ☆ Would create an Alaska Energy Trust to administer grants and loans for R & D and demonstration projects for renewable energy and energy efficiency
- ☆ Would coordinate workforce training and development
- ☆ Alaska could get "first mover" advantage in several technologies including:
  - Biomass gasification
  - Tidal and Wave power
  - Energy Storage

ACEP

What a good state R&D program can do:

- Attract investment to the state
- Reduce Failures
- Improve existing projects
- Provide focus to energy initiatives
- Assist with developing prudent policy and planning
- Create jobs and develop new/expanded industries

ACEP

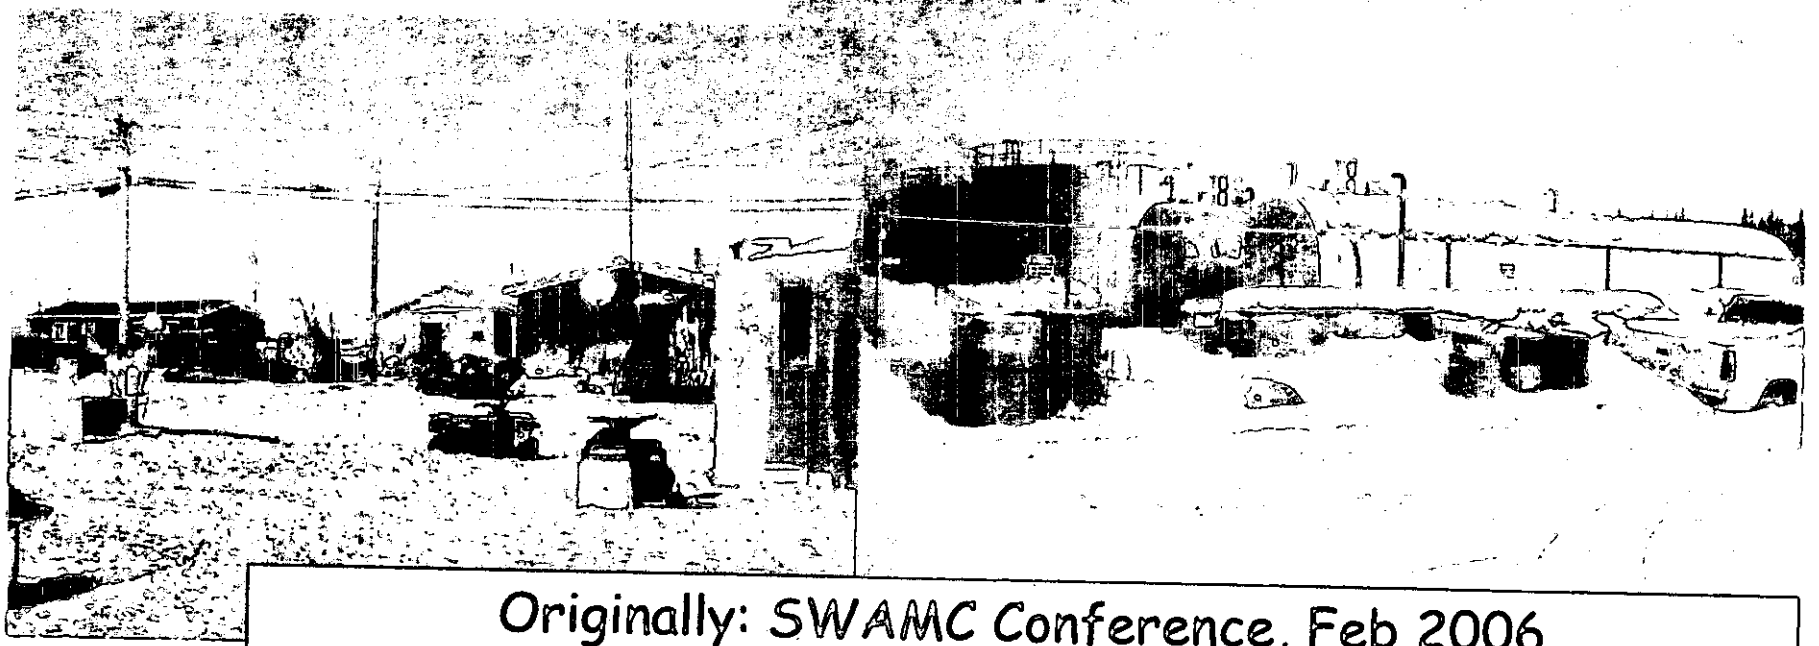
www.uaf.edu/acep

ACEP

Five Almost-Practical Policies to address High Energy Costs in Remote Alaska



Originally: SWAMC Conference, Feb 2006

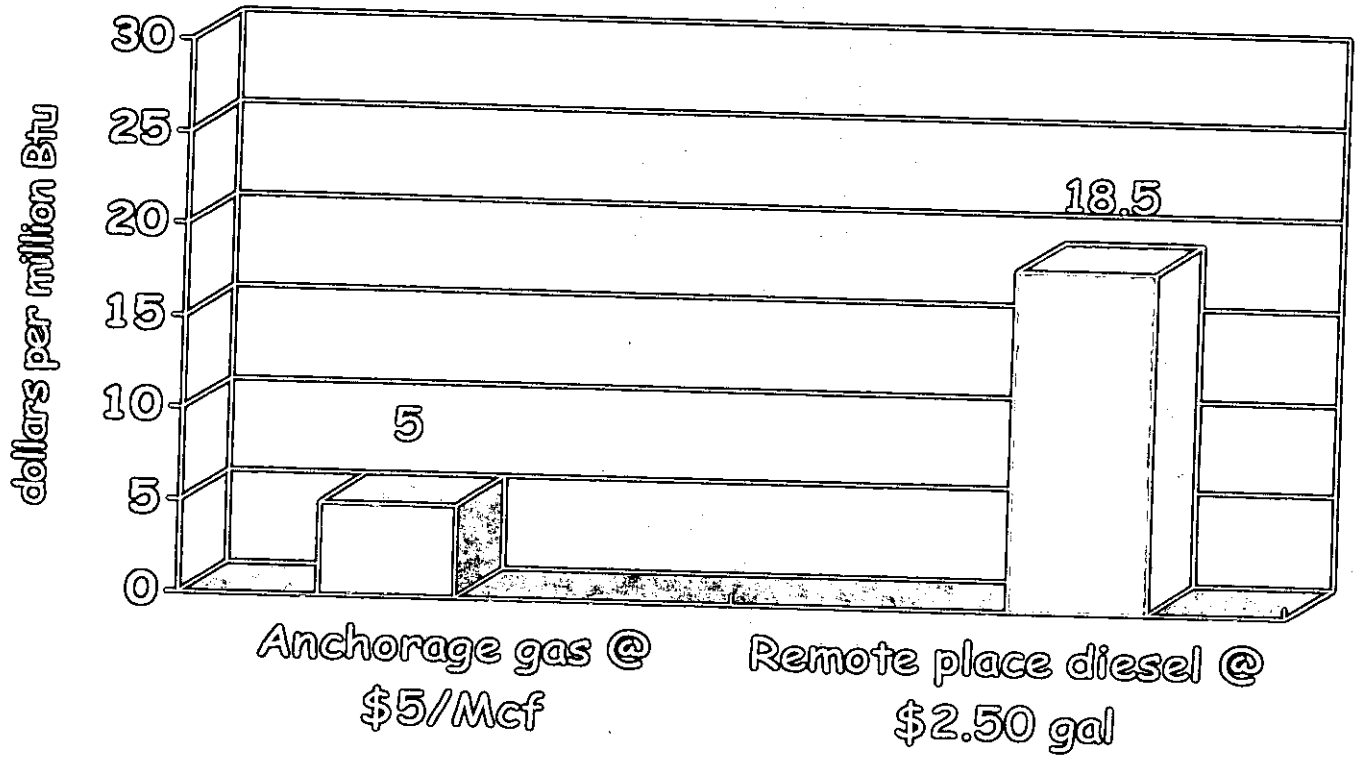
Revised Sep 2006

Steve Colt

UAA Institute of Social and Economic Research

steve_colt@uaa.alaska.edu

The Problem:
High energy COST = High energy PRICE



However, Price is Not Cost

- Very easy to reduce the price of things in remote Alaska
  - rolled-in pricing (First-class mail)
  - subsidized services (bypass mail)
  - cost-shifting (Bill the School District!)
- Much harder to reduce the cost - the overall resources used to provide energy when, where, how people need it

Physics Reminder: Energy is converted from one form to another

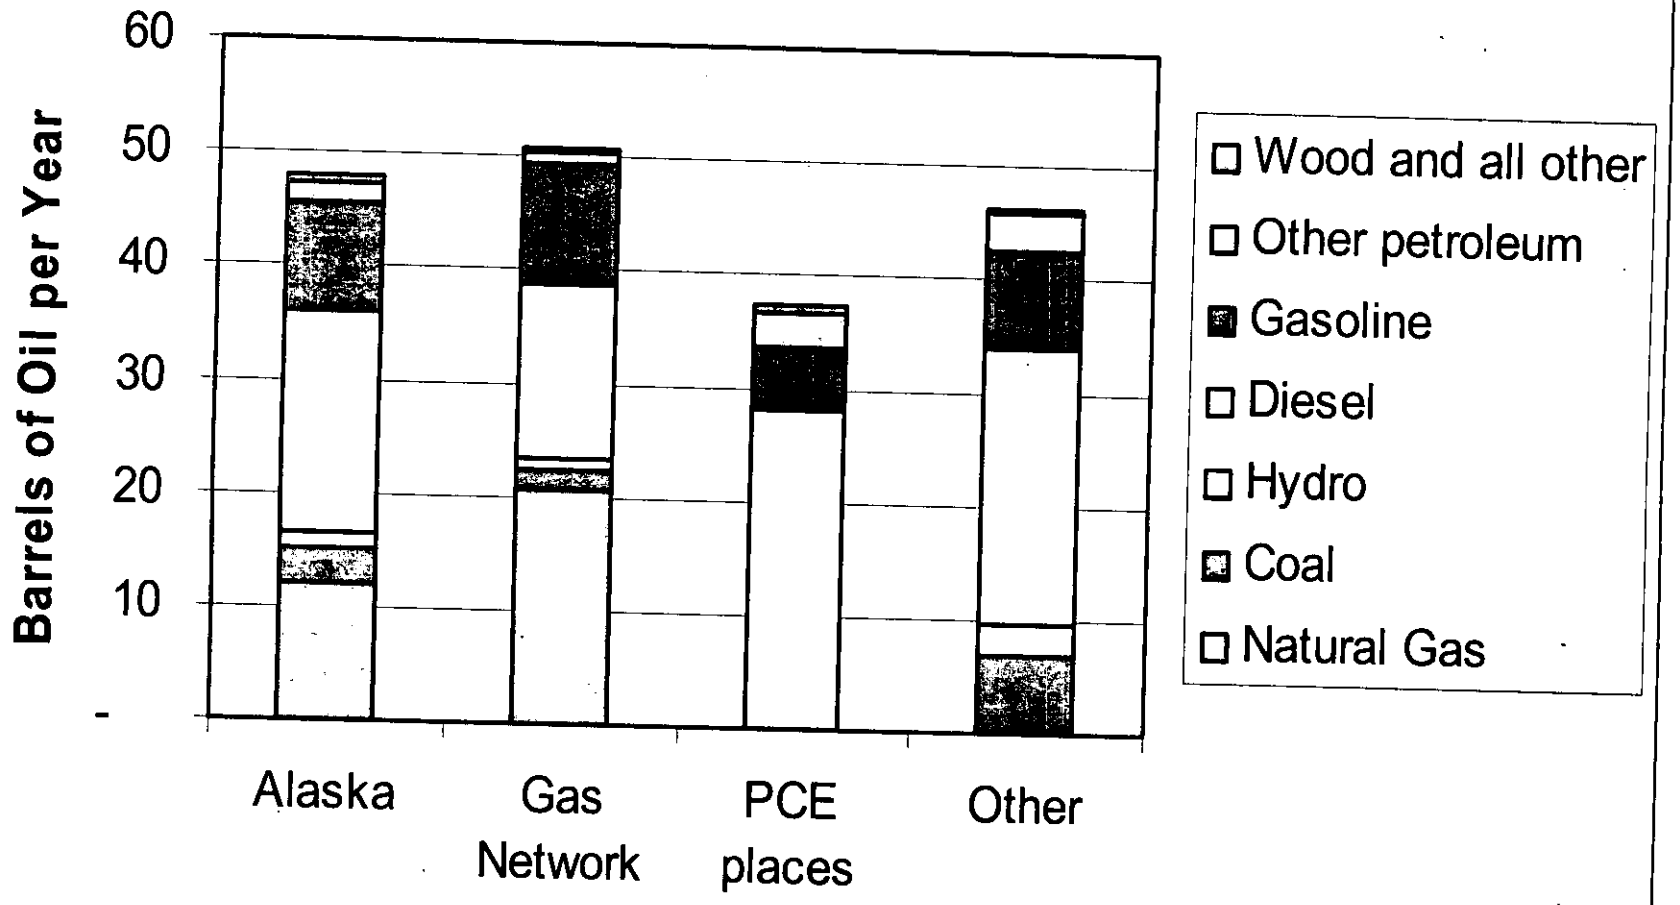
- Electricity is an energy "currency," not a primary energy source
- Hydrogen is an energy currency too!
- Example: Your Toaster

  Solar energy→ plants→Natural Gas→Electricity→Heat→

  (toast + low-grade heat)

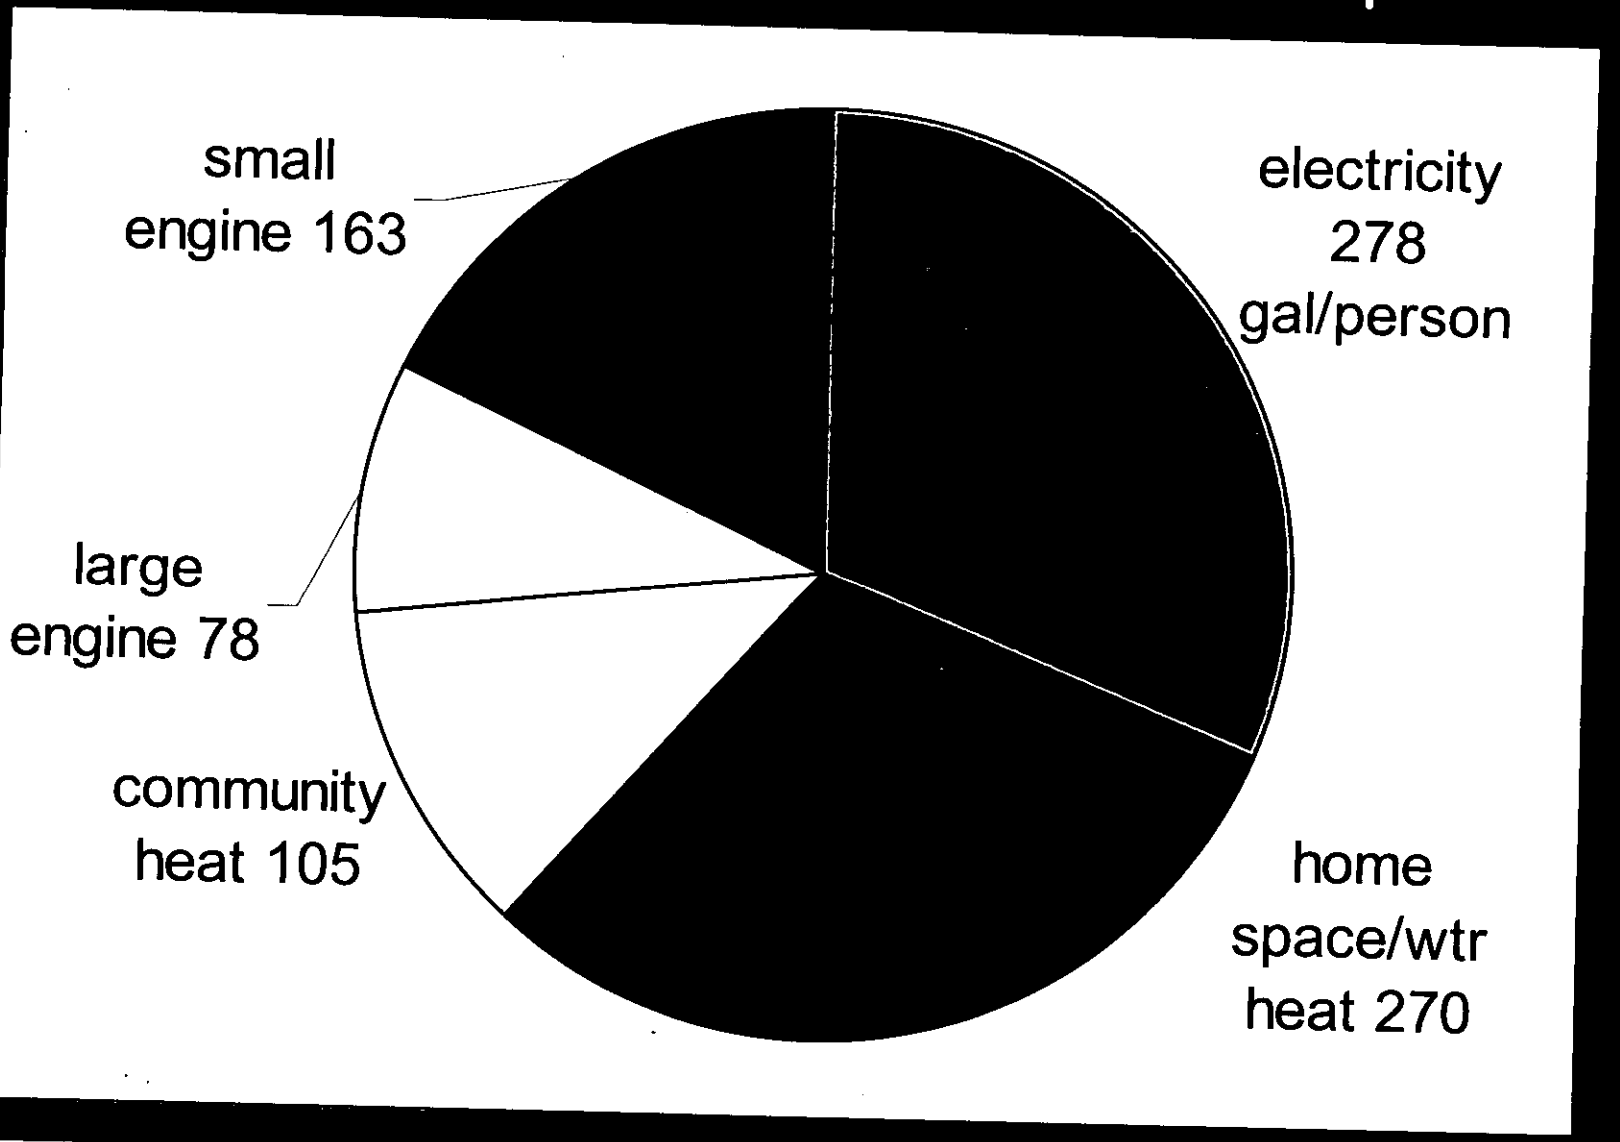
Primary energy consumption per Alaskan

barrels oil per person per year



1796

How we use it: about 900 gallons diesel/person/year in remote places

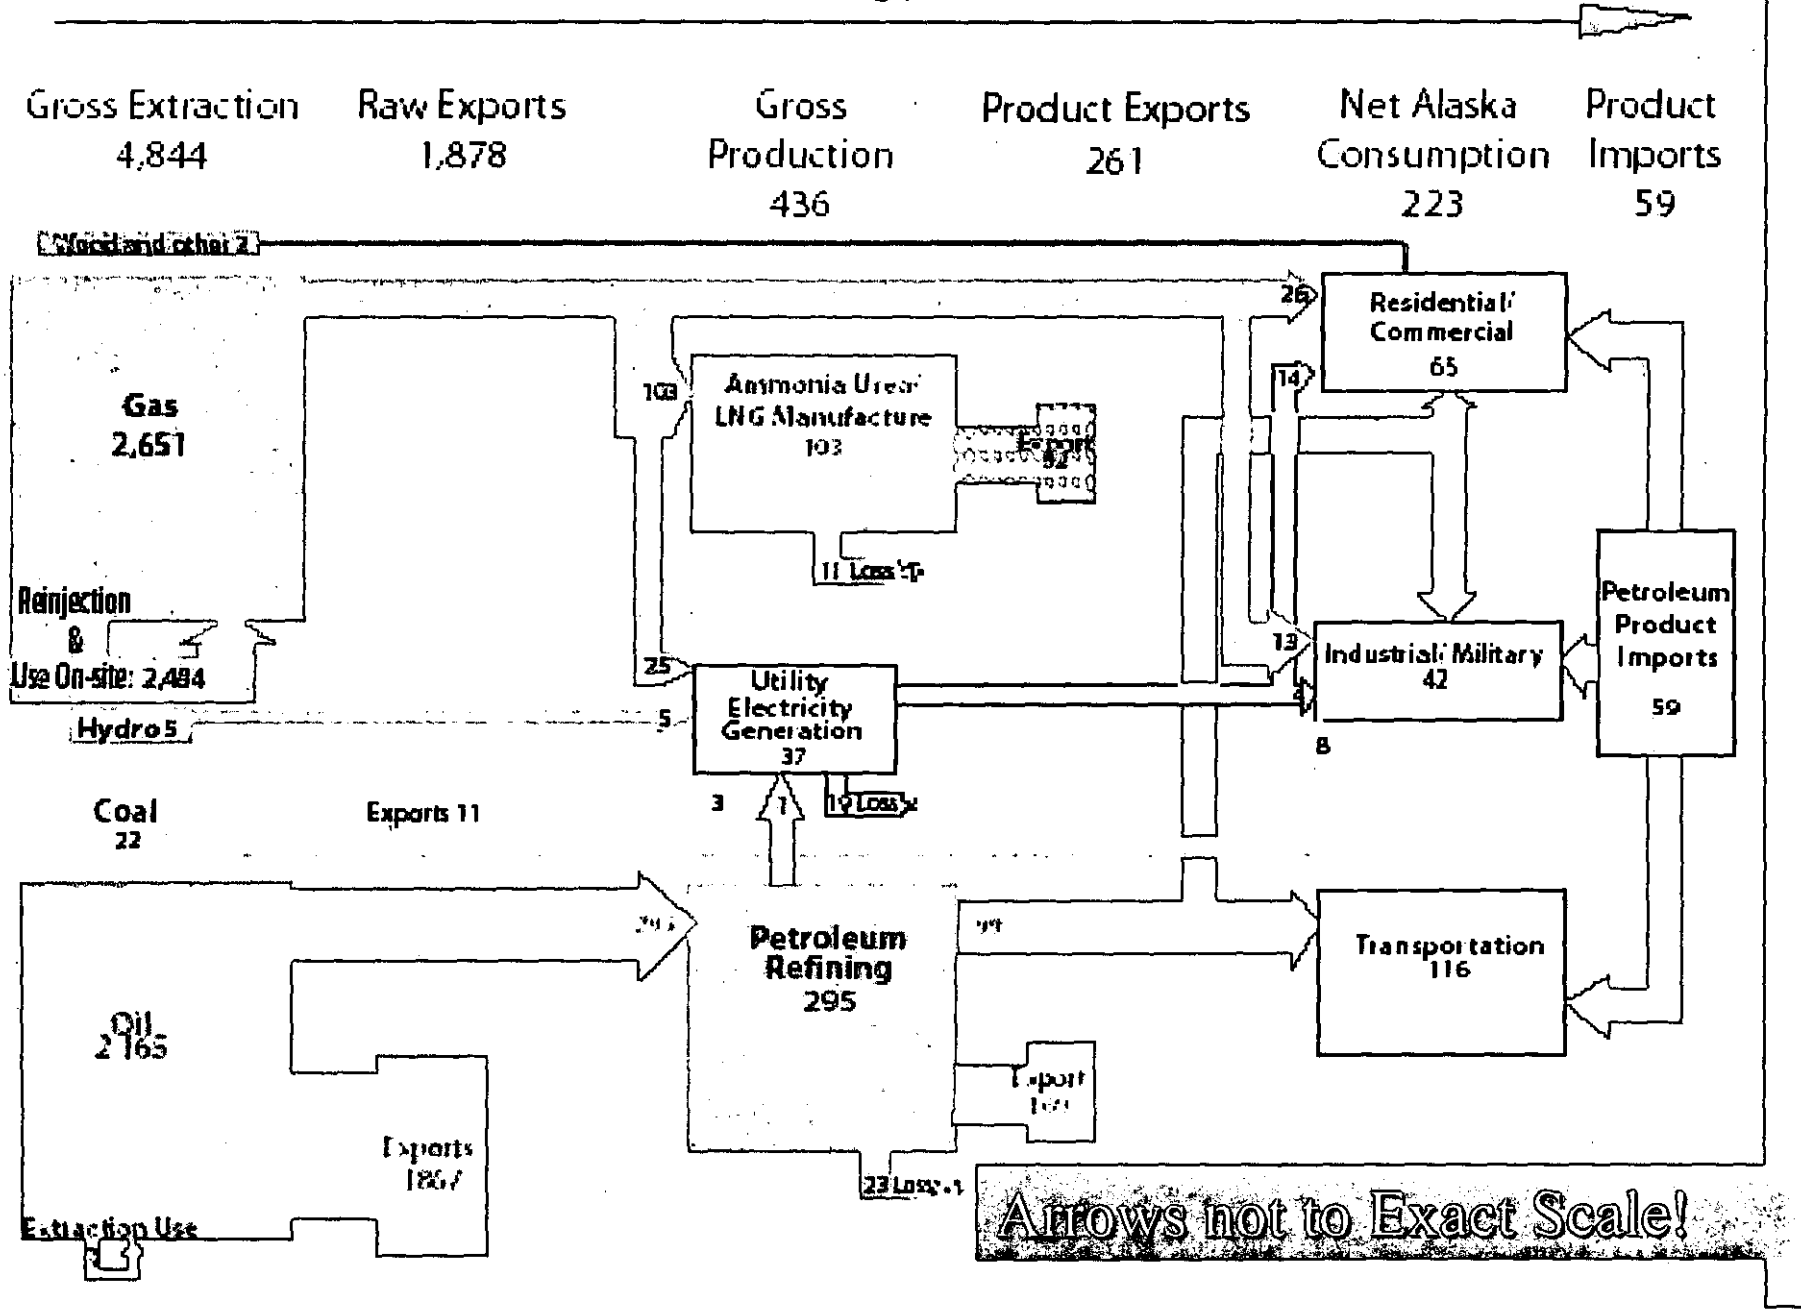


almost practical Policy #1: Share the wealth from high oil prices

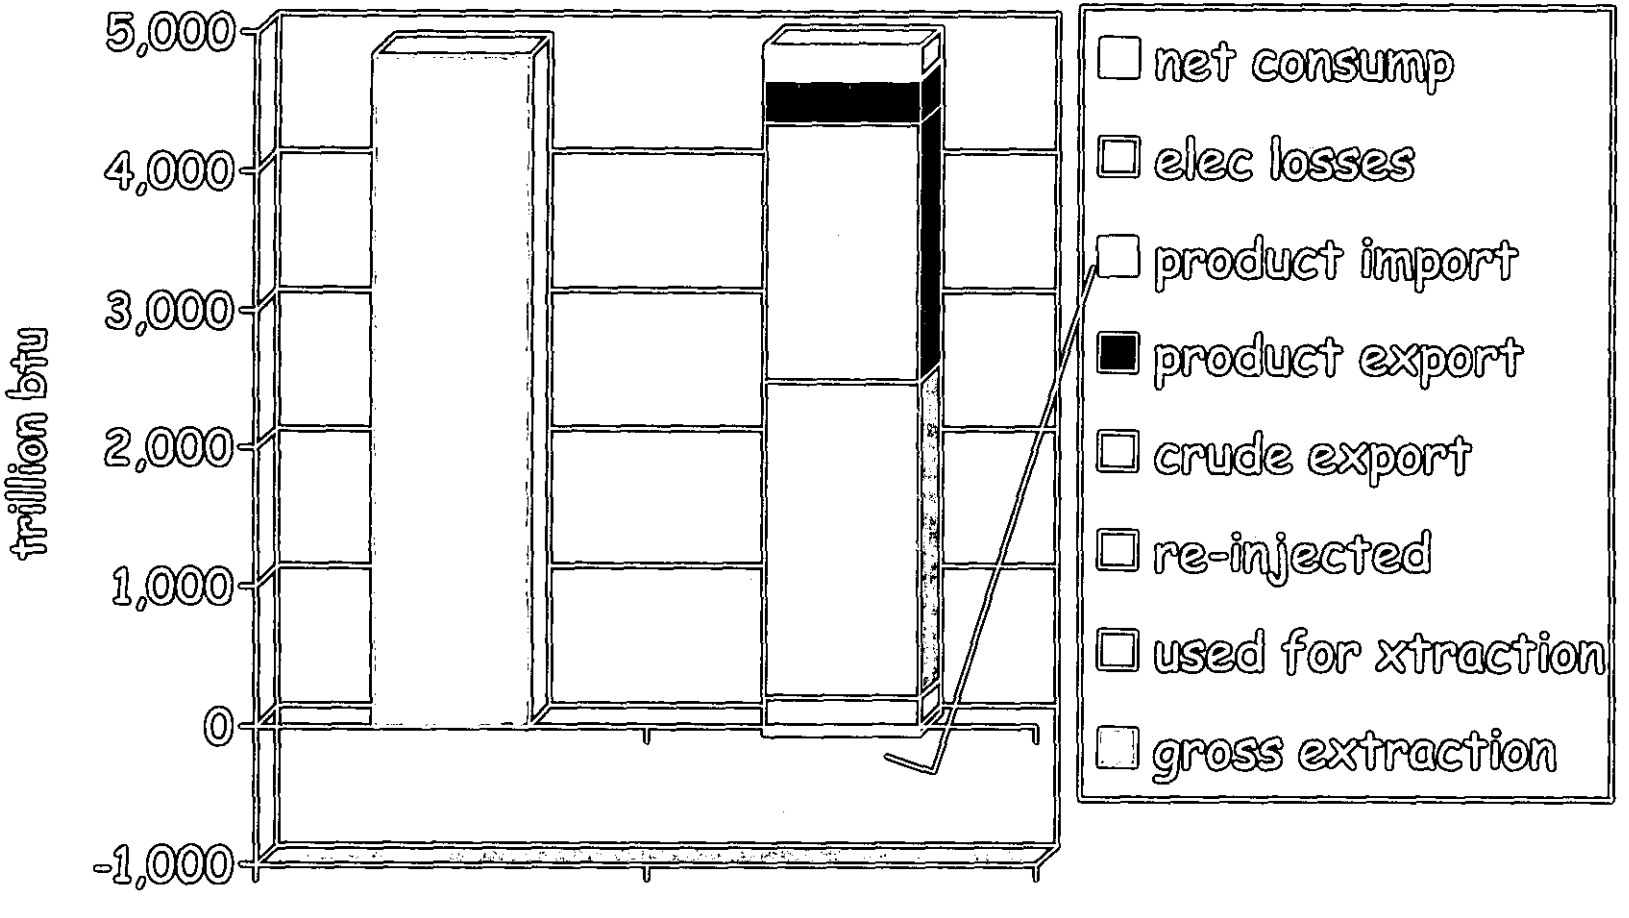
Practical because:

- Alaska is overwhelmingly a Seller of Energy.
- Therefore, we are in GREAT FISCAL SHAPE, overall, when oil prices rise.
- Short-term, do this with cash (revenue sharing) rather than fancy energy projects

2001 Alaska Energy Flow (Trillion BTUs)



Overall Disposition of Energy



Reduce the Energy Bill: Details

- Fully fund PCE, with sliding funding when diesel prices are high
- Community energy assistance tied to rising and falling oil prices

almost practical policy #2: Make PCE a Lump-Sum Payment

Practical because:

- Relatively easy to create a fair formula using existing data and program delivery channels
- Might also REDUCE program admin costs

Make PCE Lump-sum: Details

- Reward utilities for efficiency improvements
- Reward entrepreneurs for new technologies
- Reward consumers for being frugal
  - Preserve the Price Signal!

almost practical policy #3: Pre-fund energy costs (with an endowment) as part of a capital project

Practical because:

- We spend a lot of money on the "capital" budget
- It provides powerful signals for efficient design
- It's a proven, prudent way to build sustainable infrastructure
  - Most private universities require this

Pre-Fund Energy Costs as Part of a Capital Project: Details

- Include an energy (and maintenance?) endowment in all appropriations
- Maintain endowments in escrow;
- Make payments partly as lump-sum amounts to further encourage efficient facility design

almost practical Policy #3A: Include Life-Cycle Energy Costs in Evaluation of the "Low Bid"

Practical because:

- Communities could do this on their own
- Rewards designers for efficient design rather than penalizing them for higher up-front costs

almost practical Policy #4: Focus State capital $$ on Energy-Saving infrastructure, Away from Energy-Using Infrastructure

Practical because:

- You save the most $$ with up-front efficient design

almost practical policy #5: Focus State R&D dollars on Adaptation of Emerging but existing Technologies

Practical because:

- Feds and private sector are conducting major efforts on "new" stuff
- Alaska is a unique market niche with harsh conditions, most technologies require adaptation

Focus on Adaptation: Details

- Continue support for wind technology, focus on shared O&M from regional nodes
- Pilot projects:
  - Direct Hydrogen combustion in vehicles
  - Small-scale coal gasification
  - Coal-bed methane
  - Biodiesel utilization

Changing Mix of U.S. Primary Energy Sources

Alaska State Energy Policy

Introduction

Alaskans utilize energy to light and heat their homes and businesses and power their cars, trucks, trains, four wheelers, skiffs, fishing boats, and snow machines. Industry develops, refines and transports oil and gas, mining, fishing and other natural resources products. Alaska's energy policies need to be as broad as our use and production of energy.

The average Alaska household energy budget is divided with roughly 40 %spent on space heating, 35 %t for electricity, and 25 % for transportation; this varies significantly depending on the location. Historically, Alaska's energy policy and investments have been disproportionately focused on electricity generation and oil and gas development, transportation and refining. It is important that Alaska's energy policy be directed at the full range of energy uses and sources.

Alaska state agencies who carry out policy related to energy would greatly benefit from a clear and sensible energy policy. Alaska's energy policy should recognize the difference between energy costs and energy prices. Alaska's energy policy should also recognize that trade-offs exist between a policy's efficiency and its fairness (i.e. a policy that maximizes savings may not be fair and a fair policy may not maximize savings).

Current Energy Policy in Alaska

The following three goals appear to be Alaska's de facto energy policy since the discovery and development of oil and gas in Prudhoe Bay in the 1970s. This energy policy is separated into three parts reflecting three distinct energy policy goals:

1) Alaska's primary energy goal is to reduce the total cost of energy by decreasing the cost of energy supply and increasing end use efficiency without sacrificing the quality of life of any Alaskans. The cost of energy supply could be decreased by supplying needed capital, through grants and loans and management to renewable projects.

2) Alaska's secondary energy goal is to redistribute resources, in the form of price subsidies and payments to consumers, to equalize the burden of energy costs for all Alaskans in a manner that preserves the effect of natural price signals.

3) Alaska's tertiary energy goal is to ensure that energy prices are low enough in some communities to ensure that high energy prices do not cause the destruction or irreversibly damage of rural lifestyles and Alaska Native cultures. The state is willing to artificially (and possibly unsustainably) manipulate energy prices to achieve this end.

Recommendations for Future Energy Policy in Alaska

General Recommendations:

Recognize that oil prices are volatile; establish a long-term oil price forecast on which to evaluate long-term capital investments in energy project to displace fossil fuels.
Tie crude oil and natural gas price assumptions to Alaska Department of Revenue or the U.S. Energy Information Administration long-term oil price forecasts to evaluation projects. The state should determine a reasonable price for carbon emissions to incorporate within the price forecast until a federal price is established

Recognize the importance of discount rates in the evaluation of energy policies.
The discount rate has a significant impact on the net present value and the benefit cost ratio of energy projects. The discount rate reflects not only the opportunity cost of an investment but also how much the investor values the future. The discount rate should not be considered just a value used in comparing competing projects, but instead it should be considered a primary part of state energy policy.

Support establishing national and global policies for capping and reducing carbon emissions.
This will provide a more efficient outcome than a defensive posture toward greenhouse gas legislation.

Develop a carbon emissions reduction plan.
Developing a plan and state goals will provide investment certainty and stimulate markets for renewable energy projects.

Retain a share of the renewable energy grant funding at the Alaska Energy Authority for development of viable energy projects.
The Alaska Energy Authority has experience in managing and developing renewable energy projects. The agency is able to identify renewable energy projects with high rates of return for which there are no grant applications. Retaining a portion of the state's renewable energy funding would allow AEA to identify, develop and manage good projects.

Provide a mechanism for funding applied energy research within the state.
At this time, there is no state funding allocated to energy research and development (R&D). If Alaska hopes to successfully develop a suite of alternative and renewable projects in the future, it will be necessary to address some specific research questions that are directly relevant to ensuring the success of those projects. By reducing failures, prudent investment in R&D can have an excellent return on investment.

Provide a mechanism for developing and maintaining baseline data needed for conducing applied energy research.
Currently there is insufficient data on community energy and fuel use to accurately evaluate the renewable energy and other capital projects.

Recommendations related to electric energy sector:

Development of an Alaska Renewable Energy Goal
Governor Palin recently announced a goal to meet 50 % of Alaska electric energy needs with renewable energy technologies by 2025. This is currently the most aggressive goal in the country; however, Alaska currently meets 25 % of electrical energy needs with renewable energy technologies. Given Alaska's abundant resources, reaching 50 % is well within reach. Additional components of this goal could include:

1) Meet the goal of 50 % renewable energy technologies while investing in technologies and projects at the lowest cost to ratepayers and the Alaska state budget energy.

2) Give priority to integrated renewable energy projects that displace both electric generation and space heating and have the lowest cost in relation to the cost of the non-renewable energy that they displace.

3) In urban Alaska, providing low interest loans rather than grants for energy projects may provide a "market test" for energy supply alternatives while grants may be necessary in rural communities.

Recommended adjustments to the Alaska Renewable Energy Fund
The Alaska Energy Authority should retain a share of the allocated Renewable Energy Grant funding. AEA has experience in managing and developing of renewable energy projects, and the agency is capable of identifying renewable energy projects with high rates of return that may fail to submit application for grant funding.

Develop policy that positions Alaska as the world's leading exporter of small-scale, off-grid integrated energy systems and the know-how needed to adapt them to local conditions.
About two billion people live off the grid or have no electricity at all. Alaska is currently importing the equipment and some of the technical know-how for renewable energy projects under development. Alaska can be a de facto world leader and test bed for small-scale, off-the-grid energy systems while solving our energy issues one village at a time. This will require establishing some funding mechanism for research and development and demonstration projects.

Set a conservation target for communities to offset 30 % of incremental resource needs through conservation by 2020.
This goal would reduce the growth in electricity demand so that by 2020 500 GWh per year of currently forecast Railbelt needs will be met through demand reduction measures. This may include energy efficiency, conservation, and other demand side solutions.

Encourage utilities to pursue cost effective and competitive demand side management opportunities.
Energy efficiency is a critical piece of utility resource plans. Through demand side management (DSM) technologies, combined with price incentives, energy utilities play a

vital role in promoting energy conservation with investments in energy efficient technologies and building designs. Reducing electric utility peak loads energy costs can be reduced energy by avoiding the construction of new capacity or operation of inefficient peaking plants.

Explore new utility rate structures that encourage energy efficiency and conservation. A key demand side management tool is pricing structures to either discourage consumption overall, or shift demand to less costly periods. Smart meters and peak load pricing for electricity and natural gas have been shown to reduce consumption and shift demand to lower cost periods. In addition to electricity and space heat, establish solid waste utility rate structures that reward recycling and reduction of garbage to landfills.

Establish a competitive request for proposals for the use of sawmill residues, logging debris and beetle-killed timber for space heating and electricity generation to help mitigate impacts from bark beetle infestation.
The spruce bark beetle (Dendroctonus rufipennis) outbreak in Southcentral Alaska has affected 2 to 3 million acres in the past 10 years. In heavily affected stands, often all spruce trees greater than 10 cm are killed.[1] The area affected by tree death is one of the largest ever documented from an insect outbreak in North America.[2] Using this biomass for energy will reduce fire danger while restoring damaged forests and lowering energy costs.

Recommendations related to space heating:

Expand Energy Efficiency Standards for residential housing by 2010.
Expand the Alaska Housing Finance Corporation (AHFC) Building Energy Efficiency Standard (BEES) to all Alaska residential housing.

Implement Energy Efficiency Standards for commercial buildings by 2012.
Expand the Alaska Housing Finance Corporation (AHFC) Building Energy Efficiency Standard (BEES) to include commercial buildings by developing appropriate measures.

Implement an Energy Efficiency Labeling Program for buildings.
Energy performance labeling supports increased energy efficiency by making the efficiency of buildings observable, in much the same way that the Energy Star labels provide information for consumers on appliance energy use. Labeling also supports other policies and programs, such as energy-efficient mortgages, promotion of energy efficiency by realtors and property inspectors, and incentives to promote energy efficiency upgrades of houses and buildings. This program could use the AHFC AKWarm Energy Star rating system for new construction as well as the Weatherization program to rate retrofits.

[2] Werner, R.A., and Holsten, E.H. 1983. Mortality of white spruce during a spruce beetle outbreak on the Kenai Peninsula in Alaska. Canadian Journal of Forest Research 13(1):96-101.

1814

Require new state public sector buildings to integrate environmental design to achieve the highest standards for greenhouse gas emission reductions, water conservation and other building performance measures.
Buildings have many environmental impacts, including energy demand, water consumption, waste water production, the embodied energy of building materials, solid waste production, and in some cases, disposal of toxic materials.

Continue to fund the home weatherization programs through the Alaska Housing Finance Corporation.
These programs are well structured to address the needs of homeowners throughout Alaska. Research indicates that the programs reduce energy use by 25 %. The program also attempts to train energy raters and weatherization crews living in the communities and regions where the work is occurring thus fostering local work skills and employment.

Fully fund the Low Income Energy Assistance Program (LIHEAP).
This program assists households with high energy costs when oil prices increase while maintaining market prices signals to encourage efficient use of energy. State revenues also increase when oil prices increase so the funding is more readily available to fund this "counter cyclical" program. The program has an administrative structure in place to readily respond to pressures on household budgets of rising energy prices and is available for all regions of Alaska.

Policy recommendations related to industrial energy use

Develop an Industrial Energy Efficiency Program for Alaska to address specific challenges faced by Alaska's industrial sector.
Establish an Industrial Energy Efficiency Program for Alaska to address challenges and issues faced by the industrial sector. The program will encourage industry driven investments in energy efficient technologies and processes; reduce emissions and greenhouse gases; promote self generation of power; and reduce funding barriers that prohibit energy efficiency in the industrial sector. Some specific strategies include developing a results-based pilot program with industry to improve energy efficiency and reduce overall power consumption and promote the generation of renewable energy within the industrial sector.

Eliminate routine flaring at oil and gas producing wells and production facilities by 2019 with an interim goal to reduce flaring by 50 percent by 2014.
Reducing flaring is an issue for many jurisdictions and the World Bank is leading a Global Gas Flaring Reduction Partnership. Routine associated gas flaring is considered gas that meets an economic threshold for conservation. Operators will be required to perform an economic analysis of all sources of continuous solution gas flaring and subsequently tie in any gas that shows a net present value greater than zero.

Explore opportunities and new technologies to develop underground disposal of carbon dioxide (sequestration or carbon capture and storage).
Geological carbon sequestration involves disposing of carbon dioxide safely and permanently in carefully selected underground locations. There are opportunities to

dispose of carbon dioxide into depleted gas reservoirs or specific formations with saline water, or to use the carbon dioxide to enhance oil recovery.

Establish policies and measures to reduce industrial greenhouse gas emissions. Alaska industries with the highest greenhouse gas emission estimates are those engaged in the energy production and energy delivery business accounting for approximately 36 % of greenhouse gas air emissions.

Policy recommendations related to transportation

Support the development of community transit systems and plans to provide alternatives to private passenger vehicles for transportation. On-road vehicles account for approximately 18 % of Alaska transportation greenhouse gas emissions and a similar proportion of household energy budgets. Community transportation systems provide accessibility to underserved members of the public including senior citizens, low income workers, the physically handicapped and students and facilitate their ability to get to jobs, school, medical facilities, and purchasing food, clothing and other essentials. In Anchorage in 2008, the People Mover transported over 4.2 million riders an average of 4.52 miles per rider displacing approximately 1 million gallons of gasoline and 20 million pounds of CO_2 one gallon of gasoline creates 20 pounds of CO_2).[3]

Enhance transportation planning and decision-making criteria by adding CO_2 emissions as criteria in transportation decisions. By adopting criteria that estimates a project's CO_2 emissions for regional and statewide transportation plans and state transportation improvement program projects (STIP), the public and decision makers can be informed on what projects' CO_2 emissions will be and can make decisions accordingly.

Make transportation investments where existing or planned development will encourage public transportation use, walking, and bicycling. Use the statewide transportation and STIP criteria to support greenhouse gas (GHG) reducing programs and projects. Give greater emphasis to Plan and TIP criteria and projects that support sustainable land use and transit-oriented development; that promote transit, ridesharing, and travel demand management coordination; and that include bicycle and pedestrian improvements that will generate significant use of these modes.

Remove from law the limits on the percentage of Alaska Department of Transportation's State Transportation Improvement Program (STIP) that can be spent on enhancements. Also remove any limits on the ability of communities to improve pedestrian, bicycle and trail projects and safety programs.

[3] Anchorage People Mover rider ship statistics provided by Alton R. Staff, Planning Manager, Anchorage Public Transportation Department, February 24, 2009.

Encourage more compact communities and land use policies to reduce energy use from the dependence on single occupancy vehicles and reduce the cost of transportation to Alaska families by giving priority to projects in areas identified in local and regional plans as being suitable for concentrated development and/or redevelopment, support initiatives that increase sustainability.
According to John Horsley, Executive Director, American Association of State Highway Transportation Officials (AASHTO), one third of transportation's contribution to emission reductions will be shaped by transportation reauthorization investments, policies and improved fuel efficiency standards. The other two thirds will come from federal, state, and local energy policies, local land use policies, the effect of higher fuel prices, and new technologies.[4]

Support the acquisition of clean and fuel-efficient vehicles for public fleets.
State and regional agencies and urban municipalities should buy more efficient cars and trucks and increase the use of lower-carbon fuels. By doing this, agencies and municipalities will assemble a cleaner fleet and save money on energy.

Support legislation that encourages the expanded use of electric cars.
Electric cars have the potential to reduce energy costs in Alaska communities with excess electricity from renewable sources. These include small, Southeast Alaska communities off the highway system and remote communities developing wind generation facilities. Electric cars, and potentially electric four wheelers, are well suited for off-highway use and are a natural fit for these communities.

Support initiatives to eliminate unnecessary idling.
Consider developing an anti-idling regulation that prohibits idling the engine of any motor vehicle while the vehicle is stopped in excess of five minutes (with exceptions for activities such as maintenance and operating equipment such as delivery lifts). With technology that is now available, buses can be automatically switched off if left idling for over five minutes.

Consider environmental issues during transportation project selection.
In particular, air quality and the reduction of pollutants (CO, NOx, VOCs, particulates, and CO_2), the protection of water resources (soil and water contamination, stormwater management, and wetlands impacts), open space, and fish, wildlife and ecosystem preservation; and value those projects that reduce negative impacts.

[4] Horsley, John, Executive Director, American Association of State Highway Transportation Officials (AASHTO), Reauthorization and Climate Change, presentation at the Transportation Research Board Annual Meeting, January 2008.

The CERA Mission

To provide insight into the energy future...

- Provide comprehensive, **integrated** research and thought leadership on market fundamentals, industry dynamics, and strategy in the energy sector
- Offer unique **insights**, often well ahead of conventional wisdom, into the most pressing challenges—economic, geopolitical, financial, technological, regulatory, environmental, and managerial
- Help clients **anticipate** the energy future and make informed strategic, investment, and market decisions
- Foster a **community** of senior-level decision makers

CERA
An IHS Company

CERA Strategic Consulting and Advisory Services

- **Our Perspective.** Concerns over climate change, energy security and economic development are reshaping the competitive landscape of the global energy business. Through our unique integrated global energy scenarios and outlooks, we analyze markets in a global context while bringing quantitative results at the local level.

- **Our Approach.** Few consulting firms can match CERA's unique blend of profound energy industry knowledge, leading research, and hands-on experience. In working with our clients on strategy engagements, we leverage our deep knowledge and market leading research from all parts of the energy industry.

- **Our Experience.** CERA has provided the energy industry with advice and critical insight for more than 20 years. We have a diverse clientele of more than 400 leading governments, energy firms, and non-governmental organizations worldwide providing CERA with unparalleled breadth and depth of experience.

CERA
An IHS Company

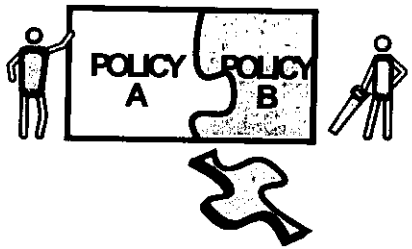
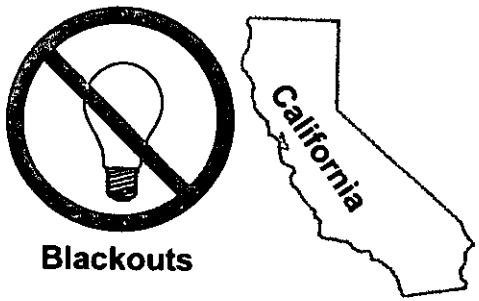
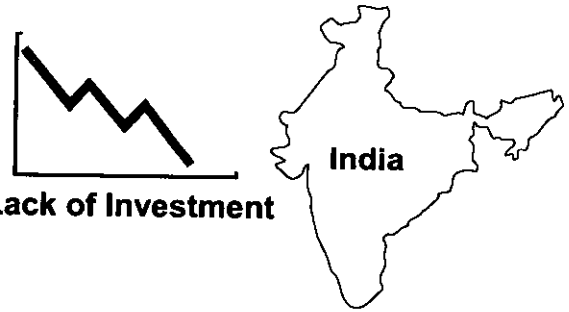
Policy trade-offs Must be Recognized and Resolved Early on



Or Face the Consequences…

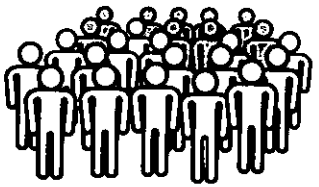




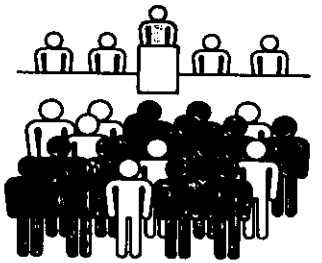
China

CERA
An IHS Company

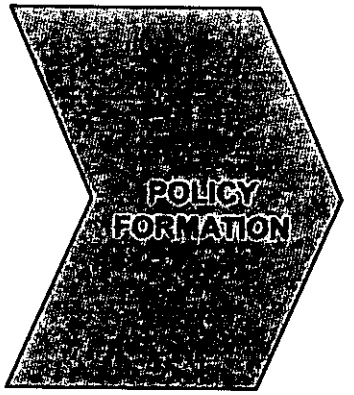
Four Key Policy Formulation Questions

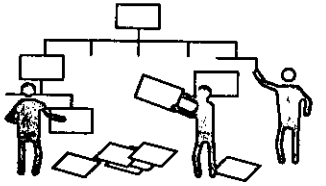


Who Decides?

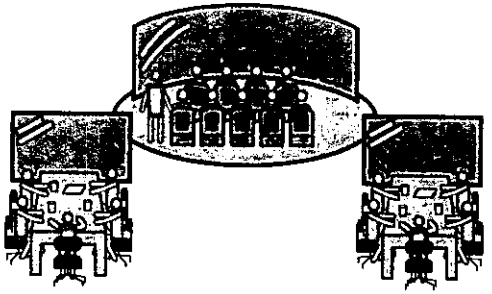


Who is consulted?





Which Topics?



What Institutions?

CERA
An IHS Company

We have assisted oil and gas clients in developing a broad range of strategies across the world.

Corporate
- IOC's strategy for high-oil price environment
- Independent's corporate portfolio strategy
- Supermajor's CO2 strategy

National Energy and Resource Development
- National resource plan based on fundamental gas demand supply forecast
- Create national resource planning and dev't

Business Unit & Regional
- SE Asia regional upstream gas strategies
- North Sea regional and country strategies
- West Africa business unit strategies

Exploration & Country Entry
- Middle East country gas entry strategy
- Atlantic Margin exploration strategy
- Various other country entry strategies

Major Resource Development
- Caspian region mega investments
- GOM and West Africa DW developments
- Major new Siberian resource development

Operating Asset Strategies
- Arctic mega asset renewal strategy
- Mature offshore asset cluster strategies
- Steam and CO2 flooding investments

Unconventional Resources
- In-situ and mined oil sands
- Tight gas, CBM and shale gas developments
- New unconventional resource technologies

LNG and GtL
- LNG liquefaction investments
- Portfolio assessment of GtL opportunities
- IOC's LNG portfolio strategy

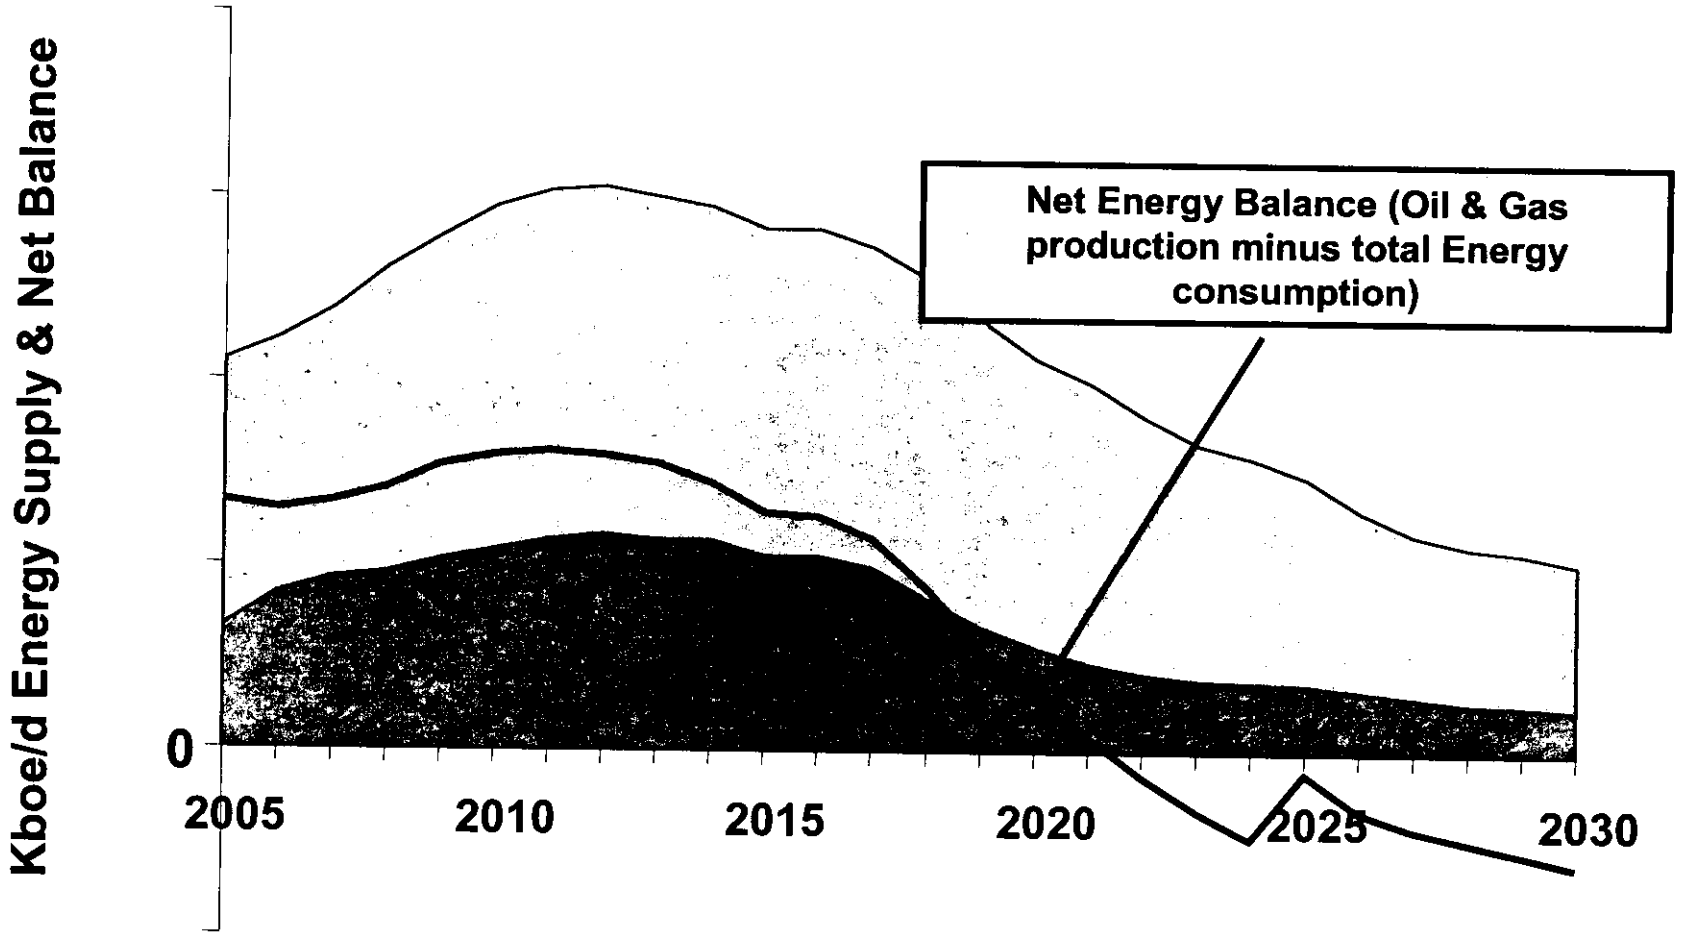
Case Example

Oil & Gas Producing Country (2007)

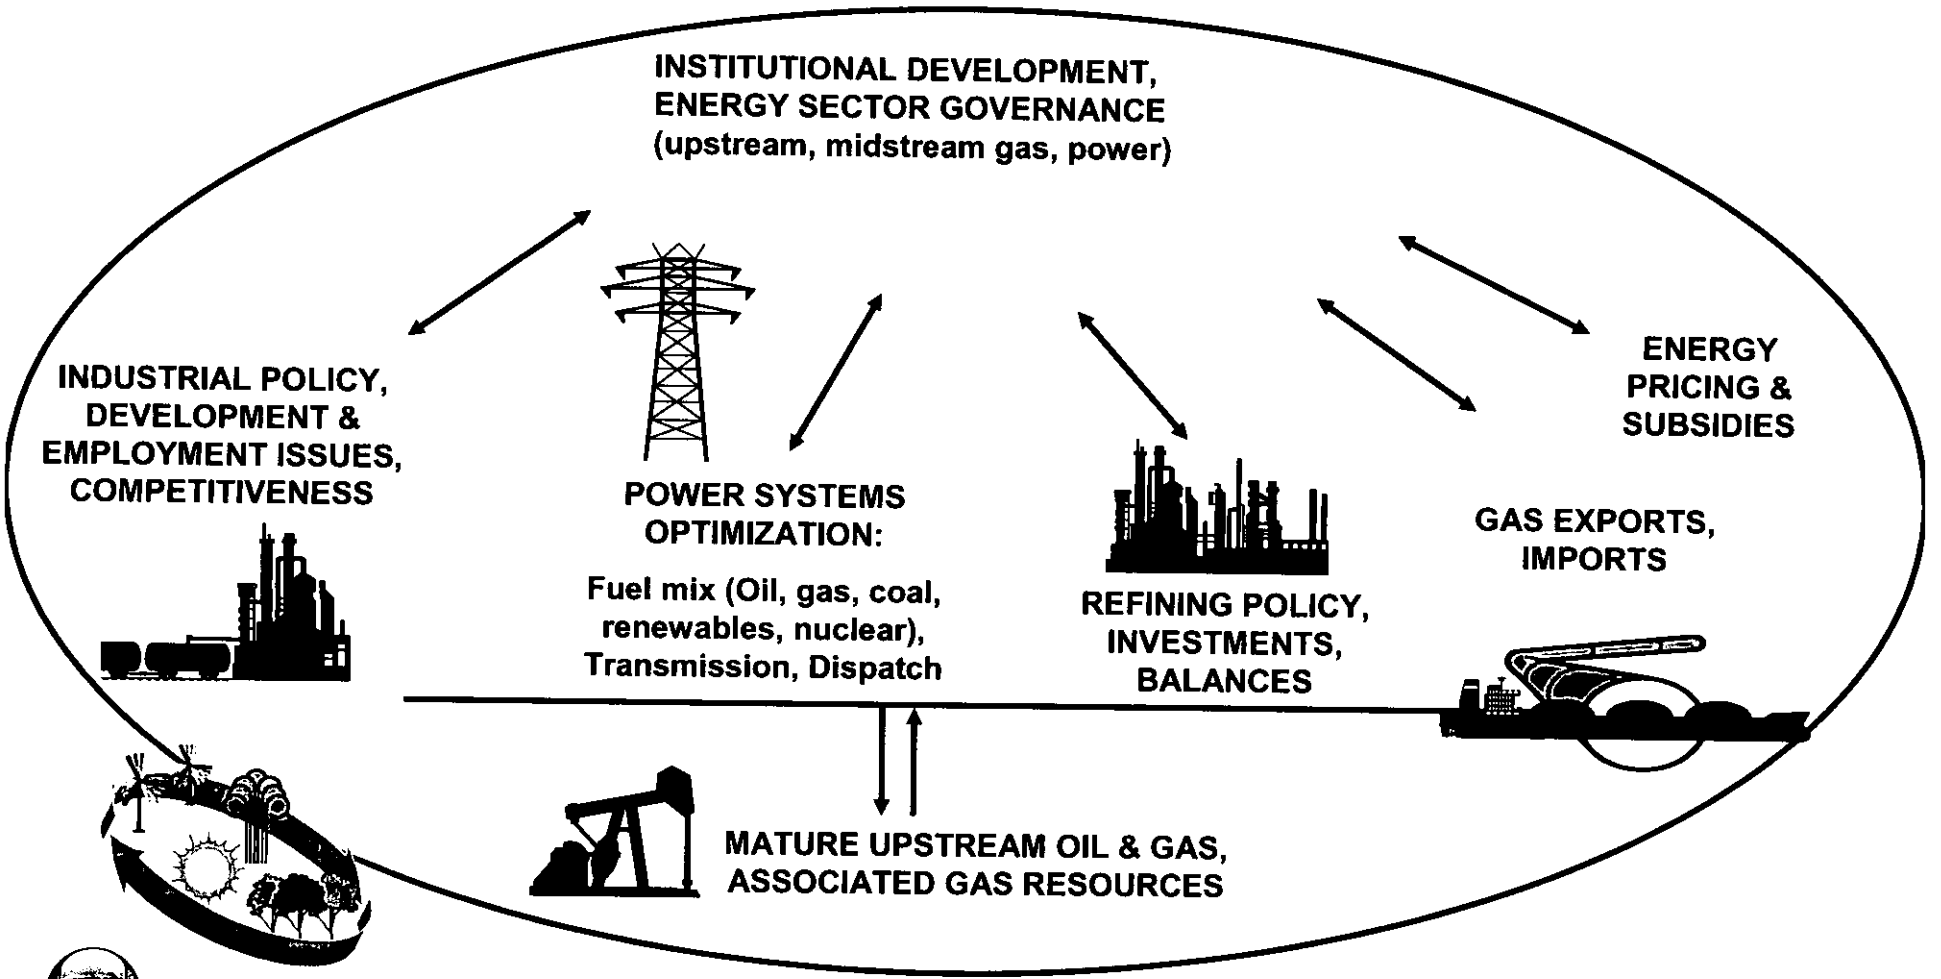
Emerging Energy Balance Shift Drove the Need for Policy Review



CERA
An IHS Company

Source: CERA analysis, study data

Study Embraced the Entire Energy Spectrum

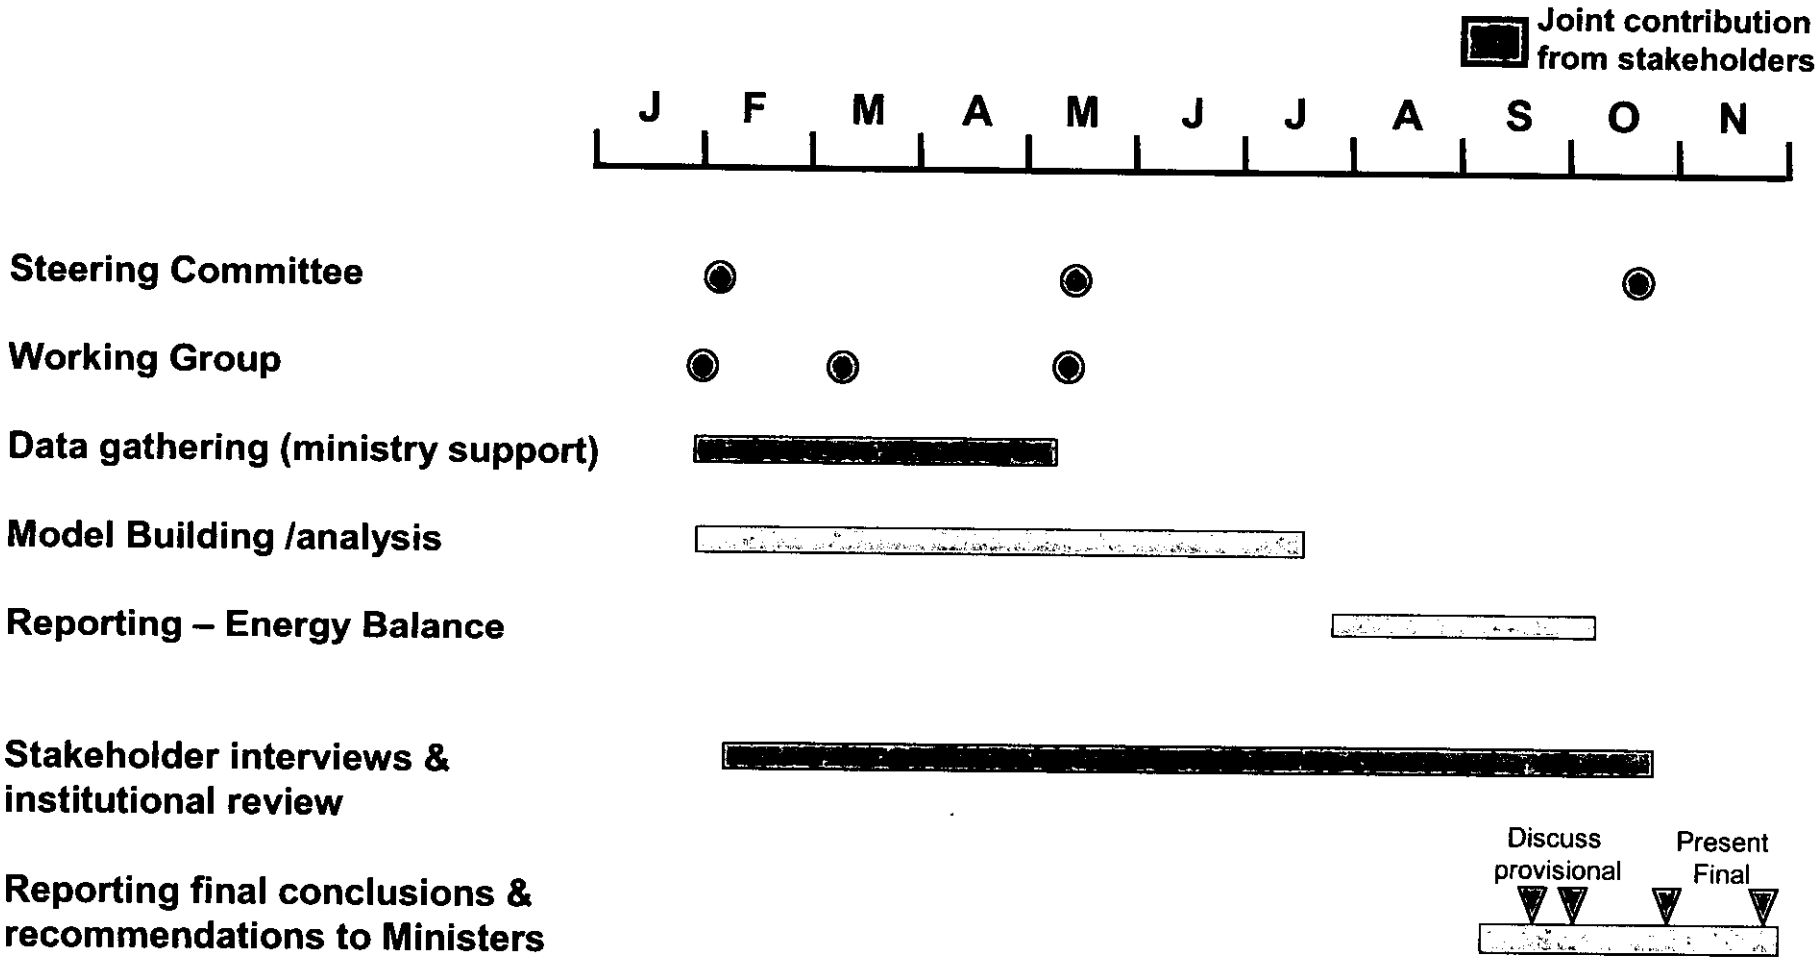


ENVIRONMENT POLICY ; ENERGY EFFICIENCY
EMISSIONS, CDM, INTERNATIONAL REPUTATION

CERA
An IHS Company

Case Example

Stakeholders were Engaged Throughout



CERA
An IHS Company

Case Example

Notional Country Energy Strategies were Developed to Test Stakeholder views

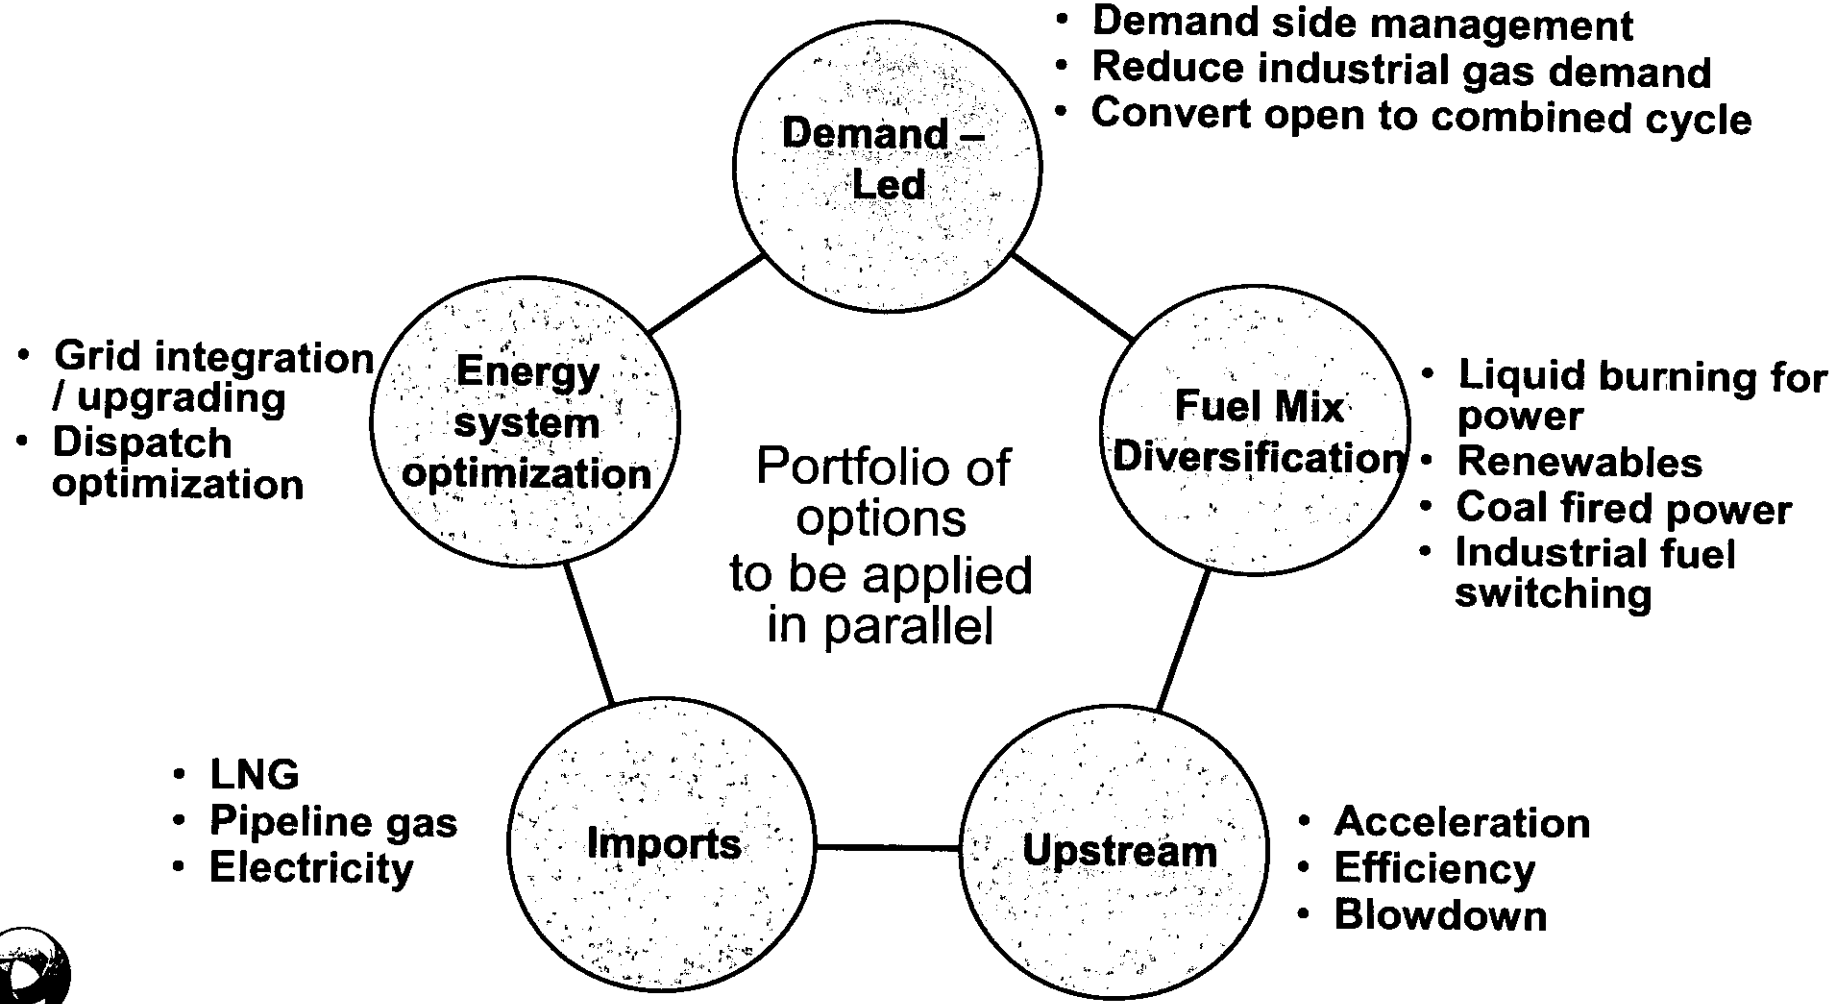
Notional Country Strategy

1. Policy Focus	Restrict / control demand across all sectors	Depend on neighbours for supplies	Give preference to upstream oil energy needs
2. Energy Supply Policies.			
3. Energy Demand Policies			
4. Energy Export Policy			
5. Fuel Mix Policy			
6. Industrialization / development policy			
7. Energy User contracts			
8. Employment			
9. Environm. Policy			
10. International Diplomacy			
11. Govt Regulatory Approach			
12. Foreign companies			

As part of the Stakeholder engagement process, CERA conducted a workshop to surface constraints / agendas affecting policy choices

CERA
An IHS Company

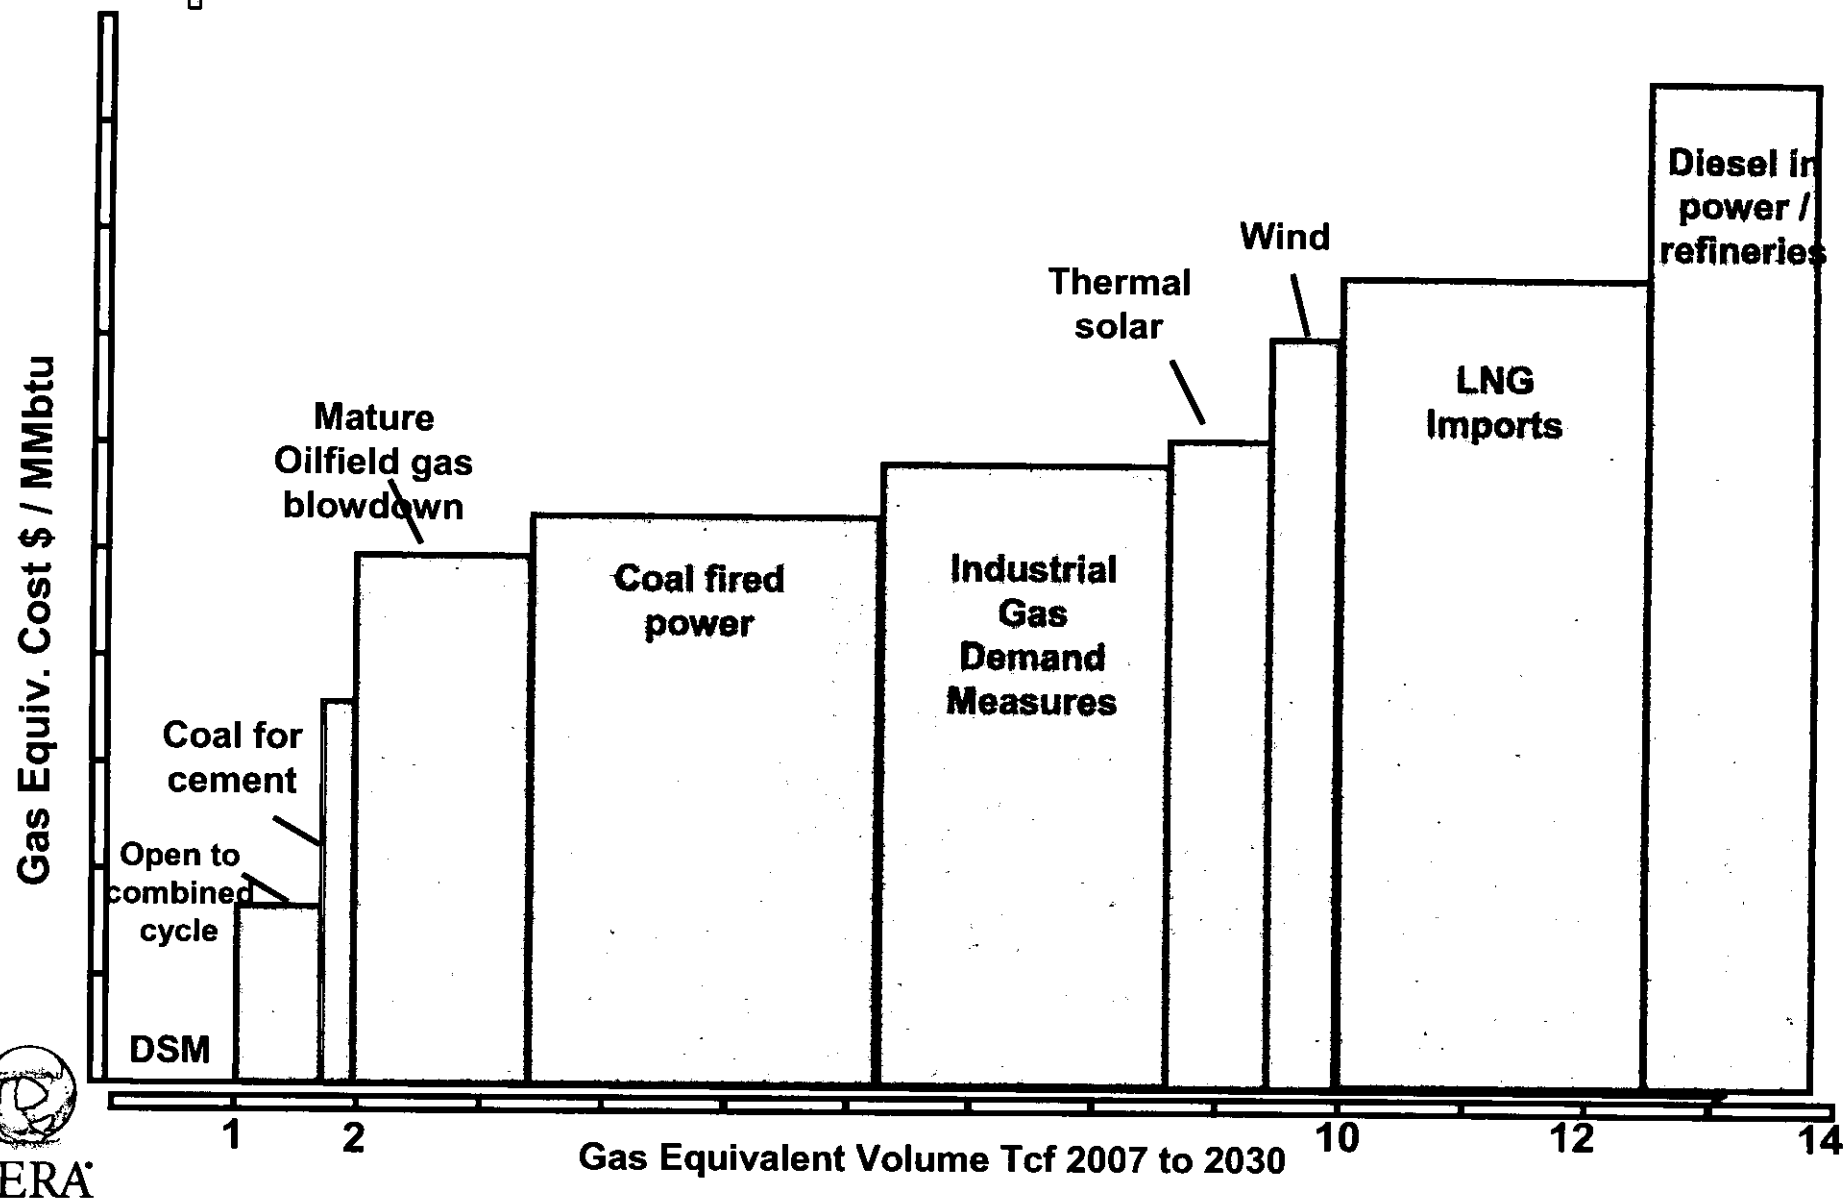
The Study Analysed a Portfolio of Options to Optimize Future Energy Balance



CERA
An IHS Company

Costs of Energy Balance Options were Compared

Case Example



CERA
An IHS Company

Qualitative Considerations were Critical in Developing Final Energy Policy Recommendations

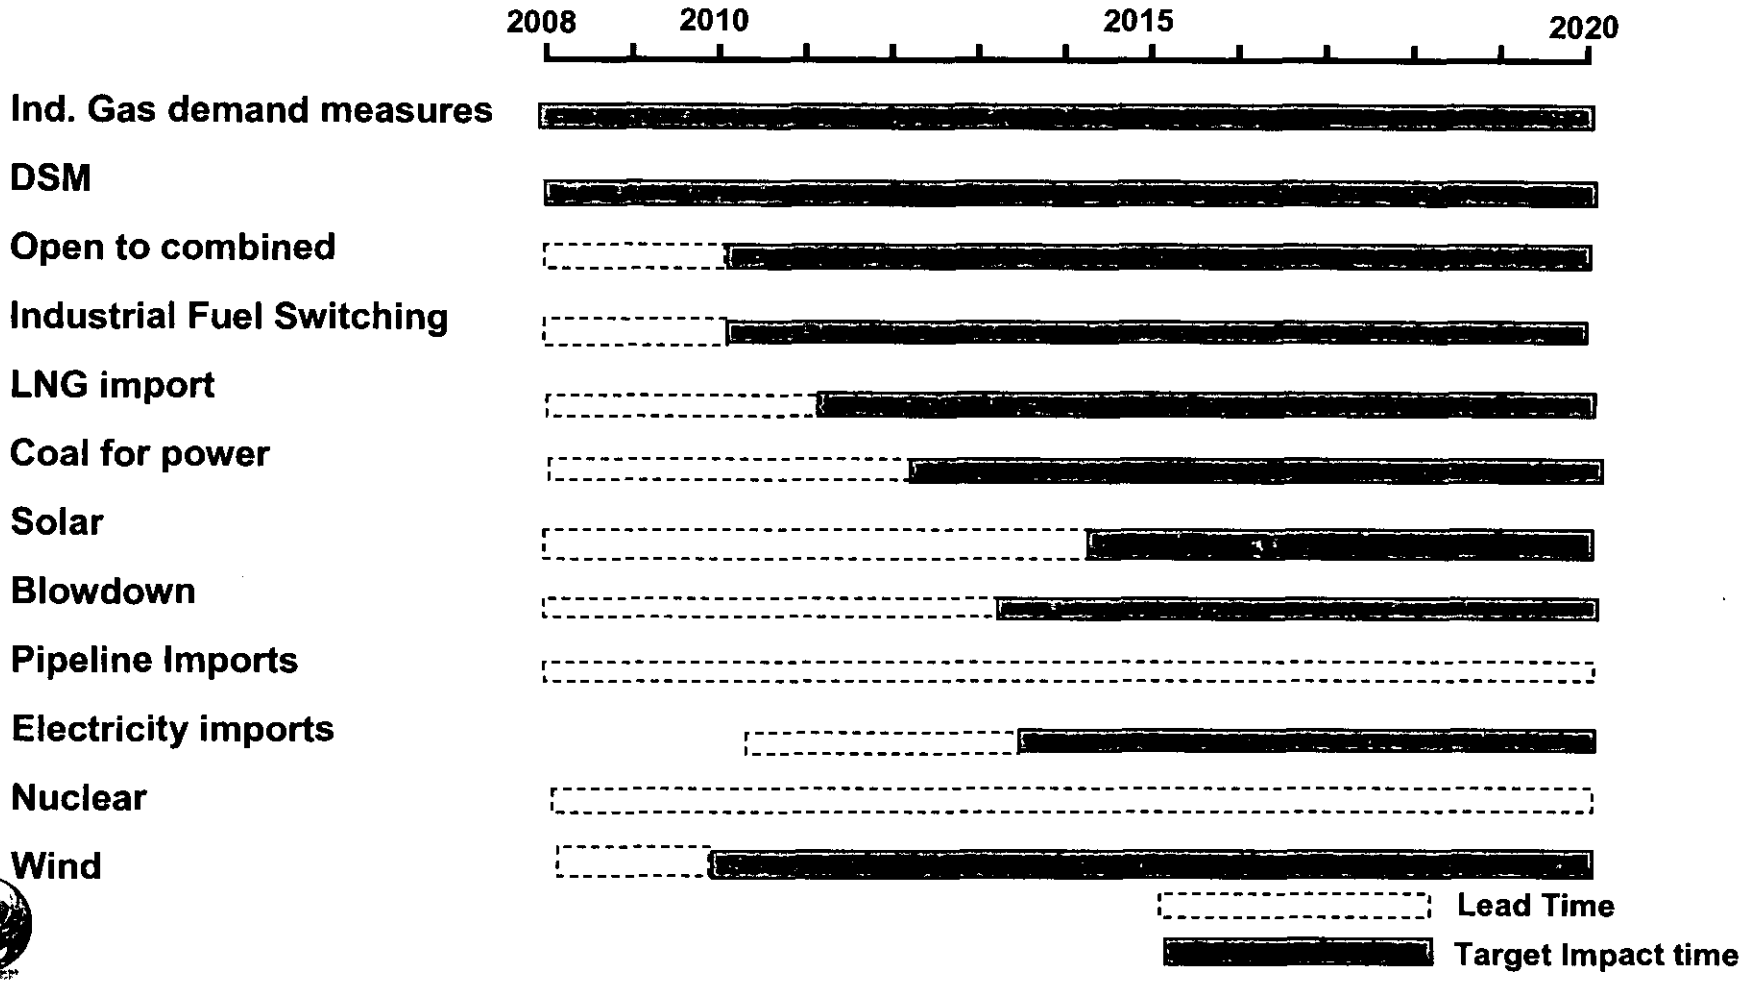
Qualitative Factors to Consider	Key Questions
Strategic Fit	• Willingness to depend on neighbours ? • Attitude toward existing gas user contracts ? • What value does diversification have (gas or fuel sources) ? • Is there a strategic upside for certain options
Risks and Vulnerabilities	• What risks or uncertainties impact implementation ? • How robust is an approach to different global energy scenarios ? • How might institutional capability influence do-ability ?
Alternatives & Trade-offs	• Do more radical options exist ? • What- if certain options excluded ?

CERA
An IHS Company

Case Example

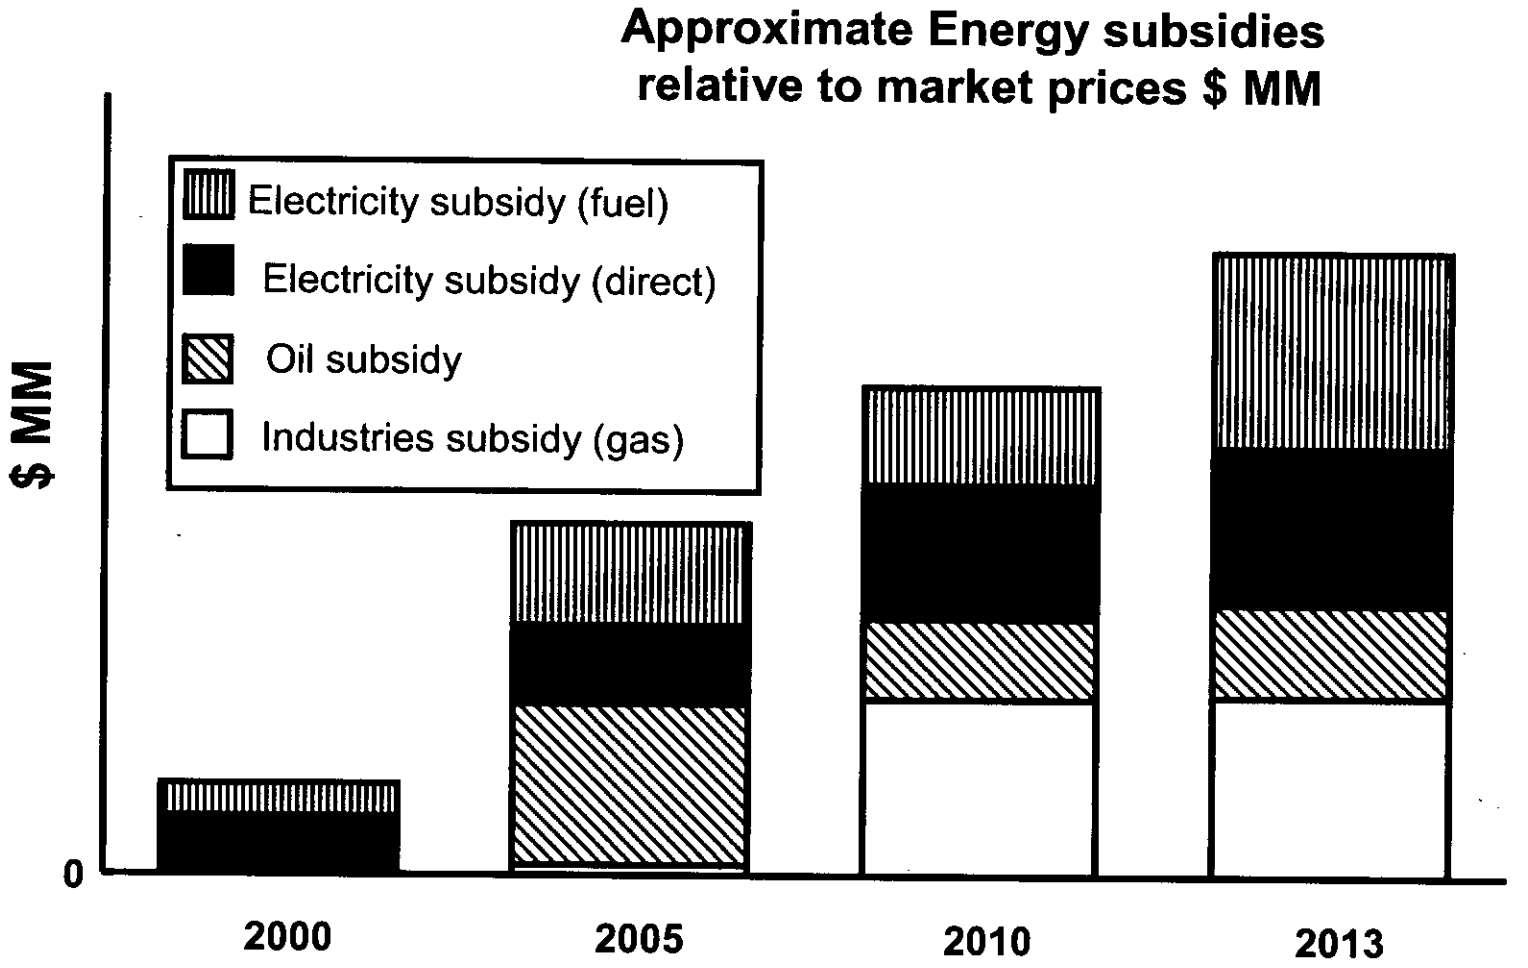
Early Planning for Implementation was Recommended

Conservative / prudent planning assuming firm supply and no pipeline imports



CERA
An IHS Company

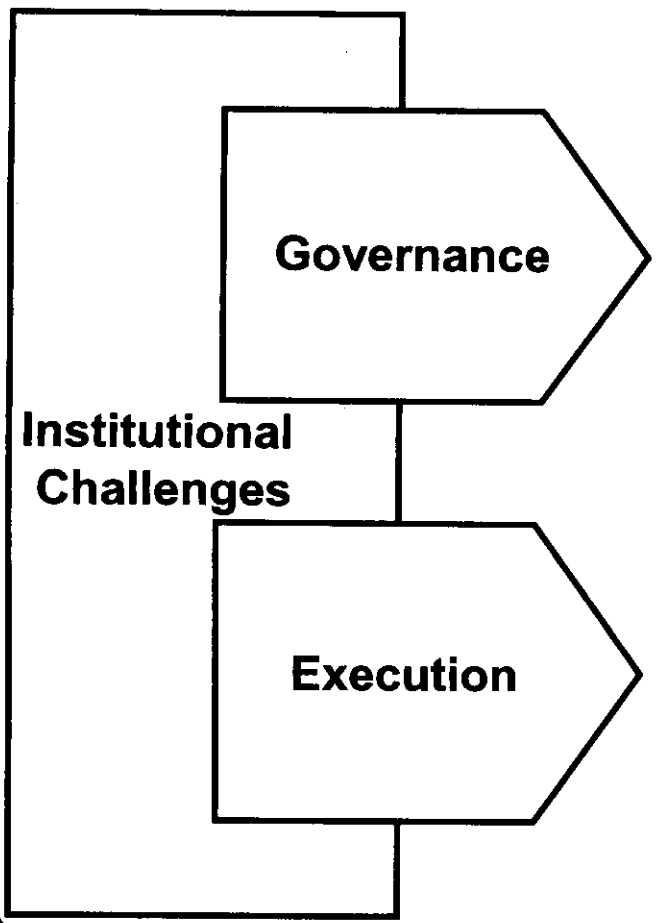
Identifying the Cost of Energy Subsidies Assisted Pricing Policy Thinking



CERA
An IHS Company

Case Example

Identification of Institutional Challenges and Solutions were Important When Recommending a Policy Roadmap



- Long term sector planning and data inventory
- Policy setting
- Designing and creating new institutional structures
- Allocating responsibilities and following-up
- Independent technical capability

- Co-ordinating wide range of policy actions (arising from this study)
- Individual actions are doable, but delivering all in parallel is a major challenge

CERA
An IHS Company

Learnings : Key Success Factors for Energy Policy Related Projects

- **Tailored, issue driven analysis**
  - — Identify critical issues to address early on
  - — Tailor model / analysis to focus on those issues
  - — Broad remit for recommendations : technical, economic, institutional, etc.
- **Build on existing knowledge**
  - — Review existing reports, work with local experts
- **Seek and build senior Stakeholder consensus**
  - — Early engagement with full range of stakeholders
  - — Continue to seek their views as project progresses
- **CERA's independence and objectivity**
  - — Flexibility to explore and deliver sometimes sensitive messages

CERA
An IHS Company

Selected Additional Energy Policy Experience

- World Bank – Yemen
- Ministry of Finance Economic Affairs – Barbados
- ExxonMobil – US
- Brazilian Petroleum Institute –Brazil
- Government Authority –Pakistan
- Ministry of Petroleum / Sonangol – Angola
- Bureau Of Minerals and Petroleum – Greenland
- Ministry of Energy – Kuwait
- Nigerian National Petroleum Corporation – Nigeria
- General Planning Council – Libya
- Confidential – Middle Eastern Country
- Directorate General of Hydrocarbons – Gabon
- Agencia Nacional de Hidrocarburos – Colombia
- JNOC / JOGMEC – Japan
- SOCAR – Azerbaijan
- Chinese NOC – China
- Government of Kazakhstan – Kazakhstan
- PetroEcuador – Ecuador
- ONAREP - Morocco

CERA
An IHS Company

Recent Strategic Consulting Experience Related to Climate Change and Clean Energy

- **Assessment of Voluntary Carbon Markets.** CERA developed a framework to assess the current and potential future demand for energy efficiency services, green power procurement and carbon offsets by businesses to achieve voluntary GHG emissions reductions.

- **GHG Policy Analysis.** CERA developed carbon abatement cost curves to inform the development of policy and business strategies related to the implementation of GHG policies.

- **GHG Policy and Market Strategies.** CERA has advised a variety of clients on the business risks and opportunities related to emerging GHG policies and markets.

- **Investment Strategies.** CERA has advised on investment and business strategies for technology providers and power generators by using a scenario framework to assess the potential risks and opportunities for various strategy options.

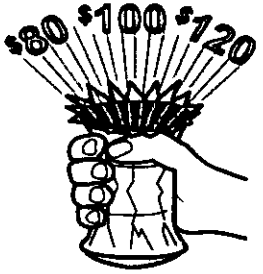
CERA's Global Energy Scenarios are the Backbone of Our Vision of the Future

ASIAN PHOENIX The center of global economic and political gravity shifts to Asia. Strong growth in China and India puts them on a path to eventually challenge the United States for global economic pre-eminence. Piecemeal international efforts to manage carbon emissions.



BREAK POINT Oil supply difficulties limit production growth. Average annual oil prices surpass $150 per barrel (nominal). Fear of peak oil encourages moves to enhance energy efficiency and accelerate growth of alternative fuels. Oil loses its monopoly on transportation. Strong, coordinated international focus on limiting CO_2 emissions drives carbon prices and research and investment in clean energy

GLOBAL FISSURES Widespread political backlash against free trade and globalization, combined with global trade and political disputes and growing security concerns over ongoing terrorist threats results in lower economic growth and weaker energy demand. Little to no effort to limit carbon emissions.

CERA
An IHS Company

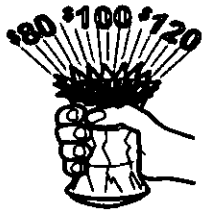
2008 US Scenarios Policy Drivers



RPS	Tax Incentives	Cap-and-Trade
❑ The 29 existing state standards remain in effect but increased compliance flexibility temper demand.	❑ Federal ITC and PTC peter out during the lead-up to federal cap-and-trade policy.	❑ RGGI continues, followed by WCI and a program in the Midwest. ❑ A federal program takes effect in 2015. ❑ Prices stay at $20-$35/ton.
❑ All existing, proposed and non-binding state goals are met.	❑ The PTC and ITC are extended through the start-up of federal cap-and-trade policy and are slowly phased out.	❑ A federal program starts up in 2012, requiring a 30% reduction below 2007 levels by 2030 leading to $100/ton prices by 2020. ❑ RGGI gets integrated into the federal program.
❑ A difficult economic environment saps the momentum behind state programs.	❑ The PTC fails to get extended past 2009 and the ITC reverts back to 10%.	❑ RGGI continues operating up until 2018 but prices remain at $2/ton. ❑ A federal program, as well as additional regional programs stall.

CERA
An IHS Company

2008 US Scenarios Overview

	ASIAN PHOENIX	BREAK POINT	GLOBAL FISSURES
International Outlook	❑ Trend economic growth. ❑ Continued growth in world trade. ❑ India, China, FSU, and Middle East continue development of home markets.	❑ Productivity suffers from high commodity prices, reducing long run growth potential. ❑ Increased reliance on multilateral trading agreements and international solutions to regional conflicts.	❑ Economic growth slows as international trade declines. ❑ NA and European backlash against globalization. ❑ Focus shifts to national adjustment issues. ❑ Emergence of resource nationalism.
Technology Outlook	❑ Technology development dependent on government subsidies and demonstration projects.	❑ Rapid pace of technology development requires more public/private initiative and risk sharing. ❑ Domestic/foreign joint ventures develop.	❑ Technology development directed toward promoting energy security within North America.
Regulatory Environment	❑ Continuing experimentation with alternative regulatory solutions. ❑ State challenge federal initiatives.	❑ Enhanced commitment to competitive solutions at the federal and state levels. ❑ Move toward multi-state regional compacts.	❑ States successfully assert regulatory authority over resource adequacy planning and infrastructure siting issues.
Industry Structure	❑ Continuation of current hybrid environment with mix of competitive and regulated entities.	❑ Increasing reliance on private capital and market-determined returns on gas and power investments.	❑ Increasing reliance on traditional vertically-integrated utilities and command and control regulation and policies.

CERA
An IHS Company

Source: Cambridge Energy Research Associates.

2008 US Scenarios Overview (continued)

	ASIAN PHOENIX	BREAK POINT	GLOBAL FISSURES
Economic Growth	❑ Recession of 2008-09 is not severe. ❑ 2011: return to long-term trend growth. ❑ Slowing population/labor force growth after 2020 reduces trend growth.	❑ High energy prices make recession of 2008-09 worse. ❑ Productivity growth slows as capital is substituted for energy in production process.	❑ Recession delayed to 2009-10 but is severe as world trade shrinks. ❑ Productivity growth well below historic norms.
Growth in Power Demand	❑ 1.6% CAGR to 2020. ❑ Recession slows growth until 2013. ❑ 1.6% CAGR after 2020 even as population growth slows.	❑ 1.1% CAGR to 2020 due to rising real power prices and sharper recession. ❑ 1.0% CAGR after 2020 as real prices escalate and population growth slows.	❑ 1.1% CAGR to 2020. ❑ 1.4% CAGR after 2020 despite declining population growth rate.
Investment	❑ Near term drivers: demand growth and tighter reserve margins. ❑ Long term drivers: continued demand growth, aging plants and environmental programs.	❑ Aggressive push for renewables and GHG legislation. ❑ Early retirement of fossil fuel units and accelerated investment in transmission. ❑ Investment requirements similar to AP.	❑ Need for transmission and generation reduced. ❑ Lower demand growth and greater reliance on domestic coal and natural gas.
Policy and Regulation	❑ Rising nominal retail rates. ❑ Some states end retail choice and reduce renewables targets. ❑ Federal GHG legislation by 2015. ❑ Many states move to reassert control over resource adequacy.	❑ 2012: Federal GHG legislation begins. ❑ Aggressive state RPSs. ❑ Regional transmission planning initiatives. ❑ FERC asserts federal authority over transmission siting.	❑ Increasing emphasis on energy security and independence. ❑ Emphasis on local reliability. ❑ Regional climate change initiatives abandoned.
Technology	❑ Focused in generation, transmission, and distribution (metering). ❑ Reliance on government subsidies for commercial scale development.	❑ Strong push for renewables, GHG abatement, and efficiency accelerate smart grid development. ❑ Commercialization of CC&S, PHEV, and storage technologies accelerated.	❑ Low economic growth pressures government budgets to support new technologies. ❑ Funding for new initiatives delayed a decade.

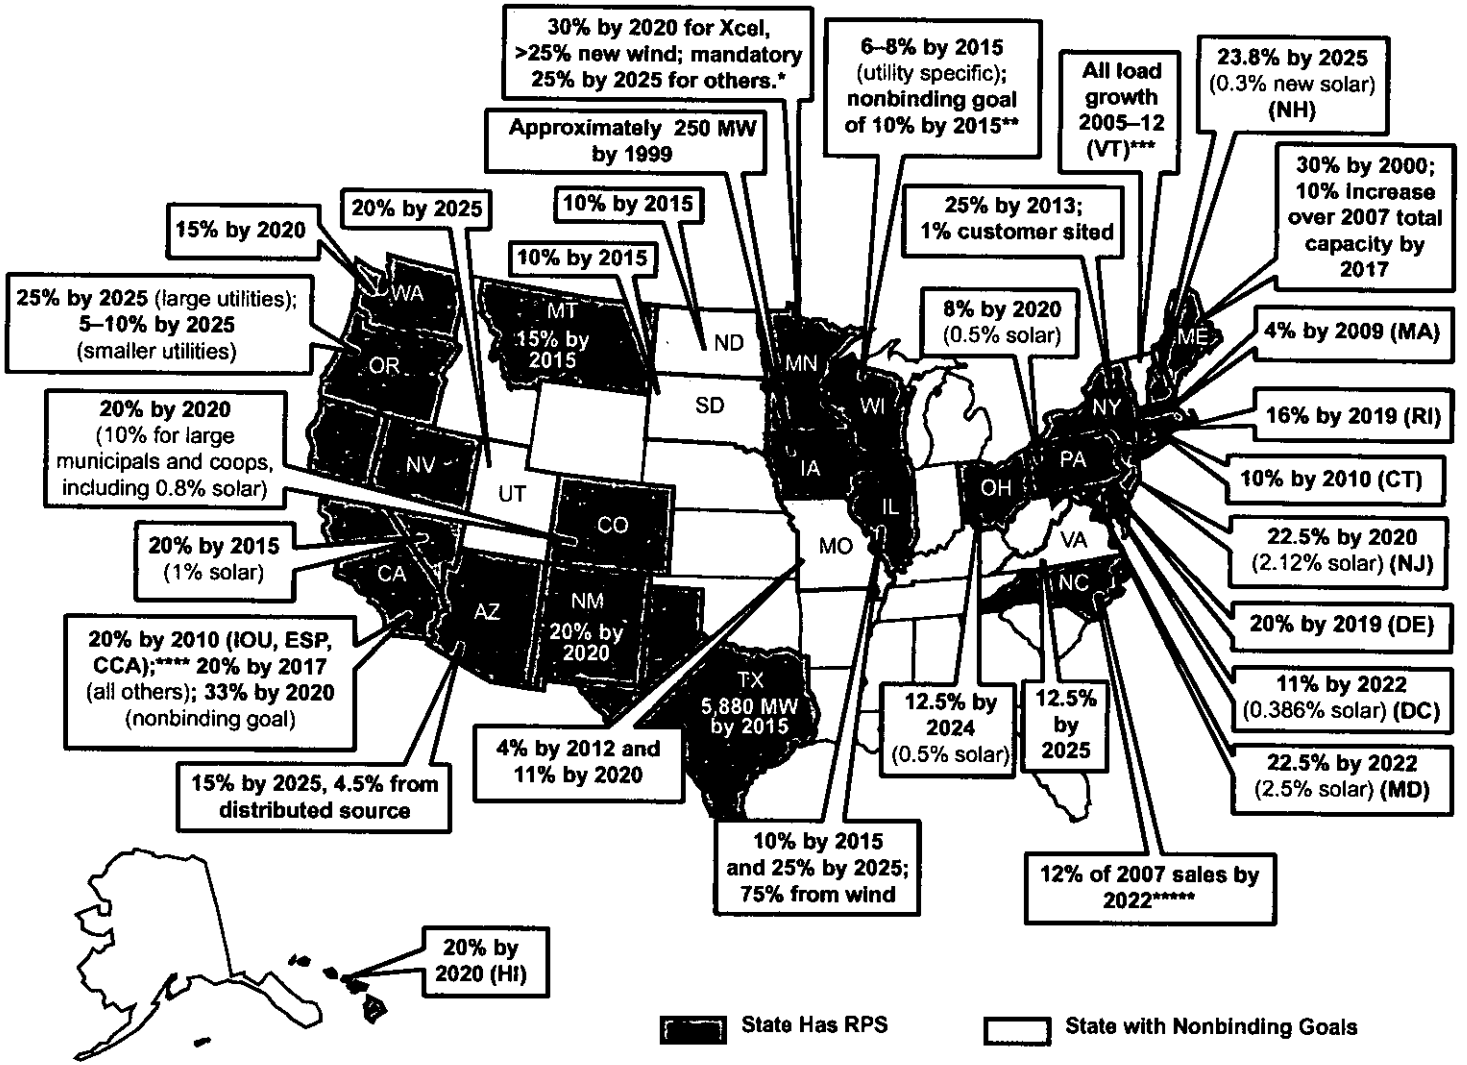
An IHS Company

State Renewable Portfolio Standards Driving Renewable Investments



Source: Cambridge Energy Research Associates, Database of State Incentives for Renewable Energy (DSIRE).
*Previous Minnesota RPS was a nonbinding goal except for Xcel Energy.
**Vermont's voluntary standard becomes mandatory in 2013 if it is not met by 2012.
***California: IOU = investor-owned utility; ESP = energy service provider; CCA = community-choice aggregator).
****Wisconsin requires all utilities to increase renewables contributions by 6 percent over the 2001–03 average level by 2015and has a nonbinding goal of 10 percent by 2015.

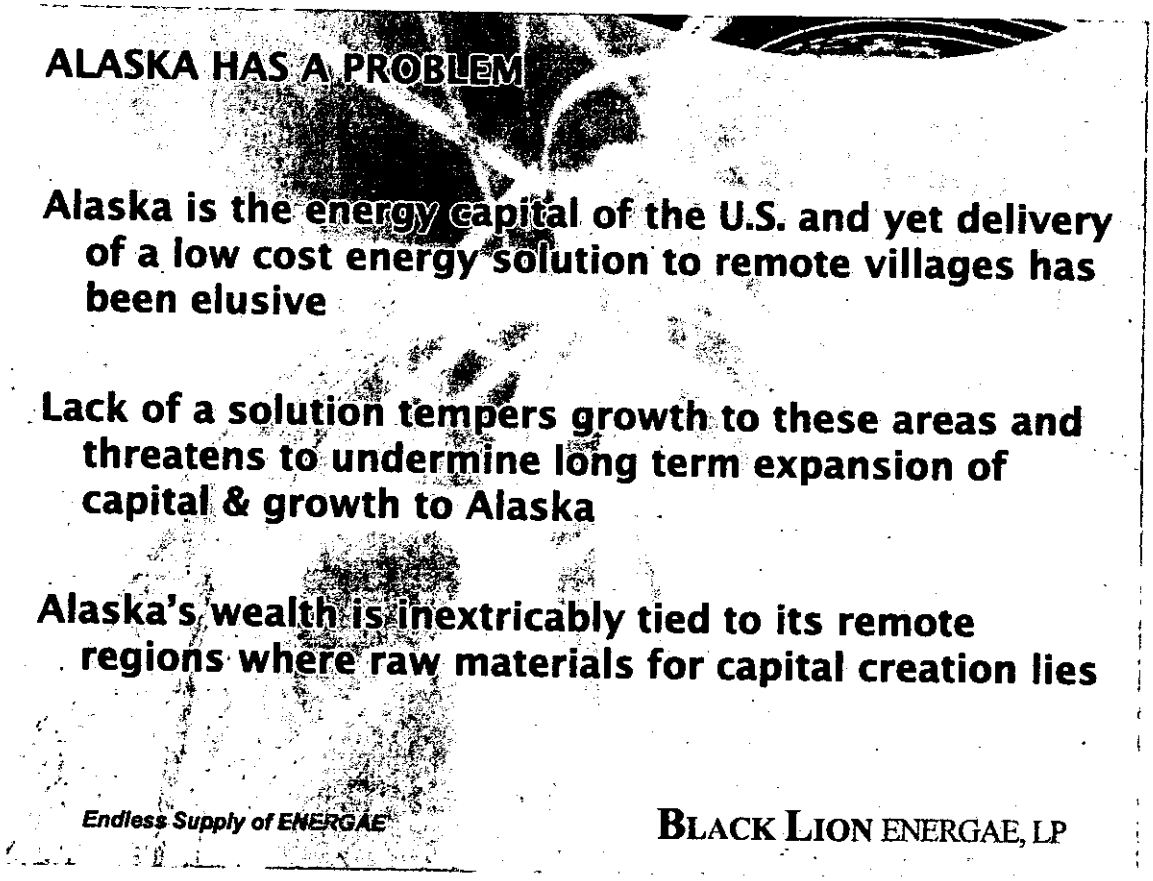
"... ALGAE is the holy grail, if we crack it we can probably give up on everything else..."
Dr. Jerry Murphy, Environmental Research Institute, University College Cork, Ireland
Endless Supply of
BLACK LION ENERGAE, LP



ALASKA HAS A PROBLEM
Alaska is the energy capital of the U.S. and yet delivery of a low cost energy solution to remote villages has been elusive
Lack of a solution tempers growth to these areas and threatens to undermine long term expansion of capital & growth to Alaska
Alaska's wealth is inextricably tied to its remote regions where raw materials for capital creation lies
Endless Supply of ENERGAE
BLACK LION ENERGAE, LP

ALASKA HAS A PROBLEM

Alaska is perceived a big oil's big brother, yet fuel costs in remote villages are among the highest in the world - higher than Central America or other developing countries who have no access to oil finds

the long term financial health of Alaska's Native Corporations and remote regions lies with delivery of a cost effective energy solution to its own; you can have all the wealth in the world, but if you can't provide for your own, you have a problem

energy alternatives

diesel fuel - $.24 to $.25 per kwh

- efficient energy source - yet, even with Alaska's abundant oil resources, they can't supply remote areas inexpensively
- costly transportation
- environmentally challenged

solar - $.35 to $.45 per kwh

- too much land required for 1 megawatt of power
- heat value non-existent/limited in winter months

wind - $.25 to $.29 per kwh

- average efficiency rating on wind generators is 35%
- costly to install and maintain relative to energy return
- lack of energy grid to maximize return

natural gas – $.09 per kwh

- perfect source; too costly to install relative to total population
- costly conversion from current diesel energy platforms

geothermal – $.29 per kwh

- excellent source, but, few areas have access
- costly conversion of current diesel energy platforms

coal $.06 to $.08 per kwh

- lowest cost energy source, but infrastructure non-existent
- unwanted discharge – "true clean coal" solution elusive
- costly conversion of current diesel energy platforms

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

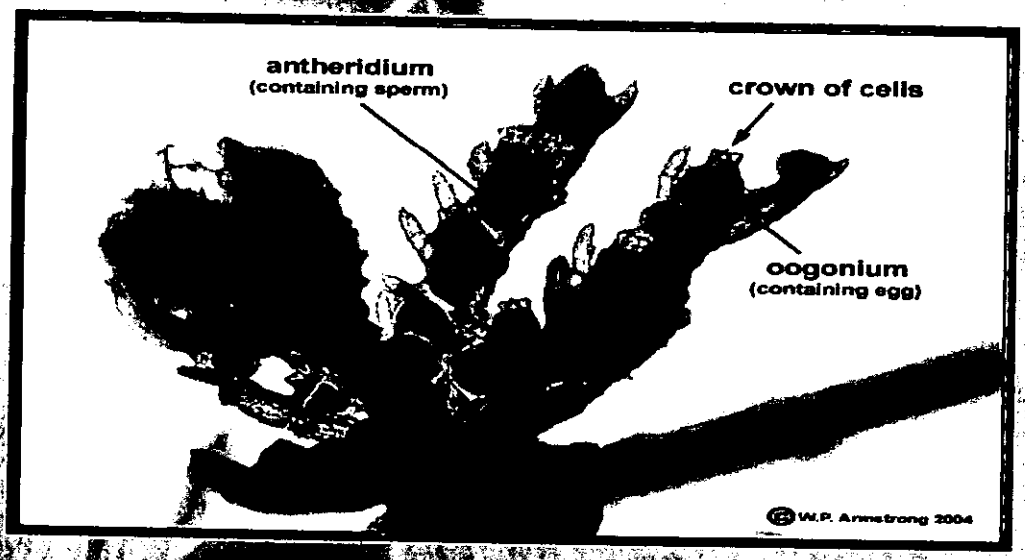
Alaska needs an energy platform solution that provides the following:

• kwh	– low cost
• environment	– safe
• diesel platform	– combined with no interruption
• transportation	– current infrastructure
• scalable	– energy platform expanded as need dictates
• set-up time	– months, not years
• infrastructure	– reasonable costs
• maintenance/upkeep	– low
• renewable	– "green"
• operation	– ease of use

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

Alaska needs Algae



Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

ALGAE

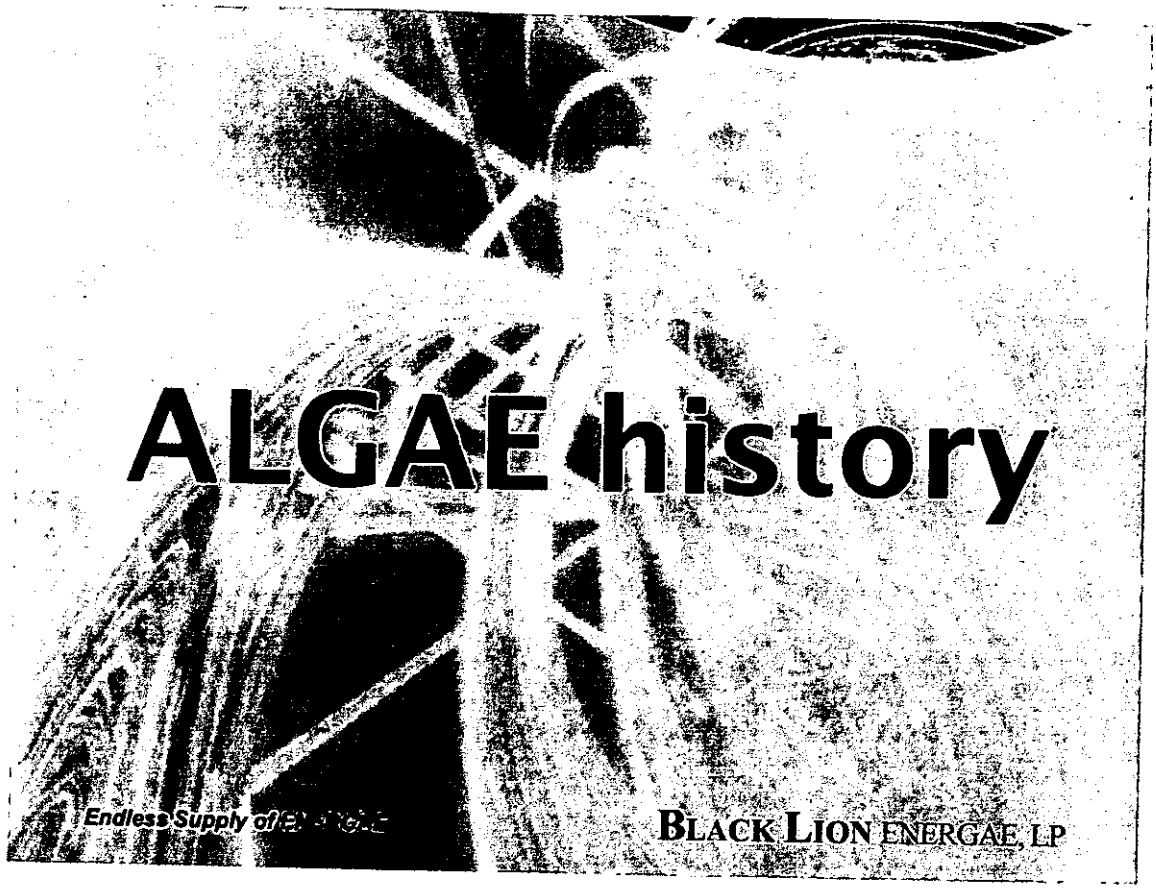
$.15 per kwh

- current diesel system
- manufactred oil
- self-sustaining energy
- weather
- BTU quantity/quality
- maintenance
- turn-key systems
- ongoing operation

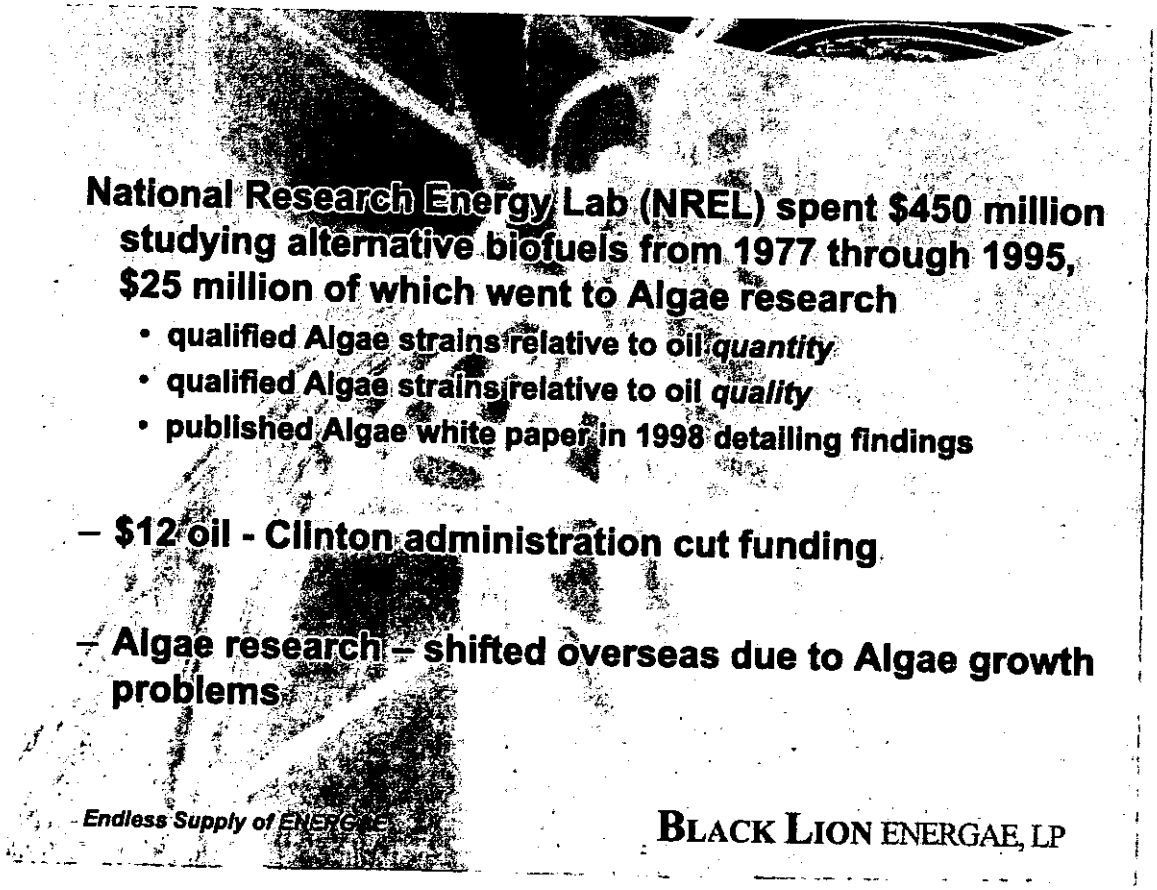
- retained, enhanced
- on site, at will
- does not require outside source to function
- operates in sub-zero under low cost greenhouse
- manipulate relative to need
- low cost
- RWE builds, maintains
- locals without Phds

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP



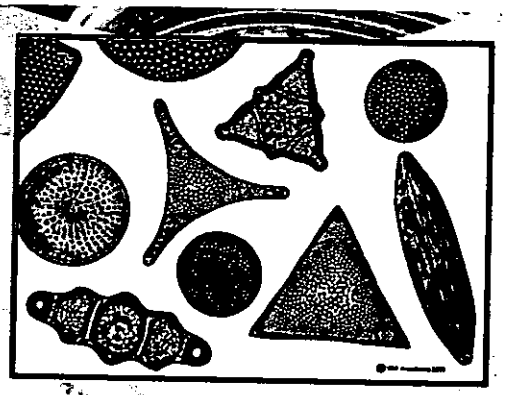
ALGAE history
Endless Supply of
BLACK LION ENERGAE, LP



National Research Energy Lab (NREL) spent $450 million studying alternative biofuels from 1977 through 1995, $25 million of which went to Algae research
• qualified Algae strains relative to oil *quantity*
• qualified Algae strains relative to oil *quality*
• published Algae white paper in 1998 detailing findings
– $12 oil - Clinton administration cut funding
– Algae research – shifted overseas due to Algae growth problems
Endless Supply of
BLACK LION ENERGAE, LP

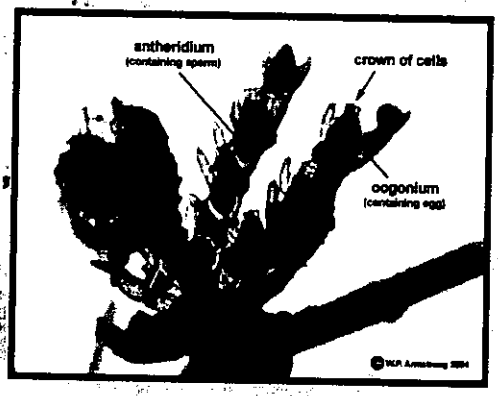
bad ALGAE - massive growth, limited energy value

dunaliella tertiolecta
dunilelia salina
butryoccocus braunii
cymbella
nitzschia
amphora
bacillariophytes



good ALGAE - massive growth, much energy value

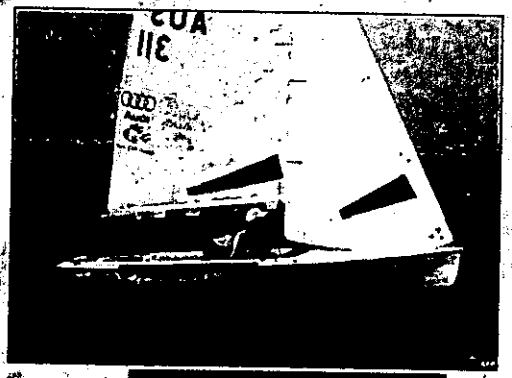
green algae
dunilelia salina



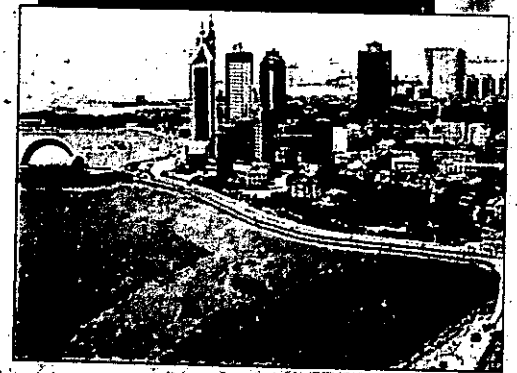
Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

ALGAE growth worldwide - exploding



Indian Ocean, 2008



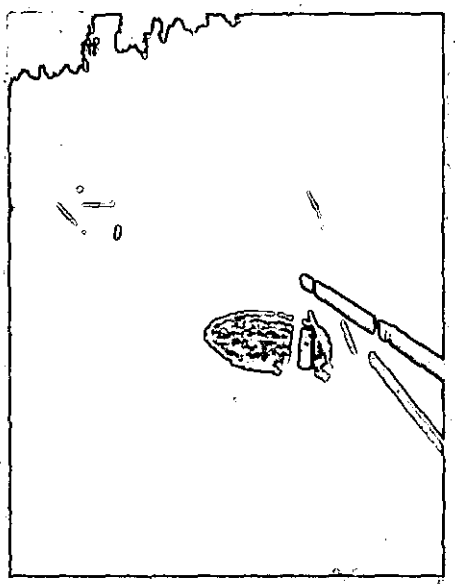
Shanghai, China - the world's most populous city, Pacific Ocean, 2008

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

The Carolinas were hard hit with ALGAE problems

They turned to two men to find a solution: Richard Armstrong & Tim Tompkins



Armstrong – physicist, electrical engineer, bio-systems & process systems specialist

Tompkins – chemical engineer, bio-engineer

together Armstrong & Tompkins built $7 billion in pulp, paper, & energy in the southern states – BF Goodrich, Duke Power, Bowater, Rhone Poulec, GE & others

Armstrong & Tompkins had worked to solve "bad" ALGAE growth problems for these companies. Armstrong & Tompkins never had to put out a resume to bid a job, word of mouth & reputation was enough

Carolinas - "...get rid of it, or find a use for it..."

Armstrong & Tompkins visited ALGAE research centers worldwide

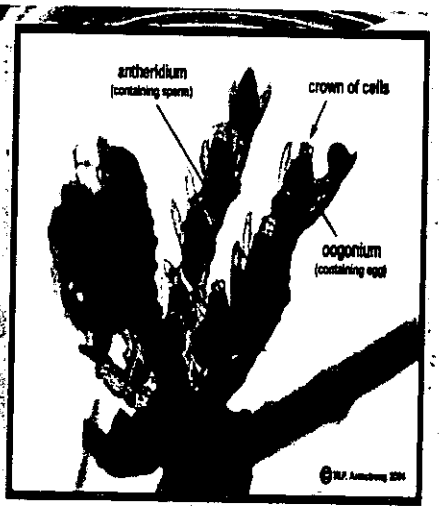
what they found... ALGAE was loaded with oil; firms were growing it

but, two major problems associated with ALGAE oil eluded solutions

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

Problem 1 - Growth: starving the ALGAE increased the oil value, but it slowed the growth



Problem 2 - Oil Extraction: extracting energy from ALGAE's 'tight' cell walls was costly

After much research, personal capital & trial & error Armstrong & Tompkins invented solutions

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

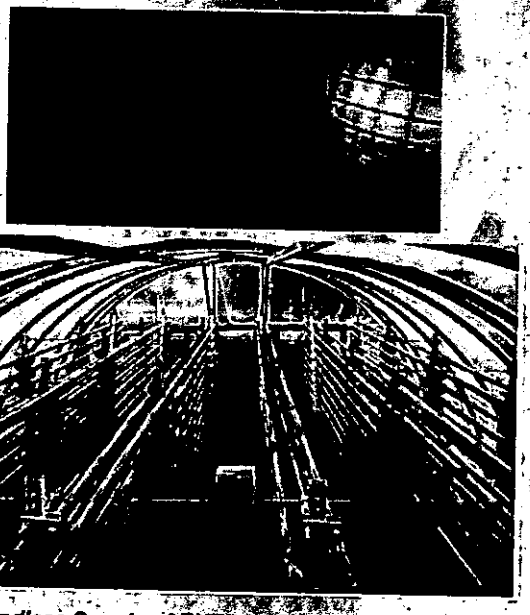
In developing their solutions, Armstrong & Tompkins' visited all known ALGAE bioreactors....

ALGAE bioreactor - a man-made incubation unit in which ALGAE is grown in order to produce oil & other ALGAE bi-products

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

many good ideas.....but most fell short...either too costly to build or they couldn't efficiently extract oil



Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

Armstrong & Tompkins *A.T. Bioreactor* design principles

- Produce large quantities of high energy value Algae and bi-product
- Cost effectively produce the oil & bi-product
- Complete automation to manage input/ouput

if you could build a customizable, fully automatic, computer controlled engine to grow massive amounts of oil, *what would it look like?*

the engine would need to be high tech, ultra durable, made of thermo-isolated materials to prevent energy loss. it would need to achieve optimal nutrient monitoring, optimal light exposure, optimal water flow, optimal CO2 & NOx intake & exchange, and optimal oil extraction.

it would look like this...

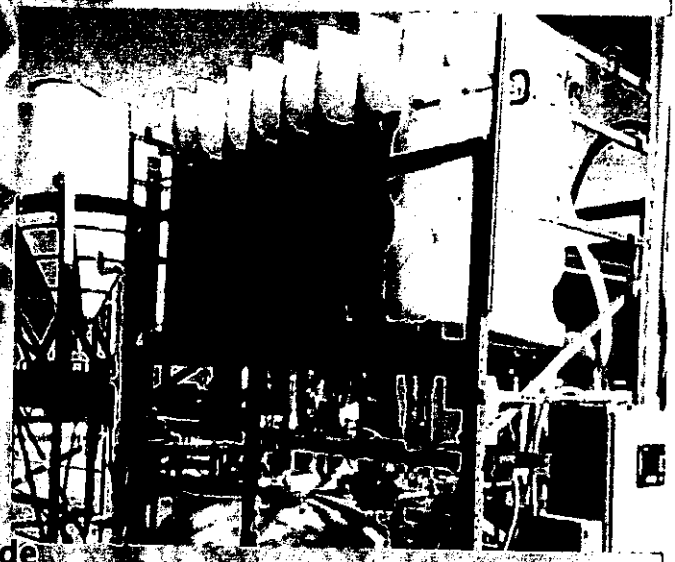
It would have

full automation

constant monitoring of
- nutrients
- light
- gas exchange/intake
- water flow
- PH level
- temperature controlled

continuous harvesting

self- sustaining – low quality oil burned to provide electricity for the entire unit



Endless Supply of [illegible]

BLACK LION ENERGAE, LP

ALGAE optimization & automation produce the following:

low cloud point

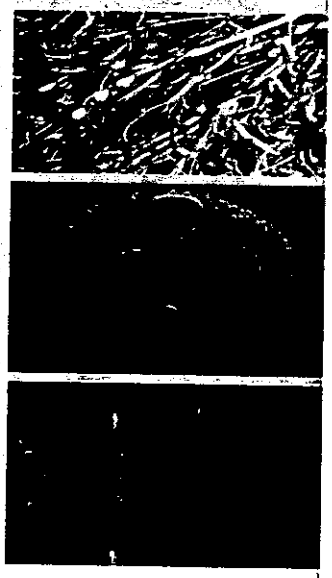
cleaner oil

low sulfur

fuel for vehicles – direct use

high quality oil & BTU value

sucks up nasty gases while growing



Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

ALGAE traits

35% to 80% of body weight in oil

fastest growing organism known to man

ALGAE oil combined with diesel fuel produces superior burn ratios & cleaner fuel

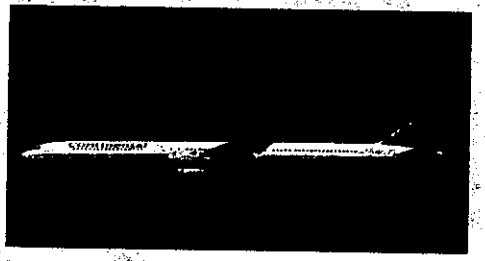
ALGAE can eat noxious gases produced by burning fuel - turns them into harmless organic carbons

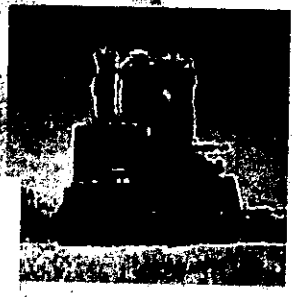
Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

products derived from ALGAE oil

- jet fuel
- gasoline
- plastics
- hydrogen
- Ethanol

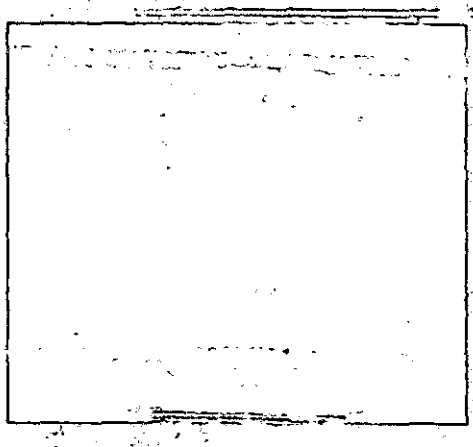


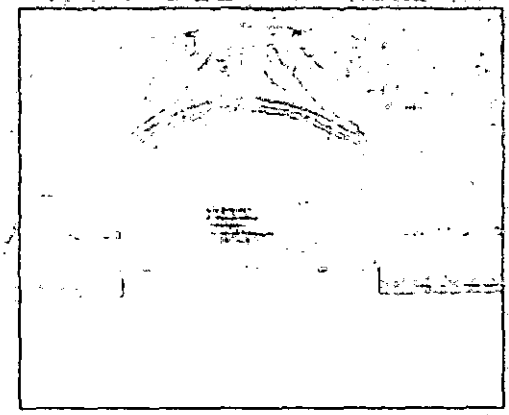


Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

sample Algae growth rate





It took 30 hours for ALGAE to grow 20 fold in Armstrong & Tompkins bioreactor using their proprietary nutrient solution & automation

Armstrong & Tompkins Bioreactor

A.T Bioreactor	Others
closed System	· open pond system
full Automation	· partial automation
super strains	· local wild strains
98% of oil extracted using proprietary harvesting methods	· 45% of oil extracted using "pressing"
cleaner oil extraction	· less quality oil
low cost to produce	· high cost to produce
low cost to build	· high cost to build
optimal CO2 intake	· poor CO2 management

some of RWE curent agreements

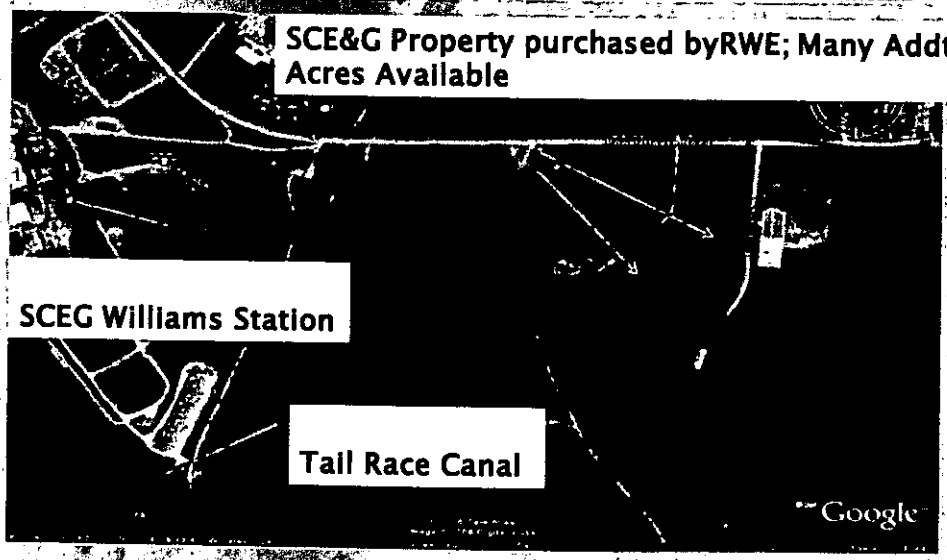
1. Universities – super Algae strains

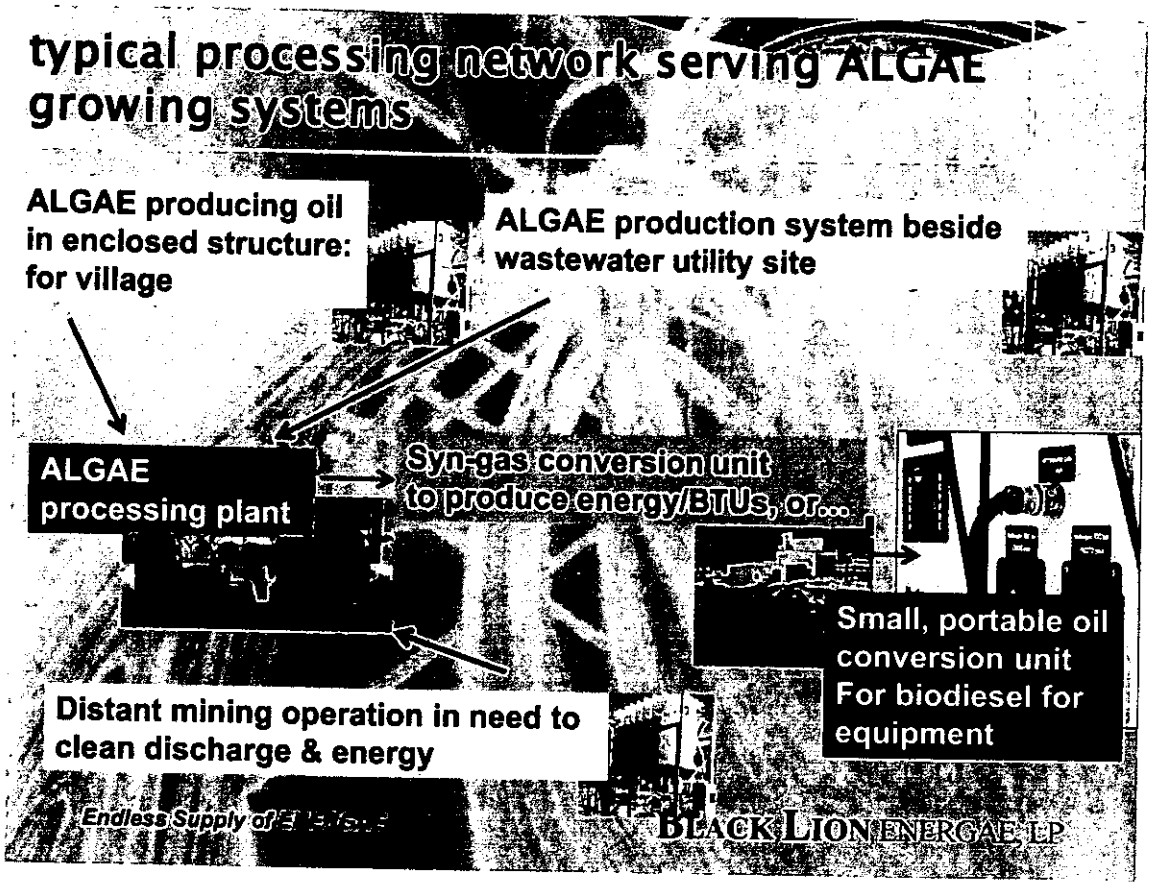
2. South Carolina Power & South Carolina Gas & Electric, the largest power production companies in the Carolinas
   - free CO2 and NOx

3. State of South Carolina –
   - $13 million in tax credits,
   - pays for all worker training,
   - 250,000 acres for $25 an acre

4. largest coal-fired power production company in the nation

S.C.EG & S.C. Power – RWE's owned site





typical processing network serving ALGAE growing systems
ALGAE producing oil in enclosed structure: for village
ALGAE production system beside wastewater utility site
ALGAE processing plant
Syn-gas conversion unit to produce energy/BTUs, or...
Small, portable oil conversion unit For biodiesel for equipment
Distant mining operation in need to clean discharge & energy
Endless Supply of
BLACK LION ENERGAE, LP

BTU & system production
Endless Supply of ENERGY
BLACK LION ENERGAE, LP

our vision – U.S. native groups

Native owned lands in Alaska and the Southwest hold the keys to energy production in the U.S.

Southwest U.S. – perfect for growing Algae low cost, but they lack the capital

Alaska – can provide the capital

Together, the native groups can help provide the energy needs for the U.S., and in the process return an investment for their shareholders

ALGAE BTU value groups:

oil

- bio-lubricants
- gasoline, ethanol additives, plastics

cake – natural drying, no drying agents

- synthetic gas
- omega 3s & other vitamins
- feed

oil & cake production & profit

1540 bioreactors per acre	≈	38,500 gallons of oil per annum
	+	285 tons of cake
Biodiesel spot price $1.90 per gallon	=	$73,150
Cake $120 a ton	=	$34,200
cost to produ $.85 per g	=	$32,725
		======
Net profit (~acre)	=	$74,625

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

Net profit	=	$74,625
shipping	=	$11,550
conversion @ modular biodiesel plant in Alaska	=	$13,475
distribution from southwest	=	$4,620
		=====
EBITDA		$44,980

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

cost per gallon of ALGAE oil to Alaska

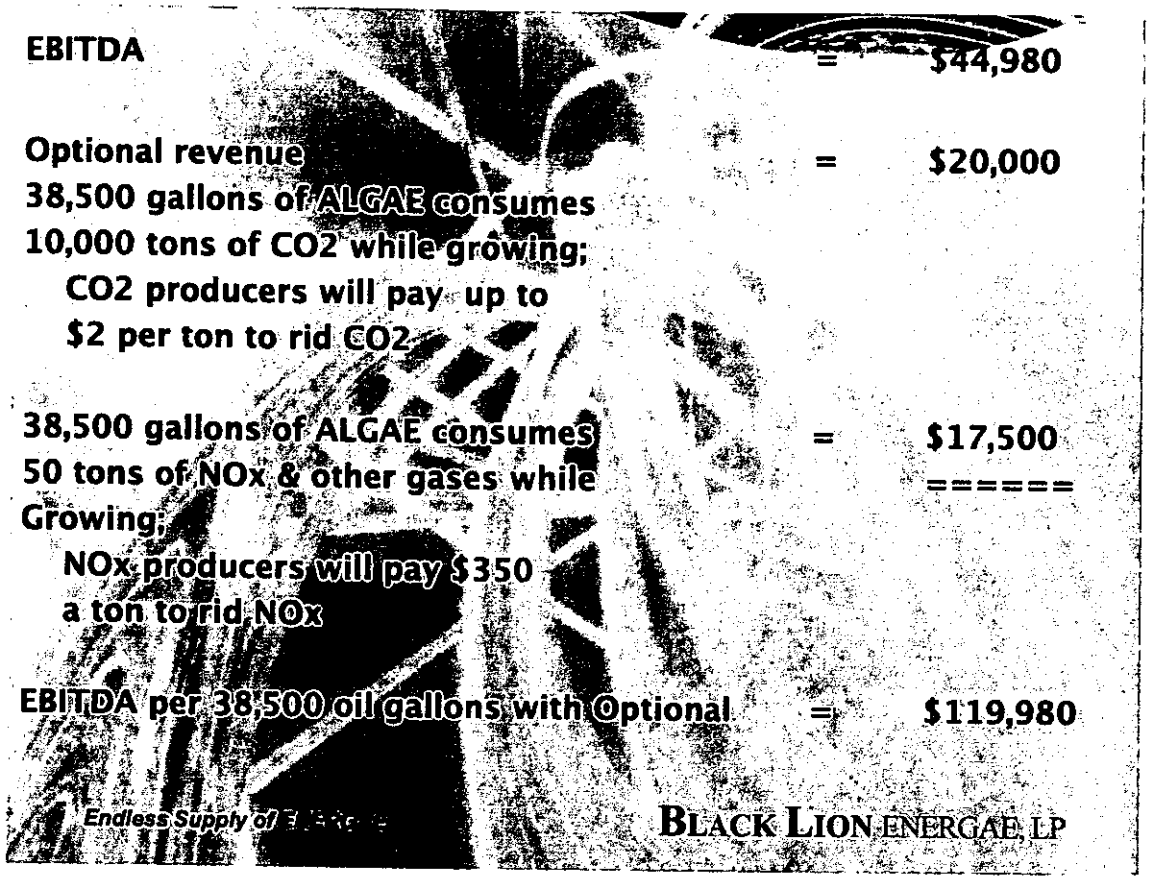
production		$0.85
shipping to port		$0.30
shipping to villages	=	$0.35
conversion at villages	=	$0.45
Misc.	=	$0.10
Middleware markup	=	$0.25
		====
Total		$2.30
offsetting cake revenue reduction	=	$0.90
Net cost per gallon	=	$1.40

optional revenue source - CO2 & NOx

ALGAE eats CO2 & NOx

ALGAE chemically changes CO2 & NOx gases into organic carbons

organic carbons are harmless to the environment and can be consumed by animals as feed when dried



EBITDA = $44,980
Optional revenue = $20,000
38,500 gallons of ALGAE consumes
10,000 tons of CO2 while growing;
CO2 producers will pay up to
$2 per ton to rid CO2
38,500 gallons of ALGAE consumes = $17,500
50 tons of NOx & other gases while
Growing;
NOx producers will pay $350
a ton to rid NOx
EBITDA per 38,500 oil gallons with Optional = $119,980
Endless Supply of

average 3 million ton Coal plant will spend
gas management = $60 million per year
installation of = $200 million
scrubbing equipment
Endless Supply of
BLACK LION ENERGAE, LP

ALGAE solution

800 acres of ALGAE beside a 3 million ton coal plant:

gas discharge reduction	=	$35 million
oil/cake net revenue	=	$39.58 million
		=====
combined annual savings	=	$74.58 million
		or $24.86 per ton
scrubbing cost installation reduction	=	$120 million or $4.50 per ton (amor. 15 yrs)

$24.86 + $4.50 = $29.36 per ton

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

ALGAE systems allow for an environmentally safe expansion of the coal, petroleum and mining industries in Alaska and beyond

ALGAE sucks up the nasty discharges, turning them into organic carbons which are harmless

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

Proposal: State of Alaska sponsored

ALGAE pilot project in Alaska, expected costs & installation

2.25 megawatt power system

first step: perform low cost feasibility study to determine costs associated with creating 2.25 megawatts of power

second step: if viable cost-wise, install

- **ALGAE bioreactors**
- **newest, small scale Florida Hydro wind design to provide electrical generation for dark winter months, growing ALGAE under artificial lighting**
- **covered enclosure**
- **optional oil processing & diesel production units**

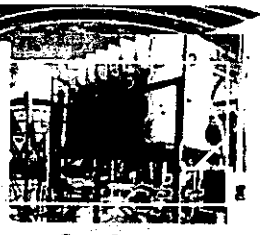
expected system cost for first/single 5 megawatts of power

feasibility study	=	$0.250 million
3000 Algae bioreactors & set-up costs	=	$1.50
syn-gas processing station	=	$1.25
optional oil processing station	=	$1.75
enclosures	=	$2.00
wind	=	$2.00
		=====
Total		$8.75 million

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

expected ALGAE BTU value



3000 units (system)	~	75,000 gallons of oil per system per year +
	+	540 tons of biomass
BTU value oil (syngas)	=	12,242 megawatts per annum
BTU value biomass	=	5,975 megawatts
wind	=	1,000 megawatt
		====
	=	19,217
combined syngas BTU value	~	2.25 megawatts per hour

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

monitoring/maintenance, pilot project year 1

testing/monitoring costs - 1 fulltime employee to manage system & maintenance - RWE manager for communication/ electrical distribution	= $150,000 = $75,000
RWE phase study	= $100,000
Total	= $325,000

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

expected revenue from energy production

2.25 megawatts & $.20kwh	= $3.94 million
10,000 gallons of oil not converted to BTU value for study and distribution @ $3.00 a gallon	= $0.03
total	= $3.97 million

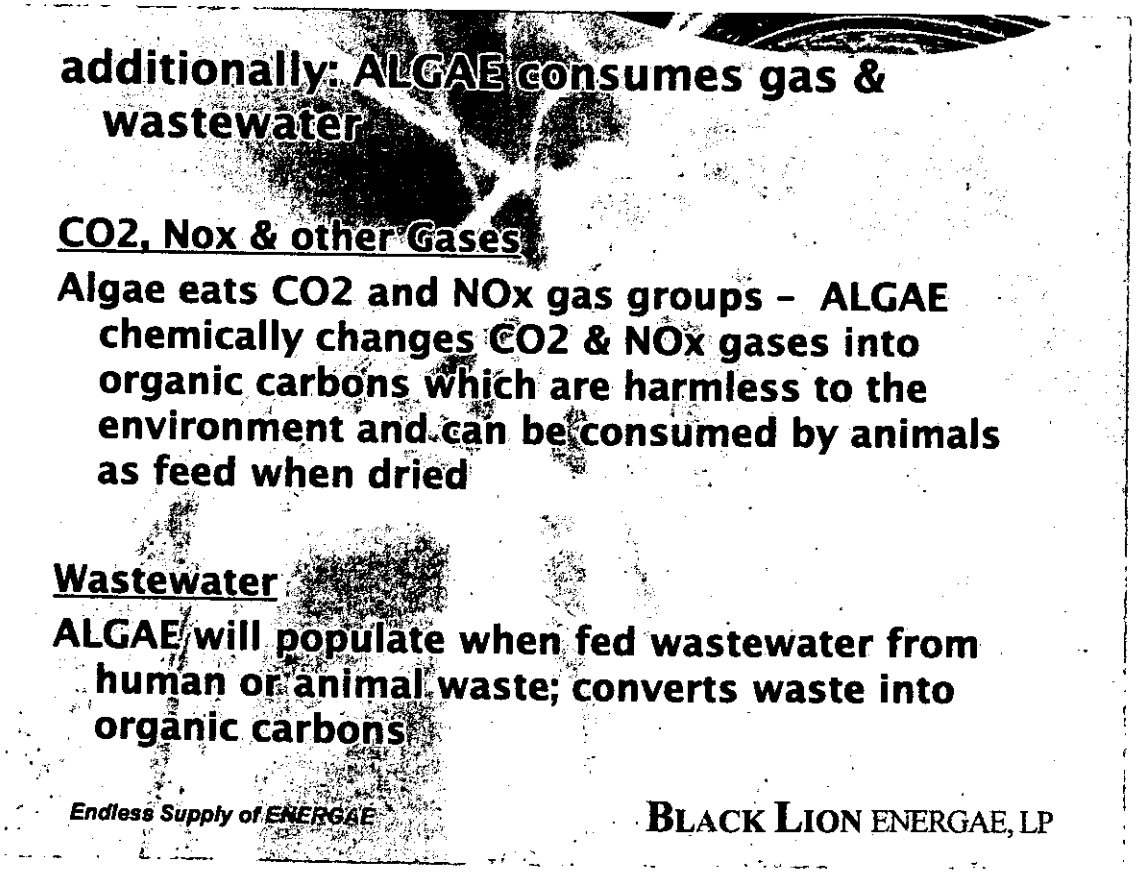
Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

village prototype system can be profitable in first year of operation

produces 2.25 megawatts of energy

additionally: ALGAE consumes gas & wastewater



CO2, Nox & other Gases

Algae eats CO2 and NOx gas groups – ALGAE chemically changes CO2 & NOx gases into organic carbons which are harmless to the environment and can be consumed by animals as feed when dried

Wastewater

ALGAE will populate when fed wastewater from human or animal waste; converts waste into organic carbons

RWE offers

turn key ALGAE systems

on-site plant management

product management

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

CO2 and NOx consumption Models as it relates to mining & coal

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

In January 2009 the EPA fined Kentucky Utilities' largest coal-fired power plant $140 million in fines and equipment upgrades to clean-up NOx & Sulfur Oxide emissions. The plant had already spent $270 million

Both the EPA & the E.U. have a ZERO tolerance for NOx emissions

But, what of CO2?
- World currently operating under TWO CO2 models

E.U./Kyoto model: Each country/industry is allotted "x" CO2 emissions

All CO2 emissions are monitored

If you exceed CO2 emissions you must
1. purchase carbon "credits" or
2. be heavily fined

U.S. Model:

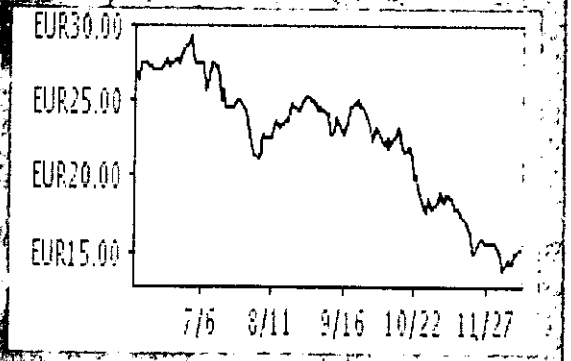
...voluntary...but...

ALL CO2 emissions are NOW recorded by the EPA

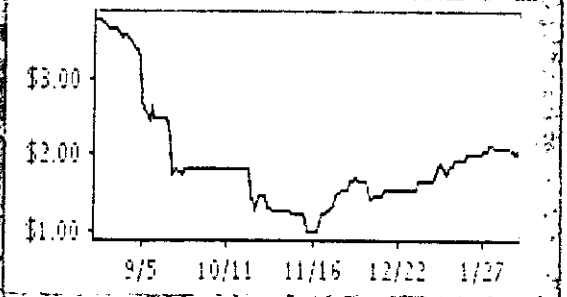
California is mandating a CO2 trading market

Mandatory Carbon Trading Market in Europe

($15 E.U. converts to $19 U.S.)



Voluntary Carbon Trading Market in the U.S.



E.U. Problem: there are not enough carbon credits relative to demand - $30 billion traded in 2008

U.S Problem: The US Supreme Court gave the EPA the "right" to mandate all CO2 emissions

Coal Problem: coal plants must spend addtl $50 million per ton of coal produced per annum to clean-up CO2 emissions, not including NOx upgrades

Mining Problem: water and gas discharge from mining operations run into multiple millions of clean-up

minimal cost to clean CO2/NOx gases in Alaska

CO2 per coal ton	$3 to scrub/sequester $6 for equipment to scrub
NOx per coal ton (bound & thermal)	$5 to scrub $8 for equipment to scrub
	==== $22 per ton
small sized coal plant 1.5 million tons of coal per annum	1.5 X $22 = $33 million per

TVA TWO POWER "Lines" ~ 1000 Megawatt each – are SHUT DOWN, due to

- being "over limit" on CO2 & NOx
- annual revenue loss = $500 million per annum
- cost to correct: $200 million + $50 million per year operating costs

Increased EPA [illegible] on coal, mining, steel & cement now being set [illegible] mandates

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

RWE Solution: ALGAE system

- consumes all CO2
- consumes all Nox & other nasty gases
- reduces need for costly scrubbing equipment
- puts people back to work
- produces additional revenue streams
- cleans up mining, cleans up coal

RWE's solution – half the corrective cost of using scrubbing – RWE's solution produces revenue

EPA's solution for TVA – $250 million COST not including ongoing $50 million per annum!

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

other revenue sources from algae cake & oil

- Plastics
- Fertilizers
- Cosmetics
- Enzymes
- amino-acids
- Antioxidants
- superoxide dismutase
- Phycocyanin
- carotenoids, etc.

mining

Algae can be programmed to suck up mining's "other" output, turns output into harmless organic carbons for fertilizer and animal feed

produces badly needed low-cost energy for remote mining locations

potential combined NET revenue if oil & cake separated and sold individually

oil	–	$1.05 per gallon
cake	–	$0.90 per gallon
CO2/Nox	–	$1.94 per gallon
Royalties	–	$0.12 per gallon
		======
subtotal	–	$4.01 per gallon

foreign petroleum oil

how does Algae compare?

*D.O.E . Figures	No. 2 Diesel Fuel	Algae Oil
Cost per gallon At $40 per barrel oil? At $10 Barrel oil = ($.22)	($.86)	N/A
Cost to Grow Oil or Convert Diesel Fuel	($0.93)	($0.85)
Convert Algae Oil to No. 2 Diesel Fuel	N/A	($0.45)
SG&A & Marketing	($0.25)	($0.25)
Shipping/Handling	($0.25)	($0.30)
Subtotal	($2.04)	($1.85)
Bi-Product Revenue Cake	NA	$0.90
Bi-Product Revenue Carbon Credits	N/A	$1.94
Bio-Diesel $1.00 per gallon credit	N/A	$1.00
Total	**($2.04)**	**$1.99**

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

In January 2009, $17 billion left American pockets to purchase foreign oil – $381,000 per minute

the U.S. imports 67% of the oil it consumes

we have a solution

Canada – 2.028 million barrels per day
Saudi Arabia – 1.482 million barrels per day
Mexico – 1.296 million barrels per day
Venezuela – 1.072 million barrels per day
Nigeria – 0.775 million barrels per day
Iraq – 0.467 million barrels per day

Endless Supply of ENERGAE

BLACK LION ENERGAE, LP

other oils vs. ALGAE oil

350 gallons – Palm Oil per acre per year

Fatty acid – HIGH Conversion to Diesel – LOW

303 gallons Canola/Rapeseed

Fatty acid – LOW Conversion to Diesel – HIGH

150 Soy Oil

Fatty acid – LOWER Conversion to Diesel – VERY HIGH

38,500 gallons & more Algae Oil

Fatty acid – Extremely Low Conversion to Diesel – 1 to 1

competitors

Valcent Products – No revenues, demonstration model, produces product called Vertigro – website claims similar gallons per acre but system is costly

Solazyme – The company utilizes proprietary genetic engineering methods to develop and optimize commercially relevant biochemical pathways ys production of hydrocarbons

LiveFuels – A national alliance of labs and scientists dedicated to transforming algae into biocrude by the year by the year 2010. Working on breeding various strains of algae, driving down the costs of harvesting algae and extracting fats and oils

Infinifuel Biodiesel – Nevada – home to a unique biodiesel project under development and is being touted as the world's first geothermal powered and heated biodiesel plant. Geothermal "wells" will be used as energy to grow ALGAE on 300 acres; still under development.

PetroAlgae – commercializing environmentally friendly ALGAE developed by a research team at Arizona State University that generates over two hundred times more oil per acre than crops like soybeans. Using a cost-effective, modular cultivation process that can be scaled. Working on converting ALGAE oil to plastics.

Sapphire – a developer scalable photo-bioreactors for the production of alternative oil products from algae oil. Sapphire's closed photo-bioreactors are expensive, but designed for high-end oil market products. Bill Gates dumped over $50 million into this project and they make oil for $2.50 a gallon and more.

production/value goals

	2009	2010	2011	2012	2013
RWE oil in MGPY	3	15	30	60	100
RWE Partner MGPY	0	15	40	60	100
	===	===	===	===	===
	3	30	70	120	200
Projected Value Per Unit	$1665	$2368	$3780	$6890	$11,450

Based on Profit per Unit current unit price $1000

Richard Armstrong Resume

Richard Armstrong, President, Chairman

SUNY- Binghamton, Electrical and Chemical

Brome CC, Math and Physics Major

Senior member ISA, Instrumentation Society of America

Extensive experience in building large chemical plants. ***Project design/manager on over 5 billion dollars in projects on pulp & paper & chemical processes including transesterification processes.*** **Experience includes project design, start-up and commissioning of pulp dryers, bleach plants, paper machines, scrubber systems, electrical distribution, emergency generators, plant automation, system networks, electronic primary and final control elements and programming/configuration of PLC's and distributive control systems for boiler houses, chemical batch reactors, conveyor systems, Pharmaceuticals, pulp and paper plants as well as petrochemical.**

- **Has extensive experience in negotiating large equipment purchases.** ***Every project over the last 30 years has been on budget and on time.***
- **Partial list of clients:** ***Bowater Pulp & Paper, Rhone Poulenc Chem., BF Goodrich, Duke Power, Phillip-Morris, AMEX, GE***

TIM TOMPKINS RESUME

Tim Tompkins, CTO

Technical Association for the Pulp and Paper Industry (TAPPI) – member since 1989

Carolinas Air Pollution Control Association (CAPCA) – member since 1996

B.S., Pulp and Paper Technology

N. C. State University

Engineer on over 2 billion dollars in projects on boilers, Pulp & Paper & chemical processes and often managed these facilities. **Pulping and bleaching projects include a new 50 ton-per-day chlorine dioxide plant and storage tank system, bleach plant modifications, recycle and de-ink pulp facilities, pulp dryer system modifications, pulp mill studies, chilled water system modernization, and design of several cooling tower systems. Papermaking projects include white water system modifications, vacuum pump installations, cleaner modifications and additions, post consumer waste recycle system, and ground calcium carbonate system. Environmental projects include scrubber additions and modifications, storm water collection and treatment, and several Cluster Rule related jobs that included: studies, capital cost, design, and construction.**

February 27, 2009

THE pebble PARTNERSHIP

The Pebble Partnership

A Shared Commitment to Sustainable Development and Social and Community Responsibility.

Northern Dynasty has delineated one of the world's great orebodies, assembling one of the most extensive environmental databases in the history of resource development.

Anglo American US brings a depth of corporate resources and a successful track record of global leadership in modern mining practices.

The Process and Requirements for Large Mine Permit Applications in Alaska

--

Senate Resources Standing Committee

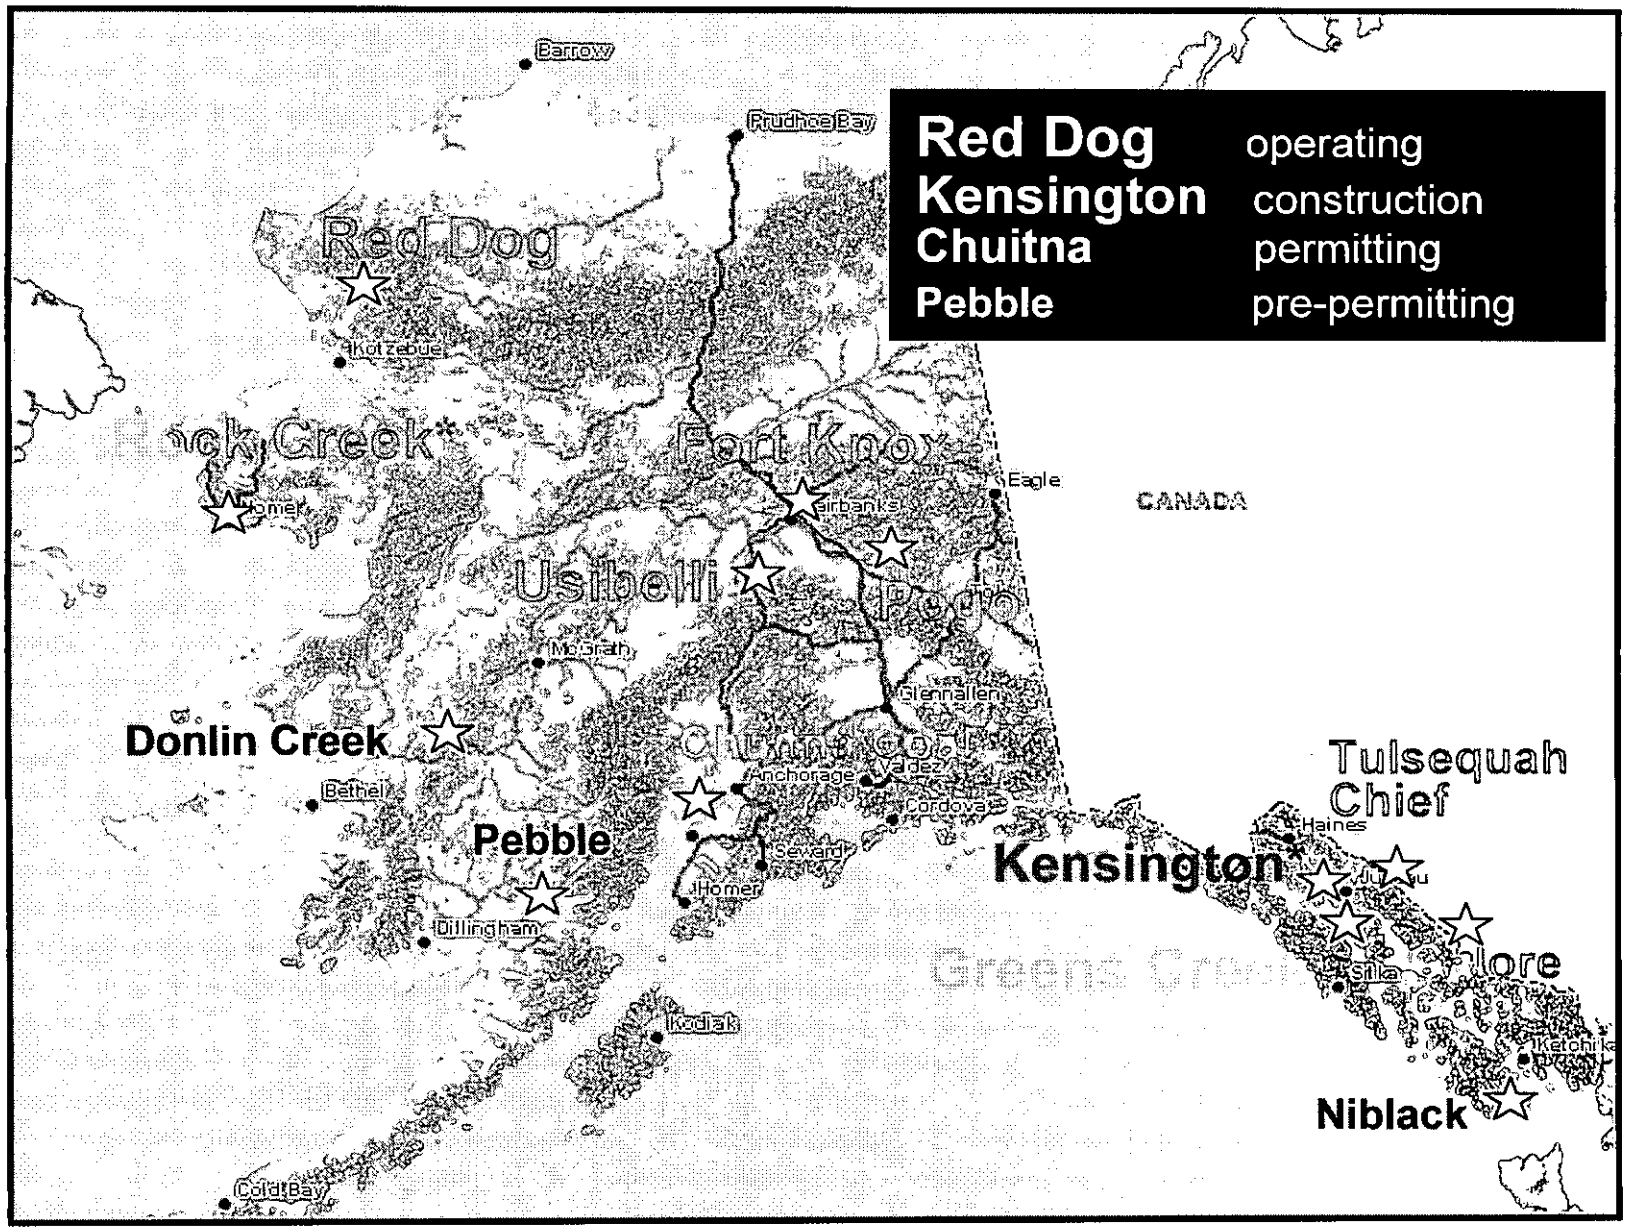
February 27, 2009

Ed Fogels, Director

Office of Project Management and Permitting

Alaska Department of Natural Resources

Large mining projects in Alaska



*Temporary Closure

*Litigation

No Single Permit to Mine: there are many permits & authorizations

STATE

- Plan of Operations (DNR)
- Reclamation and Bonding (DNR)
- Waste Management Permits and Bonding (ADEC)
- Certification of NPDES and ACOE Permits (ADEC)
- Sewage Treatment System Approval (ADEC)
- Air Quality Permits (ADEC)
- Fish Habitat and Fishway Permits (ADF&G)
- Water Rights (DNR)
- Right of Way/Access (DNR/DOT)
- Tidelands Leases (DNR)
- Dam Safety Certification (DNR)
- Cultural Resource Protection (DNR)
- Monitoring Plan (Surface/Groundwater/Wildlife) (DNR/DEC)
- Coastal Zone Consistency Determination (DNR)

(These are only some of the authorizations required)

FEDERAL

- US EPA Section 402 NPDES Water Discharge Permit
- US EPA Air Quality Permit review
- US EPA Safe Drinking Water Act (UIC Permit)
- US ACOE Section 404 Dredge and Fill Permit
- US ACOE Section 10 Rivers and Harbors Act
- US ACOE Section 106 Historical and Cultural Resources Protection
- NMFS Threatened and Endangered Species Act Consultation
- NMFS Marine Mammal Protection Act
- NMFS Essential Fish Habitat
- NMFS Fish and Wildlife Coordination Act
- USFWS Threatened and Endangered Species Act Consultation
- USFWS Bald Eagle Protection Act Clearance
- USFWS Migratory Bird Protection
- USFWS Fish and Wildlife Coordination Act

State Agencies

LARGE MINE PERMITTING TEAM

- Department of Natural Resources
  Lead State agency for coordination: AS 27.05.010(b)
- Department of Environmental Conservation
- Department of Fish and Game
- Department of Transportation & Public Facilities
- Department of Commerce, Community and Economic Development
- Department of Law
- Department of Health & Social Services

Federal Agencies

- US Environmental Protection Agency
- US Army Corps of Engineers
- US Fish and Wildlife Service
- National Marine Fisheries Service

- Bureau of Land Management
- U. S. Forest Service
- National Park Service

NEPA - EIS

- EIS Content
  - proposed project and alternatives to the project
  - description of the affected environment
  - analysis of the environmental consequences of the proposed project and alternatives

Standards

1926

ADEC Integrated Waste Management Permit

- Integrated Waste Management Permit
  - 18 AAC 60 – Solid Waste Management
  - 18 AAC 70 – Water Quality Standards
  - 18 AAC 72 – Wastewater Disposal
- Typical Wastes Managed
  - Tailings
  - Waste Rock
- Potential contaminants controlled
  - Acid Rock Drainage
  - Metals Leaching
  - Process Chemicals
- Financial Assurance Required

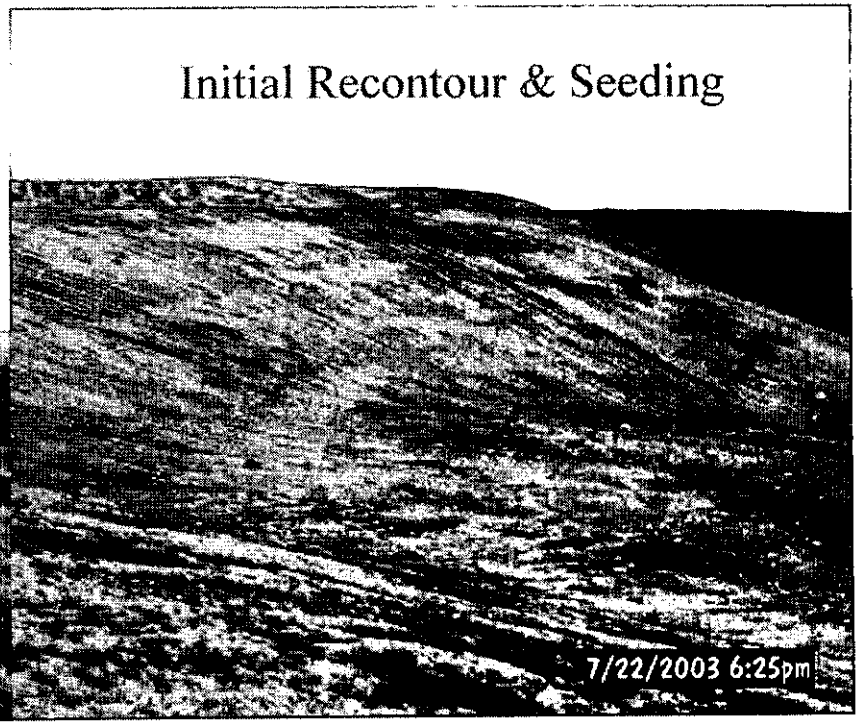
RECLAMATION PLAN APPROVAL

Issued by DNR

Division of Mining, Land and Water/Mining Section

- Minesite must be returned to a stable condition, compatible with the post-mining land use (AS 27.19.020)

- Financial Assurance must ensure State can do reclamation even if company cannot.



Illinois Creek Reclamation

1929

DAM SAFETY CERTIFICATION
Issued by DNR
Division Of Mining, Land And Water/Dam Safety Unit

- All dams (tailings and water storage) must be designed to State standards.
- Includes seismic standards
- Financial assurance for long term care and maintenance

Financial Assurance is based on a detailed engineering analysis

Financial Assurances for Alaska Mines

Not static, audited & recalculated every 5 years or when significant changes occur

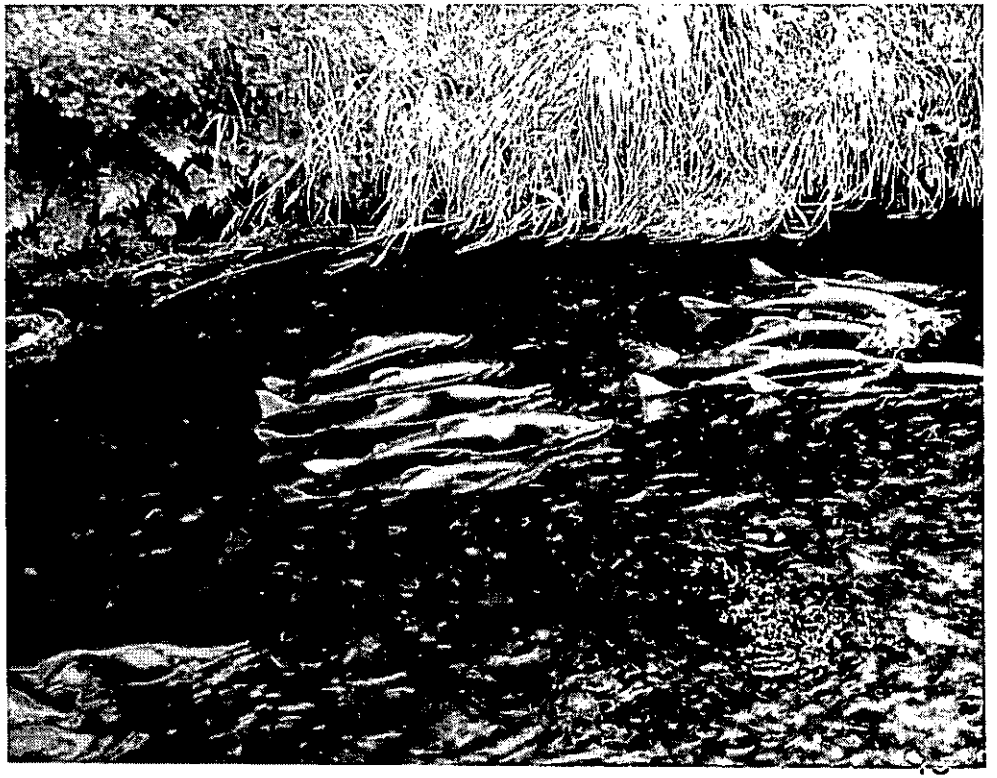
Operation	*Total Bond ($ Millions)*
Greens Creek Mine	$29.2
Red Dog Mine	$154.9
Fort Knox (& True North) Mine	$37.6
Usibelli Coal Mine & Exploration	$11.3
Kensington Project	$7.4
Rock Creek Mine	$6.8
Pogo Mine	$27.6
Nixon Fork Mine	$3.5
TOTAL	$278.3

Title 16 Permits

Issued by ADF&G Habitat Division

•AS 16.05.841: Fishway Act

For activities within or across a stream used by fish that could represent an impediment to the efficient passage of fish. e.g., culverts; water withdrawals; stream realignments or diversion; dams; low-water crossings; and construction, placement, deposition, or removal of any material or structure below **ordinary high water**



•AS 16.05.871: Anadromous Fish Act

All activities within or across a specified anadromous waterbody and all instream activities affecting a specified anadromous waterbody require approval from the OHMP, including construction; road crossings; gravel removal; mining; water withdrawals; the use of vehicles or equipment in the waterway; stream realignment or diversion; bank stabilization; blasting; and the placement, excavation, deposition, or removal of any material

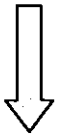
1933

Monitoring Plan Approval (ADEC/DNR/ADF&G)

- Air Q
- Water Q
  - Surface
  - Groundwater
- Fish & Wildlife Studies

Baseline

Operation (Compliance)



Post-Closure (Compliance)

Environmental Audits

- Environmental Audits on 5 year schedule tied to reissuance of permits
- All environmental systems audited
- Audits evaluate Agencies as well as operations
- Audits by 3rd party experts
- Financial Assurances revisited and recalculated based on Audit results

Take Home Message

- Many permits required, many agencies involved.
- Experienced agency professionals involved in permitting and regulation
- Financial Assurance required

1936

Take Home Message

- There are many ways to prevent contamination from occurring and control or remediate contamination once it occurs.
- Key to this:
  - Understand waste characteristics, water balance, and environmental conditions.
  - Minimize footprint and minimize contact with water
  - Design for closure
  - Appropriate Monitoring & Inspection
  - 5-Year Environmental Audits

Questions and Answers for DEC/DNR/ADF&G to House Fisheries/House Resources HB 134 field hearings and Pebble site tour

These answers were provided by staff from DEC Division of Water and DNR Division of Mining, Land and Water, and DNR Office of Project Management and Permitting. For more information, please contact Ed Fogels, DNR/OPMP, (907) 269-8423 (ed.fogels@alaska.gov).

1. Large Scale Tailings Facilities

a. Is a liner always required for a large scale tailings facility?

No, liners are normally not utilized to line the 'basin area' of large tailings facilities; however, synthetic liners are sometimes used as a low-permeability layer within the tailings dam. A prospective mining company must demonstrate how they will protect groundwater quality down-gradient of the tailings facility. All tailings facilities must have some form of seepage control, typically consisting of drainage materials and grout curtains, compacted soil, and / or synthetic liners in various combinations designed to meet the unique performance requirements of each project.

b. What material are liners made from?

Liners may be made of geologic, synthetic, or geosynthetic materials. Typically a geologic liner is composed of clay or other fine-grained material, which is compacted to achieve a permeability and thickness that comply with Department of Environmental Conservation regulations (18 AAC 60). Geomembranes, commonly referred to as synthetic liners, are made of a variety of polymers including polyvinylchloride (PVC), 'high', 'linear low', and 'very low' density polyethylene (HDPE, LLDPE, VLDPE), polypropylene (PP), and ethylene interpolymer alloy (EIA), among others. A geosynthetic clay liner (GCL) includes processed bentonite clay laminated with synthetic geotextile fabrics. Geomembranes are typically 30 to 100 mils (0.030 to 0.10 inch) thick depending upon the specific synthetic material and application.

c. On a scale as large as Pebble, is this a significant cost factor?

Yes, synthetic liners and their installation are relatively expensive. Costs can vary greatly depending on the details of the design, required products (type, polymer formulation, thickness or weight, etc.), quantity of materials that are purchased (economies of scale), project location (shipping and installation environment), and any required sub-grade preparation, and are therefore very site-specific. Budget estimates for material costs for synthetic liners typically used in the mining industry may be in the range of US$0.65/ft^2 for GCLs, US$0.50/ft^2 for 80-mil HDPE, and US$0.19/ft^2 for 16 oz/YD^2 geotextile fabric for sub-liner. We have seen cost estimates for lining a 1,000 acre tailings facility ranging from $110 million to $290 million.

d. Have advances in liner technology occurred in the recent past?

The variety of synthetic liner products has been relatively stable over the recent past, although novel products or product improvements occur regularly due to the competitive nature of the

1948

industry. Geotextiles in general (including synthetic liners) have provided substantial benefits to a variety of mining and civil engineering projects, but they should not be considered a panacea. Engineer's understanding of product performance continues to improve, but challenges remain. The 'long-term' life span of synthetic liners is an area of uncertainty, and depends on a number of factors such as composition, construction, stress, and exposure to sunlight. .

e. What agencies have authority over tailings facility design – does one agency take the lead role in permitting?

The Department of Natural Resources is the lead state agency for coordinating the permitting of mining projects. However, the permitting and regulatory oversight for the waste associated with tailings facilities falls mainly to the Department of Environmental Conservation through issuance of a Waste Management Permit for mine tailings disposal and any required waste water treatment and/or discharge. The purpose of this permit is to ensure that all water leaving the facility during operations and after closure meets standards, and that water quality is protected. The permit requires operational and post-closure monitoring, and requires financial assurance to make sure any long term treatment and monitoring can be funded.

The Department of Natural Resources' Office of Dam Safety conducts the technical review of proposed dams and companies must receive a Certificate to Construct prior to beginning work on the dam. The Dam Safety Engineer conducts inspections during the construction of the dam and reviews 'as-built' drawings, construction reports prepared by the professional engineer responsible for quality assurance / control, and the Dam Operating Plan. The mining company must receive a Certificate to Operate before they can place tailings in the facility. The designs for any modifications or the ultimate abandonment of the dam are also reviewed by the Dam Safety Engineer and must be approved prior to any actions being taken by the company. The construction and ultimate closure of tailings facilities is also reviewed by the Department of Natural Resources' Division of Mining, Land & Water to ensure that the closure plan complies with the requirements of the State Reclamation Act (AS 27.19). All projects must obtain a Reclamation Plan Approval prior to initiation of construction activities and projects located on state land must also receive a Plan of Operations Approval.

f. In a typical tailings impoundment, similar to what could be expected at Pebble, how deep is the water used to cover the tailings?

In a conventional tailings impoundment, water depth can vary from 0 to perhaps 50-feet depending primarily on the topography of the tailings basin, but also on the physical and chemical characteristics of the tailings, and requirements for water in the milling process. Also, some tailings facilities may have a water cover during the mine's life, but at closure, the water is removed and replaced with a dry or wet-soil cover.

g. What depth below the surface of the sediment beneath a tailings pond does the water permeate?

This depends on a number of factors, such as the permeability of the liner (if used), the nature of the material that the facility is built on, and the type of tailings stored in the facility. In all cases

the applicant must model the expected seepage from the facility, and demonstrate the pathways the seepage will follow and how this seepage water will be intercepted should it not meet water quality standards. When a dam is used to impound mine tailings, water behind the dam will follow the path of least resistance. Often tailings dams are designed and constructed to convey tailings water as underground seepage to the toe of the dam where a system of wells and pumps create a barrier to outward underground flow.

h. How fine is waste rock in a hypothetical tailings pond? Is the consistency of glacial silt a fair characterization, or will the tailings be coarser?

The actual size of the tailings depends on the ore processing method. In general, tailings are usually fine sand to silt sized material, which is very similar to glacial silt.

i. At the end of operations, is it normal to completely cover the tailings and make dry land, or will a lake remain in perpetuity?

Reclamation of a tailings facility is designed based on a wide variety of factors such as the site water balance, geochemistry of the tailings, quality of the water remaining in the tailings pond, seepage chemistry, and other site-specific factors. If the tailings material has potential for acid-generation or metals leaching, it may be necessary to maintain a water cover in perpetuity. In other cases, it is quite feasible to provide for either a wet-soil or dry-soil cover with re-vegetation of the surface material.

2. Mine Pit

a. Hypothetically after the termination of operations at Pebble a large pit is left, and this fills with water. Is the rock in the Pebble area expected to leach heavy metals or other materials into the water?

At this point in the exploration process it is uncertain what the tendencies for heavy metal leaching or other water quality impacts might be. As is typical for most mines, this data is developed through extensive drilling and water quality monitoring programs that most often go on for years, prior to submission of permit applications to regulatory and resource agencies. Baseline water quality and rock characterization information that is used to predict these conditions will be submitted as part of the permitting process, and will be evaluated by DEC and DNR prior to issuance of any permits. These documents, along with proposed permits must be provided to the public and public comments received.

It is possible that the pit might fill with water containing heavy metals and acid rock drainage. If a mine were permitted, it would be based on the proposed mining plan along with extensive, supporting rock and water chemistry data. It is impossible to predict any outcomes without knowing the activity (type of mining procedure and concurrent closure techniques), specific locations, and baseline data. However, any predictions will be conservative in nature. They will protect the environment to the highest prevailing quality or level while considering a range of scenarios.

1950

A clear understanding the rock geochemistry and the water quality of any water that contacts mine rock and tailings is usually the single most important factor that agencies consider in deciding if a mine's design is permissible or not. These water quality predictions drive the design of tailings storage facilities, waste rock dumps, and closure plans.

b. Will agencies require a contingency plan for a potential pit filling and discharge of heavy metals into adjacent streams?

State agencies must approve a closure plan for all mines, including any open pits that are to remain after closure. If the lake is to fill with water, the closure plan must show what the predicted water quality in the pit will be—if this water won't meet water quality standards, then it must be treated before leaving the site.

The major purpose for requiring rock to be characterized and baseline water quality to be established prior to permit issuance is to predict whether metal leaching will be a problem. The results of these studies are used to establish operating permit conditions, short and long term treatment requirements, and to predict water quality in the pit at closure. This information is also used to estimate the long term costs associated with mine closure so that adequate financial assurances can be required from the mine developer to protect the state.

In all cases, the natural quality of the receiving water will be strictly protected through redundant containment, and by vigilant monitoring, recordkeeping, and reporting. All discharged water must meet Alaska Water Quality Standards or the highest prevailing, natural, quality of the receiving water.

3. Water Quality Monitoring wells

a. To what extent are water quality monitoring wells required in areas downstream of a tailings dam?

The location and number of monitoring wells is dependent on very site specific hydrogeologic data and on the design of the tailings storage facility. Complicated geologic conditions may indicate that numerous wells are needed. Less complicated subsurface conditions may allow fewer wells. It is important that all the potential subsurface pathways be identified that could allow contamination to escape and that provisions for sampling such as a monitoring well be provided In general, the number of wells will depend on the site hydrogeology and the size of the facility.

b. What are the monitoring requirements during operation of the tailings facility - how often is monitoring required and by whom?

Monitoring frequency is established in a permit and again is site dependent. It is important that sampling be frequent enough to detect small changes over time. Typical monitoring and sampling for important contaminants of concern may be weekly or even daily. Less critical contaminants may be sampled monthly or even quarterly.

1951

Environmental sampling is typically performed by the permittee or sometimes by an independent lab or firm under the permittee's direct control. By design and through mandate, the Clean Water Act requires self monitoring and reporting by permittees. Analytical work for compliance must be performed at a testing lab with an approved quality assurance and quality control plan.

c. How deep do monitoring wells go?

Monitoring wells extend into the aquifer that would most likely be affected if a release occurred. This is usually the upper most aquifer, but in some cases, deeper aquifers may need to be sampled as well.

d. How many years after the end of operations is monitoring required?

Under 18 AAC 60.397, Post-closure care requirements for a Class I or Class II MSWLF, Section (a) requires a minimum of 30 years post-closure care, which includes groundwater monitoring among several other requirements. Consequently, post-closure monitoring must continue for 30 years or until background water quality or Alaska Water Quality Standards are met, which ever is longer.

4. Bonding

a. How does mine bonding work (for instance, is there a formula that is applied, what agencies weigh in, is bonding often a commissioner level discussion)?

Bonding or Financial Assurance is the amount of money that is necessary to reclaim a mining project, under the terms of the approved reclamation plan, and conduct post-closure monitoring and water treatment, if necessary. The amount of the financial assurance is calculated as if the State has to take over the project and conduct the reclamation effort. As such, the costs are higher than it would normally take the mining company to do the job. Normally the company makes the calculation and provides all the data, including vendor quotes, to the ADNR and the ADEC to review. Our engineers thoroughly review the calculations, sometimes conducting our own independent calculations, and ultimately derive a cost figure that is protective of the State. There is no formula, since all projects are different and reclamation costs can vary considerably depending on the location and type of mine. No project can begin construction until the financial assurance package is in place. The bond calculation is not normally an issue at the Commissioner's level; however, should there be a serious dispute over the bond amount, the company can avail itself of the Commissioner's office for additional review.

Regarding DEC's part in bonding, AS 46.03.100(f) requires the permittee to provide DEC with proof of financial responsibility for managing and closing the facility in a manner DEC finds will control or minimize the risk of the release of unauthorized levels of pollutants to state waters. Consequently, DEC's portion of the bond is for managing and protecting water quality. This is dependent on the operation, the operational control strategies, and closure plan.

b. Should monitoring of water quality be required in perpetuity, how do bonding requirements treat this?

1952

In the event that water at a closed mine site will need treatment in perpetuity, a trust fund must be established that will fund the effort. It is a sort of water treatment "permanent fund". The trust fund receives contributions from the mining company over the life of the mining operation such that at mine closure the fund is large enough that the costs of monitoring and water treatment can be funded from the annual earnings; the principal of the fund would remain untouched. Before the mine can begin operations, financial assurance must be in place to make sure that the full trust fund will be in place in the event of unexpected closure.

c. Please explain any changes to bonding standards that have occurred and if a mine as potentially large as the proposed Pebble mine will require changes to existing standards.

In the past the bonding standards were mostly set up to address the issues of placer mining and the bonding was capped at $750 per acre of land to be reclaimed. This was changed by the legislature in 2004 to make hard rock mines exempt from the $750 cap. Even a mine as large as Pebble would not require a change in bonding standards. The standards now require that an adequate financial assurance package be in place such that the State could conduct the reclamation and closure plan at any point in the life of the mine. The bond amount is monitored and updated regularly to reflect any change in conditions that warrant a significant change. This can include changes in fuel costs, the mine reclamation plan, equipment rental rates, etc. Also, the State requires that the bond be reviewed by an independent third party expert to make sure it is still adequate, or to recommend changes if it is not adequate.

BIOLOGICAL, TECHNICAL QUESTIONS AND ANSWERS ABOUT PEBBLE MINE

Compiled for the Senate Resources Committees
by Nunumta Aulukestai - Caretakers of Our Lands & Trout Unlimited Alaska
February, 2009

BIOLOGICAL QUESTIONS AND ANSWERS

1. Do sulfuric acid, copper, and other minerals at the proposed Pebble Mine site, pose significant risks to fish?

Yes. The chemical nature and location of the rock at the proposed Pebble Mine site makes the release of sulfuric acid and toxic copper into waters a virtual certainty. That is why the project is so controversial.

Pebble is a low grade metallic sulfide deposit containing copper, gold and molybdenum. The deposit is located at groundwater level, in a wet climate, where the groundwater flows through permeable soils to feed surface waters in the Bristol Bay drainages, the most productive salmon habitat and fisheries in the world.

Sulfur is chemically reactive. Exposing sulfur to air and water creates sulfuric acid, which dissolves copper (and other heavy metals) into solution where it is highly toxic to fish, particularly salmon. Mining, milling and processing the ore exponentially increases the rate of exposure of sulfur to air and water, and exponentially increases the amount of sulfuric acid generated. The mine walls,[1] the wastes, and the dust will generate sulfuric acid. A recent study of metallic sulfide mines permitted in recent years in the U.S. found that a whopping 85% of these mines polluted surface water and an astronomical 93% polluted ground water, despite that fact that at the time of permitting, fully 89% of the environmental documents predicted that the mines would not do so.[2] The proposed Pebble Mine is virtually certain to create acid mine drainage that puts metals toxic to fish into water.

---

[1] The mine itself, whether by open pit or underground block caving, is likely to fill with water, be acidic, and require permanent care and treatment.

[2] Kuipers, J.R., Maest, A.S., MacHardy, K.A., and Lawson, G. 2006. *Comparison of Predicted and Actual Water Quality at Hard Rock Mines: The reliability of predictions in Environmental Impact Statements*. The authors also found that although 100 percent of the environmental impact statements prepared before mining commenced predicted that the mines would be able to comply with water quality standards. In fact, after mining was underway:

76% of the mines polluted ground or surface water in excess of water quality standards;
60% of mines polluted surface water severely enough to exceed water quality standards;
52% of mines polluted ground water severely enough to exceed water quality standards;
73% of mines exceeded surface water quality standards despite predicting that mitigation would result in compliance;
77% of mines that exceeded groundwater quality incorrectly predicted that mitigation to correct problems would result in compliance;

Pebble is purported to contain about 0.6% desirable metals. If developed, it will yield about 8.15 billion tons of wastes – including reactive sulfide wastes and toxic agents such as cyanide used in processing – that will have to be left forever on public land, along with the abandoned mine.

Thus, six factors make Pebble controversial: (1) it is a metallic sulfide deposit; (2) it is located at groundwater; (3) it will yield a tremendous amount of waste containing sulfur; (4) such mines are virtually certain to create sulfuric acid, that dissolves copper and other heavy metals into solution, and which is highly likely to pollute groundwater and surface water, where the dissolved metals are toxic to fish; (5) the area is in the heart of the most productive salmon habitat and fisheries in the world; and (6) the governmental success rate in permitting, so as to prevent such contamination, has been demonstrated to be exceptionally poor – a 93% failure rate.

2. How does copper affect fish?

Although copper in trace amounts is important for growth and reproduction in all living organisms, copper is extremely toxic to aquatic organisms and causes irreversible harm at concentrations just over that required for growth and reproduction. Lethal and sublethal effects are well documented. Sublethal effects on salmon include: (1) impairment of sense of smell (olfaction); (2) interference with migration; (3) impairment of ability to fight disease (immune response); (4) difficulty breathing; (5) disruption of ability to osmoregulate (move between salt and fresh water); (6) impairment of ability to sense vibrations via their lateral line canals (a sensory system that helps fish avoid predators); (7) impairment of brain function; (8) alteration of enzyme activity, blood chemistry and metabolism; and (9) alteration of natural hatch rates.[3]

3. What does the Pebble Limited Partnership propose? Answer: Huge dams and tailings facilities that must contain waste forever in an active earthquake zone.

The Pebble Limited Partnership (PLP) proposes nothing different from low grade metallic sulfide mines that have already failed. PLP simply proposes a greater scale – to accommodate as much as 8.2 billion tons of waste.

As at other large mines of metallic sulfides, PLP proposes to separate the reactive, sulfur-bearing tailings (3-5 percent), from the non-reactive "bulk" tailings (95-97 percent). The reactive tailings, and the reactive waste rock that is not of high enough metal content to process, will have to be stored under water forever in huge tailings storage facilities. These will have to be maintained forever. The allegedly non-reactive "bulk" wastes after processing will be the

---

When the permitting agency tried to get the mine operator to fix the problems, the fixes failed 75% of the time; and

Of the mines analyzed that polluted ground and surface water, 63% released toxic metals such as lead, mercury, cadmium, copper, nickel, or zinc; 58% released arsenic and sulfates; and 53% released cyanide.

[3] *See* Woody, C. A., PhD, *Copper: Effects on Freshwater Food Chains and Salmon: A literature review*, submitted to the House Fisheries Committee.

texture of silt or sand, will be discharged to form what PLP calls "beaches" around the reactive tailings storage facilities.

PLP has proposed to build five dams, to create two mammoth toxic tailings lakes to store the reactive sulfur-bearing wastes plus toxic materials used in ore processing, such as cyanide or xanthates. The lakes would cover more than 10 square miles according to PLP's applications to DNR filed in 2006. The dams would be as high as 740 feet and grow to over four miles long. They would be larger, in these respects, than the Three Gorges Dam in China that is often said to be the largest dam in the world. The risk of over-topping during storm events and due to snow melt is substantial due to the relatively wet climate compared to such mines in arid parts of the western United States.

