Parents as Teachers

March 9, 2011

Dear Members of the Alaska State Legislature,

On behalf of the national office of Parents as Teachers, I would like to encourage you to support HB 49 which would establish a statewide network of Parents as Teachers programs throughout Alaska. HB 49 is a critical investment in the long-term benefits of the individuals and communities that you represent.

Parents as Teachers is a research-based, family support and parent education program serving families throughout pregnancy until their child enters kindergarten. Research has clearly shown that the early years of life are critical in a child's development and lay the foundation for success in school and in life. We believe that parents are their children's first and most important teachers.

Independent research shows that at age 3, Parents as Teachers children are more advanced in language, social development, problem solving and other cognitive abilities. Children who participate in Parents as Teachers score higher on kindergarten readiness tests and on standardized measures of reading, math and language in first through fourth grades. Furthermore, parents who participate in Parents as Teachers are more confident about their parenting and are more involved in their children's schooling...a key component of a child's success in school.

Few investments have the rate of return of early childhood programs and Parents as Teachers is critical to high-quality preschool programs. Please invest in your most important resource – Alaska's children and families by supporting HB 49. Thank you for the important work that you do. Please let me know of any other way that we can be of support.

Sincerely,

Susan S. Stepleton

To lead, facilitate, and support the efforts of those working in the Early Care and Education profession throughout Alaska.

March 5, 2011

Representative Les Gara
Alaska State Capitol, Room 500
Juneau AK 99801

Greetings,

This letter is to inform the legislative body of the widespread support across the state to establish a voluntary Parents As Teachers home visiting program for families with children ages birth to kindergarten entry. Our membership represents nearly a thousand early childhood educators across the state, devoted to increasing the quality of early learning experiences for young children in order to prepare them for success in school and life.

Parents are their children's first and most influential teachers. Voluntary family visiting programs serving families with children prenatal up to kindergarten entry provide the information, support, and encouragement parents need to help their children develop optimally during the crucial early years of life. Such programs increase parent knowledge of early childhood development, improve parenting practices, promote early literacy experiences, provide early detection of developmental delays and health issues, and increase children's school readiness and school success. Through these preventative programs, future costs such as special education and remedial education, have been shown to be reduced.

- In Alaska, 40% of children entering kindergarten are not ready for school. Children who begin school behind rarely catch up later on and are less likely to graduate from high school, attend college, or acquire the skills necessary to obtain a job that pays a living wage.
- Alaska's graduation rate according to the Alaska Department of Education and Early Development is around 60%. The lack of school readiness at kindergarten leads to low graduation rates.
- The best outcomes for children occur when quality pre-kindergarten experiences include research based home visiting programs that involve parents.
- Families involved with home visitation programs such as Parents as Teachers are more involved in their children's later school experiences, leading to more positive outcomes for their children's education.

Establishment of such programs is an investment in the young children of Alaska and their families, with positive outcomes for years to come.

Gara Bridwell

Gara Bridwell, M.A.
Alaska AEYC Chair

ASSOCIATION OF ALASKA SCHOOL BOARDS

ADVOCATES FOR ALASKA'S YOUTH

The Honorable Chris Tuck
House of Representatives
State Capitol, Room 426
Juneau, AK. 99801

March 7, 2011

Dear Representative Tuck,

During our recent Legislative Fly-in, AASB members expressed unanimous support for additional state investment in early childhood development programs, including Parents As Teachers. Education leaders know that far too many children enter kindergarten lagging behind in skills necessary to be proficient in reading and math. And far too many of those children never catch up.

AASB believes that initiatives such as Parents As Teachers are essential to raising student achievement in Alaska school children without adding to the cost and size of government. Money invested in our youngest Alaskans is returned many times over again in improved earning power and lower rates of social problems.

I would like to thank you for your efforts on HB 49 and would encourage the Alaska Legislature to enact and fund this important legislation.

Sincerely,

Carl Rose
Executive Director

March 3, 2011

Representative Chris Tuck
State Capital Building, Room 426
Juneau, AK 99801

Dear Representative Tuck,

As members of the Southwest Region School District team, we are writing in support of the legislation in HB 49 supporting the Parents as Teachers program. This bill would support funding for Parents as Teachers programs in the communities that our school district serves.

The district knows the importance of the development of young children's minds during the first few years of life and the priorities of the state need to support that development. The Parents as Teachers program has had a positive impact on the children in the communities of Southwest Region School District in previous years. The program increased the school readiness component of the children's early education, which had a positive effect on improving school success in later years and increasing parents' involvement in their child's education. This legislation would bring this program back to our communities and allow children to start school ready to learn.

We urge the state legislature to support this legislation. The investment of educational resources into the early years of children's lives and parental involvement will benefit those parents and children for a lifetime.

Cordially,

Jack Foster, Superintendent

Communities In Schools OF JUNEAU

Representative Chris Tuck
State Capitol Room 426
Juneau AK, 99801

March 7, 2011

Dear Representative Tuck:

This letter is written on behalf of the board for the Communities In Schools of Juneau in support of establishing state funding and coordination for Parents As Teachers programs. Communities In Schools of Juneau works to increase graduation rates of students, and reduce teenage drug and alcohol use. The State of Alaska can not afford to continue the high costs associated with high school drop outs.

Because our organization sees the value in early learning to leverage greater success for students, we devote considerable resources and attention to services that connect young children and families to literacy and health resources. We ask that the State of Alaska do the same. As a state, we need to reduce the heavy remediation costs, along with drug, alcohol treatment programs, crime, teen pregnancy, and learning disabilities. The solution lies in programs to strengthen families and help parents become engaged in their child's learning right from birth.

As Nobel Laureate Economist James Heckman states: "Voluntary, culturally sensitive support for parenting is a politically and economically palatable strategy that addresses problems common to all racial and ethnic groups."

The Parents As Teachers program has a proven track record. We urge the State of Alaska to invest in this effective program so children will be ready to succeed by the time they enter school.

Sincerely,

Elsa Demeksa, Executive Director

Re: HB 49 – Parents as Teachers Act

Dear Representative Tuck,

Thank you for recognizing that Alaska's children are our most valuable resource and once again sponsoring the Alaska Parents as Teachers (PAT) Act. PAT is a nationally recognized evidence based program which supports parents and families as they strive to enhance their child's development. PAT is a voluntary program, with families actively choosing to participate because they understand the significance of parenting. They want their child to have an early childhood that builds a secure and loving foundation from which to grow, learn and ultimately to be a well balanced and productive citizen. These children are the people who hold the future of our country in their tiny hands. It only makes sense to provide their parents with access to every valuable tool we can. Here in Kodiak the local PAT program is considered a valued resource. The number of families wanting to participate greatly exceeds the number of funded openings.

Nationally we have devoted countless amounts of time, energy and money into researching how the brains of infants and toddlers grow and develop. We know what they need and what we should be doing. We also have extensive documentation related to the costs of not doing or providing those things that infants and young children need. Unfortunately those costs are never aggregated. They are scattered across a broad range of programs, special education, mental health, juvenile justice, adult incarceration, substance abuse, unemployment, etc. These sums are truly astronomical in comparison to the cost of "early childhood" services.

I have spent the past 20 years of my life working with families whose children were born with conditions that cause developmental delays. Some things are like lightning strikes, unpreventable and a reality of life and we will always have a few children born with unpreventable developmental issues. As a state and as a country we do have limited resources. Fiscal reality means we need to think about our resources, what are they, and how do we prioritize them for the maximum long term outcome. I submit that our first, foremost and number one priority is our young children. We cannot afford to allow any child's potential to be limited or destroyed. I applaud you and your fellow legislators for recognizing that our future is our children and taking action to make Alaska's future secure.

I support HB 49. Please feel free to share this letter with your constituents, legislators and any others you choose.

Respectfully,

Nancy Wells

Dear Senators

It is important that the state of Alaska continues to fund the Parents as Teachers Program because our children is our future. Parents are childrens first teachers and this education to our children is important them and us. My child has been enjoying these visits and learning from these home visits.

Thank you
Shane & Tim
Stanislaws

2-22-11

Dear Senators;
We would like to hope that the State of Alaska would continue to fund the home visits with the Parents as Teachers Program because the children learn first at home and they are important to start early education. Our kids do learn from these vital first years of visits.

Thank you,
Mary T Damian

2-16-11

Dear Senators: Mr. Hoffman + Mr. Foster

My child has been enrolled in the PAT program since May 2010 and is enjoying the home visits here in Alakanuk. She has learned so much at home as well as me. Please continue to fund the Parents as Teachers Program here so that my child can continue to recieve the visits that she likes.

Thank You,
Eleanor Phillips
Concetta Phillip

Feb. 10, 2011

Dear Senators,

Begining in 2004 I've had my children enrolled in the Pat Program here in Alakanuk. With my oldest daughter, who is developmentally delayed, the program was very helpful. Also I, myself have been in the program My youngest child is now in the program and she loves it. She is learning more and likes to "go to school". I think this program is very helpful because it helped catch all the delays my daughter has and helped us get her the help she needed.

Please help fund the Alakanuk Pat Program for our future children.

Renald Black

February 10, 2011

Dear State Senators

Please help Fund the Alaskanuk parents As teachers program which I have two Children En-rolled In and are learning at home to give them a head Start in there early lifes. My children enjoy the activites.

Janet H. Beans

I Jimmy D. Droane Sr. am a Parent to two children, Keianne Carmine Droane and Jimmy D. Droane Jr. We do not want the Parents as teachers program to quit. Never know if one of these kids become a scientist or a leader for the great country of United States of America. Having our children learn things at a young age. So you who ever is in charge think about the possibilitys that our children can do to change our country in the future. ——→ J. D. Droane Sr.

To: State of Alaska Senators Hoffman and Foster Mt's

RE: Support Letter for PAT Program's Grant

This letter is to support the Parents as Teachers Program here in the village of Alakanuk. The children that are enrolled into the program are a lot more involved everyday at school which is a big change and we get different reactions from them that are enrolled compared to the peers that are not enrolled, there's an extensive knowledge in the home visit group. I would like to see the PAT program continue to be funded by the State of Alaska. This makes a big difference when they are better prepared to come to school and what to expect when they are at school.

Please continue to fund this program here in Alakanuk so that our children will be educated at the home and the parents will learn how better to help their child learn great new opportunities that are developed at the home.

They do a lot of work with the parents and children with a lot of activities that supports early educations and this is great. They do great in having the monthly group socials, the children and parents like the program and we would not like to lose this very important program that the Senators should support.

Thank you for your time,

Nellie Edmund

Kerl St. Jeor
Asst. Instructional Leader

February 21, 2011

To Whom It May Concern:

I am writing this letter as requested by Hilda Stern. I strongly believe in the program that Hilda is involved in. Here in our village we have young ladies who find themselves pregnant and ready to take on parenthood without very much support or education as to how they can effectively parent this new baby. That is where this program comes in, offering support in the way of advice, education, as well as other types of help. Please understand that in a somewhat isolated location, this program is often the only way to give young parents any help. Without financial support his program will have to be discontinued. That would be a shame.

By acquiring stronger parenting skills, these young people will better be able to have children that will be contributing citizens of the community. Please support this program ensuring that Alakanuk's young parents will continue to have this support in their lives.

Sincerely,

Diane Reed

February 23, 2011

Dear Senators of this great State of Alaska: Neal and Hoffman

I would like to take this opportunity to thank you first of all for supporting the state of Alaska with your time and commitment in your duties in the Office of the Senate. I am the Home Visitor for the Parents as Teachers Program for RurAL CAP in Anchorage, Alaska. I really do enjoy my job as it entails many hats to wear such as social service work, educator, advisor, listener, companionship, friend in need. In this line of work we service prenatal to three years of age and provide age appropriate activities to bring to the home and helpful handouts that the parents can learn through information about what is going on in the brain at this critical time in their early lives, where the 'window of opportunity' is open to receive vital educational handouts that will form and stay with the child as he/she is learning from the important activities that is done with each child and parents that are age appropriate. I serve 24 families in the village of Alakanuk and the families that are served are very grateful of this program and many have learned information that otherwise would not have known about like when their newborn is first able to see, write, walk, run, preparation to write, stimulation of the brain, memory skills, fine motor and gross motor development, language and social-emotional development. This program also offers at least one group social a month to where all children and their families can come and have a snack or dinner do an activity, and they get to see where other children are at, how their child can play with other children their age, and share information about resources that are working for them and what isn't working. We also assist in the process of preparation for Head Start (or Preschool). With PAT we do screenings for development in vision, hearing, and for any delays that the child may have. With this in place we work with Family Infant Toddler Program in referrals so that the child can get the extra help that they may need in the future. We also supervise the Reading is Fundamental book distribution which the children so love to get their own books which are hard to get out here in the rural delta villages because it is very expensive to live out here and are just surviving on the basic necessities. Resources are gathered into one and offered to the families that do request of it whether it be educational, training, crisis, immunization support, transition, health, home, etc.

So with all this information it is our hope that many parents do share in this village and state that you will help to support the continuance of funding this program for our families that we would love to continue to serve. Many that are enrolled really do love this program and would like to see it continually happen for years to come because education really does start at home with the parents and they are learning how to better educate their child so they too can become a leader as well.

Thank you for your time and consideration,

Hilda Stern, Parents as Teachers, Home Visitor-P.O. Box 189 Alakanuk, AK 99554 (907)238-3918

Hilda Stern, PAT Homevisitor

2-23-11

Dear State of Alaska Senators:

My Children (2) ~~is~~ are enrolled in the parents as teachers program and was able to detect early interventions and so were able to get the help that one child would need to see a delay developmentally. I would like to continue the program in Alakanuk since ever expecting another child and will enroll into the program. Please help to continue to fund in the State of Alaska I just hope they keep it going.

Thank you,

Eric Koreft

February-15-2011

Senator Bettye Davis

To whom it may concern:

I have been involved in the Rural Cap Parents As Teachers' Program for 3 years now, I have been with the Program all this time, because I have received the help and the needed tools to work with my daughters. I have been enabled to make them ready to go to school. the material provided by the program is very useful, as well as the help received. I really like the kind attention my daughters and I have received from Sara.

Branda Fragoso
participant.

February 15, 2011

Senator Bettye Davis
To: Who may concern.

I been enroll at Parents as Teachers at Rural Cap2 program year. I like the ideas of this program because all the activities have to do with materials that are not expencives. They allways bring books that are amazing to read to my child. This program helps me to knew my childs development and offer ideas of things I can do at home with her.

Anchorage, Alaska 99502

Date: February 22, 2011

Re: Support for Rural Cap's Parents As Teacher (PAT) Program

Hello. My name is Beverly Johnson. I am a Parents As Teachers (PAT) parent. I am writing this letter to support the Rural Cap's PAT program and am asking for your support of the PAT program as well.

I am a single parent on unemployment and public assistance. I have a 2 year old daughter enrolled in the PAT program. My daughter has medical issues, which prevents me from working at this time. I go to the food bank several times a month, just to make ends meet.

Every parent wants the best for their child, and wants to provide the best opportunities for them. Rural Cap's PAT program is an invaluable community resource that has helped my family and my daughter. PAT program has provided me with information, encouragement and support to better my daughter's learning environment.

Our PAT family visitor has provided me with easy and inexpensive developmentally-appropriate teaching activities to do with my child. The PAT family visitor also assessed what my daughter knows and tailored these teaching activities so that my daughter can be challenged a little. Our family visitor has provided me with examples of how I can make teachable moments in my everyday life. As a single low-income parent, I am often more worried about putting food on the table and paying the bills than my

daughter's learning environment. The PAT family visitor makes my task of teaching my child much easier as she gives me examples of how I can show my daughter new concepts and activities.

Our family visitor is very knowledgeable and resourceful. My family has benefited many times when she gave me information about other community resources, such as Denali Kid Care's Early Screening program and other pamphlets on parenting workshops. Each time our family visitor comes to our home, she provides me with information on helpful community resources that I am usually un-aware of.

I know that many low-income families have much more things, such as finances, to worry about than their child's early years of development and learning. The Rural Cap's PAT program is an invaluable asset to these families and to our community. The PAT program helps parents and their children, by providing encouragement and support to people who otherwise would probably would not value or do these learning activities.

So, please, I am asking you to support the Rural Cap's PAT program. It is a huge asset and powerful resource for my family, our community and will make a difference in the future of many disadvantaged children. Thank you for your time and support.

Sincerely,

Beverly Johnson

Beverly Johnson

Representative Chris Tuck
State Capitol Building
4th Floor, Room 426
Juneau, AK 99801
Phone: (907) 465-2095

Dear Representative Chris Tuck,

I am writing to ask you to support continued funding for the RurAL CAP Parents as Teachers (PAT) Program. My daughters and I are participants in the Anchorage PAT Program and I want to share with you some of the ways the program has impacted our lives.

Our PAT Family Visitor provides home visits every other week. At each visit she shares information on brain development and how I can foster the growth and development of my daughters. We always learn a new activity that is specific to each of my daughters and their individual milestones. Each visit also includes a book or literacy activity and often we get a book to keep and add to our own collection. We enjoy each visit and the fun activities our PAT Family Visitor shares with us.

The PAT Program holds group socializations every month. These provide opportunities for children and parents to get together, play, learn something new and have fun! We especially enjoyed a group social that was held at our public library. We learned about all of the activities the library provides for young children and were encouraged to sign up for a library card if we didn't already have one.

Our PAT Family Visitor offers me resources and a chance to discuss any concerns I have about my daughters development. I appreciate the opportunity to ask questions and learn new things in my home; having two young doesn't always lend itself well to getting out in the community to participate in similar activities.

The PAT Program has taught me that I am my daughters first and best teacher. My oldest daughter was born 10 weeks premature and is flourishing; I am certain that our participation in the PAT Program has given her an advantage and has given me the tools and resources I need to better support her growth and development. The PAT Program has empowered me to be an advocate for both of my daughters.

I hope that you will share this with your colleagues and please encourage them to also support funding for the RurAL CAP PAT Program.

Sincerely,

Alicia Notti

RurAL CAP PAT Parent

2-23-11

My son Sheldon was enrolled into the PAT Program since September of 2007. Betty was his PAT Family Visitor from 2007 until he transitioned into the Chevak Head Start this school year. I think that having Sheldon involved in the PAT Program was not only rewarding and beneficial for him, but for our whole family as well! The PAT Program encourages parents to become involved w/ their children and family. We even received helpful tips on parenting and also had Sheldon practice his fine motor skills. Although Sheldon was diagnosed with MLD later on, Betty still provided services for him and also referred us to the Family Infant Toddler Program in Bethel.

I am so thankful for your Program! It makes me happy to know that even though any child is facing any type of challenges, the Parents as Teachers Program is there to help! I really appreciate your services and will gladly refer any parents to your program!

Amber Lingazak
Family Advocate
Chevak Head Start

As a first time father I appreciate the PAT program, for providing such good program for my son. I believe what the PAT Workers are doing is very important to the children to prepare for school.

To whom it may concern;

Getting Toddlers and Preschoolers Ready for School

Both toddlers and preschoolers can face the same issues when transitioning to another phase of life. From home to a preschool, and then from a preschool to grade school, this change in a child's routine can effect him in a negative way if he is not prepared for it. It is the responsibility of every parent to make sure that their child is ready for preschooling or regular schooling. However, teachers also play an important role in preparing a child for these two levels of education.

The Parent as Teachers (PAT) Parents are of course the most influential being to their children they have the most access for them to be taught. They have formulated the idea to expose the children to education with their parents, for them to become a lot prepared to their formal school challenges. 'Parents as Teachers ' or PAT Program is an effective tool in shaping the minds of these young toddlers. I support the PAT Program 100% and that they keep continuing the PAT Program in our community and other communities as well.

Subject: PAT blurb

I hadn't slept much the night before a family visit from Parents As Teachers because we were trying to take the pacifier away from my 14 month old. I had just made the decision about an hour before bedtime and thought "there's no time like the present!" My visit started out normal and then Cynthia handed me the Pacifiers Are Not Forever book. What a whamoooo moment. It was encouraging and supportive and just told me, in my gut, that I was doing the right thing; it made the bags under my eyes worthwhile.

With each visit I am able to take a deep breath and step back from the act of parenting to learn about the art of parenting from a learning perspective. I may not absorb everything presented to me in that hour, but later as I re-read the material there are many whamooo moments. The Parents As Teachers program allows me, a stay at home mom, opportunities for continuing education. It offers an open forum to talk about my problems, ask my questions, and rejoice in successes.

The Tot Time is another extremely important part of our weekly routine that we all look forward to all week long. I reason to get out of the house, get the kids running around in a gym, talk with other parents, and, if nothing else, just know there are other people in our community who are going through the same things on a daily basis as I am.

It's all about making connections that make living in rural Alaska easier and it has become an integral resource for us to grow as a family and a community.

Madeline had to feel what was in the bag and match it to the picture.

Glenallen

To whom this may Concern

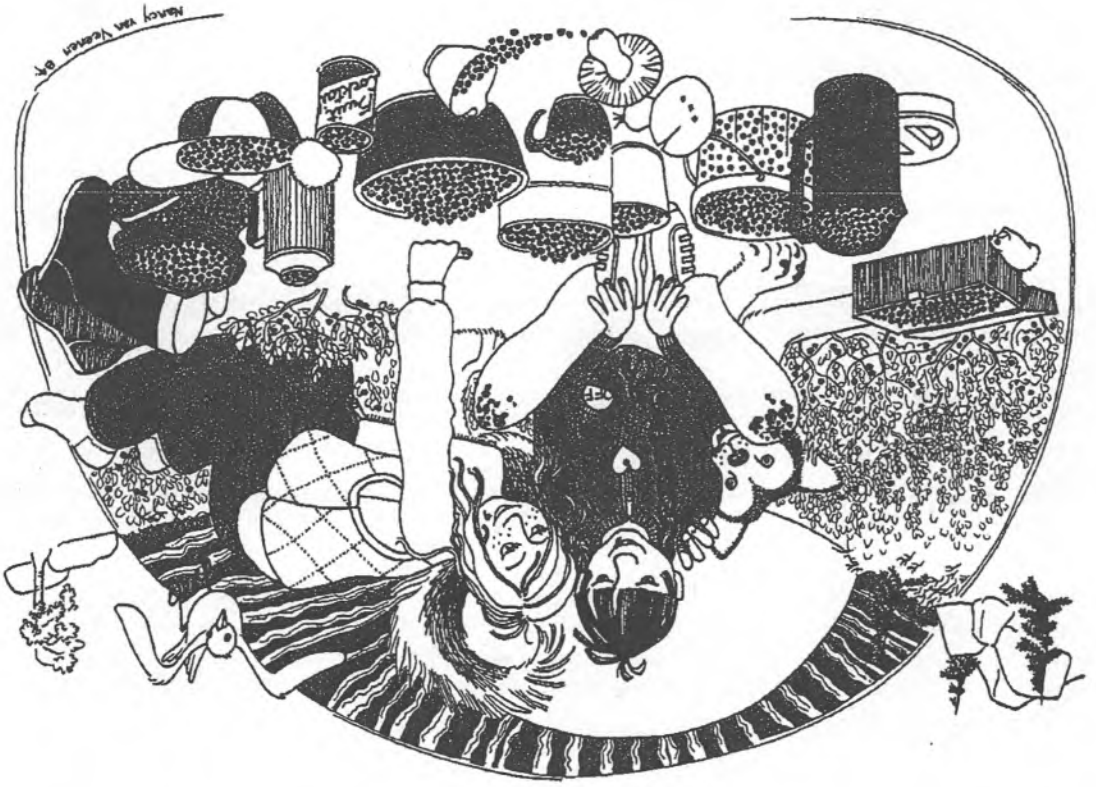
I really think this parents teachers is a really good thing to have for kids that need around here cause some parents dont Send there kids to school Until they see the parents teachers so I think this is a really good thing to have aroond here in Glenmallen way I like my daughter seeing cynthia or pat

from Davina Lanes

To Whom It May Concern,

I'm a former early-elementary teacher who is currently staying home with our 20-month-old son. My training as an early childhood educator emphasized the importance of early intervention programs and activities for very young children. We learned that all elements of development are critical for the well-being of a child, both health and intellectually. Programs like P.A.T. offer the opportunity for parents to be involved in a current, research-based program which helps their children develop in all these critical areas.

→



Enough for a Pie
Nancy van Veenen

PAT is unique in that it's focus is to enable parents to take an active role as a teacher early in life. Those early years are critical in laying a foundation for future success.

Even though I've had years of experience teaching young learners, the PAT program has enriched my son's life through weekly "Tot Time," an opportunity to interact with children his age. In addition, the strategies and learning activities presented by our local PAT Coordinator have been so helpful in making our son's playtimes intentional.

Please seriously consider supporting the continuance of a great program like P.A.T.!

Sincerely, Sherri Scribner

Re: PAT Program

I've been participating in PAT Program since I was pregnant in 2006 with my daughter & Im still in it with my son Rylan. He just turned 2 on the 7th of this month. This program helped me out as a 1st time parent & I get a lot of information about being a parent & about my children's development Right now Im learning about my sons muscles & how to help him stop drooling or to control his drooling. This program is helping me and their dad to be a better parent. Summer time we get a lot of fun activities also with safety like a 1st aide kit. PAT Program is GREAT. I'm also encouraging new parents & other parents with 0-3 y/o kids. If I didnt have this program I think I'd be not so good of a parent now.

Thank you PAT Program!

Senator Don Olson
State Capital Room 508
Juneau AK 99801

Dear Senator Olson,

My name is Ronald Trader. I am happily married to my wife, Bertina. We have a 9 month old son, William. He is a happy child, who is starting to discover books. He is also enrolled in the Parent as Teachers Program.

I am writing this letter to support the PAT Program. As we all know the child's first teachers are parents! This is a vital tool for families and it is much needed out here in rural Alaska! PAT Program works! How?

My wife and I learned about our son's cognitive stages and what to expect on development abilities at certain ages. We went through a vision and hearing tests. We got invited to social gatherings with others parents and babies. We received tips on keeping healthy during the flu season! We also received books that were appropriate for his age! He's attention span is growing when we read to him! He likes certain books! I enjoy seeing him get excited when we read books like, Twinkle twinkle little star and what's under the tree for me.
We need PAT programs to inspire kids AND parents education. It works! Education starts at home! The more education we give to our children, the less problems we have in our schools and social lives!

I applaud Senator Kawasaki for pushing Early Childhood Education! Early education for our children is investing in our future!

I support the Parent as Teacher Program because I see it working in my son, not only in him but as well with my wife and I!

Sincerely,
Ronald Trader

To: Whom it may concern
From: Christine Tegantakla
PAT program parent

Dear Sir or Mam,

I am writing this letter in support of requesting funding RurAL Cap for the Parents As Teachers program. In the past I was the family visitor for this PAT program station at Emmonak. Due to Child care & health issues I resigned my position. I also registered my baby into this program for FY 2010-2011.

This program helps parents understand how their child overall development is. I support this program especially for young parents who are just starting to care for their babies. Its also good for experienced parents like my self. Even I'm an experienced parents I learn something new at each visit about how to help my child for his age level. With this program available, it helps us to realize how vital what we do with our babies at young age is. We learn and there for help our babies grow to their full potential which also helps them as they get older.

Please provide another funding for this most important program parents can recieve. Working with families and Children I can see the difference in them compared to those who are not enrolled into this program... Thank You.

Sincerely,
Christine Tegantakla

Senator Donald Olsen
State Capitol, Room 508
Juneau, AK 99801

Dear Senator Olson:

My name is Cassandra Peterson. I am a special education teacher in Emmonak, a small, remote village in Western Alaska. I am writing to you in support of RurAL CAP Parents as Teachers program. I feel compelled to write to share the importance of early childhood programs and their bearing on their readiness for school. It has been my personal experience that children who have participated in early childhood programs are more ready and successful when they begin kindergarten. Not only are early childhood programs important for academic and social readiness, these programs are also vital in helping to identify children who have potential delays or disabilities, and the sooner interventions begin, the greater chance for success. The RurAL CAP program has been an invaluable support for the families with young children in Emmonak. Your continued support of this and other early childhood programs would be a great service to the children of Alaska.

Sincerely,

Cassandra Peterson

To Whom it may Concern; Feb 22, 2011

Parents as Teachers has been a wonderful support for me to have, even though I am not a first time parent. It has helped to enrich the experiences that I give my daughter, and her older siblings. My daughter Olivia enjoys the special playtime, and showing off her advanced skills in almost every activity she encounters. It is also great for me to have a knowledgeable adult sounding board for my fears & concerns. Please continue the funding so that many more families get this wonderful family support.

Angela Wilde

Haines

Haines

February 22, 2011

To Whom It May Concern,

I am writing this letter in support of Alaska's Parents As Teachers program. I have two children enrolled here in Haines and am thrilled by the positive impact our PAT visitor, Kim Phillips, has on my kids and my family. The information she brings to our house on a bi-weekly basis about child development, nutrition, growth, play, sleep, safety, to name only a few, has proven incredibly useful and helpful to us as well as to many other families we know whose children are blessed to have Kim in their lives.

We deeply appreciate Kim's dedication, her decades of experience in Early Childhood Education and development, and her constant encouragement and support as we raise our kids. She is very resourceful; any time we've needed extra information, she is quick to provide it, or to direct us to someone who can help us more specifically. (She helped us to arrange for our daughter to get her hearing tested since hearing loss runs in our family. She also provided extra information about vaccines when we asked - these are only a couple of dozens of examples I could give)

I understand that the grant money that supports Kim's job is running out. I implore you to do whatever necessary to keep PAT going, especially in rural areas where this type of family support is so crucial.

As my kids grow I see so many wonderful changes that are the direct result of Mrs. Phillips' work. Please allow her work to continue by giving financial assistance to her program. By doing so you are not only employing a phenomenal woman, but you're changing the lives of young Alaskans in such positive ways.

If you want to keep the children in this great state as happy and healthy as possible, keep the Parents As Teachers Program alive. And if there's anything left over, give Kim Phillips a raise. Of all the working people I know, She deserves it! She does her job because she loves kids and is a passionate advocate; not because she just wants a paycheck — She'd do this kind of work without a paycheck, I think. She's the perfect model of someone who has found their true calling in life.

Thanks and I look forward to seeing the children of the Chilkat Valley enjoy a PAT visitor for years and years to come.

Sincerely,

Vanessa Salmon

2/22/11

Haines

To Whom it may concern,

My family and I love the Parents As Teachers program. Joseph our three and a half year old was enrolled in the program from the time he was six months old. He loved every visit, the packages he got during the summer and the playgroups. When I was pregnant I got enrolled in the program and received information about our developing baby. Now that Baby (Hunter) is 10 months old and is enrolled in the PAT program! He loves it when Kim comes over, loves looking at the books and playing with her just like Joseph did.

I love to recieve the developmental information and take my kids to the playgroups. I get to meet other parents with kids my age.

The Parents As Teachers program is greatly appreciated by our family and other family in our community. Please continue to provide funding for it!

Sincerly,

Kelsey Albeeker of Haines

To whom it may Concern, Bill Thomas. Haines

We would like to take this opportunity to express our gratitude for the Parents As Teachers program, as well as those that make funding this wonderful program possible. Families are a fundamental unit of society. Programs such as Parents As Teachers promote good parenting which in return, can strengthen families. If we want a better society, we need to turn to the families. The Parents As Teachers program has enabled us to more fully appreciate the teaching involved with parenthood. What a noble calling! We hope you are as willing to keep this great program available, as we are. Parenting is more than providing food and shelter. As a parent we are responsible for teaching our children. we cannot and should not rely on others to do this for us. We wish there were more programs out there with these values!

Sincerely,
Susanna & Kevin Kennedy (and Sariah age 2½ and Kayla age 6 months ☺)

February 22, 2011

Dear Bill,

Thank you so much for your support of the Parents as Teachers program! Kim Phillips, the P.A.T. person in Haines, is such an amazing resource for all of our families. John Caleb (age 3 now!) really looks forward to her visits, and I learn from her every time we get together. Please keep supporting P.A.T.

Thank you for all you do!

Sincerely,
Holly Davis

Feb 22, 2011

Dear Representative Kookesh,

I am writing this letter in support of the Parents as Teachers program. The program has been very helpful to our family since the arrival of our daughter in 2007. It has taught us as Parents that we are the first teacher of our daughter. The program has given us the tools/info we need to encourage our daughter through the early years. We would not have had this information available to us if it were not provided by our Local PAT agent

Thank You
Leslie Katt
Leslie Kattenhorn

2/22/11

Haines

Dear Rep. Thomas,

I am writing you to ask for your support in the PAT (Parents as Teachers) program here in Haines.

I have been fortunate enough to be a part of this great program with two of my children. I strongly believe it is important for parents to be educated about the early stages of their children's lives and the development of their brains from 0-3 years specifically.

It is so nice to have the opportunity to have someone make home visits to our home, plan activities with our child, educate us on the stages our child is at at that time, answer questions we have as parents, etc.

I know so many families in Haines have greatly benefited from this program, so I strongly urge you to help with the funding to allow it to continue.

Thanks in advance!

Melissa Ganey

Haines
2-21-11

Parent as Teachers program is a great program here in Haines. We feel pleased to have Kim more than fully qualified for the position. We receive encouragement for age appropriate activities for our children. Our kids are excited to have Kim visit our house and love her playgroups. Not being around kids before I had my own kids, its great to have someone to ask questions and know she is monitoring their development. We are encouraged to become great parents and enjoy the moments when our kids are infants. I would recommend this program to others!

Mark + Alissa Koverdan
Ania 5, Arik 3, Andy 6 months

Bill Thomas, Haines

I can not stress enough how wonderful this program has been for my family. Growing up in Haines we didn't have a lot of programs to choose from and help us learn about raising children and child development. I was lucky to have family around me and always be around children growing up so I had an understanding. But others are not so lucky, and aware of what kinds of things we can do to make sure our children are getting the attention and are developing the skills they need to succeed in life. I can say having a child at the wrong age I was was, was the scariest thing I had ever experienced. I understood the basics of caring for a child and making sure they were healthy but was always afraid he wasn't developing motor skills and other skills that are very important at the young stages in life. Having Kim there for meetings every few weeks was amazing. She played with my son and showed me things that as a parent sometimes you overlook. This program made me realize how important teaching children is when they are so young. If you don't take the time to work with them when they are infants and toddlers they may not get in to reading or writing or other important skills you need in life later on when they start school. Pam has really shown me how to teach my son so he can go off to school in a few years and do well. Kids are the future and we need more programs like this one to help them become the best they can be in life.

Kaitlin Podsiki

To whom it may Concern,
My name is Chanda Turpin and I am writing this letter on behalf of the program we have in Hyde Co. I have one child in the program this year and one who was in the program last year and is now in Kindergarten. Not only is my 4 yr. old benefiting from the program but my 5 yr old did as well. I also have a two yr old and a one yr old who are enrolled, they enjoy and learn alot during the home visits that are provided for us. We also go in and volunteer, we take part in class and appreciate it, the time we are in class I my self as a mother get alot out of the program not only the home visits or the time in class but the one on one attention from teachers. I really appreciate the information to improve my parenting and home teachers & my family. I can never forget the building without learning something new and improving to make not only my childs life better but also my own. Thank you

For this program and it would
help to see the programs
we are given succeed and go
further on for more education
because we are very fortunate
to be given the opportunity to
better our children's lives through
the education that is available
to us.

Thank you for the chance
to be able to thank you
and tell you how much
these programs not only
benefit us, but also mean
to the families.

Thank you

Francis Jurgen

Senator Al Kookesh

State Capitol, Room 11

Juneau, AK 99801

Dear Senator Kookesh,

I am writing this letter in support of the Parents As Teachers Program in Hydaburg, Alaska.

I have two children, age 2 and 5 months enrolled in the program. I enjoy the home visits that are provided that help guide me to be my children's best and first teacher. I have learned about how my child develops and learns. They also provide health screenings. Because of the Parents As Teachers Program, I was able to get referred for services for my son's speech delay with the Early Learning Program. The Hydaburg program also provides monthly playgroups for our children that I really enjoy. The parents get to sound out to each other experiences of their children, and the Family Visitor is knowledgeable about what is happening. I never leave a group without learning something.

In addition to the program for my young children, Hydaburg P.A.T. also has a preschool for the 3 – 5 year olds that my children will be attending when they reach that age. This is very important to keep funded as there is no other early childhood education programs in Hydaburg.

Sincerely,

Terra Adams

My name is Judylee Guthrie. I'm writing this letter on behalf of the Parents As Teachers Program (PAT). The PAT program is a very helpful program to this Community. Many Children are enrolled into the program including my 19 month son. He has been enrolled since he was 6 months. For being a New parent and getting the one on one help with learning for My Child and Myself. I also help a Child in the school. He very much enjoys going to school and learning. As a helper, an Aunt and a Mother to the Kids at the school. Our days are based on the PAT Program for schooling. The PAT program has been here for years and hopefully for More years to come. I'm hoping for my son to be enrolled for going to school as soon as he can.
Thank you so much for taking the time to read my letter

Judylee Guthrie - Hydaburg, Ak

Dear Senator Al Kookesh + Representative Alan Dick –

February 15, 2010

I am writing to both of you to express my concerns about the state wanting to cut the Parents As Teachers program. I can tell you from first hand experience that this is a bad idea especially in our rural area! I have a 4 yr. old daughter who has been in the PAT program for 3 years and she made exceptional progress primarily due to the resources our family receives from PAT. The nearest head start is 40 miles roundtrip and that is too far for myself and others to benefit from that. If that had been my only option for early education for my daughter, I wouldn't have been able to take her and her learning opportunities would have been severely reduced. Also, I own the local store in Kenny Lake and am very involved with the community and can honestly name a numerous amount of families that have or will benefit from PAT. Please do not take away our only valuable, exceptional learning program that is educating our children of tomorrow.

Senator AL Kookesh Representative Alan Dick,

I think from a dads input that haveing Jan go once a week with my Little girls is a great learning experince for my girls. Jan is very good with the kids and my girls are so excited for tots time every wednesday. Jan is great with the kids

Thank
Andy Rosen

2/16/2011

Dear Senator Al Kookesh and Representative Alan Dick,

I am a mom of three young boys, one of whom is still at home. Jan Carlson has been visiting our home for eight years, when our firstborn was an infant. We live in a very rural, isolated community and there are no resources for parents of pre-school children. The Parents as Teachers program has been a great resource for us and has given us so much to look forward to in our long winter months. Jan has been a tremendous asset to me as a parent & have learned so much about the different stages of my boys development and how to be a better mom. Her visits to our home are such a highlight for my toddler. As there is no local pre-school, Jan's guidance has also helped me prepare my boys for school. They have excelled in school from the very beginning.

©ME Inc.

and I think Dan's visits through the Parent as Teachers program have aided in that. I think it would be a tremendous loss for our community if we were to lose this valuable program. There is literally nothing else. Please continue this program for our community. We are so grateful for it. Thank you for your consideration of our needs.

Sincerely,

Sarah Dodge

Homer, AK 99603

Dear Representative Seaton;

My name is Jeanie Moseman and my husband and I live in Seward with our son Jonas, who is eighteen months old.

I am writing to offer my support for the Parents as Teachers (PAT) program here in Seward. We have been signed up with the program since my son was born in 2009. We have found it to be a valuable resource for information on Jonas' development and expected milestones, as well as a source for suggestions of fun and interactive games and activities.

Our family always looks forward to our biweekly visits with Christina Pichotta, our PAT representative. Jonas enjoys learning new rhymes and games, and it has been reassuring to have someone evaluating his progress, especially as a first time parent. At Jonas' one year well child checkup, we were troubled to hear the doctors had some concerns about his head growth. Ms. Pichotta was able to supply us with documentation regarding his normal development to show his pediatrician, which was immensely helpful.

Please consider supporting the continued funding of this effective and valuable program. Thank you for your time.

Sincerely,

Jeanie Moseman

Representative Paul Seaton
345 W. Sterling Hwy. Suite 102 B
Homer, Alaska

Dear Representative Seaton:

This letter is in support of RurAL CAP's Parents as Teachers (PAT) program to provide home-based services for families with children aged prenatal to five years old. There is a critical need in our community for an early childhood program that helps to build school readiness skills for our children and provides support for families. We believe that the PAT program is an ideal model to meet this need.

Bi-weekly home visits and monthly group socializations offer an opportunity for parents to understand the growth and development of their children and to learn age-appropriate activities that they can do with their children to foster optimal development. The program also provides health and developmental screenings of children, identifying children who may need additional support at an early age. We firmly believe that RurAL CAP's PAT program will provide families with crucial, scientifically based information that will be presented in a way that is appropriate for our culture.

We offer our full support of this valuable program, both in our community and statewide.

Sincerely,

Lidia T Petersen

February 16, 2011

Dear Representative Seaton,

I would like to provide my support for the Parents as Teachers (PAT) program offered in the city of Seward. The PAT program has been beneficial for both my daughter and me. The program has given me some structured ideas on how to educate my daughter while we play together. The activities are great during our sessions with Chris Pichotta, our PAT coordinator, and the packets we can keep after each session are filled with ideas of things we can do for the rest of month. This is important especially over the long cold winter when outdoor play is not possible and we need things to do besides watching TV.

In a remote town like Seward, that does not offer pre-school, it is invaluable to have programs such as PAT that can prepare our children for elementary school. The PAT program has been most beneficial for me because it provides me some bench marks on what my daughter should be capable of doing at her age and what I should be teaching her. One example is teaching her how to use scissors. I have not done this with her because I was not sure it was safe. The PAT program provided a nice instructional list on how to get your child started with scissors and had a list of activities on how to practice.

Please help us support this program.

Sincerely,

Lori Polasek
Seward Resident

February 16, 2011

Dear, Mr. Paul Seaton,

I am writing to tell you what a wonderful program that Seward has to offer for children 5 and under which is call the Parents As Teachers program. I have enrolled my daughter when she was 10 months old and she loves it. It is great to have a program to have an instructor come to your home and help you teach your child and give her the one on one experience as I believe she is learning more at a young age and developing skills faster with this program. She amazes me with the new stuff she does and how eager she is to learn. And with the program they do once a month group socials which gives the children an opportunity to meet and play with each other and get to know the other parents that are enrolled. I am very grateful to have this program in our community as our community doesn't have much to offer for children 5 and under in programs.

Sincerely,

Amber Reese and Family

Dear Mr. Seaton, 2/18/2011

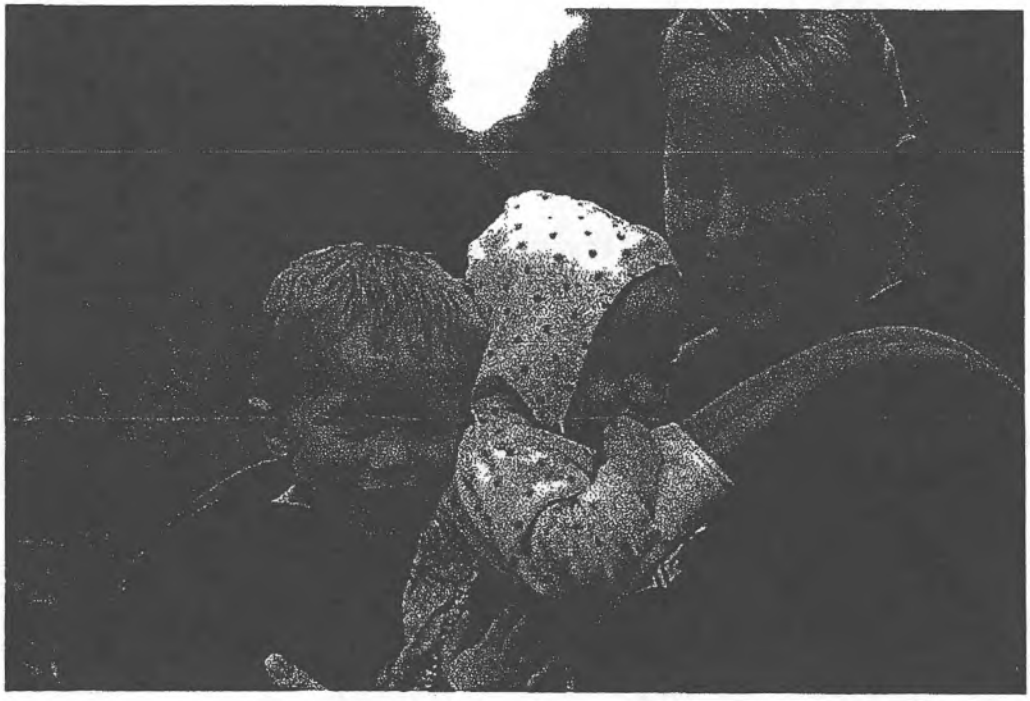
I am writing today in support of the Rural Alaska Community Action Program - more specifically the Seward Parents As Teachers program (P.A.T.)

I have two children - a son 3yrs old and a daughter 11 months; My son has been enrolled in the program since he was approx 4 months old. My daughter has been enrolled from birth as I participated in the prenatal program that Seward PAT also offers.

The PAT program has given me the tools that I need to provide my children w/ an atmosphere to learn & grow in. The facilitators are always kind and encouraging to me and my family. The home visit program has given my son and daughter the opportunity to learn and grow in ways that I could not have done on my own.

We ask that you continue to support the program with financial funding in the next fiscal year and thank you for supporting rural Alaskan families like ours!

Regards, Jena Petersen - Seward, Alaska
Lane Petersen - 3y
Arigun Peters - 11 mths



Thank you for your continued support of our rural alaskan family!

- Jena & Cole Petersen

At this point in time, the Parents as Teachers Program in Hoonah is funded by a federal grant. As the Federal Legislature votes to fund fewer and fewer of these types of projects it will become imperative that the State pick up these programs that are crutial to assuring a positive and bright future for our children.

These photos are from the Hoonah Parents as Teachers TOTS' Clinic that is held annually. At this clinic every child in Hoonah, birth to kindergarten has the opportunity to have screenings for:

Hearing	PAT Parent Educators, SESA equipment
Vision	PAT Parent Educators & Head Start Staff with the support of the Juneau Lions Club & their state of the art equipment
Medical	Dr. Amy Dressel, Pediatrician
Developmental	Jackie Bell, ILP
Motor	Bev Ingram, ILP
Speech/Language	Julie Peters, ILP
Social/Emotional	Bill Sallenbach, PhD

The U.S. Forest Service donates the use of their bunk house for this week long activity.

All of the children are weighed & measured and each parent is given a growth chart to help them track their child's height and weight percentiles. In addition to getting a book in the mail monthly from the Dolly Parton Imagination Library, each child who attends the TOTS Clinic gets an age appropriate book.

Parents are given any help and support they might request as they follow up on any referrals made as a result of this clinic.

Respectfully Submitted,
Lynne Osheim, Director
Parents of Teachers
Hoonah City Schools

Senator Donald Olson
State Capitol, Room 508
Juneau, AK 99801

RE: Parents As Teachers Program

Dear Honorable Olson;

This letter is in support of the Parents as Teachers (PAT) Program in Mountain Village, Alaska. I have had three of my four children enrolled in the PAT program and the impact left a permanent mark on my children. They still recognize their "first" teacher and are very fond of her.

Tryston, my second child who was first enrolled in the PAT program had his first social when he was four months old. Although he slept through the class, it was important for me to bring him to learn what milestones he should be reaching for his age. All other socials he was awake and participated in the hand/eye coordination and motor skill exercises.

Tyler, my second child enrolled in the PAT program had a speech impediment and through the program, we were able to get speech therapy for him. Before the end of the year, his speech improved ten fold and we were finally able to understand what he was saying. His older brother by a year and a half, Tryston, no longer needed to translate for him.

My youngest child, Ana, excelled in the PAT program and through all the hand outs we knew exactly what to expect of her by age. By the time she entered head start, she knew her name, age, parents, where she was from, colors and shapes. All learned in the PAT program.

I continue to support the PAT Program and would love to see it continue on our small community of Mountain Village. I know it has helped a lot of first time parents on what to expect of their children and by what age. I hope you feel the same after reading this and support this vital program.

Respectfully,

Tammy Aguchak
Former PAT parent

To Whom It May Concern

RE: Parent as Teachers Program

To Whom It May Concern:

I fully support the Parents as Teachers Program. All three of my children participated in this program in the past. I have realized the huge impact this program had on my children. By the time they reached Kindergarten, the Kindergarten teachers shared that they were well ahead of the curve compared to children who did not participate in the program.

I noticed my kids were always pleased to actively participate in the program with the local director. My children learned the basic developmental skills essential to their growth. It was reassuring and gratifying to see the development of my children as they progress throughout the program from birth to the entrance to Headstart and then to Kindergarten. The program also assisted in teaching young parents, as myself, on how to get the full benefits of parenthood and life skills.

I feel this is an essential program for the community since the program prepares our "most valuable people" the essentials to an improved lifestyle. I entirely agree with the saying that "It takes a community to raise a child." I feel this program is an essential building block in the development of our most valuable children.

If you have any questions or comment, please feel free to contact me at the numbers and address above. Thank you for your time and consideration.

Sincerely,

John M. Joe
Community Member

RE: Parents as Teachers Program

Dear Senator Olson;

My Name is Beverly Alexie from Mountain Village. My daughter, Traclynn is in the PAT program this year with Agnes L. Brown and she really enjoys her visits.

I have noticed many changes in my daughter's learning stages, from when she was just a year old to now, age three. Traclynn has learned a lot from the teaching materials Agnes brings to the home visits. We together show her how to do beading, building blocks, cutting with scissors, pasting objects and shapes on to paper, reading books and remembering animals names, etc. (to much to name).

I really enjoy this program myself because I am informed about what Traclynn should be learning by how many months she is. It's interesting to know exactly where she needs to be at during this important developing stage. I can see that she does things a little early then the stages say. Filling out the questionnaire Agnes brings every three months or so also shows how far Traclynn is coming along and if there are parts we really need to work on before then next home visit . I am also offered safety tips and even given fire extinguishers and fire alarms if we don't have them.

I believe this program is very helpful because I see at the group socials the children have a lot of confidence and great motor skills. They are able to do crafts and play well with each others. I also see all the children that attend the group social to love to read books with their parents, too. Every time we have these group socials they interact with each others and then the next time they meet, we see an improvement in their social skills by remembering to taking turns and stand in line to wash their hands and even talking with each others. Seeing these actions, I know it will lead to respect.

This awesome program has a great impact on our children here in Mountain Village. Before the PAT Program, we (young parents) really didn't know what our children's learning stages were, so we were practically raising them on how we thought was right and not knowing if our children have learning difficulties. Having the PAT Program now is very helpful and it gives us knowledge about the growing stages of our children and if we need to enroll them in special programs like FIT (Family Infant Toddlers) Program for speech delay or hearing problems.

If we loose the Parents As Teachers Program, I think we will see a huge difference in our children. This program benefits parents who don't know that they need to teach their children different skills their child should know at certain ages. Especially, with their large and small motor skills it could cause them

to have a delay in their growth that affects the use of their social and motor skills, which most parents are not aware of until their child reaches Head Start. It is best to keep this program so that we can catch these delays early.

With respect and love of our future leaders, I Beverly Alexie, a proud parent of Traclynn Alexie would like you, Senator Donald Olson, to continue to support this excellent program. You are our voice for our future children and we thank you for the hard work you do and the pride you have in your people!

Respectfully,

Beverly Alexie

RE: Parents as Teachers Program

Dear Representative Foster;

My Name is Beverly Alexie from Mountain Village. My daughter, Traclynn is in the PAT program this year with Agnes L. Brown and she really enjoys her visits.

I have noticed many changes in my daughter's learning stages, from when she was just a year old to now, age three. Traclynn has learned a lot from the teaching materials Agnes brings to the home visits. We together show her how to do beading, building blocks, cutting with scissors, pasting objects and shapes on to paper, reading books and remembering animals names, etc. (to much to name).

I really enjoy this program myself because I am informed about what Traclynn should be learning by how many months she is. It's interesting to know exactly where she needs to be at during this important developing stage. I can see that she does things a little early then the stages say. Filling out the questionnaire Agnes brings every three months or so also shows how far Traclynn is coming along and if there are parts we really need to work on before then next home visit . I am also offered safety tips and even given fire extinguishers and fire alarms if we don't have them.

I believe this program is very helpful because I see at the group socials the children have a lot of confidence and great motor skills. They are able to do crafts and play well with each others. I also see all the children that attend the group social to love to read books with their parents, too. Every time we have these group socials they interact with each others and then the next time they meet, we see an improvement in their social skills by remembering to taking turns and stand in line to wash their hands and even talking with each others. Seeing these actions, I know it will lead to respect.

PAT letter of support

From: **Jillian Britton** (jillianbritton@yahoo.com)
Sent: Sun 2/27/11 11:47 PM
To: Mimi Eddy (mimi_eddy@msn.com)

Hey Mimi, I made a few more changes to the letter I sent to the chick in ANC. Below is a copy, let me know what you think. I hope its good and hopefully will help. Write back and tell me what you think of it.

~Jill

To Whom it May Concern,

I have been with the Parents As Teachers program going on three years now and would like to express my appreciation for being able to be a part of such a great program. It has been such a wonderful opportunity to have Mimi, our home visitor, visit us in our home. As a stay at home mom, it is great to have a professional come for scheduled visits that allow me to completely focus on my daughter and also be shown so many new ways to broaden her creativity using items we have here in our home. Through Mimi's PAT training, she is able to share many different ways to expand ideas for fun learning activities that we are able to do and enjoy in our home and even at friends or families homes. It has given me more confidence as a parent to help and encourage my daughter to learn using the activities that Mimi has introduced to us through the PAT program.

She also brings many different books on colors, shapes, numbers, etc that have helped my daughter's love for books increase. I am so proud to see how much Rowan enjoys the books and activities that our PAT representative brings for her. Rowan is so excited to learn how to read.

I would also like to add that it has been such an honor to work with Mimi, our PAT home visitor. My daughter gets so excited every time she hears that Mimi is on her way to our house. I only wish she were able to visit more often. I would also like to add that I am now a more confident parent -thanks to working with Mimi. I can only hope that the Parents as Teachers program will continue and hopefully become a year round program. I firmly believe that it is important for young children to consistently be exposed to new skills through different and creative projects that encourage them to learn and it would be so beneficial to both Rowan and me to have the opportunity to work with PAT year round. The Parents as Teachers program is such an amazing program that has so many benefits for children as well as parents and it would certainly be more beneficial if it were year round. Rowan and I are so lucky to be able to be a part of it and to have Mimi as our home visitor. She has been such a pleasure to work with.

Please feel free to contact me with questions or if I can help in any way to ensure that this wonderful program continues, hopefully year round.

Sincerely,

Jillian Britton

Dear Donny Olson,

I like the Pat program, there doing a really good job for all the kids here in Stebbins. My 3 year old daughter always looks forward to her home visits with her teacher. And she's very excited about going to school at the head start next year. Thank you for all your support for the Pat Program and we all hope to continue with your help for the program and the kids attending School and home visits.

Stebbins, Alaska

Angela M. Mercuby

Dear Donnie Olson, 2·10·11

I think you should continue the PAT program because it helps the young children learn new stuff and skills. Also the young children enjoy home visits with the teacher.

Jamara Smith - Stebbins, Ak

Dear Senator Kookesh,

As the director of the Parents as Teachers Program in Hoonah, I get to witness 1st hand the impact of the program. Language development is one of the most important components for success in school. The children/parents in Hoonah are being helped to improve this area of development through the efforts of PAT Parent Educators.

Thank you for your time and consideration.

Sincerely,

Lynne Osborn

Testimony to the House Education Committee

March 11, 2010

Respectfully Submitted by Norman Eck, Ph.D.

Thank you for allowing me the opportunity to testify this morning. For the record, I am Dr. Norman Eck, Superintendent of the Northwest Arctic Borough School District. I have been employed as an administrator in this District for 13 years and this is my 6th year as superintendent. Two years ago I was the Alaska State Superintendent of the Year.

I am in support of House Bill Number 49. This Bill will provide a solid base to prepare parents and their children for when their children enter school. Many parents when they have children ages zero to 4-years, do not know what sort of activities that they can engage in with their children that will promote positive cognitive development. Parents as Teachers does that.

It is important that early childhood programs implemented in Alaska follow the guidelines of the National Association for the Education of Young Children. I firmly believe that evidence-based, non-mandatory, parent engaging efforts that meet high standards are the marks of good pre-Kindergarten programs and will meet the need of Alaska's children.

There is no one single solution to preschool needs. Our state is varied and the needs of students and families are very different. However, one fact is certain,

and that is that the Parents As Teachers Program is a solid pre-school offering that can make a substantial difference in a child's life.

Let me give a concrete example. In 2003, Northwest Arctic was awarded a federal grant to implement a Parents as Teachers type program. We called our program, Getting Ready to Learn. As funds were limited, we strategically operated it in 5 of our lowest performing village schools. One of the program goals was to assure parents that they are their child's first teacher: "As your child's first teacher you need to provide one-on-one interaction between your child and yourself to develop the brain and language skills to build the best foundation for future learning."

Four major skill areas were emphasized: language and literacy skills, thinking skills, self-control and self-confidence for parents and their children. The teachers worked to foster trust and communication and to provide activities which enhance attachment, engagement, investment and enjoyment of the child by the parents. Playgroups were established and home visits were made.

The homes in these five villages were primarily print free environments. So, family literacy programs were formed in each village. The purpose of those were to encourage families to read together at home by providing them with quality age appropriate books and simple activities that promoted family interactions.

Our federal funding ran out in 2006 and we had to close the Getting Ready to Learn Program. This was a great shame. By the legislature passing this bill, the

opportunity we had that brought so many of our children to success as students will be able to be offered to Alaska's neediest families. We would hope to be able to re-implement our program.

Over the past 7 years, there have been many things that we have put into place in our district to contribute to improving student academic achievement. We have implemented quality programs, quality teacher training, and we require strict adherence by all teachers to do what is best for children at all times.

What did we find in our test scores that, I believe, were directly affected by the Getting Ready to Learn Program and through our overall quality schools efforts?

Overall student achievement based on the Standards Based Assessments taken by our students in grades 3 through 10 increased as follows: In 2003, 36% of our students were proficient in language arts, by 2008 that percentage had risen to 51%. During the same time frame on the same assessment, our math scores have risen from 2003 with 32% of our students proficient to 51% of our students being proficient in 2008.

It takes many puzzle pieces to construct the entire picture of a successful education. Early childhood education is essential, especially for our underperforming students. Parents as Teachers is an excellent step for our legislature to take toward helping students to be academically successful.

March 14, 2011

Chairman Alan Dick and Members of the House Education Committee

Dear Chairman Dick:

The purpose of this letter is to express my strong support of HB 49. As an educator for nearly 40 years, 30 years of which has been spent in rural Alaska, I have found no single factor more important to a child's success in school than parental engagement, especially early in the child's life. HB 49 provides an opportunity for parents to become involved with their child's learning at an early age in a structured and supportive manner. HB 49 is a low-cost, high-impact, voluntary program that can significantly change the lives of many children.

I would ask for your support and the support of the House Education Committee to pass HB 49.

Sincerely,

Richard E. Carlson
Superintendent

CS FOR HOUSE BILL NO. 93(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES GUTTENBERG, Kerttula, Kawasaki

A BILL

FOR AN ACT ENTITLED

"An Act relating to school gardens, greenhouses, and farms."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.30.375(a) is amended to read:

(a) A school district may authorize **a nonprofit corporation to operate** or **may** operate a school garden, greenhouse, or farm. **A nonprofit corporation authorized under this section must contribute to the operation of each school garden, greenhouse, or farm matching funds in an amount that is equal to or greater than one-half percent of the state aid received by the school district under AS 14.17.400 for the school each year.** The garden, greenhouse, or farm must be used for educational purposes and for growing fruits and vegetables for consumption by the students through the school district's meal and snack program.

*** Sec. 2.** AS 14.30.375(b) is amended to read:

(b) If a school district **authorizes or** operates a school garden, greenhouse, or farm, the district **or the authorized nonprofit corporation** shall give students representing student organizations, including vocational programs, the opportunity to

New Text Underlined [DELETED TEXT BRACKETED]

be involved in the operation of the school garden, greenhouse, or farm.

* **Sec. 3.** AS 14.30.375(d) is amended to read:

(d) If a school district **authorizes or** operates a school garden, greenhouse, or farm, the excess fruit and vegetables may be sold.

* **Sec. 4.** AS 14.30.375 is amended by adding new subsections to read:

(e) If a school district authorizes a nonprofit corporation to operate a school garden, greenhouse or farm under this section, the school district shall apply for a grant under AS 14.30.377 to provide funds to the nonprofit corporation for the operation of each school garden, greenhouse, or farm.

(f) In this section, "nonprofit corporation" means a corporation that qualifies for exemption from taxation under 26 U.S.C. 501(c) (Internal Revenue Code).

* **Sec. 5.** AS 14.30 is amended by adding a new section to article 7 to read:

Sec. 14.30.377. State grant for operation of a school garden, greenhouse, or farm. (a) A school district may apply to the department on a form approved by the department for a state grant for the operation of one or more school gardens, greenhouses, or farms under AS 14.30.375.

(b) The department shall award a grant to a school district in an amount that is not more than $10,000 for each school at which a garden, greenhouse, or farm will be operated each year.

(c) The department may not, in a fiscal year, award grants for the operation of more than five gardens, greenhouses, or farms that were not previously the subject of a grant award under this section.

(d) A school district is eligible to receive a grant under this section if the district provides proof satisfactory to the department that a school or an approved nonprofit entity provides matching funds in an amount that is equal to or greater than the grant amount.

(e) The department may adopt regulations necessary to implement this section.

* **Sec. 6.** The uncodified law of the State of Alaska is amended by adding a new section to read:

GRANTS FOR SCHOOL GARDENS, GREENHOUSES, AND FARMS. Notwithstanding the limitation placed on the number of new grants awarded for the operation

of a school garden, greenhouse, or farm under AS 14.30.377(c), added by sec. 5 of this Act, the department may award grants for the operation of not more than 10 gardens, greenhouses, or farms in fiscal year 2012.

Representative David Guttenberg

House Bill 93: School Gardens
Sponsor Statement

House Bill 93 creates a grant program for non-profits who operate school gardens at public schools and have raised operation funding in their communities. It would allow the state to provide an additional ½ of one percent of state aide to a school for the purposes of supporting a non-profit run school garden, farm or greenhouse.

This legislation makes recognition of Alaska's problems with obesity and food security. By teaching young Alaskans how to grow their own healthy food in their own communities we can begin to ease both problems.

Even if every school in Alaska found non-profits to manage gardens, greenhouses or farms, the cost to the state would be minimal and the benefits would be astronomical.

(Revised 12/29/2010 OMB)

FISCAL NOTE

STATE OF ALASKA **BILL NO.** HB93
2011 LEGISLATIVE SESSION

Analysis

The attached spreadsheet includes the FY2012 projected state entitlement under AS 14.17.400 with the calculation for allocations based on one-half percent of state aid to be authorized under the proposed amended Section 1. AS 14.30.375 (a). The proposed amendment would generate $5,351.1 under this legislation.

A unit within the Division of Teaching & Learning Support would be responsible for developing an application process and administering the grant program. This unit is nearly 100% funded through federal programs and must code their time to the appropriate funding source for activities. Based on .25 FTE, the activities of administering this program would be approximately $32.0.

Part-time							
Temporary							

Why this fiscal note differs from previous version (if initial version, please note as such)

The funding mechanism for this version has changed from .5% of the State Aid under AS 14.17.400 per district to $10.0 per grant award with a limit of 10 schools in FY12 and a limit of 5 new schools per year on a statewide basis thereafter. The cost to develop a competitive grant application process and the administration of the grants has been reduced to an amount based on work by an existing Education Specialist II dedicated to the program.

Prepared by Cynthia Curran, Director — Phone 465-2857

Approved by Mike Hanley — Date 2/26/2011
Commissioner

(Revised 1/27/2011 OMB)

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSHB93(EDC)

Analysis

Under section 14.30.377 of the Committee Substitute, the department may award grants for operations of not more than 10 gardens, greenhouses, or farms in FY12. In subsequent fiscal years the department shall grant to a school district not more than an amount of $10,000 to each school at which a garden, greenhouse or farm (under AS 14.30.375) will be operated each year. The department may not award grants for the operation of more than five gardens, greenhouses, or farms that were not previously the subject of a grant award under the section.

A unit within the Division of Teaching & Learning Support would be responsible for developing an application process and administering the grant program. This unit is nearly 100% funded through federal programs and must code their time to the appropriate funding source for activities. Based on .12 FTE, the activities of administering this program would be approximately $10.6.

February 1, 2011

Chairman Alan Dick
House Education Committee
State Capitol
Juneau, AK 99801

Dear Chairman,

We at Calypso Farm and Ecology Center (Calypso) are thrilled at the prospect of House Bill 93 and what it could mean for Alaska! Our Schoolyard Garden Initiative (SGI) and Engaging Alaskan Teens in Gardening program (EATinG) have been very successful in the past eight years, producing food for the community, creating jobs for teenagers, involving community businesses and volunteers, and encouraging healthier eating habits. We know other Alaskan communities can benefit from implementing a model similar to ours, and think the incentive of matching legislative funds could really drive this process.

Calypso's SGI is currently the only nationally recognized Farm-to-School effort in the State of Alaska. It is an innovative community food program which creates school gardens that function as experiential learning environments – reaching well over 2,500 students during the school year – where students make a concrete connection to where food comes from and have the opportunity to harvest and eat fresh food from their schoolyards. During summer months, the EATinG program kicks in and the school gardens are maintained by local teenagers who plant, maintain, and harvest each of 6 school gardens, sell the vegetables throughout the summer at local farm-stands, and assist in teaching home gardening workshops to aspiring gardeners in the community and garden lessons to younger children in the fall. In exchange for their work, each Student Gardener takes home a weekly supply of vegetables and receives a monetary stipend at the end of the season. For most, this is their first job experience, and they gain excellent job readiness skills, develop a work ethic, contribute to meeting the community's need for food, and grow the local economy.

In Alaska, there are currently 7 schools in the program, with many other communities – such as, Soldotna, Kenai, Haines, and Juneau – who have indicated interested in replicating Calypso's model program or creating something similar. The growth of these programs has happened slowly, not exactly keeping pace with demand. Calypso would like to see schools throughout Alaska offering these programs and help non-profit farms statewide build similar programs, but funding can be an obstacle.

Calypso works hard each year to raise funds through soliciting contributions from corporations, local service clubs, and our members, as well as at our annual auction, special dinner events, a community-wide celebration of the programs. We also send targeted appeal mailings and apply for foundation grants. Most, recently, we were awarded a legislative grant. And we could grow more. That will require stable and diverse funding, including matching funds from the state, which is why Calypso strongly supports HB93. The matching funds incentive will provide a much-needed to boost to schools and groups on the cusp of starting a garden, greenhouse, or farm.

Below are some quick bits of information that, when you multiply them by the potential implied in HB93, would have a huge impact on youth and their families in Alaska:

- **In 2010 the school gardens produced over 10 tons of vegetables.**
- **In 2011 Calypso will engage over:**
    - **120 teenagers in EATinG**
    - **1,500 elementary school children** who will benefit by having school gardens to learn and play in
    - **300 low-income community members** who are expected to purchase food from the neighborhood farm stands associated with each garden. Five of the six schools are within walking distance of low-income housing and two of the schools are federally recognized as Title I Schools (serving youth from low-income families).

At Calypso, we've seen a tremendous impact on our community when there were just five schools engaged in SGI and EATinG. We know the exponential potential HB93 could have on our local area, let alone every community in our great state. If passed, the long-term outcomes of this legislation could include: healthier youth and families; improved local food economies and better food security; enhanced access to local foods for those using WIC, Senior Coupons and Food Stamp benefits; increased jobs in the agriculture sector; and strong workforce development.

At Calypso, we fully appreciate your time and consideration of this important bill and encourage all Alaskans to rally behind its possibilities to improve every community.

Sincerely,

Laenne K. Thompson

Laenne K. Thompson, *Calypso Farm Development Director*

(907) 451-0691

Chairman Alan Dick, House Education Committee

Please support and help pass HB 93 that **will pave the way for more communities to tap into state funds for programs similar to Calypso's Schoolyard Garden Initiative and Engaging Alaska Teens in Gardening program.**

This bill is a long-term investment in Alaska because it offers a percentage of annual operating support for a school garden/greenhouse/farm, rather than offering funds for just one year.

The matching requirement is a way for the state to ensure the communities' commitment to each project.

In sum, this is unique and will actually have a long-lasting impact and would solidify Calypso's and **other community future school garden/greenhouse/farm projects.**

I am trying to get school gardens going in the Central Kenai Peninsula and urge your support for this bill. Calypso's inspirational message last fall was the impetus for our Garden Club to start school gardens.

Please play a leading role in the national surge for more local food production. Help young Alaskans learn how to grow more of their own food.

This is the equivalent of teaching kids who then taught their families to "Stop, Drop & Roll" in fire emergencies. "Learn, Plant and Grow Locally." HB 93 is part of a serious and sincere effort to wake all of us up to Alaska's need to get growing.

