Governor Sean Parnell
STATE OF ALASKA

March 18, 2010

The Honorable Lesil McGuire
Alaska State Legislature
State Capitol, Room 125
Juneau, AK 99801-1182

Re: SB 287/ Work Draft "R"

Dear Senator McGuire,

Thank you for speaking with me yesterday regarding SB 287 and Work Draft "R" of that legislation. I believe this legislation is on the right track to codifying the work being done by our bullet line gas team and I welcome the opportunity to work further with you on it.

Alaska's natural gas is a rich and abundant resource that must be commercialized for the benefit of Alaskans. To that end, the State is currently pursuing two paths, effectively leaving open more opportunities for a gasline than choosing only one pipeline at this time.

The State has a project team pursuing bullet line opportunities intended to bring natural gas to Alaskan homes and businesses. I instructed the engineering team to determine the cost of a pipeline from the Interior basins near Nenana, to the foothills of the North Slope, or if need be, all the way to the North Slope so that the least costly routing and long term gas supply can be identified.

Last year, the Legislature approved funding for the bullet line work and we are pleased with the progress to date. An Environmental Impact Statement is in progress, preliminary engineering and permitting is underway, and we anticipate the initial cost estimates will be available this summer. In addition, a commercial group of gas owners, utilities, and other private sector parties continue to meet to support our efforts to move forward.

On a parallel path, the Alaska Gas Pipeline Project being pursued by TC Alaska and ExxonMobil is scheduled to initiate its open season in the weeks ahead. These private sector companies are bringing their expertise and capital to the table to assure a gasline project moves forward. The Alaska Gas Pipeline Project has been fully engineered and tariffs established for gas delivery to Alaskan communities (including a tidewater LNG project) and throughout North America. I fully support maintaining this Alaskan private sector opportunity.

Earlier, I noted that your bill is headed in the right direction. We need to foster opportunities for a gasline, rather than limit our options by picking only one path that may or may not lead to a project. Because Work Draft "R" of SB 287 leaves open opportunities for Alaska jobs and Alaska energy for Alaskans, I will continue working with you on the merits of the bill.

Regards,

Sean Parnell
Governor

ALASKA STATE LEGISLATURE

SENATOR LESIL McGUIRE
SENATOR BILL WIELECHOWSKI
Co-Chairs, Senate Resources Committee

MEMORANDUM

Date: March 18, 2010

To: Kirsten Waid, Senate Secretary

From: Senator Lesil McGuire, Co-Chair
Senator Bill Wielechowski, Co-Chair
Senate Resources Committee

Re: Senate Resources Committee Schedule

Committee Schedule
Senate Resources
For the week of March 15-19

Unless otherwise noted, all meetings will be held in the Butrovich, Rm 205 @ 3:30 p.m.

Thursday, March 18th
+ * = SB 287: In-State Gas Pipeline
+ * = SB 228: Tax Incentives for Gas to Liquids
+ * = SB 242: Geothermal Resources Tax Credits
+ * = SB 243: No Royalty on Geothermal Resource
~~+ * SB 294: Sport Fish Guide License~~ – *Moved to Monday's Calendar*
+ = *Bill Previously Heard/Scheduled*

Friday, March 19th *(This meeting will be held JOINTLY with House Fisheries Committee)*
Overview: *Preliminary review of the Board of Fisheries request for a comprehensive evaluation of large-mine permitting and standards for protection of fish and game habitat in the Bristol Bay watershed.*
+ = *Bill Previously Heard/Scheduled*

* First Hearing in First Committee of Referral
\+ Teleconferenced
= Bill was previously Heard/Scheduled

Re: September/October Instate Gasline Report

Dear Legislators,

The State team and its contractors continue to work on permit applications, refine cost estimates, and review project alternatives toward the goal of having a final environmental impact statement by December 2010 for a possible in-state natural gas pipeline from the North Slope to tidewater at Cook Inlet. We are doing the preparatory work; the final project decision will be up to the Legislature, the Governor, and whether private interests see a need for the project. Our work is only to analyze and present the pipeline as an option.

Our work over the past couple of months has concentrated on:

- Completion of the hydraulic analysis for the gas pipeline in order to establish the best locations for compressor stations along the pipeline route. Compressor turbines operate most efficiently at colder temperatures, so the analysis included soil and ambient temperature analysis up and down the two potential pipeline routes from the North Slope to tidewater (the Parks Highway and the Glenn/Richardson Highway routes). The work included modeling the temperatures, compressor efficiency, and drop-off in pipeline pressure to determine the most effective locations for compressor stations. The work identified potential sites, within a four or five mile range, also considering ground composition, access, and wetlands issues. The exact number of compressor stations and precise location for each station would depend on the capacity of the gas line and would be a decision for the project developer.

- Preparation of right-of-way permit applications to State and federal agencies. The State team and its contractors expect to submit those permit applications later this month. The Alaska Department of Transportation and Public Facilities (DOT & PF) will be the permit applicant. Applications will be filed for both pipeline routes. A decision on which route to select will be up to the Legislature and the Governor, and a private developer, at a later date.

- Preparation of wetlands permits that will be submitted later this month to the U.S. Army Corps of Engineers.

- Working with the DOT & PF to identify potential gravel sites along the pipeline routes.

- Determining the need and cost for a gas treatment plant to remove carbon dioxide, hydrogen sulfide, and other impurities from the gas stream before it enters the pipeline. Though Enstar has shared with the State team its work on an in-state gas line, that effort did not include a review of gas treatment needs or costs. The State team will be talking with North Slope producers and others in the coming months to learn more about possible gas treatment plant configurations, costs, and operations. Certainly, the size and cost will depend on the volume of gas expected to move through the line, and planning for any possible expansions.

- And, we are continuing with cost and economic feasibility analysis of natural gas liquids extraction in Alaska, possible sites for an Natural Gas Liquids plant, and marketing issues.

The reference case for our work is a 24-inch line from Prudhoe Bay to tidewater at Cook Inlet, though the team also is looking at smaller pipe for a lower-capacity line. A 24-inch line could accommodate up to one billion cubic feet per day, depending on the number of compressor stations. The reference case would be a pipe capable of moving wet or dry gas, while we also look at a dry-gas only line as an option. Obtaining gas supplies from Gubik in the Brooks Range Foothills is another option that will be considered as the team models out all the alternatives in the coming months. Those alternatives will range from a pipeline capacity of 250 million cubic feet per day to one billion cubic feet per day.

Upcoming work will also include flow simulations and diagrams to help determine major equipment needs and costs for the line, including a component-by-component analysis of costs, investigating cost-reduction opportunities for the project, and conducting field work next summer to verify site data — particularly at river crossings, gravel sites, fault crossings — and to conduct a geotechnical borehole drilling program. The State's team includes Baker for engineering, design, and cost work, and Arctic Slope Regional Corporation for much of the permit work.

Assuming the State obtains all of the right-of-way permits, wetlands permits, and a final Environmental Impact Statement next winter, the State would be ready in the spring of 2011 to turn over (sell) the package of engineering work and permits to a private entity to build the line, if the Legislature and Governor decide that is the best option for Alaska.

Our expenses for September and October were $445,364 and $399,968 respectively. Total expenditures for the year-to-date are $1,826,859.

Please do not hesitate to contact me at 907-269-8656 if you have any questions. I will have another report in December.

Sincerely,

Harry Noah

An unconventional glut

Mar 11th 2010 | HOUSTON
From The Economist print edition

Newly economic, widely distributed sources are shifting the balance of power in the world's gas markets

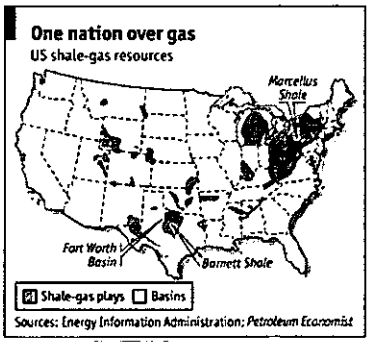
SOME time in 2014 natural gas will be condensed into liquid and loaded onto a tanker docked in Kitimat, on Canada's Pacific coast, about 650km (400 miles) north-west of Vancouver. The ship will probably take its cargo to Asia. This proposed liquefied natural gas (LNG) plant, to be built by Apache Corporation, an American energy company, will not be North America's first. Gas has been shipped from Alaska to Japan since 1969. But if it makes it past the planning stages, Kitimat LNG will be one of the continent's most significant energy developments in decades.

Five years ago Kitimat was intended to be a point of import, not export, one of many terminals that would dot the coast of North America. There was good economic sense behind the rush. Local production of natural gas was waning, prices were surging and an energy-hungry America was worried about the lights going out.

Now North America has an unforeseen surfeit of natural gas. The United States' purchases of LNG have dwindled. It has enough gas under its soil to inspire dreams of self-sufficiency. Other parts of the world may also be sitting on lots of gas. Those in the vanguard of this global gas revolution say it will transform the battle against carbon, threaten coal's domination of electricity generation and, by dramatically reducing the power of exporters of oil and conventional gas, turn the geopolitics of energy on its head.

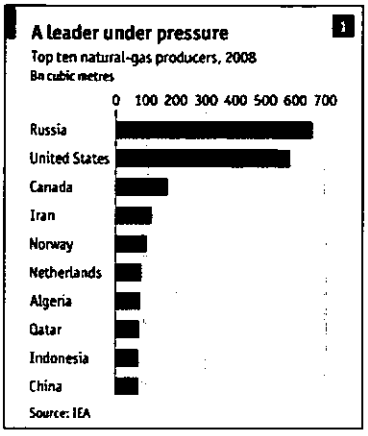
Deep in the heart of Texas

The source of America's transformation lies in the Barnett Shale, an underground geological structure near Fort Worth, Texas. It was there that a small firm of wildcat drillers, Mitchell Energy, pioneered the application of two oilfield techniques, hydraulic fracturing ("fracing", pronounced "fracking") and horizontal drilling, to release natural gas trapped in hardy shale-rock formations. Fracing involves blasting a cocktail of chemicals and other materials into the rock to shatter it into thousands of pieces, creating cracks that allow the gas to seep to the well for extraction. A "proppant", such as sand, stops the gas from escaping. Horizontal drilling allows the drill bit to penetrate the earth vertically before moving sideways for hundreds or thousands of metres.



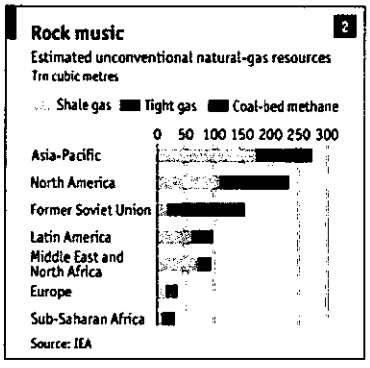
These techniques have unlocked vast tracts of gas-bearing shale in America (see map). Geologists had always known of it, and Mitchell had been working on exploiting it since the early 1990s. But only as prices surged in recent years did such drilling become commercially viable. Since then, economies of scale and improvements in techniques have halved the production costs of shale gas, making it cheaper even than some conventional sources.

The Barnett Shale alone accounts for 7% of American gas supplies. Shale and other reservoirs once considered unexploitable (coal-bed methane and "tight gas") now meet half the country's demand. New shale prospects are sprinkled across North America, from Texas to British Columbia. One authority says supplies will last 100 years; many think that is conservative. In 2008 Russia was the world's biggest gas producer (see chart 1); last year, with output of more than 600 billion cubic metres, America probably overhauled it. North American gas prices have slumped from more than $13 per million British thermal units in mid-2008 to less than $5. The "unconventional"—tricky and expensive, in the language of the oil industry—has become conventional.



The availability of abundant reserves in North America contrasts with the narrowing of Western firms' oil opportunities elsewhere in recent years. Politics was largely to blame, as surging commodity prices emboldened resource-rich countries such as Russia and Venezuela to restrict foreign access to their hydrocarbons. "Everyone would like to find more oil," says Richard Herbert, an executive at Talisman Energy, a Canadian firm using a conventional North Sea oil business to finance heavy investment in North American shale. "The problem is, where do you go? It's either in deep water or in countries that aren't accessible." This is forcing big oil companies to get gassier.

The oil majors watched from the sidelines as more entrepreneurial drillers proved shale's viability. Now they want to join in. In December Exxon Mobil paid $41 billion for XTO, a "pure-play" gas firm with a large shale business. BP, Statoil, Total and others are sniffing around the North American gas patch, signing joint ventures with producers such as Chesapeake Energy. A wave of consolidation is likely in the coming months, as gas prices remain low, the drillers seek capital and the majors hunt for the choicest acreage.



Shale is almost ubiquitous, so in theory North America's success can be repeated elsewhere. How plentiful unconventional resources might be in other regions, however, is far from established. The International Energy Agency (IEA) estimates the global total to be 921 trillion cubic metres (see chart 2), more than five times proven conventional reserves. Some think there is far more. No one will really know until companies explore and drill.

The drillers are already arriving in Europe and China, which are both expected to import increasing amounts of gas—and are therefore keen to produce their own. China has set its companies a target of producing 30 billion cubic metres a year from shale, equivalent to almost half the country's demand in 2008. Several foreign firms, including Shell, are already scouring Chinese shales. After a meeting between the American and Chinese presidents last November, the White House announced a "US-China shale gas initiative": American knowledge in exchange for investment opportunities. The IEA says China and India could have "large" reserves, far greater than the conventional resource.

Exploration is also under way in Austria, Germany, Hungary, Poland and other European countries. The oil industry's minnows led this scramble, but now the big firms are arriving too. Austria's OMV is working on a promising basin near Vienna. Exxon Mobil is drilling in Germany. Talisman recently signed a deal to explore for shale in Poland. ConocoPhillips is already there. The first results from wells being drilled in Poland, in what some analysts believe is a shale formation similar to Barnett, should be released this year.

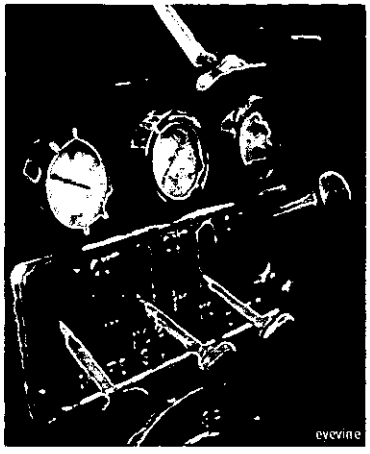
No one expects production of shale gas in Europe to make a material difference to the continent's supply for at least a decade. But the explorers in China and Europe present a long-term worry for those who have bet on exporting to these markets. Gazprom, Russia's gas giant, is the company most exposed to this threat, because its strategy relies on developing large—and costly—gasfields in inhospitable places. But Australia, Qatar and other exporters also face a shift in the basics of their business.

Choked

These producers are already getting a taste of the global gas glut. Almost in tandem with the surge in American production, recession brought a slump in world demand. The IEA says consumption in 2009 fell by 3%. In Europe, the drop was 7%. Consumption in the European Union will grow marginally if at all this year and will not be sufficient to clear an overhang of supplies, contracted through take-or-pay agreements signed in the dash for gas of the past decade. IHS Global Insight, a consultancy, reckons that the excess could amount to 110 billion cubic metres this year, almost a quarter of the EU's demand in 2008.

The glut has been exacerbated by the suddenly greater availability of LNG. Importers with the infrastructure to receive and regasify LNG can now easily tap the global market for spot cargoes. This is partly a product of the recession, which dampened demand from Japan and South Korea, the leading LNG buyers. But another cause is that many exporters, not least Qatar, the world's LNG powerhouse, spent the past decade ramping up supplies aimed at the American market. That now looks like a blunder.

America is still taking some of this LNG, but the exporters' bonanza is over before it ever really began. "You'll always find a buyer in North America," says Frank Harris, an analyst at Wood Mackenzie, a consultancy, "but you might not like the price." And LNG will grow increasingly abundant as new projects due to come on stream this year add another 80m tonnes to annual supply, almost 50% more than in 2008.



Gas out, money in

Qatar's low production costs mean it can still make money, even in North America. Others cannot. In February, for example, Gazprom postponed its Shtokman gasfield project by three years because of the change in the market. Some of the gas from that field, in the Barents Sea, was to be exported to America. But Shtokman's gas will be costly, because the field is complex and its location makes it one of the world's most difficult energy projects to execute. Some analysts now wonder whether gas will ever flow from Shtokman.

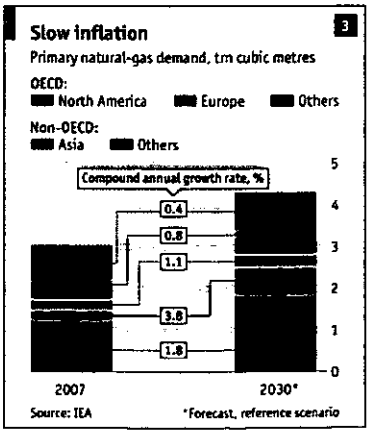
China offers some hope for ambitious exporters, but even there the outlook has become cloudier. The Chinese authorities want natural gas to account for at least 10% of the country's energy mix by 2020 and are building LNG import terminals. With that target in mind, Australia, which has its own burgeoning conventional and unconventional gas supplies, has been busily building an LNG export business. But warning lights are coming on. In January, PetroChina let a deal to buy gas from Australia's Browse LNG project expire. The original agreement was made in 2007, when LNG prices were soaring in Asia, but China can afford to be picky now. "Too many Australian LNG plants are chasing too little demand," says Mr Harris.

The shift in the global market has left China well-placed to dictate prices. This will be another blow to Gazprom, which has long talked of exporting gas to the country. Indeed, while the Chinese and the Russians have squabbled over the terms, Turkmenistan has quietly built its own export route to China. Even if Beijing's shale-gas plans come to nothing, supplies from Central Asia and new regasification terminals along its coast may allow China to reach its natural-gas consumption targets without pricey Siberian supplies.

The glut has weakened Gazprom's position in Europe, too. It has been losing market share to cheaper Norwegian and spot-market supplies. In 2007 Gazprom talked of increasing its annual exports to the EU to 250 billion cubic metres. Now, says Jonathan Stern, of the Oxford Institute for Energy Studies, Gazprom will probably only ever supply the EU with 200 billion cubic metres a year (it shipped about 130 billion in 2008). The company forecast in 2008 that its gas prices in Europe would triple, to around $1,500 per 1,000 cubic metres, on the back of rising oil prices, which help set prices in long-term contracts. But the price dropped to about $350 last year and is expected to fall again in 2010. The weak market could last for another five years, believes Wood Mackenzie. Gazprom has been renegotiating with leading customers, injecting elements of spot pricing into contracts to make them more attractive.

Shtokman shtymied

Moreover, Europe's need for new pipelines to guarantee supplies suddenly looks less pressing. Construction of Nord Stream, Gazprom's flagship project to export gas directly to Germany through the Baltic Sea, will begin next month. It is due to come on stream in 2011. The scheduled doubling of its capacity to 55 billion cubic metres a year is in doubt, says Mr Stern, because Shtokman was to have supplied the gas for it.



Demand is a bigger problem. Even without recession or European shale, the assumption that Europe's consumption will keep growing is looking shaky,

because the EU's efforts to boost efficiency and reduce carbon emissions are making gradual headway. Edward Christie, an economist at the Vienna Institute for International Economic Studies, says the EU could be importing a third less natural gas in 2030 than the European Commission forecast in 2005. That makes the case for additional supply lines much less compelling. The IEA expects rich European countries' demand to grow by only 0.8% a year in the next two decades, against 1.5% for the world as a whole (see chart 3).

An age of plenty for gas consumers and of worry for conventional-gas producers thus seems to be dawning. But two factors could reverse the picture again. The first surrounds the uncertainty about how fruitful shale exploration will be outside North America. A clearer understanding of the geology will emerge from pilot wells in the coming months. Second, there are reasons for caution above ground, too. Despite natural gas's greener credentials than oil's or coal's, shale drilling has critics among environmentalists, who worry that water sources will be poisoned and landscapes despoiled.

The industry says cement casing of wells and the depth to which they are drilled make the practice safe and relatively unobtrusive. But so far it has been drilling mainly in North America, where land is plentiful and people are accustomed to the sight of oilmen's detritus. In densely populated Europe, the rapacious rate at which shale plays must be drilled to sustain production is less likely to be tolerated.

Even in America, opposition to shale gas is rising. New York state has imposed a moratorium on drilling in its portion of the Marcellus Shale, which it shares with Pennsylvania. Lawmakers in Congress want to study the ecological impact of fracing. The Environmental Protection Agency, a federal body, also raised concerns about "potential risks" to the watershed.

The path of demand in gas's new age is hard to predict, but abundant new sources could bring about profound change in patterns of energy consumption. Some of the downward pressure on price will ease: despite sedate growth, the LNG glut should dissipate, probably by 2014, says Mr Harris; and low prices will kill more projects, clearing the inventory. France's Total thinks global demand will recover strongly enough to require another 100m tonnes a year of LNG by 2020, on top of plants already planned. However, the Energy Information Administration, the statistical arm of America's Department of Energy, predicts decades of relatively weak prices.

If this is correct, it makes sense, for both environmental and economic reasons, for the country to gasify its power generation, half of which comes from coal-fired plants. This could be done cheaply and quickly, because America's total gas-fired capacity (as opposed to production) already exceeds that for coal. Put a price of only $30 a tonne on carbon, say supporters, and natural gas would quickly displace coal, because gas-fired power stations emit about half as much carbon as the cleanest coal plants. The IEA agrees that penalising carbon emissions would benefit natural gas at the expense of dirtier fuels.

There would be political obstacles. The coal lobby remains strong in Washington, DC. Climate legislation struggling through Congress even includes provisions to protect "clean coal", a term covering an array of measures, so far uncommercial, to reduce emissions from burning the black stuff. Ironically, oil companies that were once suspicious of proposals to control carbon now regard a carbon price or even a carbon tax as a potential boon to their new gas businesses.

A more radical idea, and one that would have ramifications for the global oil sector, is to gasify transport. T. Boone Pickens, a corporate raider turned energy speculator, has launched a campaign to promote this, and has support from the gas industry. By converting North America's fleet of 18-wheeled trucks to natural gas, says Randy Eresman, boss of EnCana, a Canadian gas company, America could halve its imports of Middle Eastern oil. EnCana is promoting "natural gas transportation corridors": highways served by filling stations offering natural gas.

All this is some way off. The coal industry will not surrender the power sector without a fight. The gasification of transport, if it happens, could also take a less direct form, with cars fuelled by electricity generated from gas.

A gasified American economy would have profound effects on both international politics and the battle against climate change. Displacement of oil by natural gas would strengthen a trend away from crude in rich countries, where the IEA believes demand has already peaked as a result of the recent spike in oil prices. Another consequence of the energy market's bull run, the unearthing of vast new supplies of gas, could bring further upheaval. If the past decade was characterised by the energy-security concerns of consumers, the coming years could give even the world's powerful oil producers reason to worry, as a subterranean revolution shifts the geopolitics of global energy supply again.

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

July 17, 2009

Alaska State Legislature
Alaska State Capitol
Juneau, AK 99801

Dear Alaska Legislators:

In accordance with the legislative intent language of Section 19 of SCS CS HB113(FIN) directing me to submit monthly written reports to all legislators, this is the second monthly report on the evaluation and development of an in-state natural gas pipeline. I hope these short summaries are helpful and I certainly welcome any calls or e-mails with requests for additional information.

Much of the activity in June focused on the commercial working group's first meeting. Two dozen representatives - BP, ConocoPhillips, ExxonMobil, Anadarko, Chugach Electric Association, Golden Valley Electric Association, Agrium, Enstar, Barrick Gold Corporation and contractors and subcontractors on this effort - met for two days in Anchorage to review the project.

Baker, a worldwide engineering firm with offices in Anchorage, is the lead contractor for the evaluation and assessment project. The commercial working group listed the questions, the known and missing information, and the research and analysis needed to define the project. Work assignments were handed out with a schedule determining the order of the pieces for the project to proceed on schedule.

The work breaks down into several categories for planning and analysis - the pipeline and compressors along the route, the North Slope gas conditioning plant, other necessary North Slope infrastructure, a natural gas liquids extraction plant, permitting, Fairbanks and Interior Alaska needs, Southcentral customers (utilities and industry), other possible users around the state, and alternatives - to meet Alaska's natural gas needs.

This state-funded effort will prepare an estimate for the cost of moving gas down the pipe (pipeline tariff), not the cost of gas to consumers. That final cost will depend on the cost of production, distribution charges and market issues, all outside of this assessment.

Our work continues to focus on three principal aspects of the project: Define the project, determine the demand for gas, and calculate the cost of service (tariff) for the pipeline.

The project drivers are a stable, affordable energy supply for businesses, residential customers and to promote economic growth.

Baker is managing the work on the pipeline alternative route analysis, in addition to construction cost estimates for the project. The focus of their work will be to identify the capital cost of each option and the potential customers, in addition to potential environmental impacts. I expect to have cost comparisons and analysis by this fall of the two pipeline routes for moving North Slope gas south — the Parks Highway or Glenn Highway — so that a decision can be made on which route is best for the project and the people of Alaska.

Baker is working under a cost-plus fixed-fee contract, not to exceed $5 million. Payments to Baker were not included in June totals. These costs will be reflected in the July report.

The environmental services contract was awarded in June to ASRC, on a cost-plus basis not to exceed $2 million. ASRC's role will be to gather environmental data in support of the EIS process for the pipeline right-of-way application, looking at both the Glenn and Parks highway routes. The contract started in June; payments will be reflected in the July report.

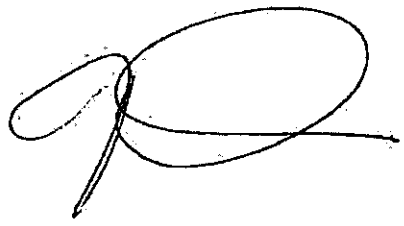
Administrative costs for June were $19,419; year to date they total $98,621. Other work last month included:

- Meetings with the federal lead agency (U.S. Army Corps of Engineers) to discuss how the permitting process would proceed.
- Planning work started on the option of a pipeline extension to the west to potentially serve the Donlin Creek mine.

The work program for July includes detailed review of a potential pipeline route around Denali National Park, completing a draft of the alternative routing analysis, a field trip with key state and federal agency personnel to plan permitting of the project, and starting site selection and analysis for the gas conditioning plant on the North Slope and also for a natural gas liquids extraction plant at tidewater. In addition, we will obtain mapping for a routing study of the pipeline to western Alaska

A long-term natural gas supply is important to Alaska and I appreciate your support as we move forward make this project a success. Please call on me if I can provide any additional information as we work toward answering that one big question for Alaskans.

Sincerely,



Harry Noah

Governor Sean Parnell
STATE OF ALASKA

August 21, 2009

Members of the Alaska State Legislature
Alaska State Capitol
Juneau, AK 99801-1182

Dear Legislators:

It has been a busy summer month for the team as we work to determine the costs and feasibility of a stand-alone Alaska natural gas pipeline project. Work continues on the route analysis for the gas pipeline from the North Slope, along with engineering work on a possible route for a pipeline extension toward Western Alaska and site selection for a natural gas liquids extraction plant. The engineering work that is currently being done will allow for cost estimates to be derived for any potential pipeline option potentially serving the railbelt area. This would include gas from the Foothills area of the North Slope, the Nenana basin, or Cook Inlet.

I expect to have the first summary report of the alternative route analysis completed by early September, and will promptly send a copy to legislators. The Baker engineering team continues to analyze the capital cost differences, environmental issues, and a number of potential customers for the two routes: from the North Slope to Fairbanks and down the Parks Highway to Southcentral Alaska versus the route to Fairbanks and then along the Richardson Highway over to Delta and down to Glennallen and along the Glenn Highway to Southcentral.

The summary report of the route analysis will not propose a decision but rather will set out the facts for policymakers to use in a future determination of the preferred route.

The current plan is to submit a right-of-way application for both routes in October. The right-of-way applications will go to the Alaska Department of Natural Resources, United States Bureau of Land Management, and the United States Army Corps of Engineers, with the Army Corps expected to serve as the lead federal agency in charge of the environmental impact statement process.

As part of the right-of-way preparations, we held field trips last month with state and federal agency personnel to familiarize everyone with some of the issues that will come up in the right-of-way and environmental impact statement process.

Our work this past month also included more detailed review of a potential pipeline route around Denali National Park to avoid the obvious problems with national park lands. We believe we have identified a possible route outside the park boundary, just east of the Parks Highway. It appears to offer an economic option to running the pipe through the park and the special permission that would be required for such an undertaking. Of course, the route could run along the highway in the park if the National Park Service were to prefer having the pipe closer to its main facilities. This

work is part of the route analysis between the two alternatives for a gas line from the North Slope to connect with the existing Southcentral pipeline system, as there are locational issues specific to each route.

Engineering work is also continuing on a possible extension toward Western Alaska to serve the proposed Donlin Creek mine, just north of the Middle Kuskokwim River village of Crooked Creek, about 280 miles northwest of Anchorage. One possible pipeline route would run from the west side of Cook Inlet to Donlin Creek, and another route under review would connect to the stand-alone pipe just south of Nenana and extend west from there.

The team just started work in July on site review for a possible natural gas liquids plant to extract the heavier gas liquids from the gas stream. The team is looking at sites in Cook Inlet.

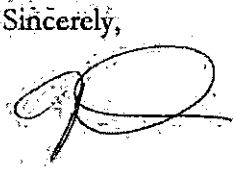
I have enclosed a copy of the stand-alone gas line project action plan, which the team put together in a meeting with engineers, North Slope producers, Southcentral utilities, potential natural gas customers, and others. It provides additional details on our scope of work, our objectives, infrastructure issues, and timelines for the project team's work assignments.

Our expense report is as follows:

> The project spent $321,040 during the month of July and has spent a total of $470,943 year to date.

Thank you for your support in this work. Please call on me if I can provide any additional information, and I will have another update for you in about 30 days.

Sincerely,



Harry Noah
Project Manager
In-state Gas Program

ACTION PLAN for a **PREFEASIBILITY STUDY**
of the
STAND-ALONE GAS PROJECT
State of Alaska

SUMMARY

INTRODUCTION

The attached Action Plan was developed by representatives of the State of Alaska, with active participation of representatives of ExxonMobil, BP, ConocoPhillips, Anadarko, Enstar, Fairbanks Gas, Golden Valley Electric, Chugach Electric, Agrium, and Barrick Gold, and with technical support from representatives of Michael Baker Engineering, during a two-day VIP (Value-added Interactive Planning) Session held in the Opportunity Salon of the Embassy Suites in Anchorage on Thursday and Friday, June 18th and 19th, 2009.

The planning session was facilitated and documented by ORION Facilitated Planning Inc.

NAME OF PROJECT

The project is evolving, and a generic working name was selected for the early phases of the project: it will be known on an interim basis as the ***Stand-Alone Gas Project.***

OWNER

For purposes of this workshop, the Owner of the project was identified as the ***State of Alaska***.

OBJECTIVE OF PROJECT

The Owner's objective of the project was established as a desire " - - - for the development of a commercially-viable in-state natural gas system with these embedded characteristics:

- Producers to make a net profit equal to, or greater than, by exporting gas;
- Industrial users to be served at a cost that enables them to be competitive in a world market; and
- To turn the project over to a private developer who will recoup costs and make a profit on the operation of the pipeline."

It was noted that the State considers that it has the authority to be the Developer, if necessary.

OBJECTIVE OF VIP SESSION

The objective of the VIP Session was defined as a need " - - - to develop an action plan for a Prefeasibility Study of the Stand-Alone Gas Project."

ACTION PLAN for a **PREFEASIBILITY STUDY**
of the
STAND-ALONE GAS PROJECT
State of Alaska

SUMMARY

PLANNING TEAM

The Action Plan defined in this document was developed by the planning session participants identified below. The full planning team functioned on an interactive, participative basis, with an Owner-oriented focus. These same participants also wrote the scope descriptions in Section 2 of this document; there, their initials identify the authors of each work package. The corporate affiliation of each participant is indicated by a superscript following his or her name.

ACTION PLAN for a **PREFEASIBILITY STUDY**
of the
STAND-ALONE GAS PROJECT
State of Alaska

SUMMARY

METHODOLOGY

The VIP process is an interactive, Owner-oriented, high-level planning process that focuses on development of a plan by a designated team to achieve the Owner's objectives for his project or program. The process is guided by an experienced Facilitator who records the aggregate input of the planning team, but does not influence the content, direction or technical viability of the plan.

For this project, the State's Sponsor (identified on the previous page) clearly identified the strategic objective of the project, and then identified the objective of the VIP Session. These objectives, coupled with other basic project information that was developed interactively during the Kickoff Portion of the workshop with the participation and endorsement of the Sponsors, are included in Section 1 of this Action Plan; they provided solid parameters for development of the plan.

The participants then developed their plan to achieve the stated project objectives. First, they developed a logic network that established the work packages and their logic-driven interactions. This part of the process largely ignored the durations of individual activities, and maintained an objective focus on the work process. As a wrap-up step, the participants made a thorough review of the logic network they had created -- they adjusted interactions if necessary and added durations to each of the work packages, remaining consciously objective through this vital phase of the planning process.

The result of the VIP Session was a plan that was developed by the team that, to large extent, will be involved with the execution of the program. This document records their plan to execute a Prefeasibility Study for the Stand-Alone Gas Project.

"COST OF SERVICE"

It was recognized that the phrase "cost of service" is potentially very misleading, that there are three significant and distinctly different components to the cost of gas, and that "cost" is not the same as "price". The participants resolved that the cost of the three components, as used in this study, should be referred to as follows:

- Production Cost
- Treatment & Pipeline Cost
- Distribution (incl Storage) Cost
- Total Cost = the Sum of these three cost elements

ACTION PLAN for a **PREFEASIBILITY STUDY**
of the
STAND-ALONE GAS PROJECT
State of Alaska

SUMMARY

ASSUMPTIONS

Two clarifying assumptions were discussed briefly during the planning session; they are included in this document to provide clarification to the context of this Action Plan:
Assumption #1: the major working assumption was that a stand-alone gas pipeline project would only be constructed if the 48-inch pipeline to the lower 48 states is either delayed from the planned 2019 start-up date, or will not be constructed at all.
Assumption #2: this action plan is focused on defining a cost of service for a stand-alone gas pipeline project. There are other aspects of the In-State gas project work that are not included in this document.

PROJECT DRIVERS

During a focused discussion, each of three groups identified the "drivers" for the project from their unique perspectives:

State of Alaska – wants the pipeline system

- to provide an energy supply to support economic growth;
- to provide a financial opportunity to the State; and
- to provide affordable natural gas service to home-owners.

Producers – want to

- sell all gas at highest possible net-back; and
- sell largest volume of gas possible.

Users – wants vary, depending on the User organization, as follows:

- Agrium: Could re-start its Kenai operations and operate at full capacity, if long-term gas service was available.
- Western Alaska: Residents of western Alaska could be served by a pipeline; the Donlin Creek mining project is one example of a major potential user.
- Utilities: Requires long-term, secure, reliable supply for existing and growing customer base; there is a sense of urgency for secure supply, and the pipeline option appears to be superior to current options.

ACTION PLAN for a **PREFEASIBILITY STUDY**
of the
STAND-ALONE GAS PROJECT
State of Alaska

SUMMARY

POTENTIAL OPPORTUNITIES

Two potentially-significant opportunities to improve the success potential for the project were identified by the participants:

- Develop opportunities to confirm and increase gas volume requirements; and
- Adopt a proactive approach to permitting by the State, to avoid project schedule delays.

POTENTIAL THREATS, RISKS & ISSUES

Six potentially-significant threats, risks or issues were identified and discussed briefly:

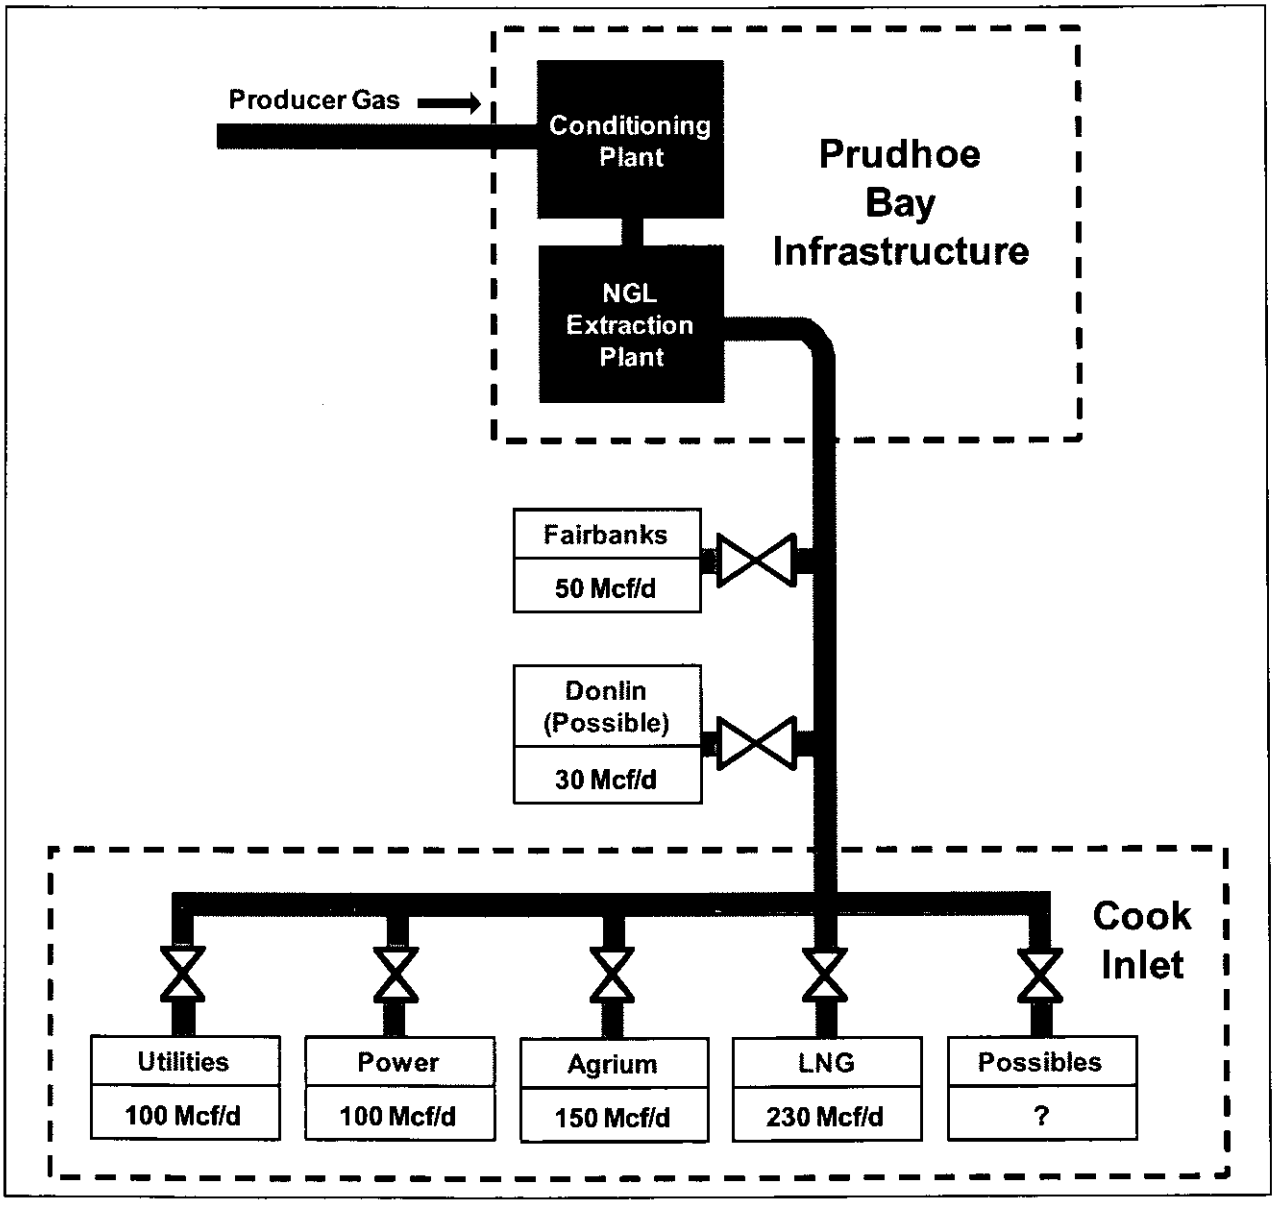
- Ramp-up may be slow, impacting the economics of the project;
- Industrial users (e.g., Agrium) may not commit if schedule is deferred;
- Possible users (e.g., Barrick) may not materialize;
- If the "big line" proceeds, this project would not be viable in the current configuration;
- If a major discovery is made in Cook Inlet, this line would not be necessary; and
- High pricing would threaten the economics of the project.

ACTION PLAN for a **PREFEASIBILITY STUDY**
of the
STAND-ALONE GAS PROJECT
State of Alaska

SUMMARY

REFERENCE CASE

Prior to development of their plan, the participants established a "reference case" to describe the scope of the project in simple graphic format:

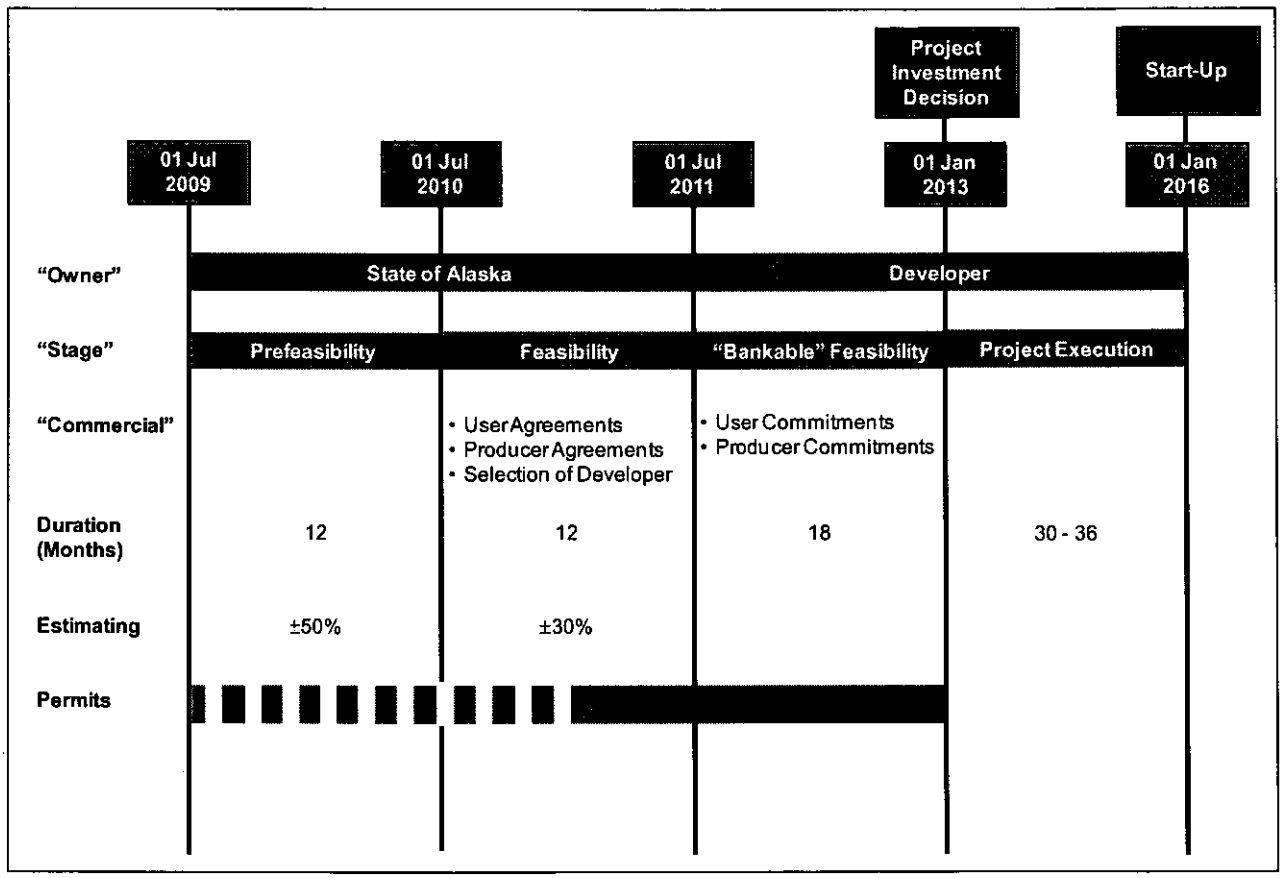


ACTION PLAN for a **PREFEASIBILITY STUDY**
of the
STAND-ALONE GAS PROJECT
State of Alaska

SUMMARY

PROJECT OVERVIEW SCHEDULE

Prior to commencement of planning, the participants developed and reviewed a simple overview schedule of the project, to understand the State's perspective of a possible advancement program for the Stand-Alone Gas Project. The numbers under the bars identify the number of months each activity could require. It is emphasized that this conceptual sketch does not represent a committed program – it was developed simply to provide a vehicle for discussion.



ACTION PLAN for a **PREFEASIBILITY STUDY**
of the
STAND-ALONE GAS PROJECT
State of Alaska

SUMMARY

WORK BREAKDOWN STRUCTURE (WBS)

The Stand-Alone Gas Project has numerous asset or administrative themes. These themes, or Work Areas, were defined by the planning team at the start of the active planning session; they form the primary structure of this action plan:

A	Program Administration
B	Conditioning Plant
C	NGL Plant
D	North Slope Infrastructure
E	Pipeline & Compressors
F	Fairbanks
G	Cook Inlet – Utilities
H	Cook Inlet – Industrial
J	Possible Users
K	Permitting
L	Alternatives

ACTION PLAN for a **PREFEASIBILITY STUDY**
of the
STAND-ALONE GAS PROJECT
State of Alaska

SUMMARY

SCHEDULE CALENDAR

The schedules in this document were prepared using the Primavera software package. They were based on the precedence [logic] network developed during the planning session, and used a start date of June 22nd, 2009

The schedules use one-day time units, with five days per calendar week. No allowances were provided for statutory holidays or vacation periods, apart from a nominal two-week lost time allowance over the Christmas period.

SCHEDULE RESULTS

The as-developed schedule indicated that the Prefeasibility Report would not be finalized and issued until August 18th, 2010 – about two months beyond the milestone date of June 30th, 2010.

The development of a logic network using the VIP process tends to create a schedule that can be reduced by some amount while staying faithful to the content of the workshop and the intent of the participants. In this case, ORION*FPI's Facilitator subsequently made a total of five carefully-considered adjustments to the schedule to enable the Prefeasibility Report to be issued on June 9th. This post-workshop pattern is a normal follow-up to an VIP Session. Only one duration was changed; the balance of the improvement was achieved by creating or extending the "overlaps" between adjacent work packages.

The schedule included in this action plan incorporates these five adjustments:

ITEM	WP – or – RELATIONSHIP	ADJUSTMENT	
		From	To
1	A-08 / A-09	FF15	FF10
2	A-16 / A-17	FF10	FF5
3	E-03 / E-04	FS	SS10
4	E-04	90	70
5	E-04 / A-07	FF10	FF5

SUMMARY

SCHEDULE FORMATS

The ***Prefeasibility Master Schedule*** for the ***Stand-Alone Gas Project*** is presented in this report in three different formats:

- A 2-page tabulation of the work packages which describes the early start and finish dates, the late start and finish dates, the duration, and the total float for each activity; it is included on Pages 3-02 to 3-03 of this report.

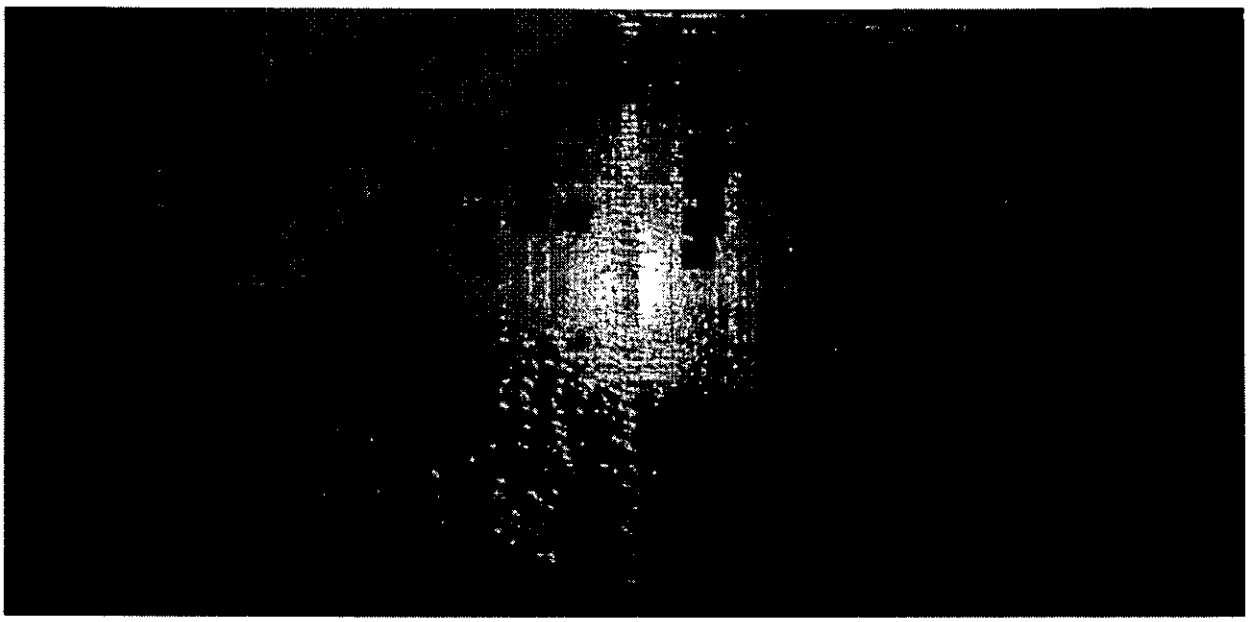
- A 4-page detailed bar chart, in color, of all work packages sorted by program areas. It is a simple and clear presentation of all of the work packages, sorted in the usual early-start, early-finish fashion; it can be found following Page 3-03.

- A large Time-Scaled Logic Diagram of all work packages, grouped by Work Areas. This format is similar to the bar charts above, but it is a large, fold-out version. It is included in a plastic pocket in the back of certain Action Plan reports, flagged by an asterisk (*) behind the names on the Letter of Transmittal.

SUMMARY

PHOTOGRAPH

The following photograph shows the logic network, as developed at the VIP Session – although not legible in this format, it will serve as a visual reminder of shape of the plan.



ACTION PLAN for a **PREFEASIBILITY STUDY**
of the
STAND-ALONE GAS PROJECT
State of Alaska

SCOPE DESCRIPTION

The scope description of each work package on the following pages is brief, but it highlights the essential content and context of the work for each activity. The key persons who attended the planning session also wrote the scope descriptions for the individual work packages. For convenience, the initials of each Planner have been placed adjacent to the scope descriptions which he or she prepared; note that the initials are not intended to imply a responsibility for execution of the work package. The write-ups have been edited by the Facilitator to achieve similarity of format and presentation, and to stay within the context of the VIP Session; in cases where the edits have been significant, the Facilitator's initials have been inserted following those of the primary author.

* * * * *

A PROJECT ADMINISTRATION

A-01 **Develop Project OrChart** (KRP)

An organization chart will be produced to show the relationship of the private and public entities participating in the project.

A-02 **Develop Points of Contact** (KRP)

An individual will be identified within each organization to handle inquiries and determine subordinate participation in the gas project.

A-03 **Develop RASCI Matrix** (KRP)

A grid system (responsibility matrix) will be established assigning roles and responsibilities within the team, bringing structure and clarity to the system, and ensuring everything the team will need to do will be taken care of. The matrix will establish interacting responsibilities regarding deliverables, processes and procedures.

A-04 **Develop Level 2 Schedules** (KJM/TDL)

This action plan includes a Level 1 (or "Master") schedule, and provides an overview of the Prefeasibility program. Level 2 schedules, including significantly more detail, will be developed with continuing reference to the Level 1 schedule, and expected inconsistencies will be rationalized. The product will be a tier of schedules, from the overview-level master schedule to the detailed Level 2 and 3 schedules that will be used to manage the program effectively.

SCOPE DESCRIPTION

A-05 **Develop Project Execution Strategy** (DGS/TDL)

An owner-oriented project execution strategy will be developed to establish the parameters within which the capital project will be implemented. To ensure the project's success, a clear vision of the purpose and objectives will be developed so that the general work activities can be identified. A project organization chart will be developed to manage the resources.

A-06 **Execute Contructability Review** (DGS)

A detailed field review of the route and conceptual plans will be performed by experienced pipeline construction personnel to identify significant factors for consideration such as routing, terrain and geotechnical issues, appropriate construction techniques and materials, logistical constraints, and cost saving measures. The proposed construction schedule will be analyzed for feasibility and significant risk factors will be identified. A similar process will address the construction of the conditioning plant and the NGL extraction plant at the north end of the pipeline, and the gas compressor stations. The results of the reviews will be fed forward into the design process.

A-07 **Develop Project Execution Plan** (DGS/TDL)

A number of detailed project execution plan components will be developed to define the execution phase of the project. Level 2 EPCM schedules will be prepared for the capital program. Critical assumptions and constraints will be identified. Quality assurance and quality control procedures will be documented. A Safety Plan will identify proper field conduct and procedures. These elements will support the development of the Basis of Estimates.

A-08 **Develop Logistics Plan** (DGS)

A Logistics Plan will be developed for the project. It will provide a time and spatial reference addressing the major elements of material and personnel transportation for the project. In conjunction with the construction schedule, likely material sources will be identified and matched with transportation modes such as air, shipping, railroads, and trucking – and perhaps sea-lifts for the facilities on the north slope. Camp and material storage locations and capacities will be identified. Water and fuel requirements will be estimated. Other material preparation or handling sites such as pipe coating and double jointing yards will be located. This plan will form the basis of transportation costs for the construction cost estimate.

SCOPE DESCRIPTION

A-09 **Establish Basis of Estimates** (DGS)

All relevant information for the pipeline, compressor stations and the conditioning plant/NGL extraction plant will be assembled and the unit costs required for the project construction cost estimate will be documented. Prevailing union labor rates and equipment rental rates will be collected. An estimating system will be set up for manpower by craft, equipment by units, fuel consumption, consumables and supplies. A crew-up type estimating system will be assembled to factor union labor rates and fringes, equipment rental rates, equipment operation and maintenance costs, cost of supplies/consumables, small tools mark-up system, applicable payroll taxes, and insurance and personnel per diem cost. Collectively, these elements will establish the basis for estimating the direct and indirect costs of the project by work area.

A-10 **Assemble Cost Estimates** (DGS)

Using the prefeasibility-level project description, unit quantities will have been determined and construction cost estimates will be prepared for the Gas Treatment Plant, the NGL Extraction Facility, and the pipeline system. Ideally, two estimates for each facility will have been prepared for comparison purposes. Conflicts will be reconciled and GTP and NGL costs will be compiled with pipeline costs into one package. The estimates that were developed by work area will be assembled and reviewed to avoid gaps and overlaps.

A-11 **Establish Commercial Parameters** (EJN)

A listing of pipeline commercial parameters will be developed including return on investment, debt-equity ratio, depreciation methodology, financing costs, pipeline access terms, and methods for allocation of cost overruns. To develop these parameters, a comparison to other pipelines will be established for relevant benchmarks. The overall return of the pipeline investment will be assessed to ensure the pipeline investment can be financed.

A-12 **Estimate Reference Project Cost** (DGS)

The "reference project" has been defined as a no-frills baseline (see sketch on Page 1-06). The project cost will be calculated from the sum of the component costs (design costs, owner-supplied long-lead time items, infrastructure development, project management, quality assurance, contingency, construction, environmental restoration and as-built costs).

SCOPE DESCRIPTION

A-13 **Execute Reference Project Cost Reviews** (KJM)

An interactive workshop will be prepared for review of the capital costs developed for the reference case. The workshop participants will have a background in developing detailed greenfield pipeline and related facility cost estimates. The workshop will have the unit cost basis of estimate, the work breakdown, crew development, as well as related production factors. As appropriate, the information will be compared and calibrated against other project cost estimates and/or relevant cost estimate items. A similar review will be conducted for evaluation of the operational costs.

A-14 **Execute Reference Project Commercial Reviews** (EJN)

An expert review of commercial terms will be performed to assess if the commercial parameters selected are appropriate. An estimation of the gas treatment and pipeline costs will be presented at this review.

A-15 **Develop Project Scenario Matrix** (KJM)

Using developed information from prior work tasks, the relevant project data and completed costs will be assembled into a scenario matrix that will succinctly describe the base elements of the project, especially as they relate to the cost of service of the project. A narrative description of significant items in the completed matrix will be developed with reference to reports that further explain these differences, especially as these items may affect the cost of service.

A-16 **Develop Alternate Scenario Cost Estimates** (KJM)

Using the same format as for the reference case, the completed information for the studied alternatives will be assembled into an analogous matrix. Along with this, a narrative description of significant differences in the completed matrix will be developed with reference to reports that will further explain these differences.

A-17 **Develop Draft Prefeasibility Report** (KJM)

The information from work tasks will be compiled into a draft prefeasibility report on an evolutionary basis throughout the study period. The report will reference completed prior reports as appropriate and summarize the findings. It will explain the matrix for comparison of the reference and alternate scenarios and will outline the significant conclusions.

A-18 **Review Draft Prefeasibility Report** (KJM)

A review of the draft prefeasibility report will be completed by the entire Working Group as well as interested personnel in the Client Group. The comments and edits will be assembled in a spreadsheet with resolution of each item noted.

SCOPE DESCRIPTION

A-19 **Finalize & Issue Prefeasibility Report** (KJM)

As appropriate, the developed actions from the review of the draft report will be incorporated into the final document. The report will be attributed with appropriate project description as a contract deliverable and prepared for further distribution as a paper report and an electronic version.

SCOPE DESCRIPTION

B CONDITIONING PLANT

B-01 Develop Conditioning Design Basis (WAW)

A design basis will be developed to describe major components of a Gas Conditioning Plant to remove carbon dioxide, hydrogen sulfide and water from source gas and deliver it to the inlet of the NGL Extraction Plant on the North Slope per the reference case scenario. Flow rates and compositions of all GCP sources, products and by-products will be identified. Applicable codes and standards will be identified. Facilities and supporting infrastructure will be described to a level only as required to support project permitting and cost estimation.

B-02 Develop Conditioning Plant Specifications (WAW)

Specifications for major components of the Gas Conditioning Plant will be developed from information in the GCP design basis. Specifications will be developed in conjunction with cost estimation and project permitting only to the detail required to support these activities. Specifications will include a block flow diagram and process flow diagram with overall material balance including fuel. A preliminary site plan showing connections to existing infrastructure will be developed. A preliminary design will not be done, but a. preliminary module layout will be developed.

B-03 Estimate Conditioning Plant Costs (WAW)

A +/- 50% capital cost estimate, with a corresponding non-fuel operating cost estimate, will be developed for the Gas Conditioning Plant based upon GCP specifications. Capital costs will be based on use of modules typical of North Slope construction and will include module transport to the site.

SCOPE DESCRIPTION

C NGL EXTRACTION

C-01 Establish NGL Extraction Design Basis (WAW)

A design basis will be developed to describe major components of the NGL Extraction Plant to be located immediately downstream of the Gas Conditioning Plant on the North Slope per the reference case. The design basis will include all facilities necessary to deliver compressed and chilled utility grade natural gas to the pipeline inlet. Flow rates and compositions of all feed, product, and by-product streams will be identified. Applicable codes and standards will be identified. Facilities and supporting infrastructure will be described to a level only as required to support project permitting and cost estimation.

C-02 Develop NGL Extraction Specifications (WAW)

Specifications for major components of the NGL Extraction Plant will be developed from information in the NGL plant design basis. Specifications will be developed in conjunction with cost estimation and project permitting only to the detail required to support these activities. Specifications will include a block flow diagram and process flow diagram with overall material balance including fuel. A rough site plan showing module layout and connections to existing infrastructure will be developed. A preliminary design will not be done.

C-03 Estimate NGL Extraction Costs (WAW)

A ±50% capital cost estimate with corresponding non-fuel operating cost estimate will be developed for the NGL Extraction Plant based upon NGL Plant specifications. Capital costs will be based on use of modules typical of North Slope construction and will include module transport to the site.

SCOPE DESCRIPTION

D NORTH SLOPE INFRASTRUCTURE

D-01 Develop North Slope Infrastructure Design Basis (DGS)

A design basis will be developed for the north slope infrastructure that will be associated with the conditioning plant and the NGL extraction plant. It will follow standard practice for BP operations near the existing gas handling facilities. A review of these design standards will be performed in consultation with BP.

D-02 Develop North Slope Infrastructure Concepts (DGS)

Infrastructure design will support the main GTP and NGL Extraction Facility complex and will be dependent on the layout of those facilities. Features that will drive the design include main and injection pipeline routing, access to the road system and power grid, proximity to existing facilities, and permitting issues. Photogrammetric level mapping will be required for the layouts. The conceptual design process will be iterative and may require several cycles and several concepts to settle the design. A basic cost estimate will be developed to aid in decision making, but the main facility cost will overshadow infrastructure cost.

D-03 Develop North Slope Infrastructure Design (DGS)

Prefeasibility-level design efforts will involve a modest improvement of the conceptual level design. Some local, up-to-date as-builts may be required to determine tie-in points of existing facilities. Plans will be developed to the level necessary to determine quantity takeoffs.

D-04 Estimate North Slope Infrastructure Costs (DGS)

For the associated pipelines, pads, roads, injection wells, power generation, and other necessary infrastructure facilities, relevant unit quantities will be determined and tabulated. Capital and operating costs will be calculated on a unit cost basis from historical cost databases for the North Slope.

SCOPE DESCRIPTION

E PIPELINE & COMPRESSORS

E-01 **Develop Gas Market Projection** (JJL)

A gas-needs market projection will be prepared for use in sizing the Alaska Stand-Alone Gas Pipeline. Information from this summary will be used to determine the throughput and ramp-up requirements of the system. In general, the pipeline throughput will be the difference between the estimated market projections (Fairbanks/Interior AK, Cook Inlet Utilities, LNG-Nikiski, Agrium-Nikiski, and other potential prospects) and existing gas contracts for Cook Inlet area gas, projected annually over the life of the pipeline. One key assumption is that annual usage will be normalized across each year through storage adequate to address peak usage and backup supply needs.

E-02 **Establish Reference Flow Rate** (WAW)

A schedule of annual pipeline flow rates for the reference case will be developed for use in pipeline hydraulic simulations and specification of attendant gas handling facilities. Annual pipeline flow will be estimated as the difference between projected Cook Inlet demand and supply, both of which will be developed via other items in the Action Plan. Annual flows will be expressed in volumetric and thermal (BTU) rates to allow adjustment based on pipeline gas heating value. Reference case flow will include gas to Fairbanks.

E-03 **Establish Pipeline Design Basis** (MCM)

A pipeline design basis will be established for a reference case from Prudhoe Bay to Cook Inlet. The basis for design will address the basic criteria and general guidelines under which the gas pipeline will be designed and constructed. The document will include average daily gas flow rate, pipe diameter, operating pressure, grade of steel, compressor and metering facilities, routing criteria, environmental data, hydrologic data, geotechnical data, construction and operational philosophy, construction scheduling and seasonal constraints. Additionally, the design basis will include a listing of applicable regulations, codes, and standards.

SCOPE DESCRIPTION

E-04 **Design Pipeline System** (MCM)

The pipeline conceptual design will utilize the pipeline design basis to complete a mile-by-mile conceptual design for input to a +/- 30% defensible cost estimate. The pipeline design will be based on terrain unit/landform mapping, permafrost mapping, digital elevation model, longitudinal slopes, cross slopes, and other derived data. The mile-by-mile design will be summarized to include compressor station locations, recommended construction season, anticipated soil and thermal conditions, pressure profile, temperature profile, ditch type, erosion control, civil grading requirements and quantities, material sites, temporary facilities sites, river crossings, road crossings, facility crossings, and an assessment of geohazards. The format of the final document will be coordinated with the pipeline cost estimate team, but will include alignment sheets and design segment summary.

E-05 **Estimate Pipeline System Costs** (MCM)

A prefeasibility level cost estimate will be developed using the mile-by-mile pipeline design. The pipeline design will be provided as alignment sheets and in a spreadsheet format to facilitate the development of a defensible cost estimate. The cost estimate format will be itemized and as a crewed-up estimate.

SCOPE DESCRIPTION

F FAIRBANKS

F-01 Develop Fairbanks & Interior Projection (JJL)

A summary of the expected gas use for Fairbanks and interior Alaska will be assembled to be used for input to the overall gas needs for the Alaska Stand-Alone Gas Pipeline. Estimation of loads for the Fairbanks area will be based on quantities provided directly from the Fairbanks area utilities (Fairbanks Natural Gas, Golden Valley Electric Association, University of Alaska Fairbanks, and the local military bases), a study of the potential gas customers along each potential pipeline corridor (Parks Highway and Richardson/Glenn Highway), and work that has been compiled by Northern Economics. Information from this projection will feed into the overall market projection for the project.

SCOPE DESCRIPTION

G COOK INLET - UTILITIES

G-01 Develop Cook Inlet Utilities Projection (JJL)

A summary of the expected gas use in the Cook Inlet area will be prepared for use in estimating the overall gas needs for the Alaska Stand-Alone Gas Pipeline. This summary will include demand projections that have been assembled from ENSTAR and the local power utilities (Matanuska Electric Association, Chugach Electric Association, Municipal Light and Power, and Homer Electric Association). Information from this projection will feed into the overall market projection for the project.

SCOPE DESCRIPTION

H COOK INLET - INDUSTRIAL

H-01 Establish Projection Criteria (JJL)

Criteria will be established to use as a guideline when projecting the gas requirements for areas where gas service will be provided from the proposed Alaska Stand-Alone Gas Pipeline. The criteria will establish the assumed user growth rates as well as a build-out schedule. Assumptions are that the gas storage necessary to allow utility loads to be consistent throughout the year will be in place.

H-02 Develop Agrium Projection (SMW)

A preliminary plan will be developed that will establishe baseline projections for gas usage at the Agrium's Kenai Nitrogen Operations facility. The plan will include daily as well as annual projections and corresponding delivery schedules.

H-03 Develop LNG Export Projection (DMC)

The potential capacity of the LNG Plant that could be available beginning in the 2016 timeframe will be determined. It will be assumed that the LNG Plant could take supplies from either the pipeline from the North Slope or Cook Inlet area fields. The described capacity will reflect what could be achieved assuming that necessary investments are made and customer support through appropriate commercial arrangements.

H-04 Develop Cook Inlet Supply Projection (JJL)

A summary of Cook Inlet gas reserves will be assembled for use in the determination of gas needs for south-central and interior Alaska. Data will be first compiled from current reserve information sources. Second, future supply/reserve projections will be developed by assigning a probability to geotechnical estimates. This information will be used to help determine the gas flow ramp-up for the Alaska Stand-Alone Gas Pipeline.

SCOPE DESCRIPTION

J POSSIBLE USERS

J-01 **Develop Possible Users Projection** (KRP)

Possible major natural gas users not already active in the Stand-Alone Gas Project will be identified. The associated gas specifications and projected annual consumption will be determined. Possible delivery methods and infrastructure needed to deliver the gas will be identified. It is anticipated this data will be used for inclusion in a ramp-up schedule for the pipeline under the future possibility category.

SCOPE DESCRIPTION

K PERMITTING

K-01 **Execute Alternative Routing Analysis** (HAN)

There are two major pipeline route alternatives south of Fairbanks, following either the Richardson Highway or the Parks Highway. An alternative routing analysis will compare the capital costs, people served, and potential environmental impacts of each route and a report will be produced.

K-02 **Define Alternatives** (HAN)

A specific report along with drawings will be produced to identify localized routing options. Those areas include the Minto Flats area, Denaili Park area and Sheep Mountain. The best route option will be determined.

K-03 **Establish Reference Project Footprint** (HAN)

A pipeline corridor will be established from Prudhoe Bay to the Cook Inlet. This corridor will be 2500 ft wide and will include both major pipeline route alternatives. Support facilities such as compressor stations, construction camps, and lay-down areas will be described but not specifically sited.

K-04 **Develop Project Description** (HAN)

A permitting level project description will be prepared to present an overview of the project including alternatives considered and rejected, pipeline routing, and general description of support facilities needed to operate the pipeline. In addition, this document will describe the general approach to construction and it will include a schedule.

K-05 **Develop Regulatory & Environmental Strategy** (HAN)

A report outlining the Permitting Plan for the project will be produced. The key element will be the role of the FERC. The second major issue will be the level of detail needed for information during the EIS process.

K-06 **Request FERC Jurisdictional Determination** (HAN)

A formal request will be made to the FERC to define their jurisdiction.

K-07 **Obtain EIS Memorandum of Understanding** (HAN)

A MOU will be written between the Federal lead agency and the applicant. The MOU will define how the permit process will be managed, the schedule, and how the other Federal and State agencies will be involved in the process.

SCOPE DESCRIPTION

K-08 **Execute EIS Process** (HAN)

The EIS process will include scoping, preparation of a draft and final EIS, and a record of the decision.

K-09 **Estimate Enviro-Permitting Costs** (KRP)

The scope of major environmental permitting activities will be established according to the outcome of FERC versus RCA determination. Ongoing environmental tasks required for permit maintenance during the operating phase of the pipe line will be identified. The level of project decommissioning for final close-out will be described. Estimates will be prepared for the initial permitting for capital cost purposes, the ongoing environmental costs for operating cost purposes, and the closure costs. The level of precision will be the same as the Stand-Alone Gas Project Report. The estimates will be included in the capital estimates.

SCOPE DESCRIPTION

L ALTERNATIVES

L-01 **Develop Liquid Demand Forecast** (MWM)

A liquid demand forecast will be developed that will describe a most likely 30-year outlook for in-State liquid and export opportunities. The forecast will include high-side and low-side outlooks based on existing demand and the probability of additional demand developing. The liquid forecast will also consider the potential location of each potential demand.

L-02 **Develop Alternate Gas Market Projections** (DMC)

A projection of possible markets in which to place ethane will be determined based on the potential volumes that could be supplied by the Stand-Alone Gas Project. Both domestic and export markets will be considered. Existing methane markets will be investigated as to their ability to take this heavier hydrocarbon component.

L-03 **Develop Alternate Project Scenarios** (WAW)

Alternate project scenarios to the reference case will be developed in conjunction with the Commercial Team with the goal of enhancing project viability. Alternates will address gas markets and potentially new gas supplies in the interior of Alaska as well as transport of North Slope NGL if this becomes available in the future. Overall project material balances will be developed for alternate scenarios. Capital and operating costs for alternate scenarios will be factored from capital costs developed for the reference case. New facility capital and operating costs will be developed if alternatives differ significantly from the reference case.

SCHEDULE

SCHEDULE FORMATS

The ***Prefeasibility Master Schedule*** for the ***Stand-Alone Gas Project*** is presented in this report in three different formats:

- A 2-page tabulation of the work packages which describes the early start and finish dates, the late start and finish dates, the duration, and the total float for each activity; it is included on Pages 3-02 to 3-03 of this report.

- A 4-page detailed bar chart, in color, of all work packages sorted by program areas. It is a simple and clear presentation of all of the work packages, sorted in the usual early-start, early-finish fashion; it can be found following Page 3-03.

- A large Time-Scaled Logic Diagram of all work packages, grouped by Work Areas. This format is similar to the bar charts above, but it is a large, fold-out version. It is included in a plastic pocket in the back of certain Action Plan reports, flagged by an asterisk (*) behind the names on the Letter of Transmittal.

ACTION PLAN for a **PREFEASIBILITY STUDY**

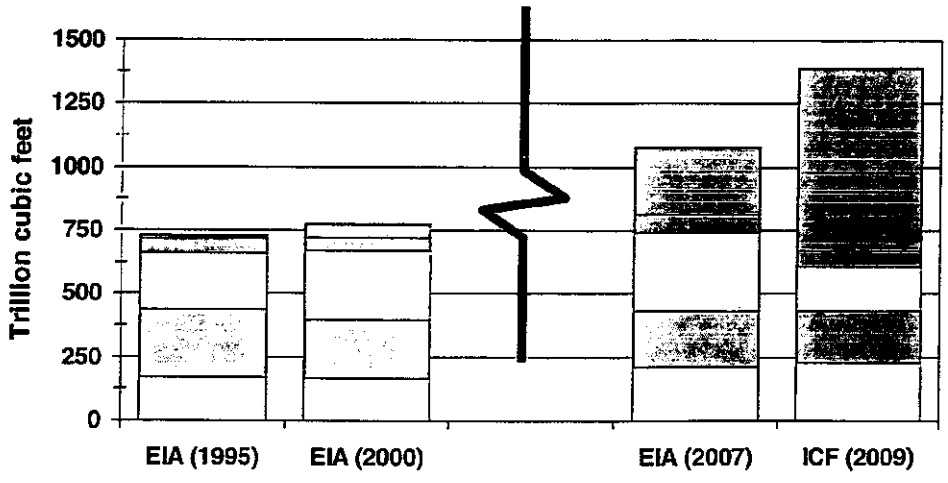
The Future of Alaska's Natural Gas

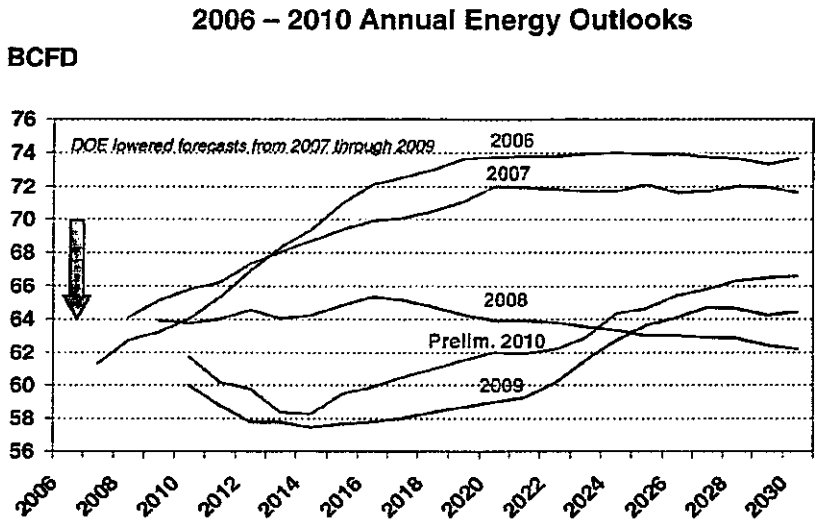
By Ted Stevens
March 12, 2010
Briefing to the members of
Commonwealth North

U.S. Natural Gas Reserves and Resources
(Excluding Alaska, Undiscovered and Associated Gas)



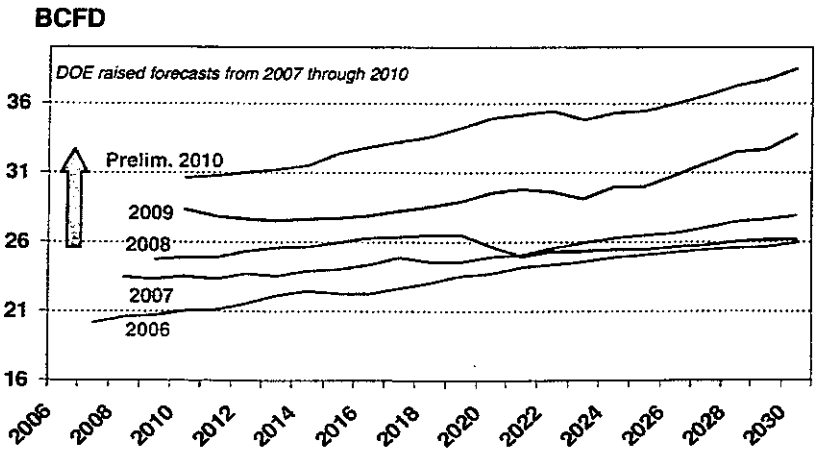
"Proven" = SEC Proven reserves; all other categories shown are technically recoverable resources
EIA = Data from U.S. Department of Energy, Energy Information Agency "Annual Energy Outlook"; data are as of January 1 of year indicated; 2007 data published in 2009 report
ICF = Data from March 2009 "ICG U.S. Play Level Gas Development Resource Cost" report

DOE U.S. Natural Gas Demand Forecasts



Source: U.S. Department of Energy, EIA Annual Energy Outlooks, 2006-2010

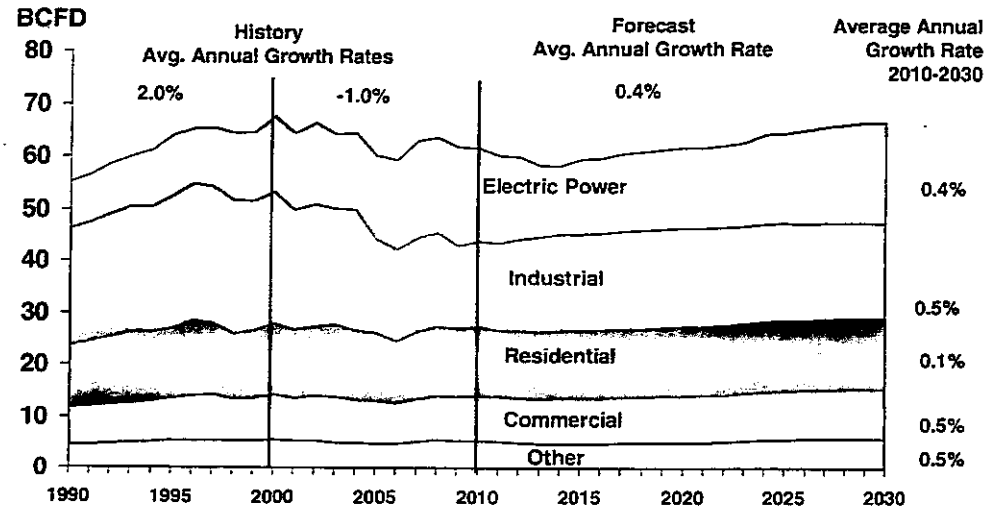
DOE U.S. Lower 48 Unconventional Natural Gas Production Forecasts



Source: U.S. Department of Energy, EIA Annual Energy Outlooks, 2006-2010

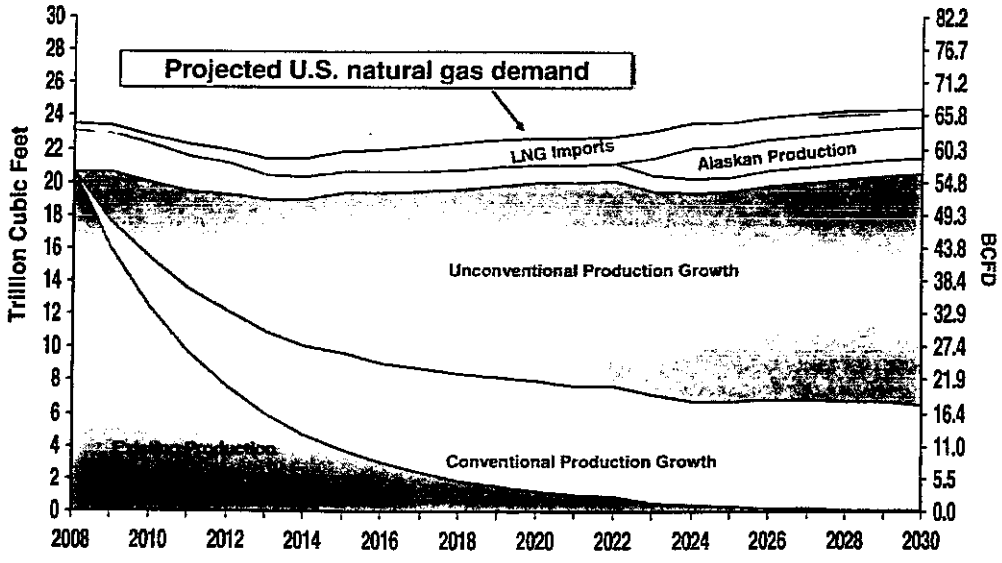
U.S. Natural Gas Demand By Sector

Case w/o Carbon Regulation



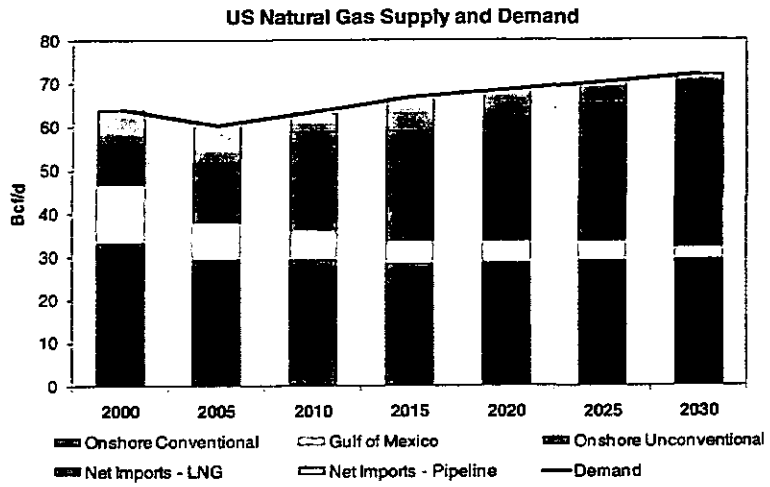
Source: U.S. DOE, EIA , Annual Energy Outlook 2010

Natural Gas Supply Sources



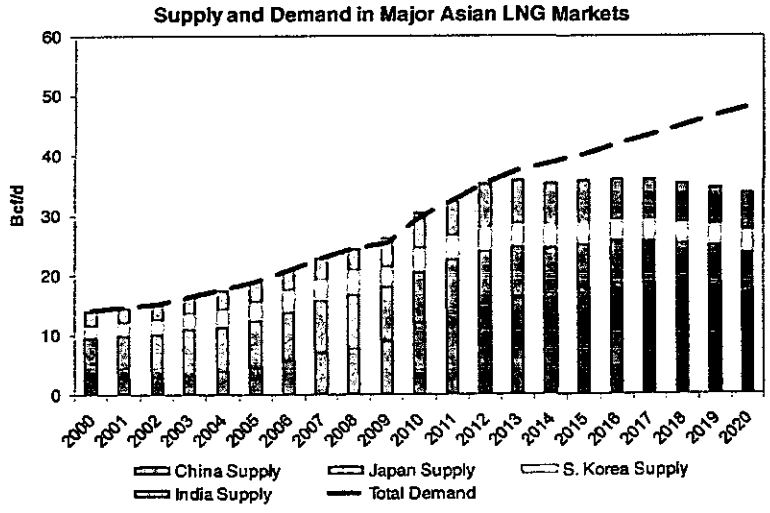
Source: U.S. DOE, EIA Annual Energy Outlook, 2010

US Production Growth Will Continue, Driven by Unconventional Gas



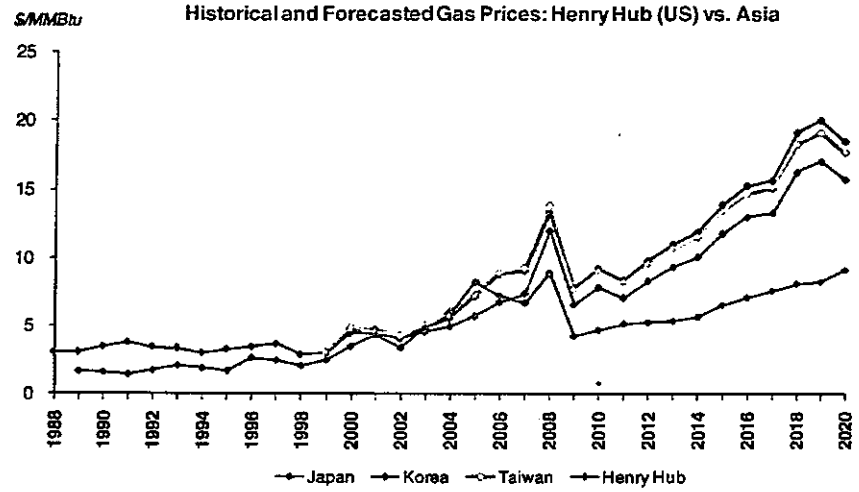
- Growth in unconventional gas production is expected to allow the US to meet demand despite declines in conventional onshore and the Gulf of Mexico (GOM)
- LNG imports are expected to grow as pipeline imports from Canada decline, but the overall need for imports is forecasted to decline

Asia: Forecasted Gas Supply and Demand



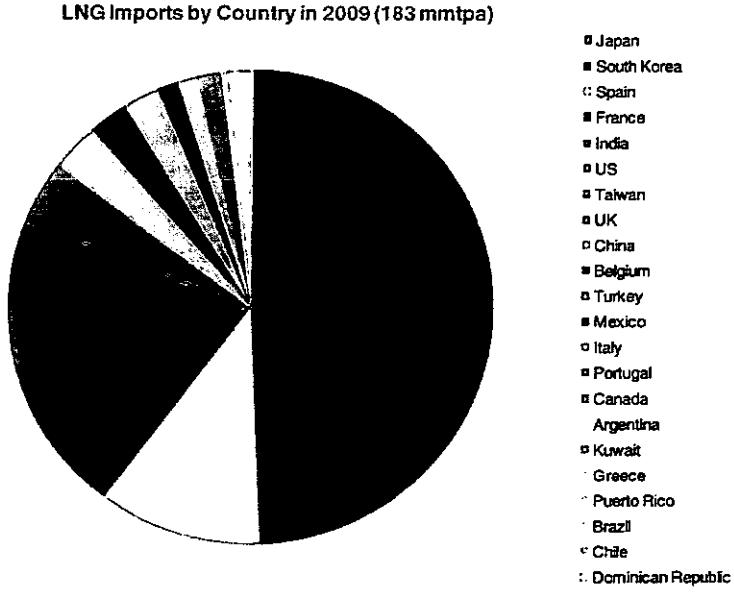
- Overall, the gap between forecasted demand and currently contracted supply in the major Pacific Basin LNG markets is ~14 bcf/d by 2020

Higher Gas Prices in Asia Make LNG the Better Value Proposition

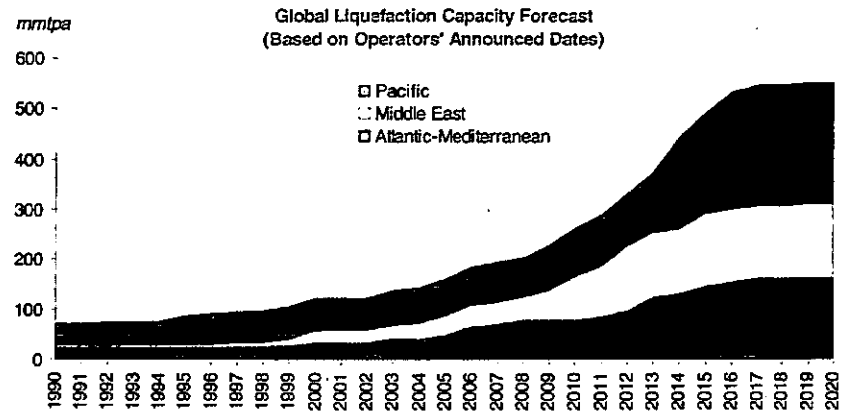


- In the US, gas is a traded commodity with robust growth on the supply side, while in Asia LNG prices are defined by long-term contracts linked to the price of oil
- The price differential between the US and Japan, currently ~$2.00/MMBtu, is forecasted to grow to ~$6.00-$8.00/MMBtu by 2020

Japan and South Korea Import Nearly Half of the World's LNG; China and India are the Fastest-Growing Markets

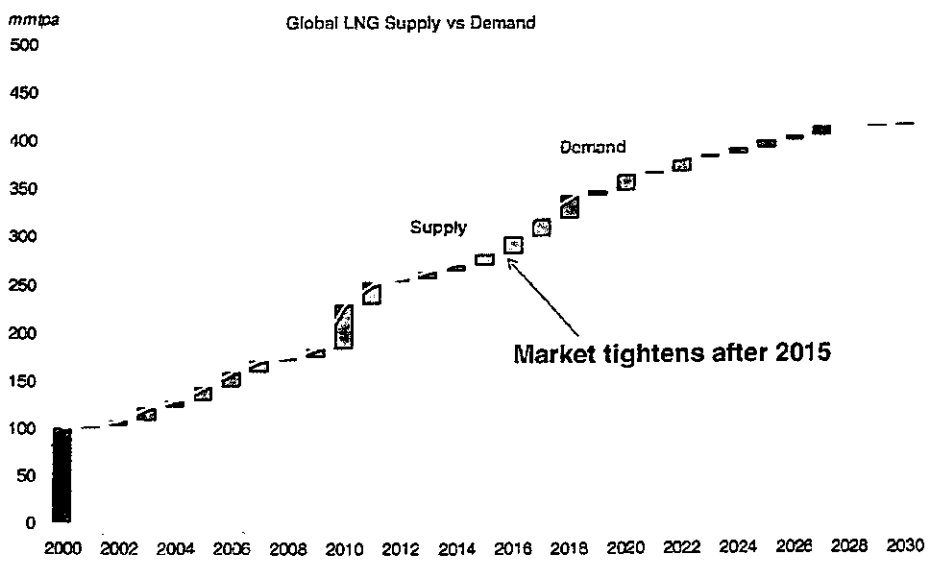


Global Liquefaction Capacity Forecast

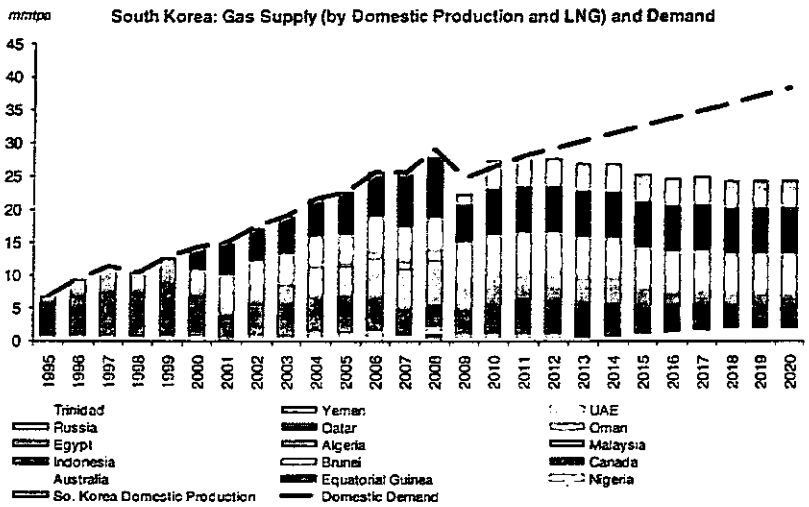


According to company plans, global liquefaction capacity will grow from 262 mmtpa in 2010 to over 550 mmtpa in 2020

LNG Supply / Demand Balance

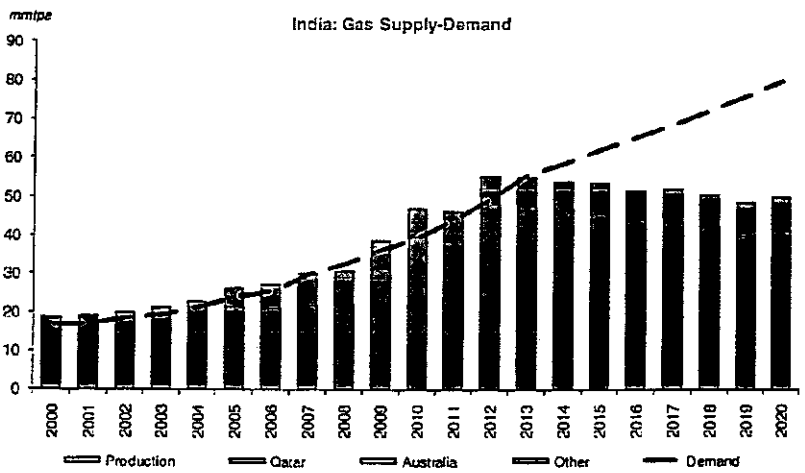


South Korea: Forecasted Gas Supply and Demand



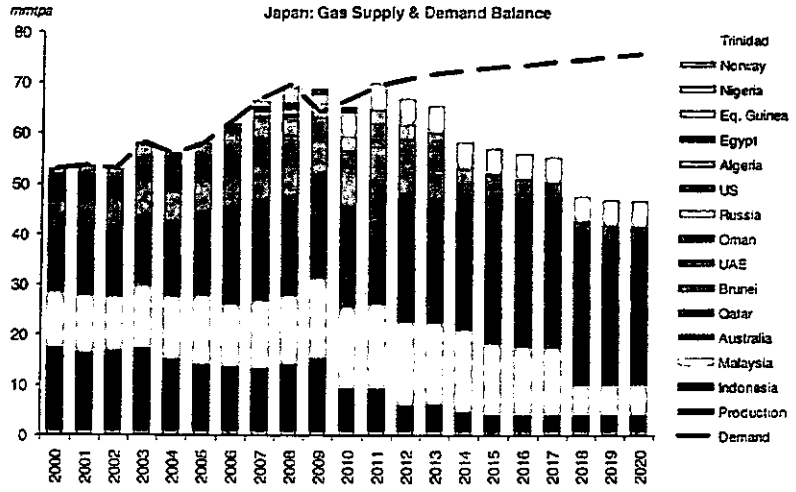
- Korea is supplied almost exclusively by LNG, which it buys primarily under long-term contracts from a variety of suppliers
- Contracted LNG supply declines after 2011, leaving a projected gap of ~14 mmtpa (~1.8 bcf/d) by 2020

India: Forecasted Gas Supply and Demand



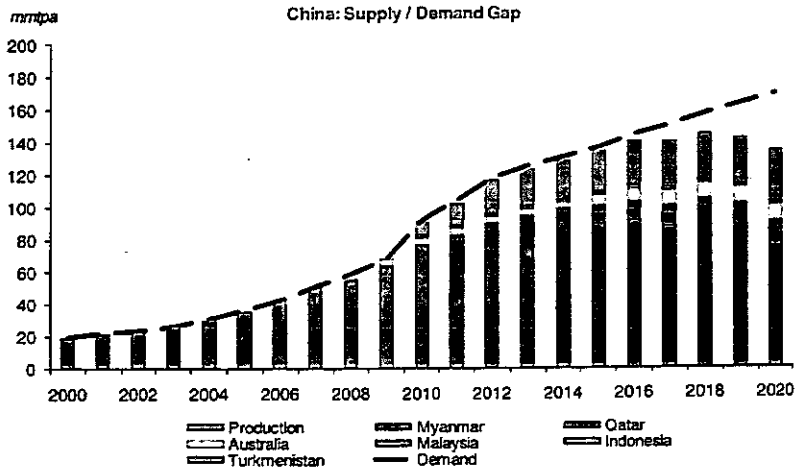
- Indian gas production is rising via Reliance's KG Basin fields, limiting short-term LNG demand
- However, a gap of ~30 mmtpa (~4 bcf/d) is forecasted by 2020

Japan: Forecasted Gas Supply and Demand



- Japan is supplied almost exclusively by LNG, which it buys primarily under long-term contracts from a variety of suppliers (including Alaska)
- Contracted LNG supply declines after 2011, leaving a projected gap of ~44 mmtpa (~5.8 bcf/d) by 2020

China: Forecasted Gas Supply and Demand



- Chinese domestic gas production is forecasted to plateau at ~80 mmtpa (~11 bcf/d)
- Contracted gas imports are increasing, but a supply gap begins to develop after 2015, reaching ~35 mmtpa (~4.6 bcf/d) by 2020

The Future of Alaska's Natural Gas

By Ted Stevens

March 12, 2010

Briefing to the members of
Commonwealth North

SEAN PARNELL
Governor

P.O. Box 110001
Juneau, Alaska 99811-0001
(907) 465-3500
Fax (907) 465-3532

STATE OF ALASKA
OFFICE OF THE GOVERNOR

February 19, 2010

Alaska State Legislature
Alaska State Capitol
Juneau, AK 99801

Dear Legislators,

This is my first opportunity to address a full month of program activity for the in-state gas line project. The new reporting format below is designed to help you easily track activities and progress. As always, I welcome your feedback.

In January, I was focused on the necessary review of this complex program, and the work team remained focused on moving critical action items forward. I congratulate them for their diligence in staying on task, on time, and under budget.

In my initial review, I identified a number of project risks requiring immediate attention. As a result, a significant amount of time and effort was expended to reduce or mitigate any potential detrimental affects posed by the risks. Nevertheless, the team worked hard to stay on task, and to date, no deadlines or milestones were missed as a result of this extended transition period. I am pleased to report that forward progress was significant and we remain on track.

The outline below provides an executive summary of in-state gas project activities that occurred during the month of January. Furthermore, I have included an overview of planned project activities over the coming months.

I. **Project Results for January 2010:**

- We are making significant progress on the final Project Description. This involves calculating the pipeline configurations and material quantities in preparation for pipeline and facilities cost estimating phase, beginning on March 15. Also, development of capital cost quantity calculations, analysis of civil quantity, construction logistics, and material costs have been initiated.

- Subcontractors are working on finalizing facilities schematic variations that will provide data for cost modeling efforts by Larkspur. This information is the first estimate of over 40 separate facilities construction cost estimates that will feed into the final project cost matrix.

- The project team has continued work for the Environmental Impact Study (EIS) being conducted under the oversight of the U.S. Army Corps of Engineers. The information that has been collected and updated includes extensive landowner and stakeholder databases, the transcripts and comments of all scoping meetings held, and the drafting of the scoping report.

- Coordination for establishing an agreement with the Office of History and Archaeology so that we may share our Alaska Heritage Resource Survey data.

- Continued to incorporate data into the electronic library for use by contractors and regulators.

The project expenses for the month of January were $511,872. Total expenditures for the project to date are $3,175,710.

II. Below is an overview of planned activities:

- Finalize data agreement with ENSTAR Natural Gas Company; coordinate permitting and Right-of-Way (ROW) application efforts with the Alaska Natural Gas Development Authority and work with federal and State regulatory bodies to minimize duplication of effort; identify additional data-mining opportunities so pertinent information from previous permitting efforts is used where appropriate (these two activities have the potential to save over a million dollars of State funds); and prepare work plans for summer 2010 environmental and geohazards field work.

- Hold two-day workshop to calibrate cost of transportation analysis and further refine remaining FY10 program focus; re-initiate and broaden contacts with commercial working group to identify potential upstream supply and downstream market opportunities; meet with potential pipeline companies to overview program progress and solicit feedback; and initiate cost of service modeling and refine construction schedules for commercial and economic feasibility modeling.

- Support on-going EIS and ROW activity and address project concerns and questions; continue to refine project and permit schedules as necessary; address scoping extension reports; provide background for purpose and need reports; finalize draft wetlands report; and finalize contract for new engineering project oversight manager.

Like any review of this magnitude, communication and collaboration with other agencies will be a huge component for success. The Governor's goal of consistently evaluating all potential energy projects will be accomplished through attention to details and diligence in providing consistent peer-reviewed work product. Focused plans and transparency of scope in the near term will ultimately pay significant dividends as Alaska defines its bright energy future.

Sincerely,

Robert Swenson
Project Manager
Alaska In-State Natural Gas Line

Enclosures

Alaska In-State Gas Pipeline Project January 2010

Table of Contents

Summary of Project Activities for January 2010 1
ASRC Energy Services – Project Activity Detail – January 2010 2
Michael Baker, Inc. – Project Activity Detail – January 2010 4
ENTRIX, Inc. – Project Activity Report – January 2010 6

Summary of Project Activities for January 2010

ASRC

- Continued work on the Environmental Impact Study throughout the month of January.
- Plans for the 2010 field seasons and pre-mapping completed and submitted for approval.
- Coordinated to establish agreement from the Office of History and Archaeology so that we may share our Alaska Heritage Resource Survey data.
- Continued to incorporate data into the electronic library for use by contractors and regulators.
- Finalizing draft Wetland Technical Report.

Baker

- Significant progress was made on the final Project Description. This involved the calculation of the pipeline configurations and material quantities in preparation for beginning the pipeline cost estimating phase beginning on March 15. This included:
    - developing capital cost quantity calculations;
    - preparing spreadsheets for distribution to capital cost estimators and GIS; and
    - analyzing civil quantity, pipeline class locations, ditch load locations, buoyancy control, construction logistics, material costs.
- Subcontractors worked to finalize facilities schematic variations that will provide data for cost modeling efforts by Larkspur. They have completed the first estimate of over 40 separate facilities construction cost estimates that will feed into the project cost matrix.
- Moved forward to request authorization Task 10, EIS Support to ensure adequate response to the requests for analysis, data and GIS support of the EIS effort.
- Ongoing property ownership data gathering.
- Worked to incorporate property ownership data into GIS database.
- Worked to incorporate Harvested JPO Data into Data Library.

ENTRIX

- Compiled transcripts from scoping meetings.

4136

- Uploaded comments and scoping meeting transcripts to stakeholder database.
- Cleaned up landowner mailing list to a usable document.
- Uploaded mailings and email information into stakeholder database.
- Compiled existing information into draft scoping report.
- Identified issues that need clarification for project description, purpose and need, resource analysis.
- Identified, located, acquired, and reviewed project and resources data; began data gap analysis.

ASRC Energy Services – Project Activity Detail – January 2010
Stand Alone Pipeline – Environmental Support

Milestones:

- Participated in weekly Project Team team meetings.
- Attended USACE EIS scoping meetings as the ADNR consultant representative.
- Continued to work with ENTRIX to provide data and information for the EIS.

TASK LEVEL DETAILS

Task 1 –	**Project Management**
Current Activity:	Attend weekly Project Team meetings with engineering and environmental. Track USACE EIS scoping meetings as the ADNR consultant representative. Provide budgetary information presentation by State Project staff to the Office of Management and Budget.
Look Ahead:	Continue to be available to BLM, State of Alaska Joint Pipeline Office, and USACE regarding draft permit applications and questions regarding information provided. Task orders for pre-planning of 2010 field seasons and pre-mapping submitted to ADNR for approval. Work on budget for 2010-2011 legislative approval process.
Concerns:	**Resolve the data ownership with ENSTAR.** **Clarification from FERC on jurisdictional opinion.** Approval of task orders so that planning for the 2010 wetland, cultural resources, stream studies, and lake surveys will be adequately resourced.

Task 2 –	**Cultural Resources**
Current Activity:	Communication with Paul Lawrence, Stephen R. Braund and Associates, was initiated and has continued into February. SRBA is working on the cultural resource piece for the USACE EIS. Working on the 2009 report and predictive model with Michael Yarborough. Coordinated on establishing agreement from the Office of History and Archaeology so that we may share our Alaska Heritage Resource Survey data.
Look Ahead:	Continue to work with CRC on the predictive model, and circling back with CRC and GIS where needed. Lack of tools and need for GIS to provide GIS model so

4137

CRC and Shawna can develop and test the predictive model. Jason Rogers, is waiting for a first run of at least a test area in order to exam the applicability of variables he defined, and to draft a narrative for the model. GIS had just started in December, and lacked necessary data. Looking into a GIS module that would do a *chi* square test on the model.

Task 3 – Wetlands Analysis

Current Activity: Continue work on draft Wetland Technical Report, which should be available in February 2010. Prepared 2010 Field Work Order Tasks. Prepared PowerPoint slide presentation for Bob Swenson held at Baker's office.
Met with USACE Project Manager to discuss permit application.

Look Ahead: Continue to coordinate with the USACE re the draft permit.

Task 4 – Project Library

Current Activity: Completed library tasks assigned for this task order.

Look Ahead: New task order and budget, discussed in January 2010. Determination not made yes as to whether more work is required to support EIS 3rd Party Contractor.
All library reference materials are ready to be entered into the SharePoint system.

Concerns: Need to discuss copyright requirements for hard-copy and access to library information with ADNR.

Task 5 – Permitting

Current Activity: Continue to support ADNR ROW permits and Section 404 permits with BLM, ADNR, and USACE as needed.

Look Ahead: Will attend and present the project description as the ADNR consultant representative.

Concerns: None at this time.

Task 6 – GIS Support

Current Activity: Task Work Order approved by ADNR in late November. Purpose is to support ADNR through permitting and EIS as needed/requested.

Look Ahead: Land ownership information is supposed to be available in early February from M. Baker, Jr. Work with M. Baker, Jr. to ensure that proper data transfer of GIS information is made to ENTRIX.

Concerns: None at this time.

4138

Michael Baker, Inc. - Project Activity Detail – January 2010

Milestones

Past Monthly Narrative

Task 1 Project Management:

- Ongoing Internal Project Coordination/Planning
- Weekly Project Meetings
- Accounting activities, preparing invoices
- Preparing sub-consulting scopes, schedules and budgets
- Reviewing sub-invoices
- Reviewing project expenditures, budget
- Reporting activities

Task 2 Data Management/Library:

- Data gathering from federal, state and borough databases
- Geo database compilation
- Quality control activities
- Ongoing GIS database layers; material sites, land ownership and cost of service elements
- Ongoing JPO ANGTS data evaluation / incorporation into GIS

Task 3 Outreach:

- Legislative Outreach Support

Task 4 Alternative Analysis:

- Complete

Task 5 Supply/Demand Analysis:

- Reviewed TCPL Report
- Reviewed DGGS Report

Task 6 Project Description:

- Additional Mapping Discussions
- Developing capital cost quantity calculations
- Preparing spreadsheets for distribution to capital cost estimators and GIS.
- Analyzing civil quantity, pipeline class locations, ditch load locations, buoyancy control, construction logistics, material costs

Task 7 Cost of Service:

- Gathering and incorporating data for cost modeling
- Formatting Cost Estimating System
- Weekly COS team progress meetings
- Ongoing Facilities Scenario Modeling by Doyon Emerald
- Ongoing facilities cost estimate by Larkspur

Task 8 ROW Application:

- Ongoing property ownership data gathering
- Incorporating property ownership data into GIS database

Task 9 Construction Planning: NTP not received

Task 10 EIS Support: NTP not received

Forecast Narrative

Task 1 Project Management:

- Ongoing Internal Project Coordination/Planning
- Refine Project Schedule, Refine Scope
- Weekly Project Meetings

Task 2 Data Management/Library:

- Incorporating Harvested JPO Data into Data Library
- Data Management Committee ongoing meeting
- Building GIS Database
- Sharepoint Updating and Maintenance

Task 3 Outreach:

- Support USACOE activities and requests

Task 4 Alternative Analysis:

- Complete

Task 5 Supply/Demand Analysis:

- Redevelop scope to incorporate NGL

Task 6 Project Description:

- Compiling final project description due 7/1/10

Task 7 Cost of Service:

- Gathering and incorporating data for cost modeling
- Formatting Cost Estimating System
- Weekly COS team progress meetings
- Ongoing Facilities Scenario Modeling by Doyon Emerald
- Ongoing facilities cost estimate by Larkspur

Task 8 ROW Application:

- Ongoing property ownership data gathering
- Incorporating property ownership data into GIS database

Task 9 Construction Planning: NTP not received

Task 10 EIS Support: NTP not received

Actual vs. work order Dollars

Task	Estimate	Actual Labor	Actual Expense	Actual Subs
1-Project Management	$549,313	$229,603	$4,755	$0
2-Data Management/Library	$219,548	$82,589	$36,941	$0
3-Outreach	$268,154	$33,743	$28,114	$74,496
4-Alternative Analysis	$269,221	$221,361	$10,633	$31,742
5-Supply/Demand Analysis	$104,200	$0	$450	$24,909
6-Project Description	$2,179,606	$882,877	$36,302	$181,682
7-Cost of Service	$1,022,328	$0	$1,358	$22,781
8-ROW Application	$54,632	$0	$0	$0
9-Construction Planning	NTP not received			
10-EIS Support	NTP not received			
Total				

Monthly man-hours (cumulative man-hour vs. budget)

Task	Budget Man-Hours	Baker Cumulative Man-Hours
1-Project Management		1207.5
2-Data Management/Library		620.5
3-Outreach		258.0
4-Alternative Analysis		1,625.0
5-Supply/Demand Analysis		0

8-ROW Application		0
9-Construction Planning		
10-EIS Support		
Total		

Narrative comparing actual vs. budget of overall project completion

The project is progressing under budget and on schedule.

Short written discussion addressing upcoming work order packages

Significant progress is being accomplished weekly on the Task 6 Project Description as we calculate pipeline configurations and material quantities in preparation for beginning the pipeline cost estimating phase beginning on March 15. We are also completing the facilities schematics for estimating by Larkspur. They have completed the first estimate of over 40 separate facilities construction cost estimates that will feed into the project cost matrix. Baker will request authorization Task 10, EIS Support to ensure adequate response to the requests for analysis, data and GIS support of the EIS effort.

ENTRIX, Inc. – Project Activity Report – January 2010

The following project activities were conducted during the month of January 2010:

- Developed and obtained advertising for reminder of the close of the formal scoping period in/on the Anchorage Daily News website, Frontiersman, Fairbanks Daily Newsminer, Delta Wind, Copper River Record and Arctic Sounder.
- Submitted announcement to What's Up website.
- Compiled transcripts from scoping meetings.
- Uploaded comments and scoping meeting transcripts to stakeholder database.
- Organized landowner mailing list into a usable document.
- Uploaded mailings and email information into stakeholder database.
- Compiled existing information into draft scoping report.
- Conducted project team meeting to discuss work plan for PDEIS.
- Met with USACE to discuss scoping process issues.
- Identified issues that need clarification for project description, purpose and need, resource analysis.

- Met with USACE and Bob Swenson to discuss project.
- Identified, located, acquired, and reviewed project and resources data; began data gap analysis.
- Maintained stakeholder database; Maintained project website and updated documents as available.

The following activities are planned for the month of February 2010:

- Develop and publish/distribute additional notices regarding scoping period extension
- Update and maintain interested parties mailing list from scoping responses and property owner information provided by ASRC.
- Collect and review scoping comments, develop scoping report.
- Develop EIS annotated outline; develop more detailed work plan and schedule.
- Conducted meetings with lead and cooperating agencies and applicant to define purposes and need, project description and alternatives.
- Draft Purpose and Need Section; continue data gap analysis; develop information requests.

Outstanding Issues:

- A clear understanding of purpose and need, project description, and path forward needs to be established with the applicant and cooperating agencies by the end of February.
- ENTRIX conducted or is conducting several out of scope items at the request of USACE: Dec 09; translator at the Barrow scoping meeting; additional advertising regarding the close of the formal scoping period. Feb 10; Develop and publish/distribute additional notices regarding scoping period extension.

LAWS OF ALASKA

2009

Source
SCS CSHB 113(FIN)(brf sup maj fld H)

Chapter No.
_____

AN ACT

Making supplemental appropriations, capital appropriations, and other appropriations; amending appropriations; making appropriations to capitalize funds; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

THE ACT FOLLOWS ON PAGE 1

(23) sec. 100, ch. 2, FSSLA 1999, page 69, lines 29 - 30, and allocated on page 69, lines 31 - 32 (Department of Transportation and Public Facilities, National Highway System (NHS) state match - $22,602,059).

(b) The unexpended and unobligated balance, not to exceed $98,056, of the appropriation made in sec. 60, ch. 3, FSSLA 2005, page 140, lines 24 - 26 (Alaska Gateway, Dot Lake School mechanical upgrade - $1,087,118) is reappropriated to the Alaska capital income fund (AS 37.05.565).

(c) The unexpended and unobligated balance, not to exceed $54,753, of the appropriation made in sec. 60, ch. 3, FSSLA 2005, page 142, lines 13 - 14 (Southeast Island, Thorne Bay house access ramp - $141,415) is reappropriated to the Alaska capital income fund (AS 37.05.565).

* **Sec. 19.** NATURAL GAS PIPELINE. (a) The sum of $4,322,000 is appropriated from the Alaska capital income fund (AS 37.05.565) to the Office of the Governor for the development of an in-state natural gas pipeline.

(b) The unexpended and unobligated balance, estimated to be $2,700,000, of the appropriation made in sec. 8, ch. 1, 4SSLA 2008 (Department of Natural Resources, gas pipeline implementation - $5,500,000) is reappropriated to the Office of the Governor for the development of an in-state natural gas pipeline.

(c) For the appropriations made in (a) and (b) of this section, it is the intent of the legislature that

(1) the funds be used solely to plan, coordinate, and facilitate construction, ownership, and management of a natural gas pipeline serving Fairbanks, the Southcentral region of the state, and other communities wherever practicable, connecting with or enhancing the existing gas pipeline system, and reaching to tidewater;

(2) the funds be used for a full alternative analysis of possible routes;

(3) an economically feasible in-state pipeline and any connecting lines serve industrial, residential, and utility customers along the entire route, including any other regions of the state that could be served at commercially feasible rates;

(4) the Office of the Governor use the appropriations to

(A) coordinate with entities that could build, own, and operate the line;

(B) assist with preparing cost estimates for the project to determine its

economic feasibility and cost to consumers;

(C) apply for and obtain right-of-way permits for the project route, with the intent that the state would transfer the permits to, and receive compensation for the permits from, the entity best able to complete the project;

(D) work with other entities to promote the gas supply and gas purchase contracts that would be required for the project to be commercially viable;

(5) the coordination effort by the Office of the Governor use, to the fullest extent possible, any and all existing work by other state agencies before contracting for new reports, research, and analyses, and that the coordination effort by the Office of the Governor not expand beyond the scope of coordinating interests to build, own, and operate the gas pipeline;

(6) the Office of the Governor submit written monthly reports to the president of the senate, the speaker of the house of representatives, and all legislators, listing all current and future contracts executed for development of an in-state natural gas pipeline and specifying the scope of work and contract amount, a cumulative total monthly of all funds spent for development of an in-state natural gas pipeline, reporting progress to date on the project work plan, and presenting a work plan for each subsequent month.

*** Sec. 20.** FUND TRANSFER. An amount equal to 20 percent of the revenue collected under AS 43.55.011(g), not to exceed $60,000,000, is appropriated from the general fund to the community revenue sharing fund (AS 29.60.850).

*** Sec. 21.** CONTINGENCIES. (a) Sections 14(f) and 14(g) of this Act are contingent on ratification by the members of the respective collective bargaining unit of its collective bargaining agreement.

(b) Section 7(e) of this Act is contingent on passage by the Twenty-Sixth Alaska State Legislature in the First Regular Session and enactment into law of a version of HB 172 relating to the education loan fund.

(c) Section 11(b) of this Act is contingent on passage by the Twenty-Sixth Alaska State Legislature in the First Regular Session and enactment into law of a version of SB 89 relating to retirement benefits for members of the Alaska Territorial Guard.

(d) Section 8(f) of this Act is contingent on passage by the Twenty-Sixth Alaska State Legislature in the First Regular Session and enactment into law of a version of HB 141

Sponsor Statement
SB 290 – Tax Credit to Drill Wells in Cook Inlet

Sub-Cretaceous (or Jurassic zone) drilling, often referred to as "deep drilling" is one area that has not been explored offshore in the Cook Inlet, due in large part to the extremely high costs involved and lack of equipment available for deep drilling.

This bill establishes an exploration credit for the first three persons (explorers) and further defines that the explorers repay the state, in the event of successful development, 50% of those tax credits.

There are only two sections to this bill.

Section one amends the existing credits by establishing a "stampede" for 50%, 75% and finally 100% credit for exploration in the Cook Inlet.

Section two adds a new subsection to the statutes which establishes the rules for the "Cook Inlet Stampede". Only the first three qualified and unaffiliated persons (explorers) that bore into the sub-Cretaceous zone get the credits.

- First one gets 100%, second one gets 75%, and third one gets 50%.
- Can only get credit for one well per person (explorer)
- Commissioner makes determination on amount of credit if more than one person is eligible for a credit
- If exploration results in production, person will repay 50% of the credit they received.
- Determination of "sub-Cretaceous" drilling is to be made by the commissioner.

Sectional Analysis
SB 290 – Tax Credit to Drill Wells in Cook Inlet

Section 1. Amends AS 43.55.025(a) (tax credits against the production tax for exploration) by adding a new subsection (5) 50, 75 or 100 percent of total exploration expenditures.

Section 2. Amends AS 43.55.025 by adding a new subsection (m) that provides for the new tax credits in Section 1 (new subsection (5)) for exploration drilling into the sub-Cretaceous zone by the first three persons.

Sets out that the first person receives 100% exploration expenditures credit, the second receives 75% exploration expenditures credit and the third receives 50% exploration expenditures credit.

Further establishes that a person can receive credit for not more than one exploration well.

In the event that more than one person qualifies, authorizes the commissioner to identify credit amounts for each person.

Also sets out circumstances for repayment of 50% of the credit if the exploration results in development.

Finally, establishes that determination of whether it is in the sub-Cretaceous zone rests with the Commissioner of Natural Resources.

SB 290 – Tax Credit to Drill Wells in Cook Inlet

Identified Issues with SB 290 (3-29-10)

1. Clarify that credits are to apply only to offshore exploration.
2. Change definition from "Sub-Cretaceous" to "pre-Tertiary".
3. Consideration of expanding exploration credits to total of 6: 3 for activities from Jack-up Rig and 3 for activities from existing structure (platform).
4. Consideration of defining "transportation" as exploration cost to clarify transport of jack-up rig to/from field as allowable cost.

Credits & Deducts available for a jackup rig brought to Cook Inlet.

1. Exploration Tax Credit under AS 43.55.025:

a. 30% of the cost of surface prep, drilling, casing, cementing and logging an exploration well in Cook Inlet if the well is three miles or more from an existing well, or the well target is certified by DNR as a distinctly separate exploration target, before the well is spudded.

or

b. 30% of the cost of surface prep, drilling, casing, cementing and logging an exploration well in Cook Inlet if the well is not less than 10 miles outside the outer boundary as delineated on July 1, 2003, of any unit that is under a plan of development, certified by DNR before the well is spudded. If a dry hole, abandonment costs within 18 months after the well was spudded,.

or

c. 40% of those costs, if both conditions above are met.

The Reg's at 15 AAC 55.360(b)(4) distinguish whether or not the explorer owns the drilling rig. If the explorer does not own the rig, transportation costs to bring the rig to the state, including mob & de-mob and rig operating costs at the contract rates paid are eligible for the credit, if the well otherwise qualifies.

If the explorer owns the rig, the transportation costs to bring the rig to the state are added to the net book value of the rig, which is charged to eligible wells based on hours or days of use for all wells drilled by the rig. (This means if the explorer owns the rig, or owns a part of it – they don't get to write off the whole rig cost on one well.)

A rig owner who operates the rig on contract to other explorers would not be eligible for the credits under AS 43.55.025. The explorer must hold an interest in the well or exploration project. Explorers "renting" a jackup rig and crew would be eligible for the credit for the contract amounts actually paid and for the cost of supplies, fuel, etc. actually paid for by the explorer in connection with a given exploration well. General administrative, management and overhead costs are not eligible for the exploration credit.

Testing, stimulation and completion costs are now eligible costs for the credit under changes enacted by ACES. There are proposed draft regulations by the department to clarify these as allowable for the credit if necessary to appraise the well for its oil or gas production potential.

Transportation of the rig back out of the state after completion of exploration work might be an issue under current regulations.

October 1, 2009
Gary A. Rogers

2. Qualified Capital Expenditure Credit under AS 43.55.23 – 20% of qualified capital expenditures.

If a well does not qualify for the AS 43.55.025 credit, it might still qualify for the 20% qualified capital expenditure credit. Under proposed Lease Expenditure Regulations, de-mob out of the state does not qualify.

If the AS 43.55.025 credit of 30% or 40% is claimed for the well, then the 20% credit would not apply.

3. Deduction as a lease expenditure: transportation of the rig to the state, mobilization and rig operating costs would qualify as a deductible lease expenditure at contract rates paid, or based on net book value allocated to the activities the rig is employed in, if owned outright. The tax rate is 25%, in addition to the value of the credits above, so there is a potential of 65% cost recovery from the State – 40% credit plus 25% tax deduction or loss carry-forward credit.

If no other taxable oil or gas production, the 25% deduction may be converted to a carried-forward loss credit under AS 43.55.023 and used in a subsequent year.

4. Small Producer Credit. If the explorer has taxable production, but less than 50,000 BOE's per day, the explorer is eligible for a $12,000,000 small producer credit under AS 43.55.024(c).

5. Cash Repurchase of Credits by the State. The exploration credits, the qualified capital expenditure credits and the carried-forward loss credits may be purchased by the state for cash, if the requirements under AS 43.55.028 are met (no unpaid delinquent taxes owed the state, no production tax liability under AS 43.55.011(e), average daily production of less than 50,000 BOEs, additional qualified capital investment or successful bids on state leases equal to or credit than the credits being purchased, for example).

6. Other. A recent Advisory Bulletin (# 2009-02) allows a company that acquires through a merger or acquisition, transferable tax credit certificates held by a dissolved company, may also qualify for the cash purchase by the State, if the acquiring company meets all the conditions and stands in the shoes of the company that originally obtained the tax credit certificates.

escopeta oil
Oil & Gas Development

March 30, 2010

Senator Thomas Wagoner
26th Alaska Legislature
State Capital – Room 427
Juneau, Alaska 99801-1182

Email: Senator_Tom_Wagoner@legis.state.ak.us

RE: Senate Bill No. 290

Dear Senator Wagoner,

Escopeta Oil Company ("EOC") is very excited to learn about the referenced Bill that you have introduced. As you know, one of the largest impediments to new exploration is the financial risk of the first well. Your Bill will significantly reduce that risk and spur new era of exploration and production in the Cook Inlet.

EOC is the lessee and unit operator of the Kitchen Lights Unit ("KLU") in the mid-Cook Inlet, just south of the producing North Cook Inlet Gas Field. Both of these offshore units are in the Kenai Peninsula Borough. The KLU is currently the largest unit in the Cook Inlet, encompassing nearly 84,000 acres. Escopeta predicts the KLU contains approximately 440 million barrels of recoverable oil and 5 trillion cubic feet of natural gas. In addition to these recoverable reserves, it is estimated that the Kitchen Thrust Fault Trap (located in the western part of the KLU) to have an additional 830 million barrels of oil and 4 trillion cubic feet of natural gas of possible reserves. Initial production after platform and infrastructure implementation could be approximately 75,000 barrels of oil and 300 million cubic feet of gas per day, from the KLU anticlinal feature alone.

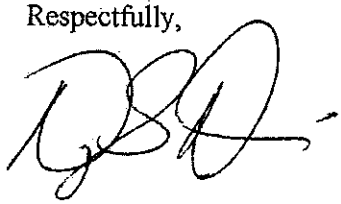
EOC has the majority of all permits already in place to drill the first KLU well to a depth sufficient enough to test the Cretaceous and Jurassic as required by SB 290. Should SB 290 be passed, EOC will amend its plans on the drilling depth to a bottom-hole depth that will penetrate and test these formations. With the passage of SB 290, EOC will commit to the delivery of a jack-up drilling rig to the Cook Inlet by August 1, 2010. The jack-up drilling rig will be mobilized from West Africa and will take approximately 45 days to reach the Cook Inlet, allowing ample time to drill the first well before the end of this year. Please allow this letter to register Escopeta Oil as the first entity that will quality for the 100% credit provided for by SB 290.

5005 Riverway, Suite 440 • Houston, Texas 77056 Office • 713.623.2219 • Fax 713.439.1205 • E-mail escopeta@swbell.net

As you are aware, there has not been an offshore exploration-drilling rig in the Cook Inlet for close to 20 years. Once this jack-up rig reaches the Cook Inlet, it is likely to remain for several years, drilling much-needed offshore exploration and development wells. I sincerely believe this Bill will result in new exploration, jobs to Alaskans, and much-needed deliverability from new oil and gas reserves.

Thank you for your foresight and service to Alaska and its people. Pleas feel free to forward this letter to your colleagues in support of this Bill.

Respectfully,



Danny S. Davis
President

ANALYSIS: *(Attach a separate page if necessary)*

The division has budgeted $437.6 in the FY11 Governor's budget to administer the Sport Fish operator/guide/vessel program. The program generates average Fish & Game Fund revenues of $242.8, with the balance of program expenditures funded with Sport Fishing license sale revenue. Although potential cost savings measures are being implemented, it is untenable at this time to make accurate projections on what monetary savings will be realized for this program over the upcoming years.

SENATOR LESIL MCGUIRE

SPONSOR STATEMENT FOR SENATE BILL 294

"An Act repealing the termination date of the licensing of sport fishing operators and sport fishing guides; and providing for an effective date."

Senate Bill 294 will ensure the continuation of Alaska's sport fish guide licensing and reporting program. Legislation authorizing the program was passed in 2004 and the program has proven beneficial to both the sport fishing industry and resource managers. With more than 1.8 million clients, 88% of whom are nonresidents, taking more than 460,000 guided fishing trips in Alaska annually; guided sport fishing has become an integral part of Alaska's tourism economy. In fact, a study commissioned by the Alaska Department of Fish and Game estimated that nonresident spending on sport fishing was more than $650 million in 2007.

Since the program's inception, an average of 1,670 sport fishing business licenses and 1,981 sport fishing guide licenses have been sold annually. 90% of license holders are Alaska residents and the professionalization of the sport fishing guide industry has benefitted both the industry and the resource. The data collected through the program provides the information state and federal managers need to sustainably manage sport fish populations. The program also allows Alaska to receive an exemption from the National Saltwater Angler Registry; a federal program that would begin levying fees for registration in 2011.

Recognizing the importance of the program, the Alaska legislature extended the program's termination date for one year in 2009; SB 294 proposes to permanently repeal the program's associated termination language in existing statutes in order to allow this valuable program to continue serving Alaskans and their valuable fishery resources.

Brief for HB 143: NO REPEAL SPORT FISH GUIDE LICENSE (Reauthorization of Sport Fish-Guide Licensing Legislation) March 10, 2009

Alaska Department of Fish and Game Contacts:
Charlie Swanton- Charles.Swanton@alaska.gov; phone: 465-6184 or 321-0955
Jennifer Yuhas- Jennifer.Yuhas@alaska.gov; phone: 465-6137 or 388-7951.

Background:

- Original legislation passed in May, 2004; effective January 1, 2005.

- Proposed by the Department for three main reasons:
  1. Information on guide numbers and their fishing activities was either not available or limited in many parts of the state;
  2. Establish minimum standards to operate a business or contract as a guide (safety, liability insurance, US Coast Guard license, etc.) as a means to increase professionalism and reduce speculative entry; and
  3. Provide comprehensive and credible data on guided sport fishing activities to regulatory agencies: Alaska Board of Fisheries (BOF), International Pacific Halibut Commission (IPHC), and North Pacific Fisheries Management Council (NPFMC).

Legislation:

Sec.16.40.260 Sport fishing operator license;
Sec.16.40.270 Sport fishing guide license;
Sec.16.40.280 Reports;
Sec.16.40.290 Penalties for violations.

These legislative sections include licensing provisions and fees (AS. 16.05.340(a)) for sport fishing business owners ($100), sport fishing guides working for the business ($50), and business owners who are also a guide (owner/operator combo $100). The mandatory reporting requirements, logbooks, are for both fresh and saltwater guide activities (freshwater logbooks were instituted in 2005). The penalties for sport fish guiding violations by business owners and guides include possible revocation of their license.

Companion Regulations:

5 AAC 75.075 Sport fishing services and sport fishing guide services; license requirements; regulation of activities.

5 AAC 75.076. Sport fishing services and sport fishing guides reporting requirements.

5 AAC 75.077. Sport fishing guide vessel registration requirements.

Present Benefits and Utility

- A comprehensive list of all sport fishing guides working in salt water is part of the data requirements that will allow Alaska to receive an exemption from participating in the National Saltwater Angler Registry (up to $25/saltwater angler in 2011).

- The logbook data for saltwater anglers has been used extensively within the IPHC and NPFMC for rule making on Pacific Halibut.

- Both freshwater and saltwater logbook harvest data has been presented and utilized by the Alaska Board of Fisheries. Harvest estimate verification studies are being conducted comparing logbook, statewide sport fish harvest survey, and dock side creel programs.

Participation Statistics

- An average of **1,670 sport fishing business licenses** (including owner/operator combo) have been sold (2005-2008); 90% of owners are Alaskan residents.

- An average of **1,981 sport fishing guide licenses** have been sold (2005-2008); 73% of guides are Alaskan residents.

- Based on logbook data, over **1.8 million clients took 453, 611 guided fishing trips** (from 2005 through 2008); 67% of clients fished in saltwater, 33% fished in freshwater and 88% of all clients were nonresidents.

- An average of **2,061 vessels in freshwater and 1,628 vessels in saltwater** were used for guided fishing trips (2005-2008).

Electronic Reporting (Modernization initiative)

- One of Commissioner Lloyd's initiatives is modernization and timelier reporting of recreational harvest data. We are actively working on this task:

    - On July 1, 2009 the point of sale hunting and fishing licensing program will tentatively be launched- this is the first phase of modernization.

    - By October 30, 2009 we will have identified the critical components necessary for electronic logbook reporting.

    - December 31, 2009 we will have completed and published a report on comparison of the 2006-2008 logbook data to statewide harvest survey data regarding harvest estimate precision.

ABSTRACT

In 2006, 1,677 sport fishing businesses and 3,454 guides licensed under the Alaska Department of Fish and Game guide and business registration program, signifying intent to provide sport fishing services in Alaska. The program licensed 1,695 businesses and 3,531 guides in 2007, and 1,659 sport fishing businesses and 3,522 sport fishing guides in 2008. Of the 1,659 sport fishing businesses registered in 2008, 1,525 were combination owner/guide licenses. Based on the 2008 physical addresses of both the businesses and guides, 90% of the businesses were residents of Alaska, and 10% were from other residency strata (defined as nonresidents), 72% of the guides were residents and 28% were nonresidents.

Of the 2,553 saltwater logbooks issued in 2008, 2,089 were activated, and of the 2,538 freshwater logbooks issued in 2008, 1,785 were activated. Of those businesses that submitted logbook information in 2008, 58% offered saltwater services, and 42% offered freshwater guided services. In 2006, logbook records show that 1,368 saltwater vessels were active, 1,409 were active in 2007 and 1,355 were active in 2008. On average during those three years, 55% of the saltwater vessels were active in Southeast Alaska and 45% were active in Southcentral Alaska.

A total of 65,671 saltwater charter trips were conducted in 2006, 67,152 trips in 2007, and 62,006 trips in 2008 statewide. On average, 84% of the saltwater angler days were nonresidents, 12% were residents and 4% were crew, comped fishing or unknown residency. In freshwater, 46,781 trips were taken in 2006, 48,697 in 2007, and 48,501 in 2008. Of the statewide freshwater trips, 90% of the angler days were nonresidents, 8% were residents, and 2% were crew fishing or unknown residency.

Average saltwater salmon harvests between 2006 and 2008 show that coho and king salmon were the predominant species, consisting of 67% and 15% of the harvest respectively statewide. Saltwater bottomfish harvests between 2006 and 2008 show that Pacific halibut were the predominant species with 68% of the total saltwater harvest statewide. Total halibut harvest statewide ranged from 379,473 fish in 2007 to a low of 339,718 fish in 2008. In freshwater, coho salmon were the predominant harvested species, followed by sockeye and then king salmon.

Key words: Sport fishing, guide and business registration, freshwater logbook, saltwater logbook, participation, effort, harvest, sport fishing vessel, Pacific halibut, salmon, bottomfish, Southeast Alaska, Southcentral Alaska

BACKGROUND

The Alaska Department of Fish and Game (ADF&G) Division of Sport Fish (DSF) has operated a program since 1998 to register and license both sport fishing guides and sport fishing guide businesses and to collect information on sport fishing participation, effort, and harvest by saltwater and freshwater guided clients. This report briefly summarizes the approach, history, and results of this program for 2006 through 2008.

GUIDE AND BUSINESS REGISTRATION AND LICENSING

The activities of the guided sport fishing industry in Alaska have significantly increased in recent years with implications to fish allocation and management decisions. Resolution of related issues was hampered by lack of information regarding the industry and its impact on fishery resources in many parts of Alaska. The sport fishing guide and business registration and licensing programs were designed to provide a comprehensive system to better define this diverse industry throughout Alaska. A brief history of the statewide registration and licensing process follows.

Beginning in May 1995 the owner(s) of any business that engaged in sport fish guiding of anglers anywhere in Alaska were required to register their business information, employees acting as sport fishing guides for the business, and listing all vessels used for guiding. In 1997 sport fishing guides were required to register and provide information about the employing business (Dean 2001; Dean and Howe 1999).

4171

In 1998, the Alaska Board of Fisheries (BOF) adopted new statewide sport fishing guide registration regulations and definitions during their February Statewide Finfish meeting in Girdwood, Alaska (5 AAC 75.075: *Sport Fishing Services and Sport Fishing Guide Services; License Requirements; Regulations of Activities).* It should be stressed that this was a registration process, not a licensing process. No fees were required and businesses and guides were allowed to provide services in any area of the state, assuming other regulatory requirements were met. In 1998 ADF&G registered guide businesses and guides and stopped registering charter vessels, because the Commercial Fisheries Entry Commission (CFEC) implemented a licensing program for all vessels to be used for guided sport fishing. From 1998 through 2004, ADF&G continued to register sport fishing businesses and sport fishing guides.

On May 11, 2004, the Alaska Legislature adopted House Bill 452 (HB 452), that established licensing requirements for sport fishing guide business owners and sport fishing guides on a statewide basis. This bill was created to establish minimum professional standards that were required of both freshwater and saltwater sport fish guides and business owners before a license could be obtained. The standards were established to protect consumers and to promote the viability and legitimacy of a professional sport fish guide industry. Businesses providing sport fish guided services were now required to obtain a State of Alaska Occupational Business License and hold liability insurance with a minimum of $300,000 coverage for all incidents in a year (AS 16.40.260). Licensed sport fishing guides were required (1) to be citizens of the United States, Canada, or Mexico, (2) hold a current first aid card, (3) have a current year Alaska sport fishing license and (4) have a valid U.S. Coast Guard operator's license if they were to operate a motorized vessel in navigable waters. License application forms and the information collected have remained consistent in design from 2006 through 2008 (Appendix A).

LOGBOOKS

In February, 1998 the BOF adopted regulations (5 AAC 75.076) requiring logbooks for saltwater charter vessels statewide. Information on the amounts and locations of charter activity and actual participation and harvest by individual vessels and businesses was needed by the BOF for allocation and management of Chinook salmon *Oncorhynchus tshawytscha*, rockfish *Sebastes* spp., and lingcod *Ophiodon elongatus*, and by the North Pacific Fisheries Management Council (NPFMC) for allocation of Pacific halibut *Hippoglossus stenolepis*. To meet these information needs ADF&G implemented a saltwater sport fishing charter vessel logbook program for DSF Region I, Southeast Alaska (Southeast), and Region II, Southcentral Alaska (Southcentral; Table 1; Figure 1).

In 1999, the NPFMC was considering proposals to limit the guided sport halibut harvest. Their concerns were: (1) that growth in this fishery was reallocating resources away from the individual fishing quota (IFQ) commercial longline fishery, and (2) that in some areas there was overcapitalization and localized depletion of the halibut resource. NPFMC endorsed a two-prong approach to resolve the perceived impact of increased guided charter halibut fishing. The first was establishment of guideline harvest limits (GHL) for International Pacific Halibut Commission (IPHC) Areas 2C and 3A (Figure 2), and the second was a process to establish local area management plans for halibut fisheries in coastal communities.

Since 1998, the logbook design has undergone annual revisions, driven primarily by changes or improvements in the collection of halibut, lingcod and rockfish data through the logbook program, Statewide Harvest Survey (SWHS), and expanded port sampling programs. House Bill

452, adopted in 2004, not only established new licensing requirements, but also established a logbook reporting requirement for all freshwater businesses in addition to the existing saltwater reporting requirements. For various reasons, both technical and policy-based, information on halibut harvests was not collected from 2002 through 2005. The collection of halibut data was resumed in 2006. In addition, the 2006 logbook was redesigned to require reporting of angler license numbers and the harvest and release numbers by angler in an effort to improve reporting and facilitate evaluation of the quality of logbook data (Appendix C).

The data from logbooks are compiled to show where fishing effort occurs, the extent of participation, and the species and numbers of fish kept and released by individual clients. This information is used for regulation and the development and management of fisheries, for project evaluation, and for formulation of department policies and priorities that reflect angler needs, concerns, and preferences. It also provides ADF&G with a tool to promote management of Alaska's resources for sustained yield.

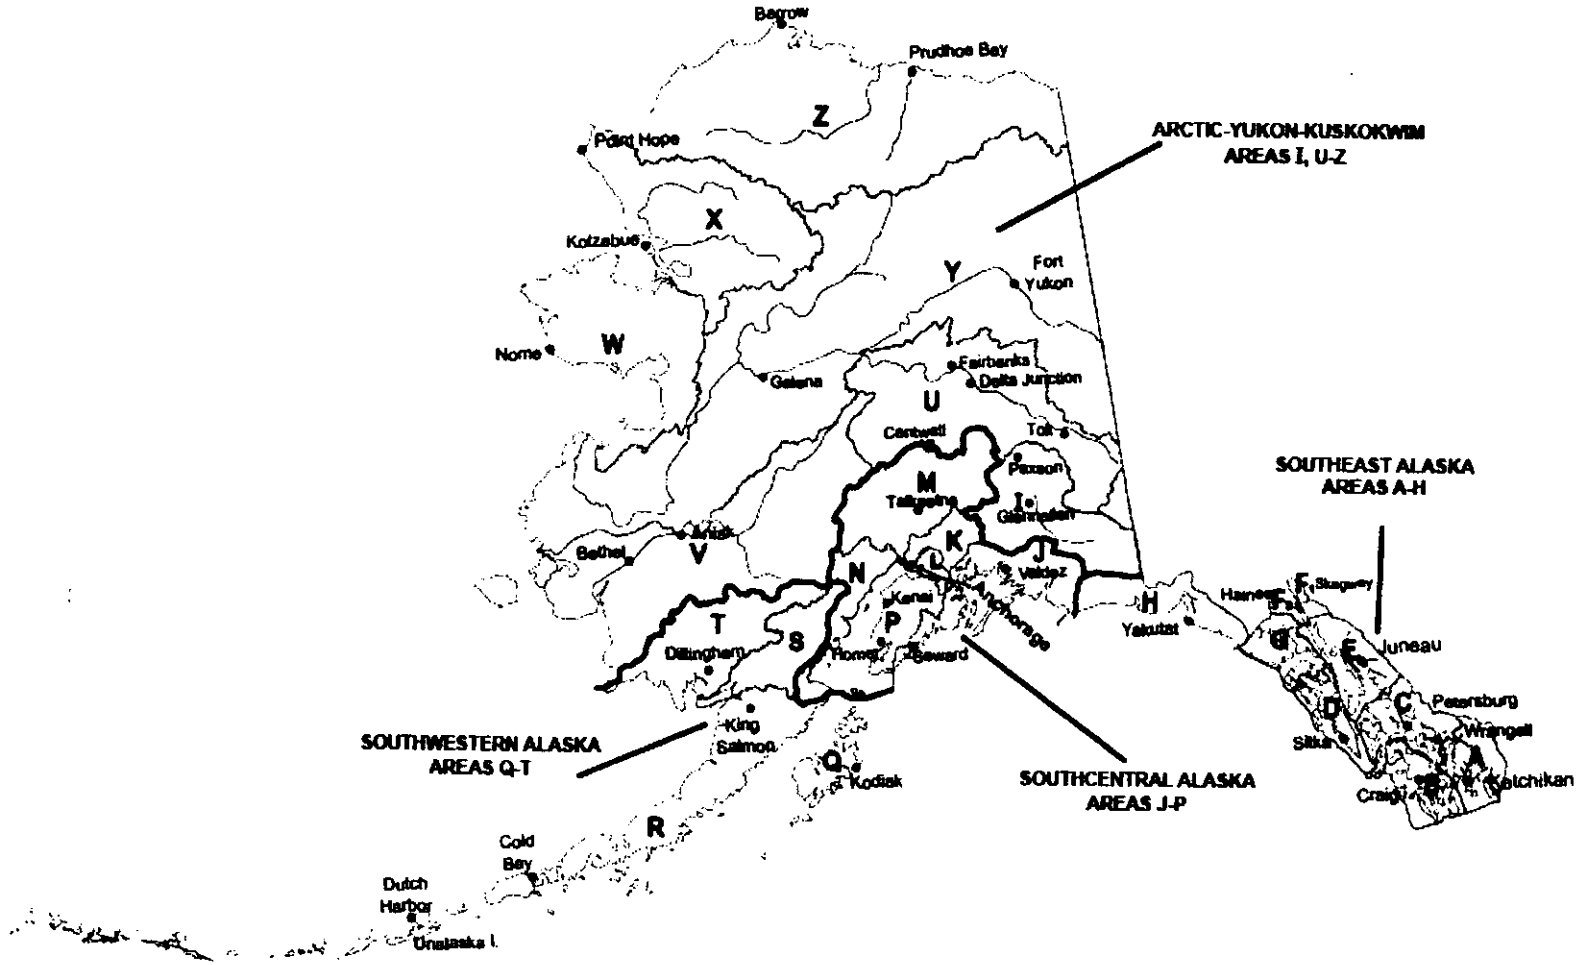

Figure 1.–Map of Alaska and Division of Sport Fish regions and management areas.

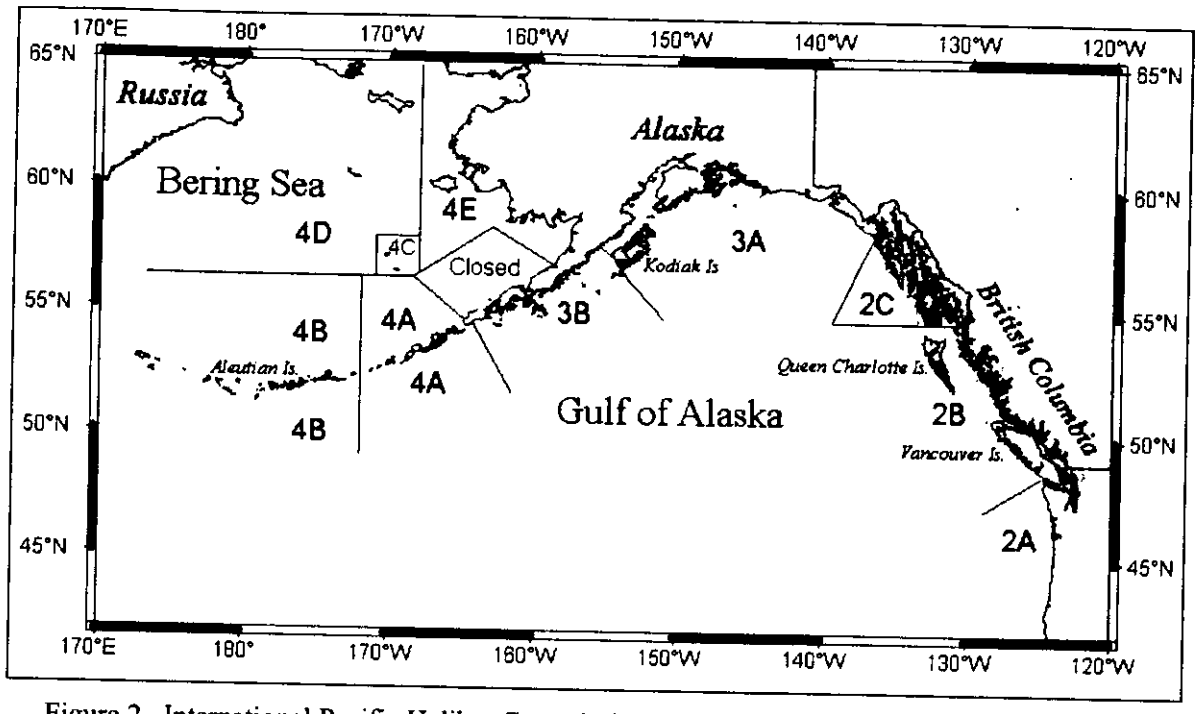

Figure 2.–International Pacific Halibut Commission (IPHC) regulatory areas.

Currently, a logbook record is required for every chartered or guided trip taken with clients, defined as an outing with one group of clients that ends when the clients and their fish (if fish were kept) are offloaded. Each trip is associated with an individual licensed business and guide.

VESSEL REGISTRATION

In addition to establishing a licensing program and statewide freshwater logbook requirement, HB 452 included establishment of a vessel registration program to be conducted by ADF&G as part of the logbook program to monitor the number of vessels used in the guided marine and freshwater fisheries. All boats used in marine or fresh water were referred to as "charter or guide boats" regardless of their size or the manner in which they are used. All vessels used in the charter guide industry were required to be registered with ADF&G. Vessel registration information was collected when logbooks were issued to a business. Registration information included the Department of Motor Vehicles or DMV number or the U.S. Coast Guard vessel documentation number. Upon completion of vessel registration with ADF&G, each vessel was provided with two decals and year tags to indicate that the vessel is used in the guide industry (Appendix B3 and B4). Decals must be applied and visible on both sides of the vessel.

METHODS

GUIDE AND BUSINESS LICENSING

Businesses and guides can be licensed to provide sport fishing guided services if they meet the minimum qualifications specified in regulation (AS 16.40.260 and AS 16.40.270).

During the month of January from 2006 through 2008, the Division of Sport Fish mailed renewal license applications to each sport fishing guide and sport fishing business that was licensed in the previous year. In addition, guides and businesses could obtain a license in person at local

ADF&G offices or through the Internet. The license applications could be used in any of three ways (Appendix A):

- To license a business only,
- To license a guide only,
- To license a combination business and guide (an owner/operator where the owner also conducted the guiding).

The licensing process collected business owner or guide name, permanent mailing information, permanent and inseason phone number if applicable. Additionally, the name of the business, name of the business owner, occupational business license number, insurance company information and insurance binder or policy number and effective dates were required. A guide is required to be a citizen of the United States, Canada, or Mexico, hold a current first aid card and have a current year Alaska sport fishing license along with any tags or permits required for specific fisheries. If a guide planned to operate a motorized vessel on navigable waters with clients on board, the guide was required to have a current U.S. Coast Guard Operator's License and provide that number and expiration date on the license application.

Unique license numbers were assigned according to how licensing occurred. License numbers did not remain the same in subsequent years. If an operator or guide licensed at an ADF&G office, a pre-numbered application was used and that number became the license number for that year. Renewal or internet license applications were randomly assigned numbers by the computer database that processed the information

Once the license applications were reviewed for completeness and accuracy, DSF mailed a wallet-sized license to each guide or business. Those applicants who licensed by going to an ADF&G office received a copy of their license, which allowed them to operate immediately. Those who licensed using the renewal application or by applying through the Internet, were required to wait until they received their license in the mail prior to operating or providing guiding services.

LOGBOOK DATA COLLECTION

A standard statewide saltwater logbook design was used from 2006 through 2008 (Appendix B). The freshwater logbook underwent very few changes between 2006 and 2008. Logbook reporting is a mandatory process governed by regulation (AS 16.40.280). As such, the reporting process was considered to be a census of all charter/guided trips. Logbooks were available and issued from ADF&G area offices located statewide, in addition to vendors located in Valdez and Seward.

Other than a few minor design changes, both the saltwater and freshwater logbooks collected the same information during all three years. Some changes were made to improve or simplify the use of the forms based on operator input, and to improve the capture of client and crew harvest information. Some of the annual design changes in the saltwater logbook were driven primarily by changes or improvements in the collection of halibut and rockfish data, and by requests from the NPFMC for information needed for allocation of halibut. In 2006, both logbooks were redesigned to require reporting of angler license numbers and the harvest and release numbers by angler in an effort to improve reporting and facilitate evaluation of the quality of logbook data. The most significant changes made to the saltwater logbook occurred between 2005 and 2006 (Appendix C).

4176

Changes between the 2005 and 2006 saltwater logbooks included:

- The data page design went from a single page designed to collect information from nine different trips to a data page that collected information from one unique trip per page.
- A section to collect Business and Vessel Information was added. Business and Guide license numbers along with the Alaska Boat Registration number (AK. #) or U.S.C.G. documentation number was recorded on every data page. This information was intended to confirm that the information was associated with the correct business on record, and to validate the vessel registration information.
- A section to collect Trip information was added. Trip information collected the date fished, port or community where clients or fish were off-loaded, total number of clients on the vessel including those that did not fish, targeted species (salmon or bottomfish), primary statistical area fished, maximum number of rods fished, and number of boat hours fished. This design change resulted in more detailed information unique to each trip taken with a group of clients.
- A section to collect Individual Angler and Catch Information was added. In 2006, the collection of halibut information resumed. The new design also required the reporting of individual angler license numbers along with harvest and release numbers by angler in an effort to improve reporting and facilitate evaluation of the quality of logbook data.
- A signature line was added that required the guide who led the trip to sign their name certifying that the information was true and correct to the best of their knowledge.
- A notice statement drafted by the NPFMC was printed within the front cover of the 2006 saltwater logbook. The notice announced that a control date of December 9, 2005 was being established. Those businesses and guides not participating in the Southeast or Southcentral charter halibut industry by this date might not be eligible for future access and/or quota in these fisheries.

No significant changes took place in the freshwater logbook design between 2005 and 2006 (Appendix D).

Changes between the 2006 and 2007 saltwater logbooks include:

- Additional client information was obtained, to indicate if "comped" anglers fished. A "comped" angler was an angler who did not compensate the guide for that charter trip. By including "comped" anglers, the data captured by onsite dockside samplers and data from the logbook census were more comparable, since all anglers on board a charter vessel and their catches were now being counted.
- Vessel AK # or U.S.C.G. documentation numbers were no longer being collected on each data page. The vessel information collected during the logbook assignment to a business on the sign-out sheet was adequate.

No significant changes took place in the freshwater logbook design between 2006 and 2007 (Appendix D).

The changes to the saltwater logbook forms between 2007 and 2008 were in response to requests by the NPFMC in an effort to continue improvement in the collection of halibut information in preparation for a potential IFQ or moratorium program. Changes between the 2007 and 2008 saltwater logbooks include:

- A request to collect information on the port or community where the fishing trip began.
- Indicate the IPHC area fished: 2C, 3A, 3B or 4.
- The collection of the angler's first and last name in addition to the angler license number.
- The number of halibut kept year-to-date (YTD) in IPHC area 2C in anticipation of an annual limit on guided halibut harvest per client. The annual limit was never implemented but this column had already been added and logbooks distributed prior to the decision to not implement an annual halibut limit.
- The signature of an angler on the back side of each trip sheet if that angler kept halibut in 2C as verification of the information provided on the data page.

No significant changes took place in the freshwater logbook between 2007 and 2008 (Appendix D).

Saltwater Logbook Forms

A saltwater logbook consisted of the cover page, schedule of reporting deadlines, one logbook check out sheet to show the business to which the logbook was issued and register the saltwater vessel, a set of instructions for filling out the information on the logbook sheets, and 50 data sheets to record trip information. Data collection on each of the 50 pages consisted of:

- ADF&G business owner license number;
- ADF&G guide license number for the guide leading the trip;
- Date that fishing took place;
- Port or community where fishing began;
- Port or community of off loading,
- Total number of paying clients on the vessel (including those that did not fish, but not including "comped" anglers or crew members that fished);
- Primary statistical area fished while targeting salmon or bottomfish;
- Number of boat hours fished;
- Crew, client, and "comped" angler's current ADF&G sport fishing license or PID (permanent fishing license) number, birthdate of youth anglers under the age of 16;
- First and last name of each client and youth angler;
- Client residency(Alaska resident/nonresident of Alaska);
- A breakdown by fish species kept (and/or released) by each individual angler.

During a saltwater charter trip, the operator must decide if his/her gear or fishing methods are effectively targeting bottomfish, salmon or both. A 6-digit statistical code where most of the fish were caught or targeted is logged for each trip. Statistical maps were provided to the operator upon logbook issuance.

Saltwater species information collected included kept and released information for "large" Chinook (king salmon) 28" and longer and for "small" Chinook (king salmon) less than 28". Also recorded were coho *O. kisutch*, sockeye *O. nerka*, pink *O. gorbuscha*, and chum *O. keta*

4178

salmon, halibut, lingcod, pelagic rockfish, yelloweye, and other nonpelagic rockfish, salmon shark *Lamna ditropis*, and a category for the number of all other species not already listed (Appendix C).

To determine the number of businesses and guides that were "active" in the industry, a cross reference is made to the logbooks to determine if actual guided trips were provided. If ADF&G received at least one charter vessel trip form that reported targeted effort, the charter operation turning in the form was considered an "active" bottomfish or salmon charter operator with an "active" vessel.

Freshwater Logbook Forms

A freshwater logbook consisted of the cover page, schedule of reporting deadlines, one logbook check out sheet to show the business to which the logbook was issued, a freshwater vessel registration page that collects the unique AK # assigned by the Department of Motor Vehicles (DMV) or a United States Coast Guard (USCG) documentation number and primary drainage, a set of instructions for filling out the information on the logbook sheets, and 50 data sheets to record trip information. Data collection on each of the 50 pages consisted of:

- ADF&G guide license number,
- Date that fishing took place,
- Specific name of river, stream or lake fished,
- Site code of site fished as reference within a list provided with each logbook,
- Number of logbook pages used for a specific trip,
- Name of any other species kept,
- Crew, client, and "comped" angler's current ADF&G sport fishing license number, and a youth angler designation for anglers under 16 years of age.
- Client residency,
- A breakdown by fish species kept and released.

Upon acquiring a freshwater logbook, the operator registers all vessels that may be used during the course of the fishing season. Freshwater vessel registration requires that the vessel already have a unique AK # assigned by DMV or a USCG documentation number. Freshwater vessels primarily have AK #'s. The operator must provide the AK # and indicate the primary freshwater drainage where the vessel will operate.

The freshwater logbook does not collect targeted species information like the saltwater logbook, it collects information on species kept and released regardless of what was targeted or sought after. A trip is counted if a logbook data page is submitted with effort information regardless of catch. Freshwater trips are assigned a region of the state based on the name of the site fished, each freshwater site is assigned a unique regional alpha code followed by a numeric code within the region in which it is located (Table 1).

Freshwater information collected were: kept and released numbers for king, coho, and sockeye salmon, cutthroat *O. clarkii*, rainbow and steelhead trout *O. mykiss*, lake trout *Salvelinus namaycush*, Dolly Varden *S. malma*, Arctic grayling *Thymallus arcticus*, northern pike *Esox lucius*, sheefish *Stenodus leucichthys* and a category for the number of all other fish not already listed (Appendix D).

Business operators are allowed to and even encouraged to pick up as many logbooks as they anticipated needing during the course of the season. The ability to acquire as many logbooks as are needed prevents them from having to make multiple trips to an ADF&G office. As a result, numerous businesses ended up getting more logbooks than were eventually used. Because of this, ADF&G differentiates between the number of logbooks issued versus the number that are actually used or activated.

LOGBOOK OUTREACH AND VERIFICATION

In December 2005, the Commissioner of the ADF&G issued a statement that detailed the strategies for assuring the accuracy of reporting of Pacific halibut harvest for the saltwater charter logbook. (Appendix E).

Outreach

An outreach program was initiated to reach as many operators as possible to field questions and to ensure compliance with the reporting requirements. The outreach program was conducted on-site (in the field) by ADF&G employees and off-site from the Anchorage ADF&G office.

On-site Logbook Inspections

Logbook outreach occurred in parts of Southeast and Southcentral regions in conjunction with existing creel survey and port sampling programs. "Courtesy logbook inspections" were conducted as time allowed by ADF&G creel and port sampling technicians during their regular dockside checks of the primary fisheries from May through September. In addition, management staff conducted periodic checks of charter logbooks, mostly in 2006. Logbooks were inspected to make sure that they were filled out correctly, and staff answered any questions about how they should be filled out. These checks were not intended for enforcement or for evaluating the accuracy of data but rather as another opportunity to encourage compliance and completeness and as an indicator of how important logbook data are to ADF&G. These inspections were conducted as time allowed by ADF&G creel and port sampling technicians during their regular dockside checks for the primary fisheries from May through September.

Off-site Logbook Review

The goal of the outreach program was to ensure compliance with all reporting requirements, by emphasizing education early in the season. Off-site outreach was conducted by the Division of Sport Fish, Research and Technical Services (RTS) staff in the Anchorage office. All logbook trip data was subject to a reporting deadline. Logbook data pages were required to be completed and returned to ADF&G on a weekly basis as specified in the instructions of both the saltwater and freshwater logbooks. Timely submission was a requirement to facilitate recall and to allow ADF&G staff to review each data page for completeness and legibility. All logbook data sheets were received by RTS in Anchorage where ADF&G data entry staff date-stamped each data page with the date received, reviewed each page for incomplete, illegible or erroneous information, and conducted phone calls to business owners and guides for follow up and clarification. Calls early in the season were intended to alleviate repeat errors in reporting which were thought to result in fewer calls being necessary later in the fishing season.

As logbook data sheets were received, RTS staff conducted reviews by monitoring all data for completion and legibility prior to data entry. In the event that some of the logbook data sheets required verification from the operator or guide, staff would place phone calls

Phone calls to the business owners and guides significantly improved the quality of the data, minimized reoccurring mistakes by the guide, increased compliance, and contributed to the outreach portion of this program. Logbook data entry staff contacted charter operators to resolve logbook reporting issues and to improve future reporting. These calls were intended to improve data quality and reinforce the message to the guide industry that logbook data are important and are consistently being reviewed. In 2006, 3,011 calls were made to operators, 1,415 in 2007 and 2,160 in 2008. Follow up phone calls have become a valuable outreach tool and will continue to be a standard procedure in the future.

Verification

Logbook data were compared to actual counts of harvested fish (verified) and to reported harvest data (unverified) from onsite interviews. These comparisons are ongoing and are part of a more comprehensive evaluation of logbook data quality (Meyer et al. 2008).

Two unique methods were used to conduct post-season verification of logbook data:

1. A comparison was made between logbook data and guided trip information collected from the Alaska Statewide Harvest Survey (SWHS; Jennings et al. 2007).
2. The data collected from the logbooks was compared to the data collected in the saltwater creel programs administered through ADF&G. Saltwater creel programs include the *Assessment of Recreational Halibut and Groundfish Harvest in Southcentral Alaska* program in Homer, the *Haines Marine Sport Fishery Harvest in Southeast Alaska*(Chapell *In prep*), and the *Harvest estimates for selected marine sport fisheries in Southeast Alaska* (Wendt and Jaenicke *In prep*).

RESULTS

GUIDE AND BUSINESS LICENSING

In 2006, 1,677 sport fishing businesses and 3,454 guides were licensed with ADF&G. In 2007, 1,695 businesses and 3,531 guides were licensed, and in 2008, 1,659 sport fishing businesses and 3,522 sport fishing guides were licensed with ADF&G to provide sport fishing services in Alaska. The total number of businesses and guides includes all saltwater and freshwater operators. Of the 1,659 sport fishing businesses licensed in 2008, 1,525 were combination owner/guide licenses. Physical addresses of both the businesses and guides in 2008 indicated that 90% of the businesses were Alaska residents, and 10% were from other residency strata (defined as nonresidents), 72% of the guides were residents and 28% were nonresidents.

The licensed businesses and guides were subtotaled by region for Southeast, Southcentral, and Other Alaska, including the Arctic-Yukon-Kuskokwim area and nonresident license applicants.

From 2006 through 2008, an average of 28% of the licensed businesses had physical addresses in Southeast, 57% in Southcentral, 5% had permanent addresses in other parts of Alaska, and 10% had nonresident addresses based on their license applications. From 2006 through 2008, an average of 22% of the licensed guides had permanent addresses in Southeast, while 47% in Southcentral, 4% in other parts of Alaska and 27% had nonresident addresses based on their license applications (Table 2).

Based on the submission of saltwater logbook data pages with trip information in 2006, 777 businesses provided saltwater services and 503 provided freshwater services, and 140 businesses

4181

provided both freshwater and saltwater services. In 2007, 786 businesses provided saltwater services and 513 provided freshwater services and 132 businesses provided both freshwater and saltwater services. In 2008, 766 businesses provided saltwater services and 508 provided freshwater services and 122 businesses provided both freshwater and saltwater services (Table 3 and Table 4).

Table 2.–Number of licensed businesses and guides by region, 2006–2008.

Licensed Businesses [a]

Site code missing	0	4	7	0	4	7
Total[d]	643	645	630	1,518	1,581	1,636

Note: Data are current as of 07/16/09.

[a] Business counts are based on the business number listed on the signout sheet of a logbook (this can be a business only or a combined business/guide license).

[b] Guide counts are based on the guide number written on each log page (this can be a guide only or a combined business/guide license).

[c] Region is based on the site code provided for the site fished on each log page.

[d] Total is not additive because a business or guide could operate in both areas. Includes businesses and guides that offered both saltwater and freshwater services.

VESSELS

Saltwater

The number of vessels registered to provide saltwater sport fishing charter services was 1,671 in 2006, 1,666 in 2007, and 1,604 in 2008. A vessel, though registered, is not considered "active" unless that vessel was used on a guided trip as indicated by the submission of a logbook data page. Of the 1,671 saltwater vessels registered in 2006, 1,368 were active, of the 1,666 vessels registered in 2007, 1,409 were active, and in 2008 of the 1,604 registered vessels, 1,355 were active in saltwater. Based on the primary port of operation indicated at registration and port of offloading, 746 saltwater vessels operated in Southeast, 621 operated in Southcentral, and 1 vessel operated in both Southeast and Southcentral in 2006. In 2007, 768 saltwater vessels operated in Southeast, 641 operated in Southcentral, and 0 vessels operated in both Southeast and Southcentral. In 2008, 759 saltwater vessels operated in Southeast, 596 operated in Southcentral, and 0 vessels operated in both Southeast and Southcentral (Table 5).

Logbook data indicate that vessels will target all possible species; bottomfish, salmon and both during the course of a fishing season (Table 6).

Table 5.–Number of registered and active saltwater vessels by region, 2006–2008.

	Registered Vessels			Active Vessels		
Region[a]	2006	2007	2008	2006	2007	2008
SE	926	918	907	747	768	759
SC	745	748	697	622	641	596
Total[b]	1,671	1,666	1,604	1,368	1,409	1,355

Note: Data are current as of 07/09/09.

[a] Region is based on primary port of operation listed on sign-out sheet and port of off loading, active is determined by the salmon or bottomfish statistical area.

[b] Total is not additive because vessels can operate in both areas.

Table 6.–Number of active saltwater vessels that made at least one trip in each target category, by region, 2006–2008.

		Target[a]			
Year	Region[b]	Salmon	Bottomfish	Both	No Statistical Area
2006	SE	631	495	637	5
	SC	383	551	486	6
	Total	1,014	1,046	1,123	11
2007	SE	637	494	676	49
	SC	377	576	495	32
	Total	1,014	1,070	1,171	81
2008	SE	623	534	649	56
	SC	325	546	441	22
	Total	948	1,080	1,090	78

Note: Data are current as of 07/09/09.

[a] Target is based on salmon and bottomfish statistical areas.

[b] Region is based on primary port of off loading, salmon statistical area and bottomfish statistical area.

Freshwater

Based on the primary drainage and sites fished, many more freshwater vessels operate in Southcentral than in other regions (Table 7).

Table 7.–Number of registered freshwater vessels by year and region, 2006–2008.

Year	SE	SC	AYK	Unknown	Total[a]
2006	131	1,640	219	98	2,086
2007	131	1,657	239	15	2,041
2008	122	1,738	261	8	2,128

Note: Data are current as of 07/14/09.

[a] Total not additive because a vessel could be registered and operate in more than one region.

4184

TRIPS

Saltwater

Logbook data indicate that 65,671 saltwater charter trips were conducted statewide in 2006, 67,152 trips were conducted in 2007, and 62,006 trips were conducted in 2008. During all three years, a majority of the trips that targeted salmon only occurred in Southeast, whereas, the majority of trips that targeted bottomfish only occurred in Southcentral. During the same three years, operators in Southeast conducted significantly more trips in which both salmon and bottomfish were targeted on the same trip. If a statistical area fished was not provided, no targeted species was assigned (Table 8).

Table 8.–Number of saltwater trips by targeted species by region, 2006–2008.

		Species Targeted[a]				
Year	Region[b]	Salmon[c]	Bottomfish[c]	Both[c]	No Statistical Area	Total
2006	SE	14,309	6,146	18,628	5	39,088
	SC	3,481	15,555	7,537	10	26,583
	Total	17,791	21,702	26,165	15	65,671
2007	SE	12,759	6,144	20,633	62	39,598
	SC	2,876	16,489	8,145	44	27,554
	Total	15,635	22,633	28,778	106	67,152
2008	SE	11,338	7,368	18,634	109	37,449
	SC	2,135	15,733	6,617	72	24,557
	Total	13,473	23,101	25,251	181	62,006

Note: Data are current as of 07/09/09.

[a] Species targeted is based on the provision of salmon and bottomfish statistical areas.

[b] Region is based on the port of offloading, and salmon or bottomfish statistical areas.

[c] The same vessel can make multiple trips targeting either salmon, bottomfish or both.

Freshwater

In 2006, 46,781 freshwater guided fishing trips were taken, 48,697 were taken in 2007, and 48,501 taken in 2008. On average, 84% of the freshwater trips took place in Southcentral, 10% in the Arctic-Yukon-Kuskokwim (AYK) area, and 6% in Southeast (Table 9).

Table 9.–Number of freshwater trips by region, 2006–2008.

	Region[a]			
Year	SE	SC	AYK	Total
2006	3,038	39,512	4,231	46,781
2007	3,256	40,543	4,898	48,697
2008	3,113	40,587	4,801	48,501

Note: Data are current as of 07/16/09.

[a] Region is based on the area code on the site code listed on each log page.

[b] Unknown means the record didn't have a site code listed, thus a region could not be determined.

4185

LOGBOOK TRIP EFFORT AND HARVEST

Statewide saltwater charter trips appear to have decreased in 2008 after a steady increase between 2006 and 2007, the number of angler days fished declined steadily since 2006. For freshwater guided fishing statewide, the number of trips and angler days fished appeared to remain steady with very slight adjustments (Table 10).

SALTWATER

An average of 82% of the saltwater logbooks that were issued were activated (effort or catch reported) each year. From 2006 through 2008, the saltwater logbook collected client residency. Records show that for those three years, 90% of the angler days of effort in the saltwater charter salmon fishery were conducted by nonresident anglers, compared with 8% by residents and 2% by crew, comped anglers or those of unknown residency. Records also indicate that for those three years, 82% of the angler days of effort in the saltwater charter bottomfish fishery were conducted by nonresident anglers, 14% by residents and 4% by crew fishing, comped anglers or those of unknown residency (Tables 11-16).

Based on the number of angler days fished from 2006 through 2008, 69% of the salmon participation took place in Southeast, and 31% in Southcentral. Within that same time period, 42% of the bottomfish participation took place in Southeast, and 58% occurred in Southcentral (Tables 11-16).

From 2006 through 2008 coho and king salmon were the predominant salmon species harvested, making up 67% and 15% respectively of the harvest statewide, with the remaining 18% consisting of a combination of other salmon (Tables 11, 13, 15).

Halibut were the most harvested bottomfish from 2006–2008, with 68% of the total harvest statewide Halibut harvests were 377,366 fish in 2006, 379,473 fish in 2007, and a low of 339,718 fish in 2008. Statewide, 32% of the halibut harvest occurred in Southeast and 68% occurred in Southcentral (Tables 12, 14, 16).

FRESHWATER

On average, 71% of the freshwater logbooks that were issued were actually activated. From 2006 through 2008, 8% of the freshwater participation occurred in Southeast, 84% occurred in Southcentral, and 8% took place in the Alaska-Yukon-Kuskokwim (AYK) or interior Alaska.

For those three years, 90% of the angler days of effort in the freshwater guided fishery were conducted by nonresident anglers, 8% were residents and 2% were crew fishing, comped anglers or those of unknown residency. The highest percent of nonresident fishing occurred in Southcentral.

From 2006 through 2008 coho, sockeye and king salmon were the predominent salmon species, making up 45%, 29% and 20% respectively on average of the harvest statewide, with the remaining 7% consisting of a combination of other salmon (Tables 17-19).

Table 10.–Saltwater and freshwater trips and angler days by region, 2006–2008.

DISCUSSION

GUIDE AND BUSINESS LICENSING

The 2006 through 2008 ADF&G guide and business licensing process differed from the registration process prior to 2005 in terms of the approach used, fees, and the information collected on license applications. The current licensing approach reflects changes made in 2005 to reflect the new minimum requirements established by HB 452. Guides and businesses offering guided fishing services are now held to a higher standard of compliance than previous to 2005. Violations of the guide licensing statutes or regulations adopted under HB 452 are either violations or misdemeanors, and courts are authorized to revoke the license of the guide or business under certain conditions, such as repeated convictions within a three-year period.

ADF&G no longer collects the information collected in earlier years on the type (saltwater vs. freshwater) and location (regions/subareas) of services. The 2006-2008 licensing processes have been similar and provide a basis for establishing a long-term database of licensed businesses and guides. Charter/guide business and guide licensing still reflects the intent to operate, while actual activity is confirmed by the submission of logbook trip data.

LOGBOOKS

ADF&G initiated a mandatory saltwater charter logbook program in 1998. The BOF adopted regulations requiring annual registration of sport fishing guides and businesses, and logbook reporting. The logbook and registration/licensing program was intended to provide information on actual participation and harvest by individual vessels and businesses.

Recent emphasis from ADF&G management staff and NPFMC on more timely saltwater data spurred discussions on how to hasten logbook data availability. Currently, logbook data entry involves collecting logbook sheets from the guide, entering the logbook data into a logbook database, and editing the data. This process can take RTS from six to eight weeks. Discussions included the possibility of an electronic submission option that would provide data to ADF&G and NPFMC staff in a more timely manner. Any option for a logbook change would have to include a design that is appealing and easy for the guide industry to use, such that they would perceive it as beneficial to a process that they already consider "burdensome." Electronic reporting options were, at first, appealing to fulfill both management needs and halibut management needs for more timely information. Further discussions concluded that electronic reporting would still necessitate the use of a paper version of the logbook due to enforcement and trip recording requirements. Data would still need to be verified for errors, be entered accurately into a database, and be available for onsite inspection. There are currently no options for going "paperless", and no perceived benefit to managers or the industry that would result from the process. The "paperless" approach would require a change in regulation for reporting requirements along with extensive research into the cost of electronic reporting. The discussion for going "paperless" will continue however.

Upon further discussion and research, an alternative approach was considered. ADF&G programmers researched the option of developing a system that would electronically scan the image of a redesigned logbook data page. Scanned images would minimize data entry time but allow for data entry personnel to fix images flagged as unrecognizable, thus maintaining data accuracy and quality. This option is not any more "burdensome" to the industry and would

likely make the weekly reporting requirement more palatable knowing that the data would be more immediately available.

In 2010, a field test of the redesigned saltwater logbooks will be conducted to test the new scannable saltwater logbook data page and scanning software. Upon review of the test data pages and likely adjustments to the design, it is hoped that this new design will be fully adopted and implemented by 2011.

Preliminary results from verification studies comparing the accuracy of logbook harvest data with the statewide harvest survey estimates, and onsite creel programs are favorable. Logbook data will continue to be compared to counts from those two programs. Comparisons are ongoing and are part of a more comprehensive evaluation of logbook data quality. Logbook halibut data has been used extensively. Saltwater and freshwater logbook data have also been used for a variety of regulatory analyses for state managed species.

ACKNOWLEDGEMENTS

Southeast and Southcentral regional and area staff, especially numerous front counter personnel, have been critical to the success of the ADF&G sport fishing guide and business licensing and logbook program. The above staff along with Rob Bentz, Bob Chadwick and Mike Jaenicke from Southeast, Scott Meyer, Matt Miller and Tom Vania from Southcentral, and Tom Taube from Fairbanks have also provided valuable comments during the process of registration and logbook form design.

Doug Vincent-Lang has provided valuable insight on the history of the program and facilitated numerous discussions with NOAA and IPHC. Bob Clark's thoughtful insight and direction has been very much appreciated. We also acknowledge the expertise and infinite patience exhibited by Joanne MacClellan in preparing this report. Her knowledge and willingness to assist is invaluable.