These two tailings impoundments would contain about 2.5 billion tons of waste. Given the amount of waste – 8.2 billion tons -- one can expect more dams containing more waste.

All of this would occur in an area susceptible to large earthquakes, much like the magnitude 7.9 earthquake which occurred on November 3, 2002, on a previously unrecognized splay fault south on the Denali fault system. PLP proposes dams engineered to a magnitude 7.8 seismic event, which is smaller than the quake that occurred in 2002 on the Denali Fault. Because the dams must last forever, larger seismic events are a statistical certainty.

4. Is the Pebble Limited Partnership's "no net loss of fish" policy an empty promise?

Yes. PLP's "no net loss" policy applies only to the habitats destroyed by building the mine, rather than to the greater and more complex events that occur, such as lethal and sublethal effects originating from acid mine drainage as discussed above.

Salmon memorize or "imprint" a complex map of chemical smells as they migrate from natal freshwaters to saltwater. When the fish return to natal habitats to spawn, they follow their noses using this memorized map. This behavior, called "homing," isolates breeding populations in space and time and results in genetic divergence and population-specific adaptations among local populations. If salmon cannot smell, or if the chemical signature of a salmon's natal stream changes, then fish will likely stray to and spawn in non-natal habitats, which generally reduces spawning success. Alteration of natural adaptive behaviors such as homing, migration and spawning due to water pollution can reduce wild salmon survival and change basic population structure.

For salmon, a healthy population structure is positively associated with genetic diversity and resilience to disturbance such that large, highly structured populations have high genetic diversity and probability of persistence. In contrast, small, unstructured and randomly-mating populations are vulnerable to inbreeding, demographic stochasticity (e.g. randomly induced mutation), genetic drift and thus, reduced evolutionary potential, and increased probability of extinction. Thus, the potential changes in population structure due to increased salmon straying rates arising from the effects of acid mine drainage has huge implications for sustainable fisheries, for which, probability of persistence is determined, in part, by the genetic integrity and biodiversity of stocks.

Pebble Limited Partnership's "no net loss" policy will be a source of endless dispute involving PLP, governmental agencies and the public. While loss of fish production from

building the mine is a straightforward matter, the more complex and greater losses will be matters of dispute due to other variables, such as harvest, natural variation in freshwater and saltwater survival rates, climate change, etc. Thus, PLP's "no net loss" policy is an empty promise.

LEGAL QUESTIONS AND ANSWERS

5. Does the state permitting process and standards protect the public and the fish when authorizing a large project like the proposed Pebble Mine?

No. To authorize Pebble Mine, various state permits will be required. For example, DNR is likely to issue- (1) dam authorization and construction permits under AS 46.17; (2) authorizations to appropriate water under the Water Use Act, AS 46.15; (3) surface land lease permits under AS 38.05.255; (4) Anadromous Fish Act and Fishways Act permits under AS 41.14.870 and AS 41.14.840; [4] and (5) permits necessary for rights-of-way or easements under AS 38.05.850. DNR also determines whether these and other state permits are consistent with the Alaska Coastal Management Plan (ACMP). [5]

Although DNR claims that its so-called "large mine permitting process" protects the public interest, *no statute establishes this so-called process, and DNR has not adopted any regulations specific to this so-called process.* Instead, under AS 27.05.010, DNR is simply the State's lead agency for most matters involving mining in Alaska. DNR created the process to coordinate permits for large mines. DNR did so by undertaking a personnel action that established a job position for a "large mine coordinator" who works with state agency staff and the mining company to expedite permitting and implement *pre-existing* statutes and regulations.[4] So, one must look at both how the process is expedited and the pre-existing statutes.

Regarding how the process is expedited, a mining company proposing a large mine can choose to enter into a contract with DNR by which the company pays DNR employee salaries involved in reviewing and expediting the company's permit applications. This presents a

---

[4] The Andromous Fish Act, AS41.14.870, requires permits for activities in anadromous waters that affect fish and game. The Fishways Act, at AS 41.14.840, requires permits for obstructions that would otherwise block fish passage. The Murkowski Administration transferred the authority for both statutes from ADF&G to DNR in eliminating the ADF&G Habitat Division.

[5]The Murkowski Administration dismantled the Coastal Management Program by eliminating enforceable guidelines and habitat standards which required that permits be consistent with a high level of protection for fish and wildlife habitat. In the same vein, ADEC issued mixing zone regulations to allow discharge of harmful substances into salmon spawning areas.

[6]Although ADF&G is charged by statute, at AS 16.05.020, with protecting, preserving and maintaining fish, game, and the uses of them, the elimination of the ADF&G Habitat Division and transfer of all ADF&G permitting authority – except for refuges – eliminates its statutory ability to implement its charge in all locales in Alaska except state refuges such as that proposed by SB 67 (the Jay Hammond State Game Refuge bill). Furthermore, given recent reports of the difficulty in hiring staff in these agencies, both DNR and ADF&G probably lack the technical capacity and staff to review a project as complex as the Pebble Mine.

palpable conflict between DNR's duties to perform objective analysis and the funding of DNR staff who perform that analysis.

Regarding existing statutes, for the most part they provide vague standards at best and lack anything approaching a standard based on actual performance by a mining company or an agency. For example, AS 38.04.005 establishes DNR's overall policy of managing "for maximum use of state land consistent with the public interest." This standard is derived from Art. VIII, section 1, of the Alaska Constitution. The result is a vague standard that allows DNR wide discretion and no guidance about how to exercise that discretion. Similarly, the Water Use Act, at AS 46.15.080, administered by DNR, provides that DNR must find that a water appropriation is in the "public interest" and that in determining the public interest, DNR shall "consider:" (1) benefit to the applicant; (2) the effect of economic activity resulting from the appropriation; (3) effect on fish and game and on public recreation; (4) the effect on public health; (5) the effect of loss of alternate uses of water; (6) harm to other persons; (7) the intent and ability of the applicant to complete the appropriation; and (8) the effect upon access to navigable or public water. Requiring that DNR "consider" a matter does not require that any particular action be taken with regards to any of the matters "considered." In contrast, performance standards might say, for example, that DNR's decision must "protect" fish and game and habitat by not allowing acid mine drainage or perpetual care and treatment of mining wastes. No such protective standards currently exist.

Finally, AS 38.05.135(e) governs leases and disposals of certain public resources, and provides DNR with wide discretion to determine what is in the "state's best interest." A "best interest finding" is not required for leases for millsites, tailings disposal, and other mine related facilities under AS 38.05.255, however. Such a lease will likely be required for the Pebble Mine, but no protections for public process are in place for that decision. This also is true for a permit, right-of-way, or easement under AS 38.05.850.[5]

Thus, DNR statutes provide vague standards to protect the public interests in fish, fishing, and other public resources and uses of them. That causes two problems:

On one hand, the lack of clear standards frustrates the ability of the public to provide meaningful input.

On the other hand,, the lack of clear standards frustrates the ability of agencies, like DNR, to make factually grounded decisions or to respond to the public in any meaningful way.

---

[7] AS 38.05.850 applies to "permits, rights of way, or easements on state land for roads, ... and ... pipelines not subject to AS 38.05, ... electric transmission and distribution lines, ... and other similar uses or improvements." The access road from Cook Inlet to Pebble will require as many as 120 stream crossings. Despite efforts to protect stream habitat, road construction activities and bridge and culvert installation can be expected to impact streams and fragment habitat. Downstream habitat will be altered as runoff patterns for seasonal flows are disrupted. Roads and their associated dust, increased access, and effects on hydrology are likely to all have significant effects on natural ecosystems of this region, including increased competition between commercial, subsistence and sport users of the fish and wildlife. Contamination at mine port loading facilities in Alaska has been an issue at Skagway, Red Dog, and Greens Creek.

DNR, when faced with a 93% failure rate at similar mines around the country, and in much more arid climates, is not credible in its claim that its permitting process will work when others have failed. This is why it is so important for the Legislature to pass legislation that provides processes and standards that will serve the public by protecting Alaska citizens' interests in the natural resources that belong to them.

Finally, the track record of one of the companies that will be developing and operating Pebble Mine shows that Pebble is likely to pollute the Bristol Bay watersheds. In Colorado, a mine in which Anglo American's subsidiary, AngloGold, was the majority owner, repeatedly violated its state-issued Clean Water Act permits. The U.S. Environmental Protection Agency fined the mine operators the maximum allowed under the Clean Water Act.[8] Anglo American's record in Colorado shows that Alaskans cannot rely on the permitting system to protect the Bristol Bay watersheds. Companies routinely violate their permits and, if they are caught, they consider the fines simply a cost of doing business.[9]

6. Will an unconstitutional "taking" of private property occur if the legislature enacts a statute that applies to the proposed Pebble Mine, and that makes it more difficult or infeasible to develop the mine?

No. This is a red herring issue raised by the Pebble Limited Partnership. A mining claim is a very limited, *exclusive*, property right. It amounts to a right to be *first in line* to explore and develop the claimed minerals, but it never creates a right to obtain permits to mine the minerals. It does not preempt the State legislature's constitutional power under Article VIII, section 2, of the Alaska Constitution, to enact natural resource statutes that revise the standards under which a claim might be developed, even if those laws render the mine infeasible. Nor does a mining claim preempt the State's police powers to enact laws to protect public health, safety, its economic interests, or the environment, even if those laws render the claim infeasible.[10]

MEMORANDUM December 7, 2006

SUBJECT: Taking of mineral rights, just compensation, and NAFTA (Work Order No. 25-LS0146)

TO: Representative Paul Seaton
Attn: Louie Flora

FROM: Donald M. Bullock Jr.
Legislative Counsel

You requested an opinion on the effect of the federal or state government limiting or precluding the development of a mine on state land that was open to mineral development and is being developed by a mining company. You asked about the effect of takings laws on such government action and referred me to HCR 29 (24th Alaska Legislature) that calls on the commissioner of natural resources to report to the legislature the commissioner's conclusion regarding whether mineral development is the most appropriate land use classification for the area encompassing the proposed Pebble mine project.

You also asked about the implication of chapter 11 of the North American Free Trade Agreement on a foreign mining company developing a mine in Alaska that is then subject to the tightening of state environmental standards or outright prohibition of resource extraction in an area in which the company is working.

Acquisition of mineral rights

Under Alaska law, a person obtains exclusive rights to possess and extract minerals on state land open to claim staking by discovery, location, and recording, subject to existing claims and to any denial of or restriction in the tentative approval of state selection or patent of the land to the state.[1] A person's acquisition of mineral rights requires no discretionary action by the Department of Natural Resources to authorize or permit the right to the minerals within the claim.[2] The rights are acquired simply by satisfying the

---

[1] Article VIII, sec. 11, Constitution of the State of Alaska; AS 38.05.195; AS 38.305.275.

[2] With your permission, I talked with Tom Crafford, Acting Large Mine Coordinator in the Department of Natural Resources regarding the discretion of the department in recognizing the rights to mineral deposits. Mr. Crafford confirmed that his department does not have discretion in the granting of mineral rights, so long as the potential location

12/14/2006 12:42 9012986628 PAGE 01/10 PAGE

three requirements – discovery, location, and filing. Discovery is the finding of the mineral, location is the marking of the land where the mineral was found, and filing is the recording of the interest in the recorder's office for the region in which the interest is located.

Not all state land is open for mining. The commissioner of natural resources has the authority to classify land so that mining, mineral entry or location, mineral prospecting, or mineral leasing is precluded or designated as an incompatible use.[3] However, the discretion to classify land as being closed to mining has been exercised on a limited basis; according to the Department of Natural Resources, approximately 92 percent of the 91 million acres for which the state has received title are open to mineral entry and the acquiring of mineral rights by staking mining locations.[4]

Although a person may acquire mineral rights by performing the three necessary steps, those rights are "subject to existing claims and to any denial of or restriction in the tentative approval of state selection or patent of the land to the state."[5] In *Beluga Mining Co. v. State, Dept. of Natural Resources*, the court found that the mining company had a property right in its claims, but had no right to mine because "its mining 'rights' were prospective and contingent, and were subject to existing claims."[6] Until any conflicting rights are identified and resolved, the holder of the right to extract the minerals proceeds at the holder's risk. If there are no "existing claims" or the land is not subject to the tentative approval of state selected land, my opinion is that the mining rights vest and development is then only subject to the holder obtaining any required permits.

Once a person has acquired mineral rights, state policy appears to favor the continued holding of those rights, even when the holder has failed to fully comply with statutory requirements. For example, AS 38.05.185(b) requires that the lessee or holder only comply with statutory requirements "as nearly as possible under the circumstances" to avoid the invalidation of the interest. That subsection reads as follows:

---

holder meets the statutory requirements. In other words, a person whose rights are not subservient to a prior interest holder, who acquires the rights by following the statutory requirements, and who maintains those rights by satisfying the annual work and rental payment requirements, has the rights to those minerals.

12/14/2006 12:42 9027388328 EXXE EVE PHOTO PAGE 02

> (b) The failure on the part of a mining lessee or a locator to comply strictly with AS 38.05.185 - 38.05.275 and regulations adopted under those sections does not invalidate the rights of a mining lessee or a locator if it appears to the satisfaction of the commissioner that the mining lessee or the locator complied as nearly as possible under the circumstances of the case, and that no conflicting rights are asserted by any other person.

The statutes and cases interpreting those statutes point to the conclusion that a person holding a mineral interest that is superior to competing claims has an ownership interest in the minerals that are located. The holder of the interest can continue to hold that interest so long as the holder can "compl[y] as nearly as possible under the circumstances" with the requirements in AS 38.05.185 - 38.05.275," including the satisfaction of the annual rental and labor requirements.[3]

However, perfection of the mineral rights does not in itself allow the interest owner to develop a mine; the owner must obtain all the necessary government-issued permits before extracting the minerals for which the rights are held. In the case of a large mine, the Large Mine Project Team in the Department of Natural Resources coordinates the timing and completion of the numerous permits.[4] Although there is a process of negotiation, modification, and amendment for permit terms and conditions, once the mine owner or operator qualifies for the permits, the mining operation can proceed.

Government liability for taking a mineral or mining right

Article I, sec. 18, Constitution of the State of Alaska, and amendment V of the U.S. Constitution prohibit the government taking of private property without just compensation. The acquisition of mineral rights by the first claimant who discovers a valuable mineral deposit, stakes a location, and files a mining claim has a legally

protected interest,[9] that if taken by the government, entitles the holder to just compensation.

The takings doctrine is implicated when the state deprives a person of a property right. In the case of mineral rights that have been located and are not subject to a prior existing claim, the voiding of those mineral rights or regulatory action that denies all economically feasible use of those mineral rights may be found by a court to constitute a per se taking of that property interest.[11]

The issue of whether or not a mine may be allowed on particular state land initially is decided when the commissioner of natural resources classifies state land as either open or not open to mining.[12] The classification of land as available for mining opens the land to discovery, location, and filing for the mineral rights. For example, the land on which the proposed Pebble Gold Project may be developed is classified as available for mineral development as part of the Bristol Bay Area Plan.[13] Once a holder has established mineral rights -- a protected interest -- the state may not take those rights without just compensation. HCR 29 (24th Alaska Legislature) calls for the commissioner to revisit the decision of classifying the area in which the Pebble Gold Project is located for mineral development. Since the claims have already been filed, a reclassification of the land use could amount to a taking of the mineral rights that have vested and a court could require the state to compensate the holder for those rights.

If the state chose to terminate the mining activity, one option would be for the state to purchase the mineral rights from the holders. Presumably, the state would offer the fair market value for the rights, an appropriate measure of compensation used for

---

[9] *Trustees for Alaska v. State*, 736 P.2d 324, 332 (Alaska 1987). Although this case described the federal location system for establishing mineral rights, it is applicable to the state's system. The difference between the state and federal systems was that at the time *Trustees* was before the court the federal requirements did not include the payment of rent and royalties nor was there a state requirement of payment. Following the decision in *Trustees*, the legislature enacted AS 38.05.211 that requires the payment of annual rent to the state for "each mining claim, leasehold location, prospecting site, and mining lease."

[11] See, *Beluga Mining Co. v. State, Dep't of Natural Resources*, 973 P.2d 570, 575 (Alaska 1999).

[13] The Bristol Bay Area Plan, that describes land use and classification in the area of the proposed Pebble Gold project and includes area maps, is published on the Internet at *http://www.dnr.state.ak.us/mlw/planning/areaplans/bristol/pdf/bbap_complete.pdf* (accessed Nov. 22, 2006).

condemning property through the state's exercise of the power of eminent domain.[14] Another possibility for the state to stop the mining activity would be to impose such extensive requirements for necessary permits that the developer could not economically proceed with the project. With regard to this second option, a regulation that denies the property owner all economically feasible use of the property may be found to be a "per se" taking by the state, and the state would again be in the position of paying just compensation.[15]

A court may also examine governmental action on a case-by-case basis for the purpose of determining whether the action amounts to a taking that justifies compensation to the holder of the property right. This type of examination involves an analysis of the following four factors: (1) the character of the governmental action; (2) its economic impact; (3) its interference with reasonable investment-backed expectations; and (4) the legitimacy of the interest advanced by the regulation or land-use decision.[16] In *Beluga*, the court used the four-factor analysis to consider whether the state had engaged in a taking. With regard to the third element, the *Beluga* court found that the plaintiff failed to establish a basis for concluding that it had "reasonable investment backed expectations" because the claims were always contingent upon state permission to mine and other adverse existing claims.[17]

As a practical matter, it seems reasonable for a mine developer to expect that permits for a mining project will eventually be issued although the requirements are subject to negotiation. My understanding from talking to a staff member[18] of the large mine project team in the Department of Natural Resources is that government agencies have discretion in developing the terms and conditions for each permit, but once the terms and conditions are agreed upon by the applicant (generally the case) the permits are issued and the mining operation proceeds. If there is some point in the permitting process that gives discretion to the decision maker whether or not to issue a permit and the denial of that permit is the basis for stopping the development of the mine, that discretionary step may be a basis for a court to find that the investment-backed expectations were not reasonable.

My impression from the existing statutory scheme and court cases on this issue is that mining rights that have vested through discovery, location, and filing, and that are not

subservient to prior or other existing claims are protected property interests and that the state's taking of those interests would require the payment of just compensation under the state and federal constitutions.

Compensation for the taking of mineral or mining rights

Should a court find that the taking of mineral interest constitutes a taking under art. I, sec. 18, Constitution of the State of Alaska or amendment V of the U.S. Constitution, the court, or the parties in negotiations, would need to determine the amount of just compensation to be paid to the holder. Since fair market value has been recognized as a basis for determining just compensation,[19] the fair market value of the interest must be determined.

The valuation of mineral rights was raised in *Phillips v. United States*, in which the 9th Circuit Court of Appeals addressed the determination of the speculative value of a mining claim.[20] The Court wrote:

> 3. The "Element of Speculation" in Mineral Right Does Not Preclude Their Having an Ascertainable Market Value.
>
> "How could the jury arrive at a dollars or cents figure for a mineral interest except by pure guess?" rhetorically asks counsel for the appellee.
>
> The Supreme Court has answered this question.
>
> In Montana Railway Co. v. Warren, 1890, 137 U.S. 348, 352, 11 S.Ct. 96, 97, 34 L.Ed. 681, the Court said:
>
> > "There remains for consideration but a single point, — that there was admitted in evidence on the trial the opinions of witnesses as to the value of the land, which were not based upon the sale of the same or similar property, and were not therefore the opinions of persons competent to so testify. It appears that the land taken was a strip running through a mining claim, which had been patented and belonged to the defendants in error. The claim adjoined the Anaconda mining claim, which had been developed and worked, and demonstrated to contain a vein of great value. The claim in controversy had been developed so far as to indicate that *possibly, perhaps probably*, the same rich vein extended through its territory. It had not been developed so

[19] *Dash v. State*, *supra*.

[20] *Phillips v. United States*, 245 F.2d 1, 5 (9th Cir. 1957).

12/14/2006 12:12 9072355535 EAGLE EYE PHOTO PAGE 05

> far that this could be affirmed as a fact proved. The strip taken ran lengthwise through the claim; and, upon the trial witnesses were permitted to testify as to their opinion and judgment of its value. It may be conceded that *there is some element of uncertainty in this testimony, but it is the best of which, in the nature of things, the case was susceptible.* That this mining claim, *which may be called 'only a prospect,'* had a value fairly denominated a 'market value,' may, as the Supreme Court of Montana well says, be affirmed from the fact that such prospects are the constant subject of barter and sale. Until there has been full exploiting of the vein its value is not certain, *and there is an element of speculation, it must be conceded, in any estimate thereof. And yet uncertain and speculative as it is, such prospect has a market value;* * * *"[1]

In other words, a court determining the appropriate amount of just compensation to be paid to the holder of mineral rights taken by the state would consider testimony and other evidence relating to the fair market value. Some of the evidence will be speculative, particularly the quantity of valuable minerals in place, the cost of extraction, and the expected profit.[2] I expect the fair market value will reflect the present value of future expected earnings from the minerals. An award based on the expected market value of the minerals that does not take into consideration the cost of developing the mine and the mining, transportation, and marketing of the minerals, including the cost of financing the mining operation, would be excessive and inequitable. Ultimately, if the parties are unsuccessful in negotiating an agreed price for the taking, the determination of fair market value must be determined by a fact finder.[3]

---

[2] Another example of valuation testimony is found in *United States v. L.E. Cooke Co.*, 991 F.2d 336, 339 (6th Cir. 1993). In that case, the federal government was condemning land in which the L.E. Cooke Company held coal interests. Part of the action was the determination of the value of the coal lease interests for the purpose of determining just compensation. Regarding the leasehold owners expert witness, the court wrote:

> Because Cooke had the burden of persuasion in this action, its expert witness, John Praskwiecz, testified first. Praskwiecz, a licensed mining engineer, regularly performs reserve studies, mine feasibility studies, and appraisals for his employer, Gaddy Engineering Company.
>
> ...
>
> Praskwiecz testified that reserve evaluations involve a determination of the amount of coal that is mineable and merchantable within a given piece of property and that mine feasibility studies are economic studies to determine the cost of mining coal, such as the selection of equipment and method of mining. The coal industry categorizes reserves according to standards established by the United States Geological Survey. Praskwiecz

12/14/2006 12:42 5072355625 EAGLE EYE PHOTO PAGE 07

Foreign held mineral interests in Alaska and the relevance of chapter 11 of the North American Free Trade Agreement.

You asked whether Chapter 11 of the North American Free Trade Agreement (NAFTA) may be utilized by a foreign company that has invested in exploration of a mineral resource and is then subject to tightening of state environmental standards relative to mineral extraction or the outright prohibition of resource extraction in an area where the company has been actively exploring.

The use of ch. 11 of NAFTA as a tool for a foreign corporation to bypass or otherwise challenge state law and policy was discussed in a 2004 article that appeared in STATE

---

testified that such reserves are either proven, i.e., one-quarter mile from a known point of coal thickness; probable, i.e., one-quarter to three-quarters of a mile from that point; inferred, i.e., three-quarters of a mile to one and one-half miles from that point; or potential, i.e., over one and one-half miles from the known point of coal.

After explaining the procedures he used and the sources of information he relied upon, Praskwiecz concluded that the tracts at issue contained 47,000 tons of proven coal and 1,066,000 tons of probable coal, for a total of 1,113,000 tons. Praskwiecz concluded that the remaining 487,000 tons of coal reserves had no economic value, and he ignored them. When questioned about the quality of the coal in the four seams present in the Cooke property, Praskwiecz stated, "The quality is a low to middle quality steam coal, which can definitely be sold on the steam coal market, and at a price." J.A., vol. II, p. 27. On cross-examination, Praskwiecz acknowledged that only one of the data points he used in his evaluation was actually located on a Cooke tract and that the quality of the coal seams fluctuated in Lawrence County. Also, he admitted that there were some impurities present in the coal but not, in his opinion, enough to affect the coal's marketability.

Praskwiecz further testified that in his opinion the highest and best use of the Cooke tracts was coal mining. In determining market value, Praskwiecz testified that the preferred approach in the industry is to use comparable sales. However, he identified only two sales which were similar enough to be considered comparable and found that these were insufficient to establish a market trend. Instead, he used a discounted cash flow analysis. When his calculations were completed, Praskwiecz determined that the present net value of the Cooke leases was $427,000 and that this was the fair market value at the time of taking.

EAGLE EYE PHOTO

LEGISLATURES, a publication of the National Conference of State Legislatures (NCSL).[22] The article included a discussion of several cases in which a foreign company sought damages based on state and local government action relating to the corporation's investment. In *Methanex v. United States*, a Canadian corporation sought damages from the United States because of its alleged loss of future profits resulting from the California legislature's ban on MTBE.[23] In a second case, Metalclad, a U.S. multinational corporation brought suit for damages against Mexico after state and local officials in a Mexican state used their land-use regulatory authority to stop the development of a hazardous waste facility in which Metalclad has invested.[24] In another case involving California, Glamis Gold is pursuing a claim against the United States based on provisions in California's mining law that protect Native American sacred sites that Glamis Gold argues will deprive the company of future profits.[25] In each of these three cases, the federal government that was a party to NAFTA -- Mexico and the United States -- is the defendant.

In 1993, the Congress of the United States enacted the North American Free Trade Agreement Implementation Act.[26] Sec. 102 of the Act addresses the relationship between NAFTA to United States and state law.[27] With regard to state law, sec. 102 requires the President to consult with the states for the purpose of achieving conformity of state laws and practices with NAFTA and to assist the states to identify those state laws that may not conform to the agreement.[28] Further, with regard to legal challenges to state law, the section states that, "No State law, or the application thereof, may be declared invalid as to any person or circumstance on the ground that the provision or application is inconsistent with the Agreement, except in an action brought by the United States for the purpose of declaring such law or application invalid."[29]

Given the nature of mineral rights in this state -- that the interests vest following discovery, location, and filing -- state action that amounts to a taking requires just compensation to be paid to the holder of the property interest that is the subject of the taking. As discussed above, Alaska courts have recognized that regulatory action can amount to a taking and require compensation to be paid. The suits brought under ch. 11 of NAFTA that are based on a regulatory taking of an economic interest possibly could be resolved under Alaska law if the court finds that a regulatory taking has occurred. The remedy for a regulatory taking under NAFTA, in the form of a suit for damages against the host country, is available to a foreign corporation regardless as to whether a particular state recognizes a regulatory taking such as our court described in *Beluga*, supra.

NAFTA and the North American Fee Trade Agreement Implementation Act do seem to complicate a state's exercise of control over environmental concerns by raising the possibility of a suit against the federal government based on state regulation and, under the Implementation Act, requiring a state and federal government to coordinate regulatory actions for consistency under NAFTA.[10]

I do not know the extent of any interaction related to NAFTA between the state and federal government. You may wish to contact the office of the governor or the governor's office in Washington, D.C. for more information.

Summary

The commissioner of natural resources identifies land in the state that is open for mining. When a person acquires mineral rights through discovery, location, and filing, that person acquires a property interest that requires the state to pay just compensation if the property is taken either as a per se taking or a regulatory taking that deprives the owner of all economic use of the interest.

The North American Free Trade Agreement provides a means for a non-U.S. corporation to try to recover damages from the federal government based on what is found to be a regulatory taking by a state or local government.

If I may be of further assistance, please advise.

Analysis of the Potential Impacts of Copper Sulfide Mining on the Salmon Resources of the Nushagak and Kvichak Watersheds

Final Report
January 10, 2008

For The Nature Conservancy

Lance Trasky & Associates
January 10, 2008

1972

This report, *Analysis of the Potential Impacts of Mining a copper sulfide deposit on the Salmon Resources of the Nushagak and Kvichak Watersheds*, was prepared by Lance Trasky and Associates, commissioned by The Nature Conservancy in Alaska, and funded by the Gordon and Betty Moore Foundation during the summer of 2007.

An Executive Summary and Key Findings, excerpted from this document, is available from The Nature Conservancy, should you wish to review the material in a more condensed format.

INTRODUCTION: The world class salmon resources and the natural and human systems dependent on them gave The Nature Conservancy (TNC) the impetus to make the Nushagak-Mulchatna watershed a priority for conservation. There is no salmon producing system in the world that is as productive and healthy as Bristol Bay and the Nushagak system is one of the key salmon producers in Bristol Bay.

Northern Dynasty Mines, Inc's announcement that they intend to develop the world's second largest copper mine at the headwaters of the two largest sockeye salmon producing systems in Bristol Bay has raised concerns within TNC about how mining would affect salmon habitat and the Bristol Bay salmon fisheries, and whether TNC can achieve its conservation goals if the mine moves forward.

The purpose of this analysis is to inform TNC board members and staff by providing a science-based review of:

(1) the scale and duration of the proposed Pebble Project and the nature of the ore deposit;

(2) the possible extent of impacts the Pebble Project could have on fish and fishermen if developed, particularly potential impacts to salmon from copper sulfide mines and the associated mineral processing, slurry pipelines, tailings disposal sites, and access roads; and

(3) the effectiveness of State and Federal statutes and regulations in avoiding potential impacts from large mines, and particularly sulfide ore body mines.

1. DESCRIPTION OF THE PROPOSED PEBBLE MINE AND ASSOCIATED FACILITIES

1.1 Pebble Prospect: Northern Dynasty Mines Pebble Project mineral claims are located on 58,000 acres of state land located approximately 25 miles north of Lake Iliamna (Figure 1). An additional 586 square miles of claims have been staked in the surrounding area by other mining companies (Anchorage Daily News, 2007b). The Pebble Project claims are located within the Lake and Peninsula Borough. Based on reserve estimates released by NDM, the Pebble Project prospect ranks as the second largest copper mineral deposit in the world (Northern Mines, 2007). Northern Dynasty Mines estimates the ore body contains approximately 82 million ounces of gold and 67 billion pounds of copper worth approximately 200 billion dollars (Anchorage Daily News, 2007a).

The Pebble project, as currently envisioned, would include:

- An open pit mine or an underground mine, or both. The most recent plans indicate that the open pit at Pebble West would be about 1700 feet deep and cover about 2 square miles. Pebble East has not been fully explored but appears to be of comparable size and underground block caving techniques might be used to mine to a depth of 5000 feet(Northern Dynasty Mines, 2007;

- Various stream diversion channels, wells and devices to dewater the pit and extract water for mine processes;
- A mill to crush and process the ore;
- At least two tailings "ponds" to store up to 8 billions tons of reactive and non reactive mine waste and tailings. These "ponds" would cover at least 10 square miles;
- The ponds would be created by five dams constructed of waste rock from the mine(s),. Approximately 9 miles of dams would impound the reactive tailings "ponds." The largest dam would be 740 feet high;
- A deep-water port in Iniskin Bay, on the west side of Cook Inlet to load ore carriers;
- A new 104 mile road to connect the mine to the port;
- Two 104 mile long, 15 inch parallel pipelines to transport a slurry of copper ore concentrate from the mill to the port and return the water to the mine area;
- A 300 megawatt power plant and 135 mile transmission line from the Kenai Peninsula to the mine site.

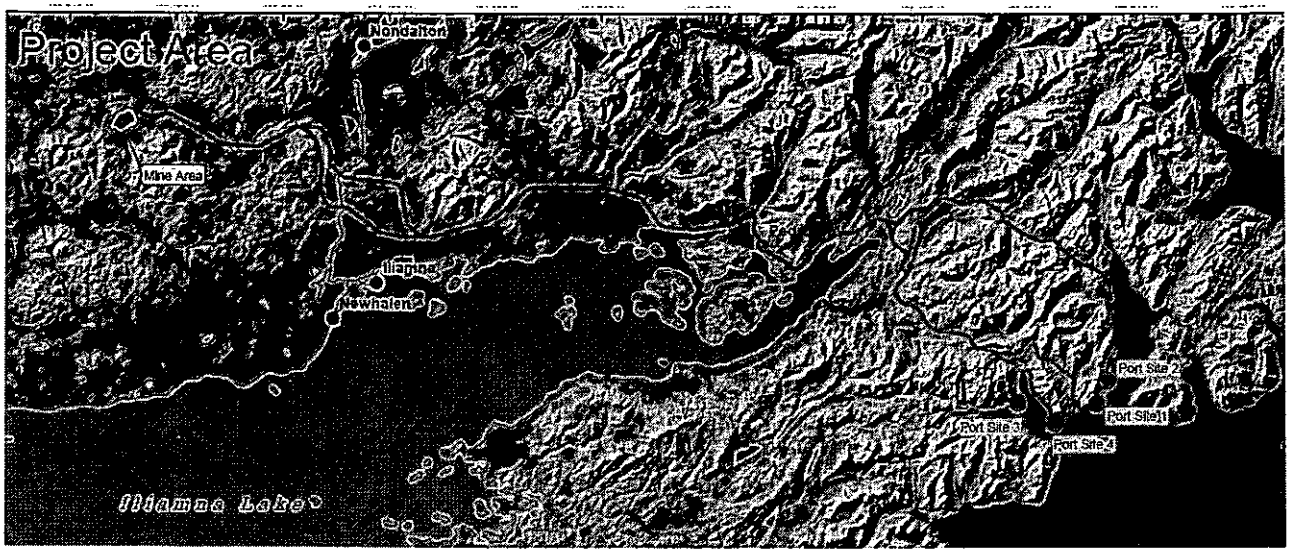

Figure 1. Location Map: Mine, Road and Port

To supply the electrical power needed for the mine a new 200 to 300 megawatt power plant would have to be constructed somewhere in the rail belt (NDM, 2007). NDM estimates that 2000 people would be employed in the construction of the mine facilities, and that 1000 people would be employed by the mine over its 40 to 70 year life span (Anchorage Daily News, March 27, 2007a). An unknown number of additional people would be employed in the construction and operation of the port, pipeline, and power plant.

1.2 Ore Deposit: The ore body is located at the headwaters of Upper Talarik Creek in the Lake Iliamna drainage and the North and South Forks of the Koktuli River in the Mulchatna River drainage (Figure 2). The deposit is low-grade copper-gold-molybdenum porphyry comprised of 0.6% copper, 0.37g/t gold, and 0.039% molybdenum. The ore body, compromised of the Pebble

East and West deposits, is approximately 12,500 feet (2.6 miles) long and up to 8,000 feet (1.6 miles) wide (Northern Dynasty Mines, 2007). The Pebble West and Pebble East deposits are approximately 1,700 and 5,000 feet deep respectively (Northern Dynasty Minerals, Ltd., 2007). According to a February 20, 2007 NDM press release, the Pebble West deposit contains 4.1 billion metric tons of ore, and the Pebble East deposit contains 3.4 billion metric tons. The total deposit of 7.5 billion metric tons is equivalent to approximately 8.4 billion U.S. tons of ore. Both the amount of ore and the size of the deposit may increase with additional drilling.

The Pebble West deposit is primarily chalcopyrite ($CuFeS_2$) and the Pebble East deposit is composed in part of bornite (Cu_5FeS_4). Both of these copper deposits are referred to as sulfide ores because the copper is locked up in a compound containing iron and sulfur. The composition of the ore is important because sulfide ores will form sulfuric acid when exposed to oxygen and water (United States Office of Surface Mining and Reclamation, 2007 and Acid Drainage Technology Initiative, 2007). At a 0.6 percent copper equivalency each ton of ore mined will yield approximately 12 pounds of copper, 0.37 grams of gold, 0.78 pounds of molybdenum and 1,987 pounds of waste rock (Phelps Dodge, 2007).

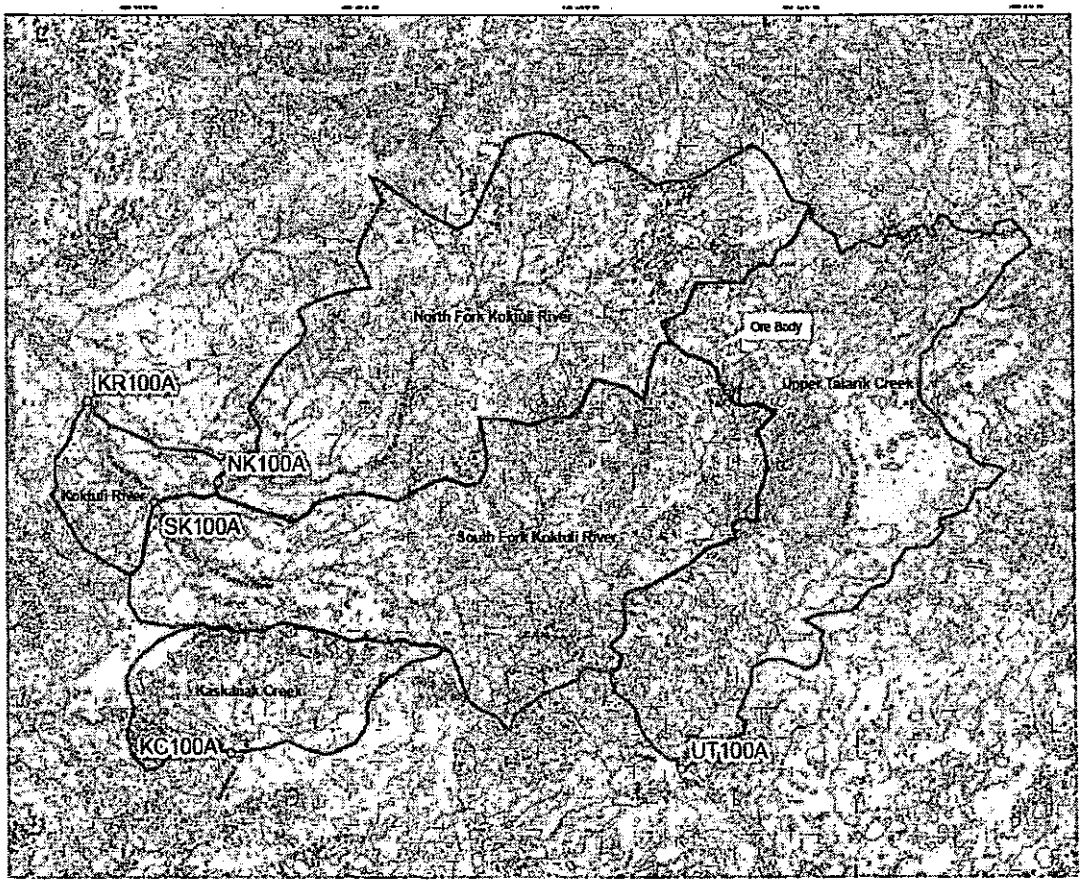

Figure 2. Stream Drainages Impacted by Pebble Mine

1.3 The Mine: The ore body would be mined through a combination of open pit and underground-block cave mining. The Pebble West deposit is exposed at the surface and is suitable for open pit mining (Northern Dynasty Mines, 2007). Open pit mining is commonly used to extract massive amounts of low grade copper ore that are at or near the surface of the earth. An open pit mine has the appearance of a series of benches or terraces (Figure 3). The mine is opened by stripping off the vegetated overburden and non ore bearing rock which would be dumped in a tailings disposal area, or used in the construction of tailings disposal areas. The streams which flow through the mine and tailings disposal area would be diverted and the water appropriated for mine use (Northern Dynasty Mines, 2006). Because the mine would extend below the ground water table, ground water from the surrounding area would flow into the pit or tunnels. A series of wells would be drilled around the mine to prevent the mine from flooding. Water from the wells and water that enters the pit would be pumped out into a water storage area for use in milling, for forming the slurry in the waste and concentrate pipelines, to submerge reactive waste rock to prevent oxidation and acid formation, to reduce dust generation, and to protect downstream resources (Northern Dynasty Mines, 2006).

Figure 3. Chino Open Pit Copper Mine, New Mexico (source Wikipedia)

The process of recovering copper from the ore body begins when miners drill and blast the ore and overburden. Detonation of explosives placed in large patterns of deep drill holes break the

solid rock. Large shovels, some lifting nearly 100 tons of material in a single bucket "bite", fill trucks holding up to 350 tons of ore that haul the broken rock to the mill to be crushed (Phelps Dodge, 2007).

The Pebble East bornite deposit is deeper but contains more copper per ton of ore (Northern Dynasty Mines, 2007). Because of the cost of removing and storing the overburden that covers the ore body, Northern Dynasty has said they might mine the Pebble East deposit using block caving. Block caving is an economic method of mining large underground ore bodies with a consistent grade of ore throughout. A series of large tunnels are cut into the base of the ore body. A thick block of ore is undercut by removing a slice of ore. The un-supported block of ore breaks and caves under its own weight. The broken ore is drawn off from tunnels below as the caved mass falls due to gravity (Figure 4). The broken ore is loaded into ore carriers and transported to the mill.

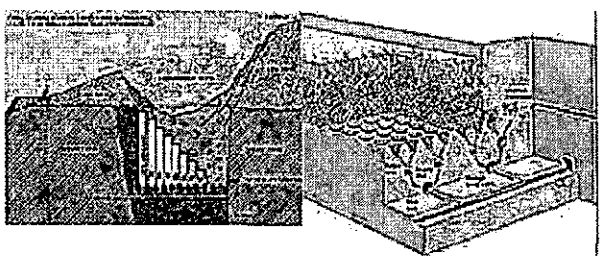

Figure 4. Block Caving (Source Atlas Copco Group)

Upon completion of mining, the Pebble West chalcopyrite pit would encompass about 2 square miles, and would be about 1700 foot deep. The Pebble East mine would cover a similar area, but would be up to 5000 feet deep (Northern Dynasty Mines, 2007). Because the water table is at the surface in the mine area, after pumping stops both Pebble West and East would fill with water and probably overflow into adjacent drainages. Based on experience from other mines where block caving was used, (Gilbride and Kehrman, 2005) the surface over the Pebble East block caving area may subside after mining is completed (Blodgett, 2002).

1.4 Processing Ore: At the mill the ore is dumped into crushers. The crusher breaks the large rocks into smaller and smaller pieces. After crushing, the ore is sent to the concentrator where huge grinding mills reduce it to the consistency of face powder. The sulfide ore is then screened to approximately 0.5mm and then sent to the froth flotation cells for recovery of copper. The copper mineral is recovered and concentrated by a process called flotation. In flotation, the finely ground ore is mixed with water to from a slurry. Certain chemicals or reagents that coat only the desired copper minerals are added in small amounts. Rising air bubbles capture the coated mineral particles and float them to the surface where they are skimmed off and dried. This dried material is called copper concentrate and is approximately 30 percent copper, 27 percent iron and 33 percent sulfur, with smaller quantities of gold, molybdenum and other metals (Phelps Dodge, 2007). A separate selective flotation step separates the molybdenite (molybdenum disulfide) from the chalcopyrite. The copper concentrate would be sent to the port site via slurry pipeline

for shipment to a smelter. The tailings which remain at the bottom of the tank are disposed of in the tailings impoundments.

Gold that is associated with the copper pyrite complex would likely be processed with the copper at a remote location (Crafford, 2007). The gold that is not associated with the copper pyrite complex might be processed on site. Cyanide is the primary means used by the mining industry for leaching gold from ore (ICMI, 2007). Although Northern Dynasty Mines initially stated that no cyanide would be used at the proposed Pebble Project Mine (Anchorage Daily News, 2004j) they later backed away from that statement (Bristol Bay Times, June 23, 2005). Gold could be removed from Pebble ore by means of either heap leaching or agitated pulp leaching (ICMI, 2007). In heap or dump leaching the ore or agglomerated fine ore is stacked in heaps on a pad lined with an impermeable membrane. Cyanide solution is introduced to the heap by sprinklers or a drip irrigation system. The solution percolates through the heap leaching the gold from the ore, and the resultant gold bearing solution is collected on the impermeable membrane and channeled to storage facilities for further processing. Heap leaching is attractive due to the low capital cost involved, but is a slow process and the gold extraction efficiency is a relatively low 50-75% (ICMI, 2007).

In a conventional agitated leaching the milled ore (slurry) is conveyed to a series of leach tanks. The slurry is agitated in the leach tanks, either mechanically or by means of air injection, to increase the contact of cyanide and oxygen with the gold and enhance the efficiency of the leach process (ICMI, 2007). The cyanide then dissolves gold from the ore and forms a stable gold-cyanide complex. The waste from which the gold was removed by any means is referred to as tailings. This residue is usually partially dewatered to recover the solution, treated to neutralize or recover cyanide, and is then sent to the tailing storage facility. Because of the very large volume of ore to be processed a very large amount of cyanide would be required to process the ore.

1.5 Tailings Storage Facilities: According to Northern Dynasty's 2006 Pebble Project Initial Application for Certificate of Approval to Construct a Dam, two tailings impoundments A and G would be constructed in stages to hold approximately 2.5 billion tons of mine waste. If the ore has a 0.6% copper equivalency as reported, 99.4% of every ton of ore mined will be waste (Northern Dynasty, 2007). This means that if all of the 8.4 billions of tons of ore were extracted, approximately 8.3 billion U.S. tons of waste would be produced over the life of the mine.

Because of the potentially harmful nature of this waste, NDM has proposed to construct two very large earthen structures they call Tailings Storage Facilities (TSF) to hold the waste and prevent it from entering the environment. Because this waste would be stored in perpetuity, these facilities would need to be constructed to permanently preclude catastrophic failure, prevent leakage into ground or surface water, and prevent mobilization of wind blown dust from the surface. The TSFs would store reactive and nonreactive tailings solids from the mill, reactive mine rock and water used to process ore (Northern Dynasty Mines, 2006). Nonreactive mine rock is relatively inert. Reactive rock contains sulfur and when exposed to oxygen and water forms sulfuric acid.

Tailings Storage Facility A would be enclosed by three earth fill dams across the valley of the South Fork Koktuli River: a north embankment 700 feet high and 2.9 miles long, a southeast embankment 710 feet high and 1.3 miles long and a southwest embankment 740 feet high and 3 miles long (Northern Dynasty Mines, 2006), (Figure 5). The surface area of TSF A would be approximately 7 square miles, not including the foot print of the dams. The containment dams would be constructed of waste rock and nonreactive tailings. Northern Dynasty is designing the tailings storage facilities to withstand a magnitude 8.7 earthquake without release of tailings or process water (Northern Dynasty Mines, 2006). According to Northern Dynasty a magnitude 8.7 earthquake would be the largest quake expected in the mine area in a 3000-5000 year period.

Tailings Storage Facility G would be constructed approximately 2 miles west of the mine pits and would fill the valley of tributary 1.190 of the North Fork of the Koktuli River with mine waste. Two earthen dams would form the impoundment (Northern Dynasty Mines, Inc., 2006). The main dam would rise to a final height of 450 feet and a smaller saddle dam would be 150 feet high (Northern Dynasty Mines, Inc. 2006). The surface area of TSF G, not including the footprint of the dams, would cover approximately 3.6 square miles and would cover approximately 4 miles of a tributary to the North Fork of the Koktuli River (Figure 5). It would be constructed to the same standards and of the same materials as TSF A.

TSF G is designed to store tailings and process water from the mill process, and would hold approximately 0.5 billion tons of reactive (acid forming), nonreactive, and potentially reactive waste. Surface water runoff and supernatant process water would form a permanent cover over a portion of the TSF, and the interstices between the tailings would be saturated to prevent oxidation of the sulfide waste. Some water would be transferred from the supernatant pond for use in the milling process. NDM contemplates total containment and recycling of all water within the impoundment with no surface water discharge to the environment. Based on Northern Dynasty Mine's water rights applications, a very large quantity of water, likely between 100 and 300 billion cubic feet, would be permanently entrained in the tailings mass over the mines 40 to 70 year life if there are no discharges from the mine or any of its facilities (Northern Dynasty Mines, 2006).

The structural integrity of the dams is critical, because the mechanical stability of the tailings mass is very poor, due to its small grain size and the typically high water content (Lottermoser, 2003). Northern Dynasty mines has stated that the mine will be a zero discharge facility and that much of the water appropriated from area streams and ground water over the mine's 40 year life would be stored in the tailings facilities. The tailings would be saturated with water to prevent oxidation of the sulfides in the waste and formation of acid. The upstream face of the dams would be lined with a high density polyethylene liner to control seepage. Because all tailing storage facilities leak, a complex system of drains, pipes, and pumps would be buried under the dams to collect leakage and return it to the tailings storage facility (Julein, et al. 2002, Bjelkevik, 2005, and Northern Dynasty Mines, 2006). After the ore is mined out and the company leaves, the tailings dams and the pollution control system would have to be maintained in perpetuity, to prevent the acid generating mine waste and other toxic chemicals in the two tailings facilities from draining into the Koktuli River or Upper Talarik Creek. Because the mine is on state land, the Department of Natural Resources would have to resume responsibility for maintenance of the

tailings storage facilities after mine closure, presumably using bonds from the company to cover the costs of on-going pollution management.

Although, the ADNR Pebble Project website states that approximately 2.5 billion tons of waste rock and mill tailings would be produced and disposed of in the tailings storage facilities (Northern Dynasty Mines, Inc., 2006), those estimates don't appear to be current. The most recent reserve estimates released by Northern Dynasty Minerals Ltd. in February 2007 are 8.4 billion tons (7.6 billion metric tons) of ore containing 67 billion pounds of copper at 0.6% copper equivalency per ton of ore. Based on those reserves estimates, if all of the ore were mined the mine would produce approximately 8.3 billion tons of mine and mill waste. This is almost three times the design capacity of Tailings Storage Facilities A and G of 2.5 billion cubic yards. If correct, Tailings Facilities A and G would either have to be expanded or other tailings storage facilities would have to be constructed in another location to hold the additional waste. Other disposal options considered by Northern Dynasty include building more tailings storage facilities in other stream drainages or discharging the waste into Lake Iliamna.

1.6 Water Use: A large mine requires a tremendous amount of water. NDM has applied for all of the ground and surface water within the boundaries of the mine area, up gradient of the downstream limit of water extraction (Northern Dynasty Mines, Inc., 2006).

The mine area encompasses a drainage area of approximately 35 square miles and includes the headwaters of Upper Talarik Creek, and the North and South Forks of the Koktuli River. According to Northern Dynasty Mine's 2006 ground and surface water rights applications, all surface and ground water within the mine area would be used in the mining process or stored in the tailings storage facilities over the 40 to 70 year life of the mine (Northern Dynasty Mines, 2006). Northern Dynasty has stated that no water would be discharged from the mine, port, or tailings storage facilities.

Northern Dynasty's surface water applications from the North and South Fork of the Koktuli River and Upper Talarik Creek headwaters for the Pebble Mine are presented in Table 1 (Northern Dynasty Mines, Pebble Project Water Use Application, July 7, 2006).

Surface water would be removed via pumping, gravity and channeling, and stored in reservoirs.

A separate application has been submitted to withdraw all of the ground water flowing from the mine area into the North and South Forks of the Koktuli River and Upper Talarik Creek drainages (Northern Dynasty Mines Ground Water Application, 2006). The Pebble Mine site receives between 35 and 40 inches of precipitation annually, The long term mean annual precipitation is estimated to be 36 inches (Northern Dynasty Mines, 2006 Application for Water Rights). The mine site is covered with permeable glacial material and is probably saturated with ground water. The upper layer of bed rock is also heavily fractured and permeable.

Northern Dynasty has requested 19.4 cubic feet per second of ground water from the Upper Talarik Creek drainage, 11.78 cubic feet per second from the South Fork Koktuli watershed, and 12 cubic feet per second from the North Fork Koktuli River drainage (NDM Pebble Project 2006 ground water application). These ground water withdrawals would be used for mine functions and to dewater the mine pit (NDM Pebble Project 2006, Application for Water Rights. Ground water withdrawals also serve a secondary purpose of preventing contaminated ground water from the mine pit, mine facilities and tailings storage facilities from leaking into fish bearing surface waters. Ground water would be removed by pumping.

Northern Dynasty has applied to take approximately 136 cubic feet per second of surface and ground water from the three watersheds which drain the site over the life of the mine. This adds up to approximately 100 to 300 billion cubic feet of water over the projected 40 to 70 years of mining. The water would be used in the milling process, dust suppression and to slurry ore concentrate in the slurry pipelines. If there is no discharge from the mine as claimed, all of the water, minus evaporation, would ultimately be stored in the tailings storage facilities (TSF).

1.7 Roads, Barge Landing Areas, Port and Pipeline: Three barge landing areas, one at Williamsport and two in Lake Iliamna are being considered for the project. These sites would be used to bring in equipment for initial construction of the road, port facility and mine. A deep water port site for the project would be sited at Iniskin Bay (Northern Dynasty Mines, 2006). Facilities would be constructed at the Iniskin Bay site to receive, dry, and store processed copper concentrate from the mine. A solid fill dock would be constructed into Iniskin Bay to load deep water vessels with copper concentrate to be transported to a foreign port for refining. A 104 mile long all weather road and a 15 inch diameter slurry pipeline would be constructed to transport copper concentrate from the mine to the Iniskin Bay port (Northern Dynasty Mines, 2007). A second pipeline would return slurry water from the port to the mine. One or more pump stations would be required to move the heavy concentrate through the 104 mile long pipeline. Another alternative would be to truck the concentrate, or a portion of the concentrate, such as molybdenum, which is not easy to transport by pipeline, to the port.

The road and the pipelines would cross approximately 120 streams including over 80 with year around flows. Many of these streams provide spawning and rearing habitat for salmon and high value resident fish species such as Dolly Varden and grayling. According to Northern Dynasty the road alignment and port site were selected by the Alaska Department of Transportation and Public Facilities. The access road corridor crosses both Native Corporation and State owned land (BBAP, 2005). According to Sean McGee, NDM spokesman, the road would be controlled by Iliamna area villages and would not be open to public use (NDM, 2007). The sites being evaluated for the port at Iniskin Bay appears to be a very productive marine environment with significant populations of marine mammals including threatened Stellar Sea Lions, seabirds and fish such as herring. Land ownership at Iniskin Bay is mixed with private, state, and ANSCA village corporation holdings.

1.8 Power Plant and Transmission Line: An enormous amount of electrical power would be required to run the Pebble Project Mine, Port Facilities, and pump stations for the slurry pipelines. According to the Pebble Project website (Northern Dynasty Mines, 2007) the power requirements for the Pebble mine would be 100 megawatts during construction and start up and 300 megawatts during operation. To put this in perspective the Pebble Project's projected power needs are 66% of Chugach Electric's highest ever peak load of 457 megawatts. Chugach Electric is Alaska's largest power producer, supplying electricity to nearly 75% of south central Alaska's population including the Homer Electric Cooperative. (Chugach Electric Association, 2006). Power for the Pebble Mine would be purchased from Homer Electric Association (HEA) and would be produced by a power plant at Nikiski and supplied to the mine via a 55 mile long submarine cable across Cook Inlet to the port site at Iniskin Bay and an 85 mile long transmission line from the port to the mine site (McGee, 2007 and Northern Dynasty Mines, 2007). One route for the transmission line would transect the Iniskin Peninsula from north to south. The source of the electricity that HEA would provide for the Pebble Mine has not been identified, but Northern Dynasty has stated that the initial 100 megawatts could be supplied from Homer Electrics current generating capacity and would not require any additional generating capacity. The additional 200 megawatts of power required for the Pebble Mine project would require HEA to acquire additional generating capacity.

2. TOXICITY OF COPPER, MERCURY, AND CYANIDE TO FISH AND AQUATIC LIFE

2.1 Overview: Of the three primary metals to be extracted from the Pebble Project ore, gold is benign. Molybdenum is generally reported in the literature to be acutely toxic to various adult fish species at relatively high concentrations (70 to over 2000ppm) but to have physiological effects at levels as low as 2.5 ppm. (Davies et al. 2005, Hamilton and Buhl, 1989 and Reid, 2002). However, copper and copper compounds are acutely toxic to fish and other aquatic life at low part per billion levels (ppb) (Eisler, 1991, Eisler, 2000, Environmental Protection Agency, 2007f, and Hamilton and Buhl, 1990).

Northern Dynasty has not provided information on the other metals and elements present in Pebble Ore. However, ground waters react chemically with rocks in their path and collect mobile components typical of the rocks they have passed through (Giblin, 2001). The analysis of water samples from the Pebble Mine area indicates that many of the other heavy metals and elements on the Environmental Protection Agency's list of priority pollutants including antimony, arsenic, cadmium, chromium, lead, mercury, nickel, selenium, and zinc are also present in ground and surface waters. (Northern Dynasty Mines Inc., 2005, Environmental Protection Agency, 2007 f). These other metals are also toxic to salmon and other fish at very low concentrations (Eisler, 2000).

The current levels of these metals in the surface and groundwaters draining the proposed Pebble Project site are measurable, but with the exception of copper and mercury, below levels known to be toxic to fish and aquatic life (Northern Dynasty Mines Inc., 2005). Mercury, which is present in the water at the Pebble Project site and is often found at elevated levels in and around mineralized areas, is a potent neurotoxin which presents a health threat to both aquatic life and humans (Munn and Short, 1997). Cyanide, commonly used in gold extraction, is one of the most rapidly acting lethal poisons known (Eisler, 1991).

A study of recently permitted large sulfide based copper and gold mines, found that mining often increases the concentrations of copper and other pollutants in ground and surface waters to levels that are toxic to fish and other aquatic life (Kuipers, et al. 2006).

Because copper and other heavy metals are already present in waters at the proposed Pebble Project site, and are toxic at extremely low levels even very small mining related increases from fugitive dust, groundwater contamination or acid mine drainage could increase the concentrations of pollutants to levels that are toxic to fish and aquatic life.

Mercury, biomagnifies, or increases in concentration as it moves up the food chain, and accumulates in the tissues of aquatic organisms such as fish. Several other metals in the deposit such as cadmium, arsenic, lead, and zinc also accumulate or build up in the tissue and organs of aquatic organisms (Sadiq, 1992 and Sorenson, 1991).

To understand how these mining related pollutants affect fish and aquatic life, three pollutants of particular concern, copper, mercury and cyanide, will be examined in greater detail. However, the same concerns apply to the other potentially harmful metals and pollutants likely present in

the ore body and already present in ground and surface water at the proposed Pebble Project Mine site.

2.2 Copper Toxicity: The element copper (Cu) is essential to the growth and metabolism of fish and other aquatic life, but may cause irreversible harm at levels slightly higher than those required for growth and reproduction (Eisler, 2000). The element copper (Cu) and many copper compounds when dissolved in water are toxic to fish and other aquatic life in the low part per billion to part per trillion range. Copper ions have acute toxic, chronic, and behavioral effects on fish and the aquatic life that they feed on. Research has shown that although salmon and trout will avoid low levels of copper in water, but do not avoid high levels of copper because it destroys their olfactory nerves and then kills them if their exposure is long enough.

Table 2 contains the Environmental Protection Agencies 2007 Updated Aquatic Life Copper Criteria species mean acute and chronic toxicity copper levels for the same genus or species of aquatic organisms present in the Pebble Project area

Table 2: EPA 2007 Updated Copper Toxicity To Selected Species

	Acute Toxicity (ug/l)	Chronic Toxicity (ug/l)
Cladoceran (Daphnia sp.)	6	8.96
Amphipods	9.6	
Pink Salmon	40.13	
Coho Salmon	22.93	
Rainbow Trout	22.19	11.9
Sockeye Salmon	54.82	
Chinook Salmon	25.02	
Bull Trout (Salveliuns confluents)	25.02	19.7
Brook Trout (Salvelinu us fontinalis)		60.4
Northern Pike (Esox lucius)		

n

Note: The EPA site did not list detrimental behavioral effect of copper even though those effects are documented in the scientific literature.

2.2.1 Factors Affecting Copper Toxicity: Researchers have found that copper toxicity to freshwater fish and other aquatic life is affected by several factors including hardness, alkalinity, pH, water temperature, organic and inorganic complexation, ,synergistic effects with other metals such as zinc and age, size and species of fish (Environmental Protection Agency, 2007i, Chakoumas, et al.1979 and Eisler, 2000). Water hardness, alkalinity and pH are interrelated and appear to be particularly important. Because of the variability in individual species tolerance and the effect of water hardness on toxicity some researchers have recommended that copper criteria should be developed on a site specific basis (Finlayson and Verrue, 1982). For example, in tests to determine the relative sensitivity of bull trout (Salvelinus confluentus) and rainbow trout to acute copper toxicity, bull trout were found to be as sensitive to copper mortality as rainbow trout at water hardness levels of 100 ppm of $CaCO_3$, but 2.5 to 4 times less sensitive at 220 ppm $CaCO_3$ (Hansen et. al, 2001).

Hardness is a measure of dissolved calcium and magnesium in water. Alkalinity is a measure of the capacity of water to neutralize acid. Potential of Hydrogen or pH is a measure of the acidity or alkalinity of water. The ADEC acute and chronic copper Aquatic Life Criteria for Freshwater is calculated from a formula based on the hardness of the receiving waters (Alaska Department of Environmental Conservation, 2003

Hardness: The toxicity of dissolved copper to fish is dependent on the concentrations of dissolved calcium and magnesium in water, or hardness (Alaska Department of Environmental Conservation Water Quality Criteria Manual, 2003). Copper and certain other metals such as cadmium are more toxic to fish in soft waters than in hard water (Chakoumas, R. et al. 1979, Sayer, et al. 1989, Lauren, D. and D. McDonald, 1986, Lauren, D. and D. McDonald, 1984,Waiwood, K. and F. Beamish, 1978, and Howarth, R. and J. Sprague, 1978. Water with 0-60 ppm as calcium is considered soft, 61 to 120 ppm is moderately hard, and 121 and above as hard to very hard (USGS, 2007). Hardness concentrations reported by Northern Dynasty ranged from 4.3 to 24.9 ppm in the North Fork of the Koktuli River, from 8.6 to 29.1 ppm in the South Fork of the Koktuli River, and from 10 to 45.2 ppm in Upper Talarik Creek (Northern Dynasty Mines, 2005 Water Chemistry Report). These water samples fall within the soft to moderately soft range. The fresh water aquatic life copper criterion contained in the ADEC Alaska Water Quality Criteria Manual were used to calculate the acute and chronic toxicity levels for copper for the hardness levels reported for Upper Talarik Creek, and the North and South Forks of the Koktuli River (ADEC, 2003). For the low and high hardness concentrations reports for these streams the acute fresh water aquatic life criteria for dissolved copper range from 0.722 ppb to 6.36 ppb, and the 4 day chronic criteria range from 0.600 ppb to 4.54 ppb. Dissolved copper levels in some of the water samples from all four streams exceeded the lowest ADEC Freshwater Aquatic Life Criteria for these hardness levels, including one location on the South Fork Koktuli River which exceeded the lowest water quality criteria on all but one sampling period. Copper levels at this site were between 2.5 to 4.9 ppb (Northern Dynasty Mines, 2005). Because Pebble Mine Area surface waters are relatively soft, lower concentrations of copper will be toxic to salmon and other species of fish.

Alkalinity: The acute and chronic toxicity of copper is also inversely correlated with alkalinity (Chakoumakos et al. 1979 and Lauren and McDonald, 1986). Alkalinity is a measure of the capacity of substances (usually bicarbonate and carbonate) dissolved in water to neutralize acidic pollution such as acid mine drainage. Alkalinity is important because it protects or buffers against rapid pH changes that are harmful to fish and other aquatic life. When acid is introduced the pH levels in low alkalinity streams can drop to a point which eliminates fish and acid intolerant forms of aquatic life. Copper is more toxic at low alkalinity levels and increasing alkalinity levels reduces copper toxicity in rainbow trout and Chinook salmon (Lauren, D. and D. McDonald, 1986 and Welch et al 2000). For protection of aquatic life the alkalinity should be at least 20 ppm calcium carbonate equivalent (Alaska Department of Environmental Conservation, 2003). Alkalinity concentrations in the Pebble Project study area (reported as equivalent concentrations of CaCO3) ranged from 11 to 32 ppm for the North Fork of the Koktuli River, from 7.0 to 35 ppm for the South Fork of the Koktuli River, and from 16 to 56 ppm for Upper Talarik Creek(Northern Dynasty, 2005). Although, site specific sampling data was not available, Northern Dynasty reports that most of the main stem sampling sites exceeded the minimum chronic aquatic-life criteria of 20ppm during the May through October sampling period

(Northern Dynasty, 2005). However, some of the sampling locations were clearly well below the minimum 20ppm criteria for protection, and no data was provided during the winter low flow periods when alkalinity levels might be lower or higher. (Sutcliffe and Carrick, 1998). To fully evaluate this issue water quality data needs to be collected throughout the year and during high and low stream flows.

pH: The toxicity of copper and certain other heavy metals is inversely correlated with the pH (i.e. copper is more toxic in acidic waters) (Welch et al. 1993, Lauren and McDonald 1986). The pH reflects the acidity or the alkalinity of a solution. The pH scale ranges from 0 to 14. A pH of 7 is considered neutral, pH numbers below 7 indicate an acidic solution and above 7 an alkaline solution. The ADEC Water Quality Standard For Designated Uses states that pH for Growth and Propagation of Fish, Shellfish , and Other Aquatic Life, " May not be less than 6.5 or greater than 8.5 and may not vary more than 0.5 pH from natural conditions." Northern Dynasty 2005, reported that pH levels ranged from 7.0 to 8.1 in the in the North Fork Koktuli River, from 6.6 to 8.4 in the South Fork Koktuli River, and from 6.8 to 7.7 in Upper Talarik Creek. Although, pH levels are currently in the slightly acidic to slightly alkaline range, the low alkalinity levels reported for these stream indicates a limited capacity to prevent harmful changes in pH if acid mine drainage occurs.

2.2.2 Acute Toxicity: Copper is a serious pollutant in the aquatic environment and its toxicity to important species has been well studied. (Sorenson, 1991, and Eisler, 2000). Exposure to copper causes ionoregulatory and respiratory problems in freshwater fish. Exposure to 49 ppb of dissolved copper for 24 hours caused a rapid decline in blood sodium, chloride, and oxygen tension and increased heart beat in rainbow trout. At the same time arterial blood pressure doubled. Heart failure caused death. Because gill tissue controls oxygen and electrolyte levels in fish, these changes were probably caused by gill tissue damage observed in fish which were exposed to copper (Wilson and Taylor, 1992).

Researchers at EPA's Corvallis Environmental Research Laboratory found that dissolved copper (Cu) is acutely toxic to juvenile Chinook salmon and steelhead trout at levels of 17 to 38 ppb of copper. Steelhead trout *(Onchorynchus mykiss)* are more sensitive than Chinook salmon *(Onchorynchus tshawytscha)*, and salmon fry and smolt are more sensitive than newly hatched alevins (Chapman, G.A., 1978). They also found that copper is acutely toxic to adult male Coho salmon and adult male steelhead at 46 and 57 ppb respectively (Chapman, G.A. and D.G. Stevens, 1978). California Department of Fish and Game toxicologists found that median lethal concentrations for juvenile Chinook salmon in 96 hour flow through tests were 26 to 34 ppb of copper.

When exposed to copper, the incipient lethal level was between 37 and 78 ppb for sockeye salmon but between 25 and 55 ppb for pink salmon during the egg to fry stage. Growth and hatching were no better than mortality as indicators of toxic effects of copper. Copper inhibited egg capsule softening, but associated mortalities during hatching occurred only at concentrations also lethal to eggs and alevins. Copper was concentrated by eggs, alevins and fry in proportion to exposure concentrations. Copper concentrations of 105 and 6.8 ppm in pink salmon eyed eggs and fry, respectively, coincided with mortalities. (Servizi, J.A. and

D.W. Martens, 1978). Several studies found that salmon fry, smolt and adults acute copper toxicities were lower than developing eggs.

Canadian researchers conducted tests in artificial stream to determine the attraction and avoidance responses of rainbow trout to lethal copper concentrations (0.5 to 4.0 ppm) over 96 hours (Pedder, S. C. J. and E. J. Maly, 1985). At all concentrations, there was an initial attraction period for copper and then subsequent avoidance of the more highly contaminated waters. Attraction was greatest in tests employing higher concentrations (3.0 and 4.0 ppm) of copper; but this attraction led to high mortality. These results indicate that observed trout behavior subsequent to copper discharges contributed to high mortality. The results also suggest that behavioral response of organisms to toxicants must be incorporated into work attempting to set reasonable water-quality standards in natural water bodies (Pedder, S. C. J. and E. J. Maly, 1985).

2.2.3 Chronic Toxicity: Exposure to elevated, but sublethal, levels of copper reduces the viability and increases the mortality rate of salmon and other fishes over time. For example, Coho salmon, which were exposed to sublethal levels of aqueous copper (1/4 and 1/2 of the dose which killed one half of the population in 4 days (LC50), lost their appetite and ceased growing or showed decreased rates of growth (Buckley, J.T. et al. 1982).

Copper is broadly toxic to the salmon olfactory nervous system (Baldwin, D.H. et al. 2003). Exposure to 1.0 to 20.0 ppb copper impaired the neurophysical responses of juvenile Coho salmon olfactory receptor neurons to natural odorants within 10 minutes of exposure. The inhibitory effects of copper were dose dependent but were not influenced by water hardness. Toxic thresholds for the different receptor pathways were found to be 2.3 to 3.0 ppb over background. Short term influxes of copper to surface waters appear to interfere with olfactory senses that are critical for spawning, feeding, predation avoidance, and migration of wild salmonids (Baldwin, D.H. et al. 2003).

In laboratory tests exposure to 25 to 300 ppb of copper significantly reduced the number of olfactory receptors in Chinook salmon and rainbow trout due to cellular necrosis (death of cells). These levels caused histological damage and neurological impairment to the olfactory system that these fish require for survival. Chinook salmon olfactory receptors were found to be harmed by lower does of copper (50 ppb) than rainbow trout (200 ppb). Chinook salmon were more susceptible to olfactory damage at lower levels of copper than rainbow trout in copper contaminated waters (Hansen, J.A. et al. 1998).

Exposure to low levels of dissolved copper reduces the resistance of rainbow trout to disease. The effect of exposure to sublethal concentrations of copper (6.4, 16.0, and 29 ppb) on the immune systems of rainbow trout was measured after 3, 7, 14, and 21 days of exposure by researchers at the University of California Davis (Dethloff and Bailey, 1989). They found that the immune system was altered at all concentrations with the greatest effects at higher concentrations. Consistent alterations in immunological parameters suggest that these parameters could serve as indicators of chronic metal toxicity in natural systems (Dethloff and Bailey, 1998).

Exposure of Chinook salmon and rainbow trout to sublethal levels of copper increased their susceptibility to *Vibrio anguillarum* infections: Vibrio is a serious disease of fish. Exposure levels were 9% (parts per trillion range) of the copper LC50 for 96 hours. Vibriosis mortality was also greater in exposed fish than unexposed fish. Rainbow trout stressed by copper required 50% less pathogens to induce a fatal infection than non-exposed fish (Baker, R.J. et al. 1983). Exposure of rainbow trout to sublethal levels of copper in water increased their susceptibility to infectious hematopoietic necrosis (IHN) virus. In most instances, the percent mortality was twice as great in the stressed groups compared with those groups which were not stressed but received the same virus dose. Although the level of copper in the water influenced the mortality rates, the length of exposure did not prove to be critical, as similar results were obtained after 1, 3, 5, 7, or 9 days of exposure. When different virus challenges were employed, the percent mortalities were again greater in the stressed fish at all virus doses tested, and at one dose, mortalities were noted in the stressed group but not in the untreated group (Hetrick. et al. 1979).

2.2.4 Behavioral Effects: Exposure to sub lethal levels of copper can have a detrimental effect on the behavior of salmonids, and reduce their survival. Rainbow trout which were exposed to copper and nickel solutions in a linear Plexiglas chamber with countercurrent flow avoided copper concentrations of 6.4 ppb total copper (Giattina et al. 1982). When copper concentrations were gradually increased, rainbow trout initially avoided low copper concentrations, but were attracted to higher concentrations (330-390 ppb) that are considered lethal. The 24-hour average concentration of these two metals presently considered adequate for the protection of freshwater aquatic life fell within the 95% confidence limits for threshold avoidance concentrations. This suggests that environmental impacts predicted on the basis of toxicity tests alone do not reflect potentially important behavioral changes caused by sub chronic concentrations of copper and nickel. Avoidance tests, therefore, may prove to be a valuable tool for screening toxic chemicals, providing additional information and a broader perspective for evaluating the impact of aquatic contaminants on fishery resources (Giattina, et al. 1982).

Tests of the responses of Chinook salmon and rainbow trout to sub lethal levels of copper, cobalt, and a mixture of copper and cobalt found that behavioral avoidance of copper varied greatly between Chinook salmon and rainbow trout in soft water (less than 40 ppm hardness). Chinook salmon avoided at least 0.7 ppb of copper, whereas rainbow trout avoided at least 1.6 ppb copper. Furthermore, following acclimation to 2 ppb of copper, rainbow trout avoided 4 ppb of copper and preferred clean water, but Chinook salmon failed to avoid any copper concentrations and did not prefer clean water. The failure to avoid high concentrations of metals by both species suggests that the sensory mechanism responsible for avoidance responses was impaired. Exposure to copper concentrations that were not avoided could result in lethality from prolonged copper exposure or in impairment of sensory-dependent behaviors that are essential for survival and reproduction (Hansen. et.al.1999).

The spawning migration of adult male Chinook salmon was monitored by radio telemetry to determine their response to the presence of copper, lead, zinc and cadmium contamination in the South Fork of the Coeur d'Alene River, in Idaho. The majority of the fish avoided the contaminated South Fork and moved up the non-contaminated North Fork to spawn. Metals levels in the South Fork waters were cadmium 6.90ppb, copper 2.0 ppb lead 23.0 ppb and zinc 2,220 ppb at hardness of 108 ppm. The results agree with laboratory findings that wild fish will

avoid spawning streams with high levels of metals contamination (Goldstein, et al. 1999). The results were also consistent with a study of wild Atlantic salmon (Salmo salar) which demonstrated that spawning salmon avoided sublethal concentrations of copper and zinc in a stream contaminated by a base metal mine by returning downstream prematurely (Saunders and Sprague, 1967).

To put the potential for behavioral effects in context, background median dissolved copper levels reported in the 2004 Northern Dynasty Water Chemistry report ranged between 0.28 and 1.88 ppb (Northern Dynasty Mines, 2005). However, dissolved copper levels in some of the water samples from the North and South Forks of the Koktuli River and Upper Talarik Creek streams exceeded the lowest ADEC Freshwater Aquatic Life Criteria for these hardness levels, including one location on the South Fork Koktuli River which exceeded the lowest water quality criteria on all but one sampling period. Copper levels at this site were between 2.5 to 4.9 ppb (Northern Dynasty Mines, 2005).

2.3 Mercury Toxicity: The element mercury is a heavy metal that has no known metabolic purpose and is toxic to living organisms (United States Geological Survey, 1994). Mercury occurs in many areas of southwestern Alaska and has been found in surface and ground water in the Pebble Mine area (United States Geological Survey, 1994, Northern Dynasty, 2005). Mercury is harmless in insoluble forms such as mercuric sulfide, but is poisonous in soluble forms such as mercuric chloride or methylmercury. Most authorities agree on six points (Eisler, 1987):

- mercury and its compounds have no known biological function and the presence of metal in the cells of living organisms is undesirable and potentially hazardous;

- forms of mercury with relatively low toxicity can be transformed into forms of very high toxicity, such as methylmercury, through biological and other processes;

- mercury can be bioconcentrated in organisms and biomagnified through the food chain;

- mercury is a mutagen, teratogen, and carcinogen, and causes embroycidal, cytochemical, and histopathological effects;

- some species of fish and wildlife contain high levels of mercury that are not attributable to human activities; and

- human use of mercury should be curtailed because the difference between tolerable natural background levels of mercury and harmful effects in the environment is exceptionally small

Mercury is of particular concern because mining may increase the amount of mercury in the environment (Maprani, et.al. 2003, Sexauer et al. 2003, National Risk Management Research Laboratory, 2003 and Earthworks, 2007) and mercury levels in organisms tend to increase (biomagnify) as it moves up the food chain and build up (bioaccumulate) in predatory fish such as coho salmon, trout and pike which feed on insects and small fishes containing mercury

(Wren and McCrimmon, 1986). The toxicity of mercury to salmon, trout, and other aquatic organisms is affected by the form of mercury, environmental conditions, and the sensitivity of the individual species and life stage (NOAA, 1996). Toxilogical effects include neurological damage, reproductive impairment, growth inhibition, developmental abnormalities, and altered behavioral responses (NOAA, 1996).

Mercury is not only toxic to aquatic life, but it is very toxic to humans and animals that consume fish. Consumption of methylated mercury contaminated fish led to the poisoning of Japanese fisherman and their families in Minamata, Japan, in the 1950s. The U.S. Food and Drug Administration (FDA) recommends that pregnant women and those who may become pregnant, avoid eating any fish species known to contain elevated levels of methylmercury, an organic form of mercury that can accumulate in the food chain. The deleterious effects of mercury consumed by animals that eat fish include reproductive failure, damage to intestines, stomach disruption, DNA alteration, and kidney damage. Methylmercury is also known to cause nerve damage.

2.3.1 Acute Toxicity: Alaska Department of Environmental Conservation (ADEC) Aquatic Life Criteria for Fresh Waters one hour average for acute mercury toxicity is 1.4 ppb (ADEC, 2003). In tests, concentrations of total mercury lethal to aquatic organisms range from 0.1 to 2.0 ppb mercury per liter of water (Eisler, 1987). Survival of rainbow trout (*Oncorhynchus mykiss*) alevins hatched from eggs exposed to 0.24 ppb mercuric chloride was significantly reduced (Birge, et al. 1979). Rainbow trout eggs exposed to mercuric chloride in sediments (0.18 ppb-107 ppb) and in the overlying water (0.25 ppb-6.4 ppb) experienced 55-100% mortality in 10 days (Birge, et al. 1979). Brook trout (*Salvelinus fontinalis)* exposed to 0.93 ppb in the water column experienced increased mortality and deformities, and stopped spawning (McKim, et al. 1976).

2.3.2 Chronic Toxicity: The presence of sublethal levels of organic mercury in lakes and streams affects the health and survivability of wild fishes. At comparatively low concentrations mercury adversely affects the reproduction, growth, behavior, metabolism, blood chemistry and oxygen exchange of fish (Eisler, 1987). Reproduction is inhibited among sensitive species at water concentrations of 0.03-1.6 ppb Eisler, 1979). Fathead minnows (*Pimpephales promelas*) which were exposed to 0.12 ppm methylmercury per liter of water for 3 months failed to reproduce (Birge, 1979) Brook trout (*Salvelinus fontinalis*) exposed to 0.93ppm methymercuric chloride in the water column stopped spawning (McKim et al. 1976). Reduced growth of sensitive species of aquatic organisms has occurred at concentrations of 0.04 to 1.0 ppb of mercury per liter of water. Growth reduction in rainbow trout (*Oncorhynchus mykiss*) was observed after 64 days of exposure to 0.04 ppb of methylmercury in water (Eisler, 1987).

The ADEC four day chronic toxicity criteria for mercury in freshwater is 0.77ppb, but it is noted that this may be under protective if a substantial part of the mercury in the water column is methyl mercury. (ADEC, 2003).

2.3.3 Behavioral Effects: The presence of very low levels of mercury in the water column can alter the behavior of fish in a manner that reduces their survival. After 24 hour exposure to 100, 50, and 10 ppb of mercury, the ability of mosquito fish to avoid predation by bass was

impaired. The degree of effect showed positive correlation with mercury concentration (Kania and O'Hara, 1974). Golden shiners (*Notemigonus crysoleucas)* which were fed a diet containing 959 ng (0.959 ppb) of methylmercury per gram of food for 90 days accumulated 518 ng (0.518ppb) of mercury per gram of body tissue. The predator avoidance behavior of these fish was also substantially altered. The authors concluded that mercury exposure at levels currently occurring in many lakes in the northern United States alters fish predator avoidance behavior in a manner that may increase vulnerability to predation, and has significant implications for food chain transfer of mercury to predators (Webber and Haines, 2003).

2.3.4 Mercury is Altered, Absorbed and Concentrated by Aquatic Organisms: A concern is that Pebble Project mining might release small amounts of mercury into nearby lakes and streams that would be converted to methylmercury and biomagnified to levels which would be harmful to aquatic life. Methylmercury is the most toxic form of mercury and it bioaccmulates and biomagnifies as it moves through the aquatic food chain (Wren and McCrimmon, 1986, Neuman and Ward, 1999). The mercuric ion combines with other inorganic and organic ions or molecular groups, and can be methylated (NOAA, 2005). Methylation in aquatic habitats is primarily a biological process. Microorganisms are able to convert the mercury that reaches surface water to methyl mercury and most organisms absorb this substance quickly. Fish are among the organisms that absorb methyl mercury from water. Rainbow trout, which were exposed to methyl mercury for 24 days, steadily accumulated mercury over the entire time period. Exposure was through (0.07-1.33 ug Hg/L) solutions in water, through food consumption (8.0-380.5 ng of Hg/L), or both. Nearly 70% of the methyl mercury ingested and 10% of the methyl mercury passing over the gills was assimilated by the rainbow trout and incorporated in their tissue (Phillips and Butler, 1978).

Mercury in the water column is accumulated by bacteria, aquatic plants, invertebrates, fish and mammals, and the concentration of mercury in the tissue of these species tends to increase with increasing trophic levels. This process is known as biomagnification. Even though mercury levels in the water column may be relatively low, methylmercury accumulates quickly and depurates very slowly in aquatic organisms (NOAA, 2005). As a result methylmercury often reaches very high levels in higher trophic species such as predatory fish, and birds and mammals that feed on fish. (Wren and McCrimmon, 1986, Neuman and Ward, 1999).

The percentage of methylmercury in tissue, as compared to total mercury, also increases with age in both fish and invertebrates. This is called bioaccumulation. Methylmercury levels in adult predatory fish may reach up to 100,000 times the levels in the water column (Eisler, 1987).

2.3.5 Present Levels of Mercury: Ground water samples taken near the Pebble West ore body had mercury levels that were 1.6 to 2.4 times the ADEC criteria for maximum allowable human health levels of trace metals in ground water of 50 parts per trillion (ppt) mercury (Northern Dynasty Mines, 2005). This is an indication that mercury is present in the rock and is being released into the ground water (Giblin, 2001). Because NDM has said that the mine would not intentionally discharge any water over its life and if they are successful in preventing contaminated ground water from leaving the mine site, much of this water and the mercury in it would ultimately end up stored in the tailings storage facilities.

Measurable levels of mercury have also been found in the waters of Upper Talarik Creek (0.0049 ppb), North Fork Koktuli River (0.0048 ppb), and South Fork Koktuli River (0.0053 ppb) Northern Dynasty Mines, 2005). These levels show that mercury is already present in the mine area, but in concentrations below the ADEC human health standards for drinking water and aquatic organisms of 0.050 ppb. However, it should be noted that the ADEC mercury standards for Alaska are higher than the human health and water quality standards set by the Great Lakes States. The human health criterion adopted by the Great Lakes States is 3.1 ng/L which is equivalent to a fish residue value of 0.035 ug of methyl mercury per gram of fish tissue. The water quality standard for fish and wildlife is 1.3ng/l or 0.013ppb.

Mercury was found to be present in tissue samples from Chinook and coho salmon, Dolly Varden, grayling, and northern pike taken from the North and South Forks of the Koktuli River (including Frying Pan and Big Wiggly Lakes), and Upper Talarik Creek drainages, (McLarnon, 2006). Mercury levels reported for all species appear to be well below the Food and Drug Administration human consumption action limit of 1.0 mg/kg (1 part per million wet weight) action level, except for large northern pike. Methylmercury concentrations in muscle tissue of large pike from Big Wiggly and Frying Pan Lakes were as high as 0.625 mg/kg.

The higher levels of mercury in the largest pike are consistent with previous studies which have shown that mercury bioaccumulates and that mercury levels are highest in long lived large predatory fish. The levels of mercury in northern pike muscle tissue from Big Wiggly and Frying Pan Lakes, however, exceed mercury levels in walleyes *(Stizostedion vitreum)* from Franklin D. Roosevelt Lake, a reservoir on the Columbia River, and from the upper Columbia River, an area contaminated by wastes from metal mining and associated processing activities. Mercury concentrations in walleye muscle from the Colombia river study area ranged from 0.11 to 0.44 mg/kg (wet weight) and were positively correlated with age, weight, and length of the walleye (Munn, M. and T. Short, 1997). In comparison, mean tissue concentrations of mercury in predatory fish such as walleye, northern pike, and bass from mercury contaminated areas of the Great Lakes were greater than 0.5 mg/kg with maximum levels exceeding 2 mg/kg in 1998 (Environmental Protection Agency, 2001 and International Joint Commission, 2004). The 2006 HDR report did not provide any data on mercury levels in large grayling or Dolly Varden from Upper Talarik Creek or the North and South Forks of the Koktuli River, so it is not known if they have also accumulated higher levels of mercury. Mercury levels in small juvenile resident fish and juvenile salmon were relatively low, which is to be expected because of the limited time they were exposed to mercury in the water.

2.4 Cyanide Toxicity: Cyanide in its commonly found compounds and breakdown components are toxic to fish and other aquatic life at very low levels. A cyanide is a substance that is found in combination with other chemicals in the environment. A cyanide is any chemical compound that contains the cyano group CN consisting of a carbon atom triple bonded to a nitrogen atom. There are many types of cyanide compounds but the most common are potassium, sodium, and calcium cyanide. Cyanide compounds that can release the cyanide ion are highly toxic

Cyanide compounds are widely used by the mining industry to assist in the extraction of both precious and non-precious metals from rock. Consequently, cyanide and related compounds

often are contained in discarded mine wastes, or enter surface waters through spills (Moran, R., 1998). Fish kills from accidental discharges of cyanide are common (Eisler, et al. 1999).

Cyanide in waste water discharges from mines is often measured using the weak acid dissociable (WAD) analytical procedure (ICMI, 2007). The WAD analysis measures free and weakly complexed forms of cyanide. The WAD procedure has been adopted by industry and regulatory agencies because it is believed to measure the toxicologically significant forms of cyanide.

The use of the WAD procedure, however, may fail to detect other forms of cyanide and certain toxic breakdown products of cyanide (Moran and Brackett, 1998). Cyanide also tends to react readily with many other chemical elements, and is known to form, at a minimum, hundreds of different compounds. (Flynn and Haslem, 1995). The toxicity of complex cyanides is usually, but not always, low, but the degradation products often include free cyanides which are toxic. Free cyanides readily degrade in the open environment but persist in groundwater. Many of these cyanide-related breakdown compounds, while generally less toxic than the original cyanide, are known to be toxic to aquatic organisms. In addition, they may persist in the environment for long periods of time, and there is evidence that some forms of these compounds can be accumulated in plant (Eisler, 1991) and fish tissues (Heming, 1989). Despite the risks posed by these cyanide-related breakdown compounds, regulatory agencies may not require mine operators to monitor this group of chemicals in mining-related waters. Therefore, while much of the cyanide used at mining sites does break down fairly readily, either as a result of natural degradation or the various treatment processes sometimes employed, significant amounts of the original cyanide may form potentially toxic compounds that remain (Eisler, 1991. "Water samples from mining sites where cyanide is used as a process chemical may have WAD and/or total cyanide concentrations that are quite low or undetected, yet when the same samples are analyzed specifically for cyanates and thiocyanates, they may show tens of milligrams per liter (ppm) or more of these compounds." (Moran and Brackett, 1998).

2.4.1 Acute Toxicity: Cyanide toxicity is caused by the free cyanides (HCN and CN-) that inhibit cytochrome oxidase and thereby suppress aerobic respiration at the cellular level. Death comes from failure of the heart and central nervous system. The Environmental Protection Agency's acute toxic criteria for freshwater is 22 ppb (Environmental Protection Agency, 2007f).

Fish are the most susceptible organisms and sensitive species exhibit lethal effects at as low as 20 to 76 ppb. Juvenile Atlantic salmon exposed to mixtures of cyanide and ammonia in freshwater for 24 hours were killed by 73 ppb of cyanide (Alabaster et al., 1983). The lethal toxicity of cyanide to juvenile rainbow trout varied from 52 ppb for trout that received exercise before exposure, to 43 ppb for trout which didn't (McGeachy, S. and G. Leduc, 1988). Free cyanide levels apparently do not increase in an organism or in the food chain over time, as many heavy metals do. Free cyanides are toxic to aquatic plants (phytotoxic) but at higher concentrations than those associated with adverse effects in fish (Eisler, 1991).

2.4.2 Chronic Toxicity: The Environmental Protection Agency's chronic toxic criterion for cyanide is 5.2 ppb (Environmental Protection Agency, 2007h). Sublethal effects of cyanide in fish include reduced reproductive capacity (decreased egg number and viability, and reduced

embryo and larval survival), impaired swimming ability, altered growth, and hepatic necrosis (Eisler, 1999). Growth of juvenile rainbow trout was reduced by 40 to 95% when exposed to hydrogen cyanide concentrations (HCN) of 20 and 30 ppb respectively for 18 days (Dixon, D. and G. Leduc, 1981). In the same study, liver damage occurred at HCN concentrations as low as 10 ppb.

Canadian scientists found that exposing male juvenile rainbow trout to concentrations of 10 to 30 ppb of HCN reduced the number of dividing spermatogonia in the testes by 13 and 50% respectively (Ruby, S. et al. 1979). They concluded "that short term exposure to sublethal concentrations of cyanide may cause permanent damage to the fixed number of primary spermatogonia within the testes, thereby reducing the reproductive capacity of the species." Exposure to sublethal levels of cyanide to a fungal pathogen increased infections in adult rainbow trout by 33% over the control (Carrballo, et al. 1995).

2.4.3 Behavioral Effects: Information on the behavioral effects of very low levels of cyanide on fish and other aquatic life is limited, probably due to its toxicity. Cyanide has a strong, immediate and long lasting inhibitory effect on the swimming ability of fish, leaving them vulnerable to predation and unable to feed efficiently (Leduc, 1984). Free cyanide concentrations as low as 10 ppb can rapidly and irreversibly impair the swimming ability of salmonids in well aerated water (Doudoroff, 1976). Osmoregulatory disturbances which were detected at HCN concentrations as low as 10 ppb, may affect migratory patterns, feeding and predator avoidance (Leduc, et al. 1982, Leduc, 1984). Loss of swimming ability, feeding ability and ability to avoid predators will reduce survival.

3. SOURCES, PATHWAYS, AND EXAMPLES OF POLLUTION FROM RECENTLY PERMITTED MINES

3.1 Overview: Based on an extensive review of the literature, the Kuipers Report and EPA records it appears that most or all sulfide ore body mines in areas where the sulfides are exposed to precipitation, ground or surface water pollute, and the only question is the degree to which they pollute and how much damage occurs (Kuipers, et al. 2006, and ADN, 8/2/2006). Annual precipitation in the Pebble Project area is projected to be 36 inches including 64 inches of snow fall (Northern Dynasty Mines, 2005, and ADCED. 2007). The water table is high and the valley floors at the project site are dotted with numerous small streams, lakes, ponds and wetlands.

There are several ways that metallic and acid pollution from sulfide ore body mines has entered surface and groundwater. These include chronic leaks of acid and heavy metal contaminated water from tunnels and mine pit walls before and after mine closure; chronic leaks from tailings piles and tailings storage areas; discharges from treatment facilities catastrophic failures of tailings dams and storage areas; slurry pipeline breaks; fugitive dust; and, failure of pollution control measures after closure or abandonment (Lottermoser, 2003).

The scale of the Pebble Mine; the amount of precipitation at the mine site; the high water table, the nature and location of the ore body: and the value of the fishery resources in the area likely to be affected by the mine , mean that the common pollution control problems associated with

sulfide mines elsewhere in the U.S. and Canada, and the risks associated with chronic or catastrophic leakage would be magnified many times (Leslie, 1989, Environmental Protection Agency, 1994b and Environmental Protection Agency, 2007i).

3.2 Acid Mine Drainage: Copper sulfide mines are often sources of acid mine drainage (U.S. Office of Surface Mining Reclamation and Enforcement, 2007). Acid mine drainage at copper mines in the United States and Canada is a serious problem. Acid mine drainage from recently permitted mines has contaminated ground and surface waters and eliminated salmon and aquatic life from thousands of miles of formerly productive streams in the United States (Environmental Protection Agency, 1994b and Environmental Protection Agency, 2007i).

Because the Pebble Copper Deposit is compromised of sulfide ore it presents a high risk of developing acid mine drainage (Environmental Protection Agency, 1994b). Open pit and subsurface mining of the Pebble Copper ore body will largely occur below the water table which is very near the surface in the project area. After the mine is closed pumps, collection systems and treatment facilities will have to be maintained in perpetuity, or water will flood the mine pit and tunnels and leak into ground and surface waters (Younger, 2002). This introduction of water is the initial step in most acid rock drainage situations, where the sulfides in the waste rock and mine walls has already oxidized (Morin and Hutt, 2001). Because of the sulfide content in the mine walls if the pit fills with water there is a good chance that will develop acid sulfide conditions with high levels of dissolved metals (Northern Dynasty Mines, 2005 and Castro, J and J. Moore, 2000). Unless the tailings dams holding billions of tons of mine waste and complex systems of drains, collection systems, and pumps which collect and return leakage back into the impoundments are successfully maintained in perpetuity, the waste will eventually leak into the ground water and adjacent streams. The mine could develop an acid mine drainage problem over its 40 to 70 year life or, more likely, after it is closed or abandoned and turned back to the State of Alaska.

When the copper and iron sulfides (pyrite) in chalcopyrite and bornite ores or mine waste are exposed to oxygen rich water, the sulfide oxidizes to sulfate, the iron oxidizes to iron oxide or hydroxide, and sulfuric acid is released (Environmental Protection Agency, 1994b). Copper, nickel, zinc and other metals present dissolve in the acid water. Colonies of bacteria and other organisms also contribute to the generation of acid equivalents. These microbes occur naturally in the rock, but the limited amount of oxygen and water present keeps their numbers low. Before mining, the acid generation process is slow and the amount of metals entering ground water is low because of the limited surface of the ore body exposed to oxygen and water. However, after mining breaks up the ore body and powders the ore, the amount of surface exposed to oxygen and the speed of the process increases exponentially (U.S. Office of Surface Mining Reclamation and Enforcement, 2007).

Although, several chemical processes contribute to the formation of acid mine drainage, pyrite oxidation is the primary contributor. The following four equations are accepted to explain the pyrite oxidation process (Acid Mine Drainage Technology Initiative, 2007).

Equation 1 $FeS2 + 7/2\ O2 + H2O = Fe2+ + 2\ SO_4^{2-} + 2\ H+$
Equation 2 $Fe2+ + 1/4\ O2 + H+ = Fe3+ + ½\ H2O$

Equation 3 $Fe^{3+} + 3\ H_2O = Fe(OH)_3 + 3\ H^+$
Equation 4 $FeS_2 + 14\ Fe^{3+} + 8\ H_2O = 15\ Fe^{2+} + 2\ SO_4^{2-} + 16\ H^+$

The sulfide ore, when exposed to water and oxygen, reacts to form iron ions and sulfuric acid (H_2SO_4). This reaction is catalyzed by the bacteria *Thiobacillus ferrooxidans* (Ohmura et al. 1993). Each molecule of sulfuric acid can then dissociate to produce two acid equivalents (U.S. Office of Surface Mining, Reclamation, and Enforcement, 2007). In some mines the heat from this reaction has produced temperatures of 120 degrees and the pH has gone as low as -3.6. The chemistry of the oxidation of pyretic ores subsequently reactions of iron ions, is very complex and this complexity has inhibited the development of effective treatments for acid mine drainage.

The sulfide based chalcopyrite and bornite ores which comprise the Pebble Claims will generate acid when exposed to air and water (Acid Drainage Technology Initiative, 2007 and Environmental Protection Agency, 1994b). On page 8-11 of the Northern Dynasty Mines 2004 **Progress Report on Geochemical Characterization and ARD/ML** the report states that, "Evidence that oxidation (of core samples from the ore body) has occurred in storage is illustrated by the general increase in sulfate sulfur relative to sulfur as the age of the core increased (Figure 6). The oxidized core (95^{th} percentile) indicates that as much as 50 percent of sulfur in the core has oxidized, though typically no more than 3 percent has oxidized, indicating that oxidation can be expected to continue for many decades if the core is exposed to weathering." The regression line for the 50^{th} percentile implies that if core had been produced in 1983 it would be acidic." (Northern Dynasty Mines, 2005). The report summary concludes, "Testing of rock core with variable ages (1 to 15 years) stored at the site showed progressive oxidation by the conversion of sulfide to sulfate and decreasing neutralization potentials. Based on these results the overall time frame for acidification of waste rock at Pebble Project appears to be from 0 to 40 years," (Northern Dynasty Mines, 2005).

The Northern Dynasty's 2004 progress report also indicates that the mine will produce two kinds of waste rock: un-mineralized overburden which will be a minority of the waste rock, and non economic mineralized rock from in and around the ore body, the majority of the waste rock. Ore processing will produce non reactive scavenger tails and bulk cleaner tails, and acid generating pyrite tailings. Copper ore that is not economic to mine (less than 0.3% copper equivalent) will be left exposed in mine tunnels and pit walls. Drill cores from the pit area indicate that the pit walls will contain reactive rock and will generate acid if exposed to air and water (Northern Dynasty Mines, 2005).

The key questions are: (1) whether there are alkaline producing minerals in the ore which might neutralize the acid generated by the sulfide ore (U.S. Office of Surface Mining Reclamation and Enforcement, and 2007), and, (2) whether the state and federal permitting agencies will correctly classify the Pebble ore before approving the project so that acid generating rock, rock exposed on the pit walls and mine tunnels and mine waste are properly treated or stored.

David Chambers of the Center for Science in Public Participation reviewed NDM's "Draft Environmental Baseline Studies, 2004 Progress Reports, Chapter 8, Geochemical Characterization & Metals Leaching/Acid Rock Drainage (Northern Dynasty Mines, 2005). He found that the majority of the 399 samples from 65 cores from the ore body, which were

analyzed for sulfur content (acid generating potential) and acid neutralizing potential (related to calcium carbonate content), were clearly in the acid generating category with a ratio of less than 1 Neutralizing Potential/1 Acid Generating Potential. This means that there does not appear to be sufficient alkaline minerals in the ore to neutralize acid that may be produced.

He also drew the following conclusions from the data in the report: (1) The sulfur in the sample is sulfide which generates acid; (2) "Sulfur concentrations in the pre-Tertiary rock (i.e., most of the ore and non-overburden waste) are typically between 1-5 % and up to 9%" (sulfur concentrations in the 1-5% range are in the range for concern for acid mine drainage); (3) "Evidence that oxidation (of core samples) has occurred in storage is illustrated by the general increase in sulfate sulfur relative to sulfur as the age of the core increases" which means that acid generation has already occurred in the older samples taken from the site; and (4) Preliminary calculations indicate that it would take 40 years for nearly all of the pre-Tertiary rock to become acidic under site conditions (Chambers, 2006). This means that the most severe problems will likely occur near or at the end of the mine life, or after closure or abandonment. (Younger, 2002).

Examples of recently permitted large mines with acid mine drainage (AMD) problems include:

Summitville Mine, Colorado: The Summitville gold mine is located in the San Juan Mountains of southwestern Colorado Environmental problems developed soon after the initiation of open-pit mining by Galactic, a subsidiary of Canadian Mining Company SCMCI. Acidic, metal rich drainage into the Wightman Fork of the Alamosa River increased significantly from numerous sources on site.

Cyanide-bearing processing solutions began leaking into an under drain system beneath the heap leach pad, where they then mixed with acid ground waters from the waste dump. Cyanide solutions also leaked from transfer pipes directly into the Wightman Fork several times over the course of mining.

Open-pit mining exposed large volumes of previously unoxidized sulfides including pyrite, enargite, and chalcopyrite to weathering. The reaction of these previously unoxidized sulfides with oxygenated ground water resulted in acid-mine drainage with high concentrations of metals. (Bigelow and Plumblee, 1995). Even though the Canadian company operating the mines was fined, at least a dozen different cyanide spills totaling more than 86,000 gallons entered Cropsy Creek, one of the waterways at the top of the drainage that leads to the Alamosa River and eventually to the Rio Grande.

In 1990, state regulators discovered that trout in three farm ponds that took in water from the Alamosa were killed and that 15,000 young trout stocked by the state in the Terrace Reservoir downstream from Summitville had died (Bigelow and Plumblee, 1995). Even though threats of further action against the mine's operators by state regulators continued and the EPA began to propose involvement in halting pollution at the mine, some 294,365 ounces of gold and 319,814 ounces of silver worth more than $113 million at current spot-market metals prices were mined before events reached a crisis point late in December, 1992.

Early in December 1992 -- just days after informing state regulators that the mine would require at least $20 million to clean up, Galactic announced it was filing for bankruptcy. At that time the estimated clean up cost exceeded the bonds Galactic had posted with state mining regulators by more than $15 million. The bankruptcy created several immediate concerns. Earlier in 1992, the company had brought a water treatment plant on line to begin treating the estimated 150 to 200 million gallons of spent cyanide processing solutions remaining in the heap; however, treatment was proceeding so slowly relative to influx of snowmelt waters that the waters were in danger of overtopping a containment dike and flowing directly into the Wightman Fork. In addition, piping carrying the processing solutions to the treatment plant would have frozen within several hours, releasing cyanide solutions and stopping water treatment.

At the request of the State of Colorado, the U.S. Environmental Protection Agency (EPA) immediately took over the site under EPA Superfund Emergency Response authority and increased treatment of the heap leach solutions, thereby averting a catastrophic release of cyanide solution from the heap. Summitville was added to the EPA National Priorities List in late May, 1994. Ongoing remediation efforts include decommissioning of the heap leach pad, plugging of the Reynolds and Chandler adits (tunnels), backfilling of the open pit with acid-generating mine waste material and capping of the backfilled pit to prevent water inflow. The total cost of the cleanup to the U.S. Government and EPA has been estimated to be in excess of $200 million dollars.

In spite of costly remediation efforts, some level of acid discharge will likely continue from the site. Significant volumes of unweathered sulfides and soluble salts are dispersed throughout the site on roadways, in soils, and in other surficial materials. These solids are a long-term source of metals and acid that will be difficult to remediate.

In May, 1994, four months after the Reynolds adit was plugged, a plug on the Chandler adit (located 150 feet above and 2400 feet north of the Reynolds adit) failed and began leaking acidic, metal-rich waters into the Wightman Fork. Although the Chandler is currently being re-plugged, the leak underscores the fact that it is difficult to prevent leakage of ground water from a highly fractured and mined mountain. The plugging of the Reynolds adit also resulted in the predictable reactivation of acid seeps and springs that had drained the site prior to underground mining (Bigelow and Plumblee, 1995). Long-term leakage of acid ground water from these natural discharge points is unavoidable.

Formosa Mine, Oregon: The 76-acre Formosa Mine is located on Silver Butte between the headwaters of the two streams, about 25 miles south of Roseburg, Oregon (The Oregonian, 2007). Pollution from the Formosa Copper Mine has killed all aquatic life in 18 miles of the two streams while changing their color to shiny bronze and silver. A Canadian mining company owned by Japanese business interests went bankrupt in 1995, leaving U.S. taxpayers with the cleanup bill, and one of the worst cases of mine pollution in Oregon history. Cleanup costs could run from $10 million to $30 million or more. At least 5 million gallons of "acid rock drainage", heavy with toxic metals, flow annually into the creeks, through both ground and surface waters (Environmental Protection Agency, 2007n).

Middle Creek and its South Fork have historically been high value habitat for steelhead, coho salmon and trout. Pollution from the mine is so severe that even insect life is gone in the upper reaches of the creeks, along with any chance of rearing fish. "It's dead. It's just a dead stream," said Ken Marcy of the U.S. Environmental Protection Agency. "If you look at the upper reaches of Middle Creek and the South Fork, there is absolutely nothing living in it." In September 2007, twelve years after the mine began polluting, EPA officials put the abandoned Formosa Copper Mine on the National Superfund List. A Superfund listing makes federal dollars available to pay for the cleanup. During the next several years the EPA will complete a remedial investigation and feasibility study that will lead to a proposed plan for clean-up of the site (Environmental Protection Agency, 2007n).

Zortman-Landusky Mine, Montana: The Zortman-Landusky Gold Mine is located in north Central Montana south of the Fort Belknap Reservation and began operating in 1977. The mine has caused extensive surface and ground water contamination (Bureau of Land Management, 2007). According to Westerners for Responsible Mining (2007) the mine has experienced over a dozen cyanide spills, including one spill that released 50,000 gallons of cyanide solution and contaminated a community drinking water supply.

Even though the environmental analysis for the mine predicted that there would not be an acid mine drainage problem, the mine developed a serious acid mine drainage problem as it began to mine environmentally risky sulfide ores in 1992 (Bureau of Land Management, 2007). In 1993 the State of Montana, the Fort Belknap Tribes and the Environmental Protection Agency filed suits against the company for impacts to water resources due to long-term water quality violations, including cyanide, acid and metal discharges to surface and groundwater. In 1997, in response to the lawsuits, the company agreed to construct an additional water treatment plant, to study environmental damage to the ground water, and to increase water quality monitoring. In 1998, the company filed for bankruptcy, leaving the state of Montana with the liability for $33 million in long-term water treatment and reclamation costs.

The State of Montana has determined that water pollution generated by the mine is so severe that expensive water treatment systems will have to be operated forever. Reclamation and water treatment at the abandoned mine cost approximately $768,000 annually (Bureau of Land Management, 2007)

In 2002 the State of Montana filed suite against BLM alleging that the reclamation plan violates state law and in 2003 the Fort Belknap tribes filed suit under the Clean Water Act again because the defunct mine site has continued to discharge toxic pollutants into ground and surface water resources (Bureau of Land Management and Westerners for Responsible Mining, 2007).

Gilt Edge Mine, South Dakota: The Gilt Edge mine is located about five miles east of Lead, in the northern Black Hills. It is a 260-acre, open-pit, cyanide heap leach gold mine operated by Brohm Mining Corporation. Early testing by Brohm Mining Corporation's (BMC) predecessor indicated that acid generating material would not be a problem. Therefore, under a state mining permit, BMC, in 1988, began developing two open pits, a large cyanide heap leach pad, and a 12 million cubic yard valley-fill waste rock dump, as well as other operations. Shortly after mining began, cyanide began leaking into the groundwater and nearby Strawberry and Bear Butte

Creeks (Westerners for Responsible Mining, 2007). As the pit was mined, sulfidic ore was exposed. Mining continued until the permitted reserve was mined out in 1992. Acid mine drainage was confirmed emanating from BMC's waste dump in 1993. At that time, the state issued BMC a notice of violation and order and required BMC to prepare a mine permit amendment to address the acid mine drainage issue and to increase the reclamation bond. BMC's parent corporation was experiencing financial difficulties at that time, which ultimately resulted in a financial reorganization in Canada in 1993 (Environmental Protection Agency, 2007h).

Due to appeals of a U.S. Forest Service approval to allow additional mining on the National Forest and lack of financing, the company notified the state that it would abandon the property in 1998. Governor William J. Janklow took BMC to the 8th Circuit Court and was successful in getting both a Temporary Restraining Order and Preliminary Injunction issued that prevented BMC from abandoning the mine. Meanwhile, environmental groups sued BMC for alleged violations of the Clean Water Act. In 1999, a creditor that had been providing limited funding to maintain operations at BMC in hopes of getting U.S. Forest Service approval for additional mining, refused to provide additional funding, and BMC's parent company filed for bankruptcy in Canada in July 1999. After the operator became insolvent, the mine was left with 150 million gallons of acidic, heavy metal-laden water in three open pits that needs to be treated, and millions of yards of acid generating waste rock that needs to be cleaned up (Environmental Protection Agency, 2007h).

South Dakota (SD) Governor, Janklow averted a discharge of acid water from the bankrupt mine by authorizing the South Dakota Department of Environment and Natural Resources (DENR) to pay for water treatment. In February 2000, Governor Janklow requested that EPA Region VIII propose the site for the Superfund National Priorities List (NPL) and provide immediate emergency response and long-term remedial cleanup. The Gilt Edge site was listed on the Superfund National Priorities List on December 1, 2000 (Environmental Protection Agency, 2007h).

Molycorp Mine, Questa, New Mexico: An EPA remedial investigation is being conducted under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) at the Molycorp Mine (Environmental Protection Agency, 2007o). The Molycorp Mine site is located 4 miles east and the tailings ponds are 1 mile east of Questa, New Mexico. The active mine and tailings ponds are adjacent to the Red River a tributary of the Rio Grande. There is a state fish hatchery two miles downstream and the Red River's lower reaches are designated as a Wild and Scenic River. Over the years there have been numerous pipeline breaks spilling into and along the flood plain of the Red River, threatening the fishery and nearby endangered species habitat. Other threats to ground and surface water include seepage from the tailings ponds and acid metal-laden water from the weathering of the waste rock piles at the mine site. Contaminants include arsenic, lead, cadmium, zinc, aluminum, cobalt, and molybdenum (Environmental Protection Agency, 2007o).

Red Dog Mine, Alaska: The Red Dog Mine is a massive lead zinc sulfide deposit in Northwestern Alaska at the headwaters of the Wulik River. The mine is located on NANA Regional Corporation Lands and is operated by Teck Cominco. Teck Cominco has been cited by the EPA for over 618 water quality violations since the mine began operating in 1989

(Anchorage Daily News, 2006b). In 2005 Red Dog produced nearly 500 million pounds of toxic materials - mostly waste rock containing heavy metals, such as lead, zinc, cadmium, selenium, and mercury (Environmental Protection Agency, 2007j, Anchorage Daily News, 2005b). Most of this waste was stored in permitted non-RCRA surface impoundments or disposed of on land. However, approximately 320,000 pounds of methanol, lead and zinc were discharged into the air as fugitive emissions (Anchorage Daily News, 2005b and Environmental Protection Agency, 2007j).

Most of the billions of pounds of acid generating waste produced over the mines 20 to 30 year life will be stored behind a tailings dam. The dam will have to be maintained in perpetuity to prevent chronic or catastrophic spills into surface and ground waters (Tom Crafford, DNR 2007, and Chambers, 2005). Acidic and metals contaminated water leaking from the tailings impoundment and waste rock piles will have to be captured, pumped back into treatment facilities and treated forever (Teck Cominco, 2002). The current State reclamation and long term maintenance bond for the Red Dog Mine is $11, 010,250. However, the cost of reclamation and treatment at the Red Dog Mine is estimated to be over $100,000,000 (Chambers, 2005). The Alaska Department of natural Resources is currently evaluating the size of the bond required for perpetual maintenance of the mine (Crafford, 2007). Additional discussion on pollution at the Red Dog Mine is presented in Section 5.5.

Discussion of Sulfide Mines, In General: In researching the available information on acid mine drainage in the United States, it was difficult to find examples of active or closed or abandoned sulfide ore mines which are not polluting U.S. waters to some degree. This is consistent with the findings of the Kuipers Report. It is possible that some exist. However, the fact that no mine in an area with substantial precipitation has been able to meet the criteria in Wisconsin's 1998 Sulfide Mining Moratorium Act gives credence to the finding that almost sulfide mines pollute to some degree (Kuipers et al, 2006). The Wisconsin Sulfide Bill prohibits the state issuance of permits for new metallic sulfide mines unless one such mine in North America is certified by the Wisconsin Department of Natural Resources to have operated for 10 years and been closed for 10 years without causing pollution. The criteria in the bill were directed in part at stopping the Crandon zinc-copper mine near the Mole Lake Chippewa Reservation, proposed by Toronto's Rio Algom Corporation. The bill also reflected Wisconsinites lack of confidence in state and federal regulators to prevent pollution from this mine. The Sulfide Mining Bill does not stop the mine directly, but adds the new criteria at the end of the permit process. To date no one has apparently come forward with an example, and the mine has not been approved.

At least two states Michigan and New Mexico have adopted laws designed to prevent the storage of untreated toxic mine waste in facilities which will require perpetual care (see: Section 5.6 and Appendix 6).
Researchers who studied recently permitted, large mines in the United States found that that sulfide mines are likely to develop pollution problems (Kuipers, et al. 2006). The study found that mines, such as those involving metallic sulfide deposits (like Pebble) and those that are near ground water (like Pebble), have such a high risk that water quality exceedances are near certain for acid drainage or contaminant leaching. The analysis found that 85% of these sulfide based mines polluted surface water, 93% of these mines polluted ground water, and of the mines that

developed acid mine drainage, 89% of the environmental documents for these mines predicted that they would not (Kuipers, et al. 2006).

The consistently high incidence of serious surface and ground water pollution problems at large metals mines in the United States is of concern considering there have been state and federal laws and regulation in place since the early 1970's to prevent pollution. These agencies employ mining experts with many years of experience with these types of mines, but still approve mining plans which have failed to predict or prevent serious pollution problems.

3.3 Tailings Dam Failures: The failure of one of the tailings dams proposed for the Pebble Mine could release billions of tons of mine waste into the Nushagak River or Kvichak River drainages. Although, state and federal permits for all large mines in the United States since the enactment of NEPA, CERCLA, and RECRA contain provisions designed to prevent the discharge of toxic effluent from tailings storage facilities, and should contain construction standards to prevent the catastrophic failure of mine dams, a significant number of tailings dam failures have occurred in the United States.

According to the World Information Service on Energy (WISE), there have been 85 major mine tailings dam failures worldwide, reported since 1960. Of these, 17 failed because of rain or flooding, 47 failed because of structural problems and 11 collapsed in earthquakes. Twenty four of the 85 tailings dams which failed were copper or gold mines. Failures occurred in all types of tailings dams, upstream, downstream, and center, which is the type proposed for the Pebble project (USCOLD, 1994 and Northern Dynasty, 2006). The largest number of failures occurred in tailings dams constructed using the upstream technique (Bruce et al. 1997). However, the difference in reported failures could be because there are many more upstream dams constructed (Bruce et al. 1997).

The International Commission On Large Dams (ICOLD compiled information on reported tailings dams' failures, breaches, and mudflows world wide (ICOLD, 2001 and 2003, and Cambridge, 2005). ICOLD reported that there have been 72 tailings dam accidents in the U.S. and 11 in Canada since 1960 (ICOLD, 2001). Most of the reported dam failures in the United States (47) and in Canada (8) were from copper, gold, and uranium mines.

A few examples of recent tailings dam failures in the United States and elsewhere and the consequences include the following.

Martin County Coal Corporation, Ohio: On Oct 11, 2000, a coal tailings dam at Martin County Coal Corporation's preparation plant near Inez, Kentucky, USA failed, releasing slurry consisting of an estimated 250 million gallons of water and 155,000 cubic yards of coal waste into local streams (American Geological Institute, 2003). About 75 miles (120 km) of rivers and streams turned an iridescent black, causing a fish kill along the Tug Fork of the Big Sandy River and some of its tributaries. At least 395,000 fish were killed in the spill and Martin Coal has spent more than $46,000,000 on cleanup (American Geological Institute, 2003). Towns along the Tug River were forced to turn off their drinking water intakes. The spill contained measurable amounts of metals, including arsenic, mercury, lead, copper and chromium, but not enough to pose health problems in treated water. The full extent of the environmental damage isn't yet

known, and estimates of the cleanup costs go as high as $60 million (World Information Service on Energy, 2006).

Brewer Gold Mine, South Carolina: In 1990 a tailings dam at the Brewer Gold Mine failed after heavy rains and spilled 10,000,000 gallons of sodium cyanide solution into Little Fork Creek (Environmental Protection Agency, 2005d). Fish were killed in the Lynches River for at least 49 miles downstream (EPA, 1991). The British mining company which operated the mine abandoned the site in 1999 and EPA declared it a superfund site in 2004 because of heavy metals pollution and acid mine drainage.

Baia Mare Gold Mine, Romania: In 2002 a tailings dam at the Baia Mare Gold Mine in Romania, operated jointly by Australian and Romanian mining companies, failed, releasing 130,000 cubic yards of mine waste contaminated with about 120 tons of cyanide and heavy metals into the Tisza River. The spill disrupted drinking water supplies for 2.5 million people and caused a massive fish kill in the Tiza River.

Grouse Creek Mine, Idaho: The Grouse Creek Mine operated by Hecla Mining Company began mining in 1994 and used cyanide vat leaching to extract gold. The Grouse Creek Mine was originally permitted as a zero discharge facility. When it opened, the mine was hailed as environmentally friendly by company officials and the EPA and Idaho DEQ regulators who permitted the mine. In 1994, a major landslide at the mine buried nearby Jordan Creek and numerous cyanide spills and leaks also occurred. The leaks occurred because plastic and clay liners under the tailings impoundment failed (Westerners for Responsible Mining, 2007). In 1996, Hecla was fined $85,000 by the EPA for violating its discharge permits. Cyanide and mercury exceeded allowable discharge levels by more than five times over a period of 13 months. By the time the mine ceased operations in 1997, it had over 250 water quality violations. Two years after the mine quit operations, cyanide was still flowing into Jordan Creek at over 12 times the levels at which chronic exposure to the chemical negatively affects fish and other aquatic organisms. Jordan Creek is important habitat for endangered Chinook salmon, steelhead and bull trout. The cost of cleaning up pollution at the mine is estimated to be $60 million dollars, $53 million dollars more that the $7 million dollar bond Hecla was required to post (Earthworks, 2007).

Bald Mountain Mine, Nevada: The Bald Mountain mine released 8,000 gallons of cyanide solution used in heap leaching of gold in 1993 and 1994 (U.S. EPA, 1995t).

Buffalo Creek Valley, West Virginia. On February 26, 1972 the failure of a coal waste impoundment at the head of Buffalo Creek killed 125 people, destroyed 500 homes, and caused over 400 million dollars in damages (Association of State Dam Officials, 2007).

3.3.1 Discussion: The size and location of tailings storage facilities (TSF) proposed for the Pebble Project mine and the fact that these facilities would have to remain intact for thousands of years after the mine is closed presents a substantial threat to surface waters and downstream fish populations.

According to the United States Geological Survey there were approximately 1,897 coal mines, 8 uranium mine, and 1965 mines and processing plants for 74 types of nonfuel minerals and materials operating in the United States in 1997(United States Geological Survey, 2003). There were approximately 106 active metals mines during the same period (United States Geological Survey, 2003). The Metals Mining Services reported that the number of metals mines decreased from 179 to 125 between 1997 and 2002(Metal Mining Services, 2007). No figures on the number of mines or mine tailings dams in the 1960's were found. Assuming that there were somewhere between 200 and 400 metals mines with one or more tailings dams in operation from 1960 to 1995 (the latest date figures are available from ICOLD). The failure rate from tailings dams at U.S. metals mines during that period may have been between 12 and 24 percent. However, The Environmental Protection Agency estimated that there were approximately 1000 active metals mines with one or more tailings impoundments in the United States in 1994 which if accurate would make the failure rate around 5% (Environmental Protection Agency, 1994t). This is consistent with a study by Davies and Martin who found that "the failure rate of upstream tailings dams, which is the most common type of tailings dam is quite high, and it appears that every twentieth dam fails" (Lottermoser, 2003). It also appears that the rate of tailings dam failures has increased in recent years since a pervious peak that occurred in the 1930's (Davies, 2002). Most of the tailings dam which failed was small, 300 feet or less in height, when compared to the proposed Pebble Project dams (Lottermoser, 2003).

With the exception of most power dams which are regulated by the Federal Energy Regulatory Commission, and dams owned by the federal government, the safety of dams is regulated by the states, and precise information on the number of tailings dams and the rate of tailings dam failures is not available (Bruce, 1997). The Association of State Dam Officials estimates there are approximately 78,000 dams of all types in the United States (Association of State Dam Officials, 2007). Around 3,361 dams have known structural or hydraulic deficiencies, leaving them susceptible to failure (Association of State Dam Officials, 2007).

The Pebble Project would be the largest copper mine in the United States and the second largest in the world. The two TSFs described in the Description of the Pebble Mine and Associated Facilities (Northern Dynasty Mines, 2005), are only designed to store 2.5 billion cubic yards of saturated reactive and nonreactive mine waste rock, and mill waste in perpetuity. However, the most recent reserve estimates from Northern Dynasty Mines indicates that the mine would generate over 8 billion tons of waste which would have to be disposed of (Northern Dynasty Mines, 2007). This means that if all of the reserves were mined, the two tailings storage facilities would have to be several times larger than currently proposed, or additional facilities of a similar size would have to be constructed in other drainages.

The Pebble Project TSFs would be enclosed by some of the largest earth fill dams ever constructed. The United States Large Dam Safety Program, which provides guidelines and technical assistance to state dam regulators, classifies a large dam as over 100 feet in height or a storage capacity greater than 50,000 acre feet (FEMA, 2007). The proposed Pebble Project TSF's would encompass over 10 square miles and be enclosed by over nine miles of dams with a height of up to 740 feet (Northern Dynasty Mines, 2006). The TSFs would be the final resting place of the waste rock and mill tailings which at this point have a negative economic value. The sole purpose of these TSFs would be to: (1) keep the billions of tons of mine waste saturated

with water so they don't generate acid, and (2) keep the toxic waste from leaking or flowing out into the ground water and adjacent drainages.

These massive tailings facilities would be constructed on top of the present headwaters of the North and South Forks of the Koktuli River. However, because of the height of the 750 foot high dams and the topography, a dam breach at the south end of TSF A could flow into either the South Fork of the Koktuli River and the Nushagak River, or Upper Talarik Creek, and down to Lake Iliamna. If the dams were breached, it might not be economically or physically feasible to clean up the billions of tons of waste that have been washed downstream or to restore these streams.

As previously described, the most common causes of tailings dam failures are earthquakes and floods, which overflow the tailings storage facilities and cut down through the earthen dams, and cause structural failures. Northern Dynasty has said that they will construct the earth fill tailings dams to the Alaska Dam Safety Programs High Potential standards. High potential is the standard that dams are constructed to if there is a likelihood of the loss of human life if the dam fails. Any current design of tailings storage facilities has to be based on the fact that they will have to survive forever. The relatively few years of data available on the magnitude of earthquakes, volcanic eruptions, floods, and storm events in Southwestern Alaska may not adequately predict events that could happen over the time scale the facilities will have to endure.

The Pebble tailings dams would be constructed on top of glacial till and fractured bedrock in a seismically active area. The design of the dams, constructed of waste rock and overburden, is based on current understanding of the location of local faults and force of future earthquakes. However, if one earthquake in the next 10,000 years is stronger than the maximum predicted, or if a previously undetected fault extends into the mine area the dams may fail and release the stored waste into the Nushagak and Kvichak drainages. An earthquake would not have to destroy the dams to release the toxic materials stored in the TSF into the ground water and into adjacent salmon spawning streams. If an earthquake just opened cracks in the bedrock below the dam, it could allow the hundreds of billions of cubic feet of contaminated water stored in the facility to leak out into ground and surface waters.

The Pebble Mine is located in an area with heavy precipitation, frequent storms and extreme temperatures. Flooding and overtopping of earth fill dams is one of the most frequent causes of dam failures. Dam design will be based on current climatic conditions and flood data available at the time of permitting. However, there are only a few years of weather and stream flow data available for the mine site and region.

Currently available data may not be an accurate predictor of the 5,000, 10,000, or 100,000 year floods at the mine site. It also does not take into account climatic change which could result in heavier and more frequent rainfall. For example, United States Geological Survey predictions of 100 year or greater flood flows for the Kenai Peninsula which experienced at least three floods which exceeded USGS 100 year flood predictions in a 20 year period may have to be revised because of rapidly melting glaciers and more severe rainstorms (Eash and Rickman, 2004). In another example, waste from the tailings impoundment at the Red Dog Mine had to be dumped

into Red Dog Creek when unanticipated levels of snowmelt and rainfall threatened to over top the dam the year after the mine opened (ADN 1990).

Even if in the short term, the risk that the tailings dams will leak or fail in any year can be reduced to a very small percentage, over the infinite period that these dams will be expected to hold their toxic contents in place, the probability that a release will occur eventually becomes 100 percent.

Complex, manmade structures deteriorate as they get older. Over enough time, the complex system of liners, pipes, drains and pumps necessary to control leakage under the mine waste and maintain the stability of the 750 foot high dams, will deteriorate and fail in the corrosive environment and crushing weight of billions of tons of tailings. Any pollution control structures placed in or under the tailings impoundments or 750 foot high earthen fill dams would either be extremely expensive to fix or would not be accessible and could not be repaired or replaced.

Northern Dynasty has stated that they would be required to establish a fund to maintain the dams in perpetuity (Crafford, 2007). However, there is no guarantee that the amount will be adequate or available to deal with the problems that will become evident over the millennia that the dams will need to remain intact. There are many recent examples where the restoration bonds accepted by state and federal agencies have proven to be inadequate to construct or maintain pollution control facilities at a mine sites after closure, or where the mining corporation has dissolved and the state and federal governments have had to pay the cleanup and restoration costs (see Summitville Mine, Gilt Edge Mine, and Illinois Creek Mine in Alaska) (Chambers 2006). There is also no way to predict how social and economic conditions may change over the thousands of years that the TSFs and associated pollution control systems will need to remain intact and function properly (Bjelkevik,2005).

3.4 Slurry Pipeline Breaks: Northern Dynasty has proposed to use a104 mile long slurry pipeline to transport more than 67 billion pounds of copper concentrate from the mine to the port site on Iniskin Bay (Northern Dynasty, 2006). A return pipeline would transport slurry water back to the mine site for reuse. No discharge is currently proposed at the port site. These pipelines would cross over 120 drainages, of which more than half support important populations of spawning and rearing salmon and high value resident fish (Northern Dynasty Mines, 2005, ADF&G, 2003, Wiedmer, 2007). Although, slurry pipelines are an economical way to transport large quantities of mineral over long distances, there is also a substantial risk that the pipeline carrying abrasive and corrosive material will leak or break one or more times over its 40 to 70 year life.

Most slurry pipeline breaks occur as the result of abrasion and corrosion, but earthquakes have caused at least one major spill (Mining Watch, 2004). In Alaska there would also be a substantial risk that the concentrate might freeze and break the pipe if the flow stopped because of a pump failure or other problem in the winter (Coulter, 1976, McKetta, 1992 and Julien, et al. 2002).

Streams are always at the lowest point in a valley. Because of the mountainous terrain between the Pebble Mine site and the Iniskin Bay port site, a large quantity of copper concentrate could flow down the pipeline and into a river or stream in the event of a break at or near the crossing.

Because of the toxicity of copper to fish and aquatic life, a slurry spill that enters one of the salmon streams transecting the proposed pipeline route, such as the Newhalen River, could do substantial short and long term damage (see section on copper toxicity. A concentrate spill in a large stream would be difficult to clean up because the material would sink to the bottom and become incorporated into the substrate (Mining Watch, 2004).

Slurry pipeline breaks are fairly common, and here are five examples of recent slurry pipeline spills in the United States and one in Argentina:

Black Mesa Pipeline, Arizona: Corrosion in the 273 mile long Black Mesa coal slurry pipeline caused ruptures and seven spills between 1997 and July 1999 (The Arizona Republic, 2002). Eight additional spills occurred in 2001-2002. The most recent incident occurred on January 19, 2002, when 500 tons of coal slurry spilled into Willow Creek, a tributary of the Big Sandy River in northwestern Arizona. Coal sludge in Willow Creek was 8 inches deep. The company did not report the spill as required by the Comprehensive Environmental Response and Liability Act (CERCLA). The Arizona Department of Environmental Quality and the EPA say the pipeline maintained by Black Mesa Pipeline, Inc. has leaked more than half a million gallons of coal slurry in 15 separate spills. The pipeline company was fined $128,000 in 2001 for illegally discharging 485,000 gallons of coal slurry in seven spills between December 1997 and July 1999 (Federal Register, 2001).

Alumbrera Mine, Argentina: An earthquake on September 17, 2004, measuring 6.5 on the Richter scale caused a pipeline to break at the Alumbrera mine in Argentina, sending copper and gold concentrate into the Villa Vil River. An unknown amount of mineral concentrate filled approximately two kilometers of the Villa Vil River, which provides water for domestic consumption and irrigation to the municipality of Andalgalá in Catamarca Province. While the flood of concentrate which reached 12 meters in height left a layer of solids on top of the riverbed and river banks, the water component of the slurry penetrated up to two meters deep, carrying with it the toxic metals (Mining Watch, 2004). As a precaution, water supplies for irrigation and domestic use were cut in the whole area.

Mountain Pass Mine, California: In 1977, a major pipeline break at the Mountain Pass Mine spilled more than 2 million gallons of radioactive water onto public land on the Ivanpah Playa (Great Basin Mine Watch, 2007). The Mountain Pass Mine is located along the I-15 corridor, between Las Vegas, NV, and Baker, CA, and borders on the Mojave National Preserve. It is a rare earth mine that produces a group of minerals called lanthanides. The mine has been listed by the EPA as California's largest polluter.

Chino Mine, New Mexico: Phelps Dodge Corp. paid a $42,150 civil penalty to the New Mexico Environment Department (NMED) over contamination resulting from pipeline spills at the company's Chino Mine in New Mexico (American Metal Market, 2003). The Phoenix-based copper producer also agreed to replace the pipeline and improve pipeline operating procedures. The settlement covered three spills of tailing slurry and process water from Chino pipelines: a 480,000 gallon spill on December 8, 2000, an 18,000 gallon spill on December 21, 2000 and a 20,000 gallon spill on January 19, 2001. According to the New Mexico Environment Department, 45 spills occurred at the Chino Mine between 1990 and 2001.

Century Mine, Ohio: In 2005, more than 30,000 gallons of coal sludge spilled from a pipeline that did not have a required permit, killing most of the fish in Capatina Creek. The spill resulted from a fist-sized hole in the three-mile-long pipeline that runs from American Energy Corp.'s Century Mine to a disposal area for slurry, a mix of water and impurities generated in coal processing (The Akron Beacon Journal, 2005).

3.4.1 Discussion: The only reported slurry pipeline break in Alaska was a 200,000 gallon concentrate spill at the Red Dog Mine in 1998 (ADN 1989). However; there have been a number of oil pipeline breaks from accidents, corrosion and sabotage. It is very difficult to protect a long unguarded pipeline from malicious acts, and impossible to prevent accidents and natural forces, such as earthquakes and floods. It is also not possible to judge the day to day diligence and effectiveness of state agencies in monitoring and regulating pipeline maintenance in Alaska, except where a notable event such as an oil spill and pipeline shut down occurs. The recent break of one of the main pipelines in Prudhoe Bay in 2006 due to corrosion and poor maintenance resulted from British Petroleum's failure to properly maintain the pipeline. However, oversight of oil pipeline safety was an Alaska Department of Environmental Conservation responsibility. This incident raises questions about the ability of state agencies to guarantee that measures to prevent slurry pipeline breaks can be effectively enforced.

3.5 Dust and other Emissions from Large Scale Mining is a Serious Environmental Problem: In the process of large-scale mining, dust and other emissions are an inevitable problem. These dust particles originate from: ore crushing, conveyance of crushed ore, loading bins, blasting, motor vehicle traffic, use of haul roads, waste rock piles, windblown tailings, processing ore and disturbed areas (Kennedy, B., 1990). Dust from the Pebble Project Mine would contain copper and iron sulfides, and likely other toxic heavy metals such as mercury, cadmium, and zinc which are present in fairly high levels in water samples from the mine area (Northern Dynasty, 2004). Sulfide dust from the Pebble Project Mine could also form sulfuric acid and dissolve the copper and other metals present when it comes in contact with water. Windblown dust can travel for miles and contaminate nearby lakes and streams with harmful levels of heavy metals. The Pebble Project Mine site, haul road, and proposed Iniskin Bay port site are areas with frequent storms and high winds (Northern Dynasty Mines, 2005, and Leslie, 1989). All of these facilities are located near salmon and high value resident fish streams, and in the case of Iniskin Bay, a productive and pristine marine environment. Dust containing heavy metals, can cause also human health problems.

Three examples of mining related dust problems that were not prevented by permit conditions or agency monitoring are:

The Red Dog Mine, Alaska: The Red Dog Mine in N.W. Alaska is an example of how dust from mining activities without effective monitoring and regulation can become a serious environmental problem. Beginning in 1989, trucks hauling concentrate for the mine to the port spread lead, zinc and cadmium dust along the haul road unbeknownst to mine officials and state and federal regulators. In 2000 scientists found extremely high levels of heavy metals in moss (*Hylocomium splendens*) on National Park Service lands adjacent to the haul road. The study confirmed that the source of this contamination was dust from trucks hauling concentrate (Ford and Hasselbach, 2001). Levels of lead, zinc, and cadmium in samples downwind from the Red

Dog haul road equal or exceeded the maximum levels of these heavy metals from samples from severely polluted regions in other areas of the world (Ford and Hasselbach, 2001).

In 2004, scientists measured the magnitude and severity of contamination from fugitive dust from the Red Dog Mine on National Park Lands adjacent to the 55 mile long haul road between the mine and port site on the Chukchi Sea (Hasselbach, L., et al. 2005). Trucks hauling sulfide based lead zinc concentrate were covered with lead zinc dust generated in the loading and unloading process at the mine and port site. The dust was then blown or washed from truck surfaces by rain during transit from the port to the mine and back. The concentrate trucks were also poorly covered (until new trucks were acquired in 2001), and concentrate-dust blew from the trucks as they were driven from the mine to the port. Surface soil levels of 27,000 mg/kg (27 times the EPA industrial cleanup standard was found near port operational areas in a 1996 monitoring summary. Researchers measured lead and cadmium levels in moss adjacent to the Red Dog haul road within the Cape Krusenstern National Monument. Lead contamination was found to extend 25 kilometers (15 miles) north of the road, and 45 kilometers (27 miles) south of the haul road (Hasselbach et al. 2005).

Mining related dust deposition can be distinguished from natural deposits in the area by the composition of the dust and dust concentrations at the soils surface (USGS, 2003). Lead and cadmium levels within 10 meters of the haul road ranged from 6.9 to 24.3 ppm for cadmium and 271 to 912 parts ppm for lead. The Environmental Protection Agency's acute toxic standard for cadmium and lead in water are 2.0 parts per billion and 65 parts per billion respectively. The chronic toxicity standard for cadmium and lead are 0.25 ppb and 2.0 ppb respectively (Environmental Protection Agency, 2007f).

The report estimates that over 3,592 (8,872acres) hectares of National Park Land are contaminated with greater than 2 ppm of cadmium and 58,067 hectares (143,425 acres) of land are contaminated with greater than 20 ppm of lead from fugitive dust resulting from the movement of ore concentrate. Trucks using the haul road and loading area are not the only source of dust pollution in the Red Dog Mine area. Similarly elevated levels of lead, cadmium and zinc have also been found in a subsequent study of mine dust on private property downwind of the mine (Clark, 2005).

Seward Coal Dock, Alaska: Coal dust from the Alaska Railroad's coal loading facility in Seward has been a problem since the 1980's (Anchorage Daily News, 2007f). After a particularly serious event in the spring of 2007 which coated boats and cars and blackened the air in Seward, the railroad was cited and ordered to come up with a plan to control emissions from the loading facility.

Nevada Gold Mines: The 1998 EPA Toxic Release Inventory (TRI) reported that northern Nevada metals mines released approximately 7 tons of mercury to the atmosphere in 1998 (National Risk Management Research Laboratory, 2000). The primary source of these omissions appeared to be ore processing. As a result of the 1998 TRI report, the State of Nevada and EPA first instituted a voluntary program to control emissions from these mines, and then in 2007 the State of Nevada instituted a mandatory regulatory program (Nevada DEP, 2007. Nevada adopted the regulations because "Mercury emissions from mining are not regulated under the National

Ambient Air Quality Standards (NAAQS) or under the National Emission Standards for Hazardous Air Pollutants (NESHAPS) for gold or silver mining." "Although, there are regulatory requirements under title V of the Clean Air Act (CAA) mercury is also not regulated under the New Source performance Standards (NSPS) Regulations." (National Risk Management Research Laboratory, 2003).

Although, a regulatory program to control emissions was instituted, it does not appear that mercury emissions from the northern Nevada mines have been abated as of 2007 (EPA, 2007e). There are also allegations that emissions from the mines have not been accurately reported (Hayes, 2005). According to a 2007 Earthworks report, researchers at the University of Nevada found very high levels of mercury in air samples taken at three Northern Nevada gold mines. Earthworks also reported that "According to EPA's (2005) Toxics Release inventory, northern Nevada gold mines release over 4,600 pounds of mercury into the air each year -- about 18 times the amount of mercury released by the average coal-fired power plant (Earthworks, 2007 and EPA, 2007e). Northern Nevada's gold mines are the largest single industrial source of U.S. mercury air emissions west of Texas." (Earthworks, 2007). Mercury emissions from Nevada mines have been implicated in high mercury levels in fish in Utah and Idaho (Hayes, 2005, and Utah Department of Environmental Quality 2007).

3.5.1 Discussion: The Pebble Mine site is located in an area with strong and frequent winds blowing from both the east and west (Northern Dynasty, 2005, Leslie, 1989). Dust would be generated by primarily from blasting, ore hauling, and storing tailings because it is not possible to completely control dust from all of these activities particularly in an open pit mine (Kennedy, 1990). It is likely that land and water downwind of the mine pits, mill, tailings storage facilities, and port would be contaminated for some distance by dust and emissions from the Pebble Mine over the 40 to 70 year life of the mine. This dust is likely to be contaminated with copper, mercury and other heavy metals found in the ore. This dust might increase concentrations of heavy metals in surface waters to levels that are harmful to fish and other aquatic life.

3.6 Groundwater Pollution: In spite of state and federal regulations and stipulations designed to prevent it, groundwater pollution continues to be a serious problem at mines in the United States (Kuipers, et al. 2006). Acid drainage, heavy metals and mine chemicals from closed and abandoned mine pits, tunnels and tailings storage facilities have seeped into the groundwater under mines tainting aquifers (see the section on acid mine drainage). This contaminated groundwater has surfaced in lakes and streams, killing aquatic life.

Groundwater is the part of precipitation that seeps down through the soil until it reaches an impermeable layer of rock material that is saturated with water. Water in the ground is stored in the spaces between rock particles (Environmental Protection Agency, 2007g). Since groundwater moves from the surface down through rocks and subsurface soil, it has a lot of opportunity to dissolve substances as it moves. Because water is such an excellent solvent it can contain lots of dissolved chemicals. For this reason, ground water will often have more dissolved substances than surface water. Naturally occurring contaminants are present in the rocks and sediments. As ground water flows through sediments, metals such as copper, mercury, iron, cadmium and manganese are dissolved and may later be found in high concentrations in the water (Environmental Protection Agency, 2007g).

Like streams and rivers, ground water moves down gradient from high areas to low areas at right angles to subterranean contour lines. However, because these contours are covered with up to hundreds of feet of permeable soil, it is often difficult to model the direction and rate of flow with any degree of accuracy. Groundwater moves through the subsurface like water on the surface, except it travels more slowly. In sand and gravel it may move up to 5 feet per day, in other types of material it may move a few inches per day (Environmental Protection Agency, 2007g). Northern Dynasty's 2004 baseline studies report indicates that the movement of groundwater in the mine area is relatively rapid (Northern Dynasty Mines, 2005).

Results from the analysis of ground water from 12 monitoring wells that Northern Dynasty drilled shows that many of the dissolved trace metals on the Environmental Protection Agency's list of priority pollutants including: antimony, arsenic, beryllium, cadmium, chromium, copper, lead, mercury, nickel, selenium, silver, and zinc (Environmental Protection Agency, 2007f) are present in the ground water in the mine area and under the proposed tailings dam sites. Most of these same metals are found in the steams which drain the mine area, albeit in lower concentrations. Dissolved metals found in monitoring wells were generally from 0.1 to 0.7 of the state human health and aquatic life criteria, except for mercury and cadmium. Four wells had mercury levels which exceed the human health standard for mercury of 0.050 parts per trillion with levels up to 0.122 parts per trillion. One well had cadmium levels 1.4 times the allowable standard (Northern Dynasty Mines, 2005.

The presence of heavy metals in ground water from undisturbed mineralized areas is common. However, because of the limited amount of ore body exposed to water and oxygen prior to mining, the levels in the ground water and entering surface waters usually do not reach toxic levels (Environmental Protection Agency, 1994b).

The streams receiving ground and surface water from the Pebble Mine site can be classified as gaining or losing. Gaining streams receive much of their water from groundwater, and the water level in the stream is generally at the same elevation as the water table in the adjacent aquifer. Water quality in the stream will be affected by the quality of groundwater entering the stream. Because the water table elevation is approximately the same as the gaining stream surface elevation, both elevations may be used to predict the general direction of groundwater flow. Losing streams lose water to the adjacent aquifer because the water table has dropped below the stream level. If there is no major source of upstream flow, the stream may dry up between rainfall events (Environmental Protection Agency, 2007g).

Northern Dynasty has installed stream gauges to monitor surface flow and monitoring wells to provide information about groundwater quality and movement. Based on stream flow information provided in Northern Dynasty Mines, Inc. 2004 Environmental Studies Reports and their 2006 water rights application, it appears that groundwater from the mine area is an important contributor to stream flow in the North and South Forks of the Koktuli River and Upper Talarik Creek (Northern Dynasty Mines, 2005 and 2006). This appears to be particularly true during critical summer and winter low flow periods when there is little precipitation and surface run off.

There was little or no precipitation in the mine area between the time the stream gauges were installed in July until mid to late September, 2004 (Northern Dynasty, 2005). During these dry periods it is assumed that the streams studied approached base flow conditions in which the only contributing flows were from groundwater. During this period, gauges on the South Fork Koktuli River showed that it gained water at station SK 136A and at the vicinity of station SK 100A. Station SK 136 is at the very headwaters of the South Fork on the southern edge of the Pebble West ore body, and SK 100A is 27 miles downstream near the confluence with the North Fork Koktuli River. The remaining 26 miles of the South Fork shows a losing pattern, where stream flow is lost to groundwater. According to the 2004 report the section from SK 100 B (mile 12.2) to SK 100 F (mile 18.45) was losing water during the study period. In mid July, the midsection of the South Fork around SK 100C (mile 17.6) was reported to be dry. The section between SK 100 C and SK 100 F is thought to be losing water to the Kaskanak Creek Basin. During the same time period, the North Fork Koktuli River lost water at all locations except NK 119B. This stream gauge is near the confluence of tributary NK 119 and the North Fork Koktuli. Similarly, Upper Talarik Creek gauges showed that it gained groundwater from its headwaters and the areas of the proposed Pebble East and West pits (UT 100D), but lost water from the area just below the Pebble East pit (UT 100D) down to UT 100B, 14.62 miles downstream.

3.6.1 Discussion: Groundwater flow dynamics in the Pebble Mine area have important implications for fish habitat and water quality. Groundwater is the most important water source to stream gravel during low flow periods in July and August when sockeye, Chinook, and chum salmon are spawning, and from January through March when incubating eggs and over wintering juvenile salmon require a consistent inflow of ground water to survive (Groot and Margolis, 1991). The removal of ground water from these drainages would reduce both the amount of available spawning area for salmon and resident fish species, and critical over wintering habitat. This in turn would reduce salmon and resident fish production from these three streams.

Based on the direction of ground water flow and the presence of seeps and upwelling there appears to be a connection between groundwater origination from the area of the Pebble West and East ore bodies, and from under proposed Tailings Storage Areas A and G, and the three streams draining the mine area (Northern Dynasty Mines, 2005). This means that pollutants leaking from the mine pit or from under the tailings storage areas into the groundwater could be conveyed into the North and South Forks of the Koktuli River and Upper Talarik Creek. Mining may also increase the level of harmful pollutants in the ground water, by breaking up the rock containing metals and sulfur and exposing them to groundwater as it percolates through the ground (Younger, et al. 2002).

Gossan Creek is an example of how groundwater pollution emanating from mines affects streams. Gossan Creek, a first-order stream in the Upsalquitch River watershed in the Canadian Province of New Brunswick, contained elevated concentrations of mercury and other heavy metals, as a result of leaching from a gold-mine tailings disposal site (Maprani, et al. 2003). Field and laboratory research revealed that the tailings pile was a point source of mercury into the aqueous system. A contaminated ground water plume originated from the tailings pile and discharged into the headwaters of Gossan Creek. The ground water and the headwaters of the stream system were found to contain high concentrations of mercury (up to 60 ppb), Cu, Al, Fe, Zn, Mn, Ni, Co, As and cyanide (CN). The levels of all mercury compounds were measured in

the stream and it was found that mercury levels declined by 95-99% within 4 km from the source. The loss of mercury from the water was attributed to accumulation in the sediments and biota and to evaporation from the stream to the atmosphere (Maprani, et al. 2003).

Northern Dynasty has indicated that over the 40 to 50 year operating life of the mine they intend to try to capture all of the groundwater from the mine and tailings storage areas and use it in the mining process or return it to the tailings ponds. However, after cessation of mining, Northern Dynasty would pass on the responsibility and liability for preventing ground and surface water pollution from the closed or abandoned mine pit and or tunnels, and up to 8.2 billions tons of mine waste and hundreds of billions of cubic feet of mine process water stored in the tailings storage facilities to the ADNR. The ADNR would have to insure that (1) both the surface and ground water emanating from the water filled mine which may be acidic and contaminated with heavy metals and, (2) the water leaking from the tailings ponds which is also likely to be contaminated with heavy metals and mine chemicals would be captured and treated in perpetuity. If successful, this would prevent contaminated ground water from reaching these streams and killing aquatic life.

The questions which have to be asked are: (1) is it feasible to capture all of the ground water flowing through underground aquifers and cracks in the bedrock over a 35 square mile area during active mining; (2) is it possible that these groundwater capture systems at the mine and tailings storage facilities will not fail or breakdown over the tens of thousands of years they will have to operate to prevent chronic pollution after mine closure or abandonment; (3) is it possible that a larger than anticipate earth quake, rainfall event, or accident might occur that would result in an catastrophic release of contaminated water from the mine or tailings storage facilities , and (4) during the eons that pollution control measures will have to function at the closed or abandoned mine and tailings storage facilities , will state regulators detect and prevent leakage or an equipment failure before pollution reaches the waters of Nushagak or Kvichak drainages?

Considering that recently permitted large metals mines in the United States have consistently polluted ground water and that the state and federal regulatory process' have not been effective in preventing it, a risk of serious ground water pollution from the Pebble Project exists, particularly over an almost infinite time frame(Kuipers, et al. 2006).

4. RESOURCES AT RISK: FISH

4.1 Fish Populations at Mine Site: The proposed Pebble Project copper mine is located at the headwaters of the North and South Forks of the Koktuli River and Upper Talarik Creek. The proposed Pebble West Pit is drained by tributaries of Upper Talarik Creek and the South Fork Koktuli (Figure 5). The Pebble East Ore body is contiguous with the eastern portion of the Pebble West Pit, and appears to extend eastward under the main stem of Upper Talarik Creek. The Koktuli River is a tributary of the Mulchatna River and is part of the Nushagak River drainage. Upper Talarik Creek discharges into Lake Iliamna which is part of the Kvichak River drainage.

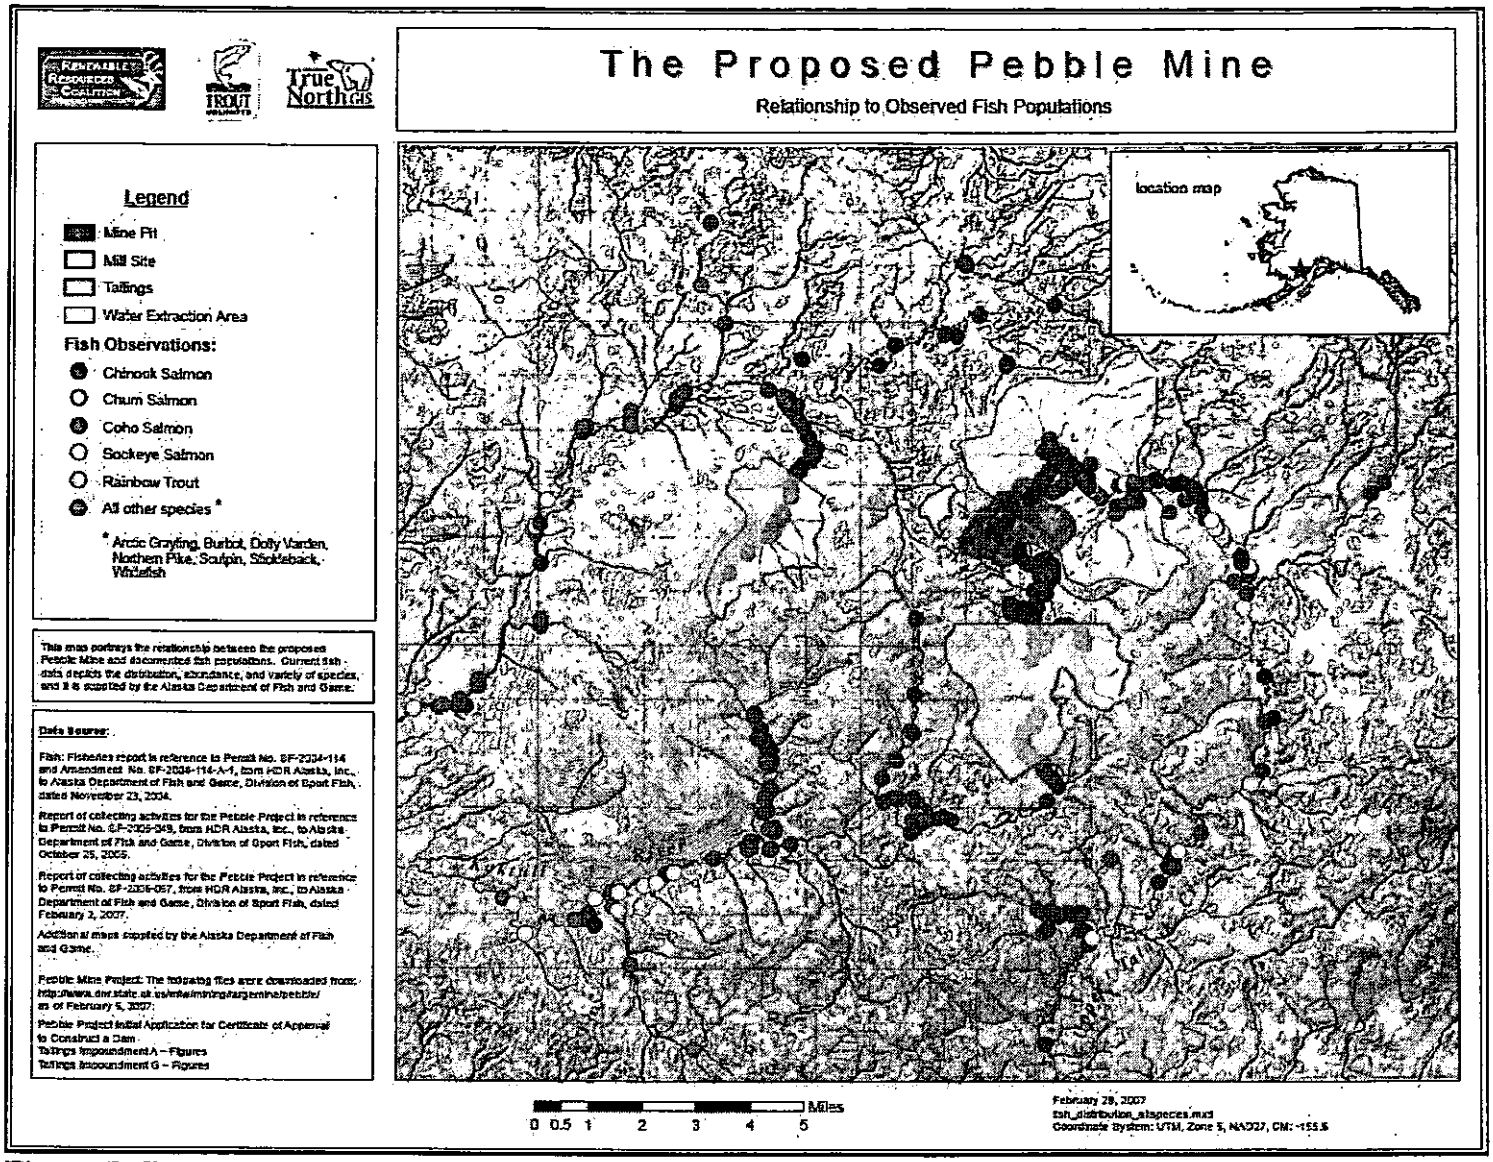

Figure 5. The Relationship of the Proposed Pebble Project Copper Mine to Existing Fish Stocks
(Note: figure used with permission of the Renewable Resources Coalition)

2020

The fish species present in the portions of Upper Talarik Creek and North and South Fork Koktuli River drainages which would be directly affected by the Pebble Mine are shown in Table 3 (Northern Dynasty Mines, 2005).

Table 3. Number of Fish by Species from Spot Samples Taken from Area Directly Impacted by Pebble Mine and Associated Facilities

	Drainage				
	South Fork Koktuli			North Fork Koktuli	Upper Talarik Creek
Species	Below FPL	FPL	Above FPL	Stream 1.19	
coho	45	0	13	41	536
chinook	0	0	0	20	0
sockeye	0	3	0	0	0
rainbow trout	0	0	0	0	1
Dolly Varden	4	0	0	451	12
grayling	279	44	47	28	0
northern pike	27	589	40	0	0
burbot	1	0	0	0	0
scuplin	122	0	112	461	305
stickleback	1	0	0	0	0
whitefish	1	0	0	0	0

Note: FPL is Frying Pan Lake. Stream 1.19 is a tributary to the North Fork Koktuli which would be covered by Tailings Storage Facility G. (Northern Dynasty Mines, 2006)

Preliminary fish sampling by Northern Dynasty contractors in 2004 found juvenile coho, Chinook and sockeye salmon was well as high value resident fish species such as Dolly Varden (Salvelinus *malma*), Arctic grayling (Thymallus *arcticus*), and northern pike (Esox *lucius*) in the reaches of Upper Talarik Creek and the North and South Forks of the Koktuli River which would be occupied by the mine and tailings storage facilities (TSF) (Table 2). Sampling methods used included electroshocking, angling in lakes and ponds, and hoop nets in Frying Pan Lake. In the 2004 fish surveys Frying Pan Lake and its upstream tributaries were found to support adult and juvenile northern pike, Arctic grayling and rearing juvenile sockeye and coho salmon (Northern Dynasty Mines, 2005). The headwaters of Upper Talarik Creek and its tributaries, including the portion which may be impacted by the extension of the Pebble East ore body, were found to provide spawning and rearing habitat for Chinook, sockeye and coho salmon, and Dolly Varden (Table 3). The data in Table 2 is from spot samples of fish taken at a number of locations in stream segments within the mine area which would be excavated, dewatered or buried under tailings storage facilities. Most of the salmon collected were rearing juveniles, but that could be an artifact of the time and location, and method used to take the samples. The HDR fish data is not quantative, but the samples do confirm the presence of substantial numbers of rearing salmon and high value resident fish in the portions of these streams which would be dewatered, buried, or otherwise impacted by mining activities.

The amount of sampling in the mine area was limited, and fish species and numbers in the mine area could vary at different times and locations. For example, stream flow's in July and August of 2004 were unusually low (United States Geological Survey, 2007, Northern Dynasty, 2004).

If 2004 Northern Dynasty samples were taken when the upstream migration of adult and rearing juvenile salmon into the mine area was blocked or restricted because portions of the upper South Fork Koktuli were dry, the number of adult and juvenile salmon in the sampling area might be substantially less than years or months when fish movements were not restricted.

4.2. Fish Populations Downstream From The Mine: The North and South Forks of the Koktuli River and Upper Talarkik Creek downstream from the mine are important salmon and high value resident fish spawning and rearing streams. These streams are also important contributors to the Nushagak and Kvichak drainage commercial, subsistence and recreational fisheries. Estimates of the number of spawning adult salmon in Upper Talarik Creek (U.T.), North and South Fork Koktuli Rivers (SFK and NFK), and Y Valley Creek at the proposed port facility are shown in Table 4 (Northern Dynasty Mines 2005).

Table 4: Adult Salmon Point Estimates of Escapement (2004-2005)

Species	Year	U.T	SFK	NFK	Y Valley
Chinook	2004		7265	7136	
Salmon	2005	194	3243	5621	
Sockeye	2004	12,400	9295	2338	
Salmon	2005	62771	6791	4140	
Coho	2004	8452	1224	1660	
Salmon	2005	6277	3203		
Chum	2004				
Salmon	2005			1510	11149

Note: HDR Alaska , Inc.fisheries scientists conducted stream surveys and then extimated fish numbers in the study area by day, using linear interpolation for the days not surveyed.

Fish surveys by both Northern Dynasty contractors and the Alaska Department of Fish and Game confirm that the North and South Forks of the Koktuli River and Upper Talarik Creek are important and productive systems which produce substantial numbers of Chinook, coho, and sockeye salmon (ADF&G, 2007). The North Fork of the Koktuli River is also a locally important chum salmon producer. When considering aerial escapement estimates it should be noted that aerial surveys escapement counts are only indexes and may only count a fraction of the salmon in a stream (Jones et al. 1998, and Visser et al. 2002). Furthermore, in a normal year, a large, but unknown percentage of the salmon produced in these streams (50 to 65 percent), are caught in the commercial and subsistence and are not included in spawning estimates. The Koktuli River is one of the most important Chinook salmon spawning streams in the Nushagak River drainage (ADF&G, 2006). In some years it hosts up to 25% of all of the Chinook spawning in the Nushagak river system (ADF&G, 2007). Upper Talarik Creek is a very productive system, providing spawning and rearing habitat for large numbers of sockeye and coho salmon to the Kvichak river drainage.

The North and South Fork of the Koktuli River and Upper Talarik Creek also support large numbers of other high value resident fish species, including Arctic grayling, Arctic char, rainbow trout, Dolly Varden, and northern pike. The Koktuli River and Upper Talarik Creek provide sport fishing opportunities for rainbow trout, coho and Chinook salmon.

4.3 In The Nushagak And Kvichak River Drainages: Lake Iliamna, the Mulchatna River, and the portions of the Nushagak River drainage downstream from the proposed Pebble mine would be affected if high volumes of acid mine drainage and heavy metals flowed from the mine into the Koktuli River and Upper Talarik Creek. Together the Kvichak and Nushagak River drainages have historically been the biggest producers of sockeye and other species of salmon in Bristol Bay, which is the world's largest producer of sockeye salmon (Alaska Department of Fish and Game, 2007). The 2006 inshore Bristol Bay sockeye salmon run of slightly more than 43.1 million fish was the 9th largest inshore run since 1952 (Salomone, et al. 2007). Historically, the Kvichak River drainage, which includes the Alagnak, Lake Iliamna, and Lake Clark drainages, has been the largest sockeye salmon producing system in Alaska and the world (Burgner, 1991). The Nushagak River drainage, which includes the Wood River, Mulchatna and Nuyakuk Rivers, is also the largest producer of Chinook and chum salmon in Bristol Bay (Westing, et al. 2006).

Estimates of total run size, including catch and escapement from the Nushagak and Kvichak-Naknek drainages are provided in Table 5 (Westing et al. 2006).

Table 5: Total Inshore Run of Salmon, Nushagak and Kvichak River Drainages (1985-2005)

	Numbers Of Salmon		
	High	Low	20 Year Average
NUSHAGAK RIVER			
Sockeye Salmon	8,900, 322	4,527,953	6,188,579
Chinook Salmon	244,107	75,216	144,334
Chum Salmon	1,090,975	255,777	655,802
Coho Salmon see note	260,310	93	107,534
Pink Salmon see note	243,890	204	83,793
KVICHAK-I NAKNEK			
Sockeye Salmon	33,229,901	1,411,225	12,673,623
Chinook Salmon see note	7,477	567	3,788
Chum Salmon see note	446,908	8,719	185,803
Coho Salmon see note	29,988	0	7,219
Pink Salmon see note	648,569	4,590	144,627

Note: numbers for Nushagak River coho and pink salmon, and Kvichak and Naknek Chinook, chum,coho, and pink salmon are catch only. No escapement numbers are available.

Commercial Fishery: The Bristol Bay sockeye salmon fishery is the largest in the world and the largest source of private sector income in the Bristol Bay region (Morstad.and Baker, 2006). The Bristol Bay fishery employs over 4239 workers and annual income from the fishery has reached as high as $350 million dollars (Dufield, 2007).

The 2006 harvest of nearly 29.0 million sockeye was the 8th largest since 1893, and the 2006 inshore run of 43.1 million sockeye was 23% above the 20-year average (Salomone, et al. 2007). The 2006 Bristol Bay commercial harvest of approximately 106 thousand Chinook salmon was the fifth largest in the last 20 years and 51% above the 20-year average of 70 thousand. The harvest of approximately 53 thousand coho salmon in Bristol Bay was well below the 20-year average of 103 thousand, but the Nushagak River was above its 20 year average and provided 81% of the coho catch. The chum salmon harvest of approximately 2.1 million was the largest in 20 years.

The 2006 harvest of all salmon species in Bristol Bay totaled approximately 31 million fish. The ex-vessel value of the catch was $93,935,000 (Salomone et al. 2007). The ex-vessel value is the amount paid to fishermen for their fish at the dock.

The Kvichak and Nushagak River systems provided most of the Bristol Bay salmon production (catch and escapement) in 2006. The total inshore sockeye run into the Nushagak District, which includes the Nushagak River and its tributary the Wood River, was more than double the forecast, coming in at 16.0 million sockeye in 2006. The Kvichak –Naknek District which includes both the Kvichak and Naknek River drainages and the Nushagak District provided 63% of the total 2006 Bristol Bay catch of 29 million sockeye. The Kvichak River drainage (includes the Alagnak River) and the Nushagak River drainage (includes the Wood River system) together provided over 65 % of the Bays 14.6 million sockeye salmon escapement (Salomone, et al. 2007). The Nushagak River drainage provided 80% of the total Bristol Bay Chinook catch, and 81% of the coho harvest.

Subsistence and Recreational Fisheries: The Kvichak and Nushagak River drainages also support economically and socially important subsistence and recreational fisheries. Bristol Bay residents are dependent on the harvest of salmon, freshwater fish, moose and caribou for food. Surveys taken in the 1980's and 1990's indicate that the 7,611 residents of 25 Bristol Bay villages harvested about 2.4 million pounds of fish and wildlife for subsistence annually (Duffield, et al.2007). The average annual salmon harvest for the period 1983-2003 was 155,153 salmon of all species (Duffield, et al.2007). Over 90% of these salmon were caught by residents of the Nushagak and Kvichak River drainages.

According to the ADF&G Sport Fish Division, the "Bristol Bay management area contains some of the most productive salmon, rainbow trout, Arctic grayling, arctic char, and Dolly Varden waters in the world." (ADF&G 2007). The most popular drainages include the Nushagak/ Mulchatna Rivers, the Wood River Lakes system, the Kvichak River and Lake Iliamna, the Naknek River, and the Togiak River (ADF&G, 2007). According to ADF&G these rivers and lakes provide" unparalleled angling opportunities". The Bristol Bay sport fisheries employs approximately 846 people and generates around 61million dollars in annual revenues (Duffield, et al. 2007).

Ecosystem Value: Bristol Bay salmon also play a major role in the productivity of the Bristol Bay terrestrial and freshwater ecosystems. Pacific salmon and other anadromous salmonids are the major vehicle transporting marine nutrients across ecosystem boundaries (i.e., from marine to freshwater and terrestrial ecosystems) (Shindler, 2003). Salmon provide nutrients and energy to biota within aquatic and terrestrial ecosystems through various pathways (Cederholm et al.1999). The annual deposition of marine nutrients from salmon is vitally important in maintaining the productivity of the lakes, streams, and riparian areas of the region (Naiman, et al. 2002). Salmon derived nutrients make up a substantial fraction of the plants and animals in aquatic and terrestrial habitats associated with healthy salmon populations (Schindler, et al. 2003).

Salmon and salmon carcasses are a major food source for all of the terrestrial predators and scavengers in the region including brown and black bears, wolves, foxes, and eagles. These species help to transfer marine nutrients from lakes and streams to uplands (Shindler, et al. 2003,

and Gresh et al. 2000). Salmon eggs and carcasses are a vital food source for rearing juvenile salmon, rainbow trout, Dolly Varden and Arctic grayling. Juvenile salmon are an important food source for the large populations of resident fish species such as rainbow trout, Dolly Varden and Arctic grayling found in Bristol Bay streams. The rich food source maintains the large number of these species found in the region. Without large salmon escapements and the associated input of marine nutrients the productivity of the region and numbers freshwater and terrestrial species in Bristol Bay dependent on salmon would diminish substantially (Gresh et al. 2000).

Discussion: Harvest and escapement figures show that the Bristol Bay drainage is clearly the premier salmon producing system remaining in the world. This is due in large part to pristine habitat, clean water, and good fisheries management. The production and harvest of salmon in Bristol Bay is critical to the regional economy, culture and ecosystem.

Proponents of the Pebble Mine have used the Frazer River, which is Canada's most productive salmon system, as evidence that hard rock mining is entirely compatible with the maintenance of salmon production in the Nushagak and Kvichak River systems (McGee, 2007 and Schindler and Hilborn, 2008). However, the collapse of the Frazer River fishery may actually be an example of how development of a watershed is incompatible with the maintenance of salmon populations. Frazer River sockeye harvests have precipitously declined from a high of around 60 million pounds in the early 1990's to a few million pounds or less by 1999 (Fisheries and Oceans Canada, 2008). This decline resulted in periodic fishing closures beginning in the late 1990's. In 2007 commercial, recreational and subsistence fishing were closed completely because of poor returns and escapement (CBC News, 2007). The outlook for 2008 remains bleak. These declines have occurred despite a substantial public investment in state of the art salmon habitat enhancement in the last three decades (Schindler and Hilborn, 2008). The Frazer River watershed has been developed for mining, logging, urban development, and agriculture. According to Canada's Fisheries and Oceans, which is responsible for Canadian fisheries policy, the reasons the continuing decline are not fully known, but "high water temperatures" and "habitat destruction" are thought to be factors (Fisheries and Oceans Canada, 2008).

4.4 Fish Populations Downstream of the Road, Pipeline, and Transmission Line Corridor: Up to 120 streams crossed by the access road, slurry pipelines, or electrical transmission line would be directly impacted by road construction, gravel extraction, wetland fills and stream crossing structures (Northern Dynasty 2004). Fish using these streams and upstream and downstream spawning areas could also be impacted by slurry pipe line breaks, and any chemical or fuel spills into these streams.

The Alaska Department of Fish and Game has identified 36 rivers, streams and small tributaries on the north shore of Lake Iliamna which provide salmon and resident fish habitat and could be affected by the Pebble Project mine, access road and pipeline corridor. The salmon streams are identified in the Catalog of Waters Important for the Spawning, Rearing or Migration of Anadromous Fish (Alaska Department of Fish and Game 2003), and include important sockeye, Chinook, and coho salmon producers, such as the Newhalen River, Knutson Creek, Canyon Creek Chekok Creek, Pile Bay River, and Iliamna River. Known salmon and resident fish streams which would be affected by the proposed Pebble mine access road and pipeline corridor are depicted in Figure 6.

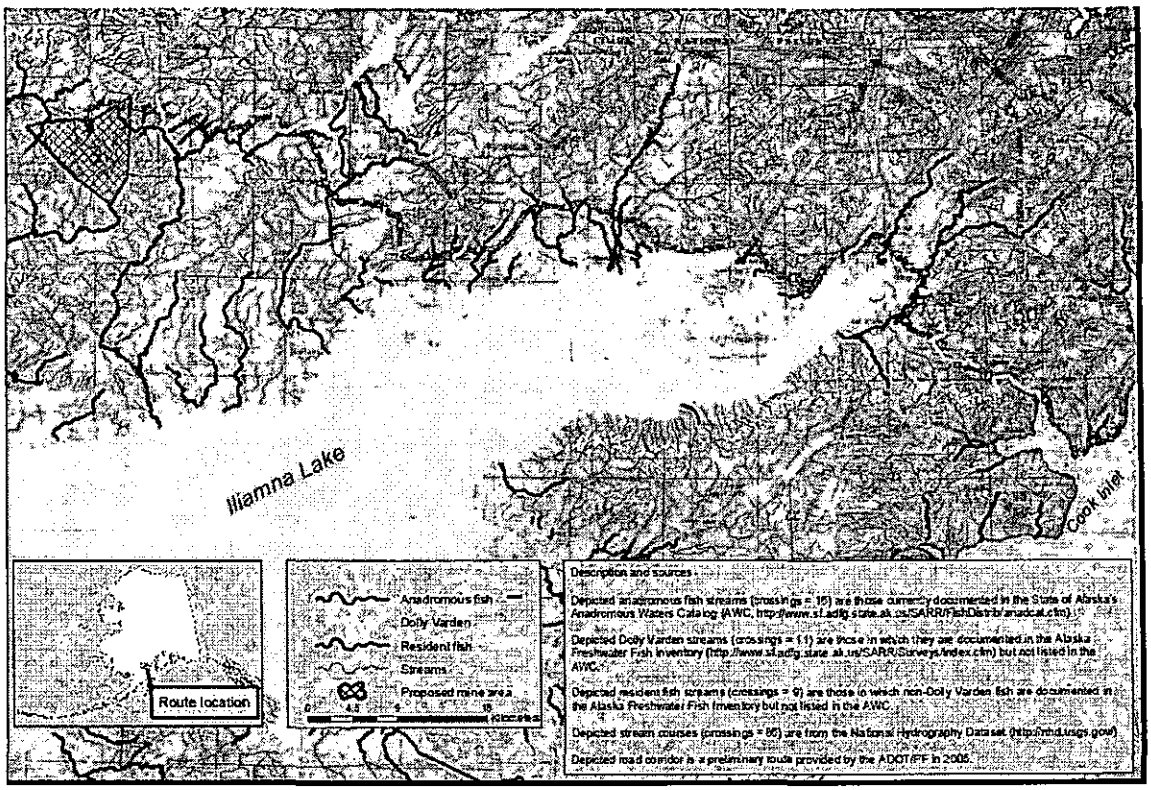

Figure 6. Known Salmon and Resident Fish Streams Which Would be Affected by the Proposed Pebble Mine, Access Road and Pipeline Corridor (Map used with permission of Michael Wiedmer, 2007.)

The north shore drainages and beaches of Iliamna Lake are also used as sockeye spawning index areas by ADF&G (Table 6). ADF&G has also identified 13 beach spawning locations along the north shore of Lake Iliamna which could be impacted by any pollutants carried downstream by road corridor drainages (Alaska Department of Fish and Game, 2003).

Table 6. High, Low and 2004 Index Numbers of Sockeye Salmon Spawners by Area, Lake Iliamna and Lake Clark Spawning Grounds Which May be Affected by Pebble Mine or Access Road (ADF&G, 2006)

Spawning Area	Escapement Index Count Low	High	2004
Upper Talarik Ck.	47	70,600	70,600
% total escapement	0.00%	0.13%	0.13%
Newhalen R. system	100	1,451,050	33,000
% total escapement	0.01%	6.40%	0.60%
N.E streams	2,200	154,000	80,700
% total escapement	0.06%	1.37%	1.40%
N.E. Ponds	30	124,711	2,200
% total escescapement	0.01%	0.89%	0.04%
Iliamna River system	3,050	414,855	138,500
% total escapement	1.22%	3.16%	2.52%
Lake Beaches N.E Shore	1820	1,017,000	43,000
% total escapement	0.19%	6.95%	0.78%
S. Shore Beaches Pile Bay	10	8,000	1,900
% total escapement	0.00%	0.05%	0.03%
Lake Clark system	100	374,551	19,730
% total escapement	0.01%	3.34	0.36%

Total index escapement	642,340
Kvichak Tower escapement	5,500,134
%of total escapement	11.60%

Note: Index counts are only an estimate of the numbers present and are only a fraction of the actual number. The percentages of total escapement is the percentage of the actual number of sockeye entering Lake Iliamna as measured at the Kvichak Tower.

Northern Dynasty Surveys: Consultants for Northern Dynasty Mines (2005) sampled 120 streams crossed by the proposed 95 mile long Pebble Mine haul road corridor, between the mine site and proposed port site at Iniskin Bay (Figure's 1 and 4). According to Northern Dynasty, the study emphasized data collection at smaller streams where culvert crossings are most likely. Larger streams with well known resources and planned bridge crossings received less effort. The intent was to adequately characterize fish use within the sample reach (Northern Dynasty Mines, 2005). Within small, wadeable streams, the entire catch was identified to species, measured and released alive near the point of capture.

Sampling was conducted between August 5 and September 8 of 2004. Forty one streams were dry at the time of the survey. Fish collection data were provided for 69 streams in a 2004 memorandum (McLarnon, 2004). This data is summarized in Appendix 1. Of the 69 streams reported on, fish were found in 55 streams and 14 had no fish at the location and time sampled.

The Northern Dynasty survey data leaves 10 streams unaccounted for. It is not known whether the missing streams are currently documented in the ADF&G Anadromous Waters Catalog (AWC) data base or were left out of the report for other reasons. Spawning adult or rearing juvenile coho, sockeye, Chinook, chum or pink salmon were found in 25 of the streams sampled. Most of the streams with spawning salmon also contained several species of anadromous and resident fish, including Dolly Varden, rainbow trout and Arctic grayling. Dolly Varden was the primary fish species in 21 streams, rainbow trout in 1 and Arctic grayling in 1. In seven streams only sculpins or sculpins and stickleback were collected.

Only one year of survey data for the Pebble Project Road Corridor has been provided, and fish distribution and numbers could be greater or smaller in other years. The sampling was not quantitative, so the numbers of fish reported do not reflect the actual number of fish which may be using upstream or downstream reaches of the streams surveyed. Some of the surveys were conducted after the peak of Chinook, pink, and chum spawning so the numbers of adults of these species observed during the surveys may be a small percentage of the number of these species which are actually using these streams.

The number of streams with fish and the number of salmon and other fish species might also have been higher if stream flows had not been unusually low during the surveys. According to the Northern Dynasty Pebble Project 2004 Surface-Water Hydrology Report, stream flows in the area were continuously declining from July through late September in 2004 when the surveys were made (Northern Dynasty, 2004). The USGS Surface Water Monthly Statistics from the Iliamna River gauge during the period 1996 to 2006 confirm that stream flows were unusually low (less than 50% of the average stream flow) during August and September of 2004 when a lot of salmon spawning normally occurs (United States Geological Survey, 2007). Low flows limit both the amount of available spawning and rearing habitat, and the numbers of fish present. Some of the streams that were reported as being dry might be used for rearing in years with higher precipitation. If additional surveys of road corridor streams were conducted in 2005 or 2006, no reports have been made available to the agencies or the public.

5. EFFECTIVENESS OF STATE AND FEDERAL REGULATORY PROCESS IN PREVENTING WATER POLLUTION AND FISH HABITAT LOSS FROM LARGE MINES

5.1 Introduction: Because of the copper sulfide ore, the size, and the location of the proposed Pebble Project mine, it presents and unprecedented threat to the two most productive salmon producing drainages remaining in the world. There isn't a mine of comparable size, ore properties and location that gives a good comparison for this analysis. However, it is instructive to look at mining regulation and mines in Alaska to see if the patterns of problems seen elsewhere in the U.S., and described earlier in this report, are evident here.

Three of the most important questions when considering the risk of the proposed Pebble Project mine having serious and long lasting impacts on fish habitat, fisheries production and fishermen are: (1) how effective are existing state and federal regulatory systems in anticipating and preventing impacts from proposed sulfide mines; (2) does the current state authorization process

give adequate weight to fish habitat protection when considering large mine projects; and (3) how effective have state and federal regulators been in monitoring mining operations and detecting and correcting problems at large mines once they begin to occur?

When faced with public calls for a prohibition on mining, or higher standards for mines in the Bristol Bay drainage, Pebble Project proponents argue that the mine should be allowed to go through the permitting process. The implication being that the present Alaska Department of Natural Resources large mine permitting process is a rigorous process with a set of detailed standards, and that state and federal participants would not issue authorizations for any mine that would harm the environment. Mine proponents also imply that current monitoring will quickly detect pollution and state and federal regulatory agencies would act swiftly to penalize any mine that does not comply with the terms of mine permits. Alaska Department of Natural Resources (ADNR) officials have also made the claim that the ADNR large mines permit coordinating process is the best in the United States.

In contrast, Pebble Mine opponents argue that the large mine permitting process is simply that – a process which, in and of itself, has no concrete standards for decision making, and is secondary to the Federal NEPA process. Opponents argue that the large mines process was established to expedite the issuance of permits for large mines, and has not been effective in preventing or correcting pollution problems. They also point out that the Murkowski Administration changed state statutes, regulations, and policies to favor large scale mining over fish habitat protection.

To judge the merit of the process for permitting large mines, it is necessary to understand what the process is, the level of protection current statutes provide for fish habitat, and how effective implementation of the statutes have been in preventing pollution at large mines in Alaska.

5.2 The Alaska Department of Natural Resources Large Mine Process: Alaska Statute 27.05.010 establishes ADNR as the state's lead agency for most matters affecting exploration, development, and mining of mineral resources in Alaska. The ADNR created the large mine permitting process to coordinate permitting activities for large mine projects. The ADNR mining website describes the process and lists the projects the large mine permitting unit has been involved in, including the Red Dog Mine, the Greens Creek Mine, the Kensington Mine, and the Pebble Mine (ADNR, 2007).

No statute or regulation creates the large mine permitting process. There are no separate regulations governing the process and no separate standards for the approval of large mine projects. It is simply a personnel action within ADNR which designates a "large mine coordinator" who works with other state and federal agency staff to implement existing statutes and regulations.

Three statutes guide the process, AS 38.04.005, 38.05.135(e), 46.15.080; and, ADNR's overall policy statute AS 38.04.005 which requires ADNR to manage "for maximum use of state land consistent with the public interest." This wording allows the ADNR wide discretion in determining what that standard means in any particular situation, such as the Bristol Bay drainages, or with respect to any particular resource, such as salmon. Similarly, AS 38.05.135(e) governs leases and disposals of public resources, such as mineral and water rights, and relies

upon a vague "state's best interest" standard for leases or disposals of public resources, such as water rights. Again, ADNR has wide discretion to determine what is in the "state's best interest".

Similarly, the Water Use Act, at AS 46.15.080, administered by ADNR, provides that DNR must find that a water appropriation is in the "public interest" and that in determining the public interest, DNR shall "consider" (1) benefit to the applicant; (2) the effect of economic activity resulting from the appropriation; (3) the effect on fish and game and on public recreation; (4) the effect on public health; (5) the effect of loss of alternate uses of water; (6) harm to other persons; (7) the intent and ability of the applicant to complete the appropriation; and (8) the effect upon access to navigable or public water. It is one thing to say that an agency shall "consider" fish and game as Alaska Statute 46.15.080 does. Three other ADNR statutes come into play if the project is in a designated anadromous fish stream or would require fish passage be provided, or is in the state's coastal zone.

Although, ADNR coordinates the large mine permitting process, permitting of large mines is actually driven by the requirements of the National Environmental Policy Act (NEPA) that applies to federal permits such as those issued under Sections 402 and 404 of the Clean Water Act (ADNR, 2007). In a January 11, 2007 presentation to a Board of Fisheries subcommittee that was gathering information on the adequacy of the ADNR process to protect fish and fish habitat, ADNR presenters focused on procedures for making decisions rather than whether there are any firm standards that actually protect fish habitat. Specifically, ADNR addressed four processes: (1) its process of large mine permitting; (2) the federal process of producing federal environmental impact statements under the National Environmental Policy Act (NEPA); (3) the ADNR process of consistency review under the Alaska Coastal Management Plan; and (4) the ADNR land use planning process (ADNR, 2007). ADNR focused on process rather than protection because it has few if any clear, concrete standards to protect fish habitat and instead relies on vague standards, as demonstrated above. The fundamental point of ADNR's presentation was that all state permits for the Pebble Mine will be integrated into, and none will be issued until, the federal NEPA process is complete for federal permits. ADNR bootstraps its processes onto the federal NEPA process. This avoids creating standards to protect fish before an applicant, such as Northern Dynasty, applies for ADNR permits. This allows an applicant to say: "let the process proceed," because the applicant does not have to meet any defined or quantifiable standards to protect fish, game populations, habitat or harvest.

Alaska Department of Natural Resources officials, proponents of the Pebble Mine and others have claimed that the ADNR's large mine permitting process is the "best" in the country. However, it is not clear what "best" means. Does this mean that it is best for the mining industry, best for the public who owns the land and minerals, or best for the environment? When asked what supporting documentation there was for the claim, Deputy ADNR Commissioner Ed Fogels (2007) said that it is his opinion that the ADNR large mine process was the best process for permitting large mines in the USA, but conceded that there is no quantitative data to support the claim. He based his opinion on talks with officials from other states who said that they did not have a similar process where all the state and federal agencies got together and permitted large mines. Mr. Fogels also said that Alaska was one of the few states that were permitting large mines at all.

The only available quantitative data on the performance of the ADNR large mine process and how changes in the fish habitat permitting and the Alaska Coastal Management Program have effected permitting of large mines in Alaska is from the Fraser Institute. The Fraser Institute is a Canadian organization whose mission is to "measure, study, and communicate the impact of competitive markets and government interventions on the welfare of individuals" (Fraser Institute, 2007). Since 1997 the Fraser Institute has conducted an annual survey of metal mining and exploration companies to assess how mineral potential and public policy factors such as taxes and environmental regulations affect minerals exploration investment. Survey results reflect the opinions of executives and managers in mining and mining exploration companies around the world, on how favorable countries, states and provinces are toward large scale mineral development. The Fraser Institute produces a report called a Policy Potential Index which is a composite index measuring the policy attractiveness of 65 jurisdictions in the survey. The Policy Potential Index is a composite index that measures the effects of government policies on exploration including the enforcement of existing regulations, environmental regulations, taxation, native land claims, protected areas, labor agreements, and geological potential.

In the 2002-2003 Fraser Report, prior to the Murkowski Administration, Alaska was ranked 12th in the world wide in the Composite Policy and Mineral Potential as a favorable place for mining investment. After the Murkowski statutory and regulatory changes were implemented, Alaska rose to number 4 in the world in the 2006-2007 report (Fraser Institute, 2007).

In the environmental regulation category of the 2006/2007 survey, Alaska was ranked behind Nevada, Utah, and Arizona which have a long history of mining. However, Alaska was ranked well ahead of other states, such as California, Wisconsin and Montana, which received very low scores, possibly because these states have enacted tough laws to prevent mining pollution (Fraser Institute, 2007).

The perception that Alaska has a very favorable regulatory climate for mining is confirmed by Alaska Miners Association Executive Director Mr. Steve Borell,, who states on the Alaska Miners Association Web site, "State-owned lands cover an area larger than the State of California, and most of these lands are open to mining under a location system which is a modern version of the federal mining law. And, although operations were for so many years held to a higher standard than in other states, today the field is nearly level and in several states the requirements are more stringent than in Alaska." (Borell, 2007) The Alaska Miners Association described the Murkowski Administration's 2003 changes to the regulatory system governing mines as "massive" (Borell, 2007). Biologists who had worked under both ADF&G and ADNR testified at a legislative hearing that the level of protection and considerations given to fish habitat under ADNR has been reduced compared to that provided under ADF&G.

From the mining industries perspective the regulatory and tax climate in Alaska appears to be favorable for large mines, but there are no equivalent surveys or other type of data that would indicate that the ADNR large mines permitting process is equally as favorable for the environment.

5.3 Funding of the Large Mines Process: The process that ADNR has established to fund state agency participation and essential baseline studies in the large mine process has also raised

several concerns. Companies proposing to develop large mines in Alaska have two choices, they can choose to submit their water rights, mining permits, and other applications through the regular ADNR permit and review process, or they can opt to use the large mine permitting process which offers a coordinator (ADNR, 2007). Because the legislature does not fund ADNR or other state agencies to maintain a large staff to review large mine projects, the regular ADNR process to permit a large mine could take decades. The Large Mine Process provides a means for a mining company to facilitate or expedite the permitting process by funding a coordinator and additional ADNR staff to facilitate the permitting process and process permits. The large mine permitting process requires that the applicant sign a Memorandum of Understanding agreeing to reimburse ADNR for costs that ADNR and other state agencies incur in attending project meetings, reviewing study plans and permit applications, and other actions required to obtain permits to develop the mine (ADNR, 2007). It does not provide funds for field inspections or monitoring of mining operations once permitted. In turn, ADNR hires additional staff in the ADNR Division's of Mining, Office of Habitat Management and Permitting (OHMP) and Office of Project Management and Permitting (OPMP) necessary to review the applicant's plans and issue approvals in a timely manner (Crafford, 2007). According to ADNR the Large Mine Process has "significantly streamlined mine permitting" (ADNR, 2007). ADNR may also negotiate Reimbursable Service Agreements (RSAs) with other state agencies such as ADEC and ADF&G for their participation and input to the process as necessary (Crafford, 2007). ADNR also reviews and approves plans for any studies necessary to evaluate the environmental, social and economic effects of the large mine process. The ADNR has signed a Memorandum of Agreement with Northern Dynasty Mines to fund the Large Mines Process for the Pebble Project (ADNR, 2007).

The concerns that critics have expressed are: (1) applicant funding creates an inherent bias in the regulating agency toward the company providing the funding, and (2) it allows the applicant and ADNR to limit the participation of other agencies such as the Alaska Department of Fish and Game (ADF&G) in fish and wildlife related studies and critical pre-permit application review of the project. The result is that ADNR and the applicant proceed in the absence of information on fish and wildlife related concerns until those concerns become apparent at the time of permitting. Another concern with the way the large mine process is funded is that ADNR staff that are funded by Northern Dynasty to work on the Pebble Mine, only have jobs as long as the project proceeds and the funding continues.

Critics of the large mine process feel that industry funding may create a subtle bias toward approval of the project. Although, it could only be coincidental, no large mine project has ever been rejected by the agencies participating in the ADNR large mine process , including the Kensington Mine whose 404 permit was subsequently revoked by the federal 9th Circuit court because it was in violation of the Clean Water Act.

The problems associated with industry funding of public research and the influence of funding on regulation of industry projects are discussed by the U.S. Food and Drug Administration in a recent report (U.S. Food and Drug Administration, 2000) Several studies have looked at the problem of potential funding bias. A recent study of the relationship between funding source and conclusions in scientific reports concluded that industry support of nutrition related scientific studies may bias conclusions in favor of the sponsor's products, with potentially significant

implications for the public health (Lessing et al. 2007). Another report summarizes studies of how industry funding of government scientific research has influenced the outcome (Sass, 2006).

According to Tom Crafford, ADNR's Large Mine Team Coordinator, ADNR received around $200,000 from NDM under the Pebble Mine Reimbursable Services Agreement in 2006 to facilitate permitting of the mine (Crafford, 2007). In contrast, the Alaska Department of Fish and Game which has a statutory mandate to protect, preserve, maintain and where possible extend the fish and wildlife resources which would be impacted by the mine, only received $20,000 to review study plans and attend project meetings during the same time period (Brookover, 2007).

5.4. Recent Changes to Alaska Statutes and Regulations Have Reduced Protection for Fish and Habitat: Between 2003 and 2006 Alaska's laws and regulations protecting fish habitat and giving local communities a substantial voice in resource development decisions were substantially weakened. In 2003 the Murkowski administration led efforts to facilitate mining and other types of non renewable resources by changing state fish habitat and water quality statutes and regulations in a manner which reduced their effectiveness. These actions included:

1. Executive Order 107 which transferring ADF&G fish habitat protection statutes to the ADNR. In 1959 the first Alaska Legislature enacted the Anadromous Fish Act (formerly AS16.05.870; now AS 41.14.870) and the Fish Ways Act (formerly AS16.05.840; now AS 41.14.840) (Appendix 5). These seminal statutes provided that the new Department of Fish and Game, through permitting, would regulate activities on state and private land that could otherwise result block or obstruct fish passage to spawning and rearing lakes and streams or the destruction of streams important for the spawning, rearing and migration of salmon. These statutes were the foundation of fish habitat protection in Alaska and the statutes remained in the Fish and Game Code (Title 16 of the Alaska Statutes) from 1959 to 2003 when they were transferred to ADNR by executive order.

The transfer of authority was a very significant change which weakened the statutory protections for Alaska's fish and wildlife resources. During the 44 years the statute was at ADF&G the analysis as to whether a project, such as Pebble, provided "efficient fish passage" (AS41.14.840), and or provided for the "proper protection of fish and game" (AS 41.14.870) was done by teams of fish, wildlife and habitat biologists at ADF&G. What constitutes ***"proper protection of fish and game" or "efficient fish passage"*** is critical in the determination of how fish and wildlife habitat in anadromous streams is protected. However, there is no statutory definition of either ***"proper protection of fish or game" or "efficient passage"***. The interpretation of these terms is left completely to the discretion of the implementing agency.

Until 2003 the decision as to whether a project achieved "proper protection" or "efficient passage" was made by the Commissioner of Fish and Game who has a statutory mandate to ***"manage, protect, maintain, improve, and extend the fish, game and aquatic plant resources of the state in the interest of the economy and general well-being of the state" (AS16.05.020 (2)***. After the transfer to ADNR, the decision as to what constitutes "proper protection" and "efficient passage" of fish is made by the Deputy Commissioner of DNR whose statutory mandate is to develop the renewable and non-renewable resources of the state in the best interest of the state of Alaska while weighing any competing uses. Fish and wildlife are not mentioned.

Prior to 2003, the ADF&G commissioner's decision on resource development that impacted anadromous waters or fish passage had equal weight with the decisions of the commissioner of ADNR to lease, sell or otherwise permit development. Where there was a disagreement the decision, or a compromise, was made by the Governor's office in a public process, usually under the processes of the Alaska Coastal Management Program. Since 2003, the tradeoffs between fish habitat conservation and other uses can be made within DNR without public scrutiny, because there is no statutory requirement for public notice or comment on fish habitat permits

The fact that the statutory underpinnings of anadromous and resident fish protection has been eroded by the changes made in 2003 is supported by statements by both the Alaska Miners Association and biologists who have worked under ADF&G and ADNR. The Alaska Miners Association supported the move from ADF&G to ADNR because the ADF&G had been a "major stumbling block for decades."(Borell, 2007) and described the Murkowski Administrations 2003 changes to the regulatory system governing mines as "massive". Biologists who had worked under both ADF&G and ADNR testified at a legislative hearing that the level of protection and considerations given to fish habitat under ADNR has been reduced compared to that provided under ADF&G;

2. Transferring the Alaska Coastal Management Program (ACMP) from the Governor's Office, where it had successfully resolved interagency differences for over 20 years, to ADNR. ADNR then gutted the enforceable ACMP standards which protected fish and wildlife habitat. The Legislature then eliminated a citizen's right of judicial enforcement, restricted local government's ability to craft local standards for fish and wildlife habitat protection and reduced the boundaries of local coastal plans;

3. Weakening, by subjecting to DNR review, ADF&G's implementation of the federal Fish and Wildlife Coordination Act, by which ADF&G coordinates with federal agencies on federal permits to assure that those permits protect fish under ADF&G standards and science;

4. Directing the Alaska Department of Environmental Conservation (ADEC) to adopt regulations to allow mixing zones for mining and other types of waste in fish spawning areas in order to "legalize" pre-existing violations. Prior to 2006 mixing zones in fish spawning areas were prohibited. In 2006 ADEC adopted the regulations allowing exceptions from the previous prohibition on mixing zones in spawning areas (ADEC 2006). Because of strong public opposition to the regulation change, the Murkowski administration was forced to exclude Pacific salmon spawning areas from the new regulations. Mixing zones are allowed in steel head, rainbow and cutthroat trout spawing areas, even though these species are also classified as Pacific salmon (ADEC, 2006). ADEC is currently working on additional regulations relating to the exemptions allowing mixing zones in resident fish spawning areas. ADEC regulations give ADEC discretion to authorize mixing zones in all other types of fish habitat, and this reduces the protection provided by the prohibition on mixing zones in anadromous fish spawning areas. Many streams are limited by the amount of rearing habitat they provide rather than spawning habitat and juvenile fish are often as susceptible to pollutants as spawning adults, and eggs. Certain pollutants also biomagnify, and bioaccumulate, and even if discharged at very low levels

may build may build up to harmful levels in long lived resident fish species such as rainbow trout, burbot, Dolly Varden and northern pike;

5. Revised the Bristol Bay Area Plan in 2005 to favor mining over protection of fish habitat.

Because the Bristol Bay Area Plan Management Policies, Management Intent, Guidelines, and Land Use Designations will direct and guide ADNR decision making in the Pebble Mine approval process, it is important to understand how the 1984 Plan was changed.

The proposed Pebble Project is located within Regions 6 and 10 of the revised 2005 Alaska Department of Natural Resources Bristol Bay Area Plan for State Lands (BBAP), and within Management Units 6 and 10 of the original plan which was adopted in 1984 (ADNR, 1984). In recognition of the importance of the Mulchatna and north Lake Iliamna drainages as fish and wildlife habitat, and the importance of commercial, sport and subsistence fishing to the regional economy, the 1984 Bristol Bay Area Plan (BBAP) stated that the primary use of all of Management Units 6 and 10, where the Pebble claims are located, was to be "wildlife habitat and harvest and recreation" (ADNR, 1984). Minerals were designated as a secondary use. The 1984 plan also closed 64 salmon streams in mineralized areas including the portions of Upper Talarik Creek and the North and South Forks of the Koktuli River known to support salmon, and it created a buffer 100 feet on either side to mineral entry (ADNR, 1984). The purpose of these closures was to protect fish habitat from incompatible mining activities. Although not mentioned in the text of the 1984 BBAP, a map of Management Unit 6 depicted a portion of the current Pebble mining claims as an area where minerals were designated as a primary use (ADNR, 1984). This was probably based on claims staked prior to 1984. Because the map is very small it is difficult to determine if the current Pebble Project ore body is within the area where minerals were designated as a primary use in 1984.

The 2005 revisions under the Murkowski Administration changed the BBAP management emphasis in Unit 6 from protection of fish and wildlife habitat to mineral development. The 2005 plan also reduced the area which was to be managed as fish and wildlife habitat from all of Unit 6, to the Muklung Hills and the streams specified in ADNR's Anadromous Waters Catalog (ADNR, 2005). The management emphasis for a very large area surrounding the Pebble claims (Units R06-23, 24 and R10-02), which was designated as fish and wildlife habitat, in the 1984 Plan, became "Area's associated with the Pebble Copper Deposit that overlap Region 10 (and 6) are designated Mineral (Mi)." "Areas associated with significant resources, either measured or inferred, that may experience mineral exploration or development during the planning period are designated minerals" (ADNR, 2005).

At the same time the Management Intent for the Pebble Mine area in the 2005 plan revisions (page 3-111) became, "The general resource management intent for the Pebble Copper Area is to accommodate mineral exploration and development and to allow DNR the discretion to make specific decisions on how development may occur, through the authorization process." "Mineral development in this unit is ***expected to be authorized*** (emphasis added) after a public process that is as extensive as this area plan and with the benefit of site specific data and design that is prepared for the development and is not now available." (ADNR, 2005). The most straightforward interpretation of this policy is that ADNR expects to approve the Pebble Mine

with conditions after receipt of a mine plan, a permit application and public hearings. The policy which directs ADNR authorizations does not mention denial as an option.

Many of the policies in the 1984 BBAP related to fish habitat protection also changed in the 2005 revisions. For example, maintenance of instream flow is an essential element in the productivity of salmon and high value resident fish streams. The instream flow management guideline in the 1984 BBAP, was "Except for public water supply and domestic use, the maintenance of fish stocks is generally the highest priority use in the study area. Therefore, the DNR will not allow an appropriation of water to fall below the amount determined necessary by ADF&G and/or USFWS to protect fish habitat and production and water fowl habitat" (BBAP, 1984). In the 2005 plan revisions the guideline was changed to, "Streams and other water bodies may be considered for instream flow reservations under AS 46.15.145.

The revised plan contains vague statements regarding protection of fish habitat such as: "Environmental Quality and Cultural Values: Protect the integrity of the environment and affected cultures when developing subsurface values", but very specific statements regarding state support of mining such as: "State Support of Mining: Aid in the development of infrastructure such as ports, roads, railroads, and continue to provide geologic and geophysical mapping and technical support to the mining industry", and "Mining in Fish Habitat: When the DNR issues a permit for mining in or adjacent to a fish stream, conditions of the permit will require any necessary measures that will allow the operation to meet water quality standards, and statutes and regulations governing the protection of fish."(ADNR, 2005). It is difficult to see how fish habitat can be "protected" when the stream bed is removed for an open pit mine such as is being proposed for the Pebble Project. The new policy permitting instream mining in the revised BBAP contrasts vividly with ADNR's finding in the 1984 mineral closures for Upper Talarik Creek and the Koktuli River that, "The development of mining claims within the active stream channel of designated anadromous streams and adjacent uplands creates an incompatible surface use conflict with salmon propagation and production and jeopardizes the economy of the Bristol Bay region and the management of the commercial, sport and subsistence fisheries in the Bristol Bay area. Mining within the active stream channel of an anadromous stream can seriously affect salmon spawning and rearing habitat and degrade water quality by the production of excessive sediment loads." (ADNR, 1984). Numerous scientific studies have documented that instream mining and the destruction of fish habitat is harmful to fish populations, and the body of scientific literature on this issue has increased since the original report was adopted in 1984 (Van Nieuwenhuyse, E. and J. Laperriere, 1986; Pierce, J. 1999; and Mol, J. and P. Outboten, 2004). What has changed is the 2005 revisions to the BBAP made protection of fish habitat and fish populations and the people that depend on fishing less important than mining.

The 2005 BBAP did leave intact the 1984 mineral closing orders for the portions of Upper Talarik Creek and the North and South Forks of the Koktuli River that were known to support salmon in 1984. These closures were put in place because the original drafters of the plan including ADNR, Bristol Bay Area residents, and State and Federal fisheries scientists who worked on the Plan recognized the threat that mining presented to the fisheries resources of the region. However, those closures were not expanded in the 2005 BBAP to include the new information on anadromous fish distribution in these streams in the proposed mine area and under the proposed tailings impoundments which become available in 2004.

Discussion: The stated purpose of the Murkowski administration's changes to state statutes, regulations and plans was to "streamline permitting" and expedite development by concentrating state authority to review and approve projects within ADNR. Although DNR and DEC claim that these actions do not adversely affect the State's responsibility to protect fish, it is not credible to conclude that in all cases the prior protections are still in place. Prior protections are certainly not in place for the Bristol Bay Area Plan or the Coastal Program. The transfer of authority to protect salmon habitat and prevent blockages of fish streams to ADNR was a fundamental change in how Alaska's fish resources are legally considered in non renewable resource decisions. The Department of Fish and Games statutory mandate is to protect, preserve, maintain, and extend the fish and wildlife resources in the interest of the economy and general well being of the State. When the two fish habitat protection statutes were transferred to ADNR, the statutory requirement to protect and preserve fish habitat was replaced by ADNR's mandate to consider fish habitat as one of many general criteria in developing non renewable resources such as large mines. During 2007 legislative hearings on HB 41, several former and present Alaska Department of Fish and Game Habitat Division and Alaska Department of Natural Resources Office of Habitat Management and Permitting biologists testified how protection for fish has been substantially weakened under ADNR. Although there has been substantial pressure to reverse these changes by the public and legislature, the Palin Administration has not acted to date.