Most sincerely,

Marion Nelson
President & Program Chair
Central Peninsula Garden Club
(over 200 members)
907 283 4632

Dear Sir,

I am writing to ask you to support HB 93. As our garden committee chairman I have worked diligently to promote and start the garden at Randy Smith Middle School. This project has had universal support from the staff and students as they easily see the win/ win/ win benefits of it.

Teachers support the garden as an educational resource that can support curricula in several disciplines. Special education and intensive resource teachers support it as more hands on and real world opportunities for their students. Staff in general support it as a way to enhance the nutrition and quality of food in our lunch program. Our cooking staff support it an opportunity to use the freshest ingredients in the food they prepare. Students know it is a work opportunity in the summer and a chance to be hands-on in bringing food to their own table. Parents are excited to see it becoming a reality for the same reasons as everyone else.

The role Calypso Farms plays in helping school gardens get started is invaluable, from guiding infrastructure development, working with district administration and facilities, physical labor, and plant materials to education support. They have developed an initiative that really works in our community and can serve as a role model in others. Passing House Bill 93 will insure that Calypso Farms is able to keep running this important program with more schools and reach more students farther into the future. Thank you very much for your consideration and support.

Sincerely,

Katherine Helmuth

Randy Smith Middle School

February 7, 2011

Chairman Alan Dick
House Education Committee
State Capitol
Juneau, AK 99801

Dear Chairman Dick:

I am writing this letter in support of House Bill 93. I am an elementary school teacher in Fairbanks, and have the privilege of utilizing a school garden as part of my daily work with students. The Pearl Creek Community Garden (my school garden) is one of several under the umbrella of the Calypso Schoolyard Garden Initiative. I am an active member of the school's Garden Committee, and I have seen firsthand what an effective teaching tool the garden can be. Our students plant seeds for the garden in the spring, as well as turn the soil and help prepare the beds. We also use the garden throughout the late summer and early fall for classroom activities and learning across all the academic curricula. Classrooms compost vegetable matter throughout the school year to help build our garden soil. The garden has become an important part of our school identity - for students, staff, and families.

The garden touches our larger school community in other ways. It provides young people with meaningful summer work and lifelong knowledge and skills, encourages interest in agricultural professions, brings fresh vegetables to the tables of many families as well as our students, and creates a beautiful space for the community. HB 93 would provide stability in funding which would help school gardens plan for growth and improvements as they are needed, ensuring that the gardens continue to employ our youth and have the resources necessary to supply the locally-grown food that more and more people in Alaska are demanding.

Here in the Forty-ninth State, we pride ourselves on our ability to live off the beautiful land around us. School gardens provide a means for Alaskan children and families to learn about sustainable food production, healthy choices, and responsible employment. I urge you to give HB 93 the highest possible consideration!

Sincerely,

Jacqueline M. Martin

Introduction to Science Performance Standards

(Grade Level Expectations)

The Alaska Science Performance Standards/Grade Level Expectations (PSGLEs) have been developed for grades 3 through 11 in fulfillment of the No Child Left Behind Act of 2001 (NCLB) requirements.

This document is intended to provide a road map for the development of assessment items as well as the basis upon which school districts refine, align, and develop their science curriculum. The content described by the PSGLEs does not represent the entire science curriculum for a grade or course. Nor does it represent the final word on the science content that is presented since one of the basic understandings in science is that our knowledge continues to grow and change as we gather more evidence about a subject. The PSGLEs indicate core content to be mastered by the end of a given grade. Science content can be added and enriched as appropriate for a district program, school, or student. It may be necessary to introduce some skills at an earlier grade in order for students to achieve mastery at a given level. Similarly, skills will need to be maintained after mastery has occurred at a given grade level.

The Alaska Science PSGLEs are aligned to the Alaska Science Content Standards. The Content Standards were revised in 2003 to align with the National Science Education Standards. Participants in the development of the PSGLEs actively researched the concepts and skills contained within this document.

References

National Research Council (U.S.). (1996). *National Science Education Standards: Observe, interact, change, learn*. Washington, DC: National Academy Press.

Project 2061 (American Association for the Advancement of Science). (2001). *Atlas of science literacy*. Washington, DC: American Association for the Advancement of Science: National Science Teachers Association.

The Science Content Standards are grouped into seven strands, A-1 through G-1.

Each PSGLE includes a bolded statement called the "stem." Each stem is the same or similar across the grades for a given PSGLE and is meant to communicate the main curriculum and instructional focus of the PSGLE across the grades.

A1—Science as Inquiry and Process

SA Students develop an understanding of the processes and applications of scientific inquiry.
SA1 Students develop an understanding of the processes of science used to investigate problems, design and conduct repeatable scientific investigations, and defend scientific arguments.
SA2 Students develop an understanding that the processes of science require integrity, logical reasoning, skepticism, openness, communication, and peer review.
SA3 Students develop an understanding that culture, local knowledge, history, and interaction with the environment contribute to the development of scientific knowledge, and local applications provide opportunity for understanding scientific concepts and global issues.

GRADE 3	GRADE 4	GRADE 5
The student demonstrates an understanding of the processes of science by	**The student demonstrates an understanding of the processes of science by**	**The student demonstrates an understanding of the processes of science by**
[3] SA1.1 asking questions, predicting, observing, describing, measuring, classifying, making generalizations, inferring, and communicating	[4] SA1.1 asking questions, predicting, observing, describing, measuring, classifying, making generalizations, inferring, and communicating*	[5] SA1.1 asking questions, predicting, observing, describing, measuring, classifying, making generalizations, inferring, and communicating*
[3] SA1.2 observing and describing their world to answer simple questions	[4] SA1.2 observing, measuring, and collecting data from explorations and using this information to classify, predict, and communicate	[5] SA1.2 using quantitative and qualitative observations to create their own inferences and predictions
The student demonstrates an understanding of the attitudes and approaches to scientific inquiry by	**The student demonstrates an understanding of the attitudes and approaches to scientific inquiry by**	**The student demonstrates an understanding of the attitudes and approaches to scientific inquiry by**
[3] SA2.1 answering "how do you know?" questions with reasonable answers	[4] SA2.1 supporting their ideas with observations and peer review (L)	[5] SA2.1 supporting their statements with facts from a variety of resources and by identifying their sources (L)
The student demonstrates an understanding that interactions with the environment provide an opportunity for understanding scientific concepts by	**The student demonstrates an understanding that interactions with the environment provide an opportunity for understanding scientific concepts by**	**The student demonstrates an understanding that interactions with the environment provide an opportunity for understanding scientific concepts by**
[3] SA3.1 observing local conditions that determine which plants and/or animals survive (L)	[4] SA3.1 identifying the local limiting factors (e.g., weather, human influence, species interactions) that determine which plants and/or animals survive (L)	[5] SA3.1 identifying the limiting factors (e.g., weather, human influence, species interactions) that determine which plants and/or animals survive

The number in brackets indicates the grade level.

PSGLEs repeated with no changes across grade levels are marked with asterisks to indicate that the PSGLE assumes increasing complexity to indicate growth in the PSGLE.

Note: Items differentiated with an "i.e." indicate that statewide assessment items may be written only to the content contained within the statement in the parentheses. Items differentiated with an "e.g." do not limit assessment items to that content, but indicate examples of content that may be used in statewide assessment items.

Some PSGLEs have been identified as Local. They are for local assessment and will not be on a state assessment.

The number indicates the Content Standard and the Grade Level Expectation number; thus PSGLE [4] SA3.1 represents Content Standard SA3, and the first PSGLE for that Content Standard for grade 4.

Differences between grade levels are underlined.

Participants in the development of the PSGLEs actively researched the concepts and skills contained within this document.

[3] SB2.1 classifying materials as insulators or conductors (i.e., fur, metal, wood, plastic) and identifying their applications	[4] SB2.1 investigating the effectiveness of different insulating and conducting materials with respect to heat flow and record the results (L)	[5] SB2.1 classifying the changes (i.e., heat, light, sound, and motion) that electrical energy undergoes in common household appliances (i.e., toaster, blender, radio, light bulb, heater)
The student demonstrates an understanding of the interactions between matter and energy and the effects of these interactions on systems by	**The student demonstrates an understanding of the interactions between matter and energy and the effects of these interactions on systems by**	**The student demonstrates understanding of the interactions between matter and energy and the effects of these interactions on systems by**
[3] SB3.1 recognizing that temperature changes cause changes in phases of substances (e.g., ice changing to liquid, water changing to water vapor, and vice versa)	[4] SB3.1 explaining that temperature changes cause changes in phases of substances (e.g., ice changing to liquid water and liquid water to water vapor)	[5] SB3.1 identifying physical and chemical changes based on observable characteristics (e.g., tearing paper vs. burning paper)
The student demonstrates an understanding of motions, forces, their characteristics, relationships, and effects by	**The student demonstrates an understanding of motions, forces, their characteristics, relationships, and effects by**	**The student demonstrates an understanding of motions, forces, their characteristics, relationships, and effects by**
[3] SB4.2 recognizing that objects can be moved without being touched (e.g., using magnets, falling objects, static electricity)	[4] SB4.1 simulating that changes in speed or direction of motion are caused by forces (L)	[5] SB4.1 investigating that the greater the force acting on an object, the greater the change in motion will be (L)

SB4.1 is not addressed until grade 4.

C1—Concepts of Life Science

SC Students develop an understanding of the concepts, models, theories, facts, evidence, systems, and processes of life science.

SC1 Students develop an understanding of how science explains changes in life forms over time, including genetics, heredity, the process of natural selection, and biological evolution.

SC2 Students develop an understanding of the structure, function, behavior, development, life cycles, and diversity of living organisms.

SC3 Students develop an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy.

GRADE 3	GRADE 4	GRADE 5
The student demonstrates an understanding of how science explains changes in life forms over time, including genetics, heredity, the process of natural selection, and biological evolution by	**The student demonstrates an understanding of how science explains changes in life forms over time, including genetics, heredity, the process of natural selection, and biological evolution by**	**The student demonstrates an understanding of how science explains changes in life forms over time, including genetics, heredity, the process of natural selection, and biological evolution by**
[3] SC1.1 sorting Alaskan plants and/or animals using physical characteristics (e.g., leaves, beaks) {L} [3] SC1.2 describing how some traits (e.g., claws, teeth, camouflage) of living organisms have helped them survive as a species	[4] SC1.1 showing the relationship between physical characteristics of Alaskan organisms and the environment in which they live [4] SC1.2 describing fossil evidence (e.g., casts, track ways, imprints, etc.) of extinct organisms	[5] SC1.1 contrasting inherited traits (e.g., flower color, number of limbs) with those that are not (riding a bike, scar from an accident) [5] SC1.2 making reasonable inferences about fossil organisms based on physical evidence
The student demonstrates an understanding of the structure, function, behavior, development, life cycles, and diversity of living organisms by	**The student demonstrates an understanding of the structure, function, behavior, development, life cycles, and diversity of living organisms by**	**The student demonstrates an understanding of the structure, function, behavior, development, life cycles, and diversity of living organisms by**
[3] SC2.1 sorting animals and plants into groups based on appearance and behaviors [3] SC2.2 observing and comparing external features of plants and of animals that may help them grow, survive, and reproduce	[4] SC2.1 choosing appropriate tools (i.e., hand lens, microscopes, ruler, balance) to examine the basic structural components (e.g., stems, leaves, fish scales, wings) of living things [4] SC2.2 describing the basic characteristics and requirements of living things	[5] SC2.1 identifying and sorting animals into groups using basic external and internal features [5] SC2.2 explaining how external features and internal systems (i.e., respiratory, excretory, skeletal, circulatory, and digestive) of plants and animals may help them grow, survive, and reproduce [5] SC2.3 recognizing that organisms are composed of cells
The student demonstrates an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy by	**The student demonstrates an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy by**	**The student demonstrates an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy by**
[3] SC3.1 identifying and sorting examples of living and non-living things in the local environment {L} [3] SC3.2 organizing a simple food chain of familiar plants and animals {L}	[4] SC3.1 identifying examples of living and non-living things and the relationship between them (e.g., living things need water, herbivores need plants) [4] SC3.2 identifying a simple food chain of familiar plants and animals, diagramming how energy flows through it; describing the effects of removing one link	[5] SC3.1 diagramming how matter and energy are transferred within and between living and nonliving things [5] SC3.2 organizing a simple food chain of familiar plants and animals that traces the source of the energy back to sunlight

D1—Concepts of Earth Science

SD Students develop an understanding of the concepts, processes, theories, models, evidence, and systems of earth and space sciences.

SD1 Students develop an understanding of Earth's geochemical cycles.

SD2 Students develop an understanding of the origins, ongoing processes, and forces that shape the structure, composition, and physical history of the Earth.

SD3 Students develop an understanding of the cyclical changes controlled by energy from the sun and by Earth's position and motion in our solar system.

SD4 Students develop an understanding of the theories regarding the evolution of the universe.

GRADE 3	GRADE 4	GRADE 5
The student demonstrates an understanding of geochemical cycles by	**The student demonstrates an understanding of geochemical cycles by**	**The student demonstrates an understanding of geochemical cycles by**
[3] SD1.1 recognizing that most rocks are composed of combinations of different substances [3] SD1.2 describing the water cycle to show that water circulates through the crust, oceans, and atmosphere of Earth	[4] SD1.1 describing that most smaller rocks come from the breaking and weathering of larger rocks as part of the rock cycle [4] SD1.2 recognizing the physical properties of water as they relate to the rock cycle	[5] SD1.1 observing a model of the rock cycle showing that smaller rocks come from the breaking and weathering of larger rocks and that smaller rocks (e.g., sediments and sands) may combine with plant materials to form soils (L)
The student demonstrates an understanding of the forces that shape Earth by	**The student demonstrates an understanding of the forces that shape Earth by**	**The student demonstrates an understanding of the forces that shape Earth by**
[3] SD2.1 identifying and comparing a variety of Earth's land features (i.e., rivers, deltas, lakes, glaciers, mountains, valleys, and islands)	[4] SD2.1 observing models of how waves, wind, water, and ice shape and reshape the Earth's surface by eroding rock and soil (L) [4] SD2.2 identifying causes (i.e., earthquakes, tsunamis, volcanoes, floods, landslides, and avalanches) of rapid changes on the surface	[5] SD2.1 describing how wind and water tear down and build up the Earth's surface resulting in new land formations (i.e., deltas, moraines, and canyons)
The student demonstrates an understanding of cycles influenced by energy from the sun and by Earth's position and motion in our solar system by	**The student demonstrates an understanding of cycles influenced by energy from the sun and by Earth's position and motion in our solar system by**	**The student demonstrates an understanding of cycles influenced by energy from the sun and by Earth's position and motion in our solar system by**
[3] SD3.1 using recorded weather patterns (e.g., temperature, cloud cover, or precipitation) to make reasonable predictions (L)	[4] SD3.1 recognizing changes to length of daylight over time and its relationship to seasons [4] SD3.2 observing that heat flows from one object to another (L)	[5] SD3.1 observing a model that shows how the regular and predictable motion of the Earth and moon determine the apparent shape (phases) of the moon over time (L) [5] SD3.2 comparing heat absorption and loss by land and water

The student demonstrates an understanding of the theories regarding the origin and evolution of the universe by	**The student demonstrates an understanding of the theories regarding the origin and evolution of the universe by**	**The student demonstrates an understanding of the theories regarding the origin and evolution of the universe by**
[3] SD4.1 recognizing that objects appear smaller the farther away they are	[4] SD4.1 recognizing that stars are like the sun but are so far away that they look like points of light	[5] SD4.1 distinguishing among stars, planets, moons, comets, and meteors (L)
[3] SD4.2 recognizing that objects have properties, locations, and movements that can be observed and described	[4] SD4.2 recognizing that objects have properties, locations, and movements that can be observed and described*	[5] SD4.2 recognizing that the Earth is in regular and predictable motion and this motion explains the length of a day and a year
[3] SD4.3 recognizing and using appropriate instruments of magnification (e.g., binoculars and telescopes) (L)	[4] SD4.3 recognizing and using appropriate instruments of magnification (e.g., binoculars and telescopes)* (L)	[5] SD4.3 recognizing and using appropriate instruments of magnification (e.g., binoculars and telescopes)* (L)

** Same concept at a higher level*

E1—Science and Technology

SE Students develop an understanding of the relationships among science, technology, and society.

SE1 Students develop an understanding of how scientific knowledge and technology are used in making decisions about issues, innovations, and responses to problems and everyday events.

SE2 Students develop an understanding that solving problems involves different ways of thinking, perspectives, and curiosity that lead to the exploration of multiple paths that are analyzed using scientific, technological, and social merits.

SE3 Students develop an understanding of how scientific discoveries and technological innovations affect and are affected by our lives and cultures.

GRADE 3	GRADE 4	GRADE 5
The student demonstrates an understanding of how to integrate scientific knowledge and technology to address problems by	**The student demonstrates an understanding of how to integrate scientific knowledge and technology to address problems by**	**The student demonstrates an understanding of how to integrate scientific knowledge and technology to address problems by**
[3] SE1.1 identifying local problems and discussing solutions (L)	[4] SE1.1 recognizing that tools (e.g., spear, hammer, hand lens, kayak, computer) and processes (e.g., drying fish, sewing, photography) are an important part of human cultures	[5] SE1.1 identifying a community problem or issue and describing the information needed to develop a scientific solution (L)
The student demonstrates an understanding that solving problems involves different ways of thinking, perspectives, and curiosity by	**The student demonstrates an understanding that solving problems involves different ways of thinking, perspectives, and curiosity by**	**The student demonstrates an understanding that solving problems involves different ways of thinking, perspectives, and curiosity by**
[3] SE2.1 identifying local tools and materials used in everyday life (L)	[4] SE2.1 identifying the function of a variety of tools (e.g., spear, hammer, hand lens, kayak, computer) [4] SE2.2 identifying multiple explanations (e.g., oral traditions, folklore, scientific theory) of everyday events (e.g., weather, seasonal changes) (L)	5] SE2.1 investigating a problem or project over a specified period of time and identifying the tools and processes used in that project (L) [5] SE2.2 comparing multiple explanations (e.g., oral traditions, folklore, scientific theory) of everyday events (e.g., weather, seasonal changes) (L)
The student demonstrates an understanding of how scientific discoveries and technological innovations affect our lives and society by	**The student demonstrates an understanding of how scientific discoveries and technological innovations affect our lives and society by**	**The student demonstrates an understanding of how scientific discoveries and technological innovations affect our lives and society by**
[3] SE3.1 listing the positive and negative effects of a single technological development in the local community (e.g., fish trap, fish wheel, four-wheeler, computer) (L)	[4] SE3.1 listing the positive and negative effects of a scientific discovery	[5] SE3.1 describing the various effects of an innovation (e.g., snow machines, airplanes, immunizations) on the safety, health, and environment of the local community (L)

F1—Cultural, Social, Personal Perspectives, and Science

SF Students develop an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives.

SF1 Students develop an understanding of the interrelationships among individuals, cultures, societies, science, and technology.

SF2 Students develop an understanding that some individuals, cultures, and societies use other beliefs and methods in addition to scientific methods to describe and understand the world.

SF3 Students develop an understanding of the importance of recording and validating cultural knowledge.

GRADE 3

The student demonstrates an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives by

[3] SF1.1-SF3.1 exploring local or traditional stories that explain a natural event (L) Cross referenced with SA3.1.

GRADE 4

The student demonstrates an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives by

[4] SF1.1-SF3.1 connecting observations of nature to a local or traditional story that explains a natural event (e.g., animal adaptation, weather, rapid changes to Earth's surface) (L) Cross referenced with SA3.1.

GRADE 5

The student demonstrates an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives by

[5] SF1.1-SF3.1 telling a local or traditional story that explains a natural event (e.g., animal adaptation, weather, rapid changes to Earth's surface) and relating it to a scientific explanation*(L) Cross referenced with SA3.1.

G1–History and Nature of Science

SG Students develop an understanding of the history and nature of science.

SG1 Students develop an understanding that historical perspectives of scientific explanations demonstrate that scientific knowledge changes over time, building on prior knowledge.

SG2 Students develop an understanding that the advancement of scientific knowledge embraces innovation and requires empirical evidence, repeatable investigations, logical arguments, and critical review in striving for the best possible explanations of the natural world.

SG3 Students develop an understanding that scientific knowledge is ongoing and subject to change as new evidence becomes available through experimental and/or observational confirmation(s).

SG4 Students develop an understanding that advancements in science depend on curiosity, creativity, imagination, and a broad knowledge base.

GRADE 3	GRADE 4	GRADE 5
[3] SG 1.1**	[4] SG 1.1**	[5] SG 1.1**

GRADE 3	GRADE 4	GRADE 5
The student demonstrates an understanding of the bases of the advancement of scientific knowledge by	**The student demonstrates an understanding of the bases of the advancement of scientific knowledge by**	**The student demonstrates an understanding of the bases of the advancement of scientific knowledge by**
[3] SG2.1 comparing the results of multiple observations of a single local event (L)	[4] SG2.1 recognizing the need for repeated measurements	[5] SG2.1 reviewing and recording results of investigations into the natural world

GRADE 3	GRADE 4	GRADE 5
[3] SG 3.1**	[4] SG 3.1**	[5] SG 3.1**

GRADE 3	GRADE 4	GRADE 5
The student demonstrates an understanding that advancements in science depend on curiosity, creativity, imagination, and a broad knowledge base by	**The student demonstrates an understanding that advancements in science depend on curiosity, creativity, imagination, and a broad knowledge base by**	**The student demonstrates an understanding that advancements in science depend on curiosity, creativity, imagination, and a broad knowledge base by**
[3] SG4.1 asking questions about the natural world	[4] SG4.1 using an account of a discovery to recognize that an individual's (e.g., George Washington Carver, Marie Curie) curiosity led to advancements in science	[5] SG4.1 investigating that scientists' curiosity led to advancements in science (L)

**"Most of the historical benchmarks do not appear until high school." (Project 2061 [American Association for the Advancement of Science], 2001, p. 129)

Project 2061 (American Association for the Advancement of Science). (2001). *Atlas of science literacy.* Washington, DC: American Association for the Advancement of Science: National Science Teachers Association.

A1—Science as Inquiry and Process

SA Students develop an understanding of the processes and applications of scientific inquiry.

SA1 Students develop an understanding of the processes of science used to investigate problems, design and conduct repeatable scientific investigations, and defend scientific arguments.

SA2 Students develop an understanding that the processes of science require integrity, logical reasoning, skepticism, openness, communication, and peer review.

SA3 Students develop an understanding that culture, local knowledge, history, and interaction with the environment contribute to the development of scientific knowledge, and that local applications provide opportunity for understanding scientific concepts and global issues.

GRADE 6	GRADE 7	GRADE 8
The student demonstrates an understanding of the processes of science by	**The student demonstrates an understanding of the processes of science by**	**The student demonstrates an understanding of the processes of science by**
[6] SA1.1 asking questions, predicting, observing, describing, measuring, classifying, making generalizations, inferring, and communicating*	[7] SA1.1 asking questions, predicting, observing, describing, measuring, classifying, making generalizations, inferring, and communicating*	[8] SA1.1 asking questions, predicting, observing, describing, measuring, classifying, making generalizations, inferring, and communicating*
[6] SA1.2 collaborating to design and conduct simple repeatable investigations (L)	[7] SA1.2 collaborating to design and conduct simple repeatable investigations, in order to record, analyze (i.e., range, mean, median, mode), interpret data, and present findings (L)	[8] SA1.2 collaborating to design and conduct repeatable investigations, in order to record, analyze (i.e., range, mean, median, mode), interpret data, and present findings (L)*
The student demonstrates an understanding of the attitudes and approaches to scientific inquiry by	**The student demonstrates an understanding of the attitudes and approaches to scientific inquiry by**	**The student demonstrates an understanding of the attitudes and approaches to scientific inquiry by**
[6] SA2.1 identifying and differentiating fact from opinion	[7] SA2.1 identifying and evaluating the sources used to support scientific statements	[8] SA2.1 recognizing and analyzing differing scientific explanations and models
The student demonstrates an understanding that interactions with the environment provide an opportunity for understanding scientific concepts by	**The student demonstrates an understanding that interactions with the environment provide an opportunity for understanding scientific concepts by**	**The student demonstrates an understanding that interactions with the environment provide an opportunity for understanding scientific concepts by**
[6] SA3.1 gathering data to build a knowledge base that contributes to the development of questions about the local environment (e.g., moose browsing, trail usage, river erosion) (L)	[7] SA3.1 designing and conducting a simple investigation about the local environment (L)	[8] SA3.1 conducting research to learn how the local environment is used by a variety of competing interests (e.g., competition for habitat/resources, tourism, oil and mining companies, hunting groups) (L)

** Same concept at a higher level*

B1—Concepts of Physical Science

SB Students develop an understanding of the concepts, models, theories, universal principles, and facts that explain the physical world.

SB1 Students develop an understanding of the characteristic properties of matter and the relationship of these properties to their structure and behavior.

SB2 Students develop an understanding that energy appears in different forms, can be transformed from one form to another, can be transferred or moved from one place or system to another, may be unavailable for use, and is ultimately conserved.

SB3 Students develop an understanding of the interactions between matter and energy, including physical, chemical, and nuclear changes, and the effects of these interactions on physical systems.

SB4 Students develop an understanding of motions, forces, their characteristics and relationships, and natural forces and their effects.

GRADE 6	GRADE 7	GRADE 8
The student demonstrates understanding of the structure and properties of matter by	**The student demonstrates understanding of the structure and properties of matter by**	**The student demonstrates an understanding of the structure and properties of matter by**
[6] SB1.1 using models to represent matter as it changes from one state to another	[7] SB1.1 using physical properties (i.e., density, boiling point, freezing point, conductivity) to differentiate among and/or separate materials (i.e., elements, compounds, and mixtures)	[8] SB1.1 using physical and chemical properties (i.e., density, boiling point, freezing point, conductivity, flammability) to differentiate among materials (i.e., elements, compounds, and mixtures)
The student demonstrates an understanding of how energy can be transformed, transferred, and conserved by	**The student demonstrates an understanding of how energy can be transformed, transferred, and conserved by**	**The student demonstrates an understanding of how energy can be transformed, transferred, and conserved by**
[6] SB2.1 recognizing that energy can exist in many forms (i.e., heat, light, chemical, electrical, mechanical)	[7] SB2.1 explaining that energy (i.e., heat, light, chemical, electrical, mechanical) can change form	[8] SB2.1 identifying the initial source and resulting change in forms of energy in common phenomena (e.g., sun to tree to wood to stove to cabin heat)
The student demonstrates an understanding of the interactions between matter and energy and the effects of these interactions on systems by	**The student demonstrates an understanding of the interactions between matter and energy and the effects of these interactions on systems by**	**The student demonstrates an understanding of the interactions between matter and energy and the effects of these interactions on systems by**
[6] SB3.1 recognizing that most substances can exist as a solid, liquid, or gas depending on temperature	[7] SB3.1 recognizing that most substances can exist as a solid, liquid, or gas depending on the motion of their particles	[8] SB3.1 exploring changes of state with increase or decrease of particle speed associated with heat transfer (L) [8] SB3.2 exploring through a variety of models (e.g., gumdrops and toothpicks) how atoms may bond together into well defined molecules or bond together in large arrays (L)
The student demonstrates an understanding of motions, forces, their characteristics, relationships, and effects by	**The student demonstrates an understanding of motions, forces, their characteristics, relationships, and effects by**	**The student demonstrates an understanding of motions, forces, their characteristics, relationships, and effects by**
[6] SB4.2 stating that every object exerts gravitational force on every other object [6] SB4.3 making waves move through a variety of media (L) *SB4.1 is not addressed in grade 6.*	[7] SB4.1 illustrating that unbalanced forces will cause an object to accelerate [7] SB4.2 recognizing that electric currents and magnets can exert a force on each other [7] SB4.3 describing the characteristics of a wave (i.e., amplitude, wavelength, and frequency)	[8] SB4.1 demonstrating (L) and explaining circular motion [8] SB4.2 describing the interactions between charges

C1—Concepts of Life Science

SC Students develop an understanding of the concepts, models, theories, facts, evidence, systems, and processes of life science.

SC1 Students develop an understanding of how science explains changes in life forms over time, including genetics, heredity, the process of natural selection, and biological evolution.

SC2 Students develop an understanding of the structure, function, behavior, development, life cycles, and diversity of living organisms.

SC3 Students develop an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy.

GRADE 6	GRADE 7	GRADE 8
The student demonstrates an understanding of how science explains changes in life forms over time, including genetics, heredity, the process of natural selection, and biological evolution by	**The student demonstrates an understanding of how science explains changes in life forms over time, including genetics, heredity, the process of natural selection, and biological evolution by**	**The student demonstrates an understanding of how science explains changes in life forms over time, including genetics, heredity, the process of natural selection, and biological evolution by**
[6] SC1.1 recognizing sexual and asexual reproduction [6] SC1.2 recognizing that species survive by adapting to changes in their environment	[7] SC1.1 comparing and contrasting sexual and asexual reproduction [7] SC1.2 describing possible outcomes of mutations (i.e., no effect, damage, benefit)	[8] SC1.1 describing the role of genes in sexual reproduction (i.e., traits of the offspring)
The student demonstrates an understanding of the structure, function, behavior, development, life cycles, and diversity of living organisms by	**The student demonstrates an understanding of the structure, function, behavior, development, life cycles, and diversity of living organisms by**	**The student demonstrates an understanding of the structure, function, behavior, development, life cycles, and diversity of living organisms by**
[6] SC2.1 using a dichotomous key to classify animals and plants into groups using external or internal features [6] SC2.2 identifying basic behaviors (e.g., migration, communication, hibernation) used by organisms to meet the requirements of life [6] SC2.3 describing the levels of organization within a human body (i.e., cells, tissues, organs, systems)	[7] SC2.1 describing the basic structure and function of plant and animal cells [7] SC2.2 identifying the seven levels of classification of organisms [7] SC2.3 identifying and describing the functions of human organs (i.e., heart, lungs, brain)	[8] SC2.1 placing vertebrates into correct classes of taxonomy based on external, observable features [8] SC2.2 explaining that most organisms utilize inherited and learned behaviors to meet the basic requirements of life [8] SC2.3 describing the functions and interdependence of human body systems (i.e., circulatory, respiratory, nervous)
The student demonstrates an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy by	**The student demonstrates an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy by**	**The student demonstrates an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy by**
[6] SC3.1 recognizing that organisms can cause physical and chemical changes (e.g., digestion, growth, respiration, photosynthesis) to matter and recognizing the importance of energy transfer in these changes [6] SC3.2 organizing a food web using familiar plants and animals	[7] SC3.1 recognizing and explaining that organisms can cause physical and chemical changes (e.g., digestion, growth, respiration, photosynthesis) to matter and recognizing and explaining the importance of energy transfer in these changes [7] SC3.2 classifying organisms within a food web as producers, consumers, or decomposers	[8] SC3.1 stating that energy flows and that matter cycles but is conserved within an ecosystem [8] SC3.2 organizing a food web that shows the cycling matter

D1—Concepts of Earth Science

SD Students develop an understanding of the concepts, processes, theories, models, evidence, and systems of earth and space sciences.

SD1 Students develop an understanding of Earth's geochemical cycles.

SD2 Students develop an understanding of the origins, ongoing processes, and forces that shape the structure, composition, and physical history of the Earth.

SD3 Students develop an understanding of the cyclical changes controlled by energy from the sun and by Earth's position and motion in our solar system.

SD4 Students develop an understanding of the theories regarding the evolution of the universe.

GRADE 6	GRADE 7	GRADE 8
The student demonstrates an understanding of geochemical cycles by	**The student demonstrates an understanding of geochemical cycles by**	**The student demonstrates an understanding of geochemical cycles by**
[6] SD1.1 exploring the rock cycle and its relationship to igneous, metamorphic, and sedimentary rocks (L)	[7] SD1.1 describing the rock cycle and its relationship to igneous, metamorphic, and sedimentary rocks	[8] SD1.1 making connections between components of the locally observable geologic environment and the rock cycle (L)
[6] SD1.2 identifying the physical properties of water within the stages of the water cycle	[7] SD1.2 explaining the water cycle's connection to changes in the Earth's surface	[8] SD1.2 applying knowledge of the water cycle to explain changes in the Earth's surface
The student demonstrates an understanding of the forces that shape Earth by	**The student demonstrates an understanding of the forces that shape Earth by**	**The student demonstrates an understanding of the forces that shape Earth by**
[6] SD2.1 describing the formation and composition (i.e., sand, silt, clay, organics) of soils	[7] SD2.1 identifying strategies (e.g., reforestation, dikes, wind breaks, off road activity guidelines) for minimizing erosion	[8] SD2.1 interpreting topographical maps to identify features (i.e., rivers, lakes, mountains, valleys, islands, and tundra)
[6] SD2.2 identifying and describing its layers (i.e., crust, mantle, core)	[7] SD2.2 describing how the movement of the tectonic plates results in both slow changes (e.g., formation of mountains, ocean floors, and basins) and short-term events (e.g., volcanic eruptions, seismic waves, and earthquakes) on the surface	[8] SD2.2 using models to show the relationship between convection currents within the mantle and the large-scale movement of the surface (L)
[6] SD2.3 describing how the surface can change rapidly as a result of geological activities (i.e., earthquakes, tsunamis, volcanoes, floods, landslides, avalanches)		
The student demonstrates an understanding of cycles influenced by energy from the sun and by Earth's position and motion in our solar system by	**The student demonstrates an understanding of cycles influenced by energy from the sun and by Earth's position and motion in our solar system by**	**The student demonstrates an understanding of cycles influenced by energy from the sun and by Earth's position and motion in our solar system by**
[6] SD3.1 connecting the water cycle to weather phenomena	[7] SD3.1 describing the weather using accepted meteorological terms (e.g., pressure systems, fronts, precipitation)	[8] SD3.1 recognizing the relationship between the seasons and Earth's tilt relative to the sun and describing the day/night cycle as caused by the rotation of the Earth every 24 hours
[6] SD3.2 identifying that energy transfer is affected by surface conditions (e.g., snow cover, asphalt, vegetation) and that this affects weather	[7] SD3.2 recognizing the relationship between phase changes (i.e., sublimation, condensation, evaporation) and energy transfer	[8] SD3.2 recognizing types of energy transfer (convection, conduction, and radiation) and how they affect weather

The student demonstrates an understanding of the theories regarding the origin and evolution of the universe by	The student demonstrates an understanding of the theories regarding the origin and evolution of the universe by	The student demonstrates an understanding of the theories regarding the origin and evolution of the universe by
[6] SD4.1 contrasting characteristics of planets and stars (i.e., light reflecting, light emitting, orbiting, orbited, composition)	[7] SD4.1 comparing and contrasting characteristics of planets and stars (i.e., light reflecting, light emitting, orbiting, orbited, composition)	[8] SD4.1 creating models of the solar system illustrating size, location/position, composition, moons/rings, and conditions (L)
[6] SD4.2 defining a light year	[7] SD4.2 using light years to describe distances between objects in the universe	[8] SD4.2 comparing the brightness of a star to its distance and size

E1—Science and Technology

SE Students develop an understanding of the relationships among science, technology, and society.

SE1 Students develop an understanding of how scientific knowledge and technology are used in making decisions about issues, innovations, and responses to problems and everyday events.

SE2 Students develop an understanding that solving problems involves different ways of thinking, perspectives, and curiosity that lead to the exploration of multiple paths that are analyzed using scientific, technological, and social merits.

SE3 Students develop an understanding of how scientific discoveries and technological innovations affect and are affected by our lives and cultures.

GRADE 6	GRADE 7	GRADE 8
The student demonstrates an understanding of how to integrate scientific knowledge and technology to address problems by	**The student demonstrates an understanding of how to integrate scientific knowledge and technology to address problems by**	**The student demonstrates an understanding of how to integrate scientific knowledge and technology to address problems by**
[6] SE1.1 recognizing that technology cannot always provide successful solutions for problems or fulfill every human need	[7] SE1.1 describing how public policy affects the student's life (e.g., public waste disposal) (L)	[8] SE1.1 describing how public policy affects the student's life and participating diplomatically in evidence-based discussions relating to the student's community (L)
The student demonstrates an understanding that solving problems involves different ways of thinking by	**The student demonstrates an understanding that solving problems involves different ways of thinking by**	**The student demonstrates an understanding that solving problems involves different ways of thinking by**
[6] SE2.1 identifying and designing a solution to a problem [6] SE2.2 comparing the student's work to the work of peers in order to identify multiple paths that can be used to investigate a question or problem (L)	[7] SE2.1 identifying, designing, testing, and revising solutions to a local problem (L) [7] SE2.2 comparing the student's work to the work of peers in order to identify multiple paths that can be used to investigate a question or problem* (L)	[8] SE2.1 identifying, designing, testing, and revising solutions to a local problem* (L) [8] SE2.2 comparing the student's work to the work of peers in order to identify multiple paths that can be used to investigate and evaluate potential solutions to a question or problem (L)

F1—Cultural, Social, Personal Perspectives, and Science

SF Students develop an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives.

SF1 Students develop an understanding of the interrelationships among individuals, cultures, societies, science, and technology.

SF2 Students develop an understanding that some individuals, cultures, and societies use other beliefs and methods in addition to scientific methods to describe and understand the world.

SF3 Students develop an understanding of the importance of recording and validating cultural knowledge.

GRADE 6	GRADE 7	GRADE 8
The student demonstrates an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives by	**The student demonstrates an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives by**	**The student demonstrates an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives by**
[6] SF1.1-SF3.1 telling a local or traditional story that explains a natural event (e.g., animal adaptation, weather, rapid changes to Earth's surface) and relating it to a scientific explanation* (L). Cross referenced with SA3.1.	[7] SF1.1-SF3.1 investigating the basis of local knowledge (e.g., describing and predicting weather) and sharing that information (L). Cross referenced with SA3.1.	[8] SF1.1-SF3.1 describing how local knowledge, culture, and the technologies of various activities (e.g., hunting, fishing, subsistence) influence the development of scientific knowledge (L). Cross referenced with SA3.1.

** Same concept at a higher level*

G1—History and Nature of Science

SG Students develop an understanding of the history and nature of science.

SG1 Students develop an understanding that historical perspectives of scientific explanations demonstrate that scientific knowledge changes over time, building on prior knowledge.

SG2 Students develop an understanding that the advancement of scientific knowledge embraces innovation and requires empirical evidence, repeatable investigations, logical arguments, and critical review in striving for the best possible explanations of the natural world.

SG3 Students develop an understanding that scientific knowledge is ongoing and subject to change as new evidence becomes available through experimental and/or observational confirmation(s).

SG4 Students develop an understanding that advancements in science depend on curiosity, creativity, imagination, and a broad knowledge base.

GRADE 6	GRADE 7	GRADE 8
The student demonstrates an understanding of the bases of the advancement of scientific knowledge by [6] SG1.1** [6] SG2.1 recognizing differences in results of repeated experiments	**The student demonstrates an understanding of the bases of the advancement of scientific knowledge by** [7] SG1.1** [7] SG2.1 explaining differences in results of repeated experiments	**The student demonstrates an understanding of the bases of the advancement of scientific knowledge by** [8] SG1.1** [8] SG2.1 describing how repeating experiments improves the likelihood of accurate results

A1—Science as Inquiry and Process

SA Students develop an understanding of the processes and applications of scientific inquiry.

SA1 Students develop an understanding of the processes of science used to investigate problems, design and conduct repeatable scientific investigations, and defend scientific arguments.

SA2 Students develop an understanding that the processes of science require integrity, logical reasoning, skepticism, openness, communication, and peer review.

SA3 Students develop an understanding that culture, local knowledge, history, and interaction with the environment contribute to the development of scientific knowledge, and that local applications provide opportunity for understanding scientific concepts and global issues.

GRADE 9	GRADE 10	GRADE 11

		[11] SA3.1 conducting research and communicating results to solve a problem (e.g., fish and game management, building permits, mineral rights, land use policies) (L)

**Same concept at a higher level*

B1—Concepts of Physical Science

SB Students develop an understanding of the concepts, models, theories, universal principles, and facts that explain the physical world.

SB1 Students develop an understanding of the characteristic properties of matter and the relationship of these properties to their structure and behavior.

SB2 Students develop an understanding that energy appears in different forms, can be transformed from one form to another, can be transferred or moved from one place or system to another, may be unavailable for use, and is ultimately conserved.

SB3 Students develop an understanding of the interactions between matter and energy, including physical, chemical, and nuclear changes, and the effects of these interactions on physical systems.

SB4 Students develop an understanding of motions, forces, their characteristics and relationships, and natural forces and their effects.

GRADE 9	GRADE 10	GRADE 11
The student demonstrates an understanding of the structure and properties of matter by	**The student demonstrates an understanding of the structure and properties of matter by**	**The student demonstrates an understanding of the structure and properties of matter by**

[9] SB3.1 recognizing that a chemical reaction has taken place [9] SB3.2 explaining that in chemical and nuclear reactions, energy (e.g., heat, light, mechanical, and electrical) is transferred into and out of a system [9] SB3.3 recognizing that atoms emit and absorb electromagnetic radiation	[10] SB3.1 describing the behavior of electrons in chemical bonding [10] SB3.2 recognizing that radioactivity is a result of the decay of unstable nuclei [10] SB3.3 comparing the relative wavelengths and applications of different forms of electromagnetic radiation (i.e., x-ray, visible, infrared, microwaves, radio)	[11] SB3.1 predicting how an atom can interact with other atoms based on its electron configuration and verifying the results (L) [11] SB3.2 researching applications of nuclear reactions in which a small amount of matter is converted directly into a huge amount of energy (i.e., $E=MC^2$) (L)

The student demonstrates an understanding of motions, forces, their characteristics, relationships, and effects by

[9] SB4.1 explaining the relationship of motion to an object's mass and the applied force

[9] SB4.2 recognizing that the gravitational attraction between objects is proportional to their masses and decreasing with their distance

[9] SB4.3 describing the interactions of waves (i.e., reflection, refraction, wave addition)

The student demonstrates an understanding of motions, forces, their characteristics, relationships, and effects by

[10] SB4.1 recognizing that when one thing exerts a force on another, an equal amount of force is exerted back on it

[10] SB4.2 explaining that different kinds of materials respond to electric and magnetic forces (i.e., conductors, insulators, magnetic, and non-magnetic materials)

The student demonstrates an understanding of motions, forces, their characteristics, relationships, and effects by

[11] SB4.1 conducting an experiment to demonstrate that when one thing exerts a force on another, an equal amount of force is exerted back on it (L)

[11] SB4.2 conducting an experiment to explore the relationship between magnetic forces and electric forces to show that they can be thought of as different aspects of a single electromagnetic force (e.g., generators and motors) (L)

C1—Concepts of Life Science

SC Students develop an understanding of the concepts, models, theories, facts, evidence, systems, and processes of life science.

SC1 Students develop an understanding of how science explains changes in life forms over time, including genetics, heredity, the process of natural selection, and biological evolution.

SC2 Students develop an understanding of the structure, function, behavior, development, life cycles, and diversity of living organisms.

SC3 Students develop an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy.

GRADE 9	GRADE 10	GRADE 11

** Same concept at a higher level*

The student demonstrates an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy by

[9] SC3.1 describing the carbon and nitrogen cycle within an ecosystem and how the continual input of energy from sunlight keeps the process going (L)

[9] SC3.3 identifying dynamic factors (e.g., carrying capacity, limiting factors, biodiversity, and productivity) that affect population size

SC3.2 is not addressed in grade 9.

The student demonstrates an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy by

[10] SC3.1 relating the carbon cycle to global climate change

[10] SC3. 2 exploring ecological relationships (e.g., competition, niche, feeding relationships, symbiosis) (L)

The student demonstrates an understanding that all organisms are linked to each other and their physical environments through the transfer and transformation of matter and energy by

[11] SC3.1 relating the carbon cycle to global climate change*

[11] SC3.2 analyzing the potential impacts of changes (e.g., climate change, habitat loss/gain, cataclysms, human activities) within an ecosystem

** Same concept at a higher level*

D1—Concepts of Earth Science

SD Students develop an understanding of the concepts, processes, theories, models, evidence, and systems of earth and space sciences.

SD1 Students develop an understanding of Earth's geochemical cycles.

SD2 Students develop an understanding of the origins, ongoing processes, and forces that shape the structure, composition, and physical history of the Earth.

SD3 Students develop an understanding of the cyclical changes controlled by energy from the sun and by Earth's position and motion in our solar system.

SD4 Students develop an understanding of the theories regarding the evolution of the universe.

GRADE 9	GRADE 10	GRADE 11

** Same concept at a higher level*

F1—Cultural, Social, Personal Perspectives, and Science

SF Students develop an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives.

SF1 Students develop an understanding of the interrelationships among individuals, cultures, societies, science, and technology.

SF2 Students develop an understanding that some individuals, cultures, and societies use other beliefs and methods in addition to scientific methods to describe and understand the world.

SF3 Students develop an understanding of the importance of recording and validating cultural knowledge.

GRADE 9

The student demonstrates an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives by

[9] SF1.1-SF3.1 describing the scientific principles involved in a subsistence activity (e.g., hunting, fishing, gardening) (L). Cross referenced with SA3.1.

GRADE 10

The student demonstrates an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives by:

[10] SF1.1-SF3.1 analyzing the competition for resources by various user groups to describe these interrelationships. Cross referenced with SA3.1.

GRADE 11

The student demonstrates an understanding of the dynamic relationships among scientific, cultural, social, and personal perspectives by

[11] SF1.1-SF3.1 investigating the influences of societal and/or cultural beliefs on science (L). Cross referenced with SA3.1.

CS FOR HOUSE BILL NO. 104(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): HOUSE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act renaming the Alaska performance scholarship and relating to the scholarship and tax credits applicable to contributions to the scholarship; relating to AlaskAdvantage education grant funding and to Alaska performance scholarship funding; establishing an account and fund for those purposes; making conforming amendments; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.113, as enacted by sec. 1, ch. 14, SLA 2010, is amended to read:

Sec. 14.03.113. District determination of scholarship eligibility. A school district shall determine whether a student who graduates from a high school in the district is eligible for an award of an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849. If a student is eligible, the district shall state in the student's permanent record the highest level of funding for which the student is eligible. A district shall provide a student with an opportunity to

request that the district correct an error in the eligibility determination.

* **Sec. 2.** AS 14.43.810, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.810. Alaska performance [MERIT] scholarship program established; regulations. (a) The Alaska **performance** [MERIT] scholarship program is established to provide scholarships for high school graduates who are Alaska residents to attend a qualified postsecondary institution in the state.

(b) The department shall, in consultation with the commission, adopt regulations necessary to implement the **scholarship** program. The commission shall administer the daily operations of the **scholarship** program and financing of the **scholarship** program, including the procedures for applying for the scholarships, establishing standards for and ensuring continuing compliance with programmatic standards, and requiring students to apply for other nonloan financial aid, consistent with federal law.

* **Sec. 3.** AS 14.43.820(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) Subject to appropriation, the commission shall award an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship to an applicant who

(1) is a resident of the state as defined in AS 01.10.055;

(2) graduated or will graduate within six months from a high school in the state;

(3) has completed a core academic curriculum in high school that includes

(A) four years of mathematics, four years of language arts, four years of science, and four years of social studies, one year of which may include a foreign language, an Alaska Native language, fine arts, or cultural heritage; or

(B) three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or an Alaska Native language;

(4) has a minimum grade-point average in high school of 2.5 or higher; the department shall set by regulation minimum requirements based on a substantially similar standard for districts that do not assign grades;

(5) has achieved a minimum score on a

(A) college entrance examination; or

(B) standardized examination designed to measure a student's level of preparedness to make the transition to work, as selected by the department; and

(6) is enrolled in good standing in a course of study at a qualified postsecondary institution in this state that is intended to result in the award of a certificate or degree.

*** Sec. 4.** AS 14.43.825(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) The maximum annual awards for the Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarships are as follows:

(1) the first award level is $4,755 and requires a 3.5 grade-point average or above and a very high minimum score on a college entrance examination;

(2) the second award level is $3,566 and requires a 3.0 grade-point average or above and a high minimum score on a college entrance examination;

(3) the third award level is $2,378 and requires a 2.5 grade-point average or above and a moderately high minimum score on a college entrance examination.

*** Sec. 5.** AS 14.43.825(f) is repealed and reenacted to read:

(f) Payment of a scholarship is subject to appropriation and the availability of funds for expenditure under AS 37.14.750. If insufficient funds are appropriated or available in a fiscal year to pay all eligible scholarships, the commission may not award a scholarship to a new applicant, and the commission shall pay existing awards on a pro rata basis for that fiscal year.

*** Sec. 6.** AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.830. Qualified postsecondary institutions. (a) The following institutions are qualified postsecondary institutions for purposes of awarding an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship:

(1) a university or college physically located in the state that [IS]

(A) **is** authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); [AND]

(B) **is** accredited by a regional accreditation association;

(C) has an advisory program established for incoming students that provides counseling related to course selection, career choice, and personal challenges; and

(D) provides courses and credits that can result in the issuance of a degree or certificate available at the institution within a time frame expected for that degree or certificate;

(2) a career and technical school program physically located in the state that **meets the standards established in (a)(1)(C) and (D) of this section and that** has been included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment.

(b) The Department of Labor and Workforce Development shall, in consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska **performance** [MERIT] scholarship program.

* **Sec. 7.** AS 14.43.849, as enacted by sec. 2, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.849. Definitions. In AS 14.43.810 - 14.43.849, unless the context requires otherwise,

(1) "department" means the Department of Education and Early Development;

(2) "grade-point average" means the average of all grades on a four-point scale, or five-point scale for advanced placement classes, obtained by the student in high school;

(3) "high school" means a public or accredited secondary school in the state and a home school program that is approved by the department;

(4) "program" means the Alaska **performance** [MERIT] scholarship program established under AS 14.43.810 - 14.43.849;

(5) "school district" means a borough school district, a city school

district, a regional educational attendance area, and a state boarding school.

* **Sec. 8.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.915. AlaskAdvantage education grant and Alaska performance scholarship award income account. The AlaskAdvantage education grant and Alaska performance scholarship award income account is created as an account in the general fund. Money may be appropriated to the account from the AlaskAdvantage education grant and Alaska performance scholarship fund under AS 37.14.750 and from other sources. The commission may use the money in the account to pay grants awarded under AS 14.43.400 - 14.43.420 and scholarships awarded to students under AS 14.43.810 - 14.43.849. The amount determined under AS 37.14.750(c) each year and deposited into the account is the maximum amount that may be used to pay grants and scholarships for the immediately succeeding fiscal year.

* **Sec. 9.** AS 14.45.130(a), as amended by sec. 7, ch. 14, SLA 2010, is amended to read:

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, courses taken at the school, and level of eligibility for an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849.

* **Sec. 10.** AS 37.14 is amended by adding a new section to read:

Article 8A. AlaskAdvantage Education Grant and Alaska Performance Scholarship Fund.

Sec. 37.14.750. AlaskAdvantage education grant and Alaska performance scholarship fund established. (a) The AlaskAdvantage education grant and Alaska performance scholarship fund is established in the general fund for the purpose of making grant payments under AS 14.43.400 - 14.43.420 and scholarship payments to qualified postsecondary institutions for students under AS 14.43.810 - 14.43.849 by appropriation to the income account established under AS 14.43.915. Money in the fund does not lapse. The fund consists of

(1) money appropriated to the fund;

(2) income earned on investment of fund assets; and

(3) donations to the fund.

(b) The amount annually appropriated and deposited to the fund may not exceed the greater of

(1) $40,000,000; or

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $160,000,000.

(c) The balance in the AlaskAdvantage education grant and Alaska performance scholarship fund shall be determined on June 30 of each year. The department shall distribute one-third of that amount or $40,000,000, whichever is less, for deposit into the account established in AS 14.43.915.

(d) Notwithstanding the limitation in (c) of this section, the legislature may appropriate any amount to the AlaskAdvantage education grant and Alaska performance scholarship fund. Nothing in this section creates a dedicated fund.

(e) In this section, unless the context requires otherwise, "fund" means the AlaskAdvantage education grant and Alaska performance scholarship fund established in (a) of this section.

*** Sec. 11.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted **for**

(1) [FOR] direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) [FOR] secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) [FOR] vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) [FOR] a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) the AlaskAdvantage grant and Alaska performance scholarship fund under AS 37.14.750(a).

*** Sec. 12.** AS 43.20.014(a), as amended by sec. 14, ch. 92, SLA 2010, is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses and programs by a school district in the state; [AND]

(3) by a state-operated vocational technical education and training school**; and**

(4) for the AlaskAdvantage grant and Alaska performance scholarship fund under AS 37.14.750(a).

*** Sec. 13.** Section 8, ch. 14, SLA 2010, is amended to read:

TRANSITION: **PERFORMANCE SCHOLARSHIP** PROGRAM STANDARDS AND IMPLEMENTATION FOR INITIAL SCHOOL YEARS. Notwithstanding any contrary provision of this Act, the Department of Education and Early Development and the Department of Labor and Workforce Development, after consultation with the Alaska Commission on Postsecondary Education, may adopt regulations under AS 44.62 (Administrative Procedure Act) to implement their respective duties under the Alaska **performance** [MERIT] scholarship program established in AS 14.43.810, enacted by sec. 5 of this Act, so that a student

(1) may be eligible for the **Alaska performance scholarship** [PROGRAM] even though the student did not fully meet the required core academic curriculum for the school years beginning July 1, 2010, through June 30, 2014; and

(2) who graduated from high school in this state after January 1, 2011, and before July 1, 2011, and meets eligibility requirements for the **Alaska performance scholarship** program may apply for a scholarship on or after January 1, 2011, for enrollment in a program of study beginning on or after July 1, 2011.

*** Sec. 14.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: ALASKADVANTAGE EDUCATION GRANT AND ALASKA

PERFORMANCE SCHOLARSHIP FUND BALANCE. Notwithstanding the $40,000,000 limit in AS 37.14.750(c), the following amounts may be substituted for that amount as follows for

(1) fiscal year 2012, $20,000,000;

(2) fiscal year 2013, $30,000,000.

*** Sec. 15.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Education and Early Development, the Department of Labor and Workforce Development, the Department of Revenue, and the Alaska Commission on Postsecondary Education may adopt regulations necessary to implement changes made to their respective authorities by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2011.

*** Sec. 16.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the

(1) heading of article 12 of AS 14.43 from "Alaska Merit Scholarship Program" to "Alaska Performance Scholarship Program";

(2) catch line for AS 14.43.820 from "Alaska merit scholarship program; eligibility" to "Alaska performance scholarship program; eligibility."

*** Sec. 17.** Section 15 of this Act takes effect immediately under AS 01.10.070(c).

*** Sec. 18.** AS 14.43.830(a)(1)(C) and (D), added by sec. 6 of this Act, and the amendment to AS 14.43.830(a)(2) made by sec. 6 of this Act take effect July 1, 2012.

*** Sec. 19.** Section 12 of this Act takes effect January 1, 2014.

*** Sec. 20.** Except as provided in secs. 17 - 19 of this Act, this Act takes effect July 1, 2011.

Governor Sean Parnell
STATE OF ALASKA

January 14, 2011

The Honorable Mike Chenault
Speaker of the House
Alaska State Legislature
State Capitol, Room 208
Juneau, AK 99801-1182

Dear Speaker Chenault,

It is time now to sustainably fund the performance scholarships we so diligently worked together on last year. Under the authority of Article III, Section 18, of the Alaska Constitution, I am transmitting a bill renaming the Alaska Merit Scholarship to the Alaska Performance Scholarship; relating to tax credits applicable to contributions for the scholarships; and establishing the Alaska Performance Scholarship investment fund and the Alaska Performance Scholarship award fund. This bill would create funding mechanisms for the Alaska Performance Scholarship that are in accordance with recommendations of the Alaska State Legislature's Joint Higher Education Scholarship Funding Task Force.

The Alaska Performance Scholarship incentivizes Alaska students to take a rigorous curriculum and earn scholarships for post-secondary education. This will lead to increased academic performance in our high schools, increased parental involvement, and increased graduation rates. More students will graduate prepared to enter and complete postsecondary education and training in Alaska. The scholarship helps a variety of students – those who seek career and technical training as well as academic studies – to realize their dreams through their own hard work.

The bill creates an Alaska Performance Scholarship investment fund. The fund would consist of appropriations to the fund, donations to the fund, and income earned on investments of fund assets. Also, the bill would create the Alaska Performance Scholarship award fund to make scholarship awards. The bill would authorize certain tax credits applicable to contributions to the scholarship.

The graduating class of 2011 will be the first students eligible for this opportunity. I urge your prompt and favorable action on this important measure.

Sincerely,

Sean Parnell
Governor

Enclosure

Alaska Performance Scholarship

An invitation to excellence, extended to students, parents and educators alike.

SB43/HB104 Renaming the Alaska performance scholarship...and establishing scholarship investment and award funds

What does SB43/HB104 do?

1. The Governor's bill amends statutes to rename the statewide scholarship. The name "merit scholarship" currently in statute puts Alaska at risk of infringing on an existing copyright held by the National Merit Scholarship organization.
2. Further, the bill establishes both an award fund into which appropriations can be made and from which scholarship awards will be paid to students, and an investment fund into which the legislature may make appropriations and others may make donations. The bill specifies the Legislature may make appropriations from the investment fund into the award fund.
3. Finally, the bill permits Alaska taxpayers to make donations into the scholarship investment fund and qualify for a tax credit against the corporate income tax.

Why is SB43/HB104 necessary?

During the 2010 legislative session Governor Parnell proposed establishing a statewide scholarship for Alaska's students based on the principle that if our students: (1) take a curriculum which prepares them to succeed in postsecondary education, and (2) work hard and perform well in school, we should incent and reward them for pursuing postsecondary education and training in Alaska. This not only will benefit students but also the state as a whole by growing a skilled, local workforce and reducing the need for non-resident hires. The Alaska Legislature embraced this strategy and approved a merit scholarship which the Governor then signed into law.

The Governor has introduced this bill to avert the consequences of the copyright infringement noted above, and, more importantly, to propose establishment of a fund with characteristics consistent with the final recommendation of the Legislature's Joint Higher Education Scholarship Funding Task Force[1].

Why is this funding structure being proposed?

Governor Parnell strongly believes the scholarship is a commitment to Alaska's students, and it is critical to the success of the program that these scholarship awards have a long-term, sustainable funding stream. Additionally, the Governor seeks to make it possible for any interested party to support the scholarship's workforce development objectives by donating to the fund. To the extent that there are Alaska taxpayers with an interest in donating, they are incented to do so through the corporate income tax credit for eligible donations.

Thank you for taking the time to discuss SB43/HB104. We are extremely appreciative of the support and valuable time and attention legislative leaders have given this matter and look forward to continuing our collaborative work to advance education and workforce development in Alaska.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HB 104

Analysis

This fiscal note is indeterminate to allow the discussion of the Funding and Finance section of the Scholarship Funding Task Force Report. Page four of the report list the recommendation that the legislature creates, in statute, a Scholarship Fund as a sub-account within the General Fund. The Task Force recommended that the Scholarship Fund have an account balance amount sufficient to sustain award distribution and inflation proofing replenishment. The Task Force report suggested the immediate capitalization of the Scholarship Fund and also offered other alternatives if that was not possible.

The administration looks forward to discussing the Task Force Funding recommendations and identifying a long term sustainable funding mechanism for the Alaska Performance Scholarship.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HB 104

Analysis

The bill provides for a separate fund designated for performance scholarships. In order to generate enough revenue to fund the performance scholarships, the Department anticipates the need for a $400 million capitalization.

It is anticipated the fund will be managed with asset allocation of 60% fixed income and 40% domestic equity in order to yield a real annual rate of return of 5%. These costs include investment management fees, audit, accounting and custody fees and are projected based on the assumptions provided by the division's investment advisor and the division's cost allocation plan.

FISCAL NOTE #2

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HB 104

Analysis

Bill Language:
This bill expands the existing education credit allowed against the corporate income tax to include contributions made to the newly created Alaska Performance Scholarship Fund under AS 37.14.750.

Revenues:
This bill does not increase or decrease the amount of total education credits allowed against corporate income tax. Therefore, this bill has no affect on state revenues.

Expenditures:
The department can implement the provisions of the bill with existing resources.

CS FOR HOUSE BILL NO. 104( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): HOUSE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act renaming the Alaska performance scholarship and relating to the scholarship and tax credits applicable to contributions to the scholarship; relating to AlaskAdvantage education grant funding and to Alaska performance scholarship funding; establishing an account and fund for those purposes; relating to an unmet need scholarship supplement for Alaska performance scholarship recipients; repealing the Alaska capital income fund; making conforming amendments; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03.113, as enacted by sec. 1, ch. 14, SLA 2010, is amended to read:

Sec. 14.03.113. District determination of scholarship eligibility. A school district shall determine whether a student who graduates from a high school in the district is eligible for an award of an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849. If a student is eligible, the

district shall state in the student's permanent record the highest level of funding for which the student is eligible. A district shall provide a student with an opportunity to request that the district correct an error in the eligibility determination.

*** Sec. 2.** AS 14.43.810, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.810. Alaska performance [MERIT] scholarship program established; regulations. (a) The Alaska **performance** [MERIT] scholarship program is established to provide scholarships for high school graduates who are Alaska residents to attend a qualified postsecondary institution in the state.

(b) The department shall, in consultation with the commission, adopt regulations necessary to implement the **scholarship** program. The commission shall administer the daily operations of the **scholarship** program and financing of the **scholarship** program, including the procedures for applying for the scholarships, establishing standards for and ensuring continuing compliance with programmatic standards, and requiring students to apply for other nonloan financial aid, consistent with federal law.

*** Sec. 3.** AS 14.43.820(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) Subject to appropriation, the commission shall award an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship to an applicant who

(1) is a resident of the state as defined in AS 01.10.055;

(2) graduated or will graduate within six months from a high school in the state;

(3) has completed a core academic curriculum in high school that includes

(A) four years of mathematics, four years of language arts, four years of science, and four years of social studies, one year of which may include a foreign language, an Alaska Native language, fine arts, or cultural heritage; or

(B) three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or an Alaska Native language;

(4) has a minimum grade-point average in high school of 2.5 or higher;

the department shall set by regulation minimum requirements based on a substantially similar standard for districts that do not assign grades;

(5) has achieved a minimum score on a

(A) college entrance examination; or

(B) standardized examination designed to measure a student's level of preparedness to make the transition to work, as selected by the department; and

(6) is enrolled in good standing in a course of study at a qualified postsecondary institution in this state that is intended to result in the award of a certificate or degree.

*** Sec. 4.** AS 14.43.825(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) The maximum annual awards for the Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarships are as follows:

(1) the first award level is $4,755 and requires a 3.5 grade-point average or above and a very high minimum score on a college entrance examination;

(2) the second award level is $3,566 and requires a 3.0 grade-point average or above and a high minimum score on a college entrance examination;

(3) the third award level is $2,378 and requires a 2.5 grade-point average or above and a moderately high minimum score on a college entrance examination.

*** Sec. 5.** AS 14.43.825(f) is repealed and reenacted to read:

(f) Payment of a scholarship is subject to appropriation and the availability of funds for expenditure under AS 37.14.750. If insufficient funds are appropriated or available in a fiscal year to pay all eligible scholarships, the commission may not award a scholarship to a new applicant, and the commission shall pay existing awards on a pro rata basis for that fiscal year.

*** Sec. 6.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.828. Eligibility for a scholarship supplement based on unmet need; minimum and maximum awards. (a) Subject to appropriation, the commission shall award a scholarship supplement based on unmet need to a student who meets the eligibility criteria for the award under this section.

(b) A student is eligible to receive a scholarship supplement based on unmet need if the student

(1) is eligible for an Alaska performance scholarship; and

(2) can demonstrate, in a year in which the student receives a scholarship, that the student has unmet financial need greater than $2,000.

(c) The annual maximum of a scholarship supplement based on unmet need is the lesser of

(1) 50 percent of the unmet financial need that exceeds $2,000; and

(2) $4,000.

(d) The commission shall determine unmet financial need by

(1) requiring the postsecondary institution attended by the student to verify all nonloan sources of financial support, including an expected family contribution and all federal, state, and private scholarships received by the student; and

(2) subtracting all nonloan sources of financial support from the student's allowable standard costs of attendance at the institution, as determined by the commission.

(e) Notwithstanding any other provision of this section, the minimum annual scholarship supplement for a student eligible under (b) of this section is $500.

(f) In this section,

(1) "allowable standard costs of attendance" means the lesser of the

(A) standard costs of attendance at the University of Alaska, as determined by the commission; or

(B) actual costs of attendance at the qualified postsecondary institution that the student attends or plans to attend, as determined by the commission;

(2) "expected family contribution" means the amount a student or the student's family is expected to pay toward the student's cost of attendance, as determined by completion of the most recent federal Free Application for Federal Student Aid.

*** Sec. 7.** AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.830. Qualified postsecondary institutions. (a) The following institutions are qualified postsecondary institutions for purposes of awarding an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship:

(1) a university or college physically located in the state that [IS]

(A) **is** authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); [AND]

(B) **is** accredited by a regional accreditation association;

(C) has an advisory program established for incoming students that provides counseling related to course selection, career choice, and personal challenges; and

(D) provides courses and credits that can result in the issuance of a degree or certificate available at the institution within a time frame expected for that degree or certificate;

(2) a career and technical school program physically located in the state that **meets the standards established in (a)(1)(C) and (D) of this section and that** has been included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment.

(b) The Department of Labor and Workforce Development shall, in consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska **performance** [MERIT] scholarship program.

* **Sec. 8.** AS 14.43.849, as enacted by sec. 2, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.849. Definitions. In AS 14.43.810 - 14.43.849, unless the context requires otherwise,

(1) "department" means the Department of Education and Early Development;

(2) "grade-point average" means the average of all grades on a four-point scale, or five-point scale for advanced placement classes, obtained by the student

in high school;

(3) "high school" means a public or accredited secondary school in the state and a home school program that is approved by the department;

(4) "program" means the Alaska **performance** [MERIT] scholarship program established under AS 14.43.810 - 14.43.849;

(5) "school district" means a borough school district, a city school district, a regional educational attendance area, and a state boarding school.

* **Sec. 9.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.915. AlaskAdvantage education grant and Alaska performance scholarship award income account. The AlaskAdvantage education grant and Alaska performance scholarship award income account is created as an account in the general fund. Money may be appropriated to the account from the AlaskAdvantage education grant and Alaska performance scholarship fund under AS 37.14.750 and from other sources. The commission may use the money in the account to pay grants awarded under AS 14.43.400 - 14.43.420 and scholarships awarded to students under AS 14.43.810 - 14.43.849. The amount determined under AS 37.14.750(d) each year and deposited into the account is the maximum amount that may be used to pay scholarships for the immediately succeeding fiscal year.

* **Sec. 10.** AS 14.45.130(a), as amended by sec. 7, ch. 14, SLA 2010, is amended to read:

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, courses taken at the school, and level of eligibility for an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849.

* **Sec. 11.** AS 37.07.020(b) is amended to read:

(b) In addition to the budget and bills submitted under (a) of this section, the governor shall submit a capital improvements program covering the succeeding six fiscal years. The governor shall also submit a fiscal plan with estimates of significant sources and uses of funds for the succeeding 10 fiscal years. The fiscal plan

(1) must include sufficient details to identify

(A) significant sources of funds;

(B) significant uses of funds, including lump sum projections of

(i) operating expenditures;

(ii) capital expenditures;

(iii) debt service expenditures;

(iv) fund capitalizations;

(v) appropriations of income of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska), if any;

(2) must balance sources and uses of funds held while providing for essential state services and protecting the economic stability of the state;

(3) must include projected balances of significant funds held in separate accounts, including the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska), the public education fund (AS 14.17.300), and the **AlaskAdvantage education grant and Alaska performance scholarship fund (AS 37.14.750)** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)];

(4) must set out significant assumptions used in the projections with sufficient detail to enable the legislature to rely on the fiscal plan in understanding, evaluating, and resolving issues of state budgeting, including information that supports major areas of operating increases, such as population demographics that affect the need for particular government services.

* **Sec. 12.** AS 37.13.145(d) is amended to read:

(d) Notwithstanding (b) of this section, income earned on money awarded in or received as a result of State v. Amerada Hess, et al., 1JU-77-847 Civ. (Superior Court, First Judicial District), including settlement, summary judgment, or adjustment to a royalty-in-kind contract that is tied to the outcome of this case, or interest earned on the money, or on the earnings of the money shall be treated in the same manner as other income of the Alaska permanent fund, except that it is not available for distribution to the dividend fund or for transfers to the principal under (c) of this section, and shall be annually deposited into the **AlaskAdvantage education grant and Alaska performance scholarship fund (AS 37.14.750)** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)].

* **Sec. 13.** AS 37.14 is amended by adding a new section to read:

Article 8A. AlaskAdvantage Education Grant and Alaska Performance Scholarship Fund.

Sec. 37.14.750. AlaskAdvantage education grant and Alaska performance scholarship fund established. (a) The AlaskAdvantage education grant and Alaska performance scholarship fund is established in the general fund for the purpose of making grant payments under AS 14.43.400 - 14.43.420 and scholarship payments to qualified postsecondary institutions for students under AS 14.43.810 - 14.43.849 by appropriation to the income account established under AS 14.43.915. Money in the fund does not lapse. The fund consists of

(1) money appropriated to the fund;

(2) income earned on investment of fund assets;

(3) donations to the fund; and

(4) money deposited to the fund under AS 37.13.145(d).