Kirk Brogdon of the division's Research and Technical Services section deserves considerable credit for designing and implementing efficient information management systems for data capture, cleaning, storage, and reporting. These systems, accessible via the division's Intranet, allowed area staff statewide to query the most up-to-date registration and logbook databases via their Internet browser.

Kathy Kush should be acknowledged for her incredible skills in streamlining the licensing process and making sure that all license applications are processed in a timely manner that has allowed the guides and businesses to start operation without delay.

Margaret Nussbaum, Diane Novinska, Jennifer Bond, Mary Yanagawa and several seasonal technicians deserve credit for receiving, entering, and filing the licensing and logbooks forms. With their perseverance, we met reporting deadlines that seemed nearly impossible with available staffing and workloads.

We also acknowledge the cooperation of the thousands of sport fishing guides and sport fishing businesses that licensed and completed their logbooks in a timely and compliant manner.

ECONOMIC IMPACTS AND CONTRIBUTIONS OF SPORTFISHING IN ALASKA

2007 REPORT

4197

A Message from the Director

CHARLIE SWANTON, DIRECTOR
ADF&G, DIVISION OF SPORT FISH

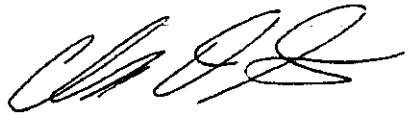
Alaska supports arguably some of the finest and most diverse sportfishing in the world. These opportunities provide Alaskans with a significant and sustainable source of food, relaxation, and social benefits. Additionally, the money spent by residents and visitors who participate in sportfishing activities produces significant economic benefits to Alaska.

The Division of Sport Fish is committed to providing an array of biological, social and economic information to fishery managers and fishery regulators who plan and evaluate fishery projects and make informed decisions about the management of fishery resources.

This report summarizes a recent effort by the Division to provide estimates of angler spending in Alaska and the contribution it makes to Alaska's economy. The results are based on an extensive statewide study of resident and nonresident anglers who went sportfishing in Alaska during 2007. The report contains estimates of the total expenditures on sportfishing by anglers and estimates of the subsequent economic effects this spending had in terms of employment, wages, salaries and tax receipts.

A key objective of this project was to establish a consistent and repeatable methodology for collecting and reporting estimates of economic contribution in Alaska such that reasonably precise estimates would be routinely available to agency personnel, fisheries decision-makers, and the public.

We hope that you find the following information useful and that it contributes to well-informed decision making.



Sportfishing in ALASKA

Sportfishing is an important component of the Alaskan economy. It contributes to the well-being of Alaskans as recreation, as a source of food, and as part of the state's collective economic fabric. In 2007, 190,644 Alaska residents bought a fishing license, along with 284,890 nonresidents.

Spending a day fishing with rod and reel usually involves spending at least some money for travel, equipment, and supplies. Because a large number of anglers—both resident and nonresident—spend many days each year enjoying Alaska's diverse fishing opportunities, the annual total of that spending is substantial.

The money spent by anglers in turn helps to support thousands of Alaskan jobs in industries ranging from fishing tackle sales to hospitality and lodging to air taxi and guide services which are an important part of the economy in many of Alaska's local communities. At the same time, angler spending is also creating federal, state and local tax revenues which support local and borough governments and help pay for fisheries management in Alaska.

Economic IMPACTS & Contributions

Economic Impact vs. Economic Contribution

This project measured and reported the economic impacts and contributions of licensed anglers to Alaska's state and regional economies. The words "impact" and "contribution" are not necessarily synonymous.

Economic impact typically refers to the effects of money being brought in from outside the state or region. It was possible to estimate the total amount of resident and nonresident spending in Alaska as a whole and within specific regions by combining the economic survey results with the ADF&G Statewide Harvest Survey results.

Economic contribution refers to in-state spending by all anglers. In theory, if the dollars spent by resident anglers were not spent on sportfishing, the same money would be spent on other things and would still stimulate economic activity. It isn't possible to accurately predict whether these local dollars would be spent in or outside of Alaska.

This study generated both economic impact estimates (non-resident spending) as well as estimates of the economic contributions of spending by Alaska anglers in 2007.

The purpose of the study was to obtain current estimates of the economic contribution of sportfishing activities to the Alaska economy and to develop a consistent method for producing such estimates on a regular basis. This project provides a survey-based process that can now be updated periodically at reasonable cost.

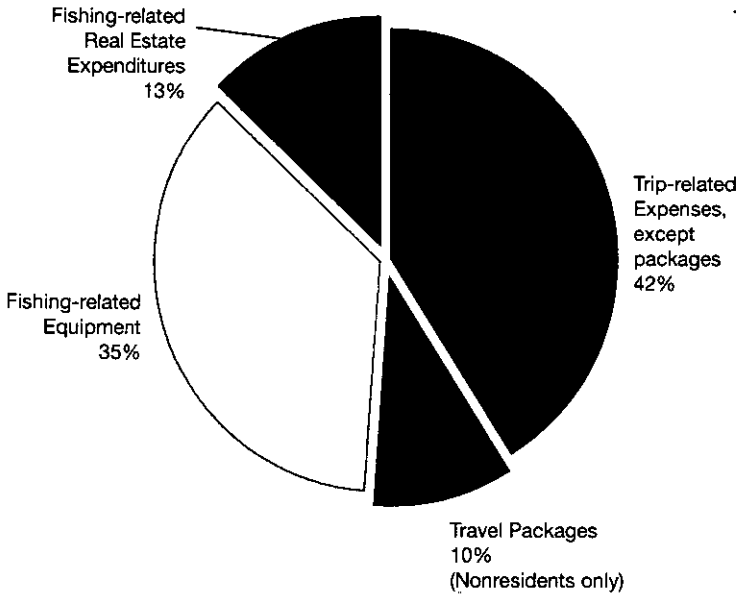
For 2007, the year covered by this report, 1,163 resident and 1,807 nonresident surveys were completed by anglers who fished in Alaska. From the survey responses collected, estimates of how much each angler spends per day of fishing and per year on fishing-related equipment were produced. These survey results were combined with the total number of licensed anglers in 2007 and the total days of fishing in Alaska as estimated by the Division's Statewide Harvest Survey. This survey, conducted every year by the Division, tracks annual sportfishing participation and harvest. By combining the economic survey results with the Statewide Harvest Survey results, it was possible to estimate the total amount of resident and nonresident spending in Alaska as a whole and within specific regions of the state.

An economic model was then used to estimate the additional economic effects that angler spending produced within each region of the state. Using the collective dollars spent by anglers, an economic model known as IMPLAN estimated the total jobs, tax revenues and other economic contributions. Regional as well as statewide totals can be determined and are summarized in the following pages. Information on the dollars associated with guided fishing trips and with nonresident fishing is also included. First, here are some statewide highlights.

Total Resident and Nonresident Sportfishing Expenditures, by Category

	Resident Anglers	Nonresident Anglers	All Anglers
Licenses and Fees	$6,627,558	$16,536,955	$23,164,513
Trip Expenditures (non-package)	$219,829,151	$347,358,999	$567,188,150
Package Expenditures	n/a	$137,519,700	$137,519,700
Equipment Expenditures	$433,693,104	$41,385,450	$475,078,554
Real Estate Expenditures	$73,139,537	$109,697,619	$182,837,156
Total Expenditures	**$733,289,349**	**$652,498,723**	**$1,385,788,072**

TOTAL ANGLER SPENDING BY CATEGORY



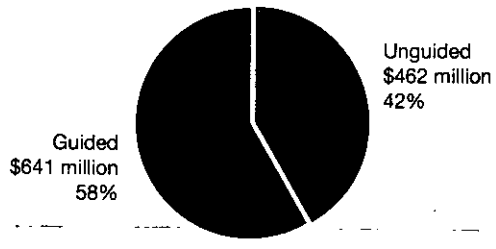
Average Per Day Expenditure for Trip-Related Items Only, Including Package Trips

(Lodging, fuel, food, travel packages, etc.)

	Per Day
All Alaska Fishing Combined	**$277.46**
Residents Only	$150.63
Non-Residents Only	$448.78
Saltwater	
Residents, Unguided	$162.81
Residents, Guided	$466.53
Non-Residents, Unguided	$209.40
Non-Residents, Guided	$744.03
Freshwater	
Residents, Unguided	$91.73
Residents, Guided	$509.56
Non-Residents, Unguided	$213.24
Non-Residents, Guided	$790.41

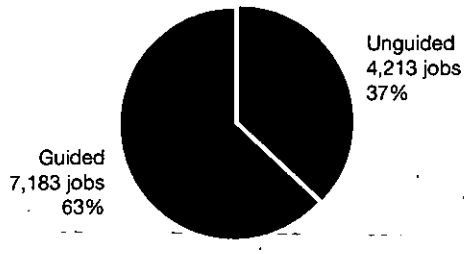
ECONOMIC ACTIVITY, OR MULTIPLIER EFFECT: SUPPORTED BY GUIDED AND UNGUIDED FISHING TRIPS

Trip-related and Package Expenditures*



JOBS: SUPPORTED BY GUIDED AND UNGUIDED FISHING TRIPS

Trip-related and Package Expenditures*



*Only trip related expenditures (food, fuel, lodging, etc.) could be divided into guided and unguided portions. It was not possible to divide equipment expenditures in such a manner.

How Economic Effects Occur

While the economic effects of sportfishing occur on a large scale statewide, it's important to note that they happen one angler at a time.

Suppose, for example, that a construction worker in downtown Anchorage decides to go fishing on his day off. He stops after work at the local tackle shop and spends $250 for a rod and reel along with some line, lures, a knife and cooler. Sandwiches, soda, and ice for the trip come from the local grocery store, and he spends still more money to fill his vehicle with gas on the way home. Very early the next morning, he starts the 150-mile drive out the Seward and Sterling highways to the Kenai River where he'll fish for king or coho salmon.

Meanwhile, the money he left behind goes to work. Some of the money he spent for fishing gear helps to pay the wages of a sales clerk, for example, who in turn spends some that evening at a local restaurant, to buy groceries, or pays his utility bill at the local light and power company. These payments, known collectively as the "multiplier effect", help to support still other jobs as the money our angler spent ripples outward in many directions through the local economy, even to those sectors not directly related to fishing. See page 11 for more definitions.

Regional Economic EFFECTS

Economic effects can be measured regionally and locally as well as statewide. Alaska has several distinct regions, each with its own characteristic sport fisheries that show different patterns in angling participation, spending, and economic effects.

STATEWIDE RESULTS

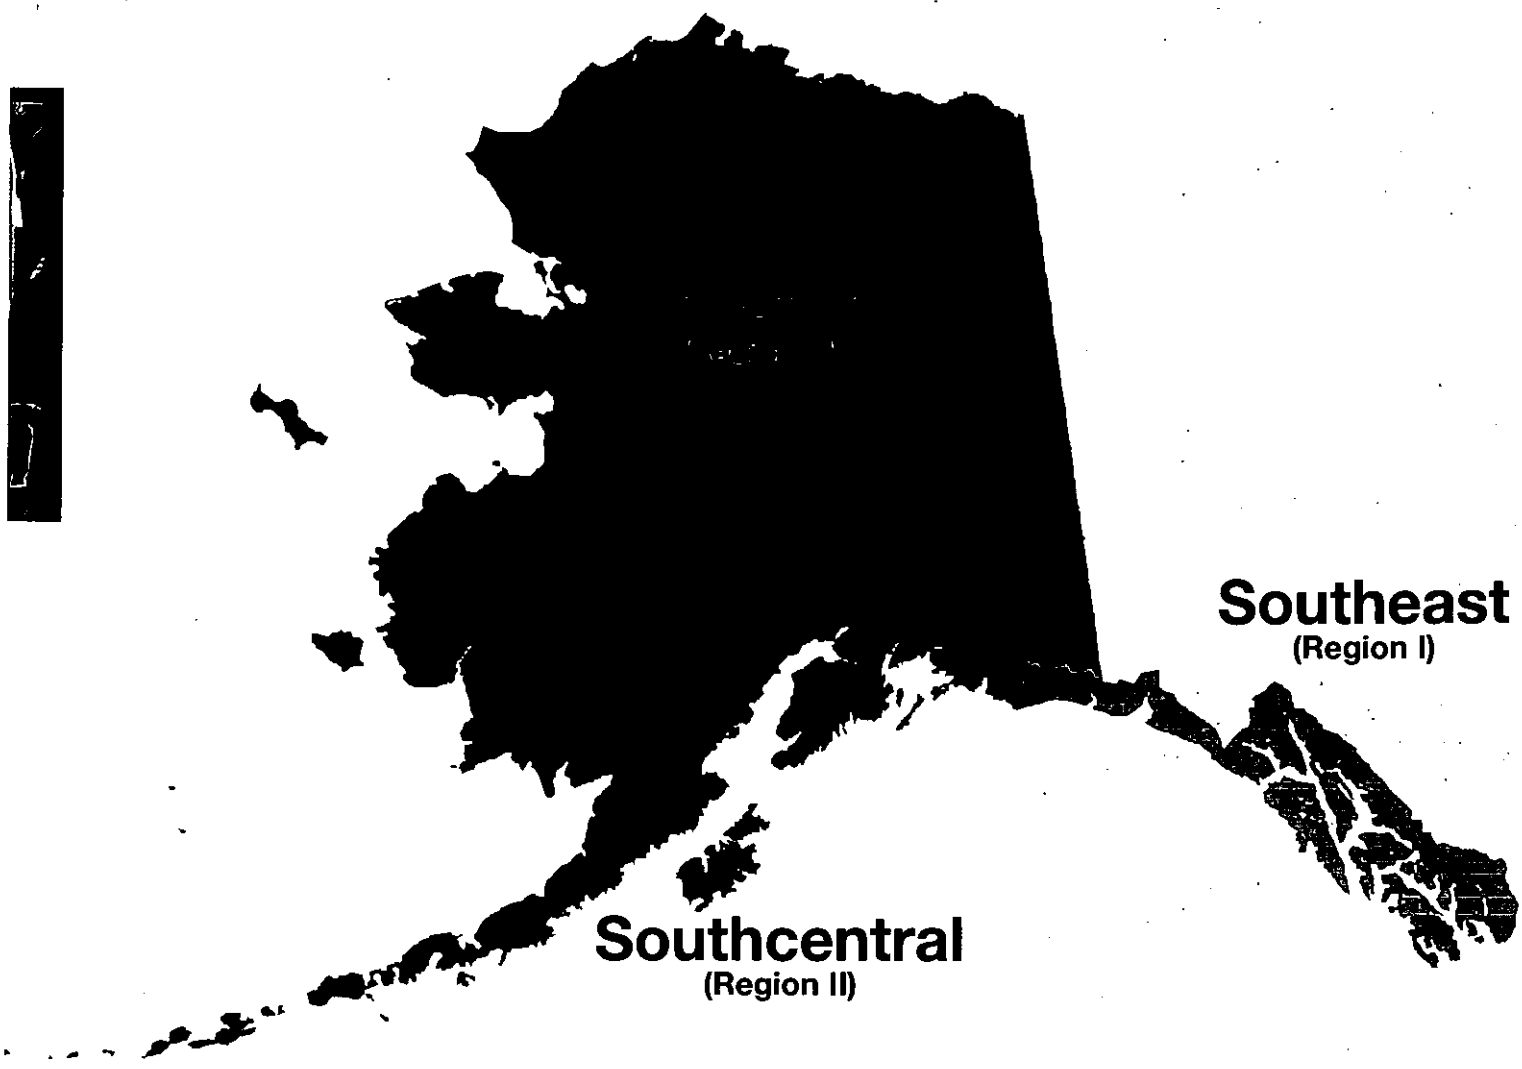
Alaska is blessed with many world-class freshwater and marine fisheries. In 2007, resident and nonresident anglers spent nearly $1.4 billion on equipment, boats, and trip-related and other items. Alaska anglers on average spent $2,914 on sportfishing trip expenses, fishing-related equipment, licenses, and other items in 2007. The actual amount spent per angler varies based on his or her preferred fishing locations, region, and more. Details are available in the technical report (see sidebar on page 8).

As anglers' expenditures exchange hands, economic contributions are generated statewide. In 2007, these contributions amounted to 15,879 jobs, $246 million in tax revenues and $545 million in income. Economic output, which is the value of all goods and services produced by businesses as a result of anglers' expenditures, was just over $1.6 billion.

SOUTHEAST (REGION I)

The so-called Panhandle area extending roughly from Yakutat south-southwest through Juneau and Ketchikan to the British Columbia border is a complex maze of islands, straits, and mountains. The saltwater salmon fishing here is outstanding, although some anglers find steelhead, along with river-resident trout, to be just as appealing.

Total spending by all anglers, resident and nonresident combined, for Southeast Alaska in 2007 was estimated to be $274 million. The total economic output came to $295 million, which supported 3,063 jobs and generated $22 million in state and local taxes.



SOUTHEAST MARINE (SUBREGION)

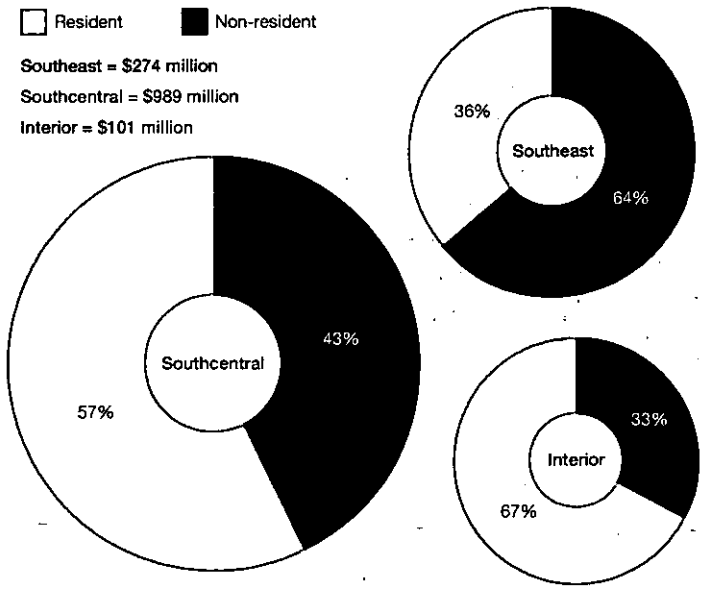
Within southeast Alaska, the popularity of salt-water fishing accounted for almost half of all angler spending. Saltwater anglers in southeast Alaska spent $132 million of the $274 million spent on sportfishing in southeast Alaska in 2007, which supported 1,897 jobs and created $14 million in state and local tax revenues.

SOUTHCENTRAL (REGION II)

This is by far the most popular angling region in Alaska as measured in total angler days. It includes Prince William Sound, Cook Inlet and the Anchorage area, as well as Kodiak Island and the Bristol Bay area to the west of Cook Inlet. All five salmon species are fished widely here in both salt- and fresh-water, along with halibut and other saltwater species. Trophy rainbow trout in the various Bristol Bay drainages are world-famous.

Anglers spent $989 million in the Southcentral region in 2007, supporting 11,535 area jobs and creating $91 million in state and local taxes.

RESIDENT AND NONRESIDENT EXPENDITURES BY REGION



Economic measures reported in this chart are based on regional IMPLAN model outputs using 2007 angler expenditures.

For More Details...

This report is a summary of a 300 page technical report available free from the Alaska Department of Fish and Game, Division of Sport Fish. The complete report presents detailed descriptions of the methods and data sources used in the study, as well as the complete results. Regional Economic EFFECTS *(cont.)*

COOK INLET (SUBREGION)

Notably, much of Southcentral's economic activity centers around the Cook Inlet area, partly because Anchorage and the Matanuska-Susitna valley are such large population centers with good fishing nearby. The Kenai River, for example, is an easy drive from Anchorage and is widely known among anglers as one of the world's foremost salmon rivers. In addition, there are large sport fisheries for halibut and other groundfish that are accessed from several communities that border Cook Inlet. In the Cook Inlet subregion alone (a subset of Southcentral region), anglers spent about $733 million in 2007, which supported 8,056 jobs and generated $55 million in state and local taxes.

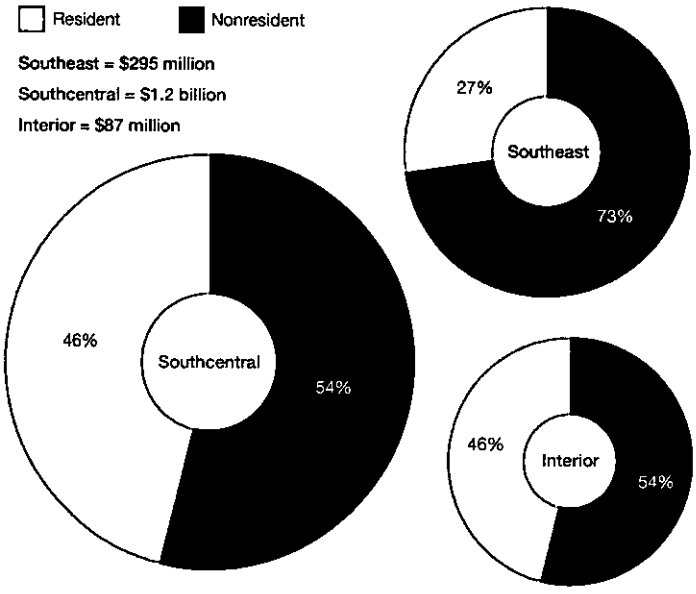
INTERIOR (REGION III)

Among anglers, the northern two-thirds of the state could be called the road less traveled. This vast area contains many small communities and sport fisheries located off the road system with fisheries less accessible than places farther south in the state. However, the fishing is none the less exceptional, and in addition to salmon and trout there are fisheries for unique species such as sheefish, arctic char, and burbot, as well as huge northern pike found in the "flats" region of the lower Yukon River.

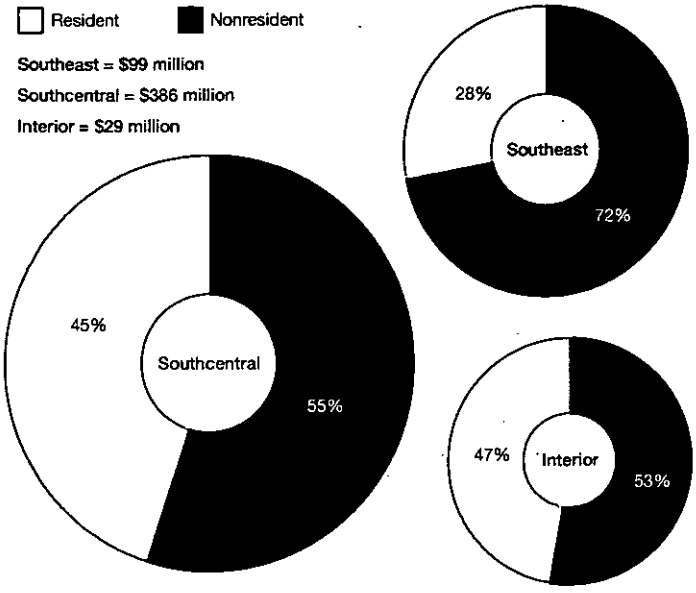
Angling traffic here is lighter than in other regions of the state but still significant. Total regional spending by all anglers in this region topped $101 million in 2007 and directly or indirectly supported 923 area jobs and $7 million in state and local taxes.

Total Angler Expenditures
$1.4 Billion

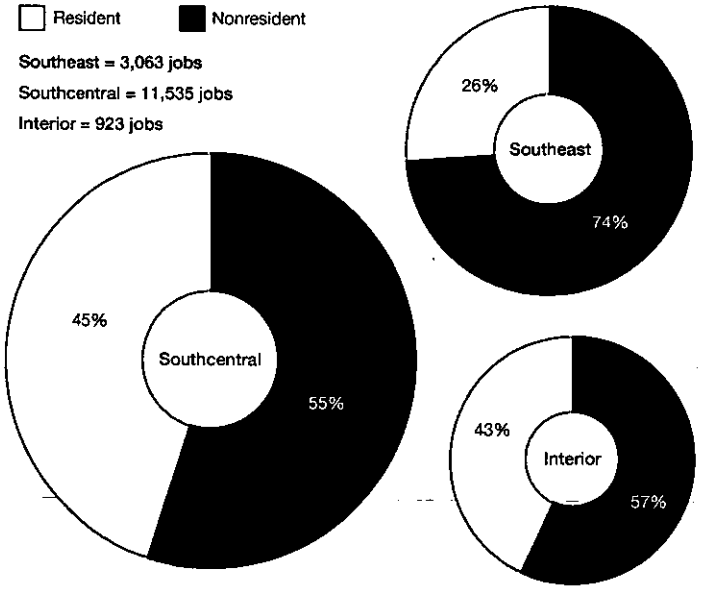
RESIDENT AND NONRESIDENT OUTPUT BY REGION



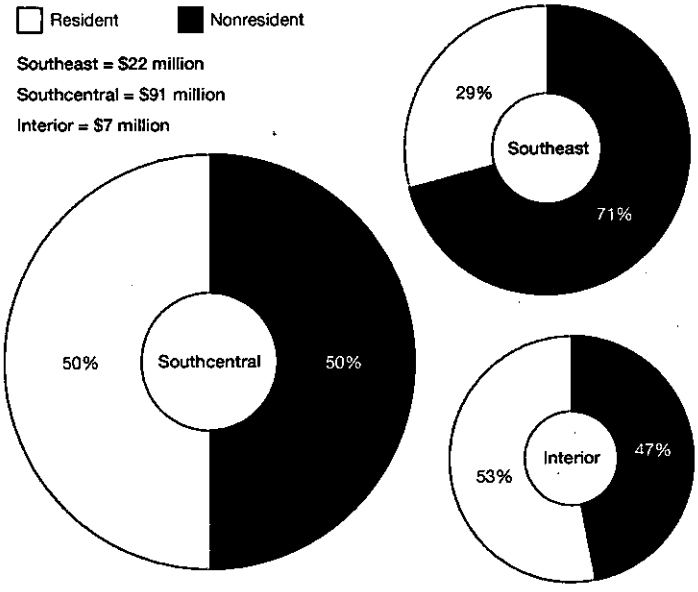
RESIDENT AND NONRESIDENT INCOME BY REGION



RESIDENT AND NONRESIDENT EMPLOYMENT BY REGION



RESIDENT AND NONRESIDENT STATE & LOCAL TAX REVENUES BY REGION



Sportfishing-related Jobs
15,879

Economic measures reported in these charts are based on regional IMPLAN model outputs using 2007 angler expenditures.

See page 11 for definitions of terms used on this page.

Economic Contributions of Sportfishing in Alaska, by Residency & Region, 2007

Federal	*$2,077,440*	*$10,104,178*	*$12,181,618*

Output = total economic activity generated by angler spending
Income = salaries, wages, employee benefits and proprietors' profits stimulated by anglers
Jobs = same as employment, these are the total number of both full-time and part-time jobs supported by angler spending
Tax Revenues = the total personal and business tax revenues earned by local, state, and federal government that are generated by angler spending
†The contributions are for trip spending only, including travel packages. It was not possible to allocate equipment and real estate expenditures by type of water fished.

Definitions of Terms Used in this Report

Angler Expenditures: the dollars spent for the primary reason of sportfishing. Such expenditures include trip-related expenses for fishing (fuel, guide services, lodging, etc.), fishing tackle and other fishing equipment, the portion of ancillary equipment used for fishing that may have multiple uses (e.g., coolers, binoculars), and real estate maintenance and construction expenditures if used primarily for the pursuit of sportfishing.

Total Multiplier Effect (also known as Total Economic Activity): the results (measured in output, income, jobs and taxes) of the total rounds of business and consumer spending stimulated by anglers' original expenditures.

Income: generated as a result of anglers' expenditures, this includes total payroll, including salaries and wages, as well as benefits such as insurance, and retirement benefits paid to employees and business proprietors.

Employment: the total number of both full-time and part-time jobs supported as a result of anglers' expenditures.

Tax Revenues: the total tax revenues earned by local, state and federal governments as a result of anglers' expenditures. All forms of local, state and federal taxes are included.

ACKNOWLEDGEMENTS

Funding for this study was provided by the Alaska Legislature which approved a $229,800 Fish and Game Fund increment and a $200,000 General Fund increment to the Division of Sport Fish FY-2008 budget. The Division of Sport Fish would like to thank Southwick Associates for their dedicated work on this project as well as the many anglers and guide businesses who participated in this study by providing detailed information on their sportfishing-related expenditures in 2007.

Southwick Associates, based in Fernandina Beach, FL, was founded in 1989 to serve state fish and wildlife agencies and the sportfishing and hunting industries. From our north Florida offices, we continue to serve this core group, and now provide economic and business intelligence to many more.

LAWS OF ALASKA

2004

Source
SCS CSHB 452(RES)

Chapter No.
_____

AN ACT

Relating to licensing and regulation of sport fishing operators and sport fishing guides; relating to licensing and registration of sport fishing vessels; authorizing the Department of Fish and Game and the Alaska Commercial Fisheries Entry Commission to release records and reports to the Department of Natural Resources and the Department of Public Safety; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

THE ACT FOLLOWS ON PAGE 1

AN ACT

Relating to licensing and regulation of sport fishing operators and sport fishing guides; relating to licensing and registration of sport fishing vessels; authorizing the Department of Fish and Game and the Alaska Commercial Fisheries Entry Commission to release records and reports to the Department of Natural Resources and the Department of Public Safety; and providing for an effective date.

*** Section 1.** AS 16.05.340(a) is amended by adding a new paragraph to read:

(26) Fishing services licenses

(A) Sport fishing operator license $100

(B) Sport fishing guide license 50

(C) Sport fishing operator and sport fishing guide combined license 100

*** Sec. 2.** AS 16.05 is amended by adding a new section to read:

Sec. 16.05.395. Sport fishing vessel registration. For calendar year 2005 and subsequent calendar years, a person may not use a vessel to provide sport fishing services under AS 16.40.260 - 16.40.299 unless the vessel is registered with the department and proof of registration is attached to and clearly visible on the vessel while the vessel is used to provide sport fishing services. The department shall register vessels used to provide sport fishing services, and provide proof of registration, without charge. The department may adopt regulations as the department finds necessary to implement this section.

*** Sec. 3.** AS 16.05.420 is amended to read:

Sec. 16.05.420. License, tag, [AND] permit, and registration violations. (a) A false statement of a material fact in an application for a license, tag, [OR] permit, **and sport fishing vessel registration** issued under AS 16.05.330 - 16.05.430 voids the license, tag, [OR] permit, **or registration** for which the application is made.

(b) A person may not make a false statement, or omit a material fact, in an application for a license, tag, [OR] permit, **or sport fishing vessel registration** issued under AS 16.05.330 - 16.05.430. A person who without any culpable mental state makes a false statement as to the person's identity or residency in an application for a license, tag, [OR] permit, **or sport fishing vessel registration** issued under AS 16.05.330 - 16.05.430 is guilty of a violation and upon conviction is punishable by a fine of not more than $300. A person who knowingly violates this subsection is guilty of a class A misdemeanor.

(c) A person to whom a license, [OR] tag, **or sport fishing vessel registration** has been issued under this chapter may not alter, change, loan, or transfer the license, [OR] tag, **or sport fishing vessel registration**. A person may not use a license, [OR] tag, **or sport fishing vessel registration** that has been issued under this chapter to another person.

*** Sec. 4.** AS 16.05.490(a) is amended to read:

(a) As a condition to delivery or landing of fish or engaging in commercial fishing in the state, a license is required for a commercial vessel [, INCLUDING A VESSEL USED IN CHARTER SERVICE FOR THE RECREATIONAL TAKING OF FISH AND SHELLFISH].

* **Sec. 5.** AS 16.05.815(a) is amended to read:

(a) Except as provided in (b) and (c) of this section, records required by regulations of the department concerning the landings of fish, shellfish, or fishery products, and annual statistical reports of fishermen, buyers, and processors required by regulation of the department are confidential and may not be released by the department or by the Alaska Commercial Fisheries Entry Commission except as set out in this subsection. The department may release the records and reports set out in this subsection to the Alaska Commercial Fisheries Entry Commission. The department and the Alaska Commercial Fisheries Entry Commission may release the records and reports set out in this subsection to the recipients identified in this subsection if the recipient, other than a recipient under (5) - (9) of this subsection, agrees to maintain the confidentiality of the records and reports. The department and the Alaska Commercial Fisheries Entry Commission may release

(1) any of the records and reports to the National Marine Fisheries Service and the professional staff of the North Pacific Fishery Management Council as required for preparation and implementation of the fishery management plans of the North Pacific Fishery Management Council within the exclusive economic zone;

(2) any of the records and reports to the professional staff of the Pacific States Marine Fisheries Commission who are employed in the Alaska Fisheries Information Network project for the purpose of exchanging information with users authorized by the department;

(3) any of the records and reports to the Department of Revenue to assist the **department** [DEPARTMENT OF REVENUE] in carrying out its statutory responsibilities;

(4) records or reports of the total value purchased by each buyer to a municipality that levies and collects a tax on fish, shellfish, or fishery products if the municipality requires records of the landings of fish, shellfish, or fishery products to be submitted to it for purposes of verification of taxes payable;

(5) such records and reports as necessary to be in conformity with a court order;

(6) on request, the report of a person to the person whose fishing

activity is the subject of the report, or to a designee of the person whose fishing activity is the subject of the report;

(7) on request, annual statistical reports of a fisherman, buyer, or processor to the fisherman, buyer, or processor whose activity is the subject of the report, or to a designee of the fisherman, buyer, or processor whose activity is the subject of the report;

(8) **any of the records and reports** [FISH TICKETS, FISH TICKET INFORMATION, SALTWATER CHARTER LOGBOOKS, SALTWATER CHARTER LOGBOOK INFORMATION, AND ANNUAL STATISTICAL REPORTS OF FISHERMEN, BUYERS, AND PROCESSORS AND INFORMATION IN THOSE REPORTS] to the Department of Public Safety **for law enforcement purposes**;

(9) fish tickets, fish ticket information, and annual statistical reports of fishermen, buyers, and processors and information in those reports to the law enforcement personnel of the National Marine Fisheries Service and the National Oceanic and Atmospheric Administration for the purpose of enforcing fishery laws in waters of this state and in waters of the exclusive economic zone adjacent to this state;

(10) fish tickets and fish ticket information regarding halibut to the International Pacific Halibut Commission; [AND]

(11) any of the records and reports to the child support enforcement agency created in AS 25.27.010, or the child support enforcement agency of another state, for child support purposes authorized under law**; and**

(12) any of the records and reports to the Department of Natural Resources to assist the department in carrying out its statutory responsibilities in regard to sport fishing operations and sport fishing guides within the Kenai River Special Management Area under AS 41.21.500 - 41.21.514.

*** Sec. 6.** AS 16.40 is amended by adding new sections to read:

Article 6. Sport Fishing Services.

Sec. 16.40.260. Sport fishing operator license. (a) The department shall issue an annual sport fishing operator license to a person who

(1) holds a current business license under AS 43.70 to provide services

to sport fishermen;

(2) presents proof satisfactory to the department of a general liability insurance policy or marine protection and indemnity insurance policy, covering the services provided by the person and the person's employees to sport fishermen, that provides coverage of at least $100,000 for each incident, and $300,000 for all incidents in a year;

(3) pays the license fee prescribed by AS 16.05.340(a); and

(4) satisfies all additional requirements adopted in regulation by the Board of Fisheries.

(b) A person may not provide sport fishing services unless the person holds a current sport fishing operator license and has current insurance coverage as required in (a)(2) of this section.

(c) A person who holds a current sport fishing operator license may contract to provide sport fishing guide services to a sport fisherman through an employee who holds a current sport fishing guide license under AS 16.40.270.

(d) A person who holds a current sport fishing operator license may not directly provide sport fishing guide services to a sport fisherman unless the person also holds a current sport fishing guide license under AS 16.40.270(b).

(e) A person who holds a sport fishing operator license may not aid in the commission of a violation of AS 16.05 - AS 16.40 or a regulation adopted under AS 16.05 - AS 16.40, including regulations relating to the proper method to release fish, by a sport fishing guide who is employed by the person or by a sport fisherman who is a client of the person.

Sec. 16.40.270. Sport fishing guide license. (a) A natural person may obtain an annual sport fishing guide license if the person

(1) is a citizen of the United States, Canada, or Mexico, or is a resident alien;

(2) is certified in first aid by the American Red Cross or a similar organization;

(3) holds a license to carry passengers for hire issued by the United States Coast Guard if the person operates a vessel in the provision of sport fishing

guide services and the license is required by the United States Coast Guard for the area in which the fishing guide provides fishing guide services;

(4) holds a current sport fishing license from this state;

(5) pays the license fee prescribed by AS 16.05.340(a); and

(6) satisfies all additional requirements adopted in regulation by the Board of Fisheries.

(b) A natural person may obtain an annual sport fishing operator and sport fishing guide combined license if the person satisfies the requirements for a sport fishing operator license under AS 16.40.260 and for a sport fishing guide license under this section and pays the license fee prescribed by AS 16.05.340(a).

(c) A person may not provide sport fishing guide services unless the person

(1) holds a current sport fishing guide license; and

(2) holds a current sport fishing operator license or is an employee of a person who holds a current sport fishing operator license.

(d) A sport fishing guide may provide sport fishing guide services only to persons who have engaged the services of the sport fishing operator by whom the sport fishing guide is employed. A sport fishing guide may not contract directly with a person to provide sport fishing guide services to a person unless the sport fishing guide also holds a current sport fishing operator license.

(e) While engaged in providing sport fishing guide services, a sport fishing guide shall have readily available for inspection

(1) a current sport fishing guide license;

(2) the current licenses, tags, and permits that are required to engage in the sport fishery for which the sport fishing guide services are being provided;

(3) a driver's license or similar identification card that is issued by a state or federal agency and that bears a photograph of the fishing guide; and

(4) proof of

(A) employment as a sport fishing guide by a person who holds a current sport fishing operator license; or

(B) current licensure as a sport fishing operator.

(f) A sport fishing guide may not

(1) aid in the commission of a violation of AS 16.05 - AS 16.40 or a regulation adopted under AS 16.05 - AS 16.40 by a client of the sport fishing guide; or

(2) permit the commission by a client of the sport fishing guide of a violation of AS 16.05 - AS 16.40 or a regulation adopted under AS 16.05 - AS 16.40 that the sport fishing guide knows or reasonably believes is being or will be committed without

(A) attempting to prevent it, short of using force; and

(B) reporting the violation.

Sec. 16.40.280. Reports. (a) The department may collect information from sport fishing guides, including

(1) the name and license number of each vessel licensed under AS 16.05.490 that is used in providing sport fishing guide services;

(2) the amount of fishing effort, catch, and harvest by clients of a sport fishing guide;

(3) the locations fished during the provision of sport fishing guide services; and

(4) other information that the department or board requires by regulation.

(b) A person who holds a license issued under AS 16.40.260 or 16.40.270 shall comply with the reporting requirements in this section and reporting requirements adopted in regulation by the department or board. The department and the board may adopt by regulation requirements for timely submission of reports required under this section or under regulations adopted by the department or board.

(c) A person who is required to complete reports under this section may not provide false information or omit material facts in a report.

(d) A person who is required to complete reports under this section may not be issued a new license under AS 16.40.260 or 16.40.270 unless the department has received all reports required under this section for the preceding year.

(e) Information collected under this section is confidential to the extent provided under AS 16.05.815.

(f) The department or board may adopt regulations under AS 44.62

(Administrative Procedure Act) that it considers necessary to implement this section.

Sec. 16.40.290. Penalty. (a) Except as provided in (b) and (c) of this section, a person who knowingly violates AS 16.40.260 - 16.40.299 or a regulation adopted under AS 16.40.260 - 16.40.299 is guilty of a class A misdemeanor.

(b) A person who, without any culpable mental state, violates AS 16.40.270(e) is guilty of a violation.

(c) A person who knowingly violates AS 16.40.270(e) or who knowingly fails to comply with a requirement for timely submission of reports required by a regulation adopted under AS 16.40.280(b) is, for a

(1) first offense in a three-year period, guilty of a violation; and

(2) second or subsequent offense in a three-year period, guilty of a class B misdemeanor.

(d) In addition to any other penalty provided by law, a court may revoke the sport fishing guide license of a person who is convicted under (a) or (c)(2) of this section.

(e) In this section, "knowingly" has the meaning given in AS 11.81.900.

Sec. 16.40.299. Definitions. In AS 16.40.260 - 16.40.299,

(1) "sport fishing guide" means a person who is licensed to provide sport fishing guide services to persons who are engaged in sport fishing;

(2) "sport fishing guide services" means assistance, for compensation or with the intent to receive compensation, to a sport fisherman to take or to attempt to take fish by accompanying or physically directing the sport fisherman in sport fishing activities during any part of a sport fishing trip; "sport fishing guide services" does not include

(A) sport fishing services; or

(B) services provided by an assistant, deckhand, or similar person who works directly under the supervision of and on the same vessel as a sport fishing guide;

(3) "sport fishing services" means the indirect provision of assistance, for compensation or with the intent to receive compensation, to a person engaged in sport fishing in taking or attempting to take fish or shellfish by a business that

employs a sport fishing guide to provide sport fishing guide services to the person during any portion of a sport fishing trip; "sport fishing services" does not include

(A) an activity for which a sport fishing guide license is required; or

(B) booking and other ancillary services provided by a tour broker or agent to a sport fishing services operator.

*** Sec. 7.** AS 25.27.244(s)(2)(A) is amended by adding new sub-subparagraphs to read:

(xviii) sport fishing operator license under AS 16.40.260;

(xix) sport fishing guide license under AS 16.40.270;

*** Sec. 8.** AS 16.05.340(a)(26); AS 16.40.260, 16.40.270, 16.40.280, 16.40.290, 16.40.299; AS 25.27.244(s)(2)(A)(xviii), and 25.27.244(s)(2)(A)(xix) are repealed January 1, 2010.

*** Sec. 9.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION; REGULATIONS. The Board of Fisheries and the Department of Fish and Game each may proceed to adopt regulations necessary to implement the changes made by secs. 1, 3, 4, 5, and 6 of this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before the effective date of the statutory changes.

*** Sec. 10.** Sections 2 and 9 of this Act take effect immediately under AS 01.10.070(c).

*** Sec. 11.** Except as provided in sec. 10 of this Act, this Act takes effect January 1, 2005.

This bill authorizes the Alaska Energy Authority (AEA) to charge and collect fees relating to the power project fund (PPF.) See AEA's fiscal note for details.

In addition to authorizing the collection of fees, this bill allows AEA to sell and the Alaska Industrial Development and Export Authority to make a one-time purchase of substantially all loans from the PPF loan portfolio.

BILL NO. SB 301

ANALYSIS CONTINUATION

AEA and AIDEA have developed a memorandum of understanding outlining the terms of the sale. AIDEA will purchase outstanding loans at a discount rate equivalent to 6.02%, its return on investments for the 3-year period ended September 30, 2009. To maximize the price paid, AEA agrees to repurchase from AIDEA loans which later default. Estimated sale proceeds are approximately $20.6 million. The closing date of the sale is anticipated to be in July 2010.

No additional operating costs are anticipated with this legislation.

ANALYSIS: *(Attach a separate page if necessary)*

This bill authorizes the Alaska Energy Authority (AEA) to charge and collect fees relating to the power project fund (PPF.) Currently, AEA only collects funds from applicants relating to the direct cost of analyzing the feasibility of a project. All fees would be deposited into the general fund; however, AEA will request an annual appropriation to have collected fees be deposited into the PPF. A similar annual appropriation is requested for fees collected from bulk fuel loans. ** Estimated fees are indeterminate until regulations are adopted; however, as a reference, AEA charges a $25 application fee and a .5% origination fee for loans from the Bulk Fuel Revolving Loan Fund.

In addition to authorizing the collection of fees, this bill allows AEA to sell and the Alaska Industrial Development

HB 301

An Act relating to the power project fund

Sectional Analysis

Section	Analysis
1	AS 42.45.010(a) is amended to allow proceeds from the sale of power project loans to be deposited into the power project fund (PPF).
2	AS 42.45.010(d) repeals and reenacts AEA authority to adopt regulations relating to the loan program by specifically allowing AEA to establish fees for applications and loan originations.
3	AS 42.45.010 is amended by adding new subsections – (k) to provide that fees collected will be deposited into the general fund. (l) provides authority to AEA to sell loans of the PPF with legislative approval, allows AEA to repurchase loans sold under this subsection which default, allows proceeds received to be deposited into the fund.
4	AS 44.88.080 is amended by adding new subsection (30) allowing AIDEA to purchase from AEA, as an investment of the revolving fund, PPF loans.
5	Uncodified law is amended by adding a new section providing for legislative approval for AEA to sell and AIDEA to purchase certain power project fund loans. This section references the 2/17/10 MOU between AIDEA and AEA that memorializes the proposed terms of the sale and purchase.
6	Provides for an immediate effective date

ALASKA ENERGY AUTHORITY

March 9, 2010

The Honorable Lesil McGuire
The Honorable Bill Wielechowski
Co-Chairs, Senate Resources Committee
Alaska State Legislature
State Capitol, Room 125
Juneau, Alaska 99801-1182

RE: SB 301, "An Act relating to the Power Project Fund"

Dear Senators McGuire and Wielechowski:

On February 26, 2010, SB 301 (Companion Bill HB 411) was introduced by the Governor through the Senate Rules committee and referred to your committee. This legislation is intended to allow the Alaska Energy Authority (AEA) to charge and collect fees relating to the Power Project Fund (PPF) and authorize AEA to sell and authorize the Alaska Industrial Development and Export Authority (AIDEA) to purchase loans of the PPF.

SB 301 allows AEA to charge and collect fees in administering the PPF, similar to the authority AEA has to charge and collect fees in administering the Bulk Fuel Revolving Loan Fund (BFRLF.) AEA charges an application fee and an origination fee for a loan of the BFRLF; AEA proposes to charge similar fees for a PPF loan application and loan.

SB 301 also authorizes AEA to sell and AIDEA to purchase certain loans from the PPF. The proposed sale of existing loans will recapitalize the PPF with approximately $20.6 million. To maximize the price paid to AEA for the sale of the loans, the bill includes provisions for AEA to repurchase from AIDEA loans which later default. This repurchase provision substantially reduces financial risk to AIDEA and allows AIDEA to purchase the loans without significant discount.

We respectfully request you to schedule SB 301 for hearing in your committee, and we urge favorable action on this bill. A copy of the Memorandum of Understanding between AIDEA and AEA, fiscal notes and sectional analysis are attached. We will be happy to meet with you and other members of the committee to provide any other information you may require. Thank you for considering our request.

Sincerely,

ALASKA ENERGY AUTHORITY

M.C. Haag

for Steve Haagenson
Executive Director

Memorandum of Understanding

This Memorandum of Understanding ("MOU") is entered into this 17th day of February, 2010, between the Alaska Energy Authority ("AEA") and the Alaska Industrial Development and Export Authority ("AIDEA").

Recitals

A. The power project fund ("PPF") is established as a separate fund of AEA under AS 42.45.010(a).

B. AEA may make PPF loans for financing various activities related to the development of energy generation and transmission projects, bulk fuel storage facilities, waste energy, energy conservation, or alternative energy facilities, or may make loans to the bulk fuel revolving loan fund for the purposes described in AS 42.45.250(l).

C. The Renewable Energy Grant Fund was established under AS 42.45.045 to finance certain energy projects in Alaska, with an emphasis on feasible energy projects that provide a cost benefit to Alaska ratepayers, and projects that will serve areas in which the average cost of energy exceeds the average cost of energy in other areas of the state.

D. AEA makes PPF loans available to assist project developers meet their matching fund obligations under the Renewable Energy Fund Grant Recommendation Program. By doing so, AEA is able to leverage the funding available from each program to better promote the development of cost efficient, renewable energy projects for the benefit of Alaska ratepayers.

E. The PPF currently has less than $5,000,000 available for serving the purposes of the fund.

F. AEA desires to sell, and AIDEA desires to purchase, the outstanding PPF loans identified in the attached Exhibit A.

G. In this MOU, in order to maximize the amount AIDEA would be willing to pay for the PPF loans identified in Exhibit A and minimize financial risk to AIDEA from purchasing the PPF loans, AEA agrees to repurchase from AIDEA any outstanding loan if the borrower has a payment default after the sale.

H. The outstanding PPF loans identified in Exhibit A have a combined current balance as of February 9, 2010, of $24,700,452.23, and earn interest at annual rates that range from 0% to 6.16%.

Memorandum of Understanding

This Memorandum of Understanding ("MOU") is entered into this 17th day of February, 2010, between the Alaska Energy Authority ("AEA") and the Alaska Industrial Development and Export Authority ("AIDEA").

Recitals

A. The power project fund ("PPF") is established as a separate fund of AEA under AS 42.45.010(a).

B. AEA may make PPF loans for financing various activities related to the development of energy generation and transmission projects, bulk fuel storage facilities, waste energy, energy conservation, or alternative energy facilities, or may make loans to the bulk fuel revolving loan fund for the purposes described in AS 42.45.250(l).

C. The Renewable Energy Grant Fund was established under AS 42.45.045 to finance certain energy projects in Alaska, with an emphasis on feasible energy projects that provide a cost benefit to Alaska ratepayers, and projects that will serve areas in which the average cost of energy exceeds the average cost of energy in other areas of the state.

D. AEA makes PPF loans available to assist project developers meet their matching fund obligations under the Renewable Energy Fund Grant Recommendation Program. By doing so, AEA is able to leverage the funding available from each program to better promote the development of cost efficient, renewable energy projects for the benefit of Alaska ratepayers.

E. The PPF currently has less than $5,000,000 available for serving the purposes of the fund.

F. AEA desires to sell, and AIDEA desires to purchase, the outstanding PPF loans identified in the attached Exhibit A.

G. In this MOU, in order to maximize the amount AIDEA would be willing to pay for the PPF loans identified in Exhibit A and minimize financial risk to AIDEA from purchasing the PPF loans, AEA agrees to repurchase from AIDEA any outstanding loan if the borrower has a payment default after the sale.

H. The outstanding PPF loans identified in Exhibit A have a combined current balance as of February 9, 2010, of $24,700,452.23, and earn interest at annual rates that range from 0% to 6.16%.

I. AEA and AIDEA agree that the outstanding loans identified in Exhibit A have a projected present value as of the closing date (expected to be in July 2010) of approximately $20.6 million. This present value is the value of projected loan payments over the life of the outstanding loans, discounted at 6.02%, which was AIDEA's return on investments for the three year period ended September 30, 2009.

J. AEA and AIDEA agree that the sale and purchase of the outstanding PPF loans identified in Exhibit A at the present value of the loans will both adequately capitalize the Power Project Fund and provide a reasonable investment for the revolving fund of AIDEA.

K. The sale and purchase of the outstanding PPF loans identified in Exhibit A will require, among other things, the enactment of legislation approving the sale and purchase.

L. This MOU is intended to set forth the principal terms and conditions under which AEA would sell, and AIDEA would purchase, the outstanding PPF loans identified in Exhibit A. The parties intend that this MOU be incorporated into legislation to be submitted to the Alaska State Legislature authorizing the sale and purchase of the loans.

NOW, THEREFORE, in exchange for the mutual promises contained herein and for other consideration the receipt and adequacy of which is hereby acknowledged, the parties agree as follows:

1. AEA agrees to sell, and AIDEA agrees to purchase, the outstanding PPF loans identified in Exhibit A on the closing date, expected to be in July 2010, for a purchase price equal to the present value as of the closing date of all PPF loans identified in Exhibit A.

2. In this MOU, the "present value" of a PPF loan means the present value of all scheduled loan payments on the PPF loan over the entire remaining life of the PPF loan, using a discount rate of 6.02%.

3. Based upon the definition of "present value," AIDEA and AEA estimate that the purchase price of all PPF loans identified in Exhibit A on the closing date will be approximately $20.6 million.

4. AEA shall repurchase from AIDEA any outstanding PPF loan if the borrower defaults on payment after the sale. The repurchase price shall equal the present value of the loan determined on the date of the payment default by the borrower, less any payments received by AIDEA after the payment default date. AIDEA may exercise the right to have AEA repurchase a PPF loan by sending notice to AEA of the payment default.

AEA shall pay AIDEA within 30 days of the notice of payment default from unencumbered and uncommitted funds in the Power Project Fund. If the PPF has an inadequate amount of unencumbered and uncommitted funds to repurchase the PPF loan from AIDEA within 30 days of the notice of default, AEA shall make payments to AIDEA with unencumbered and uncommitted funds as they become available in the Power Project Fund (through repayments from other PPF loans or otherwise), with interest on the unpaid balance at the annual rate of four percent (4%) from the date 30 days after the notice of default. Nothing in this paragraph precludes AIDEA from rescinding a notice of default.

WHEREFORE the parties have executed this Agreement as of the date first written above.

CS FOR SENATE BILL NO. 309(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE SENATE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST

FOR AN ACT ENTITLED

"An Act amending and extending the exploration and development incentive tax credit under the Alaska Net Income Tax Act for operators and working interest owners directly engaged in the exploration for and development of gas from a lease or property in the state; relating to a credit against the tax on the production of oil and gas for a qualified capital expenditure and for certain losses and expenditures; providing a credit against the tax on the production of oil and gas for drilling certain exploration wells in the Cook Inlet sedimentary basin; providing for an effective date by amending the effective date for sec. 2, ch. 61, SLA 2003; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 43.20.043(a) is amended to read:

(a) Subject to the terms and conditions of this section, and in addition to any other credit authorized to the taxpayer by this chapter, a taxpayer that is an operator or

working interest owner directly engaging in the exploration for and development of gas may apply as a credit against the state tax liability that may be imposed on the taxpayer under this chapter,

(1) for a tax year beginning after December 31, 2002, **and before January 1, 2010,**

(A) [(1)] 10 percent of the taxpayer's qualified capital investment; and

(B) [(2)] 10 percent of the annual cost incurred by the taxpayer for qualified services in the state during each tax year for which a credit is allowable for a qualified capital investment **for any gas reserve of the taxpayer or for each year that qualified costs are incurred for a gas reserve for which the taxpayer previously elected to claim a credit(A) of this paragraph; and**

(2) for a tax year beginning after December 31, 2009,

(A) 25 percent of the taxpayer's qualified capital investment; and

(B) 25 percent of the annual cost incurred by the taxpayer for qualified services in the state during each tax year for which a credit is allowable for a qualified capital investment for any gas reserve of the taxpayer or for each year that qualified costs are incurred for a gas reserve for which the taxpayer previously elected to claim a credit under (A) of this paragraph [UNDER (1) OF THIS SUBSECTION].

*** Sec. 2.** AS 43.20.043(b) is amended to read:

(b) Expenditures qualifying for the taxpayer's qualified investment credit under **(a)(1)(A) or (a)(2)(A)** [(a)(1)] of this section must be

(1) cash expenditures or binding payment agreements entered into after

(A) June 30, 2003**, and before January 1, 2010, if the claim of the credit is made under (a)(1)(A) of this section; or**

(B) December 31, 2009, if the claim of the credit is made under (a)(2)(A) of this section; and

(2) made for assets first placed in service in the state in or before the

tax year in which the credit is claimed through the date the

(A) wells [RESERVES] produce gas for sale and delivery; for purposes of this **subparagraph** [PARAGRAPH], "placed in service in the state" means that the first use of the qualified investment is in this state; if the property on which the claim of the credit is based has been used elsewhere in the tax year of acquisition and is brought to this state during that year or a subsequent year, the property does not qualify for the investment credit; **or**

(B) a gas well is determined not to be capable of production in commercial quantities.

* **Sec. 3.** AS 43.20.043(c) is amended to read:

(c) The credit **each** [PER] tax year allowed by (a) of this section may not exceed [50 PERCENT OF] the taxpayer's total tax liability under this chapter, but shall be calculated before the application of any other credits allowed under this chapter. An unused portion of the credit for the tax year

(1) may be carried forward into one or more of the following tax years, except that the unused credit from one tax year may not be carried forward for more than five following tax years;

(2) shall be applied to the taxpayer's tax liability under this chapter during the following tax year before allowance of a credit allowed by (a) of this section for that following tax year.

* **Sec. 4.** AS 43.20.043(e) is amended to read:

(e) A taxpayer entitled to a credit under this section

(1) may not convey, assign, or transfer the credit to another taxpayer or business entity unless the conveyance, assignment, or transfer of the credit is part of the conveyance, assignment, or transfer of the taxpayer's business;

(2) forfeits the credit to which the taxpayer is entitled during the tax year and any carryover of it under (c) of this section, but does not forfeit the portion of the credit that accrued in a previous taxable year that may be carried over under (c) of this section, if the taxpayer

(A) disposes of the qualified capital investment;

(B) takes the qualified investment out of service; or

(C) transfers the qualified investment out of this state;

(3) may not include in any rate base for a regulated facility submitted to a regulatory agency charged with determining an appropriate tariff the cost of any qualified capital investment or qualified service that has been offset by receipt of a credit under this chapter.

*** Sec. 5.** AS 43.20.043(f) is amended to read:

(f) A taxpayer is not entitled to a credit under this section for expenditures that are made or incurred for the qualified capital investment or for ~~qualified services made~~ for exploration and development of gas ~~that occur~~ in the area of Alaska lying north of 68 degrees North latitude ~~or that are made~~ or incurred to transport gas from reserves located in ~~the~~ area of Alaska lying north of 68 ~~degrees~~ North latitude **or for the delivery of Alaska North Slope natural gas to tidewater below 68 degrees North latitude.**

*** Sec. 6.** AS 43.20.043(g) is amended to read:

(g) A taxpayer **that** [WHO] obtains a credit **for a qualified capital investment or cost incurred for qualified services** under this section may not **also** claim a tax credit or royalty modification **for the same qualified capital investment or cost incurred for qualified services under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, or 43.55.025** [PROVIDED FOR UNDER ANY OTHER TITLE]. However, a taxpayer may **elect not to obtain** [, AT THE TAXPAYER'S ELECTION, FORGO] a credit under this section in order [TO CONTINUE] to qualify for a credit provided **under AS 38.05.180(i), AS 41.09.010, AS 43.55.023, or 43.55.025** [FOR IN ANOTHER TITLE].

*** Sec. 7.** AS 43.20.043(i)(1) is amended to read:

(1) "qualified capital investment" means a cash expenditure or binding payment agreement, as described in (b)(1) of this section, for real property or tangible personal property used in this state in the exploration and development of **any** gas **reserve regardless of whether there has been commercial production in the area or whether the exploration and development activity results in the production of gas or a well not capable of production in commercial quantities** [RESERVES IN A GAS RESERVOIR FOR WHICH THERE HAS NOT BEEN COMMERCIAL

PRODUCTION IF THE RESERVES PRODUCE GAS FOR SALE AND DELIVERY]; in this paragraph, "property" includes

(A) property used in the operation or maintenance of facilities for exploration or development of gas;

(B) property that is placed in use under a capitalized lease or an operating lease; and

(C) the following property used for the exploration and development of gas:

(i) machinery, appliances, supplies, and equipment;

(ii) drilling rigs, wells, gathering lines and transmission lines, pumping stations, compressor stations, power plants **designed for field operations, gas processing plants, and gas treatment plants, but not including liquefied natural gas or manufacturing plants** [, TOPPING PLANTS, AND PROCESSING UNITS];

(iii) roads, docks and other port facilities, and helicopter pads;

(iv) maintenance equipment and facilities, and maintenance camps and other related facilities; and

(v) communications facilities owned by a person whose principal business in the state is the exploration for or development of gas and whose operation of the communications facilities directly relates to the conduct of that business;

*** Sec. 8.** AS 43.20.043 is amended by adding a new subsection to read:

(j) A taxpayer shall claim the credit authorized in (a) of this section on a timely filed tax return for the year in which the qualified capital investment is made, on a timely filed amended tax return, or on a timely filed tax return for the year immediately following the year in which the qualified capital investment is made. The election to apply the credit authorized in (a) of this section may not be an irrevocable election.

*** Sec. 9.** AS 43.55.023(a) is amended to read:

(a) A producer or explorer may take a tax credit for a qualified capital

expenditure as follows:

(1) notwithstanding that a qualified capital expenditure may be a deductible lease expenditure for purposes of calculating the production tax value of oil and gas under AS 43.55.160(a), unless a credit for that expenditure is taken under AS 38.05.180(i), AS 41.09.010, AS 43.20.043, or AS 43.55.025, a producer or explorer that incurs a qualified capital expenditure may also elect to apply a tax credit against a tax levied by AS 43.55.011(e) in the amount of 20 percent of that expenditure; [HOWEVER, NOT MORE THAN HALF OF THE TAX CREDIT MAY BE APPLIED FOR A SINGLE CALENDAR YEAR;]

(2) a producer or explorer may take a credit for a qualified capital expenditure incurred in connection with geological or geophysical exploration or in connection with an exploration well only if the producer or explorer

(A) agrees, in writing, to the applicable provisions of AS 43.55.025(f)(2);

(B) submits to the Department of Natural Resources all data that would be required to be submitted under AS 43.55.025(f)(2).

*** Sec. 10.** AS 43.55.023(d) is amended to read:

(d) Except as limited by (i) of this section, a person that is entitled to take a tax credit under this section that wishes to transfer the unused credit to another person or obtain a cash payment under AS 43.55.028 may apply to the department for **a** transferable tax credit **certificate** [CERTIFICATES]. An application under this subsection must be in a form prescribed by the department and must include supporting information and documentation that the department reasonably requires. The department shall grant or deny an application, or grant an application as to a lesser amount than that claimed and deny it as to the excess, not later than 120 days after the latest of (1) March 31 of the year following the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; (2) the date the statement required under AS 43.55.030(a) or (e) was filed for the calendar year in which the qualified capital expenditure or carried-forward annual loss for which the credit is claimed was incurred; or (3) the date the application was received by the department. If, based on the information then available to it, the

department is reasonably satisfied that the applicant is entitled to a credit, the department shall issue the applicant **a** [TWO TRANSFERABLE] tax credit **certificate** [CERTIFICATES, EACH FOR HALF OF THE AMOUNT OF THE CREDIT]. The credit shown on [ONE OF] the **certificate** [TWO CERTIFICATES] is available for immediate use. [THE CREDIT SHOWN ON THE SECOND OF THE TWO CERTIFICATES MAY NOT BE APPLIED AGAINST A TAX FOR A CALENDAR YEAR EARLIER THAN THE CALENDAR YEAR FOLLOWING THE CALENDAR YEAR IN WHICH THE CERTIFICATE IS ISSUED, AND THE CERTIFICATE MUST CONTAIN A CONSPICUOUS STATEMENT TO THAT EFFECT.] A certificate issued under this subsection does not expire.

*** Sec. 11.** AS 43.55.025(a) is amended to read:

(a) Subject to the terms and conditions of this section, a credit against the production tax levied by AS 43.55.011(e) is allowed for exploration expenditures that qualify under (b) of this section in an amount equal to one of the following:

(1) 30 percent of the total exploration expenditures that qualify only under (b) and (c) of this section;

(2) 30 percent of the total exploration expenditures that qualify only under (b) and (d) of this section;

(3) 40 percent of the total exploration expenditures that qualify under (b), (c), and (d) of this section; [OR]

(4) 40 percent of the total exploration expenditures that qualify only under (b) and (e) of this section**; or**

(5) 80, 90, or 100 percent, or a lesser amount described in (m) of this section, of the total exploration expenditures described in (b)(1) and (2) of this section and not excluded by (b)(3) and (4) of this section that qualify only under (m) of this section.

*** Sec. 12.** AS 43.55.025 is amended by adding a new subsection to read:

(m) The first three unaffiliated persons that each drill an offshore exploration well for the purpose of discovering oil or gas in Cook Inlet that penetrates and evaluates a prospect in the pre-Tertiary zone using a jack-up drill rig are eligible for the credit under this subsection. The person that drills the first exploration well is

entitled to a credit in the amount of 100 percent of its exploration expenditures or $25,000,000, whichever is less; the person that drills the second exploration well using the same jack-up drill rig is entitled to a credit in the amount of 90 percent of its exploration expenditures or $22,500,000, whichever is less; and the person that drills the third exploration well using the same jack-up drill rig is entitled to a credit in the amount of 80 percent of its exploration expenditures or $20,000,000, whichever is less. A person or an affiliate of a person drilling an exploration well is not entitled to a credit for more than one exploration well under this subsection. The department shall make a determination of the order in which the wells are drilled based on the date and time that the drill bit first turns to the right against the seafloor for the purpose of drilling the well. Exploration expenditures eligible for the credit in this subsection may include the necessary and reasonable costs to modify an existing jack-up rig for use in Cook Inlet, may not include the cost to construct or manufacture a jack-up rig, and, notwithstanding (b) of this section, must be incurred for work performed after June 30, 2010. If the exploration well for which a credit is received under this subsection results in sustained production of oil or gas from a reservoir discovered by the exploration well, and notwithstanding that the credit may have been transferred under (g) of this section, 50 percent of the amount of the credit received shall be repaid to the department by the person that received the credit in equal monthly installments over a 10-year period commencing 60 days after the start of sustained production of oil or gas. Whether the exploration well for which a credit is requested under this subsection penetrated and evaluated a prospect in the pre-Tertiary zone and the exploration well resulted in sustained production of oil or gas from a reservoir discovered by the exploration well shall be determined by the commissioner of natural resources and reported to the commissioner. A taxpayer that obtains a credit under this subsection may not claim a tax credit under AS 43.55.023 or another provision in this section for the same exploration expenditure. In this subsection,

(1) "jack-up rig" means a mobile drilling platform with extendible legs for support on the ocean floor;

(2) "reservoir" means an oil and gas accumulation, discovered and evaluated by testing, that is separate from any other accumulation of oil and gas;

(3) "sustained production" means production of oil or gas from a reservoir into a pipeline or other means of transportation to market, but does not include testing, evaluation, or pilot production.

*** Sec. 13.** The uncodified law of the State of Alaska enacted by sec. 3, ch. 61, SLA 2003, is amended to read:

Sec. 3. CLAIM OF GAS EXPLORATION AND DEVELOPMENT TAX CREDIT CONTINUED. A taxpayer who, on the effective date of repeal of AS 43.20.043 by **secs. 2 and 5, ch. 61, SLA 2003, as amended by sec. 15** [SEC. 2] of this **2010** Act, claims the balance of any unused portion of the gas exploration and development tax credit as a carry-forward under AS 43.20.043(c), may, notwithstanding the repeal of that subsection, continue to claim the balance of the credit until the claim of the credit is exhausted or until the tax year ending December 31, **2024** [2017], whichever occurs earlier. The provisions of AS 43.20.043 as they read on the day immediately preceding the effective date of the repeal of that section apply to the claim of the credit if carried forward under this section.

*** Sec. 14.** AS 43.55.028(e)(2) and 43.55.028(e)(3) are repealed.

*** Sec. 15.** Section 5, ch. 61, SLA 2003, is amended to read:

Sec. 5. Section 2**, ch. 61, SLA 2003,** [OF THIS ACT] takes effect January 1, **2020** [2013].

*** Sec. 16.** This Act takes effect immediately under AS 01.10.070(c).

Sectional Analysis of Senate Bill 309: 26-LS 1629\A

Please note that a sectional analysis is not an authoritative interpretation of a bill. The bill itself is the best statement of its contents.

Section 1 amends AS 43.20.043(a) to increase the tax credit for qualified expenditures and annual costs to 25 percent for tax years following December 31, 2009 from the current 10 percent.

Section 2 amends AS 43.20.043(b) to clarify the application of the proposed credits and that "wells" rather than "reserves" are developed.

Section 3 amends AS 43.20.043(c) to remove the 50% cap on the application of a credit against a taxpayer's liability.

Section 4 amends AS 43.20.043(f) to clarify that the credit does not apply to gas delivered from the Alaska North Slope.

Section 5 amends AS 43.20.043(i)(1) to include development activity in the definition of qualified investment.

Section 6 amends AS 43.20.043 by adding a new subsection to specify when a taxpayer may claim the credit.

Section 7 amends the uncodified law enacted by sec. 3, ch. 61, SLA 2003 to extend the repeal of the provisions related to the exhaustion of credits.

Section 8 extends the sunset of the tax credit to January 1, 2020.

Section 9 provides an immediate effective date.

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. CSSB 309(RES)

ANALYSIS CONTINUATION

Bill Language:

This bill makes several changes to credits to both the production tax system and the oil and gas corporate income tax system as follows.

The bill extends the existing Gas Exploration and Development tax credit for investment in qualified capital expenditures and related qualified services, dealing with those capital expenditures. The Gas Exploration and Development tax credit is taken against the Corporate Income Tax (CIT), before any other federal or state credits are taken. One hundred percent of a company's tax liability can be offset by this credit in a given tax year. Additionally, credits from prior years must be used before current year credits can be used. A credit must be used within five years, otherwise it expires.

Currently, 10% of qualifying capital expenditures and operating expenditures can be taken as capital credits, sunsetting in 2013. The bill would increase the credit rate to 25% for qualifying capital and service expenditures incurred after June 30, 2011 for tax years beginning after December 31, 2010. The 25% rate would sunset on January 1, 2020. Under existing law all remaining tax credits under AS 43.20.043 expire December 31, 2017. This bill would change the sunset date to expire the tax year ending December 31, 2024.

In order for an expenditure to qualify for the 10% rate, cash expenditures or binding payment agreements must be made between June 30, 2003 and before July 1, 2011. Expenditures qualify for the 25% rate cash expenditures or binding payment agreements must be made after June 30, 2011.

The credit is limited to activities south of 68 degrees North latitude and exempts delivery of Alaska North Slope natural gas to tidewater.

It is difficult to determine the number of taxpayers who would take advantage of the corporate income tax credit, the degree to which the credit would be utilized, and other exogenous variables impacting the revenues the state would collect. Reduction in CIT are indeterminate at this time.

The bill also expands the production tax credit authorized at AS 43.55.025 to a maximum credit of 100 percent of the total exploration expenditures for drilling in the Cook Inlet basin. The bill proposes to grant the full 100 percent credit of exploration expenditures to the first person to qualify under this credit, 90 percent to the second person, and 80 percent to the third person. Only expenditures occuring after July 1, 2010 and before July 1, 2016 would qualify under the bill. If the exploration well for which credit is received results in paying quantities of production, the person who received the credit will pay back to the state 50 percent of the credit received in monthly installments over 10 years.

The fiscal impact of this provision of the bill is indeterminate. Several companies have sought credits under the .025 exploration incentive credit in the Cook Inlet basin, for which the state has reimbursed up to 40 percent of the companies' capital costs. Our records indicate that total costs for drilling in the Cook Inlet basin could be as high as $5 million or more. A recent study by the Petrotechnical Resources of Alaska (PRA) indicates that the cost of drilling 128 wells in the Cook Inlet basin over the period from 2001 through 2009 cost between $1.0 and $1.2 billion. This figure includes not just exploration wells, but presumably cheaper development wells. At the high end of the range, this amounts to a per-well cost of $9.4 million. PRA further reports that over the next decade 185 new wells will need to be drilled to meet demand, and that capital costs will increase to $1.85 to 2.8 billion, with per-well costs of $10-$15 million. If their report is correct, three persons receiving credit under this provision will cost the state up to $40 million in tax credits. If all three of the persons found paying quantities of oil or gas, the state could be reimbursed about $20 milion of the $40 million in credits.

(continued on next page)

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. CSSB 309(RES)

ANALYSIS CONTINUATION

The bill also removes from law two existing requirements relating to production tax credits. First, it removes the limitation that credits received for capital expenditures for oil and gas operations be taken over two years. The calculation of the revenue impact for this provision is difficult for two reasons: (1) the timing of the revenue impact will depend upon when the bill is signed into law; and (2) the amount the state may potentially be expected to pay to purchase credits is conditioned in part on removing the reinvestment requirement discussed in #2 above, and the timing of the payment will depend on whether companies will immediately seek reimbursement for their credits.

We assume for this provision a worse-case scenario where all credits held by companies with production tax liabilities are used in FY 2010 or FY 2011. This would cost the state approximately $225 million in reduced taxes between the two years. For companies that are holding credit certificates and are not expected to incur a tax liability in FY 2010 or FY 2011, we estimate an additional liability of up to $150 million over previous expectations for the two fiscal years. These impacts could spill into FY 2012, should companies delay seeking reimbursement. Beyond FY 2012, revenue impacts are expected to be negligible.

Second, it removes the requirement that companies that seek cash refunds from the state for credits reinvest in capital expenditures an amount equivalent to the cash reimbursement sought. This provision is expected to be revenue neutral, as credits are either taken against tax liabilities or as a refund in full, with no differential impact to the state.

Expenditures: The provisions of this bill could be implemented with existing state resources. No additional personnel or resources would be needed, since the DOR is already performing these duties.

Cook Inlet Gas Study - An Analysis for Meeting the Natural Gas Needs of Cook Inlet Utility Customers

prepared for

ENSTAR Natural Gas Company

CHUGACH POWERING ALASKA'S FUTURE

MLP ANCHORAGE, A SEVENTY-FIVE YEARS

March 2010

Peter J. Stokes, PE

PRA Petrotechnical Resources Alaska

Due to the uncertainties of drilling and producing activities of operating and exploration companies and what Alaska state agencies do and do not do in influencing those activities, this study should be considered a best estimate based on current data. It was prepared using generally accepted engineering and geological predictive methods. As such, Petrotechnical Resources of Alaska can make no warranty as to actual future Cook Inlet gas drilling and production.

4246

Executive Summary prepared by Cook Inlet Utilities

ENSTAR Natural Gas Company, Chugach Electric Association, and Anchorage Municipal Light and Power (Cook Inlet Utilities) commissioned Petrotechnical Resources of Alaska (PRA) to study Cook Inlet natural gas reserves and forecast annual natural gas production. We asked PRA to estimate the cost of the development necessary to meet the immediate needs of Cook Inlet utility customers from 2010 to 2020. The PRA study includes a review of estimated reserves and deliverability of Cook Inlet gas wells drilled between 2001 and 2009, scenarios for potential development activity, a review of a December 2009 Alaska Department of Natural Resources (DNR) reserves analysis, and an analysis of when it might be necessary to rely on non-Cook Inlet natural gas sources, such as liquefied natural gas (LNG) imports or other in-state resources.

In the future, Cook Inlet utility customers should expect to pay more for the gas used by Cook Inlet Utilities to generate heat and electricity. PRA examined results from all of the gas wells drilled in Cook Inlet between 2001 and 2009 and determined that producers spent approximately $1.0 to $1.2 billion in development costs to add reserves of approximately 519 billion cubic feet (Bcf) of natural gas. If the current trends for well success rates and costs continue, producers will need to spend two to three times that amount, an estimated $1.9 to $2.8 billion, to meet projected Cook Inlet utility demand from 2010 to 2020. Producers will invest the necessary capital in future drilling activity only if they have a reasonable expectation of a return that is competitive with other investment opportunities. In order to assure continued drilling activities, increased development costs must be reflected in the market price utilities pay for the gas and ultimately pass onto their customers. Cook Inlet Utilities will also require storage services to deliver gas to their customers on the coldest days and enable producers to optimize gas production rates. The estimated cost of a storage facility is $150 to $200 million[1]. These storage costs will also be borne by utility customers.

[1] Storage cost estimates based on ENSTAR's development assessment.

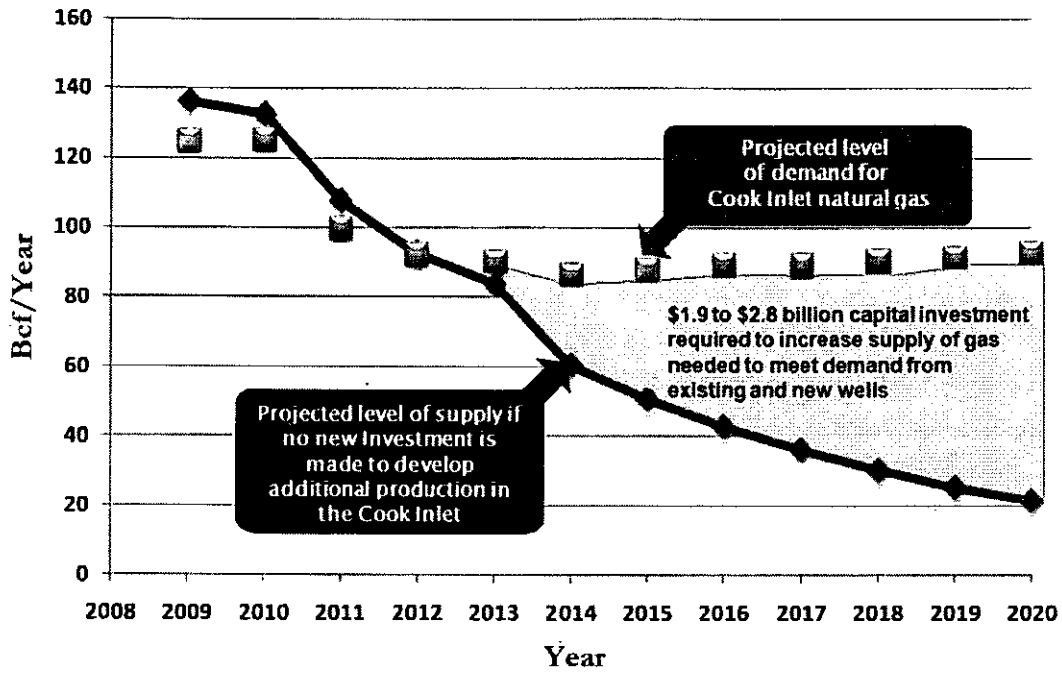

Figure 1 – Cook Inlet Supply & Demand

PRA used a decline curve analysis to review the same underlying data analyzed in the 2009 DNR reserves study and reached a similar conclusion regarding when the supply of gas from existing wells will not meet demand[2]. The PRA study took the next step, estimating the cost of bringing the undeveloped gas resources to market[3]. PRA determined that if significant efforts are undertaken to develop gas from the resources identified by DNR and if the current trends in drilling success rates continue, gas might be available through 2020. However, even if an aggressive development effort were undertaken immediately, that effort may fail to bring new gas to market quickly enough to provide needed gas when demand is projected to exceed supply as soon as 2013. Utilities need to plan for an alternative supply to meet their customers' needs. Having undeveloped gas resources in the ground will not enable Cook Inlet Utilities to provide heat and power to their customers. The gas resources will only be developed and brought to market at prices that incentivize the producers to justify their investment. Contracts with these higher prices will require RCA approval.

Cook Inlet Utilities need a viable option if additional Cook Inlet development does not materialize. To provide a stable gas supply, non-Cook Inlet sources such as gas delivered from the North Slope or LNG imports, are alternatives that must be pursued. The "easy" gas has been found in the challenging geology of Cook Inlet. The future costs of developing additional reserves will be substantial. As the cost of continued Cook Inlet gas production increases, alternative gas supply sources may become more economically attractive. Regulatory uncertainty has also discouraged Cook Inlet producers from exploring for and developing Cook

[2] PRA's study estimates remaining reserves of 729 Bcf from existing wells, compared with DNR's forecast of 863 Bcf of Proven Developed Producing reserves.

[3] The DNR study did not address the cost of bringing undeveloped resources to the market. (see DNR Study Figure 14 Description)

Inlet reserves[4]. In the current regulatory environment, two of the three major Cook Inlet producers have publicly stated that they intend to drill only to meet current contract obligations. Future development depends on a change in the regulatory climate to one where consistent standards are applied to approve negotiated utility gas supply agreements, even if those agreements reflect the increased costs of resource development.

The Cook Inlet market is in transition. Current gas fields are in decline and the loss of industrial customers has reduced the producers' incentives to do anything but meet existing contractual obligations. In order for utilities to be able to continue to supply current customers and to accommodate future growth, Cook Inlet Utilities and others must take action.

Immediate Actions Needed:

- New gas supply agreements between Cook Inlet Utilities and Producers must be signed to ensure continued development of Cook Inlet reserves.

- There must be predictable timelines and standards for regulatory approval of gas supply agreements. The Regulatory Commission of Alaska must be willing to approve gas supply contracts negotiated at arm's length, even if prices under those contracts increase.

- Cook Inlet Utilities must develop gas storage to assure deliverability on the coldest days and optimize gas production throughout the year.

- Cook Inlet Utilities should continue raising customer awareness, conservation efforts, and curtailment plans, to prepare for potential shortfalls.

- Additional well-capitalized exploration and development companies must commit to develop Cook Inlet and other Alaska gas reserves.

- To assure certainty of supply, Cook Inlet Utilities must determine how they will bring gas into Cook Inlet within the next five years to ensure the needs of their customers are met. Alternative gas supply sources include LNG imports and North Slope gas delivered by pipeline to south central Alaska.

- Additional regional industrial gas demand must be found to encourage the development of Cook Inlet reserves and spread the increased costs of production.

- Land management processes must be streamlined to encourage and accelerate reserve and infrastructure development.

[4] Recent favorable regulatory decisions on utility gas supply agreements may be a positive sign.

Technical Summary

ENSTAR Natural Gas Company, Chugach Electric Association, and Anchorage Municipal Light and Power (Cook Inlet Utilities) hired Petrotechnical Resources of Alaska (PRA) to perform a study of Cook Inlet reserves and deliverability. The components of the study included:

- Review the deliverability of Cook Inlet gas wells drilled between 2001 and 2009
- Forecast potential deliverability of future drilled gas wells
- Review Alaska Department of Natural Resources (DNR) reserves analysis
- Analyze timing of demand for a delivery of potential non-Cook Inlet gas sources, such as liquefied natural gas (LNG) imports or other in-state resources

High level findings of the study are:

Cook Inlet Well Drilling Results – 2001 to 2009

- Drivers for Cook Inlet well drilling between 2001 and 2009 included:
  - Newly executed gas contracts
  - Reserves development associated with negotiated gas contracts rejected by the RCA
  - LNG Exports and License Extensions
  - Increasing Regional Natural Gas Prices
  - Industrial Fertilizer Operations
- Results for Cook Inlet well drilling between 2001 and 2009:
  - 128 gas wells were drilled between 2001 and 2009, of which, 105 were completed with an average rate of 3.6 MMSCF/D for the first 12 months of production
    - 97 wells were permitted and drilled as Gas Development wells; 88 of these were completed as gas wells, for a 90.7% success rate
    - 31 wells were permitted and drilled as Gas Exploration wells; 18 were completed as gas wells, for a 58.1% success rate
    - An estimated 519 BCF of gas was developed by these wells
    - Ninilchik, Kenai and Deep Creek Units had the most drilling activity during this period; Ninilchik was very successful; Kenai wells were average and Deep Creek wells were marginal
    - The estimated costs for drilling and facilities of these 128 gas wells are between $1.0 and $1.2 billion

Review of DNR Analysis of Available Reserves

- The DNR completed a Cook Inlet Gas Reserves Study in December 2009
- In the DNR study, reserves and resources are systematically estimated, but as stated in the report, the timing of the development of undeveloped reserves is only an estimate as shown in DNR's Figure 14, a "Hypothetical production forecast for Cook Inlet basin showing increments of reserves and resources identified by engineering and geological analysis discussed in text."
- In the DNR study, the only firm deliverabilities are for reserves estimated by decline curve analysis and material balance. The material balance resources would be realized

through the spending of additional capital for development (Beaver Creek) or for compression (Ninilchik). Timing is determined by economic drivers.

- The DNR study forecasted 863 BCF of Proven Developed Producing reserves compared to the decline curve analysis performed by PRA forecasting 729 BCF[5] of reserves.
    - A major difference in decline curve analysis performed by PRA was apparent at Beluga River Field where the DNR study estimated 377 BCF remaining reserves and PRA estimated 207 BCF.
    - The predicted production from decline curve analysis was similar in both studies; both DNR and PRA showed decline curve analysis predictions from existing wells falling below projected demand in the 2012-2013 timeframe.
- The DNR study forecasted Additional Probable Reserves of 279 BCF based on material balance calculations, while PRA did not perform material balance calculations.
- In both studies, the four (4) Fields identified as having greatest remaining potential and selected for detailed geological analysis were: Beluga River, North Cook Inlet, Ninilchik, and McArthur River Grayling gas sands.
  Reported were:
    - Potential gas resources (from geologic analysis of 4 fields above) estimated to be 353 BCF
    - Possible gas resources of 643 BCF (50% Risked case) estimated from lower confidence pay intervals

<u>Potential of Future Gas Wells in Cook Inlet:</u>

- Drivers required for future Cook Inlet reserve development include:
    - Execution and RCA approval of gas contracts
    - Predictable timeline and standard for regulatory approval of negotiated gas pricing structures
    - Additional regional industrial gas demand, including LNG exports.
    - Additional well-capitalized exploration and development companies committed to develop Alaskan resources
    - Government action to facilitate and accelerate development of necessary infrastructure and permitting
- Challenges facing future Cook Inlet development include:
    - Possible discontinuation of LNG exports from the region
    - Reduced industrial demand (e.g., regional fertilizer manufacturing)
    - Success rates in exploration and development
    - Higher relative regional costs for exploration, development, and production
    - High level of activity in reserve development needed to meet demand
    - Probable decline in production rates from future wells in existing fields
- Minimum requirements to meet demand in Cook Inlet gas market until 2020:
    - A new source of gas, such as imported LNG or other in-state reserves, could be required as early as 2013, if ongoing drilling or drilling success does not continue at the 2007-2009 pace.

[5] 762 BCF in Report included 33.7 BCF estimated for 4 remaining 2009 Wells

- Gas storage will maximize Cook Inlet gas deliverability potential and more closely match local demand curves and production rates.
- To meet projected demand for the next decade, 185 new wells will be needed, which is a 45% increase over the number of wells drilled in the 2001-2009 period
- Development costs for this time period are estimated at $1.85 to $2.8 billion, an increase in total capital investment of 54-180%
- To incent this substantive increase in investment levels, or to bring a new source of gas to Cook Inlet, utility customers should expect to pay significantly higher gas prices

Figure 2 shows recent history and future wells estimated to meet CI gas demands through 2020. The well count assumes average well performance of 2007-2009 wells, with initial rates and developed reserves degraded by 4.3% per year.

Chapter No.
_____

AN ACT

Establishing an exploration and development incentive tax credit for operators and working interest owners directly engaged in the exploration for and development of gas for sale and delivery without reference to volume from a lease or property in the state; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

THE ACT FOLLOWS ON PAGE 1

AN ACT

Establishing an exploration and development incentive tax credit for operators and working interest owners directly engaged in the exploration for and development of gas for sale and delivery without reference to volume from a lease or property in the state; and providing for an effective date.

*** Section 1.** AS 43.20 is amended by adding a new section to read:

Sec. 43.20.043. Gas exploration and development tax credit. (a) Subject to the terms and conditions of this section, and in addition to any other credit authorized to the taxpayer by this chapter, a taxpayer that is an operator or working interest owner directly engaging in the exploration for and development of gas may apply as a credit against the state tax liability that may be imposed on the taxpayer under this chapter, for a tax year beginning after December 31, 2002,

(1) 10 percent of the taxpayer's qualified capital investment; and

(2) 10 percent of the annual cost incurred by the taxpayer for qualified

services in the state during each tax year for which a credit is allowable for a qualified capital investment under (1) of this subsection.

(b) Expenditures qualifying for the taxpayer's qualified investment credit under (a)(1) of this section must be

(1) cash expenditures or binding payment agreements entered into after June 30, 2003; and

(2) made for assets first placed in service in the state in or before the tax year in which the credit is claimed through the date the reserves produce gas for sale and delivery; for purposes of this paragraph, "placed in service in the state" means that the first use of the qualified investment is in this state; if the property on which the claim of the credit is based has been used elsewhere in the tax year of acquisition and is brought to this state during that year or a subsequent year, the property does not qualify for the investment credit.

(c) The credit per tax year allowed by (a) of this section may not exceed 50 percent of the taxpayer's total tax liability under this chapter, but shall be calculated before the application of any other credits allowed under this chapter. An unused portion of the credit for the tax year

(1) may be carried forward into one or more of the following tax years, except that the unused credit from one tax year may not be carried forward for more than five following tax years;

(2) shall be applied to the taxpayer's tax liability under this chapter during the following tax year before allowance of a credit allowed by (a) of this section for that following tax year.

(d) To obtain the credit allowed by this section, the taxpayer shall, with the taxpayer's tax return, submit, on a form prescribed by the department, information that demonstrates that the taxpayer is eligible for the credit and evidence of the expenses that are the basis of the claim of the credit. The taxpayer has the burden of demonstrating compliance with the requirements of this section to entitle the taxpayer to the claim of and the amount of the credit.

(e) A taxpayer entitled to a credit under this section

(1) may not convey, assign, or transfer the credit to another taxpayer or

business entity unless the conveyance, assignment, or transfer of the credit is part of the conveyance, assignment, or transfer of the taxpayer's business;

(2) forfeits the credit to which the taxpayer is entitled during the tax year and any carryover of it under (c) of this section, but does not forfeit the portion of the credit that accrued in a previous taxable year that may be carried over under (c) of this section, if the taxpayer

(A) disposes of the qualified capital investment;

(B) takes the qualified investment out of service; or

(C) transfers the qualified investment out of this state.

(f) A taxpayer is not entitled to a credit under this section for expenditures that are made or incurred for the qualified capital investment or for qualified services made for exploration and development of gas that occur in the area of Alaska lying north of 68 degrees North latitude or that are made or incurred to transport gas from reserves located in the area of Alaska lying north of 68 degrees North latitude.

(g) A taxpayer who obtains a credit under this section may not claim a tax credit or royalty modification provided for under any other title. However, a taxpayer may, at the taxpayer's election, forgo a credit under this section in order to continue to qualify for a credit provided for in another title.

(h) For purposes of determining allowable credits under this section, the department shall allow only expenditures and payments that are not inconsistent with the expenditures authorized under 26 U.S.C. (Internal Revenue Code) for exploration and development of natural resources.

(i) In this section,

(1) "qualified capital investment" means a cash expenditure or binding payment agreement, as described in (b)(1) of this section, for real property or tangible personal property used in this state in the exploration and development of gas reserves in a gas reservoir for which there has not been commercial production if the reserves produce gas for sale and delivery; in this paragraph, "property" includes

(A) property used in the operation or maintenance of facilities for exploration or development of gas;

(B) property that is placed in use under a capitalized lease or an

operating lease; and

(C) the following property used for the exploration and development of gas:

(i) machinery, appliances, supplies, and equipment;

(ii) drilling rigs, wells, gathering lines and transmission lines, pumping stations, compressor stations, power plants, topping plants, and processing units;

(iii) roads, docks and other port facilities, and helicopter pads;

(iv) maintenance equipment and facilities, and maintenance camps and other related facilities; and

(v) communications facilities owned by a person whose principal business in the state is the exploration for or development of gas and whose operation of the communications facilities directly relates to the conduct of that business;

(2) "qualified services"

(A) means expenditures for labor, seismic, and other services that are directly applicable to a qualified capital investment;

(B) does not include lease operating expenses.

*** Sec. 2.** AS 43.20.043 is repealed.

*** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CLAIM OF GAS EXPLORATION AND DEVELOPMENT TAX CREDIT CONTINUED. A taxpayer who, on the effective date of repeal of AS 43.20.043 by sec. 2 of this Act, claims the balance of any unused portion of the gas exploration and development tax credit as a carry-forward under AS 43.20.043(c), may, notwithstanding the repeal of that subsection, continue to claim the balance of the credit until the claim of the credit is exhausted or until the tax year ending December 31, 2017, whichever occurs earlier. The provisions of AS 43.20.043 as they read on the day immediately preceding the effective date of the repeal of that section apply to the claim of the credit if carried forward under this section.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to

read:

REPORT ON EFFECT OF GAS EXPLORATION AND DEVELOPMENT TAX CREDIT. Not later than November 30, 2008, the Department of Revenue shall prepare and publish a report on the effect of the gas exploration and development tax credit authorized by AS 43.20.043, added by sec. 1 of this Act. The department shall advise the legislature of the availability of the report and, within the first 10 days of the First Regular Session of the Twenty-Sixth Alaska State Legislature, transmit copies of the report to the chairs or co-chairs of the House and Senate Resources Committees and the chairs or co-chairs of the House and Senate Special Committees on Oil and Gas, if established. The report must address

(1) the number of successful gas discoveries for which a tax credit is provided under AS 43.20.043;

(2) the volume or amount of new gas reserves brought into production for which a tax credit is provided under AS 43.20.043;

(3) the total credits allowed under AS 43.20.043 that are applied to the tax liability through the date of preparation of the report;

(4) the total credits applied for under AS 43.20.043 that are not yet approved as of the date of preparation of the report;

(5) royalties obtained and oil and gas property production taxes paid from new gas production and anticipated from gas production for production for which credits are allowed under AS 43.20.043; and

(6) any other information that, in the judgment of the commissioner of revenue, would evaluate the effectiveness of the gas exploration and development tax credit authorized under AS 43.20.043.

*** Sec. 5.** Section 2 of this Act takes effect January 1, 2013.

*** Sec. 6.** Except as provided in sec. 5 of this Act, this Act takes effect immediately under AS 01.10.070(c).

SPONSOR STATEMENT FOR SENATE BILL 309

"An Act amending and extending the exploration and development incentive tax credit under the Alaska Net Income Tax Act for operators and working interest owners directly engaged in the exploration for and development of gas from a lease or property in the state; providing for an effective date by amending the effective date for sec. 2, ch. 61, SLA 2003; and providing for an effective date."

Senate Bill 309 amends and extends the exploration and development incentive tax credit that was originally enacted in 2003 by the 23rd legislature. This tax credit continues to be applicable, under the Alaska Net Income Tax Act, to operators and working interest owners directly engaged in the exploration for and development of natural gas, primarily in the Cook Inlet area.

To more strongly encourage companies to invest additional capital in exploring for and developing new natural gas reserves, this legislation makes five significant changes to current law:

- Expands the application of the credit to development drilling within an existing field.
- Increases the amount of the credit to 25% (from 10%) of the amount of qualified capital investment and qualified services spending.
- Removes the 50% limitation on the amount of credits that can apply in a single year.
- Removes the "successful efforts" requirement that developers must find and deliver new gas resources to market to qualify for the credit.
- Extends the sunset date of the investment tax credit from January 1, 2013 to January 1, 2020.

Annual natural gas production and supply in the Cook Inlet area have been declining for a number of years. During the same time, domestic demand has been increasing steadily. Therefore, a sharp increase in drilling to find new reserves is drastically needed. The Department of Natural Resources projects that most of the new gas needed will be found in existing fields. The original Investment Tax Credit enacted in 2003, while modestly successful in stimulating new drilling, did not incentivize development drilling in existing fields. These changes will go a long way toward achieving that goal.

Changes to SB 309 in CS SB 309 (RES) Version 26-LS1629\R

Please note that this analysis is not an authoritative interpretation of changes to the bill. The bill itself is the best statement of its contents.

Title Inserted language on page 1, lines 4-7 to reflect the addition of language from Senate Bill 290 in the bill.

Section 1 No changes.

Section 2 No changes.

Section 3 No changes.

Section 4 Added a new subsection that amends AS 43.20.043 (e) that prohibits the use of the qualified investment in a rate base for a regulated facility.

Section 5 No changes.

Section 6 Added new language clarifying that a taxpayer who claims a credit under AS 43.20.043 may not claim any other credit or royalty modification for the same investment.

Section 7 Added a new subsection amending the definition of "property" in AS 43.20.043(i)(1) to exclude LNG facilities, topping plants and processing units.

Section 8 No changes.

Section 9 Added a new section amending AS 43.55.023 (a) allowing a capital investment tax credit to be taken in a single calendar year.

Section 10 Added a new section amending AS 43.55.023 (d) to conform to the changes made in section 9.

Section 11 Added a new section creating a new credit for exploration expenses in the Cook Inlet.

SENATOR LESIL MCGUIRE

Section 12 Added a new section clarifying the application and qualifications for the credit established in section 11.

Section 13 No changes (previously section 7).

Section 14 Added new language repealing AS 43.55.028(e)(2) [requiring expenditures within 24 months] and AS 43.55.028(e)(3) [requiring expenditures equal to the credits] in the section related to use of the oil and gas tax credit fund for the purchase of credits from small producers.

Section 15 No changes (previously section 8).

Section 16 No changes (previously section 9).

Issues Surrounding Requiring Geologic and Geophysical Data Submissions for ITC Credits

Inclusion of AS 43.55.025 (f)(2) into HB 229 and/or SB 309 will damage the incentives intended in either bill. Under ACES, the statute requires proprietary data sets to be released to the DNR to qualify for the production tax credit. Such data will serve no purpose in assessing qualification in investment tax credit included in HB 229 and SB 309. Rather, the language will create a disincentive instead of delivering an incentive for further resource development to improve the reliability of natural gas production in Cook Inlet – a benefit to all stakeholders and area constituents. Language in the aforementioned statute is very problematic for specific reasons including:

1. The data set as defined is not limited to the data collected as part of the investment used in qualifying for the credit. The required data extends well beyond to include data collected over the entire area, including data collected over non-state leases and proprietary interpretations of the data.

   AS 43.55.025(f)(2)(B)
   (i) a seismic or geophysical data set includes the data for an entire seismic survey, irrespective of whether the survey area covers nonstate land in addition to state land or land in a unit in addition to land outside a unit;
   (ii) well data include all analyses conducted on physical material, and well logs collected from the well, results, and copies of data collected and data analyses for the well, including well logs; sample analyses; testing geophysical and velocity data including seismic profiles and check shot surveys; testing data and analyses; age data; geochemical analyses; and tangible material

2. Companies have invested millions of dollars in geologic assessments and sub-surface data over the years. This highly proprietary and very costly data will be released to the public domain within 24 months for well data and 10 years for seismic data. The release of such highly competitive and confidential data will provide other parties access to such data for free allowing them to undesirably encroach in the field operations, creating distractions for the producing entities. Ten years may seem lengthy however it is actually quite short considering the life cycle of a field. For example, Kenai Gas Field has been producing for over 50 years.
3. Due to the confined area of the Cook Inlet and the highly competitive nature of the local environment and market situation, applying this provision to the Cook Inlet would result in a disincentive for pursuing these credits.

Simply put, the requirements under AS 43.55.025 (f)(2)(B) will very likely outweigh any benefits provided for in these investment tax credit bills. This will not be an aid in the solution to the overall natural gas issues in Cook Inlet.

4267

EXECUTIVE SUMMARY

Over the past year, there has been widespread concern over whether the existing system of natural gas production and delivery in the Cook Inlet basin can continue to meet the energy demands of south-central Alaska. Of most immediate concern is whether there may soon be shortfalls during brief spikes in peak gas demand brought about by severe winter weather. A thorough understanding of the problem requires consideration of at least two major sets of issues. The first set includes geologic and engineering details regarding how much gas remains to be recovered from Cook Inlet fields, and what steps are required to access it. The other is a complex set of commercial and infrastructure factors that determine the ability to provide gas to the end user. This report addresses geologic and engineering issues regarding gas reserves and resources. Issues regarding the economics of drilling additional wells, recompleting existing wells, optimizing infrastructure, and the ability to sell the gas into the Cook Inlet market are beyond the scope of this paper. Nevertheless, as is the case with most maturing gas provinces, the costs and financial risk associated with accessing and producing the additional reserves and potential reserves identified by this study will increase with time, likely contributing to increases in the price of gas.

Reservoir engineering and geological analyses were undertaken independently of one another to evaluate the volumes of gas remaining in existing fields. These analyses are preliminary, based on data currently available to the Division of Oil and Gas. All 28 of the currently producing Cook Inlet gas fields were evaluated by applying decline curve analysis and material balance engineering methods to publicly available production data obtained from the Alaska Oil and Gas Conservation Commission (AOGCC). Based on extrapolations of production trends, these engineering techniques were used to derive estimates of remaining proved and probable reserves.

Four of the gas fields judged from engineering analyses to have the greatest remaining potential were selected for further study via detailed geologic analyses: Beluga River, North Cook Inlet, Ninilchik, and the McArthur River Grayling gas sands. Development geology techniques yielded volumetric estimates of original gas-in-place and initial recoverable gas (estimated ultimate recovery) for these four large fields, drawing and preserving important distinctions between gas volumes in known pay intervals versus gas in potential pay intervals. Comparison of geologically based recoverable gas with cumulative production yielded estimates of the remaining recoverable gas in the four fields.

The independent engineering and geologic approaches pursued in this study allow the reporting of remaining gas volumes at varying levels of production certainty and readiness. The total proved, developed, producing (PDP) reserves remaining to be produced from all existing fields in the Cook Inlet is estimated at 863 BCF. This volume was identified by decline curve analyses and assumes sufficient investment to maintain existing wells. Additional probable reserves that would be recoverable by increasing investment in existing fields are estimated at 279 BCF. This volume is identified as the basin-wide difference in the results of material balance methods and decline curve analyses. Geologic evaluations of the Beluga River, North Cook Inlet, Ninilchik, and the McArthur River Grayling gas sands reservoirs indicate the potential for an additional increment of 353 BCF in high-confidence pay intervals, and another

4268

possible increment of 643 BCF (in the 50 percent-risked case) from lower-confidence pay intervals, both of which are arguably not in communication with existing wellbores, and thus cannot be estimated from the engineering methods. These incremental volumes are the difference, for these four gas fields, between the remaining recoverable gas estimated in geologically identified high-confidence pay and potential pay minus that estimated by material balance analyses.

These geologically identified volumes of known and potential nonproducing gas represent a significant energy resource, which if developed, have the potential to supply local demand well into the next decade. This forecast assumes that exports of gas from the basin will be curtailed during demand shortfalls, and cease altogether at the closure date of the current export license (March 31, 2011). It also assumes that no new significant demand will be developed until additional resources are discovered in new fields.

We also discuss higher-risk contingent resources that await confirmation and delineation in exploration prospects outside of producing areas where previous well penetrations suggest follow-up drilling may be warranted. Finally, we recognize, but have not attempted to quantify, potential undiscovered gas resources in unexplored areas or underexplored plays within the Cook Inlet basin. Significant work is underway by government and industry stakeholders to analyze this exploration potential, which could be an integral part of the region's energy portfolio well into the future. The findings of this study suggest there are a variety of short-, medium-, and long-term opportunities that have the potential to meet the energy demands of south-central Alaska over the next decade or more.

4269

Section Two: Royalty Production and Revenue

Introduction

The state of Alaska receives a royalty of approximately 12.5 percent of the oil and gas produced from its leases. The state may take its share of oil production "in-kind" or "in-value." When the state takes its royalty share in-kind (RIK), it assumes possession of the oil or gas. The commissioner of Natural Resources may sell the RIK oil or gas in a competitive auction or through a noncompetitive sale negotiated with a single buyer. When the state takes its royalty in-value (RIV), the state's lessees who produce the oil or gas market the state's share along with their own share of production. The lessees remit cash payments on a monthly basis for the state's RIV share.

Over the last 30 years the state has taken about one-half of its royalty oil as RIK. The state has sold nearly 800 million barrels of RIK oil during this time, nearly all of it in-state. Pricing terms have been targeted to provide the state at least as great a price as would have been received had the royalty been taken in value. Volumes to be delivered are typically cast as targets within a defined range, rather than precise specifications of barrels. Lease terms require that when the state elects to take RIK it must provide 90-180 days notice (depending upon the lease) of a percentage of royalty to be taken in kind, rather than a specific number of barrels to be taken in kind; the uncertainty as to future production volumes makes a precise specification of RIK deliveries impossible."

These in-state sales have provided an important supply security, thereby stimulating Alaska's refining industry by providing long-term supplies of oil to each of the state's four refineries. Over the years, state RIK sales fueled many controversies and policy debates over the appropriate use of the state's natural resources.

Cook Inlet

In 1969 the commissioner of Natural Resources negotiated a sale of 100 percent of the state's royalty from Cook Inlet to the Alaska Oil and Refining Company. Within months of signing the contract, Alaska Oil and Refining Company merged with the Tesoro Petroleum Company. Tesoro subsequently built a new refinery in Nikiski on the Kenai Peninsula next to Chevron's refinery, built in 1964. Between 1969 and 1985 the state sold all of its Cook Inlet royalty oil to the Tesoro refinery. By 1980, the production decline in Cook Inlet prompted Tesoro to negotiate the first of several sales contracts with the state for supplies of RIK oil from the North Slope. By the end of 1985 Tesoro had replaced its Cook Inlet RIK volumes with supplies of RIK from the North Slope.

In 1987 the state began to export Cook Inlet RIK oil to the Chinese Petroleum Company. These volumes were produced from fields on the west side of the Cook Inlet after the federal government exempted Cook Inlet production from export administration regulations. The state sold 97 percent of the royalty production from the McArthur River, Trading Bay, North Trading Bay, and Granite Point fields in a series of one-year competitive auctions. In 1991 deliveries under the last Chinese Petroleum contract were halted under force majeure following the December 1989 eruption of the Mount Redoubt volcano. There have been no Cook Inlet RIK sales since (See Table IV.8.).

North Slope

Over the past 25 years, the state has held nine RIK sales involving portions of its Alaska North Slope (ANS) royalty oil production. These sales are summarized in Table IV.7 and Figure IV.3. In 1976, the state signed a six-year contract with Golden Valley Electric Association (GVEA), the electric utility in Fairbanks, to sell approximately 3,300 barrels of ANS crude oil per day as turbine fuel. GVEA did not exercise its option to take RIK until 1981 and it traded these volumes with Mapco (now Williams Alaska) in exchange for refined fuel. The state subsequently sold RIK ANS to GVEA in two other contracts until 1992. As in the first contract, GVEA traded these volumes with Mapco.

In 1978 the state contracted with Earth Resources Company of Alaska, predecessor to Mapco Alaska and Williams Alaska Petroleum Company, to supply 15 percent of Prudhoe Bay RIK oil production less the quantity dedicated to GVEA. This 25-year contract expired in December 2003. Williams received a maximum of 35,000 barrels per day of RIK

oil produced from the Prudhoe Bay Unit under this contract and supplemented this supply with new agreements for another 28,000 barrels per day.

Tesoro has been an important North Slope RIK customer. Tesoro negotiated and bid for several contracts that supplied it with RIK supplies from 1980 to 1998. Chevron was another big purchaser of North Slope RIK for oil supplied to its Nikiski refinery from 1980 through 1991, when it finally shut down its Nikiski refinery. Petro Star Inc. purchased North Slope RIK from 1986 through 1991 for its new refinery at North Pole. In 1992 Petro Star negotiated a 10-year contract with the state for a supply of RIK from the Kuparuk River Unit. With this contract in hand, Petro Star was able to build the state's newest refinery in Valdez. As it happened, Petro Star elected to take no oil under this contract and the contract expired automatically nine months after it had been signed.

The state also held competitive auctions of RIK oil during the early 1980s as part of a program to routinely offer RIK short-term contracts. Winners of these sales included in-state refineries but also several refineries located outside the state. Many of these buyers were also ANS producers. About 46 million barrels of Alaska North Slope RIK crude oil were sold in these auctions but the program was interrupted after the general collapse of oil prices in the mid-1980s. In January 2000, the Division of Oil and Gas published a Notice of Interest in Sale of State Royalty Oil. The response to this notice by prospective RIK purchasers prompted the division to plan for a competitive bid auction for volumes of RIK oil produced from several North Slope fields. The sale was subsequently held in August 2000 but no bids were offered.

In September 2003, the state negotiated a temporary contract with Williams for the period January 1, 2004, through March 31, 2004. The state also negotiated a new 10-year contract with Flint Hills Resources Alaska, LLC (FHR), signed by the Governor on March 9, 2004, enabling FHR to take over the Williams' North Pole refinery on March 31. Deliveries of royalty oil under the new RIK contract began April 1, 2004. The state sold approximately 57,537 barrels per day to FHR, or more than 64 percent of the total royalty oil produced on the North Slope for the period January 1 through December 31, 2008.

The contract contained special conditions which serve as additional consideration for FHR's purchase of the state's royalty oil. FHR will maintain gasoline wholesale rack price parity between Anchorage and Fairbanks. FHR has invested approximately $100 million to install clean fuels processing equipment and facilities in the North Pole Refinery and/or elsewhere in Alaska. It has fulfilled and enhanced the previous commitments made by Williams to the Government Hill Community Council in Anchorage to address concerns about gasoline storage tanks near Government Hill and has undertaken additional projects to improve the Anchorage Tank Farm Facility. FHR will also continue to ship refined products to Anchorage via the Alaska Railroad, (FHR shipments represented 41 percent of the total freight loadings for the Alaska Railroad for 2008).

In Fairbanks, FHR has studied the use and viability of the hydrant fueling system at the Fairbanks International airport (FIA), concentrating on promoting FIA to cargo carriers, evaluating and upgrading FIA fuel distribution facilities, and charging a jet fuel customer in Fairbanks the same or lower price as FHR charges that same customer in Anchorage. FHR met all of these conditions for 2008 and has performed upgrades of their fueling facilities at FIA, primarily related to environmental remediation and compliance on their lease lot.

Royalty-in-Kind Policy

The earliest RIK sales, notably Tesoro's first Cook Inlet contract, the first GVEA contract, and the Alpetco contract, generated controversy and debate in the state. Several issues arose as the RIK program evolved. Is the state better off negotiating sales one-on-one or auctioning RIK through competitive tenders? How much public input should be encouraged? Should the state subsidize the local refining industry through price breaks? What kind of oversight should be required? The debates of these questions led to the present program as set out in statutes and regulations.

When disposing royalty oil or gas, the commissioner is bound by AS 38.05.182 and AS 38.05.183. Further, the Legislature established the Alaska Royalty Oil and Gas Development Board (Royalty Board) under AS 38.06 to oversee the department's RIK program. Regulations under Title 11, Chapters 3 and 26 govern the actual disposition of royalty and the sale of RIK. (See http://www.legis.state.ak.us/folhome.htm for more information).

The rules that govern the sale of RIK may be reduced to a few principles:

- Any disposition of the state's royalty must be in the state's best interest. The state should sell its royalty rather than take it in-value as long as the best interests of the state are served.

4271

- The state must receive a price for its RIK that is at least as much as it receives when the state takes its royalty in-value.
- Under certain circumstances, the state may sell its oil in a negotiated sale, but competitive sales are preferred.
- Although the price of RIK must equal or exceed the price of RIV, a review of each sale must consider economic, social, and environmental effects. In this way, benefits may be attributed to the sale of RIK to local refineries that would not be generated by sales to outside purchases.
- The public is a part of the process. Depending on the terms of the sale, the commissioner will publish best interest findings and solicit comments on the sale from the public.
- The Royalty Board must be notified of any disposition of RIK. For supply contracts of more than one year, the Royalty Board must evaluate the economic, social, and environmental effects of the sale, convene a public hearing, and recommend approval of the sale to the Legislature.
- The Legislature approves long-term contracts by enacting legislation
- The near-universal practice of the Department is to make its sales at or near the location of production. The RIK buyers take title upstream of necessary transportation infrastructure, and must arrange for transportation themselves. In this way, transportation risks are borne by the purchaser, and the state minimizes its need for staffing to administer RIK sales.

SPONSOR STATEMENT

SCR 3 - Urging the Governor to Sue to Protect the State's Sovereign Right to Navigable Waters

Under the Equal Footing Doctrine, Statehood Act, and Submerged Lands Act, the state assumed ownership at statehood of the submerged lands of navigable waterways between the ordinary high water marks and below mean high tide. The state acquired the full power and control over its navigable waters, regardless of the upland owners for watercraft use, mining, recreation, commerce, etc. Alaska's Constitution, statutes and regulations clearly say that the state owns and manages these submerged lands and navigable waters and that its citizens have free and unrestricted access unless restricted under regulations authorized by the State Legislature. Even the 1980 Alaska National Interest Lands Conservation Act states that regulations adopted for our national parks only apply to federal lands.

Beginning in 1996, the National Park Service (NPS) placed another layer of regulations over the State of Alaska's management on navigable waterways. Some incidences to note on the Yukon River are: (1) NPS is enforcing national prohibitions on the use of certain types of watercraft that are authorized by the state; (2) NPS have cited placer miners with legitimate permits from the state; (3) NPS required commercial operators of riverboat and dog mushing tours to secure federal permits. On other rivers in the state, NPS is restricting the methods and means used by sport and subsistence fishermen. Each year they become more embolden and their restrictions on our use of navigable waters continue to grow. The NPS actions, in effect, void the state's legitimate jurisdiction on its navigable waters and diminish the rights of all Alaskans to use these waterways for fishing, hunting, boating, aircraft landing, rafting, placer mining, camping and commerce to name just a few.

The State of Alaska is incrementally losing one of it most cherished and valuable sovereign rights; the right to manage its navigable waters. Management of portions of rivers, such as the Yukon River, is being taken over by the Federal Government. The State of Alaska must take strong and decisive action or watch while it loses control forever over hundreds of miles of rivers, thousands of lakes and thousands of miles of tidelands.

SCR 3 urges the Governor to protect the State of Alaska's sovereign right to manage the submerged land of its navigable rivers. SCR 3 asks the Administration to legally redress this situation and regain our sovereign rights.

Bunde Resolution (SCR 3) Urges Governor to Sue Feds to Protect State's Right to Navigable Waterways

JUNEAU – The Alaska State Senate today is considering a resolution to ask Governor Sarah Palin to file suit against the U.S. Department of Interior, National Park Service, to assert Alaska's rights to control navigable waters within the state. Senate Concurrent Resolution 3, introduced by Sen. Con Bunde, R-Anchorage, describes growing problems the state is experiencing with the NPS, as that agency usurps control of activities on water bodies that belong to the state.

"It is absolutely critical that the State of Alaska stand up for its rights under the Statehood Compact and the equal footing doctrine," Bunde said. "These bodies of water, including the Yukon River, belong to the state, so when the Park Service attempts to dictate who can run a boat on them, or land an airplane, or use them to fish or hunt, we have a real problem with that."

Bunde's resolution notes that the foundational documents under which Alaska entered the Union clearly give control and ownership of navigable waters to the state, and this was reiterated in the Alaska National Interest Lands Conservation Act (ANILCA) in 1980. However, the NPS began usurping the state's sovereign rights over waterways inside National Parks in 1996. The resolution also notes that the state has attempted for the past 12 years to resolve the conflict without success.

"I am convinced that the only way to resolve this issue is through the courts, because the federal managers and bureaucrats have a vested interest to continue to build their empires at the expense of the state," Bunde said. "There are hundreds of thousands of acres of submerged lands at stake, under rivers, lakes and tidal waters. Access to Alaska's lands was guaranteed under ANILCA, but it is slowly but surely being denied by federal employees."

SCR 3 also urges the Governor to allocate sufficient resources to the Department of Law, the Department of Natural Resources, and the Department of Fish and Game to fund and support a legal challenge to protect the state's sovereign right to manage the public use of its navigable waters. The resolution was referred to the Senate Resources Committee.

###

REPORT ON IDENTIFIED R.S. 2477 RIGHTS-OF-WAY

INTRODUCTION

This report fulfills the requirement under AS 19.30.400(b) for the Department of Natural Resources (DNR) to report its identification, research, and adjudication of R.S. 2477 rights-of-way. RS 2477, a federal law by which the U.S. government granted rights-of-way across federal lands not otherwise reserved for public use, to encourage miners and settlers to expand into the Western states and Alaska. Although Congress repealed RS 2477 in 1976, existing rights-of-way created under it are valid existing rights preserved under federal law. DNR provides detailed information and answers to frequently asked questions involving RS 2477 rights-of-way online at: http://www.dnr.state.ak.us/mlw/trails/rs2477/

PUBLIC ACCESS ASSERTION AND DEFENSE UNIT

In FY 05 the DNR Division of Mining, Land and Water (DMLW) established the Public Access Assertion and Defense Unit (PAAD) to proactively address the increasing conflicts with public access issues to public lands and waters. The PAAD Unit is funded through both federal and state sources. The unit is divided into two sub-units, Easements and Navigability.

The Easement sub-unit's primary mission is to review all federal land conveyances under the Alaska Native Claims Settlement Act (ANCSA) to ensure that public access to public lands and water is protected when conveyances may block such access. Reserving easements is a requirement of Section 17(b) of ANCSA. The state has nominated and recommended 17(b) easements that overlay existing RS 2477 routes noting that the state asserts these are valid existing rights.

The secondary mission of the Easement Sub-unit is to research existing trails to determine if they qualify for RS 2477 codification in the statute. The Easement Sub-unit also reviews subdivision plats, state land transfers to municipalities and the University of Alaska to ensure that RS 2477s and other easements are identified and reserved. The PAAD Unit does not manage easements on a day-to-day basis, as that is the responsibility of the MLW's Regional offices.

From DNR
2009 Report to the Legislature

RS 2477 ASSERTIONS AND RESEARCH

In 2008, the Easement subunit's primary focus was to review ANCSA Conveyances, particularly in the Doyon and Ahtna regions. This emphasis is required because the federal Bureau of Land Management (BLM) has accelerated land transfers to ANCSA corporations in order to more rapidly complete land entitlements. This has diverted attention away from the RS 2477 project. Regarding RS 2477, the sub-unit focused its RS 2477 research attention on two trails, Equinox trail near Fairbanks and the Fox River trail near Homer. Since inception, a substantial amount of staff time has been devoted to researching and asserting new RS 2477s. The Legislature has not acted upon any new RS 2477s that have been submitted.

ALASKA CONSTITUTION

Alaska Constitution Article VIII, section 3 states:

Wherever occurring in their natural state, fish, wildlife, and waters are reserved to the people for common use.

Alaska Constitution Article VIII, section 13 states:

All surface and subsurface waters reserved to the people for common use, except mineral and medicinal waters, are subject to appropriation. Priority of appropriation shall give prior right. Except for public water supply, an appropriation of water shall be limited to stated purposes and subject to preferences among beneficial uses, concurrent or otherwise, as prescribed by law, and to the general reservation of fish and wildlife.

Alaska Constitution Article VIII, section 14 states:

Free access to the navigable or public waters of the State, as defined by the legislature, shall not be denied any citizen of the United States or resident of the State, except that the legislature may by general law regulate and limit such access for other beneficial uses or public purposes.

Alaska Constitution Article VIII, section 15 provides, in pertinent part:

No exclusive right of special privilege of fishery shall be created or authorized in the natural waters of the State…

Alaska Statute 38.05.965(13) defined navigable waters:

"navigable water" means any water of the state forming a river, stream, lake, pond, slough, creek, bay, sound, estuary, inlet, strait, passage, canal, sea or ocean, or any other body of water or waterway within the territorial limits of the state or subject to its jurisdiction, that is navigable in fact for any useful public purpose, including but not limited to water suitable for commercial navigation, floating of logs, landing and takeoff of aircraft, and public boating, trapping, hunting waterfowl and aquatic animals, fishing, or other public recreational purposes;

LEGISLATIVE INTENT

The Legislature further interpreted the constitutional protections for public use of the waters in an act relating to the navigable or public waters of the state, declaring in the preamble (85 SLA ch.82):

(a) The people of the state have a constitutional right to free access to the navigable or public waters of the state.

(b) Subject to the federal navigational servitude, the state has full power and control of all of the navigable or public waters of the state both meandered and unmeandered, and it holds and controls all navigable or public waters in trust for the use of the people of the state.

(c) Ownership of land bordering navigable or public waters does not grant an exclusive right to the use of the water and any rights of title to the land below the ordinary high water mark are subject to the rights of the people of the state to use and have access to the water for recreational purposes or any other public purpose for which the water is used or capable of being used consistent with the public trust.

(d) This Act may not be construed to affect or abridge valid existing rights or create any right or privilege of the public to cross or enter private land.

ALASKA STATUTES

38.05.126. Navigable and public water.

(a) The people of the state have a constitutional right to free access to and use of the navigable or public water of the state.

(b) The state has full power and control of all of the navigable or public water of the state, both meandered and un-meandered, and the state holds and controls all navigable or public water in trust for the use of the people of the state.

(c) Ownership of land bordering navigable or public water does not grant an exclusive right to the use of the water and a right of title to the land below the ordinary high water mark is subject to the rights of the people of the state to use and have access to the water for recreational purposes or other public purposes for which the water is used or capable of being used consistent with the public trust.

(d) This section may not be construed to affect or abridge valid existing rights or create a right or privilege of the public to cross or enter private land.

Sec. 38.05.127. Access to navigable or public water.

(a) Before the sale, lease, grant, or other disposal of any interest in state land adjacent to a body of water or waterway, the commissioner shall,

(1) determine if the body of water or waterway is navigable water, public water, or neither;

(2) upon finding that the body of water or waterway is navigable or public water, provide for the specific easements or rights-of-way necessary to ensure free access to and along the body of water.

unless the commissioner finds that regulating or limiting access is necessary for other beneficial uses or public purposes.
(b) The department shall adopt regulations implementing this section.
(c) Nothing in this section affects valid existing rights or limits in any way the constitutional right of the public to use and have free access to the navigable or public waters of the state.
(d) Upon application by a municipality or an affected owner of land, the department may vacate, release, modify, or relocate an easement and right-of-way for public access to or along navigable or public waters reserved by the department in a patent issued under AS 29.65 or former AS 29.18, if the commissioner determines the action is consistent with the public interest.
(e) The establishment of easements or rights-of-way for oil and gas and mineral leases under (a) of this section need not be made until the leases are ready to be developed.
(f) Rights-of-way or easements to waterways established under (a)(2) of this section shall be established approximately once each mile unless the commissioner makes a written finding that regulating or limiting access is necessary for other beneficial uses or public purposes.
(g) The commissioner may exchange land under AS 38.50 to create access to public water of the state.

Sec. 38.05.128. Obstructions to navigable water.
(a) A person may not obstruct or interfere with the free passage or use by a person of any navigable water unless the obstruction or interference is
(1) authorized by a federal agency and a state agency;
(2) authorized under a federal or state law or permit;
(3) exempt under 33 U.S.C. 1344(f) (Clean Water Act);
(4) caused by the normal operation of freight barging that is otherwise consistent with law; or
(5) authorized by the commissioner after reasonable public notice.
(b) An unauthorized obstruction or interference is a public nuisance and is subject to abatement. The cost of abatement shall be borne by the violator and is in addition to any penalty imposed by the court.
(c) This section may not be construed to affect or abridge valid existing rights.
(d) Free passage or use of any navigable water includes the right to use land below the ordinary high water mark to the extent reasonably necessary to use the navigable water consistent with the public trust.
(e) Free passage or use of any navigable water includes the right to enter adjacent land above the ordinary high water mark as necessary to portage around obstacles or obstructions to travel on the water, provided
(1) entry is made without injury or damage to the land;
(2) entry is made in the least obtrusive manner possible;
(3) there is no reasonable alternative available to avoid the use of the adjacent land above the ordinary high water mark; and
(4) the navigable water is reentered immediately below the obstacle or obstruction at the nearest point where it is safe to do so.
(f) A violation of (a) of this section is a class B misdemeanor.

Policies and Proceduces on Ownership and Management of Navigable and Public Waters

June 18,1996 State ownership of the beds of navigable waters is an inherent attribute of state sovereignty protected by the United States Constitution. Utah v. United States, 482 U.S. 193 (1987). Under the doctrine, all states enter the Union on an equal footing with respect to sovereign rights and powers, title to the beds of navigable waters in Alaska vested in the newly formed State of Alaska in 1959. In addition, under the Alaska Constitution and the public trust doctrine, all waters in the state are held and managed by the state in trust for the use of the people, regardless of navigability and ownership of the submerged lands under the Equal Footing Doctrine.

The purpose of this paper is to describe the State of Alaska's policies and procedures for identifying and protecting the state's title to the beds of navigable waters. In addition, this paper outlines the legal and policy considerations which guide the ownership and management of submerged lands and public waters.

I. IDENTIFYING AND PROTECTING STATE TITLE TO THE BEDS OF NAVIGABLE WATERS

Identification and management of the beds of navigable waters is an important policy of the State of Alaska. In 1980, the state established a comprehensive navigability program to respond to federal land conveyances and land management activities under the Alaska Statehood act, the Alaska Native Claims Settlement Act (ANCSA), and the Alaska National Interest Lands Conservation Act (ANILCA). Pursuant to the provisions of those acts, the federal government has issued navigability determinations for thousands of lakes, rivers, and streams throughout the state in an effort to determine whether the state or federal government owns the submerged lands. Navigability determinations are also made prior to many state land disposals to insure that adequate public use easements are reserved.

The basic purpose of the state's program is to protect the public rights associated with navigable waters, including, in particular, the state's title to the submerged lands. Because state and native land selections and federal conservation units blanket the state, navigability questions have arisen for rivers, lakes, and streams throughout Alaska. The navigability of many of those waterbodies has a lready been established.

There are hundreds of others, however, where navigability is not yet determined.

To help resolve these navigability disputes, a major goal of the state's navigability program is to identify the proper criteria for determining title navigability in Alaska and to gather sufficient information about the uses and physical characteristics of individual waterbodies so that accurate navigability determinations can be made as disputes arise. Other important aspects of the program include monitoring federal land conveyance and management programs to identify particular navigability disputes, seeking cooperative resolution of navigability problems through negotiations and legislation, and preparing for statewide navigability litigation.

Return to Table of Contents

RIPARIAN RIGHTS AND STATUTE OF LIMITATIONS

Disputes over ownership of submerged lands in Alaska have arisen under a variety of circumstances. The principal source of the disputes in Alaska is the survey and acreage accounting system used by the federal government for conveying land to the state and native corporations.

The standard procedures for surveying and conveying federal land are found in the Manual of Instructions for the Survey of the Public Lands of the United States, generally known as the BLM Manual of Surveying Instructions. Under those procedures, consistently used in every public land state except Alaska, only uplands are surveyed and conveyed in fulfillment of acreage entitlements, not submerged lands. The survey rules require that all lakes 50 acres or larger, and rivers and streams three chains (198 feet) in width or wider, regardless of navigability, be meandered and segregated (excluded) from the surveyed public lands. Only the surveyed uplands are conveyed. The acreage of meandered rivers, lakes, and streams is not included in computing the amount of land involved in the conveyance.

In Alaska, however, the federal government had not consistently followed these survey rules. Until 1983, the federal government treated submerged lands the same as uplands. All bodies of water that were considered non-navigable by the federal government, regardless of size, were surveyed as though they were uplands and the acreage of submerged lands was charged against the total acreage entitlement.

Because of these conveyance procedures, the navigability of waterbodies in Alaska has been an issue of contention since the enactment of the Alaska Statehood Act and ANCSA. In addition to the problems caused by a lack of information about many waterbodies, the situation was exacerbated by the narrow definition of navigability used by the federal government. Hundreds of rivers, lakes, and streams considered navigable by the state were determined non-navigable by the federal government.

In 1983, following years of negotiations, lawsuits and legislative attempts to solve the navigability problems created by the unusual survey and conveyance procedures in Alaska, the State of Alaska, the United States Department of the Interior and the Alaska Federation of Natives (AFN) agreed that the standard rules of survey should be followed for land conveyances in Alaska. The effect of that decision was to treat Alaska surveys and land conveyances like federal land surveys and conveyances in other states. The recipients of conveyances from the federal government are charged only for the amount of public land that is calculated by the survey, which does not include the areas of meandered rivers, lakes and streams.

The use of these survey procedures has eliminated many of the problems associated with the federal land conveyance programs in Alaska. Submerged lands are no longer being conveyed to fulfill acreage entitlements. With the exception of lakes smaller than 50 acres and streams narrower than 198 feet, navigability determinations are no longer being made prior to federal land conveyances. Determinations of ownership of submerged lands can be put off until a natural resource use or conflict requires resolution, such as issuance of an oil and gas lease, mining claim, or a gravel sale.

Through the joint efforts of the State of Alaska, AFN, and the Department of the Interior, the 1983 decision to use the standard survey procedures for land conveyances in Alaska was legislatively approved in August 1988 when the United States Congress passed legislation (94 Stat. 2430) amending Section 901 of the Alaska National Interest Lands Conservation Act, codified at 43 U.S.C. 1631. The 1988 amendment, sometimes referred to as the Alaska Submerged Lands Act, requires that the standard rules of survey in the BLM Manual of Surveying Instructions be used for all federal surveys under the Alaska Statehood Act and ANCSA. The 1988 amendment also repealed the Section 901 statute of limitations that would have required the state to file a lawsuit within a very short period of time in order to preserve its title to the beds of navigable waters conveyed to native corporations by the federal government as a result of erroneous navigability determinations, poor maps, surveys or whatever. Even with this legislation, a major problem

concerning navigability decisions made by the federal government under the old system remains unresolved. At issue are the hundreds of erroneous non-navigability decisions and the resulting submerged land conveyances made to ANCSA corporations in previous years. In addition, to comply with the meandering requirements of the BLM Survey Manual, the federal government is still required to make navigability determinations for lakes smaller than 50 acres and rivers or streams narrower than 198 feet in width to determine if these waters must be meandered.

Return to Table of Contents

NAVIGABILITY CRITERIA

The greatest hurdle to overcome in the state's efforts to identify and manage navigable waters has been the long- standing differences of opinion between the State of Alaska and the United States regarding the application of the test for determining title navigability. Navigability is a question of fact, not a simple legal formula. Variations in waterbody use that result from different physical characteristics and transportation methods and needs must be taken into account. There are many legal precedents for determining navigability in other states based upon the particular facts presented in those cases. In Alaska, though, we are just beginning to get the final court decisions that are necessary to provide legal guidance for accurate navigability determinations.

The physical characteristics and uses of a waterbody used by the state for asserting navigability, commonly referred to as navigability "criteria", are based upon legal principles that have been established by the federal courts. These criteria are applied to rivers, lakes, and streams throughout the state and take into account Alaska's geography, economy, customary modes of water-based transportation, and the particular physical characteristics of the waterbody under consideration.

The federal test for determining navigability was established over a hundred years ago. In the landmark decision of The Daniel Ball, 77 U.S. (19 Wall.) 557, 563, (1870), the Supreme Court declared:

Those rivers must be regarded as public navigable rivers in law which are navigable in fact. And they are navigable in fact when they are used, or are susceptible of being used, in their ordinary condition, as highways of commerce, over which trade and travel are or may be conducted in the customary modes of trade and travel on water.

Although The Daniel Ball test is accepted as the correct standard for determining navigability, there has been a lot of disagreement over application of many of the terms and phrases used in The Daniel Ball test to the specific uses of Alaska's lakes, rivers and streams. The State of Alaska uses the following interpretation of that test as the basis for its navigability program.

The Waterbody Must Be Usable As a Highway For the Transportation of People or Goods. Interpreting the requirements that navigable waterbodies be used or usable as "highways of commerce", the courts have ruled that the central theme of title navigability is that the waterbody be capable of use as a highway which people can use for transporting goods or for travel. Neither the types of goods being transported nor the purpose of the travel are important in determining navigability. Transportation on water associated with recognized commercial activities in Alaska, such as mining, timber harvesting, and trapping is, evidence of navigability. The use of waterbodies for transportation in connection with natural resources exploration or development, government land management, management of fish and game resources, or scientific research is also evidence of navigability. Travel by local residents or visitors for the purpose of hunting, fishing, and trapping, or as a means of access to an area can be used to establish navigability. The same holds for recreational transportation, including personal travel and professionally guided trips.

Waters Which Are Capable of Being Used For Transporting Persons and Goods, Although Not Actually Used, Are Navigable. It is not necessary that a waterbody be actually used for transportation to be found navigable. It is enough that it is susceptible, or physically capable, of being used. Whether a waterbody is susceptible of use for transportation depends upon the physical characteristics of the water course such as length, width, depth, and, for a river, current and gradient. If those physical characteristics demonstrate that a waterbody could be used for the transportation of persons or goods, it is legally navigable.

The susceptibility element of title navigability is very important for the identification of navigable waterbodies in Alaska. Because of Alaska's sparse population and lack of development, there are hundreds of remote rivers, lakes, and streams where there is little or no evidence of actual use. Because of their physical characteristics, however, many of these remote waterbodies could be used for transporting people or goods if there was a need. Under these circumstances, they are considered legally navigable.

Transportation Must Be Conducted In the Customary Modes of Trade and Travel On Water. A finding of navigability does not require use or capability of use by any particular mode of transportation, only that the mode be customary. The courts have held that customary modes of transportation on water include all recognized types and methods of water carriage. Unusual or freak contrivances adapted for use only on a particular stream are excluded. Customary modes of trade and travel on water in Alaska include, but are not limited to, barges, scows, tunnel boats, flat-bottom boats, poling boats, river boats, boats propelled by jet units, inflatable boats, and canoes. In places suitable for harvesting timber, the flotation of logs is considered a customary mode of transportation.

The mode of travel must also be primarily waterborne. Boats which may be taken for short, overland portages qualify. The courts have ruled that the use of a lake for takeoffs and landings by floatplanes is insufficient, in and of itself, to establish navigability.

Without expressly rejecting the claim, at least two court decisions in Alaska have suggested that winter travel on the surface of a frozen river or lake is probably not evidence of navigability. The rivers involved in the two adjudicated cases were both found navigable based upon summer use by boats, however, and it appears likely that most waterbodies in Alaska that are used as highways in winter can also be travelled by at least small boats in the summer. Because of this, the state need not rely upon winter travel to support navigability.

Waters Must Be Navigable In Their Natural and Ordinary Condition. A waterbody which can be used for transportation only because of substantial man-made improvements to the condition of the watercourse is not navigable for title purposes. However, if transportation does or could occur on the waterbody even without the improvements and the improvements would only make transportation easier or faster or possible for larger boats (e.g., dredging), it is still considered navigable for title purposes.

The presence of physical obstructions to navigation (rapids, falls, log-jams, etc.) does not render a waterway non- navigable if the obstruction can be navigated despite the difficulties or if the obstruction can be avoided by other means, such as portaging, lining, or poling. A waterbody is also navigable even if seasonal fluctuations do not allow it to be navigated at all times of the year. However, a waterbody which is only navigable at infrequent and unpredictable periods of high water is not normally considered navigable. The fact that a waterbody may be frozen for several months of the year does not render it non-navigable if it is navigable in its unfrozen condition.

Title Navigability Is Determined As Of The Date Of Statehood. To be considered navigable for title purposes, the waterbody must have been navigable in 1959 (when Alaska became a state). This element of the navigability test focuses on the physical characteristics of the waterbody and whether those characteristics have changed significantly since statehood. Most waterbodies have not physically changed enough since statehood to alter their navigability. Assuming there have been no significant changes in the physical characteristics of the waterbody, a waterbody that is navigable today would be considered legally navigable in 1959 as well. Exceptions might include the creation, by natural or man-made causes after statehood, of a totally new lake, river, or canal now used for navigation. Such a waterbody would not be considered navigable for title purposes. Conversely, a waterbody which was navigable in 1959 but, because of natural or man-made physical changes, is no longer navigable in fact would still be considered navigable for title purposes.

Return to Table of Contents

NAVIGABILITY CRITERIA DISPUTES

Because of differing legal interpretations of court navigability decisions, several aspects of the criteria used by the state to determine navigability have been disputed by the federal government. As a direct result of these criteria disputes, many waterbodies considered navigable by the state have been determined non-navigable by the federal government.

The major criteria dispute has been over the type or purpose of the transportation required to establish navigability. The federal government has asserted that a waterway must be used, or capable of use, for transporting commerce to be considered navigable. Other, "noncommercial" transportation uses are not considered sufficient to establish navigability. In this context, the federal government has claimed that the only relevant "commercial" transportation is the distribution of goods for sale or barter, or the transportation for hire of people or things. The federal government has admitted that professionally guided transportation on Alaska's rivers, lakes and streams constitutes commerce, but nevertheless has argued that the waters are not being used as a navigable "highway" when recreation is involved, but rather more

as an amusement park. The federal government has therefore claimed that waters used only for commercial recreation are legally nonnavigable even though they may be navigable in fact.

Through the work of the state's navigability program, this definition has been repeatedly rejected by the courts, most recently in the Gulkana River case. Alaska v. United States, 662 F.Supp.455 (D.Alaska 1987), affirmed sub nom. Alaska v. Ahtna, Inc., 891 F.2d 1401 (9th Cir. 1989). Applying the correct definition of navigability, many of the submerged lands that the federal government attempted to convey to ANCSA corporations should have been recognized as belonging to the state. The state appealed many conveyances to protect its title. As occurred in the Kandik-Nation Rivers appeal, Appeal of Doyon, 86 I.D. 692 (ANCAB 1979), Alaska Native Corporations also found it necessary to challenge erroneous federal determinations of non-navigability to insure they would not be deprived of any portion of their entitlement by being charged for submerged land owned by the state.

The federal government has also argued that aluminum boats, boats propelled by jet units, inflatable boats, and canoes are not customary modes of travel for the purpose of determining navigability in Alaska. As a result, many waterbodies navigated by these types of watercraft have been found legally non-navigable by the federal government. The claim is that these boats represent post-statehood technological advances, are too small to be considered "commercial", or that most "commercial" use of the watercraft developed after statehood.

Another navigability dispute involves remote, isolated lakes. The federal government has found many of these lakes legally non-navigable, even though they are physically capable of being navigated. The federal government's contention is that a navigable connection to another area is necessary to make travel on a remote lake worthwhile. Otherwise, the federal government views the lack of development in the area around the isolated lake as an indication that the lake will never be used for commercial transportation.

To resolve these navigability criteria disputes, the state has actively pursued a limited number of court cases challenging particular findings of non-navigability by the federal government. With the sole exception of floatplanes, the courts have agreed with the navigability criteria presented by the State of Alaska and have rejected the limitations suggested by the federal government. These cases include:

Gulkana River. In this case, both in the U.S. District Court and on appeal to the U.S. Court of Appeals, the federal courts rejected the federal government's restrictive interpretation of the phrase " highway of commerce" in the title navigability test. The federal district court stated that to demonstrate navigability, it is only necessary to show that the waterbody is physically capable of "the most basic form of commercial use: the transportation of people or goods." Because the Gulkana River can be used for the transportation of people or goods, the Gulkana River was found navigable. Alaska v. United States, 662 F.Supp.455 (D.Alaska 1987). On appeal, the court of appeals affirmed the district court's finding of navigability. Alaska v. Ahtna, Inc., 892 F.2d 1401 (9th Cir. 1989). The court of appeals found that the modern use of the Gulkana River for guided hunting, fishing, and sightseeing trips is a commercial use and, since the physical characteristics of the river have not significantly changed since 1959, provides conclusive evidence that the river was susceptible of commercial use at statehood. The court also found that modern inflatable rafts can be used to establish navigability. In April 1990, the United States Supreme court denied a request by Ahtna, Inc. to reconsider and overturn the court of appeals decision. The Gulkana River precedent is now binding on all future navigability determinations in Alaska.

Kandik and Nation Rivers. In this administrative appeal, the State of Alaska and Doyon Limited, an ANCSA regional corporation, successfully established that the use or susceptibility of use of a river or stream by an 18-24 foot wooden riverboat capable of carrying at least 1,000 pounds of gear or supplies is sufficient to establish navigability. Based upon the use of these types of boats for the transportation of goods and supplies by fur trappers, as well as extensive historic and contemporary canoe use, the court found the Kandik and Nation rivers, in Interior Alaska, navigable. Appeal of Doyon, 86 I.D.692 (ANCAB 1979).

Alagnak River. In this federal district court case, the Alagnak River, the Nonvianuk River, Kukaklek Lake and Nonvianuk Lake were all found navigable. These interconnected waterbodies are located in the Bristol Bay region of Alaska, south of Lake Iliamna. Their primary transportation use is for commercially guided hunting, fishing, and sightseeing and for government research and management. They also serve as a means of access for local residents to their homes and to the surrounding areas for subsistence hunting and fishing. After several years of litigation, the federal government conceded that these rivers and lakes are navigable. Alaska v. United States, No. 82-201 (D.Alaska Feb. 2, 1985).

Mataniska River. The recommended decision in this administrative appeal agreed with the State of Alaska's position that post-statehood commercial river rafting operations are sufficient to establish navigability. Based upon that type of use, the administrative law judge who heard the case recommended that the

Matanuska River, in Southcentral Alaska, be found navigable. The Secretary of Interior, over the state's objections, assumed jurisdiction over the case and stayed implementation of the recommended decision. No action has been taken in the case since that time. Appeal of Alaska, No. 82-1133 (IBLA Rec. Decision Aug. 18, 1983)

Slopbucket Lake. The state claimed that the extensive use of floatplanes on Slopbucket Lake, a twenty acre lake adjacent to Lake Iliamna, was sufficient to establish navigability. The federal courts rejected this view. The courts reasoned that floatplanes do not use the lake as a navigable highway; they just take off and land there. Alaska v. United States, 754 F.2d 851 (9th Cir.) cert denied, 106 S. Ct. 333 (1985).

IDENTIFICATION OF NAVIGABLE WATERS

Even if the criteria for determining navigability in Alaska were totally agreed upon, it still would be difficult to prepare a complete list of all of the navigable lakes, rivers, and streams in the state. Much of Alaska has not yet been surveyed and many maps are inaccurate and out-of-date. It is an immense and complex task simply to identify and locate all of the thousands of named and unnamed lakes, rivers, and streams in the state which might be considered navigable. Furthermore, once a potentially navigable lake, river, or stream has been identified, detailed information about its size and uses is necessary for an accurate navigability determination. Because of Alaska's undeveloped and remote character, gathering navigability information is both time consuming and expensive. Finally, administrative navigability determinations made by the state or the federal government are always subject to legal challenge, since only the courts can authoritatively determine title to submerged lands.

Despite these difficulties, both the state and the federal government are frequently called upon to issue navigability determinations. Although the requirement that BLM adhere to the meandering requirements of the BLM Survey Manual has eliminated the need for navigability determinations on the larger rivers, lakes, and streams, which must now be meandered regardless of navigability, navigability determinations are still required for the smaller rivers, lakes, and streams to determine if they are to be meandered at the time of survey. Because of this, some navigability determinations are still made for nearly every federal land conveyance under ANCSA or the Alaska Statehood Act. The management plan for nearly every federal Conservation System Unit (CSU) also addresses the navigability issue.

Federal navigability determinations are reviewed by the state to insure that available information sources were used and interpreted correctly. Where the federal government determines non-navigable a waterbody which is considered navigable by the state, the state may provide the government with supplemental information about the uses and characteristics of the waterbody to obtain a redetermination of navigability. Under some circumstances the state needs to make its own navigability determinations, such as for a oil and gas lease sale, land disposal, material sale, mining claim, or another use of state land or resources requiring a determination of ownership of submerged lands within the affected area.

For large, undeveloped regions of Alaska there may be little or no accurate waterbody use or physical characteristics information available for making navigability determinations. When information is lacking, and it must make a navigability determination, the state is forced to rely solely upon the physical characteristics shown on maps and aerial photographs. In these cases, the state identifies as navigable all streams depicted on the U.S.G.S. maps with double lines (generally at least 70 feet wide) and having an average gradient over the length of the stream of no more than 50 feet per mile. With rare exceptions, the state's experience has been that streams of this type are deep enough and wide enough to be navigable by boats carrying persons or goods and must, therefore, be considered legally navigable. Streams depicted with single lines, although narrower in width, may also be listed as potentially navigable if they have gradients of substantially less than 50 feet per mile and are at least 10 miles.

If there is no public use or physical characteristics information readily available for lakes, those lakes which are shown on maps and aerial photographs as having a navigable water connection with other navigable waters, or which are accessible by short overland portages, are considered navigable regardless of the size of the lake. These lakes are part of a system of interconnected navigable waters. If a lake is totally isolated, it will be included on the state's navigability maps if it is at least 1 1/2 miles long. That length insures that the lake can be used as a "highway". Future judicial decisions interpreting the "highway" requirement for isolated lakes could shorten or lengthen this 1 1/2 mile "rule of thumb."

The state recognizes that, under some circumstances, lakes smaller than 1 1/2 miles long can be and are used as navigable highways. In those cases, when known, these smaller lakes are also depicted on the

state's navigability map. Moreover, as a matter of administrative policy and convenience only, the state may sometimes make an exception to the 1 1/2 mile standard in the extremely wet regions of the state, including some areas in the Yukon- Kuskokwim Delta, Yukon Flats, and on the North Slope. In these areas, an isolated lake might need to be 2-3 miles long to be included on the state's navigability maps. Although smaller lakes in these areas are capable of being used for transportation and should be found navigable by the courts, the state has decided to concentrate its limited resources in protecting the larger waterbodies first.

NAVIGABLE WATERS WITHIN PRE-STATEHOOD FEDERAL WITHDRAWALS

Although disputes over which waters in Alaska are navigable are the most frequent cause of submerged land ownership disputes, there is another major legal issue which poses a threat to Alaska's sovereign claim to the beds of navigable waters. Even where navigability is conceded, the federal government often contends that title to the submerged lands did not vest in the state if the area was withdrawn or reserved by the federal government on the date of statehood. Within native conveyance areas, the federal government has used this claim of "reserved submerged lands" to justify its attempts to convey the beds of navigable waters in fulfillment of the native entitlements. Within state selections, the federal government has used the same claim to charge the acreage of submerged lands against the state's entitlement.

The state strongly disagrees with this federal claim and has actively pursued a number of court challenges to resolve the issue. In addition to numerous appeals from federal decisions to convey or charge for the beds of navigable waters, the state was actively involved as a friend of the court in one case before the United States Supreme Court and continues to be involved in another Supreme Court case which presents this issue. The pending case is United States v. Alaska, U.S. Supreme Court 84 Original (filed June, 1979).

On June 8, 1987 the Court issued its decision in Utah v. United States, No. 85-1772 (filed Oct. 14, 1986). In this case the federal government, in 1976, issued oil and gas leases for land underlying Utah Lake, a navigable waterbody located in Utah. The suit sought a declaratory judgement that Utah, rather than the United States, holds the lands under navigable waters in the territories in trust for future states, and, absent a prior conveyance by the federal government to third parties, a state acquires title to such land upon entering the Union on an "equal footing" with the original 13 states.

The Supreme Court held that title did pass to the state upon Utah's admission to the Union. They held that there is a strong presumption against finding congressional intent to defeat a state's title, and, that in light of the longstanding policy of the federal government's holding land under navigable waters for the ultimate benefit of future state absent exceptional circumstances, an intent to defeat a state's equal footing entitlement could not be inferred from the mere act of the reservation itself. The United States would not merely be required to establish that Congress clearly intended to include land under navigable waters within the federal reservation, but would additionally have to establish that Congress affirmatively intended to defeat the future state's title to such land.

This decision has significant ramifications within Alaska, since over 95 million acres - more than 25% of the total area of the state - was enclosed within various federal withdrawals and reservations at the time Alaska became a state.

NAVIGABLE WATERS WITHIN ANILCA CONSERVATION SYSTEM UNITS

On December 2, 1980, the Alaska National Interest Lands Conservation Act became law. This act created or added 104.3 million acres to various federal conservation system units. Because these "withdrawals" occurred after the date of statehood, there is no disagreement between the state and federal governments that navigable waters within the various CSU's are owned by the state. However, there is some disagreement on the amount of authority the federal land managers may have to regulate these state owned submerged lands.

The U.S. Constitution gives Congress certain limited powers to control uses on state owned submerged land. These are known as the Property Clause, Navigational Servitude and the Commerce Clause. The extent of these powers involves complex legal questions. However, even assuming that Congress has the power to regulate state-owned submerged lands in Alaska, the United States Supreme Court has ruled that Congress may choose not to exercise that power, thus leaving regulation totally up to the state. Escanaba

Co. v. Chicago, 107 U.S. (17 Otto.) 678 (1883). Whether Congress has done that can only be determined by examining the federal laws passed by Congress dealing with Alaska lands. Another possibility is that the state and federal governments have concurrent jurisdiction, sharing the authority to regulate submerged lands.

In ANILCA, Congress did not take away the state's power to regulate state-owned submerged lands within federal CSU's in Alaska. Numerous provisions in ANILCA recognize and respect the state's authority over state-owned land. In some cases, however, Congress may have attempted to give the federal land managers some concurrent authority to regulate navigable waters within CSU's.

The state, where possible, cooperates with rather than confronts the federal land managers. This cooperation often takes the form of a memorandum of understanding that discusses management issues and how they will be resolved. Differences do occur, however, over issues such as column management and restrictions on mining.

II. LEGAL AND POLICY GUIDELINES GOVERNING MANAGEMENT OF SUBMERGED LANDS AND PUBLIC WATERS

PUBLIC TRUST DOCTRINE

The state has special duties and management constraints with respect to state-owned land underlying navigable waters. These special duties and management constraints arise from the Alaska Constitution. The Alaska Constitution contains numerous provisions embracing the principles commonly known as the public trust doctrine. The public trust doctrine is remarkable both for its age and for its vigor. Rooted in the customs of the seafaring Greeks and Romans, it has evolved to become one of the most effective safeguards of public rights. Basically, the trust reflects an understanding of the ancient concept that navigable waters, their beds and their banks, should be enjoyed by all the people because they are too important to be reserved for private use.

In America, the concept of public rights to public waters was recognized since the early days of the Massachusetts Bay Colony where the great Pond Ordinance of 1641 guaranteed the right to fish and fowl in ponds greater than 10 acres, along with the freedom to pass through private property to do so.

By 1821, American courts were pronouncing the law of public trust as we know it today. This does not mean that no water-related development can take place. The public trust doctrine permits states to improve waterways by constructing ports, docks and wharves, thus furthering the purposes of the trust. Generally speaking, the people's trust rights may be alienated only in ways that further overall trust uses, and in relatively small parcels.

Illinois Central Railroad Company v. Illinois, 146 U.S. 387,452 (1982), involved a grant by the State of Illinois of one thousand acres of the bed of Lake Michigan, constituting the entire harbor of the City of Chicago, to the Illinois Central Railroad. The U.S. Supreme Court held that the grant was revocable, that the state held the land in trust for the public, and that it was powerless to relinquish its rights as trustee.

The court went on to say that land underlying navigable waters is much more than a simple property right.

[I]t is a title different in character from that which the state holds in lands intended for sale. It is different from the title which the United States holds in the public lands which are open to preemption and sale. It is a title held in trust for the people of the state that they may enjoy the navigation of the waters, carry on commerce over them, and have liberty of fishing therein freed from the obstruction or interference of private parties... The trust devolving upon the state for the public, and which can only be discharged by the management and control of property in which the public has an interest, cannot be relinquished by a transfer of the property.

In the 19th century the purposes of the trust were generally described as "commerce, navigation and fishery." This was logical because the major waterways were essential highways of commerce. But as other values became increasingly important, courts began to recognize recreation and environmental protection among the purposes for which the trust exists. As a California court said in 1971, "with our ever increasing leisure time...and the ever increasing need for recreational areas it is extremely important that the public need not be denied use of recreational water...the rule is that a navigable stream may be used by the public for boating, swimming, fishing, hunting and all recreational purposes." People ex rel. Baker v. Mack,

19 Cal. App. 3d 1040, 1044 (1971).

The Alaska constitution provides protections similar to the public trust doctrine protections that cannot be disregarded by the legislature or overruled by the courts. Article VIII, Sec. 3 provides; "Wherever occurring in their natural state, fish, wildlife and waters are reserved to the people for common use." After reviewing the public trust doctrine in Owsichek v. State, Guide Licensing, 763 P.2d 488 (Alaska 1988), the Alaska Supreme Court explained that "the common use clause was intended to engraft in our constitution certain trust principles guaranteeing access to the fish, wildlife and water resources of the state."

In CWC Fisheries, Inc. v. Bunker, 755 P2.d 1115 (Alaska 1988), the Alaska Supreme Court applied the public trust doctrine to tidelands, holding that, even after conveyance, the title remains subject to continuing public easements for purposes of navigation, commerce and fishery.

The 1985 Alaska legislature recognized the constitution application of public trust doctrine principles in Alaska. In an Act relating to the public or navigable waters of the state, the legislature found that "the people of the state have a constitutional right to free access to the navigable or public waters of the state" and that the state "holds and controls all navigable or public waters in trust for the use of the people of the state". 85 SLA Ch. 82. In the same act, the legislature ruled that submerged lands are "subject to the rights of the people of the state to use and have access to the water for recreational purposes or any other public purpose for which the water is used or capable of being used consistent with the public trust."

Courts in other states over the years have defined in somewhat different ways the public uses that are permitted and protected by the public trust as it applies to submerged lands. In reviewing these other cases, it can clearly be seen that through time an ever expanding definition of the public uses protected by the public trust doctrine is being adopted. The California Supreme Court recently held that:

Although early cases had expressed the scope of the public's right in (lands subject to the public trust) as encompassing navigation, commerce and fishing, the permissible range of public uses is far broader, including the right to hunt, bathe or swim, and the right to preserve the (public trust) lands in their natural state as ecological units for scientific study. City of Berkeley v. Superior Court of Alameda, 606 P.2d 362, 365 (Cal. 1980)

It is clear under the Alaska Constitution that the State of Alaska has the responsibilities of a trustee with respect to management of land underlying navigable waters. Moreover, the Alaska legislature has adopted a broad view of the public uses protected or permitted by the public trust. Accordingly, the Alaska Attorney General's Office has determined that, until the Alaska Supreme Court rules on the question, the state should assume that a broad definition of public rights protected by the Alaska Constitution and the public trust doctrine applies in Alaska, similar to the one adopted by the California Supreme Court. 1982 Atty. Gen. Op. No. 3 (June 10, 1982).

Return to Table of Contents

PUBLIC WATERS

It is not only the beds of navigable waters in Alaska that are reserved in public ownership for public use. Under article VIII, Section 3 of the Alaska Constitution, all waters occurring in their natural state are reserved to the people for common use. Article VIII, Section 14 of the Alaska Constitution also provides for the broadest possible access to and use of state waters by the general public.

Section 14. Access to Navigable Waters. Free access to the navigable or public waters of the state, as defined by the legislature, shall not be denied any citizen of the United States or resident of the state, except that the legislature may by general law regulate and limit such access for other beneficial uses or public purposes.

Pursuant to this grant of authority, the Alaska State Legislature, in AS 38.05.365(12), defined "navigable waters" as follows:

"navigable waters" means any water of the state forming a river, stream, lake, pond, slough, creek, bay, sound, estuary, inlet, strait, passage, canal sea or ocean, or any other body of water or waterway within the territorial limits of the state or subject to its jurisdiction, that is navigable in fact for any useful public purpose, including but not limited to water suitable for commercial navigation, floating of logs, landing and takeoff of aircraft, and public boating, trapping, hunting waterfowl and aquatic animals, fishing, or other public recreational purposes.

This definition of navigable waters does not define state ownership of submerged land in Alaska. The definition of navigability for ownership purposes was discussed earlier in this paper. This definition, however, does define what types of waterbodies in Alaska are available for public use under the Alaska statutes.

The Alaska State Legislature has broadly construed the constitutional protections for public use of the waters of the state. In an Act (85 SLA chap. 82, codified as AS 38.05.128) relating to the navigable or public waters of the state, the state legislature found:

(a)The people of the state have a constitutional right to free access to the navigable or public waters of the state.

(b) Subject to the federal navigational servitude, the state has full power and control of all of the navigable or public waters of the state, both meandered and unmeandered, and it holds and controls all navigable or public waters in trust for the use of the people of the state.

(c) Ownership of land bordering navigable or public waters does not grant an exclusive right to the use of the water and any rights of title to the land below the ordinary high water mark are subject to the rights of the people of the state to use and have access to the water for recreational purposes or any other public purposes for which the water is used or capable of being used consistent with the public trust.

(d) This Act may not be construed to affect or abridge valid existing rights or create any right or privilege of the public to cross or enter private land.

AS 38.05.128 provides:

OBSTRUCTIONS TO NAVIGABLE WATER

(a) A person may not obstruct or interfere with the free passage or use by a person of any navigable water unless the obstruction or interference is:

(1) authorized by a federal agency and a state agency; (2) authorized under a federal or state law or permit; (3) exempt under 33 U.S.C. 1344(f) (Clean Water Act); (4) caused by the normal operation of freight barging that is otherwise consistent with law; or (5) authorized by the commissioner after reasonable public notice.

(b) An unauthorized obstruction or interference is a public nuisance and is subject to abatement. The cost of abatement shall be borne by the violator and is in addition to any penalty imposed by the court.

(c) This section may not be construed to affect or abridge valid existing rights.

(d) Free passage or use of any navigable water includes the right to use land below the ordinary high water mark to the extent reasonably necessary to use the navigable water consistent with the public trust.

(e) Free passage or use of any navigable water includes the right to enter adjacent land above the ordinary high water mark as necessary to portage around obstacles or obstructions to travel on the water, provided:

(1) entry is made without injury or damage to the land; (2) entry is made in the least obtrusive manner possible; (3) there is no reasonable alternative available to avoid the use of the adjacent land above the ordinary high water mark; and (4) the navigable water is reentered immediately below the obstacle or obstruction at the nearest point where it is safe to do so.

(f) A violation of (a) of this section is a class B misdemeanor.

Thus, under the Alaska Constitution and this statute, any surface waters capable of use by the public defined in AS 38.05.365(12) are available to the public, irrespective of streambed ownership. Further, such public use is not considered a taking and is not subject to inverse condemnation action. Private ownership is subject to the public rights that are protected by the public trust.

In two Montana Supreme Court cases involving the nature of public rights where the submerged lands are privately owned, the court rules that public portaging, anchoring, and other uses incidental to the use of the water are allowed. The court also found that if travel on the water or streambed is obstructed, the public is

allowed to use the adjacent private land to portage around the barrier in the least intrusive way possible, avoiding damage to the property holder's rights. However, the public does not have the right to enter into or trespass across private property in order to enjoy the recreational use of state-owned waters. The State of Alaska agrees with this ruling and believes a similar ruling would be made by our state courts.

Return to Table of Contents

BOUNDARIES OF NAVIGABLE WATERS

The state is often asked where public ownership of water bodies ends and private ownership begins. There are two types of water body boundaries to address: 1) non-tidal water boundaries and 2) tidal water boundaries. Non-tidal boundaries are boundaries of lakes, rivers, and streams. Tidal boundaries are the boundaries along any body of water which is influenced by the rise and fall of the tides.

1. Non-tidal Water Boundaries The boundary between public and private ownership is the "Ordinary High Water Mark" which is defined in 11 AAC 53.900(23) as being - The mark along the bank or shore up to which the presence and action of the non-tidal water are so common and usual, and so long continued in all ordinary years, as to leave a natural line impressed on the bank or shore and indicated by erosion, shelving, vegetation, or other distinctive physical characteristics. Also see the Alaska State Supreme Court definition in Department of Natural Resources v. Pankrantz 538 P.2d 984, 988-89 (Alaska 1975). The ordinary high water line can usually be observed by the laymen simply by noting the vegetation line or well defined stream banks.

2. Tidal Water Boundaries The boundary between tidal water bodies and private/public owned uplands is the Mean High Water Line. Mean high water line as defined by 11 AAC 53.900(15) is: The tidal datum plane of the average of all the high tides, as would be established by the National Geodetic Survey, at any place subject to tidal influence.

This line is not readily observable because it is a line of known elevation which intersects the land surface. The mean high water line can be a considerable distance below the vegetation line because extreme high water will denude the beach above the line of mean high water. The only way that the location of mean high water line can be accurately determined is by differential leveling from known bench marks or by operating a tide gauge for a sufficient period of time to determine the mean high water elevation. The line of mean high water line can be approximated by time coordinated observations of the daily predictions for high and low waters, predicted by NOAA, as they relate to the published mean high water elevation. This method can be highly unreliable because small errors in the predictions or observations can transform into large errors in the horizontal location; this is especially true in areas where the beach gradient is very flat.

It is important to note that in some areas, such as Prince William Sound, the mean high water line boundary is considerably higher than the current mean high water line because the boundary became fixed at the 1964 pre-quake location. In this instance the boundary between state-owned tidelands and the uplands would be established at an elevation which equals the sum of the mean high water elevation plus the published amount of uplift or, in some cases, submergence.

Return to Table of Contents

CONCLUSION

This paper describes the state's policies and procedures for managing and protecting state submerged lands and public waters. As further legal and practical developments occur in this area, these policies and procedures will be reexamined by the state and, if necessary, appropriate changes will be made.

TITLE 36--PARKS, FORESTS, AND PUBLIC PROPERTY

CHAPTER I--NATIONAL PARK SERVICE, DEPARTMENT OF THE INTERIOR

PART 1_GENERAL PROVISIONS--Table of Contents

Sec. 1.2 Applicability and scope.

(a) The regulations contained in this chapter apply to all persons entering, using, visiting, or otherwise within:

(1) The boundaries of federally owned lands and waters administered by the National Park Service;

(2) The boundaries of lands and waters administered by the National Park Service for public-use purposes pursuant to the terms of a written instrument;

(3) Waters subject to the jurisdiction of the United States located within the boundaries of the National Park System, including navigable waters and areas within their ordinary reach (up to the mean high water line in places subject to the ebb and flow of the tide and up to the ordinary high water mark in other places) and without regard to the ownership of submerged lands, tidelands, or lowlands;

(4) Lands and waters in the environs of the District of Columbia, policed with the approval or concurrence of the head of the agency having jurisdiction or control over such reservations, pursuant to the provisions of the Act of March 17, 1948 (62 Stat. 81);

(5) Other lands and waters over which the United States holds a less-than-fee interest, to the extent necessary to fulfill the purpose of the National Park Service administered interest and compatible with the nonfederal interest.

(b) The regulations contained in parts 1 through 5, part 7, and part 13 of this chapter do not apply on non-federally owned lands and waters or on Indian tribal trust lands located within National Park System boundaries, except as provided in paragraph (a) or in regulations specifically written to be applicable on such lands and waters.

(c) The regulations contained in part 7 and part 13 of this chapter are special regulations prescribed for specific park areas. Those regulations may amend, modify, relax or make more stringent the regulations contained in parts 1 through 5 and part 12 of this chapter.

(d) The regulations contained in parts 2 through 5, part 7, and part 13 of this section shall not be construed to prohibit administrative activities conducted by the National Park Service, or its agents, in accordance with approved general management and resource management plans, or in emergency operations involving threats to life, property, or park resources.

(e) The regulations in this chapter are intended to treat a mobility-impaired person using a manual or motorized wheelchair as a pedestrian, and are not intended to restrict the activities of such a person beyond the degree that the activities of a pedestrian are restricted by the same regulations.

[51 FR 37010, Oct. 17, 1986, as amended at 52 FR 10683, Apr. 2, 1987; 52 FR 35239, Sept. 18, 1987; 61 FR 35136, July 5, 1996]

36 CFR 1.2(a)(3)—NPS Jurisdiction Over Navigable Waters Within Unit Boundaries

Issue: The State of Alaska disputes that the National Park Service (NPS) has authority to apply federal regulations at 36 CFR to state-owned submerged lands and related waters and resources (navigable waters).

NPS position: Jurisdictional regulations in 36 CFR 1.2 specify where and under what circumstances NPS regulations in 36 CFR apply. Among these jurisdictional regulations is a provision adopted in 1996, which makes Title 36 regulations apply within park areas to areas below mean high water line (mean high tide) or ordinary high water mark regardless of ownership of the submerged lands.[1] The authority for this regulation is based on 16 USC 1a-2(h), 3.[2] Other nonfederal lands are not subject to regulation under 36 CFR,[3] except in certain circumstances in the former Mt. McKinley National Park[4] and in some cases where the federal government holds a less than fee interest.[5]

State's position: The State of Alaska believes the NPS is unjustifiably extending 36 CFR to state-owned submerged lands, related waters and resources for two independent reasons: 1) Congress did not intend to delegate this broad authority to the NPS under 16 USC 1a-2(h), but instead intended only to grant authority for boating and related activities subject to US Coast Guard regulations;[6] and 2) even if Congress did intend to delegate this authority, ANILCA section 103(c)[7] supersedes the more general law in 16 USC 1a-2(h) by excluding lands and waters to which the federal government does not hold title and which are not subject to regulations applicable solely to the public lands within the park area.[8]

NPS Message to Park Visitors

- The NPS generally does not dispute state ownership of the submerged lands beneath navigable waters; rather, the NPS has jurisdiction over these areas.
- The NPS is aware of the State's position; however, both the State[9] and the NPS consider this a disagreement between governments and that it is inappropriate to put the public in the middle.
- The NPS cannot choose to ignore the NPS regulations applicable to waters within park boundaries. Park visitors need to understand the NPS must follow its regulations and violating NPS regulations may result in a fine, jail, or both.

---

[1] See 61 FR 35135. "The regulations contained in this chapter apply to all persons entering, using, visiting, or otherwise within . . . waters subject to the jurisdiction of the United States located within the boundaries of the National Park System, including navigable waters and areas within their ordinary reach (up to the mean high water line in places subject to the ebb and flow of the tide and up to the ordinary high water mark in other places) and without regard to the ownership of the submerged lands, tidelands, or lowlands...." 36 CFR 1.2(a)(3).

[2] "In order to facilitate the administration of the National Park System, the Secretary of the Interior is authorized, under such terms and conditions as he may deem advisable, to carry out the following activities: . . . Promulgate and enforce regulations concerning boating and other activities on or relating to waters located within areas of the National Park System, including waters subject to the jurisdiction of the United States: Provided, That any regulations shall be complementary to, and not in derogation of, the authority of the United States Coast Guard to regulate the use of waters subject to the jurisdiction of the United States." 16 USC 1a-2(h). Section 3 of title 16 is the general NPS authority to promulgate regulations for park management.

[3] 36 CFR 1.2(b).

[4] *See, e.g.* 36 CFR 2.2(c), 2.32(b.

[5] *See, e.g.,* 36 CFR 1.2(a)(5).

[6] The State of Alaska's position is that pursuant to the Equal Footing Doctrine, the 1953 Submerged Lands Act (67 Stat. 29, 43 U.S.C. §§ 130-1315), and Section 6(m) of the Alaska Statehood Act (Pub. L. No. 85-508, 72 Stat. 339 (1958)), title to, ownership of, and dominion over the lands beneath navigable waters, both freshwater and marine, within the exterior boundaries of the State, and the natural resources within such lands and waters, were granted to the State, with few exceptions not applicable to NPS's assertion of authority in this instance. See 43 U.S.C. §§ 1301-1315; United States v. California, 436 U.S. 32 (1978); Utah Division of State Lands v. United States, 482 U.S. 193, 195-198 (1987); State of Alaska v. Ahtna, Inc., 891 F.2d 1401, 1403-04, 1406 (9th Cir. 1989). The State of Alaska Navigability Policy at http://www.dnr.state.ak.us/mlw/nav/nav_policy.htm#ANILCA (11/5/07) also provides: "The U.S. Constitution gives Congress certain limited powers to control uses on state owned submerged land. These are known as the Property Clause, Navigational Servitude and the Commerce Clause. The extent of these powers involves complex legal questions. However, even assuming that Congress has the power to regulate state-owned submerged lands in Alaska, the United States Supreme Court has ruled that Congress may choose not to exercise that power, thus leaving regulation totally up to the state. Escanaba Co. v. Chicago, 107 U.S. (17 Otto.) 678 (1883). Whether Congress has done that can only be determined by examining the federal laws passed by Congress dealing with Alaska lands...."

[7] ANILCA § 103(c) provides: "Only those lands within the boundaries of any conservation system unit which are public lands (as such term is defined in this Act) shall be deemed to be included as a portion of such unit. No lands which, before, on, or after the date of enactment of this Act, are conveyed to the State ... shall be subject to the regulations applicable solely to public lands within such units." In addition, under ANILCA "Public lands" means "federal land", which in turn means only such lands, waters, and interests to which the United States holds title. See ANILCA § 102(1)-(3).

[8] "In ANILCA, Congress did not take away the state's power to regulate state-owned submerged lands within federal CSUs in Alaska. Numerous provisions in ANILCA recognize and respect the state's authority over state-owned land...." State of Alaska Navigability Policy at http://www.dnr.state.ak.us/mlw/nav/nav_policy.htm#ANILCA (11/5/07).

[9] "The state, where possible, cooperates with rather than confronts the federal land managers. This cooperation often takes the form of a memorandum of understanding that discusses management issues and how they will be resolved. Differences do occur, however, over issues such as column management and restrictions on mining [and applicability of CUA requirements, hunting and fishing, etc.]" State of Alaska Navigability Policy at http://www.dnr.state.ak.us/mlw/nav/nav_policy.htm#ANILCA (11/5/07).

Associate Director, Operations
National Park Service
Department of the Interior
18th and C Streets, N.W.
Washington, D.C. 20240

Re: State of Alaska's Comments on the Proposed Rule at 60 Federal Register 62233 (December 5, 1995)

Dear Ms. Finnerty:

The State of Alaska has reviewed the proposed rule published December 5, 1995, at 60 Fed. Reg. 62233. These comments represent the consolidated views of various state agencies and replace the overview of comments previously provided to Solicitor Leshy.

The proposed rule would revise portions of the National Park Service's (NPS) general regulations, as well as certain provisions governing National Park System units in Alaska. Primarily at issue is whether NPS should extend regulatory jurisdiction over all navigable waters within park boundaries, regardless of ownership of the submerged lands. The proposed rule is not a simple "clarification" of prior law as the NPS has attempted to portray. The regulations would substantively and inappropriately extend NPS jurisdiction.

The State opposes the proposed rule and urges that it be withdrawn for the following reasons:

- The Federal Register notice fails to adequately address potential effects of this rulemaking in light of the draft NPS subsistence policy and management in Alaska and the State of Alaska v. Babbitt case.

- The federal government has no authority to regulate waters within the boundaries of conservation system units where Alaska owns the submerged lands.

03-C32LH

printed on recycled paper by C.D.

- The proposed rule is premature given that the Alaska National Interest Lands Conservation Act's definition of "public lands" is still in question.

- The NPS has failed to show other authority, e.g. the Commerce Clause, for its proposed action.

- Proposed definitional changes are inconsistent with existing law.

For these reasons, the NPS does not have the authority to extend its regulatory jurisdiction to all navigable waters within park boundaries, regardless of ownership of the submerged lands. These and other issues are documented in greater detail in the attachment, which should be considered part of the State's formal comments.

If NPS has concerns about particular activities occurring on navigable waters within park boundaries in Alaska, the State encourages NPS to discuss these concerns with the appropriate state representatives. We believe that many issues of particular concern to NPS can be resolved through ongoing cooperative efforts.

Thank you for your consideration of this letter and the attachment.

Very truly yours,

Bruce Botelho
Attorney General

State of Alaska's Comments on the Proposed Rule at 60 Fed. Reg. 62233, December 5, 1995:

A. The Federal Register notice fails to adequately address potential effects of this rulemaking in light of the draft NPS subsistence policy and management in Alaska and the State of Alaska v. Babbitt case.

At the present time, an extensive statewide review of subsistence management and policy is underway within NPS. In fact, NPS has requested public review and comment until May 1, 1996 on its "Draft Review of Subsistence Law and National Park Service Regulations." In light of this ongoing internal review, the State believes the present rulemaking is premature and recommends that this rulemaking be postponed in order to consider the outcome of the subsistence program review. Remaining comments are provided without the benefit of this information.

B. The proposed rule is more than a "clarification" of prior law; it substantively extends NPS jurisdiction.

In the Federal Register notice, NPS states that the proposed rulemaking is designed to "clarify" that existing NPS regulations apply on navigable waters within National Park System units regardless of ownership of the submerged lands, and that the proposed rule does not create new or additional regulatory controls.

NPS claims this "clarification" of previous regulatory intent was made necessary by a seal hunting case in Glacier Bay National Park. United States v. Greg Brown. NPS states the seal hunting case made it aware that 36 C.F.R. § 1.2(b) "inadvertently incorporated language that seems ambiguous and could preclude park regulation of 'non-federally owned . . . waters.'" However, the proposed rule does not "clarify" existing regulations; it substantively extends NPS jurisdiction to areas not previously regulated.

Despite NPS' representations, 36 C.F.R. § 1.2(b) is not ambiguous. It clearly states that NPS regulations do not apply on non-federally owned waters.[1] The only exception

---

1 Section 1.2(b) states:

> Except for regulations containing provisions that are specifically applicable, regardless of land ownership, on lands and waters within a park area that are under the legislative jurisdiction of the United States, the regulations contained in parts 1 through 5 and part 7 of this chapter do not apply on non-federally owned

to this rule is for non-federally owned lands and waters under the legislative jurisdiction of the United States. For areas under the legislative jurisdiction of the United States, NPS regulations apply only when the regulations are made specifically applicable regardless of land ownership. 36 C.F.R. § 1.2(b). There is no dispute that state owned lands and waters within Glacier Bay National Park, and most every other park system unit in Alaska, are not within the legislative jurisdiction of the United States.