5.5 Effectiveness of NEPA Process in Preventing Mine Pollution: The States large mine permit coordination process is dependent on NEPA, because federal permits required for large mine's are subject to the requirements of the National Environmental Policy Act (NEPA). NEPA establishes national environmental policy and goals for the protection, maintenance, and enhancement of the environment. Section 102 of NEPA requires all federal agencies to prepare detailed statements assessing the environmental impact of and alternatives to major federal actions (such as permits for large mines) significantly affecting the environment (i.e., an EIS). The federal permit for the project which is being evaluated under the NEPA process can't be issued until the final EIS and the Record of Decision (ROD) is issued. If the Environmental protection Agency doesn't agree that the EIS adequately addressed potential impacts review by the Council on Environmental Quality may be required.

Because the state large mine permitting process relies on the federal NEPA process, it is necessary to evaluate how well the NEPA process and subsequent federal and state permitting has performed in predicting and preventing pollution from large mines, in order to predict how well these same processes might do in preventing pollution from the Pebble Mine. Recently, two respected critics of the NEPA process used for large mines published a two-year study of the accuracy of predictions made in Environmental Impact Statements (EIS) for recently permitted mines in the United States (Kuipers, J.R., et al. 2006). The authors studied a representative sample of 25 recently permitted major mines where pre-mining baseline data and operational data were available. Although 100 percent of the EISs predicted that the mines would be able to comply with water quality standards, in fact:

1. 76% of the mines polluted ground water or surface water severely enough to exceed water quality standards;

2. 60% of mines polluted surface water severely enough to exceed water quality standards;
3. 52% of mines polluted ground water severely enough to exceed water quality standards;
4. 73% of mines exceeded surface water quality standards despite predicting that mitigation would result in compliance;
5. 77% of mines that exceeded ground water quality standards incorrectly predicted that mitigation to correct problems would result in compliance.

The study also found that mines, involving metallic sulfide deposits (such as the Pebble Project and the Red Dog Mine) and that are near ground water (like Pebble Copper and the Red Dog Mine), have such a high risk, that water quality exceedances are near certainty for acid drainage or contaminant leaching (Kuipers, et al. 2006). The analysis found that 85% of these mines polluted surface water, 93% of these mines polluted ground water, and of the mines that developed acid mine drainage, 89% of the environmental documents for these mines predicted that they would not. When the permitting agency tried to get the mine to fix the problem, the fixes failed 75% of the time. Of the 19 out of 25 mines that were analyzed and found to pollute ground and surface water, 63% released toxic metals such as lead, mercury, cadmium, copper, nickel, or zinc, 58% released arsenic and sulfates and 53% released cyanide.

By looking at large Alaskan mines which have been permitted under the NEPA process or both the NEPA and ADNR large mines process we can get an idea of how well the system has worked in predicting and preventing pollution:

Fort Knox Mine: The Fort Knox Mine, which was permitted under NEPA and the large mine permitting process, is often used as an example of an environmentally sound, non-polluting mine. It has generally done a good job of preventing pollution thus far. Lessons we can learn are that once a mine is permitted it may change its operating methods and it will be hard to deny a new permit. Fort Knox originally said it would not use cyanide in its process. The ADNR has recently allowed Fort Knox to build a facility for large scale use of cyanide in heap leaching of low grade ore (Fairbanks Daily News Miner, 2007).

Originally Fort Knox was determined to not have an acid mine drainage issue because of the nature of the ore body which is associated with anomalously high amounts of bismuth and is a low-sulfide deposit. Because it is a low sulfide deposit, it is less likely to pollute because it is not subject to the acid mine drainage problems that all metallic sulfide mines seem prone to. However, in 2002 Fort Knox began processing ore from its True North deposit (Fairbanks Daily News Miner, 2007). Because True North gold is associated with the sulfide minerals pyrite (iron), arsenopyrite (arsenic), and stibnite (antimony) in unoxidized zones the waste does have the potential to create acid drainage. Again, the original assumptions about the potential for pollution changed after the mine was in operation.

Mining at Fort Knox commenced in 1996. In the fall of 2006 the tailings dam at Fort Knox began leaking cyanide contaminated waste water (ADN, 2007). Although the leaks were discovered in late 2006, they were not made public until 2007. The Fort Knox tailings dams incorporate a system of perforated pipes, sumps and pumps to capture leakage and return it to the

tailings pond, but in this case the leak took a different pathway. The mine caught the problem and kept pollution from getting off site. It is more likely that problems will be detected and addressed while a mine is operating and personnel and equipment are on hand than it will be years after a mine has closed and is being watched by a caretaker.

It is too early to conclude whether the Fort Knox Mine will or will not pollute at some point in the future, especially if large quantities of sulfide mine waste from the True North Mine are stored permanently on site and cyanide is used in the gold extraction process. Most pollution problems often occur over time, as mines age, and often long after the company has left and the mine is closed (Chambers, 2006).

Red Dog Mine: The Red Dog Mine is a massive lead zinc sulfide deposit located on Red Dog Creek in the Delong Mountains of the western Brooks Range. The mine consists of an open pit, a mill a large tailings pond, water supple and housing. The ore concentrate is transported to the port on the Chukchi Sea coast by a 47 mile long haul road (EPA, 1984). The mine which opened in 1989 produces more than one million pounds of lead zinc concentrate annually, demonstrates the problems and risks associated with mining sulfide ore in an area with substantial wind and precipitation.

Although, the Red Dog Mine was permitted before the ADNR's large mine permitting process, the Red Dog Mine was permitted under the same NEPA and federal permitting process that is the centerpiece of ADNR's large mine permitting process. It is also one of the mines listed on the ADNR Mining webpage as a large mine permitting project. With the exception of the changes made by the Murkowski Administration in 2003 which weakened protection for fish and wildlife habitat, and subsistence uses formerly provided under the Alaska Coastal Management Program and the Anadromous Fish and Fishways Act, the Red Dog Mine was permitted under the same state laws and regulations that are currently used by ADNR to make decisions under the large mine permitting process.

The Environmental Impact Statement (EIS) for the Red Dog Mine was completed in 1984 and predicted that the project as presented by the applicant would have "no significant or little impact" on fish and fish habitat, vegetation, wildlife, subsistence activities, and air and water quality (EPA, 1984). Topics such as the potential for dust emissions, fuel and chemical spills, ground water pollution, storage of billons of tons of mine waste in the tailings impoundment and the potential for pollution from the flooded mine pit after closure were briefly discussed, but it was concluded that the measures proposed by the applicant would prevent any impact (EPA, 1984). There was no acknowledgement of potential future problems with the permanent storage of billons of tons of acid generating waste rock and mine wastes after the mine was closed, or the possibility that permit violations might occur.

State and federal permits were issued for the project and mining operations began in 1989. Pollution related problems and deviations from predictions in the EIS began shortly after the mine opened and have continued to date. Because of its length a chronology of the pollution related events as reported in the Anchorage Daily News from 1989-2006 is presented in Appendix 4. A brief summary of the problems at the mine include:

The ADEC Toxic Release Inventory reports for 2003-2005 show that the Red Dog Mine deposits almost 500 million pounds of toxic material behind its permitted tailings dams annually (ADEC, 2003-2005). An additional 320,000 pounds of methanol, lead, and zinc are released to the air as fugitive emissions.

When mining is completed and the site closed, it will leave behind a large tailings impoundment behind an earth fill dam which will have to be maintained forever to prevent it from breaching and spilling billions of gallons of toxic lead and zinc laden water and mine waste into local streams. The water leaking from the earthen fill dam, waste rock and remaining pit and fractured ore body will also have to be captured and treated in perpetuity (Crafford, 2007). Red Dog is an example of the state and federal processes determining that it is allowable for the mine operator/owners to leave a toxic mine site and tailings disposal site in a condition that has to be treated by someone forever. The process, and resulting permits, originally required the company to provide an 11 million dollar bond, but a new bond is being evaluated and it is estimated that it will take at least $100,000,000 to provide for needed perpetual care (Chambers, 2005).

Dust from the mine, trucks hauling lead and zinc concentrate, and the port where the concentrate is loaded onto ships, has contaminated 143,000 acres of the surrounding watershed with toxic levels of lead and cadmium (Hasselbach, et al. 2005). Lead and zinc levels measured at the port are 27 times the EPA industrial cleanup level. The NEPA/EIS and the original permits did not anticipate this problem, nor did they require adequate monitoring to detect the problem. It took the National Park Service and state and federal regulators 12 years to discover dust pollution was occurring and get the mine operators to effectively cover their trucks and operate the port in a way that keeps fugitive dust in check.

The Red Dog tailings dam, which was found to be adequate in the EIS and had been approved under the state and federal permitting process, came very close to failing in 1990. It turned out that the dam, though built as permitted, was under designed to cope with the levels of effluent and precipitation encountered. To save the dam and avoid having the entire contents of the tailings impoundment flow down the Wulik River, Teck-Cominco had to open a spillway and release polluted water into Red Dog Creek. EPA fined them for the violation.

At the same time and again unanticipated by the mine developer or the permitting agencies, new groundwater with toxic levels of zinc and other heavy metals began to well up in Red Dog Creek. More than 20 miles of Red Dog Creek were fouled and the world class char fishery in the Wulik River was threatened (ADN 1990). Neither the NEPA process nor the agencies issuing permit's for the mine predicted that once the ore body began to be developed; blasting would crack adjacent rock and give groundwater new pathways to newly exposed mineralized rock and thus liberate heavy metals that caused water pollution. The company eventually addressed the problem by moving Red Dog Creek and headwater steams a number of years before its development plan called for the creek to be moved.

Because the water pollution control systems installed at the mine didn't function as expected, heavily contaminated water was dumped from the treatment facility, leaked from the ore body, and overflowed from the tailing impoundment into the middle fork of Red Dog Creek. It took years to get the water pollution control and treatment systems operating properly. As a result the

mines operator was cited for over 618 violations of the mines water quality permits (ADN, 2006). Over $16,652,000 in fines and requirements for additional pollution control measures have been levied against the Teck-Cominco through 2006. None of these violations, or any of the problems described above, was anticipated in the EIS or adequately addressed in the original state and federal mine permitting process. Teck-Cominco, who operates the Red Dog Mine, is currently operating under a federal compliance order allowing it to exceed certain water quality standards. Several residents of the Village of Kivalina are suing Teck Cominco for water quality violations at the mine (Anchorage Daily News, 2007g and 2007f).

Because Red Dog was permitted under NEPA and the associated federal permitting processes, it is an example of why ADNR's large mine process cannot be depended upon to predict and prevent water quality violations. The Red Dog Mine is also an example of the how the state and federal regulatory processes often fail to anticipate serious environmental impacts of large mines, are slow to identify impacts that are occurring, and are sometimes not very effective in fixing problems after they occur.

Finally, Red Dog is also an example that the state and federal process can determine it is "in the public interest" to leave toxic tailings and a mine site in a condition that has to be actively treated forever, and that requiring a bond to pay for that perpetual care is "in the public interest".

Kensington Mine: The Kensington Mine operated by Coeur Alaska near Juneau, was permitted under the ADNR large mine process. The state and federal permits for the Kensington Mine issued under the ADNR Large Mines Process are pertinent to the Pebble Mine issue because the Corps 404 permit allowed the mine to dump its chemically processed mine tailings into Lower Slate Lake, a natural lake which supports fish. The Juneau Empire reported that Coeur found this method would be cheaper than storing the tailings on dry land (Juneau Empire, 2005).

Federal and state approval to dump mine waste into a fish bearing lake was not only an important cost savings measure for the mine, which would have had to develop a leak proof upland storage site, but it also set a precedent for other mines in Alaska, including the much larger Pebble Project mine which proposes to cover one or more lakes and approximately 16 miles of streams, supporting both resident and anadromous fish, with billions of tons of potentially acid generating waste rock and mill waste.

However, the Corps of Engineers Kensington disposal permit was recently overturned by the U.S. 9th Circuit Court of Appeals which ruled that "the mine tailings, the waste product of a chemical milling process, could not be treated like mere 'fill material' that the 2002 EPA and Corps of Engineer regulation changes allowed mining companies to dump into bodies of water." (Anchorage Daily News, 2007g and U.S. Ninth Circuit Court, 2007). Coeur Alaska, the Palin Administration, and the local Goldbelt Native Corporation appealed the court's ruling, but the Corps of Engineers and the Forest Service declined to join the appeal (Juneau Empire, 8/23/07).

Although the disposal of mine waste into Slate Lake has been blocked by the Federal court because doing so was a violation of the Clean Water Act, it raises the question of whether Corps of Engineers, ADNR and ADEC regulators, who are charged with protecting water quality and Alaska's fisheries resources, would similarly support the disposal of toxic mining wastes into

Bristol Bay drainages where much greater fisheries resources are at risk? (See Section 5.4 on the Bristol Bay Area Plan.)

Discussion: When ADNR relies upon the NEPA process as the cornerstone of its large mine permitting process, it is depending on a process that has a poor record of predicting and mitigating water pollution problems from large scale mining operations. ADNR has not shown how its process, which depends on NEPA, differs from that used for the 25 mines studied in the 2006 Kuipers report, which likewise depended on NEPA (see also section 5.7).

5.6 The Lack of Confidence in Federal and State Regulation of Mines Prompted Changes in Other State's Laws: The citizens of two states, Wisconsin and Montana, with a long and not always good history of mining passed initiatives setting higher standards for sulfide mines and prohibiting the use of cyanide in mining. Two other states, Michigan and New Mexico, have adopted statutes and regulations prohibiting or severely restricting mines which would leave behind mine pits, tunnels, or tailing storage facilities which would require perpetual care to prevent pollution of the environment.

The State of Wisconsin adopted the Sulfide Mining Moratorium Act in 1998. The Act prohibits the state issuance of permits for new metallic sulfide mines unless one such mine in North America is certified by the Wisconsin Department of Natural Resources to have operated for 10 years and been closed for 10 years without causing pollution (Appendix 2). The Act, which received strong support from Wisconsin citizens, was directed at stopping the Canadian Rio Algom Corporation's Crandon zinc-copper mine near the Mole Lake Chippewa Reservation, from being permitted by the Wisconsin Department of Natural Resources. The Act does not prohibit sulfide mining but adds the new criteria at the end of the permit process. This has effectively halted the development of new sulfide mines in Wisconsin, because no examples of sulfide mines which meet the criteria have been identified to date.

The State of Montana banned the use of cyanide through a citizen's initiative in 1998. Montana voters overwhelmingly rejected the mining industry's effort to repeal the ban in 2004. The bill I-137 prohibits cyanide heap and vat leach open-pit gold and silver mining, but allows mines to continue operating under its existing operating permit or any amended permit that is necessary for the continued operation of the mine (Appendix 3).

The initiative passed because of numerous cyanide spills and leaks and other pollution at the Beal Mountain Mine, Zortman-Landusky Mine, Golden Sunlight Mine, Kendall Mine and Basin Creek Mine that caused fish kills and threatened water supplies for ranches and communities. The Zortman- Landusky Mine alone experienced over a dozen cyanide spills, including one spill that released 50,000 gallons of cyanide solution and contaminated a community drinking water supply (Westerners for Responsible Mining, 2007).

One mining company sued the State of Montana claiming that the ban prevented it from mining and making a profit. A five-year legal showdown over Montana's historic ban on cyanide leach mining ended April 18, 2007 when the Montana Supreme Court unanimously ruled that the ban did not deprive a mining company of property or profit. The high court ruled 6-0 that Canyon Resources Corp., the principal player behind the hoped-for large open pit cyanide leach mine

slated for Lincoln, Montana did not have a mining permit when voters approved the cyanide ban in November 1998. Consequently, the company had no right to mine and lost nothing when the initiative passed (Missoulian, 2007).

New Mexico and Michigan have enacted statutes designed to prevent the approval of mine or reclamation plans which require perpetual care (Appendix 6). The Red Dog Mine and the proposed Pebble Project Mine are examples of mines that would require perpetual care after closure because of the large quantity of toxic waste stored on site or generated by flooded mine pits or tunnels. The New Mexico statute N.M.S.A 1978, 69-26-12 states in part, "B. The Director shall issue the permit for a new mining operation if the director finds that: (4) the mining operation is designed to meet without perpetual care all applicable environmental requirements imposed by the New Mexico Mining Act and regulations adopted pursuant to that act and other laws following closure". Michigan statute M.C.L.A. 324.63209: "Natural Resources and Environmental Protection Act requires in part, (8) Both the mining area and the affected area shall be reclaimed and remediated to achieve a self-sustaining ecosystem appropriate for the region that does not require perpetual care following closure and with the goal that the affected area shall be returned to the ecological conditions that approximate premining conditions subject to changes caused by nonmining activities or other natural events."

These statutes appear to prohibit large tailings facilities storing toxic wastes, and mine tunnels and pits which are likely to develop acid mine drainage, such as those proposed for the Red Dog Mine and Pebble Project, that would require perpetual treatment and maintenance to prevent environmental pollution after closure.

5.7 Under Federal Statutes, Mining Does Not Receive the Same Scrutiny as Other Industries: The 1972 Clean Water Act (CWA) prohibited dumping waste into streams and lakes. However, in 2002, the Environmental Protection Agency and the Corps of Engineers under the Bush Administration, revised regulation to classify chemically processed mine waste as "fill," for purposes of the CWA, to allow the waste to be discharged into bodies of water if a permit is obtained (Perks and Wetstone, 2002 and Washington Post, 2004). Since then, the new definition has been applied widely in Appalachia, making it easier for companies to blast away mountaintops, mine coal seams underneath, and push the waste material into neighboring valleys, often obliterating streams in the process (Washington Post, 2004). The Corps of Engineers interpreted the new regulations to include waste from metals mining in approving a permit to dispose of mine waste into Lower Slate Lake at the Kensington Mine in Juneau (U.S. Ninth Circuit Court, 2007).

Mining waste has also been exempted from the Resource Conservation and Recovery Act (RCRA 42 U.S.C. s/s 6901 et esq.). The RCRA (1976) gave EPA the authority to control hazardous waste from the "cradle-to-grave". This includes the generation, transportation, treatment, storage and disposal of hazardous waste. In October, 1980, RCRA was amended by adding section 3001(b) (3) (A) (ii), known as the Bevill exclusion, to exclude "solid waste from the extraction, beneficiation, and processing of ores and minerals" from regulation as hazardous waste under Subtitle C of RCRA (Environmental Protection Agency, 2007s). According to the EPA, "Mining wastes include waste generated during the extraction, beneficiation, and processing of minerals". Most extraction and beneficiation wastes from hard rock mining (the

mining of metallic ores and phosphate rock) and 20 specific mineral processing wastes are categorized by EPA as "special wastes" and have been exempted by the Mining Waste Exclusion from federal hazardous waste regulations under Subtitle C of the Resource Conservation and Recovery Act (RCRA) (Environmental Protection Agency, 2007s. These amendments to federal antipollution laws allow mining companies to store billions of tons of mine waste, containing heavy metals and toxic chemicals such as cyanide, behind tailings dams. Many of these tailings storage facilities such as the Summitville Mine, Grouse Creek Mine, Zortman-Landusky Mines and others have subsequently leaked, causing serious pollution of surface and ground waters (see sections on Acid Mine Drainage and Copper and Cyanide Toxicity).

Mining operations are also exempt from certain federal air quality standards. Mercury emissions from mining are not regulated under the National Ambient Air Quality Standards (NAAQS) or under the National Emission Standards for Hazardous Air Pollutants (NESHAPS) for gold or silver mining. Although, there are regulatory requirements under title V of the Clean Air Act (CAA) mercury is also not regulated under the New Source performance Standards (NSPS) Regulations." (National Risk Management Research Laboratory, 2003). This has resulted in substantial levels of mercury pollution from metals mines in the United States.

6. POTENTIAL IMPACTS OF THE PROPOSED PEBBLE MINE AND ASSOCIATED FACILITIES ON FISH HABITAT, FISH AND FISHERMEN

6.1 Introduction: If developed, the Pebble Project mine, mill, tailings storage facilities, access roads, pipelines, port, electrical transmission lines and associated facilities would physically destroy, dewater or otherwise affect a significant amount of salmon and high value resident fish habitat in two Bristol Bay drainages. It is also likely that during the operating life of the mine or after abandonment, the Pebble Mine and associated facilities will cause pollution resulting in substantial reductions of fish habitat and fish production in portions of the Nushagak or Kvichak River drainages.

6.2 Physical Loss of Habitat: A substantial amount of fish habitat will be (1) physically destroyed during the excavation and operation of the Pebble mine and associated facilities, (2) dewatered by water appropriations, and (3) altered or blocked by construction of the access road.

Physical destruction of fish habitat: The Pebble Mine, including the Pebble West (chalcopyrite) pit, the Pebble East (bornite) pit or block cave and the tailings ponds as currently proposed, will physically occupy or impact approximately 6.5 square miles of the North Fork Koktuli (NFK) River drainage, and 19 square miles of the Upper Talarik Creek (UTC) and South Fork Koktuli River (SFK) drainages (Figure 1). All of the resident and anadromous fish habitat in the area will be destroyed. Approximately 3.5 miles of stream 1.190, a tributary of the NFK which supports grayling, large numbers of Dolly Varden, spawning adult Coho, and rearing juvenile Coho and Chinook salmon will be buried under Tailings Pond G (NDM, 2006). In addition, all fish habitat in Frying Pan Lake and approximately 9.5 miles of SFK tributaries would be excavated for the Pebble West pit, buried under Tailings Storage Facility A, or appropriated for mine process water. The headwaters of Upper Talarik Creek and many of its tributaries are underlain by the Pebble East and West ore bodies and would be removed by mining, and the water appropriated

for mine use. A portion of the headwaters of Upper Talarik Creek which would be excavated for the Pebble West pit, or underlain by the Pebble East Pit, appears to be currently specified in the Alaska Department of Natural Resources Anadromous Waters Catalog or has been identified as important for sockeye and Coho salmon spawning, and high value rearing habitat for Coho, Chinook, Dolly Varden and rainbow trout (NDM, 2006). Although, Northern Dynasty Mines has not disclosed how the deeper Pebble East Ore body would be mined (i.e., open pit or block caving), it seems almost certain that in either case the section of the main stem of Upper Talarik Creek flowing over or adjacent to the proposed Pebble East pit, would flow into the mine and would have to be rerouted around the mine or appropriated for mine use. In either event fisheries production from a one to two mile segment of the main stem of Upper Talarik Creek would be lost. Over 12 miles of Upper Talarik Creek tributaries would be similarly affected if both ore bodies were developed.

With the information available at this time, it is difficult to provide a precise estimate of the number of adult and rearing juvenile salmon and resident fish in the portions of the North and South Forks of the Koktuli River and Upper Talarik Creek which would be physically and permanently lost to mining activities over time. The numbers of spawning adult salmon and resident fish in the streams displaced by the Pebble Mine fluctuate over time due to environmental conditions and the number of returning salmon harvested. Aerial survey estimates of salmon spawning escapements are only indexes and often underestimate the actual number of fish in the stream. Information from Northern Dynasty Mine's surveys provide only qualitative information on juvenile numbers at the time and location that samples were taken, but not total population in all of the areas which may be affected by the mine. However, the loss of this much habitat in these three drainages could reduce the production of adult resident fish and salmon from these three systems by thousands and possibly up to tens of thousands of fish annually. The number of juvenile fish lost could be in the tens of thousands to hundreds of thousands. Because the production from this habitat will be permanently lost, the cumulative loss over tens of thousands of years would be substantial.

Dewatering and Loss of Instream Flow: All of the ground and surface water within the mine area, which encompasses the headwater of the North and South Forks of the Koktuli River and Upper Talarik Creeks, would be appropriated for mine use over the 40 to 70 year life of the mine (Northern Dynasty, 2005 and Northern Dynasty, 2006). Because the number of fish produced is determined by the quality and amount of habitat available in a stream, the loss of this flow over the 40 to 70 year life of the mine would reduce the number of resident and anadromous fish produced by the North and South Forks of the Koktuli River, and Upper Talarik Creek (National Research Council, 1996 and Heggenes et al. 1998).

The surface water appropriation for the mine and the tailings facilities would eliminate all flow and fish habitat in the upper main stem of the South Fork Koktuli and its headwater's tributaries, tributary 1.190 to the North Fork Koktuli, and the tributaries to Upper Talarik Creek within the Pebble East and Pebble West mine pits, upstream of the point where the water is removed (see Mine Footprint above). The fish stocks which may be genetically unique to these streams would be extirpated. The portions of these streams that would be excavated or buried under tailings would no longer produce fish even after the mine is closed.

Below the mine, stream flow would be lost and fish habitat would be dried up or severely diminished for some miles downstream. Some flow would gradually be restored downstream as unaffected tributaries empty into the main channel of these three streams. Table 1 in the section on water appropriation shows that the net reduction in stream flow on the South Fork Koktuli, 12 miles downstream, would be 16%, 8% on the North Fork Koktuli, 18 miles downstream, and 9% on the Upper Talarik Creek, 18 miles downstream. The reduction of habitat (stream width and depth) from these appropriations would substantially reduce available spawning and rearing habitat particularly during the summer low flow period when Chinook, sockeye and chum salmon are spawning and would reduce the amount of available overwintering habitat for eggs and juvenile salmon during critical low winter flows.

Northern Dynasty's 2004 hydrogeology study also found that the middle section of the South Fork Koktuli River goes dry during low flow periods during the summer. It is thought this is an indication that the South Fork Koktuli River may be contributing cross drainage ground water flow to Kaskanak Creek. The proposed surface water appropriations from the SFK would increase the frequency and length of the periods when upstream fish migration in the middle and upper South Fork Koktuli would be blocked by a dry stream bed and spawning and rearing habitat would not be available.

Northern Dynasty has also submitted a separate ground water application for 19.4 cubic feet per second from the Upper Talarik Creek drainage, 11.78 cubic feet per second of ground water from the South Fork Koktuli watershed, and 12 cubic feet per second from the North Fork Koktuli River drainage (NDM Pebble Project 2006 ground water application). The wetlands, lakes and ponds in the mine area are a manifestation of the ground water level in the mine area which appears to be quite high. Ground water flowing down gradient from the mine area also appears to provide the majority of flow to the North and South Forks of the Koktuli River and Upper Talarik Creek during July and August when there is little precipitation and Chinook, chum, and sockeye salmon are spawning. From January through March when surface runoff slows or stops, ground water is the primary source of critical winter flows to incubating salmon eggs and juvenile salmon overwintering areas. Ground water from the mine area is also likely the source of the seeps and upwelling areas in these streams currently used by salmon for spawning. The loss of ground water would reduce the amount of salmon spawning habitat in July and August when Chinook, chum and sockeye salmon spawning occurs, and would reduce the amount of viable overwintering habitat during January-March low flows. The sections of the South Fork Koktuli which currently go dry in mid summer would likely expand. Loss of salmon and resident fish habitat because of reduced and altered stream and ground water flows is well documented in the scientific literature, and is a major cause of salmon declines in the Pacific Northwest (National Research Council, 1996 and Heggnes et al. 1998) Pebble Mine ground and surface water appropriations could eliminate some or all salmon and high value fish habitat in the upper sections of the South Fork Koktuli River. Salmon and high value resident habitat and fish production would likely be reduced in downstream reaches, but to a lesser degree because of the mitigating effects of flow from downstream tributaries. Loss of ground water upwelling areas would also reduce or eliminate salmon spawning in the areas of the North and South Forks of the Koktuli River and Upper Talarik Creek where this occurs.

Predicting the impact of instream flow reductions, from the proposed surface and ground water appropriations for the Pebble Mine, on fish production is complex and imprecise without a lot of long term data. However, there is no question that the loss of ground and surface water below the mine and tailings ponds will reduce fish spawning and rearing habitat and fish production. It is likely that the proposed ground water and surface water appropriations for the Pebble Project Mine would reduce downstream production of adult salmon and other fish species by thousands and possibly into the tens of thousands of adult fish annually. The lost of rearing juvenile fish would be at least one magnitude higher. The loss of fish production would continue over the 40 to 70 year life of the mine.

After the mine is closed, the surface and ground water that is no longer captured and used by the mine would fill and then overflow the mine pits and tailings storage areas. Because this water may be contaminated with heavy metals it would have undergo an extensive treatment process before it could be discharged into these streams.

Obstruction of fish passage: The access road, pipelines, and electrical transmission line will cross at least 120 streams, and approximately half of these streams provide spawning, rearing and migratory habitat for five species of salmon and high value resident fish such as rainbow trout, Dolly Varden, and grayling. Roads impact streams when inadequately designed, poorly installed or inadequately maintained stream crossing structures, usually culverts block fish passage to upstream fish habitat. Studies of culverts by the United States Forest Service and others found that improperly installed and maintained stream crossing structures have blocked access to thousands of miles of formerly productive salmon and high value resident fish in the Pacific Northwest and Alaska (Kemset, M., 1999). According to the Alaska Department of Fish and Game Sport Fish Division, "Poorly designed or inadequately maintained culverts can block or impede fish access to upstream spawning and rearing habitat. The connectivity of a diverse suite of fish habitats is integral to supporting the abundance of fish species and their life stages found in Alaska's fresh water habitats. Tributary streams, lakes, off-channel habitats, backwater areas, small ponds, and sloughs all provide critical fish habitat. Ensuring that these habitat components remain connected allowing for the free migration of spawning adults and rearing juvenile fish is critical for maintaining healthy fish populations. However, a variety of natural and man-made barriers (particularly culverts) limits connectivity of habitats and can measurably reduce fish production in some watersheds." (ADF&G, 2007).

Although, fish passage guidelines exist for the installation of culverts, many of the culverts installed in the Pebble Mine access road will likely eventually end up as barriers to adult and juvenile fish migration. Unanticipated flood flows can erode stream channels, perch culverts and block upstream migration. Incorrectly installed or poorly maintained culverts eventually become fish passage blockages. It is estimated that up to 50% of the culverts on public road systems may impede fish passage over time (Steve Albert, 2007). Based on this estimate it is likely that over time, culverts on the Pebble Mine access road may block access to many miles of rearing and spawning habitat and will reduce fish production by tens of thousands of rearing juvenile fish and thousands of adult fish annually.

6.3 Chronic and Acute Pollution: There has never been a copper mine as large as the proposed Pebble Mine in the western hemisphere but experience from much smaller mines indicates that

there is a substantial risk that the Pebble Mine would (1) develop an acid mine drainage problem or (2) experience a large scale pollution event during the life of the mine or after abandonment (see Toxicity, Pollution Pathways, and Effectiveness Of The Regulatory Process Sections). Even small increases in copper or mercury levels in streams draining the Pebble Mine could reduce salmon and resident fish populations or cause secondary effects such as avoidance or reduced resistance to disease outbreaks.

Acid Mine Drainage: Acid mine drainage and tailings dam failures, from small to moderate sized copper and metals mines, a fraction of the size of the proposed Pebble Project Mine, have severely impacted or eliminated aquatic life in streams for many miles downstream. The potential loss of fish habitat can be estimated by considering two examples. Copper drainage from the Washington Copper mine in British Colombia has severely reduced salmon and trout populations in the Tsolum River and several tributaries for 18 miles downstream. In the past, the Tsolum River supported large populations of steelhead and resident rainbow trout, sea-run cutthroat trout, and Coho, pink and to a lesser extent, chum salmon. The fisheries resource is believed to have declined in the basin predominantly because of the acid mine drainage from Mt. Washington. Other factors such as the reduction of summer low flows by irrigation withdrawals, over fishing, logging and gravel extraction were considered as possible contributing factors. However, the neighboring Puntledge River, which has experienced these same disturbances, has continued to support strong salmon and trout populations (Government of British Colombia, Ministry of the Environment, 1995). Acid mine drainage from the 75 acre Formosa Copper Mine in Oregon has eliminated all aquatic life from 18 miles of two streams that were formerly prime habitat for steelhead, Coho salmon and trout (The Oregonian, 2007). Because the proposed Pebble Mine would be hundreds, perhaps thousands of times larger than these mines, the potential impacts would be proportionately greater than these mines.

Considering the effect of much smaller copper mines on salmon production, acid mine drainage overflowing from the abandoned Pebble East and West water filled mine pits into Upper Talarik Creek, or pollutant laden water leaking from tailings dams holding up to 8.2 billion tons of waste rock into the North or South Forks of the Koktuli River could eliminate all aquatic life for some distance downstream. Considering the scale of the Pebble Mine and the potential amount of acid mine drainage, the dead zone could include just the North or South Fork of the Koktuli, or Talarik Creek, or extend downstream into the Mulchatna River and Lake Iliamna. Increased levels of copper and other heavy metals which are toxic to phytoplankton at very low levels would reduce food organisms that support rearing juvenile sockeye in Lake Iliamna (Roch, et al. 1985). Based on adult salmon escapement levels, the loss of one or more of these streams to acid mine drainage could reduce production of adult Bristol Bay sockeye, Chinook and coho salmon in some years by up to hundreds of thousands of fish. Large numbers of high value resident fish would also be eliminated.

Waste Water Discharges: Several mining experts and a number of state and federal regulators with mining experience, who were contacted in the preparation of this report, voiced the opinion that Northern Dynasty would not be able to achieve their goal of zero discharge if the Pebble Mine were developed. The size of the mine, its location in wetlands , the amount of precipitation, the climate at the mine site, the inability to store the amount of water proposed to be appropriated over the life of the mine and past experience were all cited as reasons. This is consistent with the United States Environmental Protection Agency's, 2004, Technical support

for the 2004 effluent guidelines program plan, which found that, "Mines located in arid areas can effectively reduce effluent discharge quantities by evaporation. Other facilities, located in areas with net positive precipitation or icy conditions have less control over their discharge volumes." (Environmental Protection Agency, 2004). Sources of mine waste water discharges cited by EPA include water drained or pumped from active mining areas, process water discharges or leakage from tailings impoundments leach ponds and waste piles, and storm water runoff from the mining area (Environmental Protection Agency, 2003)

If the Pebble Mine can't achieve zero discharge, the mine can propose to discharge waste water to a nearby water body (Environmental Protection Agency, 2003). NPDES regulations allow mining operations to discharge a volume of wastewater equal to the net precipitation falling on the tailings impoundment. Considering the surface area of the tailings impoundments and the annual precipitation this discharge could amount to many cubic feet per second.

The proposed Pebble Mine might apply for a mixing zone or for reclassification of the receiving waters if it is not economically or technically feasible to treat waste water below levels that are harmful to fish.

Discharge permits are based on many factors including the composition of the waste water and the use of the receiving waters. ADEC 18AAC 70 Regulations Article 2 Exceptions to Statewide Standards allow for discharges which do not meet state water quality standards through short term variances, zones of deposit, thermal discharges, reclassification of waters, mixing zones and site specific criteria. To date ADEC has reclassified 25 stream reaches under 18.AAC 70.230e to allow nonconforming discharges from mines, including 8 for the Red Dog Mine.

Alaska Department of Environmental Conservation Mixing Zone Regulations 18 AAC 70 which were adopted in 2006 prohibit mixing zones in spawning areas and mixing zones which would "adversely affect the present and future capability of an area to support spawning, incubation, or rearing of any of the five species of salmon." However, mixing zones may be authorized in the spawning and rearing areas area of a lake, stream. river or other flowing water for all other species of resident and anadromous fish including rainbow trout, northern pike, brook trout, cutthroat trout, Arctic char, grayling and lake trout if three criteria designed to prevent or mitigate impacts to the growth and propagation of fish from discharges are met (18AAC 70).

Considering all of these factors it seems likely that the proposed Pebble Mine would have a discharge to either the Koktuli River or Upper Talarik Creek drainages. It is possible that the discharge would be piped to a lake, stream, or stream segment where 5 of the 7 species of Pacific salmon found in Alaska spawning don't spawn. Unfortunately is also likely that this discharge would exceed state water quality standards at times because of accidents, human error, and equipment breakdowns (see section on Red Dog Mine). Storm events with heavy precipitation could cause nonpoint source pollution or overwhelm treatment facilities. Depending on the size, composition and duration of the discharge, it could have acute or chronic effects on fish and other aquatic life in the receiving waters. Depending on the composition, magnitude and frequency these discharge could reduce fish production in the receiving waters.

Large Scale Pollution Event: A failure of one of the massive tailings dams planned for the Pebble Mine would have devastating short and long term consequences for the receiving waters. A tailings dam failure due to an earthquake, flood, or structural flaw would not only release a flood of polluted water downstream, but would also bury the receiving stream with silt like mine wastes. This silt would clog stream gravels and make the water in these clear water streams opaque. The tailings dam failure at the Brewer Gold Mine killed all fish in the Lynches River for 49 miles downstream (EPA, 2005d). The failure of the Martin Coal Company's tailings dam containing 250 million gallons of liquid waste and 155,000 cubic yards of solids impacted 75 miles of the Big Sandy Fork River.

The failure of one of the proposed Pebble Mine tailings dams containing several billion tons of potentially reactive mine waste and hundreds of billions of gallons of contaminated water could kill aquatic life as far downstream as the Nushagak River or out into Lake Iliamna. Mine tailings would be washed downstream and when exposed to oxygen would release acid and heavy metals for generations. Because of the billions of tons of mine waste involved, it is not clear if it would be physically or economically feasible to clean it up. A major failure of a tailings storage facility could kill hundreds of thousands to millions of adult salmon and high value resident fish depending on when and where the spill occurred. Fish production might be permanently eliminated or impaired in the stream impacted by the spill. Planktonic food organisms that are the food source for juvenile sockeye salmon in Lake Iliamna would decline if copper levels in the Lake increase as result of a spill (Roch, et al. 1985). Returning salmon which encountered the heavy metals in the plume from the spill might incur olfactory damage or be deterred from their upstream migration depending on the concentrations of heavy metals in the water column (Goldstein, J., et al. 1999)

Slurry Pipeline Breaks and Spills: As documented in the Sections on Copper Toxicity and Pollution Pathways, slurry pipeline breaks and spills occur frequently in spite of governmental regulations and oversight. Fish and other aquatic life would be likely killed by a large spill of copper concentrate slurry into any of the 40 or more streams crossed by the slurry pipelines. For example, large numbers of Newhalen River and Lake Clark sockeye stocks could be impacted by a pipeline break which spilled copper concentrate and contaminated water into the Newhalen River during the adult spawning migration, or the smolt out migration. Rearing salmon in the Newhalen River and Lake Iliamna would be impacted by dissolved copper directly and indirectly by copper which is very toxic to the planktonic food organisms that juvenile sockeye salmon feed on (see Pebble Project Toxicity section).

Adult salmon attempting to enter the Newhalen River might be injured or killed by copper levels in the River or abort their spawning run up river. Depending on the size, time and location of a pipeline spill, a slurry pipeline break could impact thousands to hundreds of thousands of adult salmon and high value resident fish, and hundreds of thousands to millions of juvenile fish.

Industrial Development and the Public Perception of Pollution Could Impact the Marketability of Bristol Bay Salmon: Publicity surrounding a major pollution event such as the failure of one of the 750 foot high tailings dams, chronic heavy metals pollution, or just the perception that the Pebble Mine might be polluting the waters of Bristol Bay drainages is likely to harm the marketability of Bristol Bay salmon. Subsistence fishermen would likely stop fishing stocks that

might be contaminated. Sport fishermen who are now attracted to the pristine but expensive salmonid fisheries of Bristol Bay might avoid areas believed to be contaminated. The economic and social cost could be very great.

Although, a comprehensive discussion of the effect of the perception of food safety on consumer's purchases is beyond the scope of this paper, the scientific literature contains many examples of how consumer's seafood purchases are affected by contamination of fish. Public reaction to news about mercury levels in tuna, a heavy metal also present in the Pebble mine area is one example of what could happen in the aftermath of news about chronic pollution or a major spill. According to a recent report in Globefish, which provides information on international fish trade, "bad publicity surrounding mercury levels in tuna has significantly reduced tuna sales in the United States, despite strenuous efforts by the industry to counter public perceptions. "Around 21% of consumers say they are "extremely concerned" about mercury in fish, up from 17% two years ago, according to a recent poll. The effective closure of all canneries on the US mainland has already dented imports of frozen whole tuna: now only around 10 000 tons, compared to 130 000 tons eight years ago. In the first nine months of 2006, imports of frozen tuna declined further, by 8%. Studies carried out recently found 19% of people ate canned tuna at least once during the previous two weeks. In 2001, this share had been 25%. The canned tuna industry is swimming upstream, hurt by health warnings of mercury contamination" (Globefish, 2006).

Reports of a massive spill of Pebble Mine tailings into the Koktuli River or Upper Talarik Creek, a slurry pipeline break spilling copper concentrate into the Newhalen River or just chronic heavy metals pollution into the salmon streams draining the mine area could trigger a similar market reaction. For example scientists who studied the public reaction to news that farmed salmon were contaminated with PCB's and dioxins, reported that, "The identification of chemical contamination in farmed salmon had an immediate impact in the press (as judged by worldwide news coverage), on the public (reduced sales of farmed salmon were reported), and on perceptions of the state of the science." (Louma, S. and R. Ragnar, 2007).

Consumers are rightfully concerned about the purity of the food they eat and concern about the safety of seafood from an area can linger long after the source of the pollution is removed. According to the International Tanker Owners Pollution Federation Limited Technical Information Paper Number 3, (ITOPF, 2004), the most serious threat of oil spills to fisheries and aquaculture activity is the economic loss arising from business interruption. "Oil on the water and the application of temporary fishing and harvesting bans may prevent normal production, or a loss of market confidence may occur leading to price reductions or outright rejection of seafood products by commercial buyers and consumers. In extreme cases the mere hint of oil contamination can affect the marketing of high-price luxury seafood even if the produce is proven to be taint-free after testing by trained sensory panels and contaminants are at background levels after exhaustive chemical analysis" (ITOPF, 2004).

6.4 Other Pebble Mine Impacts: Although not part of the mining process per se, the construction of a road and port are an essential part of the project and would result in regional economic and social changes. The construction and operation of a new power plant for the mine could have significant fisheries impacts in its own right.

Secondary Development: Depending on your perspective, one of the biggest impacts or benefits of construction of the Pebble Mine port, electric transmissions lines and access road is the secondary development what may occur as a result. The 2005 update of the ADNR Bristol Bay Area Plan For State Land, (pg. 2-37) identifies 95 mineral deposits, prospects, and occurrences within 120 miles of the port site. Most are less than 50 miles from the proposed Pebble Mine access road corridor as depicted on page 2-74 of the Bristol Bay Area Plan for State Land (ADNR, 2006). Thousands of acres of claims have been staked around the Pebble Project claims. Many more deposits are located within 120 miles of the terminus of the Pebble Mine access road, including large gold deposits in the Shotgun Hills, copper claims near Iliamna, the Kemuk Mountain iron and titanium deposit, and the Sleitat Mountain tin-tungsten-silver deposit. The fourth Mineral Resources goal on page 2-32 of the Alaska Department of Natural Resources Bristol Bay Area Plan for State Lands entitled, State Support of Mining: is "aid in the development of infrastructure such as ports, roads, railroads, and continue to provide geologic and geophysical mapping and technological support to the mining industry." (ADNR, 2005). Once transportation facilities and electric power become available, many other large mining projects may become viable, especially if the roads and transmission lines are provided by the state or public utilities. These projects could have similar impacts on fish habitat, fish, and fishermen as the Pebble Mine.

If the road and port site are open to the public it would not only reduce the cost of living for residents of the area, but would make it attractive for new people to move into the area to work in the mines and service industries. State lands designated for settlement along the road corridor at Pile River, Chekok Lake, and the Newhalen River would likely be claimed by new residents. If ferry service were established, residents of the rail belt could use the Pebble Mine access road or the state maintained Williamsport Road to access both the Kvichak River system for hunting and fishing. Road extensions to the Mulchatna drainage would allow hunters and fishermen to access that drainage. Increased demand for key species such as salmon, trout, moose and caribou and competition with local residents will likely require changes in harvest and subsistence regulations.

The New Power Plant Needed to Meet Pebble Mine Power Needs Might Have Its Own Impacts: Because there currently isn't sufficient generating capacity in South Central Alaska to provide the 300 megawatts of electricity needed for the Pebble Mine, a new power plant would have to be constructed to provide electric power. If this power were supplied by a new coal burning power plant, fueled by coal strip mined from one of Cook Inlet's coal fields, then it would have additional significant impacts on fish habitat, salmon and high value resident fish. There has also been interest the construction of a coal gasification or coal burning power plant using coal mined from the coal fields in the Chuitna River drainage near Tyonek. This project could seriously impact water quality and fish habitat in the Chuitna River drainage.

CONCLUSION: The assessment of the potential impacts of the current Northern Dynasty Mines Pebble Project Mine Proposal presented in this report is based on the scientific literature, the historical record, and expert opinion. Over 1000 documents were reviewed in the preparation of this report and the information and conclusions are derived from the 300 references cited.

Because so much conflicting information has been disseminated by proponents and opponents of the Pebble Project the reader is encouraged to refer to the scientific literature whenever there is an unanswered question regarding the potential effects of Pebble Mine.

Based on the information and the case histories available at this time, it is clear that the development of the second largest copper mine in the world, using open pit and block caving techniques proposed by NDM would physically impact a substantial amount of fish and wildlife habitat at the headwaters of the Kvichak and Nushagak River drainages. Because of the size of the mine and the nature of the ore and waste, the mine and associated tailings storage facilities would also present a substantial long term pollution threat to fish production and commercial, subsistence and sport fishing in portions of the Nushagak and Kvichak River drainages.

Bristol Bay is the largest sockeye salmon producing system remaining in the world. The Bristol Bay salmon fishery is the largest employer and the largest source of income in the region. The Kvichak River drainage has historically been the largest sockeye salmon producing system in Bristol Bay (ADNR, 1984). The Kvichak –Naknek District which includes both the Kvichak and Naknek River drainages and the Nushagak District together provided 63% of the total 2006 Bristol Bay sockeye harvest. The Kvichak river drainage (including the Alagnak River) and the Nushagak River drainage (including the Wood River system) together provided over 65 % of the total 2006 Bristol Bay sockeye escapement. The 2006 harvest of all salmon species in Bristol Bay was approximately 31 million fish. The ex vessel value was $93,935,000 to the fishermen.

Construction of the mine using open pit and block caving techniques as proposed by NDM would physically destroy a substantial amount of salmon and high value resident fish habitat in the North and South Forks of the Koktuli River and Upper Talarik Creek drainages. The tailings storage facilities would bury additional salmon and high value resident fish habitat under billions of tons of mine waste. Water appropriations for the mine would eliminate more spawning and over wintering habitat during critical summer and winter low flow periods. Construction of the 104 mile long road would fill hundreds of acres of riparian and wetlands habitat, and a percentage of the stream crossing structures would block fish passage over time. The Iniskin Bay port would impact a productive and currently undisturbed coastal and marine area. These habitat losses would reduce salmon and high value resident fish populations in affected drainages, as well as seabirds, marine mammals, and marine fish and invertebrates at the port site.

The mine and associated facilities would permanently change the wild character of the Kvichak River drainage. The road, port, and electrical transmission lines for the Pebble mine would provide access and infrastructure could support the development of other mineral claims in the Kvichak and Nushagak drainages which might not otherwise be economically viable. If developed these mines could have similar types of impacts as the proposed Pebble Project.

The sulfide ore which would be mined when exposed to water and air generates sulfuric acid which dissolves metals present in the ore, waste rock and tailings. The current information from NDM indicates that there is very little buffering capacity in the ore and treatment of the mill waste and reactive waste rock to neutralize acids is not proposed. Copper, mercury, other metals present in the ore and chemicals such as cyanide, which may be used at the mine, are toxic to fish and other aquatic life at extremely low levels. Acid mine drainage, tailings dam leaks and

failures, slurry pipeline breaks, chemical spills, fugitive dust and ground water pollution which have occurred with some regularity at other mines in the United States, can carry toxic metals and mine chemicals from mines into fish streams. Acid mine drainage from much smaller copper mines than the proposed Pebble Mine, has completely eliminated salmon from formerly productive streams. Sulfide mines in wet areas have experienced significant pollution problems compared to other types of mines and mines in arid areas.

The size of the Pebble Project, as currently proposed by NDM, which would leave behind 8 billion tons or more of mine waste behind the largest earth fill dams ever constructed in the United States and a pit that may be more than 4 square miles and a mile deep when completed, means that all of the pollution problems experienced at much smaller mines could be magnified many times.

Because the mine tailings are currently proposed to be stored and not treated to neutralize acids, the tailings containment facilities present a long term threat to the Nushagak and Kvichak River drainages. Because all tailings dams leak and the mine pit is likely to fill with water and over flow, pollution control measures at the mine and the tailings storage areas will have to function and be actively maintained in perpetuity. The need for long term maintenance increases the likelihood that pollution and substantial damage to the Nushagak or Kvichak River habitat and fisheries will occur at some point over the thousands of years that everything needs to operate flawlessly. The most common causes of tailings dam failures have been earthquakes, floods, and structural failures. The location of the proposed Pebble Project Mine in a very remote, tectonically active area with high precipitation and severe weather adds to the risk.

Neither mine developers nor state and federal regulators can guarantee that the Pebble Project mine would not pollute. NEPA documents for recently permitted sulfide mines have not predicted pollution and environmental damage that occurred after the mines began operating. Mines are exempt from federal anti-pollution statutes, such as CERCLA. Experience with mines in Alaska and elsewhere demonstrate that because of permit amendments the size and operation of the mine can change significantly after the EIS is completed and initial permits are issued. Federal and state regulators have not been very successful in predicting and preventing acid mine drainage, tailings dam failures, slurry pipeline breaks, dust pollution, cyanide spills or ground water pollution at recently permitted large mines in the United States. Changes in Alaska's regulatory system and the Bristol Bay Area Plan between 2003 and 2006 reduced protection for fish habitat.

In a number of recent high profile cases where metals mines have polluted fish streams, the restoration bonds required by the mine permits have been a fraction of what the public has had to pay to treat pollution after the mining company declared bankruptcy. Alaskan mines are listed some of the largest polluters in the United States, in large part because of exemptions from federal statutes which allow mines to permanently store massive amounts of toxic mine waste after the mine is closed..

The Frazer River has frequently been used by Northern Dynasty Mines as an example of how hard rock mining and salmon habitat can coexist. It is useful to consider the current status of Frazer River salmon stocks in evaluating these claims. The Frazer River drainage once was the

second largest sockeye salmon producing system in the world. It has good soils, mineral deposits and forests. As a result portions of the Frazer River watershed have been developed for mining, logging and agriculture. However, this development has had a detrimental effect on salmon habitat and production. Beginning in the early 1990's, Frazer River sockeye runs precipitously declined to such low levels that the commercial, sport and subsistence fisheries were closed completely in 2007. The outlook for a recovery looks bleak. The decline which is attributed to warming water temperatures and habitat destruction occurred in spite of a substantial public investment in state of the art salmon habitat enhancement over the last 30 years. The dramatic decline of the Frazer River system in the last two decades should be a sobering reminder for Alaskan's of how fragile salmon ecosystems may be and how little is known about how these systems can be affected by development and environmental changes.

It is my hope that this report will help answer the following important questions:

(1) Is the physical loss of fish and wildlife habitat that will result from development of the mine, construction of the access road, slurry pipelines, electrical transmission lines and port and the resulting fundamental change in the character of the area consistent with conservation of salmon in the Nushagak and Kvichak River drainages?
(2) How does the likelihood that development of the Pebble Project infrastructure (road, port, and power) will stimulate other mineral development with similar impacts in these drainages factor into TNC's decisions?
(3) In addition to the direct physical loss, what is the risk that the mine pit and underground workings might generate pollution and tailings storage facilities might fail or leak causing extensive habitat loss in the Nushagak or Kvichak River drainages during mining or at some time during the thousands of years after the mine is closed?
(4) based on past experience what is the likelihood that state and federal regulatory processes will anticipate and prevent significant environmental problems that may occur at the mine over its 40 to 70 year life span or in the thousands of years after it is closed?

Appendix 2. Act 171, Wisconsin 1997 Sulfide Mining Law

293.50 Moratorium on issuance of permits for mining of sulfide ore bodies.

(1) In this section:

(a) "Pollution" means degradation that results in any violation of any environmental law as determined by an administrative proceeding, civil action, criminal action or other legal proceeding. For the purpose of this paragraph, issuance of an order or acceptance of an agreement requiring corrective action or a stipulated fine, forfeiture or other penalty is considered a determination of a violation, regardless of whether there is a finding or admission of liability.

(b) "Sulfide ore body" means a mineral deposit in which metals are mixed with sulfide minerals.

(2) Beginning on May 7, 1998, the department may not issue a permit under s. 293.49 for the mining of a sulfide ore body until all of the following conditions are satisfied:

(a) The department determines, based on information provided by an applicant for a permit under s. 293.49 and verified by the department, that a mining operation has operated in a sulfide ore body which, together with the host rock, has a net acid generating potential in the United States or Canada for at least 10 years without the pollution of ground water from acid drainage at the tailings site or at the mine site or from the release of heavy metals.

(b) The department determines, based on information provided by an applicant for a permit under s. 293.49 and verified by the department, that a mining operation that operated in a sulfide ore body which, together with the host rock, has a net acid generating potential in the United States or Canada has been closed for at least 10 years without the pollution of ground water or surface water from acid drainage at the tailings site or at the mine site or from the release of heavy metals.

(2m)

(a) The department may not base its determination under sub. (2) (a) or (b) on any mining operation that has been listed on the national priorities list under 42 USC 9605 (a) (8) (B) or any mining operation for which the operator is no longer in business and has no successor that may be liable for any contamination from the mining operation and for which there are no other persons that may be liable for any contamination from the mining operation.

(b) The department may not base its determination under sub. (2) (a) or (b) on a mining operation unless the department determines, based on relevant data from ground water or surface water monitoring, that the mining operation has not caused significant

environmental pollution, as defined in s. 293.01 (4), from acid drainage at the tailings site or at the mine site or from the release of heavy metals.

(3) This section applies without regard to the date of submission of the permit application.

History: 1997 a. 171

Source: Wisconsin Department of Natural Resources,

Appendix 3. Montana Cyanide Ban CI 137 Enacted 1998

Current law states:

82-4-390. Cyanide heap and vat leach open-pit gold and silver mining prohibited.

(1) Open-pit mining for gold or silver using heap leaching or vat leaching with cyanide ore-processing reagents is prohibited except as described in subsection (2).

(2) A mine described in this section operating on November 3, 1998, may continue operating under its existing operating permit or any amended permit that is necessary for the continued operation of the mine.

The current law is actually an amended version of the citizen's initiative CI-137 that was approved by the electorate in November 1998. The 1999 legislature, through passage of SB345 (Shea), made the following amendments to the initiative language.

Section 1. Section 82-4-390, MCA, is amended to read:
"82-4-390. Cyanide heap and vat leach open-pit gold and silver mining prohibited.

(1) Open-pit mining for gold or silver using heap leaching or vat leaching with cyanide ore-processing reagents is prohibited except as described in subsection (2).

(2) A mine described in this section operating on November 3, 1998, may continue operating under its existing operating permit, but the permit may not be amended to allow its operations to be expanded or any amended permit that is necessary for the continued operation of the mine."

Section 2. Effective date. [This act] is effective on passage and approval.
This amendment effectively allowed the Golden Sunlight mine near Whitehall and the Majesty.

Appendix 4. A Chronology of Polluted Related Events At The Red Dog Mine As Reported In The Anchorage Daily News 1989-2007

1. October, 7, 1989. Water containing toxic levels of zinc and other heavy metals began flowing from a seep into Red Dog Creek. Changes in ground water flow associated with mining are suspected as the sources.

2. March 21, 1990. The mines operators struggled for over a year to get the mines treatment plant operating to neutralize waste. The Red Dog tailings dam, which had been approved under the state and federal permitting process, came very close to failing. Snow melt and rainfall flowing into the mines 500 acre waste impoundment which was already full of mine waste filled the pond to overflowing. The dam, though built as permitted, was under designed to cope with the levels of effluent and precipitation encountered. To save the dam and avoid having the entire contents of the tailings impoundment flow down into the Wulik River, Teck-Cominco had to open a spillway and release polluted water. Millions of gallons of wastewater were discharged to frozen Red Dog Creek.

3. August 18, 1990. Toxic levels of zinc and other hazardous metals from the mine leaked fouling more than 20 miles of creek with milky orange stains and threatening the Wulik River one of N.W. Alaska's richest fisheries. Regulators asked Cominco to build a diversion ditch around the mine, but company isn't sure that the problem is related to their mining activities.

4. August 30, 1990. Zinc levels flowing from a seep into Red Dog Creek reach, 1,180 ppm. Company build diversion ditch around mine and pollution subsides.

5. December 5, 1990. Three trucks carrying ore overturn spilling zinc and lead concentrate onto the tundra next to the haul road.

6. March 13, 1991. EPA fines Cominco $125,000 for violating their discharge permit 134 times between May and October 1990. Company fights allegations.

7. July 7, 1991. Red Dog Mine spends $11,000,000 to clean up pollution in Red Dog Creek. To halt pollution from the mine Cominco built a plastic lined ditch to divert Red Dog Creek water around the mine, and capture water from seeps.

8. April, 1992. Mine dumps 100,000 gallons of metal contaminated water into frozen Red Dog Creek. Zinc levels reach 220 times state water quality limit, but not expected to threaten fish or humans.

9. July 14, 1997. Cominco agrees to pay 4.7 million dollars for several thousand water quality violations which occurred 1990 and 1993. According to EPA violations included metals spills, operating unpermitted sewage treatment plants and fuel spills.

10. June 3, 1998. A pump on a slurry pipeline at the mine broke spilling 200,000 gallons of zinc and lead concentrate.

11. December 14, 1999. EPA blocks Red Dog air quality permit, because of disagreement over whether Cominco should upgrade power plant to reduce air pollution.

12. September 8, 2000. The State of Alaska joins Cominco law suit to block EPA from requiring higher air quality standards at mine.

13. October 11, 2000. Ore Truck overturns spilling 30 tons of lead concentrate onto tundra.

14. October 18, 2000. ADNR rejects Cominco's request to create an air quality exclusion zone around power plant because of restriction of public access on state tidelands.

15. April 10, 2001. State of Alaska alleges that Cominco is responsible for multiple air quality violations at Red Dog mine.

16. June 21, 2001. National Park Service releases results of study showing elevated levels of lead, zinc and cadmium on vegetation along haul road. Metal levels were higher than severely polluted areas of Eastern Europe.

17. July 7 2001. Local natives ask ADNR to close the haul road because of concern that subsistence foods are being contaminated by toxic lead and cadmium dust from ore trucks

18. July 14, 2001. State rejects road closure request. ADEC says health risk isn't enough to justify closure.

19. July 18. ADEC and EPA focus on heavy metal contamination along haul road. EPA attorney describes contamination as very significant.

20. July 21, 2001. A truck hauling concentrates overturns spilling lead concentrate on tundra.

21. December 19, 2001. Red Dog mine agrees to pay $827, 000 in fines to settle State pollution complaint.

22. January 30, 2002. Cominco buys new trucks with covers to reduce dust from trucks hauling concentrate.

23. June 3, 2002. EPA releases TRI report that in 2000 the Red Dog Mine had the second largest toxic release in the U.S. Red Dog release is huge amount of waste rock containing lead and zinc deposited in tailings impoundments and upland storage areas. According to EPA the metals can leach out and contaminate ground and surface water unless properly treated.

24. July 18, 2002. Village of Kivalina claims that mine discharges are affecting their water supply and announce plans to sue Teck-Cominco.

25. July 31, 2002. Federal Appeals Court rules against Teck-Cominco and State. EPA was justified in requiring better antipollution equipment on mine generators.

26. August 24, 2002. Murkowski promises to build roads and change state laws and policies to benefit mines.

27. September 20, 2002. Village of Kivalina files suite against Red Dog Mine discharges because of concerns about water pollution and concerns about contamination of subsistence foods.

28. October 20, 2002. ADEC official tackle acid mine drainage from Alaska's mines. Red Dog and Greens Creek Mines are identified as acid generating. The bond for Greens Creek has been set at 24 million dollars and requires 30 years of monitoring. The State is 3 years away from regulating acid mine drainage at the Red dog Mine. According to Charlotte MacCay environmental coordinator for Red Dog, "Because the deposit at Red dog is highly sulfuric, the piles of waste actually smoke. When that happens, workers cover them with inert material to keep out the air and water that triggers the acid making process."

30. January 22, 2004. The Supreme Court rejects Teck-Cominco and State claims and rules that the EPA can require tighter clean air standards at Red Dog Mine.

31, February 2, 2004. Ore truck overturn spilling lead zinc concentrate.

32. June 24, 2004. State ADEC disputes independent chemists finding that between 10 and 43 percent of berries and sourdock samples along the Red Dog Mine haul road exceed the U.S.D.A.'s food safety standards for lead and cadmium.

33. June 24, 2004. Red Dog, Greens Creek, and Illinois Creek tops EPA's 2002 toxic release list. Red Dog stored 481 millions pounds of toxic chemicals on land, and released 195, 000 pounds of air emissions.

34. July 11, 2004. The Red Dog Mine works to control waste discharge, as villagers voice concerns about affect on water quality and health.

35. July 30, 2004. State officials acknowledge high concentration of lead zinc and cadmium along haul road but say that locals don't gather food in heavily contaminated areas.

36. August 10, 2004. National Parks Service Study finds that dust from trucks has contaminated thousands of acres along haul road with toxic levels of lead, cadmium and zinc.

37. October, 5, 2004. A truck hauling fuel for the Red Dog Mine spills 4000 gallons of diesel.

38. March 20, 2005. Kivalina villagers claim that vessel traffic has caused beluga whales to change migratory routes.

39. May, 12, 2005. EPA reports that releases of toxic material from the Red Dog lead zinc mine make it the nation's tops polluter in 2003.

40. November 12, 2005. Red Dog Mine Cited for water quality breach.

41. August 2, 2006. U.S. District Court Judge John Sedwick found that Teck-Cominco violated its discharge permit 618 times by pumping too much effluent or treated waste water into Red Dog Creek which flows into the Wulick River.

42. August 24, 2007. Teck Cominco, who operates the Red Dog Mine, is currently operating under a federal compliance order allowing it to exceed certain water quality standards. Several residents of the Village of Kivalina are suing Teck Cominco for water quality violations at the mine (Anchorage Daily News, 8/24/07).

Appendix 5. Fish Habitat Protection Statutes Transferred From ADF&G to ADNR by Executive Order 107

AS 41.14.840. Fishway Required.

If the deputy commissioner considers it necessary, every dam or other obstruction built by any person across a stream frequented by salmon or other fish shall be provided by that person with a durable and efficient fishway and a device for efficient passage for downstream migrants. The fishway or device or both shall be maintained in a practical and effective manner in the place, form, and capacity the deputy commissioner approves, for which plans and specifications shall be approved by the deputy commissioner upon application. The fishway or device shall be kept open, unobstructed, and supplied with a sufficient quantity of water to admit freely the passage of fish through it.

AS 41.14.870. Protection of Fish and Game.

(a) The deputy commissioner shall, in accordance with AS 44.62 (Administrative Procedure Act), specify the various rivers, lakes, and streams or parts of them that are important for the spawning, rearing, or migration of anadromous fish.
(b) If a person or governmental agency desires to construct a hydraulic project, or use, divert, obstruct, pollute, or change the natural flow or bed of a specified river, lake, or stream, or to use wheeled, tracked, or excavating equipment or log-dragging equipment in the bed of a specified river, lake, or stream, the person or governmental agency shall notify the deputy commissioner of this intention before the beginning of the construction or use.
(c) The deputy commissioner shall acknowledge receiving the notice by return first class mail. If the deputy commissioner determines that the following information is required, the letter of acknowledgement shall require the person or governmental agency to submit to the deputy commissioner:
(1) full plans and specifications of the proposed construction or work;
(2) complete plans and specifications for the proper protection of fish and game in connection with the construction or work, or in connection with the use; and
(3) the approximate date the construction, work, or use will begin.
(d) The deputy commissioner shall approve the proposed construction, work, or use in writing unless the deputy commissioner finds the plans and specifications insufficient for the proper protection of fish and game. Upon a finding that the plans and specifications are insufficient for the proper protection of fish and game, the deputy commissioner shall notify the person or governmental agency that submitted the plans and specifications of that finding by first class mail. The person or governmental agency may, within 90 days of receiving the notice, initiate a hearing under AS 44.62.370 . The hearing is subject to AS 44.62.330 - 44.62.630.

Neither the 41.14.840 Fishway Required or AS 41.14.870 mandate maintainence of fish passage, or protection of anadromous fish habitat. AS41.14.840 states "***If the deputy commissioner considers it necessary***, every dam or other obstruction built by any person across a stream frequented by salmon or other fish shall be provided by that person with a durable and efficient fishway and a device for efficient passage for downstream migrants. AS41.14.870 states**(b)** If a person or governmental agency desires to construct a hydraulic project, or use, divert, obstruct, pollute, or change the natural flow or bed of a specified river, lake, or stream, or to use wheeled,

tracked, or excavating equipment or log-dragging equipment in the bed of a specified river, lake, or stream, the person or governmental agency shall notify the deputy commissioner of this intention before the beginning of the construction or use.
(c) The deputy commissioner shall acknowledge receiving the notice by return first class mail. ***If the deputy commissioner determines that the following information is required***, the letter of acknowledgement shall require the person or governmental agency to submit to the deputy commissioner:
(1) full plans and specifications of the proposed construction or work;
(2) complete plans and specifications for the ***proper protection of fish and game*** in connection with the construction or work, or in connection with the use; and
(3) the approximate date the construction, work, or use will begin.
(d) The deputy commissioner shall approve the proposed construction, work, or use in writing unless the deputy commissioner finds the plans and specifications ***insufficient for the proper protection of fish and game***. Upon a finding that the plans and specifications are insufficient for the proper protection of fish and game, the deputy commissioner shall notify the person or governmental agency that submitted the plans and specifications of that finding by first class mail. The person or governmental agency may, within 90 days of receiving the notice, initiate a hearing under AS 44.62.370 . The hearing is subject to AS44.62.330-44.62.630. As written the deputy commissioner has the discression to determine that plans an specifications

Appendix 6. No Perpetual Care Statutes and Regulations

A. **Michigan Statute and Regulations**: Compiled Laws Annotated Currentness
Chapter 324. Natural Resources and Environmental Protection Act
Natural Resources and Environmental Protection Act (Refs & Annos)
Article III. Natural Resources Management
Chapter 3. Management of Nonrenewable Resources
Subchapter 4. Mineral Mining
Part 632. Nonferrous Metallic Mineral Mining (Refs & Annos)

➡324.63209. Compliance with permit standards; conduct of reclamation activities generally; actions of permittee during period of suspension of mining operations; postclosure monitoring period; scope of reclamation and remediation; compliance with applicable tribal, state, federal, or local requirements

Sec. 63209. (1) A permittee shall comply with all other applicable permit standards under this act.

(2) A permittee shall conduct reclamation activities at a mining area in accordance with the approved mining, reclamation, and environmental protection plan.

(3) If mining operations are suspended for a continuous period exceeding 90 days, the permittee shall take actions to maintain, monitor, and secure the mining area and shall conduct any interim sloping or stabilizing of surfaces necessary to protect the environment, natural resources, or public health and safety in accordance with the permit.

(4) Subject to subsection (5), a permittee shall begin final reclamation of a mining area within 3 years of the date of cessation of mining operations and shall complete reclamation within the time set forth in the mining, reclamation, and environmental protection plan approved by the department.

(5) Upon written request of a permittee, the department may approve an extension of time to begin or complete final reclamation.

(6) A permittee shall conduct groundwater and surface water monitoring in accordance with the provisions of the permit during mining operations and during the postclosure monitoring period. The postclosure monitoring period shall be 20 years following cessation of mining, subject to the following conditions:

(a) The permittee shall provide to the department a written request to terminate the postclosure monitoring not less than 18 months before the proposed termination date and shall provide the department with technical data and information demonstrating the basis for the termination. The department shall extend the postclosure monitoring period in increments of up to 20 years unless the department determines, approximately 1 year before the end of a postclosure monitoring period or postclosure incremental monitoring period, that there is no significant potential for

water contamination resulting from the mining operation.

(b) The department may shorten the postclosure monitoring period at any time upon determining that there is no significant potential for water contamination resulting from the mining operation.

(7) The department may extend or shorten the postclosure monitoring period under subsection (6) only after public notice and opportunity for a public hearing under section 63219(2). [FN1]

(8) Both the mining area and the affected area shall be reclaimed and remediated to achieve a self-sustaining ecosystem appropriate for the region that does not require perpetual care following closure and with the goal that the affected area shall be returned to the ecological conditions that approximate premining conditions subject to changes caused by nonmining activities or other natural events. Any portion of the mining area owned by the applicant may be used for any legal purposes.

(9) Compliance with the provisions of this part does not relieve a person of the obligation to comply with all other applicable tribal, state, federal, or local statutes, regulations, or ordinances.

R 425.203 Mining Plan.

Rule 203. The mining, reclamation, and environmental protection plan required under R 201(1)(d) shall contain a plan for the proposed mining operations. The plan shall include information that demonstrates that all methods, materials, and techniques proposed to be utilized are capable of accomplishing their stated objectives in protecting the environment and public health, except that such information may not be required for methods, materials, and techniques that are widely used in mining or other industries and are generally accepted as effective. The required information may consist of results of actual testing, modeling, documentation by credible independent testing and certification organizations, or documented applications in similar uses and settings. The plan shall include, at a minimum, all of the following:

(a) A description of the type and method of mining, the expected operating life of the mine, and the anticipated rate and schedule of mining.

(b) An estimate of the number of employees required for the mining operation, and variations in the number over the life of the mine.

(c) Information depicting and describing the items listed in paragraphs (i) to (xxiv) of this subdivision that are mining activities or are part of, or associated with, mining activities. Information that is amenable to clear depiction on a map shall be shown on a map or maps of the mining area drawn to an appropriate scale on a topographic base and referenced to the nearest government-surveyed section or quarter-section lines. Other required information shall be presented, as appropriate, by cross-sections, photographs, documents, and engineering drawings.

(i) Area, thickness, and characteristics of topsoil that will be stripped, and plans for stockpiling and stabilizing topsoil until it will be used in reclamation.

(ii) Area, volumes, and characteristics of overburden and waste rock to be excavated; plans and schedules for excavating; and locations and dimensions of stockpiles and final placement areas.

(iii) Area, volumes, types, and mineralogy of ore to be excavated, and schedule of mining and stockpiling ore.

(iv) Plans for limiting access to stockpiles and storage or disposal facilities to prevent

disposal of unauthorized materials.

(v) A characterization of the geochemistry of the ore, waste rock, and overburden that will be mined, and peripheral rock that will be exposed in the process of mining, and of any tailings that will be generated. The characterization shall include the following:

(A) Chemical and physical testing and modeling to predict the potential generation of acid, dissolved metals, and other related substances by reaction and leaching of the ore, waste rock, tailings, overburden, and peripheral rock.

(B) Testing and modeling methodology.

(C) A plan for monitoring the characterization during the proposed mining operation to calibrate and adjust the model and predictions.

(D) Identification of the ore, waste rock, overburden, peripheral rock, and tailings that are reactive.

(vi) Lithology and thickness of rock surrounding and overlying the ore body.

(vii) The locations, depths, and contours of open pits.

(viii) The locations and dimensions of shafts, portals, or other openings between the land surface and underground mine workings.

(ix) The areal extent, depth, and dimensions of underground workings.

(x) Types and uses of grouting of the walls of open pits and of the walls, floor, and roof of underground workings.

(xi) A plan for preventing damage to the environment or public health or safety from subsidence, caving, or collapse of underground mine workings. The plan shall contain the following:

(A) A description of any planned or intentional caving and subsidence.

(B) Provisions to prevent adverse impacts to public or private water supplies or to an aquifer in the affected area.

(C) Provisions to assure that any underground mining shall not cause material damage to structures not owned or controlled by the operator.

(D) Provisions to assure that any underground mining shall not cause material damage to natural features on lands not owned by the operator.

(xii) A description of water that will be used in the mining operations, including the source or

sources of the water and intended rates and durations of pumping, diversion, or withdrawal.

(xiii) A description of water that will be stored, transferred, or discharged in the mining operations, including:

(A) The location, size, and capacities of any artificial ponds, impoundments, dewatering systems, diversions, other water control structures, and treatment facilities.

(B) The estimated volumes, rates, and water quality of discharges, and the discharge locations.

(xiv) Storage areas for equipment and vehicles.

(xv) Buildings and other facilities or structures.

(xvi) Areas for the storage and transfer of chemicals, fuel, and explosives.

(xvii) Truck and mining equipment wash down areas.

(xviii) Roads, railroads, docks, piers, and other transportation infrastructure, and provisions to prevent release of contaminants to the environment from ore or waste rock during transportation.

(xix) Beneficiation processes, materials, and activities, including the following:

(A) The types, extent, and sequence of beneficiation, including physical and chemical characterization of all materials, wastes, or products.

(B) A description of any mills, concentrators, dryers, separators, chemical reactors, filtering equipment, electrolytic chambers, flotation cells, kilns, or other beneficiation equipment.

(C) The type and amount of chemicals to be added.

(D) The types, amounts, locations, sequence, schedule, and means of waste rock and tailings disposal.

(E) Provisions to prevent release of contaminants to the environment from beneficiation equipment.

(F) Tailings transport systems, if not buried, should be designed to provide for emergency tailings conveyance or storage should a pipeline break, plug, freeze or require repairs and be made accessible for inspection, emergency repair, and maintenance. Location of emergency spill areas shall be designed to prevent contamination of surface water. If a power failure occurs, then tailing pipelines shall be self draining to the tailings area or to an emergency spill area or standby pumps and pipelines or standby power shall be

provided. In some cases (such as a long pipeline over rough country), several spill areas may have to be provided.

(xx) Plans and schedules for regulating or controlling drainage of water, including surface runoff, from within the diked area of a tailings disposal area to prevent breaching of the dikes, both during and after mining. The plans and schedules shall ensure that 24-hour 100-year precipitation events do not cause releases of water that are not in compliance with the conditions of the mining permit.

(xxi) Plans and schedules for monitoring, containment, and treatment of surface runoff that has contacted, or may contact, ore, waste rock, overburden, or tailings determined to be reactive under R 425.203(c)(v). The plans shall be designed to reasonably minimize actual and potential adverse impacts on groundwater and surface water by preventing leaching or runoff of acid-forming waste products and other waste products from the mining process.

(xxii) A soil erosion and sedimentation control plan that meets the standards of part 91 of the act to effectively reduce accelerated soil erosion and sedimentation that may impact the affected area. The plan shall include, but not be limited to, all of the following:

(A) The location, description, and schedule for installing and removing all proposed temporary soil erosion and sediment control measures.

(B) A description and the location of all proposed permanent soil erosion and sediment control measures, and provisions for establishing the permanent soil erosion control measures as soon as possible after an earth change has been completed or if significant earth change activity ceases.

(C) Provisions to limit the exposed area of any disturbed land to the shortest feasible period of time.

(D) Provisions to remove sediment caused by accelerated soil erosion from runoff water before it leaves the mining area.

(E) Temporary or permanent control measures for the conveyance of water around, through, or from the area affected by mining activities to limit the water flow to a nonerosive velocity.

(F) Provisions for temporary soil erosion and sedimentation control measures before or upon commencement of the earth change activity; for maintaining the measures on a daily basis; and for removing the measures after permanent soil erosion measures are in place and the area is stabilized.

(G) Provisions for stabilizing the area with permanent soil erosion control measures as soon as possible after an earth change has been completed or if significant earth change activity ceases.

(xxiii) Plans for conducting reclamation activities concurrently with mining operations to the extent feasible.

(xxiv) Plans for inspecting, monitoring, and maintaining liners, final covers, leachate collection systems, leak detection systems, berms, and embankments, including frequency of inspections. Inspecting or monitoring shall be conducted at least monthly.

(d) A map and description of ownership of all tracts of land in the mining area and within 1320 feet of the boundary of the mining area, including all of the following:

(i) Ownership of surface rights.

(ii) Ownership of mineral rights.

(iii) Conservation easements as defined in section 2140 of the act.

(iv) Historic preservation easements as defined in section 2140 of the act.

(e) A description of measures to be taken to prevent damage to property not owned or controlled by the operator within and immediately adjacent to the mining area.

(f) Measures to minimize impacts to the volumes and rates of recharge, flow, and discharge of groundwater and surface waters in the mining area and in the affected area sufficient to accommodate seasonal and long-term variations in precipitation, water quantity, and water quality.

(g) A monitoring plan for monitoring of groundwater and surface water quality, groundwater levels, and surface water stage and discharge rates, during mining operations and during the post-closure monitoring period. The monitoring plan shall conform to existing statutes and rules, but is not required to include monitoring required under other permits.

(i) The monitoring plan shall provide for monitor wells and structures to be located at points where mining activities have a reasonable potential for measurable impact on surface water or groundwater, taking into consideration the following:

(A) Proximity to the mining activity.

(B) The potential for diffusion and dispersion.

(C) Horizontal and vertical groundwater gradients.

(D) Seasonal variations in flow.

(E) Topography, access, and other practical limitations.

(ii) The monitoring plan shall comply with the requirements of R 425.406.

(iii) The monitoring plan shall include all of the following:

(A) Number and location of monitoring wells and structures.

(B) Frequency of sampling and sampling procedure, including all of the following:

(aa) The sampling method and volume of water to be removed from each well or sampling point during sampling.

(bb) Steps taken to prevent cross contamination between samples.

(cc) Sample handling and preservation methods.

(dd) Laboratory analysis method.

(ee) Laboratory method detection level.

(ff) Quality assurance and quality control as approved by the department.

(gg) Provisions for routine monitoring to be conducted at least every 3 months.

(C) Sampling parameters, which shall include the following:

(aa) Specific conductance.

(bb) Temperature.

(cc) The hydrogen ion concentration expressed as pH.

(dd) Dissolved oxygen.

(ee) Concentrations of calcium, sodium, magnesium, potassium, and iron.

(ff) Concentrations of chloride, sulfate, and bicarbonate.

(gg) Concentrations of other total and dissolved elements and compounds that may be introduced or affected by the mining activities, as identified in the environmental impact assessment.

(D) A description of the techniques used to present and evaluate water quality monitoring data.

(E) A description of the method used to collect static water levels and present groundwater flow data. Static water level precision shall be to 0.01 foot.

(F) The depth and screened interval for each monitor well.

(G) Provisions for design, construction, and abandonment of monitoring wells and structures that comply with R 425.406(2).

(h) A treatment and containment plan that describes proposed measures to prevent contamination of groundwater and surface water from leaching of acidic water or dissolved metals.

(i) The treatment and containment plan required under this subdivision shall apply to earth materials that are determined to be reactive under R 425.203(c)(v). The plan shall describe proposed measures for the following:

(A) Design, construction, and operation of stockpiles and storage or disposal facilities for ore, waste rock, overburden, and tailings.

(B) The management of peripheral rock that has been determined in the environmental impact assessment to have the potential to contaminate groundwater or surface water.

(ii) The treatment and containment plan required under this subdivision shall account for the volume, rate, and movement of leachate that may be generated, and the influence of weather on the generation of leachate, including any adverse impacts from severe or extreme weather events.

(iii) The treatment and containment plan required under this subdivision shall meet all applicable requirements of R 425.409.

(i) A general description of blasting materials and methods.

(j) If a threatened or endangered species may be impacted, a plan to protect the threatened or endangered species that conforms to the requirements of state and federal endangered species laws.

(k) Plans to monitor, prevent, minimize, and mitigate any adverse impacts of the proposed mining operation on flora, fauna, fish or wildlife habitats, and biodiversity.

(l) Where percolation leaching is proposed as a mining activity, plans demonstrating compliance with R 425.403.

(m) A plan and schedule for inspection or monitoring, or both, of all mine related facilities at least monthly.

(n) The name and qualifications of the person or persons who prepared the plan for the proposed mining operations.

(By authority conferred on the director of the department of environmental quality by section 63203(1) of 1994 PA 451, MCL 324.63203(1))

R 425.204 Reclamation Plan.

Rule 204. The mining, reclamation, and environmental protection plan required under R 425.201(1)(d) shall contain a plan for the proposed final reclamation operations, including the anticipated schedule, sequence, and duration of reclamation. The plan shall include information that demonstrates that all methods, materials, and techniques proposed to be used are capable of accomplishing their stated objectives in protecting the environment and public health, except that such information may not be required for methods, materials, and techniques that are widely used in mining or other industries and are generally accepted as effective. The required information may consist of results of actual testing, modeling, documentation by credible independent testing and certification organizations, or documented applications in similar uses and settings. The plan shall include, at a minimum, all of the following:

(a) Information depicting and describing the items listed in paragraphs (i) to (iv) of this subdivision. Information that is amenable to clear depiction on a map shall be shown on a map or maps of the mining area drawn to an appropriate scale on a topographic base and referenced to the nearest government-surveyed section or quarter-section lines. Other required information shall be presented, as appropriate, by cross-sections, documents, and engineering drawings.

(i) Final land contours.

(ii) Proposed final land use and relationship to surrounding land and land use.

(iii) Ponds, streams, wetlands, roads, dikes, drainage ditches, and soil erosion and sedimentation control structures that will remain after completion of reclamation.

(iv) Plans and schedules for stabilizing waste rock piles, settling ponds, tailings disposal facilities, overburden banks, open pit banks and walls, roads, and the plant site. The plans shall include sloping, grading, terracing, and revegetating that will prevent slumping, land or rock slides, or other slope failure and will effectively reduce accelerated soil erosion and sedimentation. The plans shall include the following:

(A) Provisions for sloping or terracing of the banks or bottoms of open pit surfaces that will be under water after cessation of mining, or other measures to prevent a hazard to public safety.

(B) Provisions for replacing topsoil from surface areas disturbed by the mining operation as appropriate for the approved final land use.

(C) Vegetation species and quantities, seedbed and planting area preparation, seeding and planting methods, mulching, fertilization, maintenance, and final density of plants.

(b) Evidence satisfactory to the department that the proposed reclamation will conform to the following minimum performance standards:

(i) Final disposition of all toxic and hazardous wastes, refuse, tailings and other solid waste shall be managed in a manner that protects the environment, natural resources and public health and safety, and in conformance with all other applicable federal and state laws and regulations.

(ii) All shafts, portals, or other openings between the land surface and underground mine workings shall be sealed in a manner that will protect the environment, natural resources, and public health and safety and in accordance with all other applicable laws and regulations.

(iii) All surface structures, infrastructure, rock stockpiles, and tailings disposal areas constructed as a part of the mining activities shall be removed, unless they are converted to an alternate use in accordance with the proposed final land use.

(iv) All disturbed surface areas shall be stabilized to prevent accelerated erosion by wind or water.

(v) All disturbed surface areas shall be revegetated with a variety of plants that are native to the area, except that non-native plants may be used for revegetation in areas where appropriate for an approved final land use that is different from the premining land use. In addition, plant species not native to the area may be used as approved by the department when necessary to provide temporary stabilization of slopes and prevention of erosion.

(vi) Both the mining area and the affected area shall be reclaimed to achieve a self-sustaining ecosystem appropriate for the region that does not require perpetual care following closure and with the goal that the affected area shall be returned to the ecological conditions that approximate premining conditions subject to changes caused by nonmining activities or other natural events. Any portion of the mining area owned by the applicant may be used for any legal purpose.

(c) Plans for monitoring of ground and surface water quality during the postclosure monitoring period.

(d) The name and qualifications of the person or persons who prepared the plan for the proposed final reclamation operations.

(By authority conferred on the director of the department of environmental quality by section 63203(1) of 1994 PA 451, MCL 324.63203(1))

PART 4. MINING OPERATIONS

Current through 2007 Register #13 (August 1, 2007)

R 425.409 Treatment and containment of reactive materials.

Rule 409. An operator shall manage overburden, ore, waste rock, peripheral rock, and tailings determined to be reactive under R 425.203(c)(v) in accordance with this rule and in a manner that is designed to reasonably minimize actual and potential adverse impacts on groundwater and surface water by preventing leaching or runoff of acid-forming waste products and other waste products from the mining process.

(a) An operator shall design, construct, and operate stockpiles or storage facilities for reactive overburden, ore, waste rock, or tailings in compliance with paragraph (i) or (ii) of this subdivision.

(i) A stockpile or storage facility shall meet the following requirements:

(A) A stockpile or storage facility shall have a composite liner system comprised of a flexible synthetic membrane that is not less than 60 mils thick and a layer of at least 3 feet of compacted soil having a maximum hydraulic conductivity of 1.0 X 10-7 cm/sec.

(B) The department may approve an alternative liner system that uses other materials or designs, including modified soil liners, or technologically advanced systems only if the operator provides data to demonstrate the alternative is capable of providing equivalent or better protection as compared to the requirements under subparagraph (A).

(C) A stockpile or storage facility shall have a leachate collection system.

The system shall be designed, constructed, and operated to limit the hydraulic head at the lowest point in the system to not more than 1 foot, excluding the collection sump, after construction.

(D) A stockpile or storage facility shall have a leak detection system.

(E) The liner, leachate collection system, and leak detection system shall be tested before the placement of overburden, ore, waste rock, or tailings into the facility.

(F) A cover shall be employed to isolate the reactive overburden, ore, or waste rock from precipitation and air as soon as practicable.

(G) A registered professional engineer or other qualified individual shall certify the

proper design, construction, and testing of all liners, covers, and leachate collection systems required by this paragraph. The permittee shall submit the certification to the department and shall not begin placement of ore, waste rock, overburden, or tailings in the storage facility until approved by the department.

(ii) Subject to approval of the department, an operator may utilize an alternative plan for a stockpile or storage facility for reactive overburden, ore, waste rock, or tailings. The department may approve an alternative plan only if the operator provides data that demonstrates that the alternative plan is capable of providing protection of groundwater and surface water that is equivalent to or better than that provided under paragraph (i) of this subdivision. The alternative plan shall incorporate 1 or more of the following:

(A) Measures to prevent the generation of leachate by adding a material or materials that counteract or neutralize the acid-forming or toxic characteristics of the ore, waste rock, overburden, or tailings.

(B) Measures to treat or neutralize any leachate that may be generated before it migrates outside of the storage facility.

(C) Measures to isolate the ore, waste rock, overburden, or tailings from oxygen and other oxidizing substances.

(D) Measures to isolate the ore, waste rock, overburden, or tailings from groundwater or surface water.

(b) An operator may utilize a disposal facility to manage, contain, or isolate reactive waste rock, tailings, overburden, or peripheral rock subject to approval of the department. A disposal facility may consist of a mined area that will be backfilled. The department shall not approve the plans for a disposal facility unless the operator demonstrates that the design, construction, operation, and closure of the disposal facility will reasonably minimize the actual and potential adverse impacts on groundwater and surface water by preventing leaching or runoff of acid-forming waste products and other waste products from the mining process and will not require perpetual care following closure in accordance with MCL 324.63209(8) and with R 425.204(b)(vi).

(c) A stockpile or storage or disposal facility under this rule shall be monitored in compliance with R 425.406.

(d) A permittee shall conduct and maintain grading or diking at stockpiles and storage or disposal facilities subject to this rule to assure that surface water drains away from the storage or disposal area.

(By authority conferred on the director of the department of environmental quality by section 63203(1) of 1994 PA 451, MCL 324.63203(1))

B. **New Mexico Statute:**
West's New Mexico Statutes Annotated Currentness
Chapter 69. Mines
Article 36. New Mexico Mining Act (Refs & Annos)

➡§ 69-36-12. New mining operations; mining operation permit required

A. After the effective date of the New Mexico Mining Act, except as provided in Section 5 of that act, no person shall conduct a new mining operation without a permit issued by the director. Applications for permits for new mining operations operating pursuant to Section 5 of the New Mexico Mining Act shall be received by the director by December 31, 1995. The director may grant one extension for the submission of a permit application for a new mining operation for six months for good cause shown. Prior to receiving a permit for a new mining operation, an applicant shall submit an application that complies with the New Mexico Mining Act and regulation of the commission, including at a minimum, one year of baseline data as required by regulation.

B. The director shall issue the permit for a new mining operation if the director finds that:

(1) the permit application is complete;

(2) the permit application fee has been paid and the financial assurance is adequate and has been provided;

(3) reclamation in accordance with the proposed reclamation plan is economically and technically feasible;

(4) the mining operation is designed to meet without perpetual care all applicable environmental requirements imposed by the New Mexico Mining Act and regulations adopted pursuant to that act and other laws following closure; and

(5) the applicant, the operator or owner or any persons or entities directly controlled by the applicant, operator, owner or any persons or entities that directly control the applicant, operator or owner:

(a) are not currently in violation of the terms of another permit issued by the division or in violation of any substantial environmental law or substantive environmental regulation at a mining operation in the United States, which violation is unabated and is not the subject of appeal, and have not forfeited or had forfeited financial assurance required for any mining, reclamation or exploration permit in the United States; provided that a violation that occurred prior to the initiation of a legal relationship between the permit applicant and the violator

shall not be considered for purposes of this paragraph; and

(b) have not demonstrated a pattern of willful violations of the New Mexico Mining Act or other New Mexico environmental statutes; provided that a violation that occurred prior to the initiation of a legal relationship between the permit applicant and the violator shall not be considered for purposes of this paragraph.

C. The permit for a new mining operation may be revoked or suspended by order of the director for violation of its terms or conditions, a regulation of the commission or a provision of the New Mexico Mining Act.

L. 1993, Ch. 315, § 12.

NOTES OF DECISIONS

In general 1
Discretion of commission, expansion of permit 4
Expansion of permit 3, 4
Expansion of permit - In general 3
Expansion of permit - Discretion of commission 4
Judicial review 5
Rules and regulations 2

1. In general

The decision of whether a proposed mining activity is a new mining unit or a new mining operation subject to stricter environmental safeguards under the Mining Act must be reasonable and have a rational basis. NMSA 1978, §§ 69- 36-5, 69-36-7, subds. D, G, 69-36-12. Rio Grande Chapter of Sierra Club v. New Mexico Mining Com'n, 2002, 133 N.M. 97, 61 P.3d 806, rehearing denied. Mines And Minerals ⚿ 92.8

Under the New Mexico Mining Act, a core function like the issuance of a mining permit should not be the decision of the Director of Energy, Minerals, and Natural Resources Department alone, but should involve the Mining Commission by direct administrative review. NMSA 1978, §§ 69-36-14, subd. A, 69-36-15, subd. A. Pueblo of Picuris v. New Mexico Energy, Minerals and Natural Resources Dept., 2001, 131 N.M. 166, 33 P.3d 916, certiorari denied 131 N.M. 221, 34 P.3d 610. Mines And Minerals ⚿ 92.17

2. Rules and regulations

Mining Commission regulation which could be interpreted to exceed Commission's authority under Mining Act to require permit applicant to pay for experts hired by Commission could not be struck down on facial challenge to regulation, in light of alternative interpretation of regulation under which it complied with Act. NMSA 1978, § 69-36-9, subd. G. Old Abe Co. v. New Mexico Min. Com'n, 1995, 121 N.M. 83, 908 P.2d 776, certiorari denied 120 N.M. 828, 907 P.2d 1009. Mines And Minerals ⚿ 92.8

RE: Elevating Habitat Conservation Standards in the Bristol Bay Drainages

I. INTRODUCTION

Higher standards for conservation of fish and wildlife resources and related habitat in the Bristol Bay region may be recommended by the Alaska Board of Fisheries and established by the Alaska Legislature. These may be in the context of a fish and game refuge or other designation requiring that prospective large scale mining projects in the region be able to demonstrate and ensure a capability to conserve water quality, instream flows and protect fish, wildlife, habitat and public uses as a precondition for state permission to proceed.

We have reviewed applicable federal and Alaska law regarding "takings" (i.e., when government action substantially diminishes property rights triggering the payment of just compensation for the "taken" rights) to determine whether proposals to elevate conservation standards imposing new regulatory constraints would constitute a taking of mining claims in the

[1] Parker is with the Law Office of Geoffrey Y. Parker, 634 K Street, Anchorage, Alaska 99501; 907-222-6859; gparker@alaska.net.

[2] Flynn is Director and Managing Attorney of the Western Mining Action Project (WMAP). Mr. Flynn's office is at: P.O. Box 349, Lyons, CO 80540; 303-823-5738; wmap@igc.org.

region. Our conclusion is that raising conservation standards now would NOT be a taking of the very limited property interests attendant to such claims.

State and federal law are very clear on this issue. The Alaska Supreme Court has held expressly that a mining claim carries with it "no right to mine" and that mining is "always contingent on State permission to mine."[3] Therefore, the State is free to impose new standards and reasonably withhold its permission (under elevated standards) to develop such claims if the applicant cannot satisfy the standards.

It is highly unlikely that any mining claim holders in the Bristol Bay region seeking to develop a large scale open pit or similar mine would be able to satisfy the myriad legal requirements to establish a taking in the event that, in the future, a claimant applies for permits that are substantially modified or reasonably denied on the basis of elevated conservation standards.

II. SUMMARY

We understand that your subcommittee will meet with Alaska Department of Natural Resources (DNR) staff on Thursday, January 11, 2007, concerning it's large mine permitting process. We also appreciate that your committee will consider higher standards for habitat conservation, and identify options, including refuge status for the Nushagak and Kvichak drainages, where a proposed large mine, of an acid-generating sulfide deposit for copper and other metals (Pebble Mine), could harm fish, wildlife, their habitats, and the subsistence, commercial and recreational uses which depended upon them.

This memorandum gives examples of higher standards and examines two issues relevant to your meeting with DNR and your considerations:

(1) What forms of higher standards would be lawful and not constitute a "taking" of the mining claims; and

(2) What forms of strengthened public and other processes related to large-mine permitting in a refuge would not constitute a "taking."

NO TAKING OF A MINING CLAIM OCCURS when the state legislature adopts higher standards under (a) the state's police power to protect public health, safety, the environment, and other public interests, (b) its property power to manage its land, or (c) state constitutional mandates to conserve fish and wildlife.[4] This is particularly true in the context of creating a

[3] *Beluga Mining Company v. State Department of Natural Resources*, 973 P.2d 570 (Alaska 1999).

[4] *See* Art. VIII, Alaska Constitution.

refuge to accomplish these ends. In fact, other specially designated areas (e.g., the Tugidak Island Critical Habitat Area) contain prior mining claims subject to higher standards.

A mining claim is a very limited property interest. It amounts to a right of a claimant to be first in line against subsequent claimants. It does not create a right to mine or preempt the State legislature or state agencies from regulating use or development of the claim under the State's police power, property power, and mandates to conserve fish and wildlife.

As long as the State relies on such established authorities and purposes, the following examples of "higher standards" would not constitute a taking, and the State is free to enact all, or similar provisions, in legislation:

(a) a "refuge" or similar designation where the legislation provides that the land shall be managed to protect (1) fish and wildlife habitats, and (2) public uses for commercial, subsistence and sport fishing, hunting and other such uses;[5]

(b) a "compatibility test" that requires that mining be compatible with refuge purposes;

(c) closure of refuge lands to new mining claims subject to valid existing rights;

(d) a prohibition of mining methods of operations that use or generate toxics harmful to human health, safety, aquatic or terrestrial life, the environment and subsistence, commercial

[5] In several respects, refuge or similar status would also affect a federal environmental impact statement (EIS) under the National Environmental Policy Act (NEPA) on a mine, in a manner favorable to conservation of fish, wildlife, habitats and public uses. In terms of environmental consequences, the EIS would have to address any inconsistency or conflict with state law creating the refuge. 40 CFR 1502.16 (2006); 40 CFR 1506.2(d). Federal consultation with ADF&G would occur earlier in the EIS process. 40 CFR 1501.2(d). Because ADF&G is the lead state agency managing state refuges (AS 16.20), it would have a stronger role in the EIS process. ADF&G would most likely be a "joint-lead agency" responsible with a federal lead agency for the preparation of an EIS. 40 CFR 1501.5. Refuge status would mean that ADF&G would have "jurisdiction by law" and elevate its role even as a "cooperating agency" in the EIS process, which would mean that ADF&G's expertise and environmental analysis would have to be used to the "maximum extent possible." 40 CFR 1501.6(a). Finally, even though an EIS would obviously be prepared for permits authorizing Pebble Mine, refuge status would be more likely to trigger a supplemental EIS on subsequent permit actions after the mine had been initially permitted. This is because refuge status affects the determination of whether an impact is "significant," which triggers an EIS. 40 CFR 1508.27. None of these effects on the NEPA process even trigger takings law, for reasons discussed herein.

and recreational uses of water, fish, game and other natural resources, or that may cause a nuisance;

(e) a prohibition of storage or disposal of waste rock and tailings that may generate sulfuric acid, dissolved metals, chemicals, compounds or materials that may cause such harms;

(f) a prohibition of storage or disposal of overburden, waste rock, tailings, or other waste in waters or riparian areas, or within a reasonable distance (say 500 feet) of waters or riparian areas;

(g) a prohibition of withdrawal of surface or subsurface water that may adversely affect the spawning, incubation, migration, rearing, or propagation of fish, and a requirement that any water appropriated be replaced;

(h) a prohibition of discharge of water from any point source or nonpoint source that does not meet water quality standards required for fish;

(i) a requirement that dams, for tailings disposal or other similar purposes, be seated to bedrock and impermeable;

(j) a requirement that any open pit or block caving be isolated hydrologically;

(k) a requirement that roads, power, and other facilities be designed, located, constructed and maintained in perpetuity to the highest standards to conserve fish, wildlife, habitat and uses dependent on them, by the mining company at its sole expense; and

(l) a requirement that transportation of ore concentrate use all reasonable methods to eliminate any risk of harmful or toxic metallic dust.

With respect to the second question, takings are NOT EVEN AN ISSUE when the legislature amends the processes -- rather than the standards -- related to permitting mining within a refuge. For example, takings law is not triggered when the legislature –

(a) requires a refuge management plan that is adopted into regulation by the Joint Board of Fisheries and Game;

(b) strengthens the role of the public or other agencies in decision making;

(c) creates public notice requirements that do not exist today;

(d) requires that information used be of the highest scientific quality;

(e) strengthens standards for judicial review of permitting; or

(f) requires particularized analysis of, for example, socio-economic impacts on subsistence, recreational and commercial uses of fish and game.

III. TAKINGS LAW

A. Introduction

Takings law arises from the Fifth Amendment to the U.S. Constitution and Article I, § 18 of the Alaska Constitution. Each provides that private property cannot be taken or damaged for public use or purposes without just compensation. Similarly, both the U.S. and Alaska Supreme Courts have recognized that overbroad government regulation that both substantially and inappropriately diminishes property rights, not limited interests, can be a taking.

The same case law prescribes the rigorous requirements which must be demonstrated by a claimant to establish successfully a takings claim. These matters are discussed in detail below.

Recently, the Legislative Affairs Agency addressed general aspects of takings law. The following is a more thorough outline of applicable takings law. Moreover, no draft legislation or specific proposal was in front of the agency, so it did not apply takings law to any specific proposals. This memorandum does so.

B. Constitutional Provisions

The "Takings" Clause of Fifth Amendment to the U.S. Constitution provides "nor shall private property be taken for public use, without just compensation." This limitation is imposed on the states, including Alaska, by the Fourteenth Amendment. *Chicago, B. & O.R. Co. v. Chicago,* 166 U.S. 226 (1897).

The Alaska Constitution contains a similar provision which specifies that "private property shall not be taken or damaged for public use without just compensation." Art. I, § 18.

C. Federal Law

The U.S. Supreme Court recognizes four kinds of takings: (1) "physical takings" where the property is physically appropriated by government for public use, such as where government takes private property for a highway; (2) a "total regulatory taking," such as where government eliminates all economically beneficial use of the land; (3) a "regulatory taking" such as where legislative or agency action to control land use "goes too far;" and (4) "land use exactum"

takings, such as when government demands dedication of a conservation easement as a condition for approving a subdivision. *Lingle v. Chevron USA*, 544 U.S. 528 at 548 (2005).

Regulatory takings were first recognized in *Pennsylvania Coal Co. v. Mahon*, 260 U.S. 393 (1922), in a case substantially different from the situation at hand. At issue in that case was a privately owned, express right to remove subsurface coal in private land, where the right had been reserved by contract at the conveyance of the surface estate to a homeowner. No public land or mining claim was involved. Here, we have mere mining claims on public land that do not create any right to mine. Nevertheless, the Court concluded that a 1921 Pennsylvania law restricting the impact of coal mining on surface estates affected a taking of the specific, privately-owned coal rights. Justice Oliver Wendell Holmes penned the decision, including the famous line "if regulation goes too far, it will be recognized as a taking." *Id.* at 415. However, the decision also recognized that "Government hardly could go on if to some extent values incident to property could not be diminished without paying for every such change in the general law." *Id.* at 413; *see also Lingle* at 538.

Since *Mahon*, the Court has elaborated the particular and rigorous requirements that must be demonstrated to establish that a regulation has gone "too far":

(1) The claimant must hold an established property right or a bona fide property interest that has been taken, but "a mere unilateral expectation or an abstract need is not a property interest entitled to protection." and such expectations or needs are not sufficient to support a takings claim. *Webbs Fabulous Pharmacies, Inc. v. Beckwith*, 449 U.S. 153, 161 (1980). *Penn Central Transp. Co. v. City of New* York, 438 U.S. 103, 125 (1978); *see also Seven Up Pete Venture v. State*, 114 P.3d 1009, 1019 (Montana 2005) citing *Lucas v. South Carolina Coastal Council*, 505 U.S. 1003 (1982).

(2) The claim can arise only after a government has considered and acted to deny or amend a particular course of action or permit impacting property rights. *Palazzolo v. Rhode Island*, 533 U.S. 604 (2001); *United States v. Riverside Bayview Homes*, 474 U.S. 121, 127 (1985);

(3) Per se rules are frowned upon and a regulatory takings analysis is a factual, ad hoc inquiry that focuses on three criteria –

(a) The economic impact on the property owner;

(b) The extent of interference with the reasonable investment backed expectations of the owner; and

(c) The character of the government action. *Penn Central* at 124; *see also Palazzolo* at 617.

Regarding the necessary property right, landowners, including mining claim holders, generally have no property interest or entitlement to a permit or approval for particular action: "A cognizable property interest exists [in prospective permit approval] only when the discretion of the issuing agency is so narrowly circumscribed that approval of a proper application is virtually assured." *Gardner v. Baltimore Mayor and City Council*, 969 F.2d 63, 68 (4th Cir. 1992). Similarly, unpatented federal mining claims, like the state claims at issue in *Beluga* (supra at 2), are only a limited property interest subject to substantial governmental regulatory control, and denial of mining approval is not a compensable property interest. *Reeves v. United States*, 54 Fed. Cl. 652, 672, 674 (2002).

Takings claims are also not ripe for judicial review until there has been governmental action which is a "final and authoritative determination of the type and intensity of development legally permitted on the subject property." *MacDonald, Sommen & Frates v. Yolo County*, 477 U.S. 340, 348 (1986). A court cannot determine whether a regulation has gone "too far" unless it knows how far the regulation goes. *Id.*

The heart of a takings analysis remains governed by the three *Penn Central* criteria that continue to serve as the Court's "principal guidelines" for regulatory takings. *Lingle* at 539. Each criterion has been addressed by subsequent decisions.

In terms of economic impact (the first criterion), the Court has held a taking occurred when an owner was denied ALL use of his property. *Lucas v. South Carolina Coastal Council*, 505 U.S. 1003 (1982). However, if permit restrictions allow some uses but not others, a taking is not likely. *Penn Central* at 137. In that case, building restrictions for historic preservation purposes were quite strict but it remained possible to engage in some forms of construction and building renovation consistent with the preservation standards. This meant the owner retained some rights to his property and no taking occurred. In *Riverside Bayview Homes*, reviewing a takings challenge to wetlands conservation rules, the Court opined that the possible availability of permits consistent with conservation standards would not constitute a taking: "a requirement that a person obtain a permit before engaging in a certain use of his or her property does not in itself 'take' the property in any sense; after all the very existence of a permit system implies that permission may be granted." *Id.* at 127. The Court declined to strike down the Federal wetlands regulatory program and ruled that its limitations on development did not constitute a taking.

Even very substantial reductions in property values (i.e., economic impacts) have been found not to be takings. *Penn Central* cited two cases that reduced values 75% and 87½% without being a taking. *Id.* at 131; *Euclid v. Ambler Realty Co.*, 272 U.S. 365 (1926); *Hadacheck v. Sebastian*, 239 U.S. 394 (1915).

The character of the government action is another critical criterion. The Court's general proposition is that "State laws prohibiting contemplated uses of land have been held not to be takings when the prohibitions or restrictions are for promotion of health, safety, morals, and general welfare." *Penn Central* at 125. Government action found to protect against what it determines to be a significant threat to the common welfare "leans heavily against finding a taking." *Keystone Bituminous Coal Association v. DeBenedictis*, 480 U.S. 468, 485 (1987).

This is especially so when the restricted or prohibited activity might constitute a "nuisance."[6] A nuisance is the use of property by the owner that adversely impacts his neighbors or the community. Under the common law, all property is held under an implied obligation that the owner's use of it shall not be injurious to the community. *Keystone* at 491 citing *Mugler v. Kansas*, 123 U.S. 623 (1887). Accordingly, the Court has a "long line . . . of cases sustaining against Due Process and Takings Clause challenges the State's use of its 'police powers' to enjoin a property owner from activities akin to public nuisances." *Lucas* at 1022 citing Mugler; *see also Hadacheck; Miller v. Schoene*, 276 U.S. 272 (1928); *Goldblatt v. Hempstead*, 369 U.S. 590 (1902). State action in the form of restrictions or prohibitions to restrain uses that are tantamount to a nuisance create circumstances in which the Court will "hesitate" to find a taking. *Keystone* at 491.

States are also permitted to impose restrictions on individual property owners, or a category of property owners, to protect other interests. In a noteworthy decision, the Court denied a taking claim by landowners ordered to cut down certain ornamental trees. The State of Virginia took the action to protect its apple industry as the ornamental trees were a possible source of a plant disease that could adversely impact apple orchards: "the State had not exceeded its constitutional powers by deciding upon the destruction of one class of property [without compensation] in order to save another, which in the judgment of the legislature, is of greater value to the public." *Penn Central* at 136 citing *Miller v. Schoene*.[7] The same rationale would apply to State efforts to protect valuable commercial fishing, the recreation industry and subsistence from mining.

Lastly, governments retain authority and discretion to set new rules or limitations on land use without triggering takings: "even with respect to vested property rights, a legislature generally has the power to impose new regulatory constraints on the way in which those rights

---

[6] Alaska law defines "nuisance" as a "substantial and unreasonable interference with the use and enjoyment of real property, including water." AS 09.45.255; *Parks Hiway Enterprises LLC v. CEM Leasing Inc.*, 995 P.2d 657 (Alaska 2000).

[7] An old Nevada case upheld restrictions against non-miners to facilitate the mining industry because of the value of the mining industry to that State. *Dayton Gold & Silver Mining Company v. Seawell*, 11 Nev. 394 (1876).

are used, or to condition their continued retention on performance of certain affirmative duties." *Reeves v. United States*, 54 Fed. Cl. 652, 672 (2004) citing *United States v. Locke*, 471 U.S. 84, 104 (1985). In *Reeves*, a mining company alleged that denial of its permit application to mine by the Bureau of Land Management under "non-impairment" rules, as well as designation of a National Monument that encompassed its valid mining claims, constituted a regulatory taking. The U.S. Court of Federal Claims rejected the claim.

D. Alaska Law

1. Introduction – Many features of Alaska law regarding takings mirror the U.S. Supreme Court precedents. However, the private property protection aspect of the State constitution is considered "broader" than that of the Fifth Amendment. *Anchorage v. Sandberg*, 861 P.2d 554, 557 (Alaska 1993).

Similar to federal case law, the Alaska Supreme Court also distinguishes between cases (a) where there has been a physical invasion of private property for public purposes or the destruction of all economic value and (b) regulatory takings where property rights are only diminished. *R & Y Inc. v. Municipality of Anchorage*, 34 P.3d 289, 296 (Alaska 2001).

Regulatory takings are subject to a four factor "*Sandberg*" analysis much like the *Penn Central* criterion:

(a) Character of the government action;

(b) Economic impact;

(c) Interference with reasonable investment backed expectations; and

(d) Legitimacy of the interest advanced by the regulation or land use decision. *Id.* at 557-558 citing *Penn Central*.

2. Mining Claims – The Alaska court has also specifically addressed the issue of State mining claims and takings. *Beluga v. State Department of Natural Resources*, 973 P.2d 570 (Alaska 1999). When the proponents of the major Beluga coal mine project failed to obtain permits to mine, they filed an unsuccessful takings claim against the Alaska Department of Natural Resources.

Factually, the Beluga mining claims were staked in 1983 and some mining permits were issued by the State in 1989. Other related permits were issued in 1990 but the final mining licenses were not timely issued, and "unable to mine its claims, Beluga abandoned them and sued the State for resulting economic losses." *Id.* at 572. The Court applied the *Sandberg*

factors and rejected the claim: "The State deprived Beluga of no property right. Beluga had property rights in its claims, but it had NO RIGHT TO MINE; IT'S MINING 'RIGHTS' WERE PROSPECTIVE AND CONTINGENT..." (Emphasis added). *Id.* at 575.

Beluga also argued that it had invested millions of dollars toward developing its claims and these constituted reasonable investment backed expectations for which it should be compensated. This argument was also rejected: "Beluga's claims were always CONTINGENT on State permission to mine and assertion of adverse mining claims. Absent any demonstration to the contrary, we conclude that reasonable investors could have recognized that DNR might be delayed in granting Beluga permission to mine." (Emphasis added). *Id.* at 576.

Lastly, the mine proponents contended that they had a "contractual" right under State law and rules to mine their claims and a right to obtain the necessary permits. *Id.* at 578. This argument failed too as the Court held that Beluga had no right, contractual or otherwise, to "land use permits" and after reviewing State mining law the Court decided "no express or implied promise by the State could have created a contractual mining right." *Id.*

Although not an Alaska case, the Montana Supreme Court recently handed down a similar ruling. *Seven Up Pete Venture* (2005). The mining interests acquired State mining leases in 1986 estimated to contain 9 million ounces of gold and 20 million ounces of silver. *Id.* at 1013. The permit process commenced for mining and cyanide ore processing, and the mining company invested significant sums in permit applications and for preparation of an environmental impact statement. *Id.* at 1014-1015. During this process, Montana established new environmental standards and prohibited "open-pit mining for gold or silver using heap leaching or vat leaching with cyanide ore processing reagents." *Id.* at 1013.

When it became evident that the project could not proceed under the new standard, the mining company filed takings claims arguing (a) it had "property rights in 'the opportunity for a favorable ruling on its mining permit application'" and (b) the new ban on cyanide "preclude[d] the only economically viable" means of mining therefore affecting a total taking per *Lucas*. *Id.* at 1016.

Each of these claims was rejected. Addressing the first, the court held the "opportunity to seek a permit, which required convincing the State that this cyanide leaching project was appropriate DID NOT CONSTITUTE A PROPERTY RIGHT." (Emphasis added). *Id.* at 1019. Regarding the second, the court cited *Reeves* and *Locke* that the State had the right to "impose new regulatory constraints" and these new rules did not affect a taking. *Id.* at 1017.

3. Rights to Permits – Other cases have also addressed the purported rights or entitlements of applicants to obtain permits for land development activities. Even in situations in which a statute prescribes that a permit "shall" be issued if an application satisfies particular

standards, a government is not stripped of its discretion and authority to determine if those standards have been satisfied. *Spinnell Homes, Inc. v. Municipality of Anchorage*, 78 P.3d 692, 697-698 (Alaska 2003). In such cases, a takings claim will be denied. Alaska law, in this regard, mirrors *Gardner* (4th Cir.) and Montana (*Seven Up Pete Venture*).

4. Character of Government Action – Like the U.S. Supreme Court, the Alaska Supreme Court has held that exercise of government authority for legitimate public purposes is unlikely to result in a taking. *Sandberg* at 558 citing *Penn Central*. It specifically noted that a "'taking' may more readily be found when the interference with property can be characterized as a physical invasion by government than when interference arises from some public program adjusting the benefits and burdens of economic life to promote the common good." *Id.* citing *Penn Central* at 124.

In the environmental arena, statutes, ordinances or regulations which limit a landowner's use of his property are not a taking unless the owner has been deprived of ALL economically beneficial uses of his property. *Zerbetz v. Municipality of Anchorage*, 856 P.2d 777, 782 (Alaska 1993) citing *Lucas v. South Carolina Coastal Council*, 505 U.S. 1003 (1992). The *Zerbetz* Court held that a "conservation wetlands" designation imposed on private property was not a taking even though the designation elevated the standards for building permits. Despite the new standards, permits could still be secured by satisfying the requirements. *Id.* at 783; *see also Riverside Bayview Homes* at 127. The Court also noted that the trend in environmental law was to reject landowners' takings claims and to uphold such rules as a lawful exercise of police power. *Zerbetz* at 782.

5. Reasonable Investment Backed Expectations – This feature of the *Sandberg* analysis was specifically addressed in the *Beluga* case. However, the *Sandberg* decision reveals that the Alaska Supreme Court determined that it is not necessarily reasonable to invest millions of dollars in a project dependent on prospective government approval. *Sandberg* was an inverse condemnation claim by a housing developer seeking to recover monies it invested in a development plan that secured some initial, partial government approvals, but ultimately was abandoned by the government. Rejecting this claim, the Court held it would "have to conclude" that the initial, partial approvals "constituted some kind of 'guarantee' or 'express promise'" that the government would follow through on the project and there was "absolutely no basis for such a conclusion." *Id.* at 559. Pithily the Court noted the claimant "gambled" that necessary approvals would be secured and "they lost this gamble." *Id.* at 560. Such "gambling" was held to not constitute a reasonable investment for which compensation was warranted under Alaska law. *Id.*

A reasonable investment backed expectation must also be more than a "unilateral expectation or an abstract need." *State DNR v. Arctic Slope Reg. Corp.*, 834 P.2d 134, 140 (Alaska 1991) citing *Ruckelshaus v. Monsanto*, 467 U.S. 986 (1984). In this case, where neither

State law or regulations provided a "guarantee" or "express promise" as claimants desired (i.e., to keep commercial information (property) secret), the claimants had no "reasonable" expectation that government would provide what they desired and could not assert a takings claim. *Id.*

6. Legitimate Government Interest – The Alaska Constitution addresses expressly fish, wildlife, land and water. Fish, wildlife and waters are reserved to the people for common use. (Art. VIII, § 3). Fish and wildlife are to be utilized, developed and maintained on the sustained yield basis. (Art. VIII, § 4) The legislature shall provide for the utilization, development and conservation of all natural resources belonging to the State, including lands and waters, for the maximum benefit of its people and is to provide for the administration of the state public domain. (Art. VIII, §§ 2, 6) The constitution authorizes limited entry fisheries for resource conservation and to prevent economic distress among fishermen. (Art. VIII, § 15) These provisions, in part, have been held to grant the State the right to direct the use of its natural resources including fish and game. *Herscher v. State, Dep't of Commerce*, 568 P.2d 996 (Alaska 1977).

Title 16 of the Alaska Statutes, the Fish and Game code, including state refuges, springs from the constitutional authority of Article VIII. For that matter, so does the Board's authority under AS 16.05.251(a)(1) to recommend that the legislature designate State refuges. Conservation of fish and wildlife and their habitat, salmon spawning and rearing habitats and opportunities for public uses for commercial, sport and subsistence fishing, hunting and other public uses "in a high quality environment" are among the purposes of these areas (e.g., 16.20.033(b)(1), (2)), and the use and disposition of other resources must be consistent or compatible with these purposes (e.g., 16.20.033(b)(3)). State action consistent with these authorities clearly would advance purposes of Article VIII. *See Arctic Slope Reg. Corp.* at 143. This case also refers to a variety of other legitimate government actions including public health, physical safety, financial safety and economic welfare. *Id.* The *Sandberg* opinion expressly cited this portion of the *Arctic Slope* ruling. *Id.* at 561.

IV. ANALYSIS AND APPLICATION OF TAKINGS LAW

The application of both Federal and Alaska takings law demonstrates that action by the Alaska Legislature to "impose new regulatory constraints" (*Reeves* at 672), such as those listed at the outset, on how mining development in the Bristol Bay drainages shall proceed would not constitute a taking of any cognizable property rights held by present mining claim holders. The Legislature is free to establish a refuge or other designation which elevates applicable fish, wildlife and habitat conservation standards in the Bristol Bay region or take other actions to establish more rigorous standards under which mine permit applications would be scrutinized. Such actions would not trigger a taking of mining claims or other interests requiring just

compensation under either the Takings Clause of the Fifth Amendment or Article I , § 18 of the Alaska Constitution.

Analysis of each required element for a takings claims reveals that potential plaintiffs could not carry their legally mandated burdens if they challenged State action to elevate conservation standards in the Bristol Bay region:

A. **No Cognizable Property Interest**

A mining claim is a very limited INTEREST that carries with it no right to mine and takings doctrine is only implicated when the State deprives a person a property RIGHT. *Beluga*; *Reeves*, *Penn Central*, *see also Seven Up Pete Venture*. The State retains substantial discretion to review any future permit applications, that may or may not be filed, and the applicant has no property right to have those applications approved. *Spinnell; Gardner*. The so-called "right to mine" or the "opportunity for a favorable ruling on a mining permit application" are at best mere expectancies not protected by either constitutional provision. Federal mining law, upon which Alaska's mining laws are based, confirms that there is no compensable property right to develop mining claims free of government regulation. Alaskan mining law is based upon, and very similar to, federal mining law. *Trustees for Alaska v. State*, 736 P.2d 324 (Alaska 1987).

Similarly the U.S. Department of Interior, which is charged with administering the federal mining laws on western public lands, has repeatedly held that any property right in a mining claim against the government, is contingent upon compliance with all applicable state and federal environmental and other regulatory requirements. *Great Basin Mine Watch*, 146 IBLA 248, 256 (1998) (*citing Southwest Resource Council*, 94 Interior Dec. 56, 67 (1987)) (emphasis added). *See also Clouser v. Espy*, 42 F.3d 1522, 1530 (9th Cir. 1994).

As detailed herein on state lands, the State of Alaska, like the federal government on federal public lands, has broad authority to impose new and substantial regulatory constraints on mining operations conducted on mining claims. Compliance with these requirements, and the calculation of any costs to comply with these requirements, is a prerequisite to establishing any property right against the State. Thus, a mining claimant that is unable or unwilling to comply with these requirements, or that cannot profitably develop the claims due to the imposition of these compliance costs, does not have any property right against the government.

There is also no compensable property right to operate free of government controls on mining. As detailed herein, the State of Alaska has broad regulatory authority over mining. The State is free to impose existing, or enact new, restrictions on the ability of claimants to develop their mining claims. Because a mining claimant holds his claims pursuant to, and contingent upon, compliance with all state and federal restrictions, the denial of a mine proposal based on

these restrictions does not implicate a compensable property interest. Again, directly analogous caselaw from the federal and state courts is instructive.

B. Character of Government Action

Even if it could be argued that a mining claimant has a compensable property right to mine (which is not the case), government regulatory authority over mining does not constitute a taking under Alaskan or federal law.

The State possesses wide latitude and discretion to take actions to protect and promote public health and safety and has more than ample authority to take additional steps to further ensure the conservation of valuable fish and wildlife resources like those found in the Bristol Bay region. First, mining can be a public nuisance by virtue of polluted effluent discharges, dewatering of streams, release of toxics, dust and particulates, and a variety of other actions that can produce "substantial and unreasonable interference" with the State's ability to enjoy the real property, including waters, it holds in trust for its citizens. As noted above, courts "lean heavily against a finding a taking" and are "hesitant" to do so when a State restricts property rights to prevent a nuisance. *Penn Central, Keystone.*

Second, the State is allowed to take action designed to protect activities and industries it deems important even if the action restricts other classes of property owners (i.e., mining claim holders in Bristol Bay). *Miller v. Schoene.* Here, multi-million dollar commercial, sport, and subsistence fisheries are sustained by the renewable salmon resources in Bristol Bay. The Alaska Legislature is within its rights to act to protect this vital industry even if it means new restrictions on the nascent mining industry in the region.

Third, the State, like the Federal government, is authorized to impose new regulatory constraints or create new land designations encompassing existing mining claims without triggering compensable takings. *See Reeves.* This has happened repeatedly in Alaska and not resulted in any successful takings claims (e.g., mining claims within Tudigak Island State Critical Habitat Area; U.S. Borax molybdenum claims included in Misty Fiords National Monument; Orange Hill patented copper claims included in Wrangells-St Elias National Park and Preserve, etc.).

C. Economic Impact

Elevating conservation standards in all or part of the Bristol Bay drainages will have not have any direct, tangible economic impact on present holders of mining claims in the region. As the claims carry no right to mine, and State permission to mine is a matter of discretion, any economic impacts are purely speculative and cannot rise to the level of a taking. Possible future permit applicants may well be able to satisfy the new standards, in some manner, and be granted

permission to mine in some fashion. This possibility means that present claimants and prospective applicants would not suffer any appreciable immediate economic impact. *Riverside Homes*.

D. Reasonable Investment Backed Expectations

As a matter of fact, it is highly speculative (i.e., a "gamble") that the State authorities, under either present standards or elevated conservation standards, would permit an enormous open pit mine, massive tailings dams and toxic sediment dumps, water diversions and withdrawals, and all of the related infrastructure (i.e., roads, bridges, powerlines, port, housing, etc.) astride two major river systems that support the world's most productive and best managed salmon fishery. It is also wholly unknown, and speculative, if any prospective mining projects in the Bristol Bay region are economically viable independent of environmental or conservation standards. The Alaska Supreme Court, in its seminal *Sandberg* ruling, stated that investing money in enterprises dependent on speculative government approvals constitutes a "gamble". This kind of gamble is not a "reasonable" investment. When a property owner takes such a risk and loses the gamble, the State is under no obligation to compensate that owner for its loss. Similarly, in the *Beluga* case, the Court indicated that "reasonable investors" could recognize that permits to mine may not be forthcoming from the State.[8] The existence of this fundamental contingency means that any such future investments in future permit applications and related enterprises would not be able to satisfy this critical requirement of takings law.

E. Legitimacy of the Interest Advanced by the Regulation or Land Use Decision

Conservation of fish, wildlife and related habitat is a completely legitimate interest to be advanced by State action. Authority for such action arises directly from the Alaska Constitution (Art. VIII), and the legislatively enacted Fish and Game Code (Title 16) conclusively establishes the legitimacy of state conservation interests as a matter of state law. The Court has found that a wide variety of actions are "legitimate," *see Arctic Slope* at 143, *Sandberg* at 558, and there is no doubt that constitutionally inspired conservation actions would totally satisfy the "legitimacy" requirement.

[8] In this vein, the Memorandum of Understanding between Northern Dynasty and the Department of Natural Resources, by which Northern Dynasty reimburses state permitting costs, provides that Northern Dynasty expressly agrees that nothing in the agreement entitles Northern Dynasty to permits or favorable treatment at the time of permit application.

F. **Proposals to Improve Processes Related to Mining Permits Do Not Trigger a Takings Issue.**

Proposals to improve the processes related to mining permits do not create higher conservation standards and never trigger a takings issue because mining claims are not directly affected.

For example, a draft Jay Hammond refuge bill would require ADF&G to prepare, in consultation with DNR, a refuge management plan that could be adopted into regulation by the Joint Board of Fisheries and Game. The regulations might affect the standards for permits, but the requiring plan does not.

The draft refuge bill also would strengthen the role of the public in decision making by creating a citizen advisory body. That strengthens the role of the public, compared to DNR decision-making, but does not directly affect any mining claims.

We understand that DNR is under no statutory requirement for public notice of permits under the Anadromous Fish Act, AS 41.14.870, or the Fishways Act, AS 41.14.840. A refuge bill could require public notice for any permits related to mining in the refuge.

Similarly, DNR has no applicable statutory requirement that information used in mine permitting be of the highest quality. A refuge bill could require as much.

Legislative enactment of a refuge bill also fits squarely within Alaska administrative law regarding subsequent agency action to grant or deny permits for a mine. Alaska courts apply four standards of review for agency decisions. *Kachemak Bay Watch, Inc., v. Dept. of Natural Resources* 935 P 2d 816 (Alaska 1997). (1) For questions of law not involving agency expertise, the courts apply the "substitution of judgment" standard because when no agency expertise is involved, the courts are more equipped than agencies to interpret law. *Handley v. State, Dep't of Revenue*, 838 P.2d 1231, 1233 (Alaska 1992); *Kjarstad v. State*, 703 P.2d 1167, 1170 (Alaska 1985). (2) For questions of law involving agency expertise, Alaska courts apply the "reasonable basis" test. *Rose v. Commercial Fisheries Entry Comm'n*, 647 P.2d 154, 161 (Alaska 1982). (3) The "reasonable and not arbitrary" standard is applied to administrative regulations. *Handley*, 838 P.2d at 1233. (4) The "substantial evidence" test is applied to questions of fact. *Id.*

Creating a Jay Hammond refuge administered, as refuges are, by ADF&G in some respects and by DNR in other respects, would strengthen the former's role in any permit process. However, the standards for judicial review would remain the same, and there would be no impact on due process afforded to a prospective permit applicant.

Refuge or other legislation could also require that the best information as evidence be the basis of any permits issued for large-scale mining. Given that the Bristol Bay drainages are so important for so many reasons, we are persuaded that the Board of Fisheries should recommend to the legislature that a refuge bill requires that evidence necessary to support factual findings for mine permits within the refuge must be of the highest evidentiary standard – i.e., the "clear and convincing evidence" standard.

Finally, the written comments of Trout Unlimited (TU) on Proposal 121 include a copy of *The Economics of Wild Salmon Watersheds, Bristol Bay, Alaska* (Duffield, et al. 2006) by the economic study by the University of Montana and the University of Alaska (ISER). It quantifies the economic production from the Bristol Bay watershed for commercial, subsistence and recreational use, but stops short of addressing how Pebble or other mines might impact socio-economically those uses. A refuge bill could require particularized analysis of such socio-economic impacts.

V. CIVIL AUTHORITY OF DNR VERSUS CRIMINAL AUTHORITY OF ADF&G

No discussion of elevated standards would be complete without recognizing that the importance of fish and game to Alaskans prompted Alaska's lawmakers to make violations of Title 16 (the Fish and Game Code) criminal, while nearly all violations of Titles 38 and 41 (DNR statutes) are civil (except for violations of the Fishways Act (AS 41.14.840) and the Anadromous Fish Act (AS 41.14.870)). The latter authorities were transferred from ADF&G to DNR by the elimination of the former ADF&G/Habitat Division, and which we appreciate the Board at Dillingham voted unanimously to transfer back to ADF&G.

If the Board's interest in elevating standards includes enforcement, as it should, then it makes sense to have criminal penalties under consideration.

In the context of large mine permitting, recent enforcement actions demonstrate this distinction between criminal and civil penalties. On December 21, 2006, EPA announced that Coeur Alaska, Inc. had agreed to pay penalties for Clean Water Act violations at the Kensington Mine – a project now under construction per permits received through the same large mine permitting process now applicable in the Bristol Bay region.[9]

---

[9] A recent, first-of-its-kind study, "Comparison of Predicted and Actual Water Quality at Hardrock Mines" (Maest, Kuipers, 2006) compares water quality predictions made at the time of permitting with outcomes at 25 representative large mines permitted in the United States during the last 30 years. The study concludes that the vast majority of large mines do not perform as predicted at the time of permitting. The full study, and a summary of it, are available at http://www.mine-aid.org/

VI. CONCLUSION

Elevating conservation standards in the Bristol Bay region, as outlined in Part II, by means of the twelve examples of higher standards would not constitute a taking. First, a mining claim is a very limited property right, is not a right to mine (mining is always contingent on state permission), amounts to only a priority over subsequent claimants, and is not sufficient to support a takings claim. Second, all of the twelve examples rest upon the State's police power, property power and constitutional mandate to conserve fish and wildlife, and those powers and authorities can be exercised without creating any per se takings. Third, under the three-prong, federal-law analysis of "regulatory" takings and the similar four-prong, state-law analysis, none of the elevated standards, if incorporated into legislation, would constitute a taking of the mining claims in question. In fact, two of the examples (refuge purposes and the compatibility test) are in existing State refuge statutes and have never constituted a taking, even in areas where prior mining claims exist (e.g., Tugidak Island Critical Habitat Area). Furthermore, other examples (seating of dams to bedrock, hydrological isolation, and replacement of water) have been suggested by DNR at public meetings on the subject of higher standards, and we agree with DNR that such standards would not constitute a taking. Fourth, and last, any legislation that strengthens the processes related to large-mine permitting, as also outlined in Part II by means of six examples, would not even raise the issue of takings.

It is a complete "red herring" to suggest that strengthened fishery conservation standards for the Bristol Bay region would cause a compensable taking of mining claims in that area.

Sustainability of Bristol Bay Salmon Fisheries

Provided to Senate Resources Committee members for the purpose of providing background information on Bristol Bay fisheries by Nunamta Aulukestai[1]
Feb. 27, 2009

Commercial fisheries have harvested wild salmon from Bristol Bay for over a century and current catches are as high as during any time period in the past.

Bristol Bay commercial salmon catches have been sustainable for over a century despite substantial shifts in climate in western Alaska during this time period.

The relative contributions of salmon from each of the major rivers in the Bristol Bay region have waxed and waned in response to the changing environment. The contributions of fish from rivers that were especially productive during certain decades were replaced by other rivers when their populations became less productive.

Thus, the long-term sustainability of Bristol Bay fisheries derives from the diversity of habitats and associated salmon populations in this region.

This effect of salmon biodiversity on fishery sustainability is analogous to a 'portfolio effect' in the stock market: while single 'hot' stocks may be very productive during short time periods, diverse stock portfolios nearly always outperform simple ones over the long term. Bristol Bay is one of the few places on Earth where its salmon habitat portfolio remains intact.

Industrial development of the pristine watersheds of Bristol Bay represents a potentially serious risk to salmon in this region because it threatens to erode the diversity of habitats and salmon populations that have been critical for fishery sustainability.

Although Bristol Bay is mostly known for the fact that it is the world's largest sockeye fishery, it also supports one of the largest Chinook (king salmon) fisheries in the world, and it is also home to many important species that rely on the seasonal pulse of salmon resources for their own sustenance (e.g., brown bears, rainbow trout; both of which support an enormous tourism industry)

[1] This document was compiled with technical support from Dr. Daniel Schindler at the University of Washington Fisheries Research Institute.

Key questions to ask about salmon habitat:

1) Where will the water come from that is needed to operate the mine? Will water need to be pirated from other watersheds beyond the proposed Pebble Mine footprint? *(it remains unclear where the water that is needed to operate the mine and treat the tailings will come from. It is also unclear whether the watershed that the proposed Pebble Mine would be situated within has enough water to support the mine. It is actually unlikely)*

2) What are the spin-off environmental effects of the supporting infrastructure for the mine? Roads and their associated dust, increased access, effects on hydrology are likely to all have important effects on natural ecosystems of this region.

3) What exactly is meant by 'no net loss' of salmon habitat? The current landscape of salmon habitat was generated by thousands of years of natural erosion processes that followed after the last glaciation. It is unclear that engineers will be able to create similarly productive habitats.

4) Where will the water come from to support such newly created habitats?

5) Heavy metal mining has a horrible environmental history – especially with respect to proper treatment and storage of wastes and tailings. Why would the proposed Pebble Mine be any different?

6) How long will it take for environmental effects of the mine to be expressed? *(environmental effects of hard rock mining are often expressed decades after a mine has begun operation. By this time, the mining company has often finished their exploitation and moved on.)*

Thus, how will the Pebble Limited Partnership guarantee the environmental precautions it claims it will be taking?

PERSPECTIVE:
FISHERIES MANAGEMENT

Climate Change, Ecosystem Impacts, and Management for Pacific Salmon

Michael Webster

Schindler is a professor at the School of Aquatic and Fishery Sciences, University of Washington, Seattle and he can be contacted at deschind@u.washington.edu. Augerot is the director of Pangaea Environmental, Corvallis, Oregon. Fleishman is the director of the Conservation and Resource Management Program, National Center for Ecological Analysis and Synthesis, Santa Barbara, California. Mantua is an associate research professor at the School of Aquatic and Fishery Sciences, University of Washington, Seattle. Riddell is the division head for Salmon and Freshwater Ecosystems, Science Branch, Department of Fisheries and Oceans Canada, Nanaimo, British Columbia. Ruckelshaus is a research fishery biologist at the National Marine Fisheries Service, Seattle, Washington. Seeb was chief scientist for the Alaska Department of Fish and Game, Anchorage, and is now a research professor at the School of Aquatic and Fishery Sciences, University of Washington, Seattle. Webster is a program officer for The Gordon and Betty Moore Foundation, San Francisco, California.

ABSTRACT: As climate change intensifies, there is increasing interest in developing models that reduce uncertainties in projections of global climate and refine these projections to finer spatial scales. Forecasts of climate impacts on ecosystems are far more challenging and their uncertainties even larger because of a limited understanding of physical controls on biological systems. Management and conservation plans that explicitly account for changing climate are rare and even those generally rely on retrospective analyses rather than future scenarios of climatic conditions and associated responses of specific ecosystems. Using past biophysical relationships as a guide to predicting the impacts of future climate change assumes that the observed relationships will remain constant. However, this assumption involves a long chain of uncertainty about future greenhouse gas emissions, climate sensitivity to changes in greenhouse gases, and the ecological consequences of climate change. These uncertainties in forecasting biological responses to changing climate highlight the need for resource management and conservation policies that are robust to unknowns and responsive to change. We suggest how policy might develop despite substantial uncertainties about the future state of salmon ecosystems.

Cambio climático, impactos a nivel ecosistema y manejo del salmón del Pacífico

RESUMEN: A medida que el cambio climático se intensifica, existe un creciente interés en desarrollar modelos que reduzcan la incertidumbre en las proyecciones del clima global, y llevar estas proyecciones a escalas más finas. El pronóstico de los impactos del clima sobre los ecosistemas es más difícil de abordar y la incertidumbre asociada es aun mayor porque se tiene un entendimiento rudimentario sobre los controles físicos en sistemas biológicos. Son pocos los sistemas de manejo y conservación que consideran explícitamente el papel del clima, e incluso éstos se basan en análisis retrospectivos más que en escenarios futuros de condiciones climáticas y las correspondientes respuestas a nivel ecosistema. Al utilizar relaciones biofísicas preestablecidas como guía para predecir los impactos de cambio climáticos, se asume que dichas relaciones permanecerán constantes. Sin embargo, esta suposición implica una larga cadena de imprecisiones con respecto a la intensidad de futuras emisiones de gases de invernadero, sensibilidad climática a los cambios en estos gases, y las consecuencias ecológicas del cambio climático. La incertidumbre del pronóstico de las respuestas biológicas a un clima cambiante, resaltan la necesidad de políticas de manejo y conservación que sean suficientemente robustas a esas incógnitas y sensibles al cambio. Se sugiere cómo pueden desarrollarse tales políticas a pesar de la importante incertidumbre que existe en torno al estado futuro de los ecosistemas que albergan al salmón.

OVERVIEW OF SALMON RESPONSES TO CHANGING CLIMATE

Pacific salmon are icons of the natural and cultural heritage of coastal nations throughout the subarctic North Pacific Ocean (SNPO). Since the 1960s, scientists across all nations of the SNPO have greatly advanced understanding of Pacific salmon and their habitats. During this time period, environmental conditions of the SNPO also have shifted substantially in response to inter-decadal climate variability and longer-term warming trends (e.g., Schindler et al. 2005). Initial syntheses of these data have begun to shed light on how salmon and their ecosystems respond to changing climate.

Pacific salmon are affected by climate change across a hierarchy of coarse and fine spatial and temporal scales; each of these scales has distinct implications for development of policy that will be robust

2129

to future climate change. At the scale of the entire SNPO (Figure 1), biomass of Pacific salmon has increased substantially over the last century (Figure 2; Eggers 2009 in press), coincident with increases in global temperatures (IPCC 2007). This increased salmon production has been especially pronounced since the mid-1970s (Mantua et al. 1997; Beamish et al. 2008). However, trends in both climatic conditions and salmon production have not been uniform across the SNPO. In western North America, inter-decadal patterns of salmon production in northeastern stocks (i.e., Alaska) are out of phase with production regimes for stocks in the conterminous United States and Canada (Figure 3). This variation in production coincides with warming trends in salmon watersheds and nearshore marine waters in western North America, but cooling trends in the open waters of the interior North Pacific Ocean where most salmon feed and mature (Mantua et al. 1997; Hare et al. 1999).

At still finer spatial scales, stocks entering the ocean within 500-800 km of one another have weakly coherent responses to changes in local oceanographic conditions (Mueter et al. 2002; Pyper et al. 2005). This regional coherence in productivity is most correlated with regional variation in sea surface temperatures (Mueter et al. 2002). However, at the scale of individual populations, responses to regional shifts in climatic conditions are diverse (Figure 4; Peterman et al. 1998; Hilborn et al. 2003; Crozier and Zabel 2006; Rogers and Schindler 2008). Further, salmon species vary considerably in their responses to regional climate changes (Hare et al. 1999). Identifying features of the environment and of salmon populations that produce the diversity of salmon responses to regional climate forcing is critical because these are the scales at which most management and conservation activities operate.

Policies for managing salmon in the face of climate change must change if we hope to meet our conservation and management goals. Our ability to accurately predict climate impacts on salmon ecosystems is incomplete and unlikely to improve to the point of accounting for the regional response diversity noted above. Policies must be robust to these uncertainties rather than reliant upon prescriptive forecasts of climate and associated ecological conditions. Some such management strategies have been suggested as ways to account for climatically-driven changes in salmon production, without the need to understand the intricacies of climate impacts on salmon ecosystems (e.g., Walters and Parma 1996; Peterman et al. 2000). For example, Walters and Parma (1996) showed that a constant harvest strategy (i.e., one that exploits a constant proportion of stock each year) performs remarkably well at tracking long-term fluctuations in stock productivity, as would be caused by climate change. The information needed to develop such a strategy relies heavily on our ability to forecast year-to-year variation in abundance but does not necessar-

Figure 1. Map of the distribution of salmon in the Subarctic North Pacific Ocean (SNPO). Letters and corresponding arrows depict the location and rough spatial scales over which data from Figures 3 and 4 were summarized.

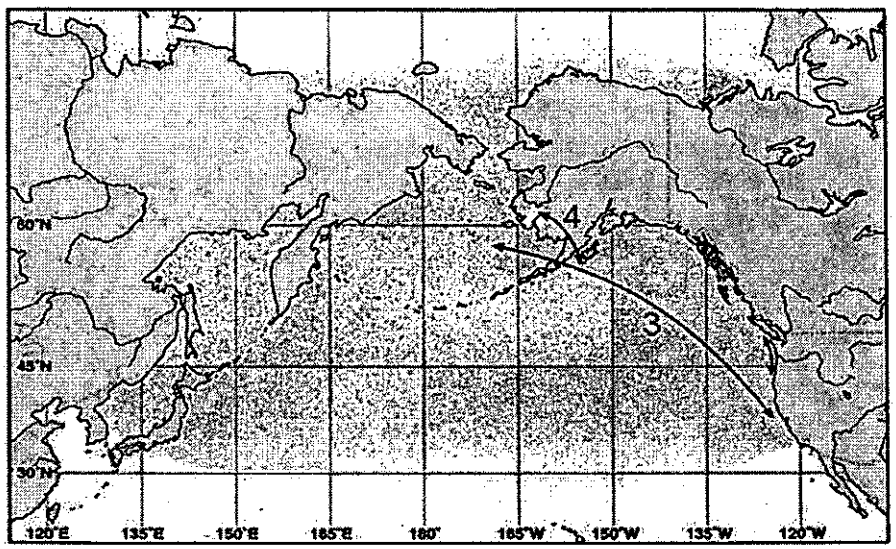

Figure 2. Total biomass (thousands of metric tons) of chum (*Oncorhynchus keta*), sockeye (*O. nerka*), and pink salmon (*O. gorbuscha*) inhabiting the SNPO (stippled area in Figure 1) from 1925–2005. Data are separated by species, continent of origin (North America [NA] versus Asia (AS), and hatchery versus wild stocks). Not all hatchery contributions are known with high certainty (e.g., Russian pink salmon) so these are combined with the wild components. Data are from Eggers (2009 in press).

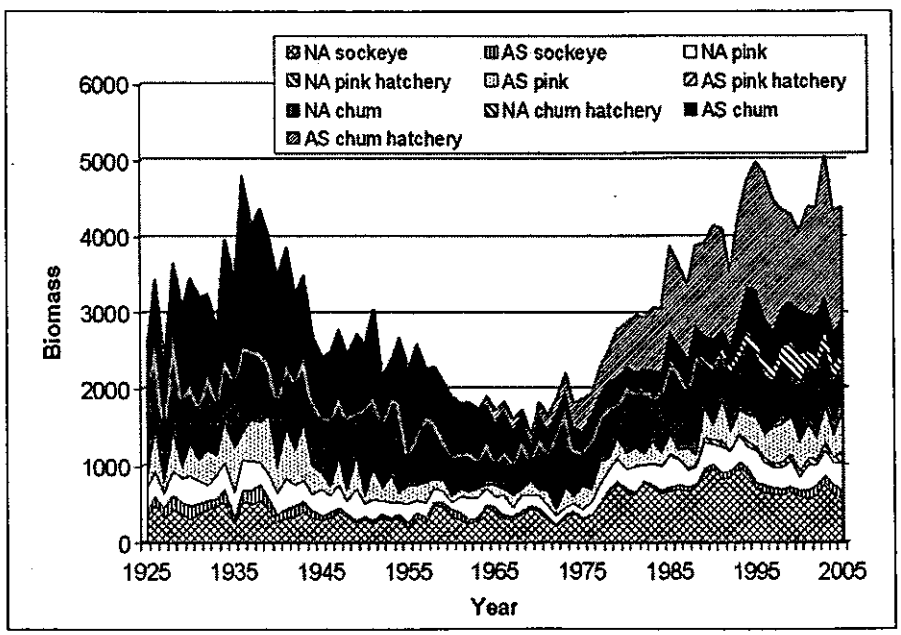

2130

ily rely on an intricate understanding of the processes causing climatically-driven variation. Given our limited predictive capacity, what information about the links between salmon and climate is useful to current policy? In particular, how might policy to address climate impacts on salmon embrace the hierarchy of spatial and temporal scales that characterize salmon responses to a changing environment?

Figure 3. Standardized anomalies of salmon harvests along the North American west coast from 1925–2005. Data were smoothed with a 5-year running mean. Abbreviations are: ch = Chinook salmon (*O. tshawytscha*), co = coho salmon, so = sockeye salmon, pi = pink salmon, BC = catch from British Columbia, US = catch from US lower 48 states, AK = catch from Alaska).

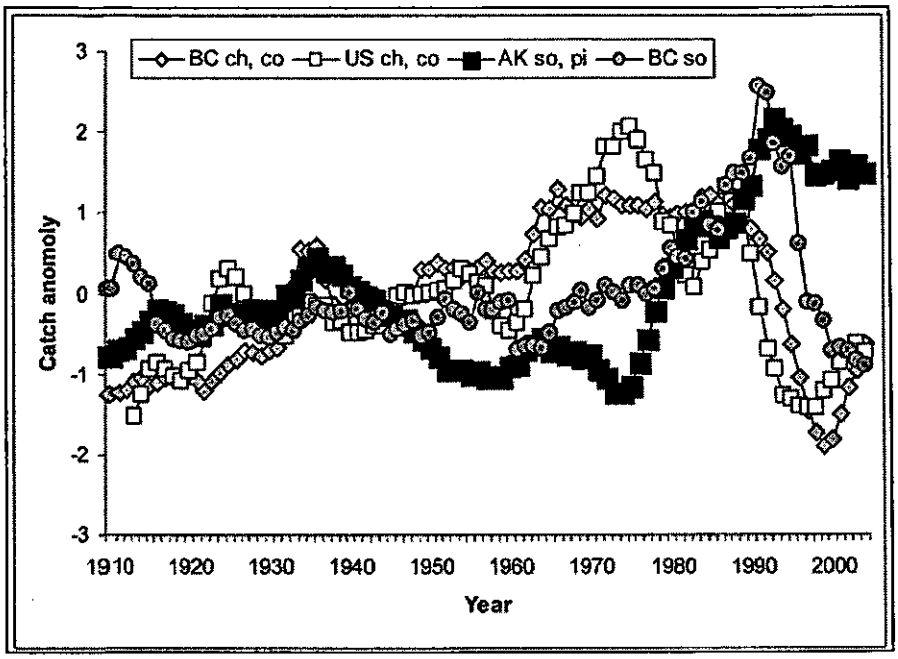

Figure 4. Sockeye salmon (*O. nerka*) commercial catch (millions of fish) from Bristol Bay, Alaska, from 1893–2006, apportioned to five fishing districts associated with the major rivers of this region (updated from Hilborn et al. 2003). Data are smoothed with a 5-year running mean.

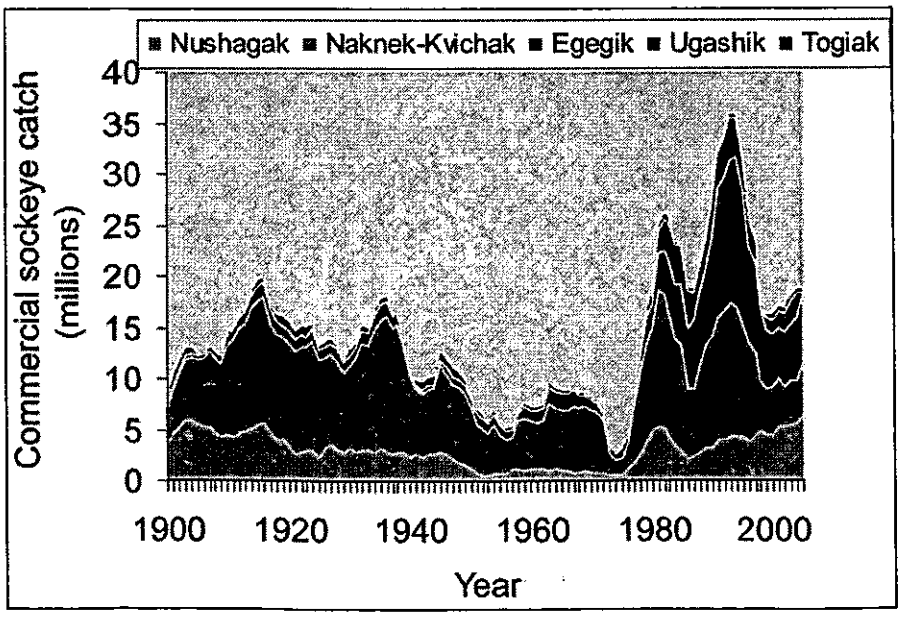

The need for SNPO-wide salmon-climate policy

Improved salmon-climate policy is needed at all of the spatial scales described above. First, we believe that proactive policy development at the scale of the entire SNPO is needed to help minimize future climate-induced political conflicts over the use of limited prey resources by salmon from different nations of the SNPO. At the scale of the entire SNPO, increases in salmon biomass largely reflect increasing numbers of hatchery-released salmon from Eurasia (Figure 2, Eggers 2009 in press) that compete with salmon from North American rivers when they overlap in international waters (Kaeriyama and Edpalina 2004; Ruggerone et al. 2005). This surge in salmon production was concurrent with a general cooling of North Pacific offshore habitat where salmon achieve most of their growth (Mantua et al. 1997; Hare et al. 1999). If the increasing trend in biomass is dependent upon the cooling trends in this offshore ecosystem, it is not likely to persist with ongoing climate warming. Thus, the institutional expectation of the SNPO's capacity to produce salmon that has developed during the last few decades may prove overly optimistic as global atmospheric and upper-ocean temperatures continue to increase. In fact, capacity may decline if thermal characteristics of offshore habitat eventually switch trajectories and, consistent with global climate model projections, the upper ocean begins warming. More extensive use of the Arctic Ocean by Pacific salmon may partially offset any diminished capacity of the SNPO. Nevertheless, international coordination of management of the open-ocean commons used by Pacific salmon needs refinement to address potential climate-driven changes in productivity. There is currently no coordinated vision for use of the SNPO (Holt et al. 2008).

Climate policy at regional scales

At intermediate (regional) spatial scales, policies that govern maintenance of habitat quality and harvest strategies could be modified to more appropriately account for complex stock structure and variation in climate impacts on different habitats used by salmon. Multi-decadal regimes of high salmon production (Beamish et al. 1999) due to favorable

2131

ocean conditions may mask the erosion of freshwater and estuarine habitat quality, and within-stock biodiversity, that only become evident once productivity in the ocean decreases. For example, fisheries for Oregon coho salmon (*Oncorhynchus kisutch*) appeared to be robust and sustainable from the 1950s into the mid-1970s. During this period, hatchery programs grew rapidly and replaced wild stocks as the principal producers of juvenile coho salmon (Pearcy 1992). Intense harvest rates that seemed appropriate for hatchery stocks during periods of exceptionally high marine survival proved too high for the long-term sustainability of wild stocks. In 1977, a shift in the state of the Pacific Decadal Oscillation generated a 20-year period of unfavorable ocean conditions for Oregon coho salmon. The abundance of both hatchery and wild coho salmon adults plummeted, sending coho salmon populations and their fisheries into a decline from which they may be only beginning to recover. Accordingly, despite their knowledge that hatcheries were eroding the complex stock structure of wild coho salmon that had evolved for millennia, a 20-year period of high marine survival rates led fishery managers to mistakenly believe that large-scale hatchery production could sustain intense fisheries (Lichatowich 1999).

Further, Oregon coho salmon provide a compelling example of situations where favorable climatic conditions and high survival in one habitat (e.g., ocean) can obscure the degradation of other habitats (e.g., freshwater systems). For example, degradation of freshwater habitats can occur during periods of favorable ocean conditions that produce high marine survival rates. The degradation of freshwater habitats is only detectable once marine conditions switch back to a low productivity regime and salmon populations are more dependent on high quality freshwater habitat. Consequently, a ratchet effect can develop on population size and stock diversity as climatically-driven conditions in the ocean oscillate between periods of high and low quality (Lawson 1993).

Although within-stock diversity hinders the development of accurate and generalizable long-term forecasts of climate impacts on salmon at watershed scales, policies that protect diverse landscapes and their potential for diverse ecological responses are likely an effective means to hedge bets against future climate changes. Ecosystem and population sensitivity to changes in temperature and precipitation varies substantially across the entire latitudinal gradient that salmon occupy. The ecological and climatic factors that produce intra-regional variation in population responses to changing climate (e.g., Hilborn et al. 2003; Crozier and Zabel 2006; Rogers and Schindler 2008) are poorly understood. It is useful to think of salmon landscapes as heterogeneous "filters" of climate. The environmental conditions experienced by any individual population are produced from how the overriding climate signal is expressed in their habitat, as influenced by its geomorphic, hydrologic, and ecological characteristics. We currently have a poor understanding of how landscapes filter climate signals, and how these in turn affect salmon populations. This lack of knowledge is an impediment to developing accurate predictions about the future status of specific salmon populations. However, to some extent, the regional diversity of population responses to climate change appears to derive from local adaptations of salmon populations to heterogeneity in landform and hydrologic conditions (Hilborn et al. 2003; Beechie et al. 2006; Crozier and Zabel 2006; Rogers and Schindler 2008). This response diversity imparts resilience to human social systems, such as fisheries, because they integrate across this ecological heterogeneity (Hilborn et al. 2003). Focusing regional policy on "salmon landscapes" will also be necessary to account for the range of habitats used by salmon over the course of their lives, including migratory corridors (Martin 2006). In the Pacific Northwest, where salmon landscapes are being developed most quickly, such protection of habitat may have to be especially aggressive to counteract ongoing effects of climate change (Ashley 2006).

What science can do to improve salmon-climate policy

Science can play an important role in reducing key uncertainties about climate impacts to which future policy can adapt. Areas that are particularly ripe for study and application to policy include:

- Developing quantitative models that allow projections for temperature, precipitation, and hydrologic conditions to be reliably downscaled to the watershed level. These models will facilitate exploration of the probability that regional conditions will support salmon in specific locations as climate continues to warm (Battin et al. 2007).
- Developing models that allow for integration of multiple factors influencing salmon ecosystems, including the cumulative impacts of climate change, land use, and water use on habitat, fishery harvest, and hatchery effects.
- Exploring the extent to which salmon and co-occurring organisms might adapt to ongoing climate change, thus affecting the direction and magnitude of overall ecosystem response. The role of evolution in ecological responses to anthropogenic change of Earth systems has been essentially ignored in conservation planning (Smith and Bernatchez 2007). This knowledge would inform policy decisions to invest or divest in salmon fisheries, salmon recovery, and hatchery production around the North Pacific.
- Exploring scenarios of future ocean productivity, linkages among ocean and freshwater or terrestrial conditions, and effects of changes in ocean, freshwater, or terrestrial conditions on salmon production at local, regional, and SNPO scales. This knowledge will be important for creating a management regime for cooperative use of the ecosystem services of the SNPO.
- Improving our understanding of how climate change affects the metapopulation processes important to salmon evolutionary and ecological dynamics.
- Refining genetic techniques to identify stocks, and ways to efficiently implement the data generated by those techniques, in harvest management to protect stock diversity in fisheries.

CONCLUSIONS

Predictions of the scope and exact nature of biological responses to future climatic and habitat conditions will always be subject to considerable uncertainty. However, we can be certain that climate will continue to change and biological responses will be heterogeneous across a variety of spatial and temporal scales. We face the challenge of developing management and conservation approaches that are robust to substantial uncertainties about future conditions and capable of responding to change. Simultaneously, we must hone our ability to identify a realistic range of alternative futures. While we have focused on Pacific salmon, the issues we raise are not unique to these species. Many of these same issues will challenge policy to achieve sustained production and conservation of any wide-ranging species as global and regional climate continue to change. ⚓

ACKNOWLEDGMENTS

This perspective developed out of an international workshop convened at the National Center for Ecological Analysis and Synthesis (Santa Barbara, California) to understand the linkages between Pacific salmon ecosystems and changing climate. We thank S. Hare (University of Washington), P. Lawson (Oregon), and D. Eggers (Alaska Department of Fish and Game) for providing data, C. Schwartz for helping develop Figure 1, and R. Waples, R. Peterman, W. Duffy, and three anonymous reviewers for helpful comments on the manuscript. The Gordon and Betty Moore Foundation and the National Science Foundation provided financial support for this project.

Biocomplexity and fisheries sustainability

Ray Hilborn*†, Thomas P. Quinn*, Daniel E. Schindler‡, and Donald E. Rogers*

Edited by William C. Clark, Harvard University, Cambridge, MA, and approved April 1, 2003 (received for review November 29, 2002)

A classic example of a sustainable fishery is that targeting sockeye salmon in Bristol Bay, Alaska, where record catches have occurred during the last 20 years. The *stock complex* is an amalgamation of several hundred discrete spawning populations. Structured within lake systems, individual populations display diverse life history characteristics and local adaptations to the variation in spawning and rearing habitats. This biocomplexity has enabled the aggregate of populations to sustain its productivity despite major changes in climatic conditions affecting the freshwater and marine environments during the last century. Different geographic and life history components that were minor producers during one climatic regime have dominated during others, emphasizing that the biocomplexity of fish stocks is critical for maintaining their resilience to environmental change.

climate change | resilience | Pacific salmon | endangered species | biodiversity

At a time of growing concern about the sustainability of many of the world's fisheries, several stand out as providing long-term sustainable yield. Among the most prominent successes are the fisheries for sockeye salmon in Bristol Bay, Alaska (Fig. 1), that have seen record returns and catches in the last two decades. This success is due in part to several factors including (*i*) favorable ocean conditions in recent decades, (*ii*) a single, accountable management agency, and (*iii*) a well established program of limited entry to the fishery. However, the biocomplexity of the stock structure has also played an critical role in providing stability and sustainability. Here we provide evidence for the effects of biocomplexity on sustainability and emphasize that conserving biocomplexity within fish stocks is important for maintaining their resilience to future environmental change.

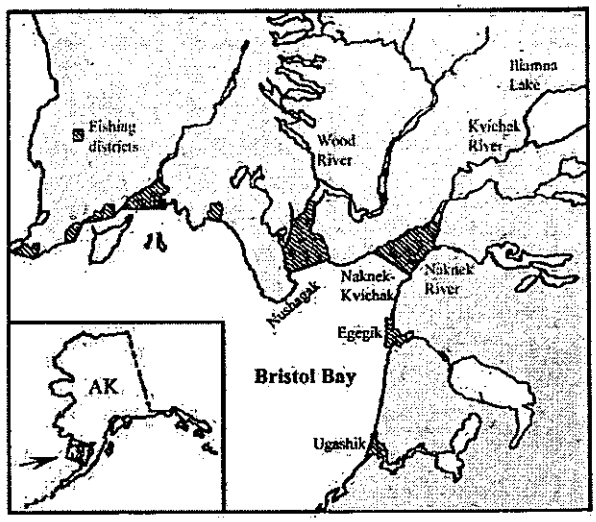

Fig. 1. Map of Bristol Bay, Alaska, showing the major lake systems producing sockeye salmon and the associated fishing districts. Figure is adapted from Minard and Meacham (37), which also gives an overview of Bristol Bay sockeye management practices.

The Biodiversity Of Bristol Bay Sockeye

Homing of Pacific salmon (*Oncorhynchus* spp.) to their natal sites results in reproductive isolation of populations, allowing natural selection to operate on heritable phenotypic traits, and the result is a wealth of distinct, locally adapted populations (1, 2). Sockeye salmon (*Oncorhynchus nerka*), for example, display a wide variety of life history types, each associated predictably with certain breeding and rearing habitats (3). The diversity of phenotypes thus reflects the adaptation of populations to the diversity of suitable habitats. Spawning by salmonid fishes generally takes place in lotic habitats, and Bristol Bay sockeye salmon spawn in streams and rivers ranging from 10 cm to several meters deep, and in substrate ranging from small gravel to cobble (4, 5). Some creeks have spring-fed ponds with much finer substrate and deeper, slowly flowing water, and these too are used for spawning. Sockeye also spawn in groundwater-fed beaches at the outwash areas of rivers and along hillsides with substantial groundwater inputs. In these habitats, sockeye may spawn from the shoreline to depths of several meters. Finally, sockeye may also spawn on the rocky beaches of low-lying islands that are too flat to develop groundwater but where wind-driven surface currents are sufficient to deliver highly oxygenated water to developing embryos buried in the coarse gravel (6).

Adult sockeye display a suite of adaptations to the diversity of spawning and incubation environments, seen repeatedly from one site to another (Table 1). First, the date of spawning reflects the long-term average thermal regime experienced by incubating eggs and the timing of food production for juvenile salmon in the spring. Simply put, the adults spawn at a date that, given the average thermal regime, will allow the embryos to complete embryonic development and emerge in time to feed on aquatic insects and zooplankton the following spring (7). Salmon spawn early (late July to mid-August) in small streams that experience cold temperatures during incubation but spawn later (late August to October) in large rivers and lakes that have substantial heat storage capacity (8).

Not only the timing of spawning but also the average size of the eggs reflects the habitat-specific features of the incubation environment. In general, salmon have very large eggs compared with other teleost fishes (9). The development of such large embryos is possible because the cold, highly oxygenated water counters the surface-to-volume constraint against large eggs and because size-selective predation (10) and competition favor large juveniles (11). Larger adult salmon have both larger and more numerous eggs than smaller salmon, but the energetic constraints on the female result in tradeoffs between egg size and egg number that are population-specific. Sockeye spawning in rocky island beaches have unusually large eggs (12). This takes advantage of the well oxygenated water and large interstitial spaces among the rocks to provide the offspring with abundant yolk to help survive the prolonged posthatching period that results from early spawning. In addition, large eggs may be less vulnerable to size-selective predation by sculpins (*Cottus* spp.) (13). In contrast to the island spawners, the eggs of females spawning in streams and rivers are of intermediate size (match-

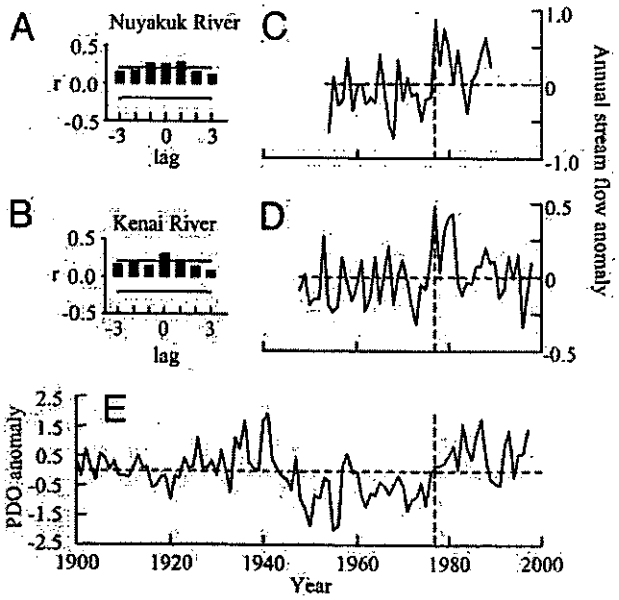

Fig. 2. Comparisons of the average annual PDO index for 1900–1998 (*E*) (ref. 26 and http://tao.atmos.washington.edu/pdo) and annual streamflow for two coastal rivers in southwestern Alaska. All time series have been normalized to the long-term mean. (*A* and *B*) The cross correlation plots (CCF) between normalized annual flow for each of the two rivers and the annual average PDO index. Lags are shown for 1-year increments. Horizontal lines on *A* and *B* mark the significance bounds ($P \leq 0.05$). Historical streamflow (annual $ft^3 \cdot s^{-1}$) is shown for the Nuyakuk River (59°56′08″ N, 158°11′16″ W, *C*) in the Upper Nushagak drainage near Dillingham, Alaska (1954–1989) and for the Kenai River at Cooper Landing, Alaska (60°29′34″ N, 149°48′28″ W, *D*) for 1948–1998.

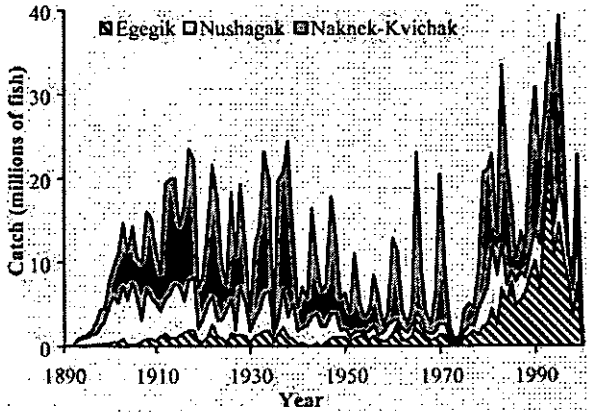

Fig. 3. Catch history of the three major fishing areas within Bristol Bay, Alaska. Contributions of the minor districts, Ugashik and Togiak, have averaged 4.6% since 1955.

the hydrologic conditions in sockeye spawning and nursery habitats (Fig. 2). When we use the Kenai River and the Nuyakuk River as examples, we see that climate regimes associated with positive phases of the PDO are characterized by relatively high stream flows, whereas negative phases of the PDO are associated with below-average flows (23, 25).

Temporal and spatial variation in the hydrology of spawning and nursery habitats have important implications for both the spawning success of adult sockeye and for growth and survival of juveniles during their freshwater residency. For example, access to small spawning streams by adults is impeded during years with low flows (19) whereas access to spawning habitat on lake beaches may be much less dependent on hydrologic patterns. Survival of smolts during their seaward migration may also be enhanced during periods with high flow because of reduced vulnerability to freshwater predators. In general, years with high stream flows coincide with years of favorable near-shore marine conditions such that sockeye productivity may be enhanced at several stages of their life history (25).

There is apparent coordination among several critical physical and biological conditions important to sockeye salmon biology. Nevertheless, an outstanding characteristic of the responses of Bristol Bay sockeye to climate variation is that not all populations appear to respond coherently to documented shifts in the environment. We argue that this population-specific variability in response to climate fluctuations is ultimately responsible for the resilience of the entire Bristol Bay sockeye stock.

Historical Patterns of Stock Productivity

To illustrate the importance of biocomplexity of the Bristol Bay stock complex, we have broken down the historical sockeye catch into the contributions from the three major fishing districts (Naknek/Kvichak, Egegik, and Nushagak) (Fig. 3). Before the 1950s, we do not have estimates of the number of fish spawning in each river system and must use fishery catch as a surrogate for total run, but all major fisheries were already well developed by the early 20th century and catch is an excellent metric of total run size. We see that initially the Naknek/Kvichak was responsible for most of the sockeye production, with the Nushagak a close second and Egegik a small contributor. In the middle part of the 20th century, the importance of the Nushagak diminished, whereas Egegik remained roughly steady, and the Naknek/Kvichak dominated, driven almost exclusively by the Iliamna Lake populations. During that period, the Bristol Bay fishery was essentially a Naknek/Kvichak fishery. With the PDO regime shift of 1977 the Egegik run expanded greatly, so it was often at least as big than the Naknek/Kvichak, and the Nushagak system remained a small but steady contributor to the total fishery. In the 1990s the Naknek/Kvichak contribution declined dramatically, Egegik diminished, whereas Nushagak increased slightly to become, in some recent years, the most important fishery in Bristol Bay. Even within the Naknek/Kvichak district, the contribution of Iliamna Lake is now so small that it requires special protective fishery management to allow fishing on the Naknek populations.

Since the 1950s, visual counting towers on the major rivers leading into the lake systems have provided reliable counts of the number of fish passing through the fishery *en route* to their spawning sites. The number of recruits per spawner is the total number of adult returns from a spawning year divided by the number of fish that spawned in that brood year, and is a measure of per capita reproductive success. We calculated this for individual systems within fishing districts associated with each of the major rivers in Bristol Bay to demonstrate the temporal changes in their productivity (Fig. 4). In Fig. 4 we see the Naknek/Kvichak broken into its two dominant components; the Kvichak River–Lake Iliamna system and the Naknek River system. The Nushagak fishing district consists of three distinct lake/river systems; the Igushik, the Wood, and the Nushagak (not shown in Fig. 4). Finally the Ugashik system is the most remote of Bristol Bay's systems, located on the Alaska Peninsula.

Two features are important in Fig. 4, the absolute number of recruits per spawner and the temporal trends. The Kvichak and Wood systems have produced the fewest recruits per spawner, generally 2–4, whereas the Naknek averages ≈4, and the Egegik, Ugashik and Igushik show considerable variability but average more than Kvichak and Wood. Egegik showed the largest increase after the 1977 regime shift. This rise in survival was largely responsible for the upsurge in abundance of Egegik sockeye after the shift. The Ugashik system also showed a

We have emphasized the importance of biocomplexity on the larger geographic scale, but similar patterns exist on ever-smaller scales within each lake system over the range of habitats and life history strategies described earlier. Within lakes, tributaries show asynchronous shifts in density and productivity, and even within tributaries we have seen habitat units affected by selective predation by bears, blockage by beaver dams, and other local processes. Our ability to measure changes in contribution at this level of biocomplexity is limited by our ability to assign the fishery catch to fine scale locations. Advances in genetic stock identification may pave the way for a high resolution analysis of the role of biocomplexity in maintenance of sustainability.

This work has lessons beyond the conservation of Pacific salmon. There is growing recognition that many marine fish stocks consist of amalgamations of several geographic components (35, 36). It would seem prudent to try to prevent loss of such stock components, including those that appear, at present, to be unproductive. This might necessitate a much finer scale of management than that which is the current norm. We believe that long-term sustainability is derived in large part from complementary patterns of productivity in different stock components. Defining the entire stock as healthy simply because a large component is doing well might lead to decline and extinction if the conditions that fostered the success of the healthy component disappear and the alternate strategy, which would have done well in the new environmental conditions, has been lost.

This research was made possible by the long-term data sets for Bristol Bay maintained by the Alaska Department of Fish and Game and the Alaska Salmon Program at the University of Washington. We also thank the numerous students, faculty, and staff who contributed to these data over the past half century. We thank Jennifer Anson and Lucy Flynn for help in writing and assembling the manuscript, and T. Francis, A. Litt, J. Moore, W. Palen, M. Scheuerell, J. Anson, and J. Shepherd for helpful reviews. Funding for this work was provided by the National Science Foundation (Environmental Biology, Biological Oceanography, and Field Stations and Marine Laboratories), the Bristol Bay salmon processors, and the University of Washington.

Pebble Mine: Fish, Minerals, and Testing the Limits of Alaska's "Large Mine Permitting Process"

Geoffrey Y. Parker

Duke University School of Law

2137

ABSTRACT

Two foreign mining companies plan to develop one of the world's largest copper and gold mines on mining claims staked on state land in the Bristol Bay drainages. Currently, this area of southwestern Alaska produces the world's largest commercial salmon fishery, offers world-class sport fishing, and provides an important food source for local communities. The promoters of the Pebble Mine promise they will create jobs and protect the environment in their quest to recover copper, gold, and molybdenum from a large metallic sulfide deposit containing iron and other metallic sulfides. However, such sulfide ore, by its nature, generates sulfuric acid when exposed to air and water. Sulfuric acid, in turn, dissolves metals present in the host rock. The dissolved metals, such as copper, can be toxic to salmon and other fish. This Article examines the adequacy of the State's large mine permitting process and finds it insufficient to deal with large metallic sulfide mines such as Pebble. The Article then analyzes current legislative responses to the Pebble Mine and discusses their relative strengths and weaknesses. Finally, the Article argues that these legislative solutions would not rise to the level of an unconstitutional taking of the mining claims.

I. INTRODUCTION

A proposal by two foreign companies to mine a massive, low-grade, copper and gold deposit on state land in southwestern Alaska has sparked an intense conflict between fishing and mining interests. The "Pebble Mine" would be located at the headwaters of the Kvichak (pronounced KWEE-jak) and Nushagak (pronounced NUSH-a-gak) river drainages, in the Bristol Bay drainages, which are essential habitats for Alaska's most productive salmon fisheries. Northern Dynasty Minerals Ltd. ("NDM"), a subsidiary of Hunter Dickinson,[1] and Anglo American Plc, the world's second largest mining concern,[2] plan to develop the Pebble Mine over several decades.

This Article examines: (1) current statutory standards at the heart of the State's "large mine permitting process;" (2) legislative proposals designed

1. NORTHERN DYNASTY MINERALS LTD., PEBBLE COPPER–GOLD–MOLYBDENUM PROJECT ALASKA, USA 13 (2007) [hereinafter NDM, PEBBLE COPPER], *available at* http://www.northerndynastyminerals.com/i/ndm/NDM_RobertDickinson_Nov2007.pdf. NDM and Hunter Dickinson are based in Vancouver, British Columbia. Northern Dynasty Mines, Inc., a United States subsidiary of NDM, owns the Pebble mining claims. Rio Tinto, a global mining concern based in London, England and Melbourne, Australia, has a 19.8 percent stake in NDM. RIO TINTO, STAYING STRONG IN COPPER (2006), http://www.riotinto.com/annualreview2006/5740_staying_strong_in_copper.asp. Mitsubishi bought a 6.1 percent stake in NDM in December 2007. *See* NORTHERN DYNASTY MINERALS LTD., ADVANCING AMERICA'S MOST IMPORTANT NEW MINERAL DEPOSIT 2 (2008) [hereinafter NDM, IMPORTANT NEW MINERAL DEPOSIT], *available at* http://www.northerndynastyminerals.com/i/pdf/NDM_FactSheet_Jan2008.pdf.

2. ANGLO AMERICAN PLC, ANNUAL REPORT 2006 51 (2006), *available at* www.angloamerican.co.uk/static/uploads/2006%20Annual%20Report%20Lo-Res2.pdf. Anglo American has operations in forty-five countries on seven continents. *Id.* Anglo American entered into a staged-investment agreement with NDM that gives Anglo American rights to up to fifty percent of the Pebble Mine project. Press Release, Northern Dynasty Materials Ltd., Northern Dynasty & Anglo American Establish 50:50 Partnership to Advance Pebble Project to Production (July 31, 2007) [hereinafter Advance Pebble Project to Production], *available at* http://www.pebblepartnership.com/files/July312007.pdf.

to protect the fish, game, habitat, and public uses of them in the Bristol Bay drainages; and (3) claims that current legislative proposals will result in regulatory takings that require compensation. This Article concludes that: (1) current statutory standards are vague and open to wide discretion; (2) stricter statutory standards are needed to protect fish, game, wildlife, habitat, and public uses of fish and wildlife in the Bristol Bay drainages; and (3) no such stricter standard would constitute a regulatory taking requiring the state to compensate those who hold mining claims for minerals at the proposed Pebble Mine.

II. BACKGROUND

Fishing and mining ventures have played major roles in Alaska's history. In the late nineteenth and early twentieth centuries, absentee business interests controlled Alaska's commercial fishing and mining industries.[3] One of the major players was the "Alaska Syndicate," which was a partnership formed by the Guggenheim family, whose American Smelting and Refining Company was a dominant force in the nation's hardrock mining industry,[4] and J. P. Morgan, an East Coast investment banker.[5] The Syndicate developed the Kennecott copper mine in the Wrangell Mountains north of Prince William Sound and held major interests in gold mines, the dredging, shipping, and transportation industries, as well as in Alaska's salmon canneries.[6] In Washington, D.C., the Syndicate successfully lobbied the United States Congress to oppose further extension of Alaskan home rule.[7]

Other merchants and bankers, based in San Francisco and Seattle, supplied capital and dominated Alaska's commercial salmon fishing industry and canneries.[8] Interests outside Alaska frustrated federal efforts to manage salmon harvests,[9] held tight control of the territorial Senate,[10]

fought statehood because they feared the new state would impose taxes and limit access to fishing grounds,[11] and persuaded Congress that Alaska would remain an economic burden, demanding greater federal subsidies if it became a state.[12]

By the late 1930s, many of the high-grade mineral deposits were depleted, and the mining industry in Alaska appeared to have little future potential.[13] By the time Congress conferred statehood on Alaska in 1959, the state's commercial salmon harvests had declined from an annual average of ninety million fish in the 1930s to an annual average of forty million fish in the 1950s.[14]

The Alaska Statehood Act granted the new state authority to manage fish and game.[15] In January 1960, the new state's first governor, William A. Egan, addressed the state legislature about the need to restore the salmon fisheries:

> On January 1 of this year, Alaska's Department of Fish and Game was handed the depleted remnants of what was once a rich and prolific fishery. From a peak of three-quarters of a billion pounds in 1936, production dropped in 1959 to the lowest in [sixty] years. On these ruins of a once great resource, the department

---

and 1924, forty-two bills introduced in Congress proposed a variety of means to regulate Alaskan commercial salmon fishing. *Id.* at 2. All were defeated or seriously weakened by the salmon canning industry. *Id.*

10. Richard Mauer, *Oil, a Foundation of Alaska, Works to Rebuild Its Image*, N.Y. TIMES, Nov. 29, 1989, at A1, *available at* http://query.nytimes.com/gst/fullpage.html?res=950DE0DB103CF93AA15752C1A96F948260.

11. *Id.* The canning industry also dominated the territorial legislature to prevent tax increases on canned salmon. NELSON, *supra* note 3, at 13.

12. Mauer, *supra* note 10, at A1.

13. *See* NELSON, *supra* note 3, at 22, 28.

14. CLARK ET AL., *supra* note 9, at 2–3. In 1924, the White Act, 43 Stat. 464, as amended, 48 U.S.C. §§ 221–28 (repealed), allowed the federal government to establish fishing seasons and hours, set catch limits, and regulate fishing practices, all of which improved salmon harvests. *Id.* at 2; *see* Kake Vill. v. Egan, 369 U.S. 60, 62 (1962). By 1939, harvests again declined due to, *inter alia*, industry resistance to regulation, lack of funding for federal enforcement and research, and overharvesting to meet food production goals during World War II. CLARK ET AL., *supra* note 9, at 3. When average annual harvests declined to forty million salmon, President Eisenhower declared parts of Alaska disaster areas, thereby authorizing emergency food supplies. *Id.*

15. Section 6(e) of the Alaska Statehood Act allowed the state to assume fish and wildlife management after the Secretary of the Interior certified to Congress that the Alaska State Legislature had made adequate provision for the administration, management, and conservation of fish and game "in the broad national interest." 48 U.S.C.S. prec § 21 (LexisNexis 2008).

> must rebuild. Our gain is that we can profit by studying the destructive practices, mistakes and omissions of the past. The revival of the commercial fisheries is an absolute imperative. The livelihood of thousands of fishermen and the very existence of many communities scattered along thousands of miles of continental and island coastline depends upon improvement of the fisheries. To this end we will give our best efforts.[16]

A. The Fishing Economy of the Bristol Bay Drainages

Alaska salmon populations rebounded as a result of improved state and federal management. In 1973, the Alaska Legislature enacted the Limited Entry Act to control the issuance of commercial fishing permits and thereby limit salmon harvests.[17] In 1976, Congress enacted the Magnuson-Stevens Fisheries Management and Conservation Act, which established an exclusive economic zone that extended United States jurisdiction over fisheries for 200 nautical miles beyond state waters.[18] This allowed the federal government to regulate foreign fishing vessels and reduce their harvests of Alaska-bound salmon.[19]

Most of Alaska's salmon populations are thriving today,[20] which is a stark contrast to the steep declines in other Pacific salmon stocks that resulted from habitat loss.[21] Alaska fisheries currently support lucrative commercial and sport industries, subsistence,[22] and tourism. By 2001, about 54,000 people earned all or part of their annual incomes from fishing,

22. Federal and state statutes define "subsistence" as the "customary and traditional" uses of wild renewable resources by rural Alaska residents. 16 U.S.C. § 3113 (2000); ALASKA STAT. § 16.05.940 (2006). Unlike the federal program, the state does not give preference to rural residents in administering subsistence programs on state lands. *See* McDowell v. State, 785 P.2d 1 (Alaska 1989) (holding that state statute limiting subsistence to rural residents violates Alaska Constitution).

which provided more jobs than oil, gas, mining, timber, agriculture and forestry, combined.[23]

In southwestern Alaska, the Bristol Bay drainages produce the world's largest commercial sockeye salmon fishery,[24] which is commercially the most valuable salmon species.[25] The Bristol Bay commercial sockeye salmon harvest is five-to-ten times larger than all other Alaska sockeye fisheries, combined.[26] Between 1986 and 2005, annual commercial catches of all five species of Pacific salmon in Bristol Bay averaged nearly 24 million sockeye (red), 70,000 Chinook (king), 922,000 chum, 103,000 coho (silver) and, in even years, 261,000 pink salmon.[27]

Bristol Bay accounts for one third of all earnings from commercial salmon fishing in Alaska.[28] In 2005, all salmon harvested commercially in Bristol Bay accounted for $226 million in wholesale value in the regional economy.[29] Between 1986 and 2005, commercial fishers received, in total, an average of $128 million in income from salmon caught in Bristol Bay, with sockeye salmon accounting for $125 million of that total.[30]

Between 1983 and 2003, subsistence harvests of salmon from the Bristol Bay drainages averaged about 159,000 fish, of which 125,000 were sockeye

salmon.[31] Southwestern Alaska's world-class trout fisheries and plentiful king salmon attract sport anglers who annually contribute about $61 million to the state's economy.[32]

In 2005, the wild salmon watersheds in the Bristol Bay drainages generated $324 million in regional expenditures related to fish and wildlife.[33] This created an estimated 5540 full-time-equivalent jobs in Alaska. Alaska residents held more than 3400 of these jobs, with almost 1600 held by residents of the Bristol Bay area.[34]

The Bristol Bay drainages produce an average of 39 million sockeye salmon annually.[35] This is more than twice as many salmon, of all species, as the entire Columbia River drainage produced before those salmon

Subsistence	14	34	49	0	49
Total FTE jobs	1598	1829	3430	2110	5540

Id. Hunting is included because wild salmon returning from the sea perform an "ecosystem service" of nutrient recycling to support habitat functions. *See id.* at 24–26. For example, in Alaska, marine nitrogen accounts for as much as ninety percent of the nitrogen in brown bears. *See* ROBERT J. NAIMAN ET AL., RIPARIA: ECOLOGY, CONSERVATION, AND MANAGEMENT OF STREAMSIDE COMMUNITIES 184–85 (2005).

35. *See* LOWELL F. FAIR, ALASKA DEP'T OF FISH & GAME, 10 ALASKA FISHERY RES. BULL. 95, CRITICAL ELEMENTS OF KVICHAK RIVER SOCKEYE SALMON MANAGEMENT (2003), *available at* http://www.adfg.state.ak.us/pubs/afrb/vol10_n2/fairv10n2.pdf.

populations declined.[36] Historically, the Kvichak River drainage is the world's single most productive sockeye salmon watershed.[37] The Nushagak River watershed is the largest producer of the other four (Chinook, chum, coho and pink) Pacific salmon species in the Bristol Bay drainages.[38]

Furthermore, the area is home to the Mulchatna caribou herd, one of Alaska's largest herds. The Mulchatna herd numbered as many as 193,000 caribou in 1996, though the population has declined in recent years due to natural population cycles.[39] The Bristol Bay drainages also are a premier area for grizzly bear, which depend on salmon for food.[40]

B. The Proposed Pebble Mine and Its Facilities

The Pebble deposit is located at the divide between the Koktuli (pronounced KOKE-too-lee) River and the Upper Talarik (pronounced Ta-LAR-ick) Creek.[41] The Koktuli River is part of the Nushagak drainage, and Upper Talarik Creek is part of the Kvichak drainage.

---

36. Before 1850, about sixteen million salmon and steelhead returned to the Columbia River basin annually to spawn. U.S. GEN. ACCOUNTING OFFICE, COLUMBIA RIVER BASIN SALMON AND STEELHEAD: FEDERAL AGENCIES' RECOVERY RESPONSIBILITIES, EXPENDITURES AND ACTIONS 1 (2002), *available at* http://www.gao.gov/new.items/d02612.pdf. Over the past twenty-five years, however, the number of salmon and steelhead returning to the Columbia River Basin has averaged around 660,000 per year. *Id.* The decline has been attributed to over-harvesting, construction and operation of hydroelectric dams, degradation of spawning habitat, increased human population, and unfavorable weather and ocean conditions. *Id.*

41. The proposed site of the Pebble Mine is about eighteen miles north of Iliamna Lake, nineteen miles southwest of the southern shore of Lake Clark, and about eighteen miles from the predominantly Native villages of Nondalton, Newhalen, and Iliamna. The Pebble Partnership, General Land Status Collings Proposed Route, http://www.pebblepartnership.com/images/LandStatus_D01-map.jpg (last visited Mar. 30, 2008).

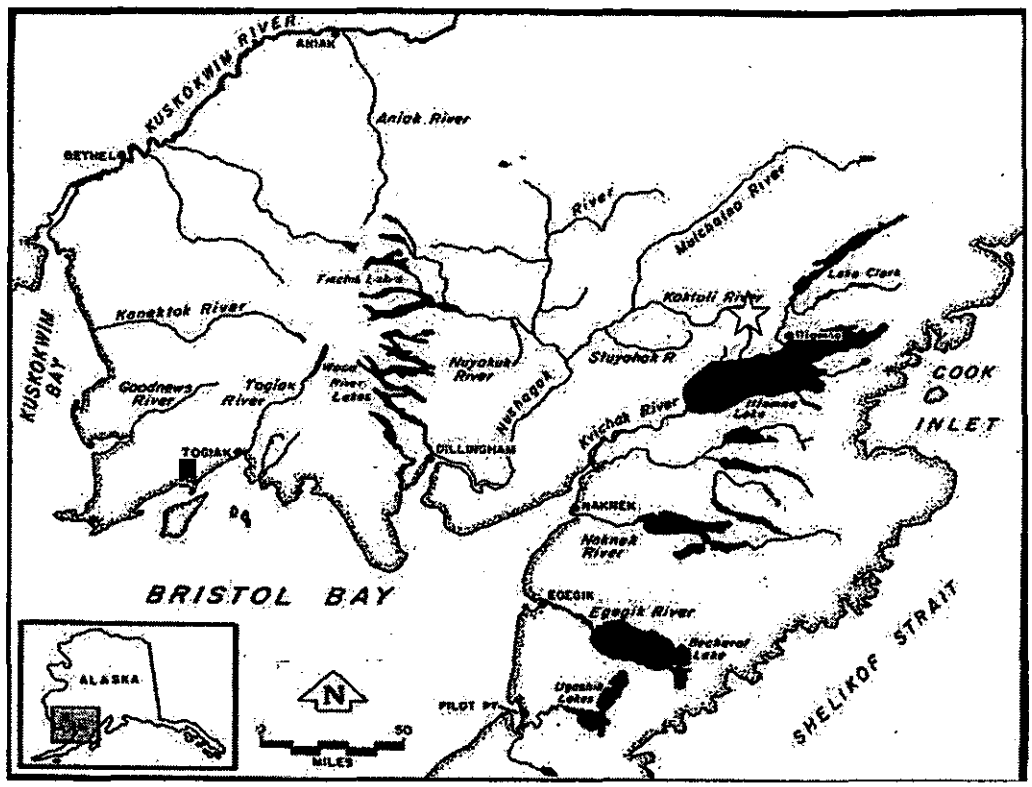

Figure 1. Schematic map of Bristol Bay watersheds. The star indicates the approximate location of the copper, gold, and molybdenum deposit comprising the proposed Pebble Mine. Map from the Alaska Department of Fish and Game.

NDM and Anglo American have asserted that the Pebble deposit "rank[s] among the world's most important accumulations of copper, gold and molybdenum."[42] NDM has asserted that Pebble is the second largest copper mineral deposit in the world and that it contains about sixty-seven billion pounds of copper, four billion pounds of molybdenum, and eighty-two million ounces of gold.[43] NDM has indicated that, on the surface, the Pebble deposit is approximately 2.65 miles by 1.7 miles.[44]

NDM divided the ore body into the "Pebble East" and "Pebble West" deposits.[45] NDM has asserted that the Pebble West deposit extends from the surface to a depth of about 2000 feet.[46] NDM also has asserted that

42. *See* Advance Pebble Project to Production, *supra* note 2.

45. *Id.*
46. *Id.*

Pebble West contains 4.1 billion metric tonnes of ore and that it may develop an open pit mine.[47]

NDM has analyzed the copper, gold, and molybdenum content in three quarters (3.026 billion tonnes) of the Pebble West deposit. [48] Converting NDM's data to United States tons indicates that each *ton* contains between 6.2 *pounds* and 10.1 *pounds* of copper, 0.010 *ounces* and 0.016 *ounces* of gold, and 0.33 *pounds* and 0.46 *pounds* of molybdenum.[49] At most, about 10.6 pounds of metals would be recovered from every 2000 pounds of ore.[50] The waste-to-metals ratio would be at least 189 to one.[51] Thus, at least 99.5 percent of the deposit will be waste.[52] NDM estimated a similar yield for the remaining 1.1 billion tonnes in the Pebble West deposit.[53]

According to NDM, the Pebble East deposit is buried beneath overburden that ranges from several feet to more than 1000 feet deep at its eastern boundary.[54] NDM has estimated that the Pebble East deposit extends more than 5000 feet below the surface.[55] NDM has asserted that Pebble East contains 3.9 billion metric tonnes of ore.[56]

NDM has also predicted that concentrations of copper, gold, and molybdenum in the Pebble East deposit will be higher than at Pebble West.[57] Converting NDM's data to United States tons indicates that, in February 2008, NDM "inferred" that each *ton* of ore at Pebble East *may* contain as much as between 12.8 *pounds* and 19.2 *pounds* of copper, 0.012 *ounces* and 0.017 *ounces* of gold, and 0.73 *pounds* and 0.77 *pounds* of

---

47. *Id.* at 1–2. Ore is defined as "rock that contains minerals in sufficient concentration, quantity, and value to be mined at a profit." *See, e.g.*, Climax Molybdenum, Glossary, http://www.climaxmolybdenum.com/Glossary/Glossary.htm (last visited Mar. 30, 2008).

52. *See id.*

53. *Id.*

54. *Id.* Overburden is defined as "rock material of little or no value that overlies an ore deposit." *See, e.g.*, Climax Molybdenum, Glossary, *supra* note 47.

55. NDM, IMPORTANT NEW MINERAL DEPOSIT, *supra* note 1, at 2.

56. Press Release, Northern Dynasty Minerals Ltd., Updated Resource Estimate Confirms Pebble East as One of the World's Most Important Copper-Gold-Molybdenum Deposits (Feb. 25, 2008) [hereinafter Updated Resource Estimate], *available at* http://www.northerndynastyminerals.com (follow "Investor Centre" hyperlink; then follow "News Releases" hyperlink; then follow "February 25, 2008").

57. *Id.*; *see also* NDM, IMPORTANT NEW MINERAL DEPOSIT, *supra* note 1, at 2.

molybdenum.[58] At most, based on NDM's estimations, less than twenty pounds of metals would be recovered from every 2000 pounds of ore mined at Pebble East.[59] The waste-to-metals ratio at Pebble East would be more than 100 to one.[60] Accordingly, more than 99 percent of all ore mined at Pebble East would be waste.[61]

Thus, if the eight billion tonnes of ore that comprise the Pebble East and Pebble West deposits are fully mined and processed, the Pebble Mine would produce more than seven billion tons of waste[62] plus waste rock that would not be processed as ore. Presumably, almost all of these wastes would be stored on state-owned public lands near the mine in perpetuity.

In 2006, NDM submitted eleven permit applications to the Alaska Department of Natural Resources (DNR).[63] Six of these applications sought to appropriate surface or groundwater from the North and South Forks of the Koktuli River and from Upper Talarik Creek.[64] The other five applications sought permits to build five massive, earthen-fill dams or embankments to contain waste from the mine. [65]

Although NDM later requested that DNR delay adjudicating the applications,[66] they provide insight into NDM's development plans. The Pebble Mine likely would include most of the following facilities:

1. An open pit mine at Pebble West that may be about 2000 feet deep and cover about two square miles and an underground mine at Pebble East that may be of comparable size and 5000 feet deep.[67]

---

58. *See* Updated Resource Estimate, *supra* note 56. NDM stated that an "inferred" mineral resource is "estimated on the basis of geological evidence and limited sampling." *Id.* NDM has "reasonably assumed, but not verified" how much of the Pebble East deposit actually contains copper, gold, or molybdenum at these concentrations. *Id.*

59. *See id.*

60. *See id.*

61. *Id.*

62. *See* NDM, IMPORTANT NEW MINERAL DEPOSIT, *supra* note 1, at 2. NDM asserts that the size of Pebble East is "wide open to further expansion and delineation drilling is ongoing." *Id.* Thus, the amount of ore and corresponding waste from Pebble East could increase.

66. Letter from Michael C. T. Smith, NEPA and Permitting Manager, Northern Dynasty Mines Inc., to Thomas Crafford, Large Mine Coordinator, Alaska Dep't of Natural Res. (Oct. 12, 2006), *available at* http://www.dnr.state.ak.us/mlw/mining/largemine/pebble/2006/acmp.pdf.

2. Various stream diversion channels, wells and devices to: (a) prevent water from filling the open pit, (b) extract water that would be used for processing the ore, (c) transport ore concentrate in a slurry via pipelines, and (d) transport wastes in a slurry via pipelines.[68]
3. A mill to crush, process, and concentrate the ore extracted from the open pit and underground mines.[69]
4. Five dams or embankments composed of waste rock and earthen-fill material that together would span about nine linear miles. The three largest dams would be 740 feet high and 3 miles long, 700 feet high and 2.9 miles long, and 710 feet high and 1.3 miles long.[70] These dams and embankments would create and contain ponds that would cover at least 10 square miles and store chemically reactive, ore-processing wastes known as "tailings."[71]
5. A deep-water port in marine waters on the west side of Cook Inlet (about 200 miles southwest of Anchorage) to load the ore concentrate on ocean freighters.[72]
6. A 104-mile road to provide a transportation corridor from the mine facilities to the port.[73]

7. Two 100-mile-long, fifteen inch-diameter pipelines that would run parallel to the road. One pipeline would be used to transport a slurry of copper ore concentrate from the mill to the port, where the slurry would be de-watered. The other pipeline would return the slurry water to the mine area.[74]
8. Four 54-inch-diameter pipelines. Three of the pipelines, totaling 70,000 feet (13.25 miles), would transport mine wastes from the mill to the waste storage facilities. The fourth pipeline, totaling 17,000 feet (3.2 miles), would reclaim water from the waste facilities and transport it to the mill.[75]
9. A 300-megawatt power plant that would be located on the Kenai Peninsula, across Cook Inlet.[76]
10. More than 100 miles of transmission lines and undersea cables to transmit electricity from the power plant on the Kenai Peninsula to the mine site.[77]

The Pebble Partnership asserts that development of the Pebble Project will generate 1000 skilled, high-wage jobs for fifty to eighty years and 2000 jobs during the project's two- to three-year construction phase.[78] The partnership claims the mine will generate tens of millions of dollars in

The Pebble Mine would be in the Lake and Peninsula Borough, which extends hundreds of miles from Lake Clark National Park and Preserve to the southern tip of the Alaska Peninsula. In 2006, the Borough population was 1557 people, of whom eighty percent were Alaska Native or part Native. *See* STATE OF ALASKA, ALASKA COMMUNITY DATABASE COMMUNITY INFORMATION SUMMARIES, http://www.commerce.state.ak.us/dca/commdb/CF_CIS.htm (follow "Lake and Peninsula Borough" hyperlink in box under "Select a Community") (last visited Mar. 30, 2008). Residents of the communities nearest the Pebble Mine are all predominantly Alaska Native. *Id.* In 2006, the populations of these villages were: Nondalton (pop. 196), Newhalen (pop. 167) and Iliamna (pop. 82). *Id.*

annual tax payments to state and local governments, as well as numerous local business opportunities.[79]

C. The Pebble Mine is Likely to Generate Acid Mine Drainage

As previously noted, NDM may construct a block-cave underground mine at Pebble East and an open-pit mine at Pebble West.[80] Block cave mines often cause surface subsidence or settling.[81] Subsidence occurs as the material above the ore body, including surface and rain water, gradually moves downward to replace the ore that has been mined.[82]

Open pit and underground mines often must be dewatered to allow extraction of the ore.[83] Two methods used to dewater the mines are pumping from ground-water interceptor wells to lower the water table and pumping directly from the mine workings.[84] Dewatering can create a hydrologic cone of depression around the mine area and can prevent contamination from reaching the surrounding aquifer.[85] If pumping ceases after the mine is abandoned, the mine workings will fill partially or completely with water and may lead to uncontrolled releases of water.[86]

The host rock associated with most types of metal mining activities contains metal sulfide minerals.[87] Most of the ore at the Pebble deposit contains iron and other metallic sulfides.[88] When such sulfides are exposed

---

79. Pebble Facts, *supra* note 78.

80. *Id.* Block caving is an underground mining method. Generally, the first step is to blast the ore body so it becomes fractured, creating a cavern of broken rock. *See, e.g.*, RESOLUTION COPPER MINING, BLOCK CAVING AND SUBSIDENCE, http://www.resolutioncopper.com/res/ourapproach/BlockCaveMining.pdf (last visited Mar. 30, 2008). The second step is to drill a tunnel under the broken rock cavern. *Id.* Finally, narrow-necked chutes are constructed under the cavern to funnel the ore to collection points in the tunnels. *Id.*

88. The predominant copper sulfide minerals in the Pebble deposit are chalcopyrite ($CuFeS_2$) and bornite (Cu_5FeS_4). *See* Press Release, Northern Dynasty Minerals Ltd., Major New Porphyry System Discovered at Pebble (Sept. 21, 2005),

to air and water, they generate sulfuric acid, which dissolves most metals, mobilizing them into solution.[89]

Prior to mining, oxidation of these sulfides and the formation of sulfuric acid is a function of natural weathering processes.[90] The oxidation of undisturbed ore bodies, which is followed by release of acid and mobilization of metals, is slow.[91] Discharge from such deposits poses little threat to receiving aquatic ecosystems.[92]

Extractions and beneficiation operations associated with mining activity increase the rate of these same chemical reactions by exposing large volumes of sulfide rock material with increased surface area to air and water.[93] This process is commonly referred to as acid mine drainage.[94] In addition to the acid contribution to surface waters, acid mine drainage may cause metals such as arsenic, cadmium, copper, silver, zinc, iron, lead, and manganese to leach from mine wastes.[95]

These leached metals cause environmental damage and are of greater concern than the acidity.[96] When dissolved metals enter surface waters, either directly or through groundwater, they become available to fish and the food chains upon which they depend.[97]

The formation of acid mine drainage, and the contaminants associated with it, have been described as the largest environmental problem facing the U.S. mining industry.[98] Mine waste rock, tailings, overburden, and mine structures such as open pits and underground workings are sources of acid mine drainage.[99] Because the factors affecting the potential for acid mine drainage are highly variable from site to site, predicting the potential for acid mine drainage is difficult, costly, and of questionable reliability.[100]

III. DISSOLVED METALS SUCH AS COPPER ARE TOXIC TO FISH

The late Jay Hammond, the popular Republican governor of Alaska from 1976 to 1982, made his home on the shore of Lake Clark, in the Bristol Bay drainages, thirty miles from the proposed Pebble Mine.[101] On July 11, 2005, two weeks before his death, he expressed his views of the Pebble Mine:

> When I was first asked about the Pebble Mine . . . I expressed this concern: that if I were asked where in Alaska would I least rather see the largest open-pit mine in the world, I can think of no more less appropriate spot than the headwaters of the Talarik Creek and Kokutli River, the drainages of two of the finest trout streams and salmon spawning areas in Alaska. But I have since modified that to where if asked that question again, I'd say there is one place I'd even less rather see it, and that's in my living room here at Lake Clark.[102]

The Pebble Partnership asserts that about ninety-five percent of the metal that Pebble Mine would produce is copper.[103] This Part focuses on the toxic effects of copper on salmon and aquatic food chains.

Copper is essential to living organisms and no fatal copper deficiencies have ever been documented for any aquatic species.[104] Yet, concentrations just above the amount required for growth and reproduction can be highly toxic to aquatic species and cause irreversible harm.[105] The exact amount of dissolved copper that is toxic to fish and aquatic food chains can be

difficult to predict[106] because many factors influence toxicity including: (1) species of copper, in elemental or compound forms, and the concentration;[107] (2) water quality, including pH, temperature, hardness, salinity, suspended solids, and organics; (3) synergistic interactions of copper with other local elements; and (4) species of fish or organism, age, size, reproductive condition, and prior exposure to copper.