(b) Each fiscal year, the legislature may appropriate to the AlaskAdvantage education grant and Alaska performance scholarship fund an amount equal to 15 percent of the money received by the state during the previous calendar year under AS 43.55.011(g).

(c) The amount annually appropriated and deposited to the fund may not exceed the greater of

(1) $40,000,000; or

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $160,000,000.

(d) The balance in the AlaskAdvantage education grant and Alaska performance scholarship fund shall be determined on June 30 of each year. The department shall distribute one-third of that amount or $40,000,000, whichever is less, for deposit into the account established in AS 14.43.915.

(e) Notwithstanding the limitation in (d) of this section, the legislature may appropriate any amount to the AlaskAdvantage education grant and Alaska performance scholarship fund. Nothing in this section creates a dedicated fund.

(f) In this section, unless the context requires otherwise, "fund" means the

AlaskAdvantage education grant and Alaska performance scholarship fund established in (a) of this section.

*** Sec. 14.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted **for**

(1) [FOR] direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) [FOR] secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) [FOR] vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) [FOR] a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) the AlaskAdvantage grant and Alaska performance scholarship fund under AS 37.14.750(a).

*** Sec. 15.** AS 43.20.014(a), as amended by sec. 14, ch. 92, SLA 2010, is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses and programs by a school district in the state; [AND]

(3) by a state-operated vocational technical education and training school**; and**

(4) for the AlaskAdvantage grant and Alaska performance scholarship fund under AS 37.14.750(a).

*** Sec. 16.** Section 8, ch. 14, SLA 2010, is amended to read:

TRANSITION: **PERFORMANCE SCHOLARSHIP** PROGRAM STANDARDS AND IMPLEMENTATION FOR INITIAL SCHOOL YEARS. Notwithstanding any contrary provision of this Act, the Department of Education and Early Development and the Department of Labor and Workforce Development, after consultation with the Alaska Commission on Postsecondary Education, may adopt regulations under AS 44.62 (Administrative Procedure Act) to implement their respective duties under the Alaska **performance** [MERIT] scholarship program established in AS 14.43.810, enacted by sec. 5 of this Act, so that a student

(1) may be eligible for the **Alaska performance scholarship** [PROGRAM] even though the student did not fully meet the required core academic curriculum for the school years beginning July 1, 2010, through June 30, 2014; and

(2) who graduated from high school in this state after January 1, 2011, and before July 1, 2011, and meets eligibility requirements for the **Alaska performance scholarship** program may apply for a scholarship on or after January 1, 2011, for enrollment in a program of study beginning on or after July 1, 2011.

* **Sec. 17.** AS 37.05.565 is repealed.

* **Sec. 18.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: ALASKADVANTAGE EDUCATION GRANT AND ALASKA PERFORMANCE SCHOLARSHIP FUND BALANCE. (a) Notwithstanding the $40,000,000 limit in AS 37.14.750(d), the following amounts may be substituted for that amount as follows for

(1) fiscal year 2012, $20,000,000;

(2) fiscal year 2013, $30,000,000.

(b) The money deposited in the Alaska capital income fund established under AS 37.05.565 shall be transferred to the AlaskAdvantage education grant and Alaska performance scholarship fund established under AS 37.14.750 on the effective date of this section.

* **Sec. 19.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Education and Early

Development, the Department of Labor and Workforce Development, the Department of Revenue, and the Alaska Commission on Postsecondary Education may adopt regulations necessary to implement changes made to their respective authorities by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2011.

*** Sec. 20.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the

(1) heading of article 12 of AS 14.43 from "Alaska Merit Scholarship Program" to "Alaska Performance Scholarship Program";

(2) catch line for AS 14.43.820 from "Alaska merit scholarship program; eligibility" to "Alaska performance scholarship program; eligibility."

*** Sec. 21.** Section 19 of this Act takes effect immediately under AS 01.10.070(c).

*** Sec. 22.** Section 6 of this Act, AS 14.43.830(a)(1)(C) and (D), added by sec. 7 of this Act, and the amendment to AS 14.43.830(a)(2) made by sec. 7 of this Act take effect July 1, 2012.

*** Sec. 23.** Section 15 of this Act takes effect January 1, 2014.

*** Sec. 24.** Except as provided in secs. 21 - 23 of this Act, this Act takes effect July 1, 2011.

Why this fiscal note differs from previous version (if initial version, please note as such)

This committee substitute amends the original bill by, among other changes : 1) establishing a needs-based supplemental award of up to $4,000 per individual for otherwise eligible Alaska performance scholarship recipients; 2) creating a potential fund source, award income account, and investment fund for the AlaskAdvantage education grant (AEG) and Alaska performance scholarship (APS) programs; and, 3) creating a forward funding structure to provide for a phase out of funding for APS recipients who have already commenced their postsecondary education training prior to APS program wind-down. Following are estimates of the costs related to full funding of: 1) the APS needs-based supplemental awards; and 2) the AEG awards. Due to the uncertainty around the level of expenditure intended for these aid programs, full program cost estimates are included in the analysis but not shown in the expenditure and revenue tables above.

DRAFT
FISCAL NOTE

STATE OF ALASKA **BILL NO.** CSHB104\I
2011 LEGISLATIVE SESSION

Analysis

APS needs-based supplement assumptions:
1) Incorporates 2010 APS utilization and attrition rates estimates (initial utilization rate of 28.8% and annual cohort attrition of 25% per year).
2) Average per student APS supplemental award is based on an analysis of unmet need data for 2009 Alaska high school graduates who attended UA in 2010 and were certified as eligible for an AEG based on their Free Application for Federal Student Aid data analysis.
This provision has a delayed effective date of July 1, 2012, for implementation, therefore, participation numbers are assumed to be: Year 1=4,034; Year 2=5,187; Year 3=5,763; Year 4=5,763
Average unmet need is $4,245 - $2000 (self-help) = $2,245 @ 50% = $1,122 (50% of remaining unmet need paid by the state)

Annual incoming cohort size: 2,305 students per year

	Number of Students	Average Supp. Award	Est. annual cost
FY13	4,034	$1,122	$ 4,526,148
FY14	5,187	$1,122	$ 5,819,814
FY15	5,763	$1,122	$ 6,466,086
FY16	5,763	$1,122	$ 6,466,086
APS needs-based cost (full implementation)	5,763		$6,466,086

This is a fairly conservative estimate based on financial needs data for Alaska 2009 high school graduates moving directly into postsecondary enrollment .

AEG funding estimate:
The following estimate is based upon the applicant data for 2010-11 AEG applicants who were certified by a participating Alaska school as in an eligible enrollment status. The total need has been reduced by the grant costs associated with the students who will not receive supplemental aid under the APS program. Assuming an annual average grant award of $1,452 for an applicant pool of 4,800 (average pool size, 2009 -- 2011), the annual cost for full AEG program funding would be $6.9 million. This number is based upon the increased annual grant maximum passed into law by the Alaska Legislature in 2010; the annual maximum grant amount was increased from $2,000 to $3,000. While an increase in: 1) student enrollment/attendance patterns, and, 2) cost of attendance would impact program costs, such growth factors are not included in these estimates.

Total combined costs of APS/APS Supplement/AEG student aid components

	APS merit	APS needs	AEG needs	Total
FY12	$8,221.9	$0.0	$6,969.6	$15,191.5
FY13	$14,389.3	$4,526.1	$6,989.6	$25,905.0
FY14	$18,502.0	$5,819.8	$6,989.6	$31,3114
FY15	$20,556.6	$6,466.1	$6,989.6	$34,012.3
Est. Annual AEG/APS Full implementation		Students funded 10,563		$34,012.3

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSHB104

Analysis

The bill provides for a separate fund designated for performance scholarships. In order to generate enough revenue to fund the performance scholarships, the Department anticipates the need for a $400 million capitalization.

It is anticipated the fund will be managed with asset allocation of 60% fixed income and 40% domestic equity in order to yield a real annual rate of return of 5%. These costs include investment management fees, audit, accounting and custody fees and are projected based on the assumptions provided by the division's investment advisor and the division's cost allocation plan.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSHB104

Analysis

Bill Language:
This bill expands the existing education credit allowed against the corporate income tax to include contributions made to the newly created Alaska Performance Scholarship Fund under AS 37.14.750.

Revenues:
This bill does not increase or decrease the amount of total education credits allowed against corporate income tax. Therefore, this bill has no affect on state revenues.

Expenditures:
The department can implement the provisions of the bill with existing resources.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSHB 104

Analysis

This committee substitute directs earnings from the Amerada Hess settlement portion of the Alaska Permanent Fund's principal to the AlaskAdvantage education grant and Alaska performance scholarship fund. Current statutes require that available Amerada Hess earnings be transferred to the Alaska Capital Income Fund. The change in the destination fund would not create a change in APFC's investing or accounting operations. As a result, there would be no additional costs to the APFC as a result of this bill.

MEMORANDUM

TO: Representative Alan Dick
Chair, House Education Committee

FROM: Representative Paul Seaton

DATE: February 11, 2011

RE: Back up documents for CSHB104

I would like to submit the information below for consideration by the House Education Committee on CSHB104v.I, amending the governor's scholarship bill to incorporate a needs based component to APS, require institutions provide student support, fund AlaskaAdvantage, and create a funding mechanism with a steady revenue stream and ability to phase down scholarship obligations.

Attached please find: Sponsor Statement for CSHB104v.I: ACPE Sectional CSHB 104v.I; Excerpts from Scholarship Funding Task Force Report to the Legislature; diagram to explain funding mechanism in CSHB104; and Alaska Capital Income Fund chart from Leg Finance.

Staff contact, Katie Koester 465-2028

Sponsor Statement

House Education Committee Substitute for HB 104

The Education Committee Substitute for HB 104 makes changes to the governor's bill funding the Alaska Performance Scholarship (APS) program to correspond with recommendations from the Joint Legislative Higher Education Scholarship Funding Task Force that met over the interim. The CS incorporates a needs based component to APS, requires institutions provide student support, funds AlaskaAdvantage, and creates a funding mechanism with a steady revenue stream and ability to phase down scholarship obligations.

The Task Force felt it was important to give those students who had worked hard and received the merit scholarship the real possibility for higher education even if their families could not afford it. The needs based component in the CS awards 50% of the total unmet need for attending school after all other funding sources and the $2,000 student work commitment have been subtracted. The award is capped at the 2010 UAF level of $4,000.

The House Education CS also requires institutions that accept scholarship funds to provide the support and structure these new adults need to succeed. A school must institute an advisory program to provide students with career counseling, course planning and help with personal challenges. Institutions are also required to offer the necessary classes for students to complete their degree in a timely manner.

The bill varies from the governor's proposed endowment account for the structure of the AlaskaAdvantage education grant and Alaska performance scholarship award income account (AEG-APS). In order to identify a steady revenue stream for the AlaskAdvantage grants and Alaska performance scholarships the CS directs the earnings of the Amerada Hess fund to the newly created AEG-APS fund and repeals the capital income fund where Amerada Hess earnings were previously held. This represents approximately 22 million a year in potential revenue assuming a 7% rate of return. Fifteen percent of progressivity, the increase in net oil tax revenue when oil goes over $30 a barrel profit, would make up the annual difference while capping AEG - APS fund at $160 million.

The AEG-APS fund is modeled after community revenue sharing with a built in step down mechanism. If another legislature decides not to transfer Amerada Hess earnings, oil tax revenue or general fund money into the AEG-APS fund, there will be enough in the account to fulfill the state's obligations to the current scholarship recipients.

The House Education CS for HB 104 translates the hard work of the Scholarship Funding Task Force into improvements to the governor's bill.

Alaska State Legislature Joint Legislative Higher Education

Scholarship Funding Task Force

Report to the Legislature

Task Force Recommendations on

The Alaska Scholarship Program and

State-supported Educational Financial Assistance

Fall 2010

Funding and Finance

The first duty and priority for the Task Force was to "evaluate how best to provide long-term and sustainable funding for state provided financial aid for postsecondary institutions in the state" with particular emphasis being given to the performance-based Alaska Scholarship.

The Task Force analyzed – as representative examples – a number of funding and financing structures which were submitted to the Task Force. Those structures included: heavily capitalized, constitutionally protected endowment funds; heavily capitalized, statutorily created General Fund sub-accounts; moderately capitalized rolling-fund accounts; and, as a control group, the pay-as-you-go default case of annual General Fund appropriations. The Task Force also considered both the numerous revenue sources which could be tapped to provide monies for scholarships and the appropriation mechanisms available for directing such monies to specific programs, as well as the opportunities and challenges associated with each approach.

Relatively speaking, the ideal structure for ensuring a secure, long-term, sustainable funding source for the Scholarship would be a constitutional account, not unlike the Permanent Fund or Constitutional Budget Reserve, specific to the Scholarship and capitalized at a level where revenues generated from investment of the corpus would be sufficient to not only fully fund annual scholarship awards but also sufficient to inflation-proof the fund itself through reinvestment. Though subject to market volatility, such a mechanism (essentially a constitutionally protected endowment) would be highly durable, self-sustaining, more able to attract private donations through the newly augmented education tax-credit system and more likely to provide an adequate, predictable funding stream for the program.

However, such a constitutionally protected endowment account, due to the need for overwhelming legislative support and a further vote of the people, would be difficult and time consuming to create. Another substantial challenge would be capitalizing the account – identifying and appropriating the hundreds of millions of dollars in initial investment necessary to place the fund on the desired self-financing and self-sustaining footing.

One alternative to the constitutionally protected account was reflected in the Governor's original Scholarship proposal. Senate Bill 224 and House Bill 297 each called for the establishment of a "scholarship fund" - a statutorily created sub-account of the General Fund, to hold appropriations, donations and income earned on investments of fund assets. Such a statutory account would have offered, though to a lesser degree, many of the same benefits as its constitutionally protected counterpart yet, because it could be created through a purely legislative process, would have been far easier to make and could have been established on a timeline as compressed as a single legislative session.

This option, however, suffered from the same fund capitalization shortcomings (both in immediacy and scale) as its counterpart. As described in Fiscal Note 2 of SB 224, the purely

statutory endowment would still have required an initial, immediate, investment of no less than $400 million to approach fund self-sustainability.

Attempts to mitigate these capitalization challenges resulted in proposals which functionally resembled the revised School Bond Debt Reimbursement program. Under these designs, termed rolling-fund accounts by the Task Force, the fund capitalization threshold was reduced and the investment timeline extended. Under draft legislation requested for the Task Force (Attachments 15 and 16), the Scholarship Fund would be incrementally capitalized up to $160 million over a series of years as monies were deposited into the fund in excess of those required for distribution as scholarship awards. Such a system would represent a moderate continuing strain on the State's finances but would allow the Legislature to capitalize the fund without the budgetary shock of a large, one-time appropriation. Also, though a smaller account balance would not afford the fail-safe, in perpetuity funding security of a heavily capitalized endowment, the corpus of a rolling-fund would provide a reasonable level of mid-term programmatic funding assurance; allowing the State the potential of a program wind-down while still having sufficient funds to meet its obligations to Scholarship awardees already in the training/education pipeline.

The Task Force considered all of these account options to be preferable to the pay-as-you-go default case of making no specific accommodation for the Scholarship and simply allowing the Administration to submit yearly funding requests for legislative consideration.

Therefore, ***it is the recommendation of the Task Force that the Legislature immediately create, through statute, a Scholarship Fund as a sub-account within the General Fund***. As an account capitalization goal, ***the Task Force recommends the Scholarship Fund account balance to be an amount sufficient to allow the Scholarship Fund to be wholly self-sustaining both for award distribution and inflation-proofing replenishment***. As an optimal capitalization strategy, ***the Task Force would prefer, should sufficient funds be available, immediate account capitalization***. However, recognizing this may not be possible, ***the Task Force recommends, as an alternative, incremental capitalization of the Scholarship Fund to a minimum balance of $160 million***, or whatever amount the Legislature deems sufficient for it to act as a surety account for already obligated awards.

Possible funding sources for the Scholarship are many since the State has multiple sources from which it collects revenue (like severance taxes and corporate income taxes), multiple ways it generates income (like investment returns, dividends and program receipts) and dozens of existing accounts in which it is already holding money. Much of this income flows into the General Fund and is as available for appropriation to the Scholarship as it is for any other state program.

However, relying primarily on General Funds for support of a program is to subject it to the uncertainty of the budgetary process by placing it in competition with all other programs for yearly legislative prioritization and appropriation. This is a situation the Task Force, with an

overarching interest in assuring an adequate, secure and predictable funding stream to the Scholarship, would hope to avoid. Therefore, the Task Force advocates a funding regime which would require General Funds as supplemental funds only, if at all.

In general, and as much as is practicable, ***the Task Force recommends that sources of funding for the Scholarship by positively identified, "funds-in" revenue be affirmatively designated*** and General Funds be used as necessary and in supplement only. In order of preference, from "first place to go" to last, the Task Force advises the Legislature to fund the Scholarship Fund as follows:

1. Designating Interest from Specific, Existing Accounts
2. Designating Program Receipts and Dividends
3. Designating Revenues from Specific, External Sources
4. Re-appropriated Assets from Liquidated Accounts
5. General Funds

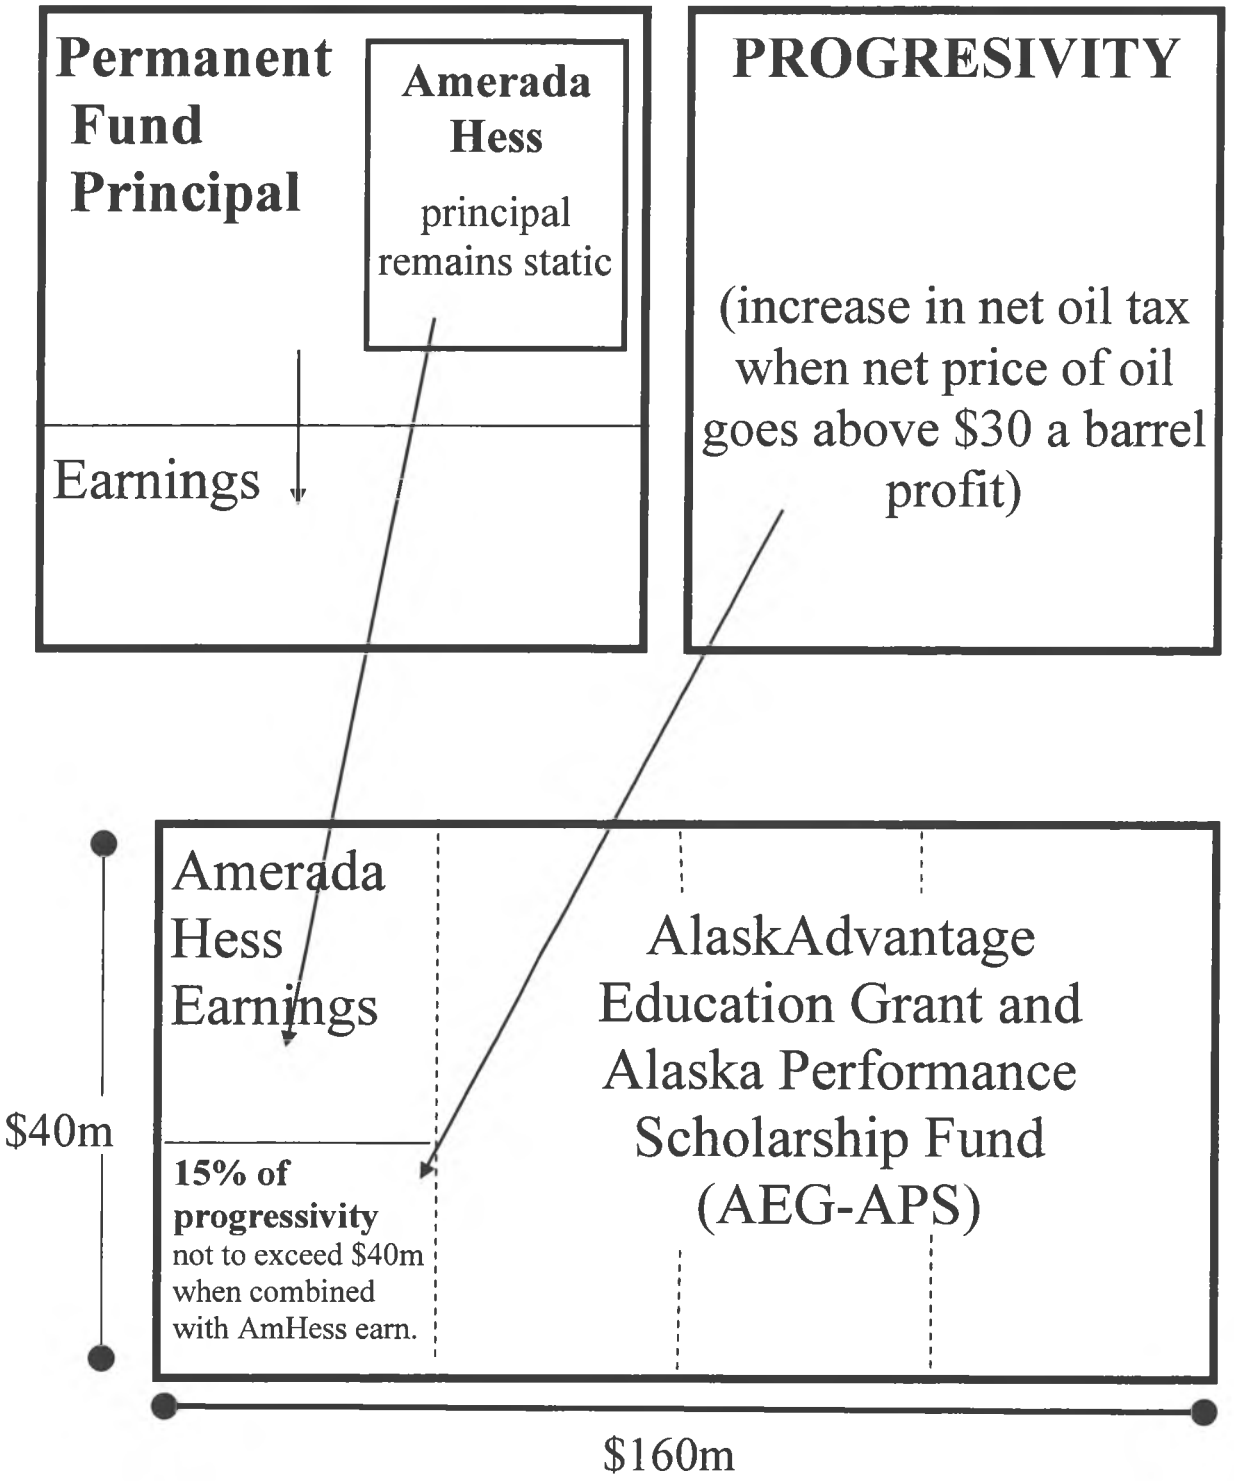
How AEG-APS Fund Works



There were no earnings directed from AmHess to the Capital Income Account in 2009 & 2010 due to realized losses in market crisis. Fiscal year 2011 earnings were used to pay back the AmHess principal until losses to the corpus are replaced. It is projected that under a "normal" income environment Am Hess will earn approximately 7%, or 22m a year. The year end balance of the fund was $53.3m.

4 AAC is amended by adding a new chapter to read:

Chapter 43. Alaska Performance Scholarship Program.

Section

10. Requirements for school districts and certain religious or private schools

20. Standardized testing and grade point average requirements

30. Curriculum requirements

40. Procedures for home-based education and certain religious or other private schools

900. Definitions

4 AAC 43.010. Requirements for school districts and certain religious or private schools. In administering a school district's duties under the scholarship program established in AS 14.43.810 – 14.43.850, a school district, or a religious or other private school accredited under 4 AAC 04.300(c) that elects to comply with AS 14.45.100 - 14.45.130, shall

(1) determine a student's level of eligibility for the Alaska performance scholarship based on curriculum, standardized examination scores, and grade point average for each of its graduating students;

(2) record a student's level of eligibility on the student's permanent record;

(3) require a student seeking Alaska performance scholarship eligibility certification to provide proof of results achieved on one of the standardized examinations required for scholarship eligibility; and

(4) no later than July 15 of each year, transmit to the department an electronic version of each graduating student's permanent record that describes the student's eligibility for the Alaska performance scholarship. (Eff. __/__/____, Register __)

Authority: AS 14.07.060 AS 14.43.810

4 AAC 43.020. Standardized examination and grade point average requirements. (a) A student is eligible for an Alaska performance honors scholarship if the student meets the curriculum requirements of 4 AAC 43.030, obtains a grade point average of 3.5 or higher, and provides proof of

(1) an ACT score of 25 or higher;

(2) an SAT score of 1680 or higher; or

(3) a WorkKeys score of five or higher in each of the following areas:

(A) applied mathematics;

(B) reading for information;

(C) locating information.

(b) A student is eligible for an Alaska performance achievement scholarship if the student meets the curriculum requirements of 4 AAC 43.030, obtains a grade point average of 3.0 or higher, and provides proof of

(1) an ACT score of 23 or higher;

(2) an SAT score of 1560 or higher; or

(3) a WorkKeys score of five or higher in each of the following areas:

(A) applied mathematics;

(B) reading for information;

(C) locating information.

(c) A student is eligible for an Alaska performance opportunity scholarship if the student meets the curriculum requirements of 4 AAC 43.030, obtains a grade point average of 2.5, and provides proof of:

(1) an ACT score of 21 or higher;

(2) an SAT score of 1450 or higher; or

(3) a WorkKeys score of five or higher in each of the following areas:

(A) applied mathematics;

(B) reading for information;

(C) locating information.

(d) A student who qualifies for a scholarship using the WorkKeys examination must use the scholarship award in a career and technical program that results in the award of a certificate. (Eff. __/__/____, Register __)

Authority: AS 14.07.060 AS 14.43.810

4 AAC 43.030. Curriculum requirements. (a) For a student graduating from high school in 2011, the curriculum requirements for all levels of the Alaska performance scholarship are completion of

(1) the subject matter requirements for high school graduation under 4 AAC 06.075(b); and

(2) one additional unit of credit from any of the following:

(A) mathematics – one unit of credit;

(B) science – one unit of credit;

(C) mathematics and science – one-half unit of credit in mathematics and one-half unit of credit in science. (Eff. __/__/____, Register___)

Authority: AS 14.07.060 AS 14.43.810

4 AAC 43.040. Procedures for home-based education and certain religious or other private schools. (a) To establish eligibility for an Alaska performance scholarship, a student who is not enrolled in a public school program and who completes a home-based education program in the state, or who graduates from a religious or other private school accredited under 4 AAC 04.300(c) that does not elect to comply with AS 14.45.100 - 14.45.130, shall apply to the department no later than July 1 of the year the student intends to enroll at an eligible postsecondary institution. The application must be in writing, on a form provided by the department, and must include documentation demonstrating

(1) proof of results achieved on a standardized examination that meet the requirements of 4 AAC 43.020(a), (b), or (c); and

(2) completion of the curriculum requirements in 4 AAC 43.030.

(b) No later than 15 days after receipt of a complete application under (a) of this section, the department will provide the student with a written notice of eligibility. In this notice, the department will state whether the student is eligible for a scholarship, and, if eligible, the student's maximum level of scholarship eligibility.

(c) A student who is denied eligibility for a scholarship under this section or wishes to dispute the department's determination of the student's maximum level of scholarship eligibility may appeal the department's determination by sending a written request for appeal no later than 15 days after the department issues the notice of eligibility.

(d) A request for appeal under (c) of this section must include

(1) the name, mailing address, and telephone number of the appellant;

(2) the relief requested in the appeal;

(3) a short and concise statement identifying the reasons supporting a reversal or modification of the department's eligibility determination; and

(4) all documents, papers, or other materials that support a reversal or modification of the department's eligibility determination.

(e) The commissioner will designate a reviewer who did not participate in the department's initial determination of scholarship eligibility to review a timely request for appeal received under (c) of this section. The reviewer shall consider all information and materials submitted and issue a written decision that determines the student's eligibility for a scholarship, and if eligible, the student's level of eligibility. The reviewer's decision is the final decision of the department. Notice of the department's decision will be sent to the student no later than 45 days after the department receives the notice of appeal. (Eff. __/__/____, Register __)

Authority: AS 14.07.060 AS 14.43.810

4 AAC 43.900. Definitions. In this chapter, unless context indicates otherwise,

(1) "ACT" means the ACT high school achievement and college admissions examination administered by ACT, Inc.;

(2) "Alaska performance scholarship" means the scholarship program established under AS 14.43.810 – 14.43.850;

(3) "Alaska performance achievement scholarship" means an Alaska performance scholarship at the award level described under AS 14.43.825(a)(2);

(4) "Alaska performance honors scholarship" means an Alaska performance scholarship the top award level described under AS 14.43.825(a)(1);

(5) "Alaska performance opportunity scholarship" means an Alaska performance scholarship the award level described under AS 14.43.825(a)(3);

(6) "commissioner" means the Commissioner of Education and Early Development;

(7) "home-based education program" means an educational program that qualifies the student for an exemption under AS 14.30.010(b)(12) from the compulsory education requirement of AS 14.30.010(a);

(8) "SAT" means the SAT high school achievement and college admissions test administered by College Board, Inc.;

(9) "standardized examinations" means the ACT, SAT, or WorkKeys examinations;

(10) "unit of credit" has the meaning given in 4 AAC 06.075(e);

(11) "WorkKeys" means the WorkKeys Job Skills Assessment administered by ACT, Inc. (Eff. __/__/____, Register __)

Talking Points
On-Line Learning Opportunities

General Opportunities

- Correspondence schools and courses
- Video Conferencing between schools within a school district
    - Sharing of highly qualified teachers between schools
    - Sharing highly qualified teachers between hub and village schools
    - Specific example: NWABSD developed a system to synchronize high school schedules across the district, using stimulus funding, and therefore build greater capability for cross district instruction.
- Academies where students are brought together in a hub or central community for intensive instruction.
- Distance learning, dual credit, and tech prep courses
    - University of Alaska
    - AVTEC
    - Alaska Technical Center (Northwest Arctic Borough)

Alaska Learning Network

The Alaska Learning Network (AKLN) assists Alaskan schools to provide students and teachers of all ages with a comprehensive range of fundamental, advanced, and specialized online learning, regardless of geographic or technical restrictions.

The Alaska Learning Network is grant funded through EED federal Title IID (technology) funds. The 2011 components of the grant include:

a) Provide 30 Alaskan teachers with distance and in-person training to complete technology learning plans;
b) Provide 240 high school students with courses taught by highly qualified teachers starting in summer 2011;
c) Develop and populate a database of online courses and lessons.

AKLN grant was provided to a consortium of eleven school districts, Alaska Staff Development Network (ASDN) and Southeast Regional Resource Center (SERRC). The goal will be to offer AKLN services to member districts, but also to non-member districts at a different rate or fee.

Member districts (11) include:

- Chatham School District
- Annette Island School District
- Hoonah City School District
- Juneau Borough School District
- Kodiak Island Borough School District
- Lake & Peninsula Borough School District
- North Slope Borough School District
- Northwest Arctic Borough School District
- Petersburg City School District
- Wrangell Public School District
- Yukon Flats School District

The Honorable Alan Dick
Chair, House Education Committee
Alaska House of Representatives
Alaska State Capitol, Room 104
Juneau, Alaska 99801

Dear Mr. Chair and Members of the House Education Committee:

Thank you for the opportunity to meet jointly with the House and Senate Education Committees yesterday while the State Board of Education and Early Development held their quarterly meeting in Juneau. Hopefully Chair Dick, you will have a chance to meet with the board at another time.

In March 2010 the State Board of Education and Early Development passed a resolution supporting the Alaska Performance Scholarship (APS) and the opportunities that it will provide for Alaskan students (see attached). The board still supports the resolution as well as the APS. The board is also committed to implementation of the APS through the regulatory process.

There are many students across the state that will graduate in the next couple of months who have been working hard towards achieving the APS and, in fact, have been counting on the APS opportunities. The board would like to emphasize its support of those students, parents and teachers who have been working so diligently towards their goal.

The Board is committed to working with Department of Education and Early Development staff, school districts, superintendents, teachers, home school families and all others to deliver the rigorous curriculum.

If you have any questions or would like to speak with me about the board's support of the APS,

printed on recycled paper

please contact me directly at esthercox@alaskalife.net. I welcome an open dialogue on our support of APS.

Sincerely,

Esther Cox
Chair
State Board of Education and Early Development

ALASKA DEPARTMENT OF EDUCATION & EARLY DEVELOPMENT

Resolution of the State Board of Education & Early Development

The Governor's Performance Scholarship

Resolution 03-2010

WHEREAS, the proposed Governor's Performance Scholarship (GPS) invites Alaska's high school students to challenge themselves with a rigorous course of study;

WHEREAS, the GPS encourages high schools to offer four years of science and math courses as well as the currently required four years of language arts courses and three years of social studies courses;

WHEREAS, the GPS recognizes a variety of meritorious students by awarding technical and academic scholarships to students with grade point averages ranging from C+ to A;

WHEREAS, the GPS serves students in public schools, private schools and home schools;

WHEREAS, the GPS encourages parents and guardians to participate in planning their students' high school career;

WHEREAS, the GPS encourages students to complete high school and be better prepared to attend a postsecondary institution;

WHEREAS, the GPS helps Alaska's families afford postsecondary education;

WHEREAS, the GPS encourages students to receive their postsecondary education in Alaska;

WHEREAS, the GPS recognizes the value and variety of Alaska's private and public postsecondary education institutions;

WHEREAS, the GPS will help Alaska to train its own highly skilled work force;

THEREFORE, BE IT RESOLVED, the State Board of Education & Early Development strongly supports the proposed Governor's Performance Scholarship to meet the academic and financial needs of Alaska's youth.

Esther J. Cox, Chair
Alaska State Board of Education & Early Development

Jan. 13, 2010
January 13, 2010

RESOLUTION NUMBER 11-01

RESOLUTION TO ENDORSE THE ALASKA PERFORMANCE SCHOLARSHIP

WHEREAS, the Alaska Workforce Investment Board is a private industry driven public organization that is accountable through its members including representatives from business and industry, education, organized labor, and government to the residents, the Legislature and the Governor of Alaska;

WHEREAS, the Alaska Workforce Investment Board acts as the lead state planning and coordinating entity for state human resource programs involving employment training, career and technical education, and workforce development;

WHEREAS, the Alaska Workforce Investment Board recognizes and values the attributes that the Alaska Performance Scholarship provides to Alaskans graduating from an Alaskan high school;

WHEREAS, the Alaska Workforce Investment Board has noted the percentage of Alaskans entering postsecondary education is among the lowest in the nation;

WHEREAS, there is a growing drop-out rate and non-graduation rate in Alaska's secondary schools;

WHEREAS, the Alaska Workforce Investment Board believes that the scholarship program will provide incentives to Alaska students to attain higher performance in secondary school, complete their high school diploma, and plan to attend postsecondary education;

WHEREAS, the scholarships will also help lower the cost of education for Alaska students and leave them in better financial status as they complete certifications or degrees; and

NOW THEREFORE BE IT RESOLVED that the Alaska Workforce Investment Board endorses the Alaska Performance Scholarship.

CERTIFICATION
The Alaska Workforce Investment Board held a meeting duly and regularly called, noticed, and convened this 23rd day of February, 2011 and the foregoing Resolution was adopted unanimously at said meeting.

Signed this 23rd day of February, 2011.

Jim Lynch, Chair
Alaska Workforce Investment Board

State and Federal Scholarship and Grant Programs Information

AlaskAdvantage Education Grant (AEG): The AEG is a state-funded need-based grant to Alaska students to promote access to postsecondary education. Annual grant awards range from $500 to $3,000 based upon: unmet cost of attendance less the student's expected family contribution and any non-loan aid, level of enrollment, and whether a student meets the requirements of one of the priority award categories. Priority categories are: having demonstrating college-readiness by scoring in the top quartile on either the SAT or ACT assessment; or, being enrolled in certain workforce shortage programs of study: education, protective and social services, allied health, and process and resource extraction industries. The AEG is available to students enrolled in a first undergraduate degree and attending at least half time at a Title IV-approved postsecondary institution in Alaska. The maximum amount a single student may receive under this program is $12,000. The application for the AEG is the Free Application for Federal Student Aid (FAFSA).

Alaska Performance Scholarship (APS): The APS is a merit-based scholarship designed to incent and reward Alaska high school students who (1) take a curriculum which prepares them to succeed in postsecondary education, and (2) work hard and perform well in school to continue on and pursue postsecondary education and training in Alaska. Annual awards for full-time enrollment range from $2,378 to $4,755. The amount is a student is eligible to receive is determined by a combination of the high school grade point average and score on the SAT, ACT or WorkKeys assessment. Recipients must attend a participating postsecondary education institution in Alaska and may use the scholarship for up to eight semesters over the six years following graduation from high school. The maximum amount a student may receive under this program is $19,020. The application for the APS is the FAFSA.

University of Alaska Scholars: The UA Scholars program is a merit-based scholarship designed to reward student achievement and promote postsecondary attendance at the University of Alaska. This program was established by the University of Alaska and is funded by UA's Land Grant Trust Fund. An award is available to Alaska high school graduates identified by their school as being in the top 10% of their class. Recipients are awarded $11,000 to be spread across eight semesters of attendance and must be used within six years of graduation from high school. The annual award is $2,750.

Federal Pell Grant: The Federal Pell Grant Program provides need-based grants to low-income undergraduate students to promote access to postsecondary education. Grant amounts are dependent on: the student's expected family contribution (EFC); the cost of attendance; the student's enrollment status; and whether the student attends for a full academic year or less. For the 2010-11 award year (July 1, 2010 to June 30, 2011), the maximum award is $5,550 and minimum is approximately $1,180. The maximum amount can change each award year and depends on program funding. The application for the federal Pell grant is the FAFSA.

Federal Supplemental Educational Opportunity Grants (FSEOG) are for undergraduates with exceptional financial need. Pell Grant recipients with the lowest EFCs are first to receive these

federal supplemental grants. These annual awards range between $100 and $4000, depending on the time of application, financial need, and available funding at the school. FSEOGs are awarded only to first-time undergraduate students.

Pell-eligibility is the cross-cutting qualification for each of the grants described above. Following are *generally* applicable annual gross family income ranges within which a full-time student may expect to receive a Pell grant, assuming one family member in college.

Net Assets	Income/3 in family	Income/4 in family	Income/5 in family	Income/6 in family
$25,000	$30k -- $55k	$30k -- $65k	$40k -- $70k	$50k -- $75k
$50,000	$30k -- $55k	$30k -- $65k	$40k -- $70k	$40k -- $75k
$100,000	$20k --$45k	$20k -- $55k	$30k -- $60k	$40k -- $65k

U.S. DOE has developed an online tool to assist families in estimating their precise EFC at www.fafsa4caster.ed.gov. A general rule of thumb is that if the family's EFC is at or above $4600, they will not be Pell-eligible.

Current grant criteria

- Alaska resident enrolled in state at a regionally or nationally accredited school, be in a cert. or degree program and attending at least half time
- Meet institution's satisfactory acad. progress requirements
- Demonstrate financial need based on the methodology used in the Free Application for Federal Student Aid
- Meet other criteria to receive federal financial aid (not already have an undergraduate degree, registered for the draft, no drug convictions while receiving aid, etc.)
- Have a high school diploma or GED
- Have unmet need of at least $500 after all other non-self-help financial aid considered

Current award process

- **Applicant pool is all otherwise eligible students who file a FAFSA on or before April 15**
- **Applicant information is made available to schools students have listed on their FAFSAs; schools provide information about other financial aid awarded and verify enrollment**
- **Using a set standard cost of attendance (based on current year UA COA), ACPE reduces the COA by each student's other non-loan aid and the Estimated Family Contribution (EFC)**

<u>Standard Cost of Attendance</u>

– Other non-loan aid

– Estimated family contribution

= Unmet need

Current award process

- Applicants are then sorted, by unmet need amounts, in a descending order;
- ACPE makes awards until the available funds are exhausted
- In the event of equivalent unmet need amounts, two additional ordering criteria are:
  - 1) lowest adjusted gross income; and,
  - 2) closest to program completion

Current grant structure

AlaskAdvantage priority awards

- **Program rules provide for priority awards, in the form or higher grant amounts, for students in two categories:**
  1. Those enrolled in severe workforce shortage area programs, or
  2. Those whose secondary school performances demonstrate high likelihood for postsecondary education success
- **For category one, the Commission annually determines qualifying shortage programs and they are:**
  1. education,
  2. social and protective services,
  3. allied health, and
  4. process and resource extraction industries
- **For category two, by regulation, eligibility is based on having scored in the top quartile of test takers on either the SAT or ACT (1740/24)**

Current grant amounts

Award type	Full-time student	Half-time student
Standard Award	$1,500	$750
Workforce Shortage Award	$3,000	$1,500
Top quartile of SAT/ACT test takers scores	$3,000	$1,500

(All amounts shown for full academic years)

Program funding history

- Grant funding source since current program inception in 2005-06: federal LEAP funds, ASLC Ofee account interest, FY09 Capital appropriation
- Until FY09 annually funded at approximately $650,000
- Most recent 3-year average total awarded is $1.161 million
- Over five years number of AK FAFSA filers is up 70% with greater increases in the number of grant-eligible applicants
- Because demand has outstripped funding, only applicants with very high need have been funded

Population served in 2009-2010

Population characteristics	Alaska FAFSAs	Eligible population	Awarded	Certified & disbursed
# of students	17,284	4,960	1,543	870
Average Age	27.8	27.7	30.3	32.6
Average AGI	$53,954	$34,994	$18,527	$16,617
Average unmet need	$8,333	$10,966	$14,965	$14,538

Alaska FAFSAs – number of Alaska resident filers for attendance at Alaska schools

Eligible population – a total population subset having filed by the April 15 deadline, indicating enrollment at a participating school and w/unmet need of $500 or greater

Awarded – the portion of the population with unmet need in excess of $14,000

Certified & disbursed – enrolled and eligible as certified by school officials

AGI – adjusted gross income

UA Scholars Program Highlights

- Started by UA in 1999 to attract students from high schools in every corner of the state
- Funded by UA
- 5,266 students have benefited
- 1,873 degrees awarded
- 79% pursuing bachelor's degrees and 14% associate degrees or certificates
- 90% remain in Alaska after graduation
- 66% receive additional financial aid including loans

UNIVERSITY of ALASKA

Many Traditions One Alaska

UA Scholars Program and APS – a comparison

Different Programs, Multiple Objectives, One Goal: Alaska Student Success

The UA Scholars program and the Alaska Performance Scholarship are both merit-based scholarships designed to reward student achievement and promote post-secondary attendance in Alaska.

UA Scholars Program

The UA Scholars Program was established in 1999 by the University of Alaska to attract the top 10 percent of students from every graduating high school class in the state. The program keeps top performers in Alaska and increases student diversity.

The $11,000 cash scholarship is not reduced if other aid is received. Funding for the scholarship comes from the university's own Land Grant Trust Fund.

Alaska Performance Scholarship (APS)

The Alaska Performance Scholarship (APS) was established in 2010 as an invitation to excellence for high school students. It rewards students who complete a rigorous high school curriculum, earn good grades and score well on achievement tests.

The goal of APS is to better prepare students for post-secondary education and to incent them to continue their education in Alaska.

The amount of the APS can be reduced when other scholarships or grants the student receives decreases his or her cost of attendance. APS funding proposals are currently under legislative consideration.

Receiving Both Scholarships

More scholarships mean greater opportunity for Alaska's students. While some students may receive both scholarships; others will receive only one. And some college-bound students will not receive either one.

The criteria for each scholarship are different and the goals of each scholarship are different.

A student receiving both scholarships would have considerable help paying for post-secondary education or workforce training if they attend the University of Alaska.

Please see the back of this page for a side-by-side comparison.

For information contact: Saichi Oba, Associate Vice President, Student & Enrollment Services, 907/450-8146

	UA SCHOLARS PROGRAM	ALASKA PERFORMANCE SCHOLARSHIP
OBJECTIVE	To incent top students from every community in Alaska to attend the University of Alaska	To incent students to be well prepared for higher education and career success and to pursue those in Alaska
TYPE OF SCHOLARSHIP	Merit-based: class standing	Merit-based: curriculum, GPA and college/career test scores
NEED-BASED COMPONENT	None	None
FUNDED BY	University of Alaska	State of Alaska
IMPLEMENTED	1999	2011 subject to appropriation
ELIGIBILITY	Graduate in the top 10% from qualified high school Scholars are designated from virtually every community in Alaska	Complete rigorous curriculum Achieve minimum 2.5 GPA Earn at least moderate scores on ACT, SAT or Work Keys
WHO DETERMINES ELIGIBILITY	Designated by qualified high schools based on class standing	School districts determine initial eligibility according to APS statutes and regulations
TERM OF SCHOLARSHIP	8 semesters over 5 years	From 2-8 semesters over 6 years
AWARD AMOUNT	$1,375 per semester for $11,000 total award	$1,189 - $2,378 based on award level per semester Lifetime $9,512-$19,020 based on award level
CONTINUING ELIGIBILITY REQUIREMENTS	Satisfactory Academic Progress and GPA	Annual Credits and GPA based on class standing
FINANCIAL RESTRICTIONS	The award is not tied to cost of attendance and not limited by other scholarships or financial aid received by student	"Last Dollar" award that cannot exceed the cost of attendance after all other scholarships and grants have been paid (including UA Scholars)
APS/UA SCHOLARS ELIGIBILITY OVERLAP	Scholar may be eligible for APS based on curriculum, test scores and GPA	APS recipient may be eligible for UA Scholars Award based on class rank
FUNDING	Provided by earnings of UA's Land Grant Trust Fund which is comprised of revenue generated by UA natural resource development. No State appropriation	Concepts Under Consideration Annual Direct Appropriation Renewable Funding Source
COST OF PROGRAM	Approx $3.5 million annually	Est. $8.5 to $20 million annually
OUTCOMES	UA Scholars Have High Retention Rates 85% return for a second year UA Scholars Have High Graduation Rates more than 50% graduate within 6 years 1,873 degrees UA Scholars Stay In-State 90% remain in Alaska today UA Scholars Increase Diversity in fall 2009 nearly 20% were Alaska Natives	Anticipated Outcomes: Increase in higher education readiness Increase in post-secondary education enrollment Increase in post-secondary graduation rates Increase in qualified local hire, Alaska workforce

Alaska Performance Scholarship
District Survey on Course Offerings

The department surveyed by email and phone each school district, and Mt. Edgecumbe High School, to determine if schools within those districts can provide students the courses necessary to meet the requirements of the Alaska Performance Scholarship (APS). The results of the survey are attached.

The survey results are organized by district and by content categories marked with a Y (for yes) or N (for no) response for each content area outlined in the APS. If the district could assist students in earning the number of courses required when the APS is fully implemented the response is Y. If the district is unable to assist students in earning the number of courses required when the APS is fully implemented the response is N.

The department learned that most districts can provide the courses necessary for a student to earn an APS; however, the department also learned about limitations that exist. Those limitations include a need to develop offerings of two consecutive years of foreign language, and the need for additional offerings in social studies and other advanced subjects in mathematics and science.

The last two columns of the survey address a) if the district provides distance or correspondence education, and b) if the district indicates they can provide students the courses needed to meet a pathway to earn an Alaska Performance Scholarship.

The department learned that under the current projections of resources and staff three districts are unable to provide a pathway to the APS. The commissioner and staff at the department will be working with those three districts to better understand the issues, and determine what technical assistance is necessary to support individual student access to required courses in those districts.

Because the area of two years of the same foreign language was a common challenge, the department is working to address this issue. The department has granted federal funds to a consortium of school districts and nonprofit education agencies in Alaska to build a virtual learning network which will provide courses that districts could use, or access to quality distance education. The first priority for course development is world language course offerings. Other priorities for course development will include the necessary courses districts need technical assistance with based on this survey, including social studies and advanced courses in mathematics and science.

The second attachment to this document is a list of current distance and virtual education programs and opportunities that exist in the state, and what districts have correspondence schools. Also included is the consortium of districts developing the virtual resources and courses, which will not only be available to those districts in the consortium, but to all Alaska districts.

Attachment 2

On-Line Learning Opportunities

General Opportunities

- Correspondence schools and courses
- Video Conferencing between schools within a school district
  - Sharing of highly qualified teachers between schools
  - Sharing highly qualified teachers between hub and village schools
  - Specific example: NWABSD developed a system to synchronize high school schedules across the district, using stimulus funding, and therefore build greater capability for cross district instruction.
- Academies where students are brought together in a hub or central community for intensive instruction.
- Distance learning, dual credit, and tech prep courses
  - University of Alaska
  - AVTEC
  - Alaska Technical Center (Northwest Arctic Borough)

Alaska Learning Network

The Alaska Learning Network (AKLN) assists Alaskan schools to provide students and teachers of all ages with a comprehensive range of fundamental, advanced, and specialized online learning, regardless of geographic or technical restrictions.

The Alaska Learning Network is grant funded through EED federal Title IID (technology) funds. The 2011 components of the grant include:

a) Provide 30 Alaskan teachers with distance and in-person training to complete technology learning plans;
b) Provide 240 high school students with courses taught by highly qualified teachers starting in summer 2011;
c) Develop and populate a database of online courses and lessons.

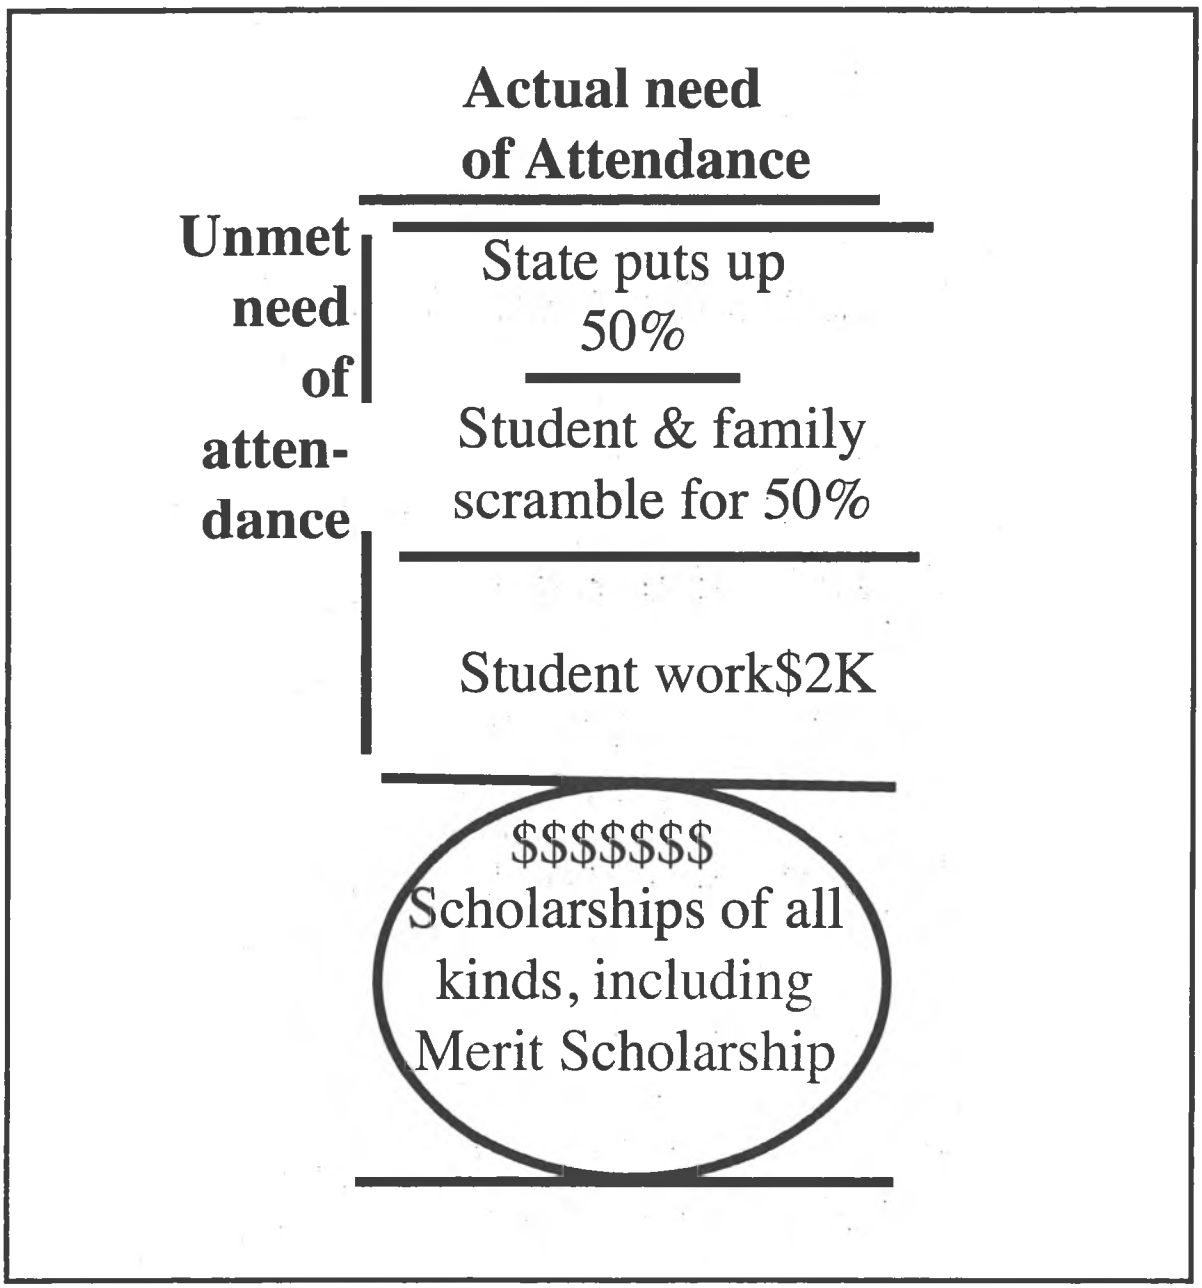
AKLN grant was provided to a consortium of eleven school districts, Alaska Staff Development Network (ASDN) and Southeast Regional Resource Center (SERRC). The consortium is also working with Alaska Staff Development Network. AKLN will not only offer services to member districts, but also to non-member districts. The agencies involved are developing a sustainability plan for AKLN beyond the length of the grant.

Member districts (11) include:

- Chatham School District
- Annette Island School District
- Hoonah City School District
- Juneau Borough School District
- Kodiak Island Borough School District
- Lake & Peninsula Borough School District
- North Slope Borough School District
- Northwest Arctic Borough School District
- Petersburg City School District
- Wrangell Public School District
- Yukon Flats School District

Amendment #1

Amendment #1 deletes this concept from the CS of HB 104.



Amendment #2

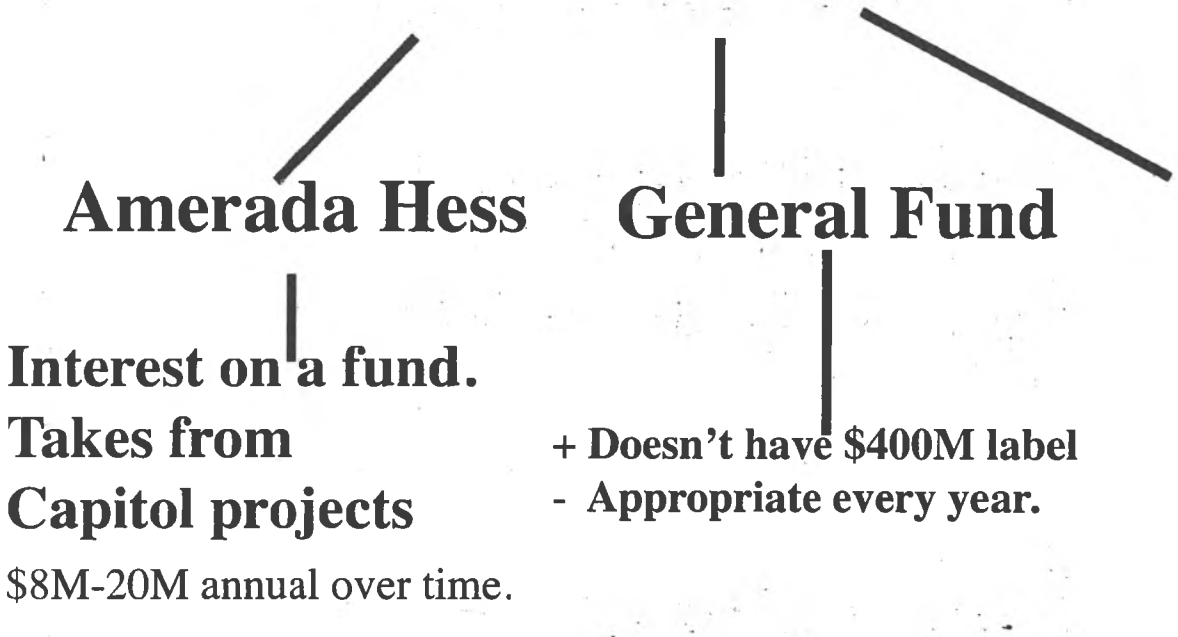
This amendment deletes the portion of the CS for HB 104 that insures the following:

Insure clear path.
Insure counseling/coaching in college.

Amendment #3

This amendment deletes "Amerada Hess"
as a funding source.
It does NOT designate a funding source.

Identify funding source



Amendment #4

This amendment removes the reference to progressivity of oil tax from the CS of HB 104.

Amendment #5

Prefunds the scholarship fund for students in the post-secondary pipeline (students who have already earned their scholarship).

In the event the program is ended, it eases the transition.

Delete all material.

Page 10, lines 20 - 24:

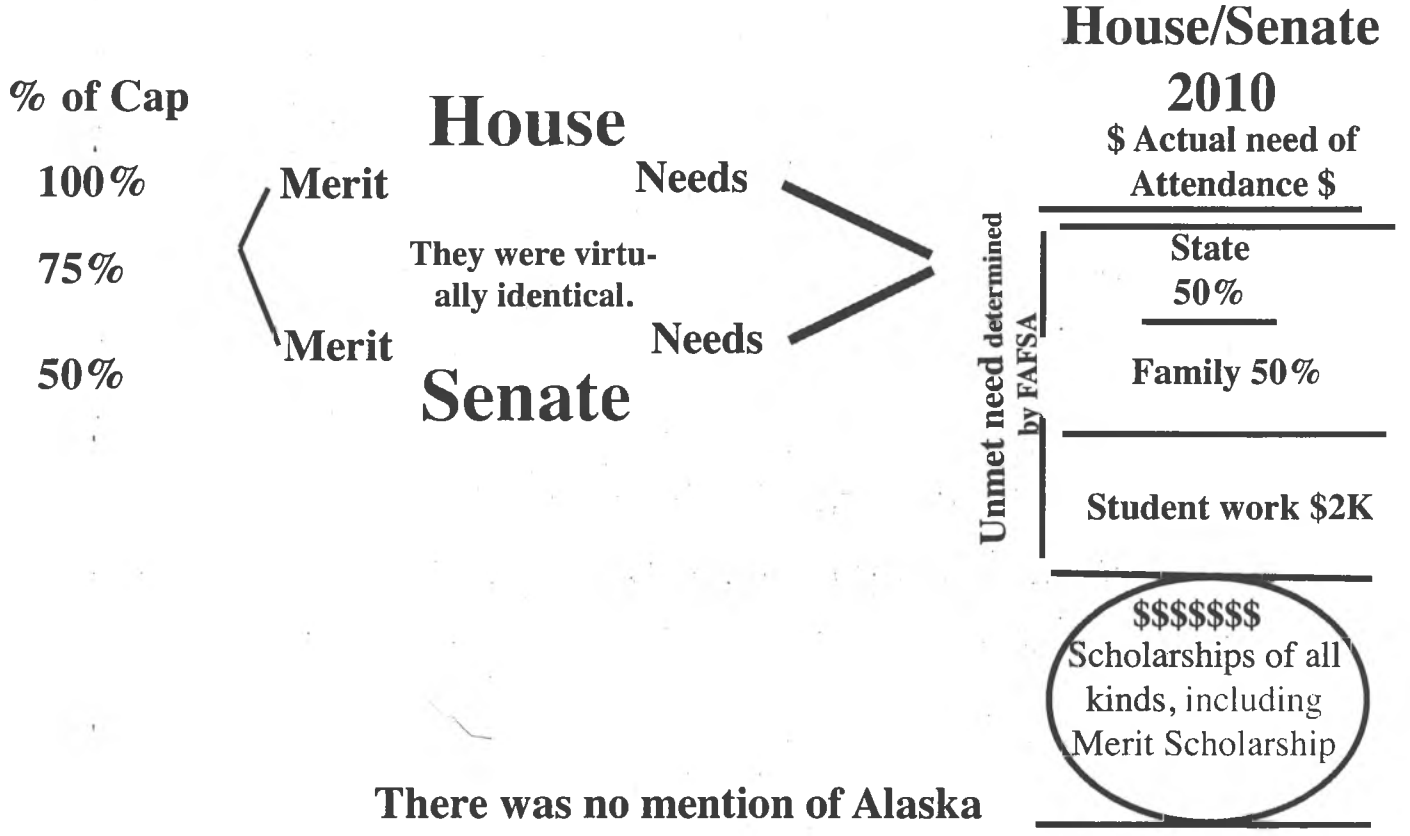
Delete "(a) Notwithstanding the $40,000,000 limit in AS 37.14.750(d), the following amounts may be substituted for that amount as follows for

(1) fiscal year 2012, $20,000,000;

(2) fiscal year 2013, $30,000,000."

Reletter the following subsection accordingly.

In 2010, the House and Senate developed almost identical bills regarding the Merit scholarship. Each had a performance and a needs-based component.



There was no mention of Alaska Advantage at that time

The performance portion of the bill included 50%, 75% and 100% increments based on the 2010 tuition. This was the *cap*.

By oversight, there was no cap on the needs based component.

In the deliberation between the two houses, it was decided to cap the base of the Merit scholarship should be $4037 instead of % of tuition costs.

Then, discussion of Alaska Advantage came into the picture.

Prepared by Alan Dick

Current Needs Discussion

Senate 2011

Don't fund

Other

Draw upon Amorada Hess.

For every $1, 2/3 goes to the Merit Scholarship and 1/3 goes to Alaska Advantage

Non-Traditional students (current prime recipients) will compete with **Performance Scholars.**

…apples & oranges.

Resolve by:

regulation? **statute?**

House/Senate 2010

Actual need of Attendance

State 50%

Family 50%

Unmet need

Student work $2K

$$$$$$$

Scholarships of all kinds, including Merit Scholarship

Identifying funding source

Amerada Hess

Interest on a fund.
Takes from Capitol projects

$8M-20M annual over time.

General Fund

+ Doesn't have $400M label
- Appropriate every year.

Do not designate

Shirks duty.
Finance can do this, but last year's task force was assigned to identify-funding sources.

The task force

was formed by consent of both bodies and
signed by the governor, April 2010.

There were three components to the Task Force assignment:

1) Address Merit component for those who perform well.
2) Address needs of those who have performed well.
3) Needs of Non-traditional students.

2010 House and Senate Committees & Final Version agreed on the Merit portion.

2010 Education committees agreed on the needs based portion for those who performed well.

2010 SB221 Originally dealt with Higher Edu. and Career Readiness Task Force.

2010 SB 221 Stripped put the Merit portion of the Scholarship bill and put it in with two Task forces 1) Scholarship & 2) Higher Education, & added a fiscal note for AK Advantage funding.

The assignment before us:

Recommend funding source.
Decide Merit based scholarship conditions.
Decide needs base of Merit based scholarship (if and how)
Address financial needs of non-traditional students.
Insure clear path.
Insure counseling/coaching in college.

HOUSE BILL NO. 132

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY REPRESENTATIVES MUÑOZ, Seaton, Herron, Kerttula, Tuck, Petersen, Kawasaki, Gara

Introduced: 1/28/11
Referred: Education, Finance

A BILL

FOR AN ACT ENTITLED

"An Act providing for funding for school lunch and breakfast."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.127. State funding for school lunch and breakfast. (a) To supplement the cost of lunch and breakfast provided to each student who is eligible for a free or reduced-price lunch under 42 U.S.C. 1771 - 1784, in addition to public school funding and subject to appropriation, the department shall provide funding to a school district of 15 cents for lunch and 35 cents for breakfast to each eligible student. For each meal, the department shall add an additional amount, expressed in cents and not applied as a cost factor, that is determined by

(1) reducing the applicable district cost factor provided in AS 14.17.460 by 1.0; and

(2) dividing the remainder determined under (1) of this subsection by four; the department shall round to the nearest cent a quotient that is not a whole number.

(b) Beginning July 1, 2012, the base amount under (a) of this section shall be adjusted annually on October 1 according to changes in the Consumer Price Index for all urban consumers for the Anchorage metropolitan area compiled by the United States Department of Labor, Bureau of Labor Statistics. The index for 2009 is the reference base index for an adjustment made under this subsection.

(c) In this section, "district" has the meaning given in AS 14.17.990.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HB 132

Analysis

This legislation will establish a state school and breakfast grant program to assist districts in offsetting the costs of providing free and reduced breakfast and lunch meals under 42 U.S.C. 1771-1784 for eligible students. School districts will be eligible for 35 cents for each breakfast and 15 cents for each lunch served plus an additional amount generated by applying the specified formula to the district cost factors under AS 14.17.460. The base allowance will be adjusted annually according to the Anchorage CPI beginning July 1, 2012 (FY13) using 2009 as the reference base index.

REPRESENTATIVE CATHY MUÑOZ

HB132: Funding for School Meals

House Bill 132 will provide a state match of 35 cents for each breakfast served and 15 cents per lunch for schools participating in the federal Free and Reduced Price School Breakfast and Lunch Program. Currently, Alaska is one of twelve states that does not provide a state match and is amongst the bottom ten states for participation in the school meals program.

With an increased school participation rate to 60% Alaska the state has the opportunity to receive an additional $1.9 million in federal funds which would greatly offset the state share.

One out of eight Alaskan families struggle to feed their families. While the school lunch program feeds over 36,000 students at a free or reduced rate for lunch, and over 18,000 for breakfast, only 20% of participating schools offer breakfast, impacting 22,253 Alaskan children, 6,850 of these children are from low income families who qualify for free or reduced price meals. HB132 provides an opportunity to offer more nutritious meals to a greater number of children.

Multiple studies have shown students who eat breakfast consistently improve in math, language, reading and vocabulary. Test scores increase, higher rates of attendance and a decrease in tardiness also occurs, with fewer behavioral problems and lower obesity rates.

This legislation is supported by the Food Bank of Alaska, The Alaska Food Coalition, Alaska School Nutrition Association, and has been endorsed by numerous school districts. These organizations have seen and heard about the struggle many families in Alaska face to put nutritious food on the table, and have first-hand knowledge of the increased benefits to the children. I urge your support for HB132.

HB132: Funding for School Meals

Rep. Cathy Muñoz

Goals for School Meal bill...

- More kids being fed in each school
- Increased participation in the lunch & breakfast program
- Long Term Goal – decreased drop out rate, higher success rate & healthier kids

Hunger in Alaska

- One out of eight Alaska families struggles to put enough food on the table each year
  - USDA, "Household Food Security in the United States"
- 43% of households visit food pantries in Alaska have a child under the age of 18.
  - Alaska Food Coalition, 2010 Hunger in America Study

Feeding American analysis says...

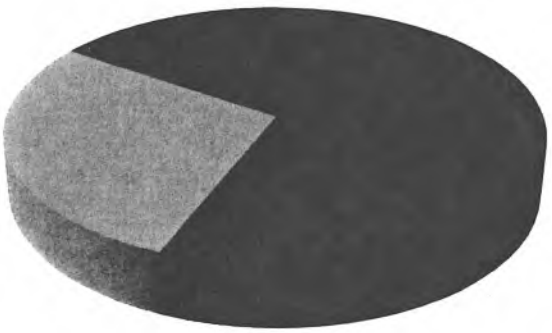
- 14.3%, or 26,534 children, in Alaska under 18 years of age are food insecure, meaning they don't have access at all times to enough food for a healthy active life; this problem is more severe in rural Alaska, where nearly one child in four experienced food insecurity
  - Feeding America analysis of 2006-2008 United States Department Agriculture data on food insecurity in America

How School Lunch Program Works

- Any child at a participating school may purchase a meal through the National School Lunch Program.
- Children from families with incomes at or below 130 percent of the poverty level are eligible for free meals.
- Incomes between 130 percent and 185 percent of the poverty level are eligible for reduced-price meals, students can be charged no more than 40 cents.
- For the period July 1, 2010, through June 30, 2011, 130 percent of the poverty level is $28,665 for a family of four; 185 percent is $40,793.

Where does the school meal money come from?