Other NPS regulations reaffirm the unambiguous language and intention of 36 C.F.R. § 1.2(b). For example, the regulations applying to park units in Alaska state: "The regulations contained in this part 13 are applicable only on federally owned lands within the boundaries of any park area. . . ." 36 C.F.R. § 13.2(e).[2] See also 36 C.F.R. § 13.1(p) (defining "public lands" to mean lands in Alaska "which are federally owned lands"); 36 C.F.R. § 13.65(a) (humpback whale protection regulations, expressly stating they are an exception to §§ 1.2(b) and 13.2(e) and therefore apply on all navigable waters within Glacier Bay National Park).

Indeed, in the Glacier Bay seal hunting case, the United States openly acknowledged the express limitation in 36 C.F.R. § 1.2(b) on its regulatory jurisdiction. See United States v. Brown, No. 94-30019, United States' brief to the Ninth Circuit Court of Appeals at 5-6, 9 (submitted May 12, 1994) (conceding that, for NPS general regulations to be enforceable against Mr. Brown, 36 C.F.R. § 1.2(b) requires that the United States prove either legislative jurisdiction over Glacier Bay National Park or ownership of the submerged lands in question). Thus, in dismissing the Brown prosecution, the United States recognized the unambiguous language of its regulations. The United States conceded it does not have legislative jurisdiction over Glacier Bay National Park, see id. at 5, and decided not to attempt to prove ownership of the submerged lands in that case.

Contrary to NPS' assertion in the Federal Register, both the language and intent of its 1983 and 1987 regulatory revisions were that NPS regulations did not apply to non-federally owned lands and waters, unless those lands and waters were under the legislative jurisdiction of the United States. See 48 Fed. Reg. 30252 at 30261, 30275 (June 30, 1983) (regulations do not apply to state owned inholdings within national park boundaries unless those areas are under the legislative jurisdiction of the United States).

The regulatory revision in 1987 simply "clarified" that state owned lands would

---

lands and waters . . . within the boundaries of a park area.

2 For the reasons discussed in these comments, the State opposes the proposed deletion of this statement in 36 C.F.R. § 13.2(e).

be treated like privately owned lands, and NPS regulations would not apply as a matter of course to either private or state lands and waters within park boundaries. See 52 Fed. Reg. 12037 (April 14, 1987) (proposing to clarify that NPS regulations only would apply to state owned lands and waters within park boundaries if those areas were under the legislative jurisdiction of the United States); 52 Fed. Reg. 35238, 35239 (Sept. 18, 1987) (certain NPS regulations apply to non-federally owned lands and waters within park boundaries only if those areas are under the legislative jurisdiction of the United States).

For these reasons, it is at best misleading for NPS to characterize the proposed rule as a "clarification" and not a substantive extension of regulatory jurisdiction. The proposed action substantially extends NPS jurisdiction to areas not previously covered by its regulations. The exclusion of state owned lands and waters from prior and existing regulations was not "inadvertent" but by express design. By not acknowledging these facts in its December 5, 1995 Federal Register notice, NPS significantly understates the effect of its proposed rule.

C. The federal government has no authority to regulate waters within the boundaries of conservation system units where Alaska owns the submerged lands.

On the substance of NPS' proposed action, the State disagrees that NPS has authority to extend its regulatory jurisdiction to all waters within park system boundaries, including navigable waters, and without regard to ownership of submerged lands.

The State has consistently objected to previous attempts by NPS to grant itself such extraterritorial authority in proposed rulemaking, e.g., Alaska's comments dated Nov. 1, 1991 (regarding proposed rule published Aug. 5, 1991). We reiterate our objections to NPS' efforts to extend regulatory jurisdiction to lands and waters lawfully owned and managed by the State.[3]

The proposed extension of NPS authority appears to be particularly dramatic in Alaska. Numerous navigable waterways run through the exterior boundaries of nearly all of the thirteen multi-million acre park units in the state. These waterways are often used for transportation and for many other activities. Under the proposed rule, NPS would apparently

---

3 Under the constitutional doctrine of equal footing and confirmed by the Submerged Lands Act of May 22, 1953, the Alaska Statehood Act of July 7, 1958, and the Alaska Constitution, the State of Alaska owns and therefore is responsible for the management of all water columns, shorelands, tidelands, and submerged lands, including the resources located within or on such lands and waters.

intend to regulate these activities. For example, under the proposed rule, NPS might require an NPS Commercial Use Permit for the commercial barging and ferry service interests currently operating on the navigable Yukon River as it passes through the Yukon-Charley Rivers Preserve, despite the fact that the State presently manages water uses, access and activities on those waters. Such an assertion of general jurisdiction is not permitted by the Alaska National Interest Lands Conservation Act (ANILCA) or other applicable law.

One of Congress' primary purposes in enacting ANILCA was to preserve vast quantities of lands and waters in Alaska. 16 U.S.C. § 3101. Congress implemented this purpose in part by creating "conservation system units" (CSUs). By definition, CSUs include any unit in Alaska of the National Park System. 16 U.S.C. § 3102(4).

However, not all lands within Glacier Bay National Park or other national park units in Alaska are included as part of the CSU. ANILCA section 103(c) states in relevant part:

> Only those lands within the boundaries of any conservation system unit which are public lands (as such term is defined in this Act) shall be deemed to be included as a portion of such unit.
>
> 16 U.S.C. § 3103(c).[4]

Similarly, in coastal areas, ANILCA section 103(a) excludes lands seaward of the mean high tide line from the boundaries of areas added by ANILCA to the National Park System. 16 U.S.C. § 3103(a).

ANILCA Section 103(c) further provides that those lands not included within the conservation system unit are not subject to federal regulation:

> No lands which, before, on, or after the date of enactment of this Act, are conveyed to the State, to any Native Corporation, or to any private party shall be subject to the regulations applicable solely to public lands within such units.
>
> 16 U.S.C. § 3103(c).

---

4 The legislative history of ANILCA § 103(c) makes clear Congress' intent to exclude lands which are not owned by the U.S. from conservation system unit regulations. The history specifies that "only public lands (and not State or private lands) are to be subject to the conservation system unit regulations applying to public lands." 126 Cong. Rec. S15129-32 (daily ed. Dec. 1, 1980) (statement of Sen. Stevens).

Legislative history establishes that Congress took this action fully aware of Kleppe v. New Mexico, 426 U.S. 529 (1976) and its progeny, which might arguably support extension of federal regulatory control over non-federally owned lands.[5] Congress directly and knowingly limited federal regulatory authority to "public lands" within conservation system units and specifically exempted inholdings from regulation. 16 U.S.C. § 3103(c). NPS recognized this fact in promulgating 36 C.F.R. § 13.2(e). See 46 Fed. Reg. 31836, 31843 (June 17, 1981) (ANILCA §§ 103(c) and 906(o) restrict the applicability of NPS regulations to federally owned lands within park boundaries; therefore, 36 C.F.R. § 13.2(e) applies only to federally owned lands).

In the case of parks in Alaska, any submerged lands underlying navigable waters within park boundaries are "inholdings" belonging to the State of Alaska. See Submerged Lands Act of 1953, 43 U.S.C. § 1311(a); Utah Div. of State Lands v. United States, 482 U.S. 193 (1987). Federal regulation does not apply to these waters.[6] The NPS therefore does not have authority to regulate navigable waters within park boundaries regardless of ownership.

If identical regulations addressing both state and federally owned lands or waters are particularly desirable in certain instances or for certain issues, the State encourages NPS to discuss these with the appropriate state regulatory entity. Through a cooperative effort, the goal of consistent regulation of especially significant issues can be lawfully achieved. Without State consent and cooperation, however, NPS may not extend its regulatory jurisdiction as proposed.

D. The proposed rule is premature given that the definition of "public lands," over which ANILCA permits some federal regulation, is still in question.

As noted earlier, the Federal Register notice does not address the proposed rule's potential effect on the implementation of ANILCA's Title VIII subsistence priority, and the State requests that NPS address the rule's implications for subsistence management and

---

5 The State does not concede this authority. While there is case law in the Eighth Circuit that appears to support this contention, the question of extra-territorial regulation is not yet resolved. In any event, NPS does not purport to rely on Congress' Property Clause power to justify this proposed action.

6 The fact that ANILCA (and existing NPS regulations) specifically exclude state lands and waters from NPS general jurisdiction is also reflected in the General Management Plans adopted for park units in Alaska.

policy.[7]

ANILCA specifically limits federal regulatory authority in conservation system units to "public lands." Accordingly, federal jurisdiction depends on whether the waters in question constitute "public lands" as defined in ANILCA.

Although the State asserts the definition of "public lands" does not include any navigable waters where the state owns the submerged lands, this question is currently unresolved. The Alaska Supreme Court's decision in Totemoff v. State, as well as Judge Hall's dissent from the Ninth Circuit opinion in State of Alaska v. Babbitt (also commonly known as the "Katie John" case), conclude that navigable waters are not "public lands" under ANILCA. See Totemoff v. State, 905 P.2d 954 (Alaska 1995); State of Alaska v. Babbitt, ___ F.3d ___, 1995 WL 749795 (9th Cir., Dec. 19, 1995). This issue is presently before the U.S. Supreme Court on a petition for certiorari. Accordingly, the NPS should withdraw these regulations until they can be reassessed in light of the Babbitt litigation once it has been finalized.

E. The NPS has failed to show other authority for its proposed action.

NPS asserts that Congress' Commerce Clause power provides authority for NPS' regulation of non-federally owned lands and waters within park boundaries. However, NPS fails to explain where it derives its Commerce Clause power, and how its power is co-extensive with Congress' Commerce Clause powers.

Moreover, even assuming NPS has some authority to regulate pursuant to the Commerce Clause, the United States Supreme Court has confirmed that the Commerce Clause power is not unlimited. See United States v. Lopez, ___ U.S. ___, 115 S. Ct. 1624 (1995). To rely on this power, NPS must satisfy traditional Commerce Clause analysis, including a showing as to how the regulated activities "substantially affect" interstate commerce. Id. at 1629-30.

NPS' Federal Register notice makes no effort to undertake a Commerce Clause analysis, and the state does not agree that the Commerce Clause permits the proposed action. Cf. State of Alaska v. Babbitt, ___ F.3d ___, 1995 WL 749795 (9th Cir., Dec. 19, 1995) (majority opinion concludes that Congress did not intend to exercise its Commerce Clause authority to regulate subsistence fishing in Alaska's navigable waters; dissenting opinion

---

7 Along this line, we note that the proposed revision to 36 C.F.R. § 13.2(c) deletes Sitka National Historical Park from the list of park units where subsistence activities are prohibited. This change is not addressed by NPS in its notice.

concludes that subsistence fishing in navigable waters does not "substantially affect" interstate commerce).[8]

Nor does NPS otherwise justify its authority to extend general regulatory jurisdiction over non-federally owned waters within park boundaries. NPS cites to 16 U.S.C. § 1a-2(h); however, the authority set forth therein is limited. That section permits NPS to promulgate and enforce regulations concerning boating and related activities; it does not provide general jurisdiction over non-federally owned waters within park boundaries. Likewise, the fact that NPS may enforce Coast Guard regulations on navigable waters within park boundaries does not provide authority over navigable waters for other purposes.

As examples of its asserted authority, NPS cites park-specific regulations that have applied on navigable waters within certain parks. However, these limited instances do not justify this proposed rule. In the case of Glacier Bay National Park, the State cooperated with the National Marine Fisheries Service and NPS in the adoption of regulations deemed necessary to protect whales. These special whale regulations were identified as an exception to NPS' general regulatory authority. See 13 C.F.R. §13.65(a), (b)(2). This example does not imply that NPS has jurisdiction to enact other regulations applying to waters owned by the State.

F. Proposed definitional changes are inconsistent with existing law.

Though the State's objections to NPS' proposed definitional changes should be clear from the preceding comments, we address the following comments specifically to NPS' proposed definitional revisions.

NPS' proposed revision of "boundary" at 36 C.F.R. § 1.4 would broadly include "the limits of lands or waters administered by the National Park Service" as "published or posted by the National Park Service." This definition grants to NPS the ability to define "boundaries" essentially as it chooses, on a case-by-case basis.

This definition is not permissible under ANILCA. ANILCA Section 103 directs that the conservation system units created by ANILCA shall have specific and defined boundaries. 16 U.S.C. § 3103 (a), (b), (c). Pursuant to the mandate in ANILCA § 103(b),

---

8 In any case, even if the proposed action could be justified under a Commerce Clause analysis, the Submerged Lands Act expressly limits that authority as it applies to this situation. See 43 U.S.C. § 1311(a) (confirming state title and ownership of lands beneath the navigable waters within the states, as well as the natural resources within those lands and waters, and providing states rights to manage those lands and natural resources).

NPS published in 1992 a legal description of the external boundaries of national park units established or expanded by ANILCA. 57 Fed. Reg. 45166 (Sept. 30, 1992).

As a result of these authorities, the proposed definition of "boundary" would conflict with the determined boundaries of park units and with ANILCA's defined areas of NPS authority. NPS is not free to ignore these existing legal boundaries, nor may it grant itself authority to amend park boundaries simply by posting a notice of intent. Accordingly, NPS may not broadly revise "boundary" as proposed.[9]

The proposed revision to 36 C.F.R. § 13.2(e), including the revised definition of "federally owned lands," likewise is not permitted by ANILCA. Under ANILCA, "federally owned lands" include lands, title to which is in the Untied States. 16 U.S.C. § 3102. Thus, State and privately owned lands cannot be defined as "federally owned lands," as they apparently would be under the proposed rule. ANILCA prohibits this definitional change, as well as NPS' attempt to extend its jurisdiction to state owned lands and waters.

G. No notice of the proposed rule was provided to the State despite ongoing meetings with NPS regarding Glacier Bay National Park.

To promote cooperation between state and federal resource managers, Alaska agency representatives participate in quarterly meetings with the NPS field director to discuss issues involving park units in Alaska. In addition, state representatives and commercial fishing interests have embarked upon good faith discussions with NPS to resolve potential conflicts arising from activities on state waters adjacent to Glacier Bay. In fact, on December 5, 1995, the day this proposed rule was published in the Federal Register, the Superintendent of Glacier Bay National Park met with state representatives, fishermen, special interest groups and others to seek cooperative resolution of problems related to activities on waters adjacent to the park.

The State is troubled that, despite these ongoing meetings, NPS provided no notice of the proposed extension of NPS regulations over all navigable waters within park boundaries, regardless of ownership, especially since the seal hunting case in Glacier Bay inspired the proposed rulemaking.

To avoid compromising the effectiveness of these ongoing cooperative efforts,

---

9 Similarly, NPS may not use such a broadened definition of "boundary" to assert general jurisdiction over state-owned lands and waters administered by NPS pursuant to a cooperative agreement. NPS and the State have entered into several cooperative agreements which grant NPS some limited administrative authority over state lands or waters. We do not contemplate that these agreements can be construed to permit broader federal authority over these areas.

the State urges the NPS field office to alert us of pending rulemakings in the future and to promote discussion of the issues involved.

Conclusion

The State disagrees that NPS has authority to extend its regulatory jurisdiction to all navigable waters within park boundaries regardless of ownership of the submerged lands. Consistent with the above discussion, the state requests that NPS withdraw the proposed rule.

HOUSE CS FOR SENATE JOINT RESOLUTION NO. 30(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SECOND LEGISLATURE - FIRST SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered: 5/3/01
Referred: Labor and Commerce, Judiciary

Sponsor(s): SENATE TRANSPORTATION COMMITTEE

A RESOLUTION

Urging the United States Forest Service to acknowledge all of the rights of the state to rights-of-way to state highways that pass through federal land.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the State of Alaska owns, maintains, and operates hundreds of miles of state roads and highways that pass through federal land; and

WHEREAS some federal agencies, through aggressive, unwarranted, and unlawful actions, have attempted to erode the state's ownership and authority over the use of these highways and appurtenant public facilities located within the rights-of-way; and

WHEREAS the most recent and egregious instance of this aggressive federal action occurred in Yakutat, where the United States Forest Service has attempted to require a permit for commercial hauling on that portion of Forest Highway 10 in the north Tongass National Forest, over which the state has for decades had exclusive management and maintenance authority; and

WHEREAS the Forest Service has attempted to control access to one of the state's navigable waterways by limiting use of a boat launch located entirely within the right-of-way of Forest Highway 10; and

4322

2001 Previous Legislation

WHEREAS the aggressive assertion of authority by the Forest Service in Yakutat bodes ill for state highways and appurtenant facilities located within the state's rights-of-way throughout the Tongass and Chugach National Forests; and

WHEREAS a precedent set by the Forest Service at Yakutat could provide an open door for it and other aggressive federal agencies that control land surrounding state highways and facilities throughout Alaska;

BE IT RESOLVED that the Alaska State Legislature urges the United States Forest Service to recognize that the State of Alaska has sole authority to control public access and use of rights-of-way for all state highways passing through Forest Service lands.

COPIES of this resolution shall be sent to the Honorable Ann Veneman, United States Secretary of Agriculture; the Honorable Gale Norton, United States Secretary of the Interior; and to the Honorable Ted Stevens and the Honorable Frank Murkowski, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

Subject: FW: SJR-13 Written Testimony for Mar 30 RES Meeting

Hello Senate Resource Committee aides!

Can you ensure that Mr. Floyd's testimony is placed in the committee folders for SJR13? As you can see, Mr. Floyd emailed his testimony to all committee members' individual email addresses, but he would like to know that the testimony also resides in the committee folders. The SRES will hear SJR13 today at 330pm. Thank you kindly and I hope you both have a good week.

Subject: SJR-13 Written Testimony for Mar 30 RES Meeting

Dear Sir/Ma'am

SJR-13 urges ratification of the international Law of the Sea Treaty (LOST). Of primary concern to many of the critics of this treaty is US sovereignty. I strongly urge the Alaskan Senate Resources Committee to investigate the arguments against LOST before recommending ratification of a treaty that would hold the same legal weight as the US Constitution and to investigate why attempts to ratify this treaty failed in 2004, and again in 2007.

Some of the more alarming revelations about this United Nations treaty came from the US Senate Committee on Foreign Relations itself in 2007. Entire news articles were written back then based on this information. I've included a transcript of Senator Vitter questioning United States Deputy Secretary of State John Negroponte and others for your consideration.

Thank you for the opportunity to provide input to those that represent the people of the great state of Alaska.

Transcript of Senator Vitter questions on Sep 27, 2007 in US Senate Committee on Foreign Relations

Participants:
--Deputy Secretary of Defense Gordon England

--United States Deputy Secretary of State John Negroponte

--John Bellinger III, Legal Adviser to the U.S. Secretary of State

--U.S. Sen. David Vitter

--Senator Webb, sitting for Joseph R. Biden, Jr-Chairman, Senate Foreign Relations Committee

[transcript follows]
Senator Webb. Senator Vitter.
Senator Vitter. Thank you all for being here and, more importantly, thank you all for your service.
My concerns about the treaty concern our military and our sovereignty. We have discussed, and you made a very important point earlier, that military activities are not subject to review by arbitration panels or the International tribunal of Law of the Sea under the treaty. However, I still have a significant outstanding concern that has not been addressed: Who decides what is, and what is not, a military activity?
Mr. Negroponte. We will decide that.
Senator Vitter. Where does----
Mr. Negroponte. We consider that within our sovereign prerogative.
Senator Vitter. Where does the treaty say that we determine what constitutes a military activity and that an arbitral body does not have the authority to rule on this as a term of the treaty?
Mr. England. My understanding, and I'll ask, I guess, my lower behind me, that that's in the treaty, that we make that determination and that's not subject to review by anyone else.
Senator Vitter. It's not in the treaty. I'd like to point you to Article 298(1)(B), where it simply says, ``Disputes concerning military activities are not subject to dispute resolution.'' What the treaty fails to address is who has the authority to determine what is and what is not in fact a military activity.
Mr. England. No; you're right. In my confusion, I believe as in the resolution, the basic consent that in 2003--is that correct--it went, came before the Senate, so that would be a provision of approval. So, we would reserve that right as part of our approval of this Convention. Have I said that right?
Senator Vitter. But that provision, which is in the Resolution of Ratification, is our language. This language is not included in the treaty. And the treaty says, specifically in article 309, that the treaty is the treaty; no reservations or exceptions may be made to the treaty's provisions. The fact that we are concerned enough about the issue of military activities that we've included it in the Resolution of Ratification only heightens my concern.
Mr. Bellinger. Could I take a crack at that?

Senator Vitter. Including an exception insisting that only we can define what constitutes military activities for our own military in the resolution simply serves to highlight that it's not in the treaty.

Mr. Bellinger. With respect to almost all treaties, there are vague terms in the treaties. And if they're not defined, then a country will take understandings as to how it understands certain terms to be accepted. And this is a regular thing that this committee does. So in this case, with military activities not defined in the treaty, it is up to the countries to decide what that is going to mean.

And in this case, we are sufficiently concerned that we want to make clear, that we decide, that we would put that in as an understanding, as part of the Senate's understanding. And this is a very common practice, almost all treaties that the Senate approves have got some understandings as to what the shared understanding between the Executive and the Senate is, with respect to particular terms.

Senator Vitter. Right. My point is, just because this may be our understanding, it does not necessarily follow that it is the understanding of other signatories to the treaty. Is that correct?

Mr. England. Can I ask the Admiral to make a comment, who's behind me, who is our legal counsel. Because I believe there are declarations that are allowed and this is one of the declarations. Could I have my legal just comment?

Senator Vitter. Sure.

Mr. England. Because this is a technical but hugely important point.

Rear Admiral MacDonald. Senator, you're correct in saying that the treaty doesn't allow reservations to be taken. It specifically says you can not take a reservation to the treaty. But it does specifically provide that you can take, you can make a declaration. And that's what we're going to take if the Senate approves the treaty and the Resolution of Advice and Consent, we would make this a declaration, that the United States alone determines what is or is not a military activity. Other nations have taken the military activities exemption. When this was debated back in 2004, this was an issue in 2004, and after the debate, the PRC, the Chinese came in, and took the military activities exemption.

Senator Vitter. Let me rephrase my concern another way. Isn't it true that there would be nothing to prevent another country, with a different understanding about U.S. military activities, to bring a dispute regarding what is, or is not, a U.S. military activity to this mandatory arbitral process, to which we would be bound?

Mr. Bellinger. Senator, they can always try, but the treaty specifically states that parties may opt out of any disputes having to do with military activity. All other major countries have done that and we would do that.

Senator Vitter. The other country does not agree that the matter concerns a military activity. The disagreement would be about defining what is, and what is not, a military activity as a term in the treaty about which two members disagree. This type of dispute falls under the treaty.

Mr. Bellinger. It is up to countries to decide what are their own military activities.

Senator Vitter. That was my first question, Where does it say that in the treaty?

Mr. Bellinger. Unless an interpretation is contrary to the object and purpose of a treaty, it is going to be up to a country to decide what those terms mean. And this is, in fact, an issue that we've thought about. It's one reason why the administration recommended in the Resolution of Advice and Consent that we be very clear on this point. But I would defer to my military contacts when they say its a risk.

Senator Vitter. I have limited time, so I want to go on to some other things.

I would just say that the fact that this is actually included in the Resolution for Ratification heightens my concern. It underscores the fact that the treaty doesn't include this protection. We attempt to tack it on in the resolution.

But let me go on to some other points and related issues: Are intelligence activities included as military activities?

Mr. England. The question: Are they affected?

Senator Vitter. Are intelligence activities considered to be excluded from the treaty's jurisdiction as a military activity?

Mr. England. To the best of my knowledge they are. Again, Bruce, do you have a--can you help me specifically to the language. You need to answer.

Mr. Bellinger. Senator, why don't I take a crack at that also? It would be up to us to determine that there's nothing in the treaty that limits our intelligence collection activities.

Senator Vitter. No.

Mr. Bellinger. It would be up to us, if we considered an intelligence activity to be a military activity. And you've heard the Senate Intelligence Committee assure us that they do not think it would interfere with our intelligence activities.

Senator Vitter. Well again, this has heightened my concern, because we say it would be up to us, yet no other treaty signatory has agreed to this. And to help demonstrate about how parties can disagree on this point, around Capitol Hill, for instance, in terms of committee jurisdiction, we consider intelligence a distinct category separate from the military issues. So, that's really heightening my concern.

If I could have 1 or 2 more minutes, Mr. Chairman.

Senator Webb. Certainly.

Senator Vitter. Thank you very much.

Another concern is regulation of domestic activity. It seems to me the treaty clearly states jurisdiction over land-based pollution sources. Why do we want to open that Pandora's Box?

Mr. Bellinger. Senator, **I think it clearly does not allow regulation over land-based pollution sources. That would stop at the water's edge.** As far as, at least dispute resolution involving them, there can be limitations on the pollution that could emanate, but as far as the ability of any other country to complain and bring us to dispute resolution over pollution that would come from land, **that's not permitted under the treaty.**

Senator Vitter. **Well Article 213 says, ``States shall enforce their law on and shall--shall,'' mandatory, ``adopt laws and regulations and take other measures necessary to implement applicable international rules and standards established through competent international organizations or diplomatic conference to prevent, reduce, and control pollution.'' Well, it sounds to me like the Kyoto Protocol is**

an international standard and we shall pass laws to enforce that.

Mr. Bellinger. Well, this is not a backdoor way to subject us to the Kyoto Protocol. There is no way that the standard, that those standards could be standards that someone could subject us to in dispute resolutions.

Senator Vitter. Why? The treaty states we shall pass laws to enforce international environmental standards. So why couldn't a state clearly take us before the Tribunal or Arbitration Panel to say, ``You're not doing that. You need to heighten environmental laws A, B, C, D, and E.''

Mr. Negroponte. There are some environmental issues that are the subject of international agreements, such as ocean dumping, for example. But the--**when you talk about land-based pollution, our view is that that's just not covered by the treaty, Senator. I think that's the point, that we believe that there is no jurisdiction over marine pollution disputes involving land-based sources.**

Senator Vitter. **If it is not covered by the treaty, why is there a section entitled, ``Pollution From Land-Based Sources''?**

Mr. Bellinger. It's just the dispute resolution. The treaty has got a number of general hortatory provisions, but the dispute resolution mechanisms are extremely limited for this very reason. We wanted dispute resolution to have things we could use in our favor. If our vessels were seized, people didn't let us go through their territorial seas.

Senator Vitter. **Let me follow up on your answer, because section 6, specifically and directly deals with enforcement of the treaty's land-based pollution provisions. You said it's not part of the dispute resolution process, but section 6, is titled ``Enforcement.'' The article is titled, ``Enforcement With Respect to Pollution From Land-Based Sources.'' Why is that article there if there is no enforcement, with regard to pollution from land-based sources?**

Mr. Bellinger. I think this gets sufficiently technical. We have worked our way through the treaty, we are confident that pollution from land-based sources would not be subject to the jurisdiction of the tribunals or arbitral panels, but we're happy to write it down for you on paper and get it to you, Senator.

Senator Vitter. **Well, I would point you to section 6, article 213, page 176, which is about enforcement, with respect to pollution from land-based sources. It seems to me, the very title of that article at least sets up a prima facie case that your statement isn't correct.**

Mr. Bellinger. We will have a look at it, Senator. Although again, the bigger picture of the enormous national security benefits of the treaty, and certainly our military will tell you that they would not enter into anything where they thought there would be legal risks to the military. But we will--we will have a close look at the provision on land-based pollution.

Senator Webb. Would the Senator----

Senator Vitter. Thank you.

Senator Webb [continuing]. Be amenable to receiving a response in writing, within a reasonable--like a really reasonable period of time addressing this point?

Senator Vitter. Sure.

[The submitted written response by Mr. Bellinger to the

requested information follows:]

The Convention addresses various forms of marine pollution, including pollution from land-based sources (for example, article 207).

However, alleged marine pollution by the United States from land-based sources is not subject to dispute settlement under the Convention, whether by the Tribunal, arbitration, or otherwise. Because of the sensitivities of coastal states concerning their land-based (and certain other) activities, the Convention sets forth limitations on the obligations related to marine pollution that can be subject to dispute settlement.

Specifically, article 297(1)(c) provides that only certain coastal state obligations related to marine pollution are subject to dispute settlement. Among other things, there needs to be a ``specified'' international rule or standard ``applicable'' to the coastal state.

In the case of land-based sources of marine pollution, the Convention does not obligate the coastal state to follow an international rule or standard, much less a specified one. On the contrary, recognizing the sensitivity surrounding land-based activities, under article 207, coastal states are merely to ``take into account'' internationally agreed rules, standards, etc.

Thus, there are no specified rules regarding land-based sources that are applicable to the United States that would be subject to dispute settlement. (It should be noted that, even if there were specified rules/standards applicable to the United States, article 207 would not require the coastal state to follow such standards, just to take them into account.)

The ``enforcement'' provisions in part XII (such as article 213) do not address party-to-party dispute settlement. Rather, they either allocate enforcement responsibilities as among flag states, port states, and coastal states or they address enforcement by parties vis-a-vis private actors, such as their flag vessels or foreign flag vessels.

In the case of land-based sources, article 213 provides for parties to enforce their respective land-based sources laws and to implement ``applicable'' international rules. It does not address party-to-party dispute settlement, which is covered by article 297 and other provisions in the dispute settlement chapter.

Senator Webb. All right. Thank you. And on one follow-on question before we close the hearing. I want to make sure that, for the record, your position on the other point that Senator Vitter mentioned, is clearly stated. Let me just ask you if my understanding is correct. I believe what you were saying, if, looking at article 298. It basically exempts disputes concerning military activities, but from my reading of it, is silent as to what the enforcement mechanism would be. And as someone who used to draft legislation here, I'm not sure this directly applies, but I want to, this is my understanding, what your position is, that anytime legislation is silent, existing law prevails. And anytime this sort of treaty provision is silent, it goes back to the law of the individual country involved. Is that essentially what you're saying?

Mr. Bellinger. Yes, sir. We specifically negotiated the treaty and at--we had the same interests as other major powers, like the Russians or Chinese, who certainly did not want to have their military activities subject to dispute resolution. So we had a commonality of interests here, to have a provision that allowed us in the treaty, to opt out of any dispute resolution involving our military activities. That's a right

you have under the treaty and we would do that. Then, the Senator has raised a fair question, as to, who decides what's a military activity. It's not defined in the treaty, so under general treaty practice, if it's not contrary to language in the treaty, it would be up to us to decide.

Senator Webb. Right.

Mr. Bellinger. And I'm sure that other major countries would take exactly the same position.

Senator Webb. That was my understanding of what you were saying. I wanted to make sure we had that clear for the record.

Senator Vitter. Mr. Chairman, if I can follow up----

Senator Webb. Yes.

Senator Vitter [continuing]. On that very briefly. First, I am concerned that, when the treaty is silent about defining what constitutes military activities, and the treaty sets up, specifically, a mandatory dispute resolution mechanism to settle differences regarding interpretation of the treaty's terms, it would be a very reasonable position to assert that the dispute resolution mechanism can be utilized to determine what constitutes a military, and a nonmilitary activity.

Second, I'm particularly concerned that we think, and hope, intelligence is considered military, but that this certainly isn't stated in the treaty text. And around here, just again to use Capitol Hill as an example, with committee jurisdictions et cetera, intelligence is treated as a very distinct smokestack from military activities.

Senator Webb. Well, the Senator has made his point. And again, we have the letters from the chairman of the Intelligence Committee and the ranking member, but his point is appreciated and we will examine it.

This series of hearings will continue next week with other witnesses. Gentlemen, we thank you very much for your time today.

And the hearing is adjourned.

[Whereupon, at 4:24 p.m., the hearing was adjourned.]

SECTION 6. ENFORCEMENT

Article 213

Enforcement with respect to pollution from land-based sources

States shall enforce their laws and regulations adopted in accordance with article 207 and shall adopt laws and regulations and take other measures necessary to implement applicable international rules and standards established through competent international organizations or diplomatic conference to prevent, reduce and control pollution of the marine environment from land-based sources.

Article 298

Optional exceptions to applicability of section 2

1. When signing, ratifying or acceding to this Convention or at any time thereafter, a State may, without prejudice to the obligations arising under section 1, declare in writing that it does not accept any one or more of the procedures provided for in section 2 with respect to one or more of the following categories of disputes:

//snip//

ALASKA STATE LEGISLATURE

Sponsor Statement: SJR 13

SJR 13 urges the United States Senate to ratify the United Nations Convention on the Law of the Seas. Ratification of this treaty will protect American interests related to use and development of the seas off the coast of Alaska, with significant potential benefits to the state of Alaska.

The Law of the Seas was established in 1982 to update outdated laws governing the world's oceans. The Law of the Seas Treaty provides a legal framework for ocean activities including economic development, claim disputes, scientific research, environmental protection, and defense.

Estimates suggest that the Arctic contains 25% of the world's undiscovered oil and gas resources. With high energy prices and a dwindling oil supply, the Arctic offers great potential to meet future energy demands. Of the 155 countries that have ratified the treaty, Russia, Norway, Denmark and Canada have made Arctic claims, giving the United States incentive to do the same.

In 1994 President Bill Clinton signed the treaty; however, the Senate has yet to ratify it, rendering the U.S. the only Arctic nation which hadn't signed. In 2007 President George W. Bush called on the Senate to ratify the treaty, and the Senate Foreign Relations Committee demonstrated overwhelming support with a 17-4 vote. Senators Lisa Murkowski and Mark Begich both favor ratification. Earlier this year, Senator Lisa Murkowski announced her support for ratification, highlighting the great economic potential Alaska's interests. It is likely the United States Senate will vote soon on its ratification.

Recent geological surveys suggest that there could be a seabed extension the size of California that lies beyond Alaska's 200 nautical mile exclusive economic zone. The Law of the Seas Treaty permits countries the right to expand beyond their 200 exclusive economic zone, under certain conditions. If the United States ratifies the Law of the Seas treaty, it is possible the 200 nautical mile exclusive economic zone could be extended.

Without ratification United States will be denied opportunities to make claims as well as participate in future policy decisions.

Background on the Law of the Sea Treaty:

- The Law of the Sea Treaty recognizes countries' sovereign rights over a 200-nautical-mile exclusive economic zone for resource development, exploration, conservation, and energy production.

- Since 1983 the United States has been in voluntary compliance with the Law of the Sea Treaty; however, mere compliance does not allow U.S. participation in treaty processes or protection under treaty terms.

- Member nations may expand their 200-nautical-mile exclusive economic zone if they meet certain provisions, such as proving that their continental seabed extends beyond this area.

- In 1994, amendments were made to this treaty which addressed President Ronald Reagan's concerns regarding deep seabed mining provisions, including a guaranteed position for the U.S. on the International Seabed Authority and elimination of mandatory technology transfers and non-market based controls on levels of mineral production.

- Ratifying the treaty does not weaken U.S. sovereignty; it actually increases it by allowing more jurisdiction over claims and permits the U.S. to participate in policymaking as a member of the International Seabed Authority.

- In 2001, a study conducted by the University of New Hampshire found that the continental shelf off Alaska may permit the U.S. to lay claim to an area approximately the size of California.

- The U.S. is the only Arctic nation that has not ratified the Law of the Sea Treaty. Currently 155 countries worldwide are signatories.

- Ratification supporters include President Bill Clinton, President George W. Bush, President Barack Obama, Senators Lisa Murkowski and Mark Begich, the International Association of Drilling Contractors, the National Fisheries Institute, Former Chairman of the Joint Chiefs of staff General Richard Meyers, the Navy League of the United States, Oceana and others.

- Until the U.S. ratifies the Law of the Seas Treaty, it will remain an observer to the International Seabed Authority, rather than a participant.

Ratifying the Law of the Sea Treaty offers Alaska tremendous benefits associated with an extended exclusive economic zone. If we do not sign, we risk surrendering our interests to other countries.

Myths and Realities of the Convention on the Law of the Sea

Taken from the written testimony of John D. Negroponte, Deputy Secretary of State, before the Senate Foreign Relations Committee, 9/27/2007

Certain arguments against U.S. accession are simply inaccurate. And other arguments are outdated, in the sense that they may have been true before the deep seabed mining provisions were fixed and thus are no longer true. I would like to address some of these "myths" surrounding the Convention:

Myth: Joining the Convention would surrender U.S. sovereignty.

Reality: On the contrary. Some have called the Convention a "U.S. land grab." It expands U.S. sovereignty and sovereign rights over extensive maritime territory and natural resources off its coast, as described earlier in my testimony. It is rare that a treaty actually increases the area over which a country exercises sovereign rights, but this treaty does. The Convention does not harm U.S. sovereignty in any respect. As sought by the United States, the dispute resolution mechanisms provide appropriate flexibility in terms of both the forum and the exclusion of sensitive subject matter. The deep seabed mining provisions do not apply to any areas in which the United States has sovereignty or sovereign rights; further, these rules will facilitate mining activities by U.S. companies. And the navigational provisions affirm the freedoms that are important to the worldwide mobility of U.S. military and commercial vessels.

Myth: The Convention is a "UN" treaty and therefore does not serve our interests.

Reality: The Convention is not the United Nations - it was merely negotiated there, as are many agreements, and negotiated by States, not by UN bureaucrats. Further, just because a treaty was drawn up at the UN does not mean it does not serve our interests. For example, the United States benefits from UN treaties such as the Convention Against Corruption and the Convention for the Suppression of Terrorist Bombings. The Law of the Sea Convention is another such treaty that serves U.S. interests.

Myth: The International Seabed Authority (ISA) has the power to regulate seven-tenths of the Earth's surface.

Reality: The Convention addresses seven-tenths of the earth's surface; the ISA does not. First, the ISA does not address activities in the water column, such as navigation. Second, the ISA has nothing to do with the ocean floor that is

subject to the sovereignty or sovereign rights of any country, including that of the United States. Third, the ISA only addresses deep seabed mining. Thus, its role is limited to mining activities in areas of the ocean floor beyond national jurisdiction. It has no other role and no general authority over the uses of the oceans, including freedom of navigation and overflight.

Myth: The Convention gives the UN its first opportunity to levy taxes.

Reality: Although the Convention was negotiated under UN auspices, it is separate from the UN and its institutions are not UN bodies. Further, there are no taxes of any kind on individuals or corporations or others. Concerning oil/gas production within 200 nautical miles of shore, the United States gets exclusive sovereign rights to seabed resources within the largest such area in the world. There are no finance-related requirements in the EEZ. Concerning oil/gas production beyond 200 nautical miles of shore, the United States is one of a group of countries potentially entitled to extensive continental shelf beyond its EEZ. Countries that benefit from an Extended Continental Shelf have no requirements for the first five years of production at a site; in the sixth year of production, they are to make payments equal to 1% of production, increasing by 1% a year until capped at 7% in the twelfth year of production. If the United States were to pay royalties, it would be because U.S. oil and gas companies are engaged in successful production beyond 200 nautical miles. But if the United States does not become a party, U.S. companies will likely not be willing or able to engage in oil/gas activities in such areas, as I explained earlier.

Concerning mineral activities in the deep seabed, which is beyond U.S. jurisdiction, an interested company would pay an application fee for the administrative expenses of processing the application. Any amount that did not get used for processing the application would be returned to the applicant. The Convention does not set forth any royalty requirements for production; the United States would need to agree to establish any such requirements.

In no event would any payments go to the UN, but rather would be distributed to countries in accordance with a formula to which the United States would have to agree.

Myth: The Convention would permit an international tribunal to second-guess the U.S. Navy.

Reality: No international tribunal would have jurisdiction over the U.S. Navy. U.S. military activities, including those of the U.S. Navy, would not be subject to any form of dispute resolution. The Convention expressly permits a party to

exclude from dispute settlement those disputes that concern "military activities." The United States will have the exclusive right to determine what constitutes a military activity.

Myth: The International Tribunal for the Law of the Sea could order the release of a vessel apprehended by the U.S. military.

Reality: The Tribunal has no jurisdiction to order release in such a case. Its authority to address the prompt release of vessels applies only to two types of cases: fishing and protection of the marine environment. Further, even if its mandate did extend further - which it does not - the United States will be taking advantage of the optional exclusion of military activities from dispute settlement. As such, in no event would the Tribunal have any authority to direct the release of a vessel apprehended by the U.S. military.

Myth: The Convention was drafted before - and without regard to - the war on terror and what the United States must do to wage it successfully.

Reality: The Convention enhances, rather than undermines, our ability to wage the war on terror. Maximum maritime naval and air mobility is essential for our military forces to operate effectively. The Convention provides the necessary stability and framework for our forces, weapons, and materiel to get to the fight without hindrance. It is essential that key sea and air lanes remain open as a matter of international legal right and not be contingent upon approval from nations along those routes. The senior U.S. military leadership - the Joint Chiefs of Staff - has recently confirmed the continuing importance of U.S. accession to the Convention in a letter to the Committee.

Myth: The Convention would prohibit or impair U.S. intelligence and submarine activities.

Reality: The Convention does not prohibit or impair intelligence or submarine activities. Joining the Convention would not affect the conduct of intelligence activities in any way. This issue was the subject of extensive hearings in 2004 before the Senate Select Committee on Intelligence. Witnesses from Defense, CIA, and State all confirmed that U.S. intelligence and submarine activities are not adversely affected by the Convention. We follow the navigational provisions of the Convention today and are not adversely affected; similarly, we would not be adversely affected by joining.

Myth: The United States can rely on use or threat of force to protect its navigational interests fully.

Reality: The United States has utilized diplomatic and operational challenges to resist the excessive maritime claims of other countries that interfere with U.S. navigational rights. But these operations entail a certain degree of risk, as well as resources. Being a party to the Convention would significantly enhance our efforts to roll back these claims by, among other things, putting the United States in a stronger position to assert our rights.

Myth: Joining the Convention would hurt U.S. maritime interdiction efforts under the Proliferation Security Initiative (PSI).

Reality: Joining the Convention would not affect applicable maritime law or policy regarding the interdiction of weapons of mass destruction. PSI specifically requires participating countries to act consistent with international law, which includes the law reflected in the Convention. Almost all PSI partners are parties to the Convention. Further, joining the Convention is likely to strengthen PSI by attracting new cooperative partners.

Myth: President Reagan thought the treaty was irremediably defective.

Reality: As explained above, President Reagan identified only certain deep seabed mining provisions of the Convention as flawed. His 1983 Ocean Policy Statement demonstrates that he embraced the non-deep-seabed provisions and established them as official U.S. policy. The 1994 Agreement overcomes each of the objections to the deep seabed mining provisions identified by President Reagan. As President Reagan's Secretary of State, George P. Shultz, noted in his recent letter to Senator Lugar, "It surprises me to learn that opponents of the treaty are invoking President Reagan's name, arguing that he would have opposed ratification despite having succeeded on the deep sea-bed issue. During his administration, with full clearance and support from President Reagan, we made it very clear that we would support ratification if our position on the sea-bed issue were accepted."

Myth: The Convention provides for mandatory technology transfer.

Reality: Mandatory technology transfer was eliminated by the 1994 Agreement that modified the original Convention.

Myth: The United States could and should renegotiate a new law of the sea agreement, confined to the provisions on navigational freedoms.

Reality: Assuming, for the sake of argument, that this were a desirable outcome, other countries would have no reason or incentive to enter into such a negotiation. The Convention is widely accepted, having been joined by over

150 parties including all other major maritime powers and most other industrialized nations. Those parties are generally satisfied with the entirety of the treaty and would be unwilling to sacrifice other provisions of the Convention, such as benefits associated with exclusive economic zones and sovereign rights over the resources they contain, as well as continental shelves out to 200 nautical miles and in some cases far beyond. And parties that would like to impose new constraints on our navigational freedoms certainly would not accept the 1982 version of those freedoms.

Stakeholder Endorsements of US Accession to the UN Convention on the Law of the Sea and the 1994 Agreement on Implementation

Endorsements categorized as follows:

- Obama Administration
- Bush Administration
- Current Military Service Chiefs and Legal Advisers(9)
- Former Secretaries of State (8)
- Other Former Cabinet and Sub-Cabinet Officers (12)
- Former UN Representatives and Ambassadors (5)
- Former National Security Advisors (4)
- Former EPA Administrators (4)
- Former Senators (6)
- State and City Officials (14)
- Business and Industry (20)
- Oceans and Environmental Organizations (21)
- Academia (25)
- Joint Ocean Commissions Initiative (3)
- Research and Science Organizations (7)
- International Affairs (4)
- Legal Societies and Organizations (5)
- Chairmen of the Joint Chiefs of Staff (7)
- Chiefs of Naval Operations (11)
- Commandants of the US Coast Guard (5)
- Additional Retired Navy and Coast Guard (12)
- Legal Advisers of the Department of State (10)
- Church Support (4)
- Other (31)

(Endorsements as contained in letters, commentary articles, letters to the editor and testimony)

Obama Administration

Barack Obama
President-Elect of the United States

Joseph Biden
Vice-President of the United States

Hillary Clinton

U.S. Extended Continental Shelf Project

Since 2001, the United States has been engaged in gathering and analyzing data to determine the outer limits of its extended continental shelf (ECS). Under the Convention on the Law of the Sea, every coastal State has a continental shelf out to 200 nautical miles from its coastal baselines (or out to a maritime boundary with another coastal State), and beyond that distance if certain criteria are met. Article 76 of the Convention sets forth the criteria upon which a coastal State may determine a continental shelf that extends beyond 200 nautical miles. The ECS is that portion of the continental shelf that lies beyond this 200 nautical mile limit. Beginning in 2007 the effort to delimit the U.S. ECS became the Extended Continental Shelf Project, directed by an interagency task force.

Defining the U.S. Extended Continental Shelf

The process to determine the outer limits of a State's ECS requires the collection and analysis of data that describe the depth, shape, and geophysical characteristics of the seabed and sub-sea floor. Particularly important is bathymetric and sediment thickness data.

The U.S. Extended Continental Shelf Task Force, an interagency body headed by the U.S. Department of State, coordinates the work to define the limits of the U.S. continental shelf. Participants in this Task Force include: State Department, NOAA (National Oceanic and Atmospheric Administration), the U.S. Geological Survey, the Executive Office of the President, the Joint Chiefs of Staff, the U.S. Navy, the U.S. Coast Guard, the Department of Energy, the National Science Foundation, the Environmental Protection Agency, the Minerals Management Service, and the Arctic Research Commission.

Why define the U.S. extended continental shelf?

A coastal State can exercise certain sovereign rights over its continental shelf, including: exploration, exploitation, conservation, and management of non-living resources of the seabed and subsoil of the continental shelf, such as ferromanganese crusts, ferromanganese nodules, gas hydrate deposits, and petroleum; and exploration,

exploitation, conservation, and management of living, "sedentary" resources, such as clams, crabs, scallops, sponges, and mollusks.

While a continental shelf is coincident with the exclusive economic zone (EEZ) out to 200 nautical miles, the ECS is not an extension of the EEZ. Sovereign rights that apply to the EEZ, especially rights to the resources of the water column (e.g., pelagic fisheries) do not apply to the ECS.

Establishing ECS limits will define the U.S. continental shelf in concrete geographical terms. Moreover, the United States has an inherent national interest in knowing, and declaring to others with specificity and certainty, the extent of sovereign rights with regard to the U.S. continental shelf beyond 200 nautical miles. Such certainty and international recognition is important to establishing the stability necessary for development and conservation of these potentially resource-rich areas.

The collection and analysis of the data necessary to support the establishment of the U.S. ECS will, in itself, serve a range of other environmental, geologic, engineering, and resource management needs. The data will provide a better scientific understanding of formation and transformation processes of our continental margins. The United States will gain specific insights related to such areas as climate variability, marine ecosystems, undiscovered or unconventional energy, mineral resources, and hazards resulting from extreme events, such as earthquakes and tsunamis. Finally, exploration of little known areas, particularly in the ice-covered Arctic, will advance our operational capabilities and open new windows on this remote and inaccessible environment.

Data Collection and Analysis

In late 2001, Congress directed the University of New Hampshire's Joint Hydrographic Center (JHC) -- a partnership with NOAA -- to conduct a study that evaluated current data holdings relevant to establishing the U.S. ECS, and to recommend what additional data would be needed. This study identified a number of areas where the United States may have extended continental shelf: the Atlantic East Coast, the Gulf of Mexico, the Gulf of Alaska, the Bering Sea, the Arctic Ocean, Kingman Reef/Palmyra Atoll, and the Mariana Islands/Guam.

This amounts to about one million square kilometers or approximately twice the size of California. Roughly half of that area is likely to exist off Alaska. Additional analyses and data collection suggest an even

larger ECS, in these and possibly other areas. As additional data are collected and existing data analyzed, we will begin to come to a more definitive conclusion as to the extent of the U.S. ECS.

Since 2002, the JHC has continued to receive grants from NOAA as directed by Congress to collect the bathymetric data specified in the study. The JHC has collected more than one million square kilometers of bathymetric data from eleven cruises: Arctic Ocean (2003, 2004, 2007), Gulf of Alaska (2005), Gulf of Mexico (2007), Atlantic Ocean (2004, 2005, 2008), Northern Mariana Islands and Guam (2006, 2007), and Bering Sea (2003). A cruise is planned for an area off Kingman Reef and Palmyra Atoll in 2008 or early 2009.

All data collected thus far by the United States in support of defining its continental shelf have been released to the public. The bathymetric data is available from the National Geophysical Data Center and the Joint Hydrographic Center

New Seafloor Maps May Bolster U.S. Arctic Claims

Jeannette J. Lee in Anchorage, Alaska
Associated Press

February 12, 2008

New seafloor mapping data show the foot of Alaska's continental slope extends more than 100 nautical miles (185 kilometers) farther from the U.S. coast than previously believed, U.S. federal scientists said Monday.

The National Oceanic and Atmospheric Administration (NOAA) data could bolster claims the U.S. might make in the Arctic, as nations in the region compete for potentially rich reserves of oil, gas, and minerals buried beneath the sea floor.

(Related story: Arctic Oil Rush Sparks Battles Over Seafloor [August 23, 2007])

Federal officials said the data would support the U.S. if the country chooses to jockey with Russia, Canada, and other circumpolar nations under the international Law of the Sea treaty to carve out boundaries off their northern coasts. (See a map of the Arctic Ocean.)

The Law of the Sea confers sovereign rights over a country's continental shelf beyond the normal boundary of 200 nautical miles (370 kilometers) if the country can substantiate its claims through scientific evidence.

The U.S. is the only Arctic nation not party to the Law of the Sea treaty, which is a contentious issue in Congress. The Bush administration has been pushing for its approval.

A Partial Answer

"We found evidence that the foot of the slope was much farther out than we thought," said Larry Mayer, the chief scientist for the expedition last year. "That was the big discovery."

Scientists said their findings do not completely settle the question of where the U.S. could set a plausible boundary.

"There's no question that the potential U.S. continental shelf and the potential shelf from Canada will have some overlap," said Andy Armstrong, NOAA co-director of the Joint Hydrographic Center at the University of New Hampshire. "We'll have to work with bordering nations to sort out any potential overlaps."

Mayer said the boundary with Russia is "just about established."

Bottom of the Ocean

The expedition, which cost at least 1.2 million U.S. dollars, focused on a section of the Chukchi Sea about 400 to 600 miles (645 to 965 kilometers) north of Alaska.

Scientists covered more than 6,200 miles (about 10,000 kilomters), taking bathymetric soundings using multibeam sonar from the deck of an icebreaker, the U.S. Coast Guard cutter *Healy*, said Mayer, who is also co-director of the Joint Hydrographic Center at the university in Durham, New Hampshire.

The resulting images of the relatively unexplored region are the most detailed ever collected and will be applied to a variety of research topics, said Capt. Steve Barnum director of NOAA's Office of Coast Survey.

"These are entirely new insights into what the ocean bottom looks like," Barnum said. "The data will be used to gain a better understanding of many things, including ecosystems and climate circulation models."

The next expedition is planned for mid-August through early September, Mayer said, and will follow a geologic feature that could extend the foot of the slope to the north and east.

A U.S. study suggests as much as 25 percent of the world's undiscovered oil and gas could be hidden beneath the Arctic seabed.

Growing evidence that global warming is shrinking polar ice (see story)—opening up resource development and new shipping lanes—has added to the urgency of the claims.

Extended Continental Shelf Project

Senator Lisa Murkowski

CSIS – Arctic Forum

Wednesday, July 23, 2008

• Thank you for the invitation to speak to you about one of my favorite topics, the Arctic. The United States has been an Arctic nation since the purchase of Alaska from Russia in 1867. While I am fairly confident that each of you were already aware of this, the challenge is getting the general public to understand not only that the United States has land in the Arctic, but this area is critically important for many reasons.

• The heightened focus on the Arctic of late is primarily due to the impacts of climate change and the fact that these changes are occurring at an unprecedented rate in this region. This makes the Arctic the most vital place to be studying how climate change can affect the entire planet.

• This past summer we saw the Northwest Passage completely ice free for the first time in recorded history. Canada responded by announcing plans for an Arctic military training facility and deep-water port on the Northwest Passage. They followed that up by calling for the construction of 6 to 8 ice strengthened patrol boats, to be in operation by 2014, to assert their sovereignty claim in the Arctic.

- In an expedition some have compared to the United States planting a flag on the moon, a Russian-led team descended 13,000 feet to the seabed on August 2 of last year and planted a Russian flag directly on the North Pole.

- This intense interest in claiming Arctic territory is primarily driven by the quest for Arctic resources. Until recently, the resources of the Arctic were deemed to be too difficult and expensive to develop. But with increasing access and high energy prices, the Arctic's wealth, which is conservatively estimated to contain up to 25% of the world's remaining oil and gas reserves, including over 100 billion barrels of oil, is now being explored and developed at an unprecedented rate.

- Russia is turning its eye to the Arctic's vast energy reserves as they are building the first offshore oil rig that can withstand temperatures as low as minus 50 degrees Celsius and heavy pack ice. They are also reducing taxes and bureaucratic hurdles in order to encourage new oil development in the Arctic.

4354

- Maritime activities relating to the transportation of goods, oil and gas, tourism and research will surely increase as access to the Arctic Ocean increases. Work is underway to determine the way forward in the development of a shipping regime through the Northern Sea Route, Northwest Passage, and even directly over the pole.

  • The dramatic retreat of Arctic sea ice has focused much attention on the development of these routes, but in order to be viable options to the Suez and Panama canals, the need for a comprehensive plan addressing safety, security, navigation, environmental protection, vessel standards and economics must be developed and in place.

  • The Arctic is truly the last frontier. One of the few places on earth where all the borders aren't drawn on the map yet and some of those that are, are disputed. A recent article in Parade magazine entitled, " The Race to Own the Arctic", will certainly bring more attention to the region, given its readership of approximately 70 million Americans. But the title of the article emphasizes the competition underway to own the resources by extending continental shelf claims. While the anticipated claims do overlap in many cases, there exists an opportunity to address these claims and many of the other key issues in the Arctic, cooperatively and multi-laterally.

  • On May 28th, representatives of the 5 coastal states bordering the Arctic-Canada, Denmark, Norway, Russia and the United States met in Ilulissat (Ill-you-lis-at), Greenland, and adopted a declaration of cooperation in the Arctic. The representatives recognized the undeniable uniqueness of the region and the dramatic changes occurring there, with the potential for profound effects on the environment and indigenous people of the region.

  • The Ilulissat Declaration recognizes the responsibilities of the Arctic nations to be good stewards and to work together to protect the fragile Arctic ecosystem. The Arctic is a marine environment surrounded by continents and a shipping disaster or oil spill would not just effect the local area, but could jeopardize the entire Arctic ecosystem and cause irreversible damage.

  • The Declaration supports the Law of the Sea Treaty as the legal framework for governance in the Arctic, saying that a new international legal regime is not needed to govern this region. If the Law of the Sea is the overarching legal mechanism, then it is even more crucial that the United States ratify this treaty.

  • Russia submitted an extended continental shelf claim in 2002 that would grant them 460,000 square miles of the Arctic Ocean's bottom resources. That is an area the size of Texas, California and Indiana combined. Their claim was rejected for lack of technical data, but they have since resubmitted their claim with new data following their flag planting expedition last summer.

  • Denmark and Canada are anxious to establish their own claims in the Arctic and

Norway's claim is currently under review by the Commission on the Limits of the Continental Shelf.

- But here in the United States, we are not able to make a claim until we ratify the Convention. There are some who do not see the point in joining the rest of the world in ratifying the treaty. They say that the U.S. already enjoys the benefits of the Treaty even though we are not a member and that by not becoming a party to the Treaty, we can pick and choose which sections we abide by, while not subjecting our actions to international review.

  • But I believe it is very important for the United States to be a party to this Treaty and be a player in the process, rather then an outsider hoping our interests are not damaged. Accession to the Convention would give current and future administrations both enhanced credibility and leverage in calling upon other nations to meet Convention responsibilities. Given the support for the Treaty by Arctic nations and the drive to develop natural resources, the Treaty will also provide the environmental framework to develop these resources while minimizing environmental impacts.

  • According to the U.S. Arctic Research Commission, if the United States were to become a party to the Treaty, we could lay claim to an area in the Arctic of about 450,000 square kilometers-or approximately the size of California. But if we do not become a party to the Treaty, our opportunity to make this claim, and have the international community respect it, diminishes considerably-as does our ability to prevent claims like Russia's from coming to fruition.

  • The Administration has shown strong leadership in being a party to the Ilulissat Declaration and our intentions to work cooperatively with the other Arctic nations. It is time for the United States Senate to show the leadership to ratify the treaty.

  • There are a number of other areas where the United States is leading the way in the Arctic. Our science budget for Arctic research is the most of any country and through efforts like the International Polar Year, American scientists are working on well over 100 projects with scientists from around the world. It is my hope that IPY will usher in a new era of scientific cooperation and collaboration in the Arctic.

  • Congress recently passed a resolution, which the President signed into law, to develop an international fisheries regime for the Arctic. Alaska, like Norway and Iceland, has been very successful in managing our fisheries and there is every reason to believe that this will continue with a very precautionary approach in the Arctic. In fact, the North Pacific Fisheries Management Council, the advisory body for the federal fisheries off of Alaska, proactively closed all fisheries in the Arctic until an assessment of the fish stocks could be made and a management plan developed.

  • Although the United States is a world leader in some facets of the Arctic, there are

many others areas that the question must be asked: Is the United States a leader in addressing climate change? For the first time the Senate started the legislative debate on the issue of climate change. We are far from an end-game, but movement is afoot. What about sustainable energy development? Alternative energy? Environmental protection? We need to be leaders in each of these areas.

• We have an incredible opportunity to develop an international policy and cooperative regime in the Arctic. With such a fragile ecosystem, however, our first effort may be our last chance to get it right. We sit on the edge of the precipice, with continued change projected to occur whether we are prepared or not. How we address this challenge and adapt in the Arctic will be an example for the rest of the world.

• The Ilulissat Declaration gives us hope that international cooperation among Arctic nations is possible and by working together to develop a framework for governing the region, we can mutually provide for its' protection and preservation.

• We will only succeed in the Arctic if it is a commitment that all nations share and undertake together. The future of the Arctic depends on it. Thank you.

CHAIRMAN OF THE JOINT CHIEFS OF STAFF

WASHINGTON, D.C. 20318-9999

26 June 2007

The Honorable Joseph Biden, Jr.
Chairman, Committee on Foreign
Relations
United States Senate
Washington, D.C. 20510-6225

Dear Mr. Chairman,

As the world's preeminent maritime power, leader in the War on Terrorism, and Nation with the largest exclusive economic zone, the United States should accede to the Law of the Sea Convention during this session of Congress. No country has a greater interest in public order for the world's oceans. Becoming a Party to the Convention will ensure our leadership role in the continuing development of oceans law and policy.

The Convention codifies navigation and overflight rights and high seas freedoms that are essential for the global mobility of our Armed Forces. It furthers our National Security Strategy, strengthens the coalition, and supports the President's Proliferation Security Initiative.

From sustaining forward deployed military forces, to ensuring the security of our ports and waters as well as advancing our most important economic and foreign policy objectives, it is important that the United States become a Party to the Convention.

In closing, we offer our gratitude for your efforts and those of Senator Lugar to bring this important Convention to the Senate for consideration.

Very Respectfully,

E. P. GIAMBASTIANI
Admiral, U.S. Navy
Vice Chairman
of the Joint Chiefs of Staff

PETER PACE

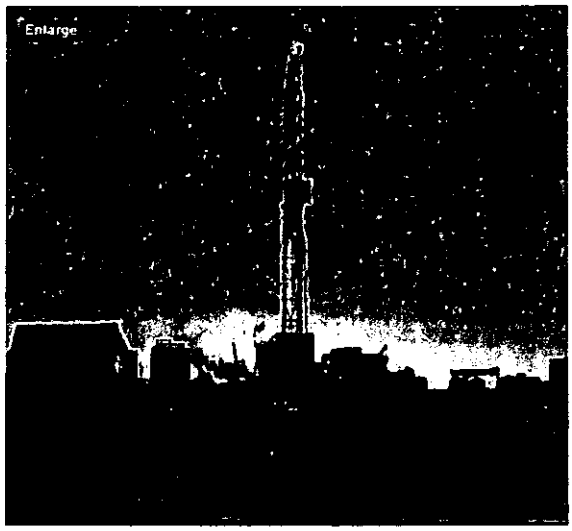
USGS Arctic Oil and Gas Report

Estimates of Undiscovered Oil and Gas North of the Arctic Circle

A USGS fact sheet from July 2008

The U.S. Geological Survey (USGS) has completed an assessment of undiscovered conventional oil and gas resources in all areas north of the Arctic Circle. Using a geology-based probabilistic methodology, the USGS estimated the occurrence of undiscovered oil and gas in 33 geologic provinces thought to be prospective for petroleum. The sum of the mean estimates for each province indicates that 90 billion barrels of oil, 1,669 trillion cubic feet of natural gas, and 44 billion barrels of natural gas liquids may remain to be found in the Arctic, of which approximately 84 percent is expected to occur in offshore areas.



Malik Project Drill Rig on the Mackenzie Delta of the Canadian Arctic. USGS Image

Introduction

In May 2008 a team of U.S. Geological Survey (USGS) scientists completed an appraisal of possible future additions to world oil and gas reserves from new field discoveries in the Arctic. This Circum-Arctic Resource Appraisal (CARA) evaluated the petroleum potential of all areas north of the Arctic Circle (66.56° north latitude); quantitative assessments were conducted in those geologic areas considered to have at least a 10-percent chance of one or more significant oil or gas accumulations. For the purposes of the study, a significant accumulation contains recoverable volumes of at least 50 million barrels of oil and/or oil-equivalent natural gas. The study included only those resources believed to be recoverable using existing technology, but with the important assumptions for offshore areas that the resources would be recoverable even in the presence of permanent sea ice and oceanic water depth. No economic considerations are included in these initial estimates; results are presented without reference to costs of exploration and development, which will be important in many of the assessed areas. So-called nonconventional resources, such as coal bed methane, gas hydrate, oil shale, and tar sand, were explicitly excluded from the study. Full details of the CARA study will be published later.

A number of onshore areas in Canada, Russia, and Alaska already have been explored for petroleum, resulting in the discovery of more than 400 oil and gas fields north of the Arctic Circle. These fields account for approximately 240 billion barrels (BBOE) of oil and oil-equivalent natural gas, which is almost 10 percent of the world's known conventional petroleum resources (cumulative production and remaining proved reserves). Nevertheless, most of the Arctic, especially offshore, is essentially unexplored with respect to petroleum. The Arctic Circle encompasses about 6 percent of the Earth's surface, an area of more than 21 million km2 (8.2 million mi2), of which almost 8 million km2 (3.1 million mi2) is onshore and more than 7 million km2 (2.7 million mi2) is on continental shelves under less than 500 m of water. The extensive Arctic continental shelves may constitute the geographically largest unexplored prospective area for petroleum remaining on Earth.

Methodology

A newly compiled map of Arctic sedimentary basins (Arthur Grantz and others, unpublished work) was used to define geologic provinces, each containing more than 3 km of sedimentary strata. Assessment units (AUs)—mappable volumes of rock with common geologic traits—were identified within each province and quantitatively assessed for petroleum potential. Because of the sparse seismic and drilling data in much of the Arctic, the usual tools and techniques used in USGS resource assessments, such as discovery process modeling, prospect delineation, and deposit simulation, were not generally applicable. Therefore, the CARA relied on a probabilistic methodology of geological analysis and analog modeling. A world analog database (Charpentier and others, 2008) was developed using the AUs defined in the USGS World Petroleum Assessment 2000 (USGS World Assessment Team, 2000). The database includes areas that account for more than 95 percent of the world's known oil and gas resources outside the United States.

Minerals

For each assessment unit, the CARA team assessed the probability (AU probability) that a significant oil or gas accumulation was present. This evaluation of AU probability was based on three geologic elements: (1) charge (including source rocks and thermal maturity), (2) rocks (including reservoirs, traps, and seals), and (3) timing (including the relative ages of migration and trap formation, as well as preservation). Each assessment unit was ranked according to its AU probability; those AUs judged to have less than a 10-percent probability of a significant accumulation were not quantitatively assessed.

In addition to the AU probability, the number of accumulations, the size-frequency distribution of accumulations, and the relative likelihood of oil versus gas were assessed for each AU and combined by means of a Monte Carlo simulation. The probabilistic results reflect the wide range of uncertainty inherent in frontier geological provinces such as those of the Arctic.

Results—Resource Summary

Within the area of the CARA, 25 provinces were quantitatively assessed; 8 provinces were judged to have less than a 10-percent probability of at least one significant accumulation in any AU and were, therefore, not assessed. Results of individual AU assessments are not reported here, but the AUs are shown as mapped areas on figure 1, where they are color-coded for the probability of at least one undiscovered accumulation of minimum size. The provinces are listed in table 1, in ranked order of total mean estimated oil-equivalent volumes of undiscovered oil, gas, and natural gas liquids (NGL). The provinces are shown in figures 2 and 3, where they have been color-coded with respect to fully risked (including AU probabilities) potential for gas and oil, respectively.

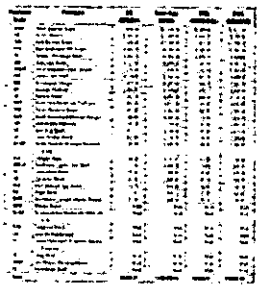

Table 1. Summary of Results of the Circum-Arctic Resource Appraisal.

More than 70 percent of the mean undiscovered oil resources is estimated to occur in five provinces: Arctic Alaska, Amerasia Basin, East Greenland Rift Basins, East Barents Basins, and West Greenland–East Canada. More than 70 percent of the undiscovered natural gas is estimated to occur in three provinces, the West Siberian Basin, the East Barents Basins, and Arctic Alaska. It is further estimated that approximately 84 percent of the undiscovered oil and gas occurs offshore. The total mean undiscovered conventional oil and gas resources of the Arctic are estimated to be approximately 90 billion barrels of oil, 1,669 trillion cubic feet of natural gas, and 44 billion barrels of natural gas liquids.

CS FOR SENATE JOINT RESOLUTION NO. 16(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE SENATE RESOURCES COMMITTEE

Offered: 3/30/09
Referred: Rules

Sponsor(s): SENATORS WIELECHOWSKI, Dyson, Wagoner, Thomas, Olson, Davis, Ellis, Paskvan, Menard, Stevens

REPRESENTATIVES Guttenberg, Tuck, Johnson, Kawasaki, Crawford

A RESOLUTION

Expressing support for responsible development of the oil and gas resources in federal waters offshore of Alaska's coast as a means to ensure energy independence, security for the nation, and jobs for Alaskans; and urging the United States Congress to provide a means for consistently sharing with all coastal energy-producing states, on an ongoing basis, revenue generated from oil and gas development on the outer continental shelf, to ensure that those states develop, support, and maintain necessary infrastructure and preserve environmental integrity.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS there are presently 697 active oil and gas leases off Alaska's coast, covering more than 1,500,000 hectares; and

WHEREAS the United States Department of the Interior, Minerals Management Service, estimates there are nearly 27,000,000,000 barrels of oil and 132,000,000,000,000 cubic feet of natural gas that are technically recoverable offshore of Alaska; and

WHEREAS responsible oil and gas development in federal waters off Alaska's coast

would significantly decrease reliance by the United States on foreign oil and gas, making the United States more energy independent and enhancing our national security; and

WHEREAS, under the Mineral Lands Leasing Act of 1920, the federal government shares with the states 50 percent of revenue from mineral production on federal land within each state's boundaries; and

WHEREAS the shared mineral production revenue is distributed to the states automatically, outside of the budget process, and is not subject to appropriation; and

WHEREAS, other than in water immediately adjacent to a state's coastline, there is not a similar authority for the federal government to share federal oil and gas revenue generated on the outer continental shelf with adjacent coastal states, despite the vital contribution made by those states to our nation's energy, economic, and national security needs in support of production from the outer continental shelf; and

WHEREAS the states that sustain this critical energy production and development deserve a share of the revenue generated because they provide infrastructure to support offshore operations and because of the environmental effects and other risks associated with oil and gas development on the outer continental shelf; and

WHEREAS, under the Gulf of Mexico Energy Security Act of 2006, the federal government recognized the contributions made by Alabama, Louisiana, Mississippi, and Texas to national security and agreed to give them 37.5 percent of revenue from oil and gas development in newly leased federal waters in the Gulf of Mexico; and

WHEREAS other coastal states, including Alaska and California, also support and should receive, on a regular and ongoing basis, a fair share of revenue generated through development on the outer continental shelf as compensation and reward for their contributions to the nation's energy supply, security, and economy; and

WHEREAS, since statehood, oil and gas lease sales from the outer continental shelf off Alaska's coast have generated millions of dollars in revenue for the federal government; and

WHEREAS the February 2008 lease sale in the Chukchi Sea generated an additional $2,600,000,000 in revenue for the federal government;

BE IT RESOLVED that the Alaska State Legislature supports responsible development of the oil and gas resources in federal waters offshore of Alaska's coast as a

means to ensure energy independence, security for the nation, and jobs for Alaskans; and be it

FURTHER RESOLVED that the Alaska State Legislature urges the United States Congress to provide a means for consistently sharing, on an ongoing basis, revenue generated from oil and gas development on the outer continental shelf with all coastal energy-producing states to ensure that those states develop, support, and maintain necessary infrastructure and preserve environmental integrity.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Ken Salazar, United States Secretary of the Interior; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; the Honorable Steny H. Hoyer, Majority Leader of the U.S. House of Representatives; the Honorable John Boehner, Minority Leader of the U.S. House of Representatives; the Honorable Harry Reid, Majority Leader of the U.S. Senate; the Honorable Mitch McConnell, Minority Leader of the U.S. Senate; the Honorable Jeff Bingaman, Chair of the U.S. Senate Committee on Energy and Natural Resources; the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress; and all other members of the 111th United States Congress.

SENATOR BILL WIELECHOWSKI

SJR 16:
Development of Offshore Oil and Gas Reserves

SJR 16 expresses support for environmentally sound and culturally sensitive development of the oil and gas resources in federal waters off Alaska coast. It also urges Congress to provide Alaska with a fair share of federal revenue from oil and gas leasing and development in federal waters.

Under current law, Alaska receives little revenue from oil and gas leasing and development that occurs more than six miles off our coast. This contrasts with how other states, including Louisiana, Mississippi, Alabama and Texas, are treated. Under the 2006 Gulf of Mexico Energy Security Act, these states receive 37.5 percent of revenues from newly leased federal waters off their coasts. This new law is expected to direct more than $13 billion to Louisiana alone over the next three decades.

Alaska deserves to be treated in the same way as other states that contribute to our nation's energy security. Like other energy-producing states, Alaska bears the costs of infrastructure in support of offshore development, and our coastal resources and residents bear the impacts of offshore development. Alaskans deserves to share in the benefits of production, just as we do its costs.

The federal Minerals Management Service estimates that there could be as much as 55 billion barrels of technically recoverable oil and 280 trillion cubic feet of technically recoverable gas off Alaska's coast. Last year companies bid $2.6 billion for access to tracts in the Chukchi Sea. More than 1.4 million acres off Alaska's coast have already been leased by the federal government. The Chukchi Sea sale could result in the leasing of an additional 2.7 million acres, providing ongoing support for a robust oil and gas industry in Alaska.

As more lands off Alaska's coast are leased for offshore oil production, we need to ensure that Alaska gets its fair share of the benefits of that leasing and production. It's time Congress treated all coastal states equally and fairly. Please join me in supporting SJR 16.

Ted Stevens: Time to divvy up OCS

Alaska's senior U.S. senator, governor want state to get share of outer continental shelf oil and gas royalties

By KRISTEN NELSON
Petroleum News

The State of Alaska should share in royalties from outer continental shelf production on its borders, says U.S. Sen. Ted Stevens, R-Alaska, predicting that such sharing will take place as a condition of OCS production off Alaska.

The senator, in Juneau to give his annual update to the Legislature, told members of the press Feb. 19 that the bill passed in 2006 which allocated OCS monies to Gulf of Mexico states originally included Alaska.

"We had a provision in the bill as it went through and it was the people opposed to ANWR who took that out of there. They thought it was an incentive to drill in Alaska and would not let us enact it."

Stevens said North Slope residents oppose drilling "until they get a percentage of it — that's what we're facing right now."

Both the state and federal governments "have to wake up," Stevens said.

People on the North Slope are not going to put up with oil and gas drilling and the risk to their resources from a spill. "I don't think it's a great risk," Stevens said, but calling it a "potential risk to their resources."

Alaska is not included in OCS offshore royalty sharing, he said, "because of the opposition of the extreme environmental people."

Alaska has two-thirds of the outer continental shelf "and we don't get any money from any production that comes from the outer continental shelf."

"I predict there's not going to be any production until we get it. Both the state and the Native people oppose any real production until we get the same kind of share that others get from production off our shore," Stevens said.

Governor: time Alaska starts promoting OCS share

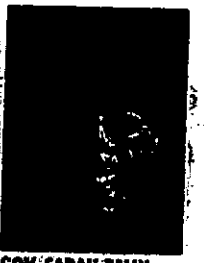
Alaska Gov. Sarah Palin agreed with Stevens on OCS royalty share.

"It's going to become much brighter on everyone's radar screen, I think, once Alaskans realize that these other coastal states do receive OCS revenue shares. Alaska doesn't; we're exempt from that," the governor told reporters Feb. 21.

She said she would like to see that changed and thinks it's time Alaska started pushing for that change, and anticipates that the state's congressional delegation would support that move.

Stevens helped the Gulf of Mexico states get a share of OCS royalties, Palin said, adding that she hopes delegations from those states would, in return, assist Alaska in getting royalties off its shores.

SEN. TED STEVENS



GOV. SARAH PALIN

Alaska's share $21.7 million

Alaska does earn royalties from production from federal lands onshore and from offshore lands adjacent to state waters.

Alaska was one of 34 states which earned a share of almost $2 billion during fiscal year 2007 as part of federal revenues collected by the Department of the Interior's Minerals Management Service, MMS said late last year.

Alaska's share, $21.7 million, represents its share of revenues collected from oil, gas and coal production.

MMS said for the majority of onshore federal lands, states receive 50 percent of the revenues while the other 50 percent goes to various funds of the U.S.

see SHARE page 14

continued from page 13

SHARE

Treasury, including the Reclamation Fund for water projects. Alaska receives a 90 percent share of revenues from onshore production as prescribed in the Alaska Statehood Act.

"In addition, Texas, Alabama, Louisiana and Mississippi with producing federal offshore tracts adjacent to state waters receive 27 percent of those mineral royalties," while remaining offshore revenues MMS collects go into various accounts of the U.S. Treasury, the majority into the general fund.

U.S. coastal waters are divided into three zones: from zero to three miles is state waters; in federal waters from three to six miles from shore, states get a 27 percent cut of royalties from production; there is no state cut beyond six miles, except for those Gulf Coast states receiving OCS royalties as a result of the 2006 federal legislation. ●

Secretary Salazar: $25 Million for Gulf States and Counties from 2007-08 Bonus Bids and Rents on OCS Energy Leases

WASHINGTON, D.C. – More than $25 million will be paid to Gulf of Mexico coastal states and communities this week as their share of bonuses and rents on energy leases in federal waters off their coasts, Secretary of the Interior Ken Salazar announced today.

"These funds will provide an important boost to communities at a moment when they need it most," Secretary Salazar said. "I was pleased to participate in last week's lease sale, to visit New Orleans, and to examine how these investments will help communities embark on a wide range of projects, including the conservation and restoration of coastal areas."

The revenues include $6,179,076.25 to the state of Alabama; $6,347,321.13 to Louisiana; $5,506,235.80 to Mississippi; and $2,159,399.65 to Texas. Forty-two eligible political subdivisions will receive $5,048,008.21. Those include $1,544,769.06 to eligible Alabama counties; $1,586,830.28 to Louisiana parishes; $1,376,558.95 to political subdivisions in Mississippi; and $539,849.92 to counties in Texas. A complete list of the disbursements and eligible political subdivisions receiving funds **is available online**.

These are the first payments under the 2006 Gulf of Mexico Energy Security Act (GOMESA) which provides that these states and counties receive 37.5 percent of the oil and gas qualified leasing revenues from certain Outer Continental Shelf areas. Most of the $25.2 million to be disbursed was received from Lease Sales 224 and 206, held on March 19, 2008. Lease Sale 205, held on Oct. 3, 2007, contributed a small percentage of the revenues that were shared with this disbursement.

In total, those lease sales generated about $67.3 million in bonus bids and first-year rentals that qualify for revenue sharing. Under GOMESA, 12.5 percent of qualified revenues are disbursed to the Land and Water Conservation Fund, which provides funds and matching grants for various land and water projects. The remaining receipts are disbursed to the U.S. Treasury.

The 2006 legislation mandates that eligible U.S. jurisdictions on the Gulf Coast within 200 miles of certain Outer Continental Shelf parcels leased in Sales 224, 206 and 205 receive these 37.5 percent share payments. The law directs that the funds be used for coastal protection, including mitigating damage to fish, wildlife or natural resources; carrying out a federally-approved marine, coastal, or comprehensive conservation management plan; mitigating the impact of Outer Continental Shelf activities through the funding of onshore infrastructure projects; as well as planning assistance and administrative costs in complying with the law.

CS FOR SENATE JOINT RESOLUTION NO. 22( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS HUGGINS, Ellis, Wielechowski, Menard, Thomas

A RESOLUTION

Opposing litigation that seeks to eliminate the Kenai, Kasilof, and Chitina sockeye salmon personal use dip net fisheries.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the United Cook Inlet Drift Association is a group of nonresident and resident commercial gill net fishermen in Cook Inlet; and

WHEREAS the United Cook Inlet Drift Association has filed a lawsuit against the United States Secretary of Commerce requesting that the United States Department of Commerce preempt state management of its salmon stocks in Cook Inlet; and

WHEREAS the United Cook Inlet Drift Association has filed a lawsuit against the United States Secretary of Commerce claiming, among other things, that association's nonresident members are discriminated against because they cannot participate in the resident-only dip net fishery, thus requesting the court to declare that the state-authorized resident-only salmon fisheries are unconstitutional and therefore preempted by federal law; and

WHEREAS all five species of Pacific salmon are an integral part of Alaska's history, heritage, and cultural identity, helping to meet both its economic and nutritional needs; and

WHEREAS the Magnuson-Stevens Fishery Conservation and Management Act explicitly excludes state waters from the jurisdiction of the Act; and

WHEREAS the exclusive economic zone is closed to commercial fishing under the Magnuson-Stevens Fishery Conservation and Management Act unless specifically authorized by the state; and

WHEREAS the Alaska Board of Fisheries has devoted an inordinate amount of time to the extremely complex salmon management program in the Cook Inlet region in an attempt to balance the interests of all stakeholders; and

WHEREAS the potential results of this lawsuit, if the plaintiff is successful, would not only preempt state fisheries management but could result in a larger number of nonresident dip net fishermen being allowed to fish, causing an even smaller allocation to the commercial fisheries, thus conceivably further adversely affecting the members of the United Cook Inlet Drift Association; and

WHEREAS the establishment of federal and state recognized commercial fisheries limited entry programs have drastically limited the ability of residents to use efficient commercial gear for taking subsistence and personal use salmon resources, which has resulted in the establishment of less efficient methods, such as the dip net fisheries, for taking salmon to meet Alaska's nutritional needs; and

WHEREAS members of the United Cook Inlet Drift Association are able to use their exclusive limited entry permits to use efficient gear that is not available to the average Alaskan for the purpose of taking salmon for personal use; and

WHEREAS members of the United Cook Inlet Drift Association, including all nonresidents, are allowed an unlimited bag limit, an unlimited possession limit, and an unlimited annual limit under state law for salmon retained for personal use if taken during the commercial fisheries, which is a luxury not afforded to Alaskans who do not possess a state limited entry permit; and

WHEREAS both the federal government and the state recognize in law and place a high priority on the importance of taking of wild resources for food; and

WHEREAS the State of Alaska restricts dip net salmon fisheries to Alaska residents; and

WHEREAS, in 1984, a resident-only dip net fishery for Copper River red salmon

stocks was established in Chitina; and

WHEREAS in 2006, 2007, and 2008, the Alaska Department of Fish and Game issued over 8,000 permits allowing Alaskans to dip net for salmon in Chitina; and

WHEREAS, in 1981, a dip net fishery for red salmon stocks was established at the mouth of the Kenai and Kasilof Rivers; and

WHEREAS in 2006, 2007, and 2008, the Alaska Department of Fish and Game issued between 18,500 and 23,700 permits allowing Alaskans to dip net for salmon in the Kenai and Kasilof Rivers; and

WHEREAS the Alaska Department of Fish and Game calculates that those dip net fisheries provide an average of 14 fish for each household for those households that participated in the Kenai and Kasilof Rivers dip net fisheries in 2006, 2007, 2008; and

WHEREAS there appears to be a growing groundswell of support within the commercial fishing industries represented at the North Pacific Fisheries Management Council and state Board of Fisheries levels for a more dominant role in the regulatory process; and

WHEREAS the Constitution of the State of Alaska dictates that "The legislature shall provide for the utilization, development, and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people," which clearly means that the state's common property resources must benefit all Alaskans and not just a few commercial fisherman;

BE IT RESOLVED that the Alaska State Legislature hereby requests that the United Cook Inlet Drift Association drop its lawsuit advocating federal preemption of Alaska's salmon management in state waters in Cook Inlet and opposing the personal use of salmon by Alaska residents.

FURTHER RESOLVED that the Alaska State Legislature also requests Governor Sarah Palin to direct the attorney general to oppose this lawsuit.

COPIES of this resolution shall be sent to the Honorable Gary F. Locke, United States Secretary of Commerce; the Honorable Sarah Palin, Governor of Alaska; the Honorable Wayne Anthony Ross, Alaska Attorney General; and the Honorable Denby Lloyd, Commissioner, Department of Fish and Game.

Charlie Huggins
Senator

Sponsor Statement SJR 22

This resolution takes aim at the lawsuit filed in the US District Court of Alaska by the United Cook Inlet Drift Association (UCIDA). The complaint by this commercial fishing group, calling for a return of federal management is an affront to the State of Alaska. Do not forget, here in our 50th year as a state, it was a colossal failure of federal salmon management that was a major driving force behind the statehood movement. I would hope no one wishes to return to such a regime.

UCIDA is an association of both resident and non-resident commercial fishers who participate in drift gillnet salmon fisheries in the inlet. Remarkably, these fishers can keep, for their personal use, an unlimited number of fish from their commercial catch. Their goal is to have the state-managed person use dip net fishery declared unconstitutional and be pre-empted by federal law. This resolution seeks a fair shake for Alaskans who fish, without commercial gear, with simple dip nets, to feed their families. It asks the governor to intervene in defense of the state's authority to manage its own fisheries in a responsible manner.

Attorney for Plaintiff

UNITED STATES DISTRICT COURT

FOR THE DISTRICT OF ALASKA

UNITED COOK INLET DRIFT ASSOCIATION, INCORPORATED; Plaintiff, vs. OTTO WOLF: In His Official Capacity as Acting Secretary of Commerce; Defendant.	)	Case No. **COMPLAINT FOR DECLARATORY AND INJUNCTIVE RELIEF** **(U.S. CONST. ART. VI, CL. 2; U.S. CONST. ART I, SEC. 8, CL. 3; U.S. CONST. AMEND. V; 16 U.S.C. § 1801 *ET SEQ.*; 5 U.S.C. §553; 28 U.S.C. §2201(a); 28 U.S.C. §2202; 42 U.S.C. §4332(2)(c))**

I. NATURE OF THE CASE

1. Plaintiff United Cook Inlet Drift Association, Inc. (UCIDA) brings this action against the Secretary of Commerce for failure to respond to a petition for emergency rulemaking under the Administrative Procedure Act, filed by UCIDA in June

BALDWIN & BUTLER, LLC.
125 N. Willow Street
Kenai, AK 99611
Phone (907) 283-7167
Fax (907) 283-8435

of 2008. Failure to respond to UCIDA's petition resulted in past and ongoing harm in violation of the Due Process clause and Equal Protection guarantees of the Fifth Amendment, and in violation of the Magnuson-Stevens Fisheries Conservation and Management Act (Magnuson-Stevens). 16 U.S.C. §1801 *et seq.*

II. JURISDICTION AND VENUE

2. This court has jurisdiction over this action under 16 U.S.C. §1855(f); 5 U.S.C. §702; 28 U.S.C. §2201(a); 28 U.S.C. § 1331. Venue is proper under 28 U.S.C. § 1391(e).

III. PLAINTIFF

3. UCIDA is a cooperative corporation, registered and in good standing in the State of Alaska, that represents commercial fishermen who utilize drift gillnets in the Exclusive Economic Zone (EEZ) of Cook Inlet, Alaska to harvest salmon. UCIDA actively participates in efforts at the state and national level to promote the interests of its members. Members of UCIDA consist of resident and non-resident commercial fishermen who rely predominately upon the harvests of sockeye salmon to earn their livelihood. Most of the sockeye salmon harvested by UCIDA members are returning to the major spawning rivers in Cook Inlet; in particular the Kenai, Kasilof, Crescent, and Susitna Rivers.

4. In addition to participating in the commercial fishery, some UCIDA members participate in recreational fishing, including UCIDA members from other states. Although UCIDA does not generally advocate for the recreational interests of its

BALDWIN & BUTLER, LLC.
125 N. Willow Street
Kenai, AK 99611
Phone (907) 283-7167
Fax (907) 283-8435

members and it is not UCIDA's primary purpose, some of UCIDA's members are precluded from participating in resident-only fisheries and are therefore harmed by ongoing state regulations that prohibit non-resident participation in recreational fisheries.

5. In February of 2008, UCIDA represented its members at the state level, opposing promulgation of proposed state salmon regulations that would substantially and adversely affect their fishery in the EEZ. Immediately after the State of Alaska promulgated these regulations, which would have a substantial and adverse affect on the ability of UCIDA members to remain economically viable, UCIDA filed a petition for emergency rulemaking (Petition) with the Secretary of Commerce pursuant to 5 U.S.C. §553(e), urging the Secretary to initiate emergency preemption proceedings against the State of Alaska under 16 U.S.C. §1855(c)(1) prior to the 2008 salmon season.

6. The Secretary failed to respond to the UCIDA petition. UCIDA brings this action on behalf of its members – those commercial salmon fishermen operating drift gillnets in the EEZ and state waters – to assert their right to petition for rulemaking under the APA and Magnuson-Stevens. UCIDA has standing under both the APA and Magnuson-Stevens to bring this action. The Secretary unlawfully failed to respond to UCIDA's Petition, causing irreparable injury to UCIDA's members. Because the injury caused by the challenged state regulations is ongoing, and the Secretary's ongoing failure to respond to the Petition denies UCIDA due process under the APA and the U.S. Constitution, there is an ongoing controversy over which this court can grant a remedy.

IV. DEFENDANT

7. Defendant Otto Wolf is the Acting Secretary of Commerce, who has management authority over anadromous species throughout their range under Magnuson-Stevens. He is vested with responsibility for implementing and enforcing Magnuson-Stevens under 16 U.S.C. § 1855(d). He is being sued in his official capacity

V. BACKGROUND

8. Congress exercised federal jurisdiction over all anadromous fish species, including Pacific salmon throughout their range, in the Magnuson-Stevens Fisheries Conservation and Management Act (Magnuson-Stevens Act), as reauthorized in 2006. 16 U.S.C. §1811(b)(1). Congress clearly articulated ten national standards applicable to conservation and management of anadromous species. The ten national standards are:

> (1) Conservation and management measures shall prevent overfishing while achieving, on a continuing basis, the optimum yield from each fishery for the United States fishing industry.
>
> (2) Conservation and management measures shall be based upon the best scientific information available.
>
> (3) To the extent practicable, an individual stock of fish shall be managed as a unit throughout its range, and interrelated stocks of fish shall be managed as a unit or in close coordination.
>
> (4) Conservation and management measures shall not discriminate between residents of different States. If it becomes necessary to allocate or assign fishing privileges among various United States fishermen, such allocation shall be (A) fair and equitable to all such fishermen; (B) reasonably calculated to promote conservation; and (C) carried out in such manner that no particular individual, corporation, or other entity acquires an excessive share of such privileges.

BALDWIN & BUTLER, LLC.
125 N. Willow Street
Kenai, AK 99611
Phone (907) 283-7167
Fax (907) 283-8435

(5) Conservation and management measures shall, where practicable, consider efficiency in the utilization of fishery resources; except that no such measure shall have economic allocation as its sole purpose.

(6) Conservation and management measures shall take into account and allow for variations among, and contingencies in, fisheries, fishery resources, and catches.

(7) Conservation and management measures shall, where practicable, minimize costs and avoid unnecessary duplication.

(8) Conservation and management measures shall, consistent with the conservation requirements of this chapter (including the prevention of overfishing and rebuilding of overfished stocks), take into account the importance of fishery resources to fishing communities in order to (A) provide for the sustained participation of such communities, and (B) to the extent practicable, minimize adverse economic impacts on such communities.

(9) Conservation and management measures shall, to the extent practicable, (A) minimize bycatch and (B) to the extent bycatch cannot be avoided, minimize the mortality of such bycatch.

(10) Conservation and management measures shall, to the extent practicable, promote the safety of human life at sea

16 U.S.C. §1851(a).

9. Congress then delegated to the Secretary of Commerce (Secretary) and eight Regional Fishery Management Councils, authority to implement the Magnuson-Stevens Act. The Secretary has authority and the responsibility to "promulgate such regulations,...as may be necessary to discharge such responsibility or to carry out any other provision of [Magnuson-Stevens]." 16 U.S.C. §1855(d). The Secretary delegated his authority to the National Marine Fisheries Service (NMFS) to enact appropriate

BALDWIN & BUTLER, LLC.

Kenai, AK 99611
Phone (907) 283-7167
Fax (907) 283-8435

regulations to implement and enforce the anadromous species provisions of Magnuson-Stevens.

10. The North Pacific Fishery Management Council (Council) retains jurisdiction over anadromous species in the EEZ from 3-200 miles off the coast of Alaska. The Council delegated management authority to the State of Alaska in the EEZ through the 1990 Fishery Management Plan for Salmon in the EEZ off the Coast of Alaska (FMP). The FMP for salmon closes the EEZ west of Cape Suckling to salmon fishing, with the exception of three historic net fisheries. The Cook Inlet commercial salmon drift gillnet fishery occurs in the EEZ west of Cape Suckling and is one of the three historic net fisheries preserved in the FMP.

11. The State of Alaska manages anadromous species in state waters under the Statehood Act, which provided that management of fish and game resources would transfer to the state once "adequate provision for the administration, management, and conservation of said resources in the broad national interest" were in place. Alaska Statehood Act, Public Law 85-508, 72 Stat. 339, July 7, 1958.

12. The Statehood Act incorporates the Submerged Lands Act of 1953 by reference. The Submerged Lands Act, while transferring title to the submerged lands under the navigable waters of the United States to the states, retained federal jurisdiction over those waters and resources for the purposes of navigation and commerce. Alaska Statehood Act, §6(c); 42 U.S.C. §772 *et seq.*

BALDWIN & BUTLER, LLC.
125 N. Willow Street
Kenai, AK 99611
Phone (907) 283-7167
Fax (907) 283-8435

13. Congressional authority to enact Magnuson-Stevens and the Submerged Lands Act is rooted in the Commerce Clause of the United States Constitution, which provides that Congress shall regulate commerce among the several states and with foreign nations. U.S. Const. Art. I, § 8.

14. The State of Alaska promulgated regulations that permit Alaska residents to harvest salmon to the exclusion of commercial fisherman and non-resident recreational fishermen in the drainages of Cook Inlet. UCIDA alleges that resident-only harvests of salmon are violative of Magnuson-Stevens, and they substantially and adversely affect the Cook Inlet EEZ fishery, thereby causing ongoing harm to UCIDA's members.

15. UCIDA alleged violations of federal law under Magnuson-Stevens including discrimination based on residency, failure to manage for optimum sustained yield, and harm to essential fish habitat, and sent a letter to the North Pacific Fishery Management Council urging the Council to provide comments to the Secretary of Commerce as provided for in the Council's procedures and the FMP.

16. The Council, through its executive director, responded that the Council had no obligation to provide comments to the Secretary, and that there are no federal laws that apply to salmon management in state waters.

17. UCIDA then filed a PETITION FOR EMERGENCY RULES RELATED TO SALMON MANAGEMENT IN COOK INLET, ALASKA pursuant to the APA and Magnuson-Stevens with the Defendant on June 16, 2008, alleging a violation of Magnuson-Stevens and urging Defendant to take emergency action.

BALDWIN & BUTLER, LLC.
125 N. Willow Street
Kenai, AK 99611
Phone (907) 283-7167
Fax (907) 283-8435

18. Specifically, UCIDA challenged the resident-only fisheries, mandatory closures, arbitrary season opening and closing dates, escapement goals that do not meet optimum sustained yield, and failure of the state to utilize the best available science when promulgating regulations. UCIDA requested that the Secretary take steps to protect the commercial fishing community and the essential fish habitat upon which UCIDA's members and salmon rely.

19. The Secretary failed to respond to the Petition.

20. On July 24, 2008, the Cook Inlet fishery targeting Kenai River sockeye salmon was closed for the season in an attempt to achieve the minimum escapement goal. The resident-only personal use fishery continued unabated until the normal regulatory season closure at 11:00 p.m. on July 31. The minimum sockeye salmon escapement goal for the Kenai River was not met.

21. On November 20, 2008 a letter was sent to the Secretary inquiring into the status of the Petition. As of March 3, 2009, there has been no response to the Petition or the letter of inquiry related to the Petition.

22. The same regulations are in place for the 2009 and 2010 seasons which led to the 2008 closure of the EEZ fishery in favor of resident-only fisheries. UCIDA's members have been harmed and continue to be harmed by the state regulations pertaining to salmon management in Cook Inlet and the EEZ.

23. UCIDA sought a remedy through the petition process available under the APA in an effort to redress the ongoing harm suffered by its members. The Secretary, by

Fax (907) 283-8435

failing to respond to the Petition, denies UCIDA's members due process under the provisions of the APA, Magnuson-Stevens, and the United States Constitution.

First Claim
Defendant Failed to Respond to UCIDA's Petition for Emergency Rulemaking

24. Paragraphs 1 through 23 are realleged and incorporated by reference herein.

25. UCIDA's members have a statutory interest under the APA and Magnuson-Stevens related to petitions for rulemaking which are filed with the Defendant.

26. UCIDA'S members also have a substantive interest in the commercial fishery in the EEZ of Cook Inlet as recognized by Congress in Magnuson-Stevens, including adherence to the ten national standards and protection of essential fish habitat.

27. Defendant unlawfully withheld agency action regarding UCIDA's Petition, resulting in actual harm to UCIDA's members when their fishery was closed in favor of resident-only fisheries and the minimum escapement goal for sockeye salmon was not achieved in the Kenai River. Defendant's inaction failed to provide procedural protections to ensure that the ten national standards are met and that essential fish habitat is protected. UCIDA members suffer ongoing harm because the same regulations which closed the Cook Inlet fishery in 2008 and failed to adhere to the ten national standards and fail to protect essential fish habitat are in place for the 2009 and 2010 seasons.

28. UCIDA's members have a statutory and substantive interest in the Cook Inlet EEZ salmon fishery that could have been protected if Defendant acted lawfully and

BALDWIN & BUTLER, LLC.
125 N. Willow Street
Kenai, AK 99611
Phone (907) 283-7167
Fax (907) 283-8435

considered the Petition. Defendant's failure to act resulted in actual harm to UCIDA members during the 2008 season, and because the same state regulations remain in place, UCIDA members will suffer harm in the 2009 and 2010 seasons that is concrete and particularized – restrictions on their fishery in favor of resident-only fisheries, lost yield, and essential fish habitat degradation.

29. UCIDA respectfully requests this court to declare resident-only fisheries preempted under the Commerce Clause and Magnuson-Stevens as a matter of law. Further, UCIDA requests an order of remand to the Defendant to thoughtfully consider all elements of UCIDA'S Petition and to initiate preemption proceedings against the State of Alaska to redress the ongoing harm suffered by UCIDA members.

Second Claim
Defendant Violated UCIDA's Members Due Process Rights Under the 5th Amendment

30. Paragraphs 1 through 29 are realleged and incorporated by reference herein.

31. Defendant's failure to respond to UCIDA's Petition deprived UCIDA's membership due process of law under the Fifth Amendment to the United States Constitution regarding their statutory liberty to commercial fish granted under Magnuson-Stevens and the APA.

Third Claim
Defendant Violated UCIDA's Members Equal Protection

BALDWIN & BUTLER, LLC.
125 N. Willow Street
Kenai, AK 99611
Phone (907) 283-7167
Fax (907) 283-8435

32. Paragraphs 1 through 31 are realleged and incorporated by reference herein.

33. Defendant's failure to respond to UCIDA's Petition deprived UCIDA's membership equal protection under the United States Constitution, the APA, and Magnuson-Stevens.

PRAYER FOR RELIEF

Therefore, Plaintiff respectfully requests that the Court:

1. Declare Defendant's failure to respond to UCIDA's Petition a violation of the APA, Magnuson-Stevens, and the 5th Amendment for unreasonably withholding agency action.

2. Declare Defendant's actions a deprivation of the due process and equal protection rights of UCIDA's members.

3. Declare that the state authorized resident-only salmon fisheries in Cook Inlet, Alaska are unconstitutional and therefore preempted by federal law.

4. Order the Defendant to initiate preemption proceedings against the State of Alaska under Magnuson-Stevens for actions that substantially and adversely affect the commercial salmon fishery in the EEZ of Cook Inlet.

5. Order the Secretary to review the Cook Inlet Salmon regulations and show cause that they meet the ten national standards of Magnuson-Stevens, with particular

Fax (907) 283-9435

attention to season opening and closing dates, mandatory closures, whether the Kenai River sockeye salmon escapement goals achieve optimum sustained yield, and whether adequate measures are in place to protect essential fish habitat.

6. Order the Secretary to provide comments to the State of Alaska and to establish a consultation process for protection and rehabilitation of essential fish habitat in the Cook Inlet basin.

7. Order the Secretary to provide procedural guidance to the North Pacific Fishery Management Council regarding requests for comments to the Secretary related to fishery management by members of the public and other interested parties.

8. Retain jurisdiction over this matter until such time as the Secretary of Commerce demonstrates to the court that salmon regulations in Cook Inlet comply with the ten national standards and other provisions of the Magnuson-Stevens Act.

9. Award Plaintiff the costs of this action, including reasonable attorney's fees, pursuant to the Equal Access to Justice Act, 28 U.S.C. § 2412.

10. Grant Plaintiff such other and further relief as the Court deems just and proper.

DATED: This 4th day of March, 2009.

Respectfully submitted,

ALASKA STATE LEGISLATURE

Bill Stoltze
State Representative
House District 16

Charlie Huggins
State Senator
Senate District H

Huggins, Stoltze Introduce Resolution to Protect Alaska's Personal Use Dip Net Fisheries

(JUNEAU, April 9, 2009) – Senator Charlie Huggins (R-Mat-Su) and Representative Bill Stoltze (R-Chugiak/Mat-Su) today announced that they are introducing companion resolutions requesting Governor Sarah Palin's administration to join the federal government in opposing a lawsuit filed by a Cook Inlet commercial fishing group challenging salmon management in the inlet. Senate Joint Resolution 22, sponsored by Senator Huggins and co-sponsored by Senators Johnny Ellis (D-Anchorage), Bill Wielechowski (D-Anchorage) and Linda Menard (R-Wasilla), was introduced this morning. Representative Stoltze plans to introduce a companion resolution in the House of Representatives tomorrow.

"With this resolution, we're trying to get a fair shake for Alaskans who fish to feed their families and asking the governor to defend the state's authority to manage our fisheries in a responsible manner," said Senator Huggins. "If this lawsuit is successful, it could pre-empt state management and be detrimental to Alaskans' access to our salmon resources."

The lawsuit was filed last year by the United Cook Inlet Drift Association (UCIDA) against the U.S. Department of Commerce opposing the current management of salmon fisheries in Cook Inlet. UCIDA is an association of both resident and non-resident commercial fishermen who participate in drift gillnet salmon fisheries in the inlet. Senate Joint Resolution 22 would express the Senate's objection to the association's effort to have state-managed personal use dip net fisheries declared unconstitutional and therefore pre-empted by federal law.

"It is appalling that this Alaska resident-only salmon fishery is under assault by special interests, said Representative Stoltze. "Dipnetting is a great part of Alaska - a true family tradition."

The resolutions request Governor Palin "to direct the attorney general to oppose this lawsuit", and, "in cooperation with the legislature, to re-examine the inordinate and potentially unfair, unethical, and disproportionate influence of the commercial fisheries industries on fisheries management in Alaska."

SJR 22 has been referred to the Resources Committee and the Judiciary Committee. The House version will be referred to committees tomorrow.

For more information, contact Senator Huggins or Sharon Long at 907-465-3878, or Representative Stoltze or Ben Mulligan at 907-465-4958.

Subject: Support for SJR 22

Dear Senators:

I strongly support passage of SJR 22. The resolution thoroughly captures my thoughts. I hope the examination of the fisheries management process the resolution calls for actually happens.

In this same vein, please also reject the appointment of Brent Johnson to the Board of Fisheries, and encourage the governor to provide more geographic balance and broader user group expertise to the board.

Thank you for whatever consideration you give to this.

sincerely,
Larry Edfelt

Subject: SJR 22

Dear Ms. Long,

Please let Sen. Huggins know that we are in full support of SJR 22; for too long the commercial fishing industry has dominated boards and councils regarding fisheries management. It past time that a more equitable balance be established on these boards and councils and we believe SJR 22 to be a first step in that direction.

Sincerely,
Charles E. and Alice J. Collins

Subject: support for SJR 22

support for SJR 22:

Dear Ms Long: Please be aware that I support SJR 22. The imbalance in the representation of our fisheries decision making councils and boards is a major causeof the creation of rules that are benefitting a small number of commercial fisherman in a disproportional manner. There finally is a study out that reflects the huge value of sport caught fish. The recreational fishery not only benefits local Alaskans directly by putting food in their freezers, but the financial benefit from tourist dollars is widely spread through the economy by the huge variety of the many small businesses that support this industry.

I think specifically the failures of the North Pacific Fisheries Management council to create a reasonable allocation of halibut resources between private and commercial sector is a result of a ridiculously biased council and somewhat biased staff and legal advisors. If there were to be a balance on that council, they might actually have produce a reasonable solution instead of the 15 years of failed efforts and legally flawed rules.

Thank you for your efforts in protecting the public interest in its resources,

Holly Van Pelt

Senate Joint Resolution 27 – National Seafood Marketing

Senate Joint Resolution (SJR) 27 communicates to the Obama Administration, the Alaska Congressional Delegation, and Congress the Legislature's support for using a portion of federal revenues generated from duties on imported seafood and fish products for marketing American seafood—including that harvested in Alaska.

Since the 1990s, well over fifty percent of the fish consumed annually by American families is the product of foreign countries. And every year the governments of many of these countries bankroll multi-million-dollar campaigns to market their seafood to Americans.

While the Alaska seafood industry as well as the state of Alaska contribute millions in funding for marketing purposes, the amounts are not adequate to finance the vigorous, consistent, and innovative promotion that our products require in the face of foreign competition.

Meanwhile, each year hundreds of millions of dollars are derived from duties on these imported fish and fish products that so aggressively compete with American seafood. Yet only an insignificant fraction of this revenue has ever been employed to promote domestically produced seafood.

SJR 27 endorses putting a portion of these revenues to work in developing and maintaining the robust domestic markets that healthy, sustainable Alaskan seafood deserves. The resolution urges Congress to pass legislation dedicating such funding for the effective domestic marketing of American seafood. It asks the Alaska Delegation in Congress to work together with representatives from other seafood producing states to accomplish these goals.

Creation of a
National Seafood Marketing Coalition

Executive Summary

U.S. seafood producers have common interests. These common interests are often overshadowed by a variety of conflicts, such as access and allocation. U.S. seafood producers can set aside conflicts in order to focus on areas of common interest.

U.S. seafood producers need parity with other U.S. food producers. The bottom line is that U.S. seafood producers are food producers and struggle with the same issues as other U.S. food producers. However, seafood producers are not included in many of the USDA programs which currently benefit farmers. For example, seafood producers do not receive specific funding for domestic marketing and product development which leaves us behind foreign competitors. Additionally, "wild caught" seafood producers cannot participate in the USDA Farm Service Agency's Loan Program due to the agency's definition of "fish."

These two examples, *marketing and affordable working capital,* address areas which are critical to the survival and success of the U.S. seafood industry. In order to affect positive change for U.S. seafood producers, we need to begin to think strategically. Below is an outline of those strategic steps.

Strategic Steps to Success:

1) Create a Coalition
2) Define the issue
3) Build support
4) Identify potential legislative vehicles
5) Wait for the correct timing

Step 1 – Create a Coalition: The formation of a *National Seafood Marketing Coalition* (Coalition) creates a forum on which to build grass roots support and effect the changes necessary in the industry. The creation of the Coalition is vital to the health of our industry and the survival of our coastal communities.

Step 2 – Define the issue: The first issue adopted by the Coalition could be the establishment of a National Seafood Marketing Fund which targets revenues from import duties on fish and fish products as an annual funding source. Other issues may be adopted by the Coalition in the future; however, beginning with one single issue allows the Coalition to focus on building its relationships and support around that issue.

A focused single issue and message with broad support is essential to achieving success. Marketing is an issue which will help all sectors of the industry by bringing higher demand and value to U.S. seafood products.

Step 3 – Build support: Grassroots support is the single most powerful influence on our Congressional Delegates. The Coalition must build support at the local, regional and national levels to create an unshakeable foundation of support for its issues. To do this, Coalition members must rally organizations, businesses, communities, and states with interest in the seafood industry, to support Coalition issues in Congress.

Step 4 – Identify potential vehicles: The next strategic step for success is to identify potential legislative vehicles on which to attach the Coalition's issue. A potential vehicle could be President Obama's Jobs Bill, mentioned in his State of the Union Address.

Step 5 – Wait for the correct timing: The political timing must be correct in order to accomplish our goal.

We must form a strong, supportive Coalition and be strategically smart. Remember, we have legitimate value in our goal; a healthy U.S. seafood industry is good for the economy and good for the country.

National Seafood Marketing Coalition

Proposal to Create a National Seafood Marketing Fund

DRAFT-DRAFT-DRAFT

Need

American seafood products are increasingly forced to compete with imported seafood and many other sources of protein in the domestic marketplace. Consequently, United States fishermen and seafood producers struggle to maintain a healthy business profile. Ex-vessel prices are too low to sustain many domestic fisheries. Fishing jobs are being lost and fishery dependant communities are in decline. It is in the interest of the U.S. to maintain a strong domestic seafood industry.

Concept

Develop national legislation directing a portion of the import duties collected on fish and fish products be dedicated to a National Seafood Marketing Fund (NSMF). The NSMF would market domestic seafood which directly competes with foreign imported seafood. Secondly, the legislation would establish nine (9) Regional Seafood Marketing Boards to receive, manage and direct these dedicated funds.

Factual Background

Seafood imports generate two sources of revenue for the U.S. treasury. First, approximately $300 million dollars annually ($282 million in 2008) is generated through duties and tariffs on imported fish and fish products. Second, as much as $400 million dollars may be generated annually from the antidumping/countervailing duties (AD/CVD) on imported fish and fish products.

The first source of revenue, money collected from import duties on fish and fish products, are funds for the U.S. Department of Agriculture (USDA) and the U.S. treasury. Annually, 30% of these funds are transferred from USDA to the U.S. Department of Commerce (USDC) National Marine Fisheries Service's *Promote and Develop Fisheries Products* (P&D) account. NMFS further allocates a majority of the P&D account to Operations, Research and Facilities (ORF). The remaining portion funds the Saltonstall-Kennedy (S-K) program, which traditionally has few or no proposals to *"promote and develop fisheries products."* To date, it has been difficult to find the disposition of the

remaining funds retained within the USDA. A breakdown of the appropriation of these funds for fiscal years 2007 & 2008 is listed below:

Revenue from Import Duties on Fish & Fish Products (millions)

Year	Total Duties in USDA	P&D Account	Remaining in USDA
FY07	**$ 276.05**	$ 82.82	$ 193.23
% of Total Duties	**100%**	30%	70%
FY08	**$ 281.98**	$ 84.59	$ 197.39
% of Total Duties	**100%**	30%	70%

P&D Account Breakdown	
ORF	SK
$ 79.00	$ 3.82
29%	1%
$ 77.00	$ 7.59
27%	3%

The 1956 S-K Act was amended in 1983 to require that 60% of the P&D, or approximately $50M, be used to fund the S-K program annually. Further, it is interesting to note that the amount of funds used for the S-K program since 1983 has never met this minimum of 60%; the average for this period is 11.8% (including promotional and marketing funds).

From FY1978 to FY2008, import duties on fish and fish products have grown from $43.3M to $282M. However, funds available for the S-K program have shrunk from $13M to $7.6M. The average for this period is $7.3M.

The second source of revenue, the antidumping/countervailing duties (AD/CVD), is not currently allocated for any use by domestic seafood producers, although domestic seafood producers are dramatically affected by imported products often subsidized by foreign governments. AD/CVD funds collected from imported seafood have been difficult to definitively identify; however, it is believed to be as much as $400M annually.

Funding Source

This proposal suggests an annual funding mechanism for the National Seafood Marketing Fund by utilizing equal portions of the revenue from import duties on fish and fish products and the revenue from AD/CVD. The portion of revenue from import duties on fish and fish products should be equal to the congressional intent of 60% of the P&D account (approximately $50M annually) which would then be matched with an equal amount from the AD/CVD.

To be clear, the import duties on fish and fish products targeted for this proposal are the 70% remaining in USDA, not the 30% transferred to NMFS for ORF and S-K.

Structure of Regional Seafood Marketing Boards

1. Nine (9) Regional Seafood Marketing Boards (Boards) would be established in order to include all U.S. seafood producers which would include mariculture and aquaculture. Eight (8) Boards would geographically parallel the 8 Regional Fishery Management Councils authorized by the Magnuson-Stevens Act. The 9th Board would represent inland domestic seafood production. Marketing activities of each Board would be directed toward seafood caught or products produced in each region.

2. Establish a statutorily "fixed" annual funding mechanism using an equal portion of the import duties on fish and fish products and the AD/CVD. The total amount appropriated annually would be divided into thirds:

- One-third distributed equally to all 9 regional Boards.
- One-third distributed based on the comparative regional value of seafood produced in the most recently reported year.
- One-third distributed based on the comparative regional volume of seafood (metric tons) produced in the most recently reported year.

3. The Boards should be limited in scope to promotion and marketing, including new product development, of seafood harvested and/or produced in each region (e.g. no imported products). "Promotion and marketing, including new product development" should be defined broadly enabling Boards to respond quickly to market needs.

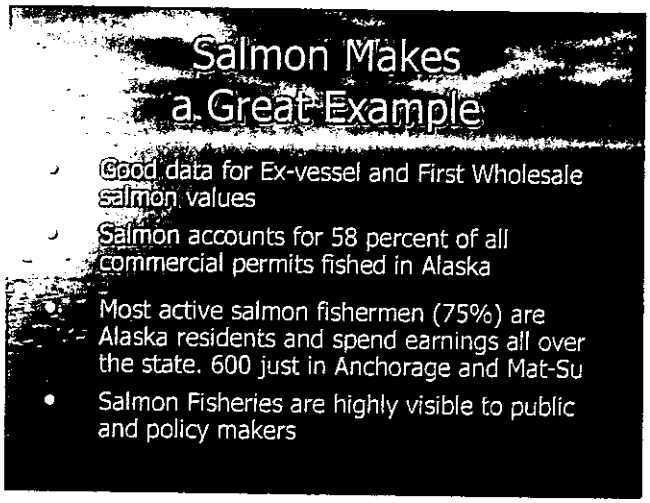
4. Boards serve as the regional "umbrella funding" entity. The Boards' activities should be limited to the awarding of grants and the distribution of funds through a Request for Proposal process. Boards would not manage marketing programs. Existing marketing or development entities, such as the Wild American Shrimp, Inc., Louisiana Seafood Promotion and Marketing Board, Maine Lobster Promotion Council, Alaska Seafood Marketing Institute, or the California Salmon Council could also apply to the Boards for funding to support their programs.

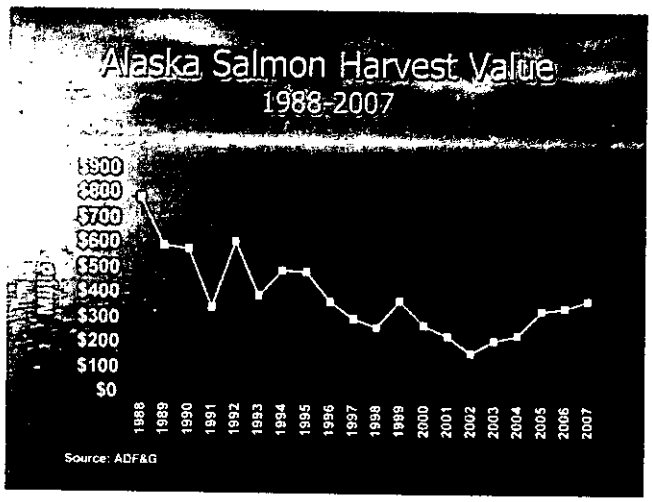
In addition, the Boards, as regional "umbrella" entities, should be encouraged to also focus on smaller (niche) marketing initiatives by requiring Boards to distribute a specific portion of their annual funding to "small businesses" as defined by the Small Business Administration.

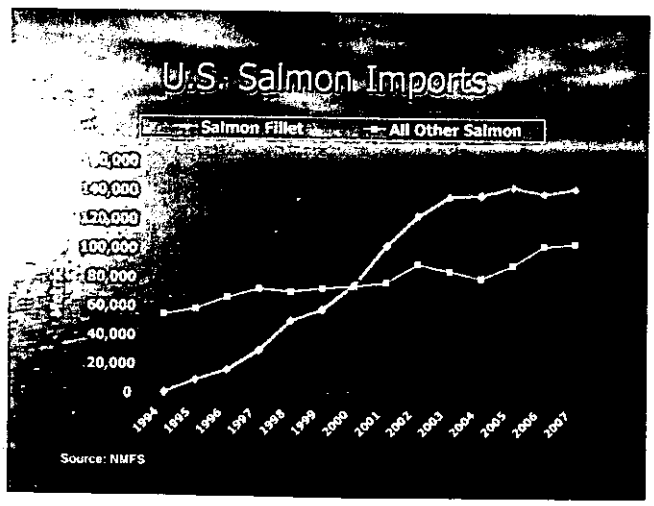
Boards can spend no more than 10% of their annual funding for administration and operational expenses.

5. Cooperation between Boards should be encouraged by requiring the Board chairmen to meet semi-annually to discuss common species, marketing projects and issues of concern. Semi-annual meetings could also include representatives from various existing seafood marketing organizations as well.

Why Marketing?
An Example from the Alaska Salmon Industry







In 1991, the Alaska salmon industry suffered from a huge influx of imported farmed salmon in consumer-friendly forms.

From 1991 to 2002, the value of Alaska salmon continued to drop as the import of farmed salmon continued to rise.

As the demand for Alaska salmon fell, so did the funds used to market Alaska salmon through the Alaska Seafood Marketing Institute (ASMI). ASMI is funded based on a percent tax on the industry.

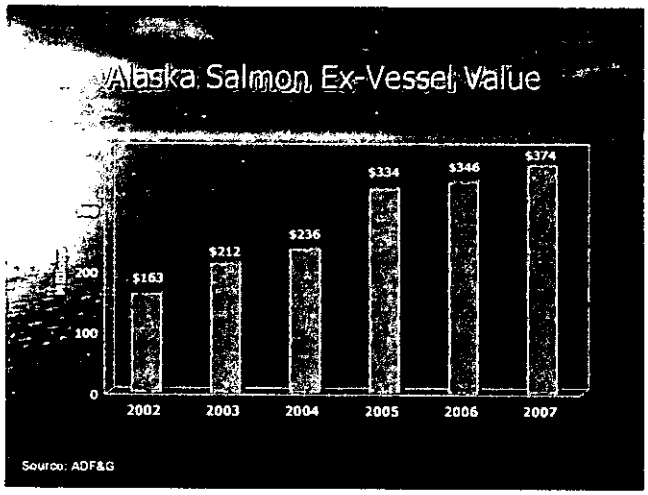
As the value of the fishery declined, the marketing funds desperately needed to pull the industry out of the tail-spin were also declining, furthering the downward trend.

During this time, approximately two-thirds of the fishermen and processing companies went out of business across Alaska.

In 2002, the Alaska salmon industry hit the lowest point of profitability in history.

Definitions

- Ex-vessel Value, $1.6 billion in 2007
  - Payment to Harvesters
    - Most common measure, basis for taxation, captures activity of harvest sector only
- First Wholesale Value, Est. $3.6 billion
  - First sale by a processor to a buyer outside their affiliate network
    - Not commonly used, but captures the full spectrum of economic activity



Value Growth Drivers

- Biology
  - Strong sockeye harvest
  - Record and near-record pink & chum harvest
- Salmon Product-form Shifts
  - Pink salmon
  - Fillet production
- Market Activity
  - Production & consumption growth
  - Market receptive to AK seafood core messages
  - Effective Differentiation

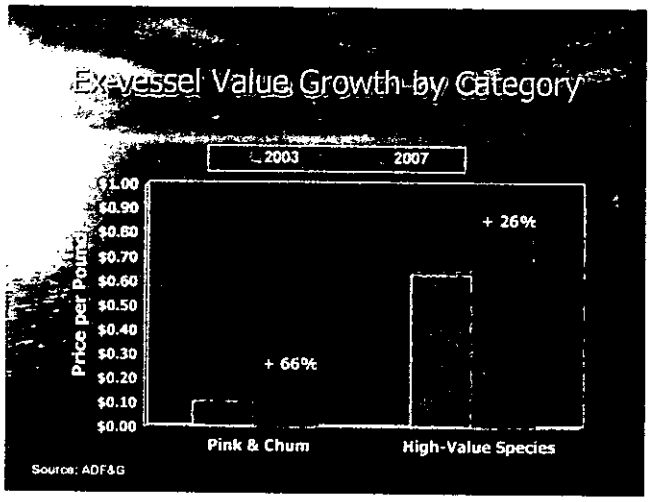
Also in 2002, Governor Frank Murkowski and his Salmon Cabinet designed and implemented the Alaska Salmon Revitalization Plan, funded with approximately $40 million, plus an equal amount of matching funds from private industry.

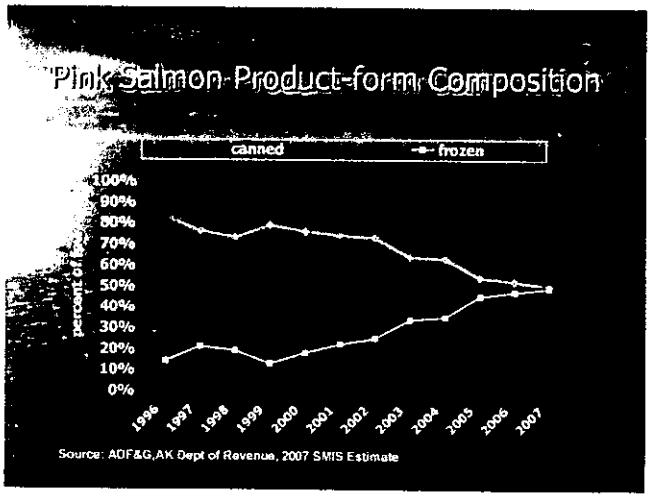
At this same time, Senator Ted Stevens created the Alaska Fisheries Marketing Board (AFMB) out of frustration in trying to meet the intent of Congress to use 60% of the Promote & Develop Fisheries Account funds to "promote and develop fisheries products." AFMB is considered a pilot project to the current proposed National Seafood Marketing Fund.

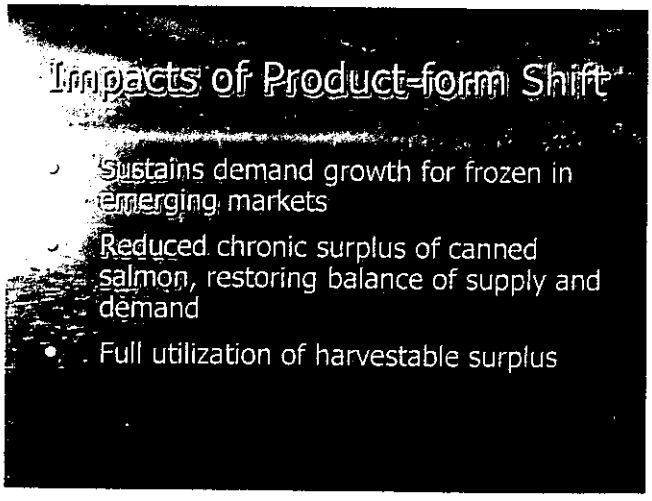
The AFMB was funded with $36 million between 2002 and 2007.

The combination of these funds, over $116 million, was used for marketing, product development and infrastructure with an emphasis on the failing salmon industry.

The positive results of these investments are significant.







Results of Investments in Marketing:

--Increased quality on vessels and in processing plants.

--Increased the number of new product forms, such as fillets, portions, and consumer-ready products.

--Decreased the number of old product forms, such as canned and headed-and-gutted salmon.

--Changed from focusing on the primary processing industry to the secondary processing industry.

--Changed from focusing on the salmon market to focusing on the food market.

--Changed from a commodity-driven market to a consumer-driven market.

--Brought fishermen, processors, wholesalers and government agencies to the table to determine what was needed as market conditions were dynamically changing.

First Wholesale: The Full Measure of Salmon Value

- Payment to harvesters
- Processors' profits
- Expenditures on goods and services associated with production in Alaska

Average First Wholesale Value Primary Pink Salmon Products

	Froz H&G	48-tall case
CY 2003	$.41	$35.57
CY 2004	$.52	$36.94
CY 2005	$.62	$41.00
CY 2006	$.82	$46.12
Jan-Sep 2007	$.75	$57.70

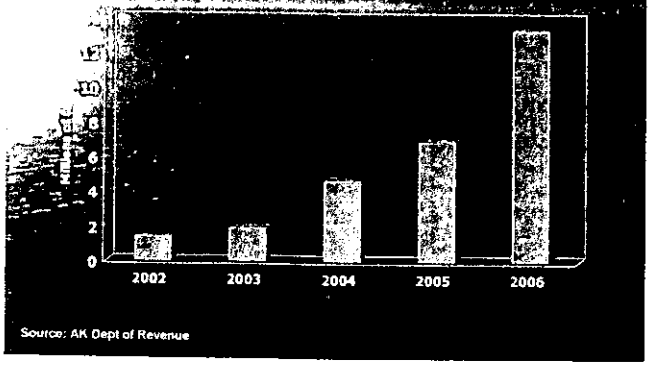
Alaska Sockeye Fillet Production



Source: AK Dept of Revenue

As a result of the investments in marketing (quality, product development, infrastructure and advertisement), the value of Alaska salmon began to rise almost immediately.

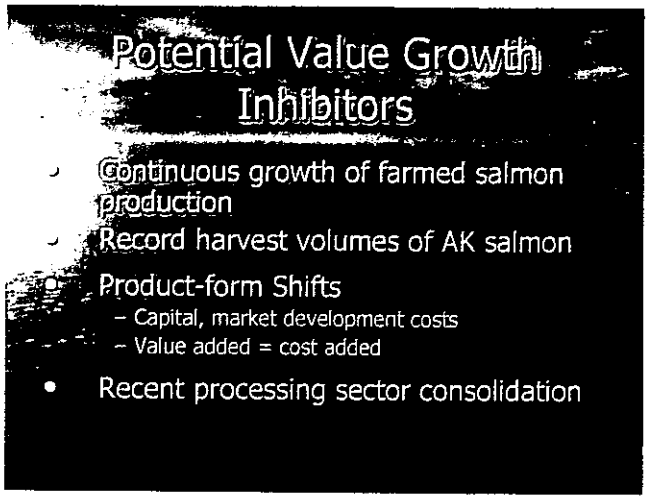
From 2002 to 2007, the ex-vessel values increased from $163 million to $374 million, an increase of 130%.

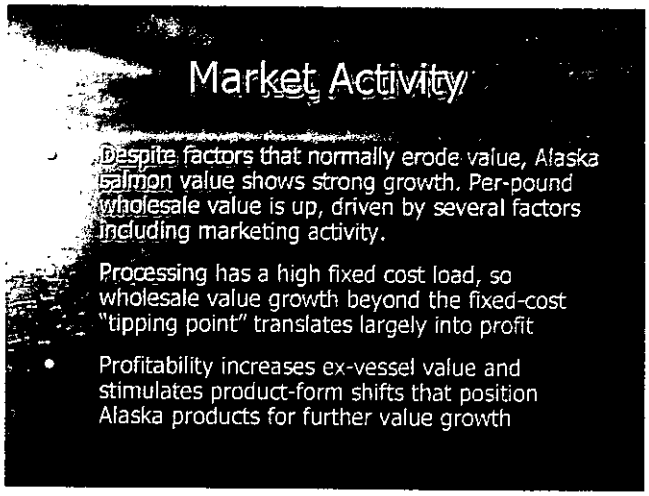
The first wholesale value of salmon increased from approximately $550 million to $850 million.

The price of canned pink salmon rose from $35.57 to $57.70 per case.

The amount of sockeye fillets produced continued to rise from approximately 2 millions pounds to almost 14 million pounds.

Many of the costs for processors are fixed. Therefore, as profitability began to rise, the percentage of profits that could be shared with fishermen also rose. The price paid to fishermen, as a percentage of the first wholesale value, increased from 29% to 40%.

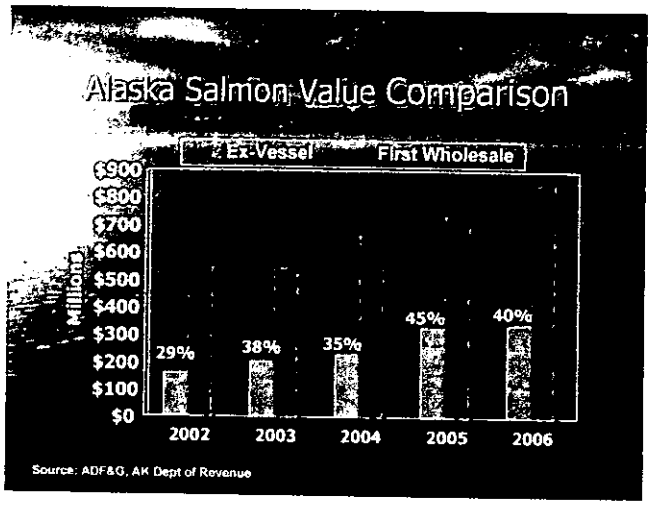


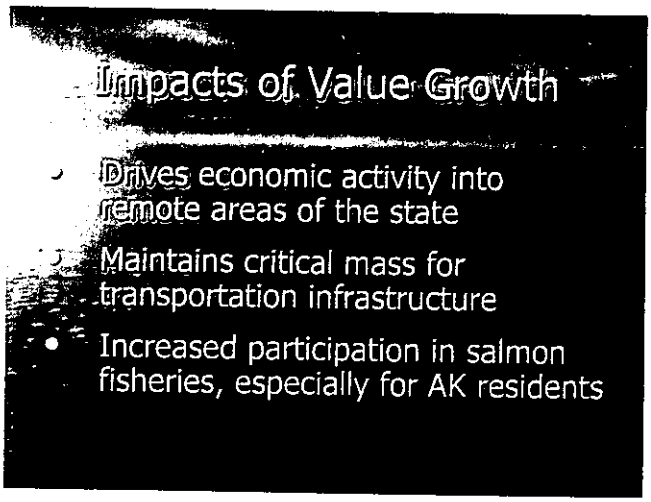


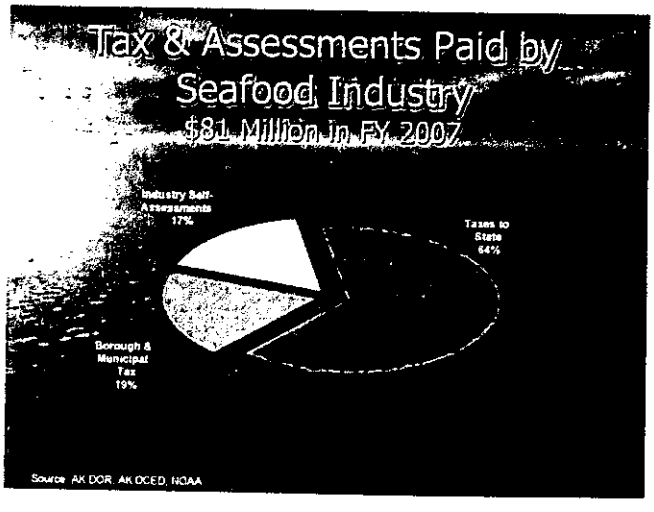
The rise in value of Alaska salmon continued even in the face of increased production of farmed salmon, record harvests of Alaska salmon, increased competition from other sources of seafood, and increased marketing efforts from foreign countries. For example, Norwegian salmon companies have budgeted $15 million for marketing in the U.S. for 2010.

The Alaska Seafood Marketing Institute (ASMI) continues to receive funding for marketing from taxes assessed on the industry. ASMI's budget from assessments is between $5 million and $10 million per year to market ***all*** Alaska Seafood. These assessments allow ASMI to leverage a variety of grants.

Since 2007, the influx of $116 million in marketing funds is no longer available. However, the ex-vessel value of salmon continues to rise. In 2008, ex-vessel values of Alaska salmon rose to $452 million, an increase of 177% over 2002 ex-vessel values.





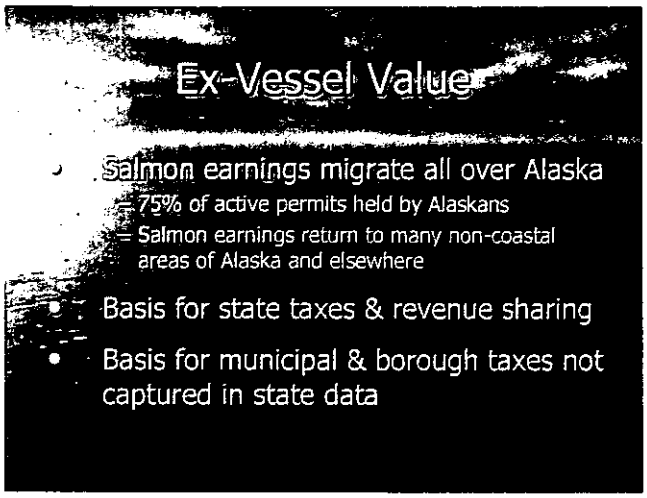


These marketing investments in the Alaska salmon industry were pure economic development.

As the value of the industry increased, economic activity also increased from rural areas of Alaska to urban centers, and even extending to other states which support the industry.

For example, as the industry began to be profitable again, upgrades were made in both the processing and harvesting sectors. Airlines invested in additional cargo capacity as more fillets and high quality salmon were shipped by air. Freight and trucking companies invested in upgrades as distribution lines changed.

Quality improvements and product development meant investments in equipment and machinery (i.e. ice machines, flash freezers and fillet machines) purchased through supply companies all over the country.



As the salmon industry increased in value, the tax revenue from the industry also increased. Salmon industry taxes support the continued marketing of Alaska seafood, the enhancement of the industry, state activities and municipal activities, such as schools and harbors.

This chain of economic impact continues to trickle down and is seen on local, regional, state and federal levels.

The investment in marketing Alaska salmon is a success story; it is also an example of what marketing can do for any product and the value of aggressive and continued marketing support, such as a *National Seafood Marketing Fund*.

*Note: Slides are excerpts from the McDowell Group's presentations to the Alaska Fisheries Marketing Board (Jan. 21, 2008) titled, "Alaska Salmon Industry: Value Growth Drivers, Secondary Impacts" & to the Alaska Seafood Marketing Institute (Feb. 21, 2008) titled "Value of the Alaska Fishing Industry to the State of Alaska".

Saltonstall-Kennedy Fishery Funding

Eugene H. Buck
Specialist in Natural Resources Policy
Resources, Science, and Industry Division

Summary

The Saltonstall-Kennedy Act established a fund that, among other things, has supported fishery research and development projects, with funding awarded annually on a competitive basis. Recent congressional "earmarks" have preempted the competitive process for awarding funding for industry projects. This report will be updated as this issue evolves.

The Saltonstall-Kennedy (S-K) Act, as amended (15 U.S.C. §713c-3), established a fund (known as the S-K Fund) that the Secretary of Commerce uses to finance projects and cooperative agreements for fishery research and development. Under this authority, projects or cooperative agreements are selected annually on a competitive basis to assist NOAA Fisheries (previously known as the National Marine Fisheries Service) in addressing concerns related to U.S. commercial and recreational fisheries. The S-K Fund is capitalized through annual transfers under a permanent appropriation to the Secretary of Commerce of 30% of the gross receipts collected by the Secretary of Agriculture under the customs laws on imports of fish and fish products.[1]

The objective of the S-K program is to address the needs of fishing communities in providing economic benefits for rebuilding and maintaining sustainable fisheries, and in dealing with the impacts of conservation and management measures.[2] The S-K program has become very important in addressing issues of immediate concern to the commercial fishing industry, by producing many new gear innovations, markets, and management options. Issues addressed have included fish harvesting, seafood quality improvements, domestic and foreign market development, efficiency and productivity improvements, and the costs/profitability of potential fishing industry investments.[3]

---

[1] Because of progressive reductions and eliminations of tariffs on edible fisheries products, most of these customs duties come from non-edible products, such as pearls, coral jewelry, etc.

[3] U.S. General Accounting Office, *Uses of Saltonstall/Kennedy Fisheries Development Funds*, (continued...)

Customs receipts have increased substantially during the life of this program, with almost $80 million currently being transferred annually to the Secretary of Commerce. **Table 1** summarizes program funding. In 1980, Congress enacted formal program authority to fund fishing industry development projects and expanded this authority in 1983, establishing a minimum percentage of S-K funds to be used to provide financial assistance to projects. The balance of S-K funds were to be used by the Secretary of Commerce for a national program of fisheries research and development to address aspects of U.S. fisheries not adequately addressed by funded industry projects. Beginning in FY1979, increasing amounts of S-K dollars have been transferred to the Department of Commerce's National Oceanic and Atmospheric Administration's (NOAA's) *Operations, Research, and Facilities* (ORF) account, reducing the funds and percentage of funds available for fishing industry projects and the national program. Since FY1982, the S-K program has never allocated the minimum amount (50% after FY1980 and 60% after FY1983) specified by law for industry projects. For example, in FY2002, slightly more than $79.1 million in customs duty receipts were transferred to the Department of Commerce from the Department of Agriculture. Of this amount, P.L. 107-77 transferred $68 million to NOAA's ORF account "for necessary expenses of activities authorized by law for the National Oceanic and Atmospheric Administration."[4] A total of slightly more than $11.1 million (14.1% of the customs receipts transferred to the Department of Commerce) remained for commercial fishing industry projects, the national program of fisheries research and development, and S-K program administration.

In FY2004 appropriations (P.L. 108-199, 118 Stat. 73, §208 of "General Provisions — Department of Commerce"), congressional earmarks designated funds for specific activities outside the regular competitive award process, and the competitive program was cancelled for FY2004.[5] A similar situation occurred in FY2003. Regardless of the merits of the activities funded through the congressional earmarks, some elements of the commercial fishing industry have expressed frustration when the competitive process is circumvented and projects are funded outside a competitive selection process.[6]

Since the S-K program requires no periodic reauthorization, no recent congressional oversight hearings have been held to review the department's rationale for allocating S-K funds between industry projects and agency base funding; how specific project areas to be funded are selected; how this program is administered and at what cost; how the results of funded projects are reviewed, disseminated, and used; and to what extent the program continues to meet its statutory objectives. Additional questions include whether the S-K

GAO/RCED0-85-145 (Washington, DC: Aug. 30,1985), p. ii.

[4] 115 Stat. 774-775.

[5] In several earlier instances, congressional "soft" earmarks were specified in report language associated with annual appropriations. Although such language is not legally binding, NOAA followed the direction in making funds available noncompetitively for various specific projects. Examples include the Interstate Shellfish Sanitation Conference for an education program on naturally occurring *Vibrio vulnificus* in shellfish and the Alaska Fisheries Development Foundation for a report entitled *An Ocean of Answers*.

[6] Discussions among commercial fishermen on the internet discussion group "Fishfolk" fishfolk@mitvma.mit.edu on Mar. 22-25, 2004.

program might be considered a continuing subsidy for the commercial fishing industry, whether the funding of industry projects continues to be useful, how the utility of the S-K program authority may have changed over time, and whether critical research might be done by industry if it were not funded by the S-K program.

Criticism of S-K program management generally comes from elements of the commercial fishing industry. Some critics of S-K Fund management question whether the administration of both regulation and research within the same agency raises questions about objectivity; they suggest that researchers might be hesitant to criticize the agency for its regulatory actions because they might lose access to future or continued project funding. Others suggest that the selection (i.e., restriction) of what types of projects will be funded also may administratively "earmark" funds, such as occurred in FY2003 when about half of all industry project funding ($5 million of an anticipated $10.3 million) was identified for direction to Atlantic salmon aquaculture development. Others suggest that the narrow agency identification of projects that would be funded in FY2003 actually prompted the subsequent congressional earmarks to specify projects that are to be funded.

The following chronology presents the development of this program. Key references are identified in footnotes by links to where they may be viewed, with care taken to select those resources that may be least transient. Full citations are not provided to these footnoted documents because of the lengthy organizations and titles for them.

Chronology

07/01/1954 — President Eisenhower signs the Saltonstall-Kennedy Act (68 Stat. 376; 15 U.S.C. §713c-3) into law.

06/15/1961 — Senate Commerce Subcommittee on Merchant Marine and Fisheries holds a hearing on fishery research and rehabilitation amendments to the S-K Act.[7]

10/01/1978 — NOAA's National Marine Fisheries Service (NMFS) begins receiving S-K dollars as annual budgetary transfers to NOAA's *Operations, Research, and Facilities* account.

12/22/1980 — Section 210 of the American Fisheries Promotion Act (P.L. 96-561) amends the S-K Act to require that not less than 50% of each fiscal year's funds be used to provide financial assistance for projects.

01/06/1983 — Section 423 of P.L. 97-424 amends the S-K Act to require that not less than 60% of each fiscal year's funds be used to provide financial assistance for projects.

[7] U.S. Congress, Senate, Committee on Commerce, Subcommittee on Merchant Marine and Fisheries, *Fishery Research and Rehabilitation (Amendments to Saltonstall-Kennedy Act)*, 87th Congress, 1st session, hearing on S. 1230 on June 15, 1961 (Washington, DC: GPO, 1961), 103 p.

08/30/1985 — The General Accounting Office (GAO) releases a report on the *Uses of Saltonstall/Kennedy Fisheries Development Funds* (GAO/RCED0-85-145), reviewing both NMFS in-house activities and competitive industry projects supported by S-K dollars. GAO examines the adequacy of the project selection process, project monitoring procedures, and the dissemination of project results. GAO presents views on the benefits of this program to the U.S. commercial fishing industry but makes no recommendations.[8]

11/14/1986 — The enactment of §209 of P.L. 99-659 creates the Fisheries Promotional Fund, to be capitalized with S-K funds.[9]

05/14/2002 — NOAA Fisheries announces the FY2003 S-K Program, allocating $5 million of an anticipated $10.3 million for Atlantic salmon aquaculture development.[10]

02/20/2003 — President Bush signs P.L. 108-7, wherein §209 (Division B; General Provisions — Department of Commerce) appropriates $10 million in S-K dollars for the Alaska Fisheries Marketing Board for FY2003.[11]

06/30/2003 — NOAA Fisheries announces the FY2004 S-K Program, suggesting that about $4 million would be available for projects.[12]

08/01/2003 — NOAA Fisheries publishes its 2003 S-K Report to Congress.[13]

01/23/2004 — President Bush signs P.L. 108-199, wherein §208 (Division B; General Provisions — Department of Commerce)[14] appropriates $17 million in S-K dollars for various specified fisheries programs for FY2004;[15] a "soft" earmark (H.Rept. 108-221, p. 89) identifies an additional $250,000 for the Gulf and South Atlantic Fisheries Foundation to continue a *Vibrio* education program.

03/19/2004 — NOAA Fisheries announces that the FY2004 competitive S-K Program is being canceled due to insufficient funding and all

2001	242,760	72,830	68,000	0	0	4,830	7%
2002	263,770	79,130	68,000	0	0	11,130	14%
2003	250,750	75,220	65,000	0	10,000	220	14%
2004	265,747	79,724	62,000	0	17,250	474	22%

[a].Except for FY2004, this column does not include the "soft" earmarks as previously discussed.

[aa].This amount includes funds for industry projects, the national program, and NMFS/NOAA Fisheries expenses for administering the industry projects. In FY2003, these administrative expenses were estimated at $500,000.

Alaska Seafood Marketing Institute
Resolution 2009-01

A RESOLUTION OF THE ALASKA SEAFOOD MARKETING INSTITUTE SUPPORTING FEDERAL FUNDING FOR UNITED STATES PRODUCED SEAFOOD

WHEREAS, the State of Alaska in conjunction with the fishing industry created the Alaska Seafood Marketing Institute (ASMI) to market and promote Alaska seafood; and

WHEREAS, ASMI has worked for 28 years to champion the "Alaska Brand" and to identify Alaska seafood as wild and sustainable; and

WHEREAS, effective marketing of Alaska's seafood requires a constant, consistent and long term marketing presence, especially in times of oversupply and new competition; and

WHEREAS, the Alaska seafood industry has "self assessed" fishery production to pay for ASMI's promotional activities; and

WHEREAS, despite the money raised from the Alaska Seafood Industry, ASMI's promotional activities are often limited and underfunded; and,

WHEREAS, in times of economic collapse or fishery oversupply, the industry is least able to increase marketing assessments; and

WHEREAS, the Federal Government collects approximately $280 million dollars annually through customs laws regulating the importation of fishery products, many of which compete with Alaska's fishery products; and

WHEREAS, funds collected from the importation of fishery products are not available for the domestic marketing of American seafood; and

WHEREAS, using fishery product import revenues to market American seafood will preserve American fishing and seafood processing jobs, U.S. processing capacity and ensure availability of domestic seafood for the American Consumer;

THEREFORE BE IT RESOLVED, that the Alaska Seafood Marketing Institute strongly supports the use of a portion of federally generated fishery product import revenues for the domestic marketing of Alaska seafood; and

Alaska Seafood Marketing Institute ▲ 311 North Franklin Street, Suite 200 ▲ Juneau, AK 99801-1147
Phone 907/465-5560 800/478-2903 ▲ Fax 907/465-5572 ▲ www.AlaskaSeafood.org ▲ info@AlaskaSeafood.org

THEREFORE BE IT FURTHER RESOLVED, that the Alaska Seafood Marketing Institute's support for the use of a portion of federally generated fishery product import revenues for the domestic marketing of Alaska seafood be communicated to Governor Sean Parnell, the Alaska Legislature, Senators Lisa Murkowski and Mark Begich, Representative Don Young and to the United Fishermen of Alaska.

[Page 833-836]

TITLE 15--COMMERCE AND TRADE

CHAPTER 15--ECONOMIC RECOVERY

SUBCHAPTER I--GENERALLY

Sec. 713c-3. Promotion of the free flow of domestically produced fishery products

(a) Definitions

As used in this section--

(1) The term ``person'' means--

(A) any individual who is a citizen or national of the United States or a citizen of the Northern Mariana Islands;

(B) any fishery development foundation or other private nonprofit corporation located in Alaska; and

(C) any corporation, partnership, association, or other entity (including, but not limited to, any fishery development foundation or other private nonprofit corporation not located in Alaska), nonprofit or otherwise, if such entity is a citizen of the United States within the meaning of section 50501 of title 46 and for purposes of applying such section 50501 with respect to this section--

(i) the term ``State'' as used therein includes any State referred to in paragraph (3),

(ii) citizens of the United States must own not less than 75 percent of the interest in the entity or, in the case of a nonprofit entity, exercise control in the entity that is determined by the Secretary to be the equivalent of such ownership, and

(iii) nationals of the United States and citizens of the Northern Mariana Islands shall be treated as citizens of the United States in meeting the ownership and control requirements referred to in clause (ii).

(2) The term ``Secretary'' means the Secretary of Commerce.

(3) The term ``State'' means any State, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, the Virgin Islands of the United States, Guam, the Northern Mariana Islands, and any other Commonwealth, territory, or possession of the United States.

(4) The term ``United States fishery'' means any fishery, including any tuna fishery, that is, or may be, engaged in by citizens or nationals of the United States or citizens of the Northern Mariana Islands.

(5) The term ``citizen of the Northern Mariana Islands'' means--

(A) an individual who qualifies as such under section 8 of the Schedule on Transitional Matters attached to the Constitution of the Northern Mariana Islands; or

(B) a corporation, partnership, association, or other entity organized or existing under the laws of the Northern Mariana Islands, not less than 75 percent of the interest in which is owned by individuals referred to in subparagraph (A) or citizens or nationals of the United States, in cases in which ``owned'' is used in the same sense as in section 50501 of title 46.

(b) Transfer of funds

(1) The Secretary of Agriculture shall transfer to the Secretary each fiscal year, beginning with the fiscal year commencing July 1, 1954, and ending on June 30, 1957, from moneys made available to carry out the provisions of section 612c of title 7, an amount equal to 30 per centum of the gross receipts from duties collected under the customs laws on fishery products (including fish, shellfish, mollusks, crustacea, aquatic plants and animals, and any products thereof, including processed and manufactured products), which shall be maintained in a separate fund only for--

(A) use by the Secretary--

(i) to provide financial assistance for the purpose of carrying out fisheries research and development projects approved under subsection (c) of this section,\1\

\1\ So in original. The comma probably should be a semicolon.

(ii) to implement the national fisheries research and development program provided for under subsection (d) of this section;

(iii) to implement the Northwest Atlantic Ocean Fisheries Reinvestment Program established under section 1863 of title 16; and

(iv) to fund the Federal share of a fishing capacity reduction program established under section 1861a of title 16; and

(B) the provision of moneys, subject to paragraph (2), to carry out the purposes of the Fisheries Promotion Fund established under

[[Page 834]]

section 208(a) \2\ of the Fish and Seafood Promotion Act of 1986 [16 U.S.C. 4008(a)].

\2\ So in original. Probably should be section ``209(a)''.

(2) There are transferred from the fund established under paragraph (1) to the Fisheries Promotion Fund referred to in paragraph (1)(B) $750,000 in fiscal year 1987, $3,000,000 in each of fiscal years 1988 and 1989, and $2,000,000 in each of fiscal years 1990 and 1991.

(c) Fisheries research and development projects

(1) The Secretary shall make grants from the fund established under subsection (b) of this section to assist persons in carrying out research and development projects addressed to any aspect of United States fisheries, including, but not limited to, harvesting, processing, marketing, and associated infrastructures.

(2) The Secretary shall--

(A) at least once each fiscal year, receive, during a 60-day period specified by him, applications for grants under this subsection;

(B) prescribe the form and manner in which applications for grants under this subsection must be made, including, but not limited to, the specification of the information which must accompany applications to ensure that the proposed projects comply with Federal law and can be evaluated in accordance with paragraph (3)(B); and

(C) approve or disapprove each such application before the close of the 120th day after the last day of the 60-day period (specified under subparagraph (a)) in which the application was received.

(3) No application for a grant under this subsection may be approved unless the Secretary--

(A) is satisfied that the applicant has the requisite technical and financial capability to carry out the project; and

(B) evaluates the proposed project as to--

(i) soundness of design,

(ii) the possibilities of securing productive results,

(iii) minimization of duplication with other fisheries research and development projects,

(iv) the organization and management of the project,

(v) methods proposed for monitoring and evaluating the success or failure of the project, and

(vi) such other criteria as the Secretary may require.

(4) Each grant made under this subsection shall be subject to such terms and conditions as the Secretary may require to protect the interests of the United States, including, but not limited to, the following:

(A) The recipient of the grant must keep such records as the Secretary shall require as being necessary or appropriate for disclosing the use made of grant funds and shall allow the Secretary and the Comptroller General of the United States, or any of their authorized representatives, access to such records for purposes of audit and examination.

(B) The amount of a grant may not be less than 50 percent of the estimated cost of the project.

(C) The recipient of the grant must submit to the Secretary periodic project status reports.

(5)(A) If the cost of a project will be shared by the grant recipient, the Secretary shall accept, as a part or all of that share, the value of in-kind contributions made by the recipient, or made available to, and applied by, the recipient, with respect to the project.

(B) For purposes of subparagraph (A), in-kind contributions may be in the form of, but are not limited to, personal services rendered in carrying out functions related to, and permission to use real or personal property owned by others (for which consideration is not required) in carrying out the project. The Secretary shall establish (i)

the training, experience, and other qualifications which shall be required in order for services to be considered as in-kind contributions; and (ii) the standards under which the Secretary will determine the value of in-kind contributions for purposes of subparagraph (A).

(C) Any valuation determination made by the Secretary for purposes of this paragraph shall be conclusive.

(d) National fisheries research and development program

(1) The Secretary shall carry out a national program of research and development addressed to such aspects of United States fisheries (including, but not limited to, harvesting, processing, marketing, and associated infrastructures) if not adequately covered by proj- ects assisted under subsection (c) of this section, as the Secretary deems appropriate.

(2) The Secretary shall, after consultation with appropriate representatives of the fishing industry, submit to the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Merchant Marine and Fisheries of the House of Representatives, an annual report, that must be submitted not later than 60 days before the close of each fiscal year, containing--

(A) the fisheries development goals and funding priorities under paragraph (1) for the next fiscal year;

(B) a description of all pending projects assisted under subsection (c) of this section or carried out under paragraph (1), in addition to--

(i) a list of those applications approved and those disapproved under subsection (c) of this section, and the total amount of grants made, for the current fiscal year, and

(ii) a statement of the extent to which available funds were not obligated or expended by the Secretary for grants under subsection (c) of this section during the current fiscal year; and

(C) an assessment of each project assisted under subsection (c) of this section or carried out under paragraph (1) that was completed in the preceding fiscal year regarding the extent to which (i) the objectives of the project were attained, and (ii) the project contributed to fishery development.

(e) Allocation of fund moneys

(1) Notwithstanding any other provision of law, all moneys in the fund shall be used exclu

[[Page 835]]

sively for the purpose of promoting United States fisheries in accordance with the provisions of this section, and no such moneys shall be transferred from the fund for any other purpose. With respect to any fiscal year, all moneys in the fund, including the sum of all unexpended moneys carried over into that fiscal year and all moneys transferred to the fund under subsection (b) of this section or any other provision of law with respect to that fiscal year, shall be allocated as follows:

(A) the Secretary shall use no less than 60 per centum of such moneys to make direct industry assistance grants to develop the United States fisheries and to expand domestic and foreign markets for United States fishery products pursuant to subsection (c) of

this section; and

(B) the Secretary shall use the balance of the moneys in the fund to finance those activities of the National Marine Fisheries Service which are directly related to development of the United States fisheries pursuant to subsection (d) of this section.

(2) The Secretary shall, consistent with the number of meritorious applications received with respect to any fiscal year, obligate or expend all of the moneys in the fund described in paragraph (1). Any such moneys which are not expended in a given fiscal year shall remain available for expenditure in accordance with this section without fiscal year limitation, except that the Secretary shall not obligate such moneys at a rate less than that necessary to prevent the balance of moneys in the fund from exceeding $3,000,000 at the end of any fiscal year.

(Aug. 11, 1939, ch. 696, Sec. 2, 53 Stat. 1412; July 1, 1954, ch. 447, 68 Stat. 376; Aug. 8, 1956, ch. 1036, Sec. 12(b), 70 Stat. 1124; Pub. L. 89-348, Sec. 1(13), Nov. 8, 1965, 79 Stat. 1311; Pub. L. 104-297, title I, Sec. 116(c), Oct. 11, 1996, 110 Stat. 3603.)

Codification

``Section 50501 of title 46'' substituted for ``section 2 of the Shipping Act, 1916 (46 U.S.C. 802)'' in subsec. (a)(1)(C) and (5)(B) and ``such section 50501'' substituted for ``such section 2'' in subsec. (a)(1)(C) on authority of Pub. L. 109-304, Sec. 18(c), Oct. 6, 2006, 120 Stat. 1709, section 8(b) of which enacted parts A and B of subtitle V of Title 46, Shipping.

Amendments

1996--Subsec. (b)(1)(A)(iii). Pub. L. 104-208 made technical amendment to reference in original act which appears in text as reference to section 1863 of title 16.

Subsec. (b)(1)(A)(iv). Pub. L. 104-297 added cl. (iv).

Pub. L. 104-208 made technical amendment to reference in original act which appears in text as reference to section 1861a of title 16.

1992--Subsec. (b)(1)(A). Pub. L. 102-567 struck out ``and'' at end of cl. (i) and added cl. (iii).

1990--Subsec. (b)(2). Pub. L. 101-627 substituted ``each of fiscal years 1990 and 1991'' for ``fiscal year 1990''.

1986--Subsec. (b). Pub. L. 99-659 designated existing provisions as introductory provisions and subpar. (A) of par. (1) and added pars. (1)(B) and (2).

1983--Subsec. (e). Pub. L. 97-424 amended subsec. (e) generally, which formerly had provided:

``(1) With respect to any fiscal year, not less than 50 percent of--

``(A) the moneys transferred to the fund under subsection (b) of this section or any other provision of law with respect to that fiscal year; and

``(B) such existing fund moneys carried over into that fiscal year;

shall be used by the Secretary during that fiscal year to provide financial assistance for projects under subsection (c) of this section; and the remainder of such moneys in the fund shall be used to implement the national fisheries research and development program established under subsection (d) of this section during that fiscal year.

``(2) Moneys accruing to the fund established under subsection (b) of this section for any fiscal year and not expended with respect to that year shall remain available for expenditure under this section without fiscal year limitation.''

1980--Subsec. (a). Pub. L. 96-561, Sec. 210(2), (3), added subsec. (a) and redesignated former subsec. (a) as (b).

Subsec. (b). Pub. L. 96-561, Sec. 210(1), (2), (4), redesignated subsec. (a) as (b), substituted ``transfer to the Secretary'' for ``transfer to the Secretary of Commerce'', ``only for use by the Secretary'' for ``and used by the Secretary of Commerce'', and provision directing that the fund be used to provide financial assistance for carrying out fisheries research and development projects and to implement the national fisheries research and development program for provision directing that the fund be used to promote free flow of domestically produced fisheries products by conducting a fishery educational service and fishery technological, biological, and related research programs, to acquire, construct, or maintain vessels and other facilities necessary for conducting research, to develop and increase markets for fishery products of domestic origin, and to conduct any biological, technological, or other research pertaining to American fisheries, and struck out former subsec. (b) which authorized any agency or wholly owned government corporation of the United States to transfer to the Secretary of Commerce any vessels or equipment excess to its needs.

Subsec. (c). Pub. L. 96-561, Sec. 210(1), (5), added subsec. (c) and struck out former subsec. (c) which directed the Secretary of Commerce to cooperate with other Federal, State, and local agencies for promotion of free flow of domestically produced fishery products and provided for the appointment of an advisory committee of the American fisheries industry to advise the Secretary in formulation of policy, rules, and regulations.

Subsec. (d). Pub. L. 96-561, Sec. 210(1), (5), added subsec. (d) and struck out former subsec. (d) which authorized the Secretary of Commerce to retransfer any funds available under this section, not to exceed $1,500,000, to the Secretary of Agriculture to be used for the purposes specified in section 713c-2 of this title.

Subsec. (e). Pub. L. 96-561, Sec. 210(1), (5), added subsec. (e) and struck out former subsec. (e) which provided that the special fund created for use of the Secretary of Commerce under subsec. (a) of this section and the annual accruals thereto be available for each year until expended by the Secretary.

1965--Subsec. (f). Pub. L. 89-348 repealed subsec. (f) which required an annual report to the appropriate committees of Congress on the use of the separate fund.

1956--Subsec. (e). Act Aug. 8, 1956, struck out provisions which limited expenditures to not more than $3,000,000 in any fiscal year, restricted the balance of the fund to not more than $5,000,000 at the end of any fiscal year, and required the Secretary of the Interior to retransfer funds in excess of the $5,000,000 to the Secretary of Agriculture.

1954--Act July 1, 1954, amended section generally, to encourage the distribution of fishery products.

Effective Date of 1996 Amendment

Section 101(a) [title II, Sec. 211(b)] of div. A of Pub. L. 104-208 provided that the amendment made by that section is effective 15 days after Oct. 11, 1996.

[[Page 836]]

Effective Date of 1983 Amendment

Section 423(b) of Pub. L. 97-424 provided that: ``The amendment made by subsection (a) of this section [amending this section] shall take effect on October 1, 1983.''

Short Title

Section 2 of act Aug. 11, 1939, which enacted this section, is popularly known as the ``Saltonstall-Kennedy Act''.

Termination of Reporting Requirements

For termination, effective May 15, 2000, of provisions in subsec. (d)(2) of this section relating to submitting annual report to Congress, see section 3003 of Pub. L. 104-66, as amended, set out as a note under section 1113 of Title 31, Money and Finance, and page 50 of House Document No. 103-7.

Abolition of House Committee on Merchant Marine and Fisheries

Committee on Merchant Marine and Fisheries of House of Representatives abolished and its jurisdiction transferred by House Resolution No. 6, One Hundred Fourth Congress, Jan. 4, 1995. Committee on Merchant Marine and Fisheries of House of Representatives treated as referring to Committee on Resources of House of Representatives in case of provisions relating to fisheries, wildlife, international fishing agreements, marine affairs (including coastal zone management) except for measures relating to oil and other pollution of navigable waters, or oceanography by section 1(b)(3) of Pub. L. 104-14, set out as a note preceding section 21 of Title 2, The Congress.

Transfer of Functions

Functions of all officers, agencies, and employees of Department of Agriculture transferred, with certain exceptions, to Secretary of Agriculture by Reorg. Plan No. 2 of 1953, Sec. 1, eff. June 4, 1953, 18 F.R. 3219, 67 Stat. 633, set out in the Appendix to Title 5, Government Organization and Employees.

Continuation of Authorization for Transfer of Funds

Section 12(a) of act Aug. 8, 1956, provided that: ``The authorization for the transfer of certain funds from the Secretary of Agriculture to the Secretary of the Interior and their maintenance in a separate fund as contained in section 2(a) of the Act of August 11,

1939, as amended July 1, 1954 (68 Stat. 376), [now subsec. (b) of this section], shall be continued for the year ending June 30, 1957, and each year thereafter.''

Termination of Advisory Committees

Advisory committees in existence on Jan. 5, 1973, to terminate not later than the expiration of the 2-year period following Jan. 5, 1973, unless, in the case of a committee established by the President or an officer of the Federal Government, such committee is renewed by appropriate action prior to the expiration of such 2-year period, or in the case of a committee established by the Congress, its duration is otherwise provided by law. See section 14 of Pub. L. 92-463, Oct. 6, 1972, 86 Stat. 776, set out in the Appendix to Title 5, Government Organization and Employees.

111TH CONGRESS
1ST SESSION

S. 1408

To amend the Internal Revenue Code of 1986 to encourage alternative energy investments and job creation.

IN THE SENATE OF THE UNITED STATES

JULY 8, 2009

Mr. MENENDEZ (for himself, Mr. REID, and Mr. HATCH) introduced the following bill; which was read twice and referred to the Committee on Finance

---

A BILL

To amend the Internal Revenue Code of 1986 to encourage alternative energy investments and job creation.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE, ETC.

(a) SHORT TITLE.—This Act may be cited as the "New Alternative Transportation to Give Americans Solutions".

(b) AMENDMENT OF 1986 CODE.—Except as otherwise expressly provided, whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference

shall be considered to be made to a section or other provision of the Internal Revenue Code of 1986.

(c) TABLE OF CONTENTS.—The table of contents for this Act is as follows:

Sec. 1. Short title, etc.

TITLE I—PROMOTE THE PURCHASE AND USE OF NGVS WITH AN EMPHASIS ON HEAVY DUTY VEHICLES AND FLEET VEHICLES

Sec. 101. Modification of alternative fuel credit.
Sec. 102. Extension and modification of new qualified alternative fuel motor vehicle credit.
Sec. 103. Allowance of vehicle and infrastructure credits against regular and minimum tax and transferability of credits.
Sec. 104. Natural gas vehicle bonds.
Sec. 105. Modification of credit for purchase of vehicles fueled by compressed natural gas or liquified natural gas.
Sec. 106. Modification of definition of new qualified alternative fuel motor vehicle.

TITLE II—PROMOTE PRODUCTION OF NGVS BY ORIGINAL EQUIPMENT MANUFACTURERS

Sec. 201. Incentives for manufacturing facilities producing vehicles fueled by compressed or liquified natural gas.

TITLE III—INCENTIVIZE THE INSTALLATION OF NATURAL GAS FUEL PUMPS AT SERVICE STATIONS AND DEPOTS AND DOMESTIC LNG PRODUCTION FACILITIES FOR SMALL ENERGY PRODUCERS

Sec. 301. Extension and modification of alternative fuel vehicle refueling property credit.
Sec. 302. Increase in credit for certain alternative fuel vehicle refueling properties.

TITLE IV—NATURAL GAS VEHICLES

Sec. 401. Natural gas vehicles in Federal fleet.
Sec. 402. Grants for natural gas vehicles research and development.
Sec. 403. Sense of the Senate on EPA certification of NGV retrofit kits.

TITLE I—PROMOTE THE PURCHASE AND USE OF NGVS WITH AN EMPHASIS ON HEAVY DUTY VEHICLES AND FLEET VEHICLES

SEC. 101. MODIFICATION OF ALTERNATIVE FUEL CREDIT.

(a) ALTERNATIVE FUEL CREDIT.—Paragraph (5) of section 6426(d) (relating to alternative fuel credit) is amended by inserting ", and December 31, 2019, in the case of any sale or use involving compressed or liquefied natural gas)" after "hydrogen".

(b) ALTERNATIVE FUEL MIXTURE CREDIT.—Paragraph (3) of section 6426(d) is amended by inserting ", and December 31, 2019, in the case of any sale or use involving compressed or liquefied natural gas)" after "hydrogen".

(c) PAYMENTS RELATING TO ALTERNATIVE FUEL OR ALTERNATIVE FUEL MIXTURES.—Paragraph (6) of section 6427(e) is amended—

(1) in subparagraph (C)—

(A) by striking "subparagraph (D)" in subparagraph (C) and inserting "subparagraphs (D) and (E)", and

(B) by striking "and" at the end thereof,

(2) by striking the period at the end of subparagraph (D) and inserting ", and", and

(3) by inserting at the end the following:

"(E) any alternative fuel or alternative fuel mixture (as so defined) involving compressed or liquefied natural gas sold or used after December 31, 2019.".

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to fuel sold or used after the date of the enactment of this Act.

SEC. 102. EXTENSION AND MODIFICATION OF NEW QUALIFIED ALTERNATIVE FUEL MOTOR VEHICLE CREDIT.

(a) IN GENERAL.—Paragraph (4) of section 30B(k) (relating to termination) is amended by inserting "(December 31, 2019, in the case of a vehicle powered by compressed or liquefied natural gas)" before the period at the end.

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to property placed in service after the date of the enactment of this Act.

SEC. 103. ALLOWANCE OF VEHICLE AND INFRASTRUCTURE CREDITS AGAINST REGULAR AND MINIMUM TAX AND TRANSFERABILITY OF CREDITS.

(a) BUSINESS CREDITS.—Subparagraph (B) of section 38(c)(4) is amended by striking "and" at the end of clause (vii), by striking the period at the end of clause (viii) and inserting ", and", and by inserting after clause (viii) the following new clauses:

"(ix) the portion of the credit determined under section 30B which is attributable to the application of subsection (e)(3) thereof with respect to new qualified alternative fuel motor vehicles which are capable of being powered by compressed or liquefied natural gas, and

"(x) the portion of the credit determined under section 30C which is attributable to the application of subsection (b) thereof with respect to refueling property which is used to store and or dispense compressed or liquefied natural gas.".

(b) PERSONAL CREDITS.—

(1) NEW QUALIFIED ALTERNATIVE FUEL MOTOR VEHICLES.—Subsection (g) of section 30B is amended by adding at the end the following new paragraph:

"(3) SPECIAL RULE RELATING TO CERTAIN NEW QUALIFIED ALTERNATIVE FUEL MOTOR VEHICLES.—In the case of the portion of the credit determined under subsection (a) which is attributable to the application of subsection (c)(3) with respect to new qualified alternative fuel motor vehicles which are capable of being powered by compressed or liquefied natural gas—

"(A) paragraph (2) shall (after the application of paragraph (1)) be applied separately with respect to such portion, and

"(B) in lieu of the limitation determined under paragraph (2), such limitation shall not exceed the excess (if any) of—

"(i) the sum of the regular tax liability (as defined in section 26(b)) plus the tentative minimum tax for the taxable year, reduced by

"(ii) the sum of the credits allowable under subpart A and sections 27 and 30.".

(2) ALTERNATIVE FUEL VEHICLE REFUELING PROPERTIES.—Subsection (d) of section 30C is amended by adding at the end the following new paragraph:

"(3) SPECIAL RULE RELATING TO CERTAIN ALTERNATIVE FUEL VEHICLE REFUELING PROPERTIES.—In the case of the portion of the credit determined under subsection (a) with respect to refueling property which is used to store and or dispense compressed or liquefied natural gas and which is attributable to the application of subsection (b)—

"(A) paragraph (2) shall (after the application of paragraph (1)) be applied separately with respect to such portion, and

"(B) in lieu of the limitation determined under paragraph (2), such limitation shall not exceed the excess (if any) of—

"(i) the sum of the regular tax liability (as defined in section 26(b)) plus the tentative minimum tax for the taxable year, reduced by

"(ii) the sum of the credits allowable under subpart A and sections 27, 30, and the portion of the credit determined under section 30B which is attributable to the application of subsection (e)(3) thereof.".

(c) CREDITS MAY BE TRANSFERRED.—

(1) VEHICLE CREDITS.—Subsection (h) of section 30B is amended by adding at the end the following new paragraph:

"(11) TRANSFERABILITY OF CREDIT.—

"(A) IN GENERAL.—Except as provided in subparagraph (B), a taxpayer who places in service any new qualified alternative fuel motor vehicle which is capable of being powered by compressed or liquefied natural gas may transfer the credit allowed under this section by reason of subsection (e) with respect to such vehicle through an assignment to the seller or lessor of such vehicle. Such transfer may be revoked only with the consent of the Secretary.

"(B) DENIAL OF DOUBLE BENEFIT.—No assignment of a credit allowed under this section by reason of subsection (e) with respect to any new qualified alternative fuel motor vehicle which is capable of being powered by compressed or liquefied natural gas may be made under subparagraph (A) to a taxpayer who has claimed a credit under section 54G with respect to the financing of such vehicle.

"(C) REGULATIONS.—The Secretary shall prescribe such regulations as necessary to en-

sure that any credit transferred under subparagraph (A) is claimed once and not reassigned by such other person.".

(2) INFRASTRUCTURE CREDIT.—Subsection (e) of section 30C is amended by adding at the end the following new paragraph:

"(7) TRANSFERABILITY OF CREDIT.—

"(A) IN GENERAL.—Except as provided in subparagraph (B), a taxpayer who places in service any qualified alternative fuel vehicle refueling property relating to compressed or liquefied natural gas may transfer the credit allowed under this section with respect to such property through an assignment to the seller or lessor of such property. Such transfer may be revoked only with the consent of the Secretary.

"(B) DENIAL OF DOUBLE BENEFIT.—No assignment of a credit allowed under this section by reason of subsection (e) with respect to any qualified alternative fuel vehicle refueling property relating to compressed or liquefied natural gas may be made under subparagraph (A) to a taxpayer who has claimed a credit under section 54G with respect to the financing of such property.

"(C) REGULATIONS.—The Secretary shall prescribe such regulations as necessary to ensure that any credit transferred under subparagraph (A) is claimed once and not reassigned by such other person.".

(d) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to property placed in service after the date of the enactment of this Act.

SEC. 104. NATURAL GAS VEHICLE BONDS.

(a) IN GENERAL.—Subpart I of part IV of subchapter A of chapter 1 (relating to qualified tax credit bonds) is amended by adding at the end the following new section:

"SEC. 54G. NATURAL GAS VEHICLE BONDS.

"(a) NATURAL GAS VEHICLE BOND.—For purposes of this subpart, the term 'natural gas vehicle bond' means any bond issued as part of an issue if—

"(1) 100 percent of the available project proceeds of such issue are to be used for capital expenditures incurred by a governmental body for 1 or more qualified natural gas vehicle projects placed in service by such governmental body primarily for governmental or public use,

"(2) the bond is issued by a governmental body,

"(3) the issuer designates such bond for purposes of this section, and

"(4) in lieu of the requirements of section 54A(d)(2), the issue meets the requirements of subsection (c).

"(b) LIMITATION ON AMOUNT OF BONDS DESIGNATED.—

"(1) IN GENERAL.—The maximum aggregate face amount of bonds which may be designated under subsection (a) by any issuer shall not exceed the limitation amount allocated under this subsection to such issuer.

"(2) NATIONAL LIMITATION ON AMOUNT OF BONDS DESIGNATED.—There is a national natural gas vehicle bond limitation of $3,000,000,000.

"(3) ALLOCATION BY SECRETARY.—The Secretary shall allocate the amount described in paragraph (2) among qualified natural gas vehicle projects in such manner as the Secretary determines appropriate.

"(c) SPECIAL RULES RELATING TO EXPENDITURES.—

"(1) IN GENERAL.—An issue shall be treated as meeting the requirements of this subsection if, as of the date of issuance, the issuer reasonably expects—

"(A) 100 percent or more of the available project proceeds of such issue are to be spent for 1 or more qualified natural gas vehicle projects within the 5-year period beginning on the date of issuance of the natural gas vehicle bond,

"(B) a binding commitment with a third party to spend at least 10 percent of such available project proceeds will be incurred within the 6-month period beginning on the date of issuance of the natural gas vehicle bond, and

"(C) such projects will be completed with due diligence and such available project proceeds will be spent with due diligence.

"(2) EXTENSION OF PERIOD.—Upon submission of a request prior to the expiration of the period described in paragraph (1)(A), the Secretary may extend such period if the issuer establishes that the failure to satisfy the 5-year requirement is due to reasonable cause and the related projects will continue to proceed with due diligence.

"(3) FAILURE TO SPEND REQUIRED AMOUNT OF BOND PROCEEDS WITHIN 5 YEARS.—To the extent that less than 100 percent of the available project proceeds of such issue are expended by the

close of the 5-year period beginning on the date of issuance (or if an extension has been obtained under paragraph (2), by the close of the extended period), the issuer shall redeem all of the nonqualified bonds within 90 days after the end of such period. For purposes of this paragraph, the amount of the nonqualified bonds required to be redeemed shall be determined in the same manner as under section 142.

"(d) GOVERNMENTAL BODY.—For purposes of this section, the term 'governmental body' means any State or Indian tribal government, or any political subdivision thereof.

"(e) QUALIFIED NATURAL GAS VEHICLE PROJECT.—For purposes of this subpart, the term 'qualified natural gas vehicle project' means—

"(1) 1 or more new qualified alternative fuel motor vehicles which are capable of being powered by compressed or liquefied natural gas (within the meaning of section 30B(e)(4)), or

"(2) 1 or more qualified alternative fuel vehicle refueling properties which are used to store and or dispense compressed or liquefied natural gas (within the meaning of section 30C(e)).