Salmon and organisms comprising freshwater food chains are very sensitive to heavy metals, trace elements, and other contaminants found in mine wastes.[108] Because copper is highly toxic to freshwater aquatic organisms, understanding potential lethal and sublethal effects of copper on salmon and their freshwater food chains is important to address the adequacy of the state's large mine permitting process. Both lethal and sublethal effects of copper (Cu) on salmon and their food chains have been demonstrated[109] at concentrations below the Alaska state water quality criterion for protection of freshwater species (9 micrograms Cu per liter (µg Cu/L) calculated on 100 mg/L hardness (CaCO3)) and well below the human drinking water criterion of 1300 µg Cu/L.[110]

Copper has sublethal effects on salmon that can reduce the viability of populations.[111] Concentrations below the accepted criterion for aquatic life in Alaska (< 9 µg Cu/L) have produced the following documented effects on fish: (1) impairment of sense of smell (olfaction);[112] (2) interference with

normal migration;[113] (3) impairment of their ability to fight disease (immune response);[114] (4) difficulties in breathing;[115] (5) disruption of osmoregulation (ability to control internal salinity of body fluids);[116] (6) impairment of ability to sense vibrations via their lateral line canals (a sensory system that helps fish avoid predators);[117] (7) impairment of brain function;[118] (8) changes in enzyme activity, blood chemistry, and metabolism;[119] and (9) delay or acceleration of natural hatch rates.[120]

Many metals toxic to aquatic life are commonly released at hard rock mining sites, and interactive effects on salmon and aquatic systems are not well studied.[121] Few studies exist on the "cocktail" effects that multiple metals have on fish and aquatic food chains. However, combined effects can be more toxic than any single element.[122] For example, copper (Cu) and zinc (Zn) often co-occur; a 6:1 ratio of soluble Zn:Cu caused additive toxicity to fish in hard water, meaning that together the elements were more toxic to fish then either alone.[123] Rainbow trout exposed to sublethal concentrations of Cu, Cu+ low concentrations of Zn, or Cu + high concentrations of Zn consistently exhibited depressed levels of lymphocytes and elevated levels of neutrophils, two white blood cell types key to immune function.[124]

Moreover, interactions among metals, such as copper and zinc, can produce more than additive effects. Mixtures of the metals cause higher rates of mortality in fish than would be expected by simply adding the

effects of each element alone.[125] Once inside an organism, metallic elements exist in a specific form and ratio to other elements and will interact directly or indirectly based on a multitude of parameters.[126] For example, survival from egg to hatch of catfish (*Ictalurus* spp.) treated with a 1:1 ratio of Cu:Zn declined predictably under an additive model up to a concentration of ~1 ppm. With increasing concentrations, mortality rates increased synergistically at higher than predicted rates.[127] However, relatively few studies of synergistic effects exist, and the scientific understanding of such effects is still developing.

Bristol Bay salmon populations are comprised of several hundred genetically and phenotypically discrete stocks displaying different life history characteristics and local adaptations.[128] This biodiversity allows the aggregate populations to sustain their productivity, despite major changes in climatic conditions affecting the freshwater and marine environments during the last century.[129] The stability and sustainability of Bristol Bay sockeye salmon have been greatly influenced by different populations performing well at different times.[130] If managers in earlier times had decided to focus management on the most productive runs at the time, the biocomplexity that later proved important could have been lost.[131] This biocomplexity is important on small scales as well, as lakes and tributaries show asynchronous shifts in density and productivity.[132]

Long-term sustainability is derived in large part from complementary patterns of productivity in different stock components.[133] Defining the entire stock as healthy, simply because a large component is doing well, might lead to decline and extinction if the conditions that fostered success of the healthy component disappear, and the alternate strategy, which

would have done well in the new environmental conditions, has been lost.[134] Conservation of a diverse "salmon stock portfolio," much like a diverse retirement portfolio, increases the likelihood of long-term sustained salmon returns into the future.

Thus, the following factors should be considered in devising state statutory standards: (1) scientific findings demonstrate toxic affects on fish below established limits for copper, (2) multiple parameters affect toxicity of copper alone and in synergistic combination with other metals, and (3) the understanding of synergistic effects is developing.

IV. STATE STATUTORY STANDARDS ARE INADEQUATE TO PROTECT FISH FROM THE PEBBLE MINE

The Alaska Department of Natural Resources (DNR) asserts that its "large mine permitting process," which depends substantially on the preparation of federal environmental impact statements ("EIS") under the National Environmental Policy Act ("NEPA"),[135] will adequately protect fish, wildlife, and public uses of fish and game from potential adverse effects of the Pebble Mine.[136]

134. *Id.*

135. 42 U.S.C. § 4321 (2000).

136. *See* OFFICE OF PROJECT MANAGEMENT AND PERMITTING, ALASKA DEP'T. OF NAT. RES., PERMITTING LARGE MINE PROJECTS IN ALASKA 5 (2006), *available at* http://www.dnr.state.ak.us/mlw/mining/largemine/lmpt_process.pdf; Press Release, Alaska Dep't of Nat. Res., Commissioner Irwin Voices Supports For Resource Development in Alaska (July 3, 2007), *available at* http://www.dnr.state.ak.us/standard/dsp_media_release.cfm?id=885&title=Commissioner%20Irwin%20Voices%20Supports%20for%20Resource%20Development%20in%20Alaska.

In 2006, a groundbreaking study[137] systematically compared predicted and actual water quality at hardrock mines operating in the United States, including in Alaska.[138] The study compared pre-mining water quality data presented in federal EISs[139] to operational and post-operational water quality data in order to assess the reliability of predictions relied upon by agency personnel making permitting decisions.[140] Four of the study's conclusions are particularly useful for assessing the adequacy of current state statutory standards. They are:

1. Actual water quality impacts are closer to potential (pre-mitigation) impacts rather than the predicted (post-mitigation) impacts stated in the EISs. The threshold inquiry for determining the environmental significance (or effect) of agency permitting decisions, e.g., for purposes of determining whether permitting the mine would "significantly affect the quality of the human environment,"[141] should be a mine's *potential* rather than *predicted* impacts.[142]

137. JAMES R. KUIPERS ET AL., COMPARISON OF PREDICTED AND ACTUAL WATER QUALITY AT HARDROCK MINES: THE RELIABILITY OF PREDICTIONS IN ENVIRONMENTAL IMPACT STATEMENTS (2006), *available at* http://www.earthworksaction.org/pubs/ComparisonsReportFinal.pdf. For mines with potential for acid drainage or metals leaching, the study found that eighty-five percent polluted surface water and ninety-three percent polluted groundwater. *Id.* at ES-11,12. At the time of permitting, eighty-nine percent of the environmental review documents for those mines underestimated the potential of the mines to pollute. *See id.* at ES-09. Nearly all of the environmental impact statements examined by the report predicted that the mines would be able to comply with water quality standards. *Id.* at ES-8. In actuality: seventy-six percent of the mines polluted ground or surface water in excess of water quality standards, *id.* at Table ES-7b; sixty percent of mines polluted surface water severely enough to exceed water quality standards, *id.* at Table ES-5; fifty-two percent of mines polluted ground water severely enough to exceed water quality standards, *id.* at Table ES-6; seventy-three percent of mines exceeded surface water quality standards despite predicting that mitigation would result in compliance, *id.* at Table ES-5; seventy-seven percent of mines that exceeded groundwater quality incorrectly predicted that mitigation to correct problems would result in compliance, *id.* at Table ES-6. Mitigation measures failed sixty-four percent of the time. *Id.* at 192. Of the mines analyzed that polluted ground and surface water, sixty-three percent released toxic metals such as lead, mercury, cadmium, copper, nickel, or zinc. More than half of the mines released arsenic, sulfates, and cyanide. *Id.* at ES-9.

138. *Id.* at i, ES-3.

139. The National Environmental Policy Act requires a detailed EIS on "major Federal actions significantly affect[ing] the quality of the human environment." 42 U.S.C. § 4332(C) (2000).

140. KUIPERS ET AL., *supra* note 137, at ES-1.

141. 42 U.S.C. § 4332(C).

142. KUIPERS ET AL, *supra* note 137, at ES-15.

2. State and federal agencies should require a minimum and relatively consistent set of geochemical tests, for example to determine sulfide and metals content at the Pebble deposit.[143]
3. Mines with close proximity to water sources—as Pebble Mine would be—or with moderate to high acid drainage potential—as the Pebble deposit is—should undergo more scrutiny by agencies in the permitting process than mines with low inherent potential for impacting water quality.[144]
4. Failure to accurately characterize hydrological conditions can be addressed by requiring adequate characterization and conservative assumptions about water quality and quantity.[145]

Most Alaska statutes that apply to the permitting, operation, and closure of mines, and the use of lands and waters for mining-related activities, are administered by DNR. The remainder of this section summarizes the State's statutory framework and addresses whether the statutory standards[146] are adequate to protect fish, wildlife, their habitats, and the uses of fish and game from the potential impacts associated with the Pebble Mine.

Pursuant to section 27.05.010 of the Alaska Statutes, DNR is "the lead agency for all matters relating to the exploration, development, and management of mining, and, in its capacity as lead agency, shall coordinate all regulatory matters concerning mineral resource exploration, development, mining, and associated activities."[147] The statute requires all other state agencies to consult with DNR before "tak[ing] action that may directly or indirectly affect the exploration, development, or management of mineral resources."[148] Thus, section 27.05.010 provides only a standard

146. Although most state statutes relevant to mining are administered by DNR, the United States Environmental Protection Agency administers the issuance of permits under the National Pollutant Discharge Elimination System ("NPDES") because Alaska is not authorized to implement the NPDES program under section 402(b) of the Clean Water Act. 33 U.S.C. § 1342(b) (2000). *See* U.S. Environmental Protection Agency, National Pollutant Discharge Elimination System, State Program Status, http://cfpub.epa.gov/npdes/statestats.cfm (last visited Mar. 30, 2008).

147. ALASKA STAT. § 27.05.010(b) (2006).

148. *Id.*

that other agencies must consult with DNR before taking actions that "directly or indirectly affect" mining, and the statute contains no standard for DNR's role as the "lead agency" that "coordinate[s] all regulatory matters" concerning mining.

The general standard that governs DNR's management of state lands is found in section 38.04.005 of the Alaska Statutes. The statute requires DNR to "provide for maximum use of state land consistent with the public interest."[149] Without identifying any of the values to be considered in determining the public interest, the statute allows DNR wide discretion and does not specifically address fish, wildlife, or uses of them. The statute stands in stark contrast to section 16.05.020 of the Alaska Statutes, which imposes on the Alaska Department of Fish and Game (ADF&G) a duty to "manage, protect, maintain, improve, and extend the fish, game and aquatic plant resources of the state in the interest of the economy and general well-being of the state."[150]

Section 38.05.035 of the Alaska Statutes spells out powers and duties of DNR with respect to managing state lands, including its power to "approve contracts for the sale, lease, or other disposal" of state land, resources, property, or interests in them.[151] In approving these contracts, DNR must issue "a written finding that the interests of the state will be best served."[152] The statute provides eight exceptions to the requirement for a best interest finding.[153] These exceptions include: revocable permits or authorizations; mining claims;[154] mining leases;[155] leases for surface use of land or water necessary for mining operations, such as for mill sites, tailings disposal, and other mine-related facilities;[156] and permits, rights-of-way, or easements for roads, ditches, pipelines, electric transmission lines,

153. *See* ALASKA STAT. § 38.05.035(e)(6)(A)–(H).
154. *See* ALASKA STAT. § 38.05.035(e)(6)(D) (exempting approval of mineral claims under section 38.05.195 of the Alaska Statutes from the requirement in section 38.05.035(e) of the Alaska Statutes of "a written finding that the interests of the state will be best served").
155. *See* ALASKA STAT. § 38.05.035(e)(6)(E) (exempting approval of mineral leases under section 38.05.205 of the Alaska Statutes from the requirement in section 38.05.035(e) of the Alaska statutes of "a written finding that the interests of the state will be best served").
156. *See* ALASKA STAT. § 38.05.035(e)(6)(G) (exempting approval of surface uses under section 38.05.255 of the Alaska Statutes from the requirement in section 38.05.035(e) of the Alaska Statutes of "a written finding that the interests of the state will be best served").

and similar uses or improvements.[157] Thus, this "best interest" standard contains many exceptions for mining; it is also vague, does not address fish, game, habitat, or uses of them, and is open to wide discretion.

Section 38.05.255 of the Alaska Statutes, in turn, governs surface use of state lands and water by mining operations. It states that "surface uses of land or water included within a mining property by the owners, lessees, or operators shall be limited to those *necessary* for the prospecting for, extraction of, or basic processing of minerals and shall be *subject to reasonable concurrent uses.*"[158] Without defining what constitutes a "necessary" use of land and water, this provision appears to give DNR wide latitude to approve use of as much land and water as it deems necessary, subject to "reasonable concurrent uses."[159]

By failing to provide an adequate definition of what would be deemed "necessary" for prospecting, extraction, and processing, the statute gives wide latitude to the agency to defer to the mining company. DNR would have difficulty deciding whether, for example, housing and sewage treatment for two thousand workers are a "necessary" use of state land when alternatives may exist on private land that would not infringe on concurrent uses. The introduction of two thousand workers into an area sparsely populated by residents in small villages could have substantial impacts on local subsistence activities far beyond the land addressed by section 38.05.255(a) of the Alaska Statutes. Also, this statute fails to provide guidance to DNR as to whether it should take cost into account in deciding whether use of state land is necessary. DNR would have no basis to decide whether it could require the mine to house its workers or provide sewerage facilities on private land, which may be significantly more expensive. This type of permitting decision could have serious regional impacts on fish, game, and uses dependent on these resources. Even the requirement that the land remain subject to "reasonable concurrent use" does not address off-site impacts that are potentially more significant.

Section 38.05.850 of the Alaska Statutes authorizes DNR to issue permits, rights-of-way, or easements on state land for uses or improvements such as roads, trails, ditches, pipelines, telephone or electric

157. *See* ALASKA STAT. § 38.05.035(e)(6)(H) (exempting approval of permits, rights-of-way, or easements for roads, ditches, pipelines, electric transmission and distribution lines, and similar uses or improvements under section 38.05.850 of the Alaska Statutes from the requirement in section 38.05.035(e) of the Alaska Statutes of "a written finding that the interests of the state will be best served").

158. ALASKA STAT. § 38.05.255(a) (emphasis added).

159. *Id.*

transmission and distribution lines, and production facilities for recovering minerals.[160] The statute requires DNR to "give preference to that use of the land that will be of greatest economic benefit to the state and the development of its resources."[161] The statute, however, does not spell out the factors that DNR should consider in making such a determination. The statute also fails to identify the intended beneficiary of the economic benefit, or in other words, whether the term "the state" refers to the state treasury, the general economy, or the citizens of Alaska.

Section 46.15.080 of the Alaska Statutes governs applications to appropriate state owned waters. Approval of an application to appropriate water must be "in the public interest."[162] In determining the public interest, section 46.15.080 requires DNR to "consider" eight criteria: (1) benefit to the applicant resulting from the proposed appropriation, (2) effect of the economic activity resulting from the proposed appropriation, (3) effect on fish and game resources and on public recreational opportunities, (4) effect on public health, (5) effect of loss of alternate uses of water that might be made within a reasonable time if not precluded or hindered by the proposed appropriation, (6) harm to other persons resulting from the proposed appropriation, (7) intent and ability of the applicant to complete the appropriation, and (8) effect upon access to navigable or public water.[163]

The requirement that DNR "consider" these eight factors is far short of a substantive standard requiring DNR to protect fish and game, and avoid, minimize, or mitigate harms and risks to fish, wildlife, and public uses of them. Also, "considering" the effects on fish is far short of a statutory standard that articulates a standard for deciding whether a certain level of harm to fish is acceptable.

Section 46.17.010 *et seq.* of the Alaska Statutes applies to permits authorizing construction of dams, such as for tailings impoundments. Dams must be designed, constructed, operated, and maintained "consistent with the protection of life and property."[164] This standard ignores fish, game, habitat, and uses of these resources. It leaves such

matters to other statutes such as the Fishway Act[165] and the Anadromous Fish Act,[166] both discussed below.

The Alaska Coastal Management Program ("ACMP")[167] applies to state agency decisions on a proposed project located in the coastal zone, as identified by state or district coastal management plans. Section 46.40.096 of the Alaska Statutes provides that agency decisions must be reviewed for "consistency" with statewide coastal zone standards adopted under section 46.40.040 of the Alaska Statutes and the enforceable policies in an applicable district coastal management plan. In 2003, then Governor Frank Murkowski issued Executive Order 106, which transferred the ACMP from the Office of the Governor to DNR.[168] Under DNR's administration of the ACMP, the districts amended their district coastal management plans to eliminate many prior district policies that sought to balance conservation and development.[169]

---

165. Currently codified as ALASKA STAT. §§ 41.14.840–.860 (2006). On February 13, 2008, Alaska Governor Sara Palin issued Executive Order 114, which effectively reversed an earlier Executive Order, changing the statutory language and restoring the administration of the Fishway Act and the Anadromous Fish Act to ADF&G. Alaska Exec. Order No. 114 (Feb. 13, 2008); *see infra* note 168 and accompanying text. The legislature, pursuant to the Alaska constitution, has sixty days to disapprove the executive order. *See* ALASKA CONST. art. 3, § 23. If the legislature does not disapprove Executive Order 114, then, effective July 1, 2008, the statute will be codified pursuant to the Executive Order as ALASKA STAT. §§ 16.05.841–.861.

166. Currently codified as ALASKA STAT. §§ 41.14.870–.900 (2006). *See supra* note 165 for description of pending change in codification and statutory language. Effective July 1, 2008, the Anadromous Fish Act may be codified as ALASKA STAT. §§ 16.05.871–.901.

167. ALASKA STAT. §§ 46.40.010–.100 (2006).

168. ALASKA STAT. §§ 46.39.010–.040 (2006); *see also* Exec. Order No. 106 (Feb. 13, 2003), *available at* http://www.legis.state.ak.us/PDF/23/EO/exor0106.pdf.

169. For example, the polices of Lake and Peninsula Borough Coastal Management Plan ("LPB-CMP") in 1996 provided:

> C-12 Mining and Mineral Processing Waste Disposal
> Mining and mineral processing activities which dispose of potentially toxic tailings or discharge processing effluents which may contain toxic materials shall ensure that:
> 1) effluents are treated to remove materials toxic to human health, fish, or wildlife prior to discharge;
> 2) tailings are treated, stored and disposed in a manner which avoids any possibility of toxic runoff to surface waters or infiltration of toxic waters into the groundwater aquifer; and
> 3) if conditions 1) and 2) cannot be achieved and satisfactorily demonstrated, all potentially toxic tailings and process waters shall be contained in a zero-discharge disposal facility or impoundment.

Section 27.19.020 of the Alaska Statutes governs reclamation of mining sites. It states that "[a] mining operation shall be conducted in a manner that prevents *unnecessary and undue degradation* of land and water resources, and the mining operation shall be reclaimed *as contemporaneously as practicable* with the mining operation to leave the site in a *stable condition.*"[170] "Unnecessary and undue degradation" is defined in section 27.19.100(9) of the Alaska Statutes as "surface disturbance greater than would normally result when an activity is being accomplished by a prudent operator in usual, customary, and proficient operations of similar character and considering site specific conditions" and "includes the failure to initiate and complete reasonable reclamation."[171] This standard does not address fish and wildlife or public use of public land and is almost impossible to enforce because the terms "prudent operator," "usual, customary, and proficient," "similar," "considering site specific conditions," "failure to initiate," and "reasonable" are all open to wide interpretation and dispute.

Section 27.19.100(7) of the Alaska Statutes defines "stable condition" as "the rehabilitation, where feasible, of the physical environment of the site to a condition that allows for the reestablishment of renewable resources on the site within a reasonable period of time by natural processes."[172] Thus, reclamation to a "stable condition" is unenforceable in that it is qualified by "where feasible," which is an amorphous standard. It also does not address rehabilitation of the area to a condition approximating that which existed before the mining activity because the statute does not specifically define what constitutes "reestablishment of renewable resources." Thus, the statute allows the establishment of any renewable resources, as opposed to resources that were present before the mining activity. Similarly, reclamation "as contemporaneously as practicable" is

172. ALASKA STAT. § 27.19.100(7).

open to differing interpretation and addresses the timing of restoration rather than fish or wildlife.

In addition to statutes implemented by DNR, ADF&G has some permitting authority over activities related to the proposed Pebble Mine.[173] This is because the mine and its associated facilities may trigger the Fishway Act[174] and the Anadromous Fish Act.[175]

The Fishway Act requires permits for activities that could obstruct fish passage, such as dams and culverts, in order to assure fish passage "if the commissioner considers it necessary."[176] ADF&G has discretion in determining what is "necessary," but the issue quickly gets complicated by technical matters, such as the proper design and placement of culverts to allow fish passage.[177]

The Anadromous Fish Act requires permits to assure "proper protection" for activities that use or pollute waters "specified" by the commissioner as "important" for anadromous fish such as salmon.[178] The "proper protection" standard and the discretion to determine which streams are "important" are vague, subjective, open to discretion, and lack statutory definition. Many anadromous waters remain to be identified. The state currently lists approximately 16,000 streams, rivers, and lakes in Alaska which have been specified as important for the spawning, rearing, and migration of anadromous fish.[179] Based upon thorough surveys of a few drainages, it is believed that this number represents less than fifty percent of the streams, rivers, and lakes actually used by anadromous

173. On February 13, 2008, Alaska Governor Sara Palin issued Executive Order 114, which effectively reversed former Governor Murkowski's Executive Order 107, and restored the administration of the Fishway Act and the Anadromous Fish Act to ADF&G. *See supra* notes 165, 166 and accompanying text.

174. Currently codified as ALASKA STAT. §§ 41.14.840–.860 (2006). *See supra* note 165 for description of pending change in codification and statutory language.

fish.[180] At least another 20,000 anadromous water bodies have not been identified or specified under the Act.[181]

Several conclusions seem inescapable. First, none of the statutes that are administered by DNR and that apply to permitting facilities related to Pebble Mine articulate clear standards for protecting fish and game, habitats, and public uses of them. Only the Water Use Act at section 46.15.080 of the Alaska Statutes mentions fish, game, and recreation (but not commercial or subsistence use).[182] The Act only requires DNR to "consider" fish, game, and recreation, rather than to protect them.[183] Furthermore, all of the applicable statutes, even the Fishway and Anadromous Fish Acts, administered by ADF&G, are subject to broad discretion.

Second, no statute requires DNR to approve the mine's plan of operation. Instead, the state process consists of a series of unrelated permits, most of which derive from statutes not tailored specifically to mining.

Third, none of the statutes specifically address modern, large scale mining, such as the Pebble Mine, that exploits massive, low-grade, ore deposits. Some of the statutes were enacted before the risks of contemporary mining of massive, low-grade, metallic sulfide ores posed to ecosystems were widely recognized.[184]

Fourth, although section 27.05.010 of the Alaska Statutes requires DNR to "coordinate" matters related to mining, no statute actually *creates* DNR's so-called "large mine permitting process." Instead, DNR's "large mine permitting process" is a *personnel action*, i.e., the selection of a staff person as a "project manager" who coordinates permit applications, agency reviews, and authorizations for large mines under pre-existing discretionary authority and vague statutes.[185]

---

180. *Id.*
181. *Id.*
182. ALASKA STAT. § 46.15.080 (2006).
183. *See id.*
184. The statute that gave DNR authority over all mining activities was enacted in 1949, before Alaska was a state. *See* ALASKA STAT. § 27.05.010 (2006).
185. *See* OFFICE OF PROJECT MANAGEMENT AND PERMITTING, ALASKA DEP'T OF NATURAL RESOURCES, PERMITTING LARGE MINE PROJECTS IN ALASKA (2006), *available at* http://www.dnr.state.ak.us/mlw/mining/largemine/lmpt_process.pdf. A mining company proposing a large mine can opt to engage the process by entering into a "memorandum of agreement" with DNR, whereby the company reimburses DNR for personnel time and costs related to the permits. *Id.* at 6. This creates a potential conflict between DNR's duties to perform objective analysis and DNR's reliance on the industry to pay DNR staff to perform that analysis.

Other states have addressed the problems that arise from mining massive, low-grade deposits. Michigan and New Mexico, for example, require mines to show at the time they receive permits to operate that they will not require "perpetual care" after they close.[186] Wisconsin has imposed a moratorium on permits to mine metallic sulfides until the industry can show that a single mine in North America has operated for ten years without creating acid mine drainage and that a single mine has been closed for ten years without creating acid mine drainage.[187] To date, the industry does not appear to have been able to meet these statutory standards.[188]

V. PROPOSED LEGISLATION AIMS TO IMPROVE STATUTORY STANDARDS, BUT FURTHER TIGHTENING IS NEEDED

In response to the controversy surrounding Pebble Mine, two state legislators introduced legislation to create more stringent standards for permitting mines such as the Pebble Mine.

A. Proposed Legislation Would Establish a State Fish and Game Refuge in the Kvichak and Nushagak Drainages.

1. Proposed Legislation. Senator Gary Stevens (R-Kodiak), whose district includes the Kvichak drainage, introduced Senate Bill 67, which aims to permanently protect fish, wildlife, habitat, and public uses of these resources on state lands in the Kvichak and Nushagak drainages. Senate Bill 67 would designate about seven million acres of state lands and waters in these drainages as a fish and game refuge named after former governor Jay Hammond.[189]

186. *See* MICH. COMP. LAWS § 324.63209 (2006); N.M. STAT. § 69-36-12 (2007). These standards are an effort to avoid perpetual care because once a mine requires perpetual care, the taxpayers usually end up having to cover the costs.

187. WIS. STAT. § 293.50 (2006).

188. Telephone Interview with Philip Fauble, State Mining Coordinator, Wis. Dep't of Natural Res., in Madison, Wis. (Mar. 18, 2008).

189. S.B. 67, 2007 Leg., 25th Sess. (Alaska 2007), *available at* http://www.legis.state.ak.us/PDF/25/Bills/SB0067A.pdf. As introduced, Senate Bill 67 would be codified at section 16.20.045 of the Alaska Statutes by adding a new section to the Alaska Code. The refuge still may be revised to exclude land within the Nushagak drainage, which is concomitantly south of Wood-Tikchik Park and west of the Lake and Peninsula Borough, so as to allow potential land selections of a possible future borough in the Dillingham/Nushagak area from the excluded area. Section 29.65.030 of the Alaska Statutes entitles municipal governments to select ten percent of "vacant, unappropriated, unreserved land"

The central provisions of Senate Bill 67, as in any refuge legislation, are the purposes for which the refuge is established and the "compatibility test," which is a standard that allows uses of resources not within refuge purposes to proceed if compatible with refuge purposes.[190] Accordingly, Senate Bill 67 provides:

> (b) The Jay Hammond State Game Refuge is established to protect the
>
> 1. fish and wildlife habitat and populations, including the salmon and trout spawning and rearing habitat, and critical caribou, moose, and brown bear habitat;
> 2. public use of fish and wildlife and their habitat, particularly subsistence, commercial, and recreational fishing, hunting, trapping, viewing, and general public recreation in a high quality environment; and
> 3. use and disposition of other resources when the activities are not incompatible with (1) and (2) of this subsection.[191]

---

within its boundary. Senate Bill 67 excludes Wood-Tikchik State Park and should be revised to exclude any state and federal lands in the Nushagak and Kvichak drainages that already are designated as parks or refuges.

190. Other refuge statutes contain compatibility tests. *See* ALASKA STAT. § 16.20.033(b)(3) (2006) (applying to the Yakataga State Game Refuge); ALASKA STAT. § 16.20.036(c) (2006) (applying to the Susitna Flats State Game Refuge); ALASKA STAT. § 16.20.037(b)(3) (2006) (applying to the Minto Flats State Game Refuge); ALASKA STAT. § 16.20.038(c) (2006) (applying to the Trading Bay State Game Refuge): ALASKA STAT. § 16.20.041(b)(3) (2006) (applying to the McNeil River State Game Refuge). *See also* 16 U.S.C. § 668dd(d) (2000) (applying to all national wildlife refuges). The compatibility test seeks to simultaneously protect fish, game, habitat, and uses of them, while protecting other uses, such as valid existing mining claims, so long as they are compatible with protecting fish, wildlife, habitats, and public uses of them. *Id.*

191. S.B. 67, 2007 Leg., 25th Sess. (Alaska 2007). Because of commercially harvested salmon, the proposed Jay Hammond refuge would probably produce more economic benefits from fish and wildlife than any national wildlife refuge in the United States. As explained in text, direct expenditures/sales in the Alaskan regional economy resulting from commercial, recreational, subsistence, and nonconsumptive use of fish and wildlife in the Bristol Bay drainages were estimated at approximately $324 million in 2005. *See* DUFFIELD ET AL., *supra* note 28, at 15. Although not all of this value is attributable to the Kvichak and Nushagak drainages, the Kvichak drainage is historically the most productive of sockeye salmon and therefore the most economically productive and the Nushagak is historically the most productive for other salmon. *See id.* at 15–16. In contrast, the total direct expenditures/sales in the regional economies from consumptive and nonconsumptive use of fish and wildlife in all 548 national wildlife refuges in the United States was estimated at almost $1.7 billion in 2006. *See* ERIN CARVER & JAMES CAUDILL, DIV. OF ECONOMICS, U.S. FISH & WILDLIFE SERVICE, BANKING ON NATURE 2006: THE ECONOMIC BENEFITS TO LOCAL COMMUNITIES OF NATIONAL WILDLIFE REFUGE

In late 2007, the Pebble Partnership issued a series of statements about its ability to develop the Pebble Mine in a manner that protects fish and wildlife and the public uses of these resources:

> "If a mine cannot be designed that protects the water, fisheries, and wildlife resources of Bristol Bay, it will not be built."[192]
>
> "Pebble will be . . . engineered to protect all things Alaskans value. Or it won't be built at all."[193]
>
> "Fish come first. We simply won't develop Pebble if it harms commercial, subsistence or sport fishing in this remarkable region."[194]
>
> "We simply will not develop a mine that damages Alaska's fish and wildlife."[195]
>
> "We will not be associated with the development of a mine that damages Alaska's Bristol Bay fishery and wildlife, or those in the communities whose livelihoods depend on those resources. If the mine cannot be developed in a way that provides proper protections, we will not build it."[196]
>
> "If the mine cannot be planned in a way that provides proper protections, it should not be built."[197]

197. Speech by Cynthia Carroll, CEO, Anglo American plc, to Resource Development Council, in Anchorage, Alaska (Oct. 23, 2007), http://www.pebblepartnership.com/related_media/speech.pdf.

Although none of these statements addressed specific legislation, one could conclude from these statements that the Pebble Partnership may not oppose the refuge purposes and compatibility test of Senate Bill 67.

Senate Bill 67 would also close the refuge to new mining claims[198] and prohibit storage or disposal of industrial waste in the refuge.[199] Subject to the refuge purposes, closure to new mining claims, and prohibition of disposal of industrial waste, ADF&G and DNR would exercise their respective authorities over the refuge consistent with a management plan prepared by ADF&G in consultation with DNR.[200] A citizens' advisory committee, composed of representatives of subsistence users, state, municipal and tribal entities, tourism and recreation, mining and industry, and sport and commercial fishing, would assist ADF&G and DNR regarding management of the refuge.[201] Furthermore, refuge management plans are usually adopted into regulation.[202] Doing so provides an opportunity for pubic notice and comment under the Alaska Administrative Procedure Act.[203] Finally, ADF&G's overall policy statute, which requires ADF&G to "manage, protect, maintain, improve, and extend the fish, game and aquatic plant resources of the state in the interest of the economy and general well-being of the state," would apply.[204]

2. *The Legislature May Wish to Consider Several Revisions to the Refuge Bill.* First, because the Bristol Bay drainages are so valuable for fish and

198. Senate Bill 67 could be clarified to provide that the closure to new mining claims (mineral entry) is subject to valid existing rights, so as to accommodate concerns that the legislation would not otherwise protect valid existing rights. *See* S.B. 67, 2007 Leg., 25th Sess. (Alaska 2007).

199. Industrial waste is defined as:

> [A] liquid, gaseous, solid, or other waste substance or a combination of them resulting from process of industry, manufacturing trade or business, or from the development of natural resources; however, gravel, sand, mud, or earth taken from its original situs and put through sluice boxes, dredges, or other devices for the washing and recovery of the precious metal contained in them and redeposited in the same watershed from which it came is not industrial waste.

ALASKA STAT. § 46.03.900 (2006).

200. *See* S.B. 67, 2007 Leg., 25th Sess. (Alaska 2007). For example, DNR would continue to exercise authority to lease for oil and gas and permit dams for Pebble Mine and rights of way as long as such activities were compatible with refuge purposes.

201. *Id.*

202. ALASKA ADMIN. CODE tit. 5, §§ 95.500–.545 (2007).

203. ALASKA STAT. §§ 44.62.190-.290 (2006).

204. ALASKA STAT. § 16.05.020 (2006).

game production, the legislature should consider a "no perpetual care" standard to be used at the time of permitting a metallic sulfide mine. This could be similar to "no perpetual care" standards in Michigan and New Mexico mining statutes.[205] Such an amendment might read:

> *A mine for sulfide minerals or ores in the refuge shall be permitted only if the mining area and affected area, including all facilities, shall be reclaimed and remediated to achieve a naturally self-sustaining ecosystem appropriate for the area that does not require long-term or perpetual care, including treatment, and the areas shall be returned as expeditiously as possible to the ecological conditions that approximate pre-mining conditions.*

Imposing such a standard at the time of permitting would not foreclose requiring perpetual care after closure of the mine. The legislature also could require that any waste rock piles and tailings facilities be isolated hydrologically from surface and groundwater. As noted above, such hydrological isolation may be difficult due to the fracturing of rock that occurs in block caving.[206]

Second, with respect to mining metallic sulfides in the refuge, the legislature should consider adopting the "precautionary approach" of the Alaska Board of Fisheries. Such an approach is already used in its Policy for the Management of Sustainable Salmon Fisheries.[207] The precautionary

---

205. *See* MICH. COMP. LAWS § 324.63209 (2006); N.M STAT. § 69-36-12 (2007).

206. *See supra* note 80.

207. ALASKA ADMIN. CODE tit. 5, § 39.222 (2007). The Policy for the Management of Sustainable Salmon Fisheries adopts the precautionary approach, at ALASKA ADMIN. CODE tit. 5, § 39.222(c)(5) (2007), which provides:

> (5) in the face of uncertainty, salmon stocks, fisheries, artificial propagation, and essential habitats shall be managed conservatively as follows:
>
> (A) a precautionary approach, involving the application of prudent foresight that takes into account the uncertainties in salmon fisheries and habitat management, the biological, social, cultural, and economic risks, and the need to take action with incomplete knowledge, should be applied to the regulation and control of harvest and other human-induced sources of salmon mortality; a precautionary approach requires
>
> (i) consideration of the needs of future generations and avoidance of potentially irreversible changes;
>
> (ii) prior identification of undesirable outcomes and of measures that will avoid undesirable outcomes or correct them promptly;
>
> (iii) initiation of any necessary corrective measure without delay and prompt achievement of the measure's purpose, on a time scale

approach requires an agency to be cautious—in effect to err on the side of conservation—when information is inadequate or still developing, as in the case of synergistic effects of copper, and the absence of adequate information is not a reason to fail to take conservation measures.

Third, the legislature could clarify that the compatibility test refers to the refuge purposes and is not a part of the purposes themselves.[208] Doing so would avoid confusion between the purposes of the refuge—protecting fish, wildlife, habitat and public uses of these resources—and other potential uses, such as development of pre-existing mining claims, which would be permitted only if compatible with the purposes of the refuge. Thus, the proposed subsection 16.20.045(b) of the Alaska Statutes should be amended to be two subsections, (b) and (c), as follows:

> *(b) The Jay Hammond State Game and Wild Salmon Protection Area is established to protect the*
> *1. fish and wildlife habitat and populations, including the salmon and trout spawning and rearing habitat, and critical caribou, moose, and brown bear habitat; and*
> *2. public use of fish and wildlife and their habitat, particularly subsistence, commercial, and recreational fishing, hunting, trapping, viewing, and general public recreation in a high quality environment.*
> *(c) The use and disposition of other resources may be permitted when the activities are not incompatible with subsections (b)(1) and (b)(2).*

Fourth, the legislature could amend the proposed section 16.20.045(d) of the Alaska Statutes in order to focus statutory prohibitions or restrictions on the environmental issues posed by development of pre-existing mining

---

not exceeding five years, which is approximately the generation time of most salmon species;
(iv) that where the impact of resource use is uncertain, but likely presents a measurable risk to sustained yield, priority should be given to conserving the productive capacity of the resource;
(v) appropriate placement of the burden of proof, of adherence to the requirements of this subparagraph, on those plans or ongoing activities that pose a risk or hazard to salmon habitat or production;
(B) a precautionary approach should be applied to the regulation of activities that affect essential salmon habitat.

208. In most refuge statutes, the compatibility test is a separate subsection that refers to the refuge purposes. *See* ALASKA STAT. § 16.20.036(c) (2006) (applying to the Susitna Flats State Game Refuge); ALASKA STAT. § 16.20.038(c) (2006) (applying to the Trading Bay State Game Refuge); *see also* 16 U.S.C. § 668dd(d) (2000) (applying to all national wildlife refuges).

claims for metallic sulfide ore. By focusing in this manner, the refuge bill could address (1) sulfuric acid, acid mine drainage, toxic agents such as cyanide used in ore processing, and ammonia residues from explosives used in mining; (2) storage or disposal of industrial waste, waste rock, overburden, and tailings; and (3) withdrawal, appropriation, and diversion of surface or subsurface water. The following is suggested language that would prohibit acid mine drainage in the refuge:

> *No state agency shall issue a permit or authorization for activities that would have potential to create acid mine or acid rock drainage into surface or groundwater.*

Fifth, the legislature could implement the Kuipers-Maest procedural recommendations by requiring that permitting agencies (1) use *potential* impacts to water quality rather than *predicted* impacts to water quality when making permitting decisions,[209] (2) establish a minimum and relatively consistent set of geochemical tests to determine geochemistry and sulfide content of ore,[210] (3) impose stricter scrutiny of any potential metallic sulfide mine that is near water and has potential for acid drainage,[211] and (4) ensure hydrological conditions are adequately characterized based on conservative assumptions about water quality and quantity.[212]

Sixth, the legislature should provide longer opportunities for public comment on permits for metallic sulfide mining in the refuge. Except for the consistency findings under the Alaska Coastal Management Program and land disposals or leases under section 38.05.035(e) of the Alaska Statutes, the remainder of the state statutes implemented by DNR or ADF&G, and applicable to Pebble Mine, do not afford public notice and comment. Hence, DNR and ADF&G will depend on a federal EIS under NEPA[213] to provide notice and comment on state permits. This will occur by virtue of NEPA regulations, which require the EIS to be coordinated with state and local permits.[214] The result is that state and local permits will be adjudicated contemporaneously with federal permits. However, under NEPA regulations, the minimum comment period on a draft EIS is ninety days and on a final EIS only thirty days.[215] In the case of the Pebble Mine,

209. KUIPERS ET AL., *supra* note 137, at ES-15.
210. *Id.*; *see also* KUIPERS ET AL., METHODS AND MODELS, *supra* note 143.
211. KUIPERS ET AL., *supra* note 137, at ES-15.
212. *Id.*
213. 42 U.S.C. § 4321 (2000).
214. 40 C.F.R. § 1506.2 (2007).
215. 40 C.F.R. § 1506.10 (2007).

the EIS is likely to be so voluminous and complicated by issues of science, engineering, and law that it could defeat the ability of the public to comment effectively. The legislature would be wise to amend state law to give the public time to become educated about what is likely to be a very complex matter and to afford judicial review.[216] For example, the legislature could amend Senate Bill 67 to include the following:

> *Any permit, lease, compatibility determination, or authorization for facilities related to mining sulfide minerals or ores in the refuge shall be subject to a public notice and comment period of at least 180 days, after which the agency shall respond to comments in writing and with scientific or technical justification for the agency's position. Any person who participated in the public comment process may seek judicial review of the agency decision.*

Finally, the legislature should amend Senate Bill 67 to condition annual exploration permits, which generally are issued prior to applications that trigger the NEPA process, upon a duty to release and summarize environmental data as they are gathered by the Pebble Partnership. The partnership claims to have spent $55 million on environmental and socio-economic studies to assist it in developing a project plan to be submitted for governmental and public review.[217] However, no statute or regulation requires the Pebble Partnership to disclose these studies, the underlying data, protocols used to gather data, or assumptions made in designing the studies.[218] NEPA regulations provide that environmental information must

---

216. The Alaska Administrative Procedure Act, *see* ALASKA STAT. § 44.62.330(a)(6) (2006), affords judicial appeal to review DNR's decisions under the Alaska Land Act, ALASKA STAT. § 38.05 *et seq.*, "where applicable." The Alaska Land Act, at § 38.05.035(l), provides for appeal to a superior court from a written finding by DNR that it is in the best interest of the state to sell, lease, or dispose of land under § 38.05.035(e)(6). However, § 38.05.035(e)(6)(A)–(H) lists eight exceptions to the requirement of a written best interest finding. These exceptions include approvals of: (1) revocable permits or authorizations; (2) mineral claims located under § 38.05.195; (3) mineral leases under § 38.05.205; (4) surface use leases (e.g., for mill sites, tailings disposal and other mine-related facilities) under § 38.05.255; and (5) permits, rights-of-way, or easements (e.g., for roads, ditches, pipelines, electric transmission lines) under § 38.05.850. Thus, a result of the exemptions in section 38.05.035(e)(6) is that many of DNR's decisions related to mining may not be subject to appeal to the courts under the Administrative Procedure Act because the decision will not depend on an approval based on a best interest finding.

217. The Pebble Partnership, Environment Overview, http://www.pebblepartnership.com/pages/environment/environment-overview.php (last visited Mar. 30, 2008).

218. For example, whenever NDM discloses the content of valuable metals in its ore (which presumably bolsters marketing the prospective mine to investors) but

be "high quality" and that "[a]ccurate scientific analysis, expert agency comments, and public scrutiny are essential."[219] Requiring disclosure to agencies and the public would help assure high quality information, improve public understanding of the issues, and facilitate more informed public scrutiny. The legislature also should require analysis of socio-economic impacts on public uses of natural resources—such as subsistence and recreational uses of fish and game—that occur substantially outside of conventionally quantifiable market transactions, such as commercial fishing.[220]

B. Proposed Legislation Would Regulate Use of State Waters in the Bristol Bay Drainages

1. Proposed Legislation. State Representative Bryce Edgmon (D-Dillingham), whose district includes the Nushagak drainage, introduced House Bill 134, which aims to provide additional protections for water used by salmon or for human consumption.[221] As introduced, House Bill 134 provided that, subject to exceptions for most current uses of water, a person may not "withdraw, obstruct, divert, inject, pollute, or pump" surface or ground water or "alter, destroy, displace, relocate, channel, dam, [or] convert to dry land" any water body in the Nushagak, Kvichak, Naknek, Egegik, and Ugashik river drainages—all of which flow to Bristol Bay.[222]

The House Special Committee on Fisheries revised the bill to focus on mining metallic sulfides. The committee substitute bill, CS House Bill 134, provided in part:

---

does not disclose the sulfide content, then the public is put at a disadvantage for purposes of protecting public interests in fish. NDM, PEBBLE COPPER, *supra* note 1, at 4.

219. 40 C.F.R. § 1500.1 (2007).

220. *See* DUFFIELD ET AL., *supra* note 28, at 14 (providing an example of a natural resource economic study that quantifies socio-economic values for activities such as subsistence and recreation that occur substantially outside of market-transactions and the ordinary market economy).

221. H.B. 134, 2007 Leg., 25th Sess. (Alaska 2007), *available at* http://www.legis.state.ak.us/PDF/25/Bills/HB0134A.pdf. While Senate Bill 67 primarily seeks to protect fish, game, habitat, and public uses of these resources, and would be implemented by ADF&G and DNR, House Bill 134 would add a new section to the Alaska Code, section 16.10.015 of the Alaska Statutes, and would be implemented by the Alaska Department of Environmental Conservation (DEC).

222. *See* H.B. 134, 2007 Leg., 25th Sess. § 2 (Alaska 2007).

> Sec. 16.10.015. Protection of salmon streams within certain drainages affecting Bristol Bay. (a) Notwithstanding any other provision of law, a person may not withdraw, obstruct, divert, inject, pollute, or pump, either temporarily or permanently, any subsurface or surface water within the anadromous fish waters of the Bristol Bay watershed in connection with a sulfide mining operation.
> (b) Notwithstanding any other provision of law, a person may not alter, destroy, displace, relocate, channel, dam, convert to dry land, or otherwise adversely affect any portion of the anadromous fish waters of the Bristol Bay watershed in connection with a sulfide mining operation.
> (c) In addition to any other penalties, a person who violates (a) or (b) of this section, upon conviction, is punishable by a fine of not less than $100,000 a day or more than $1,000,000 a day. Each day on which a violation described in (a) or (b) of this section occurs constitutes a separate violation of (a) or (b) of this section.
> (d) In this section,
>
> (1) "anadromous fish waters of the Bristol Bay watershed" means the waters in the Bristol Bay watershed that are specified under [the Anadromous Fish Act] as being important for the spawning, rearing, or migration of anadromous fish;
>
> (2) "sulfide mining operation" means a mining operation for
>
> (A) antimony, arsenic, copper, iron, lead, mercury, molybdenum, nickel, palladium, platinum, silver, or zinc; or
>
> (B) gold associated with any of the minerals listed in (A) of this paragraph.[223]

This revision of House Bill 134 clarified that it applied solely to metallic sulfide mining operations and did not ensnare individuals engaged in relatively harmless activities. Nonetheless, to achieve its goal of protecting the Bristol Bay watershed, the legislature could further revise the legislation.

2. *Legislature Could Further Revise the Legislation.* First, the legislature should define "pollution" in a bill such as CS House Bill 134. It does not do so. Thus, to adjudicate any challenge brought in the absence of a definition,

223. Comm. Substitute for H.B. 134, 2007 Leg., 25th Sess. § 2 (Feb. 2008), *available at* http://www.legis.state.ak.us/PDF/25/Bills/HB0134B.pdf.

a court would be forced to rely on the definition of "pollution" found in section 46.03.900(20) of the Alaska Statutes. It reads as follows:

> "[P]ollution" means the contamination or altering of waters, land, or subsurface land of the state in a manner which creates a nuisance or makes waters, land, or subsurface land unclean, or noxious, or impure, or unfit so that they are actually or potentially harmful or detrimental or injurious to public health, safety, or welfare, to domestic, commercial, industrial, or recreational use, or to livestock, wild animals, bird, fish, or other aquatic life[.][224]

In defining "pollution," the bill should address issues such as acid mine drainage, toxic effects of copper at levels below state standards, synergistic effects, use of toxic agents such as cyanide, and ammonia residues, all of which may be toxic to salmon and other organisms. The bill should also address the storage or disposal of industrial waste, waste rock, overburden, and tailings, all of which can impair water quality.

Second, the legislature could rely on a *combination* of standards and restrictions or prohibitions in House Bill 134, as Senate Bill 67 does. House Bill 134 relies on prohibitions, instead of standards by which to measure a proposed activity. Relying solely on prohibitions to protect the Bristol Bay watershed from mine pollution requires the legislature to foresee *every* potential activity associated with the Pebble Mine that could harm fish populations. In contrast, Senate Bill 67 focuses first on standards—i.e., the purposes of the refuge and a compatibility test by which to evaluate *any* proposed action, foreseeable or not, that is not within refuge purposes—and then addresses prohibitions. Relying on a combination of standards and prohibitions or restrictions helps the legislature draft legislation capable of addressing unforeseeable issues.

Third, in the proposed section 16.10.015(a) of the Alaska Statutes, the legislature should clarify what it means by "any subsurface or surface water within the anadromous fish waters." The language is unclear whether it intends to protect any subsurface water from pollution and other activities related to metallic sulfide mining or only subsurface water that feeds anadromous surface water.

Fourth, instead of defining anadromous waters by reference to the Anadromous Fish Act, which dates to 1959, the legislature may wish to

224. ALASKA STAT. § 46.03.900(2) (2006).

model its definition on a more modern statute. For example, the Alaska Forest Practices Act provides:

> (1) "anadromous water body" means the portion of a fresh water body or estuarine area that
>
> (A) is cataloged under [the Anadromous Fish Act] as important for anadromous fish; or
>
> (B) is not cataloged under [the Anadromous Fish Act] as important for anadromous fish but has been determined [by ADF&G] to contain or exhibit evidence of anadromous fish in which event the anadromous portion of the stream or waterway extends up to the first point of physical blockage.[225]

The legislature could also amend House Bill 134 by incorporating the suggestions made above with respect to Senate Bill 67. The legislature could add to House Bill 134 the "no perpetual care" and "precautionary approach" standards to be used at permitting, add a more protective post-closure reclamation and restoration standard, improve public notice and opportunities for comment and public involvement, require the permitting agencies to respond to public comments, allow for judicial review, place conditions on exploration permits that require the mining company to release all scientific data when gathered, and otherwise improve regulation and permitting of metallic sulfide mines as suggested above.

Finally, the best approach to producing final legislation that protects the Bristol Bay drainages may be for the legislature to combine Senate Bill 67 and House Bill 134 and then select the most appropriate combination of standards, procedures, prohibitions and restrictions pertaining to metallic sulfide mining. Doing so would allow the legislature, the public, and the agencies to speak to both approaches and all matters at once.[226]

VI. THE PROPOSED LEGISLATION WOULD NOT CONSTITUTE A TAKING

The Takings Clause of the Fifth Amendment to the United States Constitution, made applicable to the states through the Fourteenth

225. ALASKA STAT. § 41.17.950(1) (2006).

226. No discussion of elevated standards is complete without recognizing that the importance of fish and game to Alaskans prompted Alaska's lawmakers to criminalize most violations of Title 16 of the Alaska Statutes. *See, e.g.*, ALASKA STAT. § 16.05.925(a) (2006). Nearly all violations of Title 38 (DNR statutes) are civil violations. ALASKA STAT. §§ 38.05.005–.95.300 (2006).

Amendment,[227] provides that private property shall not "be taken for public use, without just compensation."[228] The Takings Clause "does not prohibit the taking of private property, but instead places a condition on the exercise of that power."[229] In other words, it "is designed not to limit the governmental interference with property rights *per se*, but rather to secure *compensation* in the event of otherwise proper interference amounting to a taking."[230] Similarly, Article I, section 18 of the Alaska Constitution provides: "[p]rivate property shall not be taken or damaged for public use without just compensation."[231]

Proponents of Pebble Mine have asserted that, if House Bill 134 becomes law and stops the Pebble Mine project, it will constitute a taking of NDM's mining claims and require the State to compensate NDM.[232] The Legal Services Division of the Alaska Legislature advised Representative Edgmon that if, after a holder of a mining claim has acquired rights, the law is changed in such a way that "no longer allows [the holder of a mining claim] to use its land for the intended profit-making purpose, then it seems likely a taking has occurred."[233]

In analyzing whether a governmental action constitutes a taking, "the logically antecedent inquiry [is] into the nature of the owner's estate" and to ascertain whether the proscribed use interests were part of his title.[234] Thus, the threshold inquiry in this case must be into the nature of the property rights that a mining claimant holds on state-owned public land.

Mining claims are a "unique form of property." [235] Unlike ordinary private property, the government is the owner of the underlying fee title to

234. Lucas v. S.C. Coastal Council, 505 U.S. 1003, 1027 (1992).

235. Best v. Humboldt Placer Mining Co., 371 U.S. 334, 335–36 (1963) (stating that a mining claim is a "possessory interest" that is "mineral in character" within the limits of the claim). Unless otherwise provided, the uses and interpretations of

the public domain.[236] As the owner, the government maintains broad powers over the terms and conditions upon which the public lands can be used, leased, and acquired.[237] Alaska law contains no provision for patenting a mining claim, which would convey fee-simple title.[238]

In Alaska, a "prior right" to mineral deposits on state land open to claim staking may be acquired by discovery, location, and recording.[239] The claimant has an "exclusive" right to possess and extract minerals within the boundaries of the claim.[240]

The holder of a state mining claim, however, has "no right to mine" because that right is always contingent on state permission.[241] In other words, a mining claim does not constitute an absolute right to mine; it vests in the claimant a right to exclude others who wish to mine the same minerals within the boundaries of the mining claims.[242]

For a mining claim to be valid, the discovery must ultimately pass the "marketability test."[243] This test requires the claimant to show that the minerals can be extracted at a profit.[244]

A. Legal Standards Governing Takings Analysis

In examining whether a government intrusion on private property rights constitutes a taking, several factors have particular significance. The

---

federal mining law as supplemented by state law apply to sections 38.05.185–.275 of the Alaska Statutes. ALASKA STAT. § 38.05.185(c) (2006).

236. United States v. Locke, 471 U.S. 84, 104 (1985) (citing, e.g., Kleppe v. New Mexico, 426 U.S. 529, 539 (1976)).

237. *Locke*, 471 U.S. at 104.

238. *See* ALASKA STAT. §§ 38.05.185 *et seq.* (2006).

239. "Prior discovery, location, and filing, as prescribed by law, shall establish a prior right to these minerals and also a prior right to permits, leases, and transferable licenses for their extraction." ALASKA CONST. art. VIII, § 11.

240. ALASKA STAT. § 38.05.195(a). In order to maintain the claim, a claimant must comply with requirements for annual labor, pursuant to section 38.05.210 of the Alaska Statutes; annual rental, pursuant to section 38.05.211 of the Alaska Statutes; and production royalties, pursuant to section 38.05.212 of the Alaska Statutes. ALASKA STAT. § 38.05.185(a).

241. Beluga Mining Co. v. Dep't of Natural Res., 973 P.2d 570, 575–76 (Alaska 1999).

242. The right to exclude other subsequent mining claimants, however, is not a right to exclude the public at large. *See* ALASKA STAT. § 38.05.255 (2006) (providing that a holder of a mining claim has limited use of surface land and waters within the boundaries of the claim, subject to reasonable concurrent uses by the ordinary public).

243. United States v. Coleman, 390 U.S. 599, 602–03 (1968).

244. *Id.*

economic impact of the regulation on the claimant and, particularly, on the extent to which the regulation has interfered with distinct investment-backed expectations are two primary factors.[245] Also relevant is the character of the governmental action, i.e., whether it amounts to a physical invasion or merely affects property interests "through some public program adjusting the benefits and burdens of economic life to promote the common good."[246] These three factors all aim to identify regulatory actions that are functionally equivalent to a direct appropriation or ouster from private property in that each focuses on the severity of the burden that the government imposes on property rights.[247]

B. House Bill 134 and Senate Bill 67 Would Not Constitute Takings

In assessing the character of the government action, a court may more readily find a "taking" when the interference with property can be characterized as a physical invasion by government than when interference arises from some public program adjusting the benefits and burdens of economic life to promote the common good.[248] Under Alaska law, this inquiry also examines the legitimacy of the interest advanced by the regulation or land-use decision.[249]

The legislature may enact legislation that is designed to protect activities and industries it deems important, even if it thereby restricts other types of industries, without having to compensate the industry that suffers a loss as a result of the legislature's action.[250] In a wide variety of

245. Penn Cent. Transp. Co. v. City of New York, 438 U.S. 104, 124 (1978).

246. *Id.* Prior to *Pennsylvania Coal Co. v. Mahon*, 260 U.S. 393 (1922), it was generally thought that the Takings Clause reached only a "direct appropriation" of property or the functional equivalent of a "practical ouster of [the owner's] possession." Lucas v. S.C. Coastal Council, 505 U.S. 1003, 1014 (1992) (citations omitted). *Mahon* established the oft-cited maxim that, "while property may be regulated to a certain extent, if regulation goes too far it will be recognized as a taking." *Id.* (citing *Mahon*, 260 U.S. at 415).

247. Lingle v. Chevron U.S.A., Inc., 544 U.S. 528, 539 (2005).

248. *Penn Cent.*, 438 U.S. at 124.

249. Beluga Mining Co. v. Dep't of Natural Res., 973 P.2d 570, 575 (Alaska 1999). The Supreme Court of the United States rejected this prong of the analysis, stating that it "prescribes an inquiry in the nature of a due process, not a takings test, and that it has no proper place in . . . takings jurisprudence." *Lingle*, 544 U.S. at 540.

250. Miller v. Schoene, 276 U.S. 272, 279 (1928) (finding no taking where state required destruction of one owner's rust-infected cedar trees with the intent to prevent destruction of apple orchards because "the state does not exceed its constitutional powers by deciding upon the destruction of one class of property in order to save another, which, in the judgment of the legislature, is of greater value to the public").

contexts, the government may execute laws or programs that adversely affect recognized economic values.[251] "Even with respect to vested property rights, a legislature generally has the power to impose new regulatory constraints on the way in which those rights are used, or to condition their continued retention on performance of certain affirmative duties."[252] This power includes the enactment of new land designations encompassing existing mining claims.[253]

In enacting more stringent environmental regulations or establishing a refuge in the Bristol Bay drainages, the legislature would simply be adjusting the benefits and burdens of economic life to promote the common good.[254] In Alaska, the common good includes protecting the public interest in the conservation of fish, wildlife, and habitat; the protection of commercial, sport and subsistence fishing, and hunting; and other public uses "in a high quality environment."[255]

The Bristol Bay drainages support multi-million dollar commercial, sport, and subsistence fisheries. Thus, if the legislature restricts mining in the Bristol Bay drainages in an effort to protect the fisheries, it would not have to compensate the affected mining claimants if, in the judgment of the legislature, the fisheries are of greater value to the public.[256]

The legitimacy of the state interests advanced by House Bill 134 and Senate Bill 67 is supported by Article VIII of the Alaska Constitution. Article VIII: (1) requires the legislature to provide for the conservation of natural resources for the maximum benefit of the people;[257] (2) reserves fish, wildlife, and waters to the people for common use;[258] (3) provides that fish, forests, wildlife, grasslands, and all other replenishable resources are to be maintained on a sustained yield basis;[259] and (4) requires the

252. Reeves v. United States, 54 Fed. Cl. 652, 672 (2002) (quoting United States v. Locke, 471 U.S. 84, 104 (1985)).

253. *See id.* at 672.

254. *See Penn Cent.*, 438 U.S. at 124.

255. *See, e.g.*, ALASKA STAT. §§ 16.20.033(b)(1)–(2) (2006) (stating that purposes of the Yakataga State Game Refuge include protecting fish and wildlife habitat, populations, and public use).

256. *See, e.g.*, Miller v. Schoene, 276 U.S. 272, 279 (1928).

257. ALASKA CONST. art. VIII, § 2 ("The legislature shall provide for the utilization, development and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people.").

258. ALASKA CONST. art. VIII, § 3 ("Whenever occurring in their natural state, fish, wildlife, and waters are reserved to the people for common use.").

259. ALASKA CONST. art. VIII, § 4 ("Fish, forests, wildlife, grasslands, and all other replenishable resources are to be utilized, developed and maintained on the sustained yield principle, subject to preferences among beneficial uses.").

legislature to provide for the administration of public lands.[260] The progeny of these constitutional authorities includes: statutes that regulate mining, such as Title 27 and sections 38.05.185–.275 of the Alaska Statutes; set aside land as refuges under sections 16.20.010–.080 of the Alaska Statutes; and the other statutes discussed herein.

The second prong of the takings analysis is the economic impact of the regulation or legislation. This test is essentially an ad hoc, factual inquiry into the circumstances of a particular case.[261]

Here, the economic losses may include the expenditures by NDM and its partners to maintain their claims so as to pass the marketability test. These losses may range from the annual rental, pursuant to section 38.05.211 of the Alaska Statutes, to the total investments by NDM and its partners in maintaining their claims prior to the passage of the legislation.[262] Any compensable economic losses would not include a right to mine, the value of the mined metals, or lost profits because a state mining claim does not bestow on its possessor a right to mine.[263] In any event, "mere diminution in the value of property, however serious, is insufficient to demonstrate a taking."[264]

The last prong of a takings analysis requires an examination of whether further regulation, such as the regulations specified in House Bill 134, or the refuge compatibility test inherent in Senate Bill 67, were part of the

260. ALASKA CONST. art. VIII, § 6 ("Lands and interests therein, including submerged and tidal lands, possessed or acquired by the State, and not used or intended exclusively for governmental purposes, constitute the state public domain. The legislature shall provide for the selection of lands granted to the State by the United States, and for the administration of the state public domain.").

261. *See, e.g.*, Kaiser Aetna v. United States, 444 U.S. 164, 175 (1979).

262. NDM claims to have invested $180 million since 2002 in exploring the mineral potential of the Pebble project. NDM, IMPORTANT NEW MINERAL DEPOSIT, *supra* note 1.

263. *See* Beluga Mining Co. v. Dep't of Natural Res., 973 P.2d 570, 575 (Alaska 1999) (stating that mining claim provides no right to mine). As a legal matter, the Supreme Court of the United States has emphasized that "[t]he loss of future profits . . . provides a slender reed upon which to rest a takings claim." Andrus v. Allard, 444 U.S. 51, 66 (1979). "Prediction of profitability is essentially a matter of reasoned speculation that courts are not especially competent to perform." *Id.* "Further, perhaps because of its very uncertainty, the interest in anticipated gains has traditionally been viewed as less compelling than other property-related interests." *Id.* This is especially true regarding the speculative profits of modern mining concerns that routinely vary their production levels, or even cease operations temporarily, in response to changes in market conditions and technology.

264. Concrete Pipe & Prods. of Cal., Inc. v. Constr. Laborers Pension Trust for S. Cal., 508 U.S. 602, 645 (1993).

investment-backed expectations of the property owner. The investment-backed expectations of a mining enterprise include the possibility of government regulation, and revisions to those regulations, because mining is always contingent on state permission.[265] Many takings challenges have failed on the ground that, while the government action caused economic harm, it did not interfere with interests that were sufficiently bound up with the reasonable expectations of the claimant to constitute "property" for Fifth Amendment purposes.[266]

Where an entity that is already subject to government regulation claims that further regulation constitutes a taking, a court is likely to reject the claim on the grounds that further regulation was part of the company's investment-backed expectations.[267] After all, "[g]overnment hardly could go on if to some extent values incident to property could not be diminished without paying for every such change in the general law."[268]

NDM and its partners invested in the Pebble Mine with the expectation that their mining activities would be regulated by, *inter alia*, DNR permitting statutes, the Anadromous Fish Act, the Fishway Act, and the

265. *See Beluga Mining Co.*, 973 P.2d at 575–76. On federal public lands, for example, any right in a mining claim is contingent upon compliance with applicable environmental and other regulatory requirements. 30 U.S.C. § 22 (2006) (stating that staking and patent of mineral claims on federal land must comply with all federal regulations). *See, e.g.*, Reeves v. United States, 54 Fed. Cl. 652, 672–73 (2002) (finding no taking where miners holding unpatented mining claims on federal land designated as wilderness study area were forced to comply with non-impairment standard); Clouser v. Espy, 42 F.3d 1522, 1529–30 (9th Cir. 1994) (mining operations must comply with Forest Service regulations to protect forest resources).

266. Penn Cent. Transp. Co. v. City of New York, 438 U.S. 104, 125–26 (1978) (citations omitted).

267. *Concrete Pipe & Prods.*, 508 U.S. at 645 (citation omitted). *See also* Usery v. Turner Elkhorn Mining Co., 428 U.S. 1, 16 (1976) (stating that legislation readjusting rights and burdens is not unlawful solely because it upsets otherwise settled expectations).

268. Pennsylvania Coal Co. v. Mahon, 260 U.S. 393, 413 (1922). Zoning laws are the classic example. *See* Gorieb v. Fox, 274 U.S. 603, 608 (1927) (providing requirement that portions of parcels be left un-built); Euclid v. Ambler Realty Co., 272 U.S. 365 (1926) (providing a prohibition of industrial use); Welch v. Swasey, 214 U.S. 91 (1909) (providing height restrictions). The Court has viewed these and other regulations as permissible governmental action even when they prohibited the most beneficial use of the property. *See Penn Cent.*, 438 U.S. at 125. Takings challenges have also been held to be without merit in a wide variety of situations where the challenged governmental actions "prohibited a beneficial use to which individual parcels had previously been devoted and thus caused substantial individualized harm." *Id.* at 125–26 (citing Miller v. Schoene, 276 U.S. 272 (1928)).

federal Clean Water Act.[269] The Kvichak and Nushagak drainages are historically important to commercial, subsistence, and recreational fishing. Hence, a developer of a massive, sulfide mineral deposit in these drainages should reasonably expect the possibility that the legislature would implement stricter statutory standards to protect these fisheries. A mine developer also would expect procedural reforms, such as adoption of a "precautionary approach" in legislation, or other suggestions discussed herein, that would refine the mine permitting process to further protect the Bristol Bay drainages and the valuable fisheries they support.[270]

In a mining venture, a reasonable investment-backed expectation would be that permission to mine might not be granted.[271] Where government approval is required but not assured for a project, any investment in that project is akin to a business gamble.[272] "A mere unilateral expectation or an abstract need" is not a property interest entitled to protection.[273]

By the time Anglo American entered into its partnership with Northern Dynasty, legislators had already introduced Senate Bill 67 and House Bill 134.[274] That the state might establish a refuge, or further protect water, must have been within the investment-backed expectations of the Pebble Partnership. Those who do business in a regulated field cannot object if the legislative scheme is buttressed by subsequent legislation or regulation.[275]

---

269. *See* Clean Water Act, § 402(b), 33 U.S.C. § 1342(b) (2000) (providing for the National Pollutant Discharge Elimination System); *see also* Clean Water Act § 404, 33 U.S.C. 1344 (2000) (providing for wetland dredge and fill program).

270. *See* United States v. Locke, 471 U.S. 84, 107–08 (1985) (stating that newly enacted requirements mandating that the claimants timely register prior mining claims and forfeit their claims upon failure to comply do not "take" the claims of those who fail to comply).

271. Beluga Mining Co. v. Dep't of Natural Res., 973 P.2d 570, 575–76 (Alaska 1999).

272. Anchorage v. Sandberg, 861 P.2d 554, 560 (Alaska 1993) (finding that developer who purchased land and planned housing development did not have reasonable expectations that the city government would fund access road, water, and sewer).

273. Webb's Fabulous Pharmacies, Inc. v. Beckwith, 449 U.S. 155, 161 (1980) (citing, e.g., *Penn Cent.*, 438 U.S. at 122); Dep't of Natural Res. v. Arctic Slope Regional Corp., 834 P.2d 134, 140 (Alaska 1991) (quoting Ruckelshaus v. Monsanto Co., 467 U.S. 986, 1005 (1984)).

274. *See* Advance Pebble Project to Production, *supra* note 2; S.B. 67, 2007 Leg., 25th Sess. (Alaska 2007); H.B. 134, 2007 Leg., 25th Sess. (Alaska 2007). Mitsubishi also bought into NDM after Senate Bill 67 and House Bill 134 were introduced. *See supra* note 1.

275. Concrete Pipe & Prods. of Cal., Inc. v. Const. Laborers Pension Trust for S. Calif., 508 U.S. 602, 645 (1993).

NDM and its partners claim they have invested large sums in the Pebble mine.[276] If these investors invested in the Pebble Mine with the expectation that the state would approve their plans to develop the mine, their economic losses would have been based on a "mere unilateral expectation" and would not be property interests entitled to constitutional protection.[277] In other words, these investments would have been a business gamble.[278]

Because the reasonable, investment-backed expectations of NDM and its partners were that the Pebble Mine might be subject to further regulation, NDM and its partners have no constitutionally protected interest for which they must be compensated should House Bill 134 or Senate Bill 67 be enacted into law.

VII. CONCLUSION

Heightened regulation is necessary to protect the Bristol Bay drainages and the valuable commercial, subsistence, and recreational fisheries from the risks posed by the Pebble Mine. House Bill 134 and Senate Bill 67 attempt to provide that protection, but such legislation must survive takings challenges by the mine proponents. Nonetheless, government regulation was part of the investment-backed expectations of Northern Dynasty Minerals and its partners. From the start, they had no right to mine these claims, which are on state land, because that "right" was always contingent on the state granting them permission to mine. Thus, if the Alaska Legislature enacts legislation to impose new regulatory constraints on metallic sulfide mining in the Bristol Bay drainages, its actions would not constitute a taking of property for which the state would be required to compensate the owners of the Pebble Mine claims.

276. NDM claims to have invested $180 million since 2002 in exploring the mineral potential of the Pebble project. NDM, IMPORTANT NEW MINERAL DEPOSIT, *supra* note 1.

AGENDA

Monday, March 11, 2009

Overview: Alaska's Oil and Gas Fiscal Design

Pat Galvin, Commissioner of Revenue

Rich Ruggiero, Gaffney, Cline & Associates, Inc., Administration consultants

Gas Production Tax Overview

March 11, 2009

Alaska Department of Revenue

Purpose of Overview

- Demonstrate Legitimacy of Existing Gas Fiscal System
  - Is Well Crafted to Protect State Revenues, Incentivize North Slope Gas Commercialization, and Provide Stability for the State and all Gas Producers
- Establish a Framework for Continuing Discussion of Gas Fiscal System
  - Moving toward Open Season(s), Administration and Legislature must continue discussions on appropriateness of gas fiscal system

- Rich Ruggiero Presentation

Gas Production Tax Summary

- As Evidenced by Analysis for both ACES and AGIA, Existing Gas Fiscal System is Reasonable and Appropriate
  - Protects State Revenues before and after North Slope Gas Commercialization
  - Provides Strong Incentives to North Slope Gas Producers to Commercialize North Slope Gas
  - Results in Strong Economic Returns for Gas Pipeline Participants
- Before the State Considers Changes to the Fiscal System, it is Incumbent on Producers to Demonstrate Why Changes are Needed to the Existing Fiscal System

ACES, Progressivity and Natural Gas Development

Senate Resources Committee

11 March 2009

Goals for Fiscal Design from the ACES Special Session Nov 2007

- **Based on comments during the ACES special session GCA saw the State trying to achieve the following:**
  1. Fields with larger **profitability** should be paying **more** taxes
  2. Encourage investment in existing units
     - Reinvestment in producing assets
     - Investment in new developments
       - ❖ Conventional
       - ❖ Unconventional (i.e. heavy oil)
       - ❖ **Gas**

  3. Encourage new investment outside legacy units
     - Level playing field for incumbents and new entrants
  4. Durability
     - Don't want to be back 'fixing' things
  5. Build on prior tax dialogue

ACES Tutorial - Oil

- **ACES is a production tax on producer cash flow**
  - Market Price (e.g. ANS WC)
    - Less Transportation (TAPS & Shipping)
  - Unit value
    - Less Royalty
    - Less Operating Expense
    - Less Capital Expense
  - Producer Cash Flow
    - Less production tax (ACES)
    - Less income tax (State and Federal)
  - Producer Profit

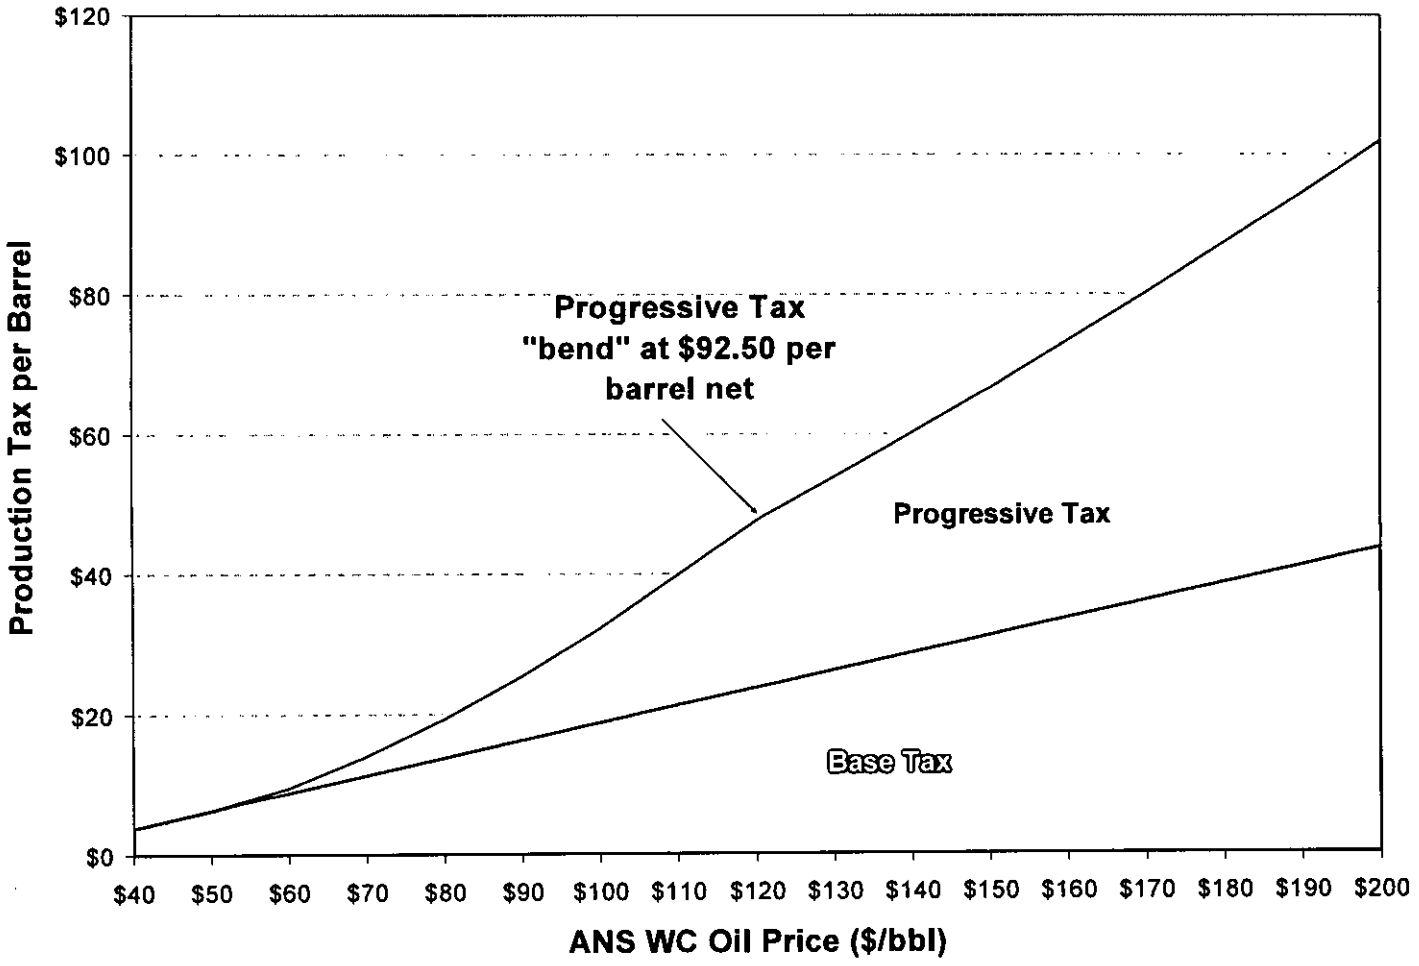
ACES Tutorial - Gas

- **ACES is a production tax on producer cash flow**
  - Market Price ***(e.g. AECO Hub or US City Gate)***
    - Less Transportation ***(Processing & Pipelines)***
  - Unit value
    - Less Royalty
    - Less Operating Expense
    - Less Capital Expense
  - Producer Cash Flow
    - Less production tax (ACES)
    - Less income tax (State and Federal)
  - Producer Profit

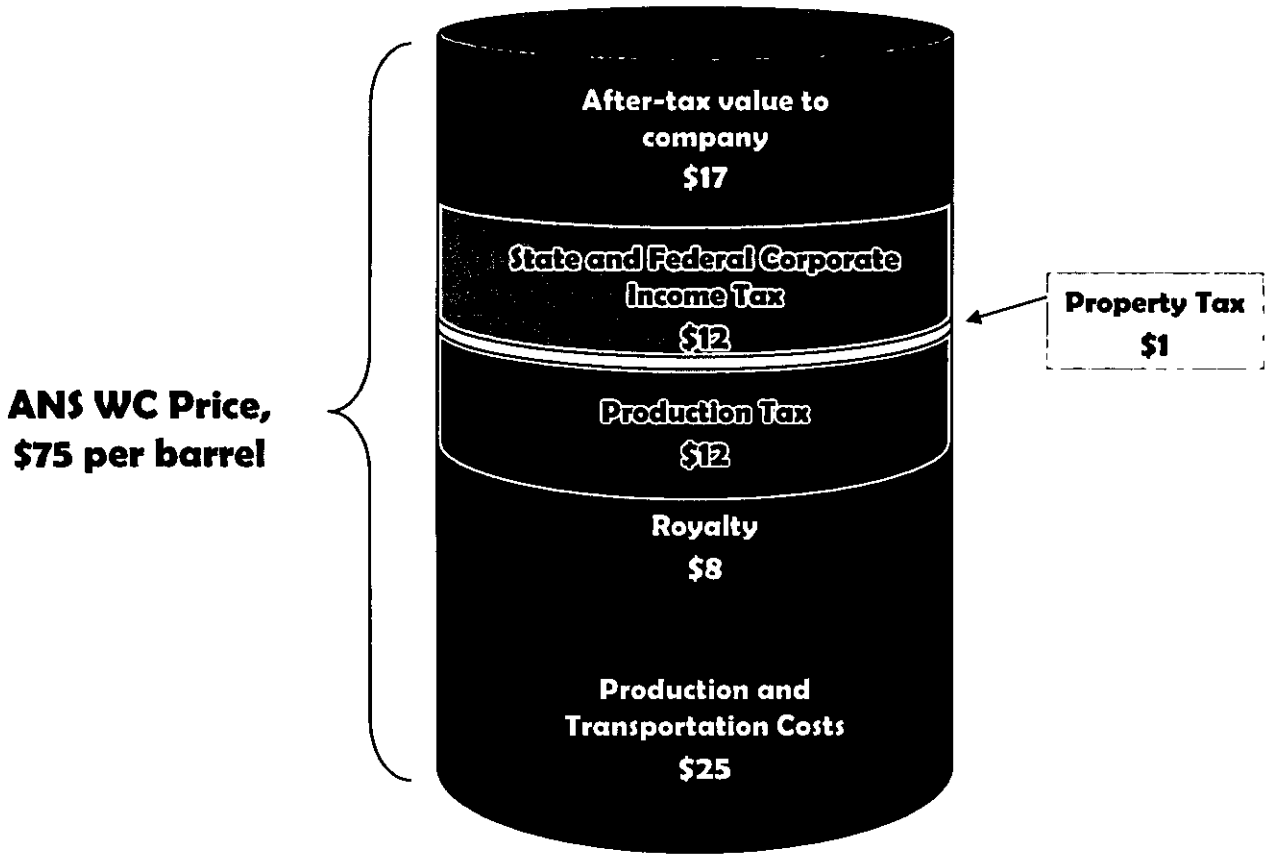
ACES Tutorial – Tax Rate

- **Producer Cash Flow**
  - Base Rate
    - For Cash Flow > $0/bbl, base rate is 25%
  - 1st Progressivity
    - For Cash Flow > $30/bbl but < $92.5/bbl the progressivity tax is 0.4% for every $1/bbl above $30/bbl
    - At $92.5/bbl total production tax is 50%
  - 2nd Progressivity
    - For Cash Flow > $92.5/bbl the progressivity tax is 0.1% for every $1/bbl above $92.5/bbl

ACES Production Tax

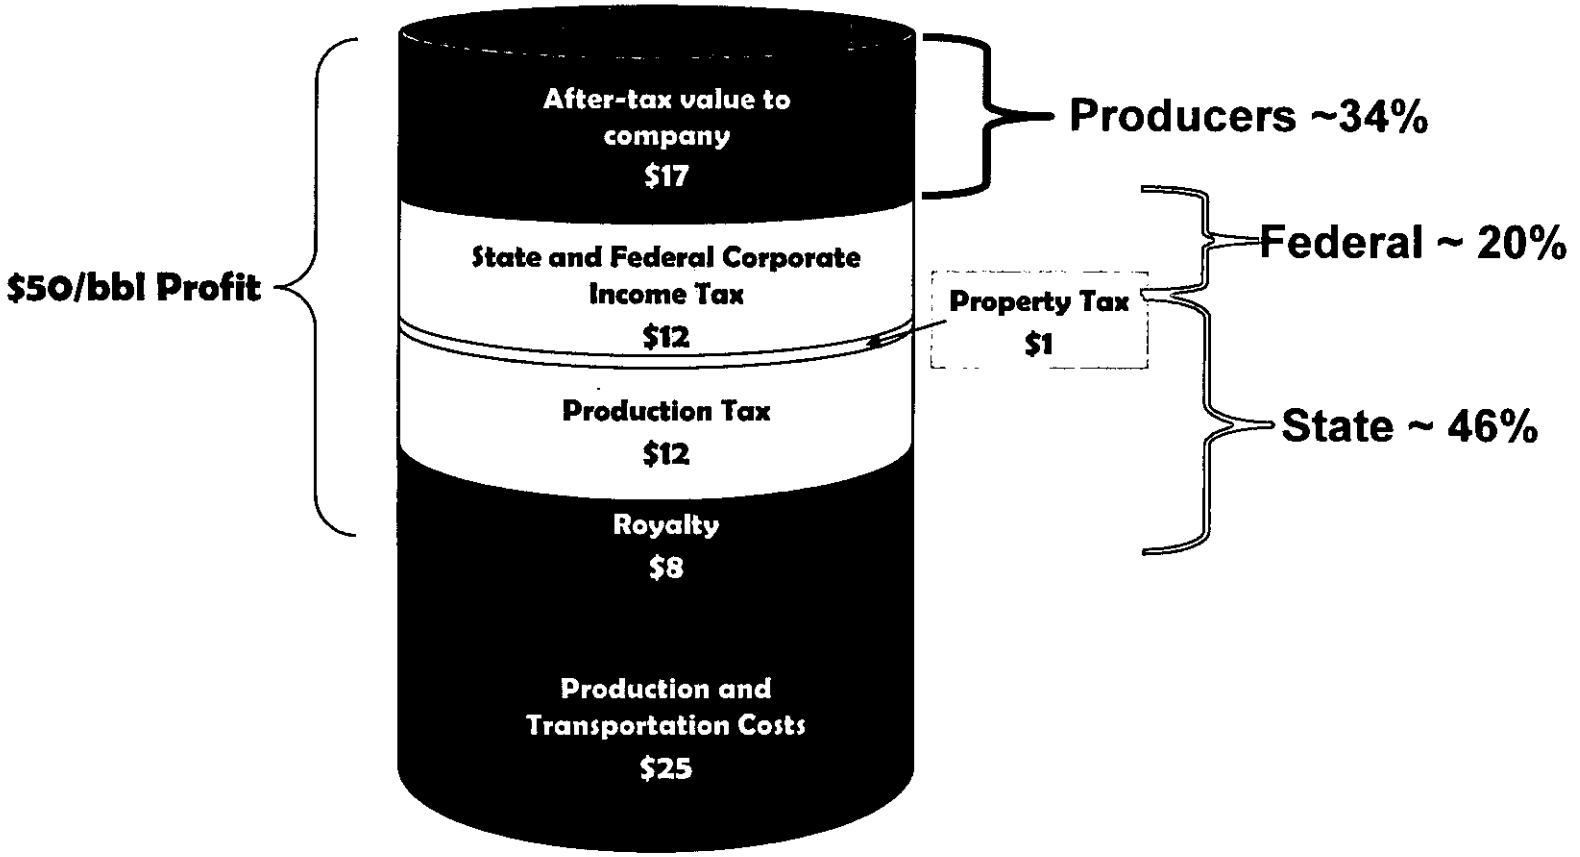


How a $75 Barrel of Alaska North Slope Oil is Allocated*



*This graphic assumes average transportation and production costs and royalty and tax rates, and is not intended to represent the allocation of every barrel produced on the North Slope.

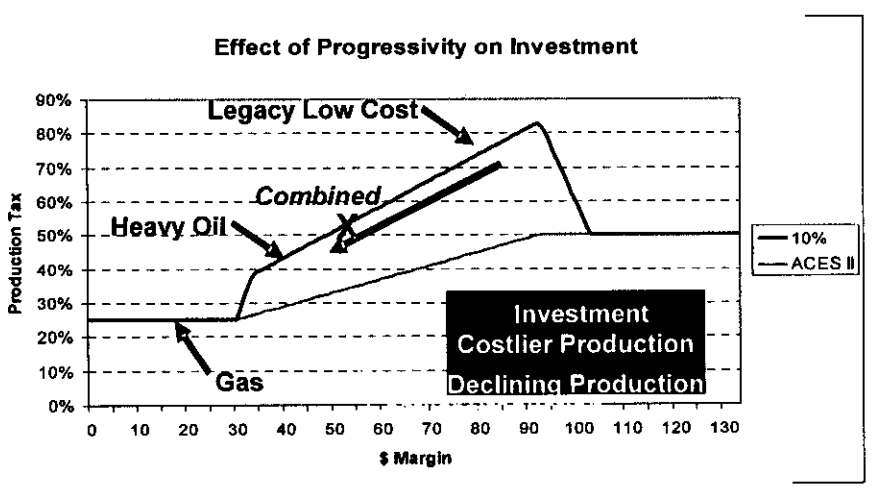
How a $75 Barrel of Alaska North Slope Oil is Allocated*

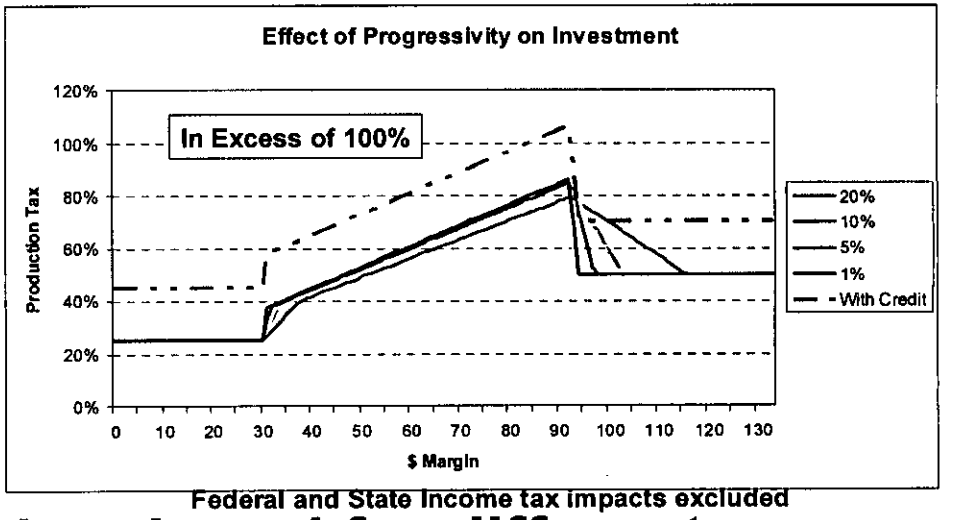


*This graphic assumes average transportation and production costs and royalty and tax rates, and is not intended to represent the allocation of every barrel produced on the North Slope.

Encourage Investment in Existing Units

- **The effective "marginal" rate being greater than the "absolute" rate was evaluated and presented to several committees**



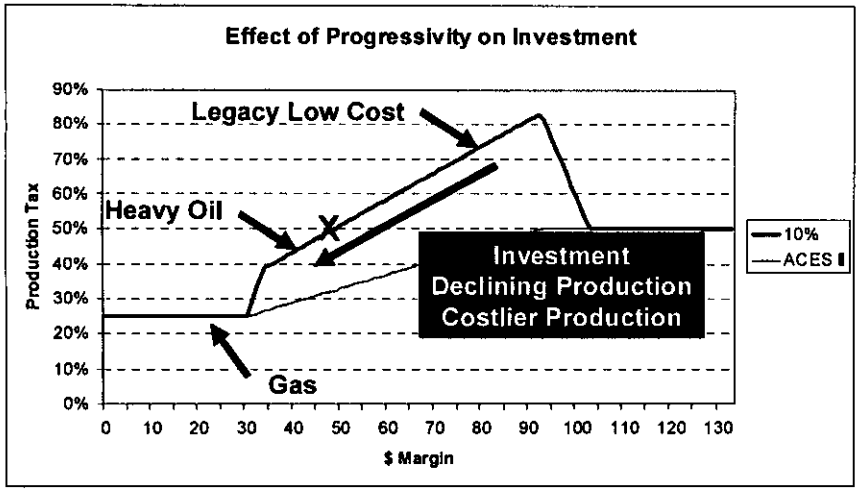


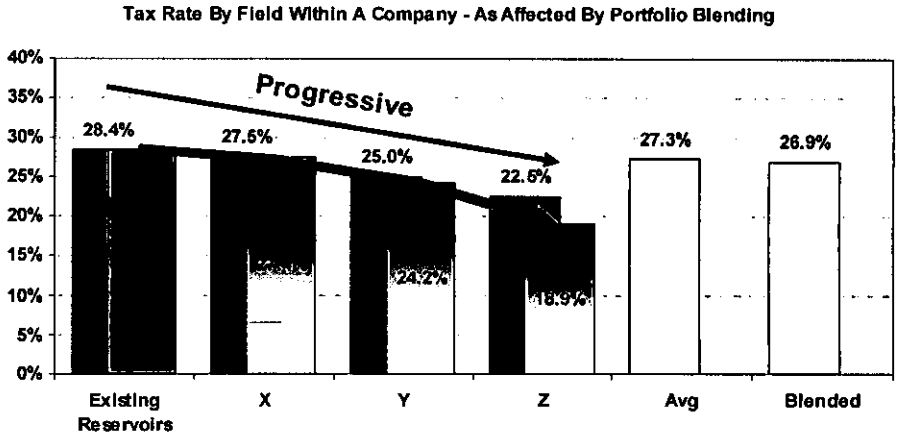
Federal and State Income tax impacts excluded

- **It was also evaluated and reviewed for different levels of investment tax credits and different levels of cash flow reinvestment**

Cross Subsidies and "Less Tax"

- **The cross subsidy issue caused by progressivity was also discussed at great length and it was shown how under certain circumstances the "effective" rate of tax on a higher cost / lower profitability development (such as gas or heavy oil) could be lower than the base rate**





- **It was also noted that any evaluation involved many commercial and economic parameters that would need to be evaluated across a range of expected values**

How big is the "Subsidy"?

- **The degree of "subsidy" is impacted by a number of variables, such as:**
  - Relative volumes of high/low value production
  - Oil/gas price parity
  - Quality adjustments
  - Any "loss" of production by lowering reservoir pressure to produce and sell gas
  - Any "gain" in production by extending the life of facilities and pipelines by bringing on new production and pushing forward in time operating economic limits
- **Single day or single year 'snapshots' can be misleading**

Oil/Gas Parity

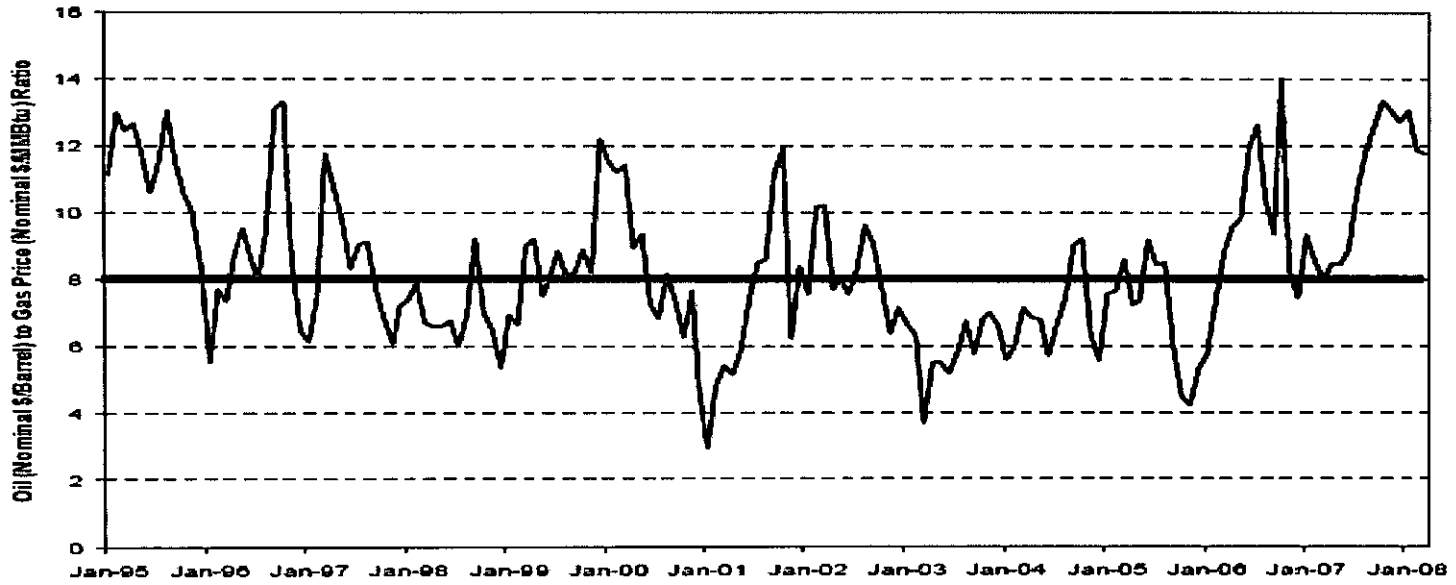
- **What is meant by oil/gas parity?**
  - On average a barrel of oil contains as much energy or heating value as 6,000 cubic feet of gas.
  - Since each cubic foot of gas has about 1000 Btu/cf then a barrel of oil is equivalent to 6 million Btu or 6 MMBtu

- **If priced at parity the oil price in $/bbl divided by 6 would equal the gas price in $/MMBtu**
  - For example, at $60/bbl the natural gas would be at parity if it were priced at $10/MMBtu
  - As opposed to most of the rest of the world where gas is priced against oil, in the US gas prices fluctuate and average higher than 6:1

Pricing Parity is Key

- One way to predict the future is to look at the past
- Plot of US oil / gas price parity trading on average about 8:1

Figure 4-5. Historical Oil to Gas Price Ratio

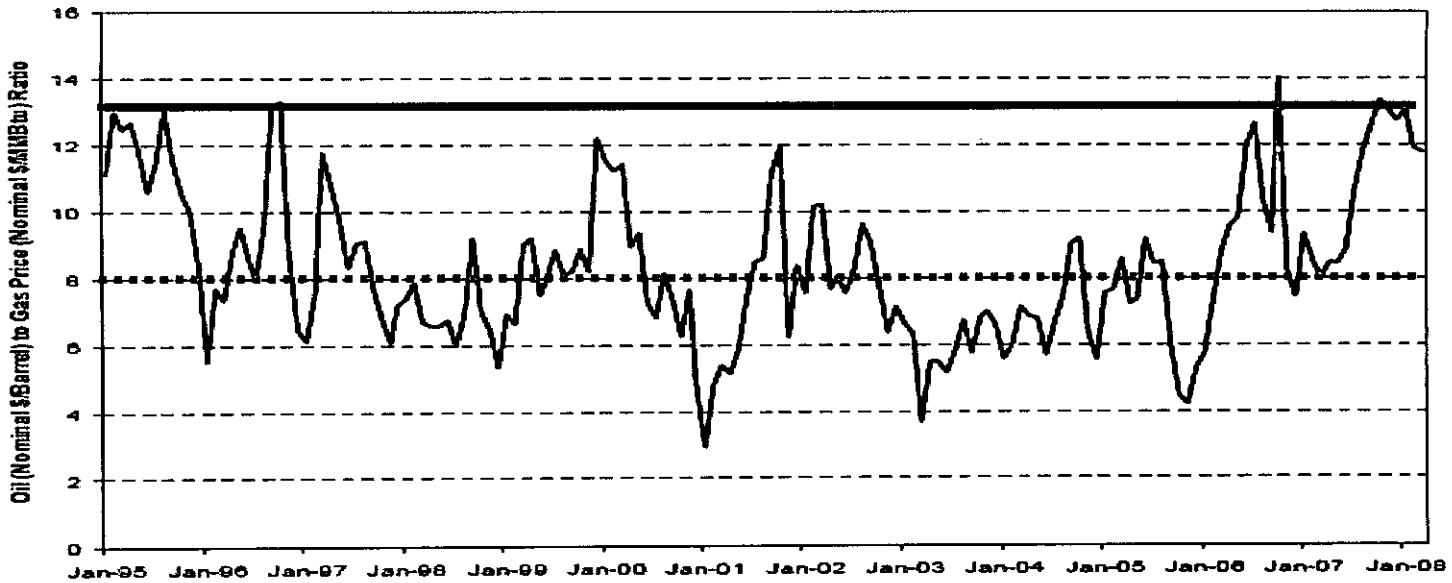


Source: Black and Veatch 2008, Appendix G1, Section 7.15.4.3

Pricing Parity is Key

- **Mr. Dickinson chose 13:1 price parity for his model**
- **This occurred <4% of the time in the last 14 years**

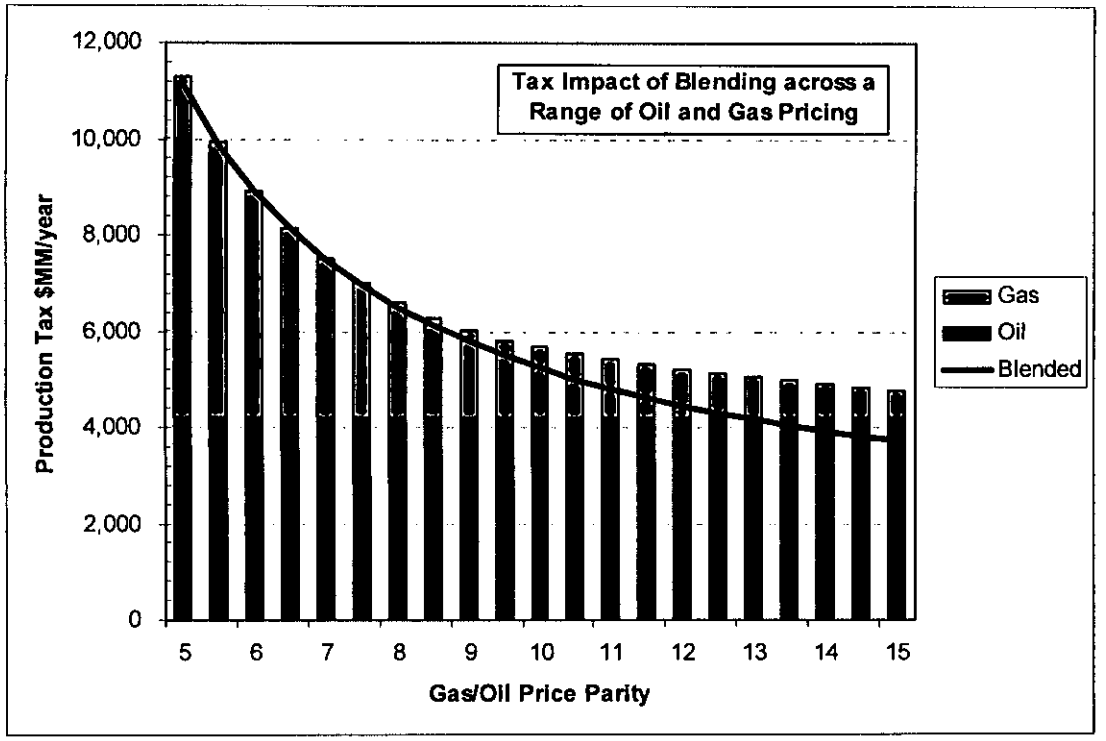
Figure 4-5. Historical Oil to Gas Price Ratio



Source: Black and Veatch 2008, Appendix G1, Section 7.15.4.3

"Subsidy" across range of values

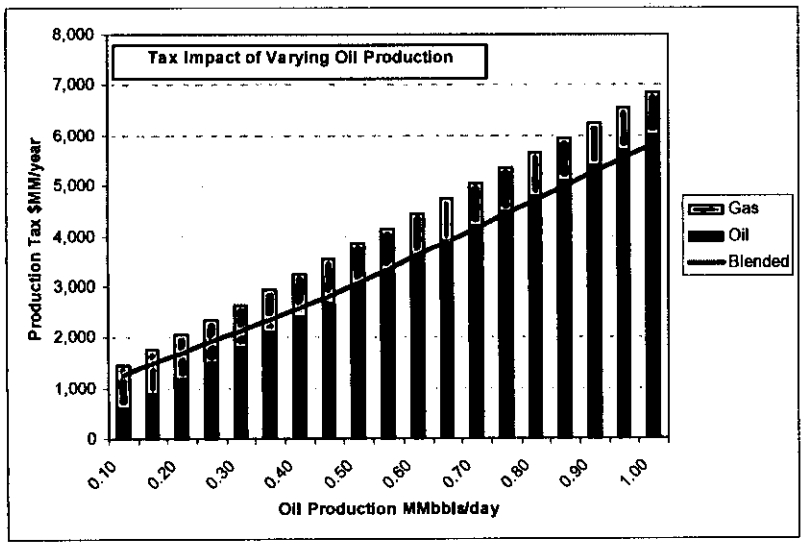
- **E.G. modifying the oil/gas price parity is revealing**

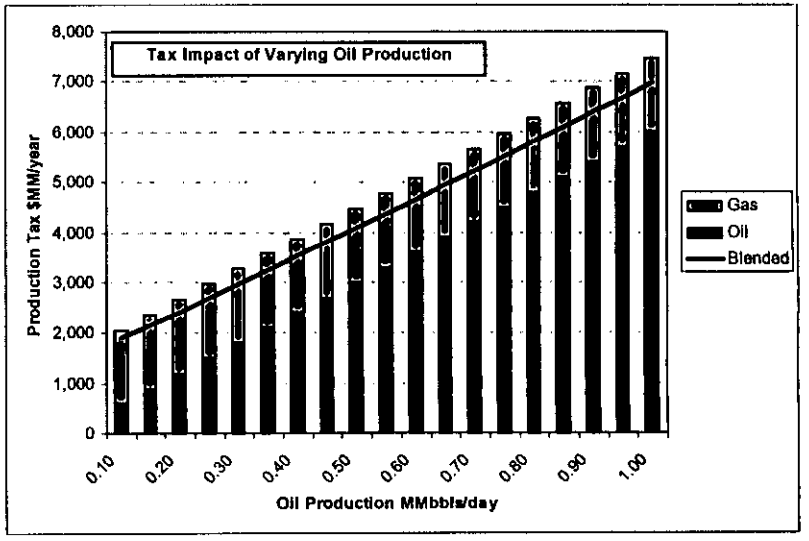


- **Green**
  Tax paid by existing oil
- **Red**
  Tax paid by standalone gas
- **Blue**
  The total tax paid under ACES with the progressivity impact

Impact of Varying Production and Price Parity Ratios

- Gas at 4.2 bcf/d and Oil at $80/bbl
- Left prices 13:1 and on the right prices 10:1





- At 10:1, the issue of pay less overall taxes goes away. At the long-range expectation of prices at 8:1, paying "less" taxes is a non-issue

Goals for Fiscal Design from the ACES Special Session Nov 2007

- **Based on comments during the ACES special session GCA saw the State trying to achieve the following:**

1. ✓ Fields with larger **profitability** should be paying **more** taxes
2. ✓ Encourage investment in existing units
   - Reinvestment in producing assets
   - Investment in new developments
     - ❖ Conventional
     - ❖ Unconventional (i.e. heavy oil)
     - ✓ **Gas**
3. Encourage new investment outside legacy units
   - Level playing field for incumbents and new entrants
4. ✓ Durability
   - Don't want to be back 'fixing' things
5. Build on prior tax dialogue

Summary

- A range of possible outcomes "caused" by ACES' structure was identified, reviewed and built into the final design of ACES to provide incentives to both existing SOA producers as well as new entrants

- During the AGIA special session economics showed that at the modeling parameters reasonable results could be obtained by all parties.

- Nobody has brought forth expected, likely or sustainable scenarios to show that ACES needs to be modified for gas development

  - Policy shift limiting access to lower 48 federal lands for non-renewable energy production?
  - First authoritative Arctic oil and gas assessment
  - Increased likelihood of carbon regulation

Economic 'Recession'

Jim Mulva, Chairman and CEO ConocoPhillips,
March 13, 2009 - *Petroleumworld.com*

"Costs are coming down pretty dramatically," (Mulva) said. "When we say defer, we're not talking years, we're talking months, quarters, maybe up to a year."

Speaking about the Denali Alaska gas pipeline project, proposed last June by ConocoPhillips and BP, Mulva said President Barack Obama has identified the 4 Bcf/d project as a means of reducing US dependence on foreign oil.

The pipeline would bring North Slope gas down to a pipeline in Alberta for transport to the Lower 48 states. "We know it's going to get far more federal attention," he said. "Obviously, Alaska would like to see it go."

Mulva repeated the partners plan a 2010 open season for gas deliveries; first gas deliveries are eyed for 2019.

While current gas prices have led ConocoPhillips to cut back on its Canadian operations, Mulva discounted the low prices as a roadblock to the pipeline project's development.

"You can't look at gas prices today," he said. "You have to look at prices 10 years from now."

CARA Gas Provinces

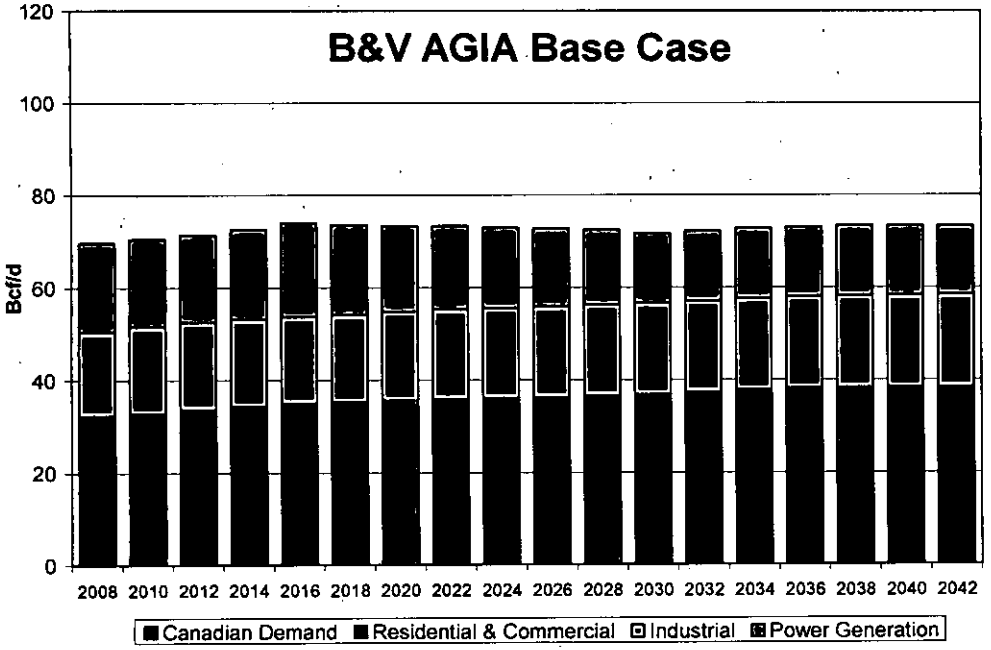
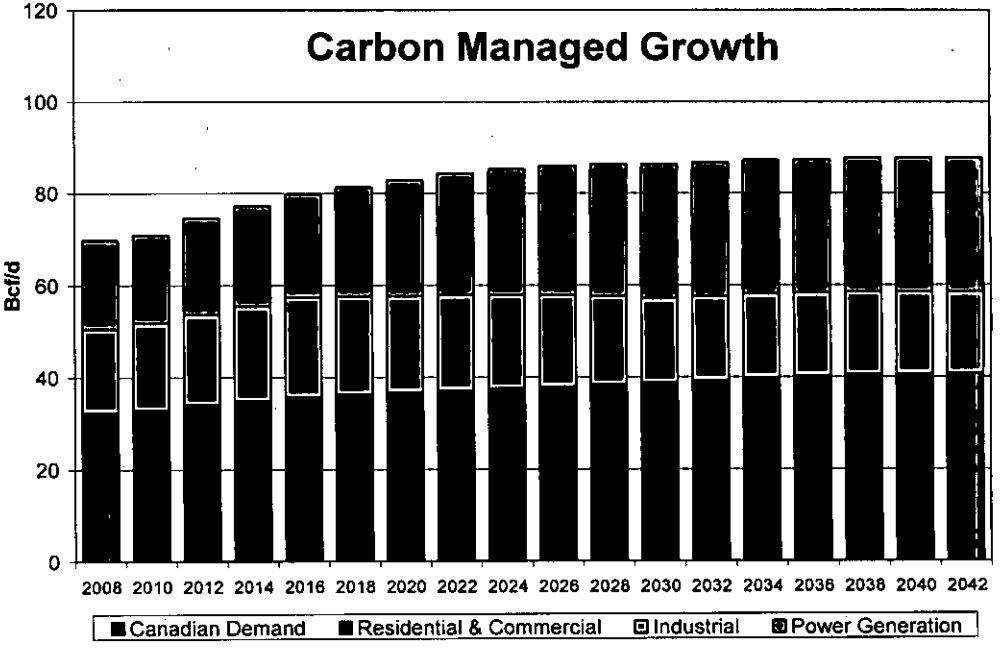
Impact of Carbon Regulation on Natural Gas Demand

AGIA
The Alaska Gasline Inducement Act

In a Carbon Managed Growth case, demand is 14 Bcf/d more than the B&V AGIA Base Case

- Policies and legislations designed to curb Green House Gas could reduce dispatch and construction of coal-fired generation facilities in favor of natural gas fired facilities, resulting in demand increase from the power sector in the US
- All resources, including renewables, nuclear and IGCC with CCS and gas fired combined cycles are all needed to meet electric demand growth. Gas demand from the power sector will grow from 19 Bcf/d in 2008 to 29 Bcf/d by 2030, with a CAGR of 2%
- Total demand in US lower 48 states is 12.1 Bcf/d higher than BV's AGIA Base Case by 2042. Canada demand is 2.3 Bcf/d higher in the Carbon Managed Growth case





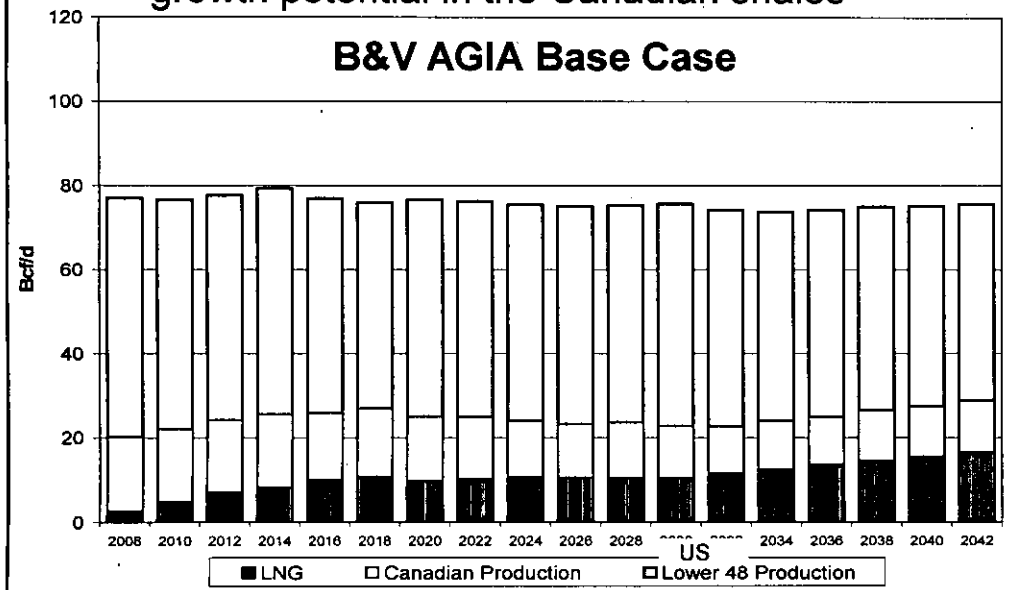
Source: Black & Veatch Analysis

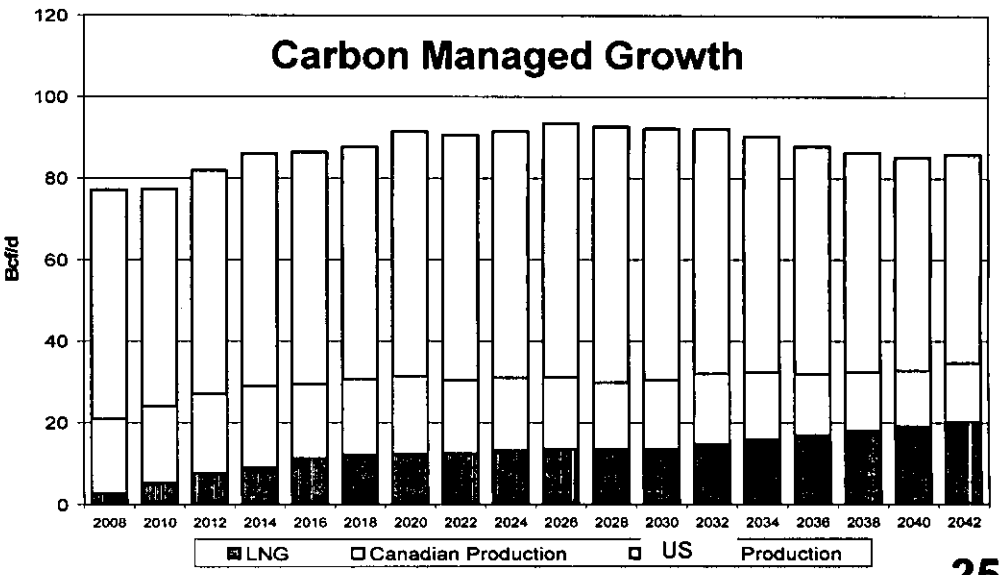
Multiple Different Sources of Natural Gas will be Needed to Meet Lower 48 Demand Growth

AGIA
The Alaska Gasline Inducement Act

Additional LNG imports and more unconventional productions from the US is necessary in order to meet the lower 48 demand growth

- Additional LNG imports will be needed to meet the demand growth; 6.4 Bcf/d by 2042 in the Carbon Managed Growth scenario
- US Production will average 58.3 Bcf/d from 2022-2042 in the Carbon Managed Growth case, which will be 7.8 Bcf/d higher than the B&V AGIA Base Case. Recent developments in shale discoveries in Haynesville and Marcellus indicate greater production potentials from these unconventional resources. The production growth can be considered as a proxy.
- Canadian production continues to decline in both cases. In the Carbon Managed Growth case, Canadian production is 3.7 Bcf/d higher than in the B&V AGIA Base Case, which may approximately reflect the growth potential in the Canadian shales



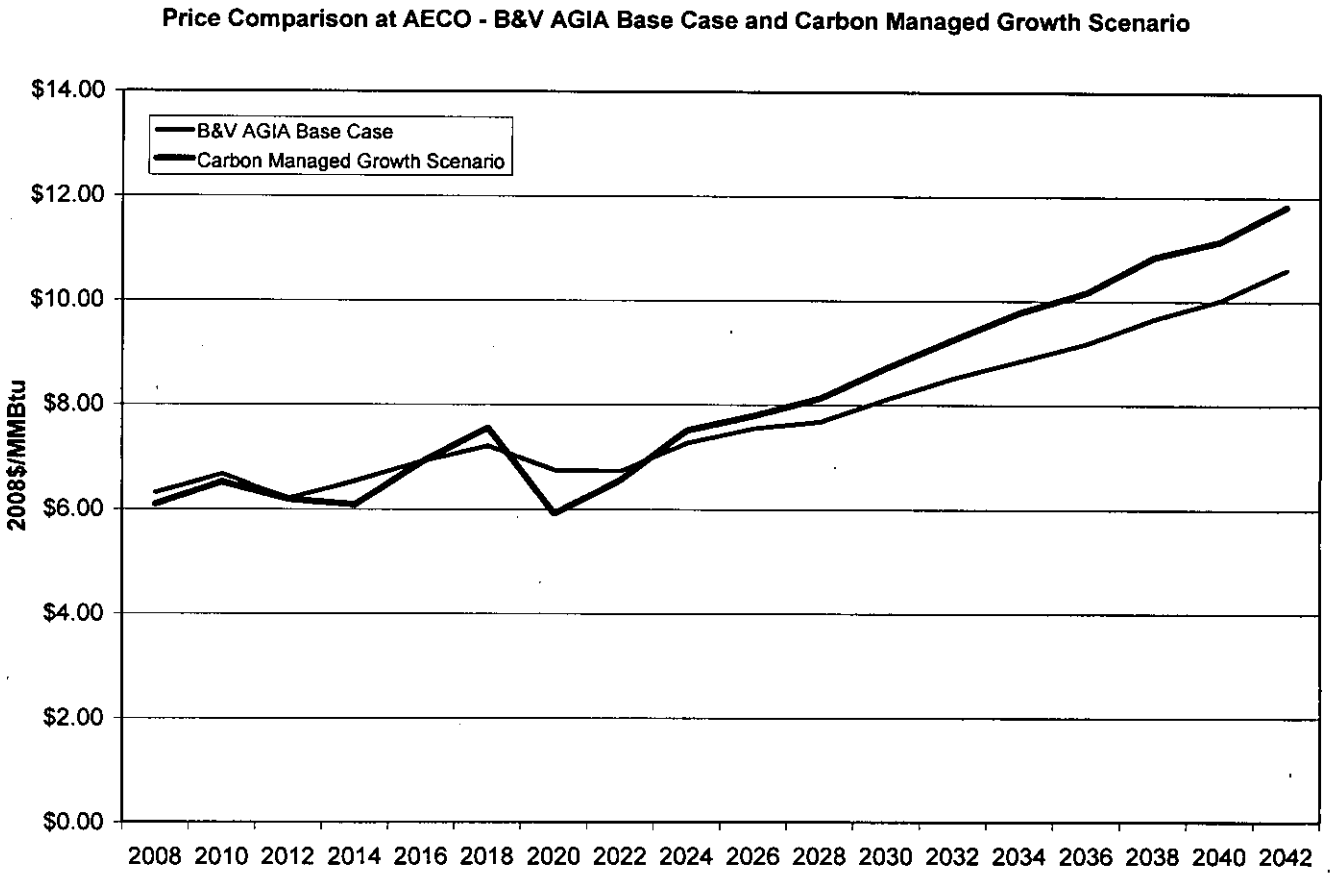


Source: Black & Veatch Analysis

Impact of Carbon Regulation on AECO Price Forecasts

AGIA
The Alaska Gasline Inducement Act

- The Carbon Managed Growth case has sufficient supplies from North America to meet the high demand from both unconventional production and slightly higher additional LNG volumes
- North American gas price is projected to have a higher price path than in the AGIA base case



Source: Black & Veatch Analysis

USGS/EIA

The USA Today

AGIA
The Alaska Gasline Inducement Act

- How have things changed since the legislature approved the AGIA license?
  - Global economic downturn with associated rapid decline in oil and gas prices
  - Rapid expansion of unconventional (shale) gas supplies in USA
  - Policy shift limiting access to lower 48 federal lands for non-renewable energy production?
  - First authoritative Arctic oil and gas assessment
  - Increased likelihood of carbon regulation

Economic 'Recession' AGIA

The Alaska Gasline Inducement Act

Jim Mulva, Chairman and CEO ConocoPhillips,
March 13, 2009 - *Petroleumworld.com*

"Costs are coming down pretty dramatically," (Mulva) said. "When we say defer, we're not talking years, we're talking months, quarters, maybe up to a year."

Speaking about the Denali Alaska gas pipeline project, proposed last June by ConocoPhillips and BP, Mulva said President Barack Obama has identified the 4 Bcf/d project as a means of reducing US dependence on foreign oil.

The pipeline would bring North Slope gas down to a pipeline in Alberta for transport to the Lower 48 states. "We know it's going to get far more federal attention," he said. "Obviously, Alaska would like to see it go."

Mulva repeated the partners plan a 2010 open season for gas deliveries; first gas deliveries are eyed for 2019.

While current gas prices have led ConocoPhillips to cut back on its Canadian operations, Mulva discounted the low prices as a roadblock to the pipeline project's development.

"You can't look at gas prices today," he said. "You have to look at prices 10 years from now."

AGIA
The Alaska Gasline Inducement Act

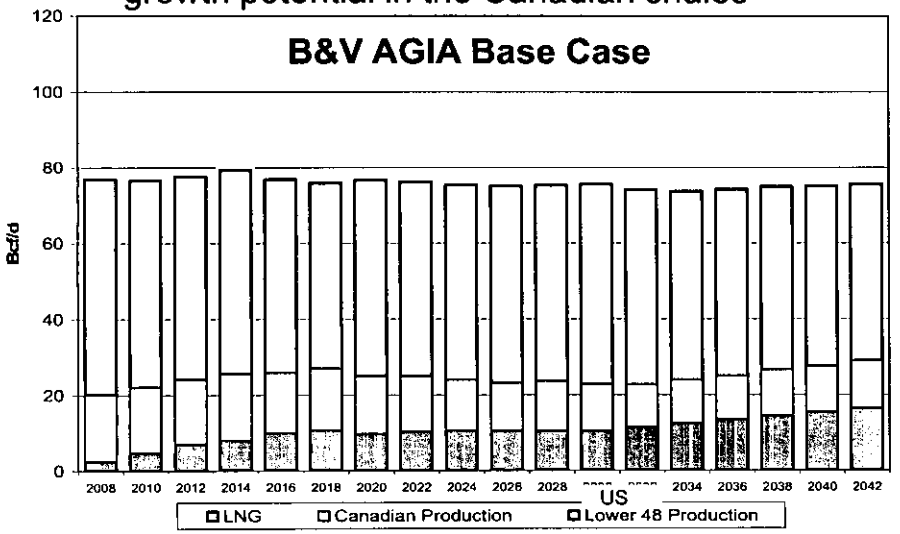
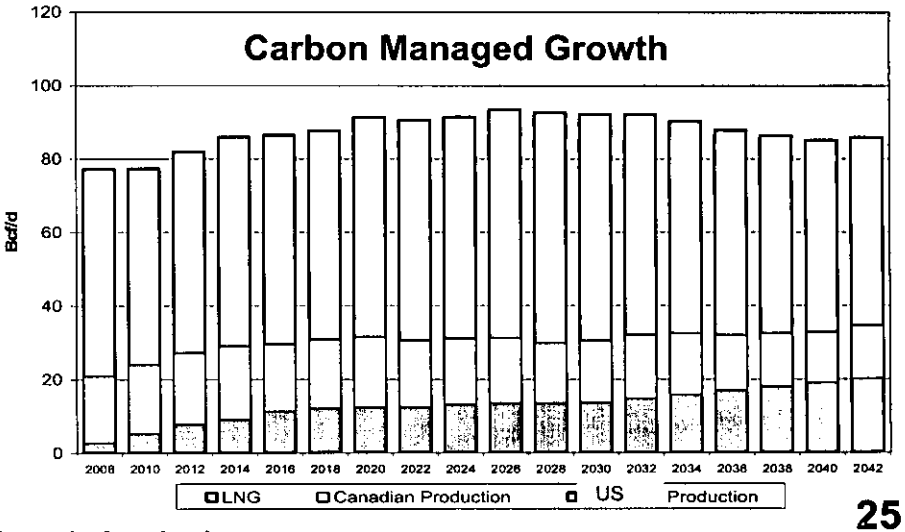
Additional LNG imports and more unconventional productions from the US is necessary in order to meet the lower 48 demand growth

- Additional LNG imports will be needed to meet the demand growth; 6.4 Bcf/d by 2042 in the Carbon Managed Growth scenario
- US Production will average 58.3 Bcf/d from 2022-2042 in the Carbon Managed Growth case, which will be 7.8 Bcf/d higher than the B&V AGIA Base Case. Recent developments in shale discoveries in Haynesville and Marcellus indicate greater production potentials from these unconventional resources. The production growth can be considered as a proxy.
- Canadian production continues to decline in both cases. In the Carbon Managed Growth case, Canadian production is 3.7 Bcf/d higher than in the B&V AGIA Base Case, which may approximately reflect the growth potential in the Canadian shales





Source: Black & Veatch Analysis

Impact of Carbon Regulation on AECO Price Forecasts

AGIA
The Alaska Gasline Inducement Act

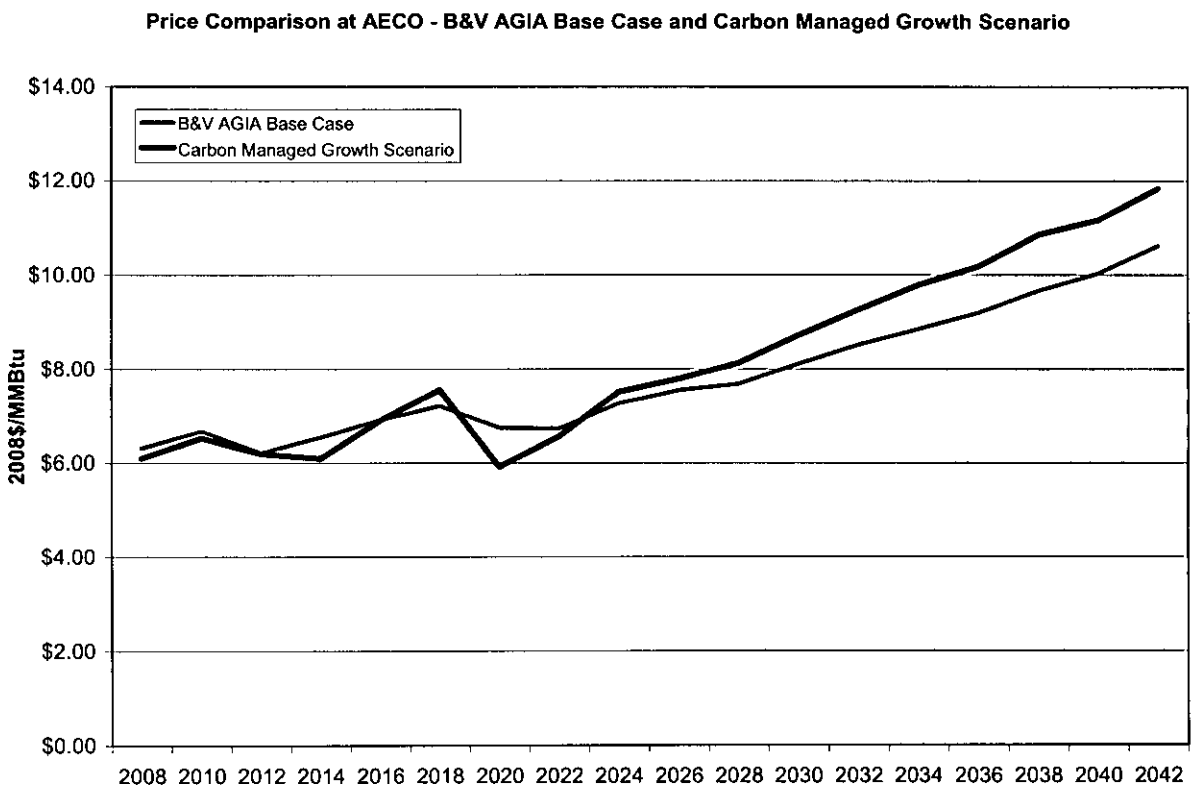
- The Carbon Managed Growth case has sufficient supplies from North America to meet the high demand from both unconventional production and slightly higher additional LNG volumes
- North American gas price is projected to have a higher price path than in the AGIA base case



Source: Black & Veatch Analysis

Liquid Natural Gas (LNG) Imports

AGIA
The Alaska Gasline Inducement Act

LNG import volumes have experienced little net change since the legislature approved the AGIA license

Total US LNG Import Volumes

July 2008:	31,019 mmcf
December 2008:	30,708 mmcf

UNITED STATES DEPARTMENT OF TRANSPORTATION
Pipeline and Hazardous Materials Safety Administration

Hearing on

The Overview and Update of Federal and State Agencies with Pipeline Oversight Responsibilities

Before the
Senate Resources Committee of the
Alaska State Legislature

Written Statement of the
U.S. Department of Transportation

2268

WRITTEN STATEMENT
OF
DENNIS HINNAH, DEPUTY DIRECTOR, WESTERN REGION,
PIPELINE AND HAZARDOUS MATERIALS SAFETY ADMINISTRATION
U.S. DEPARTMENT OF TRANSPORTATION
BEFORE THE
SENATE RESOURCES COMMITTEE
ALASKA STATE LEGISLATURE

March 25, 2009

INTRODUCTION

Co-Chairs McGuire and Wielechowski and members of the Committee, thank you for the invitation to appear today. I am pleased to discuss the actions of the Department of Transportation's Pipeline and Hazardous Materials Safety Administration (PHMSA) in overseeing the safe operation of pipelines in the State of Alaska.

PHMSA is the Federal agency that is responsible for the development and enforcement of pipeline safety regulations for natural gas and hazardous liquid transmission and distribution pipelines, as well as liquefied natural gas (LNG) facilities throughout the country. PHMSA does not currently regulate production facilities on the North Slope because we do not have authority. However, in Alaska, PHMSA does regulate and inspect interstate and intrastate gas transmission pipelines, hazardous liquid pipelines, gas distribution systems and LNG facilities. The hazardous liquids subject to our regulations include crude oil and refined petroleum products.

Ensuring the safety of 2.3 million miles of pipeline in the country is an enormous task. Our State partners in the lower 48 oversee 90 percent of the pipeline mileage that require operator compliance with pipeline safety regulations, because the vast majority of pipelines are gas distribution pipelines. Alaska is an exception; it does not participate in our Federal/State pipeline safety program. The only other State that does not participate is Hawaii. PHMSA takes pipeline safety in Alaska very seriously. Since 2006, PHMSA increased its staff in Alaska in order to enhance our current capabilities and prepare for oversight of numerous proposed natural gas pipelines. In 2008, I accepted the position of Deputy Director for the office in Anchorage. The Alaska Office currently has four full-time engineer/inspectors, an administrative assistant and me.

PHMSA REGULATED PIPELINES IN ALASKA

PHMSA in Alaska is part of the Western Region, headquartered in Denver, Colorado. We work closely with pipeline owners and operators, the Joint Pipeline Office, the Petroleum Systems Integrity Office, the Office of the Federal Coordinator and other Federal and State regulators.

PHMSA regulates over 40 hazardous liquid and gas pipelines and LNG facilities in Alaska (see attached list and map). We use a risk-based approach to determine which pipelines to inspect each year. Some pipelines such as TAPS are inspected annually, and all pipelines are inspected at least every three years. We also investigate accidents and safety issues. For example, we have been the lead Federal agency investigating the 2006 BP Exploration (Alaska), Inc. (BPXA) spills from two North Slope Oil Transit Lines (OTLs).

After these incidents, we issued a Corrective Action Order (CAO) that eventually contributed to BPXA's decision to replace its Eastern and Western Operating Area OTLs. We conduct inspections that cover pipeline design, construction standards, integrity management, operator qualifications and drug and alcohol requirements. The inspections include document reviews, field inspections and interviews. In addition, we have a role in ensuring operator preparedness and response to any oil spills that may occur.

INCIDENT NOTIFICATIONS AND INVESTIGATIONS

Normally, PHMSA is notified of an incident by the pipeline owner or operator or by the National Response Center. PHMSA regulations require owners and operators to report certain types of incidents. For pipelines we do not regulate, sometimes our first notification is through the news media. For pipelines that we do regulate, however, we contact the pipeline operator and then inform other Federal and State agencies advising them of our findings. For pipelines such as the Trans-Alaska Pipeline System (TAPS), much of the coordination is handled through the Joint Pipeline Office (JPO). The JPO is a consortium of 11 Federal and State agencies to provide oversight of the TAPS and shares information on other pipelines in Alaska. For pipelines that we do not regulate, we usually stay informed by the State or Federal agency conducting the investigation. Based on what we learn, we may investigate independently or with others. In certain cases, we follow up our investigation with an enforcement action.

Examples of the more recent investigations that PHMSA has conducted include: the TAPS PS-9 fire in 2007; the January 15, 2009 incident where

natural gas was pushed into TAPS PS-1; the sinking of M/V Monarch near the Granite Point Platform on the same date; and the residential natural gas explosion on March 12, 2009 in Anchorage.

ENFORCEMENT

In the past three years, PHMSA has initiated several enforcement cases against pipeline operators in Alaska. These cases include CAOs issued to BPXA, Notices of Probable Violation issued to Alyeska and Enstar Natural Gas and additional cases against other operators. These cases are currently in various stages of our normal enforcement process.

In the course of conducting our duty of oversight for the BPXA CAO issued in the aftermath of the March 2006 North Slope oil spill, we have closely monitored the corrective actions the company is required to take, including the replacement of the failed OTLs.

RISK ASSESSMENTS ON THE NORTH SLOPE

PHMSA's Integrity Management (IM) regulations require operators to assess the risks their pipelines pose to High Consequence Areas and to develop programs to mitigate those risks. Pipelines such as TAPS, Alpine and Endicott have already completed this process, and we periodically review the continual updates they are required to make to their IM programs. Under our 2008 Low Stress rule, additional pipeline operators must develop IM programs. We are aware of the risk assessment programs the State of Alaska is performing, and we are committed to sharing certain integrity and risk

information with the State on the pipelines which we have pipeline safety jurisdiction. For example, we are in the process of providing certain PHMSA data and information to the Alaska Department of Environmental Conservation (ADEC) in support of their Alaska Risk Assessment (ARA) project efforts.

RISK-BASED APPROACH

The responsibility for safety rests first with the owners and operators of pipeline facilities. Our mission is to achieve and maintain the safe, environmentally sound and reliable operation of the nation's pipeline transportation system. This requires understanding the condition of the pipelines and assuring that operators take action to address any unsafe condition. We manage oversight based on risk and take a "systems approach" to setting priorities. We make full use of our statutory authority, including new tools provided by the Pipeline Safety Improvement Act of 2002, and the Pipeline Inspection, Protection, Enforcement and Safety (PIPES) Act of 2006. Our progress with the IM programs positioned us to take effective action when BPXA's low stress OTLs failed in Prudhoe Bay in March and August 2006.

Over the past eight years, PHMSA has designed and executed a risk-based systems approach to oversight of the national pipeline infrastructure. We undertook rulemaking projects on a risk prioritized basis, acting first on those parts of the infrastructure that posed the greatest risk to people and then the environment. To begin the program, we defined High Consequence Areas and mapped the locations, including areas unusually sensitive to

environmental damage, in the National Pipeline Mapping System. We have completed, and are implementing, regulations that provide integrity management-based protection for people and the environment that could be affected by a failure from high and low pressure hazardous liquid pipelines, as well as high pressure gas transmission pipelines.

Given the impact of the 2006 BPXA incidents, we were concerned about other immediate risks that could lead to a shutdown of the other feeder lines to TAPS. Acting upon this concern, we deployed a team to update our knowledge of the risks to the other pipelines, including those at the Kuparuk, Alpine, Badami, North Star, Oliktok and Milne Point fields.

DOT'S PIPELINE REGULATIONS

Recently, PHMSA amended our Pipeline Safety Regulations to bring previously unregulated hazardous liquid gathering, and low stress pipelines in rural areas, into our regulatory oversight program. The Low Stress rule will add to our oversight not only of the pipelines in Prudhoe Bay but also those in the Cook Inlet and the Kenai Peninsula. By adding these lines, we are taking a risk-based approach to protect more lines that, in the event of a failure, could spill into an Unusually Sensitive Area (USA). Our assessment of which lines to regulate is based on how they can impact a USA in relation to the pressure of the line and the volume of product that could be spilled.

Through a phased-in approach, the pipeline safety regulations will provide additional and robust integrity protection to areas where oil pipelines in rural areas could affect drinking water resources and endangered species, as well as

other ecological resource concerns. These regulations will enhance corrosion protection by including requirements for continuous monitoring, integrity assessment and leak detection. They will require operators of these lines to follow, among other requirements, safety rules for design, construction, testing and maximum operating pressure. In addition, the regulations will require operators to protect their lines from corrosion and excavation damage, install and maintain line markers, establish operator qualification and damage prevention programs, provide public education and report accidents and safety-related conditions.

CONCLUSION

I assure the members of this Committee that the Administration, Transportation Secretary LaHood and the dedicated men and women of PHMSA share your strong commitment to improving safety, reliability and public confidence in our nation's pipeline infrastructure.

Like you, we understand the importance of our mission relative to the safety of our citizens and to both the energy security and continued economic growth of our great nation.

Thank you.

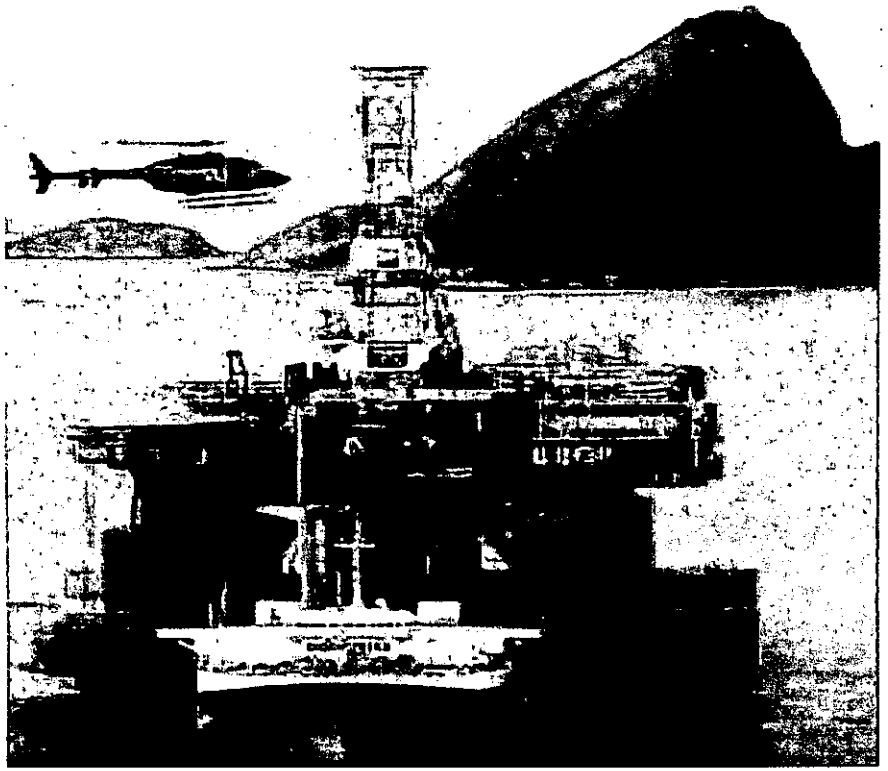
Petroleum Systems Integrity Office

May, 2000 Petrobras 36

World's largest floating oil platform off the coast of Brazil



(www.rootcauselive.com/files)

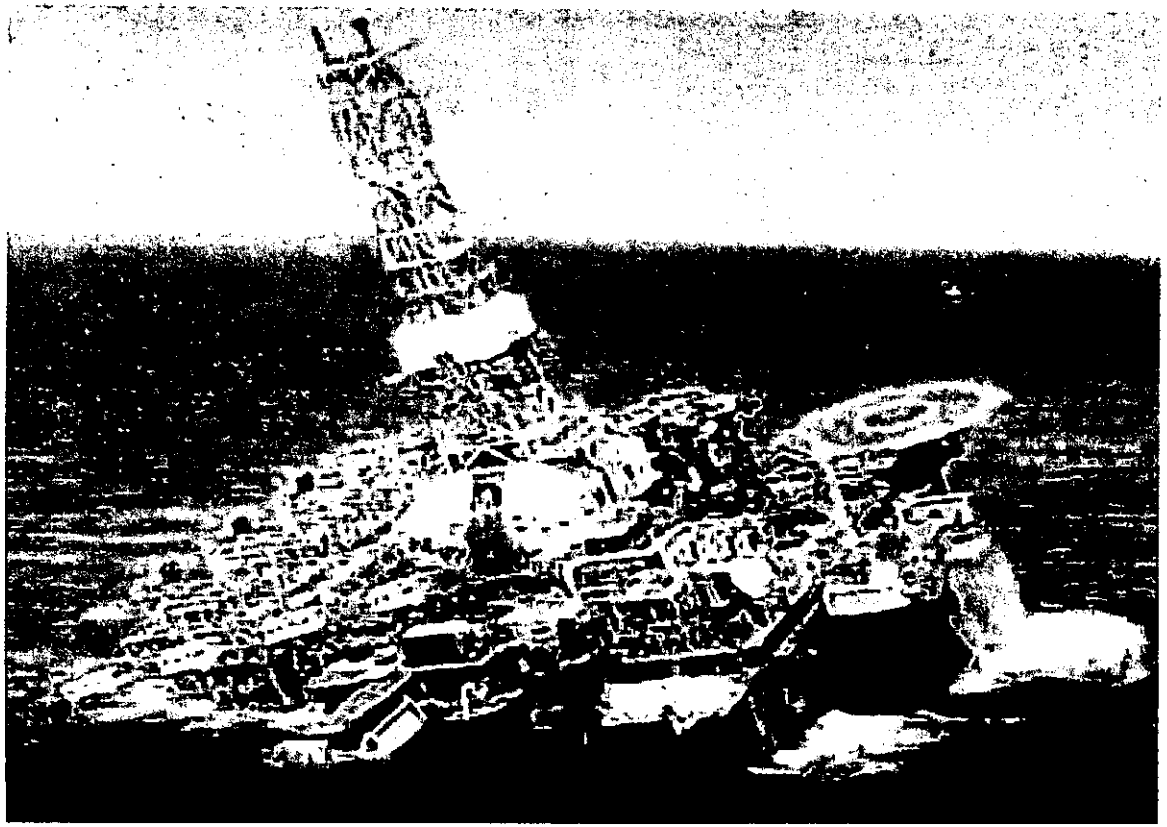
Speech on the new platform design
by a Petrobras executive

"Petrobras has established new global benchmarks for the generation of exceptional shareholder wealth through an aggressive and innovative programme of cost cutting on its P36 production facility. Conventional constraints have been successfully challenged and replaced with new paradigms appropriate to the globalised corporate market place.

Through an integrated network of facilitated workshops, the project successfully rejected the established constricting and negative influences of prescriptive engineering, onerous quality requirements, and outdated concepts of inspection and client control.

Elimination of these unnecessary straitjackets has empowered the project's suppliers and contractors to propose highly economical solutions, with the win-win bonus of enhanced profitability margins for themselves. The P36 platform shows the shape of things to come in the unregulated global market economy of the 21st Century."

March 15, 2001 Petrobras 36



(www.rootcauselive.com/files)

On March 15, 2001, the Petrobras 36 platform in the Roncador Field, Campos Basin, experienced an explosion during drainage operations. The operations were immediately suspended, and emergency trained crew attempted to put out the fire. Shortly later, a second explosion occurred, killing 11 of the 175 people onboard.

In May 2007, a federal judge ruled that Petrobras had to pay a fine of BRL100 million ($50.8 million) for environmental damages caused when the P-36 sank.

Inadequate safety inspections and virtually no quality assurance were blamed for the incident.

PSIO

- Established in April 2007 by Administrative Order 234
- Primary tasks:
  - Coordinate state, federal and local agencies
  - Incident investigation
  - Gap/Overlap Analysis
  - Quality Management

Designated Liaison Agencies

- Department of Environmental Conservation
- Department of Fish and Game
- Department of Public Safety
- Department of Revenue
- Department of Transportation and Public Facilities
- Department of Labor and Workforce Development
- Department of Law
- Department of Natural Resources
- Alaska Oil and Gas Conservation Commission
- Governor's Washington, D.C. Office

Coordinated Efforts Among Agencies

- Event notification and coordination of investigations
- Circulation of employee/public concerns
- Regular liaison interaction
- Regular contact with local, state and federal entities
- Combat the “silo effect”

Recent Coordinated Incident Investigations/Activities

- September 2008 Y-Pad artificial lift gasline rupture
- January 2009 Pump Station 1 pigging incident

Gap Analysis

The Goal of the Gap Analysis is to provide a **comprehensive and cost-effective approach to state oversight** of oil and natural gas facilities, equipment, infrastructure, and activities on state oil and natural gas units and leases.

Process

In coordination with Liaison Officers:

- Identify statutory and regulatory authorities;
- Identify how these authorities are implemented;
- Identify any gaps and overlaps;
- Assess risks associated with any gaps and overlaps;
- Coordinate the review of gaps, overlaps and risks;
- Provide recommendations to DNR Commissioner and Resources Subcabinet

Schedule

- Arcadis hired to do detailed analysis of statutory and regulatory gaps and overlaps
- Data compilation in progress – will begin meeting with PSIO liaisons soon
- Results expected August 2009

PSIO's Gap Analysis & DEC's Alaska Risk Assessment

- The Risk Assessment and Gap Analysis documents will serve as tools in determining how best to coordinate agency efforts to provide a comprehensive and cost-effective approach to oil and gas oversight activities
- Where high risks exist in areas of little or no oversight, those gaps will likely need to be filled.
- Where low risks exist in areas of duplicative oversight, those overlaps will likely need to be removed.

Quality Program

Designated agencies, to the extent authorized through existing legal authorities, shall require the industry businesses to provide a comprehensive description of current practices that includes the quality control, quality assurance, monitoring, inspection, and other practices the business uses to ensure the integrity and reliability of oil and natural gas facilities, equipment, infrastructure, and activities.

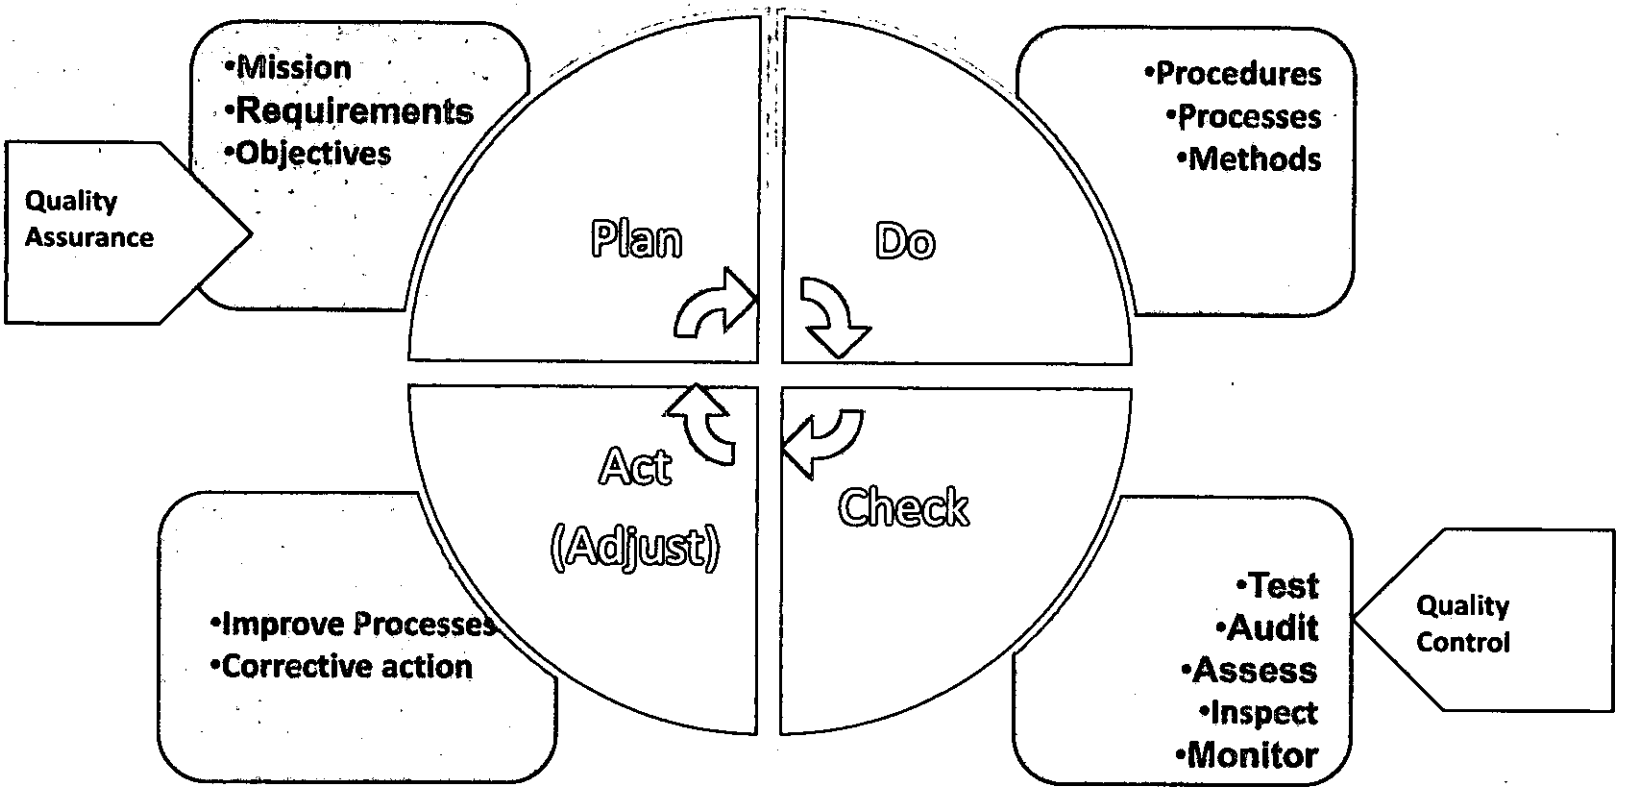
What is Quality Assurance?

- Quality assurance is any systematic process of determining if a product or service meets the mutually agreed upon characteristics and expectations for performance
- Establishes rules and methods (the process) to achieve expected results and conformance to requirements
- The "Plan" component of a quality management system
- Often confused with quality control

What is Quality Control?

- The process steps, procedures and activities employed to measure or test physical characteristics and performance requirements against predetermined criteria
- Is concerned with the product or service
- The "Check" element of a quality management system
- Should not, but is often confused with quality assurance

PDCA Cycle



•Mission
•Requirements
•Objectives
Quality Assurance

Quality Control

Quality Management Systems

Fundamentals:

- Quality control;
- Quality assurance;
- Monitoring;
- Inspection; and
- Other practices used to ensure the integrity and reliability of facilities, equipment and infrastructure

Agency Expectations of PSIO

- Help agency personnel become knowledgeable of the elements of quality management systems in order to maintain the integrity and reliability of:
  - Oil and natural gas facilities
  - Equipment
  - Infrastructure
- Understand the benefits of:
  - Plan, Do, Check (Study), Act
  - Performance measurement
  - Continuous Improvement

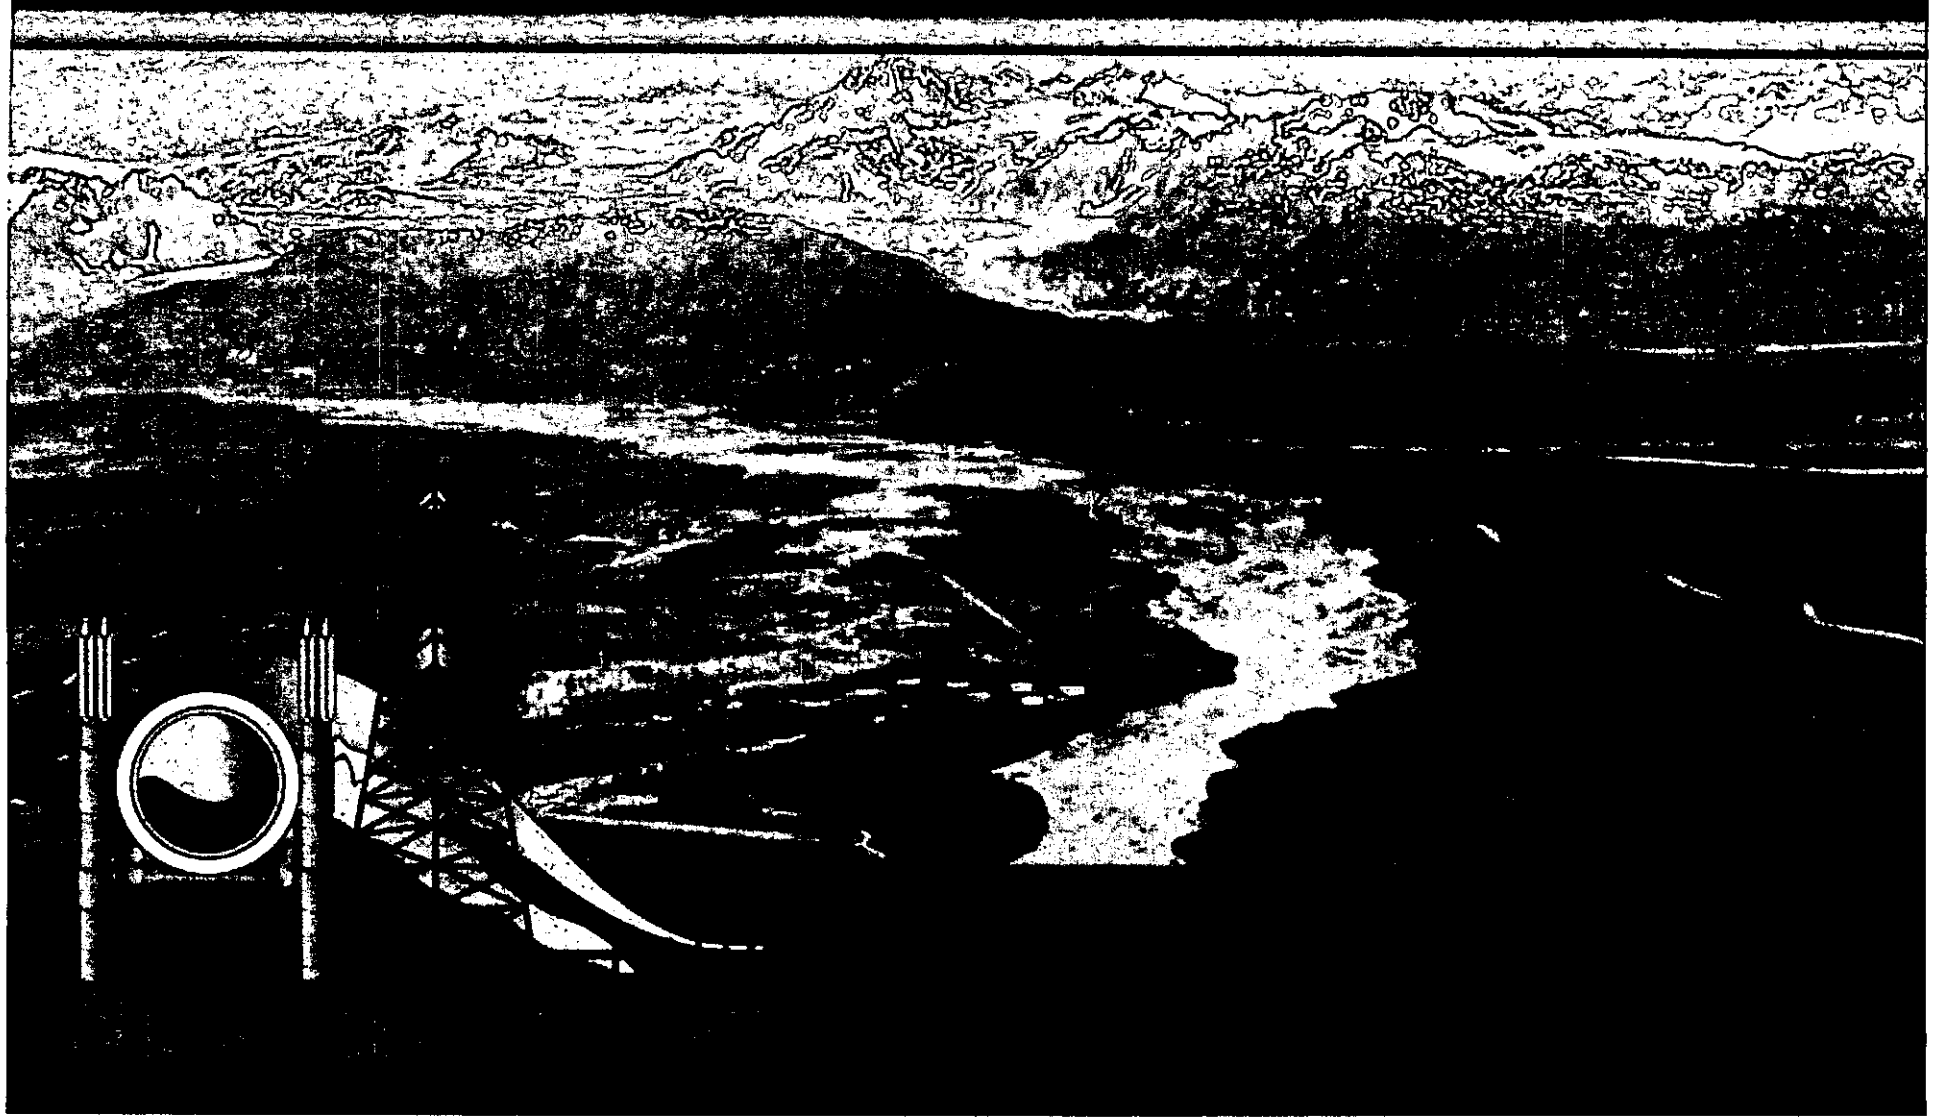
PSIO Expectations of Agencies

- Document evaluations of oil and gas facilities, equipment, infrastructure, work activities and where applicable in the context of quality management
- Effectively communicate results to industry
- Work with the PSIO Coordinator to coordinate review of evaluations, identify gaps, and seek remedial action.

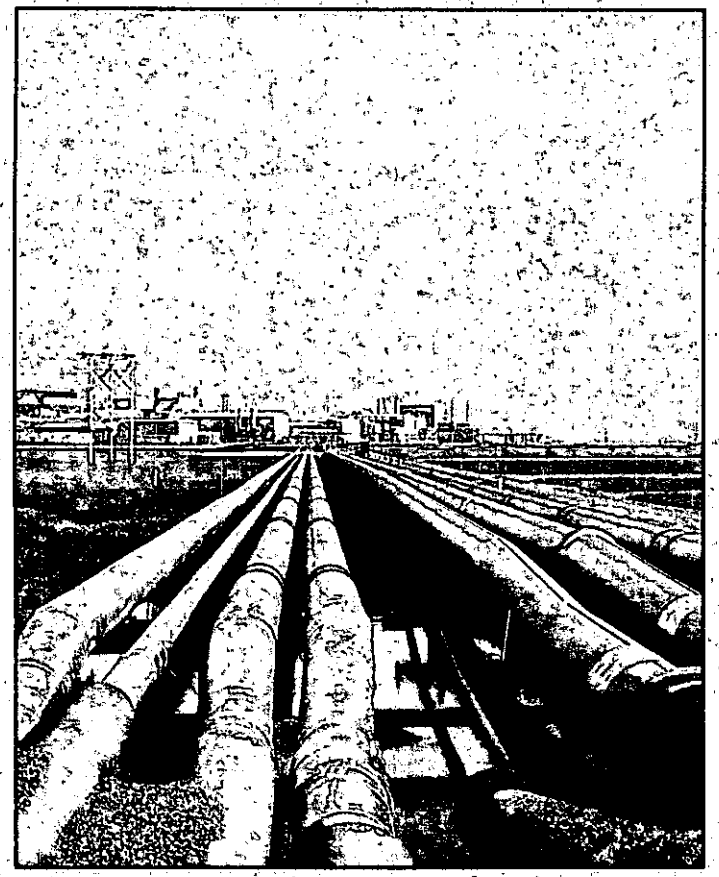
PSIO Expectations of Petroleum Industry

Provide evidence that management systems or processes for quality control, quality assurance, monitoring, inspection and other programs are implemented, effective, and periodically evaluated by upper management.

Alaska Risk Assessment of Oil & Gas Infrastructure



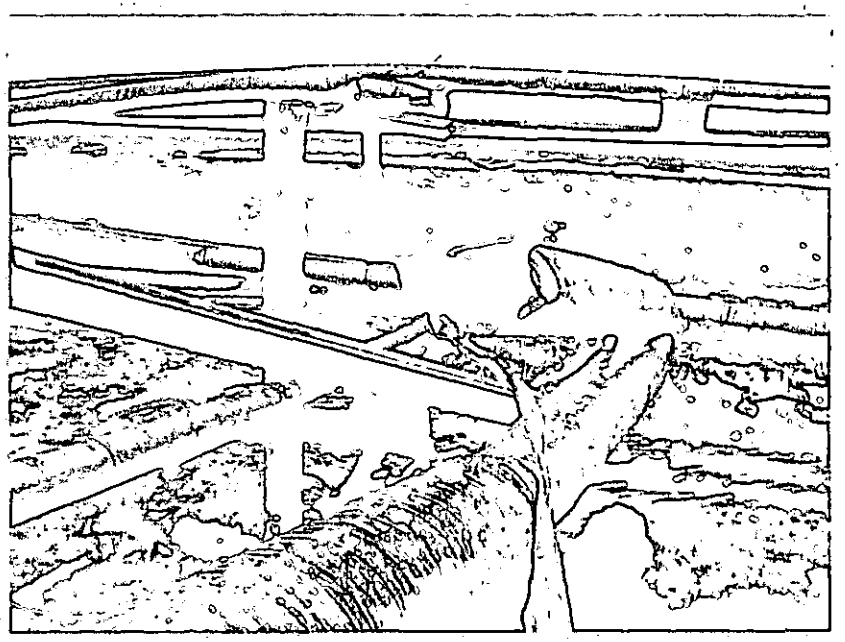
Project Objectives



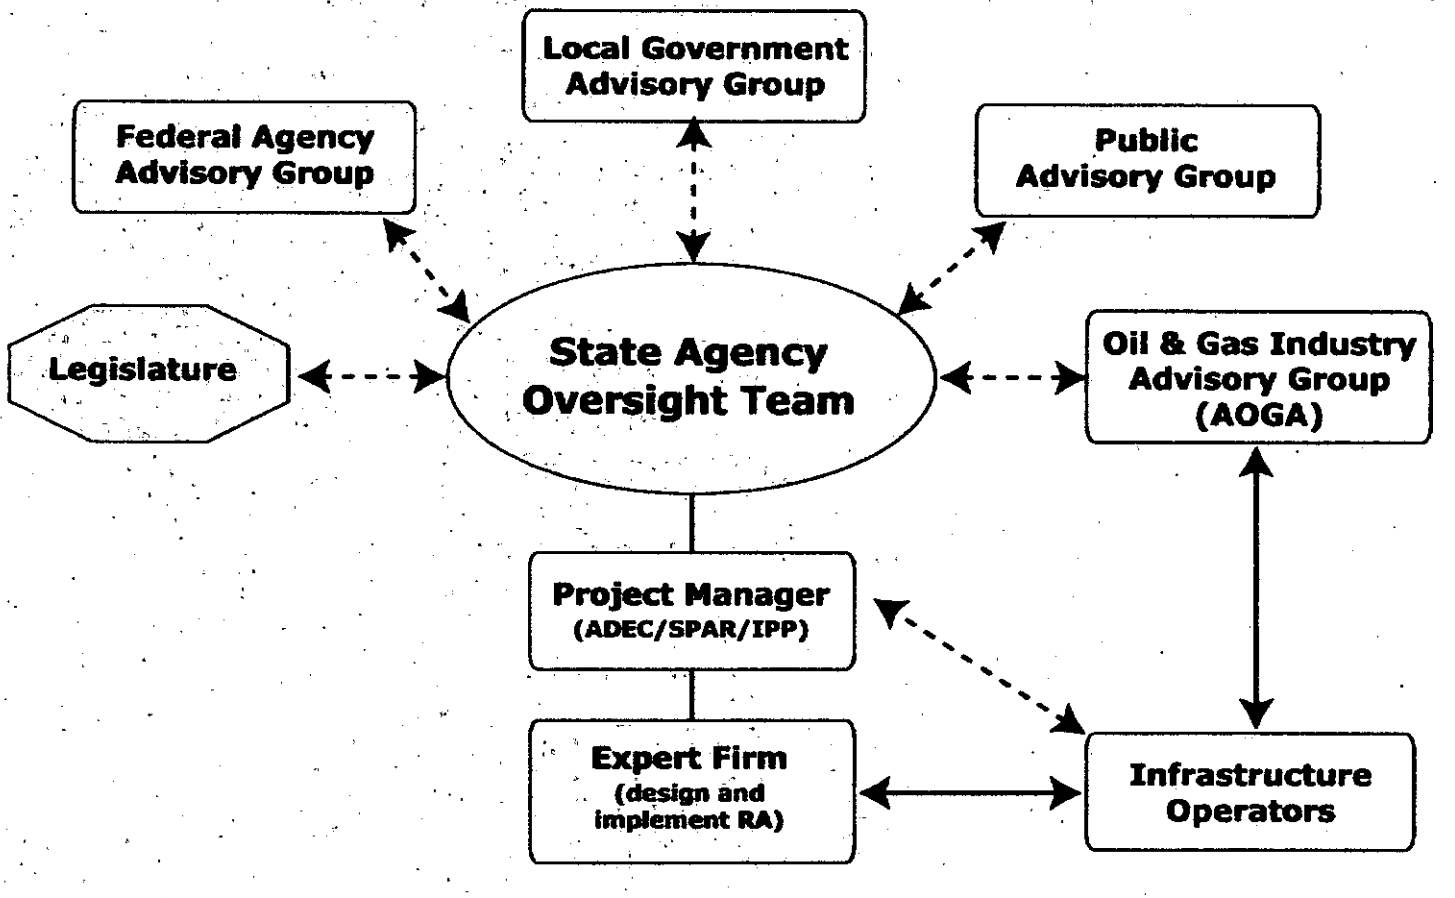
- Assess the current state of infrastructure & systems in place to operate it.
- Identify and rank areas of greatest risk.
- Present findings.

Project Background

- Parts of Alaska's complex oil and gas infrastructure have been in place since the early 1960s, and in some cases have already exceeded their original engineered lifespan.
- In 2006, North Slope oil production was interrupted with a failure in one component of the system.



Project Organizational Structure

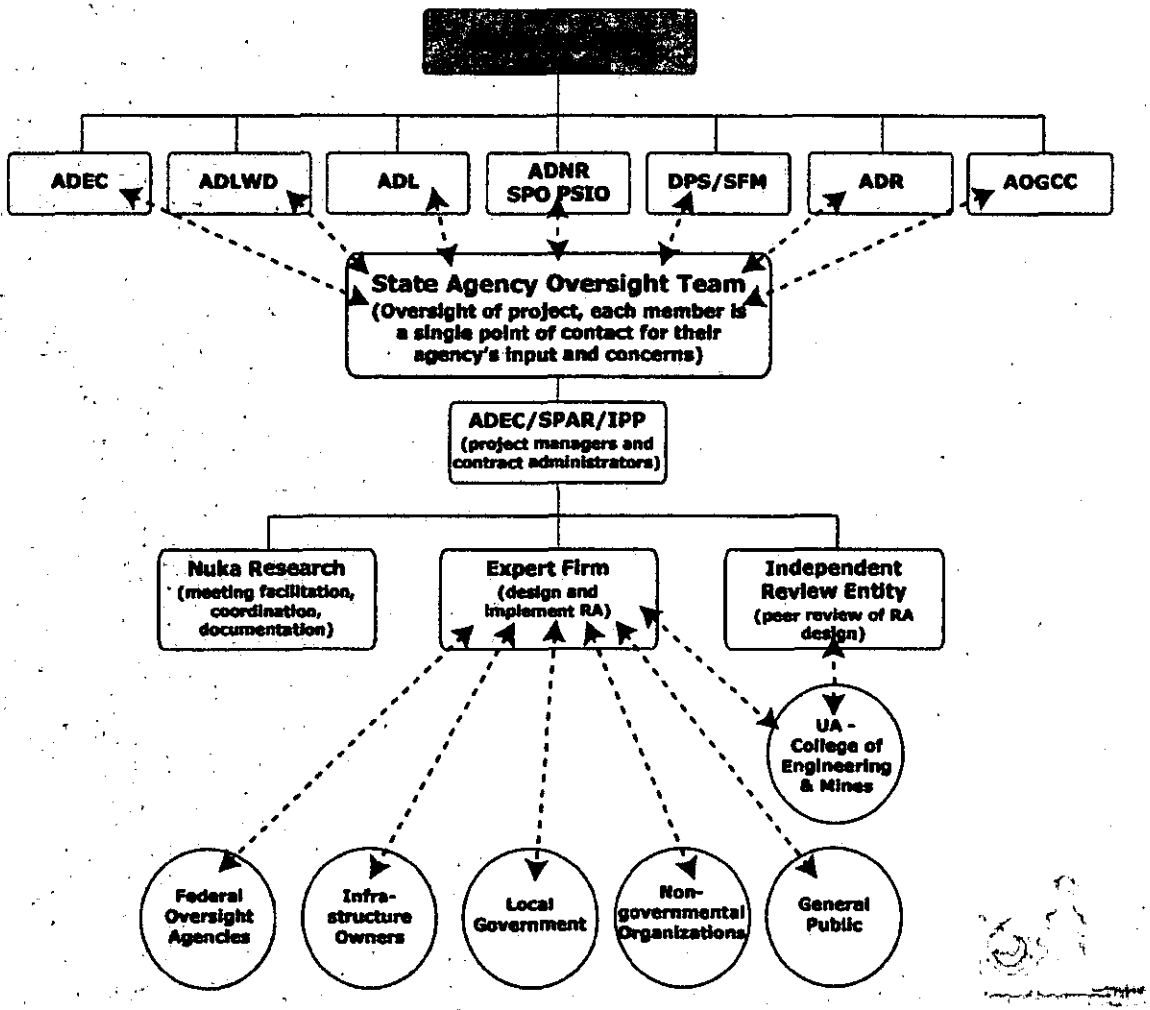


Project Organizational Structure

State Agency Oversight Team:

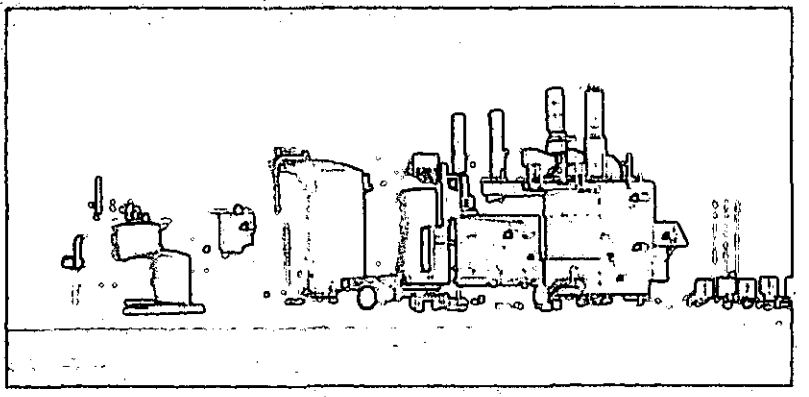
- Alaska Department of Environmental Conservation (ADEC)
- Alaska Department of Labor and Workforce Development (ADLWD)
- Alaska Department of Law (ADL)
- Alaska Department of Natural Resources (ADNR)
  - State Pipeline Office (SPO)
  - Petroleum Systems Integrity Office (PSIO)
- Alaska Department of Public Safety, State Fire Marshall (DPS/SFM)
- Alaska Department of Revenue (ADR)
- Alaska Oil & Gas Conservation Commission (AOGCC)

Alaska Oil & Gas Infrastructure Risk Assessment
Organizational Chart



Project Purpose

- Outcome of the Risk Assessment
  - "Picture" of the system as it stands today, highlighting the infrastructure components with the highest relative risk of a potential significant event.
  - Provide information to State agencies that is necessary for them to perform their mandated duties to oversee the steady flow of oil and gas without unplanned interruptions, while protecting the public's safety and the environment.



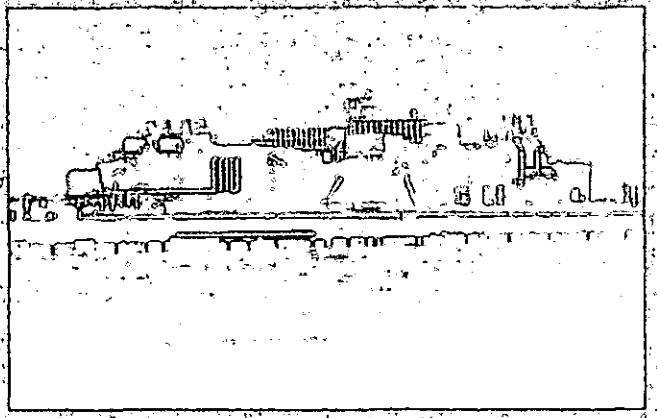
What is a Risk Assessment?

- Organized and systematic effort to identify and analyze hazardous scenarios;
- Starts with answering the question "What can go wrong?"
- Evaluate "how likely" it is that a significant event will occur;
- Evaluate "how damaging" the event would be to people, the environment, or production and state revenue if the event were to occur; and
- Combine the factors to determine an objective risk level.

Three Step Process

Step 1

- Define the significant events
- Design the risk assessment



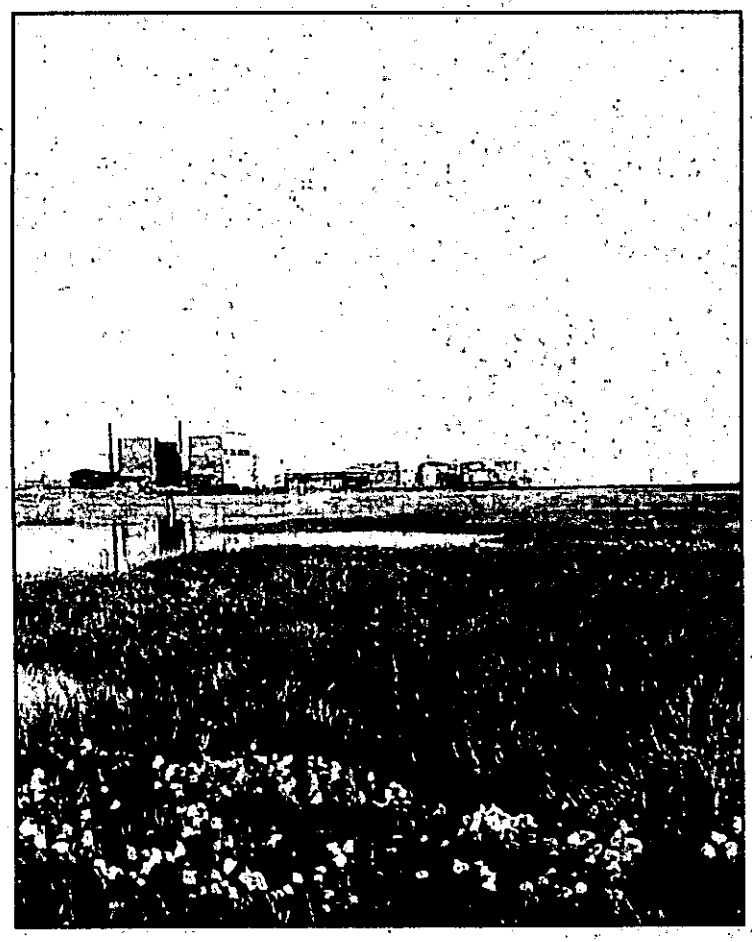
Step 2

- Conduct the risk assessment

Step 3

- Analyze the results
- Develop risk mitigation recommendations

Potential Recommendations



- Physical changes to infrastructure
- Changes to policies, procedures, standards, or regulations
- Changes to infrastructure audits, management, or oversight

General Project Scope

North Slope

TAPS

Cook Inlet

Draft Methodology Report

STATE OF ALASKA
DEPARTMENT OF ENVIRONMENTAL CONSERVATION
Press Release
COMMISSIONER'S OFFICE

FOR IMMEDIATE RELEASE

New step in study of Alaska's oil and gas infrastructure

State invites public comment on risk assessment methodology; National Academy of Sciences also to review approach

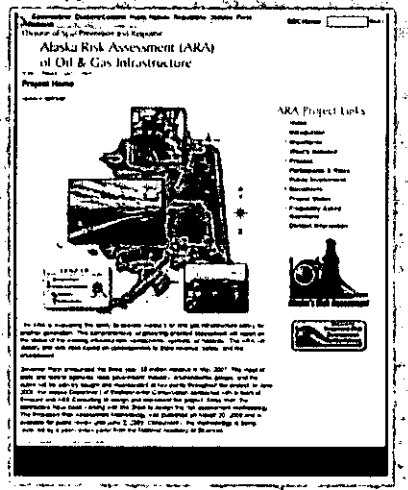
Contact: Ira Rosen, DEC project manager, (907) 465-5219

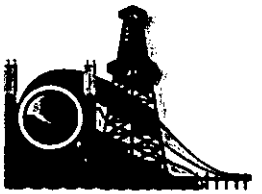
Juneau – March 21, 2009) Members of the public now can comment on the approach developed to assess the health of the state's oil and gas infrastructure. Public meetings are planned for Anchorage, Fairbanks, Kenai, Barrow and Valdez to present the approach and answer questions. The comment period will end June 2.

Development of the methodology – a mathematical model to quantify risks – is the focus of the first phase of the Alaska Risk Assessment, a three year, $5 million initiative to evaluate Alaska's oil and gas infrastructure. The study is an outcome of the spills, leaks and corrosion discovered on the North Slope in recent years. When complete, the assessment will report on the status of the existing infrastructure, components, systems and hazards. It will identify and rank risks based on consequences to state revenue, safety and the environment and will assist the state in making mitigation recommendations. The Alaska Department of Environmental Conservation (ADEC), working in cooperation with the Petroleum Systems Integrity Office (PSIO), is leading the risk assessment project.

"Finalizing the method we use to evaluate the condition of Alaska's oil and gas infrastructure is a key step in the overall assessment of this complex system," said Larry Dietrick, ADEC director of Spill Prevention and Response.

As part of the project, the State gathered input from government agencies, industry and the public in 2008. Those ideas helped shape the design of the risk assessment model. "Stakeholders now have a chance to confirm issues and concerns they identified have been included in our approach," said Ira Rosen, DEC project manager.





Comprehensive Evaluation and Risk Assessment of Alaska's Oil and Gas Infrastructure

Proposed Risk Assessment Methodology

–Revision 1–

March 20, 2009

Prepared By

DOD/ONE/MERALD

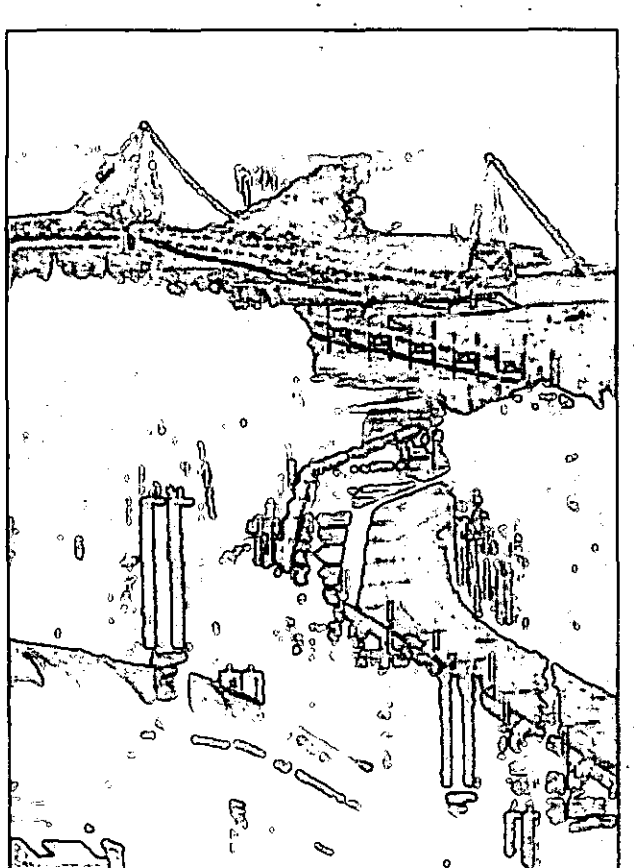
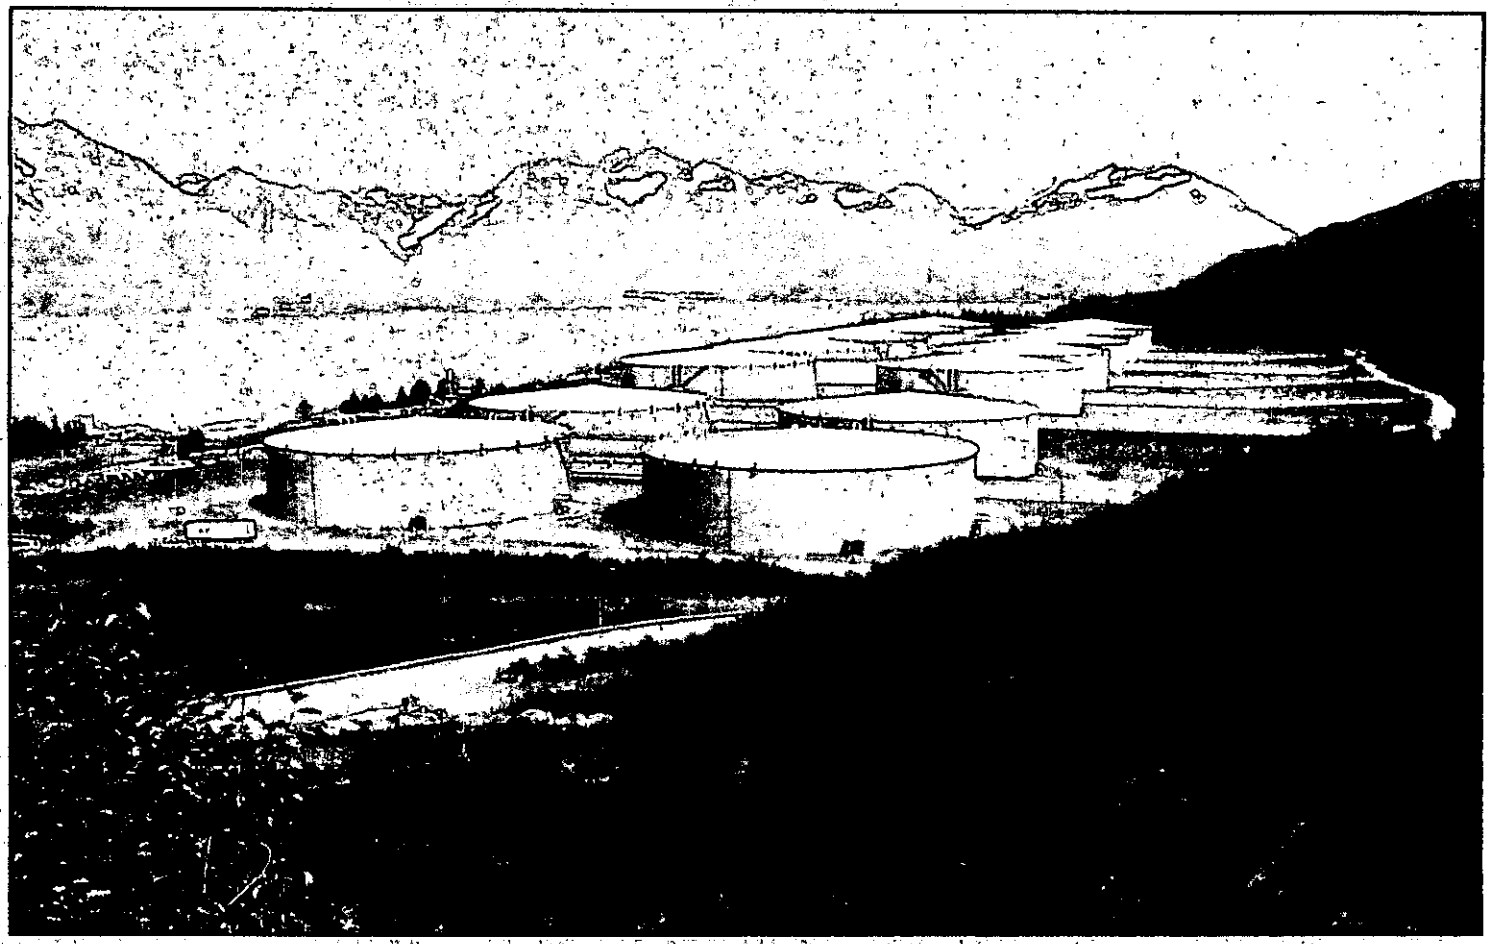
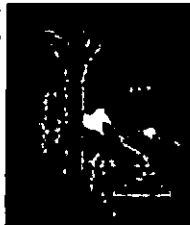
Press Release announces availability of the Draft Methodology Report

Project Results



- Provide risk profile of infrastructure.
- Provide input for risk management decisions by Industry and the State.





Methods

Risk Analysis

Screening

Reliability

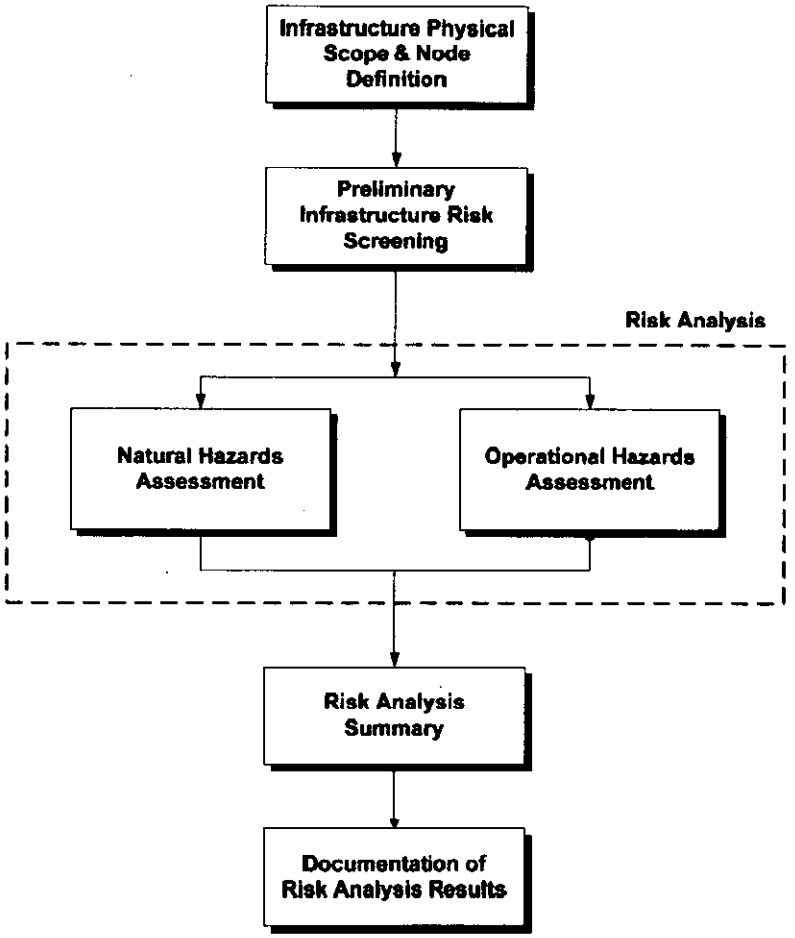
Environmental Spill Calculations

Environmental Consequences

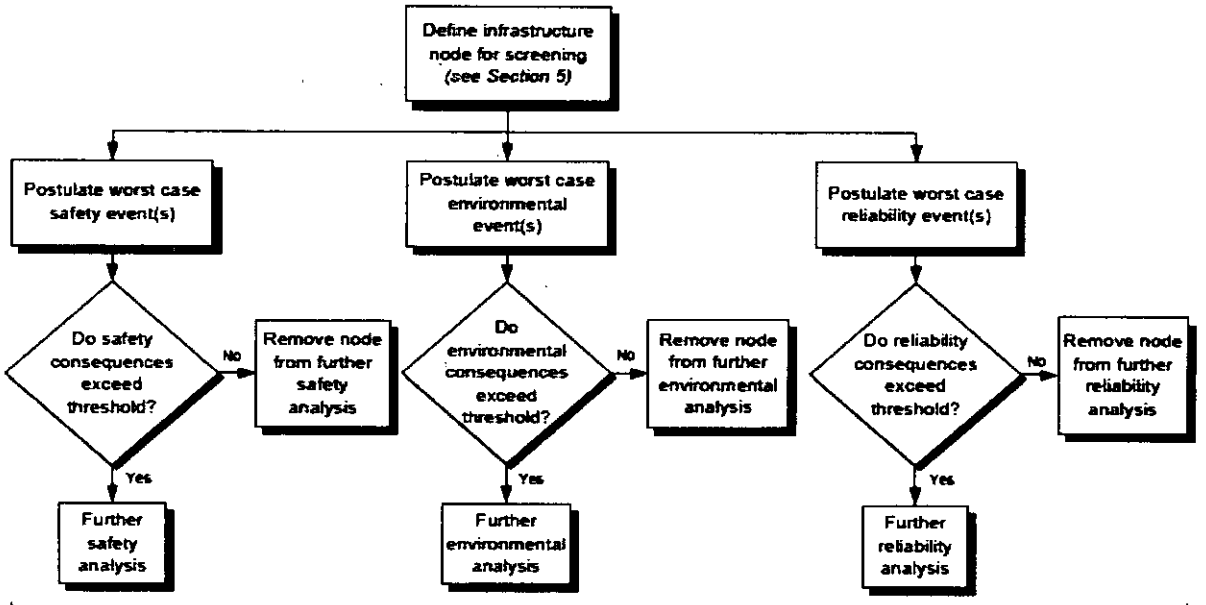
Operational Hazards

Safety

Risk Analysis



Screening



Document Screening Results

1. Nodes that are potential contributors to significant events in all three consequence categories (SER)
2. Nodes that are potential contributors to significant events in one or two consequence categories (SE, SR, ER, S, E, or R)
3. Nodes that are NOT potential contributors to significant events in any consequence categories

Reliability

Table 6-3 Reliability Consequence Levels for Preliminary Risk Screening

Category	Category Production Loss Boundaries	Explanation (see Note)
3	>42,000,000 bbls	Corresponds to about a two month full outage for TAPS
2	4,200,000 to 42,000,000 bbls	Corresponds to an outage range which includes an approximate 30 day outage for TAPS or a two week outage for a production source that is half of the TAPS throughput
1	<4,200,000 bbls	Corresponds to less than a week outage for TAPS or a 60 day outage for a production source that is 10% of the TAPS throughput.

Note: Outages assume 700,000 barrels per day TAPS throughput

Environmental Spill Calculations

Table 7-3 Release Quantity Categories

Release Quantity	Category Index Number	Explanation
Large release (>10,000 barrels)	6	Release quantities will be assessed based on normal process flow, the nature of the worst-case release considered, and the expected detection and isolation time.
Medium Release (1,001 to 10,000 barrels)	5	
Small Release (10 to 1,000 barrels)	4	

Note: The release quantity categories are assigned numbers from 4 to 6 in order to reflect the overall importance of the spill size compared to the other contributing categories (i.e., release quantity is more heavily weighted than the other factor categories, which have an index range from 1 to 3). This also allows the environmental impact to reflect an approach that adjusts spill size by expected recoverability (i.e., subtracting the recoverability category from the release quantity category) to represent the impact of the material which may actually remain in the environment long term.

Table 7-4 Release Recovery/Remediation Factor Category

Recovery/Remediation Capabilities	Category Index Number	Explanation
Little to no ability to recover/remediate this type of release	1	This category includes: • Direct spills to moving bodies of water other than contained entirely on ice (such as ocean/sea, river systems, and tributaries) • Spills to subsurface areas • Other situations assessed as difficult to recover (including requiring input from State and remediation experts
Limited to moderate capability to recover/remediate this type of release	2	This category includes: • Spills to land and tundra in other than frozen conditions • Spills to unprepared surfaces (i.e., prepared surfaces include gravel pads which have been land for remediation ease) • Other situations assessed as limited to moderate to recover (including requiring input from State and remediation experts)
Very effective capability to recover/remediate this type of release	3	This category includes: • Spills in winter conditions contained on ice or recovered from frozen land or tundra (i.e., limited migration) • Spills to gravel pads or other prepared surfaces where recovery can be accomplished by direct removal of contaminated materials

Table 7-5 Local Environment Sensitivity Categories

Type of Environment	Category Index Number	Type of Environment
Waterways	3	This category includes: • Waterways or direct pollution routes to waterways that support commercial fishing, aquaculture, or subsistence activities
Sensitive Lands (including surface and subsurface areas)	2	This category includes: • A land area that supports unique flora and fauna or wildlife breeding and migratory areas, which may support subsistence hunting activities (e.g. tundra or wetlands) • An area that encompasses a cultural or historical site • A Recreational Area (defined as an area that supports hunting, fishing, hiking or other outdoor recreational activities) • Areas that have been branded based on pristine conditions and which support tourism activities
Other Lands	1	This category includes: • A land area (surface or subsurface) not defined as "sensitive" in Category 2 above.

Environmental Consequences

Calculating Environmental Consequence Categories

An environmental consequence score will be calculated for each of the release events that are considered, based on the index values that are assigned in each of the above contributing factor categories. The overall environmental consequence score will be calculated using Equation 7-2:

$$\mathcal{N}_i = M_i * (Q_i - R_i) * S_i$$

Equation 7-2 Environmental Consequence Scoring Calculation

Where:

$\mathcal{N}_i$ = Event i Calculated Environmental Consequence Score (1 to 45)

M_i = Event i Material Composition Index (1 to 3)

Q_i = Event i Release Quantity Index (4 to 6)

R_i = Event i Recoverability/Remediation Index (1 to 3)

S_i = Event i Environmental Sensitivity Category Index Number (1 to 3)

Example calculation:

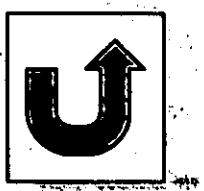
A significant release of crude oil (M = 3) that is 2,000 barrels in size (Q = 5) in an area of very high sensitivity (S = 3), but where recovery and remediation efforts can be highly effective (R= 3), would be scored as:

$\mathcal{N}_i = 3 \times (5-3) \times 3 = 18$

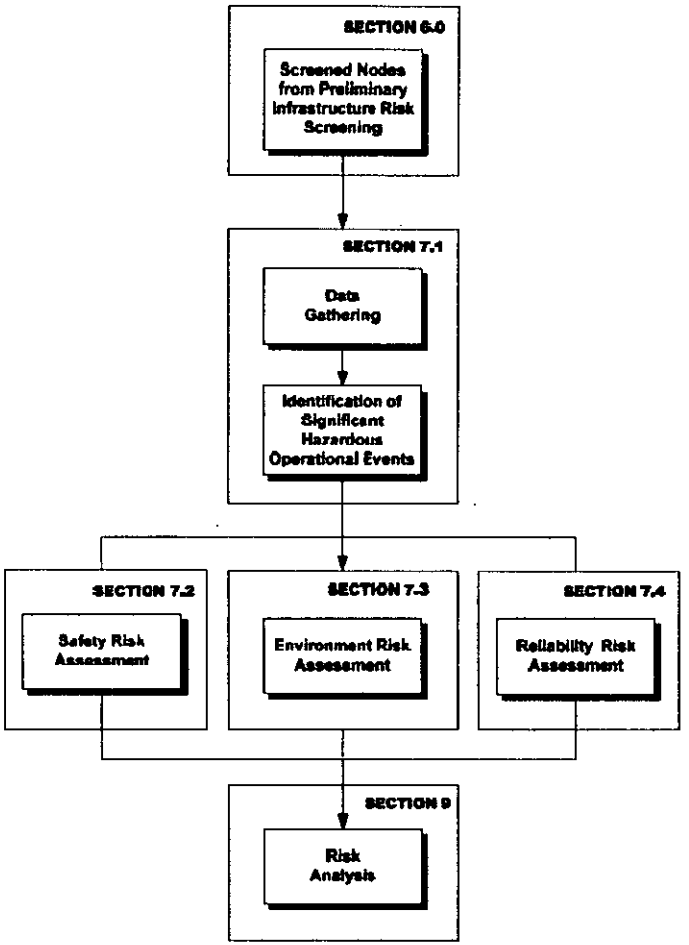
This approach represents a relative ranking of releases; it cannot be correlated to any physical meaning based on the absolute value of the numbers or index that is assigned to each factor. The value of the overall environmental consequence score can range from 1 to 45, depending on the assigned values of the contributing factor categories. Ranges of the environmental consequence score will then be used to categorize the relative environmental impacts of the potential release scenarios. See Appendix G for example scenarios that have been processed through this model.

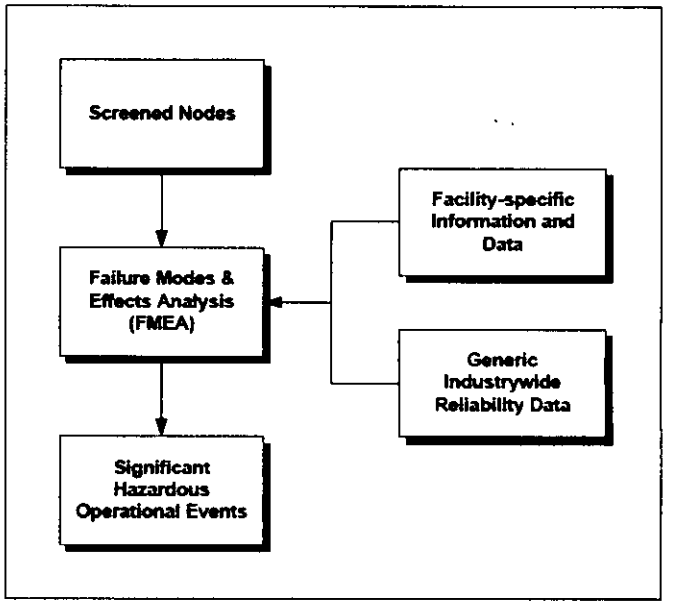
Table 7-6 presents preliminary values that will be used for assigning the environmental consequences to each of the potential release events. The definitions and descriptions for the qualitative range of significant environmental consequences for this project in Table 7-6 were derived from input from the stakeholder consultation process that was executed at the commencement of the project.