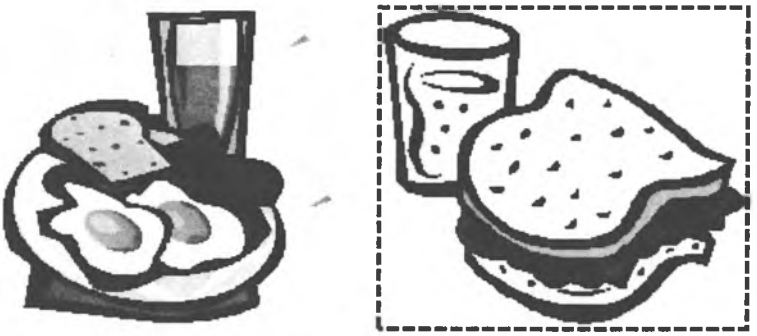
2009 – 2010



- Federal Subsidies – $32.5 million
- Student Payments – $16.5 million
- School Operating Budget –$9 million

*Figures from the Dept. of Education

HB132 provides state support for the School Meals Program



.35 cents for Breakfast

.15 cents for Lunch

Comparing Costs

2010-2011 Federal Reimbursement

Program	Free	Reduced	Full-Paid
Breakfast	$2.36	$2.06	$0.39
Lunch	$4.41	$4.01	$0.42

Cost to provide lunch
(AK School Nutrition Assoc)

	Cost	Free Meal	Reduced Meal
On the Road	$4.90	$0.49*	$0.89*
Off the Road	$7.35	$2.94*	$3.34*

* Amount not covered by federal funding & paid by the local school district

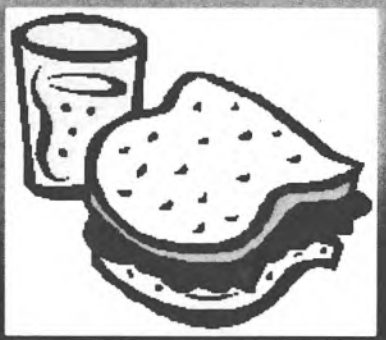
Federal Reimbursement of School Meals in Alaska, USDA data as of Jan.31, 2011

Year	School Lunch	School Breakfast	Total
2010 (preliminary)	$28,183,074	$6,906,411	$35,089,485
2009	$25,873,292	$6,108,476	$31,981,768
2008	$24,067,965	$5,350,937	$29,418,902
2007	$23,446,316	$5,063,950	$28,510,266
2006	$22,790,882	$4,862,847	$27,653,729

School Lunch Participation

In Alaska, the school lunch program feeds over 36,000 students at a free/reduced rate for lunch.

FRAC Scorecard, 2010



School Breakfast Participation

School breakfast participation includes 14,000 free/reduced price.

FRAC Scorecard, 2010

Kids Not Being Reached…

- Six school districts do not offer breakfast or lunch
  - Aleutian Region, Chugach, Denali, Pelican, Pribilof, Tanana
- 20% of the school districts participating in the Lunch Program do not participate in the Breakfast Program
- Alaska is in the bottom 10 states for the lowest participation in the School Breakfast Program in the nation.

Positive Short Term Effects

- Better Academic performance
- Better behavior
- Higher Attendance Rates
- Decreased Tardiness
- Better health

Long Term Effects

- Lower Drop Out Rates
- Higher Graduation Rates
- Lower Obesity Rates
- Decreased Healthcare needs & costs

Studies Relating to the Benefits of School Meals

School Achievement – A review of 18 studies showed students who ate breakfast consistently showed improvement in verbal fluency, arithmetic, attention, memory, creativity, physical endurance, and general tests of academic achievement and cognitive functioning.

"Nutrition and Student Performance at School" – The Journal of School Health, 2005

How well do you function after skipping a meal ?

Fast Facts: Alaska's School and Lunch Program

Alaskan Children In Need:

- One out of every 8 Alaska families struggles to put enough food on the table.[USDA]
- According to Hunger in America 2010, 74,000 Alaskans seek food assistance each year. The study also showed that 43% of households visiting food pantries in Alaska have a child under the age of 18. [Hunger In America]
- An estimated 42% of Alaska students, more than 51,000 children, are eligible for free or reduced cost school meals.

School Meals Programs In Need

- Alaska is one of only twelve states in the country that does not have any state legislative support for their school meals programs. [Alaska Food Coalition Hunger Data]
- Currently, the federal funds the majority of the school meal program at $32 million. That still leaves Alaska schools with a $25 shortfall. [Alaska Department of Education and Early Development]
- In Alaska, the school lunch program feeds over 36,000 students at a free/reduced rate for lunch. School breakfast participation is over 18,000 with 14,000 of those being free/reduced price. [FRAC scorecard]
- Currently in Alaska, twenty percent (20%) of schools participating in the school lunch program do not offer school breakfast, impacting 22,253 Alaskan children, 6,850 of whom are children from low income families who qualify for free or reduced price meals.
- For many children, these are the only nutritious meals they will get on a regular basis.

Alaska Missing Out On $1.9 Million

- Alaska is in the bottom 10 states for lowest participation in the School Breakfast Program in the nation.
- Our state is not taking advantage of a large amount of potential federal funding that would come to the state on a per-meal basis.
- If Alaska lifted breakfast participation from 38.3% to 60%, the state would receive an additional $1.9 million in federal funds.
- That would entail feeding approximately 8,006 additional free and reduced-price students.[FRAC scorecard]

How School Breakfast/Lunch Works

Schools are not required to provide or operate school lunch or breakfast programs. For eligible children, however, they are reimbursed per meal through the Federal Government (through DEED) based on poverty level.

Children whose families fall below 130 percent of the Federal Poverty Level (FPL) are eligible for a free meal. Those children between 130 percent and 185 percent of the FPL are eligible for a reduced-price meal ($0.30 for breakfast and $0.40 for lunch).

Income Eligibility Guidelines, 2010-11

Reduced priced meals	Reduced Priced Meals	Free Meals
Household size

Rural School	$4.80	$2.82	$7.35	$4.43

How Much The Federal Government Reimburses Per Breakfast and Lunch

	Lunch		**Breakfast**	
	Regular	Severe** Need	Regular	Severe** Need
Paid	0.42	0.44	0.39	0.39
Reduced	4.03	4.01	2.06	2.52
Free	4.41	4.43	2.36	2.82

*Note prices are not adjusted for cost differentials across communities. Severe need is based on 40% of the meals having been served to students qualifying for free or reduced price meals.

**A school is eligible for severe need reimbursement if 40 percent or more of the student lunches served at the school in the second preceding school year (2007-2008) were served free or at a reduced price.

Studies Relating To The Benefits Of School Meals

Better Memory, Cognition and Test Scores

Improved School Achievements A review of 18 studies showed students who ate breakfast consistently showed improvement in verbal fluency, arithmetic, tests of attention, memory, creativity, physical endurance, and general tests of academic achievement and cognitive functioning. - "Nutrition and Student Performance at School." The Journal of School Health 2005

Improved Standardized Test Scores: Scores on the Comprehensive Test of Basic Skills improved significantly in schools that had larger participation in their school breakfast programs. -- "School Breakfast Program and School Performance." American Journal of Diseases of Children 1989

Improved Scores in Language, Reading, Math: Low-income students in a breakfast test program in the United States improved their combined scores in language, reading and math. --"Breakfast and Cognition: An Integrative Summary." American Journal of Clinical Nutrition 1998

Improved Math Scores, Participation: Researchers found students who ate breakfast improved math scores and participated more in class. --"Diet, Breakfast, and Academic Performance in Children." Annals of Nutrition & Metabolism 2002

Improved Memory, Listening Skills: A Tufts University study showed elementary school students who ate breakfast listened better and had both better spatial memory and short-term memory than students who skipped breakfast. -- "Effect of Breakfast Consumption on Cognitive Processes in Elementary School Children." Physiology & Behavior 2005

Improved Vocabulary: Research from the University of California showed eating breakfast had a significant positive effect on vocabulary test performance. --Food and Nutrition Bulletin 1996

Skipping Breakfast = Slower Brain Function: A study conducted by the University of California Davis showed skipping breakfast alters brain function and had an adverse affect on the speed and accuracy with which children were able to retrieve information from memory. -- "Does Breakfast Make a Difference in School?" Journal of the American Dietetic Association 1995

Better Behavior

Calmer, More Obedient: Researchers noted a significant decrease in behavioral "oppositional scores" for students eating school breakfast. "Oppositional scores" measure whether or not students are likely to break the rules, have problems with authority or are quick to anger than most individuals in their age groups. -- "Evaluation of the School Breakfast Program Pilot Project: Findings from the First Year of Implementation." U.S. Department of Agriculture, Food and Nutrition Service 2002.

Better Behaved: Researchers found low-income students who ate meals at school were less likely to be hyperactive and had fewer behavioral or attention problems than their hungry peers. -- "Relationship Between Hunger and Psychosocial Functioning in Low-Income American Children." Journal of the American Academy of Child & Adolescent Psychiatry 1998

Fewer Disciplinary Referrals Needed: Researchers conclude that classroom breakfast works and that a pilot program in New York resulted in decreased hunger and improvements in factors critical to student learning such as tardiness and disciplinary referral rates. -- "Academics & Breakfast Connection Pilot: Final Report on New York's Classroom Breakfast Project." Nutrition Consortium of New York State. Albany, New York. July 2005.

Fewer Emotional Problems: Increased school breakfast participation is associated with fewer emotional or behavioral problems. Teachers at schools that increased participation in their school breakfast programs reported a positive change in student behavior (60%) and improved in student attentiveness (63%). "The Boston Public Schools Universal Breakfast Program: Final Evaluation Report." Massachusetts General Hospital, Boston, MA, 2000

Better Attendance Rates

Higher Rates Of Attendance: Studies show that universal school breakfast program participation is associated with higher rates of attendance and declines in tardiness. "Universal-Free School Breakfast Program Evaluation Design Project. Review of the Literature on Breakfast and Learning. Final Report." Mathematica Policy Research 1999

Lower Rates Of Tardiness: Schools with increased participation in school breakfast programs had their proportion of children chronically tardy decreased by 67%. -- "Evaluation of a Universally-Free School Breakfast Program Demonstration Project, Central Falls, Rhode Island," Tufts University, 1996

Better Health/ Weight

Lower Obesity Rates: Girls from "food insecure" households are significantly less likely to become overweight (68 percent) if they participate in school lunch and breakfast programs. -- "Lower Risk of Overweight in School-aged Food Insecure Girls Who Participate in Food Assistance: Results from the Panel Study of Income Dynamics Child Development Supplement." Archives of Pediatric and Adolescent Medicine 2003.

More Physically Active: Students who ate breakfast daily were more likely to participate in physical activity three or more times a week than breakfast skippers. --"Smoking, Physical Activity and Breakfast Consumption among Secondary School Students in a Southwestern Ontario Community." Canadian Journal of Public Health 2003

More Vitamins: Children who consumed breakfast at school had significantly higher mean daily intakes of energy and protein were more likely to obtain two-thirds of the RDA for vitamins A, E, D, and B6, as well as other minerals than children who did not eat school breakfast. -- "Breakfast Consumption Affects Adequacy of Total Daily Intake in Children." Journal of the American Dietetic Association 1993

THE SCHOOL BREAKFAST PROGRAM

1. What is the School Breakfast Program?

The School Breakfast Program is a federally assisted meal program operating in public and nonprofit private schools and residential child care institutions. It began as a pilot project in 1966, and was made permanent in 1975. The School Breakfast Program is administered at the Federal level by the Food and Nutrition Service. At the State level, the program is usually administered by State education agencies, which operate the program through agreements with local school food authorities in more than 87,000 schools and institutions.

2. How does the School Breakfast Program work?

The School Breakfast Program operates in the same manner as the National School Lunch Program. Generally, public or nonprofit private schools of high school grade or under and public or nonprofit private residential child care institutions may participate in the School Breakfast Program. School districts and independent schools that choose to take part in the breakfast program receive cash subsidies from the U.S. Department of Agriculture (USDA) for each meal they serve. In return, they must serve breakfasts that meet Federal requirements, and they must offer free or reduced price breakfasts to eligible children.

3. What are the nutritional requirements for school breakfasts?

School breakfasts must meet the applicable recommendations of the Dietary Guidelines for Americans which recommend that no more than 30 percent of an individual's calories come from fat, and less than 10 percent from saturated fat. In addition, breakfasts must provide one-fourth of the Recommended Dietary Allowance for protein, calcium, iron, Vitamin A, Vitamin C and calories. The decisions about what specific food to serve and how they are prepared are made by local school food authorities.

4. How do children qualify for free and reduced price breakfasts?

Any child at a participating school may purchase a meal through the School Breakfast Program. Children from families with incomes at or below 130 percent of the Federal poverty level are eligible for free meals. Those with incomes between 130 percent and 185 percent of the poverty level are eligible for reduced-price meals. (For the period July 1, 2010, through June 30, 2011, 130 percent of the poverty level is $28,665 for a family of four; 185 percent is $40,793.) Children from families over 185 percent of poverty pay full price, though their meals are still subsidized to some extent.

5. How much reimbursement do schools get?

Most of the support USDA provides to schools in the School Breakfast Program comes in the form of a cash reimbursement for each breakfast served. The current (July 1, 2010 through June 30, 2011) basic cash reimbursement rates for non-severe need are:

Free breakfasts $1.48

Reduced-price breakfasts $1.18

Paid breakfasts $0.26

Schools may qualify for higher "severe need" reimbursements if 40% of their lunches are served free or at a reduced price in the second preceding year. Severe need payments are up to 28 cents higher than the normal reimbursements for free and reduced-price breakfasts. About 74 percent of the breakfasts served in the School Breakfast Program receive severe need payments. Higher reimbursement rates are in effect for Alaska and Hawaii.

Schools may charge no more than 30 cents for a reduced-price breakfast. Schools set their own prices for breakfasts served to students who pay the full meal price (paid), though they must operate their meal services as non-profit programs.

For the latest reimbursement rates visit FNS website at
www.fns.usda.gov/cnd/Governance/notices/naps/NAPs.htm

6. What other support do schools get from USDA?

Through Team Nutrition, USDA provides schools with technical training and assistance to help school food service staffs prepare healthy meals, and with nutrition education to help children understand the link between diet and health.

7. How many children have been served over the years?

In Fiscal Year 2007, over 10.1 million children participated every day. That number grew to over 11.1 million in Fiscal Year 2009. Of those, 9.1 million received their meals free or at a reduced-price.

Participation has slowly but steadily grown over the years: 1970: 0.5 million children; 1975: 1.8 million children; 1980: 3.6 million children; 1985: 3.4 million children; 1990: 4.0 million children; 1995: 6.3 million children; 2000: 7.5 million children.

8. How much does the program cost?

For Fiscal Year 2009, the School Breakfast Program cost $2.9 billion, up from $1.9 billion in Fiscal Year 2005. The cost in previous years was in 1970, $ 10.8 million; in 1980, $287.8 million; in 1990, $ 599.1 million; and in 2000, $1.39 billion.

For more information:

For information on the operation of the School Breakfast Program and all the Child Nutrition Programs, contact the State agency in your state that is responsible for the administration of the programs. A listing of all our State agencies may be found on our web site at www.fns.usda.gov/cnd, select "Contact Us" then select "Child Nutrition Programs."

September 2010

NATIONAL SCHOOL LUNCH PROGRAM

1. What is the National School Lunch Program?

The National School Lunch Program is a federally assisted meal program operating in over 101,000 public and non-profit private schools and residential child care institutions. It provides nutritionally balanced, low-cost or free lunches to more than 31 million children each school day in 2009. In 1998, Congress expanded the National School Lunch Program to include reimbursement for snacks served to children in afterschool educational and enrichment programs to include children through 18 years of age.

The Food and Nutrition Service administers the program at the Federal level. At the State level, the National School Lunch Program is usually administered by State education agencies, which operate the program through agreements with school food authorities.

2. How does the National School Lunch Program work?

Generally, public or nonprofit private schools of high school grade or under and public or nonprofit private residential child care institutions may participate in the school lunch program. School districts and independent schools that choose to take part in the lunch program get cash subsidies and donated commodities from the U.S. Department of Agriculture (USDA) for each meal they serve. In return, they must serve lunches that meet Federal requirements, and they must offer free or reduced price lunches to eligible children. School food authorities can also be reimbursed for snacks served to children through age 18 in afterschool educational or enrichment programs.

3. What are the nutritional requirements for school lunches?

School lunches must meet the applicable recommendations of the Dietary Guidelines for Americans, which recommend that no more than 30 percent of an individual's calories come from fat, and less than 10 percent from saturated fat. Regulations also establish a standard for school lunches to provide one-third of the Recommended Dietary Allowances of protein, Vitamin A, Vitamin C, iron, calcium, and calories. School lunches must meet Federal nutrition requirements, but decisions about what specific foods to serve and how they are prepared are made by local school food authorities.

4. How do children qualify for free and reduced price meals?

Any child at a participating school may purchase a meal through the National School Lunch Program. Children from families with incomes at or below 130 percent of the poverty level are eligible for free meals. Those with incomes between 130 percent and 185 percent of the poverty level are eligible for reduced-price meals, for which students can be charged no more than 40 cents. (For the period July 1, 2010, through June 30, 2011, 130 percent of the poverty level is $28,665 for a family of four; 185 percent is $40,793.)

Children from families with incomes over 185 percent of poverty pay a full price, though their meals are still subsidized to some extent. Local school food authorities set their own prices for full-price (paid) meals, but must operate their meal services as non-profit programs.

Afterschool snacks are provided to children on the same income eligibility basis as school meals. However, programs that operate in areas where at least 50 percent of students are eligible for free or reduced-price meals may serve all their snacks for free.

5. How much reimbursement do schools get?

Most of the support USDA provides to schools in the National School Lunch Program comes in the form of a cash reimbursement for each meal served. The current (July 1, 2010 through June 30, 2011) basic cash reimbursement rates if school food authorities served less than 60% free and reduced price lunches during the second preceding school year are:

Free lunches:	**Reduced-price lunches:**	**Paid lunches:**
$2.72	**$2.32**	**$0.26**
Free snacks:	**Reduced-price snacks:**	**Paid snacks:**
$0.74	**$0.37**	**$0.06**

Higher reimbursement rates are in effect for Alaska and Hawaii, and for schools with high percentages of low-income students. For the latest reimbursement rates visit FNS website at www.fns.usda.gov/cnd/Governance/notices/naps/NAPs.htm

6. What other support do schools get from USDA?

In addition to cash reimbursements, schools are entitled by law to receive USDA foods, called "entitlement" foods, at a value of 20.25 cents for each meal served in Fiscal Year 2010-2011. Schools can also get "bonus" USDA foods as they are available from surplus agricultural stocks.

Through Team Nutrition USDA provides schools with technical training and assistance to help school food service staffs prepare healthful meals, and with nutrition education to help children understand the link between diet and health.

7. What types of foods do schools get from USDA?

States select entitlement foods for their schools from a list of various foods purchased by USDA and offered through the school lunch program. Bonus foods are offered only as they become available through agricultural surplus. The variety of both entitlement and bonus USDA foods schools can get from USDA depends on quantities available and market prices.

A very successful project between USDA and the Department of Defense (DoD) has helped provide schools with fresh produce purchased through DoD. USDA has also worked with schools to help promote connections with local small farmers who may be able to provide fresh produce.

8. How many children have been served over the years?

The National School Lunch Act in 1946 created the modern school lunch program, though USDA had provided funds and food to schools for many years prior to that. About 7.1 million children were participating in the National School Lunch Program by the end of its first year, 1946-47. By 1970, 22 million children were participating, and by 1980 the figure was nearly 27 million. In 1990, over 24 million children ate school lunch every day. In Fiscal Year 2009, more than 31.3 million children each day got their lunch through the National School Lunch Program. Since the modern program began, more than 219 billion lunches have been served.

9. How much does the program cost?

The National School Lunch Program cost $9.8 billion in FY 2009. By comparison, the lunch program's total cost in 1947 was $70 million; in 1950, $119.7 million; in 1960, $225.8 million; in 1970, $565.5 million; in 1980, $3.2 billion; in 1990, $3.7 billion; and in 2000, 6.1 billion.

A listing of all our State agencies may be found on our web site at www.fns.usda.gov/cnd, select "Contact Us", then select "Child Nutrition Programs."

You may also contact us through the Office of Public Affairs (CGA) at 703-305-2281, or by mail at 3101 Park Center Drive, Room 914, Alexandria, Virginia 22302. September 2010

U.S. GOVERNMENT INFORMATION GPO

H. Res. 210

In the House of Representatives, U. S.,

March 9, 2009.

Whereas breakfast program participants under the Child Nutrition Act of 1966 include public, private, elementary, middle, and high schools, as well as rural, suburban, and urban schools;

Whereas at least 16,000 schools that participate in the National School Lunch Program do not participate in the National School Breakfast Program;

Whereas in fiscal year 2008, 8,520,000 students in the United States consumed free or reduced-price school breakfasts provided under the national school breakfast program established by section 4 of the Child Nutrition Act of 1966;

Whereas less than half of the low-income students who participate in the National School Lunch Program also participate in the school breakfast program;

Whereas in fiscal year 2008, 60 percent of school lunches served, and 80 percent of school breakfasts served, were served to students who qualified for free or reduced priced meals;

Whereas the current economic situation, including the increase of nearly 3 percent in the national unemployment

rate in 2008, is causing more families to struggle to feed their children and to turn to schools for assistance;

Whereas implementing or improving classroom breakfast programs have been shown to increase the participation of eligible students in breakfast consumption dramatically, doubling, and in some cases tripling, numbers, as evidenced by research in Minnesota, New York, and Wisconsin;

Whereas making breakfast widely available through different venues or a combination thereof, such as in the classroom, obtained as students exit their school bus, or outside the classroom, has been shown to lessen the stigma of receiving free or reduced-price breakfast, which often prevents eligible students from obtaining traditional breakfast in the cafeteria;

Whereas providing free universal breakfast, especially in the classroom, has been shown to significantly increase school breakfast participation rates and decrease absences and tardiness;

Whereas studies have shown that access to nutritious programs such as the National School Lunch Program and National School Breakfast Program helps to create a strong learning environment for children and helps to improve children's concentration in the classroom;

Whereas providing breakfast in the classroom has been shown in several instances to improve attentiveness and academic performance, while reducing tardiness and disciplinary referrals;

Whereas students who eat a complete breakfast have been shown to make fewer mistakes and work faster in math exercises than those who eat a partial breakfast;

Whereas studies suggest that eating breakfast closer to classroom and test-taking time improves student performance on standardized tests relative to students who skip breakfast;

Whereas studies show that students who skip breakfast are more likely to have difficulty distinguishing among similar images, show increased errors, and have slower memory recall;

Whereas children who live in families that experience hunger have been shown to be more likely to have lower math scores, face an increased likelihood of repeating a grade, and receive more special education services;

Whereas studies suggest that children who eat breakfast have more adequate nutrition and intake of nutrients, such as calcium, fiber, protein, and vitamins A, E, D, and B–6;

Whereas studies show that children who participate in school breakfast programs eat more fruits, drink more milk, and consume less saturated fat than those who do not eat breakfast;

Whereas children who fail to eat breakfast, whether in school or at home, are more likely to be overweight than children who eat a healthy breakfast on a daily basis; and

Whereas March 2 through March 6, 2009, is National School Breakfast Week: Now, therefore, be it

Resolved, That the House of Representatives—

(1) recognizes the importance of the National School Breakfast Program and its overall positive effect on the lives of low-income children and families, as well

as its effect on helping to improve a child's overall classroom performance;

(2) expresses support for States that have successfully implemented school breakfast programs in order to improve the test scores and grades of its participating students;

(3) encourages States to strengthen their school breakfast programs by improving access for students, to promote improvements in the nutritional quality of breakfasts served, and to inform students and parents of healthy nutritional and lifestyle choices;

(4) recognizes the need to provide States with resources to improve the availability of adequate and nutritious breakfasts;

(5) recognizes the impact of nonprofit and community organizations that work to increase awareness of, and access to, breakfast programs for low-income children; and

(6) recognizes that National School Breakfast Week helps draw attention to the need for, and success of, the National School Breakfast Program.

SUPPORT FOR ALASKA STATE SUPPORT OF SCHOOL MEALS

The organizations listed below have signed resolutions in support of State Funding for School Meals:

State Educational Organizations:

- Aleutians East School District
- Anchorage School District
- Bering Strait School Board
- Bristol Bay Borough School Board
- Chugach School District
- Copper River School District
- Cordova School Board
- Iditarod Area School District
- Kenai Peninsula Borough School District
- Lake and Peninsula School District
- Kuspuk School District
- Lower Kuskokwim School District
- Nenana School Board
- Petersburg City Schools
- Yakutat School District
- Yupiit School District
- Valdez School District

Additional Organizations:

- ALPHA – Alaska Public Health Association
- Alaska Association of Social Workers
- Homer Community Food Pantry
- Kenai Peninsula Food Bank
- NEA-Alaska Chapter
- Petersburg Indian Association
- Unity Outreach, North Pole, AK

Organizational support through letters, testimony, etc. has been submitted by:

- AARP Alaska
- Alaska Action for Healthy Kids Team
- Alaska School Nutrition Association
- Alaska Youth & Parent Foundation
- Association of Alaska School Boards
- Food Bank of Alaska

ALASKA FOOD COALITION

RESOLUTION
Support for State Funding for School Meals

WHEREAS the mission of the Alaska Food Coalition (AFC) - a statewide group of non-profit, faith-based, tribal and government organizations is working to help feed hungry Alaskans in their communities and strengthen and coordinate public and private food and nutrition assistance programs in the state; and

WHEREAS Alaska State Senators passed SB213 during the 2010 legislative session supporting AFC's efforts to ensure children start each school day with a healthy and balanced meal; and

WHEREAS Feeding America analysis of 2006-2008 United States Department Agriculture data on food insecurity in America found 14.3%, or 26,534 children in Alaska under 18 years of age are food insecure, meaning they don't have access at all times to enough food for a healthy active life; this problem is more severe in rural Alaska, where nearly one child in four experienced food insecurity; and

WHEREAS insufficient nutrition puts children at risk for illness and weakens their immune system. In comparison to food secure children, children from food insecure families are 90% more likely to be in fair or poor health and have 30% higher rates of hospitalization; and

WHEREAS the lack of adequate nutrition affects the cognitive and behavioral development of children. Food insecurity is associated with grade repetition, absenteeism, tardiness, anxiety, aggression, poor mathematics scores, psychosocial dysfunction and difficulty with social interaction among 6 to 12 year old children; and

WHEREAS food insecurity puts children in development in jeopardy, characterized by challenges with speaking, behavior, and movement; increasing the likelihood of later problems with attention, learning, and social interaction. Young children living in low income and food insecure households are more likely to be developmentally at risk than children from food secure households; and

WHEREAS federal programs exist to assist in providing nutrition to children through the schools, most notably the National School Lunch Program and the School Breakfast Program; and

WHEREAS Alaskan schools primarily do not offer breakfast programs because it is not economically feasible. The federal reimbursement for breakfast does not cover the high costs of food and transportation in Alaska;

THEREFORE BE IT RESOLVED that the _____ supports an adequate financial appropriation from the state to strengthen and expand the School Breakfast Program in Alaska, so that breakfast may be available to all children at all schools throughout the state, including low income children and children with food insecurity. No child in Alaska should go without breakfast.

Suggested by: Council Member Marquis

CITY OF KENAI

RESOLUTION NO. 2011-08

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF KENAI, ALASKA, IN SUPPORT OF SENATE BILL 3, "AN ACT PROVIDING FOR FUNDING FOR SCHOOL LUNCH AND BREAKFAST."

WHEREAS, Alaska Senate Bill 3 was pre-filed on January 7, 2011 and introduced in the Alaska Senate on January 19, 2011; and,

WHEREAS, the bi-partisan bill proposes amendment to the Alaska Statutes, Chapter 14.03, by adding a new section to provide for improved funding of school lunches and breakfasts for eligible students; and,

WHEREAS, the State of Alaska's education policy set forth in AS 14.03.015 states: It is the policy of this state that the purpose of education is to help ensure that all students will succeed in their education and work, shape worthwhile and satisfying lives for themselves, exemplify the best values of society, and be effective in improving the character and quality of the world about them; and,

WHEREAS, Senate Bill 3, if enacted, would supplement the cost of lunches and breakfasts provided to each student who is eligible for a free or a reduced-price lunch under 42 U.S.C. 1771 – 1784; and,

WHEREAS, scientific research shows that adequate nourishment and nutrition is imperative for proper cognitive and behavioral development in students, and that eating quality meals, especially breakfast, is directly related to increases in test scores, decreases in the rate of childhood obesity, and a decrease in school violence; and,

WHEREAS, Alaska is one of only a few states that currently does not supplement school lunch and breakfast funding, and ranks 48th in the nation for participation in school breakfast programs; and,

WHEREAS, Senate Bill 3 has the support of the Food Bank of Alaska, the Alaska Food Coalition, and other organizations, school districts and education boards throughout Alaska.

NOW, THEREFORE BE IT RESOLVED BY THE COUNCIL OF THE CITY OF KENAI, ALASKA, the City of Kenai recognizes the importance of the adequate nourishment and nutrition of our children and students and supports enactment of Alaska Senate Bill 3; and,

BE IT FURTHER RESOLVED that a copy of this resolution shall be forwarded to Alaska Senate President Gary Stevens, Alaska House Speaker Rep. Chenault and the

other members of the Kenai Peninsula Legislative Delegation, and the Senate Bill 3 sponsors including Senators Wielechowski, Ellis, Davis, Egan, French, Kookesh, McGuire, Menard, Paskvan, and Thomas.

PASSED BY THE COUNCIL OF THE CITY OF KENAI, ALASKA, this second day of February, 2011.

PAT PORTER, MAYOR

ATTEST:

Carol L. Freas, City Clerk

RYAN MARQUIS

(907) 283-7405 Ph. / (907) 398-8058 Cell

To: Mayor Porter,
Council Members Bookey, Boyle, Gabriel, Molloy, Moore

From: Council Members Ryan Marquis

Date: 01-25-2011

Subject: Resolution No. 2011-08: A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF KENAI, ALASKA, IN SUPPORT OF SENATE BILL 3, "AN ACT PROVIDING FOR FUNDING FOR SCHOOL LUNCH AND BREAKFAST."

I'm respectfully asking for your support on Resolution 2011-08. This resolution would send the legislature our support of Senate Bill 3, which would provide funding to public schools for lunch and breakfast programs. Alaska is one of only a few states that do not supplement the federal funding of such programs. Only about one-third of the Alaskan schools that offer a free or reduced lunch program, also offer breakfast. Approximately 10,000 Alaskan children start their school-day hungry, making learning and development much more difficult than it should be.

I've talked to a number of people that either work in, or spend much time in, our schools. They all have stories about hungry students. Some students are subsisting mainly off of the food they can get at school. Some even try to save some of their lunch to bring home for dinner.

Students should be concerned about whether or not they studied their spelling words enough before a test, not about how they're going to eat that day.

Senate Bill 3 won't end hunger in Alaska, but it will go a long way in reducing it. I understand that this will result in increased spending on the state level, but I believe that in the long-term, this is an investment. Students focused on learning and developing their social skills will constitute the next generation of business owners, teachers, scientists, elected officials, public safety officers, and members of the military. By supporting these students now, we're supporting our city, our state, and our nation's future.

I sincerely appreciate your consideration of this resolution.

Ryan Marquis

Making Increased Participation in School Breakfast a Top Priority

During the 2009-2010 school year, 14,164 low-income children in Alaska participated in the national School Breakfast Program, according to a new national report. While the number of children receiving school breakfast increased, many still are missing out. For every 100 low-income children that ate school lunch, only 38 also ate school breakfast in Alaska.

The *School Breakfast Scorecard*, released annually by the Food Research and Action Center (FRAC), measures the reach of the School Breakfast Program nationally and by state, evaluating state performance by comparing the number of low-income children receiving school breakfast to the number of such children receiving school lunch.

The best performing states reached about 60 per 100, and the national average was 47 low-income children participating in school breakfast for every 100 that received lunch. Alaska, well below average, ranked 43 in student participation out of the 50 states and the District of Columbia.

Low participation means missed meals for children and missed dollars for states. If participation in Alaska rose to 60 low-income children eating federally-funded school breakfast for every 100 low-income children eating lunch, 8,006 more low-income children would start the day with a healthy breakfast and the state would gain an additional $1.9 million in federal funding. Two states, New Mexico and South Carolina, already exceed this goal and demonstrate that this is eminently achievable.

"Breakfast is proven to boost test scores, improve attendance and participation, and help children start their day ready to learn," says Susannah Morgan, Executive Director of Food Bank of Alaska. "106 schools in Alaska currently do not offer breakfast. Senator Wielechowski's bill SB03 supports state funding to make it more feasible for all Alaskan schools to offer breakfast. This report demonstrates how important Senator Wielechowski's leadership is to our children."

Not only does breakfast reduce hunger and improve education, but it also contributes to better nutrition. Children who participate in school breakfast eat more fruits, drink more milk, and consume a wider variety of foods than those who do not eat school breakfast or who have breakfast at home. "Given the concern for obesity in our children, it is disturbing that Alaska is leaving this money untapped," said Morgan.

Nationally, participation in the School Breakfast Program grew to include 9.4 million low-income children during the 2009-2010 school year, an increase of 663,000 low-income children over the previous school year – and the largest increase since FRAC began tracking participation in 1991. Over the past two school years, participation in breakfast grew by nearly 1.2 million low-income children. The 2009-2010 school year also saw the largest increase in lunch participation recorded by FRAC; the program reached nearly 20 million low-income children on an average school day.

"Clearly, the recession created more childhood hunger and fueled growth in the school meal programs. While officials and advocates at the school, state, and federal level took important steps to boost enrollment, we still see that far too few children are starting the day with a healthy morning meal," said Jim Weill, FRAC President.

About the report:

The full report, *School Breakfast Scorecard,* is available at www.frac.org. To measure the reach of the School Breakfast Program, FRAC compares the number of schools and low-income children that participate in breakfast to those that participate in the National School Lunch Program. FRAC also sets a participation goal of reaching 60 children with breakfast for every 100 receiving lunch as a way to gauge state progress and the costs of underparticipation in the program. Nationally, the School Breakfast Program has grown to include 9.4 million low-income children.

Representative Cathy Munoz- 1/31/10
State Capitol Room 403
Juneau AK, 99801

January 31, 2011

Dear Representative,

Thank you for your school meal support with House Bill 132.

I work with the Kenai Peninsula Borough School District (KPBSD), and am able to see the challenge faced by the Student Nutrition Services (SNS) who provide the School Meals to the 32 schools across the KPBSD.

I understand that 40% of the students in KPBSD qualify for free and reduced priced meals. The SNS office is challenged with application processing for the free and reduced priced meals.

The demand for the school meals is extraordinary. Also, I feel these meals are a necessary part of education for many of students.

Thousands of school meals are served each year here in the KPBSD. I am told almost a million are served each year in the KPBSD.

It is my understanding that the meal program is tasked to produce a complete meal for the price of a latte. The School Lunch program needs your help! House Bill 132 seems like a reasonable help. I would appreciate it if you could help the children on Alaska by lending your support to this bill.

Thank you.

Subject: HB 132 Support Letter

TO: HONORABLE REPRESENTATIVE CATHY MUNOZ

FROM: DEAN HAMBURG-ALASKA SCHOOL NUTRITION ASSOCIATION

SUBJECT: SUPPORT FOR ALASKA FAMILIES AND STUDENTS IN HOUSE BILL 132

Thank you for your service as Sponsor for House Bill 132 as a support to Alaska Families and Students.

Each school year in , Juneau, Anchorage Fairbanks, Bettles, Tyonek, Wrangell, and Homer and all across Alaska, 11 million school meals are collectively provided with support coming only from the United States Department of Agriculture (USDA.)

Each school year, Alaska families/students who qualify for Free or Reduced Priced USDA meals AND all students that do not qualify receive per meal support from the USDA.

Among all Alaska Families, 40% qualify for Free or reduced priced meals.

While the funding from the USDA is appreciated for support of school meals, for success in Alaska classrooms, the per meal funding does not cover the cost of a meal in Anchorage or in rural Alaska.

There are 38 states that do add a small support for their school meal programs serving their families/student.

Alaska is not yet among those states.

HOUSE BILL 132 will add meaningful support to school meal programs and will add Alaska to those states taking responsibility for the school meal programs serving Alaska families/students.

We who operate school meal programs work with families who are often desperate to know if they qualify for free or reduced priced meals as this service is a significant support for their families.

We who operate school meal programs also serve the many students across Alaska categorized as Homeless. School meals are a very big deal to theses students.

Subject: House Bill 132

Good morning Representative Munoz,

I am writing to thank you for sponsoring House Bill 132, which would provide state funding for reimbursable meals served in our meal programs.

In the Fairbanks North Star Borough School District we serve an average of 1500 breakfasts and 5000 lunches per day. In December 2010, 31% (4,233 students) qualified to receive their meals at the free or reduced rates and we served 70% of our meals to those who qualified. We are very proud to offer a wide variety of fresh produce, fresh baked breads, and overall nutritionally well balanced meals. Unfortunately, federal reimbursement rates have not kept pace with our rising costs and we find ourselves in need of state funding support. The bill would mean approximately an additional $195,977 to our nutrition services program.

With the passage of the federal Hunger-Free, Healthy Kids Act of 2010, we are being asked to do much more for our students. It is a privilege to serve our students but we know financial support from the great state of Alaska will be needed to ensure our nutrition programs are successful.

Please feel free to contact me if you have any questions. Thank you again.

Action for Healthy Kids®

Because healthy kids learn better

House Education Committee
VIA FAX

February 7, 2011

Representative Dick,

I am writing on behalf of the Alaska Action for Healthy Kids team, a coalition of Alaskan organizations, agencies and individuals who support ways to fight children obesity through changes in school policies.

We support HB 132!

Lack of adequate nutrition affects the cognitive and behavioral development of children. Research shows that school breakfast
(1) improves student performance; (2) increases school attendance; (3) decreases school violence; and (4) fights obesity and improves nutrition

* 42% of Alaska students qualify for free/reduced school meals (over 51,000 students)

* 15% of the students that qualify for free/reduced school meals do not attend schools that offer a breakfast program (over 7,000 missed meals) Over 23,000 Alaska students attend a public school that does not offer a school breakfast program.

We urge Alaska join 25 other states that provide state funds to supplement the federal reimbursement so that all Alaskan children have access to healthy meals at school.

"Childhood Obesity: The Preventable Threat to America's Youth" follows this fax. We invite you to www.actionforhealthykids.org to find more fact sheets.

If I can provide more information, please contact me at mary.grisco@elmendorf.af.mil.

Thanks for your support,

Mary Grisco, Acting Chair
Alaska Action For Healthy Kids Team
And Executive Director, All Alaska Pediatric Partnership

Fact Sheet

Action for Healthy Kids®

Childhood Obesity
The Preventable Threat to America's Youth

The majority of American youth are sedentary and do not eat well. The resulting poor nutrition and lack of physical activity has created an epidemic of childhood obesity that is preventable, yet shows no sign of decreasing. Action for Healthy Kids helps schools make changes that will make their students healthier, which in turn will improve their achievement.

Prevalence and Trends

Overweight and obesity impairs or threatens the health of millions of American children.

- Thirty-two percent of American children and adolescents are overweight or obese, with a 16% of youth 2-19 falling into the obese category
- Rates of overweight and obesity remain high with 31.9% of children and adolescents aged 2-19 years at or above the 85th percentile of the 2000 BMI-for-age growth charts. [1]
- For children aged 2-19 11% are above the 97th percentile, 15% above the 95th percentile, and 30% above the 85th percentile. About 2/3 of those with BMIs above the 95th percentile have BMIs above the 97th percentile, indicating much severe obesity. [1]

Racial/Ethnic Populations

Although overweight has increased for all children and adolescents over time, data indicate disparities among racial/ethnic groups.

- 28% of African-American girls aged 12 to 19 are obese, as are 20% of Mexican-American girls. [1]
- 18.5% of African-American and 22% of Mexican-American boys are overweight or obese. [1]
- Among 12-19 year olds, those above the 97th percentile BMI included 20% of non-Hispanic black girls, 18% of Mexican American boys, and 9% of white girls. [1]

Contributing Factors

Poor eating habits and lack of physical activity are root causes of overweight and obesity.

- Only 2% of school-aged children consume the recommended daily number of servings from all five major food groups, and only 30% consume the suggested amount of milk. [2]
- Caloric contribution from sugar sweetened beverages increased significantly from 204 kcal/day in 1988–1994 to 224 kcal/day in 1999–2004. [3]
- 35% of students watch television 3 or more hours per average school day. [4]
- Only 35% of students are physically active for 60 minutes at least 5 days per week. [4]

Health Consequences

Childhood obesity is a medical concern, not a cosmetic issue.

- An obese 4-year-old has a 20% chance of becoming an obese adult, and an obese teenager has up to an 80% chance of becoming an obese adult. [5]

- Overweight children and teens have been found to have risk factors for cardiovascular disease (CVD), including high cholesterol levels, high blood pressure, and abnormal glucose tolerance.[6]
- Among 5- to 17-year-olds, almost 60% of overweight children had at least one CVD risk factor while 25 percent of overweight children had two or more CVD risk factors.[7]
- Severely overweight and obese children often suffer from depression, anxiety disorders, isolation from their peers, low self-esteem, and eating disorders.[8]

Academic Consequences

A growing body of evidence indicates that poor nutrition, physical inactivity and obesity are associated with lower student achievement.

- The psychological stress of social stigmatization can cause low self-esteem which, in turn, can hinder academic and social functioning, and persist into adulthood.[9]
- Hunger, physical and emotional abuse, and chronic illness can lead to poor school performance.[10]
- Overweight kindergartners had significantly lower math and reading test scores at the beginning of the year than did their non-overweight peers, and these lower scores continued into first grade.[11,12]

Economic Consequences

- Childhood obesity is estimated to cost $14 billion annually in health expenses.[13,14]
- Severely overweight children miss four times as much school as normal-weight kids.[8] If such health problems keep children out of school just one day per month, this could cost a large school district like Los Angeles about $15 million each year. An average size school district could likely forfeit $95,000 to $160,000 annually.[15]
- Obesity-associated annual hospital costs for children increased more than threefold from $35 million during 1979-1981 to $127 million during 1997-1999.[16]

The Honorable Alan Dick, Chair
House Education Committee
Alaska State Capitol, Room 104
Juneau, AK 99801-1182

RE: HB 132 (Munoz)--Support

Dear Chair Dick:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the House Education Committee to support HB 132, authored by Representative Cathy Munoz and co-sponsored by your Committee colleagues Representatives Paul Seaton and Scott Kawasaki as well as Representatives Bob Herron, Beth Kerttula, Chris Tuck, Pete Peterson and Les Gara.

AARP is the world's largest organization of grandparents. We are concerned about good nutrition for everyone's grandchildren.

We have many grandparents who are raising their grandchildren.

- As of October, 2007, Alaska had 8,188 children living in grandparent-headed households (4.3% of all the children in the state).
- Of the children living in households headed by grandparents in Alaska, 5,110 are living there without either parent present.
- 5,419 grandparents report they are responsible for their grandchildren living with them (43% are Alaska Natives, 41% are White).
- 67.4% of these grandparents are under age 60. Many of them are still in the workforce.
- 11.5% of these grandparents live below the federal poverty level.

A healthy future for Alaska's children should be something everyone can agree on.

You will see all the statistics about how school breakfasts and lunches improve education for these children. Their test scores are higher, their cognition is enhanced, and they make fewer mistakes and work faster. Children who participate in the school nutrition programs have fewer problems with obesity and school violence even drops. All these factors will help grandparents who are raising grandchildren, especially those who are still in the workforce and leave home before the grandchildren leave for school. Obviously these programs are even more important for those 11.5% of grandparents raising grandchildren who are themselves below the poverty level.

Grandparents don't plan on raising their grandchildren. Circumstances happen to families and these grandparents step up to the plate to take care of these kids and keep them out of the foster care

program. HB 132 is one more way that the state can help support the efforts of these grandparents. They can certainly use it.

AARP requests an "AYE" vote on HB 132.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

TO: HONORABLE REPRESENTATIVE ALAN DICK

FROM: DEAN HAMBURG-ALASKA SCHOOL NUTRITION ASSOCIATION

SUBJECT: SUPPORT FOR ALASKA FAMILIES AND STUDENTS IN HOUSE BILL 132

Thank you for your service as REPRESENATIVE for District 6. This is a special responsibility covering a very special and important part of Alaska.

Please consider serving as a co-sponsor for House Bill 132 as a school meal support to Alaska Families and Students.

If it helps, please know that I am on the board for the Alaska School Nutrition Association (AKSNA) and also serve as the administrator for 32 school meal sites across the Kenai Peninsula, and also the school meal site in Tyonek, Alaska – District 6.

Each school year in, Juneau, Anchorage Fairbanks, Bettles, Tyonek, Wrangell, and Homer and all across Alaska, 11 million school meals are collectively provided with support coming only from the United States Department of Agriculture (USDA.)

Each school year, Alaska families/students who qualify for Free or Reduced Priced USDA meals AND all students that do not qualify receive per meal support from the USDA.

Among all Alaska Families, 40% qualify for Free or reduced priced meals.

While the funding from the USDA is appreciated for support of school meals, for success in Alaska classrooms, the per meal funding does not cover the cost of a meal in Anchorage or in rural Alaska.

There are 38 states that do add a small support for their school meal programs serving their families/student. Alaska is not yet among those states.

HOUSE BILL 132 will add meaningful support to school meal programs and will add Alaska to those states taking responsibility for the school meal programs serving Alaska families/students.

We who operate school meal programs work with families who are often desperate to know if they qualify for free or reduced priced meals as this service is a significant support for their families.

We who operate school meal programs also serve the many students across Alaska categorized as Homeless. School meals are a very big deal to these students.

Sectional Analysis

HB 143
Education Funding

Section 1 raises the base student allocation to $5,838

Section 2:

Subsection 1 provides that the base student allocation shall be adjusted for inflation for fiscal years 2013 and 2014.

Subsection 2 requires the Department of Education and Early Development to review the actual changes in educational costs per student in each district.

Subsection 3 requires the Department to submit a recommendation for the amount of the BSA for fiscal year 2015 to the 28th Legislature before the 2014 regular session

Section 3 establishes a July 1, 2011 effective date for this act.

Sponsor Statement

HB 143
Education Funding

This bill will protect school districts from cost increases caused by inflation, and allow school districts to perform better multi-year planning, by providing certainty that the BSA will be adjusted to cover inflation over the next three years.

House Bill 143 adjusts the Base Student Allocation (BSA) to protect School Districts from losses due to ongoing inflation for Fiscal Years 2012 through 2014. It also requires the Department of Education and Early Development to study the actual costs of providing K-12 education and recommend to the Legislature an appropriate adjustment to the BSA at the end of this three year period.

Inflation happens every year, and students should not have to pay for inflation with less educational opportunities. When the BSA loses ground to inflation, school districts are forced to make up the losses by cutting services, requesting special appropriations, or increasing municipal taxation.

This bill would hold the BSA harmless for inflation for the next three fiscal years. The Legislature would receive a professional report on the true costs of education and a recommended adjustment for the BSA to aide in consideration of the BSA amount for FY 2015. The review and report will allow the Legislature to ensure that any education specific costs or efficiencies are factored into the BSA amount.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HB143

Analysis

This bill amends AS14.17.470 Base Student Allocation (BSA) with an increase of $158 from $5,680 to $5,838 for FY2012.

In the subsequent fiscal years of FY2013 and FY2014 the BSA will be increased using the inflation adjustment based on the Consumer Price Index (CPI-U) for all urban consumers for the Anchorage metropolitan area with a base index of January 2010.

To project the CPI-U for all urban consumers for the Anchorage metropolitan area for FY2013 and FY2014, an average was calculated based on the last five years of percent change according to the Department of Labor.
2010 = 1.8%
2009 = 1.2%
2008 = 4.6%
2007 = 2.2%
2006 = 3.2%
Average = 2.6%

This legislation also directs the Department of Education & Early Development to review the actual changes in educational cost per student for each district and on or before January 10, 2014, provide recommendations to the 28th Legislature regarding the amount and adjustment that would be needed to increase the BSA beginning in FY2015.

Based on section 2 (2) of this legislation a $125,000 contract would be required to review the educational cost per student for each district.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HB143

Analysis

The Alaska Challenge Youth Academy would be affected by this bill which amends AS14.17.470 Base Student Allocation (BSA) with an increase of $158 from $5,680 to $5,838 for FY2012.

In the subsequent fiscal years of FY2013 and FY2014 the BSA will be increased using the inflation adjustment based on the Consumer Price Index (CPI-U) for all urban consumers for the Anchorage metropolitan area with a base index of January 2010.

To project the CPI-U for all urban consumers for the Anchorage metropolitan area for FY2013 and FY2014, an average was calculated based on the last five years of percent change according to the Department of Labor.

2010 = 1.8%
2009 = 1.2%
2008 = 4.6%
2007 = 2.2%
2006 = 3.2%
Average = 2.6%

907-500-9086
alasbo@gci.net

February 23, 2011

The Honorable Pete Peterson
Alaska House of Representatives

Representative Peterson,

We are writing in support of a new multi-year plan to increase the base student allocation (BSA) in the K-12 foundation funding formula. This type of multi-year plan appears in **HB 143 – Public Education Funding Increase and Inflation Adjustment.**

The Alaska Association of School Business Officials (ALASBO) represents school business professionals from across the state, many of whom are responsible for budgeting and financial planning for their districts.

The multi-year increases to the Base Student Allocation applied during the years FY09-FY11 had a profound effect on the focus of the budget dialogue in school districts across the state. Instead of concern primarily about budget cuts to keep our heads above water, stakeholders participating in the budget process were able to plan instructional programs over a multi-year period. Although education is a long-term project, we can see that these efforts are already beginning to bear fruit, to the benefit of Alaskan students.

ALASBO members also know very well that school districts need regular funding increases to function effectively, in order to keep up with the increases in health insurance, energy, wages, benefits and other costs that are a reality in our current economy.

We believe that a multi-year funding plan for the BSA is one of the most effective actions the Legislature can take to promote continued improvement to the quality of instruction across the state. We'd like to see our districts focus on instructional planning, rather than the debilitating distraction of pink slips and the uncertainty of cuts to promising programs each spring.

We urge your support for a new multi-year funding plan for the Base Student Allocation. Please contact ALASBO Executive Director Amy Lujan using the contact information above if we can provide further assistance to your efforts.

Sincerely,

Luke D. Fulp
ALASBO President

April 4, 2011

The Honorable Pete Petersen
Alaska State House of Representatives
State Capitol, Room 422
Juneau, AK 99801-1182

Dear Representative Petersen:

On behalf of the 13,000 public school employee members of NEA-Alaska, I'm writing to thank you for the introduction of House Bill 143. This legislation would increase the Base Student Allocation (BSA) by $158 per student in fiscal year 12 and require further review to address the increasing cost of K-12 education in Alaska.

NEA-Alaska is enthusiastic about this legislation as it will address the increased costs of doing business on school districts across Alaska. We will be available to testify in support of this legislation on April 6, when it is heard by the House Education Committee.

School districts across Alaska will suffer significantly if there is no BSA increase this year. The Anchorage School District had to dip into reserves to cover some of the $13 million gap they will encounter with a frozen BSA of $5,680 per student.

We appreciate your efforts to increase the BSA next year and we look forward to your legislation moving through the process.

Respectfully,

Barb Angaiak
President

Subject: In Support of HB143

Speaker Chenault, Representative Dick, Representative Petersen, Representative Tuck, Representative Gara, and Representative Kawasaki:

I am writing in support of HB143, the education funding bill which relates to increasing the FY12 BSA to $5,838 and adjusts it annually in the two subsequent years. I would respectfully ask you to consider passing this bill which is so badly needed for our public schools.

During the past three years, we have been so very fortunate as school business leaders to have the benefit of forward funding which came about as a result of the Education Task Force. I want to sincerely thank you for that. It made planning for the best use of our state funding possible because we could depend on getting a base amount when writing our annual budgets. Here at Yukon Koyukuk School District (YKSD) forward funding allowed us to bargain with our teacher's union for a period of three years, allowing our teachers to spend less time at negotiations and more time in their classrooms with students. Last year, when we began bargaining with our teachers, we could only do so for a year at a time because we didn't know at what level we would be funded beyond FY11. We did the same this year when we reopened bargaining for salaries, deciding only on FY12 salaries, making it necessary to plan to come back to the table next year once again. And even now, we have arrived at a salary schedule for which we hope funding will be available since these decisions have not yet been made.

As with most school districts, we have been moving ever closer to reductions in staffing due to inflationary costs, not only in salaries and benefits, but also utilities, staff travel and the high cost of shipping necessary supplies and equipment to our villages. The Stimulus funds were very helpful in staving off these cuts, but we have been planning for them to go away this year as we had been told at the time they were given. I am thankful for the boost these funds gave our district; however now we find ourselves in the unenviable position of needing to cut staff. Seven of our nine village schools have fewer than 40 children K-12. Many of them are staffed to the bare bones now with multi-age classrooms, so there is no place to cut but in the jobs that are available for our local people. This is a further hit on the villages and their economies. By investing in our schools, you have the opportunity to multiply the State dollars as they bolster local economies.

With the predictions of falling oil production and dwindling state funding from oil, I know the temptation must be great to pull back and conserve the huge dollars our state is currently reaping from the oil industry. However, I would ask that you consider instead investing the money we have now in our State's future by touching our young residents who will be the great minds leading us in the future. Please consider carefully the position we are in currently as a State with healthy coffers that are the envy of the rest of the United States, and pass HB143. Your support of Alaska's students is so very much appreciated, and will pay huge dividends in the future.

Thank you for your kind consideration and time.

CS FOR HOUSE BILL NO. 145(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES KELLER, Millett, Johansen

A BILL

FOR AN ACT ENTITLED

"An Act establishing the parental choice scholarship program to be administered by the Department of Education and Early Development for the purpose of paying the cost of attending grades kindergarten through 12 at private schools; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14 is amended by adding a new chapter to read:

Chapter 31. Parental Choice Scholarship Program.

Sec. 14.31.010. Parental choice scholarship program established. The parental choice scholarship program is established for the purpose of providing public funding of the cost of attending grades kindergarten through 12 at a private school selected by the student's parent or legal guardian. The department shall administer the program under the provisions of this chapter. Participation of a school in the program does not confer authority over a school to the department that is not expressly provided for in this title. Payments made under the program are subject to

appropriation.

Sec. 14.31.020. School selection and scholarship amount. (a) A private school in the state that is accepted for participation in the program may receive a scholarship under the program on behalf of a student who attends the school, regardless of the attendance area or the school district in which the student resides.

(b) Notwithstanding the calculations required under AS 14.17, the department shall award a parental choice scholarship that is equal to the lesser of the cost of tuition at the participating school or the amount the district would receive as state aid under AS 14.17 for a similarly situated student to attend a public school in the district in which the student resides. Of the amount available for a parental choice scholarship under AS 14.31.045, the department shall pay a parental choice scholarship while a student is attending a participating school as follows:

(1) to the school district in which the participating student resides, except as provided in AS 14.31.030(c), 30 percent of the amount the district would receive as state aid under AS 14.17 for the student; and

(2) to a participating school, except as provided in AS 14.31.030(c), the amount remaining after the district is paid under (1) of this subsection, up to 70 percent of the amount the district in which the school is located would receive as state aid under AS 14.17 for the student.

(c) The parent or legal guardian shall be responsible for costs and fees assessed by a participating school that exceed the amount paid under (b)(2) of this section.

(d) The department shall provide transportation to a participating school to the extent required under AS 14.09.020.

(e) A scholarship received for the benefit of a student under this section must be used for educational purposes. A scholarship is transferable among participating schools.

Sec. 14.31.025. Accountability and enrollment standards for a participating school. (a) The department shall accept a school for participation in the parental choice scholarship program if the school

(1) submits to the department, on a form approved by the department,

notice that the school intends to participate in the program;

(2) meets the following financial accountability standards:

(A) demonstrates the school's financial ability to repay to the department any overpaid scholarship funds; and

(B) certifies the actual annual costs to the school of educating a student, including a prorated amount for facility and operating costs; and

(3) is a school that is a

(A) private correspondence study program located and operated entirely in the state; or

(B) private school operated in compliance with AS 14.45.030 or AS 14.45.100 - 14.45.130.

(b) Nothing in this chapter authorizes the department to regulate a participating private school except as necessary to carry out the program.

Sec. 14.31.030. Effect on districts. (a) A school that, as a result of the program, has an ADM of less than 10 but five or more shall be treated as if the school had 10 students for a two-year period following the date on which the ADM is reported to be less than 10 but five or more for purposes of calculating state aid under AS 14.17. In this subsection, "ADM" has the meaning given in AS 14.17.990.

(b) If requested by a participating school, a school district that receives a payment under AS 14.31.020(b)(1) shall enter into a lease agreement with the participating school for space controlled by the school district if

(1) the lease is offered with reasonable terms;

(2) the space that is subject to the lease agreement is available; and

(3) the agreement is consistent with applicable state law.

(c) If a school district that receives a payment under AS 14.31.020(b)(1) unreasonably refuses to enter into a lease agreement as provided under (b) of this section, the board may, after notice and an opportunity for a hearing before the board, order the department to provide to the participating school that requested the lease agreement the funding the district received under AS 14.31.020(b)(1) for the students attending the participating school.

Sec. 14.31.035. Departmental duties. (a) In implementing the parental choice

scholarship program, the department shall

(1) obtain from the participating school a count of the number of participating students in the program;

(2) make scholarship payments directly to the school quarterly after receiving proof satisfactory to the department that the student claimed under a scholarship attends the school on a full-time basis;

(3) make available to students and students' parents or guardians a list of schools that have been accepted to participate in the program; and

(4) provide a standard application for use by a participating school to enroll a student under the program; a school may, however, supplement the application.

(b) If the department determines that a school is ineligible under this chapter to participate in the program, the department shall, after administrative and judicial appeal periods have lapsed, immediately notify the affected students and the students' parents or guardians.

Sec. 14.31.040. Regulations. The department shall adopt regulations necessary to carry out the program including

(1) procedures for calculating and distributing scholarships;

(2) timelines and procedures for application, renewal, and appeal for participating schools and students; and

(3) standards for acceptance, revocation, and denial for participating schools.

Sec. 14.31.045. Appropriations for scholarships. The legislature may appropriate parental choice scholarship program funds to the department for distribution to the participating schools and affected districts. If the appropriation for the program is insufficient in a given fiscal year, the department shall distribute the available funds to the participating schools and affected districts prorated by the total number of students participating in the program.

Sec. 14.31.090. Definitions. In this chapter,

(1) "district" has the meaning given in AS 14.17.990;

(2) "private school" means a school located in the state that provides

education to students attending grades kindergarten through 12, or any combination of those grades, and that does not receive state funding under AS 14.17;

(3) "program" means the parental choice scholarship program;

(4) "student" means a person residing in the state who is at least five years of age but not more than 21 years of age.

* **Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

PARENTAL CHOICE SCHOLARSHIP PROGRAM; APPLICABILITY. (a) In the three school years following the effective date of this section, the parental choice scholarship program established under AS 14.31.010, added by sec. 1 of this Act, does not apply to, and a parental choice scholarship may not affect, a public school that has an average daily membership of less than 50 students for that year.

(b) In this section, "average daily membership" has the meaning given in AS 14.17.990.

* **Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONTINGENCY. Sections 1 and 2 of this Act take effect only if an amendment to art. VII, sec. 1, Constitution of the State of Alaska, deleting the prohibition on the payment of public funds for the direct benefit of a private educational institution, is approved by the voters before July 1, 2013.

* **Sec. 4.** If, under sec. 3 of this Act, secs. 1 and 2 of this Act take effect, they take effect on the effective date of the constitutional amendment described in sec. 3 of this Act.

MEMORANDUM January 31, 2012

SUBJECT: Effect on districts and explanation of applicability (CSHB 145( ) (Work Order No. 27-LS0223\G))

TO: Representative Wes Keller
Attn: Ernest Prax

FROM: Jean M. Mischel
Legislative Counsel

You have asked two questions pertaining to the above-referenced bill draft as follows.

1. Does section 2 of the bill preclude a child who attends a public school that has an average daily membership of less than 50 for that year from participation in the parental choice scholarship program established by the bill?

Yes, for the stated three years following the effective date of the Act.

2. Please describe the effect of proposed sec. 14.31.030 in sec. 1 of the bill using a hypothetical of a school with an ADM of 10 that loses five students to a private school under the scholarship program.

That school with five remaining students will be treated, for purposes of calculating the school size factor under AS 14.17.450, as a school with an ADM of 10 for a two-year period following the date on which the ADM is reported to be less than 10.

If I may be of further assistance, please advise.

HB 145 Version G Summary of Changes

Insert pg. 1 line 14: "Payments made under the program are subject to appropriation."

Changed pg. 2 line 5: "…regardless of the attendance area ~~in~~ **or** the school district in which the student resides."

Added: pg. 4 lines 21-25.

QUESTIONS FROM JANUARY 27, 2012 HOUSE EDUCATION COMMITTEE HEARING REGARDING HB 145: K-12 SCHOLARSHIP PROGRAM INFORMATION PROVIDED BY DEPARTMENT OF EDUCATION & EARLY DEVELOPMENT AND OFFICE OF REP. WES KELLER

Questions on version G (attached).

1) Please explain how the State would transport participating students under HB 145.

Sec. 14.09.020. Transportation for nonpublic school students.

In those places in the state where the department or a school district provides transportation for children attending public schools, the department also shall provide transportation for children who, in compliance with the provisions of AS 14.30, attend nonpublic schools that are administered in compliance with state law where the children, in order to reach the nonpublic schools, must travel distances comparable to, and over routes the same as, the distances and routes over which the children attending public schools are transported. The commissioner shall administer this nonpublic school student transportation program, integrating it into existing systems as much as feasible, and the cost of the program shall be paid from funds appropriated for that purpose by the legislature.

2) How will special and intensive needs students be affected by HB 145? Will they have the opportunity to apply and be accepted in private participating schools? Can private schools refuse to accept them?

- Special and intensive needs students have the opportunity to apply to a private school. However, it is unlikely that the private school would accept them because they are not able to provide the service the student needs. Nothing in the legislation prohibits a private school from accepting special and intensive needs students.

3) Are there schools in Alaska that are able to select which students they do or do not accept even if the school receives state and/or federal dollars?

Federal anti-discrimination laws apply to schools accepting state or federal funding:

- Title VI of the Civil Rights Act of 1964 bars discrimination based on race, color or national origin in any program or activity that receives federal financial assistance. It also prohibits discrimination in public schools based upon a student's religious beliefs

- Title IX of the Education Amendments of 1972 bans discrimination on the basis of sex in educational programs and activities receiving federal funding. Unless it's an all-boys or all-girls school, it can't deny admission to a student simply because he's of the opposite sex. It also covers sexual harassment by staff and other students

- Section 504 of the Rehabilitation Act of 1973 makes it illegal for any program and activity that gets federal money to discriminate against a person based upon a disability. "Disability" includes many physical and mental or psychological disabilities.

CHARTER SCHOOL INFORMATION:

Charter School Admissions: AS 14.03.265(b) A charter school shall enroll all eligible students who submit a timely application, unless the number of those applications exceeds the capacity of the program, class, grade level or building. In the event of an excess of those applications, the charter school and the local school board shall attempt to accommodate all of those applicants by considering providing additional classroom space and assigning additional teachers from the district to the charter school. If it is not possible to accommodate all eligible students who submit a timely application, students shall be accepted by random drawing. A school board may not require a student to attend a charter school.

Charter Schools
In Alaska, under AS 14.03.255:

> "(a) A charter school operates as a school in the local school district except that the charter school [...] is exempt from the local school district's textbook, program, curriculum, and scheduling requirements[.]"

For the purposes of IDEA, charter schools in Alaska are the responsibility of districts, equivalent to any other schools within the district. Though charter schools may be relieved from some local administrative requirements (*e.g.* the hiring of administrators), there are no exemptions from the requirements of IDEA, ADA, or the Rehabilitation Act for districts operating programs for students with disabilities in charter schools. *Charter school special education programs must operate in the same manner, and with the same funding, as other district programs* (20 USCS § 1413(a)(5).

CS FOR HOUSE BILL NO. 145( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES KELLER, Millett

A BILL

FOR AN ACT ENTITLED

"An Act establishing the parental choice scholarship program to be administered by the Department of Education and Early Development for the purpose of paying the cost of attending grades kindergarten through 12 at private schools; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14 is amended by adding a new chapter to read:

Chapter 31. Parental Choice Scholarship Program.

Sec. 14.31.010. Parental choice scholarship program established. The parental choice scholarship program is established for the purpose of providing public funding of the cost of attending grades kindergarten through 12 at a private school selected by the student's parent or legal guardian. The department shall administer the program under the provisions of this chapter. Participation of a school in the program does not confer authority over a school to the department that is not expressly provided for in this title. Payments made under the program are subject to

appropriation.

Sec. 14.31.020. School selection and scholarship amount. (a) A private school in the state that is accepted for participation in the program may receive a scholarship under the program on behalf of a student who attends the school, regardless of the attendance area or the school district in which the student resides.

(b) Notwithstanding the calculations required under AS 14.17, the department shall pay to a participating school attended by the student under this section a parental choice scholarship that is equal to the lesser of the cost of tuition at the participating school or the amount the district would receive as state and local aid under AS 14.17 for a similarly situated student to attend a public school in the district in which the student resides.

(c) The parent or legal guardian shall be responsible for costs and fees assessed by a participating school that exceed the amount paid under (b) of this section.

(d) The department shall provide transportation to a participating school to the extent required under AS 14.09.020.

(e) A scholarship received for the benefit of a student under this section must be used for educational purposes. A scholarship is transferable among participating schools.

Sec. 14.31.025. Accountability and enrollment standards for a participating school. (a) The department shall accept a school for participation in the parental choice scholarship program if the school

(1) submits to the department, on a form approved by the department, notice that the school intends to participate in the program;

(2) meets the following financial accountability standards:

(A) demonstrates the school's financial ability to repay to the department any overpaid scholarship funds; and

(B) certifies the actual annual costs to the school of educating a student, including a prorated amount for facility and operating costs; and

(3) is a school that is a

(A) private correspondence study program located and operated

entirely in the state; or

(B) private school operated in compliance with AS 14.45.030 or AS 14.45.100 - 14.45.130.

(b) Nothing in this chapter authorizes the department to regulate a participating private school except as necessary to carry out the program.

Sec. 14.31.030. Effect on districts. Notwithstanding the lower limit for a student count of 10 under AS 14.17.450(a) and (b), a school that, as a result of the program, has an ADM of less than 10 shall be treated as if the school had 10 students for a two-year period following the date on which the ADM is reported to be less than 10 for purposes of calculating the school size factor under AS 14.17.450. In this subsection, "ADM" has the meaning given in AS 14.17.990.

Sec. 14.31.035. Departmental duties. (a) In implementing the parental choice scholarship program, the department shall

(1) obtain from the participating school a count of the number of participating students in the program;

(2) make scholarship payments directly to the school quarterly after receiving proof satisfactory to the department that the student claimed under a scholarship attends the school on a full-time basis;

(3) make available to students and students' parents or guardians a list of schools that have been accepted to participate in the program; and

(4) provide a standard application for use by a participating school to enroll a student under the program; a school may, however, supplement the application.

(b) If the department determines that a school is ineligible under this chapter to participate in the program, the department shall, after administrative and judicial appeal periods have lapsed, immediately notify the affected students and the students' parents or guardians.

Sec. 14.31.040. Regulations. The department shall adopt regulations necessary to carry out the program in a manner that ensures the highest number of student and school participation, including

(1) procedures for calculating and distributing scholarships;

(2) timelines and procedures for application, renewal, and appeal for participating schools and students; and

(3) standards for acceptance, revocation, and denial for participating schools.

Sec. 14.31.045. Appropriations for scholarships. The legislature may appropriate parental choice scholarship program funds to the department for distribution to the participating schools. If the appropriation for the program is insufficient in a given fiscal year, the department shall distribute the available funds to the participating schools prorated by the total number of students participating in the program.

Sec. 14.31.090. Definitions. In this chapter,

(1) "district" has the meaning given in AS 14.17.990;

(2) "private school" means a school located in the state that provides education to students attending grades kindergarten through 12, or any combination of those grades, and that does not receive state funding under AS 14.17;

(3) "program" means the parental choice scholarship program;

(4) "student" means a person residing in the state who is at least five years of age but not more than 21 years of age.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

PARENTAL CHOICE SCHOLARSHIP PROGRAM; APPLICABILITY. (a) In the three school years following the effective date of this Act, the parental choice scholarship program established under AS 14.31.010, added by sec. 1 of this Act, does not apply to, and a parental choice scholarship may not affect, a public school that has an average daily membership of less than 50 students for that year.

(b) In this section, "average daily membership" has the meaning given in AS 14.17.990.

*** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONTINGENCY. Sections 1 and 2 of this Act take effect only if an amendment to art. VII, sec. 1, Constitution of the State of Alaska, deleting the prohibition on the payment of

public funds for the direct benefit of a private educational institution, is approved by the voters before July 1, 2013.