"(f) TERMINATION.—This section shall not apply with respect to any bond issued after December 31, 2019.".

(b) CONFORMING AMENDMENTS.—

(1) Paragraph (1) of section 54A(d) is amended by striking "or" at the end of subparagraph (D), by inserting "or" at the end of subparagraph (E), and by inserting after subparagraph (E) the following new subparagraph:

"(F) a natural gas vehicle bond,".

(2) Subparagraph (C) of section 54A(d)(2) is amended by striking "and" at the end of clause (iv), by striking the period at the end of clause (v) and inserting ", and", and by adding at the end the following new clause:

"(vi) in the case of a natural gas vehicle bond, a purpose specified in section 54G(a)(1).".

(c) CLERICAL AMENDMENT.—The table of sections for subpart I of part IV of subchapter A of chapter 1 is amended by adding at the end the following new item:

"See. 54G. Natural gas vehicle bonds.".

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to bonds issued after the date of the enactment of this Act.

SEC. 105. MODIFICATION OF CREDIT FOR PURCHASE OF VEHICLES FUELED BY COMPRESSED NATURAL GAS OR LIQUIFIED NATURAL GAS.

(a) INCREASE IN CREDIT.—Paragraph (2) of section 30B(c) (relating to applicable percentage) is amended to read as follows:

"(2) APPLICABLE PERCENTAGE.—For purposes of paragraph (1), the applicable percentage with respect to any new qualified alternative fuel motor vehicle is—

"(A) except as provided in subparagraphs (B) and (C)—

"(i) 50 percent, plus

"(ii) 30 percent, if such vehicle—

"(I) has received a certificate of conformity under the Clean Air Act and meets or exceeds the most stringent standard available for certification under the Clean Air Act for that make and model year vehicle (other than a zero emission standard), or

"(II) has received an order certifying the vehicle as meeting the same requirements as vehicles which may be sold or leased in California and meets

or exceeds the most stringent standard available for certification under the State laws of California (enacted in accordance with a waiver granted under section 209(b) of the Clean Air Act) for that make and model year vehicle (other than a zero emission standard),

"(B) 80 percent, in the case of vehicles that are only capable of operating on compressed natural gas or liquefied natural gas, or mix-fuel vehicles which are capable of operating on compressed or liquefied natural gas, and

"(C) 50 percent, in the case of vehicles described subsection (e)(4)(A)(i)(II).

For purposes of the preceding sentence, in the case of any new qualified alternative fuel motor vehicle which weighs more than 14,000 pounds gross vehicle weight rating, the most stringent standard available shall be such standard available for certification on the date of the enactment of the Energy Tax Incentives Act of 2005.".

(b) HIGHER INCREMENTAL COST LIMITS FOR NATURAL GAS VEHICLES.—Subsection (e) of section 30B (relating to new qualified alternative fuel motor vehicle cred-

it) is amended by adding at the end the following new paragraph:

"(6) HIGHER INCREMENTAL COST LIMITS FOR NATURAL GAS VEHICLES.—In the case of new qualified alternative fuel motor vehicles with respect to vehicles powered by compressed or liquefied natural gas, paragraph (3) shall be applied—

"(A) in subparagraph (A) by substituting '$12,500' for '$5,000',

"(B) in subparagraph (B) by substituting '$20,000' for '$10,000',

"(C) in subparagraph (C) by substituting '$50,000' for '$25,000', and

"(D) in subparagraph (D) by substituting '$80,000' for '$40,000'.".

(c) EFFECTIVE DATE.—The amendment made by this section shall apply to property placed in service after the date of the enactment of this Act.

SEC. 106. MODIFICATION OF DEFINITION OF NEW QUALIFIED ALTERNATIVE FUEL MOTOR VEHICLE.

(a) IN GENERAL.—Clause (i) of section 30B(e)(4)(A) (relating to definition of new qualified alternative fuel motor vehicle) is amended to read as follows:

"(i) which—

"(I) is only capable of operating on an alternative fuel, or

"(II) is capable of operating on compressed or liquefied natural gas and gasoline or diesel fuel, but in no case shall such vehicle have an operating range of less than 200 miles on compressed or liquefied natural gas.".

(b) CONVERSIONS AND REPOWERS.—Paragraph (4) of section 30B(e) is amended by adding at the end the following new subparagraph:

"(C) CONVERSIONS AND REPOWERS.—

"(i) IN GENERAL.—The term 'new qualified alternative fuel motor vehicle' includes the conversion or repower of a new or used vehicle so that it is capable of operating on an alternative fuel as it was not previously capable of operating on an alternative fuel.

"(ii) TREATMENT AS NEW.—A vehicle which has been converted to operate on an alternative fuel shall be treated as new on the date of such conversion for purposes of this section.

"(iii) RULE OF CONSTRUCTION.—In the case of a used vehicle which is converted or repowered, nothing in this section shall be construed to require that the motor vehicle be acquired in the year the credit is claimed under this section with respect to such vehicle.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to property placed in service after the date of the enactment of this Act.

TITLE II—PROMOTE PRODUCTION OF NGVS BY ORIGINAL EQUIPMENT MANUFACTURERS

SEC. 201. INCENTIVES FOR MANUFACTURING FACILITIES PRODUCING VEHICLES FUELED BY COMPRESSED OR LIQUIFIED NATURAL GAS.

(a) DEDUCTION FOR MANUFACTURING FACILITIES.—Part VI of subchapter B of chapter 1 of the Internal Revenue Code of 1986 (relating to itemized deductions for individuals and corporations) is amended by inserting after section 179E the following new section:

"SEC. 179F. EXPENSING FOR MANUFACTURING FACILITIES PRODUCING VEHICLES FUELED BY COMPRESSED NATURAL GAS OR LIQUIFIED NATURAL GAS.

"(a) TREATMENT AS EXPENSES.—A taxpayer may elect to treat the applicable percentage of the cost of any qualified natural gas vehicle manufacturing facility property as an expense which is not chargeable to a capital account. Any cost so treated shall be allowed as a deduction for the taxable year in which the qualified manufacturing facility property is placed in service.

"(b) APPLICABLE PERCENTAGE.—For purposes of subsection (a), the applicable percentage is—

"(1) 100 percent, in the case of qualified natural gas vehicle manufacturing facility property which is placed in service before January 1, 2015, and

"(2) 50 percent, in the case of qualified natural gas vehicle manufacturing facility property which is placed in service after December 31, 2014, and before January 1, 2020.

"(c) ELECTION.—

"(1) IN GENERAL.—An election under this section for any taxable year shall be made on the taxpayer's return of the tax imposed by this chapter for the taxable year. Such election shall be made in such

manner as the Secretary may by regulations prescribe.

"(2) ELECTION IRREVOCABLE.—Any election made under this section may not be revoked except with the consent of the Secretary.

"(d) QUALIFIED NATURAL GAS VEHICLE MANUFACTURING FACILITY PROPERTY.—For purposes of this section—

"(1) IN GENERAL.—The term 'qualified natural gas vehicle manufacturing facility property' means any qualified property—

"(A) the original use of which commences with the taxpayer,

"(B) which is placed in service by the taxpayer after the date of the enactment of this section and before January 1, 2020, and

"(C) no written binding contract for the construction of which was in effect on or before the date of the enactment of this section.

"(2) QUALIFIED PROPERTY.—

"(A) IN GENERAL.—The term 'qualified property' means any property which is a facility or a portion of a facility used for the production of—

"(2) REGULATIONS.—The Secretary shall prescribe such regulations as are necessary to carry out the purpose of this subsection.".

(b) REFUND OF CREDIT FOR PRIOR YEAR MINIMUM TAX LIABILITY.—Section 53 (relating to credit for prior year minimum tax liability) is amended by adding at the end the following new subsection:

"(g) ELECTION TO TREAT AMOUNTS ATTRIBUTABLE TO QUALIFIED MANUFACTURING FACILITY.—

"(1) IN GENERAL.—In the case of an eligible taxpayer, the amount determined under subsection (c) for the taxable year (after the application of subsection (e)) shall be increased by an amount equal to the applicable percentage of any qualified natural gas vehicle manufacturing facility property which is placed in service during the taxable year.

"(2) APPLICABLE PERCENTAGE.—For purposes of paragraph (1), the applicable percentage is—

"(A) 35 percent, in the case of qualified natural gas vehicle manufacturing facility property which is placed in service before January 1, 2015, and

"(B) 17.5 percent, in the case of qualified natural gas vehicle manufacturing facility prop-

"(i) any new qualified alternative fuel motor vehicle which is capable of being powered by compressed or liquefied natural gas (within the meaning of section 30B(e)(4)), or

"(ii) any eligible component.

"(B) ELIGIBLE COMPONENT.—The term 'eligible component' means any component which is designed specifically for use in such a new qualified alternative fuel motor vehicle.

"(e) SPECIAL RULE FOR DUAL USE PROPERTY.—

"(1) IN GENERAL.—In the case of any qualified natural gas vehicle manufacturing facility property which is used to produce both property described in clauses (i) and (ii) of subsection (d)(2)(A) and property which is not so described, the amount of costs taken into account under subsection (a) shall be reduced by an amount equal to—

"(A) the total amount of such costs (determined before the application of this subsection), multiplied by

"(B) the percentage of property expected to be produced which is not so described.

erty which is placed in service after December 31, 2014, and before January 1, 2020.

"(3) ELIGIBLE TAXPAYER.—For purposes of this subsection, the term 'eligible taxpayer' means any taxpayer—

"(A) who places in service qualified natural gas vehicle manufacturing facility property during the taxable year,

"(B) who does not make an election under section 179F(c), and

"(C) who makes an election under this subsection.

"(4) OTHER DEFINITIONS AND SPECIAL RULES.—

"(A) QUALIFIED NATURAL GAS VEHICLE MANUFACTURING FACILITY PROPERTY.—The term 'qualified natural gas vehicle manufacturing facility property' has the meaning given such term under section 179F(d).

"(B) SPECIAL RULE FOR DUAL USE PROPERTY.—In the case of any qualified natural gas vehicle manufacturing facility property which is used to produce both qualified property (as defined in section 179F(d)) and other property which is not qualified property, the amount of

costs taken into account under paragraph (1) shall be reduced by an amount equal to—

"(i) the total amount of such costs (determined before the application of this subparagraph), multiplied by

"(ii) the percentage of property expected to be produced which is not qualified property.

"(C) ELECTION.—

"(i) IN GENERAL.—An election under this subsection for any taxable year shall be made on the taxpayer's return of the tax imposed by this chapter for the taxable year. Such election shall be made in such manner as the Secretary may by regulations prescribe.

"(ii) ELECTION IRREVOCABLE.—Any election made under this subsection may not be revoked except with the consent of the Secretary.

"(5) CREDIT REFUNDABLE.—For purposes of this title (other than this section), the credit allowed by reason of this subsection shall be treated as if it were allowed under subpart C.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after the date of the enactment of this Act.

TITLE III—INCENTIVIZE THE INSTALLATION OF NATURAL GAS FUEL PUMPS AT SERVICE STATIONS AND DEPOTS AND DOMESTIC LNG PRODUCTION FACILITIES FOR SMALL ENERGY PRODUCERS

SEC. 301. EXTENSION AND MODIFICATION OF ALTERNATIVE FUEL VEHICLE REFUELING PROPERTY CREDIT.

(a) IN GENERAL.—Subsection (g) of section 30C is amended by striking "and" at the end of paragraph (1), by redesignating paragraph (2) as paragraph (3), and by inserting after paragraph (1) the following new paragraph:

"(2) in the case of property relating to compressed or liquefied natural gas, after December 31, 2019, and".

(b) EFFECTIVE DATE.—The amendments made by subsection (a) shall apply to property placed in service after the date of the enactment of this Act.

SEC. 302. INCREASE IN CREDIT FOR CERTAIN ALTERNATIVE FUEL VEHICLE REFUELING PROPERTIES.

(a) IN GENERAL.—Subsection (b) of section 30C is amended to read as follows:

"(b) LIMITATION.—The credit allowed under subsection (a) with respect to all qualified alternative fuel vehicle refueling property placed in service by the taxpayer during the taxable year at a location shall not exceed—

"(1) except as provided in paragraph (2), $30,000 in the case of a property of a character subject to an allowance for depreciation,

"(2) in the case of a compressed natural gas, or liquefied natural gas, the lesser of—

"(A) 50 percent of such cost, or

"(B) $100,000, and

"(3) $2,000 in any other case.".

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to property placed in service in taxable years beginning after December 31, 2010.

TITLE IV—NATURAL GAS VEHICLES

SEC. 401. NATURAL GAS VEHICLES IN FEDERAL FLEET.

When complying with mandatory Federal fleet alternative fuel vehicle purchase requirements, Federal agencies shall purchase dedicated alternative fuel vehicles un-

less the agency can show that alternative fuel is unavailable or purchasing such vehicles would be impractical.

SEC. 402. GRANTS FOR NATURAL GAS VEHICLES RESEARCH AND DEVELOPMENT.

(a) IN GENERAL.—The Secretary of Energy may make grants to original equipment manufacturers of light duty and heavy duty natural gas vehicles for the development of engines that reduce emissions, improve performance and efficiency, and lower cost.

(b) LIMITATION.—The aggregate amount of grants under subsection (a) for any fiscal year shall not exceed $30,000,000.

SEC. 403. SENSE OF THE SENATE ON EPA CERTIFICATION OF NGV RETROFIT KITS.

It is the sense of the Senate that the Environmental Protection Agency should streamline the process for certification of natural gas vehicle retrofit kits to promote energy security while still fulfilling the mission of the Clean Air Act.

111TH CONGRESS
1ST SESSION

H. R. 1835

To amend the Internal Revenue Code of 1986 to encourage alternative energy investments and job creation.

IN THE HOUSE OF REPRESENTATIVES

APRIL 1, 2009

Mr. BOREN (for himself, Mr. LARSON of Connecticut, Mr. SULLIVAN, Mr. ABERCROMBIE, Mr. BISHOP of Georgia, Mr. BURGESS, Mr. CONAWAY, Mr. KAGEN, Mr. MCMAHON, Ms. MARKEY of Colorado, Mr. MILLER of Florida, Mr. MINNICK, Mr. TEAGUE, and Mr. THOMPSON of California) introduced the following bill; which was referred to the Committee on Ways and Means, and in addition to the Committees on Oversight and Government Reform and Science and Technology, for a period to be subsequently determined by the Speaker, in each case for consideration of such provisions as fall within the jurisdiction of the committee concerned

---

A BILL

To amend the Internal Revenue Code of 1986 to encourage alternative energy investments and job creation.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE, ETC.

(a) SHORT TITLE.—This Act may be cited as the "New Alternative Transportation to Give Americans Solutions Act of 2009".

(b) AMENDMENT OF 1986 CODE.—Except as otherwise expressly provided, whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1986.

(c) TABLE OF CONTENTS.—The table of contents for this Act is as follows:

Sec. 1. Short title, etc.

TITLE I—PROMOTE THE PURCHASE AND USE OF NGVS WITH AN EMPHASIS ON HEAVY DUTY VEHICLES AND FLEET VEHICLES

Sec. 101. Modification of alternative fuel credit.
Sec. 102. Extension and modification of alternative fuel vehicle credit.
Sec. 103. Allowance of vehicle and infrastructure credits against regular and minimum tax and transferability of credits.
Sec. 104. Modification of credit for purchase of vehicles fueled by natural gas or liquified natural gas.
Sec. 105. Modification of definition of new qualified alternative fuel motor vehicle.

TITLE II—PROMOTE PRODUCTION OF NGVS BY ORIGINAL EQUIPMENT MANUFACTURERS

Sec. 201. Credit for producing vehicles fueled by natural gas or liquified natural gas.

TITLE III—TO INCENTIVIZE THE INSTALLATION OF NATURAL GAS FUEL PUMPS AT SERVICE STATIONS AND DEPOTS AND DOMESTIC LNG PRODUCTION FACILITIES FOR SMALL ENERGY PRODUCERS

Sec. 301. Extension and modification of alternative fuel vehicle refueling property credit.
Sec. 302. Increase in credit for certain alternative fuel vehicle refueling properties.

TITLE IV—NATURAL GAS VEHICLES

Sec. 401. Natural gas vehicles in Federal fleet.
Sec. 402. Grants for natural gas vehicles research and development.

4464

TITLE I—PROMOTE THE PURCHASE AND USE OF NGVS WITH AN EMPHASIS ON HEAVY DUTY VEHICLES AND FLEET VEHICLES

SEC. 101. MODIFICATION OF ALTERNATIVE FUEL CREDIT.

(a) ALTERNATIVE FUEL CREDIT.—Paragraph (5) of section 6426(d) (relating to alternative fuel credit) is amended by inserting ", and December 31, 2027, in the case of any sale or use involving compressed or liquefied natural gas)" after "hydrogen".

(b) ALTERNATIVE FUEL MIXTURE CREDIT.—Paragraph (3) of section 6426(d) is amended by inserting ", and December 31, 2027, in the case of any sale or use involving compressed or liquefied natural gas)" after "hydrogen".

(c) PAYMENTS RELATING TO ALTERNATIVE FUEL OR ALTERNATIVE FUEL MIXTURES.—Paragraph (6) of section 6427(e) is amended—

(1) in subparagraph (C)—

(A) by striking "subparagraph (D)" in subparagraph (C) and inserting "subparagraphs (D) and (E)", and

(B) by striking "and" at the end thereof,

(2) by striking the period at the end of subparagraph (D) and inserting ", and",

(3) by inserting at the end the following: "or with respect to compressed or liquefied natural gas" after "subparagraph (D)".

"(E) any alternative fuel or alternative fuel mixture (as so defined) involving compressed or liquefied natural gas.".

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to fuel sold or used after the date of the enactment of this Act.

SEC. 102. EXTENSION AND MODIFICATION OF ALTERNATIVE FUEL VEHICLE CREDIT.

(a) IN GENERAL.—Paragraph (4) of section 30B(k) (relating to termination) is amended by inserting "(December 31, 2027, in the case of a vehicle powered by compressed or liquefied natural gas)" before the period at the end.

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to property placed in service after the date of the enactment of this Act.

SEC. 103. ALLOWANCE OF VEHICLE AND INFRASTRUCTURE CREDITS AGAINST REGULAR AND MINIMUM TAX AND TRANSFERABILITY OF CREDITS.

(a) BUSINESS CREDITS.—Subparagraph (B) of section 38(c)(4) is amended by striking "and" at the end of clause (vii), by striking the period at the end of clause (viii) and inserting ", and", and by inserting after clause (viii) the following new clauses:

"(ix) the portion of the credit determined under section 30B which is attributable to the application of subsection (e)(3) thereof with respect to qualified alternative fuel motor vehicles which are capable of being powered by compressed or liquefied natural gas, and

"(x) the portion of the credit determined under section 30C which is attributable to the application of subsection (b) thereof with respect to refueling property which is used to store and or dispense compressed or liquefied natural gas.".

(b) PERSONAL CREDITS.—

(1) NEW QUALIFIED ALTERNATIVE FUEL MOTOR VEHICLES.—Subsection (g) of section 30B is amended by adding at the end the following new paragraph:

"(3) SPECIAL RULE RELATING TO CERTAIN NEW QUALIFIED ALTERNATIVE FUEL MOTOR VEHICLES.—In the case of the portion of the credit determined under subsection (a) which is attributable to the application of subsection (e)(3) with respect to qualified alternative fuel motor vehicles which are capable of being powered by compressed or liquefied natural gas—

"(A) paragraph (2) shall (after the application of paragraph (1)) be applied separately with respect to such portion, and

"(B) in lieu of the limitation determined under paragraph (2), such limitation shall not exceed the excess (if any) of—

"(i) the sum of the regular tax liability (as defined in section 26(b)) plus the tentative minimum tax for the taxable year, reduced by

"(ii) the sum of the credits allowable under subpart A and sections 27 and 30.".

(2) ALTERNATIVE FUEL VEHICLE REFUELING PROPERTIES.—Subsection (d) of section 30C is amended by adding at the end the following new paragraph:

"(3) SPECIAL RULE RELATING TO CERTAIN ALTERNATIVE FUEL VEHICLE REFUELING PROPERTIES.—In the case of the portion of the credit determined under subsection (a) with respect to refueling property which is used to store and or dispense compressed or liquefied natural gas and which is attributable to the application of subsection (b)—

"(A) paragraph (2) shall (after the application of paragraph (1)) be applied separately with respect to such portion, and

"(B) in lieu of the limitation determined under paragraph (2), such limitation shall not exceed the excess (if any) of—

"(i) the sum of the regular tax liability (as defined in section 26(b)) plus the tentative minimum tax for the taxable year, reduced by

"(ii) the sum of the credits allowable under subpart A and sections 27, 30, and the portion of the credit determined under section 30B which is attributable to the application of subsection (e)(3) thereof.".

(c) CREDITS MAY BE TRANSFERRED.—

(1) VEHICLE CREDITS.—Subsection (h) of section 30B is amended by adding at the end the following new paragraph:

"(11) TRANSFERABILITY OF CREDIT.—Nothing in any law or rule of law shall be construed to limit a taxpayer from transferring, through sale and repurchase agreement, the credit allowed by this section for qualified alternative fuel motor vehicles which are capable of being powered by compressed or liquefied natural gas.".

(2) INFRASTRUCTURE CREDIT.—Subsection (e) of section 30C is amended by adding at the end the following new paragraph:

"(6) CREDIT MAY BE TRANSFERRED.—Nothing in any law or rule of law shall be construed to limit a taxpayer from transferring the credit allowed by this section through sale and repurchase agreements.".

(d) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to property placed in service after the date of the enactment of this Act.

SEC. 104. MODIFICATION OF CREDIT FOR PURCHASE OF VEHICLES FUELED BY NATURAL GAS OR LIQUIFIED NATURAL GAS.

(a) INCREASE IN CREDIT.—Paragraph (2) of section 30B(c) (relating to applicable percentage) is amended to read as follows:

"(2) APPLICABLE PERCENTAGE.—For purposes of paragraph (1), the applicable percentage with respect to any new qualified alternative fuel motor vehicle is—

"(A) except as provided in subparagraphs (B) and (C)—

"(i) 50 percent, plus

"(ii) 30 percent, if such vehicle—

"(I) has received a certificate of conformity under the Clean Air Act and meets or exceeds the most stringent standard available for certification under the Clean Air Act for that make and model year vehicle (other than a zero emission standard), or

"(II) has received an order certifying the vehicle as meeting the same requirements as vehicles which may be sold or leased in California and meets

or exceeds the most stringent standard available for certification under the State laws of California (enacted in accordance with a waiver granted under section 209(b) of the Clean Air Act) for that make and model year vehicle (other than a zero emission standard)

"(B) 80 percent, in the case of vehicles that are only capable of operating on compressed natural gas or liquefied natural gas, or mix-fuel vehicles which are capable of operating on compressed or liquefied natural gas, and

"(C) 50 percent, in the case of vehicles described subsection (e)(4)(A)(i)(II).

For purposes of the preceding sentence, in the case of any new qualified alternative fuel motor vehicle which weighs more than 14,000 pounds gross vehicle weight rating, the most stringent standard available shall be such standard available for certification on the date of the enactment of the Energy Tax Incentives Act of 2005.".

(b) HIGHER INCREMENTAL COST LIMITS FOR NATURAL GAS VEHICLES.—Subsection (e) of section 30B (relating to new qualified alternative motor vehicle credit) is

amended by adding at the end the following new paragraph:

"(6) HIGHER INCREMENTAL COST LIMITS FOR NATURAL GAS VEHICLES.—In the case of alternative fueled motor vehicles with respect to vehicles powered by compressed or liquefied natural gas, paragraph (3) shall be applied—

"(A) in subparagraph (A) by substituting '$12,500' for '$5,000',

"(B) in subparagraph (B) by substituting '$20,000' for '$10,000',

"(C) in subparagraph (C) by substituting '$50,000' for '$25,000', and

"(D) in subparagraph (D) by substituting '$80,000' for '$40,000'.".

(c) EFFECTIVE DATE.—The amendment made by this section shall apply to property placed in service after the date of the enactment of this Act.

SEC. 105. MODIFICATION OF DEFINITION OF NEW QUALIFIED ALTERNATIVE FUEL MOTOR VEHICLE.

(a) IN GENERAL.—Clause (i) of section 30B(e)(4)(A) (relating to definition of new qualified alternative fuel motor vehicle) is amended to read as follows:

"(i) which—

"(I) is only capable of operating on an alternative fuel, or

"(II) is capable of operating on compressed or liquefied natural gas and (but not in combination with) gasoline or diesel fuel, but in no case shall such vehicle have an operating range of less than 200 miles on compressed or liquefied natural gas.".

(b) CONVERSIONS AND REPOWERS.—Paragraph (4) of section 30B(e) is amended by adding at the end the following new subparagraph:

"(C) CONVERSIONS AND REPOWERS.—

"(i) IN GENERAL.—The term 'new qualified alternative fuel vehicle' includes the conversion or repower of a new or used vehicle so that it is capable of operating on a qualified alternative fuel as it was not previously capable of operating on an alternative fuel.

"(ii) TREATMENT AS NEW.—A vehicle which has been converted to operate on alternative fuel shall be treated as new on the date of such conversion for purposes of this section.

"(iii) RULE OF CONSTRUCTION.—In the case of a used vehicle which is converted or repowered, nothing in this section shall be construed to require that the motor vehicle be acquired in the year the credit is claimed under this section with respect to such vehicle.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to property placed in service after the date of the enactment of this Act.

TITLE II—PROMOTE PRODUCTION OF NGVS BY ORIGINAL EQUIPMENT MANUFACTURERS

SEC. 201. CREDIT FOR PRODUCING VEHICLES FUELED BY NATURAL GAS OR LIQUIFIED NATURAL GAS.

(a) IN GENERAL.—Subpart D of part IV of subchapter A of chapter 1 (relating to business-related credits) is amended by inserting after section 45Q the following new section:

"SEC. 45R. PRODUCTION OF VEHICLES FUELED BY NATURAL GAS OR LIQUIFIED NATURAL GAS.

"(a) IN GENERAL.—For purposes of section 38, in the case of a taxpayer who is a manufacturer of natural gas vehicles, the natural gas vehicle credit determined

under this section for any taxable year with respect to each eligible natural gas vehicle produced by the taxpayer during such year is an amount equal to the lesser of—

"(1) 10 percent of the manufacturer's basis in such vehicle, or

"(2) $4,000.

"(b) AGGREGATE CREDIT ALLOWED.—The aggregate amount of credit allowed under subsection (a) with respect to a taxpayer for any taxable year shall not exceed $200,000,000 reduced by the amount of the credit allowed under subsection (a) to the taxpayer (or any predecessor) for all prior taxable years.

"(c) DEFINITIONS.—For purposes of this section—

"(1) ELIGIBLE NATURAL GAS VEHICLE.—The term 'eligible natural gas vehicle' means any motor vehicle (as defined in section 30(c)(2))—

"(A) which—

"(i) is only capable of operating on natural gas or liquefied natural gas, or

"(ii) is capable of operating on compressed or liquefied natural gas and (but not in combination with) gasoline or diesel fuel, but in no case shall such vehicle have an operating range of less than 200 miles

on compressed or liquefied natural gas, and

"(B) the final assembly of which is in the United States.

"(2) MANUFACTURER.—The term 'manufacturer' has the meaning given such term in regulations prescribed by the Administrator of the Environmental Protection Agency for purposes of the administration of title II of the Clean Air Act (42 U.S.C. 7521 et seq.).

"(d) SPECIAL RULES.—For purposes of this section—

"(1) IN GENERAL.—Rules similar to the rules of subsections (c), (d), and (e) of section 52 shall apply.

"(2) CONTROLLED GROUPS.—

"(A) IN GENERAL.—All persons treated as a single employer under subsection (a) or (b) of section 52 or subsection (m) or (o) of section 414 shall be treated as a single producer.

"(B) INCLUSION OF FOREIGN CORPORATIONS.—For purposes of subparagraph (A), in applying subsections (a) and (b) of section 52 to this section, section 1563 shall be applied without regard to subsection (b)(2)(C) thereof.

"(3) VERIFICATION.—No amount shall be allowed as a credit under subsection (a) with respect to which the taxpayer has not submitted such information or certification as the Secretary, in consultation with the Secretary of Energy, determines necessary.

"(e) TERMINATION.—This section shall not apply to any vehicle produced after December 31, 2017.".

(b) CREDIT TO BE PART OF BUSINESS CREDIT.—Section 38(b) is amended by striking "plus" at the end of paragraph (34), by striking the period at the end of paragraph (35) and inserting ", plus", and by adding at the end the following:

"(36) the natural gas vehicle credit determined under section 45R(a).".

(c) CONFORMING AMENDMENT.—The table of sections for subpart D of part IV of subchapter A of chapter 1 is amended by inserting after the item relating to section 45Q the following new item:

"Sec. 45R. Production of vehicles fueled by natural gas or liquified natural gas.".

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to vehicles produced after December 31, 2008.

TITLE III—TO INCENTIVIZE THE INSTALLATION OF NATURAL GAS FUEL PUMPS AT SERVICE STATIONS AND DEPOTS AND DOMESTIC LNG PRODUCTION FACILITIES FOR SMALL ENERGY PRODUCERS

SEC. 301. EXTENSION AND MODIFICATION OF ALTERNATIVE FUEL VEHICLE REFUELING PROPERTY CREDIT.

(a) IN GENERAL.—Subsection (g) of section 30C is amended by striking "and" at the end of paragraph (1), by redesignating paragraph (2) as paragraph (3), and by inserting after paragraph (1) the following new paragraph:

"(2) in the case of property relating to compressed or liquefied natural gas, after December 31, 2027.".

(b) EFFECTIVE DATE.—The amendments made by subsection (a) shall apply to property placed in service after the date of the enactment of this Act.

SEC. 302. INCREASE IN CREDIT FOR CERTAIN ALTERNATIVE FUEL VEHICLE REFUELING PROPERTIES.

(a) IN GENERAL.—Subsection (b) of section 30C is amended to read as follows:

"(b) LIMITATION.—The credit allowed under subsection (a) with respect to all qualified alternative fuel vehicle refueling property placed in service by the taxpayer during the taxable year at a location shall not exceed—

"(1) except as provided in paragraph (2), $30,000 in the case of a property of a character subject to an allowance for depreciation,

"(2) in the case of a compressed natural gas, or liquefied natural gas, the lesser of—

"(A) 50 percent of such cost, or

"(B) $100,000, and

"(3) $2,000 in any other case.".

(b) EFFECTIVE DATE.—The amendments made by subsection (a) shall apply to property placed in service after the date of the enactment of this Act.

TITLE IV—NATURAL GAS VEHICLES

SEC. 401. NATURAL GAS VEHICLES IN FEDERAL FLEET.

Not later than December 31, 2014, and thereafter, at least 50 percent of all new vehicles purchased or placed into service by the United States Government shall be vehicles that are capable of operating on compressed or liquefied natural gas.

SEC. 402. GRANTS FOR NATURAL GAS VEHICLES RESEARCH AND DEVELOPMENT.

(a) IN GENERAL.—The Secretary of Energy may make grants to original equipment manufacturers of light duty and heavy duty natural gas vehicles for the development of engines that reduce emissions, improve performance and efficiency, and lower cost.

(b) LIMITATION.—The aggregate amount of grants under subsection (a) for any fiscal year shall not exceed $30,000,000.

HB 14

"An Act designating the Alaskan malamute as the Alaska State Dog"

The Alaskan malamute has played an important role in Alaska's history for at least four thousand years. Considered to be one of the twelve ancient breeds, the Alaskan malamute evolved from the ancient dogs that accompanied prehistoric man in his migrations from Asia, reaching back to the earliest days of prehistory Alaska with the Mahlemut people, now known as the Inuits, in Northwestern Alaska. They lived and worked closely with their dogs, depending on them as partners in hunting large game, hauling heavy loads, and even helping to watch children.

Eighteenth and nineteenth century European explorers to Alaska were impressed with the breed and by the time of the gold rush, Alaskan malamutes, with their ability to haul equipment and people, were in high demand. They were so highly valued that a prospector would pay $500 dollars for one good dog and $1500 for a small team! Long after the Gold Rush, Alaskan malamutes continued to be valuable freight dogs. They were easy to care for and could pull heavy loads to areas that were otherwise inaccessible.

During the 1925 Serum Run to Nome, about 150 sled dogs relayed diphtheria antitoxin 674 miles by dog sled in a record-breaking five and a half days, saving the small city of Nome and the surrounding communities from an incipient epidemic. The Alaskan malamute played a role in this important event.

The Alaskan malamute assisted with Admiral Richard Byrd's expeditions to the South Pole in 1828 and 1934. The successful exploration of this vast continent could not have been accomplished without these dogs.

Additionally, the Alaskan malamute contributed to America's efforts during WWII, pulling sleds in snow-covered areas that were inaccessible to other, more mechanical means of transportation. They were also used as pack animals to carry weaponry and ammunition across the frozen ground, and they served as search-and-rescue dogs.

With its long and distinguished history, the Alaskan malamute has always been an intelligent, hardworking, and loyal partner. This amazing breed helped to make Alaska what it is today and deserves to be recognized.

Please join us in supporting the appointment of the Alaskan malamute as the official Alaska state dog.

CS FOR HOUSE BILL NO. 14(STA)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE STATE AFFAIRS COMMITTEE

Offered: 2/27/09
Referred: Rules

A BILL

FOR AN ACT ENTITLED

"An Act designating the Alaskan Malamute as the official state dog."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

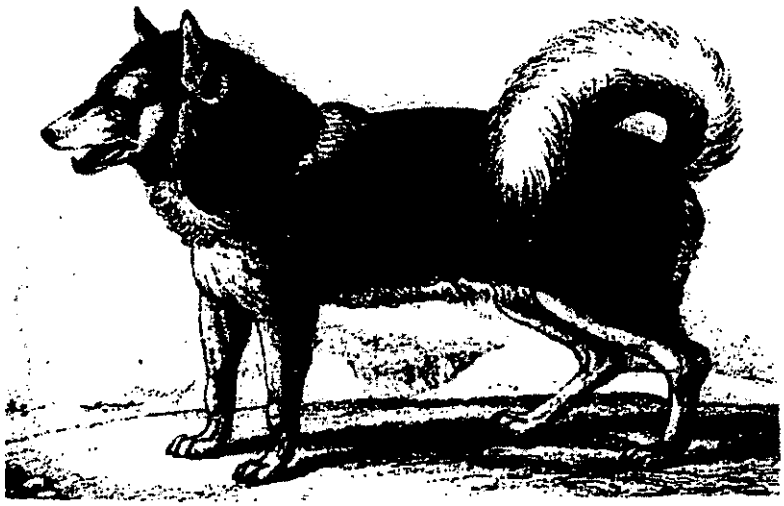
*** Section 1.** AS 44.09 is amended by adding a new section to read:

Sec. 44.09.140. State dog. The Alaskan Malamute is the official state dog.

THE STATE SLED DOG. THE HUSKEY IS THE OFFICIAL STATE SLED DOG.

ALASKAN MALAMUTE HISTORY

Alaska and Siberia, separated only by 55 miles of Bering Sea, with some of the smaller islands in the straits as close to each other as only 2 miles, have all through the ages shared their ancestry, a way of living and their life preserving dogs.



A Northern dog quite different from our Northern breeds of today

Some 35,000 years ago the people of Central Asia migrated farther and farther north to the extreme most regions of Siberia and the Arctic, and brought with them their jackal-type dogs (Canis aureus). Cross-bred with the Arctic wolves (Canis lupus), these animals developed over the centuries into what later came to be referred to as the Northern breeds, including the Malamute, Samoyeds, the Spitz, Keeshonds, Elkhounds, the Nootka dogs of Iceland and the Russian Laikas.

By the Neolithic age, 3500 to 2000 B.C., the Northern dogs had become established with their own type and characteristics which, with periodic breedings to the wolf, managed to endure down through the ages. All of these were referred to as "huskies". The term husky is a corruption of "esky", a slang word for Eskimo; it covered all the sled-pulling breeds that had rough, shaggy coats, pointed faces and plumey tails. Their coats were thick and woolly to protect them from the elements, and they came in almost every color; solids, brindles, white with spots, black with white, white with black patches, reds, yellow, yellow spotted, red spotted, etc. Today the term husky applies only to the Siberian Husky breed.

An Arctic expedition prepares for its sledge journey over the ice. (Courtesy Virginia Devaney)

From the first days of the Eskimos' existence on earth the dogs had been there at their sides, living with them and hunting with them, thousands of years before sleds were thought of or necessary to their existence. As far back as Mesolithic times men traveled on skis, and there are also evidences that they used the travois for ages before they got around to building sleds.

As the wilderness opened up before them, and as their numbers grew, they began to develop a dog bred to meet the requirements of their specific needs, a dog with the necessary conformation to provide endurance over great distances with the least expenditure of energy.

And so the Mahlemut Indians in the vast Alaskan territory, with their settlement along the Kotzebue Sound in upper Western Alaska, took the husky dog and began by process of elimination to develop what we have come to know as the Alaskan Malamute breed. It was almost a case of the survival of the fittest, since only the strongest of the litters came to survive the elements and the work schedule given to them by their owners. Through this continuous culling program we now have the distinctive, strong, powerful working dog that is hailed as the king of the working dogs.

Malemut Men and Women with Lip Labrets - 1881

In the twentieth century the Malamutes came of age:

1909 brought about the Commander Robert Peary -Dr. Frederick Cook controversy on who reached the North Pole first. This remarkable exploration was made possible by the sled dogs, and nobody argues this point. Regardless of which man got to the North Pole first, history bears out the fact that the sled dogs were truly the first ones there.

The great serum run in 1925 when a group of drivers and their stalwart dogs fought their way through fifty below zero weather and an 80 mile an hour blizzard to get serum to the inhabitants of Nome to halt the march of diphtheria.

Later brought the two Admiral Richard Byrd expeditions on the Antarctic continent. To this day there stands a plaque in Little America, Antarctic dedicated to all the dogs whose lives were lost during these two expeditions to Little America, 1928-1930 & 1933-1935.

Milton and Eve Seeley, the pinnacles in the breed, received their first Malamute from Arthur Walden in 1924. Walden was a well respected Malamute owner and trainer. Walden was responsible for the training and preparation of the Antarctic expeditions for Admiral Byrd. The Seeley's were responsible for the Alaskan Malamute receiving AKC recognition in 1935. On April 17, 1935 the Alaskan Malamute Club was organized, it later became the Alaskan Malamute Club of America, as we know it today.

Eva "Short" Seeley

There are 2 original strains of Malamutes, the M'Loots and the Kotzebues. The M'Loots tend to be larger sized than the Kotzebue, but some were rangy, some considerably lacking in substance. Their fronts were generally better than the Kotzebues, who tented to be somewhat wide in the chest and sometimes out at the elbows. The M'Loots were lacking in rear angulation, and this led to stilted gait. The Kotzebues had a broader head, more compact body and more rear angulation. The M'Loots also tended to have long ears and long muzzles.

The Kotzebues were gray dogs with white trim. The M'Loots had a wider range from gray to black and white. Dispositions differed somewhat. The Kotzebues were less aggressive and easier to control. The M'Loots were often aggressive with other dogs, prone to fighting, and sometimes difficult to handle.

It was the Kotzebue size which became a proven factor in all of the Byrd expeditions that this was the size most desired to endure the pace and elements. This is where the size in the breed standard came from. It was the Kotzebue line which was first recognized by AKC as a breed, and later the M'Loots were allowed to be included. Both strains are named for the Eskimos (Mahlemiut), of their region, the M'Loot, and the Kotzebue tribes.

A team of AKC registered Alaskan Malamutes

Today, Malamutes are seen in most areas of the world. They are tremendous companions, they are shown in every state, and many foreign countries. They still work performing weight pulls, back packing, and sledding. They perform in the obedience rings, provide care to elderly folks as service dogs and on occasion they have been known to sit on your lap.

Malamutes are very smart, loving, devious and still the most powerful working dog in the world. All they ask for in return is love, a safe environment, and maybe, a pat on the head.

Siberian Husky History

As the name would suggest, Siberian Huskies are native to Siberia, where they have been trained for hundreds of years by the Chukchi people to pull sleds. The Chukchi are semi-nomadic people, and the Siberian Husky's ability to pull sleds with light loads for long distances made it a useful companion. Recent DNA analysis has shown the Siberian Husky to be one of the oldest breeds of dog.

A team of Siberian Huskies was brought to Alaska in 1909 to compete in the All Alaska Sweepstakes Race. Following their debut a large number were imported to Alaska, and a team of Siberian Huskies won the same race the following year. In subsequent years, Siberian Huskies went on to win many different races and gain fame for their speed and endurance.

Siberian Huskies were made even more famous in 1925, when the city of Nome, Alaska was struck by a diphtheria outbreak. Several different teams of sled dogs, most of them Siberian Huskies, relayed the necessary serum back to Nome. After this story became national news, Leonhard Seppala, a famous breeder of Siberian Huskies and a key figure in the Nome rescue, toured New England with his team. These events helped to popularize the breed, and in 1930 the Siberian Husky was recognized as a breed by the American Kennel Club. They are still used in various sledding, carting, and racing events, and are largely responsible for the popularization of these activities. In recent years, however, the Alaskan Husky, which is specially bred for speed, has largely replaced the Siberian in many races; in response, a movement has started to create races specifically for Siberian Huskies. Recently, the breed has found success as a hiking companion, therapy dog, and as a loving pet.

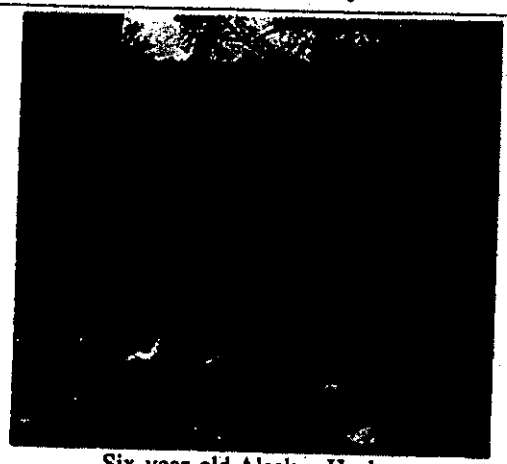
Alaskan Husky

From Wikipedia, the free encyclopedia

Alaskan Husky



Six-year-old Alaskan Husky

Country of origin United States (Alaska)

Traits [hide]

Classification & standards [show]

The **Alaskan Husky** is not so much a breed of dog as it is a type or a category. It falls short of being a breed in that there is no preferred type and no restriction as to ancestry; it is defined only by its purpose, which is that of a highly efficient sled dog. That said, dog drivers usually distinguish between the Alaskan Husky and "hound crosses", so perhaps there is informal recognition that the Alaskan Husky is expected to display a degree of northern dog type. Specializations in type exist within the breed, such as freighting dogs (Mackenzie River Husky), sprint Alaskans, and distance Alaskans. Most Alaskan Huskies have pointy ears, meaning they are in fact classified as a spitz-type dog.

The Alaskan is the sled dog of choice for world-class dog sled racing sprint competition. None of the purebred northern breeds can match it for sheer racing speed. Demanding speed-racing events such as the Fairbanks, Alaska Open North American Championship and the Anchorage Fur Rendezvous are invariably won by teams of Alaskan huskies, or of Alaskans crossed with hounds or gun dogs. Hounds are valued for their toughness and endurance. Winning speeds often average more than 19 miles per hour (31 km/h) over three days' racing at 20 to 30 miles (32 to 48 km) each day.

Alaskan huskies that fulfill the demanding performance standards of world-class dogsled racing are extremely valuable. A top-level racing lead dog can be worth $10-15,000. Alaskans that fail to meet the performance standards of the musher who bred them often go on to be sold to less competitive mushers, allowing them to continue to run.

Description

Appearance

The Alaskan Husky is a heavily diluted wolfdog breed which has northern or husky-type ancestry, much like the Siberian Husky.

Alaskan Huskies (at least those used for speed racing) are moderate in size, averaging perhaps 46 to 60 pounds (21 to 25 kg) for males and 38 to 42 pounds (17 to 19 kg) for females. Some of them superficially resemble racing strains of the Siberian Husky breed (which is undeniably part of the Alaskan Husky genetic mix), but are usually taller and larger with more pronounced tuck-up.

Two Alaskan Huskies in the harness.

Color and markings are a matter of total indifference to racing drivers; Alaskans may be of any possible canine color and any pattern of markings. Eyes may be of any color and are often light blue. Coats are almost always short to medium in length, never long, and usually less dense than those of northern purebreds; the shorter coat length is governed by the need for effective heat dissipation while racing.

In very cold conditions, Alaskans often race in "dog coats" or belly protectors. Particularly in long distance races, these dogs often require "dog booties" to protect their feet from abrasion and cracking. Thus the considerations of hardiness and climate resistance prevalent in breeds such as the Siberian Husky and Canadian Inuit Dog are subordinated in the Alaskan Husky to the overriding consideration of speed. On long distance races they require considerable care and attention on the trail at rest stops.

Temperament

Racing sled dogs are bred for stamina, strength, speed, and endurance. A positive working attitude is essential. Sled dogs that come in contact with the public at races or in excursion businesses must not be aggressive toward humans.

Alaskan huskies are popular as pets in Alaska; older dogs that have outlived their usefulness as racing dogs make excellent pets for people willing to exercise them regularly. Older ex-racers tend to be very alert and well behaved, as well as somewhat less energetic than their younger counterparts.

Young huskies make good pets if given plenty of space to run and play, but their high demand for exercise and activity makes them a poor choice for urban residents.

Huskies are often healthier in drier climates such as that of interior Alaska. In the more humid regions, they are prone to develop ear and related infections.

If multiple huskies are kept in the same lot they tend to be vocal, howling and barking at each other and any other dogs in the vicinity unless they are trained to be quiet. In crowded neighborhoods this can be a very irritating nuisance to neighbors. They can be trained for silence, albeit with some effort. They are accomplished diggers and will tunnel underneath fences and houses to hunt burrowing animals or to escape their enclosures.

Huskies make relatively poor household dogs. They shed heavily during the Spring and Fall and may be considered hyperactive by sedate humans, running in circles inside a house when bored or cramped. If left alone in a dwelling for long periods they may engage in destructive behavior out of boredom, mischief or malice. They enjoy hunting small and large animals due to a deeply wired instinct known as SMAR or small mammal attack response. When they are hooked up to a sled, and will have to stay there for a while, they may get crazy and excited and start to chew the gang line.

In Alaska and other extreme northern regions they are occasionally killed by moose in the winter. Infrequently, moose in search of non-existent winter browse of willows and mountain ash during desperate times of long cold snaps and deep snow will enter human areas attracted by the scent of fresh straw used as bedding for the dogs. True to their wolf ancestors, huskies tend not to back down from such encounters and an angry moose can easily stomp and kick several dogs causing severe injuries. Most moose/husky encounters occur during runs when a musher accidentally startles a moose on a trail. Most of the time moose avoid fights, but in cases of deep snow when escape is difficult a moose may confuse a sled team for a wolf pack and cause some serious trouble.

Normally, moose are aware that huskies are domesticated, tethered and not a threat and will frequently bed down adjacent to sled dog kennels in order to use the huskies as sentries who will alert the sleeping moose of approaching wolves. Sled dogs tethered in far northern forests may be attacked and killed on their stakeouts by wolves when other prey is unavailable. However this is rare. Professional dog sled racers often surround their lots with high fences to prevent wildlife attacks. More important is a low fence to keep out diseased rodents which can infect dogs by carrying parasites.

Health

The Alaskan Husky is generally a healthy dog. Some strains are prone to genetic health problems similar to those found in purebred dog breeds. These may include PRA, hypothyroidism, etc. Dogs with an esophagus disorder, termed "wheezers" sometimes occur. This disorder makes the dog unable to bark, but have the ability to produce a low-pitched howling noise. The defect is genetically linked and appeares rarely. Theories of common exterior traits among "wheezers" abound, but are conflicting and undocumented. The life span of the Alaskan Husky is usually between 10 to 15 years.

History

The Alaskan Husky is derived from a mix of northern types, most notably the Siberian Husky. The history of the Alaskan Husky really began with the Gold Rushes of the late nineteenth century; sled and draft dogs used by miners of that era were typically heavy draft dogs with obvious Saint Bernard ancestry. The importation into Alaska of dogs from across the Bering Strait in Siberia in 1908 and subsequent years changed Alaskan sled dogs radically and permanently towards a smaller dog with lighter weight and much greater speed. With the increasing prevalence of motorized winter transport in the mid twentieth century, working sled dogs became less common in the northern villages. The Alaskan sled dog experienced a revival in the 1970s. George Attla, a Native Alaskan from the village of Huslia, was largely responsible for this. Many successful racing dogs today trace their lineage back to Attla dogs.

Recent history

Various attempts have been made in the past to organize breeders of Alaskan Huskies and to establish a registry for these dogs; such attempts have never received widespread support. Although racing sled dog kennels can be large, sometimes harboring well over a hundred dogs, and the breed population arguably in excess of one hundred thousand, this canine variety remains an informal and unregistered category of dog.

Bill seeks to name Alaskan Malamute as Alaska state dog

Mary Pemberton/The Associated Press
Published Friday, January 23, 2009

ANCHORAGE, Alaska -- It's time to stop dissing the dog.

That's the message that an inquisitive kindergartner brought to her teacher more than two years ago when she wanted to know why Alaska - the state that has a fondness for most things canine - didn't have an official state dog.

She even offered up her personal choice: the Alaskan Malamute.

The youngster's idea, and the hard work of other students, inspired a bill that if passed would make the Alaskan Malamute the official state dog. The large, rugged dogs with super thick coats suited for Arctic climes would join the list of other official state symbols, including the state insect (four spot skimmer dragonfly), the state fish (the Chinook salmon), the state flower (Forget-Me-Not), state gem (jade), and the state fossil (Wooly Mammoth.)

Rep. Berta Gardner, D-Anchorage, is sponsoring the bill in the House. It got its first reading on the opening day of the Legislature on Tuesday and was referred to the State Affairs Committee.

Gardner is asking for a quick hearing so that the children can see the rewards of their hard work soon, she said.

"To tell you the truth, I don't have a great passion for why the Malamute or why we should have the state dog," Gardner said. "This is their project and I am simply their tool."

Carol Bartholomew, a teacher at the Polaris K-12 School in Anchorage, said the school decided last year to forge ahead with the project, which was broken down into several segments. The youngest students researched what the dogs look like. The next older group looked into the connection between the dogs and the Mahlemut tribe. The oldest students put the dog in a historical context.

"I found out that the Alaskan Malamute originated in Alaska and the Mahlemut tribe

used to use them to haul game, take care of children, and um, helped in World War II to haul stuff where people couldn't. They also helped in Arctic explorations," said 10-year-old Atticus Madland, a Polaris student.

"They are known to usually be nice to people and kind of take care of them. Sometimes, they are mean to other dogs but generally are really nice to people," he said.

The students came up with a PowerPoint presentation. They got letters from community and city leaders. They collected signatures of support. They got the American Kennel Club and the Student Government Association of Alaska to support the idea.

The students submitted a legislative packet before the Dec. 15 deadline.

Madland hopes lawmakers pass the bill.

"After all the hard work, I think we deserve it," he said.

The Alaskan Malamute would be a good choice for the state dog, said Ione Zeller, former president of the Alaskan Malamute Club of America whose has lived with and loved Malamutes for 35 years.

"I believe most Alaskans think for themselves. They seem to be rather independent. They are not the kind that fawns over people and things, and neither are these dogs," she said.

According to the AKC, the Alaskan Malamute is one of the oldest Arctic sled dogs. They were named after a native tribe, the Mahlemuts, that settled along the shores of Kotzebue Sound in northwestern Alaska. The dogs were used primarily to haul game, belongings and supplies. The breed was recognized by the AKC in 1935.

Nancy Russell, in charge of judges education for the Alaskan Malamute Club of America, said the Alaskan Malamute is the only AKC registered breed that is native to the United States. While other breeds were developed here, the dogs used to develop those breeds came from outside the United States.

The Alaskan Malamute was already here, Russell said.

"The Alaskan Malamute is basically the native dog of the United States," she said.

Russell had a team of her Malamutes in the 1994 Iditarod Trail Sled Dog Race to see if the dogs, better at hauling freight than running marathons, could do it. Most of the dogs used in the 1,100-mile race are Alaskan huskies, a mixed-breed dog bred for speed.

The Malamute team made it 600 miles before scratching.

"They did just fine," she said. "They got to Ruby. That is not too bad for a Malamute team."

Anchorage students look to elevate malamute as Alaska's official top dog

By Dermot Cole

Published Saturday, January 10, 2009

We have an official state sport, which is dog mushing, as well as an official fish, land mammal, marine mammal, tree, flower, gem, mineral, bird, insect and fossil.

Somehow, with all of that, we have failed to crown an official canine.

Students at the Polaris K-12 school in Anchorage want to recognize the malamute as top dog.

The students put it this way: "The Alaskan malamute is an important part of Alaska history. They helped the Inuit hunt, carry food and watch over their children. They hauled supplies during the Gold Rush and World War II. They were part of the teams that brought medicine to Nome during the serum run."

"Their endurance, strength, loyalty and intelligence make the Alaskan malamute a great dog to represent Alaska."

Anchorage Rep. Berta Gardner has heard their call from the wild and prefiled a short bill that states, "The Alaskan malamute is the official state dog."

She said the students plan to present a case to the Legislature and answer questions about why the malamute should be elevated to official status.

"I think this is really going to be a very fun project. The kids and their teachers have done a fantastic job and have boundless enthusiasm," Gardner said.

The malamute breed won recognition from the American Kennel Club in 1935, "largely as a result of selective breeding programs by New England sled dog fanciers using original stock from Alaska," Russell Tabbert writes in the "Dictionary of Alaskan English."

December 10, 2008

To whom it may concern,

My name is Paige Hill and when I was a kindergartner, my grandma Shirley came to Alaska to spend Easter with my family. Since I was a kindergartner she came and spent the day with my class at Polaris K-12 School.

You see, my grandma Shirley teaches second grade in North Carolina and she wanted to teach us about things from where she came from. One of the first things she taught us about was her state's symbols. We learned that their state dog is a plott hound. She wanted to know what Alaska's state dog was and we all looked at each other. Nobody knew for sure what it was! Later, we found out we didn't even have a state dog and this is where it all began.

My teacher, Terry Powers, decided to help us do some investigating. We wanted to figure out how our state could get a state dog. We found out that two other symbols, the willow ptarmigan in 1955 and the four-spotted dragon fly in 1995 both became state symbols because of the efforts of school children just like us.

After lots of discussion, we narrowed our choice down to two types of dogs, the husky and the Alaskan malamute. We finally voted for the Alaskan Malamute. One of the reasons we picked the Alaskan malamute is because it's big like Alaska and because it's a hard working dog like the people of Alaska.

The next school year our class asked two older classes, Jamie Rodriguez's 4/5 and Carol Bartholomew's 2/3, to join us and help research more about the Alaska malamute's history to show that it's the very best choice to be Alaska's official state dog.

Sincerely.
Paige Hill, 2nd grader

Representative Berta Gardner
AK State Capitol, Room # 422
Juneau, AK 99801

Dear Representative Gardner,

My name is Florence Boots and I am in the fifth grade in Jamie's class at Polaris K-12 School. My class along with two others is working together to make the Alaskan Malamute the Alaska state dog.

The Alaskan Malamute has a deep connection with Alaskan history. Their origins reach back to the early days of Alaska with the Mahlemut people. The Mahlemut People, now known as the Inuits, lived in Northwestern Alaska. They lived and worked closely with their dogs, using them to haul loads and even to help watch children. Also, the Alaskan Malamutes were a very popular breed during the Klondike Gold Rush when they were used to help haul supplies. The Alaskan Malamute dogs were so valued back then that one person would pay $500 dollars for one good dog and $1500 for a small team! The Alaskan Malamute also assisted with Admiral Richard Byrd's expedition to the South Pole. The Alaskan Malamute also proved useful in World War II, as a helping and hauling dog. So the Alaskan Malamute would be a very good choice as the official Alaska state dog.

Please add your voice to ours by writing a letter to support making the Alaskan Malamute our official state dog. We will add it to our legislative packet along with our bill and informational presentation. We would greatly value the opportunity to add your voice to our growing number of supporters. Thank you very much.

Sincerely,

Florence S. Boots

Dear Mr. Terry:

Reference is made to your letter of April 30, 2008, regarding a bill to make the Alaskan Malamute the official state dog.

Your letter arrived after our May meeting so it had to wait for the Board Meeting for action. The Board of the Alaska Kennel Club has voted to support your effort to make the Alaskan Malamute the official state dog of Alaska. Please feel free to include this letter in your legislative packet.

Good luck in your efforts.

Sincerely,

ALASKA KENNEL CLUB

To: Christopher Gray;

This is a letter to support your class campaign to make the Alaskan Malamute the State Dog of Alaska. The Alaskan Malamute has played an important role in the history of our state and nation. It is an icon of Alaska in the legends and visual imagery of our state. In addition, it continues to be a highly valued companion and working dog in our modern society. Granting this honor to the breed would be an appropriate recognition of one of Alaska's native treasures.

Sincerely;

Kathleen Stephenson

Anchorage, AK 99507-1911

Dear Jessica:

Thank you for contacting the American Kennel Club. The Alaskan Malamute is a wonderful breed and we support your efforts to make it the state dog of Alaska.

There are currently nine state dogs in the United States. We have included a magazine article that appeared in the *AKC Gazette* in July 2006 that explains how these dogs became state symbols. In Wisconsin, a group of students wanted to make the American Water Spaniel their state dog. They contacted their representative and a bill was created and eventually passed!

Your class should contact your local state representative with your proposal. They will have to write and introduce legislation. For information on how a bill goes through the legislative process, visit http://www.lrc.ky.gov/kidspages/how_a_bill_becomes_law_.htm
This is an example from the state of Kentucky. It is in coloring book format and titled "How the Beagle Could Become Kentucky's State Dog."

If you need more information about the Alaskan Malamute, you can visit our web site at http://www.akc.org/breeds/alaskan_malamute/

You can also contact local dog clubs in your area (http://www.akc.org/clubs/search/index.cfm) or the Alaskan Malamute Club of America for more information and for support of your proposal:

Polaris K-12 School
6200 Ashwood Street
Anchorage, Alaska 99507-1911

Dear Carol's Class:

It has been brought to my attention by a well-written letter from Khaner Smith that your classroom is trying to pass a law to make the Alaska Malamute our official state dog. I understand how much research you have been doing and the reasons you are trying to make a difference on a state-wide issue such as an official state dog. Some of your research has me intrigued such as:

They were bred in Alaska.
They sniffed bombs during WWII.
They carried airplane parts.

Although Central Middle School of Science's mascot is the Husky, I can support your efforts in making the official state dog the Malemute. Please let me know how I can be of assistance to your classroom and thank you for inviting my support! Your classroom is filled with a beautiful group of motivated, intelligent, civic-minded students who are responsible for their learning - how could I not support your cause?

Sincerely,

Lisa Zelenkov,
Principal of Central Middle School of Science

Dear Katie:

I received your letter concerning your efforts to have the Alaska Malamute named the official state dog.

From reading your letter it is clear that you have done your homework. You have learned a lot about Malamutes and how they have served the First People and those who came after them. Well done! I applaud your efforts to have this fine animal and friend to man named the state dog.

If this letter can help you achieve your goal, then please feel free to send copies to the legislature and the governor.

Good luck on your project.

Regards,

Dan K. Coffey

Anchorage, AK 99507-1911

Dear Taylor,

Until I received your letter I did not know the origin of the Alaskan Malamute and its rich historical connection to the Inuit people and to Alaska. I also did not know that it is one of the 12 ancient breeds. Thank you for providing such a wealth of information about the Alaskan Malamute – including that this breed of dog was vital to miners during the Gold Rush; that Alaskan Malamutes helped during Admiral Byrd's expedition to the South Pole; and that Alaskan Malamutes were part of the dog team that made the historical Serum Run to Nome. The Alaskan Malamute truly is a wonderful dog that is hard working and loyal. I agree that these are the kind of attributes that Alaskans would consider important in naming an Alaska state dog.

I wish you and your class much success in your efforts to have the Alaska Malamute named Alaska state dog.

Sincerely,

Fran Ulmer

8 April 2008

To whom it may concern,

I am writing this letter in support of the proposal to make the Alaskan Malamute the official State dog of Alaska. I have been impressed with the job that the students at Polaris k-12 in Anchorage have done in making the case for the Malamute. I for one was educated by the class and felt they had done an exceptional job researching the topic. Given the importance of dogs in the history and culture of Alaska, I can think of no better way to honor this contribution than to select a true working dog, the Alaskan Malamute, as the official State dog

Sincerely,

Gary Drew

Gary Dew

3/31/08

DEAR JACOB,

THANK YOU FOR THE INTERESTING LETTER. I WOULD BE GLAD TO SUPPORT YOUR IDEA FOR PROMOTING THE ALASKAN MALEMUTE TO BE THE ALASKAN STATE DOG.

YOU HAVE DONE A LOT OF RESEARCH ON THE HISTORY OF THE DOG AND HAVE FOUND OUT HOW PEOPLE WANTED THEM TO BE PART OF THEIR FAMILY.

GOOD LUCK WITH YOUR RESEARCH, I AM SURE YOU WILL FIND MORE INTERESTING FACTS THAT WILL CONVINCE YOU, EVEN MORE, THAT THE MALEMUTE WOULD BE AN EXCELLENT CHOICE TO REPRESENT ALASKA.

THANK YOU FOR YOUR LETTER AND I WILL TELL MY FRIENDS ABOUT YOUR PROJECT.

LOVE YOU,

GRANDMA ELAINE.

May 13, 2008

Polaris K-12 School
6200 Ashwood Street
Anchorage, AK 99507-1911
Attn: Sarah Bartholomew

Dear Ms. Bartholomew:

Thank you for your letter regarding the Malamutes and how helpful they have been to people in the Arctic region. Your letter was very insightful and had alot of information that I was unaware of pertaining to this breed of dog. I agree this is one of the oldest and toughest dogs to come out of this region, probably even one of the first dogs to be domesticated here in Alaska being able to withstand the Northern Arctic's harsh climate.

Passage of a bill would be special recognition for an animal that has done so much for the people living in Alaska and other Arctic regions. I would love to support you and your school on this bill, and I believe the community would agree the Malamute should be our state dog. Having this breed originate from our own state should be more than a good enough reason to consider it as our state dog.

Good Luck with your school project to get this bill passed.

Sincerely,

Mark Begich

April 1, 2008

To Whom It May Concern:

This letter is to support officially declaring the Alaska Malamute as the State Dog.

As the result of the wonderful work of a second grade class at Polaris K-12 in Anchorage I was made aware of the tremendous role the Alaska Malamute has played in Alaska history.
At the top of the list:

- They helped gold miners dig for gold.
- They are strong workers and are used to pull heavy burdens.
- Their role in the Iditarod is obvious.

Please accept these brief words as my support. Feel free to contact me with any questions.

Sincerely,

Troy J. Bowler

April 29, 2008

Dear Members of the Alaska State Legislature:

I am writing in support of making the Alaska malamute the official state dog of Alaska. The arguments supporting this proposal, as articulated by the students of Polaris, have convinced me that the Alaska malamute is an appropriate symbol for our state. The breed represents the best of our unique state, as a strong, beautiful animal that has contributed greatly to the survival of peoples in this tough region for thousands of years.

I also think it is exciting to see young people get engaged in thinking about, and making public policy and history.

I urge you to support this effort.

Thank you.

Summary of Changes in CSHB20(FIN) From Original to Current Version

The original version of CSHB20(FIN) amended only subsection A in the Commercial Fisheries Loan Act, in order to allow borrowers who meet the existing eligibility criteria under subsection A to take out loans for energy efficiency upgrades.

In the House Fisheries Committee, a CS was adopted that further increases the level of loan coverage and eligibility. CSHB20(FSH) maintains the amendment to subsection A, and also amends subsection B, paragraph (i), to eliminate language prohibiting borrowers who have received loans under subsection A from receiving for loans under subsection B.

However, this prohibition is eliminated only if the purpose of the additional loan under subsection B is for energy efficiency improvements.

Taking into account the increasing prices for engines and other equipment, CSHB20(FSH) also raises the total allowable outstanding balance on loans to an individual fisher under both subsections A and B from $300,000 to $400,000.

Also, CSHB20(FSH) adds an immediate effective date.

Another change in CSHB20(FSH) made the legislation retroactive to September 1, 2008. This was because of concern over whether existing retroactivity regulations under the Loan Act would apply to energy upgrades made by applicants before the language was in statute.

The Division of Investments has since been assured by legal counsel that the retroactivity in regulation will apply. Therefore, an amendment to the bill was adopted in the House Finance Committee that deleted the retroactivity clause in CSHB20(FSH).

Prepared by the Office of Rep. Edgmon

ANALYSIS: *(Attach a separate page if necessary)*

This legislation amends Section A (AS 16.10.310(a)(1)(A)) of the Commercial Fishing Revolving Loan Fund (CFRLF) program to provide low interest loans to qualified Alaskan harvesters who wish to upgrade their existing vessels and gear to improve energy efficiency.

The bill also amends AS 16.10.320(i) to allow Section A borrowers to apply for energy efficiency upgrade loans under Section B (AS 16.10.310(a)(1)(B)) and increases the outstanding balance loan limits to $400,000.

The Department of Commerce, Community, & Economic Development (DCCED) anticipates that this will increase loan demand by approximately $4.2 million in FY10, $2.1 million in FY11 and $1.6 million in years FY12 through FY15.

Approved by: Emil Notti, Commissioner — Date 2/4/2010
Department of Commerce, Community and Economic Development

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. CSHB 20(FIN)

ANALYSIS CONTINUATION

The CFRLF has sufficient cash reserves to handle the increased loan demand. DCCED is requesting one additional Loan Officer position to process loan requests generated as a result of this legislation. This position will be funded out of the CFRLF.

There may be a very small but indeterminate change in revenues as a result of this legislation. Currently, cash in the CFRLF is managed by the Department of Revenue and is invested in short term instruments that are yielding minimal returns in this interest rate environment. These earnings are retained by the General Fund. Interest earnings generated by loans made as a result of this legislation would be retained by the CFRLF.

Sponsor Statement

CSHB20 (FIN): Fisheries Loans for Energy Efficiency

SPONSOR'S INTENT
CSHB20 (FIN)

CSHB20 (FIN) provides technical fixes to the Commercial Fishing Loan Act in order to make low-interest loans for energy efficiency upgrades available to a larger number of Alaska's commercial fishers.

Volatility in fuel costs continues to have a worrisome impact on our commercial fishing fleets, cutting into profits and threatening productivity.

In recent years, great advances have been made in diesel and outboard engine technologies. Fuel efficiency and performance have vastly improved.

There have also been substantial developments in alternatives to traditional diesel and gasoline generator sets, and modifications to vessel hulls—such as bulbous noses and fin stabilizers—can also significantly boost energy efficiency.

Commercial fishers across the state are eager to take advantage of these and other new technologies that significantly lower operating costs.

Passage of CSHB20 (FIN) will provide many Alaskan fishers the opportunity to make these improvements sooner. At the same time, it will foster innovation and stimulate the entrepreneurial spirit in one of Alaska's most important industries.

Prepared by the office of Rep. Edgmon

Sectional Analysis

CSHB20 (FIN): Fisheries Loans for Energy Efficiency

Section 1 amends subsection A, paragraph (ii) of the Commercial Fishing Loan Act to allow loans to upgrade existing vessels and gear for the purpose of improving energy efficiency. Under current statute, subsection A loans are only available for improving the quality of Alaska seafood products.

Section 2 of the bill amends paragraph (i) of subsection B of the Act in two ways:

First, it eliminates the current prohibition for a borrower who has ever had a loan out under subsection A from also becoming a borrower under subsection B, but only if the purpose of the additional subsection B loan is for an energy efficiency upgrade.

Second, it raises the total allowable balance outstanding on loans to an individual from both subsection A and subsection B from $300,000 to $400,000.

Section 3 sets an immediate effective date for the bill.

The fuel survey and subsequent reports was led by Sunny Rice with contributions by Paula Cullenberg, Torie Baker, and Glenn Haight of the Alaska Sea Grant Marine Advisory Program; Carol Kaynor, Doug Schneider and Dave Partee of the Alaska Sea Grant Program; Greg Fisk with SeaFisk Consulting; and Mark Vinsel of United Fishermen of Alaska. The survey was a product of the Alaska Sea Grant Marine Advisory Program's fuel and energy committee, under the Alaska Fisheries Business Assistance Program (FishBiz).

4529

Introduction

In fall 2008, the Alaska Sea Grant Marine Advisory Program (MAP), in partnership with the United Fishermen of Alaska, conducted a web-based survey of Alaska's commercial fishermen and tender operators. The survey asked respondents how increased fuel prices impacted their fishing businesses, what steps they took in response, and what further technical assistance would help them adapt to increasing costs. Following a strong response of 126 completed surveys, representing a broad cross-section of gear types and fishing locations in the state, MAP identified several technical issues that require further research and support.

Background

The Alaska seafood industry is the state's largest private sector employer and its main economic engine along Alaska's vast coastline. In the spring of 2008, the Alaska seafood industry braced for the highest fuel prices ever. Diesel-dependent seafood processors and commercial fishermen, sometimes operating in highly remote areas of the state, faced per gallon prices in excess of $5 to $6. Some areas reported prices in excess of $7 per /gallon. In some cases, this increase represented a doubling of fuel costs.

The resulting huge production costs likely offset many of the gains the sector had made on improved seafood prices, and any future increases in fuel costs will continue to cast a pall over the fishing sector. This prospect, combined with growing consumer trends favoring food sources that use less fossil fuel to produce, serve as compelling reasons to reduce and/or eliminate fossil fuel use.

As first responders to the Alaska commercial fishing industry, MAP developed a detailed survey for the fleet to gather baseline information and determine initial impacts. This information serves to identify areas for further research, outline long-term alternative energy needs and prompt policy makers to address this crucial issue for coastal Alaska's main economic engine.

4530

Summary Findings

This section summarizes significant survey findings listed throughout the report.

Changing Behaviors

- On average, fishermen attempted to lower their fuel costs through several changes in their fishing practices.
- The most common method of reducing fuel usage was less prospecting for fish.
- Other common methods include staying closer to home or staying out on the grounds longer.
- These top techniques for reducing fuel during fishing appear to indicate less overall effort.
- The most common fuel saving techniques in the fishing operations were throttling back and maintaining engine and fuel systems.
- The next most common fuel saving techniques were more careful planning of routes and timing, keeping the vessel bottom clean and propeller tuned, and monitoring vessel trim.
- Respondents indicating they owned a Bristol Bay gillnet permit were the least likely to change their operation to reduce fuel consumption.

Impact on Income

- Forty-three percent of the survey respondents projected fuel expenses between 10-20% of their total gross income. Expanding that range to 10 - 30% of total gross income expands the percentage of respondents to 70%.
- Almost 90% of the survey respondents indicated their fuel cost as a percentage of income increased "somewhat more" or "more than doubled" over the past five years.
- Eighty percent of the respondents with crew reported higher fuel costs negatively impacted income to crew members.
- Twenty-four percent of survey respondents received some form of fuel assistance from their processor.

Fisheries Management Impacts

- A majority of the respondents (64%) believe fisheries management decisions may affect their fuel costs. Conversely, only 40% believe fisheries managers should consider the impacts on fuel usage when managing fisheries.

Survey Limitations

- Underreporting of conditions for fishermen in the AYK region requires additional review. These regions sustain high fuel costs, and with gas powered engines, employ some of the more inefficient engines in the fishery.

4531

Survey Parameters

The fuel survey ran on Survey Monkey©, an online survey tool, from late September until mid October.

Results of this survey are unscientific. Respondents were self-selected members of the Alaska commercial fishing industry, referred to the survey website by radio or newspaper stories, fishing-related listserves, or by direct referral from MAP faculty or others. As the survey was conducted using a web-based survey-hosting site, respondents were limited to those with internet access. Neither names nor computer IP addresses were collected with responses and no attempt was made to verify that respondents had identified themselves accurately.

Respondents were asked 17 questions on topics ranging from energy saving techniques to fisheries management impacts and possible research areas. Appendix I provides the survey tool.

While we were pleased with the response rate (126 total responses) and the information provided, there are over 10,000 permit holders in the Alaska state fisheries alone. Furthermore, the number of respondents per gear type in some cases was very small.

Despite these limitations, we feel these results provide a relevant snapshot of the impacts of, and fishermen's responses to, increased fuel prices.

4532

Survey Respondent Information

Make up of Survey Responders

126 Alaska commercial seafood harvesters and tender operators responded to the survey. Table 1 provides the gear type and, in some cases, the region of each responder.

124 survey respondents indicated participating in 199 separate fisheries. This indicates several fished in more than one fishery. Two skipped the question. Almost 50% of the responders were gillnetters.

Several areas in this report provide gear- specific results where notable differences occurred between gear types.

Table 1

Answer Options	Response Count	Response %
Gillnetting - Bristol Bay	12	9.7%
Gillnetting – Arctic, Yukon, Kuskokwim (AYK)	2	1.6%
Gillnetting – other locations	46	37.1%
Setnetting	9	7.3%
Trolling	15	12.1%
Seining	24	19.4%
Longlining	37	29.8%
Trawling	14	11.3%
Diving	3	2.4%
Jigging	7	5.6%
Pot fishing	19	15.3%
Tendering	7	5.6%
Other	4	3.2%
Comments	11	
Total Responses	199	
Total Respondents	124	
Skipped questions	2	

Current fuel usage

A large majority, 78%, of the respondents had diesel engines. This result may overestimate the percentage of diesel vessels in the fleet because of the low number of AYK responses (only 2 out of 126). Small boat fishermen in the Arctic, Yukon, Kuskokwim (AYK) region tend to employ gas powered engines.

Changing Behaviors

Fishing Practices

The high cost of fuel dramatically changed the fishing activity of the survey responders. While survey results revealed 15 individuals (12% of total respondents) that did not change the way they fished because of the increasing cost of fuel, the vast majority of the respondents did change the way they fished.

4533

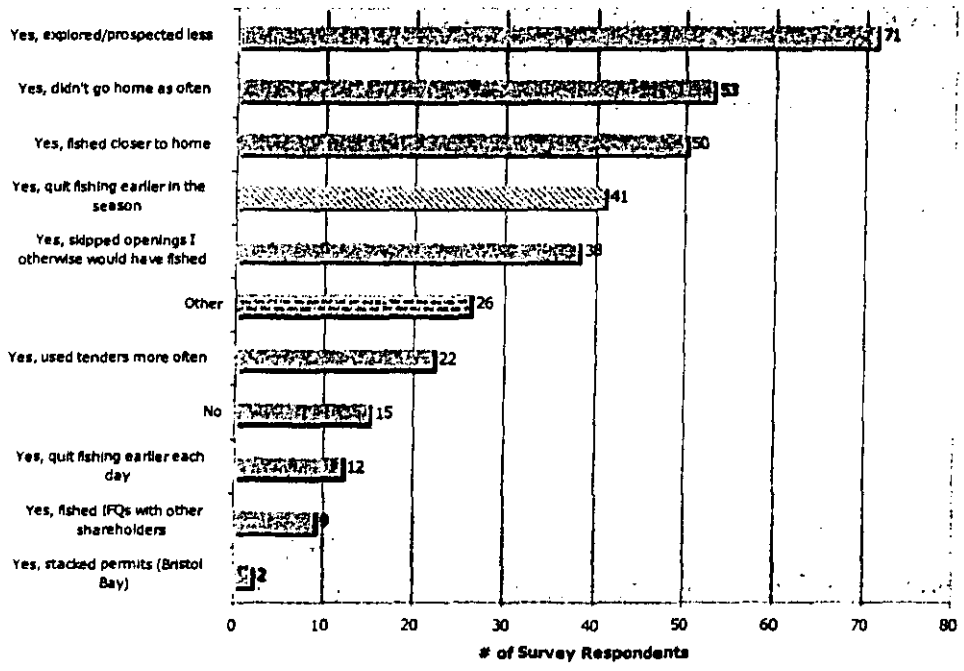
An examination of respondents indicating no change in fishing activity by gear type reveals over half were Bristol Bay gillnetters.

After removing these respondents, there were a total of 324 responses on types of changes made. This equates to an average of three changes per respondent. This indicates fishermen changed fishing practices in several ways to mitigate the high cost of fuel.

The most common response was that fishermen prospected less. This may have caused lower harvests as fishermen targeted areas known for large harvests, missing altogether areas that produced less fish historically.

Other top answers included, not going home as often and, conversely, fishing closer to home. The other top answer was fishermen quit earlier in the season.

Chart 1 - Changes in fishing behavior due to fuel prices



Most responses would seem to indicate less total harvesting activity. Chart 1 provides a summary of changes in fishing practices.

Fuel Saving Techniques

The survey sought information on what fuel saving techniques fishermen employed in the operation and maintenance of their vessels. Over 70% of

respondents indicated that they "paid lots of attention" to maintaining their engine and fuel systems, and throttling back. Over 60% paid attention to planning their routes and timing.

General maintenance of the vessel proved very important with fishermen. This included carefully cleaning their boat, maintaining the propeller, and monitoring vessel trim.

Table 2 summarizes all responses to Question 9, *"How much attention do you pay to the following techniques for decreasing fuel consumption?"*

Table 2

Answer Options	Lots of attention	Some attention	Very little attention	Response Count
Throttling back	90	23	5	118
Maintaining engine and fuel systems	89	23	4	116
Planning your route and timing	78	25	11	114
Keeping bottom clean	61	39	10	110
Keeping propeller tuned	58	36	15	109
Monitoring vessel trim	54	31	25	110
Maintaining fuel consumption records	46	33	27	106
Adjusting autopilot to improve tracking	43	23	26	92
Reducing vessel weight	33	44	37	114
Cutting back on diesel genset use	28	20	29	77
Other	14	2	6	22
Comments				19
			Total answered	119
			Total skipped	7

Investment Into Fuel Saving Devices

The survey attempted to learn what kinds of investments fishermen were considering making into fuel saving equipment. Adding a new engine drew the most positive response, while adding a flow meter was a close second. Items like bulbous bows, aerofoil-shaped rudders and kort nozzles were not as highly considered.

Table 3 summarizes all responses to Question 10, *"What new DEVICES have you used or considered using to decrease your fuel consumption?"* Not counting the "Other" category, the answers are sorted by those that drew the most favorable responses (measured as the "Added this year", "Added prior year", or "Considering adding").

4535

Table 3

Answer Options	Added this year	Added prior to this year	Considering adding	Not interested	Response Count	Positive Response Count
New engine	12	21	42	19	94	75
Flow meter	3	17	44	22	86	64
Bulbous bow	2	5	22	44	73	29
Aerofoil-shaped rudder	0	8	17	44	69	25
Kort nozzle	0	5	15	48	68	20
Other	9	1	6	8	24	16
Comments					25	
				Total answered	109	
				Total skipped	17	

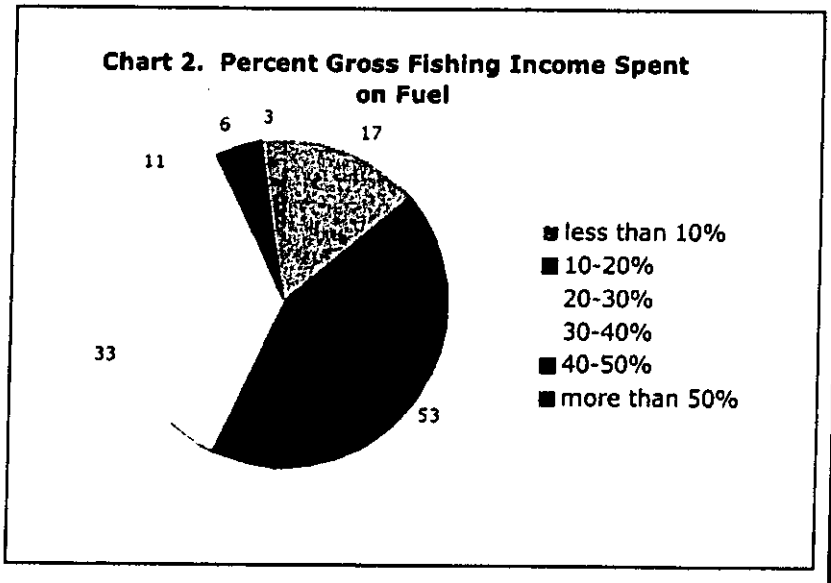
Income Impacts

Current Cost of Fuel

Survey respondents were asked what percentage of their income was spent on fuel. Forty-three percent of fishermen surveyed said they spent between 10 to 20% of their gross fishing income on fuel. Seventy percent (n=86) fell in the 10 to 30% range.

Chart 2 highlights the survey results for Question 4, *"Over the past year, what percentage of your gross fishing income has been spent on fuel?"*

Chart 2. Percent Gross Fishing Income Spent on Fuel

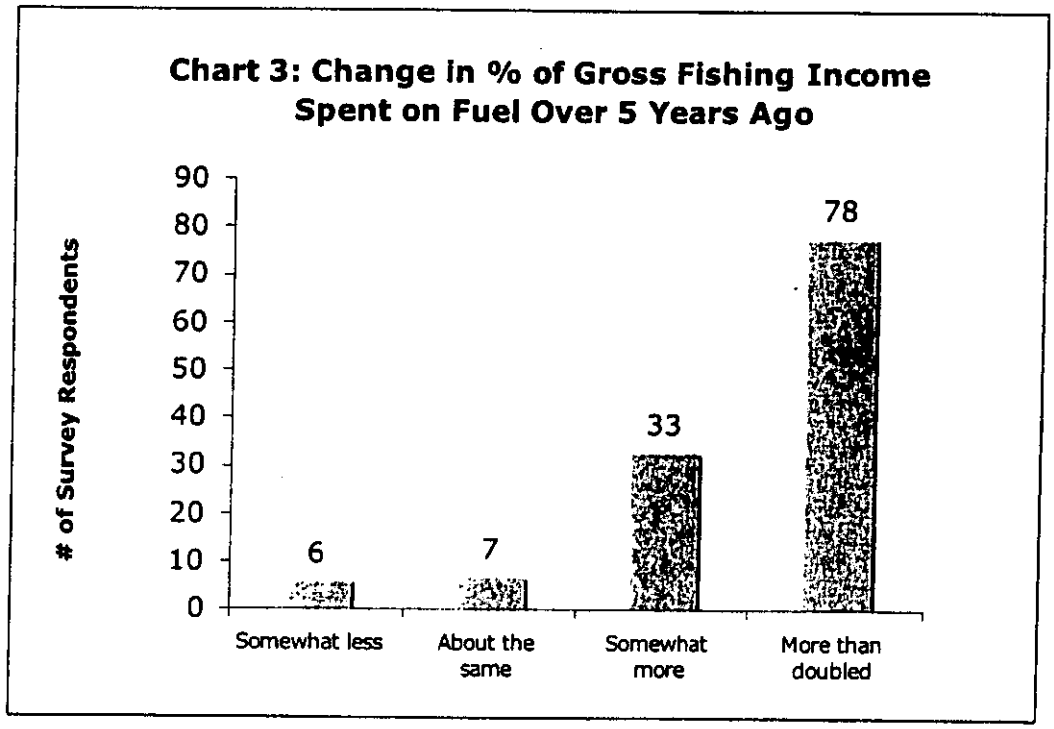


Increase in Fuel as a Production Cost

Respondents were then asked how much the cost of fuel increased as a percentage of income over the last five years. Sixty-three percent offered it more

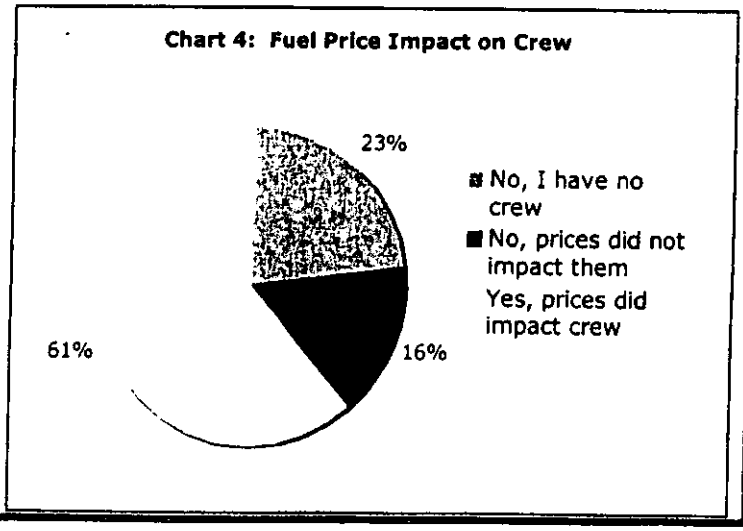
than doubled over that time. Very few indicated no real change at all. In total, 89.5% of the survey respondents indicated their fuel cost as a percentage of income increased at least "somewhat more". This is a disturbing trend considering that increased market prices in most salmon fisheries should have increased their income over that period of time.

In reviewing gear specific responses to this question, it appears this doubling of fuel costs occurred consistently across all fisheries. Chart 3.



Impacts to Crew Income

Permit holders were not the only ones impacted. A majority (61%) of respondents



4537

said their crew also felt the pinch of high fuel prices. A large portion, 23%, offered they had no crew. Of the remaining respondents, 80% indicated the price of fuel impacted how much income the crew made.

When asked how crew were impacted, most said that crew shares were reduced because the cost of fuel was taken off the top before shares were calculated. In many cases, this was the first year permit holders considered fuel costs in the crew share calculation. Others indicated that they fished short-handed or didn't hire crew at all. Others said they quit fishing or laid crew off sooner.

Help from Processors

Finally, survey respondents were asked to detail whether they received fuel cost assistance from their processor. Comments provided under this question indicate that processors assisted primarily through selling fuel to them at a bulk fuel price or providing fuel bonuses. Twenty eight percent of fishermen said that their processors provided assistance with their fuel costs. Table 4 summarizes the answers.

Table 4

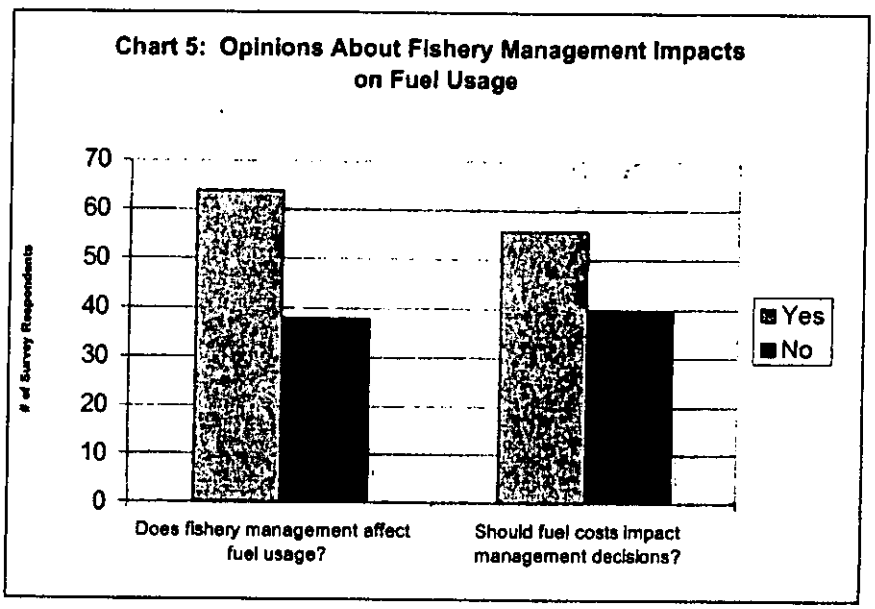
Answer Options	Response Count	Response Percent
Yes	34	27.6%
No	89	72.4%
Comments	29	
Total answered	123	
Total skipped	3	

Fisheries Management Impacts

Finally, respondents were asked about fisheries management's impact on fuel consumption. While 64 respondents said that management did affect fuel consumption rates in their fisheries, only 40 felt that "fuel costs are a valid concern and should be integrated into the fishery management process," with 56 indicating that "management should be strictly biological."

When these responses are examined by gear group, however, only one gear group indicated a contrary opinion. 53% of trollers responding felt that fuel costs should be integrated into fishery management decisions, while 33% felt that management should be strictly biological.

4538



Further Technical Assistance

As a final question, the survey asked respondents to identify how else the Marine Advisory Program could help adapt to rising fuel prices and if they had any particular questions or comments. The survey received a number of responses which may or may not fall within the purview of the Marine Advisory Program. In any event, they are informative for the general discussion.

Selected comments, including those of great frequency, are provided here.

- Clear technical advice from engine and fuel industry.
- Funding options for new engine or engine rebuilds.
- Promote energy independence for country and Alaska.
- Alternative assistance from processors.
- Develop harvesting privileges for dive fishery.
- Subsidies for food suppliers.
- Improved technology for alternative fuels and energy.
- Pre-season lectures/workshops on energy use.
- More coordination with the Alaska Department of Fish & Game.
- Research into green technologies adapted for the fishing industry.
- Fuel consumption comparisons between engines.
- Investment cost recoupment calculator for engine overhauls.

4539

- Low interest loan/tax relief for engine upgrades. *(Author's Note: Please check with the Alaska Division of Investments for their new program for energy efficiency improvements.)*
- Constant and current information for industry.
- Literature/project review to determine successful programs in other areas of the world.
- Lower other government costs like taxes and permit fees.
- Seek cooperation from Alaska fuel refineries to sell to Alaska producers, like truckers, farmers, fishermen, at a point a slight profit margin.
- Continue focus on other profit points like improving ex-vessel value of fish.
- Seek removal of fuel tax on fishing boats during the season. *(Author's Note: commercial fishing activity is exempt from paying federal fuel excise tax. Most fuel suppliers have fishermen fill out appropriate paperwork and handle the exemption. If you fuel at the regular gas station or aren't getting the exemption, keep track of your fuel costs and write it off on your income tax.)*
- More information on pyrometers – specs, efficiencies, etc.
- Workshops for outboard and boat engine maintenance.
- Weekly price reports on different port fuel charges.

And finally....

- "Give me the winning Power Ball #'s so I can keep fishing until the money is gone." *(Author's Note: It is good to see a sense of humor even as we deal with our most trying issues. Thanks to all who assisted with the survey. It does make a difference.)*

4540

Appendix I – Survey Tool

The following is the survey tool used to develop the information for this report.

Q1. Did the price of fuel cause you to change how you fished this year (check all that apply)?

Answer Options
____ Yes, stacked permits (Bristol Bay)
____ Yes, fished IFQs with other shareholders
____ Yes, quit fishing earlier each day
____ No
____ Yes, used tenders more often
____ Other
____ Yes, skipped openings I otherwise would have fished
____ Yes, quit fishing earlier in the season
____ Yes, fished closer to home
____ Yes, didn't go home as often
____ Yes, explored/prospected less
Comments

Q2. Which types of commercial fishing operations do you run (check all that apply)?

Answer Options
____ Gillnetting - Bristol Bay
____ Gillnetting - AYK
____ Gillnetting - other locations
____ Setnetting
____ Trolling
____ Seining
____ Longlining
____ Trawling
____ Diving
____ Jigging
____ Pot fishing
____ Tendering
____ Other
Comments

Q3. Which type of engine do you run on your primary fishing vessel?

Answer Options
____ Gas
____ Diesel

Q4. Over the past year, what percentage of your gross fishing income has been spent on fuel?

4541

Answer Options
____ less than 10%
____ 10-20%
____ 20-30%
____ 30-40%
____ 40-50%
____ more than 50%

Q5. How does this percentage compare to 5 years ago?

Answer Options
____ Somewhat less
____ About the same
____ Somewhat more
____ More than doubled
____ Comments

Q6. Did your buyer or processor assist you with your fuel costs?

Answer Options
____ Yes
____ No
____ Comments

Q7. Did increased fuel prices impact your crew?

Answer Options
____ No, I have no crew
____ No, prices did not impact them
____ Yes, prices did impact crew
____ Comments

Q8. How else have fuel prices impacted your fishing business this year?

Q9. How much attention do you pay to the following techniques for decreasing fuel consumption?

4542

Answer Options
____ Throttling back
____ Reducing vessel weight
____ Cutting back on diesel genset use
____ Keeping bottom clean
____ Keeping propeller tuned
____ Maintaining engine and fuel systems
____ Adjusting autopilot to improve tracking
____ Monitoring vessel trim
____ Planning your route and timing
____ Maintaining fuel consumption records
____ Other
____ Comments

Q10. What new DEVICES have you used or considered using to decrease your fuel consumption?

Answer Options
____ New engine
____ Flow meter
____ Bulbous bow
____ Aerofoil-shaped rudder
____ Kort nozzle
____ Other
____ Comments

Q11. If you have repowered or are planning to repower your vessel for greater fuel efficiency, what are your estimated costs?

Q12. Can you share any specific websites, periodicals or other sources that you use for information on fuel efficiency?

Q13. Do you feel that management decisions affect fuel consumption rates in your fishery (fisheries)?

Answer Options
____ Yes
____ No
____ Comments

Q14. Should managers (Board of Fish, ADF&G, NPFMC, IPHC) take fuel cost issues into account when making management decisions?

4543

Answer Options

_____ Yes, fuel costs are a valid concern and should be integrated into the fishery management process
_____ No, management should be strictly biological
_____ Don't know
_____ Other
_____ Comments

Q15. What kinds of management changes do you think could be made in your fisheries to reduce fuel consumption?

Q16. In addition to our fuel efficiency webpage, which you will be redirected to when you finish this survey, how else can the Marine Advisory Program help you adapt to rising fuel prices?

Q17. Comments or questions for the Alaska Sea Grant Marine Advisory Program or United Fishermen of Alaska?

COMMUNITY AND
ECONOMIC DEVELOPMENT
Alaska Division of Investments

Sarah Palin, Governor
Emil Notti, Commissioner
Greg Wimegar, Director

February 24, 2009

The Honorable Anna Fairclough
State Capitol, Room 421
Juneau, AK 99801

Dear Representative Fairclough:

Re: House Bill 20

As you requested in the House Finance Committee hearing last week, there are three tables listed below containing financial and statistical information relating to the Commercial Fishing Revolving Loan Fund (CFRLF):

Table One:	
Monies transferred from the CFRLF to the General Fund to fund other government operations:	
FY07 Department of Fish & Game to fund Operating Budget	$1,326,300.00
FY08 Department of Fish & Game to fund Operating Budget	$1,326,300.00
FY09 Department of Fish & Game to fund Operating Budget (authorized)	$1,326,300.00

Table Two:			
FY07 CFRLF GeFONSI earnings	$2,054,419.72	FY07 Interest Rate:	5.51%
FY08 CFRLF GeFONSI earnings	$2,348,491.02	FY08 Interest Rate:	5.85%
FY09 CFRLF GeFONSI earnings (as of 12/31.08)	$1,331,665.63	FY09 Interest Rate:	2.68%

Table Three:	
FY09 Division of Investments staff positions dedicated to CFRLF funding:	38

Enacted in 1972, the CFRLF is a revolving loan fund. As a result, all interest earned on loans made from the fund revolve back into the fund for future loans and all administrative costs are paid out of the fund. In addition, a substantial amount of money has been appropriated out of the fund over the years to help pay for other government operations. In the last several years those funds have been used to off set General Fund expenditures for the Department of Fish and Game. Table One lists the transfers that took place during the last three fiscal years. Over the life of the program, over $53 million was transferred out

[illegible]
[illegible] Fax: [illegible]
[illegible]
[illegible] Website: http: [illegible]

of the CFRLF for similar purposes.

CFRLF cash is managed by the Department of Revenue and is typically invested in a pool of funds referred to as the GeFONSI (General Fund and Other Non-segregated Investments). These earnings are retained by the General Fund. Table Two lists the CFRLF GeFONSI earnings and the rate of return for the last three fiscal years.

Table Three lists the number of Alaska Division of Investment's positions that are paid out of the CFRLF.

Please let me know if you have any questions or need additional information.

Cordially,

Greg Winegar

RE: HB20-Fisheries Loans for Energy Efficiency

Dear Representative Edgmon:

On behalf of the Resource Development Council for Alaska, Inc., (RDC), I am writing in support of HB20-Fisheries Loans for Energy Efficiency.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

Throughout the last several years, Alaskans have been struggling with high energy costs. Fuel costs and usage have escalated as fisherman are required to go further out for catch due to impacts from endangered species listings, critical habitat designations, marine protected areas, and fish movement. Opportunities to improve energy efficiency through state loans are important not only for the pocket books of the fisherman who harvest over half of this nation's total catch, but also for the environment—increased efficiency will likely lead to lower costs and ultimately decreased carbon emissions.

We encourage the committee to vote in favor of this bill. Thank you for your consideration.

Sincerely,

Jason W. Brune
Executive Director

PSPA

PACIFIC SEAFOOD PROCESSORS ASSOCIATION
Est. 1914

February 1, 2009

Rep. Bryce Edgmon, Chairman
House Fisheries Committee
Alaska Legislature
State Capitol
Juneau, AK 99801

RE: Support for HB 20 – Commercial Fishing Loans for Energy Efficiency Upgrades

Dear Chairman Edgmon:

Pacific Seafood Processors Association (PSPA) is a trade association of seafood processing companies with operations in many locations throughout coastal Alaska, including Ketchikan, Sitka, Kodiak, Unalaska/Dutch Harbor, Valdez, Dillingham, Naknek, Pederson Point, Togiak, Port Moller, and King Cove.

PSPA's member companies themselves, the communities in which they operate, and the fishermen to whom our member companies provide markets, are all struggling with high energy costs. The profitability and economic viability of Alaska's processors and harvesters alike, depend on the ability to increase energy efficiency and contain energy costs.

In expanding the provisions of the state's commercial fishing loan program to allow fishermen to obtain loans to increase the energy efficiency of their vessels, HB 20 does not *directly* affect or benefit seafood processors. However, a healthy, viable, energy efficient harvesting sector is important to the overall success of the entire industry. Thus, HB 20, in helping Alaska's fishing fleet move toward energy efficiency, will benefit fishermen, seafood processors and other fisheries-dependent businesses, Alaska communities, and the overall economy and revenues of the state.

PSPA appreciates your sponsorship of HB20 and your prompt scheduling of the bill for a hearing in the House Fisheries Committee.

We encourage legislators to support the bill and move it quickly through the legislative process.

Sincerely,

Mary McDowell

RE: Support for HB 20 for Energy Improvement Loans

UFA appreciates the Division of Investments prompt initiation of a program for commercial fishing vessel engine retrofit loans in Fall of 2008 to address the impact of high fuel prices on Alaska's fishing communities. We recognize that establishing these loans in the Section B program was the way to get this done as soon as possible. However, Alaska statutes prohibit any current borrowers under Section A programs access to these loans. UFA supports statutory changes to allow fishermen who currently have Section A loans to obtain loans to improve their energy efficiency. UFA also supports broadening the program to include financing for other energy improvements.

HB 20 accomplishes both of these objectives. We ask you and committee members for your support to provide long term financing for improvements to reduce the energy usage in commercial fishing.

United Fishermen of Alaska is the largest statewide commercial fishing trade association, representing 37 commercial fishing organizations participating in fisheries throughout the state and its offshore waters.

Sincerely,

Mark Vinsel
Executive Director

Alaska Conservation Alliance

Uniting for Alaska's Future

February 2, 2009

House Special Committee on Fisheries, Finance
State House of Representatives
Alaska State Capitol
Juneau, Alaska 99801-1182

Dear Representatives Edgmon, Buch and Austerman,

On behalf of the 40 conservation groups and the 38,000 Alaskans that are represented by the Alaska Conservation Alliance, I am pleased to acknowledge our strong support for HB20 to establish Energy Efficiency loans for commercial fishermen. Alaska's fisheries and fishermen play a vital role in the state's long-term sustainable economy. Alaska's main, non-hydrocarbon export is its seafood. Three billion pounds of fish are harvested from Bristol Bay waters each year and Alaska's Salmon fishery alone added nearly a half billion dollars to the state's economy last year.

With the volatility of fuel prices and with industry predictions of a return to $110 barrel of oil in the near future, Alaska's fishermen need to find ways to conserve, recycle and limit the energy used in their operations. Recently Japan dedicated $700 million to improve the efficiency of their fishing fleet. To compete, both in seafood price and in technological innovation, Alaska needs the kind of dedication and funding provided by this bill. Loans to maximize engine and hull efficiencies reduce the amount of high-priced diesel used during the season and result in a higher standard of living for our fishermen, less expensive and more competitive seafood products and less climate-damaging emissions. By giving the loans fishermen need to increase the efficiency of their operation this bill is decreasing the use of unpredictably priced foreign fuel, reducing toxic and greenhouse gas emissions, assuring the competitiveness of Alaska's fishing industry and improving the lives of Alaska's fishermen.

Energy efficiency in all its forms is a high priority for Alaska's conservation community. I strongly encourage the Alaska Legislature to pass HB 20. Thank you for your time and consideration.

Sincerely,

Kate Troll

2 February 2009

RE: HB 20

Dear Rep. Edgmon,

I'd like to thank you and the other sponsors of HB 20 for this important legislation. This bill couldn't be more timely to assist Alaska's fishermen and fishing communities. Broadening the eligibility for low interest state loans for fishermen and women to repower their vessels with more efficient engines is the right thing to do for the environment and the right thing to do for Alaska's fishermen. Many have deferred the maintenance and improvements needed to remain competitive precisely because fish prices have been low and fuel prices high. While HB 20 effects a modest change in the Division of Investments requirements, it can make a big difference to Alaska harvesters working hard to keep their operations in the black.

I appreciate your work on this bill and urge adoption of this legislation.

Thank you, sincerely,

Fritz Johnson
F/V Jazz
Dilllingham

Commercial Fishing Loan Fund Summary

Loan Program Goal and Objectives

To provide long-term, low interest loans to promote the development of predominantly resident fisheries, and continued maintenance of commercial fishing vessels and gear for the purpose of improving the quality of Alaska seafood products.

Provides Loans For:

- Section A—up to $300,000 for the purchase of Entry Permits or for existing Vessel or Gear upgrades for improving seafood quality.
- Section B—up to $100,000 for the purchase of Entry Permits, Vessel and Gear Upgrades, Vessel and Gear purchases, and Vessel Construction—with differing eligibility criteria, the most significant being that the applicant must not be able to obtain financing from a bank.
- Section C—the purchase of Quota Shares—with eligibility requirements similar to Section B applicants.
- Section D—to satisfy past due federal Tax Obligations.
- Section E—for the purchase of Quota Shares by a Community Quota Entity (CQE).
- Section F—for existing Tender Vessel and Gear upgrades

General Requirements

- Alaska resident for the past 2 years.
- Child support payments must not be past due.

Definition of Resident

- Living in Alaska with the intent to remain indefinitely
- Primary and permanent home in Alaska
- Present in Alaska except for brief intervals (generally less than 90 days) except for military service, education or good cause.

Program Requirements

- Purchases - Loans are available for limited entry permits, quota shares, vessels, or gear purchased less than 12 months prior to the date your application is received.
- Refinancing - Vessels or gear loans made by other lenders more than one year prior to receipt of your application are eligible for financing.
- Collateral - The item being financed (limited entry permit, vessel, etc.) will be the collateral for the loan and, and generally, a priority lien must be obtained.

Terms and Conditions

- Interest rate is 2% above the prime rate, not to exceed 10.5%.
- Interest rate for Energy Efficiency and Product Quality Improvement loans is 2% below the prime rate, not to exceed 10.5%. However, a minimum 3% interest rate "floor" exists for all loans.
- Interest rate will be fixed at the time of loan approval.
- Maximum loan term is 15 years.
- Borrower is responsible to pay all direct costs incurred in processing an application including surveys, inspections, appraisals, title insurance, etc.

Prepared by the Office of Representative Edgmon with excerpts from the Division of Investments.

SPONSOR STATEMENT
COMMITTEE SUBSTITUTE for HOUSE BILL 44 (FIN) am

"An Act relating to investments applicable in energy; clarifying the purpose of the Alaska Natural Gas Development Authority; relating to the definitions of certain terms that relate to a project that may be developed by the Alaska Natural Gas Development Authority; and authorizing certain public corporations to issue bonds for energy projects."

House Bill 44 preauthorizes the Alaska Housing Finance Corporation and the Alaska Natural Gas Development Authority to issue bonds for energy related programs and projects. House Bill 44 also expands ANGDA's authority to provide natural gas from sources anywhere within the state to markets within Alaska allowing the authority to broadly serve Alaskans and Alaskan markets. The language expanding ANGDA's authority was originally found in House Bill 163 and has been incorporated within this legislation.

This bill was introduced as an effort to address the state's energy needs; especially for weatherization and energy efficiency programs and to provide an impetus for an in-state gasline.

Although the Legislature has authorized a number of these projects either through the Alaska Housing Finance Corporation and has made appropriations to the Alaska Natural Gas Development Authority, I believe it is now time to progress these needs to a higher level. In particular, the state's gas needs will not wait until a TransCanada or Denali project is completed around 2020. The Fairbanks, Mat-Su and Cook Inlet areas will all require gas or affordable energy within the next five years. Processing of the liquids from our natural gas supply will also help our rural areas by relieving them from the high cost of diesel. I would prefer that a private entity build a spur line or bullet line. This legislation may provide the impetus for any private corporation to work with ANGDA in constructing an in-state gasline. Approval from the Legislative Budget and Audit Committee must be received before ANGDA can issue any bonds.

SECTIONAL ANALYSIS
COMMITTEE SUBSTITUTE for HOUSE BILL 44 (FIN) am

"An Act relating to investments applicable in energy; clarifying the purpose of the Alaska Natural Gas Development Authority; relating to the definitions of certain terms that relate to a project that may be developed by the Alaska Natural Gas Development Authority; and authorizing certain public corporations to issue bonds for energy projects."

Section 1: Amends AS 18.56.08(c), Compliance with Executive Budget Act; corporation finances; dividend. Adds section 6 of the committee substitute to the subsection that lists previous issuance of bonds. Bond repayments are deducted from dividends that are provided to the state.

Section 2: Amends AS 41.41.010(a), Establishment of the authority. Adds language clarifying that ANGDA may bring natural gas from other regions of the state and not just the North slope. Also clarifies that gas may be delivered to markets within the state and may include more than one pipeline project.

Section 3: Amends AS 41.41.010(d), Establishment of the authority. Expands the acquisition of natural gas to include other regions of the state to include the Alaska outer continental shelf and may be delivered to markets within the state.

Section 4: Amends AS 41.41.990(3), Definitions. Amends the definition of project to include other regions of the state to a market in the state or be available to markets within the state.

Section 5: Adds a new paragraph to AS 41.41.990 describing the North Slope to mean that part of the state that lies north of 68 degrees North latitude to include the Brooks Range foothills.

Section 6: New section to uncodified law. Gives pre-authorization to the Alaska Housing Finance Corporation to issue up to $100 million in bonds for energy efficiency and conservation programs for home owners.

Section 7: New section to uncodified law. Gives pre-authorization to the Alaska Natural Gas Development Authority to issue up to $250 million in bonds in order to acquire a gas

Representative_Mike_Chenault@legis.state.ak.us

supply, develop the Cook Inlet and Fairbanks markets, and plan, permit and design gas transmission systems to mitigate gas shortfalls, the impact on consumers and the economy of high cost energy and ensure energy sufficiency for Alaskans. ANGDA must receive approval from the Legislative Budget and Audit Committee prior to issuing any bonds.

ANALYSIS: *(Attach a separate page if necessary)*

House Bill 44 would allow the Alaska Housing Finance Corporation the authorization to bond for up to $100 million for energy efficiency and conservation programs. The Corporation does not anticipate needing to utilize this option in FY10.

If the Corporation were to sell bonds at some point in the future, the estimate of costs would be $750,000 in closing costs on the bonds and annual debt service with 30 year amortization and a 6.5 percent interest rate of $7.7 million.

Sec. 18.56.089. Compliance with Executive Budget Act; corporation finances; dividend.

(a) The provisions of AS 37.07 (Executive Budget Act)

(1) apply to

(A) the operating budget of the corporation;

(B) amounts payable from corporate earnings or assets of the corporation for grants or grant programs authorized by this chapter;

(C) interest rate subsidies and building subsidies as determined by the corporation;

(D) the amount and source or sources of the total annual appropriation for the corporation's loan programs for which a subsidy is not provided, but the provisions of AS 37.07 are not otherwise applicable to that appropriation;

(E) the amount and source or sources of the total annual appropriation for the corporation's multi-family housing loans and the corporation's housing programs and housing projects if a subsidy is provided from the corporation's arbitrage earnings for the loans, programs, or projects, but the provisions of AS 37.07 are not otherwise applicable to that appropriation; and

(F) except as otherwise specifically provided in (2) of this subsection, the activities of the corporation under AS 18.55 and the activities of the corporation under this chapter;

(2) do not apply to activities of the corporation under AS 18.55 and this chapter that

(A) relate to the corporation's borrowing of money as provided in this chapter to make or purchase mortgage loans, including the issuing of its obligations or evidence of that borrowing and the repayment of the debt obligation;

(B) relate to the corporation's ability to refinance existing mortgage loans in order to achieve a lower interest rate; or

(C) are directly attributable to the servicing of mortgage loans, including real estate acquired by the corporation as a result of foreclosure.

(b) To further ensure effective budgetary decision making by the legislature, the corporation shall

(1) annually review the corporation's assets, including the assets of the Alaska housing finance revolving fund under AS 18.56.082, to determine whether assets of the corporation exceed an amount required to fulfill the purposes of the corporation as defined in AS 18.55 and this chapter; in making its review, the board shall determine whether, and to what extent, assets in excess of the amount required to fulfill the purposes of the corporation during the next fiscal year are available without

(A) breaching any agreement entered into by the corporation;

(B) materially impairing the operations or financial integrity of the corporation; or

(C) materially affecting the ability of the corporation to

(i) stabilize the market price of and demand for residential housing; and

(ii) ensure an adequate long-term supply of residential housing for persons of lower and moderate income;

(2) specifically identify in the corporation's assets the amounts that the corporation believes are necessary to meet the requirements of (1)(C) of this subsection; and

(3) present to the legislature by January 10 of each year a complete accounting of all assets of the corporation, including assets of the Alaska housing finance revolving fund under AS 18.56.082, and a report of the review and determination made under (1) and (2) of this subsection; the accounting shall be audited by an independent outside auditor and must include a full description of all mortgage loan interest and principal repayments and program receipts, including

(A) mortgage loan commitment fees received by or accrued to the corporation during the preceding fiscal year; and

(B) all income earned on assets of the corporation during that period, including earnings on assets of the state assisted mortgage fund.

(c) The corporation shall make a dividend available to the state each fiscal year. The corporation shall pay the dividend for a current fiscal year to the state before the end of that fiscal year. The legislature may appropriate the dividend for capital projects. The corporation shall notify the commissioner of revenue of the amount of each dividend under this subsection for inclusion in the state operating budget and shall also notify the commissioner when each dividend is available for payment to the state. The amount of the dividend for a current fiscal year is calculated as follows:

(1) the lesser of $103,000,000 or 75 percent of the adjusted change in net assets of the corporation for the base fiscal year;

(2) minus the amount of money from the corporation used during that current fiscal year for bond repayment and other costs related to the bonds issued under

(A) ch. 26, SLA 1996, up to a maximum of $1,000,000;

(B) sec. 10(b), ch. 130, SLA 2000;

(C) sec. 1, ch. 1, SSSLA 2002;

(D) sec. 4, ch. 120, SLA 2004; and

(3) minus any appropriation of unrestricted unencumbered money of the corporation during the current fiscal year, other than an appropriation for the corporation's operating budget.

(d) In (c) of this section,

(1) "adjusted change in net assets" means the change in net assets from the base fiscal year, adjusted for capital expenditures incurred during the base fiscal year;

(2) "base fiscal year" means the fiscal year ending two years before the end of the current fiscal year in which the dividend is made available to the state;

(3) "dividend" means a payment made to the state under (c) of this section.

History -

(Sec. 20 ch 106 SLA 1980; am Sec. 3 ch 102 SLA 1983; am Sec. 1 ch 12 SLA 1991; am Sec. 89 - 91 ch 4 FSSLA 1992; am Sec. 1 ch 88 SLA 1995; am Sec. 1 ch 76 SLA 2003; am Sec. 2 ch 120 SLA 2004; am Sec. 2, 3, 5 ch 7 SLA 2006)

Revisors Notes -

In (d) of this section, paragraph (1) was enacted as paragraph (4) and renumbered in 2006 to maintain the alphabetical order of the terms defined; at that time, former paragraph (3) was deleted and paragraphs (d)(1) and (2) were renumbered as (d)(2) and (3), respectively.

Cross References -

For transitional provisions that apply to the calculation of the dividend payment for fiscal years 2004 - 2008 inclusive, see Sec. 2, ch. 76, SLA 2003, in the 2003

Temporary and Special Acts, as amended by Sec. 3, ch. 120, SLA 2004, in the 2004 Temporary and Special Acts, and by Sec. 4, ch. 7, SLA 2006 in the 2006 Temporary and Special Acts.

For statement of legislative intent applicable to the 2004 amendment of (c) of this section, see Sec. 1, ch. 120, SLA 2004, in the 2004 Temporary and Special Acts.

Amendment Notes -

The 2003 amendment, effective July 1, 2003, added subsections (c) and (d).

The 2004 amendment, effective June 30, 2004, added paragraph (c)(2)(D).

The 2006 amendment, effective July 1, 2006, substituted "adjusted change in net assets" for "net income" in paragraph (1) of subsection (c), and, in subsection (d), deleted former paragraph (3), which defined "net income" and added paragraph (4) [now (1)].

History Reports -

For governor's transmittal letter for ch. 120, SLA 2004 (SB 279), amending (c) of this section and providing for issuance of Alaska Housing Finance Corporation revenue bonds to finance water and sewer projects, see 2004 Senate Journal 1995 - 1996.

For governor's transmittal letter for ch. 7, SLA 2006 (SB 236), relating to the Alaska Housing Finance Corporation and the determination of its dividend, see 2006 Senate Journal 1900 - 1901.

Sec. 41.41.010. Establishment of the authority.

(a) There is established the Alaska Natural Gas Development Authority, the purpose of which is to provide one or more of the following services and functions in order to bring natural gas from the North Slope to market, including

(1) the acquisition and conditioning of North Slope natural gas;

(2) the design and construction of the pipeline system;

(3) the operation and maintenance of the pipeline system;

(4) the design, construction, operation, of other facilities necessary for delivering the gas to market and to Southcentral Alaska; and

(5) the acquisition of natural gas market share sufficient to ensure the long-term feasibility of the pipeline system project.

(b) The authority is a public corporation and an instrumentality of the state within the Department of Revenue.

(c) The authority has a legal existence independent of and separate from the state.

(d) The acquisition of natural gas from the North Slope and its delivery to tidewater for shipment to market by the authority is an essential government function of the state.

(e) The authority may not be terminated as long as it has bonds, notes, or other obligations outstanding.

Sec. 41.41.990. Definitions.

In this chapter,

(1) "authority" means the Alaska Natural Gas Development Authority;

(2) "board" means the board of directors of the Alaska Natural Gas Development Authority;

(3) "project" means the gas transmission pipeline, together with all related property and facilities, to extend from the Prudhoe Bay area on the North Slope of Alaska either to tidewater at a point on Prince William Sound and the spur line from Glennallen to the Southcentral gas distribution grid or to tidewater at a point on Cook Inlet, and includes planning, design, and construction of the pipeline and facilities as described in AS 41.41.010(a)(1) - (5).

ALASKA STATUTE

Chapter 41.41. ALASKA NATURAL GAS DEVELOPMENT AUTHORITY

Article 01. ESTABLISHMENT OF THE AUTHORITY

Sec. 41.41.010. Establishment of the authority.

(a) There is established the Alaska Natural Gas Development Authority, the purpose of which is to provide one or more of the following services and functions in order to bring natural gas from the North Slope to market, including

(1) the acquisition and conditioning of North Slope natural gas;

(2) the design and construction of the pipeline system;

(3) the operation and maintenance of the pipeline system;

(4) the design, construction, operation, of other facilities necessary for delivering the gas to market and to Southcentral Alaska; and

(5) the acquisition of natural gas market share sufficient to ensure the long-term feasibility of the pipeline system project.

(b) The authority is a public corporation and an instrumentality of the state within the Department of Revenue.

(c) The authority has a legal existence independent of and separate from the state.

(d) The acquisition of natural gas from the North Slope and its delivery to tidewater for shipment to market by the authority is an essential government function of the state.

(e) The authority may not be terminated as long as it has bonds, notes, or other obligations outstanding.

Sec. 41.41.020. Authority governing body.

(a) The authority shall be governed by a board of directors consisting of seven members from the general public appointed by the governor and confirmed by the legislature.

(b) The board shall annually elect a chair, and may elect other officers, from among its members.

Sec. 41.41.030. Term of office.

(a) The members of the board shall be appointed for terms of three years, and they may be reappointed.

(b) The terms of the members shall be staggered.

Sec. 41.41.040. Removal and vacancies.

(a) The governor may remove a member of the board from office. A removal must be in writing and must state the reason for the removal. A member who is removed may not participate in board business and may not be counted for purposes of establishing a quorum after the member receives written notice of removal. A member who is removed is not entitled to honoraria, per diem, or travel expenses authorized under AS 41.41.060 for work performed after the member receives the written notice of removal.

(b) The governor shall promptly fill a vacancy on the board by appointment. An appointee to a vacancy shall hold office for the balance of the term for which the appointee's predecessor on the board was appointed.

(c) A vacancy on the board does not impair the authority of a quorum of the board to exercise all the powers and perform all the duties of the board.

Sec. 41.41.050. Quorum and voting.

Four members of the board constitute a quorum for the transaction of business and the exercise of the powers and duties of the board. Action may be taken only upon the affirmative vote of a majority of the full membership of the board.

Sec. 41.41.060. Compensation of board members; per diem and travel expenses.

Members of the board are entitled to per diem and travel expenses authorized for boards and commissions under AS 39.20.180.

Sec. 41.41.070. Authority staff.

(a) The board may employ and determine the salary of a chief executive officer.

(b) The chief executive officer may, with the approval of the board, select and employ additional staff as necessary.

(c) An employee of the authority, including the chief executive officer, may not be a member of the board. The chief executive officer and the other employees of the board are in the exempt service under AS 39.25.110.

(d) In addition to its employees, the authority may contract for and engage the services of bond counsel, consultants, experts, and financial advisors the authority considers necessary for the purpose of

developing information, furnishing advice, or conducting studies, investigations, hearings, or other proceedings.

Sec. 41.41.080. Legal counsel.

The attorney general

(1) is the legal counsel for the authority;

(2) shall advise the authority in legal matters; and

(3) shall represent the authority in legal actions.

Sec. 41.41.090. Conflicts of interest.

(a) Members of the board and the chief executive officer of the authority are subject to the provisions of AS 39.50.

(b) If a member of the board or an employee of the authority acquires, owns, or controls an interest, direct or indirect, in an entity or project in which assets of the authority are invested, the member shall immediately disclose the interest to the board. The disclosure is a matter of public record and shall be included in the minutes of the first board meeting following the disclosure.

Sec. 41.41.100. Budget.

The revenue earned by operations of the authority must be identified as the source of the operating budget of the authority in the state's operating budget under AS 37.07 (Executive Budget Act).

Sec. 41.41.110. Audits.

The Legislative Budget and Audit Committee may provide for an annual post audit and annual operational and performance evaluations of the authority's operations and budget.

Sec. 41.41.120. Reports and publications.

(a) By September 30 of each year, the board shall publish a report of the authority for distribution to the governor and the public. The board shall notify the legislature that the report is available.

(b) The report must include financial statements audited by independent outside auditors and a statement of the amount of money received by the authority from its operations during the period covered.

Sec. 41.41.130. Tax exemption.

The security instruments issued by the authority, the transfer of the security instruments, and the income on the security instruments are exempt from all taxes and assessments in the state.

Sec. 41.41.140. Political activities.

The resources of the authority may not be used to finance or influence political activities.

Sec. 41.41.150. Public access to information.

(a) Information in the possession of the authority is a public record, except that information that discloses the particulars of the business or affairs of a private enterprise or investor is confidential and is not a public record for purposes of AS 40.25.110 - 40.25.140. Confidential information may be disclosed only for the purposes of an official law enforcement investigation or when its production is required in a court proceeding.

(b) The restrictions of (a) of this section do not prohibit the publication of statistics presented in a manner that prevents the identification of particular reports, items, persons, or enterprises.

Article 02. POWERS OF THE AUTHORITY

Sec. 41.41.200. Powers of the authority.

In furtherance of its corporate purposes, in addition to its other powers, the authority may

(1) sue and be sued;

(2) adopt a seal;

(3) adopt, amend, and repeal bylaws and regulations;

(4) make and execute contracts and other instruments;

(5) in its own name acquire property, lease, rent, convey, or acquire real and personal property; a project site or part of a project site may be acquired by eminent domain;

(6) acquire natural gas supplies;

(7) issue bonds and otherwise incur indebtedness in accordance with AS 41.41.300 - 41.41.410 in order to pay the cost of a project;

(8) accept gifts, grants, or loans from and enter into contracts or other transactions regarding gifts, grants, or loans with a federal agency or an agency or instrumentality of the state, a municipality, private organization, or other source;

(9) enter into contracts or agreements with a federal agency, agency or instrumentality of the state, municipality, or public or private individual or entity, with respect to the exercise of its powers;

(10) charge fees or other forms of remuneration for the use of authority properties and facilities;

(11) defend and indemnify a current or former member of the board or an employee or agent of the authority against the costs, expenses, judgments, and liabilities as a result of actions taken in good faith on behalf of the authority; and

(12) purchase insurance to protect its assets, services, and employees against liabilities that may arise from authority operations and activities.

Article 03. REVENUE BONDS AND NOTES

Sec. 41.41.300. Bonds and notes of the authority.

(a) The authority, by resolution, may issue revenue bonds and bond anticipation notes in order to provide funds to carry out the purposes set out in AS 41.41.010 (a).

(b) The principal and interest on the revenue bonds or notes authorized and issued under (a) of this section are payable from authority funds. Bond anticipation notes may be payable from the proceeds of the sale of bonds or from the proceeds of the sale of other bond anticipation notes or, in the event bond or bond anticipation note proceeds are not available, the notes may be paid from other funds or assets of the authority.

(c) Bonds or notes may be additionally secured by a pledge of a grant or contribution from the federal government, or a corporation, association, institution, or person, or a pledge of money, income, or revenues of the authority from any source.

(d) Bonds or bond anticipation notes of the authority may be issued in one or more series and shall be dated, bear interest at the rate or rates per year or within the maximum rate, be in the denomination, be in the form, either coupon or registered, carry the conversion or registration provisions, have the rank or priority, be executed in the manner and form, be payable at the times, from the sources, and in the medium of payment and place or places within or outside the state, be subject to authentication by a trustee or fiscal agent, and be subject to the terms of redemption with or without premium, as the resolution of the authority may provide. Bond anticipation notes shall mature at the time or times that are determined by the authority. Bonds shall mature at a time not exceeding a number of years from their date that is determined by the authority. Before the preparation of definitive bonds or bond anticipation notes, the authority may issue interim receipts or temporary bonds or bond anticipation notes, with or without coupons, exchangeable for bonds or bond anticipation notes when these definitive bonds or bond anticipation notes have been executed and are available for delivery.

(e) Bonds or bond anticipation notes may be sold in the manner and on the terms the authority determines.

(f) If an officer whose signature or a facsimile of whose signature appears on a bond, note, or coupon attached to them ceases to be an officer before the delivery of the bond, note, or coupon, the signature or facsimile is valid to the same extent as if the officer had remained in office until delivery.

Sec. 41.41.310. Covenants.

In a resolution of the authority authorizing or relating to the issuance of bonds or bond anticipation notes, the authority has power by provisions in the resolution that will constitute covenants of the authority and contracts with the holders of the bonds or bond anticipation notes to

(1) pledge to a payment or purpose all or a part of its revenues to which its right then exists or may thereafter come into existence, and the money derived from the revenues, and the proceeds of bonds or notes;

(2) covenant as to the use and disposition of payments of principal or interest received by the authority on loans or other investments held by the authority;

(3) covenant as to establishment of reserves or sinking funds and the making of provision for and the regulation and disposition of the reserves or sinking funds;

(4) covenant with respect to or against limitations on a right to sell or otherwise dispose of property of any kind;

(5) covenant as to bonds and notes to be issued, and their limitations, terms, and conditions, and as to the custody, application, and disposition of the proceeds of the bonds and notes;

(6) covenant as to the issuance of additional bonds or notes, or as to limitations on the issuance of additional bonds or notes and the incurring of other debts;

(7) covenant as to the payment of the principal of or interest on the bonds or notes, as to the sources and methods of the payment, as to the rank or priority of the bonds or notes with respect to a lien or security, or as to the acceleration of the maturity of the bonds or notes;

(8) provide for the replacement of lost, stolen, destroyed, or mutilated bonds or notes;

(9) covenant as to the redemption of bonds or notes and privileges of their exchange for other bonds or notes of the authority;

(10) covenant to create or authorize the creation of special funds of money to be held in pledge or otherwise for operating expenses, payment or redemption of bonds or notes, reserves, or other purposes;

(11) establish the procedure, if any, by which the terms of a contract or covenant with or for the benefit of the holders of bonds or notes may be amended or abrogated, the amount of bonds or notes the holders of which must consent to amendment or abrogation, and the manner in which the consent may be given;

(12) covenant as to the custody of property or investments, their safekeeping and insurance, and the use and disposition of insurance money;

(13) agree with a corporate trustee that may be a trust company or bank having the powers of a trust company within or outside the state as to the pledging or assigning of revenue or funds to which or in which the authority has rights or an interest; the agreement may further provide for other rights and remedies exercisable by the trustee as may be proper for the protection of the holders of a bond or note of the authority and not otherwise in violation of law and may provide for the restriction of the rights of an individual holder of bonds or notes of the authority;

(14) appoint and provide for the duties and obligations of a paying agent or paying agents or other fiduciaries as the resolution may provide within or outside the state;

(15) limit the rights of the holders of a bond or note to enforce a pledge or covenant securing the bonds or notes;

(16) make covenants other than and in addition to the covenants expressly authorized in this section of like or different character, and to make covenants to do or refrain from doing acts and things as may be necessary or convenient and desirable in order to better secure bonds or notes or that, in the absolute

discretion of the authority, will tend to make bonds or notes more marketable, notwithstanding that the covenants, acts, or things may not be enumerated in this section.

Sec. 41.41.320. Limitations of issuance of bonds.

(a) The authority may not issue bonds in an amount that exceeds the amount of bonds authorized to be issued by the legislature.

(b) This section does not apply to the issuance by the authority of refunding bonds or to the issuance by the authority of bonds the proceeds of which are intended to be used to refinance the loans held by the authority.

Sec. 41.41.330. Independent financial advisor.

In negotiating the private sale of bonds or bond anticipation notes to an underwriter, the authority may retain a financial advisor. A financial advisor retained under this section must be independent from the underwriter.

Sec. 41.41.340. Validity of pledge.

(a) The pledge of assets or revenue of the authority to the payment of the principal of or interest on an obligation of the authority is valid and binding from the time the pledge is made, and the assets or revenue become immediately subject to the lien of the pledge without physical delivery or further act. The lien of a pledge is valid and binding against all parties having claims in tort, contract, or otherwise against the authority, irrespective of whether those parties have notice of the lien of the pledge.

(b) This section does not prohibit the authority from selling assets subject to a pledge, except that a sale may be restricted by the trust agreement or resolution providing for the issuance of the obligations.

Sec. 41.41.350. Capital reserve funds.

(a) For the purpose of securing one or more issues of its obligations, the authority may establish one or more special funds, called "capital reserve funds," and shall pay into those capital reserve funds (1) money appropriated and made available by the state for the purpose of those funds, (2) proceeds of the sale of its obligations, to the extent provided in the resolution or resolutions of the authority authorizing their issuance, and (3) other money that may be made available to the authority for the purpose of those funds from another source. All money held in a capital reserve fund, except as provided in this section, shall, subject to appropriation, be used as required solely for the payment of the principal of obligations or of the sinking fund payments with respect to those obligations; the purchase or redemption of obligations; the payment of interest on obligations; or the payment of a redemption premium required to be paid when those obligations are redeemed before maturity. However, money in a fund may not be withdrawn from that fund at any time in an amount that would reduce the amount of that fund to less than the capital reserve requirement set out in (b) of this section, except for the purpose of making, with respect to those obligations, payment, when due, of principal, interest, redemption premiums, and the sinking fund payments for the payment of which other money of the authority is not available. Income or interest earned by, or increment to, a capital reserve fund due to the investment of the fund or other amounts in it may be transferred by the authority to other funds or accounts of the authority to the extent that the transfer does not reduce the amount of the capital reserve fund below the capital reserve fund requirement.

(b) If the authority decides to issue obligations secured by a capital reserve fund, the obligations may not be issued if the amount in the capital reserve fund is less than a percent, not exceeding 10 percent, of the principal amount of all of those obligations secured by that capital reserve fund then to be issued and then outstanding in accordance with their terms, as may be established by resolution of the authority, called the "capital reserve fund requirement," unless the authority, at the time of issuance of the obligations, deposits in the capital reserve fund from the proceeds of the obligations to be issued or from other sources an amount that, together with the amount then in the fund, will not be less than the capital reserve fund requirement.

(c) In computing the amount of a capital reserve fund for the purpose of this section, securities in which all or a portion of the funds are invested shall be valued at par or, if purchased at less than par, at amortized costs as the term is defined by resolution of the authority authorizing the issue of the obligations or by some other reasonable method established by the authority by resolution. Valuation on a particular date must include the amount of interest earned or accrued to that date.

(d) To assure the continued operation and solvency of the authority for the carrying out of its corporate purposes, provision is made in (a) of this section for the accumulation in capital reserve funds of an amount equal to their capital reserve fund requirement.

(e) The chair of the authority shall annually, not later than January 2, make and deliver to the governor and chairs of the house and senate finance committees a certificate stating the sum, if any, required to restore a capital reserve fund to the capital reserve fund requirement. The legislature may appropriate that sum, and all sums appropriated during the current fiscal year by the legislature for the restoration shall be deposited by the authority in the appropriate capital reserve fund.

(f) This section does not create a debt or liability of the state.

Sec. 41.41.360. Remedies.

A holder of obligations or coupons attached to them issued under the provisions of this chapter, and a trustee under a trust agreement or resolution authorizing the issuance of the obligations, except as restricted by a trust agreement or resolution, either at law or in equity, may enforce all rights granted hereunder or under the trust agreement or resolution, or under another contract executed by the authority under this chapter, and may enforce and compel the performance of all duties required by this chapter or by the trust agreement or resolution to be performed by the authority or by an officer of it.

Sec. 41.41.370. Negotiable instruments.

All obligations and interest coupons attached to them are negotiable instruments under the laws of this state, subject only to applicable provisions for registration.

Sec. 41.41.380. Obligations eligible for investment.

Obligations issued under the provisions of this chapter are securities in which all public officers and public bodies of the state and its political subdivisions, all insurance companies, trust companies, banking associations, investment companies, executors, administrators, trustees, and other fiduciaries may properly and legally invest funds, including capital in their control or belonging to them. These obligations may be deposited with a state or municipal officer of an agency or political subdivision of the state for a purpose for which the deposit of bonds, notes, or obligations of the state is authorized by law.

Sec. 41.41.390. Refunding bonds.

(a) The authority may provide for the issuance of refunding bonds for the purpose of refunding an obligation then outstanding that has been issued under the provisions of this chapter, including the payment of redemption premium on them and interest accrued or to accrue to the date of redemption of the obligations. The issuance of the bonds, the maturities and other details of them, the rights of the holders of them, and the rights, duties, and obligations of the authority in respect of them are governed by the provisions of this chapter that relate to the issuance of obligations insofar as those provisions may be appropriate.

(b) Refunding bonds may be sold or exchanged for outstanding bonds issued under this chapter, and, if sold, the proceeds may be applied, subject to appropriation and in addition to another authorized purpose, to the purchase, redemption, or payment of the outstanding obligations. Pending the application of the proceeds of refunding bonds, with any other available funds, to the payment of the principal of, accrued interest on, and redemption premium on the obligations being refunded, and, if so provided or permitted in the resolution authorizing the issuance of the refunding bonds or in the trust agreement securing them, to the payment of any interest on the refunding bonds and expenses in connection with the refunding, the proceeds may be invested in direct obligations of, or obligations the principal of and the interest on which are unconditionally guaranteed by, the United States that mature or that will be subject to redemption, at the option of the holders of them, not later than the respective dates when the proceeds, together with the interest accruing on them, will be required for the purposes intended.

Sec. 41.41.400. Credit of state not pledged.

(a) Obligations issued under the provisions of this chapter do not constitute a debt, liability, or obligation of the state or of a political subdivision of the state or a pledge of the faith and credit of the state or of a political subdivision of the state but are payable solely from the revenue or assets of the authority. Each obligation issued under this chapter must contain on its face a statement that the authority is not obligated to pay it or the interest on it except from the revenue or assets of the authority and that neither the faith and credit nor the taxing power of the state or of a political subdivision of the state is pledged to the payment of the principal of or the interest on the obligation.

(b) Expenses incurred by the authority in carrying out the provisions of this chapter are payable from funds provided under this chapter, and liability may not be incurred by the authority in excess of these funds.

Sec. 41.41.410. Officers not liable.

A member or other officer of the authority is not subject to personal liability or accountability by reason of having executed or issued an obligation.

Article 04. PROPERTY OF THE AUTHORITY

Sec. 41.41.450. Property of the authority.

The authority may acquire, by purchase, lease, or gift, upon terms that it considers proper, land, structures, real or personal property rights, rights-of-way, franchises, easements, and other interests in land it considers necessary or convenient for the financing of the project or a part of the project.

Article 05. PROJECT CONSTRUCTION

Sec. 41.41.500. Contract terms relating to use of Alaska resources.

(a) The authority shall enter into one or more prehire project term agreements with labor organizations that

(1) contain no-strike clauses; and

(2) secure timely completion of the project and maximum employment opportunities for state residents.

(b) To maximize the economic benefits of the project to Alaskan businesses, the authority shall use Alaska contractors and suppliers to the maximum extent possible to take advantage of the Alaska experience in Arctic engineering and construction.

Article 06. GENERAL PROVISIONS

Sec. 41.41.900. Tax exemption.

All obligations issued under this chapter are declared to be issued by a body corporate and public of the state and for an essential public and governmental purpose, and the obligations, and the interest and income on and from the obligations, and all fees, charges, funds, revenues, income, and other money pledged or available to pay or secure the payment of the obligations, or interest on the obligations, are exempt from state taxation except for transfer, inheritance, and estate taxes.

Sec. 41.41.990. Definitions.

In this chapter,

(1) "authority" means the Alaska Natural Gas Development Authority;

(2) "board" means the board of directors of the Alaska Natural Gas Development Authority;

(3) "project" means the gas transmission pipeline, together with all related property and facilities, to extend from the Prudhoe Bay area on the North Slope of Alaska either to tidewater at a point on Prince William Sound and the spur line from Glennallen to the Southcentral gas distribution grid or to tidewater at a point on Cook Inlet, and includes planning, design, and construction of the pipeline and facilities as described in AS 41.41.010 (a)(1) - (5).

Senator Gary Stevens
Alaska State Legislature
State Capitol Room 111
Juneau, Alaska 99801

RE: Support for House Bill 44 – Clarify ANGDA's Authority

Honorable Senator Stevens:

Homer Electric Association, Inc. (HEA) would like to offer support for House Bill 44, which will clarify ANGDA's authority to work throughout Alaska on projects linking in-state natural gas supplies and in-state users. This bill pre-approves up to $250 million of ANGDA project revenue bonds and authorizes AHFC to issue up to $100 million of energy efficiency bonds. Passage of this bill enables entities such as the Natural Gas Supply Company (NGSC) to purchase a larger tranche of gas at a lower price for in-state use.

Alaska's in-state gas supply is dwindling and the situation must be rectified as soon as possible. The passage of this bill during the current session is a huge step toward creating energy stability for all Alaskans.

If you have any questions, please feel free to contact me at any time.

Sincerely,

Bradley P. Janorschke
General Manager

cc: Senator Thomas Wagoner
Representative Mike Chenault
Representative Kurt Olson
Representative Paul Seaton
Mr. Pat Carter
Mr. Joe Gallagher

ANGDA Supports HB 44

- Advances broadly and simultaneously several aspects of in-state gas issues
- Strongly demonstrates Legislative support for multiple proposed solutions to in-state gas and energy problems
- Delegates specific project funding decision to fiduciary responsible boards of public corporations
- Board decisions are made in full public view after due diligence
- Funding decision based on commercial and market elements, not politics
- Advances Alaska energy infra-structure construction during a low oil price period by using limited general fund cash (separately appropriated) to develop bonding packages for much larger leveraged project investment requirements
- Extends the State's very strong credit position to consumers through lower utility financing costs

HB 44 Provides A Flexible Framework To Repeat Past Successes In Financing Energy Projects

- State Bonding Of Bradley Lake Hydro Electric Project

- Anchorage Municipal Light & Power's Purchase Of A One-Third Interest In The Beluga Gas Field

Alaska Natural Gas Development Authority

Statutory Bonding Provisions

AS 41.41.200 Powers of the Authority

In the furtherance of its corporate purposes, in addition to its other powers, the authority may . . . . . .

(7) **issue bonds** and otherwise incur indebtedness in accordance with AS 41.41.300 – 41.41.410 in order to pay the cost of a project;

AS 41.41.320 Limitations of issuance of bonds

(a) The authority may not issue bonds in an amount that exceeds the amount of bonds **authorized** to be issued **by the legislature**.

AS 41.41.010 Establishment of the Authority

. . . . the **purpose** of which is to provide one or more of the following services and functions in order to bring natural gas from the North Slope to market, including

(1) the acquisition and conditioning of North Slope natural gas;
(2) the design and construction of the pipeline system;
(3) the operation and maintenance of the pipeline system;
(4) the design, construction, operation, of other facilities necessary for delivering the gas to market and to Southcentral Alaska; and
(5) the acquisition of natural gas market share sufficient to ensure the long-term feasibility of the pipeline system project.

Potential General Benefits From ANGDA Bonding

- Provide financing from the public side of a public private partnership -- **lower tariff** passed through to the consumer
- Bridge the project financing between the pre-construction / construction phase and the later stabilized operating phase -- **risk reduction** and lower financing costs
- Convert the longer-term pledge of monthly utility(s) consumer payments to a bond cash-equivalent for an up-front commitment or purchase -- long-term **stable discounted price** to consumer

Specific ANGDA Bonding Opportunities in 2009 & 2010

- Debt portion of any in-state gas pipeline project in support of a private sector pipeline company partner
- Utility shipping commitments during an "open season" developed through the "gas supply co-op"
- Purchase of gas supply "in-ground" on North Slope, Copper River Valley, Interior, or Cook Inlet

Other Current "In-State" Gas Bonding Opportunities

- Portions of ANGDA's proposed North Slope wholesale propane facility and propane transporters could use AIDEA financing (ie, in-state manufacture and purchase of ISO-container propane tanks)
- Fairbanks Natural Gas proposed LNG facility at Prudhoe Bay and associated trucking & delivery elements could use AIDEA financing
- Pipe and logistical systems (including pipe handling, preparation, and storage) for Alaska pipelines could be financed with Alaska Railroad bonds
- The Alaska Permanent Fund could be one of several subscribers purchasing bonds or debt for any of the Alaska energy projects

House Bill 44 will:

- Clarify ANGDA's authority to work through out Alaska on projects linking in-state natural gas supplies and in-state users; and
- Pre-approves up to $250 million of ANGDA project revenue bonds

Alaska natural gas projects currently being analyzed for bonding include:

- Purchase of developed gas production for Cook Inlet & Fairbanks electric utilities
- Ownership of "cushion gas" for gas storage fields
- Partnering in Kenai LNG plant and modification for additional operations including in-state LNG supply (truck & barge) and peak shaving by regasification
- "Open season" shipping commitment (for electric utilities) to Fairbanks, Delta Junction, and/or Glennallen on big-inch North Slope gas pipeline
- Shipping commitment (for electric utilities) on "Spur Line" linking big-inch North Slope gas pipeline to SouthCentral
- Development of a North Slope based wholesale propane facility at Prudhoe Bay & distribution system

Houston, TX 77079

RE: Purchase of Kenai LNG Plant

Dear Mr. Mulva:

The purpose of this letter is to express interest by Natural Gas Supply Company (NGSC) in purchasing some or all of the Kenai LNG Plant assets, including ConocoPhillips' interest in those assets. NGSC has also sent an identical indication of interest to Marathon Oil Corporation.

Subject to the conditions and limitations to be negotiated, NGSC proposes a partnership that could include:

(i) NGSC investment to facilitate regasification of LNG at the Kenai LNG Plant;
(ii) NGSC investment in additional capabilities for in-state road & barge delivery and importation of LNG;
(iii) NGSC would be a majority owner of the regasification, in-state delivery, and import assets;
(iv) existing Kenai LNG Plant owners would maintain majority ownership in LNG export assets; and
(v) existing owners would continue operation of Kenai LNG Plant.

As you know, the Kenai LNG Plant has played an important role in Alaska's Cook Inlet region. The future operation of the Kenai LNG Plant could look different, but play just as significant a role in helping to meet regional energy needs.

The Natural Gas Supply Company is a not-for-profit cooperative created under Alaska Statute 10.15. NGSC is working with Alaska Railbelt electric utilities on aggregated gas supply and related services including storage. The Alaska Natural Gas Development

Authority (ANGDA), a public corporation of the State, is also a coop member providing additional financing abilities.

This indication of interest is non-binding and is subject to (i) the negotiation of a definitive agreement among NGSC, Marathon, and ConocoPhillips, (ii) the completion of customary due diligence, (iii) receipt of various corporate, utility, and regulatory approvals for the proposed transaction.

Please contact me so that we can discuss how best to move this transaction forward. NGSC is prepared to move quickly to complete due diligence, to negotiate and execute a definitive purchase agreement, to secure all necessary approvals, and to embark on any necessary regulatory reviews and approval process.

We are confident that a mutually-beneficial transaction can be consummated. I look forward to hearing from you at your earliest convenience.

Sincerely,

Tony Izzo

CHUGACH
POWERING ALASKA'S FUTURE

February 19, 2010

Representative Mike Chennault
State Capitol Room 208
Juneau AK, 99801

Dear Speaker Chennault:

Thank you for making time last week to discuss energy with our Chugach group. It is clear that energy issues are drawing a lot of attention this session.

We appreciated our discussion of the need for natural gas for the Cook Inlet area. Over the past four decades we have built a regional economy that depends upon natural gas, and it is vitally important to the health and safety of Alaskans throughout the region. Every year about 90 percent of the kilowatt-hours sold by Chugach come from burning natural gas, with the rest from hydro projects. The thermal use of gas is equally important to area residents. In a recent survey, 95 percent of Chugach respondents reported they use gas to heat their homes and 90 percent said it heated their hot water.

My senior management team is spending more and more time on natural gas issues these days and Chugach is open to considering all sources of natural gas to meet the needs of the region. We obviously are most familiar with production of gas from Cook Inlet, and have been working closely with producers on contracts to meet our future needs. As I may have mentioned, I also worked with Harry Noah as he studied the idea of a bullet line (an investigation I've supported in testimony over the past few years). LNG imports could provide a near term source of gas, and a Spur Line would be a source in the future if the big pipe is built. With others, we are also striving to secure gas storage by the winter of 2012-2013.

Mr. Speaker, we appreciate the focus you and other legislators are putting on natural gas related issues this year. If you'd ever like to discuss them further, please give me a call.

Sincerely,

Bradley Evans

Memorandum

Date: April 13, 2010

To: Senator Lesil McGuire, Co-Chair
Senator Bill Wielechowski, Co-Chair
Senate Resources Committee

From: Representative Carl Gatto

Re: Hearing Request for CSHB 70

HB 70, the "Farm-to-School Act," is designed to bolster agriculture produced in the state and better serve Alaska's school children. Encouraging the use of locally-grown food in schools promotes sustainability and provides students with greater nutritional value and a better understanding of healthy eating habits. This bill was unanimously passed by the House of Representatives in its current form, CS HB 70 (FIN), Version 26-LS0284\P, Bannister. I respectfully request a hearing for CS HB 70 (FIN) in the Senate Resources Committee. Thank you for your time and effort in considering this bill.

Sincerely,

Representative Carl Gatto

ANALYSIS: *(Attach a separate page if necessary)*

A Farm-to School program – as outlined in Sec. 2 of HB 70 – would be created in the Division of Agriculture to increase procurement and use of Alaska grown foods in the public schools and make available existing curricula, programs and publications that educate students on the benefits of preparing and consuming foods grown locally. A Development Specialist, Range 18, $81.9, would implement Section 2, in conjunction with a seasonal Agriculture Inspector, Range 16, $44.2 to implement section 4. Travel expenses will be used to cover travel to ***selected*** districts to educate students on the benefit of growing and consuming healthy local produce. Contractual will cover the cost of curriculum coordinated with the Department of Education to educate youth on the benefit of growing and consuming healthy local produce. Section 5 of the bill repeals the Farm to School Program July 1, 2013.

*Alaska has 55 school districts with approximately 500 public schools.

To: Senator Lesil McGuire, Co-Chair
Senator Bill Wielechowski, Co-Chair
Senate Resources Committee

From: Representative Carl Gatto

Re: Explanation of Changes between HB 70 Original and (CS) for HB 70, Version 26-LS0284\P.

Section 4 of the original bill created an Alaskan Grown Fresh Fruit and Vegetable Program to provide students with free locally grown produce as snacks throughout the school day. Snacks would have been accompanied by education on nutrition, agricultural stewardship, and environmental issues. It was removed from the Committee Substitute due to fiscal concerns.

Section 7 of the original bill was also removed due to fiscal concerns. This section would have created a pilot program in small and rural communities through which the state facilitated the use of locally grown products in area food banks.

Section 6 of the original bill was designed to increase the use of food stamps and WIC cards at local farmers' markets. The section was removed at the request of the Department of Health and Social Services since the department was already developing a similar program.

The House Resources Committee passed Conceptual Amendment 1 stating:
Page 6, line 10, following "gardens":
Insert ", greenhouses"

Page 6, line 11, following "school garden":
Insert ", greenhouse"

Page 6, line 11, following "The garden":
Insert ", greenhouse"

Page 6, line 14, following "garden":
Insert ", greenhouse"

Page 6, line 17, following "garden":
Insert ", greenhouse"

Page 6, line 20":
Insert a new subsection to read:
"(d) When a school garden, greenhouse, or farm is used the excess fruits or vegetables may be sold, if the revenues are used to support the program."

Conceptual Amendment 1 inserts an explicit mention of greenhouses into several portions of the bill to guard against any confusion as to their eligibility for the program. Subsection (d) helps ease any financial strain on other school organizations by allowing school gardens to sell excess products to help fund the program.

Version S of (CS)HB70 deleted page 6, lines 23-24, to avoid constitutional problems concerning dedicated funds. The new language allows for excess produce to be sold without specifying the use of the funds.

The CS passed out of the House Finance Committee simply adjusts the dates in the bill so that it still establishes a four year program.

Sponsor Statement
HB 70
Alaska Grown Agricultural Products

The Farm-to-School Act is similar to programs proposed in several other states. Its intent is to strengthen links between state agriculture and state food procurement in schools, expand local markets, improve nutrition, and even benefit the environment. It improves upon current law that requires schools receiving state moneys to purchase agricultural products harvested if the state if, and only if, they are priced no more than seven percent higher than similar products imported to Alaska.

A Farm-to-School Program is created to facilitate increased procurement of Alaska grown foods by schools. The program will, in order of priority:

- Identify and develop policies and procedure, including proposed uniform procurement procedures, to implement and evaluate the program;
- Assist food producers, distributors, and brokers to market Alaska grown food to schools by informing them of opportunities and requirements;
- Assist schools in connecting with local producers by informing them of sources, availability and benefits of Alaska grown foods;
- Identify and recommend ways to increase predictability of sales and adequacy of supply;
- Make available publications allowing students to see benefits of preparing and consuming locally-grown food;
- Support efforts to advance other farm-to-school extensions such as school gardens or farms, and farm visits; and
- Seek additional funds to leverage state expenditures;

The Division of Agriculture must, cooperating with the Department of Education & Early Development, collect data on program activities and report biennially to the Legislature their progress beginning January 2010.

HB 70 also gives schools the authorization to create a school garden or even a farm. In doing so they must also allow students representing student organizations the opportunity to be involved in the garden or farm operation. Schools may teach both organic and traditional farming methods.

This bill sunsets on July 1, 2013.

MEMORANDUM March 6, 2009

SUBJECT: Sectional summary of CSHB 70( ) establishing the farm-to-school program in the Department of Natural Resources, and relating to school gardens and farms
(Work Order No. 26-LS0284\R)

TO: Representative Carl Gatto
Attn: Sandra Wilson

FROM: Theresa Bannister
Legislative Counsel

You have requested a sectional summary of the above-described bill. As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents.

Section 1. Directs the commissioner of natural resources to implement the farm-to-school program established by AS 03.20.100.

Section 2. Sec. 03.20.100. Establishes the farm-to-school program.

Sec. 03.20.100(a). Establishes the farm-to-school program in the Department of Natural Resources to increase public school use of state-grown food.

Sec. 03.20.100(b). Directs the department to perform certain tasks, as prioritized in the subsection, in consultation with other listed state agencies. The tasks relate to uniform procurement policies and procedures, assisting the food industry to market food to public schools, assisting public schools to connect with local producers, mechanisms for increasing sales and supply predictability, educating students, advancing other farm-to-school activities, and program funding.

Sec. 03.20.100(c). Directs the department, in cooperation with the Department of Education and Early Development, to collect data on the activities under this section and to report biennially to the legislature.

Sec. 03.20.100(d). States that this section does not affect two statutes related to state agricultural and fisheries product preferences.

Sec. 03.20.100(e). Defines terms for the section.

Section 3. Directs the Department of Education and Early Development to assist the Department of Natural Resources to develop and implement the farm-to-school program under AS 03.20.100.

Section 4. Sec. 14.30.375. Adds a new section relating to school gardens and farms.

Sec. 14.30.375(a). Allows a school district to authorize or operate a school garden or farm for educational purposes and for growing fruits and vegetables for the students.

Sec. 14.30.375(b). Requires a district to give students representing student organizations the opportunity to be involved in the operation of the garden or farm.

Sec. 14.30.375(c). Requires that, when the garden is used for education about agricultural practices, students be given the opportunity to learn about both organic and conventional growng methods.

Section 5. Repeals the provisions in this bill on July 1, 2013.

If I may be of further assistance, please advise.

CASE STUDY

Healdsburg, CA

Movers and Shakers
Nancy May, the School Food Service Supervisor, is the main organizer behind this Farm to School project. She came to Healdsburg Junior High School at a time when the cafeteria was being renovated, and decided to change the emphasis from ordering a la carte items from windows to eating a healthy, appealing meal using a cafeteria line.

Project Description
Ms. May has instituted an eye-catching salad bar, using farm products wherever possible. This salad bar operates two days a week at one middle school and the high school. She has opened three old school kitchens – including one at an elementary school and is serving up virtually home-cooked lunches every day. The a la carte items such as burritos and tamales, are nutritious and freshly made, and have helped boost a la carte sales.

Other Components
School gardens have been organized at each school with the help of community donations. One garden fence, including the labor, was donated by a local gardening group. Materials for raised beds were donated by a local home and garden business. Ms. May aggressively markets the farm to school project, by actions such as serving school lunches at school board meetings. She has also hosted the state Superintendent of Schools to visit the school garden.

Students and parents also help with the menu planning and Ms. May holds occasional product tastings to help determine students' preferences.

Funding
Ms. May has received $30,000 from a Shaping Health as Partners in Education (SHAPE) grant that has been used to help develop nutrition education, teacher training, and to purchase equipment such as the salad bars and a portable cooking cart for classrooms. She received a second SHAPE grant for $50,000 that was used for developing the school garden, establishing links between the garden and farm to school project, and for supporting an agriculture curricula.

Labor
The bulk of the organizing work has been done by Ms. May. She has incorporated student workers in the cafeteria to help with food preparation and food serving. Students over 13 years old can work up to 6 hours per week.

Farmers/Crops
The district buys from three local farmers who were located by Nancy May at the local farmers' market and through word-of-mouth. The crops they provided on a seasonal

basis include: tomatoes, cucumbers, apples, pears, herbs, peppers, onions, and lettuces. Ms. May buys organic produce whenever possible.

Product Delivery
The farmers deliver directly to the district on Monday mornings for the salad bar that operates twice a week at both the junior high and high school.

Price
The farmers charge a fair price that is generally comparable to the wholesale price.

School Food Service Support
This program was organized by the school food service staff. However, staff is working to garner further administrative support to expand the existing program.

Kitchen Facilities
When Ms. May came to the district three years ago, she began reopening three old kitchens so that meals could be freshly prepared instead of reheating prepackaged frozen meals. Both the kitchens at the elementary schools have been renovated within the last three years. The high school kitchen is also being renovated. Despite these improvements, more space is needed for food preparation and storage.

Sustainability
While this program is sustainable, additional funding would help to expand and improve what currently exists. Funding would be used for storage and refrigeration facilities, additional serving tables and utensils, to pay for more labor-intensive meal preparation, and for hiring a garden/farm to school coordinator.

CASE STUDY

Santa Monica-Malibu

Movers and Shakers

The initial impetus for this project came from Bob Gottlieb, a parent at one of the schools in the Santa Monica-Malibu Unified School District (SMMUSD). He approached Rodney Taylor, the School Food Service Director, about implementing a salad bar, and initially received a lukewarm reception. However, Mr. Taylor was open to trying a pilot project as long as Mr. Gottlieb was willing to do most of the organizational work. As a university professor, Mr. Gottlieb was able to incorporate students into the project, as well as write grant proposals to hire full-time staff.

Project Description

The Farm to School Project encompasses all of the 15 schools in the SMMUSD district, including elementary, junior high and high schools. Each school has a Farmers' Market Salad Bar which features produce that consists entirely of farm products that are purchased at local farmers' markets. The salad bar also contains protein, grain, and dairy products. Because of the year-round growing season, and year-round farmers' markets, the project is able to always include regionally grown produce. While the project began in one school, within a four year period the Farmers' Market Salad Bar was instituted on a district wide basis. The children have the daily choice of the salad bar or the hot meal.

Other Components

Each of the schools in the district also has a school garden that is maintained by teachers or parent volunteers. A child nutritionist was hired on a temporary basis to teach nutrition education, including a class on salad bar etiquette and an introduction of the items found at the salad bar. A cooking cart is also used for classroom demonstrations.

Another component of the project is field trips to both farms and the farmers' markets. Teachers sign up their classes for farm field trips and the Salad Bar Coordinator arranges tours of the farmers' markets. The latter includes a talk by the Market Manager about the different products at the market accompanied by hands-on experience with the products, and of course, an opportunity to sample them.

Funding

During the first year, funding was provided by the California Endowment to UCLA/Occidental College through a grant directed by Mr. Gottlieb. In the next year, the district took on the staffing of the project and obtained funding from a Department of Health Services Nutrition Network grant. However, only six schools in the district qualified for this grant, due to the requirement that a specific number of children be eligible for free or reduced meal pricing. At the other schools, the PTA donated $5,000 - for each school - to get the program up and going. The Santa Monica Farmers' Market also donates $10,000 per year to the Farm to School project. Funds from ala carte sales also help to support the Farmers' Market Salad Bar.

Labor
In the first year, labor was provided primarily by UCLA/Occidental College staff and parent volunteers. However, the school labor unions do not allow parent volunteer labor, and eventually, a part-time person was hired at each school to help with the salad bar preparation, serving and clean-up. There is also a Salad Bar Coordinator who oversees the entire program.

Farmers/Crops
There are two tremendously successful year-round farmers' markets within a mile of the SMMUSD central office. Twice a week, on Wednesdays and Saturdays, the Salad Bar Coordinator visits the markets to purchase the produce. Some of the products purchased seasonally include: strawberries, apples, melons, cherries, lettuce, carrots, celery, tomatoes, citrus, raisins, peppers, broccoli, cauliflower, potatoes, and peaches. Over the school year, about 20 farmers will provide crops for the salad bar, and the district will spend a total of approximately $100,000 on produce from the farmers' market.

Product Delivery
The SMMUSD has its own truck to transport the produce. The district purchased the truck prior to the implementation of the Farmers' Market Salad Bar. The produce is brought directly from the farmers' market to the central kitchen where one driver delivers produce to the Santa Monica schools and another driver transports the produce to the schools in Malibu. This is done twice weekly.

Price
As the farmers are already making the trip to the farmers' market, and do not have additional delivery costs to the schools, they are able to sell at wholesale instead of retail prices. In the beginning of the project, some farmers sold below wholesale because they believed in the idea of kids eating great produce. With the Farmers' Market Salad Bar now in all 15 schools, the prices are generally comparable to wholesale.

School Food Service Support
Initially, support from school food service folks was slow in coming. The real change occurred when the staff saw children choosing the salad bar for lunch, and eating what was on their plate! There is now overwhelming support for the project, and Rodney Taylor has on his business card, "Home of the Farmers' Market Salad Bar".

Kitchen Facilities
Each of the schools has their own facilities for food preparation. The actual salad bars were purchased before the farmers' market component was added.

Sustainability
After four years in operation, the Farmers' Market Salad Bar is able to operate without grant funding. However, some of the other project components, such as the nutrition education, can only be done if additional funding is obtained. The SMMUSD has found that costs spread out over 15 schools make it a much more viable program than when it operated in only 2 or 3 locations.

CASE STUDY

Kentucky

How it Started

Official introduction occurred in May 2000 through cooperative efforts of the USDA, the Kentucky Department of Ag., University of Kentucky Extension and the Kentucky Department of Education. Some school districts in Kentucky had noted the North Carolina model and had been purchasing produce through the DOD fresh program and from local cooperatives. In the first year the program was piloted in regions 4 and 8. Schools were encouraged to request product grown in Kentucky, if prices were comparable. The program went statewide this year. Farm-to-School in Kentucky now has a full time coordinator who handles communications with farmers and schools funded by the State Department of Agriculture.

Farm to School Project and Components

Clark County is Kentucky's model program for integrating Farm to School with nutrition and health education. There they are developing and piloting the Clover CAT (Cooking, Activity, and Time to be well) curriculum. This curriculum includes nutrition, time management, exercise and self-esteem. The curriculum is being piloted in the 5th, 7th, and 9th grades with introductory, intermediate and advanced levels. In some areas the YMCA offers a three-month scholarship to obese children who attend these classes. If the children work out at the YMCA 30 times in three months they are offered another three-month free membership. Intergenerational gardens are being piloted but not always in conjunction with the farm to school program.

Farm-to-school coordinator plans to develop additional components (ag education, nutrition education) in the future.

Funding

The farm to school program is incorporated into the jobs of nearly all those involved. The program is broadly supported by the State of Kentucky. No additional funding has been required.

Farmers/Crops

The Kentucky Department of Agriculture facilitates communication between farmers and schools. They promote products grown in Kentucky such as seedless watermelons, sweet potatoes, broccoli and seasonal decorative products. Local and Kentucky grown cannot always provide quantities needed by school districts. In these cases commodities and out-of-state foods are used. Farm cooperatives comprise the majority of farms involved in the program. Few independent farms participate. There is some question as to how beneficial this program is to new, small-scale, or non-traditional farms.

School food service commented that farmers have not approached schools independently. If they did, they might be well received. Additional product is needed for summer feeding program and school food service might be willing to purchase direct if farmers made the effort.

DOD provides purchasing expertise some contact with growers. DOD helps set prices, work with growers and seek out small-scale growers

Delivery
School Districts place their orders in May each year. Contracted produce distributors ship their produce to larger distribution sites 5 located in Kentucky, one in Ohio and one in Tennessee. Product is shipped from these sites to schools. Department of Ag. inspects and approves distributors prior to their involvement with farm-to-school

In districts served by a central kitchen food service directors at individual schools can order from their local distributor to supplement what is provided by the central kitchen. The central kitchen places a request once a month for bid. Bids are published and individual schools may order from that list. Schools are encouraged to choose lowest bid first, Kentucky grown second. Produce is delivered once a week.

Price
Farm-gate price is negotiated by Kentucky Dept. of Ag and DOD. A 5.6% surcharge is added to farm gate price and this price is offered to schools. Price for Kentucky grown has not been an issue with product purchased through State farm-to-school program but price for locally grown can be an issue when purchasing from local distributors. Commodities and low prices take precedence over locally grown.

School Food Service Support
School food service was supportive from the beginning. At the May 2000 conference they shared the barriers they had confronted and overcome as well as barriers that persist. For the last year and a half Jefferson County has prepared food in the central kitchen and delivered to schools in refrigerated trucks owned and operated by Food Service. Menus are developed for periods of 6-months. Seasonality impacts price but is not necessarily a consideration in menu development.

USDA rep provides regular training to food service in handling fresh product and some nutrition education.

Kitchen Facilities
Jefferson County has a model central kitchen which can process huge quantities of food with little additional staffing. Food for school lunches is prepared at this site and shipped to individual schools. Other schools have some processing capability but prefer pre-cut, prepackaged product. No additional labor has been necessary.

Sustainability
This project has a great deal of State support. Nearly all aspects of the program are incorporated into the jobs of those involved. Elementary and middle schools do not allow students to leave campus during school hours. Ala carte items, which are part of school menu, are sold during lunch but no competitive foods are sold on campus. Although high schools have soft drink contracts, the machines cannot be turned on until ½ hour after last lunch period. Under these conditions the program is sustainable.

CASE STUDY

Florida

Movers and Shakers

In 1995, a group of farmers formed the New North Florida Marketing Cooperative. The goal of the cooperative was to provide marketing services to the participating farmers, and provide training and education in marketing options such as farmers' markets, roadside stands, and selling to local school districts. The goal is to increase the amount of product being sold, thereby increasing the farmers' incomes.

Description

The New North Florida Cooperative began by selling farm fresh produce to 13 schools in Gadsden County, Florida. In six years, the marketing efforts have increased so that the Cooperative now sells to 15 school districts in Florida, Georgia and Alabama. Through these districts, they are serving 300,000 students!

The farmers focus on producing three to four main items, on a seasonal basis, and sell to schools year-round. The items are incorporated into menu planning, generally as a side dish or as a fresh fruit dessert. The Cooperative has developed a good reputation by providing high-quality produce, prompt deliveries, fair prices and for their courteous professionalism. They refer to this as "relationship marketing". The positive word-of-mouth has been very effective in opening the door to the program in other school districts.

Other Project Components

As part of its marketing and promotion, the Cooperative has developed posters showing the life cycle of a crop – from planting to harvesting. These posters are displayed in school cafeterias.

Funding

Approximately 90% of the funding for the Cooperative's marketing efforts come from the sales of their members and participants. These sales come from a variety of direct marketing alternatives, including farmers' markets, roadside stands, and through their sales to schools. When the initial farm to school program was ready to launch, the Cooperative did receive a $4,000 grant from the USDA Agriculture Marketing Service. They also received a $3,000 loan from the West Florida Resource Conservation and Development Council (WFRCDC). Most of the grant money received by the Cooperative has been used for infrastructure and equipment purchase, such as refrigerated trucks and cool and cold storage facilities.

Labor

Most of the labor for preparing the products, as well as growing, them comes from the Cooperative members and participants. During particularly busy times, day labor is also utilized. Since the farmers have the ability to wash, chop and bag the produce, there is no additional labor on the part of the school food service.

Farmers and Crops
The Cooperative provides marketing services and opportunities for over 100 members and participants in Florida, Georgia and Alabama. Their primary crops are collards, field peas, muscadine grapes and a few turnip greens.

Product Delivery
Deliveries are made 2 ½ to 3 days per week depending on school menus. While much of the produce is delivered by the Cooperative, they do work with other produce vendors as well. The produce that is delivered is packaged and has a label with a logo and a nutritional analysis. The Florida A & M University provided some technical assistance to develop the label.

A delivery trailer was purchased by the Cooperative, and a cooling system from a recreational camper was installed to keep the produce at a relatively low temperature while in transit. Styrofoam insulation was also installed to protect the produce from the outside heat. The logo is printed on the side of the trailer along with the name of the Cooperative and the phrase, "The Pinnacle of Quality".

Price
The Cooperative has developed a niche market as there is little competition in providing fresh, washed, chopped, bagged, and delivered greens. Consequently, the Cooperative is able to negotiate a price that is both fair to the school district and profitable for the growers.

School Food Service
The Cooperative members gained the respect of the school food purchasers by initially *donating a sample of their product – 3,000 pounds of greens.* The greens and fruits have been met with an enthusiastic reaction from children, which has been a big factor in administrative acceptance of the product. All members of the Cooperative go out of their way to be helpful and courteous when delivering the product, and they unload the boxes and stack them neatly in cold storage facilities. After each delivery, the cafeteria manager is notified that the order was delivered. The Cooperative demonstrates courtesy, provides convenience, and protects the high quality of its products by taking this extra step.

Kitchen Facilities
Since schools are not processing the product, facilities become more of an issue for the Cooperative members, who must have storage, refrigeration, and a covered area for washing, cutting, and bagging equipment. Originally, all of the washing was done in large steel tubs, and chopping was done by hand. There was no refrigeration system and therefore no storage capacity. As a result, harvesting and processing had to be done in one day – one very long day. To continue in business, the Cooperative purchased a packing/processing shed, a cutting/chopping machine, wash sinks, and a refrigeration and storage system. Funds for purchasing equipment came from grant funding and bank loans.

Sustainability
The New North Florida Cooperative has been sustainable since it began, as 90% of its funding comes from direct marketing sales. The few loans and grants they have received have helped it to build infrastructure with equipment purchases.

CASE STUDY

Iowa

Movers and Shakers
The three major organizers of the Iowa Farm to School project are Merl Steines, Michael Nash, and Joan Lubke. Mr. Steines and Mr. Nash are farmers with the GROWN Locally cooperative. Ms. Lubke, is a Dietary Manager, Food Service Director at the Decorah Community School District in Northeast Iowa, and she and her husband are farmers who produce organic soybeans, corn, oats, and raise organic cattle.

Ms. Lubke, Mr. Steines and Mr. Nash have known each other for several years, but became better acquainted at a Farm to School forum in Ames, sponsored by the USDA and organized by the Practical Farmers of Iowa.

Project Description
Through the Iowa Farm to School Project, Ms. Lubke uses locally grown products for a salad bar and as a la carte items. She works with four schools, two elementary, one middle school and one high school, and the farm-fresh items are particularly popular with students in the middle school and high school.

Other Components
Horticulture classes are offered through the local Future Farmers of America (FFA), and information about agriculture, farming and nutrition are provided as well in classes focusing on the environment and culinary arts. GROWN Locally is also preparing printed materials and will organize farm tours in the spring.

Funding
The program has not received special funding to buy directly from the GROWN Locally cooperative. With additional funding, we would able to purchase a greater amount of local products.

Labor
The GROWN Locally cooperative provides much of the produce already washed to help reduce labor costs. However, some food preparation is needed to cut and chop the produce. The price of labor is the prohibiting factor in expanding this program. GROWN Locally is planning to purchase processing equipment to help reduce these costs for the school district.

Farmers/Crops
There are 11 members in the GROWN Locally cooperative, and they coordinate both the production of the crops as well as the distribution to schools and other institutions. One invoice is presented from the cooperative to the school, so that there is no need for the school to pay each individual farmer Individual farm payments are then distributed by GROWN Locally. The crops that have been the most popular with the students are apples, cucumbers, lettuces, carrots, broccoli and cauliflower.

Product Delivery
Deliveries are made to the school by the cooperative once per week. With the exception of the apples, this is the first year that GROWN Locally has sold to the school district. It is expected that the program will expand with additional products in the coming year.

Price
The members of the cooperative check wholesale prices for their products, and set their prices competitively with these standards. At this time, 20% of the money received from the sales goes back into running the cooperative.

Even with prices set to be competitive with major distributors, the cost is still somewhat high for the school district. These prices are to a degree offset by the use of commodity items. School food services acknowledges that price is an issue, but is willing to pay for a quality product in order to provide great tasting meals for the children.

School Food Service Support
As the school food service staff was instrumental in organizing farm sales to schools, they are very supportive of the project. The farmers in GROWN Locally have done some marketing around their direct sales, and it has generated good public relations for the school. There is also good support from school board members.

Kitchen Facilities
The kitchen facilities are up-to-date with an adequate amount of space for food preparation and storage. GROWN locally is planning to build a small processing center to provide their products in forms that are more accessible to school food service personnel and to extend the times when products are available.

Sustainability
Since this project has not require additional funding, it is sustainable. However, it is also limited in any possible expansion by labor costs. With additional funding for the labor required for food preparation, the farm to school project would be able to grow beyond its present operation.

CASE STUDY

New Mexico

Movers and Shakers

The primary organizer behind the Farm to School project in Santa Fe is Lynn Walters. Lynn is a chef and previous restaurant owner as well as a concerned mother of two school-aged children. She is Program Coordinator of Cooking with Kids, a multicultural food education program. Lynn arranged a visit to the Santa Monica Farmers' Market Salad Bar for several school food service staff members and New Mexico Department of Agriculture Marketing Specialist Craig Mapel. The Director of Student Nutrition Services, Judi Jaquez, fondly calls Lynn "the thorn in her side" that moved her to support and develop a farm to school program in Santa Fe, New Mexico. Judi is a self-described "convert" who touts the flavor and quality of locally grown fresh fruits and vegetables.

Farm to School Project and Components

Three Santa Fe public schools are participating in this project, two elementary and one high school. One of the elementary schools has a salad bar every day. The meal at this site includes a meat entree three times a week and a vegetarian item twice a week. The other elementary school offers a side salad of mixed greens, sunflower sprouts, and other seasonal items with lunch. The high school has a separate salad bar; students have the choice of the salad bar or a hot lunch.

Nutrition education in the classroom has had a big impact on the salad bar line. The first session conducted by Farms to Schools Coordinator Betsy Cull discussed proper salad bar etiquette as well as what is required for a reimbursable meal. Betsy followed the hands-on model of the Santa Monica Farmers' Market Salad Bar Program and brought the salad bar into the classroom for a lesson about food groups and portion sizes. The students were then able to prepare a tray to eat, practicing what they just learned.

Student Comments

"I've never tasted this stuff before; it's good"
"I love fruits and vegetables."
"I didn't use to like this kind of lettuce much, but I'm starting to like it more now that I've tasted it"

Funding

Three grants have provided start-up funds for this project: a USDA Community Food Projects grant will be providing $30,750 over three years and the New Mexico Department of Agriculture (NMDA) is contributing $30,000 to this project this year. In addition, USDA's Federal State Marketing and Improvement Program awarded NMDA $27,000 to further develop the program into next year.

Labor

Collaboration got this program going. A group of folks, including Lynn Walters, Craig Mapel, and Judi Jaquez, worked with the support of members of the Student Nutrition Advisory Council, including Registered Dietician and former NET Coordinator Blanche Harrison, to organize this project. Betsy Cull was hired as the Farms to Schools Coordinator, a newly created school district position. School food service staff prepare the fruits and vegetables for the salad bars.

Farmers/Crops
Organizers worked with the NM Department of Agriculture and the state Farmers' Marketing Association to locate farmers. Approximately forty farmers sell to the school district, primarily through a farmers' coop, during the fall and spring months. Farmers see a tremendous potential to sell more crops if they can extend their season, and they are working to develop hothouse techniques to do just that. The crops that the children see seasonally include salad greens, sunflower sprouts, apples, pears, watermelons, tomatoes, corn, cucumbers, peppers, squash, potatoes, onions, carrots, broccoli, and radishes.

Product Delivery
The school district is working with the New Mexico Farmers' Market Association to coordinate deliveries through a cooperative distribution system. Deliveries are made either directly to the school sites or to the central warehouse.