Category Number	Environmental Impacts	Consequences Score
3	**Catastrophic** – A significant release to an area of extremely high environmental consequence that causes large-scale, widespread, non-recoverable, irreversible, and long-term damage that is severe. The damage would be considered to be extensive enough that the area would be considered unusable for the foreseeable future. The loss would prevent a return to normal life support and access for the conduct of normal activities that were once supported by the area's resources.	Greater than or equal to 30
2	**Challenging** – A significant release to an area of high environmental consequence that causes widespread and persistent damage to the area, which would cause a disruption in life support and would limit normal use and activities in the area for some time. Remediation would be required and some damage to the area may be irreversible.	Greater than 15, but less than 30
1	**Manageable** – A release to an area of some environmental consequence that results in localized and reversible effects on the environment. Results in some initial disruption of activities in the area, but normal usage can resume in a very short time frame once remediation/recovery activities have been completed.	Less than or equal to 15



Operational Hazards





Safety

After the incident scenarios for each node have been identified, the safety risk calculation will entail three major tasks:

1. Consequence Analysis – Evaluation of physical effects of incidents on people
2. Likelihood Analysis – Estimation of incident frequencies
3. Risk Calculation – Calculation of risks, which are a combination of likelihood and consequences/impacts, and presentation of results

Risk is then calculated using the "risk triplet" model, shown in Equation 7-1:

$$\mathcal{R} \equiv \langle \mathcal{E}_i, C_i, \mathcal{L}_i \rangle_n$$

Equation 7-1 Risk Triplet Model

Where:

$\mathcal{R}$ = Calculated risk

$\mathcal{E}_i$ = Significant Incident Scenario i (from the FMEA Hazard Events Identification process)

C_i = Event i consequence (from the Consequence Analysis)

$\mathcal{L}_i$ = Event i Likelihood (from the Likelihood Analysis)

n = Number of significant incident scenarios

3/26/09 PRESENTATION: NATURAL GAS FISCAL DESIGNS

Combined Oil and Gas Progressivity in Alaska's Production Tax II

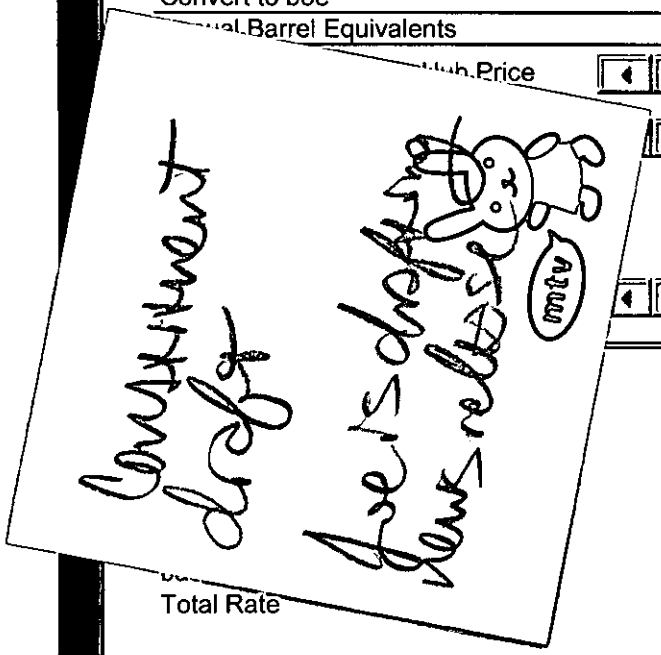
Dan E. Dickinson, CPA

Joint Hearing
Senate Resources Committee
Senate Finance Committee
Alaska State Legislature

March 26, 2009

Feb 2 Model Screen Shot - $135 oil and $6 gas - Tax Falls

	Oil Only		Incremental Gas		Combined	
Daily Vol	0.350	mmbbls/day	4.2	bcf/day		
days per year	365		365			
Annual Volume	127.8	mmbbls/yr	1533	bcf/yr		
Convert to boe	1		6			
Barrel Equivalents	127.8	boe/yr	255.5	boe/yr	383.3	boe/yr
Price	$ 135.00		$ 6.00			
			(0.75)			
	(6.00)		(2.75)			
	129.00		2.50			
	$ 16,480		$ 3,833			
	87.5%		87.5%			
	$ 14,420		$ 3,353			
	3,300		-			
	$ 11,120		3,353		$ 14,473	
	87.5%		87.5%		87.5%	
	111.8		223.6		335.3	
	$ 99.48		$ 15.00		$ 43.16	
	30.00		30.00		30.00	
	$ 69.48		$ -		$ 13.16	
	25.70%		0.00%		5.26%	
	25.00%		25.00%		25.00%	
Total Rate	50.70%		25.00%		30.26%	
	Stand Alone Oil		Stand Alone Gas		Combined	
Total Tax (Tax Rate * PTV)	$ 5,637		838.4		$ 4,380	



Sum of stand alone oil & gas: 6,475.84

Gain (loss) in production tax from using current law vs stand alone: (2,095.7)

Gain (loss) in production tax from adding gas stream under current law: (1,257.3)

3.26.2009

Ruggerio and Dickinson Agree I

- Dan Dickinson's testimony before LB&A on January 12, 2009 and Senate Finance February 2, 2009
- Rich Ruggerio's testimony before Senate Finance on February 2, 2009, March 11, 2009
- Rich and I agree
  - Could happen that production tax revenues fall, not rise if 4.3 bcf a day of gas added to a 700,000 bbl a day stream of oil at certain set up prices
  - I illustrated the volume effect – Rich focused on the effect of smaller oil volumes generally require great price disparity
  - I focused on price spike such as the 2008 spike; Rich confirmed that that kind of relationship between oil and gas prices only occurred in roughly 7 months out of prior 14 years: rare but not impossible
    - Price above 92.5+25=117.5 in only 3 months – but special rules

3.26.2009

Oil Valued way above 6:1 gas btu parity: 1995

	Jan-95	Feb-95	Mar-95	Apr-95	May-95	Jun-95	Jul-95	Aug-95	Sep-95	Oct-95	Nov-95	Dec-95

Less $30	30.00		30.00		30.00	
Starting Point	$ 69.07		$ -		$ 13.02	
Prog rate (.4% or .1% per dollar)	25.66%		0.00%		5.21%	
base rate	25.00%		25.00%		25.00%	
Total Rate	50.66%		25.00%		30.21%	
	Stand Alone Oil		Stand Alone Gas		Combined	
Total Tax (Tax Rate * PTV)	**$ 461**		**68.9**		**$ 358**	

Sum of stand alone oil & gas **529.98**

Gain (loss) in production tax from using current law vs stand alone **(171.8)**

Gain (loss) in production tax from adding gas stream under current law: **(102.8)**

3.26.2009

Ruggerio and Dickinson Agree III

- Rich and I agree
  - In material presented by Administration and Gaffney & Cline in 2007-2008 when focus was primarily on current oil production.
  - Under current law taxpayer can lower taxes on production from mature high "cash flow" projects by investing in beginning of other "low cash" projects
  - Works same way for ownership of
    - heavy oil deposits and 40 degree API Prudhoe Bay crude
    - High value oil and generally lower value gas
- Where Rich and I disagree – Further investigation of distinct gas tax warranted?

Looking Forward: Combined Progressivity Tax (CPT)

Gas exported from state and oil taxed at same rate – both part of combined progressivity calculation.

- Prices swings in one can effect tax on the other
- Gas converted to oil on Btu basis (roughly 6:1)
- Progressivity triggered by $30 boe PTV

	1 mcf	1 Boe Gas	Oil
Subject to progressivity June 2008	0.25	1.50	81.25
$30 no Progressivity zone	5.00	30.00	30.00
Upstream Costs ?	2.71	16.26	16.26
Downstream costs	4.73	28.38	6.27

Sources: Oil data from Spring 2008 RSB, Upstream Gas Cost is oil data on boe basis, Gas Downstream cost is Black & Veatch Estimate from Appendix G Alaska Gasline Determination, Oil price from DOR website, Gas Price from St Louis Fed Reserve website

3.26.2009

Potential Dimensions of a Distinct Gas Tax

- If main issue is cross subsidy between oil and gas - may only need look at distinct oil and gas progressivity rather than (CPT) combined progressivity
  - Distinct mechanisms for oil and gas taxes would require allocation of costs between oil and gas. Like the 6:1 ratio embedded in current law, a simplifying compromise with side complications, though not impossible
- If main issue is difference in cost structure, may need to look at break points, "progressivity trigger" and rates in GPT (gas progressivity).
- If main issue is competitiveness in government-take as that fits into cost structure, may need to look at other aspects of gas tax.

3.26.2009

Looking Forward: TransCanada's AGIA application suggestion:

- "TransCanada would rely on the State of Alaska to take all feasible actions exclusively within its authority as a sovereign power to ensure a favorable economic environment for potential Shippers on the Project. Those actions include:
  - engaging with the ANS producers to reach agreement on a commercially reasonable and predictable upstream fiscal regime that balances the needs of the state and the ANS producers;
  - and encouraging robust exploration for and development of new natural gas resources and the commitment of such resources to the Project."

Source: TransCanada, Application for License, Alaska Gasline Inducement Act (November 30, 2007) page 2.5-52

Looking Forward: ConocoPhillips' Proposal

- ConocoPhillips' Proposal (ConocoPhillips current owner with BP of Denali Project)

  "The predominant lessee risk that should be the focus of discussion with the State is the risk of unclear, unpredictable State taxes and royalties. In order to enable shippers to make long term shipping commitments, prospective shippers need clearly defined natural gas fiscal terms and an understanding of the period during which these terms will apply. Addressing these issues remains a critical component necessary to develop ANS natural gas resources and make this Project a reality."

Senate Finance Committee and Senate Resources Committee Joint Hearing

David Wood
26th March 2009

Preliminary Report on a Fiscal Design for the Development of Alaska's Natural Gas

Presentation Structure

This presentation focuses on the key findings of the report: *"Preliminary Report on a Fiscal Design for the Development of Alaska's Natural Gas"*.

- Report & presentation objectives
- What are the issues for Alaska's fiscal regime when applied to gas?
- What are the fiscal designs applied by other countries?
- Fiscal elements commonly combined to optimize government take
- Alaska's Prevailing Fiscal design
- Complications of combined oil and gas progressivity tax (CPT)
- Multi-year and multi-scenario fiscal performance cash flow models
- Fiscal designs go beyond upstream issues and influences
- Conclusions and recommendations of preliminary study

Report and Presentation Objectives

Report & Presentation Objectives

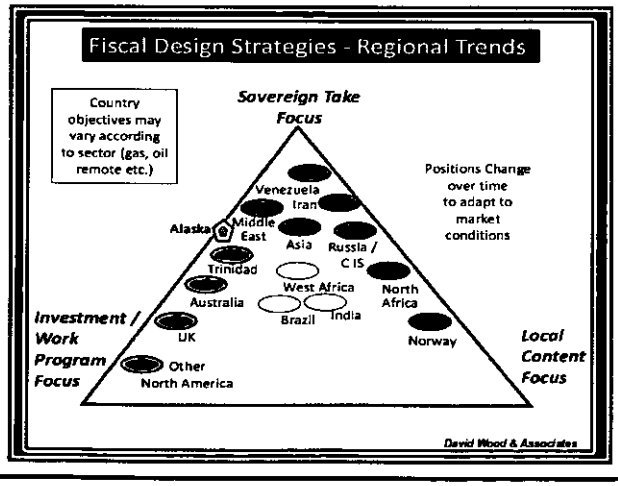
Review findings of this 8 months of study into Alaska's fiscal design for natural gas in the context of the international natural gas industry.

- Issues for Alaska's upstream fiscal design for natural gas
- Structure and interplay of regressive and progressive fiscal elements
- Fiscal designs of major natural gas producing nations
- Multi-year cash flow models to evaluate performance of fiscal designs
- Fiscal instability, credibility and certainty
- Complications associated with combined oil & gas progressivity tax
- Further models that would help make future fiscal design decisions

What are the issues for Alaska's fiscal regime when applied to gas?

Fiscal Designs are Best Driven by Clear Fiscal Objectives & Strategies

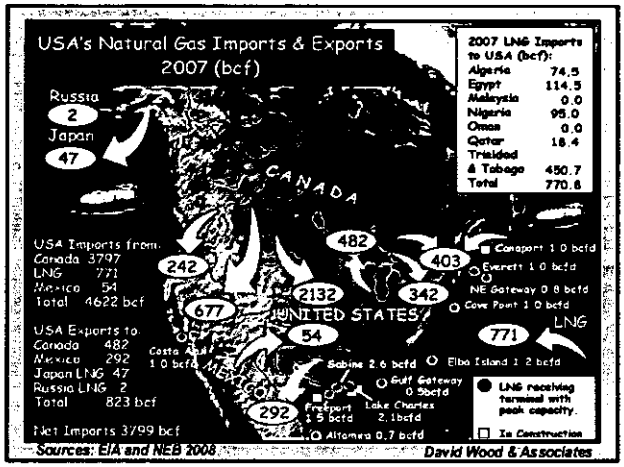
Upstream fiscal designs should reflect the broader strategies and objectives that governments are striving to achieve.



A clear statement of fiscal design strategy by a government can help to enhance its fiscal credibility. Perceptions of the fiscal strategy are important in the persuasion of large investors to sanction projects

Providing a Fiscal Regime that Accelerates Monetization of Gas

Alaska has substantial natural gas reserves that have remained stranded for decades. Lower 48 states have a thirsty and growing market for gas.

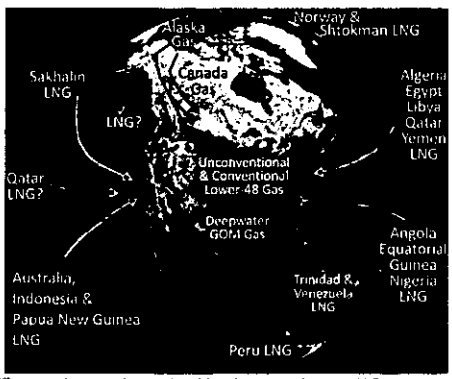


Alaska's aspirations for "the Gas Line" span more than three decades.

However, market drivers and competition have significantly in recent years.

Alaska is One of Several Potential Long-term Suppliers of Natural Gas to Lower-48

The Long-term Competition to Deliver Natural Gas to the Lower-48 US Markets is Intense



Differences between international fiscal terms and among U.S. state terms, will play a key role in that competition by influencing producers' costs of supply.

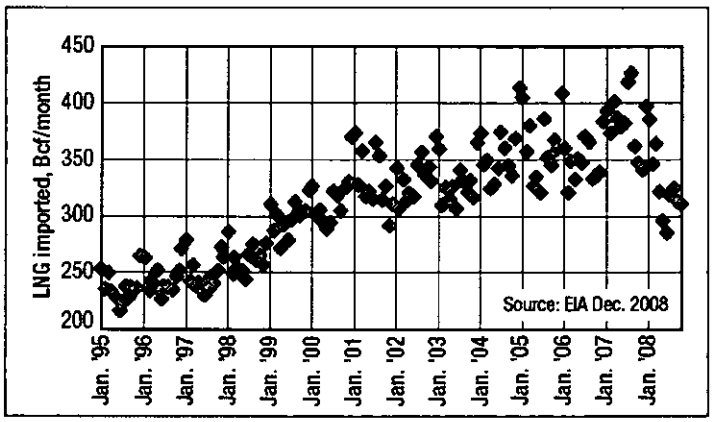
David Wood & Associates

Fiscal terms are one of several factors that influence the delivered price of gas into a market and it is important to understand differences among competing sources.

The differences usually go far beyond a simple percentage sovereign take comparison.

Gas Imports to US Decline in 2008 For First Time in More than a Decade

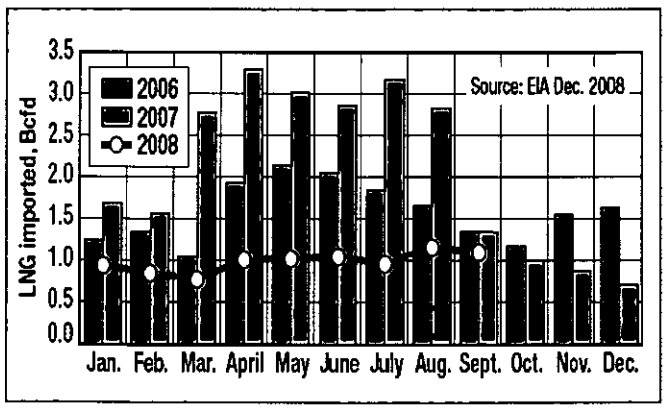
A consequence of greater Lower-48 gas production in 2008 was a reduction in US gas imports.



From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009)

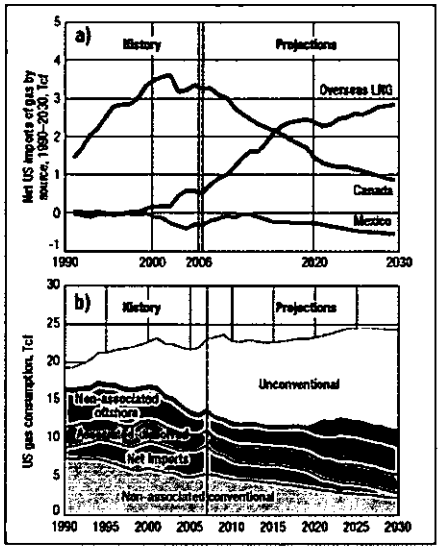
Lower LNG Imports to U.S. in 2008

Monthly LNG imports to the US, 2006–2008 show significant decline for 2008.



From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009).

U.S. Long-term Views on Gas Supply Changed Dramatically During 2008

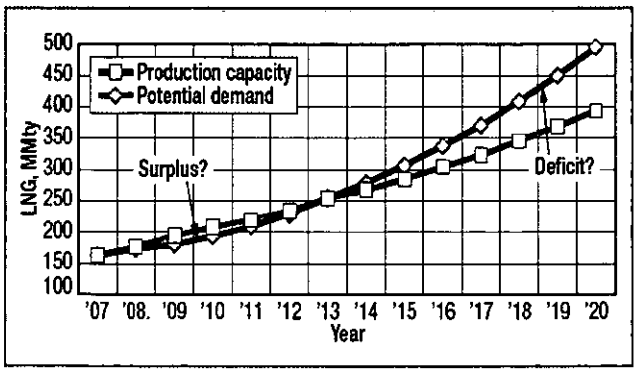


EIA Annual Energy Outlook June 2008 (top) and December 2008 (bottom) show quite different views with unconvenental lower-48 gas and Alaska gas replacing imported LNG.

From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009).

Global LNG supply demand forecast to 2020

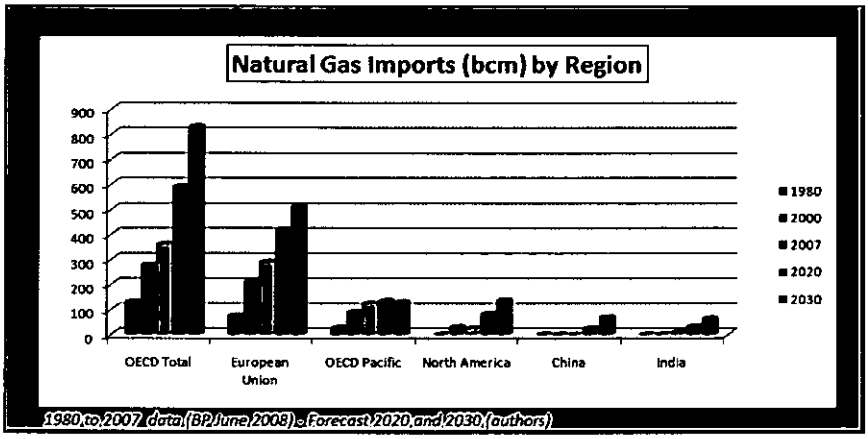
Natural gas surplus due to economic downturn and development of competing supplies is leading to over-supply and lower prices forecast to last perhaps to 2012 for internationally traded LNG. This surplus may itself fuel supply shortfalls globally beyond 2013 and higher prices 2015 to 2020.



From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009).

International Gas Markets are Growing - Competition for Gas is Increasing

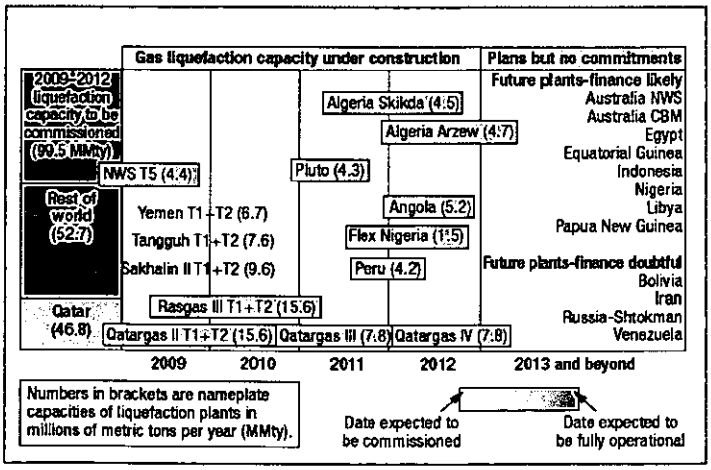
How key gas import markets compare and are forecast to grow in absolute terms (bcm = billions cubic metres; 35.3 bcf = 1 bcm).



In Press 2009, Journal of Natural Gas Science & Engineering

Worldwide New Gas Liquefaction Developments to 2013 and Beyond

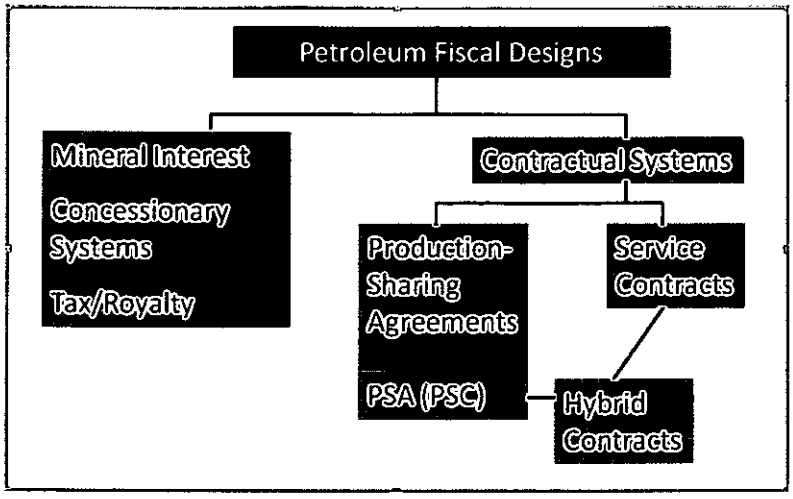
Large new capacity of LNG coming into the market with new plants under construction.



From David Wood *"Uncertain supply and demand outlook for LNG."* **World Oil** (February 2009)

What are the fiscal designs applied by other countries?

Summary of Upstream Oil & Gas Fiscal Designs



Fiscal Terms of 23 Countries and Regions Reviewed

Those countries that could compete for large gas developments (e.g. $20 billion plus) over the next decade are marked with a star.

Algeria: Gas Fiscal Terms Summary

Algeria operates both mineral interest and production sharing systems. Since the new hydrocarbon law of 2005 mineral interest favored.

- Tax on revenues (TRP) with transport and NGL processing deductible
- Tax on income (ICR) 30% (or 15% if earnings reinvested)
- State participation 51% fixed (huge reduction to IOC revenues)
- Tax on extraordinary income (TPE) Sliding scale windfall tax on oil (5% to 50%) – starts at $30 / barrel (Brent) and is not deductible.
- Alnaft (gas agency) monitors long-term gas contracts
- Minimum 85% take or pay required
- Property taxes, water use and carbon credit transfer costs may apply
- Farmout assignments charged at 1% of transaction value
- Government take some 75% of revenues (depending on project and

Angola: Gas Fiscal Terms Summary

Production sharing agreements now dominate fields under development. Many of the new fields are large deepwater oil fields with associated gas.

- Large signature bonuses
- Up to 50% revenue allocation available each year for cost recovery
- Capital costs uplifted by some 20% to 50% (negotiable)
- Profit sharing on sliding scale driven by post-tax IRR rising to 80% to government at high IRRs. Scale is negotiable.
- Petroleum Income tax 50% of producers' profits
- Gas negotiations linked to no flaring rules
- Producers offered low prices to supply LNG plant under construction.
- High-cost deepwater gas gathering infrastructure as well as LNG plant to finance and build.

Norway: Gas Fiscal Terms Summary

Norway operates a mineral interest system. There are no bonuses or royalty and the fiscal take comes from progressive instruments.

- Royalty 0% and no bonuses but marginal tax burden is some 78%
- Corporate Tax (CT) 28% of taxable income
- No ring fences with CT base established at the company Level.
- Special tax rate 50% with investment uplift of 7.5% for 4 years deducted from CT base. Uplift shelters marginal fields.
- Tax of CO_2 emissions at 0.79 NOK (~10 US cents)/ m^3 CO_2
- Gas taxed on bases of actual realised prices.
- Rules concerning prices of gas transfer between affiliates
- Stated fiscal strategy is *that the tax system should act as a sleeping partner providing producers with technical control and ensuring that any investment decision that is commercially viable before tax should remain viable after tax.*

Papua New Guinea (PNG): Gas Fiscal Terms Summary

Papua New Guinea (PNG) operates a mineral interest system. It has relaxed fiscal terms since 1990's as fields under development have declined. Upsurge in interest in large LNG projects led to legislative changes offering progressivity and stability.

- Royalty 2%
- Income tax (IT) 30% (50% for oil)
- Additional Profits Tax (APT) 7.5% after 17.5% post-IT IRR reached for project and 10% after 20% post-IT IRR reached for project.
- State equity participation 22.5% (2% of which goes to landowners)
- Partial carry for the state
- Past exploration costs recoverable through 20-year carry-forwards
- Marginal field incentives: e.g. accelerated depreciation
- ExxonMobil (41.6%) and partners FEED study of PNG LNG ongoing

Qatar: Gas Fiscal Terms Summary

Qatar operates a development and production sharing agreement (DPSA) system providing access for IOCs to some of world's largest gas reserves.

- Qatar Petroleum (QP) NOC usually holds 65% to 70% equity
- Integrated upstream and downstream projects (gas and NGL production linked with LNG, GTL and petrochemicals) are typical.
- Up to 50% revenue allocation available each year for cost recovery
- Upstream gas price fixed at low value (feedstock to downstream)
- Profit gas shared on volume (e.g. <130 mmscf/d 65% goes to QP; >520 mmscf/d 90% goes to QP). Scales are negotiable.
- Value mainly in LNG etc. where producer share is typically 30% subject to 35% corporate income tax. Upstream income exempt CIT.
- NGL and condensate profit split is on a negotiable sliding scale driven by an R-factor (e.g. R <1 QP share is 65%, R>2.5 QP share 90%).

Trinidad & Tobago (T&T): Gas Fiscal Terms Summary

T&T operates mineral interest and PSA systems, but prefers the latter.

- Mineral Interest :
  - Royalty 10% (increased in 2005)
  - Petroleum profits Tax (PPT) 50% (+5% unemployment levy)
  - Supplemental Petroleum Tax (SPT) on oil sliding scale on prices
  - Green fund levy 0.1% of gross revenue
  - Petroleum production levy 3% of total income
- Midstream /downstream projects 35% special corporate tax
- Withholding tax 15% (US no tax treaty so paid by US companies)
- PSC:
  - Cost gas allocation negotiable – typically 40% to 50%
  - Profit share driven by production rate and gas price scales (e.g. at low rates prices producer gets ~45% at high rates/prices producer gets ~15%).
  - Ring fence around PSC area
  - Fiscal stability clause and exemption from other taxes

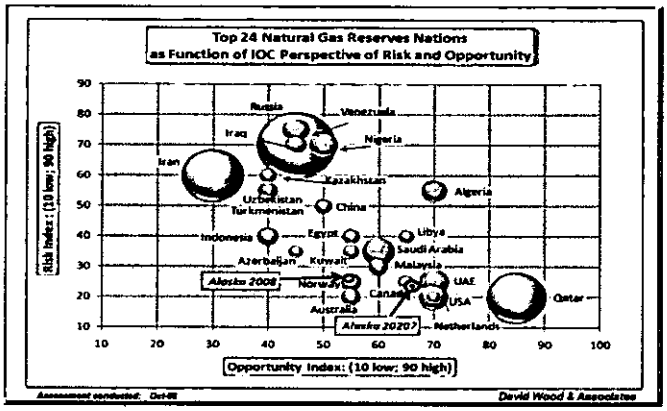
Factors Used to Assess Gas Producer Regional Risk and Opportunity

In addition to identifying projects with positive discounted cash flow potential and offering competitive producer post-tax takes superficial risk and opportunity analysis evaluates the following:

- The five attributes used to evaluate for scoping ***risk*** analysis are focused mainly on political, business and fiscal risks:
  - Expropriation / overall political instability (RL & NI components)
  - Corruption
  - High administrative burden (cost & time)
  - Community/ labor disputes
  - Regressive and inflexible fiscal terms
- The five attributes used to evaluate for scoping ***opportunity*** analysis are focused mainly on technical, operational and financial risks:
  - Access to large reserves
  - Low finding and development costs
  - Ease of operation
  - Access to equity /debt funding
  - Access to infrastructure / markets

Alaska Gas Compared on International Scale of Risk versus Opportunity

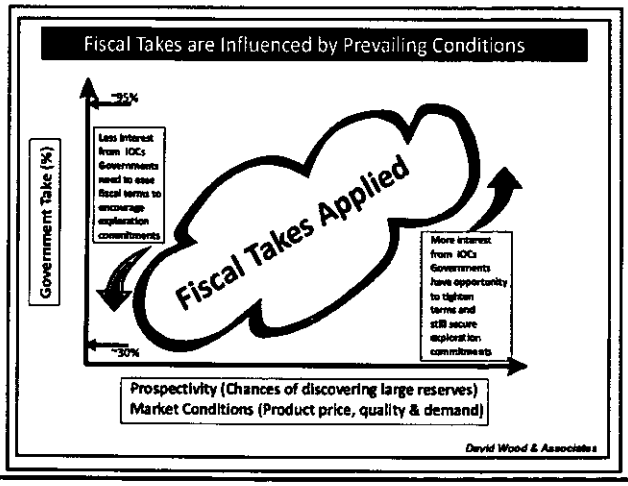
The diameters of the bubbles are proportional to proved natural gas reserve holdings as reported by BP Statistical Review (June 2008).



Alaska marked on the framework from David Wood *"Global perspectives required for risk, opportunity analyses."* **Oil & Gas Journal** (9Feb, 2009).

Overall Government Takes from Gas Production Varies Substantially

Governments need to retain the ability to adjust fiscal designs to meet changing conditions.



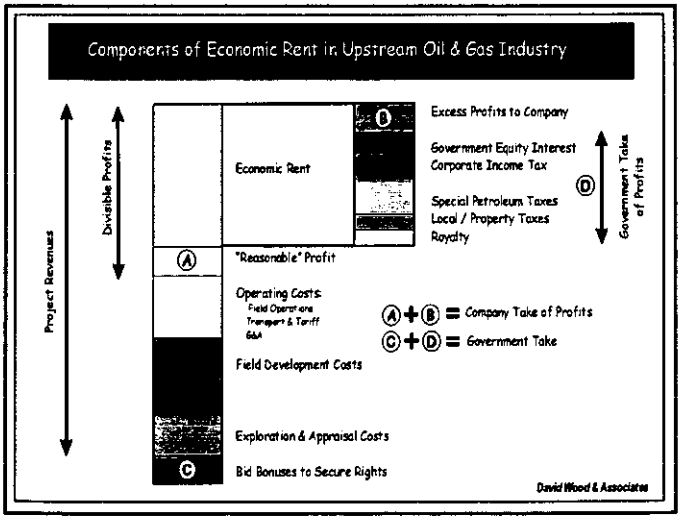
Most governments open new areas for licensing, re-licensing, or for contract by IOCs in stages over time.

Often such activity is linked to bidding rounds. It is useful for the governments to retain rights to adjust fiscal terms associated with new licensing.

Fiscal elements commonly combined to

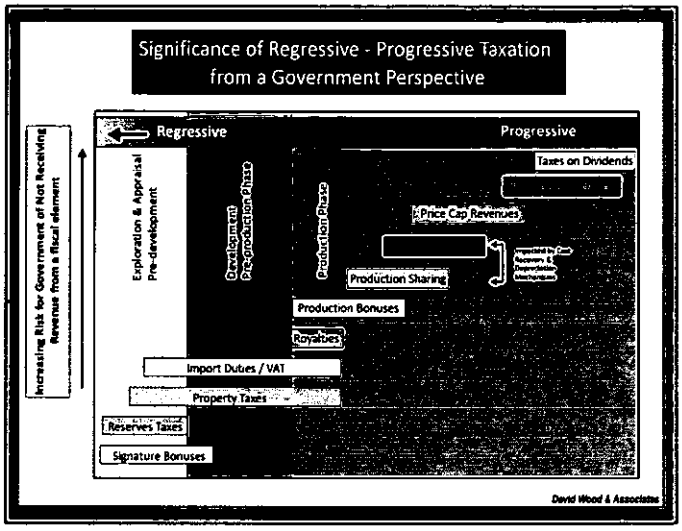
optimize government take

Fiscal Designs Focus on the Division of Economic Rent



Government take comes mainly from the revenue stream but bonuses and pre-production taxes also contribute.

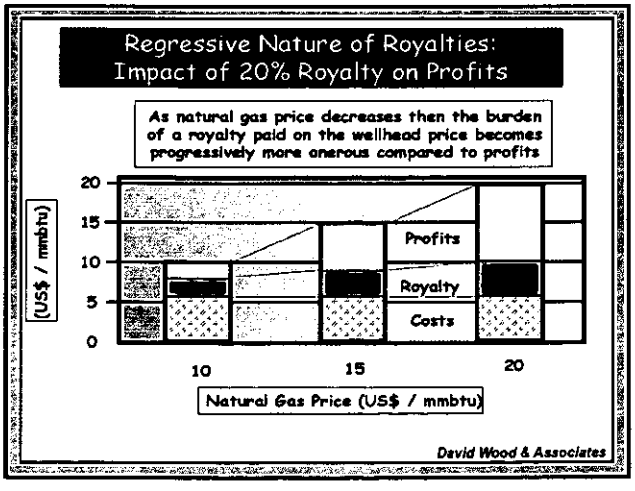
Progressive & Flexible Fiscal Designs Help to Promote Investment



The stronger the commitment made by governments to promote a commercially attractive environment, the more likely investors are to commit investments without guarantees of fiscal stability.

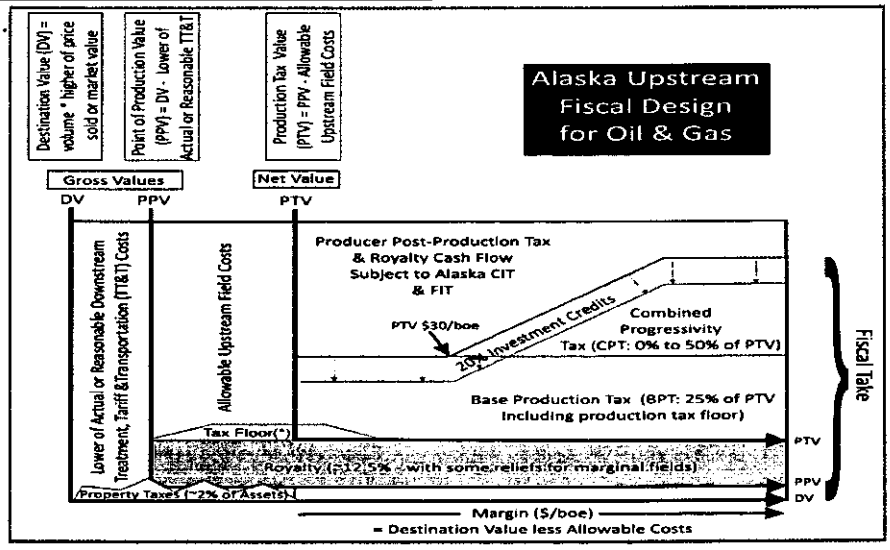
Regressive Impact of Royalty

Royalty takes a higher percentage share of profits at lower prices.



Alaska's Prevailing Fiscal design

Schematic of Alaska's Prevailing Oil & Gas Fiscal Design



Key Regressive Elements in Alaska's Prevailing Fiscal Design

There are three elements that make Alaska's prevailing fiscal design regressive.

- Royalty
- Property Taxes
- Production Tax Floor

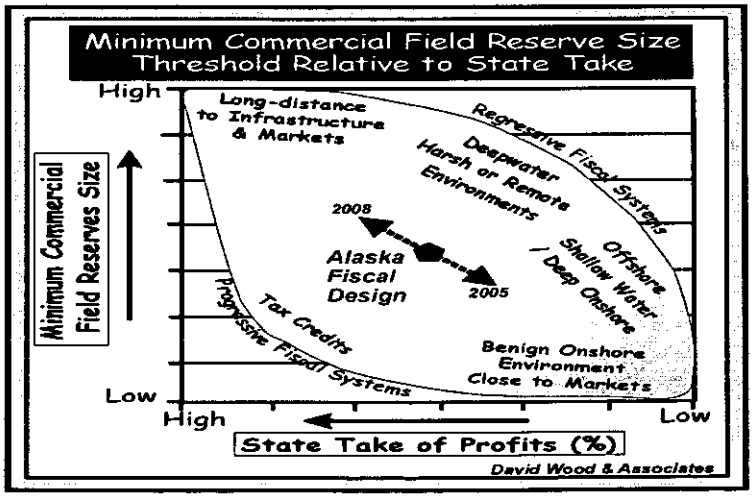
These regressive elements are partially offset by:

- Investment credits (exploration and development)
- Production taxes (levied after deduction of all allowable costs)
- Progressivity tax (only levied on high value streams)

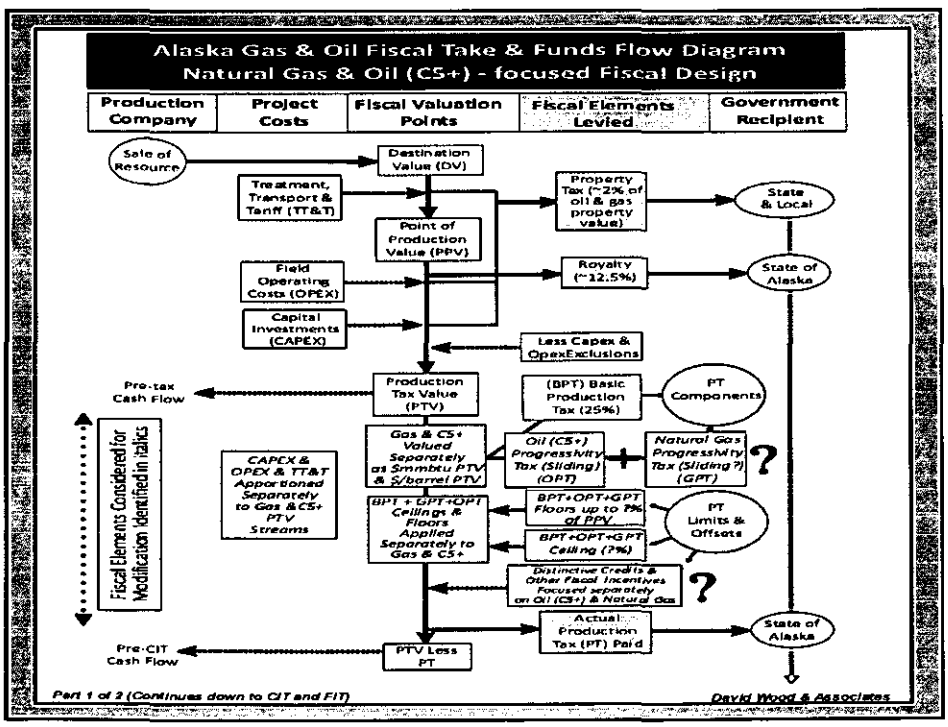
Other allowances / credits for producers should be considered to offset impacts of regressive elements coupled with tougher progressivity terms.

Regressive Fiscal Designs Increase Minimum Commercial Field Sizes

Tax credits can help offset some regressive fiscal elements.



Complications of combined oil and gas progressivity tax (CPT)



Problems with Alaska's Current Progressivity Tax from the Natural Gas Perspective

The models of a wide range of gas field sizes suggest three issues associated with calculating production tax values using a combined oil and gas (boe) revenue stream.

- Large gas production volumes contributing low value to high value oil production can dilute the PTV/boe and progressivity of the combined stream.
- The PTV / boe threshold (i.e., trigger point) at which progressivity tax becomes initially payable are set too high for natural gas.
- Tying the production tax floor to PPV can lead to regressive consequences for gas producers in high cost / low value conditions.

Impact of Natural Gas on Combined Oil & Gas Production Tax

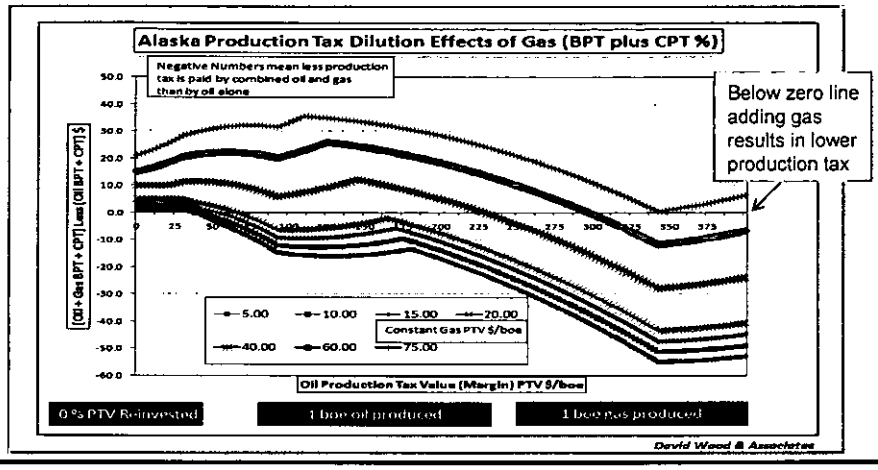
Analysis has identified that three factors are relevant to the dilution effects under prevailing production tax paid by an existing oil- only case with the addition of gas production (and vice versa – i.e. oil added to a gas-only case). These factors are:

1. Magnitude of value differential between oil and gas streams (high oil value minus low gas value, or high gas value minus low oil value);
2. Relative volumes of oil and gas produced contributing to combined production tax boe stream.
3. Amount of PTV reinvested, which depending on the PTVs of each stream can have a significant impact

An Excel computer model has been developed to test these three factors.

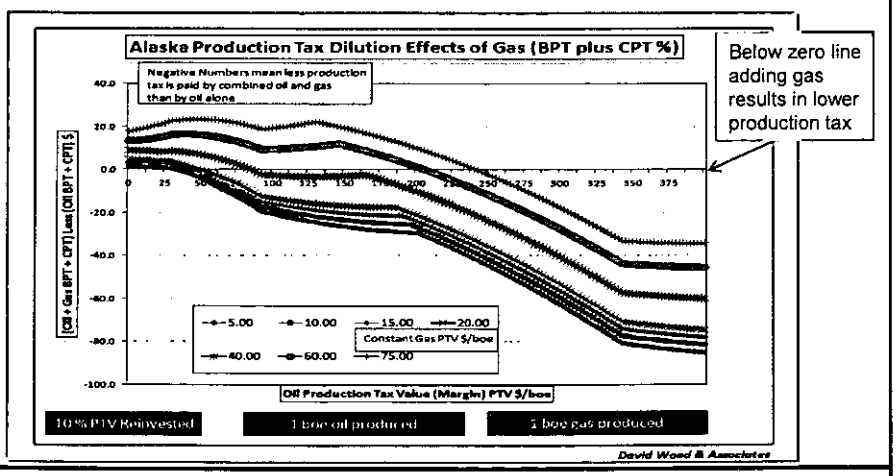
Natural Gas Dilution Effects on Combined Oil & Gas Production Tax

The trends are non-linear with slope changes because of the changing gradients of the production tax progressivity mechanism (i.e. 0.4/boe to 0.1/boe) and the threshold values at which those changes occur.



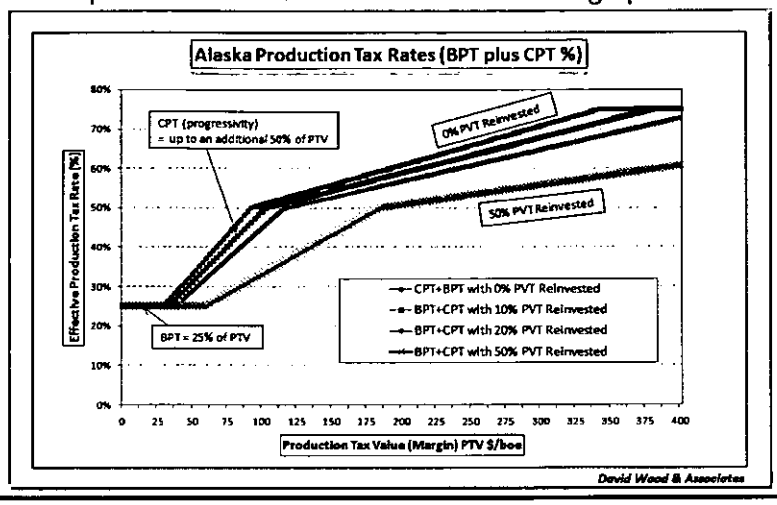
Natural Gas Production Tax Dilution Effects Impacted by Reinvestment

If some of the PTV is reinvested the reduction in production tax paid is significantly greater. This graph shows the impact of 10% reinvestment.



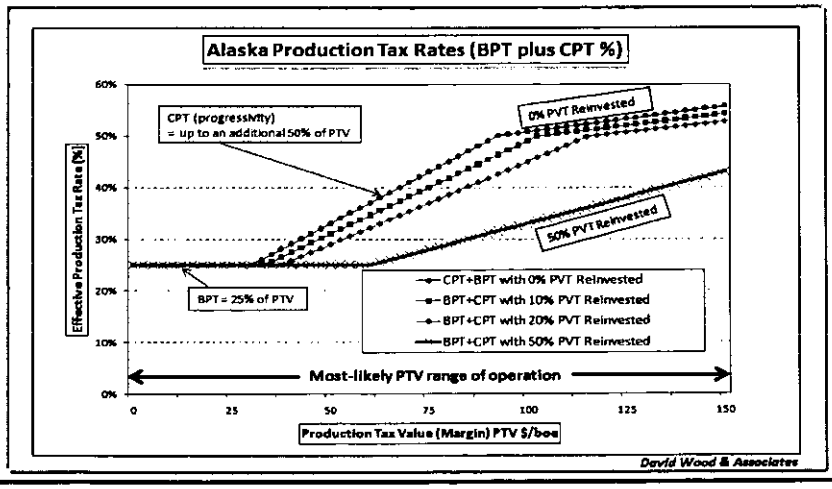
Natural Gas Production Tax Dilution Different Reinvestment Scenarios

The impact of several reinvestment scenarios – 0% , 10%, 20% and 50% of PTV - on production tax rates are illustrated in this graphic.



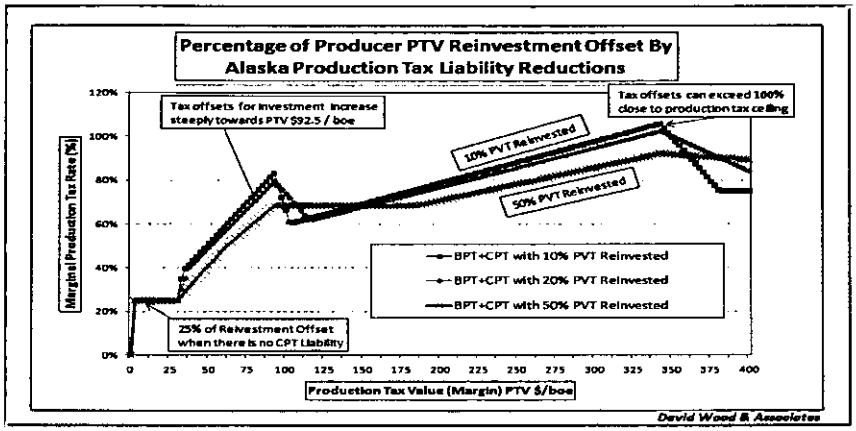
Reinvestment Scenarios For PTV Range $30/boe to $150/boe

For example production tax rate can be reduced from 49% to 42% at PTV $90/boe by reinvesting 20% of the PTV.



Marginal Production Tax Rates Seen by a Producer for Reinvestment Dollars

The vertical axis shows the percentage tax reduction associated with the incremental re-investment (or the marginal tax rate offset by the producer by its reinvestment). Note the peak around PTV$90/boe and values above 100% at PTV $350/boe plus multiple crossover points.



Implications of Analysis

The analysis suggests that the prevailing production tax system has the following complications:

1. It is difficult to predict (from tax authority and producer perspectives) and relationships between oil and gas tax liabilities are non-linear;

2. The magnitude of combined production tax impact caused by adding a gas production stream varies with relative oil and gas PTVs, oil and gas volumes and percentage of PTV re-invested;

3. Without detailed analysis (and speculative forecasting of oil and gas prices) production tax outcomes can be counterintuitive.

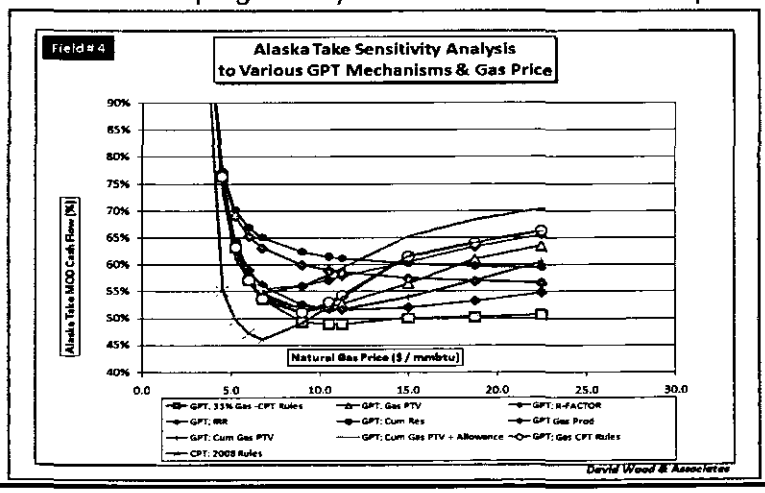
Alternative Drivers of Gas Progressivity Tax Evaluated by Fiscal Model

Ten different mechanisms are evaluated. No.1 represents the status quo evaluating gas progressivity as a combined revenue stream with oil (boe).

1. CPT: 2008 Rules (combined PTV/boe)
2. GPT / OPT: separates gas and oil on PTV/boe scale
3. GPT /OPT: progressivity applied to only 33% of gas PTV
4. GPT: Gas PTV (based on Gas PTV / mmbtu)
5. GPT: R-Factor (cumulative PPV less royalty/cumulative gas costs)
6. GPT: IRR (Investor's Rate of Return of cumulative PTV)
7. GPT: Cumulative gas reserves produced
8. GPT: Annual gas production volumes
9. GPT: Cumulative gas PTV
10. GPT: Mechanism #9 plus allowances to counter regressive elements

Ten Progressivity Mechanisms: Sensitivity Analysis

A large gas field (5 tcf reserves) illustrates the impact on Alaska's state take of cash flow of the ten progressivity mechanisms at different oil prices.



Multi-year and multi-scenario fiscal

performance cash flow models

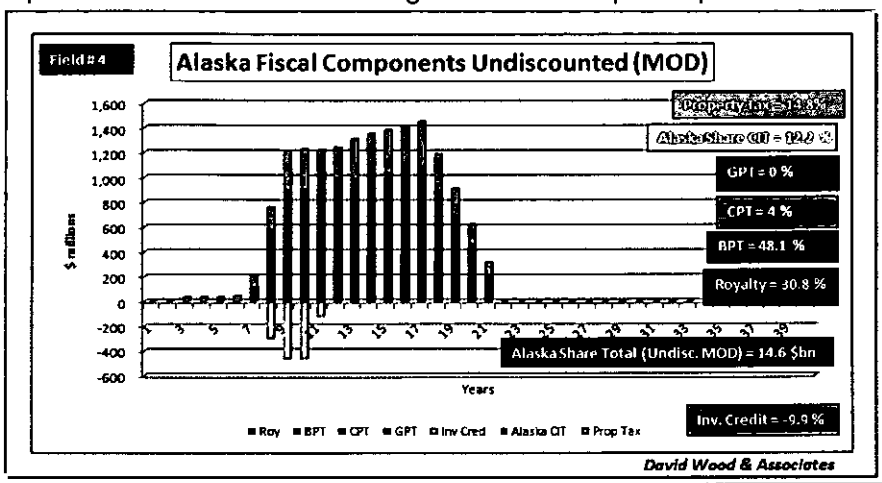
Hypothetical Field Cases Evaluated

Five non-associated natural gas fields and five oil fields with associated gas were constructed to use with a multi-year fiscal model built in Excel.

- The natural gas fields (#1 to #5) range in reserve size from 500 bcf to 10tcf.
- The oil fields (#6 to #10) vary in reserve size from 28 mmb (with 20 bcf of associated gas) to 500 mmb (with 690 bcf of associated gas).
- The fields display a wide range of production and cost profiles.
- Base cases for each model field tested with wide ranging sensitivity cases.
- Base case assumptions applied: Year 0 gas price: $7.5 / mmbtu; Year 0 oil price: $80 / barrel; nominal inflation 2% / year. The model allows these and the sensitivities to be changed easily and quickly.

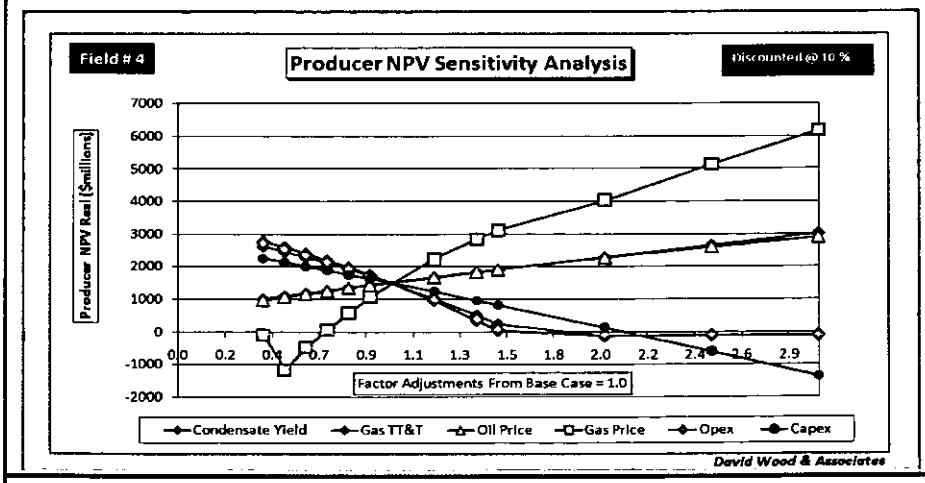
Alaska Fiscal Take Varies Over Field Life

Components of Alaska fiscal take for a large gas field (5 tcf) showing the impact of investment credits during the field development phase.



Sensitivity of Alaska Gas Field to Project & Market Variables

Economic performance of a gas field development from a producer's perspective for a large gas field under the prevailing Alaska fiscal system.



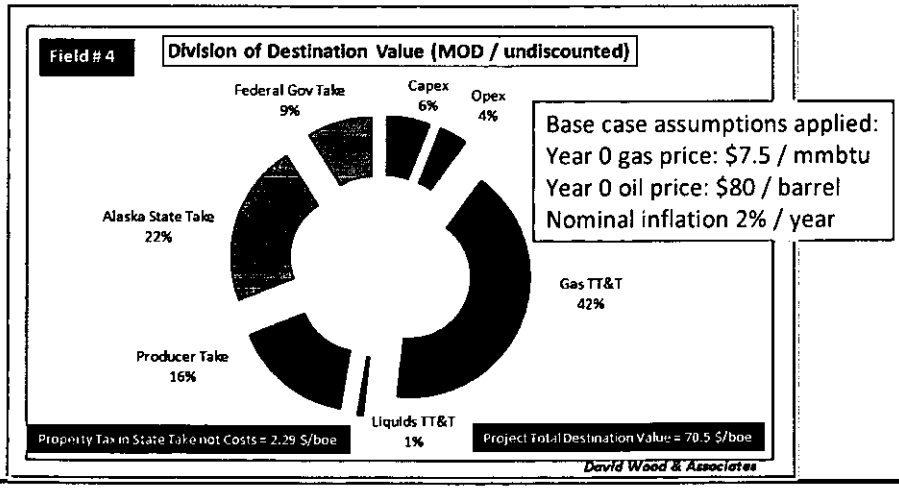
Base Case Hypothetical Field Models Reveal High-level Implications for Government Take

Government take includes Alaska state take and federal government take. The models apply the prevailing Alaska fiscal design and some base case assumptions.

- For oil fields (with associated gas):
  - Government take of destination value (gross) is about 60%
  - Government take of destination value less costs (gross) is about 75%
- For natural gas fields (non-associated gas with NGLs):
  - Government take of destination value (gross) is about 30%
  - Government take of destination value less costs (gross) is about 67%
- Exact percentages vary with field sizes, prices and costs.

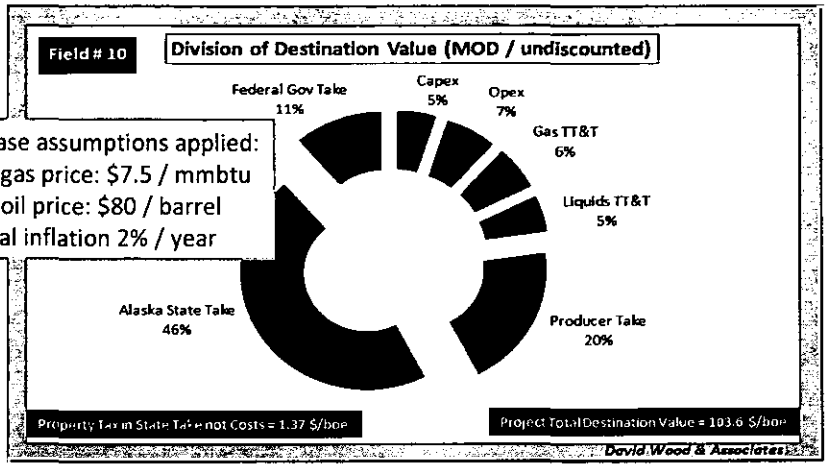
Large Gas Field: Division of Destination Value

For gas fields of various size (5 tcf shown here) gas TT&T takes the largest share of destination value. Alaska takes some 22% of destination value.



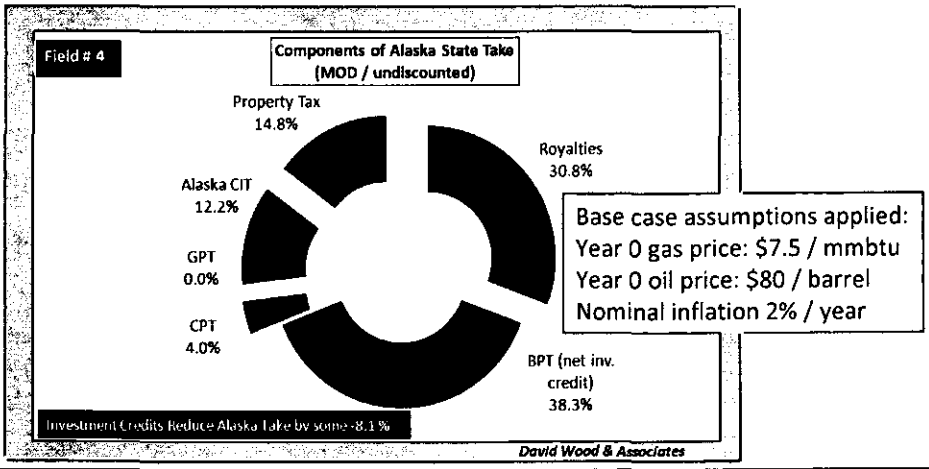
Large Oil Field: Division of Destination Value

For oil fields of various size (500 mmb shown here) costs are less significant than for gas. Alaska takes some 46% of destination value.



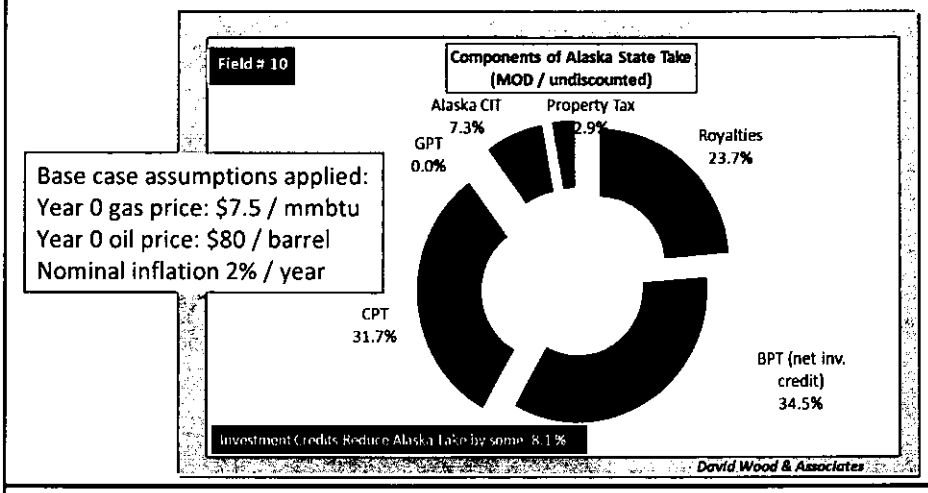
Components of Alaska State Take for Large Gas Field

Royalties and basic production tax account for two-thirds of Alaska state take for this 5 tcf field. Base case price and cost assumptions applied.



Components of Alaska State Take for Large Oil Field

Basic production tax and combined progressivity tax account for two-thirds of Alaska state take for this 500 mmb oil field.



Fiscal designs go beyond upstream

issues and influences

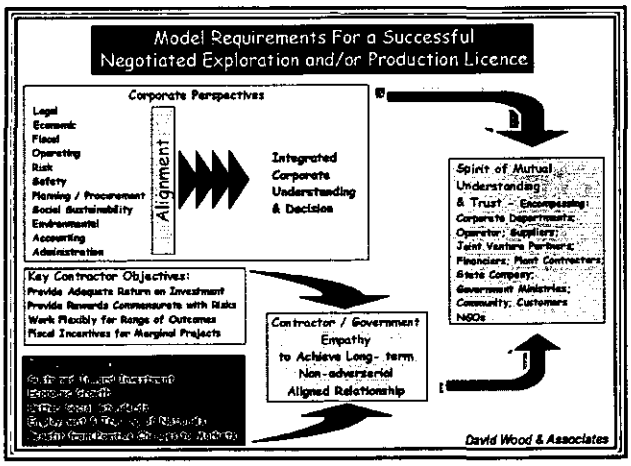
Integrated Upstream & Downstream Fiscal Designs

IOCs have demonstrated more enthusiasm around the world for downstream infrastructure project investments that are integrated with development of upstream resources (e.g. Algeria, Nigeria, Russia, Qatar etc.).

- IOCs have signed up around the world to progressive systems with high marginal government takes (with significant government equity shares) when gas values are high and with limited access to reserves.
- They have been more likely to do so when:
  - there are incentives and/or allowances available to compensate for regressive elements when gas values are low or during field development phases.
  - integrated upstream and downstream projects granting them exclusive access rights to those resources (limited TPA).
  - terms are controlled by contracts.

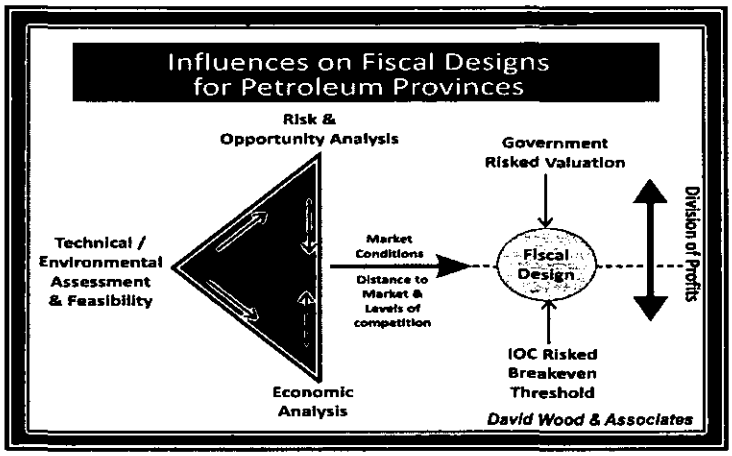
Alignment between Government and Producer Objectives

Alignment of purpose should be taken into consideration when formulating fiscal designs. Win-win outcomes take a long-term view to achieve.



Influences on Fiscal Design

Technical, economic and risk analysis will determine whether fiscal designs on offer provide acceptable levels of return to justify IOC investment.



Fiscal Instability and Fiscal Credibility

The IOCs have experienced unprecedented fiscal instability around the world in recent years, coupled with greater political uncertainty.

- There are different degrees of fiscal instability culminating in the extreme in expropriation of assets.
- Milder forms of instability involve changing fiscal terms with various degrees of retrospective impacts on existing leases and contracts.
- IOCs are facing more competition from NOCs to access large oil and gas reserves and political manipulation by governments.
- Such factors make the U.S. (and other OECD countries) more attractive regions for risk investment where large reserves exist.
- Although issues of fiscal stability and credibility remain important and take time to establish they are only one of several factors that will influence IOC investment decisions in upstream developments.

Guarantees of Fiscal Certainty

IOCs often seek fiscal certainty in exchange for committing to very large investments in strategic infrastructure and reserves development.

- Issuing such guarantees is risky for governments.
- Implement flexible and progressive fiscal designs is a better approach
- Clear, pro-commercial fiscal strategy statements improve confidence
- If guarantees are offered they should involve:
  - limited time periods
  - reciprocal commitments from IOCs to place ceilings on costs
  - more regressive fiscal elements than if no guarantees given
- Retaining the right to adjust fiscal terms enables governments to periodically change the fiscal design to respond to market conditions.

Conclusions & recommendations of

preliminary study

Conclusions Regarding Progressivity Tax Structure

Complications in CPT lead to the following general conclusions:

1. Under the current production tax rules (CPT) the impact of natural gas revenue on the magnitude of combined production taxes is difficult to predict making tax planning difficult (for both state and producers).

2. This is likely to render the production tax structure unstable in the long term and to require future adjustments by the legislature to progressivity rates and thresholds according to prevailing conditions.

3. Such adjustments would have significant impacts on investors and risk undermining fiscal stability and credibility over the long term.

4. By separating CPT into GPT and OPT these problems are removed and incentives can be structured in a transparent way. Under separate oil and gas taxation streams the combined production taxes become more predictable, stable and flexible.

Useful Analysis to Aid Natural Gas Fiscal Design Yet to be Conducted

The dilution effect of production tax is one of several issues that suggest that the natural gas fiscal design requires some adjustment. A first step is to establish a strategy for what a revised fiscal design should achieve. In order to help this process the following analysis could be conducted.

1. Establish and compare multi-year cash flow models for Prudhoe Bay and Point Thomson fields to evaluate from a natural gas perspective the taxation outcomes a range of scenarios: 1) Gas pipeline alternatives; 2) LNG plant at Valdez; GTL plant on the slope; and others.

2. Use the information from 1. together with the ten hypothetical yet-to-find fields (presented in December Report) to test alternative gas fiscal designs.

3. Evaluate the fiscal designs and specific fiscal instruments applied in the main oil and gas producing states of the Lower 48. Alaska may be competing for investment with large-scale unconventional gas projects (e.g. shale gas). It is important to understand the incentives being offered by such projects.

Approaches to Fiscal Design that Can Improve Performance & Credibility

The following are selected recommendations for Alaska from the report:

- Develop a clear statement of fiscal strategy and objectives
- Focus on a simple, flexible and progressive fiscal design
- Some level of fiscal stability important to secure investment
- Such designs could be more effective than contractual guarantees
- Drive progressivity fiscal elements for gas with gas PTV (not boe)
- Consider return on investment drivers for progressivity taxes
- Combine progressivity tax with allowances to offset regressive elements
- Aim to clarify and optimize fiscal revenue streams from NGLs
- Consider state equity involvement in infrastructure projects
- Involve cost control components to some fiscal incentives
- Apply time constraints to new leases to develop resources

4/1/09 CONFIRMA-TIONS: BOARD OF GAME

July 11, 2005
Brief Resume of:
Paul Johnson
22891 Glacier Highway
Juneau, Alaska, 99801
(907) 789-0944
Summer Address:
PO Box 22
Elfin Cove, Alaska 99825
(907) 697-2720

Born May 28, 1952 to Ed and Mary Johnson in Juneau, Alaska

Raised in Alaska's Fishing and Guiding Industries

1970 Graduate Juneau Douglas High School

Private Pilot License 1970

University of Alaska 1970-1972 Wildlife Management Studies

Registered Guide License 1976

Coast Guard Captains License 1976

1972-1995, Owner; J&M Fish Buying and General Store, sold to Alec Brindle 1995

1975-Present, Owner Operator; Chichagof Charters Hunting Fishing and Sightseeing

1980-Present, Board of Directors; Middle Fork Mining Company

1980-1992, Board of Directors; Elfin Cove Community Corporation

1979-1990, Member; Elfin Cove ADF&G Fish and Game Advisory Committee

1981-1995, Board of Directors and Chairman; Elfin Cove Electric Corp.

1989-1990, Member; Task force on Guiding and Game

1989-1993, Board of Directors and Chair (three years); Big Game Commercial Services Board

1995-1997, Board of Directors; Alaska State Camber of Commerce

1996-1998, Board of Directors; Alaska Professional Hunters Association

2001-Present, Board of Directors; Northern South East Alaska Agriculture Association

2002-2004, Member; GMU4 Brown Bear Management Plan

Matt Robus
(907) 465-4190

Bill Corbus
(907) 465-2301

I have made payroll and worked as an employer all of my working life. Along with all of the members of The Alaska Professional Hunters Association I have worked very hard to create this board and I believe in the professional guiding industry. My wife and family support my desire to serve on this board. As a member and Chairman of the previous Big Game Commercial Services Board I am aware of the exceptional audit ratings we had as a board prior to being allowed to sunset by Senator Rick Halford.

Please note that without hesitation I promote and support the nominations to this new board made by the Alaska Professional Hunters Association. Both Richard Rohrer and Brad Dennison are men of the highest level of integrity. I have given Governor Murkowski my full support and if asked to serve on this board will do my best to uphold and support his policies.

Respectfully,
Paul Johnson

STATE OF ALASKA
OFFICE OF THE GOVERNOR

Phone: (907) 465-3500 Fax: (907) 465-3532

BOARDS AND COMMISSIONS APPLICATION FORM

INSTRUCTIONS

A separate application is required for each position for which you apply. Complete and specific answers will aid in rapid and accurate processing of your resume. Please type or print legibly in ink. Forward to the above address. Be sure your answers are true. A willfully false answer may result in your disqualification or removal from office if you are appointed.

Board or Commission and seat for which I am applying: Big Game Commercial Svs
(For example, Board of Agriculture, public seat)

Please list any other State Boards or Commissions on which you currently or previously have served:

Name: Dirk Nickisch

Mailing Address: 2199 Nottingham Dr

Residence Address: Same

City, State and Zip Code: Fairbanks, AK 99709

Home or Message Telephone: _____ Business Telephone: 479-5995

Fax Number: 479-5042 Cell Phone: _____

Email address: flights@flycoyote.com

AS 39-05-100 requires that a person appointed to a state board or commission be a registered voter prior to the last general election:

Are you a registered voter: YES X NO _____ Voter Registration Number (Optional): _____

Social Security Number (Optional, required if appointed for travel, reimbursement etc.): _____

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?

YES _____ NO X if "YES", explain the circumstances on a separate sheet of paper and attach it to this application. A conviction is not necessarily grounds for disqualification. The number of convictions, nature, recentness, and relationship to the board position applied for, will be evaluated and a determination will be made after a review of all relevant facts.

CONFLICTS OF INTEREST: Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?
YES X NO _____

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you have applied? YES X NO _____

If "YES", explain:
I own and operate a 135 air taxi that transports hunters

Fax Received
OCT 15 2008
Office of the Governor

TRAINING AND EXPERIENCE: (If resume attached, it is not necessary to complete items A-D)

A. List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria: Commercial Single Engine Land, ATP Multi Engine Land, Commercial Single Engine Sea Pilot Licence

B. List both formal and informal education and training experiences: (Use additional paper if necessary).
Bachelor of Science in Economics minor in Animal + Range Science NDSU
Dakota Aero Tech A+P License

C. List any community service, municipal government, and state positions held, and any awards received. Include both compensated and uncompensated positions (such as president of a service organization or a mayor). Include length of time serviced.
North Dakota Heritage Award for public service

D. Employment work history – paid, unpaid or voluntary: (Use additional paper of necessary).
See Resume

The Office of the Governor and the State of Alaska have an Affirmative Action Equal Employment Opportunity Program. To assist in the program, you are asked to voluntarily answer the following questions to provide the information necessary for reporting purposes. Under State and Federal law, the information you provide will not be used to illegally discriminate against you.

DATE OF BIRTH: _____ SEX: FEMALE _____ MALE X

ETHNICITY:
Alaska Native ___ American Indian ___ Asian or Pacific Islander ___ Black ___ Hispanic ___ White X

MILITARY SERVICE (if applicable, give dates): _____

CERTIFICATION: I swear the information I have entered on this form is true to the best of my knowledge. I understand that if I deliberately conceal or enter false information on the form my application may be rejected, I may be removed from the list of eligible candidates, or I may be removed from the position. I agree that the Office of the Governor may contact present or former employees or other persons who know me to obtain an additional information about my skills and abilities. I understand that the information on this application is public information and may be released through a legal request for such information.

Resume Of

Peter B. Froehlich
1785 Evergreen Avenue
Juneau, Alaska 99801
Phone: (907) 586-2806

Residence: Alaska residence since February 1970

Experience: *August 2005 - Present*: Commissioner, Commercial Fisheries Entry Commission, Juneau, Alaska

August 1989 - January 2005: District Court Judge for Juneau, Alaska

December 1981 - July 1989: Assistant Attorney General, Juneau, Alaska. Split position in both Legislation and Regulations Section and Commercial Section

July 1979 - November 1981: Salmon hand trolling (seasonal); part-time, private law practice including work for Alaska Legislature

January 1976 - June 1979: Assistant Attorney General, Juneau, Alaska, Natural Resources Section

September 1975 - December 1975: Legal intern, U.S. Attorney's Office, Portland, Oregon

May 1975 - September 1975: Legal Assistant, District Attorney's Office, Ketchikan, Alaska

December 1973 - January 1974: Legal Assistant, Attorney General's Office, Juneau, Alaska

August 1970 - November 1972: Crewman on fishing vessel involved in King and Tanner Crabbing, and Salmon Tendering

Education: *November 2002*: National Judicial College, ABA/UNR (Civil Mediation Certificate): (Also five other courses 1990 - 1998)

June - July 1995: University of Oxford, England, Legal Heritage Program

August 1973 - December 1975: Willamette University College of Law, Salem, Oregon (Juris Doctorate)

June 1974 - September 1974: University of Washington, School of Law, Seattle, Washington (summer session)

January 1972 - May 1972: University of Alaska, Anchorage, Alaska (graduate courses)

September 1965 - May 1969: Marquette University, Milwaukee, Wisconsin (B.S. in Economics, minor in accounting)

Professional Organizations:

Alaska and Juneau Bar Associations, 1976-Present. National Judicial College, Faculty Moderator, 1997. Jury Subcommittee of Supreme Court Fairness and Access Committee, 1996-1997. Conference of Alaska Judges, 1990-1994. President, Board Member, Alaska Bar Association Ethics Committee, 1991-1994. Code Revision Commission, 1986-1990. Alaska Bar Association Discipline Committee, 1983-1988.

Current Service Organizations:

Mayor's Task Force on Youth. Boys & Girls Club Board. Big Brothers/Big Sisters mentor. Alaska Native Sisterhood, Camp 2.

Former Service Organizations:

Youth Court Board. Kids Voting Board. Healthy Nations Central Circle. Mayors Task Force on Sobriety. ALSC Pro Bono Program. United Way of Southeast Board. Big Brothers & Big Sisters, President.

Awards: Youth program volunteer of the year (2002). Making a Difference Award, NCAAD (1997).

Special Interests:
Family, sports (especially basketball), coaching, fishing, hiking, biking, and travel.

4/7/09 UPDATE: ALL-ALASKA GASLINE

2383

Alaska Gasline
PORT AUTHORITY

All-Alaska Gasline Update

Senate Resources

April 7, 2009

http://www.allalaskagasline.com

Continued Support from the State

- Legislative intent language in AGIA (July 23,2008)
  - calls for the continued advancement of the All-Alaska/LNG project within the AGIA framework
  - adopted overwhelmingly: 58-1
  - "It is the intent of the legislature that an AGIA license will enable and encourage an All Alaska gas line/liquefied natural gas (LNG) project within the TransCanada project."

- Governor Palin's Administrative Order No. 242 (August 20,2008)
  - directs State agencies to assist the development of the LNG project
  - "I…direct [DNR and DOR] to assist entities…in pursuing development of an economically and technically viable liquefied natural gas (LNG) project in this state, such as the project envisioned by the Alaska Gasline Port Authority."

Interest from Hawaii / West Coast

- We continue to work with the Office of Hawaiian Affairs to bring Alaskan LNG to Hawaii

- Alaska Federation of Natives: Resolution No. 08-42 (October 2008) adopted in support of LNG project within AGIA to benefit rural Alaska and Hawaii

- Oregon LNG Projects
  - Bradwood LNG
  - Oregon LNG
  - Jordan Cove LNG

- Sempra LNG

Port Authority Project Advancement

- The Port Authority, Mitsubishi Corporation and Sempra LNG, continue to advance the development of the All-Alaska Gasline/LNG project
  - Mitsubishi
    - Japan's largest trading company with a wide range of business activities
    - Strong experience in LNG projects (handles approximately half of Japan's LNG imports)
  - Sempra LNG
    - Owns the only LNG receiving terminal on the West Coast
    - Subsidiary of Sempra Energy, one of the largest traders of natural gas in North America

Focus on AGIA Open Season

- Our focus is to position our project for TransCanada's open season targeted for July 2010
- As part of the AGIA process, TransCanada committed to build a pipeline to Valdez – if sufficient gas volumes are committed – either on a standalone basis or in conjunction with a pipeline into Canada
- The Port Authority along with Mitsubishi and Sempra LNG have met with TransCanada to discuss the open season
- We continue to work with TransCanada as we seek to coordinate our efforts

Focus on AGIA Open Season (continued)

- We intend to participate, either directly or through prospective gas shippers, in TransCanada's Open Season

- We are planning significant technical, environmental and other development work for the LNG terminal

- Our objective: to develop a project that provides a highly attractive economic proposition for the North Slope producers and the State of Alaska

Committed to Meeting Alaska's Gas Needs

- We believe our project will maximize ANS gas wellhead value by exporting LNG out of Alaska to reach global markets, including the U.S. and Asia

- However, we have always been committed to prioritizing the needs of Alaska's domestic gas consumers. Indeed, we believe that our project provides the best opportunity to maximize in-State access to our North Slope gas resources

- We will continue to work in cooperation with ANGDA on meeting this important goal

Market Developments Favor an LNG Project

- Recent market developments have underscored the importance of the All-Alaska/LNG project as the most attractive option to monetize Alaska's gas.

- Lower 48 and Canada have experienced significant increases in production
  - shale gas has been at the forefront of increases in "non-conventional" gas production.
  - Navigant Consulting and ICF Consulting have recently estimated America's potential gas resources at about 2,000 tcf.
    - That's 100 years worth of U.S. natural gas demand.
    - "That's 50 percent more gas than the current proven reserves of Russia and twice as much as the proven reserves in Iran. Put into oil terms, that 2,200 Tcf of gas is the equivalent of one-and-a-half Saudi Arabia's."[1]

- In Canada BC shale gas is a "game changer," with projected production of 5.3 bcf/d within 10 years. [2]

- The gas market in the Lower 48 has dramatically changed. The viability and need for the LNG option has never been greater from Alaska's perspective.

[1] Energy Tribune (1/12/2009) <energytribune.com/articles.cfm?aid=1055>

Market Developments Favor an LNG Project Cont'd. . .

Alaska Gasline Port Authority

Porter Bennett, president and CEO of Bentek Energy, a consultancy firm specializing in energy market research says: (3/29/09)

"You've got to recognize that there is at least the possibility that the Lower 48 supply situation will make the absorption of Alaska gas difficult. That might argue for maintaining the opportunity to export Alaska gas as LNG, to leave open the option of exporting the gas to foreign markets such as Asia".

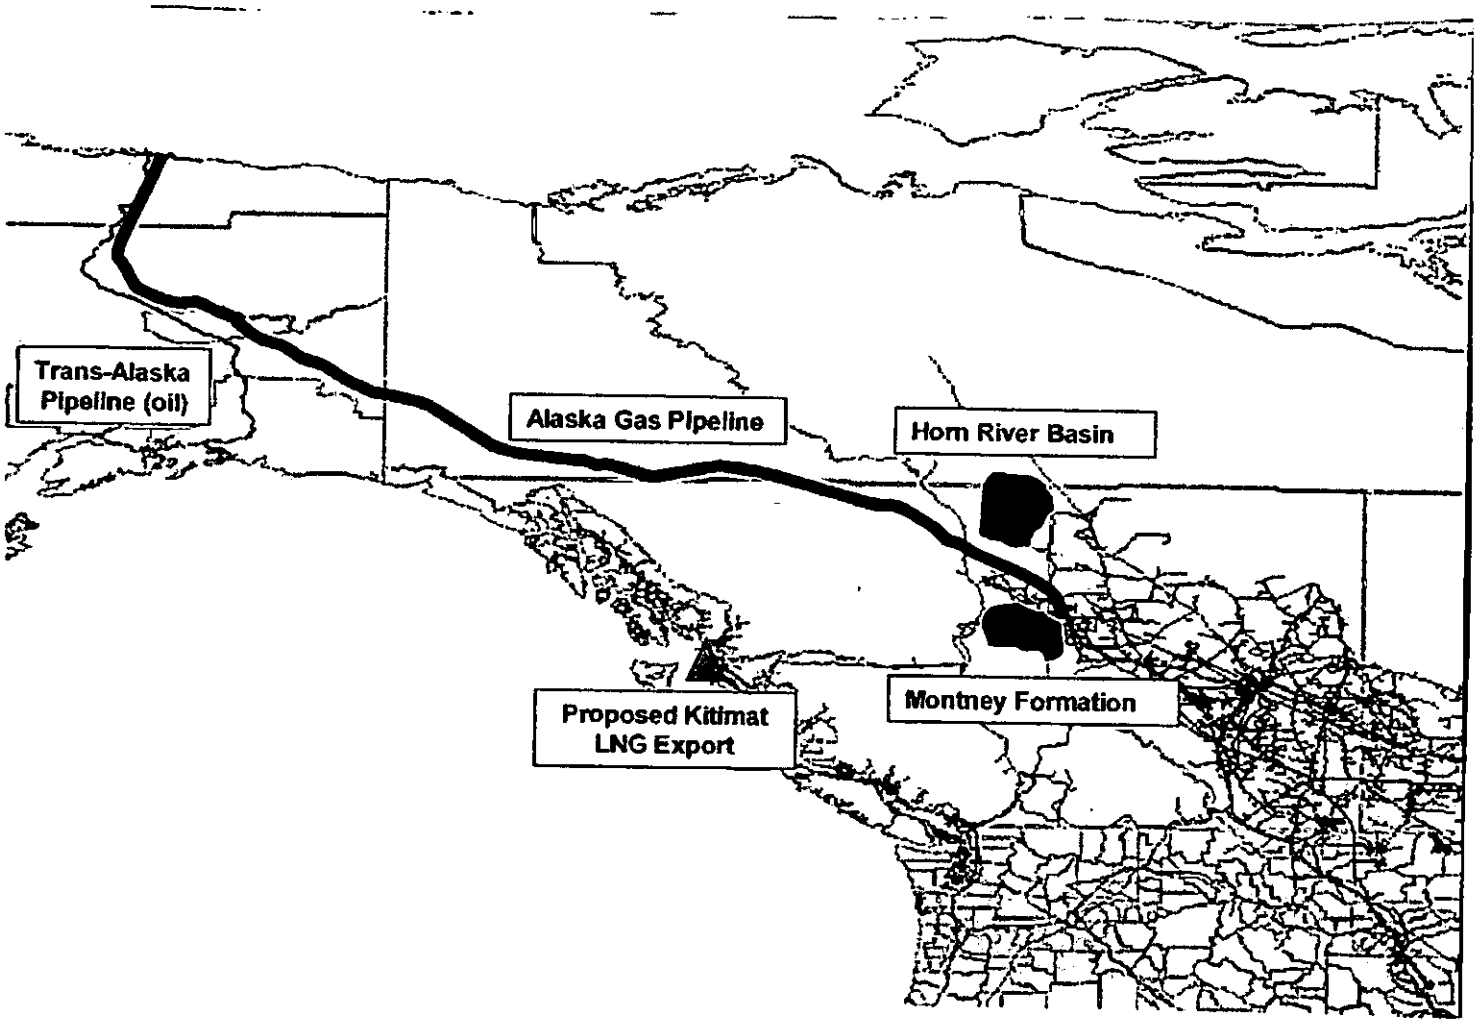
"You've got to explore both options . . . recognizing all the while that the market may work against you".

Petroleum News (3/29/2009) <www.petroleumnews.com/pntruncate/961088981.shtml>

Recent Open Seasons

Recent Successful Binding Open Seasons for Shale Gas Plays:

- 1. Haynesville Shale (Texas) 1/28/09
  - Length: 178 miles
  - Volume: 2 bcf/d
  - Cost: $1 billion
  - Operation date: 2011
- 2. Horn River Shale (B.C.) 2/26/09
  - Length: 96.31 miles (36")
  - Volume: 378 mcf
  - Cost: $340 million
  - Operation date: 2011
- 3. Montney (B.C.) 2/26/09
  - Length: 48.47 miles
  - Volume: 1.1 bcf/d
  - Cost: $250 million
  - Operation date: 2014

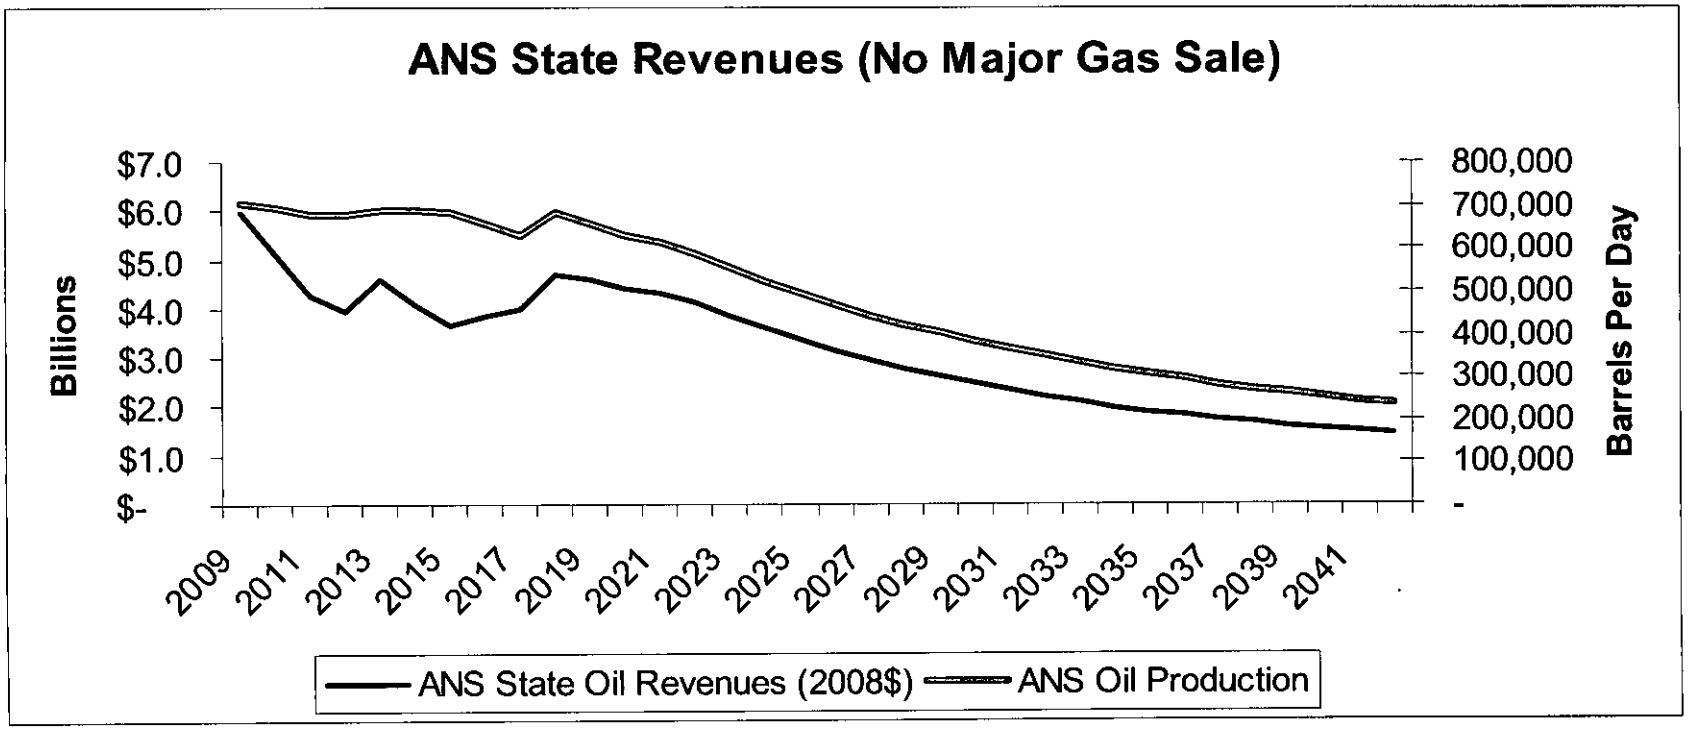


Trans-Alaska Pipeline (oil)
Alaska Gas Pipeline
Horn River Basin
Montney Formation
Proposed Kitimat LNG Export

Alaska's Competition is Not Waiting

- The market changes are being acted upon by our competition
- Kitimat LNG, previously conceived as an LNG import terminal, has recently reversed their project from an LNG receiving terminal and now intends to develop an LNG export project
- Kitimat LNG will target the growing, premium LNG markets in Asia, and has partnered with Mitsubishi to try to satisfy Asian demand for North American gas
- The window of opportunity is here for Alaska to maximize the value of its gas. Our competition is not waiting!

Consequence of No Major Gas Sale



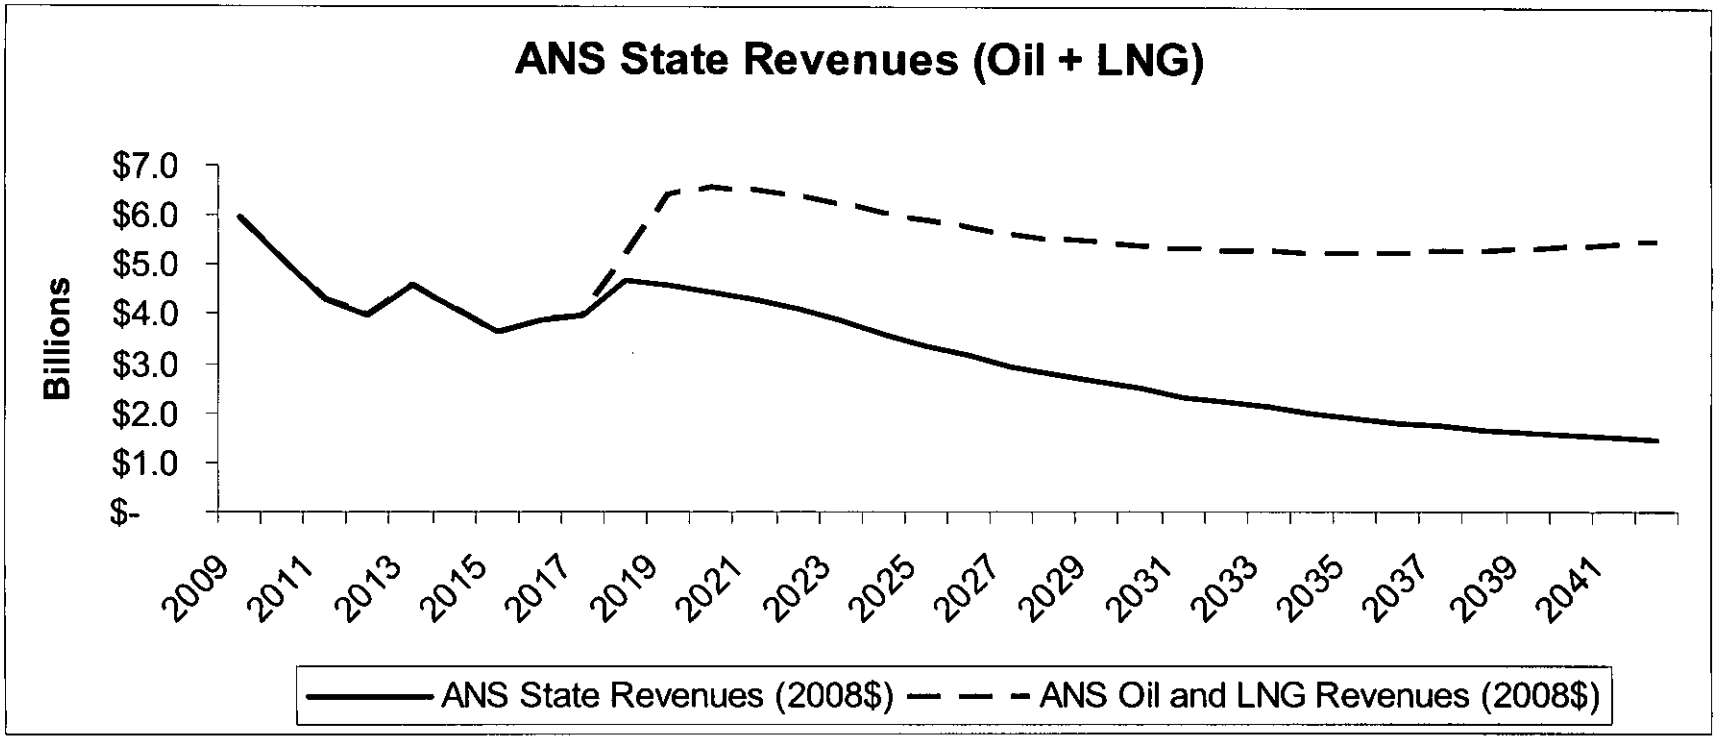
Includes ANS Royalty, Production Taxes, Property Taxes, Income Taxes, Etc.

Major Assumptions

DOR Fall 2007 Production Forecast (2008 Projections Past 2018 Not Available)

DOR Fall 2008 Price Forecast and Tax Assumptions

Consequences of No Major Gas Sale



- A 3 train LNG project offsets declining ANS oil production
- Although different oil price assumptions change the magnitude of state collections, they do not reverse the downward trend in production and thus falling State revenues from oil
- The State must have a major gas sale (LNG or Canadian project) to offset declines in North Slope oil production in the coming decades or the next generation will not enjoy the same level of prosperity

Best In-State Option for Alaska

Alaska Gasline PORT AUTHORITY

Reasons The Port Authority All-Alaska LNG Project Remains The Best In-State Option For All Alaska

- 1. **KNOWN GAS SUPPLY.** It begins at the North Slope where currently 8.4 billion cubic feet of gas is reinjected into the field each day. There is sufficient gas for the Project today without additional exploration and development.
- 2. **KNOWN ROUTE.** The gas line route is parallel to the existing Trans Alaska Pipeline System (TAPS) route from the North Slope to Valdez. This route has already received 3 Federal Environmental Impact Studies (two by TAPS owners, one by Yukon Pacific Corporation).
- 3. **NO LIMIT ON VOLUME.** Since the Port Authority Project is within AGIA, it is not limited by volume restriction for projects outside AGIA that can not transport more than 500 million cubic feet of gas/day.

Best In-State Option for Alaska continued . . .

- 4. **PIPELINE COMPANY IN PLACE**. Since the Port Authority Project is within AGIA, TransCanada Alaska has committed to hold an open season for customers to Valdez, independent of a Canadian line, targeted for July, 2010. TransCanada is already working on the cost estimates for the pipeline to Valdez.
- 5. **CHEAPER GAS TO ALASKANS**. With the world markets' interest in LNG from Alaska, there will be a larger volume in the pipe, and therefore, the cost to Alaska's consumers would be cheaper.
- 6. **SPUR LINE TO SOUTHCENTRAL**. Through the Alaska Natural Gas Development Authority's work on a spur line from Glennallen to the south central gas grid in Palmer, gas from this Project would be able to flow to the Mat Su Valley, Anchorage and the Kenai Peninsula through the existing gas grid.

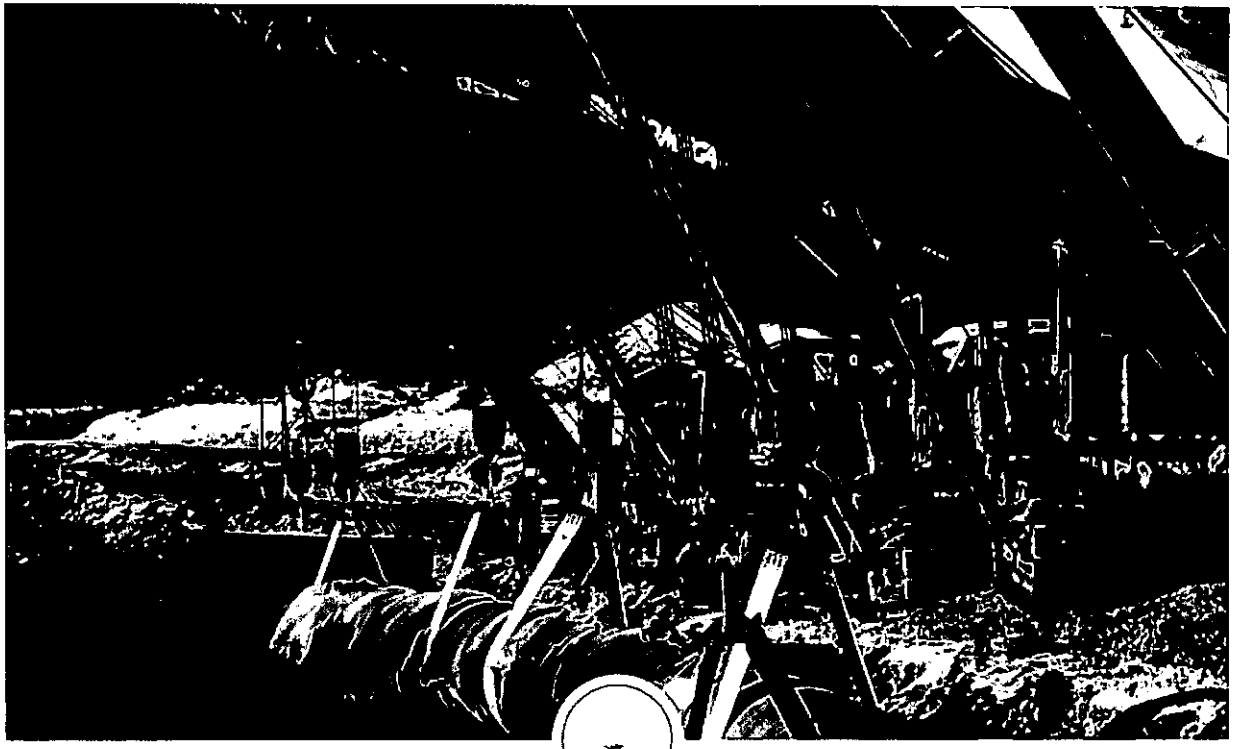
Best In-State Option for Alaska continued . . .

- 7. **REVENUES TO ALASKA'S TREASURY**. With the high volume of gas in this project it is projected to bring hundreds of million of dollars each year into the state coffers through royalties, severance and corporate income taxes resulting from this Project to help offset the declining revenues from the annual reduced flow of oil through TAPS.
- 8. **MARKET PARTICIPATION**. The Port Authority is working on the Project in conjunction with two industry giants, Mitsubishi Corporation and Sempra LNG, indicating the strong market interest in LNG from Alaska.
- 9. **PROJECT CONTROL AND BENEFITS REMAIN IN ALASKA**. Alaska would have complete control over all aspects of this Project. Alaskans would benefit from lower energy prices and the long term post-construction jobs for generations to come.

Best In-State Option for Alaska continued . . .

- 10. **MARKET OPTIONALITY**. Over the last several years significant developments of shale gas in both Canada and the L 48 has many energy consultants now referring to the L 48 as being "awash in natural gas". In fact some companies are now turning their LNG receiving terminals into LNG export terminals citing the surplus gas from shale gas development in the L 48 as the reason. They are seeking the export of their LNG to the premium Asian markets. Alaska has a 40 year successful relationship with selling LNG to the Asian market which that market is anxious to continue. Additionally, Alaska's LNG could also supply the energy needs of the state of Hawaii.

Thank you



Alaska Gasline
PORT AUTHORITY

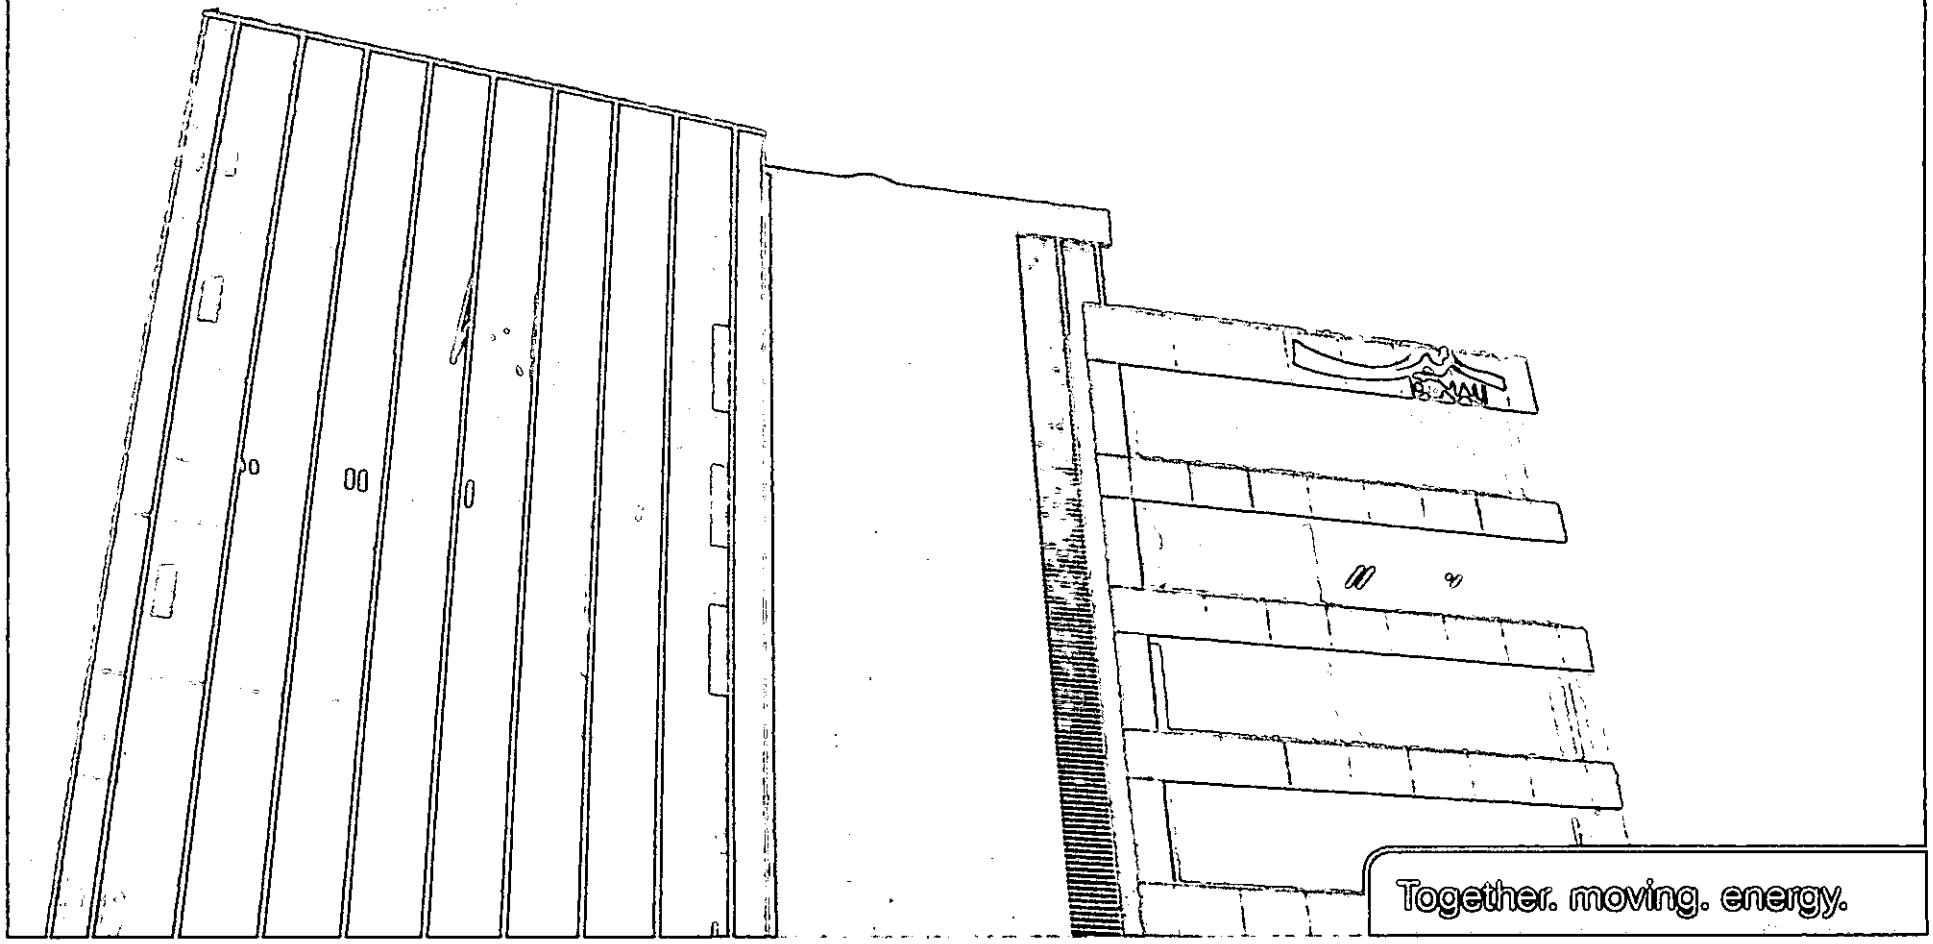
DENALI
the alaska gas pipeline

Alaska State Legislature

Senate Resources Committee

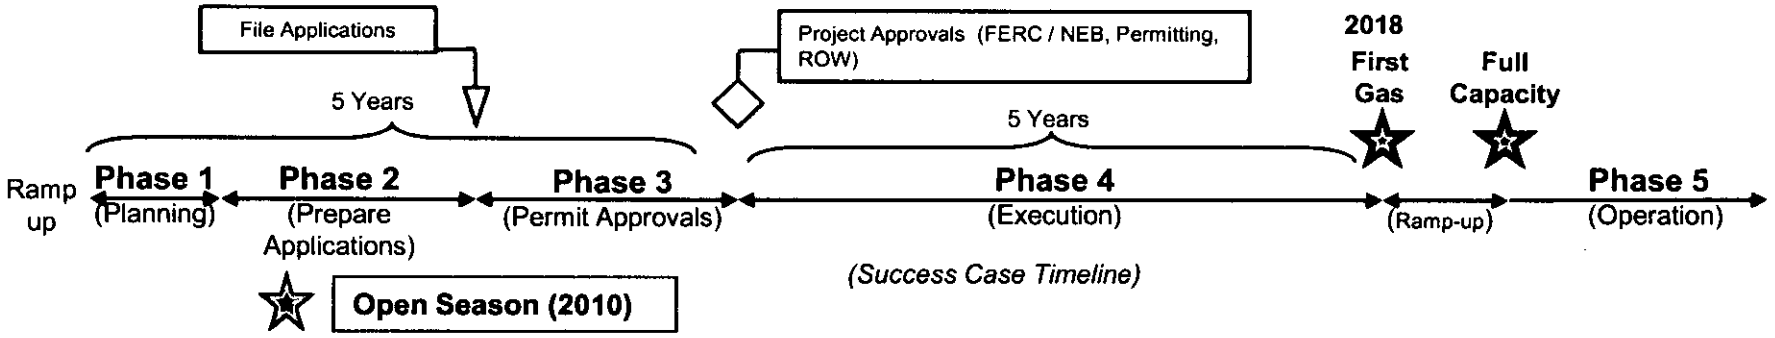
April 7th, 2009



Together. moving. energy.

DENALI
the alaska gas pipeline

Denali – On track for success



- Denali organization in place. Open season in 2010
- Denali believes there will be a place for Alaska gas in the North American market
  - Alaska gas is a key part of the President's energy plan
  - Natural gas is the fuel of choice – viewed as the bridge to renewables
  - Anticipate the US and World economies and natural gas demand will have recovered in the next 9 to 10 years.
- The economy has not changed our focus

Together. moving. energy.

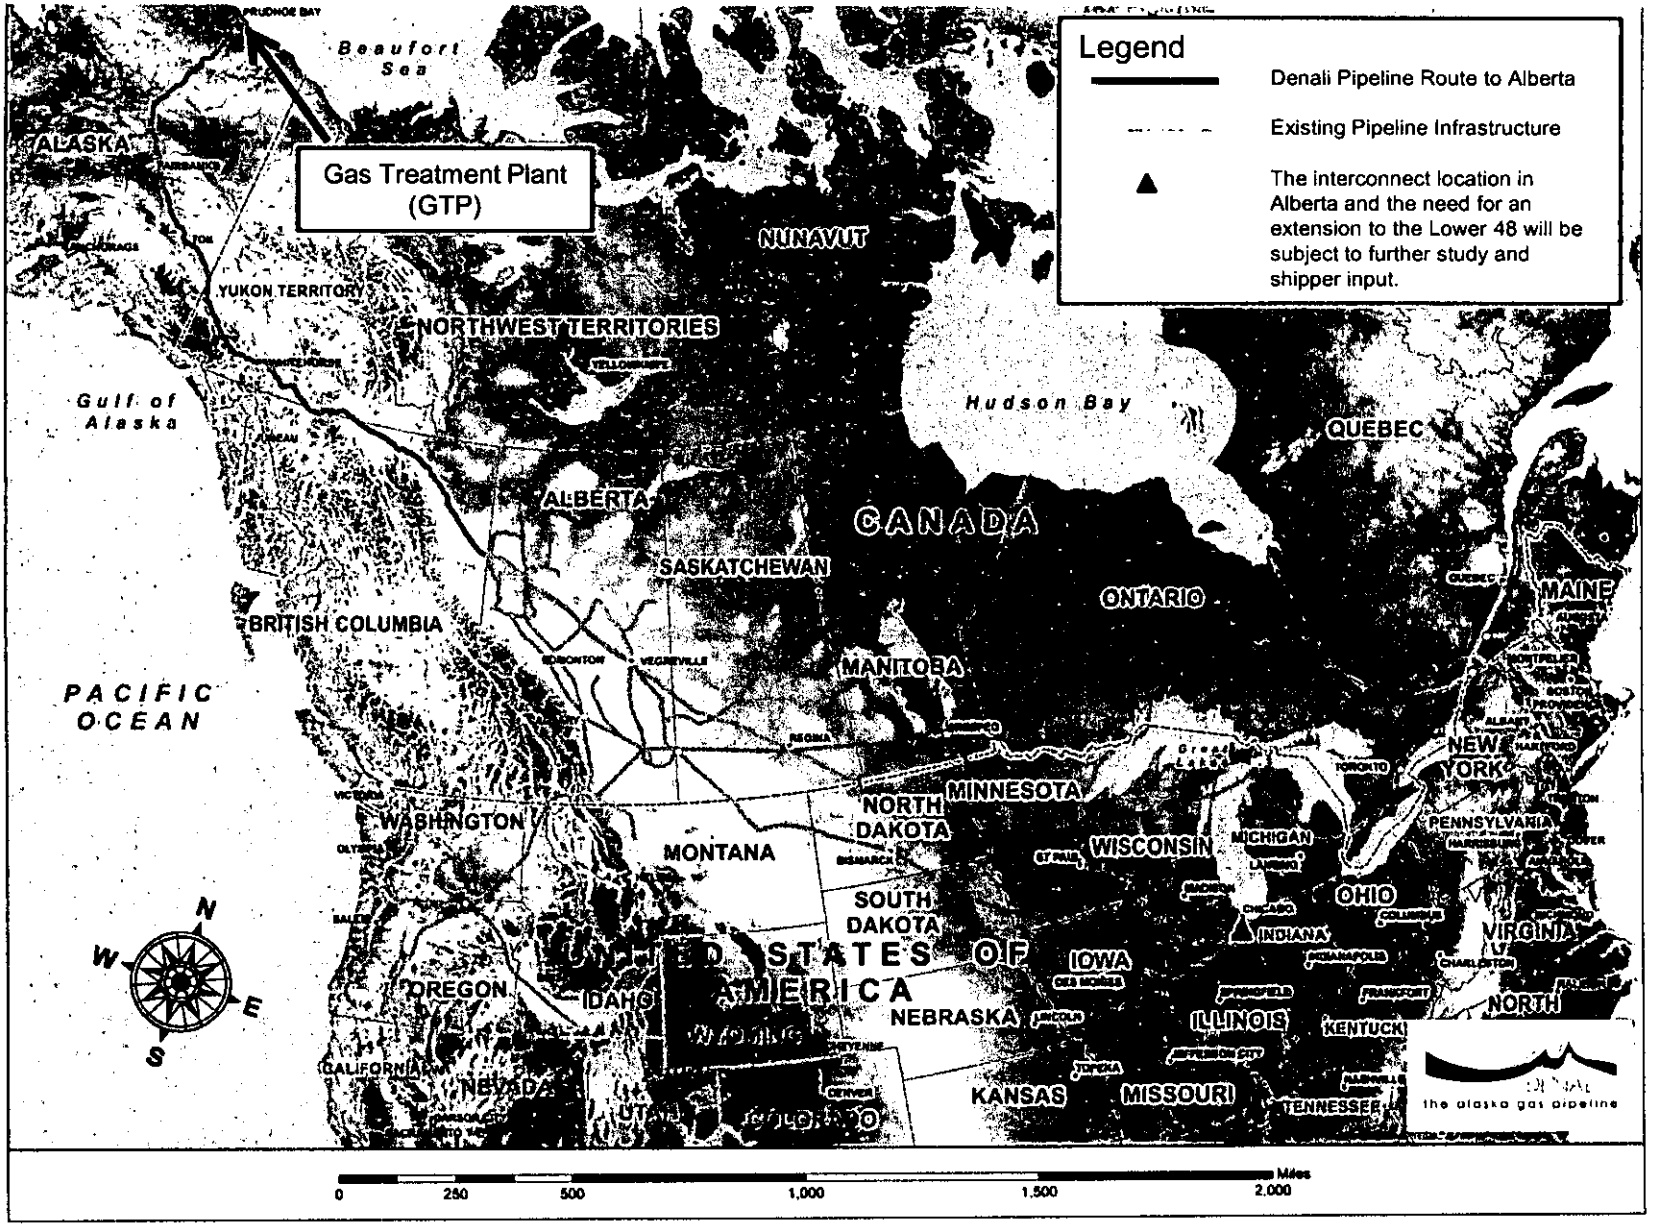
DENALI
the alaska gas pipeline

Denali Project Description

- Gas Treatment Plant (GTP) at Prudhoe Bay
  - Remove CO2, dehydrate, compress and chill the gas
- Buried, large diameter, high pressure (~2,500 psi) pipeline
- Compressor stations every 100 to 200 miles at >40,000 hp each
- About 2,000 miles to Alberta, requiring (~2-3 million tons of steel)
- Possibly another 1,500 miles to US markets (~2 million tons of steel)
- ~4bcfd to North American consumers (6-8% US daily consumption)

Denali will be the largest private energy project in North America, and will require world-class project execution skills

The Denali Project – 4 BCFD to North American consumers



Together. moving. energy.

DENALI
the alaska gas pipeline

Denali Terms of Service

- Denali is an Open Access pipeline – ***It's the law***
  - *"People have open access to the pipeline, not just the producers."*
    (FERC testimony to Joint AGIA Committee, June 16, 2008)
- Distance sensitive transportation rates for local use
- Design will provide for efficient expandability
- Solicit shippers every two years regarding expansion
- Will provide at least five offtake points within Alaska
- Will provide offtake points in Canada if warranted

DENALI
the alaska gas pipeline

Regulatory Frameworks – Canada and U.S.

Canada

- Two regulatory frameworks are available in Canada:
  - Northern Pipeline Act (NPA) – established more than 3 decades ago; available exclusively to one party
  - National Energy Board Act – a modern, non-exclusive process that is open for use by any project proponent
- Denali will use the modern-day National Energy Board (NEB) process. No significant advantage to pursue project outside NEB framework

U.S.

- The Federal Energy Regulatory Commission (FERC) is responsible for authorizing the project
- The Alaska Gasline Inducement Act (AGIA) is not an exclusive license to build a pipeline. Denali does not need AGIA to move forward

DENALI
the alaska gas pipeline

Denali Progress – Key Accomplishments

Spent ~$55 million in 2008

- Project Team mobilized
- Established Anchorage Headquarters
- Established Canadian Headquarters
- FERC pre-filing request approved
- Filed Right of Way on federal lands with Bureau of Land Management
- Successful 2008 summer field program
- Community outreach meetings in Alaska and Canada
- Established Archeology Technician program with UAF
- Member of AK DOL workforce development task force
- Met with Alaska, U.S. and Canadian government officials
- Awarded contracts for multi-million dollar Gas Treatment Plant and Pipeline preliminary engineering

DENALI
the alaska gas pipeline

FERC Pre-filing and BLM Right of Way Application

FERC Pre-filing:

- Enables Denali and FERC to exchange information and coordinate work activities cooperatively and efficiently
- Ensures a timely application development and review process
- The FERC requested that Denali pre-file due to project size and complexity

BLM Right of Way Application:

- Initiated formal ROW process with Bureau of Land Management (BLM)
- Enables direct BLM involvement in Denali's planning process
- One third of Denali's 730 mile pipeline route in Alaska crosses land under BLM jurisdiction

DENALI
the alaska gas pipeline

2008 Work

Summer Field Work

- Outstanding safety record
- Tok field office
- Surveyed over 200 miles of wetlands
- Investigated 70 archeological sites
- Shot over 1700 miles of ortho-photography
- Shot 730 miles of **"immersive" video**
- Investigated 538 potential stream/river crossings
- Performed route reconnaissance
- Identified contaminated sites
- As many as 80 people in the field

Engineering Progressed

- Route optimizations
- Technical studies
- Environmental assessments
- Cost estimates and schedules
- Plan project execution
- ~100 people engaged

DENALI
the alaska gas pipeline

Who's Been Working with Denali?

$55 million spent in 2008

Together. moving. energy.

DENALI
the alaska gas pipeline

Two Major Engineering Contracts Awarded

Fluor / WorleyParsons
ARCTIC SOLUTIONS
A JOINT VENTURE

Fluor WorleyParsons Arctic Solutions (Gas Treatment Plant)

- Major elements include technical studies, design basis, execution planning, cost estimating, and schedule development
- Arctic Solutions has significant arctic and North Slope experience, strong capability in the design and construction of mega projects in Alaska.

BECHTEL

Bechtel (Mainline – pipeline and compressor stations)

- Major elements include engineering, design basis development, cost estimating, scheduling, procurement planning and infrastructure and logistics assessments
- Bechtel has extensive experience designing and constructing major pipelines, including some of the world's longest. Long history of design and construction of megaprojects worldwide.

DENALI
the alaska gas pipeline

2009 Plans Focused on Open Season

- Broader work program will result in updated cost estimate – essential for open season
- Awarded Gas Treatment Plant contract - preliminary engineering underway
- Awarded Contract for Alaska to Alberta Mainline – preliminary engineering underway
- Ongoing work with DNR, FERC, NEB, OFC
- Continue to meet FERC prefiling requirements and engage FERC 3rd Party Contractor
- Work with AK DOTPF on infrastructure requirements
- Field work program in Canada, minimal program in Alaska
- Workforce Development (UAF, AKDOL, survey crew training)
- Stakeholder engagement in Alaska and Canada
- Progress commercial work for open season

DENALI
the alaska gas pipeline

Denali is the only project proponent that . . .

- Has decades of Alaskan and Canadian construction and operational experience
- Has the desire and experience to construct and operate the Gas Treatment Plant (GTP)
- Has prefiled with the Federal Energy Regulatory Commission
- Has established a significant Alaska Headquarters office
- Is spending only its own money to move the project forward

Denali is moving forward with confidence in uncertain economic times

Economic 'Recession' AGIA

The Alaska Gasline Inducement Act

Jim Mulva, Chairman and CEO ConocoPhillips,
March 13, 2009 - *Petroleumworld.com*

"Costs are coming down pretty dramatically," (Mulva) said. "When we say defer, we're not talking years, we're talking months, quarters, maybe up to a year."

Speaking about the Denali Alaska gas pipeline project, proposed last June by ConocoPhillips and BP, Mulva said President Barack Obama has identified the 4 Bcf/d project as a means of reducing US dependence on foreign oil.

The pipeline would bring North Slope gas down to a pipeline in Alberta for transport to the Lower 48 states. "We know it's going to get far more federal attention," he said. "Obviously, Alaska would like to see it go."

Mulva repeated the partners plan a 2010 open season for gas deliveries; first gas deliveries are eyed for 2019.

While current gas prices have led ConocoPhillips to cut back on its Canadian operations, Mulva discounted the low prices as a roadblock to the pipeline project's development.

"You can't look at gas prices today," he said. "You have to look at prices 10 years from now."

Both Lower 48 Unconventional and Alaska North Slope Gas are Needed for America's Future

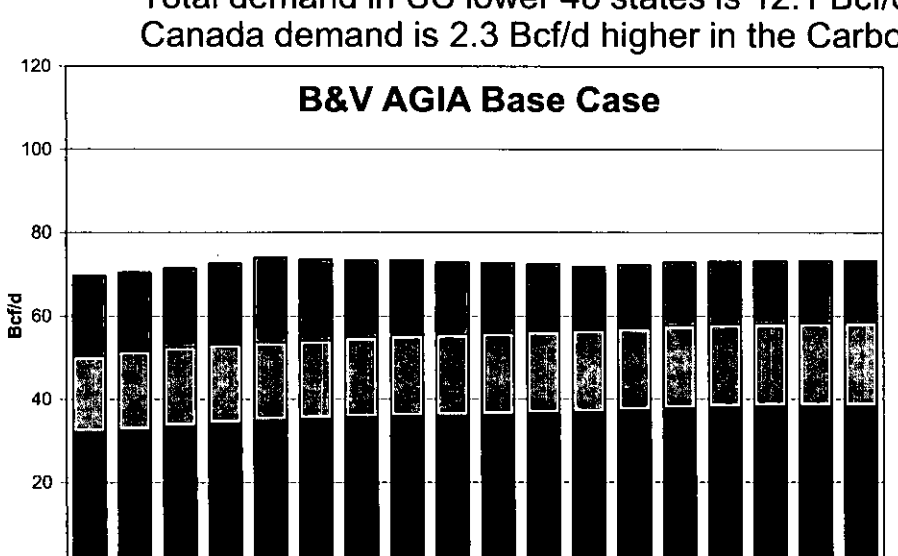
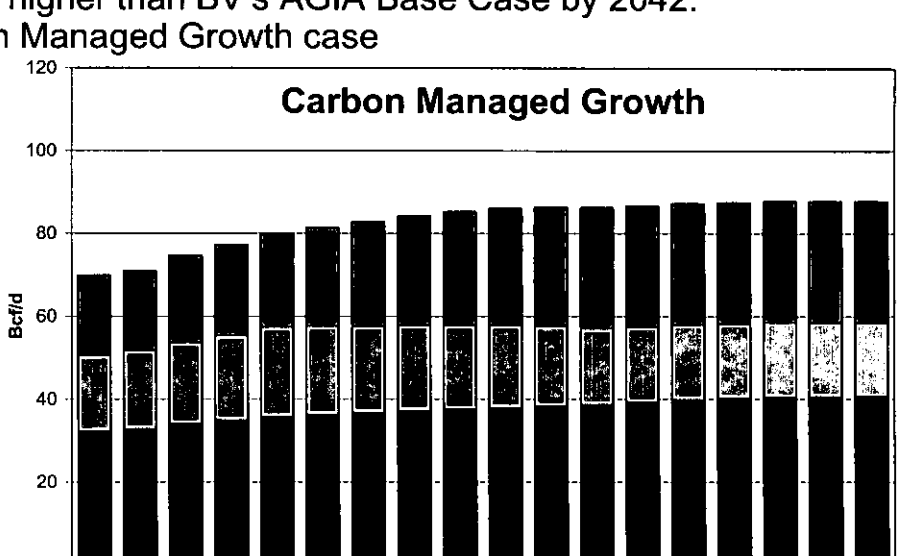
Impact of Carbon Regulation on Natural Gas Demand

AGIA
The Alaska Gasline Inducement Act

In a Carbon Managed Growth case, demand is 14 Bcf/d more than the B&V AGIA Base Case

- Policies and legislations designed to curb Green House Gas could reduce dispatch and construction of coal-fired generation facilities in favor of natural gas fired facilities, resulting in demand increase from the power sector in the US
- All resources, including renewables, nuclear and IGCC with CCS and gas fired combined cycles are all needed to meet electric demand growth. Gas demand from the power sector will grow from 19 Bcf/d in 2008 to 29 Bcf/d by 2030, with a CAGR of 2%
- Total demand in US lower 48 states is 12.1 Bcf/d higher than BV's AGIA Base Case by 2042. Canada demand is 2.3 Bcf/d higher in the Carbon Managed Growth case





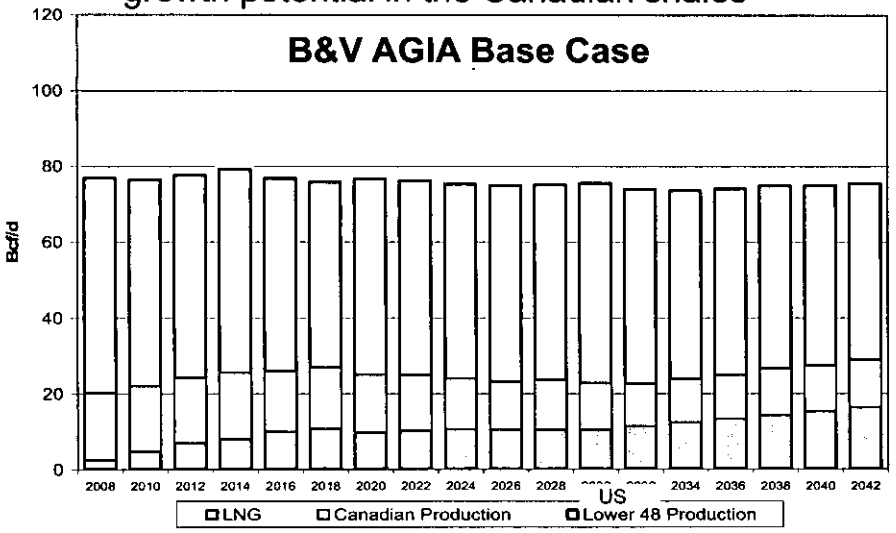
Source: Black & Veatch Analysis

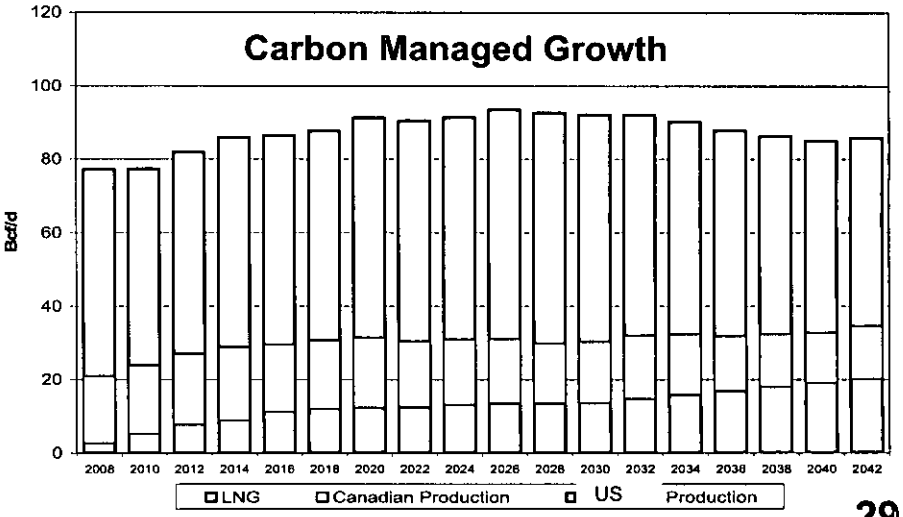
Multiple Different Sources of Natural Gas will be Needed to Meet Lower 48 Demand Growth

AGIA
The Alaska Gasline Inducement Act

Additional LNG imports and more unconventional productions from the US is necessary in order to meet the lower 48 demand growth

- Additional LNG imports will be needed to meet the demand growth; 6.4 Bcf/d by 2042 in the Carbon Managed Growth scenario
- US Production will average 58.3 Bcf/d from 2022-2042 in the Carbon Managed Growth case, which will be 7.8 Bcf/d higher than the B&V AGIA Base Case. Recent developments in shale discoveries in Haynesville and Marcellus indicate greater production potentials from these unconventional resources. The production growth can be considered as a proxy.
- Canadian production continues to decline in both cases. In the Carbon Managed Growth case, Canadian production is 3.7 Bcf/d higher than in the B&V AGIA Base Case, which may approximately reflect the growth potential in the Canadian shales



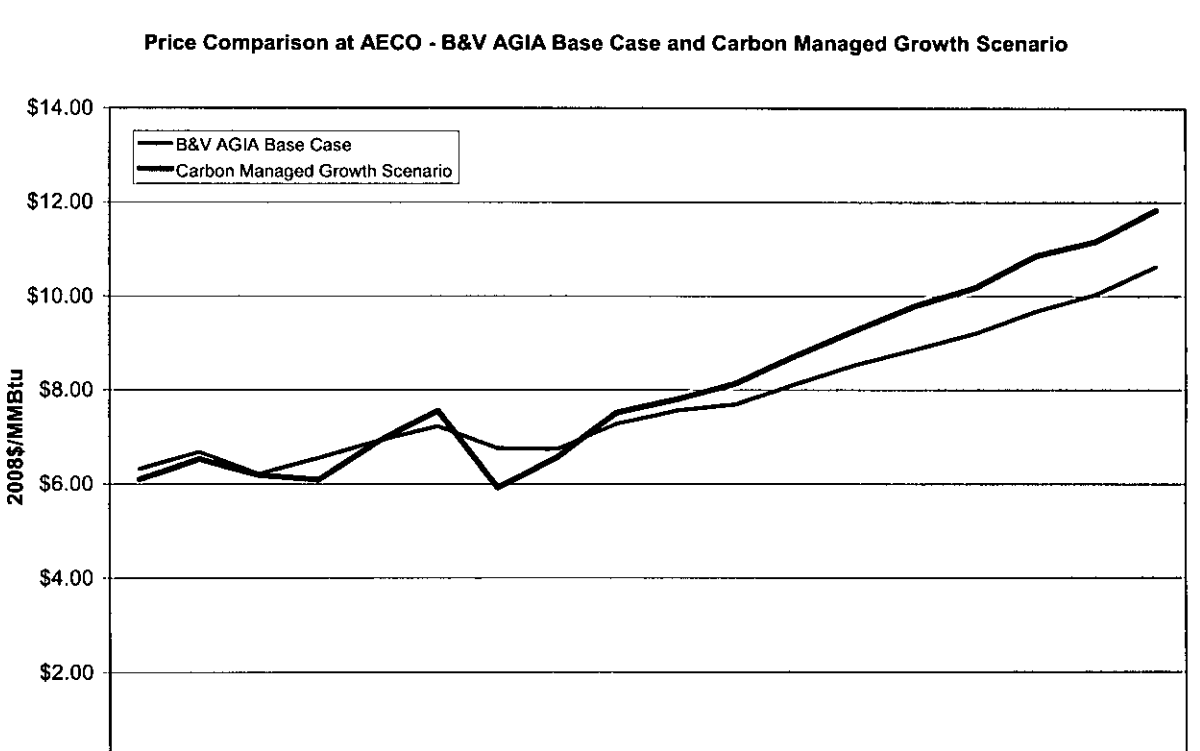


Source: Black & Veatch Analysis

Impact of Carbon Regulation on AECO Price Forecasts

AGIA
The Alaska Gasline Inducement Act

- The Carbon Managed Growth case has sufficient supplies from North America to meet the high demand from both unconventional production and slightly higher additional LNG volumes
- North American gas price is projected to have a higher price path than in the AGIA base case



Source: Black & Veatch Analysis

Liquid Natural Gas (LNG) Imports Current and Forecast Volumes

Resume

Name:	Karl S. Johnstone
Address:	18618 Snowy Plover Cir Anchorage, Alaska 99516
Time in Alaska:	1967 to present
Date of Birth:	07/25/1941
Health:	Perfect
Education:	Bachelor's degree in Business, 1964 U. of Arizona Juris Doctor in Law, 1967 U. of Arizona
Work Experience:	Private Practice of Law 1968 through 1978 Superior Court Judge 1979 through July 1996 Part time mediator/arbitrator and limited practice 1997 through present
Position applying for:	Member of North Pacific Fishery Management Council or Alaska Fish Board
Related Experience:	Owned and fished Limited entry permits for set net and drift net salmon fishing in Bristol Bay from 1984 through 1988. Owned and fished Limited entry permits for gillnet herring in S.E. Alaska and Prince William Sound from 1984 through 1988. Have been an active sport fisherman through out Alaska since 1967 to present.
Other activities:	Golf, flying, building aircraft, fishing, reading.

Veterans'/National Guard Preference
Are you a veteran or a member of the Alaska National Guard? If no, you may proceed to the Optional State of Alaska Equal Employment Opportunity Questionnaire below.

Are you a veteran who served on active duty (not active duty for training) in the United States Armed Forces and did you receive an honorable or general discharge? Yes No

If Yes:

Did you serve during a war* **OR** during the period beginning April 28, 1952, and ending July 1, 1955? **OR**

Did you serve for more than 180 consecutive days, any part of which occurred during the following periods:

- After November 11, 1918, and before December 2, 1919;
- After September 15, 1940, and before December 7, a941;
- After December 31, 1946, and before January 1, 1948;
- After June 26, 1950, and before April 18, 1952;
- After January 31, 1955, and before October 15, 1976; or
- In the Alaska Territorial Guard?

Did you serve during the Gulf War period beginning August 2, 1990, and ending January 2, 1992? AND If you originally enlisted after September 7, 1980, or entered on active duty on or after October 14, 1982, without having previously completed 24 months of continuos active duty, did you serve continuously for 24 months or the full period called or ordered to active duty? **OR**

Were you awarded a campaign or expedition medal or an award or decoration for heroism or gallantry in action? AND if you originally enlisted after September 7, 1980, or entered on active duty on or after October 14, 1982, without having previously completed 24 months of continuous active duty, did you serve continuously for more than 180 days or the full period called or ordered to active duty?

Yes No

OR

Are you currently a member of the Alaska National Guard and have you served for eight (8) years or longer? Yes No

*Under Title 5 Section 2108 of the United States Code the following time periods are considered periods of war.

- World War I Between April 6, 1917, and November 11, 1918, inclusive Unless service was with the United States military forces in Russia, then the ending date is April 1, 1920. Service after November 11, 1918, and before July 2, 1921, is considered World War I service if time was served in the active military, naval, or air service after April 5, 1917, and before November 12, 1918.
- World War II: Between December 7, 1941, and December 31, 1946. If in service on December 31, 1946, continuous service before July 26, 1947, is also considered World War II service.

Are you entitled to disability compensation, disability retirement benefits, or disability pension under laws administered by the United States Department of Veterans Affairs or a military department? **OR**

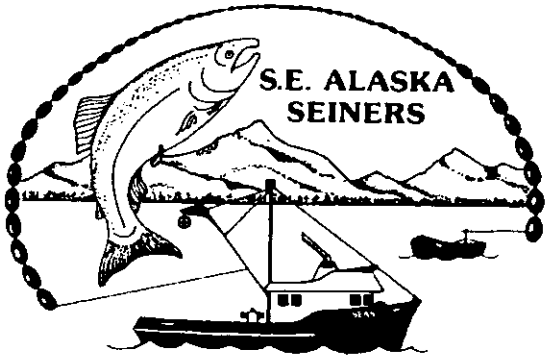
Were you honorably discharged and awarded the Purple Heart? Yes No

The State of Alaska complies with Title I of the Americans with Disabilities Act (ADA). Individuals with disabilities who require special accommodation, auxiliary aides or services, or alternative communication formats call 465-3897 in Juneau or (907) 465-3514 TTY.

We are an equal opportunity employer and support workplace diversity.

I understand if I conceal or enter false information this form, my name may be removed from consideration for a job, or I may be removed from my job, if hired. I understand the information in this profile may be released in an authorized legal investigation; and before I am hired I will be required to sign an official State Form certifying these statements are true. I agree that the State of Alaska, or its agents, may contact current or former employers or other persons who know me in order to obtain additional information.

Applicant's Signature: Karl Johnstone



Senator Lesil McGuire
Alaska State Legislature
Juneau, AK 99801

April 8, 2009

Dear Senator McGuire

Southeast Alaska Seiners Association (SEAS) is a non-profit fishing association representing well over 1000 direct and several thousand indirect jobs in the Southeast Alaska region. **We support both the confirmations of Karl Johnstone as well as Brent Johnson.**

While we have conducted our business in Southeast since 1968, we are very concerned about the regional and geographic balance on regulatory bodies that we deal with, such as the Alaska State Board of Fisheries. We understand that the Governor's appointments would now leave us with 3 seats in the Cook Inlet basin out of a total of 7 seats, these being Big Lake, Anchorage and Clam Gulch. With the remaining seats from Juneau, Petersburg, Kodiak and Naknek, there is quite a bit of diversity and geographic representation on the Board of Fisheries.

There will be statements and concerns coming from several quarters as to the geographic representation as well as the "balance" of this board. We are convinced that the Governors appointees are the right people for the job and will enhance and provide this balance. While most of our members are avid sportsmen as well as personal, subsistence and recreational users of the resource, our organization, SEAS, represents the commercial side of the Board of Fish arena.

Approximately 75% of all Board of Fish proposals are regulation changes, improvements, and management implementations that concern only commercial fishing. Thus, while you will hear that 4 of the 7 seats will now be considered "commercial", this is the way things should be. And the definition of "commercial" varies from region to region. Not one of these 7 Board of Fish members fish on a vessel large enough to qualify as a Southeast seiner. One of the "commercial" seats is a former processor who hasn't fished commercially for 40 years and the other 3 "commercial" seats have small enough vessels to fit on the deck of one of our boats.

☼ PO Box 23081, Juneau, AK 99802 ☼ 907-463-5030 ☼ Fax: 907-463-5083 ☼

Furthermore, one of the "sport" seats has fished commercially, in the past, for about ten years. Another "sport" seat used to be a fisheries biologist, Mr. Howard Delo, and he is one of our favorite board members. We never thought that we would be so inclined to be supportive of a fellow from Big Lake, but we are. (And please keep that in mind next year when this time of year rolls around again). We want Howard back on that board regardless of the fact that his home is not in Fairbanks. Some of the best folks may not come from the best geographic locations (not that Big Lake isn't a great place, it just isn't Fairbanks), but we want to see the best seven members on the board, regardless of affiliation or region.

Often we find more common interests with the so called "sport" representation than we do "commercial". And it helps that the "sport" seat can actually deliberate and vote on everything. **Interestingly enough, Brent Johnson will be not only conflicted out of voting on any Cook Inlet sport vs. commercial allocation issue but he will not be allowed to even deliberate. He must join the audience and is not allowed to speak on any conflicting issues.** We are bringing this to your attention so that you will know that some of the forces amassing against Mr. Johnson, while their points and concerns may be valid to their constituents, need to be reminded of this fact.

Brent Johnson will be unable to vote or deliberate on any contentious Cook Inlet issue because he is a Kenai setnetter.

I trust you will agree that these labels that are often used for the Board of Fisheries members often do not work out to paint an accurate picture. What is most important is that potential board members have an open mind, a commitment to the fish resource, and an unbiased determination to do what is right to enable the state of Alaska to continue to have a sustainable resource so that all users may benefit. And when the member must choose in an allocation disagreement, that they use the highest ethical and moral means to guide them in these decisions.

Again, SEAS requests your 'yes' vote for the confirmation of both of Governor Palin's Board of Fisheries appointees, Brent Johnson and Karl Johnstone.

Sincerely

Robert M. Thorstenson, Jr.
Executive Director, SEAS

Dear Sen. Lesil McGuire:

In my opinion we very definitely need Karl Johnstone on the Board of Fisheries. He is familiar, both with commercial fishing and sport fishing. He would be an excellent choice to represent those of us that need a stronger voice. Please support his choice.

Thank you.

Linda and Chris Branham

Dear Senator McGuire,

Please vote NO on Mr. Johnson and YES on Judge Johnstone.

We sport anglers cannot afford to have Johnson on the Board. I have debated Cook Inlet fishing issues with him for many years. He has been so focused on improving commercial fishing to the detriment of the 200,000 or so sport fishermen and 10,000 or so dipnetters that his membership on the Board of Fisheries would be a giant step backwards for all of our work over the past 12-15 years towards equilibrium of interests on the Board. He is bright, well versed, and biased. Another issue with the appointment is that with him on the Board, there would be no one on the Board who lives north of Palmer. There would be no one who is familiar with issues particular to the Interior. That's a gross injustice to our neighbors up north.

Last month, I testified before the Board of Fisheries and was impressed by the knowledge of Judge Johnstone. His ability to ascertain the intent of statues and regulations was refreshing. His questions to me and others were salient to the topic, well expressed, and helped other Board members in the subsequent deliberations. He rose up and beyond the other members and is an asset to the Board.

Regards,

Phil Cutler
President, Alaska Sportfishing Association

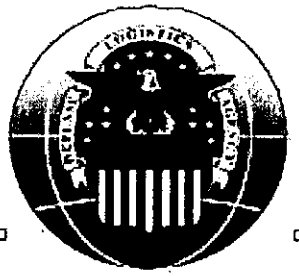
  - Require blended fuel as contract deliverable
- Competitively Priced
- Complies with Environmental Standards
  - Section 526 Life-cycle Green House Gas Requirements

Background

- DoD level program focusing on alternative/renewable fuels
- DESC/military service coordinated approach on Alaska F-T synthetic fuels pilot program
  - USAF previously identified goals
    - Certify all platforms by 2011
    - 50% of the domestic aviation fuel requirement using 50:50 blend by 2016
- DESC has conducted two Requests for Information (RFI) with Industry
  - May 2006 (28 responses received)
  - Sep 2007 (9 responses received)

Background (Cont'd)

- DESC short term acquisition (certification/testing)
  - Shell Malaysia contract (GTL Syn Fuel)
    - Jun 2006 – 315k USG
  - Two SASOL contracts (CTL Syn Fuel)
    - Jun 2008 60k USG
    - Jul 2008 335k USG
- DESC long term acquisition strategy (sustainment)
  - First step is Alaska pilot program
  - Domestic production capability
  - Expansion to CONUS requirements



Defense Logistics Agency

Defense Energy Support Center

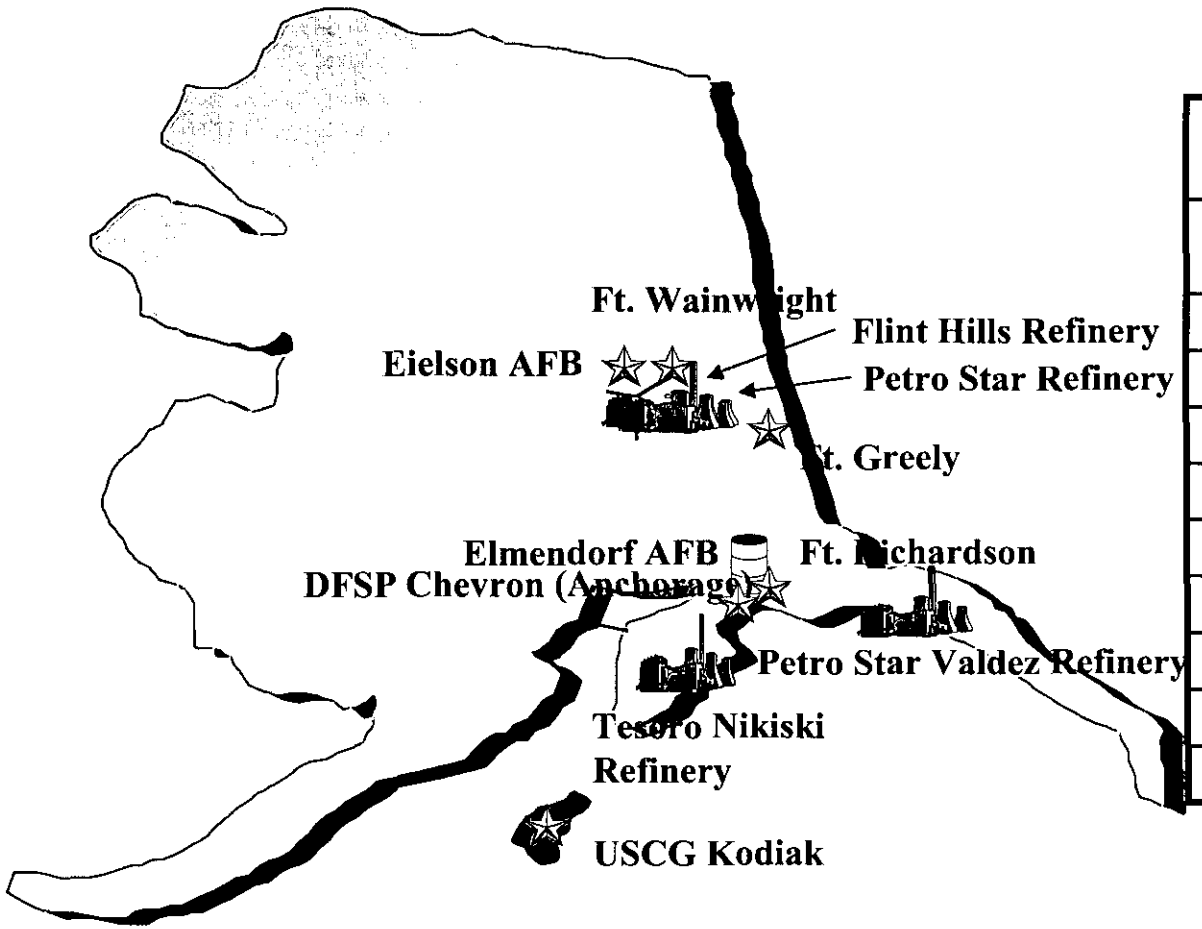
Why Do This?

- Driven by energy security concerns
- Utilization of domestic resources
- Environmental considerations
- Get ahead of customer requirements

Who Could Do This?

- Existing suppliers
- New synthetic fuel production suppliers
- Partnerships

Requirements



Bulk Fuel Annual Requirements

Location	Product	Volume (gallons)
ANG Kulis Fld (Anchorage)	JP8	2,500,000
Eielson AFB	JP4	50,000
(*)	JP8	22,000,000
Elmendorf AFB	JP8	42,000,000
Fort Greeley	JP4	500,000
Fort Richardson	JP4	200,000
	JP8	200,000
Fort Wainwright	JP4	1,000,000
	JP8	300,000
USCG Kodiak	JP5	3,800,000

(*) Requirements currently under separate Eielson AFB Coal-To-Liquid Initiative

Next Steps

- Alaska F-T Synthetic Fuels Industry Summit
  - Explain pilot program approach
  - Solicit input / comments
- Refine acquisition strategy
  - Finalize acquisition approach
  - Finalize acquisition timelines
- Issue solicitation (RFP)
- Evaluate offers
- Award contract
- Timeline for product delivery

Notional Timeline

Issue Solicitation	June 1, 2009
Close Solicitation	July 30, 2009
Initial Evaluation	August 1, 2009 – August 30, 2009
Negotiations Close	September 15, 2009 – October 30, 2009
Final Evaluations Complete	November 30, 2009
Contract Award	December 30, 2009
First Delivery	December 2014

Industry Summit Summation

Purpose of Conference Achieved!

- Gather DoD, Industry, and State/Local Political Officials to Discuss DESC Alaska Synthetic Fuel Initiative
  - 90+ Attendees the first day
  - 45+ Attendees the second day
- Solicit Feedback on DESC Planned Approach
  - 10 Take Away Issues in 3 Broad Categories
- Follow-On Session with Alaska State Legislators
- Follow-On Coordination Between DESC and USAF
- Refine Acquisition Strategy and Plot Course Ahead

Take-Away Issues

- Defining the Requirement
  - Quantity/Location
  - Commercial Sector Requirements
  - Feedstock Source/Plant Location Restrictions
  - Eielson AFB Requirements
- Structuring the RFP for Success
  - Section 526 Model
  - Quality/Technical Criteria
  - Contract Length
  - Contract Pricing Structure
- How to Proceed
  - Establish Timeline for Acquisition
  - Pre-Feasibility/Down Select Process

Areas for State Assistance

- Financial Incentives to Industry to Participate
  - Tax Credits/Incentives
  - Loan Guarantees

- Encouragement to Commercial Aviation Industry
  - Incentives for Participation
  - Price Considerations

- Streamlining Regulatory Requirements
  - Permitting/Easements
  - Environmental Standards

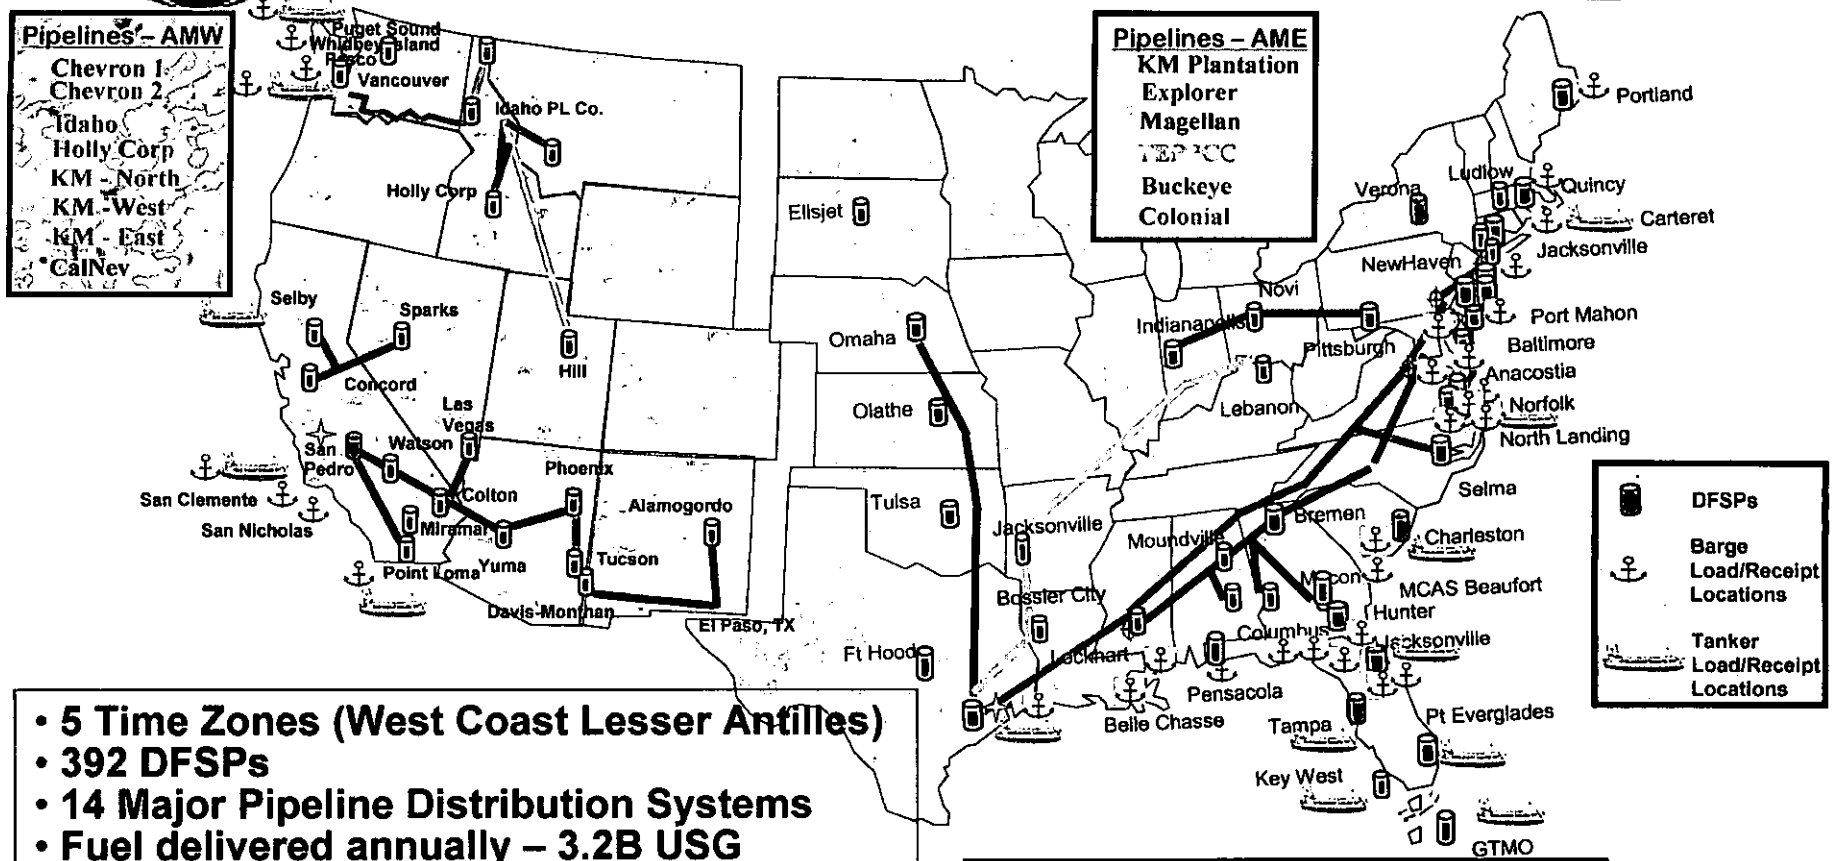
Back-Up Charts

Bulk Fuel Overview

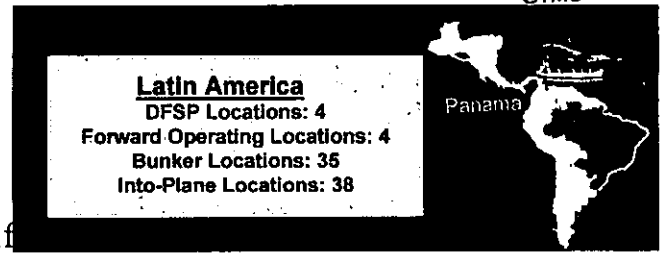
Major Programs

- Inland/East/Gulf Coast (IEG)
  - One-year contract cycles: Apr-Mar
  - Approx. 1.7B USG
  - Approximately $3.6B
- Western Pacific (WESTPAC)
  - One-year contract cycles: Jan-Dec
  - Approx. 1B USG
  - Approx. $4.3B
- Rocky Mountain/West (RM/W)
  - One-year contract cycles: Oct-Sep
  - Approx. 1B USG
  - Approximately $2.7B
- Atlantic/European/Mediterranean (AEM)
  - One-year contract cycles: Jul-Jun
  - Approx. 491M USG
  - Approx. $1.3B

DESC Americas



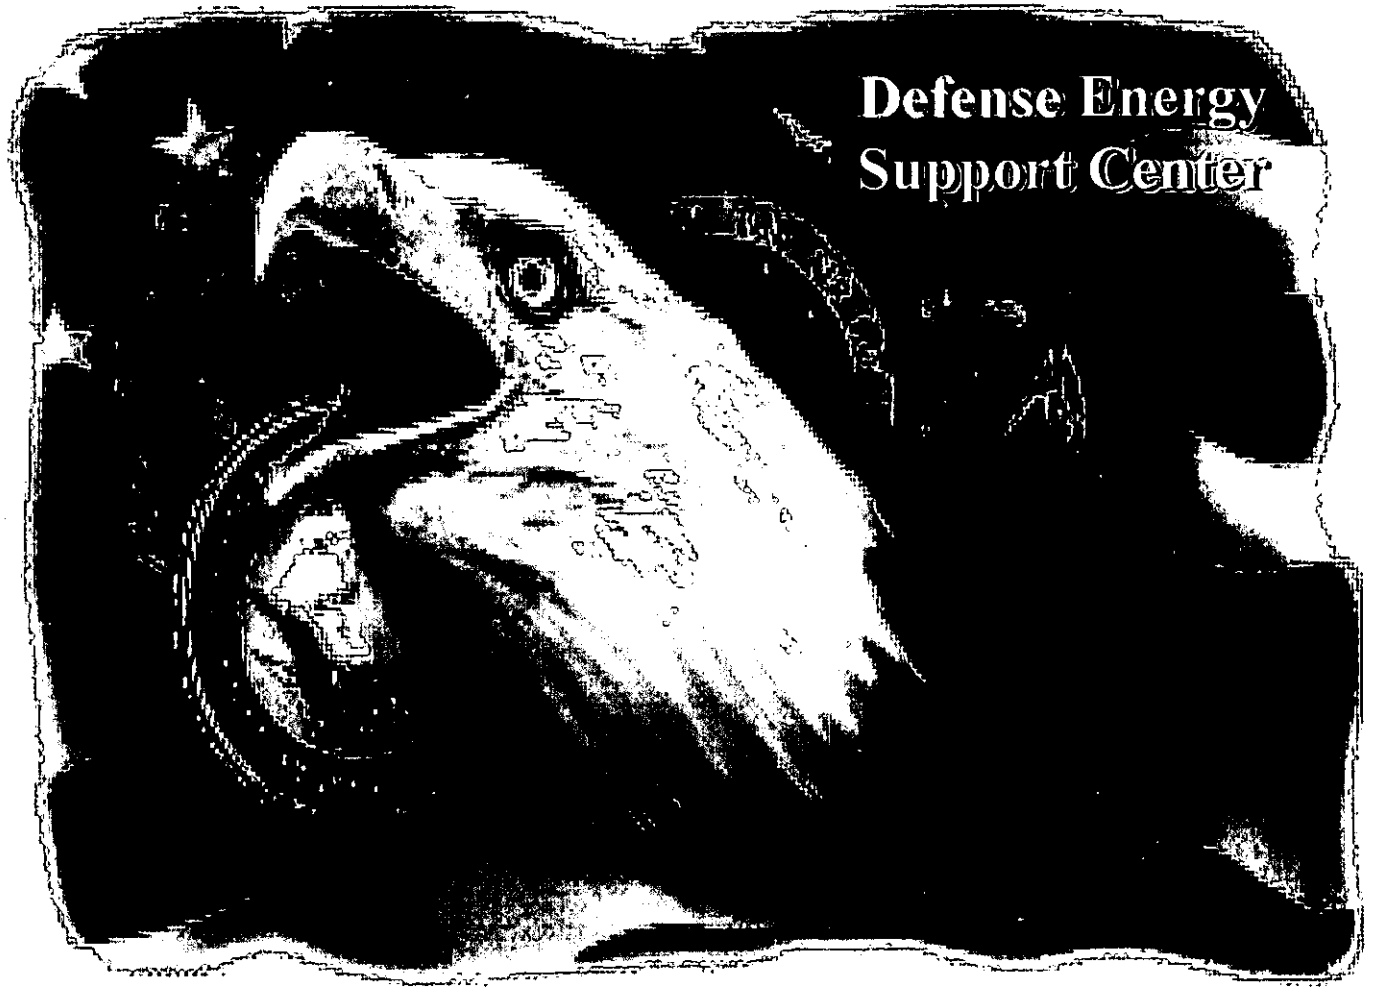
- 5 Time Zones (West Coast Lesser Antilles)
- 392 DFSPs
- 14 Major Pipeline Distribution Systems
- Fuel delivered annually – 3.2B USG
- 38/38 - Suppliers / Contracts (FY08)
- $4.9 Billion - Value of Contracts (FY08)
- 2,045 – Accounts
- 9,000 to 11,000 - Movements/Month
- 400,000 to 550,000 - Transactions/Month



Environmental Considerations

- Energy Independence and Security Act
  - Section 526
    - No Federal agency shall enter into a contract for procurement of an alternative or synthetic fuel, including a fuel produced from nonconventional petroleum sources, for any mobility-related use, other than for research or testing, unless the contract specifies that the lifecycle greenhouse gas emissions associated with the production and combustion of the fuel supplied under the contract must, on an ongoing basis, be less than or equal to such emissions from the equivalent conventional fuel produced from conventional petroleum sources.

Comments / Questions



4/13/09 CONFIRMA-TIONS: BOARDS OF FISHERIES & GAME

Brent G. Johnson
resumé for application to Alaska Board of Fisheries.

Fisheries experience:
• Cook Inlet setnetter since 1962. My wife, Judy, and I have owned our own setnet site since 1977. Together with my mother and our children we currently fish 11 permits, one of the largest operations in Cook Inlet. We have developed a way to put all our fish into slush ice at the point of harvest (in the skiffs).
•Crewed on a Prince William Sound salmon seiner several times, most recently in 2008. I typically do this after the Cook Inlet setnet season has closed.
•Seined and setnet for herring in Cook Inlet.
•Crewed on Cook Inlet halibut longline vessels.
•Drafted Shore Fisheries Diagrams for clients in Cook Inlet, Kodiak, Area M and Bristol Bay.

Public service organization experience:
•Served on the Kenai-Soldotna Fish & Game Advisory Committee for about 15 years, including terms as secretary and as chairman. Last service there was about 5 years ago.
•Served on the Cook Inlet Aquaculture Association Board of Directors for about 15 years. Currently serving as president of that organization.
•Served on the Kenai Peninsula Fishermen's Association Board of Directors for about 20 years, including several terms as president. Last term as president ended in the spring of 2008. At that time I retired from the KPFA Board of Directors, though I'm still a member of the organization.
•Served as an alternate to the Cook Inlet Salmon Brand (Kenai Wild) Board of Directors.
•Served on the Kenai Peninsula Borough Planning Commission for about 12 years. This is a paid position and I continue to serve there.
•Served on the Kasilof Regional Historical Association for about 4 years. Currently president of that organization.
•Elected president of the Kenai Peninsula Historical Association in May 2008 and continue to serve in that capacity.

Education:
Graduated from Ninilchik High School in 1973.
Numerous classes for personal development from U of A, Kenai River Branch.

Pertinent family ties:
•My brother-in-law, Doug Blossom, owns the setnet site adjacent to ours. He is also Chairman of the District 34 Republican Party.
•Two of my nephews work in the sport fish guiding industry and one of my nieces is married to a Cook Inlet salmon drift fisherman.
•My 89-year-old mother has been in Alaska since 1942.

Work:
• I worked for years for my father who was a private land surveyor. My brother has taken over his business and I've physically surveyed numerous Shore Fishery Leases for them.

STATE OF ALASKA
OFFICE OF THE GOVERNOR

BOARDS AND COMMISSIONS APPLICATION FORM

INSTRUCTIONS

A separate application is required for each position for which you apply. Complete and specific answers will aid in rapid and accurate processing of your resume. Please type or print legibly in ink. Forward to the above address. Be sure your answers are true. A willfully false answer may result in your disqualification or removal from office if you are appointed.

Board or Commission and seat for which I am applying: Board of Fisheries
(For example, Board of Agriculture, public seat)

Please list any other State Boards or Commissions on which you currently or previously have served:

Name: Brent G. Johnson

Mailing Address: 20773 Porcupine Ln.

Residence Address: 20773 Porcupine Ln.

City, State and Zip Code: Clam Gulch, AK 99568

Home or Message Telephone: 262-4763 Business Telephone: 262-4763

Fax Number: 260-5367 Cell Phone: _____

Email address: nagweb@gci.net

AS 39-05-100 requires that a person appointed to a state board or commission be a registered voter prior to the last general election:

Are you a registered voter: YES X NO _____ Voter Registration Number (Optional): _____

Social Security Number (Optional, required if appointed for travel, reimbursement etc.):

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?

YES _____ NO X if "YES", explain the circumstances on a separate sheet of paper and attach it to this application. A conviction is not necessarily grounds for disqualification. The number of convictions, nature, recentness, and relationship to the board position applied for, will be evaluated and a determination will be made after a review of all relevant facts.

CONFLICTS OF INTEREST: Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?
YES X NO _____

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you have applied? YES X NO _____

If "YES", explain: My family & I setnet in Cook Inlet

2500

TRAINING AND EXPERIENCE: (If resume attached, it is not necessary to complete items A-D)

A. List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria:

B. List both formal and informal education and training experiences: (Use additional paper if necessary).
Graduated from Nikolchik High School, 1973

C. List any community service, municipal government, and state positions held, and any awards received. Include both compensated and uncompensated positions (such as president of a service organization or a mayor). Include length of time serviced. Kenai - Soldotna F&G Advisory Committee, Served about 15 years including terms as secretary & chairman, Cook Inlet Aquaculture Assoc., served about 15 years, currently President Kenai Peninsula Planning Commission

D. Employment work history – paid, unpaid or voluntary: (Use additional paper of necessary).

The Office of the Governor and the State of Alaska have an Affirmative Action Equal Employment Opportunity Program. To assist in the program, you are asked to voluntarily answer the following questions to provide the information necessary for reporting purposes. Under State and Federal law, the information you provide will not be used to illegally discriminate against you.

DATE OF BIRTH: SEX: FEMALE _____ MALE X

ETHNICITY:
Alaska Native ___ American Indian ___ Asian or Pacific Islander ___ Black ___ Hispanic ___ White X

MILITARY SERVICE (if applicable, give dates): _____

CERTIFICATION: I swear the information I have entered on this form is true to the best of my knowledge. I understand that if I deliberately conceal or enter false information on the form my application may be rejected, I may be removed from the list of eligible candidates, or I may be removed from the position. I agree that the Office of the Governor may contact present or former employees or other persons who know me to obtain an additional information about my skills and abilities. I understand that the information on this application is public information and may be released through a legal request for such information.

Signature (in ink): Brent Johnson Date: 11-21-08

Senator Bill Wielechowski
Senate Resources Committee
Alaska State Legislature
120 4th Street, State Capitol, Room 3
Juneau, Alaska 99801-1182

Dear Co-chairs McGuire and Wielechowski,

As an Alaskan and person who has been in the seafood industry for 28 years, I support the confirmation of Brent Johnson to the Alaska Board of Fisheries.

Mr. Brent Johnson is an experienced Cook Inlet and Prince William Sound commercial fisherman. Each summer he produces high quality salmon at his Upper Cook Inlet set net site by bleeding and icing all of his catch. I believe that this conscientiousness for quality workmanship will carry over to the job he will do for the Alaska Board of Fisheries. The fact that he has his own ice machine proves that he goes out of his way to do the best job he can.

Brent has served on many boards and committees, devoting countless hours to understanding the issues faced by the multiple user groups of the resource. His sense of commitment and experience will be well used as a Board member.

Thank you for your time and consideration in the support of the confirmation of Brent Johnson to the Alaska Board of Fisheries.

Sincerely,

Charles McEldowney
Seward Fisheries Plant Manager

Senator Lesil McGuire
Senator Bill Wielechowski
Senate Resources Committee
Alaska State Legislature
120 4th Street, State Capitol, Room 3
Juneau, Alaska 99801-1182

Dear Co-chairs McGuire and Wielechowski,

I wish to express our support for the confirmation of Brent Johnson to the Alaska Board of Fisheries.

Mr. Johnson has many years of experience as a commercial fisherman in Cook Inlet and Prince William Sound harvesting salmon, herring and halibut. Through his experience on the fishing grounds and as an active board member of various organizations, including the United Fishermen of Alaska and the Cook Inlet Aquaculture Association, he has acquired a very good knowledge of Alaska's fisheries. He understands the importance of scientifically based fishery resource management and is a strong supporter of utilizing practices that promote quality. Having more than a decade of service on the Kenai-Soldotna Fish & Game Advisory committee has prepared him for this appointment.

We believe that Mr. Johnson will make a fine member of the Alaska Board of Fisheries and respectfully request your support of his confirmation.

Sincerely,

Duff Hoyt
Manager

Dear Co-chairs McGuire and Wielechowski,

I wish to express my support for the confirmation of Brent Johnson to the Alaska Board of Fisheries.

I have served on the Board of Directors of Cook Inlet Aquaculture Association with Brent for many years. I have always found Brent to be a thoughtful, fair and reasonable voice. Serving as president of the BOD Brent understands the process and kept meetings moving while allowing members to voice their opinion. I can say Brent puts the association's agenda first and his unbiased character helps all the directors with some difficult decisions.

I believe that Mr. Johnson will make a fine member of the Alaska Board of Fisheries and respectfully request your support of his confirmation.

Sincerely,

Tim Schmidt

Rep. Bryce Edgmon, Chair. House Fisheries Committee
State Capitol, Room 424
Juneau, AK 99801-1182

Dear Rep. Edgmon,

Trout Unlimited Alaska supports the appointment of Brent Johnson to the Alaska Board of Fisheries. Mr. Johnson understands the important role habitat conservation plays in the well-being of fish and the sport, subsistence, and commercial users who benefit from our highly productive fisheries. Mr. Johnson has a balanced perspective on allocation between user groups and will address allocation issues based first and foremost on conservation of the resource and secondly by looking at the specific details of each fishery rather than applying blanket regulations across Alaska's diverse fishing areas, industries, and uses. We believe Brent Johnson will be a fair, open, and honest member on the Alaska Board of Fisheries and hope that the legislature will confirm his appointment.

Sincerely,

Tim Bristol

April 8, 2009

Alaska State Legislature
Juneau, AK 99811

Dear Legislator

The Alaska Trollers Association strongly supports the appointment of Brent Johnson to the Alaska Board of Fisheries.

Mr. Johnson has been involved in Alaska fisheries most of his life, fishing salmon, halibut, and herring from Cook Inlet to Prince William Sound, and serving on the board of his region's aquaculture association. This has provided him with a wealth of experience to draw upon as he approaches this new position. His tenure on the Kenai-Soldotna Fish and Game Advisory Committee has further prepared him for this next logical step.

Brent's exemplary involvement in his industry and community has been recognized by members of our association for many years. He is known as a strong advocate of Alaska's sustainable fisheries management program, always placing the needs of the resource above his business. He is studious, informed, approachable, and fair-minded. These traits will be of great value to the fishing public and many others concerned about Alaska's resources.

Brent is precisely the kind of person ATA looks for when searching out candidates for the Board of Fisheries. We encourage you to vote in support of his confirmation.

Best Regards,

Dale Kelley

Executive Director

Sen. Bill Wielechowski
Alaska State Legislature
120 4th Street
State Capital Room 3
Juneau, Alaska 99811-1182
907-465-2435, fax: 907-465-6615

Dear Senator Wielechowski,

The Kodiak Regional Aquaculture Association (KRAA) is a private nonprofit corporation that includes among its members the 605 Kodiak area commercial salmon fishery permit holders, numerous Kodiak sport fishing charter organizations, and uncounted local subsistence and sport fishermen, as well as others interested in the salmon resources of the Kodiak area.

I write to offer the support of the members of KRAA for the appointment of Brent Johnson to the Alaska Board of Fisheries. Mr. Johnson's intelligence, his breadth of experience in serving on committees and Boards within his community, his experience in and grasp of Alaskan fisheries and fisheries issues, and his willingness to serve the public distinguish him as an excellent candidate for appointment to this important Board.

Please support his appointment to this important position.

On behalf of the Board of Directors and members of KRAA,

Sincerely,

Kevin Brennan, Executive Director
Kodiak Regional Aquaculture Association

CC: Gov. Sarah Palin. Senators: Stevens, McGuire, and Wielechowski.
Representatives: Austerman, Johnson, and Neuman

Furthermore, one of the "sport" seats has fished commercially, in the past, for about ten years. Another "sport" seat used to be a fisheries biologist, Mr. Howard Delo, and he is one of our favorite board members. We never thought that we would be so inclined to be supportive of a fellow from Big Lake, but we are. (And please keep that in mind next year when this time of year rolls around again). We want Howard back on that board regardless of the fact that his home is not in Fairbanks. Some of the best folks may not come from the best geographic locations (not that Big Lake isn't a great place, it just isn't Fairbanks), but we want to see the best seven members on the board, regardless of affiliation or region.

Often we find more common interests with the so called "sport" representation than we do "commercial". And it helps that the "sport" seat can actually deliberate and vote on everything. **Interestingly enough, Brent Johnson will be not only conflicted out of voting on any Cook Inlet sport vs. commercial allocation issue but he will not be allowed to even deliberate. He must join the audience and is not allowed to speak on any conflicting issues.** We are bringing this to your attention so that you will know that some of the forces amassing against Mr. Johnson, while their points and concerns may be valid to their constituents, need to be reminded of this fact.

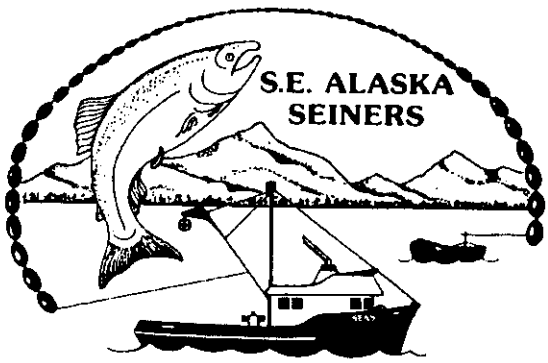
Brent Johnson will be unable to vote or deliberate on any contentious Cook Inlet issue because he is a Kenai setnetter.

I trust you will agree that these labels that are often used for the Board of Fisheries members often do not work out to paint an accurate picture. What is most important is that potential board members have an open mind, a commitment to the fish resource, and an unbiased determination to do what is right to enable the state of Alaska to continue to have a sustainable resource so that all users may benefit. And when the member must choose in an allocation disagreement, that they use the highest ethical and moral means to guide them in these decisions.

Again, SEAS requests your 'yes' vote for the confirmation of both of Governor Palin's Board of Fisheries appointees, Brent Johnson and Karl Johnstone.

Sincerely

Robert M. Thorstenson, Jr.
Executive Director, SEAS
410 Calhoun Ave
Juneau, AK 99801
(907) 463-5030



Senator Bill Wielechowski
Alaska State Legislature
Juneau, AK 99801

April 8, 2009

Dear Senator Wielechowski

Southeast Alaska Seiners Association (SEAS) is a non-profit fishing association representing well over 1000 direct and several thousand indirect jobs in the Southeast Alaska region. **We support both the confirmations of Karl Johnstone as well as Brent Johnson.**

While we have conducted our business in Southeast since 1968, we are very concerned about the regional and geographic balance on regulatory bodies that we deal with, such as the Alaska State Board of Fisheries. We understand that the Governor's appointments would now leave us with 3 seats in the Cook Inlet basin out of a total of 7 seats, these being Big Lake, Anchorage and Clam Gulch. With the remaining seats from Juneau, Petersburg, Kodiak and Naknek, there is quite a bit of diversity and geographic representation on the Board of Fisheries.

There will be statements and concerns coming from several quarters as to the geographic representation as well as the "balance" of this board. We are convinced that the Governors appointees are the right people for the job and will enhance and provide this balance. While most of our members are avid sportsmen as well as personal, subsistence and recreational users of the resource, our organization, SEAS, represents the commercial side of the Board of Fish arena.

Approximately 75% of all Board of Fish proposals are regulation changes, improvements, and management implementations that concern only commercial fishing. Thus, while you will hear that 4 of the 7 seats will now be considered "commercial", this is the way things should be. And the definition of "commercial" varies from region to region. Not one of these 7 Board of Fish members fish on a vessel large enough to qualify as a Southeast seiner. One of the "commercial" seats is a former processor who hasn't fished commercially for 40 years and the other 3 "commercial" seats have small enough vessels to fit on the deck of one of our boats.

Subject: See what I mean

Can a Cook Inlet commercial fisherman EVER qualify for the Board of Fisheries?
A quote from Les Palmer from the Peninsula Clarion's outdoors columnist.

"....Don't get the idea that I have anything personal against Brent Johnson. As a person, I've always respected and liked him. I just think it's a bad idea putting a Cook Inlet commercial fisherman on the fish board."
Would you folks please put on the Alaska Legislature and the ADFG webpage some quote to the effect: For any Board of Fisheries or other fisheries related state positions, Cook Inlet Commercial Fisherman need not apply."

Memo: Re appointment of Brent Johnson to Alaska Board of Fisheries

ALERT!! MEMBER OF COOK INLET SETNETTER CASTE APPOINTED TO BOARD OF FISHERIES!

This is indeed a potential travesty of momentous proportions! Brent Johnson, a Cook Inlet eastside setnetter (Yes, one of THOSE guys...They should have all been purged years ago!) has been appointed to the Board of Fisheries by Governor Palin! This cannot be!

Even though Brent:

- As president of various fishing organizations, and as a long-time member and president of the Kenai/Soldotna Advisory Board and the Cook Inlet Aquaculture Association, has a long experience dealing with Cook Inlet fisheries issues in general, and—more specifically—as a participant in the Board process including attendance and committee participation at numerous Board hearings...
- Is known by those who know him as one who always puts principle ahead of politics, one who, it is often said, "has people who disagree with him, but has no enemies".
- Is also actively involved in the Kenai Peninsula community supporting school activities, as a highly respected member and president of the Planning Commission and as president of various historical societies...
- Because of his engagement in and responsibility to the community is well versed and knowledged in the history and "going-ons" in that community and the state as a whole..
- In any of his community dealings does more than the requisite reading and attending of meetings, always seeking out the best information from a variety of sources in a variety of venues to help him make wise decisions...
- Is, if not the most qualified, one of the most qualified appointments to the Alaska Board of Fisheries in decades.
- Will be conflicted out of any Board of Fish deliberations and votes on any issues concerning Cook Inlet.

...even though all of the above, Brent is obviously not a suitable candidate to serve on the Board of Fisheries because:

- Brent is a Cook Inlet commercial fisherman, an east side setnetter at that—Duh! There is no way in these times ANY such individual can or should serve. It can't happen...it won't happen.

EVER!! [Though, perhaps, he could run for governor. It would probably be an easier and more likely successful endeavor than getting confirmed for the Board of Fisheries.]

- Despite the fact that:
  - Sport and recreational interests are commonly served and even represented as advocates for those interests on the board by a plethora of appointments who often don't have ANY fisheries experience or expertise.
  - Those sport and recreational "representatives" are able to deliberate and vote on ANY issue affecting anyone in the state, including any issue they're particularly passionate about UNLESS they or a relative or two have tangential commercial fishing interests—No conflict of interest, of course, for biased advocacy, but that negligible monetary interest in a commercial fishery? What an annoyance! Darn relatives! No biggy; talk about it a bit with other board members; conflict deemed insignificant. [This happened with Delo, who I think is actually not that bad of a guy..nevertheless...]
  - At this point in time there are only a couple Board of Fisheries members with significant current commercial fisheries experience, even though 80% or more of Board of Fisheries work load pertains to commercial fishing.

- Nevertheless, in sum, Brent can NEVER be appointed to the Alaska Board of Fisheries. Why?
  - ...And here, I am being quite serious: It's because of outright bigotry and prejudice against Brent by many influential people and groups who can't stomach the idea of having a Cook Inlet commercial fisherman, particularly a setnetter on the Board of Fisheries REGARDLESS of merit and qualifications.

- From a qualification standpoint, Brent is as qualified as any current member on the Board of Fisheries, more qualified than most past members of the Board of Fisheries.

- If Brent cannot or is not confirmed, why not?
  - Prejudice. (If not prejudice, under which scenario COULD a Cook Inlet eastside setnetter be confirmed?)
  - ?????? I honestly can't think of a legitimate reason.

Please vote to confirm Brent Johnson for a term as a member of the Alaska Board of Fisheries.

Sincerely,
Gene Palm

Subject: letter regarding the appointment of Brent Johnson, to Alaska's Board of Fisheries

Dear Representative,

This letter regards the appointment of **Brent Johnson**, by our Governor, to Alaska's Board of Fisheries.
The below letter was generated and signed by 11 Alaskan Representatives and Senators.
I agree with the content of this letter so I am now sending it to you and Governor Palin.
A final legislative confirmation vote for this BOF position will happen within 5 days, **ON APRIL 17, 2009.**

I am a 30 year resident of Alaska and I am requesting that you **NOT CONFIRM** Brent Johnson to the Alaska Board of Fish for two reasons.
1.] The first reason is because it would leave interior Alaska and subsistence/ personal use residents without a voice on our BOF.
2.] The second reason is that we need people on our BOF who are able to see the big fisheries picture regarding our many fisheries USES here in Alaska. I have know Brent Johnson for 30 years and I personally know that he only carries a SINGLE picture in his head with regard to Alaska's fisheries. That perspective is one which enforces by regulation that commercial fishermen are allocated 98% of Alaska's fisheries and common users are given the left-overs. I believe this ratio should be the other way around, with our common users receiving priority access to our fisheries and commercial users receiving any harvestable excess, which the public cannot use.
Governor Palin has made a very poor choice with this BOF appointment of Johnson.

Thank you.

Don Johnson
907 262 7893
ccpwow@gci.net

Thank you.

April 10, 2009

The Honorable Sarah Palin
Governor, State of Alaska
State Capitol, Room 300
Juneau, AK 99801

Dear Governor Palin,

We commend the vetting process of members of state boards and commissions conducted by the Governor. We are confident the appointees are individuals of honesty, integrity and merit and we applaud their willingness to serve the people of Alaska. It is important for the Board of Fisheries to consist of members who are knowledgeable, honest and objective in their consideration of Alaska's fishery concerns.

It is crucial for board members to be true to the interests of all Alaskans. Appointees should have concern for those who depend on local fishing sources. Board members should be able to look at all sides of an issue without any preconceived notions. They should impartially evaluate the concerns and interests of the various groups and regions. They should also have the education to make well-studies, science-based decisions. In this sense, fairness and objectivity are essential modes of consideration and evaluation.

The Board of Fisheries should have a wide breadth of knowledge of fisheries issues across the state. It is safe to assume that each member is an expert of the issues in their residential region. A Juneau resident is familiar with the needs of Southeast commercial and sports fishermen. A Cook Inlet resident understands the needs of dipnetters and halibut fishermen. A resident of the Yukon-Kuskokwim region values the importance of fishing for personal use. A Board member from the Fairbanks area would have a profound understanding of fishing for personal use. The Chitina personal use fishery in the Copper River illustrates an Interior concern. The geographical location of Fairbanks is influential in its proximity to rural Alaska and its stature as the second largest city in the state. The Interior is largely dependent on the many services Fairbanks has to offer, particularly as a hub of economic stimulus and development for those who travel to the region to fish.

It is imperative for Board appointments to represent each unique region of our state. It is questionable whether members of the Board of Fisheries who are commercial and sports fishermen south of the Alaska Range are in tune to the needs of Interior and Native Alaskans that depend on fish for subsistence. There would be an unfair disparity among regional appointments if the Interior no longer has a representative on the Board. If the Interior goes unrepresented on the Board, this means a region that encompasses over half the state, including the Yukon River and its salmon concerns, would lack a residential voice familiar with the region and its issues and people. While current members of the Board undoubtedly serve Alaska's fisheries to the best of their abilities and knowledge, there is not a current member who is Native or resides north of Big Lake.

Given these concerns and issues, the Interior Delegation respectfully requests the Governor to appoint to the Board of Fisheries a resident from the Interior. We hope that you weigh these considerations carefully and understand the interests of this vast region of our state. While we have the utmost respect and no disregard for your appointee, the Interior Delegation feels that a representative of our region should be on the Board of Fisheries.

Thank you for your time and consideration of these important concerns expressed by our constituents. We have confidence you will consider the issues that are close to the hearts of Alaskans across the state. We appreciate your taking valuable time to find the most suitable and knowledgeable individuals to sit on the state's boards and commissions. Please feel free to contact member of the Interior Delegation if you have any questions, comments or concerns.

Respectfully,

1.] **Representative** Scott Kawasaki
House District 9 Fairbanks

2.] **Representative** John Coghill
Interior Delegation Chairman
House District 11 , Fairbanks

3.] **Representative** David Guttenberg
House District 8 Fairbanks

4.] **Representative** John Harris

Subject: Opposition to Brent Johnson on Board of Fish

April 12, 2009

Dear Legislator:

I am writing to you to ask that you oppose the appointment of Brent Johnson to the Alaska Board of Fisheries, because I don't think he can be fair towards other user groups besides commercial fishing. I sport fish on the Kenai River regularly during the summer months, and also make use of the Kenai dip net fishery. I also assist my daughter-in-law fish at the Kenaitze Indian Tribe's educational fishery on the Kenai beach. I helped start a new group representing dip netters – the Southcentral Alaska Dipnetters Association (SCADA), of which I am the vice president. I also served on the board of directors of the Kenai Watershed Forum for six years, and the Kenai – Soldotna AC for two years.

As a past member of the Kenai – Soldotna AC, I can say that having fair and balanced representation is important on the BOF and the local ADFG Advisory Committees. I served on the Kenai – Soldotna AC in 2006 and 2007. During this time we had an equal representation of three members active in the commercial fishing industry, and three members active in the sport guide charters. We also had a wide range of members from the general public, with representation in hunting, trapping, subsistence, personal use, and at-large.

During this time I can say I felt comfortable that the fish and game proposals we reviewed received fair and balanced treatment, with no one user group's viewpoint controlling the process. I feel we made valuable contributions through our comments and actions to both the BOF and the BOG. I feel our comments were welcomed and seen in a positive manner in the overall board processes.

I feel fortunate to have served on the Kenai – Soldotna AC when I did, because I understand that our local AC was not always viewed in such a positive light. I understand that the policy to have balanced representation from commercial and sport users on the Kenai – Soldotna AC came about *after* the tenure of Brent Johnson as the local AC Chair – because past AC's got stacked with commercial fishing interests and did not provide fair, balanced comments on fisheries proposals. From people I talked to, other user groups felt intimidated by the AC and did not feel their input was valued or wanted. There was a feeling that proposals from other user groups did not receive impartial judgments under his tenure.

I think all user groups deserve a fair shake at the BOF. As with my experience on a fair and balanced local AC, the BOF make-up should not be over balanced in favor of one user group. The appointment of Brent Johnson *does* overweight board representation to the commercial fishing industry, with four of seven seats. As such, I am afraid that other user groups will once again find problems getting fair hearing at the BOF.

What is also troubling to me is that much of Brent's support for his appointment comes from commercial fishing interests in Cook Inlet that are leading the attack on my right to dip net, something that I care very passionately about. I understand UCIDA has come out in full support of Brent's appointment, which is not surprising because he serves on the board of director of Cook Inlet Aquaculture Association with many of them.

UCIDA recently filed a Federal lawsuit wanting to ban dip netting on the Kenai, as does a similar lawsuit from other Cook Inlet commercial fishing interests. Why? Because resident only fisheries discriminate against UCIDA's non-resident members. I have seen the number of fish that non-resident drifters bring in from a day's fishing on the Inlet – many times more than the household limit I am allowed to bring back to my freezer for food. They are allowed to take home an unlimited number for home pack, and now my right to dip net is being attacked by them. This is an insult and outrage at its most basic level. Is this what I can expect from the BOF with Brent on board?

I also find it illuminating and troubling that as president of Kenai Peninsula Fishermen's Association (KPFA), Brent called for UCIDA's executive director, Roland Maw, to be the Commissioner of Fish and Game, or at the very least appointed to the BOF. I remember when the joint boards of Fish and Game refused to pass on the name Roland Maw as a qualified candidate for Commissioner. That should tell you something about how these boards felt about Roland Maw's qualifications. I was thankful of that because I witnessed more than once at Kenai – Soldotna AC meetings and BOF meetings where Roland Maw stretched, manipulated and just plain lied about the facts on proposals under consideration. The support between UCIDA and KPFA seems to be - I will scratch your back if you will scratch mine.

We don't need to stack the BOF with one user group over all others. The appointment of Brent Johnson does just that – we have seen that this approach does not work in the past – why would we expect it to work any better in the future. Please vote no on his confirmation.

Respectfully,

From: RichardErkeneff@aol.com
Sent: Monday, April 13, 2009 10:40 AM
To: Sen. Lesil McGuire
Subject: Nomination of Brent Johnson to the Board of Fish

I am writing this E-mail in regard to the nomination of Brent Johnson to the Board of Fish.

I am Richard Erkeneff, a resident of the Kenai Peninsula Borough and the owner of a Lodge and a Fishing and RV Camp on the Kenai River. I have been a resident of Alaska for approximately five years. The success of many of Alaska's small businesses and the well being of many our citizens depend upon Fish for all User Groups.

Its all about Fish! Whether your interest is Commercial, Sport, Personal Use or Subsistence, you need sustainable fisheries for **all Users.** I want to emphasize the word **ALL**. The BOF is an elite group of seven, who makes decisions regarding hundreds of proposals from all user groups. After public testimony, it is these seven members that deliberate and finally decide on issues regarding the regulations of the fisheries.

If all User groups are going to get a fair shake during these private deliberations, the board make up should not be over balanced in favor of one user group. I believe that this nomination does overweight the board representation with commercial fisherman interests to four of seven. If approved, Mr. Johnson will be the second commercial set netter (Vince Webster is the first). The Chairman of the BOF, Mr. Jensen, a commercial fisherman, and Mr. Morris, a seafood sales expeditor, the Past Chairman, support commercial fisherman interests.

During a past BOF nomination process, Mr. Johnson argued that the BOF members should have an extensive background in diverse fisheries. What does Mr. Johnson know that isn't duplicated by the abundant knowledge of Messrs. Jensen, Morris or Webster?

Additionally, one of his main support groups, Upper Cook Inlet Drifters Association (UCIDA), is advocating federal preemption of state management of salmon fisheries and seeking to outlaw the resident-only dip net fishery, in favor of non-resident commercial fishermen.

The Board will not have any representative for the Interior or non-coastal areas of Alaska if Mr. Johnson is approved.

For reasons noted above, I do not support the nomination of Mr. Johnson. I am hopeful that you will have a "nay" vote on Mr. Johnson's nomination.

Subject: Board of Fisheries Brent Johnson Opposition

Dear Legislator;

I am writing to ask you to vote against the appointment of Brent Johnson to the Board of Fisheries. I've been an Alaska resident since 1982 and an avid outdoors person, including hunting and fishing. I oppose Governor Palin's appointment for the following reasons:

- Brent Johnson appointment takes a seat from the Fairbanks / Interior area, negating an important and broad geographical region from the Board, especially in light of the upcoming 2009 / 2010 board meeting for Arctic – Yukon – Kuskokwim Finfish.
- Brent would be the fourth appointment to the board from the Southcentral / Cook Inlet region, and would leave the board without an Alaska Native or subsistence / personal use representative.
- Brent Johnson appointment puts a Cook Inlet set netter on the board, which would be the Governor's fourth appointment of commercial fishing orientation and second set netter.
- Brent Johnson is in the leadership of the Cook Inlet commercial fisheries, which has supported state lawsuits seeking to give commercial fishing permit holders private property rights to our public fishery resources. These past lawsuits failed in state court.

I do support Governor Palin's other Board appointment of Karl Johnstone. He has broad sport and commercial experience and has a good reputation with both entities. I'd like to see either a woman on the Board, or native representation. I'd ask that other nominee's be considered, like Mike Smith with Tanana Chiefs who would be fair representation of the interior Alaska as well as a Native Alaskan representation.

Please oppose the appointment of Brent Johnson to the Board of Fisheries. Thank you.

Subject: Brent Johnson's appointment to the BOF

Dear Senator McGuire-
I am writing to oppose the appointment of Brent Johnson to the Board of Fish. I know that you care greatly about the natural resources of our state since you have chosen to sit on the committees that protect them and I hope you want to protect the concept that they be accessible to all the citizens of the state... after all our constitution pretty much mandates that.

The appointment of Mr. Johnson is very likely to unbalance the Fish Board since he will be the 4th commercial fisherman on the board and the 4th to represent Cook Inlet... no one on the board will represent subsistence and personal use for the first time in something like 20 years, no one on the board will represent Alaskan Natives and no one will represent the Interior.

Mr. Johnson has been part of the commercial fishing leadership which has filed lawsuits that would have them "own" all of the salmon. It is his opinion that any fish that gets upriver over and above minimum escapement is a "wasted fish". He is a participant in current lawsuits that are attempting to usurp the powers of the Board of Fish (how ironic) and that are seeking to eliminate the popular personal use fisheries taking fish from all Alaskans to give them to the commercial fleet.

One of the main problems for the Cook Inlet commercial fishery is that you have one out of eight commercial fishermen in Alaska fishing there and they historically get only 2% of the commercially caught salmon in the state. Of course, this means higher costs and lower yields for each permit.

The answer according the commercial guys is to let them catch more fish by re-allocating more of the runs to the commercial fleet. Given that they already harvest over 80% of the fish taken, there is a very limited up side to this approach.

So, please make sure that someone more balanced is appointed to the open seat on the BOF. It will be in the best interests of the resource and the people.

Sincerely,
George Heim

Sent: Saturday, April 11, 2009 2:50 PM
To: Sen. Lesil McGuire
Subject: Oppose Brent Johnson for BOF

Dear Legislator

The following are key points why Brent Johnson should not be appointed to the Board of Fish. This is not just a Cook Inlet issue but one that would affect all areas of Alaska.

This is not personal or one sided as all user groups deserve a fair shake at the BOF. The board make-up should not be over weighted in favor of one user group. This appointment does overweight board representation with commercial fishing interest with a 4of 7 majority voice. He will not have the support or trust of statewide user groups except for commercial fishing.

One of his main support groups, Upper Cook Inlet Drifters Association (UCIDA), is advocating federal preemption of state management of salmon fisheries and seeking to illegal the resident-only dip net fishery, in favor of non-resident commercial fisherman.

Based on past performance, I do not believe he will make balanced and impartial decisions that address the needs of various user groups. In addition, this appointment will leave the interior non-coastal area without a voice. Also, this will leave the Alaska Native community without a representative.

I strongly urge you not to confirm Brent Johnson to the BOF.

Sincerely,

Subject: Board of Fisheries Confirmation Hearing

Senator Lesil McGuire

Please vote against the confirmation of Brent Johnson to the Board of Fisheries. The Board of fisheries is currently loaded with commercial fishermen and this is not good for Alaska or Alaskans. Commercial Fishing is very important to our state but so is the individual sportsman, be that our neighbors fishing to put food in the freezer, or be it the tourist coming to Alaska for the adventure of a lifetime and sustaining many other vital jobs. The Board of Fish needs balance that can look at ALL of Alaska's needs and create fair regulations to the benefit of all of Alaska's people. This cannot be done if the board of fish is controlled by any one group.

Thank You
Ed Haney

Subject: Support of Brent Johnson, Board of Fisheries

Senators and Representatives,

My name is Jodi Sibson and I writing in support of Brent Johnson as a Board of Fisheries Member.

Brent Johnson is active in commercial fishing in Cook Inlet as a set netter on the east side; he has been active as a salmon seiner, herring seiner, set netter, and halibut longliner.

Brent is an open-minded individual who is highly knowledgeable on the subject of fisheries management. He is a very approachable individual to all persons and user groups.

I believe with his experience through KPFA, CIAA, Kenai/Soldotna Fish & Game Advisory Committee, and the Kenai Peninsula Borough Planning Commission that he will be an asset to all Alaskans as a Board of Fisheries Member.

Respectfully,

Subject: State Board of Fisheries Appointment
Follow Up Flag: Follow up
Flag Status: Yellow

Lesil and Bob,
Gov Palin has appointed Brent Johnson to the State Board of Fisheries and I need your support to stop this appointment.
The Anchorage Fish and Game Advisory Board voted last night not to support Mr. Johnson as a selection to Board of Fish as his history in the fishing community has not show interest in the preservation of Alaska's fish for all fishing groups.
Our current Fish and Game Board is already stacked with 4 of the 7 seats representing commercial fishing interests, so they don't need the additional commercial fishing coverage. We need a board appointment that will make decisions with an open mind for our resources and all Alaskans.

As an avid sportfisherman I need your help to protect my rights to Alaska's resources. There is enough to go around but the commercial fishing interests in Alaska have proved time and again that they want it al for themselves.

Please let me know where you stand?

Sincerely,
Todd Heesch

Alaska State Legislature
Juneau, AK 99811

Dear Legislator

The Alaska Trollers Association strongly supports the appointment of Brent Johnson to the Alaska Board of Fisheries.

Mr. Johnson has been involved in Alaska fisheries most of his life, fishing salmon, halibut, and herring from Cook Inlet to Prince William Sound, and serving on the board of his region's aquaculture association. This has provided him with a wealth of experience to draw upon as he approaches this new position. His tenure on the Kenai-Soldotna Fish and Game Advisory Committee has further prepared him for this next logical step.

Brent's exemplary involvement in his industry and community has been recognized by members of our association for many years. He is known as a strong advocate of Alaska's sustainable fisheries management program, always placing the needs of the resource above his business. He is studious, informed, approachable, and fair-minded. These traits will be of great value to the fishing public and many others concerned about Alaska's resources.

Brent is precisely the kind of person ATA looks for when searching out candidates for the Board of Fisheries. We encourage you to vote in support of his confirmation.

Best Regards,

Dale Kelley

Executive Director

Subject: Brent Johnson/cruise ships

Dear Sirs....
For the record, I want to express my opinion on two issues....
I have been an Area E gillnetter for 16 years, and strongly support Brent Johnson's appointment to the Board of Fish. There is no one who could better represent the Kenai Peninsula fairly and objectively. I am not a fan of Gov. Palin, but in this case I think she made an excellent choice in her nomination. I am sick and tired of sportfishing interests and associations getting their way because they spend so much money lobbying. The Board's decisions are supposed to made on the basis of science and biology, not money.
Also, I am DISGUSTED by the cruise ships emptying their waste water in our waters. I am disgusted by cruise ships anyway, people think they bring so much business to our state, but they really don't. No one spends extra $$ onshore to eat anywhere, and how many Alaska t-shirts does one visitor need? It is a joke and I am sick of our legislature supporting this industry like they do.
Just my humble opinion, Julie Etherington

Subject: Fish and Game Board appointment: Brent Johnson

Dear Senator McGuire:

I am writing to you to ask for your support to appointment Brent Johnson to the Alaska Fish and Game Board. Govenor Palin is recommending Brent and my husband and I personally know him. He would be fair and just and has many years of experiences on boards, such as Cook Inlet Aquaculture and Kenia Pensinsula Fisherman's Association. Brent is a Southcentral Commercial Fisherman and, if my information is correct, there is no Commercial Fisherman from the Southcentral region of our state on the board. There are sportfisherman from Southcentral. This is another reason to support Brent. I know that we talk about "fairness" on our boards, and this would even the playing field.

I thank you for you dedication to Alaska and appreciate your consideration on this important matter.

Audra Doner

Subject: Alaska Board of Fish APPOINTMENT BRENT JOHNSON!!~??