* **Sec. 4.** If, under sec. 3 of this Act, secs. 1 and 2 of this Act take effect, they take effect on the effective date of the constitutional amendment described in sec. 3 of this Act.

General revisions to HB 145 Version I now reflected in Version Y.

- Removes public schools completely from the scholarship program. Only private schools can participate.
- Directs the Department of Education and Early Development to administer the scholarship program.
- HB 145 now provides statutory guidance on missions and measures rather than trying to put regulation into statute.

HB 145 Version I	HB 145 Version Y
Sec. 14.31.010: Establishes a parental choice scholarship program for K-12 students attending a public or private school. School districts shall administer the program.	Sec. 14.31.010: Reworded to now state that the parental choice scholarship program is limited to private schools and is subject to appropriation by the legislature. Administration by school districts is removed and put under the purview of the Department of Education and Early Development.
Sec. 14.31.020 (a): States that a public school may receive scholarship funds for students that are participating in the scholarship program.	Sec. 14.31.020 (a): Only private schools may participate and receive funds from the scholarship program.
Sec. 14.31.020 (b): Defines participation requirements for private schools.	Sec. 14.31.020 (b): Version I language is deleted and reworded as follows:: • Notwithstanding provisions of AS 14.17 *Financing of Public Schools,* under the parental choice scholarship program, the department shall pay to a participating private school a scholarship that: o Is the lessor of the cost of tuition at the participating school or the state and local aid the school district receives for a similarly situated student to attend a public school in the district in which the student resides.
Sec. 14.31.020 (c)(1-2): (c)(1) is now part (b) of Version Y. (c)(2) is deleted.	Sec. 14.31.020 (c): Parent or legal guardian is responsible for a participating school's assessed fees and costs that exceed (b).
Sec. 14.31.020 (d): If a parent selects a public school outside of the attendance area in which the student currently resides, the old school district may contribute to student transportation costs to the participating public school.	Sec. 14.31.020 (d): The department shall provide transportation to a participating private school in a manner consistent with AS 14.09.020 *Transportation for nonpublic school students.*
Sec. 14.31.020 (e): Scholarship must be for educational purposes.	Sec. 14.31.020 (e): Same.
Sec. 14.31.020 (f): Participating schools shall include scholarship students in the student count for purposes of calculating state aid under AS 14.17.610 *Distribution of state aid.*	Sec. 14.31.020 (f): Added "submitted to the district" for clarification purposes.
Sec. 14.31.025 (a): Defines the criteria districts must use when accepting parental choice scholarship participating schools.	Sec. 14.31.025 (a): • Directs the department to establish accountability and enrollment standards and to accept eligible private schools for

	participation in the scholarship program. • Rewrites the acceptance standards to more reflect existing statutory guidelines rather than trying to write regulation into statute. • Removes the 'random selection process' which would have infringed upon a non-government school's ability to select students. • Removes guidelines that would have conflicted with a non-government school's hiring in accordance with their mission and values.
Sec. 14.31.025 (b): Preserves a participating school's autonomy and not subject to additional regulation unless authorized under AS 14.31.010-090.	Sec. 14.31.025 (b): Reworded to now state that nothing in the legislation authorizes the Dept. of Education to regulate participating private schools except as necessary to carry out the scholarship program.
	Sec. 14.31.30: New Section~ Effect on districts • States that if a **public** school loses students to the scholarship program and falls below the ADM threshold limit of 10 students, the school will still be treated as having 10 students for a 2 year period following the date on which the ADM is reported.
Sec. 14.31.035: District Duties	Sec. 14.31.035: Changed to Department Duties
Sec. 14.31.035 (a)(1): Directs districts to make scholarship payments to participating schools after receiving verification that the student is attending full time.	Sec. 14.31.035 (a)(1): Directs the department to obtain from participating schools the number of scholarship students.
	Sec. 14.31.035 (a)(2): Same intent (a)(1) in Version I but now replaces 'district' with 'department'.
Sec. 14.31.035 (a)(2): List of approved participating schools.	Sec. 14.31.035 (a)(3): Same as (a)(2) in Version I.
Sec. 14.31.035 (a)(3): Instructs districts to develop a standardized application for schools to enroll a scholarship student.	Sec. 14.31.035 (a)(4): Same as (a)(3) in Version I, but the department is now responsible for developing the application.
Sec. 14.31.035 (b): If a district denies an application or revokes a school's program participation, they must notify the affected students and parents.	Sec. 14.31.035 (b): The department, not the district, is now responsible for notifying students and their parents if a participating school is deemed ineligible.
Sec. 14.31.040: Directs the department to establish regulations needed to carry out program.	Sec. 14.31.040: Same as Version I but removes subsection (1).
Sec. 14.31.045: States that the Legislature may fund the program. If the appropriation for a fiscal year is insufficient, the department will distribute available funds to districts prorated by the number of participating students.	Sec. 14.31.045: Same as Version I except that the department now distributes the scholarship funds to participating schools, not school districts.
Sec. 14.31.090: Definitions and effective date.	Sec. 14.31.090: Definitions and adds the constitutional contingency language.

Representative Keller

Amendment #1

Intent: Further clarify that the parental choice scholarship program depends on legislative appropriation to function.

Insert: Page 1 Line 8.

Sec. 14.31.010. Parental choice scholarship program established. **Subject to appropriation**, the parental choice scholarship program is established for the purpose of providing public funding of the cost of attending grades kindergarten through 12 at a private school selected by the student's parent or legal guardian.

Not offered

Representative Keller

Amendment #2

withdrawn & not offered

Intent: Reinsert mistakenly deleted text.

Insert: Page 2 Line 19.

(f) A participating school shall include students who are enrolled under this section in the student count submitted to the district for purposes of calculating state aid under AS 14.17.610.

A BILL

FOR AN ACT ENTITLED

"An Act establishing the parental choice scholarship program to be administered by the Department of Education and Early Development for the purpose of paying the cost of attending grades kindergarten through 12 at private schools; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14 is amended by adding a new chapter to read:

Chapter 31. Parental Choice Scholarship Program.

Sec. 14.31.010. Parental choice scholarship program established. The parental choice scholarship program is established for the purpose of providing public funding of the cost of attending grades kindergarten through 12 at a private school selected by the student's parent or legal guardian. The department shall administer the program under the provisions of this chapter. Participation of a school in the program does not confer authority over a school to the department that is not expressly provided for in this title.

Sec. 14.31.020. School selection and scholarship amount. (a) A private school in the state that is accepted for participation in the program may receive a scholarship under the program on behalf of a student who attends the school, regardless of the attendance area in the school district in which the student resides.

(b) Notwithstanding the calculations required under AS 14.17, the department shall pay to a participating school attended by the student under this section a parental choice scholarship that is equal to the lesser of the cost of tuition at the participating school or the amount the district would receive as state and local aid under AS 14.17 for a similarly situated student to attend a public school in the district in which the student resides.

(c) The parent or legal guardian shall be responsible for costs and fees assessed by a participating school that exceed the amount paid under (b) of this section.

(d) The department shall provide transportation to a participating school to the extent required under AS 14.09.020.

(e) A scholarship received for the benefit of a student under this section must be used for educational purposes. A scholarship is transferable among participating schools.

Sec. 14.31.025. Accountability and enrollment standards for a participating school. (a) The department shall accept a school for participation in the parental choice scholarship program if the school

(1) submits to the department, on a form approved by the department, notice that the school intends to participate in the program;

(2) meets the following financial accountability standards:

(A) demonstrates the school's financial ability to repay to the department any overpaid scholarship funds; and

(B) certifies the actual annual costs to the school of educating a student, including a prorated amount for facility and operating costs; and

(3) is a school that is a

(A) private correspondence study program located and operated entirely in the state; or

(B) private school operated in compliance with AS 14.45.030

or AS 14.45.100 - 14.45.130.

(b) Nothing in this chapter authorizes the department to regulate a participating private school except as necessary to carry out the program.

Sec. 14.31.030. Effect on districts. Notwithstanding the lower limit for a student count of 10 under AS 14.17.450(a) and (b), a school that, as a result of the program, has an ADM of less than 10 shall be treated as if the school had 10 students for a two-year period following the date on which the ADM is reported to be less than 10 for purposes of calculating the school size factor under AS 14.17.450. In this subsection, "ADM" has the meaning given in AS 14.17.990.

Sec. 14.31.035. Departmental duties. (a) In implementing the parental choice scholarship program, the department shall

(1) obtain from the participating school a count of the number of participating students in the program;

(2) make scholarship payments directly to the school quarterly after receiving proof satisfactory to the department that the student claimed under a scholarship attends the school on a full-time basis;

(3) make available to students and students' parents or guardians a list of schools that have been accepted to participate in the program; and

(4) provide a standard application for use by a participating school to enroll a student under the program; a school may, however, supplement the application.

(b) If the department determines that a school is ineligible under this chapter to participate in the program, the department shall, after administrative and judicial appeal periods have lapsed, immediately notify the affected students and the students' parents or guardians.

Sec. 14.31.040. Regulations. The department shall adopt regulations necessary to carry out the program in a manner that ensures the highest number of student and school participation, including

(1) procedures for calculating and distributing scholarships;

(2) timelines and procedures for application, renewal, and appeal for participating schools and students; and

(3) standards for acceptance, revocation, and denial for participating schools.

Sec. 14.31.045. Appropriations for scholarships. The legislature may appropriate parental choice scholarship program funds to the department for distribution to the participating schools. If the appropriation for the program is insufficient in a given fiscal year, the department shall distribute the available funds to the participating schools prorated by the total number of students participating in the program.

Sec. 14.31.090. Definitions. In this chapter,

(1) "district" has the meaning given in AS 14.17.990;

(2) "private school" means a school located in the state that provides education to students attending grades kindergarten through 12, or any combination of those grades, and that does not receive state funding under AS 14.17;

(3) "program" means the parental choice scholarship program;

(4) "student" means a person residing in the state who is at least five years of age but not more than 21 years of age.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONTINGENCY. Section 1 of this Act takes effect only if an amendment to art. VII, sec. 1, Constitution of the State of Alaska, deleting the prohibition on the payment of public funds for the direct benefit of a private educational institution, is approved by the voters before July 1, 2013.

*** Sec. 3.** If, under sec. 2 of this Act, sec. 1 of this Act takes effect, it takes effect on the effective date of the constitutional amendment described in sec. 2 of this Act.

NORTHWEST Religious Liberty ASSOCIATION

Financial Aid

Principles for Church Institutions to Consider When Evaluating the Acceptability of State Financial Aid

In dealing with the practical question of when it is appropriate for church schools or institutions in the faith community to accept support or funding from the government, the following principles should be considered:

1. Would accepting the aid establish a precedent that would undercut the religious freedom protections guaranteed by the First Amendment, and the broad principle it embraces – the separation of church and state?

2. Does the aid come attached with conditions or requirements that would inhibit or interfere with the religious mission or goals of the institution, such as the restriction of its religious activities or standards?

3. Is there a reasonable likelihood that the aid would create a dependency by the religious institution on the government benefit program -- so much so that it would inhibit its future ability to act independently?

In conclusion, the Northwest Religious Liberty Association, and its board of directors offer these principles in the form of questions so that meaningful dialogue can occur at all levels of the faith community. In the spirit of helpfulness, we believe that these three questions can substantially safeguard the faith community and its institutions from undue compromise and hardship in the future, and thus protect the vitality of its prophetic mission in America.

FOR AN ACT ENTITLED

"An Act establishing the parental choice scholarship program to be administered by school districts for the purpose of paying the cost of attending grades kindergarten through 12 at public and private schools; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14 is amended by adding a new chapter to read:

Chapter 31. Parental Choice Scholarship Program.

Sec. 14.31.010. Parental choice scholarship program established. The parental choice scholarship program is established for the purpose of providing public funding of the cost of attending grades kindergarten through 12 at a public or private school selected by the student's parent or legal guardian. Each school district shall administer the program under the provisions of this chapter. Participation of a school in the program does not confer authority over a school to a school district that is not expressly provided for in this title.

Sec. 14.31.020. School selection and scholarship amount. (a) A public or

private school in the state that is accepted for participation in the program may receive a scholarship under the program on behalf of a student who attends the school, regardless of the attendance area in the school district in which the student resides.

(b) Notwithstanding the calculations required under AS 14.17, the district shall pay to a participating school attended by the student under this section a parental choice scholarship that is equal to the lesser of

(1) the amount the school district in which the student resides would receive as state aid and local contributions under AS 14.17 for a similarly situated student to attend a public school in the district, except that the amount may not exceed 100 percent of the funding the school receives and expends from all state and local sources for the student; or

(2) the actual annual cost to the school of educating the student, including prorated facility and operating expenses.

(c) If a parent or legal guardian has selected a public school outside of the attendance area in which the student resides for a scholarship under this section, the school district in which the student resides may contribute to the reasonable costs of transporting the student to the scholarship recipient school with state aid available under AS 14.09.010 for transportation of the student.

(d) A scholarship received for the benefit of a student under this section must be used for educational purposes. A scholarship is transferable among participating schools.

(e) A participating school shall include students who are enrolled under this section in the student count for purposes of calculating state aid under AS 14.17.610.

Sec. 14.31.025. Accountability and enrollment standards for a participating school. (a) A district shall accept a school for participation in the parental choice scholarship program if the school

(1) submits notice of participation to the district in which the student is a resident on a form approved by the district indicating that the school intends to participate in the program;

(2) meets the following financial accountability standards:

(A) demonstrates the school's financial ability to repay to the

district any overpaid scholarship funds; and

(B) certifies the actual annual costs to the school of educating a student, including a prorated amount for facility and operating costs; and

(3) is a school that is a

(A) public school or correspondence study program operated by the department or a district in the state under this title;

(B) charter school established under AS 14.03.250 - 14.03.290; or

(C) private school operated in compliance with AS 14.45.030 or AS 14.45.100 - 14.45.130.

(b) Nothing in this chapter authorizes a district or the state to regulate a participating private school except as necessary to carry out the program.

Sec. 14.31.035. District duties. (a) In implementing the parental choice scholarship program, the district shall

(1) make scholarship payments directly to the school quarterly after receiving proof satisfactory to the district that the student claimed under a scholarship attends the school on a full-time basis;

(2) make available to students and students' parents or guardians a list of schools that have been accepted to participate in the program; and

(3) provide a standard application for use by a school to enroll a student under the program; a school may, however, supplement the application.

(b) If the district denies or revokes acceptance of a school to participate in the program, the district shall, after administrative and judicial appeal periods have lapsed, immediately notify the affected students and the students' parents or guardians.

Sec. 14.31.040. Regulations. The department shall adopt regulations necessary to carry out the program in a manner that ensures the highest number of student and school participation, including

(1) procedures for calculating and distributing scholarships;

(2) timelines and procedures for application, renewal, and appeal for participating schools and students; and

(3) standards for acceptance, revocation, and denial for participating

schools.

Sec. 14.31.045. Appropriations for scholarships. The legislature may appropriate parental choice scholarship program funds to the department for distribution to the districts. If the appropriation for the program is insufficient in a given fiscal year, the department shall distribute the available funds to the districts prorated by the number of participating students in the program.

Sec. 14.31.090. Definitions. In this chapter,

(1) "district" has the meaning given in AS 14.17.990;

(2) "private school" means a school located in the state that provides education to students attending grades kindergarten through 12, or any combination of those grades, and that does not receive state funding under AS 14.17;

(3) "program" means the parental choice scholarship program;

(4) "student" means a person residing in the state who is at least five years of age but not more than 21 years of age.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONTINGENCY. Section 1 of this Act takes effect only if an amendment to art. VII, sec. 1, Constitution of the State of Alaska, deleting the prohibition on the payment of public funds for the direct benefit of a private educational institution, is approved by the voters before July 1, 2013.

*** Sec. 3.** If, under sec. 2 of this Act, sec. 1 of this Act takes effect, it takes effect on the effective date of the constitutional amendment described in sec. 2 of this Act.

CS FOR HOUSE BILL NO. 145( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVE KELLER

A BILL

FOR AN ACT ENTITLED

"An Act establishing the parental choice scholarship program to be administered by school districts for the purpose of paying the cost of attending grades kindergarten through 12 at public and private schools; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14 is amended by adding a new chapter to read:

Chapter 31. Parental Choice Scholarship Program.

Sec. 14.31.010. Parental choice scholarship program established. The parental choice scholarship program is established for the purpose of providing public funding of the cost of attending grades kindergarten through 12 at a public or private school selected by the student's parent or legal guardian. Each school district shall administer the program under the provisions of this chapter. Participation of a school in the program does not confer authority over a school to a school district that is not expressly provided for in this title.

Sec. 14.31.020. School selection and scholarship amount. (a) A public or

private school in the state that is accepted for participation in the program may receive a scholarship under the program on behalf of a student who attends the school, regardless of the attendance area in the school district in which the student resides.

(b) Notwithstanding the calculations required under AS 14.17, the district shall pay to a participating school attended by the student under this section a parental choice scholarship that is ~~equal to the lesser of~~

#1 (1) the amount the school district in which the student resides would receive as state aid ~~and local contributions~~ under AS 14.17 for a similarly situated student to attend a public school in the district, except that the amount may not exceed ~~100~~ 70 percent of the funding the school receives and expends from all state ~~and local~~ sources for the student; ~~or~~

~~(2) the actual annual cost to the school of educating the student, including prorated facility and operating expenses~~.

(c) If a parent or legal guardian has selected a public school outside of the attendance area in which the student resides for a scholarship under this section, the school district in which the student resides may contribute to the reasonable costs of transporting the student to the scholarship recipient school with state aid available under AS 14.09.010 for transportation of the student.

(d) A scholarship received for the benefit of a student under this section must be used for educational purposes. A scholarship is transferable among participating schools.

#3 (e) A participating school shall include students who are enrolled under this section in the student count submitted to the district for purposes of calculating state aid under AS 14.17.610.

A

Sec. 14.31.025. Accountability and enrollment standards for a participating school. (a) A district shall accept a school for participation in the parental choice scholarship program if the school

(1) submits notice of participation to the district in which the student is a resident on a form approved by the district indicating that the school intends to participate in the program;

(2) meets the following financial accountability standards:

(A) demonstrates the school's financial ability to repay to the

district any overpaid scholarship funds; and

(B) certifies the actual annual costs to the school of educating a student, including a prorated amount for facility and operating costs; and

(3) is a school that is a

(A) public school or correspondence study program operated by the department or a district in the state under this title;

(B) charter school established under AS 14.03.250 - 14.03.290; or

(C) private school operated in compliance with AS 14.45.030 or AS 14.45.100 - 14.45.130.

(b) Nothing in this chapter authorizes a district or the state to regulate a participating private school except as necessary to carry out the program. and to meet applicable state and federal assement standards

#4 >

Sec. 14.31.035. District duties. (a) In implementing the parental choice scholarship program, the district shall

(1) make scholarship payments directly to the school quarterly after receiving proof satisfactory to the district that the student claimed under a scholarship attends the school on a full-time basis;

(2) make available to students and students' parents or guardians a list of schools that have been accepted to participate in the program; and

(3) provide a standard application for use by a school to enroll a student under the program; a school may, however, supplement the application.

(b) If the district denies or revokes acceptance of a school to participate in the program, the district shall, after administrative and judicial appeal periods have lapsed, immediately notify the affected students and the students' parents or guardians.

Sec. 14.31.040. Regulations. The department shall adopt regulations necessary to carry out the program in a manner that ensures the highest number of student and school participation, including

(1) procedures for calculating and distributing scholarships;

(2) timelines and procedures for application, renewal, and appeal for participating schools and students; and

(3) standards for acceptance, revocation, and denial for participating

#5 Add: Notwithstanding the standards for acceptance of a school for participation in the program under this section, a school district may not accept a school for participation in the program if the school participation will result in enrollment of fewer than ten students in a school in the district.

schools.

Sec. 14.31.045. Appropriations for scholarships. The legislature may appropriate parental choice scholarship program funds to the department for distribution to the districts. If the appropriation for the program is insufficient in a given fiscal year, the department shall distribute the available funds to the districts prorated by the number of participating students in the program.

Sec. 14.31.090. Definitions. In this chapter,

(1) "district" has the meaning given in AS 14.17.990;

(2) "private school" means a school located in the state that provides education to students attending grades kindergarten through 12, or any combination of those grades, and that does not receive state funding under AS 14.17;

(3) "program" means the parental choice scholarship program;

(4) "student" means a person residing in the state who is at least five years of age but not more than 21 years of age.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

CONTINGENCY. Section 1 of this Act takes effect only if an amendment to art. VII, sec. 1, Constitution of the State of Alaska, deleting the prohibition on the payment of public funds for the direct benefit of a private educational institution, is approved by the voters before July 1, 2013.

*** Sec. 3.** If, under sec. 2 of this Act, sec. 1 of this Act takes effect, it takes effect on the effective date of the constitutional amendment described in sec. 2 of this Act.

MEMORANDUM February 15, 2011

SUBJECT: Sectional Summary (HB 145 (Work Order No. 27-LS0223\I))

TO: Representative Wes Keller
Attn: Jim Pound

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Establishes a new program in the Department of Education and Early Development to be administered by school districts to provide for public funding of education at a private or public school in the state that is selected by a parent or guardian for students enrolled in grades kindergarten through 12. Describes eligibility, accounting, and enrollment standards.

Section 2. Provides a July 1, 2012 effective date for sec. 1 of the bill.

DISTRICT 14

SPONSOR STATEMENT

HB 145

"An Act establishing the parental choice scholarship program to be administered by school districts for the purpose of paying the cost of attending grades kindergarten through 12 at public and private schools; and providing for an effective date."

House Bill 145 could well be the next critical step in allowing today's Alaskan children to compete with the world on an equal footing educationally. We do not hear of parents who do not want the best education for their child. It goes without saying that a child's parent or guardian is in the best position to make a choice of which school is appropriate for their child, especially when some of our schools are plagued with high drop-out rates and lack of success.

Parents or guardians are the most important part of the education experience and HB 145 gives them an appropriate opportunity to participate. They will review the local options available and decide where their children need to go to get the best education possible. Public, private, correspondence schools will all be on the table to compete for the funding that the legislature sends to school districts each year.

HB 145- **"The Parental Choice Scholarship Program"** brings the quality of K-12 education to a new level. Graduating seniors will be better prepared for the next step in their lives. Schools will face competition, which means they must rise to the goal of excellence.

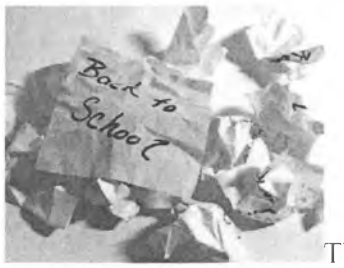
The Proving Grounds: School "Reform" in Washington, D.C.

by Leigh Dingerson

Washington, D.C., is leading the transformation of urban public education across the country—at least according to Time magazine, which featured D.C. Schools Chancellor Michelle Rhee on its cover, wearing black and holding a broom. Or perhaps you read it in Newsweek or heard it from Oprah, who named Rhee to her "power list" of "remarkable visionaries."



The model of school reform that's being implemented here is popping up around the country, heavily promoted by the same network of conservative think tanks and philanthropists like Bill Gates, Eli Broad, and the Walton Family Foundation that has been driving the school reform debate for the past decade. It is reform based on the corporate practices of Wall Street, not on education research or theory. (photo by Flickr user Avolore)

But there's nothing remarkably visionary going on in Washington. The model of school reform that's being implemented here is popping up around the country, heavily promoted by the same network of conservative think tanks and philanthropists like Bill Gates, Eli Broad, and the Walton Family Foundation that has been driving the school reform debate for the past decade. It is reform based on the corporate practices of Wall Street, not on education research or theory. Indications so far are that, on top of the upheaval and distress Rhee leaves in her wake, the persistent racial gaps that plague D.C. student outcomes are only increasing.

Chancellor Rhee helicoptered into Washington in 2007 promising to change the culture of the District of Columbia Public Schools (DCPS). Everyone cheered. But we weren't counting on the new culture coming straight out of Goldman Sachs. Suddenly, decisions were being made at the top and carried out with atomic force. Parents have been treated like consumers—informed about options and outcomes but denied a seat at the table. The district's teachers have been insulted in the national media, fired or laid off in record numbers, and replaced by less credentialed and less experienced newcomers. The model views teachers as a delivery system, not as professionals. High turnover is not just the result—it's the goal. Principals, too, are isolated and expendable. The district lauds the educational mavericks—principals whose "crusades" are described as "relentless" and "methodical"—those who see themselves as an army of one. We are becoming a district where the frontline workers are demoralized, people are looking out for themselves, and trust is all but gone.

Chancellor Rhee is the army of one at the top of the district's lurching reform. An articulate and supremely confident 39-year-old, Rhee is, for now, the movement's national poster child. Pundits debate her occasionally tactless comments in the media, but there has been little analysis of the reform model itself and how its "my way or the highway" culture affects students, parents,

Provided by Rep. Keller's Office

and teachers. Adopting the rhetoric for just one moment, in a cost-benefit analysis, are D.C. students gaining the benefits, or are we all paying the price?

The Proving Grounds

DCPS has a reputation as one of the worst school systems in the nation. But it has not always been so troubled.

Washington, with its gleaming white facades and manicured parks, is home to a complicated mix of people and politics. Long a majority African American city, D.C. has only been self-governing since 1973, when a 100-year-long fight for home rule forced Congress to hold elections for the city's mayor and city council. Congress still reviews all legislation passed by the council before it becomes law and retains authority over the District budget.

The vast public sector employment created by the federal government helped establish a significant black middle class that supported its public schools. Many African American parents and grandparents remember *their* schools as neighborhood institutions and gateways to success. But many of D.C.'s middle-class blacks have left for suburban counties in Maryland and Virginia. What remains is a city with stark divisions—some of the most affluent neighborhoods in the nation, and some of the poorest.

Most of D.C.'s public schools are intensely segregated—like the city's neighborhoods. Though DCPS uses a traditional neighborhood boundary system, students from anywhere in the city may enter a lottery for available seats in any school after neighborhood enrollment is complete. At the elementary level, most schools reflect the demographics of their communities. But in the city's more affluent western wards, white parents begin pulling their children out of DCPS before middle school, sending them to one of the city's boutique charters or elite private schools. The availability of "out-of-boundary" slots increases, making middle and high schools in these neighborhoods the most integrated in the city. Every D.C. high school is majority students of color.

Many of the District's African American and Latino children are from economically isolated and badly neglected communities. For decades, there have been too few resources and too much infighting to support those communities and help their children succeed. Rather than digging deep to address the social, economic, and educational issues involved, however, District leadership has focused on attracting young white professionals back to the urban core. In the late '90s and early 2000s, construction cranes towered over the skyline as block after city block became home to yet another luxury condominium complex. These "urban pioneers"—mostly young, white professionals—have begun to staunch the city's declining population numbers. As they've settled in, they've also become players in school politics.

The current wave of education reform began with Adrian Fenty, a young and energetic city council member, born and raised in D.C. Elected in 2000 at the age of 30, Fenty proved to be a charismatic and effective politician, and was reelected without opposition in 2004. In September 2006 he easily won the Democratic primary for mayor. In hugely Democratic D.C., the primary

is, for all intents and purposes, the general election. It was only *after* his September victory that Fenty announced his plan to take over the District's schools.

Day One:
Teachers Feel the Heat

The day after he took office in January 2007, Fenty introduced legislation to eliminate the city's elected school board and consolidate control of the schools in the mayor's office. The council passed the bill in April, and submitted it for congressional approval. Both the House and Senate approved the bill in May, and it was signed into law by then-President Bush on June 1. Twelve days later, Fenty held a press conference to introduce his new chancellor, Michelle Rhee.

Rhee had just three years of teaching experience, through Teach for America, and no experience running a school, let alone a school system. After dipping her toes in teaching, Rhee had gone on to found and lead the New Teacher Project, an organization that collaborates with school districts to recruit, train, and develop teachers for high-needs schools.

Rhee lost no time proclaiming what was wrong in D.C.: "I know what the obstacles are in these systems that are not conducive to effecting change," Rhee said at the press conference.

The implications of her pronouncement were not lost on those who had been following the national education debate. Over the past decade, research funded by conservative foundations has systematically built a case for transforming teaching as a profession. It began with research connecting "high-quality" teachers to student academic gains. Therefore, pundits began to surmise, low-performing students must just have lazy or incompetent teachers. Once teachers were to blame, it was a hop, skip, and a jump to find the culprit—teachers' unions and collectively bargained contracts that guarantee teachers due process before dismissal. The rhetorical attack on teachers has been shrill enough to stifle what the *rest* of the decade's research has shown: that teachers generally get *better* with experience and support; that meaningful parent engagement, strong school leadership, and student-centered learning climates must also be present for schools to succeed; and that no single component by itself can carry a school and its students to their full potential.

Amidst the clamor of teacher bashing, some D.C. teachers experienced Rhee's comments as a bull's-eye drawn on their backs. "We were troubled by her remarks," recalls Kerry Sylvia, a veteran teacher at the city's Cardozo High School. It seemed clear that the "obstacles" that Rhee was referring to were district teachers.

Sweeping Change

In her first months, Rhee demonstrated the frenetic pace of activity that has become her trademark. In the southern heat and humidity of a D.C summer, Rhee crisscrossed the city, meeting with principals and cutting through the district's legendary red tape. Warehouses full of textbooks were emancipated, classrooms stocked. Checks were cut, paint was slapped on, and creaky gears started turning. Many—including principals and parents—were impressed. By the time school started, there was a palpable feeling of forward motion.

At the same time, Rhee was meeting privately with officials from the Gates and Broad foundations, the California-based NewSchools Venture Fund, the American Enterprise Institute, and other key players in the school reform movement. Adrian Fenty and Chancellor Rhee were their new darlings.

That spring, Rhee began firing principals. Sixty-one principals and assistant principals were fired at the end of the school year. Next came the teachers. By July of 2008, according to some reports (neither DCPS nor the Washington Teachers' Union will release actual numbers), Rhee had fired 250 teachers and 500 teachers aides, avoiding union due-process rules by utilizing the "highly qualified" certification requirements of the federal No Child Left Behind Act.

In October, stymied by her inability to negotiate a contract with the union (she wanted, among other things, new provisions in the contract to make it easier for her to fire teachers), Rhee announced that she would implement a little-used procedure allowing principals to place teachers on a 90-day "improvement plan," with the ability to fire them immediately after that.

All the Blame, Not Enough Support

It is worth noting that, as a so-called "education reformer," Rhee has not focused on content or pedagogy. There have been no initiatives to improve teacher induction or strengthen instructional practice. The focus has remained on management and staffing, and the tone has been judgmental rather than supportive.

One of Rhee's early priorities was to establish a new teacher evaluation system that would, in part, make it easier to fire teachers based on their students' performance on standardized tests. It's the latest Wall Street concept embraced by the reformers. Indeed, U.S. Secretary of Education Arne Duncan has proposed that federal funding be contingent upon states developing teacher evaluations directly linked to student test scores. Rhee hoped to set the standard.

Her "director of human capital strategy" took the lead in designing the new system, called IMPACT. It was launched in the 2009–10 school year and again put Rhee into the national spotlight.

IMPACT is a complicated web of more than 20 separate evaluation processes. For teachers unlucky enough to teach subjects and grade levels with test data, 50 percent of their evaluation is based on a patently preposterous calculation of their effect on student scores. Teachers also undergo five short observations by their principal or a "master teacher," based on an extensive "teaching and learning framework" with dozens of indicators. One of the biggest concerns has been that IMPACT will snare some of the district's best teachers in its web—those who refuse to teach to the tests or conform to a checklist of specific practices. The Washington Teachers' Union was worried enough to demand a working group to monitor IMPACT's implementation and results.

Meanwhile, after three years of contentious negotiation, the union and the chancellor announced agreement on a new contract in the spring of 2010. The contract attached bonus money to teacher evaluations and included a significant increase in salaries (ratification of the new contract was

stalled briefly when it was revealed that the salary increases were being funded with $64.5 million in one-time grants from the Broad and Walton foundations, among others, and that the grants were predicated on Rhee continuing as chancellor).

Throughout contract negotiations and the roll out of the IMPACT system, Rhee continued to target career teachers, in action and words. In the spring and summer of 2009 the district hired more than 900 new teachers—three times the usual number of summer hires. Then, in October, Rhee announced that a newly discovered budget shortfall required that 266 teachers be laid off. Because the layoffs were budget related, principals were free to ignore the "last hired-first fired" rules in the union contract. According to the union, a substantial number of the laid-off teachers were older, more senior teachers, rather than those who had been hired the previous spring and summer. Students and parents protested as beloved teachers and counselors were yanked out of buildings.

The layoffs created a firestorm of protest as classes were disrupted just weeks into the school year. The crisis got hotter when Rhee's budget shortfall could not be verified and to some appeared contrived. But the final straw for many teachers was when the chancellor, in an interview with *Fast Company* magazine, justified the layoffs by saying, "I got rid of teachers who had hit children, who had had sex with children, who had missed 78 days of school." Rhee was excoriated for the remark, which proved to be a gross overstatement, but the ousted teachers remained on the curb.

It was just one more in a series of what veteran teachers saw not only as personal attacks, but also as an indication that Rhee had no understanding of the challenges that they and their students face each day.

"It creates a very individualized and isolating feeling in the school," says Sylvia, whose school population includes almost 100 homeless teens. "Our kids come in with a host of real problems. . . . Teachers in the community need to be part of the process, not the object of it. . . . Feeling under attack all the time isn't conducive to collaboration."

Chris Bergfalk, a teacher at H.D. Cooke Elementary School, is convinced that the attacks on teachers spill over into the consciousness of parents as well. "You can feel it," he says. "Parents come into the classroom thinking that teachers are the enemy. . . . It takes more than one meeting, sometimes, before the parents decide that you're OK and basically competent. . . . I've never felt this level of suspicion and mistrust from my students' parents."

Crystal Sylvia, Kerry's sister and a social worker at a struggling but improving elementary school, has a different way of putting it. "We get the message: If we were here, working in the schools before the chancellor arrived, we are part of the problem."

In a fall 2009 survey of teachers conducted by DC VOICE, an education advocacy group, 80 percent of teachers, when asked whether they liked the way the school system was run, said "no." Many of those said their chief complaint was the lack of respect and the blame cast upon teachers. It is difficult to imagine any CEO who has so severely alienated her own workforce being dubbed a "remarkable visionary" in the national press.

But Rhee wasn't done. On July 23, 2010, she announced 165 additional teacher firings. Of those, 76 were dismissed as a result of poor evaluations under IMPACT. And, as feared, some of the fired teachers were among the most experienced, dynamic, and beloved educators in the system. Rhee boasted that more than 700 *additional* teachers had been judged "minimally effective" through IMPACT, and that a significant number of *them* would no doubt be fired after the next school year. The union's working group had not even met.

Even before the most recent dismissals, Rhee's transformation of the D.C. teacher workforce has been significant. Almost 40 percent of the teachers now working in DCPS entered the workforce since the chancellor arrived. In the recently completed school year, 120 of those teachers were placed through Teach for America—virtually guaranteeing continued high teacher turnover in district classrooms.

The Living Room Approach to Community Engagement

Chancellor Rhee's approach to parents and communities has been nearly as tone deaf as her dealings with teachers. "She creates lots of opportunities for people to learn what's going on," reflects Jill Weiler, a DCPS parent and community organizer. "I think she really does listen. But it doesn't seem to influence her." For example, in December 2007, Rhee announced the closing or consolidation of two dozen schools. Parents, teachers, and students were frustrated at Rhee's failure to *inform*, much less involve the impacted communities before the announcement. As required by district rules, Rhee subsequently held a series of community hearings at the affected schools, but made few changes to the plan.

Then, in April 2008, Rhee announced that as many as 10 high schools would undergo federally mandated "restructuring," and that several would be placed under external management. Rhee promised school communities a voice in selecting from among six "partner" organizations she had chosen. But at Anacostia High School, the parents' choice of outside partner was rejected. Instead, Rhee chose Friendship Public Charter School—a charter management organization with five D.C. charter schools—to take over operations at Anacostia. Marvin Tucker, a DCPS parent and assistant football coach at Anacostia, was frustrated by the process: "DCPS doesn't want parent participation. Neither does Friendship." The new management group fired 85 percent of Anacostia's teachers and disbanded the school's Local School Restructuring Team (LSRT)—a DCPS advisory council of teachers and parents at each school.

Rhee isn't deaf to all voices. Her inconsistency exploded into the media in December 2009 when she announced the replacement of the principal at Hardy Middle School—one of the top performing schools in the city, and also one of the most racially mixed. Hardy's art-centered curriculum draws students from across the city to fill seats not taken by students from the surrounding affluent Georgetown community. When a $48 million renovation at the school was completed in 2009, it became at least a more physically attractive option for neighborhood parents. But apparently there was still concern. After the chancellor abruptly announced that she was removing the popular (and by all measures, successful) principal, it was revealed that she had met in a private living room with a dozen Georgetown parents. The group had complained that they didn't feel "welcome" at Hardy.

The announcement set off a firestorm at Hardy, where teachers and parents—even the school's LSRT—had not been consulted or informed of the chancellor's decision. At a subsequent community meeting at the school, emotions were raw. The racial implications of the move were unavoidable, as Rhee tried to explain why she had met privately with a small group of white parents but failed to discuss the move with the school's mostly African American parent leadership. Jeffrey Watson, a parent of two Hardy students, charged that Georgetown neighborhood parents stayed away because they were not comfortable with the racial composition of the school, reported the *Washington Post*. "Don't play games with people in here. We're not stupid," Watson said at the school hearing. "Rather than having private meetings with them, tell them to walk on over." Despite impassioned pleas from teachers, parents, and students to reinstate the principal, Rhee refused to budge.

Her decisions at Hardy and elsewhere are clear nods to the District's changing demographics. Since 2000—with the proliferation of luxury condominiums and the boom in the housing market—the District has gained 16,000 residents. The city's white population has increased from 30 percent to 40 percent of the total, and the African American population has decreased from 60 percent to 54 percent. Per capita income (adjusted for inflation) has increased from $28,659 to more than $41,000.

The effort to bring middle-class whites back to the city's public schools may be a laudable one, Rhee's process notwithstanding. But for the district's high-profile reform efforts, there is another advantage, whether the chancellor intends it or not.

D.C.'s Education Miracle a Chimera?

Despite glowing reports from the adoring media, D.C.'s education miracle is a chimera at best. There have been dramatic drops in standardized assessment scores, and, on closer analysis, the highly touted increases in D.C. National Assessment of Educational Progress (NAEP) scores are a reflection of the changing demographics of the schools, not the result of any real improvement in the quality of education provided to D.C.'s poorest and neediest students.

Bergfalk has taught in the district for seven years, and was a finalist for D.C. Teacher of the Year in 2010. As a teacher, he is focused and energetic.He is also deeply skeptical. In March 2009, the district announced that the new NAEP scores showed dramatic student increases and progress in closing D.C.'s persistent achievement gap. Bergfalk decided to check it out for himself. Using NAEP's own interactive website, Bergfalk deconstructed the data.

"These test scores are not the result of an increase in student achievement. Instead, they are a result of a change in who was tested," says Bergfalk. He found that for the 4th-grade test, the percentage of African American kids in DCPS (the lowest scoring racial/ethnic group in D.C.) taking the test dropped from 67 percent of test takers to 53 percent of test takers between 2007 and 2009, while the percentage of Hispanic students (with average test scores 12 points higher) rose from 6 percent to 9 percent of test takers, and white students rose from 6 percent to 7 percent of test takers. Where aggregate scores appear to show improvement among DCPS students, the disaggregated data tell a different story. The district continues to have one of the highest achievement gaps among major U.S. cities.

Bergfalk found the same pattern on the 8th-grade NAEP reading test. The percentage of African American kids in DCPS taking the test dropped from 59 percent of test takers to 43 percent of test takers, which is why there was a statistically significant four-point increase overall from 2007 to 2009, but no statistically significant increase for any racial/ethnic subgroup. The overall increase, like that on the 4th-grade test, was again the result of a change in demographics rather than an increase in student achievement.

When DCPS released the results of local assessments in July 2010, the district touted what it called "unparalleled progress" in secondary school results. But at the elementary level, scores took a hit—in some schools dropping by more than 30 percent the past two years. Students in half of all D.C. public schools performed worse in the 2010 assessments than they did in 2009.

The Price of Autocratic Reform

In a Feb. 1, 2010, article, the *Washington Post* reported that approval ratings for Mayor Fenty and his schools chief had dropped precipitously. The poll showed Chancellor Rhee's approval rating had sunk from 59 percent of residents in January 2008 to 43 percent in early 2010.

The numbers are crucial for Fenty: The mayor is up for reelection this fall, and the race is being cast as hinging on public support for his school reform agenda. Fenty's challenger, Vincent Gray, the current chair of the city council, has been a critic of Rhee's leadership: "We need a mayor who understands that the best way to achieve real and lasting school reform is to involve the community. The best way to help every community in the district is to engage teachers, engage parents, engage principals, and engage students in the decision-making."

Mary Filardo, director of the 21st Century School Fund, agrees. "School change should be about students, families, and communities taking ownership of their schools. "Although there is the *illusion* that parents may have more access—that Michelle Rhee will answer their emails—there is meager civic life around the public schools."

Cathy Reilly, who leads the Senior High School Alliance of Parents, Principals, and Educators, notes: "It's not an empowering model. . . . The players in the system—parents, teachers, and principals—are supposed to understand that things are being 'fixed' and to get with the program, or get out."

For many parents and teachers, the problem with Rhee's approach was best summed up by Diane Ravitch, former undersecretary at the Department of Education under President George H.W. Bush. Ravitch, speaking at a reception in D.C. last spring, was asked what she thought of D.C. school reform. Ravitch responded with the timeless adage, "It's difficult to win a war when you're firing on your own troops."

Michelle Rhee on D.C. Kids' 'Crappy Education'

Firebrand Schools Chancellor Michelle Rhee, the National Face for Education Reform, Could Lose Her Job

By Z. BYRON WOLF and LEE FERRAN

Sept. 16, 2010

"They are getting a crappy education," Rhee said while discussing the district's schoolchildren in an interview with ABC News. "I mean, you could try to sugar coat it all you want. Subpar, or whatever. But what it is in terms that everyone can understand -- they are getting a crappy education."

It could be comments like that, not to mention aggressive and controversial education policies, landed Rhee in the spotlight of a new documentary "Waiting for Superman," and could also cost her her job.

Rhee, who has become the national face of education reform, could end up jobless after D.C. voters ousted Mayor Adrian Fenty.

Under Rhee's three-year watch, more than 200 teachers have been fired, nearly 20 schools closed and pay has been tied to merit evaluations. But test scores have shot up for elementary and secondary school students, and teachers' salaries were raised.

"The situation we inherited three years ago in Washington, D.C., was absolutely deplorable," Rhee said. "People need to understand that and if that makes people uncomfortable, then so be it."

The victor in Tuesday's Democratic primary -- and therefore almost a sure winner come November in this overwhelmingly Democratic city -- is City Council Chairman Vincent Gray, a chief Rhee antagonist at oversight hearings.

Gray has not said he would fire Rhee, but he hasn't said he would keep her on either.

"I have said on many occasions that after this election is over, I'd like to sit down with Michelle Rhee and let us walk and talk through it, you know, how we might work together," Gray said on CNN Tuesday.

Rhee had campaigned for Fenty. The Washington Teacher's Union campaigned for Gray.

"This has been a significant change in direction and it's going to require me sitting down with Mayor Fenty, the chairman and other people to see what's in the best interests of our kids," Rhee said Wednesday in an interview with MSNBC.

Rhee Feels Guilty About Fenty Loss

"I do feel sort of bad and guilty," she said. "This man, Adrian Fenty, is truly the best leader I've ever worked for. We need more leaders like him who are willing to stake everything to make sure our kids are getting a good education."

Obviously, D.C. voters disagree. And so do the leaders of local and national teachers unions.

An op-ed Wednesday morning by George Parker, president of the Washington Teacher's Union, and Randi Weingarten, president of the American Federation of Teachers, made no mention of Rhee. The article was titled "No Turning Back for D.C. Kids," and it suggested that the teachers would be happier and work more collaboratively with Gray.

"Public education is a marathon, not a sprint. Yes, there's urgency to fixing our schools, but we have to set ourselves on a long-term path toward constant and sustainable progress," wrote the union leaders.

President Obama stayed out of the race, but Secretary of Education Arne Duncan appeared at an event with Fenty and Rhee in the closing days of the election. It was not a campaign event, but Duncan announced the award of $75 million in new federal funding for D.C. schools. He was noticeably absent from any event with Gray.

Rhee Tackles Classroom Challenge

By Amanda Ripley / Washington

In 11th grade, Allante Rhodes spent 50 minutes a day in a Microsoft Word class at Anacostia Senior High School in Washington. He was determined to go to college, and he figured that knowing Word was a prerequisite. But on a good day, only six of the school's 14 computers worked. He never knew which ones until he sat down and searched for a flicker of life on the screen. "It was like Russian roulette," says Rhodes, a tall young man with an older man's steady gaze. If he picked the wrong computer, the teacher would give him a handout. He would spend the rest of the period learning to use Microsoft Word with a pencil and paper.

One day last fall, tired of this absurdity, Rhodes e-mailed Michelle Rhee, the new, bold-talking chancellor running the District of Columbia Public Schools system. His teacher had given him the address, which was on the chancellor's home page. He was nervous when he hit SEND, but the words were reasonable. "Computers are slowly becoming something that we use every day," he wrote. "And learning how to use them is a major factor in our lives. So I'm just bringing this to your attention." He didn't expect to hear back. Rhee answered the same day. It was the beginning of an unusual relationship.

The U.S. spends more per pupil on elementary and high school education than most developed nations. Yet it is behind most of them in the math and science abilities of its children. Young Americans today are less likely than their parents were to finish high school. This is an issue that is warping the nation's economy and security, and the causes are not as mysterious as they seem. The biggest problem with U.S. public schools is ineffective teaching, according to decades of research. And Washington, which spends more money per pupil than the vast majority of large districts, is the problem writ extreme, a laboratory that failure made. (See pictures of a diverse group of American teens.)

Rhee took over Anacostia High and the district's 143 other schools in June 2007, when Mayor Adrian Fenty named her chancellor. Her appointment stunned the city. Rhee, then 37, had no experience running a school, let alone a district with 46,000 students that ranks last in math among 11 urban school systems. When Fenty called her, she was running a nonprofit called the New Teacher Project, which helps schools recruit good teachers. Most problematic of all, Rhee is not from Washington. She is from Ohio, and she is Korean American in a majority-African-American city. "I was," she says now, "the worst pick on the face of the earth."

But Rhee came highly recommended by another prominent school reformer: Joel Klein, chancellor of New York City's schools. And Rhee was once a teacher--in a Baltimore elementary school with Teach for America--and the experience convinced her that good teachers could alter the lives of kids like Rhodes.

Anacostia High has a 24% graduation rate, and only 21% of its students read at grade level. Rhodes is well aware of the miserable statistics, and when he first saw his new chancellor from afar, he thought she looked petite, foreign and underqualified. "I was like, She doesn't look ready for urban kids." But after they exchanged e-mails, he agreed to meet her downtown. He realized almost at once that he had underestimated her. "She actually sat

with me," he says, "and talked eye to eye, like I was one of her co-workers." They decided to meet again, this time at Anacostia High. Rhodes began to talk about Rhee to his classmates, and they started writing an agenda for the meeting, detailing all the things that were wrong with the D.C. school system. They had much to tell.

Rhee has promised to make Washington the highest-performing urban school district in the nation, a prospect that, if realized, could transform the way schools across the country are run. She is attempting to do this through a relentless focus on finding--and rewarding--strong teachers, purging incompetent ones and weakening the tenure system that keeps bad teachers in the classroom. This fall, Rhee was asked to meet with both presidential campaigns to discuss school reform. In the last debate, each candidate tried to claim her as his own, with Barack Obama calling her a "wonderful new superintendent."

Hard as it is to imagine Washington schools ranking among the best in the country, the city does have some things working in its favor. The system is relatively small, making it easier to redirect. As in New York City, the board of education was recently dissolved, which means changes can be made without waiting for the blessing of a fractious body of overseers. And now that a third of Washington's kids are in charter schools, there is intense pressure on the public system to keep the students it still has. If they keep fleeing the system at the current rate, enrollment will drop 50% every 10 years.

Each week, Rhee gets e-mails from superintendents in other cities. They understand that if she succeeds, Rhee could do something no one has done before: she could prove that low-income urban kids can catch up with kids in the suburbs. The radicalism of this idea cannot be overstated. Now, without proof that cities can revolutionize their worst schools, there is always a fine excuse. Superintendents, parents and teachers in urban school districts lament systemic problems they cannot control: poverty, hunger, violence and negligent parents. They bicker over small improvements such as class size and curriculum, like diplomats touring a refugee camp and talking about the need for nicer curtains. To the extent they intervene at all, politicians respond by either throwing more money at the problem (if they're on the left) or making it easier for some parents to send their kids to private schools (if they're on the right).

Meanwhile, millions of students left behind in confused classrooms spend another day learning nothing.

A Teacher from Toledo

ONE DAY IN AUGUST, I SPENT THE MORNING with Rhee as she made surprise visits to Washington public schools. She emerged from her chauffeured black SUV with two BlackBerrys and a cell phone and began walking--fast--toward the front door of the first school. She wore a black pencil skirt, a delicate cream blouse and strappy high heels. When we got inside, she walked into the first classroom she could find and stood to the side, frowning like a specter. When a teacher stopped lecturing to greet her, she motioned for the teacher to continue. Rhee smiled only when students smiled at her first. Within two minutes, she had seen enough, and she stalked out to the next classroom.

In the hallway, she muttered about teachers who spend too much time cutting out elaborate bulletin-board decorations or chitchatting at "morning meetings" with their third-graders before the real work begins. "We're in Washington, D.C., in the nation's capital," she said later. "And yet the children of this city receive an education that every single citizen in this country should be embarrassed by." (See pictures of teens and how they would vote.)

In the year and a half she's been on the job, Rhee has made more changes than most school leaders--even reform-minded ones--make in five years. She has shut 21 schools--15% of the city's total--and fired more than 100 workers from the district's famously bloated 900-person central bureaucracy. She has dismissed 270 teachers. And last spring she removed 36 principals, including the head of the elementary school her two daughters attend in an affluent northwest-D.C. neighborhood.

Rhee is convinced that the answer to the U.S.'s education catastrophe is talent, in the form of outstanding teachers and principals. She wants to make Washington teachers the highest paid in the country, and in exchange she wants to get rid of the weakest teachers. Where she and the teachers' union disagree most is on her ability to measure the quality of teachers. Like about half the states, Washington is now tracking whether students' test scores improve over time under a given teacher. Rhee wants to use that data to decide who gets paid more--and, in combination with classroom evaluation, who keeps the job. But many teachers do not trust her to do this fairly, and the union bristles at the idea of giving up tenure, the exceptional job security that teachers enjoy.

Rhee grew up in a nice neighborhood in Toledo, Ohio, a middle child, between two brothers. Her parents immigrated from South Korea several years before she was born so that her father could study medicine at the University of Michigan. He became a specialist in rehabilitation and pain medicine, and her mother owned a women's clothing store. Education was highly valued in the family, as was independence. After Rhee finished sixth grade, her parents sent her to South Korea to live with an aunt and attend a Korean school, a harrowing experience for a child in a strange land with limited skills in its language. When she returned a year later, her parents sent her to a private school because they found the public schools lacking.

After Rhee graduated from Cornell University in 1992, she joined Teach for America. She spent three years teaching at Harlem Park Elementary, one of the lowest-performing schools in Baltimore. Her parents visited and were stunned by the conditions of the neighborhood. "The area where the kids lived reminded me of a scene after the Korean War," says her father Shang Rhee.

Rhee suffered during that first year, and so did her students. She could not control the class. Her father remembers her returning home to visit and telling him she didn't want to go back. She had hives on her face from the stress.

The second year, Rhee got better. She and another teacher started out with second-graders who were scoring in the bottom percentile on standardized tests. They held on to those kids for two years, and by the end of third grade, the majority were at or above grade level, she says. (Baltimore does not have good test data going back that far, a problem that plagues many districts, so this assertion cannot be checked. But Rhee's principal at the time has confirmed the claim.) The experience gave Rhee faith in the power of good teaching. Yet what happened afterward broke her heart. "What was most disappointing was to watch these kids go off into the fourth grade and just lose everything," Rhee says, "because they were in classrooms with teachers who weren't engaging them."

The summer after her second year of teaching, Rhee met Kevin Huffman, a fellow Teach for America member. They married two years later and had two daughters, Starr and Olivia, now 9 and 6. They moved to Colorado to be closer to Rhee's parents, but the marriage faltered. Huffman and Rhee separated, agreeing to joint custody of the kids. And then Rhee got the offer to run Washington's schools. Huffman, now head of public affairs for Teach for America, had no illusions about the challenges Rhee would face. But when he heard about

the job offer, he decided to follow her to D.C. "Even though moving didn't sound like a whole lot of fun," he says, "the reality is that I genuinely believed that she had the potential to be the best superintendent in the country. Most people think about their own longevity, about political considerations." He adds, "Very few people genuinely don't care about anything other than the end result for kids. Michelle will compromise with no one when it comes to making sure kids get what they deserve."

Scorched Earth

WHEN THEY ARRIVED IN WASHINGTON, Huffman and Rhee anted up. They enrolled Starr and Olivia in Oyster-Adams, a public elementary school. Although the school is considered among the best in the city, Rhee quickly concluded that it was inferior to the Colorado public school her daughters had been attending. Among other things, the homework was sporadic and unchallenging, she says. Rhee dismissed the principal before the school year was out, a move that sparked outrage across the city and in her own home. "That," she says, "was probably the decision I got the most grief about."

Rhee is, as a rule, far nicer to students than to most adults. In many private encounters with officials, bureaucrats and even fundraisers--who have committed millions of dollars to help her reform the schools--she doesn't smile or nod or do any of the things most people do to put others at ease. She reads her BlackBerry when people talk to her. I have seen her walk out of small meetings held for her benefit without a word of explanation. She says things most superintendents would not. "The thing that kills me about education is that it's so touchy-feely," she tells me one afternoon in her office. Then she raises her chin and does what I come to recognize as her standard imitation of people she doesn't respect. Sometimes she uses this voice to imitate teachers; other times, politicians or parents. Never students. "People say, 'Well, you know, test scores don't take into account creativity and the love of learning,'" she says with a drippy, grating voice, lowering her eyelids halfway. Then she snaps back to herself. "I'm like, 'You know what? I don't give a crap.' Don't get me wrong. Creativity is good and whatever. But if the children don't know how to read, I don't care how creative you are. You're not doing your job."

See pictures of a diverse group of American teens.

See pictures of the college dorm's evolution.

Rhee's ferocity has alienated many people--even those who support her ideas and could be helpful to her. This summer the chair of the Washington city council called dealing with Rhee a "nightmare." There has been talk of passing legislation to rein her in. "Michelle Rhee believes in scorched earth," says Randi Weingarten, president of the American Federation of Teachers, a national union that has become unusually involved in local matters in Washington. "I am not saying that D.C.'s school system doesn't need a lot of help. But I have been part of a lot of reforms, and the one thing I have never seen work is a hierarchical, top-down model."

Rhee is aware of the criticism, but she suggests that a certain ruthlessness is required. "Have I rubbed some people the wrong way? Definitely. If I changed my style, I might make people a little more comfortable," she says. "But I think there's real danger in acting in a way that makes adults feel better. Because where does that stop?"

The Data

ON RHEE'S TOUR OF SCHOOLS DURING the first week of classes this year, a parent stopped her to praise her accomplishments so far. Rhee listened with a small smile while systematically cracking each of her knuckles with the thumb of the same hand. Then she got back into her SUV and began furiously e-mailing. When she calls her staff, she does not say hello; she just starts talking. She answered 95,000 e-mails last year, according to her office.

She frequently sounds exasperated. "People come to me all the time and say, 'Why did you fire this person?'" she says. The whiny voice is back. "'She's a good person. She's a nice person.' I'm like, 'O.K., go tell her to work at the post office.' Just because you're a nice person and you mean well does not mean you have a right to a job in this district."

The data back up Rhee's obsession with teaching. If two average 8-year-olds are assigned to different teachers, one who is strong and one who is weak, the children's lives can diverge in just a few years, according to research pioneered by Eric Hanushek at Stanford. The child with the effective teacher, the kind who ranks among the top 15% of all teachers, will be scoring well above grade level on standardized tests by the time she is 11. The other child will be a year and a half below grade level--and by then it will take a teacher who works with the child after school and on weekends to undo the compounded damage. In other words, the child will probably never catch up.

The ability to improve test scores is clearly not the only sign of a good teacher. But it is a relatively objective measure in an industry with precious few. And in schools where kids are struggling to read and subtract, it is a prerequisite for getting anything else done. In their defense, Washington teachers and principals, like educators in many of the country's worst school districts, talk about trying to teach a seventh-grader who is eight months pregnant; about being assaulted by students; about holding meetings for parents, replete with free food, and no one showing up. Washington Teachers' Union leader George Parker worries that test-score data cannot take all this into account: "I don't think our teachers are afraid of demonstrating student growth, but you have to look at the dynamics of the children you're dealing with. If I'm teaching children who have computers at home, who have educated parents, those students can move a lot faster than kids whose parents can't read."

Rhee says she does not expect all kids to move up the charts at the same rate; the important thing is to demand that most do move up. "This is a cultural shift," says Kaya Henderson, Rhee's deputy. "For years, there were no data, and you were a good teacher because the parents or your principal told you so. And so this is a scary thing."

The most glaring example of the backward logic of schools is the way most teachers receive lifetime job security after one or two years of work. As Larry Rosenstock, CEO of eight California charter schools, noted at an education panel last spring, we don't give that kind of job security to pilots or doctors--or any others who hold our children's fate in their hands: "What is it that is so exceptional about teachers that they should have this unique right?"

Teachers got tenure rights in the early 20th century to protect them against meddling politicians and school-board members who treated their jobs as patronage pawns. But the rationale is plainly antiquated. Today dozens of federal and state laws protect teachers (and other people) from arbitrary firing. But most teachers still receive tenure almost automatically. In fact, even before they get tenure, they are rarely let go. Schools spend millions of dollars evaluating teachers, but principals have little incentive to shake up their staffs, and so most teachers end up scoring near the top. "What I'm finding is that our principals are ridiculously--like ridiculously--conflict-averse," Rhee says. "They know someone is not so good, and they want to give him a 'Meets expectations' anyway because they don't want to deal with the person coming into the office and yelling and getting the parents riled up."

Right now, schools assess teachers before they teach--filtering for candidates who are certified, who have a master's degree, who have other pieces of paper that do not predict good teaching. And we pay them the same regardless of their effectiveness.

By comparison, if we wanted to have truly great teachers in our schools, we would assess them after their second year of teaching, when we could identify very strong and very weak performers, according to years of research. Great teachers are in total control. They have clear expectations and rules, and they are consistent with rewards and punishments. Most of all, they are in a hurry. They never feel that there is enough time in the day. They quiz kids on their multiplication tables while they walk to lunch. And they don't give up on their worst students, even when any normal person would.

See pictures of teens and how they would vote.

See pictures of college mascots.

Students know this instinctively. Acquirra Carter, 14, attends Washington's Cardozo High School, where, she complains, kids walk out of classes when they get bored and certain teachers talk on their cell phones when they are supposed to be teaching. But there are exceptions, and Carter knows them when she sees them. "Some teachers find a way. Mrs. Brown, they would not dare walk out of her class. She has total control. Mrs. Lawton, nobody leaves her class. This boy whispered, and she knew it!"

Minefields in the Schoolyard

IN THE VIEW OF RHEE AND REFORMERS like her, the struggle to fix America's failing school system comes down to a simple question: How do you get the best teachers and principals to work in the worst schools? In her quest to figure this out, Rhee has already suffered a major setback. Earlier this year, she proposed a revolutionary new model to let teachers choose between two pay scales. They could make up to $130,000 in merit pay on the basis of their effectiveness--in exchange for giving up tenure for one year. Or they could keep tenure and accept a smaller raise. (Currently, the average teacher's salary in Washington is $65,902.) The proposal divided the city's teachers into raging, blogging factions. This fall, the union declined to put Rhee's proposal to a vote, and its relationship with her has become increasingly hostile.

In October, Rhee vowed to purge incompetent teachers through any means necessary. She has brought on extra staff to help principals navigate the byzantine termination process and says an unprecedented number of teachers have already been put on notice. But she cannot give teachers the huge raises she proposed unless the union agrees to a new contract. So this approach will be slower, more litigious and less inspiring. In other words, it will be all stick and no carrot. It's hard to say if anyone else would have been able to persuade the union to trade away tenure for cash bonuses, but Rhee's sometimes dismissive attitude made it harder for some teachers to trust her.

For now, Mayor Fenty says he still has full confidence in Rhee, and he claims that Washington residents share his enthusiasm. "Regular people love the fact that for once someone is making tough decisions for D.C. schools," says Fenty, who attended the district's public schools. But the disconnect between Rhee's confident, sweeping rhetoric and the tortured reality is sizable, and it is most apparent at ground level, in the schools she is trying to save.

Rhee likes to tell the story of how Rhodes got in touch with her. She recounted it on TV on The Charlie Rose Show in July: "A student sent me this e-mail and said, basically, If you really want to know what's wrong with our schools, you should come and talk to the kids because I'm afraid that by talking to the adults, you might not be getting the real story."

Rhodes has a more nuanced version of the story. After their initial meeting, they met for a second time at Anacostia High, in a room off the library. Rhodes had invited eight fellow students, and they gave Rhee their typed agenda. They talked about the need for better teachers, as Rhee emphasizes when she tells the story. But Rhodes says he also told her about the holes in the floors, the lack of supplies and the fact that most classes did not have enough books for the students to take home. Rhee listened but did not offer many specific solutions. "She was vague," Rhodes says. "I got the sense she didn't want to make promises she couldn't keep."

Then one day last May, Rhee dismissed Anacostia's principal. Rhodes was devastated. He sent Rhee a furious e-mail. "My principal is a mother, mentor and a teacher to us all," he wrote. "I refuse, NO! we refuse the students of Anacostia to let her go." Rhee wrote him back. "She told me not to worry about it," Rhodes says quietly.

One of the things that make school reform so wrenching and slow is that schools become embedded in people's hearts. This is true in rich neighborhoods and poor ones, with good

schools and bad. Rhodes talks about his school as if it were an extension of himself. He talks about "my teachers" and "my staff," and he refers to other students as "my colleagues." "I love Anacostia High School," he says. At the same time, he is dismayed by his school. He walks through his halls, pointing out the litter on the floor and the broken lockers. Rhodes is 6 ft. 8 in. (2 m) tall, so he has to look down to talk to almost everyone. He wears white tube socks under his black Nike flip-flops and carries his large frame deliberately, like a gentle overseer. "You see all these lockers? None of them work," he says. "This classroom over here is supposed to be for home economics, but it's never been fixed up."

Rhodes did not contact Rhee again. This year Anacostia has a new principal, and Rhodes admits that the school is functioning better. "All the children are wearing their uniforms," he says. "No kids are in the hallways." If you come to school without your uniform on, a security guard or an assistant principal will "snatch you up and just send you home." All the computers in his Microsoft Word classroom now work.

But on Nov. 19, Rhodes had to evacuate his school when fights broke out in the hallways and three students were stabbed. And he still doesn't use the school bathrooms, which are filthy and sometimes unsafe. He waits until he returns to his grandmother's house, where he lives.

Now that he is a senior, Rhodes spends much of his time worrying about getting into college. As we stand on the front steps of the school one autumn evening after class, I ask him what he wants to study. He answers quickly: "Public administration, with a minor in English." I ask him how he can be so sure. "Because someone told me that's what I have to do to take Chancellor Rhee's job," he says matter-of-factly, watching his drum corps practice and his baton twirlers twirl in the twilight.

AS 14.17.410. Public School Funding.

(a) A district is eligible for public school funding in an amount equal to the sum calculated under (b) and (c) of this section.

(b) *Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:*

(1) state aid equals basic need minus a required local contribution and *90 percent of eligible federal impact aid* for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470 ; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450 ;

(B) the number obtained under (A) of this paragraph is multiplied by the district cost factor described in AS 14.17.460 ;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420 (a)(1);

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110 , not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

(c) In addition to the local contribution required under (b)(2) of this section, a city or borough school district in a fiscal year may make a local contribution of not more than the greater of

(1) the equivalent of a two mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110 ; or

(2) 23 percent of the district's basic need for the fiscal year under (b)(1) of this section.

(d) State aid may not be provided to a city or borough school district if the local contributions required under (b)(2) of this section have not been made.

(e) If a city or borough school district is established after July 1, 1998, for the first three fiscal years in which the city or borough school district operates schools, local contributions may be less than the amount that would otherwise be required under (b)(2) of this section, except that

(1) in the second fiscal year of operations, local contributions must be at least the greater of

(A) the local contributions, excluding federal impact aid, for the previous fiscal year; or

(B) the sum of 10 percent of the district's eligible federal impact aid for that year and the equivalent of a two mill tax levy on the full and true value of the taxable real and personal property in the city or borough school district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110 ; and

(2) in the third year of operation, local contributions must be at least the greater of

(A) the local contributions, excluding federal impact aid, for the previous fiscal year; or

(B) the sum of 10 percent of the district's eligible federal impact aid for that year and the equivalent of a three mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110 .

(f) A school district is eligible for additional state aid in the amount by which the local contributions that would otherwise have been required under (b)(2) of this section exceed the district's actual local contributions under (e) of this section.

Article 2. Exempt Religious and Other Private Schools

AS § 14.45.110

§ 14.45.110. Requirements of exempt schools

Currentness

(a) The parent or guardian of a child of compulsory school age enrolled in a religious or other private school that complies with AS 14.45.100 - 14.45.130 shall file an annual notice of enrollment in the school for the child with the local public school superintendent for the area in which the child resides on a form provided by the department. The form shall be signed by the parent or guardian and the chief administrative officer of the school and returned to the local public school superintendent by the parent or guardian. The school shall notify the local public school superintendent within a reasonable time if the child is no longer enrolled in or attending the school.

(b) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain monthly attendance records for each student enrolled in the school, shall operate on a regular schedule, excluding reasonable holidays and vacations, during at least 180 days of the year, shall make an annual report to the commissioner of the number of students in each grade and the school calendar, and shall comply with the provisions concerning missing children under AS 14.30.700 - 14.30.720.

Article 2. Exempt Religious and Other Private Schools

AS § 14.45.120

§ 14.45.120. Standardized testing requirements

Currentness

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall administer a nationally standardized test selected by the chief administrative officer of the school to all students enrolled in grades four, six, and eight at least once each school year.

(b) The nationally standardized test must measure achievement in English grammar, reading, spelling, and mathematics.

(c) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain records of the results of the nationally standardized tests and the records shall be made available to the parent or guardian of the student. Each school shall make composite test results for the school available annually to an authorized representative of the department. The composite test results of a religious or other private school operated in compliance with AS 14.45.100 - 14.45.130 are not public information unless each public school

(1) is also required to administer a nationally standardized test that measures achievement in English grammar, reading, spelling, and mathematics; and

(2) the composite test results for each public school are public information.

Article 1. State Aid to Public Schools

AS § 14.17.300

§ 14.17.300. Public education fund

Currentness

(a) The public education fund is established. The fund consists of appropriations for

(1) distribution to school districts, to the state boarding school, and for centralized correspondence study under this chapter; and

(2) transportation of pupils under AS 14.09.010.

(b) Money appropriated to the fund may be expended without further appropriation. Money appropriated to the fund does not lapse. The money in the fund may be expended only in aid of public schools and for centralized correspondence study programs under this chapter and for transportation of pupils under AS 14.09.010. Interest earned on money held in the fund before expenditure may be appropriated to the fund by the legislature.

Title 14. Education, Libraries, and Museums (Refs & Annos)

Chapter 17. Financing of Public Schools

Article 1. State Aid to Public Schools

AS § 14.17.410

§ 14.17.410. Public school funding

Currentness

(a) A district is eligible for public school funding in an amount equal to the sum calculated under (b) and (c) of this section.

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420(a)(1) and the high school vocational education factor set out in AS 14.17.420(a)(3);

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A)--(C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school

size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

(c) In addition to the local contribution required under (b)(2) of this section, a city or borough school district in a fiscal year may make a local contribution of not more than the greater of

(1) the equivalent of a two mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110; or

(2) 23 percent of the district's basic need for the fiscal year under (b)(1) of this section.

(d) State aid may not be provided to a city or borough school district if the local contributions required under (b)(2) of this section have not been made.

(e) If a city or borough school district is established after July 1, 1998, for the first three fiscal years in which the city or borough school district operates schools, local contributions may be less than the amount that would otherwise be required under (b)(2) of this section, except that

(1) in the second fiscal year of operations, local contributions must be at least the greater of

(A) the local contributions, excluding federal impact aid, for the previous fiscal year; or

(B) the sum of 10 percent of the district's eligible federal impact aid for that year and the equivalent of a two mill tax levy on the full and true value of the taxable real and personal property in the city or borough school district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110; and

(2) in the third year of operation, local contributions must be at least the greater of

(A) the local contributions, excluding federal impact aid, for the previous fiscal year; or

(B) the sum of 10 percent of the district's eligible federal impact aid for that year and the equivalent of a three mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110.