Price
There are price barriers that are not easily overcome in New Mexico and are quite likely the greatest hurdle facing the pilot project. New Mexico procurement law requires most state agencies (including school districts) to go out to bid on virtually any item, including produce, that will be over $10,000. In addition, to insure that the public dollar is being wisely spent, the agency requesting the bid must accept the lowest bid submitted. No real weight is assigned to what in reality is a higher quality, fresher, locally grown product.

This problem is further complicated by the size of the average farm (particularly those in north central New Mexico), which tends to be around 10 to 15 acres. It is difficult to compete with larger, out of state producers, submitting bids on the same type of produce.

The pilot program with the three Santa Fe schools selected by the coordinators has been able to circumvent these problems to a great extent. The coordinators designed bid requests to specify the freshness of the product, i.e. picked and delivered within 2 days, and by using monies from grants to ensure that no state monies were involved in the project to purchase food.

School Food Service Support
School food service personnel have been overwhelmingly supportive, as has been the District Administration. They were brought into this program fairly early in its conception, and were active in helping to design the program.

Kitchen Facilities
The three schools participating in the program had the equipment and facilities necessary to prepare and store the product. The high school kitchen had just gone through a renovation and was well-equipped for a salad bar.

Sustainability
When this program started, all of the collaborators knew it would be difficult to sustain in its present form. The organizers have been working at a state and national level to pass legislation that would allow schools to give preference to local growers and to make it easier for area farmers to participate in the program. There is consensus among the collaborators that by working closely with District purchasing personnel to create very specific purchasing requests, that local farmers will have a greater opportunity to participate in the program.

Farm to School Legislation: A State by State Listing

Eighteen states have passed legislation regarding farm to school programs. Below are summaries and links to the text of this legislation. This information should reflect legislation that has passed as of June 10, 2008.

California

To search for California state legislation text: http://www.assembly.ca.gov/acs/acsframeset2text.htm

SB 281 (2005 California Statute, Chapter #236)
Introduced in 2005, SB 281 established the California Fresh Start Program that provides an additional 10 cents per a meal for fruits and vegetables. SB 281 also encourages schools to buy California products when commercially available. As a part of nutrition education, sampling of produce is required, and may include purchase of local products for this purpose.

According to SB 281 the State Department of Education will have $400,000 to provide grants, on a competitive basis, to a county office of education or community college. Of this $400,000, no more than $100,000 can be used to cultivate an online professional development seminar for school-site staff on serving, safe-handling guidelines, marketing, and promoting nutritious fruits and vegetables. Also no more than $300,000 is to be used to conduct a comprehensive evaluation of educational materials and marketing of California Fresh Start Pilot Program.

Colorado

To search for Colorado state legislation text:
http://www.state.co.us/gov_dir/leg_dir/olls/session_laws_of_colorado.htm

SB 127 (2006 Colorado Session Laws, Chapter #242)
http://www.state.co.us/gov_dir/leg_dir/olls/sl2006a/sl_242.htm

SB 127 established the Fresh Fruits and Vegetables pilot program for the 2006-2007 and 2007-2008 school years, to provide students in participating public schools with free fruits and vegetables. Interested school districts must apply for the program through the Department of Education. Eligible schools are selected based on a variety of criteria, one of which is to ensure that a certain percentage of students enrolled in a particular school district are eligible for reduced or free lunch under the federal "National School Lunch Act." This bill also requires that participating schools use Colorado fruits and vegetables to the maximum extent possible.

$500,000 was appropriated. $350,000 was used to convert reduced price meals to free meals. $150,000 went to the Fresh Fruits and Vegetables Pilot Program.

HB 1307 (2005 Colorado Session Laws, Chapter #317)
http://www.leg.state.co.us/CLICS2005A/csl.nsf/fsbillcont3/7D29AAABBE3A21EA87256FA3007CC90B?Open&file=1307_enr.pdf

Under HB 1307 governmental bodies purchasing agricultural products are allowed to preference Colorado products over out of state products as long as the quality is equal, the Colorado producer is able to meet requested quantity, and price is either lower than the lowest out of state bid, or "reasonably exceeds" the lowest bid. "Reasonably exceeds" is defined as a bid that may exceed the lowest bid and can be paid for by the existing fiscal budget.

Connecticut

To search for Connecticut state legislation text: http://www.cga.ct.gov/

HB 5847 (2006 Connecticut Acts, P.A. 06-135)

http://www.cga.ct.gov/2006/ACT/PA/2006PA-00135-R00HB-05847-PA.htm
HB 5847 is "an act implementing the provisions of the budget concerning education" and therefore pertains to a variety education related programs including farm to school. The farm to school program is established within the Department of Agriculture, which will collaborate with the Department of Education to promote the sale of Connecticut-grown farm products to school districts, individual schools and educational institutions that are under the jurisdiction of the Department of Education.

The Department of Agriculture's (DOA) role is to encourage, solicit, and guide Connecticut farmers through the process to sell their products to school districts, individual schools and educational institutions, while also working with the Department of Education to support schools through the local procurement process. The DOA is also required to develop and maintain a database of farmers interested in farm to school, and to outreach to these farmers.

According to this bill the Department of Education (DOE) will promote events such as Connecticut Grown for Connecticut Kids week to bring school kids together with Connecticut agriculture inside and outside of the classroom. The DOE should "encourage and solicit school districts, individual schools and other educational institutions under its jurisdiction to purchase Connecticut-grown farm products, and provide outreach, guidance and training to districts, parent and teacher organizations, schools and school food service directors concerning the value of and procedure for purchasing and incorporating into their regular menus Connecticut-grown farm products."

PA 05-228 (2005 Substitute Senate Bill #410)
http://www.cga.ct.gov/asp/cgabillstatus/cgabillstatus.asp?selBillType=Public+Act&bill_num=228&which_year=2005&SUBMIT1.x=7&SUBMIT1.y=12&SUBMIT1=Normal
Allocates $100,000 annually to encourage the sale of Connecticut-grown food to schools, restaurants, retailers, and other institutions and businesses in the state.

SB 589 (2004 Connecticut Acts, P.A. 04-222)
http://www.cga.ct.gov/2004/act/Pa/2004PA-00222-R00SB-00589-PA.htm
SB 589 is "an act concerning the preservation of the family farm and Long Island Sound" and therefore pertains to various agriculture-related programs including the Connecticut Farm Fresh Schools program. Administered by the Commissioner of Agriculture, Connecticut Farm Fresh Schools is to promote Connecticut schools that are serving Connecticut farm products. Schools, including public, non-public, and higher education institutions, in which 20% or more of the food served by the school consists of Connecticut grown/produced foods are eligible to be certified as a "Connecticut Farm Fresh School" and are able to use "Connecticut Farm Fresh School" in promotional materials and activities.

Delaware

To search for Delaware state legislation: http://legis.delaware.gov/

HR 74 (2004)
http://legis.delaware.gov/LIS/LIS142.NSF/vwLegislation/HR+74?Opendocument

House Resolution 74 urges Congress to pass the Farm to Cafeteria Projects Act (Child Nutrition Reauthorization), and any other legislation promoting farm to school partnerships. The goals of this bill are to assist schools in purchasing locally grown food, provide more healthy fresh food for school children, educate children and their families about foods grown in their communities, and to expand market opportunities for local farms.

Iowa

To search for Iowa state legislation: http://www.legis.state.ia.us/

SF 601 (2007)
http://coolice.legis.state.ia.us/Cool-ICE/default.asp?Category=billinfo&Service=Billbook&menu=false&ga=82&hbill=SF601

Iowa's farm to school program was originally part of SF 209 and SF 452, and is currently written into SF 601. This bill establishes a statewide Iowa farm to school program that is administered by the Department of Agriculture and Land Stewardship and a Farm to School Council. The purpose of this program is to improve child nutrition in schools and strengthen local and regional farm economies. This program encourages the relationships between Iowa farms and Iowa schools (elementary and secondary) to purchase locally and regionally produced or processed foods to provide Iowa's children with fresh minimally processed food for inclusion in school lunches.

SF 551 (2007)
http://coolice.legis.state.ia.us/Cool-ICE/default.asp?Category=billinfo&Service=Billbook&menu=false&hbill=SF551
$80,000 was appropriated for farm to school in FY08 and another $80,000 was appropriated for FY09. Money will go toward salaries, support, maintenance, and other miscellaneous needs.

Kentucky

To search for Kentucky state legislation: http://www.lrc.ky.gov/record_search.htm

HB 484 (2008 Kentucky Acts, Chap. # 37)
http://www.ncsl.org/programs/environ/healthyCommunity/healthyCommunity_search.cfm
This bill would extend the provisions of KRS 45A.645 to encourage governing boards of public post secondary institutions to purchase Kentucky-grown agricultural products if the vendor can meet quality and pricing requirements; and if the institutions purchase agricultural products. See HB 669 from 2006 for further details. (Last Update: 6/3/2008)

HB 626 (2008 Kentucky Laws, Chap. #154)
http://www.ncsl.org/programs/environ/healthyCommunity/healthyCommunity_search.cfm
This bill amends current law concerning the Kentucky Proud program. It creates a Kentucky Proud Advisory Council and creates a Kentucky Proud promotion fund, with a grant program using available funds. Before a state agency may purchase Kentucky-grown agricultural products, the vendor shall be required to participate in the Kentucky Proud program, if the vendor can meet quality and pricing requirements. See HB 669 from 2006 for further details.

KRS 45A.645 (2006)
http://www.lrc.ky.gov/KRS/045A00/645.PDF
This bill addresses the direct marketing of Kentucky-grown products to state agencies. Under KRS 45A.645 State agencies shall purchase Kentucky-grown agricultural products if quality and pricing requirements can be met. All vendors selling to state agencies must participate in the Kentucky-Grown Labeling Program. All Kentucky-grown products that are purchased by state agencies must also be reported to the legislature. Also non-U.S. grown agricultural products must be labeled with a country of origin label if they are purchased by a state agency.

HB 669 (2006 Kentucky Acts, Chapter 244)
http://www.lrc.ky.gov/record/06RS/HB669/bill.doc
This bill amends KRS 45A.645, requiring state agencies to purchase Kentucky-grown agriculture products if vendors can meet quality and pricing requirements. Also, prospective vendors may also apply for marketing assistance from the state, as long as the vendor is participating in the Kentucky grown labeling and logo program.

Maryland

To search Maryland state legislation text: http://mlis.state.md.us/#pryr

HB 883 (2006 Maryland Laws, Chapter 360)
http://mlis.state.md.us/2006rs/bills/hb/hb0883t.pdf
HB 883 requires the Board of Works to adopt regulations allowing a 5% price preference above the lowest bid for MD grown products. Schools and state facilities are to review procurement regulations and

use the 5% price preference for purchasing local products. This section does not apply if it is inconsistent with federal law.

SB 158 (2008 Maryland Laws, Chapter #371)
http://www.ncsl.org/programs/environ/healthyCommunity/healthyCommunity_search.cfm
This bill establishes the "Jane Lawton Farm to School Program" in the Department of Agriculture to promote the sale of farm products grown in the state to schools. This includes developing a database of farmers interested in selling their farm products to schools, creating a promotional event entitled "Maryland Homegrown School Lunch Week," and providing experiential learning for students, such as trips to local farms. The companion to this bill is HB 696.

Massachusetts

To search for Massachusetts state legislation text: http://www.mass.gov/legis/laws/seslaws.htm

HB 4429 (Chapter 123 of Acts of 2006)
http://www.mass.gov/legis/laws/seslaw06/sl060123.htm
Earlier versions of this bill include HB 4324, HB 4381, HB 4404. Language was originally made part of the Economic Stimulus Package 2006, and is now a law as Section 4 of Chapter 123 of Acts 2006. HB 4429 allows state agencies to pay up to 10% above the lowest bid to purchase in-state agriculture products as long as there is no conflict with other state or federal laws. State procurement officers may award contracts up to $25,000 without seeking other bids, as required by standard procurement procedures. A governmental body may establish a preference for purchasing local products by majority vote.

Montana

To search for original text o Montana state legislation text: http://leg.mt.gov/css/bills/default.asp

SB 328 (2007 Montana Laws, Chapter #146)
http://data.opi.mt.gov/bills/2007/billpdf/SB0328.pdf
SB 328 allows public agencies to preference Montana agricultural products when price "reasonably" exceeds the lowest price quoted for a similar out of state product. "Reasonably" exceeding the lowest price quoted means that the public agency can remain within its budget without supplemental or additional appropriation to pay for the potentially higher cost of local procurement. This provides an optional exemption from the Montana Procurement Act for public institutions.

New Mexico

To search for New Mexico state legislation text: http://legis.state.nm.us/lcs/BillFinder.asp

SM 54 (2008)
This resolution commits the Senate to having additional fresh fruits and vegetables served in school meals to every New Mexico student and to strengthening New Mexico's farming communities and increasing farmers' incomes by purchasing fruits and vegetables, when available, from New Mexico farmers.

The Senate requests that the school districts and their respective boards of education and superintendents place great emphasis on, and make a high priority as a matter of educational policy for, the purchase of locally grown foods in their school food programs for the benefit of their students.

The Senate should encourage the food service directors of New Mexico school districts to search out in their various locales, with the assistance of the New Mexico department of agriculture and farm to table, local farmers who want to supply locally grown foods for school food programs.

SB 90 and HB 264 (2007)
http://www.ncsl.org/programs/environ/healthyCommunity/healthyCommunity_search.cfm
This bill appropriates $85,000 from the general fund to provide New Mexico grown fresh fruits and vegetables when available to the Valley High School cluster in the Albuquerque public school district.

HJM 34 (2001)
http://legis.state.nm.us/lcs/_session.asp?chamber=H&type=JM&number=34&Submit=Search&year=01
This bill encourages the Department of Agriculture and the Department of Education to collaborate on increasing the use of New Mexico agricultural products in public school meals. One of the goals in New Mexico is to expand marketing and selling opportunities for the state's farmers and ranchers.

New York

To search for New York state legislation text:
http://public.leginfo.state.ny.us/frmload.cgi?MENU-09735958

AND
2002 New York Laws Article 7, Section 305, subdivision 31 under Education
http://public.leginfo.state.ny.us/menugetf.cgi?COMMONQUERY=LAWS (Click "EDN Education", "Article 7", "305")

Under the jurisdiction of the Education Department with cooperation from the Commissioner of Education and Commissioner of Agriculture and Markets this law establishes a farm to school program to facilitate and promote the purchase of New York farm products by educational institutions in New York. The department will also work on making relevant information available to farmers, farm organizations, and institutions interested in establishing farm to school programs. The department shall also coordinate promotional events such as New York Harvest for New York Kids Week in early October each year.

S 6024 (2004 New York Laws, Chapter #269)
http://public.leginfo.state.ny.us/menugetf.cgi?COMMONQUERY=LAWS (Click "GMU General Municipal", "Article 5-A", "103")

Allows school districts to apply for permission to purchase directly from associations of more than 10 farmers when no other farmers or smaller associations are available. Raises the dollar cap on direct purchases $0.15 to $0.20 per meal per student.

Requires the NYS Education Department to develop regulations with input from the Department of Agriculture and Markets that should:
1. accommodate the provisions of the State Farm-to-School Law;
2. allow schools to pay farmers prices comparable to what they would otherwise pay for locally grown foods through their conventional channels as opposed to comparing to national wholesale prices;
3. allow school districts interested in purchasing local farm products to notify interested farmers statewide in accordance with provisions of the Farm-to-School Law by using publications, websites and other mechanisms;
4. ensure that schools provide a fair opportunity to all farmers interested in selling to them and that schools select the seller or sellers based on the usual traditional purchasing criteria (i.e. low price, quality, reliability, delivery, etc.) without having to divide up purchases proportionally among competing bidders;
5. provide guidelines for dept of education approval of purchases by schools from associations of 10 or more farmers;

Oklahoma

To search for Oklahoma state legislation text: http://www.lsb.state.ok.us/

HB 2655 (2006 Oklahoma Session Laws, Chapter #257)

http://webserver1.lsb.state.ok.us/2005-06bills/HB/HB2655_ENR.RTF
In HB 2655, the director of the Oklahoma Farm to School Program is established under the Department of Agriculture, Food and Forestry. The Director will establish public and non-profit partnerships to develop farm to school programs; provide state leadership to encourage school districts to buy from local farmers; and provide workshops and training for food service, farmers, processors, and others involved in farm to school work. Staff shall be made available from the departments of Health, Education and Human Services to assist in implementation of the program, seek grant funding and private donations for the program, and develop a web site to assist farmers in coordinating fresh food procurement.

$100,000 was permanently allocated to the Department of Agriculture for the program but not written in the specific language of the bill. The money has been appropriated in total for the past two years

HB 2833 (56 O.S. Supplemental 2007, Section 245)
This bill continues the "Oklahoma Food Security Act" until December of 2012. The Food Security Committee will continue to meet and work on issues such as supporting community food security initiatives and encouraging food production on the local level, supporting efforts to provide farmers' markets with the technology for accepting food stamps, encouraging the use of home and community gardens for food production, and supporting creative transportation methods for connecting at-risk populations with nutritious foods.

This year, HB 2833 included the schools as part of the overall goals of the Oklahoma Food Security Task Force: "Involve schools in identifying and improving students' access to sufficient and nutritious foods." The Governor signed HB 2833 on Friday, June 6th, 2008.

Oregon

HB 3601 (2008 Oregon Laws, Chapter #21)
http://www.ncsl.org/programs/environ/healthyCommunity/healthyCommunity_search.cfm
This bill requires the Department of Education to establish the Oregon Farm to School and School Garden Program. These programs help schools utilize Oregon food products and produce from school gardens, promote food and garden-based educational activities, and work with the state Department of Agriculture to develop farm to school related programs. For the purpose of paying the costs of the Department of Education of administering the Oregon Farm to School and School Garden Program, the department may accept contributions of moneys and assistance from any source, public or private.

On or before February 1, 2009, the Department of Education shall report, in the manner provided in ORS 192.245, to the Seventy-fifth Legislative Assembly on the activities related to the Oregon Farm to School and School Garden Program established under section 1 of this 2008 Act.

Pennsylvania

To search for Pennsylvania state legislation text: http://www.legis.state.pa.us/

SB 1209 (2006 Pennsylvania Laws, Act #184)
http://www.legis.state.pa.us/CFDOCS/Legis/PN/Public/btCheck.cfm?txtType=HTM&sessYr=2005&sessInd=0&billBody=S&billTyp=B&billNbr=1209&pn=2047
SB 1209 is known as the Healthy Farms and Healthy Schools bill. This law creates a statewide program modeled after the Kindergarten Initiative. Recognizing the benefits of integrated programs that combine nutrition education, parent involvement, and a connection to local agriculture for students and farmers in Pennsylvania, this program trains teachers and other educational staff on nutrition and agriculture education. Also, a list of Pennsylvania farmers who have agreed to supply foods to Pennsylvania schools was established, and grants have been awarded to schools for procurement of local produce and implementation of educational programs. Grant amounts are limited to 75% of the amount necessary to develop the program and are not to exceed $15,000 annually, per school. Applicants may use in-kind support to match the amount granted.

Money for the Healthy Farms and Healthy Schools is provided by the Governor's budget (http://www.state.pa.us/papower/cwp/view.asp?A=11&Q=471208). $500,000 has been appropriated for 2007 and 2008 with a similar budget for the same amount through 2012.

HR 821 (2004)
http://www.legis.state.pa.us/cfdocs/billinfo/billinfo.cfm?syear=2003&sind=0&body=H&type=R&BN=0821
Almost word for word the same as Delaware resolution [HR74], urging Congress to support the Farm to School Projects Act of 2003 and any other legislation that assists schools in purchasing local foods, provides more healthy and fresh food for school children, educates children and their families about foods grown in their communities, and expands market opportunities for local farms.

Tennessee

SB 3341 (2008 Tenn. Public Acts, Chapter # 963)
http://www.ncsl.org/programs/environ/healthyCommunity/healthyCommunity_search.cfm
This bill specifies that each local school board's plan for compliance with nutritional breakfast and lunch programs include specific provisions to encourage purchasing local agricultural products. This would include setting preferences for the use of agriculture products from each local school board's county or geographical region, as well as allowing flexible bidding processes to assist farmers to bid competitively on portions of a given nutrition plan, rather than an entire nutrition plan. The legislation requires each local school board to submit to the commissioner a plan for compliance with this part sixty (60) days prior to the beginning of the school year. For each subsequent school year, it requires each local school board to submit modifications to the plan sixty (60) days prior to the beginning of the school year.

Vermont

To search for Vermont state legislation text: http://www.leg.state.vt.us/docs/docs2.cfm

SJR 59 (2004)
http://www.leg.state.vt.us/docs/legdoc.cfm?URL=/docs/2004/acts/ACTR386.HTM
This resolution urges Congress to enact the proposed "Farm to Cafeteria Projects Act."

HB 456 (Act 145 of 2006)
http://www.leg.state.vt.us/docs/legdoc.cfm?URL=/docs/2006/acts/ACT145.HTM
HB 456 encourages farm to school initiatives through improvements to local infrastructure and education. The Commissioner of Education is to award small grants from the education fund to schools that use Vermont products in their school meals and provide nutrition education for students. It also establishes a mini-grant program, with maximum awards being $15,000, to assist with purchasing equipment, resources and materials that increase local purchasing and education regarding nutrition and agriculture. Grants may also be used for professional development for teachers to learn more about farm to school connections. The Department of Agriculture is to make one-time awards to local processors who are processing local produce for Vermont schools or institutions, while the food service personnel and Commissioner of Education are to provide training in local purchasing and processing for food service providers. This bill also requires that a report be submitted to appropriate legislative committees on how to increase local purchasing by state entities.

HB 522 (Act # 38 of 2007)
http://www.leg.state.vt.us/docs/legdoc.cfm?URL=/docs/2008/acts/ACT038SUM.HTM
HB 522 sets goals for Vermont to support in-state agriculture. This includes Vermont's own "buy local" campaign that promotes the purchasing of locally produced foods and dairy products. This bill also establishes systems to connect local producers and processors with state purchasing entities to facilitate marketing local foods. Strategic and technical assistance will also be made available to local producers and processors to create or enlarge facilities necessary to expand sales to the state and other markets. [Although this is a broad direct marketing bill, it does encourage farm to school initiatives, as schools are considered "other markets."]

HB 91 (Act # 24 of 2007)

http://www.leg.state.vt.us/docs/legdoc.cfm?URL=/docs/2008/bills/passed/H-091.HTM
HB 91 makes the mini-grant farm to school program created by Act #145 of 2006, also referred to as HB 456, permanent. Each grant awarded is not to exceed $15,000.

$110,000 was designated for this Act in the 2008 session. $85,000 will go to farm to school mini grants, and another $25,000 will go to training and technical assistance for schools to develop their farm to school programs.

Virginia

To search for Virginia state legislation text: http://leg1.state.va.us/

SB 797 (Chapter #352 of 2007 Virginia Laws)
http://leg1.state.va.us/cgi-bin/legp504.exe?071+ful+SB797ER
SB 797 authorizes the Commissioner of Agriculture and Consumer Services to create a website that promotes Virginia agricultural products to educational institutions. The website should include information such as farmers' contact information, amount and types of produce available.

The website is available at: http://www.vdacs.virginia.gov/vagrown-july/index.shtml.

SJ 347 (2007)
http://leg1.state.va.us/cgi-bin/legp504.exe?071+ful+SJ347ER
SJ 347 authorizes the Secretary of Agriculture and Forestry and the Secretary of Education to establish a Farm to School Task Force that will develop a plan for implementing a farm to school program in Virginia. The task force will study methods for providing information to the Virginia Department of Education, interested schools divisions and institutions of higher education regarding the availability of Virginia products. The task force has been formed.

Washington

To search for Washington state legislation text:
http://apps.leg.wa.gov/billinfo/search.aspx?term=farm%20to%20school

HB 2657 (2002 Washington Laws, Chapter #166)
According to HB 2657, the Department of General Administration, through the state purchasing director, shall encourage state agencies and local agencies doing business with the state to purchase Washington agricultural products when available. The Department of General Administration shall work with the Department of Agriculture to identify strategies to increase the purchase of Washington products. This was declared emergency legislation to improve the health of rural economies and the agricultural economy.
HB 2657 is still on the books; however, SB 6483 goes far beyond 2657.

SB 6483 (2008)
This is a comprehensive piece of legislation, requiring the following:
1. The State Department of Agriculture will facilitate the purchase of Washington grown food by schools, by linking school districts and local producers, as well as integrating curricula and programs that demonstrate the benefits of local food.
2. The creation of the Washington Grown Fresh Fruit and Vegetable Grant Program in the Office of the Superintendent of Public Instruction, to facilitate consumption of Washington grown-nutritious snacks to improve student health and expand the market for locally grown fresh produce.
3. Revision of food procurement and food contract procedures to facilitate the purchase of Washington grown food by state agencies and institutions to the maximum extent practicable. A school district may develop and implement policies and procedures to facilitate and maximize purchases of Washington grown food.
4. School districts may operate school gardens or farms as appropriate for the purpose of growing fruits and vegetables to be used for educational purposes.

5. The creation of the Washington State Farmers Market Technology Improvement Pilot Program to lend technological hardware to farmers markets to assist farmers markets and Washington farmers develop the capability to accept electronic payment cards, including electronic benefits transfers.
6. The creation of the Farmers to Food Banks Pilot Program. The Office of Financial Management shall work to develop measures for reporting on changes and trends in the purchasing of Washington-grown food by state agencies, institutions of higher education, and schools. The companion to this bill is HB 2798.

If specific funding for the purposes of this act, referencing this act by bill or chapter number, is not provided by June 30, 2008, in the omnibus appropriations act, this act is null and void.

$1.49 million in funding was appropriated to implement 6483. $600,000 will be used to provide grant funds to elementary schools with high numbers of low-income students to make available a locally-grown fruit and vegetable snack program.

Farm to school program changes kids' views on food

By LISA RATHKE
Associated Press Writer

SHARON, Vt. (AP) – The third and fourth graders at Sharon Elementary know where the veggies in their soup come from because they've visited the farms.

They know the nutritional value of the carrots, onions, and cabbage because they've studied them in class, and they know how they're grown because they've nurtured them in raised beds out back.

The 105-student school is part of the National Farm to School Network, aimed at getting healthier meals into school cafeterias, teaching kids about agriculture and nutrition, and supporting local farmers.

About 40 states have farm-to-school programs, but Vermont is a leader in incorporating all three missions into its programs.

"Vermont has really taken it on in quite the most holistic way and not just in a couple of school districts but statewide," said Anupama Joshi, director of the Farm to School program, based at the Center for Food and Justice at Occidental College in Los Angeles.

Vermont may be a step ahead of other states because a nonprofit partnership called Vermont FEED had already been working to get local foods into schools.

The state also has backed the farm-to-school effort with funding to help schools buy equipment to chop or process the local food and buy meat from a local farmer.

What started as a handful of pilot programs has grown into 45 Vermont schools getting grants and about 60 with farm-to-school activities.

The funding is expected to dry up next year with budget cuts.

Sharon used its $13,500 grant to buy a potato chopper and a food processor. Food service director Lin-Ann Perry now uses the food processor machine to slice squash and tomatoes picked from the school's gardens and area farms in the summer and fall, later to be frozen. The school also bought a salad bar, which has been a huge hit.

When Perry used to prepare salads for the kids, there was a lot of waste. But when kids could choose what they wanted in their bowls or on their plates, more were eating fruits and vegetables, she said.

The number of students buying hot lunch has jumped by 50 percent since the school added the salad bar, Perry said. The salad bar is also used for tacos and stir-fries.

The students take part in lunch room taste tests to see what they like. Harvest soup, also known as cabbage soup, with and without beef, got rave reviews.

"This is great, guys," said sixth grader Daniel Lazar.

The third and fourth graders who chopped up vegetables for the soup also tried to sell other kids on the meal. They hung up posters in the cafeteria that advertised the nutritional value and cancer-fighting properties of the ingredients, which they learned about that morning.

"Super onions say no to cancer," one read.

See FARM/SCHOOL, page 11

REBATE, from page 8

at least 30 days prior to purchase in order to be eligible for the $500 rebate. The participating dealer will apply the discount towards the vehicle purchase price. The cash allowance will then be paid to the selling dealer by Dodge.

The 2010 models eligible for this membership benefit are: Journey, Grand Caravan, Ram Pickup 1500/2500/3500, Ram 3500/4500/5500 Chassis Cab, Dakota, Durango, Nitro, Charger, Avenger, and Caliber.

Please call the Alaska Farm Bureau Office if you have questions about the Dodge rebate, this change, or if your dealer has questions. The telephone number is (907) 895-4752. The discount applies to purchases made at participating dealers in Alaska as well as those in other states.

QUOTA, from page 8

cent of its 135-member quota; the Copper River Valley Chapter is at 60 percent of its quota of 10 members, and the Kenai Peninsula Chapter has met 50 percent of its 48-member quota.

The membership year ends on October 31 of each year. Chapters that have met quota will be recognized, and the president of that chapter will receive a Farm Bureau memento at the annual meeting each year. The next annual meeting will be held at the Alpine Lodge in Fairbanks on November 13, 2010.

HOT OFF THE PRESS!

A brand new book from Western Horseman and Baxter Black . . .

Baxter has been lucky to bring up the rear in the *Western Horseman Magazine* for over 15 years. Now, there is a brand new hardback collection of Baxter's *Western Horseman* commentaries!

It's packed with brilliant illustrations by wildly creative artists like Kevin Courtz and Herb Mignery! *The Back Page* features Baxter's classic cowboy humor and left-handed perspective on the rural lifestyle, *Equine Ethos, Rodeodio, Cow Brutes and more!*

A grand collection of Baxter's perfectly skewed, and often hilarious ramblings - now available in a heavy duty, fully-loaded, methane enriched hardcover book!

FARM/SCHOOL, from page 9

The students are learning to eat healthier, and the focus on agriculture, local food, and nutrition is paying off in the classroom, said principal Barrett Williams.

Kids are interested, and teachers are given more diversity in the curriculum – they can work the food angle in science, reading, and health classes, he said.

But activities like the farm field trips are what Williams really likes.

Working with local farmers helps build community, he said, although that food may be more expensive than the commodity food that some schools use.

The grant helped to buy at least 200 pounds of ground beef from Back Beyond Farm in Chelsea, which cost about a dollar more per pound than hamburger from an area distributor, Perry said. But Vermont apples are cheaper than apples from other states, she said.

The school has raised money for the program by hosting a winter farmers market.

A BILL

FOR AN ACT ENTITLED

"An Act relating to the terms and conditions of commercial passenger vessel permits for the discharge of graywater, treated sewage, and other wastewater; establishing a science advisory panel on wastewater treatment and effluent quality in the Department of Environmental Conservation; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

LEGISLATIVE INTENT. It is the intent of the legislature that the minimum standards for the terms and conditions of wastewater discharge permits for large commercial passenger vessels meet all applicable state and federal effluent limits or standards, including Alaska Water Quality Standards, governing pollution at the point of discharge if the Department of Environmental Conservation, shall establish and consult in consultation with ~~its~~ a science advisory panel on wastewater treatment, to evaluate ~~determines that compliance with those limits or standards is~~ the most technologically effective and economically feasible treatment options.

*** Sec. 2.** AS 46.03.462(b) is amended to read:

(b) The minimum standard terms and conditions for all discharge permits authorized under this section require that the owner or operator

(1) may not discharge untreated sewage, treated sewage, graywater, or other wastewaters in a manner that violates any applicable effluent limits or standards (technology-based) under state or federal law, including Alaska Water Quality Standards governing pollution at the point of discharge**, except as provided in (e) of this section**;

(2) shall maintain records and provide the reports required under AS 46.03.465(a);

(3) shall collect and test samples as required under AS 46.03.465(b) and (d) and provide the reports with respect those samples required by AS 46.03.475(c);

(4) shall report discharges in accordance with AS 46.03.475(a);

(5) shall allow the department access to the vessel at the time samples are taken under AS 46.03.465 for purposes of taking the samples or for purposes of verifying the integrity of the sampling process; and

(6) shall submit records, notices, and reports to the department in accordance with AS 46.03.475(b), (d), and (e).

*** Sec. 3.** AS 46.03.462 is amended by adding new subsections to read:

(e) When issuing, reissuing, renewing, or modifying a permit required under (a)(1) of this section, the department may include effluent limits or standards (technology-based) less stringent than those required under (b)(1) of this section for no more than two years duration if the department finds that a permittee is using methods of pollution prevention, control and treatment found by the department to be the most technologically effective and economically feasible in controlling all wastes and other substances in the discharge but is unable to achieve compliance with Alaska Water Quality Standards at the point of discharge.

(f) In developing an effluent limit or standard under (e) of this section, the department shall

(1) require use of methods of pollution prevention, control, and treatment found by the department to be the most technologically effective and

economically feasible; and

(2) apply all other applicable provisions of state law and this section.

(g) When reissuing, renewing, or modifying a permit required under this section that was issued after the effective date of this bill section, the department may not include effluent limits or technology-based standards less stringent than the comparable effluent limitations in a previous permit issued under this section.

(h) Nothing in this section shall be construed to limit the authority of the department to

(1) restrict the areas in which discharges permitted under this section may occur; or

(2) impose additional terms and conditions on the manner in which discharges permitted under this section may be made in a specific area.

*** Sec. 4.** AS 46.03 is amended by adding a new section to read:

Sec. 46.03.464. Advisory panel on wastewater treatment; commissioner's reports to the legislature. (a) A science advisory panel is established in the department. The panel consists of 11 members selected by the commissioner. Members of the panel serve without compensation but are entitled to transportation expenses and per diem as authorized for members of boards and commissions under AS 39.20.180. Each of the individuals the commissioner selects will serve for up to a five-year period and have expertise in the design, operation, or function of wastewater management and treatment systems; among the 11 panel members, the commissioner shall select at least one individual from each of the following groups:

(1) coastal community domestic wastewater management;

(2) cruise ship industry;

(3) commercial fishing industry; and

(4) a non-governmental organization with an interest in water quality matters.

(b) The panel shall

(1) meet at the call of the commissioner and give public notice of meetings of the panel as required under AS 44.62.310 and 44.62.312;

(2) hold one or more public conferences or workshops before 2012,

with at least one public conference or workshop to be held between January 1, 2012, and January 1, 2015, if the department issues, renews, or modifies a permit required under AS 46.03.462(a)(1) after January 1, 2012; and

(3) assist and advise the commissioner in conducting the analyses and preparing the reports required in (c) and (d) of this section.

(c) On or before January 1, 2012, the commissioner, in consultation with the panel, shall provide a preliminary report to the legislature that summarizes

(1) methods of pollution prevention, control, and treatment in use and the level of effluent quality achieved by commercial passenger vessels;

(2) additional methods of pollution prevention, control, and treatment that could be employed to provide the most technologically effective and economically feasible measures to control all wastes and other substances in the discharge; and

(3) the environmental benefit and cost of implementing additional methods of pollution prevention, control, and treatment identified in (2) of this subsection.

(d) On or before January 1, 2015, the commissioner, in consultation with the panel, shall provide a final report to the legislature that includes the topics identified in (c)(1) - (3) of this section.

*** Sec. 5.** AS 46.03.465 is amended by adding a new subsection to read:

(h) On request, the owner or operator of a commercial passenger vessel discharging wastewater under AS 46.03.462(b) shall provide the department with information relating to wastewater treatment, pollution avoidance, and pollution reduction measures used on the vessel, including testing and evaluation procedures and economic and technical feasibility analyses.

*** Sec. 6.** AS 46.03.464 is repealed.

*** Sec. 7.** Section 6 of this Act takes effect ~~June~~ Jan 5 1, 2015.

*** Sec. 8.** Sections 1 through 5 of this Act take effect immediately under AS 01.10.070(c).

CS for House Bill No. 134 (RES)

An Act relating to terms and conditions of commercial passenger vessel permits for wastewater discharges

The House Resources Committee Substitute for HB 134 represents a compromise to address the issue of permits for wastewater discharges from large commercial passenger vessels known as cruise ships.

In 2006, Alaska voters approved the cruise ship initiative that amended the law to require vessels to meet water quality standards at the point of discharge. Municipal wastewater systems and discharges from other commercial entities commonly use mixing zones, and smaller-sized vessels in Alaska are exempt.

In 2008, the Department of Environmental Conservation issued a general permit for all large cruise ships that provided a two-year period for vessels to meet standards at the point of discharge. DEC has also conducted a cruise ship technology conference on available treatments for discharges of ammonia and dissolved metals.

All sides on this issue agree that technology is unavailable now for onboard treatment of wastewater that allows vessels to meet all water quality standards at the point of discharge.

This bill addresses how the agency will permit wastewater discharges from vessels to allow for the time it takes to get the technology developed and installed onboard. It is important to keep in mind that cruise ships discharge cleaner wastewater than most municipalities, commercial entities, and all other Alaska vessels.

The House Resources Committee version of HB 134 establishes a reasonable compromise that will both protect Alaska waters and allow coastal communities the opportunity for cruise ships to stay in port longer.

ALASKA CRUISE ASSOCIATION

April 10, 2009

Senator Lesil McGuire
Co-Chair, Senate Resources Committee
State Capitol, Room 9
Juneau, AK, 99801

Dear Senator McGuire:

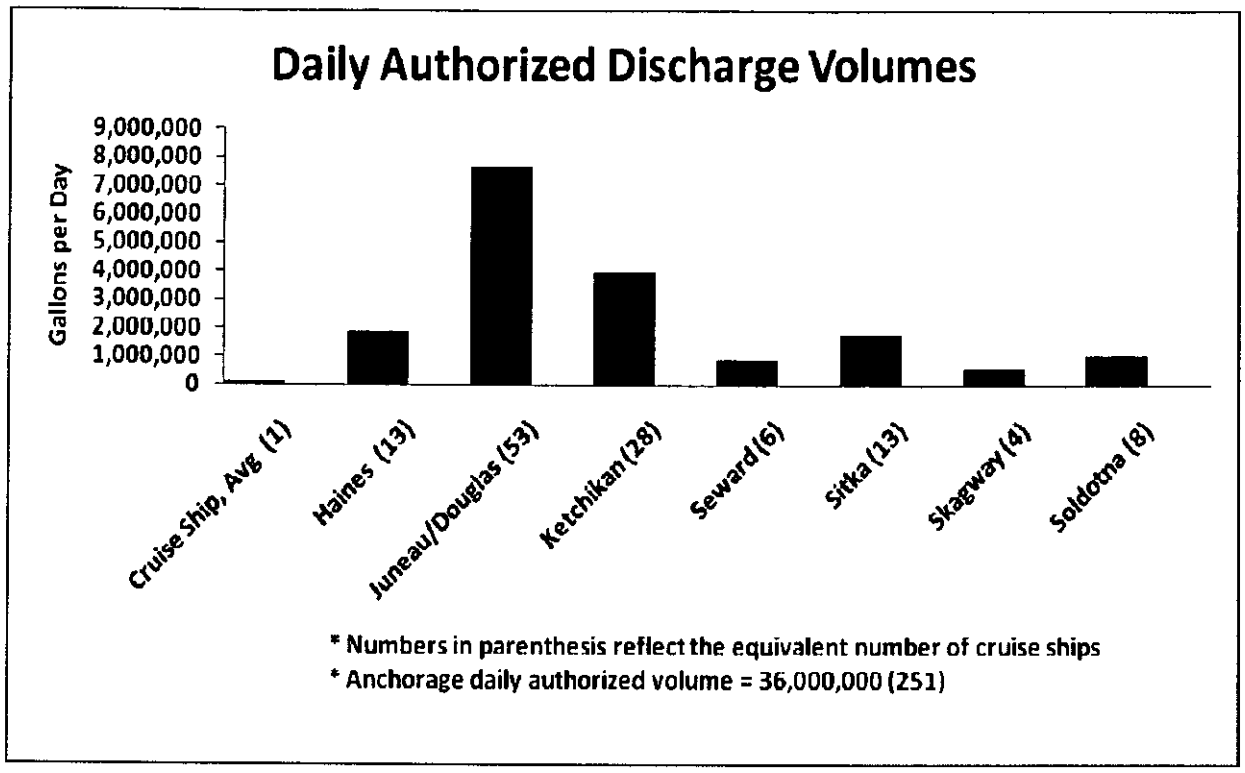
I am writing to address a number of the questions raised at Monday's Senate Resources Committee as well as correct the record regarding several incorrect statements made on HB 134.

You heard testimony that cruise ships travel in a parade and, "discharge millions of gallons each night in long hour and two hour long spurts." While this statement might work to incite extreme environmentalists, the facts show otherwise.

The amount of effluent produced by the ships' advanced wastewater systems is very small compared to municipal dischargers. Cruise ship discharges are mostly continuous; both while at dock and underway. This is primarily due to the belief that the quality of the effluent being the highest when it immediately comes out of the treatment system, thus precluding the possibility of bacterial re-growth when it is held in tanks. Tank capacities vary greatly by ship but according to responses to EPA's 2004 survey, graywater holding capacity ranges from 5 to 90 hours with an average holding capacity of 56 hours (http://www.epa.gov/owow/oceans/cruise_ships/pdf/section3_graywater.pdf). It should be noted that reaching capacity and holding also raises special considerations such as ballast and the safety and efficiency of the vessel.

All ships discharge different total volumes of effluent per 24 hours and at different rates of flow. The most definitive independent data is from the EPA. In 2004, EPA staff conducted an extensive study onboard ships in Alaska, using monitoring equipment to measure discharge volumes. The report can be found at http://www.epa.gov/owow/oceans/cruise_ships/results.html and reflects an average volume of 143,600 gallon per day. The chart below compares this average volume of ships to land based systems. You will see that it would take 53 ships in Juneau one time to equal the daily volumes that the municipal systems are permitted.

360 K Street, Suite 300 · Anchorage, Alaska · 99501 · (907) 743-4529 · (907) 743-4553 fax

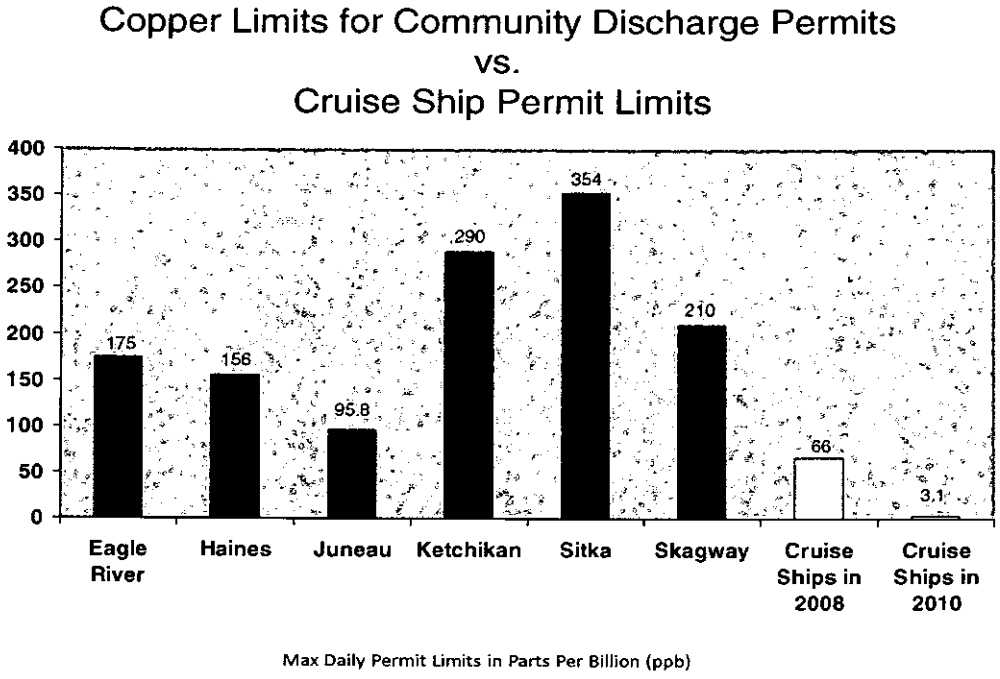


The quality of the effluent produced today by the ships' advanced wastewater system is very clean. Cruise ships have the most advanced and efficient wastewater treatment systems permitted in our state. For metals the quality of the effluent is based on many variables. One such variable is municipal drinking water that we purchase from Alaska communities. DEC's technology contractor, OASIS found that, "one main source appears to be water taken on board from municipalities and bunkered for use." A study of municipal water at selected ports showed Juneau with a maximum content of 280 parts per billion copper (average of sampling was 54). Skagway samples showed a maximum of 470 parts per billion of nickel (average of sampling was 28).

Port	Contaminant	Average	Maximum	Exceedance Rate
		Ppb	ppb	(% of samples)
Vancouver	Copper	20	120	77
Juneau	Copper	54	280	83
Seattle	Zinc	499	1500	63
Skagway	Nickel	28	470	29

If you look at the "at the point of discharge" standard required under the 2010 permit, you will find that discharges are only authorized to a maximum of 3.1 parts per billion copper and 8.2 parts per billion nickel. These levels are not only significantly lower than samples of municipal drinking water that is brought aboard the ships, they are significantly lower than authorized discharges from municipal wastewater systems. For example, Juneau is permitted to discharge

95.8 parts per billion copper, Eagle River is authorized 175 parts per billion copper and Ketchikan is permitted 290 parts per billion copper. Not one permitted facility in the State can meet the 2010 limits, nor are they being required to do so.



Chip Thoma, of Responsible Cruising in Alaska, stated to the committee that the 2002 Science Advisory Panel Report[1] was only "engineering" and "none of it was scientific." The record shows otherwise. The panel reviewed and developed conclusions of bioassays conducted in July 2002. The tests included sample effluent from five different ships and addressed the effect that simultaneous exposure has on an organism. In this test, organisms selected were representative of marine species most likely to be sensitive to the effluent. The results showed, "The various effluents tested and analyzed would be expected to impart no acute or chronic toxic effects to marine organisms at the high dilutions that occur when vessels are underway." Additional

information can be found at:
http://www.dec.state.ak.us/water/cruise_ships/pdfs/sap_wettest_final.pdf. It is also important to note that this study was conducted prior to the installation of the current advanced treatment systems, which produce a much cleaner level of effluent.

A number of studies have been conducted to determine the effects of dilution. In 2002, the science advisory panel found that a large cruise ship discharging at a rate of 200 cubic meters per hour (typical for continuous discharge) and traveling at the minimum allowed speed of 6 knots, will have mixing greater than 50,000 to 1. In 2002 the EPA conducted a plume tracking study and found that ships traveling between 9.1 and 17 knots have a dilution factor of "200,000 to 640,000 to 1 immediately behind the boat." Based upon this information, the DEC has testified that treated effluent from large cruise ships' advanced wastewater treatment systems would meet Alaska's tough standards "almost instantaneously" when under motion.

Study	Conditions	Dilution
EPA Skagway Study, 2008	Stationary, slack tide conditions	65:1
DEC Science Panel, 2002	Minimum speed 6 knots	50,000:1
EPA Plume Study, 2001	Speeds between 9.1 and 17.4 knots	200,000:1 to 640,000:1

Sources: http://www.epa.gov/owow/oceans/cruise_ships/plume_dilution_sampling_report.pdf, http://www.epa.gov/owow/oceans/cruise_ships/plumerpt2002/plumereport.pdf, http://www.dec.state.ak.us/water/cruise_ships/pdfs/impactofcruiseship.pdf.

As I mentioned in my testimony, the industry would prefer the original version of HB 134 and its straightforward approach to leveling the playing field for all industries. However, the current version is reasonable. Specifically, we support the creation of a new science panel, the continued review of new technology and the anti-backsliding provisions. The current version will establish a process for DEC and industry to work cooperatively toward improving technology. The bill will also give DEC the authority to establish permit conditions such as excluding ports, sensitive marine areas, or minimum speeds for discharges.

I believe adding a sunset provision would be the wrong approach and have the opposite effect of what this bill is trying to accomplish. Individual cruise companies utilize different technology in their advanced wastewater treatment system. It is fair to say that even with the different systems, all the environmental departments believe they can make improvements. However, no one can predict when technology will be available to integrate into existing systems and prove to be effective 100% of the time in a marine environment. We have manufacturers of the systems now performing research and development with the cruise lines to improve their systems. We are told that there are no guarantees that a redesigned system will get all the way to the "end of pipe standard."

If a sunset is added to the bill and the authorization for DEC to permit a ship using the best available technology goes away, I am concerned that companies will not have any incentive to make major investments in advancing technology. Instead, we may see investment in alternatives such as increasing holding capacities and altering itineraries.

I thank you for your interest in understanding the science and technology of wastewater discharges. I would request that the bill move from the Senate Resources Committee unamended.

Sincerely,

John Binkley
President
Alaska Cruise Association

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

March 19, 2009

The Honorable John Harris
Alaska State Legislature
State Capitol, Room 403
Juneau, AK 99801

Dear Representative Harris:

Thank you for your letter requesting my help clarifying expectations for the Department of Environmental Conservation (DEC) should your legislation, known as HB 134, pass the Legislature and become law. I share your confidence in DEC's abilities and efforts, and agree that DEC officials are working hard to implement the best treatment technology as quickly as possible.

I would like to assure you, and anyone else interested in this issue, that in the event that this legislation passes, DEC will retain the ability to preserve and protect water quality through their existing permitting authority. While discharge permits could be modified to include mixing zones where appropriate, cruise ships would still have to obtain and comply with permits that will fully protect aquatic life and other uses of Alaska's waters. Permits could include a variety of conditions to ensure water quality is protected.

DEC would retain the authority to prevent backsliding by assuring that any standards currently achieved must continue to be met and would have the ability to mandate that the best and most feasible treatment technology be used. As you may know, DEC is aware of no technologies currently available for widespread shipboard use that would allow standards to be met. From DEC's technology conference held last month, it appears there are new waste reduction and treatment options that could become commercially available in the future. We want to encourage improvement, and continue to explore these options.

I appreciate your interest and efforts in this issue and hope this information is helpful as you continue hearings on this legislation.

Sincerely,

Sarah Palin
Governor

REPRESENTATIVE JOHN HARRIS

March 11, 2009

Governor Sarah Palin
Office of the Governor
Juneau, Alaska

Subject: Large Commercial Passenger Vessel Wastewater Discharge Permits

Dear Governor Palin:

This is to call your attention to legislation relating to wastewater discharge permits for large passenger vessels operating in state waters. Policy direction from your office would be helpful to the legislature, coastal communities, vessel owners, and many interested individuals toward resolving this issue.

House Bill 134 would provide the Department of Environmental Conservation with the same authority to regulate wastewater discharges of large vessels that it has with other entities. Current law – which was established by voter initiative in 2006 – requires testing of vessel wastewater specifically at the point of discharge.

Testing at the point of discharge imposes a different methodology than that which exists for any other industry or municipality in Alaska. For example, mining operations, seafood processing, and coastal communities have their discharges tested at a reasonable distance away from the discharge point. Be that as it may, clean water itself should be our standard, and if someone is polluting our waters, then DEC must step in and stop them.

In spite of the initiative's language, DEC issued a general permit for all large commercial passenger vessels on March 25, 2008 that provides interim effluent limits and recognizes that vessels need time to make changes to their operations or equipment. The compliance schedule provides a deadline of 2010 to fully meet new standards for ammonia, copper, nickel, and zinc.

I believe this first discharge permit was a good first step. It complies with the citizens' initiative, and it establishes a reasonable approach toward developing vessel treatment systems that will keep our marine water clean.

Two bills have already been signed into law that have amended the citizens' initiative. One, by former Sen. Kim Elton, removed state ferries and other vessels of similar size from the initiative's requirements. Another, by Rep. Lindsey Holmes, removed certain passenger disclosure provisions. HB 134 – if enacted – would not be the first change to the initiative.

As the prime sponsor of HB 134, I have confidence that DEC is fully qualified to evaluate the best available methods and technologies and apply them to the operational permits that cruise ships must obtain. A technology session recently held by DEC revealed several approaches that could result in protecting Alaska waters; however, it found that not all systems could work on all vessels, not all vessels could discharge to shore, and all this is a developing field needing further evaluation by DEC. The bottom line is that your administration is working right now toward bringing the best treatment systems possible on board vessels as quickly as possible.

By having confidence in DEC's ability and efforts, I sponsored HB 134. Giving the agency broad authority does nothing to diminish water quality standards. Its officials are working hard to implement the best treatment technology as quickly as possible, and they will hold vessels to high water quality standards.

Unless a bill is enacted this session that amends the testing requirement "at the point of discharge," both large commercial passenger vessels and DEC will face a difficult decision. Either the agency will have to continue to issue permits that don't meet the requirements of the citizens' initiative or large commercial passenger vessels will have to abide by standards for which technology is not now available.

HB 134 returns that authority to the agency. Your support for the legislation will convey your confidence that the agency will do the job that we expect it to do.

Thank you for your time and consideration of this important issue.

Sincerely,

Representative John Harris

4/5/09

Madame Chairman and Members of the Senate Resources Committee,

Thank you for this opportunity to testify today on HB134. My name is Gershon Cohen Ph.D., I am a 25-year resident of Haines, Alaska. I am one of the co-sponsors and drafters of the Alaska Cruise Ship Ballot Initiative (CSBI) that became law by a majority vote of Alaskans in 2006.

I urge you to adopt several key amendments to the current bill so that it may be supportable by all sides of this debate:

First and foremost, there must be a reasonable sunset date for closure of the WQS waiver program included in the bill or it will fail two fundamental tests: (1) adequate protection of our State marine resources, and (2) respecting the intent of Alaskans who voted in a clear majority in 2006 to pass the cruise ship ballot measure. CSBI sponsors have never challenged DEC decision to give the industry a reasonable timeframe for compliance provided the ships make an honest effort to comply with the law. But without a meaningful deadline, any incentive to improve their performance will simply disappear.

Second, the intent language in Section 1 implies, if not provides, an inappropriate level of power to an appointed body over the actions of DEC. The role of the Science Panel is to assist DEC in its examination of wastewater treatment technologies. No decision by the department should be in any way dependent on this consultation. It must be clear DEC is free to accept or reject the panel's findings without prejudice and make its own decisions. The simple way to achieve this is to end the sentence in Section 1, line 11 with a period after the word "discharge." The following sentence can read, "The Department of Environmental Conservation shall establish a science advisory panel to assist the Department in its evaluation of technologically effective and economically feasible wastewater treatment options."

Third, DEC stated in its Feb. 16, 2009 *Draft Feasibility Study: Reducing Concentrations of Dissolved Metals and Ammonia in Large Passenger Vessels Wastewater Discharges* that technologies exist capable of achieving all State WQS at the point of discharge. DEC staff further stated in their report of March 2, 2009 *Water Division Staff's Status Report* that only 4% of the samples taken in 2008 violated interim permit limits and ~1/3 of the time cruise ships were already meeting the long term limits without a mixing zone. Obviously, full compliance is not only possible it is already being achieved by some members of the fleet. We therefore recommend the timing for the workshops and reports from the Science Panel described in Section 4 be accelerated by one year. Under the current proposed schedule, most if not all ships will be capable of complying with the law before the Science Panel holds a public workshop, which would defeat its purpose of helping to inform the debate over which technologies are the most effective and feasible.

If the committee is willing and able to amend HB134 to the effect described above, the sponsors of the Alaska Cruise Ship Ballot Initiative will stand in support of this legislation.

Sincerely,

Gershon Cohen Ph.D., Project Director, CSAW
Co-sponsor CSBI

Opinion

Vote yes, then fix it This may be the only way to get cruise industry to pay something

There is something for everyone in Ballot Measure 2, the citizens initiative on Tuesday's primary election ballot to impose new taxes and fees, stricter environmental rules and consumer disclosure requirements on the cruise ship industry. And there are problems with almost every one of the provisions.

But the indigestion is worth it. That's why we recommend a yes vote. Then get ready for litigation and legislative battles to fix the problems and, we hope, after a couple of years, Alaska will be left with a workable, fair set of laws.

Our fear is that unless Alaska stands up and forces the issue this election, the cruise industry will not willingly pay toward all the services it and its almost 1 million passengers a year enjoy while in our state. Though they are very good at donating millions of dollars to charities and other nonprofits, the cruise lines have been equally strong in battling against state and local taxes and fees.

For example, the industry mischaracterized a 2005 economics study, claiming in its campaign material: "The cruise industry pays over $42 million annually in taxes to local governments in Alaska." Not quite. Passengers and crew paid an estimated $17.4 million in local sales taxes. Passengers paid an estimated $6.4 million in local hotel taxes. Cruise lines paid $14.6 million in fees to tie up at local ports, essentially reimbursement for costs. That leaves just $4.5 million the cruise companies actually paid from their own corporate pockets in local property taxes and sales taxes.

That doesn't cut it. Not for an industry that profits from carrying a million passengers to Alaska each year. Without Alaska and all that it offers, there would be no cruises.
The $4.5 million is less than the state collects in rental car taxes, a significantly smaller industry.

The ballot measure would amend state law to require that cruise lines pay corporate income taxes on their shipboard profits, just like any other business making money in Alaska. The cruise industry would have been subject to income taxes under a 1998 Alaska Supreme Court ruling, but it successfully lobbied the Legislature and governor's office to adopt a law retroactively exempting it from the tax.

Also, the initiative's $4 fee per passenger to pay for onboard state observers to monitor pollution is a good dose of preventive medicine.

Were those the only issues in the ballot measure, this would be an easy yes vote.

The $46 fee per passenger for the right to come into Alaska might not survive a legal challenge, though a reasonable "head tax" to cover state and city waterfront- and passenger-related expenses is appropriate and legally defensible. And the initiative's provision allowing Juneau and Ketchikan to maintain their own passenger fees on top of the state's fee defeats the idea of a single set of laws.

The provision requiring cruise lines to disclose in big type the commission they earn for selling bus tours, flightseeing tours and such seems like piling on in a measure already heavily weighted with revenge against the companies.

And the 33 percent tax on cruise ship gambling revenues is excessive. Whatever the social ills of gambling aboard the ships, those costs don't fall on Alaska.

One other reason to dislike the initiative is that it taxes only Outsiders, reinforcing the embarrassing attitude of many Alaskans that everyone should pay taxes but us. The solution to that dilemma is not to defeat this initiative but rather to convince Alaskans that they too should pay something toward the public services they enjoy.

The state constitution prohibits legislators from quickly repealing the initiative if it passes, but it allows them to amend the provisions. Between legislative amendments and some wise court decisions, we hope Alaska and the cruise lines can end up with a reasonable set of laws before too much damage is done to one of our few growing industries.

It's an awful lot in one ballot measure. Maybe too much, and maybe it will cause the industry to threaten cutting back its ships' time in Alaska. It has done just that when cities have imposed or even talked about adopting passenger fees. We believe that's the risk of showing the industry that Alaskans are tired of being taken for granted.

BOTTOM LINE: Ballet Measure 2 looks like the only way to get the cruise industry's attention.

Our view: Cruise law amendment

Cut ships a qualified break

(02/16/09 18:49:38)

The cruise industry finally found its champion to knock five words out of the 2006 cruise ship initiative. Former House Speak John Harris, R-Valdez, is sponsoring legislation to amend the initiative-passed law by deleting this phrase: "At the point of discharge."

What difference does it make

The amendment would allow the Alaska Department of Environmental Conservation to issue permits to cruise ships for wastewater discharge that in effect allows a mixing zone, whereby pollution is measured after it hits the water and is diluted. That's a standard allowed for shore-based sewage treatment throughout the state.

As it stands now, cruise ships have to meet discharge rules stricter than any other operation in Alaska. They can meet them in most categories, except for copper and ammonia. Even in those cases, their effluent is cleaner than what DEC allows sewage treatment plants.

The initiative is clear -- no mixing zones. So the cruise industry wants DEC to have the authority to cut them some slack.

That's fair -- to a point.

Already, to the chagrin of cruise initiative backers like Gershon Cohen, DEC has granted the industry until 2010 to meet the strict pollution standards. Industry spokesmen like John Binkley of the Alaska Cruise Association argue that even that extension isn't enough, and that furthermore, no science shows that the ships' effluent is harming marine life. Cohen argues that no science shows it isn't.

Binkley counters Cohen's assertion that the industry hadn't really tried to meet the copper and ammonia standards, saying the industry is working on it.

Cohen and his allies make no bones about the fact that they are pushing the industry to the leading edge of pollution control, forcing cruise ships to accelerate development and installation of technologies that shore-based, tax-supported facilities can't afford. Why Because, they say, the industry can afford it. And their goal harks back to the original intent of the federal Clean Water Act, which was to eventually measure all pollution control at the point of discharge.

It's a good push to make, but you have to know when to ease off.

So we yes to the Harris amendment, but with this addition -- require both the cruise industry and DEC to report on the latest practical technologies for the cleanest effluent, and give DEC the authority to require those, at least as pilot programs, within a reasonable time frame.

We're confident Cohen and his allies will help keep DEC and the industry up to date on what's

available.

The initiative will keep its teeth, but delay its bite. And the cruise industry can prove that it's making a genuine effort to meet stricter standards.

The idea here is simple. Don't let the perfect be the enemy of the good; cruise pollution controls are vastly improved over 10 to 15 years ago. What they discharge is much cleaner than what Alaska cities pour into Alaska waters every day. Give the cruise lines some leeway.

But not too much; cruise lines cleaned up their acts because people and prosecutors demanded they do. Pressure helps.

If the perfect can be done, let's do it. Meet point-of-discharge rules and all the mixing zone math becomes moot. And Alaska's waters benefit.

BOTTOM LINE: Give cruise lines a little latitude on initiative's pollution standards -- but not too much.

Do not call

Legislature should add cell phones to phone soliciting law

A small but worthwhile bill before the Legislature would make it a violation of state law to make unwanted solicitations to cell phones.

You can already register cell phones as well as land lines on the national "do not call" list, at www.donotcall.gov. That makes unwanted phone solicitation a federal violation.

House Speaker Mike Chenault of Nikiski and several others from both major political parties are sponsoring a bill to make such calls to cell phones against state law as well.

The bill makes it clear that Alaskans can rely on state statute for protection from telemarketers, as well as the federal government.

BOTTOM LINE: It's good that the state is updating its phone solicitation law to cover cell phones.

Anchorage Daily News Editorial 3/25/09

KEEP WATCH: Cruise lines need deadlines

Lawmakers and state officials were still working Tuesday on a bill to give cruise lines more time to meet strict pollution standards in Alaska waters.

More time for cruisers to comply is fair. More devilish are the details of just how long to let the clock run and how to measure progress. First priority: Keep the pressure on.

Backers of the Cruise Ship Ballot Initiative of 2006 have suggested one-year waivers on some discharges for up to three years, provided the cruise lines make progress toward meeting the standards required by the initiative.

Another suggestion has been to let the waiver period run up to five years.

We're not going to quibble about three years or five -- provided the cruise lines have to show progress each year on meeting the stricter standards. In other words, give waivers a year at a time and only when both good-faith effort and the need for more time to comply are clear.

Don't allow a blank check for five years. Or even three. Why allow the time at all? Hard-nosed backers of the initiative argue that cruise companies have spent more energy lobbying for changes than trying to comply since 2006.

Maybe so, but the fact is that cruise ships are spewing far less pollution than they were 10 years ago. They already discharge cleaner water than shore-side sewage treatment plants do. Even with more time, their discharges are less harmful to the marine environment. And cruise ships have the option of detouring to discharge in federal waters, where standards are less strict.

It's better for all hands, and for marine life, if Alaska can drive the stricter standards to become the norm. That keeps our waters clean and raises the bar beyond our borders.If a few more years will get us there, such cleaner cruising is worth the wait.

But keep the waivers conditional, and the heat on.

BOTTOM LINE: Cruise ship bill should allow more time, but no free time.

Department of Environmental Conservation
Testimony before the Senate Resources Committee
on CS HB 134(RES) Bill Version 26-LS0570\W
April 6, 2009

Introduction

DEC appreciates Representative Harris and the Co-chairs of the Senate Resources Committee giving DEC the opportunity to provide input on CS HB 134 (RES). Over the past few weeks DEC has worked with Representative Harris and the Co-chairs of the House Resources Committee on the bill.

This is an important bill. As it is currently written, A.S. 46.03.462 requires large commercial passenger vessels to treat their waste water to meet all state water quality standards at the point of discharge. As worthy of a goal as this is, cruise ships are not able to meet this high standard despite using the best technology available to them. They either have to hold their treated waste and discharge it outside of state waters, or discharge it in violation of the standard.

DEC believes CS HB 134 (RES) strikes an appropriate and environmentally-protective balance, giving cruise ships limited relief from a standard they cannot currently meet, while pressing forward in a logical and effective manner towards finding technologies that can achieve water quality standards at the point of discharge.

At the point of Discharge Requirement

CS HB134 (RES) retains the requirement adopted by a citizen's initiative for waste water discharges from large cruise ships to meet Alaska water quality standards "at the point of discharge," but allows DEC to grant exceptions under section 3 (e) where cruise ships, despite employing the **most technologically effective and economically feasible** pollution prevention, control and treatment measures, cannot currently meet this standard.

The discharges would still have to meet all other DEC regulatory requirements. The environment will still be protected while industry works to meet the "at the point of discharge" standard for all pollutants.

Technology Forcing Requirements

The bill includes significant technology forcing requirements that are designed to ensure cruise ships make continuous progress towards meeting the Alaska water quality standards at the point of discharge.

1. When issuing or re-issuing permits the department would need to determine that a permittee is using the most effective methods of pollution prevention, control and treatment that are technologically and economically feasible, but the permittee is still unable to meet the water quality standards at the point of discharge; and

2. DEC would:

- Convene a science advisory panel of select experts to advise the Department on methods to reduce sources of contaminants and on current and emerging treatment technologies for the onboard or onshore treatment of wastewater form cruise ships.
  (The advisory panel includes 11 members, with at least one member appointed from the following groups:

  - Coastal community domestic wastewater management;
  - Cruise ship industry;
  - Commercial fishing industry; and
  - A non-governmental organization with an interest in water quality matters.

- In conjunction with the advisory panel, DEC will:

  - Hold one or more technology conferences to look at progress in treatment technologies, again, including both on-board and on-shore options. (Currently, DEC is requiring cruise ships to provide periodic "Source Reduction Evaluation" reports describing their efforts to reduce pollution in their treated waste water. Section 5 of CS HB 134 (RES) includes authority for DEC to require cruise ships to also provide their technical and economic feasibility analyses of different waste prevention, control and treatment options);
  - Evaluate the quality of waste water effluent the cruise ships have been able to achieve;
  - Estimate timeframes for implementation of new technologies based on the technical requirements and economic factors;
  - Evaluate potential economic impacts to transitioning to new technologies; and
  - Evaluate the environmental improvements and costs anticipated from the new technologies.

DEC will provide an interim report to the legislature in January 2012 and a final report in January of 2014 which provides an opportunity for the legislature to evaluate the progress and determine if any additional changes should be made to the statutes prior to the 2014 cruise ship season.

Anti-backsliding

The cruise ship industry in Alaska has been able to achieve a relatively high quality effluent already. They are meeting state water quality standards "at the point of discharge" for many pollutants. The pollutants that have been more difficult to reduce or remove are ammonia, copper, and to a lesser degree nickel and zinc. Even here, some vessels have come close to meeting the "at the point of discharge" requirement.

The anti-backsliding provision in the bill at section 3 (g) (page 3, line 3) prohibits DEC from relaxing an effluent limit established in a previous permit, ensuring that any gains made in improving wastewater quality will be maintained.

DEC anticipates, if HB 134 passes, it will be issuing a modified general permit for cruise ship wastewater that reflects the changes called for under the bill. Once that permit is modified, the "anti-backsliding" requirement in section 3 (g) of the bill would assure that any ground already gained in reducing pollutants in wastewater discharges from cruise ships would not be lost.

Under the permitting structure established in HB 134, the Department will impose the stricter effluent limits as technology becomes available. For example, if the cruise ships can achieve the water quality standards for ammonia before technology is available for the metals, the stricter standard for ammonia will be imposed via permit. The stricter standards for metals will be imposed when the technology becomes available. The Science Advisory Panel and technology conferences will assist the Department in forcing technology development and in determining when technologies are available.

Future Action

At the start of the 2014 Legislative Session, the Legislature will have DEC's final report regarding on-board and on-shore treatment technologies applicable to treating wastewater from cruise ships. It will also know the track record on what the cruise ship industry has been able to achieve to date and the time and estimated economic impacts of implementing any additional new treatment technologies.

The Legislature can modify AS 46.03.462 to impose any appropriate requirements as to those pollutants that may still not be treated to the "at the point of discharge" standard, or if the Legislature believes DEC's existing

requirements are sufficient, it could leave the existing requirements in place. Under section 6 of the amended bill, the Science Advisory Panel would sunset.

It is important to understand that under this amended bill, cruise ships would continue to be subject to the anti-backsliding requirement. They would also be required, at a minimum to use "the methods of pollution prevention, control, and treatment found by the DEC to be the most effective and reasonable." Finally, they would still have to meet all of the other permitting requirements of DEC.

Fiscal Impact

DEC anticipates it would not need an increment or new positions in FY 2010. An increment might be needed for work in later years, but DEC would try to fund all work out of cruise ship registration fees. This was the funding source for past studies and ongoing permitting costs.

Conclusion

Again, DEC appreciates the opportunity to provide input on the amendment.

ANALYSIS: *(Attach a separate page if necessary)*

This bill establishes a 25,291-acre State Forest in Southern Southeast Alaska by redesignating certain state-owned parcels. A timber management plan would be developed to actively manage the parcels for higher timber volumes per acre, shorter rotations and less impact on wildlife. This would involve thinning young second-growth stands; a long-term investment not justified for undesignated lands.

Implementation of this bill will not require new positions or funding. The bill will have no short-term impact to the revenue stream, but will provide for long-term increases in forest productivity and subsequent increased timber revenues.

Southeast State Forest

DEPARTMENT OF NATURAL RESOURCES -- DIVISION OF FORESTRY

Alaska Department of NATURAL RESOURCES

January 24, 2010

Background. The state Department of Natural Resources manages over 156,000 acres of forest land in Southern Southeast (SSE) Alaska. Of this land, timber management is allowed on approximately 49,000 acres. The state actively manages this timber base to supply wood to local processors. Remaining land is designated primarily for other uses including land sales, recreation, water resources, and fish and wildlife habitat, including over 25,000 acres of legislatively designated state parks, refuges, and public use areas.

In SSE, demand for state timber exceeds supply. The majority of timber in SSE is on federal land, but federal timber sales have declined drastically. Local mills now depend heavily on state timber for survival. The state is committed to finding long-term solutions by:

- maximizing the sustainable supply of timber from the small state timber base.
- working with the US Forest Service to increase economically feasible federal timber sales, and
- accelerating the transition from old-growth harvesting to harvesting second-growth.

There is broad support for shifting timber harvesting in SE Alaska from old growth to second-growth stands. Actively-managed second-growth stands provide more timber volume per acre on shorter rotations, and have less impact on wildlife. Much of the state timber land was inherited from the USFS with young second-growth stands. We can accelerate the shift to second-growth harvesting and increase timber volume on state land by thinning these stands. However, thinning is a long-term investment, and is only justified if the land will continue to be available for forest management. Legislatively designating a State Forest would ensure that some land will remain available for long-term forest management.

Purpose. This bill would establish a new Southeast State Forest from state lands presently used for timber harvest. The Division of Forestry will be able to manage the State Forest for a long-term supply of timber to local processors, and retain the land in state ownership for multiple uses.

Proposed State Forest land. The proposed Southeast State Forest includes 20 parcels totaling approximately 25,291 acres (see chart). Parcels are General Use lands on Prince of Wales, Tuxekan, Kosciusko, Heceta, Revilla, and Gravina islands, and on the mainland at Crittenden Creek. The Division of Forestry worked with the Division of Mining, Land, and Water Management to identify and exclude lands that are priorities for the state land disposal program.

State Forest Management. The Southeast State Forest would be managed as part of the State Forest System under AS 41.17.200-.230. Lands in the State Forest would continue to be open for multiple uses, including wildlife habitat and harvest and recreational activities. State Forest lands would be managed consistent with the management intent under the current Prince of Wales Island and Central Southeast area plans. Changes to management intent would require public and interagency review through adoption of a State Forest Management Plan under AS 41.17.230.

Municipal Entitlements. The City and Borough of Wrangell boundary encompasses three parcels in the proposed state forest (Crittenden Creek and Bradfield Canal East and West). A State Forest designation will not affect the amount or location of land the Wrangell Borough can select. That determination is based on the maximum total acreage of vacant, unappropriated, unreserved land in the borough boundaries within two years after the date of incorporation (AS 29.65.030). However, a borough would not normally be able to select land within a State Forest. To avoid conflicts with the Wrangell entitlement, the Southeast State Forest bill specifies that the Wrangell Borough may select State Forest land within the borough boundary.

If new municipalities are incorporated before June 30, 2019, lands that were vacant, unappropriated, unreserved land before establishment of the State Forest will be included in the calculation of the municipal entitlement acreage, but may not be selected.

RE: HB 162-An Act to Establish the Southeast Alaska State Forest

Dear Senators McGuire and Wielechowski:

The Resource Development Council (RDC) is writing to support HB 162, the establishment of the Southeast Alaska State Forest.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

The bill would establish a new state forest in Southeast Alaska from state lands presently used for timber harvest. The Division of Forestry would be able to manage the state forest for a long-term supply of timber to local processors, and retain the land in state ownership for multiple use. The forest would be managed as part of the State Forest System and under the current Prince of Wales Island and Central Southeast area plans.

In Southeast Alaska, demand for state timber exceeds supply and local mills are dependent on a consistent supply to stay in business. The majority of the timber in Southeast Alaska is on federal land, but federal timber sales have declined sharply. Subsequently, the demand for state timber from local mills has increased significantly.

Much of the proposed forest was inherited from the U.S. Forest Service with young second-growth stands. There is broad support for shifting timber harvesting in Southeast Alaska from old growth to second growth stands. Establishment of the Southeast Alaska State Forest will help provide a sustainable timber supply to local mills and accelerate the harvest of second-growth timber. Actively managed second-growth stands will provide more timber volume per acre on shorter rotations.

The shift to second-growth harvesting can be accelerated and timber volume increased on state land by thinning these stands. However, thinning is a long-term investment and is only justified if the land will continue to be available for forest management. A legislatively designated State Forest would ensure that land would remain available for long-term forest management.

RDC encourages your committee to support HB 162. Thank you for the opportunity to provide comments on this important legislation.

Sincerely,

RESOURCE DEVELOPMENT COUNCIL
For Alaska, Inc.

Alaska Society of American Foresters

February 18, 2010

Chris Maisch, State Forester
Alaska Division of Forestry
3700 Airport Way
Fairbanks, AK 99709

Dear Mr. Maisch,

The Alaska Society of American Foresters strongly supports the adoption of House Bill 162: "An Act establishing the Southeast State Forest and relating to the Southeast State Forest; and providing for an effective date" and the corresponding Senate Bill 127.

The Alaska Society is a state chapter of the national Society of American Foresters (SAF), the national scientific and educational organization representing the forestry profession in the United States. The Alaska SAF's support of House Bill 162 parallels the SAF Core Values:

- Forests are a fundamental source of global health and human welfare,
- Forests must be sustained through simultaneously meeting environmental, economic, and community aspirations and needs,
- Foresters are dedicated to sound forest management and conservation, and
- Foresters serve landowners and society by providing sound knowledge and professional management skills

The Alaska SAF supports the establishment of the southeast state forest as it promotes continued timber and resource management in Southeast Alaska. In doing so, state forests support timber production, wood energy, recreation, habitat and jobs. Formal designation as a state forest provides the incentive for the Alaska Division of Forestry to invest in management of these lands for their multiple benefits to the community and natural resources of the region.

Furthermore, the Alaska SAF concurs with the Juneau Chapter of SAF in its Resolution attached.

Sincerely,

Sue Rodman, Chair
Alaska Society of American Foresters

Enclosure

Resolution

Whereas the majority of timber in SE Alaska is on federally owned National Forest land, harvest of which has drastically declined and local mills are heavily dependent on sale of state timber, and;

Whereas the state is committed to maximizing the sustainable supply of timber from the small state timber land base, and;

Whereas, there is broad support for shifting timber harvesting in SE Alaska from old growth to young growth stands, which yield higher volumes per acre on shorter rotations, and have less impact on wildlife, and;

Whereas, much of the state timber land was conveyed from the federal government with young growth stands, the shift from old growth to young growth harvest can be accelerated by thinning these stands, and;

Whereas, thinning and subsequent young growth management constitutes long-term investment, it is only justified if the land will continue to be available for forest management, and;

Whereas land designated as State Forest would ensure that some land will remain available for long-term management for multiple uses including the supply of timber to local processors, and;

Whereas, the State owns 20 parcels of land comprising approximately 25,291 acres suitable for designation and subsequent management as a State Forest, now therefore;

Be it resolved that the Juneau Chapter Alaska Society of American Foresters (SAF) generally endorses establishment of a Southeast Alaska State Forest as currently proposed in House Bill #162 "An Act establishing the Southeast State Forest and relating to the Southeast State Forest; and providing for an effective date" and Senate Bill #127.

And be it finally resolved that the Juneau Chapter of the Alaska Society of American Foresters transmit this resolution to the Governor of Alaska, House and Senate Resource Committee Chair, Alaska State Legislature, the Alaska Congressional Delegation, the U.S. Forest Service Chief, U.S. Forest Service Alaska Regional Forester.

Adopted by unanimous vote of the Juneau Chapter, Alaska Society of American Foresters, January 20, 2010.

Shalon Szymanski

From: jack slaght [jackslaght@gmail.com]
Sent: Monday, March 29, 2010 1:52 PM
To: Shalon Szymanski
Subject: H.B. 162

To: Senate Resources Chair, Lesil McGuire, and Members of the Senate Resources Committee.....here are my thoughts and testimony concerning House Bill 162:

It is my belief that Southeast Alaska needs to strive for rebuilding a diversified economy. Since arriving in Petersburg in 1993, I've watched the Southeast Alaska economy move away from being a diversified economy to becoming a specialized economy. In the past 20 yrs, a relentless assault on what remained of a forest products industry, by environmental groups, has effectively reduced that industry to almost nothing. Many citizens of Southeast Alaska have only heard the doom and gloom side of the timber harvest story and proponents of retaining a down-sized but stable forest products industry have remained relatively silent. After a couple of decades of this one-sided debate, many people now believe that environmental activists must be right. This is how carefully planned and executed propaganda works in a society. It is how Hitler and his Third Reich managed to take over Germany and most of Europe during WW11. They were fanatics. Since the mid 1990's, I've tried to be a voice of reason on occasion. I have not networked with other like-minded individuals when it comes to written or oral testimony. Networking has been a powerful tool used effectively by environmental activists. It is transparent when a group of activists read testimonials sharing many common threads at public meetings. They will claim to represent themselves and not a larger organization. Hmmmm.

For years I've warned others that we are taking a huge risk in creating the specialized regional economy that now exists in Southeast Alaska. I've seen, first hand, what can happen to a local economy when the only industry supporting that economy slows down or is destroyed. I've left a region and moved on when logging and saw milling and mining were stopped (I'd been employed as a logger and hard-rock driller). The same economic collapse can occur when mining or commercial fishing and processing come to a screeching halt. Currently, only fishing and processing and some tourism exist in the Petersburg area. Throughout Southeast Alaska that formula exists. Thankfully, some mining is still being done. In a recent article in the ***Petersburg Pilot***, several local business owners were interviewed and they expressed concern over how the closure of Trident Seafoods this season will negatively impact their businesses and the local economy.

We are starting to see warning signs that commercial fishermen and processors will be dealing with new challenges as economic and environmental conditions develop in the coastal Alaska region. There will be increased competition for ocean resources as time advances. No one knows how future energy costs will affect fishing and processing. Again, how will our regional economy, heavily dependant on fishing and processing, fare in the years and decades ahead?

Now back to the topic of the doom and gloom of timber harvesting. I've wondered for many years how there could have been record salmon runs and harvests in the 1990's, following a couple of decades of record timber harvesting in Southeast Alaska--when those timber harvests were supposed to have completely wiped out fish and wildlife habitat. Hmmm. I grew up in a logging community and culture and spent many years, as a young man, working in timber towns and logging camps in five western states and Alaska. I've read as much as I could about forest management and ecosystem management practices and continue to be amazed by the lack of knowledge and belief in misinformation many citizens express. Much of this misinformation is intentionally distributed by radical environmental groups. I say lets grow up! We need to begin to take pride in how well we can manage our natural resources. I'm in support of House Bill 162 for the reasons I've stated. We need to take a

more mature look at how we can benefit from utilizing the natural resources of Southeast Alaska.

The US Forest Service is so tied up in knots by environmental restrictions and litigation these days, they are not producing timber sales necessary to insure survival of the remaining sawmills in Southeast Alaska. When they have put forth timber sales of any significant size, environmental groups have immediately accused the Forest Service of operating in the red and made claims that
the timber industry is heavily subsidized by the tax payers. There are reasons for that:

1. A very sizable staff of government workers and scientists employed by the USFS specifically to use sound science in the process of producing timber sales.
2. Litigation.

It has been a very interesting game. However, that game could eventually have a negative effect on the Southeast economy. If the specialized economy of Southeast Alaska should collapse at some point in the future, will the architects of that economy (environmental groups) be held accountable? Of course not!

In addition to the passing of House Bill 162, I propose that a program should be established to educate citizens on how we can use our natural resources wisely, without destroying fish and wildlife habitat. I'm convinced that sound science will allow us to do exactly that. The resources include: seafood, minerals, oil & gas, timber, ocean energy and so on. Alaska should become a leader in moving away from the doom and gloom dark age we've all been living in. Alaska should demonstrate for the rest of our nation how we can manage our resources wisely without destroying habitat.
It should be a source of pride, rather than a source of constant arguing and turmoil.

I have great admiration for Governor Parnell. He has shown courage in taking a position on retaining a forest products industry in Alaska. That is a political hot potato many leaders would not care to touch. In truth, all the ideas and opinions I've expressed are my own and I've not networked with others. I care enough about the economic future of Alaska, I've decided to stick my neck out and
call a spade a spade. House Bill 162 is a good beginning for restoration of a stable Southeast Alaska economy. Thank you for taking my testimony!

Sincerely,

Jack Slaght, Petersburg, Alaska

ANALYSIS: *(Attach a separate page if necessary)*

To satisfy the land exchange proposed under this legislation, DNR anticipates that it will need to complete the following work: 1) coordinate with the U.S. Fish and Wildlife Service in the preparation of the required Environmental Impact Statement (EIS), 2) review state land title documents and prepare deeds for state land to be conveyed to the federal government, and 3) review proposed deeds of federal land to be conveyed by the federal government. DNR is seeking alternative sources of funding to coordinate the state's effort on the EIS. Title document preparation will not be required until after the EIS is completed, which may take 2-3 years.

ANALYSIS: *(Attach a separate page if necessary)*

To satisfy the land exchange proposed under this legislation, DNR anticipates that it will need to complete the following work: 1) coordinate with the U.S. Fish and Wildlife Service in the preparation of the required Environmental Impact Statement (EIS), 2) review state land title documents and prepare deeds for state land to be conveyed to the federal government, and 3) review proposed deeds of federal land to be conveyed by the federal government. DNR believes that it can complete the work on the EIS using existing staff and resources, and does not anticipate the need for additional funds to complete the proposed land exchange. Title documentation work will not be required until after the EIS is completed, which may take 2-3 years.

CSHB 210 (RES): Izembek State Game Refuge Land Exchange

On March 30th last year President Obama signed the Omnibus Public Lands Management Act of 2009. This act includes Congressional approval for a land exchange between the State of Alaska and the federal government to allow a single-lane, unpaved road through the Izembek National Wildlife Refuge, connecting the village of King Cove to the Cold Bay airport.

CSHB 210 (RES) will grant state authorization for that exchange.

However, it is important to note that at the federal level there are still two major processes that need to be completed before this transaction is final. These are the completion of an environmental impact statement and a finding by the Secretary of the Interior determining that the land exchange is in the public interest.

CSHB 210 (RES) therefore does more than execute at state level the transaction endorsed by Congress; it also provides compelling evidence to the Secretary of the Interior that the State of Alaska approves of this agreement to establish dependable access for King Cove residents to the Cold Bay airport primarily for health and safety purposes.

In the agreement, the State will transfer approximately 43,000 acres of land in the Alaska Peninsula National Wildlife Refuge to the federal government in exchange for approximately 206 acres for the road corridor. The legislation also agrees to the receipt of 1600 acres of federal land located on Sitkinak Island to the State and provides for the designation of Kinzarof Lagoon as part of the Izembek State Game Refuge.

The residents of King Cove and Aleutians East Borough have strived toward this goal for more than a decade. The King Cove Corporation has agreed to provide approximately 19,000 acres of its ANCSA land to the federal government, at no cost, as part of this exchange. The Alaska Department of Natural Resources supports the transaction. Senator Murkowski, Congressman Young, and former Senator Stevens have championed this endeavor at the federal level over many years. Senator Begich also backs the plan.

It is now the State of Alaska's role to take this next important step. I respectfully ask for your support in concluding this agreement while also sending an important message to the Secretary of the Interior that Alaska endorses this exchange and all that it entails for the improved safety and quality of life for citizens in Southwestern Alaska.

Sectional Analysis

CSHB210(RES): Izembek State Game Refuge Land Exchange

Section 1. States that the purpose of the Act is to add state land and water near Kinzarof Lagoon to the Izembek State Game Refuge.

Section 2. Amends AS 16.20.030(a)(14) by adding the description of land and water to be added to the Izembek State Game Refuge.

Section 3. Provides for the removal of the land added to the Izembek State Game Refuge in sec. 2 of the Act if the conditions in sec. 7(b) of the Act are satisfied.

Section 4. Requires the Department of Natural Resources to transfer land adjacent to the Izembek National Wildlife Refuge in exchange for federal land. Describes the land to be transferred by the department and the federal land expected to be received in exchange.

Section 5. States that the land exchange in sec. 4 of the Act is not subject to the provisions in AS 38.50 that would normally apply to an exchange of state land.

Section 6. Provides for the land added to the Izembek State Game Refuge in sec. 2 of the Act and the land conveyed under sec. 4 of the bill to be returned to its original status if the land exchange authorized by sec. 6402(a) of the Omnibus Public Land Management Act of 2009 becomes null and void under sec. 6405 of the federal Act.

Section 7. Subsection (a) makes secs. 1, 2, 4, and 5 of the Act take effect only if the United States Secretary of the Interior determines that the land exchange described in sec. 4 is in the public interest. Subsection (b) makes sec. 3 and 6 of the Act take effect if the land exchanged is voided under sec. 6405 of the Omnibus Public Land Management Act of 2009. Requires the commissioner of natural resources to notify the lieutenant governor and the revisor of statutes if and when the conditions in sec. 7 are satisfied.

Section 8. If secs. 1, 4, and 5 of the Act take effect, identifies the date on which those sections take effect.

Section 9. If sec. 2 takes effect, identifies the date on which sec. 2 takes effect.

Section 10. If secs. 3 and 6 take effect, identifies the date on which those sections take effect.

Section 11. Except as provided in secs. 8 – 10 of the Act, makes the Act take effect immediately.

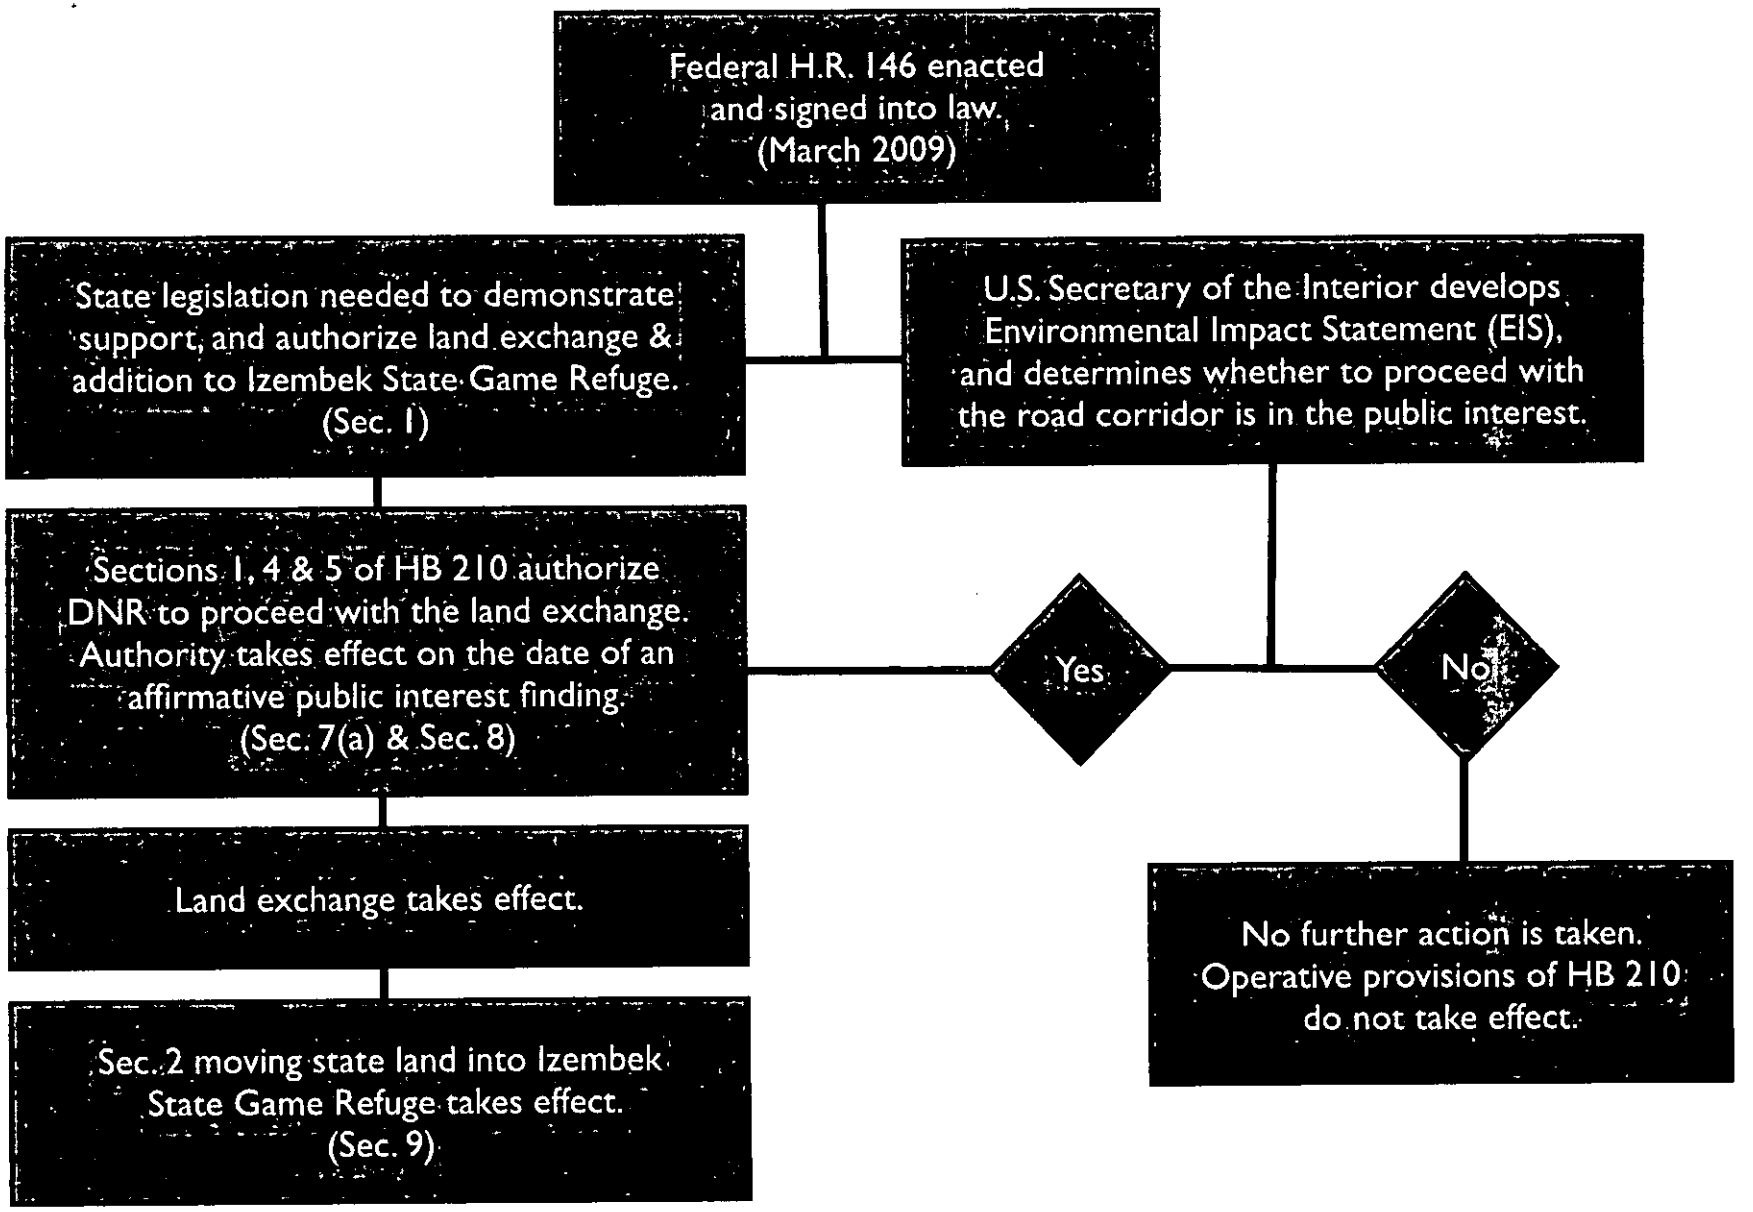
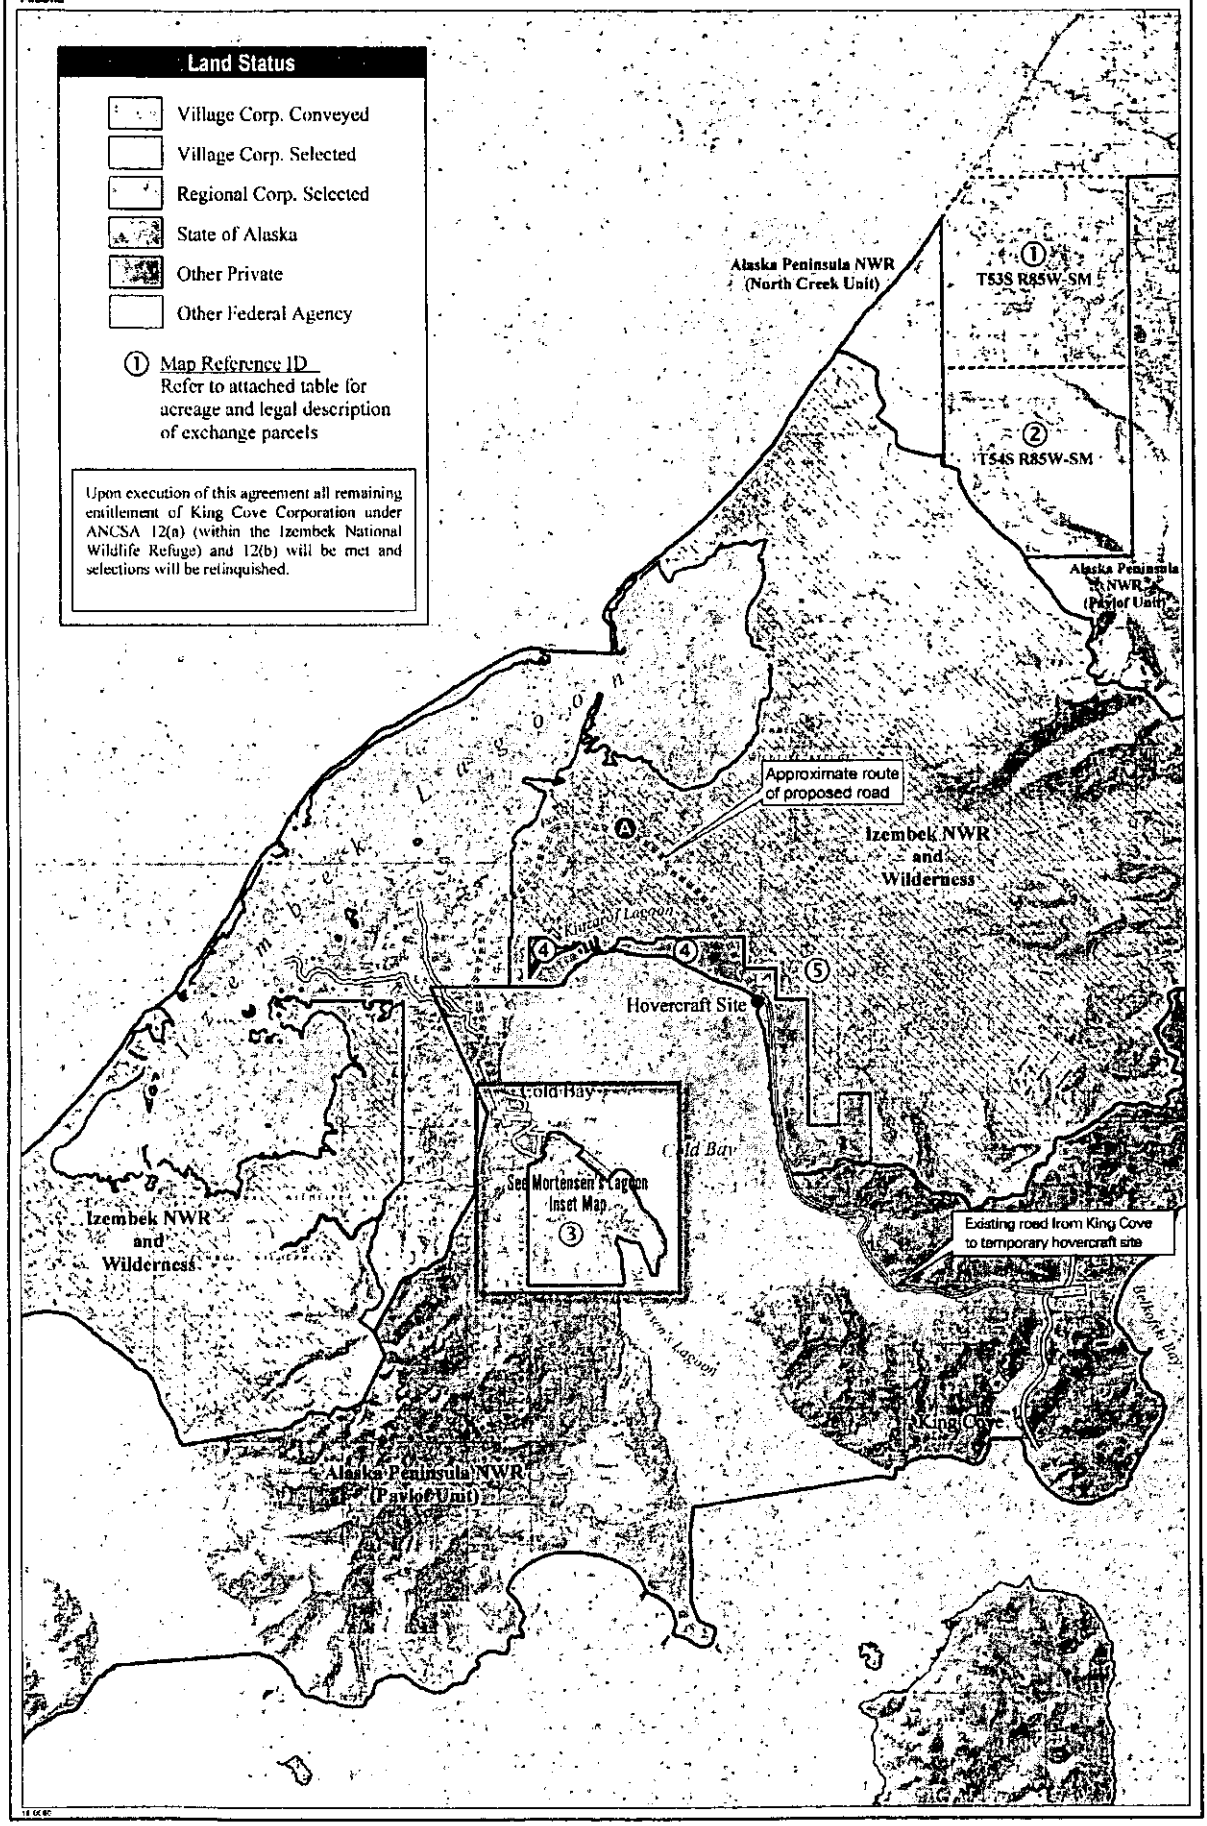
HB 210 - King Cove Land Exchange Process



Proposed Land Exchange Between USFWS and King Cove Corporation

Izembek and Alaska Peninsula National Wildlife Refuges
Alaska



Summary of Changes Between HB210 to CSHB210(RES)

During its hearing in the House Finance Committee on April 8th, 2009, section 4(b)(1) of the original bill was amended to make language in the state legislation conform more closely to the federal act it relates to.

On page 5, lines 8 and 9, "constructing a single-lane road" was deleted and "a corridor for the construction and operation of a road" was inserted. This more inclusive language helps ensure that all the road features set down in the federal agreement are acknowledged in the state legislation.

Also on page 5, line 9, "in accordance with the Omnibus Public Land Management Act of 2009, H.R. 146, 111th Cong. (2009) (enacted)," was inserted after "Cold Bay, Alaska,". Citing the federal legislation in this way was also in order to emphasize the state legislation's consistency with the federal act.

When this amendment was incorporated in the CS by the legislature's Legal Services counsel, it and all other references to the Omnibus Public Land Management Act of 2009 were edited to reflect that since HB210 was introduced the act has been designated Public Law 111-11. The changes are nonsubstantive.

An editorial change was also made in sec. 11 to correctly reference effective date sections in the bill that provide for effective dates that are not immediate. "secs. 7 – 10 of this Act" was changed to "secs. 8 – 10 of this Act".

Prepared by the Office of Representative Edgmon. *Regarding CSHB210(FIN) 26-LS0788\R*

Re: S 1680 – the Izembek and Alaska Peninsula Refuge and Wilderness Enhancement Act and King Cove Safe Access Act

Dear Chairman Bingaman and Ranking Member Domenici:

The State of Alaska supports S 1680, legislation that would authorize a land exchange between the State of Alaska, the U.S. Fish and Wildlife Service and King Cove Corporation to secure road access between the Alaskan communities of King Cove and Cold Bay. These communities are located on the Alaska Peninsula and are accessible only by air or water.

A priority for the Agdaagux Tribe of King Cove, the City of King Cove and the Aleutians East Borough is to construct a 27-mile road to Cold Bay, through the Izembek National Wildlife Refuge, to access the larger and safer airport at Cold Bay.

This overland link is necessary because both air and water access to King Cove is treacherous in the frequent stormy weather so common on the lower Alaska Peninsula. Cold Bay has a much larger, safer airport and the residents of King Cove need reliable access to the Cold Bay airport facility for health and safety, including emergency medical evacuations. A combination road and hovercraft system, established under the King Cove Health and Safety Act passed by Congress several years ago, has not safely nor efficiently resolved access problems.

The need for this road link has been identified in land and transportation plans for at least twenty-five years, including the Alaska Department of Transportation's Southwest Alaska Transportation Plan, adopted in 2004.

The land exchange would add valuable and significant acreage to the Izembek and Alaska Peninsula National Wildlife Refuges. Much of the land that would be added to the refuges is currently owned by the State of Alaska. Specifically, the State of Alaska is offering to exchange 43,093 acres, or all of the state-owned land contained in two townships located northeast of Izembek Refuge, in exchange for a 206 acre easement dedicated to the State of Alaska, through the Izembek National Wildlife Refuge and Wilderness. The undeveloped state land being offered to the Refuge is surrounded on three sides by refuge lands and is habitat for brown bears and caribou. This state land includes the lower portion of the Cathedral River, which drains the western flanks of Pavlof Volcano. It is de facto wilderness land. This state land was included in a recent state oil and gas lease sale, although no bids were received on these tracts.

The 7,900 acres being offered to the Izembek Refuge by King Cove Corporation includes valuable waterfowl habitat that straddles Kinzarof Lagoon at the head of Cold Bay. This land is an inholding within the existing Izembek Wilderness area. The Corporation is also offering to sell an additional 10,800 acres of private lands to the U.S. Fish and Wildlife Service for the Refuge.

The road easement that the state would acquire will run approximately 13 miles through the Izembek National Wildlife Refuge. More than half of this road already exists as primitive roads that were originally built during World War II. The total length of new road through the Wilderness area is 6.3 miles. The exact location of the easement will be determined in consultation with the U.S. Fish and Wildlife Service.

The combined offers from the State of Alaska and the King Cove Corporation would add 51,000 acres to the Izembek and Alaska Peninsula National Wildlife Refuges. All of the state land that is being offered in this exchange would be designated Wilderness by this legislation.

The state would acquire approximately 206 acres that encompass the road. The state would also acquire a 1,600-acre federal inholding on Sitkinak Island, a predominantly state-owned island located south of Kodiak Island.

The State of Alaska recognizes the unique value of the Izembek National Wildlife Refuge. In 1972, the Alaska Legislature set aside the state-owned tidelands within Izembek Lagoon and adjacent offshore state lands as a State Game Refuge. These state lands contain eel grass beds that are the very heart of Izembek Refuge.

As part of this proposal, the state would add more than 4,000 acres of state-owned tidelands in Kinzarof Lagoon, at the head of Cold Bay, to the State Game Refuge. The exchange will require approval by our state legislature as the state lands are quite likely of unequal, but greater, fair market value that the federal lands being exchanged.

The state is well aware of concerns expressed by various groups who are opposed to this legislation. Some are concerned about the precedent set by building a road through a Wilderness Area. Yet, when the Alaska National Interest Lands Conservation Act was passed in 1980, Congress specifically recognized that transportation facilities may be needed across the 58 million acres of federal Wilderness lands in Alaska. The Alaska Lands Act requires Congressional approval for such transportation corridors through Wilderness.

There are also concerns about increased public access to the refuge wilderness. The refuge and wilderness area are already accessible from Cold Bay by existing local roads. Through planning and enforcement of existing refuge regulations, the impacts of the limited number of new users from King Cove can be mitigated.

The State of Alaska supports this legislation and stands ready to commit over 43,000 acres of state land to the National Wildlife Refuge and Wilderness system. We urge the Committee to approve this bill.

Thank you for the opportunity to comment on this legislation.

Sincerely,

Tom Irwin, Commissioner
Alaska Department of Natural Resources

Omnibus Public Land Management Act of 2009
(P.L. 111-11)

Subtitle E--Izembek National Wildlife Refuge Land Exchange

SEC. 6401. DEFINITIONS.

In this subtitle:

(1) CORPORATION- The term `Corporation' means the King Cove Corporation.

(2) FEDERAL LAND- The term `Federal land' means--

(A) the approximately 206 acres of Federal land located within the Refuge, as generally depicted on the map; and

(B) the approximately 1,600 acres of Federal land located on Sitkinak Island, as generally depicted on the map.

(3) MAP- The term `map' means each of--

(A) the map entitled `Izembek and Alaska Peninsula National Wildlife Refuges' and dated September 2, 2008; and

(B) the map entitled `Sitkinak Island-Alaska Maritime National Wildlife Refuge' and dated September 2, 2008.

(4) NON-FEDERAL LAND- The term `non-Federal land' means--

(A) the approximately 43,093 acres of land owned by the State, as generally depicted on the map; and

(B) the approximately 13,300 acres of land owned by the Corporation (including approximately 5,430 acres of land for which the Corporation shall relinquish the selection rights of the Corporation under the Alaska Native Claims Settlement Act (43 U.S.C. 1601 et seq.) as part of the land exchange under section 6402(a)), as generally depicted on the map.

(5) REFUGE- The term `Refuge' means the Izembek National Wildlife Refuge.

(6) SECRETARY- The term `Secretary' means the Secretary of the Interior.

(7) STATE- The term `State' means the State of Alaska.

(8) TRIBE- The term `Tribe' means the Agdaagux Tribe of King Cove, Alaska.

4689

SEC. 6402. LAND EXCHANGE.

(a) In General- Upon receipt of notification by the State and the Corporation of the intention of the State and the Corporation to exchange the non-Federal land for the Federal land, subject to the conditions and requirements described in this subtitle, the Secretary may convey to the State all right, title, and interest of the United States in and to the Federal land. The Federal land within the Refuge shall be transferred for the purpose of constructing a single-lane gravel road between the communities of King Cove and Cold Bay, Alaska.

(b) Compliance With National Environmental Policy Act of 1969 and Other Applicable Laws-

(1) IN GENERAL- In determining whether to carry out the land exchange under subsection (a), the Secretary shall--

(A) comply with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.); and

(B) except as provided in subsection (c), comply with any other applicable law (including regulations).

(2) ENVIRONMENTAL IMPACT STATEMENT-

(A) IN GENERAL- Not later than 60 days after the date on which the Secretary receives notification under subsection (a), the Secretary shall initiate the preparation of an environmental impact statement required under the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.).

(B) REQUIREMENTS- The environmental impact statement prepared under subparagraph (A) shall contain--

(i) an analysis of--

(I) the proposed land exchange; and

(II) the potential construction and operation of a road between the communities of King Cove and Cold Bay, Alaska; and

(ii) an evaluation of a specific road corridor through the Refuge that is identified in consultation with the State, the City of King Cove, Alaska, and the Tribe.

(3) COOPERATING AGENCIES-

(A) IN GENERAL- During the preparation of the environmental impact statement under paragraph (2), each entity described in subparagraph (B) may participate as a cooperating agency.

(B) AUTHORIZED ENTITIES- An authorized entity may include--

(i) any Federal agency that has permitting jurisdiction over the road described in paragraph (2)(B)(i)(II);
(ii) the State;
(iii) the Aleutians East Borough of the State;
(iv) the City of King Cove, Alaska;
(v) the Tribe; and
(vi) the Alaska Migratory Bird Co-Management Council.

(c) Valuation- The conveyance of the Federal land and non-Federal land under this section shall not be subject to any requirement under any Federal law (including regulations) relating to the valuation, appraisal, or equalization of land.

(d) Public Interest Determination-

(1) CONDITIONS FOR LAND EXCHANGE- Subject to paragraph (2), to carry out the land exchange under subsection (a), the Secretary shall determine that the land exchange (including the construction of a road between the City of King Cove, Alaska, and the Cold Bay Airport) is in the public interest.

(2) LIMITATION OF AUTHORITY OF SECRETARY- The Secretary may not, as a condition for a finding that the land exchange is in the public interest--

(A) require the State or the Corporation to convey additional land to the United States; or

(B) impose any restriction on the subsistence uses (as defined in section 803 of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3113)) of waterfowl by rural residents of the State.

(e) Kinzaroff Lagoon- The land exchange under subsection (a) shall not be carried out before the date on which the parcel of land owned by the State that is located in the Kinzaroff Lagoon has been designated by the State as a State refuge, in accordance with the applicable laws (including regulations) of the State.

(f) Designation of Road Corridor- In designating the road corridor described in subsection (b)(2)(B)(ii), the Secretary shall--

(1) minimize the adverse impact of the road corridor on the Refuge;

(2) transfer the minimum acreage of Federal land that is required for the construction of the road corridor; and

(3) to the maximum extent practicable, incorporate into the road corridor roads that are in existence as of the date of enactment of this Act.

(g) Additional Terms and Conditions- The land exchange under subsection (a) shall be subject to any other term or condition that the Secretary determines to be necessary.

SEC. 6403. KING COVE ROAD.

(a) Requirements Relating to Use, Barrier Cables, and Dimensions-

(1) LIMITATIONS ON USE-

(A) IN GENERAL- Except as provided in subparagraph (B), any portion of the road constructed on the Federal land conveyed pursuant to this subtitle shall be used primarily for health and safety purposes (including access to and from the Cold Bay Airport) and only for noncommercial purposes.

(B) EXCEPTIONS- Notwithstanding subparagraph (A), the use of taxis, commercial vans for public transportation, and shared rides (other than organized transportation of employees to a business or other commercial facility) shall be allowed on the road described in subparagraph (A).

(C) REQUIREMENT OF AGREEMENT- The limitations of the use of the road described in this paragraph shall be enforced in accordance with an agreement entered into between the Secretary and the State.

(2) REQUIREMENT OF BARRIER CABLE- The road described in paragraph (1)(A) shall be constructed to include a cable barrier on each side of the road, as described in the record of decision entitled `Mitigation Measure MM-11, King Cove Access Project Final Environmental Impact Statement Record of Decision' and dated January 22, 2004, unless a different type barrier is required as a mitigation measure in the Record of Decision for Final Environmental Impact Statement required in section 6402(b)(2).

(3) REQUIRED DIMENSIONS AND DESIGN FEATURES- The road described in paragraph (1)(A) shall--

(A) have a width of not greater than a single lane, in accordance with the applicable road standards of the State;

(B) be constructed with gravel;

(C) be constructed to comply with any specific design features identified in the Record of Decision for Final Environmental Impact Statement required in section 6402(b)(2) as Mitigation Measures relative to the passage and migration of wildlife, and also the exchange of tidal flows, where applicable, in accordance with applicable Federal and State design standards; and

(D) if determined to be necessary, be constructed to include appropriate safety pullouts.

(b) Support Facilities- Support facilities for the road described in subsection (a)(1)(A) shall not be located within the Refuge.

(c) Federal Permits- It is the intent of Congress that any Federal permit required for construction of the road be issued or denied not later than 1 year after the date of application for the permit.

(d) Applicable Law- Nothing in this section amends, or modifies the application of, section 1110 of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3170).

(e) Mitigation Plan-

(1) IN GENERAL- Based on the evaluation of impacts determined through the completion of the environmental impact statement under section 6402(b)(2), the Secretary, in consultation with the entities described in section 6402(b)(3)(B), shall develop an enforceable mitigation plan.

(2) CORRECTIVE MODIFICATIONS- The Secretary may make corrective modifications to the mitigation plan developed under paragraph (1) if--

(A) the mitigation standards required under the mitigation plan are maintained; and

(B) the Secretary provides an opportunity for public comment with respect to any proposed corrective modification.

(3) AVOIDANCE OF WILDLIFE IMPACTS- Road construction shall adhere to any specific mitigation measures included in the Record of Decision for Final Environmental Impact Statement required in section 6402(b)(2) that--

(A) identify critical periods during the calendar year when the refuge is utilized by wildlife, especially migratory birds; and

(B) include specific mandatory strategies to alter, limit or halt construction activities during identified high risk periods in order to minimize impacts to wildlife, and

(C) allow for the timely construction of the road.

(4) MITIGATION OF WETLAND LOSS- The plan developed under this subsection shall comply with section 404 of the Federal Water Pollution Control Act (33 U.S.C. 1344) with regard to minimizing, to the greatest extent practicable, the filling, fragmentation or loss of wetlands, especially intertidal wetlands, and shall evaluate mitigating effect of those wetlands transferred in Federal ownership under the provisions of this subtitle.

SEC. 6404. ADMINISTRATION OF CONVEYED LANDS.

(1) FEDERAL LAND- Upon completion of the land exchange under section 6402(a)--

(A) the boundary of the land designated as wilderness within the Refuge shall be modified to exclude the Federal land conveyed to the State under the land exchange; and

(B) the Federal land located on Sitkinak Island that is withdrawn for use by the Coast Guard shall, at the request of the State, be transferred by the Secretary to

the State upon the relinquishment or termination of the withdrawal.

(2) NON-FEDERAL LAND- Upon completion of the land exchange under section 6402(a), the non-Federal land conveyed to the United States under this subtitle shall be--

(A) added to the Refuge or the Alaska Peninsula National Wildlife Refuge, as appropriate, as generally depicted on the map; and

(B) administered in accordance with the laws generally applicable to units of the National Wildlife Refuge System.

(3) WILDERNESS ADDITIONS-

(A) IN GENERAL- Upon completion of the land exchange under section 6402(a), approximately 43,093 acres of land as generally depicted on the map shall be added to--

(i) the Izembek National Wildlife Refuge Wilderness; or

(ii) the Alaska Peninsula National Wildlife Refuge Wilderness.

(B) ADMINISTRATION- The land added as wilderness under subparagraph (A) shall be administered by the Secretary in accordance with the Wilderness Act (16 U.S.C. 1131 et seq.) and other applicable laws (including regulations).

SEC. 6405. FAILURE TO BEGIN ROAD CONSTRUCTION.

(a) Notification To Void Land Exchange- If the Secretary, the State, and the Corporation enter into the land exchange authorized under section 6402(a), the State or the Corporation may notify the Secretary in writing of the intention of the State or Corporation to void the exchange if construction of the road through the Refuge has not begun.

(b) Disposition of Land Exchange- Upon the latter of the date on which the Secretary receives a request under subsection (a), and the date on which the Secretary determines that the Federal land conveyed under the land exchange under section 6402(a) has not been adversely impacted (other than any nominal impact associated with the preparation of an environmental impact statement under section 6402(b)(2)), the land exchange shall be null and void.

(c) Return of Prior Ownership Status of Federal and Non-Federal Land- If the land exchange is voided under subsection (b)--

(1) the Federal land and non-Federal land shall be returned to the respective ownership status of each land prior to the land exchange;

(2) the parcel of the Federal land that is located in the Refuge shall be managed as part of the Izembek National Wildlife Refuge Wilderness; and

(3) each selection of the Corporation under the Alaska Native Claims Settlement Act (43 U.S.C. 1601 et seq.) that was relinquished under this subtitle shall be reinstated.

SEC. 6406. EXPIRATION OF LEGISLATIVE AUTHORITY.

(a) In General- Any legislative authority for construction of a road shall expire at the end of the 7-year period beginning on the date of the enactment of this subtitle unless a construction permit has been issued during that period.

(b) Extension of Authority- If a construction permit is issued within the allotted period, the 7-year authority shall be extended for a period of 5 additional years beginning on the date of issuance of the construction permit.

(c) Extension of Authority as Result of Legal Challenges-

(1) IN GENERAL- Prior to the issuance of a construction permit, if a lawsuit or administrative appeal is filed challenging the land exchange or construction of the road (including a challenge to the NEPA process, decisions, or any required permit process required to complete construction of the road), the 7-year deadline or the five-year extension period, as appropriate, shall be extended for a time period equivalent to the time consumed by the full adjudication of the legal challenge or related administrative process.

(2) INJUNCTION- After a construction permit has been issued, if a court issues an injunction against construction of the road, the 7-year deadline or 5-year extension, as appropriate, shall be extended for a time period equivalent to time period that the injunction is in effect.

(d) Applicability of Section 6405- Upon the expiration of the legislative authority under this section, if a road has not been constructed, the land exchange shall be null and void and the land ownership shall revert to the respective ownership status prior to the land exchange as provided in section 6405.

HB 210 – Izembek Land Exchange

Testimony – Mayor Stanley Mack
April 8, 2009

My name is Stanley Mack. I am the Mayor of the Aleutians East Borough. The Borough consists of six communities located between 500 to 800 miles southwest of Anchorage. One of my primary responsibilities as Mayor is to help improve the quality of life for the 2700 residents of the borough. Safe and dependable transportation access is one of the most important of these qualities.

I am very pleased today to speak in support of HB 210. I also want to thank the State of Alaska for its steadfast involvement and support of this issue. Without the state's assistance we would not have this opportunity today.

HB 210 will authorize a land exchange between the federal government, State of Alaska, and the King Cove Corporation so that a single-lane road can eventually connect the village of King Cove with the Cold Bay Airport. I was born and raised in King Cove, so I know first-hand about the never-ending challenges in reaching the Cold Bay Airport due to

weather and the precarious location of the King Cove airstrip.

Thirty years ago King Cove's hopes for access to the Cold bay Airport were dashed when a portion of the Izembek Refuge between the two communities was declared wilderness. The fact that no one bothered to consult the indigenous residents of King Cove made this decision to cut us off especially wounding.

Now, after two decades of educating and advocating and, with the help of the State of Alaska and the King Cove Corporation in putting together a major land exchange, we are optimistic this road link can occur. We have worked long and hard for this opportunity.

I will sincerely appreciate your support of HB 210.

Thank You.

HB 210 – Izembek Land Exchange

Testimony – Mayor Ernest Weiss
April 8, 2009

My name is Ernest Weiss. I am the Mayor of the City of King Cove. We have a major transportation access issue between our community and the Cold Bay Airport. The Cold Bay Airport is the third longest runway in the state and is served daily from Anchorage.

Our problem living in King Cove is getting access to the Cold Bay Airport on a safe and predictable basis.

I am pleased today to speak in support of HB 210. This legislation will authorize the provisions of the Omnibus Public Lands Management Act of 2009, signed last week by President Obama, in helping to solve our access problem to the Cold Bay Airport. HB 210 will authorize a land exchange between the federal government, State of Alaska, and the King Cove Corporation so that a single-lane road can connect King Cove with the Cold Bay Airport.

I have lived in King Cove for the last 25 years and have personally witnessed fear and frustration which results from not having a safe, dependable, and

predictable means to get to the Cold Bay Airport. My experience has been that about 30-40% of the time that I travel to the Cold Bay Airport, I either do not get there, or at "best," do not arrive there in a timely or routine manner.

I realize that many other bush communities have transportation access issues. However, our transportation issue is one which can be solved. Now, after two decades of educating and advocating and, along with the help of the State of Alaska and the King Cove Corporation in putting together a major land exchange, we are optimistic this road link can finally occur.

On behalf of the 800 residents of King Cove, I want to thank the State of Alaska for its continuing involvement and support of our transportation access issue.

I will sincerely appreciate your support of HB 210.

Thank You.

HB 210 – Izembek Land Exchange

Testimony – Della Trumble, King Cove Corporation
April 8, 2009

My name is Della Trumble. I represent the King Cove Corporation (Corporation), our village ANCSA Corporation.

I have been personally involved in this issue for the last 25+ years. I have vowed to never quit until we have accomplished our objective of a simple and safe road link to the Cold Bay Airport.

I am pleased to speak today in support of HB 210, which will authorize the State's participation in a major land exchange between the federal government, State of Alaska, and the King Cove Corporation so this road can be built.

I was born in King Cove and have lived here all my life. I know first-hand about the never-ending challenges in reaching the Cold Bay Airport due to weather and the precarious location of the King Cove airstrip. This situation has brought countless times of misery and hardship to our residents.

Now, with the King Cove Corporation's willingness to give back about 20% of our aboriginal lands to the federal government, combined with the State lands being offered, our road becomes possible.

Please know we are very appreciative of the State's support helping us achieve this goal.

The Corporation's decision to give up our lands has been a difficult decision. But, we have come to understand this is the price we must pay for the opportunity to have a very modest road to the Cold Bay Airport through the Izembek Refuge.

We have reluctantly accepted the awareness that somewhere in the process, the federal government and others have ignored the fact that my Aleut ancestors have lived in this area for over 4,000 years. Long before Izembek Refuge even had a name, it has been a part of our environment and cultural survival.

However, it is now time to move forward to the future. Road access to the Cold Bay Airport will greatly enhance our personal safety and quality-of-life.

I respectfully request your support of this legislation.

Thank you.

ANALYSIS: *(Attach a separate page if necessary)*

The proposed legislation would provide financial incentives for natural gas storage facilities and for exploration in the Cook Inlet basin, and provide general guidance to the Regulatory Commission of Alaska (RCA) on natural gas pricing. Statutes governing the general powers and duties of the RCA would be revised to require the RCA, when considering whether approval of a natural gas supply contract is in the public interest, to (1) recognize the public benefits of a utility's ability to negotiate different pricing mechanisms with different suppliers and maintain a diversified portfolio of gas supply contracts to protect customers from the risks of inadequate supply or excessive costs that may arise from a single pricing mechanism, and (2) consider whether the utility could meet its responsibility to the public in a timely manner should the rate of gas supply contract not be approved.

ANALYSIS: *(Attach a separate page if necessary)*

HB 280 offers tax credits for Cook Inlet gas storage facilities and attempts to promote gas exploration and production in the Cook Inlet.

There is no anticipated fiscal impact to the Division of Oil and Gas for the management of gas storage on state land. However, Sec. 4 of the bill will provide a ten year "holiday" on all storage fees and rentals for the storage lease. Also, the accounting convention described means that "non-native" gas will be withdrawn from storage first and no royalty revenue will acrue to "native" gas until all non-native gas is withdrawn. How industry will respond to the tax credits offered by this bill is unknown, therefore, the impact on fees, rents, and royalty revenues is negative indeterminate.

ANALYSIS: *(Attach a separate page if necessary)*

HB 280 would make multiple changes to the existing law on tax credits and gas storage facilities. The portions of the bill that specifically apply to the Department of Revenue would change the treatment of credits under AS 43.55.023 (Qualifying Capital Expenditures) and create a credit against corporate income tax (CIT) for gas storage facilities (AS 43.20.046). The language relating to credits has the potential to be interpreted quite broadly with the potential for large reductions in state revenues when compared to future developments that might occur under the current law.

The Department is requesting a Corporate Income Tax Auditor III position (Range 22) to audit the tax credits and manage the approval, issuance and tracking of the new and modified state credits. (continued)

ANALYSIS CONTINUATION

There are three gas storage facilities currently operating in the Cook Inlet region. None of the existing gas storage facilities would qualify for the corporate income tax credits under this bill as currently written. However, it is unclear if the existing gas storage facilities could qualify for credits if they shut-down and re-opened or changed ownership. Any estimate of the change in revenues to the state under this legislation would be based on hypothetical development in the future. As a result, the full revenue impact of this legislation cannot be accurately determined at this time.

The following scenarios may provide some perspective on the range of potential revenue impacts.

Scenario 1: Corporate income tax credit effects on a small facility

The first scenario assumes the construction of a small gas storage facility in a depleted reservoir similar to one of the smaller currently operating gas storage facilities. The facility is assumed to be capable of approximately 1.25 cycles a year and to have a working gas capacity of approximately 1Bcf. Under the terms of HB 280 this facility would be entitled to a credit of $1.5 Million against state CIT.

In 2004, the Federal Energy Regulatory Commission (FERC) estimated the median cost-of-service rate for firm storage service at $0.64/Decatherm. One Decatherm is equal to one Mcf of natural gas if the natural gas contains 1,000 Btu/cubic foot. Escalating this cost for inflation produces a 2009 cost-of-service rate of approximately $0.72/Mcf of firm storage service.

Given the estimated cost-of-service, volume of gas cycled and reasonable assumptions about debt to equity and other factors, the Department of Revenue estimates that this gas storage facility would owe approximately $95,000/year in state CIT. This rough estimate suggests that the corporate income tax credit for gas storage created under AS 43.20.046 of this bill would entirely offset the state corporate tax liability for nearly the first 16 years of operation. It is important to note that the credit created in this bill under AS 43.20.046 is eligible to be transferred or refunded.

There is a credit clawback provision that applies if the gas storage ceases commercial operations within ten years. However, in this scenario, the amount of the original credit remaining after ten years of commercial operations is estimated to be $550,000. This means the storage operator in this scenario could cease to operate at the beginning of year 11 and theoretically retain as much as $550,000 in refundable state credits. Additionally, under HB 280, the facility would be exempt from rental and storage fees charged by the Department of Natural resources (DNR) for the first ten years of commercial operations. There is also some question about whether the existing statute of limitations would allow the state to exercise the clawback provision.

Under this scenario the reduction in state taxes to the state is $1.5 million in undiscounted terms for each qualifying facility of this type. This does not include reductions in estimated rental and storage fees.

Scenario 2: Corporate income tax credit effects on a large facility

Scenario two assumes the construction of a large gas storage facility in a depleted reservoir. The facility is assumed to be capable of cycling approximately one time each year and to have a working gas capacity of

ANALYSIS CONTINUATION

Under the terms of HB 280 this facility would be entitled to the maximum credit of $30 million against state corporate income tax.

Using the same cost-of-service and financial assumptions as scenario one, the Department of Revenue estimates that the gas storage facility owner would owe approximately $1.5 million annually in state CIT. This rough estimate suggests that the corporate income tax credit created under AS 43.20.046 would completely offset the state corporate income tax liability for about 20 years of operation. It is important to note again that the credit created in this bill under AS 43.20.046 is eligible to be transferred or refunded. There is a credit clawback provision that applies if the gas storage ceases commercial operations within ten years. However, in this scenario, the amount of the original credit remaining after ten years of commercial operations is estimated to be $15,000,000. This means the storage operator in this scenario could cease to operate at the beginning of year 11 and theoretically retain as much as $15,000,000 in refundable state credits. The facility would also be exempt from rental and storage fees charged by the Department of Natural resources (DNR) for the first ten years of commercial operations.

Under this scenario the reduction in state taxes to the state is $30 million in undiscounted terms for each qualifying facility of this type. This does not include reductions in estimated rental and storage fees.

Scenario 3: Broader interpretation of HB 280 benefits

Previous scenarios have assumed gas storage facilities operated at nearly 100% of capacity, using 100% of certified storage capacity. This scenario assumes a gas storage operator takes full economic advantage of a broad interpretation of the language in HB 280. Specifically, the facility uses a reservoir with a working gas capacity of 20 Bcf and the operator only cycles the minimum amount of gas to prevent the loss of the credits: 10,000 Mcf of natural gas annually. Using the same cost-of-service and financial assumptions as the previous two scenarios, the Department of Revenue estimates that the gas storage facility owner would owe less than $1,000 annually in state CIT. The storage facility owner would be eligible for a credit of $30,000,000 for the facility based on the working gas capacity. In this scenario it would take nearly 4,000 years of operation under this scenario for a gas storage operator to exhaust the state corporate income tax credit provided under this bill. Alternatively, after 10 years of commercial operation the owner could shut the facility down and retain $29,990,000 in refundable state credits.

Scenario 4: Lost or deferred production and production tax revenue

Previous scenarios have assumed gas storage in a depleted reservoir. It is possible that an oil and gas lessee could elect to shut-in production at a currently producing field earlier than would have otherwise occurred in order to take full advantage of plentiful native gas for free cushion gas. Under this bill the remaining native gas could be produced at the end of commercial operations for the gas storage facility. This deferred or lost production tax revenue would be in addition to lost revenue impacts equivalent to any of the previous three scenarios. The time value of deferred production is not calculated but could be substantial.

Scenario 5: Tax Ceiling

Existing state law provides the benefit of a tax ceiling for certain production under AS 43.55.011(j)(k) and (o). The tax ceiling applies to Cook Inlet production as well as any natural gas produced for use in state. Currently, credits earned under AS 38.05.180(i), AS 41.09.010, AS 43.55.024 or AS 43.55.025 are required to be applied first to a producers tax liability under AS 43.55.011(e) as though it were not limited by AS 43.55.011(j)(k) or (o).

ANALYSIS CONTINUATION

Under HB280, the limitation on application of credits does not apply to Cook Inlet production after January 1, 2011. This change would allow credits from Cook Inlet expenditures to also be applied to other non-Cook Inlet tax liability. In essence producers would earn credits and apply their full value against state wide tax liability and also receive the benefit of the reduced tax rate resulting from the comparison of actual tax rate (using those credits) and the prior ELF rate or ceiling rate. This repeal is likely to have the effect of reducing Cook Inlet tax collections to zero and allowing Cook Inlet credits to be used to shield taxes due from operations in other parts of Alaska such as the North Slope. This provision would be a particular benefit to companies operating in both Cook Inlet and on the North Slope.

Scenario five entails a producer with production in both Cook Inlet and on the North Slope. Assume the producer is entitled to a credit of $12 million under AS 43.55.025 because of Cook Inlet Exploration Expenditures, and assume that the producer's total production taxes are approximately $18 million, with $16 million attributed to North Slope production and $2 million attributed to Cook Inlet production.

Under existing law, AS 43.55.011(m) requires the producer to apply the $12 million in Cook Inlet credits to the full value of its hypothetical .011(e) Cook Inlet tax liability even though the Cook Inlet tax ceiling rate is applicable. Applying the $12 million credit against $2 million of .011(e) Cook Inlet production tax leaves $10 million in excess credits that may be used to offset tax liability elsewhere in the state. The tax ceiling rate on Cook Inlet oil is zero; therefore $2 million of the credit is considered "used" under AS 43.55.011(m).

Under current law, the North Slope tax liability of $16 million would be offset by the $10 million in credits left over after application of AS43.55.011(m), leaving a production tax liability of $6 million. Under HB 280, the producer would not have to draw down its $12 million of Cook Inlet tax credits, and instead be allowed to apply the full $12 million to the $16 million North Slope tax liability. As a result, the producer would pay a total of $4 million in production tax under this scenario, or $2 million less than under the existing law.

This scenario is a simplified version of how HB 280 might affect state revenues. Because AS 43.55.011(m) applies to multiple types of credits, and multiple taxpayers, the revenue effects could be significant.

Additional Scenarios and Fiscal Impacts:

The effect of increasing the value of credits for well work in Cook Inlet to 40% under AS 43.55.023(m) is not quantified in this analysis but would reduce tax revenues.

There could be additional reductions in state tax revenues if other existing facilities or natural gas pipelines were certified as gas storage and eligible for credits. This bill does not limit the credit for gas storage to the Cook Inlet, and in fact could be applied to gas stored on the North Slope or other areas of the state.

Cook Inlet production tax and additional production caused by the injection or withdrawal requirements under this proposal are very unlikely to generate more than a small fraction of the revenue that would be required to fund this credit. This means production taxes from other areas of the state, such as the North Slope would likely be the source of funds to the tax credit fund for the state to repurchase this credit.

House Bill 280
"The Cook Inlet Recovery Act"
Sponsor Statement

Residents of South Central Alaska are at risk that in the near future there will not be enough natural gas produced in Cook Inlet to heat and light their homes and businesses. Legislative action now can help address this challenge before it becomes a crisis.

A critical and universally recognized part of the solution is large-scale gas storage, allowing utilities to purchase gas during lower demand periods; hold the gas in storage; then withdraw it when needed. Establishing gas storage is crucial, and the state needs to promote the rapid development of storage facilities. House Bill 280, the Cook Inlet Recovery Act (CIRA), provides tax incentives and regulatory assurances to attract the private investment necessary to develop storage facilities and help reduce the cost of storage to consumers.

Specifically, CIRA provides a 10-year exemption from state land lease fees and rents to owners of new gas storage facilities. Since storage is needed urgently, these financial incentives will be available only for facilities put into operation before December 31, 2015. CIRA sets standards, such as minimum size and access requirements, for qualifying projects. Consumers will benefit from increased energy security and lower energy costs, as any financial incentives are required to pass through the supply chain to utilities and, in turn, to their customers.

In addition to storage, South Central also needs new gas discoveries. CIRA increases the incentives for exploration in Cook Inlet and allows explorers and producers to take their full benefit in one year rather than over two years.

CIRA also provides statutory guidance to the Regulatory Commission of Alaska in its consideration of utility gas supply contracts to help ensure adequate supplies of reasonably priced gas in the years ahead.

2/5/10

Rep.Mike.Hawker@legis.state.ak.us • http://www.akrepublicans.org/hawker/

HB 280
Cook Inlet Recovery Act - Sectional Analysis
Prepared by Representative Mike Hawker's Office

Section 1: Sets out a short title for the legislation: Cook Inlet Recovery Act (CIRA).

Section 2: Establishes an application process, criteria and timeline for the Alaska Oil and Gas Conservation Commission (AOGCC) to certify that a gas storage facility (GSF) meets the minimum working gas storage capacity and daily delivery rate requirements to be eligible for the financial incentives provided in this bill.

Requires a GSF owner to notify the AOGCC if the facility ceases operation.

Provides definitions for terms used in CIRA.

Section 3: Requires the Director of the Division of Mining, Land and Water to give priority to and expedite "when reasonably possible" any applications, permits and lease assignments needed for development and operation of a GSF.

Section 4: Prohibits the Department of Natural Resources from denying a lease application for a natural gas storage facility solely because the facility would be used exclusively or primarily to store gas owned by the owner or operator of the facility.

Section 5: Directs the Department of Natural Resources (DNR) to waive any state land lease fees or rents for the first 10 years of a GSF's operation. The waiver would stop if the storage facility ceases commercial operations.

States that any waivers of lease fees or rents would be public record.

Requires that the GSF pass on the financial benefits of any lease exemption to utilities that use its service.

Clarifies that any gas withdrawn from a GSF is considered to be non-native gas and not subject to royalty until all non-native gas is withdrawn.

Section 6: Directs the Regulatory Commission of Alaska (RCA), when considering the approval of a utility's gas supply contract, to consider the impact on consumers if the commission rejects a utility's gas supply contract and to recognize the value of a utility holding a diversified portfolio of gas supply contracts with different pricing mechanisms in order to protect consumers from inadequate gas supplies and the risk of a single pricing mechanism.

Section 7: Requires that a utility's cost of gas storage that is passed on to consumers reflect the financial benefits of any tax credits and state lease exemptions provided in this legislation.

Section 8: Clarifies that a natural gas storage facility that is part of a regulated natural gas pipeline (regulated under AS42.06) shall not also be regulated as a utility under the new provisions of AS42.05 in this bill.

Section 9: Specifies that the Regulatory Commission of Alaska has jurisdiction over natural gas storage services provided for gas that is owned by a regulated utility.

Section 10: Further defines "natural gas storage facility" and clarifies what is considered part of the storage facility.

Further defines that RCA regulation of gas storage facilities is limited to facilities operated primarily or exclusively for third-party customers; regulation does not extend to a proprietary storage facility operated exclusively or primarily to hold gas owned by the storage facility owner or operator.

Section 11: Clarifies that the names of taxpayers and the amount of credits claimed for gas storage facilities under this legislation shall be public information. Requires the Department of Revenue (DOR) to furnish the information to the RCA.

Section 12: Establishes a credit against corporate income taxes of $1.50 per thousand cubic feet of new gas storage capacity opened in Alaska during 2011-2015. The credit is limited to the lesser of $15 million or 25% the costs incurred to establish the GSF. This section sets out minimum capacity and deliverability requirements to qualify for the credit, including that the GSF must be available for use by regulated utilities and, if utilizing state land, must be in compliance with its DNR storage lease. The credit can be refunded by the state at full value if the owner does not have enough taxable income to fully utilize it.

Section 13: Sunsets on Jan. 1, 2011, the rule that limits how certain tax credits arising from activity in Cook Inlet or from producing gas for in-state use are used. This would allow a Cook Inlet explorer or producer to explore or produce elsewhere in the state and have full access to the credits it earned from its Cook Inlet activities.

Section 14: Clarifies that any native gas in a gas storage facility shall be deemed not to be produced for production tax purposes until all of the non-native gas injected into the storage facility has been withdrawn.

Section 15: Allows explorers in Cook Inlet to receive their full production tax credit in the first year rather than over two years (as in current statute).

Section 16: Makes additional statutory changes to allow explorers in Cook Inlet to receive their full production tax credit the first year rather than over two years (as in current statute).

Section 17: Adds the new Cook Inlet-related well tax credits to the section in statute dealing with audits of transferred tax credits.

Section 18: Provides a 40% credit for exploration expenses in Cook Inlet against production taxes, rather than the two-tiered 30% / 40% credit in existing statute. In addition, all well-related lease expenditures in Cook Inlet, including non-capital and non-exploration related lease expenditures, also qualify for the credit. The section also defines which expenses qualify as a "Cook Inlet well lease expenditure" to be eligible for the tax credit.

Section 19: Allows the state to use funds from the oil and gas tax credit fund to refund the tax credits issued to a GSF.

Section 20: Makes additional changes to make it easier for a company to sell its Cook Inlet exploration credits to the state. Current law requires that before a company can sell credits back to the state it must prove it has spent an amount equal to the credit in Alaska. HB 280 would eliminate that requirement for Cook Inlet exploration credits.

Section 21: Authorizes the Department of Revenue to write regulations implementing certain aspects of Section 17.

Section 22: Directs the Office of Public Advocacy for regulatory affairs at the Department of Law, when considering whether to participate in a utility rate case regarding a utility's gas supply contract before the RCA, to consider the impact to consumers if the commission rejects a utility's gas supply contract and to recognize the value of a utility holding a diversified portfolio of gas supply contracts with different pricing mechanisms in order to protect consumers from inadequate gas supplies and the risk of a single pricing mechanism.

Section 23: Immediate effective date clause.

CS FOR HOUSE BILL NO. 306(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered: 3/15/10
Referred: First Supplemental Calendar

Sponsor(s): HOUSE SPECIAL COMMITTEE ON ENERGY

A BILL

FOR AN ACT ENTITLED

"An Act declaring a state energy policy."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

LEGISLATIVE INTENT. It is the intent of the legislature that

(1) the state achieve a 15 percent increase in energy efficiency on a per capita basis between 2010 and 2020;

(2) the state receive 50 percent of its electric generation from renewable energy sources by 2025;

(3) the state work to ensure a reliable in-state gas supply for residents of the state;

(4) the power project fund (AS 42.45.010) serve as the main source of state assistance for energy projects;

(5) the state remain a leader in petroleum and natural gas production and become a leader in renewable alternative energy development.

* **Sec. 2.** AS 44.99 is amended by adding a new section to read:

Sec. 44.99.115. Declaration of state energy policy. The State of Alaska recognizes that the state's economic prosperity is dependent on available, reliable, and affordable residential, commercial, and industrial energy to supply the state's electric, heating, and transportation needs. The state also recognizes that worldwide supply and demand for fossil fuels and concerns about global climate change will affect the price of fossil fuels consumed by Alaskans and exported from the state to other markets. In establishing a state energy policy, the state further recognizes the immense diversity of the state's geography, cultures, and resource availability. Therefore, it is the policy of the state to

(1) institute a comprehensive and coordinated approach to supporting energy efficiency and conservation by

(A) encouraging statewide energy efficiency codes for new and renovated residential, commercial, and public buildings;

(B) decreasing public building energy consumption through conservation measures and energy-efficient technologies; and

(C) initiating and supporting a program to educate state residents on the benefits of energy efficiency and conservation, including dissemination of information on state and federal programs that reward energy efficiency;

(2) encourage economic development by

(A) promoting the development of renewable energy resources, including geothermal, wind, solar, hydroelectric, hydrokinetic, tidal, and biomass energy, for use by Alaskans and for export of power that is surplus to the needs of Alaska communities;

(B) promoting the development, transport, and efficient use of nonrenewable and alternative energy resources, including natural gas, coal, oil, gas hydrates, heavy oil, and nuclear energy, for use by Alaskans and for export;

(C) working to identify and assist with development of the most cost-effective, long-term sources of energy for each community

statewide;

(D) creating and maintaining a state fiscal regime that encourages private sector development of the state's energy resources;

(E) promoting the efficiency of energy used for transportation;

(3) support energy research, education, and workforce development by investing in

(A) training and education programs that will help create jobs for Alaskans and that address energy conservation, efficiency, and availability, including programs that address workforce development and workforce transition; and

(B) applied energy research and development of emerging technologies, including university programs, to achieve reductions in state energy costs and stimulate industry investment in the state;

(4) coordinate governmental functions

(A) by reviewing and streamlining regulatory processes and balancing the economic costs of review with the level of regulation necessary to protect the public interest;

(B) using one office or agency, as may be specified by law, to serve as a clearinghouse in managing the state's energy-related functions to avoid fragmentation and duplication and to increase effectiveness;

(C) by actively collaborating with federal agencies to achieve the state's energy goals and to meet national emissions, renewable energy, and energy production targets.

Energy Policy for Alaska

Presented by:
Chris Rose, Renewable Energy Alaska Project
Bill Popp, Anchorage Economic Development Corporation

The House Energy Committee
January 26, 2010

The Stakeholder Advisory Panel

- Rep. Bryce Edgmon & Rep. Charisse Millett, House Energy Committee Co-Chairs
- Adam Berg, Jeff Turner & Larry Persily, Legislative Staff
- Gwen Holdmann, Alaska Center for Energy & Power
- Robert Venables, Southeast Conference
- Scott Goldsmith, ISER
- Jason Brune, RDC
- John Davies, Alaska Cold Climate Housing Research Center
- Ralph Andersen, Bristol Bay Native Association
- Bill Popp, AEDC
- Bob Pawlowski, Denali Commission
- Denali Daniels, Denali Commission
- Caitlin Higgins, Alaska Conservation Alliance
- Stacy Schubert, Municipality of Anchorage
- Marilyn Leland, Alaska Power Authority
- Meera Kohler, Alaska Village Electric Cooperative
- Ron Miller, Energy Consultant
- Chris Rose, REAP
- Kathy Wasserman, AML

The Purpose

- To develop a statewide energy policy as the basis for a long-term vision to address Alaska's energy challenges and opportunities
- Through adopted policy, align state government in a unified set of strategic goals for the State of Alaska
- Lead to the development of a comprehensive energy plan to achieve the strategic goals of the State of Alaska

The Key Steps

1. Establish the Energy Policy
2. Develop Strategic Goals
3. Create the Plan to Achieve the Goals
4. Implement Programs and Projects

Principles Guiding the Process

- The future success of Alaska's statewide economy is tied to available, reliable, and affordable energy for:
  - Residential users
  - Commercial users
  - Industrial users
- Worldwide supply and demand for fossil fuels and concerns about global climate change will affect the price of fossil fuels in the future

The Starting Point of the Policy

- Tri-Borough Commission Energy Policy
  - Matanuska-Susitna Borough Mayor Curt Menard
  - Municipality of Anchorage Mayor Mark Begich
  - Kenai Peninsula Borough Mayor John Williams
- Established a diverse 13 member task force to develop proposed energy policy in October, 2007
- Adopted Southcentral region energy policy proposal February 7, 2008

- **The House Energy Policy Stakeholders Advisory Panel agreed that many of the principles in this policy could be applied statewide**

The Fundamentals of the Policy

- Promotes energy efficiency and conservation
- Promotes development of renewable and non-renewable energy resources
- Promotes economic development through cost-effective, long-term sources of energy for communities statewide
- Supports energy research, education, and workforce development
- Supports coordination of governmental functions and promotes streamlining of regulatory processes, avoiding duplication of effort, and overall coordination of effort by all levels of government

The Key Steps Going Forward

1. Establish the Energy Policy
2. Develop Strategic Goals
3. Adopt the Plans to Achieve the Goals
4. Implement Programs and Projects

Thank You!

Sponsor Statement – HB 306

"An act creating a state energy policy"

Creating a state energy policy is one of the first steps to meeting the state's energy current and future needs. A comprehensive energy policy in statute will serve as a blueprint for future generations of Alaskans.

The House Special Committee on Energy Co-chairs Rep. Bryce Edgmon, D-Dillingham and Rep. Charisse Millett, R-Anchorage used a unique method to draft the bill - they didn't write it.

Instead, they assembled a diverse group of Alaskans with decades of experience in energy policy to come together and write what they believed would make a good energy policy for Alaska.

Sixteen respected Alaskans participated in The House Energy Stakeholders Group:

Gwen Holdmann, Alaska Center for Energy & Power
Robert Venables, Southeast Conference
Scott Goldsmith, ISER
Jason Brune, Resource Development Council
John Davies, Alaska Cold Climate Housing Research Center
Ralph Anderson, Bristol Bay Native Association
Bill Popp, Anchorage Economic Development Council
Bob Pawlowski, Denali Commission
Denali Daniels, Denali Commission
Caitlin Higgins, Alaska Conservation Alliance
Stacy Schubert, Municipality of Anchorage
Kathie Wasserman, Alaska Municipal League
Marilyn Leland, Alaska Power Authority

Meera Kohler, Alaska Village Electric Cooperative
Ron Miller, Energy Consultant
Chris Rose, Renewable Energy Alaska Project

The result of their hard work is House Bill 306. The draft energy policy carries five core fundamental principles to guide the state moving forward:

- Promote energy efficiency and conservation
- Promote development of renewable and non-renewable energy resources
- Promote economic development through cost-effective, long-term sources of energy for communities statewide
- Support energy research, education, and workforce development
- Support coordination of governmental functions, which promotes streamlining of regulatory processes and overall coordination of efforts by all levels of government

If passed, Alaska will join many other states in having a statewide energy policy on the books.

March 11, 2010

Re: State Energy Policy

Honorable State Senators and Representatives,

I am a lifelong Alaskan, and I am in favor of the creation of a State Energy Policy. It is much needed and long overdue. Because of our unique geography and the fact that most of our utilities are not interconnected, Alaska does not fit comfortable into many federal energy programs. Consequently, it is imperative that our State-level energy structure be as efficient as possible. The creation of an office or agency to be a clearinghouse and to manage the state's diverse energy-related functions will not only be a cost saving measure that addresses any fragmentation and duplication of efforts; but it is a common-sense approach to facilitate the efficiencies needed for economic development and quality of life for Alaskans.

I do not speak for or on behalf of any organization, but I have seen how a well thought-out, synergetic stakeholder approach to issues reaps maximum benefits. One only needs to look at the current situation in regards to the Rural Sanitation issue and the creation of the Power Cost Equalization Endowment Fund addressed under the Knowles Administration. An identical approach to the energy-related issues will achieve the same affect for Alaskans no matter where they chose to live in our State. I express appreciation to each of you for your Leadership, personal commitment and Statesmanship on this issue. Quyana Cakenaq

Sincerely,

Robert L. Beans

A BILL

FOR AN ACT ENTITLED

"An Act relating to an in-state natural gas pipeline, the office of in-state gasline project coordinator, and the Joint In-State Gasline Development Team; requiring the development of an in-state natural gas pipeline plan, to be delivered to the legislature by July 1, 2011, that provides for a natural gas pipeline that is operational by December 31, 2015; directing the Joint In-State Gasline Development Team to assume responsibilities under sec. 19, ch. 14, SLA 2009; requiring expedited review and action by state agencies or entities relating to the in-state natural gas pipeline project; clarifying the purpose of the Alaska Natural Gas Development Authority; relating to definitions of certain terms that relate to a project that may be developed by the Alaska Natural Gas Development Authority; authorizing the Alaska Natural Gas Development Authority to issue bonds for energy projects; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

LEGISLATIVE FINDINGS AND PURPOSE. (a) The legislature finds that

(1) by 2018, declining oil flow through the Trans Alaska Pipeline System will seriously diminish state revenue;

(2) Cook Inlet natural gas reserves are depleting at a rate that could cause significant short-term shortages for residential and commercial gas users in Southcentral Alaska by 2013;

(3) a proposed natural gas pipeline to deliver North Slope gas reserves to the North American domestic gas pipeline grid at a connection in central Alberta will not produce revenue for the benefit of the state before 2020;

(4) the state's significant reserves of natural gas should be made available on a priority basis in the state to enhance employment opportunities, expand the state's economy, and supply a significant portion of community energy needs;

(5) the Alaska Railroad Corporation is a public corporation charged with promoting economic development in the state, enjoys unique authority, and may issue revenue bonds to finance construction of a natural gas pipeline;

(6) the Alaska Natural Gas Development Authority is studying a pipeline spur, aggregating in-state demand for natural gas, and facilitating delivery of natural gas and natural gas liquids to Alaskans; and

(7) in light of competing demands for future uses of the state's North Slope natural gas reserves, an aggressive effort involving planning, permitting, and coordination of information sharing, of necessary agreements and commitments, and commercial negotiations among interested parties is necessary for completion of construction of an in-state natural gas pipeline that will provide significant direct benefit to the people of the state at the earliest possible date.

(b) It is the purpose of sec. 4 of this Act

(1) to give general direction to the Joint In-State Gasline Development Team to plan and develop construction of a high pressure in-state natural gas pipeline sufficient to provide for the distribution of natural gas for residential and commercial purposes at locations along the pipeline route; and

(2) to direct the executive director of the Alaska Housing Finance Corporation to oversee all aspects of the project described in sec. 4 of this Act.

*** Sec. 2.** AS 18.56.086 is amended to read:

Sec. 18.56.086. Creation of subsidiaries. The corporation may create subsidiary corporations for the purpose of financing or facilitating the financing of school construction, facilities for the University of Alaska, facilities for ports and harbors, prepayment of all or a portion of a governmental employer's share of unfunded accrued actuarial liability of retirement systems, or other capital projects. **A subsidiary corporation may also be created for the purpose of planning, constructing, and financing in-state natural gas pipeline projects or for the purpose of aiding in the planning, construction, and financing of in-state natural gas pipeline projects.** A subsidiary corporation created under this section may be incorporated under AS 10.20.146 - 10.20.166. The corporation may transfer assets of the corporation to a subsidiary created under this section. A subsidiary created under this section may borrow money and issue bonds as evidence of that borrowing, and has all the powers of the corporation that the corporation grants to it. However, a subsidiary created for the purpose of financing or facilitating the financing of prepayment of a governmental employer's share of unfunded accrued actuarial liability of retirement systems may borrow money and issue bonds only if the state bond rating is the equivalent of AA- or better and subject to AS 37.15.903. **A subsidiary corporation created for the purpose of planning, constructing, and financing in-state natural gas pipeline projects or for the purpose of aiding in the planning, construction, or financing of in-state natural gas pipeline projects is exempt from AS 36.30, including AS 36.30.015(d) and (f).** Unless otherwise provided by the corporation, the debts, liabilities, and obligations of a subsidiary corporation created under this section are not the debts, liabilities, or obligations of the corporation.

*** Sec. 3.** AS 36.30.850(b) is amended by adding a new paragraph to read:

(48) a subsidiary of the Alaska Housing Finance Corporation created under AS 18.56.086 for the purpose of planning, financing, or constructing in-state natural gas pipeline projects or for the purpose of aiding in the planning, financing, or constructing of in-state natural gas pipeline projects.

* **Sec. 4.** AS 38 is amended by adding new sections to read:

Chapter 34. In-State Natural Gas Pipeline.

Sec. 38.34.010. In-state gasline project coordinator. (a) The position of in-state gasline project coordinator is created in the Office of the Governor. The Office of the Governor shall provide administrative support for the position. The position shall continue until one year after commencement of commercial operation of the in-state natural gas pipeline.

(b) The governor shall appoint an individual to the position of in-state gasline project coordinator. The coordinator is in the exempt service under AS 39.25.110. The person serving as the in-state gasline project coordinator may be removed from the position at the discretion of the governor, who shall appoint another person to the position.

(c) The in-state gasline project coordinator shall collaborate with other state agencies to coordinate and facilitate the provisions of AS 38.34.020.

Sec. 38.34.020. Expedited review and action by state agencies or entities. (a) A state agency or entity conducting a review or taking action relating to the in-state natural gas pipeline project under this chapter shall expedite the review or action in a manner consistent with the timely completion of the project.

(b) Notwithstanding any contrary provision of law, a state agency or entity may not include in any project certificate, right-of-way, permit, or other authorization a term or condition that is not required by law if the in-state gasline project coordinator determines that the term or condition would prevent or impair, in any significant respect, the expeditious construction and operation or expansion of the in-state natural gas pipeline project.

(c) Unless required by law, a state agency or entity may not add to, amend, or abrogate any certificate, right-of-way, permit, or other authorization if the in-state gasline project coordinator determines that the action would prevent or impair, in any significant respect, the expeditious construction, operation, or expansion of the in-state natural gas pipeline project.

Sec. 38.34.030. Joint In-state Gasline Development Team. (a) The Joint In-State Gasline Development Team is established in the Alaska Housing Finance

Corporation. The development team consists of five members as follows:

(1) the commissioner of transportation and public facilities, or the commissioner's designee;

(2) the chair of the board of directors of the Alaska Railroad Corporation or the chair's designee;

(3) the chief executive officer of the Alaska Natural Gas Development Authority;

(4) the in-state gasline project coordinator; and

(5) the executive director of the Alaska Housing Finance Corporation.

(b) The executive director of the Alaska Housing Finance Corporation is the chair of the development team.

(c) The development team may hire staff, enter into contracts, and exercise other powers necessary to carry out its functions. The development team shall separately account for expenditures made to carry out its functions and submit to the legislature a quarterly report of those expenditures. The development team shall also submit to each member of the legislature monthly updates on the progress of the in-state natural gas pipeline project.

Sec. 38.34.040. Duties of the development team. (a) The Joint In-State Gasline Development Team shall produce a project plan for the development of an in-state natural gas pipeline that is compatible but not competitive with the project described in and authorized by AS 41.41 or the project described in and authorized by AS 43.90. The development team shall ensure that the project plan is completed and delivered to the legislature by July 1, 2011. The project plan must specify and document how an in-state natural gas pipeline can be designed, financed, constructed, and made operational by December 31, 2015.

(b) The Joint In-State Gasline Development Team shall assume executive authority over and managerial responsibility for all activities enumerated under sec. 19, ch. 14, SLA 2009, including work previously completed, work in process, and work for which money has been encumbered but that is not completed on the effective date of this subsection.

(c) The project plan must include specific plans to coordinate and facilitate

construction, ownership, operation, and management of a natural gas pipeline serving Fairbanks, the southcentral region of the state, and other communities whenever practicable, connecting with or enhancing the existing gas pipeline system, and reaching to tidewater in the Southcentral region of the state.

(d) The development team's work product shall include an analysis of alternative possible routes and the selection of a route that, consistent with the other requirements of this section,

(1) is economically feasible;

(2) makes natural gas available to residents at the lowest possible cost;

(3) allows for connecting lines to serve industrial, residential, and utility customers along the entire route, and in other regions of the state that can be served at commercially feasible rates;

(4) uses state land and existing state highway and railroad rights-of-way to the maximum extent feasible;

(5) uses existing highway and railroad bridges, gravel sources, equipment yards, maintenance facilities, and other existing facilities and resources to the maximum extent feasible.

(e) With the intent that any project-related assets acquired or developed be available for transfer or sale to the entity best able to complete the project, the development team shall

(1) prepare plans and designs necessary for construction of the in-state natural gas pipeline project;

(2) coordinate with entities qualified to build, own, and operate the natural gas pipeline;

(3) identify, apply for, and obtain rights-of-way and other permits for the project route;

(4) work with other entities to promote gas supply and purchase contracts required for the project to be commercially viable;

(5) prepare cost estimates for the project design, construction, and operation to determine the project's economic feasibility and the projected cost of natural gas to consumers;

(6) coordinate with and, to the fullest extent possible, use existing work by other state agencies and entities before contracting for new reports and research and analysis;

(7) determine regulatory authority over the pipeline project and perform any necessary compliance requirements;

(8) identify and apply for, or support extension of, existing permits for export of Alaska natural gas if that export improves project economics and will reduce the price of natural gas to in-state consumers.

(f) Notwithstanding any other provision of law, any rights to a natural gas pipeline corridor obtained by a state agency under eminent domain may be transferred to a private entity.

(g) Notwithstanding any other provision of law, a state agency acquiring an interest in land by eminent domain may grant a permit authorizing a private person to construct, manage, and operate a gas pipeline over, under, along, across, or upon the land.

(h) In preparing the project plan required in this section, the development team may consider all aspects of the in-state natural gas pipeline project, including public, private, or joint construction alternatives, marketing of natural gas, financing alternatives for pipeline construction, procurement of natural gas from producers, maximization of local hire, opportunities for promoting value added industries, gas-to-liquids manufacturing opportunities, production and delivery of liquefied natural gas or propane to Yukon River, interior, and coastal communities, alternatives for transporting natural gas to other locations in the state, the acquisition of natural gas commitments sufficient to ensure the long-term feasibility of the in-state natural gas pipeline project, and the development of a global natural gas trading hub in the state.

(i) The Joint In-State Gasline Development Team shall take all action necessary to complete its responsibilities under this section.

Sec. 38.34.050. Cooperation and access to information. (a) Notwithstanding other laws, the Joint In-state Gasline Development Team may have access to information of all state agencies or entities, including confidential information, that may relate to the in-state natural gas pipeline or prove useful in planning, design,

construction, or operation of the pipeline. Confidential information received by the development team shall be kept confidential.

(b) All state agencies or entities shall cooperate with and, except for requests from the Alaska Gasline Inducement Act coordinator (AS 43.90.250), give priority to requests for information from the Joint In-state Gasline Development Team. The development team shall avoid duplicating studies, plans, and designs that have already been produced or otherwise obtained by other state entities.

(c) Notwithstanding any contrary provision of law, the Department of Natural Resources shall grant the Alaska Housing Finance Corporation a right-of-way lease under AS 38.35 for the gasline transportation corridor if

(1) the corporation submits a complete right-of-way lease application under AS 38.35.050;

(2) the lease application is made the subject of notice and other reasonable and appropriate publication requirements under AS 38.35.070; and

(3) the corporation agrees to be bound by the right-of-way lease covenants set out in AS 38.35.120.

(d) Notwithstanding any contrary provision of law, a right-of-way lease granted under (c) of this section is subject to AS 38.05, except that the best interest findings requirements of AS 38.05 and the permit requirements of AS 38.05.850 do not apply to a lease made under this section.

Sec. 38.34.060. Conflicts of interest. (a) If a member of the Joint In-state Gasline Development Team acquires, owns, or controls an interest, direct or indirect, in property, an organization, or a business that might be affected by the in-state natural gas pipeline project or other matter under consideration by the development team, the member shall immediately disclose the interest to the development team. The disclosure is a matter of public record and shall be included in the minutes of the first meeting of the development team held after the disclosure.

(b) The members of the development team are subject to AS 39.50 and AS 39.52.

Sec. 38.34.099. Definitions. In this chapter,

(1) "in-state natural gas pipeline" means a pipeline for transporting

natural gas that runs from the North Slope to tidewater in the state;

(2) "North Slope" means that area of Alaska lying north of 68 degrees North latitude.

*** Sec. 5.** AS 39.25.110 is amended by adding a new paragraph to read:

(43) the in-state gasline project coordinator appointed under AS 38.34.010.

*** Sec. 6.** AS 41.41.010(a) is amended to read:

(a) There is established the Alaska Natural Gas Development Authority, the purpose of which is to provide one or more of the following services and functions in order to bring natural gas from the North Slope **or other regions of the state** to market, including

(1) the acquisition and conditioning of [NORTH SLOPE] natural gas;

(2) the design and construction of the pipeline system;

(3) the operation and maintenance of the pipeline system;

(4) the design, construction, **and** operation [,] of other facilities necessary for delivering the gas to market**, including markets in the state** [AND TO SOUTHCENTRAL ALASKA]; and

(5) the acquisition of natural gas market share sufficient to ensure the long-term feasibility of [THE] pipeline system **projects** [PROJECT].

*** Sec. 7.** AS 41.41.010(d) is amended to read:

(d) The acquisition of natural gas from the North Slope **and other regions of the state, including the Alaska outer continental shelf,** and its delivery to **markets in the state for use by markets in the state or to** tidewater for shipment to market by the authority **are** [IS AN] essential government **functions** [FUNCTION] of the state.

*** Sec. 8.** AS 41.41.990(3) is amended to read:

(3) "project" means the gas transmission pipeline, together with all related property and facilities, to extend from [THE PRUDHOE BAY AREA ON] the North Slope of Alaska **or other regions of the state to a market in the state, or be available to a market in the state, and** [EITHER] to tidewater at a point on Prince William Sound [AND THE SPUR LINE FROM GLENNALLEN TO THE SOUTHCENTRAL GAS DISTRIBUTION GRID] or [TO TIDEWATER AT A

POINT ON] Cook Inlet, and includes planning, design, and construction of the pipeline and facilities as described in AS 41.41.010(a)(1) - (5).

*** Sec. 9.** AS 41.41.990 is amended by adding a new paragraph to read:

(4) "North Slope" means that part of the state that lies north of 68 degrees North latitude and includes the Brooks Range foothills.

*** Sec. 10.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITIONAL PROVISIONS. (a) In discharging its obligations, the Joint In-State Gasline Development Team shall

(1) seek letters of intent from buyers and sellers of natural gas to ship gas using the facilities of the project and, from information obtained, by February 15, 2011, define the project parameters that would allow the project to be commercially viable;

(2) seek letters of interest from private pipeline construction and operating companies to develop the project; the work under this paragraph should be initiated between November 15, 2010, and shall be completed by March 15, 2011;

(3) prepare and submit to the governor and the presiding officer of each house of the legislature, by December 15, 2010, any initial legislation necessary to advance the project;

(4) prepare and submit a report at each of the dates set out in (1) - (3) of this subsection to the governor, the speaker of the house of representatives, and the president of the senate.

(b) The parties having responsibility for contracts, permit and acquisition applications, and studies in progress on the effective date of this Act initiated or entered into by the Office of the Governor or a state agency that relate to an in-state natural gas pipeline shall transfer those obligations and initiatives to the Alaska Housing Finance Corporation. Transfer of those obligations and initiatives may not be unreasonably delayed. If the corporation forms a subsidiary under AS 18.56.086 for the purpose of planning, constructing, and financing in-state natural gas pipeline projects or for aiding those projects, the corporation shall transfer the obligations and initiatives to its subsidiary.

*** Sec. 11.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ALASKA NATURAL GAS DEVELOPMENT AUTHORITY: LEGISLATIVE AUTHORIZATION AND APPROVAL OF BONDS FOR NATURAL GAS PROJECTS TO ENSURE ENERGY SUFFICIENCY. (a) Subject to (b) of this section, the Alaska Natural Gas Development Authority is authorized to issue bonds under the power granted to it in AS 41.41.300 to acquire a gas supply, develop the Cook Inlet and Fairbanks markets, and plan, permit, and design gas transmission systems to mitigate gas shortfalls, the effect on consumers, and the economy of high cost energy, and ensure energy sufficiency for Alaskans. The maximum principal amount of bonds that the Alaska Natural Gas Development Authority may issue under this section is $250,000,000. The Alaska Natural Gas Development Authority may issue the bonds in a single issuance or in several issuances, without limitation as to number of issuances or timing, and as the Alaska Natural Gas Development Authority determines best furthers the purpose of financing the projects described in this section. The Alaska Natural Gas Development Authority shall negotiate with interested parties and shall enter into agreements with interested parties to provide revenue sufficient to accomplish the purposes described in this subsection.

(b) Unless the issuance is approved under this subsection by law, bonds may not be issued under (a) of this section without the prior written approval of the Legislative Budget and Audit Committee. If the Legislative Budget and Audit Committee approves or fails to approve the issuance of bonds, the committee shall notify the Alaska Natural Gas Development Authority and all members of the legislature in writing. On or before the fifth day of the next session that convenes after the day notice is received by the Alaska Natural Gas Development Authority, the authority may request the legislature to approve or disapprove the bond issue by law.

(c) This section constitutes the approval required by AS 41.41.320 for the issuance of the bonds described in this section.

*** Sec. 12.** This Act takes effect immediately under AS 01.10.070(c).

PASSED

Amendment #1

Offered in the Senate

By Senator McGuire

To: SCS CSHB 369 (RES), Draft Version "W"

On page 5, line 20 following "natural gas pipeline" delete:

> "that is compatible but not competitive with the project described in and authorized by AS 41.41 or the project described in and authorized by AS 43.90"

On page 2, following line 31, insert new subsection:

> "(2) to give general direction to the Joint In-State Gasline Development Team that, to the maximum extent practicable, the plan for development of an in-state natural gas pipeline required under AS 38.34.040 is compatible but not competitive with the projects described in AS 41.41 and AS 43.90; and"

Renumber accordingly.

SPEAKER OF THE HOUSE

SECTIONAL ANALYSIS

COMMITTEE SUBSTITUTE FOR HOUSE BILL 369 (FIN) am
(Draft Version 1527\W)

(Changes incorporated into 26-LS1527\W are highlighted and in bold)

"An Act relating to an in-state natural gas pipeline, the office of in-state gasline project ***coordinator****, the Joint In-State Gasline Development Team; requiring the development of an in-state natural gas pipeline plan, to be delivered to the legislature by July 1, 2011, that provides for a* ***natural gas pipeline*** *that is operational by December 31, 2015; directing the Joint In-State Gasline Development Team to assume responsibilities under sec. 19, ch. 14, SLA 2009; requiring expedited review and action by state agencies or entities relating to the in-state natural gas pipeline project;* ***clarifying the purpose of the Alaska Natural Gas Authority; relating to definitions of certain terms that relate to a project that may be developed by the Alaska Natural Gas Development Authority; authorizing the Alaska Natural Gas Development Authority to issue bonds for energy projects;*** *and providing for an effective date."*

Section 1: Adds a new section to uncodified law. Legislative Findings and Purpose.

Section 2: Adds a new subsection to the bill by amending AS 18.56.086, Creation of subsidiaries. Allows AHFC to create a subsidiary within the corporation to plan, construct and finance an in-state gasline or to aid in planning, construction or financing of an in-state gasline. Exempts the subsidiary from Title 36, Public Contracts and AS 36.30.015 (d) and (f), Executive branch agencies.

Section 3: Adds a new subsection to AS 36.30.850(b), Application of this chapter. Adds a subsidiary of AHFC created under Section 2 to the list of those agencies or entities of which AS 36 does not apply.

Section 4: Adds a new chapter, Chapter 34: In-State Natural Gas Pipeline, to AS 38, Public Land.

Sec. 38.34.010. In-state gasline project coordinator. (a) Creates the position of in-state gasline project **coordinator** within the Governor's Office. This position will continue until one year after commercial operation of the in-state natural gas pipeline begins. (b) The Governor appoints

Representative_Mike_Chenault@legis.state.ak.us

an individual to the position of an in-state gasline **coordinator** and may be removed at the Governor's discretion. (c) Describes the duties of the in-state gasline project **coordinator who is responsible for collaborating with other state agencies to coordinate and facilitate the provisions of section 4 of this bill. (Deletes Subsections 2 and 3.)**

Sec. 38.34.020. Expedited review and action by state agencies or entities. (a) States that any state agency or entity conducting and taking action relating to the in-state gasline shall be expedited. (b) A state agency or entity may not include in any project certificate, right of way, permit or other authorization issued to a licensee a term or condition that is not required by law if the in-state project **coordinator** determines the term or condition would prevent or impair the expeditious construction and operation or expansion of the in-state gasline. (c) A state agency or entity may not, unless required by law, amend or abrogate any certificate, right of way, permit or other authorization issued to a licensee if the project **coordinator** determines the action would prevent or impair the expeditious construction and operation or expansion of the in-state gasline.

Sec. 38.34.030. Joint In-state Gasline Development Team. (a) Establishes the Joint In-state Gasline Development Team in the **Alaska Housing Finance Corporation**. The team consists of the commissioner of the Department of Transportation and Public Facilities or designee, the **chair of the board of directors** of the Alaska Railroad Corporation or the **chair's** designee, the chief executive officer of the Alaska Natural Gas Development Authority, the in-state gasline project **coordinator** and the chief executive officer of the Alaska Housing Finance Corporation. (b) Names the Alaska Housing Finance Corporation's chief executive officer as chair. (c) Allows the development team to hire staff, enter into contracts and exercise other powers to carry out its functions. **The development team is to separately account for expenditures and submit a quarterly report of expenditures to the legislature. The development team is too also submit monthly reports to the legislature on the progress of the in-state gasline project.**

Sec. 38.34.040. Duties of the Development Team. (a) **Produce** a project plan for the development of an in-state gasline **that is compatible but not competitive with an ANGDA project (AS 41.41) or the AGIA project (AS 43.90)** and that the project plan is completed and delivered to the legislature by July 1, 2011. The project plan must specify and document how an in-state gasline can be designed, financed, constructed and made operational by December 31, 2015. (b) The Joint In-State Gasline Development Team is to assume all executive authority over and managerial responsibility for all activities enumerated under sec. 19, ch. 14, SLA 2009, including work previously completed, work in process, and work for which money has been encumbered but that is not completed on the effective date of this subsection. (c) Describes specific plans that are to be included within the project plan for an in-state gasline that will serve Fairbanks, the Southcentral region of the state, and other communities whenever practicable, connecting with or enhancing the existing gas pipeline system, and reaching to tidewater. (d) The development team's work product is to include an analysis of alternative possible routes and select a route that is consistent with the following requirements: (1) is the most economical, (2) will provide gas to residents at a reasonable cost, (3) allows for connecting lines to serve industrial, residential and utility customers along the entire route and in other regions of the state that can be served at commercially feasible rates, (4) uses state land and existing state highway and railroad rights of way to the maximum extent feasible, (5) uses existing highway and railroad

bridges, gravel pits equipment yards and maintenance facilities and other existing facilities and resources to the maximum extent feasible. (e) With the intent that any project-related assets acquired or developed be available for transfer or sale to the entity best able to complete the project, the development team is to: (1) prepare plans and designs necessary for the construction of the in-state gasline; (2) coordinate with entities qualified to build, own and operate the gasline; (3) identify, apply for and obtain rights-of-way and other permits for the project route; (4) work with other entities to promote gas supply and purchase contracts required for the project to be commercially viable; (5) prepare cost estimates for project design, construction and operation to determine the project's feasibility and the projected cost of natural gas to consumers; (6) coordinate with and use, to the fullest extent, possible existing work by other state agencies and entities before contracting for new reports and research and analysis; (7) determine regulatory authority over the pipeline project and perform any necessary compliance requirements; (8) identify and apply for, or support extension of, existing permits for export of Alaska natural gas if that export improves project economics and will reduce the price of natural gas to in-state consumers. (f) Any rights to a gasline corridor obtained by a state agency under eminent domain may be transferred to a private entity. (g) Allows a state agency acquiring interest in land by eminent domain to grant a permit authorizing a private person to construct, manage and operate a gas pipeline on that land. (h) Describes the various aspects of the in-state gasline project the development team may consider. (i) States the development team is to take all action necessary to complete its responsibilities.