Dear Alaska Representative,

I am contacting you regarding the appointment of Brent Johnson, by the Governor to our Alaska Board of Fish. I TOTALLY oppose this appointment.
Brent Johnson is one of the most radical commercial fishermen that I have ever known.
I have lived in Alaska for 30 years and he ranks right up there on top of my list of persons who consistently radically advance commercial fisheries access, while also reducing common user access to our fisheries. He is currently the President of our most notorious and extreme commercial fishing association here on our Kenai Peninsula, the Kenai Peninsula Fishermen's Association.
If you know anything about the KPFA, you know that it's membership works full time at figuring out ways to improve commercial fishing access, while reducing common user access.
The issue is purely a money issue. The KPFA looks at Alaska's fisheries resources as being completely granted to commercial fishermen within Alaska's Limited Entry Amendment.
They see common users as obstacles to be overcome and removed.
I believe Mike Smith of Fairbanks would be a much better choice to replace **Bonnie Williams**.
I personally do not understand what Governor Palin is thinking by attempting to change an **interior, native, subsistence & personal use seat** , into a commercial fishing extremist seat.
I am hoping you will do everything possible to make sure that Brent Johnson is not confirmed to replace Bonnie Williams.
As far as Brent Johnson's ['record' against sport and personal use fishing] goes, it is literally all over the internet with dozens of reference letters. (see below references)
That is all he has been about for the past 30 years. If you locate a single case were he supported sport or personal use access, it was to somehow acquire even greater fisheries access for commercial fisheries.
If you know of any persons or groups working to prevent Brent Johnson from being confirmed, please send me a website link or email address to contact them.

Please do not confirm Brent Johnson!

Sportfishermen aren't too keen on Gov. Sarah Palin's choice of Cook Inlet commercial salmon gillnetter Brent Johnson for a seat on the Board of Fisheries.
He's a press release from the Kenai River Sportfishing Association:

Kenai River Sportfishing Association
April 2, 2009
Kenai River Sportfishing Association (KRSA) Opposes Johnson's Appointment to Alaska Board of Fisheries
SOLDOTNA – Members of Alaska's largest sportfishing advocacy organization in the state,

Kenai River Sportfishing Association (KRSA), are opposing the appointment of Brent Johnson to the Alaska Board of Fisheries (BOF). With the appointment of Johnson – an Upper Cook Inlet east side set netter – to replace Bonnie Williams on the BOF, Gov. Sarah Palin removed the only subsistence/personal use and Fairbanks seat from the Board and has tipped the balance toward commercial fishermen.
The second set netter appointed by the Governor to the Board, Johnson's appointment also leaves the BOF with no Alaska Native or female representation in their management of Alaska's subsistence, sport, personal use and commercial fisheries.
"Anyone who believes in Alaskan's subsistence, sport and personal use fishing rights should be appalled by this appointment," said KRSA executive director Ricky Gease. "Johnson is unable to see other points of view and has shown in his past interactions with the Board that he is not able to take a fair and balanced approach to fish allocation decisions."
Johnson is past president of Kenai Peninsula Fishermen's Association (KPFA), a set netter trade association of Cook Inlet commercial fishing interests that has consistently claimed priority rights to the public fisheries of the region. KPFA aligned itself with past failed legal challenges in state courts that sought to grant exclusive private property rights to the State's public fishery resources as guaranteed in the Alaska constitution. These efforts have led to new legal challenges in Federal court that seek to invalidate every personal use fishery in the state of Alaska. More than 30,000 Alaskan households participated in the personal use fisheries last year. According to the 2007 report on the economic impacts and contributions of sportfishing in Alaska, there were more than $700 million in angler expenditures in Cook Inlet alone, a region that sees a quarter million people fish more than a million angler days each year.
"Johnson is no friend to those who believe that Alaska's fishing resources should be managed for all of the people of Alaska and not just for commercial fishermen," said Gease.
KRSA also contends that the appointment of Johnson is inappropriate because it means the Interior of Alaska is no longer represented on the Board. This large area contains not only the Yukon and Kuskokwim Rivers, but also many other important watersheds that are critical to subsistence, sport, personal use and commercial interests.
The current Board also lacks any Alaska Native representation, so they will not have that cultural aspect represented in their deliberations.

franan wrote on 04/06/2009 11:42:48 AM:
The KRSA (especially RG) wouldn't know what is fair and equitable if it hit them upside the head for weeks on end. They believe in their own math - their own limited version of reality -

and they would proudly stand over the demise of an industry in Cook Inlet that provides jobs and income for hundreds of families and food for tens of thousands of people around the world. They are people who have 'public ownership' of the resource confused with 'public access'. When Alaska stops inviting the rest of the world in to catch fish to support a few guides we might start understanding what drives the RG's of this world - their checkbooks - not their hearts and minds.

Board of Fish Appointments

Board of Fisheries
Governor Palin appointed **Brent G. Johnson**, and reappointed Karl S. Johnstone, to the Board of Fisheries.
The seven-member Board of Fisheries is responsible for conservation and development of the state's fishery resources by setting seasons, bag limits, methods and means for the state's subsistence, commercial, sport, guided sport, and personal use fisheries.
The board sets fishery management policy, and makes the allocation decisions which the Department of Fish and Game must carry out through its management of fishery resources.
Johnson, of Clam Gulch, is a lifelong commercial fisherman who has been a salmon setnetter for most of his life. He has worked as a salmon and herring seiner and halibut longliner in Cook Inlet, and as a salmon seiner in Prince William Sound. Johnson has been active in fisheries management issues, having served more than a decade on the Kenai-Soldotna Fish and Game Advisory Committee from the early 1990s to 2002, the last two years as chairman. He was a member of the Cook Inlet Aquaculture Association board of directors from 1988-2001, and rejoined the board as president in 2005.
Johnson is a past president and board member of the Kenai Peninsula Fishermen's Association. His appointment represents the first appointment of a Cook Inlet commercial fisherman to the board since 1975.
Johnson has served on the Kenai Peninsula Borough Planning Commission since 1997.
He has also been president of Kasilof Regional Historical Association since 2005, and president of the Kenai Peninsula Historical Association since 2008. Born in Seldovia, he graduated from Ninilchik High School in 1973. He was appointed to a public seat.

4 BRENT JOHNSON LETTERS

Web posted Wednesday, April 18, 2007

Fish Board says no to changes
Upper Cook Inlet Management Plan won't be modified prior to season
By HAL SPENCE
Peninsula Clarion
The Upper Cook Inlet Management Plan will not be changed prior to the start of the 2007 fishing season, the Alaska Board of Fisheries decided Tuesday during a teleconferenced meeting. The board met by phone to discuss an emergency petition from four Upper Cook Inlet setnetters seeking changes to the Upper Cook Inlet Salmon Management Plan (UCISMP).

Robert Williams, Jeffery Beaudoin, **Brent Johnson** and Herman Hermansen had asked the board to clear up "apparent ambiguities" in management priorities by adopting an emergency regulation making it clear that the primary objective of management was achieving established escapement goals.
In their petition, the fishermen said that unless language was clarified, the 2007 season would begin without the Alaska Department of Fish and Game knowing whether staying within restrictions or meeting established escapement goals would be the greater management priority. According to the fishermen, the department acknowledged the priority dilemma in a salmon management issues paper in December 2006 that noted that the Board of Fisheries had adopted escapement goals, windows, and established fishing time restrictions, but that it was "unclear which is the higher priority; allowable fishing time or management within the escapement goals."
According to the petitioners, the uncertainty **has meant fish worth millions have gone unharvested**, though harvests have been biologically justifiable.
"Without clarification written into the UCISMP, large sockeye salmon escapement events, well in excess of established goals, will continue," the fishermen said.

Something's fishy on the Board of Fish

Letter to the Editor

Here's what's going down. The state Board of Fisheries (BOF) is going to hold a February meeting, put on a kangaroo court and enact regulations that will likely make commercial fishing in Cook Inlet a memory. Here's why: governors Palin, Murkowski, Knowles, Hickel, Cowper and Sheffield didn't appoint a single Cook Inlet commercial fisher to the BOF. Gov. Jay Hammond was the last to do that, with the appointment of Dannie Garroutte, a drift fisher from Ninilchik (served 1975-80).

Fish board meeting was fair

Like Jonah, who predicted too soon the demise of Ninevah, I must admit my own auguring of doom for commercial fishers has proven premature.
Going in to the recent Board of Fish (BOF) process I was certain commercial fishers had no advocate. I expected a fleet of flotsam downstream of this meeting.
While there can be no doubt that Alaska politics have short-changed Cook Inlet com fishers, the recent meeting seemed fair. Why was that?

Settnetters' petition denied at Board of Fish meeting

By Cristy Fry
Four Upper Cook Inlet setnetters were denied their petition to make escapement goals the priority in managing the salmon fisheries during an emergency Board of Fisheries teleconference Monday.

Specifically, the petitioners requested the board amend regulation 5 ACC 21.363 in the UCI salmon management plan, clarifying to the Alaska Department of Fish and Game that "achieving established escapement goals is the primary objective."
The petition was submitted by Robert Williams, Jeffrey Beaudoin and Herman Hermansen, all of Kasilof, and **Brent Johnson** of Clam Gulch. It was brought to the board at its March meeting, at which time the board decided the petition met the criteria for an emergency meeting.
It was not considered at the March meeting because any regulation change made by emergency petition is only in effect for 120 days and would expire before the 2007 UCI salmon season ended.

Re: Application for the Board of Game

Dear Governor Murkowski

I would like to be considered for appointment to the Board of Game. I came to Alaska in 1962 after graduating from Humboldt State College in Northern Ca. with a Bachelors Degree in Wildlife Management. I worked for the Greater Anchorage Borough Health Departments and Environmental Quality Departments until Nov. of 1974. I was the Director of the Department of Environmental Quality when I left to build and operate Crown Point Lodge near Moose Pass. The lodge was damaged by a chemical accident in 1986. I moved to Wasilla and purchased Wasilla Mini-Storage, which I sold in 1998 and retired in the Wasilla area. While in Moose Pass I served on the Seward Fish and Game Advisory Committee. I am now the Chairman of the Matanuska-Susitna Fish and Game Advisory Committee. I have attended and testified for the AC at numerous Board of Game and Board of Fish meetings. I am an avid outdoor person and have fed my family moose, caribou and fish for forty years. My basic philosophy concerning wildlife management is that the State should work to provide an abundance of wildlife to provide for the needs of all Alaskans. Where shortages of wildlife for food occur the state should apply management techniques that assure customary users have the opportunity to harvest game for food. I would appreciate your consideration of my application for the Board of Game.

Sincerely Cliff Judkins

4/15/09 CONFIRMA-TION: TERESA ALBAUGH BOARD OF GAME

Teresa Sager Albaugh
HC 72 Box 835
Tok, Alaska 99780

I am a lifelong Alaskan, raised in Fairbanks, and a 23 year resident of the Tok / Mentasta area. I have a strong personal interest and family background in hunting, fishing and trapping, and support sound scientific, sustained yield management of Alaska's renewable resources. I also support the tenets of our state constitution guaranteeing all residents equal access to fish and game.

WORK HISTORY

1996 – Present
Summit Consulting Services, Inc., Tok, Alaska
(Remote Project Construction Management & Design Services)
Personnel Management • Proposal Development • Internal Operations Management

1983 – 1995
Alaska State Legislature

- 1995: Senate Rules Committee Aide • Senator Mike Miller, Chair
- 1993 – 1994: Senate Resources Committee Aide • Senator Mike Miller, Chair
- 1985 – 1992: Legislative Aide • Representative / Senator Steve Frank
- 1984: Interim Legislative Aide • Representative Dick Shultz
- 1984: House C&RA Committee Secretary • Representative Mike Miller, Chair
- 1983: Legislative Secretary • Representative John Ringstad

1981 – 1982
Fairbanks North Star Borough Transit System
Clerk / Revenue Collections

EDUCATION

Graduate, Monroe Catholic High School • Fairbanks

VOLUNTEER / NON-PROFIT POSITIONS

Alaska Outdoor Council

- President (2005 – 2007)
- Board Member (1986 – 1990 and 2004 – 2007)

Alaska Division of Elections • District R / 36 – Mentasta Precinct

- Chair / Volunteer Poll Worker Coordinator (1998 – Present)

Slana Alaskans Unite • Secretary (1998 – Present)

MEMBERSHIPS

Alaska Outdoor Council
Slana Alaskans Unite
National Rifle Association
Focus on the Family

PERSONAL BACKGROUND

I grew up in a family where being outdoors - well out of town and away from the crowds – was considered a great thing. As a child, my five siblings and I spent summers with our mother, father, aunt, uncle and grandparents at the family cabin, where we literally got our feet wet, our faces dirty, and our hearts and minds filled with a deep appreciation for "the woods." We learned to fish with a rod and reel, handle firearms, and to clean and eat what we killed. As adults, we have continued these traditions and we have the pleasure of now passing them on to our children, nieces and nephews.

I personally have had the good fortune of many wonderful hunting opportunities for moose, caribou, sheep, bear, and deer, as well as ducks, ptarmigan and grouse. My husband, Bill, runs a trapline in the winter and as often as possible I join him to learn from and share the experience. We live in a log home, haul water, run a propane cook stove and lights, and provide our own part-time power system. Much of our diet comes from the wild food we harvest and each year's bounty from the garden.

I have no formal or professional training in wildlife management. My experience comes from a combination of personal field observation spending time in the natural environment, and a layman's study of applicable state and federal fish and game laws.

In part because of my personal interest in the outdoors, my work as a legislative aide often involved resource issues, which allowed me to hear many hours of testimony from Alaskans who expressed their perspectives and strong opinions on a wide range of fish and wildlife issues. I was also fortunate to have worked toward the passage of laws that have benefited hunters and trappers. My service on the board of directors of the Alaska Outdoor Council, including two years as president, has further broadened my understanding and appreciation of how important wildlife and the outdoors are to the people of the state. I have attended local Advisory Committee meetings, offered testimony to the Game Board, and provided public comments to the National Park Service on proposals of impact to the people, land, fish and game of my area.

Enabling present and future Alaskans to be responsible stewards of the resource, and to continue building and strengthening our outdoor heritage by assuring opportunity, are objectives I consider very meaningful and important. I believe they are goals that can be pursued and achieved through the efforts of the Board of Game, and I would be grateful for the opportunity to serve in that capacity.

Senator Lesil McGuire
120 4th Street
Juneau, AK 99801-1182

Dear Senator McGuire,

EMOTIONAL? Those of us who advocate for animal rights and fair wildlife practices hear it all the time as though feelings invalidate our stance. If anger is an emotion, then yes, we're emotional. We advocate fair and legal management practices for wildlife, and we're angry that radical extremists like Sager-Albaugh with her selfish agenda are even considered for a critical management position on the Board of Game. It is the overwhelming majority of Alaskans who want change in this state, and positive change and balance to the Board of Game. We're sick of the scales being dishonestly tipped in the wrong direction toward (and by!) these extremists in our government. As a

constituent, I strongly believe that Teresa Sager-Albaugh should not be confirmed to the Board of Game. OUR ENVIRONMENT, OUR FUTURE, AND OUR QUALITY OF LIFE ARE AT STAKE. Truth and justice should be more than a fantasy.

I urge you to oppose Teresa Sager-Albaugh's nomination to the Board of Game and look forward to your reply.

Sincerely,

Ms. Bette Rutan

Dear Senator Wielechowski,

As a constituent, I strongly believe that Teresa Sager-Albaugh should not be confirmed to the Board of Game. The Boartd of Game is so

slanted towards the hunting industry that it is not functioning for the people of the State of Alaska. The slaughter and carnage of this "exdtreme predator control" has got to stop!!! It is disgusting and I'm ashamed of it!!! This war against wildlife hasn't proved to increase moose & caribou! It;s just killing for killing sake uner the guise of game farming! Stop it!!! Re-structure the BOG with some hunters, trappers, photographers, outdoor enthusiasts, and some one from the Alaska Native community and the tourism industry.

I urge you to oppose Teresa Sager-Albaugh's nomination to the Board of Game and look forward to your reply.

Sincerely,

Ms. barbara reilly

Senator Bill Wielechowski
120 4th Street
Juneau, AK 99801-1182

Dear Senator Wielechowski,

As a constituent, I strongly believe that Teresa Sager-Albaugh should not be confirmed to the Board of Game.
I am a B&B owner here in Alaska and I have already had potential

clients ask about this cruel and unneccesary state policy on the wanton killing of our precious wildlife. I have even had two clients cancel already because of our state's policy on the slaugher of wolves and bears. And I am only one of hundred's of B&B and hotel owners who is already feeling the effect of our state's actions on the lack of wildlife protection.
Where will this kind of "officially sanctioned cruelty" take us? Why this is happening is beyond comprehansion. If you don't think tourism is a huge benefit to this state you are wrong! People come

here - and spend millions each year - to see the incredible beauty and the wildlife that abounds. But we are getting an international

reputation for cruel and barbaric treatment of the resourses we have so cherished in the past.
Please put a stop to this king of extremism and help return our state

to the place of wildlife protection - and not just because such a stand is profitable - but because it is the right thing to do.

I urge you to oppose Teresa Sager-Albaugh's nomination to the Board of Game and look forward to your reply.

Sincerely,

Subject: Wrong Pick for the Board of Game -- Teresa Sager-Albaugh!

Apr 7, 2009

Senator Lesil McGuire
120 4th Street
Juneau, AK 99801-1182

Dear Senator McGuire,

As an Alaskan and one of your constituents, I strongly believe that Teresa Sager-Albaugh should not be confirmed to the Board of Game.

It is not just about humans. Wildlife populations are impacted by many changes taking place in their environments.
For one, trophy hunting is a terrible *form of hunting*. Taking the prime breeders out of a population because the males have a great rack to display on one's wall seriously removes genetically-viable individuals from a (waning) population and in this process, the Board of Game has to adopt *scapegoat* regulations to increase herd numbers.
The scapegoats are wildlife it deems to be destroyed by senseless slaughter because of *competition*.
Please tell me when the last wolf or bear shopped at a grocery store for its sustenance? Sustenance for wildlife comes from the wild and executing wildlife for doing the very thing they do naturally is aberrant policy.
Alaska is wild. It should not become a huge game farm. It is terrible policy what the Palin Administration is proposing!!

I urge you to oppose Teresa Sager-Albaugh's nomination to the Board of Game and look forward to your reply.

Sincerely,

Ms. Mary Miceli

To: Sen. Bill Wielechowski
Subject: Teresa Sager-Albaugh is the Wrong Pick for the Board of Game!

Apr 7, 2009

Senator Bill Wielechowski
120 4th Street
Juneau, AK 99801-1182

Dear Senator Wielechowski,

As a constituent, I strongly believe that Teresa Sager-Albaugh should not be confirmed to the Board of Game.
Sager-Albaugh voted to allow controversial practices that are unprecedented in Alaska's 50-year history. Here's a run down of the most egregious votes she cast at her first Board of Game meeting.
Sager-Albaugh voted to:
Allow predator control in Denali State Park.
Allow citizens who participate in predator control programs to use helicopters to support the killing of wolves and bears.
Permit "agents of the state" to use poison gas bombs to kill wolf pups in the den and put snares in and around wolf dens.
Let citizens snare bears -- even sows and cubs -- using bait to lure them to their death.
Allow citizens to kill over 800 bears and sell their fur for profit, which would encourage poaching and the illegal sale of bear parts.
Give citizens the go-ahead to use planes to spot, then land and shoot, brown bears -- including sows and cubs.
Extend the wolf hunting season to when mothers are nursing newborn pups.
Expand "predator control" programs in two new areas of the state -- an increase of 33%.

Sager-Albaugh's voting record isn't showing us anything new: she has a

long history of anti-wildlife extremism. After serving as president of the Alaska Outdoor Council from 2005-2007, she continues to keep close

ties to the radical special interest group that has been behind many of the state's most outrageous anti-wildlife laws and initiatives.
Alaska's Board of Game should reflect the broad diversity of the Alaskan people, not the extreme interests of a narrow few. There should be at least one seat for other interest groups around this

powerful table to promote balanced discussion of the costs and benefits of predator control for ALL Alaskans -- not just hunters and trappers.

I urge you to oppose Teresa Sager-Albaugh's nomination to the Board of Game and look forward to your reply.

Sincerely,

120 4th Street
Juneau, AK 99801-1182

Dear Senator McGuire,

As a constituent, I strongly believe that Teresa Sager-Albaugh should not be confirmed to the Board of Game.
I believe we need a more diverse group representing on the board. I have lived in Alaska for over 23 years and have watched the process go backwards as more representation by hunters stands on the board. I have nothing against hunting in a fair manor, but while working in the boat charter industry, I have seen the slaughter of black bear carcass

left on the beach and floating in the water. It looked just like human bodies. What a wonderful sight to show tourists visiting Alaska. The tourist industry is also huge revenue for the State ... and we need representation of better husbandry for tourist wildlife sightings.

I urge you to oppose Teresa Sager-Albaugh's nomination to the Board of Game and look forward to your reply.

Dear Senator McGuire,

As someone who values the emphasis Alaskans have on the preservation of natural resources, I think the approach should be a balanced one.
Teresa Sager- Albaugh represents one segment of the population which seem to favor practices Alaskans have long abhorred and watched as "outsiders" practiced them.
The issues being addressed are difficult, the challenges almost insurmountable, yet, if we have a balanced and thoughtful group, we might find a new way to meet our needs.
Please confirm another candidate and vote against Teresa Sager-Albaugh.
Thank you for your consideration.

Sent: Monday, April 13, 2009 12:25 PM
To: Sen. Bill Wielechowski
Subject: Block -Reject Sager-Albaugh

Sager-Albaugh voted to allow controversial practices that are unprecedented in Alaska's 50-year history. She clearly expressed her ideological extremism at her first Board of Game meeting.

Examples of her extreme ideology include the following.

Sager-Albaugh voted to:

* Allow predator control in Denali State Park.
* Allow citizens who participate in predator control programs to use helicopters to support the killing of wolves and bears.
* Permit "agents of the state" to use poison gas bombs to kill wolf pups in the den and put snares in and around wolf dens.
* Let Alaskans and out-of-state residents snare bears - even sows and cubs - using bait to lure them to their death. Children as young as 10 years old may participate in the snaring.
* Allow the killing of more than 800 bears and selling of their fur for profit. This would encourage poaching and the illegal sale of bear parts.
* Give licensed hunters the go-ahead to use planes to spot, then land and shoot, brown bears - including sows and cubs.
* Extend the wolf hunting season to include the time when mothers are nursing newborn pups.
* Expand "predator control" programs in two new areas of the state - an increase of 33%.

Sager-Albaugh's voting record isn't showing us anything new: she has a long history of anti-wildlife extremism. After serving as president of the Alaska Outdoor Council from 2005-2007, she continues to keep close ties to this radical special interest group that has been behind many of the state's most outrageous anti-wildlife regulations.

Palin and her hand-picked cronies on the Board of Game want to turn Alaska into a game farm for out-of-state trophy hunters. Is this the Alaska you want to see?

Alaska's Board of Game should reflect the broad diversity of the Alaskan people, not just the extreme interests of a narrow few. Tell our state legislators that Alaskans won't stand by and let Sarah Palin and her Board of Game turn our state into a game farm.

Subject: Teresa Sager-Albaugh is the Wrong Pick for the Board of Game!

Apr 7, 2009

Senator Lesil McGuire
120 4th Street
Juneau, AK 99801-1182

Dear Senator McGuire,

As a constituent, I strongly believe that Teresa Sager-Albaugh should not be confirmed to the Board of Game.
I stronglt feel that the way that the Board of Game and our Governor is handling preditor control is wrong. We have a duty to preserve our wildlife and to research the situation with wolves and bears before taking action in a irresponsible way. Why isn't there a biologist or someone with scientific knowledge and a research background on the Board of Game. The ones on it now are all involved with hunting and supporting or promoting hunters coming in for the
"lower 48" to kill our wildlife for sport ! I strongly
oppose the confirmation of Teresa Sager-Albaugh . Please let me know what you will do. I am a citizen of ALaska and one of your constituents. I need you to stand up for our wildlife and not just let these injustices go be without any opposition. I will looking to see what you do . I would like a reply to this letter also. Thank you for listening and hopefully acting justly ! dorothy giloley

I urge you to oppose Teresa Sager-Albaugh's nomination to the Board of Game and look forward to your reply.

Sincerely,

Ms. Dorothy Giloley

2/1/10 UPDATE: PIPELINE PROGRESS BY TRANS-CANADA

ALASKA PipelineProject

Open Season Fact Sheet

Announcement of Open Season Filing:

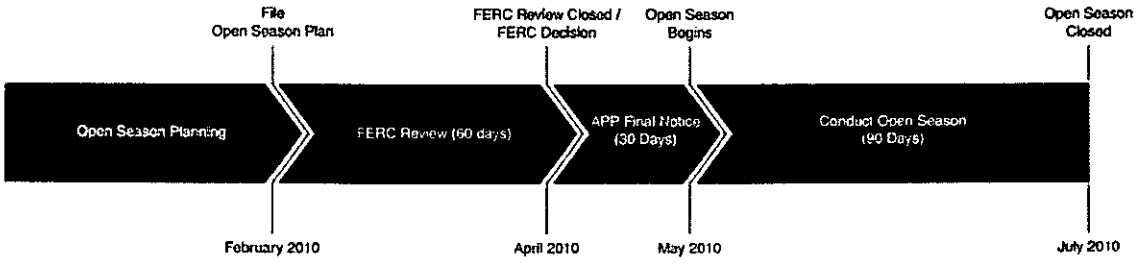
The Alaska Pipeline Project (APP) announced on January 29, 2010, that it filed its Open Season Plan with the U.S. Federal Energy Regulatory Commission (FERC) for the Commission's review and approval.

Purpose of Open Season:

In simple terms, the open season puts the project to a test of the market. During the open season, information about the project will be provided to potential shippers of natural gas (primarily North Slope producers) including details such as anticipated project costs, engineering design, tariffs and timelines. The shippers will assess this project information and determine their interest in shipping natural gas through the pipeline under the offered terms and whether to make long term commitments to reserve capacity on the pipeline. The project needs these shipper commitments to secure financing and to continue to be able to advance.

Open Season Process:

The process that has been initiated as of January 29 is not the open season itself, rather we have pre-filed our Open Season Plan for review and approval by FERC and for public comment as required by federal regulations. The project's Open Season Plan will next undergo a 60-day review process. It is anticipated the public review period will run through February and the FERC review and approval period to extend through March. If FERC approves the plan, we will begin our actual open season with shippers at the end of April 2010. The open season will run a minimum of 90 days through the months of May, June and July. The open season process we have initiated with FERC only applies to the portion of the project in the United States. A separate but coordinated open season for the Canadian portion of the project will be conducted concurrently.



Reporting of Open Season Results:

It is important to keep in mind that major pipeline builders rarely report open season results immediately because the shippers' bids to reserve pipeline capacity almost always include conditions, not unlike the contingencies written into a contract for sale of a home.

2580

Thus, with the close of the open season bidding period at the end of July, follow-up negotiations between the project and shippers are likely to commence to attempt to resolve those contingencies. Experts believe shippers may also include in their bids some conditions beyond the control of the Alaska Pipeline Project, such as taxation and resource access issues which cannot be decided by the project. Many people expect the shippers to ask for the State's engagement in resolving these issues before they will be able to commit to the project.

APP is targeting the completion of its open season bid review and negotiation process by year-end 2010, contingent upon the satisfactory resolution of shippers' conditions precedent.

Options to be Assessed During the Open Season:

During the open season, the Alaska Pipeline Project will present two alternative project options for assessment by potential customers, and shippers will have the opportunity to reserve capacity on the option they prefer.

It is economically feasible for only one of the two project options to advance and the results of the open season will determine the preferred development choice.

One option would transport an estimated 4.5 billion cubic feet per day of North Slope natural gas approximately 1,700 miles (2,736 kilometers) across Alaska to Alberta, Canada, (the Alberta option), where it could be sent on existing pipelines to North American gas markets.

Another option is to transport an estimated 3 billion cubic feet of natural gas per day approximately 800 miles (1,287 kilometers) to Valdez, Alaska, (the Valdez option), where shippers could liquefy the gas in a plant constructed by others and ship it on tankers to U.S. and international markets.

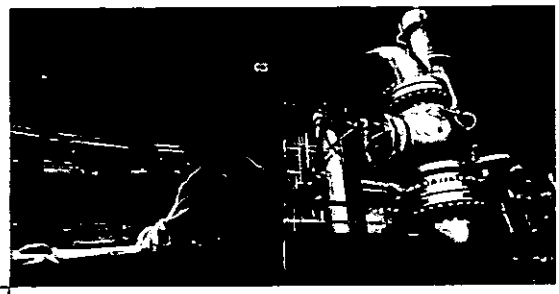
It is important to emphasize that both options would provide opportunities for Alaska communities to acquire natural gas from the pipeline from a minimum of five strategically located off-take connections. The Alberta option would also provide opportunities for local gas deliveries in Canada as well.

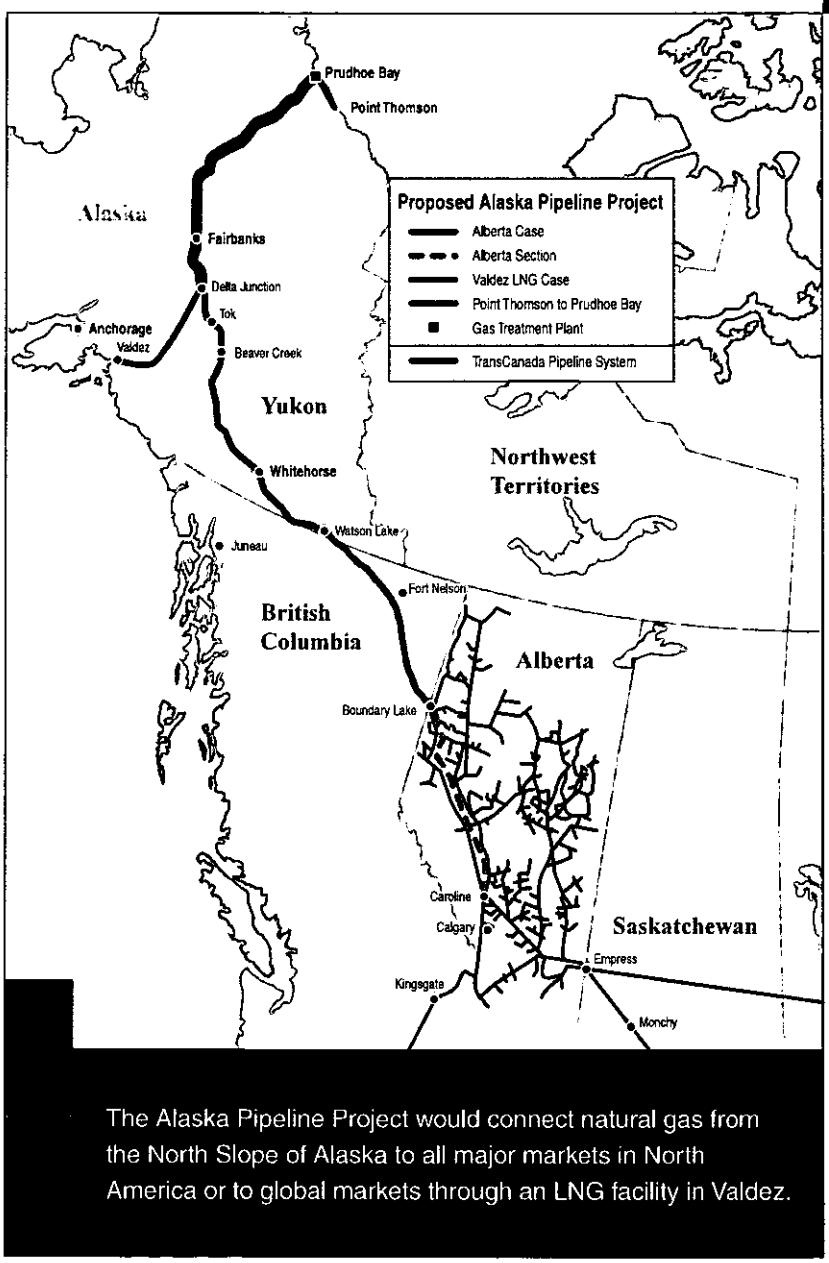
A world-class natural gas treatment plant, to be located adjacent to the North Slope's Prudhoe Bay facilities, and an approximately 58-mile (93-kilometer) transmission pipeline connecting the natural gas supplies of the Point Thomson field to the plant are components of both development options.

Open Season Information:

The Alaska Pipeline Project is fully committed to provide the public information on our Open Season Plan. The project has established a new internet website at www.thealaskapipelineproject.com. Members of the public can find our Open Season Plan submittal to FERC on the site, as well as on FERC's website. We welcome and invite public review and comment on the project.

ALASKA
PipelineProject





The Alaska Pipeline Project would connect natural gas from the North Slope of Alaska to all major markets in North America or to global markets through an LNG facility in Valdez.

TransCanada and ExxonMobil are working together to progress the Alaska Pipeline Project. The project, which will connect Alaska's North Slope natural gas resource to new markets, is designed to deliver a reliable and secure source of clean energy for decades to come. The project will provide numerous benefits to Alaska, Canada and the broader U.S., including jobs, business opportunities, government revenues, and long-term stable supplies of natural gas.

The scope of the joint project includes the following components:

- a gas treatment plant (GTP) near Prudhoe Bay, Alaska, which will condition the gas for pipeline transportation;
- a gas transmission pipeline connecting the Point Thomson field in Alaska to the GTP; and
- a gas transmission pipeline that will extend, subject to shipper confirmation during the Open Season process, from the GTP in Alaska to either:
  - The Alberta Hub (Alberta Case); or
  - Valdez, Alaska (Valdez LNG Case).

For the Alberta case, shippers would have the ability to deliver into pipeline systems located near Boundary Lake, Alberta, or into the Alberta Hub, and then onto other take-away pipelines to major North American markets.

For the Valdez LNG Case, shippers would have the ability to deliver into a liquefaction facility (to be developed by others) for subsequent delivery to LNG markets.

The Alaska Pipeline Project has established offices in Anchorage, Calgary, Houston and Whitehorse to conduct the diversity of engineering, technical, commercial, environmental, public consultation and other work that is currently underway. The project's initial open season is targeted for completion to be held from May to July 2010.

TransCanada ExxonMobil

For additional project information go to www.thealaskapipelineproject.com.

Point Thomson transmission pipeline

- Pipeline length:.....58 miles (93 km) (approx.)
- Pipeline diameter:.....32 inches
- Maximum operating pressure:.....1030 psig
- Pipeline capacity:.....1.1 bcf/d

Alberta Case (Prudhoe Bay to Alberta)

- Total length:..... 1700 miles (2737 km)
  - Pipeline length (Alaska):..... 734 miles (1182 km)
  - Pipeline length (Canada):..... 966 miles (1555 km)
- Pipeline diameter:.....48 inches
- Maximum operating pressure:.....2500 psig
- Pipeline capacity (base design case):.....4.5 bcf/d
- Pipeline capacity (with max compression):.....5.9 bcf/d

Valdez LNG Case (Prudhoe Bay to Valdez)

- Pipeline length:..... 803 miles (1293 km)
- Pipeline diameter:.....48 inches
- Maximum operating pressure:.....2500 psig
- Pipeline capacity (base design case):.....3.0 bcf/d

Compression

	Alberta Case 4.5 bcf/d	Alberta Case 5.9 bcf/d	Valdez LNG Case 3.0 bcf/d
• Total compressor stations (Alaska)	6	13	2
• Total compressor stations (Canada)	11	20	n/a

- In areas of continuous and discontinuous permafrost, gas chillers will be installed on the discharge side of compressor stations
- Each compressor station site will be approximately 25 acres

Gas Treatment Plant

- Initial design to process up to 5.3 bcf/d raw gas
- Delivers 4.5 bcf/d of pipeline quality gas to pipeline at 2500 psig
- Handles up to 0.6 bcf/d of CO_2 at 4000 psig
- 4 trains (Alberta Case) / 3 trains (Valdez LNG Case)

Gas Deliveries

Delivery points in Alaska will be provided for community gas off-takes for both the Alberta and the Valdez LNG Cases, and also in Canada for the Alberta Case.

Design Methodology

- The application of structured and proven project management processes and expertise for large complex projects will provide increased confidence to prospective shippers.
- A formal Front-End Execution Planning process will identify and address project execution issues early to minimize risk.
- Proven industry-leading technology will be specified for design, materials and construction to support safe, reliable and cost-effective operation.
- Proprietary, integrated hydraulics/geothermal/pipeline analysis modelling software will be utilized for system and pipeline design.

Primary Project Regulators

- Alberta Case: U.S. Federal Energy Regulatory Commission (FERC) for the Alaskan components of the project, and the Northern Pipeline Agency for the Canadian components.
- Valdez LNG Case: FERC

Stakeholder Engagement / Community Relations

A key objective of the Alaska Pipeline Project is to achieve positive long-term relationships, based on mutual trust and respect, with Alaska Native, Canadian Aboriginal and other communities along the project corridor. We believe these relationships will be realized through proactive communications and engagement as the project progresses.

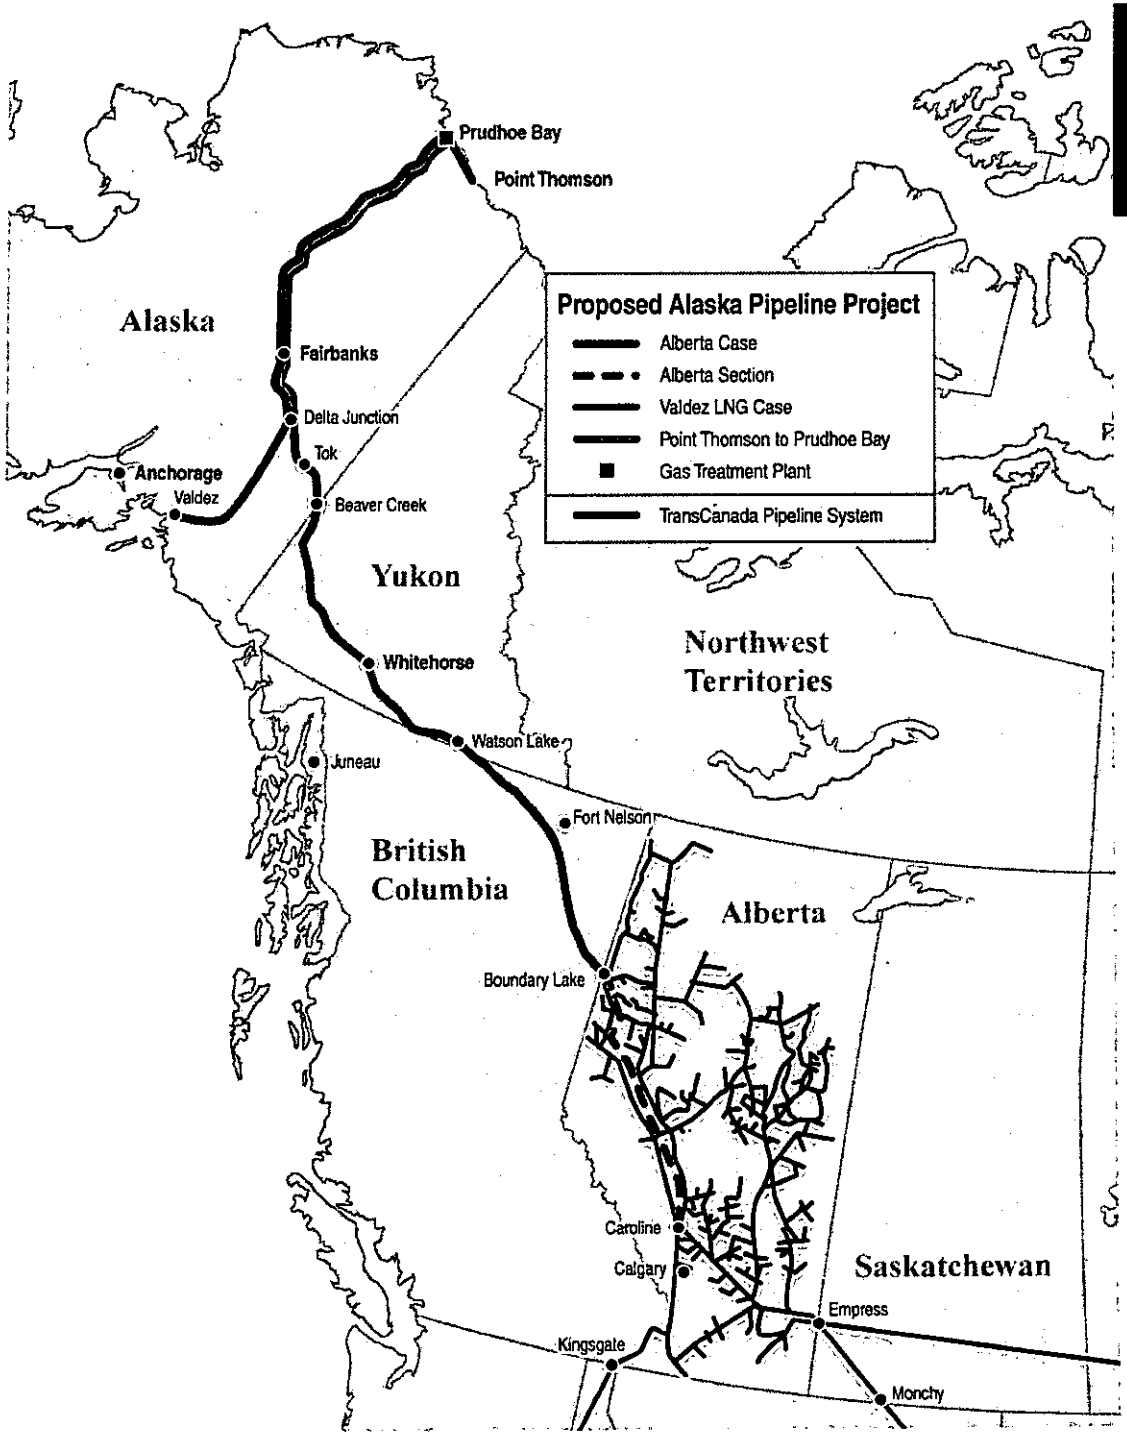
Alaska Legislature
Senate/House Resources & Energy Committees

February 2010

TransCanada ExxonMobil



First Open Season for North Slope Gas

- On January 29, the Alaska Pipeline Project (APP) filed its plan with FERC to implement the first Open Season in history of North Slope natural gas.
- In an Open Season, the pipeline company provides potential shippers with an engineering design, commercial terms and an estimate of project costs, tariffs and timelines.
- The pipeline company is seeking shippers' contractual support for the project through executed precedent agreements.
- APP's initial Open Season offers service to potential shippers for markets in:
  - Alaska
  - Lower 48 via Alberta
  - U.S./international via Valdez

ALASKA PipelineProject

Path to In-service

- **Large pipeline projects undergo a lengthy development stage, and if successful, then move to construction and operations**
- **APP's development stage is scheduled to run through 2014**
  - Prior to Open Season – through April 2010
  - Open Season – May to July 2010
  - Post Open Season – August 2010 through 2014
- **All stakeholders in the Alaska gas pipeline have important initiatives underway to advance the project**
  - Alaska Pipeline Project, Producers / Shippers, Governments, others
  - To successfully move the Alaska Pipeline Project from the development stage onwards to the construction stage, all parties need to achieve commercial and regulatory breakthroughs

APP Development Stage – Prior to Open Season

Achievements to Date

- Producers / Shippers
  - Explored / developed gas reserves; reviewed transportation alternatives; researched potential natural gas markets
- State of Alaska
  - Established State's requirements in AGIA; granted AGIA License; finalizing royalty regulations under AGIA
- U.S. Government / FERC
  - Established legislative/regulatory structure (ANGPA); Federal Loan Guarantee; set FERC regulatory process
- Canadian Government
  - Established legislative / regulatory structure (Northern Pipeline Act); TransCanada's Right-of-Way through Yukon

APP Development Stage – Prior to Open Season

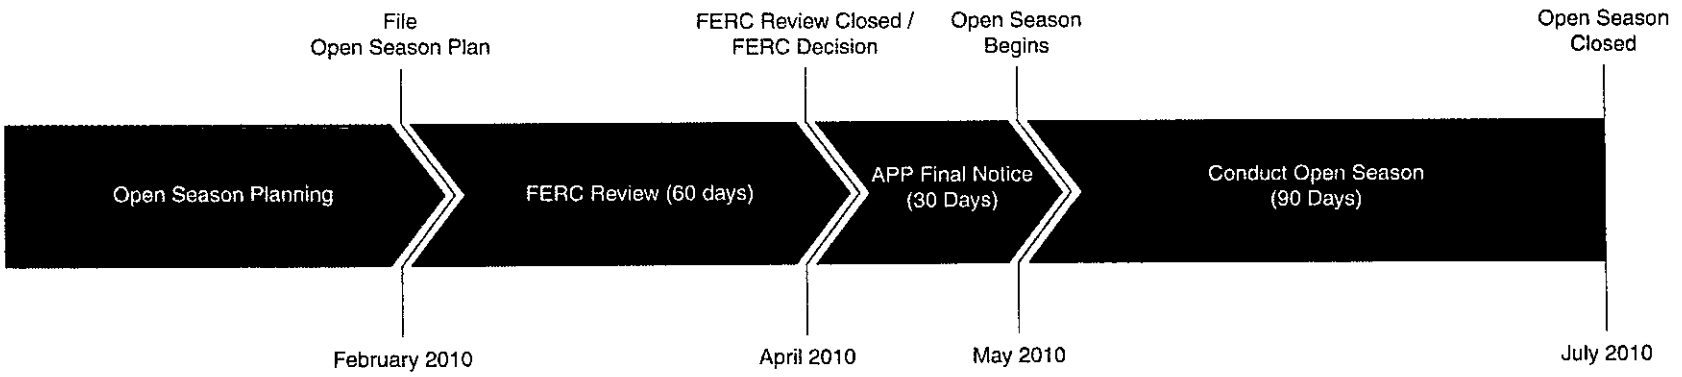
Achievements to Date

- APP
  - Alignment of key stakeholders
    - TransCanada / State of Alaska via AGIA License in 2008
    - TransCanada / ExxonMobil in 2009
    - Continue to offer equity participation to BP / ConocoPhillips
  - Initiated FERC (NEPA) pre-filing process in U.S.; Continuing interface with Northern Pipeline Agency (NPA) in Canada
  - First Nations negotiations in Canada; Interfaces with Alaska Native groups and communities along the project corridor in Alaska
  - Resolved claims on previous projects
  - Developed comprehensive Alberta and LNG alternatives – technical scope, cost estimates, schedules
  - Filed Open Season Plan with FERC
  - In-state Gas Study
    - Technical Conference in Anchorage on February 4 at 2:00 p.m.

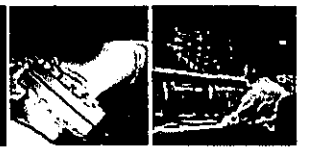
APP Development Stage - Open Season

Timeline

- **Filing begins 60-day FERC review for U.S. section**
- **If FERC approves plan, conduct Open Season from May-July 2010**
  - Concurrent Canadian Open Seasons for Alberta option
- **Expect APP / Shipper follow-up negotiations to resolve conditioned bids (typical situation)**
- **Final Open Season results targeted by year-end 2010**
  - Contingent on satisfactory resolution of Shippers' conditions precedent



Open Season Plan



- **Comprehensive, credible and competitive Open Season plan**
  - TransCanada and ExxonMobil have unparalleled expertise / experience in interstate/inter-provincial gas pipelines and gas treatment plants
  - Over one-quarter million hours of engineering, regulatory, technical, environmental, commercial, legal and project management work
  - Builds on significant base from past initiatives for Alaska gas
- **Joint project work has provided improved understanding of scope, costs, complexities and risk for this large, complex project**

Open Season Plan

- **APP offering better commercial terms / access than in AGIA Application**
  - Available to Shippers in APP's initial Open Season
  - Comprehensive Alberta and Valdez options
    - Responsive to Shipper discussions
    - 48 inch 3.0 Bcf/d pipeline to Valdez
    - Access to other pipelines upstream of Alberta Hub
    - 20-year minimum contract term for firm service
    - Interruptible, overrun and park-and-loan services
    - Shared development costs
  - Better commercial terms reduces tolls by $500 million/year
    - 12% ROE
    - 80% capital recovery over initial contract term
    - 70/30 debt/equity ratio for expansions

Project Scope

Two pipeline options for Shipper assessment in the APP Open Season

Option One: Pipeline from Alaska's North Slope to Alberta

- 4.5 Bcf/d; approx. 1,700 miles (2,737 km); 48 inch
- Gas delivered to pipeline systems serving major North American markets

Option Two: Pipeline from the North Slope to Valdez, Alaska

- 3.0 Bcf/d; approx. 800 miles (1,287 km); 48 inch
- Converted to liquefied natural gas (LNG) in a facility to be built by others and delivered by ship to U.S. and international markets

Both options include:

- Opportunity for Alaska communities to acquire natural gas from the pipeline
    - Minimum 5 off-takes in Alaska
- A world-class natural gas treatment plant, to be located adjacent to the North Slope's Prudhoe Bay facilities
    - One of the largest facilities of its kind that would treat the gas to remove CO^2/impurities
- An approx. 58-mile (93-kilometer) transmission pipeline connecting natural gas supplies from Point Thomson field to the plant

Project Cost Estimates and Indicative Tolls

Note: All numbers 2009$US

Option One: Pipeline from Alaska's North Slope to Alberta

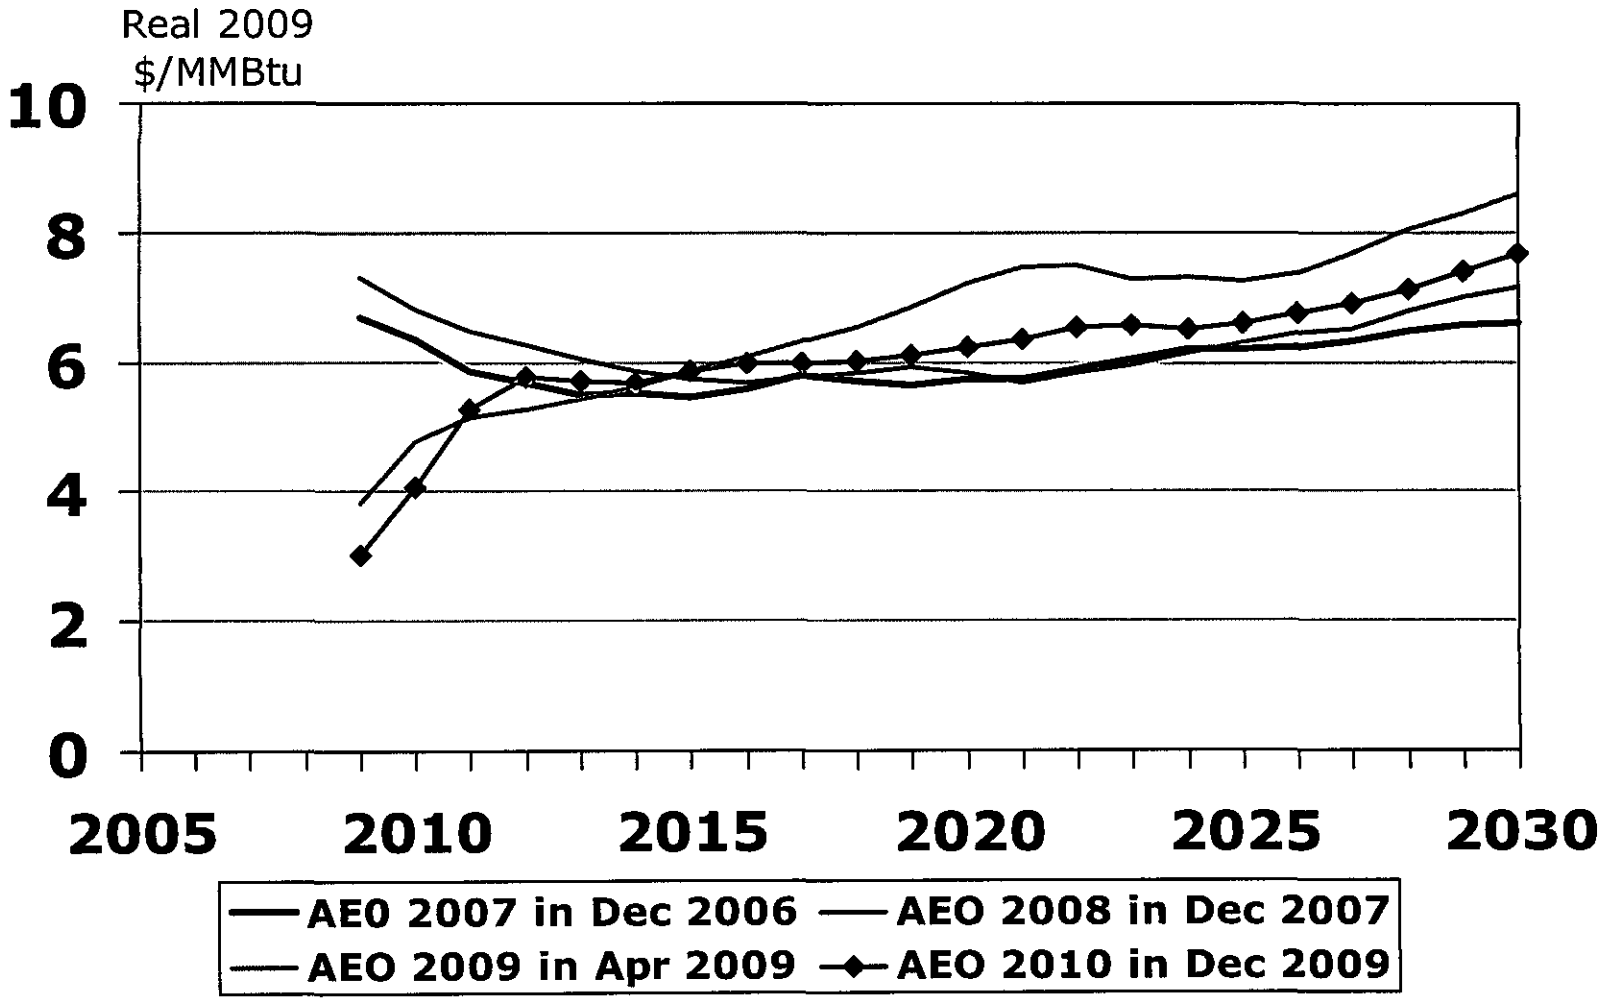
- Capital cost range $32B-$41 B
- Target in-service 2020
- Tariff range (incl. fuel)* $2.80-$3.50 / MMBtu (from GTP to Alberta Hub)
- Alberta Hub gas price** $6.25-$7.65 / MMBtu

Both the Alberta and Valdez options are technically and commercially viable based on current project costs and natural gas/oil price forecasts

* Prudhoe Bay to Alberta Hub (25-yr contract term). Add $0.15-0.20 / MMBtu for Pt. Thomson line

** Source: U.S. Dept. of Energy 2010 Annual Energy Outlook for the years 2020-2030

Comparison of Recent US DOE Annual Energy Outlooks for Alberta Hub Natural Gas Prices



Project Cost Estimates and Indicative Tolls

Note: All numbers 2009$US

Option Two: Pipeline from the North Slope to Valdez, Alaska

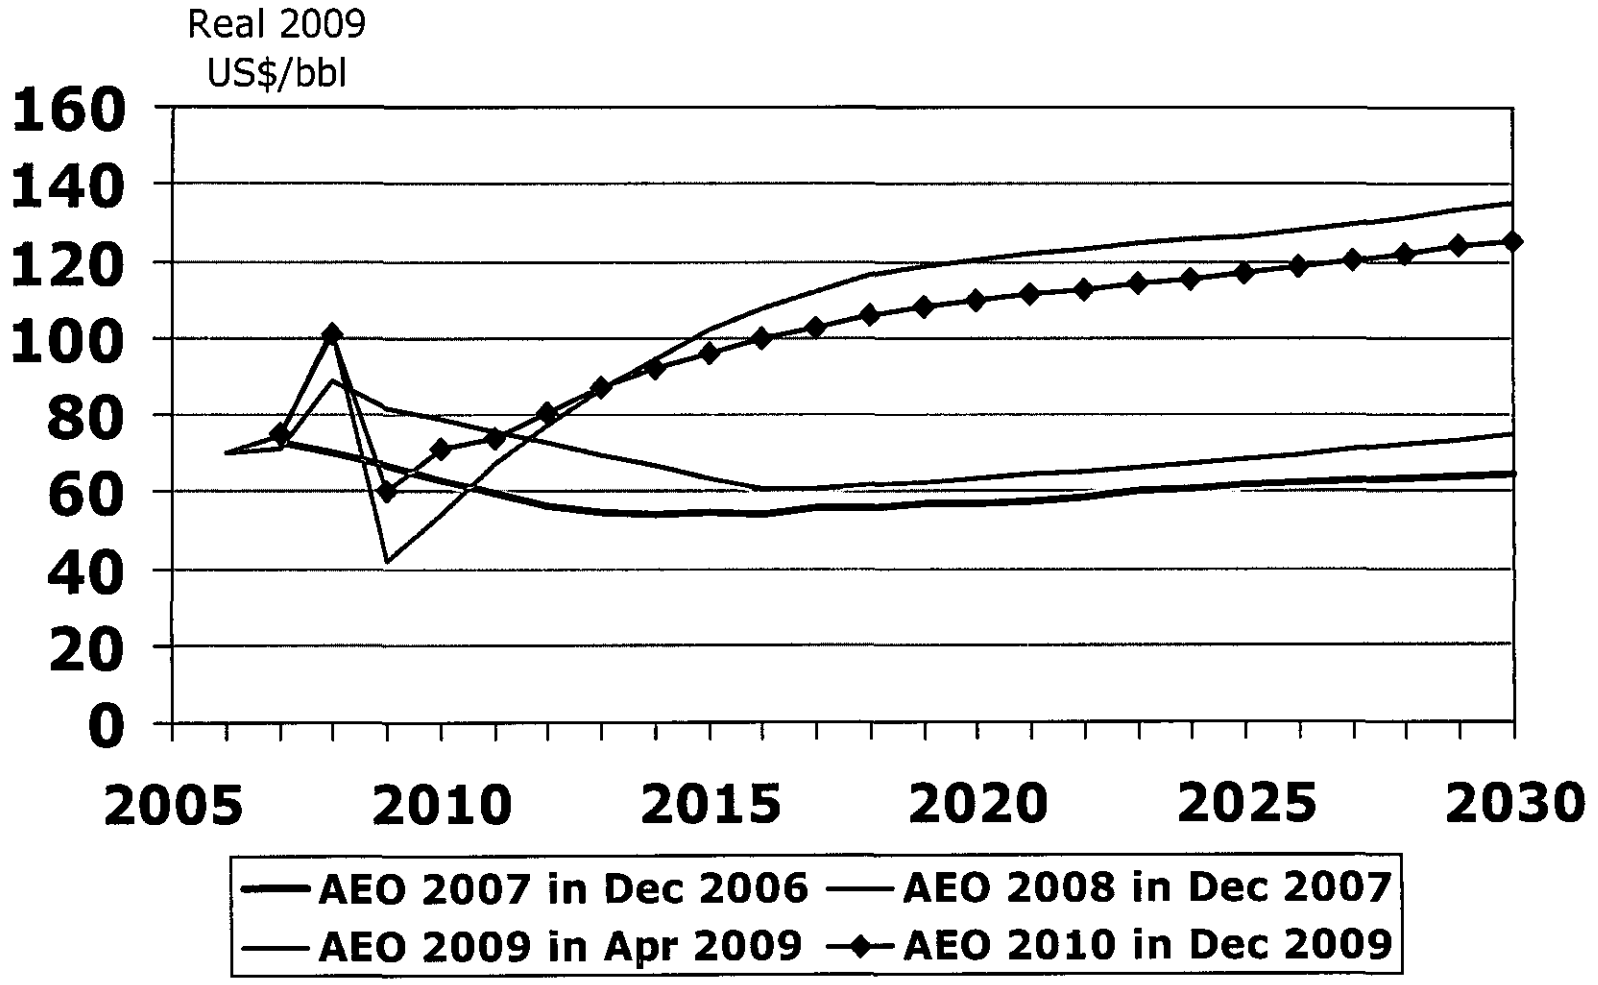
- Capital cost range $20B-$26 B
- Target In-service 2020
- Tariff range (incl. fuel)* $2.45-$3.15 / MMBtu (from GTP to Valdez)
- Henry Hub gas price** $6.75-$8.15 / MMBtu
- Oil prices** $110-$125 / bbl

Both the Alberta and Valdez options are technically and commercially viable based on current project costs and natural gas/oil price forecasts

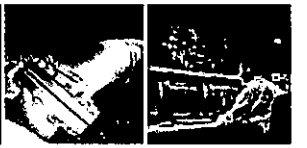
* Prudhoe Bay to Valdez (25-year contract term). Add $0.15-0.20/MMBtu for Pt. Thomson line

** Source: U.S. Dept. of Energy 2010 Annual Energy Outlook for the years 2020-2030

Comparison of Recent US DOE Annual Energy Outlooks for Light Sweet Imported Oil Prices



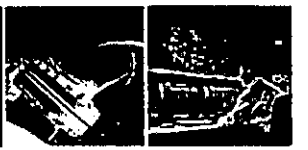
APP Development Stage – Post Open Season



Commercial / Regulatory Milestones

- APP
  - Resolve conditions precedent with Producers / Shippers
  - Progress engineering, environmental (including field work), and other work to prepare for major U.S. / Canadian permitting
    - Recent environmental contracts awarded to URS / AECOM for Alaska fieldwork commencing spring 2010
    - Canadian section awarded to TERA / Stantec
  - Meet AGIA obligations (including FERC Application in 2012)
  - Advance project in-step with commercial and regulatory breakthroughs
  - Continue to seek alignment with BP / ConocoPhillips

Post Open Season



Commercial / Regulatory Milestones

- Producers / Shippers
  - Resolve conditions precedent with APP
  - Resolve upstream fiscal / production levels at Prudhoe Bay, Point Thomson, other fields with State / AOGCC
  - Arrange downstream transportation; secure final gas markets and export permits (LNG option)
- State of Alaska
  - Resolve any upstream tax or production issues with Producers / Shippers
  - Facilitate project permitting
- U.S. Government / FERC
  - Establish Federal Loan Guarantee levels, terms and conditions
  - Facilitate project permitting
- Government of Canada / Alaska Natives / Canadian First Nations
  - Facilitate project permitting and alignment

Summary

APP Open Season May-July 2010 if FERC approves APP's plan

APP offering improved commercial terms vs. AGIA

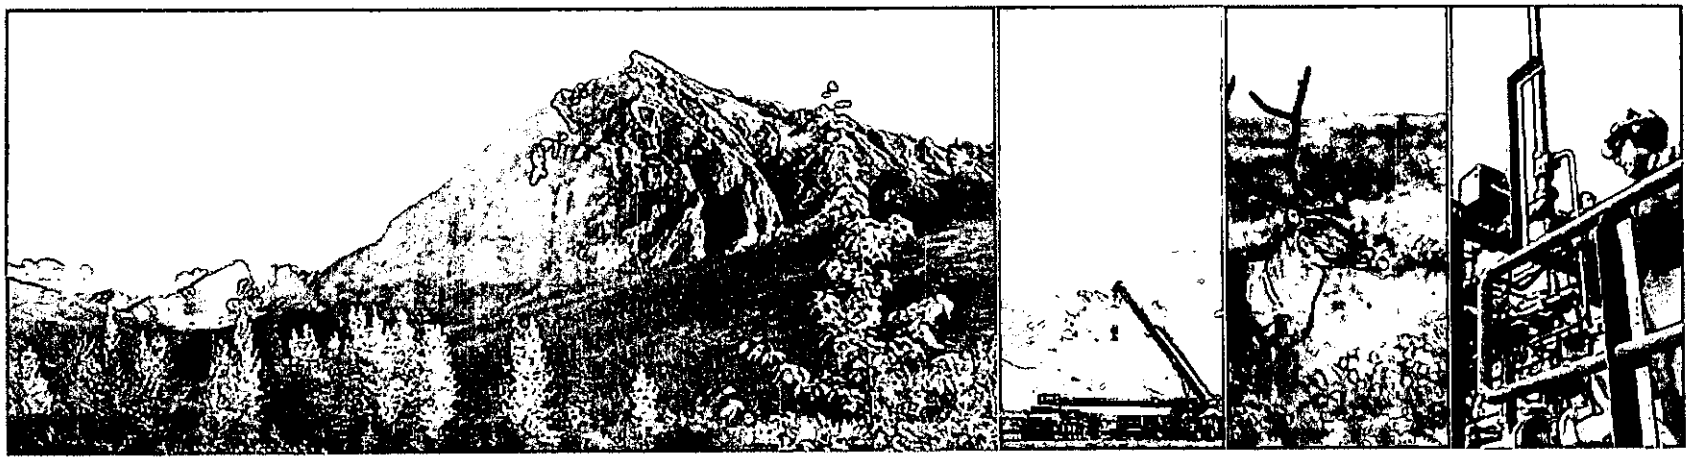
Alberta / Valdez options both viable

Regulatory / commercial breakthroughs required by APP, Producers-Shippers, and Governments

TransCanada / ExxonMobil / State working together through AGIA structure provides best opportunity to:

- Align all stakeholders
- Achieve project benefits for Alaskans and other parties

ALASKA
PipelineProject



Thank You

Note: APP's Open Season plan is available at www.thealaskapipelineproject.com or on the FERC website

TransCanada ExxonMobil

2/4/10 UPDATE: ACES PRODUC-TION TAX

ACES PRODUCTION TAX UPDATE

February 4, 2010

Alaska Department of Revenue

ACES and Oil and Gas Investment

- ACES Overview
  - Tax Structure
  - Incentivizing New Investment
- ACES Status Report
  - Revenue comparison
  - Lease Expenditure Experience and Forecasts
  - Standard Deduction Experience
  - Oil and Gas Employment Figures
  - Drilling Activity Levels

ACES Overview

- **Production Tax Value (PTV)** is the market price transportation costs and Allowable Lease Expenditures
  - Allowable Lease Expenditures include operating and capital expenditures
- **Base tax rate** of 25% on PTV
- **Progressive Surcharge Rate**
  - Triggered when a company's PTV reaches $30 per barrel
  - $30.00/bbl < PTV < $92.50/bbl = Surcharge adds 0.4% to tax rate for each additional $1 increase in PTV, until combined tax rate reaches 50%
  - $92.50/bbl < PTV < $342.50/bbl = Surcharge adds 0.1% for each additional $1 increase in PTV until combined tax rate reaches the maximum of 75%

ACES Overview

How the Tax is Calculated

Production Tax Value (PTV) X Base Tax Rate =	Base Tax
	+
PTV X Progressive Surcharge Rate =	Progressive Surcharge
Pre-Credit Tax Bill	Total Taxes Before Credits
	-
Credits	Credits Applied Against Taxes
Final Tax Bill	**Total Production Taxes Owed**

ACES Overview (cont.)

- Tax Credits
  - $12 million for **small producers** (< 50,000bbl/yr.)
  - 20% for qualified **capital** expenditures
  - 30% - 40% for qualified **exploration** expenditures
  - 25% of **losses carried forward**

Example 1: New Entrant

- A new entrant with no current production pursues an exploration project requiring $200 million in investment
- Company receives a 20% - 40% investment credit (depending on location), worth $40 - $80 million
- Company also receives an additional 25% credit for its "tax loss", worth up to $50 million

Example 1: New Entrant (*cont.*)

- The total credits of $90 - $130 million, can be:
  - Directly recouped (cash) from the state
  - Transferred to a person that does pays tax, so that the Transferee pays $90 - $130 million less in tax
- Either way, State pays $90 - $130 million for the exploration; company pays $70 - $110 million.
- If the exploration effort fails, the state never recoups this money.

  The state bears the risk for failure as does the new entrant

Example 2: Incumbent Producer

- Incumbent with current production pursues a development requiring $200 million investment
- Company receives a 20% capital investment credit, worth $40 million
- By reducing their PTV, the company reduces their taxes due by the total capital expense multiplied by the tax rate:
  - $200 million * 25%, worth $50 million; plus
  - $200 million * progressivity surcharge rate (which is reduced due to the drop in PTV)

Example 2: Incumbent Producer (*cont.*)

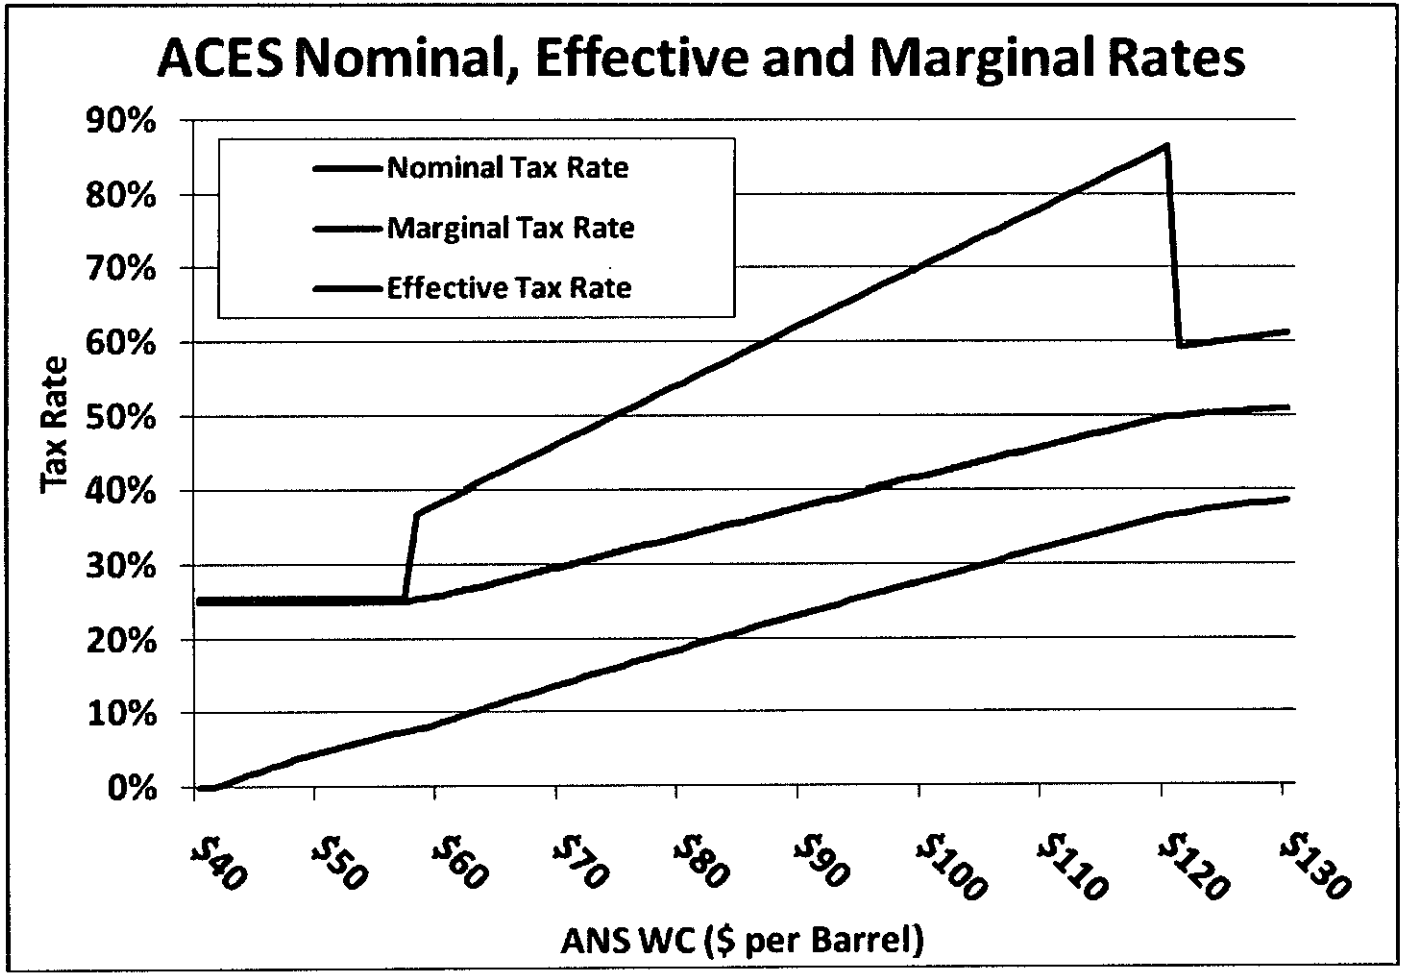
- Deductions and credits total more than 45% of the $200 million, greater than $90 million
- State pays more than $90 million of the new development's capital cost; true investment cost for the incumbent is less than $110 million
- If the development fails, the state never recoups this money

The state bears the risk for failure as does the incumbent investor

Key Points

- For the state there is no cash flow difference in providing a credit to a new entrant and an incumbent: **cutting a check (new entrant) is no different from a reduction in tax revenue (incumbent)**
- In both cases the state is an investor: real money leaves the treasury, **sharing the risk born by the active investor**
- ACES incentivizes investment **because state bears risk and reduces explorers/producers costs**
- ***Tax credits, along with the net-based structure, make the state the largest investor in exploration and new development activities***

ACES Tax Rate



* Based on $26 combined transportation and lease expenditure deductions

ACES and Oil and Gas Investment

- ACES Overview
  - How the Tax is Structured
  - Incentivizing New Investment
- ACES Status Report
  - Revenue comparison
  - Lease Expenditure Experience and Forecasts
  - Standard Deduction Experience
  - Oil and Gas Employment Figures
  - Drilling Activity Levels

ACES Status Report

Requested by the Commissioner to review experience with ACES to date

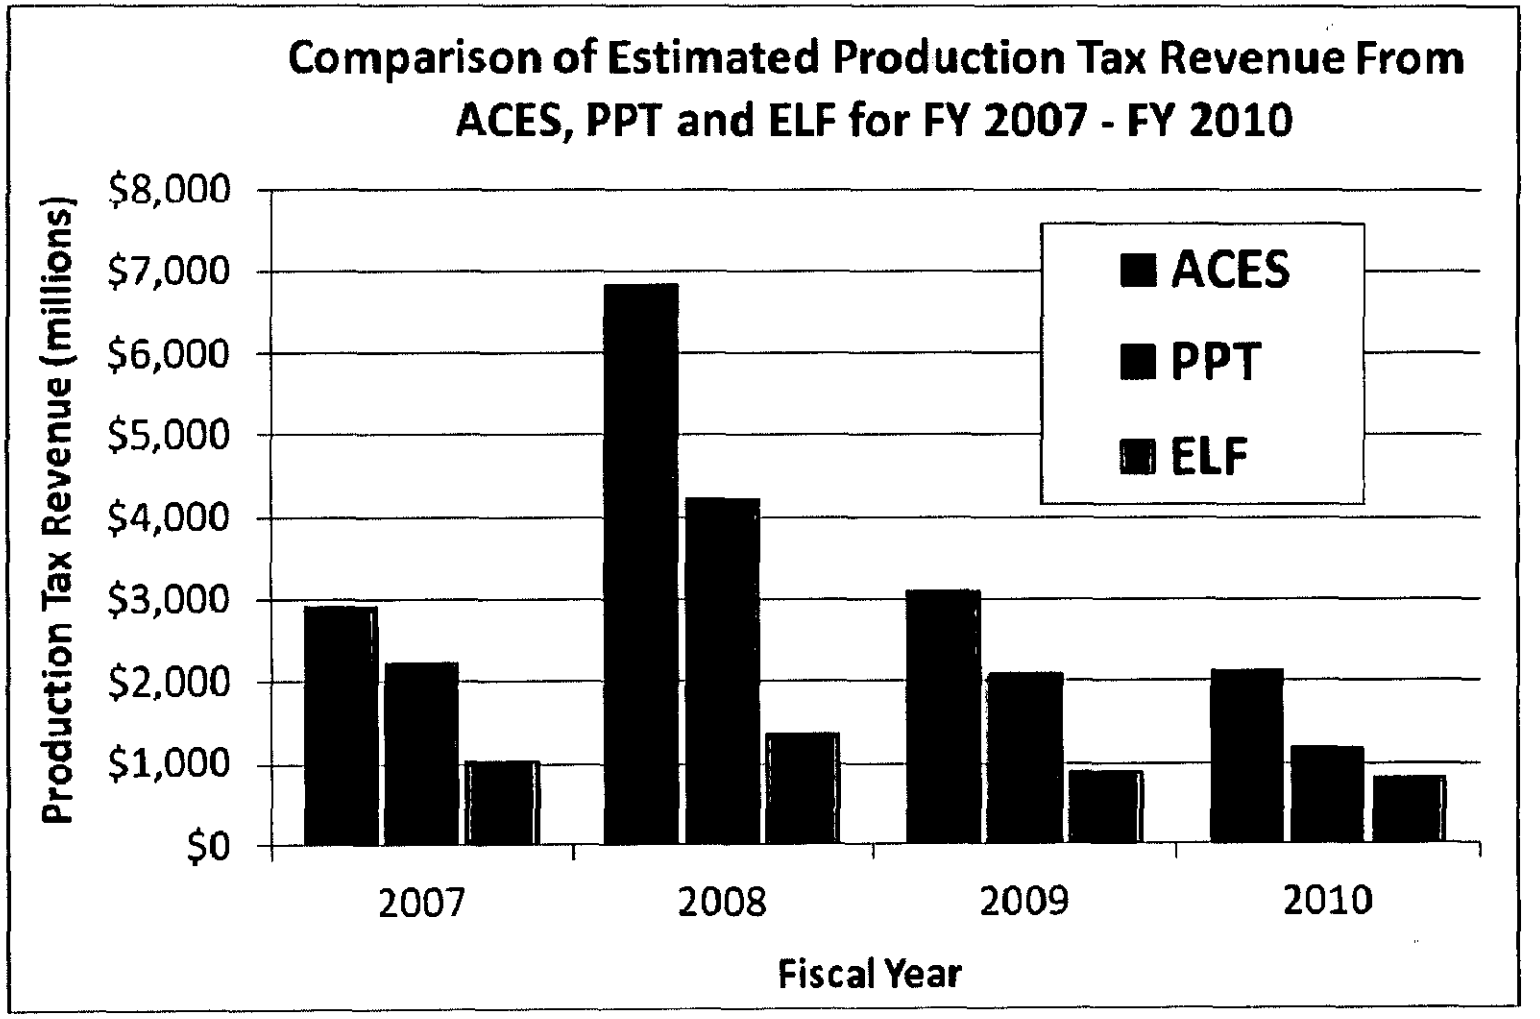
- Prepared by DOR Economics Technical Team
- Released on January 14, 2010

DOR Analysis of ACES

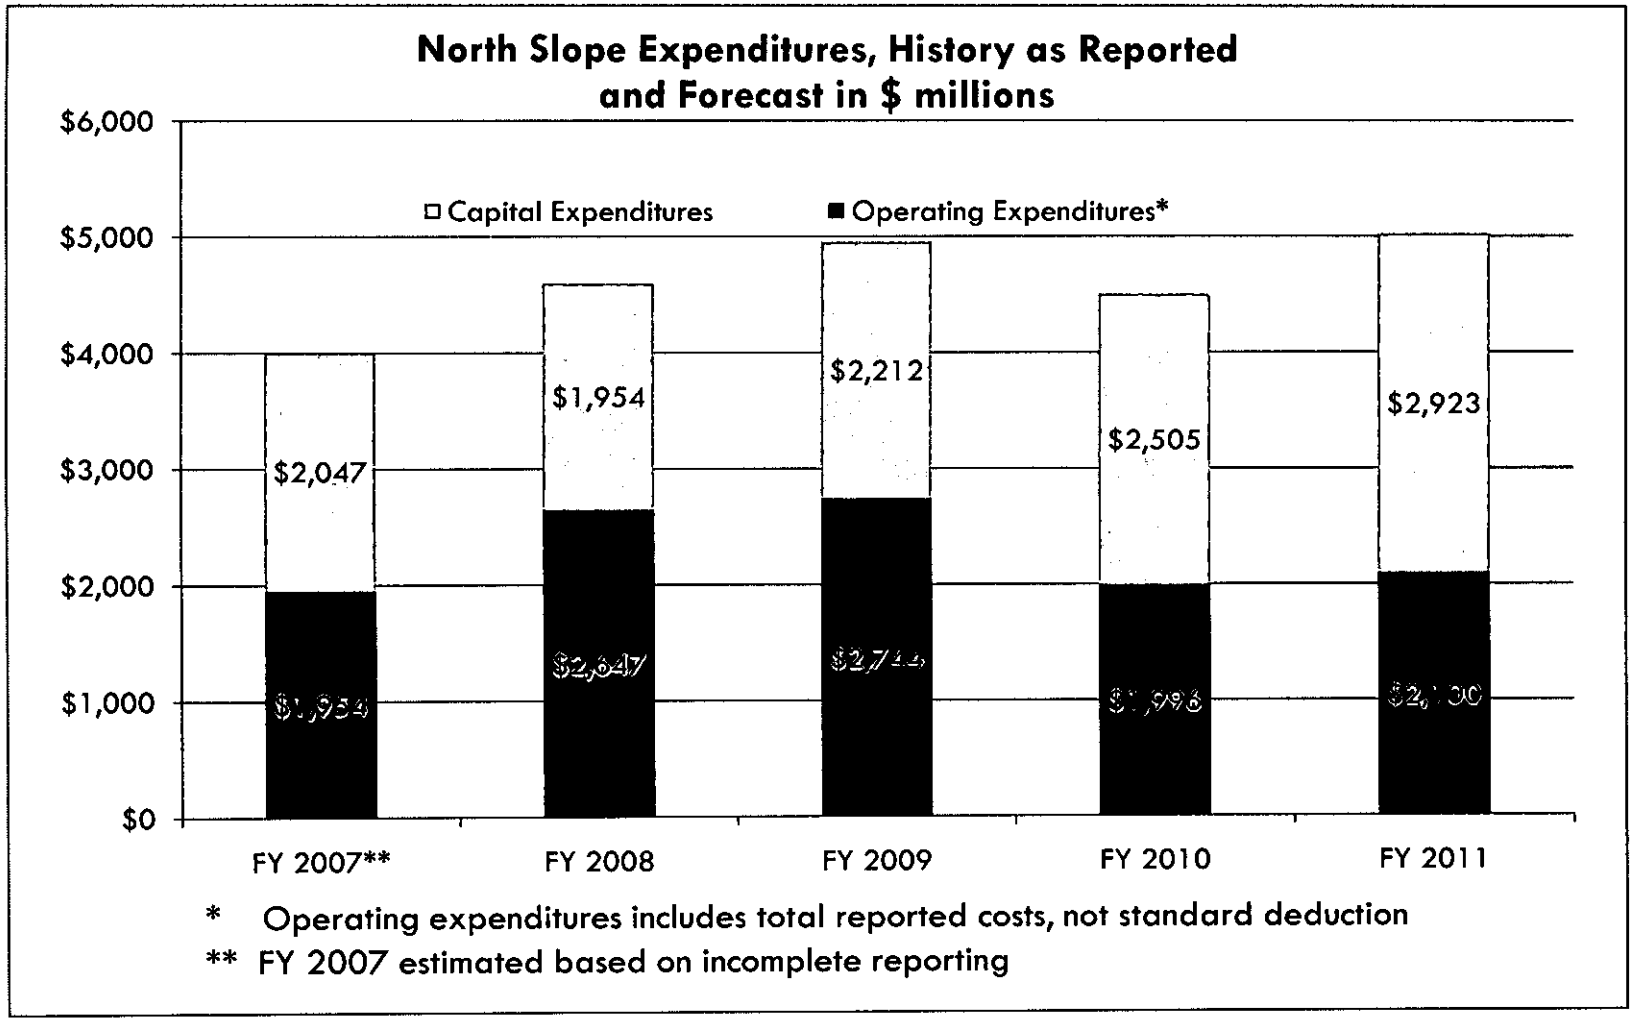
In conjunction with the ACES Status Report, and in response to inquiries from legislators, the department reviewed several sources of available information to gauge industry response to the recent tax changes. Sources included:

- Taxpayer Data
- Dept. of Labor Data
- AOGCC Data
- DNR Data

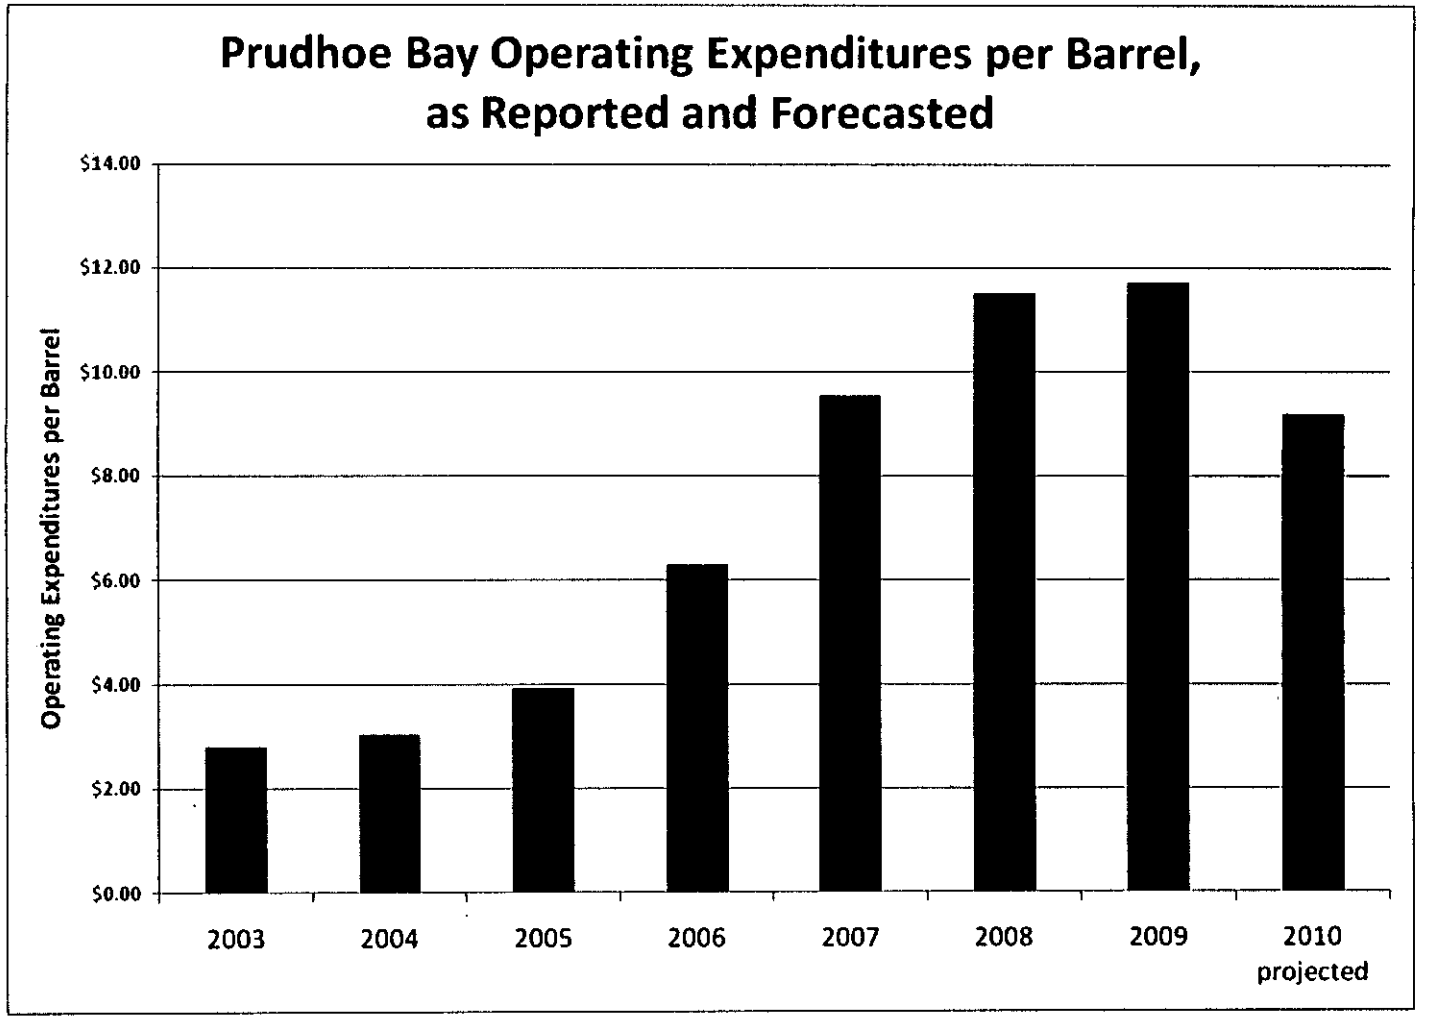
Revenue Under Various Tax Systems



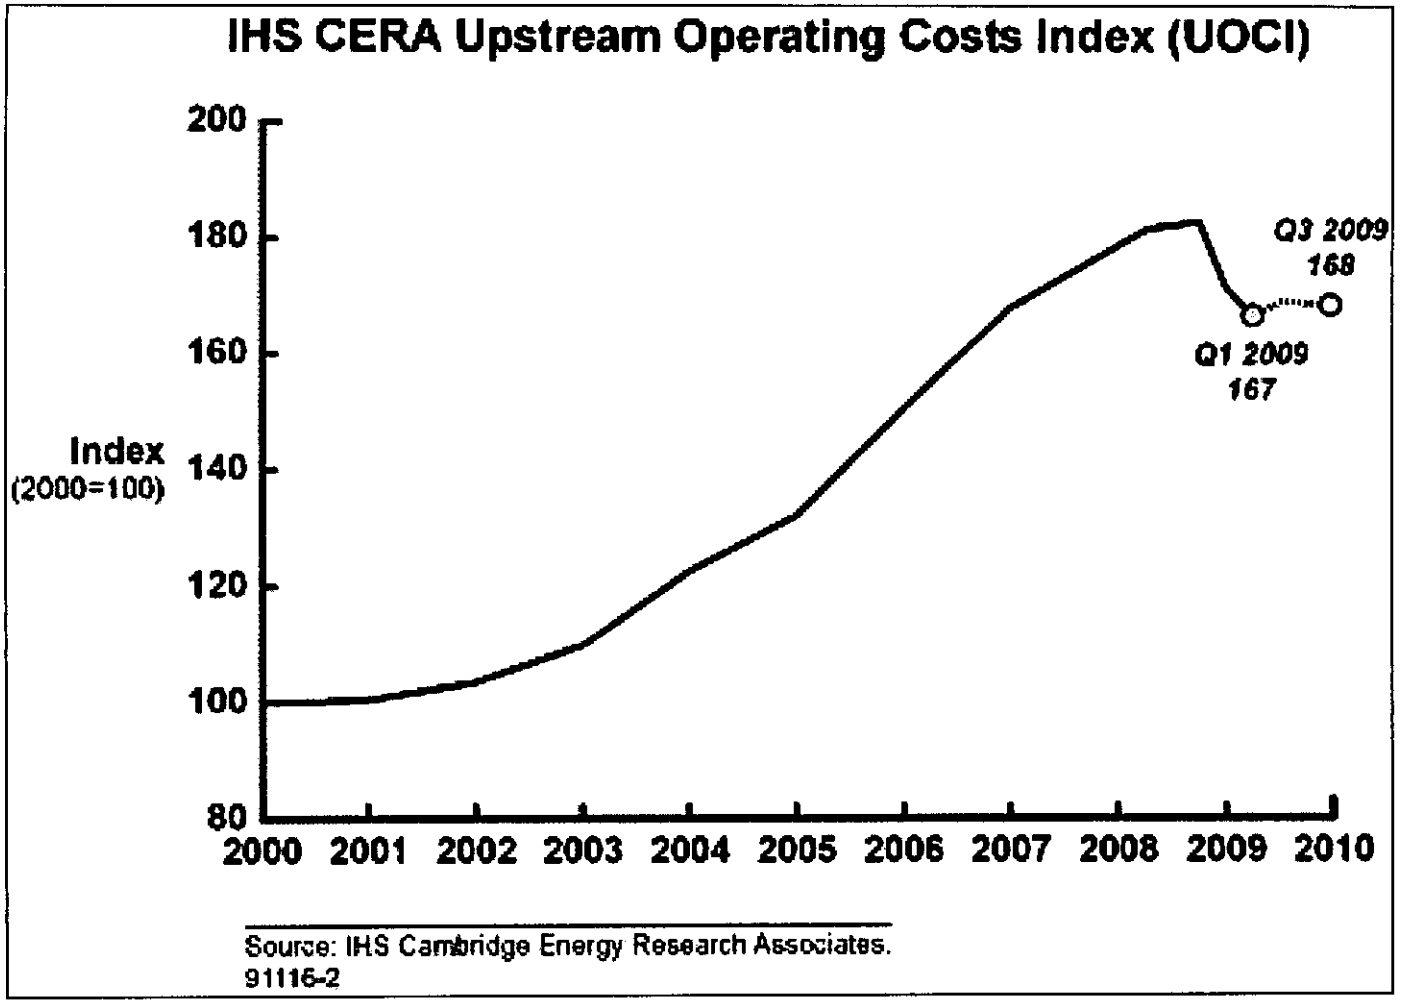
North Slope Expenditures



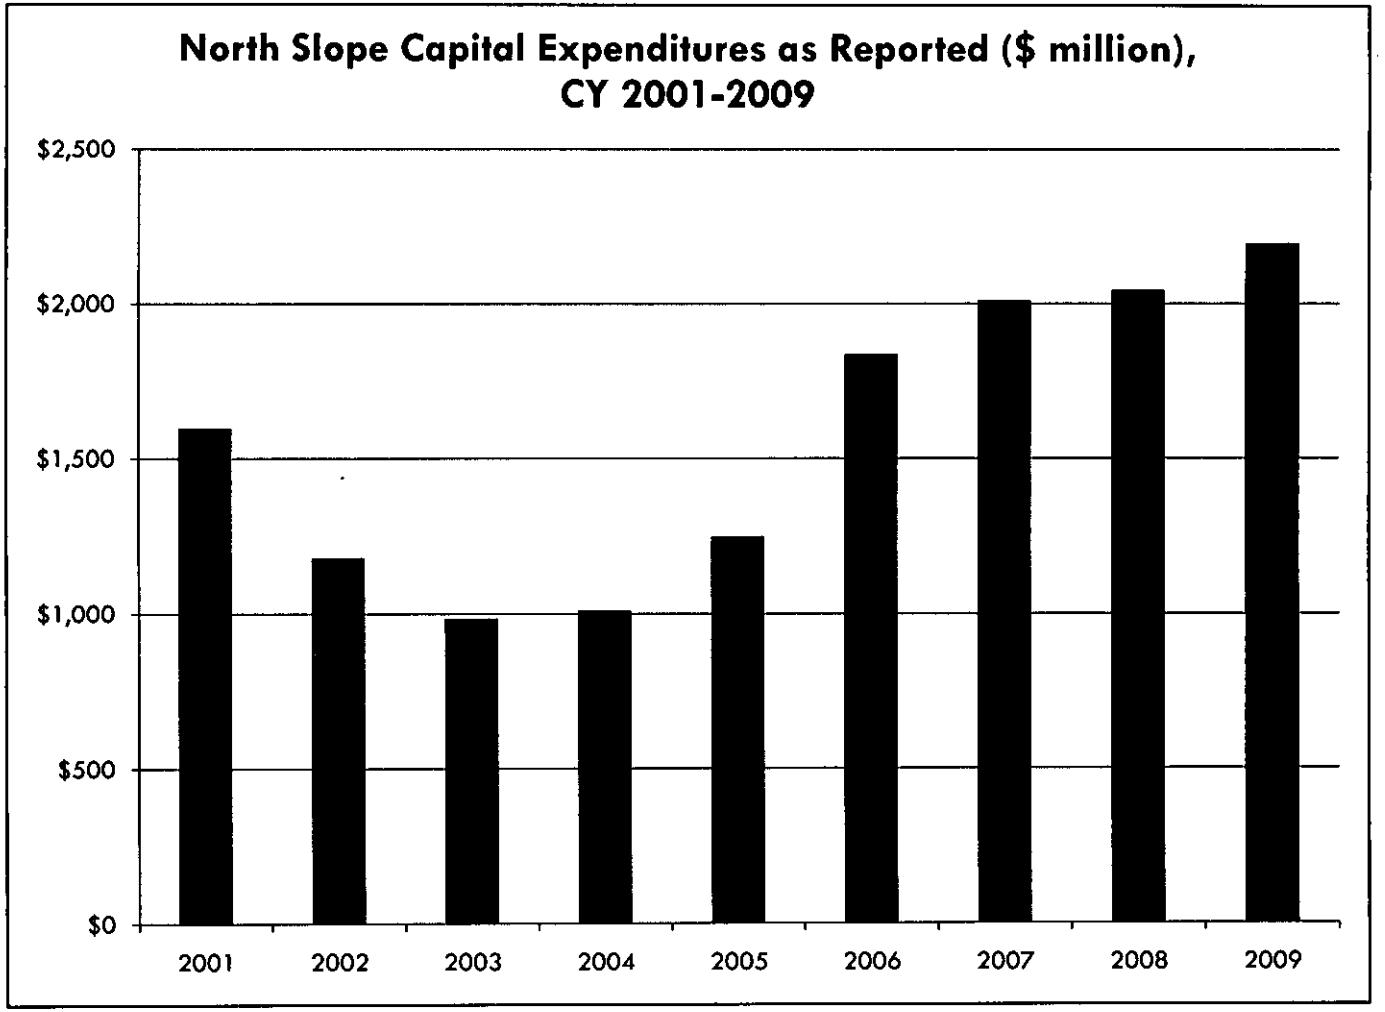
Historical Trends - Prudhoe Bay Operating Costs



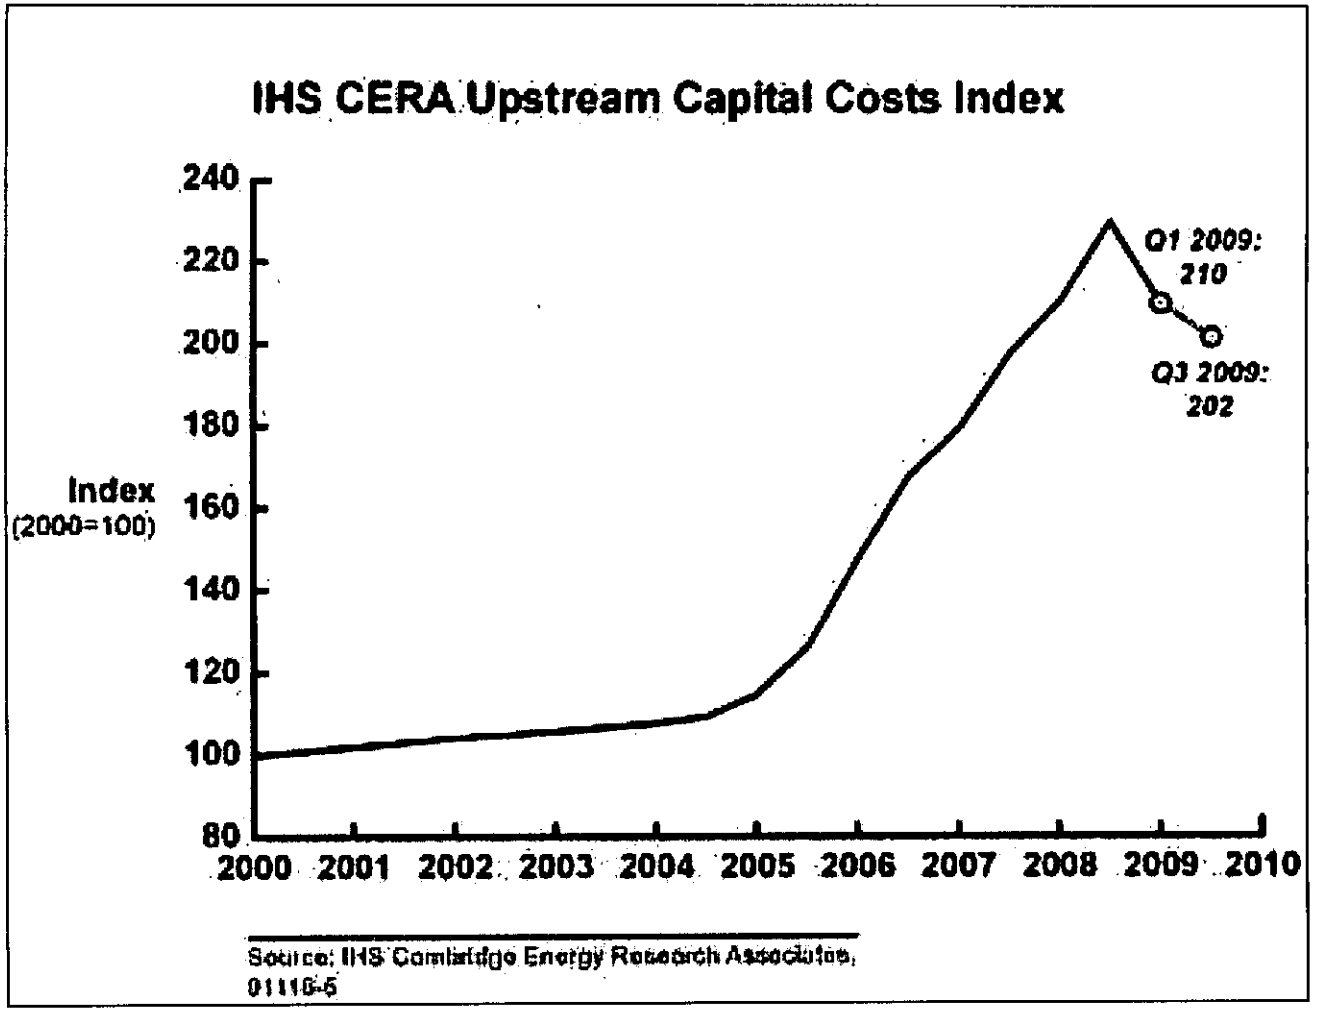
Historical Trends – Worldwide Upstream Operating Costs



Historical Trends – North Slope Capital Expenditures



Historical Trend – Worldwide Upstream Capital Costs

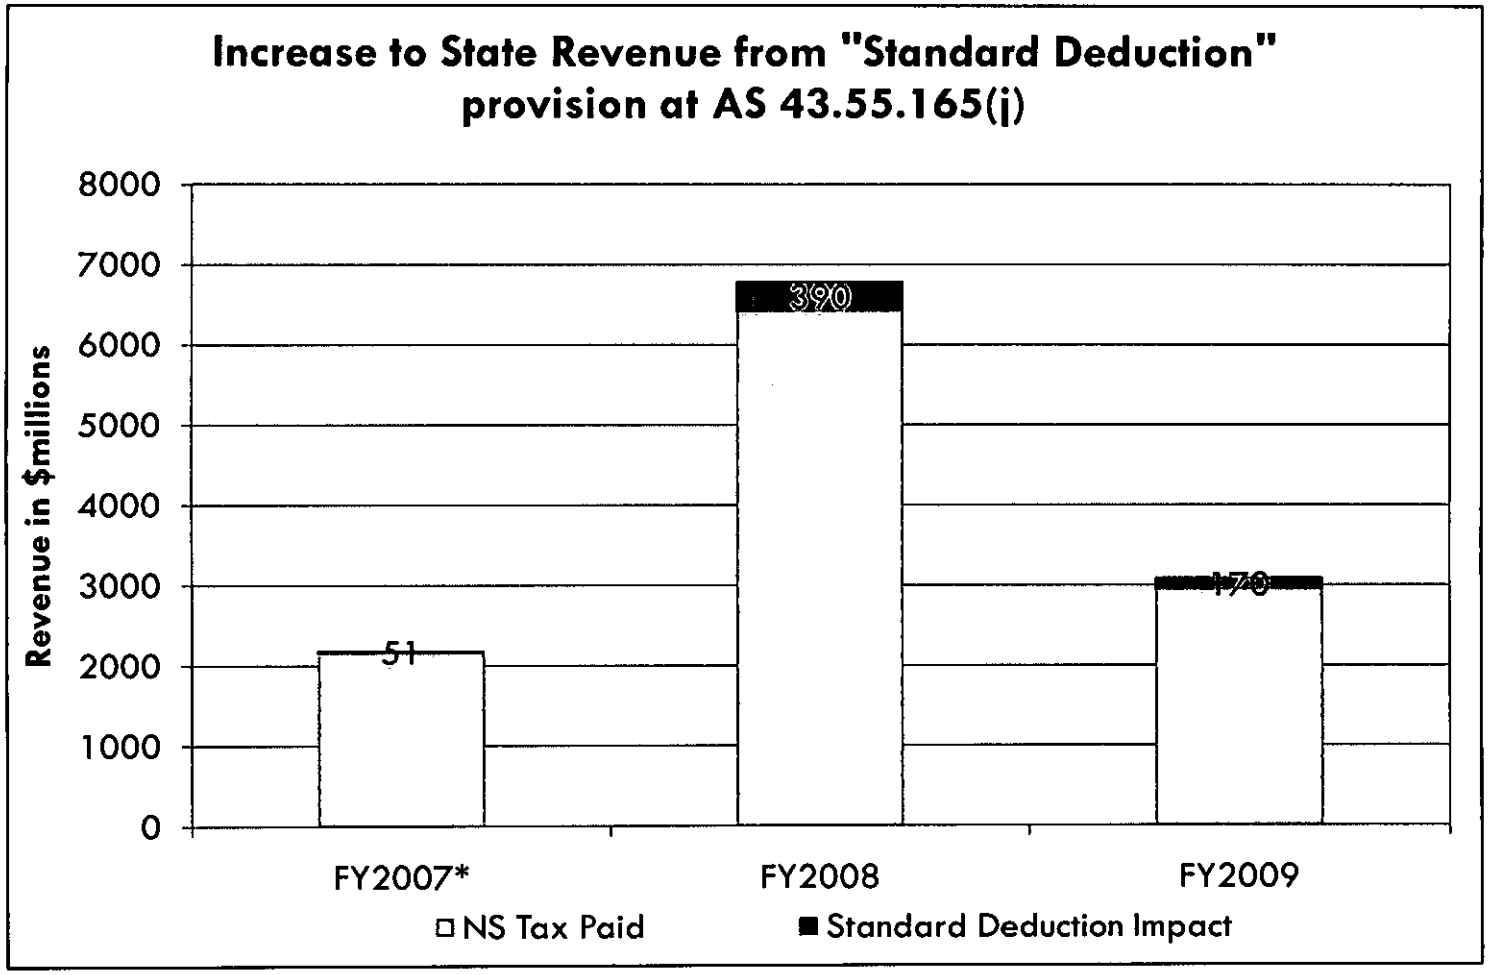


Are the Increasing Spending Levels due to Maintenance Costs?

CAPEX- Capital expenditures ("CAPEX") on pipeline repairs at Prudhoe Bay increased after corrosion incidents in 2006. However, the majority of growth in capital expenditures since 2007 is attributable to drilling, seismic and other production related projects.

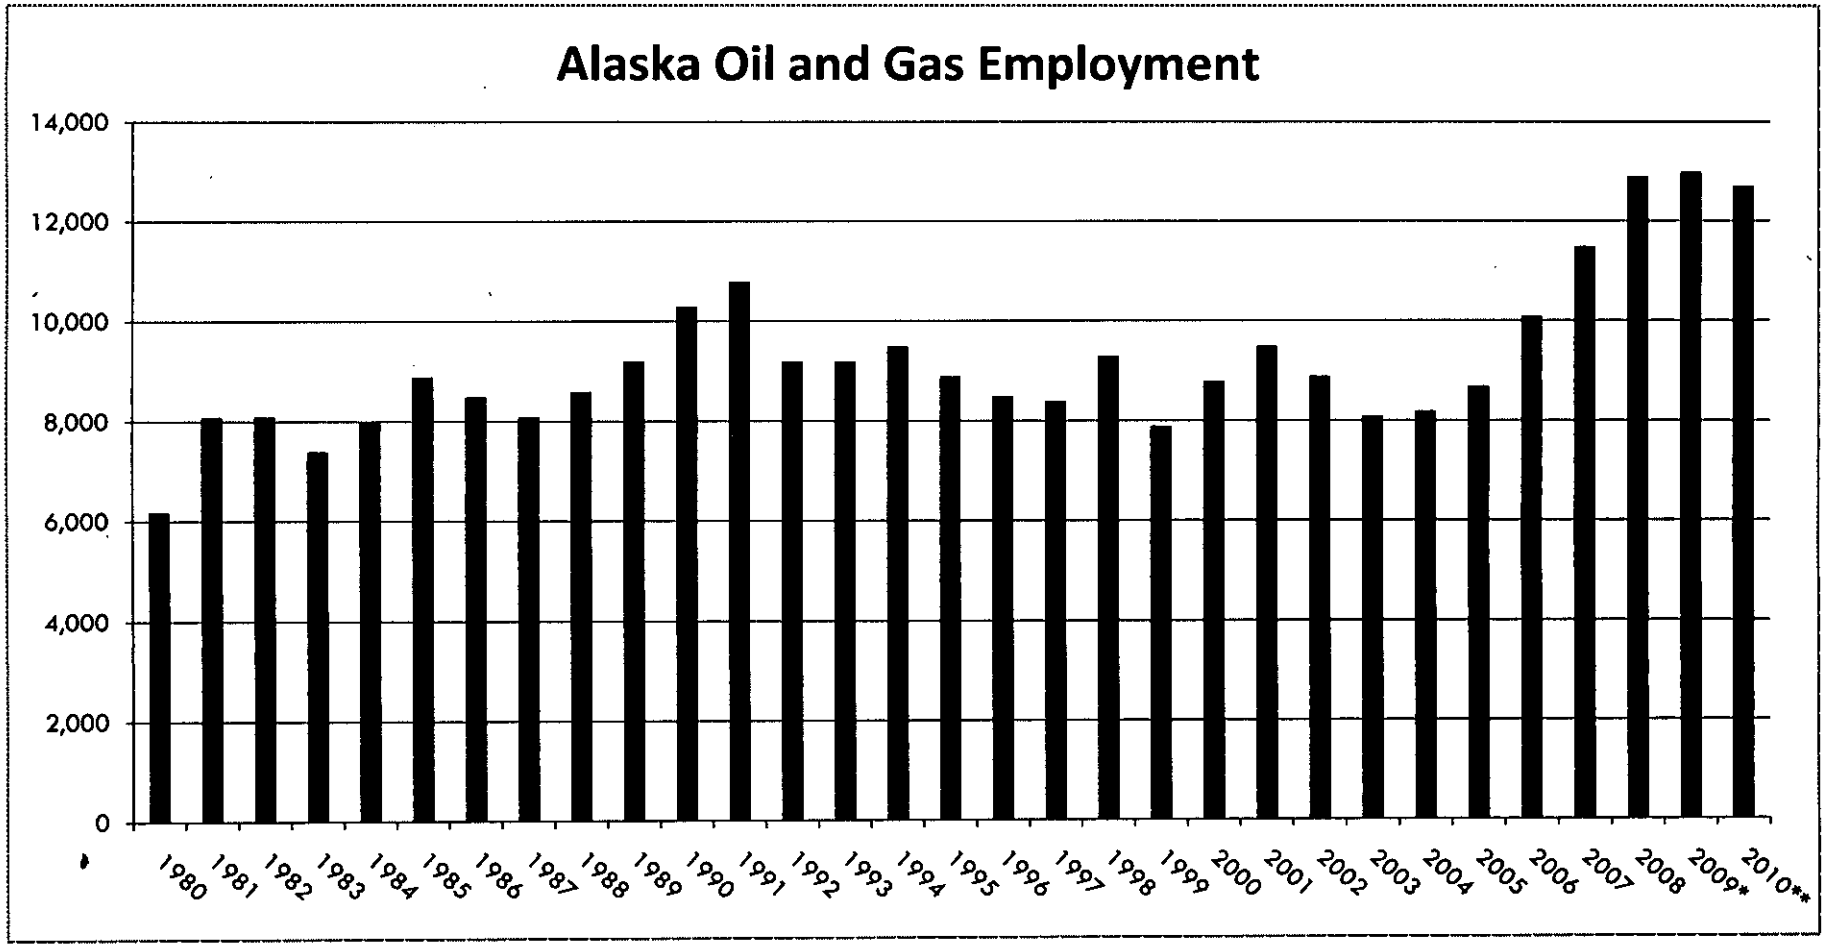
OPEX - Since 2007, the proportion of total operating expenditures ("OPEX") related to major repairs does not appear to be the key driver in the growth of total operating expenditures

Effect of Standard Deduction Provision



*Standard Deduction in place for half of FY 2007.

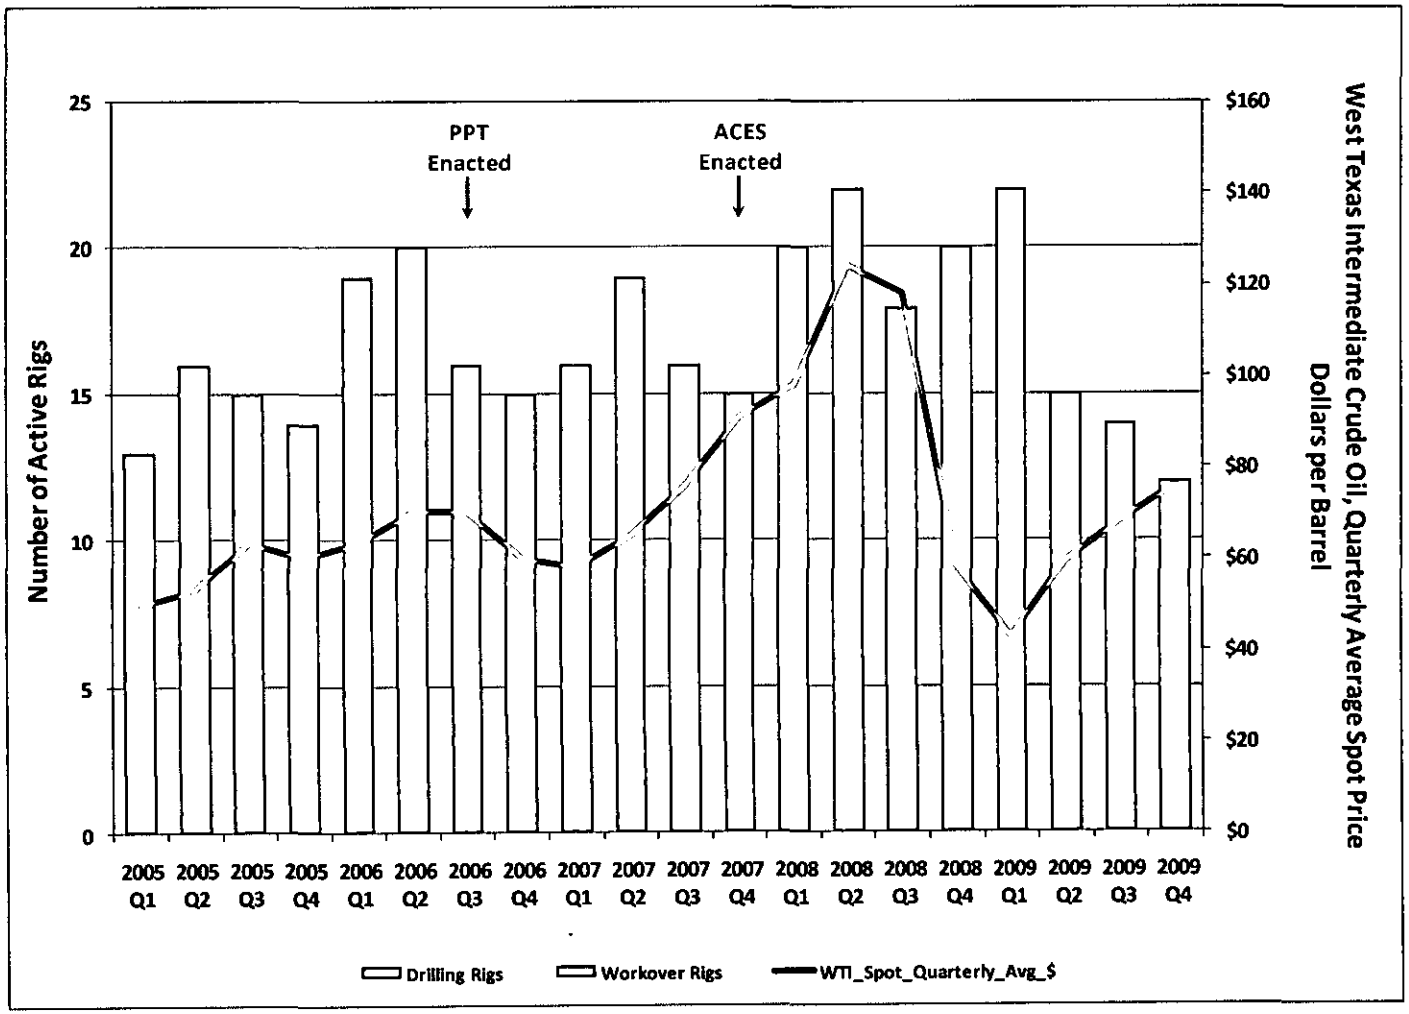
Oil and Gas Industry Employment 1980-2009



*Estimates for 2009 are preliminary; revised as of February 3, 2010.

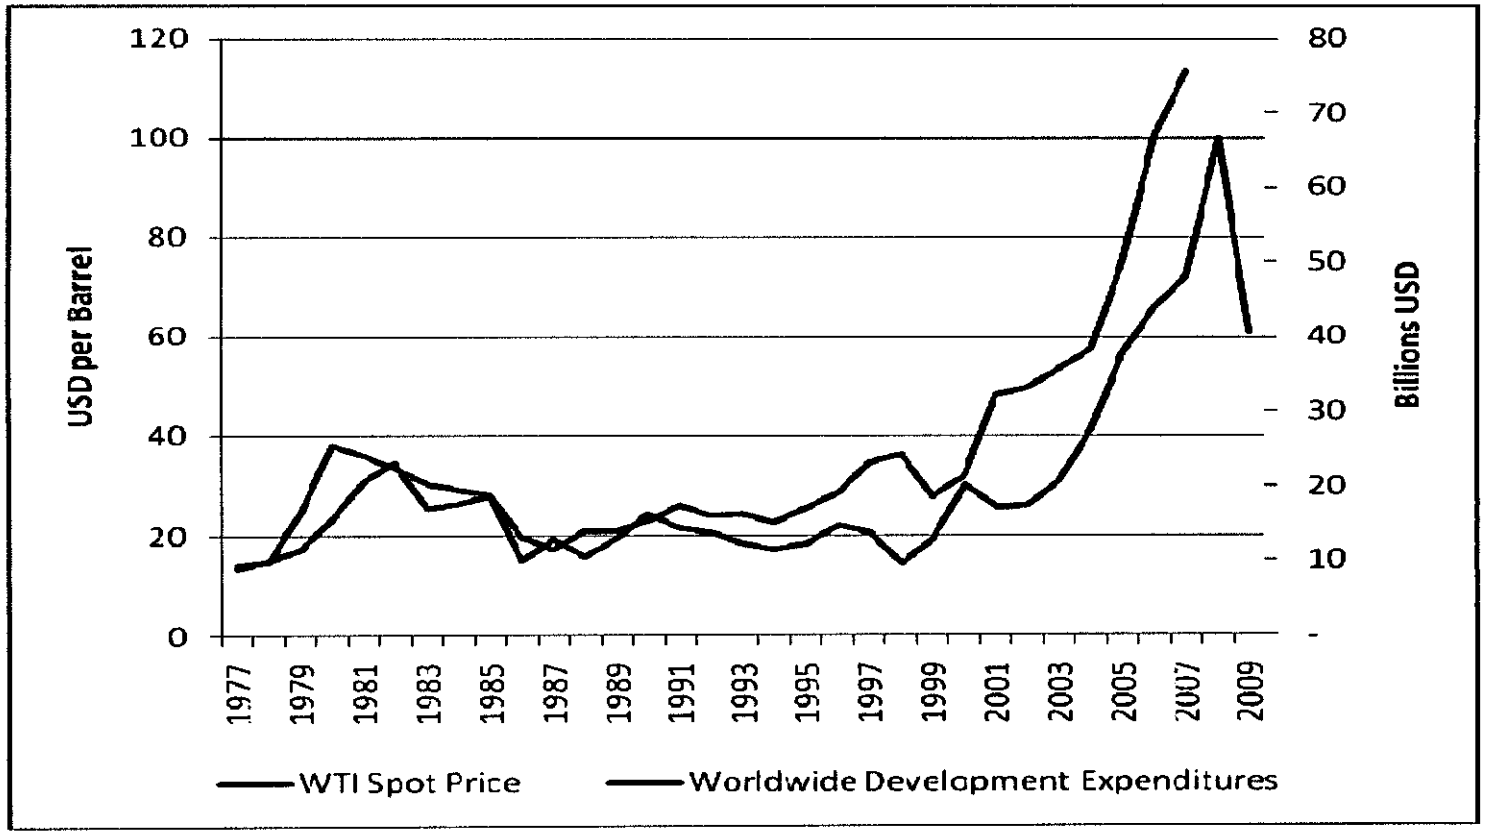
**Forecast.

Active Drilling Rigs in Alaska 2005-2009



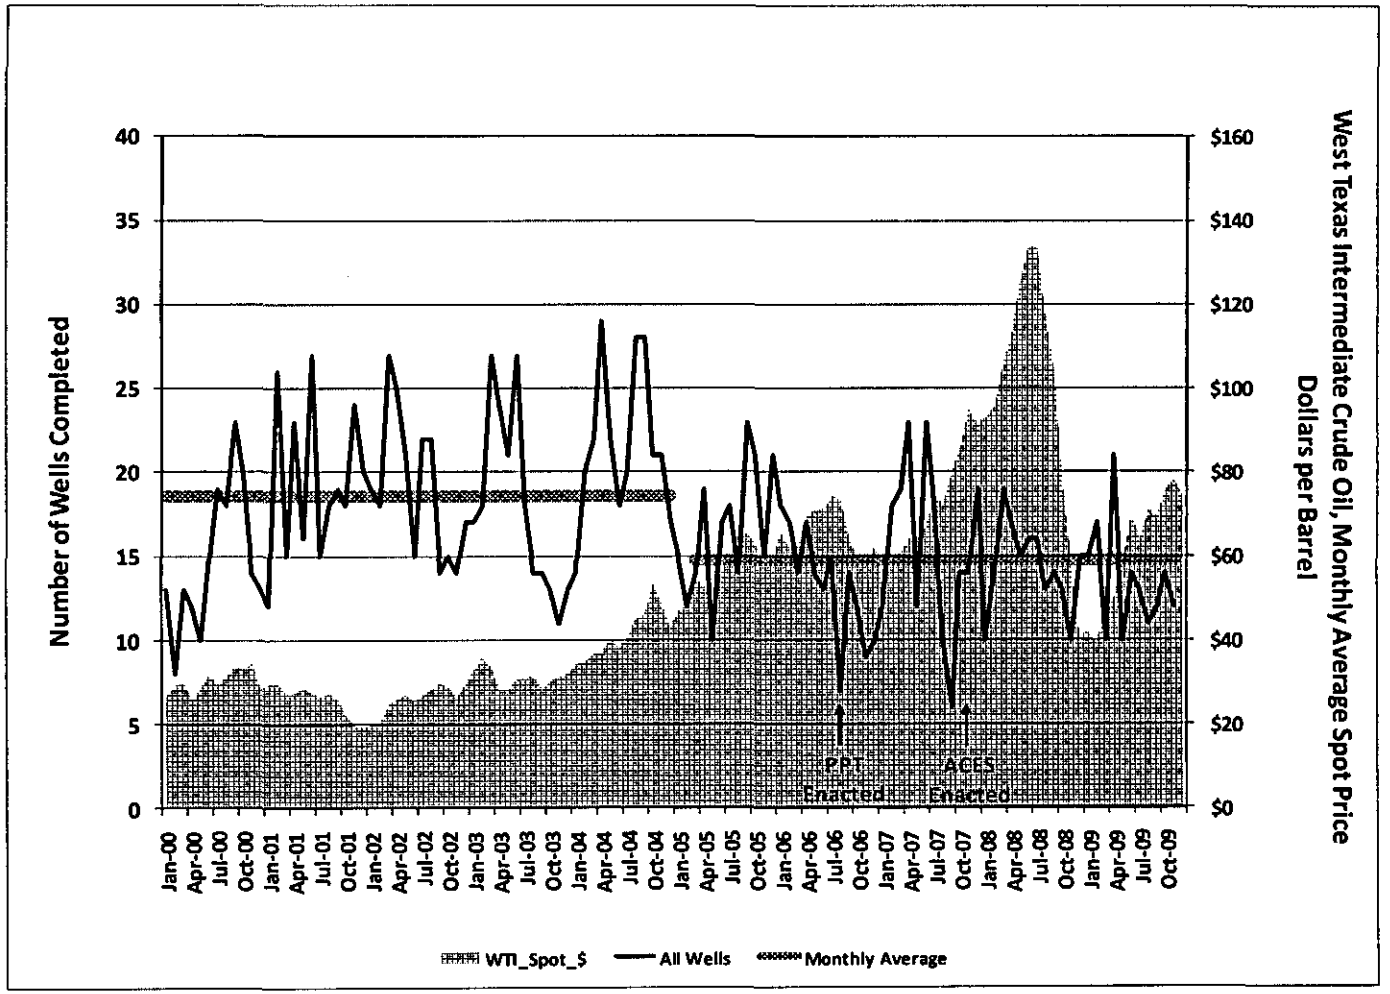
Development Expenditures Strongly Correlated with Oil Prices

Historical WTI Price and Worldwide Development Expenditures of EIA Surveyed Companies



Source: EIA Financial Reporting System data on development costs (data available thru 2007 only). Note, this survey does not reflect a consistent set of companies. WTI prices from BP Statistics and the Wall Street Journal.

Wells Completed 2000-2009



Companies Drilling in Alaska During the Last Year - by Region

North Slope

- Anadarko
- BP
- Brooks Range
- Conoco Phillips
- ENI
- Pioneer
- Savant
- Ultrastar

Cook Inlet

- Aurora
- Marathon
- Unocal

Interior

- Rampart
- Rutter & Wilbanks

Conclusions from the Analysis

In general, the information does not indicate that changes in the tax system have had a direct negative impact on industry activity in the state

In fact, the data would indicate that the investment incentive provisions of ACES are contributing to increased levels of expenditure

2631

The End

2/10/10 PRESENTATION: PORT MACKENZIE RAIL EXTENSION

2633

Mineral Occurrences and Potential Sources of Freight for the Alaska Railroad Extensions – Port MacKenzie to the Canadian Border

By
Paul Metz, Ph.D., DIC, P.G.
Director, Mineral Industry Research Laboratory
University of Alaska Fairbanks
February 2007-2010

Objectives

- Estimation of the expected tonnage of mineral concentrates that would be generated within a 200 km wide corridor along the proposed route of the railroad extensions from Fairbanks to the Canadian Border over the next 100 years.
- Estimation of the expected economic impact of the mines that would generate those mineral concentrates.

Nabesna	45
Total	887

2644

Mineral Deposit Model Types
(After Cox and Singer, 1986)

- 1. Stillwater Ni-Cu
- 7a. Synorogenic-synvolcanic Ni-Cu
- 8a. Minor podiform Cr
- 8b. Major podiform Cr
- 8c. Limassol Forest Co-Ni
- 8d. Serpentine hosted asbestos
- 10. Carbonatite
- 14a. W skarn
- 14b. Sn skarn
- 14c. Replacement Sn
- 15a. W veins
- 16. Climax Mo
- 17. Porphyry Cu

2645

Mineral Deposit Model Types
(After Cox and Singer, 1986)

- 18b. Cu -skarn
- 18c. Zn-Pb skarn
- 18d. Fe skarn
- 20c. Porphyry Cu-Au
- 21a. Porphyry Cu-Mo
- 21b. Porphyry Mo low-F
- 22a. Volcanic hosted Cu-As-Sb
- 22b. Au-Ag-Te veins
- 22c. Polymetallic veins
- 23. Basaltic Cu
- 24b. Besshi massive sulfide
- 25a. Hot-springs Au-Ag
- 25c. Comstock epithermal veins

Mineral Deposit Model Types
(After Cox and Singer, 1986)

- 26a. Carbonated-hosted Au-Ag
- 27d. Sb deposits
- 28a. Kuroko massive sulfide
- 29a. Quartz-pebble conglomerate Au-U
- 36a. Low-sulfide Au-quartz veins
- 36b. Homestake Au
- 37a. Unconformity U-Au
- 39a. Gold on flat faults

Mineral Commodity Prices
(as of January 2007)

Metal Prices Use in this Investigation (January 2007)		
Commodity	Units	Price
Aluminum	$/lb	1.28
Antimony	$/lb	0.85
Arsenic	$/lb	0.45
Asbestos	$/ton	125.00
Barite	$/ton	23.00
Bismuth	$/lb	0.18
Cadmium	$/lb	0.25
Chromite	$/lb	2.18
Cobalt	$/lb	18.00
Columbium	$/lb	8.07
Copper	$/lb	2.85
Fluorite	$/lb	152.00
Germanium	$/lb	391.00
Gold	$/tr oz	625.00

Mineral Commodity Prices
(Continued)

Iron	$/ton-unit	0.60
Lead	$/lb	0.79
Mercury	$/flask	700.00
Molybdenum	$/lb	28.00
Nickel	$/lb	6.75
Palladium	$/tr oz	286.00
Rhodium	$/oz	3095.00
Platinum	$/tr oz	1050.00
Silver	$/tr oz	12.30
Tantalum	$/lb	182.62
Tin	$/lb	2.48
Titanium	$/lb	1.30
Tungsten	$/lb	1.82
Vanadium	$/lb	1.75
Zinc	$/lb	1.94

2649

Probabilities

- Probabilities of discovery and development at a given tonnage and grade
  - Mineral occurrence not in historic mining district – 90th percentile; P = 0.0001
  - Mineral occurrence not in historic mining district – 50th percentile; P = 0.0005
  - Mineral occurrence in historic mining district – 90th percentile; P = 0.001
  - Mineral occurrence in historic mining district – 50th percentile; P = 0.001
  - Mineral occurrence in historic mining district, adjacent to major mine; P = 0.01

2650

Expected Tonnage of Concentrates

- 50 Percentile tonnage and grade; Expected Tonnage = 11,000,000 tons per year for 100 years.
- 90 Percentile tonnage and grade: Expected Tonnage = 26,000,000 tons per year (equivalent tonnage from the development of only one porphyry Mo deposit or one layered mafic complex Cu-Ni deposit every 10 years).

2651

Expected Economic Benefits from the Development of the Mineral Occurrences in the Extension Corridor

- Economic benefits of the Fort Knox Mine – Information Insights, 1999 estimated $100 million per year to Fairbanks North Star Borough
- Over 12 year mine life the mine would provide economic benefits equivalent to the gross metal value of the deposit at the time of completion of the feasibility study.
- Expected gross metal value at 50 percentile = $9 billion
- Expected gross metal value at 90 percentile = $83 billion.

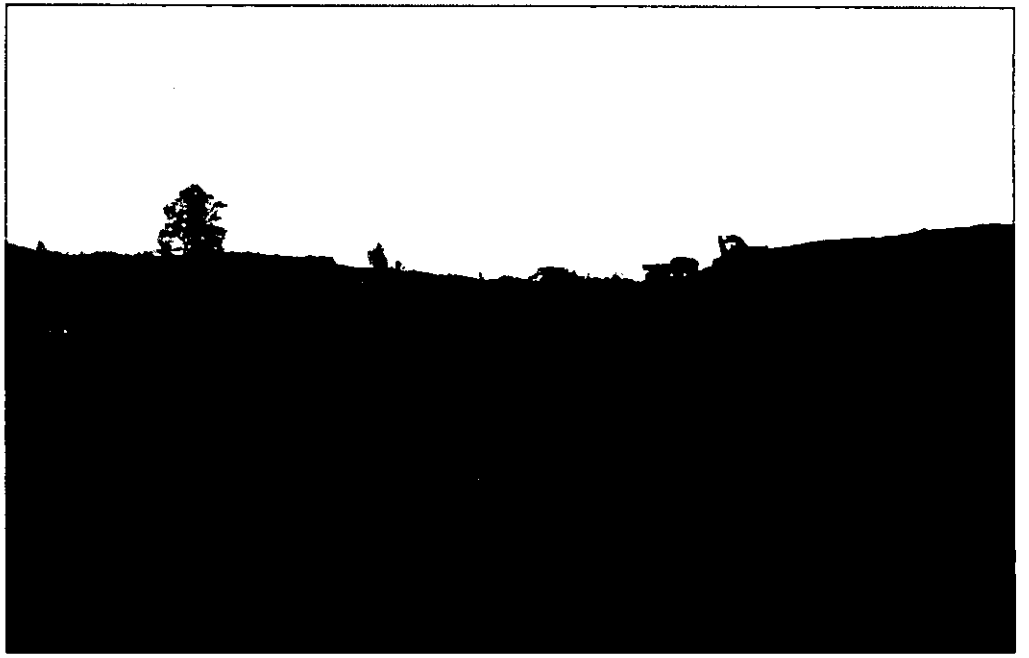
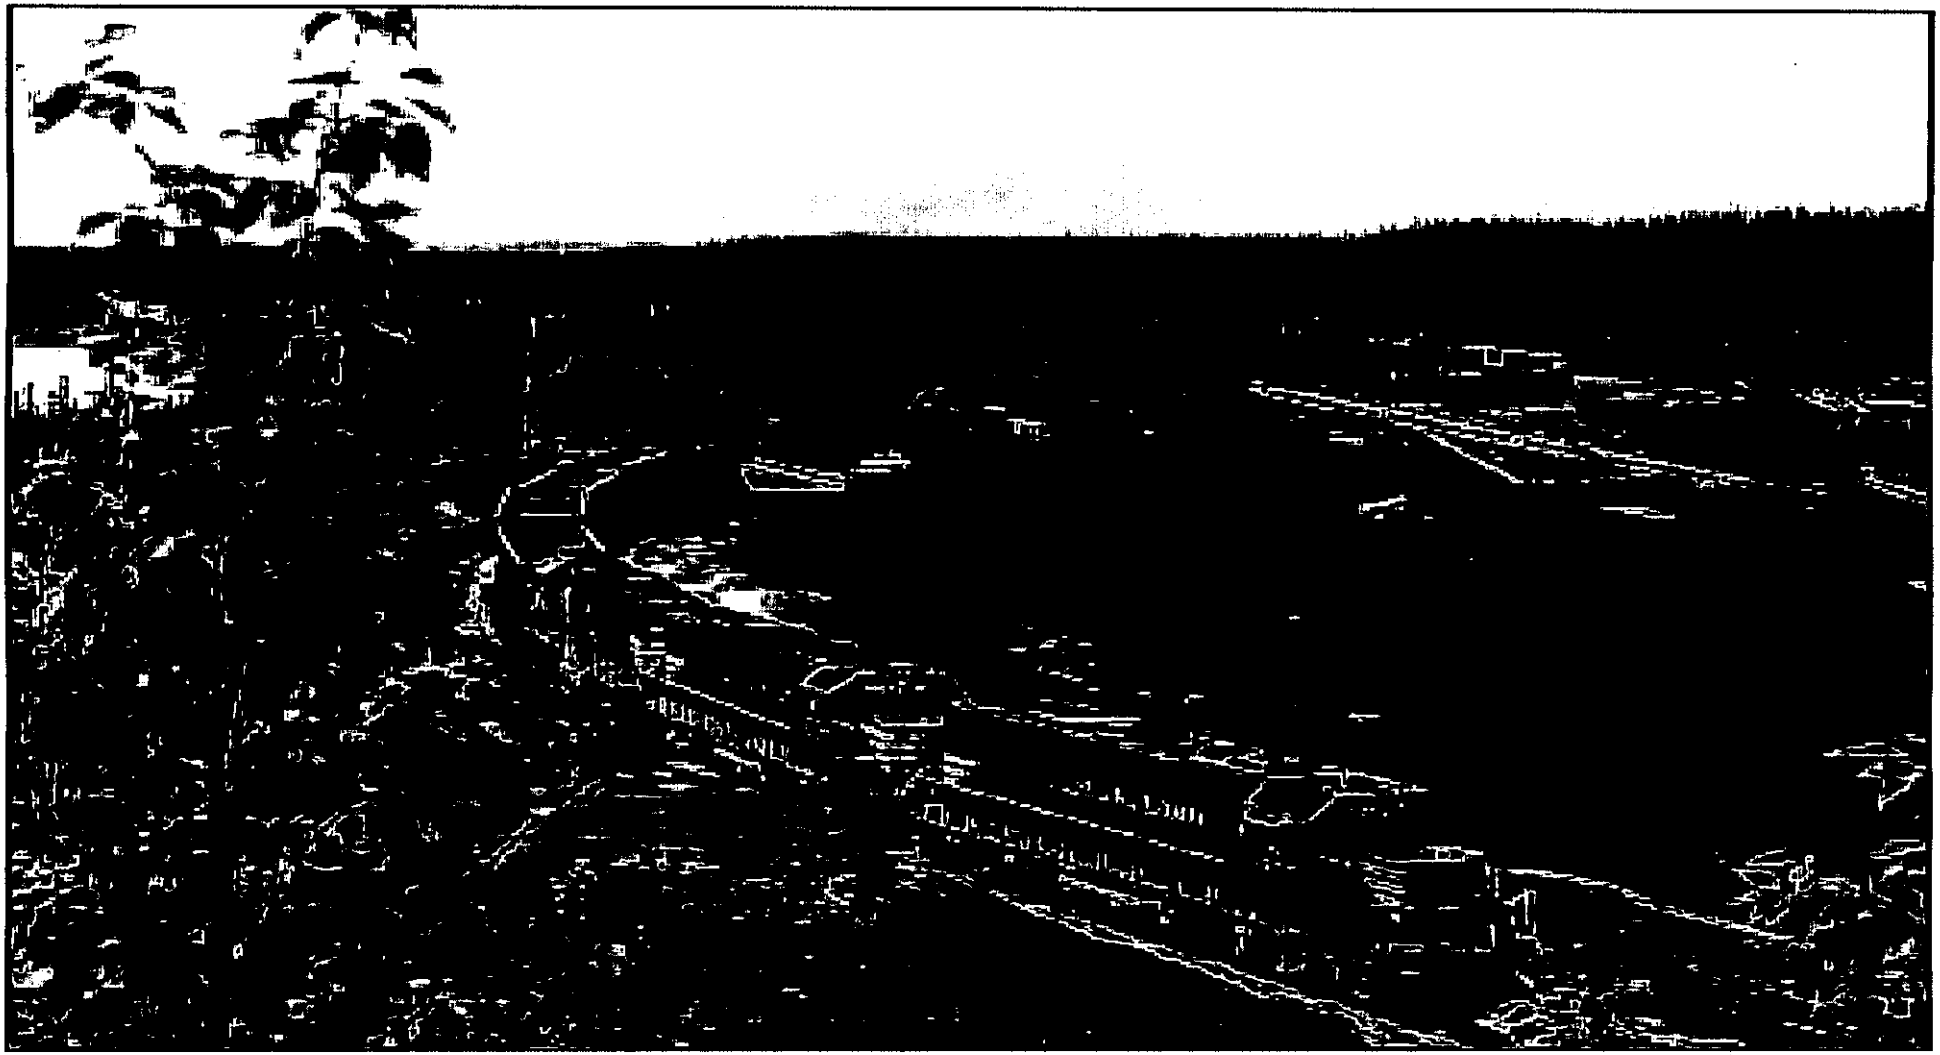
Fall Excavation and Fill Work



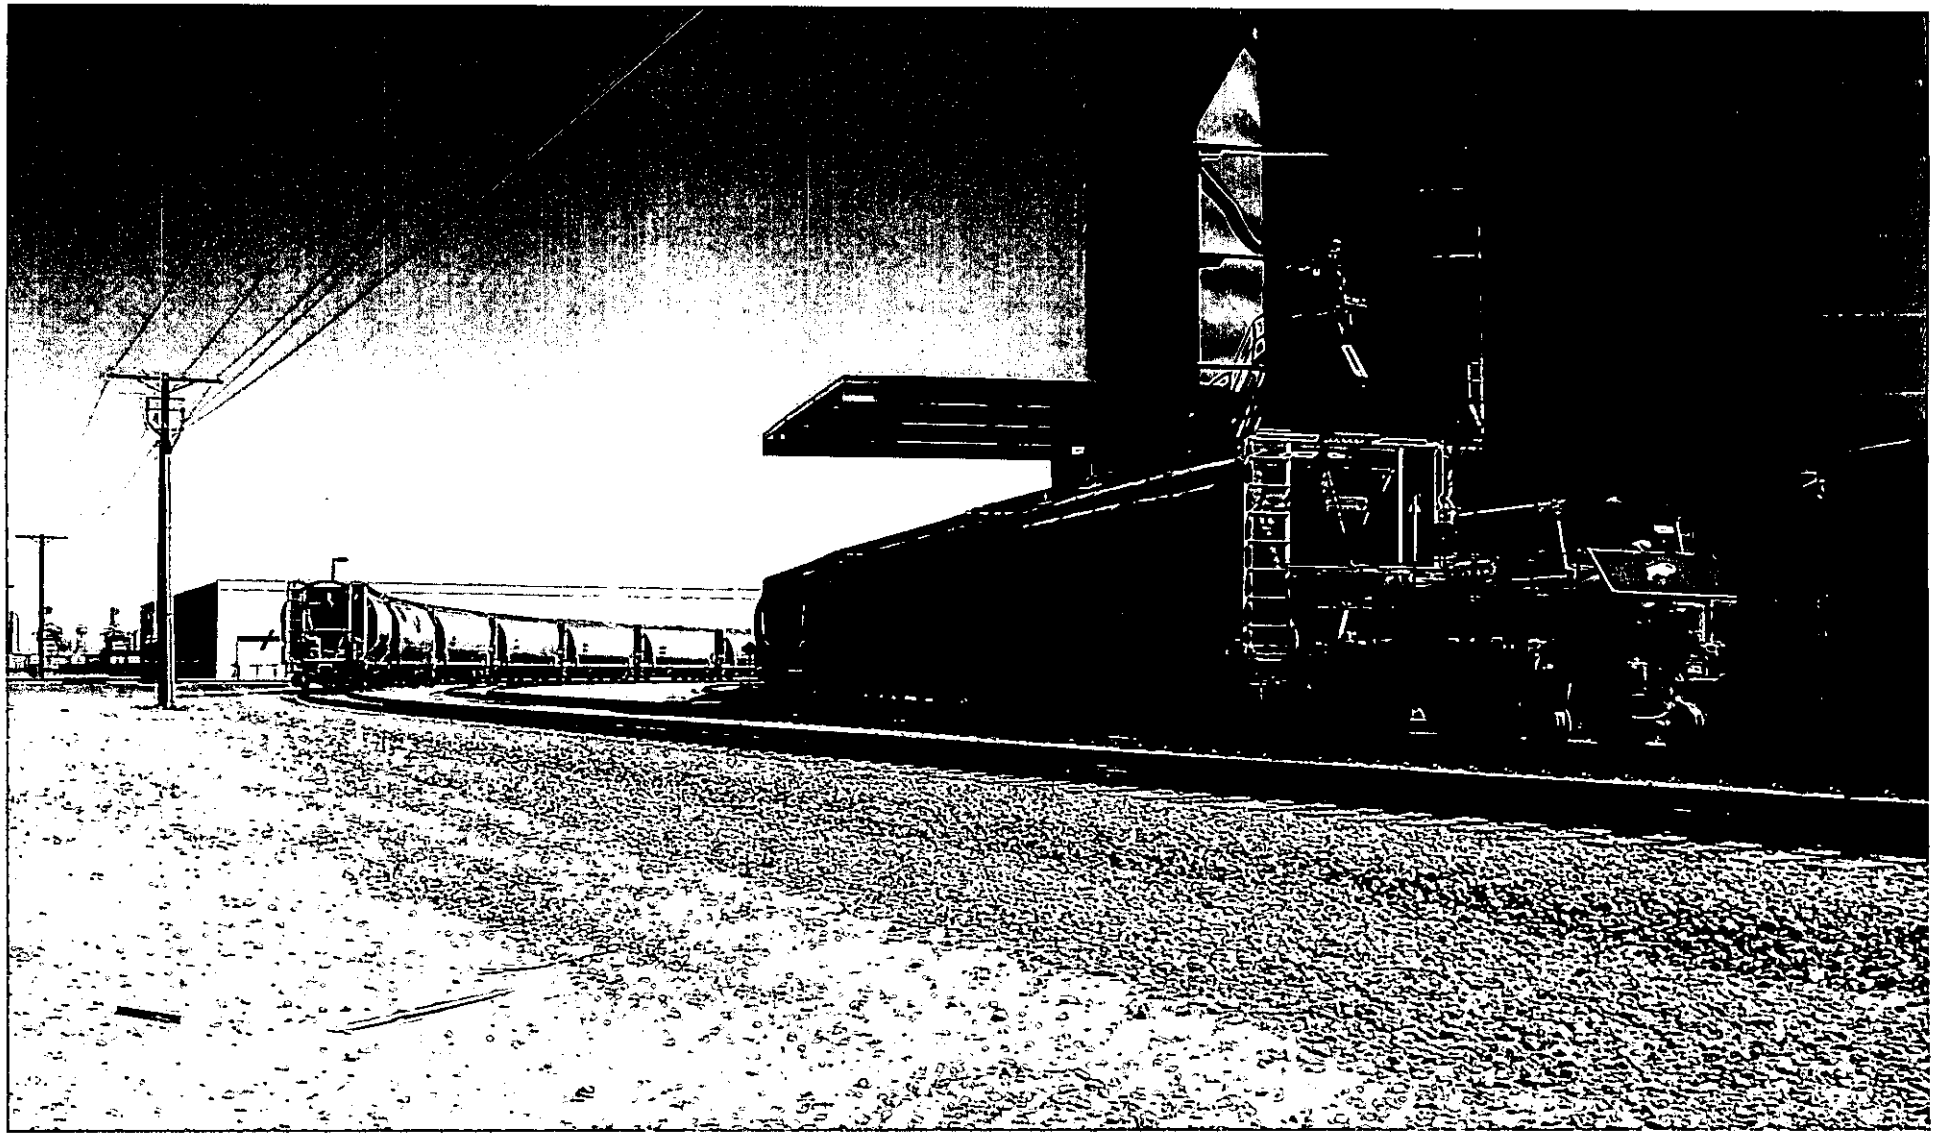
Port Mackenzie; the Shortest Distance to Tidewater

(Coal now has to travel to Seward)

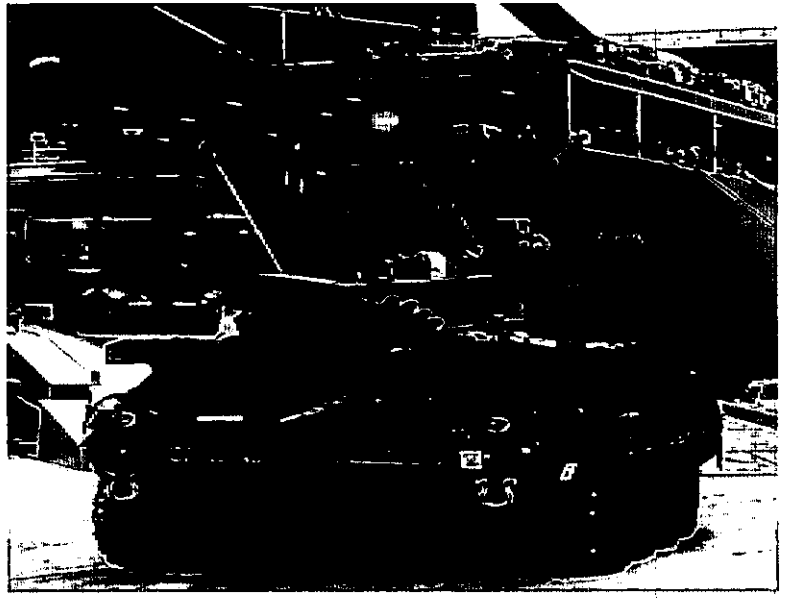


Only Alaskan Port with space for a Mile Long Rail Loop

(Example of loading cement on Loop Track)



Port MacKenzie - Military Logistics Option



Advantages and Savings of Using South Central Rail Extension to Port MacKenzie

- Transportation Savings.....$533 million
  (Benefit/Cost Ratio).....(1.9/1)

- Benefits to Alaska from New Mines
  - Gross Metal Value.....$172 billion
  - Community Benefits.....Permanent Jobs and Long-term Economic Engine

- State Revenue.....$6.3 billion

Summary of Rail Extension Statewide Benefits

- Supports Gas Pipeline Construction (mainline & spur line)
- New Interior Resource Development Opportunities
  (Benefits are $61M to $737M per year for 100+ years)
  - Limestone
  - Portland cement manufacture
  - Strategic Minerals (nickel, molybdenum)
  - Improved global price competitiveness of Alaska coal
- Transport Low Sulfur Fuel North (Interior, Southwest Alaska, North Slope)
- Alternate rail link to Interior (military mobilization/natural disaster /terrorism)
- Decreased rail congestion (Willow to Anchorage)
- Diversified Economy

Rail Project Project Scheduling

- ✓ **Phase 1** – EIS - **$10 Million**: 2007-2009

- ✓ **Phase 2** – Bi-Modal Loop & first 11 mile segment - **$17.5 Million**: 2008-2009
  - Permitting
  - Design of Bi-Modal Loop, Reserve and 11 miles
  - Right-of-way acquisition for Bi-Modal and 11 miles
  - Construction Bi-Modal Loop

- **Phase 3** – First 11 Mile Segment and EIS selected alternative – ($57 Million): **2010**
  - Construction of First 11 Mile Segment
  - Permitting, Design of EIS Selected Alternative

- **Phase 4** – EIS Selected Alternative – (*$150 Million): 2010-2011
  - Construction

- **Phase 5** – Track and Ancillary Facilities – (*$41 Million): 2012
  - Construction (laying rail, installing signals, etc.)
  - Project Completion Fall of 2012

*Note: Projected cost of $274 is expected to be adequate. Cost will be dependent on alternative selected in EIS

Southcentral Rail Exension Project

February, 2010

RAIL EXTENSION PROJECT

Economic Benefits to the Central Alaska Regional Economy

(Anchorage, Mat-Su, Denali Borough, and Fairbanks)

Economic Problems facing Alaska's Economy

1. **Uncertainty about energy availability and costs**
2. **Uncertainty about the Gas Line construction**
3. **Uncertainty about the future of the TransAlaska Pipeline**

1

Economic Problems facing Alaska's Economy (cont'd)

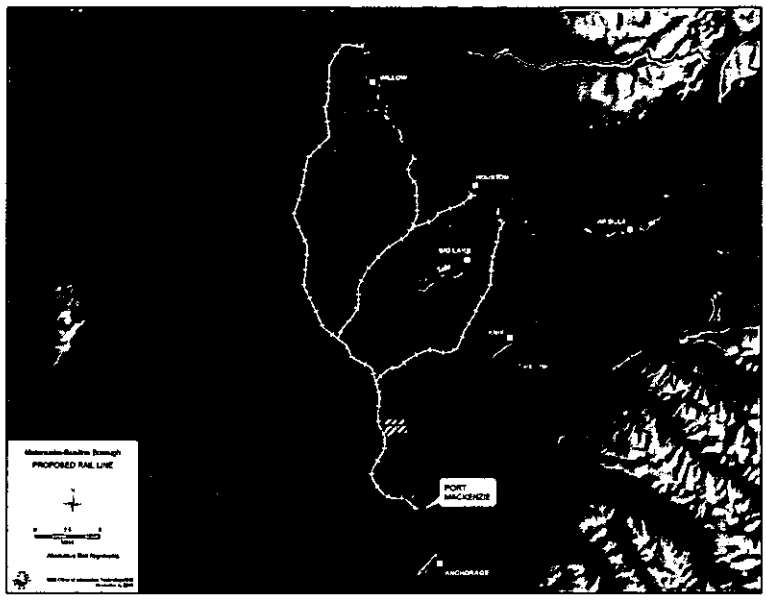
4. **Uncertainty about Small Business Administration contracting program for Native Business**
5. **Uncertainty about explorations permits for Chukchi and Beaufort Sea**
6. **Lack of Diversification of Alaska's Economy**
7. **Lack of Transportation Infrastructure to promote Economic Development**

2

*But a major solution to one of these problems is <u>just months away</u> and the **positive effects** will be felt **next summer**.*

3

The Rail Extension from Port MacKenzie to the Main Line of the Alaska Railroad



4

To Understand the Impact of Port MacKenzie and the Rail Extension, we need to begin thinking of the **Fairbanks North Star Borough, the Denali Borough, the Mat-Su Borough, and Anchorage** as a regional economy

Working, Building, and Growing Together

5

What the Rail Extension Means to this Regional Economy

1. Opens up the Interior to Resource Development
2. Facilitates the Development of a World Class Limestone Deposit in Livengood just north of Fairbanks
3. Facilitates the Development of a Cement Production Facility in or around Fairbanks
4. Opens up a development corridor along the Railbelt to exploration and extraction of strategic minerals (Lead, Zinc, Copper, Molybdenum and Silver)

6

What the Rail Extension Means to this Regional Economy (cont'd)

5. Improves the transportation of Lower Cost Fuel to Interior and Southwest Alaska
6. Dramatically improves the world competitiveness of Alaska Coal
7. Significantly reduces transportation and staging cost for the Gas Pipeline Construction (Important if it goes. Essential if it doesn't.)
8. Increases employment in the Mat-Su Borough, the Denali Borough, the Fairbanks North Star Borough and Anchorage

7

How does the Rail Extension do all these things?

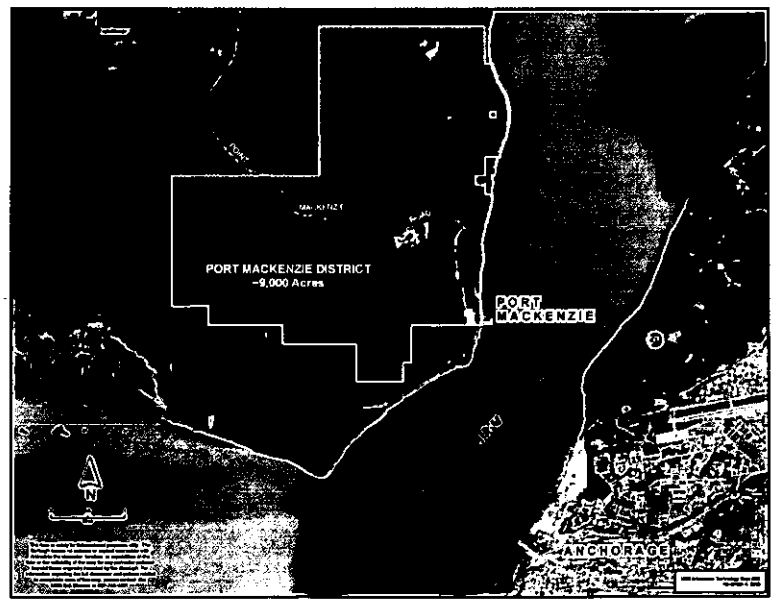
The Answer is <u>Port MacKenzie and the Rail Extension working Together</u>

Port MacKenzie?

Port MacKenzie is a Bulk Commodities Port for minerals, cement, coal, bulk fuel, pipe (Not a Consumer Goods or a Container Port like the Port of Anchorage)

8

It's a Port with 14 Square Miles of Industrial Zoned Land.
(That's nearly 9,000 Acres.)

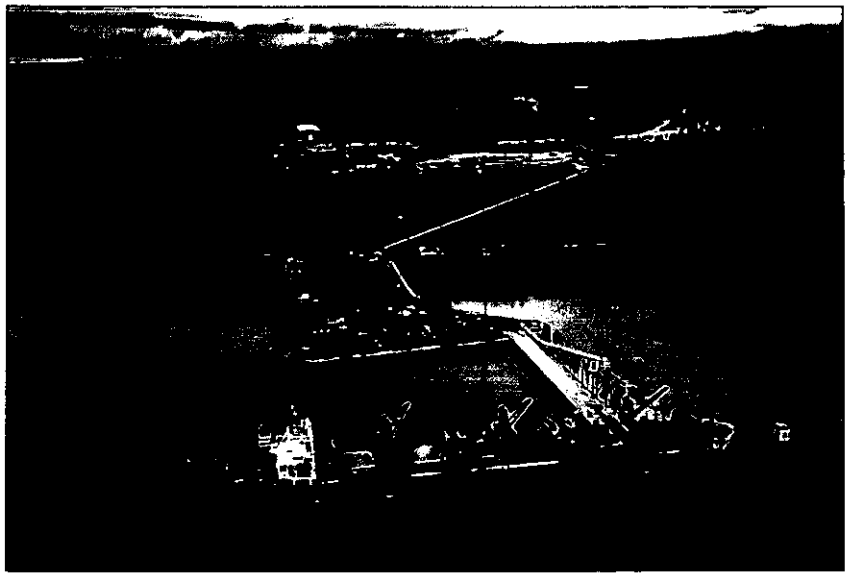


9

Port Mackenzie 20 Years Ago

10

Port MacKenzie 2 Years Ago

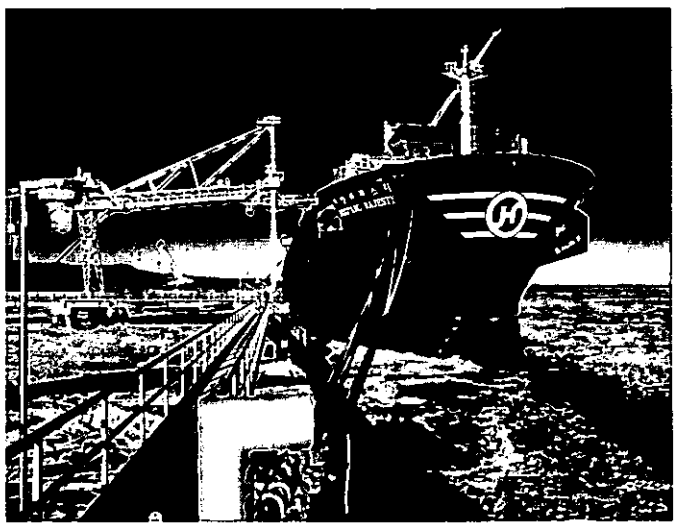


11

Port MacKenzie Now

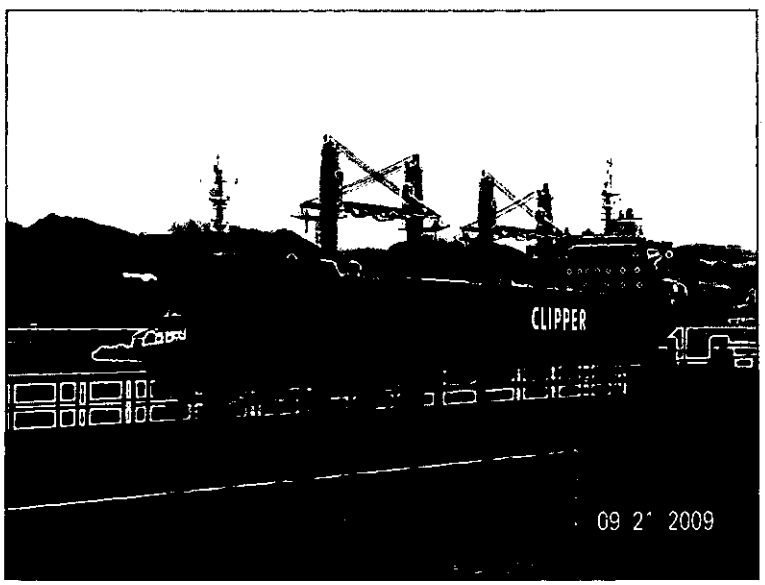
Does not compete with the Port of Anchorage (60' mean low tide compared to 35' for Port of Anchorage)

No Dredging Required



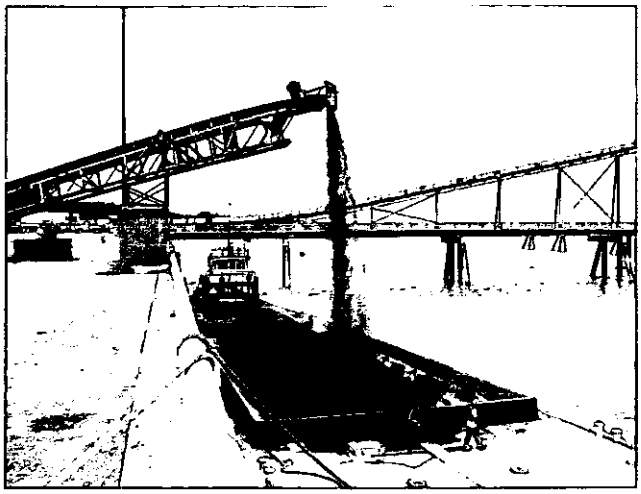
12

A Deep Water Port (MLLW-60) That Can Handle The World's Largest Cargo Ships today (Panamax and Cape Size Vessels)



13

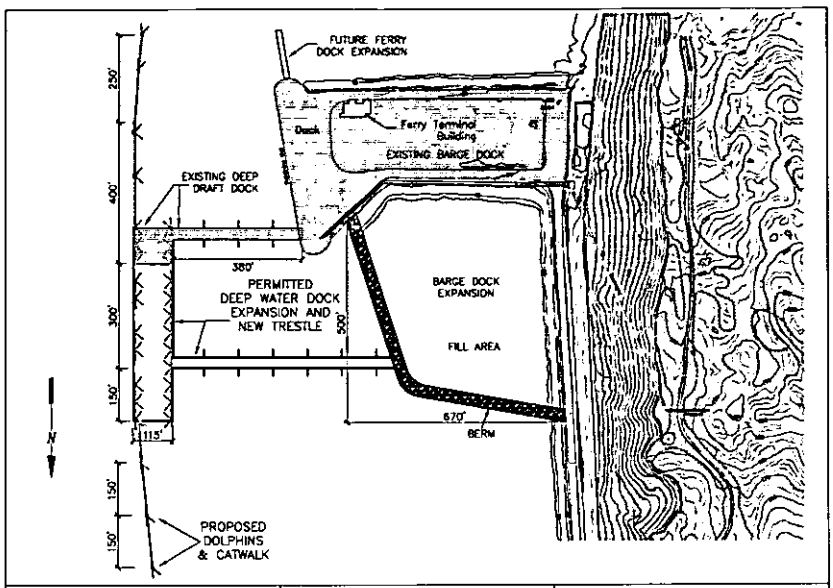
It's also Designed and Built to Easily Handle Barges Carrying Bulk Commodities, Minerals, Coal and Aggregate



14

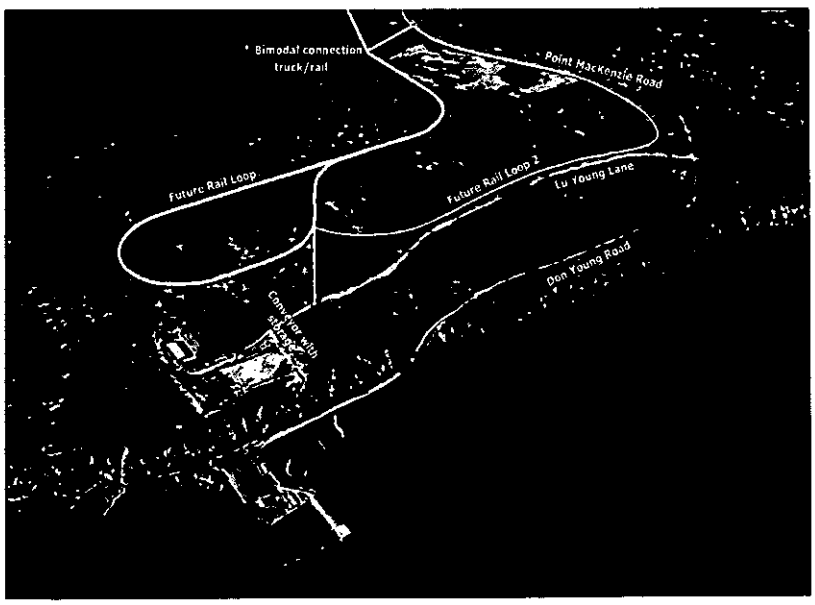
Barge Dock Expansion to be Complete Next Summer

15



16

Rail Loop Under Construction



17

Plenty of Storage and Staging Capacity for
All the pipe needed for both Gas Lines

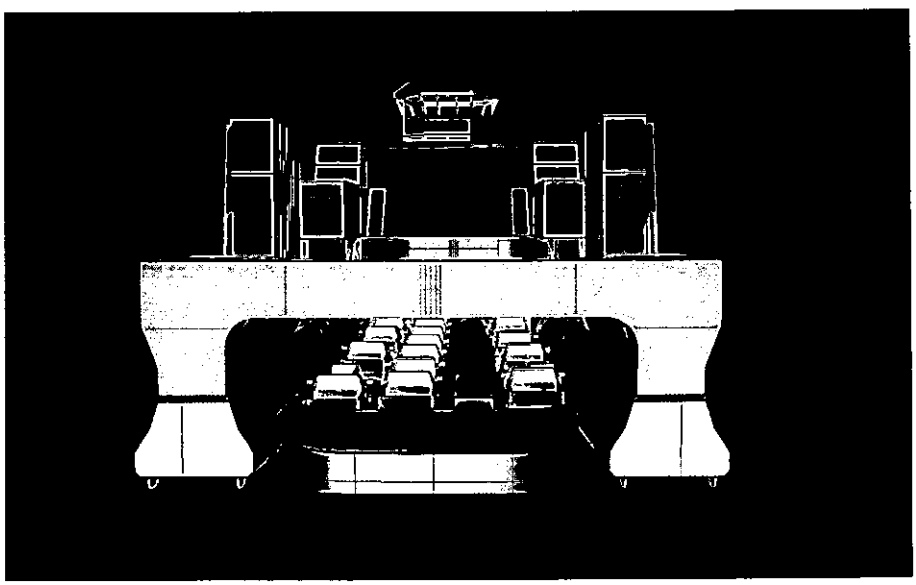
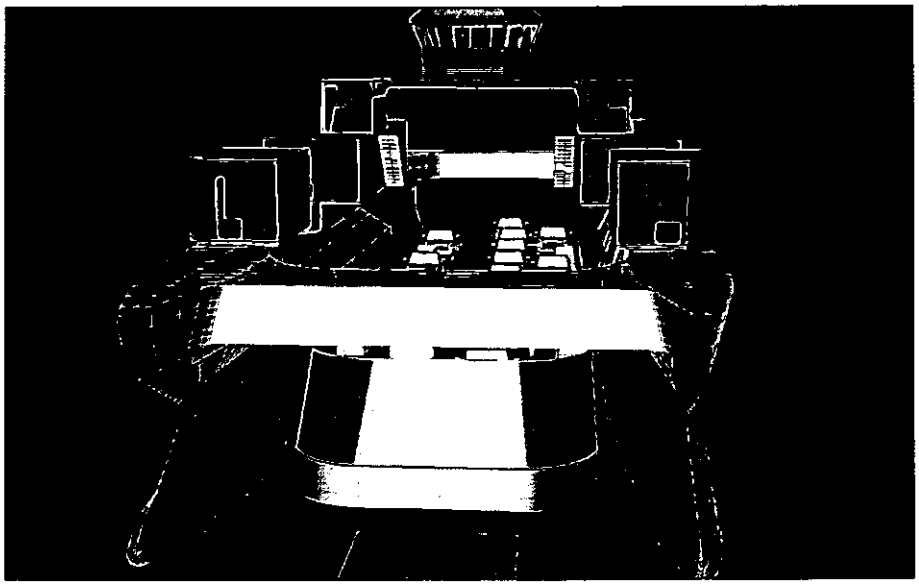
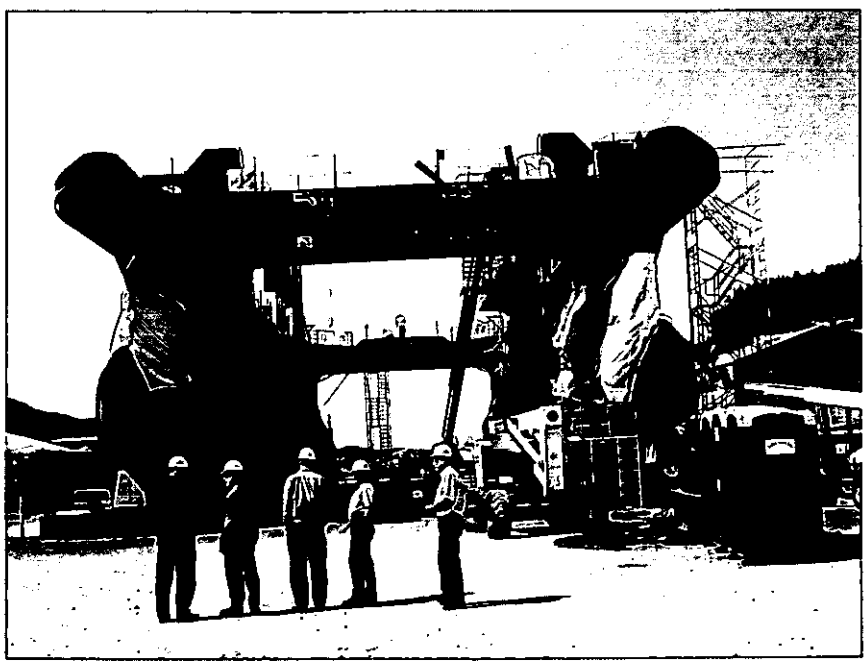
22



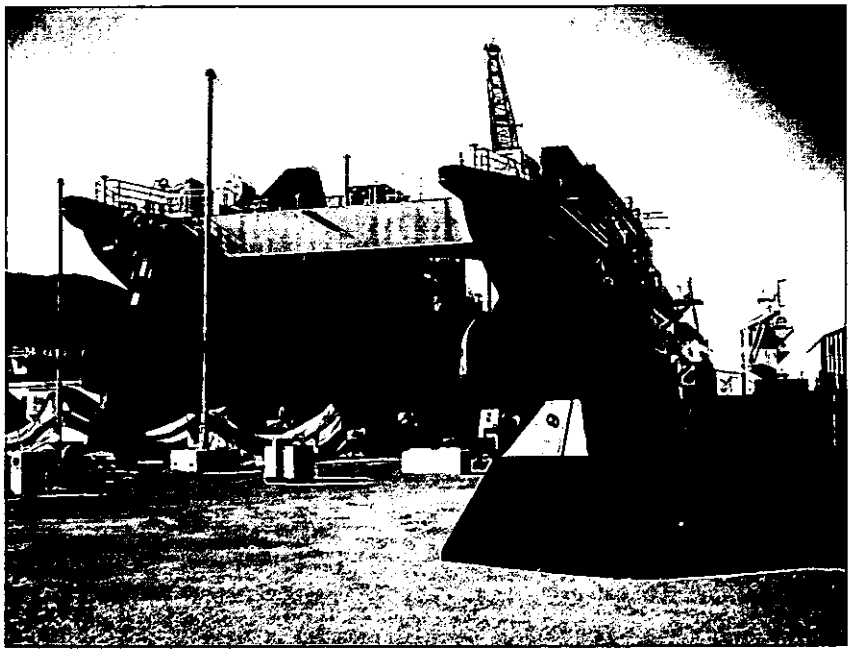
23



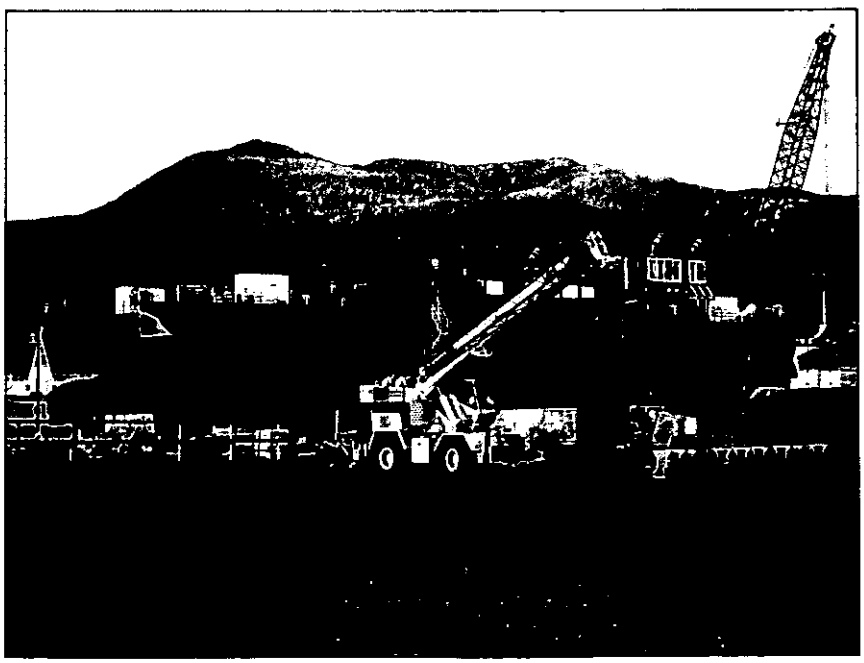
24



25

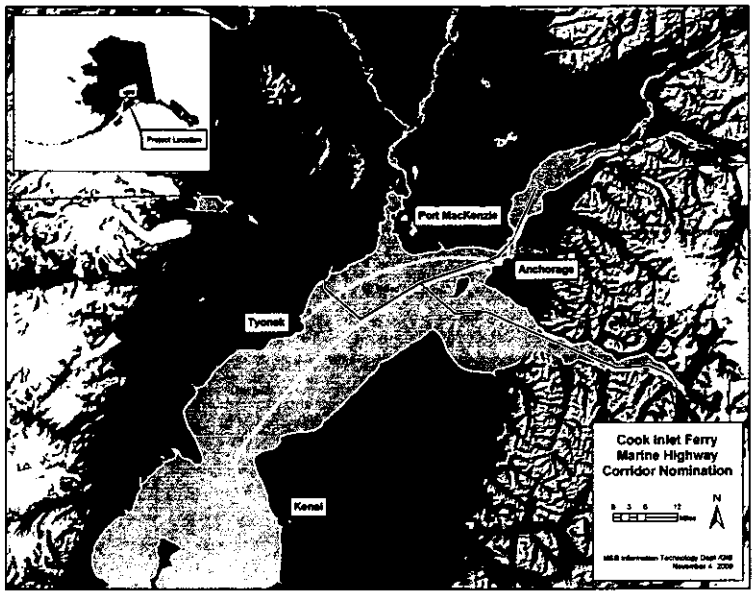


26



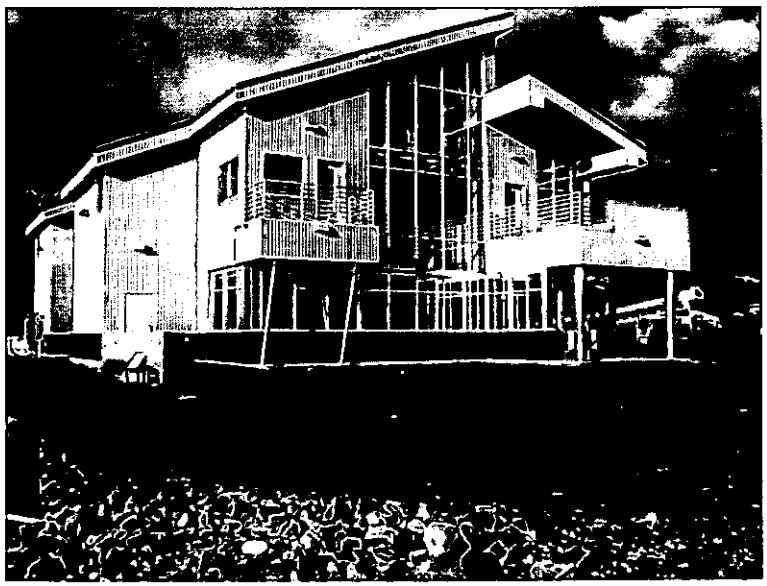
27

Hourly Service between Anchorage and Mat-Su Plus Service to Kenai and Tyonek



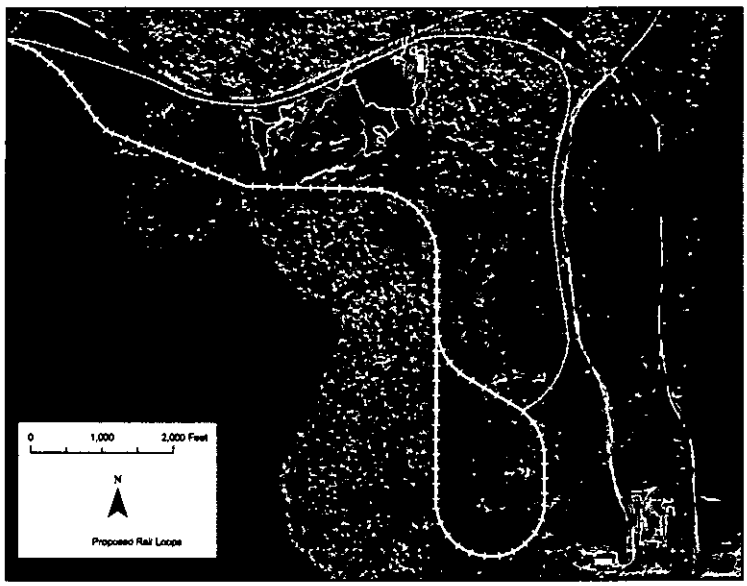
28

Port MacKenzie also has a Recently Constructed Ferry Terminal for **Anchorage-Port MacKenzie hourly runs**



29

Port MacKenzie and the Rail Extension Together are a Major Key to the Economic Development of the Region



30

What the Rail Extension Means to this Regional Economy

1. **Opens up the Interior to Resource Development**
2. **Facilitates the Development of a World Class Limestone Deposit in Livengood just north of Fairbanks**
3. **Facilitates the Development of a Cement Production Facility in or around Fairbanks**
4. **Opens up a development corridor along the Railbelt to exploration and extraction of strategic minerals (Lead, Zinc, Copper, Molybdenum and Silver)**

31

What the Rail Extension Means to this Regional Economy (cont'd)

5. **Improves the transportation of Lower Cost Fuel to Interior and Southwest Alaska**
6. **Dramatically improves the world competitiveness of Alaska Coal**
7. **Significantly reduces transportation and staging cost for the Gas Pipeline Construction (Important if it goes. Essential if it doesn't.)**
8. **Increases employment in the Mat-Su Borough, the Denali Borough, the Fairbanks North Star Borough and Anchorage**

32

Jobs Created by Rail Extension and Port MacKenzie Expansion*

Project Segment	JOBS
Rail Extension Construction Related Jobs (2010-2013)	3000
Port MacKenzie Constructon Related Jobs (2010-2013)	500

Private Development	JOBS
Mining Development Jobs along Rail Line	4000
Industrial Development of Port MacKenzie	3500

*Estimates by HDR and ISER

33

What's Next for the Rail Extension?

- Completion of the Environmental Impact Study (Spring 2010) $10 Million
- Construction of the Road/Rail Bimodal Loop (Under Construction) $17 Million
- Permitting, Design and Begin Construction of EIS Selected Alternative (Can Start Summer 2010) $57 Million
- Construction of Railroad Bed (Starts Summer 2011)
- Laying the Tracks (Completion 2013)

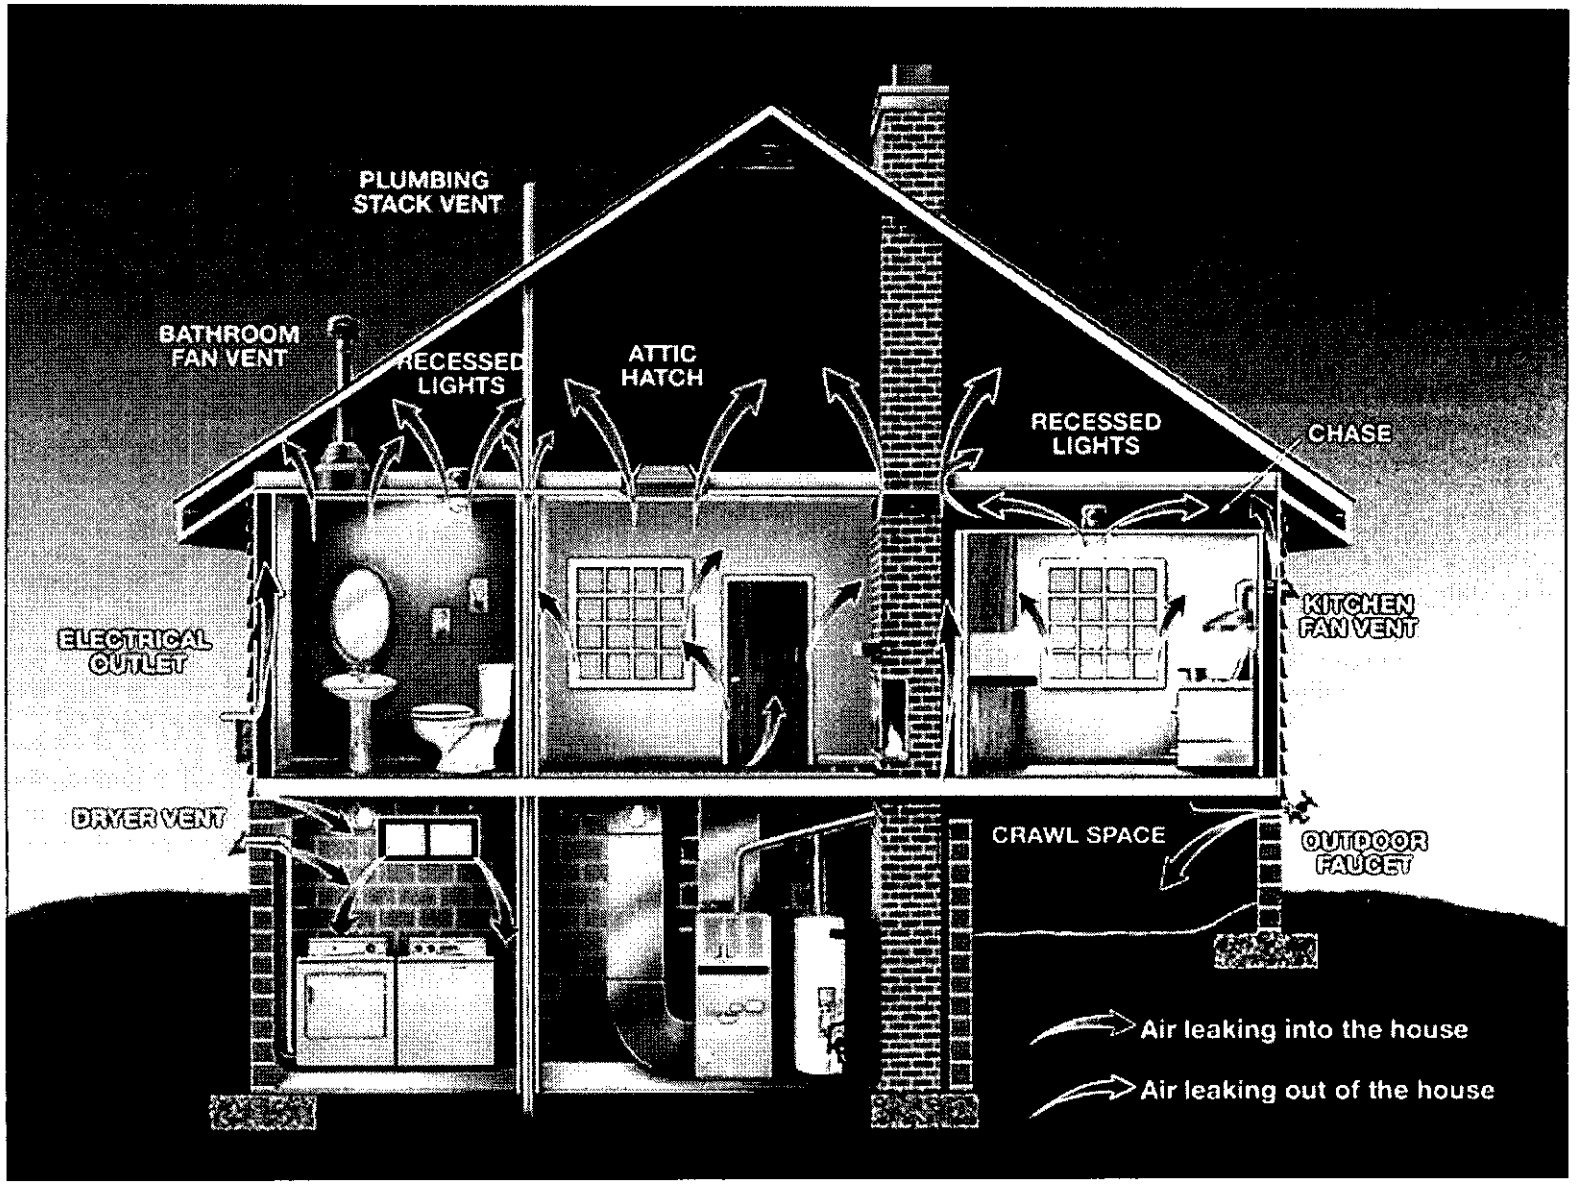
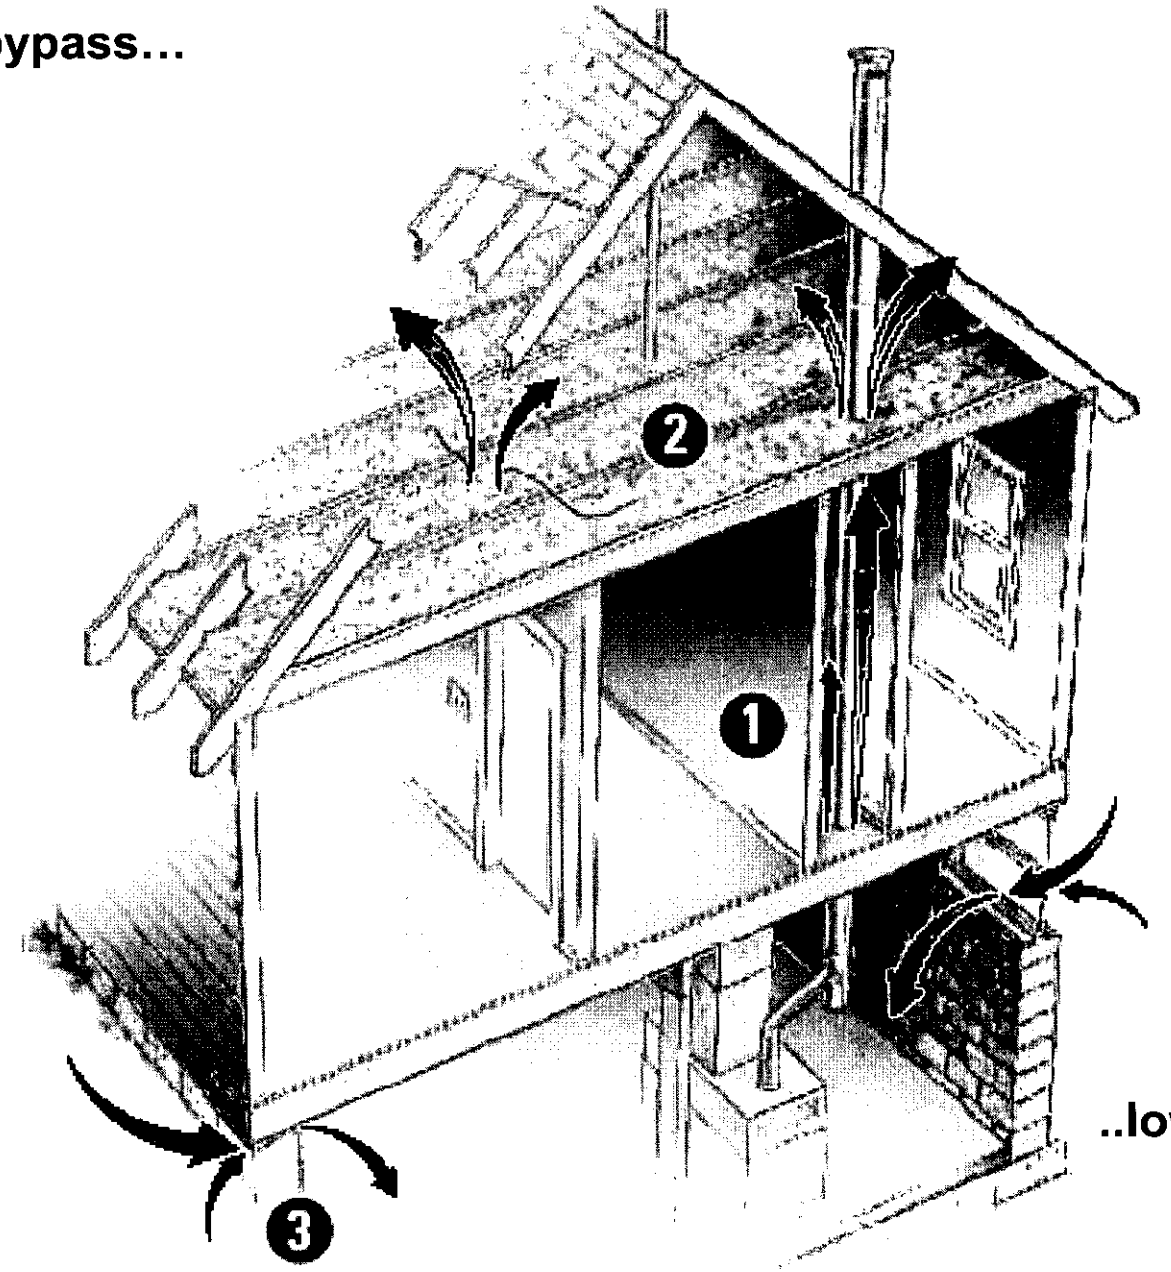
Seal high...