(f) A school district is eligible for additional state aid in the amount by which the local contributions that would otherwise have been required under (b)(2) of this section exceed the district's actual local contributions under (e) of this section.

Chapter 17. Financing of Public Schools

Article 1. State Aid to Public Schools

AS § 14.17.420

§ 14.17.420. Funding for special needs, high school vocational and technical instruction, and intensive services

Currentness

(a) As a component of public school funding, a district is eligible for special needs and high school vocational and technical instruction funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17. 410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13;

(3) in addition to the special needs and intensive services funding available under (1) and (2) of this subsection, high school vocational and technical instruction funding is available to assist districts in providing vocational and technical instruction to students who are enrolled in grades nine through 12; a high school vocational and technical instruction funding factor of 1.01 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "vocational and technical instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

(b) If a district offers special education, gifted and talented education, vocational education, or bilingual education services, in order to receive funding under (a)(1) of this section, the district must file with the department a plan that indicates the services that will be provided to students who receive these services.

(c) In this section, "intensive services" has the meaning given by the department by regulation adopted under AS 14.30.180--14.30.350.

Article 1. State Aid to Public Schools

AS § 14.17.430

§ 14.17.430. State funding for correspondence study

Currentness

Except as provided in AS 14.17.400(b), funding for the state centralized correspondence study program or a district correspondence program, including a district that offers a statewide correspondence study program, includes an allocation from the public education fund in an amount calculated by multiplying the ADM of the correspondence program by 80 percent.

Chapter 17. Financing of Public Schools

Article 1. State Aid to Public Schools

AS § 14.17.440

§ 14.17.440. State funding for state boarding schools

Currentness

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the special needs factor in AS 14.17.420(a)(1) and the high school vocational education factor set out in AS 14.17.420(a)(3) and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

(b) State boarding schools are also eligible for intensive services funding under AS 14.17.420(a)(2).

Chapter 17. Financing of Public Schools

Article 1. State Aid to Public Schools

AS § 14.17.450

§ 14.17.450. School size factor

Currentness

(a) For purposes of calculating a school's ADM to determine state aid, the ADM of each school in a district shall be computed by applying the following formula:

If the student count in a school is			The adjusted student count is				
At least		**But less than**	**Base**		**Multiplier**		**The number of students in excess of**
10	-	20	39.6				
20	-	30	39.6	+	(1.62	x	20)
30	-	75	55.8	+	(1.49	x	30)
75	-	150	122.85	+	(1.27	x	75)
150	-	250	218.1	+	(1.08	x	150)
250	-	400	326.1	+	(0.97	x	250)
400	-	750	471.6	+	(0.92	x	400)
750 or over			793.6	+	(0.84	x	750).

(b) If the ADM in a school is less than 10, those students shall be included in the ADM of the school in that district with the lowest ADM as determined by the most recent student count data for that district.

(c) Except as provided in (d) of this section, if the student count in a charter school is less than 150, the adjusted student count for the school shall be calculated by multiplying the student count by the student rate for a school that has a student count of 400.

(d) If a charter school has a student count of more than 120 but less than 150 for the current year and is in the first year of operation or had a student count of 150 or more in the previous year of operation,

(1) the adjusted student count for the school shall be calculated by multiplying the student count by 95 percent of the student rate for a school that has a student count of 150; and

(2) not later than February 15, the charter school shall submit for approval of the governing board of the district a plan for the following school year that includes a statement about whether the school will continue to operate if the student count remains the same that year and, if so, a projection of the funding anticipated from the state and other sources, a proposed budget, and a description of anticipated changes to the school staff, program, and curriculum; if the school intends to close if the student count remains the same the following year, the plan must describe transfer plans for students, staff, facilities, and materials.

(e) If an alternative school has a student count of more than 120 but less than 175 for the current year and is in the first year of operation or had a student count of 175 or more in the previous year of operation, the adjusted student count for the school shall be calculated by multiplying the student count by 95 percent of the student rate for a school that has a student count of 175.

Next

(f) In (c)--(e) of this section, "student rate" is calculated by adding the base and the multiplier provided under (a) of this section and dividing the sum by the student count.

Chapter 17. Financing of Public Schools

Article 1. State Aid to Public Schools

AS § 14.17.490

§ 14.17.490. Public school funding adjustments

Currentness

(a) Except as provided in (b)--(e) of this section, if, in fiscal year 1999, a city or borough school district or a regional educational attendance area would receive less public school funding under AS 14.17.410 than the district or area would have received as state aid, the district or area is, in each fiscal year, eligible to receive additional public school funding equal to the difference between the public school funding the district or area was eligible to receive under AS 14.17.410 in fiscal year 1999 and the state aid the district or area would have received in fiscal year 1999.

(b) A city or borough school district is not eligible for additional funding authorized under (a) of this section unless, during the fiscal year in which the district receives funding under (a) of this section, the district received a local contribution equal to at least the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110.

(c) For the purposes of the reduction required under AS 14.17.400(b), funding authorized under (a) of this section is treated the same as the state share of public school funding under AS 14.17.410.

(d) Beginning in fiscal year 2000, if a district receives more public school funding under AS 14.17.410 than the district received in the preceding fiscal year, any amount received by the district under this section shall be reduced. The amount of the reduction required under this subsection is equal to the amount of increase from the preceding fiscal year in public school funding multiplied by 40 percent. In this subsection, "public school funding" does not include funding under this section.

(e) Beginning in fiscal year 2000, in each fiscal year, the department shall compare each district's ADM with the district's ADM in fiscal year 1999. If the current fiscal year ADM is less than 95 percent of the district's ADM in fiscal year 1999, the department shall reduce the district's public school funding calculated under (a) of this section by a percentage equal to the percentage of decrease in the district's ADM.

(f) For purposes of this section, "state aid" means state aid distributed under the provisions of AS 14.17, as those provisions read on January 1, 1998, and additional district support appropriated by the legislature for fiscal year 1998.

Article 2. Preparation of Public School Funding Budget

AS § 14.17.500

§ 14.17.500. Student count estimate

Currentness

(a) A district shall prepare and submit to the department by November 5 of each fiscal year, in the manner and on forms prescribed by the department, an estimate of its ADM and other student count data, including per school student count data, for the succeeding fiscal year upon which computations can be made to estimate the amount of state aid for which the district may be eligible under AS 14.17.400 in the succeeding fiscal year. In making its report, the district shall consider its ADM, other student count data, the pattern of growth or decline of the student population in preceding years, and other pertinent information available to the district.

(b) Part-time students shall be included in the student count data in accordance with regulations adopted by the department.

(c) When reporting a district's ADM, a part-time student who is a correspondence student may not be counted as more than one full-time equivalent student.

Article 2. Preparation of Public School Funding Budget

AS § 14.17.510

§ 14.17.510. Determination of full and true value by Department of Commerce, Community, and Economic Development

Currentness

(a) To determine the amount of required local contribution under AS 14.17. 410(b)(2) and to aid the department and the legislature in planning, the Department of Commerce, Community, and Economic Development, in consultation with the assessor for each district in a city or borough, shall determine the full and true value of the taxable real and personal property in each district in a city or borough. If there is no local assessor or current local assessment for a city or borough school district, then the Department of Commerce, Community, and Economic Development shall make the determination of full and true value guided by AS 29.45.110 and based on a determination of full and true value made by the state assessor at least every two years using the best information available, including on-site inspections made by the state assessor in each of those districts at least once every four years. For purposes of this subsection, the full and true value of taxable real and personal property in any area detached shall be excluded from the determination of the full and true value of the municipality from which the property was detached for the two years immediately preceding the effective date of the detachment. Also, in making the determination for a municipality that is a school district, or for a city that is within a borough school district, the assessed value of property taxable under AS 43.56 shall be excluded if a tax is not levied under AS 29.45.080 by the municipality that is the school district. The determination of full and true value shall be made by October 1 and sent by certified mail, return receipt requested, on or before that date to the president of the school board in each city or borough school district. Duplicate copies shall be sent to the commissioner. The governing body of a city or borough that is a school district may obtain judicial review of the determination. The superior court may modify the determination of the Department of Commerce, Community, and Economic Development only upon a finding of abuse of discretion or upon a finding that there is no substantial evidence to support the determination.

(b) Motor vehicles subject to the motor vehicle registration tax under AS 28.10.431 shall be treated as taxable property under this section.

(c) Notwithstanding AS 14.17.410(b)(2) and the other provisions of this section, if the assessed value in a city or borough school district determined under (a) of this section increases from the base year, only 50 percent of the annual increase in assessed value may be included in determining the assessed value in a city or borough school district under (a) of this section. The limitation on the increase in assessed value in this subsection applies only to a determination of assessed value for purposes of calculating the required contribution of a city or borough school district under AS 14.17.410(b)(2) and 14.17.490(b). In this subsection, the base year is 1999.

Chapter 17. Financing of Public Schools

Article 2. Preparation of Public School Funding Budget

AS § 14.17.520

§ 14.17.520. Minimum expenditure for instruction

Currentness

(a) A district shall budget for and spend a minimum of 70 percent of its school operating expenditures in each fiscal year on the instructional component of the district budget.

(b) The commissioner shall reject a district budget that does not comply with (a) of this section and, unless a waiver has been granted by the board under (d) of this section, shall withhold payments of state aid from that district, beginning with the payment for the second full month after rejection and continuing until the school board of the district revises the district budget to comply with (a) of this section.

(c) The commissioner shall review the annual audit of each district for compliance with the expenditure requirements of (a) of this section. If the commissioner determines that a district does not meet those requirements, the commissioner shall advise the district of the determination, calculate the amount of the deficiency, and deduct that amount from state aid paid to the district for the current fiscal year. A deduction in state aid required under this subsection begins with the payment for the second full month after the determination, unless a waiver has been granted by the board under (d) of this section.

(d) A district that has been determined by the commissioner to be out of compliance with the requirements of this section may, within 20 days of the commissioner's determination, request a waiver by the board of the imposition by the commissioner of any reduction in state aid payments under (b) or (c) of this section. The request must be in writing and must include an analysis of the reasons and causes for the district's inability to comply with the requirements of this section. The board may grant the waiver if the board determines that the district's failure to meet the expenditure requirements of this section was due to circumstances beyond the control of the district. The request must also be submitted to the Legislative Budget and Audit Committee, which shall review the district's request and forward the committee's recommendations on it to the board.

(e) The commissioner shall submit an annual report on actions taken by the commissioner or the board under this section to the Legislative Budget and Audit Committee by April 15 of each year.

(f) In this section, "instructional component" includes expenditures for teachers and for pupil support services.

Article 3. Procedure for Payments of State Aid

AS § 14.17.600

§ 14.17.600. Student count periods

Currentness

(a) Within two weeks after the end of the 20-school-day period ending the fourth Friday in October, each district shall transmit a report to the department that, under regulations adopted by the department, reports its ADM for that count period and other student count information that will aid the department in making a determination of its state aid under the public school funding program. For centralized correspondence study, the October report shall be based on the period from July 1 through the fourth Friday in October. The department may make necessary corrections in the report submitted and shall notify the district of changes made. The commissioner shall notify the governor of additional appropriations the commissioner estimates to be necessary to fully finance the public school funding program for the current fiscal year.

(b) Upon written request and for good cause shown, the commissioner may permit a district to use a 20-school-day count period other than the period set out in (a) of this section. However, a count period approved under this subsection must be 20 consecutive school days unless one or more alternate count periods are necessary to permit a district to implement flexible scheduling that meets the district's needs and goals without jeopardizing the state aid for which the district would ordinarily be eligible under this chapter.

§ 14.17.905. Facilities constituting a school

Currentness

(a) For purposes of this chapter, the determination of the number of schools in a district is subject to the following:

(1) a community with an ADM of at least 10, but not more than 100, shall be counted as one school;

(2) a community with an ADM of at least 101, but not more than 425, shall be counted as

(A) one elementary school, which includes those students in grades kindergarten through six; and

(B) one secondary school, which includes students in grades seven through 12;

(3) in a community with an ADM of greater than 425, each facility that is administered as a separate school shall be counted as one school, except that each alternative school with an ADM of less than 175 shall be counted as a part of the school in the district with the highest ADM.

(b) Notwithstanding (a)(3) of this section and for purposes other than calculations under AS 14.17.450, a charter school shall be counted as a separate school if the charter school has an ADM of at least 150 students.

Article 4. General Provisions

AS § 14.17.990

§ 14.17.990. Definitions

Currentness

In this chapter, unless the context requires otherwise,

(1) "ADM or average daily membership" means the aggregate number of full-time equivalent students enrolled in a school district during the student count period for which a determination is being made, divided by the actual number of days that school is in session for the student count period for which the determination is being made;

(2) "district" means a city or borough school district or a regional educational attendance area;

(3) "district adjusted ADM" means the number resulting from the calculations under AS 14.17.410(b)(1);

(4) "district ADM" means the sum of the ADMs in a district;

(5) "eligible federal impact aid" means the amount of federal impact aid received by a district as of March 1 of the fiscal year as a result of an application submitted in the preceding fiscal year, including advance payments and adjustments received since March 1 of the preceding fiscal year from prior year applications, under 20 U.S.C. 7701--7714, except payments received under former 20 U.S.C. 7703(f)(2)(B), to the extent the state may consider that aid as local resources under federal law;

(6) "local contribution" means appropriations and the value of in-kind services made by a district;

(7) "taxable real and personal property" means all real and personal property taxable under the laws of the state.

Stephen Evenson Testimony HB 145

1/23/12

While our concern is more a warning to religious and parochial schools that receive the money, it is good to remind everyone that increasing dependence on such monies can and often does result in the increasing vulnerability of the religious mission of these schools through state programming regulations, such as, determining what can and cannot be taught, and during a major financial crunch cause the crippling and shut down of said schools due to the sweeping withdrawal of such voucher based financial support.

That being said we are neither for or against this proposal. We are simply offering principles for church institutions to consider when evaluating the acceptability of State Financial aid.

In dealing with the practical question of when is it appropriate for church schools or institutions in the faith community to accept support or funding from the government, the following principles should be considered:

1. Would accepting the aid establish a precedent that would undercut the religious freedom protections guaranteed by the First Amendment, and the broad principle it embraces - the separation of church and state?

2. Does the aid come attached with conditions or requirements that would inhibit or interfere with the religious mission or goals of the institution, such as the restriction of its religious activities or standards?

3. Is there a reasonable likelihood that the aid would create a dependency by the religious institution on the government benefit program - so much so that it would inhibit its future ability to act independently?

In conclusion, the Northwest Religious Liberty Association, and its board of directors offer these principles in the form of questions so that meaningful dialogue can occur at all levels of the faith community. In the spirit of helpfulness, we believe that these three questions can substantially safeguard the faith community and its institutions from undue compromise and hardship in the future, and thus protect the vitality of its prophetic mission in America.

Re: HB 145: Public Funding of Religious Schools
ACLU Review of Constitutional Issues

Dear Chair Dick & Vice-Chair Pruitt:

Thank you for the opportunity to provide written testimony with respect to House Bill 145, and associated draft Committee Substitutes thereto.

The American Civil Liberties Union of Alaska represents thousands of members and activists throughout Alaska who seek to preserve and expand the individual freedoms and civil liberties guaranteed by the United States and Alaska Constitutions. From that perspective, we wish to advise the Committee of two issues of concern with this proposed legislation: it may violate the federal and Alaska Establishment Clauses and students at private schools (both religious and secular) will enjoy fewer protections than their public school counterparts.

Potential Violations of the Federal and State Establishment Clauses

The Establishment Clauses of the United States and Alaska Constitutions forbid the State from establishing a religion. U.S. Const.. Amend. I ("Congress shall make no law respecting an establishment of religion . . ."); Alaska Const., Art. I, § 4 ("No law shall be made respecting an establishment of religion . . .").

Of course, parents have a constitutional right to send their children to religious schools. *Pierce v. Society of the Sisters of the Holy Names of Jesus and Mary*, 268 U.S. 510, 534–35 (1925). The important religious freedoms of belief and practice also guaranteed by the US and Alaska Constitutions are core American values, and the ACLU has often defended – and will continue to defend – those rights.

The constitutional problems in HB 145 are thus not whether Alaskans may attend a religious school, but **whether the religious school's tuition shall be publically subsidized.**

HB 145's answer to that question is "yes," that religious schools should be allowed to receive public funds.

As the Committee is aware, this is in direct conflict with the Alaska Constitution, and it is proposed that this Bill would "be moved together" with House Joint Resolution 16. HJR 16 contemplates a State constitutional amendment that would eliminate Article VII, section 1's prohibition on paying "public funds for the direct benefit of any religious or other private educational institution" and would amend Article IX, section 6 to permit "payment from public funds for the direct educational benefit of students as provided by law." Section 2 of working drafts HB 145D and HB 145X condition the legislation's effectiveness on the approval of an amendment equivalent to the one proposed by HJR 16.[1]

Religious Neutrality

The Legislature may not enact a law with "the 'purpose' or 'effect' of advancing or inhibiting religion," *Zelman v. Simmons-Harris*, 536 U.S. 639, 648–49 (2002), and this secular purpose "has to be genuine, not a sham, and not merely secondary to a religious objective," *McCreary County, Kentucky v. American Civil Liberties Union of Kentucky*, 545 U.S. 844, 864 (2005).

Alaska's sensitivity to religious neutrality dates back to our Constitutional Convention, when the delegates defeated a "motion . . . to delete entirely the direct benefit prohibition of article VII, section 1." *Sheldon Jackson College v. State*, 599 P.2d 127, 129 (Alaska 1979). This sensitivity is important in light of the Alaska school system's specific details. During the 2009–2010 school year, Alaska had 57 private schools, of which 72 percent, or 41 schools, were religiously affiliated."[2]

---

1. As noted, absent amendments similar to those in HJR 16 are enacted, HB 145 is clearly unconstitutional under Alaska Const. art. VII, § 1 and art. IV, § 6.

2. Data from National Center for Education Statistics, (part of the U.S. Department of Education) and the "primary federal entity for collecting and analyzing data related to education in the U.S. and other nations." National Center for Education Statistics, About Us *at* http://nces.ed.gov/about/ (last visited Jan. 20, 2012). Additional data from; http://nces.ed.gov/surveys/pss/privateschoolsearch/ (last visited Jan. 20, 2012).

While the U.S. Supreme Court has upheld an Ohio secular and religious school voucher program, *Zelman*, 536 U.S. at 644, **that decision does not necessarily immunize HB 145 from constitutional challenge.** HB 145 is substantively different in at least four ways:

(1) HB 145 has weaker nondiscrimination requirements,

(2) HB 145 may unconstitutionally permit religious instruction and proselytization,

(3) Alaska would directly pay the religious schools; and

(4) HB 145 may unconstitutionally incentivize religious schools.

HB 145 Permits Religious and Ethnic Discrimination and May Permit Sexual and Racial Discrimination.

A private school, in order to participate in *Zelman*'s Ohio voucher program, must have "agree[d] not to discriminate on the basis of race, religion or ethnic background, or to 'advocate or foster unlawful behavior or teach hatred of any person or group on the basis of race, ethnicity, national origin, or religion.'" *Zelman*, 536 U.S. at 645. HB 145's nondiscrimination requirements are tepid in comparison.

Only HB 145A alters private schools' ability to discriminate on the basis of sex or race. HB 145D and HB 145X both permit private schools that are exempt under Alaska Stat. § 14.45.100 to sexually and racially discriminate against students and employees. Under all versions of HB 145, an Alaska private school, receiving taxpayer funds from our multi-religious, multiethnic citizens, may use that very religious and ethnic diversity as grounds to discriminate against potential students or employees. A court might view such discrimination, particularly in the religious context, as unconstitutionally "[m]anifesting a purpose to favor one faith over another" or abandoning the "mandate[d] government neutrality between . . . religion and nonreligion." *McCreary*, 545 U.S. at 860 (internal quotation omitted).

Zelman upheld the Ohio program because it "is entirely neutral with respect to religion." *Zelman*, 536 U.S. at 662. As HB 145 is not "entirely neutral," it is subject to suit and being struck down.

HB 145 May Allow Unconstitutional Religious Instruction and Proselytization.

The Ohio voucher program, in addition to requiring a robust nondiscrimination pledge from the private schools, stated that those schools could not "'advocate or foster unlawful behavior or teach hatred of any person or group on the basis of race, ethnicity, national origin, or religion.'" *Zelman*, 536 U.S. at 645 (quoting Ohio Rev. Code Ann. § 3313.976(A)(6)).

Not only does HB 145 lack such a substantive bar on a private school's curriculum, it explicitly exempts private secular and religious schools from essentially all state regulation. Many

religious schools teach religion (as catechism, not as an academic discipline) and proselytize their pupils. Indeed, that is part of religious schools' reason for being and it is one of the facets that make them attractive to families.

HB 145 would violate the Establishment Clauses if, however, it gave money to a religious entity that has the "objective . . . to further religious beliefs or dogmas" and "teach . . . religion[.]" *Lien v. City of Ketchikan*, 383 P.2d 721, 724 (Alaska 1963). "Partisan, sectarian, or denominational doctrines may not be advocated in a public school during the hours the school is in session. A teacher or school board violating this section may not receive public money." Alaska Stat. § 14.03.090. The mix of (1) proselytization and religious teaching with (2) government money could cause a court to conclude that HB 145 "favor[s] one faith over another, or adherence to religion generally," *McCreary*, 545 U.S. at 860. This conclusion would be especially likely were a court to determine that HB 145 was causing payment of nearly three out of every four vouchers to a religious school.

The State Will Directly Pay the Religious Schools.

Ohio's private religious schools did not directly receive public money; instead, individuals directly received the "government aid . . . [and they], in turn, direct[ed] government aid to religious schools wholly as a result of their own genuine and independent private choice[.]" *Zelman*, 536 U.S. at 652. HB 145 directly transfers public money to private religious schools, even though "a direct transfer of funds from the state to a private school will of course render a program constitutionally suspect." *Sheldon Jackson College*, 599 P.2d at 130.

HB 145 Is Financially Skewed In Favor of Private Schools.

Ohio tailored its school voucher scheme to avoid a financial windfall to private schools. The program "create[d] financial *dis*incentives for religious schools," because they "receiv[ed] only half the government assistance given to community schools and one-third the assistance given to magnet schools." *Zelman*, 536 U.S. at 654 (emphasis in original). Families shared this disincentive: families with income below 200 percent of the poverty line could receive a voucher for no more than 90 percent of the private school's tuition, up to $2,250, and they faced a possible copayment to the school of up to $250; all other families could receive a voucher for no more than 75 percent of the private school's tuition, up to $1,875, and an unlimited copayment cap. *Id.* at 646. A family who chose "a community school, magnet school, or traditional public school" – independent of the family's income – "pa[id] nothing." *Id.* at 654.

HB 145, however, does not avoid possible "financial incentive[s]" that might "ske[w] the program toward religious schools." *Id.* at 653 (internal quotations omitted and alterations in original). If passed, private schools would receive the lesser of (1) the amount the public school district would receive to educate that student or, under HB 145A and HB 145D, (2) the private

school's entire annual cost "of educating the student, including prorated facility and operating expenses." Families do not have a mandatory copayment under any version of HB 145.

Though this financial calculus may seem neutral, private schools' economics are more favorable than public schools and private schools will receive a financial benefit that public schools will not. Private school teachers, unlike their public school counterparts, tend to be non-unionized, and also unlike public schools, private schools are exempt from an array of regulations.[3]

Religious schools' exemptions are even broader: they do not have to comply with Title IX's non-sexual discrimination requirements,[4] 20 U.S.C. § 1681(a)(3), and they are exempt from at least part of the federal Americans with Disabilities Act and employment discrimination laws, *Hosanna-Tabor Evangelical Lutheran Church and School v. EEOC*, 565 U.S. —, 2012 WL 75047, at *16 (2012).

HB 145 Would Violate the Alaska Constitution, Even Were It To Pass Federal Review

Federal case law may instruct a court's Alaska Establishment Clause analysis of HB 145, but that federal precedent does not bind the Alaska courts. If an Alaska court concluded that HB 145 did not violate the federal Establishment Clause, it may interpret the Alaska Establishment Clause more narrowly and strike down HB 145. *See Locke v. Davey*, 540 U.S. 712, 722, 725 (2004).

Since the Nation's founding, "there have been popular uprisings against procuring taxpayer funds to support church leaders, which was one of the hallmarks of an 'established' religion." *Id.* at 722. The U.S. Supreme Court "can think of few areas in which a State's antiestablishment interests come more into play." *Id.*

The Framers adopted the First Amendment because "they fervently wished to stamp out . . . the centuries [long] . . . turmoil, civil strife, and persecutions, generated in large part by established sects determined to maintain their absolute political and religious supremacy." *Everson v. Board of Education of Ewing Township*, 330 U.S. 1, 8–9 (1947). The Framers designed the Establishment Clause "to preserve liberty for themselves and their posterity." *Id.* at 8.

Alaska's history is no different. Our state constitutional delegates rejected a "motion . . . to delete entirely the direct benefit prohibition of article VII, section 1." *Sheldon Jackson College*, 599 P.2d at 129. Their vote was rooted in the "clear . . . wish[] [for] the constitution to support

---

3. HB 145 (exempting private schools from most state regulations); Alaska Stat. § 14.45.100 ("A religious or other private school that complies with AS 14.45.100–14.45.130 is exempt from other provisions of law and regulations relating to education except law and regulations relating to physical health, fire safety, sanitation, immunization, and physical examinations.").

4. Title IX of the Educational Amendments of 1972, 20 U.S.C. §§ 1681–1688.

and protect a strong system of public schools." *Id.* Delegate Coghill was concerned "that the amount of tax dollars available for the support of public schools might be lessened if public funds were used to support a great many private schools." *Id.* at 129 n.6.

The constitutional delegates adopted the Alaska Establishment Clause on February 5, 1956. The people ratified it on April 24, 1956, and it became operative on January 3, 1959. In 1956, the federal Clause "mean[t] at least this: Neither a state nor the Federal Government . . . can pass laws which aid one religion, aid all religions, or prefer one religion over another," and "[n]o tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may adopt to teach or practice religion." *Everson*, 330 U.S. at 15–16.

A School Voucher Program Must Be Religiously Neutral

This "government aid program" must be "neutral with respect to religion," *Zelman*, 536 U.S. at 652, and it must have a "genuine . . . secular purpose" that is "not a sham [nor] merely secondary to a religious objective," *McCreary*, 545 U.S. at 864. The school vouchers cannot be paid to schools that "further religious beliefs or dogmas" or that are "teaching [students] religion[.]" *Lien*, 383 P.2d at 724. *See also* Alaska Stat. § 14.03.090.

HB 145 fails this test. Rather than requiring schools that receive vouchers to refrain from religious instruction and proselytization, HB 145 provides that "[a] district *shall* approve a school" for the voucher scheme if it meets various requirements, none of which are refraining from proselytizing or religious indoctrination.

A court would likely hold that in order to be constitutional, HB 145 must require religious schools to give up their *sine qua non*, religious instruction, to receive public funds. Though HB 145 has the professed aim of expanding access (by reducing price) to religious schools, the required modifications would actually reduce access by forcing religious schools to choose between (1) not participating in the voucher program or (2) participating but diluting their religiosity.

Private Schools Lack Public Rights

Students at private schools, both secular and religious, have less constitutional and statutory rights than students at public schools. Both this Committee and families that may use vouchers for private schools should know that children are less protected from multiple types of discrimination in private schools.

Private schools, both religious and secular, may exempt themselves from nearly all state educational laws and regulations, including the sexual and racial nondiscrimination laws of Alaska Stat. §§ 14.18.010–14.18.110. Alaska Stat. § 14.45.100. (Private schools may not

exempt themselves from "law and regulations relating to physical health, fire safety, sanitation, immunization, and physical examination." Alaska Stat. § 14.45.100.)

Private school students may be religiously and ethnically discriminated against. Students at religious schools may find themselves even further outside the law's protection: in addition to possible religious and ethnic discrimination, they may be sexually discriminated against and without recourse to Title IX, 20 U.S.C. § 1681(a)(3); and they may be discriminated against for an otherwise-protected physical or mental disability, *Hosanna-Tabor*, 565 U.S. —, 2012 WL 75047, at *16.

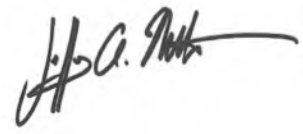
Conclusion

We hope that the Education Committee will recognize that these are just some of the constitutional infirmities in House Bill 145.

Legislative efforts to strengthen our State's primary and secondary educational system must be well-crafted to achieve that purpose. Instead of achieving such and educational goal, were HB 145 to pass – be it version 145A, 145D, or 145X – these constitutional infirmities and policy problems would expose Alaska's families and children to the threat of discrimination, and will render the State subject to the needless risk of lengthy and expensive litigation, to protect the history of religious freedom established by our State's founders.

Thank you again for letting us share our concerns. Please feel free to contact the undersigned if you have any questions or wish additional information.

Sincerely,



Jeffrey Mittman

Subject: IN SUPPORT OF - House Bill No. 145, the Parental Choice Scholarship Program

Representative Keller,

I am an Anchorage resident of **District 20** and considered a Supper Voter.

I write regarding House Bill No. 145, the **Parental Choice Scholarship Program**. I strongly support this bill. I urge you to move this bill out of the Education Committee right away. I also urge you to co-sponsor this bill for the benefit of all Alaskan children. The status quo of spending more money is not working. We need to do what's right for the kids, not the adults. Thank you for your time and service.

Best wishes.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** CSHB145
2012 LEGISLATIVE SESSION

Analysis

The bill amends AS 14 by adding a new section establishing the Parental Choice Scholarship Program. The parental choice scholarship program would provide public funding for the cost of K-12 students attending a participating public or private school selected by the student's parent or guardian.

The school districts under the new chapter are responsible with administering the program. Administering the program requires school districts to approve participating schools if they operate within stated compliance requirements and if the private schools follow financial accountability standards. School districts will also be required to administer payments and verify student claims at the participating schools; make available to parents participating school lists; providing applications; and make notification to parents and guardians for denials after administrative and judicial appeal periods have lapsed.

The Department of Education and Early Development is required to develop regulations to carry out the program that ensure the highest number of student and school participation and includes procedures for calculating and distributing scholarship funds; timelines and procedures for the application, renewal, and appeal for participating schools and students; and standards for approval, revocation, and denial for participating schools.

Sec. 14.31.020 establishes the amount of each scholarship as the lesser of, the amount the school district would receive under AS 14.17 for a similarly situated student to attend public school not to exceed 100% of the funding the school receives for educating the student, or the actual annual cost of education the student including prorated facility and operating expenses. Parents who choose to send their child to a public school outside their attendance area will be responsible for transportation their child to the school of choice.

The bill requires a participating school include students who are enrolled under this section in the student count for purposes of calculating state aid under AS 14.17.610. The participating school will have to maintain an October count period.

Sec. 14.31.025(b) provides that participating schools are to be autonomous and not subject to additional regulation by the state unless authorized under AS 14.31.010-14.31.090.

The bill provides that the legislature may appropriate parental choice scholarship program funds to the department for distribution to districts. If the appropriation is insufficient then the department will prorate the available funds based on the number of participating students in the porgram.

This bill cannot be implemented without amending the Constitution of the State of Alaska. House Joint Resolution No. 16 proposes amendments to the Constitution of the State of Alaska that would remove the restriction on the use of public funds being used for the direct benefit of a religious or private educational institution.

The Department of Education & Early Development does not have an estimate count of new students, not currently enrolled, that may choose to participate in the new program therefore the fiscal note amount remains indeterminate.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HB145

Analysis

The bill proposes an amendment to AS 14 by adding a new section establishing the Parental Choice Scholarship Program. As stated by the new section, the parental choice scholarship program is established for the purpose of providing public funding for the cost of attending grades kindergarten through 12 at a public or private school (participating school) selected by the student's parent or legal guardian.

The burden of administering the program under the new chapter is placed at the school district level. A school district shall approve participating schools if they operate in compliance with stated requirements and if the private schools follow financial accountability standards. School districts will be tasked with administering payments and verifying student claims at the participating schools; making available to parents participating school lists; providing applications; and making notification to parents and guardians for denials after adminstrative and judicial appeal periods have lapsed.

The Department of Education and Early Development would be tasked with developing regulations to carry out the program that include timelines that result in the highest number of student and school participation, procedures for calculating and distributing scholarship funds, procedures for application, renewal, and appeal for participating schools and students; and standards for approval, revocation, and denial for participating schools.

Sec. 14.31.020 establishes the amount of each scholarship as the lessor of, the amount the school district in which the student resides would receive under AS 14.17 for a similarly situated student to attend public school not to exceed 100% of the funding the school receives and expends from all state and local sources for the student; or the actual annual cost to the school of educating the student, including prorated facility and operating expenses. In addition, the bill provides for transportation costs as available under 14.09.010, the department's reimbursement program for school district transportation.

The bill provides that a participating school shall include students who are enrolled under this section in the student count for purposes of calculating state aid under AS 14.17.610. The participating school will maintain an October count period.

Under 14.31.025 (b) it is understood that the sponsor intends that private participating schools are to be autonomous and not subject to additional regulation by the state unless authorized under AS 14.31.010 - 14.31.090. Public participating schools remain under state regulation.

The bill provides that the legislature may appropriate parental choice scholarship program funds to the department for distribution to districts.

At this time, the Department of Education & Early Development does not have an estimated count of new students, not currently enrolled, that may choose to participate in the new program therefore the fiscal note amount remains indeterminate .

In addition to House Bill 145, the sponsor proposes House Joint Resolution No. 16 proposing amendments to the Constitution of the State of Alaska relating to state aid for education.

CS FOR HOUSE BILL NO. 154(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES KAWASAKI, Tuck, Gara, Petersen

A BILL

FOR AN ACT ENTITLED

"An Act providing for the establishment of a statewide early childhood education plan and guidelines."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public

New Text Underlined [DELETED TEXT BRACKETED]

schools; the regulations must provide that, if a course in American Sign Language is given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will **ensure** [ASSURE] healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans"

include educational specifications, schematic designs, projected energy consumption and costs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may intervene in a school district to improve instructional practices, as described in AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental intervention, as described in AS 14.07.030(14)(A) and (B) and (15), after the district demonstrates three consecutive years of improvement consisting of not less than two percent increases in student proficiency on standards-based assessments in math, reading, and writing as provided in AS 14.03.123(f)(2)(A); and

(C) a process for districts to petition the department for continuing or discontinuing the department's intervention;

(17) notify the legislative committees having jurisdiction over education before intervening in a school district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15);

(18) assist the Department of Natural Resources in developing and implementing the farm-to-school program established under AS 03.20.100**;**

(19) devise a statewide early childhood education plan for students that

(A) incorporates the early learning guidelines adopted by

the board under AS 14.07.165(6);

(B) provides for effective and efficient coordination with or expansion of optional pre-elementary programs operating in the state, including Head Start, to the extent permitted by law.

* **Sec. 2.** AS 14.07.165 is amended to read:

Sec. 14.07.165. Duties. The board shall adopt

(1) statewide goals and require each governing body to adopt written goals that are consistent with local needs;

(2) regulations regarding the application for and award of grants under AS 14.03.125;

(3) regulations implementing provisions of AS 14.11.014(b);

(4) regulations requiring approval by the board before a charter school, state boarding school, or a public school may provide domiciliary services;

(5) regulations implementing the secondary school student competency examination provisions of AS 14.03.075, including the criteria and procedure under which a governing body uses a waiver to grant a diploma to a student; criteria regarding granting a waiver must include provisions that a waiver may only be granted for students who enter the system late or have rare or unusual circumstances meriting a waiver**;**

(6) early learning guidelines that support an effective, cost-efficient, and optional pre-elementary program provided under a statewide early childhood education plan approved by the department.

* **Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REPORT: EARLY CHILDHOOD EDUCATION PLAN. On or before January 15, 2012, the Department of Education and Early Development shall prepare and submit a report to the legislature on the early childhood education plan devised under AS 14.07.020(a)(19), added by sec. 1 of this Act.

BILL NO. HB154

Analysis

This bill creates statewide early childhood education plan. The plan incorporates the early learning guidelines for students three and four years of age and provides an optional pre-elementary program for those interested in participating.

The department will coordinate with other pre-elementary programs, i.e. Head Start to implement the early childhood plan.

Estimated number of statewide meetings with district representation in order to write the plan: 4
Estimated cost travel/per diem/substitute teacher cost: $86,455
Estimated Alaska Early Childhood Coordination Council review, travel for 1, 3 day meeting and final printing/ publication of the plan: $23,545
Estimated contractors cost to assist department staff with the plan: $40,000

Representative Scott Jiu Wo Kawasaki
Alaska State Legislature District 9 Fairbanks

House Bill 154
Sponsor Statement

Alaska remains one of the only states that do not provide pre-Kindergarten (pre-K) education to its children on a statewide basis. HB 154 seeks to add Alaska to the ranks of states that recognize that children benefit from early education. Children who participate in early education programs earn more money as adults, enter the job market in much larger numbers, obtain college education in higher numbers, remain off of public assistance and are more likely to stay out of jail.

Alaska has a responsibility to provide the best education possible for its children. Currently, outside of few school district classrooms, the state only provides pre-K education through Head Start programs and through the Best Beginnings partnership. Head Start is underfunded and only available to the poorest students. Due to underfunding, the Alaska Head Start Association estimates that more than 50% of the children who qualify cannot receive Head Start education. Head Start has consistently lagged far behind its need. Providing early public education opportunities is a crucial stepping stone to brightening the future of the young Alaskans.

Extensive research shows that a child's intellectual development is especially important before age six. A study by the National Institute for Early Education research in 2004 found that children who attended state-funded pre-kindergarten programs demonstrated improvements in vocabulary 31% greater than those who did not participate, and 44% greater in math. Young children who receive high quality early education do better in school academically and are more likely to stay in school, graduate, and go on to attend college.

The beneficial impact of early education also extends to the economy with multiple studies showing that funds invested in early education pay dividends in the long run. Every dollar invested in high quality pre-kindergarten programs saves Alaskans from paying for remedial and special education and public assistance. An ongoing study of 40-year old adults in Michigan who participated in the 1962 Perry Pre-Preschool Project found that adults with pre-K were more likely to be employed and earned 33 percent higher average income than their peers who did not have state funded early education.

Additionally, a study prepared for the University of Alaska Southeast, states that 87% of Alaska residents think it is important for state government to provide financial support for early education and child care.

HB 154: Alaska Pre-Elementary Program

Sectional Analysis

Section 1. Department of Education shall devise and implement a statewide early education plan that incorporates early learning guidelines adopted by the education board and coordinates with Head Start and other child care providers.

Section 2. Board of Education shall adopt early learning guidelines that support an effective and cost-efficient optional pre-elementary program provided under a statewide early childhood education plan approved by the department.

Section 3. Requires the Department of Education and Early Education Plan to submit a report to the Legislature by January 15, 2012

RE: HB154 An Act providing for the establishment of a statewide early childhood education plan and guidelines

Thank you for your efforts to pass this legislation. Alaska can not go one more year without educating our preschool children. Please pass this before we become a third world country or state, anyway.

There is so much evidence of the value of this and the negligence resulting from not having early childhood education. Honestly, you can not be a responsible state and nation anymore and not provide for early childhood education. I have talked until I'm blue in the face so I don't think my referring to more studies will help.

Please get Alaska off to early childhood education. It is something that should be optional for individual parents. Some may have something already going on. The children who most need this, who have no other options, are the ones who get nothing.

Also, if you can provide for the "parents as teachers" early education plan that is a great idea as well. That program also teaches parents how to teach their children those early skills. Providing options is good! Just do it some way.

Thank you!

Hi Scott.

I am glad to hear about Bill 154 and I am in support of pre-k programs. I was not shocked to hear on the local tv news that the U.S. is still falling in educating our young people. The report stated that we are at the lowest overall rating from the past 20 years. I am a concerned grandmother and would love to see more support given for the working families, it seems that parents are not taking the time help educate their children as per the report. I also have seen the struggles our college students are having in math and english we need to build a strong foundation from early on and get them ready for the next step in their education.

Regards,

Gabriele Larry

I am excited to hear about this bill and encourage you to continue supporting this and all Alaska education funding. Our children are our future from pre-school through college. If we provide the young adults with opportunities to go to the university here then they are more likely to stay here as adults. Using oil revenues for education is an investment in the future.

Thank you for your hard work.

Our view: Alaska needs a plan to make public schools better

Quality gap

(11/16/08 21:39:10)

Alaska has handicapped its young children by being one of only 12 states with no state-funded education syster for pre-kindergarten students.

Here's another gloomy statistic at the other end of the public education system: Only about two-thirds of Alaska high school students graduate in four years, compared with the U.S. average of three-fourths graduating.

And of Alaska students who do graduate, only a third start college. Nationwide, nearly half of high school graduates are college-bound. So what's the plan to improve the odds for Alaska kids?

There isn't one -- but state commissioner of education Larry LeDoux wants to change that. Last week, the state sponsored the first education summit in many years, engaging about 400 parents, students, educators, universit officials and others in a discussion about what's needed.

Friday they came up with about 50 goals, including offering state-funded preschool to the families of every 3-, 4- and 5-year-old in Alaska.

A sampling of other goals:

- Evaluating pre-school programs to make sure they're adequately preparing children for school.
- Establishing a statewide telecommunications network, with equal access for all students.
- Defining what a student needs to know to be a skilled worker or a college student -- not just the minimum standards the state now sets for handing out high school diplomas.

Meeting these goals would take school funding to another level. A much higher one, though no one made any estimates.

The true test of Alaska's commitment to our young people will not be whether a group of smart, dedicated people can produce an admirable list of goals, but whether the state administration and the Legislature will support them financially.

We can't say right now which reforms the state should adopt and pay for and which not.

They need to be thought through. The list will go up on the state Web site, be adopted and perhaps refined by the state Board of Education, and be publicized so that anyone in Alaska can comment.

But it's worth noting that other states, not as wealthy as ours, do offer state-funded pre-school, for example.

And it's clear that Alaska isn't doing enough to ensure the success of its students. If it were, we wouldn't have such abysmal graduation rates.

BOTTOM LINE: Alaska needs to take a hard look at steps that will improve public education, like state-funded pre-kindergarten.

Legislative Research Report: The Value of Pre-Kindergarten Programs (2006) Executive Summary as prepared by Representative Kawasaki

According to the National Education Association (NEA), children who attend high quality prekindergarten programs are better prepared for kindergarten, have better language and math skills, better cognitive and social skills, and better relationships with classmates. In addition they note that children who attend prekindergarten are less likely to drop out of school, repeat grades, need special education, or get in trouble with the law when they are older. The NEA advocates for universal high quality prekindergarten programs because it "represents one of the best investments our country can make."

In the most recent evaluation of the High/Scope Perry Preschool Project students, the age of which was about 40, the High/Scope Education Research Foundation was able to interview 97 percent of the study participants still living. Some of this study's major findings are as follows:

- A greater percentage of the group graduated from high school than the non-program group
- The group who received high-quality early education on average outperformed the non-program group on various intellectual and language tests during their early childhood years, on school achievement testes between ages 9 and 14, and on literacy tests between ages 19 and 27
- A greater percentage of the group who received high-quality early education was employed at age 40 than was the non-program group
- The group who received high-quality early education had median annual earnings more than $5,000 higher than the non-program group
- A greater percentage of the group owned their own homes
- They had fewer arrests and fewer arrests for violent crimes
- Taxpayers received $17 in benefits for every dollar spent on high-quality early education programs

The Abecedarian Early Childhood Intervention Project assessed their students at age 21 with the following results:

- School districts saved more than $11,000 per child because participants are less likely to require special or remedial education
- Higher cognitive test scores
- Higher academic achievements in reading and math
- They were more likely to attend a four-year college
- Taxpayers received $4 in benefits for every dollar spent on high-quality early education programs

Memorandum

TO: Representative Bryce Edgmon
FROM: Susan Haymes, Legislative Analyst
DATE: February 17, 2011
RE: State and Federal Head Start Funding
LRS Report 11.166

You asked for the level of state and federal funding for the Alaska Head Start program for FY11, and the Governor's proposal for FY12.

Although state funding for the Head Start program remains constant under the Governor's proposed budget for fiscal year 2012, an anticipated decrease of more than $3 million in federal funds could reduce the program's overall funding budget. The following table shows state and federal funding for FY11 and proposed funding for FY12.

State and Federal Funding for Alaska Head Start, FY11-FY12

Funding Source		FY11 (authorized)		FY12 (proposed)
Total Federal				
Direct Funding to Grantees[1]	$	35,000,000	$	32,000,000
Funding to the State	$	125,000	$	125,000
State	$	7,292,600	$	7,292,600
Total Federal and State	$	42,417,600.00	$	39,417,600.00

Notes: The vast majority of federal funds go directly from the federal government to organizations that are Head Start grantees; however, a small amount of funding goes to the state to facilitate collaboration at the state, regional, and local levels around early childhood education issues.
(1) The $35 million figure for FY11 is an approximate amount. The FY12 figure reflects a projected decrease of at least 3 million in federal funds to Head Start grantees. Alaska grantees could see a decrease as early as March 2011.

RESEARCH SUMMARY — Institute of Social and Economic Research
University of Alaska Anchorage • January 2009
R.S. No. 71

The Cost of Crime: Could The State Reduce Future Crime and Save Money by Expanding Education and Treatment Programs?

By Stephanie Martin and Steve Colt

Alaska's prison population is among the fastest-growing in the country. We have five times more inmates in 2007 than in 1981. Spending on the state justice system has nearly doubled since 1981, but the crime rate has dropped only about 30%.

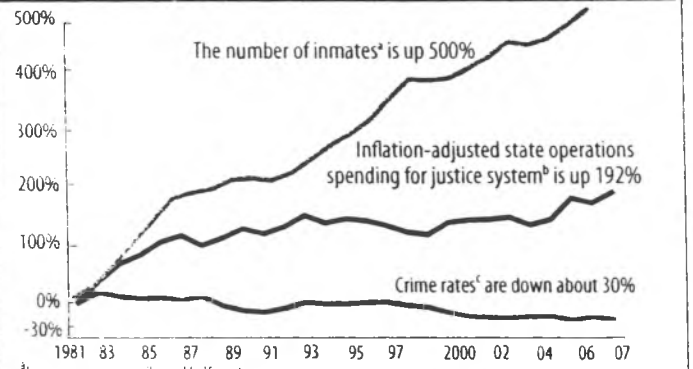
Here's the dilemma for the state, given the pattern shown in Figure 1: What can it do to hold down the number of inmates and stem the rising costs—while at the same time keeping the public safe and using tax dollars effectively?

Senate President Therriault asked ISER to project growth in the number of Alaska inmates and the associated costs—and then evaluate whether the state could reduce that growth by expanding offender treatment and prevention programs for people already in prison or at risk of ending up there. Alaska currently spends about $10 million a year for such programs, but they aren't available to many of those who might benefit from them.

There's a wide range of such programs. But it is programs for adults who are already in prison or jail that have the most potential to improve lives and reduce crime in the next 20 years. That's because they can reach the most people.

Nationwide, without any intervention, about two-thirds of those released from their sentences and are released commit new crimes. Treatment can help at least some of them from committing more crimes. That can not only help improve public safety but also reduce growth in the number of inmates and in spending.

Figure 1. Percentage Changes in Alaska Crime Rate, Spending for Justice System, and Number of Inmates, 1981-2007

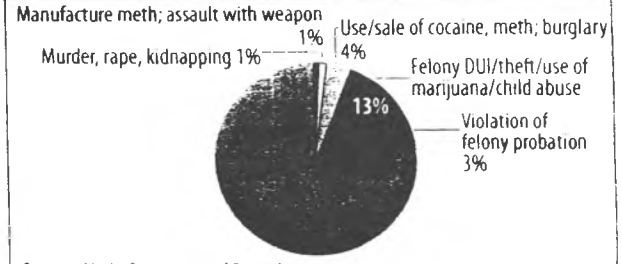


[a]Inmates in prisons, jails, and halfway houses
[b]Spending for Departments of Corrections, Public Safety, and Law; court system; Division of Juvenile Justice; Public Defender Agency; and Office of Public Advocacy. Does not include capital spending or payment on debt.
[c]Rates per 100,000 for murder, rape, robbery, aggravated assault, burglary, larceny, and motor vehicle theft.
Sources: U.S. Department of Justice; state budget documents; Alaska Department of Corrections

Also, most of those released committed misdemeanors (Figure 2). Those who commit the most serious crimes serve long sentences and make up a small share of those released in any given year.

To analyze which programs have the most potential to reduce crime *and* save the state money, we worked with the Alaska Criminal Justice Working Group and the Washington State Institute of Public Policy. That institute did a similar analysis for Washington state and provided us with data it collected from program evaluations nationwide (see back page). What did our study show?

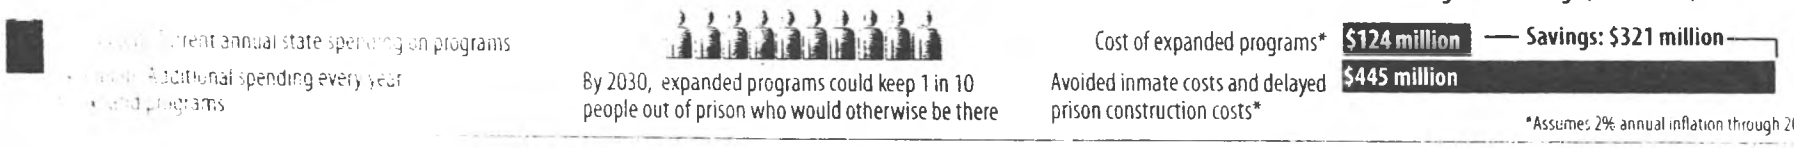
Figure 2. Who Gets out of Jail or Prison in Alaska?
(Total Releases, 2002-2007: 82,339)



Source: Alaska Department of Corrections

- *With no change in policies, the number of Alaska inmates is likely to double by 2030,* from 5,300 to 10,500.
- *If the state spent an additional $4 million a year to expand programs it already has, the prison population in 2030 might be 10% smaller* than projected—about 1,050 fewer inmates.
- *The state would spend about $124 million for expanded programs through 2030 but would avoid $445 million in costs—a savings of $321 million.* It would save money by incarcerating fewer people and by delaying prison construction costs. (Figures 3 and 8).
- *Education and substance-abuse treatment programs—in prison, after prison, and instead of prison—save the state two to five times* what they cost and reach the most people. Programs for teenagers are also very effective at reducing crime and saving money, but they reach fewer people.

Figure 3. Potential Effects, Costs of, and Savings from Expanded Prevention or Intervention Programs



...looked at but excluded other programs from our final analysis. The criminal justice working group decided that a few ... while effective elsewhere, wouldn't be feasible to implement in Alaska at this time. For other programs, there ... available evidence to judge how effective they were at saving money or reducing crime, or the available evidence ... them to be largely ineffective.

How Do the Programs Compare?

... (next page) shows, expanding programs to serve ... people would save the state about $321 million ... projected number of inmates 10% by 2030. Figures ... show the various programs contribute to costs, savings ... in the number of Alaskans behind bars.

- *... substance-abuse treatment programs for inmates save ... times what they cost*, reduce recidivism by about ... points and can reach the most people.

- *... programs for ... committed ... effective at saving ... reducing recidivism ... serve a much ... people.*

- *... up transitional ... inmates with mental ... disorders* commit ... are among ... but they ... expanded to ... people who ... them.

- *... for some ... lesser ... save money ... almost all ... be excep... monitoring ... effective but ... to reduce ...*

- *Treatment programs for sex offenders do reduce crime*, but they are very expensive and so don't save the state money.

- *Programs that prevent future crime by helping very young at-risk children are the most effective*. But the effects of spending for those programs aren't apparent until many years later.

Figure 6. How Effective Are Various Programs at Saving Money and Reducing Crime?

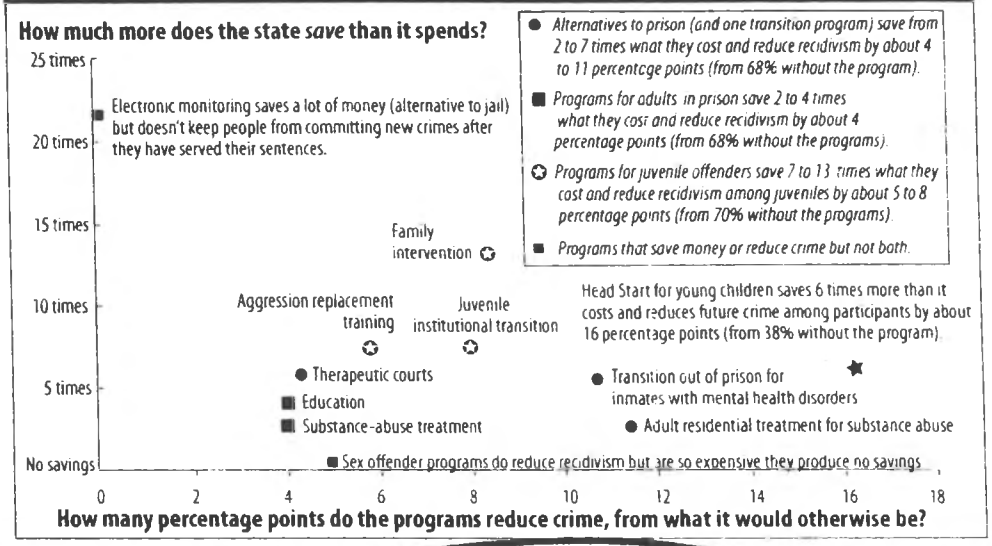


Figure 7. How Would Expanding Specific Programs Contribute to Reducing Growth in Numbers of Inmates?

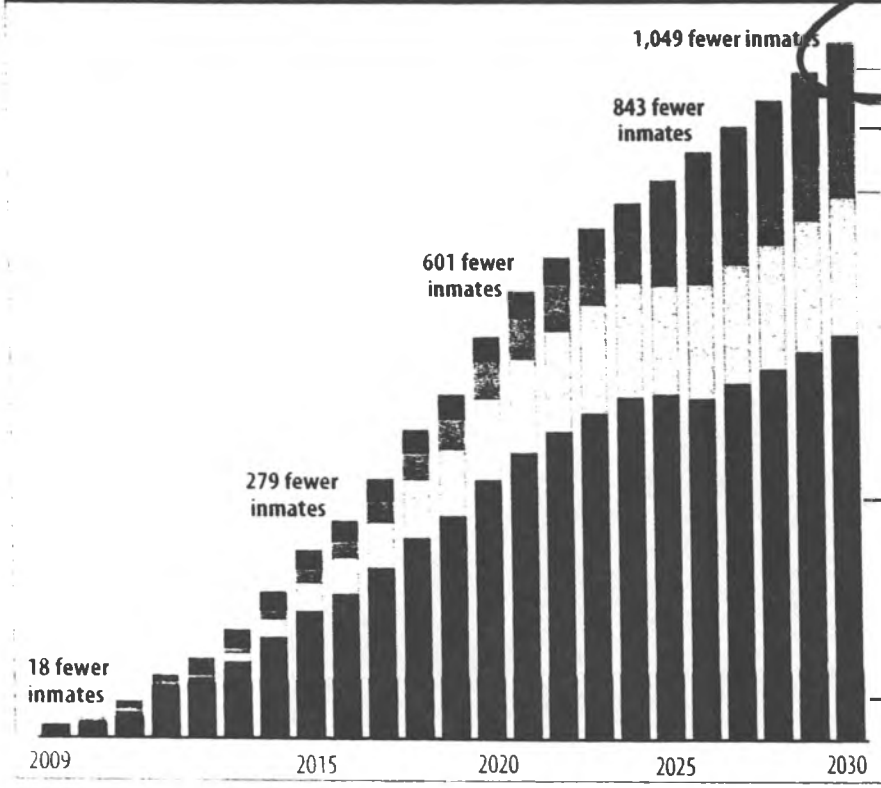


Pre-school programs for at-risk children cost about $1,000 per child but save many times that much, by reducing future crime. The effects of the spending aren't apparent for years, until the children grow up.

Programs for juveniles offenders cost an average of about $2,500 per person, but save almost 10 times that much by keeping kids out of prison. They serve only a subset of the population of 12- to-17-year-olds.

Transition programs for people with mental health disorders are extremely effective, add about $2,000 per person to inmate costs, and save about four times that much. But the programs currently serve very few people and can't readily be expanded to serve large numbers.

Programs that treat inmates for substance abuse add about $2,000 a person to inmate costs, but over time save about twice as much. They are effective, but can't readily be expanded to reach all the people who need them.

Education and job training programs in prison add about $1,000 to inmate costs, but they reach the most people and save about four times more than they cost. Because they are offered in every facility, they can easily be expanded and can reach more people. (Reductions in the number of inmates as a result of the sex-offender treatment program are also included here, but are only one or two people a year.)

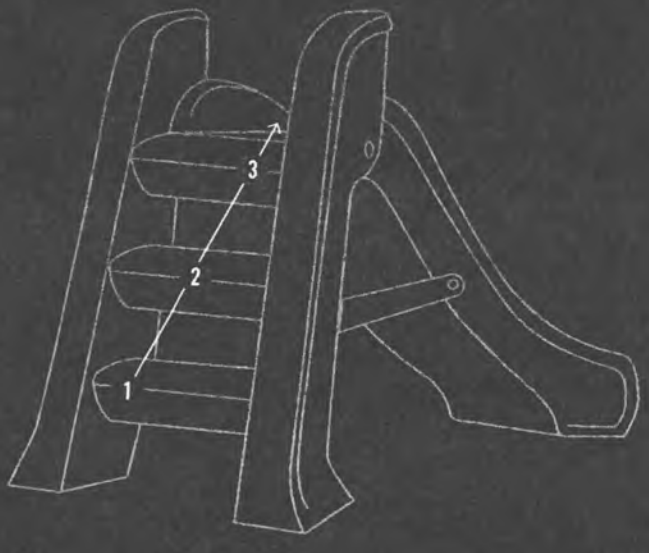
Programs that keep people out of prison save the state money right away, because they cost much less than the $44,000 per person the state spends to lock people up. They include therapeutic courts for substance abuse and mental health disorders, electronic monitoring, and residential substance-abuse treatment.

A Summarized Economic Impact Report on Early Education and Child Care Services in ALASKA

step up early ed & child care

Based on the McDowell Group Report *July 2006*

PREPARED FOR:
SYSTEM FOR EARLY EDUCATION DEVELOPMENT (SEED)
UNIVERSITY OF ALASKA SOUTHEAST



step up early ed & child care

STUDY FINDINGS ARE DETAILED ON THE FOLLOWING PAGES:

Demographics	Pg. 2
The Economic Impact on Alaska	Pg. 3
The Early Learning and Child Care Sector	Pg. 5
Impact on Alaska Families	Pg. 7
Alaskans Support Funding	Pg. 9

Why should you care about the availability of quality early education and child care in Alaska? Because stepping up early education for our children is critical for all of us.

LET US STEP YOU THROUGH THE FACTS.

1 Early childhood education and child care play a critical and measurable role in Alaska's economy

2 The availability of quality, affordable child care remains a challenge for many Alaska families

3 Alaskans across the state place a high priority on state funding for early education and child care

Until recently, there was no data specific to Alaska to demonstrate how the welfare of our youngest community members impacts the entire state – both in the short term and long term. But thanks to this study commissioned by the System for Early Education Development (SEED) and completed in July 2006 by McDowell Group, there is now local information to combine with the knowledge learned from national studies to provide an accurate baseline. What the statistics demonstrate is that Alaska lags behind much of the country in providing quality early education and child care to our residents. And while there are certainly entities working hard throughout Alaska to provide quality care for our children, Alaska remains one of only 11 states without a state-funded, statewide early childhood education system.

ALASKA IS ONE OF ONLY 11 STATES WITHOUT A STATE-FUNDED, STATEWIDE EARLY CHILDHOOD EDUCATION SYSTEM.

"I believe that high quality early childhood programs are critically important for the health and well-being of our community, and they are especially important for the health and well-being of our children. ... What can never be forgotten or taken lightly is that these programs provide a proven economic benefit to the organizations they serve. It is important that we recognize that. Research has shown that organizations who offer these services on-site for their employees retain these employees for an additional five years. The value of keeping these employees for this extended amount of time is immeasurable, and as a leader of an organization with more than 4,000 employees, I can tell you that recruiting talent is expensive, difficult and time consuming. Keeping our talent in the first place is without a doubt the best way to ensure we can sustain and live out our mission at Providence, and I'm grateful for the role our Center for Child Development plays in doing that each day."

AL PARRISH, CHIEF EXECUTIVE
PROVIDENCE HEALTH SYSTEM IN ALASKA

SCOPE OF THE ALASKA STUDY

The purpose of this study is to measure the economic impacts of the early education and child care sector on Alaska's economy. This study focuses on education and care of children under six years of age. Economic impacts are measured in terms of employment, spending on child care services, and the role that child care services play in making it possible for Alaska families to earn income.

This study also examines research conducted elsewhere in the U.S. that measures the broader societal economic benefits stemming from quality child care services.

A key component of this project was a telephone survey of 823 randomly selected households. The primary purpose of the phone survey was to collect information on the types of child care services Alaska families use and how much money households spend on child care services. The survey also collected information on Alaskans' attitudes about the importance of state government funding for early education and child care services.

ALASKA WORKING PARENT DEMOGRAPHICS

To best understand the data, it is critical to first understand the scope of the population we are considering. In 2004, Alaska's population included 62,013 children under six years of age, according to the Alaska Department of Labor and Workforce Development (DOLWD). Of these children, approximately 63 percent (39,400 children) were living in households where all available parents were in the labor force, whether families were dual-income or single-parents. These children resided in 30,400 Alaska households, all of which were potentially in need of child care services.

Detailed look at the 39,400 children under the age of six, where all available parents are in the workforce

LIVING WITH SINGLE MOTHER, IN LABOR FORCE
23%

LIVING WITH SINGLE FATHER, IN LABOR FORCE
12%

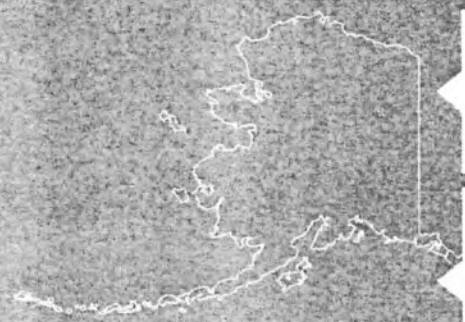
LIVING WITH TWO PARENTS, BOTH IN LABOR FORCE
65%

step 1

EARLY CHILDHOOD EDUCATION AND CHILD CARE PLAY A CRITICAL AND MEASURABLE ROLE IN ALASKA'S ECONOMY.

THE ECONOMIC IMPACT ON ALASKA

Mounting evidence shows that investment in quality early learning and child care is critical to building and maintaining a viable state economy. The economic impact of the early education and child care sector includes jobs for thousands of Alaskans, millions of dollars in spending by households and governments, and indirect contributions of Alaska's resident labor force and family income.



JOBS

DIRECT & INDIRECT:
7,400 in child care workforce

CONTRIBUTION TO THE WORKFORCE:
29,400 Alaskans can join the workforce because they have child care

WAGES

DIRECT & INDIRECT:
$124 million in child care workforce payroll

CONTRIBUTION OF HOUSEHOLD INCOME:
$850 million in annual wages paid to working families with child care

IMMEDIATE IMPACT OF QUALITY EARLY EDUCATION AND CHILD CARE

Child care providers make it possible for **29,400** Alaskans to enter the labor force (one adult for each household with children under six years of age where all parents are in the labor force). The 29,400 Alaskans that are in the workforce because child care services are available to them account for 9.5 percent of the Alaska resident workforce. If these working parents also account for 9.5 percent of all Alaska resident wages, their total annual wages would be just under $850 million. This indicates an average of $28,820 per family in additional Alaska annual income, indirectly made possible by child care services, is equal to approximately 40 percent of Alaska's mean family income in 2005.

Other data suggests a similar household income impact related to adding a second wage earner. In 2003, median family income for families with one wage earner was $43,709. Median family income for families with two wage earners was $77,159, a difference of $33,450. This analysis assumes that the typical parent who is in the labor force because child care services are available to him or her earns the same wages as the average Alaska worker. This may or may not be true given the demographics of families with young children. Nevertheless, it is clear that the availability of child care has major implications on income for Alaska residents in general, and on family household income in particular.

"Investment in early childhood development programs brings a real (that is, inflation-adjusted) public return of 12%, and a real total return, public and private, of 16%. We are unaware of any other economic development effort that has such a public return ...."

ART ROLNICK
SVP AND DIRECTOR OF RESEARCH
FEDERAL RESERVE BANK OF MINNEAPOLIS

LONG-TERM ECONOMIC IMPACTS OF QUALITY EARLY EDUCATION & CHILD CARE

A host of studies have been done to track the long-term economic impact of high quality early child care development on society. Though none of these studies focuses on Alaska, the implications for Alaska are relevant. The results of these studies have shown conclusively that although investment is required to provide quality early care to infants, toddlers and youths, the rate of return far exceeds that initial investment.

The largest benefit provided by quality early care was increased earnings capacity projected from higher educational attainment, along with higher taxes paid from better paying jobs. Other benefits are lower criminal justice system costs, reduced welfare costs, savings for crime victims, and savings on school remedial services budgets. The results of several studies are highlighted below.

LONG-TERM BENEFITS OF EARLY EDUCATION AND CHILD CARE

29% higher high school graduation rates

20% higher college attendance

70% lower crime incidence

20% lower welfare dependency

$143,000 additional earned income per capita, resulting from better employment

Studies also note that expenditures on education that are focused on K-12 may be misplaced given that brains develop rapidly in the early years (0-4), then develop at a much slower pace from age 4 through 18. The implication is that the earlier the investment on early education, the higher the return on investment will be.

step 1 → EARLY CHILDHOOD EDUCATION AND CHILD CARE PLAY A CRITICAL AND MEASURABLE ROLE IN ALASKA'S ECONOMY.

THE EARLY CHILDHOOD AND CHILD CARE SECTOR

When understanding the economic impact of early education and child care, the actual workforce in this field is often overlooked. Yet it has been found that at least 6,500 Alaskans participate in the child care sector workforce.

The estimate of 6,500 participants is derived from a variety of sources (as described in the full McDowell Group report). It must be understood that this is a conservative estimate, however. It does not include an unknown number of at-home providers who care for four or fewer unrelated children, or any number of related children, and therefore are not required to be licensed.

Yet, even without these added positions, the size of this workforce is comparable to other significant industries in Alaska. For example, the residential and non-residential building construction sector employed an average of 6,000 workers in Alaska in 2002, and Alaska's air transportation sector employed an average of 6,400 workers that same year.

SIZE OF COMPARABLE INDUSTRIES IN ALASKA

6,500 Workers in child care

6,400 [illegible]

6,000 [illegible]

DETAILED LOOK AT THE CHILD CARE AND EARLY EDUCATION WORKFORCE IN ALASKA

Not only is Alaska's early education and child care sector significant in size, it features a wide variety of service providers. It includes any program providing care for children from birth to age six. Examples of these programs include center-based child care, family child care, Head Start, Early Head Start, private and public preschools, Montessori programs, and pre-kindergarten services.

Despite the prominence of individuals employed in this workforce, there is a very low correlation in compensation. DOLWD payroll data indicated that the average monthly wage of an individual employed in this sector was $1,342. This is well below the average for all sectors of the Alaska economy; the average monthly wage in Alaska for this same time period was $3,218 – nearly three times that amount.

To put this in further context, it has been found that providers of early education and child care earn less than half of what the average elementary school teacher earns, even though the difference in age of those they teach may be less than one year.

ALASKA WAGE COMPARISON

INCOME OF AVERAGE ALASKAN
$38,616

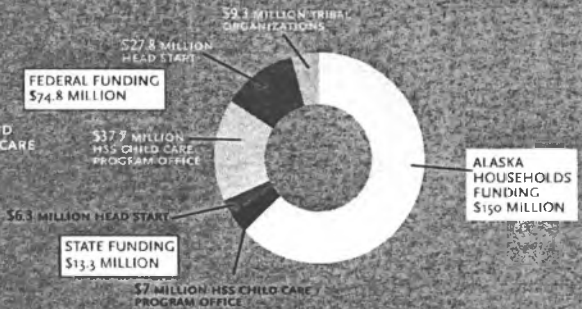
INCOME OF K-12 TEACHER IN ALASKA

INCOME OF EARLY ED & CHILD CARE WORKER IN ALASKA
$16,093

CHILD CARE SERVICES REVENUE AND FUNDING

There are two sources of spending on early education and child care services – government funding and spending by parents on child care services. Based on the analysis of the McDowell Group report, Alaska households may be spending $150 million annually on child care services for children under six years of age. In comparison, government spending on child care totals $88 million in Alaska, with nearly $75 million of that contribution coming from federal funding. Together, approximately $240 million is spent in Alaska on child care services for young children.