Sec. 38.34.050. Cooperation and access to information. (a) States the development team may have access to a state entity's information to include confidential information that may relate to the in-state gasline or prove useful in planning, design, construction or operation of the gasline. Confidential information received by the development team shall be kept confidential. (b) All state agencies are to cooperate and give priority to requests for information from the Development Team. The Development Team is to avoid duplicating studies, plans, and designs that have already been produced or otherwise obtained by state entities. **(c) DNR is to grant AHFC a right of way lease under AS 38.35 (Right of Way Leasing Act) for the gasline transportation corridor if: (1) the corporation submits a right of way application under AS 38.35.050 (Applications for right of way leases); (2) the lease application is made the subject of notice and other reasonable and appropriate publication requirements under AS 38.35.070 (Notice of application); and the corporation agrees to be bound by the right of way lease covenants set out in AS 38.35.120 (Covenants required to be included in the lease). (d) A right of way lease granted under (c) of this section is subject to AS 38.05 (Alaska Land Act) except the best interest findings requirements of AS 38.05 and the permit requirements of AS 38.05.850 (Permits) do not apply to a lease made under this section.**

Sec. 38.34.060. Conflicts of interest. (a) If a member of the development team acquires, owns or controls a direct or indirect interest in property, an organization or business that might be affected by the in-state gasline project or other matters under consideration by the Development Team shall immediately disclose the interest to the development team. This disclosure is part of the public record and shall be included in the minutes of the first meeting of the development team held after the disclosure. (b) Members of the development team are subject to AS 39.50 (Public Official Disclosure) and AS 39.52 (Alaska Executive Branch Ethics Act).

Sec. 38.34.099. Definitions. Defines the in-state natural gas pipeline and the North Slope.

Section 5: Amends AS 39.25.110, Exempt service. Adds the in-state gasline project coordinator to the exempt service list.

(Sections 6, 7, 8, 9 and 11 are taken from HB 44)

Section 6: Amends AS 41.41.010(a), Establishment of the authority. Adds language clarifying that ANGDA may bring natural gas from other regions of the state and not just the North Slope. Also clarifies that gas may be delivered to markets within the state and may include more than one pipeline project.

Section 7: Amends AS 41.41.010(d), Establishment of the authority. Expands the acquisition of natural gas to include other regions of the state to include the Alaska outer continental shelf and may be delivered to markets within the state.

Section 8: Amends AS 41.41.990(3), Definitions. Amends the definition of project to include other regions of the state to a market in the state or be available to markets within the state.

Section 9: Adds a new paragraph to AS 41.41.990 describing the North Slope to mean that part of the state that lies north of 68 degrees North latitude to include the Brooks Range foothills.

Section 10: New section to uncodified law, Transitional Provisions. (a) The development team shall: (1) seek letters of intent from buyers and sellers of natural gas to ship gas using the facilities of the project by February 15, 2011, and define the project parameters that would allow the project to be commercially viable; (2) seek letters of interest from private pipeline construction and operating companies to develop the project and should be initiated between November 15, 2010 and completed by March 15, 2011; (3) prepare and submit to the Governor and the presiding officer of each body of the legislature any initial legislation necessary to advance the project by December 15, 2010; (4) prepare and submit a report to the governor and the presiding officers of each body of the legislature at the dates established in 1 through 3 of this subsection. (b) The parties having responsibility for contracts, permits and acquisition applications and studies in progress on the effective date of this act initiated or entered into by the Governor or state agencies shall transfer these obligations and initiatives may not be unreasonably delayed and IF AHFC forms a subsidiary, these obligations and initiatives shall be transferred to the subsidiary.

Section 11: New section to uncodified law. Gives pre-authorization to the Alaska Natural Gas Development Authority to issue up to $250 million in bonds in order to acquire a gas supply, develop the Cook Inlet and Fairbanks markets, and plan, permit and design gas transmission systems to mitigate gas shortfalls, the impact on consumers and the economy of high cost energy and ensure energy sufficiency for Alaskans. ANGDA must receive approval from the Legislative Budget and Audit Committee prior to issuing any bonds.

Section 12: Immediate effective date.

4767

Sec. 38.35.050. Applications for right-of-way leases.

(a) A person or persons desiring to own a pipeline which is proposed to be located in whole or in part on state land, shall apply for a noncompetitive right-of-way lease of the state land.

(b) Applications under (a) of this section shall be made in a form and manner prescribed by regulation, and shall include any and all data, information, plans, and exhibits which the commissioner determines are necessary to prepare the analysis required by AS 38.35.080 and to make a decision under AS 38.35.100.

(c) Any amendment to an application filed under this section that constitutes a substantial change in the application is subject to all provisions of this chapter applying to an original application. For purposes of this subsection,

(1) an amendment constitutes a substantial change in the application only if the amendment proposes

(A) a net increase in the amount of state acreage to be leased for the right-of-way that exceeds by at least 10 percent the amount of the acreage in the applicant's original application;

(B) a change in the design of the pipeline that would use less effective environmental or safety mitigation measures or less advanced technology than proposed in the original application; or

(C) a fundamental change in the general route, which would include the origin or terminus, as set out in the original application;

(2) in calculating the percentage increase in acreage under (1)(A) of this subsection, each of the following must be excluded:

(A) the acreage attributable to an amendment of a right-of-way originally issued by the federal government, whether administered by the state or the federal government; and

(B) land subject to an existing federal right-of-way grant held by the applicant that is transferred to the state for its administration.

(d) All persons owning or planning to own an interest in a pipeline or proposed pipeline subject to a lease must join in the application under (a) of this section. Any person employed by the lessee in operating the pipeline is bound by the covenants of the lease applicable to functions within the scope of employment as if the person were an applicant under the lease and the state may enforce any breach of a covenant directly against an operator who is not in compliance with the covenant.

History -

(Sec. 1 ch 72 SLA 1972; am Sec. 5 ch 3 FSSLA 1973; am Sec. 1 ch 26 SLA 2001)

Amendment Notes -

The 2001 amendment, effective May 10, 2001, in subsection (c) added "For purposes of this subsection," at the end of the introductory language, added paragraphs (1) and (2), and made a stylistic change.

Sec. 43.90.250. Alaska Gasline Inducement Act coordinator.

(a) There is created in the Office of the Governor the position of Alaska Gasline Inducement Act coordinator. Administrative support for the position shall be provided by the Office of the Governor. The position shall continue until one year after commencement of commercial operations of the project.

(b) The governor shall appoint a person to the position of Alaska Gasline Inducement Act coordinator. The individual serving as the Alaska Gasline Inducement Act coordinator may be removed from the position at the discretion of the governor.

History -

(Sec. 1 ch 22 SLA 2007)

Sec. 43.90.260. Expedited review and action by state agencies.

(a) A review conducted and action taken by a state agency relating to the project shall be expedited in a manner consistent with the completion of the necessary approvals in accordance with this chapter.

(b) Notwithstanding any contrary provision of law, a state agency may not include in any project certificate, right-of-way, permit, or other authorization issued to the licensee a term or condition that is not required by law if the coordinator determines that the term or condition would prevent or impair in any significant respect the expeditious construction and operation or expansion of the project.

(c) Unless required by law, a state agency may not add to, amend, or abrogate any certificate, right-of-way, permit, or other authorization issued to a licensee if the coordinator determines that the action would prevent or impair in any significant respect the expeditious construction, operation, or expansion of the project.

History -

(Sec. 1 ch 22 SLA 2007)

Sec. 38.35.070. Notice of application.

Upon receiving an application under AS 38.35.050, the commissioner shall

(1) cause notice of it to appear in a daily newspaper of general circulation published in the vicinity of the location of the proposed pipeline, the notice to include:

(A) a general description of the land involved;

(B) a summary of the substance of the application;

(2) file copies of the application with each coordinate agency;

(3) furnish at cost copies of a notice or application to persons requesting them; and

(4) provide other publication and notice the commissioner considers reasonable and appropriate to inform the public of the application.

History -

(Sec. 1 ch 72 SLA 1972; am Sec. 7 ch 3 FSSLA 1973)

Sec. 18.56.086. Creation of subsidiaries.

The corporation may create subsidiary corporations for the purpose of financing or facilitating the financing of school construction, facilities for the University of Alaska, facilities for ports and harbors, prepayment of all or a portion of a governmental employer's share of unfunded accrued actuarial liability of retirement systems, or other capital projects. A subsidiary corporation created under this section may be incorporated under AS 10.20.146 - 10.20.166. The corporation may transfer assets of the corporation to a subsidiary created under this section. A subsidiary created under this section may borrow money and issue bonds as evidence of that borrowing, and has all the powers of the corporation that the corporation grants to it. However, a subsidiary created for the purpose of financing or facilitating the financing of prepayment of a governmental employer's share of unfunded accrued actuarial liability of retirement systems may borrow money and issue bonds only if the state bond rating is the equivalent of AA- or better and subject to AS 37.15.903. Unless otherwise provided by the corporation, the debts, liabilities, and obligations of a subsidiary corporation created under this section are not the debts, liabilities, or obligations of the corporation.

History -

(Sec. 7 ch 130 SLA 2000; am Sec. 1 ch 7 SLA 2006; am Sec. 3 ch 35 SLA 2008)

Cross References -

For sale to AHFC of right to receive revenue from the settlement of Alaska v. Philip Morris, Inc., No. 1JU-97-915 Civ. (First Jud. Dist. at Juneau), and special bonding provisions for AHFC or a subsidiary created under this section, see Sec. 9 and 10, ch. 130, SLA 2000 in the 2000 Temporary and Special Acts, Sec. 3, ch. 96, SLA 2001 in the 2001 Temporary and Special Acts, and Sec. 1 and 2, ch. 35, SLA 2006 in the 2006 Temporary and Special Acts.

Amendment Notes -

The 2006 amendment, effective July 1, 2006, added "or other capital projects" at the end of the first sentence, and make a corresponding stylistic change.

The 2008 amendment, effective May 23, 2008, inserted "prepayment of all or a portion of a governmental employer's share of unfunded accrued actuarial liability of retirement systems" in the first sentence, and inserted the next-to-last sentence.

Sec. 38.05.850. Permits.

(a) The director, without the prior approval of the commissioner, may issue permits, rights-of-way, or easements on state land for roads, trails, ditches, field gathering lines or transmission and distribution pipelines not subject to AS 38.35, telephone or electric transmission and distribution lines, log storage, oil well drilling sites and production facilities for the purposes of recovering minerals from adjacent land under valid lease, and other similar uses or improvements, or revocable, nonexclusive permits for the personal or commercial use or removal of resources that the director has determined to be of limited value. The commissioner, upon recommendation of the director, shall establish a reasonable rate or fee schedule to be charged for these uses, subject to the exception for nonprofit cooperative associations specified in (b) of this section. In the granting, suspension, or revocation of a permit or easement of land, the director shall give preference to that use of the land that will be of greatest economic benefit to the state and the development of its resources. However, first preference shall be granted to the upland owner for the use of a tract of tideland, or tideland and contiguous submerged land, that is seaward of the upland property of the upland owner and that is needed by the upland owner for any of the purposes for which the use may be granted.

(b) The fee charged for a right-of-way approved under (a) of this section shall be waived by the commissioner if the right-of-way is for a transmission or distribution line established by a nonprofit cooperative association organized under AS 10.25 for the purpose of supplying electric energy and power, or telephone service, to its members, and the waiver is considered by the commissioner to be in the best interests of the state.

(c) If the director determines, by evaluation of the nature and duration of the intended use, that an easement or right-of-way issued under this section will not be functionally revocable, the director shall provide public notice before issuing the easement or right-of-way.

Sec. 38.35.120. Covenants required to be included in lease.

(a) A noncompetitive lease of state land for a right-of-way for an oil or natural gas pipeline valued at $1,000,000 or more may be granted only upon the condition that the lessee expressly covenants in the lease, in consideration of the rights acquired by it under the lease, that

(1) it assumes the status of and will perform all of its functions undertaken under the lease as a common carrier and will accept, convey, and transport without discrimination crude oil or natural gas, depending on the kind of pipeline involved, delivered to it for transportation from fields in the vicinity of the pipeline subject to the lease throughout its route both on state land obtained under the lease and on the other land; it will accept, convey, and transport crude oil or natural gas without unjust or unreasonable discrimination in favor of one producer or person, including itself, as against another but will take the crude oil or natural gas, depending on the kind of pipeline involved, delivered or offered, without unreasonable discrimination, that the Regulatory Commission of Alaska shall, after a full hearing with due notice to the interested parties and a proper finding of facts, determine to be reasonable in the performance of its duties as a common carrier; however, a lessee that owns or operates a natural gas pipeline

(A) subject to regulation either under the Natural Gas Act (15 U.S.C. 717 et seq.) of the United States or by the state or political subdivisions with respect to rates and charges for the sale of natural gas, is, to the extent of that regulation, exempt from the common carrier requirement in this paragraph;

(B) that is a North Slope natural gas pipeline (i) is required to operate as a common carrier only with respect to the intrastate transportation of North Slope natural gas, as that term is defined in AS 42.06.630, and (ii) is not required to operate as a common carrier as to a liquefied natural gas facility or a marine terminal facility associated with the pipeline, and is not otherwise required to perform its functions under the lease as a common carrier; for purposes of this subparagraph, "North Slope natural gas pipeline" means all the facilities of a total system of pipe, whether owned or operated under a contract, agreement, or lease, used by a carrier for transportation of North Slope natural gas, as defined by AS 42.06.630, for delivery, for storage, or for further transportation, and including all pipe, pump, or compressor stations, station equipment, tanks, valves, access roads, bridges, airfields, terminals and terminal facilities, including docks and tanker loading facilities, operations control centers for both the upstream part of the pipeline and the terminal, tanker ballast treatment facilities, fire protection system, communication system, and all other facilities used or necessary for an integral line of pipe, taken as a whole, to carry out transportation, including an extension or enlargement of the line;

(2) it will interchange crude oil or natural gas, depending on the kind of pipeline involved, with each like common carrier and provide connections and facilities for the interchange of crude oil or natural gas at every locality reached by both pipelines when the necessity exists, subject to rates and regulations made by the appropriate state or federal regulatory agency;

(3) it will maintain and preserve books, accounts, and records and will make those reports that the state may prescribe by regulation or law as necessary and appropriate for purposes of administration of this chapter;

(4) it will accord at all reasonable times to the state and its authorized agents and auditors the right of access to its property and records, of inspection of its property, and of examination and copying of records;

(5) it will provide connections, as determined by the Regulatory Commission of Alaska under AS 42.06.340, to facilities on the pipeline subject to the lease, both on state land and other land in the state, for the purpose of delivering crude oil or natural gas, depending on the kind of pipeline involved, to persons (including the state and its political subdivisions) contracting for the purchase at wholesale of crude oil or natural gas transported by the pipeline when required by the public interest;

(6) it shall, notwithstanding any other provision, provide connections and interchange facilities at state expense at such places the state considers necessary if the state determines to take a portion of its royalty or taxes in oil or natural gas;

(7) it will construct and operate the pipeline in accordance with applicable state laws and lawful regulations and orders of the Regulatory Commission of Alaska;

(8) it will, at its own expense, during the term of the lease,

(A) maintain the leasehold and pipeline in good repair;

(B) promptly repair or remedy any damage to the leasehold;

(C) promptly compensate for any damage to or destruction of property for which the lessee is liable resulting from damage to or destruction of the leasehold or pipeline;

(9) it will not transfer, assign, or dispose of in any manner, directly or indirectly, or by transfer of control of the carrier corporation, its interest in a right-of-way lease, or any rights under the lease or any pipeline subject to the lease to any person other than another owner of the pipeline (including subsidiaries, parents, and affiliates of the owners), except to the extent that the commissioner, after consideration of the protection of the public interest (including whether the proposed transferee is fit, willing, and able to perform the transportation or other acts proposed in a manner that will reasonably protect the lives, property, and general welfare of the people of Alaska), authorizes; the commissioner shall not unreasonably withhold consent to the transfer, assignment, or disposal;

(10) it will file with the commissioner a written appointment of a named permanent resident of the state to be its registered agent in the state and to receive service of notices, regulations, decisions, and orders of the commissioner; if it fails to appoint an agent for service, service may be made by posting a copy in the office of the commissioner, filing a copy in the office of the lieutenant governor, and mailing a copy to the lessee's last known address;

(11) the applicable law of this state will be used in resolving questions of interpretation of the lease;

(12) the granting of the right-of-way lease is subject to the express condition that the exercise of the rights and privileges granted under the lease will not unduly interfere with the

management, administration, or disposal by the state of the land affected by the lease, and that the lessee agrees and consents to the occupancy and use by the state, its grantees, permittees, or other lessees of any part of the right-of-way not actually occupied or required by the pipeline for the full and safe utilization of the pipeline, for necessary operations incident to land management, administration, or disposal;

(13) it will be liable to the state for damages or injury incurred by the state caused by the construction, operation, or maintenance of the pipeline and it will indemnify the state for the liabilities or damages;

(14) it will procure and furnish liability and property damage insurance from a company licensed to do business in the state or furnish other security or undertaking upon the terms and conditions the commissioner considers necessary if the commissioner finds that the net assets of the lessee are insufficient to protect the public from damage for which the lessee may be liable arising out of the construction or operation of the pipeline.

(b) For a right-of-way lease granted under this chapter for an oil or natural gas pipeline valued at $1,000,000 or more to be valid and of legal effect, it must contain the terms required to be inserted under the provisions of AS 38.35.110 - 38.35.140. An oil or natural gas pipeline right-of-way lease granted under this chapter that does not contain the required terms is null and void and without legal effect and does not vest any interest in state land or any authority in the carrier granted the lease.

(c) The commissioner may insert in any right-of-way lease other reasonable provisions and conditions required by the public interest.

(d) The lease will also contain terms and conditions that are reasonably necessary to obligate the lessee, to the extent reasonably practicable, to

(1) prevent conflicts with other existing uses of the land involving a superior public interest;

(2) protect state and private property interests;

(3) prevent any significant adverse environmental impact, including but not limited to the erosion of the surface of the land, and damage to fish and wildlife and their habitat;

(4) restore and revegetate during the term and at termination of the lease; and

(5) protect the interests of individuals living in the general area of the right of way who rely on the fish, wildlife, and biotic resources of the area for subsistence purposes.

(e) In the event the commissioner proposes to offer a lease or leases to two or more lessees for the same pipeline, the commissioner may include terms in the lease or leases which establish the limit of the obligations and liabilities of each lessee arising under this chapter or under the lease or leases.

History -

(Sec. 1 ch 72 SLA 1972; am Sec. 11 ch 3 FSSLA 1973; am Sec. 2, 3 ch 110 SLA 1981; am Sec. 69 ch 59 SLA 1982; am Sec. 1 ch 56 SLA 2000; am Sec. 15 ch 22 SLA 2001)

Revisors Notes -

Former (f) of this section was renumbered as AS 38.35.122 in 1984.

In 1999, in paragraphs (a)(1), (a)(5), and (a)(7) "Regulatory Commission of Alaska" was substituted for "Alaska Public Utilities Commission" in accordance with Sec. 30(a), ch. 25, SLA 1999.

Amendment Notes -

The 2000 amendment, effective August 9, 2000, added subparagraph (a)(1)(B) and made stylistic changes.

The 2001 amendment, effective May 10, 2001, in paragraph (a)(1) moved the language beginning "it will accept" and ending "as a common carrier" from the end of subparagraph (a)(1)(A) to near the end of the introductory language.

40 SLA 1976)

Sec. 36.30.015. Executive branch agencies.

(a) The commissioner of transportation and public facilities may delegate to another agency the authority to contract for construction. Before delegating authority to an agency under this subsection, the commissioner of transportation and public facilities shall make a written determination that the agency is capable of implementing the delegated authority. Notwithstanding delegation of authority under this subsection, contracts for construction are governed by this chapter and regulations adopted by the commissioner of administration under this chapter.

(b) The commissioner of administration may delegate to an agency the authority to contract for and manage services, professional services, and supplies. Notwithstanding delegation of authority under this subsection, an agency's exercise of the authority is governed by this chapter and regulations adopted by the commissioner under this chapter. Before delegating authority to an agency under this subsection, the commissioner shall make a written determination that the agency is capable of implementing the delegated authority.

(c) [Repealed, Sec. 48 ch 137 SLA 1996].

(d) An agency may not contract for the services of legal counsel without the approval of the attorney general. An agency may not contract for the services of a hearing officer or administrative law judge for an administrative, quasi-judicial hearing without the approval of the attorney general and the chief administrative law judge of the office of administrative hearings (AS 44.64.010).

(e) The board of directors of the Alaska Railroad Corporation and the board of directors of the Alaska Aerospace Corporation shall adopt procedures to govern the procurement of supplies, services, professional services, and construction. The procedures must be substantially equivalent to the procedures prescribed in this chapter and in regulations adopted under this chapter. Notwithstanding the other provisions of this subsection, the Alaska Railroad Corporation and the Alaska Aerospace Corporation shall comply with AS 36.30.170(b), and, when the Department of Transportation and Public Facilities authorizes the Alaska Railroad Corporation to perform construction work instead of the Department of Transportation and Public Facilities, the Alaska Railroad Corporation shall use competitive sealed bidding or competitive sealed proposals under AS 36.30.100 - 36.30.270 to procure the supplies, services, professional services, and construction services necessary for the work and, to ensure the state obtains the lowest cost for the project, may submit a bid or proposal for the work.

(f) The board of directors of the Alaska Housing Finance Corporation, notwithstanding AS 18.56.088, and the board of directors of the Knik Arm Bridge and Toll Authority under AS 19.75.111, shall adopt regulations under AS 44.62 (Administrative Procedure Act) and the board of trustees of the Alaska Retirement Management Board shall adopt regulations under AS 37.10.240 to govern the procurement of supplies, services, professional services, and construction for the respective public corporation and board. The regulations must reflect competitive bidding principles and provide vendors reasonable and equitable opportunities to participate in the procurement process and must include procurement methods to meet

emergency and extraordinary circumstances. Notwithstanding the other provisions of this subsection, the Alaska Housing Finance Corporation, the Knik Arm Bridge and Toll Authority, and the Alaska Retirement Management Board shall comply with AS 36.30.170(b).

(g) The Department of Transportation and Public Facilities shall adopt regulations to manage the procurement of supplies, services, professional services, and construction for the repair, maintenance, and reconstruction of vessels, docking facilities, and passenger and vehicle transfer facilities of the Alaska marine highway system. The regulations must be based on principles of competitive procurement consistent with this chapter to satisfy the special requirements of the Alaska marine highway system as determined by the Department of Transportation and Public Facilities.

(h) The board of directors of the Alaska Seafood Marketing Institute shall adopt procedures to govern the procurement of supplies, services, and professional services. The procedures must be similar to the procedures prescribed in this chapter and in regulations adopted under this chapter, except that the Alaska Seafood Marketing Institute shall comply with AS 36.30.170(b).

(i) Notwithstanding (e) of this section and the authority to delegate under (a) of this section, the Alaska Railroad Corporation, rather than the Department of Transportation and Public Facilities, shall perform signalization and flagging work, may perform the signalization and flagging work by itself or by using contractors, and, if it decides to use contractors for the work, it shall obtain the contractors by using its procurement procedures adopted under (e) of this section.

(j) Notwithstanding the other provisions of this chapter, when a project of the Department of Transportation and Public Facilities includes construction of rails, ties, or ballast for railroad tracks used by the Alaska Railroad Corporation, the Department of Transportation and Public Facilities may enter into an agreement with the Alaska Railroad Corporation for the Alaska Railroad Corporation to perform the work, and the Alaska Railroad Corporation may perform the work itself without procuring a contractor to provide the supplies, services, professional services, or construction services necessary for the work.

History -

(Sec. 2 ch 106 SLA 1986; am Sec. 8, 9 ch 30 SLA 1990; am Sec. 11 ch 168 SLA 1990; am Sec. 6 ch 88 SLA 1991; am Sec. 8 ch 31 SLA 1992; am Sec. 2 ch 94 SLA 1992; am Sec. 111 ch 4 FSSLA 1992; am Sec. 1 ch 102 SLA 1995; am Sec. 2 - 4, 48 ch 137 SLA 1996; am Sec. 1, 2 ch 73 SLA 1998; am Sec. 2 ch 77 SLA 2003; am Sec. 51 ch 163 SLA 2004; am Sec. 1 ch 177 SLA 2004; am Sec. 54 ch 9 FSSLA 2005)

Revisors Notes -

In 2003, in subsection (f), "AS 19.75.111" was substituted for "AS 44.90.111" to reflect the 2003 renumbering of AS 44.90.111.

In 2009, under Sec. 2, ch. 60, SLA 2009, in this section "Alaska Aerospace Corporation" was substituted for "Alaska Aerospace Development Corporation".

Amendment Notes -

The 2003 amendment, effective September 10, 2003, in subsection (f) inserted "and the board of directors of the Knik Arm Bridge and Toll Authority under AS 44.90.111," in the first sentence and ", the Knik Arm Bridge and Toll Authority," in the last sentence.

The first 2004 amendment, effective October 24, 2004, added subsection (j).

The second 2004 amendment, effective July 1, 2005, added the last sentence to subsection (d).

The 2005 amendment, effective July 28, 2005, in subsection (f) substituted "Alaska Retirement Management Board" for "Alaska State Pension Investment Board" in the first and last sentences.

Editors Notes -

Under Sec. 146, ch. 9, FSSLA 2005, the 2005 amendment of subsection (f) of this section made by ch. 9, FSSLA 2005, is retroactive to July 1, 2005.

Decisions -

Outside services of counsel. - The fact that the legislature provided a mechanism in this section for state agencies to procure personal services contracts demonstrates that the legislature contemplated retention of the services of counsel outside of the Department of Law. State v. Breeze, 873 P.2d 627 (Alaska Ct. App. 1994).

offerors of the intent to enter into a contract through competitive sealed proposals.

Sec. 36.30.850. Application of this chapter.

(a) This chapter applies only to contracts solicited or entered into after January 1, 1988, unless the parties agree to its application to a contract solicited or entered into before that date.

(b) This chapter applies to every expenditure of state money by the state, acting through an agency, under a contract, except that this chapter does not apply to

(1) grants;

(2) contracts for professional witnesses to provide for professional services or testimony relating to existing or probable lawsuits in which the state is or may become a party;

(3) contracts of the University of Alaska where the work is to be performed substantially by students enrolled in the university;

(4) contracts for medical doctors and dentists;

(5) acquisitions or disposals of real property or interest in real property, except as provided in AS 36.30.080 and 36.30.085;

(6) disposals under AS 38.05;

(7) contracts for the preparation and transportation of ballots under AS 15;

(8) acquisitions or disposals of property and other contracts relating to airports under AS 02.15.070, 02.15.090, 02.15.091, and AS 44.88;

(9) disposals of obsolete property under AS 19.05.060;

(10) disposals of obsolete material or equipment under AS 35.20.060;

(11) agreements with providers of services under AS 47.25.071 - 47.25.095; AS 47.07; AS 47.08; AS 47.10; AS 47.12; AS 47.14; AS 47.17; AS 47.24; and AS 47.27, including contractors under AS 47.27.050;

(12) contracts of the Department of Fish and Game for flights that involve specialized flying and piloting skills and are not point-to-point;

(13) purchases of income-producing assets for the state treasury or a public corporation of the state;

(14) [Repealed, Sec. 48 ch 137 SLA 1996].

(15) a contract that is a delegation, in whole or in part, of investment powers held by

(A) the commissioner of revenue under AS 14.42.200, 14.42.210, AS 18.56.095, AS 37.10.070, 37.10.071, or AS 37.14;

(B) the Board of Regents of the University of Alaska under AS 14.40.250 - 14.40.491;

(16) a contract that is a delegation, in whole or in part, of investment powers or fiduciary duties of

(A) the Board of Trustees of the Alaska Permanent Fund Corporation under AS 37.13;

(B) the Alaska Mental Health Trust Authority under AS 37.14.001 - 37.14.099;

(17) the purchase of books, book binding services, newspapers, periodicals, audio-visual materials, network information services access, approval plans, professional memberships, archival materials, objects of art, and items for museum or archival acquisition having cultural, historical, or archaeological significance; in this paragraph

(A) "approval plans" means book selection services in which current book titles meeting an agency's customized specifications are provided to the agency subject to the right of the agency to return those books that do not meet with the agency's approval;

(B) "archival materials" means the noncurrent records of an agency that are preserved after appraisal because of their value;

(C) "audio-visual materials" means nonbook prerecorded materials, including records, tapes, slides, transparencies, films, filmstrips, cassettes, videos, compact discs, laser discs, and items that require the use of equipment to render them usable;

(D) "network information services" means a group of resources from which cataloging information, holdings records, inter-library loans, acquisitions information, and other reference resources can be obtained;

(18) contracts for the purchase of standardized examinations for licensure under AS 08;

(19) contracts for home health care provided under regulations adopted by the Department of Health and Social Services and for adult residential care services provided under regulations adopted by the Department of Health and Social Services or by the Department of Administration;

(20) contracts for supplies or services for research projects funded by money received from the federal government or private grants;

(21) guest speakers or performers for an educational or cultural activity;

(22) contracts of the Alaska Industrial Development and Export Authority for a clean coal technology demonstration project that

(A) is attempting to develop a coal-fired electric generation project;

(B) uses technology that is capable of commercialization during the 1990's; and

(C) qualifies for federal financial participation under P.L. 99-190 as amended;

(23) operation and protection of assets or disposals of equipment and supplies acquired through foreclosure or other legal proceedings relating to loans issued under AS 03.10;

(24) purchases of curatorial and conservation services to maintain, preserve, and interpret

(A) objects of art; and

(B) items having cultural, historical, or archaeological significance to the state;

(25) acquisition of confidential seismic survey data necessary for pre-sale oil and gas lease or gas only lease analyses under AS 38.05.180;

(26) contracts for village public safety officers;

(27) purchases of supplies and services to support the operations of the Alaska state troopers or law enforcement officers engaged in fish and wildlife protection if the procurement officer for the Department of Public Safety makes a written determination that publicity of the purchases would jeopardize the safety of personnel or the success of a covert operation;

(28) expenditures when rates are set by law or ordinance;

(29) construction of new vessels by the Department of Transportation and Public Facilities for the Alaska marine highway system;

(30) contracts entered into with a regional development organization; in this paragraph, "regional development organization" has the meaning given in AS 44.33.895;

(31) contracts that are to be performed in an area outside of the country and that require a knowledge of the customs, procedures, rules, or laws of the area;

(32) contracts that are between the Department of Law and attorneys who are not employed by the state and that are for the review or prosecution of possible violations of the criminal law of the state in situations where the attorney general concludes that an actual or potential conflict of interest makes it inappropriate for the Department of Law to review or prosecute the possible violations;

(33) contracts between the Department of Natural Resources and contractors qualified to evaluate hydrocarbon development, production, transportation, and economics, to assist the commissioner of natural resources in evaluating applications for royalty increases or decreases or other royalty adjustments, and evaluating the related financial and technical data, entered into under AS 38.05.180(j);

(34) contracts of the Alaska Industrial Development and Export Authority made with the developer of an integrated transportation and port facility owned by the authority;

(35) procurements of contracts with the media for advertising;

(36) [Repealed, Sec. 10 ch 58 SLA 2006].

(37) contracts between the state medical examiner and a provider of medical services to perform or assist in performing the duties assigned to the state medical examiner in AS 12.65.020;

(38) contracts between the commissioner of revenue and an independent contractor under AS 43.82.240;

(39) contracts for a convener under AS 44.62.730 or for a facilitator under AS 44.62.760 related to a negotiated regulation making process under AS 44.62.710 - 44.62.800;

(40) [Repealed, Sec. 5 ch 173 SLA 2004].

(41) a tourism marketing contract awarded under AS 44.33.125;

(42) grants and contracts with qualified entities for services under AS 47.18.330 for the foster care transition program;

(43) contracts for travel services, including airplane travel, hotel accommodations, and travel agency services, but excluding motor vehicle rentals;

(44) contracts of the Alaska Commission on Postsecondary Education or the Alaska Student Loan Corporation for the guarantee and disbursing of financial aid money to institutions of postsecondary education under the financial aid programs under AS 14.43.091 - 14.43.750 and AS 14.44.025;

(45) contracts for an arbitration panel to determine whether a project is uneconomic under AS 43.90.240, and contracts for the development of application provisions for licensure and for the evaluation of those applications under AS 43.90;

(46) contracts for delivery of home heating assistance under AS 47.25.626;

(47) contracts of the Alaska Pension Obligation Bond Corporation under AS 37.16.010 - 37.16.900.

(c) Except for AS 36.30.085 and 36.30.700 - 36.30.790, this chapter does not apply to contracts between two or more agencies, the state and its political subdivisions, or the state and other governments.

(d) Nothing in this chapter or in regulations adopted under this chapter prevents an agency or political subdivision from complying with the terms and conditions of a grant, gift, bequest, cooperative agreement, or federal assistance agreement.

(e) [Renumbered as AS 36.30.170(i)].

Delayed Amendment -.

Under Sec. 53, ch. 35, SLA 2003, paragraph (b)(30) is amended to read as follows: "contracts entered into with a regional development organization; in this paragraph, "regional development organization' means a nonprofit organization or nonprofit corporation formed to encourage economic development within a particular region of the state that includes the entire area of each municipality within that region and that has a board of directors that represents the region's economic, political, and social interests."

Under Sec. 75, ch. 35, SLA 2003 and Sec. 2, ch. 43, SLA 2000, as amended by Sec. 1, ch. 110, SLA 2003, Sec. 1, ch. 51, SLA 2005, and Sec. 1, ch. 69, SLA 2008, this amendment takes effect July 1, 2013.

Revisors Notes -

Paragraphs (b)(15) - (17) were enacted as (b)(14), (15), and (14), respectively. Renumbered in 1988. Paragraphs (b)(31) and (32) were enacted as (b)(30) and (31), respectively. Renumbered in 1993.

Paragraphs (b)(35) and (b)(37) were enacted as (b)(34) and paragraph (b)(36) was enacted as (b)(35); renumbered in 1996.

Paragraphs (b)(39) and (40) were enacted as (b)(38). Renumbered in 1998.

In 1999, in (b) of this section, "Department of Education" was changed to "Department of Education and Early Development" in accordance with Sec. 89, ch. 58, SLA 1999.

Paragraph (b)(43) was enacted as (b)(42); renumbered in 2002.

In 2003, "AS 47.12; AS 47.14; AS" was reinserted in (b)(11) of this section to correct an error in failing to reconcile chs. 59 and 107, SLA 1996.

In 2003, in paragraph (b)(11), "AS 47.25.071 - 47.25.095" was substituted for "AS 47.25.007 - 47.25.009" to reflect the 2003 renumbering of AS 47.25.007 - 47.25.009.

Paragraph (b)(47) was enacted as (b)(46); renumbered in 2008.

Cross References -

For provisions applicable to all insurance contracts involving state money, see AS 36.30.170.

Amendment Notes -

The 2000 amendment, effective July 1, 2000, in paragraph (b)(7) inserted "and transportation" and made a section reference substitution.

The first 2002 amendment, effective July 1, 2002, added paragraph (b)(42).

The second 2002 amendment, effective September 29, 2002, added paragraph (b)(43).

The 2003 amendment, effective July 1, 2003, updated a section reference in paragraph (b)(11).

The first 2004 amendment, effective June 5, 2004, inserted "or gas only lease" in paragraph (b)(25), and deleted "oil and gas" preceding "royalty increases" and "royalty adjustments" in paragraph (b)(33).

The second 2004 amendment, effective June 17, 2004, added paragraph (b)(44).

The third 2004 amendment, effective June 26, 2004, in paragraph (b)(11), transferred "AS 47.25.001 - 47.25.009" to its present location from its former location, following "services under."

The fourth 2004 amendment, effective July 27, 2004, repealed paragraph (b)(40), relating to contracts of the Department of Education and Early Development.

The 2006 amendment, effective June 14, 2006, repealed paragraph (b)(36).

The 2007 amendment, effective June 8, 2007, added paragraph (b)(45).

The first 2008 amendment, effective May 23, 2008, added paragraph (b)(46).

The second 2008 amendment, effective May 23, 2008, added paragraph (b)(46) [now (b)(47)].

The third 2008 amendment, effective May 23, 2008, substituted "law enforcement officers engaged in fish and wildlife protection" for "the division of fish and wildlife protection" in paragraph (b)(27).

Editors Notes -

Section 2, ch. 112, SLA 2002 provides that paragraph (b)(43) "does not apply to a contract entered into before September 29, 2002 if, by the terms of the contract, the contract continues to be effective on or after September 29, 2002."

Section 7, ch. 117, SLA 1998, which was to repeal (b)(39) of this section effective July 1, 2003, was repealed by Sec. 2, ch. 44, SLA 2003.

AG Opinions -

The exception in paragraph (b)(1) for grants applies where: 1) the legislature makes an appropriation to a specific program for a specific purpose; 2) the appropriation is for a donative purpose that would more traditionally be characterized as a grant (rather than the purchase of services or supplies); and 3) the nature of the program, known to the legislature, makes application of the procurement code difficult or unreasonable. Mar. 23, 1988 Op. Att'y Gen.

The State Procurement Code does not apply to decisions of the Department of Fish and Game (DF&G) concerning allocation to private nonprofit hatcheries of federal funds granted to the state in connection with the U.S./Canada Pacific Salmon Treaty, since the transaction that occurs when DF&G selects and allocates federal grant money to private nonprofit hatchery projects is not contractual under the State Procurement Code. Apr. 13, 1988 Op. Att'y Gen.

The Department of Transportation and Public Facilities (DOT/PF) is not required to make the Procurement Code a condition of a Transfer of Responsibility Agreement (TORA). DOT/PF has discretion to negotiate for the inclusion of all or portions of the code in a TORA. June 10, 1988 Op. Att'y Gen.

The Procurement Code does not apply to contract negotiations of the Alaska Marine Highway System (AMHS) with the Port of Bellingham to provide terminal services at Bellingham for the AMHS. However, the AMHS may contract for these services with the Port of Bellingham. Aug. 16, 1989 Op. Att'y Gen.

Although the procurement code mentions the expenditure of money, the procurement code must be read to cover cases where instead of money some other type of valuable consideration is provided by the state in exchange for a good or service. Apr. 17, 1991 Op. Att'y Gen.

AS 36.30.850(b)(16) does not exempt the Alaska Permanent Fund Corporation from the procurement requirements of AS 36.30, when the corporation retains certain advisory, consulting, auditing, legal and investment services. Jan. 26, 1993 Op. Att'y Gen.

The State Procurement Code would not apply to services truly donated to construction effort by Upper Susitna Soil and Water Conservation District to assemble a building received as a donation to the District, and the Department of Natural Resources can provide supervision and oversight of the project without formal involvement of the Department of Transportaion and Public Facilities. Jan. 14, 1994 Op. Att'y Gen.

The Alaska Department of Fish and Game may comply with an express term or condition imposed by the Exxon Valdez Oil Spill Council that strictly requires a contract be awarded to a specific entity, but should not infer such an intent; if the Council fails to expressly impose the condition that a contract be awarded to a specific entity, the Department must comply with competitive requirements of the procurement code regarding the selection of the contract recepient, and the Department should comply with any other provision of the procurement code

that does not conflict with an express term or condition the Council imposes. Sept. 14, 1999 Op. Att'y Gen.

SPONSOR STATEMENT

COMMITTEE SUBSTITUTE FOR HOUSE BILL 369 (FIN) am

"An Act relating to an in-state natural gas pipeline, the office of in-state gasline project manager, the Joint In-State Gasline Development Team; requiring the development of an in-state natural gas pipeline plan, to be delivered to the legislature by July 1, 2011, that provides for a gasline that is operational by December 31, 2015; directing the Joint In-State Gasline Development Team to assume responsibilities under sec. 19, ch. 14, SLA 2009; requiring expedited review and action by state agencies or entities relating to the in-state natural gas pipeline project; and providing for an effective date."

Committee Substitute for House Bill 369 (FIN) am was introduced as an effort to expedite the process for an in-state natural gas pipeline. The in-state gasline has been a topic of discussion in the Legislature and the Administration for a number of years. Currently, there are two separate state entities, the Alaska Natural Gas Development Authority and the in-state gasline coordinator, working on a project. House Bill 369 combines these two entities along with the Department of Transportation and Public Facilities, the Alaska Railroad Corporation and the Alaska Housing Finance Corporation to create a Joint In-state Gasline Development Team within the Office of the Governor. The Development Team is to ensure that a project plan is developed by July 1, 2011 with gas flowing by the end of 2015. It is my hope the Development Team will be able to focus the state's efforts in putting a project plan together and leverage the best ideas and data to get a gasline built.

The Department of Transportation and Public Facilities and the Alaska Railroad Corporation were included as members of the team due primarily to their having existing rights of way which could speed up any permitting process that may need to be undertaken. The Alaska Railroad Corporation also has bonding ability which could be an answer in financing a gasline. The addition of the chief executive officer of the Alaska Housing Finance Corporation is to help develop a financing plan for the in-state gasline. The CEO of AHFC will chair the Development Team.

The Development Team will cover all aspects of the line's development and are to select the most economically sound route that will deliver gas to Alaskans, plan permitting and design by using existing rights of way and take any action necessary to get a project plan in place by July 1 of next year. Additional duties of the Joint Development Gasline Development Team are also spelled out within the legislation.

The bill provides for an expedited review and action process and the sharing of information that may already have been accumulated or completed. The bill also requires that state agencies or entities cooperate with and give priority to requests for information from the Development Team.

SECTIONAL ANALYSIS

COMMITTEE SUBSTITUTE FOR HOUSE BILL 369 (FIN) am

"An Act relating to an in-state natural gas pipeline, the office of in-state gasline project manager, the Joint In-State Gasline Development Team; requiring the development of an in-state natural gas pipeline plan, to be delivered to the legislature by July 1, 2011, that provides for a gasline that is operational by December 31, 2015; directing the Joint In-State Gasline Development Team to assume responsibilities under sec. 19, ch. 14, SLA 2009; requiring expedited review and action by state agencies or entities relating to the in-state natural gas pipeline project; and providing for an effective date."

Section 1: Adds a new chapter, Chapter 34: In-State natural Gas Pipeline, to AS 38, Public Land.

Sec. 38.34.010. In-state gasline project manager. (a) Creates the position of in-state gasline project manager within the governor's Office. This position will continue until one year after commercial operation of the in-state natural gas pipeline begins. (b) The Governor appoints an individual to the position of an in-state gasline manager and may be removed at the Governor's discretion. (c) Describes the duties of the in-state gasline project manager.

Sec. 38.34.020. Expedited review and action by state agencies or entities. (a) States that any state agency or entity conducting and taking action relating to the in-state gasline shall be expedited. (b) A state agency or entity may not include in any project certificate, right of way, permit or other authorization issued to a licensee a term or condition that is not required by law if the in-state project manager determines the term or condition would prevent or impair the expeditious construction and operation or expansion of the in-state gasline. (c) A state agency or entity may not, unless required by law, amend or abrogate any certificate, right of way, permit or other authorization issued to a licensee if the project manager determines the action would prevent or impair the expeditious construction and operation or expansion of the in-state gasline.

Sec. 38.34.030. Joint In-state Gasline Development Team. (a) Establishes the Joint In-State Gasline Development Team in the Governor's Office. The team consists of the commissioner of the Department of Transportation and Public Facilities or designee, the chief executive officer of the Alaska Railroad Corporation or designee, the chief executive officer of the Alaska Natural Gas Development Authority, the in-state gasline project manager and the chief executive officer

Representative_Mike_Chenault@legis.state.ak.us

of the Alaska Housing Finance Corporation. (b) Names the Alaska Housing Finance Corporation's chief executive officer as chair. (c) Allows the development team to hire staff, enter into contracts and exercise other powers to carry out its functions.

Sec. 38.34.040. Duties of the Development Team. (a) Ensure a project plan for the development of an in-state gasline is completed and delivered to the legislature by July 1, 2011. The project plan must specify and document how an in-state gasline can be designed, financed, constructed and made operational by December 31, 2015. (b) The Joint In-State Gasline Development Team is to assume all executive authority over and managerial responsibility for all activities enumerated under sec. 19, ch. 14, SLA 2009, including work previously completed, work in process, and work for which money has been encumbered but that is not completed on the effective date of this subsection. (c) Describes specific plans that are to be included within the project plan for an in-state gasline that will serve Fairbanks, the southcentral region of the state, and other communities whenever practicable, connecting with or enhancing the existing gas pipeline system, and reaching to tidewater. (d) The development team's work product is to include an analysis of alternative possible routes and select a route that is consistent with the following requirements: (1) is the most economical, (2) will provide gas to residents at a reasonable cost, (3) allows for connecting lines to serve industrial, residential and utility customers along the entire route and in other regions of the state that can be served at commercially feasible rates, (4) uses state land and existing state highway and railroad rights of way to the maximum extent feasible, (5) uses existing highway and railroad bridges, gravel pits equipment yards and maintenance facilities and other existing facilities and resources to the maximum extent feasible. (e) With the intent that any project-related assets acquired or developed be available for transfer or sale to the entity best able to complete the project, the development team is to: (1) prepare plans and designs necessary for the construction of the in-state gasline; (2) coordinate with entities qualified to build, own and operate the gasline; (3) identify, apply for and obtain rights-of-way and other permits for the project route; (4) work with other entities to promote gas supply and purchase contracts required for the project to be commercially viable; (5) prepare cost estimates for project design, construction and operation to determine the project's feasibility and the projected cost of natural gas to consumers; (6) coordinate with and use, to the fullest extent, possible existing work by other state agencies and entities before contracting for new reports and research and analysis; (7) determine regulatory authority over the pipeline project and perform any necessary compliance requirements; (8) identify and apply for, or support extension of, existing permits for export of Alaska natural gas if that export improves project economics and will reduce the price of natural gas to in-state consumers. (f) Any rights to a gasline corridor obtained by a state agency under eminent domain may be transferred to a private entity. (g) Allows a state agency acquiring interest in land by eminent domain to grant a permit authorizing a private person to construct, manage and operate a gas pipeline on that land. (h) Describes the various aspects of the in-state gasline project the development team may consider.

Sec. 38.34.050. Cooperation and access to information. (a) States the development team may have access to a state entity's information to include confidential information that may relate to the in-state gasline or prove useful in planning, design, construction or operation of the gasline. Confidential information received by the Development Team shall be kept confidential. (b) All state agencies are to cooperate and give priority to requests for information from the

Development Team. The Development Team is to avoid duplicating studies, plans, and designs that have already been produced or otherwise obtained by state entities.

Sec. 38.34.060. Conflicts of interest. (a) If a member of the Development Team acquires, owns or controls a direct or indirect interest in property, an organization or business that might be affected by the in-state gasline project or other matters under consideration by the Development Team shall immediately disclose the interest to the Development Team. This disclosure is part of the public record and shall be included in the minutes of the first meeting of the Development Team held after the disclosure. (b) Members of the development team are subject to AS 39.50 (Public Official Disclosure) and AS 39.52 (Alaska Executive Branch Ethics Act).

Sec. 38.34.099. Definitions. Defines the in-state natural gas pipeline and the North Slope.

Section 2: Amends AS 39.25.110, Exempt service. Adds the in-state gasline project manager to the exempt service list.

Section 3: Immediate effective date.

Representative Mike Chenault
Speaker of the House
State Capitol, Room 423
Juneau, AK 99801-1182

Re: In-State Gas Pipeline Legislation

Dear Representative Chenault:

ANGDA was formed in 2002 by a vote of 138,000 Alaskans to spur development of an Alaskan gas pipeline and to insure that Alaskans benefited from the gas line. ANGDA has stayed true to that mission over our history and the large body of completed public work that has been built will contribute to any in-state gas pipeline project.

Over time, there has been a range of support for ANGDA's efforts throughout several administrations and legislative sessions. Suffice it to say, ANGDA is very pleased to see the current legislative focus on pulling together all elements of a team to help facilitate an in-state gas pipeline to serve residential, industrial, and export gas uses. We stand prepared to take any actions asked of us to help bring this priority project about.

Some specific items that ANGDA is currently working on that could help any in-state gas project and should be continued to the benefit of Alaskans are:

1. Organizing the gas supply cooperative of electric utilities (NGSC) to help aggregate gas demand that could then in turn make shipping commitments to a gas pipeline;

2. Providing a range of value added opportunities that could provide a gas line anchor tenant to make gas more affordable to Alaskans;

3. Production and distribution of propane or other gases to all rural, river, and coastal communities to reduce the energy costs in western and interior Alaska;

4. The analysis of a potential split-line gas pipeline through Glennallen to Cook Inlet and to Valdez for LNG export shipments and thereby making gas more affordable to Alaskans; and

5. Working with the electric utilities on partnering in the Kenai LNG plant to maintain winter gas deliverability and serve as a bridge supply of gas until a gas line can be built.

The current legislation focuses on specific objectives to be achieved in the next fiscal year. ANGDA's experience can make major contributions to the efficiency of these efforts by shortening timelines and avoiding duplication. ANGDA's existing pipeline business relationships and special statutory authorities can compliment and work in synergy with the other team members.

Specific task areas in the legislation that ANGDA is uniquely able to contribute to with its experienced staff, individual expert contractors, and contractor firms are:

1. Identify opportunities for delivering North Slope gas to rural & maritime Alaska;
2. Identify and negotiate with potential gas suppliers and potential gas consumers;
3. Develop pro-forma financials for the project;
4. Develop a partnering agreement with a pipeline company;
5. Provide a design, construction schedule, permitting plan, and cost estimate for an LNG plant; and
6. Develop and execute a public information and outreach plan.

A huge body of pipeline design knowledge has already been analyzed by ANGDA and the urgency of the tasks could lead to duplication if ANGDA is not strongly represented in all tasks. The desired comparison of project choices will require a full vetting of a Valdez LNG plant design and ANGDA is the only team member with prior experience on this portion of the project. ANGDA is currently dealing on a commercial basis with gas suppliers, gas consumers, and pipeline companies.

We believe all these elements are critical to any of the in-state gas projects being contemplated and we are prepared to be part of the team to help move Alaska's in-state gas line agenda forward. We ask for your support of ANGDA's involvement.

Sincerely,

Harold C. Heinze

Office of Governor FY11: 8,053.7 plus 2,599.6 additional contractual for RSA needs for a total request of 10,653.3.

To ensure that an in-state natural gas pipeline plan is delivered to the legislature by July 1, 2011 as set out in HB 369 (FIN), the in-state gas line project team has identified general work products, materials, and a minimum staffing level needed to direct the work for the project team. The cost associated with contractual services to perform environmental work and support of permitting, cost of service analysis, continued refinement of pipeline engineering, and development and management of development plan in FY11 will be approximately $6.5 million. A cost of transportation estimate to provide pipeline and facility costs are scheduled to be completed by July 1, 2010, which will provide partial data for cost of service models. These costs will help determine commercial viability of a pipeline. The additional $2.6 million is for RSA monies to agencies duties outlined below.

OFFICE OF THE GOVERNOR:

PERSONAL SERVICES: 1,095.2 - increased to include 7 staff for first year as follows:
Project Manager Rg 26
Engineering Manager Rg 26
Commercial Manager Rg 26
Legislative Liaison/Public Outreach Officer Rg 23
Finance/budget analyst Rg 22
Schedule Coordinator Rg 21
Technical Writer Rg 19 (first year only)

Current 6500.0 operating budget request includes 322.2 for personal services. Fiscal note increases total personal services to 1,095.2 for 7 staff in first year. Following years reduce staff to 6 and include scheduled merit increases for all but professional staff.

TRAVEL: 36.0 – reflects original travel request in FY2011 Governor's budget request.

CONTRACTUAL: 6,809.2 + 2,599.6 (Total 9,408.8)
Current 6500.0 operating budget request includes 6,130.0 for contractual. Fiscal note increases contractual to include commercial analysis of downstream industrial opportunities, public outreach and information dissemination, and annual lease space for 7 staff during the first year. Second and subsequent fiscal year contractual costs are indeterminate.

500.00 for FY2011, 2012 and 2013 for commercial analysis of downstream industrial opportunities; reduced to 200.0 for 2014 thru 2016.

Contractual (continued)

100.0 for public outreach, information dissemination, printing, advertising, postage.

79.2 first year office lease space – reduces to 75.3 for second and subsequent years

2599.6 RSA funding requirements – see below

SUPPLIES: 29.0 increases FY2011 operating budget request to 29.0 for increased staff and fast-track activities, reducing to 25.0 for second and subsequent years.

EQUIPMENT: 84.3 one-time office set-up.

Office of Governor FY12 & Beyond: Contractual; Indeterminate
Fiscal responsibility for FY12 and beyond is indeterminate at this time. These costs may include preconstruction engineering, procurement of natural gas, purchase of ENSTAR Bullet Line data package, potential application for extension of LNG export license, and other engineering and commercial activities that provide for a gasline that is operational by December 31, 2015. The State's ability to transfer the project to private investors is likewise unknown. If unsuccessful, the State may assume liability for a portion, or all of the construction costs. These costs will depend on what is determined and approved from the development plan, if anything, and could range from tens of millions to over 5 billion dollars, depending on the level of participation by the State.

Breakdown of RSAs to state agencies: 2599.6 as follows:

AHFC FY11: 500.0

This fiscal note is an estimate of what funds would be necessary for the Alaska Housing Finance Corporation should House Bill 369 become law. The preparation of a comprehensive financing plan would be completed once cost estimates for the project are available.
Contractual services will consist of Financial Advisors and legal counsel.
FY12: 0

DEC FY11: 121.1

The Department of Environmental Conservation (DEC) fiscal note reflects a project coordinator to be located in the Office of the Commissioner to coordinate with the joint in-state pipeline development team in evaluation of necessary environmental permitting, environmental impact statement review, Alaska Coastal Management

DEC (continued)

Program coordination, as well as compliance and enforcement activities for an in-state natural gas pipeline.

FY12+: Indeterminate

The costs of the environmental permitting for pipeline construction is indeterminate at this time, this fiscal note does not account for any permitting activities that may occur after the in-state pipeline plan is submitted to the legislature by July 1, 2011.

DOR FY11: 1000.0

Travel **50.0**
Contractual **950.0**
Department of Revenue working as part of the development team with experienced contractors and contractor firms to execute major elements of the assigned tasks.

1. Identify opportunities for delivering North Slope gas to rural & maritime Alaska
2. Identify and negotiate with potential gas suppliers and potential gas consumers
3. Develop pro-forma financials for the project
4. Develop a partnering agreement with a pipeline company
5. Provide a design, construction schedule, and cost estimate for an LNG plant
6. Develop and execute a public information and outreach plan

DOT FY11: 610.8 plus 367.7 for DNR State Pipeline Coordinators Office

The Department is a member of the joint pipeline development team and is the applicant for the right-of-way (ROW). A Engineer V will serve as the technical expert for the commissioner and as the technical lead for the Department's responsibilities. As the applicant for the ROW, a ROW agent will coordinate the ROW portions of the plan, providing the technical expertise to assist in determining the intricacies associated with potential routes, and will start initial coordination with utilities that are currently in the ROW. An environmental impact analysis manager will oversee and provide technical expertise for the environmental impacts and permits needed for activities in the department's ROW. Additional, costs are for

Personnel Services **418.7**
Travel **45.0**
Contractual **87.1**
Supplies **60.0**

ADDITONAL CONTRACTUAL FOR DOT: 367.7 needed for interagency funding to DNR State Pipeline Coordinators Office to be used by DNR as detailed below.

DOT FY12 +: Indeterminate
The costs for activities after the plan is submitted on July 1, 2011 are undetermined at this time.

(DNR FY11): 367.7

All State Pipeline Coordinator Office (SPCO) costs associated with the right-of-way permitting process, preparation of the Commissioner's Analysis, Proposed Decision and Action, construction oversight, and operational oversight are reimbursable pursuant to AS 38.35.140(b). Costs reflected in this fiscal note are reimbursable under AS38.35.140(b). Positions and efforts identified for SPCO work will utilize existing positions to the greatest extent possible. If additional SPCO or MLW positions are necessary they will be established as Long Term Non-Perm positions.

In the preparation of this fiscal note certain assumptions have been made:
State Pipeline Coordinators Office (SPCO)
1) Participating state agencies (ADF&G, ADEC, etc.) will provide separate fiscal notes, although their costs associated with permitting the right-of-way may be reimbursable by the applicant through the SPCO.

DNR (continued)

2) The right-of-way lease applicant, pursuant to AS 38.35. 140(b), will reimburse DNR's (and other participating state agencies as well) work associated with delivery of a right-of-way lease.
3) DLMW has completed a separate fiscal note, however portions of their costs may be reimbursable by the applicant through the SPCO.
4) Existing Program Receipt Authority will be used for the project.
5) DGGS cost estimate assumes that the state needs to understand the geohazards to ensure the applicant has identified and considered all geologic hazards along the route.
6) Construction and operational oversight begins in FY2012 and FY2014, respectively. The cost estimate for these activities is for DNR only and does not include estimates for other state agencies (ADF&G, ADEC, etc.), although their costs may be reimbursable by the applicant through the SPCO.
7) Assume SPCO will administer material sites after initial sale.
8) Assume a two-year construction schedule segregated into four geographic areas.

FY2011 costs to DNR/SPCO would include expenses to support the duties of the development team in preparing the project plan and the Analyses necessary to prepare project applications, supporting documentation, and the preparation for an expedited state review of the proposed actions. Costs for FY2011 do not include any expenses towards processing a right-of-way lease applications. Expenses associated with the right-of-way permitting process are projected to start in FY2012.

FY2011 PERSONAL SERVICES COST - $ 200.3 total (for 12 months)

BREAKDOWN of DNR FY11 costs

1- STATE PIPELINE COORDINATOR'S OFFICE
Positions in Anchorage; for preparing the project plan and analyses.
- one State Pipeline Coordinator (SPC) (range 26) - total 1 month at $9.7/month = $9.7
- one Natural Resource Specialist (NRS) III (range 18)- total 3 months/yr at 7.31/month = $21.93
-one Natural Resource Manager (NRM) II (range 20) - total 1 month at $9.41/month = $9.41
-one Engineer IV (range 27) - total 3 months at 13.70/month = $41.1
- Administrative Support - total = $8.20
$90.34 for **FY 11 Total**

2- OFFICE OF PROJECT MANAGEMENT AND PERMITTING
Position in Anchorage; for coordination of a project Health Impact Assessment.
- Natural Resource Specialist (NRS) III (range 18) - total = $10.0
$10.0 for **FY 11 Total**

DNR (continued)

3 - DIVISION OF COASTAL AND OCEAN MANAGEMENT
One position in Anchorage; for conducting the project Alaska Coastal Management Program process.
-one Natural Resource Specialist (NRS) III (range 18)-
total 1 month at 7.31/month = $7.31
$7.31 for FY 11 Total

3- STATE HISTORIC PRESERVATION OFFICE
Position in Anchorage; for review and monitoring the cultural resource project program. - one Archeologist = $20.0
$20.0 for **FY 11 Total**

4- DIVISION OF GEOLOGICAL AND GEOPHYSICAL SURVEYS
Positions in Fairbanks; for management of geohazards project related studies and review of existing information.
- one Geologist IV (range 21) - total 4 months = $35.80
- one LTNP Geologist III (range 19) - total 4 months = $25.52
- one Graduate Intern - total 4 months = $11.32
$72.64 for **FY 11 Total**

TRAVEL, CONTRACTUAL, SUPPLIES - $70.0 total for FY11
Travel, contractual, and supplies to support the duties of the development team in preparing the project plan and the Analyses necessary to prepare project applications, supporting documentation, and the preparation for an expedited state review of the proposed actions.
Other miscellaneous, contractual and supply costs include office space, telephones, core service charges and related expenses.

5- DIVISION OF MINING LAND & WATER
Assumptions
1) that DNR/DMLW will be required to prepare a title report regarding state owned lands in the pipeline ROW,
2) that DNR will not be required to transfer title to any state lands to DOT/PF,
3) that DOT/PF will be responsible for all title or ROW acquisitions from entities other that DNR managed state lands including lands owned by private persons, boroughs, ANCSA corporations, native allotments, and the federal government,
4) that DNR/DMLW will review and approve all land surveys associated with granting an in-state gasline ROW and developing an in-state gasline across state land,

DNR (continued)

5) DNR DMLW will participate in the ROW planning effort to some degree across state land, the review of the
AS 38.35 R/W lease to be prepared by SPCO for issuance to DOT/PF, and the ACMP review of the ROW, and
6) SPCO will issue AS 38.35 ROW accross state lands to DOT/PF.
The costs to DMLW would include expenses during FY 11 for providing assistance during the development teams planning efforts and preapplication meetings

PERSONAL SERVICES COST - $86.4 total (for 12 months in FY11)
One Natural Resource Specialist (NRS) III (range 18) - total 12 months at $86.4/year for assistance with the planning effort and preparation for the authorization work in FY12.
TRAVEL, CONTRACTUAL, SUPPLIES - $2.0 total
Travel would be for planning and public meetings. $2.0 in FY11
Other contractual costs include $5.2 for office space, telephones, core service charges and related
expenses for the new positions in FY11.
Supplies are budgeted at $3.8 for FY11, and includes one-time start-up costs for new computers and office equipment .

DNR FY12 & Beyond

The FY2012 costs to DNR/SPCO would include expenses to coordinate the participation of state agencies in the right-of-way permitting process, prepare the Commissioner's Analysis, Proposed Decision and Action, develop the draft lease and, if necessary, hold public hearings. In addition the costs include right-of-way permitting expenses for the participation of the State Historic Preservation Office (SHPO), Division of Coastal and Ocean Management (DCOM), Office of Project Management and Permitting (OPMP) and the Division of Geological and Geophysical and Surveys (DGGS). It should be noted that the proposed schedule is aggressive and in order to meet the specified timeline the right-of-way permitting process will need to be conducted independent of the federal NEPA process. The FY2012 and 13 costs reflect construction oversight activities by DNR. Operational oversight costs begin in FY2014 and continue forward.
FY2012 PERSONAL SERVICES COST - $ 522.42 total (for 12 months)

DNR (continued)

Breakdown of DNR FY12 and beyond.

STATE PIPELINE COORDINATOR'S OFFICE

Positions in Anchorage; for completing the right-of-way leasing process.
-one Natural Resource Specialist (NRS) IV (range 21) - total 10 months at $9.95/month= $99.50
-one Natural Resource Manager (NRM) II (range 20) - total 1 month at $9.41/month = $9.41
-one Natural Resource Specialist (NRS) III (range 18)- total 6 months at 7.31/month = $43.86
-one Engineer IV (range 27) - total 3 months at 13.70/month = $41.1
-Administrative Support - total = $38.77
$232.64 for **FY 12 Total**
Positions in Anchorage; for construction oversight.
- two Natural Resource Specialist (NRS) III (range 18)- total 6 months/yr at 7.31/month = $87.72
- one Natural Resource Manager (NRM) II (range 20) - total 1 month at $9.41/month = $9.41
- one Engineer IV (range 27) - total 2 months at 13.70/month = $27.4
- Administrative Support - total = $24.9
$149.43 for **FY 13 and 14**
Positions in Anchorage; for operational oversight.
- one Natural Resource Specialist (NRS) III (range 18)- total 4 months/yr at 7.31/month = $29.24
- one Natural Resource Manager (NRM) II (range 20) - total 1 month at $9.41/month = $9.41
-one Engineer IV (range 27) - total 1 months at 13.70/month = $13.70
- Administrative Support - total = $10.47
$62.82 for **FY15 Forward**

STATE HISTORIC PRESERVATION OFFICE
Position in Anchorage; for review and monitoring the cultural resource project program.
- one Archeologist = $20.0
$20.0 for **FY 12 Total**
Positions in Anchorage; for construction oversight.
- one Archeologist = $20.0
$20.0 for **FY 13 and 14 Totals**

DIVISION OF GEOLOGICAL AND GEOPHYSICAL SURVEYS
Positions in Fairbanks; for management of geohazards project related studies and review of existing information.
- one Geologist IV (range 21) - total 12 months = $107.4
- one LTNP Geologist III (range 19) - total 12 months = $76.45
- one Graduate Intern - total 12 months = $34.0
$217.85 for **FY 12 Total**

DNR (continued)

OFFICE OF PROJECT MANAGEMENT AND PERMITTING
Position in Anchorage; for coordination of a project Health Impact Assessment.
- Natural Resource Specialist (NRS) III (range 18) - total = $30.0
$30.0 for **FY 12 Total**

DIVISION OF COASTAL AND OCEAN MANAGEMENT
One position in Anchorage; for conducting the project Alaska Coastal Management Program process.
-one Natural Resource Specialist (NRS) III (range 18)- total 3 months at 7.31/month = $21.93
$21.93 for **FY 12 Total**

TRAVEL, CONTRACTUAL, SUPPLIES - $322.2 total for FY 12
Travel would be for public meeting, public hearings, agency coordination and monitoring of contractors performing field work. In addition, DGGS will require travel to complete field studies. **$30.0 in FY12**
Contractual costs include helicopter support for DGGS studies, office space, telephones, core service charges and related
Miscellaneous costs include aerial photos, satellite imagery, field supplies a and maps.
Other miscellaneous, contractual and supply costs include office space, telephones, core service charges and related expenses.
TRAVEL, CONTRACTUAL, SUPPLIES - $70.0 total for FY 13 and 14
TRAVEL, CONTRACTUAL, SUPPLIES - $10.0 total for FY 15 Forward

DIVISION OF MINING LAND& WATER, FY12
PERSONAL SERVICES COST - $465.7 total (for 12 months in FY12)
LAND TITLE ACTIONS
Four positions Anchorage; for land title review and report preparation and document review and processing.
-three Natural Resource Specialist (NRS) III (range 18) - total 6 months each at $7.24/month= $130.32
-one Natural Resource Specialist (NRS) II (range 16) - - total 6 months each at $6.40/month = $38.4
$168.72 for **FY 12 Total**
LAND SURVEY REVIEW
Two positions Anchorage; for reviewing land and project surveys .
-Two land surveyor II (LS) III (range 22) - 1 year each at $109.1/year
$218.2 for **FY 12 Total**

DNR (continued)

MATERIAL SALES
Two positions; for preparing and executing material sales for use in pipeline R/W.
- One Natural Resource Specialist (NRS) III (range 18) - total 12 months at $89.2/year for Northern Region Office Fairbanks = $89.2
- OneNatural Resource Specialist (NRS) III (range 18) - total 12 months at $86.4/year for SouthCentral Region Office Anchorage = $86.4
$175.6 for **FY 12 Total**

PROJECT REVIEWS
One position; to participate in the R/W planning effort, the review of the AS 38.35 ROW lease , and the ACMP review of the R/W.
- One Natural Resource Specialist (NRS) III (range 18) - total 8 months each at $86.4/year for SouthCentral Region Office Anchorage = $57.6
$86.4 for **FY 12 Total**

TRAVEL, CONTRACTUAL, SUPPLIES - $143.0 total (for 12 positions)
Travel would be for land survey review purposes, preparation of material sales, and planning, ROW and ACMP review. $35.0 in FY12
Other contractual costs include $52.0 for office space, telephones, core service charges and related
expenses for the new positions in FY12 at a rate of $5.2 per new position.
Supplies are budgeted at $38.0 per year FY12, and includes one-time start-up costs for new computers and office equipment of $3.8 per each new position.

Sec. 39.25.110. Exempt service.

Unless otherwise provided by law, the following positions in the state service constitute the exempt service and are exempt from the provisions of this chapter and the rules adopted under it:

(1) persons elected to public office by popular vote or appointed to fill vacancies in elected offices;

(2) justices, judges, magistrates, and employees of the judicial branch including employees of the judicial council;

(3) employees of the state legislature and its agencies;

(4) the head of each principal department in the executive branch;

(5) officers and employees of the University of Alaska;

(6) certificated teachers and noncertificated employees employed by a regional educational attendance area established and organized under AS 14.08.031 - 14.08.041 to teach in, administer, or operate schools under the control of a regional educational attendance area school board;

(7) certificated teachers employed by the Department of Education and Early Development as correspondence teachers, teachers in skill centers operated by the Department of Education and Early Development or by the Department of Labor and Workforce Development, or in Mt. Edgecumbe School;

(8) patients and inmates employed in state institutions;

(9) persons employed in a professional capacity to make a temporary or special inquiry, study or examination as authorized by the governor;

(10) members of boards, commissions, or authorities;

(11) the officers and employees of the following boards, commissions, and authorities:

(A) [Repealed, Sec. 13 ch 43 SLA 1994].

(B) Alaska Permanent Fund Corporation;

(C) Alaska Industrial Development and Export Authority;

(D) Alaska Commercial Fisheries Entry Commission;

(E) Alaska Commission on Postsecondary Education;

(F) Alaska Aerospace Corporation;

(G) Alaska Natural Gas Development Authority;

(12) the executive secretary and legal counsel of the Alaska Municipal Bond Bank Authority;

(13) the state medical examiner, deputy medical examiner, and assistant medical examiners appointed under AS 12.65.015 and pharmacists and physicians licensed to practice in this state and employed by the Department of Health and Social Services or by the Department of Corrections;

(14) petroleum engineers and petroleum geologists employed in a professional capacity by the Department of Natural Resources and by the Alaska Oil and Gas Conservation Commission, except for those employed in the division of geological and geophysical surveys in the Department of Natural Resources;

(15) [Repealed, Sec. 1 ch 32 SLA 1999].

(16) persons employed by the division of marine transportation as masters and members of the crews of vessels who operate the state ferry system and who are covered by a collective bargaining agreement provided in AS 23.40.040;

(17) officers and employees of the state who reside in foreign countries;

(18) employees of the Alaska Seafood Marketing Institute;

(19) emergency fire-fighting personnel employed by the Department of Natural Resources for a fire emergency or for fire prevention and related activities conducted under AS 41.15.030;

(20) employees of the Office of the Governor and the office of the lieutenant governor, including the staff of the governor's mansion;

(21) [Repealed, Sec. 47 ch 99 SLA 2004].

(22) youth employed by the Department of Natural Resources under the Youth Employment and Student Intern programs;

(23) [Repealed, Sec. 6 ch 28 SLA 2003].

(24) students employed by the state institutions in which the students are enrolled;

(25) [Repealed, Sec. 8 ch 2 SLA 2004].

(26) investment officers in the Department of Revenue;

(27) [Repealed, Sec. 10 ch 29 SLA 1999].

(28) persons engaged in employment or pre-employment training programs operated by the Department of Military and Veterans' Affairs;

(29) [Repealed, Sec. 9 ch 115 SLA 1989].

(30) a person employed as an actuary or assistant actuary by the division of insurance in the Department of Commerce, Community, and Economic Development;

(31) [Repealed, Sec. 91 ch 163 SLA 2004].

(32) a participant in the Alaska temporary assistance program under AS 47.27 who holds a temporary position with the state in order to obtain job training or experience;

(33) a person employed as a convener under AS 44.62.730 or as a facilitator under AS 44.62.760 related to a negotiated regulation making process under AS 44.62.710 - 44.62.800;

(34) the chief executive officer and employees of the Alaska Mental Health Trust Authority employed under AS 47.30.026(b);

(35) the assistant adjutant general for space and missile defense appointed under AS 26.05.185;

(36) the victims' advocate established under AS 24.65.010 and the advocate's staff;

(37) employees of the Alaska mental health trust land unit established under AS 44.37.050;

(38) the executive director of the Council on Domestic Violence and Sexual Assault established under AS 18.66.010;

(39) the executive director and employees of the Knik Arm Bridge and Toll Authority under AS 19.75.051 and 19.75.061;

(40) the chair of the Workers' Compensation Appeals Commission (AS 23.30.007);

(41) the Alaska Gasline Inducement Act coordinator appointed under AS 43.90.250;

(42) oil and gas audit masters employed in a professional capacity by the Department of Revenue and the Department of Natural Resources to collect oil and gas revenue by developing policy, conducting studies, drafting proposed regulations, enforcing regulations, and directing audits by oil and gas revenue auditors.

Revisors Notes -

Former paragraph (29) was enacted as (28). Renumbered in 1989. Paragraph (32) was enacted as (31); renumbered in 1996. Paragraphs (35) and (36) were enacted as (34); renumbered in 2001.

In 1999, "Department of Commerce and Economic Development" was changed to "Department of Community and Economic Development" in paragraph (30) in accordance with Sec. 88, ch. 58, SLA 1999, and "Department of Education" was changed to "Department of Education and Early Development" in paragraph (7) in accordance with Sec. 89, ch. 58, SLA 1999.

Paragraph (38) was enacted as paragraph (37) and renumbered in 2002.

In 2003, in paragraph (39), "AS 19.75.051 and 19.75.061" was substituted for "AS 44.90.051 and 44.90.061" to reflect the 2003 renumbering of AS 44.90.051 and 44.90.061.

In 2004, in paragraph (30) of this section, "Department of Community and Economic Development" was changed to "Department of Commerce, Community, and Economic Development", in accordance with Sec. 3, ch. 47, SLA 2004.

In 2009, under Sec. 2, ch. 60, SLA 2009, in paragraph (11) of this section "Alaska Aerospace Corporation" was substituted for "Alaska Aerospace Development Corporation".

Cross References -

Amendment Notes -

The first 2001 amendment, effective April 28, 2001, added paragraph (34).

The second 2001 amendment, effective May 25, 2001, added paragraph (35).

The third 2001 amendment, effective July 1, 2002, added paragraph (36).

The first 2002 amendment, effective August 16, 2002, added paragraph (37).

The second 2002 amendment, effective June 28, 2002, added paragraph (38).

The third 2002 amendment, effective February 25, 2003, added subparagraph (11)(G).

The first 2003 amendment, effective July 1, 2003, repealed paragraph (23).

The second 2003 amendment, effective July 1, 2003, inserted "or by the Department of Labor and Workforce Development" in paragraph (7).

The third 2003 amendment, effective September 10, 2003, added paragraph (39).

The first 2004 amendment, effective May 16, 2004, repealed paragraph (25), relating to the executive director and staff of the Alaska Science and Technology Foundation.

The second 2004 amendment, effective June 26, 2004, repealed paragraph (21), relating to employees of the Citizens' Advisory Commission on Federal Areas in Alaska.

The third 2004 amendment, effective July 1, 2005, repealed paragraph (31), relating to administrative law judges appointed to the office of tax appeals.

The 2005 amendment, effective November 7, 2005, added paragraph (40).

The 2006 amendment, effective August 30, 2006, inserted "and pharmacists" in paragraph (13), and deleted "the Division of Mental Health and Developmental Disabilities in" preceding "the Department of Health" in that paragraph.

The first 2007 amendment, effective June 8, 2007, added paragraph (41).

The second 2007 amendment, effective December 20, 2007, added paragraph (42).

The first 2009 amendment, effective June 21, 2009, in (14), added "Alaska" preceding "Oil and Gas Conservation Commission".

The second 2009 amendment, effective July 1, 2009, in (38), deleted "and staff" following "the executive director".

Editors Notes -

Section 7, ch. 117, SLA 1998, which was to repeal paragraph (33) of this section effective July 1, 2003, was repealed by Sec. 2, ch. 44, SLA 2003.

History Reports -

For governor's transmittal letter for ch. 1, SSSLA 2007 (HB 2001), presenting, among other matter, a proposal relating to classification of petroleum revenue auditors under the State Personnel Act, see 2007 House Journal 1547 - 1550.

AG Opinions -

Staff administering the Alaska Military Youth Academy are members of the classified service, and are not in the exempt service, because they are not "persons engaged" in the employment training program, as required by subsection (28). Oct. 13, 2000, Op. Att'y Gen.

Decisions -

The thrust of the exemptions in this chapter, the Public Employees Retirement System, former AS 39.35.680(5)(c), and the statutory leave provisions for state employees, AS 39.20.310, is to provide for those public employees who are not susceptible to ordinary recruiting and examining procedures. Hafling v. Inlandboatmen's Union, 585 P.2d 870 (Alaska 1978).

No inconsistency between ferry crew exemption of this section and inclusion of such personnel with Public Employment Relations Act, AS 23.40.070 et seq. - See Hafling v. Inlandboatmen's Union, 585 P.2d 870 (Alaska 1978).

National Guard exempt from Personnel Act. - Because of the state's adoption of federal personnel rules and regulation regarding promotion and separation in the Alaska National Guard, it has "otherwise provided by law" that members of the National Guard are exempt from the Alaska Personnel Act. State, Dep't of Military & Veterans Affairs v. Bowen, 953 P.2d 888 (Alaska 1998).

Effect of being in exempt service. - The "exempt service" is a category of jobs which, for whatever reason, the Legislature wanted to exclude from the state personnel system. Not every person

in the exempt service is a confidential employee. The fact that plaintiff was in the exempt service did not mean that the Alaska Energy Center lacked the power to give him a three-year contract. Zerbetz v. Alaska Energy Ctr., 708 P.2d 1270 (Alaska 1985).

Cited in State v. Haley, 687 P.2d 305 (Alaska 1984); McGrath v. University of Alaska, 813 P.2d 1370 (Alaska 1991).

(23) sec. 100, ch. 2, FSSLA 1999, page 69, lines 29 - 30, and allocated on page 69, lines 31 - 32 (Department of Transportation and Public Facilities, National Highway System (NHS) state match - $22,602,059).

(b) The unexpended and unobligated balance, not to exceed $98,056, of the appropriation made in sec. 60, ch. 3, FSSLA 2005, page 140, lines 24 - 26 (Alaska Gateway, Dot Lake School mechanical upgrade - $1,087,118) is reappropriated to the Alaska capital income fund (AS 37.05.565).

(c) The unexpended and unobligated balance, not to exceed $54,753, of the appropriation made in sec. 60, ch. 3, FSSLA 2005, page 142, lines 13 - 14 (Southeast Island, Thorne Bay house access ramp - $141,415) is reappropriated to the Alaska capital income fund (AS 37.05.565).

*** Sec. 19.** NATURAL GAS PIPELINE. (a) The sum of $4,322,000 is appropriated from the Alaska capital income fund (AS 37.05.565) to the Office of the Governor for the development of an in-state natural gas pipeline.

(b) The unexpended and unobligated balance, estimated to be $2,700,000, of the appropriation made in sec. 8, ch. 1, 4SSLA 2008 (Department of Natural Resources, gas pipeline implementation - $5,500,000) is reappropriated to the Office of the Governor for the development of an in-state natural gas pipeline.

(c) For the appropriations made in (a) and (b) of this section, it is the intent of the legislature that

(1) the funds be used solely to plan, coordinate, and facilitate construction, ownership, and management of a natural gas pipeline serving Fairbanks, the Southcentral region of the state, and other communities wherever practicable, connecting with or enhancing the existing gas pipeline system, and reaching to tidewater;

(2) the funds be used for a full alternative analysis of possible routes;

(3) an economically feasible in-state pipeline and any connecting lines serve industrial, residential, and utility customers along the entire route, including any other regions of the state that could be served at commercially feasible rates;

(4) the Office of the Governor use the appropriations to

(A) coordinate with entities that could build, own, and operate the line;

(B) assist with preparing cost estimates for the project to determine its

economic feasibility and cost to consumers;

(C) apply for and obtain right-of-way permits for the project route, with the intent that the state would transfer the permits to, and receive compensation for the permits from, the entity best able to complete the project;

(D) work with other entities to promote the gas supply and gas purchase contracts that would be required for the project to be commercially viable;

(5) the coordination effort by the Office of the Governor use, to the fullest extent possible, any and all existing work by other state agencies before contracting for new reports, research, and analyses, and that the coordination effort by the Office of the Governor not expand beyond the scope of coordinating interests to build, own, and operate the gas pipeline;

(6) the Office of the Governor submit written monthly reports to the president of the senate, the speaker of the house of representatives, and all legislators, listing all current and future contracts executed for development of an in-state natural gas pipeline and specifying the scope of work and contract amount, a cumulative total monthly of all funds spent for development of an in-state natural gas pipeline, reporting progress to date on the project work plan, and presenting a work plan for each subsequent month.

* **Sec. 20.** FUND TRANSFER. An amount equal to 20 percent of the revenue collected under AS 43.55.011(g), not to exceed $60,000,000, is appropriated from the general fund to the community revenue sharing fund (AS 29.60.850).

* **Sec. 21.** CONTINGENCIES. (a) Sections 14(f) and 14(g) of this Act are contingent on ratification by the members of the respective collective bargaining unit of its collective bargaining agreement.

(b) Section 7(e) of this Act is contingent on passage by the Twenty-Sixth Alaska State Legislature in the First Regular Session and enactment into law of a version of HB 172 relating to the education loan fund.

(c) Section 11(b) of this Act is contingent on passage by the Twenty-Sixth Alaska State Legislature in the First Regular Session and enactment into law of a version of SB 89 relating to retirement benefits for members of the Alaska Territorial Guard.

(d) Section 8(f) of this Act is contingent on passage by the Twenty-Sixth Alaska State Legislature in the First Regular Session and enactment into law of a version of HB 141

March 11, 2010

Honorable Mike Chenault
Speaker, Alaska House of Representatives
State Capitol Room 208
Juneau, AK 99801

Dear Speaker Chenault:

I am pleased to offer my support of House Bill 369: An Act relating to an in-state natural gas pipeline.

The Kenai Peninsula Borough and the entire South Central region of Alaska has long relied on the natural gas production from the Cook Inlet basin to heat our homes, schools and businesses; generate electrical energy and employment of thousands of workers. As the Cook Inlet supply is dwindling, a new source of natural gas is paramount to our economic stability and prosperity. I believe an "in-state" gas line will accomplish that.

Many Alaskan's have become frustrated by the apparent lack of movement by our elected officials to head off the day when a reliable source of natural gas ceases to exist here; in my view HB 369 attempts to consolidate the multiple and individual efforts into one common direction and does so with measurable timeframes for action.

The Kenai Peninsula Borough supports the construction of a natural gas spur pipeline, or "bullet line", connecting the North Slope to Cook Inlet. This pipeline would address Alaskan economic concerns and long-term energy needs. The Kenai Peninsula Borough supports the efforts of the Alaska Natural Gas Development Authority (ANGDA) to develop a spur pipeline, to bring North Slope natural gas to Southcentral Alaska, specifically to the Nikiski area, which is an established hub in Cook Inlet.

The Kenai Peninsula Borough welcomes the opportunity to be included as part of the Joint In-state Gasline Development Team as described in HB 369. Please consider this letter as my firm support of House Bill 369.

Sincerely,

David R. Carey

David R. Carey
Mayor

4812

Senate Resources Testimony

Offered by David Gottstein 04/01/2010

Thank you to the Chair, and members of the committee for offering me the opportunity to share my views today regarding CSHB 369, and a gas pipeline in general. My name is David Gottstein and I reside in Anchorage, Alaska. I come at the gas pipeline questions not only as an interested Alaskan, but as a twenty year company analyst and Registered Investment Advisor with a finance degree from Wharton, having also been a logistics and supply chain manager in a major grocery operation for almost ten years. Perhaps the intersection of these two disciplines allows me to look at the question at hand differently than most, because any pipeline project is largely a combination of economics, logistics and finance.

The most important thing I have to say regarding logistics is, since logistics is mostly about moving weight and cubic volumes at the lowest cost per unit of distance, that any effort to get Alaskan's gas to Alaskans that doesn't include material export capacity will be terribly short-sighted and will cost the State of Alaska at least tens of billions of dollars over time in lost opportunity, in addition to saddling most Alaskans with much higher energy costs for decades to come, than they would have to pay by otherwise piggybacking on top of an export volume-based and efficient, distribution network. **That means at the very minimum, a large diameter pipeline from the North Slope to a logistical "Sweet Spot" in the Interior must be the anchor of any pipeline project.** We should concurrently spur to Fairbanks and South Central, and then let the markets determine the fate of the remaining logistical foot-print, or rather sizing and routing, of any further distribution. When economics justify it, albeit Canada, Valdez/LNG, and any value added processing.

The oil companies and pipeline companies must wait until they fill a pipeline through the open season process before they can commit to build because they are looking for immediate economic rent and returns on capital. And they can't otherwise finance such a project. Therefore, regardless of how they may be posturing now, uncertainty about intermediate to long-term gas pricing and demand means it could be a decade or more before boards of directors will be in a position to vote to dedicate the large capital investments necessary for a massive project such as the Canadian route. Everything they do in the meantime is a cost of posturing to maintain an "Option" to actually build only when they want to. Whenever that might be.

We can't afford though to freeze in the dark waiting. Only the State of Alaska has the vested interest in making sure we get Alaskan's gas to Alaskans in the shortest amount of time, and provide for an efficient distribution network. One not offered by a small diameter line. We also need not leave our destiny to the calendars of outside boards of directors with very different interests. CSHB 369 recognizes that, and therefore could be the right instrument to move forward on; with some critical adjustments. But the document must first conform to the economics I believe, and not the other way around.

The most important thing I have to say regarding the economics, and I am not suggesting this position, but rather just offering the base-line economics, is that the State of Alaska, again just as a baseline, not a goal, is the only entity, as the owner of the resource, who could write a check for cash to pay for the pipeline, charge zero for the tariff, and make $50-100 billion. That is because we make the vast majority of our money selling the resource, not in the transportation of it. When you start off with that economic focus, and calculate what you get by investing the $3 billion extra it would take to increase the size of a pipe from the North Slope to the Interior suitable for export capacity, the economic and business decision becomes quite simple because the returns are enormous. Only the State can afford to incubate, or have a portion of the pipe idle for a period of time, and wait for the rest of the market to come to it. It puts us in a very powerful negotiating position. How long can we wait until the pipe needs to be filled before we lose the bet? The answer is 50-100 years if you look at it from an economic and financial perspective. I would be happy to share with staff how to make those financial calculations.

And I am not talking about having the State take any construction risk, or to design, build, maintain or manage the project. That would be done by private sector partners who gain rights to future tariffs as negotiated. Hopefully this would include The Big Three and maybe TransCanada. And we can further separate economic rights from governance rights in our negotiations.

So here are 12 things that the State of Alaska gets if it underwrites, and elevates to ***Investment Grade***, a gas pipeline with efficient export potential, made possible by $3 billion extra and patient development capital, which could be financed a number of different ways;

1. We avoid saddling Alaskans with high energy costs for thirty years, or however long it might take to pay off the bonds necessary for a small diameter high cost per unit line. Only when export volumes are achieved will economies-of-scale be available to pass on to consumers in the form of lower energy tariffs and costs.
2. We avoid putting an export project at materially greater risk in terms of time and money by moving from a highly inefficient logistical foot-print to a highly efficient one. Since we won't then have to build two sets of pipe to move the same amount of gas that could much more efficiently pass through one.
3. We get gas to Alaskans in as little as six to eight years.
4. We put our future and destiny on our timeframe instead of that necessary for an alignment of uncontrollable, unpredictable, disparate, and naturally competing factors and interests outside of our control.
5. By announcing to the energy community that we are prepared now to build, and we invite them to participate, we force them to act, for fear of being left behind.
6. We greatly invigorate the potential for adding volumes not only to the gas pipeline, but the oil pipeline as well. This is because not only will we have finally, after decades, brought our gas to market, but we will also make it possible for new oil and gas explorers, on a spot basis, not having participated in an open season necessary to secure capacity, the opportunity to explore and produce, knowing they can get their product to market. And when they look for gas, they

will find more oil, and vice versa. Yesterday's continental shelf rulings magnify this potential.

7. The Oil & Gas Commission, for the first time will be empowered to maximize their mandate by maximizing the trade-off of oil and gas values, un-constrained by capacity limitations.
8. We position many parts of rural Alaska to benefit with reliable access to lower cost energy over time because of economies-of-scale.
9. We create the opportunity to approach Hawaii most importantly, about Alaska being a long-term significant solution to their energy needs with a project that could actually happen. Unfettered with any export limitations.
10. We will jump start the economy and generate decades of improved prosperity for all Alaskans. With a long-term fiscal plan based upon the rational management of our energy wealth, resulting in being able to continue contributing to the Permanent in material ways for many years to come.
11. We avoid to a considerable degree, exposing the State to long-term fiscal decay, and hopefully put off until long in the future, pressures to use the Permanent Fund to help pay for state government.
12. If we have buyers, and a pipeline, the producers will have no choice but to supply our gas. The view that the producers hold the key to everything doesn't have to be.

So how do we do we earn all this? By doing the following;

Appropriate enough money this session to fully vet this approach. This can be done separately or by amending HB369 to focus on a large capacity line from the North Slope to an interior hub. Including what role the State of Alaska could play in order to insure the project moves forward as soon as possible, on an INVESTMENT GRADE basis. No research being done at the state level currently contemplates this scenario.

If we get our gas to a hub, the rate payers can afford to take it the rest of the way. Just doing this alone this year will put pressure on the majors to take this upcoming season more seriously.

We can wait for multiple open seasons before we get started, adding at least one to two years to a project, or we can start now. The sooner we announce to the world we are doing this, the sooner serious negotiations can begin with potential buyers.

In terms of the legislation, I support legislation that attempts to do something, but without focusing on the economics, we lose the economics. Putting a time limit on the process, handicaps and limits the results. I would rather see us engage in an expedited process rather than mandate a timeframe that limits a result.

I have no prejudice in terms of what State entity manages the process as long as the members are qualified, coupled with any extra advantages that might be inherent in a particular entity. I will offer that one could, it would seem, greatly expedite the process simply by renegotiating the AGIA license with TransCanada, as authorized within AGIA,

to convert the State of Alaska to a co-developer of the big pipe to the Interior, owning whatever rights the private sectors chooses not to adequately bid on. In the end, that could even be very little.

The only way we lose this bet is if China and India don't grow sufficiently in the next 50-100 years to make North Slope gas economic. That should be an easy bet. The only tough decision there might be is if we generate perhaps 2 BCF a day of demand from in-state use and Hawaii, along with Japan and South Korea perhaps, with an 80-90% chance of success, and we are also faced with a much larger Canadian opportunity, and there isn't enough gas for both projects. Only if the Canadian option rises significantly above the 50% likelihood in a predictable timeframe might there be a real choice to make. But we don't have to make that decision, until we are faced with that option.

Thank you members of the committee for allowing me to present.

HCR

Sponsor Statement for House Concurrent Resolution No. 2

Short Title: IN-STATE GAS PIPELINE **Contact: Margaret Dowling, 465-6841**

Purpose and Intent HCR 2:

The intent of House Concurrent Resolution No. 2 is to provide energy security for Alaskans. This resolution urges the Governor to take action that will facilitate development of a small natural gas pipeline, commonly referred to as the "bullet line." With completion of a large diameter gas line not expected until 2016 at the earliest, the bullet line, a smaller project that will be easier and quicker to complete, can bridge the gap in natural gas delivery and provide much needed natural gas to communities along its route between the North Slope and Cook Inlet. Because the gas will be extracted and delivered within the state, and for export, the cost of this resource to the ratepayers could be considerably less than the cost of other sources of fuel consumed by Alaska's residents today. Thus, the bullet line will provided certainty of supply and predictability of price for Alaskans along the bullet line route.

The Governor and key agencies in the executive branch are in a unique position to facilitate development of the bullet line. The executive branch has the authority and resources to locate companies or entities in Gubik or elsewhere in the North Slope that have significant quantities of natural gas and to negotiate contracts with those entities to guarantee commercially reasonable terms that will enhance economic viability of a bullet line. The time to act for energy certainty for all Alaskans is now.

Summary HCR 2:

- Requests that the Governor provide energy security for all Alaskans by taking action necessary to support the development of a natural gas pipeline that will deliver natural gas from the North Slope to Cook Inlet.

February 11, 2009 26-LS0264\S.A

Representative_Jay_Ramras@legis.state.ak.us

- Requests that the Governor identify entities in Gubik or elsewhere on the North Slope that have sufficient quantities of natural gas to support a gas line.
- Requests that the Governor negotiate a commitment with the identified entity for gas production on commercially reasonable terms that would support the economic viability of the gas line.

Benefits HCR 2:

- Secures an adequate supply of affordable natural gas for residential and industrial consumers from the North Slope to Cook Inlet.
- Increases jobs, and local and state revenue.

HCR 2 Testimony 2/3/09

Frank Abegg
Fairbanks resident, private citizen

I support building a Bullet Line to deliver in-state natural gas to the Railbelt.

I have been a volunteer working on the Interior Issues Council of the Fairbanks Economic Development Corporation (FEDC). This group was formed a few years ago to find ways to improve our health and lower the area's energy costs. During the past few months, and our community group investigated Alaska's gas fields, in-state pipeline/supply options, the gas market and potential future industry opportunities. The group identified three possible options for delivering InState gas to Alaskans: Fairbanks Natural Gas LNG from the North Slope, the ANGDA Spur Line from Delta Junction to Anchorage, and the ENSTAR Bullet Line from the North Slope to Anchorage. All three proposals have challenges to provide economical gas supply. However, I believe the Bullet Line is the best option for supplying future reliable and economical gas to Fairbanks and Anchorage. If the bullet line can secure sufficient market and operate at its projected 0.5 Bcf/day, then natural gas could be supplied from the North Slope in the $10 to $12/mcf range. FNG currently supplies gas to Fairbanks customers at $22.91/mcf.

One of the options we explored was the "Do Nothing" scenario. At present the Fairbanks area uses 50 million gallons of fuel oil for residential/commercial heating each year. At $2.50/gallon oil the Fairbanks spends $125 million annually. Switching to gas could save up to $60 million annually by switching to gas priced at $10-12/mcf. The local refineries, Flint Hills and PetroStar, and the electric utility, GVEA, also burn oil. If they switched to gas they could potentially save around $150 million annually, which could be over $200 million annual savings.

Currently the Anchorage area's residential/commercial customers and electric utilities use about 80 Bcf/yr of gas. With the Cook Inlet gas field depleting, they might need to import LNG in the future without instate gas from the bullet line. If the imported LNG cost an additional $3/mcf, then the Anchorage customers would need to spend an additional $240 million/year for gas.

Bottom line is that the Railbelt could see increased energy costs in the range of $500 million/year compared to building a bullet line. If the Bullet Line costs $4 billion at an investment rate of 12%, then its annual cost would be about $500 million. About the same cost. However, the Bullet Line would provide Alaskans' access to in-state resources, create jobs in its construction, opportunities for local industry and help Fairbanks solve the growing PM2.5 air quality non-attainment problem.

I recommend that the State provide assistance to private industry in the permitting and right-of-way and possibly roads needed for the bullet line construction. The goal should be to have gas delivered to Anchorage and Fairbanks within the next 5 years.

The FEDC Instate Gas Pipeline Supply Options Study will be officially released this week. The Study supports construction of the Bullet Line and recommends the State provide assistance. The Study supports building a limited size LNG facility on the North Slope to deliver gas to Fairbanks by 2011 and a Bullet Line that can deliver gas by 2016. The bullet line would provide access to market for the potential Nenana gas field, Yukon Flats, Gubik and Cook Inlet. Having multiple gas supplies should encourage competitive pricing of our future gas supply.

Sponsor Statement for House Concurrent Resolution No. 3

Short Title: IN-STATE GAS PIPELINE **Contact: Margaret Dowling, 465-6841**

Intent and Purpose HCR 3

The intent of House Concurrent Resolution No. 3 is to provide energy security for Alaskans by encouraging the Governor to take the lead in expediting reopening of Agrium U.S., Inc.; a facility that processes natural gas into urea fertilizer and other consumables. Reopening Agrium ensures a steady demand for natural gas that will enhance the economic viability of a gas bullet line, which will in turn benefit all Alaskans by providing certainty of supply and predictability of price for gas consumers.

The intent of HCR 3 is also to support the Alaska farming industry. Farms cover more than 25,000 acres in five boroughs with more than 300 farmers residing in the Matanuska-Susitna Borough and more than 130 farmers in the Fairbanks area. The value of those farms is approximately $22,700,000. Agrium U.S., Inc. was the only urea fertilizer plant in the state. After it closed in 2007, because it lacked sufficient supplies of natural gas with which to manufacture fertilizer, famers in Alaska experienced a 400% increase in the cost of fertilizer and the Alaskan job market lost over 150 jobs. Reopening Agrium will not only help increase the economic viability of a natural gas line, it will create jobs and reduce the cost of farming in Alaska.

Summary HCR 3:

- Requests that the Governor provide energy security for all Alaskans by taking action necessary to support the development of a natural gas pipeline that will deliver natural gas from the North Slope to Cook Inlet.

- Requests that the Governor initiate negotiations to reopen the Agrium U.S., Inc. facility, which closed in 2007 and which was a consumer of natural gas used in the production of fertilizer.

Benefits HCR 3:

- Secures an adequate supply of affordable natural gas for residential and industrial consumers from the North Slope to Cook Inlet.
- By reopening Agrium, demand for natural gas will be insured enhancing the economic viability of a natural gas bullet line, which in turn benefits Alaskans by providing certainty of supply and predictability of price for gas consumers along the bullet line route.
- Supports Alaska's farming industry by providing a local, cost competitive source of fertilizer.
- Increases jobs for Alaskans and state and local revenue.

Sponsor Statement for House Concurrent Resolution No. 4

Short Title: IN-STATE GAS PIPELINE **Contact: Margaret Dowling, 465-6841**

Purpose and Intent HCR 4

The intent of House Concurrent Resolution No. 4 is to provide energy security for Alaskans by requesting that the Governor take all steps necessary to encourage development of a natural gas pipeline from the North Slope to the Cook Inlet Region, including advocating for an increase in the amount of natural gas that may be exported from the state under the authority granted by the United States Department of Energy. Increasing the volume of gas that may be exported from Alaska under U.S. Department of Energy licenses will increase demand and provide certainty and economic viability for a natural gas bullet line from the North Slope to the Cook Inlet Region.

Under current licenses with the U.S. Department of Energy, ConocoPhillips Alaska Natural Gas Corporation and Marathon Oil Company may export from the Kenai liquefied natural gas export facility up to 99,000,000,000,000 British thermal units (about 98,100,000,000 cubic feet) of liquefied natural gas during the two-year period from April 1, 2009 to March 31, 2011. After that time the Kenai liquefied natural gas export facility may be forced to close if the authority to export liquefied natural gas is not extended and if no new gas is discovered in the Cook Inlet region to meet both export and local demand. Local demand alone in the Cook Inlet region is expected to grow from 200,000,000 cubic feet a day to approximately 700,000,000 cubic feet a day during the period of 2010 to 2025. By supporting an increase in export licenses, the Governor will take the lead in insuring that Cook Inlet natural gas demand is supplied and that a natural gas bullet line from the North Slope to Cook Inlet is an economically viable project.

Summary HCR 4:

- Requests that the Governor provide energy security for all Alaskans by taking action necessary to support the development of a natural gas pipeline that will deliver natural gas from the North Slope to Cook Inlet.

- Requests that the Governor take appropriate action to advocate an increase in the volume of gas that may be exported under licenses issued by the U.S. Department of Energy to 60,000,000,000 cubic feet a year with that increase to be supplied by North Slope natural gas.

Benefits HCR 4:

- Secures an adequate supply of affordable natural gas for residential and industrial consumers from the North Slope to Cook Inlet.
- Enhances production and export of liquefied natural gas, thereby increasing jobs, and local and state revenue.
- Allows the Interior and other regions in the state to convert from fossil fuels to cheaper and cleaner burning natural gas, thereby increasing compliance with the fine particle air quality standard issued by the U.S. Environmental Protection Agency and enhancing Alaskan's health.

Sponsor Statement for House Concurrent Resolution No. 5

Short Title: IN-STATE GAS PIPELINE **Contact: Margaret Dowling, 465-6841**

Purpose and Intent HCR 5

The intent of House Concurrent Resolution No. 5 is to provide energy security for Alaskans by requesting that the Governor take all steps necessary to encourage development of a natural gas pipeline from the North Slope to the Cook Inlet region – and to do so with all due speed.

Alaskans' demand for reasonably priced, clean burning fuel for their homes is on the rise. With the cost of electricity and home heating fuel still at record breaking prices, and with completion of a large diameter natural gas pipeline not expected until 2016, at the earliest, now is the time to take action to build a smaller gas line. HCR 5 requests that the Governor work to support the timely construction of a natural gas bullet pipeline from the North Slope to the Cook Inlet region, including assisting and facilitating a private entity to commit to investing in the bullet pipeline before November 1, 2010.

Summary HCR 5:

- Requests that the Governor provide energy security for all Alaskans by taking action necessary to support the development of a natural gas pipeline that will deliver natural gas from the North Slope to Cook Inlet.
- Requests that the Governor assist and facilitate the commitment of a private entity to invest in the bullet pipeline before November 1, 2010.

Benefits HCR 5:

- Secures an adequate supply of affordable natural gas for residential and industrial consumers from the North Slope to Cook Inlet.
- Enhances production and exports of liquefied natural gas, thereby increasing jobs, and local and state revenue.

- Allows the Interior and other regions in the state to convert from fossil fuels to cheaper and cleaner burning natural gas, thereby increasing compliance with the fine particle air quality standard issued by the U.S. Environmental Protection Agency and enhancing Alaskan's health.

House Concurrent Resolution 10
Sponsor Statement
Version: CS HCR 10 (RES)

"Urging the Governor to exercise all available legal options to restrain the United States Department of the Interior, National Park Service, from intruding on the sovereign right of the state to exercise jurisdiction over navigable water and submerged land and urging the Governor to allocate sufficient resources to the Department of Law, the Department of Natural Resources, and the Department of Fish and Game to defend the state's right to manage the public use of its navigable water."

The State of Alaska owns and has the right to manage submerged land and navigable water in the state, unless Congress has specifically limited the state's authority. However, due to federal action, Alaska is quickly losing one if its most valuable assets and Alaskans are losing the ability to access these resources.

Starting in 1996, the United States Department of the Interior, National Park Service, began regulating public use of Alaska's navigable waterways. In the past 12 years, despite the state's continued protest and efforts to administratively address this problem, Alaskans' right to access and use Alaskan land has been eroded.

House Concurrent Resolution 10 reaffirms our sovereignty and asks for the governor to exercise all available legal options to protect our citizens from this inappropriate preemption of our state's rights. We must take action now to ensure that our right to manage our resources, as guaranteed by Alaska's Constitution, and both federal and state law, is protected.

February 13, 2009

Richard Svobodny
Acting Attorney General
State of Alaska
Department of Law
P.O. Box 110300
Juneau, Alaska 99811-0300

Dear Mr. Svobodny:

In 1996, over the strong objections of the State of Alaska and others, the National Park Service adopted regulations which improperly extended its management and enforcement authorities over state owned navigable waters within units of the National Park System. While the agency has been fairly restrained in its enforcement of the regulations, there have been a growing number of encounters between National Park Service rangers and the public. It is our understanding that one citation has been issued and commercial operators have been required to get permits to operate on the Yukon River within the Yukon Charley Rivers National Preserve, even though they do not use the upland areas of the preserve.

The regulations at 36 CFR §1.2(a)(3) state that National Park Service regulations apply to waters located within the boundaries of the National Park System, including navigable waters, "without regard to ownership of submerged lands, tidelands or lowlands." This is contrary to ANILCA Section 103(c) which clearly states that only public lands are included as a portion of a conservation system unit and that state or private lands are not subject to the regulations applicable solely to public lands within such units. As defined by ANILCA, public lands do not include State owned lands, including the submerged lands beneath navigable waters.

In publishing its rulemaking the Park Service classified Section 103(c) as a "minor technical provision." To the contrary, addition of this section was a key revision included in the concurrent resolution that led to the final passage of ANILCA. Section 103(c)

clearly indicates that Congress recognized that the authority of the State to regulate its lands and waters was not to be superseded by federal agency regulations.

Since adoption of the regulations the State of Alaska, through your office and the ANILCA Program, has worked to find an administrative solution to this issue. While the National Park Service generally does not dispute state ownership of submerged lands underlying navigable waters, it maintains that the NPS Organic Act and other general statutory authorities grant it the necessary authority to regulate activities on navigable waters.

In view of the National Park Service position, it appears that there can be no administrative solution to this issue. Therefore, under the authority granted by AS 41.37.240, the Citizens' Advisory Commission on Federal Areas respectfully requests the Department of Law bring suit against the National Park Service and ask the court to set aside these regulations.

We should note that Senator Bunde and Senator Therriault have introduced Senate Concurrent Resolution (SCR) No. 3 which urges the Governor to file suit challenging these regulations. The Commission fully concurs with that resolution.

We believe that this action is in the best interest of the State and is necessary to protect the State's authorities over its lands and waters. The Commission is committed to providing any help and support it can in this matter. Please contact us if we can be of assistance.

Sincerely,

Rick Schikora

Rep. Mike Hawker
Alaska State Legislature
Juneau, AK

Dear Rep. Hawker,

I am in full support of HCR 10 opposing federal interference in the management and enjoyment of state lands and navigable waterways. Once again we must defend Alaska and her sovereign inalienable rights against federal control.

I am proud to see the leadership you and have taken on this issue. I wish to remind others of the solemn oath taken by all Legislators, and the Governor herself, in the promise to protect and defend the Constitution of the State of Alaska.

The sovereign entity of Alaska is at the heart of this issue and there should be no opposition to the full and complete defense of it. Time is of the essence in order to rid our state of this cancer.

In my opinion, an elected official who would not employ whatever legal means necessary to correct this gross error, is in violation of the oath of office.

Very Truly Yours,

Raymond Hickel

- PAAD Notice regarding Director's Chuitna Report, Chuitna Field Trip Report
  - Director's Chuitna Report (04/04/08)
  - Chuitna Field Trip Report (09/08/08)

The mission of the Division of Land's Navigability Project is to protect the public rights associated with navigable and public waters, and to ensure that the state's title to lands beneath navigable waters is protected. The Alaska State Constitution provides for free access and common use of public and navigable waters by any citizen of the United States or resident of the State of Alaska. State ownership of the beds of navigable waters is an inherent attribute of state sovereignty protected by the United States Constitution.

The Division's Navigability Project will enable the State of Alaska to assert ownership of lands beneath navigable waters. This is important for two reasons: first, the public will be ensured access to these state lands; and second, if these lands are already owned by the State of Alaska, they shouldn't be counted against Alaska's statehood land entitlement or conveyed by the Federal Government to non-state ownership.

Policies and Proceduces on Ownership and Management of Navigable and Public Waters

June 18,1996 State ownership of the beds of navigable waters is an inherent attribute of state sovereignty protected by the United States Constitution. Utah v. United States, 482 U.S. 193 (1987). Under the doctrine, all states enter the Union on an equal footing with respect to sovereign rights and powers, title to the beds of navigable waters in Alaska vested in the newly formed State of Alaska in 1959. In addition, under the Alaska Constitution and the public trust doctrine, all waters in the state are held and managed by the state in trust for the use of the people, regardless of navigability and ownership of the submerged lands under the Equal Footing Doctrine.

The purpose of this paper is to describe the State of Alaska's policies and procedures for identifying and protecting the state's title to the beds of navigable waters. In addition, this paper outlines the legal and policy considerations which guide the ownership and management of submerged lands and public waters.

I. IDENTIFYING AND PROTECTING STATE TITLE TO THE BEDS OF NAVIGABLE WATERS

Identification and management of the beds of navigable waters is an important policy of the State of Alaska. In 1980, the state established a comprehensive navigability program to respond to federal land conveyances and land management activities under the Alaska Statehood act, the Alaska Native Claims Settlement Act (ANCSA), and the Alaska National Interest Lands Conservation Act (ANILCA). Pursuant to the provisions of those acts, the federal government has issued navigability determinations for thousands of lakes, rivers, and streams throughout the state in an effort to determine whether the state or federal government owns the submerged lands. Navigability determinations are also made prior to many state land disposals to insure that adequate public use easements are reserved.

The basic purpose of the state's program is to protect the public rights associated with navigable waters, including, in particular, the state's title to the submerged lands. Because state and native land selections and federal conservation units blanket the state, navigability questions have arisen for rivers, lakes, and

streams throughout Alaska. The navigability of many of those waterbodies has a lready been established. There are hundreds of others, however, where navigability is not yet determined.

To help resolve these navigability disputes, a major goal of the state's navigability program is to identify the proper criteria for determining title navigability in Alaska and to gather sufficient information about the uses and physical characteristics of individual waterbodies so that accurate navigability determinations can be made as disputes arise. Other important aspects of the program include monitoring federal land conveyance and management programs to identify particular navigability disputes, seeking cooperative resolution of navigability problems through negotiations and legislation, and preparing for statewide navigability litigation.

Return to Table of Contents

RIPARIAN RIGHTS AND STATUTE OF LIMITATIONS

Disputes over ownership of submerged lands in Alaska have arisen under a variety of circumstances. The principal source of the disputes in Alaska is the survey and acreage accounting system used by the federal government for conveying land to the state and native corporations.

The standard procedures for surveying and conveying federal land are found in the Manual of Instructions for the Survey of the Public Lands of the United States, generally known as the BLM Manual of Surveying Instructions. Under those procedures, consistently used in every public land state except Alaska, only uplands are surveyed and conveyed in fulfillment of acreage entitlements, not submerged lands. The survey rules require that all lakes 50 acres or larger, and rivers and streams three chains (198 feet) in width or wider, regardless of navigability, be meandered and segregated (excluded) from the surveyed public lands. Only the surveyed uplands are conveyed. The acreage of meandered rivers, lakes, and streams is not included in computing the amount of land involved in the conveyance.

In Alaska, however, the federal government had not consistently followed these survey rules. Until 1983, the federal government treated submerged lands the same as uplands. All bodies of water that were considered non-navigable by the federal government, regardless of size, were surveyed as though they were uplands and the acreage of submerged lands was charged against the total acreage entitlement.

Because of these conveyance procedures, the navigability of waterbodies in Alaska has been an issue of contention since the enactment of the Alaska Statehood Act and ANCSA. In addition to the problems caused by a lack of information about many waterbodies, the situation was exacerbated by the narrow definition of navigability used by the federal government. Hundreds of rivers, lakes, and streams considered navigable by the state were determined non-navigable by the federal government.

In 1983, following years of negotiations, lawsuits and legislative attempts to solve the navigability problems created by the unusual survey and conveyance procedures in Alaska, the State of Alaska, the United States Department of the Interior and the Alaska Federation of Natives (AFN) agreed that the standard rules of survey should be followed for land conveyances in Alaska. The effect of that decision was to treat Alaska surveys and land conveyances like federal land surveys and conveyances in other states. The recipients of conveyances from the federal government are charged only for the amount of public land that is calculated by the survey, which does not include the areas of meandered rivers, lakes and streams.

The use of these survey procedures has eliminated many of the problems associated with the federal land conveyance programs in Alaska. Submerged lands are no longer being conveyed to fulfill acreage entitlements. With the exception of lakes smaller than 50 acres and streams narrower than 198 feet, navigability determinations are no longer being made prior to federal land conveyances. Determinations of ownership of submerged lands can be put off until a natural resource use or conflict requires resolution, such as issuance of an oil and gas lease, mining claim, or a gravel sale.

Through the joint efforts of the State of Alaska, AFN, and the Department of the Interior, the 1983 decision to use the standard survey procedures for land conveyances in Alaska was legislatively approved in August 1988 when the United States Congress passed legislation (94 Stat. 2430) amending Section 901 of the Alaska National Interest Lands Conservation Act, codified at 43 U.S.C. 1631. The 1988 amendment, sometimes referred to as the Alaska Submerged Lands Act, requires that the standard rules of survey in the BLM Manual of Surveying Instructions be used for all federal surveys under the Alaska Statehood Act and ANCSA. The 1988 amendment also repealed the Section 901 statute of limitations that would have required the state to file a lawsuit within a very short period of time in order to preserve its title to the beds of

navigable waters conveyed to native corporations by the federal government as a result of erroneous navigability determinations, poor maps, surveys or whatever. Even with this legislation, a major problem concerning navigability decisions made by the federal government under the old system remains unresolved. At issue are the hundreds of erroneous non-navigability decisions and the resulting submerged land conveyances made to ANCSA corporations in previous years. In addition, to comply with the meandering requirements of the BLM Survey Manual, the federal government is still required to make navigability determinations for lakes smaller than 50 acres and rivers or streams narrower than 198 feet in width to determine if these waters must be meandered.

Return to Table of Contents

NAVIGABILITY CRITERIA

The greatest hurdle to overcome in the state's efforts to identify and manage navigable waters has been the long- standing differences of opinion between the State of Alaska and the United States regarding the application of the test for determining title navigability. Navigability is a question of fact, not a simple legal formula. Variations in waterbody use that result from different physical characteristics and transportation methods and needs must be taken into account. There are many legal precedents for determining navigability in other states based upon the particular facts presented in those cases. In Alaska, though, we are just beginning to get the final court decisions that are necessary to provide legal guidance for accurate navigability determinations.

The physical characteristics and uses of a waterbody used by the state for asserting navigability, commonly referred to as navigability "criteria", are based upon legal principles that have been established by the federal courts. These criteria are applied to rivers, lakes, and streams throughout the state and take into account Alaska's geography, economy, customary modes of water-based transportation, and the particular physical characteristics of the waterbody under consideration.

The federal test for determining navigability was established over a hundred years ago. In the landmark decision of The Daniel Ball, 77 U.S. (19 Wall.) 557, 563, (1870), the Supreme Court declared:

Those rivers must be regarded as public navigable rivers in law which are navigable in fact. And they are navigable in fact when they are used, or are susceptible of being used, in their ordinary condition, as highways of commerce, over which trade and travel are or may be conducted in the customary modes of trade and travel on water.

Although The Daniel Ball test is accepted as the correct standard for determining navigability, there has been a lot of disagreement over application of many of the terms and phrases used in The Daniel Ball test to the specific uses of Alaska's lakes, rivers and streams. The State of Alaska uses the following interpretation of that test as the basis for its navigability program.

The Waterbody Must Be Usable As a Highway For the Transportation of People or Goods. Interpreting the requirements that navigable waterbodies be used or usable as "highways of commerce", the courts have ruled that the central theme of title navigability is that the waterbody be capable of use as a highway which people can use for transporting goods or for travel. Neither the types of goods being transported nor the purpose of the travel are important in determining navigability. Transportation on water associated with recognized commercial activities in Alaska, such as mining, timber harvesting, and trapping is, evidence of navigability. The use of waterbodies for transportation in connection with natural resources exploration or development, government land management, management of fish and game resources, or scientific research is also evidence of navigability. Travel by local residents or visitors for the purpose of hunting, fishing, and trapping, or as a means of access to an area can be used to establish navigability. The same holds for recreational transportation, including personal travel and professionally guided trips.

Waters Which Are Capable of Being Used For Transporting Persons and Goods, Although Not Actually Used, Are Navigable. It is not necessary that a waterbody be actually used for transportation to be found navigable. It is enough that it is susceptible, or physically capable, of being used. Whether a waterbody is susceptible of use for transportation depends upon the physical characteristics of the water course such as length, width, depth, and, for a river, current and gradient. If those physical characteristics demonstrate that a waterbody could be used for the transportation of persons or goods, it is legally navigable.

The susceptibility element of title navigability is very important for the identification of navigable waterbodies in Alaska. Because of Alaska's sparse population and lack of development, there are hundreds

of remote rivers, lakes, and streams where there is little or no evidence of actual use. Because of their physical characteristics, however, many of these remote waterbodies could be used for transporting people or goods if there was a need. Under these circumstances, they are considered legally navigable.

Transportation Must Be Conducted In the Customary Modes of Trade and Travel On Water. A finding of navigability does not require use or capability of use by any particular mode of transportation, only that the mode be customary. The courts have held that customary modes of transportation on water include all recognized types and methods of water carriage. Unusual or freak contrivances adapted for use only on a particular stream are excluded. Customary modes of trade and travel on water in Alaska include, but are not limited to, barges, scows, tunnel boats, flat-bottom boats, poling boats, river boats, boats propelled by jet units, inflatable boats, and canoes. In places suitable for harvesting timber, the flotation of logs is considered a customary mode of transportation.

The mode of travel must also be primarily waterborne. Boats which may be taken for short, overland portages qualify. The courts have ruled that the use of a lake for takeoffs and landings by floatplanes is insufficient, in and of itself, to establish navigability.

Without expressly rejecting the claim, at least two court decisions in Alaska have suggested that winter travel on the surface of a frozen river or lake is probably not evidence of navigability. The rivers involved in the two adjudicated cases were both found navigable based upon summer use by boats, however, and it appears likely that most waterbodies in Alaska that are used as highways in winter can also be travelled by at least small boats in the summer. Because of this, the state need not rely upon winter travel to support navigability.

Waters Must Be Navigable In Their Natural and Ordinary Condition. A waterbody which can be used for transportation only because of substantial man-made improvements to the condition of the watercourse is not navigable for title purposes. However, if transportation does or could occur on the waterbody even without the improvements and the improvements would only make transportation easier or faster or possible for larger boats (e.g., dredging), it is still considered navigable for title purposes.

The presence of physical obstructions to navigation (rapids, falls, log-jams, etc.) does not render a waterway non- navigable if the obstruction can be navigated despite the difficulties or if the obstruction can be avoided by other means, such as portaging, lining, or poling. A waterbody is also navigable even if seasonal fluctuations do not allow it to be navigated at all times of the year. However, a waterbody which is only navigable at infrequent and unpredictable periods of high water is not normally considered navigable. The fact that a waterbody may be frozen for several months of the year does not render it non-navigable if it is navigable in its unfrozen condition.

Title Navigability Is Determined As Of The Date Of Statehood. To be considered navigable for title purposes, the waterbody must have been navigable in 1959 (when Alaska became a state). This element of the navigability test focuses on the physical characteristics of the waterbody and whether those characteristics have changed significantly since statehood. Most waterbodies have not physically changed enough since statehood to alter their navigability. Assuming there have been no significant changes in the physical characteristics of the waterbody, a waterbody that is navigable today would be considered legally navigable in 1959 as well. Exceptions might include the creation, by natural or man-made causes after statehood, of a totally new lake, river, or canal now used for navigation. Such a waterbody would not be considered navigable for title purposes. Conversely, a waterbody which was navigable in 1959 but, because of natural or man-made physical changes, is no longer navigable in fact would still be considered navigable for title purposes.

Return to Table of Contents

NAVIGABILITY CRITERIA DISPUTES

Because of differing legal interpretations of court navigability decisions, several aspects of the criteria used by the state to determine navigability have been disputed by the federal government. As a direct result of these criteria disputes, many waterbodies considered navigable by the state have been determined non-navigable by the federal government.

The major criteria dispute has been over the type or purpose of the transportation required to establish navigability. The federal government has asserted that a waterway must be used, or capable of use, for transporting commerce to be considered navigable. Other, "noncommercial" transportation uses are not

considered sufficient to establish navigability. In this context, the federal government has claimed that the only relevant "commercial" transportation is the distribution of goods for sale or barter, or the transportation for hire of people or things. The federal government has admitted that professionally guided transportation on Alaska's rivers, lakes and streams constitutes commerce, but nevertheless has argued that the waters are not being used as a navigable "highway" when recreation is involved, but rather more as an amusement park. The federal government has therefore claimed that waters used only for commercial recreation are legally nonnavigable even though they may be navigable in fact.

Through the work of the state's navigability program, this definition has been repeatedly rejected by the courts, most recently in the Gulkana River case. Alaska v. United States, 662 F.Supp.455 (D.Alaska 1987), affirmed sub nom. Alaska v. Ahtna, Inc., 891 F.2d 1401 (9th Cir. 1989). Applying the correct definition of navigability, many of the submerged lands that the federal government attempted to convey to ANCSA corporations should have been recognized as belonging to the state. The state appealed many conveyances to protect its title. As occurred in the Kandik-Nation Rivers appeal, Appeal of Doyon, 86 I.D. 692 (ANCAB 1979), Alaska Native Corporations also found it necessary to challenge erroneous federal determinations of non-navigability to insure they would not be deprived of any portion of their entitlement by being charged for submerged land owned by the state.

The federal government has also argued that aluminum boats, boats propelled by jet units, inflatable boats, and canoes are not customary modes of travel for the purpose of determining navigability in Alaska. As a result, many waterbodies navigated by these types of watercraft have been found legally non-navigable by the federal government. The claim is that these boats represent post-statehood technological advances, are too small to be considered "commercial", or that most "commercial" use of the watercraft developed after statehood.

Another navigability dispute involves remote, isolated lakes. The federal government has found many of these lakes legally non-navigable, even though they are physically capable of being navigated. The federal government's contention is that a navigable connection to another area is necessary to make travel on a remote lake worthwhile. Otherwise, the federal government views the lack of development in the area around the isolated lake as an indication that the lake will never be used for commercial transportation.

To resolve these navigability criteria disputes, the state has actively pursued a limited number of court cases challenging particular findings of non-navigability by the federal government. With the sole exception of floatplanes, the courts have agreed with the navigability criteria presented by the State of Alaska and have rejected the limitations suggested by the federal government. These cases include:

Gulkana River. In this case, both in the U.S. District Court and on appeal to the U.S. Court of Appeals, the federal courts rejected the federal government's restrictive interpretation of the phrase " highway of commerce" in the title navigability test. The federal district court stated that to demonstrate navigability, it is only necessary to show that the waterbody is physically capable of "the most basic form of commercial use: the transportation of people or goods." Because the Gulkana River can be used for the transportation of people or goods, the Gulkana River was found navigable. Alaska v. United States, 662 F.Supp.455 (D.Alaska 1987). On appeal, the court of appeals affirmed the district court's finding of navigability. Alaska v. Ahtna, Inc., 892 F.2d 1401 (9th Cir. 1989). The court of appeals found that the modern use of the Gulkana River for guided hunting, fishing, and sightseeing trips is a commercial use and, since the physical characteristics of the river have not significantly changed since 1959, provides conclusive evidence that the river was susceptible of commercial use at statehood. The court also found that modern inflatable rafts can be used to establish navigability. In April 1990, the United States Supreme court denied a request by Ahtna, Inc. to reconsider and overturn the court of appeals decision. The Gulkana River precedent is now binding on all future navigability determinations in Alaska.

Kandik and Nation Rivers. In this administrative appeal, the State of Alaska and Doyon Limited, an ANCSA regional corporation, successfully established that the use or susceptibility of use of a river or stream by an 18-24 foot wooden riverboat capable of carrying at least 1,000 pounds of gear or supplies is sufficient to establish navigability. Based upon the use of these types of boats for the transportation of goods and supplies by fur trappers, as well as extensive historic and contemporary canoe use, the court found the Kandik and Nation rivers, in Interior Alaska, navigable. Appeal of Doyon, 86 I.D.692 (ANCAB 1979).

Alagnak River. In this federal district court case, the Alagnak River, the Nonvianuk River, Kukaklek Lake and Nonvianuk Lake were all found navigable. These interconnected waterbodies are located in the Bristol Bay region of Alaska, south of Lake Iliamna. Their primary transportation use is for commercially guided hunting, fishing, and sightseeing and for government research and management. They also serve as a means of access for local residents to their homes and to the surrounding areas for subsistence hunting and

fishing. After several years of litigation, the federal government conceded that these rivers and lakes are navigable. Alaska v. United States, No. 82-201 (D.Alaska Feb. 2, 1985).

Matanuska River. The recommended decision in this administrative appeal agreed with the State of Alaska's position that post-statehood commercial river rafting operations are sufficient to establish navigability. Based upon that type of use, the administrative law judge who heard the case recommended that the Matanuska River, in Southcentral Alaska, be found navigable. The Secretary of Interior, over the state's objections, assumed jurisdiction over the case and stayed implementation of the recommended decision. No action has been taken in the case since that time. Appeal of Alaska, No. 82-1133 (IBLA Rec. Decision Aug. 18, 1983)

Slopbucket Lake. The state claimed that the extensive use of floatplanes on Slopbucket Lake, a twenty acre lake adjacent to Lake Iliamna, was sufficient to establish navigability. The federal courts rejected this view. The courts reasoned that floatplanes do not use the lake as a navigable highway; they just take off and land there. Alaska v. United States, 754 F.2d 851 (9th Cir.) cert denied, 106 S. Ct. 333 (1985).

Return to Table of Contents

IDENTIFICATION OF NAVIGABLE WATERS

Even if the criteria for determining navigability in Alaska were totally agreed upon, it still would be difficult to prepare a complete list of all of the navigable lakes, rivers, and streams in the state. Much of Alaska has not yet been surveyed and many maps are inaccurate and out-of-date. It is an immense and complex task simply to identify and locate all of the thousands of named and unnamed lakes, rivers, and streams in the state which might be considered navigable. Furthermore, once a potentially navigable lake, river, or stream has been identified, detailed information about its size and uses is necessary for an accurate navigability determination. Because of Alaska's undeveloped and remote character, gathering navigability information is both time consuming and expensive. Finally, administrative navigability determinations made by the state or the federal government are always subject to legal challenge, since only the courts can authoritatively determine title to submerged lands.

Despite these difficulties, both the state and the federal government are frequently called upon to issue navigability determinations. Although the requirement that BLM adhere to the meandering requirements of the BLM Survey Manual has eliminated the need for navigability determinations on the larger rivers, lakes, and streams, which must now be meandered regardless of navigability, navigability determinations are still required for the smaller rivers, lakes, and streams to determine if they are to be meandered at the time of survey. Because of this, some navigability determinations are still made for nearly every federal land conveyance under ANCSA or the Alaska Statehood Act. The management plan for nearly every federal Conservation System Unit (CSU) also addresses the navigability issue.

Federal navigability determinations are reviewed by the state to insure that available information sources were used and interpreted correctly. Where the federal government determines non-navigable a waterbody which is considered navigable by the state, the state may provide the government with supplemental information about the uses and characteristics of the waterbody to obtain a redetermination of navigability. Under some circumstances the state needs to make its own navigability determinations, such as for a oil and gas lease sale, land disposal, material sale, mining claim, or another use of state land or resources requiring a determination of ownership of submerged lands within the affected area.

For large, undeveloped regions of Alaska there may be little or no accurate waterbody use or physical characteristics information available for making navigability determinations. When information is lacking, and it must make a navigability determination, the state is forced to rely solely upon the physical characteristics shown on maps and aerial photographs. In these cases, the state identifies as navigable all streams depicted on the U.S.G.S. maps with double lines (generally at least 70 feet wide) and having an average gradient over the length of the stream of no more than 50 feet per mile. With rare exceptions, the state's experience has been that streams of this type are deep enough and wide enough to be navigable by boats carrying persons or goods and must, therefore, be considered legally navigable. Streams depicted with single lines, although narrower in width, may also be listed as potentially navigable if they have gradients of substantially less than 50 feet per mile and are at least 10 miles.

If there is no public use or physical characteristics information readily available for lakes, those lakes which are shown on maps and aerial photographs as having a navigable water connection with other navigable waters, or which are accessible by short overland portages, are considered navigable regardless of the size

of the lake. These lakes are part of a system of interconnected navigable waters. If a lake is totally isolated, it will be included on the state's navigability maps if it is at least 1 1/2 miles long. That length insures that the lake can be used as a "highway". Future judicial decisions interpreting the "highway" requirement for isolated lakes could shorten or lengthen this 1 1/2 mile "rule of thumb."

The state recognizes that, under some circumstances, lakes smaller than 1 1/2 miles long can be and are used as navigable highways. In those cases, when known, these smaller lakes are also depicted on the state's navigability map. Moreover, as a matter of administrative policy and convenience only, the state may sometimes make an exception to the 1 1/2 mile standard in the extremely wet regions of the state, including some areas in the Yukon- Kuskokwim Delta, Yukon Flats, and on the North Slope. In these areas, an isolated lake might need to be 2-3 miles long to be included on the state's navigability maps. Although smaller lakes in these areas are capable of being used for transportation and should be found navigable by the courts, the state has decided to concentrate its limited resources in protecting the larger waterbodies first.

Return to Table of Contents

NAVIGABLE WATERS WITHIN PRE-STATEHOOD FEDERAL WITHDRAWALS

Although disputes over which waters in Alaska are navigable are the most frequent cause of submerged land ownership disputes, there is another major legal issue which poses a threat to Alaska's sovereign claim to the beds of navigable waters. Even where navigability is conceded, the federal government often contends that title to the submerged lands did not vest in the state if the area was withdrawn or reserved by the federal government on the date of statehood. Within native conveyance areas, the federal government has used this claim of "reserved submerged lands" to justify its attempts to convey the beds of navigable waters in fulfillment of the native entitlements. Within state selections, the federal government has used the same claim to charge the acreage of submerged lands against the state's entitlement.

The state strongly disagrees with this federal claim and has actively pursued a number of court challenges to resolve the issue. In addition to numerous appeals from federal decisions to convey or charge for the beds of navigable waters, the state was actively involved as a friend of the court in one case before the United States Supreme Court and continues to be involved in another Supreme Court case which presents this issue. The pending case is United States v. Alaska, U.S. Supreme Court 84 Original (filed June, 1979).

On June 8, 1987 the Court issued its decision in Utah v. United States, No. 85-1772 (filed Oct. 14, 1986). In this case the federal government, in 1976, issued oil and gas leases for land underlying Utah Lake, a navigable waterbody located in Utah. The suit sought a declaratory judgement that Utah, rather than the United States, holds the lands under navigable waters in the territories in trust for future states, and, absent a prior conveyance by the federal government to third parties, a state acquires title to such land upon entering the Union on an "equal footing" with the original 13 states.

The Supreme Court held that title did pass to the state upon Utah's admission to the Union. They held that there is a strong presumption against finding congressional intent to defeat a state's title, and, that in light of the longstanding policy of the federal government's holding land under navigable waters for the ultimate benefit of future state absent exceptional circumstances, an intent to defeat a state's equal footing entitlement could not be inferred from the mere act of the reservation itself. The United States would not merely be required to establish that Congress clearly intended to include land under navigable waters within the federal reservation, but would additionally have to establish that Congress affirmatively intended to defeat the future state's title to such land.

This decision has significant ramifications within Alaska, since over 95 million acres - more than 25% of the total area of the state - was enclosed within various federal withdrawals and reservations at the time Alaska became a state.

Return to Table of Contents

NAVIGABLE WATERS WITHIN ANILCA CONSERVATION SYSTEM UNITS

On December 2, 1980, the Alaska National Interest Lands Conservation Act became law. This act created or added 104.3 million acres to various federal conservation system units. Because these "withdrawals" occurred after the date of statehood, there is no disagreement between the state and federal governments that navigable waters within the various CSU's are owned by the state. However, there is some

disagreement on the amount of authority the federal land managers may have to regulate these state owned submerged lands.

The U.S. Constitution gives Congress certain limited powers to control uses on state owned submerged land. These are known as the Property Clause, Navigational Servitude and the Commerce Clause. The extent of these powers involves complex legal questions. However, even assuming that Congress has the power to regulate state-owned submerged lands in Alaska, the United States Supreme Court has ruled that Congress may choose not to exercise that power, thus leaving regulation totally up to the state. Escanaba Co. v. Chicago, 107 U.S. (17 Otto.) 678 (1883). Whether Congress has done that can only be determined by examining the federal laws passed by Congress dealing with Alaska lands. Another possibility is that the state and federal governments have concurrent jurisdiction, sharing the authority to regulate submerged lands.

In ANILCA, Congress did not take away the state's power to regulate state-owned submerged lands within federal CSU's in Alaska. Numerous provisions in ANILCA recognize and respect the state's authority over state-owned land. In some cases, however, Congress may have attempted to give the federal land managers some concurrent authority to regulate navigable waters within CSU's.

The state, where possible, cooperates with rather than confronts the federal land managers. This cooperation often takes the form of a memorandum of understanding that discusses management issues and how they will be resolved. Differences do occur, however, over issues such as column management and restrictions on mining.

Return to Table of Contents

II. LEGAL AND POLICY GUIDELINES GOVERNING MANAGEMENT OF SUBMERGED LANDS AND PUBLIC WATERS

PUBLIC TRUST DOCTRINE

The state has special duties and management constraints with respect to state-owned land underlying navigable waters. These special duties and management constraints arise from the Alaska Constitution. The Alaska Constitution contains numerous provisions embracing the principles commonly known as the public trust doctrine. The public trust doctrine is remarkable both for its age and for its vigor. Rooted in the customs of the seafaring Greeks and Romans, it has evolved to become one of the most effective safeguards of public rights. Basically, the trust reflects an understanding of the ancient concept that navigable waters, their beds and their banks, should be enjoyed by all the people because they are too important to be reserved for private use.

In America, the concept of public rights to public waters was recognized since the early days of the Massachusetts Bay Colony where the great Pond Ordinance of 1641 guaranteed the right to fish and fowl in ponds greater than 10 acres, along with the freedom to pass through private property to do so.

By 1821, American courts were pronouncing the law of public trust as we know it today. This does not mean that no water-related development can take place. The public trust doctrine permits states to improve waterways by constructing ports, docks and wharves, thus furthering the purposes of the trust. Generally speaking, the people's trust rights may be alienated only in ways that further overall trust uses, and in relatively small parcels.

Illinois Central Railroad Company v. Illinois, 146 U.S. 387,452 (1982), involved a grant by the State of Illinois of one thousand acres of the bed of Lake Michigan, constituting the entire harbor of the City of Chicago, to the Illinois Central Railroad. The U.S. Supreme Court held that the grant was revocable, that the state held the land in trust for the public, and that it was powerless to relinquish its rights as trustee.

The court went on to say that land underlying navigable waters is much more than a simple property right.

[I]t is a title different in character from that which the state holds in lands intended for sale. It is different from the title which the United States holds in the public lands which are open to preemption and sale. It is a title held in trust for the people of the state that they may enjoy the navigation of the waters, carry on commerce over them, and have liberty of fishing therein freed from the obstruction or interference of private parties... The trust devolving upon the state for the public, and which can only be discharged by the

management and control of property in which the public has an interest, cannot be relinquished by a transfer of the property.

In the 19th century the purposes of the trust were generally described as "commerce, navigation and fishery." This was logical because the major waterways were essential highways of commerce. But as other values became increasingly important, courts began to recognize recreation and environmental protection among the purposes for which the trust exists. As a California court said in 1971, "with our ever increasing leisure time...and the ever increasing need for recreational areas it is extremely important that the public need not be denied use of recreational water...the rule is that a navigable stream may be used by the public for boating, swimming, fishing, hunting and all recreational purposes." People ex rel. Baker v. Mack, 19 Cal. App. 3d 1040, 1044 (1971).

The Alaska constitution provides protections similar to the public trust doctrine protections that cannot be disregarded by the legislature or overruled by the courts. Article VIII, Sec. 3 provides; "Wherever occurring in their natural state, fish, wildlife and waters are reserved to the people for common use." After reviewing the public trust doctrine in Owsichek v. State, Guide Licensing, 763 P.2d 488 (Alaska 1988), the Alaska Supreme Court explained that "the common use clause was intended to engraft in our constitution certain trust principles guaranteeing access to the fish, wildlife and water resources of the state."

In CWC Fisheries, Inc. v. Bunker, 755 P2.d 1115 (Alaska 1988), the Alaska Supreme Court applied the public trust doctrine to tidelands, holding that, even after conveyance, the title remains subject to continuing public easements for purposes of navigation, commerce and fishery.

The 1985 Alaska legislature recognized the constitution application of public trust doctrine principles in Alaska. In an Act relating to the public or navigable waters of the state, the legislature found that "the people of the state have a constitutional right to free access to the navigable or public waters of the state" and that the state "holds and controls all navigable or public waters in trust for the use of the people of the state". 85 SLA Ch. 82. In the same act, the legislature ruled that submerged lands are "subject to the rights of the people of the state to use and have access to the water for recreational purposes or any other public purpose for which the water is used or capable of being used consistent with the public trust."

Courts in other states over the years have defined in somewhat different ways the public uses that are permitted and protected by the public trust as it applies to submerged lands. In reviewing these other cases, it can clearly be seen that through time an ever expanding definition of the public uses protected by the public trust doctrine is being adopted. The California Supreme Court recently held that:

Although early cases had expressed the scope of the public's right in (lands subject to the public trust) as encompassing navigation, commerce and fishing, the permissible range of public uses is far broader, including the right to hunt, bathe or swim, and the right to preserve the (public trust) lands in their natural state as ecological units for scientific study. City of Berkeley v. Superior Court of Alameda, 606 P.2d 362, 365 (Cal. 1980)

It is clear under the Alaska Constitution that the State of Alaska has the responsibilities of a trustee with respect to management of land underlying navigable waters. Moreover, the Alaska legislature has adopted a broad view of the public uses protected or permitted by the public trust. Accordingly, the Alaska Attorney General's Office has determined that, until the Alaska Supreme Court rules on the question, the state should assume that a broad definition of public rights protected by the Alaska Constitution and the public trust doctrine applies in Alaska, similar to the one adopted by the California Supreme Court. 1982 Atty. Gen. Op. No. 3 (June 10, 1982).

PUBLIC WATERS

It is not only the beds of navigable waters in Alaska that are reserved in public ownership for public use. Under article VIII, Section 3 of the Alaska Constitution, all waters occurring in their natural state are reserved to the people for common use. Article VIII, Section 14 of the Alaska Constitution also provides for the broadest possible access to and use of state waters by the general public.

Section 14. Access to Navigable Waters. Free access to the navigable or public waters of the state, as defined by the legislature, shall not be denied any citizen of the United States or resident of the state, except that the legislature may by general law regulate and limit such access for other beneficial uses or

public purposes.

Pursuant to this grant of authority, the Alaska State Legislature, in AS 38.05.365(12), defined "navigable waters" as follows:

"navigable waters" means any water of the state forming a river, stream, lake, pond, slough, creek, bay, sound, estuary, inlet, strait, passage, canal sea or ocean, or any other body of water or waterway within the territorial limits of the state or subject to its jurisdiction, that is navigable in fact for any useful public purpose, including but not limited to water suitable for commercial navigation, floating of logs, landing and takeoff of aircraft, and public boating, trapping, hunting waterfowl and aquatic animals, fishing, or other public recreational purposes.

This definition of navigable waters does not define state ownership of submerged land in Alaska. The definition of navigability for ownership purposes was discussed earlier in this paper. This definition, however, does define what types of waterbodies in Alaska are available for public use under the Alaska statutes.

The Alaska State Legislature has broadly construed the constitutional protections for public use of the waters of the state. In an Act (85 SLA chap. 82, codified as AS 38.05.128) relating to the navigable or public waters of the state, the state legislature found:

(a)The people of the state have a constitutional right to free access to the navigable or public waters of the state.

(b) Subject to the federal navigational servitude, the state has full power and control of all of the navigable or public waters of the state, both meandered and unmeandered, and it holds and controls all navigable or public waters in trust for the use of the people of the state.

(c) Ownership of land bordering navigable or public waters does not grant an exclusive right to the use of the water and any rights of title to the land below the ordinary high water mark are subject to the rights of the people of the state to use and have access to the water for recreational purposes or any other public purposes for which the water is used or capable of being used consistent with the public trust.

(d) This Act may not be construed to affect or abridge valid existing rights or create any right or privilege of the public to cross or enter private land.

AS 38.05.128 provides:

OBSTRUCTIONS TO NAVIGABLE WATER

(a) A person may not obstruct or interfere with the free passage or use by a person of any navigable water unless the obstruction or interference is:

(1) authorized by a federal agency and a state agency; (2) authorized under a federal or state law or permit; (3) exempt under 33 U.S.C. 1344(f) (Clean Water Act); (4) caused by the normal operation of freight barging that is otherwise consistent with law; or (5) authorized by the commissioner after reasonable public notice.

(b) An unauthorized obstruction or interference is a public nuisance and is subject to abatement. The cost of abatement shall be borne by the violator and is in addition to any penalty imposed by the court.

(c) This section may not be construed to affect or abridge valid existing rights.

(d) Free passage or use of any navigable water includes the right to use land below the ordinary high water mark to the extent reasonably necessary to use the navigable water consistent with the public trust.

(e) Free passage or use of any navigable water includes the right to enter adjacent land above the ordinary high water mark as necessary to portage around obstacles or obstructions to travel on the water, provided:

(1) entry is made without injury or damage to the land; (2) entry is made in the least obtrusive manner possible; (3) there is no reasonable alternative available to avoid the use of the adjacent land above the

ordinary high water mark; and (4) the navigable water is reentered immediately below the obstacle or obstruction at the nearest point where it is safe to do so.

(f) A violation of (a) of this section is a class B misdemeanor.

Thus, under the Alaska Constitution and this statute, any surface waters capable of use by the public defined in AS 38.05.365(12) are available to the public, irrespective of streambed ownership. Further, such public use is not considered a taking and is not subject to inverse condemnation action. Private ownership is subject to the public rights that are protected by the public trust.

In two Montana Supreme Court cases involving the nature of public rights where the submerged lands are privately owned, the court rules that public portaging, anchoring, and other uses incidental to the use of the water are allowed. The court also found that if travel on the water or streambed is obstructed, the public is allowed to use the adjacent private land to portage around the barrier in the least intrusive way possible, avoiding damage to the property holder's rights. However, the public does not have the right to enter into or trespass across private property in order to enjoy the recreational use of state-owned waters. The State of Alaska agrees with this ruling and believes a similar ruling would be made by our state courts.

Return to Table of Contents

BOUNDARIES OF NAVIGABLE WATERS

The state is often asked where public ownership of water bodies ends and private ownership begins. There are two types of water body boundaries to address: 1) non-tidal water boundaries and 2) tidal water boundaries. Non-tidal boundaries are boundaries of lakes, rivers, and streams. Tidal boundaries are the boundaries along any body of water which is influenced by the rise and fall of the tides.

1. Non-tidal Water Boundaries The boundary between public and private ownership is the "Ordinary High Water Mark" which is defined in 11 AAC 53.900(23) as being - The mark along the bank or shore up to which the presence and action of the non-tidal water are so common and usual, and so long continued in all ordinary years, as to leave a natural line impressed on the bank or shore and indicated by erosion, shelving, vegetation, or other distinctive physical characteristics. Also see the Alaska State Supreme Court definition in Department of Natural Resources v. Pankrantz 538 P.2d 984, 988-89 (Alaska 1975). The ordinary high water line can usually be observed by the laymen simply by noting the vegetation line or well defined stream banks.

2. Tidal Water Boundaries The boundary between tidal water bodies and private/public owned uplands is the Mean High Water Line. Mean high water line as defined by 11 AAC 53.900(15) is: The tidal datum plane of the average of all the high tides, as would be established by the National Geodetic Survey, at any place subject to tidal influence.

This line is not readily observable because it is a line of known elevation which intersects the land surface. The mean high water line can be a considerable distance below the vegetation line because extreme high water will denude the beach above the line of mean high water. The only way that the location of mean high water line can be accurately determined is by differential leveling from known bench marks or by operating a tide gauge for a sufficient period of time to determine the mean high water elevation. The line of mean high water line can be approximated by time coordinated observations of the daily predictions for high and low waters, predicted by NOAA, as they relate to the published mean high water elevation. This method can be highly unreliable because small errors in the predictions or observations can transform into large errors in the horizontal location; this is especially true in areas where the beach gradient is very flat.

It is important to note that in some areas, such as Prince William Sound, the mean high water line boundary is considerably higher than the current mean high water line because the boundary became fixed at the 1964 pre-quake location. In this instance the boundary between state-owned tidelands and the uplands would be established at an elevation which equals the sum of the mean high water elevation plus the published amount of uplift or, in some cases, submergence.

CONCLUSION

This paper describes the state's policies and procedures for managing and protecting state submerged lands

and public waters. As further legal and practical developments occur in this area, these policies and procedures will be reexamined by the state and, if necessary, appropriate changes will be made.

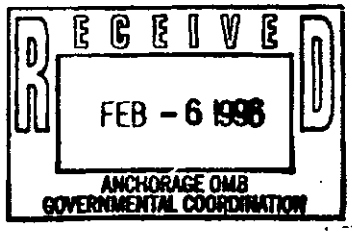
STATE OF ALASKA

TONY KNOWLES, GOVERNOR

DEPARTMENT OF LAW

OFFICE OF THE ATTORNEY GENERAL

P.O. BOX 110300
JUNEAU, ALASKA 99811-0300
PHONE: (907) 465-3600
FAX: (907) 465-2075



February 2, 1996

Ms. Maureen Finnerty
Associate Director, Operations
National Park Service
Department of the Interior
18th and C Streets, N.W.
Washington, D.C. 20240

Re: State of Alaska's Comments on the Proposed Rule at 60 Federal Register 62233 (December 5, 1995)

Dear Ms. Finnerty:

The State of Alaska has reviewed the proposed rule published December 5, 1995, at 60 Fed. Reg. 62233. These comments represent the consolidated views of various state agencies and replace the overview of comments previously provided to Solicitor Leshy.

The proposed rule would revise portions of the National Park Service's (NPS) general regulations, as well as certain provisions governing National Park System units in Alaska. Primarily at issue is whether NPS should extend regulatory jurisdiction over all navigable waters within park boundaries, regardless of ownership of the submerged lands. The proposed rule is not a simple "clarification" of prior law as the NPS has attempted to portray. The regulations would substantively and inappropriately extend NPS jurisdiction.

The State opposes the proposed rule and urges that it be withdrawn for the following reasons:

- The Federal Register notice fails to adequately address potential effects of this rulemaking in light of the draft NPS subsistence policy and management in Alaska and the State of Alaska v. Babbitt case.

- The federal government has no authority to regulate waters within the boundaries of conservation system units where Alaska owns the submerged lands.

printed on recycled paper by C D

- The proposed rule is premature given that the Alaska National Interest Lands Conservation Act's definition of "public lands" is still in question.

- The NPS has failed to show other authority, e.g. the Commerce Clause, for its proposed action.

- Proposed definitional changes are inconsistent with existing law.

For these reasons, the NPS does not have the authority to extend its regulatory jurisdiction to all navigable waters within park boundaries, regardless of ownership of the submerged lands. These and other issues are documented in greater detail in the attachment, which should be considered part of the State's formal comments.

If NPS has concerns about particular activities occurring on navigable waters within park boundaries in Alaska, the State encourages NPS to discuss these concerns with the appropriate state representatives. We believe that many issues of particular concern to NPS can be resolved through ongoing cooperative efforts.

Thank you for your consideration of this letter and the attachment.

Very truly yours,

Bruce Botelho
Attorney General

ATTACHMENT

State of Alaska's Comments on the Proposed Rule at 60 Fed. Reg. 62233, December 5, 1995:

A. The Federal Register notice fails to adequately address potential effects of this rulemaking in light of the draft NPS subsistence policy and management in Alaska and the State of Alaska v. Babbitt case.

At the present time, an extensive statewide review of subsistence management and policy is underway within NPS. In fact, NPS has requested public review and comment until May 1, 1996 on its "Draft Review of Subsistence Law and National Park Service Regulations." In light of this ongoing internal review, the State believes the present rulemaking is premature and recommends that this rulemaking be postponed in order to consider the outcome of the subsistence program review. Remaining comments are provided without the benefit of this information.

B. The proposed rule is more than a "clarification" of prior law; it substantively extends NPS jurisdiction.

In the Federal Register notice, NPS states that the proposed rulemaking is designed to "clarify" that existing NPS regulations apply on navigable waters within National Park System units regardless of ownership of the submerged lands, and that the proposed rule does not create new or additional regulatory controls.

NPS claims this "clarification" of previous regulatory intent was made necessary by a seal hunting case in Glacier Bay National Park. United States v. Greg Brown. NPS states the seal hunting case made it aware that 36 C.F.R. § 1.2(b) "inadvertently incorporated language that seems ambiguous and could preclude park regulation of 'non-federally owned . . . waters.'" However, the proposed rule does not "clarify" existing regulations; it substantively extends NPS jurisdiction to areas not previously regulated.

Despite NPS' representations, 36 C.F.R. § 1.2(b) is not ambiguous. It clearly states that NPS regulations do not apply on non-federally owned waters.[1] The only exception

---

1 Section 1.2(b) states:

> Except for regulations containing provisions that are specifically applicable, regardless of land ownership, on lands and waters within a park area that are under the legislative jurisdiction of the United States, the regulations

contained in parts 1 through 5 and part 7 of this chapter do not apply on non-federally owned

to this rule is for non-federally owned lands and waters under the legislative jurisdiction of the United States. For areas under the legislative jurisdiction of the United States, NPS regulations apply only when the regulations are made specifically applicable regardless of land ownership. 36 C.F.R. § 1.2(b). There is no dispute that state owned lands and waters within Glacier Bay National Park, and most every other park system unit in Alaska, are not within the legislative jurisdiction of the United States.

Other NPS regulations reaffirm the unambiguous language and intention of 36 C.F.R. § 1.2(b). For example, the regulations applying to park units in Alaska state: "The regulations contained in this part 13 are applicable only on federally owned lands within the boundaries of any park area. . . ." 36 C.F.R. § 13.2(e).[2] See also 36 C.F.R. § 13.1(p) (defining "public lands" to mean lands in Alaska "which are federally owned lands"); 36 C.F.R. § 13.65(a) (humpback whale protection regulations, expressly stating they are an exception to §§ 1.2(b) and 13.2(e) and therefore apply on all navigable waters within Glacier Bay National Park).

Indeed, in the Glacier Bay seal hunting case, the United States openly acknowledged the express limitation in 36 C.F.R. § 1.2(b) on its regulatory jurisdiction. See United States v. Brown, No. 94-30019, United States' brief to the Ninth Circuit Court of Appeals at 5-6, 9 (submitted May 12, 1994) (conceding that, for NPS general regulations to be enforceable against Mr. Brown, 36 C.F.R. § 1.2(b) requires that the United States prove either legislative jurisdiction over Glacier Bay National Park or ownership of the submerged lands in question). Thus, in dismissing the Brown prosecution, the United States recognized the unambiguous language of its regulations. The United States conceded it does not have legislative jurisdiction over Glacier Bay National Park, see id. at 5, and decided not to attempt to prove ownership of the submerged lands in that case.

Contrary to NPS' assertion in the Federal Register, both the language and intent of its 1983 and 1987 regulatory revisions were that NPS regulations did not apply to non-federally owned lands and waters, unless those lands and waters were under the legislative jurisdiction of the United States. See 48 Fed. Reg. 30252 at 30261, 30275 (June 30, 1983) (regulations do not apply to state owned inholdings within national park boundaries unless those areas are under the legislative jurisdiction of the United States).

The regulatory revision in 1987 simply "clarified" that state owned lands would

---

lands and waters . . . within the boundaries of a park area.

2 For the reasons discussed in these comments, the State opposes the proposed deletion of this statement in 36 C.F.R. § 13.2(e).

be treated like privately owned lands, and NPS regulations would not apply as a matter of course to either private or state lands and waters within park boundaries. See 52 Fed. Reg. 12037 (April 14, 1987) (proposing to clarify that NPS regulations only would apply to state owned lands and waters within park boundaries if those areas were under the legislative jurisdiction of the United States); 52 Fed. Reg. 35238, 35239 (Sept. 18, 1987) (certain NPS regulations apply to non-federally owned lands and waters within park boundaries only if those areas are under the legislative jurisdiction of the United States).

For these reasons, it is at best misleading for NPS to characterize the proposed rule as a "clarification" and not a substantive extension of regulatory jurisdiction. The proposed action substantially extends NPS jurisdiction to areas not previously covered by its regulations. The exclusion of state owned lands and waters from prior and existing regulations was not "inadvertent" but by express design. By not acknowledging these facts in its December 5, 1995 Federal Register notice, NPS significantly understates the effect of its proposed rule.

C. The federal government has no authority to regulate waters within the boundaries of conservation system units where Alaska owns the submerged lands.

On the substance of NPS' proposed action, the State disagrees that NPS has authority to extend its regulatory jurisdiction to all waters within park system boundaries, including navigable waters, and without regard to ownership of submerged lands.

The State has consistently objected to previous attempts by NPS to grant itself such extraterritorial authority in proposed rulemaking, e.g., Alaska's comments dated Nov. 1, 1991 (regarding proposed rule published Aug. 5, 1991). We reiterate our objections to NPS' efforts to extend regulatory jurisdiction to lands and waters lawfully owned and managed by the State.[3]

The proposed extension of NPS authority appears to be particularly dramatic in Alaska. Numerous navigable waterways run through the exterior boundaries of nearly all of the thirteen multi-million acre park units in the state. These waterways are often used for transportation and for many other activities. Under the proposed rule, NPS would apparently

---

3 Under the constitutional doctrine of equal footing and confirmed by the Submerged Lands Act of May 22, 1953, the Alaska Statehood Act of July 7, 1958, and the Alaska Constitution, the State of Alaska owns and therefore is responsible for the management of all water columns, shorelands, tidelands, and submerged lands, including the resources located within or on such lands and waters.

intend to regulate these activities. For example, under the proposed rule, NPS might require an NPS Commercial Use Permit for the commercial barging and ferry service interests currently operating on the navigable Yukon River as it passes through the Yukon-Charley Rivers Preserve, despite the fact that the State presently manages water uses, access and activities on those waters. Such an assertion of general jurisdiction is not permitted by the Alaska National Interest Lands Conservation Act (ANILCA) or other applicable law.

One of Congress' primary purposes in enacting ANILCA was to preserve vast quantities of lands and waters in Alaska. 16 U.S.C. § 3101. Congress implemented this purpose in part by creating "conservation system units" (CSUs). By definition, CSUs include any unit in Alaska of the National Park System. 16 U.S.C. § 3102(4).

However, not all lands within Glacier Bay National Park or other national park units in Alaska are included as part of the CSU. ANILCA section 103(c) states in relevant part:

> Only those lands within the boundaries of any conservation system unit which are public lands (as such term is defined in this Act) shall be deemed to be included as a portion of such unit.
>
> 16 U.S.C. § 3103(c).[4]

Similarly, in coastal areas, ANILCA section 103(a) excludes lands seaward of the mean high tide line from the boundaries of areas added by ANILCA to the National Park System. 16 U.S.C. § 3103(a).

ANILCA Section 103(c) further provides that those lands not included within the conservation system unit are not subject to federal regulation:

> No lands which, before, on, or after the date of enactment of this Act, are conveyed to the State, to any Native Corporation, or to any private party shall be subject to the regulations applicable solely to public lands within such units.
>
> 16 U.S.C. § 3103(c).

---

4 The legislative history of ANILCA § 103(c) makes clear Congress' intent to exclude lands which are not owned by the U.S. from conservation system unit regulations. The history specifies that "only public lands (and not State or private lands) are to be subject to the conservation system unit regulations applying to public lands." 126 Cong. Rec. S15129-32 (daily ed. Dec. 1, 1980) (statement of Sen. Stevens).

Legislative history establishes that Congress took this action fully aware of Kleppe v. New Mexico, 426 U.S. 529 (1976) and its progeny, which might arguably support extension of federal regulatory control over non-federally owned lands.[5] Congress directly and knowingly limited federal regulatory authority to "public lands" within conservation system units and specifically exempted inholdings from regulation. 16 U.S.C. § 3103(c). NPS recognized this fact in promulgating 36 C.F.R. § 13.2(e). See 46 Fed. Reg. 31836, 31843 (June 17, 1981) (ANILCA §§ 103(c) and 906(o) restrict the applicability of NPS regulations to federally owned lands within park boundaries; therefore, 36 C.F.R. § 13.2(e) applies only to federally owned lands).

In the case of parks in Alaska, any submerged lands underlying navigable waters within park boundaries are "inholdings" belonging to the State of Alaska. See Submerged Lands Act of 1953, 43 U.S.C. § 1311(a); Utah Div. of State Lands v. United States, 482 U.S. 193 (1987). Federal regulation does not apply to these waters.[6] The NPS therefore does not have authority to regulate navigable waters within park boundaries regardless of ownership.

If identical regulations addressing both state and federally owned lands or waters are particularly desirable in certain instances or for certain issues, the State encourages NPS to discuss these with the appropriate state regulatory entity. Through a cooperative effort, the goal of consistent regulation of especially significant issues can be lawfully achieved. Without State consent and cooperation, however, NPS may not extend its regulatory jurisdiction as proposed.

D. The proposed rule is premature given that the definition of "public lands," over which ANILCA permits some federal regulation, is still in question.

As noted earlier, the Federal Register notice does not address the proposed rule's potential effect on the implementation of ANILCA's Title VIII subsistence priority, and the State requests that NPS address the rule's implications for subsistence management and

---

5 The State does not concede this authority. While there is case law in the Eighth Circuit that appears to support this contention, the question of extra-territorial regulation is not yet resolved. In any event, NPS does not purport to rely on Congress' Property Clause power to justify this proposed action.

6 The fact that ANILCA (and existing NPS regulations) specifically exclude state lands and waters from NPS general jurisdiction is also reflected in the General Management Plans adopted for park units in Alaska.

policy.[7]

ANILCA specifically limits federal regulatory authority in conservation system units to "public lands." Accordingly, federal jurisdiction depends on whether the waters in question constitute "public lands" as defined in ANILCA.

Although the State asserts the definition of "public lands" does not include any navigable waters where the state owns the submerged lands, this question is currently unresolved. The Alaska Supreme Court's decision in Totemoff v. State, as well as Judge Hall's dissent from the Ninth Circuit opinion in State of Alaska v. Babbitt (also commonly known as the "Katie John" case), conclude that navigable waters are not "public lands" under ANILCA. See Totemoff v. State, 905 P.2d 954 (Alaska 1995); State of Alaska v. Babbitt, ___ F.3d ___, 1995 WL 749795 (9th Cir., Dec. 19, 1995). This issue is presently before the U.S. Supreme Court on a petition for certiorari. Accordingly, the NPS should withdraw these regulations until they can be reassessed in light of the Babbitt litigation once it has been finalized.

E. The NPS has failed to show other authority for its proposed action.

NPS asserts that Congress' Commerce Clause power provides authority for NPS' regulation of non-federally owned lands and waters within park boundaries. However, NPS fails to explain where it derives its Commerce Clause power, and how its power is co-extensive with Congress' Commerce Clause powers.

Moreover, even assuming NPS has some authority to regulate pursuant to the Commerce Clause, the United States Supreme Court has confirmed that the Commerce Clause power is not unlimited. See United States v. Lopez, ___ U.S. ___, 115 S. Ct. 1624 (1995). To rely on this power, NPS must satisfy traditional Commerce Clause analysis, including a showing as to how the regulated activities "substantially affect" interstate commerce. Id. at 1629-30.

NPS' Federal Register notice makes no effort to undertake a Commerce Clause analysis, and the state does not agree that the Commerce Clause permits the proposed action. Cf. State of Alaska v. Babbitt, ___ F.3d ___, 1995 WL 749795 (9th Cir., Dec. 19, 1995) (majority opinion concludes that Congress did not intend to exercise its Commerce Clause authority to regulate subsistence fishing in Alaska's navigable waters; dissenting opinion

---

7 Along this line, we note that the proposed revision to 36 C.F.R. § 13.2(c) deletes Sitka National Historical Park from the list of park units where subsistence activities are prohibited. This change is not addressed by NPS in its notice.

concludes that subsistence fishing in navigable waters does not "substantially affect" interstate commerce).[8]

Nor does NPS otherwise justify its authority to extend general regulatory jurisdiction over non-federally owned waters within park boundaries. NPS cites to 16 U.S.C. § 1a-2(h); however, the authority set forth therein is limited. That section permits NPS to promulgate and enforce regulations concerning boating and related activities; it does not provide general jurisdiction over non-federally owned waters within park boundaries. Likewise, the fact that NPS may enforce Coast Guard regulations on navigable waters within park boundaries does not provide authority over navigable waters for other purposes.

As examples of its asserted authority, NPS cites park-specific regulations that have applied on navigable waters within certain parks. However, these limited instances do not justify this proposed rule. In the case of Glacier Bay National Park, the State cooperated with the National Marine Fisheries Service and NPS in the adoption of regulations deemed necessary to protect whales. These special whale regulations were identified as an exception to NPS' general regulatory authority. See 13 C.F.R. §13.65(a), (b)(2). This example does not imply that NPS has jurisdiction to enact other regulations applying to waters owned by the State.

F. Proposed definitional changes are inconsistent with existing law.

Though the State's objections to NPS' proposed definitional changes should be clear from the preceding comments, we address the following comments specifically to NPS' proposed definitional revisions.

NPS' proposed revision of "boundary" at 36 C.F.R. § 1.4 would broadly include "the limits of lands or waters administered by the National Park Service" as "published or posted by the National Park Service." This definition grants to NPS the ability to define "boundaries" essentially as it chooses, on a case-by-case basis.

This definition is not permissible under ANILCA. ANILCA Section 103 directs that the conservation system units created by ANILCA shall have specific and defined boundaries. 16 U.S.C. § 3103 (a), (b), (c). Pursuant to the mandate in ANILCA § 103(b),

---

8 In any case, even if the proposed action could be justified under a Commerce Clause analysis, the Submerged Lands Act expressly limits that authority as it applies to this situation. See 43 U.S.C. § 1311(a) (confirming state title and ownership of lands beneath the navigable waters within the states, as well as the natural resources within those lands and waters, and providing states rights to manage those lands and natural resources).

NPS published in 1992 a legal description of the external boundaries of national park units established or expanded by ANILCA. 57 Fed. Reg. 45166 (Sept. 30, 1992).

As a result of these authorities, the proposed definition of "boundary" would conflict with the determined boundaries of park units and with ANILCA's defined areas of NPS authority. NPS is not free to ignore these existing legal boundaries, nor may it grant itself authority to amend park boundaries simply by posting a notice of intent. Accordingly, NPS may not broadly revise "boundary" as proposed.[9]

The proposed revision to 36 C.F.R. § 13.2(e), including the revised definition of "federally owned lands," likewise is not permitted by ANILCA. Under ANILCA, "federally owned lands" include lands, title to which is in the Untied States. 16 U.S.C. § 3102. Thus, State and privately owned lands cannot be defined as "federally owned lands," as they apparently would be under the proposed rule. ANILCA prohibits this definitional change, as well as NPS' attempt to extend its jurisdiction to state owned lands and waters.

G. No notice of the proposed rule was provided to the State despite ongoing meetings with NPS regarding Glacier Bay National Park.

To promote cooperation between state and federal resource managers, Alaska agency representatives participate in quarterly meetings with the NPS field director to discuss issues involving park units in Alaska. In addition, state representatives and commercial fishing interests have embarked upon good faith discussions with NPS to resolve potential conflicts arising from activities on state waters adjacent to Glacier Bay. In fact, on December 5, 1995, the day this proposed rule was published in the Federal Register, the Superintendent of Glacier Bay National Park met with state representatives, fishermen, special interest groups and others to seek cooperative resolution of problems related to activities on waters adjacent to the park.

The State is troubled that, despite these ongoing meetings, NPS provided no notice of the proposed extension of NPS regulations over all navigable waters within park boundaries, regardless of ownership, especially since the seal hunting case in Glacier Bay inspired the proposed rulemaking.

To avoid compromising the effectiveness of these ongoing cooperative efforts,

---

9 Similarly, NPS may not use such a broadened definition of "boundary" to assert general jurisdiction over state-owned lands and waters administered by NPS pursuant to a cooperative agreement. NPS and the State have entered into several cooperative agreements which grant NPS some limited administrative authority over state lands or waters. We do not contemplate that these agreements can be construed to permit broader federal authority over these areas.

the State urges the NPS field office to alert us of pending rulemakings in the future and to promote discussion of the issues involved.

Conclusion

The State disagrees that NPS has authority to extend its regulatory jurisdiction to all navigable waters within park boundaries regardless of ownership of the submerged lands. Consistent with the above discussion, the state requests that NPS withdraw the proposed rule.

CS FOR HOUSE JOINT RESOLUTION NO. 7(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered: 2/25/09
Referred: Rules

Sponsor(s): REPRESENTATIVES MILLETT, Lynn, Dahlstrom, Johnson, Chenault, Neuman, Petersen, Hawker, Gardner, Joule, Crawford, Gatto, Johansen, Herron, Fairclough

SENATORS Therriault, Wagoner, Bunde

A RESOLUTION

Urging the United States Congress to pass legislation to open the coastal plain of the Arctic National Wildlife Refuge to oil and gas exploration, development, and production.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS, in 16 U.S.C. 3142 (sec. 1002 of the Alaska National Interest Lands Conservation Act (ANILCA)), the United States Congress reserved the right to permit further oil and gas exploration, development, and production within the coastal plain of the Arctic National Wildlife Refuge; and

WHEREAS the oil industry, the state, and the United States Department of the Interior consider the coastal plain to have the highest potential for discovery of very large oil and gas accumulations on the continent of North America, estimated to be as much as 10,400,000,000 barrels of recoverable oil; and

WHEREAS the "1002 study area" is part of the coastal plain located within the North Slope Borough, and many of the residents of the North Slope Borough, who are predominantly Inupiat Eskimo, are supportive of development in the "1002 study area"; and

WHEREAS oil and gas exploration and development of the coastal plain of the refuge and adjacent land could result in major discoveries that would reduce our nation's future need for imported oil, help balance the nation's trade deficit, and significantly increase the nation's security; and

WHEREAS the state's future energy independence would be enhanced with additional natural gas production from the North Slope of Alaska including what are expected to be significant gas reserves in the Arctic National Wildlife Refuge, and the development of those reserves would enhance the economic viability of the proposed Alaska Natural Gas Pipeline; and

WHEREAS domestic demand for oil continues to rise while domestic crude production continues to fall, with the result that the United States imports additional oil from foreign sources; and

WHEREAS development of oil at Prudhoe Bay, Kuparuk, Endicott, Lisburne, and Milne Point has resulted in thousands of jobs throughout the United States, and projected job creation as a result of coastal plain oil development will have a positive effect in all 50 states; and

WHEREAS Prudhoe Bay production is declining; and

WHEREAS the Trans Alaska Pipeline System, a transportation facility that is a national asset and that would cost billions of dollars to replace, would have its useful physical life extended for a substantial period if the additional reserves of recoverable oil from the coastal plain were produced; and

WHEREAS, while new oil field developments on the North Slope of Alaska, such as Alpine, Northstar, and West Sak, may temporarily slow the decline in production, only giant coastal plain fields have the theoretical capability of increasing the production volume of Alaska oil to a significant degree; and

WHEREAS opening the coastal plain of the Arctic National Wildlife Refuge now allows sufficient time for planning environmental safeguards, development, and national security review; and

WHEREAS the 1,500,000-acre coastal plain of the refuge makes up only eight percent of the 19,000,000-acre refuge, and the development of the oil and gas reserves in the refuge's coastal plain would affect an area of ~~only~~ 2,000 acres, which is less than one-half of

one percent of the area of the coastal plain; and

WHEREAS 8,900,000 of the 19,000,000 acres of the refuge have already been set aside as wilderness; and

WHEREAS the oil industry has shown at Prudhoe Bay, as well as at other locations along the Arctic coastal plain, that it is capable of conducting oil and gas activity without adversely affecting the environment or wildlife populations; and

WHEREAS the state will strive to ensure the continued health and productivity of the Porcupine Caribou herd and the protection of land, water, and wildlife resources during the exploration and development of the coastal plain of the Arctic National Wildlife Refuge; and

WHEREAS the oil and gas industry is developing directional drilling technology that will allow horizontal drilling in a responsible manner by minimizing the development footprint within the Arctic National Wildlife Refuge and this directional drilling technology may be capable of drilling from outside of the boundaries of the 1002 study area; and

WHEREAS the oil industry is using innovative technology and environmental practices in the new field developments at Alpine and Northstar, and those techniques are directly applicable to operating on the coastal plain and would enhance environmental protection beyond traditionally high standards; and

WHEREAS the continued competitiveness and stability of the state and its economy require that the Alaska State Legislature consider national trends toward renewable energy development; and

WHEREAS the Alaska State Legislature encourages the use of revenue from any development in the Arctic National Wildlife Refuge for the development of renewable energy resources in the state;

BE IT RESOLVED by the Alaska State Legislature that the United States Congress is urged to pass legislation to open the coastal plain of the Arctic National Wildlife Refuge to oil and gas exploration, development, and production, and that the Alaska State Legislature is adamantly opposed to further wilderness or other restrictive designation in the area of the coastal plain of the Arctic National Wildlife Refuge; and be it

FURTHER RESOLVED that that activity be conducted in a manner that protects the environment and the naturally occurring population levels of the Porcupine Caribou herd on which the Gwich'in and other local residents depend, that uses directional drilling and other

advances in technology to minimize the development footprint in the 1002 study area, and that uses the state's work force to the maximum extent possible; and be it

FURTHER RESOLVED that the Alaska State Legislature urges the United States Congress to pass legislation opening the 1002 study area for oil and gas development while continuing to work on measures for increasing the development and use of renewable energy technologies; and be it

FURTHER RESOLVED that the Alaska State Legislature opposes any unilateral reduction in royalty revenue from exploration and development of the coastal plain of the Arctic National Wildlife Refuge and any attempt to coerce the State of Alaska into accepting less than the 90 percent of the oil, gas, and mineral royalties from the federal land in Alaska that was promised to the state at statehood.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Ken Salazar, United States Secretary of the Interior; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; the Honorable John Boehner, Minority Leader of the U.S. House of Representatives; the Honorable Harry Reid, Majority Leader of the U.S. Senate; the Honorable Mitch McConnell, Minority Leader of the U.S. Senate; the Honorable Jeff Bingaman, Chair of the Energy and Natural Resources Committee of the U.S. Senate; the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress; and all other members of the 111th United States Congress.

HJR 7

Resolution Urging the U.S. Congress to Open ANWR to Oil and Gas Exploration

House Joint Resolution 7 urges the United States Congress to pass legislation to open the coastal plain of the Arctic National Wildlife Refuge to oil and gas exploration and production.

ANWR remains a key component of our nation's effort to achieve energy independence. Combining environmentally responsible oil production with renewable energy sources like wind, solar and hydro will reduce and could someday even eliminate our dependence on crude oil from nations that are hostile to the United States.

New directional drilling technology will protect the delicate arctic ecosystem and shrink the size of the development footprint. Someday it may even be possible to drill outside the 1002 area.

All the reasons for opening ANWR are still valid. Failing to even address the issue only slows down America's effort to gain true energy security in the future.

Opening ANWR is more important for America's economy and national security than ever. HJR 7 expresses the Alaska Legislature's desire to see the 1002 area open as soon as possible and respectfully asks congress to pass legislation permitting oil and gas exploration and development to go forward.

Re: HJR7, Urging the U.S. Congress to open the Coastal Plain of ANWR to oil and gas exploration, development, and production

Dear Representative Johnson and Representative Neuman:

On behalf of the Resource Development Council for Alaska, Inc., (RDC), I am writing in support of HJR7, which urges Congress to open the Coastal Plain of ANWR to oil and gas exploration, development, and production.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

The 1002 Area of ANWR is considered the nation's most promising onshore oil and gas prospect, and there is strong support across Alaska for environmentally-responsible development of the oil and gas resources beneath the Coastal Plain. Such development could play a large role in Alaska's future prosperity, create hundreds of thousands of jobs across America, and reduce our reliance on foreign oil.

We encourage the Committee to vote in favor of this resolution. Thank you for your consideration.

Sincerely,

Jason Brune
Executive Director

H.R.49

American Energy Independence and Price Reduction Act (Introduced in House)

SEC. 5. GRANT OF LEASES BY THE SECRETARY.

(a) In General- The Secretary may grant to the highest responsible qualified bidder in a lease sale conducted pursuant to section 4 any lands to be leased on the Coastal Plain upon payment by the lessee of such bonus as may be accepted by the Secretary.

(b) Subsequent Transfers- No lease issued under this Act may be sold, exchanged, assigned, sublet, or otherwise transferred except with the approval of the Secretary. Prior to any such approval the Secretary shall consult with, and give due consideration to the views of, the Attorney General.

SEC. 6. LEASE TERMS AND CONDITIONS.