...and seal low

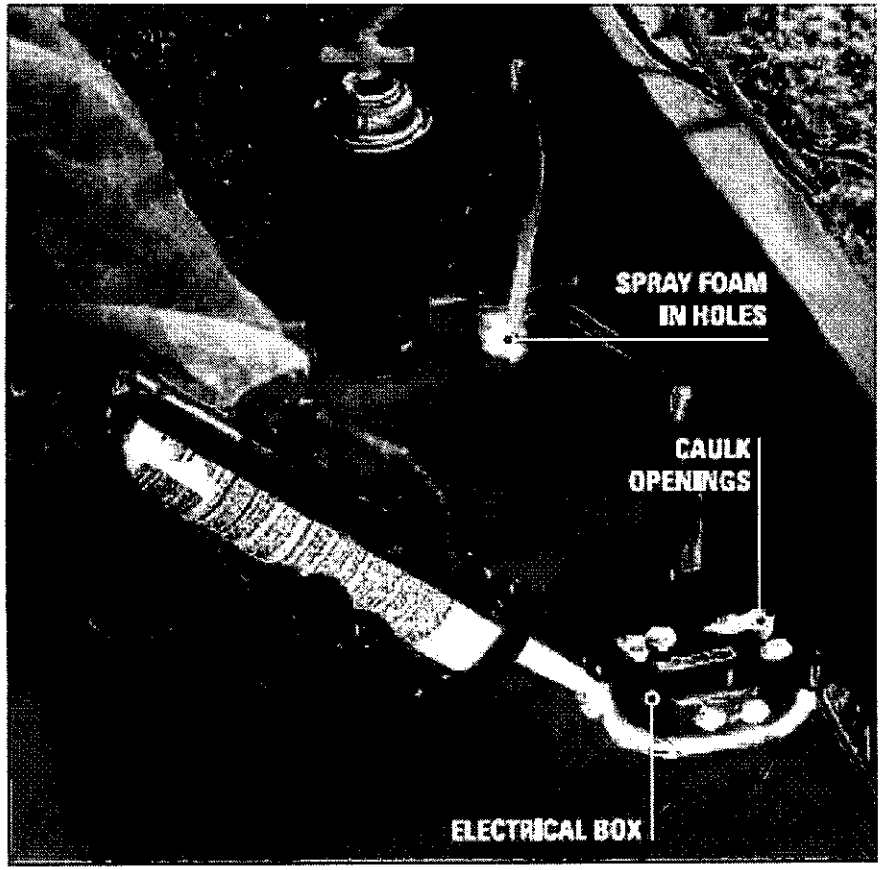
8. FIND ATTIC BYPASSES

The attic bypass…

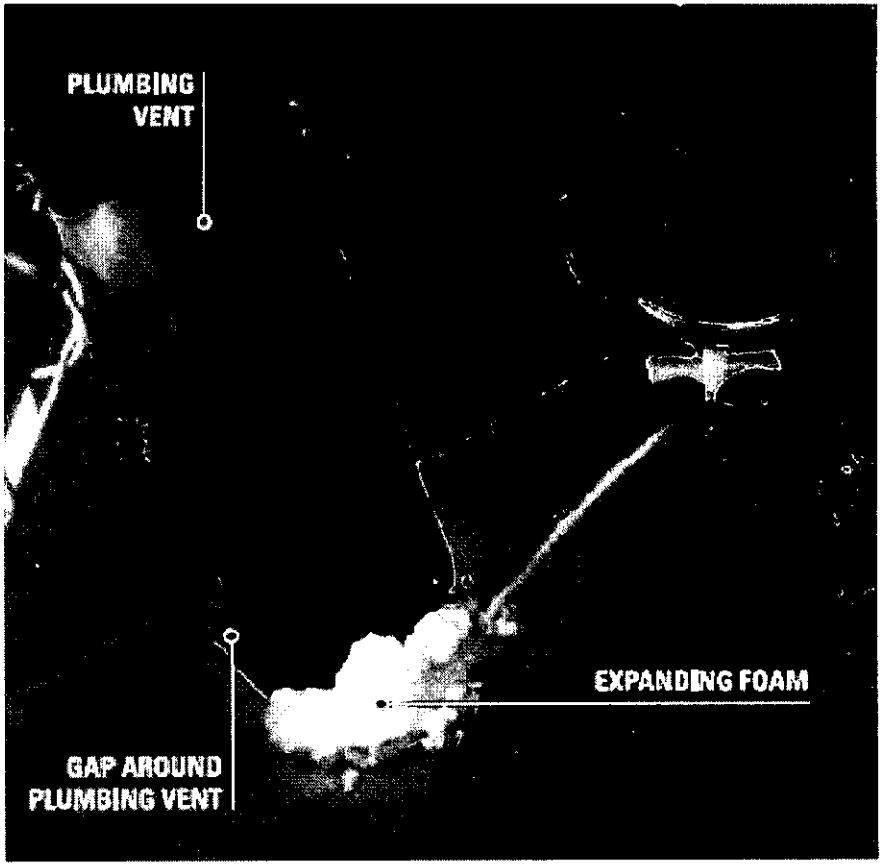


..low leaks exit high

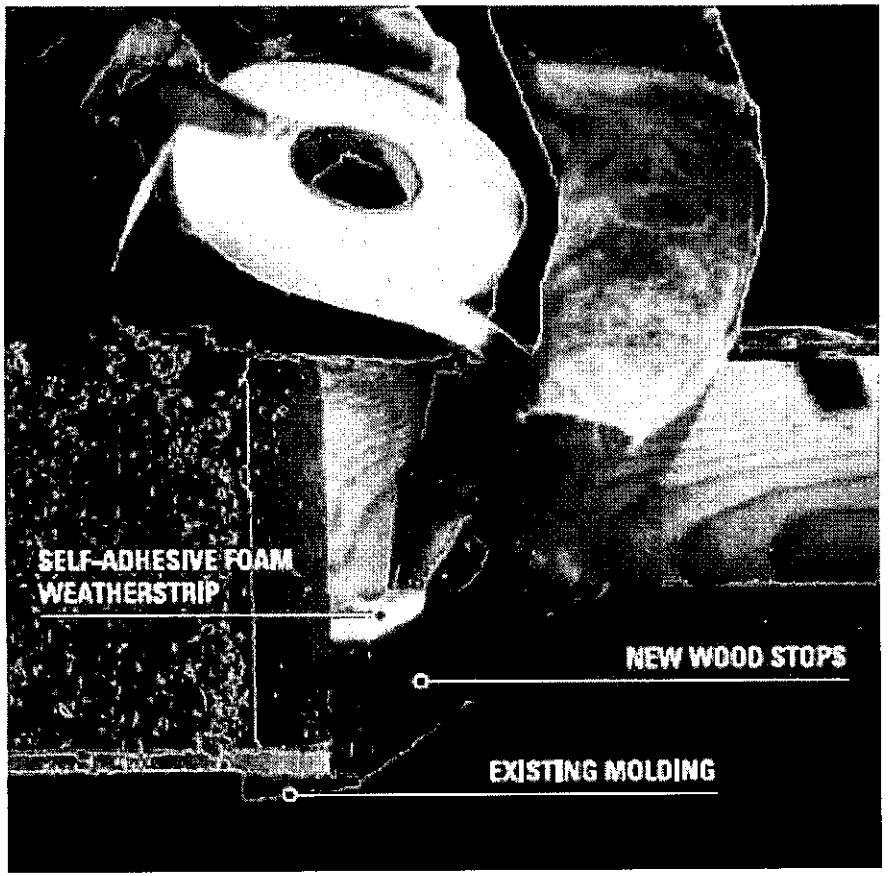
9. FILL HOLES WITH CAULK



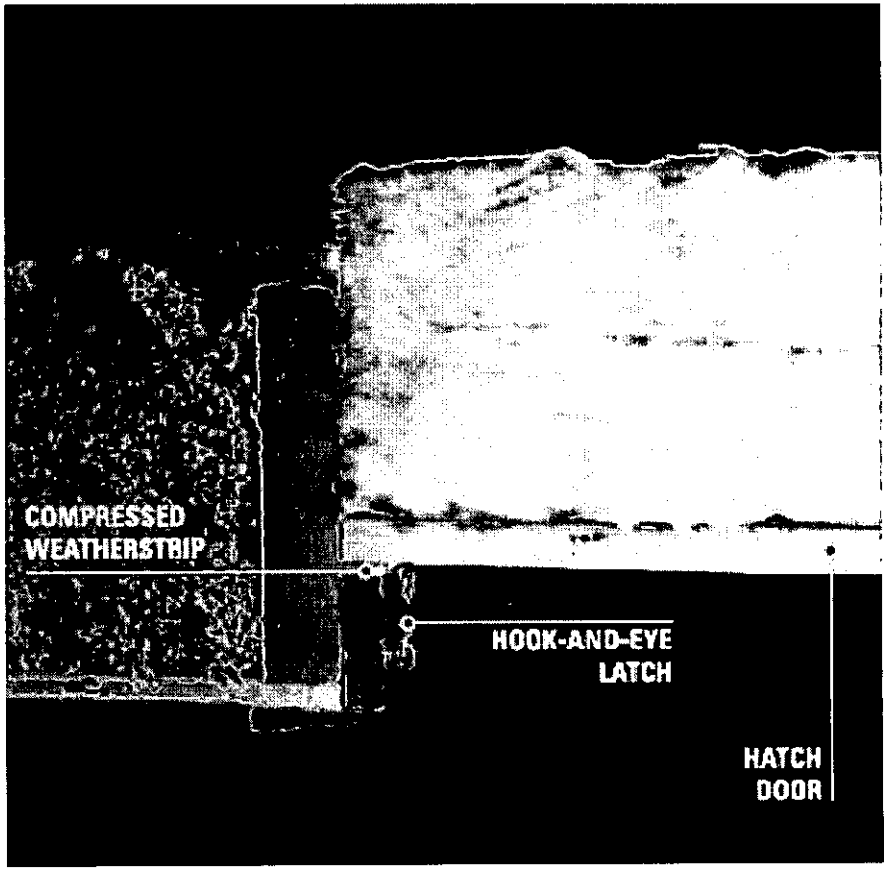
10. STUFF GAPS WITH INSULATION



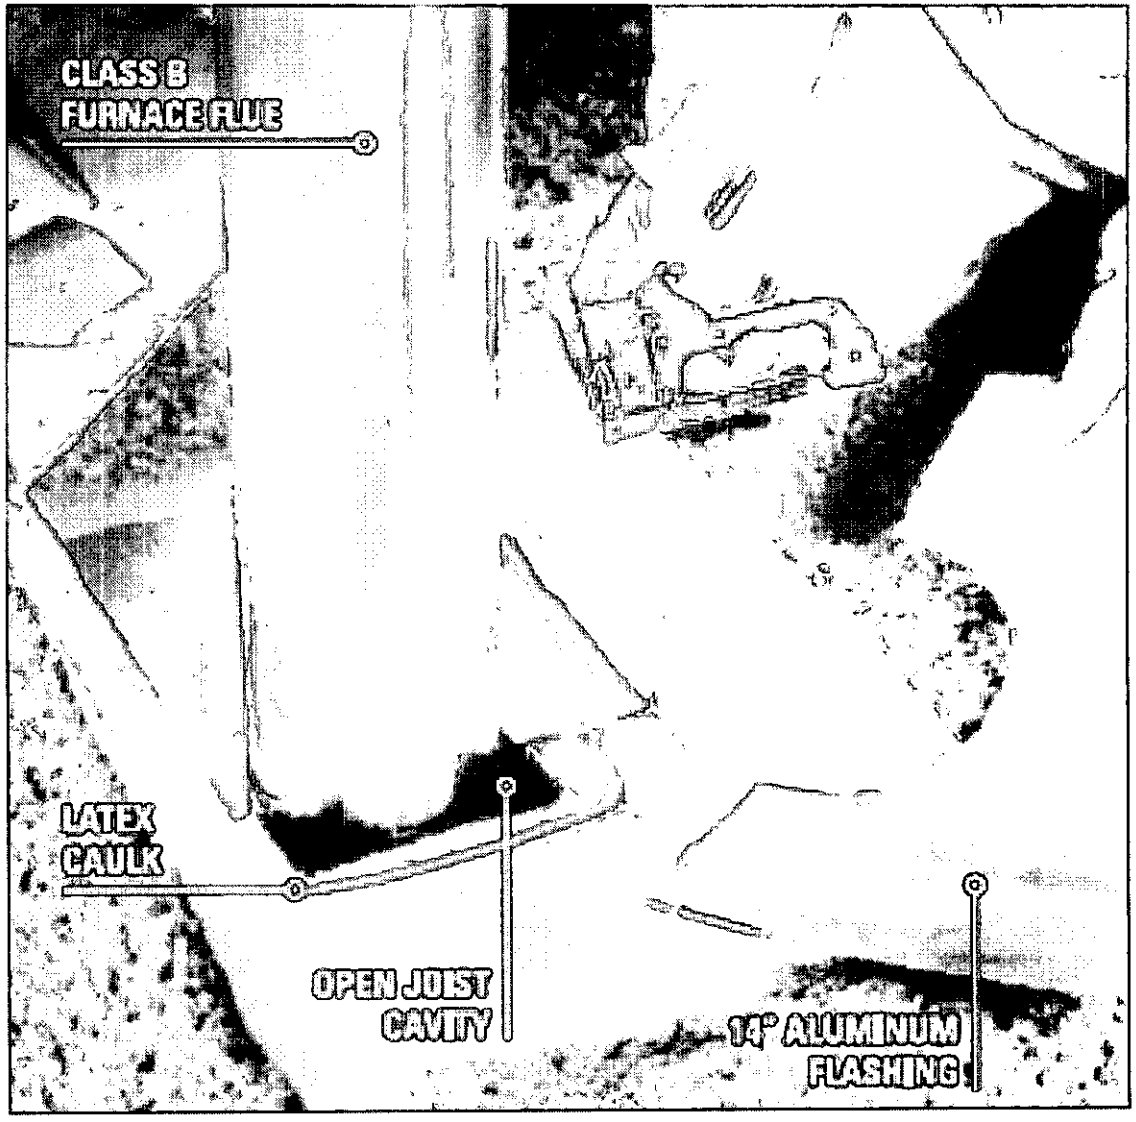
11. WEATHERSTRIP THE DOOR



12. ATTACH FASTENERS

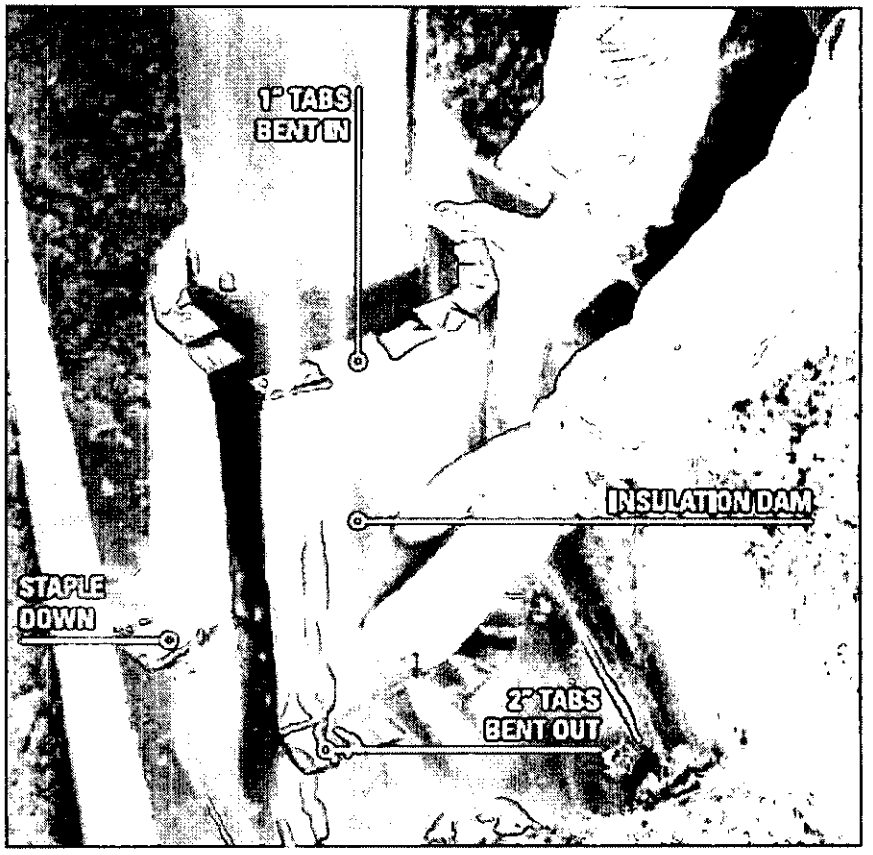


5. CUT ALUMINUM FLASHING



6. SEAL WITH SILICONE CAULK

7. FORM AN INSULATION DAM



...and seal low

Areas To Foam Or Caulk

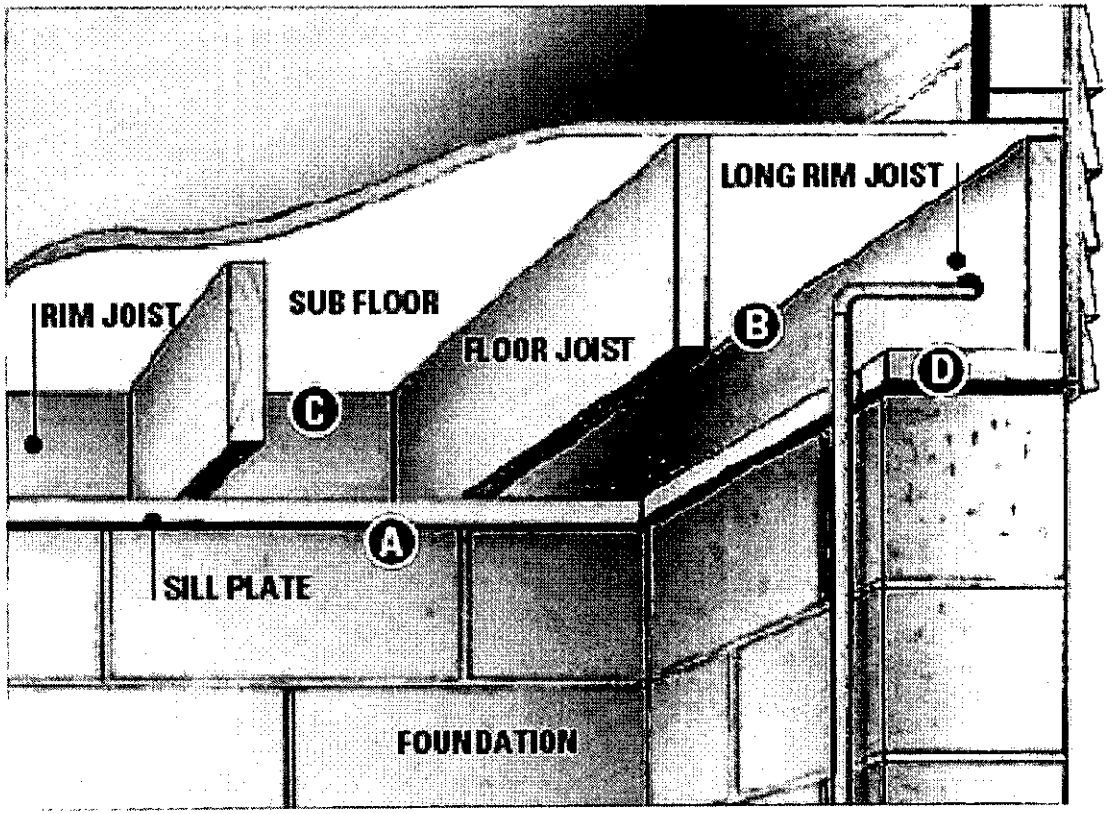


ILLUSTRATION BY DALE HOFFMEYER

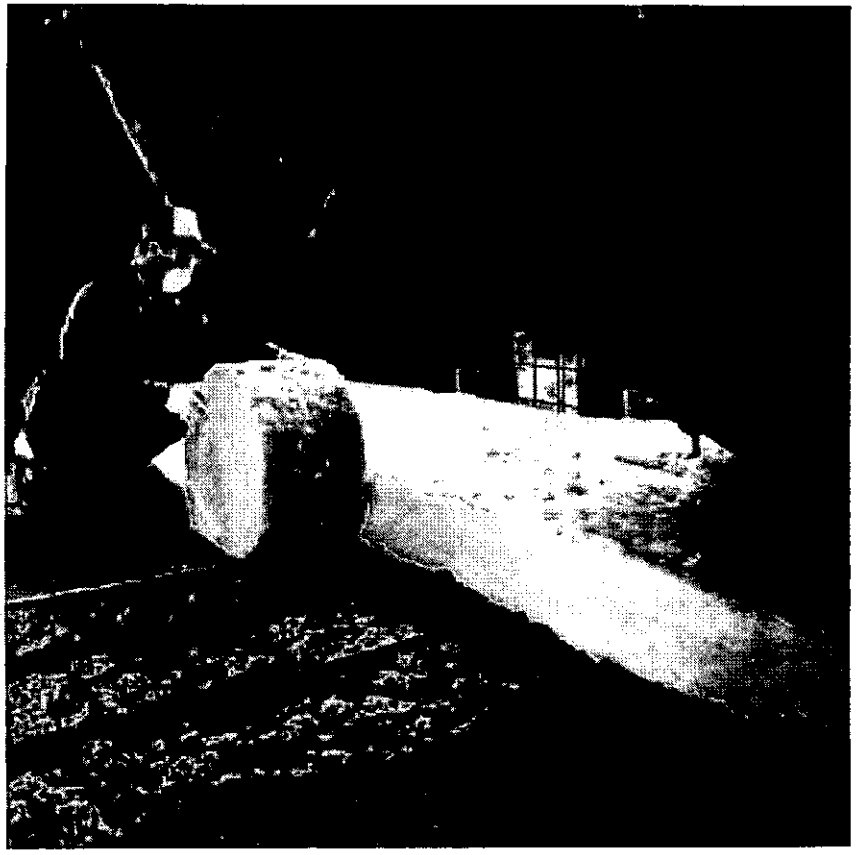
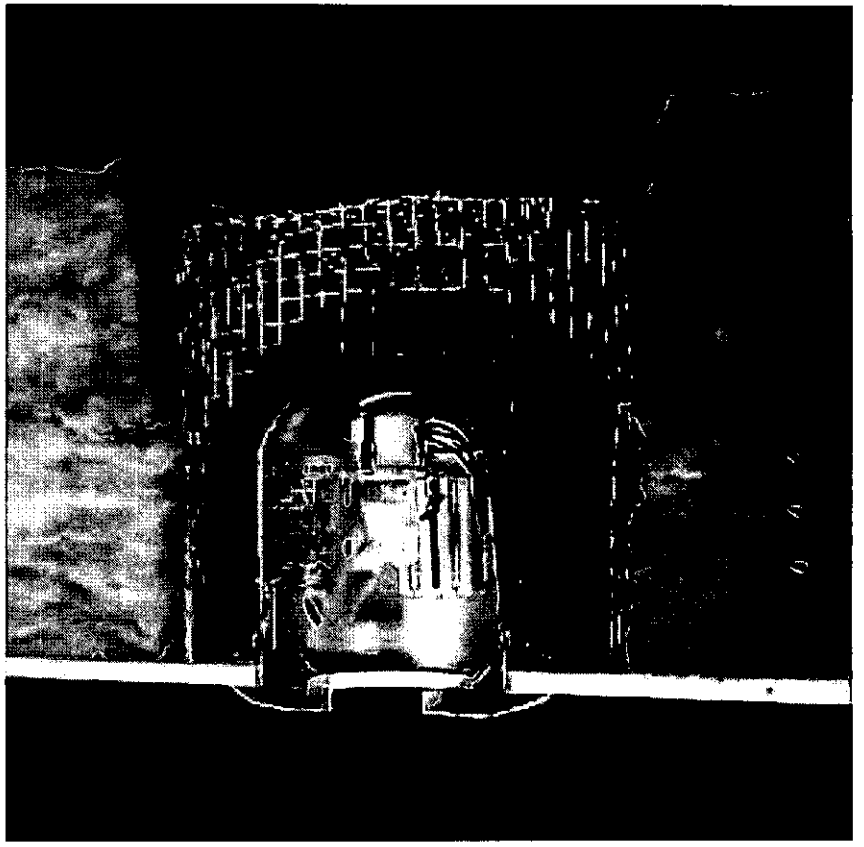
Sealed & Insulated Crawlspace

1. LAY FIBERGLASS ROLLS



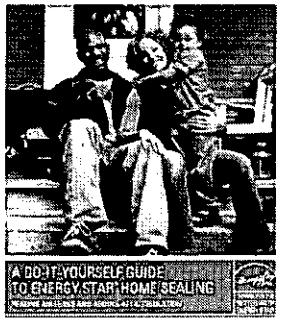
LAYER FIBERGLASS ROLL INSULATION PERPENDICULAR TO THE JOISTS.

2. CREATE A BARRIER



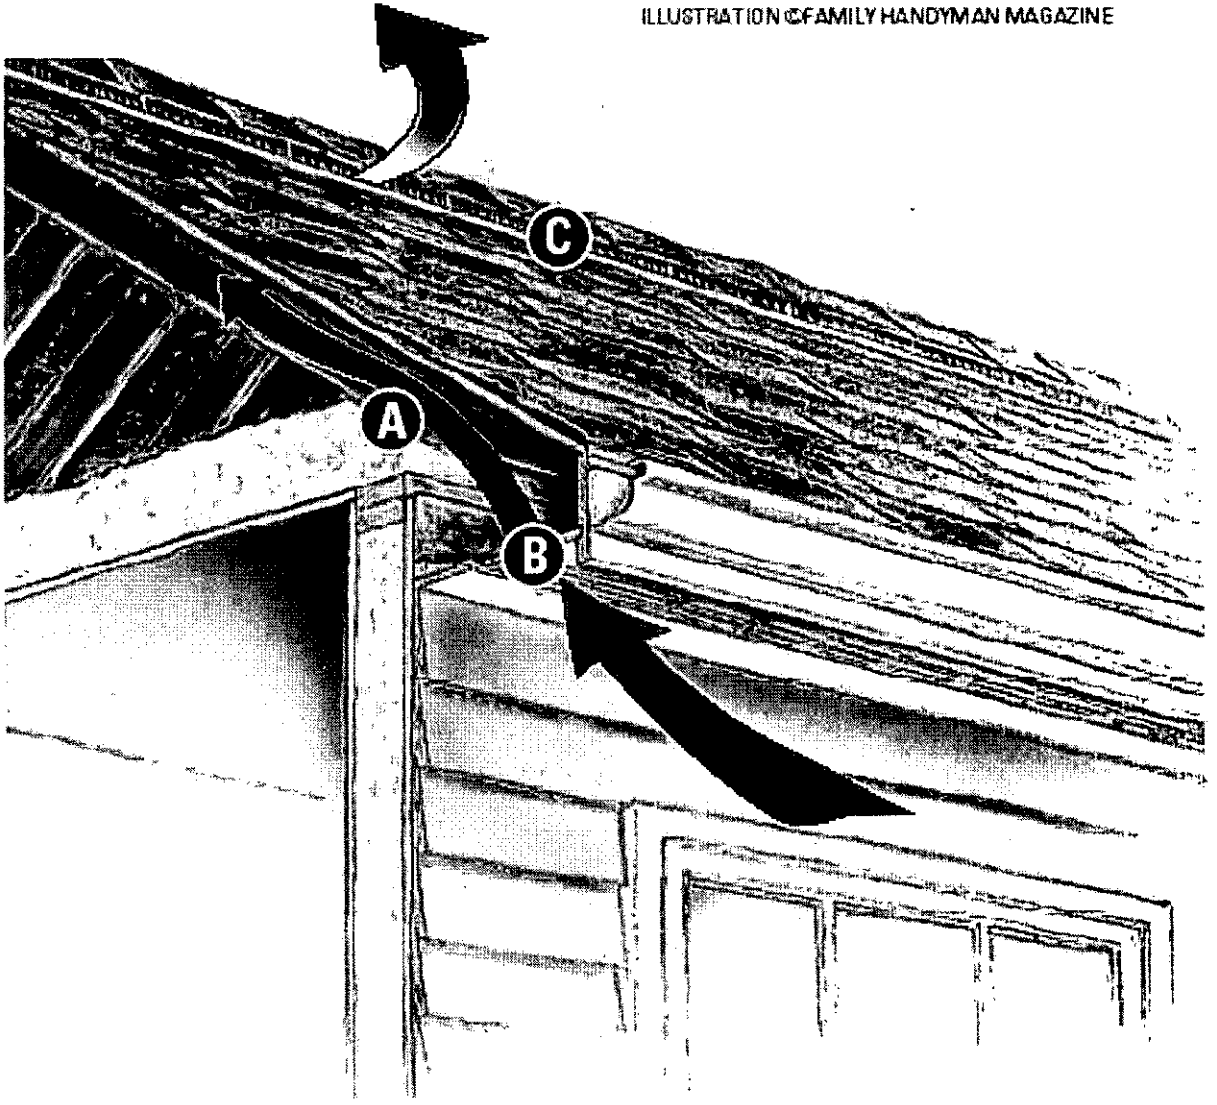
USE SHEET METAL OR WIRE MESH TO HELP CREATE A BARRIER AROUND FIXTURES OR VENTS.

Remember: Insulate AFTER sealing & weatherstripping!



USE A BLOWING MACHINE TO BLOW
IN LOOSE FILL INSULATION.

Attic/Roof Ventilation

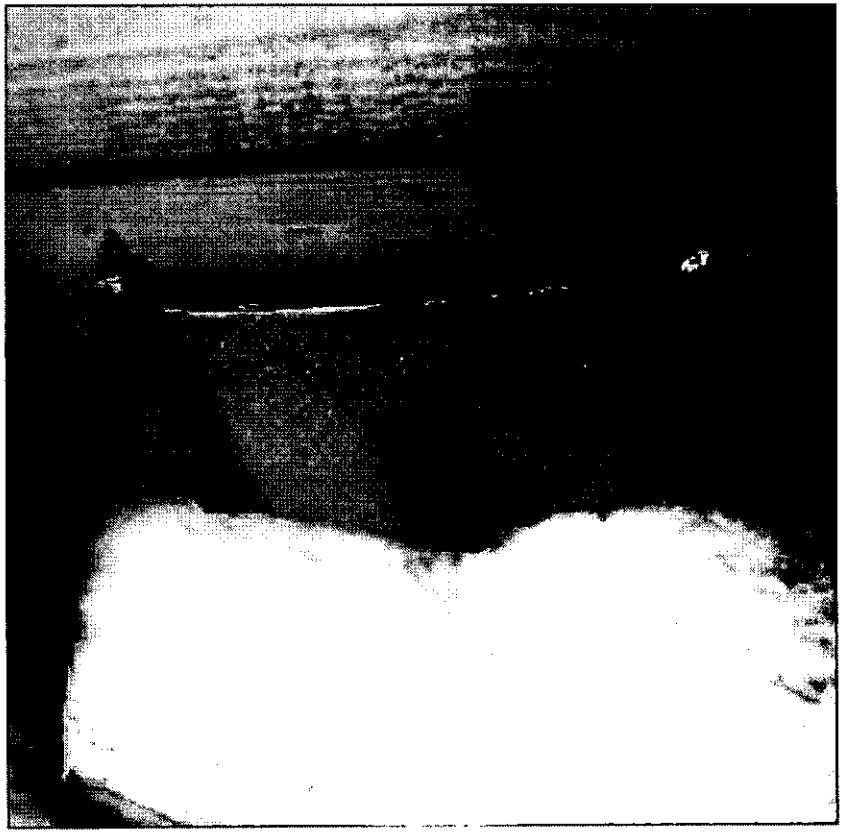


Attic/Roof Ventilation

3. PLACE RAFTER VENTS

PLACE RAFTER VENTS IN-BETWEEN THE RAFTERS WHERE THE CEILING MEETS THE FLOOR.

4. ADD INSULATION



ADD INSULATION AROUND THE RAFTER VENT AND OUT TO THE EDGE OF THE ATTIC FLOOR.

Typical Top Priority Items

- Caulk & seal air leaks high (between the ceiling and attic) and low (around the crawlspace or basement rim joist). Also seal around doors & windows.
- Add additional insulation to the attic, and crawlspace or basement walls.
- Get a heating & water heating system check up.

AND for health & safety:

- Install a quiet, energy efficient bathroom fan
- Make sure you have smoke & CO alarms
- Make sure you've met codes & standards

1-800-478-2432 or 1-907-338-6100

3/17/10 PRESENTATION: PROPOSED AGIA ROYALTY REGS

2760

Proposed AGIA Royalty Regulations

Senate Resources Committee

March 17, 2010

Agenda

- Introduction
- Major challenges valuing ANS gas in NA markets
- Overarching valuation principles adopted by DNR
- Valuation concepts and approaches
- Example of how to value royalty gas
- RIV/RIK switching issues and solution
- Value to producers

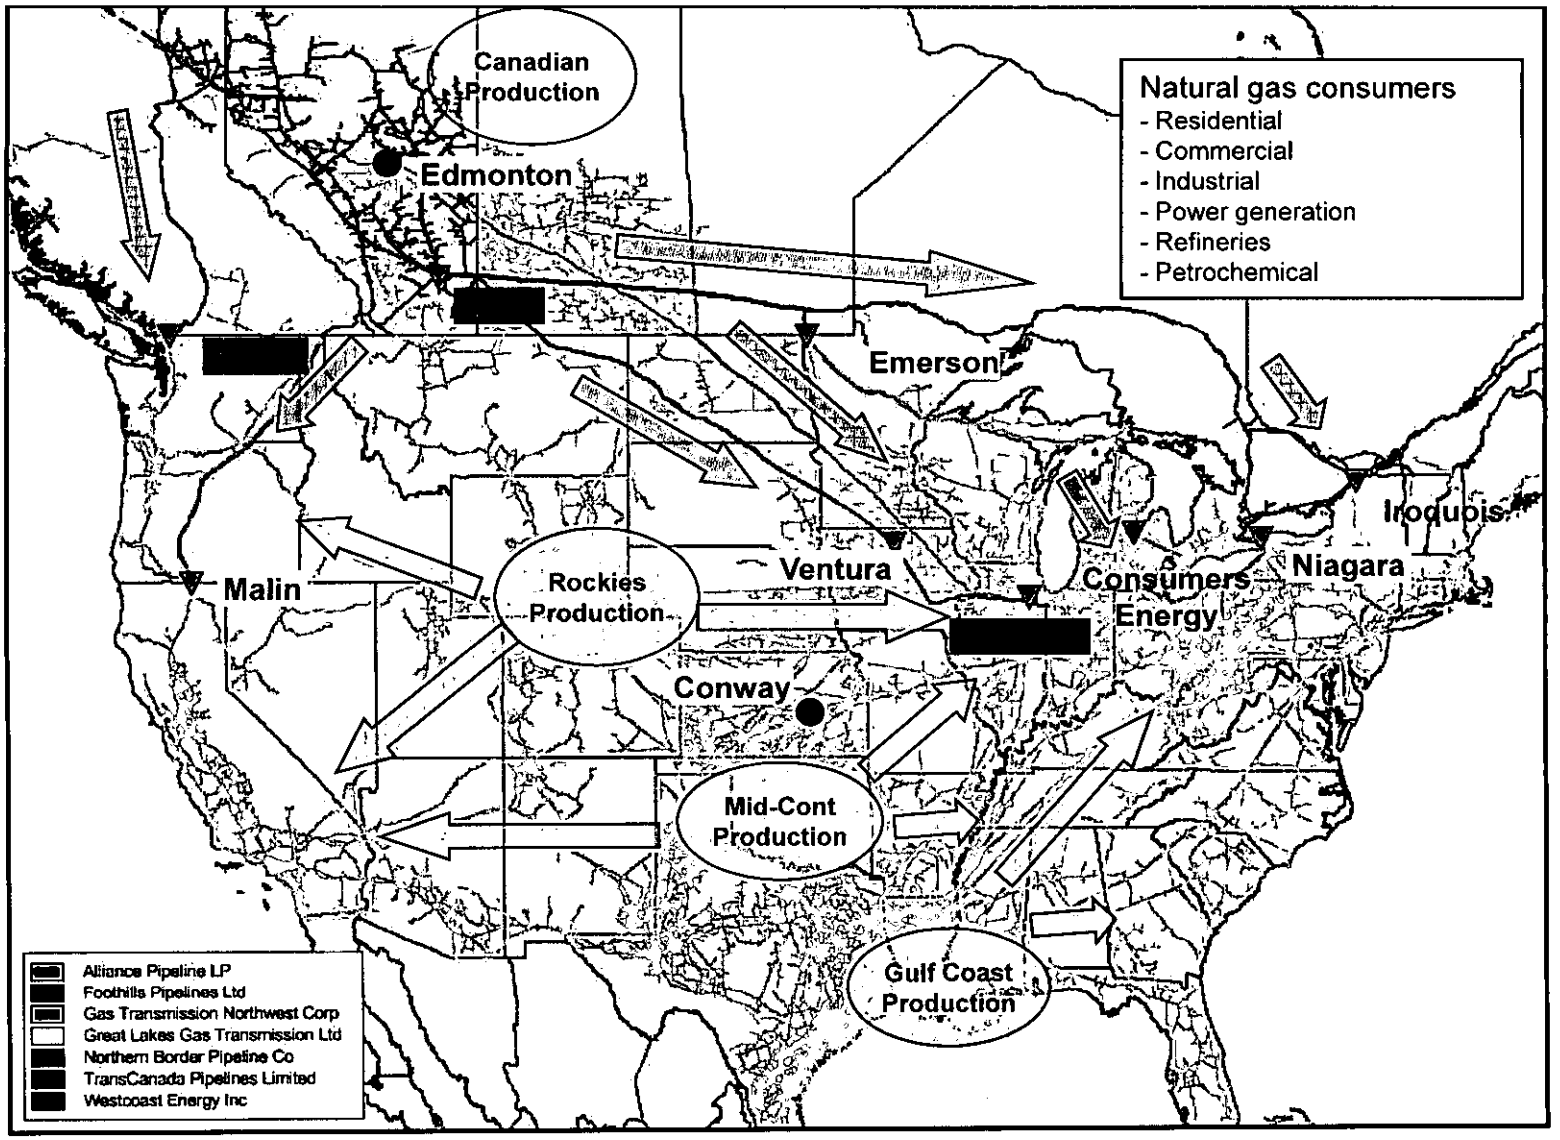
Overview of the AGIA Royalty Regulation

- Purpose of the regulation is to make offer to modify state lease contracts, consistent with requirements of the Alaska Gas Inducement Act (AGIA)
  - Establish method to determine "fair market value" (FMV) of the state's royalty share of gas production that increases clarity and predictability of royalty value
  - Establish terms under which the state will modify its ability to exercise current rights to switch between taking royalty in value (as money) or in kind (as gas), that reduces lessees exposure to stranded or insufficient transportation
  - Lessee who qualifies for royalty inducements can elect either (or both) Valuation or Royalty Switching provisions

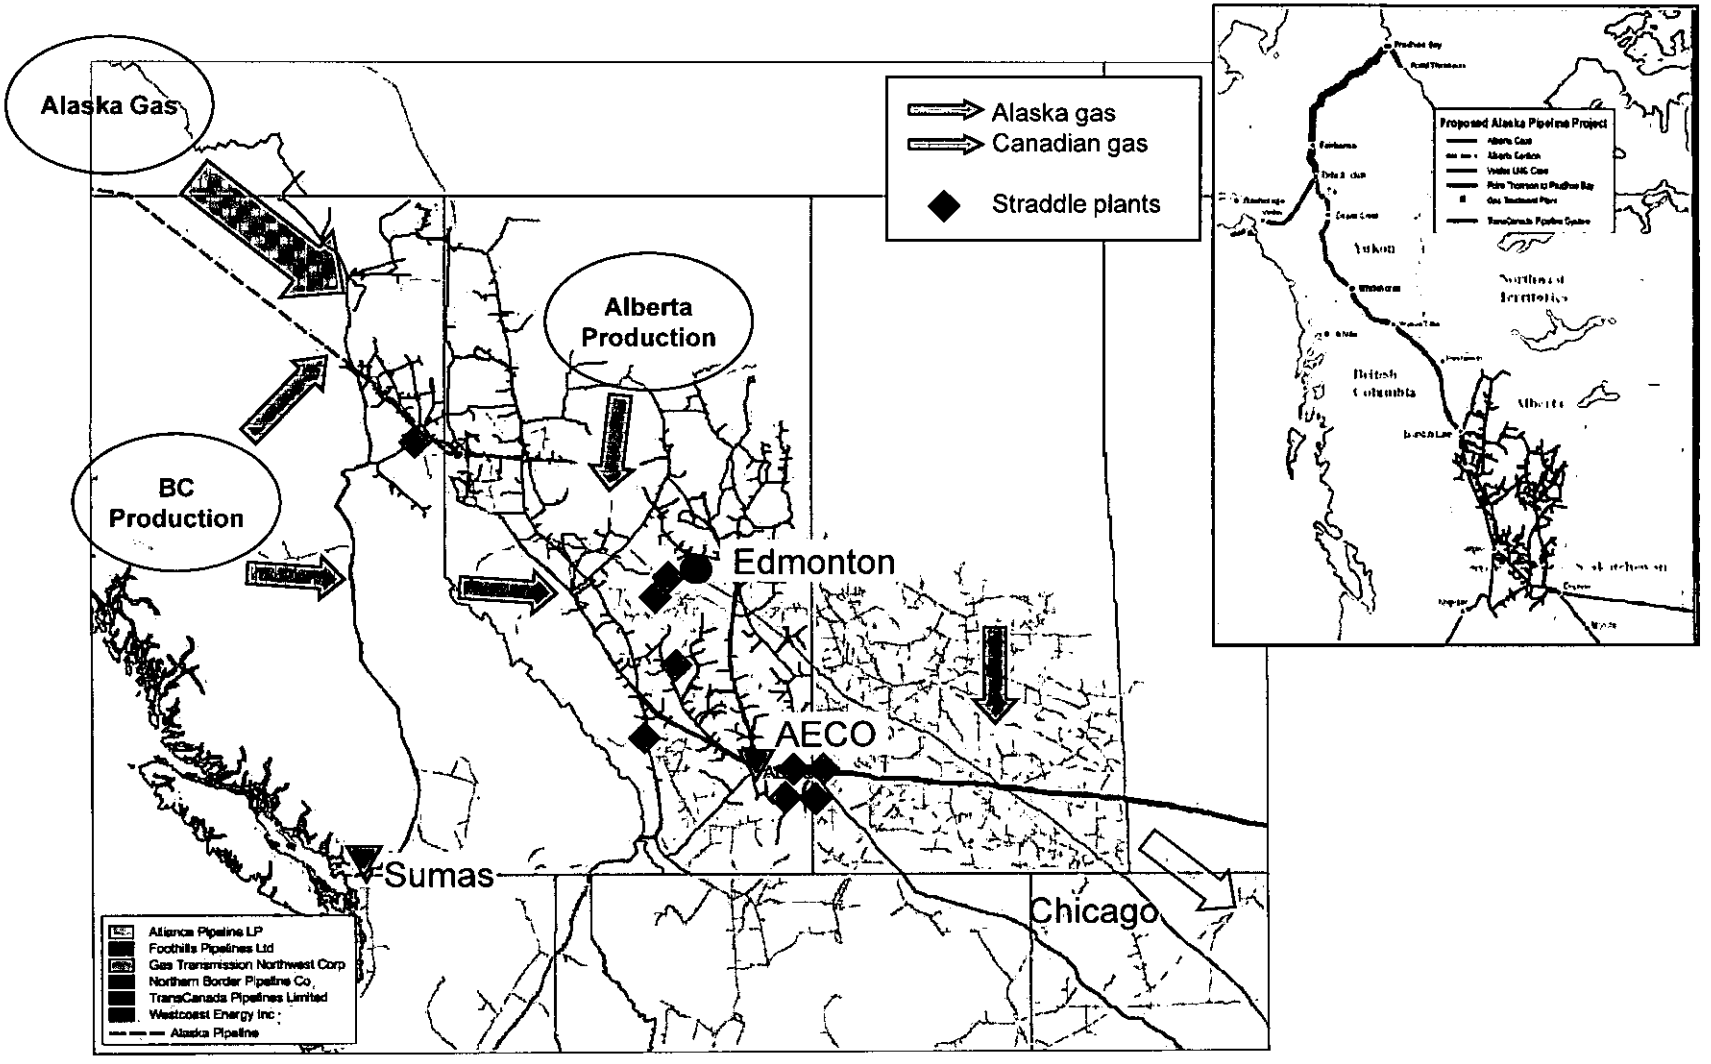
Requirements in AGIA

- Valuation regulations must:
  - Minimize retroactive adjustments in royalty value
  - Establish FMV based on reliable trade publications
  - Allow reasonable and actual deductions for transportation and processing
  - Allow for reasonable share of unused capacity
  - Allow deductions under the 1980 settlement agreement

Dynamic North America Natural Gas Market



NS Gas Commingled with Other Production



Natural Gas Liquids Have Value

CBM

	Volume		Price		Value
Residue (Mmbtu)	0.98	x	3.51	=	3.44
Ethane (gal)	-	x	0.26	=	-
Propane (gal)	-	x	0.64	=	-
Butane (gal)	-	x	0.75	=	-
Pentane Plus (gal)	-	x	1.21	=	-

Total Value of 1 Mcf

$3.44

* NEB report shows that British Columbia and Alberta have significant coalbed methane resources

Alberta

	Volume		Price		Value
Residue (Mmbtu)	1.02	x	3.51	=	3.58
Ethane (gal)	1.09	x	0.26	=	0.28
Propane (gal)	0.48	x	0.64	=	0.31
Butane (gal)	0.19	x	0.75	=	0.14
Pentane Plus (gal)	0.05	x	1.21	=	0.06

$4.37

* Alberta production composition is estimated based on information from NEB and EUB

PBU

	Volume		Price		Value
Residue (Mmbtu)	1.01	x	3.51	=	3.56
Ethane (gal)	1.28	x	0.26	=	0.33
Propane (gal)	0.70	x	0.64	=	0.45
Butane (gal)	0.16	x	0.75	=	0.12
Pentane Plus (gal)	0.03	x	1.21	=	0.04

$4.50

* Prudhoe Bay production composition is based on the report generated by PetroTel during the AGIA License Finding process.

Overarching Principles

1. Reduce lessee uncertainty
2. Maintain state's full royalty value
3. Incorporate natural gas industry practices to the extent doing so is consistent with (1) and (2)

Overarching Principle: Reduce Uncertainty

- Eliminate "higher-of" lease valuation terms
- Establish value based on published prices
- Minimize or eliminate retroactive adjustments
- Allocate volumes *pro rata* to increase clarity of gas value and costs of transportation and processing

Overarching Principle: Full Value Under Lease

- "Full Value" without gross proceeds
  - Gas components tracked; values separately established for residue gas, gas plant products, unprocessed gas, LNG
  - Published prices in destination markets establish value
  - Ability to update price publications, destination markets, location differentials
  - Valuation backstop "basket" ensures unrepresentative destination market published price doesn't distort FMV
  - No negative royalty
- *Pro rata* allocation of value and costs back to the lease establishes fair distribution and ensures full value

Overarching Principle: Incorporate Gas Industry Practices

- Use well established regulatory structure and methodology where practical to determine transportation costs (i.e. FERC)
- Use MMS regulations as a template
  - North Slope producers have extensive experience in complying with MMS gas regulations in Lower 48
  - Used as baseline; modified where necessary to reflect differences in circumstances of Alaska project

Key Valuation Concepts and Approaches

1. Destination where gas is valued
2. Publishing value at destination
3. Backstop measure of FMV for residue gas
4. "Actual and reasonable" transportation and processing deductions
5. Appropriate deductions for unused capacity

How to Determine Destination

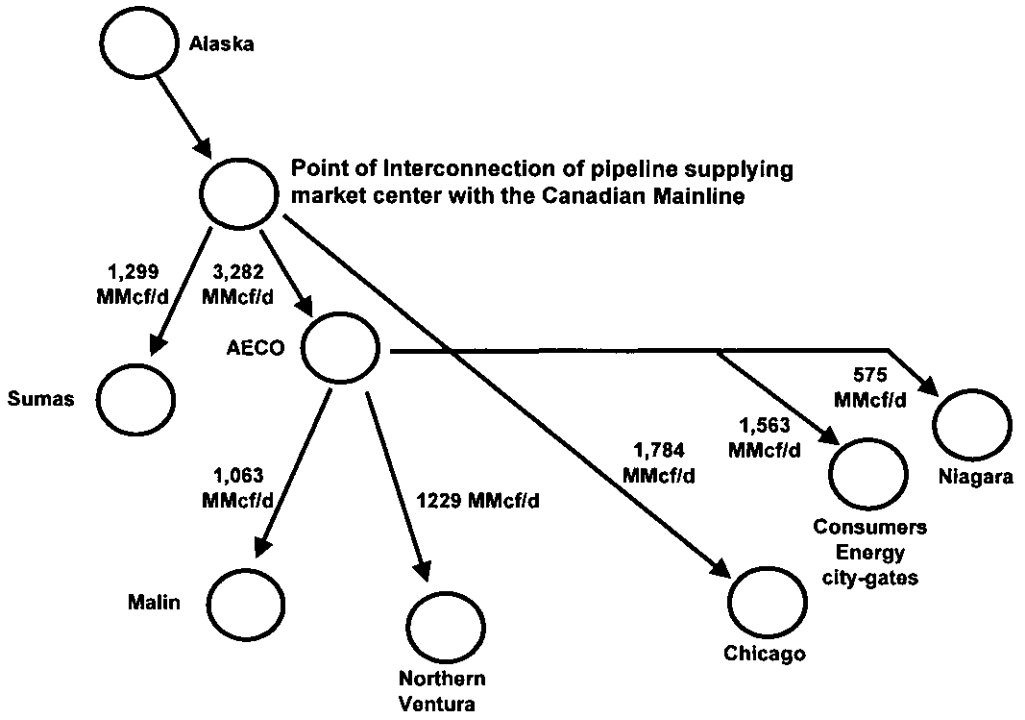
- A lessee's gas is valued for royalty at "Destination"
- A lessee's qualified gas is generally considered to be at "Destination" when it first:
    1. Enters a first destination market;
    2. Has been sold in an arm's length transaction; or
    3. Has been processed to extract residue gas and gas plant product
- "Destination values" are determined with reference to "first destination markets"
- First destination market is the first liquid market where ANS gas is physically transported to and bought, sold, processed, or regasified that has a reliable and widely available published price

Department to Publish Information Necessary to Determine Destination Value

- The department will publish on its website prior to the royalty reporting period:
  - The location of all First Destination Markets
  - The name of the source of the published price for residue gas, gas plant products at the First Destination Market
  - Appropriate location or quality differentials to establish FMV with reference to First Destination Market
  - Reasonable gas treatment, processing, or re-gasification cost allowances

Alternative Destination Value for Residue Gas

- Basket of published indices used to calculate a "backstop" fair market value to published index prices at destination markets
- Basket is relied upon only when the published price at a destination market is less than 95% of the basket price
- The alternative destination value protects the State from being locked in to a valuation rule that fails to reflect fair market value
- Pricing elements making up the basket determined by market liquidity criteria
- Basket reflects the volume weighted average of value received by the market



Actual and Reasonable Cost of Transportation and Processing - Non Arms Length Transactions

- Non-arm's length transportation cost allowance for Alaska and Canadian mainline is based on the terms proposed in the Open Season offer
  - If affiliated lessee negotiates a lower rate, then the transportation cost allowance will be based on this negotiated lower rate
- Other pipelines – Cost deductions calculated using FERC based cost of service methodology
- Generally follow MMS methodology to establish non-arm's length processing deductions

Deductions for Unused Transportation Capacity

- Unused capacity deductions were designed to balance the need to mitigate producers risk, but not expose the State to bearing unintended costs
- Deductions are allowed for Unused Capacity on Alaska and Canadian mainlines
- Unused Capacity = Allocated Capacity – Allocated Shipments
  - Allocated Capacity – Portion of firm transportation capacity acquired by lessee in first binding open season to transport production from state leases; measured with reference to actual state lease production
  - Allocated Shipments – greater of shipments of production from state leases or a pro-rata allocation of total shipments from all sources

Example – NS Gas Delivered to Alberta and Chicago

	Total
Value at Lease	**$ 190**

	Volume	Cost Rate	Total Cost
GTP Cost	96	1.00	$ 96

	Volume	Cost Rate	Total Cost
AK Pipeline (AK and Can)	94	3.00	$ 281
Alberta System	46	0.10	$ 5
Alliance Pipeline	45	1.00	$ 45
Transportation Cost			$ 330

	Volume	Cost Rate	Total Cost
Alberta	46	0.20	$ 9
Chicago	45	0.25	$ 11
Processing Cost			$ 20

RIK/RIV Switching Issue

- Under lease the State has the option of taking its royalty share of production either in kind (RIK) or in value (RIV). This option creates a risk for shippers.
  - If the State switches from RIV to RIK, shippers may have stranded capacity corresponding to the royalty volumes
  - If the State switches from RIK to RIV, shippers may not have sufficient capacity on a timely basis
  - Additionally, shippers' marketing arrangements need to be reconciled with the State's RIK/RIV election
- Given the substantial tariffs on the Alaska project, the potential exposure associated with the State's RIV/RIK option is significant

RIK/RIV Solution: "Capacity Follows the Gas"

- Switching from RIV to RIK:
  - State obligated to seek capacity corresponding to the State's RIK share (*"RIK Capacity"*) from the Producers via a pre-arranged deal
  - Released capacity will be acquired at original contract rates (state forgoes opportunity to get a better deal)
- Switching from RIK to RIV:
  - Capacity corresponding to the State's RIK share (*"RIK Capacity"*) reverts back from the State to the Producers at contract rates
- State requested and FERC approved a waiver to allow pre-arranged deals for FT capacity at contract rates, consistent with these terms
- Increase notice period for RIK/RIV switching
  - 120 days when between 100,000 & 200,000 MMbtu/d
  - 180 days when quantity is greater than 200,000 MMbtu/d

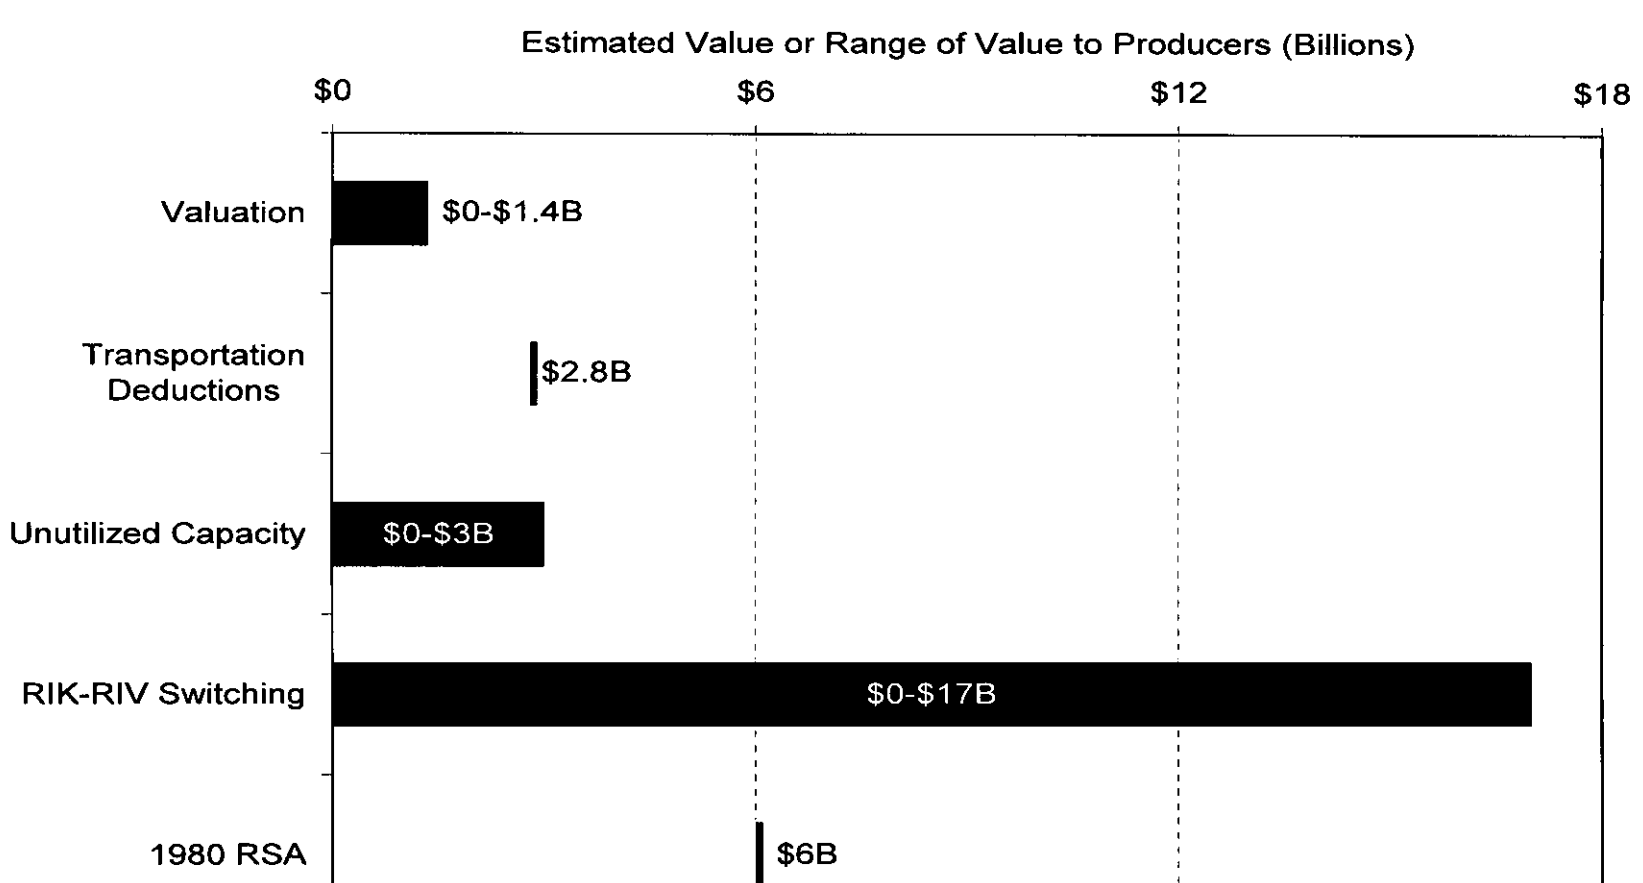
Value of Royalty Inducement to Producers

- The AGIA regulations provide value to producers while protecting State interests
- Some of the key provisions that provide value to producers include:
  - Valuation – moving away from "higher-of" provision
  - Transportation –
    - Adopting FERC-like approach for transportation deductions, rather than MMS-like approach
    - Allowing deductions for unused capacity
  - RIK/RIV switching – FERC waiver allows capacity transfer deal at contract rates

Aggressive Assumptions were Made to Establish Upper Bound of Value to Producers

- Recognize that the value of and need for these provisions may be lower depending on the facts of the project going forward:
  - Methane valuation – Assumed impact of moving away from "higher-of" provision is not offset by market basket concept
  - Transportation deduction for non-arm's length transactions – Assumed that alternative was MMS methodology
  - Unused capacity deduction – Assumed that no YTF gas is found
  - RIK-RIV switching - Assumed that entire royalty volume is switched from in-value to in-kind
- Very approximate estimates of the value to producers from provisions in the 1980 Royalty Settlement Agreement have also been shown here to provide a more complete picture of royalty value to producers

Estimated Value or Range of Value to Producers from Key Provisions in AGIA Regulations & 1980 RSA



4/7/10 CONFIRMA-TION: BRUCE TWOMLEY ACFEC

APR 0 7 2010

SENATE
CONFIRMATION COMMITTEE REPORT

Date: 4-7-10

In accordance with AS 39.05.080, the Resources Committee reviewed the following and recommends the appointments be forwarded to a joint session for consideration:

Alaska Commercial Fisheries Entry Commission
Bruce C. Twomley - Juneau
Appointed: 8/2/2005
Reappointed: 3/1/2006
Reappointed: 3/1/2010 Term Expires: 3/1/2014

This does not reflect an intent by any of the members to vote for or against the confirmation of the individuals during any further sessions.

December 29, 2009

The Honorable Sean Parnell
Governor of Alaska
P.O. Box 110001
Juneau, AK 99811-0001

Dear Governor Parnell:

Respectfully, I ask you to reappoint me to the Alaska Commercial Fisheries Entry Commission (CFEC). I would welcome the opportunity to help complete the substantial work in progress before CFEC.

Before Governor Jay Hammond first appointed me to the commission, I had 10 years' experience as a lawyer suing state and federal bureaucracies on behalf of Alaskans and also representing Alaska fishermen before the Limited Entry Commission. My experience made me sensitive to the effects of limited entry on Alaskans (especially rural Alaskans) and qualified me to help the Commission avoid unnecessary legal issues and controversy. Enclosed is a copy of my resume.

I believe limited entry is a tool for the development and protection of the resource, as well as a historic means to protect local jobs and families. We do everything we can under the law to help keep limited entry permits in the hands of Alaska's local residents.

Most recently, I served on an advisory panel for a study commissioned by the Bristol Bay Economic Development Corporation to explore the means to increase the number of limited entry permits held by local Bristol Bay residents. In part from my urging, the Bristol Bay Economic Development Corporation and the Bristol Bay Native Association earlier created their own local agency to protect and maintain limited entry permits in their local areas. And, for more than 10 years, I have advocated for local and regional groups to participate in a loan guarantee program with the State Commercial Fishing Revolving Loan Fund to help local residents acquire and keep limited entry permits.

Additionally, I have worked closely with the IRS to help keep limited entry permits in the hands of local people. To help provide Alaska fishermen a tool to achieve voluntary compliance with their federal tax obligations, I worked for passage of a bill reinstating the Tax Obligation Loan Program within the Commercial Fishing Revolving Loan Fund. As the result of my work with the IRS, the U.S. Treasury Secretary appointed me to the National Taxpayer Advocacy Panel (TAP), where I was elected chairman of the TAP Multilingual Initiative Committee, served from 2002-2006, and did my best to ensure that remedies for taxpayers under the 1998 IRS Reform Act continued to be available and known to Alaska commercial fishermen and other taxpayers.

At the request of an earlier administration, I was a principal author of the *Outline of Options for Fleet Consolidation in Alaska's Salmon Fisheries*, a paper to provide Alaska fishermen with fundamental information about various potential remedies for the crisis in Alaska's salmon fisheries.

The paper has helped fishermen take a realistic view of the various options and continues to be a basis for discussion of salmon remedies today.

In addition to these overriding issues affecting the rights and well being of Alaska fishermen, my primary focus at the commission is on our fundamental tasks. During the period I have served on the commission, the commission limited entry into some 35 fisheries (overall, some 68 Alaska fisheries are currently under limitation).

While limiting entry is always controversial, we have spent considerable time communicating with members of the industry in an effort to ensure actions by the commission are predictable and understandable. We believe the fishing industry deserves a climate of regulatory stability at a time when there are few other sources of stability in commercial fishing.

In addition to limiting fisheries, our primary responsibility is adjudicating the high volume of cases that has been before the commission. I have participated in and written more than 2,900 commission decisions. My experience enables me to do this work efficiently and to make our decisions stick: from 1996, in the course of 20 appeals from our decisions, the commission has suffered only 2 partial reversals by the Alaska Supreme Court. Reversals of limited entry decisions can have serious consequences, because the courts may apply them retroactively to open cases previously closed and thereby undermine limitations of entire fisheries. The attached chart shows our steady progress through commission cases (despite the continuous influx of new appeals from more recently limited fisheries).

CFEC's decisions affect people in such personal and emotional ways (much like decisions affecting our childrens' health and education) that our decisions are always controversial. Nonetheless, since 1982, the number of pending court appeals from commission decisions has dropped from approximately 150 to 9 today. (This reduction in court appeals is despite the fact that an applicant can continue to fish as long as the individual can maintain an appeal.) Fewer appeals save the state money and provide stability to the fishing industry. Additionally, fewer appeals is a measure of acceptance by those affected. Although we must often disagree with claimants, I believe generally they regard the commission as fair.

Protecting fishermens' rights and preserving our ability to perform the fundamental tasks of the commission present some creative opportunities to shape cases that we know will go to court. For example, our recent favorable decision from the Alaska Supreme Court in *Simpson v. State*, CFEC, 101 P.3d 605 (Alaska 2004), will protect permit holders and enhance the commission's ability to complete adjudications expeditiously.

In short, at the Entry Commission, we have work in progress that serves goals of your administration. I am asking you to please grant me the opportunity to complete these tasks.

Respectfully yours,

Bruce Twomley

Enclosure

LAW SCHOOL:	Hastings College of Law, San Francisco, California. 1967 - 1970. Graduated with J.D. in upper 15% of the class.
EDUCATION:	Northwestern University, Evanston, Illinois. 1963 - 1967. Graduated with A.B. in upper quarter of the class. Elgin High School, Elgin, Illinois. 1960 - 1963.
BAR MEMBERSHIPS:	Alaska State Bar California State Bar (inactive) United States District Court for the District of Alaska United States Court of Appeals for the Ninth Circuit

HONORS:

President's Volunteer Service Award. 2005
Alaska Legal Services Award. 1992.
Martindale-Hubbell highest (a v) lawyer rating. 1983
Alaska Legal Services Distinguished Service Award. 1983
Elected to Senior Men's Honorary, Northwestern (Deru).
Elected to Junior Men's Honorary, Northwestern (Norleggama).
Illinois State Scholarship Winner.
Elected Most Outstanding Male Graduate (Marie K. Ekvall Award), Elgin High School (student body: 2,000).

SELECTED PRESENTATIONS, PUBLICATIONS, AND PROJECTS:

2009 Advocacy: Served as a witness and consultant for the Office of Public Advocacy and Alaska Legal Services to ensure that applicants for Medicaid and SSI Disability were not unfairly denied benefits because they held an Alaska limited entry permit.

From 2006-2008, served on the **Guided Sportfish Task Force** (sponsored by the Sport Fish Division of the Alaska Department of Fish and Game).

In 2008, prepared and submitted a report on the status of permit adjudications for the **Alaska Department of Fish and Game's Northern Southeast Inside sablefish fishery industry meeting**.

In 2007, prepared and submitted a report to the **Southeast Alaska King and Tanner Crab Task Force** on the status of commission adjudications.

Throughout 2007, served on the advisory panel to a study commissioned by the **Bristol Bay Economic Development Corporation** to explore means to increase the number of limited entry permits held by local Bristol Bay residents.

Appointed by the U.S. Secretary of the Treasury to the **National Taxpayer Advocacy Panel** (served from 2002 through 2006; elected Chairman of the Multi-lingual Initiative Committee; worked to ensure that remedies provided for taxpayers under the 1998 IRS Reform Act continued to be available and known to Alaska commercial fishermen and other taxpayers).

Salmon Consolidation: Are Co-ops Dead Or Is Buyback Ahead? (panel presentation, Pacific Marine Expo, Seattle, November 2005).

Contributor and Editor of **Charting New Courses for Alaska Salmon Fisheries: The Legal Waters** (published by the University of Alaska Marine Advisory Program in November of 2003).

License Limitation in Alaska's Commercial Fisheries [at the request of former Governor Walter J. Hickel and the Institute of the North, wrote and presented a paper to the first Alaska meeting of the International Association for the Study of Common Property (IASCP), which has published the paper. August 2003].

Member, Advisory Panel for **An Analysis of Options to Restructure the Bristol Bay Salmon Fishery** (an independent study funded and published by the Bristol Bay Economic Development Corporation March 2003).

Status of Limited Entry Permits in Southeast Alaska Native Communities (presentation to the **Salmon for Success Summit in Juneau** sponsored by the Central Council of Tlingit and Haida Indians of Alaska. February 2003).

Presentation of Legal Issues in **A Workshop on Options for Restructuring Alaska's Salmon Fisheries at the University of Alaska in Anchorage** (sponsored by the Institute for Social and Economic Research, the University of Alaska Marine Advisory Program, and the Washington Sea Grant Program as part of the "Tools for the Salmon Industry Initiative." October 2002).

Commercial Fishing License Limitation in the State of Alaska: A Controversial System of Grandfather Rights (paper presented to and subsequently published by the International Institute of Fisheries Economics and Trade, Oregon State University, July 2000).

Fleet Reduction in Alaskan Salmon Fisheries (panel presentation, Alaska Salmon Forum '99, Anchorage).

Fleet Reduction in Bristol Bay Salmon Fisheries (panel presentation, Bristol Bay Native Association Forum, Anchorage, 1999).

Consolidating Salmon Fleets: Is Fewer Better than More? Different Alternatives to Managing Salmon (panel presentation, Fish Expo Seattle, 1999).

Coauthor, **Outline of Options for Fleet Consolidation in Alaska's Salmon Fisheries** (CFEC December 1998).

Contributor, **Limiting Access to Marine Fisheries: Keeping the Focus on Conservation**. Center for Marine Conservation and World Wildlife Fund U.S. 1994.

License Limitation in Alaskan Salmon Fisheries. Paper and panel presentation to Conference on Managing Marine Fisheries by Limited Access sponsored by World Wildlife Fund and Center for Marine Conservation. Annapolis, MD. 1992.

Getting and Keeping Alaska Limited Entry Permits in Local Rural Communities.

- Bristol Bay Native Association, Bristol Bay Fisheries Conference, Dillingham, 1992.
- Southeast Alaska ANCSA Economic Summit. Saxman, 1991.
- AFN Convention. Anchorage, 1991.

The IRS and Alaska Limited Entry Permits, University of Alaska Commercial Fishing Business Seminar, Federal Tax Impact on Commercial Fishermen. Anchorage, 1987.

Parental Involvement, Local Control, and Quality of Education, Alaska Native Education Association. Anchorage, 1981.

Alaska Native Control of Local Village Secondary School Programs, Lawyers Clinic on Parental Liberty in Education. Washington, D.C. December 1978.

SELECTED CASES, AND DECISIONS:

Simpson v. State, CFEC, 101 P.3d 650 (Alaska 2004). The Alaska Supreme Court affirmed the commission's optimum number decision for the Northern Southeast Inside sablefish fishery.

Crivello v. State, CFEC, 59 P.3d 741 (Alaska 2002). The Alaska Supreme Court affirmed a CFEC decision that advanced commission adjudications by limiting the extent to which the commission was required to grant additional hearings under *Forquer v. State*, CFEC, 677 P.2d 1236 (Alaska 1984).

In re Francis S. Carle, CFEC 96-003-P (1996). In the face of a demand by the Internal Revenue Service to force the transfer of a Southeast salmon herring seine permit held by a 61-year-old resident of Hydaburg, the commission (in a 96 page decision, including exhibits) declined to transfer the permit.

Wilson v. Watt, 703 F.2d 395 (9th Cir. 1983). Class action with co-counsel Kathleen Strasbaugh, sought preliminary injunction against Secretary of Interior James Watt to restore BIA general assistance payments to Alaska Natives.

Fairbanks Correctional Center Inmates v. Williamson, 600 P.2d 743 (Ak. Sup. Ct. 1979).

Ferdinand v. City of Fairbanks, 599 P.2d 122 (Ak. Sup. Ct. 1979).

Co-counsel for plaintiff class of 2,667 Alaska Native secondary school age children in *Tobeluk v. Lind* (known as the Molly Hootch case), 589 P.2d 873 (Ak. Sup. Ct. 1979), which by consent decree established the entitlement of Alaska Native children in 126 villages throughout the state to attend secondary school in their home villages and further required the state to expend more than $158-million for the construction of local secondary facilities.

Horton v. Horton, 519 P.2d 1131 (Ak. Sup. Ct. 1974).

Attorney for plaintiff class of Alaska Native women and minor children in *Finnesand v. Kleppe*, No. A75-42 Civ. (U.S. District Court Alaska), which by consent decree abolished a discriminatory eligibility standard for BIA General Assistance.

Represented more than 100 Alaska Native Allotment applicants before the Department of Interior. 1972-1982.

Attorney for the Akiak Indian Reorganization Act Council and parents of grade school children in *Akiak v. Lind*, No. 4BR 8-39 Civ.

Amicus Curiae (in cooperation with the Office for Civil Rights) in *The Matter of Alaska State Department of Education and Twenty-One Regional Educational Attendance Area School Districts* S-134, a proceeding before the Department of Health, Education and Welfare, to enforce Title VI of the 1964 Civil Rights Act on behalf of Alaska Native school children.

Resumé Addendum

I am seeking a second term reappointment to the Board on which I currently serve. I am an active member and feel that I am doing an excellent job in my position. I currently serve as a liason between the Board and the Department of Public Safety and I am able to look at the complicated issues that we face as a Board with fairness and experience. I have resided in many different areas within Alaska, including Palmer/Wasilla, Anchorage, Sand Point, Kodiak, Fairbanks Coldfoot and Soldotna. I have exparience in almost all aspects of the big game commercial services.

Press Release Wording

Robert Mumford, 55, of Anchorage has been reappointed to a four year term on the Big Game Commercial Services Board. Bob is a retired Alaska State Trooper/ Fish and Wildlife Protection Lieutenant and Commercial Pilot.

Submitted: 12/05/09 at 1:21 pm from 209.112.219.99

4/7/10 CONFIRMA-TIONS: BOARD OF FISHERIES

Claude V. Webster (Vince)
P.O. Box 121
King Salmon, AK 99613

Background:
I was raised on a farm in Indiana. My life dream was to go to Alaska. I joined the Air Force to support my family and was rewarded by a transfer to King Salmon, Alaska in 1978. There I was introduced to commercial fishing in Bristol Bay and the greatest Rainbow Trout fishing in the world. I was transferred to Elmendorf Air Force Base from 1979-1982 where I continued to enjoy the great outdoors. I was offered a job, in the maritime ship yards, on the west coast from 1982-1988. I purchased my first Bristol Bay set net permit in 1984. My wife (Sherry) and I moved our family (Troy and Derek) back to King Salmon in 1989 for a more intimate education. Our sons went on to graduate from Eastern Connecticut and Yale University with honors. We continue to reside in King Salmon and enjoy sharing our fishing operation with our sons and grand daughter every summer.

Work Experience:
1984-Present...Set gillnet operator in the Kvichak District of Bristol Bay.

2000-Present...Facilities & Maintenance Director for Lake & Peninsula School District.

2004-Present...Drift Gillnet Operator in the Naknek District of Bristol Bay.

1997-2000...Maintenance & construction for Katmia National Park.

1989-1990...Cannery construction for BKR & Associates at Cordova, Kodiak, Petersburg & Naknek.

1982-1988...Ship Repair Coordinator & Branch Manager for Donco Inc. in California & Washington.

1975-1982...US Air Force.

1978...Managed Air Force boat dock & operated Air Force charter boat at King Salmon.

Other Fisheries Experience:
Togiak Herring, Cinder River Salmon, Chignik Salmon, Bristol Bay Halibut and numerous sport fisheries throughout the state.

Volunteer Work:
Naknek/Kvichak Fish and Game Advisory Committee, over 15 years, Co-Chair.
Numerous fish committees & task forces.

Education:
Graduated Jennings Co. High School, Indiana 1974.
Versailles Vocational School, Indiana 1973 (While attending High School).
Air Force Aircraft Weapon's Release Systems Tech School 1976.

Resumé Addendum
RESUME Thomas G. Kluberton

Career Synopsis

Tom was elected to the Mat-Su Borough Assembly in October 2006 after serving two years on the Mat-Su Planning Commission. While on the Assembly, Tom Chaired the Mayor's Blue Ribbon Sportsman's Committee, and contributed his knowledge of the Department of Transportation and Public Facilities as a member of the Mayor's Blue Ribbon Road Service Area Task Force.

Alongside positions in local government, Tom owns and operates the Fireweed Station Inn at Sunshine, south of Talkeetna, with his wife. Originally built in 1946, their Inn is listed on the National Historic Register and was thoroughly reconstructed under Tom's direction between 1993 and 2003 when it opened.

He also served as financial and part-time operating partner in an equipment rental, greenhouse/nursery, and dirt-work business with his brother in the Talkeetna area from 1998 – 2000.

Since 1973 Tom has been handed complex business challenges, analyzed their component issues, spelled-out alternatives to management for resolving those issues, guided the team responsible for resolving the challenge to consensus in choosing the best alternative, and, managed numerous such projects to completion.

In April,1994 he joined a team of eight people with a good idea to create a network simulation and management software package. By August 1996, Netsys Technologies Inc. was selling a million dollars worth of software a month throughout the world. The company was sold to Cisco in Nov. '96 for $85M.

In 1991 as Director of Information Systems at the Alaska DOT&PF, Tom was responsible for implementing the State of Alaska's first Internet-like computer network interconnecting fourteen local networks in three Alaskan Cities. This implementation was designed and modeled on a computer before being implemented to ensure success.

As a consultant with Alaska's Department of Administration Information Resource Management Division Tom was involved in hundreds of information technology and networking projects in all aspects from technical and administrative reviews, to conducting full RFP procesess and project management.

Independent Consultant – dba Denali SoftWorks (1995 - 2003)

• Assisted GCI with Cable Modem product launch, analyzing the multitude of issues surrounding integration of broadband internet into their Cable TV organization
• Sat on Technical Advisory Board of Palo Alto based software development company that developed and sold large scale internetwork management and simulation software.
• Prepared initial U.S. Patent document for internetwork management and simulation software package
• Assisted AIDEA in for with various computing-related projects
* Performed Process Review of technology acquisition cycle for ARCO Alaska Inc

NETSYS Technologies Inc. (3/94 - 8-95)
Director, Market Research & Third Party Vendor Relationships

* Responsible for establishing strategic relationships with Third Party consulting firms selected for demonstrated expertise in computer network
* Provided product requirements input to software development team based on experiences delivering client server applications and via research into market demand and trends.

Alaska Department of Transportation and Public Facilities (1987 - 1989)
Director, Information Systems (& '91 - '93)

* Implemented statewide Management Reporting system including the state's first Internet-type TCP/IP network
* Performed initial analysis, conducted RFP process and managed contractor's development of Billing System for $200 million/yr Federal Aid highways program.
* Managed RFP process and managed implementation of department wide Asset Management Application to manage maintenance of two international airports and state equipment fleet of 6800+ vehicles.

Unisys Corporation (1989 - 1991)
Sr. Account Representative

* Drove sales effort to broaden State of Alaska IBM Mainframe network (SNA/SDLC) capabilities to Open Networking (TCP/IP). Presented concepts to all levels of government from cabinet to network technicians in effort to raise awareness of the need to move from outdated technology.

* Managed accounts for all public sector customers in Alaska.

Alaska Department of Administration (1984 - 1987)
Manager, Data Center Customer Services

* Managed all customer interface requirements for large IBM Mainframe center including implementation of chargeback system, planning and microcomputer acquisition process.
* Sat on committee in review of all State of Alaska technology acquisitions.
* Managed all end-user computing support staff.
* Provided consulting services to all State of Alaska agencies as needed on computer projects, primarily project management and acquisition issues.

Crown Zellerbach Inc. (1980 - 1984)
Wilson Foods Inc. (1978 - 1980)
Continental Oil Co. (CONOCO) (1973 - 1978)
IBM Mainframe Application Development and Systems Programming

* Implemented Stock Transfer system at CONOCO, first U.S. Corp. to be its own Transfer Agent.
* Supported Order Entry and Invoicing applications
* Performed all aspects of Systems Programming: SNA network and operating system support
* Application analysis, programming and project management

Education

Bachelor of Business Administration - University of Oklahoma, 1973

Press Release Wording

Tom Kluberton, 58 of Talkeetna, owns Fireweed Station Inn, was an Member of the Mat-Su Borough Assembly, a political appointee under three governors, and, has a bachelors degree in Business

Submitted: 02/21/10 at 10:54 pm from 216.137.239.1

4/7/10 CONFIRMA-TIONS: BOARD OF GAME

Grussendorf, Ben /Resume/
Game, Board of Game

Ben Grussendorf
1221 Halibut Point Road
Sitka, AK 99835

Personal:

Date of Birth: February 23, 1942 (Grand Rapids, Minnesota)
Spouse: Karen
Children: Tim and Karla

Education:

High School: Grand Rapids Minnesota.
College: Bachelor of Arts degree from University of Minnesota,
Master of Arts degree from University of Minnesota
Post-graduate work with Washington State University

Governing Experience:

Served in the Alaska House of Representatives from 1980-00, in various capacities including: Speaker of the House (1985-87, 1987-88, 1991-92); Chair of the Rules Committee, member of the Finance Committee, and the Special Committee on Fisheries.

Also served two terms as Mayor of the City and Borough of Sitka, and two terms as Sitka City and Borough Assembly Member.

Served as a member of the Alaska Municipal League Legislative Committee; President of the Alaska Conference of Mayors; Chair of the Municipal Finance and Utility Committee; Chair of the Sitka Charter Commission; and member of the National Education Association.

Teaching Experience:

Teacher and instructor in national, state and local government/social sciences at Sitka High School and Sitka Community College.

Service Organizations and Membership:

Lions Club, Sitka Chamber of Commerce, Alaska Native Brotherhood, Elks, Moose, Pioneers of Alaska, Sons of Norway.

Special Interests:

Hunting, fishing, wildlife viewing, exploring with the hound, public service.

Game, Board of **Allen Franices Barrette**

Conflict of Interest

Certain boards and commissions require full disclosure of personal financial data under AS 39.50.010. If required for the board or commission for which you are applying, are you willing to do so?
Yes

Could you or any member of your family be affected financially by decisions to be made by the board or commission for which you are applying?
No

Please explain the potential financial benefit

Employment History

Employment work history including paid, unpaid or voluntary.
Owner/Operator of Fairbanks Fur Tannery for the past 17 years.

Education, Training, Experience & Qualifications

List both formal and informal education and training experiences:
1983 was certified in artificial insemination,1984 graduated high school,1992 completed apprenticeship program for heavy duty diesel mechanic,4 credit hours left on a associates degree automotive technician.

List any professional licenses, certifications, or registrations and dates obtained that may be used as qualifying criteria:
Business license, Fur Tannery/Taxidermy License, Class A assistant guide Licence, Importer/Exporter License, All Licenses listed are current.

List any community service, municipal government, and state positions held, and any awards received.
2005 Was elected to the Fairbanks Fish and game Advisory Committee and appointed chairman of the trapping subcommittee. Still hold that same seat currently.

Conviction Record

Have you ever been convicted of a misdemeanor within the past five years or a felony within the past ten years?
No

barrette@gci.net

I and my family have been Alaskan Residents for 21yrs. Since we chose to move to Alaska we've never thought of living anywhere else. This is the greatest state in the union. We have enjoyed all that Alaska has to offer. From the greatest hunting, fishing, and trapping opportunities, too some of the greatest sights known to the world. I and my family have always been consumptive users of most of Alaskan resources. We count it a blessing everyday that we manage its resources for the maximum benefit of its people and for its conservation. I believe its my time to step up if the honor be bestowed to me. To serve at the highest level of public participation, The Board of Game. I will bring my vast knowledge of conservation of wildlife my understanding of urban and rural social issues, my ability to listen and learn about issues that will come up that I have no or little experience with. I am able to understand and use The Alaska Fish & Game Law and Regulations to resolve situations. I'm a very pro predator management and believe the Department of Fish & Game should have all the tools necessary to manage predator and ungulates alike for sustained yield. We should be wise stewards of all our resources. As our local Department of Fish & Game can attest I'm very interested in why, how, or their ideology on management of Fish & Game.
If afforded this opportunity I would continue to what I believe is the best public process of regulating and managing users and game for the state for all current users and the future generations.

Family- Married wife Laura in 1987 (22 years), Raising 3 children all born in Fairbanks Jacob 17, Mickinze 14, Ashley 10,

Education- 1983 was certified in artificial insemination,1984 graduated high school,1992 completed apprenticeship program for heavy duty diesel mechanic,4 credit hours left on a associates degree automotive technician.

History-
Born 1965 Dollar Bay Michigan (43yrs)
Native American, Keweenan Bay Indian Community
1979 hire as dairy farm hired hand
1982 promoted to dairy herdsman
1984
1983 Joined the US Army as a vehicle mechanic, served in Washington state, South Carolina, Germany and Alaska was my last duty station.
1987 Reenlisted to be stationed in Alaska
1993 Was honorably discharged from an injury
1993 Became a disabled vet
1993 Started and operated Fairbanks Fur Tannery, 1st commercial tannery in the interior which I still continue
1995 Became involved in making proposals and learning the B.O.G process
1995 seriously started supplementing our family income from trapping
2002 Purchased the Alaskan No. 9 trap Co. And continue to manufacture the Alaskan wolf trap
2005 Was elected to the Fairbanks Fish and game Advisory Committee and appointed chairman of the trapping subcommittee. Still hold that same seat currently.
2006 Received first gunners permit in the predator control program.
2007 Became a class A Big Game Guide.

Interest-

• Educating preservationist and less educated persons on why and how come I do what I do or the science or biology behind what the State or I do.
•Showing my family how to handle fish and game properly and only take what your going to use not necessarily the limit that is afforded to us, being good stewards of the land
•Educating young and inexperienced trappers to all facets of trapping
•Thinking outside the box when persistent or longtime dilemmas exist. i.e. social or urban/rural subsistence allocations
•Learning how biology works in conjunction with the management of game
•Trying to introduce ideas to our legislators pertaining to Fish and Game
•How to reduce regulations pertaining to Fish and Game when applicable
•Big game Guiding
•Taxidermy
•Trapping
•Hunting
•Fishing
•Camping and wildlife photography

Life Memberships-
•Alaska Trapping Association A.T.C,
•The National Rifle Association N.R.A

ANALYSIS: *(Attach a separate page if necessary)*

This bill would allow the Commercial Fisheries Entry Commission to share fisheries information and data with regional Alaska Regional Development Organizations (ARDORs). Currently there is an ongoing charge for this information from the Department of Fish and Game.

There is zero fiscal impact on the Department of Commerce, Community and Economic Development.

Senate Bill 3 – C.F.E.C. As An Information Source

Version 26-LS0018/A, February 5, 2009
STAFF: Tim Benintendi, 465-4989

SPONSOR STATEMENT and SECTIONAL ANALYSIS

SPONSOR STATEMENT:

SB 3 would allow ARDORs to benefit from commercial fishery and related information generated by the Commercial Fisheries Entry Commission (CFEC), at no cost. No confidential information may be disclosed, per AS 16.05.815.

There are eleven ARDORs (Alaska Regional Development Organizations) established under AS 44.33.895. These are non-profit organizations comprised of representatives of the economic, political, and social interests in each region. Their purpose is to encourage and assist economic development in their specific areas.

Eight ARDORs would especially benefit from this legislation: Southwest Alaska Municipal Conference, Bering Strait Development Council, Lower Kuskokwim Economic Development Council, Northwest Arctic Borough Economic Development Commission, Kenai Peninsula Borough Economic Development District, Mat-Su Resource Conservation & Development, Inc., Prince William Sound Economic Development District, and the Southeast Conference.

For these organizations, commercial fishing activities provide a substantial portion of their regions' economic base. To illustrate, the wholesale value of the 2005 commercial fishery exceeded $3 billion. Earnings of the 27,700 participating fishermen accounted for $1.2 billion. Another 22,500 persons participated in the seafood processing workforce, earning $277 million in wages. For coastal communities, approximately 37% of private-sector workers were employed in fish harvesting and seafood processing activities. CFEC information

can be critical for ARDOR understanding of economic trends in their regions, and development opportunities which may emerge.

The CFEC supports Senate Bill 3, and regards the loss of fees under this bill as negligible.

SECTIONAL ANALYSIS:

SECTION 1: Would amend AS 16.43.100(a) by adding to CFEC responsibilities, providing without charge to regional development organizations formed under AS 44.33.895, public information relevant to fisheries, participants in fisheries, permit holders' harvests, and earnings data. No confidential information would be released under Senate Bill 3.

FISCAL NOTE: Zero note from CFEC.

January 30, 2009

The Honorable Donny Olson
Alaska State Senator
State Capitol, Room 514
Juneau, AK 99801-1182

RE: SB 3 "An Act authorizing an Alaska regional development organization to use the Alaska Commercial Fisheries Entry Commission as an informational resource"

Dear Senator Olson:

We have reviewed SB 3 and support this legislation.

We understand that the intent of SB 3 is to allow Alaska Regional Development Organizations (ARDORS) established under AS 44.33.895 to request public information from the Commercial Fisheries Entry Commission (CFEC) fishery database without charge. As you know, CFEC has a wealth of public information regarding Alaska's commercial fisheries that we regularly make available upon request to any person or entity. However, there may be a fee required depending on the extent of the effort needed to provide the data. Under SB 3 we would provide data to ARDORS just as we would without this bill, however, without charge.

As a clarification, any CFEC public information available from CFEC data sources must comply with AS 16.05.815 "Confidential nature of certain reports and records." (See enclosed) Basically this statute prohibits the release of any individual fisherman's earnings and harvests obtained from fish ticket information unless aggregated to protect confidentiality. That prohibition is not affected by SB 3.

We do not believe SB 3 would be a significant impact on CFEC resources since there are a limited number of ARDORS and not all represent coastal areas.

Thank you for the opportunity to comment on SB 3.

Sincerely,

Frank Homan
Chairman

Enclosure

2816

(1) during the first full 10 days after the time when a taking is prohibited, except as provided in (3) of this section;

(2) if the fish or game or part of fish or game is in a preserved condition whether frozen, smoked, canned, salted, pickled, or otherwise preserved; or

(3) with respect to crab aboard a commercial crab fishing vessel, during the first full three days after the time when a taking is prohibited. (§ 26 art I ch 94 SLA 1959; am § 1 ch 42 SLA 1974)

Sec. 16.05.815. Confidential nature of certain reports and records. (a) Except as provided in (b) and (c) of this section, records required by regulations of the department concerning the landings of fish, shellfish, or fishery products, and annual statistical reports of fishermen, buyers, and processors required by regulation of the department are confidential and may not be released by the department or by the Alaska Commercial Fisheries Entry Commission except as set out in this subsection. The department may release the records and reports set out in this subsection to the Alaska Commercial Fisheries Entry Commission. The department and the Alaska Commercial Fisheries Entry Commission may release the records and reports set out in this subsection to the recipients identified in this subsection if the recipient, other than a recipient under (5) — (9) of this subsection, agrees to maintain the confidentiality of the records and reports. The department and the Alaska Commercial Fisheries Entry Commission may release

(1) any of the records and reports to the National Marine Fisheries Service and the professional staff of the North Pacific Fishery Management Council as required for preparation and implementation of the fishery management plans of the North Pacific Fishery Management Council within the exclusive economic zone;

(2) any of the records and reports to the professional staff of the Pacific States Marine Fisheries Commission who are employed in the Alaska Fisheries Information Network project for the purpose of exchanging information with users authorized by the department;

(3) any of the records and reports to the Department of Revenue to assist the department in carrying out its statutory responsibilities;

(4) records or reports of the total value purchased by each buyer to a municipality that levies and collects a tax on fish, shellfish, or fishery products if the municipality requires records of the landings of fish, shellfish, or fishery products to be submitted to it for purposes of verification of taxes payable;

(5) such records and reports as necessary to be in conformity with a court order;

(6) on request, the report of a person to the person whose fishing activity is the subject of the report, or to a designee of the person whose fishing activity is the subject of the report;

(7) on request, annual statistical reports of a fisherman, buyer, or processor to the fisherman, buyer, or processor whose activity is the subject of the report, or to a designee of the fisherman, buyer, or processor whose activity is the subject of the report;

(8) any of the records and reports to the Department of Public Safety for law enforcement purposes;

(9) fish tickets, fish ticket information, records required of sport fishing guides, and annual statistical reports of fishermen, buyers, and processors and information in those reports to the law enforcement personnel of the National Marine Fisheries Service and the National Oceanic and Atmospheric Administration for the purpose of enforcing fishery laws in waters of this state and in waters of the exclusive economic zone adjacent to this state;

(10) fish tickets, fish ticket information, and records required of sport fishing guides regarding halibut to the International Pacific Halibut Commission;

(11) any of the records and reports to the child support services agency created in AS 25.27.010, or the child support enforcement agency of another state, for child support purposes authorized under law; and

(12) any of the records and reports to the Department of Natural Resources to assist the department in carrying out its statutory responsibilities in regard to sport fishing operations and sport fishing guides within the Kenai River Special Management Area under AS 41.21.500 — 41.21.514.

(b) Except as provided in (c) of this section, records or reports received by the department which do not identify individual fishermen, buyers, or processors or the specific locations where fish have been taken are public information.

(c) Crab stock abundance survey information that reveals crab catch by sampling location is confidential and is not subject to inspection or copying under AS 40.25.110 — 40.25.120 until the close of the fishing season for which the survey was conducted.

(d) Except as otherwise provided in this section, the department shall keep confidential (1) personal information contained in fish and wildlife harvest and usage data; and (2) the records of the department that concern (A) telemetry radio frequencies of monitored species; (B) denning sites; (C) nest locations of raptors that require special attention; (D) the specific location of animal capture sites used for wildlife research or management; and (E) the specific location of fish and wildlife species. The department may release records and information that are kept confidential under this subsection if the release is necessary to comply with a court order, if the requestor is a state or federal agency, if the requestor is under contract with the state or federal agency to conduct research on a fish or wildlife population, or if the requestor has been authorized by the department to perform specific activities and agrees to use the records and information only for

purposes as provided under a contract or agreement with the department. After 25 years, the records and information that are kept confidential under this subsection become public records subject to inspection and copying under AS 40.25.110 — 40.25.140 unless the department determines that the release of the records or information may be detrimental to the fish or wildlife population. In this subsection, "personal information" has the meaning given in AS 40.25.350. (§ 1 ch 117 SLA 1970; am § 1 ch 117 SLA 1974; am § 1 ch 66 SLA 1980; am §§ 1, 2 ch 72 SLA 1982; am § 1 ch 84 SLA 1985; am §§ 1, 2 ch 115 SLA 1988; am § 1 ch 32 SLA 1989; am § 10 ch 200 SLA 1990; am § 1 ch 89 SLA 1994; am § 19 ch 87 SLA 1997; am § 1 ch 59 SLA 1999; am § 1 ch 119 SLA 2002; am § 5 ch 70 SLA 2004; am § 1 ch 41 SLA 2007)

Revisor's notes. — In 2000, in subsection (c), "AS 40.25.110 — 40.25.120" was substituted for "AS 09.25.110 — 09.25.120" and in subsection (d) "AS 40.25.110 — 40.25.140" was substituted for "AS 09.25.110 — 09.25.140" to reflect the 2000 renumbering of AS 09.25.110 — 09.25.140.

In 2004, "child support enforcement agency created in AS 25.27.010" was changed to "child support services agency created in AS 25.27.010" in paragraph (a)(11) of this section in accordance with § 12(a), ch. 107, SLA 2004.

In 2007, "AS 40.25.350" was substituted for "AS 44.99.350" in subsection (d) to reflect the 2004 renumbering of AS 44.99.350.

Cross references. — For exceptions to this section related to the weathervane scallop fishery, see AS 16.43.911(c) and to other fisheries, see AS 16.43.520(i); for reporting of wholesale canned salmon prices, see AS 43.80.050 — 43.80.100.

Effect of amendments. — The 2002 amendment, effective July 6, 2002, in subsection (a) inserted "fishermen" in the first sentence and updated an internal reference, added the language beginning ", or to a designee" to the end of paragraph (6), added present paragraph (7) and redesignated former paragraphs (7)-(10) as paragraphs (8)-(11), rewrote paragraph (8), in paragraph (9) inserted ", and annual statistical reports of fishermen, buyers, and processors and information in those reports"; and made stylistic changes.

The 2004 amendment, effective January 1, 2005, in subsection (a), substituted "department" for "Department of Revenue" in paragraph (3), rewrote paragraph (8), and added paragraph (12).

The 2007 amendment, effective July 4, 2007, inserted "records required of sport fishing guides" in paragraphs (a)(9) and (a)(10), and made related changes.

Editor's notes. — The delayed amendments to this section by § 148(c), ch. 87, SLA 1997, as amended by § 53, ch. 132, SLA 1998, which were to take effect July 1, 2001, were repealed by § 15, ch. 54, SLA 2001.

Sec. 16.05.820. Research by the federal government. The Secretary of the Interior, the Secretary of Commerce, or the Secretary of Agriculture of the United States and their authorized agents or other appropriate federal agencies may conduct fish cultural operations and scientific investigations in the state in the manner and at the times jointly considered necessary or proper by the Board of Fisheries and the secretary and their authorized agents. (§ 29 art I ch 94 SLA 1959; am § 14 ch 206 SLA 1975; am § 10 ch 208 SLA 1975)

Sec. 16.05.822. Transplanting of musk oxen. The board may transplant surplus musk oxen from Nunivak Island to appropriate areas on the mainland of the state, when good management practices dictate the action. The board shall determine which transplant sites are appropriate and whether a surplus of animals exists. (§ 1 ch 220 SLA 1975)

Revisor's notes. — Formerly AS 16.05.865. Renumbered in 2008.

Sec. 16.05.825. State upland game bird release program. (a) In addition to any other program for the stocking or propagation of game birds that the department has as of July 23, 1974, the department shall establish a special program for the raising, maintenance, and release of upland game birds in the state. Birds raised under this program may be released in an appropriate area of the state, at any time, but may be harvested only during regular hunting seasons, as specified by the board under AS 16.05.255(a)(2). The board shall adopt regulations necessary to implement this section.

(b) The department shall establish an appropriate facility for the raising and maintenance of upland game birds to be located at an appropriate place, as determined by the commissioner, in interior Alaska.

(c) The department shall employ a method of tagging game birds released under this section and compile harvest statistics.

(d) In this section, "upland game bird" means a game bird for which a season is established under AS 16.05.255(a)(2) as of July 23, 1974, excluding waterfowl. (§ 1 ch 31 SLA 1974; am § 15 ch 206 SLA 1975; am § 7 ch 126 SLA 1994)

Sec. 16.05.826. Waterfowl conservation stamp program. (a) The waterfowl conservation tag authorized in AS 16.05.340(a)(17) shall be produced annually in stamp form by the department in an amount the commissioner considers appropriate. The department shall make stamps available for the creation of waterfowl conservation limited edition prints and shall provide for the sale of stamps and prints to the public.

(b) The department shall provide by appropriate means for the selection of the design of the annual waterfowl conservation stamp and for the production and sale of the stamps.

(c) The department may contract to others the performance of the department's responsibilities under this section. Contracting under this subsection is governed by AS 36.30 (State Procurement Code), except that a contract may include provisions for advance payment or reimbursement for services performed under the contract. All costs incurred under this section may be paid from the fish and game fund.

(d) *[Repealed, § 28 ch 90 SLA 1991.]* (§ 5 ch 71 SLA 1984; am § 8 ch 106 SLA 1986; am § 31 ch 138 SLA 1986; am E.O. No. 73 § 12 (1989); am § 28 ch 90 SLA 1991)

Re: Senate Bill 3

Dear Senator Olson:

The Southwest Alaska Municipal Conference is an Alaska Regional Development Organization (ARDOR) and also a federally recognized Economic Development District. Our region includes three of the biggest seafood ports (2006) in the nation for total volume landed: Dutch Harbor (#1), Kodiak (#4), Naknek (#12) and includes the world's largest sockeye run – Bristol Bay. This region also includes three of the most valuable seafood ports (2006) in the nation for total landed value: Dutch Harbor (#2), Kodiak (#3), and Naknek (#8). The fisheries of Alaska have just been rated as the ninth largest fishery in the world and account for sixty two percent (62%) of the nation's total seafood catch.

Much of our region's economic vitality and development potential is based on commercial fisheries and their health. We do a lot of research and analysis of fisheries data for the region to assist in our efforts to promote development opportunities in the region. So for SWAMC to have free access to commercial fisheries data from the Commercial Fisheries Entry Commission is vital to our mission and the quality of work.

On behalf of our Board of Directors and staff we fully support your efforts to allow ARDORs free access to this critical economic data that is vital to our economic development efforts.

Sincerely,

Michael Catsi

RE: SB3 – Commercial Fisheries Entry Commission

Dear Senator Olson:

Prince William Sound Economic Development District became an ARDOR (Alaska Regional Development Organization) in 1991, and a federal economic development district in 2001. Our region is comprised of Chenega Bay, Cordova, Tatitlek, Valdez, and Whittier.

The fishing industry is of great importance to our regional economy, and therefore we are requesting that ARDORs have free access to economic data gathered by the Commercial Fisheries Entry Commission, as described in SB3, public information relevant to fisheries, participants in fisheries permit holders' harvests, and earnings data.

Thank you for considering our request.

Sincerely,

Sue Cogswell

Senator Donny Olson
Alaska State Senate
Juneau, AK 99801

Dear Sen. Olson: re: Senate Bill 3

This letter is written in support of your Senate Bill 3, introduced in the current session, that will provide Alaska fisheries information to Alaska Regional Development Organizations (ARDORs), and other economic development organizations that provide assistance to Alaskan commercial fishermen.

By providing current fisheries information to these organizations, the State of Alaska will provide timely and appropriate assistance to these self employed entrepreneurs and help to strengthen Alaskan commercial fisheries for the long term benefit of all Alaskans.

Very truly,

Carl Berger
Executive Director

Kenai Peninsula Economic Development District, Inc.

SENT BY FAX 907-465-4821

Reference Senate Bill No. 3

Dear Senator Olson: Donny

The Kenai Peninsula Economic Development District is an Alaska Regional Development Organization, (ARDOR) and also a federally recognized Economic Development District.

Our region includes the ports in Seward, Homer, Seldovia, Port Graham and other parts of the Cook Inlet.

Part of our responsibilities as an ARDOR is to do research, analysis and planning for our region. A large part of that is to have the free flow of information from other State and Federal agencies of the data that each is responsible to collect.

Your proposed legislation, Senate Bill No. 3, goes a long way to ensure that this data exchange is open and free flowing.

The Kenai Peninsula Economic Development District is in full support of this legislation.

Thank you for taking a leadership role in providing this economic data to the effective ARDORS.

ANALYSIS: *(Attach a separate page if necessary)*

This bill would allow the Commercial Fisheries Entry Commission to share fisheries information and data with regional Alaska Regional Development Organizations (ARDORs). Currently there is an ongoing charge for this information from the Department of Fish and Game.

There is zero fiscal impact on the Department of Commerce, Community and Economic Development.

Senate Bill 3 – C.F.E.C. As An Information Source

Version 26-LS0018/A, January, 2009

STAFF: Tim Benintendi, 465-4989

SPONSOR STATEMENT and SECTIONAL ANALYSIS

SPONSOR STATEMENT:

SB 3 would allow ARDORs to benefit from commercial fishery and related information generated by the Commercial Fisheries Entry Commission (CFEC), at no cost. No confidential information may be disclosed, per AS 16.05.815.

There are eleven ARDORs (Alaska Regional Development Organizations) established under AS 44.33.895. These are non-profit organizations comprised of representatives of the economic, political, and social interests in each region. Their purpose is to encourage and assist economic development in their specific areas.

Eight ARDORs would especially benefit from this legislation: Southwest Alaska Municipal Conference, Bering Strait Development Council, Lower Kuskokwim Economic Development Council, Northwest Arctic Borough Economic Development Commission, Kenai Peninsula Borough Economic Development District, Mat-Su Resource Conservation & Development, Inc., Prince William Sound Economic Development District, and the Southeast Conference.

For these organizations, commercial fishing activities provide a substantial portion of their regions' economic base. To illustrate, the wholesale value of the 2005 commercial fishery exceeded $3 billion. Earnings of the 27,700 participating fishermen accounted for $1.2 billion. Another 22,500 persons participated in the seafood processing workforce, earning $277 million in wages. For coastal communities, approximately 37% of private-sector workers were employed in fish harvesting and seafood processing activities. CFEC information

can be critical for ARDOR understanding of economic trends in their regions, and development opportunities which may emerge.

The CFEC supports Senate Bill 3, and regards the loss of fees under this bill as negligible.

SECTIONAL ANALYSIS:

SECTION 1: Would amend AS 16.43.100(a) by adding to CFEC responsibilities, providing without charge to regional development organizations formed under AS 44.33.895, public information relevant to fisheries, participants in fisheries, permit holders' harvests, and earnings data. No confidential information would be released under Senate Bill 3.

FISCAL NOTE: Zero note from CFEC.

CSSB 4 (CRA) – Coastal Management Programs

Version 26-LS0019/R, January, 2009
STAFF: Tim Benintendi, 465-4989

SPONSOR STATEMENT

In 2003, HB 191 instituted significant changes to the Alaska Coastal Management Program (ACMP). It unduly impacted local participation in development reviews and approvals affecting both state and federal actions in the coastal zone. Prior to 2003, the program was not felt to be significantly problematic. Currently, there are 28 management districts either approved, or under review for approval. For a list of current districts, see the Alaska Coastal Management Program website at (http://alaskacoast.state.ak.us/district/html/progressfinal.htm). To identify a community within a particular coastal district, see http://alaskacoast.state.ak.us/explore/communityindex.pdf .

The authority for a Consistency Review Process, used to implement the ACMP, is found at 11 AAC 110. This process reviews proposed development activities for conformity with state laws and regulations,, and district enforceable policies. 11 AAC 112 and 11 AAC 114 also apply. The governing statutes are AS 46.39 and AS 46.40. With the changes from 2003, regulations adopted by the Department of Natural Resources severely limited the ability of coastal districts to establish enforceable policies regarding the eventual effects of development on coastal resources and uses. So dramatic were the changes that the federal Office of Oceans and Coastal Resource Management formally reviewed state actions for compliance, and took two years to determine acceptance.

Since the 2003 changes, Alaska's coastal districts have dealt with controversy and delay by DNR where achieving suitable district management plans are concerned. Formerly, disputes over approval of district plans were resolved by the Coastal Policy Council. Disbanding the Council under HB 191 concentrated all decision-making power within DNR.

CSSB 4 (CRA) would establish the Alaska Coastal Policy Board within the Department of Natural Resources, and restore an authoritative role for local residents, one that was working acceptably prior to 2003. The new board would be much trimmer than the pre-2003 panel of seventeen members. Nine members would compose the new board, including five public members appointed by the governor. One of the five would be at-large from any of the coastal districts, and the others would be appointed from four defined regions: Northwest Alaska, Southwest Alaska, Upper Cook Inlet, and Southeast Alaska. Filling out the board membership

would be the commissioners of DEC, F&G, DNR, and CCED. DNR would continue to provide day-to-day management and support.

This bill would also reinstate locally-generated enforceable policies, streamline project reviews, provide Board approval of agency-generated regulations, provide for district management plan approvals, allow for receiving grants and other monies, and empower the Board with other authorities.

The primary thrust of CSSB 4 (CRA) is to return significant authority to local district residents by sharing power over the Alaska Coastal Management Program ,between them and the identified commissioners. Since 2003, all authority has rested solely with the Commissioner of the Department of Natural Resources.

SECTIONAL ANALYSIS

CSSB 4 (CRA) Coastal Management Programs

Version 26-LS0019/ R, February 5, 2009

STAFF: Tim Benintendi, 465-4989

(Compared to SB 4)

Section 1: Establishes the ALASKA COASTAL POLICY BOARD, composed of five coastal district members and the commissioners of DNR, F&G, DEC, and COMMERCE. One co-chair will come from the district membership, and one co-chair from the commissioners. This board is smaller than the 17-member panel prior to the 2003 changes. Differences from SB 4 are: Added one district member, and added commissioner of CCED to Board.

Section 2: Clarifies that DNR coordinates all project consistency reviews for projects with only departmental permits or for projects that involve two or more other state resource agency permits. Not included in SB 4.

Section 3: Allows but does not mandate that regulations approved by the Board may be adopted by DNR. Same provision is in SB 4, Section 2.

Section 4: Establishes powers of the Board, including taking reasonable action to carry out provisions of AS 46.39 (administration) and AS 46.40 (ACMP). Same provision is in SB 4, Section 3.

Section 5: Provides for the Board to approve statewide ACMP standards and criteria, as developed by the department, for district plan approval.

Section 6: Defines "Board" in AS 46.39.900. Same provisions in SB 4, Section 5.

Section 7: Provides for approval of ACMP program changes by the Board. Same provisions in SB 4, Section 6.

Section 8: Adds "subsistence" to the list of values included in the ACMP objectives. Same provisions in SB 4, Section 7.

Section 9: Subsection (a) removes requirement for district enforceable policies to meet the statewide standards. Clarifies that district enforceable policies apply to all land and water issues subject to the plan. Removes requirement to describe proper and improper uses. Changes the term "areas meriting special attention" to "special management areas." Subsection (b) requires district enforceable policies to be clear and concise, either prescriptive (how to proceed toward goal) or performance-based (goal achievement by various methods), and stricter or more specific policy than state or federal laws. If stricter, support may include traditional, local knowledge. This section was not included in SB 4.

Section 10: Makes conforming changes for Board approval of ACMP regulations. Deletes language in AS 46.40.040(a)(2) – (5); moved to a new subsection (d). Compares to SB 4, Section 8, changing "areas of the coast that merit special attention," to "special management areas."

Section 11: Moves language deleted from Section 10, to a new section outlining responsibilities of the Board. Not included in SB 4.

Section 12: Makes conforming amendments to clarify that district plans must be approved by the Board. Not included in SB 4.

Section 13: Establishes the review and approval process for coastal district plans, including provisions for districts to work with DNR to resolve issues before the Board approves a plan. Allows districts to request mediation of the Board's decision. Not included in SB 4.

Section 14: Establishes criteria for Board approval of district plans and clarifies that district enforceable policies may not address matters pre-empted by state or federal laws. Rewritten from SB 4.

Section 15: Makes conforming changes for Board approval of ACMP regulations governing the consistency review and determination process. Same provision is in SB 4, Section 15.

Section 16: Changes the term "subsequent review" to the commonly used term "elevation" and clarifies that the three state resource agencies make the final decision on a project elevation. Modifies SB 4, Section 18, by allowing more autonomy for state resource agencies in preparing a consistency review and determination.

Section 17: Clarifies that aspects of an activity covered by a general or nationwide permit are excluded from a consistency review (rather than the entire activity). Same provision is in SB 4, Section 19.

Section 18: Makes conforming changes for Board approval of district enforceable policies. Same provision is in SB 4, Section 20.

Section 19: Allows for ACMP consistency reviews of projects inland of the coastal zone, if there would be direct and significant effects to coastal uses or resources. Clarifies that seismic survey activities in federal waters are subject to consistency reviews. Differences from SB 4, Section 21, are the inclusion of activities and impacts "inland from the coastal zone," in federal "waters," and "seismic survey activity" on the Outer Continental Shelf. DNR currently exempts this activity from review.

Section 20: Clarifies that categorically or generally consistent activities are for routine projects. From SB 4, Section 22 of this version, deletes a reference mandating Board approval.

Section 21: Exempts federal activities and federally-permitted projects from the 90-day consistency review time limit. Allows extension of the time limit for adjudication of coastal district permits. Differs from SB 4, Section 23 by adding language for a 30-day extension period for an affected coastal resource district to accommodate the adjudication process.

Section 22: Clarifies that the term "affected coastal resource district" includes districts with a publicly-reviewed draft plan or approved plan. Not included in SB 4.

Section 23: Requires an individual consistency review for each Outer Continental Shelf lease sale. Not included in SB 4. Would make each lease sale a separate consistency review.

Section 24: Gives the Board authority to act on a petition regarding non-implementation of a coastal district plan. Same provision is in SB 4, Section 24.

Sections 25, 27, 28: Make conforming amendments regarding Board action on a petition regarding non-implementation of a coastal district plan. Ties to Section 24. Same provisions are in SB 4, Sections 25, 27, 28.

Section 26: Provides that the Superior Courts have jurisdiction to enforce orders of the Board, as well as the department. Same provision is in SB 4, Section 26.

Section 29: Clarifies that a coastal resource service area (CRSA) may accept new matter submitted by a city or village into its coastal management plan. Not included in SB 4.

Section 30: Clarifies that municipalities are part of a CRSA unless they choose to be excluded. Not included in SB 4. There are currently no 3rd class boroughs in Alaska.

Section 31: Removes language about boroughs that do not exercise planning and zoning authority. Not included in SB 4.

Section 32: Makes a conforming amendment clarifying the board's role in coastal boundary changes. Same provision is in SB 4, Section 30.

Section 33, 34: Make conforming amendments regarding the Board's role in approving district plans and district enforceable policies. Same provisions are in SB 4, Sections 31, 32.

Section 35: Clarifies that the term "project" applies to federal activities and federally-permitted activities, including individual lease sales. Not included in SB 4.

Section 36: Adds new definitions for the terms "Board" and "special management areas." Definition of "special management areas" was not included in SB 4.

Section 37: Repeals the exemption for DEC permits from consistency reviews (eliminates DEC carve-out) (AS 46.40.040(b)–(c), not included in SB 4,

and AS 46.40.096(i)). Only this reference was included in SB 4.

Removes the requirement for re-submittal of district plans every 10 years (AS 46.40.050(a)). Not included in SB 4.

Removes the exemption of shallow gas projects from ACMP reviews (AS 46.40.205). Not included in SB 4.

Removes the definition for "areas meriting special attention" (AS 46.40.210(1)). Not included in SB 4.

CSSB 4(CRA) will have the following fiscal impact:

1. Travel - It is expected that the Coastal Policy Board (CPB) will need to meet at least four times annually to fulfill the obligations and provide the services outlined in CSSB 4 (CRA). Travel (including air, hotel, and per diem) for appointed members, designated members, and state agency staff is included.
2. Contractual - In order to re-write the guiding regulations, DNR must secure contractual services for the promulgation and final Department of Law review of the regulations (FY 2010 only). In addition, contractual services for the CPB meetings must be procured, and will be an annual expense.
3. Supplies - The CPB meetings will require some level of supplies for ensuring the members have proper materials.

ANALYSIS: *(Attach a separate page if necessary)*

This legislation amends Alaska statutes related to the Alaska Coastal Management Program (ACMP). The bill requires that the Department of Environmental Conservation process its permits in accordance with the ACMP coastal consistency review procedures where permits are currently processed independent from those procedures. The increased work load for existing staff is estimated at one-half of the salary cost of a Range 19 position.

In addition to increasing the effort required to process a permit, the changes require a new half-time position to serve as ACMP lead for DEC with responsibility for internal and external coordination of ACMP matters. The fiscal note reflects the personnel and support costs of a new, part-time (0.5 FTE, Range 20) position to serve as DEC's ACMP Program Coordinator. First-year costs include one-time supply costs that are not reflected in subsequent years.

Honorable Representative Reggie Joule
Capitol, Room 502
Juneau, Alaska 99801

Re: SB 4 and HB 74 Alaska Coastal Management Program

Dear Senator Olson and Representative Joule:

The Northwest Arctic Borough (NWAB) would like to thank you for the introduction of SB 4 and HB 74 on the Alaska Coastal Management Program (ACMP). On behalf of the Borough, I would like to address the substance of HB 74 because we understand the Senate Community and Regional Affairs Committee will consider adoption of the provisions of HB 74 into a senate committee substitute.

The NWAB supports the proposed legislation that would restore the ability of coastal districts to effectively participate in the program and establish meaningful policies under the ACMP; therefore providing valuable local input to development that happens in a very large and unique state. Another important provision in the bills would establish a board made of Alaskans to oversee the major aspects of ACMP as a publicly funded program. The proposed board would jointly represent state agencies and local coastal districts thereby restoring effective public engagement in the ACMP.

Currently, only the Alaska Department of Natural Resources (DNR) as a single agency makes all coastal management decisions. This has proved to be very one-sided and frustrating. For example, as you may know, during 2008 the NWAB attempted mediation with DNR to improve the decisions regarding our coastal management plan. Unfortunately, the mediation ended in an impasse with the majority of the proposed plan flat out denied. According to the

NORTHWEST ARCTIC BOROUGH

P.O. Box 1110

Kotzebue, Alaska 99752

ACMP now, our only re-course for a fair review is again to go back to the DNR commissioner for re-consideration of a decision that has already been made by the commissioner and his staff. As you can see, the ability to obtain a third party review that involves the public is not possible under the current program, and the new provisions in this bill will help prevent such a future problematic situation and provide state staff the clear criteria and direction for approval of coastal district policies with involvement of the coastal policy board.

The NWAB also supports the addition of subsistence to the ACMP objectives in AS 46.40.020. Until changes made by the Murkowski Administration, the ACMP has been an effective tool balancing resource development and protection of our coastal resources that support healthy subsistence. It is very important that Alaskans have the ability to propose local policies that demonstrate the real life connection of people and communities to coastal areas and actually reflect the close relationship Alaskan residents have to this land, the coastal zones and our valuable subsistence way of life. For the NWAB, the ability to cooperatively work with developers and the state to address subsistence impacts is the primary reason for participating in the ACMP so that development honors our long-time and permanent Alaskans lifestyles.

We also support provisions in the bill that would bring activities covered by the Alaska Department of Environmental Conservation back into the ACMP consistency review process. Impacts to air and water quality also affect habitat and subsistence, and it makes sense to address these issues together in a consolidated format during a single consistency.

The NWAB encourages responsible development of our natural resources. We recognize the economic importance of development in providing new revenues to fund local public services and facilities, and to provide steady employment opportunities in rural areas. However, it is important that local coastal districts have a role in voicing valid concerns and potential impacts to subsistence and other coastal uses and resources - all to ensure that we are doing resource development the right way.

In closing, these bills restore a meaningful role for coastal districts to facilitate effective future development opportunities. I appreciate your interest in improving the ACMP, and I look

MEMO TO: Administrator Jim Dinley
Mayor and Assembly

FROM: Marlene Campbell, Government Relations Director
(and Coastal Management Coordinator)

SUBJECT: Resolution Supporting Revisions to Alaska Coastal Management Program

Your approval or modification of proposed Resolution 2009-32 is requested to affirm CBS support for "legislation to enable Alaska's Coastal Communities To More Effectively Participate in the Alaska Coastal Management Program (ACMP)". There are several bills (HB 74, SB 4, and possibly others) being considered by the Legislature which could help rebuild the ACMP.

When House Bill 191 substantially changed the ACMP in 2003, all coastal plans had to be rewritten. Sitka lost more than half of its enforceable policies which must be considered in coastal consistency reviews and other proposals for projects within the City and Borough of Sitka. Sitka's Coastal Plan has been a model of effective coastal management since it was first approved in 1981. The Sitka Plan's 1989 major amendment was even more specific, with enforceable policies which permitted the City and Borough of Sitka and the Sitka community to have a "seat at the table" in management decision making on uses and activities in Sitka's coastal zone.

This local "due deference" has almost entirely been lost since the forced revision of Sitka's program approved in April, 2007. Other changes such as not permitting policies relating to air or water quality and removing the Department of Environmental Conservation (DEC) from the ACMP process have greatly reduced coastal communities' ability to comment. The movement of the Alaska Coastal Management Program from the Governor's office to the Department of Natural Resources Division of Coastal and Ocean Management has proved damaging to the former positive relationship the coastal communities enjoyed with the former Alaska Division of Governmental Coordination. DNR's mission as manager of the development and use of Alaska's natural resources is inconsistent with the protection and public use of those same resources for which the ACMP previously provided a balanced perspective.

The attached petition discusses some key issues which from Alaska's Coastal Management Program coordinators' perspectives would help restore some of the major losses of the ACMP and greatly improve Sitka's ability to comment on Coastal Management permits and activities. Sitka's program has since its inception supported active involvement in the ACMP, and the proposed legislation will permit Sitka to have "standing" to comment on ACMP issues which is now not possible for the most part. Since the specific bills addressing these issues could change, the resolution supports the key provisions rather than just certain bills.

If there are questions please contact Marlene Campbell at 747-1855 (campbell@cityofsitka.com e-mail).

SPONSOR: Administrator

CITY AND BOROUGH OF SITKA

RESOLUTION 2009-32

A RESOLUTION OF THE ASSEMBLY OF THE CITY AND BOROUGH OF SITKA, ALASKA, SUPPORTING LEGISLATION TO ENABLE ALASKA'S COASTAL COMMUNITIES TO MORE EFFECTIVELY PARTICIPATE IN THE ALASKA COASTAL MANAGEMENT PROGRAM (ACMP)

WHEREAS, the "streamlined ACMP process" which resulted from the passage of House Bill 191 in 2003, and its implementation by regulations and statutory amendments, forced the complete revision of all Alaska Coastal Management Plans in Alaska, including Sitka's; and

WHEREAS, as a result, Sitka lost more than half of its enforceable policies (the only section of coastal plans which had standing to be considered as part of the ACMP review process for permits and management decision-making affecting coastal communities), and those policies remaining were so restricted as to be virtually un-usable in coastal comments; and

WHEREAS, there has been an increasing, widespread effort to revise the ACMP to help coastal Alaskan communities regain a "seat at the table" in management decision making affecting Alaska's coastal zone, and reign in the Department of Natural Resources which is charged with managing the State's resources but now also makes all coastal management decisions on developing those same resources; and

WHEREAS, prior to the ACMP's revisions, the Sitka Coastal Management Program had been a model of effective coastal management, allowing the Sitka community to have due deference and protect local resources and activities while permitting responsible development; and

WHEREAS, House Bill 74 sponsored by Representative Joule and Senate Bill 4 sponsored by Senator Olson are being considered by the Alaska Legislature, and this legislation could help restore a meaningful role for coastal municipalities such as Sitka in the ACMP, including the following key provisions (among others):

- Establishes Alaska Coastal Policy Board with 5 public members representing coastal districts and 5 commissioners of resource agencies to make ACMP policy decisions.
- Establishes duties of the Board to approve ACMP standards and criteria for district plans.
- Adds subsistence to the list of resources included in the ACMP objectives.
- Restores local plan ability to write meaningful enforceable policies by enabling policies to be either prescriptive or performance-based, stricter or more specific than state or federal laws, and clarifies policies apply to all land and water uses subject to the plan.
- Eliminates the "DEC carve-out" exempting DEC permits from consistency reviews.
- Allows ACMP consistency reviews of projects inland of the coastal zone if there would be direct and significant impacts to coastal uses or resources;
- Permits meaningful local participation in the ACMP through expanded enforceable policies

addressing a wide range of coastal uses.

NOW, THEREFORE, BE IT RESOLVED that the Assembly of the City and Borough of Sitka, Alaska, supports the revision of the Alaska Coastal Management Program to restore these key provisions and permit the City and Borough of Sitka to better manage its coastal zone per the Alaska State Constitution's provision for maximum local self-government.

PASSED AND APPROVED by the Assembly of the City and Borough of Sitka, Alaska, on this twenty-fourth day of February, 2009.

_____
Scott McAdams, Mayor

ATTEST:

_____
Colleen Ingman, MMC
Municipal Clerk

CS Senate Bill 4 (CR&A)
Alaska Coastal Management Program (ACMP)
HIGHLIGHTS
January 26, 2009

Streamlines Project Reviews and District Plan Approvals

- Brings DEC permits back into the coordinated ACMP project review process
  - Eliminates need for a separate DEC review to determine ACMP consistency
  - Reduces confusion with current process about scope of ACMP review
- Promotes interagency cooperation and issue resolution
  - Encourages coordination of municipal Title 29 permitting with the ACMP process
    - Meaningful district policies will encourage local participation and resolution of issues during the state-coordinated ACMP review[1]
  - Reduces chances for conflicting permit conditions (federal, state and local permits)
  - Encourages early resolution of project issues
- Allows coastal districts to have performance-based enforceable policies[2]

Restores Checks and Balances

- Establishes streamlined Coastal Policy Board (CPB)
  - The 9-member CPB represents coastal districts, DNR, DEC, ADF&G, and DCCED[3]
  - Board provides guidance on 3 matters by approving:
    - 1) District coastal plans, 2) Grant programs, & 3) ACMP regulations
  - DNR retains day-to-day management of all ACMP matters
  - DNR retains responsibility for project consistency reviews
- Involves all 3 state resource agencies in project elevations (pre-decision appeals)
- Allows districts to keep their existing plan (no requirement to amend plan as in 2003 legislation)
- Encourages districts to resolve issues with DNR before their plan is reviewed by the CPB

Restores Traditional Role of Coastal Districts

- Allows districts to establish local enforceable policies that do not conflict with state or federal law or address matters preempted by state or federal agencies
- Restores intent of the ACMP
  - Original 1977 Alaska Coastal Management Act emphasized role of local coastal districts
  - The 2004 Murkowski Administration ACMP regulations conflicted with 2004 legislation by eliminating ability to establish district enforceable policies for matters not adequately addressed by state or federal law

Restores States' Rights

- Reinstates provisions eliminated by the 2003 legislation to assert state rights
  - Allows extension of the 90-day review limit for reviews with federal permits
  - Allows review of projects inland of the coastal zone if there are coastal effects
  - Allows for review of individual oil and gas lease sales in federal OCS waters

[1] Before the 2003 ACMP changes, less than 1% of projects were appealed.

[2] Performance-based policies are preferred by industry (rather than policies that prescribe a specific action)

[3] The former Coastal Policy Council was originally a 17-member body that had responsibility for project reviews.

Alaska Coastal Management Program

Program Goals and Objectives

The Alaska Coastal Management Program (ACMP) oversees the responsible development of coastal uses and resources, federal activities within the coastal zone, and activities on the Outer Continental Shelf.

ACMP Structure and Organization

The ACMP is a voluntary State program, authorized by the Coastal Zone Management Act of 1972, as amended. The Division of Coastal and Ocean Management (DCOM), within the Department of Natural Resources, is the lead agency for the ACMP. Several State departments and agencies participate in the implementation of the ACMP. In addition, several coastal municipalities and service areas (collectively known as coastal districts) voluntarily participate in the implementation of the ACMP. This structure and organization of State agencies and coastal districts provides for a networked implementation scheme designed to comprehensively manage coastal uses and resources.

The primary tool used to implement the ACMP is the consistency review process at 11 AAC 110. Through this process, proposed resource development activities are reviewed for consistency and compliance with the State's coastal management program which includes State laws, State standards, and district enforceable policies.

Value of ACMP

Having a federally-approved coastal management program allows the State the opportunity to:

- Balance the need for economic investment and development in coastal areas with the need to protect and manage the uses and resources of coastal areas
- Act as the State's liaison to federal agencies (1) conducting/permitting activities within the State's coastal area and the Outer Continental Shelf; (2) involving federal laws/initiatives that effect development of the coastal zone, waters, uses or resources of the State
- Act as the department's lead on issues affecting or addressing the coastal waters affecting the State
- Apply State ACMP enforceable policies to federal agency activities
- Provide project applicants with a single point of contact for the State's review of resource development permit applications
- Incorporate coastal district input and knowledge for reasoned decisions

Key FY 2008 and FY 2009 Priorities and Needs

- Educate and train participants on implementation of ACMP
- Re-evaluate the ACMP Statutes (AS 46.39 and 40) and Regulations (11 AAC 110, 112, 114), so to strengthen the ACMP as a State program
- Implement the approved Coastal Impact Assistance Program (CIAP) and act as the liaison between the federal government and the State of Alaska

A Program of the Division of Coastal and Ocean Management

"The Alaska Coastal Management Program provides stewardship for Alaska's rich and diverse coastal resources to ensure a healthy and vibrant Alaskan coast that efficiently sustains long-term economic and environmental productivity."

Alaska Coastal Management Program

Key 2008 Calendar Year Accomplishments

- In June 2008, DNR/DCOM initiated a series of workshops to review the current ACMP statutes (AS 46.39 and 46.40) and regulations (11 AAC 110, 112, and 114). The purpose of the re-evaluation is to strengthen the ACMP as a State program, that will benefit applicants and the public in the coordinating project reviews and that will enhance coastal district participation regarding activities occurring in the coastal area and on the outer continental shelf.

- DNR is currently revising the list of expedited consistency reviews using the ABC List. This revision was initiated to meet the legislative intent of identifying and broadening categories of activities subject to the expedited consistency review process. AS 46.40.096(m) SB 102 (2005) requires that DNR establish in regulation the state resource agency permits and federal permits that would trigger a consistency review. The ABC List categorizes development activities in the Coastal Zone according to expected levels of impact on uses and resources in the Zone. The last time the ABC List was substantively amended was in 1995. The current revision initiative will clarify the review process for certain resource development projects that are "de minimis" in nature or that are routine and can be made consistent with standard alternative measures. By updating the ABC List and developing new expedited consistency reviews for routine activities, DNR expects to reduce the workload for State agencies and coastal districts.

- In September 2008, the federal Minerals Management Service approved the State of Alaska Coastal Impact Assistance Program (CIAP) plan, making Alaska eligible to receive approximately $9.7 million in federal funds under the CIAP initiative. Due to an increase in OCS revenue off the coast of Alaska, the state's portion of CIAP funds will increase by more than $53 million in the next two fiscal years. DCOM is currently working on amending the CIAP plan to reflect Alaska's new allocation. A portion of the funds will go to 8 municipalities that are within 200 nautical miles of OCS development, and a portion will be offered to State agencies and the public through a competitive grant process.

- During the 2008 calendar year, nine more coastal district plans went into effect, bring the total of approved coastal district management plans to 25.

- During the 2008 calendar year, DCOM performed 262 coordinated or expedited consistency reviews, issued 415 No Additional Reviews and 29 Single Agency Reviews for resource development projects within the coastal zone.

RE: Proposed Senate Bill No. 4
An Act Relating to the Alaska Coastal Management Program (ACMP)
Establishment of the Alaska Coastal Policy Board
State Statutes AS 46.39 and AS 46.40

Dear Senator Olson:

ConocoPhillips Alaska, Inc. (CPAI) has prepared this formal response to proposed Senate Bill No. 4, an act relating to the Alaska Coastal Management Program (ACMP) and establishment of an Alaska Coastal Policy Board, and offers the following comments for your consideration.

Retention of the Current Program

CPAI has been, and remains, a supporter of the centralized ACMP process which resulted from the passage of House Bill (HB) 191 in 2003 and was later implemented by regulations and statutory amendments. In 2003, the Alaska Legislature concluded that "the Alaska coastal management program (ACMP) is intended to function with a minimum of delay and avoid regulatory confusion, costly litigation, and uncertainty regarding the feasibility of new investment." In addition, the legislature stated that statewide standards "be clear, and concise and provide the needed predictability as to the application, scope, and timing of the consistency review process of the program."

Proposed changes in Senate Bill (SB) No. 4 would allow districts to restrict selected activities within their coastal district; these activities will undoubtedly involve uses of state concern and/or may involve matters already adequately addressed by existing regulatory programs. Decision-making authority concerning the management and use of state resources vests with the State.

The current program's approach eliminates enforceable policies which may be conflicting between coastal districts, state, and federal agencies, and which could result in a loss of

conformity of district policies that currently exists in the ACMP program. The existing statewide standards provide clear and concise predictability to the ACMP process. Coastal districts are still afforded the ability to propose enforceable policies that conform to the district plan approval criteria and requirements outlined in 46.40.040 and 46.40.070; or those that are not duplicative, restate existing state or federal policies, and do not redefine, replace, or otherwise modify existing standards. From an applicant's perspective, the retention of the centralized ACMP will provide applicants with assurances of an efficient permitting process.

Elimination of the Alaska Department of Environmental Conservation (ADEC) Carve Out (AS 46.40.040 and 46.40.096)

CPAI believes the ADEC carve out should be retained in its present form and the carve out should not be eliminated from the ACMP program. CPAI believes there is significant misunderstanding by many stakeholders on this matter. Approvals for air, water, and C-Plan permits require public notice and public comment periods which allow for public input. The public notice and comment periods for these permits were not negatively affected by carving out the ADEC permits. Timelines associated with these approval processes are at least six months in duration, far longer than the existing 50- to 90-day ACMP coordination process. In addition, the timelines for public participation do not align with the intent or the process of the ACMP program which is one of thoughtful timely coordination and decision-making.

Eliminating the ADEC carve out will re-introduce conflicting regulatory mandates between ADEC and the ACMP process, and will delay the start of the consistency review process. Adequate public participation and opportunities for review by coastal districts is provided in the existing program. Adequate environmental protection is being provided by ADEC, regardless of whether or not their approvals are part of a consistency review process.

In closing, as we look at the substantial nature of the changes proposed in SB 4, we ask the question: Why? Since the passage of HB 191, have resource development projects been permitted by the state where a coastal district's input and concerns have not been accommodated? Is this change going to help motivate resource development projects in this state? We suggest that the current program is working as intended and changes are neither necessary nor desirable.

Sincerely,

Dale Summerlin

Roger D. (Dale) Summerlin

RE: **SB 4 Alaska Coastal Management Program**

Dear Senator Olson:

Thank you for pre-filing SB 4 about the Alaska Coastal Management Program (ACMP). I understand the Senate Community and Regional Affairs Committee will be considering adopting a committee substitute similar to the version of this bill in the House. The North Slope Borough (Borough) supports the committee substitute because it will restore meaningful local involvement in the ACMP, implement checks and balances and streamline project reviews.

The Borough appreciates the sections of the proposed committee substitute that clarify the ability of coastal districts to establish enforceable policies, especially the provisions in AS 46.40.030 and 070. While the 2003 legislative changes to the ACMP allowed coastal districts to establish policies for matters not adequately addressed by state or federal law, many of our proposed enforceable policies were denied on the basis that they addressed an agency's authority. We made an extra effort to focus our proposed policies on matters that were not addressed by existing laws, but still they were denied.

The committee substitute for SB 4 would restore checks and balances to the ACMP by establishing the Coastal Policy Board. This body would represent coastal districts and state agencies. It would be responsible for approving changes to ACMP regulations, amendments to coastal district programs and overall grant programs. This body is similar to the former Coastal Policy Council except that it has fewer members and it is not responsible for project consistency reviews. Restoring the responsibility for project elevations to the three state resource agencies will ensure these agencies have a seat at the table.

The Borough also supports the sections of the proposed committee substitute that streamline project reviews. The ACMP used to be an effective program that resolved issues among local, state and federal agencies, but changes to the program statutes and regulations reduced its effectiveness. Bringing the Alaska Department of Environmental Conservation back into the consistency review process will bring air and water quality issues back into ACMP project reviews. Likewise, allowing coastal districts to have meaningful policies will encourage their participation in the coordinated consistency review process. These changes will streamline project reviews because issues can be resolved early in the process by all parties. The changes will also encourage permitting agencies to ensure their permit stipulations are compatible and reasonable.

Again, the North Slope Borough thanks you for introducing SB 4, and I look forward to testifying on this bill as it moves through the committee process.

Sincerely,

Edward S. Itta

CS FOR SENATE BILL NO. 31(ENE)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE SENATE SPECIAL COMMITTEE ON ENERGY

Offered:
Referred:

Sponsor(s): SENATORS MCGUIRE, Ellis, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act relating to an alternative energy production tax credit that may be claimed or applied against tax due under the Alaska Net Income Tax Act; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.20.021(d) is amended to read:

(d) Where a credit allowed under the Internal Revenue Code is also allowed in computing Alaska income tax, it is limited to 18 percent for corporations of the amount of credit determined for federal income tax purposes **that** [WHICH] is attributable to Alaska. This limitation does not apply to a special industrial incentive tax credit under AS 43.20.042 **or to an alternative energy production tax credit under AS 43.98.040**.

*** Sec. 2.** AS 43.98 is amended by adding a new section to read:

Sec. 43.98.040. Alternative energy production tax credit. (a) An energy producer that produces alternative energy may claim an alternative energy production

2857

tax credit in the amount of 2.1 cents for each kilowatt-hour of alternative energy produced or sold for each of the first four tax years after the date the system used to produce alternative energy is placed into service if

(1) the alternative energy produced supplies all or part of the energy required by commercial units owned or used by the energy producer; or

(2) the energy producer sells all or part of the energy produced.

(b) A tax credit under this section may be claimed only for

(1) an alternative energy system placed into service on or after January 1, 2010; or

(2) an expansion of an alternative energy system if the expansion is made on or after January 1, 2010.

(c) An unused tax credit under this section may be carried forward and applied against the tax liability of the energy producer.

(d) A tax credit provided under (a) of this section may be sold, assigned, exchanged, conveyed, or otherwise transferred, in whole or in part.

(e) A taxpayer acquiring a tax credit under (a) or (d) of this section may use the tax credit or a portion of the tax credit to offset taxes imposed under AS 43.20.011. Any portion of the credit not used may be used at a later time or transferred under (d) of this section. A tax credit under this section may not exceed 20 percent of the energy producer's capital investment for the system used to produce alternative energy.

(f) An energy producer that claims a tax credit under this section and that wishes to transfer the unused tax credit to a taxpayer under (d) of this section may apply to the department for a transferable tax credit certificate. An application under this subsection must be in a form prescribed by the department and must include supporting information and documentation that the department reasonably requires. The department shall grant or deny an application, or grant an application as to a lesser amount than that claimed and deny it as to the excess, not later than 120 days after it receives the application.

(g) A taxpayer acquiring a tax credit under (a) or (d) of this section may not use the tax credit or a portion of the tax credit to offset taxes imposed by AS 43.20.011 in the same year the taxpayer uses a federal alternative energy credit under 26 U.S.C.

45, authorized by AS 43.20.021, to offset taxes imposed by AS 43.20.011.

(h) The department shall

(1) prescribe an application form for a tax credit under this section; and

(2) adopt regulations necessary for the administration of this section.

(i) In this section,

(1) "alternative energy" means geothermal, solar, hydroelectric, wind, biomass, hydrokinetic or tidal, and wave energy;

(2) "energy producer" means an electric utility or independent power producer holding a certificate of public convenience and necessity under AS 42.05.

*** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

EXHAUSTION OF UNUSED ALTERNATIVE ENERGY PRODUCTION TAX CREDITS. Notwithstanding the repeal of AS 43.98.040, an unused portion of a tax credit acquired under AS 43.98.040(a) or (d) may be carried forward until exhausted, except that the unused portion of the tax credit may not be carried forward to tax years beginning after December 31, 2028.

*** Sec. 4.** AS 43.98.040 is repealed January 1, 2025.

*** Sec. 5.** This Act takes effect January 1, 2010.

CS FOR SENATE BILL NO. 31( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS MCGUIRE, Ellis, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act relating to a renewable energy production tax credit that may be claimed or applied against tax due under the Alaska Net Income Tax Act; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.20.021(d) is amended to read:

(d) Where a credit allowed under the Internal Revenue Code is also allowed in computing Alaska income tax, it is limited to 18 percent for corporations of the amount of credit determined for federal income tax purposes **that** [WHICH] is attributable to Alaska. This limitation does not apply to a special industrial incentive tax credit under AS 43.20.042 **or to a renewable energy production tax credit under AS 43.20.046**.

*** Sec. 2.** AS 43.20 is amended by adding a new section to article 1 to read:

Sec. 43.20.046. Renewable energy production tax credit. (a) An energy producer that produces renewable energy may claim a renewable energy production

tax credit in the amount of 15 percent of the retail rate for each kilowatt-hour of electricity charged by the energy producer, as determined by the Regulatory Commission of Alaska; however, a tax credit may not be less than 2.1 cents for each kilowatt-hour of renewable energy produced or more than five cents for each kilowatt-hour of renewable energy produced.

(b) An energy producer may claim a renewable energy tax credit under this section for each kilowatt-hour of renewable energy produced or sold for each of the first five tax years after the date the capital investment used to produce renewable energy is placed into service if the energy producer sells all or part of the energy produced.

(c) A renewable energy tax credit under this section may be claimed only for a capital investment

(1) to produce renewable energy that is placed into service on or after JULY 09 January 1, 2010; or

(2) to expand production of renewable energy if the investment for production expansion is made on or after JULY 09 January 1, 2010.

(d) An unused renewable energy tax credit under this section may be carried forward and applied against the tax liability of the energy producer.

(e) A renewable energy tax credit provided under this section may be sold, assigned, exchanged, conveyed, or otherwise transferred, in whole or in part.

(f) A taxpayer acquiring a renewable energy tax credit under (a) or (e) of this section may use the tax credit or a portion of the tax credit to offset taxes imposed under this chapter. Any portion of the credit not used may be used at a later time or transferred under (e) of this section.

(g) A renewable energy tax credit acquired under (a) or (e) of this section, when combined with any state aid that the energy producer receives for the capital investment made to produce renewable energy for which the credit is acquired, may not exceed 10 percent of the energy producer's capital investment for production of renewable energy, aggregated over the five years within which the credit is allowed to be claimed under (b) of this section.

(h) An energy producer that claims a renewable energy tax credit under this

section and that wishes to transfer the unused tax credit to a taxpayer under (e) of this section may apply to the department for a transferable tax credit certificate. An application under this subsection must be in a form prescribed by the department and must include supporting information and documentation that the department reasonably requires. The department shall grant or deny the tax credit certificate, or grant the tax credit certificate as to a lesser amount than that for which application is made and deny it as to the excess, not later than 120 days after it receives the application.

(i) An energy producer that uses a renewable energy production tax credit to offset the tax imposed by this chapter or transfers the credit under (e) of this section may not also claim the federal renewable energy credit under 26 U.S.C. 45, authorized by AS 43.20.021, for a capital investment associated with the production or expansion of renewable energy that generated the credit under this section.

(j) The department shall

(1) prescribe an application form for a tax credit under this section; and

(2) adopt regulations necessary for the administration of this section.

(k) In this section,

(1) "capital investment" means an expenditure made

(A) as a cash expenditure or binding payment agreement for real property or tangible personal property used in this state in the production of renewable energy; and

(B) for an asset first placed in service for the production of renewable energy in the state during or before the tax year in which the credit is claimed; in this subparagraph, "placed in service for the production of renewable energy in the state" means that the first use of the capital investment is in this state; if the property on which the claim of the credit is based has been used elsewhere in the tax year of acquisition and is brought to this state during that year or a subsequent year, the property does not qualify as a capital investment;

(2) "energy producer" means

(A) an electric utility or independent power producer holding a

certificate of public convenience and necessity under AS 42.05; or

(B) an independent power producer producing more than 100 kilowatts of electricity from renewable energy;

(3) "renewable energy" means geothermal, solar, hydroelectric, wind, biomass, hydrokinetic or tidal, and wave energy.

*** Sec. 3.** AS 43.20.046 is repealed January 1, 2025.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

EXHAUSTION OF UNUSED RENEWABLE ENERGY PRODUCTION TAX CREDITS. Notwithstanding the repeal of AS 43.20.046 by sec. 3 of this Act, an unused portion of a tax credit acquired under AS 43.20.046(a) or (e), enacted by sec. 2 of this Act, may be carried forward until exhausted, except that the unused portion of the tax credit may not be carried forward to tax years beginning after December 31, 2025.

*** Sec. 5.** This Act takes effect January 1, 2010.

ANALYSIS CONTINUATION

Bill Language:
This bill will create a tax credit for electricity production from new alternative energy projects in the state. The amount of the credit will be 2.1 cents for each kilowatt hour of alternative energy produced or sold in "each of the first four years after the date the system used to produce alternative energy is placed into service," up to a limit of 20 percent of capital costs. The tax credit would be applicable only to the Alaska Corporate Net Income Tax. Unused tax credits could be carried forward or transferred.

For purposes of this bill, "alternative energy" means geothermal, solar, hydroelectric, wind, biomass, hydrokinetic or tidal, and wave energy. The credit could be claimed by an "electric utility holding a certificate of public convenience and necessity under AS 42.05 or an independent power producer." The term "independent power producer" would need to be defined in regulation and could potentially include any entity that chooses to implement an eligible alternative energy project.

The effective date of the bill is January 1, 2010. There bill includes a sunset date of January 1, 2025.

Revenues:
Revenues from this bill are indeterminate because we do not know the size or number of projects that would qualify for the credit. According to the US Department of Energy, Alaska currently produces 1.3 billion kilowatt hours of alternative energy annually (hydroelectric, biomass, solar and wind power; there is currently no commercial geothermal electric generation). For each 10 percent increase in alternative energy production, tax revenue to the state would be reduced by $2.7 million per year for four years.

Some examples of credits generated by possible projects include the following (These examples are for illustrative purposes only. They are based on publicly available information and typical capacity utilization rates):

- A 14-megawatt hydroelectric project such as the Lake Dorothy project near Juneau could be eligible for a $1.5 million annual credit (assuming the project operates at 60% of capacity). Over four years, this credit would amount to about 9.7% of the estimated $64 million capital cost.

- A 30-megawatt wind farm such as the Fire Island project near Anchorage could be eligible for a $1.7 million annual credit (assuming the project operates at 30% of capacity). Over four years, this credit would amount to about 12.3% of the estimated $54 million capital cost.

- A 1.2-megawatt wind farm such as the Nome wind farm could be eligible for a $66,000 annual credit (assuming the project operates at 30% of capacity). Over four years, this credit would amount to about 4.8% of the estimated $5.5 million capital cost.

Many smaller projects would likely also qualify for the credit. Based on our analysis of the sample projects listed above, we believe that for most projects, the total credit over four years would amount to less than 20 percent of capital expenditures.

We anticipate that this credit will mostly be used by corporations that acquire the credit through the transferability provision. The transferability provision will be used because many power producers are owned by municipalities, non-profits or S-corporations and therefore are not subject to the corporate income tax. Also, independent power producers, once defined in regulation, could potentially include individuals, sole proprietorships, LLC's, S-corporations, non-profits and other entities that are not subject to the corporate income tax.

Expenditures:
This bill would require the Department of Revenue to administer a new tax credit program, including the review and approval of credit applications and issuance and tracking of credit certificates. This new credit program will likely involve a large number of projects and millions of dollars in credits claimed annually.

The Department is requesting a Corporate Income Tax Auditor III position (Range 22) to audit the tax credits and manage the approval, issuance and tracking of the credits. There will also be $30,000 in one-time startup expenses: $20,000 for enhancements to our tax examination system, and $10,000 for an education and public outreach program.

SPONSOR STATEMENT

SB 31: Alternative Energy Production Tax Credit

SB 31 encourages the development of Alaska's vast renewable energy resources by offering power producers and utilities a valuable production tax credit for each kilowatt-hour of electricity they produce from geothermal, wind, hydro, tidal, wave, biomass, in-river, or solar energy.

In its simplest terms, a tax credit is a direct reduction in the amount of taxes owed. The production tax credit created by SB 31 rewards power producers in the state of Alaska for producing electricity from alternative energy sources by offering to directly reduce the amount of state corporate income tax they owe. In Alaska, the corporate income tax rate is graduated from 1% to 9.4% in increments of $10,000 of taxable income. The 9.4% maximum rate applies to taxable income of $90,000 and over.

SB 31 offers a production tax credit in the amount of 2.1 cents per kilowatt-hour (kWh), which matches the rate of the federal Renewable Electricity Production Tax Credit. What this means is that the state will directly reduce the amount of corporate tax owed by 2.1 cents for each kWh of energy produced. By way of example, a 400 kWh plant similar to the Chena Hot Springs Geothermal project, operating at the 75% capacity typical for a geothermal plant, could claim just over $55,000 in credits per year (400 kW x $0.021 x 8760 kWh/year x 75% = $55,188/year); a 30 MW project similar to the Fire Island Wind Project, assuming the typical wind farm capacity of 30%, would be eligible for $1.7 million in credits annually. The credit can only be claimed for each of the first four years after a power plant is placed into service and is capped at 20% of the capital investment of a power project.

However, the dominant model for energy production in Alaska is not the privately owned power producer that pays corporate tax, but rather the publically owned cooperatives and municipal utilities that are tax exempt. To level the playing field and to ensure that all power producers in the state can benefit from the tax credit, SB 31 proposes a transferable tax credit. A transferable tax credit can be sold or traded on an open market to other corporate entities that are required to pay the state corporate income tax.

Because the production tax credit can only be claimed by a power producer that has made a significant investment in infrastructure and is already producing electricity, SB 31 allows a way to incentivize alternative energy development without requiring hefty state appropriations to unproven projects and technologies.

In energy plans across the nation, production incentives are playing an increasingly important role in encouraging the development of renewable energy resources. Twenty-five states offer some sort of renewable energy corporate tax incentive and five states and the federal government offer a production tax credit similar to the one proposed by SB 31.

SUMMARY OF CHANGES

SB 31 Version M to Version N

(1) Page 1
Revisor's changes: changed Section 2 to Section 1, renumbered accordingly, and changed "which" to "that" in line 8.

(2) Page 2, line 8-11:
Added a clause that would limit eligibility for the PTC to only projects or expansions to projects placed into service on or after January 1, 2010.

(3) Page 3, line 8-9:
Changed the definition of "energy producer" to require independent power producers to hold an RCA issued certificate of public convenience and necessity in order to be eligible for the tax credit.

SUMMARY OF CHANGES

CS for SB 31 - Version D

(1) Section 2(a)
Changed the amount of the PTC to a graduated system that ties the tax credit to the retail cost of power for a community. The amount of the tax credit is equal to 15% of the retail electricity rate for a given community. The tax credit amount is a minimum of 2.1 cents/kWh and a maximum of 5 cents/kWh.

Reason:
As suggested by Chris Rose during Monday's hearing, this seemed to be a more equitable and sensible way to incentivize renewable energy development in communities where it is needed the most. This change ties the amount of the PTC to the cost of power rather than power plant capacities or community populations, which were also explored. Has the advantages of a tiered system but without the arbitrary thresholds.

(2) Section 2(a)(2) removed
Removed language that allowed power producers to claim the tax credit if they used the electricity they produced for their own commercial purposes.

Reason:
Part of the intent of this bill has become to encourage the production and distribution of electricity to communities that need it the most. This (1) ensures that the power being incentivized by the tax credit makes it onto the grid and into the homes of Alaskans, and (2) addresses the industry concern of power producers claiming the tax credit by selling electricity to themselves.

(3) Section 2(b)
Changed the number of years that the credit could be claimed from four to five years.

Reason:
Industry experts suggested extending to as much as ten years, but cursory analysis quickly showed that his would add up to huge subsidies over a ten year period. Half that – five years – seemed a reasonable compromise.

2870

(4) Section 2(g)
Capped the aggregate amount of tax credit plus state grants that can be claimed to 10% of the capital cost of a given project.

Reason:
Prevents over-subsidization of projects that are eligible for both the PTC and Renewable Energy Fund grants. As pointed out by Sen. French, giving a tax credit to a project that has already been subsidized through the renewable energy fund may "over-stimulate" that project.

(5) Section 2(k)(2)
Changed the definition of "energy producer" so that independent power producers are not required to obtain a certificate of public convenience and necessity from the RCA. Limited the eligibility of projects to power plants with a production capacity of 100 kW or more.

As per Sen. Huggins' concern, the certificate may be an unnecessary burden to both the producer and the RCA. Limiting eligibility to 100 kWh or more addresses the problem of "back-door net-metering" as brought up by Chris Rose of REAP.

(6) Section 2(k)(3) and all sections
Changed all occurrences of "alternative energy" to "renewable energy".

Alternative energy and renewable energy are often used interchangeably, but there is an important distinction. The types of energy that are eligible for the PTC program under SB 31 (geothermal, solar, hydroelectric, wind, biomass, hydrokinetic, tidal, and wave energy) are all renewables, not alternatives. The nomenclature was changed to reflect that.

(6) All sections
Moved the tax credit language from 43.98 (Revenue and Taxation: Miscellaneous Provisions) to 43.20 (Revenue and Taxation: Alaska Net Income Tax).

Reason:
Language change recommended by the Tax Division. Ensures that the credit is applicable only against the corporate income tax and not any other state taxes.

February 10, 2009

Senator Lesil McGuire
Chair, Senate Special Committee on Energy

Re: Committee Substitute of SB 31, Alternative Energy Production Tax Credits

Dear Honorable Chair McGuire:

Alaska Power Association (APA) is the statewide trade association for the electric utilities that supply power to more than a half-million Alaskans in communities from Barrow to Unalaska and down the Inside Passage.

APA strongly supports the development of alternative energy projects. State financial assistance and incentives will play a critical role in getting these projects off the drawing board. The Committee Substitute for Senate Bill 31 would help encourage the construction of alternative energy projects through the use of tax credits. It is for these reasons that Alaska Power Association supports the Committee Substitute for Senate Bill 31.

I would like to offer the following suggested changes:

APA suggests defining the time during which a renewable energy producer could claim a credit as 48 months instead of four (4) years. Under the existing bill, if a utility or independent power producer started producing power in August, it could only claim a few months worth of production for that year. By counting months instead of years, the bill would allow for a full four (4) years of production to be claimed over a five-year period. The change could be made by amending subsection (b) to read as follows:

> (b) An energy producer may claim a tax credit under this section in the amount of .35 cents for each kilowatt-hour of alternative energy produced or sold. A tax credit may be claimed for each of the first ~~four years~~ **forty-eight months** after the date the system used to produce alternative energy is placed into service.

APA also suggests amending subsection (e) to clarify that it is referring to the credits described in subsection (d). The clarified language would read as follows:

> (e) A taxpayer acquiring a ~~transferable~~ tax credit **under (d) of this section** may use the tax credit or a portion of the tax credit to offset taxes imposed under AS 43.20 (Alaska Net Income Tax Act). Any portion of the credit not used may be used at a later time or transferred under (d) of this section.

APA believes that this minor change to section (b) and the clarification to subsection (e) are consistent with the intent behind Committee Substitute for SB 31.

If you have any questions regarding this letter, please contact me at 907-771-5703 or mleland@alaskapower.org. I will be traveling to an out-of-state meeting the day of the first hearing on this bill. As a result, I regret that I will not be able to testify at the hearing.

Thank you for your work on this and other issues of importance to the Alaska electric utility industry.

Sincerely,

Marilyn Leland
Executive Director

Alaska Conservation Alliance

Uniting for Alaska's Future

February 12, 2009

The Honorable Lesil McGuire
Alaska State Senate
Alaska State Capitol
Juneau, Alaska 99801-1182

Dear Senator Lesil McGuire,

On behalf of the 40 conservation groups and the 38,000 Alaskans that are represented by the Alaska Conservation Alliance, I am pleased to acknowledge our strong support for SB 31 to establish an Alternative Energy Production Tax Credit. This credit will give Alaskan communities, utilities and entrepreneurs the incentive needed to develop clean, stably priced clean energy sources.

As you are well aware, Alaska is at an energy crossroads. Much of the state's aging electricity generation infrastructure will have to replaced in the next decade. With power plant life spans of 20 to 100 years, decisions made today about electric power technology will affect generations of Alaskans to come. A decision now to base Alaska's energy infrastructure solely on fossil fuels will result in decades of energy price volatility. Additionally, it is commonly accepted that a carbon cap and trade system to limit the greenhouse gas emissions of fossil fuels, further increasing the costs associated with fossil fuels, will soon likely be implemented. An alternative energy production tax credit gives rural and urban communities incentive to tap a fuel-free, zero-carbon energy source that will stabilize Alaska's future energy costs.

Investing in clean energy production and research can help Alaska become an exporter of clean energy technologies to the world in addition to supplying Alaskans with clean and stably priced energy. Through incentives similar to the Geothermal Tax Credit, Germany built an $8.7 billion renewable energy industry, creating 170,000 jobs.

The Alaska Conservation Alliance would like to thank you for this opportunity to voice our support for SB 31 and we encourage passage of this bill.

Sincerely,

Kate Troll

February 18, 2009

Senator Lesil McGuire
State Capital, Room 125
Juneau, Alaska

Dear Senator McGuire:

The efforts you are making towards building Alaska's clean, renewable energy infrastructure is commendable. Our survival as a civilization in the North is dependent on our ability to have affordable and dependable energy available to homes and businesses. As we have seen over the last few years we cannot rely on the stability of fossil fuel prices and need to further develop energy resources that are sustainable and secure. The work you are doing in the Senate Energy Committee shows your commitment to the future of our state's communities and economy.

Specifically, I would like to commend you and Senator Ellis on the development of Senate Bill 31, which if adopted would greatly encourage investment in renewable energy projects and an incentive to get the projects online rapidly. The approach of offering transferable tax credits is the perfect solution for small power producers who won't see significant net income in the first four years of operation. It is also helpful that the tax credits can be assigned, exchanged, or transferred in whole or part; this allows the small producer to have a more favorable revenue outlook when planning a new project.

Many other states have enacted similar legislation. The New Mexico Renewable Energy Production Tax Credit provides a tax credit against the corporate income tax North Dakota allows any taxpayer -- an individual or corporation -- to claim an income tax credit for the cost of equipment and installation of a system that uses geothermal, solar, biomass, or wind energy. All or part of the unused credit may be sold, assigned or otherwise transferred by the taxpayer under certain limitations.

I am strongly in support of SB 31 and look forward to how it can encourage the development of renewable energy. In Alaska, we can be smokestack free by 2023. What we need is vision, passion, and the cooperation of multiple stakeholders. Any movement towards a sustainable Alaska is a step in the right direction. SB 31 will help accomplish our common goals.

Sincerely,

Bernie Karl

SPONSOR STATEMENT
Senate Bill 54

"An Act making sales of and offers to sell certain energy resources by a refiner at prices that are exorbitant or excessive an unlawful act or practice under the Alaska Unfair Trade Practices and Consumer Protection Act."

Alaskans are paying far too much for heating and motor fuel. This bill will help reduce the cost of gasoline, and heating fuel for many Alaska residents, from road system communities where the price of gasoline is excessive, to rural communities where the price of heating fuel is far too high.

There is evidence that Alaska's refiners are marking up the cost they pay for crude oil at a rate that far exceeds the markup charged by West Coast refiners, and that is higher than the historical Alaska mark up. Many other states have price gouging laws, and Alaska should have one too.

Most Alaska motor fuel and heating oil is produced by the Tesoro and Flint Hills refineries, with most motor fuel coming from the former. Evidence to date shows that the high price Alaskans are paying for motor fuel and heating oil is caused in large part by this refiner mark-up. While it is understandable that fuel prices will rise and fall with the price of oil, there is questionable justification for the margins Alaska's main refiners are adding to their cost for Alaska crude oil.

This bill provides protection for Alaskan communities, individuals, and businesses that rely on refined petroleum products for heating and transportation by prohibiting refineries from charging excessive or exorbitant prices for heating oil, diesel, and automobile and aircraft fuel. An objective threshold is established where prices are presumed to be excessive or exorbitant, which refiners can rebut by showing that their prices are a reasonable response to expenses. The bill provides for monetary damages to deter potential violators.

During the recent fuel cost crisis, the rate at which Alaskan prices have been higher than Lower 48 rates has consistently exceeded historical norms, and Alaskan prices have increased while Lower 48 rates decreased. Even suspending Alaska's gasoline tax has not been able to eliminate this disparity.

This bill targets refinery prices, because the investigations conducted by the Legislative Research Division and the House Judiciary Committee have shown that the price disparities have arisen because of the prices that refineries sell products to retailers. This bill does not set or control pricing, and disparate pricing would still be legal if refiners can show their prices to be reasonable. This bill only applies to refiners with annual sales of over one million gallons of applicable fuel, exempting smaller community refiners.

While many other states' prohibitions against excessive fuel prices only apply in the event of natural disasters, terrorist attacks, or declared emergencies, Alaska has a unique Constitutional responsibility to ensure that natural resources are used to the maximum benefit of the Alaskan people. This bill prohibits refineries from charging exorbitant or excessive prices that are detrimental to state and local economies and the welfare of individual Alaskans. Also, this recent crisis has shown that high fuel costs alone can be enough to create an economic emergency.

MEMORANDUM January 23, 2009

SUBJECT: Senate Bill 54: sectional analysis
(Work Order No. 26-LS0209\E)

TO: Senator Bill Wielechowski

FROM: Jack Chenoweth
Assistant Revisor

Senate Bill 54 makes a refiner's sales of and offers to sell certain energy resources at prices that are exorbitant or excessive an unlawful act or practice under the Alaska Unfair Trade Practices and Consumer Protection Act (AS 45.50.471 - 45.50.561).

Bill section 1 amends AS 45.50.471(b) to add, as a new paragraph, the material enacted by bill section 2 to the list of "unfair methods of competition" and "unfair or deceptive acts or practice" set out in the Act.

Bill section 2 adds a new section, AS 45.50.483, to make sale of certain energy resources by Alaska refiners at a price that is "exorbitant or excessive" subject to provisions of the Act. More specifically,

- subsection (a) declares that a refiner may not sell or offer to sell an energy resource at an exorbitant or excessive price;

- subsection (b) specifies the types of fuel to which the section applies;

- subsection (c) declares that it is prima facie evidence that a wholesale price is exorbitant or excessive if the price exceeds by more than 10 percent the average wholesale price of the comparable energy resource charged by refiners in the state of Washington; it also provides that the refiner may rebut the presumption by providing evidence that the price charged was due to reasonable costs incurred by the refiner;

- subsection (d) directs the attorney general to initiate an investigation if that officer believes that this section is being violated;

- subsection (e) specifies the maximum amount the attorney general may recover in civil penalties upon the finding of a violation of the section; and

- subsection (f) supplies a definition for the term "refiner."

This memo was prepared in response to a request by George Ascott.

August 11, 2008

Attorney General Talis J. Colberg
P.O. Box 110300
Juneau, AK 99811-0300

Dear Attorney General Colberg:

We are writing to request an investigation into gasoline pricing in Alaska. As you know, the price of gasoline in Alaska is the highest in the nation. As of today, the average Alaska price is $4.62/gallon, while the national average is $3.88/gallon. This gap of 75 cents is substantially higher than the 20 cent spread that has historically existed. In fact, the actual price spread is higher than 75 cents, as Alaska's gasoline tax—which was 8 cents/gallon until recently suspended—was the second lowest in the country.

We would like to know what is responsible for this unprecedented discrepancy in pricing. Specifically could collusion at the wholesale or retail level be inflating prices in Alaska? We note that in 1999, after the last investigation into gasoline prices was initiated, the spread between Alaska and Lower 48 prices narrowed dramatically. This has led many people to speculate about whether informal price-fixing may have been at work.

We urge you to initiate this investigation as soon as possible as many Alaskans are struggling with today's exorbitant prices and desperately need relief.

Please do not hesitate to contact us if you have any questions about this request.

Sincerely,

Senator Bill Wielechowski

Bettye Davis

Re: Alaska Gasoline Pricing

Dear Senators Wielechowski and Davis:

Thank you for your August 11, 2008 letter requesting an investigation into gasoline pricing in Alaska. I am also concerned with the high cost of gasoline and the apparent disparity between prices in Alaska and markets in other parts of the United States. On Saturday, August 9, 2008, at the request of the Governor, I directed the Consumer Protection Unit within the Department of Law to initiate an investigation into Alaska gasoline pricing.

We completed a similar investigation in November, 2002 which lasted over three years. The results of that investigation did not find evidence of any illegal activity. This type of investigation is complicated, and will require significant resources including the retention of experts to assist us in gathering and deciphering documents and information. We do not know when the investigation, which must remain confidential, will be completed.

Thank you again for your inquiry. Please contact my office if you have any questions.

Sincerely,

Talis J. Colberg
Attorney General

Press Release

ATTORNEY GENERAL'S OFFICE

For Immediate Release
November 20, 2008

UPDATE ON DEPARTMENT OF LAW'S GASOLINE PRICING INVESTIGATION

(Anchorage, Ak) - At the direction of Governor Sarah Palin, the Department of Law began an investigation into the pricing of gasoline in Alaska. The investigation was initiated in August, following the decline of gasoline prices across the country as the price of crude oil began to drop from record highs near $150 a barrel in July. Gasoline prices in Alaska, however, did not follow national trends, and soon became the highest in the nation. The Department's investigation is focused on explaining the slow decline of gasoline prices in Alaska, and whether the price of gasoline is the result of any illegal conduct, like price fixing or other collusive behavior.

The Department's investigation is ongoing, and must remain confidential under state law. The Department has gathered significant information from refiners, distributors, and retailers about the pricing of gasoline, and continues to gather additional data and information. The Department has retained Barry Pulliam, a Senior Economist at the Los Angles firm of Econ One, to assist the Department in its investigation. The Department has also attended two House Judiciary Committee hearings convened to discuss gasoline pricing issues.

The following is some useful information about gasoline pricing generally that may help explain some of the pricing for gasoline in Alaska.

1. The State of Alaska (or any state) does not regulate gasoline prices. Refiners, distributors, and retailers can sell gasoline at any price they want so long as those prices are not the result of collusive behavior, like "price fixing." If the price reached an "unconscionable" level, the price could also violate Alaska's consumer protection laws.

2. Because gasoline pricing is not regulated, economic forces including the available supply, consumer demand, and competition in the marketplace are the primary factors that determine gasoline prices.

3. Alaska does not have a price gouging law. Sellers of all goods and services (including gasoline) are not required to sell products on a "cost plus" basis. Thus, it does not matter what it costs the seller to acquire the goods or provide a service. Sellers can sell their products for whatever the market will bear. There is no "cap" on the amount of profit any business can make.

4. It does not matter what gasoline prices were when the price of oil was the same as it is today. For example, if refiners sold gasoline for $1.10/gallon when oil was $60 a barrel, this does not require them to sell it for $1.10 every time oil is $60 a barrel.

5. The price of gasoline in the lower 48 is not a good indicator of what prices "should be" in Alaska. The competitive forces that operate to control gasoline prices in the lower 48 are completely different from Alaska. The dynamics of supply, demand, and competition are unique in Alaska.

6. The demand for gasoline is not as "price sensitive" in Alaska as it is in other parts of the country. This means that regardless of the price, the demand does not change by much. This creates less incentive for suppliers to lower their price compared to areas of the country where demand drops significantly when prices rise.

7. Gasoline sold in Southeast Alaska is barged up from the Pacific Northwest and from Cook Inlet. Because fuel is only barged in once a month or every few months, it takes longer for prices to reflect current market conditions. It may take two or three months to exhaust current supply before less (or more) expensive gasoline is available and sold to retailers.

8. Some cities and boroughs charge tax on fuel sales. In the Kenai and Soldotna area, for example, the pump price adds a 6% city and borough tax that is not present in other cities, like Anchorage. Coupled with lower volumes and fewer stations, prices will tend to be higher in these communities.

The Department will complete its investigation to determine if there is any illegal activity among gasoline sellers that may be a cause of the high price of gasoline, and will prepare a summary of its findings when the investigation is done.

For further information, contact Department of Law Assistant Attorney General Clyde (Ed) Sniffen at (907) 269-5200.

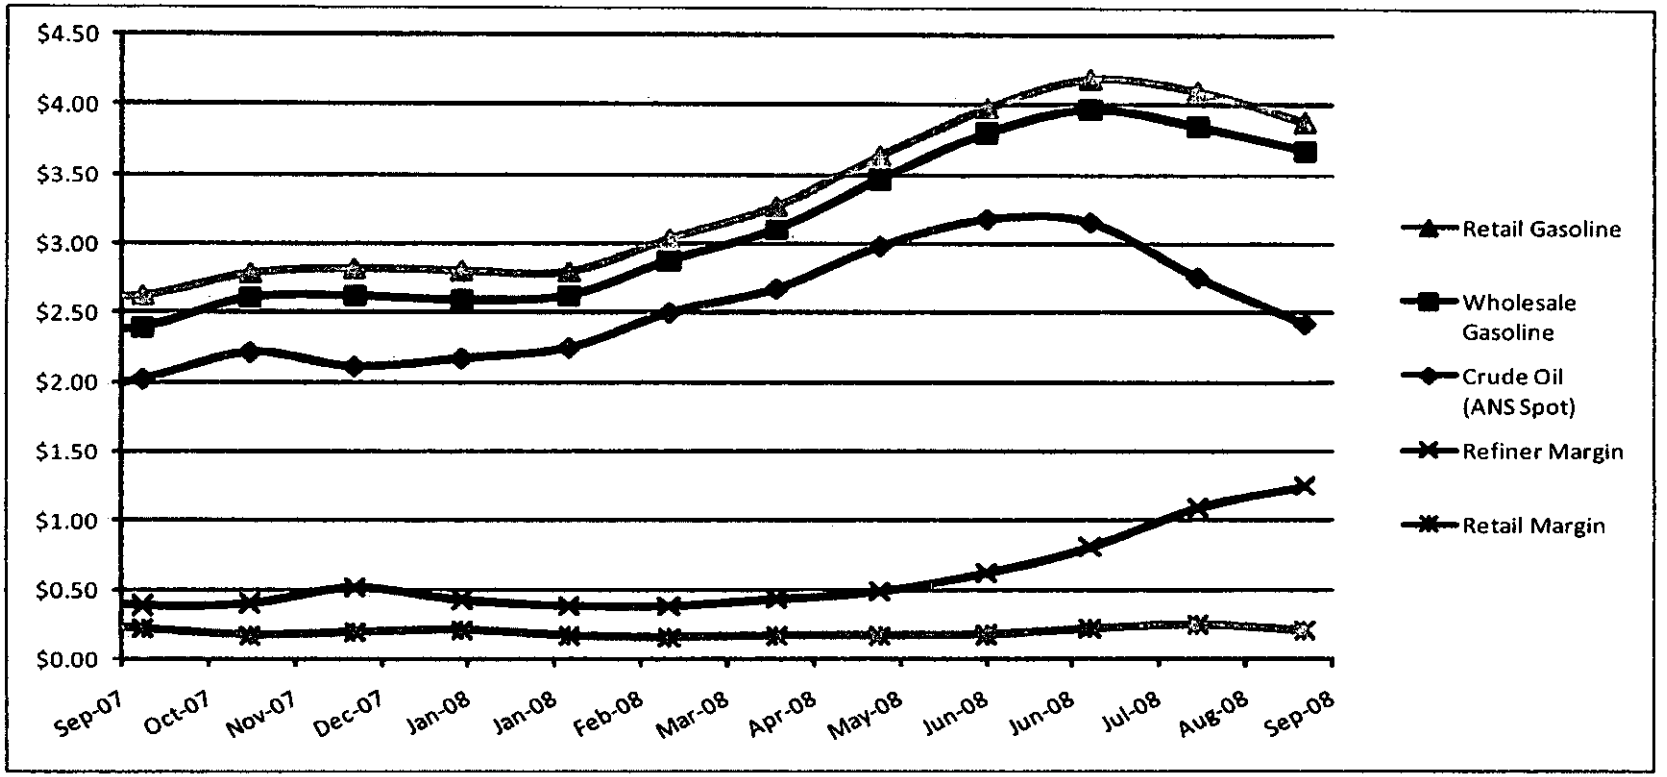
Figure 1: Selected Components of Alaska Gasoline Prices, September 2007 to September 2008



Notes: All dollar amounts are per gallon. We use the word "margin" to mean the proportion of gasoline costs attributable to a certain step in the process of bringing a gallon of gasoline to the retail market. In this context, only a percentage of the total margin is taken as profit.
1) "Retail Gasoline" is the average price of gasoline "at the pump" to end-users and include taxes;
2) "Wholesale Gasoline" is the average price of gasoline charged by Alaska refinters to resellers;
3) "ANS Spot" is the cost of Alaska North Slope crude oil on the commodity market. We calculated this cost by dividing the price per barrel by 42 (the number of gallons in a standard barrel);
4) "Refiner Margin" is refiner wholesale price minus ANS Spot prices;
5) "Retail Margin" is retail price minus wholesale price.

Re: Studies regarding gasoline prices in Alaska by AG's office

Dear Ms. Moss:

You have requested that the Department of Law provide you with copies of any reports done regarding investigation of gasoline pricing in Alaska. I have located two such reports which are enclosed, one prepared by the Alaska Department of Law dated December 21, 2001 and entitled, "Alaska Petroleum Products Pricing Investigation: Update and Status," and the other also prepared by the Alaska Department of Law, dated November 21, 2002 entitled, "Alaska Petroleum Products Pricing Investigation: Closing Report." Please let me know if you have any further questions.

Sincerely,

GREGG D. RENKES
ATTORNEY GENERAL

ALASKA PETROLEUM PRODUCTS PRICING INVESTIGATION:
UPDATE AND STATUS
Prepared by the Alaska Department of Law
December 21, 2001

Introduction

The Office of the Attorney General for the State of Alaska began an investigation of Alaska petroleum prices in 1999 by issuing Civil Investigative Demands to petroleum refiners and product distributors. The investigation was begun because of public complaints and inquiries to the Attorney General about the high price of gasoline in Alaska in comparison to other states. The purpose of the investigation is to determine whether Alaska petroleum product pricing is the product of illegal price fixing or other anticompetitive behavior in violation of state or federal statutes.

The Attorney General's investigation is ongoing. The Department of Law is reviewing the documents and data provided by the state's gasoline marketers. The Department of Law has not made a determination regarding whether there is sufficient evidence to warrant bringing an antitrust or other enforcement action.

Background

To bring an action under Section One of the Sherman Act (the federal antitrust law) or under AS 45.50 (Alaska's antitrust law), there must be evidence of an illegal agreement. This could be an actual written agreement, testimony, or other evidence of an agreement to fix prices, divide the market, or otherwise restrain competition.

Under existing law, the State of Alaska does not attempt to regulate wholesale or retail gasoline prices. A business is free to set its own price, but it is illegal for a business to collude with competitors to set prices.

The state has reviewed thousands of pages of documents, conducted interviews, and reviewed market data to determine whether there is direct evidence of an illegal agreement.

All material and data provided to the state in response to the civil investigative demands of the Attorney General are confidential by statute. AS 45.50.592(e). The following is a summary of the non-confidential portions of the analysis prepared by the department to date.

2889

Price Differences Between Alaska and the Lower 48

Retail prices of gasoline in Alaska have more closely followed prices in other West Coast states than prices in the rest of the U.S. Given Alaska's relative proximity to the West Coast, this probably is to be expected. Though Alaska's refineries supply much of the petroleum products required in the state, jet fuel, diesel, and gasoline have regularly been shipped from West Coast refineries to Alaska during the past decade. (Alaska's sources of supply for petroleum products are discussed in greater detail below.) In addition, gasoline and other products have been exported from Alaska to the West Coast. Because West Coast refineries are the closest alternative source of refined petroleum products outside Alaska, and because refined products move from Alaska to the West Coast, Alaska prices are influenced by West Coast prices.

Unfortunately, gasoline prices on the U.S. West Coast have, historically, been higher than prices in the rest of the U.S. Over the past seven years, the average retail price for gasoline, excluding taxes[1], on the West Coast has been 11 cents per gallon ("cpg") higher than the average retail price throughout the 50 states.

Concerns expressed by consumers and others about West Coast gasoline prices prompted the Federal Trade Commission ("FTC") to initiate an investigation. The FTC studied West Coast gasoline pricing practices for almost three years, but ultimately concluded that there was nothing unlawful about the manner in which West Coast wholesalers priced gasoline.

The FTC closed its West Coast investigation in May 2001. In doing so, it concluded that the West Coast has several important characteristics that set it apart from much of the rest of the U.S. gasoline market. One of the most important characteristics is the West Coast's relative distance from the Gulf Coast. The Gulf Coast is the largest refining center in the U.S. and an important source of supply of gasoline and other refined products. Refined products move to much of the U.S. from Gulf Coast refineries through a network of pipelines. There are no pipeline connections, however, between the Gulf Coast's refineries and the West Coast. This means that products like gasoline moving from the Gulf Coast's refineries to the West Coast must be shipped through the Panama Canal on marine tankers. This may explain in part why gasoline and other products refined on the West Coast command higher prices.

Unique product requirements, such as those imposed by the California Air Resources Board ("CARB"), also tend to raise the price of gasoline. In addition, there are a limited number of gasoline refiners and wholesalers on the West Coast, and all refiners and wholesalers do not compete in all metropolitan areas.

---

[1] Retail gasoline prices at the pump include federal, state, and local taxes. Since Alaska has one of the lowest gasoline taxes in the nation, retail price comparisons understate the differences between prices in Alaska and elsewhere unless taxes are deducted.

2890

Apart from the CARB standards, the West Coast market characteristics identified above are also present in Alaska. Compared to the West Coast, however, Alaska is even more distant from Gulf Coast product markets, has fewer refiners, and has even greater wholesale market concentration. This may explain in part why Alaska prices tend, on average, to be higher than those in other western states.

Yet these market characteristics, by themselves, do not explain why the price difference between Alaska and the West Coast grew sharply between 1995 and 1998. During this period, Anchorage-area prices were on average 17 cpg above retail prices in the Seattle area, a level nearly double the 9 cpg difference seen in the prior four years. This is curious given that Alaska refiners produced more gasoline during this period than was consumed here, and exported the surplus to the West Coast and Far East at prices lower than those offered in Alaska. Beginning in 1999, however—after the Attorney General initiated this investigation—the spread narrowed dramatically. Between January 1999 and December 2000, Anchorage-area retail prices averaged just 3 cpg above Seattle-area retail prices.

Supply and Demand of Petroleum Products

In addition to gasoline, the other major petroleum products sold in Alaska are jet fuel and diesel (No. 2 heating oil and No. 2 diesel fuel). These products and gasoline constitute more than 95% of the total volume of petroleum products sold in the state.

The Tesoro and Williams refineries produce gasoline, jet fuel, and diesel. The PetroStar refinery produces jet fuel and diesel, but no gasoline.

The Williams refinery, near Fairbanks, and the PetroStar refineries, near Fairbanks and in Valdez, all take Alaska North Slope crude ("ANS") directly from the TAPS line. Both companies reinject the unrefined portion of ANS back into the TAPS line.

Alaska's current demand for refined petroleum products is approximately 100 thousand barrels per day (MBD), or 1.5 billion gallons per year. Jet fuel consumption is just over 60 MBD, accounting for a little more than 60% of total demand for refined product in the state. Consumption of diesel and gasoline in Alaska runs approximately 16 MBD, or 245 million gallons per year, for each product.

More gasoline is produced in Alaska than is consumed. The excess is exported to the West Coast and foreign destinations. Nevertheless, gasoline, diesel, and jet fuel are barged into southeastern Alaska from Seattle-area refineries.

Historically, Alaska's refineries have not produced enough jet and diesel fuel to supply the state. These products are imported from the Far East or the West Coast.

2891

Tesoro's refinery supplies the majority of gasoline consumed in Alaska, but Williams supplies most of the gasoline sold in Fairbanks and interior Alaska. Williams also ships gasoline and jet fuel by rail to Anchorage.

The Anchorage metropolitan area accounts for about 60% of the state's retail gasoline sales while Fairbanks, Juneau, the Kenai Peninsula, and Western Alaska account for roughly 10% of retail sales each. There are approximately 300 service stations in Alaska. About one-third of Alaska's 300 retail gasoline stations are located in the Anchorage area. The average retail station in Anchorage is larger and sells much higher volumes than stations in the rest of the state.

Alaska's Gasoline Industry Is Highly Concentrated

Williams, Tesoro, Chevron, and Texaco[2] account for the vast majority of gasoline marketed in Alaska. The state's two gasoline refiners, Williams and Tesoro, were also its largest gasoline marketers, accounting for nearly 65% of Anchorage-area sales between them in 1999. Chevron and Texaco accounted for approximately 32% of Anchorage volumes. These same four marketers have accounted for nearly all of Alaska's gasoline sales over the past decade.

For purposes of analyzing competition within a market, the U.S. Justice Department and the Federal Trade Commission categorize markets into the following three groups: Unconcentrated, Moderately Concentrated, Highly Concentrated. Alaska's gasoline industry is Highly Concentrated at both the refining and wholesale distribution levels. Wholesale gasoline markets in Alaska are more concentrated than in most other wholesale gasoline markets in the U.S. and on the West Coast. Analysis of the available market share data shows that with the exception of the southeast part of the state, concentration levels are much higher in regions outside of Anchorage.

Competition, Oligopoly, and Illegal Behavior

Unconcentrated markets are characterized by a large number of sellers offering the same or similar products to consumers who can shop for the best value. Unconcentrated markets are generally assumed to be competitive. The more sellers, the more likely competition will thrive. In a competitive situation, no single seller has market power; the

[2] Since the late 1990's, in the West and Midwest, Texaco brand gasoline has been marketed by Equilon, a joint venture between Texaco and Shell. As a condition to approving the recent merger of Chevron and Texaco, Alaska, other states, and the Federal Trade Commission required Texaco to divest its interest in Equilon to Shell or another buyer. Therefore, the Chevron-Texaco merger should not reduce competition in the Alaska gasoline market.

2892

power to influence prices in the market on its own. Also where there are many sellers, it is difficult for sellers to coordinate their behavior or agree to volume or price restrictions without being detected.

In a competitive market, sellers are motivated to lower their prices in order to increase their sales, while buyers are motivated to seek out the best deal. Prices will tend to drop over time until they are close to sellers' costs. If prices begin to rise above costs, sellers will try to take advantage of the opportunity to increase profits by making more of the product available in the market. This increase in supply will in turn drive prices down to the point where they again are close to the sellers' costs. If prices fall to a level that does not cover sellers' costs, some sellers will go out of business. Those that are left will offer less of the product until prices start to increase again.

On the other end of the spectrum are highly concentrated markets, where there are relatively few sellers of a particular product. Economists call such a market an "oligopoly." Oligopolies do not always lead to higher prices, however. Prices in an oligopoly can be competitive even when there are very few sellers if, for example, potential new sellers are ready, willing, and able to enter the market in the event of even a small increase in price. In this situation, the threat of additional competition may tend to keep prices low. However, if there are relatively high costs associated with entering a market (entry barriers), existing sellers may be able to increase prices without much concern about attracting new competition.

When there are few sellers in a market, it is, presumably, easier for each to observe how its competitors react to decisions regarding output and prices, and each may take into account the potential impact of its own actions on market prices and the potential responses from other sellers. This type of competitive behavior, which is dependent in part on the expected actions or reactions of other sellers, is often referred to as "oligopolistic pricing" or "oligopolistic interdependence." In this environment, it is easy for sellers to develop a "live and let live" attitude toward their rivals that would not be possible to maintain in a competitive market. As a result, oligopolistic behavior can result in prices that are above competitive levels over extended periods of time.[3]

This type of interdependent behavior on the part of sellers is not generally regarded as a violation of antitrust laws so long as each business develops and implements its pricing and output decisions independently. That is, in determining what volumes to produce or what prices to offer, businesses can incorporate their expectations about a rival's likely reactions as long as those expectations are developed independently and without the aid of other sellers. If the sellers communicate about price setting or enter into

[3] Not all economists agree with this theory, and some would require empirical evidence supporting the theory before considering it valid for a particular market. In any event, whether higher-than-competitive prices in a market can be explained by oligopolistic interdependence is highly dependent on the facts.

an agreement that affects prices, it is considered collusion and a violation of the antitrust laws.

Economists believe collusion is more likely when certain conditions are present in a market, especially in markets for a relatively homogenous product like gasoline. These conditions include (1) the presence of only a few sellers (oligopoly), (2) inelastic demand, (3) relatively static or declining demand over time, (4) easy detection of sales by competitors, (5) price visibility, (6) difficulty of entry by potential new competitors, (7) frequent contact between sellers, and (8) few "fringe" or smaller sellers. All of these conditions are present in Alaska. But their presence, together with gas prices higher than one would expect in a competitive market, do not in themselves constitute a legal basis for an antitrust enforcement action. There must also be evidence of an illegal agreement or evidence that would allow the inference of such an agreement.

Additional Information on the Investigation

The companies have recently finished producing documents to the state. The state is in the process of reviewing and analyzing those documents to determine whether any laws or regulations have been violated.

Under Alaska's antitrust law, many aspects of this case are to be kept confidential. In particular, documents and their contents provided to the state in response to the Civil Investigative Demands (CIDs) issued by the Office of the Attorney General are to be kept confidential in the absence of a court order authorizing their disclosure to the public. AS 45.50.592(e). Such an order might be requested by the state if the investigation leads to an enforcement action. If the state finds no evidence of a violation of the antitrust laws, CID information may not be disclosed to the public in the absence of express authorization by the firm that provided the documents. AS 45.50.592(e). Because of the lawsuits filed against the state by some of the companies being investigated, court pleadings have been filed in the public record that contain some information about the investigation that would normally not be available to the public.

The state's initial CIDs were served upon several dealers of wholesale petroleum products in June, July, and August of 1999. Shortly thereafter, Tesoro, Chevron, and Texaco filed suit in Alaska Superior Court in Anchorage protesting the scope of the CID questions and the state's intended use of the produced documents. Those cases were consolidated under case number 3AN-99-8544CI. In an order issued October 7, 1999, the Superior Court upheld the propriety of the CIDs, with minor modification to a small number of questions, and the right of the state to share the documents with contract counsel without permission of the producing companies.

On October 13, 1999, Tesoro filed an appeal of the Superior Court's decision in the Alaska Supreme Court (Case No. S9379). Tesoro appealed both the scope of the CIDs and the state's right to share documents with contract counsel. The Alaska Supreme Court heard oral argument on November 15, 2000, but has yet to issue a decision.

The initial petition filed by Tesoro in the Superior Court explains Tesoro's contentions with respect to the scope of the CID. The CID, attached to the petition as an exhibit, lists the issues being examined by the Department of Law. Likewise, the state's opposition to Tesoro's petition outlines the issues that are the focus of the CID. The state's brief in the Alaska Supreme Court analyzes the issues being pursued and gives a brief history of the case proceedings. These documents are available at the state court clerk's office in Anchorage.

Other Resources

Interested persons may obtain gasoline pricing information from a number of sources on the Internet. The Energy Information Agency of the Federal Department of Energy tracks petroleum-related information nationwide. It compiles retail and wholesale gasoline pricing data and maintains reference documents about petroleum economics and various aspects of the energy markets:
http://www.eia.doe.gov

There is information on average wholesale prices at:
http://www.eia.doe.gov/pub/oil_gas/petroleum/data_publications/petroleum_marketing_monthly/current_pdf/pmmtab35.pdf

The following article discusses the reasons that West Coast prices tend to be higher than those in the rest of the country:
http://www.eia.doe.gov/pub/oil_gas/petroleum/presentations/2001/senate_testimony_0501/index.html

The following article explains the many factors influencing the costs of refining:
http://www.eia.doe.gov/emeu/finance/usiR/refdowpstrctu/index.html

In August 2001, the Federal Trade Commission conducted a hearing regarding factors influencing the price of refined petroleum products. Testimony and information regarding that hearing can be found at:
http://www.ftc.gov/bc/gasconf/

The American Automobile Association publishes daily average gasoline prices at:
http://www.fuelgaugereport.com

ALASKA PETROLEUM PRODUCTS PRICING INVESTIGATION:

CLOSING REPORT

Prepared by the Alaska Department of Law

November 21, 2002

Introduction

At my direction, the Alaska Department of Law conducted an extensive three-year investigation into the pricing of petroleum products in Alaska. The investigation was initiated in 1999 in response to public complaints about the high price of gasoline in Alaska in comparison to other states. I am closing the investigation because there is insufficient evidence indicating a violation of the antitrust laws.

Conditions Prompting the Investigation

Historically, the price of gasoline on the West Coast of the United States averaged 11 cents per gallon (cpg) higher than the average retail price throughout the 50 states, excluding taxes,[1] and the price of gasoline in Alaska has tended to be higher than the price of gasoline on the West Coast by about 9 cpg. Between 1995 and 1998, however, gasoline prices in Alaska were as much as 17 cpg higher than West Coast prices. This was the impetus for the investigation. Immediately after I initiated the investigation, beginning in 1999, the spread between prices in Alaska and the West Coast narrowed dramatically, more closely tracking the historical spread between Alaska and the other states.

Legal Standards

In order to establish a violation of Alaska's antitrust statute, AS 45.50.562 and AS 45.50.564 (or the comparable federal law), there must be evidence that two or more companies entered into an express or "tacit" agreement to fix petroleum prices. A showing that companies charged prices in excess of the competitive level, or raised and lowered prices in a parallel fashion, is not enough to establish the existence of a tacit agreement. Instead, evidence of uniform pricing must be accompanied by additional evidence demonstrating that two or more parties had a "meeting of the minds" to engage in cooperative pricing behavior, such as: (1) actions contrary to an entity's independent economic interests; (2) departure from normal business practices; (3) motive to conspire; (4) opportunity to conspire; (5) high level of inter-company communications; and (6) past antitrust violations involving collective action.[2]

---

[1] Retail gasoline prices at the pump include federal, state, and local taxes. Since Alaska has one of the lowest gasoline taxes in the nation, retail price comparisons understate the differences between prices in Alaska and elsewhere unless taxes are deducted.

[2] *See, In re Baby Food Litigation*, 166 F.2d 112, 122 (3d Cir. 1999) (proof of plus factors is a "prerequisite to finding that parallel action amounts to a conspiracy").

The Investigation

The investigation began in the summer of 1999 when my staff issued Civil Investigative Demands (CIDs) to refiners and distributors of petroleum products in the state. Hundreds of boxes of documents were produced in response to the demands. The investigation involved the review of thousands of pages of internal company documents, detailed analysis of pricing data, interviews of witnesses and potential witnesses, and formal depositions of several current and former oil company employees and executives.

Findings

My staff provided a summary of the investigation in a report entitled "Alaska Petroleum Price Fixing Investigation: Update and Status," December 21, 2001, http://www.law.state.ak.us/civil/oil-gas-mining/AKPPPI-1a_final.pdf. That report describes the economic conditions and market forces present in Alaska that affect the pricing of petroleum products. All of the information and data provided to me in response to the CIDs is, by statute, confidential. AS 45.50.592(e).

The investigation found that Alaska's gasoline industry is highly concentrated, in that four marketers accounted for the vast majority of gasoline sales during the relevant time period. When there are few sellers in a market, like Alaska, it is easier for them to observe how competitors react to decisions regarding output and prices, and each may take into account the potential impact of its own actions on market prices and the potential responses from other sellers. This type of interdependent behavior on the part of sellers often leads to parallel pricing, but that is not, in the absence of an express or implied agreement to set prices, a violation of the antitrust laws so long as each business develops and implements its pricing and output decisions independently. The investigation has not produced evidence of an express or implied agreement to set prices or to otherwise violate antitrust laws.

For the reasons set forth above, I am closing this investigation without further action. However, I expect the Department of Law to continue to monitor gasoline prices in Alaska.

Testimony to Energy Committee on SB54
February 12, 2009

I imagine that all members of this committee have read the House Judiciary Committee's report on gas prices. In my testimony today I want to point our several omissions from the report that dramatically effect the conclusion the committee chair has reached.

The burden that high gas prices have on Alaska residents is real and our prices over the last year are unjustified. Gasoline, diesel and heating oil are not a luxury items that households can simple go without. In the winter, heating oil is literally a life and death matter. High energy prices have a ripple effect through the economy as every resident pays for our higher fuel costs several times over.

We have been paying over a dollar a gallon at the gas pump and this has been a highly visible and contentious issue. What is less obvious is that we then pay again in increase freight costs for food, clothing and retail products. We pay more to heat our homes and then in turn have to pay more for goods and services as businesses are forced to pass on their additional energy costs.

Lacking from the judicial committee report was quantitative information. Based upon the latest published information, the annual gasoline consumption in Alaska is 285 million gallons[1]. At a conservative estimate of $.80 cents over Seattle prices Alaska consumers are paying an additional $230 million dollars a year for gasoline alone. This is money that leaves our state and provides us no direct or indirect benefit.

The house judiciary committee report concluded that our gas prices are basically subsidizing jet fuel to keep Alaska's airline industry profitable. Unfortunately these findings were based on intuition rather than fact. As I just stated, Alaska's gas market is 285 million gallons annually. The jet market on the other hand is over four times this volume at 1.3 billion gallons annually[2]. If the extra $230 million dollars that Alaskans are paying was added to the cost of jet fuel it would raise the price by only 4.6 cents a gallon or 2%.

It is hard to reach the conclusion that 4.6 cents would bring an end to the Alaska airline industry. The report stated that refiners in Alaska do not base their gas prices on their cost but rather base the price on market conditions. The same holds true for the airline industry. Airline fares often cost double or more for endpoint within Alaska compared to fares in the lower 48. This is not a function of increased costs, but rather lack of competition. Even if fares did increase to cover the added 4 cents, at least then the cost would be born by the users of the service and not by all Alaskans.

---

[1] U.S. Energy Information Administration 2006 report, Consumption of 6,789 thousand barrels of gasoline.
[2] U.S, Energy Information Administration 2006 report, Consumption of 31,747 thousand barrels of jet fuel.

The report also said that Ft. Greely, Eielson and Ft. Wainwright would be impacted and potential shut down by any potential legislation. It is far flung to conclude that the military would sacrifice our national defense for 4.6 cents per gallon. Additionally, the prime supplier for all military installations in Alaska is the Petrostar refinery who would be exempt under section (f) of this bill.

In conclusion I feel that lower gas prices would have a positive effect on our economy and that the benefits far outweigh the potential impacts to the airline industry. Industries such as fishing, tourism, recreation and ground transportation are no less important than air transportation. The $230 million dollars extra we are currently paying at the pump would be spent within the state, benefiting Alaska's economy, rather than large airline corporations..

CS FOR SENATE BILL NO. 54( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS WIELECHOWSKI, ELLIS AND FRENCH, Thomas

A BILL

FOR AN ACT ENTITLED

"An Act making sales of and offers to sell certain energy resources by a refiner at prices that are exorbitant or excessive an unlawful act or practice under the Alaska Unfair Trade Practices and Consumer Protection Act."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 45.50.471(b) is amended by adding a new paragraph to read:

(56) violating AS 45.50.483 (sales of certain energy resources by refiners).

*** Sec. 2.** AS 45.50 is amended by adding a new section to read:

Sec. 45.50.483. Sales of certain energy resources by Alaska refiners. (a) A refiner may not sell or offer to sell an energy resource at a price that is exorbitant or excessive.

(b) The provisions of this section apply only to sales of

(1) motor fuel used in an engine for the propulsion of a motor vehicle, as that term is defined in AS 28.90.990, or an aircraft;

(2) fuel for space heating; and

(3) diesel fuel.

(c) If the attorney general believes that a refiner has engaged in or is engaging in a violation of (a) of this section, the attorney general shall initiate an investigation under AS 45.50.495.

(d) Notwithstanding the penalties authorized by AS 45.50.551, the attorney general may recover, on behalf of the state, a civil penalty of not less than the greater of

(1) 10 times the economic benefit obtained by the refiner through the refiner's conduct that violated or violates this section; or

(2) $50,000,000.

(e) In this section, "refiner" means a company, corporation, or individual who owns or controls, or controls through a substantially owned subsidiary, partnership, or joint venture, a refinery used for the production of an energy resource described in (b) of this section having total annual sales that exceed 1,000,000 gallons of all of those energy resources.

"An Act making sales of and offers to sell certain energy resources at prices that are exorbitant or excessive an unlawful act or practice under the Alaska Unfair Trade Practices and Consumer Protection Act."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 45.50.471(b) is amended by adding a new paragraph to read:

(56) violating AS 45.50.483 (sales of certain energy resources by refiners, distributors, and retailers).

*** Sec. 2.** AS 45.50 is amended by adding a new section to read:

Sec. 45.50.483. Sales of certain energy resources by Alaska refiners, distributors, and retailers. (a) A refiner, distributor, or retailer may not sell or offer to sell an energy resource described in (b) of this section at a price that is exorbitant or excessive.

(b) The provisions of this section apply only to sales of

(1) motor fuel used in an engine for the propulsion of a motor vehicle,

as that term is defined in AS 28.90.990, or an aircraft;

(2) fuel for space heating; and

(3) diesel fuel.

(c) If the attorney general believes that a refiner, distributor, or retailer has engaged in or is engaging in a violation of (a) of this section, the attorney general shall initiate an investigation under AS 45.50.495.

(d) In addition to the civil penalties authorized by AS 45.50.551, the attorney general may recover, on behalf of the state, a civil penalty of not less than 10 times the economic benefit obtained by the refiner, distributor, or retailer through the conduct of the refiner, distributor, or retailer that violated or violates this section.

(e) Only the attorney general may bring an action to enforce this section. In an action to enforce this section in which the attorney general is the prevailing party, the attorney general may recover attorney fees and costs as authorized by AS 45.50.537(d). The provisions of AS 45.50.531 and 45.50.535 do not apply to authorize a person

(1) who suffers an ascertainable loss of money or property as a result of the act of a refiner, distributor, or retailer declared unlawful by this section to bring a civil action to recover for each unlawful act; or

(2) who was the victim of an unlawful act under this section, whether or not the person suffered actual damages, to bring an action to obtain an injunction prohibiting the refiner, distributor, or retailer from continuing to engage in the act that is made unlawful by this section.

(f) In an action to enforce this section, a refiner, distributor, or retailer has the right to submit evidence that the price charged by the refiner, distributor, or retailer that is alleged to be exorbitant or excessive was attributable to additional reasonable costs incurred in connection with the sale of the energy resource by the refiner, distributor, or retailer.

(g) In this section,

(1) "distributor" means a person or corporation other than a refiner who is engaged in the sale, assignment, or distribution of an energy resource described in (b) of this section to one or more retailers for sale through retail outlets;

(2) "refiner" means a company, corporation, or individual who owns or controls, or controls through a substantially owned subsidiary, partnership, or joint venture, a refinery used for the production of an energy resource described in (b) of this section having total annual sales that exceed 1,000,000 gallons of all of those energy resources;

(3) "retailer" means a person in the state who is engaged in the business of selling at retail an energy resource described in (b) of this section.

BILL NO. CSSB 54(ENE)

ANALYSIS CONTINUATION

SB 54 amends AS 45.50 to add a new section that prohibits a refiner from selling an energy resource at a price that is exorbitant or excessive. The bill only applies to motor fuel, diesel, and heating fuel. Violations of this law would become violations of the consumer protection act, and enforceable by the attorney general. The bill requires the attorney general to initiate an investigation upon belief that a refiner has engaged in a violation of the statute. Penalties under the statute are set at 10 times the economic benefit obtained through the refiner's conduct, or $50 million, whichever is greater.

Because it is difficult to predict when a refiner may be engaging in illegal conduct under this bill, the resources necessary to investigate and enforce this bill is unknown. The two recent gasoline pricing investigations undertaken by the attorney general required significant time and resources, including the retention of an expert economist. Petroleum pricing investigations take several months if not years. The most recent investigation spanned five months, and required a contract with an economic expert for $250,000. The prior investigation took three years, and significant resources, including retention of economic experts.

Accordingly, the fiscal impact of this legislation on the department of law is indeterminate, and would depend on the number of investigations required.

Alaska State Legislature

Sponsor Statement for SB 58

Senate Bill 58, an act establishing February 2nd of each year as Marmot Day, will create a localized, Alaska version of Groundhog Day.

While many people in the Lower 48 spend every February 2nd honoring Punxsutawney Phil, or some other incarnation of the famous groundhog, Alaska residents don't have the same representation.

The Marmot Day bill (SB 58) solves that, giving school children, public institutions and even adults the opportunity to use a local hire (the marmot) as their symbol.

Marmot Day can be celebrated in myriad ways, from special events at the Alaska Zoo to school celebrations with an educational angle so children can learn more about Alaska's furry ground squirrel.

Already, the Marmot Day bill has received support from the Alaska Zoo and the Mat-Su Borough School District.

I hope you will also support the Marmot Day bill.

Marmot

From Wikipedia, the free encyclopedia

Marmots are members of the genus ***Marmota***, in the rodent family Sciuridae (squirrels).

Marmots are generally large ground squirrels. Those most often referred to as marmots tend to live in mountainous areas such as the Alps, northern Apennines, Carpathians, Tatra, and Pyrenees in Europe, the Rockies and the Sierra Nevada in the United States, and Northern Canada. However, the groundhog is also properly called a marmot, while the similarly-sized but more social prairie dog is not classified in the genus *Marmota* but in the related genus *Cynomys*.

Marmots typically live in burrows, and hibernate there through the winter. Most marmots are highly social, and use loud whistles to communicate with one another, especially when alarmed.

The name *marmot* comes from French *marmotte*, from Old French *marmotan, marmontaine*, from Old Franco-Provençal, from Low Latin *mures montani* "mountain mouse", from Latin *mures monti*, from Classical Latin *mures alpini* "Alps mouse".

Marmots mainly eat greens. They eat many types of grasses, berries, lichens, mosses, roots and flowers.

Marmot Day

From Wikipedia, the free encyclopedia

Marmot Day is a community celebration in Owosso, Michigan, occurring on July 25th (or on the following Monday if the 25th falls on a weekend). It is a celebration of all marmots, which include groundhogs, woodchucks, and ground squirrels.

Confusion with Groundhog Day

Because groundhogs are also marmots, Groundhog Day (which occurs on February 2) has also been referred to as Marmot Day[1]. The Owosso celebration is a distinct event.

History of Marmot Day

Marmot Day was begun in 2002 in Owosso, Michigan, as a day of celebration for this animal which is usually considered as a pest. A luncheon is traditional as part of the celebration, and marmot jokes are also shared, among other festivities typical of any party or celebration. At 12:45 P.M., a marmot is positioned outside its hole, and if it goes into its hole, legend has it that summer is over; if it does not go into its hole, there will be one more month of summer.

Menard mad about marmot

By BRIAN O'DONOGHUE
Frontiersman staff

JUNEAU—A nefarious conspiracy is afoot among powerful members of the Legislature to deny a noble Alaskan its day in the sun.

Because of the conspiracy, Rep. Curt Menard said, next Tuesday the eyes of the nation will once again be drawn to a hole in Pennsylvania, instead of gazing with wonder at the Alaska Zoo.

"It's a disgrace to tourism," the representative declared over the phone from the state capital this week.

Menard's anguish stems from the Byzantine political fate of House Bill 181, his bold legislation to replace Groundhog Day with an occasion honoring an official state marmot.

House speaker Ben Grussendorf confirmed Menard's dire forecast.

"I don't think we're going to see the marmot's shadow out of committee and onto the floor by the time Groundhog Day rolls around," the speaker said.

Though he originally banished the bill to four committees, Grussendorf denied he is part of a crusade to deny marmots their due.

(Please see Marmot Back Page)

Marmot

(Continued from Front Page)

"I look at what we call local hire, or Alaska preference, and the marmot may well serve that purpose," he said. "I've no personal preference on it. If the bill comes out of committee it's fine with me."

Marmots living this far north are seldom seen this time of year, according to Alaska Zoo director Fammye Seawell. However, Smoke Alarm, the Zoo's senior hoary marmot, is apparently an exception.

"Every few weeks Smoke Alarm sticks his nose out," the zoo director said.

Groundskeepers say Smoke Alarm's restlessness is a matter of personal hygiene. In the halls of the Statehouse, however, the consensus holds the furry weathervane is actually sniffing out the political situation.

Pressed to explain the legislative logjam, Grussendorf shook his head.

"There's no leverage in the Marmot Bill," he said.

Nonetheless, this much is clear: Rep. John Sund is holding official recognition for Smoke Alarm hostage in his Judiciary Committee.

"We call it the dark hole," Menard said. "There's not a whole lot that comes out of that committee. I've talked to John a couple time about moving it. But he's not too big on the poor little critter."

So, I don't think the marmot's going to stick it's head out of the hole," Menard said, chuckling. "I think the speaker's right."

A lot of ribbing goes on about the Marmot Bill, but Menard said he takes it in stride.

"A lot of them are saying it's a joke thing, but there's a long-term value in terms of tourism. I thought it would give some promotion to the zoo. There's a town in Penn where the official Groundhog lives. They built a big tourist industry on that critter alone, selling shirts and all kinds of knickknacks. People go there for souvenirs.

"We always say we're different," he added. "If we're going to be different we don't have to drag all these traditional things up from the Lower 48."

Marmot Day: This is especially beneficial to the valley. Our community is sadled with a lot of embarrasing stereotypes (meth capitol of the state, etc.), which cause young people especially to be disrespectful of our community. Marmots are local and have been here all along; recoginzing their value with Marmot Day shows that we in the Valley have some local pride. Without that, it's impossible to maintain a sense of community identity.

Growing up in the Valley, I knew that our strip malls and box stores were nothing special. Independence Mine at Hatcher Pass, populated by marmots, is special. Marmot Day draws attention to the rich cultural resources preserved at Independence Mine and throughout the Talkeetna Mountains. The more we can do to imbue our community with a depth of history, the more the Mat-Su becomes somewhere we can be proud to live. I have watched the most talented members of my high school class leave the Valley with no plans of returning. Things like Marmot Day may be insignificant alone, but when we connect them together, they represent something important. The act of valuing local aspects like gold mines and marmots, or the Palmer Hay Flats and waterfowl, gives my generation a reason to stay-- or to come home again

-Will Elliot, Wasilla

Jasmine Riski
501 valley St.
anchorage, ak
99504

Dear Senator Menard,

I am willing to support SB58 for naming February 2 "Marmot day in Alaska for three reasons. First, because its a special day for Alaska to have fun. Second, because Alaska does not have Ground Hogs; we have Marmots. Last but not least, because Alaska will be the only state in the US that has Marmot day. Obviously I hope that Ground Hog Day gets changed to Marmot Day.

Sincerely,
Jasmine Riski

Raia Stamm
6801 Pottle Heights Dr.
Anchorage, AK
99516.

To Whom it may concern,

I am writing to support SB58. I have been going to Arctic Valley my whole life and they celebrate "Merry Marmot Day." On that day a group of people arrange a bunch of activities and contests for the kids. Also we don't have Ground Hogs in Alaska. Anybody can see that this bill should be passed because it would give Alaskans a special day to celebrate.

Sincerely,

Raia Stamm

Joey Aist
4700 Marsh Dr.
Anchorage AK
March 2 2009

Dear Senator Menard

I support SB58 for these reasons. First, groundhogs don't even live in Alaska, but marmots live all over Alaska. Second, marmots are equivalent to groundhogs. Third, a lot of people in Alaska appreciate and like the marmot. Clearly marmots are Alaska's groundhogs, so a day to honor them makes sense.

Sincerely,
Joey Aist

10041 Hanley Cir.
Anchorage, AK. 99507
March 2nd 2009

Dear Senator Menard,

I am writing in support of SB 58. Every year during the spring the Artic Valley Ski area hosts a "Merry Marmot Festival" and has many fun activities honoring the Marmot. During the festival many people come to celebrate the Marmot, so why not make it offical? The Marmot is very similar to the Groundhog, only Marmots live in Alaska and Groundhogs do not. Having February 2nd be Marmot Day would give Alaska another very unique quality.

Sincerely,
Ms. Ryan Terry

3236 [illegible]
Anchorage [illegible]
March 2, 2009

Dear, Senator Menard,

I support SB58 to have a "Merry Marmot Day", every February 2nd. We should have a "Merry Marmot Day", instead of Ground Hogs' Day because, the Marmot is Alaska's Ground Hog. The kind of Marmot here is the Hoarey Marmot. The Marmot lives here, and the Ground Hog doesn't so why does the Ground Hog get a special day? As you can see the Marmot deserves their own special day.

Sincerely,
Caleena B. Shafer

[illegible] Valley Brook Cir
Anchorage, Ak 99507
March 2, 2009

Dear Senator Menard,

I am writing to support SB58. We should have a Marmot day because it would add to the uniqueness of Alaska. Also, we would be able to celebrate a cute, furry mammal, and many people love cute and furry mammals. One more thing is that marmots are afraid of their shadows, like groundhogs, so we will still be able to tell how much longer winter will last, instead of doing something else. All in All, Marmots are the groundhogs of Alaska, so a special day for them makes sense.

Sincerely,
Yungshu Wang

AK 99515

Dear Senator Menard,

I support your bill and have agreed that the marmot day is a great day to have for alaska. We need our own special day, like the other states have.

Marmots are cute, kind, and gentle. They help keep alaska beautiful.

So I believe that the marmot would be a great day for alaskans.

Sincerley
Maddie Flores

Dear senator Menard,

I support [illegible] Marriot Day is a good idea because it would be interesting to have a unique animal to celibrate. Second of all, Ground Hogs don't even live here, marmots do. Finally, we should choose an animal That lives here unlike Ground Hogs. To sum it all up, the marmot deserves to have its special day.