ALASKA HOUSEHOLD, STATE AND FEDERAL FUNDING FOR CHILD CARE SERVICES IN ALASKA



step 2

THE AVAILABILITY OF QUALITY, AFFORDABLE CHILD CARE REMAINS A CHALLENGE FOR MANY ALASKA FAMILIES

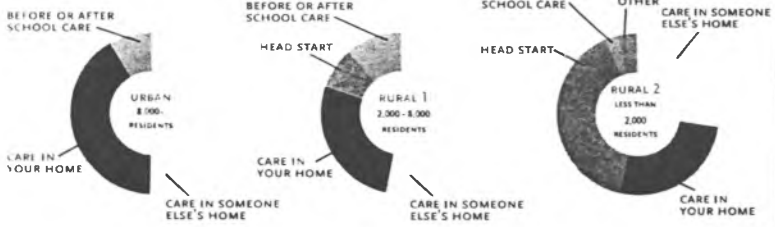
"I emphasize strongly how important it is to give the children the best start ... to have the children have a good early learning experience."

IMPACT ON ALASKA FAMILIES

To better understand how the early education & child care sector directly impacts families, 723 Alaska households were asked about their use of child care services as a part of this study's telephone survey. The findings of this study are understood to be the first set of data on this topic directly applicable to Alaska.

The survey sample included 323 households with children under six years of age. The sample included households from urban Alaska, defined as all communities with more than 8,000 residents. The sample also included surveys from households in communities with between 2,000 and 8,000 residents (labeled "Rural I"), as well as surveys from households in communities with fewer than 2,000 residents (labeled "Rural II"). In conducting statewide analysis of the survey results, data from these areas of the state were weighted to reflect their actual proportion of the state's population.

COMPARISON OF TYPES OF CARE IN URBAN AND RURAL AREAS OF ALASKA



Approximately 58 percent of children in the surveyed households received child care services of some type during the month of January 2006. Among those children receiving child care services, 49 percent were in a preschool or child care center. Just under one-third were being cared for in someone else's home, with over one-quarter receiving care in their own home. Eight percent were in a Head Start program. The total adds up to more than 100 percent, as some children received care in more than one setting.

FINDING ACCEPTABLE CHILD CARE

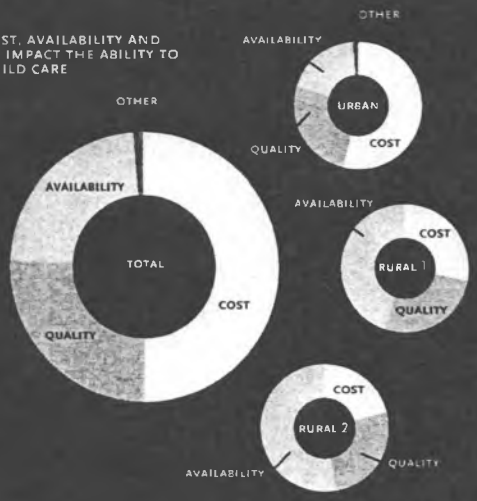
FINDING ACCEPTABLE CHILD CARE

This study also found that 45 percent of Alaska households with children under six in a child care situation found it difficult or very difficult to find acceptable child care. About the same percentage (49 percent) found it either easy or very easy to find acceptable child care.

Finding quality early education and child care programs proved to be an issue both in rural and urban areas of the state.

36% of households with children under the age of six reported that the quality, cost or availability of child care services had prevented someone in their household from seeking employment, or had in some way restricted the number of hours that they could work.

HOW COST, AVAILABILITY AND QUALITY IMPACT THE ABILITY TO FIND CHILD CARE



MONTHLY COST

$400-$900
DEPENDENT ON AGE OF CHILD AND LOCATION

MONTHLY COST OF FULL-TIME CHILD CARE

FACTORS AFFECTING ABILITY TO FIND ACCEPTABLE CHILD CARE

Among households in Alaska's smallest communities (the "Rural II" areas, or communities under 2,000 residents), 26 percent reported that the quality, cost or availability of child care services had prevented someone in their household from seeking employment, or had in some way restricted the number of hours that they could work. The difference between rural and urban in this regard is probably not due to better child care service in rural areas, but rather to the fact that rural areas have fewer employment opportunities available. Among those households where cost, quality or availability of child care services have been a constraint, cost was a major factor for 78 percent of households. Availability had a major impact on 56 percent of households, and quality on 48 percent.

COST MOST OFTEN CITED

When asked which factor had the greatest impact on their ability to find acceptable child care, cost was most often cited. Half (50 percent) indicated that cost had the greatest impact on their ability to find acceptable child care, while 26 percent cited quality, and 23 percent cited availability.

Cost is apparently more of an issue in urban Alaska, while availability is more of an issue in rural Alaska. Just over half of urban households indicated that cost had the greatest impact, compared to approximately one quarter of those in rural areas. Conversely, within rural areas, approximately half the households reported that availability had the greatest impact, compared to only 19 percent of urban areas.

COST IS A LARGE ISSUE

It is not a surprise that cost is a significant issue. The cost of full-time child care in Alaska ranges from $400 to $900 per month, depending on the age of the child and the location of the care. Given these figures, it was perhaps surprising to find that just one in seven Alaska households with children in child care services received some form of child care assistance.

Just 1 in 7 Alaska households with children under six in child care services received financial assistance for child care

step 3

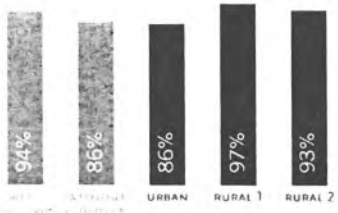
EARLY CHILDHOOD EDUCATION AND CHILD CARE PLAY A CRITICAL AND MEASURABLE ROLE IN ALASKA'S ECONOMY.

9 of 10 alaskans support funding

The telephone survey described earlier also asked all households a series of questions about state funding support for early learning and child care services in Alaska. Results showed overwhelming support for the funding of early education and child care.

Nearly nine out of ten Alaska residents (87 percent) think it is important or very important for state government to provide financial support for early education and child care. Among residents with children under six years of age, 94 percent think state support is important or very important. Even among residents without young children, 86 percent think state financial support is important or very important. Further, urban and rural residents alike feel it is important to provide funding for early education and child care.

THOSE STATING IT IS "IMPORTANT" OR "VERY IMPORTANT" FOR STATE GOVERNMENT TO PROVIDE FINANCIAL SUPPORT



audiences who expressed above average support for early education and child care

Alaskans were also asked if the state should give early learning and child care high, medium or low priority. Overall, 63 percent feel it should have high priority. A variety of population subgroups were more likely to give a high priority. They include:

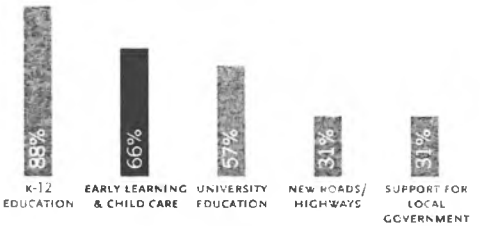
- 76% households with children under six
- 72% female residents
- 77% residents aged 35 to 44
- 76% low income residents <$25,000
- 73% high income residents >$100,000

"The data shows what I have also personally experienced – that the issue of quality early education and child care is one of the most important social issues facing us in Alaska today."

JIM CALVIN, MCDOWELL GROUP

alaskans place priority on funding early education and child care

Alaskans also give early learning a high priority for state funding, when compared to other state-funded programs. Among the categories of spending presented to survey respondents, only K-12 education was rated as a high priority more often.



THE RELATIVE IMPORTANCE OF EARLY EDUCATION AND CHILD CARE

To press this matter further, a third question regarding Alaskans' perception of the importance of funding for early learning and child care focused on relative importance. More than three-quarters of Alaska residents feel that early learning and child care are more important to fund than support for local government or construction of new roads and highways. Almost two-thirds (63 percent) feel that funding for early learning and child care is more important than funding for university education. Among the various programs, only K-12 education is viewed as more important than early learning and child care.

report conclusion - next steps

This series of questions regarding perceived importance of state funding for early education and child care services in Alaska indicate that Alaskans place a high priority on funding for education in Alaska, with a high interest in early education and child care.

end notes

This piece serves as a condensed summary of the July 2006 McDowell report titled "Economic Impact of Early Education and Child Care Services in Alaska." This complete study was commissioned and prepared for the System for Early Education Development (SEED), based at the University of Alaska Southeast. This publication is funded by a grant from the U.S. Department of Education, Fund for the Improvement of Education.

You may download a full copy of the report at http://seed.alaska.edu or request the full report from the SEED administrator at 907.796.6414.

We thank you for taking the time to review this report, which contains critical data regarding the future of Alaska's children and our economy.

The McDowell Group study team would like to acknowledge the invaluable assistance provided by the Project Steering Committee. The Committee included Mary Lorence *(Manager, Alaska Child Care Programs, Department of Health and Social Services)*, Joy Lyon *(Executive Director, Association for the Education of Young Children, Southeast Alaska)*, Mary Lou Madden *(Madden Associates)*, and Carol Prentice *(SEED Program Manager)*. In addition, SEED would like to recognize the contribution made by SEED Council members Candace Winkler and Cindy Harrington.

SEED also appreciates the collaboration with Alaska's *Ready to Read, Ready to Learn Task Force*, 28 Alaskan leaders dedicated to improving the literacy and learning skills of Alaska's pre-kindergarteners.

FPG Snapshot

#42 | April 2007

Poverty and Early Childhood Intervention

In the spring of 2006, UNC's Center on Poverty, Work and Opportunity hosted a competitive process to support original research by UNC faculty members in the form of policy briefs. Each brief was authored by a UNC faculty member and was reviewed by two experts—an academic and a practitioner in the field that the brief addresses. This Snapshot summarizes the brief on Poverty and Early Childhood Educational Intervention.

OVER AND OVER AGAIN research has shown that children living in poverty suffer in a multitude of ways. Childhood poverty is associated with higher rates of academic failure, grade retention, school drop-outs, teen parenthood, and smoking and illegal drug use. Children growing up in poverty are more likely to have employment difficulties as adults. Research also shows that these outcomes are preventable.

Findings from the Abecedarian Project—a 30-year old project at FPG Child Development Institute—demonstrate that intensive early childhood educational intervention can have lasting positive effects for children raised in poverty. What's more, the program resulted in decreased government spending. Yet children living in poverty today do not have access to this type of initiative.

What Happens to Children Living in Poverty

Children raised in poverty:

- Have poorer academic achievement outcomes than other children.
- Are less likely to attend college. While 88 percent of affluent students attend college, only 36 percent of children raised in poverty do so.
- Are more likely to become a teen parent.
- Are more likely to smoke and use illegal drugs.
- Are more likely to be unemployed.

Existing Research on Early Educational Programs for Poor Children

Numerous early childhood programs have been created over the years to attempt to redress the negative consequences of poverty. Below is a brief summary of research on some of these efforts.

Head Start

Research in the early nineties which seemed to show that Head Start had no lasting impact on poor children's school performance received much attention, despite significant problems with the study's methodology. A more recent study which met standard research protocols showed that after participating in Head Start for a year, children had some improvement in language and pre-reading outcomes and access to health care; and no significant effect for math.

Consortium for Longitudinal Studies

The consortium included researchers from several early childhood programs from the 1960s. They followed up with participants six to ten years later and found that these children were less likely to use special services in school and had fewer grade retentions. However, intellectual gains eroded within three to four years after the program and academic gains were largely gone by five to six years in school.

CONTINUED

CONTINUED FROM PAGE 1

Chicago Child-Parent Center Program

This program was center-based and offered child and family support services to a sample of families living in high-poverty neighborhoods. Children attended half-day preschool and received additional support through first grade. Participants had higher achievement scores during elementary school than those who did receive the intervention. By age 20, these same children had lower incidence of crime and higher rates of high school graduation.

Infant Health and Development Program

Study participants were low birth weight babies. Participants were randomly assigned to receive services typically offered for such babies or to receive home-based educational intervention during their first year followed by two years of center-based child care. At age eighteen, those who had been heavier at infancy had higher cognitive scores and fewer reported behavior problems. There were no long-term benefits for the lighter weight infants.

Perry Preschool Program

Children attended a half-day preschool program for two years. By second grade, participants had significantly higher achievement scores and were less likely to receive special education services. By age 27, participants were more likely to have graduated from high school, had significantly higher earnings, own homes and second cars, and were less likely to receive welfare or be involved in crime. By age 40, participants were more likely to be employed, have higher salaries, own homes, and have savings accounts. They were less likely to have committed a crime or used illegal drugs.

The Abecedarian Project: A One-of-a-Kind Experience

This project represents the most intensive early childhood program offered for children from poor families. It is the only program to have had full-day, year-round, center-based care in infancy and continue until kindergarten entry. The study methods used meet the highest standards of research. The program enrolled 111 infants between 1972 and 1977 with 57 randomly assigned to receive center-based early educational intervention and 54 in a control group.

The Intervention

The curriculum involved educational "games" that emphasized development skills in cognition and language. For example, infant games were age appropriate adult-child interactions that included talking to the child, showing pictures or toys, and offering infants a chance to react to their environment. Activities were individualized for each child. As children aged, the "games" became more conceptual and skill-based, but the program always emphasized individual development. Children also received their healthcare on site from a staff pediatrician.

Result Highlights

Those who received the intervention:

- Scored 1.8 grade years higher in reading and 1.3 years higher in math as young adults.
- Were more likely to attend a four-year college (36 percent versus 14 percent).
- Were more likely to have a skilled job (47 percent versus 27 percent).
- Were less likely to have had their first child at age 18 or younger (26% versus 45%).
- Tended to smoke less (39 percent versus 55 percent).
- Were less likely to use marijuana (18 percent versus 39 percent).

Cost-Benefit Analysis

Independent economists calculated cost-benefit ratios for the Abecedarian Project based on:

- Earnings and benefits of participants,
- Earnings and benefits of future generations,
- Maternal earnings,
- Elementary and secondary education cost-savings,
- Improved health,
- Higher education costs, and
- Welfare use.

The estimated cost-benefit ration was 2.5:1—meaning for every dollar spent on the program, taxpayers saved $2.50 as a result of higher incomes, less need for educational and government services, and reduced health care costs.

Conclusions

Abecedarian Project findings show that intensive early childhood educational intervention made a dramatic difference in long-term outcomes for children in raised in poverty. Individuals in the study currently are participating in an age 30 follow-up study.

Enhanced Early Childhood Education Pays Long-Term Dividends in Better Health

ScienceDaily (Jan. 17, 2011) — Intensive early education programs for low-income children have been shown to yield numerous educational benefits, but few studies have looked more broadly at their impact on health and health behaviors. A new study conducted by researchers at Columbia University's Mailman School of Public Health examines this issue, using data from a the well-known Carolina Abecedarian Project (ABC), a randomized control study that enrolled 111 infants in the 1970s and continued to follow them through age 21.

Researchers found that individuals who had received the intensive education intervention starting in infancy had significantly better health and better health behaviors as young adults.

The study is only the second to explore the relationship of early childhood education and adult health benefits. The first study, based on the Perry Preschool Program, also was conducted by Columbia professors Peter Muennig, MD, and Matthew Neidell, PhD, on a similarly small cohort of children, and found behavioral benefits, but no overall health benefits. The current study is the first randomized control study to definitively show the health benefit of education.

Findings are online in the *American Journal of Public Health*.

The original study enrolled infants from 1972 to 1977 at the Frank Porter Graham Child Development Institute in Chapel Hill, NC, where they received an age-appropriate curriculum designed to enhance cognition and language development starting in infancy. Researchers had found that infants enrolled in the program had higher IQ by age three and higher reading and math achievement by 15 years of age, lower rates of teen depression and greater likelihood of college enrollment compared with a control group.

The current study expands on the original study to examine the impact of ABC on three health measures and 11 measures of behavioral risk factors. The health measures were the number of self-reported health problems since 15 years of age, a depression index score, and the number of hospitalizations in the past year. Behavioral risk factors concerned traffic safety, drug use, and access to primary care. Researchers found that participants had significantly better health and health behaviors and that these findings were independent of IQ, educational attainment or health insurance status.

The original study was small, but it had a very strong effect on education. Until it came along, the benefit of education had never been proven using the gold standard in research methods-the randomized controlled trial. What we have found is that this educational intervention also reduced health risks like smoking and improved health outcomes as early as age 21," said Dr. Muennig, assistant professor of Health Policy and Management at Columbia's Mailman School and principal investigator of the new study. "The health benefits were quite dramatic."

KNOWLEDGE INNOVATION RESULTS

QUALITY EARLY EDUCATION:
A COMPETITIVE NECESSITY IN A GLOBAL ECONOMY

Bill Millett / President, Scope View Strategic Advantage

In the global economy of 2011 and beyond, the United States must effectively mobilize every possible competitive resource. Early education has rarely been positioned in that context, but it is a critical asset, or damaging liability depending on its quality, for the nation's long-term economic vitality.

Cited below are some of the key business organizations and other sources that have made forceful cases for the long-term economic importance of quality early education and that are discussed in this presentation. Scope View believes that early education advocates have too often based their arguments by using the conclusions of other early education professionals, while too seldom citing resources like those shown here.

There is only one way to effectively and consistently reach business and governmental leaders. And that is to ensure that business organizations are among those making the case. Many of them have... and with compelling logic. Business sources also provide substantially more credibility within some governmental circles that may discount arguments advanced by the early education community itself.

The Business Roundtable: www.businessroundtable.org/taskforces

The Business Roundtable is the bluest of blue chip business associations. It is comprised of the Chief Executive Officers of 160 leading U.S. companies with $4.5 trillion in annual revenues and more than 10 million employees. Member companies comprise nearly a third of the total value of the U.S. stock markets and represent over 40 percent of all corporate income taxes paid. Roundtable companies give more than $7 billion a year in combined charitable contributions, representing nearly 60 percent of total corporate giving.

The Roundtable is committed to advocating public policies that ensure vigorous economic growth, a dynamic global economy, and the well-trained and productive U.S. workforce essential for future competitiveness. The Roundtable believes that its potential for effectiveness is based on the fact that it draws on CEOs directly and personally, and presents government with reasoned alternatives and positive suggestions.

In 2003, it issued a major position paper, "Early Childhood Education: A Call to Action from the Business Community," emphatically endorsing state and federal programs that provide quality early education. In so doing, it embraced both the general principles and key operational elements of Smart Start. Importantly, the Business Roundtable positioned the issue as one of major importance to the long-term vitality and security of local and state economies and that of the nation as a whole.

"Over the past two decades, business leaders have invested time, expertise, and resources in efforts to improve K-12 education in the United States. What we have learned leads us to conclude that America's continuing efforts to improve education and develop a world-class workforce will be hampered without a federal and state commitment to early childhood education for 3-4 year-old children. In today's world, where education and skill levels determine future earnings, the economic and social costs to individuals, communities, and the nation of not taking action on early childhood education are far too great to ignore."

However the research is clear: the return on investment is linked to quality; simply increasing participation without ensuring program quality will not produce positive results. Successful programs will include:

(1) Aligning the objectives of early education systems with states' standards in the early grades; (2) Ensuring that teaching staffs possess the skills, knowledge, and attitudes to help young children enter school prepared to succeed; (3) Supporting parents as their children's first teachers and providing high-quality program options to parents who choose to enroll their children; (4) Embracing accountability for measurable results; (5) Building partnerships to finance, sustain, and improve the system."

U.S. Chamber of Commerce: www.uschamber.com/issues/index/education/education.htm

The United States Chamber of Commerce is the world's largest not-for-profit business federation, and represents: 3,000,000 businesses (via its federation of local chambers and association members. Actual direct membership is several tens of thousands.); 2,800 state and local chambers.; 830 business associations; and 90 American chambers in other countries.

"To keep America competitive and strong, the business community must be actively engaged on issues related to our nation's educational system as a means to ensure an educated citizenry of self-sufficient, lifelong learners who have the skills needed to thrive in the global workplace, today and in the future. The coordination of community resources, school support systems, family engagement programs, and classroom teachers' efforts can diminish the barriers to learning. Employer engagement must be significant and have the ability to address some of the greatest challenges facing education…

These challenges include the lack of preparation of early learners who enter school for the first time, the significant learning and education gaps among groups of students, as well as the unacceptable number of students who never complete a secondary education or have the skills necessary to enter the world of work or continue on with higher education.

Studies by the Federal Reserve Bank of Minnesota reveal that the capacity for developmental skills begins in the first five years of life. This is the beginning point for a person's creativity, communication, team working, problem solving, and critical thinking skills. These studies reflect that there is a great need for children to enter kindergarten prepared to learn. Unfortunately, too few young children today are in fact prepared with these tools.

Through these efforts, states and localities should strive to provide access to high quality programs for all children. These programs should include a strong family engagement component to facilitate early literacy development; should focus on academic preparation; and be held accountable for their performance. Research shows that lasting benefits of Pre-K programs only persist when staff is professionally prepared and high quality standards are maintained."

BusinessWeek (10/23/06): www.businessweek.com/magazine/content/06_43/b4006099.htm

Owned by McGraw-Hill, BusinessWeek was first published in 1929. With a circulation of more than a million, it is consistently one of the most widely read and respected such magazines in the world. In its October 23, 2006, U.S. edition, it featured an article on quality preschooling.

"Programs that put real money into intensive preschooling pay off -- in productive workers. To stay competitive, companies need an educated workforce. That's one reason executives wince at the sorry scores U.S. students earn in international reading, science, and math rankings.

It doesn't have to be that way. Analyzing data from a series of long-term studies, a band of scientists, educators, and economists say that aggressive preschool training for children from troubled homes yields extraordinary dividends for the families and society. Some of the most persuasive data come from a 40-year, 123-child study at the High/Scope Perry Preschool Project in Ypsilanti, Mich. In 1962-67, preschool teachers worked intensively with 64 low-income African American children aged 3 to 4, both at preschool and once a week in their homes. Such efforts don't come cheap: The High/Scope program cost $10,600 per pupil, in 2005 dollars.

But 40 years later, when administrators compared the children's life stories with those of 59 people who did not receive special attention, the payoff was impressive. Almost half of the preschooled children performed at grade level by the age of 14, compared with just 15% in the control group, and 60% were earning upward of $20,000 a year in their 40s, vs. 40% in the control group. Throw in the higher number of school grades completed, lower rates of criminal activity, reduced time spent in prison, and other factors, and the benefit-to-cost ratio comes to $17 for every $1 invested.

The Committee for Economic Development: ced.org/projects/educ.shtml

Throughout its 60+ year history, the Committee for Economic Development has addressed national priorities that promote sustained economic growth and development to benefit all Americans. These activities have helped shape issues ranging from the Marshall Plan in the late 1940s, to education reform in the past two decades, and campaign finance reform since 2000. Trustees include key representatives from both the corporate and university sectors.

Since 2002, the Committee has been engaged in an aggressive national campaign to build the momentum surrounding investment in early education. Its initial early education report, Preschool for All: Investing in a Productive and Just Society, CED has The report calls for free, high quality preschool education for all children age 3 and over who have not yet entered kindergarten. Its 2004 analysis, The Value of High Quality Preschool Investments as Economic Tools was authored by James Heckman, Nobel Laureate in Economics. Its most recent work, Economic Promise of Investing in High-Quality Preschool: Using Early Education to Improve Economic Growth and the Fiscal Sustainability of States and the Nation, was released in June 2006.

"Many of the current local development policies surfaced during the 1970's when an energy crunch, global competition and high unemployment forced state and local governments to take action to attract jobs. Since then, added employment pressures and increased mobility of labor and capital have further expanded "territorially competitive" development policies, and by 1994 there were an average of twenty-four inducement programs per state.

Each year, billions of dollars of state and local tax dollars are committed to local development projects, often in the form of inducements to high-profile companies. Though these investments are increasingly common, their return are risky, if at al positive, and their benefits are frequently aimed at a small segment of the population

Early childhood education, in contrast, appears to offer greater potential returns and substantially less risk. CED encourages local development policy-makers to view early education as a development tool and appreciate its lasting benefits. It is time that early education is implemented with the same energy, urgency and funding that is currently being applied to other less-promising development projects."

Federal Reserve Bank of Minneapolis: www.minneapolisfed.org/pubs/fedgaz

The Federal Reserve System serves as the central banker of the United States. It influences monetary and credit conditions in the economy in pursuit of maximum employment, stable prices, and moderate long-term interest rates. It supervises and regulates banking institutions to ensure their safety and soundness, and maintains the stability of the economy while containing systemic risk that may arise in financial markets. Minneapolis is one of twelve independent Federal Reserve Banks located in major cities throughout the nation.

"Early childhood development programs are rarely portrayed as economic development initiatives, and we think that is a mistake. Such programs, if they appear at all, are at the bottom of the economic development lists for state and local governments. They should be at the top...

Most of the numerous projects and initiatives that state and local governments fund in the name of creating new private businesses and new jobs result in few public benefits. In contrast, studies find that well-focused investments in early childhood development yield high public as well as private returns... State and local subsidies to private businesses are not new. In the name of economic development and creating new jobs, Minnesota, and virtually every other state in the union, has a long history of subsidizing private businesses. We have argued in previous studies that the case for these subsidies is short-sighted and fundamentally flawed...

The conventional view of economic development typically includes company headquarters, office towers, entertainment centers, and professional sports stadiums and arenas. In this paper, we have argued that in the future any proposed economic development list should have early childhood development at the top. The return on investment from early childhood development is extraordinary, resulting in better working public schools, more educated workers and less crime."

Zogby International: http://ced.org/docs/poll_earlyed2006zogby.pdf

Zogby International has been tracking public opinion since 1984 in North America, Latin America, the Middle East, Asia, and Europe. It has major clients in the business, nonprofit, governmental and political arenas. It was commissioned by the Pew Charitable Trusts, PNC National Bank and the Committee for Economic Development to survey 1,000 business leaders across the country on their views of the importance of publicly funded pre-kindergarten programs and their importance to the economy. The results are shown below.

"Facing a decline in the number of skilled workers, American business leaders overwhelmingly back public funding for pre-kindergarten for all children to keep the U.S. economy globally competitive, according to a survey by Zogby International.

The poll was conducted last fall among 205 managers of Fortune 1000 companies and businesses with more than 1,000 employees, and was released in conjunction with a forum of more than 200 business leaders, economists, and educators. The event, "Building the Economic Case for Investments in Preschool," is sponsored by the Committee for Economic Development (CED), The Pew Charitable Trusts and PNC Financial Services Group, Inc.

It said that 49% felt the level of their workers' skills had decreased over the last decade, while 42% felt skills had improved. 54% said they expected difficulty finding enough educated and skilled workers in the future, while 81 percent said public funding of voluntary pre-kindergarten for all children would improve the nation's work force.

Concerns about the quality of the American workforce and our economic future were implicit in the responses of business leaders. What was truly surprising was not just the recognition that pre-kindergarten is essential to a better educated workforce, but that 63% of the business leaders favor active support for such universal programs by business.

American business leaders overwhelmingly favor publicly-supported pre-kindergarten programs, with more than four-in-five agreeing with all of the following statements:

- Investments in effective preschool programs for children are important if the U.S. is to remain competitive in the global economy.
- Investments in effective preschool programs for children are important for the long-term success of the U.S. economy.
- Voluntary pre-kindergarten for all children would improve the workforce.
- Public funding of voluntary pre-K for all children would improve America's workforce.

Significantly, 83% favor an approach that would provide publicly-funded pre-kindergarten with choice—that is, where parents were empowered to choose the pre-K program that is right for them and their child. In fact, not only do these business leaders favor this approach, but more than three-in-five business leaders (63%) favor active support for such universal programs from the business sector.

Business leaders clearly tie their support to studies that showed significant economic advantages to providing pre-school to all children. More than four-in-five say they are more likely to support universal pre-school because of studies that showed disadvantaged children provided with pre-K educations earned higher incomes and were better able to support themselves and their families as adults, as well as a gender-specific study that found that female pre-K participants were more likely to graduate from high school and avoid costly lifestyle choices like out-of-wedlock birth and receiving public assistance.

Ultimately, unease about the American workforce and the U.S.'s ability to compete in the global economy without a solid investment in education beginning in early childhood seems a potent rationale for business leaders to support investing in universal pre-school for all who want it."

The New America Foundation: www.newamerica.net

Launched in 1999, this non-partisan think tank examines such powerful forces as rapid technological change, massive demographic shifts, economic globalization and the rise of new global powers that are remaking America. Its Board includes the chief executive officers of some of the country most creative and forward looking companies.

"Never before has the connection between our economic growth and our education system been so critical. As the Council on Competitiveness predicts, where once we optimized our organizations for efficiency and quality, now we must optimize our entire society for innovation.

The drive for innovation demands that we look at improving our education system from the ground up. However, to date, we have heard little in the education debate about children's early years. This is radically different than our competitors, who begin investing much earlier in their citizens' education, knowing that these investments have long-term benefits. For America to succeed, we must do the same.

In this new global economy, our education system must develop students who have the creative capacity to dream and design as well as build. They must be able to interact with people who have different values and beliefs. While they will need the ability to question and think critically, they must also be able to communicate effectively and work in cooperation with co-workers across the globe. For America to prosper, we need citizens and leaders to engage in a complex and changing economy

Many of these skills are fundamental and develop surprisingly early in a child's life. Yet, our current education system concentrates most of its attention on students' later academic years. As test scores confirm, this strategy is not helping students keep pace with their international peers. Other countries build their primary education systems upon an integrated and coordinated system of early care and education, often beginning at age three. A first step in our efforts to strengthen our education system is to develop a national system for children's earliest education experiences that aligns standards, expectations and programs."

TWO ADDITIONAL ARGUMENTS FOR THE IMPORTANCE OF QUALITY EARLY EDUCATION

The Crime Prevention Case: Fight Crime: Invest in Kids. www.fightcrime.org

This bipartisan organization is comprised of over 4,000 law enforcement leaders and crime survivors nationwide. It has called on Congress and state lawmakers to expand pre-kindergarten, one of the most effective strategies to increase graduation rates in the 2009 report Schools or the Street; Crime and America's Dropout Crisis.

"America faces a dropout crisis that poses a significant threat to public safety. Nationwide, an estimated three out of ten high school students fail to graduate from high school on time; and for many cities and minority populations, the numbers are much worse.

High school dropouts are three and one-half times more likely than high school graduates to be arrested, and more than eight times as likely to be incarcerated. Across the country, 68% of state prison inmates have not received a high school diploma. According to researchers, ten percentage-point increases in graduation rates have historically been shown to reduce murder and assault rates by approximately 20%. Increasing graduation rates by ten percentage points would prevent over 3,000 murders and nearly 175,000 aggravated assaults in America each year.

Many efforts are underway nationwide to increase graduation rates, but the most tested and widely adopted school reform shown to greatly increase graduation rates is high-quality pre-kindergarten. Evidence from two long-term evaluations of the effects of pre-kindergarten programs show that participating in high-quality pre-kindergarten increases high school graduation rates by as *much as 44%.*

The Military Readiness Case: Mission Readiness. www.missionreadiness.org

Mission: Readiness is the nonprofit, bi-partisan organization led by senior retired military leaders ensuring continued American security and prosperity into the 21st century by calling for smart investments in the next generation of American children.)

"Competent, educated, and healthy young people are the future patriots tasked with defending America's national security and prosperity. Today, over 72% of 17 to 24-year-olds do not meet the basic minimum standards required for military service.

A world-class military requires world-class health and education. The most effective long-term investment we can make for a strong military is in the health and education of the American people. We must invest now in the next generation to preserve our nation's security, freedom, and opportunity. We call on all policymakers to ensure America's national security by supporting interventions that will prepare young people for a life of military service and productive citizenship; this includes fully funding early childhood education programs…"

Alaska Preschool Project

In April of 2009, the Alaska Legislature provided EED with $2,000,000.00 in General Funds for a pre-kindergarten project. The application process offered bonus points in the Request for Application (RFA) for partnerships with other entities and for those willing to participate in Department-offered training. EED also required the use of certified teachers with an early childhood background along with specific pre- and post-assessments for outcomes for both the children and the program.

Districts

- The Anchorage School District (ASD) provided two new complete classrooms in partnership with Kids Corps Inc. (KCI) Head Start. Both are federally recognized Head Start classrooms being jointly provided by the ASD & KCI in a school district setting.
- The Bering Strait School District (BSSD) project is a partnership among three educational agencies: BSSD, Kawerak, Inc. Head Start, and RurAL CAP Head Start. All four BSSD programs are housed in Head Start settings and jointly provided by the district and either of the two Head Start programs.
- The Juneau School District (JSD) provided two complete classrooms in partnership with the Central Council of Tlingit and Haida Indian Tribes of Alaska (CCTHITA) Head Start. Both are federally recognized Head Start classrooms being jointly provided by the JSD & CCTHITA.
- The Lower Kuskokwim School District (LKSD) provided services to children in one school-based classroom in Bethel.
- In Nome, the program ran two classrooms: one in the Nome Preschool (a private entity) and the other a Kawerak Head Start. Both are run jointly with the Nome Public Schools.
- Yukon-Koyukuk School District (YKSD) provided two new preschool classrooms. One was a district-run program in Allakaket (building in one additional hour of Athabascan language immersion daily as requested by the community). The other new classroom in Minto was in partnership with Tanana Chiefs Conference (TCC) Head Start. They also worked in Huslia, and Kaltag with TCC Head Start programs.

Early Learning Efforts in Other Districts

The department provided $300,000 to increase funding for early learning projects in Lower Yukon School District and Yupiit School District.

- Lower Yukon School District hired an Early Childhood Specialist in 2010 who focused her work in two directions; providing family training and activities for children who will transition into Kindergarten in Nunam Iqua. Additionally the department provided Lower Yukon School District with training and technical assistance on site for district staff and community members.

- Yupiit School District hired a coordinator to work with district run home visiting programs, local Head Starts, and other local early care and education providers in their three communities; Akiak, Akiachak, and Tuluksak. Work focused on transition and alignment between the birth to three programs, Head Start or other early care and learning programs and the five year olds' transition to Kindergarten programs and the K-12 system. An Early Childhood Leadership Team with local representatives from early learning programs was created and joint outreach to local councils is ongoing.

The following chart shows the number of students being served by program in the 2010-2011 school year and funding:

Program	Students Served	State Funding
Anchorage School District	35	167,684
Bering Strait School District	48	362,828
Juneau School District	23	201,073
Lower Kuskokwim School District	21	337,732
Nome City Schools	35	219,539
Yukon-Koyukuk School District	12	325,445
Lower Yukon School District	90	150,000
Yupiit School District	55	150,000
THREAD (Pre & Post Program Assessments-ECERS)		85,699
Totals	**319**	**2,000,000**

Assessments

The Peabody Picture Vocabulary Test (PPVT) provides information on vocabulary and receptive language development. Large numbers of children entering the AP3 program in the fall were significantly below their same age peers nationally. As a result of participation in the program, 72% of the children made above expected growth in vocabulary.

The Developmental Indicators for the Assessment of Learning (DIAL -3) provides information on three areas of development in relation to school readiness: Motor Development; Concept Development; and Language Development. In the fall 73% of children entering the AP3 program were significantly below their same age peers nationally. Spring assessments show that 28% of the children are in the top quartile as compared to the 9% in the fall and that 29% have moved out of the bottom quartile.

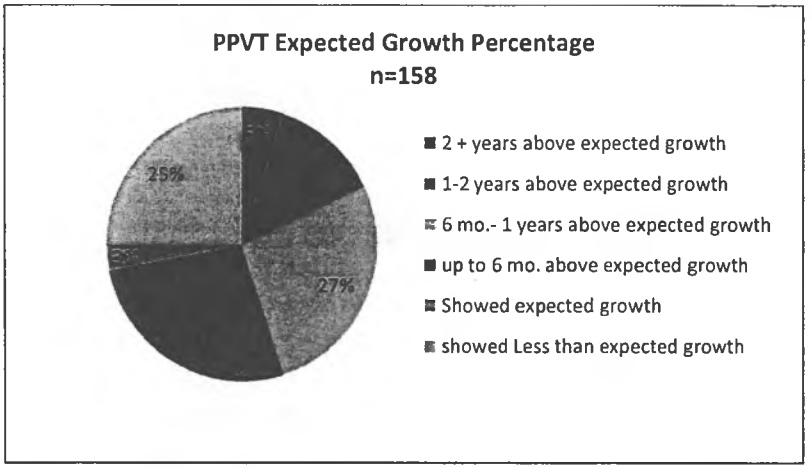
The Early Childhood Environmental Rating Scale (ECERS) was used to determine the quality of the environment in which the programs took place. Programs were rated in the fall and again in the spring. The AP3 programs began the year above minimal on the scale and ended approaching

good (almost a full point of improvement in less than a year's time). This represents significant programmatic growth.

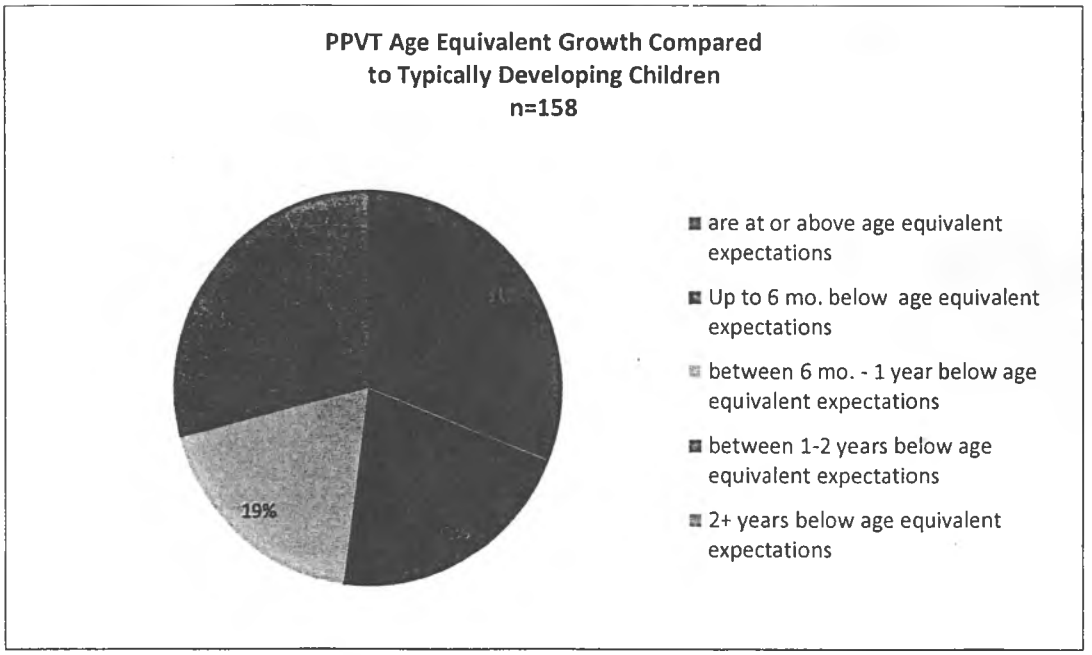
State Aggregate
PPVT Child Outcomes

The following chart illustrates children's actual growth compared to the expected growth for the time between assessments.

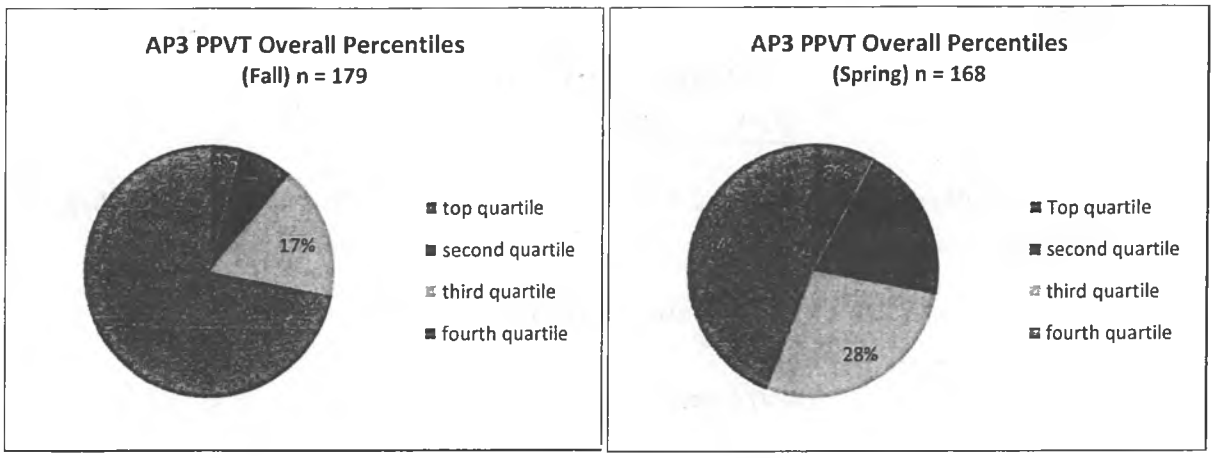
State Aggregate



The following chart illustrates the students' growth in relation to an age-equivalent typically-developing child on a national level.



State PPVT Percentages

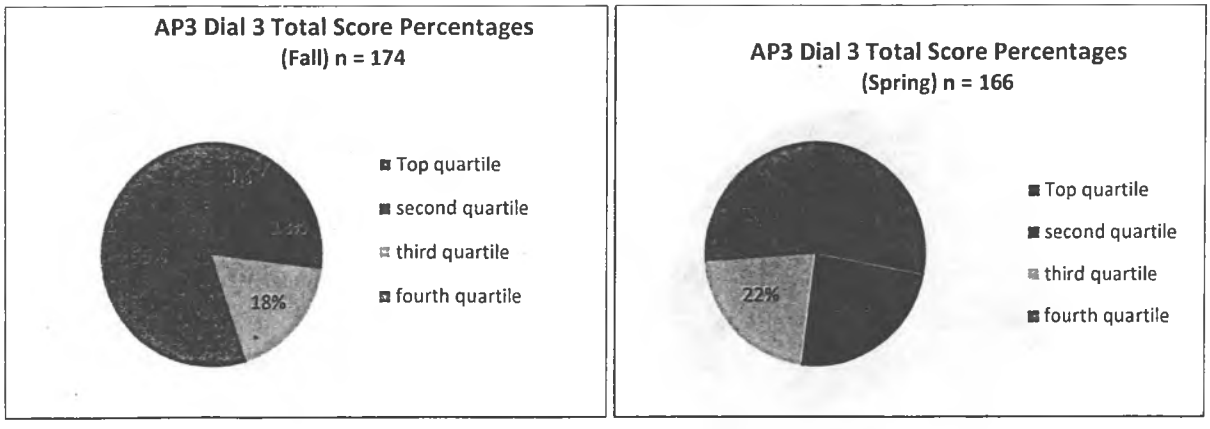


DIAL – 3 State Aggregate Results

Total Score Fall & Spring DIAL - 3

The following charts illustrate the large numbers of children entering the AP3 program significantly below their same age peers nationally and the numbers of children showing significant improvement in percentile ranking compared to same age peers nationally.

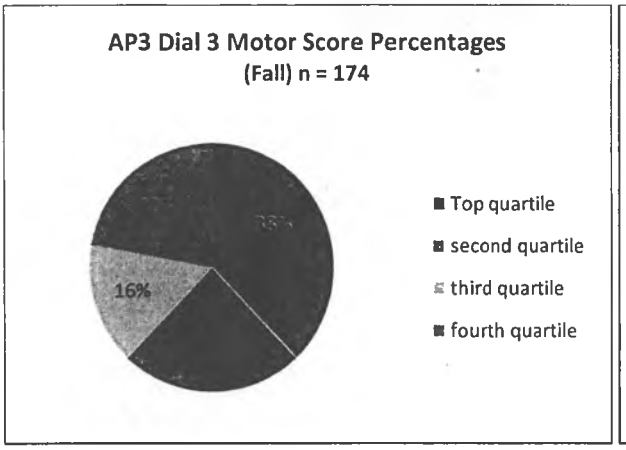
State Dial-3 Total Score Percentages

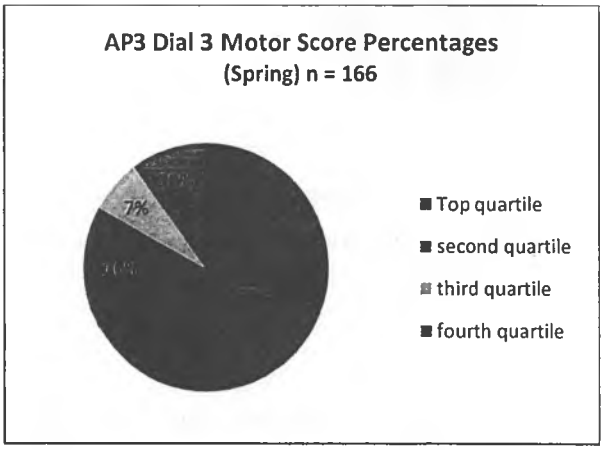


Motor Development Score Fall & Spring DIAL-3

The charts below illustrate the placement of children entering the AP3 program compared to their same age peers nationally in motor development and the improvement of children in the AP3 program.

State Dial-3 Motor Score Percentages

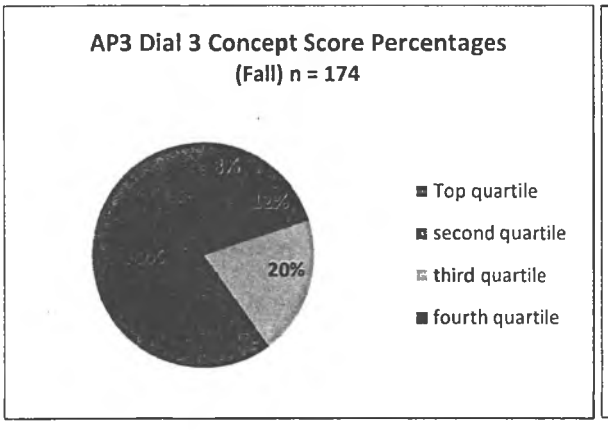


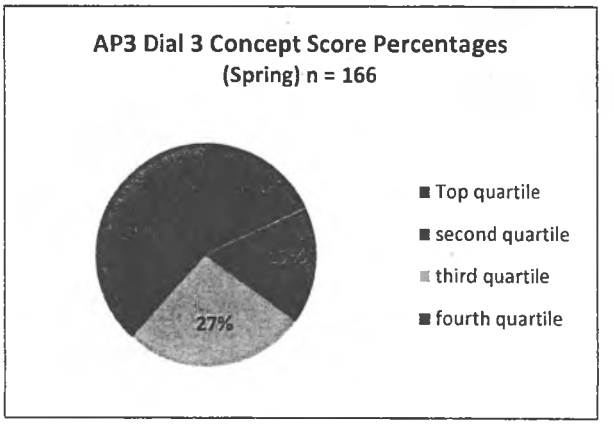


Concept & Language Development Scores Fall & Spring DIAL - 3

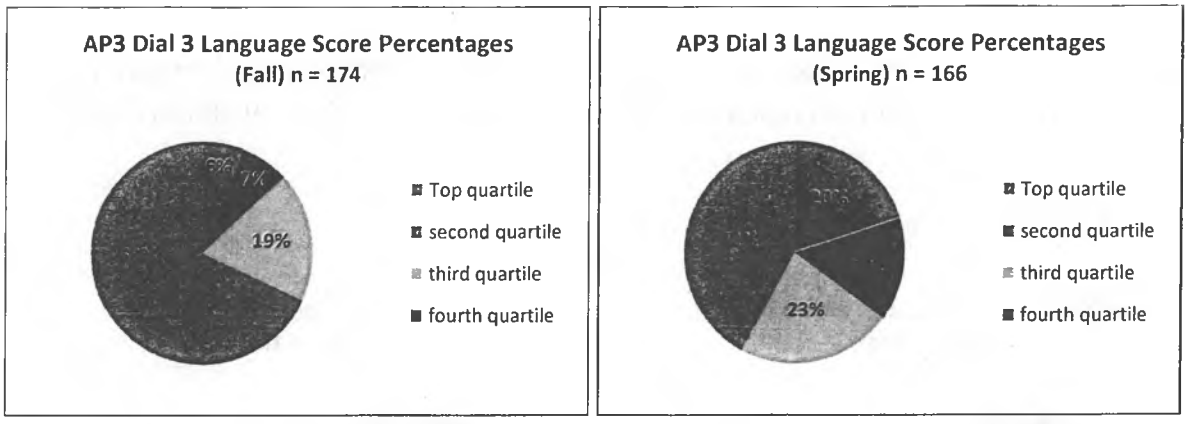
The next sets of charts show the large numbers of children entering the AP3 program significantly below their same age peers nationally in both concept and language development, and the improvement of children participating in the AP3 program.

State Dial-3 Concept Score Percentages





State Dial-3 Language Score Percentages



87% of AP3 children are entering the program in the bottom two quartiles. 35% of AP 3 children are finishing the program in the top two quartiles. 22% have moved from the bottom two quartiles to the top two quartiles.

The following chart shows the number of preschool students statewide who participated in the fall entry and spring exit on the PPVT and DIAL-3 testing for the AP3.

Test Numbers for the 2009-2010 School Year

District	PPVT Entry	PPVT Exit	DIAL 3 Entry	DIAL 3 Exit
Anchorage	35	29	34	28
Bering Strait	49	46	46	45
Juneau	33	30	32	31
Lower Kuskokwim	21	22	19	21
Nome	20	19	22	21
Yukon Koyukuk	21	22	21	20
Total All Districts	**179**	**168**	**174**	**166**

Early Childhood Environment Rating Scale-Revised Edition (ECERS-R) Program Outcomes

ECERS-R is designed for use in classroom-based early childhood care & education programs aged two to six years. It is organized into seven scales observing classroom environments,

activities and interactions, program structure, and parents and staff communication and interaction.

The first table shows the state aggregate overall scores and the seven scale scores in a fall/spring comparison. The second table shows the overall scores for each district in a fall/spring comparison. One is inadequate, three is minimal, five is good and seven is excellent.

State Aggregate	Fall	Spring
Overall Score:	3.76	4.69
Space and Furnishings	3.06	4.08
Personal Care Routines	2.64	3.33
Language-Reasoning	4.10	5.43
Activities	3.16	4.33
Interaction	4.54	4.80
Program Structure	4.26	5.41
Parents and Staff	5.44	6.13

AP3 Programs	Overall Score - Fall	Overall Score - Spring
Anchorage School District	4.56	4.72
Bering Strait School District	3.76	4.24
Juneau School District	2.91	5.4
Lower Kuskokwim S. District	3.17	5.38
Nome Public Schools	3.52	5.09
Yukon Koyukuk School District	4.05	4.45

Project data shows a continuing need for quality early childhood programs. While the Pre-K children are making large strides in their development and a large number have closed the gap, there are still children performing below expectations. The unprecedented levels of cooperation, coordination, and collaboration between Head Start programs and school districts are leading to improved alignment, transition and common planning & training.

SPONSOR STATEMENT

House Bill 198
Special Education Service Agency Funding/Sunset

House Bill 198 removes a sunset requirement and increases state funding to the Special Education Service Agency (SESA), a not-for-profit organization established in statute in 1986. SESA is governed by the Governor's Council on Disabilities and Special Education and its own independent board of directors.

The Special Education Service Agency assists local school districts to provide needed special education services. Sometimes districts cannot fully serve students that have low-incidence disabilities with their existing personnel and resources. SESA has a pool of educators trained to give support to teachers and administrators who work daily with students who are *deaf, deaf-blind, mentally retarded, hearing impaired, blind and visually impaired, orthopedically disabled, health-impaired in other ways, and severely emotionally disturbed . . .* (AS 14.30.630 (b)(1)).

The Special Education Service Agency receives state support based on a funding formula adopted in 1998. Each year the Department of Education and Early Development allocates to SESA not less than $15.75 times the number of students statewide. Although local school districts have received an increase in state funding since 1998, SESA has not. Under HB 198, the multiplier increases as the base student allocation increases. Currently the computation (four-tenths of one percent of $5,680) equals $22.72 which approximates the impact of inflation from 1998 to 2011.

Sponsor Statement for House Bill 198
Special Education Service Agency Funding/Sunset

The Special Education Service Agency is set to expire on June 30, 2013. During previous performance audits, both the Department of Education and the Legislative Auditor recommended removing SESA from the sunset process. House Bill 198 repeals the sunset requirement and thus allows SESA to plan long-term.

Thank you for your support of this legislation.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HB198

Analysis

This bill would change the way the funding for the special education service agency would be calculated. The calculation would be four-tenths of one percent of the BSA multiplied by statewide average daily membership (ADM). This replaces the current formula of $15.75 multiplied by the statewide ADM.

For the current projected FY2012 BSA of $5,680 multiplying by four-tenths of one percent results in a rate of $22.72 per ADM for FY2012. The FY2012 ADM is projected at 129,334.

Sec. 2 of the bill repeals the expiration of the special education service agency.

Benefit of Increased Funding:

- Enhanced direct service.
- Distance delivery and online courses.
- Increase staff, which would allow SESA to serve more individual students.
- Increased trainings:
    - For regular and special education teachers to help with the NCLB mandate of highly qualified teachers.
    - For paraprofessionals to help districts with the NCLB mandate regarding the qualifications for being certified.
    - Summer training opportunities for new special education teachers.
    - Trainings geared to the state's special education directors.

Programs at Special Education Service Agency

FY11

Low Incidence Disabilities (LID)

Autism Impairment (AI)

Our primary purpose is to empower educational teams and provide information and training to professionals and families for development of programs for:

- Functional communication
- Positive behavior support
- Social skills
- Instructional strategies
- Meeting sensory needs
- Curriculum modification
- Accommodations.

We offer presentations and trainings to people who work with students, ages 3-21 years old, on a variety of topics including:

- Autism awareness
- Inclusion of special learners in general education settings
- Prompting strategies
- Positive behavior plans
- Functional behavior assessment

Emotional Disturbance (ED)

A student's emotional disturbance can affect areas beyond the emotional, and may also include the student's physical, social, or cognitive skills. ED program services include useful strategies for educators to provide emotional and behavioral support while also helping students with academics, social skills, self-control, and self-esteem. By encouraging positive behavioral support (PBS) in the school environment, problem behaviors are minimized, and positive, appropriate behaviors are fostered. This may include assistance with conducting a functional behavioral assessment (FBA) and the subsequent behavior intervention plan (BIP), which focuses on student strengths and interests. Families of students with ED often need help in understanding their child's disability and how to access mental health services. SESA's ED specialists help to coordinate services between home, school, and community.

Hearing Impairment (HI)

The HI program provides support to staff working with students with a moderate to profound hearing loss. Services include:

- Assistance with assessment of language, communication, literacy, and speech development
- Information on sign language, deaf culture, and professional development opportunities for interpreters

Hearing Impairment (HI) Continued...

- Assistance with planning transition to school or post-secondary programs
- Troubleshooting assistive listening devices
- Working closely with parents, teachers, and paraprofessionals to design programs that meet the unique needs of children with hearing loss

Multiple Disabilities (MD)

School teams in rural and remote Alaska are eligible to receive services to help them educate students with significant cognitive impairments, physical disabilities, and multiple disabilities. Students with other health impairments, traumatic brain injury, and pre-school developmental delay are also often assigned to the multiple disabilities program. Education specialists from the multiple disabilities program work with school-based teams and other itinerant professionals to help design and support educational programs that are age appropriate and meaningful for the student. We help teachers provide access to the general education curriculum, while focusing on academic and other essential skill development through specialized materials and strategies.

Vision Impairment (AI)

The SESA vision impairment program provides supports in any of the following areas of need:

- Functional vision evaluation
- Development and implementation of IEP/instructional programs
- Sharing and modeling of intervention strategies
- Specialized teaching strategies and skills
- Assistance in procuring or adapting instructional materials or equipment
- Orientation and mobility training

SESA Tech and Library

Tech

SESA maintains a full website with information and links to a wide variety of information and knowledge about low incidence disabilities. It includes staff-written blogs, presentations, and educational modules. In addition, SESA uses two-way videoconferencing to provide consultation and support to rural districts with similar technologies. The agency has an extensive infrastructure of these and other distance and educational technologies to help rural and remote districts provide quality educational programs to their students with significant disabilities.

Library

SESA's extensive library is available to educators, families, university students, and other service providers throughout Alaska. The library was established to support SESA's staff and the school districts they serve, and many outside patrons also take advantage of this resource assistive technology devices may be borrowed to try or to use while the student's own device is being repaired.

State Grants

Alaska Autism Resource Center (AARC)
AARC provides statewide information dissemination, presentations, and trainings. In collaboration with families, schools, and communities throughout the state, the AARC helps to increase the knowledge and resources of appropriate services for individuals of all ages with autism spectrum disorders.

Alaska Center for Accessible Media (AKCAM)
The Alaska Center for Accessible Media (AKCAM) was created with startup funding from the Alaska Department of Education and Early Development (DEED) to be a one-stop shop for school districts who need to provide accessible instructional materials (AIM) to students with print disabilities. AKCAM is a state Authorized user and Accessible Media Producer for the national system for AIM. In addition, AKCAM can help districts find electronic text across a variety of online and local providers, while being able to convert and produce electronic text materials in a variety of electronic formats, like Daisy-compliant talking books, accessible PDFs, Braille and refreshable Braille files, and audio files. Services are at cost for time and materials, and are available to school districts across the state of Alaska.

Bring the Kids Home Educational Transition Support Project (BTKH)
The BTKH Project was developed to establish a non-direct service program to support youth returning to Alaska schools from residential psychiatric treatment centers (RPTC). SESA will establish communications with the RPTCs and assist with advance notice of student return, transition of necessary paperwork, and follow up of recommended services.

Positive Behavior Intervention Supports Center of Alaska (PBIS Center)
The Positive Behavioral Interventions and Supports (PBIS) Center provides technical assistance and coaching to schools. It serves as a clearinghouse and depository for PBIS materials to meet the needs of all Alaskan schools and educators.

Federal Grants

Creating Innovative, Responsive, and Consistent Learning Environments (CIRCLE)
Project CIRCLE supports Head Start programs across Alaska to increase the use of program-wide positive behavior supports. We look at ways to teach correct behavior and arrange the learning and physical environments to prevent problem behavior and to help children who have difficulty managing their behavior.

Alaska Dual Sensory Impairment Services (DSI)
As the recipient of federal funds under The Individuals with Disabilities Education Act (IDEA), SESA provides technical assistance for children and youth, ages 0 through 21 years who have both vision and hearing impairments. Our purpose is to assist service providers and families in preparing learners with dual sensory impairments for quality lives in their homes, schools, and communities. We provide technical assistance to service providers and families through onsite consultation, in-service trainings, promotion of home-school partnerships, materials and resource dissemination, and access to an extensive lending library. Services are provided at no cost.

Recommendation No. 3 Audit Report November 28, 1994

The legislature should consider either extending the period between sunset reviews to ten years or removing SESA from the sunset process.

a. The need for SESA's assistance to school districts will remain consistent in the future.

This is SESA's fourth sunset audit. Since 1986, it has consistently served an important public interest. (See the Analysis of Public Need section of this report). Special education services are required by federal law. The need is not likely to decrease in the future, nor is there likely to be a reduction in the need for rural school districts to receive subsidized assistance for low incidence disabilities.[9]

b. A statewide service agency will continue to be a feasible alternative for delivery of low incidence services to school districts.

As discussed in Recommendation No. 1, several factors make a statewide service agency a feasible system for providing low incidence assistance: level of demand for low incidence services at the district and regional levels, difficulty in recruiting specialists for regional hub positions, technology that facilitates consultation from a

[9]A SESA specialist noted that fetal alcohol exposure and children's injuries related to alcohol abuse are being reported in increasing numbers and are underlying causes of many disabilities for which SESA is consulted.

Provided by Rep. Dick's Office

central office (i.e., fax, teleconferencing, videos, and laptop computers), and centralized library resources. The significance of these factors is not likely to change in the future.

c. SESA will continue to be subject to extensive monitoring outside of the sunset process.

SESA is a heavily-monitored agency. An annual financial statement and compliance audit is performed by an independent CPA firm, which includes a management letter if necessary. SESA is monitored by the Governor's Council on Disabilities and Special Education. DOE performs periodic compliance reviews. The U.S. Department of Education includes SESA within the federal compliance review of the State's special education programs. The Statewide Evaluation Training Team Program and the Infant Learning Program are subject to Department of Health and Social Services reviews which both examine regulatory compliance and assess performance in terms of the programs' objectives.

School districts are a sophisticated user group. Their superintendents can be fully expected to provide necessary feedback to DOE. DOE has an adequate system for handling formal appeals and informal mediation if users have problems with SESA's services.

d. Education professionals perceive the sunset process as an impediment to long-term educational planning by both SESA and the State's school districts.

With its record of service since 1986, SESA has become an integral part of the State's educational system for students with disabilities. Rural school districts rely upon the availability of SESA's services. However, in the perception of education professionals, the spectre of SESA's periodic sunset review injects caution into long-term planning of those districts and SESA itself.

In September 1994, the Alaska Association of Administrators of Special Education passed a resolution supporting SESA's removal from the sunset review process, with the following stated as part of its reasoning:

> *[T]he instability caused by the current three year sunset period impairs needed long-term planning, limits development of new services and more efficient and effective methods of delivery, and is adverse to external funding for additional support and services; . . .*

Similarly, in October 1994, the Alaska Association of School Administrators passed a resolution supporting SESA's removal from the sunset review process, with that resolution noting in part:

Instability is created by the current requirement that this agency be reauthorized every three years. This impairs long-range planning, limits development of new services and interferes with external funding.

In summary, we believe that the need for SESA will continue and that this program will be adequately monitored without frequent sunset audits. Thus, we recommend the legislature either establish a ten-year sunset review cycle for SESA or delete the sunset requirements altogether. As specific issues arise, they can be addressed directly by the Division of Legislative Audit through special requests submitted to the Legislative Budget and Audit Committee.

Juneau, Alaska 99811-3300

RE: Confidential Preliminary Audit Report
Department of Education and Early Development, Special Education Service Agency (SESA). Sunset Review, December 18, 2003.

Dear Ms. Davidson:

The department has reviewed the December 18, 2003 preliminary audit report of the Special Education Service Agency (SESA), dated December 18, 2003. This correspondence provides the departments response as requested.

Report Conclusion:
Recommend the Legislature extend the termination date to June 30, 2008.

The preliminary audit conclusion would extend the agency's sunset status for an additional four-year period. The department suggests that SESA be removed from the "sunset" provision.

Over SESA's 17-year lifespan the agency has delivered a sufficient quantity and quality of service to justify the agency's continuation in the public interest. The department believes that the intent and mission of SESA to provide special education services to children in eligible districts is an ongoing element of Alaska's Public Schools and as such SESA should be removed from the "sunset" provision. The department believes that in providing services as prescribed in law at AS14.30.600 – 14.30.660 SESA will remain accountable to the public interest through interaction with Alaska's 53 public school districts, through SESA's annual submittal of operational plan and budget to DEED, through annual legislative appropriation, and by business practices such as SESA's annual independent audit.

Recommendation No. 1
SESA should transition to videoconferencing as the norm for delivery of its service.

The department believes that continued and increased videoconferencing can enhance SESA's service delivery. However, the department is unable to conclude that videoconferencing could become the norm at this time.

SESA has confirmed that the agency believes videoconferencing should be maximized and considers this recommendation to be a useful and desirable vision. The department encourages

printed on recycled paper

Provided by Rep. Dick's Office

SESA to investigate strategies that may increase the use of video conferencing while providing effective services to districts.

Recommendation No. 2
SESA's management should spearhead a state special education training consortium to formally advance the capabilities of school district personnel.

The department supports efforts by SESA to spearhead a state special education training consortium. The department encourages SESA to investigate the possibility of a statewide special education consortium or other related proposal fulfilling this intent. However, the department recognizes current statewide resources may limit SESA's ability to fully implement the recommendation.

Recommendation No. 3
SESA should apply for a federal subsidy of up to 90 percent of its telecommunications expense.

The department concurs with Recommendation No. 3. The department supports efforts that would enable SESA to potentially secure "e-rate" subsidy.

Recommendation No. 4
SESA's management should aggressively pursue opportunities for more diversified funding.

The department concurs with Recommendation No. 4.

Recommendation No. 5
SESA should continue to enhance the availability of its specialized library to the general public.

The department concurs with Recommendation No. 5. The department supports SESA's efforts to advance public awareness of its very valuable resource collection of books and materials. SESA's collection could be linked to the EED special education webpage.

Recommendation No. 6
DEED and the Governor's Council should appoint representatives who will attend SESA board meetings.

The department concurs with Recommendation No. 6. The department has assigned the Special Education Director or their designee to work directly with the SESA Board to attend SESA Board Meetings. The department recommends SESA communicate with the Special Education Advisory Panel of the Governor's Council on Disability and Special Education regarding the GCDSE appointment of a representative to attend SESA board meetings.

Recommendation No. 7
As a statutorily-created entity of state government, SESA should investigate the necessity of filing tax returns and paying excise taxes.

The department concurs with Recommendation No. 7. However, the department recognizes that legal entity status, internal revenue service tax-exempt status and operating in a "dual legal status as a government agency and a not-for-profit organization"[1] are complicated issues and the outcome may or may not produce a cost savings.

Sincerely,

Roger Sampson
Commissioner

Audit Report - October 9, 2007

AUDITOR COMMENTS

The formula for funding the Special Education Service Agency's (SESA) low-incidence disability outreach programs that supplement the school districts' special education services has not been increased since 1998. The legislature may want to consider a review of the funding formula concurrent with the revision of the State's public school funding formula.

The Joint Legislative Education Funding Task Force (Task Force) was established for the purpose of examining school district cost differentials and the existing formula for distribution of state aid for education. The Task Force issued a report dated September 1, 2007 to the legislature and the governor with findings and proposed recommendations. The findings and recommendations of this report are to be considered during the legislative session beginning in January 2008.

In 1998, legislation was enacted that revised the public school funding statutes and the statutory funding formula for SESA. The revised formula for SESA provides not less than $15.75 for each student in the State's average daily membership (ADM) from the preceding fiscal year.[29]

Inflation between 1998 and 2006 was approximately 21 percent.[30] Although, SESA may not experience the full effects of this inflation factor, the agency has experienced increased operating costs, i.e., travel, supplies, and educational materials.

In addition to the effects of inflation, SESA's costs for employee retirement benefits have significantly increased. SESA employees participate in either the Public Employees' Retirement System (PERS) or the Teachers' Retirement System (TRS). The required employer contributions to these two retirement systems by SESA increased by about $152,000 or 93 percent from FY 99 through FY 07. Like the school districts and other employers, SESA did receive some relief for the FY 08 PERS and TRS employer contribution rates. However, whether such assistance will be available in future years is not yet known.

Due to position vacancies and cost-cutting measures, SESA was able to build a fund balance for its low-incidence disability (LID) outreach programs between the fiscal years 2003 and 2006. The fund balance as of June 30, 2006 for these programs was $661,919. During FY 07, there was a decrease in the fund balance of $107,208.

[29] ADM is determined by the student counting procedures used for the public school foundation formula.
[30] The basis for this calculation was the changes in the consumer price index for the Municipality of Anchorage found on the Alaska State Department of Labor's website.

Juneau, AK 99811-3300

RE: Confidential Preliminary Audit Report
Department of Education and Early Development, Special Education Service Agency,
October 9, 2007

Dear Ms. Davidson:

The department has reviewed the preliminary audit report of the Special Education Service Agency (SESA), dated October 9, 2007. This correspondence provides the department's response as requested.

Prior Audit Recommendation No. 1
SESA should transition to videoconferencing as the norm for delivery of its service.

The department concurs with Prior Audit Recommendation No. 1. SESA should continue to use videoconferencing along side other current technologies to enhance the services provided.

Prior Audit Recommendation No. 2
SESA's management should spearhead a state special education training consortium to formally advance the capabilities of school district personnel.

The department concurs with Prior Audit Recommendation No. 2. The department continues to support the steps SESA has taken through partnering with other organizations to provide special education training across Alaska.

Prior Audit Recommendation No. 3
SESA should apply for a federal subsidy of up to 90 percent of its telecommunications expense.

The department concurs that Prior Audit Recommendation No. 3 has been implemented.

Provided by Rep. Dick's Office

printed on recycled paper

Prior Audit Recommendation No. 4
SESA's management should aggressively pursue opportunities for more diversified funding.

The department concurs with Prior Audit Recommendation No. 4. The department supports SESA's continued efforts to obtain additional sources of funding to enhance the services provided.

Prior Audit Recommendation No. 5
SESA should continue to enhance the availability of its specialized library to the general public.

The department concurs that Prior Audit Recommendation No. 5 has been implemented.

Prior Audit Recommendation No. 6
DEED and the Governor's Council should appoint representatives who will attend SESA board meetings.

The department concurs with Prior Audit Recommendation No. 6. Although there are representatives from the Governor's Council present at all SESA board meetings, more consistent attendance by the executive director would be beneficial to all board members.

Prior Audit Recommendation No. 7
As a statutorily-created entity of state government, SESA should investigate the necessity of filing tax returns and pay excise taxes.

The department concurs that Prior Audit Recommendation No. 7 is no longer a significant audit issue.