(a) In General- An oil or gas lease issued pursuant to this Act shall--

(1) provide for the payment of a royalty of not less than 12 1/2 percent in amount or value of the production removed or sold from the lease, as determined by the Secretary under the regulations applicable to other Federal oil and gas leases;

(2) provide that the Secretary may close, on a seasonal basis, portions of the Coastal Plain to exploratory drilling activities as necessary to protect caribou calving areas and other species of fish and wildlife;

(3) require that the lessee of lands within the Coastal Plain shall be fully responsible and liable for the reclamation of lands within the Coastal Plain and any other Federal lands that are adversely affected in connection with exploration, development, production, or transportation activities conducted under the lease and within the Coastal Plain by the lessee or by any of the subcontractors or agents of the lessee;

(4) provide that the lessee may not delegate or convey, by contract or otherwise, the reclamation responsibility and liability to another person without the express written approval of the Secretary;

(5) provide that the standard of reclamation for lands required to be reclaimed under this Act shall be, as nearly as practicable, a condition capable of supporting the uses which the lands were capable of supporting prior to any exploration, development, or production activities, or upon application by the lessee, to a higher or better use as approved by the Secretary;

(6) contain terms and conditions relating to protection of fish and wildlife, their habitat, subsistence resources, and the environment as required pursuant to section 3(a)(2);

(7) provide that the lessee, its agents, and its contractors use best efforts to provide a fair share, as determined by the level of obligation previously agreed to in the 1974 agreement implementing section 29 of the Federal Agreement and Grant of Right of Way for the Operation of the Trans-Alaska Pipeline, of employment and contracting for Alaska Natives and Alaska Native Corporations from throughout the State;

(8) prohibit the export of oil produced under the lease; and

(9) contain such other provisions as the Secretary determines necessary to ensure compliance with the provisions of this Act and the regulations issued under this Act.

(b) Project Labor Agreements- The Secretary, as a term and condition of each lease under this Act and in recognizing the Government's proprietary interest in labor stability and in the ability of construction labor and management to meet the particular needs and conditions of projects to be developed under the leases issued pursuant to this Act and the special concerns of the parties to such leases, shall require that the lessee and its agents and contractors negotiate to obtain a project labor agreement for the employment of laborers and mechanics on production, maintenance, and construction under the lease.

SEC. 7. COASTAL PLAIN ENVIRONMENTAL PROTECTION.

(a) No Significant Adverse Effect Standard To Govern Authorized Coastal Plain Activities- The Secretary shall, consistent with the requirements of section 3, administer the provisions of this Act through regulations, lease terms, conditions, restrictions, prohibitions, stipulations, and other provisions that--

(1) ensure the oil and gas exploration, development, and production activities on the Coastal Plain will result in no significant adverse effect on fish and wildlife, their habitat, and the environment;

(2) require the application of the best commercially available technology for oil and gas exploration, development, and production on all new exploration, development, and production operations; and

(3) ensure that the maximum amount of surface acreage covered by production and support facilities, including airstrips and any areas covered by gravel berms or piers for support of pipelines, does not exceed 2,000 acres on the Coastal Plain.

(b) Site-Specific Assessment and Mitigation- The Secretary shall also require, with respect to any proposed drilling and related activities, that--

(1) a site-specific analysis be made of the probable effects, if any, that the drilling or related activities will have on fish and wildlife, their habitat, subsistence resources, and the environment;

(2) a plan be implemented to avoid, minimize, and mitigate (in that order and to the extent practicable) any significant adverse effect identified under paragraph (1); and

(3) the development of the plan shall occur after consultation with the agency or agencies having jurisdiction over matters mitigated by the plan.

(c) Regulations To Protect Coastal Plain Fish and Wildlife Resources, Subsistence Users, and the Environment- Before implementing the leasing program authorized by this Act, the Secretary shall prepare and promulgate regulations, lease terms, conditions, restrictions, prohibitions, stipulations, and other measures designed to ensure that the activities undertaken on the Coastal Plain under this Act are conducted in a manner consistent with the purposes and environmental requirements of this Act.

(d) Compliance With Federal and State Environmental Laws and Other Requirements- The proposed regulations, lease terms, conditions, restrictions, prohibitions, and stipulations for the leasing program under this Act shall require compliance with all applicable provisions of Federal and State environmental law, and shall also require the following:

(1) Standards at least as effective as the safety and environmental mitigation measures set forth in items 1 through 29 at pages 167 through 169 of the `Final Legislative Environmental Impact Statement' (April 1987) on the Coastal Plain.

(2) Seasonal limitations on exploration, development, and related activities, where necessary, to avoid significant adverse effects during periods of concentrated fish and wildlife breeding, denning, nesting, spawning, and migration.

(3) That exploration activities, except for surface geological studies, be limited to the period between approximately November 1 and May 1 each year and that exploration activities shall be supported, if necessary, by ice roads, winter trails with adequate snow cover, ice pads, ice airstrips, and air transport methods, except that such exploration activities may occur at other times if the Secretary finds that such exploration will have no significant adverse effect on the fish and wildlife, their habitat, and the environment of the Coastal Plain.

(4) Design safety and construction standards for all pipelines and any access and service roads, that--

(A) minimize, to the maximum extent possible, adverse effects upon the passage of migratory species such as caribou; and

(B) minimize adverse effects upon the flow of surface water by requiring the use of culverts, bridges, and other structural devices.

(5) Prohibitions on general public access and use on all pipeline access and service roads.

(6) Stringent reclamation and rehabilitation requirements, consistent with the standards set forth in this Act, requiring the removal from the Coastal Plain of all oil and gas development and production facilities, structures, and equipment upon completion of oil and gas production operations, except that the Secretary may exempt from the requirements of this paragraph those facilities, structures, or equipment that the Secretary determines would assist in the management of the Arctic National Wildlife Refuge and that are donated to the United States for that purpose.

(7) Appropriate prohibitions or restrictions on access by all modes of transportation.

(8) Appropriate prohibitions or restrictions on sand and gravel extraction.

(9) Consolidation of facility siting.

(10) Appropriate prohibitions or restrictions on use of explosives.

(11) Avoidance, to the extent practicable, of springs, streams, and river system; the protection of natural surface drainage patterns, wetlands, and riparian habitats; and the regulation of methods or techniques for developing or transporting adequate supplies of water for exploratory drilling.

(12) Avoidance or minimization of air traffic-related disturbance to fish and wildlife.

(13) Treatment and disposal of hazardous and toxic wastes, solid wastes, reserve pit fluids, drilling muds and cuttings, and domestic wastewater, including an annual waste management report, a hazardous materials tracking system, and a prohibition on chlorinated solvents, in accordance with applicable Federal and State environmental law.

(14) Fuel storage and oil spill contingency planning.

(15) Research, monitoring, and reporting requirements.

(16) Field crew environmental briefings.

(17) Avoidance of significant adverse effects upon subsistence hunting, fishing, and trapping by subsistence users.

(18) Compliance with applicable air and water quality standards.

(19) Appropriate seasonal and safety zone designations around well sites, within which subsistence hunting and trapping shall be limited.

(20) Reasonable stipulations for protection of cultural and archeological resources.

(21) All other protective environmental stipulations, restrictions, terms, and conditions deemed necessary by the Secretary.

(e) Considerations- In preparing and promulgating regulations, lease terms, conditions, restrictions, prohibitions, and stipulations under this section, the Secretary shall consider the following:

(1) The stipulations and conditions that govern the National Petroleum Reserve-Alaska leasing program, as set forth in the 1999 Northeast National Petroleum Reserve-Alaska Final Integrated Activity Plan/Environmental Impact Statement.

(2) The environmental protection standards that governed the initial Coastal Plain seismic exploration program under parts 37.31 to 37.33 of title 50, Code of Federal Regulations.

(3) The land use stipulations for exploratory drilling on the KIC-ASRC private lands that are set forth in Appendix 2 of the August 9, 1983, agreement between Arctic Slope Regional Corporation and the United States.

(f) Facility Consolidation Planning-

(1) IN GENERAL- The Secretary shall, after providing for public notice and comment, prepare and update periodically a plan to govern, guide, and direct the siting and construction of facilities for the exploration, development, production, and transportation of Coastal Plain oil and gas resources.

(2) OBJECTIVES- The plan shall have the following objectives:

(A) Avoiding unnecessary duplication of facilities and activities.

(B) Encouraging consolidation of common facilities and activities.

(C) Locating or confining facilities and activities to areas that will minimize impact on fish and wildlife, their habitat, and the environment.

(D) Utilizing existing facilities wherever practicable.

(E) Enhancing compatibility between wildlife values and development activities.

(g) Access to Public Lands- The Secretary shall--

(1) manage public lands in the Coastal Plain subject to subsections (a) and (b) of section 811 of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3121); and

(2) ensure that local residents shall have reasonable access to public lands in the Coastal Plain for traditional uses.

SEC. 8. EXPEDITED JUDICIAL REVIEW.

(a) Filing of Complaint-

(1) DEADLINE- Subject to paragraph (2), any complaint seeking judicial review of any provision of this Act or any action of the Secretary under this Act shall be filed--

(A) except as provided in subparagraph (B), within the 90-day period beginning on the date of the action being challenged; or

(B) in the case of a complaint based solely on grounds arising after such period, within 90 days after the complainant knew or reasonably should have known of the grounds for the complaint.

(2) VENUE- Any complaint seeking judicial review of any provision of this Act or any action of the Secretary under this Act may be filed only in the United States Court of Appeals for the District of Columbia.

(3) LIMITATION ON SCOPE OF CERTAIN REVIEW- Judicial review of a Secretarial decision to conduct a lease sale under this Act, including the environmental analysis thereof, shall be limited to whether the Secretary has complied with the terms of this Act and shall be based upon the administrative record of that decision. The Secretary's identification of a preferred course of action to enable leasing to proceed and the Secretary's analysis of environmental effects under this Act shall be presumed to be correct unless shown otherwise by clear and convincing evidence to the contrary.

(b) Limitation on Other Review- Actions of the Secretary with respect to which review could have been obtained under this section shall not be subject to judicial review in any civil or criminal proceeding for enforcement.

SEC. 9. FEDERAL AND STATE DISTRIBUTION OF REVENUES.

(a) In General- Notwithstanding any other provision of law, of the amount of adjusted bonus, rental, and royalty revenues from Federal oil and gas leasing and operations authorized under this Act--

(1) 50 percent shall be paid to the State of Alaska; and

(2) except as provided in section 12(d), the balance shall be transferred to the ANWR Alternative Energy Trust Fund established by this Act.

(b) Payments to Alaska- Payments to the State of Alaska under this section shall be made semiannually.

SEC. 10. RIGHTS-OF-WAY ACROSS THE COASTAL PLAIN.

(a) In General- The Secretary shall issue rights-of-way and easements across the Coastal Plain for the transportation of oil and gas--

(1) except as provided in paragraph (2), under section 28 of the Mineral Leasing Act (30 U.S.C. 185), without regard to title XI of the Alaska National Interest Lands Conservation Act (30 U.S.C. 3161 et seq.); and

(2) under title XI of the Alaska National Interest Lands Conservation Act (30 U.S.C. 3161 et seq.), for access authorized by sections 1110 and 1111 of that Act (16 U.S.C. 3170 and 3171).

(b) Terms and Conditions- The Secretary shall include in any right-of-way or easement issued under subsection (a) such terms and conditions as may be necessary to ensure that transportation of oil and gas does not result in a significant adverse effect on the fish and wildlife, subsistence resources, their habitat, and the environment of the Coastal Plain, including requirements that facilities be sited or designed so as to avoid unnecessary duplication of roads and pipelines.

(c) Regulations- The Secretary shall include in regulations under section 3(g) provisions granting rights-of-way and easements described in subsection (a) of this section.

SEC. 11. CONVEYANCE.

In order to maximize Federal revenues by removing clouds on title to lands and clarifying land ownership patterns within the Coastal Plain, the Secretary, notwithstanding the provisions of section 1302(h)(2) of the Alaska National Interest Lands Conservation Act (16 U.S.C. 3192(h)(2)), shall convey--

(1) to the Kaktovik Inupiat Corporation the surface estate of the lands described in paragraph 1 of Public Land Order 6959, to the extent necessary to fulfill the Corporation's entitlement under sections 12 and 14 of the Alaska Native Claims Settlement Act (43 U.S.C. 1611 and 1613) in accordance with the terms and conditions of the Agreement between the Department of the Interior, the United States Fish and Wildlife Service, the Bureau of Land Management, and the Kaktovik Inupiat Corporation effective January 22, 1993; and

(2) to the Arctic Slope Regional Corporation the remaining subsurface estate to which it is entitled pursuant to the August 9, 1983, agreement between the Arctic Slope Regional Corporation and the United States of America.

SEC. 12. LOCAL GOVERNMENT IMPACT AID AND COMMUNITY SERVICE ASSISTANCE.

(a) Financial Assistance Authorized-

(1) IN GENERAL- The Secretary may use amounts available from the Coastal Plain Local Government Impact Aid Assistance Fund established by subsection (d) to provide timely financial assistance to entities that are eligible under paragraph (2) and that are directly impacted by the exploration for or production of oil and gas on the Coastal Plain under this Act.

(2) ELIGIBLE ENTITIES- The North Slope Borough, the City of Kaktovik, and any other borough, municipal subdivision, village, or other community in the State of Alaska that is directly impacted by exploration for, or the production of, oil or gas on the Coastal Plain under this Act, as determined by the Secretary, shall be eligible for financial assistance under this section.

(b) Use of Assistance- Financial assistance under this section may be used only for--

(1) planning for mitigation of the potential effects of oil and gas exploration and development on environmental, social, cultural, recreational, and subsistence values;

(2) implementing mitigation plans and maintaining mitigation projects;

(3) developing, carrying out, and maintaining projects and programs that provide new or expanded public facilities and services to address needs and problems associated with such effects, including fire-fighting, police, water, waste treatment, medivac, and medical services; and

(4) establishment of a coordination office, by the North Slope Borough, in the City of Kaktovik, which shall--

(A) coordinate with and advise developers on local conditions, impact, and history of the areas utilized for development; and

(B) provide to the Committee on Resources of the House of Representatives and the Committee on Energy and Natural Resources of the Senate an annual report on the status of coordination between developers and the communities affected by development.

(c) Application-

(1) IN GENERAL- Any community that is eligible for assistance under this section may submit an application for such assistance to the Secretary, in such form and under such procedures as the Secretary may prescribe by regulation.

(2) NORTH SLOPE BOROUGH COMMUNITIES- A community located in the North Slope Borough may apply for assistance under this section either directly to the Secretary or through the North Slope Borough.

(3) APPLICATION ASSISTANCE- The Secretary shall work closely with and assist the North Slope Borough and other communities eligible for assistance under this section in developing and submitting applications for assistance under this section.

(d) Establishment of Fund-

[+] FEEDBACK

(1) IN GENERAL- There is established in the Treasury the Coastal Plain Local Government Impact Aid Assistance Fund.

(2) USE- Amounts in the fund may be used only for providing financial assistance under this section.

(3) DEPOSITS- Subject to paragraph (4), there shall be deposited into the fund amounts received by the United States as revenues derived from rents, bonuses, and royalties from Federal leases and lease sales authorized under this Act.

(4) LIMITATION ON DEPOSITS- The total amount in the fund may not exceed $11,000,000.

(5) INVESTMENT OF BALANCES- The Secretary of the Treasury shall invest amounts in the fund in interest bearing government securities.

(e) Authorization of Appropriations- To provide financial assistance under this section there is authorized to be appropriated to the Secretary from the Coastal Plain Local Government Impact Aid Assistance Fund $5,000,000 for each fiscal year.

SEC. 13. ANWR ALTERNATIVE ENERGY TRUST FUND.

(a) Establishment of Trust Fund- There is established in the Treasury of the United States a trust fund to be known as the 'ANWR Alternative Energy Trust Fund', consisting of such amounts as may be transferred to the ANWR Alternative Energy Trust Fund as provided in section 9.

(b) Expenditures From ANWR Alternative Energy Trust Fund-

(1) IN GENERAL- Amounts in the ANWR Alternative Energy Trust Fund shall be available without further appropriation to carry out specified provisions of the Energy Policy Act of 2005 (Public Law 109-58; in this section referred to as 'EPAct2005') and the Energy Independence and Security Act of 2007 (Public Law 110-140; in this section referred to as 'EISAct2007'), as follows:

CS FOR HOUSE JOINT RESOLUTION NO. 18(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE RESOURCES COMMITTEE

Offered: 2/25/09
Referred: Rules

Sponsor(s): REPRESENTATIVES MILLETT, Stoltze, Lynn, Johnson, Neuman, Keller, Ramras, Wilson, Kelly, Dahlstrom, Hawker, Joule, Gatto, Johansen, Crawford

SENATORS Therriault, Wagoner, Bunde, McGuire, Menard, Stedman, Meyer, Huggins, Olson, French, Dyson, Thomas, Stevens

A RESOLUTION

Urging the United States Congress to refrain from passing legislation that designates land in Area 1002 of the Arctic National Wildlife Refuge as wilderness.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS Area 1002 of the Arctic National Wildlife Refuge is considered the most promising onshore oil and gas prospect in the United States; and

WHEREAS the United States Department of the Interior estimates that there may be 10,400,000,000 recoverable barrels of oil and significant quantities of natural gas in the Arctic National Wildlife Refuge; and

WHEREAS the potentially enormous oil and gas prospects are located in Area 1002 of the Arctic National Wildlife Refuge, and Area 1002 comprises only eight percent of the total area of the Arctic National Wildlife Refuge; and

WHEREAS the United States Congress, in 16 U.S.C. 3121 (sec. 1002, Alaska National Interest Lands Conservation Act), authorized oil and gas exploratory activity within the coastal plain of the Arctic National Wildlife Refuge and reserved the right to enact future laws to allow for entry into and development of oil and gas resources in the Arctic National Wildlife Refuge; and

WHEREAS Area 1002 of the Arctic National Wildlife Refuge was excluded from wilderness designation in 1980 as a result of a compromise in the negotiations that led to the conversion of the Alaska Wildlife Range into the Arctic National Wildlife Refuge, with the Arctic National Wildlife Refuge encompassing an area that is approximately double the size of the Alaska Wildlife Range; and

WHEREAS 16 U.S.C. 3101(d) (sec. 101(d), Alaska National Interest Lands Conservation Act) expresses the belief of the United States Congress that the need for future legislation designating new conservation system units, new national conservation areas, or new national recreation areas in Alaska has been obviated by the enactment of the Alaska National Interest Lands Conservation Act; and

WHEREAS development of the oil reserves in the Arctic National Wildlife Refuge would reduce the dependence of the United States on unstable sources of foreign oil and would make the economy of the United States stronger and more stable; and

WHEREAS the economy of the United States would suffer further if the large natural gas resources in Area 1002 of the Arctic National Wildlife Refuge are not available for transportation in the proposed Alaska natural gas pipeline; and

WHEREAS clean-burning natural gas delivered by way of the proposed Alaska natural gas pipeline could be used as an environmentally friendly energy source for homes and businesses in the lower 48 states for decades to come; and

WHEREAS new technology and environmental practices used by the oil and gas industry provide for efficient production and environmental protection; and

WHEREAS 8,900,000 acres of the 19,000,000 acres in the Arctic National Wildlife Refuge are already designated as wilderness areas; and

WHEREAS, assuming development of major oil and gas prospects and full leasing, oil and gas operations will have a footprint on only 2,000 acres out of a total of 1,500,000 acres in Area 1002 of the Arctic National Wildlife Refuge, approximately 0.13 percent of the area;

BE IT RESOLVED that the Alaska State Legislature urges the United States Congress to preserve its right to enact a law providing for the environmentally responsible exploration and development of oil and gas resources in the Arctic National Wildlife Refuge by not passing any legislation that designates land in Area 1002 of the Arctic National

Wildlife Refuge as wilderness.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Ken Salazar, United States Secretary of the Interior; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; the Honorable John Boehner, Minority Leader of the U.S. House of Representatives; the Honorable Harry Reid, Majority Leader of the U.S. Senate; the Honorable Mitch McConnell, Minority Leader of the U.S. Senate; the Honorable Jeff Bingaman, Chair of the Energy and Natural Resources Committee of the U.S. Senate; the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress; and all other members of the 111th United States Congress.

House Joint Resolution 18
Sponsor Statement

House Joint Resolution 18 urges the United States Congress to reject any legislation seeking a wilderness designation for the 1002 Area of the Arctic National Wildlife Refuge.

Legislation has been introduced in Congress to do just that. The 1002 Area could be the largest untapped onshore oil prospect in the United States and that makes it both a national refuge and a strategic resource. The two are not incompatible.

Congress deliberately set aside the 1002 Area for future oil and gas exploration. Lawmakers at the time understood the day may come when those reserves will be needed to fuel the economy and reduce the flow of imported oil into America.

Alaska needs new jobs to grow its economy and new revenue to fund basic services like education, public safety and transportation infrastructure. America needs a stable, safe and secure supply of energy to help the economy get back on its feet. ANWR can do all of that without harming the fragile arctic environment.

Locking up a two thousand acre area that makes up less than one percent of the refuge and holds an estimated 10,400,000,000 barrels of oil does not make sense for America's economy and national security.

HJR 18 has been referred to the House Resources Committee. For more information, contact Representative Millett at (907) 465-3879.

Representative Charisse Millett
Alaska State Legislature
State Capitol Building
Room 412
Juneau, AK 99801-1182

Dear Representative Millet:

I am writing to extend my sincerest appreciation for your leadership on HJR 18, urging the United States Congress to keep the Arctic National Wildlife Refuge open for future oil and gas development.

As you may know, Arctic Slope Regional Corporation owns subsurface title to 92,000 acres inside the Coastal Plain of ANWR, and our sister village corporation, Kaktovik Iñupiat Corporation (KIC), owns the surface title to the same acreage.

ASRC in partnership with KIC have worked this issue for over two decades. We have an up close and personal interest in this debate because potential development or Wilderness designation will have a direct impact on the residents of Kaktovik and those of the North Slope.

I am extending ASRC's assistance in providing your office with additional information on this important matter. Please do not hesitate to contact me directly. Thank you, again, for your leadership on the ANWR issue.

Regards,
ARCTIC SLOPE REGIONAL CORPORATION

Re: HJR18, Urging the U.S. Congress to refrain from passing legislation that designates lands in Area 1002 of ANWR as Wilderness

Dear Representative Johnson and Representative Neuman:

On behalf of the Resource Development Council for Alaska, Inc., (RDC), I am writing in support of HJR18, which urges Congress to refrain from passing legislation that designates the 1002 Area of ANWR as Wilderness.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

A Wilderness designation would preclude future action by Congress to provide for environmentally responsible exploration and production of oil and gas resources in ANWR. Federal Wilderness should not be expanded to include the 1002 Area, given the Coastal Plain is considered the nation's most promising onshore oil and gas prospect.

We encourage the Committee to vote in favor of this resolution. Thank you for your consideration.

Sincerely,

Jason Brune
Executive Director

HR 39 IH

111th CONGRESS

1st Session

H. R. 39

To preserve the Arctic coastal plain of the Arctic National Wildlife Refuge, Alaska, as wilderness in recognition of its extraordinary natural ecosystems and for the permanent good of present and future generations of Americans.

IN THE HOUSE OF REPRESENTATIVES

January 6, 2009

Mr. MARKEY of Massachusetts introduced the following bill; which was referred to the Committee on Natural Resources

A BILL

To preserve the Arctic coastal plain of the Arctic National Wildlife Refuge, Alaska, as wilderness in recognition of its extraordinary natural ecosystems and for the permanent good of present and future generations of Americans.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the `Udall-Eisenhower Arctic Wilderness Act'.

SEC. 2. FINDINGS AND STATEMENT OF POLICY.

(a) Findings- The Congress finds the following:

(1) Americans cherish the continued existence of expansive, unspoiled wilderness ecosystems and wildlife found on their public lands, and feel a strong moral responsibility to protect this wilderness heritage as an enduring resource to bequeath undisturbed to future generations of Americans.

(2) It is widely believed by ecologists, wildlife scientists, public land specialists, and other experts that the wilderness ecosystem centered around and dependent upon the Arctic coastal plain of the Arctic National Wildlife Refuge, Alaska, represents the very epitome of a primeval wilderness ecosystem and constitutes the greatest wilderness area and diversity of wildlife habitats of its kind in the United States.

(3) President Dwight D. Eisenhower initiated protection of the wilderness values of the Arctic coastal plain in 1960 wh[+] set aside 8,900,000 acres establishing the Arctic National Wildlife Refuge expressly `for the purpose of preserving unique wildlife, wilderness and recreational values'.

(4) In 1980, when the Congress acted to strengthen the protective management of the Eisenhower-designated area with the enactment of the Alaska National Interest Lands Conservation Act (Public Law 96-487), Representative Morris K. Udall led the effort to more than double the size of the Arctic National Wildlife Refuge and extend statutory wilderness protection to most of the original area.

(5) Before the enactment of the Alaska National Interest Lands Conservation Act, the House of Representatives twice passed legislation that would have protected the entire Eisenhower-designated area as wilderness, including the Arctic coastal plain.

(6) A majority of Americans have supported and continue to support preserving and protecting the Arctic National Wildlife Refuge, including the Arctic coastal plain, from any industrial development and consider oil and gas exploration and development in particular to be incompatible with the purposes for which this incomparable wilderness ecosystem has been set aside.

(7) When the Arctic National Wildlife Refuge was established in 1980 by paragraph (2) of section 303 of the Alaska National Interest Lands Conservation Act (Public Law 96-487; 94 Stat. 2390; 16 U.S.C. 668dd note), subparagraph (B)(iii) of such paragraph specifically stated that one of the purposes for which the Arctic National Wildlife Refuge is established and managed would be to provide the opportunity for continued subsistence uses by local residents, and, therefore, the lands designated as wilderness within the Refuge, including the area designated by this Act, are and will continue to be managed consistent with such subparagraph.

(8) Canada has taken action to preserve those portions of the wilderness ecosystem of the Arctic that exist on its side of the international border and provides strong legal protection for the habitat of the Porcupine River caribou herd that migrates annually through both countries to calve on the Arctic coastal plain.

(9) The extension of full wilderness protection for the Arctic coastal plain within the Arctic National Wildlife Refuge will still leave most of the North Slope of Alaska available for the development of energy resources, which will allow Alaska to continue to contribute significantly to meeting the energy needs of the United States without despoiling the unique Arctic coastal plain of the Arctic National Wildlife Refuge.

(b) Statement of Policy- The Congress hereby declares that it is the policy of the United States--

(1) to honor the decades of bipartisan efforts that have increasingly protected the great wilderness ecosystem of the Arctic coastal plain;

(2) to sustain this natural treasure for the current generation of Americans; and

(3) to do everything possible to protect and preserve this magnificent natural ecosystem so that it may be bequeathed in its unspoiled natural condition to future generations of Americans.

SEC. 3. DESIGNATION OF ADDITIONAL WILDERNESS, ARCTIC NATIONAL WILDLIFE REFUGE, ALASKA.

(a) Inclusion of Arctic Coastal Plain- In furtherance of the Wilderness Act (16 U.S.C. 1131 et seq.), an area within the Arctic National Wildlife Refuge in the State of Alaska comprising approximately 1,559,538 acres, as generally depicted on a map entitled 'Arctic National Wildlife Refuge--1002 Area Alternative E--Wilderness Designation' and dated October 28, 1991, is hereby designated as wilderness and, therefore, as a component of the National Wilderness Preservation System. The map referred to in this subsection shall be available for inspection in the offices of the Secretary of the Interior.

(b) Administration- The Secretary of the Interior shall administer the area designated as wilderness by subsection (a) in accordance with the Wilderness Act as part of the wilderness area already in existence within the Arctic National Wildlife Refuge as of the date of the enactment of this Act.

END

S 231 IS

111th CONGRESS

1st Session

S. 231

To designate a portion of the Arctic National Wildlife Refuge as wilderness.

IN THE SENATE OF THE UNITED STATES

January 14, 2009

Mr. LIEBERMAN (for himself, Mrs. MURRAY, Ms. STABENOW, Mr. WHITEHOUSE, Mr. LEAHY, Mr. CARDIN, Mr. SCHUMER, Mr. KOHL, Mr. FEINGOLD, Mr. KENNEDY, Mr. DURBIN, Mr. DODD, Mrs. BOXER, Ms. CANTWELL, Mr. WYDEN, Mr. REED, Mrs. FEINSTEIN, Mr. SANDERS, Mr. UDALL of New Mexico, Mr. UDALL of Colorado, Mr. HARKIN, Mr. LAUTENBERG, Mr. KERRY, Ms. KLOBUCHAR, and Mr. MENENDEZ) introduced the following bill; which was read twice and referred to the Committee on Environment and Public Works

A BILL

To designate a portion of the Arctic National Wildlife Refuge as wilderness.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. DESIGNATION OF PORTION OF ARCTIC NATIONAL WILDLIFE REFUGE AS WILDERNESS.

Section 4 of the National Wildlife Refuge System Administration Act of 1966 (16 U.S.C. 668dd) is amended by adding at the end the following:

'(p) Designation of Certain Land as Wilderness- Notwithstanding any other provision of this Act, a portion of the Arctic National Wildlife Refuge in Alaska comprising approximately 1,559,538 acres, as generally depicted on a map entitled 'Arctic National Wildlife Refuge--1002 Area. Alternative E--Wilderness Designation, October 28, 1991' and available for inspection in the offices of the Secretary, is designated as a component of the National Wilderness Preservation System under the Wilderness Act (16 U.S.C. 1131 et seq.).'.

NEWS FOR RELEASE / Wednesday, April 1, 2009

McGuire bill funding new energy technology advances to Finance

JUNEAU – The Senate Committee on Resources today approved and advanced to Senate Finance legislation establishing an Emerging Energy Technology Fund to encourage and support Alaska research in renewable and traditional sources of energy.

The fund is proposed in Senate Bill 150, sponsored by Resources Co-Chair Senator Lesil McGuire, R-Anchorage. It would be administered by the Alaska Center for Energy and Power at the University of Alaska, Fairbanks.

"Alaskans are working hard on breakthrough energy technology that is state-of-the-art and practical," McGuire said. "They're providing vision and hands-on energy. We have an obligation to provide appropriate support for their research."

Senate Bill 150 encourages new and advanced energy technology -from renewable sources including geothermal, wind, hydro, tidal, wave, biomass, in-river or solar energy, as well as Alaska's proven resources of oil and gas.

The measure stipulates that emerging energy research put a priority on projects developed by Alaska residents, organizations and institutions, including projects developed in partnership with the University of Alaska or other post-secondary institutions. It defines "energy technology" as technology that promotes diversity of available energy resources, means of transmission and reduces negative environmental effects.

The Resources committee expanded eligibility to include private and non-profit sectors; created a five-member advisory committee to handle grant applications and limited eligibility to projects realistically expected to be commercially viable within five years.

SPONSOR STATEMENT

HOUSE JOINT RESOLUTION 21

House Joint Resolution 21 requests the North Pacific Fishery Management Council (NPFMC) to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program (LLP) license holder to participate in the Pacific cod fixed gear fisheries in the Gulf of Alaska. It also supports the continuation of the existing LLP program for groundfish in the Gulf of Alaska, and supports a policy of broad participation in the harvest of marine resources in the Gulf of Alaska.

The NPFMC is the federal regulatory body that oversees management of the federal fisheries off the coast of Alaska, in the area from 3 to 200 miles from shore. The NPFMC is currently considering regulatory action that would create and require Pacific cod "endorsements" on Gulf of Alaska fixed gear license limitation program (LLP) licenses in order to harvest the Pacific cod resource. (In this proposed action, "fixed gear" includes pot and longline gear types.) These endorsements would be placed on only those LLPs that have been used in a specific range of recent years. LLPs without Pacific cod endorsements could not be used to fish for Pacific cod. This action renders those LLPs functionally useless and valueless to their owners and increases the barriers for re-entry or new entrance into the Pacific cod fisheries. Of the LLPs that would be impacted by this action, more than 60% are estimated to be owned by Alaska residents.

Pacific cod is among the most important of the fishery resources harvested in federal waters in the Gulf of Alaska. Pacific cod is harvested by four different gear types, and on vessels ranging in size from very small (<30 feet) to relatively large (>100 feet). The greatest number of vessels harvesting Pacific cod in the Gulf of Alaska use pot, longline or jig gear, and the vast majority of these vessels are ≤60 feet in length. This is the core of the coastal Alaska resident fleet in the Gulf of Alaska. Pacific cod are also harvested using trawl gear.

The creation and requirement of Pacific cod endorsements for participation in federal Pacific cod fisheries in the Gulf of Alaska would create significant barriers for new entrants to Alaska's commercial fisheries, and for re-entrance by fishermen who did not participate in a specific range of qualifying years. It would also impact a group of recent fishery entrants who made their fishery investments *after* the qualifying years. Impacted individuals would include young Alaskans and enterprising crewmen looking to advance into ownership positions in the industry.

This action is also likely to lead to consolidation of the fishing fleet and concentration of LLP ownership in fewer hands. Expected results of this action would include consolidation of the Gulf of Alaska Pacific cod fixed gear fleet, fewer crew jobs, less demand for support sector services in Alaska's coastal communities, and increased costs of entry into Gulf of Alaska fisheries.

In absence of a biological concern for resource sustainability, it is important to maintain fisheries with relatively low entry barriers to encourage and allow the entrance of the next generation of fishermen into Alaska's fisheries. While HJR21 carries no legal force, it put the Alaska Legislature on record as supporting a policy of broad participation in Gulf of Alaska groundfish fisheries.

Re: HJR 21

Dear Sirs:

I own and operate the F/V Polar Star, a 58-foot fishing vessel based in Kodiak that fishes in the Gulf of Alaska for salmon, halibut, sablefish, tanner crab, and pacific cod. I have been a resident of Kodiak for 36 years and fishing has been my livelihood for that entire time. The Pacific cod fishery is an important fishery for myself and many others here in the Gulf of Alaska, so I feel compelled to comment on the HJR 21 bill that you are currently considering.

I am opposed to the passage of this bill for the following reasons. I support the North Pacific Fishery Management Council action to add P-cod endorsements to Federal LLPs as a means of limiting the future entry of latent capacity. This action is needed to stabilize the fishery for the current active participants who have committed themselves to the P-cod fishery and are fully dependent on it. The council process has been thorough and the public has had plenty of opportunities to comment on the P-cod endorsement action. I believe that the Alaska Legislature should not impose itself in the Federal NPFMC process at such a late date without a more thorough consideration of the issues.

I urge the Senate Resources Committee to deny passage of HJR 21.

Sincerely,
Patrick J. Pikus

RE: Support for HJR 21

Dear Members of the Senate Resource Committee;

This letter is to speak on behalf of HJR 21 and request the Senate to adopt the resolution and take immediate action to prevent the NPFMC members from adopting a pacific cod limitation program.

When the Magnuson-Stevens Act of 1976 was adopted it was designed to Americanize the pacific ground fishery. But since this Act was passed further Acts have been adopted which have been designed to benefit large open-ocean fishing fleets at the expense of smaller in-shore fishing vessels and communities. The race for fish switched from a foreign fishery to a domestic one, at the expense of our coastal communities.

Over the years representatives from small communities have attended NPFMC meeting opposing further rationalization of our commercial sea food species with limited success. We have always stated that the commercial fishing and subsistence economies of coastal communities must be addressed as part of any action taken regarding management of species which directly or indirectly affect the inshore communities.

When the NPFMC and State takes action to sustain a fishery it must keep our smaller in-shore coastal community fishermen as a priority, this is the strongest in-shore economic influence that can be made on the future of rural community fisheries; Alaska and the NPFMC has put themselves out as a fish and game success story in sustaining fish species, however, at the NPFMC level the desired outcome has been at the expense of our rural fishing villages; our recommended course of action is to scale back on rationalization of fisheries which now favor larger fishing vessels and off-shore processors; When we look at the poverty rate, per capita income and unemployment rate of our rural fishing villages, its doesn't take much to recognize that the NPFMC and state has managed our rural commercial fishing villages out of existence; The survival of our rural fishing villages should be a common factor determining the success of any State or Federal fisheries program; and it should be recognized by now that in-shore commercial fisheries is a necessary form of economy in order for many of our coastal villages to survive financially.

Sincerely,

Don Bremner

North Pacific Fishery Management Council, December 2008
C-2(a) Gulf of Alaska Fixed Gear Recency Motion

The Council directed staff to develop an analysis based upon the following purpose and need statement, components, and options for initial public review. Final action is scheduled for April 2009.

C-2(a) Gulf of Alaska Fixed Gear Recency

Western GOA and Central GOA Pacific cod fisheries are subject to intense competition, particularly during the A season, when fish are aggregated and of highest value. Competition among fixed gear participants in the Western GOA and Central GOA Pacific cod fisheries has increased for a variety of reasons, including increased market value of Pacific cod products, a declining ABC/TAC, increased participation by harvesters displaced from other fisheries and introduction of capital that has been accrued from participation in rationalized fisheries. Additionally, fishery policies have created incentives that encourage non-traditional efficiency improvements for the less than 60 ft LOA vessel class. The possible future entry of latent effort and disproportionate vessel efficiency would have detrimental effects on LLP holders that have exhibited participation in, and dependence on, the fixed gear Pacific cod fisheries. Many fixed gear vessel owners have made significant investments, have long catch histories, and are dependent on the Western GOA and Central GOA Pacific cod resources. These long-term participants need protection from those who have little or no recent history and who have the ability to increase their participation in the Pacific cod fisheries. At the same time, retaining Federal waters opportunities for small community quota eligible (CQE) communities dependent on access to a range of fishery resources and expanding opportunities in Federal waters for small capacity jig operations is valued to promote community protections at a level that imposes minimal impact on historic catch shares of recent participants.

The intent of the proposed amendment is to prevent the future entry or re-entry of latent fixed gear groundfish fishing capacity that has not been utilized in recent years into the Pacific cod fisheries, and to preserve the traditional vessel operational efficiencies within the fisheries. This requires prompt action to promote stability in the fixed gear sectors of the GOA Pacific cod fisheries, and is expected to be implemented concurrently with the division of GOA Pacific cod among sectors which is currently under consideration. However, this action cannot address continued growth in the waters managed by the State of Alaska.

ALTERNATIVE 1.

No Action. No changes would be made to the current License Limitation Program.

ALTERNATIVE 2.

Add non-severable gear-specific Pacific cod endorsements to fixed gear licenses. Pacific cod endorsements would limit entry into the directed Pacific cod fisheries in Federal waters in the Western and Central Gulf of Alaska.

Component 1— Areas included

Western Gulf
Central Gulf (current LLP endorsement includes West Yakutat)

- Different options may be applied to each management area.

Component 2— Identify and define sectors

4898

The sector definitions for awarding Pacific cod endorsements may be different from those used for the GOA Pacific cod sector split action. The purpose of sector definitions in this action is to allow the Council to select different catch thresholds for the different gear types, operation types, and vessel lengths. Individual licenses may qualify for any combination of a jig, hook-and-line, and pot endorsement if the license meets the respective threshold(s) for the appropriate gear type, operation type, and vessel length.

- Hook-and-line CP
  Option: Hook-and-line CP ≥125
  Hook-and-line CP <125
- Hook-and-line CV
  Option: Hook-and-line ≥60
  Hook-and-line <60
- Pot CP
- Pot CV
  Option: Pot CV ≥60
  Pot CV <60
- Jig
  Exempt vessels using jig gear from the LLP requirement (including the Pacific cod endorsement requirement) that use a maximum of 5 jigging machines, 5 lines, and 30 hooks per line or one line of 150 hooks.

Option: Exempt vessels participating with fixed gear in the Western GOA B season directed Pacific cod fishery from the Pacific cod endorsement requirement.
Suboption: Exempt vessels using pot gear only.

Component 3 – Qualifying years

Option 1: 2000-2006
Option 2: 2002-2006
Option 3: Add the qualifying period January 1, 2007 through:
Suboption 1: June 4, 2008
Suboption 2: December 8, 2008

- Either of these suboptions will be selected in addition to one of the qualifying periods in Option 1 or Option 2.

  Suboption 3: If an LLP license qualifies only when the supplemental range of years in Suboption 1 or Suboption 2 is included, any Pacific cod endorsements granted to licenses under these suboptions would be extinguished upon transfer of the LLP license to another vessel or owner.

- If a GOA hook-and-line catcher processor LLP license holder was a voluntary non-participant in the Freezer Longliner Coalition informal PSC co-op efforts of 2006, 2007, or 2008, and does not qualify under Component 3, Options 1, 2, or 3, the LLP would not be extinguished. If Pacific cod endorsements are a result of this action in the GOA hook-and-line CP sector, the LLP would receive a Pacific cod endorsement.

4899

Component 4 – Catch thresholds

Thresholds shall be based on legally retained catch in the aggregate during all of the qualifying years in the Federal and parallel fisheries (excluding IFQ catch). Separate and distinct thresholds may be determined for each defined sector.

Option 1: All directed Pacific cod 1, 3, or 5 landings (resulting in a Pacific cod endorsement)
Option 2: All directed Pacific Cod 5, 10, 25, or 100 mt (resulting in a Pacific cod endorsement)

Option: Hardship provision. A GOA fixed gear LLP holder who had 5 or more Pacific cod landings in 1999, but had a vessel on which the LLP was used sink in 1999 or 2000, shall be credited with qualifying history so as to obtain a Pacific cod endorsement.

Directed Pacific cod catch is defined as landings made when the directed Pacific cod fisheries are open. For purposes of catch accounting, licenses are credited with deliveries or processing activity recorded up to 7 days after the directed season closes.

Component 5 – Stacked license provisions

Where there are multiple LLPs registered to a single vessel, also known as 'stacking' of LLPs, groundfish harvest history will be fully credited to all stacked licenses, each carrying its own qualifying endorsements and designations.

Component 6 – Capacity/efficiency limits to CV and CP fixed gear LLPs

Add a width restriction (efficiency restriction) on each CV and CP fixed gear LLP license that is eligible to access Pacific cod under this action. The width restriction would be 1 ft of width for each 3 ft of length, and is based on the LOA of the vessel assigned to the license on December 8, 2008. The licenses that are assigned to vessels on December 8, 2008 that exceed the width restriction will be grandfathered at their present LOA. For vessels under construction on December 8, 2008, the width restriction for the license shall be equal to the vessel width upon completion. Vessels would be required to report width measurements to RAM.

Option: Add a simple gross tonnage maximum to licenses.

Component 7 – CQE community resident exemption

CQE community residents currently holding latent, non-qualifying, LLP permits shall retain their LLP and area endorsement(s) and be exempt from the Pacific cod endorsement requirement. A hook-and-line or pot gear endorsement shall be made through (a) a one-time designation at the time the endorsement is issued or (b) designated at the time the first Pacific cod landing is made based on the gear type used. The CQE community resident's LLP, shall not be leased, and can only be transferred to an individual who has lived continuously in the permit holder's CQE community for 24 consecutive months prior to the transfer and who intends to remain a resident of the community. Residency shall be affirmed annually upon renewal. If a CQE community LLP holder with a restricted transfer LLP is no longer a resident of the CQE community or dies without a designated qualified LLP community beneficiary, the community CQE shall designate a qualified individual in the CQE community to hold the restricted transfer LLP.

4900

Option: Restrict exemption to LLPs with a MLOA endorsement less than 60 feet.

Additional information requested

- Additional information on the number of identical stacked licenses that meet the catch thresholds (Component 5).
- Additional information on possible approaches to identifying a maximum length to width ratio or maximum simple gross tonnage for purposes of adding a capacity endorsement to licenses (Component 6).

Representative Bryce Edgmon, Chair
House Fisheries Special Committee
State Capitol, Room 416
Juneau, AK 99801-1182

Re: HJR 21 "Requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program license holder to participate in the Pacific cod fisheries in the Gulf of Alaska"

Dear Representative Edgmon,

We respectfully submit the following comments in opposition to HJR 21 (i.e., "Requesting the North Pacific Fishery Management Council to cease consideration of an amendment package that would require a Pacific cod endorsement for a license limitation program license holder to participate in the Pacific cod fisheries in the Gulf of Alaska").

I. Introductory Comments

HJR 21 addresses a proposed regulatory action that is under consideration by the North Pacific Fishery Management Council ("NPFMC" or "Council"). The proposed regulatory action is intended to add gear-specific (i.e., pot, hook-and-line, and jig) Pacific cod "Endorsements" to fixed gear licenses for the purpose of limiting entry to the directed Pacific cod fisheries in Federal waters of the Western Gulf of Alaska (WGOA) and the Central Gulf of Alaska (CGOA). Briefly, licenses that meet the selected catch threshold (1, 3, or 5 landings, or 5 mt, 10 mt, 25 mt, or 100 mt of directed Pacific cod catch) using pot, hook-and-line, or jig gear would receive gear-specific Pacific cod "Endorsements". The NPFMC has the flexibility to select different catch thresholds for vessels within the array of gear (i.e., pot, hook and line, etc.), operation type (i.e., catcher vessel, catcher processor, etc.) and vessel length sectors that are included in this proposed action.

It is important to note that the proposed action to implement Gulf of Alaska (GOA) fixed gear P. cod Endorsements provides needed stability for the Alaska resident fleets that participate in the WGOA and CGOA fixed gear P. cod fisheries, and incorporates several tools to ensure ample opportunities for new participation and entry-level participation in these fisheries. The proposed Endorsements action seeks to arrest an ongoing and continued deterioration of, and to provide necessary protection for, the social, cultural and economic characteristics of WGOA and CGOA communities, and those fishing businesses, vessels, vessel owners, operators, crews, support businesses, etc. that are so important to Kodiak and

other Alaska coastal communities, and that depend on stability and growth in the CGOA fixed gear P. cod fishery. The proposed GOA fixed gear P. cod Endorsements action adopts a fleet management protocol that is very similar to that which is instituted in the State of Alaska Limited Entry system; that is, the proposed Endorsements action creates licenses that have a similar purpose and function, for example, as the Limited Entry Licenses that are created by the State of Alaska in the Kodiak salmon, herring and tanner crab fisheries.

In addition to comments that directly address our opposition to HJR 21, we have included a brief compilation of relevant and recent documentary resources that define and explain the complexity of the proposed GOA Fixed Gear P. cod Endorsements action, and the serious and significant attention that has been invested in such proposed action.

II. Comments on HJR 21

We respectfully request that the House Fisheries Special Committee (House Fisheries Committee) take no action on HJR 21.

We respectfully request that the House Fisheries Committee please understand that a regulatory process has been underway for a long period of time to develop a proposed action for GOA fixed gear P. cod Endorsements. We respectfully request the House Fisheries Committee to please understand that many of the Alaskan communities, fishing businesses, vessels, vessel owners, operators, crews, support businesses, etc. that depend on the GOA fixed gear p. cod fishery would be detrimentally impacted by the adoption of HJR 21. We fear that the individuals, businesses and coastal communities who are in need of the proposed Endorsements action may be harmed by any legislative insertion into this process that may be caused by HJR 21. HJR 21 seeks to insert the Alaska Legislature into a regulatory process that is governed by a federally established entity that has developed the proposed initiative for GOA fixed gear P. cod Endorsements. However, HJR 21 falls far short of providing an accurate, thorough, complete and comprehensive consideration and understanding of the issues that are associated with the proposed Endorsements action. We fear that a significant risk exists to the individuals, businesses and coastal communities who are impacted by the proposed Endorsements action if the Alaska Legislature does not guarantee a significant investment of their time and attention to fully and completely understand the significant complexity, considerations, ramifications and details of the statutory, regulatory, social, cultural, economic and statistical considerations and analysis that have heretofore already been invested in the Endorsements initiative.

To be clear, we respect and support the authority, interests and prerogatives of the Alaska Legislature, on behalf of the State of Alaska, its resources and its citizens, to convey official expressions and resolutions of interest, intent and policy for the purpose of addressing

specific resource management initiatives that may otherwise lie within the official jurisdiction of a resource management entity that is officially established apart from the jurisdiction of the State of Alaska. However, the action that is proposed in HJR 21 is misdirected, unproductive and unreasonable, and leads to no practical or beneficial result whatsoever. And the accuracy, efficacy, manner of expression and foundation of the provisions therein contained are in large part hyperbole, malapropos, uninformed and inaccurate. HJR 21 suggests action that would significantly disadvantage and harm Alaska-resident harvesters and Alaskan coastal communities, and, instead, permit the continuing erosion of Alaskan interests in the GOA fixed gear P. cod fishery that is caused by non-Alaskan interests, and other interests that are otherwise enriched by favorable management programs in other fisheries.

Please bear in mind that the consideration of the proposed action for GOA fixed gear P. cod Endorsements is given by federal statute to a federally established entity (i.e., the NPFMC) in which the State of Alaska has statutorily been provided with significant official standing, involvement, influence and participation. The State of Alaska has reasonably sufficient and experienced professional resources with which to engage, and which have, in fact, reasonably engaged, in the development of the proposed Endorsements action. The State of Alaska has significant and ample opportunity to consider, balance, judge and advocate the details and impacts, and the policy and other considerations, that are associated with the proposed Endorsements action.

Importantly, the proposed Endorsements action that is referenced in HJR 21 has been under development for several years, and is scheduled for final action during the April, 2009, NPFMC meeting. The proposed action is very important to the stability, survival and future growth of the traditional and customary social, cultural, economic and business framework of Kodiak and other Alaska coastal communities. In fact, aggressive action to address the problems, challenges and threats to such stability, survival and future growth, such as are addressed in the proposed GOA Endorsements action, should have been taken and implemented many years ago.

We respectfully request that the House Fisheries Special Committee, the House Resources Committee and the Alaska Legislature please do not insert themselves in the proposed GOA fixed gear P. cod Endorsements initiative, especially in the manner that is expressed in HJR 21. We respectfully request that the House Fisheries Committee take no action on HJR 21.

III. Brief Compilation of Relevant and Recent Documentary Resources

A. Analysis (Public Review Draft EA/RIR/IRFA; March 3, 2009)

"PUBLIC REVIEW DRAFT; ENVIRONMENTAL ASSESSMENT/REGULATORY IMPACT REVIEW/INITIAL REGULATORY FLEXIBILITY ANALYSIS for a Proposed Amendment to the Fishery Management Plan for Groundfish of the GOA Management Area to ADD PACIFIC COD ENDORSEMENTS TO WESTERN AND CENTRAL GOA FIXED GEAR LLP LICENSES; March 3, 2009" (129 pages)
<http://www.fakr.noaa.gov/npfmc/current_issues/pcod/fixedgearrecency309.pdf>

The above referenced document is commonly referred to as an "Analysis", and illustrates the most recent version of the analytical review of those conservation, management, community, statutory, regulatory, policy and other issues that the Council has determined to be included in such Analysis, in response to significant and diverse public testimony, agency comment (including from NOAA General Counsel, National Marine Fisheries Service Sustainable Fisheries Division and Enforcement Division personnel or "NMFS", Alaska Department of Fish & Game or "ADF&G", United States Coast Guard or "USCG", etc.), conformity with federal statutory and regulatory requirements (i.e., NEPA, etc.), etc.

Please see Chapter 1.1 ("Purpose and Need for the Action"; page 21), and the associated "GOA Fixed Gear Recency Purpose and Need Statement" (page 23).

Please also see that the subject Analysis identifies the most recent array of "Alternatives and Options" that are under consideration by the NPFMC for the proposed regulatory action (please see Chapter "1.2 Alternatives"; page 24).

B. December 2008 NPFMC Newsletter Article (see page 7) "GOA Fixed Gear LLP Pacific cod Endorsements"
<http://www.fakr.noaa.gov/npfmc/newsletters/news1208.pdf>

This NPFMC December 2008 newsletter article provides the public with a brief summary of the status, elements, direction and expectations for NPFMC action on the proposed GOA fixed gear P. cod Endorsements action that is the subject of HJR 21.

Thank you for your consideration of our comments on HJR 21.

Sincerely,

Jeffrey R. Stephan

Public Comment of Shawn Dochtermann on HJR 21 re P.Cod Endorsements

Wednesday, March 18, 2009

Chairmen McGuire & Wielechowski and Senate Resource Members,

I'm Shawn Dochtermann, a second-generation commercial fisherman from Kodiak with over 30 years of fishing experience under my knife belt. I'm here representing my interests in Gulf of Alaska fisheries, today — even though I'm frequently a public advocate for many Alaskan fishermen, their families and coastal communities.

I'm here in support of HJR 21, for many reasons.

First I'd like to review a brief history of fisheries rationalization regimes:

- Fifty years ago, we became a state, and forced fisheries processors to start sharing profits of the resources that were being extracted from our state.
- Fast-forward to the early seventies, Limited Entry was introduced as state fishery law. **There was only one catch: in order to harvest the fish, the permit holder had to actually put his boots on and go down and work on the boat, go fishing, catch the fish and then deliver them for processing. It was an owner-on-board fishery**, and the crews got paid well.
- In 1995 the halibut and sablefish federal fisheries management program (FMP) was changed from open access to Individual Fish Quotas, a.k.a. IFQs, DAPs, LAPs, or 'Catch Shares'. The NPFMC gave quotas to vessel owners and the program created a superior right so they would never have to step foot on boat again if they so chose. **This is what you would call an absentee owner model.**

  For the record, approximately 15,000 halibut crewmen and skippers lost their jobs in one day. But at least when quotas are sold or the initial recipient expires from the fishery (my father will be 100 years old, I'll bet!) the IFQ has to be fished by the quota holder. That's what one would call fair – as compared to the newer privatization schemes. And the quotas were awarded only to fishermen as suppliers, not given to processors as buyers: who might dominate price setting.
- Next (BS) pollock was privatized in 1998 with the direct help of Ted Stevens and Trevor McCabe. **Now foreign owned companies that own processors and vessels are granted exclusive rights to catch and process pollock in the BS.** This greatly degraded Alaska's sovereign abilities to control its own resources.
- Lastly, in 2005 came Bering Sea Aleutian Island Crab Rationalization (CR) or CRAB RATZ. With a name like that one would know there's real "devils in the details", as over 1,000 crab crewmen were disenfranchised by Ted Stevens' Rider on a must-pass federal appropriations bill. **This gifted over 1 Billion Dollars in**

IFQ rights to about 100 individuals and corporations.

The processing rights were given to 7 major processing companies. Japanese trading companies own 40-50% of the processing rights, while Trident Seafoods has over 25% of processing and a large amount of IFQs. **All of the IFQs were given to the quota holders forever; consequently there is no program to get fishing privileges back into the hands of active fishermen.**

Crewmen in the Bering Sea are now getting paid at unfair and inequitable compensation rates due to high rent seekers taking exorbitant lease fees off the top. The average Bering Sea crabber now makes from 50-70% less than he did pre-rationalization. Now BS crab IFQ holders (who by majority live out of state) can play golf in Hawaii during the crab season — and collect a paycheck from Alaskan crab that was harvested without having to even own a boat or gear — by skimming 70% of the gross proceeds right off the top, before the boat it is fished on leaves the dock.

The next generation (myself included) is now sitting at this table and we've had enough of **fishery access removal** by the factions of fisheries lobbyists you will hear from today. If you're not born into a fishing family, it will take millions of dollars invested just to go catch some fish.

We fought Ben Stevens and his thuggery and stopped SB113 in this same building in 2005/6, and we won. Governor Palin was elected and she put the kibosh on the rush into GOA groundfish rationalization. **But now the NPFMC is trying to get GOA groundfish rationalization through by other means to suit the trawlers' need of getting quota ownership and securing the high value bycatch — incidental species now targeted that should by the standards of the Magnuson Stevens Act and related fisheries laws be brought to a halt.** The gear groups that fish the dirtiest should be penalized for excessive bycatch, not awarded allocations as a prize for lobbying efforts and campaign financing.

In summary, removing the latent LLPs from the GOA groundfish permit holders will leave state waters as the dumping ground for new entrants. Why shouldn't federal waters have a place for active fishermen as new entrants to transition into, for all of its fisheries? Where is the problem of too many fishing vessels? There is no great influx of vessels coming into the GOA Pacific cod fishery in the last 5-10 years. It's not financially viable for that many vessels to stay in the fishery, in any case — especially with the huge recent drop in ex-vessel cod prices. So, many vessels are now fishing only to secure rights to a catch history in case a rationalization management or privatization scheme gets imposed.

I'll be headed out jigging in state waters this week. But with these low prices, it looks like I'll be fishing first for my sanity and second to try to make an income. But there are no guarantees, it's fishing. I should be able to have access to the fisheries that are right outside of my doorstep, and the next generation should have that opportunity as well. **Fishing rights need to remain with those who go out on the boats.**

Removing these LLPs from the fixed-gear fishermen will simply **take rights from active and future fishermen and give exclusive rights to an investor-only faction who do not fish**.

The North Pacific Fishery Management Council presides over the federal waters off of one state only: Alaska. And the Council and State conduct joint Board of Fish and other coordinated efforts. Yet some have argued that you should not concern yourself with advising the Council on behalf of the People of Alaska whom you represent. Nothing could be further from the truth. It is both the right and duty of this Legislature to keep watch over these economic and social issues. In fact, it is inherent in our State's birthright and Constitution.

I urge the Senate Resources Committee to move HJR21a to the floor and ask all of the members here today to speak with other the state senator representing their district to move this Resolution forward to the NPFMC forthwith.

As always, I appreciate the time you've taken to listen to my comments.

Respectfully,

Shawn C Dochtermann

Anchorage, Alaska 99501

192nd Plenary Session – April 1-7, 2009
Hilton Hotel, Anchorage, AK

Re: C-1 GOA Groundfish Management

Public Comment By: Mr. Shawn C. Dochtermann
Kodiak, Alaska 99615 — Tel: (907) 486-8777

Mr. Secretary, Chairman Olson, Council members,
and Honorable Citizens of the United States,

My name is Shawn Dochtermann, a 2nd generation commercial fisherman from Kodiak. I have 31 years experience in the GOA, BS, Bristol Bay and in the Aleutian islands. I am here representing myself as well as many Alaskan citizens in the coastal communities.

I'm in opposition to the removal of LLPs from GOA groundfish license holders and to the implementation of Pacific Cod endorsement requirements by the Council. Therefore, I ask for the Council to remain with Status Quo for the GOA Groundfish Management.

The purpose and needs statements is flawed. There is no increased market value, in fact, the price has dropped by almost 50% from the 2008 to the 2009 cod season. Where is the intense competition, unless there are vessels that are racing for history that was perpetuated due to the Council moving forward with GOA rationalization, sector splits, and LLP removal threats?

Most of the federal fisheries in the state of Alaska have gone the way of privatization and it has disconnected the actual fishermen that prosecute the fisheries from having access to participate and ascend to vessel owner/skipper. If 500 of the 800 licenses that are in circulation at present are removed you will be handing 300 fixed gear license holders the keys to owning the resource as well as the trawler sector and it's past removal of LLPs from the GOA.

I ask only one question of the council:

Where is the link to conservation, sustainability of the resource and habit protection in removing LLPs?

The removal of the LLPs in the GOA Groundfish fisheries venomously violates NS #5 Sec. 600.330 " no such measure shall have economic allocations as it's sole purpose".

Once you remove 500 licenses, it takes away future fishermen having the chance to participate and awards 300 license holders the access to a sector split, which in essence is an economic allocation.

I'd like to review a brief history of fisheries rationalization regimes:

- Fifty years ago, we became a state, and forced fisheries processors to start sharing profits of the resources that were being extracted from our state. The federal government was nowhere to be found in promoting conservation of fisheries, sustainability, and protection of fish habitat.
- Fast-forward to the early seventies, Limited Entry was introduced as state fishery law. **There was only one catch: in order to harvest the fish, the permit holder had to actually put his boots on and go down and work on the boat, go fishing, catch the fish and then deliver them for processing. It was an owner-on-board fishery,** and the crews got paid well.
- In 1995 the halibut and sablefish federal fisheries management program (FMP) was changed from open access to Individual Fish Quotas, a.k.a. IFQs, DAPs, LAPs, or 'Catch Shares'. The Council gave quotas to vessel owners and the program created a superior right so they would never have to step foot on boat again if they so chose. **This is what you would call an absentee owner model.**

  For the record, approximately 15,000 halibut crewmen and skippers lost their jobs in one day. But at least when quotas are sold or the initial recipient expires from the fishery (my father will be 100 years old, I'll bet!) the IFQ has to be fished by the quota holder. That's what one would call fair – as compared to the newer privatization schemes. And the quotas were awarded only to fishermen as suppliers, not given to processors as buyers: who might dominate price setting.
- Next BS pollock was privatized in 1998 with the direct help of Ted Stevens and Trevor McCabe. **Now foreign owned companies that own processors and vessels are granted exclusive rights to catch and process pollock in the BS.** This greatly degraded Alaska's sovereign abilities to control its own resources.
- Lastly, in 2005 came Bering Sea Aleutian Island Crab Rationalization (CR) or CRAB RATZ. With a name like that one would know there's real "devils in the details", as over 1,000 crab crewmen were disenfranchised by Ted Stevens' Rider on a must-pass federal appropriations bill. **This gifted over 1 Billion Dollars in IFQ rights to about 100 individuals and corporations.**

  The processing rights were given to 7 major processing companies. Japanese trading companies own 40-50% of the processing rights, while Trident Seafoods has over 25% of processing and a large amount of IFQs. **All of the IFQs were given to the quota holders forever; consequently there is no program to get fishing privileges back into the hands of active fishermen.**

  Crewmen in the Bering Sea are now getting paid at unfair and inequitable

compensation rates due to high rent seekers taking exorbitant lease fees off the top. The average Bering Sea crabber now makes from 50-70% less than he did pre-rationalization. Now BS crab IFQ holders (who by majority live out of state) can play golf in Hawaii during the crab season — and collect a paycheck from Alaskan crab that was harvested without having to even own a boat or gear — by skimming 70% of the gross proceeds right off the top, before the boat it is fished on leaves the dock.

The next generation (myself included) is now sitting at this table and we've had enough of **fishery access removal** by the factions of fisheries lobbyists that have gotten us to this point and will continue to work for those that stand to gain the most monetarily. If you're not born into a fishing family, it will take millions of dollars invested just to go catch some fish. Where is the MSA protections for fisheries, not vessel and quota holders bank accounts and future revenues?

We fought Ben Stevens and his thuggery and stopped SB113 and coordinates GOA groundfish rationalization in the Alaska Legislature in 2005/6, and we won. Governor Palin was elected and she put the kibosh on the rush into GOA groundfish rationalization.

The lobbyists and the Council have worked together to move GOA groundfish rationalization through by other means to suit the trawlers' need of getting quota ownership and securing the high value bycatch — incidental species now targeted that should by the standards of the Magnuson Stevens Act and related fisheries laws be brought to a halt. The gear groups that fish the dirtiest should be penalized for excessive bycatch, not awarded allocations as a prize for lobbying efforts and campaign financing.

The Council should make an amendment to the GOA Groundfish Management plan to hand the cleanest gear group more of the quota. The jig sector is recognized as the group that has the least bycatch (almost none), least mortality on any bycatch, the least footprint on the sea floor, and the least carbon footprint. We've been here for 4 years asking for an exemption to own an LLP, to be able to prosecute the federal cod/groundfish fishery. We are a small vessel fleet connected to the communities in the GOA and promote family fisheries. The jig sector, never really had the chance to participate in GOA "A" season do due safety concerns from inclement weather. To abide by MSA law the gear groups with the least impact on the ocean should have the best opportunity to gain quota for their sector.

In summary, removing the latent LLPs from the GOA groundfish permit holders will leave state waters as the dumping ground for new entrants. Why shouldn't federal waters have a place for active fishermen as new entrants to transition into, for all of its fisheries? Where is the problem of too many fishing vessels? There is no great influx of vessels coming into the GOA Pacific cod fishery in the last 5-10 years.

It's not financially viable for that many vessels to stay in the fishery, in any case — especially with the huge recent drop in ex-vessel cod prices.

I'll be headed out jigging in state waters this week. But with these low prices, it looks like I'll be fishing first for my sanity and second to try to make an income. But there are no guarantees, it's fishing. I should be able to have access to the fisheries that are right outside of my doorstep, and the next generation should have that opportunity as well. **Fishing rights need to remain with those who go out on the boats.**

Removing these LLPs from the fixed-gear fishermen will simply **take rights from active and future fishermen and give exclusive rights to an investor-only faction who do not fish.**

I urge the NPFMC to stay with status quo for the GOA groundfish fisheries and use tools that are already in the tool box, such as trip limits, pot, hook and trawl net size limits and even *vessel capacity limits* to keep the fisheries healthy.

As always, I appreciate the time you've taken to listen to my comments.

Respectfully,

Shawn C Dochtermann

ALASKA STATE LEGISLATURE
House District 35

Sponsor Statement
HJR 22

HJR 22 urges the U.S. Senate to ratify the United Nations Convention on the Law of the Sea ("Law of the Sea treaty"). This resolution will help Alaska's Senate delegation bring the Law of the Sea treaty to the Senate floor for a vote on ratification. Ratification of this treaty is important to protect U.S. interests concerning the use and development of the high seas off Alaska.

The Law of the Sea treaty governs many aspects of oceans, such as mapping, state area control, environmental control, marine scientific research, economic and commercial activities, transfer of technology and the settlement of disputes relating to ocean matters.

150 countries are signatories to the treaty, including all of the arctic nations with the exception of the United States.

According to the office of U.S. Senator Lisa Murkowski, a resolution from the Alaska State Legislature would be helpful as she works this late spring or early summer to get a ratification vote to the Senate Floor. U.S. participation in the Law of the Sea Treaty was approved in 1994 by President Clinton after work was done on portions of the treaty to address concerns raised by President Reagan. The Bush Administration actively supported Senate ratification of the treaty. Among other entities on the record supporting ratification are the United States Coast Guard, the Department of the Navy, Governor Sarah Palin, The State Department, the Joint Chiefs of Staff, AT&T, The American Petroleum Institute, The International Association of Drilling Contractors, and the National Oceans Industries Association.

The U.S. is now the only arctic nation that is not a signatory to the treaty. Under the treaty, member nations can claim an exclusive economic zone (EEZ) to 200 miles, with sovereign rights to explore, develop, and manage the resources within that zone. A claim can extend beyond the 200 mile limit if a connection can be proven that the nation's continental shelf extends beyond 200 miles. It is estimated that the northern seabed off Alaska and beyond the 200 mile limit could be as large as the state of California.

http://www.RepPaulSeaton.com
Email: Rep_Paul_Seaton@legis.state.ak.us

Key features of the Law of the Sea treaty include the following:

- Coastal States exercise sovereignty over their territorial sea which may not exceed 12 nautical miles; foreign vessels are allowed "innocent passage" through those waters;
- Ships and aircraft of all countries are allowed "transit passage" through straits used for international navigation; States bordering the straits can regulate navigational and other aspects of passage;
- Coastal States have sovereign rights in the 200-nautical mile EEZ with respect to natural resources and certain economic activities, and exercise jurisdiction over marine science research and environmental protection;
- All other States have freedom of navigation and over flight in the EEZ, as well as freedom to lay submarine cables and pipelines;
- All States enjoy the traditional freedoms of navigation, overflight, scientific research and fishing on the high seas; they are obliged to adopt, or cooperate with other States in adopting, measures to manage and conserve living resources;
- States are bound to prevent and control marine pollution and are liable for damage caused by violation of their international obligations to combat such pollution;
- All marine scientific research in the EEZ and on the continental shelf is subject to the consent of the coastal State, but in most cases they are obliged to grant consent to other States when the research is to be conducted for peaceful purposes and fulfils specified criteria;
- States Parties are obliged to settle by peaceful means their disputes concerning the interpretation or application of the Convention;
- Disputes can be submitted to the International Tribunal for the Law of the Sea established under the Convention, to the International Court of Justice, or to arbitration. Arbitration is also available and, in certain circumstances, submission to it would be compulsory. The Tribunal has exclusive jurisdiction over deep seabed mining disputes.

The State of Alaska has much to gain from controlling development in the waters adjacent to our 200 mile EEZ and much to lose if we are the only arctic nation not to extend our ocean boundaries.

Subject: RE: Law of the Sea

Members of the House State Affairs Committee,

I am writing in support of HJR 22, A resolution urging the United States Senate to ratify the United Nations Convention on the Law of the Sea. This resolution will be helpful to Senator Lisa Murkowski and Senator Mark Begich as they work to bring the Treaty to the floor for Senate consideration.

I recognize there are still some concerns that remain, in regards to the Treaty and I ask that the committee members thoroughly research the facts. I believe you will find that the concerns about detrimental affects to the United States are unfounded.

I believe that the strong support from members of all branches of the United States military, including national intelligence; former Secretaries of State; former Joint Chiefs of Staff; the oil and gas industry, shipping companies, telecommunication, offshore mining interests, commercial and recreational fishing groups, and environmental organizations is a testament to the benefits that ratifying the Convention offers the United States, including enhancing our nation's economic security. Otherwise, you simply would not have support from such a diverse and broad group of interests.

I encourage you to support HJR 22 in your committee and by the Legislature of the State of Alaska.

Sincerely,

Arne Fuglvog
Legislative Assistant for Natural Resources
Senator Lisa Murkowski

Notes

1. The depicted potential areas of continental shelf beyond 200 nautical miles (nm) for Canada, Denmark and the USA are theoretical maximum claims assuming that none of the states claims continental shelf beyond median lines with neighbouring states where maritime boundaries have not been agreed. **In reality, the claimable areas may fall well short of the theoretical maximums** (see the summary of the definition of the outer limit of the continental shelf below). It is also possible that one or more states will claim areas beyond the median lines.

   Where the continental margin of a coastal state extends beyond 200 nm from the state's territorial sea baseline, the outer limit of the continental shelf is defined with reference to two sets of points: (i) points 60 nm from the foot of the continental slope; (ii) points at which the thickness of sedimentary rocks is at least 1% of the shortest distance from the points in question to the foot of the continental slope. The outer limit of the continental shelf is defined by a series of straight lines (not exceeding 60 nm in length) connecting the seawardmost of the points in the two sets described above. This map does not attempt to depict such lines, which can only be identified with precision through bathymetric and seismic surveys. However, it is possible to depict the 'cut-off' limit beyond which states may not exercise continental shelf jurisdiction regardless of the location of the foot of the continental slope and the thickness of sediment seaward of that point. The cut-off limit is the seawardmost combination of two lines: (i) a line 350 nm from the state's territorial sea baseline; (ii) a line 100 nm seaward of the 2,500 metre isobath. Both the 350 nm line and (where it runs seaward of the 350 nm line) the 2,500 m + 100 nm lines are depicted on the map. The 2,500 m + 100 nm line is derived from the US National Geophysical Data Center's etopo2 bathymetry dataset.

2. The depicted claims of Denmark and Iceland to continental shelf beyond 200 nm in the northeast Atlantic Ocean are defined in the "Agreed Minutes on the Delimitation of the Continental Shelf beyond 200 Nautical Miles between the Faroe Islands, Iceland and Norway in the Southern Part of the Banana Hole of the Northeast Atlantic" of 20 September 2006. The agreed division of the continental shelf in this area is subject to confirmation by the Commission on the Limits of the Continental Shelf (CLCS) that there is a continuous continental shelf in the area covered by the agreement. Neither Denmark nor Iceland has yet made a submission to the CLCS.

3. An executive summary of Norway's submission to the CLCS of 27 November 2006 is available at http://www.un.org/Depts/los/clcs_new/submissions_files/nor06/nor_exec_sum.pdf. The Commission has yet to respond to Norway's submission.

4. Maps and coordinates defining the area covered by Russia's submission to the CLCS of 20 December 2001 are available at http://www.un.org/Depts/los/clcs_new/submissions_files/submission_rus.htm. The Commission asked Russia to revise its submission relating to its continental shelf in the Arctic Ocean.

5. Norway and the Soviet Union agreed a partial maritime boundary in Varangerfjord in 1957 but disagree on the alignment of their maritime boundary in the Barents Sea: Norway claims the boundary should follow the median line, while Russia seeks a 'sector' boundary extending due north (but deviating around the 1920 Svalbard Treaty area). As the Barents Sea is an important fishery for both states, in January 1978 the two governments agreed on a fishing regime in the so-called "Grey Zone", a 19,475 nm² area covering 12,070 nm² of overlapping EEZ claims, 6,588 nm² of undisputed Norwegian EEZ and 817 nm² of undisputed Russian EEZ. Within the Grey Zone Norway and Russia have jurisdiction over their own fishing vessels.

6. Canada argues that the maritime boundary in the Beaufort Sea was delimited in the 1825 treaty between Great Britain and Russia defining the boundary between Alaska and the Yukon as following the 141° W meridian "as far as the frozen ocean". The USA argues that no maritime boundary has yet been defined and that the boundary should follow the median line between the two coastlines. The area of overlap between the two claims is more than 7,000 nm².

7. Under a treaty signed in February 1920, Norway has sovereignty over the Svalbard archipelago and all islands between latitudes 74° and 81° north and longitudes 10° and 35° east. However, citizens and companies from all treaty nations enjoy the same right of access to and residence in Svalbard. Right to fish, hunt or undertake any kind of maritime, industrial, mining or trade activity are granted to them all on equal terms. All activity is subject to the legislation adopted by Norwegian authorities, but there may be no preferential treatment on the basis of nationality. Norway is required to protect Svalbard's natural environment and to ensure that no fortresses or naval bases are established. 39 countries are currently registered as parties to the Svalbard treaty.

8. The Eastern Special Area lies more than 200 nm from the baseline of the USA but less than 200 nm from the baseline of Russia. Under the June 1990 boundary agreement between the two states, the Soviet Union agreed that the USA should exercise EEZ jurisdiction within this area. A second Eastern Special Area and a Western Special Area (in which the opposite arrangement applies) were established adjacent to the boundary south of 60° north. The agreement has yet to be ratified by the Russian parliament but its provisions have been applied since 1990 through an exchange of diplomatic notes.

Agreed maritime boundaries

Canada-Denmark (Greenland): continental shelf boundary agreed 17 December 1973.

Denmark (Greenland)-Iceland: continental shelf and fisheries boundary agreed 11 November 1997.

Denmark (Greenland)-Norway (Jan Mayen): continental shelf and fisheries boundary agreed 18 December 1995 following adjudication by the International Court of Justice.

Denmark (Greenland)-Iceland-Norway (Jan Mayen) tripoint agreed 11 November 1997.

Denmark (Greenland)-Norway (Svalbard): continental shelf and fisheries boundary agreed 20 February 2006.

Iceland-Norway (Jan Mayen): fisheries boundary following the 200 nm limit of Iceland's EEZ agreed 28 May 1980; continental shelf joint zone agreed 22 October 1981 following the report of the Conciliation Commission.

Russia-USA: single maritime boundary agreed 1 June 1990 (see also note 8).

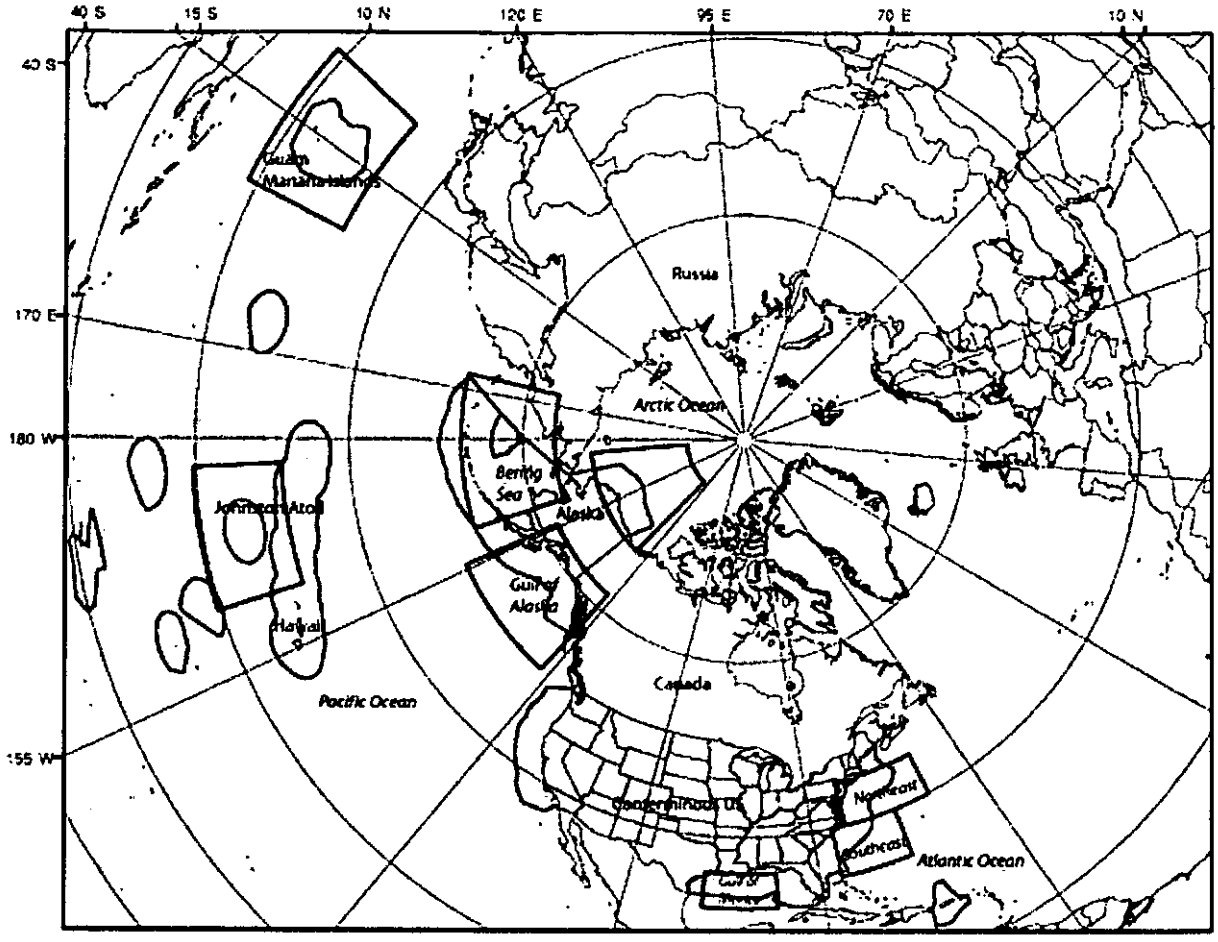

Figure 2: Eight regions (in red) adjacent to the United States and its dependences, where there likely exists extended continental shelf (ECS) beyond 200 nautical miles (in blue) identified by Mayer et al.(2002), The compilation and analysis of data relevant to a U.S. Claim under the United Nations Law of the Sea Article 76: A Preliminary Report. The regions presented in this figure are the result of an academic study, do not represent a formal position of the United States, and are without prejudice to any rights that the United States has with respect to its continental shelf.

US Department of State
Extended Continental Shelf Project

Arctic Meltdown

The Economic and Security Implications of Global Warming

Scott G. Borgerson

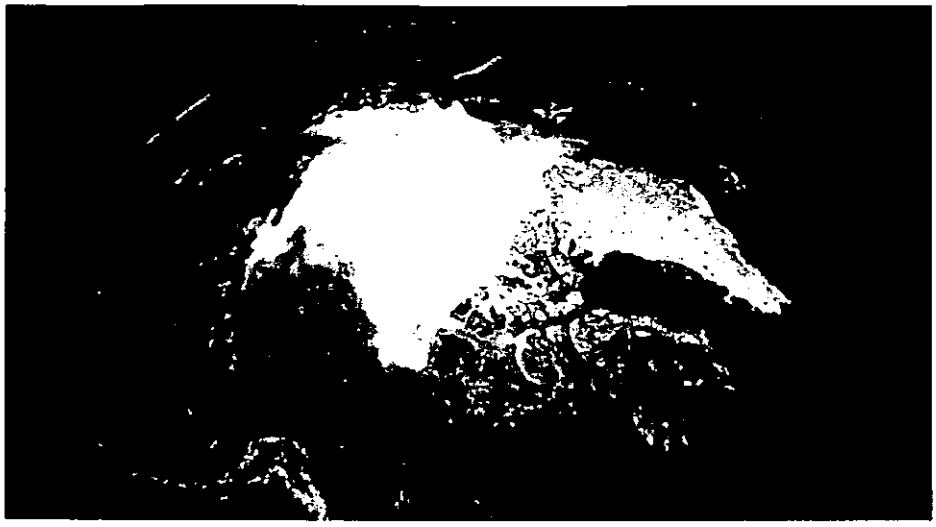
THE ARCTIC OCEAN is melting, and it is melting fast. This past summer, the area covered by sea ice shrank by more than one million square miles, reducing the Arctic icecap to only half the size it was 50 years ago. For the first time, the Northwest Passage—a fabled sea route to Asia that European explorers sought in vain for centuries—opened for shipping. Even if the international community manages to slow the pace of climate change immediately and dramatically, a certain amount of warming is irreversible. It is no longer a matter of if, but when, the Arctic Ocean will open to regular marine transportation and exploration of its lucrative natural-resource deposits.

Global warming has given birth to a new scramble for territory and resources among the five Arctic powers. Russia was the first to stake its claim in this great Arctic gold rush, in 2001. Moscow submitted a claim to the United Nations for 460,000 square miles of resource-rich Arctic waters, an area roughly the size of the states of California, Indiana, and Texas combined. The UN rejected this ambitious annexation, but last August the Kremlin nevertheless dispatched a nuclear-powered icebreaker and two submarines to plant its flag on the North Pole's sea floor. Days later, the Russians provocatively ordered strategic bomber flights over the Arctic Ocean for the first time since the Cold War. Not to be outdone, Canadian Prime Minister Stephen Harper announced

---

SCOTT G. BORGERSON is International Affairs Fellow at the Council on Foreign Relations and a former Lieutenant Commander in the U.S. Coast Guard.

4923



NASA

The Arctic icecap, September 2001

funding for new Arctic naval patrol vessels, a new deep-water port, and a cold-weather training center along the Northwest Passage. Denmark and Norway, which control Greenland and the Svalbard Islands, respectively, are also anxious to establish their claims.

While the other Arctic powers are racing to carve up the region, the United States has remained largely on the sidelines. The U.S. Senate has not ratified the UN Convention on the Law of the Sea (UNCLOS), the leading international treaty on maritime rights, even though President George W. Bush, environmental nongovernmental organizations, the U.S. Navy and U.S. Coast Guard service chiefs, and leading voices in the private sector support the convention. As a result, the United States cannot formally assert any rights to the untold resources off Alaska's northern coast beyond its exclusive economic zone—such zones extend for only 200 nautical miles from each Arctic state's shore—nor can it join the UN commission that adjudicates such claims. Worse, Washington has forfeited its ability to assert sovereignty in the Arctic by allowing its icebreaker fleet to atrophy. The United States today funds a navy as large as the next 17 in the world combined, yet it has just one seaworthy oceangoing icebreaker—a vessel that was built more than a decade ago and that is not optimally configured for Arctic missions. Russia, by comparison, has a fleet of 18 icebreakers. And even China operates one icebreaker, despite its lack of Arctic waters. Through its own neglect, the world's

4924

NASA

The Arctic icecap, September 2007

sole superpower—a country that borders the Bering Strait and possesses over 1,000 miles of Arctic coastline—has been left out in the cold.

Washington cannot afford to stand idly by. The Arctic region is not currently governed by any comprehensive multilateral norms and regulations because it was never expected to become a navigable waterway or a site for large-scale commercial development. Decisions made by Arctic powers in the coming years will therefore profoundly shape the future of the region for decades. Without U.S. leadership to help develop diplomatic solutions to competing claims and potential conflicts, the region could erupt in an armed mad dash for its resources.

GO NORTH, YOUNG MAN

THE ARCTIC has always experienced cooling and warming, but the current melt defies any historical comparison. It is dramatic, abrupt, and directly correlated with industrial emissions of greenhouse gases. In Alaska and western Canada, average winter temperatures have increased by as much as seven degrees Fahrenheit in the past 60 years. The results of global warming in the Arctic are far more dramatic than elsewhere due to the sharper angle at which the sun's rays strike the polar region during summer and because the retreating sea ice is turning into open water, which absorbs far more solar radiation. This dynamic is creating a vicious melting cycle known as the ice-albedo feedback loop.

4925

Arctic Energy Resources

SOURCE: UN Environment Program/GRID-Arendal.

Each new summer breaks the previous year's record. Between 2004 and 2005, the Arctic lost 14 percent of its perennial ice—the dense, thick ice that is the main obstacle to shipping. In the last 23 years, 41 percent of this hard, multiyear ice has vanished. The decomposition of this ice means that the Arctic will become like the Baltic Sea, covered by only a thin layer of seasonal ice in the winter and therefore fully navigable year-round. A few years ago, leading supercomputer climate models predicted that there would be an ice-free Arctic during the summer by the end of the century. But given the current pace of retreat, trans-Arctic voyages could conceivably be possible within the next five to ten years. The most advanced models presented at the

4926

2007 meeting of the American Geophysical Union anticipated an ice-free Arctic in the summer as early as 2013.

The environmental impact of the melting Arctic has been dramatic. Polar bears are becoming an endangered species, fish never before found in the Arctic are migrating to its warming waters, and thawing tundra is being replaced with temperate forests. Greenland is experiencing a farming boom, as once-barren soil now yields broccoli, hay, and potatoes. Less ice also means increased access to Arctic fish, timber, and minerals, such as lead, magnesium, nickel, and zinc—not to mention immense freshwater reserves, which could become increasingly valuable in a warming world. If the Arctic is the barometer by which to measure the earth's health, these symptoms point to a very sick planet indeed.

Ironically, the great melt is likely to yield more of the very commodities that precipitated it: fossil fuels. As oil prices exceed $100 a barrel, geologists are scrambling to determine exactly how much oil and gas lies beneath the melting icecap. More is known about the surface of Mars than about the Arctic Ocean's deep, but early returns indicate that the Arctic could hold the last remaining undiscovered hydrocarbon resources on earth. The U.S. Geological Survey and the Norwegian company StatoilHydro estimate that the Arctic holds as much as one-quarter of the world's remaining undiscovered oil and gas deposits. Some Arctic wildcatters believe this estimate could increase substantially as more is learned about the region's geology. The Arctic Ocean's long, outstretched continental shelf is another indication of the potential for commercially accessible offshore oil and gas resources. And, much to their chagrin, climate-change scientists have recently found material in ice-core samples suggesting that the Arctic once hosted all kinds of organic material that, after cooking under intense seabed pressure for millennia, would likely produce vast storehouses of fossil fuels.

The Arctic could hold the last great undiscovered hydrocarbon resources on earth.

The largest deposits are found in the Arctic off the coast of Russia. The Russian state-controlled oil company Gazprom has approximately 113 trillion cubic feet of gas already under development in the fields it owns in the Barents Sea. The Russian Ministry of Natural

4927

Resources calculates that the territory claimed by Moscow could contain as much as 586 billion barrels of oil—although these deposits are unproven. By comparison, all of Saudi Arabia's current proven oil reserves—which admittedly exclude unexplored and speculative resources—amount to only 260 billion barrels. The U.S. Geological Survey is just now launching the first comprehensive study of the Arctic's resources. The first areas to be studied are the 193,000-square-mile East Greenland Rift Basins. According to initial seismic readings, they could contain 9 billion barrels of oil and 86 trillion cubic feet of gas. Altogether, the Alaskan Arctic coast appears to hold at least 27 billion barrels of oil.

Although onshore resources, such as the oil in Alaska's Arctic National Wildlife Refuge, have dominated debates about Arctic development in Washington, the real action will take place offshore, as the polar ice continues to retreat. An early indication of the financial stakes and political controversies involved is a lawsuit that was filed against Royal Dutch/Shell in the U.S. Ninth Circuit Court. Filed jointly by an unusual alliance of environmental groups and indigenous whalers, the case has held up the development of Shell's $80 million leases in the newly accessible Beaufort Sea, off Alaska's northern coast. By 2015, such offshore oil production will account for roughly 40 percent of the world's total. The Alaskan coast might one day look like the shores of Louisiana, in the Gulf of Mexico, lit up at night by the millions of sparkling lights from offshore oil platforms.

POLAR EXPRESS

AN EVEN GREATER prize will be the new sea-lanes created by the great melt. In the nineteenth century, an Arctic seaway represented the Holy Grail of Victorian exploration, and the seafaring British Empire spared no expense in pursuing a shortcut to rich Asian markets. Once it became clear that the Northwest Passage was ice clogged and impassable, the Arctic faded from power brokers' consciousness. Strategic interest in the Arctic was revived during World War II and the Cold War, when nuclear submarines and intercontinental missiles turned the Arctic into the world's most militarized maritime space, but it is only now that the Arctic sea routes so coveted by nineteenth-

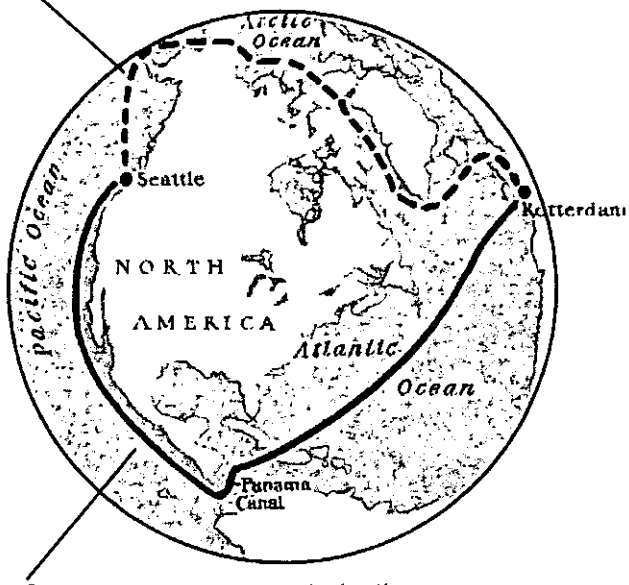
4928

century explorers are becoming a reality.

The shipping shortcuts of the Northern Sea Route (over Eurasia) and the Northwest Passage (over North America) would cut existing oceanic transit times by days, saving shipping companies—not to mention navies and smugglers—thousands of miles in travel. The Northern Sea Route would reduce the sailing distance between Rotterdam and Yokohama from 11,200 nautical miles—via the current route, through the Suez Canal—to only 6,500 nautical miles, a savings of more than 40 percent. Likewise, the Northwest Passage would trim a voyage from Seattle to Rotterdam by 2,000 nautical miles, making it nearly 25 percent shorter than the current route, via the Panama Canal. Taking into account canal fees, fuel costs, and other variables that determine freight rates, these shortcuts could cut the cost of a single voyage by a large container ship by as much as

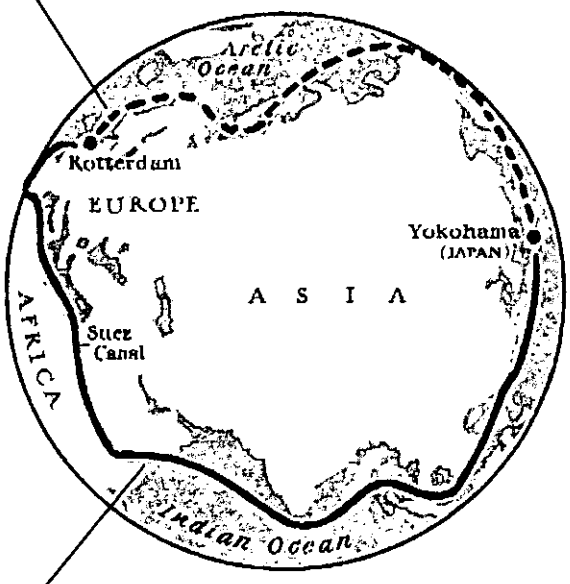
Arctic Shipping Shortcuts

Northwest Passage: 7,000 nautical miles



Current route: 9,000 nautical miles

Northern Sea Route: 6,500 nautical miles



Current route: 11,200 nautical miles

4929

20 percent—from approximately $17.5 million to $14 million—saving the shipping industry billions of dollars a year. The savings would be even greater for the megaships that are unable to fit through the Panama and Suez Canals and so currently sail around the Cape of Good Hope and Cape Horn. Moreover, these Arctic routes would also allow commercial and military vessels to avoid sailing through politically unstable Middle Eastern waters and the pirate-infested South China Sea. An Iranian provocation in the Strait of Hormuz, such as the one that occurred in January, would be considered far less of a threat in an age of trans-Arctic shipping.

Arctic shipping could also dramatically affect global trade patterns. In 1969, oil companies sent the *S.S. Manhattan* through the Northwest Passage to test whether it was a viable route for moving Arctic oil to the Eastern Seaboard. The *Manhattan* completed the voyage with the help of accompanying icebreakers, but oil companies soon deemed the route impractical and prohibitively expensive and opted instead for an Alaskan pipeline. But today such voyages are fast becoming economically feasible. As soon as marine insurers recalculate the risks involved in these voyages, trans-Arctic shipping will become commercially viable and begin on a large scale. In an age of just-in-time delivery, and with increasing fuel costs eating into the profits of shipping companies, reducing long-haul sailing distances by as much as 40 percent could usher in a new phase of globalization. Arctic routes would force further competition between the Panama and Suez Canals, thereby reducing current canal tolls; shipping chokepoints such as the Strait of Malacca would no longer dictate global shipping patterns; and Arctic seaways would allow for greater international economic integration. When the ice recedes enough, likely within this decade, a marine highway directly over the North Pole will materialize. Such a route, which would most likely run between Iceland and Alaska's Dutch Harbor, would connect shipping megaports in the North Atlantic with those in the North Pacific and radiate outward to other ports in a hub-and-spoke system. A fast lane is now under development between the Arctic port of Murmansk, in Russia, and the Hudson Bay port of Churchill, in Canada, which is connected to the North American rail network.

4930

In order to navigate these opening sea-lanes and transport the Arctic's oil and natural gas, the world's shipyards are already building ice-capable ships. The private sector is investing billions of dollars in a fleet of Arctic tankers. In 2005, there were 262 ice-class ships in service worldwide and 234 more on order. The oil and gas markets are driving the development of cutting-edge technology and the construction of new types of ships, such as double-acting tankers, which can steam bow first through open water and then turn around and proceed stern first to smash through ice. These new ships can sail unhindered to the Arctic's burgeoning oil and gas fields without the aid of icebreakers. Such breakthroughs are revolutionizing Arctic shipping and turning what were once commercially unviable projects into booming businesses.

THE COMING ANARCHY

DESPITE THE melting icecap's potential to transform global shipping and energy markets, Arctic issues are largely ignored at senior levels in the U.S. State Department and the U.S. National Security Council. The most recent executive statement on the Arctic dates to 1994 and does not mention the retreating ice. But the Arctic's strategic location and immense resource wealth make it an important national interest. Although the melting Arctic holds great promise, it also poses grave dangers. The combination of new shipping routes, trillions of dollars in possible oil and gas resources, and a poorly defined picture of state ownership makes for a toxic brew.

The situation is especially dangerous because there are currently no overarching political or legal structures that can provide for the orderly development of the region or mediate political disagreements over Arctic resources or sea-lanes. The Arctic has always been frozen; as ice turns to water, it is not clear which rules should apply. The rapid melt is also rekindling numerous interstate rivalries and attracting energy-hungry newcomers, such as China, to the region. The Arctic powers are fast approaching diplomatic gridlock, and that could eventually lead to the sort of armed brinkmanship that plagues other territories, such as the desolate but resource-rich Spratly Islands, where multiple states claim sovereignty but no clear picture of ownership exists.

4931

There are few legal frameworks that offer guidance. The Arctic Council does exist to address environmental issues, but it has remained silent on the most pressing challenges facing the region because the United States purposefully emasculated it at birth, in 1996, by prohibiting it from addressing security concerns. Many observers argue that UNCLOS is the correct tool to manage the thawing Arctic. The convention provides mechanisms for states to settle boundary disputes and submit claims for additional resources beyond their exclusive economic zones. Furthermore, UNCLOS sets aside the resources in the high seas as the common heritage of humankind, it allows states bordering ice-covered waters to enforce more stringent environmental regulations, and it defines which seaways are the sovereign possessions of states and which international passages are open to unfettered navigation.

Diplomatic gridlock could lead the Arctic to erupt in an armed mad dash for its resources.

However, UNCLOS cannot be seamlessly applied to the Arctic. The region's unique geographic circumstances do not allow for a neat application of this legal framework. The Arctic is home to a number of vexing problems that, taken in their entirety, make it a special case. These unresolved challenges include carving up the world's longest uncharted and most geologically complex continental shelf among five states with competing claims, resolving differences between Canada and the rest of the world over how to legally define the Northwest Passage, demarcating maritime borders between the United States and Canada in the Beaufort Sea and between Norway and Russia in the Barents Sea, and regulating vessels shielded behind flags of convenience (which obscure the true origin and ownership of the vessels) as they travel across numerous national jurisdictions. Finally, increased oil and gas exploration and the trans-Arctic shipping that comes with it will pose serious environmental risks. Oil tankers present a particularly grave environmental threat, as illustrated by three recent oil spills in the much safer waters of the San Francisco Bay, the Black Sea, and the Yellow Sea.

There are also a handful of unresolved issues at play in the Arctic that are not covered under UNCLOS. Between 1958 and 1992, Russia dumped 18 nuclear reactors into the Arctic Ocean, several of them still

4932

fully loaded with nuclear fuel. This hazard still needs to be cleaned up. Furthermore, the Arctic region is home to one million indigenous people, who deserve to have a say in the region's future, especially as regards their professed right to continue hunting bowhead whales, their safety alongside what will becomé bustling shipping lanes, and their rightful share of the economic benefits that Arctic development will bring. With the prospect of newfound energy wealth, there is also growing talk of Greenland petitioning Denmark for political independence. Finally, there has been an explosion in polar tourism, often involving ships unsuited for navigation in the region. Last year, 140 cruise ships carried 4,000 intrepid travelers for holidays off Greenland's icy coast, a dangerous journey in largely uncharted waters.

Although it is tempting to look to the past for solutions to the Arctic conundrum, no perfect analogy exists. The 1959 Antarctic Treaty, which froze all territorial claims and set aside the continent for scientific research, provides some lessons, but it concerns a continent rather than an ocean. Moreover, Antarctica is far removed from major trade routes, and negotiations unfolded in the entirely different context of the Cold War. As a body of water that links several large economies, the Mediterranean Sea is somewhat similar to the Arctic Ocean, but its littoral states have always had clearer historical claims, and it has never been covered with ice, at least not in human history. There is simply no comparable historical example of a saltwater space with such ambiguous ownership, such a dramatically mutating seascape, and such extraordinary economic promise.

The region's remarkable untapped resource wealth and unrealized potential to become a fast lane between the Atlantic and Pacific Oceans makes it a key emerging pressure point in international affairs. At this critical juncture, decisions about how to manage this rapidly changing region will likely be made within a diplomatic and legal vacuum unless the United States steps forward to lead the international community toward a multilateral solution.

NORTHERN EXPOSURE

UNTIL SUCH a solution is found, the Arctic countries are likely to unilaterally grab as much territory as possible and exert sovereign control

4933

over opening sea-lanes wherever they can. In this legal no man's land, Arctic states are pursuing their narrowly defined national interests by laying down sonar nets and arming icebreakers to guard their claims.

Washington must get over its isolationist instincts and lead the way toward a multilateral Arctic treaty.

Russia has led the charge with its flag-planting antics this past summer. Moscow has been arguing that a submarine elevation called the Lomonosov Ridge is a natural extension of the Eurasian landmass and that therefore approximately half of the Arctic Ocean is its rightful inheritance. The UN commission that is reviewing the claim sent Russia back to gather additional geological proof, leading Artur Chilingarov, a celebrated Soviet-era explorer and now a close confidant of Russian President Vladimir Putin, to declare, "The Arctic is ours and we should manifest our presence" while leading a mission to the North Pole last summer.

Naturally, other Arctic states are responding. Norway submitted its claim for additional Arctic resources to the commission in 2006; Canada and Denmark are now doing their homework in order to present their own claims. Ottawa and Copenhagen are currently at odds over the possession of Hans Island, an outcropping of desolate rocks surrounded by resource-rich waters in the Nares Strait, between Canada's Ellesmere Island and Greenland. Even the United States, despite its refusal to ratify UNCLOS, has for the past few summers dispatched its sole icebreaker to the Arctic to collect evidence for a possible territorial claim in the event the Senate eventually ratifies the treaty.

There are also battles over sea-lanes. Canada has just launched a satellite surveillance system designed to search for ships trespassing in its waters. Even though the Northern Sea Route will likely open before the Northwest Passage, the desire to stop ships from passing through the Canadian archipelago—especially those from the U.S. Coast Guard and the U.S. Navy—is the cause of much saber rattling north of the border. "Use it or lose it," Canadian Prime Minister Harper frequently declares in reference to Canada's Arctic sovereignty—an argument that plays well with Canadians, who are increasingly critical of their southern neighbor. So far, the delicate 1988 "agreement to disagree" between the United States and Canada over the final disposition

4934

of these waters has remained intact, but the United States should not underestimate Canadian passions on this issue.

The ideal way to manage the Arctic would be to develop an overarching treaty that guarantees an orderly and collective approach to extracting the region's wealth. As part of the ongoing International Polar Year (a large scientific program focused on the Arctic and the Antarctic that is set to run until March 2009), the United States should convene a conference to draft a new accord based on the framework of the Arctic Council. The agreement should incorporate relevant provisions of UNCLOS and take into account all of the key emerging Arctic issues. With a strong push from Washington, the Arctic states could settle their differences around a negotiating table, agree on how to carve up the region's vast resource pie, and possibly even submit a joint proposal to the UN for its blessing.

But even as it pushes for a multilateral diplomatic solution, the United States should undertake a unilateral effort to shore up U.S. interests in the Arctic. The few in the United States who still stubbornly oppose U.S. accession to UNCLOS claim that by ratifying the treaty Washington would cede too much U.S. sovereignty and that customary international law and a powerful navy already allow the United States to protect its Arctic interests. But these are not enough. The United States is the only major country that has failed to ratify UNCLOS, and Washington is therefore left on the outside looking in as a nonmember to various legal and technical bodies. In addition to becoming a party to the convention, the United States must publish an updated Arctic policy, invest in ice-mapping programs, and breathe new life into its inefficient, uncompetitive shipyards, thus enabling it to update the country's geriatric icebreaker fleet, as soon as possible.

The United States should also strike a deal with Canada, leading to a joint management effort along the same lines as the 1817 Rush-Bagot Agreement, which demilitarized the Great Lakes and led to the creation (albeit more than a century later) of the nonprofit St. Lawrence Seaway Development Corporation to manage this critical, and sometimes ice-covered, binational waterway. In the same spirit, the United States and Canada could combine their resources to help police thousands of miles of Arctic coastline. Washington and

4935

Ottawa now work collaboratively on other sea and land borders and together built the impressive North American Aerospace Defense Command, or NORAD, system. They are perfectly capable of doing the same on the Arctic frontier, and it is in both countries' national interests to do so.

There is no reason that economic development and environmental stewardship cannot go hand in hand. To this end, Canada could take the lead in establishing an analogous public-private Arctic seaway management corporation with a mandate to provide for the safe and secure transit of vessels in North American Arctic waters while protecting the area's sensitive environment. Shipping tolls levied by this bilateral management regime could pay for desperately needed charts (much of the existing survey information about the Northwest Passage dates to nineteenth-century British exploration), as well as for search-and-rescue capabilities, traffic-management operations, vessel tracking, and similar services that would guard life and property. Such a jointly managed Arctic seaway system could establish facilities for the disposal of solid and liquid waste, identify harbors of refuge for ships in danger, and enforce a more rigorous code for ship design in order to ensure that vessels traveling through the Northwest Passage have thicker hulls, more powerful engines, and special navigation equipment. The captains and crews of these vessels could also be required to have additional training and, if the conditions warrant, to take aboard an agency-approved "ice pilot" to help them navigate safely.

This bilateral arrangement could eventually be expanded to include other Arctic countries, especially Russia. The United States and Russia, as an extension of the proposed Arctic seaway management corporation, could develop traffic-separation schemes through the Bering Strait and further invest in the responsible development of safe shipping along the Northern Sea Route. Eventually, a pan-Arctic corporation could coordinate the safe, secure, and efficient movement of vessels across the Arctic. Japan, which is vitally dependent on the Strait of Malacca for the overwhelming majority of its energy supplies, would be a natural investor in such a project since it has an interest in limiting the risk of a disruption in its oil supply.

4936

IT'S EASY BEING GREEN

In 1847, a British expedition seeking the fabled Northwest Passage ended in death and ignominy because Sir John Franklin and his crew, seeing themselves as products of the pinnacle of Victorian civilization, were too proud to ask the Inuit for help. At the height of its empire, the United States sometimes sees itself as invincible, too. But the time has come for Washington to get over its isolationist instincts and ratify UNCLOS, cooperate with Canada on managing the Northwest Passage, and propose an imaginative new multilateral Arctic treaty.

Washington must awaken to the broader economic and security implications of climate change. The melting Arctic is the proverbial canary in the coal mine of planetary health and a harbinger of how the warming planet will profoundly affect U.S. national security. Being green is no longer a slogan just for Greenpeace supporters and campus activists; foreign policy hawks must also view the environment as part of the national security calculus. Self-preservation in the face of massive climatic change requires an enlightened, humble, and strategic response. Both liberals and conservatives in the United States must move beyond the tired debate over causation and get on with the important work of mitigation and adaptation by managing the consequences of the great melt.

Senators James M. Inhofe
U.S. Senate
Washington, D.C.

Senator James M. Jeffords
U.S. Senate
Washington, D.C.

Dear Senators Inhofe and Jeffords:

The American Petroleum Institute (API), the International Association of Drilling Contractors (IADC) and the National Ocean Industries Association (NOIA), are pleased to provide for the Senate Environmental and Public Works Committee a copy of our statement in support of U.S. ratification of the United Nations Law of the Sea (LOS) Convention. The statement was delivered during an October 2003 hearing before the Senate Foreign Relations Committee. We would ask that our statement be made part of your committee's record for the March 23, 2004 hearing on the LOS.

Thank you for considering the views expressed in this statement.

American Petroleum Institute

International Association of Drilling Contractors

National Ocean Industries Association

CHAMBER OF SHIPPING
OF AMERICA

19 March 2004

The Honorable James M. Inhofe
Chairman, Senate Environment and Public Works Committee
United States Senate
Washington, DC 20510

The Honorable James M. Jeffords
Ranking Member, Senate Environment and Public Works Committee
United States Senate
Washington, DC 20510

Dear Mr. Chairman and Ranking Member:

Thank you for holding a hearing on the UN Law of the Sea Treaty. The purpose of this letter is to advise that the Chamber of Shipping of America very strongly supports ratification of the United Nations Law of the Sea Convention (UNCLOS) as it is in the best interests of the United States to do so.

The Chamber of Shipping of America represents 22 American companies that own, operate or charter ships used in the domestic and international trades of the United States. We represent all types of ships including container ships, tankers, ocean-going tug/barges vessels, roll-on roll-off ships and bulk ships. We were founded in 1917 to coordinate U.S. shipowner positions at the initial deliberations leading to the Safety of Life at Sea Convention. Today, we represent our members on safety, environmental and security issues addressed domestically and at the international fora including the International Maritime Organization and the International Labor Organization.

UNCLOS is the codification of the traditional law of the sea and protects, inter alia, our rights of innocent passage and freedom of navigation. We are concerned that our status as a non-ratifying party places us in a dangerous position when the treaty comes open for amendment in October of this year. It is simply in our sovereign interest to ensure that we are at the international negotiating table in the strongest possible position. The U.S. should not ignore the potential for treaty amendments that could have large negative impacts on our interests and we have no vote.

I enclose here a copy of testimony I gave before the Senate Foreign Relations Committee on October 21, 2003 wherein I explain some of the potential problem areas where amendments may limit our navigation freedoms. I request that my letter and enclosure be made part of this hearing record. If you or your staff has any questions, please feel free to contact me.

Sincerely,

Joseph J. Cox
President

OFFICE OF THE CHIEF OF NAVAL OPERATIONS
2000 NAVY PENTAGON
WASHINGTON, D.C. 20350-2000

IN REPLY REFER TO

18 Mar 04

Dear Senator Jeffords,

I write to express my strong support for United States accession to the Law of the Sea Convention. It has been the consistent, longstanding position of the Navy that accession to the Convention will benefit the United States by advancing our national security interests and ensuring continued U.S. leadership in the development and interpretation of the law of the sea.

The Law of the Sea Convention helps assure access to the largest maneuver space on the planet - the sea - under authority of widely recognized and accepted law and not the threat of force. The Convention protects military mobility by codifying favorable transit rights that support our ability to operate around the globe, anytime, anywhere, allowing the Navy to project power where and when needed. The Convention also provides important safeguards for protecting the marine environment while preserving operational freedoms.

Although the Convention was drafted over 20 years ago, the Convention supports U.S. efforts in the war on terrorism by providing important stability and codifying navigational and overflight freedoms, while leaving unaffected intelligence collection activities. Future threats will likely emerge in places and in ways that are not yet known. For these and other as yet unknown operational challenges, we must be able to take maximum advantage of the established navigational rights codified in the Law of the Sea Convention to get us to the fight rapidly. The diversity of challenges to our national security combined with a more dynamic force structure makes strategic mobility more important than ever. The oceans are fundamental to that maneuverability and, by joining the Convention, we further ensure the freedom to get to the fight, twenty-four hours a day and seven days a week, without a permission slip.

I appreciate your continued strong support of the Law of the Sea Convention and the Navy.

Sincerely,

VERN CLARK
Admiral, U.S. Navy

FOR IMMEDIATE RELEASE

Office of Public Affairs
U.S. Coast Guard

U.S. Department of Homeland Security
United States Coast Guard

Press Release

Date: May 17, 2007

Contact: Cmdr. Jeff Carter
(202) 372-4635

STATEMENT BY ADM. THAD ALLEN, COMMANDANT OF THE COAST GUARD, ON THE CONVENTION ON THE LAW OF THE SEA

WASHINGTON – Adm. Thad Allen, commandant of the U.S. Coast Guard, issued the following statement today reiterating long-standing Coast Guard support for joining the Convention on the Law of the Sea.

"Becoming a party to the 1982 United Nations Convention on the Law of the Sea would greatly enhance our global position in maritime affairs. Because of our maritime security and law enforcement missions, the Coast Guard has long been a proponent of achieving a comprehensive and stable regime with respect to traditional uses of the oceans. The convention greatly enhances our ability to protect the American public as well as our efforts to protect and manage fishery resources and to protect the marine environment. From the Coast Guard's perspective, we can best maintain a public order of the oceans through a universally accepted law of the sea treaty that preserves and promotes critical U.S. national interests.

"The convention strikes the appropriate balance between the interests of countries in controlling activities off their coasts with the interests of all countries in protecting freedom of navigation. The convention provides the framework under which the Coast Guard is able to interdict illicit drug traffickers and illegal immigrants far beyond our own waters. The convention also gives the coastal state the right to protect its marine environment, manage its fisheries and off-shore oil and gas resources within the 200-nautical mile exclusive economic zone, and secure sovereign rights over resources of the continental shelf beyond 200 nautical miles.

"U.S. military forces, including Coast Guard units, already rely heavily on the freedom of navigation principles codified in the convention. These principles allow the use of the world's oceans to meet changing national security requirements, including those necessary to fight the global war on terrorism. Becoming a party to the convention will enhance our ability to carry out the many maritime missions of the Coast Guard, refute excessive maritime claims, and participate in interpreting and applying the convention to day-to-day realities."

###

The U.S. Coast Guard is a military, maritime, multi-mission service within the Department of Homeland Security dedicated to protecting the safety and security of America.

STATE OF ALASKA
OFFICE OF THE GOVERNOR
JUNEAU

September 13, 2007

The Honorable Ted Stevens
United States Senate
522 Hart Senate Building
Washington, DC 20510

The Honorable Lisa Murkowski
United States Senate
709 Hart Senate Building
Washington, DC 20510

Dear Senator Stevens and Senator Murkowski:

It is my understanding that the U.S. Senate may consider the United Nations Convention on the Law of the Sea in the fall. With this in mind, I am writing to express my strong support for Senate ratification of the convention. In my opinion, the convention would be beneficial to the U.S. and Alaska in various ways, but I want to focus on one aspect in this correspondence.

As you know, several Arctic nations have recently asserted claims to submerged lands off their coasts. The Convention on the Law of the Sea establishes the framework for these assertions. To date, 155 nations, including Canada and Russia, have approved the convention. If the U.S. does not ratify the convention, the opportunity to pursue our own claims to offshore areas in the Arctic Ocean might well be lost.

As a consequence, our rightful claims to hydrocarbons, minerals, and other natural resources could be ignored. In this regard, geologists have prognosticated that billions of barrels of crude oil and vast quantities of natural gas, not to mention various hard rock minerals, might be present in the Arctic. In the absence of affirmative action by the Senate, these resources could become the property of nations with less valid claims.

It is my understanding that the Bush administration and many senators, both republicans and democrats, have expressed support for Senate ratification of the

convention. However, as you know, ratification has been thwarted by a small group of senators who are concerned about the perceived loss of U.S. sovereignty. I believe that quite the contrary is the case. If the U.S. does not ratify the convention, we will be denied access to the forum established by the international community to adjudicate claims to submerged lands in the Arctic.

I also urge Congress to authorize the programs and funds necessary for the U.S. to assert its sovereign rights. The assertion of such rights requires significant research and information gathering. Other Arctic nations have recently begun this process, and I understand that the U.S. is moving in this direction as well.

I believe that you have previously supported Senate ratification of the convention. With this letter, I want to put my administration on record in support of the convention as the predicate for asserting sovereign rights that will be of benefit to Alaska and the nation. Hopefully, this letter will assist you in articulating Alaska's position to your colleagues in the Senate.

Thank you for considering my views.

Sincerely,

Sarah Palin
Governor

Western
Pacific
Regional
Fishery
Management
Council

March 18, 2004

Hon. Daniel K. Akaka
US Senator
SH-141 Hart Senate Office Building
Washington, DC
20510-1103

Dear Senator Akaka:

I would like to express the support of Western Pacific Fishery Management Council for the ratification of the United Nations Convention on the Law of the Sea by the United States. This Council, by virtue of its geography, is the most internationally focused of the eight Regional Fishery Management Councils in the USA, and international fishery management is an integral part of our Pelagic Fishery Management Plan. Thus, the provisions of UNCLOS as they apply to the exploitation of natural resources are of key interest to the Council, quite apart from the important security aspects and key rights of navigation enshrined within the treaty.

Many of the provisions of UNCLOS, and international instruments that have stemmed therefrom, have been incorporated into this Council's management of highly migratory pelagic fish. In the 1980s, even before the UN ban, the Western Pacific Council was aware of the controversy surrounding this gear and banned its use within the EEZ of the US Flag Pacific Islands. This Council was also among those agencies and individuals who supported you and your colleagues in having tuna included within the Magnuson Act, an initiative which recognized the rights of individual countries to manage pelagic fishery resources within their EEZs as outlined within UNCLOS.

More recently, the Western Pacific Council has actively supported the development of an international convention for managing tuna fisheries in the Central and Western Pacific, hosting four out of the seven seminal meetings through which this new management initiative was crafted. This new fishery commission developed by the convention will come into force some time in 2004. This is the first international fishery management arrangement that fully incorporates UNCLOS principles in the articles of the convention, and will assume responsibility for the largest tuna fishery grounds on the globe. Such a development is timely due to the need to limit unconstrained expansion of fishing effort on these important shared economic resources.

As pointed out by your colleagues Senator Lugar and Senator Stevens in recent correspondence with Senate members, the failure to ratify UNCLOS would mean that the US would be unable to participate in the amendment to the Convention and safeguard aspects of concern to this country, including international fishery agreements such as the new fishery commission in the Central and Western Pacific. Naturally this is of paramount concern to this Council, embedded as it is within Micronesia and Polynesia, and with economies reliant to a large degree on ocean resources. The Council therefore hopes that the Senate will recognize the importance of ratifying UNCLOS, both from a strategic and security perspective, and also from our perspective in the US Pacific Islands, where the US voice needs to be heard in the management of shared fishery resources in the Pacific.

Sincerely,

Kitty M. Simonds

THE LEGAL ADVISER
DEPARTMENT OF STATE
WASHINGTON

April 6, 2004

Dear Senator Warner:

During recent briefings of Senate staff by officials from the Department of State, the Department of Defense, and other relevant agencies on the Law of the Sea Convention, the question was raised whether the Convention would prohibit or otherwise adversely affect U.S. intelligence activities. I would like to take this opportunity to respond to that question. I have coordinated this response with the Department of Defense and those other relevant agencies.

U.S. accession to the Convention would support ongoing U.S. military operations, including the continued prosecution of the war on terrorism. The Convention reinforces our military's ability to move – without hindrance and under authority of law – forces, weapons, and materiel to the fight, which is critical to our accomplishing national security objectives. The Convention does not prohibit U.S. intelligence activities; nor would we recognize any restrictions on those activities.

Since President Reagan's 1983 Ocean Policy Statement, the United States has conducted its activities consistent with the non-deep seabed provisions of the Convention. Further, the Convention's "innocent passage" provisions are actually more favorable to U.S. military and navigational interests than those in the 1958 Convention on the Territorial Sea and the Contiguous Zone, to which the United States is a party. Not

The Honorable
John Warner,
Chairman,
Committee on Armed Services,
United States Senate.

only is the Convention's list of non-innocent activities an exhaustive one, but it generally uses objective, rather than subjective, criteria in the listing of activities.

Sincerely,

William H. Taft, IV

Dear Senator Helms:

AT&T depends upon undersea fiber optic cables to carry the bulk of our international telecommunications traffic. We enclose for your reference an information packet describing AT&T's submarine cable network. We believe this information underscores the critical commercial significance of that network. We hope it also helps to acquaint you with AT&T's interest in the use of the seabed for its provision of global telecommunications services over that network.

It is essential that we protect that undersea cable network from damage and disruption. The main purpose of this letter, therefore, is to urge the United States Senate to give its advice and consent to accede to the Law of the Sea Convention. and to ratify the Agreement relating to the Implementation of Part XI of the Convention. The requested action by the Senate will enable us to better protect our cables and recover for damage to the cables. AT&T respectfully asks that this advice and consent be given at the earliest opportunity.

AT&T's concern is straightforward. AT&T and other U. S. owners of such undersea telecommunications facilities become involved in matters of international law in their efforts to recover their losses from parties whose vessels have damaged their undersea cables. AT&T's efforts against such offending vessel owners and their underwriters have had limited success. Over the past 17 years, we have achieved some recovery in cases involving only 13 such cable failures. The scope of the problem is o evident when one considers that, since 1990, almost half of the 134 reported failures of international submarine cable were caused by third party vessels.

The recovery of damages in these cases reduces the operating expense of the cable owners and enables them, in turn, to benefit their customers in the form of lower rates for international telecommunications. services News of a significant damage recovery also provides a deterrent against careless or uncaring vessel owners. As indicated, however, AT&T and other U. S. cable owners have been frustrated in their cable protection and damage recovery efforts by serious shortcomings in existing submarine cable law. Illustrations of this problem are readily available.

In the typical case of damage by third party vessels, repairing damaged undersea cable and restoring service to telecommunications users costs in excess of $2 million. Yet our existing federal statute (47 U.S.C., Section 21) imposes a maximum criminal penalty of only $5,000 upon those who violate submarine cable laws and cause this level of damage to undersea cables.

Under these circumstances it is not surprising that, in February 1996, the U. S. Attorney in Florida declined to prosecute a vessel owner caught intentionally destroying an undersea telephone cable. And on several other occasions, the U. S. Coast Guard has declined to enforce obligations imposed on vessels and their owners under international law Despite Strong evidence against the violators in each of these cases, these agencies evidently determined that there would be insufficient return on their resource investment to support the assignment of full time legal and investigative personnel to an incident carrying such an Insignificant maximum criminal penalty.

These examples make clear that if we are to have any meaningful protection, we must have in place a level of fines that considers and reflects the level of damage inflicted by such criminal violations. In addition we need legal framework that establishes clear jurisdiction in cable damage cases, and that provides specific

authority to award damages. When nearly half of the 134 failures in intonational submarine cable since 1990 have been externally inflicted as previously noted, the need for increased legal protection is clear.

Many of the shortcomings in existing law are addressed and corrected in the U N. Convention on the Law of the Sea (UNCLOS,). UNCLOS expands the right to lay submarine cable in the oceans of the world and expands international protection for those cables. Articles 79 and 112 of UNCLOS have established the rights of nations and private parties to lay cable on the continental shelf (subject to reasonable review by the adjoining coastal state) and in the bed of the high seas. Universal codification of these rights would inhibit any single such coastal state from attempting unilaterally and unreasonably to thwart such rights.

Article 113 requires that all states must adopt laws that make damage to submarine cable, done willfully or through negligence - including behavior likely to result in cable damage - a punishable offense. Article 114 provides that if owners of a submarine cable, in landing or repairing their cables damage the cable of another, they must bear the cost of repairs. Article 115 provides that vessel owners who can prove they sacrificed an anchor or fishing gear to avoid damaging a cable, can recover their loss against the cable owner, provided that the vessel took reasonable precautionary measures beforehand.

To take full advantage of UNCLOS, the United States must become party and implement its provisions through legislation. This requirement is readily satisfied by much needed updating of the Submarine Cable Act of 1888. This law can and should be amended to conform to UNCLOS. We would be pleased to provide additional information and suggested amendments to your Committee.

Ratification of UNCLOS is of extreme importance to all U.S. providers of intonational telecommunications services. Beyond the obvious matters of national security associated with the protection of our undersea facilities, there are economic impact issues. The U. S. companies whose undersea facilities are at stake here are major U. S. enterprises and significant source of revenue, jobs and economic wellbeing for American citizens and businesses, at home and abroad.

Due to the rapid globalization of business, fiber optic capacity will have increased some 3000% from 1989 to the year 2000. With the explosion of data traffic on the information superhighway, fueled by greater use of the Internet, multimedia services and video conferencing, it has never been more important to our U. S. economic infrastructure to assure the protection and reliability of international submarine cables. UNCLOS will enable us to achieve that goal and maintain that protection.

We have attempted In this letter. Mr. Chairman, to outline the salient points of UNCLOS as they very positively affect U. S. owners and operators of Intonational submarine cables. I would be more than happy, at your convenience, to brief you or any of your staff in person with regard to any of the matters raised in this letter. In addition, AT&T remains ready and willing to appear and testify at any hearings that your Committee may schedule on this subject.

We remain most grateful, Mr. Chairman, for your attention to this matter.

Very truly yours,

R. Reed Harrison III

President's Message

Law of the Sea Convention is Essential to U.S. Naval Power

The sea services of our nation must maintain their leading role in shaping global rules and policies that affect our freedom of navigation and maritime mobility, two essential elements of U.S. naval power. That is why it is now time for Congress to ratify the Law of the Sea Convention and thereby strengthen our national security.

The Convention codifies access and transit rights for our ships and enhances the nation's prosecution of the global war on terrorism. Our nation has much to gain and nothing to lose by becoming a party to the Convention, which is a comprehensive international legal framework governing the world's oceans. The United States should now join 145 nations that use the Convention as a means to assure access to the oceans. In November, the Convention will be opened for amendment. As a party to the Convention, the United States would have a major role in shaping changes to come.

The Law of the Sea Convention is a complex document that touches on wide range of U.S. maritime concerns. Since it was finalized in 1982, a primary U.S. interest in the Convention has been to preserve essential navigational freedoms and thereby enhance the mobility of U.S. naval power. That is why every chief of naval operations (CNO), the Joint Chiefs of Staff and the Department of Defense have consistently and strongly supported U.S. ratification.

Our current CNO, Adm. Vern Clark, said in a March 18 letter to Sen. Richard G. Lugar, R-Ind., chairman of the Senate Committee on Foreign Relations, that accession to the Convention will support "our ability to operate around the globe, anytime, anywhere, allowing the Navy to project power where and when needed."

The Convention guarantees, for example, that ships and aircraft may transit straits that otherwise may have been closed by the territorial claims of nearby states. More than 135 straits are affected, including the Strait of Hormuz, entryway to the Persian Gulf, and the Strait of Malacca, the main sea route between the Indian and Pacific oceans.

In fact, the United States' interest as a global naval power was behind its initial participation in talks on the Convention as the United Nations conducted negotiations from 1973 to 1982. Our policy makers were concerned that transit and access rights of U.S. warships could be restricted by the rising number of claims from other nations over territorial seas, fishing zones and offshore high seas areas. Today, Adm. Clark wants the United States to join because, he said, "the Law of the Sea Convention helps assure access to the largest maneuver space on the planet — the sea — under authority of widely recognized and accepted law and not the threat of force."

Much of our government's initial delay in ratification was linked to objections by many industrialized countries to sections related to deep seabed mining. However, changes to the Convention in 1994 remedied each of the U.S. objections.

Despite its advantages, the Law of the Sea Convention remains controversial because of widespread — and erroneous — belief that it would adversely affect U.S. sovereignty, inhibit our intelligence gathering activities or hamper the U.S. Proliferation Security Initiative (PSI) through which our forces seek to interdict shipments of weapons of mass destruction.

Critics point to the International Tribunal for the Law of the Sea, created to settle disputes, as a threat to U.S. sovereignty. However, parties to the Convention are free to agree on any method of dispute settlement they desire — and the U.S. will not select the Tribunal.

Fears that ratification would diminish our collection of intelligence are linked to a section of the Convention containing a list of activities that would deprive a vessel of the right of innocent passage through territorial seas. These activities include the collection of certain types of information and the requirement that submarines navigate on the surface. However, such activity is not a violation of the Convention. Intelligence-gathering activities are not prohibited nor adversely affected by the Convention.

The Bush Administration's PSI — potentially a major weapon in the global war on terrorism — seeks the support of all nations in international efforts to board and search

vessels suspected of transporting weapons of mass destruction. Adm. Michael G. Mullen, vice chief of naval operations, told Lugar's committee that being party to the Convention "would greatly strengthen" the Navy's ability to support the PSI by reinforcing freedom of navigation rights on which the service depends for its operational mobility.

We learned in Iraq that even allies sometimes will block access to key battle areas. Our freedom of navigation cannot be contingent on the approval of nations along global sea lanes. A legal regimen for the world's oceans will help guarantee worldwide mobility for our military.

The Law of the Sea Convention is good for our sea services. It strengthens our country. The time for ratification is at hand.

Sheila M. McNeill, National President

CHAIRMAN OF THE JOINT CHIEFS OF STAFF
WASHINGTON, D.C. 20318-9999

7 April 2004

The Honorable Richard G. Lugar
Chairman, Committee on Foreign
Relations
United States Senate
Washington, D.C. 20510-6225

Dear Mr. Chairman,

The testimony of the Chief of Naval Operations, Admiral Vern Clark, to the Senate Armed Services Committee regarding the Law of the Sea Convention (LOSC) reflects the views of the combatant commanders and the Joint Chiefs. We strongly support US accession to LOSC.

The Convention remains a top national security priority. In today's fast changing world, it ensures the ability of the US Armed Forces to operate freely across the vast expanse of the world's oceans under the authority of widely recognized and accepted international law. It supports efforts in the War on Terrorism by providing much-needed stability and operational maneuver space, codifying essential navigational and overflight freedoms.

The rules under which US forces have operated for over 40 years to board and search ships or to conduct intelligence activities will not be affected. The LOSC does not require permission from the United Nations to conduct these searches and leaves US intelligence activities unaffected. Moreover, the Proliferation Security Initiative is designed to be consistent with international law and frameworks, including the LOSC. While the Administration previously raised a concern regarding dispute resolution, that has been satisfactorily addressed by the proposed Resolution on Advice and Consent. Accession will provide continued US leadership in the development and interpretation of the Law of the Sea and ensure changes are compatible with future military initiatives.

I appreciate your continued strong support of the LOSC and the US Armed Forces.

Sincerely,

RICHARD B. MYERS
Chairman
of the Joint Chiefs of Staff

4954

THE WHITE HOUSE

WASHINGTON

February 8, 2007

Dear Mr. Chairman:

Recognizing the historic bipartisan support for the Law of the Sea Convention, I anticipate our shared interest in moving it forward. As the President believes, and many members of this Administration and others have stated, the Convention protects and advances the national security, economic, and environmental interests of the United States. In particular, the Convention supports navigational rights critical to military operations and essential to the formulation and implementation of the President's National Security Strategy, as well as the National Strategy for Maritime Security. I appreciate your efforts as Chairman in bringing this important Convention to the Senate for consideration and look forward to its approval as early as possible during the 110th Congress.

Sincerely,

Stephen J. Hadley
Assistant to the President
for National Security Affairs

The Honorable Joseph R. Biden, Jr.
Chairman
Committee on Foreign Relations
United States Senate
Washington, D.C. 20510

4955

RICE SAYS ADMINISTRATION SUPPORTS EARLY ACTION ON UN LAW OF SEA TREATY

January 25, 2004 -- During her nomination hearings on January 18-19, 2005, Dr. Condoleezza Rice asserted Administration support for "early Senate action" on the UN Convention on the Law of the Sea and urged the Foreign Relations Committee to report it to the floor again in the 109th Congress. Although the Senate Committee on Foreign Relations unanimously approved the treaty last year, the convention and implementing agreement must be re-reported for consideration in the new Congress. It is reported that the Committee may send the treaty to the floor for consideration as early as the first week of April.

In her testimony, Dr. Rice asserted that "Joining the Convention will advance the interests of the U.S. military," and that the U.S. "will gain economic and resource benefits from the Convention."

Full text of Dr. Rice's responses:

Questions from Senator Richard G. Lugar
Nomination Hearing for Dr. Condoleezza Rice
January 18 & 19, 2005

Law of the Sea: Ratification Efforts

Question #1:

The most recent Treaty Priority List submitted by the Administration to the Committee listed the Law of the Sea Convention as a treaty "for which there is an urgent need for Senate approval." How can we work together to make certain that the treaty is ratified on an urgent basis?

Answer:

The Administration supports early Senate action on the Convention.
The Administration urges the Senate Foreign Relations Committee to again favorably report out the Convention and Implementing Agreement, with the Resolution of Advice and Consent to Ratification as reported by the Committee last March.
The Administration will work with the Senate leadership to bring the Convention and implementing Agreement to a floor vote in the 109th Congress.

Law of the Sea: Benefits for National Security

Question #2:

I was pleased to see in the U.S. Ocean Action Plan that he submitted to the Congress on December 17, the President states that "as a matter of national security, economic self-interest, and international leadership, the administration is strongly committed to U.S. accession to the UN Convention on the Law of the Sea." Can you cite specific benefits that accession will have for U.S. national security?

Answer:

Joining the Convention will advance the interests of the U.S. military.

As the world's leading maritime power, the United States benefits more than any other nation from the navigation provisions of the Convention. Those provisions, which establish international consensus on the extent of jurisdiction that States may exercise off their coasts, preserve and elaborate the rights of the U.S. military to use the world's oceans to meet national security requirements. They achieve this, among other things:
• by stabilizing the outer limit of the territorial sea at 12 nautical miles;
• by setting forth the navigation regime of innocent passage for all ships in the territorial sea, through an exhaustive and objective list of activities that are inconsistent with innocent passage – an improvement over the subjective language in the 1958 Convention on the Territorial Sea and Contiguous Zone;

- by protecting the right of passage for all ships and aircraft, through, under, and over straits used for international navigation, as well as archipelagoes;
- by reaffirming the traditional freedoms of navigation and overflight in the exclusive economic zone and the high seas beyond; and
- by providing for the laying and maintenance of submarine cables and pipelines.

U.S. Armed Forces rely on these navigation and overflight rights daily, and their protection is of paramount importance to U.S. national security.

Becoming a party to the Convention would strengthen our ability to deflect potential proposals that would be inconsistent with U.S. national security interests, including those affecting freedom of navigation.

Law of the Sea: Economic Benefits

Question #3:

Support for U.S. accession to the Law of the Sea Convention has been expressed by U.S. companies and industry groups whose businesses depend on the oceans. These include the American Petroleum Institute, the U.S. Oil and Gas Association, the Chamber of Shipping of America, the U.S. Tuna

Foundation, the American Chemistry Council, the National Oceans Industries Association, and the U.S. Council for International Business. Do you agree with these U.S. companies that acceding to the Law of the Sea Convention will advance U.S. economic interests and benefit American businesses?

Answer:

Yes. The United States, as the country with the longest coastline and the largest exclusive economic zone, will gain economic and resource benefits from the Convention:

- The Convention accords the coastal State sovereign rights over non-living resources, including oil and gas, found in the seabed and subsoil of its continental shelf.
- The Convention improves on the 1958 Continental Shelf Convention, to which the United States is a party, in several ways:

by replacing the "exploitability" standard with an automatic♣ continental shelf out to 200 nautical miles, regardless of geology;
by♣ allowing for extension of the shelf beyond 200 miles if it meets certain geological criteria; and
by establishing an institution that can promote♣ the legal certainty sought by U.S. companies concerning the outer limits of the continental shelf.

Concerning mineral resources beyond national jurisdiction, i.e., not subject to the sovereignty of the United States or any other country, the 1994 Agreement meets our goal of guaranteed access by U.S. industry on the basis of reasonable terms and conditions.

Joining the Convention would facilitate deep seabed mining activities of U.S. companies, which require legal certainty to carry out such activities in areas beyond U.S. jurisdiction.

The Convention also accords the coastal State sovereign rights over living marine resources, including fisheries, in its exclusive economic zone, i.e., out to 200 nautical miles from shore.

The Convention protects the freedom to lay submarine cables and pipelines, whether military, commercial, or research.

In addition, the Convention establishes a legal framework for the protection and preservation of the marine environment from a variety of sources, including pollution from vessels, seabed activities, and ocean dumping.

The provisions effectively balance the interests of States in protecting the environment and natural resources with their interests in freedom of navigation and communication.

With the majority of American living in coastal areas, and U.S. coastal areas and EEZ generating vital economic activities, the United States has a strong interest in these aspects of the Convention.

Law of the Sea: Military Operations

Question#4:

It is my understanding that it has been U.S. policy since President Reagan's 1983 Statement of Ocean Policy that the United States, including the U.S. military, will act in accordance with the Law of the Sea Convention's provisions relating to the traditional uses of the oceans. Would acceding to the Law of the Sea Convention require the United States military to make any changes in its existing policies or procedures with respect to the use of the oceans to conduct military operations?

Answer:

No.

As the Chief of Naval Operations, Admiral Vern Clark, testified before the Senate Armed Services Committee on April 8, 2004, "I am convinced that joining the Law of the Sea Convention will have no adverse effect on our operations ..., but rather, will support and enhance ongoing U.S. military operations, including continued prosecution of the global war on terrorism."
The Vice Chief of Naval Operations, Admiral Mike Mullen, testified before the House International Relations Committee on May 12, 2004, that the Navy "currently operate[s] – willingly because it is our national security interests – within the provisions of the Law of the Sea Convention in every area related to navigation. We would never recommend an international commitment that would require us to get a permission slip – from anyone – to conduct our operations." Admiral Mullen concluded his oral statement by emphasizing, "Simply, the Convention does not require a permission slip or prohibit these activities; we would continue operating our military forces as we do today."

Law of the Sea: Weapons Of Mass Destruction

Question #5:

Some commentators have asserted that acceding to the Law of the Sea Convention would prevent the United States from taking action necessary to stop the transportation of weapons of mass destruction across the oceans. I note,

however, that State Department Legal Adviser William Taft testified before the House International Relations Committee that "the Convention will not affect applicable maritime law or policy regarding interdiction of weapons of mass destruction, their means of delivery and related materials." Do you believe that acceding to the Law of the Sea Convention will in any way diminish the ability of the United States to take necessary action to prevent the transport of weapons of mass destruction?

Answer:

No.

The Convention's navigation provisions derive from the 1958 law of the sea conventions, to which the United States is a party, and also reflect customary international law accepted by the United States.
As such, the Convention will not affect applicable maritime law or policy regarding interdiction of weapons of mass destruction.
Like the 1958 conventions, the LOS Convention recognizes numerous legal bases for taking enforcement action against vessels and aircraft suspected of engaging in proliferation of weapons of mass destruction:

- exclusive port and coastal State jurisdiction in internal waters and national airspace;
- coastal State jurisdiction in the territorial sea and contiguous zone;
- exclusive flag State jurisdiction over vessels on the high seas (which the flag State may, either by general agreement in advance or approval in response to a specific request, waive in favor of other States); and
- universal jurisdiction over stateless vessels.

Nothing in the Convention impairs the inherent right of individual or collective self-defense (a point which is reaffirmed in the Resolution of Advice and Consent proposed in the last Congress).

Law of the Sea: Proliferation Security Initiative

Question #6:

Some commentators have asserted that acceding to the Law of the Sea Convention would prevent or inhibit the United States from implementing the Proliferation Security Initiative. I note, however, that State Department Legal Adviser William Taft testified before our Committee that the PSI is consistent with the Law of the Sea Convention, and that the obligations under the Convention do not present any difficulties for successfully carrying out this important initiative. Chief of Naval Operations Admiral Vern Clark gave similar testimony before the Senate Armed Services Committee. I also note that all of the other countries that are partners with the United States in PSI are themselves parties to the Law of

the Sea Convention. In your view, will acceding to the Convention inhibit the United States and its partners from successfully pursuing the PSI?

Answer:

No.

PSI requires participating countries to act consistent with national legal authorities and "relevant international law and frameworks," which includes the law reflected in the Law of the Sea Convention.
The Convention's navigation provisions derive from the 1958 law of the sea conventions, to which the United States is a party, and also reflect customary international law accepted by the United States.
As such, the Convention will not affect applicable maritime law or policy regarding interdiction of weapons of mass destruction, their means of delivery, and related materials.

Like the 1958 conventions, the LOS Convention recognizes numerous legal bases for taking enforcement action against vessels and aircraft suspected of engaging in proliferation of weapons of mass destruction:

- exclusive port and coastal State jurisdiction in internal waters and national airspace;
- coastal State jurisdiction in the territorial sea and contiguous zone;
- exclusive flag State jurisdiction over vessels on the high seas (which the flag State may, either by general agreement in advance or approval in response to a specific request, waive in favor of other States); and
- universal jurisdiction over stateless vessels.

Nothing in the Convention impairs the inherent right of individual or collective self-defense (a point which is reaffirmed in the Resolution of Advice and Consent proposed in the last Congress).

Law of the Sea: Role of the UN

Question #7:

Some commentators have asserted that the Law of the Sea Convention gives the United Nations the power to regulate the use of the oceans and that U.S. accession to the Convention would allow the United Nations to veto uses of the ocean by the United States, including by the U.S. military. It is my understanding that, under the Convention, the United Nations has no decision-making role with respect to any uses of the oceans. Please explain what role, if any, the United Nations would have in regulating uses of the oceans by the United States if the United States were to accede to the Law of the Sea Convention.

Answer:

The United Nations has no decision-making role under the Convention in regulating uses of the oceans by any State Party to the Convention. Commentators who have made this assertion have argued that the International Seabed Authority (ISA) somehow has regulatory power over all activities in the oceans.
The authority of the ISA is limited to administering the exploration and exploitation of minerals in areas of deep seabed beyond national jurisdiction, generally more than 200 miles from shore. The ISA has no other role and has no general regulatory authority over the uses of the oceans, including freedom of navigation and oversight.

Law of the Sea: Taxation by International Seabed Authority

Question #8:

Some commentators have asserted that acceding to the Law of the Sea Convention would involve giving the International Seabed Authority the power to impose taxes on U.S. citizens. State Department Legal Adviser William Taft has testified before Congress that the International Seabed Authority has no ability or authority to levy taxes. In your view, is there any basis for concern that U.S. accession to the Law of the Sea Convention will result in U.S. citizens being subject to taxation by the International Seabed Authority?

Answer:

No. The Convention does not provide for or authorize taxation of individuals or corporations.

Law of the Sea: Technology Transfer

Question #9:

Some commentators have asserted that the United States would be required to transfer sensitive technology, including technology with military applications, to developing countries if it acceded to the Law of the Sea Convention. It is my understanding, however, that provisions of the Law of the Sea Convention containing mandatory technology transfer requirements were eliminated by the 1994 Agreement addressing the Convention's deep seabed mining regime. Do you believe there is any reason for concern that acceding to the Convention would require the United States to transfer any technology to developing countries?

Answer:

No, technology transfers are not required by the Convention.

Law of the Sea: U.S. Sovereignty over Ocean Resources

Question #10:

Some commentators have asserted that acceding to the Law of the Sea Convention will involve ceding to the International Seabed Authority sovereignty currently enjoyed by the United States over ocean resources. It is my understanding, however, that the jurisdiction of the International Seabed Authority addresses only mining of minerals in areas of the deep seabed beyond the jurisdiction of any country, and that the United States has never asserted sovereignty over such areas. Do you believe that acceding to the Convention would involve any surrender of existing United States claims to sovereignty over ocean resources?

Answer:

No, the United States has never claimed sovereignty over areas or resources of the deep seabed.

The Convention's provisions on the exclusive economic zone and continental shelf preserve and expand U.S. sovereign rights over the living and non-living ocean resources located within, and with regard to the continental shelf beyond, 200 miles of our coastline.

Law of the Sea: Effect of 1994 Implementing Agreement

Question #11:

Some commentators have asserted that there is uncertainty as to the legal status of the 1994 Agreement Relating to the Implementation of Part XI of the Law of the Sea Convention, which addresses the Convention's deep seabed mining regime. I have received a letter from eight former Legal Advisers to the Department of State from both Republican and Democratic Administrations stating that the 1994 Agreement "has binding legal effect in its modification of the LOS Convention." Do you believe there is any basis for questioning the legal effect of the 1994 Agreement?

Answer:

No. My understanding is that the notion that the 1994 Agreement has no legal effect is incorrect.

Last updated:

Statement of Senator Lisa Murkowski
Senate Foreign Relations Committee
Hearing on the UN Convention on the Law of the Sea
September 27, 2007

Mr. Chairman – thank you for holding this hearing and the opportunity to comment on a treaty that is of particular importance to Alaska.

Some of my colleagues may not be aware, but over half of the United States' coastline is in Alaska. Likewise, the Arctic Ocean covers only 3% of the earth's surface, yet it accounts for over 25% of the world's continental shelf area. So when we are considering a Treaty that governs the planet's oceans and the ocean floor, the people of Alaska have a very strong interest.

There are some who do not see the point in joining the rest of the world in ratifying the Convention on the Law of the Sea. They say that the U.S. already enjoys the benefits of the Treaty even though we are not a member – that by not becoming a party to the Treaty we can pick and choose which sections of the Treaty we abide by while not subjecting our actions to international review.

But I would point out, while the situation is favorable now, that may not always be the case. The Treaty opened to amendment in 2004. Do we want a seat at the table to ensure our voice is heard, or do we place our interests in the hands of other nations?

I will give one example. When the U.S. declined to sign the Law of the Sea Treaty in 1982 out of concern over deep sea-bed mining provisions in Part XI, one of the objections was that the United States was not guaranteed a seat on the executive council of the international seabed authority. With the renegotiation in the 1994 agreement, the U.S. is essentially assured a seat on the 36-member State Council by virtue of the "largest economy" provision within the Implementation Agreement.

And I would note that while some decisions by the Council are subject to majority vote if a consensus cannot be formed, there are circumstances where decisions must be made by consensus – including the adoption of rules concerning sea-bed mining, and the adoption of amendments to Part XI of the Treaty. As a party to the Law of the Sea, the U.S. can promote rules and regulations based on market principles and investment protection. But if we do not ratify this Treaty, the Senate will have capitulated the United States' ability to block unfavorable rules and amendments – including potential amendments that could revoke the United States' guarantee of a seat in the Council.

The U.S. waged a global campaign in the developed world to hold off ratifying the Treaty until the sea-bed mining provisions were changed. We got what we wanted, but still we have declined to ratify the Law of the Sea. How can we expect parties in the future to take the U.S. seriously when we negotiate treaties or agreements if we are not willing to follow through in this instance? I believe it is very important for the U.S. to be a party to

this Treaty and be a player in the process, rather than an outsider hoping our interests are not damaged.

Now, there are several topics I would like to comment on relating to the Treaty and its potential impact on Alaska. The first being claims over the continental shelf.

In the 1958 Convention on the Continental Shelf, which the U.S. is a party to, the issue of limitations on the continental shelf was not resolved due to lack of information about the continental shelf. With technological advances and greater knowledge the Law of the Sea provides that a coastal state's continental shelf can extend for 200 nautical miles, with the potential to extend that claim even further.

Russia has submitted a number of claims to the Commission on the Limits of the Continental Shelf that would grant them 45% of the Arctic Ocean's bottom resources – first in 2002 and of course the most recent when Russia placed a flag on the ocean bottom earlier this year. We are fortunate that the Commission so far has withheld its approval of Russia's claim.

According to the U.S. Arctic Research Commission, if we were to become a party to the Treaty, the U.S. stands to lay claim to an area in the Arctic of about 450,000 square kilometers – or approximately the size of California.

But if we do not become a party to the Treaty our opportunity to make this claim, and have the international community respect it, diminishes considerably – as does our ability to prevent claims like Russia's from coming to fruition.

Not only is that a negligent forfeiture of valuable oil, gas, and mineral deposits, but also the ability to perform critical scientific research. The Arctic Ocean is the most poorly understood ocean on the planet. Now is the time to be studying the thinning of the polar cap and its potential impact on the global climate, as well as potential economic activity in the area – not the least of which is the opening of polar routes for maritime commerce.

Also in relation to the Arctic Ocean – and the potential thinning of the polar cap – is the opening of polar routes for maritime commerce. There are predictions that the Arctic Ocean will be ice free for ninety days or more in the summer by the year 2050 – which in turn translates into greater access, and greater utilization.

By utilizing a polar route, the distance between Asia and Europe is 40% shorter than current routes via the Suez or Panama Canals – and is in a much more stable part of the world.

But with greater usage comes greater responsibility. A number of nations have Arctic research programs. Alaska's coastline on the Arctic Ocean is over 1,000 nautical miles. The U.S. can either exercise sea control and protection in this area of the world, or cede that role to whichever nation is willing to assume it. As a party to the Law of the Sea, the

United States' ability to enforce our territorial waters and our Exclusive Economic Zone (EEZ) in the Arctic Ocean is strengthened even further.

Mr. Chairman, the Convention on the Law of the Sea also provides a basis for several international treaties with great relevance to our nation's most productive fisheries, which occur off the coast of Alaska and are of significant value to the economies of Alaska and other Pacific Northwest states.

The Convention on Straddling and Highly Migratory stocks provides both access to, and protections for fish stocks which migrate through the high seas and the jurisdictions of other countries. Among the stocks for which this agreement is of paramount significance is the Bering Sea stock of Alaska pollock, which is the basis for this country's largest single fishery.

The Convention on Fisheries in the Central Bering Sea is another critical piece, which allows us an unprecedented degree of control over the activities of other fishing nations in the central portion of the Bering Sea, beyond both the U.S. and the Russian Exclusive Economic Zones. Without the influence of the Law of the Sea, neither of these important fishing agreements would likely have come into being.

Also, Mr. Chairman, let me note the importance – and the somewhat fragile status of – our maritime boundary agreement with Russia. As you may know, this agreement delineates a specific boundary between our two countries. It is necessary because the agreement under which the United States acquired what is now the State of Alaska was interpreted differently by the two parties.

Both the boundary agreement, and the fisheries enforcement mechanisms that stem from it, are critical to the conduct of fisheries policy in the U.S. and Russian EEZs in the Bering Sea. Although the United States ratified the maritime boundary agreement shortly after it was presented to the Senate, the Russian government has yet to do so, under pressure both from nationalist political interests and Russian Far East economic interests. While observing the provisions of the boundary treaty, the Russian government also has attempted to persuade the U.S. to make a number of significant concessions regarding Russian access to U.S. fishery resources, suggesting meanwhile that such concessions would improve the atmosphere for Russian ratification.

The terms of the boundary treaty are widely regarded as highly favorable to the United States, and are themselves consistent with the Law of the Sea. However, rejection of the latter by the United States could trigger similar rejection by the Russian Duma of the boundary treaty. If that were to occur, it would extremely difficult to renegotiate the boundary agreement with similar positive results for the United States.

The United States and Alaska have tremendous interests in the Arctic Ocean. Our technological capabilities in calculating the extent of the continental shelf are welcomed by other nations. As a party to the Law of the Sea Treaty, we have the opportunity to

stake our claim to a significant chunk of real estate that has the potential for impact on our economy and our national security.

We also have the opportunity to further U.S. leadership in the international community on maritime issues and ensure the continuation of those provisions in the Convention that are so vital to the United States' fisheries industries.

The Convention on the Law of the Sea has my strong support and I look forward to its consideration on the Senate floor.

INFORMATION MEMO
SENATOR MURKOWSKI
From: Isaac
Date: December 10, 2007

RE: Law of the Sea: Myths v. Fact

Below are three of the most common arguments in opposition to the Law of the Sea Treaty and what the text of the Convention actually says.

United Nations:
Myth: This is an abrogation of our sovereignty and hands over control of the United States' waters and seabed to the United Nations.

Reality: The only connection the United Nations Convention on the Law of the Sea has with the United Nations is its title.* Although negotiated under the auspices of the United Nations, the U.N. has no role in the governance of the Treaty nor in the commissions set up by the Treaty. The Treaty establishes several international bodies, most notably the Commission on the Limits of the Continental Shelf and the International Seabed Authority.

The Continental Shelf Commission is composed of 21 members who are "experts in the fields of geology, geophysics, or hydrography" and are nationals of Parties to the Law of the Sea Treaty. This means that unless the United States is a party to the Treaty, no one from the U.S. can serve on the Commission and we will have no say on whether other nations' extended continental shelf claims are internationally recognized. This takes on increased significance with Russia's latest claim to a large portion of the Arctic Ocean. We will not have the opportunity to receive international recognition for our own claims in the Arctic, or refute Russian and other nation's claims, without ratifying the Treaty.

The International Seabed Authority is composed of all parties to the Law of the Sea Treaty. Within the Seabed Authority, a 36-member Council is set up which functions as the executive power of the Seabed Authority. Based on election criteria, the United States would be guaranteed a permanent seat on the Council if we ratify the Treaty. As a result, because most of the Council's substantive decisions are made on a consensus basis, the United States would be able to prevent action against our interests from being adopted.

The Seabed Authority only has jurisdiction over the ocean floor outside of each nation's Exclusive Economic Zone (EEZ). The Law of the Sea grants a nation the exclusive rights over all living and non-living resources within its Exclusive Economic Zone, which extends 200 nautical miles from the shoreline. That includes all fisheries and mineral deposits. No nation may exploit the natural resources within the United States' EEZ without our permission.

* The United Nations does provide a forum for parties to the Treaty to elect members to the Continental Shelf Commission, and funds a secretariat to the Continental Shelf Commission, but plays no other role.

Military:

Myth: The United States Navy's ability to continue its current operations around the world will be subject to an international tribunal. Certain articles in the Treaty prevent military activity, or allow a nation to prevent military passage, in that nation's territorial sea (out to 12 miles from shore). For example, Article 19 says innocent passage is not innocent if a foreign ship undertakes any exercise or practice with weapons of any kind, launches or lands any aircraft, or launches, lands, or takes on board any military device. Article 20 says a submarine must travel on the surface in a nation's territorial sea. Article 30 says that if a warship does not comply with the coastal state's laws, it can be forced to leave. Opponents also say that the exception provided under Article 298 is not clear (more on that below) and would subject U.S. military action to international arbitration or international court.

Reality: A nation has complete sovereignty in its territorial waters and it is understandable that a nation would not want U.S. or any other nation's warships moving through their waters without permission, just as we would not want foreign warships in U.S. waters without abiding by our laws. There are two provisions that refute the opponents arguments.

Article 298 says that when signing, ratifying, or acceding to the Convention, or at any time thereafter, the State may declare that it does not accept any one or more of the procedures with respect to...

> (1)(b) disputes concerning military activities, including military activities by government vessels and aircraft engaged in non-commercial service,

Opponents argue that there is no definition of military activity and another nation could challenge the United States' claim of military activity – thus subjecting our military activities to an international tribunal.

So far Argentina, Belarus, Canada, Cape Verde, Chile, China, France, Mexico, Portugal, South Korea, Russia, Slovenia, Tunisia, Ukraine, and the UK have made declarations opting out of dispute settlement provisions with respect to military activities. This includes every other member of the UN Security Council. In the Senate Resolution of Advice and Consent to the Treaty, the U.S. opts out of the dispute resolution mechanisms for disputes concerning military activities. Further, in the Senate Resolution, the U.S. further declares that "its consent to accession to the Convention is conditioned upon the understanding that, under Article 298(1)(b), each State Party has the exclusive right to determine whether its activities are or were military activities and that such determinations are not subject to review." This is a permissible declaration under the Convention.

Innocent Passage: Article 17 grants ships of all states the right of innocent passage through the territorial sea and archipelagic waters (ie: Indonesia). Based on this right, a U.S. warship will always be able to traverse a nation's territorial waters.

On a side note, it is worth pointing out that just about every Resolution on Advice and Consent that the Senate passes contains a RUD (Reservation, Understanding, or Declaration) and sometimes multiple RUDs. Treaties are purposefully written to be vague so that more nations will support them – the RUDs provide for the individual interpretation of the Treaty. By arguing that a certain item is not specifically spelled out (ie: definition of military activity) you're essentially saying that you don't support any treaty the U.S. has ever become a party to because a RUD is needed to clarify the text.

International Tribunal – Dispute Resolution:

Myth: The United States will be subjecting itself to mandatory international arbitration when we currently enjoy the benefits of the Law of the Sea Treaty without limiting our sovereignty.

Reality: Start with the fact that as a non-party to the Treaty, the U.S. enjoys Law of the Sea Treaty benefits at the pleasure of other nations – they have no obligation to recognize U.S. claims (12 mile territorial sea, 200 mile Exclusive Economic Zone, etc...).

Article 287 permits states to choose from a number of mechanisms for dispute resolution, including: the International Tribunal for the Law of the Sea; the International Court of Justice; an arbitral tribunal; or a special arbitral tribunal. Under the Senate's Resolution of Advice and Consent, the U.S. will choose arbitration. At present, the U.S. is party to 16 multilateral agreements, and a large number of bilateral agreements that require dispute settlement through arbitration. Not the least of these is the Conservation and Management of Straddling Fish Stocks and Highly Migratory Fish Stocks agreement which is based on the Law of the Sea dispute resolution mechanisms and is highly important to Alaska and the Pacific Northwest's fisheries. The Senate has ratified this Treaty.

Under the special arbitration process, which is principally chosen, both parties select two arbitrators and then those four arbitrators select a fifth and final arbitrator. If they are unable to agree on a fifth arbitrator, they can agree on a third party to select a fifth arbitrator. If still no agreement can be reached, the Secretary General of the U.N. appoints an arbitrator.

In a regular arbitration, each party selects one arbitrator, and then mutually agree on three other arbitrators. If there is no agreement, a third party may appoint the three remaining arbitrators.

Bottom line is that if an arbitration panel returns a decision that the United States strongly opposes, there is no true enforcement mechanism and the U.S. can veto and U.N. Security Council measure.

Law of the Sea Treaty crucial to U.S. - COMPASS: Points of view from the community

Anchorage Daily News (AK) - November 8, 2007

Author: *SEN. LISA MURKOWSKI ; Commentary*

It's ironic that an international treaty that can do much good for the nation, especially Alaska, is only now moving closer to Senate approval because of actions by Russia, Denmark and Canada. Steps taken by those three nations to strengthen or establish claims in the Arctic Ocean have highlighted for many Americans -- and many of my colleagues -- the need of the Senate to approve the Law of the Sea Treaty. Otherwise, we could be left standing on the shore, watching as other nations divvy up the wealth and scientific riches of the valuable Arctic seabed.

Without ratification, the U.S. will have no permanent seat on the decision-making body that would settle disputed claims.

Without ratification, the United States, with 1,000 miles of Arctic coast along Alaska, would be the only Arctic nation not party to the treaty. Currently, 155 nations have ratified the treaty, including all of our allies and the world's maritime powers.

International negotiators first approved the Convention on the Law of the Sea in 1982. President Ronald Reagan wisely saw a serious shortcoming in how the new treaty would deal with deep-seabed mining. Negotiators went back to work and, in 1994, presented an improved treaty.

U.S. Senate approval is required of all international treaties, and a Senate committee held hearings in 1994 but the full Senate never voted on the measure. Committee hearings resumed in 2003 and 2004, but still no vote.

The Senate Foreign Relations Committee, of which I am a member, again took up the treaty last month. I hope this is the year for final passage.

Several events of the past few months have pushed the treaty to the front of the agenda, including Russia's decision to send two small submarines into Arctic waters in August to plant their nation's flag under the North Pole. Russia believes its continental shelf extends that far into the Arctic. Like-minded Denmark has sent scientists to determine if a mountain ridge beneath the Arctic Ocean is connected to its territory of Greenland. And Canada, getting nervous at the thought of underwater flags and ice-free shipping lanes through the Northwest Passage, is talking about setting up military bases and expanding its fleet to patrol the waters.

The United States cannot sit by and watch as other nations draw their own maps.

Under the Law of the Sea Treaty, member nations can claim an exclusive economic zone out to 200 miles, with sovereign rights to explore, develop and manage the resources within that zone. Nations' claims can extend even farther if they can prove a real connection to their continental shelf. The U.S. Arctic Research Commission believes the United States could lay claim, beyond our 200 mile exclusive economic zone, to the northern seabed around Alaska equal in size to the state of California.

This isn't just about the oil, gas and mineral resources in the Arctic. It's also about managing the critical scientific research that is so important to Alaskans' way of life. It's about the United States defining and defending its rights on uses of the sea, rules of navigation,

economic development and environmental standards. This is about our future, for without Senate ratification of the treaty, the future of miles of ocean north of Alaska is in someone else's hands.

"We have more to gain from legal certainty and public order in the world's oceans than any other country," Deputy Secretary of State John Negroponte said in Senate committee hearings last month. Negroponte, who also has served as director of national intelligence and U.N. ambassador, said the treaty would not interfere with U.S. intelligence-gathering efforts or our Navy's navigational freedom.

Support for Senate ratification is coming from all sides of the political world, including the ranking Republican on the Foreign Relations Committee, Indiana Sen. Richard Lugar, and the Democratic chairman of the committee, Delaware Sen. Joseph Biden.

I urge Alaskans to join me in supporting the Law of the Sea Treaty. It's time the United States signed on the bottom line to protect our rights.

Republican Lisa Murkowski represents Alaska in the U.S. Senate.

Optional Protocol of Signature concerning the Compulsory Settlement of Disputes, 1958

A Historical Perspective

The oceans had long been subject to the freedom of-the-seas doctrine - a principle put forth in the seventeenth century essentially limiting national rights and jurisdiction over the oceans to a narrow belt of sea surrounding a nation's coastline. The remainder of the seas was proclaimed to be free to all and belonging to nc While this situation prevailed into the twentieth century, by mid-century there was an impetus to extend national claims over offshore resources. There was growi concern over the toll taken on coastal fish stocks by long-distance fishing fleets and over the threat of pollution and wastes from transport ships and oil tankers car noxious cargoes that plied sea routes across the globe. The hazard of pollution was ever present, threatening coastal resorts and all forms of ocean life. The navies maritime powers were competing to maintain a presence across the globe on the surface waters and even under the sea.

A tangle of claims, spreading pollution, competing demands for lucrative fish stocks in coastal waters and adjacent seas, growing tension between coastal nation rights to these resources and those of distant-water fishermen, the prospects of a rich harvest of resources on the sea floor, the increased presence of maritime pow and the pressures of long-distance navigation and a seemingly outdated, if not inherently conflicting, freedom-of-the-seas doctrine - all these were threatening to transform the oceans into another arena for conflict and instability.

In 1945, President Harry S Truman, responding in part to pressure from domestic oil interests, unilaterally extended United States jurisdiction over all natural resources on that nation's continental shelf - oil, gas, minerals, etc. This was the first major challenge to the freedom-of-the-seas doctrine. Other nations soon follo suit.

In October 1946, Argentina claimed its shelf and the epicontinental sea above it. Chile and Peru in 1947, and Ecuador in 1950, asserted sovereign rights over a 2 mile zone, hoping thereby to limit the access of distant-water fishing fleets and to control the depletion of fish stocks in their adjacent seas.

Soon after the Second World War, Egypt, Ethiopia, Saudi Arabia, Libya, Venezuela and some Eastern European countries laid claim to a 12-mile territorial sea clearly departing from the traditional three-mile limit.

Later, the archipelagic nation of Indonesia asserted the right to dominion over the water that separated its 13,000 islands. The Philippines did likewise. In 1970, Canada asserted the right to regulate navigation in an area extending for 100 miles from its shores in order to protect Arctic water against pollution.

From oil to tin, diamonds to gravel, metals to fish, the resources of the sea are enormous. The reality of their exploitation grows day by day as technology opens ways to tap those resources.

In the late 1960s, oil exploration was moving further and further from land, deeper and deeper into the bedrock of continental margins. From a modest beginni 1947 in the Gulf of Mexico, offshore oil production, still less than a million tons in 1954, had grown to close to 400 million tons. Oil drilling equipment was already as far as 4,000 metres below the ocean surface.

The oceans were being exploited as never before. Activities unknown barely two decades earlier were in full swing around the world. Tin had been mined in the shallow waters off Thailand and Indonesia. South Africa was about to tap the Namibian coast for diamonds. Potato-shaped nodules, found almost a century earlie lying on the seabed some five kilometres below, were attracting increased interest because of their metal content.

And then there was fishing. Large fishing vessels were roaming the oceans far from their native shores, capable of staying away from port for months at a time. Fish stocks began to show signs of depletion as fleet after fleet swept distant coastlines. Nations were flooding the richest fishing waters with their fishing fleets virtually unrestrained: coastal States setting limits and fishing States contesting them. The so-called "Cod War" between Iceland and the United Kingdom had brought about the spectacle of British Navy ships dispatched to rescue a fishing vessel seized by Iceland for violating its fishing rules.

Offshore oil was the centre of attraction in the North Sea. Britain, Denmark and Germany were in conflict as to how to carve up the continental shelf, with its rich oil resources.

It was late 1967 and the tranquillity of the sea was slowly being disrupted by technological breakthroughs, accelerating and multiplying uses, and a super-Power rivalry that stood poised to enter man's last preserve - the seabed.

It was a time that held both dangers and promises, risks and hopes. The dangers were numerous: nuclear submarines charting deep waters never before explored; designs for antiballistic missile systems to be placed on the seabed; supertankers ferrying oil from the Middle East to European and other ports, passing through congested straits and leaving behind a trail of oil spills; and rising tensions between nations over conflicting claims to ocean space and resources.

The oceans were generating a multitude of claims, counterclaims and sovereignty disputes.

The hope was for a more stable order, promoting greater use and better management of ocean resources and generating harmony and goodwill among States that would no longer have to eye each other suspiciously over conflicting claims.

Third United Nations Conference on the Law of the Sea

On 1 November 1967, Malta's Ambassador to the United Nations, Arvid Pardo, asked the nations of the world to look around them and open their eyes to a looming conflict that could devastate the oceans, the lifeline of man's very survival. In a speech to the United Nations General Assembly, he spoke of the super-Power rivalry that was spreading to the oceans, of the pollution that was poisoning the seas, of the conflicting legal claims and their implications for a stable order and of the rich potential that lay on the seabed.

Pardo ended with a call for "an effective international regime over the seabed and the ocean floor beyond a clearly defined national jurisdiction". "It is the only alternative by which we can hope to avoid the escalating tension that will be inevitable if the present situation is allowed to continue", he said.

Ambassador Tommy Koh, President, UN Conference on the Law of the Sea

Pardo's urging came at a time when many recognized the need for updating the freedom-of-the-seas doctrine to take into account the technological changes that had altered man's relationship to the oceans. It set in motion a process that spanned 15 years and saw the creation of the United Nations Seabed Committee, the signing of a treaty banning nuclear weapons on the seabed, the adoption of the declaration by the General Assembly that all resources of the seabed beyond the limits of national jurisdiction are the common heritage of mankind and the convening of the Stockholm Conference on the Human Environment. What started as an exercise to regulate the seabed turned into a global diplomatic effort to regulate and write rules for all ocean areas, all uses of the seas and all of its resources? These were some of the factors that led to the convening of the Third United Nations Conference on the Law of the Sea, to write a comprehensive treaty for the oceans.

The Conference was convened in New York in 1973. It ended nine years later with the adoption in 1982 of a constitution for the seas - the United Nations Convention on the Law of the Sea. During those nine years, shuttling back and forth between New York and Geneva, representatives of more than 160 sovereign States sat down and discussed the issues, bargained and traded national rights and obligations in the course of the marathon negotiations that produced the Convention.

United Nations Convention on the Law of the Sea - key provisions

- Setting Limits
- Navigation
- Exclusive Economic Zone
- Continental Shelf
- Deep Seabed Mining

- The Exploitation Regime
- Technological Prospects
- The Question of Universal Participation in the Convention
- Pioneer Investors
- Protection of the Marine Environment
- Marine Scientific Research
- Settlement of Disputes

The Convention

Navigational rights, territorial sea limits, economic jurisdiction, legal status of resources on the seabed beyond the limits of national jurisdiction, passage of ships through narrow straits, conservation and management of living marine resources, protection of the marine environment, a marine research regime and, a more unique feature, a binding procedure for settlement of disputes between States - these are among the important features of the treaty. In short, the Convention is an unprecedented attempt by the international community to regulate all aspects of the resources of the sea and uses of the ocean, and thus bring a stable order to mankind's very source of life.

"Possibly the most significant legal instrument of this century" is how the United Nations Secretary-General described the treaty after its signing. The Convention was adopted as a "Package deal", to be accepted as a whole in all its parts without reservation on any aspect. The signature of the Convention by Governments carries the undertaking not to take any action that might defeat its objects and purposes. Ratification of, or accession to, the Convention expresses the consent of a State to be bound by its provisions. The Convention came into force on 16 November 1994, one year after Guyana became the 60th State to adhere to it.

Across the globe, Governments have taken steps to bring their extended areas of adjacent ocean within their jurisdiction. They are taking steps to exercise their rights over neighbouring seas, to assess the resources of their waters and on the floor of the continental shelf. The practice of States has in nearly all respects been carried out in a manner consistent with the Convention, particularly after its entry into force and its rapid acceptance by the international community as the basis for all actions dealing with the oceans and the law of the sea.

The definition of the territorial sea has brought relief from conflicting claims. Navigation through the territorial sea and narrow straits is now based on legal principles. Coastal States are already reaping the benefits of provisions giving them extensive economic rights over a 200-mile wide zone along their shores. The right of landlocked countries of access to and from the sea is now stipulated unequivocally. The right to conduct marine scientific research is now based on accepted principles and cannot be unreasonably denied. Already established and functioning are the International Seabed Authority, which organize and control activities in the deep seabed beyond national jurisdiction with a view to administering its resources; as well as the International Tribunal for the Law of the Sea, which has competence to settle ocean related disputes arising from the application or interpretation of the Convention.

Wider understanding of the Convention will bring yet wider application. Stability promises order and harmonious development. However, Part XI, which deals with mining of minerals lying on the deep ocean floor outside of nationally regulated ocean areas, in what is commonly known as the international seabed area, had raised many concerns especially from industrialized States. The Secretary-General, in an attempt to achieve universal participation in the Convention, initiated a series of informal consultations among States in order to resolve those areas of concern. The consultations successfully achieved, in July 1998, an Agreement Related to the Implementation of Part XI of the Convention. The Agreement, which is part of the Convention, is now deemed to have paved the way for all States to become parties to the Convention.

Setting Limits

The dispute over who controls the oceans probably dates back to the days when the Egyptians first plied the Mediterranean in papyrus rafts. Over the years and centuries, countries large and small, possessing vast ocean-going fleets or small fishing flotillas, husbanding rich fishing grounds close to shore or eyeing distant harvests, have all vied for the right to call long stretches of oceans and seas their own.

Conflicting claims, even extravagant ones, over the oceans were not new. In 1494, two years after Christopher Columbus' first expedition to America, Pope Alexander VI met with representatives of two of the great maritime Powers of the day - Spain and Portugal - and neatly divided the Atlantic Ocean between them. A Papal Bull gave Spain everything west of the line the Pope drew down the Atlantic and Portugal everything east of it. On that basis, the Pacific and the Gulf of Mexico were acknowledged as Spain's, while Portugal was given the South Atlantic and the Indian Ocean.

Before the Convention on the Law of the Sea could address the exploitation of the riches underneath the high seas, navigation rights, economic jurisdiction, or any other pressing matter, it had to face one major and primary issue - the setting of limits. Everything else would depend on clearly defining the line separating national and international waters. Though the right of a coastal State to complete control over a belt of water along its shoreline - the territorial sea - had long been recognized in international law, up until the Third United Nations Conference on the Law of the Sea, States could not see eye to eye on how narrow or wide this belt should be.

At the start of the Conference, the States that maintained the traditional claims to a three-mile territorial sea had numbered a mere 25. Sixty-six countries had by then claimed a 12-mile territorial sea limit. Fifteen others claimed between 4 and 10 miles, and one remaining major group of eight States claimed 200 nautical miles.

Traditionally, smaller States and those not possessing large, ocean-going navies or merchant fleets favoured a wide territorial sea in order to protect their coastal waters from infringements by those States that did. Naval and maritime Powers, on the other hand, sought to limit the territorial sea as much as possible, in order to protect their fleets' freedom of movement.

As the work of the Conference progressed, the move towards a 12-mile territorial sea gained wider and eventually universal acceptance. Within this limit, States are in principle free to enforce any law, regulate any use and exploit any resource.

The Convention retains for naval and merchant ships the right of "innocent passage" through the territorial seas of a coastal State. This means, for example, that a Japanese ship, picking up oil from Gulf States, would not have to make a 3,000-mile detour in order to avoid the territorial sea of Indonesia, provided passage is not detrimental to Indonesia and does not threaten its security or violate its laws.

In addition to their right to enforce any law within their territorial seas, coastal States are also empowered to implement certain rights in an area beyond the territorial sea, extending for 24 nautical miles from their shores, for the purpose of preventing certain violations and enforcing police powers. This area, known as the "contiguous zone", may be used by a coast guard or its naval equivalent to pursue and, if necessary, arrest and detain suspected drug smugglers, illegal immigrants and customs or tax evaders violating the laws of the coastal State within its territory or the territorial sea.

The Convention also contains a new feature in international law, which is the regime for archipelagic States (States such as the Philippines and Indonesia, which are made up of a group of closely spaced islands). For those States, the territorial sea is a 12-mile zone extending from a line drawn joining the outermost points of the outermost islands of the group that are in close proximity to each other. The waters between the islands are declared archipelagic waters, where ships of all States enjoy the right of innocent passage. In those waters, States may establish sea lanes and air routes where all ships and aircraft enjoy the right of expeditious and unobstructed passage.

Back to the contents

Navigation

Perhaps no other issue was considered as vital or presented the negotiators of the Convention on the Law of the Sea with as much difficulty as that of navigational rights.

Countries have generally claimed some part of the seas beyond their shores as part of their territory, as a zone of protection to be patrolled against smugglers, warships and other intruders. At its origin, the basis of the claim of coastal States to a belt of the sea was the principle of protection; during the seventeenth and eighteenth centuries another principle gradually evolved: that the extent of this belt should be measured by the power of the littoral sovereign to control the area.

In the eighteenth century, the so-called "cannon-shot" rule gained wide acceptance in Europe. Coastal States were to exercise dominion over their territorial seas as far as projectiles could be fired from a cannon based on the shore. According to some scholars, in the eighteenth century the range of land-based cannons was approximately one marine league, or three nautical miles. It is believed that on the basis of this formula developed the traditional three-mile territorial sea limit.

By the late 1960s, a trend to a 12-mile territorial sea had gradually emerged throughout the world, with a great majority of nations claiming sovereignty out to that seaward limit. However, the major maritime and naval Powers clung to a three-mile limit on territorial seas, primarily because a 12-mile limit would effectively close off and place under national sovereignty more than 100 straits used for international navigation.

A 12-mile territorial sea would place under national jurisdiction of riparian States strategic passages such as the Strait of Gibraltar (8 miles wide and the only open access to the Mediterranean), the Strait of Malacca (20 miles wide and the main sea route between the Pacific and Indian Oceans), the Strait of Hormuz (21 miles wide and the only passage to the oil-producing areas of Gulf States) and Bab el Mandeb (14 miles wide, connecting the Indian Ocean with the Red Sea).