Sincerly,
Ciara Brady

CS FOR SENATE BILL NO. 71( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR THERRIAULT

A BILL

FOR AN ACT ENTITLED

"An Act relating to alternative energy systems for public works."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 35.10 is amended by adding a new section to article 1 to read:

Sec. 35.10.085. Alternative energy for public works. (a) When preparing and adopting plans and specifications and determining standards for the construction of a public work under AS 35.10.010, the department shall review the option of using a viable alternative energy system for heat or electrical power for the public work.

(b) If a viable alternative energy resource is available and can be used as a primary or secondary source of heat or electrical power or the department determines a viable alternative energy source will become available, a public work constructed under this chapter shall be constructed to accommodate or be compatible with the viable alternative energy system.

(c) In this section, "viable alternative energy system" means a system that uses a nonfossil fuel fired system for heat or electrical power that, if used over the course of the life of the facility, will cost not more than a fossil fuel fired system to purchase,

install, maintain, and operate and will have less measurable adverse effect on the environment than a fossil fuel fired system.

Senate Bill 71

Sponsor Statement

With the recent spikes in energy costs, Alaskans have turned their time and efforts to identify and develop alternative energy sources. Through the passage of HB 152 in 2008, the state established a funding source to support these efforts. Now we must prepare to use the alternative energy as it becomes available both to save money and to help make these energy sources viable on a broader scale to the public.

Senate Bill 71 proposes to expand state support for the development of alternative energy by constructing public facilities in such a way that they can easily use those energy sources without costly renovations or retrofitting. By preparing in advance to use alternative energy sources, the state may very well determine the economic viability of developing projects that will in turn support local jobs and infrastructure in the surrounding geographic area.

Senate Bill 71 does not require the state to purchase alternative energy at an increased cost to the public, nor does it require the state to add design changes where they do not make sense. Senate Bill 71 does bring recognition that state facilities are large consumers of energy and when alternative energy sources are applicable the state as a sizable consumer can open the door and lower costs for all other local energy consumers.

SB 104

Alaska State Legislature
Juneau Senate Office
District B

Sponsor Statement
SB 104 Expand Stan Price Wildlife Sanctuary

This bill expands the size of the wildlife sanctuary at Pack Creek, on Admiralty Island in Southeast Alaska, by adding additional state-owned tidelands and submerged land. Pack Creek contains a unique population of human-habituated brown bears, and is a significant tourist attraction for boaters and fly-in day visitors from Juneau.

Fish and game management on Admiralty Island is reserved for the state, although most uplands—nearly 1 million acres—are federally owned and managed as Admiralty Island National Monument and Kootznoowoo Wilderness.

Hunting is prohibited in the Stan Price sanctuary. Since 1984, the uplands adjacent to Pack Creek and several surrounding watersheds have been closed to hunting by the Board of Game. This area, about 77,000 acres in total, is known as the Upper Seymour Canal Closed Area. There is a continuing vocal attempt from the same small number of hunters to reopen this area to bear hunting. They have brought this issue before the Board of Game seven times since 1984 and failed each time. These repeated efforts consume a significant effort in board and ADF&G staff time and unfairly burden the public which has to wage a campaign to defend the closure each time. By expanding the Sanctuary to include state tidelands and submerged lands that conform to the boundaries of the Upper Seymour Canal Closed Area, this bill would effectively foreclose the possibility of re-opening that area to bear hunting.

This bill is a good government measure. It is clear that the great majority of Southeast Alaska citizens, including hunters, support keeping the area closed to bear hunting, as it has been for years. It is a waste of scarce public resources to continually revisit this issue.

Currently, the Forest Service requires specific access permits to visit the Pack Creek area but does not require this in the rest of the Upper Lynn Canal Closed Area. SB 104 would have no effect on this Forest Service policy; areas outside Pack Creek would remain open to visitors without a permit. Likewise, the vast majority of Admiralty Island will not be affected by this bill and will continue to be open for bear hunting.

January 31, 2010

RE: Support for SB 104, HB 142; Legislation to Expand the Pack Creek Sanctuary.

Dear Senator Egan and Representative Kerttula,

As Alaska residents and local business owners who have made their living for the past 18 years guiding visitors on bear watching excursions to Pack Creek, Windfall Harbor and Swan Cove, we wanted to thank you for sponsoring this important legislation. We understand how vital it is to extend permanent protection to the closed areas surrounding the tiny amount of actual sanctuary land at Pack Creek itself. Years of experience have shown us how frequently the habituated bears that make Pack Creek viewing special also range throughout the adjacent drainages of Windfall Harbor and Swan Cove, and how vulnerable Pack Creek bears would be to hunting in these areas. We can also attest to how important Windfall Harbor and Swan Cove are in their own right as viewing locations. These areas have long offered bear viewing options to visitors when permits for Pack Creek are not available. Even with a business as limited as ours that operates with just one pilot/guide serving small very groups, the numbers are significant. Looking at our use figures since the year 2000, we have taken an average of 86 clients into Windfall and Swan each year. That is in addition to the approximately 180 clients we have taken to Pack Creek each season.

Having spent the better part of 2 decades intensively engaged in bear viewing in this area we can especially speak to how this activity enriches Juneau's economy. It is well understood that wildlife watching is big business in Alaska and an essential aspect of our tourism economy. It is perhaps less apparent just how much of that business is done by small, locally owned and operated ventures. That is particularly the case for bear viewing within the Pack Creek/Windfall/Swan complex. Tours for bear viewing in these areas are not sold through the cruise ships. Instead this is a market aimed at independent travelers and facilitated by local guiding businesses, Juneau's air taxi charters, and small Alaskan travel agencies. Small businesses and local residents are the primary beneficiaries of bear viewing activity at Pack Creek, Windfall Harbor and Swan Cove. These businesses overwhelmingly employ people who live, own property, pay taxes and spend their money right here.

Not only does the income we've earned from bear watching flow through the local economy, a significant amount of it goes directly back to underwriting the cost of managing Pack Creek itself through special dedicated use fees we pay to the Forest Service. Our Pack Creek permit fees average over $5000 per year. And that amount is in addition to other use fees we pay each year as a commercial operator in the National Forest. Altogether such funds generated by watchable wildlife are an important source of revenue for the agencies that manage public lands; a fact that is often not given proper credit. However it is certainly true at Pack Creek that wildlife viewers pay their way. Pack Creek, Windfall Harbor and Swan Cove, along with Windfall and Swan Islands just offshore of Pack Creek itself, function as a whole, and together they comprise an extremely valuable public resource. We urge the legislature to safeguard this area's future, and the future of those who depend on it for their livelihoods, by finally extending full sanctuary status to all of these lands.

Respectfully,
Butch Laughlin and Sarah Dunlap

Denby Lloyd
Commissioner, Alaska Department of Fish and Game
PO Box 115526
Juneau, AK 99811-5526

Dear Commissioner Lloyd,

The USDA Forest Service and Alaska State Department of Fish and Game have co-managed the bear viewing opportunities at Pack Creek for more than 25 years. We have invested considerable time and energy into making a successful partnership and the result has been impressive. Up to 1,200 visitors per year pay a $50 permit fee, or up to $450 in guided fees to view these tolerant bears. Visitation is limited to 24 persons per day and visitors expect a high quality viewing and photography experience. Pack Creek is now highly regarded as a sustainable ecotourism destination where federal and state agencies have closely aligned our goals, objectives and allowed uses.

In 1997 the Forest Service designated the Pack Creek Zoological Area (PCZA) in our Tongass Land Management Plan with a boundary that matches the State of Alaska's 1984 Seymour Canal Closed Area. By doing so, the Forest Service took an important step toward expanding our cooperative management with the State. The PCZA includes Swan Cove to the north of Pack Creek and Windfall Harbor to the south where management focuses on protecting bear habitat and providing opportunities for wilderness visitors to see wildlife in a less-structured setting as compared to Pack Creek.

Recent PCZA planning by the Forest Service has highlighted some important differences between the protective upland wilderness management of the forest and the tideland management of the State of Alaska Department of Natural Resources (outside of the existing Stan Price Wildlife sanctuary). For example, generally allowed uses of State tidelands in Windfall Harbor or Swan Cove could include landing helicopters, using off-road vehicles, assembling groups up to 50 persons, cutting firewood, and recreational mining. To better align our management objectives, the Forest Service supports expanding the jurisdiction of the Department of Fish and Game, our long term partners, in directly managing these tidelands. This could be accomplished by expanding the Stan Price Wildlife Sanctuary to include all of the Seymour Canal Closed Area. As a result, the two agencies could best serve the public by enhancing wildlife viewing opportunities; this has been suggested in scoping for our current plan, and has been successfully demonstrated at Pack Creek. This could also improve client experience on Outfitted and Guided tours thereby supporting continued investment in bear viewing businesses.

The Forest Service looks forward to continuing our beneficial relationship with the State of Alaska. Pack Creek has provided a great example of co-management that can be expanded and strengthened in the surrounding areas. Thank you for continued partnership in this world class wildlife viewing area.

Sincerely,

FORREST COLE
Forest Supervisor

RE: Support for SB 104, HB 142; Legislation to Expand the Pack Creek Sanctuary.

Dear Senator Egan and Representative Kerttula,

Thank you for your support of this important legislation that maintains the protections of Pack Creek and related areas. We often take visitors to Pack Creek, and at times the bear viewing is better in Windfall Harbor than at the creek itself. The same bears frequent the entire area, and without protection, would certainly provide less viewing opportunities. We don't have a guide license, so our clients must procure Pack Creek permits themselves, and if they don't happen to receive permits, they can often see the bears at Windfall Harbor.

Your support safeguards this area's future, and the future of those who depend on it for their livelihoods, by finally extending full sanctuary status to all of these lands. This is a public resource that is frequented and used by our local tour companies, since local charter vessels and air carriers are the major means of transport to this area. Local businesses like ours that provide this service live and work in Juneau, and purchase their own goods and services here, strengthening Juneau's economy.

We look forward to the passage of this legislation and the protections this area deserves.

Sincerely,

Francis and Linda Kadrlik

Juneau, Alaska 99801

Dear Senators Wielechowski and McGuire:

The Territorial Sportsmen Inc. (TSI) supports SB 104 to extend the boundaries of the Stan Price Wildlife Sanctuary beyond the Pack Creek Delta to include state-owned tidelands south to Windfall Harbor and north to Swan Cove and including Swan and Windfall Islands. This extension will insure that brown bears are protected on tidelands throughout the Seymour Canal Closed Area.

TSI appreciates the changes made to the original bill that addressed our concerns. TSI supports the committee substitute for Senate bill 104.

TSI is a Juneau based sportsmen organization with 1800 members. We advocate for the rights of hunters, trappers, sport fishermen and other outdoor users.

Sincerely yours

Wayne Regelin

Board of Game Southeast Regional Meeting
November 10-14, 2006

DESIGNATED REPORTER: Gerry Bigelow
This summary of actions is for information purposes only and is not intended to detail, reflect or fully interpret the reasons for the Board's actions.

PROPOSAL 13 ACTION: Failed
DESCRIPTION: Open Swan Cove and Swan Island in the Pack Creek – Seymour Canal Closed Area to spring and fall brown bear hunting.
DISCUSSION: Board members commented on the overwhelming number of comments opposing the proposal. The board referenced the public hearing in Juneau on October 19th where many individuals testified in opposition to the proposal. Board members felt there was not a compelling reason to open the small area to brown bear hunting and that Admirality Island seems to be well balanced with wildlife viewing and hunting opportunities. The board discussed the issue of habituated bears roaming outside the boundaries of the closed area and are not entirely protected from hunting. The board imposed a ten year moratorium to exclude the Seymour Canal Closed Area from future calls for proposals unless a majority of board members request it.

PROPOSAL 15 ACTION: Failed
DESCRIPTION: Open Swan Cove in the Pack Creek – Seymour Canal Closed Area to spring and fall brown bear hunting.
DISCUSSION: The proposal failed in light of the action taken on proposal 13.

To see the proposals from the Nov 2006 board meeting:
http://www.boards.adfg.state.ak.us/gameinfo/meetinfo/gprop.php
http://www.boards.adfg.state.ak.us/gameinfo/meetinfo/2006-2007/gcal2006_2007.php

Department comments regarding proposal 13:

PROPOSAL 13

EFFECT OF THE PROPOSAL: Open Swan Cove and Swan Island in the Pack Creek – Seymour Canal Closed Area to spring and fall brown bear hunting.

DEPARTMENT RECOMMENDATION: **Do Not Adopt**

RATIONALE: The Pack Creek – Seymour Canal closed area has been an important brown bear viewing area for many decades. Today, ADF&G and the US Forest Service jointly operate a permitted viewing area at this site. Pack Creek and its immediate surrounding area were closed to bear hunting in 1934, and the Swan Cove and Windfall Harbor areas were added to the closure in 1984. The Swan Cove and Windfall Harbor closures were established to protect the bears that frequent the area and that had become habituated to the presence of humans as a result of the original Pack Creek closure. These bears represent a very small component of a large population of brown bears that inhabit Admiralty Island.
The Pack Creek – Seymour Canal closed area represents a small percentage (6%) of the island. This area is popular and used intensively from spring through fall each year by a large number (1,200-1,400 per year) of visitors interested in viewing brown bears in their natural environment.

Results from a recent small-scale study of bear movements, using hair snares and DNA forensic approaches, indicates both male and female bears move between Windfall Harbor, Pack Creek, and Swan Cove. Findings from long-term brown bear research conducted by the department on Admiralty and Chichagof islands have shown that brown bear home ranges are often larger than the area constituting the existing closed area. Opening Swan Cove would increase the likelihood of harvesting bears that are among the most habituated and viewed in the closed area, thereby compromising the long-term investment in this public bear viewing area.

In addition to a number of economic and social reasons, opening Swan Cove is also contrary to the recommendation made by a citizens/agency brown bear management advisory team in its Southeast Alaska Unit 4 Brown Bear Management Strategy (2000). That recommendation included opposition to creating new viewing areas on the Pack Creek or McNeil River models, but also recommended against trying to modify or diminish the existing bear viewing areas in any way (including Pack Creek). A new management area concept was proposed by the Group that would establish new, "Brown Bear Special Use Zones," in which hunting and viewing would be managed as compatible and equal in priority.
****
***

SB 104: FREQUENTLY ASKED QUESTIONS

What would SB 104 do? SB 104 seeks to officially expand the Stan Price State Wildlife Sanctuary at Pack Creek on Admiralty Island to include the state owned tide and submerged lands of the surrounding closed areas at Windfall Harbor, Windfall Island, Swan Cove and Swan Island. These areas adjacent to Pack Creek, identified by the BOG as the Upper Seymour Canal Closed Area, have functioned as if they were part of the sanctuary for the past 25 years. However their status as no-hunting zones is not permanent and could be revoked. SB 104 would enhance consistent and coordinated state and federal management in these four areas that lie immediately adjacent to the Pack Creek watershed and estuary.

Why is SB 104 necessary? The areas adjacent to Pack Creek were initially closed to bear hunting in 1984 by action of the Alaska Board of Game in order to serve as necessary buffer zones bracketing the tiny amount of actual sanctuary land at found at Pack Creek itself. Since then the Upper Seymour Canal Closed Area has functioned and been managed as an essential part of the sanctuary. However it has never had the full protection of sanctuary status. Its continued closure as a non-hunting area has been threatened repeatedly over the last quarter century and remains imperiled to this day. The only way to truly ensure permanent protection for Pack Creek itself is for the Alaska Legislature to officially extend sanctuary status to the rest of the closed areas below mean high tide that are under state jurisdiction. Because it is Forest Service policy to manage the uplands in a way that is compatible with state tidelands designations, this would effectively close the uplands as well.

Would SB 104 cause any noticeable changes for visitors to Pack Creek or the surrounding closed areas at Windfall Harbor and Swan Cove? No. Management on the ground within the sanctuary and closed areas would not change, nor would any additional management expenses be incurred. The very point of this legislation is to ensure that the area will not suffer changes, given that the common consensus is that it functions very well as it currently is. Rather SB 104 would help preclude the possibility of drastic changes resulting from any of the closed areas ever being reopened to bear hunting.

What would the benefits of SB 104 be? Ultimately it would safeguard the future of Pack Creek, and allow the agencies that manage the sanctuary, and the businesses that rely on Pack Creek, to plan for that future with clarity and certainty. Since 1984 the BOG has considered reopening some or all of the Upper Seymour Canal Closed Area, six times. Each time that possibility arises a large array of people and agencies must prove and defend the closed areas' continued necessity as no hunting zones. Pack Creek's managing agencies, the U.S. Forest Service and the Alaska Department of Fish & Game, are required to divert scare resources to provide current documentation of the closed area's vital importance to the overall integrity of the sanctuary. A wide variety of local businesses that depend on Pack Creek for their livelihoods are burdened with fighting for their futures. The general public must mobilize to speak out in defense of a precious public resource. And periodically the BOG itself is burdened with taking an inordinate amount of time out of their busy agenda to go over this same old issue that past boards have settled in favored of continued closure many times before. **The closure of these areas to bear**

hunting has become one of the most thoroughly vetted and consistently reaffirmed land use allocations in Alaskan history. Yet it takes nothing more than a single individual hunter to make a proposal to the BOG to start the entire process over again. Only legislative action can stop this wasteful cycle of pointless, endless review.

Is SB 104 an anti-hunting measure? No. The creation of the Upper Seymour Canal Closed Area in 1984 was compensated for by reopening other long closed areas on the island to bear hunters. No net loss of hunting area on Admiralty ever resulted from this closure where over 90% of Admiralty Island is open to bear hunting. Historically, bear hunters have been some of the most passionate champions of conservation measures on Admiralty Island, as has been the case with this area. The original 1984 upper Seymour Canal closure was supported by well know bear guide, Carl Lane, along with former members of the BOG. Additionally many hunters are concerned with how the hunting of this population of habituated brown bears would violate ethical standards of fair chase and reflect badly upon their sport.

Admiralty Island is an amazing resource. It affords opportunities for world-class brown bear hunting alongside opportunities for world-renowned bear viewing. The prohibition of hunting within the Upper Seymour Canal Closed Areas surrounding Pack Creek at Windfall Harbor, Windfall Island, Swan Cove and Swan Island are an essential part of the stable and equitable balance that has been struck between these two user groups. Further review of their already established necessity, and continued uncertainty about their future, serves no good purpose. It is time for the Alaska Legislature to extend full sanctuary status to these lands.

Alaska State Legislature

Juneau Senate Office

District B

SB 104: PACK CREEK HISTORY

Admiralty Island's Pack Creek is a magical place; one of just a handful of sites on the planet where wild brown bears go freely about their lives within the presence of humans. Because of this, Pack Creek offers a compelling and powerful wildlife viewing experience to visitors and rare insights into the lives of creatures that are too often misunderstood and sensationalized. As a world-renowned destination for bear watching Pack Creek has long been recognized as a valuable public resource and a great asset to Alaska's and Juneau's tourism economy. In brief here is a history of the public policy decisions that have lead to the creation and protection of Pack Creek.

• **1934: The Alaska Territorial Commission closes Pack Creek to bear hunting.** This original hunting closure covers only the Pack Creek drainage and comprises approximately 5,700 acres and only a half mile of beach front. This closure was part of a compromise between a national movement to make all of Admiralty Island a refuge and local development interests.

• **1935: Forest Service selects Pack Creek as a brown bear viewing area.** That year the Civilian Conservation Corps constructs Pack Creek's first observation tower and trail.

• **1956 - 1989: Stan Price resides at Pack Creek.** Stan's presence discourages poaching, and his hospitality, home movies, and tales of life among the bears help promote Pack Creek as a bear viewing destination.

• **1984: Bear hunting closure expanded to Swan Cove and Windfall Harbor.** Over time the original no-hunting area proves to be far too small to sufficiently protect the habituated bears that frequent Pack Creek because such wide ranging animals constantly move out of the protected area to adjacent drainages and islands. The Alaska State Board of Game approves a proposal to expand the closed area to include the drainages on either side of Pack Creek along with two islands lying just offshore of Pack Creek's tidal flat. This area, referred to as the Upper Seymour Canal Closed Area, adds approximately 75 more square miles to the previously protected area at Pack Creek. These closures in Seymour Canal are offset be opening other areas on the island to bear hunters, resulting in no net loss of hunting opportunities on Admiralty where over 90% of the island remains available to bear hunters.

• **1991: State of Alaska establishes Stan Price State Wildlife Sanctuary.** After Stan's death in 1989, Alaska honors his memory by making Pack Creek a State Wildlife Sanctuary. Only the Pack Creek estuary below mean high tide is given the legislative protection of sanctuary status. Swan Cove, Swan Island, Windfall Harbor and Windfall Island remain closed to hunting only by order of the Alaska Board of Game.

• **1985 - 2006: Numerous proposals are brought before the BOG to re-open bear hunting in the Upper Seymour Canal Closed Areas surrounding Pack Creek.** On six different occasions within a 25 year period the Alaska Board of Game considers proposals by a small number of bear hunters to reopen portions of the Upper Seymour Canal Closed Area. Each time public outcry, scientific evidence, and the recommendations of the managing agencies overwhelming support continued closure. The BOG ultimately rejects each proposal.

• **2006: The most recent proposal to re-open bear hunting in Swan Cove and Swan Island is rejected by the Board of Game.** Once again the BOG is persuaded by vigorous public protest to unanimously retain the no-hunting boundaries around Pack Creek. However, the possibility of reopening these areas to hunting remains. This ongoing threat underscores the need to finally make this thoroughly debated, scientifically verified, long established and broadly supported land use decision permanent through legislative action.

• **2009: Senate Bill 104 is introduced into the Alaska State Legislature to expand the boundaries of the Stan Price State Wildlife Sanctuary to include the state owned lands of the Upper Seymour Canal Closed Areas surrounding Pack Creek.**

CS FOR SENATE BILL NO. 108( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR THOMAS

A BILL

FOR AN ACT ENTITLED

"An Act creating the Stampede State Recreation Area."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 41.21 is amended by adding new sections to article 4 to read:

Sec. 41.21.401. Purpose of AS 41.21.401 - 41.21.405. The purpose of AS 41.21.401 - 41.21.405 is to establish the area described in AS 41.21.405 as the Stampede State Recreation Area. The Stampede State Recreation Area is established to

(1) perpetuate and enhance

(A) general public recreation;

(B) public enjoyment of fish and wildlife;

(2) protect and maintain fish and wildlife habitat so that traditional public use of fish and wildlife populations may continue;

(3) provide an area for the public to enjoy the full spectrum of public uses, including maintenance and enhancement of motorized and nonmotorized recreational opportunities;

New Text Underlined *[DELETED TEXT BRACKETED]*

L
2950

(4) allow

(A) continued motorized access for owners of private property in the Stampede State Recreation Area; and

(B) additional public uses of the area determined by the commissioner to be compatible with this section.

Sec. 41.21.402. Management. (a) The commissioner is responsible for the management of the land and mineral estate within the Stampede State Recreation Area consistent with the purposes of AS 41.21.401. After adequate public hearings and in consultation with the Denali Borough Assembly, the commissioner may designate incompatible uses and shall adopt and may revise a management plan for the Stampede State Recreation Area.

(b) The commissioner of fish and game, the Board of Fisheries, and the Board of Game are responsible for the management of fish and game resources and public use of fish and wildlife in the Stampede State Recreation Area consistent with the purposes of AS 41.21.401.

Sec. 41.21.403. Incompatible uses. (a) Except as provided in this section, the commissioner may prohibit or restrict uses determined to be incompatible with the purposes of the Stampede State Recreation Area under AS 41.21.401 within the state-owned land and water described in AS 41.21.405.

(b) Nothing in AS 41.21.401 - 41.21.405 prohibits the Department of Fish and Game from engaging in rehabilitation, enhancement, and development of fish and wildlife habitat within an area described in AS 41.21.405 that is consistent with the purposes stated in AS 41.21.401.

(c) The commissioner may not restrict

(1) lawful fishing, hunting, or trapping rights allowed under a regulation of the Board of Fisheries or the Board of Game in the Stampede State Recreation Area; or

(2) the use of weapons, including firearms, in the Stampede State Recreation Area except in locations where the commissioner determines that the use of weapons constitutes a threat to public safety.

(d) The commissioner shall

(1) allow the Stampede State Recreation Area to be used for activities compatible with the reasons for establishing the public recreation area in AS 41.21.401, including all-terrain vehicle use, watercraft use, snowmobiling, horseback riding, hiking, bicycling, dog sledding, cross-country skiing, skijoring, camping, hunting, fishing, wildlife viewing, and photography; and

(2) recognize the traditional use of existing motorized and nonmotorized uses in the area; reroute an existing trail to avoid sensitive habitat; conduct trail rehabilitation or reroute a trail to minimize damage; maintain and enhance motor vehicle options and opportunities; and provide for increased use of the public recreation area.

Sec. 41.21.404. Purchase authorized; eminent domain prohibited. The commissioner may acquire, by purchase in the name of the state, title to or interest in real property lying within the boundaries of the Stampede State Recreation Area. The state may not acquire by eminent domain privately owned land for inclusion in the Stampede State Recreation Area.

Sec. 41.21.405. Stampede State Recreation Area. The state-owned land and water, vacant and unappropriated, and all that acquired in the future by the state lying within the following parcels are designated as the Stampede State Recreation Area, reserved from all uses incompatible with their primary function as public recreation land, and assigned to the department for control, development, and maintenance:

(1) Township 12 South, Range 9 West, Fairbanks Meridian
Sections 3 - 10
Sections 15 - 22
Sections 27 - 34

(2) Township 12 South, Range 10 West, Fairbanks Meridian
Sections 1 - 36

(3) Township 12 South, Range 11 West, Fairbanks Meridian
Sections 1 - 36

(4) Township 13 South, Range 9 West, Fairbanks Meridian
Sections 3 - 10

(5) Township 13 South, Range 10 West, Fairbanks Meridian

Sections 1 - 6 excluding national park lands

Sections 7 - 12 excluding national park lands

(6) Township 13 South, Range 11 West, Fairbanks Meridian

Sections 1 - 6 excluding national park lands

Sections 7 - 12 excluding national park lands.

ANALYSIS: *(Attach a separate page if necessary)*

The costs associated with management of this new state recreation area include funding for a limited 2 year public planning process to develop a management plan (FY 2010-2011), followed by funding for a full time Park Ranger providing field management beginning in FY2011. Costs associated with the public planning process include scoping and survey work, draft management plan preparation, maps, displays, public notice advertising, room rentals, printing and distribution of final plan, lease space, computer and office supplies. Field management costs beginning in FY2011 include funding for a park ranger position, lease space, vehicle costs, utilities, and general supplies. One-time start up costs include one new vehicle, office supplies, and law enforcement gear.

Potential infrastructure identified in the management plan such as camping areas could generate park fees in future years.

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Senate Bill 108 - An Act creating the Stampede State Recreation Area

Sponsor Statement

The Stampede Road corridor, northwest of Healy and flanked on three sides by the Denali National Park, is a traditional place for many Alaskans to hunt, fish, trap, snowmachine, mush and pursue other recreational opportunities. Home to a growing number of Denali Borough residents and businesses, this is a wild and beautiful place that Alaskans from across the state can easily access.

This bill would establish the Stampede State Recreation Area in the vacant and unappropriated state land and water within the corridor as described in the bill and attached maps. The purpose of State Recreation Areas is to manage state-owned land and water in such a way that provides the maximum level of outdoor recreation opportunities without significant adverse effects on the natural system. The goal of this legislation is to protect the area for continued traditional use.

The Stampede mining trail was trail blazed in the 1930s. In 1961, the new State of Alaska upgraded the trail as part of the Pioneer Road Program. The project was halted in 1963 after some fifty miles of road was built, but no bridges were ever constructed over the several rivers it crossed, and the route was shortly rendered impassable by thawing permafrost and floods. While the road is described as being fifty miles long, only the first few miles are paved, and only the first eight miles are passable by standard car.

SB 108 will preserve the traditional uses of this area by creating the Stampede Recreation Area within the Stampede corridor. Several years ago, former Governor Murkowski proposed to build a road through this area. This planned road was vehemently opposed by borough residents as well as the recreational and traditional user groups who had an interest in keeping things "the way they are." In an effort to preserve the area for use by residents and visitors, the Denali Borough Assembly passed a resolution calling on the Alaska Legislature to designate the corridor as the Stampede State Recreation Area, with a strong emphasis on self-determination by the residents and users of the area.

The current use of the area includes off-road and all-terrain vehicle use, watercraft use, snowmobiling, horseback riding, hiking, bicycling, dog sledding, cross-country skiing, skijoring, camping, hunting, fishing, wildlife viewing, and photography. Recreational users of the area come from the Denali Borough, Fairbanks, Mat-Su and Anchorage. Tourists and adventurers travel to the area from across the globe. The area supports several tourism-related businesses including several lodges and a road-touring company that rents all-terrain vehicles for use on the more primitive sections of the road.

This bill is supported by the Denali Borough Assembly (see attached resolution). Additionally, the bill's sponsor has hosted several constituent meetings on the proposed legislation. By and large, the proposed area is supported by local residents and trail users. The main impetus behind the legislation is to protect the area for continued traditional use.

SENATOR JOE THOMAS

MEMORANDUM March 16, 2009

SUBJECT: Sectional Summary for SB 108

TO: Senators Lesil McGuire and Bill Wielechowski, Co-Chairs
Members of the Senate Resources Committee

FROM: Senator Joe Thomas, Sponsor

This sectional summary is developed based on earlier summaries developed by Legislative Legal, and should not be considered an authoritative interpretation of the bill.

Section 1. Establishes the Stampede State Recreation Area. Describes the purpose for creating the recreation area, the land and water to be included, management responsibilities and incompatible uses. Identifies activities that the commissioner may not restrict within the recreation area. Authorizes the commissioner to purchase real property lying within the boundaries of the recreation area. Prohibits the use of the power of eminent domain to acquire privately owned land for inclusion in the recreation area.

MEMORANDUM February 18, 2009

SUBJECT: Technical corrections to SB 108 (Work Order No. 26-LS0568\R)

TO: Senator Joe Thomas
Attn: Joseph Hardenbrook

FROM: Donald M. Bullock Jr.
Legislative Counsel

Enclosed is a draft committee substitute for SB 108. SB 108 incorrectly includes references to sec. 41.21.407; this draft corrects the references to refer to sec. 41.21.405. Sec. 41.21.405 describes the area to be included in the Stampede State Recreation Area and is the last of the five statutory sections proposed to be enacted.

I suggest you provide this draft to the chair of the first committee to which the bill has been referred. The changes in this draft are not substantive and merely correct internal references.

If I may be of further assistance, please advise.

09-008.med

Enclosure

DENALI BOROUGH, ALASKA
RESOLUTION NO. 07-01

A RESOLUTION IN SUPPORT OF THE ALASKA LEGISLATURE DESIGNATING MANAGEMENT OF THE STAMPEDE ROAD AREA WEST OF EIGHT MILE LAKE TO THE STATE OF ALASKA; DIVISION OF PARKS AND OUTDOOR RECREATION:70 CREATE THE STAMPEDE STATE RECREATION AREA.

WHEREAS, there are many issues related to the Stampede Trail and surrounding area west of Eight Mile Lake, many of which have brought into question the ability to continue traditional use dating back prior to statehood; and

WHEREAS, the Denali Borough has openly and repeatedly expressed a desire to have recreational opportunities and uses continued in this area; and

WHEREAS, the current use of the area includes motor vehicle access, horseback riding, dog mushing, cross-country skiing, skijoring, hiking, fishing, hunting, snowmobiling, and other outdoor activities; and

WHEREAS, there are no designated Alaska State Parks or Recreation Sites within the Denali Borough; and

WHEREAS, the Stampede Trail and surrounding area are well known critical habitat for caribou, moose and other wildlife; and

WHEREAS, this area is of current and future importance for providing a land base to support Alaska-owned outdoor recreation enterprises at Denali National Park and Preserve and other existing tourism destinations.

THEREFORE, BE IT RESOLVED that the Denali Borough Assembly strongly encourages the state of Alaska Legislature to pass legislation designating management of the following area to the state of Alaska, Division of Parks and Outdoor Recreation the following area: Fairbanks Meridian, Healy Quadrangle, the western half of Township 12S9W, the western half of Township 13S9W, Township 12S10W, Township 12511 W, Township 13S10W, Township 13S11 W.

BE IT FURTHER RESOLVED that the Denali Borough specifically requests that the aforementioned current uses be included in the management of the area and the Denali Borough Assembly be designated as the Local Advisory Management Council for the Stampede Recreation area.

ED a APPROVED by the DENALI BOROUGH ASSEMBLY this 10th day of January, 2007.

Denali Borough Mayor

ATTEST: Borough Clerk

RESOLUTION IN SUPPORT OF THE STAMPEDE STATE RECREATION AREA
DENALI BOROUGH, ALASKA

WHEREAS, the State of Alaska has recognized the importance of the Stampede townships for habitat and public recreation by classifying most of this area as Wildlife Habitat and/or Public Recreation in the Tanana Basin Area Plan (1991); and

WHEREAS, the State of Alaska recently validated the importance of these lands for habitat and recreation by choosing to retain acreage around 8 Mile Lake and near Otto Lake in state ownership when determining the Denali Borough's entitlement conveyances; and

WHEREAS, 8 Mile Lake is a logical gateway to such a State Recreation Area, and is most in need of immediate planning to provide services and avoid negative impacts; and

WHEREAS, local citizens who attended two Stampede Summits and commented on land and resource planning issues have re-iterated their individual interest in maintaining these lands for existing recreational uses; and

WHEREAS, growing numbers of statewide and national visitors enjoy the Denali area, for its landscape, wildlife, and its unique recreational opportunities; and

WHEREAS, in view of increased pressures for visitation, the established purposes of the Stampede townships will best be furthered by use of a management structure that enables all stakeholders to plan the future of this valuable public resource; and

WHEREAS, designation as a State Recreation Area will ensure such management.

THEREFORE, BE IT RESOLVED BY THE BOARD AND MEMBERS OF THE DENALI CITIZENS COUNCIL, that we support the establishment by the State of Alaska of the Stampede State Recreation Area, with boundaries as described in the legislation brought forth by Senator Joe Thomas, but with the ADDITION of nine sections around 8 Mile Lake (see map attached).

Division of Geological & Geophysical Surveys
Coal and CBM Resource Assessment for the Proposed Stampede State Recreation Area

Executive Summary

The Division of Geological & Geophysical Surveys undertook the following short analysis of available geologic data in an area west of Healy, Alaska, to determine the state's current understanding of the area's coalbed methane (CBM) and other energy resource potential. Figure 1 outlines the acreage that is being considered for designation as a State Recreation Area (SRA). Sedimentary rocks of the coal-bearing Usibelli Group were mapped and analyzed at the southern boundary of the SRA by previous geologists working this region. They noted that the thickest coal seam was 13 feet, 6 inches and the thickest cumulative coal at one locality was 22 feet. Coal quality analyses from these exposures indicate the maturity rank is predominantly Lignite A. If coal bearing strata extending beneath the extensive covered area to the north within the SRA are all of this rank, the potential for commercially viable CBM or other energy resources would be low.

However, coal measures exposed to the east of the SRA, in the vicinity of the town of Healy, contain much thicker coal seams and are of much higher thermal rank. If these strata are present in the subsurface in the area of the SRA, there would be unrealized potential for natural gas and/or coal resources within the area in question. The currently available information does not rule out either interpretation. Gathering subsurface information by drilling a few critically-placed core holes would provide a relatively definitive answer as to the energy resource potential of the area.

Sources of Information

Available resource information for the proposed Stampede State Recreation Area include several regional 1:250,000 scale geologic maps (Csejtey and others, 1992; see Fig. 1); detailed 1:63.360 scale geologic map of the Healy D-5 quadrangle (eastern half of the proposed area, Wahrhaftig, 1970; see Fig. 2), and maps of the Healy D-5 and D-6 quadrangles (Gilbert and Bundtzen, 1976); U.S. Bureau of Mines Report of Investigations 4520 (Toenges and Jolley, 1949); Alaska coal geology, resources, and coalbed methane potential (Flores and others, 2004, see Fig. 3); geologic report on coal investigations in Alaska (Barnes and others, 1951); the Alaska Coal Mine Land Inventory (Plangraphics, Inc., 1983); and the U.S. Bureau of Mines Selected Coal Deposits in Alaska (Meyer, 1990). The RI 4520 contains outcrop descriptions of bed and coal thickness, strike and dip bedding attitude information, and coal quality analyses (11 analyses shown in table 1) at seven sites (1-7 on attached map, Fig. 1) that are at or just below the southern margin of the area. Unfortunately, the locations of these sites are indicated on a single page, hand drafted cartographic map (Fig. 7 from Toenges and Jolley, 1949) so no precise latitude or longitude data are available. However, these locations were approximately located on the map of Csejtey and others, 1992 (our Fig. 1) by using the river drainages as depicted on Fig. 7 in Toenges and Jolley, 1949, and the descriptions given in the text. The discussion that follows is based on the above mentioned **publicly-available** data and relies on the geologic mapping

2961

presented in Csejtey and others (1992) and Wahrhaftig (1970). This discussion will focus on the coal geology and related data that are relevant to the proposed Stampede State Recreation area.

Geology

The proposed Stampede State Recreation area contains Quaternary surficial deposits (**Qt** map unit, Fig. 1), and sedimentary rocks consisting of the Nenana Gravel (**Tcn** map unit, Fig. 1), and the Tertiary-age coal-bearing Usibelli Group (**Tcb** map unit, Fig. 1) exposed on its southern border. These Tertiary rocks were deposited on much older metamorphic rocks of the Yukon-Tanana terrane, that includes Paleozoic and Precambrian (?) pelitic and quartzose schist (**PzpCp**, **Pzk** and **MDt** map units, Fig. 1).

The Usibelli Group (**Tcb** map unit, Fig. 1) is predominantly Miocene-age strata that were deposited in southward-flowing fluvial, lacustrine, and peat bog environments situated north of the present day central Alaska Range (Ridgway and others, 2007). The Usibelli Group sedimentary sequence consists of five formations that are summarized in Fig. 3. These are from bottom to top: 1.) coal-bearing Healy Creek; 2.) noncoaly Sanctuary; 3.) coal-bearing Suntrana; 4.) coal-bearing Lignite Creek; and 5.) noncoaly Grubstake. The Usibelli group is conformably overlain by the Tertiary-age Nenana Gravel (unit 6 described in Fig. 3).

East of the Parks Highway near Healy, Alaska the Usibelli Coal Mine successfully produces annually about 1.5 million short tons of coal. In the immediate area, the only past production west of the Parks Highway and southeast of the proposed Stampede State Recreation area was at the abandoned Diamond Coal Mine (shown as DCM on Fig. 1). Here, a 40 foot thick coal bed that strikes N62° E and dips 33° NW, along the slope of the hill, was mined in 1946, producing 34,911 (short) tons of coal in stripping operations (Toenges and Jolley, 1949). This unit is mapped as **Tcu**, or undifferentiated coal-bearing Usibelli Group by Wahrhaftig (1970, see Fig. 2).

Figure 1 shows outcrops of the Usibelli Group at the southern edge of the proposed Stampede State Recreation area and south into Mt. McKinley National Park as coal-bearing strata (**Tcb**). Strikes and dips of **Tcb** shown on the Fig. 1 are from Toenges and Jolley (1949) and they generally dip from 9° to 33° to the northwest, directly into the proposed recreation area. The total thickness of the exposed coal at these localities ranges from 8 ft to 22 ft (see Fig. 1) with the thickest bed of coal at 13 ft 6 in (data from Toenges and Jolley, 1949; locations approximate). In general, detailed geologic mapping by Wahrhaftig (1970) shows similar directions of bedding attitude (strike and dip) of the coal-bearing Usibelli Group. However, Wahrhaftig's mapping further differentiates the Usibelli Group into the lowermost Healy Creek Formation (unit 1, Fig. 3) and the Lignite Creek Formation (unit 4, Fig. 3). The Lignite Creek Formation is queried (Tlc?) indicating uncertainty which formation is present. The intervening Sanctuary Formation (unit 2, Fig. 3) and the Suntrana Formation (unit 3, Fig. 3), the main source of minable coal to the east at the Usibelli Coal Mine are not indicated on the Wahrhaftig 1970 map in the area along the southern border of the proposed Stampede State Recreation area. Additionally, Wahrhaftig's 1970 map of the Healy D-5 quadrangle has structure contours (red-dashed lines, Fig. 2) drawn at the base of the Nenana Gravel that suggest that the local basin may be up to 2500 ft deep. However, his cross sections A to A' (shown on Fig. 2) and B to B' (not

2962

shown) imply that this small basin is filled with ~2500 ft of Nenana Gravel. The base of the Nenana gravel in these cross sections is denoted by question marks (?) indicating what lies beneath the Nenana Gravel is unknown. The 1970 Wahrhaftig map does not indicate the source of the information for the structure contour, or that data that indicates the local "basin" may be 2500 feet deep. On the basis of the general trend of northwest dipping strata it is reasonable to suggest that coal-bearing Usibelli Group rocks might underlie the proposed recreation area at some depth. However, drilling would be necessary to confirm their presence, thickness, and depth.

Coal Quality of Coal Exposed near the Proposed Stampede State Recreation Area

Eleven coal quality analyses reported in Toenges and Jolley (1949) for coal seams sampled at the seven localities (1-7 shown on the map, Fig. 1) were placed into an Excel spreadsheet and Apparent Coal Rank was calculated for each (Table 1). Nine of the samples have an Apparent Rank of Lignite A and have Moist, Mineral Matter Free BTUs between 7536 to 8140. Two samples have "Apparent Ranks" of High Volatile Bituminous C (Locality 1, analysis C- 64425) and Subbituminous C (Locality 5, analysis C-64418). The high moisture content of 26.3% for sample C- 64425 at locality 1 suggests that this sample was highly weathered prior to testing and that the "Apparent Rank" of High Volatile Bituminous C is suspect. The description given on page 22 in Toenges and Jolley (1949) suggests that this 7 ft 10 in thick coal seam is directly beneath the Nenana Gravel and was subaerially exposed for a long period of time. Bacterial action on highly weathered coals results in higher water retention, and the moisture content of High Volatile Bituminous C coals should not exceed 20%. Therefore, discounting the analysis for this sample, all of the other coals are low rank Lignite A (9 samples) to Subbituminous C (1 sample). The low apparent rank of these coals indicates that the original peat bogs were never buried deep enough and for a long enough time to develop into higher rank coals. This is consistent with these coals likely being from the uppermost Lignite Creek formation (unit 4, Fig. 3).

Senator Joe Thomas
State Capitol, Room 510
Juneau, AK 99801

RE: Senate Bill 108, Creation of a Stampede State Recreation Area

Dear Senator Thomas,

The Denali Chamber of Commerce was created for the purpose of cooperating in matters of interest to the public and professional people of the community; to promote and perpetuate the business, commercial, manufacturing and civic interests of the members and the community; to promote and perpetuate the general welfare and prosperity of the Denali area, and to stimulate public interest to these ends; and to develop a uniform public spirit whereby we may put forth the maximum effort in the aid of our area and to make it more prosperous, beautiful and a better place in which to live.

Therefore, in fulfilling the purpose of the Denali Chamber of Commerce, the Board of Directors on behalf of the members of the chamber support the proposed legislation you have introduced in the State of Alaska Senate, for the Creation of the Stampede State Recreation Area.

Our community residents use this area for many recreational purposes such as hiking, bird watching, motor vehicle travel (ATV's and snowmobiling), dog mushing, skiing, skijoring, photography, berry picking, hunting and trapping. Several chamber members own business enterprises on the Stampede Road which provide recreational services to users of the area which include horseback riding, jeep safari tours and sled dog tours along the Stampede Trail, as well as lodging facilities for tourists visiting the area.

The chamber members also support inclusion of lands around the 8-Mile Lake area in the legislation. These lands provide a natural gateway to a recreation area and are most in need of management. Most locals and visitors use this as a parking and/or staging area for access to the Stampede Trail and state lands on which they recreate.

Denali Chamber of Commerce

email : denali.chamber@gmail.com

We are most appreciative of your efforts to introduce this important legislation which will provide a means of management to encourage stewardship and continued recreation opportunities for all Alaskans and visitors alike. We also appreciate you making the wishes of your constituents known to the legislature.

Best regards,

Denali Chamber of Commerce Board of Directors

Josh Wilhour, President

Heidi DeCoeur, Vice President

Panguingue Creek Homeowner's Association
P.O. Box 451, Healy, AK 99743

3/24/2009

Dear Senator Thomas,

The Panguingue Creek Homeowner's Association would like to thank you for sponsoring the bill to create the Stampede State Recreation Area and for your work toward its passage. The Panguingue Creek Subdivision is located along the first few miles of the Stampede Road, so all of our members are very interested in the future of the lands proposed to be a part of the new recreation area.

Many of us that own property in this area and choose to live here do so because of the area's beautiful setting and access to Alaska's wilderness. We live here because we enjoy hiking, camping, berry picking, bird watching, skiing, skijoring, dog mushing, snowmobiling, riding ATV's, hunting, trapping, and fishing, and just about everything you can do to enjoy Alaska's beauty. Indeed, we have given up easy access to groceries and services we travel for over 100 miles to obtain, in order to have easy access to all the Stampede area has to offer.

Already, people from across the state, the country, and the world pass through here to use the state's land for recreation. Creating the Stampede State Recreation Area will help ensure that future generations of Alaskans and visitors will be able to enjoy this area, as well. As homeowner's closest to the proposed area, we know of the need that already exists for some type of management and improvement of this area.

Stampede Road offers vehicle access as far as Eight-mile Lake, one of the area's biggest draws, for the summer months. This area sees the highest use in the summer months, and without any improvements, its quality as a destination will continue to deteriorate as users leave trash and impact the area. The area around Eight-mile Lake already serves as a trail head for the area and begs for its inclusion in the State Recreation Area Proposal.

Two "Stampede Summits" got our community together to think about what we could do to make sure that we will always have access to these lands so near to our homes. The Stampede State Recreation Area is the best way to achieve that goal, and we thank you for taking this issue to Juneau for us.

Sincerely,

Panguingue Creek Homeowner's

William Price, President
Phil Brease, Secretary
Jared Zimmerman, Treasurer

Stewart Cubley

Senate Bill 108
Proposed Stampede State Recreation Area
March 18, 2009

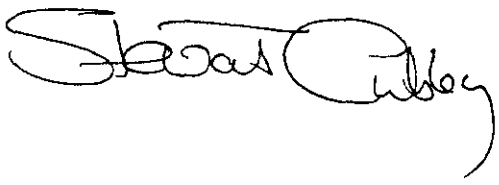
Dear Senator Thomas,

I am a private landowner in the Wolf Townships. I have a homestead near the Sanctuary River that I staked out in 1972 through an open-to-entry program, and later purchased it from the state. Over the years I have built a log cabin and accessory structures on the property and I live there for part of each year. I have traveled throughout the Wolf Township going to and from my property under all manner of locomotion and in all seasons for over three decades. I know firsthand the diversity of the land and its value as a natural resource for animal habitat as well as traditional recreational uses.

I **support** the inclusion of the Wolf Townships in the proposed Stampede Trail State Recreation Area, including the area surrounding 8 Mile Lake. I believe that the creation of this recreation area would provide more certainty for management of the lands under the direction of the Division of Parks and Outdoor Recreation than with the current management by the Division of Mining, Land and Water. If this area is not protected, inevitable commercial pressures will place them at risk for fragmentation by sale or lease, leaving fewer options for wise management and appropriate use.

This land is especially appealing for its open vistas and sightlines to the mountains of Denali to the south, thus making its apparent development value high. But anyone who has traveled to this area knows that this openness is due to poor soils underlain by permafrost. From the public policy standpoint, we should strive to protect this sensitive area and manage it for the existing public uses that have been in place for the last three decades.

As a potential in-holder in the Stampede State Recreation Area, I strongly support the intent of SB 108 to preserve the traditional nature of this region. I hope that you will recognize the extraordinary value of this land and that you will act to insure its responsible management in the future.



Sincerely, Stewart Cubley

March 19, 2009

Senator Joe Thomas
State Capitol
Juneau, AK 99801

Dear Senator Thomas,

On behalf of the Board of Directors and members of the Denali Citizens Council (DCC), I would like to thank you for introducing SB 108, an Act creating the Stampede State Recreation Area. DCC, a grassroots citizen's organization founded in Cantwell in 1974, is composed largely of Alaskans, many of whom live in Denali Borough communities. Over the years, we've been involved in a number of public deliberations regarding land uses in the Denali Borough. Our local members live near the proposed Recreation Area and use it for recreation in diverse ways, including hiking, snow machining, and dog mushing. Some of our members are potential inholders within the bounds of the proposed Recreation Area.

We support SB 108. Establishment of a State Recreation Area in the Stampede townships will allow the recreational activities our members enjoy to continue. In addition, it will involve stakeholders in how best to manage this area for the future. It recognizes that the priority use of these lands is for recreation and the habitat that sustains it.

In the Denali Borough, whose livelihood and economic vitality depend largely upon tourism, a State Recreation Area is the right designation for these lands. We recently circulated a petition inviting local and statewide citizens to support the formation of this Recreation Area and have had an excellent response.

When local citizens met with representatives of Alaska Parks and Outdoor Recreation last year, we supported inclusion of 8 Mile Lake in the Recreation Area. We urge you to amend the bill to include this area. It is the logical gateway to the Recreation Area and is the most currently utilized and impacted area.

Thank you for the opportunity to provide input into this important legislation. We urge the Senate Resources Committee to pass SB 108.

Sincerely,

Nancy Bale

18 March 2009

Senator Joe Thomas
Alaska State Capitol
Room #510
Juneau, AK 99801

Dear Senator Thomas:

We are writing in support of Senate Bill 108, an act establishing the Stampede State Recreation Area. Due to prior commitments, we will be unable to testify before the Senate Resources Committee this Friday but hope that you can use this letter to help show local support for the bill.

Since 1980 we have owned land along the Savage River within the proposed recreation area and have used the cabin we built there for vacations with family and friends, usually several times a year. There is no place on earth more dear to us. We have enjoyed seeing moose, wolves, caribou, lynx, sandhill cranes, and other wildlife on our trips through the area and want future generations to be able to enjoy that as well. According to your sponsor statement, "the purpose of State Recreation Areas is to manage state-owned land and water in such a way that provides the maximum level of outdoor recreation opportunities without significant adverse effects on the natural system". We wholeheartedly support that protection for this land.

We would also like to see Eight-Mile Lake and the land to the east that is within the Wolf Townships included in the proposed recreation area. Inclusion would recognize the existing pattern of use since one of the main destinations for summer recreational users is Eight-Mile Lake. The trail between the parking lot and the lake is showing "significant adverse effects on the natural system" and would benefit from more active management.

As year-round residents of Panguingue Creek Subdivision on the Stampede Road, this area is our backyard playground, and we are willing to put time, energy, and money into its upkeep. Its designation as a State Recreation Area with a management plan and local advisory board would, we hope, put in place a structure through which we and our neighbors could help to limit the degradation of its natural beauty.

Thank you for sponsoring Senate Bill 108. If we can help your fellow senators see the value of this legislation, please let us know.

Sincerely,

Susan and David Braun

To: Sen. Gary Stevens; Sen. Charlie Huggins; Sen. Tom Wagoner; Sen. Bert Stedman
Cc: Sen. Joe Thomas
Subject: support for SB 108 Stampede State Recreation Area

Dear Senators Huggins, Stedman, Stevens, and Waggoner:

I am a member of the Citizen Advisory Board for State Parks in the Northern Area and ask you to support Senate Bill 108 to establish a Stampede State Recreation Area west of the Parks Highway near Healy. This area provides an outstanding opportunity to continuing allowing traditional access to the land for a variety of recreational purposes (hunting, snowmachining, horseback riding, berry picking, mountain biking, etc.) while providing a level of protection against having it degraded by unsustainable uses. A nearby example of what to avoid is the level of damage caused to the Rex Trail by a dramatic increase in unregulated motorized traffic in recent years that has effectively excluded many of the traditional access means.

I have enjoyed mountain biking along the Stampede Trail in addition to backcountry skiing and horseback riding to the south off the trail. A state recreation area in this scenic place would be the first along the Parks Highway north of the Alaska Range and provide additional recreational opportunities not allowed in nearby Denali National Park.

I recognize the fiscal note for planning and staffing this proposed addition to the Alaska State Park system comes at a poor time given the condition of the state and national economies. This is an investment for the future of public recreation lands. Local residents can help plan for the types of activities that will be appropriate, and State Parks can work to ensure a variety of uses while protecting the infrastructure of sustainable trails, campgrounds, and other appropriate facilities.

Sincerely,

Tom Paragi

Subject: SB 108

Dear members of the Senate Resources Committee

I am writing in support of senate bill 108 to establish the Stampede State Recreation Area and I hope you too will support this bill. This area would provide the people of Alaska and it's visitors with an outstanding area for outdoor recreation which I feel is one of the primary reasons people live in and visit this state. The Alaska State Park System is one that provides maximum recreational opportunity while still maintaining the natural resources. Alaska State Parks are truly valued by by the people who visit them.

The Stampede trail area is currently used primarily for recreation and this bill would provide management that would protect it from incompatible land use. Recreational use in this area is important for many residents of interior Alaska. The establishment of a state recreation area could invite both out of state tourists and residents from other parts of the state to visit the Healy area thus providing an economic benefit. Also, given the use restrictions of the nearby Denali National Park, the establishment of a state recreation area would open recreational opportunities to motorized use in this area.

I hope you will realize that this is an opportunity to invest in the recreational opportunities of both current and future Alaskans which improves quality of life. Given the current economic situation, I know that it is difficult to add another expense to the state budget, however, I hope you can support this bill and start the process of creating the Stampede State Recreation Area.

Thank you for your time

Jeremy Douse

Re: Final CS Request

Please create a Final Committee Substitute (SRES) for work order # **26-LS0586\W**.

SB 121 did move out of committee today with no changes to the CS and we would like to have it read across on the floor Monday.

Thank you!

CS for SB 121\W (3/13/09)
compared with CS for SB 121 \P (3/9/09).

"An act relating to energy audits of public facilities and to energy efficiency for public facilities with the intent of reducing state operating costs."

The following five changes have been made to the CS for SB 121\P based on feedback provided by experts and committee members at its first hearing on Monday, Mar. 9, 2009. All changes have been requested and/or approved by Dept. of Transportation & Public Facilities and Alaska Energy Authority.

Changes to the bill:

1. The Dept. of Transportation & Public Facilities has requested that the database be updated annually, rather than every 10 years. This can be done simply by having individual building managers update data based on their utility bills. If substantial inefficiencies are found in a facility, then an energy audit and potential retrofit will be scheduled for that facility. **The only difference here is an annual update.**

2. All facilities **(not just heated facilities)** shall be retrofitted and eligible for performance contract retrofit projects. DOT asked that ALL facilities be eligible for performance contracting, regardless of whether or not they are heated and the section regarding retrofitting was also adjusted for consistency. *(Lighting projects still must be as efficient as possible while meeting federal guidelines; however the department felt it important for all buildings to be evaluated and eligible for retrofits.)*

3. **The reference to the International Energy Conservation Code (IECC) was removed** and the bill now states that: Facilities will be made to meet or exceed the most recently published edition of the ASHRAE/IESNA standard 90.1 as published by the American Society of Heating, Refrigerating and Air-Conditioning Engineers. **ASHRAE is more typically used for commercial facilities and also does a much better job at addressing Alaska's climate conditions**, while still meeting the same basic guidelines found in the IECC. Although the IECC embodies ASHRAE, it only recognizes 3 climatic zones which is insufficient for the entire state of Alaska. *(For the point of definitions, IESNA refers to the Illuminating Engineering Society of North America).*

4. The **decision to postpone a retrofit** due to lack of cost-effectiveness was modified to add a provision that this decision may be based in part on whether or not the department would be able to meet a return on investment within 15 years after project completion.

5. **The energy use index language** found in Sec. 44.83.955, was **adjusted to better define the energy use index and the database**. The Alaska Energy Authority shall establish an energy use index to measure energy consumption. The database they prepare will be made up of energy use index data for each facility. These changes did not alter content, just provided for better clarity through definition.

26-LS0586\P
Kane
3/9/09

CS FOR SENATE BILL NO. 121(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE SENATE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE RESOURCES COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act relating to energy audits of public facilities and to energy efficiency for public facilities with the intent of reducing state operating costs."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

PURPOSE. The purpose of this Act is to reduce the amount of energy consumed by public facilities by 20 percent not later than 15 years after the completion of the energy use index database, thereby reducing costs to the state and increasing jobs in energy efficiency industries.

*** Sec. 2.** AS 44.42.065 is amended to read:

Sec. 44.42.065. Energy use index database maintenance; energy audit [CONSERVATION OF ENERGY IN PUBLIC BUILDINGS]. (a) The department shall

(1) update the energy use index database established in

AS 44.83.955

(A) when a retrofit project for a public facility is completed;

(B) not less than every 10 years after completion of a retrofit project for a public facility;

(C) when the state acquires ownership of a new public facility; or

(D) when significant capital improvements have been performed on a public facility; and

(2) conduct [, AT LEAST ONCE EVERY SEVEN YEARS, PERFORM] an energy audit of each public **facility whenever, in updating the energy use index under (1) of this subsection, the department determines there is substantial energy inefficiency for the public facility** [BUILDING].

(b) The department shall include in each energy audit required by **(a)(2)** [(a)] of this section recommendations for corrective measures to improve the energy efficiency and to minimize the life-cycle cost of the public **facility** [BUILDING] surveyed. These measures may include (1) energy conservation measures, (2) measures involving solar technology and other alternative energy systems, (3) energy management, and (4) maintenance and operating procedures and energy-related modifications. In recommending the corrective measures, the department shall give priority to changes in maintenance and operating procedures over measures requiring substantial structural modification or installation of equipment.

(c) In this section, "energy audit" means a determination of

(1) the energy consumption characteristics of a **public facility** [BUILDING], including the size, type, and rate of energy consumption of major energy-consuming systems of the **public facility** [BUILDING] and the climate characterizing the region where the **public facility** [BUILDING] is located; and

(2) a determination of the energy conservation and cost savings likely to result from appropriate energy-conserving maintenance and operating procedures and modifications, including the purchase and installation of energy-related fixtures.

*** Sec. 3.** AS 44.42 is amended by adding a new section to read:

Sec. 44.42.067. Retrofits; performance contracting for energy efficiency. (a) In addition to its obligation under AS 44.42.065, the department shall retrofit all heated public facilities listed in the energy use index described in AS 44.83.955. For nonheated public facilities listed in the index, the department shall retrofit, replace, or redesign inefficient lighting fixtures to be as efficient as possible while meeting federal guidelines.

(b) In carrying out the duty under (a) of this section, the department may, if no other funding or partial funding for a project is available

(1) enter into an energy performance contract; and

(2) administer a performance contract for a public facility by contracting with an energy service company that is a member of the National Association of Energy Service Companies.

(c) If the department uses an energy performance contract under (b) of this section for a project retrofitting a heated public facility, the contract may also include alternative energy projects and capital improvements not related to energy retrofitting.

(d) The department shall manage its duties under (a) of this section so that the retrofitting of state facilities identified in the energy use index database described in AS 44.83.955 shall be completed not later than 15 years after completion of the energy use index database.

(e) If the department determines that an energy retrofit described under (a) of this section is not cost-effective, the department may postpone the retrofit until it is determined to be cost-effective or additional capital improvements are required.

(f) Any retrofit, new construction, or deferred maintenance of a public facility performed under this section shall be made in accordance with the most recently published edition of the International Energy Conservation Code or the 90.1 standard of the American Society of Heating, Refrigerating and Air-Conditioning Engineers. The department is not required to comply fully with the International Energy Conservation Code or the 90.1 standard of the American Society of Heating, Refrigerating and Air-Conditioning Engineers if the climate of an area of the state makes the standards inappropriate for the retrofit, new construction, or deferred maintenance.

(g) In this section,

(1) "performance contract" means an agreement for the provision of energy services and equipment in which a private entity or qualified third party agrees to finance, design, construct, install, maintain, operate, or manage energy systems or equipment to improve the energy efficiency of, or produce energy for, a facility in exchange for a portion of the cost savings, lease payments, or specified revenue, and by which the level of payments is made contingent on verified energy savings, energy production, avoided maintenance, avoided energy equipment replacement, or any combination of verified energy savings, energy production, avoided maintenance, or avoided energy equipment replacement;

(2) "public facility" means a facility owned or controlled and held by the state for government or public use.

*** Sec. 4.** AS 44.83 is amended by adding a new section to read:

Sec. 44.83.955. Energy use index. (a) The authority shall

(1) establish an energy use index for all public facilities to capture baseline energy consumption data and energy efficiency data for prioritization of energy retrofit projects;

(2) prepare a baseline energy use index database for all public facilities evaluated and of the energy information collected; and

(3) adopt regulations establishing the methodology to be used in determining the energy use index described in (1) of this subsection.

(b) In this section, "public facility" means a facility owned or controlled and held by the state for government or public use.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ENERGY USE INDEX DATABASE. The Alaska Energy Authority shall establish the energy use index database described in AS 44.83.955, added by sec. 4 of this Act, not later than six months after the effective date of this Act.

*** Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ENERGY PERFORMANCE REPORT. Not later than January 31 of each of the three

years following the completion of an energy retrofit project, the Department of Transportation and Public Facilities shall submit to the legislature an energy performance report detailing the effectiveness of the energy efficiency measures provided for in this Act.

This bill would require the Alaska Energy Authority (AEA) to:
1- Establish a baseline energy index and energy efficiency data for prioritization of retrofits of state owned or controlled facilities.
2- Adopt regulations to establish methodology to be used in establishing the index.

AEA estimates it will cost $100.0 to complete this one-time capital project.

Case One: No GF appropriation for energy efficiency retrofits. Retrofits will be accomplished via energy savings performance contracts. The performance contracts are funded with loans which are paid back over time using money that would have been expended on the energy saved from implementing the energy savings measures, from the using agencies existing operating budget. No reduction in operating budgets will be seen until the loan has been repaid.

Two engineering positions required in year one to implement and administer the program, with a third position added in FY2011.

SENATE RESOURCES COMMITTEE

SPONSOR STATEMENT

Senate Bill 121: "An Act relating to energy efficiency for public facilities With the intent of reducing state operating costs."

SB 121 will decrease the cost of operating state facilities by reducing the amount of energy consumed by public facilities over the next fifteen years.

This bill requires the Department of Transportation and Public Facilities to retrofit, where cost effective, all public facilities within 15 years of the completion of an energy use index database. Retrofitting numerous public facilities will save energy and energy costs but could be very expensive if it weren't for performance contracting. Performance contracting by an energy service company allows the state to retrofit many more buildings through a pay as you save system than could be funded annually. It's a win-win situation. No money is spent out of pocket, initial savings are paid to the energy service company for the retrofit, and within 15 years or less, cost savings from efficiency upgrades go directly to the state, saving public funds.

In order to prioritize energy retrofit projects, an energy use index database must be established to provide baseline data on the energy consumption of individual facilities. Once this data is all in one place, the state can identify which facilities consume the greatest amount of energy and are therefore most costly to operate, so that those facilities can be targeted for priority retrofitting.

This bill requires the Alaska Energy Authority to create an energy use index database and requires the Department of Transportation and Public Facilities to update the database every 10 years from the date of an individual retrofit or whenever there are substantial changes to a facility. If during an update, substantial inefficiencies are identified for a facility in the database, a new energy use audit and potential retrofitting of that facility would be arranged by the department.

In 2004, the Alaska Department of Transportation and Public Facilities executed a performance contract to retrofit 8 public buildings. Based on 2006-2007 utility rates, this contract has saved the state $365,991, significantly more than the contract guaranteed. Based on 2008 rates, this savings would actually be $557,096. Electricity usage was cut by 22%, natural gas by 15%, and fuel oil by 36 percent. If the state executed just 25 similar contracts, the state could save over $13 million (based on 2008 rates) in the first year.

Senate Bill 121:
Reducing State Operating Costs Through Energy Efficient Public Buildings

Proposal:

Decrease the cost of operating state facilities by reducing the amount of energy consumed by public buildings by 20 percent over the next fifteen years.

Background:

- Alaska faces some of the highest energy costs nationwide, and as the owner of nearly 1800 public facilities, the State of Alaska would benefit by taking steps to lower these operating costs.
- The easiest way for the state to reduce energy costs is to maximize energy efficiency of public facilities by installing energy savings measures that meet the most recently published International Energy Conservation Code (IECC) standards.
- The 2009 International Energy Conservation Code (IECC) provides facilities with 15% more efficiency than the 2006 code.
- Most public facilities in Alaska have not received energy efficiency upgrades and therefore do not meet the current International Conservation Code (IECC) standards.
- Beginning in 2004, The Department of Transportation and Public Facilities executed a performance contract with Siemens Building Technologies who has now audited and retrofitted 16 public facilities, in 2 contracts to improve energy efficiency.
- Performance contracts allow the state to retrofit many more buildings than could be funded annually through a pay as you save system. Initial savings are paid to an energy service company for the retrofit, and within 15 years or less, cost savings from the efficiency upgrades go directly to the state, saving public funds.
- The energy performance report from the first performance contract of 8 facilities shows that in the first year after receiving energy retrofits, the state saved $365,991 (using 2006-2007 rates). Using 2008 rates the savings would actually be $557,096.
- The efficiency measures that resulted in cost savings to the state cut electricity usage by 22%, natural gas by 15%, and fuel oil by 36%. Looking at these figures, the total reduction in energy usage for these 8 facilities in the first year was 24 percent.
- Prioritizing energy retrofit projects will allow the state to realize the greatest savings by providing for energy efficiency measures in the facilities which consume the greatest amount of energy and therefore cost the most to operate, prior to retrofitting buildings which consume less.
- To help the state identify which facilities consume the most energy and prioritize energy retrofit projects accordingly, an energy use index database containing energy use data for each public facility should be established and maintained using data from utility bills.
- By prioritizing retrofit projects and using performance contracts, the state can begin saving energy right away and save in operating costs for years to come.

CS for SB 121 – General Intent, Additions and Changes

"An act relating to energy efficiency for public facilities with the intent of reducing state operating costs"

This bill provides for the Alaska Energy Authority to establish an energy use index database so that the state can identify the amount of energy consumed by each public facility and better prioritize energy retrofit projects to help reduce state operating costs.

This bill requires the Department of Transportation and Public Facilities to retrofit, where cost effective, all public facilities within 15 years of the completion of the energy use index database.

This bill allows the department to use performance contracting with a qualified energy service company so that the state can achieve energy audits and efficiency upgrades through a "pay as you save" system, where the state is guaranteed a specific energy savings and is able to pay for the contract in 15 years or less, with savings earned through efficiency upgrades.

This bill requires the department to update the energy use index database with information from new utility bills every 10 years or whenever a substantial change has been made for a facility. If a substantial inefficiency is detected during database maintenance, the department shall perform an energy audit and possibly another retrofit.

Below are a few changes and additions offered in the Committee Substitute to SB 121.

Changes to the bill:
The Purpose has been changed to say that the amount of energy consumed should be reduced by 20 percent not later than 15 years after completion of the energy use index database.

The timeframe for completion of energy retrofit projects has changed from 10 years after the date of the act to 15 years from the date of completion of the energy use index database.

Maintenance and updates to the energy use index database will be made by the Department of Transportation and Public Facilities every 10 years and when there are substantial changes to a facility.

Additions to the bill:
Lighted facilities that are not heated shall be upgraded so that lighting is as efficient as possible while meeting federal guidelines.

If the department determines that a retrofit is not cost effective, the department may postpone the retrofit until it is determined to be cost effective or additional capital improvements are required.

All retrofits, new construction and deferred maintenance of state buildings shall be made in accordance with the most recently published version of the International Energy Conservation Code or the 90.1 standard of the American Society of Heating, Refrigerating and Air-Conditioning Engineers. The department may amend these standards to better address the climate needs throughout the state.

CCHRC

Memo

Date: **March 9, 2009**

To: **Senate Resources Committee, State of Alaska**

From: **Dr. John N Davies, Research Director**

RE: **Support for SB 121**

As SB 121 addresses two of the key recommendations made in our report, *Alaska Energy Efficiency Program and Policy Recommendations,* we are in strong support of this bill.

The first recommendation was to establish an Energy Use Index for public buildings based on readily available utility bills and data about the size and use of each building. An energy use index is often as simple as energy used per square foot of heated floor space (BTU/sq. ft). Such an index gives the building owner a means of comparison with other similar buildings as to how the owner's building is performing. It also gives the state a means to prioritize retrofit work.

The second recommendation was "The Governor should direct each state agency to reduce energy consumption in its facilities by 20 percent from 2000 levels by 2020." We suggested that some sort of pay-as-you-save mechanism be used to fund the needed retrofits, either a revolving loan fund or to encourage the use of private energy service companies (ESCO). The funding mechanism uses some or all of the energy cost savings from the retrofit work to pay for financing the work.

7. The Alaska Housing Finance Corporation and Alaska Energy Authority should conduct an end-use survey of residential and commercial energy consumers.

AHFC and AEA should conduct a household survey to collect information about energy end-use and user behavior. Overall analysis should include survey data, AKWarm[10] data and utility data. The purpose of an end-use survey is to determine the specifics of residential energy consumption – how many people use electric hot water heaters versus gas; average age of refrigerators and industrial walk-in freezers in Alaska; the number of people and businesses that have switched to efficient lighting; and so on.

Baselines should be established by facility type and type of user.

- Quantify current energy use by
  - Residential – per household and type of user, i.e. multi-family versus single family
  - Commercial/public – square footage and type of user, i.e. hours per year of facility use; number of daily users

AHFC and AEA need to establish mechanisms for updating energy user data on an annual or biennial basis. Costs associated with these recommendations should be included in overall program administration.

The effect on homeowners and business owners of the recent run-up in energy prices (and in Juneau, the effect of temporary electrical transmission problems), has resulted in a variety of responses by state and local policy-makers. Additional information on end uses, updated periodically, would assist state and local policy-makers in choosing among policy options.

8. The Alaska Energy Authority should establish and report an Energy Use Index (EUI) for all public buildings.

The AEA should establish an energy use index for all public buildings, employing user and utility information. AEA should act as clearinghouse for EUIs, collecting and standardizing end-use information specific to Alaska. Energy use is usually then reported out in relation to square footage, type and hours of use, number of users, etc.

The Oregon Energy Trust has developed a simple and easy-to-use tool utilized by public schools in Oregon and Northern California based on the following ideas.

- A simple EUI can be established with 12 months energy use data (utility bills) and basic information about buildings use
- EUIs will help guide energy efficiency program funding to the highest users
- The EUI will serve the function of supplying basic baseline energy use information for public facilities

[10] AKWarm database housed at AHFC includes energy ratings on more than 25,000 households in Alaska. Information on energy used for home heating can be found for homes in parts of state the fuel source used for home heating is not used for other purposes.

We recommend the state contract for coordination and consolidation of EUI data; an estimated one-time cost of $50,000 would cover this effort. Set-up for such an endeavor would include choosing or developing a data gathering tool; working with Alaska DOT/PF to identify the contact person at each facility; contact and assistance to collect information; and consolidation of data. The state could choose to keep this project in-house but it is unlikely that costs would be reduced, they would just be less apparent.

EXECUTIVE SUMMARY

This document is the first annual Performance Assurance Report and compares the measured energy savings against the energy savings that were guaranteed by Siemens Building Technologies (Siemens) as part of a Performance Contract that was executed in 2004. As part of that contract, Siemens implemented Facility Improvement Measures (FIMs) at eight facilities which included: upgrades to the lighting systems and lighting controls, installation of low-flow water fixtures, installation of high efficient motors, modifications and expansion of the energy management systems, installation of office equipment machine load controllers, burner upgrades, conversion of CV to variable volume HW pumping upgrades, replacement of generator heaters, upgrades to the chiller plant cooling, the addition of oil tank heaters, installation of an exhaust fan for the electrical room and building envelope improvements.

Facility energy or water savings are determined by comparing the energy use before and after the installation of the FIM. The "before" case is called the baseline; the "after" case is referred to as the post-installation or performance period. Baseline adjustments are included to account for changes that affect energy use but that are not caused by the measures. Such adjustments may account for differences in weather and occupancy conditions between the baseline and performance periods.

In general,

Savings = Baseline Energy Use – Post Installation Energy Use ± Baseline Adjustments

The measured energy and water savings for the Facility Improvement Measures (FIM's) installed provide $365,991 in actual cost avoidance savings in the first annual year report.

The total guaranteed annual energy savings and the measured energy savings are summarized in Tables A & B below:

Table A

	Original Contract Guaranteed Annual Energy Savings	Reported Measured Savings (Year 1)
Electrical Consumption	2,211,605 (kWh)	2,881,786 (kWh)
Electrical Demand	322 (kW)	457 (kW)
Natural Gas	11,168 (Therms)	13,324 (Therms)
Fuel Oil	70,216 (Gal)	94,336 (Gal)
Water	2,409,000 (Gal)	2,923,000 (Gal)

The monetized annual energy savings based off of the original contract guarantee is reported in the table below:

Table B

	Original Annual Energy Savings (Monetized) *	Reported Monetized Savings (Year 1)**
Energy & Utility Savings	$265,329	**$353,393**
Operational Savings	$12,528	**$12,528**
Total	$277,857	**$365,991**

**Monetized savings based off of 2003-2005 base year utility rates*

***Reported Monetized savings based off of 2006-2007 1 year utility performance period.*

The water fixture operational savings were based upon the historical typical life of a fixture. The typical life of a water fixture is about 10 to 12 years. The water fixtures needing repair and replacement were evenly distributed. The age of the building and spot replacements were also taken into consideration to determine the failure rate of a given water fixture. Each year there is between 8-10% failure rate for a fixture.

Per the contract, the utility rate used for savings calculations will be based on the utility rate in effect for the predominant bill or the utility rate in effect for the corresponding period of the baseline period whichever is greater. The current rates will be designated the floor price. An escalation rate of 3.5% per annual period will be applied to the floor rates. The escalated floor rate will be compared to the utility rate in effect in each future annual period, and the greater of the two will be applied

INTRODUCTION

Siemens Building Technologies, Inc. (Siemens) is pleased to present the State of Alaska (State) with this first annual Performance Assurance Report for the operation of the Facility Improvement Measures (FIMs) that were installed as part of the Performance Contract in 2004 at the eight facilities listed on Table 1. This report documents and compares the measured energy savings against the energy savings that were guaranteed by Siemens.

Table 1
List of Buildings Included in Project

Dimond Courthouse	State Office Building
Alaska Office Building	Aviation Building
Court Plaza	DOT/PF Annex Building
Douglas Island Building	Public Safety Building

The FIMs that were implemented as part of this project include: upgrades to the lighting systems and lighting controls, installation of low-flow water fixtures, installation of high efficient motors, modifications and expansion of the energy management systems, installation of office equipment machine load controllers, burner upgrades, conversion of CV to variable volume HW pumping upgrades, replacement of generator heaters, upgrades to the chiller plant cooling, the addition of oil tank heaters, installation of an exhaust fan for the electrical room and building envelope improvements. The FIMs that were installed in each building are identified on Table 2.

BASE YEAR

The Base Year for this project is a rolling base year starting in July 2002 through June 2005, and the annual performance period is from September 1, 2006 through September 1, 2007. Utility data for the base year which represents the Baseline Energy Use is summarized in Table 4 with detailed utility data for the base year provided in Appendix N in back of the Utility Rate Information.

Table 4
Baseline Energy Use

7/2002-6/2005	Electric		Natural Gas	Fuel Oil	Water	Sewer
	Consumption	Demand	Consumption	Consumption	Consumption	Consumption
Building	(kWh)	(kW)	(therms)	(gal)	(gal)	(gal)
Dimond Courthouse	1,516,840	4,283	0	83,096	1,579,000	1,579,000

GUARANTEED ENERGY SAVINGS

This section reviews the energy savings that were guaranteed by Siemens as part of this project. Table 5 provides the guaranteed reductions for electricity, natural gas Fuel oil, and domestic water for each FIM. The guaranteed cost avoidance savings are based upon 2003-2005 base year rates.

Table 5
Guaranteed Savings for each FIM

FIM#	Description	Electric Consumption (kWh)	Electric Demand (kW)	Natural Gas Consumption (therms)	Fuel Consumption (gal)	Water Consumption (kgal)	Baseyear Cost Savings ($)
1.00	Lighting Upgrades	1,277,391	322	-1,257	-2,109	0	$102,307
1.01	LightingControls	175,800	0	-10	-425	0	$9,073
2.00	WaterConservation		0	454	397	2,212	$25,089
3.00	Energy Efficient Motor Upgrades	21,812	0	0	0	0	$1,610
4.00	Energy Management/DDC Upgrades	669,911	0	12,096	68,323	0	$114,995

↑ savings guarantee

1. The guaranteed rate savings used in Table 5 are based upon 2003-2005 base year rates.

SUMMARY OF FINDINGS

The results of this Performance Assurance Report indicate that the State has had a very successful year in realizing the energy savings that were guaranteed by Siemens. Table 7 presents the utility savings that were measured during the first year of the agreement. The State achieved $365,991 in utility savings which is $88,134 more savings than anticipated. These savings are based upon (2006-2007) utility rates.

Table 7
Measured Savings for each FIM (Year 1)

FIM#	Description	Electric Consumption (kWh)	Electric Demand (kW)	Natural Gas Consumption (therms)	Fuel Consumption (gal)	Water Consumption (kgal)	Baseyear Cost Savings ($)
1.00	Lighting Upgrades	1,642,790	457	-1,621	-2,868	0	$134,944

↑ savings at 2008 rates

3. The switch from #1 Oil to #2 Oil has had a tremendous impact on the current year cost avoidance with today's current fuel cost rate $/gals. During the base year the average cost $/gals for the #1 Oil was at $1.2558 compared to $1.1047 for the #2 Oil, and the extra cost for the use of #1 oil was $.1511. Considering the cost of #2 Oil is less expensive than the cost of #1 Oil, and with today's $ the cost of #1 Oil would have easily exceeded over $3.00 $/gals. The current cost of $/gals of #2 Oil in 2007 was $2.14 and in 2008 is now at $2.96 $/gals. This cost has more than doubled from the base year cost. The actual rates for 2008 were used in this table. The cost of fuel with today's $/gals rate of $2.96 is $275,680.

CS FOR SENATE BILL NO. 143(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE SENATE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act authorizing the organization of the Greater Railbelt Energy and Transmission Corporation; relating to energy and transmission corporations, and to the Alaska Energy Authority's contracting with energy and transmission corporations to operate a power project; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

LEGISLATIVE INTENT. It is the intent of the legislature that an energy and transmission corporation authorized under this Act shall be regulated by the Regulatory Commission of Alaska. The legislature intends to review the regulation of energy and transmission corporations by the Regulatory Commission of Alaska five years after the formation of an energy and transmission corporation under this Act to evaluate whether continued regulation by the Regulatory Commission of Alaska is appropriate.

*** Sec. 2.** AS 42 is amended by adding a new chapter to read:

Chapter 50. Energy and Transmission Corporations.

Sec. 42.50.010. Energy and transmission corporations. (a) Four or more municipal or cooperative public utilities with electrically interconnected service territories may, if first authorized by law, organize an energy and transmission corporation

(1) to acquire, operate, or maintain power and transmission projects acquired or constructed as part of the former energy program for the state and owned by the Alaska Energy Authority under AS 44.83.396; and

(2) to plan for, recommend, coordinate, and otherwise address power generation and transmission for the electrically interconnected service territories as provided in this chapter.

(b) The purposes of the corporation are

(1) to ensure adequate, reliable, safe, and stable wholesale electric power to public utility members without undue discrimination, at the lowest reasonable long-term cost; and

(2) to be the primary recipient of state financial assistance provided to support the acquisition, construction, or development of generation and transmission assets and ancillary services and assets for the public utility members of the corporation.

(c) In furtherance of the purposes of the corporation, the corporation may plan for, recommend, coordinate, and otherwise address

(1) the adequacy of fuel supply, fuel storage, and fuel transportation resources required to meet the short-term and long-term electric power needs of the service territory of the corporation;

(2) the adequacy of generation and transmission assets to prudently meet local and regional short-term and long-term electric power and reliability needs of the areas electrically interconnected to the service territory of the corporation;

(3) generation reserves to meet planning and operational requirements;

(4) base load generation in all parts of the service territory of the corporation;

(5) generation and transmission power dispatch resources, including

the ability to connect dispatch resources of the public utility members;

(6) diversity in generation resources;

(7) renewable-energy-based generation resources;

(8) integration of renewable energy generation resources.

(d) The corporation shall operate on a nonprofit basis, offering its services based on uniform rates for like services under standard tariffs or contractual arrangements.

(e) The corporation has a separate and independent existence from the state. The corporation may not be considered the state, a state agency, an administrative unit of the executive branch of state government, a governmental unit of the state, a public corporation of the state, a municipal corporation, or a political subdivision of the state.

(f) The exercise by the corporation of the powers granted by this chapter is considered to be for a public purpose.

(g) The corporation is authorized to interconnect with and provide services to electric utilities other than public utility members on terms and conditions approved by the corporation's board of directors. The corporation may decline to interconnect with an electric utility or any other entity that fails to meet standards for interconnection adopted by the corporation.

Sec. 42.50.020. Board of directors. (a) The corporation shall be governed by a board of directors consisting of

(1) two directors from each public utility members, one of whom shall be the chief executive officer of the public utility member or the chief executive officer's designee and one of whom shall be an individual appointed by the governing body of the public utility member; and

(2) one public director appointed by the governor from a list of at least three persons submitted by the directors appointed under (a)(1) of this section; if the governor rejects an entire list, the directors appointed under (a)(1) of this section shall submit a new list that includes at least three persons who were not included on a previously rejected list.

(b) The term of a director representing a public utility member under (a)(1) of this section expires when the public utility member notifies the board that the

individual has been removed as a representative of the utility on the board.

(c) The term of the director appointed by the governor under (a)(2) of this section is four years. If a vacancy occurs, the governor shall appoint a director under (a)(2) of this section to serve the remaining term of the director. The governor may reappoint the director described in this subsection.

(d) The board may only remove a director for cause on two-thirds majority vote of the full board. The bylaws must provide a mechanism for a public utility member to appoint an alternative member if the chief executive officer of the utility is removed from the board.

(e) A majority of the directors on the board constitutes a quorum for the transaction of business and the exercise of the powers and duties of the board.

(f) The directors shall annually elect from among the directors on the board a chair and vice-chair and other board officers as may be provided in the bylaws.

(g) Directors may not receive a salary, but the corporation may pay directors a meeting fee, per diem, and travel expenses.

Sec. 42.50.030. Board meetings; exceptions. (a) A meeting of the board may be attended by members of the corporation, ratepayers, and the public. The bylaws must provide for participation of members and ratepayers at board meetings. Except when a voice vote is authorized, a vote shall be conducted in a manner that the members and ratepayers may know the vote of each director entitled to vote. The board may conduct a meeting by teleconference or similar communications equipment if the board gives reasonable notice of the meeting and if the members, ratepayers, and public are able to attend the meeting and hear the meeting. This subsection applies only to a meeting at which a quorum is present.

(b) The board may hold an executive session to discuss matters that come within the exceptions contained in (c) of this section on a majority vote of the board. Before holding an executive session, the board must first be convened as a regular or special meeting. A subject that is not mentioned in the motion calling for the executive session may not be considered at the executive session unless the subject is auxiliary to the main question. Formal action may not be taken during an executive session.

(c) The following matters may be discussed in an executive session:

(1) matters the knowledge of which would clearly have an adverse effect on the finances of the corporation;

(2) matters that tend to prejudice the reputation and character of a person; however, the person may request a public discussion;

(3) matters discussed with an attorney for the corporation, the knowledge of which could have an adverse effect on the legal position of the corporation;

(4) matters that are required by law to be confidential;

(5) matters pertaining to a plan, a program, or procedures for establishing, maintaining, or restoring security, or to a detailed description or evaluation of systems, facilities, or infrastructure of the corporation, but only to the extent that the discussion of the matter in open session

(A) could reasonably be expected to interfere with the implementation or enforcement of the security plan, program, or procedures;

(B) would disclose confidential guidelines for investigations or enforcement and the disclosure could reasonably be expected to risk circumvention of the law; or

(C) could reasonably be expected to endanger the life or physical safety of an individual or to present a real and substantial risk to the public health and welfare.

(d) The board shall give notice for all regular or special meetings of the board as provided in the bylaws.

Sec. 42.50.040. Officers and employees. (a) The board shall appoint a chief executive officer. The chief executive officer may not be a director and serves at the pleasure of the board.

(b) The board shall appoint officers as required by the bylaws and as the board determines to be necessary for the effective operation of the corporation.

(c) The chief executive officer may hire employees of the corporation as necessary for the efficient performance of the functions of the corporation. The board shall approve the range of compensation for employees. Employees of the corporation are not employees of the state and are not considered to be employees of a public

organization for the purposes of AS 39.

(d) An employee of the corporation may not be a director.

Sec. 42.50.050. Membership. (a) The members of the corporation are the public utility members and other entities that purchase services from the corporation that the board of directors approves to become members. The corporation may provide member benefits solely to the members of the corporation.

(b) An entity that meets the qualifications of a public utility member under this subsection shall become a public utility member of the corporation if approved by a two-thirds majority vote of the board. A public utility member

(1) shall be a municipal or cooperative electric utility with a designated electric distribution service territory, holding a certificate of public convenience and necessity issued by the Regulatory Commission of Alaska;

(2) shall be electrically interconnected to the service territory of the corporation; and

(3) may not be an affiliated electric utility.

(c) An affiliated electric utility may become a member of the corporation if approved by the board of directors.

(d) A member, including a public utility member, may withdraw from the corporation if the member

(1) pays or provides for the payment of all liabilities owed to the corporation;

(2) demonstrates that the withdrawal will not have adverse tax consequences to the corporation; and

(3) gives not less than six months' notice to the corporation.

(e) Withdrawal from the corporation does not affect a right or obligation in an agreement between a withdrawing public utility member and the corporation. The corporation shall hold equity contributed by a withdrawing public utility member to the corporation for the account of the withdrawing public utility member and refunded only in accordance with a long-range financial management plan adopted by the board.

(f) A public utility member may withdraw from being a public utility member

of the corporation but remain a member of the corporation if the public utility member

(1) demonstrates that the withdrawal will not have adverse tax consequences to the corporation; and

(2) gives not less than six months' notice to the corporation.

(g) When a public utility member gives a notice of withdrawal, the public utility member loses the right to have a director on the board.

Sec. 42.50.060. Articles of incorporation; change in location of principal office. (a) The articles of incorporation and amended articles of incorporation of a corporation must recite that they are executed under this chapter and must state

(1) the name of the corporation;

(2) the address of the principal office of the corporation;

(3) the names and the addresses of the incorporators;

(4) the names and addresses of the directors.

(b) The articles may contain any provisions consistent with this chapter that are considered necessary or advisable for the conduct of the business of the corporation. The articles shall be signed and acknowledged on behalf of each initial public utility member of the corporation. It is not necessary to recite in the articles of incorporation the purpose for which the corporation is organized or the corporate powers of the corporation.

(c) Articles of incorporation, and amended articles of incorporation, shall be submitted to the commissioner for filing. Upon a finding that the articles conform to the requirements of this chapter, and upon payment of the fees provided in AS 10.25.530, the commissioner shall file the articles in the records of the commissioner's office.

(d) A corporation may, upon authorization of its board of directors, change the location of its principal office by filing a certificate reciting the change of principal office, executed and acknowledged by its presiding officer under its seal, attested by the officer designated by the board, in the office of the commissioner.

Sec. 42.50.070. Bylaws. (a) The board shall adopt bylaws for the corporation for the governance and management of the affairs of the corporation. The board may alter, amend, or repeal the bylaws.

(b) The bylaws must be consistent with this chapter and the articles of incorporation.

(c) The bylaws must set out conditions that require the corporation to offer public utility members an opportunity to serve an industrial customer before the corporation may serve an industrial customer.

(d) The bylaws must include provisions governing financing arrangements under AS 42.50.150 that include obligations exceeding 12 months.

Sec. 42.50.080. Indemnification of directors, officers, and employees. The corporation shall indemnify directors, officers, and employees in a manner consistent with AS 10.06.490.

Sec. 42.50.090. General powers of the corporation. (a) To fulfill the purposes described in AS 42.50.010, the corporation may

(1) sue and be sued in its name;

(2) have perpetual existence;

(3) adopt and alter a corporate seal;

(4) participate with federal, state, and local governmental entities in formulating and implementing policies relating to electric power, and in planning for the development, construction, and operation of adequate electric power generation and transmission facilities for the service territory of the corporation;

(5) accept, by grant, sale, contract, operating agreement, or any other arrangement, assets from members of the corporation or other public or private entities, persons, or governments;

(6) engage in a program to support the efforts of the public utility members and affiliated electric utilities to enhance the development, efficiency, reliability, safety, and price stability of electric power in the service territory of the corporation;

(7) generate, manufacture, purchase, acquire, accumulate, transmit, meter, and dispatch wholesale electric power and ancillary services, and sell at wholesale, supply, and dispose of electric power to public utility members, members, affiliated electric utilities, and other entities;

(8) generate, manufacture, purchase, acquire, accumulate, transmit,

meter, and dispatch retail electric power and ancillary services to an industrial customer, and sell at retail, supply, and dispose of electric power to an industrial customer

(A) not located in the certificated service territory of a public utility providing electric service, under conditions established in the bylaws; or

(B) located in the certificated service territory of a public utility providing electric service if the public utility gives its written consent before the corporation enters an agreement to sell power to the industrial customer;

(9) procure fuel supplies, fuel storage capacity, and fuel transmission resources;

(10) construct, buy, lease, or otherwise acquire, equip, maintain, and operate, and sell, assign, convey, lease, mortgage, pledge, or otherwise dispose of or encumber land, buildings, structures, electric power lines or systems, dams, plants and equipment, and any other real or personal property, tangible or intangible, that is necessary, convenient, or appropriate to accomplish the corporation's purposes;

(11) buy, lease, use, or acquire franchises, rights, privileges, licenses, permits, and easements;

(12) sell, assign, convey, mortgage, pledge, exercise, or dispose of or encumber franchises, rights or privileges, licenses, permits, and easements;

(13) borrow money, contract indebtedness, issue evidences of indebtedness, and secure payment of indebtedness by mortgage, pledge, deed of trust, or other encumbrance on its real or personal property, assets, franchises, or revenue;

(14) construct, maintain, and operate electric transmission lines, along, upon, under, and across publicly owned land and public thoroughfares, including, without limitation, all roads, highways, streets, alleys, bridges, and causeways;

(15) exercise the power of eminent domain as a public utility under AS 42.05.631, except the corporation may not exercise the power of eminent domain to take an electric power generation or transmission asset from a public utility;

(16) acquire by purchase, lease, bequest, devise, gift, exchange, the satisfaction of debts, the foreclosure of mortgages, or otherwise, personal property, rights, rights-of-way, franchises, easements, and other interests in land, and acquire by

appropriation water rights that are located in the state, taking title to the property in the name of the corporation;

(17) hold, maintain, use, operate, improve, lease, exchange, donate, convey, alienate, encumber, or otherwise grant a security interest in, or authorize use or dispose of, land or personal property, subject to other provisions of this chapter;

(18) contract with and accept transfers, gifts, grants, or loans of funds or property from the United States or from the state or its political subdivisions, subject to other provisions of federal or state law or municipal ordinances;

(19) undertake and provide for the management, operation, maintenance, use, repair, renovation, and control of all of the property of the corporation;

(20) apply to the state, the United States, foreign countries, or other proper agencies for the permits, licenses, rights-of-way, or approvals necessary to construct, maintain, and operate electric power and related services, and obtain, hold, and reuse the licenses and permits in the same manner as other similar operators;

(21) enter into agreements with the state or a state agency or other instrumentality of the state;

(22) make all contracts necessary, convenient, or appropriate for the full exercise of its powers;

(23) conduct its business and exercise its powers inside or outside the state;

(24) develop operating standards applicable to all public utilities electrically interconnected to the service territory of the corporation;

(25) do or perform any other act and thing and have and exercise any other power that may be necessary, convenient, or appropriate to accomplish the corporation's purposes; and

(26) create subsidiary corporations.

(b) The corporation may not require its members to enter into power purchase agreements that restrict the ability of members to enter into bilateral power purchase or wheeling agreements among themselves, except as a condition for participation in specific new generation or transmission projects when the condition is reasonably

necessary in order for the corporation to finance the project.

Sec. 42.50.100. Public utility powers and regulation. The corporation shall have all of the powers and duties of a regulated electric public utility under AS 42.05, except that the corporation

(1) may not make retail sales of electric power except to an industrial customer under AS 42.50.090(a)(8);

(2) is not required to obtain a certificate under AS 42.05.221.

Sec. 42.50.110. Integrated resource plan. (a) The corporation shall adopt an integrated resource plan for use with a long-range fuel supply plan under AS 42.50.120 to determine the need for and selection of electric generation and transmission projects to ensure delivery of safe and reliable electric power to public utility members at the lowest reasonable long-term cost. The corporation shall evaluate and consider recommendations made in an applicable state energy plan or state integrated resource plan before in adopting and updating the plan. If the corporation's integrated resource plan deviates from other state energy or resource plans, the corporation's plan must include a report explaining the reasons for the deviation.

(b) The board shall establish a schedule for review of the integrated resource plan and update the plan at least once every five years.

(c) The corporation shall make the integrated resource plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.120. Long-range fuel supply plan. (a) The corporation shall adopt a long-range fuel supply plan to determine the need for and selection of fuel supplies to be used by electric generation projects to ensure delivery of safe, reliable, and sustainable electric power to public utility members at the lowest reasonable long-term cost. The corporation shall evaluate recommendations made in any applicable state energy plan or state integrated resource plan before adopting and updating the long-range fuel supply plan. If the corporation deviates from recommendations in a state plan, the adopted or updated long-range fuel supply plan shall include a report explaining the reasons for the deviation.

(b) The board shall establish a schedule for review of the long-range fuel

supply plan and update the plan at least once every five years.

(c) The corporation shall make the long-range fuel supply plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.130. Long-range capital improvement plan. (a) The corporation shall adopt a long-range capital improvement plan. The plan must describe how the corporation intends to accomplish the corporation's purposes and identify anticipated capital improvements planned during each of the following 10 years. The plan must be based on the principle of providing safe, reliable, and sustainable electric power to public utility members at the lowest reasonable long-term cost.

(b) The board shall establish a schedule for review of the long-range capital improvement plan and update the plan at least once every five years.

(c) The corporation shall make the long-range capital improvement plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.140. Long-range financial management plan. (a) The corporation shall adopt a long-range financial management plan. The plan must describe the manner in which the corporation intends to accomplish the corporation's purposes and the corporation's plans for acquisition, accumulation, and issuance of equity and debt for the next 10 years. The plan shall be based on the principle of providing safe, reliable, and sustainable electric power to public utility members at the lowest reasonable long-term cost.

(b) The board shall establish a schedule for review and update the long-range financial management plan at least once every five years.

(c) The corporation shall make the long-range financial management plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.150. Financing arrangements. (a) The corporation may

(1) use any financing arrangements permitted by law in achieving the purposes and objectives of the corporation; and

(2) develop financing arrangements for individual projects.

(b) The corporation may obtain assistance from state agencies with financing projects through direct grants, debt guarantees, granting of a moral obligation of the state to ensure payment of debt instruments, purchase of issued debt instruments, or

other financial methods appropriate to the projects or tasks.

Sec. 42.50.160. Fuel supplies. (a) The corporation may acquire long-term fuel supplies as required to ensure electric power generation facilities can operate without fuel-related interruption, including direct ownership of transportation and storage facilities as required to fulfill the purposes of the corporation under AS 42.50.010(b).

(b) The corporation may acquire long-term fuel supplies under this section in conjunction with other entities that are acquiring long-term fuel supplies for any lawful purpose in any lawful manner.

Sec. 42.50.170. Tax exemption. The real and personal property of the corporation and the assets, income, and receipts of the corporation are exempt from all taxes and assessments of the state or a political subdivision of the state, except that electricity sold at retail by the corporation is subject to the electric cooperative tax under AS 10.25.540 – 10.25.570.

Sec. 42.50.180. Reports and publications. The board shall publish an annual report on the Internet. The report must include financial statements audited by independent auditors, a discussion of the corporation's circumstances and operations during the period covered by the report, and any other information requested by the legislature. The board may publish other information or reports it considers appropriate.

Sec. 42.50.190. Right to examine books and records. (a) Except as provided in (c) of this section, members and ratepayers may, at a reasonable time and for any proper purpose, examine and make copies of the books and records of the corporation at the principal office of the corporation.

(b) The corporation may charge a requestor an amount equal to the actual cost of finding and duplicating documents requested under this section.

(c) The corporation may withhold books and records concerning the following subjects:

(1) records required to be kept confidential by law;

(2) personnel records, to the extent that the records are not required to be publicly disclosed by a state or federal agency;

(3) records that are proprietary, privileged, or a trade secret;

(4) records or information pertaining to a plan, a program, or procedures for establishing, maintaining, or restoring security, or to a detailed description or evaluation of systems, facilities, or infrastructure of the corporation, but only to the extent that the production of the records or information

(A) could reasonably be expected to interfere with the implementation or enforcement of the security plan, program, or procedures;

(B) would disclose confidential guidelines for investigations or enforcement and the disclosure could reasonably be expected to risk circumvention of the law; or

(C) could reasonably be expected to endanger the life or physical safety of an individual or to present a real and substantial risk to the public health and welfare; or

(5) specific matters that were prepared for or during an executive session of the board, and not subsequently made public by the corporation.

Sec. 42.50.200. Audits and examinations of corporation. The corporation shall be audited annually by an independent auditor. The board shall engage the auditor, who shall be responsible to the board. The corporation shall submit copies of each report of the auditor to the legislature and governor within 30 days after receipt of the report by the corporation.

Sec. 42.50.210. Dissolution, merger, consolidation, and disposition of assets. Without prior legislative approval, the corporation may not

(1) dissolve;

(2) merge or consolidate; or

(3) dispose of corporate assets other than in the ordinary course of business.

Sec. 42.50.220. Procedures for dispute resolution. The corporation shall establish a dispute resolution process in its bylaws. The dispute resolution process must include, at a minimum,

(1) a requirement that disputes be initially brought before the board for resolution;

(2) a requirement that the parties shall attempt to resolve a dispute that

is not resolved by the board through mediation;

(3) a requirement that the corporation and the disputing party shall attempt to resolve a dispute that is not resolved by the board and is not resolved through mediation through binding arbitration if allowed by the bylaws of the corporation; and

(4) if not resolved by the board, through mediation, or through binding arbitration, if allowed, a provision for resolution of the dispute through litigation in a court of competent jurisdiction.

Sec. 42.50.900. Definitions. In this chapter, unless the context otherwise requires,

(1) "affiliated electric utility" means an electric utility that is wholly owned by one or more public utility members and by or through which one or more public utility members obtain electric power or electric generation or transmission services;

(2) "board" means the board of directors of the corporation;

(3) "commissioner" means the commissioner of commerce, community, and economic development;

(4) "cooperative" means an entity organized under AS 10.25;

(5) "corporation" means an energy and transmission corporation organized under this chapter;

(6) "electrically interconnected" means interconnected at a minimum transmission level of 69 kilovolts;

(7) "electric power" means electric energy and capacity;

(8) "electric utility" means a public utility, as defined in AS 42.05.990 that furnishes electrical generation, transmission, or distribution service;

(9) "member" means a member of the corporation under AS 42.50.050, including public utility members;

(10) "public utility member" means a municipal or cooperative electric utility that has an electric distribution service territory, that holds a certificate of public convenience and necessity issued by the Regulatory Commission of Alaska, that is one of the electric utilities that organizes an energy and transmission corporation or that

becomes a public utility member of the corporation under AS 42.50.050(b), and that does not withdraw from being a member or public utility member under AS 42.50.050(d) or (e);

(11) "ratepayers" means the ratepayers of the public utility members of the corporation;

(12) "service territory of the corporation" means the combined service territories identified in the certificates of public convenience and necessity issued by the Regulatory Commission of Alaska for each of the public utility members of the corporation.

*** Sec. 3.** AS 44.83.396(c) is amended to read:

(c) The authority shall enter into a contract or lease under reasonable terms and conditions to permit the applicant utility to operate the power project when the applicant utility is the only wholesale power customer to be served directly by the power project**, or is a corporation organized under AS 42.50.010 and one or more public utility members of the corporation is a wholesale power customer to be served directly by the power project,** unless the authority determines **the** [A] utility **or corporation** making application for a contract or lease to operate a power project is not a qualified utility or is not capable of operating that power project efficiently and in a manner that is consistent with national standards for the industry and with agreements with bondholders.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

AUTHORIZATION TO FORM GREATER RAILBELT ENERGY AND TRANSMISSION CORPORATION. (a) Any combination of four or more of the following public utilities may organize the Greater Railbelt Energy and Transmission Corporation, as an energy and transmission corporation under AS 42.50:

(1) Homer Electric Association, Inc.;

(2) the City of Seward, Electric Utility Department;

(3) Chugach Electric Association, Inc.;

(4) the Municipality of Anchorage d/b/a Municipal Light and Power;

(5) Matanuska Electric Association, Inc.; and

(6) Golden Valley Electric Association, Inc.

(b) The corporation described in (a) of this section, if formed, shall conduct, under the direction of the Legislative Budget and Audit Committee, a management audit of the corporation to be commenced on June 30, 2013, 2016, and 2020. The management audit shall be conducted under methodologies and principles set out in volumes I (1988 ed.), II (1992 ed.) and III (1995 ed.) of the Management Audit Manual published by the National Association of Regulatory Utility Commissioners, Washington, D.C. The results of the management audit shall be transmitted to the Legislative Budget and Audit Committee 180 days after the commencement of the audit. This obligation to conduct a management audit shall be in addition to any audit obligation that may be required under an appropriation to the corporation.

(c) This section authorizes the organization of the Greater Railbelt Energy and Transmission Corporation, as required under AS 42.50.010(a), enacted by sec. 2 of this Act, if the conditions in sec. 5 of this Act are met.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT. (a) Sections 2 and 3 of this Act take effect only if four or more of the listed public utilities deliver to the Alaska Energy Authority before 4:30 p.m. on July 30, 2010, a letter of intent in the form and substance acceptable to the Alaska Energy Authority, under which the listed public utility agrees to become a public utility member of the Greater Railbelt Energy and Transmission Corporation. Each listed public utility that meets the conditions described in this subsection shall, effective August 16, 2010, be a public utility member of the Greater Railbelt Energy and Transmission Corporation. The listed public utilities are as follows:

(1) Homer Electric Association, Inc.;

(2) the City of Seward, Electric Utility Department;

(3) Chugach Electric Association, Inc.;

(4) the Municipality of Anchorage d/b/a Municipal Light and Power;

(5) Matanuska Electric Association, Inc.;

(6) Golden Valley Electric Association, Inc.

(b) The executive director of the Alaska Energy Authority shall notify the lieutenant

governor and the revisor of statutes when any of the conditions described in (a) of this section are met.

(c) In this section, unless the context otherwise requires,

(1) "Alaska Energy Authority" means the authority created in AS 44.83.020;

(2) "Greater Railbelt Energy and Transmission Corporation" means the corporation organized as an energy and transmission corporation under AS 42.50, enacted by sec. 2 of this Act, as authorized by sec. 4 of this Act;

(3) "public utility member" has the meaning given in AS 42.50.900, enacted by sec. 2 of this Act.

*** Sec. 6.** If secs. 2 and 3 of this Act take effect under sec. 5(a) of this Act, they take effect August 16, 2010.

*** Sec. 7.** Sections 1, 4, and 5 of this Act take effect immediately under AS 01.10.070(c).

MEMORANDUM March 24, 2010

SUBJECT: Redraft of CSSB 143(ENE), generally applicable to organization of the Greater Railbelt Energy and Transmission Corporation (Work Order No. 26-GS1041\S)

TO: Senator Lesil McGuire
Co-Chair of the Senate Resources Committee

FROM: Jack Chenoweth
Assistant Revisor

The material added, amended, and deleted in your committee's previous "E" version to produce the "S" version that accompanies this memo is drawn from nine pages transmitted from your office. After consultation with Assistant Attorney General Brian Bjorkquist, I tried to address the effective date provisions as I understand the administration would like them to operate, but can't be sure whether I'm correct. Please check these provisions -- bill sections 15 - 17 -- carefully to make sure that they will operate rationally.

This measure really only makes sense if you have a sound grasp of the interrelationship of the effective date provisions and the corresponding contingencies.

1. The authorization (bill section 13) and conditional effect (bill section 14) are keystone provisions: under bill section 15, they are to be given immediate effect.

2. Under bill section 14(a) and bill section 14(c), all of the remaining substantive provisions are made conditionally effective, that is, they will take effect only after compliance with the significant bill section 14 condition:

a. If the condition of bill section 14 is met, then the principal operating provisions of the bill -- sections 3, 6, and 11 -- are to take effect: these carry a mid-August 2010 effective date.

b. Various provisions are amended or repealed at a later date: these provisions take effect in mid-August 2015.

You and the committee and the administration should verify that the handling of the effective dates conforms to expectations.

Look specifically at the interrelationship between the blanket exemption provided under proposed AS 42.05.711(q), added by bill section 5, and the various regulatory provisions added to AS 42.50.100(a) and (b) by bill sections 7 and 8. As set out, the provisions are arguably inconsistent as to the oversight of the proposed new corporation by the Regulatory Commission of Alaska. To the extent that they may be, you could easily cure any inconsistency by adding, at the beginning of the text of AS 42.05.711(q) (bill section 5), the words: "Except as otherwise provided in AS _____,".

*

With respect to my preparation of the draft from the notes and instructions that were provided, please note --

In AS 42.05.431(i), I substituted "may not" for "shall not" in the replacement language to be consistent with direction given in the Manual of Legislative Drafting (Manual at pp. 64 and 65, Uniform Rule 10, and AS 24.08.010).

I included the addition requested at the end of AS 42.50.050(c) (insert "under (a) of this section") but, in context, the change makes no sense. Should it say, instead, "approval under (a) of this section"?

I included the edits proposed for AS 42.50.050(f) but not at the places instructed because the instruction would have yielded an absurd outcome. Please review my handling.

The deletion of material at page 10, lines 24 - 26, of the previous "E" draft necessitated a renumbering of all paragraphs that follow paragraph (9).

The deletion of material at page 14, beginning at line 27, of the former "E" draft (all of former AS 42.50.160) and of material beginning at page 15, line 13 (all of former AS 42.50.180) necessitated a renumbering of the codified sections following through to the "definitions" section.

In former AS 42.50.170, now renumbered as AS 42.50.160, the requested deletion of subsection (b) necessitated a relettering of the next following subsections.

The material proposed to be added as bill section 8 of the material supplied appears in the accompanying draft as additions made in bill sections 9 and 10. To maintain the material consistent with its former sequence in the legislation, these sections are intercalated with codified section numbers of "AS 42.50.155" and "AS 42.50.165".

Enclosure

26-GS1041\S
Chenoweth/Bailey
3/24/10

CS FOR SENATE BILL NO. 143( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act authorizing the organization of the Greater Railbelt Energy and Transmission Corporation; relating to energy and transmission corporations, to exemption of energy and transmission corporations from regulation by the Regulatory Commission of Alaska and municipalities, and to the Alaska Energy Authority's contracting with energy and transmission corporations to operate a power project; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 29.35.070(a) is amended to read:

(a) The assembly acting for the area outside all cities in the borough and the council acting for the area in a city may regulate, fix, establish, and change the rates and charges imposed for a utility service provided to the municipality or its inhabitants by a utility that is not subject to regulation under AS 42.05 unless that utility is exempted from regulation under AS 42.05.711(a), (d) - (k), (o), [OR] (p), **or (q),** or is

exempted under regulations adopted under AS 42.05.810 from complying with all or part of AS 42.05.141 - 42.05.721.

*** Sec. 2.** AS 42.05.431(c) is amended to read:

(c) Notwithstanding (b) of this section,

(1) a wholesale agreement for the sale of power from a project licensed by the Federal Energy Regulatory Commission on or before January 1, 1987, and related contracts for the wheeling, storage, regeneration, or wholesale repurchase of power purchased under the agreement, entered into between the Alaska Energy Authority and one or more other public utilities or among the utilities after October 31, 1987, and before January 1, 1988, and amendments to the wholesale agreement or related contract, [AND] the wholesale agreement or related contract assigned by the Alaska Energy Authority to a joint action agency formed under AS 42.45.310 that purchases the project from the Alaska Energy Authority, **and a wholesale agreement for the sale of power from a project owned or operated by a corporation organized under AS 42.50, and related contracts for the wheeling, storage, regeneration, or wholesale repurchase of** electric **power purchased under the agreement, entered into between the corporation and one or more public utilities,** are not subject to review or approval by the commission until all long-term debt incurred for the project is retired, or, for a wholesale agreement or related contract assigned to a joint action agency formed under AS 42.45.310, until all long-term debt incurred to pay the purchase price to the Alaska Energy Authority is retired; and

(2) a wholesale agreement or related contract described in (1) of this subsection may contain a covenant for the public utility to establish, charge, and collect rates sufficient to meet its obligations under the contract; the rate covenant is valid and enforceable.

*** Sec. 3.** AS 42.05.431 is amended by adding a new subsection to read:

(i) When setting or reviewing rates for an energy and transmission corporation organized under AS 42.50.010, the commission may not disallow from a rate base or revenue requirement amounts necessary for the corporation to fund a cost reasonably anticipated to become a just and reasonable cost of producing and transmitting electric power, energy, or other services, including costs

I COULD APPLY TO GAS STORAGE

(1) for the repair, replacement, and retirement of a project owned or operated by the corporation; and

(2) incurred to permit the corporation to build reasonably necessary equity for future operations.

*** Sec. 4.** AS 42.05.711(*l*) is amended to read:

(*l*) A person, utility, joint action agency established under AS 42.45.310, or cooperative that is exempt from regulation under (a), (d) - (k), [OR] (o) **or (q),** of this section is not subject to regulation by a municipality under AS 29.35.060 and 29.35.070.

*** Sec. 5.** AS 42.05.711 is amended by adding a new subsection to read:

(q) A corporation organized under AS 42.50 is exempt from regulation under this chapter, including the requirement to obtain a certificate of public convenience and necessity under AS 42.05.221.

*** Sec. 6.** AS 42 is amended by adding a new chapter to read:

Chapter 50. Energy and Transmission Corporations.

Sec. 42.50.010. Energy and transmission corporations. (a) Four or more municipal or cooperative public utilities with electrically interconnected service territories may, if first authorized by law, organize an energy and transmission corporation

(1) to acquire, operate, or maintain power and transmission projects acquired or constructed as part of the former energy program for the state and owned by the Alaska Energy Authority under AS 44.83.396; and

(2) to plan for, recommend, coordinate, and otherwise address power generation and transmission for the electrically interconnected service territories as provided in this chapter.

(b) The purposes of the corporation are

(1) to ensure adequate, reliable, safe, and stable wholesale electric power to public utility members without undue discrimination, at the lowest reasonable long-term cost; and

(2) to be the primary recipient of state financial assistance provided to support the acquisition, construction, or development of generation and transmission

assets and ancillary services and assets for the public utility members of the corporation.

(c) In furtherance of the purposes of the corporation, the corporation may plan for, recommend, coordinate, and otherwise address

(1) the adequacy of fuel supply, fuel storage, and fuel transportation resources required to meet the short-term and long-term electric power needs of the service territory of the corporation;

(2) the adequacy of generation and transmission assets to prudently meet local and regional short-term and long-term electric power and reliability needs of the areas electrically interconnected to the service territory of the corporation:

(3) generation reserves to meet planning and operational requirements;

(4) base load generation in all parts of the service territory of the corporation;

(5) generation and transmission power dispatch resources, including the ability to connect dispatch resources of the public utility members;

(6) diversity in generation resources;

(7) renewable-energy-based generation resources;

(8) integration of renewable energy generation resources.

(d) The corporation shall operate on a nonprofit basis, offering its services based on uniform rates for like services under standard tariffs or contractual arrangements.

(e) The corporation has a separate and independent existence from the state. The corporation may not be considered the state, a state agency, an administrative unit of the executive branch of state government, a governmental unit of the state, a public corporation of the state, a municipal corporation, or a political subdivision of the state.

(f) The exercise by the corporation of the powers granted by this chapter is considered to be for a public purpose.

(g) The corporation is authorized to interconnect with and provide services to electric utilities other than public utility members on terms and conditions approved by the corporation's board of directors. The corporation may decline to interconnect with an electric utility or any other entity that fails to meet standards for

interconnection adopted by the corporation.

Sec. 42.50.020. Board of directors. (a) The corporation shall be governed by a board of directors consisting of

(1) two directors from each public utility members, one of whom shall be the chief executive officer of the public utility member or the chief executive officer's designee and one of whom shall be an individual appointed by the governing body of the public utility member; and

(2) one public director appointed by the governor from a list of at least three persons submitted by the directors appointed under (a)(1) of this section; if the governor rejects an entire list, the directors appointed under (a)(1) of this section shall submit a new list that includes at least three persons who were not included on a previously rejected list.

(b) The term of a director representing a public utility member under (a)(1) of this section expires when the public utility member notifies the board that the individual has been removed as a representative of the utility on the board.

(c) The term of the director appointed by the governor under (a)(2) of this section is four years. If a vacancy occurs, the governor shall appoint a director under (a)(2) of this section to serve the remaining term of the director. The governor may reappoint the director described in this subsection.

(d) The board may only remove a director for cause on two-thirds majority vote of the full board. The bylaws must provide a mechanism for a public utility member to appoint an alternative member if the chief executive officer of the utility is removed from the board.

(e) A majority of the directors on the board constitutes a quorum for the transaction of business and the exercise of the powers and duties of the board.

(f) The directors shall annually elect from among the directors on the board a chair and vice-chair and other board officers as may be provided in the bylaws.

(g) Directors may not receive a salary, but the corporation may pay directors a meeting fee, per diem, and travel expenses.

Sec. 42.50.030. Board meetings; exceptions. (a) A meeting of the board may be attended by members of the corporation, ratepayers, and the public. The bylaws

must provide for participation of members and ratepayers at board meetings. Except when a voice vote is authorized, a vote shall be conducted in a manner that the members and ratepayers may know the vote of each director entitled to vote. The board may conduct a meeting by teleconference or similar communications equipment if the board gives reasonable notice of the meeting and if the members, ratepayers, and public are able to attend the meeting and hear the meeting. This subsection applies only to a meeting at which a quorum is present.

(b) The board may hold an executive session to discuss matters that come within the exceptions contained in (c) of this section on a majority vote of the board. Before holding an executive session, the board must first be convened as a regular or special meeting. A subject that is not mentioned in the motion calling for the executive session may not be considered at the executive session unless the subject is auxiliary to the main question. Formal action may not be taken during an executive session.

(c) The following matters may be discussed in an executive session:

(1) matters the knowledge of which would clearly have an adverse effect on the finances of the corporation;

(2) matters that tend to prejudice the reputation and character of a person; however, the person may request a public discussion;

(3) matters discussed with an attorney for the corporation, the knowledge of which could have an adverse effect on the legal position of the corporation;

(4) matters that are required by law to be confidential;

(5) matters pertaining to a plan, a program, or procedures for establishing, maintaining, or restoring security, or to a detailed description or evaluation of systems, facilities, or infrastructure of the corporation, but only to the extent that the discussion of the matter in open session

(A) could reasonably be expected to interfere with the implementation or enforcement of the security plan, program, or procedures;

(B) would disclose confidential guidelines for investigations or enforcement and the disclosure could reasonably be expected to risk circumvention of the law; or

(C) could reasonably be expected to endanger the life or physical safety of an individual or to present a real and substantial risk to the public health and welfare.

(d) The board shall give notice for all regular or special meetings of the board as provided in the bylaws.

Sec. 42.50.040. Officers and employees. (a) The board shall appoint a chief executive officer. The chief executive officer may not be a director and serves at the pleasure of the board.

(b) The board shall appoint officers as required by the bylaws and as the board determines to be necessary for the effective operation of the corporation.

(c) The chief executive officer may hire employees of the corporation as necessary for the efficient performance of the functions of the corporation. The board shall approve the range of compensation for employees. Employees of the corporation are not employees of the state and are not considered to be employees of a public organization for the purposes of AS 39.

(d) An employee of the corporation may not be a director.

Sec. 42.50.050. Membership. (a) The members of the corporation are the public utility members and other entities that purchase services from the corporation that the board of directors approves to become members. The corporation may provide member benefits solely to the members of the corporation.

(b) An entity that meets the qualifications of a public utility member under this subsection shall become a public utility member of the corporation if approved by a two-thirds majority vote of the board. A public utility member

(1) shall be a municipal or cooperative electric utility with a designated electric distribution service territory, holding a certificate of public convenience and necessity issued by the Regulatory Commission of Alaska;

(2) shall be electrically interconnected to the service territory of the corporation; and

(3) may not be an affiliated electric utility.

(c) An affiliated electric utility may become a member of the corporation under (a) of this section.

(d) A member, including a public utility member, may withdraw from the corporation if the member

(1) pays or provides for the payment of all liabilities owed to the corporation;

(2) demonstrates that the withdrawal will not have adverse tax consequences to the corporation; and

(3) gives not less than six months' notice to the corporation.

(e) Withdrawal from the corporation does not affect a right or obligation in an agreement between a withdrawing public utility member and the corporation. The corporation shall hold equity contributed by a withdrawing public utility member to the corporation for the account of the withdrawing public utility member and refunded only in accordance with a long-range financial management plan adopted by the board.

(f) A public utility member may withdraw from being a public utility member of the corporation but remain a member of the corporation if the public utility member

(1) demonstrates that the withdrawal will not have adverse tax consequences to the corporation; and

(2) gives not less than six months' notice to the corporation.

(g) When a public utility member gives a notice of withdrawal, the public utility member loses the right to have a director on the board.

Sec. 42.50.060. Articles of incorporation; change in location of principal office. (a) The articles of incorporation, and amended articles of incorporation, of a corporation must recite that they are executed under this chapter and must state

(1) the name of the corporation;

(2) the address of the principal office of the corporation;

(3) the names and the addresses of the incorporators;

(4) the names and addresses of the directors.

(b) The articles may contain any provisions consistent with this chapter that are considered necessary or advisable for the conduct of the business of the corporation. The articles shall be signed and acknowledged on behalf of each initial public utility member of the corporation. It is not necessary to recite in the articles of

incorporation the purpose for which the corporation is organized or the corporate powers of the corporation.

(c) Articles of incorporation, and amended articles of incorporation, shall be submitted to the commissioner for filing. Upon a finding that the articles conform to the requirements of this chapter, and upon payment of the fees provided in AS 10.25.530, the commissioner shall file the articles in the records of the commissioner's office.

(d) A corporation may, upon authorization of its board of directors, change the location of its principal office by filing a certificate reciting the change of principal office, executed and acknowledged by its presiding officer under its seal, attested by the officer designated by the board, in the office of the commissioner.

Sec. 42.50.070. Bylaws. (a) The board shall adopt bylaws for the corporation for the governance and management of the affairs of the corporation. The board may alter, amend, or repeal the bylaws.

(b) The bylaws must be consistent with this chapter and the articles of incorporation.

(c) The bylaws must set out conditions that require the corporation to offer public utility members an opportunity to serve an industrial customer before the corporation may serve an industrial customer.

(d) The bylaws must include provisions governing financing arrangements under AS 42.50.150 that include obligations exceeding 12 months.

Sec. 42.50.080. Indemnification of directors, officers, and employees. The corporation shall indemnify directors, officers, and employees in a manner consistent with AS 10.06.490.

Sec. 42.50.090. General powers of the corporation. (a) The corporation may

(1) sue and be sued in its name;

(2) have perpetual existence;

(3) adopt and alter a corporate seal;

(4) participate with federal, state, and local governmental entities in formulating and implementing policies relating to electric power, and in planning for the development, construction, and operation of adequate electric power generation

and transmission facilities for the service territory of the corporation;

(5) accept, by grant, sale, contract, operating agreement, or any other arrangement, assets from members of the corporation or other public or private entities, persons, or governments;

(6) engage in a program to support the efforts of the public utility members and affiliated electric utilities to enhance the development, efficiency, reliability, safety, and price stability of electric power in the service territory of the corporation;

(7) generate, manufacture, purchase, acquire, accumulate, transmit, meter, and dispatch wholesale electric power and ancillary services, and sell at wholesale, supply, and dispose of electric power to public utility members, members, affiliated electric utilities, and other entities;

(8) generate, manufacture, purchase, acquire, accumulate, transmit, meter, and dispatch retail electric power and ancillary services to an industrial customer, and sell at retail, supply, and dispose of electric power to an industrial customer

(A) not located in the certificated service territory of a public utility providing electric service, under conditions established in the bylaws; or

(B) located in the certificated service territory of a public utility providing electric service if the public utility gives its written consent before the corporation enters an agreement to sell power to the industrial customer;

(9) procure fuel supplies, fuel storage capacity, and fuel transmission resources;

(10) construct, buy, lease, or otherwise acquire, equip, maintain, and operate, and sell, assign, convey, lease, mortgage, pledge, or otherwise dispose of or encumber land, buildings, structures, electric power lines or systems, dams, plants and equipment, and any other real or personal property, tangible or intangible, that is necessary, convenient, or appropriate to accomplish the corporation's purposes;

(11) buy, lease, use, or acquire franchises, rights, privileges, licenses, permits, and easements;

(12) sell, assign, convey, mortgage, pledge, exercise, or dispose of or

encumber franchises, rights or privileges, licenses, permits, and easements;

(13) borrow money, contract indebtedness, issue evidences of indebtedness, and secure payment of indebtedness by mortgage, pledge, deed of trust, or other encumbrance on its real or personal property, assets, franchises, or revenue;

(14) construct, maintain, and operate electric transmission lines, along, upon, under, and across publicly owned land and public thoroughfares, including, without limitation, all roads, highways, streets, alleys, bridges, and causeways;

(15) exercise the power of eminent domain as a public utility under AS 42.05.631, except the corporation may not exercise the power of eminent domain to take an electric power generation or transmission asset from a public utility;

(16) acquire by purchase, lease, bequest, devise, gift, exchange, the satisfaction of debts, the foreclosure of mortgages, or otherwise, personal property, rights, rights-of-way, franchises, easements, and other interests in land, and acquire by appropriation water rights that are located in the state, taking title to the property in the name of the corporation;

(17) hold, maintain, use, operate, improve, lease, exchange, donate, convey, alienate, encumber, or otherwise grant a security interest in, or authorize use or dispose of, land or personal property, subject to other provisions of this chapter;

(18) contract with and accept transfers, gifts, grants, or loans of funds or property from the United States or from the state or its political subdivisions, subject to other provisions of federal or state law or municipal ordinances;

(19) undertake and provide for the management, operation, maintenance, use, repair, renovation, and control of all of the property of the corporation;

(20) apply to the state, the United States, foreign countries, or other proper agencies for the permits, licenses, rights-of-way, or approvals necessary to construct, maintain, and operate electric power and related services, and obtain, hold, and reuse the licenses and permits in the same manner as other similar operators;

(21) enter into agreements with the state or a state agency or other instrumentality of the state;

(22) make all contracts necessary, convenient, or appropriate for the

full exercise of its powers;

(23) conduct its business and exercise its powers inside or outside the state;

(24) develop operating standards applicable to all public utilities electrically interconnected to the service territory of the corporation;

(25) do or perform any other act and thing and have and exercise any other power that may be necessary, convenient, or appropriate to accomplish the corporation's purposes; and

(26) create subsidiary corporations.

(b) The corporation may not require its members to enter into power purchase agreements that restrict the ability of members to enter into bilateral power purchase or wheeling agreements among themselves, except as a condition for participation in specific new generation or transmission projects when the condition is reasonably necessary in order for the corporation to finance the project.

Sec. 42.50.100. Public utility powers and regulation. The corporation shall have all of the powers and duties of a regulated electric public utility under AS 42.05, except that the corporation

(1) may not make retail sales of electric power except to an industrial customer under AS 42.50.090(a)(8);

(2) is not required to obtain a certificate under AS 42.05.221.

Sec. 42.50.110. Integrated resource plan. (a) The corporation shall adopt an integrated resource plan for use with a long-range fuel supply plan under AS 42.50.120 to determine the need for and selection of electric generation and transmission projects to ensure delivery of safe and reliable electric power to public utility members at the lowest reasonable long-term cost. The corporation shall evaluate and consider recommendations made in an applicable state energy plan or state integrated resource plan before in adopting and updating the plan. If the corporation's integrated resource plan deviates from other state energy or resource plans, the corporation's plan must include a report explaining the reasons for the deviation.

(b) The board shall establish a schedule for review of the integrated resource

plan and update the plan at least once every five years.

(c) The corporation shall make the integrated resource plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.120. Long-range fuel supply plan. (a) The corporation shall adopt a long-range fuel supply plan to determine the need for and selection of fuel supplies to be used by electric generation projects to ensure delivery of safe, reliable, and sustainable electric power to public utility members at the lowest reasonable long-term cost. The corporation shall evaluate recommendations made in any applicable state energy plan or state integrated resource plan before adopting and updating the long-range fuel supply plan. If the corporation deviates from recommendations in a state plan, the adopted or updated long-range fuel supply plan shall include a report explaining the reasons for the deviation.

(b) The board shall establish a schedule for review of the long-range fuel supply plan and update the plan at least once every five years.

(c) The corporation shall make the long-range fuel supply plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.130. Long-range capital improvement plan. (a) The corporation shall adopt a long-range capital improvement plan. The plan must describe how the corporation intends to accomplish the corporation's purposes and identify anticipated capital improvements planned during each of the following 10 years. The plan must be based on the principle of providing safe, reliable, and sustainable electric power to public utility members at the lowest reasonable long-term cost.

(b) The board shall establish a schedule for review of the long-range capital improvement plan and update the plan at least once every five years.

(c) The corporation shall make the long-range capital improvement plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.140. Long-range financial management plan. (a) The corporation shall adopt a long-range financial management plan. The plan must describe the manner in which the corporation intends to accomplish the corporation's purposes and the corporation's plans for acquisition, accumulation, and issuance of equity and debt for the next 10 years. The plan shall be based on the principle of providing safe,

reliable, and sustainable electric power to public utility members at the lowest reasonable long-term cost.

(b) The board shall establish a schedule for review and update the long-range financial management plan at least once every five years.

(c) The corporation shall make the long-range financial management plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.150. Financing arrangements. (a) The corporation may

(1) use any financing arrangements permitted by law in achieving the purposes and objectives of the corporation; and

(2) develop financing arrangements for individual projects.

(b) The corporation may obtain assistance from state agencies with financing projects through direct grants, debt guarantees, granting of a moral obligation of the state to ensure payment of debt instruments, purchase of issued debt instruments, or other financial methods appropriate to the projects or tasks.

Sec. 42.50.160. Fuel supplies. (a) The corporation may acquire long-term fuel supplies as required to ensure electric power generation facilities can operate without fuel-related interruption, including direct ownership of transportation and storage facilities as required to fulfill the purposes of the corporation under AS 42.50.010(b).

(b) The corporation may acquire long-term fuel supplies under this section in conjunction with other entities that are acquiring long-term fuel supplies for any lawful purpose in any lawful manner.

Sec. 42.50.170. Tax exemption. The real and personal property of the corporation and the assets, income, and receipts of the corporation are exempt from all taxes and assessments of the state or a political subdivision of the state, except that electricity sold at retail by the corporation is subject to the electric cooperative tax under AS 10.25.540 – 10.25.570.

Sec. 42.50.180. Reports and publications. The board shall publish an annual report on the Internet. The report must include financial statements audited by independent auditors, a discussion of the corporation's circumstances and operations during the period covered by the report, and any other information requested by the legislature. The board may publish other information or reports it considers

appropriate.

Sec. 42.50.190. Right to examine books and records. (a) Except as provided in (c) of this section, members and ratepayers may, at a reasonable time and for any proper purpose, examine and make copies of the books and records of the corporation at the principal office of the corporation.

(b) The corporation may charge a requestor an amount equal to the actual cost of finding and duplicating documents requested under this section.

(c) The corporation may withhold books and records concerning the following subjects:

(1) records required to be kept confidential by law;

(2) personnel records, to the extent that the records are not required to be publicly disclosed by a state or federal agency;

(3) records that are proprietary, privileged, or a trade secret;

(4) records or information pertaining to a plan, a program, or procedures for establishing, maintaining, or restoring security, or to a detailed description or evaluation of systems, facilities, or infrastructure of the corporation, but only to the extent that the production of the records or information

(A) could reasonably be expected to interfere with the implementation or enforcement of the security plan, program, or procedures;

(B) would disclose confidential guidelines for investigations or enforcement and the disclosure could reasonably be expected to risk circumvention of the law; or

(C) could reasonably be expected to endanger the life or physical safety of an individual or to present a real and substantial risk to the public health and welfare; or

(5) specific matters that were prepared for or during an executive session of the board, and not subsequently made public by the corporation.

Sec. 42.50.200. Audits and examinations of corporation. The corporation shall be audited annually by an independent auditor. The board shall engage the auditor, who shall be responsible to the board. The corporation shall submit copies of each report of the auditor to the legislature and governor within 30 days after receipt

of the report by the corporation.

Sec. 42.50.210. Dissolution, merger, consolidation, and disposition of assets. Without prior legislative approval, the corporation may not

(1) dissolve;

(2) merge or consolidate; or

(3) dispose of corporate assets other than in the ordinary course of business.

Sec. 42.50.220. Procedures for dispute resolution. The corporation shall establish a dispute resolution process in its bylaws. The dispute resolution process must include, at a minimum,

(1) a requirement that disputes be initially brought before the board for resolution;

(2) a requirement that the parties shall attempt to resolve a dispute that is not resolved by the board through mediation;

(3) a requirement that the corporation and the disputing party shall attempt to resolve a dispute that is not resolved by the board and is not resolved through mediation through binding arbitration if allowed by the bylaws of the corporation; and

(4) if not resolved by the board, through mediation, or through binding arbitration, if allowed, a provision for resolution of the dispute through litigation in a court of competent jurisdiction.

Sec. 42.50.900. Definitions. In this chapter, unless the context otherwise requires,

(1) "affiliated electric utility" means an electric utility that is wholly owned by one or more public utility members and by or through which one or more public utility members obtain electric power or electric generation or transmission services;

(2) "board" means the board of directors of the corporation;

(3) "commissioner" means the commissioner of commerce, community, and economic development;

(4) "cooperative" means an entity organized under AS 10.25;

(5) "corporation" means an energy and transmission corporation organized under this chapter;

(6) "electrically interconnected" means interconnected at a minimum transmission level of 69 kilovolts;

(7) "electric power" means electric energy and capacity;

(8) "electric utility" means a public utility, as defined in AS 42.05.990 that furnishes electrical generation, transmission, or distribution service;

(9) "member" means a member of the corporation under AS 42.50.050, including public utility members;

(10) "public utility member" means a municipal or cooperative electric utility that has an electric distribution service territory, that holds a certificate of public convenience and necessity issued by the Regulatory Commission of Alaska, that is one of the electric utilities that organizes an energy and transmission corporation or that becomes a public utility member of the corporation under AS 42.50.050(b), and that does not withdraw from being a member or public utility member under AS 42.50.050(d) or (e);

(11) "ratepayers" means the ratepayers of the public utility members of the corporation;

(12) "service territory of the corporation" means the combined service territories identified in the certificates of public convenience and necessity issued by the Regulatory Commission of Alaska for each of the public utility members of the corporation.

* **Sec. 7.** AS 42.50.100, as enacted by sec. 6 of this Act, is amended to read:

Sec. 42.50.100. Public utility powers and regulation. The corporation shall have all of the powers and duties of a regulated electric public utility under AS 42.05, except that the corporation

(1) may not make retail sales of electric power except to an industrial customer under AS 42.50.090(a)(8);

(2) is not required to obtain a certificate under AS 42.05.221;

(3) is exempt from payment of a regulatory cost charge under AS 42.05.254; and

(4) is exempt from rate regulation under AS 42.05.431.

* **Sec. 8.** AS 42.50.100, as enacted by sec. 6 of this Act, is amended by adding a new subsection to read:

(b) The corporation

(1) shall comply with the principles and requirements contained in AS 42.05.441 - 42.05.491 as if the corporation were a regulated public utility; and

(2) is subject to the jurisdiction of the Regulatory Commission of Alaska under AS 42.05.311 and 42.05.321 regarding joint use and interconnection of facilities.

* **Sec. 9.** AS 42.50, as enacted by sec. 6 of this Act, is amended by adding a new section to read:

Sec. 42.50.155. Administrative costs and other services. (a) The corporation may annually assess and collect a fee for just and reasonable administrative expenses from members of the corporation.

(b) The corporation may enter into contracts with members of the corporation for services rendered by the members to the corporation and for services provided to the members.

* **Sec. 10.** AS 42.50, as enacted by sec. 6 of this Act, is amended by adding a new section to read:

Sec. 42.50.165. Rates for electric power, energy, and services. (a) The corporation shall establish schedules of rates and charges for electric power, energy, and other services provided by the corporation, which become effective on adoption by the board of directors of the corporation using the procedures set out in (d) of this section.

(b) The rates and charges included in a schedule

(1) must comply with AS 42.50.100(b)(1);

(2) may be established for individual projects that are owned or operated by the corporation; however, the corporation may not grant an unreasonable preference or advantage to a customer or subject a customer to an unreasonable prejudice or disadvantage;

(3) may provide for uniform rates and charges in order to extend the

benefits of an integrated generation and transmission system and encourage the equitable distribution of the electric power, energy, and other services developed by the corporation;

(4) may not establish or maintain an unreasonable difference between localities or classes of service;

(5) must be based on the principle of the recovery of just and reasonable costs of producing and transmitting electric power, energy, or other services, including

(A) operation and maintenance costs;

(B) administrative expenses not assessed under AS 42.50.155;

(C) the amortization of the capital investment over a reasonable period of years;

(D) margins required by financial covenants contained in mortgages or other debt instruments of the corporation;

(6) must consider, and not duplicate recovery for, administrative expenses assessed under AS 42.50.155;

(7) may include amounts necessary to fund costs reasonably anticipated to become just and reasonable costs of producing and transmitting electric power, energy, or other services, including costs

(A) for the repair, replacement, and retirement of a project owned or operated by the corporation;

(B) to permit the corporation to build reasonably necessary equity for future operations.

(c) The corporation shall determine, after the conclusion of each fiscal year, the actual annual project costs for a project owned or operated by the corporation for the fiscal year, including

(1) the amounts used to fund anticipated costs under (b)(7) of this section;

(2) the annual payment obligation of each purchaser of the electric power, energy, or services for the fiscal year; and

(3) the amount of payment or refund required for each purchaser to

ensure that the total amount of payments received from each purchaser for the fiscal year is equal to that purchaser's actual annual payment obligation for that asset for that fiscal year; a payment or refund obligation must be paid or refunded as soon as practicable using a rate adjustment.

(d) The corporation shall use the following procedures to establish a schedule for rates and charges:

(1) notice of a proposed schedule of rates and charges must include a statement of the justifications and reasons supporting the new or amended schedule;

(2) the notice shall be published at a time and in a manner that will reasonably inform members and ratepayers of the proposed rates and charges and must state the deadline for timely filing of comments to the schedule;

(3) the deadline for submitting comments to a proposed schedule of rates and charges may not be less than 30 days after the date of the notice;

(4) the corporation shall conduct one or more hearings under procedural rules adopted by the board; the procedural rules must provide for the development of a record that includes all timely submitted comments related to the proposed rates and charges; the procedural rules must provide for the examination of evidence regarding just and reasonable costs at the hearing;

(5) the corporation may republish notice of proposed rates and charges in the schedules if the corporation proposes significantly different new or amended rates and charges following consideration of timely filed or submitted comments;

(6) the corporation shall make a final written decision establishing or amending the schedule of rates and charges based on the record; the decision must include a full and complete justification supporting the final rates and charges;

(7) the decision of the corporation becomes effective 90 days after the corporation issues notice of its final written decision;

(8) a member may appeal a final rate decision of the board under the dispute resolution process in AS 42.50.220; during the appeal process, the corporation may implement the new or amended rates and charges in the schedules on an interim and refundable basis if the board determines that the interests of the ratepayers can be reasonably protected;

(9) the corporation may establish other procedural rules consistent with this subsection to protect the interests of ratepayers.

*** Sec. 11.** AS 44.83.396(c) is amended to read:

(c) The authority shall enter into a contract or lease under reasonable terms and conditions to permit the applicant utility to operate the power project when the applicant utility is the only wholesale power customer to be served directly by the power project**, or is a corporation organized under AS 42.50.010 and one or more public utility members of the corporation is a wholesale power customer to be served directly by the power project,** unless the authority determines **the** [A] utility **or corporation** making application for a contract or lease to operate a power project is not a qualified utility or is not capable of operating that power project efficiently and in a manner that is consistent with national standards for the industry and with agreements with bondholders.

*** Sec. 12.** AS 42.05.431(i), enacted by sec. 3 of this Act, is repealed.

*** Sec. 13.** The uncodified law of the State of Alaska is amended by adding a new section to read:

AUTHORIZATION TO FORM GREATER RAILBELT ENERGY AND TRANSMISSION CORPORATION. (a) Any combination of four or more of the following public utilities may organize the Greater Railbelt Energy and Transmission Corporation, as an energy and transmission corporation under AS 42.50:

(1) Homer Electric Association, Inc.;

(2) the City of Seward, Electric Utility Department;

(3) Chugach Electric Association, Inc.;

(4) the Municipality of Anchorage d/b/a Municipal Light and Power;

(5) Matanuska Electric Association, Inc.; and

(6) Golden Valley Electric Association, Inc.

(b) This section is contingent on the obligation that the corporation shall conduct, under the direction of the Legislative Budget and Audit Committee, a management audit of the corporation to be commenced on June 30, 2013, 2016, and 2020. The management audit shall be conducted under methodologies and principles set out in volumes I (1988 ed.), II (1992 ed.) and III (1995 ed.) of the Management Audit Manual published by the National

Association of Regulatory Utility Commissioners, Washington, D.C. The results of the management audit shall be transmitted to the Legislative Budget and Audit Committee 180 days after the commencement of the audit. This obligation to conduct a management audit shall be in addition to any audit obligation that may be required under an appropriation to the corporation.

(c) This section authorizes the organization of the Greater Railbelt Energy and Transmission Corporation, as required under AS 42.50.010(a), enacted by sec. 6 of this Act.

*** Sec. 14.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT. (a) Sections 3, 6, and 11 of this Act take effect only if four or more of the listed public utilities deliver to the Alaska Energy Authority before 4:30 p.m. on July 30, 2010, a letter of intent in the form and substance acceptable to the Alaska Energy Authority, under which the listed public utility agrees to become a public utility member of the Greater Railbelt Energy and Transmission Corporation. Each listed public utility that meets the conditions described in this subsection shall, effective August 16, 2010, be a public utility member of the Greater Railbelt Energy and Transmission Corporation. The listed public utilities are as follows:

(1) Homer Electric Association, Inc.;

(2) the City of Seward, Electric Utility Department;

(3) Chugach Electric Association, Inc.;

(4) the Municipality of Anchorage d/b/a Municipal Light and Power;

(5) Matanuska Electric Association, Inc.;

(6) Golden Valley Electric Association, Inc.

(b) The executive director of the Alaska Energy Authority shall notify the lieutenant governor and the revisor of statutes when any of the conditions described in (a) of this section are met.

(c) Sections 1, 2, 4, 5, 7 - 10, and 12 of this Act take effect only if secs. 3, 6, and 11 of this Act have taken effect.

(d) In this section, unless the context otherwise requires,

(1) "Alaska Energy Authority" means the authority created in AS 44.83.020;

(2) "Greater Railbelt Energy and Transmission Corporation" means the

corporation organized as an energy and transmission corporation under AS 42.50, enacted by sec. 6 of this Act, as authorized by sec. 13 of this Act;

(3) "public utility member" has the meaning given in AS 42.50.900, enacted by sec. 6 of this Act.

*** Sec. 15.** If secs. 3, 6, and 11 of this Act take effect under sec. 14(a) of this Act, they take effect August 16, 2010.

*** Sec. 16.** If secs. 1, 2, 4, 5, 7 - 10, and 12 of this Act take effect under sec. 14(c) of this Act, they take effect August 16, 2015.

*** Sec. 17.** Sections 13 and 14 of this Act take effect immediately under AS 01.10.070(c).

AMENDMENT

Submitted by Dept of Law

**This amendment will be incorporated into a new CS* VERSION "S"

TO: SB 143 (Work Draft 26-GS1041\E)

" * **Sec. 7.** AS 42.50.100, enacted by section 6 of this Act, is amended to read:

Sec. 42.50.100. Public utility powers and regulation. **(a)** The corporation shall have all of the powers and duties of a regulated electric public utility under AS 42.05, except that the corporation:

(1) may not make retail sales of electric power except to an industrial customer under AS 42.50.100(8); [AND]

(2) is not required to obtain a certificate under AS 42.05.221**;**

(3) is exempt from payment of a regulatory cost charge under AS 42.05.254; and

(4) is exempt from rate regulation under AS 42.05.431.

(b) The corporation

(1) shall comply with the principles and requirements contained in AS 42.05.441 - AS 42.05.491 as if the corporation were a regulated public utility; and

(2) is subject to the jurisdiction of the Regulatory Commission of Alaska under AS 42.05.311 and AS 42.05.321 regarding joint use and interconnection of facilities.

* **Sec. 8.** AS 42.50, enacted by section 6 of this Act, is amended by adding new sections to read:

Sec. 42.50.160. Administrative Costs and Other Services. (a) The corporation may annually assess and collect a fee for just and reasonable administrative expenses from members of the corporation.

(b) The corporation may enter into contracts with members of the corporation for services rendered by the members to the corporation and for services provided to the members.

Sec. 42.50.180. Rates for Electric Power, Energy and Services. (a) The corporation shall establish schedules of rates and charges for electric power, energy, and other services provided by the corporation, which become effective upon adoption by the board of directors of the corporation using the procedures set out in (d) of this section.

(b) The rates and charges included in a schedule:

(1) must comply with AS 42.50.100(b)(1);

(2) may be established for individual projects which are owned or operated by the corporation; provided that the corporation may not, as to rates and charges, grant an unreasonable preference or advantage to any of its customers or subject a customer to an unreasonable prejudice or disadvantage;

(3) may provide for uniform rates and charges in order to extend the benefits of an integrated generation and transmission system and encourage the

equitable distribution of the electric power, energy, and other services developed by the corporation;

(4) may not establish or maintain an unreasonable difference between localities or classes of service;

(5) must be based on the principle of the recovery of just and reasonable costs of producing and transmitting electric power, energy or other services, including

(A) operation and maintenance costs;

(B) administrative expenses not assessed under AS 42.50.160;

(C) the amortization of the capital investment over a reasonable period of years;

(D) margins required by financial covenants contained in mortgages or other debt instruments of the corporation;

(6) must consider, and not duplicate recovery for, administrative expenses assessed under AS 42.50.160; and

(7) may include amounts necessary to fund costs reasonably anticipated to become just and reasonable costs of producing and transmitting electric power, energy or other services, including costs

(A) for the repair, replacement and retirement of a project owned or operated by the corporation;

(B) to permit the corporation to build reasonably necessary equity for future operations.

(c) The corporation shall determine after the conclusion of each fiscal year, the actual annual project costs for a project owned or operated by the corporation for that fiscal year, including

(1) the amounts used to fund anticipated costs under (b)(7) of this section;

(2) the annual payment obligation of each purchaser of the electric power, energy or services for that fiscal year; and

(3) the amount of payment or refund required for each purchaser to ensure that the total amount of payments received from each purchaser for the fiscal year is equal to that purchaser's actual annual payment obligation for that asset for that fiscal year; a payment or refund obligation must be paid or refunded as soon as practicable using a rate adjustment.

(d) The corporation must use the following procedures to establish a schedule for rates and charges:

(1) notice of a proposed schedule of rates and charges include a statement of the justifications and reasons supporting the new or amended schedule;

(2) the notice must be published at a time and in a manner that will reasonably inform members and ratepayers of the proposed rates and charges and must state deadline for timely filing comments to the schedule;

(3) the deadline for submitting comments to a proposed schedule of rates and charges may not be less than 30 days after the date of the notice;

(4) the corporation shall conduct one or more hearings under procedural rules adopted by the board; the procedural rules must provide for the development of a record that includes all timely submitted comments related to the proposed rates and charges; the procedural rules must provide for the examination of evidence regarding just and reasonable costs at the hearing;

(5) the corporation may republish notice of proposed rates and charges in the schedules if the corporation proposes significantly different new or amended rates and charges following consideration of timely filed or submitted comments;

(6) the corporation shall make a final written decision establishing or amending the schedule of rates and charges based on the record; the decision must include a full and complete justification supporting the final rates and charges;

(7) the decision of the corporation becomes effective 90 days after the corporation issues notice of its final written decision;

(8) a member may appeal a final rate decision of the board under the dispute resolution process in AS 42.50.240; during the appeal process, the corporation may implement the new or amended rates and charges in the schedules on an interim and refundable basis if the board determines that the interests of the ratepayers can be reasonably protected;

(9) the corporation may establish other procedural rules consistent with this subsection to protect the interests of ratepayers.

*** Sec. 9.** AS 44.83.396(c) is amended to read:

(c) The authority shall enter into a contract or lease under reasonable terms and conditions to permit the applicant utility to operate the power project when the applicant utility is the only wholesale power customer to be served directly by the power project**, or is a corporation organized under AS 42.50.010 and one or more public utility members of the corporation is a wholesale power customer to be served directly by the power project,** unless the authority determines **the** [A] utility **or corporation** making application for a contract or lease to operate a power project is not a qualified utility or is not capable of operating that power project efficiently and in a manner that is consistent with national standards for the industry and with agreements with bondholders."

CS FOR SENATE BILL NO. 143(ENE)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE SENATE SPECIAL COMMITTEE ON ENERGY

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act relating to energy and transmission corporations; authorizing the organization of the Greater Railbelt Energy and Transmission Corporation; relating to exemption of energy and transmission corporations from regulation by the Regulatory Commission of Alaska and municipalities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 29.35.070(a) is amended to read:

(a) The assembly acting for the area outside all cities in the borough and the council acting for the area in a city may regulate, fix, establish, and change the rates and charges imposed for a utility service provided to the municipality or its inhabitants by a utility that is not subject to regulation under AS 42.05 unless that utility is exempted from regulation under AS 42.05.711(a), (d) - (k), (o), [OR] (p), **or (q),** or is exempted under regulations adopted under AS 42.05.810 from complying with all or part of AS 42.05.141 - 42.05.721.

*** Sec. 2.** AS 42.05.431(c) is amended to read:

(c) Notwithstanding (b) of this section,

(1) a wholesale agreement for the sale of power from a project licensed by the Federal Energy Regulatory Commission on or before January 1, 1987, and related contracts for the wheeling, storage, regeneration, or wholesale repurchase of power purchased under the agreement, entered into between the Alaska Energy Authority and one or more other public utilities or among the utilities after October 31, 1987, and before January 1, 1988, and amendments to the wholesale agreement or related contract, [AND] the wholesale agreement or related contract assigned by the Alaska Energy Authority to a joint action agency formed under AS 42.45.310 that purchases the project from the Alaska Energy Authority, **and a wholesale agreement for the sale of power from a project owned or operated by a corporation organized under AS 42.50, and related contracts for the wheeling, storage, regeneration, or wholesale repurchase of power purchased under the agreement, entered into between the corporation and one or more public utilities,** are not subject to review or approval by the commission until all long-term debt incurred for the project is retired, or, for a wholesale agreement or related contract assigned to a joint action agency formed under AS 42.45.310, until all long-term debt incurred to pay the purchase price to the Alaska Energy Authority is retired; and

(2) a wholesale agreement or related contract described in (1) of this subsection may contain a covenant for the public utility to establish, charge, and collect rates sufficient to meet its obligations under the contract; the rate covenant is valid and enforceable.

*** Sec. 3.** AS 42.05.431 is amended by adding a new subsection to read:

(i) When setting or reviewing rates for an energy and transmission corporation organized under AS 42.50.010, the commission may not reject an amount necessary for the corporation to fund a cost reasonably anticipated to become a just and reasonable cost of producing and transmitting electric power, energy, or other services, including costs

(1) for the repair, replacement, and retirement of a project owned or operated by the corporation; and

(2) incurred to permit the corporation to build reasonably necessary

equity for future operations.

* **Sec. 4.** AS 42.05.711(*l*) is amended to read:

(*l*) A person, utility, joint action agency established under AS 42.45.310, or cooperative that is exempt from regulation under (a), (d) - (k), [OR] (o) **or (q),** of this section is not subject to regulation by a municipality under AS 29.35.060 and 29.35.070.

* **Sec. 5.** AS 42.05.711 is amended by adding a new subsection to read:

(q) A corporation organized under AS 42.50 is exempt from regulation under this chapter, including the requirement to obtain a certificate of public convenience and necessity under AS 42.05.221.

* **Sec. 6.** AS 42 is amended by adding a new chapter to read:

Chapter 50. Energy and Transmission Corporations.

Sec. 42.50.010. Energy and transmission corporations. (a) Four or more municipal or cooperative public utilities with electrically interconnected service territories may, if first authorized by law, organize an energy and transmission corporation

(1) to acquire, operate, or maintain power and transmission projects acquired or constructed as part of the former energy program for the state and owned by the Alaska Energy Authority under AS 44.83.396; and

(2) to plan for, recommend, coordinate, and otherwise address power generation and transmission for the electrically interconnected service territories as provided in this chapter.

(b) The purposes of the corporation are

(1) to ensure adequate, reliable, safe, and stable wholesale electric power to public utility members without undue discrimination, at the lowest reasonable long-term cost; and

(2) to be the primary recipient of state financial assistance provided to support the acquisition, construction, or development of generation and transmission assets and ancillary services and assets for the public utility members of the corporation.

(c) In furtherance of the purposes of the corporation, the corporation may plan

for, recommend, coordinate, and otherwise address

(1) the adequacy of fuel supply, fuel storage, and fuel transportation resources required to meet the short-term and long-term electric power needs of the service territory of the corporation;

(2) the adequacy of generation and transmission assets to prudently meet local and regional short-term and long-term electric power and reliability needs of the areas electrically interconnected to the service territory of the corporation:

(3) generation reserves to meet planning and operational requirements;

(4) base load generation in all parts of the service territory of the corporation;

(5) generation and transmission power dispatch resources, including the ability to connect dispatch resources of the public utility members;

(6) diversity in generation resources;

(7) renewable-energy-based generation resources;

(8) integration of renewable energy generation resources.

(d) The corporation shall operate on a nonprofit basis, offering its services based on uniform rates for like services under standard tariffs or contractual arrangements.

(e) The corporation is exempt from the provisions of AS 10.15 (Alaska Cooperative Corporation Act), AS 10.20 (Alaska Nonprofit Corporation Act), and, except as provided under AS 42.50.060 and 42.50.190, AS 10.25 (Electric and Telephone Cooperative Act).

(f) The corporation has a separate and independent existence from the state. The corporation may not be considered the state, a state agency, an administrative unit of the executive branch of state government, a governmental unit of the state, a public corporation of the state, a municipal corporation, or a political subdivision of the state.

(g) The exercise by the corporation of the powers granted by this chapter is considered to be for a public purpose.

(h) The corporation is authorized to interconnect with and provide services to electric utilities other than public utility members on terms and conditions approved by the corporation's board of directors. The corporation may decline to interconnect

with an electric utility or any other entity that fails to meet standards for interconnection adopted by the corporation.

Sec. 42.50.020. Board of directors. (a) The corporation shall be governed by a board of directors consisting of

(1) two directors from each public utility members, one of whom shall be the chief executive officer of the public utility member or the chief executive officer's designee and one of whom shall be an individual appointed by the governing body of the public utility member; and

(2) one public director appointed by the governor from a list of at least three persons submitted by the directors appointed under (a)(1) of this section; if the governor rejects an entire list, the directors appointed under (a)(1) of this section shall submit a new list that includes at least three persons who were not included on a previously rejected list.

(b) The term of a director representing a public utility member under (a)(1) of this section expires when the public utility member notifies the board that the individual has been removed as a representative of the utility on the board.

(c) The term of the director appointed by the governor under (a)(2) of this section is four years. If a vacancy occurs, the governor shall appoint a director under (a)(2) of this section to serve the remaining term of the director. The governor may reappoint the director described in this subsection.

(d) The board may only remove a director for cause on two-thirds majority vote of the full board. The bylaws must provide a mechanism for a public utility member to appoint an alternative member if the chief executive officer of the utility is removed from the board.

(e) A majority of the directors on the board constitutes a quorum for the transaction of business and the exercise of the powers and duties of the board.

(f) The directors shall annually elect from among the directors on the board a chair and vice-chair and other board officers as may be provided in the bylaws.

(g) Directors may not receive a salary, but the corporation may pay directors a meeting fee, per diem, and travel expenses.

Sec. 42.50.030. Board meetings; exceptions. (a) A meeting of the board may

be attended by members of the corporation, ratepayers, and the public. The bylaws must provide for participation of members and ratepayers at board meetings. Except when a voice vote is authorized, a vote shall be conducted in a manner that the members and ratepayers may know the vote of each director entitled to vote. The board may conduct a meeting by teleconference or similar communications equipment if the board gives reasonable notice of the meeting and if the members, ratepayers, and public are able to attend the meeting and hear the meeting. This subsection applies only to a meeting at which a quorum is present.

(b) The board may hold an executive session to discuss matters that come within the exceptions contained in (c) of this section on a majority vote of the board. Before holding an executive session, the board must first be convened as a regular or special meeting. A subject that is not mentioned in the motion calling for the executive session may not be considered at the executive session unless the subject is auxiliary to the main question. Formal action may not be taken during an executive session.

(c) The following matters may be discussed in an executive session:

(1) matters the knowledge of which would clearly have an adverse effect on the finances of the corporation;

(2) matters that tend to prejudice the reputation and character of a person; however, the person may request a public discussion;

(3) matters discussed with an attorney for the corporation, the knowledge of which could have an adverse effect on the legal position of the corporation;

(4) matters that are required by law to be confidential;

(5) matters pertaining to a plan, a program, or procedures for establishing, maintaining, or restoring security, or to a detailed description or evaluation of systems, facilities, or infrastructure of the corporation, but only to the extent that the discussion of the matter in open session

(A) could reasonably be expected to interfere with the implementation or enforcement of the security plan, program, or procedures;

(B) would disclose confidential guidelines for investigations or enforcement and the disclosure could reasonably be expected to risk

circumvention of the law; or

(C) could reasonably be expected to endanger the life or physical safety of an individual or to present a real and substantial risk to the public health and welfare.

(d) The board shall give notice for all regular or special meetings of the board as provided in the bylaws.

Sec. 42.50.040. Officers and employees. (a) The board shall appoint a chief executive officer. The chief executive officer may not be a director and serves at the pleasure of the board.

(b) The board shall appoint officers as required by the bylaws and as the board determines to be necessary for the effective operation of the corporation.

(c) The chief executive officer may hire employees of the corporation as necessary for the efficient performance of the functions of the corporation. The board shall approve the range of compensation for employees. Employees of the corporation are not employees of the state and are not considered to be employees of a public organization for the purposes of AS 39.

(d) An employee of the corporation may not be a director.

Sec. 42.50.050. Membership. (a) The members of the corporation are the public utility members and other entities that purchase services from the corporation that the board of directors approves to become members. The corporation may provide member benefits solely to the members of the corporation.

(b) An entity that meets the qualifications of a public utility member under this subsection shall become a public utility member of the corporation if approved by a two-thirds majority vote of the board. A public utility member

(1) shall be a municipal or cooperative electric utility with a designated electric distribution service territory, holding a certificate of public convenience and necessity issued by the Regulatory Commission of Alaska;

(2) shall be electrically interconnected to the service territory of the corporation; and

(3) may not be an affiliated electric utility.

(c) An affiliated electric utility may become a member of the corporation.

(d) A member, including a public utility member, may withdraw from the corporation if the member

(1) pays or provides for the payment of all liabilities owed to the corporation;

(2) demonstrates that the withdrawal will not have adverse tax consequences to the corporation; and

(3) gives not less than six months' notice to the corporation.

(e) Withdrawal from the corporation does not affect a right or obligation in an agreement between a withdrawing public utility member and the corporation. The corporation shall hold equity contributed by a withdrawing public utility member to the corporation for the account of the withdrawing public utility member and refunded only in accordance with a long-range financial management plan adopted by the board.

(f) A public utility member may withdraw from being a public utility member of the corporation but remain a member of the corporation if the public utility member demonstrates that the withdrawal will not have adverse tax consequences to the corporation and if the public utility member gives not less than six months' notice to the corporation.

(g) When a public utility member gives a notice of withdrawal, the public utility member loses the right to have a director on the board.

Sec. 42.50.060. Articles of incorporation; change in location of principal office. (a) The articles of incorporation, and amended articles of incorporation, of a corporation must recite that they are executed under this chapter and must state

(1) the name of the corporation;

(2) the address of the principal office of the corporation;

(3) the names and the addresses of the incorporators;

(4) the names and addresses of the directors.

(b) The articles may contain any provisions consistent with this chapter that are considered necessary or advisable for the conduct of the business of the corporation. The articles shall be signed and acknowledged on behalf of each initial public utility member of the corporation. It is not necessary to recite in the articles of

incorporation the purpose for which the corporation is organized or the corporate powers of the corporation.

(c) Articles of incorporation, and amended articles of incorporation, shall be submitted to the commissioner for filing. Upon a finding that the articles conform to the requirements of this chapter, and upon payment of the fees provided in AS 10.25.530, the commissioner shall file the articles in the records of the commissioner's office.

(d) A corporation may, upon authorization of its board of directors or its members, change the location of its principal office by filing a certificate reciting the change of principal office, executed and acknowledged by its presiding officer under its seal, attested by the officer designated by the board, in the office of the commissioner.

Sec. 42.50.070. Bylaws. (a) The board shall adopt bylaws for the corporation for the governance and management of the affairs of the corporation. The board may alter, amend, or repeal the bylaws.

(b) The bylaws shall be consistent with this chapter and other laws that apply to the corporation.

(c) The bylaws must set out conditions that require the corporation to offer public utility members an opportunity to serve an industrial customer before the corporation may serve an industrial customer.

(d) The bylaws must include provisions governing financing arrangements under AS 42.50.150 that include obligations exceeding 12 months.

Sec. 42.50.080. Indemnification of directors, officers, and employees. The corporation shall indemnify directors, officers, and employees in a manner consistent with AS 10.06.490.

Sec. 42.50.090. General powers of the corporation. (a) The corporation may

(1) sue and be sued in its name;

(2) have perpetual existence;

(3) adopt and alter a corporate seal;

(4) participate with federal, state, and local governmental entities in formulating and implementing policies relating to electric power, and in planning for

the development, construction, and operation of adequate electric power generation and transmission facilities for the service territory of the corporation;

(5) accept, by grant, sale, contract, operating agreement, or any other arrangement, assets from members of the corporation or other public or private entities, persons, or governments;

(6) engage in a program to support the efforts of the public utility members and affiliated electric utilities to enhance the development, efficiency, reliability, safety, and price stability of electric power in the service territory of the corporation;

(7) generate, manufacture, purchase, acquire, accumulate, transmit, meter, and dispatch wholesale electric power and ancillary services, and sell at wholesale, supply, and dispose of electric power to public utility members, members, affiliated electric utilities, and other entities;

(8) generate, manufacture, purchase, acquire, accumulate, transmit, meter, and dispatch retail electric power and ancillary services to an industrial customer, and sell at retail, supply, and dispose of electric power to an industrial customer

(A) not located in the certificated service territory of a public utility providing electric service, under conditions established in the bylaws; or

(B) located in the certificated service territory of a public utility providing electric service if the public utility gives its written consent before the corporation enters an agreement to sell power to the industrial customer;

(9) procure fuel supplies, fuel storage capacity, and fuel transmission resources, including fuel in the ground or in other natural or man-made storage and deposits;

(10) own and operate facilities to find and extract fuel deposits;

(11) construct, buy, lease, or otherwise acquire, equip, maintain, and operate, and sell, assign, convey, lease, mortgage, pledge, or otherwise dispose of or encumber land, buildings, structures, electric power lines or systems, dams, plants and equipment, and any other real or personal property, tangible or intangible, that is necessary, convenient, or appropriate to accomplish the corporation's purposes;

(12) buy, lease, use, or acquire franchises, rights, privileges, licenses, permits, and easements;

(13) sell, assign, convey, mortgage, pledge, exercise, or dispose of or encumber franchises, rights or privileges, licenses, permits, and easements;

(14) borrow money, contract indebtedness, issue evidences of indebtedness, and secure payment of indebtedness by mortgage, pledge, deed of trust, or other encumbrance on its real or personal property, assets, franchises, or revenue;

(15) construct, maintain, and operate electric transmission lines, along, upon, under, and across publicly owned land and public thoroughfares, including, without limitation, all roads, highways, streets, alleys, bridges, and causeways;

(16) exercise the power of eminent domain as a public utility under AS 42.05.631, except the corporation may not exercise the power of eminent domain to take an electric power generation or transmission asset from a public utility;

(17) acquire by purchase, lease, bequest, devise, gift, exchange, the satisfaction of debts, the foreclosure of mortgages, or otherwise, personal property, rights, rights-of-way, franchises, easements, and other interests in land, and acquire by appropriation water rights that are located in the state, taking title to the property in the name of the corporation;

(18) hold, maintain, use, operate, improve, lease, exchange, donate, convey, alienate, encumber, or otherwise grant a security interest in, or authorize use or dispose of, land or personal property, subject to other provisions of this chapter;

(19) contract with and accept transfers, gifts, grants, or loans of funds or property from the United States or from the state or its political subdivisions, subject to other provisions of federal or state law or municipal ordinances;

(20) undertake and provide for the management, operation, maintenance, use, repair, renovation, and control of all of the property of the corporation;

(21) apply to the state, the United States, foreign countries, or other proper agencies for the permits, licenses, rights-of-way, or approvals necessary to construct, maintain, and operate electric power and related services, and obtain, hold, and reuse the licenses and permits in the same manner as other similar operators;

(22) enter into agreements with the state or a state agency or other instrumentality of the state;

(23) make all contracts necessary, convenient, or appropriate for the full exercise of its powers;

(24) conduct its business and exercise its powers inside or outside the state;

(25) develop operating standards applicable to all public utilities electrically interconnected to the service territory of the corporation;

(26) do or perform any other act and thing and have and exercise any other power that may be necessary, convenient, or appropriate to accomplish the corporation's purposes; and

(27) create subsidiary corporations.

(b) The corporation may not require its members to enter into power purchase agreements that restrict the ability of members to enter into bilateral power purchase or wheeling agreements among themselves, except as a condition for participation in specific new generation or transmission projects when the condition is reasonably necessary in order for the corporation to finance the project.

Sec. 42.50.100. Public utility powers and regulation. (a) The corporation shall have all of the powers and duties of a regulated electric public utility under AS 42.05, except that the corporation

(1) may not make retail sales of electric power except to an industrial customer under AS 42.50.090(a)(8);

(2) is not required to obtain a certificate under AS 42.05.221;

(3) is exempt from payment of a regulatory cost charge under AS 42.05.254; and

(4) is exempt from rate regulation under AS 42.05.431.

(b) The corporation

(1) shall comply with the principles and requirements contained in AS 42.05.441 - 42.05.491 as if the corporation were a regulated public utility; and

(2) is subject to the jurisdiction of the Regulatory Commission of Alaska under AS 42.05.311 and 42.05.321 regarding joint use and interconnection of

facilities.

Sec. 42.50.110. Integrated resource plan. (a) The corporation shall adopt an integrated resource plan for use with a long-range fuel supply plan under AS 42.50.120 to determine the need for and selection of electric generation and transmission projects to ensure delivery of safe and reliable electric power to public utility members at the lowest reasonable long-term cost. The corporation shall evaluate and consider recommendations made in an applicable state energy plan or state integrated resource plan before in adopting and updating the plan. If the corporation's integrated resource plan deviates from other state energy or resource plans, the corporation's plan must include a report explaining the reasons for the deviation.

(b) The board shall establish a schedule for review of the integrated resource plan and update the plan at least once every five years.

(c) The corporation shall make the integrated resource plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.120. Long-range fuel supply plan. (a) The corporation shall adopt a long-range fuel supply plan to determine the need for and selection of fuel supplies to be used by electric generation projects to ensure delivery of safe, reliable, and sustainable electric power to public utility members at the lowest reasonable long-term cost. The corporation shall evaluate recommendations made in any applicable state energy plan or state integrated resource plan before adopting and updating the long-range fuel supply plan. If the corporation deviates from recommendations in a state plan, the adopted or updated long-range fuel supply plan shall include a report explaining the reasons for the deviation.

(b) The board shall establish a schedule for review of the long-range fuel supply plan and update the plan at least once every five years.

(c) The corporation shall make the long-range fuel supply plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.130. Long-range capital improvement plan. (a) The corporation shall adopt a long-range capital improvement plan. The plan must describe how the corporation intends to accomplish the corporation's purposes and identify anticipated

capital improvements planned during each of the following 10 years. The plan must be based on the principle of providing safe, reliable, and sustainable electric power to public utility members at the lowest reasonable long-term cost.

(b) The board shall establish a schedule for review of the long-range capital improvement plan and update the plan at least once every five years.

(c) The corporation shall make the long-range capital improvement plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.140. Long-range financial management plan. (a) The corporation shall adopt a long-range financial management plan. The plan must describe the manner in which the corporation intends to accomplish the corporation's purposes and the corporation's plans for acquisition, accumulation, and issuance of equity and debt for the next 10 years. The plan shall be based on the principle of providing safe, reliable, and sustainable electric power to public utility members at the lowest reasonable long-term cost.

(b) The board shall establish a schedule for review and update the long-range financial management plan at least once every five years.

(c) The corporation shall make the long-range financial management plan available on the Internet to members, the governor, the legislature, and ratepayers.

Sec. 42.50.150. Financing arrangements. (a) The corporation may

(1) use any financing arrangements permitted by law in achieving the purposes and objectives of the corporation; and

(2) develop financing arrangements for individual projects.

(b) The corporation may obtain assistance from state agencies with financing projects through direct grants, debt guarantees, granting of a moral obligation of the state to ensure payment of debt instruments, purchase of issued debt instruments, or other financial methods appropriate to the projects or tasks.

Sec. 42.50.160. Administrative costs and other services. (a) The corporation may annually assess and collect a fee for just and reasonable administrative expenses from members of the corporation.

(b) The corporation may enter into contracts with members of the corporation for services rendered by the members to the corporation and for services provided to

the members.

Sec. 42.50.170. Fuel supplies. (a) The corporation may acquire long-term fuel supplies as required to ensure electric power generation facilities can operate without fuel-related interruption, including direct ownership of fuel supply production, transportation, and storage facilities as required to fulfill the purposes of the corporation under AS 42.50.010(b).

(b) The corporation is authorized to bid on interests in state land, including bids for oil and gas leases, and may not be required to post a deposit under AS 38.05.860.

(c) The corporation may acquire long-term fuel supplies under this section in conjunction with other entities that are acquiring long-term fuel supplies for any lawful purpose in any lawful manner.

Sec. 42.50.180. Rates for electric power, energy, and services. (a) The corporation shall establish schedules of rates and charges for electric power, energy, and other services provided by the corporation, which become effective on adoption by the board of directors of the corporation using the procedures set out in (d) of this section.

(b) The rates and charges included in a schedule

(1) must comply with AS 42.50.100(b);

(2) may be established for individual projects that are owned or operated by the corporation; however, the corporation may not grant an unreasonable preference or advantage to a customer or subject a customer to an unreasonable prejudice or disadvantage;

(3) may not establish or maintain an unreasonable difference between localities or classes of service;

(4) must be based on the principle of the recovery of just and reasonable costs of producing and transmitting electric power, energy, or other services, including

(A) operation and maintenance costs;

(B) administrative expenses not assessed under AS 42.50.160;

(C) the amortization of the capital investment over a reasonable

period of years;

(D) margins required by financial covenants contained in mortgages or other debt instruments of the corporation;

(5) must consider, and not duplicate recovery for, administrative expenses assessed under AS 42.50.160;

(6) may include amounts necessary to fund costs reasonably anticipated to become just and reasonable costs of producing and transmitting electric power, energy, or other services, including costs

(A) for the repair, replacement, and retirement of a project owned or operated by the corporation;

(B) to permit the corporation to build reasonably necessary equity for future operations;

(7) may provide for uniform rates and charges in order to extend the benefits of an integrated generation and transmission system and encourage the equitable distribution of the electric power, energy, and other services developed by the corporation; in the alternative, the corporation may adopt rates and charges for a service provided by a specific project owned or operated by the corporation that reflect differences in the cost of providing that service to a specific customer or group of customers.

(c) The corporation shall determine, after the conclusion of each fiscal year, the actual annual project costs for a project owned or operated by the corporation for the fiscal year, including

(1) the amounts used to fund anticipated costs under (b)(6) of this section;

(2) the annual payment obligation of each purchaser of the electric power, energy, or services for the fiscal year; and

(3) the amount of payment or refund required for each purchaser to ensure that the total amount of payments received from each purchaser for the fiscal year is equal to that purchaser's actual annual payment obligation for that asset for that fiscal year; a payment or refund obligation must be paid or refunded as soon as practicable using a rate adjustment.

(d) The corporation must use the following procedures to establish a schedule for rates and charges:

(1) notice of a proposed schedule of rates and charges must include a statement of the justifications and reasons supporting the new or amended schedule;

(2) the notice must be published at a time and in a manner that will reasonably inform members and ratepayers of the proposed rates and charges and must state the deadline for timely filing of comments to the schedule;

(3) the deadline for submitting comments to a proposed schedule of rates and charges may not be less than 30 days after the date of the notice;

(4) the corporation shall conduct one or more hearings under procedural rules adopted by the board; the procedural rules must provide for the development of a record that includes all timely submitted comments related to the proposed rates and charges; the procedural rules must provide for the examination of evidence regarding just and reasonable costs at the hearing;

(5) the corporation may republish notice of proposed rates and charges in the schedules if the corporation proposes significantly different new or amended rates and charges following consideration of timely filed or submitted comments;

(6) the corporation shall make a final written decision establishing or amending the schedule of rates and charges based on the record; the decision must include a full and complete justification supporting the final rates and charges;

(7) the decision of the corporation becomes effective 90 days after the corporation issues notice of its final written decision;

(8) a member may appeal a final rate decision of the board under the dispute resolution process in AS 42.50.240; during the appeal process, the corporation may implement the new or amended rates and charges in the schedules on an interim and refundable basis if the board determines that the interests of the ratepayers can be reasonably protected;

(9) the corporation may establish other procedural rules consistent with this subsection to protect the interests of ratepayers.

Sec. 42.50.190. Tax exemption. The real and personal property of the corporation and the assets, income, and receipts of the corporation are exempt from all

taxes and assessments of the state or a political subdivision of the state, except that electricity sold at retail by the corporation is subject to the electric cooperative tax under AS 10.25.540 – 10.25.570.

Sec. 42.50.200. Reports and publications. The board shall publish an annual report on the Internet. The report must include financial statements audited by independent auditors, a discussion of the corporation's circumstances and operations during the period covered by the report, and any other information requested by the legislature. The board may publish other information or reports it considers appropriate.

Sec. 42.50.210. Right to examine books and records. (a) Except as provided in (c) of this section, members and ratepayers may, at a reasonable time and for any proper purpose, examine and make copies of the books and records of the corporation at the principal office of the corporation.

(b) The corporation may charge a requestor an amount equal to the actual cost of finding and duplicating documents requested under this section.

(c) The corporation may withhold books and records concerning the following subjects:

(1) records required to be kept confidential by law;

(2) personnel records, to the extent that the records are not required to be publicly disclosed by a state or federal agency;

(3) records that are proprietary, privileged, or a trade secret;

(4) records or information pertaining to a plan, a program, or procedures for establishing, maintaining, or restoring security, or to a detailed description or evaluation of systems, facilities, or infrastructure of the corporation, but only to the extent that the production of the records or information

(A) could reasonably be expected to interfere with the implementation or enforcement of the security plan, program, or procedures;

(B) would disclose confidential guidelines for investigations or enforcement and the disclosure could reasonably be expected to risk circumvention of the law; or

(C) could reasonably be expected to endanger the life or

physical safety of an individual or to present a real and substantial risk to the public health and welfare; or

(5) specific matters that were prepared for or during an executive session of the board, and not subsequently made public by the corporation.

Sec. 42.50.220. Audits and examinations of corporation. The corporation shall be audited annually by an independent auditor. The board shall engage the auditor, who shall be responsible to the board. The corporation shall submit copies of each report of the auditor to the legislature and governor within 30 days after receipt of the report by the corporation.

Sec. 42.50.230. Dissolution, merger, consolidation, and disposition of assets. Without prior legislative approval, the corporation may not

(1) dissolve;

(2) merge or consolidate; or

(3) dispose of corporate assets other than in the ordinary course of business.

Sec. 42.50.240. Procedures for dispute resolution. The corporation shall establish a dispute resolution process in its bylaws. The dispute resolution process must include, at a minimum,

(1) a requirement that disputes be initially brought before the board for resolution;

(2) a requirement that the parties shall attempt to resolve a dispute that is not resolved by the board through mediation;

(3) a requirement that the corporation and the disputing party shall attempt to resolve a dispute that is not resolved by the board and is not resolved through mediation through binding arbitration if allowed by the bylaws of the corporation; and

(4) if not resolved by the board, through mediation, or through binding arbitration, if allowed, a provision for resolution of the dispute through litigation in a court of competent jurisdiction.

Sec. 42.50.900. Definitions. In this chapter, unless the context otherwise requires,

(1) "affiliated electric utility" means an electric utility that is wholly owned by one or more public utility members and by or through which one or more public utility members obtain electric power or electric generation or transmission services;

(2) "board" means the board of directors of the corporation;

(3) "commissioner" means the commissioner of commerce, community, and economic development;

(4) "cooperative" means an entity organized under AS 10.25;

(5) "corporation" means an energy and transmission corporation organized under this chapter;

(6) "electrically interconnected" means interconnected at a minimum transmission level of 69 kilovolts;

(7) "electric power" means electric energy and capacity;

(8) "electric utility" means a public utility, as defined in AS 42.05.990 that furnishes electrical generation, transmission, or distribution service;

(9) "member" means a member of the corporation under AS 42.50.050, including public utility members;

(10) "public utility member" means a municipal or cooperative electric utility that has an electric distribution service territory, that holds a certificate of public convenience and necessity issued by the Regulatory Commission of Alaska, that is one of the electric utilities that organizes an energy and transmission corporation or that becomes a public utility member of the corporation under AS 42.50.050(b), and that does not withdraw from being a member or public utility member under AS 42.50.050(d) or (e);

(11) "ratepayers" means the ratepayers of the public utility members of the corporation;

(12) "service territory of the corporation" means the combined service territories identified in the certificates of public convenience and necessity issued by the Regulatory Commission of Alaska for each of the public utility members of the corporation.

*** Sec. 7.** AS 42.05.431(i), enacted by sec. 3 of this Act, is repealed.

*** Sec. 8.** The uncodified law of the State of Alaska is amended by adding a new section to read:

AUTHORIZATION TO FORM GREATER RAILBELT ENERGY AND TRANSMISSION CORPORATION. (a) Any combination of four or more of the following public utilities may organize the Greater Railbelt Energy and Transmission Corporation, as an energy and transmission corporation under AS 42.50:

(1) Homer Electric Association, Inc.;

(2) the City of Seward, Electric Utility Department;

(3) Chugach Electric Association, Inc.;

(4) the Municipality of Anchorage d/b/a Municipal Light and Power;

(5) Matanuska Electric Association, Inc.; and

(6) Golden Valley Electric Association, Inc.

(b) This section is contingent on the obligation that the corporation shall conduct, under the direction of the Legislative Budget and Audit Committee, a management audit of the corporation to be commenced on June 30, 2013, 2016, and 2020. The management audit shall be conducted under methodologies and principles set out in volumes I (1988 ed.), II (1992 ed.) and III (1995 ed.) of the Management Audit Manual published by the National Association of Regulatory Utility Commissioners, Washington, D.C. The results of the management audit shall be transmitted to the Legislative Budget and Audit Committee 180 days after the commencement of the audit. This obligation to conduct a management audit shall be in addition to any audit obligation that may be required under an appropriation to the corporation.

(c) This section authorizes the organization of the Greater Railbelt Energy and Transmission Corporation, as required under AS 42.50.010(a), enacted by sec. 6 of this Act.

*** Sec. 9.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONDITIONAL EFFECT. (a) Sections 3, 6, and 8 of this Act take effect only if four or more of the listed public utilities deliver to the Alaska Energy Authority before 4:30 p.m. on July 30, 2010, a letter of intent in the form and substance acceptable to the Alaska Energy Authority, under which the listed public utility agrees to become a public utility member of the Greater Railbelt Energy and Transmission Corporation. Each listed public utility that

meets the conditions described in this subsection shall, effective August 16, 2010, be a public utility member of the Greater Railbelt Energy and Transmission Corporation. The listed public utilities are as follows:

(1) Homer Electric Association, Inc.;

(2) the City of Seward, Electric Utility Department;

(3) Chugach Electric Association, Inc.;

(4) the Municipality of Anchorage d/b/a Municipal Light and Power;

(5) Matanuska Electric Association, Inc.;

(6) Golden Valley Electric Association, Inc.

(b) The executive director of the Alaska Energy Authority shall notify the lieutenant governor and the revisor of statutes when any of the conditions described in (a) of this section are met.

(c) In this section, unless the context otherwise requires,

(1) "Alaska Energy Authority" means the authority created in AS 44.83.020;

(2) "Greater Railbelt Energy and Transmission Corporation" means the corporation organized as an energy and transmission corporation under AS 42.50, enacted by sec. 6 of this Act, as authorized by sec. 8 of this Act;

(3) "public utility member" has the meaning given in AS 42.50.900, enacted by sec. 6 of this Act.

*** Sec. 10.** If secs. 3, 6, and 8 of this Act take effect under sec. 9 of this Act, they take effect August 16, 2010.

*** Sec. 11.** Sections 1, 2, 4, 5, and 7 of this Act take effect August 16, 2015.

*** Sec. 12.** Except as provided in sections 10 and 11 of this Act, this Act takes effect immediately under AS 01.10.070(c).

MEMORANDUM March 18, 2010

SUBJECT: Greater Railbelt Energy and Transmission Corporation; drafting issues (CSSB 143(ENE), Work Order No. 26-GS1041\E)

TO: Senator Lesil McGuire
Chair of the Senate Special Committee on Energy
Attn: Mike Pawlowski

FROM: Dennis C. Bailey
Legislative Counsel

This memorandum accompanies the draft CS requested. Please review the new draft carefully to ensure that the editing has not changed your intent. Please note the following issues that arose during drafting.

Give attention to the effective dates particularly in sec. 11 of the bill. The sections cited are not subject to a contingency, only a delayed effective date, so we've eliminated contingency language. We have also consolidated all of the effective dates in secs. 10 - 12. In general, the effective dates need to be clarified. Using repeal language may be an additional option to consider.

AS 42.05.431(h)(1) and (2), bill section 3, use "cost" instead of "funding" for consistency with the leading paragraph.

AS 42.05.711(q), added by sec. 5, states that a corporation organized under AS 42.50 is exempt from regulation under AS 42.05. This does not seem consistent with AS 42.05.431(i), added by sec. 3 or AS 42.50.100(b)(2). AS 44.83.396, referred to in sec. 42.50.010, requires that projects acquired or constructed as part of the former energy program for Alaska are owned and administered by the Alaska Energy Authority. Should this section be cross referenced, or an exception placed in AS 44.83.396?

Sec. 42.50.010(c) states that the corporation shall operate on a not for profit basis, but sec. 42.50.010(d) disclaims the application of AS 10.20 (Alaska Nonprofit Corporations Act). Do you also intend to disclaim application of AS 10.06? If not, it may apply. In a similar vein, I expect that you are aware that "members" is not normally a term used in the context of a corporation.

In sec. 42.50.050(b), can the directors decline to approve a public utility member for any reason?

In sec. 42.50.050(c), is a vote required to allow an affiliated utility to become a member of the corporation?

Sec. 42.50.050(f) is confusing. Does it mean that a public utility member may withdraw but still be a member?

Under sec. 42.50.060(d), the members can authorize a change to the location of the principal office. Is this the only place where the membership acts in the place of the board? I suggest removing the reference to the member action in this subsection.

In sec. 42.50.070(b), the last sentence refers to other laws that apply. Does this mean other laws that apply to corporate bylaws? If other laws apply it is preferable to identify them by reference.

Sec. 42.50.180(b)(4)(B) seems to duplicate sec. 42.50.180(5). Can one or the other be removed?

Sec. 42.50.180(b)(7) is redundant and should be deleted.

In sec. 42.50.190, should the tax apply to electricity sold at retail by members, as well as the corporation?

Sec. 42.50.200 requires the board to publish its report, including audited financial statements on the Internet. Sec. 42.50.220 requires that the audit report be submitted to the legislature and governor within 30 days after receipt of the report by the corporation. While the provisions may not technically conflict, is a cross reference or clarification advisable?

Sec. 42.50.240(3) presents an ambiguity. Paragraph (3) states a mandatory requirement for dispute resolution, but permissively allows the bylaws to allow or not allow binding arbitration. Also, under sec. 42.50.240(4), if binding arbitration is required, litigation may be prohibited. I am not sure how to resolve these issues without further direction.

AS 42.50 may be subject to challenge as special legislation in violation of art. II, sec. 19 of the state constitution. Whether a measure amounts to local or special legislation, barred by the constitution is to be evaluated according to the test applied to nonsuspect classifications in equal protection cases. *State v. Lewis*, 559 P.2d 630, 643 (Alaska 1977) (upholding a three-way exchange of land, and the minerals it contained, among the State of Alaska, the United States, and a regional Native corporation); *Boucher v. Engstrom*, 528 P.2d 456, 463 (Alaska 1974) ("The classification must bear a reasonable and proper relationship to the purposes of the act and the problem sought to be remedied."). Thus, the court has said, when the legislature has singled out an area or group, it will examine the legislative goals and the means used to advance them [to] determine whether the legislation bears a "fair and substantial relationship" to legitimate purposes. If this

standard is satisfied, the bill will not be invalid because of incidental local or private advantages. Legislation need not operate evenly in all parts of the state to avoid being classified as local or special. *Lewis*, 559 P.2d at 643 (footnotes omitted).

ANALYSIS: *(Attach a separate page if necessary)*

This bill creates the framework for a Greater Railbelt Energy and Transmission Corportation. The fiscal note assumes Alaska Energy Authority (AEA) project management staff time and AEA admin support to assist in the formation of the Greater Railbelt Energy and Transmission Corporation (GRETC), including $50,000 contractual costs for Department of Law assistance to AEA. AEA is to provide coordination of business development by providing project manager technical assistance, legal assistance and meeting space and coordination of meetings and document development. ($155.0 contractual costs)

Prepared by: Sara Fisher-Goad, Deputy Director-Operations

Approved by: Emil Notti, Commissioner
Date 3/24/2010
Commerce, Community and Economic Development

(Revised 11/6/2009 OMB)

3081

ANALYSIS CONTINUATION

$2,395 is made available for a 0% interest loan to GRETC develop the business structure of the new entity, contingent upon the delivery to AEA a letter of intent, in form and substance acceptable to AEA, from four or more of the railbelt utilities an agreement to become a member of GRETC.

The sum of $2,395,000 is appropriated from the Alaska railbelt energy fund (AS 37.05.520) to the Alaska Energy Authority, as a debt obligation recoverable from GRETC as a cost of the formation the GRETC business structure.

The debt obligation is repayable to the railbelt energy fund(AS 37.05.520), with interest at 0 percent, amortized over a term not to exceed 10 years, recoverable by the Alaska Energy Authority. Further terms and conditions of the debt obligation will be determined by AEA.

The estimated costs of the business formation are as follows:

Program management	173.0
Finalize business structure	608.0
Secure new facility	116.0
Develop Business P&P's	142.0
Complete operations transition planning	46.0
HR recruiting and planning	114.0
Develop IT infrastructure	203.0
Develop Business Systems	404.0
Training	77.0
Transition and cutover execution	58.0
IT software and hardware/office equipment	454.0
Total	**2395.0**

SB 143
Sectional Analysis

Section 1. (Page 1, line 10 – page 12, line 20) Section 1 creates and empowers the Greater Railbelt Energy and Transmission Corporation ("corporation") within AS 42.50. The corporation has the primary public purpose, and corporate powers, to provide Greater Railbelt electric utilities with adequate, reliable, safe, and stable wholesale electric power and transmission services, at the lowest feasible long-term cost. The corporation will plan for the financing, and acquisition or construction of electric power generation and transmission assets or services necessary to serve the Railbelt.

The corporation is similar in corporate form to the Commercial Fishing and Agriculture Bank (AS 44.81 – "CFAB"). Both are statutory corporations that are not public corporations of the state or otherwise agencies of state government. However, CFAB and the corporation differ in governance structure. CFAB is structured and operated as a cooperative corporation, and is governed by a board of directors with two directors appointed by the governor and the remaining five to seven directors elected by members. In contrast, the corporation is a non-profit corporation, governed by a board of directors composed of up to 12 persons selected by the Greater Railbelt electric utilities, and one public member appointed by the governor. Members of the corporation are the ratepayers of individual Greater Railbelt electric utilities, with member governance exercised, and member benefits received, solely through the member's electric utility. The Greater Railbelt electric utilities thereby collectively retain control over their future electric power generation and transmission needs, and can exercise that control through the corporation.

Specific sections of AS 42.50 within section 1 of the bill include:

AS 42.50.010. (Page 1, line 12 – page 2, line 23) Establishes the corporation as a non-profit corporation, and describes the purposes of the corporation, including to plan for and take actions necessary to provide the Railbelt with adequate, reliable, safe, and stable electric power at the lowest feasible cost. The section clarifies that the corporation is exempt from certain statutes applicable to other corporations. The section further clarifies that the corporation may not be considered to be or constitute the state, state government, or a political subdivision so that statutes applicable to such entities (*e.g.* the Executive Budget Act or the Procurement Code) will not apply to the corporation. Finally, the section declares that the exercise of powers by the corporation is considered to be for a public purpose, which will make the corporation more readily eligible for state financial assistance.

3083

AS 42.50.020. (Page 2 line 24 – page 3 line 17) Establishes provisions for the board of directors to govern the corporation. The governor will appoint one director, and each Greater Railbelt electric utilities will have two representative directors, for a total of up to 13 directors.

AS 42.50.030. (Page 3 line 18 – page 4 line 26) Establishes rules related to noticing and conducting meetings of the board of directors, including requiring public meetings, and establishing rules and criteria for executive sessions of the board.

AS 42.50.040. (Page 4 line 27 – page 5 line 7) Establishes provisions for the corporation to hire employees, including a chief executive officer. Declares that employees of the corporation are not employees of the state and are not considered to be employees of a public organization for purposes of the Public Employees' Retirement System of Alaska (AS 39.35).

AS 42.50.050. (Page 5 lines 8 - 12) Establishes that ratepayers of the individual Greater Railbelt electric utilities are the members of the corporation, and provides that members are represented by, and receive benefits solely through, their respective electric utility.

AS 42.50.060. (Page 5 lines 13 - 16) Authorizes the corporation's board to adopt bylaws, and requires that bylaws be consistent with AS 42.50 and other laws applicable to the corporation.

AS 42.50.070. (Page 5 lines 17 - 21) Authorizes the corporation to indemnify, or purchase insurance on behalf of, directors, officers and employees.

AS 42.50.100. (Page 5 line 22 – page 7 line 24) Authorizes the corporation to exercise enumerated general powers that will enable the corporation to fulfill its corporate purposes to plan for and take actions necessary to provide the Railbelt with adequate, reliable, safe, and stable electric power at the lowest feasible cost. These general powers include enabling the corporation to plan for, finance, construct or acquire electric power generation and transmission facilities or services, fuel supplies and fuel storage facilities, and other facilities necessary or convenient to accomplish the corporation's purposes. The corporation may work with the state regarding energy planning, and with the Greater Railbelt electric utilities regarding their energy needs. The corporation may exercise eminent domain to acquire necessary land interests using statutory authority available to electric utilities. And, the corporation may create subsidiary corporations, including non-profit subsidiary corporations under AS 10.20, if that creates better opportunities to finance, construct or acquire necessary facilities, assets or services.

AS 42.50.110. (Page 7 lines 25 – 30) Establishes that the corporation has all the powers and duties of a regulated electric utility, except the corporation is not required to obtain a certificate of public convenience and necessity, and the corporation may not make retail sales of electric power.

AS 42.50.120, AS 42.50.130, and AS 42.50.140. (Page 7 line 31 – page 9 line 5) Three sections, collectively, impose a framework for the corporation to plan for future electric power generation and transmission needs for the Greater Railbelt region service territory. **AS 42.50.120** imposes a duty on corporation to adopt, regularly review, and update an integrated resources plan. The corporation in this plan will analyze the anticipated future electric power needs of the Greater Railbelt electric utilities, and select electric generation and transmission projects that will best meet those future needs. **AS 42.50.130** imposes a duty on corporation to adopt, regularly review, and update a long-range capital improvement plan. The corporation in this plan, and building upon the integrated resources plan, will identify anticipated capital improvement projects and otherwise describe how the corporation intends to accomplish its corporate purposes over the following 10 years. **AS 42.50.140** imposes duty on corporation to adopt, regularly review, and update a long-range capital management plan. The corporation in this plan, and building upon both the integrated resources plan and the long-range capital improvement plan, will describe the corporation's plans for financing capital improvement projects and other fiscal needs over the following 10 years. Each of these sections also require the corporation to make these plans available on the Internet to Greater Railbelt electric utilities, members of the corporation, the governor, the legislature, and the public.

AS 42.50.150. (Page 9 lines 6 – 14) The state pledges to any lender to the corporation that the state will not limit or alter the rights of the corporation to fulfill terms of contracts, or impair remedies available to the lender. Without this pledge, concerns about the corporation repaying debt might arise, which might make lenders unwilling to provide debt financing to the corporation.

AS 42.50.160. (Page 9 line 15 – 21) Authorizes the corporation to acquire long-term fuel supplies to ensure electric power generation facilities can continue to operate without fuel related interruptions. The corporation may acquire fuel supplies in conjunction with other persons who acquire fuel for other purposes, including purposes unrelated to electric power. Cook Inlet gas supplies may not be plentiful in the future. The acquisition of fuel supplies in conjunction with other users of fuel may offer economic advantages to the corporation.

AS 42.50.170. (Page 9 line 22 - 24) Establishes that the corporation's real and personal property, assets, income, and receipts are exempt from state and local taxes and special assessments. This tax exemption is revenue neutral to state and local governments. The Greater Railbelt electric utilities are comprised of municipal and cooperative electric utilities. Municipal electric utilities do not pay taxes. Cooperative electric utilities are exempt from state and local taxes, and instead pay an electric cooperative tax on retail sales of electricity. Only Greater Railbelt electric utilities will sell electricity at retail because the corporation may not make retail electric power sales (AS 42.50.110(b)). Electric cooperatives will pay the electric cooperative tax on all electric power obtained from the corporation, so state and local governments will not lose tax revenues as a result of this tax exemption.

AS 42.50.200. (Page 9 line 25 – page 10 line 2) Obligates the corporation to publish an annual report, which report must include audited financial statements and other information requested by the legislature.

AS 42.50.210. (Page 10 lines 3 - 29) Establishes rights of Greater Railbelt electric utilities, members of the corporation, and the public to inspect books and records of the corporation, and describes books and records that the corporation may withhold from inspection.

AS 42.50.170. (Page 10 line 30 – page 11 line 22) Establishes provisions for audits and examinations of the corporation. The section authorizes the legislative auditor to cause the corporation to be audited, and establishes processes that will apply. The section also requires an annual audit of the corporation by an independent outside auditor.

AS 42.50.900. (Page 11 line 23 – page 12 line 20) Defines certain terms used in AS 42.50.

Sections 2-7, and section 12. (Page 12 lines 21 – 26, and page 17 line 13 – page 18 line 14) Sections 2 – 7, and 12 provide a mechanism to remove from participation in the corporation individual Greater Railbelt electric utilities that do not desire to participate in the corporation. To continue participation in the corporation, a Greater Railbelt electric utility must deliver to the Alaska Energy Authority by July 31, 2010, an acceptable letter of intent under which the utility commits to enter a phased commitment agreement among the Alaska Energy Authority, the corporation, and the utility. These sections, effectively, enable individual Greater Railbelt electric utilities to elect to opt out of the corporation.

Sections 2 - 7 of the bill (page 12 lines 21 – 26) repeal from the definition of "Greater Railbelt electric utilities" under AS 42.50.900(5), individually listed

Greater Railbelt electric utilities. For example, section 2 would repeal AS 42.50.900(5)(A) which lists "Homer Electric Association, Inc." within the definition of "Greater Railbelt electric utilities. Sections 3 – 7 would repeal other portions of AS 42.50.900(5) which list other electric utilities. If a utility is removed from the definition of "Greater Railbelt electric utilities, the utility would no longer be empowered to participate in the corporation. For example, removal of a utility from the definition would eliminate that utility's right to have two directors on the board (*see* AS 42.50.020(a)(1) – page 2 lines 26 - 29).

Subsection 12(a) (page 17 lines 13 – 28) makes the repeal of the individual portions of AS 42.50.900(5) effective if the respective individual utility does not deliver to the Alaska Energy Authority an adequate letter of intent. Subsection 12 (c) (page 17 line 31 – page 18 line 2) requires the executive director of the Alaska Energy Authority to notify the lieutenant governor and revisor of statutes if any of the conditions are met. Subsection 12(d) (page 18 lines 3 - 14) defines terms used in section 12 of the bill.

Section 8. (Page 12 line 27 – page 15 line 2) Section 8 establishes obligations on the corporation to organize and, jointly with the Alaska Energy Authority, develop by January 19, 2010 a transition and finance plan to enable the corporation to become an all requirements supplier of electric power and transmission services to Greater Railbelt electric utilities. The section recognizes the reality that no new entity can immediately fulfill the goals set for the corporation. Existing electric power generation and transmission assets and services owned and operated by Greater Railbelt electric utilities and the state must be integrated into the corporation, together with anticipated new assets and services. Only under a phased transition can the corporation acquire necessary assets and services to enable it to become the supplier of electric power generation and transmission services to Greater Railbelt electric utilities.

The finance plan will identify how any new assets, or upgrades to existing assets, can be financed. The corporation will also identify how best the State of Alaska can assist in this financing, whether it be through cash capitalization, credit, or both. Any assistance provided by the State will have to be approved by the Legislature. In the short term, this could amount to hundreds of millions of dollars. In the long term, it could exceed a billion dollars. The Energy Team at the Alaska Energy Authority will work with the corporation on this finance plan, while at the same time work with members of the Legislature to determine the optimum means to finance investments all across Alaska.

Under subsection 8(a) (page 12 line 29 – page 14 line 9), the corporation must organize and jointly with the Alaska Energy Authority, develop a transition and finance plan. The plan must include or address several components. The plan

must include a phased commitment agreement that identifies commitments by the state, corporation and utilities to enable the corporation to achieve its corporate purposes, and a commitment by utilities to obtain electric power and transmission services from the corporation. The plan must address financing for necessary new projects, and include provisions to ensure that the creation and transition not negatively effect the ability of the corporation and utilities to finance necessary Railbelt electric power generation and transmission assets and services. Such provisions include ensuring the repayment of existing and new debt. The plan must address the corporation's acquisition of assets. The plan may propose statutory changes to improve the ability of the corporation to achieve its purposes.

Under subsection 8(b) (page 14 lines 10 – 23), the corporation must annually report on progress towards implementing the transition and finance plan.

Subsection 8(c) (page 14 line 24 – page 15 line 2), defines certain terms used in section 8 of the bill.

Section 9. (Page 15 line 3 – page 16 line 7) Section 9 requires the corporation to report to the governor and legislature with proposed statutory changes regarding the scope of regulation by the Regulatory Commission of Alaska over the corporation.

Subsection 9(a) (page 15 lines 7 – 29) identifies principles that the corporation must include in its proposed legislation. Rates must be based upon the reasonable costs of the corporation, and be adequate to cover financing covenants. A single, system wide rate must be established for Greater Railbelt electric utilities that become all requirements purchasers. The scope of review by the Regulatory Commission of Alaska must be established, and a simplified process for determining rates and revenue requirements must be proposed.

Nothing in section 9 obligates the legislature to take any particular action in response to the legislation to be proposed by the corporation. If the legislature takes no further action regarding the scope of regulation by the Regulatory Commission of Alaska over the corporation, under AS 42.50.110 to be enacted in section 1 of the bill (page 7 lines 25 – 30), the corporation would remain subject to full regulation by the Regulatory Commission of Alaska, excepting that the corporation would not need to obtain a certificate of convenience and public necessity under AS 42.05.221.

Subsection 9(b) (page 15 line 30 – page 16 line 7) defines certain terms used in section 9 of the bill.

Section 10. (Page 16 line 8 – page 17 line 10) Section 10 authorizes the Alaska Energy Authority to convey the Bradley Lake Hydroelectric Project and the Alaska Intertie to the corporation.

Bradley Lake Hydroelectric Project is a storage hydro electric power project located near Homer, Alaska. The project has a peak capacity of 126 MW, with significant water storage held behind a rock fill dam. Bradley Lake is an important part of the Railbelt operating power portfolio, providing 5-10% of the annual Railbelt electric power needs at the lowest Railbelt wide generation cost. Under the power sales agreement, 100 percent of the project's capacity and energy has been sold to Railbelt utilities, including: Chugach Electric Association, Inc. (30.4%); Municipality of Anchorage d/b/a Municipal Light and Power Utility (25.9%); Golden Valley Electric Association, Inc. (16.9%); Matanuska Electric Association, Inc. (through Alaska Electric Generation and Transmission Cooperative, Inc.) (13.8%); Homer Electric Association, Inc. (through Alaska Electric and Energy Cooperative, Inc.) (12.0%); and City of Seward, Electric Utility Department (1.0%).

The Alaska Intertie is a 170 mile long electrical transmission line that stretches from Healy River to Willow, and under agreements authorizing the use of Matanuska Electric Association owned transmission lines, extends an additional approximately 25 miles to the Teeland Substation near Knik. An ongoing extension project will extend the Alaska Energy Authority owned line from Willow to the Chugach Electric Association transmission system. This extension will become a part of the project. The Alaska Intertie connects the southern Railbelt Utilities electrically with Golden Valley Electric Association that serves communities to the north of the Alaska Range. Designed to move power in both directions, the intertie has been used chiefly to convey inexpensive electrical energy produced by Chugach Electric and Municipal Light and Power northward to become a part of the GVEA energy portfolio. Recently, power flows have flowed from GVEA south to the Chugach system, when Chugach lacked access to sufficient natural gas to carry the Chugach system load.