At the Third United Nations Conference on the Law of the Sea, the issue of passage through straits placed the major naval Powers on one side and coastal States controlling narrow straits on the other. The United States and the Soviet Union insisted on free passage through straits, in effect giving straits the same legal status as the international waters of the high seas. The coastal States, concerned that passage of foreign warships so close to their shores might pose a threat to their national security and possibly involve them in conflicts among outside Powers, rejected this demand.

Instead, coastal States insisted on the designation of straits as territorial seas and were willing to grant to foreign warships only the right of "innocent passage", a term that was generally recognized to mean passage "not prejudicial to the peace, good order or security of the coastal State". The major naval Powers rejected this concept, since, under international law, a submarine exercising its right of innocent passage, for example, would have to surface and show its flag C an unacceptable security risk in the eyes of naval Powers. Also, innocent passage does not guarantee the aircraft of foreign States the right of overflight over waters where only such passage is guaranteed.

In fact, the issue of passage through straits was one of the early driving forces behind the Third United Nations Conference on the Law of the Sea, when, in early 1967, the United States and the Soviet Union proposed to other Member countries of the United Nations that an international conference be held to deal specifically with the entangled issues of straits, overflight, the width of the territorial sea and fisheries.

The compromise that emerged in the Convention is a new concept that combines the legally accepted provisions of innocent passage through territorial waters and freedom of navigation on the high seas. The new concept, "transit passage", required concessions from both sides.

The regime of transit passage retains the international status of the straits and gives the naval Powers the right to unimpeded navigation and overflight that they had insisted on. Ships and vessels in transit passage, however, must observe international regulations on navigational safety, civilian air-traffic control and prohibition of vessel-source pollution and the conditions that ships and aircraft proceed without delay and without stopping except in distress situations and that they refrain from any threat or use of force against the coastal State. In all matters other than such transient navigation, straits are to be considered part of the territorial sea of the coastal State.

Exclusive Economic Zone

The exclusive economic zone (EEZ) is one of the most revolutionary features of the Convention, and one which already has had a profound impact on the management and conservation of the resources of the oceans. Simply put, it recognizes the right of coastal States to jurisdiction over the resources of some 38 million square nautical miles of ocean space. To the coastal State falls the right to exploit, develop, manage and conserve all resources - fish or oil, gas or gravel,

nodules or sulphur - to be found in the waters, on the ocean floor and in the subsoil of an area extending 200 miles from its shore.

The EEZs are a generous endowment indeed. About 87 per cent of all known and estimated hydrocarbon reserves under the sea fall under some national jurisdiction as a result. So too will almost all known and potential offshore mineral resources, excluding the mineral resources (mainly manganese nodules and metallic crusts) of the deep ocean floor beyond national limits. And whatever the value of the nodules, it is the other non-living resources, such as hydrocarbons, that represent the presently attainable and readily exploitable wealth.

The most lucrative fishing grounds too are predominantly the coastal waters. This is because the richest phytoplankton pastures lie within 200 miles of the continental masses. Phytoplankton, the basic food of fish, is brought up from the deep by currents and ocean streams at their strongest near land, and by the upwelling of cold waters where there are strong offshore winds.

The desire of coastal States to control the fish harvest in adjacent waters was a major driving force behind the creation of the EEZs. Fishing, the prototypical cottage industry before the Second World War, had grown tremendously by the 1950s and 1960s. Fifteen million tons in 1938, the world fish catch stood at 86 million tons in 1989. No longer the domain of a lone fisherman plying the sea in a wooden dhow, fishing, to be competitive in world markets, now requires armadas of factory-fishing vessels, able to stay months at sea far from their native shores, and carrying sophisticated equipment for tracking their prey.

The special interest of coastal States in the conservation and management of fisheries in adjacent waters was first recognized in the 1958 Convention on Fishing and Conservation of the Living Resources of the High Seas. That Convention allowed coastal States to take "unilateral measures" of conservation on what was then the high seas adjacent to their territorial waters. It required that if six months of prior negotiations with foreign fishing nations had failed to find a formula for sharing, the coastal State could impose terms. But still the rules were disorderly, procedures undefined, and rights and obligations a web of confusion. On the whole, these rules were never implemented.

The claim for 200-mile offshore sovereignty made by Peru, Chile and Ecuador in the late 1940s and early 1950s was sparked by their desire to protect from foreign fishermen the rich waters of the Humboldt Current (more or less coinciding with the 200-mile offshore belt. This limit was incorporated in the Santiago Declaration of 1952 and reaffirmed by other Latin American States joining the three in the Montevideo and Lima Declarations of 1970. The idea of sovereignty over coastal-area resources continued to gain ground.

As long-utilized fishing grounds began to show signs of depletion, as long-distance ships came to fish waters local fishermen claimed by tradition, as competition increased, so too did conflict. Between 1974 and 1979 alone there were some 20 disputes over cod, anchovies or tuna and other species between, for example, the United Kingdom and Iceland, Morocco and Spain, and the United States and Peru.

And then there was the offshore oil.

The Third United Nations Conference on the Law of the Sea was launched shortly after the October 1973 Arab-Israeli war. The subsequent oil embargo and skyrocketing of prices only helped to heighten concern over control of offshore oil reserves. Already, significant amounts of oil were coming from offshore facilities: 376 million of the 483 million tons produced in the Middle East in 1973; 431 million barrels a day in Nigeria, 141 million barrels in Malaysia, 246 million barrels in Indonesia. And all of this with barely 2 per cent of the continental shelf explored. Clearly, there was hope all around for a fortunate discovery and a potential to be protected.

Today, the benefits brought by the EEZs are more clearly evident. Already 86 coastal States have economic jurisdiction up to the 200-mile limit. As a result, almost 99 per cent of the world's fisheries now fall under some nation's jurisdiction. Also, a large percentage of world oil and gas production is offshore. Many other marine resources also fall within coastal-State control. This provides a long-needed opportunity for rational, well-managed exploitation under an assured authority.

Figures on known offshore oil reserves now range from 240 to 300 billion tons. Production from these reserves amounted to a little more than 25 per cent of total world production in 1996. Experts estimate that of the 150 countries with offshore jurisdiction, over 100, many of them developing countries, have medium to excellent prospects of finding and developing new oil and natural gas fields.

It is evident that it is archipelagic States and large nations endowed with long coastlines that naturally acquire the greatest areas under the EEZ regime. Among the major beneficiaries of the EEZ regime are the United States, France, Indonesia, New Zealand, Australia and the Russian Federation.

But with exclusive rights come responsibilities and obligations For example, the Convention encourages optimum use of fish stocks without risking depletion through overfishing. Each coastal State is to determine the total allowable catch for each fish species within its economic zone and is also to estimate its harvest capacity and what it can and cannot itself catch. Coastal States are obliged to give access to others, particularly neighbouring States and land-locked countries, to the surplus of the allowable catch. Such access must be done in accordance with the conservation measures established in the laws and regulations of the coastal State.

Coastal States have certain other obligations, including the adoption of measures to prevent and limit pollution and to facilitate marine scientific research in their EEZs.

Continental Shelf

In ancient times, navigation and fishing were the primary uses of the seas. As man progressed, pulled by technology in some instances and pushing that technology at other times in order to satisfy his needs, a rich bounty of other resources and uses were found underneath the waves on and under the ocean floor - minerals, natural gas, oil, sand and gravel, diamonds and gold. What should be the extent of a coastal State's jurisdiction over these resources? Where and how should the lines demarcating their continental shelves be drawn? How should these resources be exploited? These were among the important questions facing lawyers, scientists and diplomats as they assembled in New York in 1973 for the Third Conference.

Given the real and potential continental shelf riches, there naturally was a scramble by nations to assert shelf rights. Two difficulties quickly arose. States with a naturally wide shelf had a basis for their claims, but the geologically disadvantaged might have almost no shelf at all. The latter were not ready to accept geological discrimination. Also, there was no agreed method on how to define the shelf's outer limits, and there was a danger of the claims to continental shelves

being overextended - so much so as to eventually divide up the entire ocean floor among such shelves.

Although many States had started claiming wide continental-shelf jurisdiction since the Truman Proclamation of 1945, these States did not use the term "continental shelf" in the same sense. In fact, the expression became no more than a convenient formula covering a diversity of titles or claims to the seabed and subsoil adjacent to the territorial seas of States. In the mid-1950s the International Law Commission made a number of attempts to define the "continental shelf" and coastal State jurisdiction over its resources.

In 1958, the first United Nations Conference on the Law of the Sea accepted a definition adopted by the International Law Commission, which defined the continental shelf to include "the seabed and subsoil of the submarine areas adjacent to the coast but outside the area of the territorial sea, to a depth of 200 metres, or, beyond that limit, to where the depth of the superjacent waters admits of the exploitation of the natural resources of the said areas".

Already, as the Third United Nations Conference on the Law of the Sea got under way, there was a strong consensus in favour of extending coastal-State control over ocean resources out to 200 miles from shore so that the outer limit coincides with that of the EEZ. But the Conference had to tackle the demand by States with a geographical shelf extending beyond 200 miles for wider economic jurisdiction.

The Convention resolves conflicting claims, interpretations and measuring techniques by setting the 200-mile EEZ limit as the boundary of the continental shelf for seabed and subsoil exploitation, satisfying the geologically disadvantaged. It satisfied those nations with a broader shelf C about 30 States, including Argentina, Australia, Canada, India, Madagascar, Mexico, Sri Lanka and France with respect to its overseas possessions C by giving them the possibility of establishing a boundary going out to 350 miles from their shores or further, depending on certain geological criteria.

Thus, the continental shelf of a coastal State comprises the seabed and its subsoil that extend beyond the limits of its territorial sea throughout the natural prolongation of its land territory to the outer edge of the continental margin, or to a distance of 200 miles from the baselines from which the territorial sea is measured, where the outer edge of the continental margin does not extend up to that distance.

In cases where the continental margin extends further than 200 miles, nations may claim jurisdiction up to 350 miles from the baseline or 100 miles from the 2,500 metre depth, depending on certain criteria such as the thickness of sedimentary deposits. These rights would not affect the legal status of the waters or that of the airspace above the continental shelf.

To counterbalance the continental shelf extensions, coastal States must also contribute to a system of sharing the revenue derived from the exploitation of mineral resources beyond 200 miles. These payments or contributions - from which developing countries that are net importers of the mineral in question are exempt C are to be equitably distributed among States parties to the Convention through the International Seabed Authority.

To control the claims extending beyond 200 miles, the Commission on the Limits of the Continental Shelf was established to consider the data submitted by the coastal States and make recommendations

Deep Seabed Mining

Deep seabed mining is an enormous challenge that has been compared to standing atop a New York City skyscraper on a windy day, trying to suck up marbles off the street below with a vacuum cleaner attached to a long hose.

Mining will take place at a depth of more than fifteen thousand feet of open ocean, thousands of miles from land. Mining ships are expected to remain on station five years at a time, working without a stop, and to transfer the seabed minerals they bring up to auxiliary vessels.

At the centre of the controversy were potato-sized manganese nodules found on the deep ocean floor and containing a number of important metals and minerals.

On 13 March 1874, somewhere between Hawaii and Tahiti, the crew of the British research vessel HMS *Challenger*, on the first great oceanographic expedition of modern times, hauled in from a depth of 15,600 feet a trawl containing the first known deposits of manganese nodules. Analysis of the samples in 1891 showed the Pacific Ocean nodules to contain important metals, particularly nickel, copper and cobalt. Subsequent sampling demonstrated that nodules were abundant throughout the deep regions of the Pacific.

In the 1950s, the potential of these deposits as sources of nickel, copper and cobalt ore was finally appreciated. Between 1958 and 1968, numerous companies began serious prospecting of the nodule fields to estimate their economic potential. By 1974, 100 years after the first samples were taken, it was well established that a broad belt of sea floor between Mexico and Hawaii and a few degrees north of the equator (the so-called Clarion Clipperton zone) was literally paved with nodules over an area of more than 1.35 million square miles.

In 1970 the United Nations General Assembly declared the resources of the seabed beyond the limits of national jurisdiction to be "the common heritage of mankind". For 12 years from then, up to 1982 when the Convention on the Law of the Sea was adopted, nothing tested so sorely the ability of diplomats from various corners of the world to reach common ground than the goal of conserving that common heritage and profiting from it at the same time.

Back to the contents

The Exploitation Regime

Having established that the resources of the seabed beyond the limits of national jurisdiction are the common heritage of mankind, the framers of the treaty faced the question of who should mine the minerals and under what rules. The developed countries took the view that the resources should be commercially exploited by mining companies in consortia and that an international authority should grant licenses to those companies. The developing countries objected to this view on the grounds that the resource was unique and belonged to the whole of mankind, and that the most appropriate way to benefit from it was for the international community to establish a public enterprise to mine the international seabed area.

Thus, the gamut of proposals ran from a "weak" international authority, noting claims and collecting fees, to a "strong" one with exclusive rights to mine the common heritage area, involving States or private groups only as it saw fit. The solution found was to make possible both the public and private enterprises on one hand and the collective mining on the other - the so-called "parallel system".

This complex system, though simplified to a great degree by the Agreement on Part XI, is administered by the International Seabed Authority, headquartered in Jamaica. The Authority is divided into three principal organs, an Assembly, made up of all members of the Authority with power to set general policy, a council, with powers to make executive decisions, made up of 36 members elected from among the members of the Authority, and a secretariat headed by a secretary-general.

Back to the contents

Technological Prospects

Unfortunately, the road to the market is long, hard and expensive. The nodules lie two to three miles - about 5 kilometres - down, in pitch-black water where pressures exceed 7,000 pounds per square inch and temperatures are near freezing. Many of the ocean floors are filled with treacherous hills and valleys. Appropriate deep-sea mining technology must be developed to accommodate this environment.

Many mining systems have been tried, and some have appeared more promising than others. For a while, hydraulic suction dredge airlifts and a continuous-line bucket system were thought to be a promising answer to the mining dilemma. Another system, the so-called shuttle system, involves sending down a remotely operated, Jules Verne-like vehicle, with television "eyes" and powerful lights, to crawl over the ocean floor, gobble up and crush nodules and resurface with its catch.

Today, the continuous-line bucket system, where empty buckets are lowered to the bottom of the ocean and later raised, partially filled with nodules, has been discarded because of low recovery rates. The shuttle system has been shelved because its operational and investment costs far exceeded the costs of more conventional approaches. However, this system is thought to be the technology of the future. Thus, the current focus is on the hydraulic suction and dredge method. But there are a number of technological problems to be worked out before it will be ready for commercial application.

Keeping a steady ship position, since a vessel cannot anchor 5 kilometres above the sea floor and making sure that the pipe does not snap or that the recovery vehicle is not lost or permanently stuck on the ocean floor are among the many headaches involved in developing the necessary technology for commercial exploitation.

Extracting metals from the nodules is another task altogether. All agree that this phase will be the most expensive, even if only at the initial investment stage. Technologically, however, processing does not pose as much of a challenge as the recovery of manganese nodules. That is because it is thought that the two processing techniques applied to land-derived ores - heat and chemical separation of the metals - will apply just as well to the seabed resources.

Because of their porous nature, recovered nodules retain a great deal of water. Heat processing would therefore require a great amount of energy in order to dry the nodules prior to extracting the metals. It is for that reason that some believe that chemical techniques will prove to be the most efficient and least costly.

Moreover, processing would involve such waste that special barren sites would have to be found to carry out operations. Yet, others believe that the economic viability of seabed mining would be greatly enhanced if a method is devised to process the nodules at sea, saving enormous energy costs involved in the transfer of nodules to land-based processing plants.

Back to the contents

The Question of Universal Participation in the Convention

Prospects for seabed mining depend to a large degree on the market conditions for the metals to be produced from seabed nodules. While one of the driving forces behind the Convention on the Law of the Sea was the prevailing belief in the 1970s that commercial seabed mining was imminent, today the prospects for the inherently expensive process of mining the seabed have greatly receded with changing economic and other conditions since the early 1980s. Indeed, some experts predict that commercial mining operations are not likely to begin until well after the year 2000.

A number of important political and economic changes have taken place in the 10 years that have elapsed since the adoption of the Convention, some directly affecting the deep seabed mining provisions of the Convention, others affecting international relations in general. In the meantime, the prevailing economic prognosis on which the seabed mining regime was built has not been realized.

The Convention on the Law of the Sea holds out the promise of an orderly and equitable regime or system to govern all uses of the sea. But it is a club that one must join in order to fully share in the benefits. The Convention - like other treaties - creates rights only for those who become parties to it and thereby accept its obligations, except for the provisions which apply to all States because they either merely confirm existing customary law or are becoming customary law.

However, as its preamble states, the Convention starts from the premise that the problems of ocean space are closely interrelated and need to be considered as a whole. The desire for a comprehensive Convention arose from the recognition that traditional sea law was disintegrating and that the international community could not be expected to behave in a consistent manner without dialogue, negotiations and agreement.

In this context, it must be underscored that the Convention was adopted as a "package deal", with one aim above all, namely universal participation in the Convention. No State can claim that it has achieved quite all it wanted. Yet every State benefits from the provisions of the Convention and from the certainty that it has established in international law in relation to the law of the sea. It has defined rights while underscoring the obligations that must be performed in order to benefit from those rights. Any trend towards exercising those rights without complying with the corresponding obligations, or towards exercising rights inconsistent with the Convention, must be viewed as damaging to the universal regime that the Convention establishes.

The adoption of the Agreement on Part XI has eliminated this threat. With nearly all States now adhering, even on a provisional basis pending ratification or accession, to the Convention, the threat to the Convention has been eliminated. The Agreement has particularly removed those obstacles which had prevented the industrialized countries from adhering to the Convention. Those same countries have either ratified the Convention or submitted it for their internal legislative procedures. Even more important, is their active participation in the institutions created by the Convention and their strong support for the regime contained in it.

Back to the contents

Pioneer Investors

The Preparatory Commission for the International Seabed Authority and for the International Tribunal for the Law of the Sea was established, prior to the entry into force of the Convention, to prepare for the setting up of both institutions. The Preparatory Commission proceeded with the implementation of an interim regime adopted by the Third United Nations Conference on the Law of the Sea, designed to protect those States or entities that have already made a large investment in seabed mining. This so-called Pioneer Investor Protection regime allows a State, or consortia of mining companies to be sponsored by a State, to be registered as a Pioneer Investor. Registration reserves for the Pioneer Investor a specific mine site in which the registered Investor is allowed to explore for, but not exploit, manganese nodules. Registered Investors are also obligated to explore a mine site reserved for the Enterprise and undertake other obligations, including the provision of training to individuals to be designated by the Preparatory Commission.

The Preparatory Commission had registered seven pioneer investors: China, France, India, Japan, the Republic of Korea, and the Russian Federation, as well as a consortium known as the Interoceanmetal Joint Organization (IMO). With the Convention in force and the International Seabed Authority being functioning, those pioneer investors will become contractors along the terms contained in the Convention and the Agreement, as well as regulations established by the International Seabed Authority.

Protection of the Marine Environment

Thor Heyerdahl, sailing the Atlantic in his papyrus raft, Ra, found globs of oil, tar and plastics stretching from the coast of Africa to South America. Parts of the Baltic, Mediterranean and Black Sea are already so polluted that marine life is severely threatened. And waste dumped in the Pacific and Atlantic Oceans has washed up on the shores of Antarctica.

In the United States, long stretches of beaches are often closed because of medical and other waste washing up on shore. And every time an oil tanker is involved in an accident, the world's pulse quickens a bit in fear of a major catastrophe. In fact, every time a tanker cleans its tanks at sea, every time a factory channels toxic residues to coastal waters or a city conveniently releases raw sewage into the sea, every time a service station changes the oil of an automobile and pours the waste oil into the sewers, the oceans become a little more polluted. Eventually, scientists fear, the oceans' regenerative capacity will be overwhelmed by the amount of pollution it is subjected to by man. Signs of such catastrophe are clearly observed in many seas—particularly along the heavily populated coasts and enclosed or semi-enclosed seas.

There are six main sources of ocean pollution addressed in the Convention: land-based and coastal activities; continental-shelf drilling; potential seabed mining; ocean dumping; vessel-source pollution; and pollution from or through the atmosphere.

The Convention lays down, first of all, the fundamental obligation of all States to protect and preserve the marine environment. It further urges all States to cooperate on a global and regional basis in formulating rules and standards and otherwise take measures for the same purpose.

Coastal States are empowered to enforce their national standards and anti-pollution measures within their territorial sea. Every coastal State is granted jurisdiction for the protection and preservation of the marine environment of its EEZ. Such jurisdiction allows coastal States to control, prevent and reduce marine pollution from dumping, land-based sources or seabed activities subject to national jurisdiction, or from or through the atmosphere. With regard to marine pollution from foreign vessels, coastal States can exercise jurisdiction only for the enforcement of laws and regulations adopted in accordance with the Convention or for "generally accepted international rules and standards". Such rules and standards, many of which are already in place, are adopted through the competent international organization, namely the International Maritime Organization (IMO).

On the other hand, it is the duty of the "flag State", the State where a ship is registered and whose flag it flies, to enforce the rules adopted for the control of marine pollution from vessels, irrespective of where a violation occurs. This serves as a safeguard for the enforcement of international rules, particularly in waters beyond the national jurisdiction of the coastal State, i.e., on the high seas.

Furthermore, the Convention gives enforcement powers to the "port State", or the State where a ship is destined. In doing so it has incorporated a method developed in other Conventions for the enforcement of treaty obligations dealing with shipping standards, marine safety and pollution prevention. The port State can enforce any type of international rule or national regulations adopted in accordance with the Convention or applicable international rules as a condition for the entry of foreign vessels into their ports or internal waters or for a call at their offshore terminals. This has already become a significant factor in the strengthening of international standards.

Finally, as far as the international seabed area is concerned, the International Seabed Authority, through its Council, is given broad discretionary powers to assess the potential environmental impact of a given deep seabed mining operation, recommend changes, formulate rules and regulations, establish a monitoring programme and recommend issuance of emergency orders by the Council to prevent serious environmental damage. States are to be held liable for any damage caused by either their own enterprise or contractors under their jurisdiction.

With the passage of time, United Nations involvement with the law of the sea has expanded as awareness increases that not only ocean problems but global problems as a whole are interrelated. Already, the 1992 United Nations Conference on Environment and Development (UNCED) held in Rio de Janeiro, Brazil in 1992, placed a great deal of emphasis on the protection and preservation of the oceans' environment in harmony with the rational use and development of their living resources, thus establishing the concept of "sustainable development" embodied in Agenda 21, the programme of action adopted at the Conference.

The necessity to combat the degradation and depletion of fish stocks, both in the zones under national jurisdiction and in the high seas and its causes, such as overfishing and excess fishing capacity, by-catch and discards, has been one of the recurrent topics in the process of implementation of the programme of action adopted in Rio de Janeiro.

In this respect, among the most important outputs of the Conference was the convening of an intergovernmental conference under United Nations auspices with a view to resolving the old conflict between coastal States and distant-water fishing States over straddling and highly migratory fish stocks in the areas adjacent to the 200 nautical-mile exclusive economic zones. This Conference adopted the 1995 Agreement on Straddling Fish Stocks and Highly Migratory Fish Stocks which introduces a number of innovative measures, particularly in the area of environmental and resource protection obliging States to adopt a precautionary approach to fisheries exploitation and giving expanded powers to port States to enforce proper management of fisheries resources.

Back to the contents

Marine Scientific Research

With the extension of the territorial sea to 12 miles and the establishment of the new 200-mile EEZ, the area open to unrestricted scientific research was circumscribed. The Convention thus had to balance the concerns of major research States, mostly developed countries, which saw any coastal-state limitation on research as a restriction of a traditional freedom that would not only adversely affect the advancement of science but also deny its potential benefits to all nations in fields such as weather forecasting and the study of effects of ocean currents and the natural forces at work on the ocean floor.

On the other side, many developing countries had become extremely wary of the possibility of scientific expeditions being used as a cover for intelligence gathering or economic gain, particularly in relatively uncharted areas, scientific research was yielding knowledge of potential economic significance.

The developing countries demanded "prior consent" of a coastal State to all scientific research on the continental shelf and within the EEZ. The developed countries offered to give coastal States "prior notification" of research projects to be carried out on the continental shelf and within the EEZ, and to share any data pertinent to offshore resources.

The final provisions of the Convention represent a concession on the part of developed States. Coastal State jurisdiction within its territorial sea remains absolute. Within the EEZ and in cases involving research on the continental shelf, the coastal State must give its prior consent. However, such consent for research for peaceful purposes is to be granted "in normal circumstances" and "shall not be delayed or denied unreasonably", except under certain specific circumstances identified in the Convention. In case the consent of the coastal State is requested and such State does not reply within six months of the date of the request, the coastal State is deemed to have implicitly given its consent. These last provisions were intended to circumvent the long bureaucratic delays and frequent burdensome differences in coastal State regulations.

Back to the contents

Settlement of Disputes

Provisions for the settlement of disputes arising out of an international treaty are often contained in a separate optional protocol. Parties to the treaty could choose to be bound by those provisions or not by accepting or not accepting the Protocol. The Convention on the Law of the Sea is unique in that the mechanism for the settlement of disputes is incorporated into the document, making it obligatory for parties to the Convention to go through the settlement procedure in case of a dispute with another party.

During the drafting of the Convention, some countries were opposed in principle to binding settlement to be decided by third party judges or arbitrators, insisting that issues could best be resolved by direct negotiations between States without requiring them to bring in outsiders. Others, pointing to a history of failed negotiations and long-standing disputes often leading to a use of force, argued that the only sure chance for peaceful settlement lay in the willingness of States to bind themselves in advance to accept the decisions of judicial bodies.

What emerged from the negotiations was a combination of the two approaches, regarded by many as a landmark in international law.

If direct talks between the parties fail, the Convention gives them a choice among four procedures - some new, some old: submission of the dispute to the International Tribunal for the Law of the Sea, adjudication by the International Court of Justice, submission to binding international arbitration procedures or submission to special arbitration tribunals with expertise in specific types of disputes. All of these procedures involve binding third-party settlement, in which an agent other than the parties directly involved hands down a decision that the parties are committed in advance to respect.

The only exception to these provisions is made for sensitive cases involving national sovereignty. In such circumstances, the parties are obliged to submit their dispute to a conciliation commission, but they will not be bound by any decision or finding of the commission. The moral pressure resulting was argued as being persuasive and adequate to ensure compliance with the findings. The Convention also contains so-called "optional exceptions", which can be specified at the time a country signs, ratifies or accedes to the Convention or at any later time. A State may declare that it chooses not to be bound by one or more of the mandatory procedures if they involve existing maritime boundary disputes, military activities or issues under discussion in the United Nations Security Council.

Disputes over seabed activities will be arbitrated by an 11-member Seabed Disputes Chamber, within the International Tribunal for the Law of the Sea. The Chamber has compulsory jurisdiction over all such conflicts, whether involving States, the International Seabed Authority or companies or individuals having seabed mining contracts.

The United Nations and the Law of the Sea

Throughout the years, beginning with the work of the Seabed Committee in 1968 and later during the nine-year duration of the Third United Nations Conference on the Law of the Sea, the United Nations has been actively engaged in encouraging and guiding the development and eventual adoption of the Law of the Sea Convention. Today, it continues to be engaged in this process, by monitoring developments as they relate to the Convention and providing assistance to States, when called for, in either the ratification or the implementation process.

The goal of the Organization is to help States to better understand and implement the Convention in order to utilize their marine resources in an environment relatively free of conflict and conducive to development, safeguarding the rule of law in the oceans.

In this context, the Division for Ocean Affairs and the Law of the Sea (DOALOS) of the United Nations Office of Legal Affairs helps to coordinate the Organization's activities and programmes in the area of marine affairs. It is active in assisting and advising States in the integration of the marine sector in their development planning. It also responds to requests for information and advice on the legal, economic and political aspects of the Convention and its implications for States. Such information is used by States during the ratification process, in the management of the marine sector of their economies and in the development of a national sea-use policy.

The United Nations also gives assistance to the two newly created institutions - the International Seabed Authority and the International Tribunal for the Law of the Sea.

The Future

The entry into force of the Convention, together with extended jurisdiction, new fields of activity and increased uses of the oceans, will continue to confront all States with important challenges. These challenges will include how to apply the new provisions in accordance with the letter and spirit of the Convention, how to harmonize national legislation with it and how to fulfil the obligations incumbent upon States under the Convention.

Another major challenge will be to provide the necessary assistance, particularly to developing States, in order to allow them to benefit from the rights they have acquired under the new regime. For example, a great many of the States that have established their EEZs are not at present in a position to exercise all their rights and perform duties under the Convention. The delimitation of EEZ, the surveying of its area, its monitoring, the utilization of its resources and, generally speaking, its management and development are long-term endeavours beyond the present and possibly near-term capabilities of most developing countries.

The United Nations will continue to play a major role in the monitoring of, collection of information on and reporting on State practice in the implementation of the new legal regime. It will also have a significant role to play in reporting on activities of States and relevant international organizations in marine affairs and on major trends and developments. This information will be of great assistance to States in the acceptance and ratification of the Convention, as well as its early entry into force and implementation.

A number of new duties falls upon the Secretary-General of the United Nations. These include the depositing of charts and coordinates showing the maritime limits of coastal States and servicing of the Commission on the Limits of the Continental Shelf The Secretary-General is also called upon to convene meetings of States Parties to elect the members of the International Tribunal for the Law of the Sea and to adopt its budget. Meetings of States Parties may also be called for a Review Conference dealing with the provisions on deep seabed mining or for amending the Convention.

The United Nations will continue to strengthen the cooperation that has developed over the last two decades among the organizations in the United Nations system involved in marine affairs. Such close cooperation would be of great benefit to States, since it would avoid duplication and overlapping of activities. It would also help to coordinate multidisciplinary activities related to the management of marine affairs.

With the passage of time, United Nations involvement with the law of the sea is expected to expand as awareness increases that not only ocean problems but also global problems as a whole are interrelated.

Sponsor Statement for
CSHJR 25 Urging Congress to Classify Hydroelectric Power as Renewable

One of the most readily available sources of renewable energy in Alaska is hydroelectric power. Alaska has a vast amount of high elevation lakes and run-of-the-river systems which have the potential, in many areas, to completely displace diesel generated power with little to no environmental impact. Hydroelectric power is so abundant in Alaska that most areas of the state can make use of it in some form or another.

With such a plentiful source of non-diesel generated power, it is unfortunate that the Federal Government does not have a working definition of renewable or alternative that includes hydroelectric power. This effectively cuts hydroelectric power projects off from many potential sources of federal funding, and therefore, hinders Alaska's efforts to displace diesel generated power.

CSHJR 25 asks Congress to develop a working definition of renewable and alternative which includes hydropower so that reliable renewable energy policy can be developed, and valuable projects receive adequate support.

I urge your support of CSHJR 25.

CS FOR HOUSE JOINT RESOLUTION NO. 25(ENE) am

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY THE HOUSE SPECIAL COMMITTEE ON ENERGY

Amended: 4/13/09
Offered: 3/25/09

Sponsor(s): REPRESENTATIVES THOMAS, Johansen, Edgmon, Millett, Austerman, Kerttula, Muñoz, Wilson, Johnson, Dahlstrom, Gruenberg, Crawford, Gardner, Tuck, Lynn, Gara, Guttenberg, Olson, Gatto, Petersen, Chenault, Holmes

A RESOLUTION

Urging the United States Congress to classify hydroelectric power as a renewable and alternative energy source.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS fossil fuels such as oil, natural gas, and coal are important sources of energy for the electric power supply system of the United States; and

WHEREAS the cost of most fossil fuels, particularly oil, has increased dramatically in recent years; and

WHEREAS increases in the cost of fossil fuels such as oil have caused, and continue to cause, substantial increases in the electric bills of residential, business, and governmental rate-payers at a time when the economy of the United States is in a major recession; and

WHEREAS the United States is dependent on foreign sources for a majority of its oil supply; and

WHEREAS oil and other fossil fuels are finite resources that contribute to growing worldwide concerns over carbon and other environmental effects; and

WHEREAS Alaskans, particularly those in rural parts of the state, are dependent on oil-fired electric generation with retail rates as high as $1 a kilowatt-hour; and

WHEREAS hydroelectric power is a viable source of clean, renewable, and long-lasting electric energy in many areas of the state; and

WHEREAS hydroelectric energy can be developed in Alaska using high-elevation lakes and run-of-the-river systems that have few or no negative environmental effects; and

WHEREAS it is the policy of the state to encourage development of its abundant hydroelectric potential and wind, geothermal, and other renewable and alternative energy sources to reduce dependence on fossil fuels for electric power generation and to reduce the cost of electricity to rate payers; and

WHEREAS some federal laws and federal renewable and alternative energy programs do not classify hydroelectric power as a renewable or alternative energy source; and

WHEREAS regions of the United States outside of Alaska have limited water supplies or water shortages that could lead to classifying hydroelectric power as nonrenewable, but many areas of Alaska have ample water supplies that are capable of providing a renewable energy source for hydroelectric projects in the state;

BE IT RESOLVED that the Alaska State Legislature urges the United States Congress to take the necessary action to classify hydroelectric power as a renewable and alternative energy source so that the state can participate in federal programs without restriction to facilitate development of the state's hydroelectric resources for the benefit of its residents.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Harry Reid, Majority Leader of the U.S. Senate; the Honorable Mitch McConnell, Minority Leader of the U.S. Senate; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; and the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

National Hydropower Association

"Assessment of Waterpower Potential and Development Needs" By the Numbers

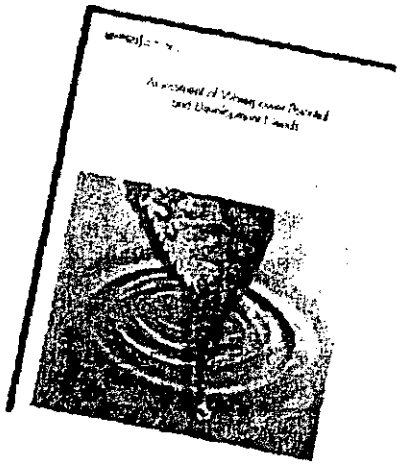
A quick look at the growth potential of hydropower by the year 2025, as detailed in the March 2007 report released by the Electric Power Research Institute.

GENERAL OVERVIEW

- **270,000 GWH** - existing hydropower generation in the United States (75 percent of U.S. renewable energy generation—the largest renewable source)
- **90,000 MW** - overall water potential available
- **23,000 MW** - potential capacity increase by 2025

BY 2025, CONVENTIONAL POTENTIAL

- **10,000 MW** - overall potential increase
  - **2,700 MW** - from new small and low-power conventional hydropower
  - **2,300 MW** - from capacity gains and efficiency improvements at existing hydropower facilities
  - **5,000 MW** - from new hydro at existing non-powered dams



Copies of the EPRI report are available at www.wpri.com. Search for report #1014762.

By 2025, NEW WATERPOWER TECHNOLOGY POTENTIAL

- **10,000 MW** - increase from ocean and wave energy devices
- **3,000 MW** - increase from new hydrokinetic technologies

The power of moving water

www.hydro.org

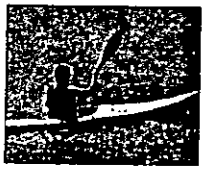
4991

Hydropower is a domestic source of renewable, reliable, and affordable electricity. No other energy source offers so many advantages.

Domestic and Secure

Water from our rivers is a domestic resource that is not subject to disruptions from foreign suppliers, cost fluctuations, and transportation issues.

Efficient



Today's hydropower turbines are capable of converting more than 90% of available energy into electricity, which is more efficient than any other form of generation (the best fossil fuel power plant is only about 50% efficient).

Popular

Nationally, 93% of individuals believe hydropower is important or very important for meeting future electricity needs.

Source: 2002 public opinion poll by Bisconti Research Inc.

Renewable

Like wind, solar, and geothermal, hydropower's "fuel" is essentially infinite and is not depleted during the production of electricity. Hydropower facilities simply harness the natural energy of flowing and falling water to generate electricity.

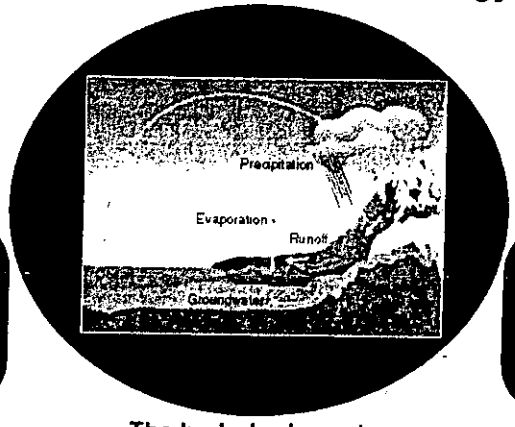
Clean

Hydropower uses water to generate electricity. It is climate-friendly and does not produce air pollution or create any toxic by-products.

HydroPOWER
the power of moving water

Clean power for a secure energy future

Any moving-water has the potential to make power



Water used for power is returned to the water cycle

The hydrologic cycle

source: http://hydropower.inel.gov/hydrofacts/how_hydro_works.shtml

Reliable

Hydropower can go from zero power to maximum output rapidly and predictably. This makes hydropower exceptionally good at meeting changing demands for electricity and providing ancillary electrical services that maintain the balance between supply and demand.

Flexible

Hydropower has the unique ability to change output quickly. Its unique voltage control, load-following, and peaking capabilities are critical for electric grid stability. This ability also provides an efficient and cost-effective way to support the use of intermittent renewable sources of power such as wind and solar energy.

Non-power benefits

Hydropower projects do more than just produce electricity; they create wildlife conservation lands, provide stable habitat for many kinds of wildlife, support healthy fisheries, provide water supply, control floods, irrigate land for food production, and create recreational opportunities for millions of Americans.

US Senator Murkowski says higher taxes on oil, gas could backfire

Washington (Platts)--16Mar2009

US Senator Lisa Murkowski, ranking Republican on the Energy and Natural Resources Committee, said Monday that increasing taxes on the oil and gas industry would have the unintended consequence of driving natural gas producers and independent companies out of the country.

In his fiscal 2010 budget released last month, President Barack Obama called for excluding the petroleum industry from a manufacturer's tax credit, which might raise $31 billion in additional taxes from the industry.

"People get up in the morning to hate the oil industry," said Murkowski, speaking at Platts Energy Podium in Washington. Murkowski represents Alaska, which after Texas produces the most oil of any US state.

Still, if Congress approves the president's proposal to raise taxes on the industry, that could reduce production of gas and its use as a lower-carbon alternative to coal-fired electricity generation.

She said that the committee will likely not agree on a renewable energy standard, although she said she could support a low-carbon electricity standard which includes nuclear energy and hydroelectric generation.

"If your goal is reduction of emissions, why would you not want to recognize those existing resources that aren't contributing to carbon output?" she said.

Energy and Natural Resources Committee Chairman Jeff Bingaman of New Mexico, a Democrat, plans to offer a renewable energy standard that would require investor-owned utilities to draw 20% of their output from wind, solar and other renewables by 2021. His proposal does not classify hydropower as renewable energy.

Nonetheless, Murkowski said she is optimistic that she and Bingaman will agree on a range of issues that could pass their panel with broad bipartisan support, including increased federal authority over

- **True-up period.** A three-month true-up period is provided at the end of each year during which generators may obtain the required number of RECs or makeup any shortfall. During this period, purchases of RECs can be made from renewable-resource generators that have unsold RECs, or from generators that have RECs exceeding their requirement.

- **Credit banking.** Generators and renewable energy producers could be allowed to "bank" credits indefinitely. This will help to even out variations in output associated with natural resources, and provide generators with additional methods for ensuring that they are in full compliance.

- **Force majeure provision.** An extended true-up period could be provided to allow response time for extreme deviations in expected renewables generation resulting from events that are impossible to control, i.e., "act of God" situations such as a damaging hurricane. Such fluctuations should not affect the entire REC market, but may affect individual generators who have contracted for RECs from certain facilities.

TOP

Hydropower

It is necessary to exclude large hydropower from the RPS for several reasons. Though hydro brings public benefits in terms of avoiding the air emissions and wastes associated with conventional power plants, hydro is technologically mature, is fully commercialized (representing a significant share of the electricity market), and has limited development potential. Most importantly, including hydro in the RPS would create several intractable practical problems: (a) output from the large base of Canadian hydro projects could potentially be rerouted into the U.S. market and "flood" that market, depressing prices to levels too low to support non-hydro renewables; (b) the large year-to-year fluctuations in hydro output would make it difficult to meet a fixed standard each year and at the same time provide a predictable market for renewables; and (c) many hydro facilities have more than one use and have been built with the aid of large government subsidies. Therefore, it may be difficult to avoid cross-subsidizing irrigation, recreation, flood control, etc., through payments to hydro via the RPS. Including hydro projects under some size limit (no more than 30 MW) may help to keep in operation those projects that will have difficulty competing in the market (especially those with high environmental mitigation costs).

Encouraging a Diversity of Renewables

The RPS in its simplest form is a strategy for diversifying the electric supply with the lowest-cost renewable power available, as judged through market competition. Its primary purpose is not aimed directly at technology commercialization, though it will certainly encourage private investment in technology advancement. A diversity of renewable resources will be encouraged because generators and investors are likely to seek out the most cost-effective technologies and technology applications, thereby taking advantage of the most cost-effective applications of each resource (i.e., the low-cost end of the supply curve for each resource). Because the cost of many renewable technologies, e.g., wind, geothermal, landfill gas and some solid-fuel biomass and some solar thermal facilities, are in the same competitive range, the market is likely to result in a diversity of resources and technologies. The market can also be expected to seek out cost-effective niche applications of renewables, such as distributed applications of photovoltaics. Higher-cost technologies can be encouraged through commercialization programs (e.g., those funded by system benefits charges), which can work along side the RPS. Because the RPS creates a market for renewables, it will help to close the gap between the cost of pre-commercial technologies and the renewables-market price. As a result, technology commercialization program dollars can go farther as a result of the RPS.

Self-generation

Surplus renewables generation that is metered and sold at retail from customer-owned, grid-connected renewable facilities could be eligible for RECs. If a simple method is available to measure the power produced by these systems that is consumed on-site, that generation could also qualify for RECs. Though off-grid renewable self-generation applications could qualify for RECs, there are two reasons for not including them: (1) most off- grid self-generation applications are already competitive as compared to T&D line extensions; and (2) off-grid applications are not metered or sold at retail, and thus verification of production would be difficult. If policy-makers nevertheless want to encourage off-grid renewables, procedures could be developed to estimate production, though verification could entail high transactions costs.

Allocating RECs from Existing Facilities

An RPS policy creates a new, unanticipated source of income for existing renewable

AMENDMENT NO. Calendar No.

Purpose: To provide a renewable portfolio standard.

IN THE SENATE OF THE UNITED STATES—111th Cong., 1st Sess.

(no.)

(title)

Referred to the Committee on and
ordered to be printed

Ordered to lie on the table and to be printed

AMENDMENT intended to be proposed by

Viz:

At the appropriate place, add the following:

TITLE VIII—RENEWABLE PORTFOLIO STANDARD

SEC. 01. RENEWABLE PORTFOLIO STANDARD.

(a) IN GENERAL.—Title VI of the Public Utility Regulatory Policies Act of 1978 (16 U.S.C. 2601 et seq.) is amended by adding at the end the following:

"SEC. 610. FEDERAL RENEWABLE PORTFOLIO STANDARD.

"(a) DEFINITIONS.—In this section:

"(1) BASE QUANTITY OF ELECTRICITY.—

"(A) IN GENERAL.—The term 'base quantity of electricity' means the total quantity of electricity sold by an electric utility to electric consumers in a calendar year.

"(B) EXCLUSIONS.—The term 'base quantity of electricity' does not include—

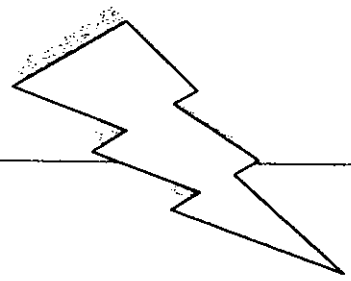
"(i) electricity generated by a hydroelectric facility (including a pumped storage facility but excluding incremental hydropower); or

"(ii) electricity generated through the incineration of municipal solid waste.

"(2) DISTRIBUTED GENERATION FACILITY.—The term 'distributed generation facility' means a facility at a customer site.

"(3) EXISTING RENEWABLE ENERGY.—Except as provided in paragraph (7)(B), the term 'existing renewable energy' means electric energy generated at a facility (including a distributed generation facility) placed in service prior to January 1, 2006, from solar, wind, or geothermal energy, ocean energy, biomass [(as defined in section 203(b) of the Energy Policy Act of 2005 (42 U.S.C. 15852(b)))], or landfill gas.

Southeast Conference Energy Program



Legislative Report – January 2009

Southeast Conference

P.O. Box 21989, 612 W. Willoughby Avenue, Suite B
Juneau Alaska 99802-1989
(907) 523-2310
Fax (907) 463-5670

Mike Korsmo: SEC Board President
Shelly Wright: SEC Executive Director
J.C. Conley: SEC Energy Committee Chair
Robert Venables: SEC Energy Coordinator

Executive Summary

Mission Statement

The mission of Southeast Conference is to undertake and support activities that promote strong economies, healthy communities, and a quality environment in Southeast Alaska.

Southeast Conference is a private membership organization that works to advance the collective interests of the people, communities, and businesses of Southeast Alaska. It is the Alaska Regional Development Organization (ARDOR), Federal Economic Development District (EDD), and USDA Resource Conservation and Development (RC&D) Council for the region.

Energy Committee Mission

Our vision for Southeast Alaska is to reduce, to the maximum extent possible, the use of diesel as a primary fuel source for the generation of electricity.

This will be accomplished through the utilization of the regions plentiful hydroelectric potential and the development of an interconnected transmission system to share these resources throughout the region.

ACCOMPLISHMENTS:

The Southeast Conference, working with its member communities and utilities, has been successful in developing regional plans and obtaining state and federal funds for many energy projects in the region. Our energy committee represents communities, organizations and utilities throughout the region. This is a 'working committee' dedicated to working together to solve the region's energy problems.

Plans and Organizational Work

- Completed an engineering/economic analysis of the entire Southeast Alaska Intertie Project (**Acres Report, 1998 and D. Hittle & Associates, 2003 & 2005**).
- Secured U.S. Congressional Authorization for SE Electrical Intertie System Plan (PL 106-511).
- Took a lead role in the formation of Kwaan Electric Transmission Intertie Cooperative (KWETICO), potential owner/operator of portions of the SE Intertie.
- Worked with AEA to develop the Southeast Alaska Energy Export Study (2007).
- Kake-Petersburg Transmission Intertie Study Update (due March 2009).

Current Utility Projects Underway

- Kasidaya Hydro Project near Haines/Skagway (Project operational, 2008).
- Juneau to Hoonah Intertie Segment (Project partially completed to Greens Creek).
- Swan-Tyee Intertie Segment (Project on schedule for completion October 2009).
- Kake-Petersburg Intertie Segment (Planning Study/Economic Analysis, update in progress, joint design/permitting project with AKDOT&PF and AEA).
- Reynolds Creek, Haida Corp. (partially funded, ready to construct this year).
- Prince of Wales Intertie (partially funded, ready to construct).
- Elfin Cove Utility Commission (in final design for hydroelectric facility).
- Gustavus Falls Creek Hydro (operational 2009, final phase ready to construct).

Southeast Conference Energy Program FY10

Funding Overview

To maintain its Energy program, Southeast Conference (SEC) is working to locate short-term funding and to identify long-term (and sustained) sources of income. The immediate goal is to secure funding for two years to maximize the effectiveness of the energy program and assist communities in their ongoing efforts to reduce energy costs and increase efficiencies.

Program Goals

- Reduce dependence on fossil fuels. This is critical in light of the recent volatility in oil prices.
- Bring affordable hydro power to communities where this is technically and economically feasible.
- Develop a regional electrical grid interconnecting Southeast communities and utilities with hydroelectric generation.
- Work with member communities and utilities to develop adequate energy infrastructure including alternative energy sources to meet current and future needs.
- Lower costs to rate payers and communities and increase economic development opportunities.

Priorities / Tasks

- Secure funding for permitting and design for Kake-Petersburg Intertie ($4.3 million).
- Work with IPEC and rural communities on solutions for their energy needs.
- Support Haida Corporation's efforts to advance the Reynolds Creek Hydro to completion.
- Begin working with federal and state funding agencies to construct the Kake-Petersburg Intertie.
- Facilitate efforts in Southeast to develop a regional Intertie and projects that increase hydro capacity.
- Work with member communities and utilities in their efforts to secure permits and funding for hydro and other alternative energy project development.
- Study alternative energy sources – biomass, hydrogen, wind, geo-thermal, tidal, and waste-to-energy.

Southeast Conference feels it is essential to develop and implement a regional energy plan for Southeast Alaska. We are working with the Alaska Energy Authority (AEA) and the Tlingit & Haida Energy Department to develop a regional energy plan and working with the communities to implement the opportunities that exist in their areas. Substantial and measurable progress has been made over the past couple of years, and it is important to keep the momentum of this program moving forward. The Southeast Conference Board of Directors has voted to maintain its energy coordinator position and its energy program as a core program within Southeast Conference and voted to support its staff in the pursuit of these goals. The position is currently being funded from reserves.

The following information is intended to demonstrate many areas where the State of Alaska can make an investment with significant impact and benefits to the region. These projects come from the communities and have been vetted through the public process. It is a work in progress and will be updated as more information comes to us from the communities.

Southeast Alaska Energy Projects with Estimated Funding Needs

Facilities and Infrastructure Construction Needs

- **Metlakatla Intertie to Ketchikan**: This is the southernmost leg of the SE Intertie system and is designed to transmit surplus hydroelectricity (approx. 8,500,000kW per year) to Ketchikan where the energy will be used to offset diesel generation (about 580,000 gallons). **CONSTRUCTION READY AT A PROJECT COST OF $7,652,000.**

- **POW Island Intertie**: AP&T proposes to construct a 48 mile line extension to the communities of Coffman Cove and Naukati Bay (both use 100% diesel generated power). This project will place these communities onto the POW grid which is supplied by hydroelectric power. This intertie will reduce fossil fuel consumption by 71,082 gallons per year and reduce the electrical rate by up to 60%. **CONSTRUCTION READY, PARTIALLY FUNDED, AP&T HAS REQUESTED $3,752,181 TO COMPLETE.**

- **Reynolds Creek Hydroelectric Power Project**: This 5 MW hydro facility is located 10 miles east of Hydaburg and is a joint venture between Haida Corporation and AP&T. The development of this resource is essential to meet the electrical needs of the POW Island as it grows and will prevent the use of supplemental diesel power. **CONSTRUCTION READY, PARTIALLY FUNDED, HAIDA POWER REQUESTING $13,720,000 TO COMPLETE.**

- **Gustavus Electric**: The Falls Creek Hydro Electric Project is an 800 kWh run-of-river hydroelectric facility which will provide electric power to the community of Gustavus. The project will displace existing diesel generation. Construction of the project is approximately 90% complete and will provide 90% of the community's electric needs. **FUNDING REQUESTED BY GUSTAVUS FOR COMPLETION, $750,000.**

- **Kake – Petersburg Intertie**: This is a high priority need in the region. Funding has been identified through HB 152 for final design and permitting. Detailed construction cost estimates will be available in March, but the project is estimated to cost between **$25-34 MILLION** and could be funded in phases. The AK DOT&PF has begun field work and is an active partner in the development of this project.

Capacity Development Projects: Final Design and Permitting

Ketchikan - Whitman Lake: The proposed Whitman Lake Hydroelectric Project is located approximately four miles east of Ketchikan, Alaska. KPU proposes to install 4.6 MW of hydropower generating capacity at the existing Whitman Lake Dam to provide an additional source of clean renewable energy to the city of Ketchikan and the Borough area including Saxman Village, while also enhancing the conversion of oil heat to electric heat and displacing expensive and nonrenewable diesel generation. Phases 1 & 2 are complete. **FUNDING FOR FINAL DESIGN IS REQUESTED BY KPU AT $1,300,000 (KPU MATCH, $320K).**

Sitka- Blue Lake Hydroelectric Project: This project will raise the height of the dam by 83 feet and expand the plant's capacity from 8MW to 18MW of capacity. Sitka has nearly maxed out available hydro resources. Multiple funding partners are expected to participate in order to bring this facility on line by 2015. The City and Borough of Sitka **REQUESTS FINANCIAL ASSISTANCE IN FY2010 OF $7,500,000.**

Hoonah Energy Needs: With the costs of the proposed Juneau to Hoonah intertie escalating to an estimated $40 million, Alaska Energy Authority (AEA) commissioned a conceptual study of the hydroelectric resources in the immediate area of Hoonah along with an analysis of the power plant needs that should be addressed concurrently. The findings are as follows:

- $4,061,317 Power Plant Replacement (2,600kW @ $1,562/kW)
- $4,558,500 Gartina Creek Hydroelectric Project (600kW)
- $3,946,500 Water Supply Creek Hydroelectric Project (600kW)
- $4,393,500 Elephant Falls Hydroelectric Project (600kW)

The development of any one of the three proposed hydro facilities would offset approx. 30% of Hoonah's projected annual demand. This would result in a savings of approx. 129,000 gallons of diesel fuel per year (saving approx. $380,000 using an est. fuel cost of $3.00/gallon). The development of any two of the three proposed hydroelectric facilities would offset about 50% of Hoonah's annual demand, with an approx. savings of $640K. No formal request has yet been made, **CAPITAL NEEDS ABOVE TOTAL, $16,959,817**. These projects will benefit the community significantly but will not meet all of Hoonah's energy needs. The Juneau to Hoonah Intertie Project is construction-ready and is still a long-term objective as part of the regional electrical grid network.

Elfin Cove Utility Commission: This hydroelectric power plant and associated infrastructure for access and connection will serve the community of Elfin Cove. Upon completion, the hydroelectric facility will include: a 1,000-foot long diversion conduit; a 1,300-foot long penstock to tidewater; and upgrades to the hydro power house. **FUNDING REQUEST BY ELFIN COVE FOR FINAL DESIGN AND FERC PERMITTING IS $395,200.**

Community Planning Efforts: Feasibility and Assessment

Petersburg – Ruth Lake: This Project would develop the hydro potential at Ruth Lake, with a total installed capacity of the powerhouse of 20 MW. The proposed Ruth Lake Hydroelectric Project would be interconnected to the existing transmission infrastructure currently owned and operated by the FDPPA. Ruth Lake would be a major addition to the energy resources to serve communities in an interconnected Southern Southeast Alaska grid. **PHASE 1 FUNDING REQUEST FROM THE CITY OF PETERSBURG FOR PRE-FEASIBILITY IS $160,000 AND PHASE 2 PERMITTING IS $2 MILLION.** Petersburg is providing matching funds of $540,000 for the two phases.

Metlakatla – Triangle Lake: This proposed 4MW hydroelectric project is located along the proposed transmission line intertie to Ketchikan. The Triangle Lake project will provide additional hydro power to Metlakatla and will offset diesel power generated in Ketchikan. **FUNDING REQUESTED BY METLAKATLA FOR FEASIBILITY ANALYSIS AND CONCEPTUAL DESIGN IS $500,000.**

Sitka – Takatz Lake: Sitka is engaged in a long range strategy to decrease its dependence on oil by developing its renewable energy resources, particularly the known hydroelectric resources on Baranof Island. This project is the study and investigation phase of developing Sitka's hydroelectric resources to determine the feasibility of developing the estimated 28MW Takatz Lake Hydroelectric Project. **THE ESTIMATED COST OF THIS STUDY AND INVESTIGATION OF THE HYDROELECTRIC POTENTIAL OF TAKATZ LAKE IS $2,000,000.**

This is a compilation of community projects that have gone through the public process. Most are part of the Southeast Intertie Plan authorized by Congress in 2001. More detailed information is available upon request. Other projects, such as Thayer Creek in Angoon will be added to this list as information becomes available.

Alaska State Legislature

Representative Anna Fairclough – House District 17

House Joint Resolution 26

"Urging the United States Congress to adequately fund land surveys in Alaska in order to issue patents to the State of Alaska and Alaska Native corporations."

House Joint Resolution 26 urges the United States Congress to adequately fund land surveys in Alaska in order to issue patents to the State of Alaska and Alaska Native Corporations. This is critical concern in Alaska because surveys and subsequent land patents issued to the State and Native Corporations are critical to the future use and development of land in Alaska.

At Statehood, Alaska was granted a land entitlement from the federal government of 103,350,000 acres. Alaska Natives, through the Alaska Native Claims Settlement Act (ANCSA), were granted a land entitlement from the federal government of over 45 million acres. In 2004, Congress passed the Alaska Land Transfer Acceleration Act (ALTAA) with the intent of largely completing state and ANCSA land entitlements by 2009.

The United States Bureau of Land Management (BLM) has aggressively and diligently worked to implement the ALTAA, however, despite BLM's efforts, considerable land conveyance work remains to be accomplished, particularly in the area of land survey. Land surveys are necessary to issue patents to the state and ANCSA Corporations, and are essential to determining with certainty what lands are owned by the state and ANCSA corporations. This certainty regarding boundaries and ownership is needed long term for land use and development.

Congress provided interim title to the state and ANCSA corporations by granting Tentative Approval (TA) to the State and Interim Conveyance (IC) to ANCSA Corporations, but with the understanding that the land would eventually be surveyed and patent issued. Under both the Statehood Act and ANCSA, the federal government is responsible for preparing these land surveys. As of December 31, 2008, over 66 million acres of land still awaits patent in Alaska, including more than 40 million acres of land that has been TA'd to the State and 14 million acres IC'd to ANCSA corporations, and over 12 million additional acres await conveyance.

This resolution asks the United States Congress to budget sufficient funds to BLM to ensure the timely completion of land surveys in Alaska in order that land promised to Alaska Natives and the State of Alaska can be patented. This is especially important with current federal budget constraints.

I urge your support on the passage of this legislation.

The Alaska Land Transfer Acceleration Act: Background and Summary

Summary

On December 10, 2004, the President signed into law P.L. 108-452, the Alaska Land Transfer Acceleration Act. The act represents an attempt to clear up the conflicting land claims of three distinct parties in Alaska – the State, Alaska Native Corporations, and Native allottees – in time for the fiftieth anniversary of Alaska's statehood in 2009. These claims are grounded in the Alaska Statehood Act, the Alaska Native Claims Settlement Act, and the Native Allotment Act of 1906. This report provides a background on these Acts, the claims they support, and a summary of the provisions of the Alaska Land Transfer Acceleration Act.

The Alaska Land Transfer Acceleration Act: Background and Summary

Introduction

On December 10, 2004, the President signed into law P.L. 108-452, the Alaska Land Transfer Acceleration Act. The act represents an attempt to clear up the land claims of various groups in Alaska in time for the fiftieth anniversary of Alaska's statehood in 2009. This report provides a background on these claims and a summary of the act's provisions.

Background

The Alaska Statehood Act ("the Statehood Act") was passed in 1958 and allowed the State to select for ownership approximately 104 million acres of unclaimed and unreserved federal land.[1] Soon after passage of the Statehood Act, however, Alaska natives began to challenge many of the State's selections, arguing that native lands were not available for State selection under the Statehood Act. In 1969, the Ninth Circuit ruled in favor of the Alaska natives,[2] making it difficult for the State to continue the selection process without clarification as to the specific boundaries of Alaska native lands. Congress attempted to resolve this problem in 1971 with the Alaska Native Claims Settlement Act[3] (ANCSA), which was designed to settle the aboriginal claims of the Alaska natives. ANCSA authorized the transfer of over 45 million acres of land and the payment of nearly $1 billion to Alaska Natives.

The ANCSA approach to the native land transfers is unique in its reliance on the corporate form. To manage the lands transferred to the Alaska natives, ANCSA created two tiers of Native Corporations: the Village Corporations, of which there are over 200; and the larger Regional Corporations, of which there are thirteen.[4] A Village Corporation files an application selecting certain lands and, if this application is approved, then the Village Corporation is conveyed title to the surface estate, while the Regional Corporation is generally conveyed title to the subsurface estate. The conveyance process is similar to the state application process, in that the Corporations first file applications for selections of land, which BLM then reviews and, if approved, surveys, transfers, and issues a final patent to the land to the appropriate Native Corporation.

---

[1] P.L. 85-508 (72 Stat. 339). Alaska became a state the following year.

[2] *Alaska v. Udall*, 420 F.2d 938 (9th Cir. 1969).

[3] P.L. 92-203 (codified, as amended, at 43 U.S.C. §§ 1601-1629).

[4] ANCSA granted natives 100 shares of the Village and Regional Corporations in which they were enrolled.

The conveyance process has proven difficult to complete, due in large part to complications in the surveying of lands. Neither the Statehood Act conveyance process nor the ANCSA conveyance process has been completed. BLM estimates that, of the 104.5 million acres to which the State is entitled under the Statehood Act, BLM has completed the survey, transfer, and patent process for about 43 million acres. An additional 47 million acres have been transferred, but the State is still awaiting patent of those lands. This leaves 15 million acres on which, according to BLM, the conveyance process has not even begun.[5]

BLM further estimates that, of the 45.6 million acres to which the Native Corporations are entitled under ANCSA, BLM has issued final patents on approximately 18 million acres. BLM has transferred an additional 19 million acres that are still awaiting final patents. BLM officials say that they cannot complete the survey and conveyance process on the remaining 8.4 million acres of land for a variety or reasons, the primary one being that many of the Native Corporations have overselected lands beyond their entitlements.[6] The Native Corporations were encouraged to do this so that they would receive their full entitlement even if certain lands were not approved for transfer, but these overselections require BLM to determine which of the overselected lands will be used to fulfill the Corporations' entitlements.

Further complicating the land transfer process is the Native Allotment Act of 1906.[7] Under this act, Alaska Natives were authorized to acquire individual allotments of up to 160-acre parcels of unreserved and unappropriated land. Alaska Natives filed roughly 10,000 applications for 16,000 parcels of land before the Allotment Act was repealed by ANCSA.[8] In 1998, Congress passed the Alaska Native Veterans Allotment Act,[9] which allowed those Vietnam veterans who missed the opportunity to apply for allotments under the 1906 Act the chance to do so. BLM estimates that it still has pending applications for 3,256 acres of land under these two Acts,[10] all of which must be finalized before the State and ANCSA entitlements can be filled.

[10] S. Hrg. 108-163, at 20 (testimony of Henri Bisson, State Director, Bureau of Land Management, Department of the Interior).

The entitlements created by the Statehood Act, ANCSA, and the Native Allotment Act have resulted in a tangled web of interests vying for a finite amount of land -- land which also happens to be the subject of very bitter, long-running disputes between environmental groups and private oil, timber, and mining interests. In 2001, BLM came up with a plan to complete the land transfer process by 2020. Many have expressed the strong desire, however, that the process be completed by 2009, the 50th anniversary of Alaska's statehood. In order to meet this deadline, BLM and the Department of the Interior requested legislative action to streamline a process that has traditionally moved very slowly. The Alaska Land Transfer Acceleration Act is Congress's response.

The Alaska Land Transfer Acceleration Act

Title I. Title I represents an attempt to speed up the State selection process. Under section 6(a) of the Statehood Act, the State is allowed to select 400,000 acres of national forest land and 400,000 acres of other public lands, all adjacent to existing communities. Approval authority for these community development grants is vested in the Secretary of Agriculture for national forest lands and in the Secretary of the Interior for all other public lands.[11] The Statehood Act requires BLM to convey tracts of at least 160 acres, but many pending applications for selections of public lands are in violation of this minimum tract requirement. Further, because the statutory application deadline has passed, these applications cannot be amended, giving the Secretary of the Interior no alternative but to reject the applications.[12] The act waives the minimum tract requirement for five grant applications totaling almost 400 acres.[13] In addition, the act approves any community grant applications for other public lands on file with the Interior Secretary on the date of enactment.[14]

Many of the State's current community grant selections are in areas likely to be conveyed to ANCSA corporations, which could leave the State without sufficient remaining selections to fulfill its community grant entitlement to 400,000 acres. To remedy this problem, the act allows the State to convert selection applications from its much larger general entitlement under section 6(b) of the Statehood Act[15] into community grant selection applications.[16] These 6(b) entitlements amount to more than 102 million acres of vacant, unappropriated, and unreserved federal lands, and cannot be selected from national forests.

[15] P.L. 85-508, § 6(b) (72 Stat. 340).

[16] P.L. 108-452, § 101(b)

When Congress enacted the Alaska National Interests Land Conservation Act[17] (ANILCA) in 1980, Congress granted the State the ability to prioritize its selections. The act clarifies the State's responsibilities as to these prioritizations.[18] Some of the lands prioritized by the State have a reversionary interest vested in the United States, as the statutes under which the lands were conveyed to the State require the federal government to retain such an interest to ensure the lands are used consistent with the respective purposes of the conveyances. The act allows the State to fulfill its land entitlement by selecting these reversionary interests.[19] This would have the effect of removing the federal government's control and oversight of these lands, and possibly allowing development inconsistent with any surrounding federal lands. In testimony before a Senate Subcommittee, a BLM official conceded that much of these lands are within National Wildlife Refuges, but argued that the lands are generally adjacent to towns and villages and are already developed in ways beneficial to the local communities (e.g., they have schools or community centers built on them).[20]

Since the passage of ANILCA, the State has been allowed to fulfill its 6(a) and 6(b) entitlements by selecting lands that are presently withdrawn for some other purpose but may become open for selection at a future date.[21] The State is still waiting for much of the land selected according to these so-called "top filings" to become available. The act makes available eight parcels of land top-filed for selection that were previously reserved for power projects or withdrawn as hot or medicinal springs.[22] The act excludes land within conservation system units (CSUs)[23] from availability under this provision.[24]

Congress in 1929 granted a 100,000-acre land entitlement to the University of Alaska,[25] but disputes abound as to just how much land remains to be conveyed under this entitlement. The act sets the remaining entitlement at 456 acres, and allows the State, on behalf of the University, to fulfill the University's entitlement by selecting mineral interests in land, the unreserved portion of which is held by the University,

[21] 43 U.S.C. § 1635(e). The State cannot, however, select land within a conservation system unit or the Alaska National Petroleum Reserve. *Id.*

[22] P.L. 108-452, § 104(a). These parcels are in the following areas: Bradley Lake; Eagle River/Ship Creek/Peters Creek; Salmon Creek; Nenana River; Solomon Gulch at Valdez; and Kruzgamepa River Pass Creek. *Id.*

[23] ANILCA defines CSUs as any unit of Alaska land within the National Park System, National Wildlife Refuge System, National Wild and Scenic Rivers System, National Trails System, National Wilderness Preservation System, or a National Forest Monument. 16 U.S.C. § 3102(4).

[24] P.L. 108-452, § 104(b).

[25] Act of January 21, 1929, Chap. 92 (45 Stat. 1091).

or the United States' reversionary interests in land, the unreserved portion of which is held by the University.[26]

The act grants the Secretary of the Interior the flexibility to enter into binding agreements with the State to finalize Alaska's entitlements under the Statehood Act.[27] In addition, the act allows the State to select or top-file specific parcels of land in the Chugach National Forest and the Trans-Alaska Pipeline System that were mistakenly omitted from previous applications or top-filings.[28]

The act institutes a streamlined procedure for the conversion of certain federal mining claims to state mining claims.[29] Some lands selected by the State are encumbered by federal mining claims, making the lands unavailable for selection. The surrounding lands can be conveyed to the State, but that creates isolated tracts of federal land which BLM has complained are very difficult to manage.[30] The act allows for the holder of a valid federal mining claim on State-selected or top-filed lands to relinquish that claim and have it converted to a state mining claim. The lands attached to the mining claim are then transferred to the State so long as the land was selected or top-filed as of January 3, 1994.[31]

Title II. Title II of the act attempts to finalize the Regional and Village Corporation land selections under ANCSA. Under ANCSA, Regional and Village Corporations had a limited time in which to select lands, and could only select lands that were available during that period. In other words, they did not have the option to "top-file" withdrawn lands for future selection when they became available. Title II of the act allows the Corporations to select previously unavailable land that is part of or adjacent to a town in which a Village Corporation is located.[32]

Section 12 of ANCSA gave the Village Corporations two separate selections of land: selections of land within which the Native Villages were located ("12(a) selections"); and excess land reallocable to the Village Corporations by the Regional Corporations on an equitable basis ("12(b) selections").[33] The Regional Corporations have been slow to reallocate the 12(b) lands, and the act requires the Regional Corporations to complete the process by October 1, 2005.[34] The act also attempts to counter the effects of overselections and ease BLM's surveying duty by allowing the 12(a) and 12(b) selections to be combined for the purpose of surveying and

[32] *Id.*, at § 201(a).

[33] 43 U.S.C. § 1611(a), (b).

[34] P.L. 108-452, § 202(1).

conveying those lands.[35] If a village has overselected its 12(a) lands, for example, it can take a smaller amount of 12(b) lands to fulfill its entitlement.

BLM has argued that one of the primary obstacles to completing the conveyance process is the requirement that BLM survey down to the very last acre to ensure that conveyances do not exceed the Corporation's entitlement. According to BLM, this often takes more than one field survey season to accomplish.[36] The act addresses this problem by allowing the Interior Secretary to enter into an agreement with the affected Corporation, according to which the Secretary conveys some or all of the next whole prioritized section (640 acres) of land if doing so would satisfy that Corporation's entitlement.[37] Exactly how much the Secretary is allowed to "round up" under this provision depends on the status of the land:

- If the land is managed by BLM and is not within a CSU, then the Secretary can convey the next whole section;
- If the land is not within a CSU and is managed by an agency other than BLM, then the Secretary can convey the next quarter-section (with the concurrence of the other agency); and
- If the land is within a CSU, then the Secretary can convey the next quarter of a quarter-section (if managed by an agency other than BLM, then the concurrence of that agency is also required).[38]

ANCSA authorized the Secretary of the Interior to withdraw 2 million acres of unreserved and unappropriated public lands and convey them to Corporations and Native groups for special situations and purposes, such as cemetery land and reserved mineral charges against Regional Corporation entitlements.[39] Delays in finalizing these conveyances have, according to BLM, created significant delays in enabling Regional Corporations to know their final entitlements.[40] The act creates an expedited process for the conveyance of roughly 1,800 existing cemetery and historical sites.[41] According to ANCSA, any of these 2 million acres of special purpose land left over are to be distributed among the Regional Corporations

according to population.[42] Determining just how much remains of that 2 million acres has proved difficult, however, and so the act deems there to be 200,000 acres remaining to be divided.[43]

The act provides that if a Regional Corporation does not have sufficient land selected to fulfill its entitlement under the remainder provision, then the Secretary may withdraw land to fulfill that entitlement, so long as the land is vacant, unappropriated, and unreserved.[44]

Section 17(d)(1) of ANCSA gave the Secretary of the Interior the authority to withdraw lands for further study and reclassify them for various uses in the public interest.[45] Much of this land remains withdrawn today but has yet to be reclassified, and the question of what to do with these "lingering withdrawals" - estimated by BLM to comprise over 53 million acres of land - proved to be one of the most controversial aspects in the debates leading to the passage of the act.[46] Of this 53 million acres, BLM estimates that roughly 28 million acres are selected by the State, a Native Corporation, or both, leaving 25.3 million acres potentially open for economic activities under federal law should the lands withdrawn under 17(d)(1) be opened up.[47] The act requires that, within 18 months of its enactment, the Interior Secretary must conduct a review of these lingering withdrawals and submit a report to the Senate Energy Committee and the House Resources Committee identifying portions that can be opened up for appropriation.[48]

---

[42] 43 U.S.C. § 1613(h)(8)(A).

[43] P.L. 108-452, § 205. There are two minor exceptions: the Chugach Native Corporation's portion of the 200,000 acres is determined according to a 1982 agreement with the Corporation; and Cook Inlet Region's portion is held by the United States. *Id.*

[44] *Id.* at § 206.

[45] 43 U.S.C. § 1616(d)(1).

[46] The first few versions of S. 1466, which eventually became P.L. 108-452, would have vested the Interior Secretary with varying degrees of discretion to open and/or close these lands, touching off a debate between the mining and environmental communities. While the mining interests argued that the Secretary should only have the authority to *open* these lands, environmental groups countered that the Secretary should only be able to *close* them. In addition, the environmental groups did not want the Interior Secretary to be able to open these lands without going through the process mandated by the Federal Land Policy Management Act (FLPMA) (43 U.S.C. § 1701 et seq.). FLPMA requires that the Secretary develop land use plans governing management of public lands considering, among other things, present and potential uses, principles of sustained yield, long term vs. short-term benefits to the public, and compliance with applicable pollution control laws (43 U.S.C. § 1712(c)). For both sides of these debates, *see* S. Hrg. 108-163, at 32 (prepared statement of Steven C. Borrell, Executive Director, Alaska Miners Association, Inc.); and S. Hrg. 108-163, at 60 (statement of Eleanor Huffines, Alaska Regional Director, and Allen E. Smith, Alaska Senior Policy Analyst, the Wilderness Society).

[47] These statistics were provided to CRS by BLM's Alaska Office.

[48] P.L. 108-452, § 207. In conducting this review, the Secretary must provide for public notice and comment. *Id.*

While overselection of lands by Native Corporations presents practical obstacles to the completion of the land transfer process, there is also a relatively small number of Corporations that have not selected enough lands to fulfill their entitlements. Federal officials have been grappling with these "underselections" for years; Congress included in ANILCA a process for dealing with underselections,[49] but BLM argued that this process is too cumbersome.[50] This process includes two steps. First, the Secretary issues a Public Land Order (PLO) withdrawing twice the amount of land necessary to fulfill the Corporation's entitlement. Then, the Corporation has ninety days in which to file an application selecting from that amount enough land to fulfill its entitlement.[51] The act allows the parties to agree in advance which lands are to be selected. The Secretary may then withdraw the agreed-upon amount of land, which the Corporation would formally select.[52]

Similar to the authority that granted to the Secretary of the Interior to negotiate with the State to finalize its entitlements, the act grants the Secretary that same authority with regards to the Native Corporations.[53]

Title III. In 2003, BLM estimated that the remaining pending allotment applications totaled 3,256 acres of land, approximately 1,100 acres of which were erroneously conveyed to the State or to Native Corporations, and so no longer belong to the United States.[54] Recovery of title[55] of these lands has proven especially difficult, and the act seeks to ameliorate this problem by allowing the Secretary of the Interior to either correct erroneous conveyances (i.e., the conveyances that caused the lands to pass from the federal government's ownership in the first place) to exclude allotment land[56] or enter into agreements with Native Corporations whereby the Corporations reconvey the land to the United States.[57]

If the parties cannot agree to use the processes described above, then the act allows the State or Native Corporation to enter into an agreement with the applicant in which the applicant would receive substitute Native Corporation lands in place of

[50] *See* S. Hrg. 108-163, at 10 (prepared statement of Henri Bisson, State Director, Bureau of Land Management, Department of the Interior).

[51] 43 U.S.C. § 1621(j)(2).

[52] P.L. 108-452, § 208.

[53] *Id.* at § 209.

[54] *See* S. Hrg. 108-163, at 9 (prepared statement of Henri Bisson, State Director, Bureau of Land Management, Department of the Interior).

[55] For many years, the Department of the Interior routinely denied allotment applications for land conveyed to the State or Village Corporations. In 1979, however, a federal District Court ruled this was illegal, and ordered the Department to recover title to such lands. *Ethel Aguilar v. United States*, 474 F. Supp. 840 (D. Alaska 1979).

[56] P.L. 108-452, § 301.

[57] *Id.* at § 302.

those originally included in the allotment application.[58] If, as a result of any of the processes described above or any other effort to accelerate the Alaska land transfers, the State or a Native Corporation loses land in relation to its entitlement, then the Secretary of the Interior is empowered to adjust the remaining entitlement accordingly.[59]

The act allows for the reinstatement or reconstruction of previously closed allotment applications, and authorizes the Interior Secretary to seek the voluntary reconveyance of the land described in the application.[60] Native Veterans are allowed to amend their applications to include land valuable for its sand and gravel deposits, unless that land is part of a National Park.[61] In addition, the act amends the process for determining cause of death for applications filed on behalf of deceased Native Veterans to ensure that such determinations are supported by sufficient evidence.[62]

Title IV. In order to complete the land transfers by 2009, the act establishes sequential deadlines for prioritizing selections, with six-month intervals in between to allow the next group in line to know what the preceding group chose. The deadlines would expire in the following order: 1) Village Corporations;[63] 2) Regional Corporations;[64] and 3) the State.[65]

Title V. The act authorizes the Secretary of the Interior to establish a field office of DOI's Office of Hearings and Appeals in Alaska to handle disputes related to the Alaska land transfers.[66]

Title VI. The act requires the Secretary of the Interior, within three years of the bill's passage, to submit to Congress a report including a statement of progress on the Alaska land transfers and recommendations for completing the conveyances.[67] Finally, the act authorizes the appropriation of the sums necessary to carry out the purposes of the act.[68]

SENATE CS FOR CS FOR HOUSE JOINT RESOLUTION NO. 27( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES KELLY, Keller, Wilson, Johnson, Neuman, Millett, Olson, Lynn, Johansen, Gatto

SENATORS Therriault, Dyson, Wagoner

A RESOLUTION

Relating to sovereign powers of the state.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the Tenth Amendment to the Constitution of the United States reads, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people"; and

WHEREAS the Tenth Amendment defines the total scope of federal power as being that specifically granted by the Constitution of the United States and no more; and

WHEREAS some federal actions weaken states' rights protected by the Tenth Amendment to the Constitution of the United States; and

WHEREAS the Tenth Amendment assures that we, the people of the United States of America and each sovereign state in the Union of States, now have, and have always had, rights the federal government may not usurp; and

WHEREAS art. IV, sec. 4, Constitution of the United States, reads, "The United States shall guarantee to every State in this Union a Republican Form of Government," and the Ninth Amendment to the Constitution of the United States reads, "The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people"; and

WHEREAS the United States Supreme Court has ruled in New York v. United States, 112 S.Ct. 2408 (1992), that the United States Congress may not simply commandeer the legislative and regulatory processes of the states; and

WHEREAS all states, including Alaska, find themselves regularly facing proposals from the United States Congress that weaken states' rights protected by the Tenth Amendment;

BE IT RESOLVED that the Alaska State Legislature hereby claims sovereignty for the state under the Tenth Amendment to the Constitution of the United States over all powers not otherwise enumerated and granted to the federal government by the Constitution of the United States; and be it

FURTHER RESOLVED that this resolution serves as Notice and Demand to the federal government to cease and desist, effective immediately, mandates that are beyond the scope of these constitutionally delegated powers.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress; all other members of the 111th United States Congress; the presiding officers of the legislatures of each of the other 49 states; and the governors of each of the other 49 states.

CS HJR 27(RES) SPONSOR STATEMENT

HJR 27 re-asserts Alaska's rights as a sovereign. The resolution reminds the federal government that the 10th Amendment limits the scope of federal power to that specifically granted by the Constitution of the United States and no more. Each state possesses a vast array of rights that our Founders strove to make certain the federal government could not usurp, rights the federal government seems to increasingly have ignored or diminished.

This year several resolutions before the House refer to the abuse of federal powers and the consequences that abuse poses for Alaska including:

- HR 8 and SR 6 – Resolutions opposing the Transportation Security Administration's (TSA) proposal to require in-state general aviation to implement a Large Aircraft Security Plan, similar to that in effect for major Interstate and International airports and flights.
- HJR 17 – A Resolution opposing the "Blair Holt's Firearm Licensing and Record of Sale Act" which would violate Alaskans' 2nd Amendment right to keep and bear arms.
- SCR 3 – A Resolution Urging the Governor to take action against the US Department of the Interior for violating our right to manage our millions of acres of navigable waters and submerged lands.
- HB 186 – A bill exempting firearms manufactured and kept in Alaska from federal regulation.

The federal government's encroachment on state's rights doesn't stop there. According to the National Conference of State Legislatures, "the volume of federal legislation that preempts state authority has increased" and "pressure continues to mount for Congress and the White House to support federal usurpation of state authority in a variety of areas such as criminal law, tort reform, driver's license security and the environment."

Unfunded mandates in Medicare, Medicaid and Education spending, preemption of state absentee voting laws and product liability and consumer protection standards should be added to the list of over-reaching federal authority. As the 9th and 10th amendments to the United States Constitution anticipated, the states must forever retain the power and flexibility to craft innovative solutions to their own problems.

Often the broad manner in which laws are written in congress can most politely be described as overreaching and cavalier. One example that concerns Alaskans is a Congressional proposal that could turn into the confiscation of our firearms in violation of the 2nd Amendment. HJR 27 tells the feds to back off, that Alaska has the authority and right to determine how best to govern our state.

I would appreciate your support for this resolution.

Sponsor Statement

CS for House Joint Resolution No. 28 (RES) am

"Urging the President of the United States and the US Congress not to adopt any policy, rule or administrative action or enact legislation that would restrict energy exploration, development and production in federal and state waters around Alaska, the OCS within 200 miles of shore, and elsewhere in the continental US."

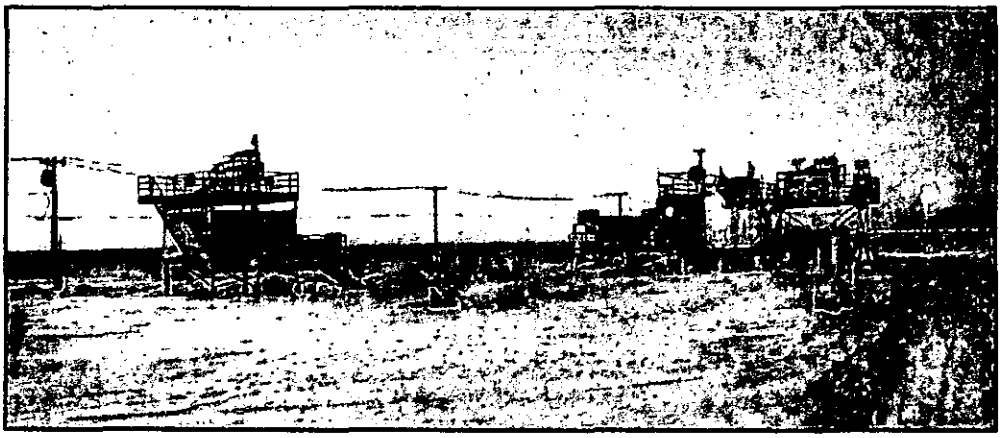
The Alaskan Outer Continental Shelf (OCS) is a potentially important source of future energy supply. Recent estimates of the potential resources in the OCS place the undiscovered reserves at 27 billion barrels of oil and 132 trillion CF of natural gas. Add this to the estimated 35,000 jobs that OCS development could potentially create and the economic benefits are clear.

Recent actions and statements from the President of the United States and his Administration have caused uncertainty among producers and regulators regarding the future of OCS development in Alaska and the continental United States. Considering the unprecedented escalation of gasoline and heating oil prices that were seen last year, as well as the current economic crisis America is facing today, now is not the time to restrict businesses that are creating jobs and generating revenue.

It is more important than ever that we work with the oil and gas industry and federal regulators to ensure that Alaska's pipeline continues to provide oil and gas to the nation and revenue to the state. To facilitate this, President Obama and his Administration need to avoid enacting regulations, rules or administrative actions that would hinder or ban OCS development.

CS HJR 28 (RES) urges President Obama, key members of his Administration and members of Congress to not adopt any policy, rule, administrative action or legislation that would restrict energy exploration, development and production in federal or state waters around Alaska, the OCS within 200 miles of shore or elsewhere in the continental United States. CS HJR 28 (RES) further urges the President and Congress to encourage and promote continued exploration, development and production of domestic oil and gas resources.

Co-Chair, House Resources Committee
Member of Rules, State Affairs, Transportation Committees



By Tim Bradner, Alaska Journal of Commerce

Offshore development off Alaska's coasts could create an annual average of 35,000 new jobs in Alaska and $72 billion in total new payroll over a 50-year period, according to a study by the University of Alaska Anchorage's Institute of Social and Economic Research and Northern Economics Inc.

The growth in jobs resulting from outer continental shelf development could also lead to a 5 percent increase in statewide population, the study said. Most of the growth would be concentrated in Alaska's existing population centers but small coastal communities near the exploration areas could see dramatic expansion, the researchers said.

Shell Exploration and Production paid for the study, which was done over the last year, company spokesman Curtis Smith said. Shell hopes to explore leases in the Beaufort and Chukchi seas.

The study assumed development of a number of offshore projects in three active federal outer continental shelf leasing areas, the Beaufort and Chukchi seas, and the North Aleutian Shelf off the state's southwest coast. Scenarios used were those developed by the U.S. Minerals Management Service in planning the sales, according to Patrick Burden, president of Northern Economic.

The new jobs would include 6,000 directly employed in production and by oil field services companies, 3,000 in support of the infrastructure needed for production, such as pipelines, 22,000 in indirect support work such as engineering and transportation, and 4,000 in the state and local governments near the offshore production areas, Burden said in a briefing held Monday for Anchorage business leaders.

Offshore oil and gas production would also result in an estimated $15.3 billion in additional state government revenue assuming an average price of $65 per barrel over the 50-year period, Burden said.

About $10 billion of that would result because of additional crude flowing through the Trans-Alaska Pipeline System from OCS production. Additional liquids in TAPS would lower tariffs for all oil moved through the pipeline, resulting in higher state royalty and tax revenues to the state from production on state-owned lands, Burden said.

OCS development would also increase municipal government revenues for local governments near the production areas by $4.5 billion, mostly through new property tax income on onshore pipelines and other support facilities.

Most of the new municipal revenue would go to the North Slope Borough, which borders the Beaufort and Chukchi regions where OCS development could occur.

The scenarios used in the analysis, which were developed by the MMS, include seven major offshore fields and seven production platforms in the Beaufort Sea, four major fields and four platforms in the Chukchi Sea and two field and two platforms in the North Aleutian Shelf area.

Assumptions used in the study, also by the MMS, include new oil production resulting from the developments totaling about 1.5 million barrels per day in 2032.

"Outer continental shelf-related employment growth could more than offset losses from the decline of petroleum production on state lands and could help sustain Alaska's economy for several decades," Burden said.

OUTER CONTINENTAL SHELF DEFINITIONS

Outer Continental Shelf: The Federal Government administers the submerged lands, subsoil, and seabed, lying between the seaward extent of the States' jurisdiction and the seaward extent of Federal jurisdiction.

State jurisdiction is defined as follows:

- Texas and the Gulf coast of Florida are extended 3 marine leagues (9 nautical miles) seaward from the baseline from which the breadth of the territorial sea is measured.
- Louisiana is extended 3 imperial nautical miles (imperial nautical mile = 6080.2 feet) seaward of the baseline from which the breadth of the territorial sea is measured.
- All other States' seaward limits are extended 3 nautical miles (approximately 3.3 statute miles) seaward of the baseline from which the breadth of the territorial sea is measured.

Federal jurisdiction is defined under accepted principles of international law. The seaward limit is defined as the farthest of 200 nautical miles seaward of the baseline from which the breadth of the territorial sea is measured or, if the continental shelf can be shown to exceed 200 nautical miles, a distance not greater than a line 100 nautical miles from the 2,500-meter isobath or a line 350 nautical miles from the baseline.

Outer Continental Shelf limits greater than 200 nautical miles but less than either the 2,500 meter isobath plus 100 nautical miles or 350 nautical miles are defined by a line 60 nautical miles seaward of the foot of the continental slope or by a line seaward of the foot of the continental slope connecting points where the sediment thickness divided by the distance to the foot of the slope equals 0.01, whichever is farthest.

Assessment of Undiscovered Technically Recoverable Oil and Gas Resources of the Nation's Outer Continental Shelf, 2006

Using a play-based assessment methodology, the Minerals Management Service estimated a mean of 85.9 billion barrels of undiscovered recoverable oil and a mean of 419.9 trillion cubic feet of undiscovered recoverable natural gas in the Federal Outer Continental Shelf of the United States.

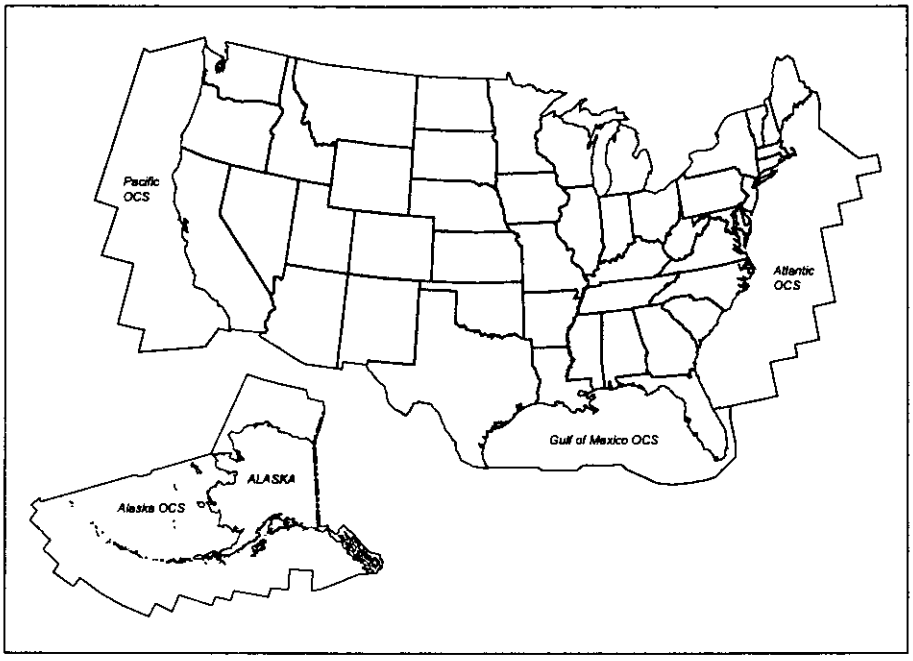

Figure 1. Federal OCS Areas of the United States.

Introduction

This report summarizes the results of the Minerals Management Service (MMS) 2006 assessment of the technically recoverable oil and gas resources for the U.S. Outer Continental Shelf (OCS) (see figure 1). The OCS comprises the portion of the submerged seabed whose mineral estate is subject to Federal jurisdiction. The 2006 assessment represents a comprehensive appraisal that considered relevant data and information available as of January 1, 2003, incorporated advances in petroleum exploration and development technologies, and employed new methods of resource assessment.

This assessment provides estimates of the undiscovered, technically and economically recoverable oil and natural gas resources located outside of known oil and gas fields on the OCS. It considers recent geophysical, geological, technological, and economic information and utilizes a probabilistic play-based approach to estimate the undiscovered technically recoverable resources (UTRR) of oil and gas for individual plays. This methodology is suitable for both conceptual plays where there is little or no specific information available, and for developed plays where there are discovered oil and gas fields and considerable information is available. After estimation, individual play results are aggregated to larger areas such as basins and regions. Estimates of the quantities of historical production, reserves, and future reserves appreciation are presented to provide a frame of reference for analyzing the estimates of UTRR.

More detailed information about the geology, assessment methodology, and economics will be published in separate regional assessment reports.

Commodities Assessed

The petroleum commodities assessed in this inventory are crude oil, natural gas liquids (condensate), and natural gas that exist in conventional reservoirs and are producible with conventional recovery techniques. Crude oil and condensate are reported jointly as oil; associated and nonassociated gas are reported as gas. Oil volumes are reported as stock tank barrels and gas as standard cubic feet. Oil-equivalent gas is a volume of gas (associated and/or nonassociated) expressed in terms of its energy equivalence to oil (i.e., 5,620 cubic feet of gas per barrel of oil) and is reported in barrels. The combined volume of oil and oil-equivalent gas resources is referred to as barrel of oil-equivalent (BOE) and is reported in barrels.

This assessment does not include potentially large quantities of hydrocarbon resources that could be recovered from known and future fields by enhanced recovery techniques, gas in

geopressured brines, natural gas hydrates, or oil and natural gas that may be present in insufficient quantities or quality (low permeability "tight" reservoirs) to be produced by conventional recovery techniques. In some instances the boundary between these resources is somewhat indistinct; however, we have not included in this assessment any significant volume of unconventional resources.

Estimates of undiscovered recoverable resources are presented in two categories, undiscovered technically recoverable resources (UTRR) and undiscovered economically recoverable resources (UERR). In addition, the quantities of historical production, reserves, and future reserves appreciation are presented to provide a frame of reference for analyzing the estimates of UTRR. The UERR results are presented as price-supply curves which show the relationship of price to economically recoverable resource.

Methodology

This assessment incorporated a comprehensive play-based (see list of terms) approach toward the analysis of hydrocarbon potential. A major strength of this method is that it has a strong relationship between information derived from oil and gas exploration activities and the geologic model developed by the assessment team. An extensive effort was involved in developing play models, delineating the geographic limits of each play, and compiling data on critical geologic and reservoir engineering parameters. These parameters were crucial input in the determination of the total quantities of recoverable resources in each play.

Due to the inherent uncertainties associated with an assessment of undiscovered resources, probabilistic techniques were employed and the results reported as a range of values corresponding to different probabilities of occurrence. For plays in frontier areas with sparse data, analogs were developed using subjective probabilities to cover the range of uncertainties. Most plays in the Alaska, Atlantic and some in the Pacific OCS were assessed this way. For mature areas with significant amounts of data, such as the Gulf of Mexico and southern California, plays were analyzed using a method based on statistical parameters of discovered pools and historical trends.

Assessment Results

The MMS completed an assessment of the undiscovered technically recoverable oil and natural gas resources of the OCS, which reflects data and information available as of January 1, 2003. This assessment was the culmination of a multi-year effort that included data and information not available at the time of the previous assessment (MMS, 2001), incorporated advances in petroleum exploration and development technologies, and employed new methods of resource assessment.

UTRR estimates are presented at 95th and 5th percentile levels, as well as the mean estimate. This range of estimates corresponds to a 95-percent probability (a 19 in 20 chance) and a 5-percent probability (a 1 in 20 chance) of there being more than those amounts present, respectively. The 95- and 5-percent probabilities are considered reasonable minimum and maximum values, and the mean is the average or expected value. Results for individual plays, basins, and planning areas will be presented in subsequent regional reports.

Estimates of UTRR for the entire OCS range from 66.6 Bbo at the F_{95} fractile to 115.1 Bbo at the F_5 fractile with a mean of 85.9 Bbo (figure 2 and table 1). Similarly, gas estimates range from 326.4 to 565.9 Tcf with a mean of 419.9 Tcf. On a barrel of oil-equivalence (BOE) basis 54 percent of the potential is located within the Gulf of Mexico. The Alaska OCS ranks second with 31 percent. The Pacific is third among the regions

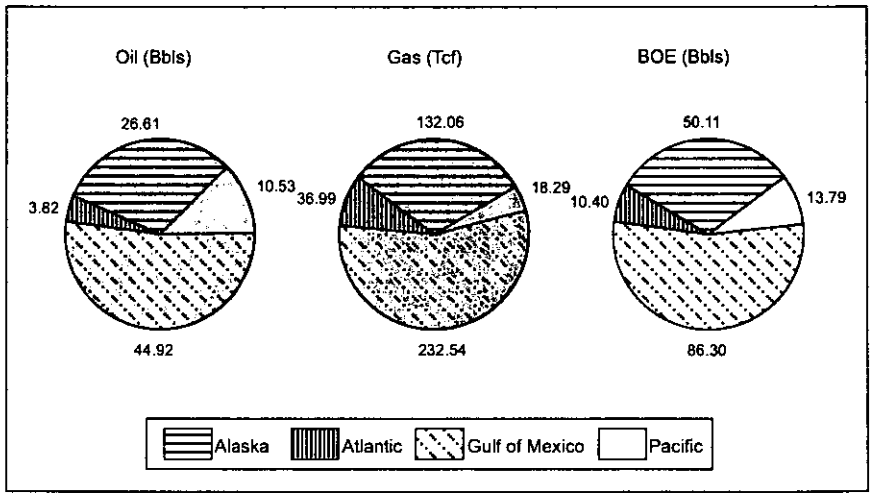

Figure 2. Undiscovered Technically Recoverable Resources by type and region.

in terms of oil potential and fourth with respect to gas. The Atlantic region, on the other hand, ranks third when considering gas potential and fourth in terms of oil.

Technological advances in hydrocarbon exploration and development are sure to occur in the future, yet the nature of advancement is extremely hard to predict and its impact difficult to estimate. However, past experience indicates most technological breakthroughs occur during high-cost scenarios and impact exploration and development by lowering the cost and sometimes by improving the chance of success. For the purpose of this assessment, recent technological advances in gathering, processing, and interpreting seismic data contributed to the identification and mapping of geological plays and development of geologic parameters used to model the plays. Similarly, recent technological advances in offshore drilling and development operations were incorporated through the assumptions associated with the costs of these activities.

However, no attempt was made to determine an empirical relationship between the future technological advancements and the estimated undiscovered resources. MMS believes that future technological advances will significantly affect the

Table 1. Undiscovered Technically Recoverable Resources of the OCS

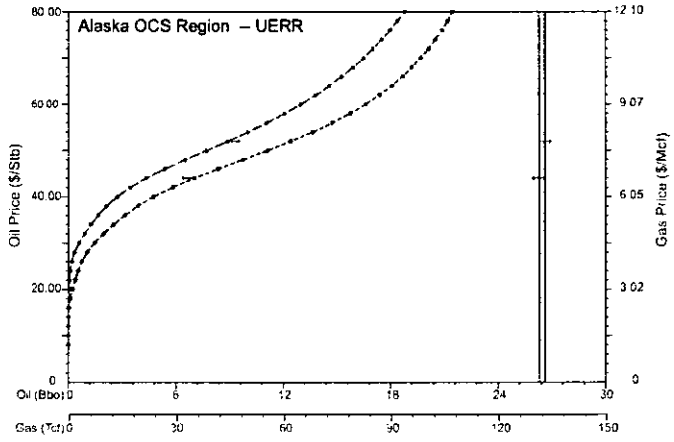
(Bbo, billion barrels of oil, Tcf, trillion cubic of gas. F95 indicates a 95 percent chance of at least the amount listed, F5 indicates a 5 percent chance of at least the amount listed. Only mean values are additive.)

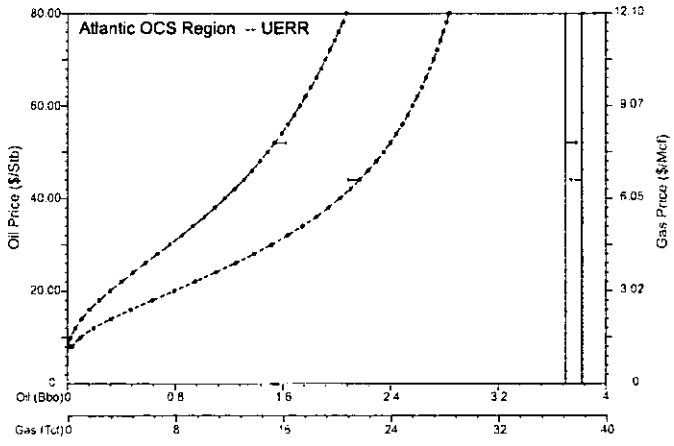
Region	Oil (Bbo)			Natural Gas (Tcf)			BOE (Bbo)		
	95%	Mean	5%	95%	Mean	5%	95%	Mean	5%
Alaska OCS	8.66	26.61	55.14	48.28	132.06	279.62	17.25	50.11	104.89
Atlantic OCS	1.12	3.82	7.57	14.30	36.99	66.46	3.67	10.40	19.39
Gulf of Mexico OCS	41.21	44.92	49.11	218.83	232.54	249.08	80.15	86.30	93.43
Pacific OCS	7.55	10.53	13.94	13.28	18.29	24.12	9.91	13.79	18.24
Total U.S. OCS	66.60	85.88	115.13	326.40	419.88	565.87	124.68	160.60	215.82

portion of the undiscovered resources represented by estimates of UTRR, resulting in an increased percentage being classified as economically recoverable resources.

Estimates of UERR are presented as price-supply curves for the entire OCS as well as individual regions (figure 3). A price-supply curve shows the relationship of price to economically recoverable resource volumes (i.e., a horizontal line from the price axis to the curve yields the quantity of economically recoverable resources at the selected price). The price-supply curve for each region shows two curves and two price scales, one for oil and one for gas. The curves represent mean values at any specific price. They are not independent of each other; that is, one specific oil price cannot be used to obtain an oil resource and a separate gas price used to get a gas resource. The gas price is dependent on the oil price and must be used in conjunction with the oil price on the opposite axis to calculate resources. The reason for this condition is that oil and gas frequently occur together and the individual pool economics are calculated using the coupled pricing. A different gas price associated with the oil price would result in a different resource number than that shown on the curve.

The two vertical lines (green for oil and red for natural gas) indicate the mean estimates of UTRR. At high prices, the economically recoverable resource volumes approach the conventionally recoverable volumes. These curves represent resources available with sufficient exploration and development efforts and do not imply an immediate response to price changes.





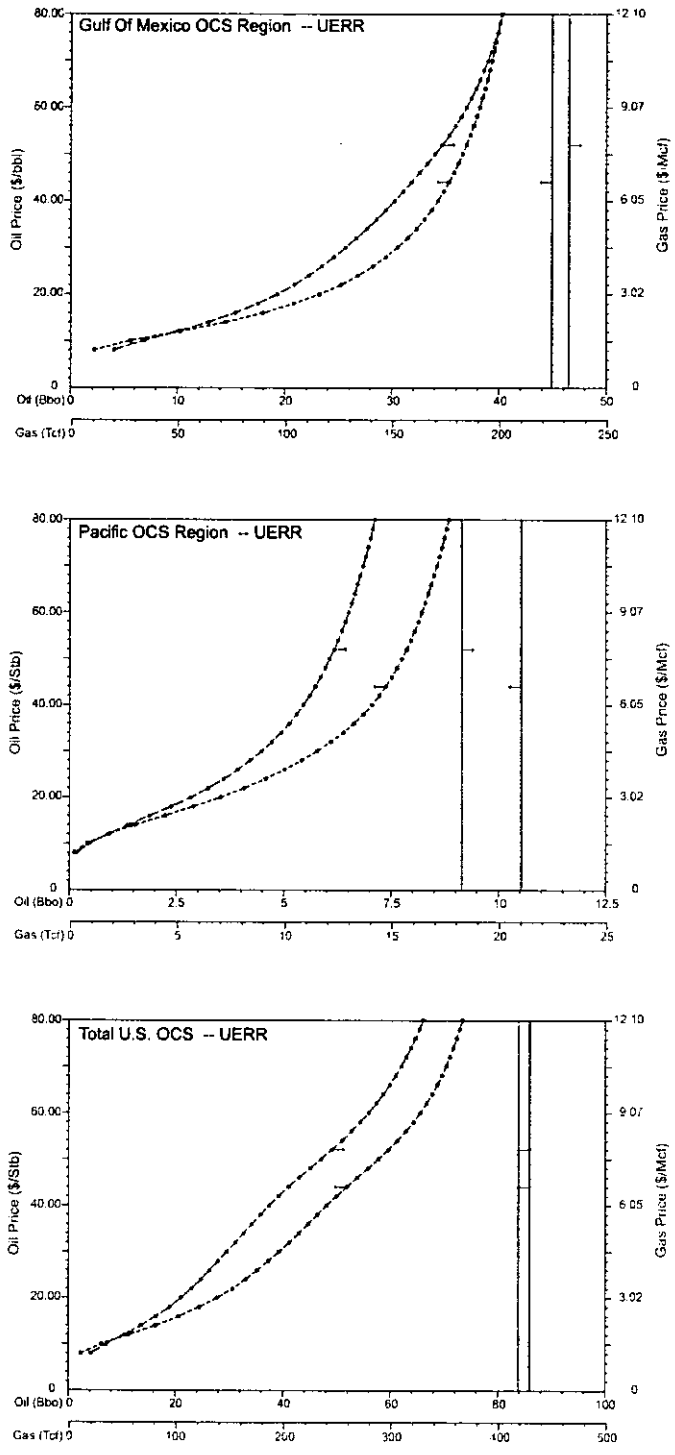


Figure 3. Price Supply Curves for Federal OCS Regions and Total Federal OCS.

Estimates of the quantities of historical production, reserves, and future reserves appreciation are presented to provide a frame of reference for analyzing the estimates of UTRR. The *total endowment* is the sum of historic production, reserves, future reserves appreciation, and UTRR. Mean estimates of the total endowment for the entire OCS are 115.4 Bbo and 633.6 Tcfg (228.2 BBOE). The total endowment distribution by resource category can be seen in figure 4 and table 2. More than 18 percent of the total endowment in terms of the mean estimate of BOE has already been produced. An additional 11 percent is contained within the various reserves categories, the source of near and midterm production. After more than 50 years of OCS exploration and development, 70 percent of the mean BOE total endowment is still represented by undiscovered resources.

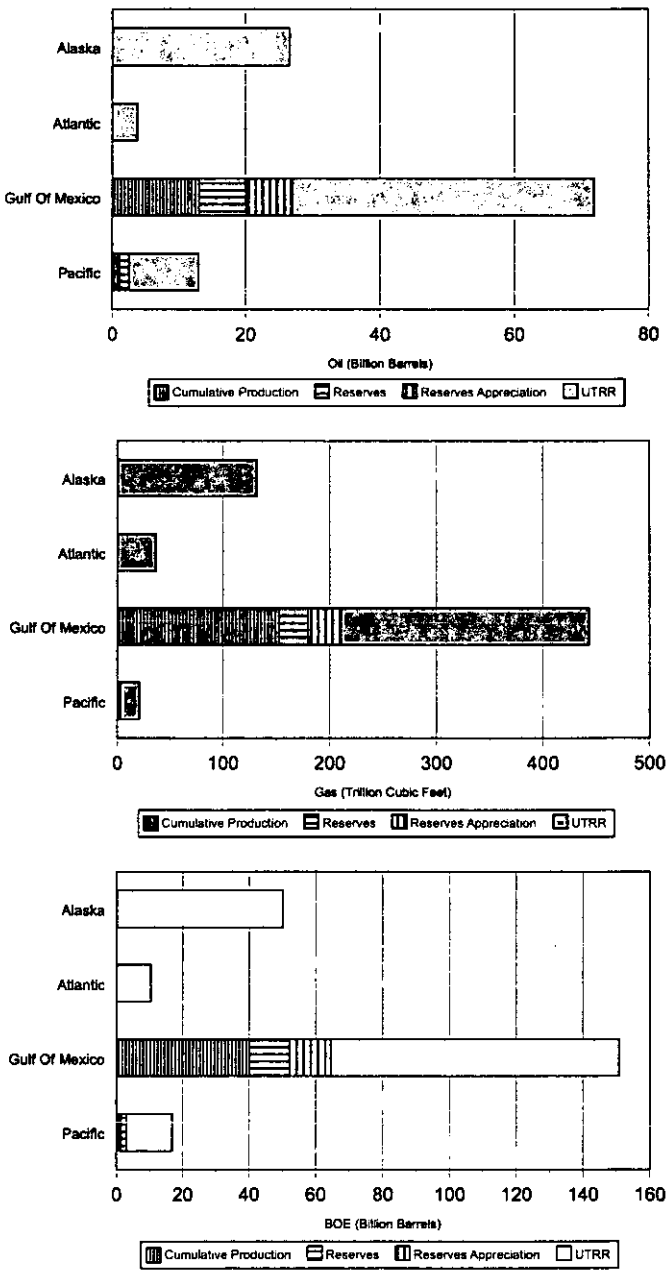

Figure 4. Distribution of total hydrocarbon endowment by type, region and resource category.

Table 2. Distribution of total hydrocarbon endowment by type, region and resource category.

Resource Category		Alaska	Atlantic	Gulf of Mexico	Pacific	Total OCS

	BOE (Bbo)	**50.15**	**10.40**	**150.81**	**16.82**	**228.18**

Comparison with Previous Assessments

A general comparison of 1996, 2001, and 2006 assessment UTRR results is shown in figure 5. At the mean level, the estimates of UTRR for the entire OCS represent an increase compared to the previous (2001) assessment of 10.9 Bbo and 57.7 Tcfg or about 15 percent for oil and gas. The vast majority of this increase occurred in the Gulf of Mexico, where estimates of UTRR range from 41.2 to 49.1 Bbo and 218.8 to 249.1 Tcfg with a mean of 44.9 Bbo and 232.5 Tcfg respectively. Significant increases in the estimates for the deepwater areas were the major contributor to the overall growth in the estimates of UTRR for oil. The majority of the increase in the estimate of UTRR from gas was related to deep gas plays located beneath the shallow water shelf of the Gulf of Mexico. This increase in UTRR was also accompanied by approximately 4.5 Bbo and 14 Tcfg that were discovered in fields such as Thunder Horse and Holstein, whose resources were moved to the reserve category during this time period.

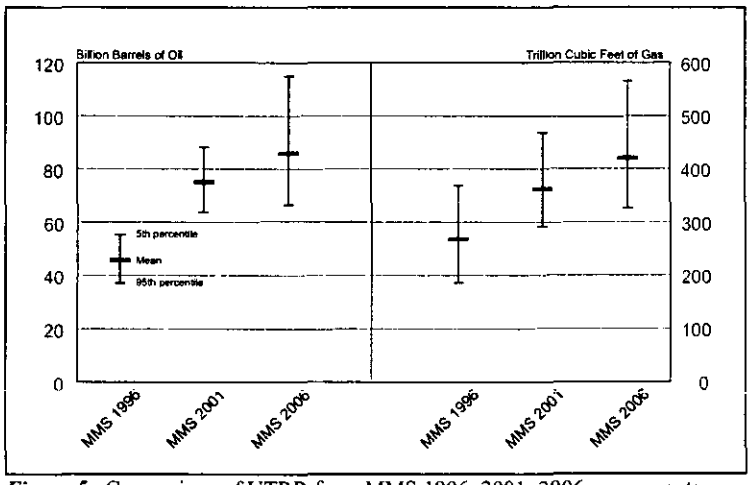

Figure 5. Comparison of UTRR from MMS 1996, 2001, 2006 assessments.

In the Pacific Region, the mean estimate for UTRR of 10.5 Bbo and 18.3 Tcfg represented a slight decrease for both oil and natural gas. The Atlantic estimate of UTRR ranges from 1.1 to 7.6 Bbo and 14.3 to 66.5 Tcfg with a mean of 3.8 Bbo and 37.0 Tcfg. The estimates represent a 66 percent increase in oil resources and a 33 percent increase in gas resources in the Atlantic OCS, when compared with the MMS 2001 assessment. The last remaining leases in the Atlantic OCS, on the Manteo Prospect, expired in 2002 without a well being drilled. However, significant new analog information was available as the result of recent exploration in the Scotian Shelf offshore Canada and the West African Continental Slope offshore Mauritania. Applying these new exploration ideas to the older Atlantic play models led to adjustments to risks in previously defined plays and the identification of additional new plays.

Estimates of UTRR on the Alaska OCS changed only slightly compared to the previous assessment. The mean oil estimate

increased by 1.7 Bbo, while the mean natural gas estimate declined by 6.7 Tcf. The first Alaskan OCS production occurred in 2001 from the joint state/Federal Northstar unit in the Beaufort Sea.

Fifty-four percent of the mean estimate of UTRR on a BOE basis was projected to be present in the Gulf of Mexico OCS. The Alaska, Pacific and Atlantic OCS comprise 31, 9 and 6 percent respectively of the total UTRR.

List of Terms

Cumulative production: The sum of all produced volumes of oil and gas prior to a specified point in time.

Pool: A discovered or undiscovered accumulation of hydrocarbons, typically within a single stratigraphic interval.

Play: A group of pools that share a common history of hydrocarbon generation, migration, reservoir development, and entrapment.

Probability: A means of expressing an outcome on a numerical scale that ranges from impossibility to absolute certainty; the chance that a specified event will occur.

Prospect: A geologic feature having the potential for trapping and accumulating hydrocarbons; a pool or potential field.

Reserves: The quantities of hydrocarbon resources anticipated to be recovered from known accumulations from a given date forward. All reserve estimates involve some degree of uncertainty.

Reserves appreciation: The observed incremental increase through time in the estimates of reserves (proved and unproved) of an oil and/or natural gas field as a consequence of extension, revision, improved recovery, and the addition of new reservoirs.

Resources: Concentrations in the earth's crust of naturally occurring liquid or gaseous hydrocarbons that can conceivably be discovered and recovered.

Undiscovered resources: Resources postulated, on the basis of geologic knowledge and theory, to exist outside of known fields or accumulations.

Undiscovered technically recoverable resources (UTRR): Oil and Gas that may be produced as a consequence of natural pressure, artificial lift, pressure maintenance, or other secondary recovery methods, but without any consideration of economic viability. They are primarily located outside of known fields.

Undiscovered economically recoverable resources (UERR): The portion of the undiscovered conventionally recoverable resources that is economically recoverable under imposed economic and technologic conditions.

Re: HJR28, Urging the President and U.S. Congress not to restrict energy exploration, development, and production in federal and state waters around Alaska

Dear Representative Johnson and Representative Neuman:

On behalf of the Resource Development Council for Alaska, Inc., (RDC), I am writing in support of HJR28, which urges the President and U.S. Congress not to restrict energy exploration, development, and production in federal and state waters around Alaska.

RDC is a statewide, non-profit, membership-funded organization founded in 1975. The RDC membership is comprised of individuals and companies from Alaska's oil and gas, mining, timber, tourism, and fisheries industries, as well as Alaska Native corporations, local communities, organized labor, and industry support firms. RDC's purpose is to link these diverse interests together to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

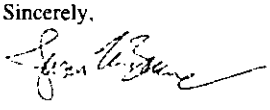
Oil and gas resources located in the Outer Continental Shelf out to 200 miles are vital to the economic viability of a gas pipeline to the Lower 48 and the continued operation of the Trans Alaska Pipeline System. Indeed, an additional 15 TCF of natural gas must be discovered for either the Trans-Canada or Denali pipeline projects to be economically viable over the long term. In addition, throughput in TAPS continues its decline from 2.1 million barrels of oil per day in the late 80s to one-third of that today. This trend can be reversed with production from the OCS where we should be encouraging development, not hampering it.

No one has more care for the environment than Alaskans, and OCS development has a strong track record. It has coexisted with other industries including fishing, in Cook Inlet, the North Sea, and the Gulf of Mexico. Energy exploration, development, and production in federal and state waters around Alaska will occur in an environmentally-sensitive and responsible manner overseen by the strongest of regulatory regimes. When necessary, seasonal operating restrictions and mitigation measures to avoid conflicts with other resource users will be employed.

Given the nation will remain heavily reliant on oil and gas development for decades, America must harness the significant energy resources beneath its most promising onshore and offshore oil and gas basins. It is important to take into consideration, when formulating public policy, that for every barrel of oil America refuses to develop domestically, it will have little choice but to import an equal amount from overseas – where weaker environmental regulations often apply.

With the impact high-energy prices have on Americans and their economy, the U.S. has a moral obligation to develop domestic energy sources, and the OCS is the ideal location. The resources located in the OCS will buy us the time we need to develop the alternative and renewable energy resources that will someday break our reliance on foreign oil. We encourage the Committee to vote in favor of this resolution. Thank you for your consideration.

Sincerely,



Jason Brune
Executive Director

Anchorage, AK 99503
907.770.3700

March 30, 2009

The Honorable Craig Johnson
Alaska State Representative
VIA FACSIMILE

Dear Representative Johnson,

Thank you for your work on HJR 28 and your support for increased access to the offshore.

Shell supports HJR 28 as additional access to the Outer Continental Shelf (OCS) oil and gas would provide resources critical to our nation's energy supply and security. While Shell supports development of a number of energy alternatives to keep up with future demand, oil and natural gas make up two-thirds of our nation's energy needs and will be our main source of fuel for the foreseeable future. In fact, global demand for oil and natural gas is expected to increase 50 percent by 2030 and double by 2050. Currently, 65 percent of our nation's oil supply and nearly 20 percent of our natural gas are imported - accounting for an annual transfer of $600 Billion to foreign suppliers.

The resources believed to be in the in the offshore could play a major role in offsetting that imbalance. Unfortunately, almost 90 percent of all federally controlled coastal waters are currently off-limits, including an estimated 466 trillion cubic feet of natural gas and 91 billion barrels of crude oil. There is enough natural gas off our coasts to heat 100 million homes for the next 60 years and drive 85 million cars for 35 years. A great deal of that gas is located in the Alaska OCS. The US Minerals Management Service conservatively estimates that the federal waters adjacent to the State of Alaska contain 25 billion barrels of oil and 122 trillion cubic feet of natural gas.

Again, thank you for your efforts on this bill.

Sincerely,

Cam Toohey
Manager, Government Relations
Alaska

SENATE CS FOR CS FOR HOUSE JOINT RESOLUTION NO. 40(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE SENATE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES MILLETT, Neuman, Lynn, Johnson, Keller, Gatto, Olson, Stoltze, Johansen

A RESOLUTION

Opposing the proposed designation by the National Marine Fisheries Service of 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the Endangered Species Act requires economic effects to be taken into account for critical habitat designations, and areas may be excluded from critical habitat if it is determined that the benefit of such exclusion outweighs the benefit of specifying such areas as critical habitat; and

WHEREAS the National Marine Fisheries Service has proposed declaring 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales; and

WHEREAS scientists in the National Marine Fisheries Service have concluded that the primary reason for the population decline was the unsustainable subsistence harvest in the 1990s; and

WHEREAS a cooperative harvest management plan was put into place in 2000; and

WHEREAS scientists predicted signs of recovery of the beluga whale population would take five to seven years after a cooperative harvest management plan was instituted; and

WHEREAS, in 2005, the population of beluga whales was 278, and, in 2009, the population was 321, a four percent increase a year; and

WHEREAS the State of Alaska has given notice of its intent to sue challenging the Cook Inlet beluga whale Endangered Species Act listing; and

WHEREAS there is little evidence that human activity has harmed the beluga whale's environment, migration, or ecology; and

WHEREAS the National Marine Fisheries Service has stated that the additional regulatory oversight will cost only an additional $600,000 over the next decade; and

WHEREAS the cost estimate does not factor in the extra costs that existing and future operations may have to pay to meet unnecessary new regulatory burdens; and

WHEREAS a critical habitat designation in Cook Inlet may hurt community and economic development; and

WHEREAS permitting and construction projects may suffer costly delays, and economic development could be curtailed; and

WHEREAS the proposed Knik Arm Bridge, Port Mackenzie, tourism, and vessel traffic may be negatively affected; and

WHEREAS infrastructure development in Cook Inlet for resource development and energy projects could be threatened by critical habitat designations; and

WHEREAS the Port of Anchorage serves 85 percent of the population of the state and receives 90 percent of the goods coming into the state, and the port has already fully addressed the conservation needs of the Cook Inlet beluga whales relating to the whales' activity, based on the best scientific information available, working with the National Marine Fisheries Service and other experts; and

WHEREAS military deployments from the Port of Anchorage, military flight patterns, and military operations could be negatively affected or limited with no benefit to beluga whales; and

WHEREAS environmental lawsuits may add significant delays and millions of dollars to the cost of economic development projects in the Cook Inlet area; and

WHEREAS decades of safe and environmentally responsible oil and gas production, vessel transportation, community development, commercial, sport, and subsistence fishing, and other economic activity in Cook Inlet have taken place without harming Cook Inlet beluga whales; and

WHEREAS future oil and gas exploration, development, and production could be gravely affected by critical habitat designations; and

WHEREAS southcentral Alaska energy needs have been met predominantly through responsible oil and gas production in Cook Inlet for nearly 50 years while beluga whale populations thrived; and

WHEREAS there is little evidence that commercial or sport fishing is harming the beluga whale population; and

WHEREAS the commercial and sport fishing industries could be gravely threatened by a critical habitat designation because the beluga whale's primary food source is fish; and

WHEREAS lost development opportunities because of critical habitat designations could ultimately lead to lost revenue to the State of Alaska and to local governments; and

WHEREAS all three members of Alaska's congressional delegation and Governor Sean Parnell are opposed to the critical habitat designation; and

WHEREAS designation of such broad areas of municipal, commercial, and industrial interest, without any known or identifiable link between these activities and the conservation status of the Cook Inlet beluga whale is contrary to the public interest; and

WHEREAS the conservation benefits, which are entirely uncertain and speculative, are outweighed by the costs and impediments posed by designation of critical habitat in this instance in most, if not all, of the proposed designation area;

BE IT RESOLVED that the Alaska State Legislature opposes the proposed designation by the National Marine Fisheries Service of 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales; and be it

FURTHER RESOLVED that the State of Alaska requests a more robust economic analysis be completed by the National Marine Fisheries Service before finalizing any critical habitat designation; and be it

FURTHER RESOLVED that the State of Alaska urges that any final critical habitat

designation, including any research conducted by State of Alaska marine mammal experts, that clearly links any designated critical habitat to the conservation and recovery of the Cook Inlet beluga whales be supported by sound science.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; the Honorable Gary F. Locke, United States Secretary of Commerce; Dr. Jane Lubchenko, Under Secretary of Commerce for Oceans and Atmosphere, United States Department of Commerce; Kaja Brix, Director, Protected Resources Division, Alaska Region, National Marine Fisheries Service, National Oceanic and Atmospheric Administration; the Honorable Dan Sullivan, Mayor of the Municipality of Anchorage; the Honorable John C. Combs, Mayor of the City of Palmer; the Honorable Verne E. Rupright, Mayor of the City of Wasilla; the Honorable Talis Colberg, Mayor of the Matanuska Susitna Borough; the Honorable James C. Hornaday, Mayor of the City of Homer; the Honorable Pat Porter, Mayor of the City of Kenai; the Honorable Peter A. Micciche, Mayor of the City of Soldotna; the Honorable Dave Carey, Mayor of the Kenai Peninsula Borough; and the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

Adopted

SENATE CS FOR CS FOR HOUSE JOINT RESOLUTION NO. 40(RES)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - SECOND SESSION

BY THE SENATE RESOURCES COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES MILLETT, Neuman, Lynn, Johnson, Keller, Gatto, Olson, Stoltze, Johansen

A RESOLUTION

Opposing the proposed designation by the National Marine Fisheries Service of 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales.

BE IT RESOLVED BY THE LEGISLATURE OF THE STATE OF ALASKA:

WHEREAS the Endangered Species Act requires economic effects to be taken into account for critical habitat designations, and areas may be excluded from critical habitat if it is determined that the benefit of such exclusion outweighs the benefit of specifying such areas as critical habitat; and

WHEREAS the National Marine Fisheries Service has proposed declaring 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales; and

WHEREAS scientists in the National Marine Fisheries Service have concluded that the primary reason for the population decline was the unsustainable subsistence harvest in the 1990s; and

WHEREAS a cooperative harvest management plan was put into place in 2000; and

WHEREAS scientists predicted signs of recovery of the beluga whale population would take five to seven years after a cooperative harvest management plan was instituted; and

WHEREAS, in 2005, the population of beluga whales was 278, and, in 2009, the population was 321, a four percent increase a year; and

WHEREAS the State of Alaska has given notice of its intent to sue challenging the Cook Inlet beluga whale Endangered Species Act listing; and

WHEREAS there is little evidence that human activity has harmed the beluga whale's environment, migration, or ecology; and

WHEREAS the National Marine Fisheries Service has stated that the additional regulatory oversight will cost only an additional $600,000 over the next decade; and

WHEREAS the cost estimate does not factor in the extra costs that existing and future operations may have to pay to meet unnecessary new regulatory burdens; and

WHEREAS a critical habitat designation in Cook Inlet may hurt community and economic development; and

WHEREAS permitting and construction projects may suffer costly delays, and economic development could be curtailed; and

WHEREAS the proposed Knik Arm Bridge, Port Mackenzie, tourism, and vessel traffic may be negatively affected; and

WHEREAS infrastructure development in Cook Inlet for resource development and energy projects could be threatened by critical habitat designations; and

WHEREAS the Port of Anchorage serves 85 percent of the population of the state and receives 90 percent of the goods coming into the state, and the port has already fully addressed the conservation needs of the Cook Inlet beluga whales relating to the whales' activity, based on the best scientific information available, working with the National Marine Fisheries Service and other experts; and

WHEREAS military deployments from the Port of Anchorage, military flight patterns, and military operations could be negatively affected or limited with no benefit to beluga whales; and

WHEREAS environmental lawsuits may add significant delays and millions of dollars to the cost of economic development projects in the Cook Inlet area; and

WHEREAS decades of safe and environmentally responsible oil and gas production, vessel transportation, community development, commercial, sport, and subsistence fishing, and other economic activity in Cook Inlet have taken place without harming Cook Inlet beluga whales; and

WHEREAS future oil and gas exploration, development, and production could be gravely affected by critical habitat designations; and

WHEREAS southcentral Alaska energy needs have been met predominantly through responsible oil and gas production in Cook Inlet for nearly 50 years while beluga whale populations thrived; and

WHEREAS there is little evidence that commercial or sport fishing is harming the beluga whale population; and

WHEREAS the commercial and sport fishing industries could be gravely threatened by a critical habitat designation because the beluga whale's primary food source is fish; and

WHEREAS lost development opportunities because of critical habitat designations could ultimately lead to lost revenue to the State of Alaska and to local governments; and

WHEREAS all three members of Alaska's congressional delegation and Governor Sean Parnell are opposed to the critical habitat designation; and

WHEREAS designation of such broad areas of municipal, commercial, and industrial interest, without any known or identifiable link between these activities and the conservation status of the Cook Inlet beluga whale is contrary to the public interest; and

WHEREAS the conservation benefits, which are entirely uncertain and speculative, are outweighed by the costs and impediments posed by designation of critical habitat in this instance in most, if not all, of the proposed designation area;

BE IT RESOLVED that the Alaska State Legislature opposes the proposed designation by the National Marine Fisheries Service of 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales; and be it

FURTHER RESOLVED that the State of Alaska requests a more robust economic analysis be completed by the National Marine Fisheries Service before finalizing any critical habitat designation; and be it

FURTHER RESOLVED that the State of Alaska urges that any final critical habitat

designation, including any research conducted by State of Alaska marine mammal experts, that clearly links any designated critical habitat to the conservation and recovery of the Cook Inlet beluga whales be supported by sound science.

COPIES of this resolution shall be sent to the Honorable Barack Obama, President of the United States; the Honorable Joseph R. Biden, Jr., Vice-President of the United States and President of the U.S. Senate; the Honorable Nancy Pelosi, Speaker of the U.S. House of Representatives; the Honorable Gary F. Locke, United States Secretary of Commerce; Dr. Jane Lubchenko, Under Secretary of Commerce for Oceans and Atmosphere, United States Department of Commerce; Kaja Brix, Director, Protected Resources Division, Alaska Region, National Marine Fisheries Service, National Oceanic and Atmospheric Administration; the Honorable Dan Sullivan, Mayor of the Municipality of Anchorage; the Honorable John C. Combs, Mayor of the City of Palmer; the Honorable Verne E. Rupright, Mayor of the City of Wasilla; the Honorable Talis Colberg, Mayor of the Matanuska Susitna Borough; the Honorable James C. Hornaday, Mayor of the City of Homer; the Honorable Pat Porter, Mayor of the City of Kenai; the Honorable Peter A. Micciche, Mayor of the City of Soldotna; the Honorable Dave Carey, Mayor of the Kenai Peninsula Borough; and the Honorable Lisa Murkowski and the Honorable Mark Begich, U.S. Senators, and the Honorable Don Young, U.S. Representative, members of the Alaska delegation in Congress.

Sponsor Statement – HJR 40

"Opposing the proposed designation by the National Marine Fisheries Service of 3,000 square miles of upper Cook Inlet, the mid-inlet, all of the inlet's western shores, and Kachemak Bay as critical habitat for beluga whales."

House Joint Resolution 40 seeks to protect the economy of the entire Cook Inlet region from an unnecessary critical habitat designation for beluga whales. The designation would apply to 3,000 square miles of Cook Inlet. The National Marine Fisheries Service is considering the designation a way to protect Cook Inlet beluga whales.

NMFS scientists concluded years ago that an unsustainable harvest caused the decline in the beluga population. The beluga numbers are now increasing at the rate of four percent a year because a revised harvest management program was instituted in place in 2000.

All activities in and around Cook Inlet from the Port of Anchorage, to military operations, to sport and commercial fishing could be slapped with new restrictions if a critical habitat designation is issued.

I urge all my colleagues to join me, our congressional delegation and Governor Parnell in opposing the critical habitat designation.

Re: RIN 0648-XT72 Proposed Critical Habitat Designation for Cook Inlet Beluga Whales

Thank you for the opportunity to comment on the above referenced proposed critical habitat designation. In general, the proposed critical habitat designation is far too broad and encompasses an area much larger than would seem to be necessary for protection of Cook Inlet Beluga whales.

First, it is worth commenting that the endangerment finding was flawed in the first place because indications are that the Beluga population in Cook Inlet is increasing. It is well documented that over harvest was the cause of the decline in population and recent curtailment of harvest has already reversed the trend. It would appear that existing marine related activity, such as shipping and energy development that utilize the proposed critical habitat area is not a significant factor in past decline of the population.

Having worked on the marine terminal in Anchorage for over 30 years as well as recreational boating and fishing in upper cook inlet, I have observed Beluga whales on many occasions. My observations is that the mouths and lower reaches of major rivers, such as the Little Susitna, Susitna and Beluga experience concentrations of Beluga whales, especially during salmon runs. The upper reaches of Turnagain Arm also attract significant numbers during times of hooligan and salmon migration. Otherwise, the whales seem to be fairly widely dispersed in the broader areas of the Inlet. If critical habitat designation is needed, it seems like it should be limited to such areas of high use and concentration. The fact that Belugas transit the larger parts of the Inlet does not justify critical habitat protection.

North Star Terminal & Stevedore Company operates at Anderson Dock in Anchorage, the Port of Anchorage, Port McKenzie, Rig Tenders Marine Terminal in Nikiski, and at both terminals in Homer. Critical habitat designation in the Port Mackenzie area and for the shipping lanes through upper Cook Inlet could be a serious impediment to all current and potential import and export opportunities. All of the necessary goods, commodities and supplies for over 70% of Alaska's population rely on these Ports to provide for the necessary shipment and handling of these necessities.

Alaskan's pay some of the highest energy costs in America. Development of our energy, mineral and other natural resources always has been, and will continue to be, vital to maintaining a healthy economy and good jobs for our citizens.. Hampering resource development and the flow of commerce in and around Cook Inlet will have far reaching

detrimental effects for most Alaskan's far and away many times more substantial in economic impact than estimated to date.

Cook Inlet is the most densely developed and heavily used region in Alaska with respect to resource development, human population and recreational activity. At the same time, it remains one of the biologically most productive regions in the State. Well developed management programs and diligent attention to environmental protection by industry have demonstrated that the marine environment and people can flourish in Cook Inlet. There is no reason the Beluga whales cannot recover and flourish again as well, without the harsh restrictions imposed by the proposed critical habitat designations.

In conclusion, no real Alaskan would approve of activities that truly endanger the Cook Inlet Beluga whales. Many, like me, have experienced the pleasure of watching these unique animals as part of our enjoyment of Cook Inlet. However, the proposal to place half of Cook Inlet in critical habitat designation will do nothing to protect the whales and has the potential to cripple future economic development in the region. I have 6 children and if Alaska's economy does not grow, they will be forced to leave to find gainful employment elsewhere. I want them to have the opportunity to enjoy Alaska's natural wonders as residents, not visitors.

Thank you for your consideration of my comments.

Sincerely,

Jeff Bentz

Re: HJR40

Dear Jason,

I was on the telephone yesterday and attended the hearing of HJR40. I did not get a chance to speak so here are my thoughts. Escopeta is in total support of HJR40 and stand with all those who testified yesterday.

Unfortunately Escopeta (and the people of Alaska indirectly) have already been affected by the Beluga proposal. Escopeta had contracts with very strong partners to bring a jack-up rig to the Cook Inlet this spring and drill the #1 Kitchen Lights Unit well. The project was put on hold indefinitely, due to the proposed Beluga Habitat designation. This is a fact, and once again places Escopeta on hold to develop the natural gas supply badly needed by each and every one of you.

I believe that this is just the beginning of serious financial trouble for all of you, if HJR40 does not stop the Federal Government from telling you how to run and operate your state.

Escopeta Oil is a small oil and gas company, but we are big on conservation. We believe in protecting every aspect of this great earth and all of its inhabitants. To this extent we must act with common sense, and combine conservation with business and commerce, which supports not only our industries and jobs, but also the future that lay in front of each of us. Escopeta has been put on hold by the Federal Government which has prevented Escopeta from moving forward to develop the Kitchen Lights Unit in 2010 as planned and promised. We are in total support of HJR40.

Jason, please pass my comments on to those you wish. Thank you for including me yesterday.

Yours truly,

Danny S. Davis

Re: HJR 40 – Opposing Proposed Designation of Cook Inlet as Critical Habitat for Cook Inlet Beluga

Dear Representative Millett:

I support your resolution to oppose the proposed designation of 3,000 miles of the Cook Inlet as critical habitat for the Cook Inlet Beluga whale.

The Municipality of Anchorage (MOA) is committed to ensuring the long-term health and productivity of the Cook Inlet and to the conservation of its beluga population. Cook Inlet supports significant oil and gas production, fishing, mining and a year-round tourism industry to the benefit of all Alaskans. The Port of Anchorage is the essential conduit through which passes an astounding 85% of all goods entering the state, and 26% of the tonnage of U.S. international air freight moves through the city via Ted Stevens Anchorage International Airport.

Anchorage's strategic location continues to be vitally important to our nation's overall defense strategy. We are an excellent staging point for an array of military operations and equipment that is deployed – and redeployed – through our Port in support of our national strategic interests.

The proposed critical habitat designation adds nominal value to the protection of the Cook Inlet beluga. It is fundamentally vague, and because the Endangered Species Act already applies, the MOA is addressing the needs of the beluga responsibly, directly, and with best available science. The projections of economic costs associated with the proposed designation do not pass the red face test; the potential for new regulations, delayed development and increased costs will most certainly total more than the $575,000 that NMFS included along with its proposal.

Thank you for your work and for the opportunity to provide comments. Please contact my intergovernmental affairs director, Stacy Schubert, if she can be of assistance to you. She can be reached at 343-7112 or by email: schuberts@muni.org.

Sincerely,

Dan Sullivan
Mayor

National Marine Fisheries Service
P.O. Box 21668
Juneau, AK 99802-1668

ATTN: Ellen Sebastian

RIN 0648-AX50

Dear Ms. Brix:

The following comments are provided on behalf of the Export Council of Alaska (ECA) in response to the National Marine Fisheries Service (NMFS) proposed rule and request for comment regarding Endangered and Threatened Species; Designation of Critical Habitat for Cook Inlet Beluga Whale [Docket No. 090224232-91321-03] published in the Federal Register on December 2, 2009. The ECA is commenting on both the November 17, 2009, Draft Regulatory Impact review/Section 4(b)(2) Preparatory Assessment/Initial Regulatory Flexibility Act Analysis (RIR/4(b)(2)PA/IRFA) and the proposed rule.

The ECA is one of a nationwide network of export councils intended to foster the international competitiveness of the United States. Nationwide, export councils link together 1,500 leaders of business, government, and academia with the International Trade Administration of the U.S. Department of Commerce. Each member is appointed to a limited term by the Secretary of Commerce on behalf of the President. We serve as an advisory group and communications link between the exporting community and the U.S. Department of Commerce. In Alaska, we focus on expanding awareness of companies and individuals to opportunities in markets abroad and assist those firms engaged in exporting. Exports of liquefied natural gas, fish, minerals, and other items valued at hundreds of millions of dollars move through Cook Inlet and its ports every year. Many projects are proposed or under development in this area; some of these projects are directly related to exports, while others are infrastructure projects that are indirectly related to exports in that they improve the international competitiveness of Alaska and the United States. The designation of Cook Inlet beluga whale critical habitat should be tailored to have minimal or no impact on these exports.

Comments on Draft RIR/4(b)(2)PA/IRFA:

The Draft RIR/4(b)(2)PA/IRFA significantly undercounts the costs, and exaggerates the benefits, of the critical habitat designation and arbitrarily and capriciously concludes that the benefits of such designation exceed its costs. NMFS should revise this document to address the weaknesses described in the following paragraphs:

Significantly Undercounts the Costs:

The Draft RIR/4(b)(2)PA/IRFA significantly undercounts the costs of the critical habitat designation by failing to include the costs associated with several energy and transportation projects in the Cook Inlet region. These projects include the following:

Turnagain Arm Tidal Energy Generation Project: On November 17, 2009, the Turnagain Arm Tidal Energy Corporation filed an application with the Federal Energy Regulatory Commission (FERC) for a preliminary permit to study the feasibility of a tidal energy generation system on the Turnagain Arm of Cook Inlet. Section 7.7 of the Draft RIR/4(b)(2)PA/IRFA analyzed cost impacts of critical habitat designation for two other tidal energy projects, and should be revised to include the potential costs of critical habitat designation to the Turnagain Arm Tidal Energy Generation project as well.

Mt. Spurr Geothermal Power Plant: Section 7.7 of the Draft RIR/4(b)(2)PA/IRFA states that this project was reviewed, but it was not analyzed further because a decision to go forward with the plant has not been made. Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA describes the status of the project as "pre-decisional, geothermal lease in place, no permits have been requested". Ormat Technologies, a company with a history of successfully developing geothermal projects in other countries, is the major lease holder for the Mt. Spurr geothermal development. It has a better record of success than any of the tidal energy companies whose projects were analyzed in the Draft RIR/4(b)(2)PA/IRFA. Power transmission lines for this project may need to cross Cook Inlet to reach Anchorage or the Kenai Peninsula. Ormat has identified the North Forelands Dock and Industrial Area as its logistics base for construction and operation of this project, which would result in an increase in vessel traffic through this area. This project is expected to have a total construction cost, including supporting infrastructure, of approximately $1 billion. Because this project is highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Section 7.7 should be revised to include the potential costs of critical habitat designation to the Mt. Spurr Geothermal Power Plant project as well.

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Chakachamna Hydropower Plant: Section 6.4.7 of the Draft RIR/4(b)(2)PA/IRFA states that this project was reviewed, but determined to not have a connection with the critical habitat designation due to its inland location and lack of physical connection with Cook Inlet. However, the project description clearly describes the projects planned measures to protect salmon, which are designated as a primary constituent element (PCE) of the critical habitat. The project would discharge water flow from the facility into the MacArthur River near its confluence with Cook Inlet. The power transmission lines may need to cross the MacArthur River, and potentially Cook Inlet, to reach Anchorage or the Kenai Peninsula. Chakachamna Power has identified the North Forelands Dock and Industrial Area as its logistics base for construction and operation of this project, which would result in an increase in vessel traffic through this area. A preliminary permit application for this project was filed with FERC on December 10, 2009. This project is expected to have a total construction cost, including supporting infrastructure, of $1.75 billion. Because this project is highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Section 7.7 of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential costs of critical habitat designation to the Chakachamna Hydropower Plant project.

North Forelands Dock and Industrial Area aggregate mining and export: The Tyonek Native Corporation is developing plans to mine and export high quality aggregate from its North Forelands Dock and Industrial Area using the existing adjacent pier, which would require modification (see www.tyonek.com/Presentations/tnc_wci08.pdf). This project would result in increased vessel traffic through this area. This project is expected to have a total construction cost of approximately $20 million. Because this project is highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Sections 6.4.2, 7-2 and 9-2-1.1 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential cost impacts of critical habitat designation to this project.

Beluga Coal to Liquids Plant: Alaska Natural Resources to Liquids recently completed a $1.5 million preliminary feasibility study with the help of the Alaska Industrial Development and Export Authority (see www.aidea.org/PDF%20files/BelugaCTLoverview9-20-06.pdf). Plans call for using coal from the Chuitna coal fields to produce 80,000 barrels per day of diesel and naphtha for U. S. West Coast markets in addition to jet fuel and petrochemical feedstocks. This fuel would be shipped out of the existing North Forelands Dock, which would require modification, and result in increased vessel traffic through this area. This project is expected to have a total construction cost, including supporting infrastructure, of approximately $12 billion. Because this project is highly unlikely to jeopardize the

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Sections 6.4.2, 7-2 and 9-2-1.1 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential cost impacts of critical habitat designation to this project.

Alaska natural gas pipeline projects: Multiple major natural gas pipeline projects are in various stages of development in Alaska, all of which would require the shipment of large quantities of materials through Cook Inlet to the Anchorage area for staging and shipment inland. Because these projects are highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Sections 6.4.2, 7-2 and 9-2-1.1 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA should be revised to indude the potential cost impacts of critical habitat designation to these projects

North Slope to Lower 48 through Canada: Public Law 108-324 authorized the development of this pipeline and $18B in federal loan guarantees to facilitate its construction. In 2009, the Senate Energy and Natural Resources Committee reported out legislation to increase the federal loan guarantee amount to $30 billion. Two projects are competing to build this pipeline: AGIA (TransCanada's $26 billion, 1,715 mile pipeline) and Denali (BP and Conoco Phillips' $32 billion, 1,500 mile pipeline). The Alaska Natural Gas Transportation Projects, Office of the Federal Coordinator is reviewing both projects, and both have initiated the FERC application process.

ANGDA spur pipeline to Cook Inlet: Alaska Natural Gas Development Project (ANGDA) is planning a $2 billion pipeline to divert a portion of the gas from the above pipeline project to Cook Inlet to replace dwindling local reserves and provide processed natural gas liquids for export from a to-be-developed facility through Cook Inlet. This pipeline would run from Delta, through Glennallen to a Beluga gas facility near Wasilla.

Enstar bullet pipeline: This $4B pipeline would connect Alaska North Slope gas fields through Fairbanks to the Beluga gas facility. This project is competing with the ANGDA spur line project above for both local consumption and liquid products export. Enstar is currently pursuing Alaska environmental permits for this project.

Port MacKenzie Projects: Sections 6.4.4, 7-4 and 9-2-1.1 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA analyzed cost impacts of critical habitat designation for two port MacKenzie projects: Deep Draft Dock Expansion and Barge Dock Expansion. The port also plans to spend $18M to construct a ferry terminal for the service to Anchorage and Tyonek. On July 17, 2009, the Surface Transportation Board, a federal agency, published a Notice of Availability of Final Scope of Study for the Environmental

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Impact Statement (EIS) for an extension from Port MacKenzie to the Alaska Railroad Corporation (ARRC) main line between Wasilla and north of Willow, Alaska. The purpose of this extension is to transport mined minerals to Port MacKenzie for export. The ARRC Port MacKenzie to Willow project is expected to cost $200M, with most of the required materials being shipped through Cook Inlet to Port MacKenzie. Both of these projects would significantly increase vessel traffic through Port MacKenzie, so they should be included in the above sections and table of the Draft RIR/4(b)(2)PA/IRFA. Because these projects are highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated.

Ferry service to Tyonek: Sections 6.4.3, 7.3, and 7.7 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA describe the Cook Inlet ferry service as being planned only for service between Port MacKenzie and Anchorage. However, the Matanuska-Susitna Borough signed a memorandum of understanding with the Native Village of Tyonek in July, 2008, to provide ferry service between Tyonek and the Matanuska-Susitna valley. This was reported in Alaska News on July 16, 2008. Either the existing Ladd Landing or North Foreland waterfront sites would be used for this purpose and a suitable ferry landing would have to be constructed at either site. This project is expected to have a total construction cost of approximately $14 million. Because this project is highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. The above sections and table of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential costs of critical habitat designation to the Tyonek ferry landing development and the extended ferry service.

Road and bridge projects connecting West Cook Inlet settlements and projects: The Alaska Department of Transportation has designated rights of way for a system of roads to connect West Cook Inlet settlements and development sites. These road systems include bridges crossing several of the medium and high flow-accumulation rivers entering Cook Inlet identified in the proposed rule as supporting prey species for the Cook Inlet beluga whale (see http://www.fakr.noaa.gov/protectedresources/whales/beluga/management.htm#habitat). These projects would connect Anchorage to several of the West Cook Inlet energy projects described in this letter and the Draft RIR/4(b)(2)PA/IRFA. They are expected to have a total construction cost of approximately $200 million. Because these projects are highly unlikely to jeopardize the existence of Cook Inlet beluga whales but may affect a small portion of the whales' habitat, project modification costs should be estimated. Sections 6.4.3, 7-3 and 9-2-1.1 and Table 6-28 of the Draft RIR/4(b)(2)PA/IRFA should be revised to include the potential cost impacts of critical habitat designation to these projects.

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Section 4.1.2 of the Draft RIR/4(b)(2)PA/IRFA describes how project modification costs are to be calculated in addition to federal agency consultation costs. However, in the Section 7 analysis of total potential costs of critical habitat designation, no project modification costs are included. In addition to the project modification costs for the projects described above, such costs should also be estimated for the other projects included in Section 7.

The Draft RIR/4(b)(2)PA/IRFA should be revised to expand the valuation of the anticipated costs to address the above concerns.

Exaggerates the Benefits:

The Draft RIR/4(b)(2)PA/IRFA exaggerates the benefits of the critical habitat designation by: (1) failing to adequately differentiate between the benefits that accrue from the designation of the Cook Inlet beluga whale as endangered and the benefits of the designation of the whale's critical habitat; (2) failing to account for the baseline requirements of the Endangered Species Act (ESA) that, without the designation of critical habitat, NMFS would be required to not take any action that would jeopardize the Cook Inlet beluga whale's existence due to inadequate stocks of prey fish species; and (3) attributing benefits to fishermen from such critical habitat designation while ignoring legal requirements other than the ESA for fisheries conservation and the increased consumption of fish by the resulting larger whale population.

Section 3.3.1 of the Draft RIR/4(b)(2)PA/IRFA states that "The baseline for the critical habitat designation analysis is the existing state of regulation that provides protection to the Cook Inlet beluga whales under the ESA, as well as under other federal, state, and local laws and guidelines, without the critical habitat designation...Absent a designation of CH, Section 7 of the ESA requires Federal agencies to consult with NMFS to ensure that any action authorized, funded, or carried out will not likely jeopardize the continued existence of any endangered or threatened species."

While Section 5.5 of the Draft RIR/4(b)(2)PA/IRFA states that "in all cases, the types of economic benefits associated with CHD are largely co-extensive with listing the Cook Inlet beluga whale as endangered", Section 5.2.1.1 proposes that the designation of critical habitat may sustain healthy stocks of Cook Inlet beluga whale prey fish and increase the consumptive value from fishing in and adjacent to such critical habitat. Sections 7.8, 7.9, and 7.10 of the Draft RIR/4(b)(2)PA/IRFA also presume an increase in fish stocks from critical habitat designation. These presumptions ignore the baseline requirements for NMFS and the Alaska Department of Natural Resources to maintain the reproductive capacity of such fish stocks through managing human harvesting of

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

these stocks and the increased consumption of such fish stocks by a larger Cook Inlet beluga whale population that NMFS expects to result from such critical habitat designation. Preserving designated critical habitat is more likely to help maintain such prey fish at current stock levels, not increase them, since such designation merely retains the status quo with respect to the condition of such habitat and does not require improving such habitat. On the other hand, to the extent to which the designation of critical habitat would increase the Cook Inlet beluga whale population above the baseline condition, the consumption of such fish stocks by such whale population would clearly increase, leaving fewer fish available for fishermen to catch. In summary, the net effect of critical habitat designation is more likely to be a reduction in the consumptive value from fishing in and adjacent to such critical habitat, and therefore would not be a benefit to fishermen.

Appendix A is titled "Nonuse Values of Critical Habitat for the Cook Inlet Beluga Whale". However, the analysis included in Appendix A discusses the nonuse value of both the critical habitat and protecting Cook Inlet beluga whales and most of the studies cited therein pertain to valuation of a species, not the critical habitat of such species. The protection of the species from extinction is a baseline requirement of the ESA without critical habitat designation. Therefore, it should be separated from the nonuse valuation of the protection of such species' critical habitat before comparing costs and benefits of critical habitat designation. As with calculating the costs of critical habitat designation, the calculation of the benefits of such designation must be limited to the incremental value provided by such designation over the baseline protections afforded by the ESA without such designation. Unfortunately, the statement on page A-4 that "Therefore, it is logical to conclude that in the absence of critical habitat the species would go extinct" and the analysis that follows fail to adequately separate out the protections that would provided to such habitat under the ESA under the baseline condition without designation of critical habitat.

In its discussion of the Kontoleon and Swanson (2003) study, Appendix A fails to show that the preference for preserving a species in its natural habitat versus in a reserve does not represent a valuation of a preference that a species remain in its natural habitat rather than being relocated to a reserve (i.e., a negative reaction to the unnatural condition of animal) and not a valuation of preserving the habitat itself. Therefore, the conclusion that the Kontoleon and Swanson (2003) study provides grounds for believing that some portion of the public's value for the Cook Inlet beluga whale is attributable specifically to critical habitat is premature, as the choice in this case does not involve preservation of the beluga whale in an unnatural habitat.

The literature cited in the Draft RIR/4(b)(2)PA/IRFA may represent the best available science on the subject of valuation of protecting endangered species and their critical

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

habitat, however, the analysis in this document of this scientific data clearly falls short of meeting the requirements of the ESA. The Draft RIR/4(b)(2)PA/IRFA should be revised to narrow the valuation of anticipated benefits to address the above concerns.

Arbitrarily and Capriciously Concludes that Benefits Exceed Costs:

Section 5 and Appendix A of the Draft RIR/4(b)(2)PA/IRFA describe several methods for calculating the value of several forms of benefits, but do not attempt to place a quantitative value on the benefits of Cook Inlet beluga whale critical habitat designation above the benefits of the baseline protection of the ESA without such designation. Similarly, the document also does not attempt to develop a qualitative measurement of such value or attempt to describe how such benefits were compared with the more easily calculated (although in this case, undercounted) costs of such designation. Instead, section 8 of the Draft RIR/4(b)(2)PA/IRFA in two short paragraphs simply states that the anticipated benefits would outweigh the anticipated costs and a net benefit to the nation would result. No support is provided for this statement. No basis is provided that would allow an outside disinterested expert to reach such a conclusion using the same information provided in the document. NMFS simply throws up its hands and says that a valuation of the benefits can't be done, yet it concludes that such benefits would exceed the expected costs. The lengthy separate discussions of the costs and benefits do not overcome the opaque, arbitrary and capricious manner in which the comparison of the two was made and in which the conclusion was reached. This is especially egregious when the agency undercounts the costs and exaggerates the benefits for the purposes of this comparison.

The Draft RIR/4(b)(2)PA/IRFA should be revised to include a detailed method of comparing quantitative and qualitative valuations of costs and benefits and an explanation of how such a comparison was made using costs and benefits information revised to address the inaccuracies described above. The resulting net cost or benefit conclusion should be supported in a manner that is repeatable by outside disinterested experts using the same data.

Comments on Proposed Rule (all page numbers reference the December 2, 2009 Federal Register Vol. 74, No. 230):

Page 63081, second column, second full paragraph, seventh sentence: Change the estimated economic impact range to account for the additional costs identified above.

Page 63084, Figure 1: Revise Figure 1 to include the proposed changes to Areas 1 and 2 described later in this letter.

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Page 63087, second column, first full paragraph, second sentence: Change to read: 'The effects of prolonged harassment may also indude the prolonged abandonment of habitat."

Rationale: To remove the potential for incorrectly interpreting the original sentence to mean that momentary incidents of harassment could result in the prolonged abandonment of habitat by the endangered species.

Page 63087, second column, physical or biological feature number 1: Insert before the semicolon at the end the following: ", except as excluded by the descriptions of Areas 1 and 2".

Rationale: To clarify that these features only apply to the waters included in Areas 1 and 2.

Page 63087, second column, physical or biological feature number 3: Change to read: "The absence of non-naturally occurring toxins or other agents of a type and amount that would kill or injure Cook Inlet beluga whales or cause the prolonged abandonment of their critical habitat areas;"

Rationale: These changes clarify that federal agencies are not required to eliminate naturally occurring irritants to Cook Inlet beluga whales and replace the vague standard of harm with effects-based language from physical or biological feature number 5.

Page 63087, second column, physical or biological feature number 4: Change to read: "The absence of prolonged impediments to unrestricted passage within or between the critical habitat areas; and".

Rationale: To remove the potential for incorrectly interpreting the original sentence to mean that the changes in direction by Cook Inlet beluga whales to avoid a vessel or structure in Cook Inlet does not necessarily equate to denial of unrestricted passage.

Page 63087, second column, physical or biological feature number 5: Change to read: "The absence of in-water noise at levels and durations resulting in the prolonged abandonment of critical habitat by Cook Inlet beluga whales."

Rationale: This discussion on page 63088 of the impacts of noise on beluga whales describes two thresholds: one for impulsive noises and one for continuous noise. The revised language recognizes the duration basis for the two noise thresholds and incorporates the same abandonment clarification that is included in the previous

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

paragraphs. Again, this removes the potential for incorrectly interpreting this sentence to mean that the temporary avoidance by Cook Inlet beluga whales of a vessel operating in Cook Inlet at a noise level below the stated thresholds, which the whales would detect by sound, does not equate to abandonment of critical habitat. Cook Inlet experiences significant natural in-water noise levels from the shifting of ice during winter tidal changes, yet beluga whales continue to inhabit the region. Noise limits for vessels and other human activities should be set at levels higher than this natural noise level.

Page 63087, third column, Area 1 description: Insert before the period at the end the following: ", excluding those waters within ½ mile of the Port MacKenzie dock complex (61.27 N, 149.92 W) and within ½ mile of the Anchorage marine terminal (61.22N, 149.91W)".

Rationale: Part 424.19 of title 50 of the Code of Federal Regulations authorizes the Secretary to exclude any portion of an area being considered for designation as critical habitat if benefits of such exclusion outweigh the benefits of specifying the area as part of the critical habitat, and such exclusion does not result in the extinction of the species. Four economically significant activities are planned for Port MacKenzie: (1) deep draft dock expansion, (2) barge dock expansion, (3) ferry service to Anchorage and Tyonek, and (4) extension of the Alaska Railroad to Port MacKenzie from the main line between Wasilla and north of Willow, Alaska. These marine terminals are the gateways to the bulk of Alaskan exports and imports. The expansion of the Port of Anchorage has already started, an initial beluga whale incidental take authorization from NMFS, and several measures are being taken to protect the whales. Additionally, ferry service between Port MacKenzie and Tyonek will serve Anchorage. While these projects are in different stages of development, combined, they are critical to the economic development of the Cook Inlet region and the mobility of its residents. The inclusion of these small areas within Area 1 would likely result in the imposition of significant limitations on the development and use of the above projects, resulting in economic harm to the region. While Cook Inlet beluga whales have been sighted in the vicinity of Port MacKenzie and the Port of Anchorage marine terminal, the areas to be excluded are miniscule in comparison to the remaining critical habitat and their exclusion would have no significant impact on the Cook Inlet beluga whale's critical habitat or its continued existence. Clearly, the benefits of excluding these small portions of Area 1 exceed the benefits of including them in the critical habitat designation.

Page 63087, third column, Area 2 description: Insert before the period at the end the following: ", excluding those waters within 2 miles of the Ladd Landing pier (61.13N, 151.10W), within 1 mile of the North Forelands Dock (61.04N, 151.16W), within 1 mile of the Upland Rock Quarry at Cottonwood Bay (59.64N, 153.63W), and within ½ mile of the Kenai LNG export terminal (60.68N, 151.40W)." Strike "and the mouth of the

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Douglas River (59.04 N., 153.45 W)," and insert "and 60.00 N. latitude," or, alternatively, add to the excluded areas in the first sentence of this paragraph the following: "within 1 mile of the multimodal port site in Iniskin Bay (59.66N, 153.46W),".

Rationale: The rationale for these changes is similar to that described in the preceding proposed change. Ladd Landing may be used for the export of Chuitna coal and as a landing for the ferry service to Port MacKenzie and Anchorage (which would require modifications to these piers). The North Forelands Dock may be used to export locally mined aggregate and locally produced coal to liquids fuel and may be used as a landing for the ferry service to Port MacKenzie and Anchorage (any of which may require modifications to the pier). A multimodal port facility may be built in Iniskin Bay to enable shipment by water of materials extracted from the Pebble Mine. The Upland Rock Quarry waterfront in Cottonwood Bay requires filling and dredging to support extraction and export of excavated materials. The Kenai LNG export terminal provides important revenue and a significant source of employment to the Kenai area. Combined, these facilities are critical to the economic development of the Cook Inlet region. The inclusion of these small areas within Area 2 would likely result in the imposition of significant limitations on the development and use of the above projects, resulting in economic harm to the region. The Alaska Fisheries Science Center 2008 Supplemental Status Review and Extinction Assessment of Cook Inlet Belugas shows: (1) a small presence of 2-10 belugas within 2 miles of the Ladd Landing site only during the 1993-1997 period, (2) no presence of belugas within 1 mile of the North Forelands Dock between 1978 and 2008, (3) a small presence of 2-10 belugas within Iniskin Bay only during the 1993-1997 period, (4) no information on beluga presence in Cottonwood Bay, (5) a small presence of 3-10 belugas in the Kenai River only during the 1978-1979 period, and (6) the 95% population area boundary for Cook Inlet beluga whales as far back as 1978-1979 does not include either Iniskin Bay or Cottonwood Bay. Clearly, the benefits of excluding these portions of Area 2 exceed the benefits of including them in the critical habitat designation.

Page 63090, first column, second full paragraph, second sentence: Insert before the period at the end the following: ", which may include adjusting agency actions to protect Cook Inlet beluga whale habitat".

Rationale: To clarify that the baseline condition without critical habitat designation may still require Federal agencies to adjust their actions to protect Cook Inlet beluga whale habitat to prevent jeopardizing that species' existence.

Page 63090, first column, third full paragraph, sixth sentence: Insert "beyond those prohibited by the Clean Water Act and other federal, state or local laws or regulations" between "Cook Inlet" and the comma.

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Rationale: To clarify that the pollution reduction benefit of critical habitat designation is limited to only that which exceeds pollution limits required by current laws and regulations.

Page 63090, second column, first full paragraph, first sentence: Insert "beyond that required by the ESA Section 7 jeopardy provision" between "derived from protection of critical habitat" and "),".

Rationale: To clarify that the increase in Cook Inlet beluga whale lives saved, longevity, health, productivity, etc. derived from critical habitat designation is limited to that which exceeds the baseline protections without critical habitat designation afforded by Section 7 of the ESA.

Page 63093, first column, first paragraph, first full sentence: Insert "geothermal and" between "FERC permits for" and "turbine".

Rationale: To include the potential for geothermal project transmission line interactions with Cook Inlet.

Page 63093, second column, first paragraph, first full sentence: Strike "destruction of adverse modification" and insert "destruction or adverse modification".

Rational: Correct typographical error.

Page 63094, third column, Area 1 description: Insert before the period at the end the following: ", excluding those waters within ½ mile of the Port MacKenzie dock complex (61.27N, 149.92W) and within ½ mile of the Anchorage marine terminal (61.22N, 149.91W)".

Rationale: Same as described for page 63087 change.

Page 63094, third column, Area 2 description: Insert before the period at the end the following: ", excluding those waters within 2 miles of the Ladd Landing pier (61.13N, 151.10W), within 1 mile of the North Forelands Dock (61.04N, 151.16W), within 1 mile of the Upland Rock Quarry at Cottonwood Bay (59.64N, 153.63W), and within ½ mile of the Kenai LNG export terminal (60.68N, 151.40W)." Strike "and the mouth of the Douglas River (59.04 N., 153.45 W)," and insert "and 60.00 N. latitude," or, alternatively, add to the excluded areas in the first sentence of this paragraph the following: "within 1 mile of the multimodal port site in Iniskin Bay (59.66N, 153.46W),".

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

Rationale: Same as described for page 63087 change.

Page 63095 map: Revise the map to include the proposed changes to Areas 1 and 2..

Page 63095, first column, primary constituent element number (1): Insert before the period at the end the following: ", except as excluded by the descriptions of Areas 1 and 2".

Rationale: Same as described on page 63087 for physical or biological feature number 1.

Page 63095, first column, primary constituent element number (3): Change to read: "The absence of non-naturally occurring toxins or other agents of a type and amount that would kill or injure Cook Inlet beluga whales or cause the prolonged abandonment of their critical habitat areas."

Rationale: Same as described on page 63087 for physical or biological feature number 3.

Page 63095, first column, primary constituent element number (4): Change to read: "The absence of prolonged impediments to unrestricted passage within or between the critical habitat areas.".

Rationale: Same as described on page 63087 for physical or biological feature number 4.

Page 63095, first column, primary constituent element number (5): Change to read: "The absence of in-water noise at levels and durations resulting in the prolonged abandonment of critical habitat by Cook Inlet beluga whales."

Rationale: Same as described on page 63087 for physical or biological feature number 5.

Conclusion

Due to the flaws in the Draft RIR/4(b)(2)PA/IRFA, its conclusion that there would be a net benefit to the Nation by designating critical habitat for Cook Inlet beluga whales is suspect. The Draft RIR/4(b)(2)PA/IRFA should be revised as described above and a new analysis of whether such critical habitat designation would result in a net cost or a net benefit should be performed. Should such an analysis result in a justified and repeatable conclusion that a net benefit would result, the above proposed changes to

431 West 7th Avenue, Suite 108
Anchorage, AK 99501
Phone: (907) 271-6237 Fax: (907) 271-6242

the proposed rule should be included in that rule. Should such an analysis result in a justified and repeatable conclusion that a net cost would result, the ECA recommends that the proposed rule be revised to not designate critical habitat for the Cook Inlet beluga whale.

Respectfully yours,

Export Council of Alaska

Anthony B. Follett, Chairman

FOR IMMEDIATE RELEASE **No. 10-041**

State Challenges EPA Move to Regulate Greenhouse Gases

March 17, 2010, Juneau, Alaska – The State of Alaska filed a motion in court to intervene in a lawsuit over a recent U.S. Environmental Protection Agency decision that triggers expanded federal regulation of greenhouse gas emissions. In challenging the EPA's decision in the U.S. Court of Appeals for the D.C. Circuit, the Parnell administration seeks to join several states and trade groups, and the U.S. Chamber of Commerce.

"Alaska is challenging a decision that, by EPA's own admission, will vastly expand the EPA's regulation of all sectors of the state's economy," said Governor Sean Parnell. "We remain concerned the EPA is extending its authority too aggressively and in a manner that harms the state's interests. We will continue to fight this type of federal overreach."

At issue is the process EPA used in finding that six greenhouse gases contribute to global climate change, endangering human health and welfare and the substantial regulatory implications of that finding. This finding was prompted by the U.S. Supreme Court decision of *Massachusetts v. EPA*, where the court rejected the agency's reasons for denying a petition to regulate greenhouse gases emissions from motor vehicles.

"Since 2003, Alaska has been a party to the litigation over the EPA's authority to regulate greenhouse gas emissions under the Clean Air Act," Attorney General Dan Sullivan said. "Our filing continues Alaska's involvement in this important case. With its endangerment finding, EPA has clearly signaled that its next step is to regulate emissions from 'stationary sources' -- a regulatory burden that would severely hamper economic growth and resource development throughout the state."

The state is not challenging the science on climate change underlying EPA's decision, according to Sullivan. Rather, the state is challenging EPA's position that Congress intended the agency and states to regulate greenhouse gas emissions through the permitting requirements of the Clean Air Act, as well as the process by which the EPA came to this decision.

Regulations triggered by EPA's decision would increase the number of emissions permits that the federal Clean Air Act forces EPA and the state to administer from several thousand to more than a million.

"The Clean Air Act was not designed with regulating greenhouse gases in mind and is not well-suited for that purpose," said Commissioner of Environmental Conservation

Larry Hartig, who chairs the Governor's Executive Sub-Cabinet on Climate Change. "Climate change presents a complex challenge involving critical social and economic issues in addition to important long-term environmental concerns. A Congressional solution with strong input from states and communities is the best way to address the climate change challenge."

A copy of the motion to leave to intervene is available at:

###

State Challenges EPA Move to Regulate Greenhouse Gases

Background Information

In December 2009, the Environmental Protection Agency (EPA) issued an "endangerment finding" that greenhouse gases cause climate change and put at risk the public health and welfare. This finding would dramatically increase the EPA's regulatory authority over the nation's economy.

Many interested parties have appeals filed or pending in the Circuit Court of Appeals for the D.C. Circuit. Parties challenging the EPA's decision include Texas, Nebraska, Oklahoma, Louisiana, Alabama, Virginia, South Dakota, North Dakota, Indiana, Kentucky, South Carolina, the Chamber of Commerce, Industrial Minerals Association, National Cattlemen's Beef Association and oil refiners. Many of the states challenging the decision generate much of the nation's energy.

Parties defending the EPA decision include environmental groups and a coalition of 16 states and New York City. The states and New York City argue that they have the right to intervene because they have a direct and substantial interest in the outcome of the court's action. The states seeking to intervene in support of EPA are: Arizona, California, Connecticut, Delaware, Illinois, Iowa, Maine, Maryland, Massachusetts, New Hampshire, New Mexico, New York, Oregon, Rhode Island, Vermont and Washington.

The EPA's finding stems from litigation that began in 2003. At that time, the State of Alaska intervened as a party in the case, filing briefs with the D.C. Circuit and the United States Supreme Court arguing that the EPA should not regulate greenhouse gases under the Clean Air Act.

In the motion to intervene, the state is asking the court to allow Alaska to continue its involvement in this significant litigation.

Groups challenging the EPA's finding have articulated various reasons for their appeal. For example, many of the parties, including some states, dispute the science underlying the EPA's decision.

Other parties, however, are challenging the EPA's position that Congress in the Clean Air Act intended to authorize EPA to regulate and issue permits for emitters of greenhouse gases, as well as the process by which EPA came to its decision. The State of Alaska's brief will focus on these issues.

The State of Alaska is intervening for three primary reasons.

First, the state is very concerned that the EPA, across a number of areas, is extending its authority too aggressively and in a manner that harms the state's interests. The state believes that the EPA's endangerment finding exceeds the agency's statutory mandate. The Parnell administration's policy is to preserve state autonomy against overreaching federal regulation. Intervening in this case is consistent with this policy.

Second, the consequences of the EPA's finding will have a profound and far-reaching effect on the country and on Alaska. It is clearly in the state's interest to have a seat at the table as this issue moves forward in the courts, especially because Alaska is on the front lines of climate change. If the state is not a party to the litigation, it cannot influence the outcome of the litigation, nor can it participate in any potential settlement discussions.

Third, the EPA's endangerment finding, as the EPA has acknowledged, will result in extensive regulation of greenhouse gases from "stationary sources" such as office buildings, restaurants and churches. This decision could have severe repercussions for Alaska's economy. It could have an adverse impact on the gas pipeline, TAPS, new oil and gas developments, and current oil and gas operations. The state will also be burdened by the tremendous increase in permit applications that it now will have to process.

More specifically, if this decision stands, it will require the EPA and the states to dramatically increase their regulation of the U.S. economy. For example, because of the endangerment finding the EPA estimates that states and the EPA will now have to process over a *million* permits for stationary sources.

This means that in Alaska the EPA will have the authority to regulate and permit everything from fish processors to hospitals to churches. Those permitting requirements would include, among other things, a determination of and the installation of the "best available control technology" for greenhouse gas emissions from the source seeking the permit. Additionally, many stationary sources of greenhouse gas emissions would be required to apply to the EPA for operating permits. State agencies will also be required to be involved in such permitting.

Perhaps more troubling is that under the Clean Air Act private parties have the ability to file lawsuits whenever they believe the EPA has not adequately permitted stationary sources of greenhouse gases. This could almost certainly result in a flood of lawsuits in Alaska, against the very businesses that produce jobs for Alaskans. Indeed, some environmental groups have already used the EPA's endangerment finding as a basis for challenging Shell's air permits, which it recently acquired to explore the Outer Continental Shelf. These lawsuits will chill economic activity because they significantly increase the cost and uncertainty of developing Alaska's natural resources.

At a time when the state is at a critical juncture in working with industry to further develop oil and gas reserves, it is clearly not in the state's interest to sit idly by while the EPA unreasonably expands its authority and empowers environmental groups to stall or shut down development activities.

While some parties are challenging the science underlying the EPA's endangerment finding, Alaska will focus on whether Congress intended for the EPA to have the broad authority to regulate millions of businesses and require them to acquire permits. The state believes the Supreme Court has never squarely addressed this issue.

This is not to say that climate change is not a cause for concern. The Governor's Sub-cabinet on Climate Change is focused on this issue. To address the challenges caused by climate change, the state is also working closely with the federal government. Nonetheless, the state believes that the EPA is ill-equipped to effectively address the problem and that by intervening to regulate GHG emissions, the agency has over-reached.

Representative Bill Stoltze
State Capitol Building
Juneau, Alaska 99801-1182

RE: House Joint Resolution 49

Representative Stoltze:

On behalf of the National Federation of Independent Business/Alaska (NFIB/AK), the state's leading small business advocacy organization, I am writing in support of House Joint Resolution 49 supporting U.S. Senator Murkowski's S.J. Res 26 disapproving the Environmental Protection Agency's (EPA) endangerment finding on greenhouse gases (GHGs) and implementation of climate regulations that would harm Alaska's economy.

On December 15, 2009, the EPA announced a final rule regarding the "Endangerment and Cause or Contribute Findings for GHGs under Section 202(a) of the Clean Air Act (CAA)". The rule finds that six greenhouse gases taken in combination endanger the public health and welfare. This effectively allows the EPA to continue to announce new emissions regulations on businesses and individuals under the CAA. NFIB/AK believes that the CAA is an inefficient and ineffective vehicle to address climate protection and that Congress solely should address GHG emissions. The CAA was designed to control air pollution by requiring individual stationary pollutant sources to institute emission control technologies.

Environmental regulations have been and continue to be a challenge for small businesses, as small entities are not major polluters and least able to sustain or even understand new restrictions. This regulation will create new burdens such as federal permitting requirements, restrictions on fuel choices and energy use, and expensive requirements for installation of new energy efficient equipment.

The EPA's Prevention of Significant Deterioration (PSD) Program is one such program that will impose major new costs on small business. The PSD permitting process itself is time consuming and expensive. The costs include legal, engineering and consulting fees, as well as permitting and administrative fees. Small entities that would now be subject to PSD program requirements include many restaurants, office and apartment buildings, hotels, malls, retail stores and warehouses, schools, hospitals, nursing facilities, churches, and small manufacturing plants. Unfortunately, hundreds of thousands of previously unregulated small entities would be regulated as a 'major' emitter.

In addition to the PSD Program, NFIB/AK expects small businesses to be regulated under the Title V permitting program and the Hazardous Air Pollutant program. Adding more regulatory costs and administrative burdens would be a serious blow to already overburdened small business owners, who according to the January 2010 NFIB Small Business Economic Trends survey, are still suffering from weak sales and profits numbers.

Subjecting over a million new sources to the CAA's complex and expensive permitting process will not materially reduce the nation's greenhouse gases. NFIB/AK strongly supports the independent actions of business to become more energy efficient. According to NFIB's *2006 National Small Business Poll on Energy Consumption*, over the past three years, over 43 percent of America's small business owners have taken steps to reduce the amount of energy their businesses consume. Small business believes that the free market is best suited to develop new energy efficient technologies and renewable sources of fuel, and our nation's job creators stand ready to do so without the heavy hand of government mandates.

NFIB/AK strongly supports the Murkowski resolution of disapproval. We strongly support HJR 49 that puts the state of Alaska on record opposing this bureaucratic action by the EPA that would cause higher energy prices, higher food prices, lost jobs, and reduced production of domestic oil, natural gas and coal.

Sincerely yours,

Dennis L. DeWitt
Alaska State Director

111TH CONGRESS
2D SESSION

H. J. RES. 76

Disapproving a rule submitted by the Environmental Protection Agency relating to the endangerment finding and the cause or contribute findings for greenhouse gases under section 202(a) of the Clean Air Act.

IN THE HOUSE OF REPRESENTATIVES

FEBRUARY 25, 2010

Mr. SKELTON (for himself, Mr. PETERSON, and Mrs. EMERSON) introduced the following joint resolution; which was referred to the Committee on Energy and Commerce

---

JOINT RESOLUTION

Disapproving a rule submitted by the Environmental Protection Agency relating to the endangerment finding and the cause or contribute findings for greenhouse gases under section 202(a) of the Clean Air Act.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That Congress disapproves the rule submitted by the Environmental Protection Agency relating to the endangerment finding and the cause or contribute findings for greenhouse gases under section 202(a) of the Clean

Air Act (published at 74 Fed. Reg. 66496 (December 15, 2009)), and such rule shall have no force or effect.