Response to Auditor's Comments

The department concurs that the statutory funding formula for SESA's low-incidence disability outreach programs should be reviewed. An increase in the statutory funding formula is necessary for SESA to continue to meet all operating expense obligations as well as to provide continued and improved special education services to school districts within Alaska.

Response to Analysis of Public Need

The department concurs that SESA meets a valid public need through the services they offer and that there is no duplication of services.

Sincerely,

Barbara Thompson
Interim Commissioner

Special Education Service Agency
Recommendations for Statutory Change

WHAT:

- The Special Education Service Agency (SESA) was established under State Statute (AS 14.30.600) in 1986 and formed as a not-for-profit corporation
  - ✓ The Governor's Council on Disabilities and Special Education serves as SESA's governing board (AS 14.30.610)
  - ✓ SESA operates under a sunset provision
- AS14.30.630(b) (I) requires SESA to provide the following services
  - ✓ Itinerant outreach services to students who are deaf, deaf-blind, cognitively disabled, hearing impaired, blind and visually impaired, orthopedically disabled, health-impaired in other ways and severely emotional disturbed and to students with multiple disabilities or autism. **Note:** these students are considered to have low incidence disabilities
  - ✓ Special education instruction support and training of local school district special education personnel
  - ✓ Other services appropriate to special education needs
- AS14.30.650 requires SESA to be funded as follows
  - ✓ Each fiscal year the Department of Education & Early Development shall allocate not less than $15.75 times the number of students in the average daily membership in the preceding fiscal year
- SESA does not provide low incidence disability services to the big five school districts (Anchorage, Fairbanks, Juneau, Kenai-Soldotna and Mat-SU) because they have adequate, qualified staff to meet the needs of students with low incidence disabilities

RECOMMENDED CHANGES:

- Remove the sunset provision from SESA's authorizing statute
- Change the funding formula for SESA to 0.40% of Current Year Base Student Allocation (BSA) X Total State Average Daily Membership (ADM) from previous year

WHY:

- SESA's last audit found that SESA performs a valuable, effective and efficient service to school districts that they are unable to provide themselves because of the nature of low incidence disabilities (infrequent and severe)

PO Box 240249, Anchorage, AK 99524-0249
Phone (907) 269-8990 · Toll Free (888) 269-8990 · Fax (907) 269-8995 1/28/2011

Special Education Service Agency
Recommendations for Statutory Change

- The availability of SESA services means that students are able to be served in their local communities, which benefits not only the student and his or her family but also the big five school districts
- The auditors recommended that SESA's sunset be removed
- The auditors also found that SESA does not duplicate services provided by the Department of Education & Early Development or local school districts
- The next audit is scheduled to start in January 2012 and completed by January 2013; as a result, SESA will find it increasingly difficult to recruit and retain qualified staff and negotiate a long-term facility lease
- The funding formula for SESA is based on a fixed per student allocation of $15.75; in 2011, SESA received $2,021,600, which is $52,620 less than it received 10 years ago – despite the rising costs of wages and benefits, travel and other operating expenses
- While school districts BSA has increased over the years, SESA's has remained flat; if SESA had received an increase equivalent to the BSA increase, its rate would be $22.71 and its 2011 allocation would be just short of $2.8 million
- In response to the last audit, SESA successfully secured grants and contracts that fit with its mission; however, these grants and contracts are "soft" money and dedicated for specific purposes
- Grants and contracts currently comprise 45% of SESA's total budget and contribute $236,000 in overhead costs, which means SESA is able to fund 3 full-time positions for the low incidence disability program and provide statutorily mandated services requested by school districts
- SESA is already having difficulty meeting its statutorily mandated duties; if there is a reduction in grants or contract, this situation will get even worse and will negatively impact students and school districts
    - ✓ Loss of child-specific evidence-based educational intervention strategies modeled on-site to teachers
    - ✓ Fewer on-site visits to provide targeted interventions, observe classrooms and enhance programs
    - ✓ Shorter visits to maximize travel dollars to include more sites
    - ✓ Loss of guidance to new special education teachers and to classroom teachers working with students who have unique, low incidence disabilities
    - ✓ Less student-teacher interactions based on evidence-based practices

House Bill 199
Funding for State Boarding Schools

House Bill 199 doubles for two years the per-student monthly stipend currently received by three school districts that operate residential boarding school programs, the Nenana City School District, the Galena City School District and the Lower Kuskowkim School District. In 2006 the Legislature established a monthly stipend to help cover room and board expenses incurred by school districts operating a boarding school prior to January 1, 2005.

The Nenana Student Living Center, the Galena Interior Learning Academy and the Bethel Alternative Boarding School educate collectively approximately 260 high school students from at least 50 different communities statewide. The proposed funding increase helps offset the high cost of operating a high school residential program, but does not fully cover all the expenses incurred. The school districts must still seek additional funds to meet the cost of operating a residential boarding school.

These three residential high schools, along with the state-operated Mt. Edgecumbe High School (398 students), deliver high-quality programs that positively impact the lives of the students who attend. However, the annual loss of more than 650 students from small rural high schools impacts the ability of their local school district to offer quality programs to students who elect to remain at home. When one school district gains in students and resources, the other district loses.

Sponsor Statement for House Bill 199
Funding for State Boarding Schools

The time has come to engage all Alaskans in a dialog on how best to educate students living in rural Alaska. The proposed two-year timeframe in HB 199 provides financial relief to three school districts while allowing time for the much needed discussion.

Thank you for your support.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** HB199
2011 LEGISLATIVE SESSION

Analysis

This bill replaces the monthly stipend rates in statute with new rates for the two year period FY2012 and FY2013.

The new rates are double the existing rates.

This bill applies to districts that were operating a statewide residential educational program for grades nine through 12 before January 1, 2005. There are three districts that qualify under this program: Galena School District, Lower Kuskokwim School District, and Nenana School District.

Stipend funding is distributed for students enrolled on the last day of the count period up to the maximum bed count approved in each programs application.

The calculation includes Galena at 175 beds x $1,184; Lower Kuskokwim at 35 beds x $1,006; and Nenana at 88 beds x $968, for up to 10 months.

Appendix A - Statute

ALASKA STATUE

Chapter 14.16. SPECIAL SCHOOLS

Article 02. SCHOOL DISTRICTS OPERATING STATEWIDE RESIDENTIAL EDUCATIONAL PROGRAMS

Sec. 14.16.200. State funding for districts operating statewide residential educational programs.

(a) A district that, before January 1, 2005, began operating a statewide residential educational program for students in grades nine through 12 that has been approved by the department under regulations adopted by the board is eligible to receive reimbursement for the costs incurred by the district in operating that program. To be eligible for reimbursement for costs, the district-operated statewide residential educational program must provide a suitable student dormitory and daily access to a public school offering the appropriate grade level.

(b) Costs that may be claimed by a district for reimbursement under (a) of this section are

(1) one round trip on the least expensive means of transportation between the student's community of residence and the school during the school year if the district expends money for the trip; and

(2) a per-pupil monthly stipend to cover room and board expenses as determined by the department on a regional basis and not to exceed the following amounts:

(A) for the Southeast Region (Region I), $410;

(B) for the Southcentral Region (Region II), $400;

(C) for the Interior Region (Region III), $484;

(D) for the Southwest Region (Region IV), $503;

(E) for the Northern Remote Region (Region V), $592.

(c) In this section,

(1) "district" has the meaning given in AS 14.17.990 ;

(2) "district-operated statewide residential educational program" means a public school operated by a school district for students in grades nine through 12 that provides education, room, and board for a full school year without regard to the student's district of residence.

Appendix B - Regulation

ALASKA ADMINISTRATIVE CODE

4 AAC 33.090. District-operated statewide residential educational programs

(a) A district must obtain approval from the department before operating a statewide residential educational program. A district may apply to establish and operate a new program only during a period of open applications established by the department under (c) of this section. The department will approve an initial application from a district that operated a statewide residential educational program during school year 2005 - 2006, unless the department has substantial evidence that continuation of the program is not in the public interest. Applications must include

(1) designation of the facilities that will house the residential program, including any proposal to build or renovate a facility, and the revenue sources that will support the construction or renovation;

(2) a five-year budget for the operation of the residential component of the program; the budget must specify the revenue sources that will support the proposed budget, including a provision for charging student tuition;

(3) a tuition waiver policy for families that can demonstrate financial hardship, including a definition of "hardship";

(4) an enrollment and selection policy for students applying to attend the residential program;

(5) a list of course offerings;

(6) a plan to assist students in crisis; and

(7) a staffing plan for the program.

(b) The department may require that a district supplement its application with additional information. The department may require a district to change its policies or proposed practices before approving an application. A district must operate the residential program in conformance with its approved application. A district that wishes to change any of the requirements of an approved application must submit a revised application. In determining whether to grant or deny an application, the department will consider

(1) whether the community in which the program is located has sufficient infrastructure to support the residential program;

(2) demand, current capacity, and regional needs for residential programs;

(3) the cost to provide a residential program in the applying district;

(4) the district's ability to offer a high-quality academic program to students;

(5) the health and welfare of students housed in the residential program, including the ability of the district to offer a high-quality residential program;

(6) for a revised application, whether the program has complied with the policies and practices that the district identified in its current application; and

(7) the public interest.

(c) The department will establish a period of open applications and solicit proposals from districts to establish additional statewide residential educational programs when the department determines that establishment of additional programs are warranted. The department may require that applications be targeted to provide a particular program to meet specific needs of students in the state. A period of open application and solicitation does not imply that the department will approve the establishment of any new programs. In determining whether to establish a period of open applications, the department will consider the

(1) demand for residential programs, including the demand and needs in different regions of the state;

(2) capacity of existing programs; and

(3) public interest.

(d) This section does not prevent a governing body from establishing an in-district residential educational program that is not eligible for state support for the operation of the residential aspects of the program.

(e) A district that operates an approved statewide residential educational program shall submit an annual report to the department. The report must include the

(1) number of applications received by the program;

(2) number of students accepted into the program;

(3) students' communities and districts of residence at the time of application for enrollment;

(4) students' academic achievement results;

(5) date of, reason for, and number of withdrawals from the program during the school year;

(6) number of expulsions from the program during the school year;

(7) number of students receiving a tuition waiver; and

(8) other information requested by the department with respect to the program.

(f) On December 1 of each school year, a district that operates an approved statewide residential educational program shall submit to the department an application, on a form provided by the department, for payment of a stipend under AS 14.16.200 (b)(2). The district is eligible for payment of the lesser of actual cost to house the student or the amount allowed in AS 14.16.200 (b)(2) for each residential student who is housed by the district on the last day of the student count period under AS 14.17.600 , and whose parents or guardians do not reside in the community in which the program is located. If appropriations are insufficient for the residential component of approved statewide residential educational programs, the department will reduce each district's entitlement by a pro rata amount as determined by the department.

(g) The department may withdraw its approval for a district to operate a statewide residential educational program if the department determines that continued operation of the program is not in the public interest. In making this determination, the department will consider

(1) the health and safety of the students in the residential program;

(2) whether students at the program have demonstrated sufficient academic achievement; in making this determination, the department will consider all evidence of student academic achievement and improvement, including evidence of

(A) students' scores and improvement of students' scores on statewide student assessments under 4 AAC 06.710; and

(B) the program's record of demonstrating adequate yearly progress under 4 AAC 06.805, and the reasons for its success or failure to demonstrate adequate yearly progress;

(3) the demand for the program;

(4) the cost of operating the program;

(5) whether the program has complied with the policies and practices that the district identified in its application; and

(6) the existence of alternative methods of meeting the needs of students.

Subject: RE: Information Request

Good morning Mr. Caldwell,

Here is the information you requested for Galena Interior Learning Academy re: our 2010 graduates. Sorry for the delay in getting this to you.

GPA 3.5+	GPA 3.0 - 3.49	GPA 2.5-2.99	Total # graduates
9	8	7	24

Please let me know if you need any additional information.

Sincerely,
Lisa Shelby
GILA Principal

Subject: Information Request
Importance: High

Good afternoon, Jim.

The commissioner's office is requesting information, and hope to have it as soon as possible. Unfortunately, I could not reach either you or Melissa Robbins by phone. Could you provide the following information about GILA's 2010 graduates today, or at latest by 10am tomorrow morning:

Breakout of Galena Interior Learning Academy's 2010 Graduates:

- Number of graduates with GPA of 3.5 or higher
- Number of graduates with GPA of 3.0 to 3.49
- Number of graduates with GPA of 2.5 to 2.99
- Total number of graduates

Thank you so much for your assistance. I look forward to hearing back from you soon.

Sincerely,
Eric Caldwell

Galena City School District

Resolution #10-01; 1-19-2011
State Support for GILA Residential Hall and Dining Hall Facilities

WHEREAS, Galena City School District with the support of the City of Galena and Louden Tribal Council has operated the second largest high school boarding school (Galena Interior Learning Academy) in the state of Alaska for over 13 years; and
WHEREAS, Galena Interior Learning Academy student population for FY11 comes from 56 communities; and
WHEREAS, the savings to the state foundation program generated by these students' travel to Galena's lower "district cost factor" is substantial, and higher boarding subsidies would allow these funds to follow the student, and
WHEREAS, Galena Interior Learning Academy's core clientele is Alaska Native, a segment of Alaska's population that is at extreme risk for dropping out of school, and
WHEREAS, attending Galena Interior Learning Academy is an alternative to dropping out for many students by providing a viable, rural academic and career technical option; and
WHEREAS, Galena Interior Learning Academy is an option for students who are wards of the state and for some who leave unhealthy home situations; and
WHEREAS, of the 176 rural high school programs state-wide, 35 have less than 20 students and another 78 have less than 10 students. Challenged program offerings and choice in these small schools often present families looking for expanded curricular offerings for their child, and
WHEREAS, the Galena Interior Learning Academy, with existing infrastructure and well-established programs, is in an excellent position to serve as a regional education center, should the State of Alaska shift to a regional model for the delivery of education in rural Alaska; and
WHEREAS, current state funding for student residence and food services falls tremendously short of actual costs; and
WHEREAS, diesel fuel provided through the Base Realignment and Closure process provides some support for school operations for an additional five years and presents a five year planning window; and
WHEREAS, GILA school campus operation and utility costs will double once transition fuel support is gone; and
WHEREAS, School District dollars alone cannot support additional boarding school costs; and
WHEREAS, Alaska's state boarding school receives full residential and food costs support; now

THEREFORE BE IT RESOLVED that the Galena City School District, City of Galena, and Louden Tribal Council request the State of Alaska provide additional funding for the staffing and operations of Galena Interior Learning Academy student residence hall and dining hall facilities.

BE IT FURTHER RESOLVED that the Galena City School District, City of Galena, and Louden Tribal Council request the State of Alaska provide additional funding for the maintenance of Galena Interior Learning Academy student residence hall and dining hall facilities.

Adopted by the Galena City School District Board of Trustees this 19th day of January 2011.

GCSD Board President, Ed Pitka

GCSD Superintendent, Jim Smith

City of Galena Mayor, Russ Sweetsir

Louden Tribal Council Chief, Chris Sommer

Current Residential School Funding Short-Fall

The objective of this request is two-fold: (1) present the number of rural students currently served at Nenana and Galena Boarding Schools and (2) to discuss Alaska's educational support to these rural Alaskan education providers.

A. Galena Interior Learning Academy

GILA 198 students this fall coming from 58 communities, most of them rural and remote. Over 93% of the students are Alaska Native.

B. Nenana Learning Center

Nenana brought 80 rural students on board.

C. Current State Support establish in 2006

Sec.14.16.200 presented payment in two perspectives per each student; 1) one round trip airfare from home residence to the school site if the school district expends the money, and 2) a per pupil monthly stipend to cover board and room expenses as determined by the department on a regional basis and not to exceed the following amounts:

(A) Southeast Region I, $410
(B) South-central Region II, $400
(C) Interior Region III, $484
(D) South-east Region IV, $503
(E) Northern Region V, $592

I. Galena/Nenana Revenues vs. Costs

(A) Residence Hall & Food Services: 255 students average cost per student- $17,136
(B) State 14.16.200 support: average state paid per 255 students -$5,872
(C) Deficit to be secured from other sources: $ 1,971,368 Galena & $901,120 Nenana

II. Projected Fiscal Cost

(A) Current revenues cover only 34% of actual cost in Galena and Nenana.
(B) Necessary "additional" funds to support Galena and Nenana Residential Schools food & Lodging costs for current student counts.
(C) $2,872,488

A word from the president

Alaska must improve education options

By: Margie Brown, CIRI president and CEO

Gov. Sean Parnell recently asked me to offer suggestions about education reform in Alaska. My views are shaped by my family's own experiences with Alaska's education system. This generational view begins with my grandfather, Adams Hollis Twitchell.

My grandfather was mostly a self-educated man with a mind inclined to natural science and a hunger for life-long learning. His life in western Alaska would come to include owning and operating sternwheelers, trading posts and reindeer herds. And it would include raising a family and providing his children with opportunities for formal education.

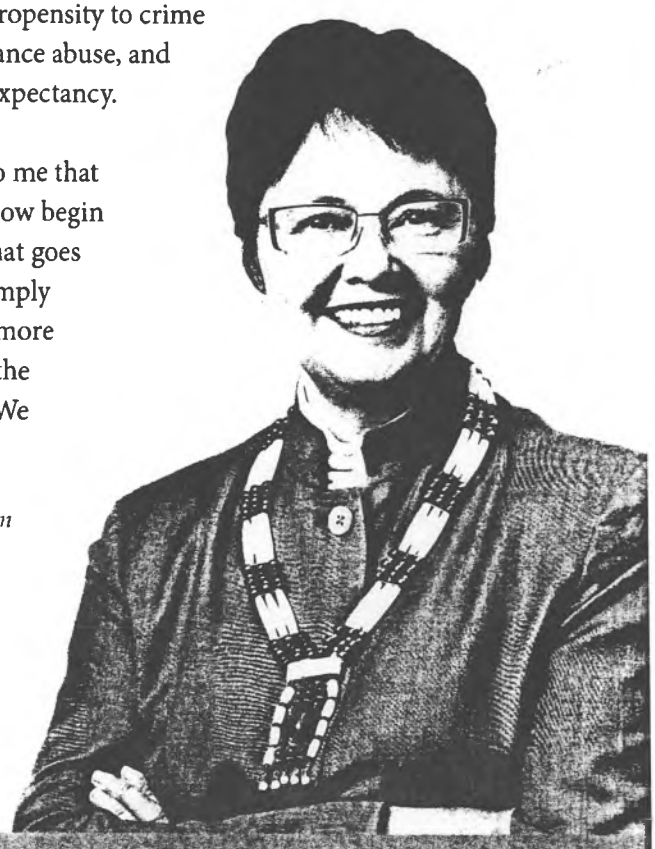
Educating children in remote, rural Alaska then was much different than today. For grandfather's children, including my father, Ben Twitchell, formal schooling began at the mission at Holy Cross. After receiving encouragement from his Jesuit teachers, my father traveled alone to Fairbanks from the small community of Flat to attend high school and, upon graduation, the Agricultural College and School of Mines (now UAF).

Traveling away from home for schooling was the only realistic option at the time. Much more recently, the decision in the Molly Hootch lawsuit and the resulting Tobeluk consent decree changed schooling options dramatically. Coming providentially at the same time as wealth poured into state coffers from Prudhoe Bay royalties, these legal actions led to the state opening 105 secondary schools in rural Alaska, providing children throughout the state with an option to attend high school in their own communities, including, for the first time, in rural Alaska.

While the 1972 Molly Hootch decision was a landmark, the world has changed dramatically in the last 39 years. I believe it is now time to reassess the impacts of that decision.

Clearly there were excellent outcomes from the Molly Hootch lawsuit and Tobeluk consent decree. Parents of grade school children no longer faced the prospect of moving their entire family from home villages so that their children could attend grade school - the very decision my parents made when they decided they must move our family from the village of Takotna.

However, we must honestly assess the performance of today's high school students in small village schools. Ignoring the shortcomings of rural education threatens to leave a generation of high school students undereducated and unprepared for college or trade school. And in today's increasingly competitive world, undereducation places these students at a severe disadvantage. Why? Because we know that educational attainment directly correlates with virtually every quality of life measurement, including employment, income, propensity to crime and substance abuse, and even life expectancy.



It seems to me that we must now begin a dialog that goes beyond simply throwing more dollars at the problem. We need to

continued on reverse side

consider systemic change. I believe that establishing residential high schools in Alaska's regional centers should be a key component of this dialog because it has been shown that higher student densities enable economies of scale that provide more and better education programs and services for fewer dollars.

I acknowledge that there is fear in the Alaska Native community about regional residential schools. We still have a generation of Alaska Natives who were uprooted to boarding schools. In keeping with the appalling policies of the federal government at the time, these schools made a concerted effort to separate children from their Alaska Native culture, the result of which was, not surprisingly, harmful.

But our culture, nation and world have evolved dramatically since 1972. In today's more culturally sensitized world, we can create residential regional high schools where enhancement, not destruction, of Alaska Native culture is promoted; where high academic standards are expected and pursued; where academic offerings are supplemented with a full and robust array of extracurricular school opportunities; and where students are highly functioning, resilient and prepared to take on life's challenges.

I urge Gov. Parnell and his administration to work with the Alaska Native community to begin a dialog that will lead to systemic change and improvement of our state's rural education system. And I urge Alaska Native leaders to join me in engaging in this dialog with open minds and hearts. We must all make education a statewide priority and act to implement systemic changes that will close Alaska's academic performance gaps before it is too late.

We owe it to our children to act, not from fear, but from our vision of what can be.

Margie Brown is president and chief executive officer of CIRI and is Yup'ik from the Interior village of Takotna, Alaska. She graduated from Oakridge High School in Oakridge, OR and earned a Bachelor of Science in Biology from the University of Oregon and a Master of Business Administration from the University of Colorado.

A Time for Change

Improving Education Delivery for Alaska's Small Rural High Schools

February 23, 2011

Jerry Covey
JSC Consulting, LLC

Overview

This paper addresses three issues critical to the success of small rural high schools and makes recommendations to state policy makers.

ISSUE I: Education Issues in Small Rural High Schools

Alaska's present small rural high-school system shaped by the Molly Hooch decision has remained largely unchanged since it was implemented in 1976; however, the education environment these schools operate in has changed dramatically over the last 35 years.

At the time of their creation, rural education attendance area (REAA) and rural borough school districts operated in a stable environment that lacked competition from other state-funded schools. Since that time, state-funded residential boarding schools, correspondence programs, and charter and home schools have emerged that draw many students who might otherwise attend small rural high schools. In addition to competition from other schools, small rural high schools have been impacted by population shifts from rural to urban communities, significant increases in the cost of education delivery without attendant increases in operational funding, and increasing performance demands from employers, universities and post-secondary training schools, and state and federal governments.

During the 2008-09 school year, Alaska had 126 small rural high schools with 30 or fewer students; 72 of these schools had 10 or fewer students; 110 were off the road system.

Over 84% of the students attending small rural high schools are Alaska Natives. These students are the group with the highest dropout rate and the lowest achievement levels. They also comprise the majority of students that attend the smallest and most remote high schools with the most limited curriculum. The schools these students attend are consistently among the lowest-achieving schools in the state.

Educator turnover in rural school districts is higher than in other parts of the state, and overall a greater percentage of teachers are teaching courses they are not highly qualified to teach. Teachers in small rural high schools are spread thin just to teach the minimal requirements for graduation and have little time and fewer resources at their disposal to deliver much needed advanced academic, enrichment, and career and technical education courses.

Although Alaska's rural high-school system meets legal muster, it is presently stretched beyond its capacity to deliver programs and services that meet the academic and career and technical education needs of its students. Performance data that compares the achievement and graduation and dropout rates of students in small rural high schools with those who attend large rural high schools and residential boarding schools bears this out.

ISSUE 2: Competition Between Residential High Schools and Small Rural High Schools

In addition to the REAA and borough or city schools available to rural students, there are three large residential schools that accept students from anywhere in the state and deliver both educational and residential-living services. All of these schools are funded primarily by the state and are financially impacted by where students choose to attend school.

Alaska's three largest residential high schools, Mt. Edgecumbe High School, Galena Interior Learning Academy, and Nenana City Schools deliver high-school programs to approximately 650 students from mostly rural communities. These schools consistently outperform both large and small rural high schools in terms of attendance, achievement, and graduation rates.

Residential high schools deliver high-quality programs that positively impact the lives of the students who attend them. Unfortunately, they negatively impact the ability of rural school districts to deliver quality programs to students in small high schools. A consequence of the residential school system drawing almost 700 students annually from small rural high schools is that it pits one system against the other. When one part of the system gains in students and resources, the other part must lose. It should not be this way.

The Impact of Residential High Schools on Small High Schools

The impact of residential boarding schools on the 120+ small rural high schools is significant. Specifically, residential high schools annually attract many talented students and remove millions of dollars of school funding from small high schools.

Estimating that the average rural student generates $15,000 in state aid and taking that number times 650 (the approximate number of students who attend the above residential schools) equates to 9.75 million dollars in funding that goes to residential schools instead of other rural school districts.

Rural districts find themselves in an untenable position. They annually project their enrollment and make employment and other resource commitments only to find that significant numbers of students they budgeted for opted to attend residential boarding schools. Exacerbating the situation even more is the fact that students who drop out of residential schools often return to their local high schools. In those situations, the residential schools keep the funding and districts where the students return must provide educational services without the resources to pay for them.

The financial impact of students attending residential schools on other rural districts equates to:

1. Less revenue to deliver education services.
2. A greater percentage of the budget to operating costs.
3. Fewer teachers.
4. The loss of talented students.

5. Reduced ability to deliver academic and career and technical education courses.
6. Lower student achievement levels.
7. Increased dropout rates.

ISSUE 3: Improving Educational Delivery for Students in Small Rural High Schools

Small rural high schools are an important part of Alaska's education delivery system and are vital to the health and stability of rural communities. It is clearly in the state's best interest to maintain the current system and improve the quality of education they are able to deliver.

A variety of effective distance delivery methods are used to deliver educational services to small high-school students. Advances in technology continue to provide additional opportunities for cost effective delivery of quality programs to students. However, among the most important learning opportunities are those that can only be delivered in person and require resources, infrastructure, and learning opportunities not available in small rural high schools.

Leveling the educational playing field for small rural high school students will require providing them access to learning environments comparable to those provided by large rural comprehensive high schools and residential high schools. Students attending small rural high schools must have the opportunity to participate in advanced academics, career and technical education programs, partnerships with regional training centers, apprenticeship programs, and UA rural campuses.

Create Residential Learning Centers Located in Rural Hub Communities

Regionally-based residential learning centers in rural hub communities would capitalize on existing infrastructure such as large high schools, regional training centers, UA rural campuses, and regionally-based employers to deliver short- and long-term academic, career and technical education programs, apprenticeship, and other programs that offer critical learning opportunities. These centers could operate on a year-around basis.

Benefits of Establishing Regionally-Based Residential Learning Centers

1. Students attending small rural high schools would have nearby access to short- and long-term courses and programs that their local school is unable to deliver.

2. State education funding would remain in a student's home district.

3. Rural school districts could collaborate and partner with other organizations on course delivery and cost-sharing arrangements.

4. Students participating in these programs would have direct access to post-secondary technical centers, rural university campuses, and apprenticeship opportunities that train local students for local jobs.

5. Courses could include practical hands-on learning important to life in rural Alaska and be delivered on a year-round basis.

6. Help students to qualify for the Governor's Scholarship Program.

Fund Programs That Work
In the absence of action by the state to address the needs of students attending small rural high schools, some school districts have developed programs and obtained funding from other sources to meet their students' academic, social, and career and technical education needs that cannot be addressed in small high-school settings.

Outstanding examples of short-term residential programs are the Northwestern Alaska Career and Technical Center (NACTEC) operated by Nome City Schools and Bering Strait School District and Chugach School District's Voyage to Excellence (VTE) program. Each of these districts has procured and operates facilities without state support and has provided students with high-quality residential programs for several years and actively partners with other rural school districts to serve the needs of their students. Northwest Arctic Borough School District currently relies on a grant to operate a magnet school that partners with the Alaska Technical Center and Chukchi College to deliver programs for grades 11-14 that prepare students for careers in rural Alaska. Lower Kuskokwim School District is using grant funds to partner with the Alaska Native Science and Engineering Program (ANSEP) at UAA to deliver coursework that prepares students for entry into the ANSEP program. The program currently relies on a district approved boarding-home program to provide residential services.

These models, and others like them, are outstanding examples of what could be delivered by regional learning centers and made available to all rural high-school students. Programs such as these should be approved by the State Board of Education and funded as residential programs by the state.

Recommendations to State Policy Makers
1. Contract for regional surveys of rural high-school students, parents, educators, school-board members, employers, and community leaders to determine local interest in constructing residential facilities in regional hub communities to improve small high-school delivery options.

2. Approve the construction of residential facilities for rural hub school districts that are currently operating magnet schools and/or residential boarding-home programs (Northwest Arctic Borough School District and Lower Kuskokwim School District).

3. Establish a process to consider, approve, and fund regionally based district-operated residential programs that are currently supported by external sources.

4. Revisit the stipend amount for residential programs and fund all existing and new short- and long-term residential programs at a level that is equitable based on the cost of delivery.

5. Maintain, but do not expand the capacity of current residential high schools.

Margie Brown
President/CEO, Cook Inlet Region Incorporated (CIRI)
Testimony before the House Education Committee
March 23, 2011

MARGIE BROWN, President and CEO, Cook Inlet Region Incorporated (CIRI) Alaska Native Corporation, described the Native corporation, which she represents, and said:

> I am not a professional in the education business. ... I am a product in part of the state of Alaska, and its education system in earlier years. But I am very interested in this issue in particular, and I note that the materials that I sent to the chairmen actually have been distributed to you. These are my views about the time and the need, urgent I believe, ... to address how students are educated, particularly in rural Alaska. I'm involved with several advisory boards and committees at the University of Alaska in Anchorage, and have been alarmed by the statistics that show that 70 percent of the students that arrive at that university campus require some form, sometimes even several years, of remedial education before they can begin their college level classes. ... I think that is ominous and it should send alarm signals in all of our brains, that we are producing a generation of students that appear to come to the university system ... unprepared for university level classes; ... what is the issue, particularly in rural Alaska. ... I am a believer, that we now, 39 years past the monumental Molly Hootch lawsuit, and the Tobeluk decision that followed that established schools in small villages throughout Alaska, that it's time for us to think, look back, [and] analyze what it is that is very good about those lawsuits, ... the following legal actions, ... the action by the State of Alaska to comply, and what is it that is not working ... well. I am from Takotna, ... from a family who chose to leave the village because there was no school opportunity for me and my siblings. I was going into the third grade and, when the school closed for lack of school population, this of course [being] territorial days and long before the Molly Hootch

decision. So I know that sacrifice that my family made, to pick us up from the life that they loved and move us to where we could get an education. ... To the extent that the litigations, ... the states actions, and the establishment of schools in small villages for grade school children, and even middle school children, has come about, I think ... is a good thing; ... grade school children need to be with their parents. ... The opportunity to [attend school] and stay in your village ... is very important. ... We need to look more carefully when children get older and get to the high school age. I know we have this issue about what happens when students go to residential schools and what happens to their villages, and what happens to their school in their villages, and I think that's because we are trying to do both. ... I'm not certain that we can do [both] and not, as you suggest Chairman Dick, harm the students that stay back in the village. ... I'm just now becoming familiar with this particular piece of legislation, and I think the dialogue around having [these] two years to look very carefully at how we organize our school system is totally appropriate, and to the extent that this gives these three schools better breathing room; I'm all for that. But I am mostly for this dialogue. I sit atop a corporation that is doing a lot of tremendously exciting things in the state, and I would like to look out to the people who were raised and educated in Alaska, and look to a gainfully employable work force of shareholders, of people who live in urban centers, of people who come from rural Alaska. ... I think this idea that we must now look at some systemic change is totally appropriate, and I encourage the dialogue. I would welcome, I would be happy to participate if you would like me to do so. I do think that this is not about changing the formula, [or] arguing about the formula, this is really has to be about systemic change, and we do, as you suggest, need to get about [change]. ... I fear we are going to leave a whole generation of young people behind because they exit our school system undereducated.

9:27:12 AM

REPRESENTATIVE FEIGE asked if the CIRI Native Corporation has considered starting a private high school for its shareholders.

MS. BROWN reported that the Cook Inlet Tribal Council, a CIRI affiliated non-profit organization, is working to establish a residential facility in Anchorage, for 40 high school students, located near Bartlett High School. She said this may also serve to address another issue, which is the population of young homeless students from villages who need a safe educational environment. Bartlett High School currently affords the tribal council space for a school within a school program, and it would be incorporated into the residential plan. Thus, in the Anchorage area, a particular population of Native students is receiving attention from CIRI.

9:28:42 AM

REPRESENTATIVE FEIGE queried whether other Native corporations are considering similar action.

MS. BROWN stated that the day's agenda includes a meeting with the presidents and CEO's of the twelve regional corporations, and a meeting with the governor. She said education reform, and the concepts she has mentioned, will be on the agenda. Two years ago, at a similar CEO meeting, this concern was expressed. A call was made for change in how education is delivered in the state, and a unified belief was stated that it is a systemic issue and not about arguing over formula and funding. She said:

> We all recognize, and we've been using this term 'boarding school' ... in this hearing, and I'm trying to move away from that term, because we know, as Alaska Native leaders that there has been a lot of harm fostered on people in past years through the boarding school concept; where the desire was to actually remove people from their Alaska Native culture. We recognize that, I acknowledge it. I know in putting this paper out [speaker raised an article titled, "Alaska must improve education options" reprinted from the January 2011 issue of "Raven's Circle"] that there is some risk that people will be offended. However, I do believe our conditions are such, that we have a different kind of society now ... and ... we can find a way to have these schools and actually empower, and encourage, and nurture Native culture, as opposed to trying to damage it. I believe the other CEO's are there too; they said that two years ago, and I think they'll say it again today to

> the governor. We know it has to be a careful dialogue where you engage the local community. This is not something that can be forced down on people. ... You ... are truly going to have to have buy-in, and you are going to have to engage the Alaska Native community in a very, very heartfelt and sincere way. But I belief if we do that, we can get there, because everybody wants their children to have the best opportunity, and that is good for the state, ... [the] communities, and that's what parents want throughout the state.

9:31:40 AM

REPRESENTATIVE P. WILSON asked if there is a possibility that a funding partnership with the corporations could be formed to help with the effort.

MS. BROWN offered that tribal and Native organizations have access to private funding sources. However, she opined, whether regional corporations can step up and do the work of the state is a question. A cooperative effort is in everyone's interest, in order to educate employable people.

9:34:04 AM

REPRESENTATIVE CISSNA encouraged the conversation to continue over the interim and build better communication regarding the basic necessities.

9:36:12 AM

MS. BROWN stressed that this could be a highly charged issue due to the subject matter, children's education, and the social impacts that the villages will experience. She concurred that for this to succeed the local elders, and the children to be served, need to buy-in to the idea and feel ownership. She provided an anecdote to illustrate her point, of how a school janitor enlisted the help of students to turn a frequently, graffiti marred wall into a mural; which they prized and protected. She continued, stating:

> You really do not want to create a system of haves and have not's. I like the idea of going to school year around, I like the idea of perhaps two or three weeks in your residential regional center, and maybe a week back home; but for that you go year around with some

time off for subsistence activities. Obviously we want children to understand and value their subsistence activities. But I think these are all part of the dialogue, where you can keep kids engaged with their village, ... and with their parents. Maybe it's not for the full four years; maybe it's for the last two. ... There are so many options that need to be considered, that we ought to be able, with all of our collective thoughts ..., to figure out a program that doesn't diminish the villages ... and yet provides ... rich opportunities for students. ... You have to have a student body of some size to really deliver a high school experience, and that doesn't happen when you have ... 72 schools with less than 10 students in high school; that just doesn't happen. I think there are a lot of formulas that could be looked at, and a lot of different ways you could organize school, including year around school, that would allow time back in the village and also to participate in a regional experience.

9:40:02 AM

REPRESENTATIVE FEIGE opined that the system is too dispersed to provide a meaningful education, and said the Native Corporations are in a good position to help with this effort; in the bully pulpit. He acknowledged the cultural stripping that occurred at one time, and stressed the importance for the Native corporations to understand their role for affecting educational change.

9:42:34 AM

REPRESENTATIVE SEATON noted that a number of districts are successful, and are highly regarded/rated. He cited the St. Mary's school district, which has a 90 percent graduation rate, with 87 percent of postsecondary students requiring no remedial classes. The legislature is not able to impose specific aspects, on particular districts, which would result in the reformation of state operated schools. Trying to make a one-size fits all education plan is difficult, and would affect the already successful schools; even within districts. The time frame of working with the legislature, and changes that occur on the legislative committees is also a challenge. He asked:

> How do you see the relationship of delaying the conversation for two years in the legislature. And

'effective rural schools versus non effective rural schools,' ... is it ... that debate more than 'we should have boarding schools.' ... How do we change the whole system for the ineffective [schools], with a statewide model.

9:46:47 AM

MS. BROWN responded that the conversation should occur within the next two years and not be delayed. She suggested that the legislature use its own bully pulpit to instigate the conversation and implement change. The state must scrutinize the entire system to ensure consistency and opportunity in education. She stated her belief that quality education is not achievable when schools have fewer than 10 students, and encouraged the committee to take the reins.

9:50:04 AM

REPRESENTATIVE CISSNA suggested that prior to the end of school a video/teleconference be scheduled for May to get the ball rolling, and stressed the importance of timing.

9:51:13 AM

REPRESENTATIVE PRUITT commented that the Native corporations and the state are acknowledging the need for change, and he underscored the importance, and possible long term effectiveness, of that unity.

9:52:29 AM

REPRESENTATIVE SEATON noted that the time frame may be difficult to work within, given the legislative calendar and turnover. He explained that by spanning two interims and bringing the topic to a new legislature, there could be change in committee leadership, and membership, and the knowledge base, and continuity, may become dispersed. A request should be made through the governor's office, to compel action with the sitting legislature, he suggested.

9:53:46 AM

CHAIR DICK said, "I think this is a ... magical moment here." He announced that public testimony would be held open.

9:20:35 AM

MARGIE BROWN, President and CEO, Cook Inlet Region Incorporated (CIRI) Alaska Native Corporation, described the Native corporation, which she represents, and said:

> I am not a professional in the education business. I have, I am a product in part of the state of Alaska, and its education system in earlier years. But I am very interested in this issue in particular, and I note that the materials that I sent to the chairmen actually have been distributed to you. These are my views about the time and the need, urgent I believe, Representative Cissna, as you said, urgent need, to address how students are educated, particularly in rural Alaska. I'm involved with several advisory boards and committees at the University of Alaska in Anchorage, and have been alarmed by the statistics that show that 70 percent of the students that arrive at that university campus require some form, sometimes even several years, of remedial education before they can begin their college level classes. And I think that is ominous and it should send alarm signals in all of our brains, that we are producing a generation of students that appear to come to the university system, those that choose to go to the university system, unprepared for university level classes. So what is the issue, particularly in rural Alaska. And I am a believer, that we now, 39 years past the monumental Molly Hootch lawsuit, and the Tobeluk decision that followed that established schools in small villages throughout Alaska, that it's time for us to think, look back, analyze what it is that is very good about those lawsuits and the following legal actions and the action by the State of Alaska to comply, and what is it that is not working so awfully

well. I am from Takotna, very close to Stony River, and of course even closer to McGrath. I am from a family who chose to leave the village because there was no school opportunity for me and my siblings. I was going into the third grade and, when the school closed for lack of school population, this of course is territorial days, and long before the Molly Hootch decision. So I know that sacrifice that my family made, to pick us up from the life that they loved and move us to where we could get an education. And so to the extent that the litigations and the states actions and the establishments of schools in small villages for grade school children, and even middle school children, has come about, I think that is a good thing. I think grade school children need to be with their parents, and the opportunity to do that and stay in your village I think is very important. But I do believe that we need to look more carefully when children get older and get to the high school age. And I know we have this issue about what happens when students go to residential schools and what happens to their villages, and what happens to their school in their villages, and I think that's because we are trying to do both. And I'm not certain that we can do that and not as you suggest, Chairman Dick, harm the students that stay back in the village. So I think that two years, and I'm just now becoming familiar with this particular piece of legislation, and I think the dialogue around having this two years to look very carefully at how we organize our school system is totally appropriate, and to the extent that this gives these three schools better breathing room; I'm all for that. But I am mostly for this dialogue. I sit atop a corporation that is doing a lot of tremendously exciting things in the state, and I would like to look out to the people who were raised and educated in Alaska, and look to a gainfully employable work force of shareholders, of people who live in urban centers, of people who come from rural Alaska. And I think this idea that we must now look at some systemic change is totally appropriate, and I encourage the dialogue. I would welcome, I would be happy to participate if you would like me to do so. I do think that this is not about changing the formula, arguing about the formula, this is really has to be about systemic change, and we do, as you suggest, need to get about that because I fear we are going to leave a

whole generation of young people behind because they exit our school system undereducated. Thank you.

9:27:12 AM

REPRESENTATIVE FEIGE asked if the CIRI Native Corporation has considered starting a private high school for its shareholders.

MS. BROWN reported that the Cook Inlet Tribal Council, a CIRI affiliated non-profit organization, is working to establish a residential facility in Anchorage, for 40 high school students, located near Bartlett High School. She said this may also serve to address another issue, which is the population of young homeless students from villages who need a safe educational environment. Bartlett High School currently affords the tribal council space for a school within a school program, and it would be incorporated into the residential plan. Thus, in the Anchorage area, a particular population of Native students is receiving attention from CIRI.

9:28:42 AM

REPRESENTATIVE FEIGE queried whether other Native corporations are considering similar action.

MS. BROWN stated that the day's agenda includes a meeting with the presidents and CEO's of the twelve regional corporations, and a meeting with the governor. She said education reform, and the concepts she has mentioned, will be on the agenda. Two years ago, at a similar CEO meeting, this concern was expressed. A call was made for change in how education is delivered in the state, and a unified belief was stated that it is a systemic issue and not about arguing over formula and funding. She said:

rosapeter64@hotmail.com

Dear House Education Committee Members,

I am the parent of Daphne Williams who has chosen to leave our local community and school here in Nulato to attend the Nenana City School. I support my daughter because the school offering here is limited and the Nenana school offers so much more. I am happy that my daughter has made this choice because it will help her in the future. I know that students graduating from Nenana have a better chance to go to college or get a good job. Please give Nenana the increased funding they need to keep operating the Living Center so students from small communities can get a better education.

My daughter has enjoyed living at the Living Center and atttending the Nenana City School...she gets good grades, and she loves playing basketball there. She has been attending Nenana City School since her freshman year, and plans on graduating there in 2012.

Thank you for considering my request.

Sincerely,

Rosa L. Peter

NENANA VOLUNTEER FIRE/EMS

P. O. Box 0070 Nenana, Alaska 99760

Office: (907) 832-5632 • Fax: (907) 832-5503 • Emergency: 911

I am the fire chief with the Nenana Volunteer Fire/EMS Department and want to express how important the students who live in the Nenana Living Center are to this program. The students who participate in this community program gain skills they can use the rest of their lives. Some go on to college and others go into the military work place. We have had several student volunteers that have gone on to paramedic programs or other medical related fields. All of the students come to us from small communities where limited opportunities exist and appreciate the opportunity they have here in Nenana.

I support HB-199 that would increase the stipend for students living in the Center and attending the Nenana City Schools. I know that this funding is needed by the school district and that the students who come to us will continue to get a better educational program than they have available to them where they live. Please give your attention to HB-199 and pass it so students will benefit.

Sincerely,

Rodney G. Jensen
Fire Chief

March 29, 2011

Dear Folks of the Legislature,

I am writing in support of HB 199, an increase in the stipend sent to the Statewide Educational Programs. These programs are a very viable alternative for kids all over the state to get the education that they feel fits their needs and will help them reach their goals.

The kids who come to the Nenana School are here for education and the experience of a larger school with a more diverse class offering than some of the small villages that they come from. Some are here because it is a safer environment; some are here for the surrounding educational support that helps them get more out of the classroom instruction. Some kids are encouraged by their parents to expand their horizons.

Whatever the reason the kids who chose to leave home in high school to pursue their education and the families who endure separation are making choices that are for their own betterment. These choices cause financial hardship on families and are an added cost to the schools that they attend. In the interest of higher education and to honor students who are stepping up to make good choices I ask you at pass this HB 199.

Thank you,

Sincerely,

Marilyn E. Duggar

CS FOR HOUSE BILL NO. 242(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES PEGGY WILSON, Dick, Seaton, Kawasaki

A BILL

FOR AN ACT ENTITLED

"An Act relating to funding for digital learning as a component of public school funding."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.078 is amended to read:

Sec. 14.03.078. Report. The department shall provide to the legislature by February 15 of each year an annual report regarding the progress of each school and school district toward high academic performance by all students. The report required under this section must include

(1) information described under AS 14.03.120(d);

(2) the number and percentage of students in each school who pass the examination required under AS 14.03.075, and the number who pass each section of the examination;

(3) progress of the department

(A) toward implementing the school accountability provisions

of AS 14.03.123; and

(B) in assisting high schools to become accredited;

(4) a description of the resources provided to each school and school district for coordinated school improvement activities and staff training in each school and school district;

(5) each school district's and each school's progress in aligning curriculum with state education performance standards;

(6) a description of the efforts by the department to assist a public school that receives a designation of deficient or in crisis;

(7) a description of intervention efforts by each school district and school for students who are not meeting state performance standards;

(8) the number and percentage of turnover in certificated personnel and superintendents;

(9) the number of teachers by district and by school who are teaching outside the teacher's area of endorsement but in areas tested by the high school competency examination**;**

(10) the amount and use of digital learning funds by each district under AS 14.17.420(a) and by the state boarding schools under AS 14.17.440(a).

*** Sec. 2.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs**,** [AND] high school vocational and technical instruction**, and digital learning** funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13;

(3) in addition to the special needs and intensive services funding available under (1) and (2) of this subsection, high school vocational and technical instruction funding is available to assist districts in providing vocational and technical instruction to students who are enrolled in grades nine through 12; a high school vocational and technical instruction funding factor of 1.01 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "vocational and technical instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills**;**

(4) in addition to the funding available under (1) - (3) of this subsection, digital learning funding is available to assist districts in providing a full range of digital technology solutions that include interactive white boards, mobile devices, tablets, laptops, software, professional development for teachers, and direct technical support services for students who are enrolled in grades kindergarten through 12; a digital learning funding factor of 1.005 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "digital learning" excludes costs associated with administrative services.

*** Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the special needs factor in AS 14.17.420(a)(1)**,** [AND] the high school vocational education factor set out in AS 14.17.420(a)(3)**, and the digital learning funding factor set out in AS 14.17.420(a)(4)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent

school district under AS 14.17.460.

REPRESENTATIVE PEGGY WILSON
HOUSE DISTRICT 2

Two changes were made to the bill based on the comments heard from the Committee last week when this bill was heard.

1. Issue: No reporting or accountability for the new funds
    a. Page 2 line 17, We have added a reporting requirement to provide insight into how the school districts are using their digital learning funds.
2. Issue: Using the funds for professional development
    a. Page 3, line 14, we explicitly called out professional development of teachers as a use for the funding.

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills;

(4) in addition to the funding available under (1) - (3) of this subsection, digital learning funding is available to assist districts in providing a full range of digital technology solutions that include interactive white boards, mobile devices, tablets, laptops, software, professional development for teachers, and direct technical support services for students who are enrolled in grades kindergarten through 12; a digital learning funding factor of 1.005 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "digital learning" excludes costs associated with administrative services.

*** Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the special needs factor in AS 14.17.420(a)(1), [AND] the high school vocational education factor set out in AS 14.17.420(a)(3), **and the digital learning funding factor set out in AS 14.17.420(a)(4)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent

school district under AS 14.17.460.

REPRESENTATIVE PEGGY WILSON
HOUSE DISTRICT 2

SPONSOR STATEMENT
House Bill 242

"An Act relating to funding for digital learning as a component of public school funding."

House Bill No. 242 establishes a "digital learning funding factor" in law to assist school districts to implement a full range of digital technology solutions. The factor is added as a multiplier in the Student Based Formula that is used to determine the funding for each school district.

The bill proposes to multiply the ADM by a factor of 1.005 for digital learning needs. Funds can be used to acquire a range of technologies, such as mobile devices, tablets or notebooks, plus software and services like professional development and technical support. School districts will retain complete flexibility to use the funds based on local priorities.

Alaska's current kindergarten students will graduate and enter the workforce or go to college in the year 2023. There is no doubt their future will be digital. The world already depends on computers and other digital devices. Technology is a basic ingredient of modern life.

Effective digital learning must be the new vehicle of teaching and learning. In fact, many states have embraced this new reality with aggressive programs to provide mobile devices to as many students as possible. There is strong evidence that proper use of technology in a modern classroom results in improved student performance.

Several years ago, the Alaska State Legislature saw this coming and funded "The Consortium for Digital Learning". Operated by the Alaska Association of School Boards (AASB), this program implemented a pilot "one to one" laptop program, with participation by many school districts throughout the state. The pilot has been successful. It is time to take the next step. The "digital learning funding factor" will help get the job done while giving districts flexibility to use these funds based on local priorities.

The Higher Education and Career Readiness Task Force recommended to "consider using modern classroom (or cyber-room) teaching practices; including for example, replacing traditional textbooks with electronic books, and providing the option for students to view classroom lectures remotely, via the internet." House Bill No. 242 implements this recommendation.

House Bill No. 242
Public School Funding: Digital Learning

Explanation: House Bill No. 242 establishes a "digital learning funding factor" in law to assist school districts to implement a full range of digital technology solutions. The factor is added as a multiplier in the formula. The formula is done by adding the ADM (Average Daily Membership) of each school district, which includes the school size factor and the district cost factor.

The bill proposes to multiply the ADM by a factor of 1.005 for digital learning needs. The new factor should provide about $6 million per year spread across the state. Funds can be used to acquire a range of technologies, such as mobile devices, tablets or notebooks, plus software and services like professional development and technical support. School districts will retain complete flexibility to use the funds based on local priorities.

Justification: Alaska's current kindergarten students will graduate and enter the workforce or go to college in the year 2023. There is no doubt their future will be digital. The world already depends on computers and other digital devices. Technology is a basic ingredient of modern life. The pen and pencil just aren't what they used to be and we need to change our ways.

Effective digital learning must be the new vehicle of teaching and learning by teachers and students. In fact, many states (including Maine and Idaho) have embraced this new reality with aggressive programs to provide mobile devices to as many students as possible. There is strong evidence that proper use of technology in a modern classroom results in improved student performance.

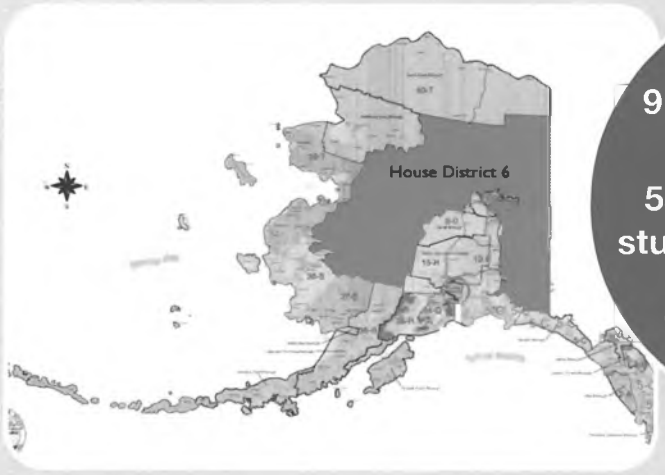
Several years ago, the Alaska State Legislature saw this coming and funded "The Consortium for Digital Learning". Operated by the Alaska Association of School Boards (AASB), this program implemented a pilot "one to one" laptop program, with participation by many school districts throughout the state. The pilot has been successful. It is time to take the next step. The "digital learning funding factor" will help get the job done but give districts flexibility to use these funds based on local priorities.

House Bill No. 242 implements a key recommendation of the Higher Education and Career Readiness Task Force to "consider using modern classroom (or cyber-room) teaching practices; including for example, replacing traditional textbooks with electronic books, and providing the option for students to view classroom lectures remotely, via the internet."

HD6 IPADS4LITERACY

February 1, 2012

Preliminary results of a collaborative vision for the students of House District 6 of Representative Alan Dick and the Consortium for Digital Learning



9 school districts, 40 schools, 55 teachers + 550 students + 600 iPads = School Transformation

DIGITAL LEARNING IN REMOTE ALASKA

The use of mobile technologies and instructional strategies that promote reading literacy and math numeracy in rural/bush Alaska.

In an effort to improve student achievement and prepare students with skills ready for post-secondary education, a project using mobile technology in schools was sponsored by Rep. Alan Dick. The Association of Alaska School Boards' Consortium for Digital Learning serves in the capacity of program design, program administration and school district liaison for the HD 6 iPad for Literacy Project. The target population for the project is school children grades K-5 (age 5 - 12) with classroom groupings containing the 3rd grade within districts of House District 6. Nine districts with approximately 550 students and over 50 teachers in 40 schools are participating in the project. Each student has a dedicated iPads for their use. The goals of the project are to use technology to improve student achievement in the areas of reading and math literacy and fluency.

Students and teachers are using the iPad technology with targeted applications within established methodology to demonstrate best practices from existing programs from pilot districts in Oregon and California. The use of iPads for voice recording of current reading material for fluency, a differentiated

Continued on p. 2

Students from Stony River, Kuspuk School District show off their iPads

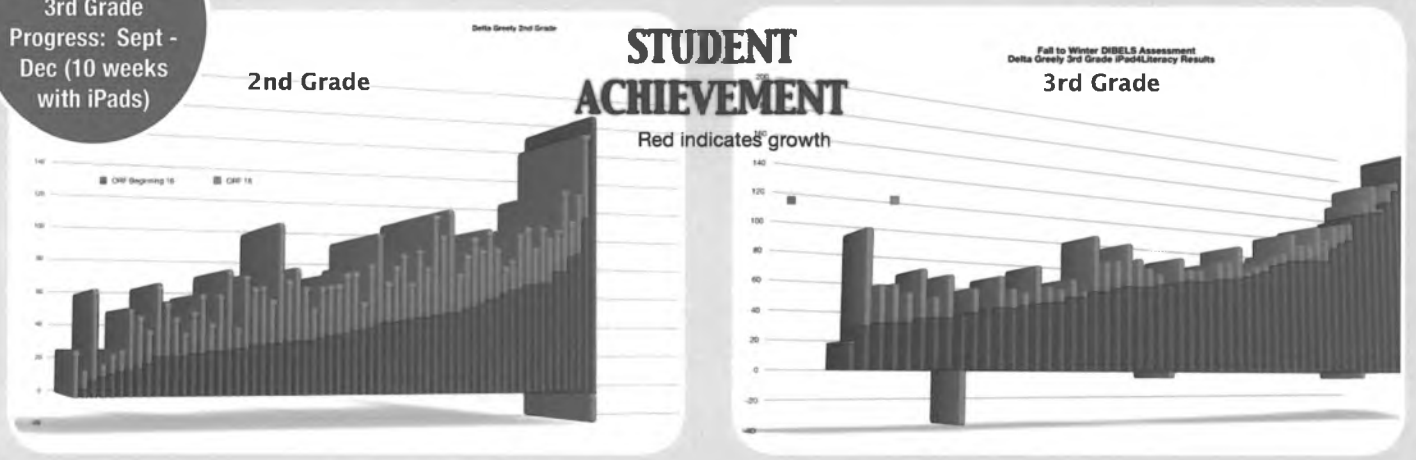
Vast distances, few roads (if any at all), low bandwidth, harsh conditions but can-do attitudes and learning happens!

An Aggressive Timeline:

Guidelines were targeted on getting iPads in students' hands quickly and integrating the prescribed instructional strategies so that formative assessments would indicate if adjustments were needed. Student rollouts of machines took place only after staff had professional development.

Assessments: Formative Assessments were done through DIBELS/AIMSWeb administrations, both pre-iPad rollout and after at least 8 weeks of use. Preliminary results are promising with more analysis to be done by an independent evaluator.

Delta Greely 2nd and 3rd Grade Progress: Sept - Dec (10 weeks with iPads)



from p. 1

reading program for reading comprehension, and math apps for practice of math numeracy are the main strategies. The design for this one year demonstration project includes an evaluation process, periodic formative assessment using common assessments between districts, and prescribed professional development provided by CDL-approved vendors. Professional development is delivered in face-to-face sessions as well as through distance delivery. One day of technical support services was also specified in the project as a district requirement.

Digital Learning for ALL Alaska Students!

All funding for associated hardware and software are paid from a legislative grant appropriation with the school districts responsible for all other costs, including necessary professional development, technical support, and CDL monitoring and mentoring, and evaluation. The approximate funding allocations amount to 75% grant to 25% district match. Districts costs are also dependent

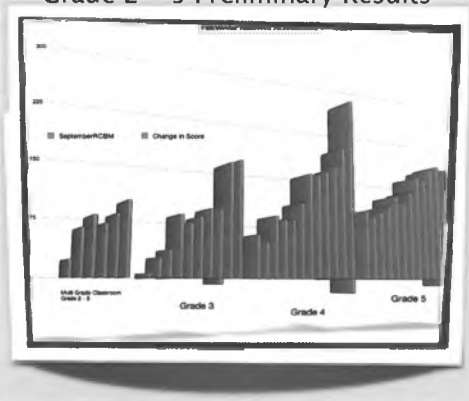
Continued on p. 3

Teacher Voices:

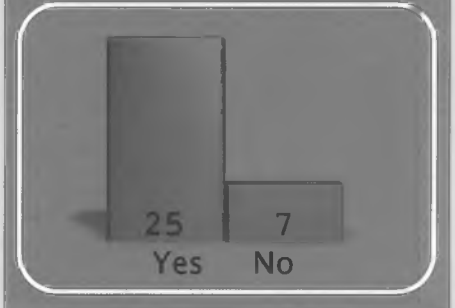
- "I have changed the way I plan for instruction. I am always thinking about how to use technology so that my students can collaborate and/or create, instead of just responding to questions or problems."
- "Voice recordings have definitely made students more aware of their own fluency and their progress in fluency."
- "Students are more independent and I can work more one on one with the students that need more support."
- "They have opened up different avenues for learning. It helps give more interactive ways to learn and show learning (through research and projects/presentations)."
- "When my students are ALL engaged, the more opportunities for higher level thinking and learning."

From p. 2

Alaska Gateway Overall
Grade 2 - 5 Preliminary Results



Teachers: "Have iPads changed your instruction?"



Teachers: "Have the outcomes you consider "success" for use of iPads made progress?"

And the Project Goes On.

iPads4Literacy continues through the year. Additional inservice for teachers is taking place to expand the use of the iPads into other areas of instruction. An assessment at the end of the year will be done to further understand the implications of mobile technologies for our students of Alaska.

on the ability to bring staff together to provide for an economy of scale for professional development.

Project implementation was aggressive and was generally smooth in rollout. Districts were very cooperative in helping to ensure the best opportunity for success. District calendars were adjusted to accommodate professional development as were testing dates to establish baseline data from students before their equipment rollout. Time in the day were assured by district personnel to include the implementation of the targeted strategies.

Teacher support is an important element of any project of this nature. An initial two day professional development session was held for all teachers before any student machines were rolled out.

In addition, at least one session of online training for KidBiz 3000 (the differentiated reading program) was held for all teachers. A wiki has been developed to as a resource to teachers for classroom management and technical issues.

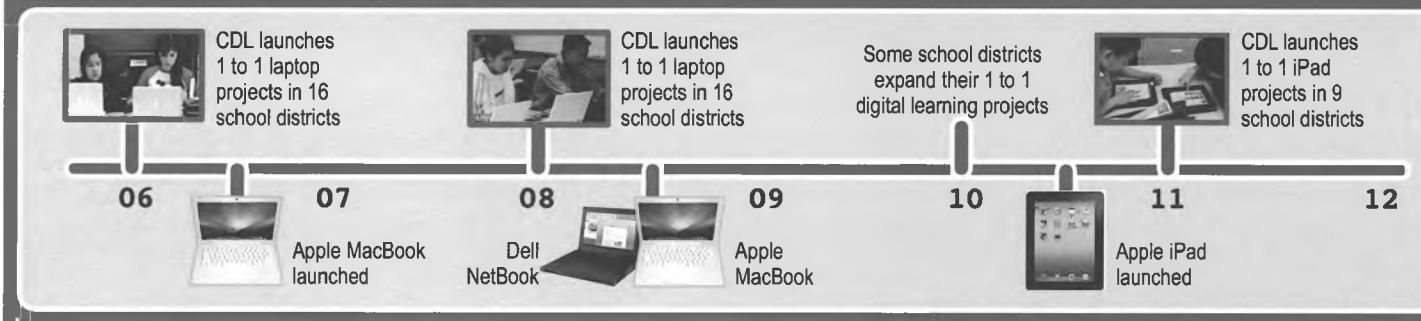
A virtual teacher mentor was hired from Canby School District, Canby, Oregon, to provide online assistance. Julie Johnson, a 3rd grade teacher from Canby and presently a technology interventionist at grade K - 6, continues to hold web conferences through GoToMeeting on Wednesday afternoons, in addition to maintaining the iPads4Literacy wiki and responding to individual email questions. A formative assessment was due from all districts after 8 - 10 weeks of student iPad use, with several districts testing before Christmas Break.

Administrators are Excited!

- "Teachers have found ways to do activities in very new and exciting ways that motivate students in ways I would never have imagined. Students are reading more, writing more, and developing their higher-level thinking skills as a result of their increased motivation to learn."
- "I believe this project was an enormous success for our district, and I hope we are able to secure additional funding to continue to expand the project to other sites and grade levels in the near future."
- "A 5th grader very eloquently explained to me that he prefers to write with his iPad, and writes a lot more than on paper, because his handwriting is "bad" and he doesn't have to go back and fix mistakes with an eraser. Gives me goosebumps! In short, we are just so thankful to be participating in this project and can't quite believe the growth students have made after only a couple of months with iPads in their hands and classrooms."
- "It took perseverance to get it up and running, but it was worth the effort. I would still like to see more options for our students who are emerging readers."
- "I can't thank Rep. Dick enough for this project. It has meant a lot of our students in our district to have this opportunity and they (as well as our staff) have flourished!!"

Every child, regardless of geography, deserves a relevant education for today's world.

AASB Consortium for Digital Learning - Project Timeline



Summary of the CDL Digital Revolution in Alaska's Public Schools

AASB is committed to the idea that creating 1 to 1 digital learning environments in our schools will help all students develop 21st century skills, reach their potential, raise their literacy levels, and lead successful lives in an increasingly global economy.

In 2006 and again in 2008, the AASB Consortium for Digital Learning (CDL) was awarded capital funds in the total amount of $7.5 million by the 24th and 25th Legislatures for 2 separate rounds of projects. With those funds, over 100 one-to-one laptop projects in over 28 school districts spanning a 4 year project timeline were implemented. Over 12,000 students and teachers were included in these projects.

With the support of CDL, school districts have continued to move forward to expand their one-to-one digital learning projects.

With the advent of tablets and other mobile devices, over a dozen school districts have launched digital learning projects that demonstrate the advantages of having a dedicated mobile device per student. The HD 6 iPad project is included in that number.

Through the experience of CDL and finding of research, CDL has developed infrastructures of support to assist school districts in their digital learning efforts. These infrastructures include:

Aggregate Ordering

Reduced pricing on bulk equipment purchases by multiple districts

Professional Development

Liaison to vendors, cross platform multi-device training opportunities for teachers

iTunes U K-12 for Alaska

A platform for statewide digital distribution of instructional content

Transforming Alaska Education through Digital Learning

Rapid Change

1990's | 2002-2006 | 2005-2007 | 2010

Technology Innovation Timeline

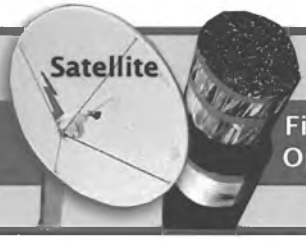
New Tools

Mobile Apps

Applications

The transition from expensive software packages to low cost individual mobile apps allows teachers to access more educational resources than ever before.

Getting Connected



Connectivity Infrastructure

Broadband connectivity in Alaska through business and government. Schools are a major part of anticipated demand. While infrastructure is still expanding to meet needs, digital learning still progresses at a rapid rate.

Support Infrastructure

Aggregate Ordering
Reduced pricing on bulk equipment purchases by multiple districts

Professional Development
Liaison to vendors, cross platform multi-device training for teachers

iTunes U
A platform for statewide digital distribution of instructional content

Infrastructures are in place for hardware acquisition, professional development for teachers and digital instructional content.

The Association of Alaska School Boards' **Consortium for Digital Learning (CDL)** is the only entity that has taken it upon itself to move schools into the 21st century by putting all of these support systems in place. These structures are scalable to accommodate rapid expansion of digital learning across Alaska. For six years CDL has promoted, developed and implemented digital learning in Alaska's schools resulting in over 100 1-to-1 projects in 32 districts.

Obligation and Opportunity

"The legislature shall... establish and maintain a system of public schools open to all children"
- Alaska Constitution

The need for consistent, sustainable funding to support innovative education for all Alaska children is both an obligation and an opportunity. The challenge is that all children do not have access to an equitable education experience. Additional designated funding will help school leaders meet that responsibility. Adding funds to the foundation formula and collaboration between individual legislators and school districts to expand digital learning opportunities for students can transform education in Alaska. For us to miss this opportunity to change the face of teaching and learning now would be a tragedy.

Report on Leveling the Playing Field for Rural Schools Grant **February 7, 2012**

In July 2011 the Association of Alaska School Board's Consortium for Digital Learning (CDL) was granted $250,000 through "Leveling the Playing Field for Rural Schools", a grant to support statewide digital learning. Since July, 2011, CDL has worked diligently to support and advance digital learning in school districts through direct contact with school leaders. The activities listed below include highlights of the CDL activities:

Hardware Support

- CDL Aggregate Ordering Service: Through the creation of the CDL Store, aggregate ordering opportunities have been made available for districts to combine technology purchases and take advantage of discounted bulk ordering. Over $2 million dollars have passed through this site, providing discounts not previously available to the 19 districts that participated. Regular ordering periods are established and being utilized by increasing numbers of districts.

Professional Development and Training

- School Leadership Training and Presentations: CDL provided three conferences in Sept, 2011, November 2011, and Feb. 2012. Nationally recognized experts in technology and one to one implementations were brought to Alaska for presentations with school board members, superintendents and school leadership teams. Over 75% of Alaska's school board members and 80% of school superintendents participated in these events.
- District Support and Guidance: CDL provided needed support, recommendations and guidance to school district leadership in critical components of technology integration: 9 school districts: Alaska Gateway, Copper River, Delta Greely, Kuspuk, Iditarod, Nenana, Tanana, Yukon Flats, Yukon Koyukuk. CDL investigated and promoted cutting edge strategies and applications for instruction through technology with ten school districts adopting suggested strategies into their curriculum and others considering these same options.
- Teacher Professional Development Opportunities: CDL organized and developed professional development and technical training services for 9 rural districts. CDL continues to develop working relationships with vendors to develop and provide Alaska-based professional development in use of technology. Over 300 teachers had multiple opportunities for professional development.

Digital Content

- Alaska's iTunes U - Alaska's Education Resource: A free digital content repository site was launched for all K12 educational leaders and teachers worldwide to provide Alaska content relevant to schools and instruction. The Association of Alaska School Board's iTunes U site has over 4000 visits per week by educators in Alaska and around the world.

Services

- Project development and support for sustainability: CDL assisted two districts (Nome and Northwest Arctic) by determining their needs in critical components for success in implementation of their digital learning projects and helped them to make adjustments where their projects needed improvements.

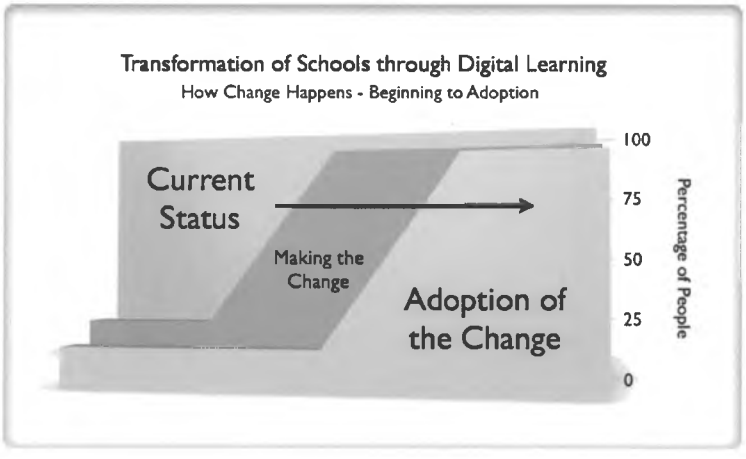
ASSOCIATION OF ALASKA SCHOOL BOARDS
ADVOCATES FOR ALASKA'S YOUTH

Rationale for Inclusion of Digital Learning in Education Foundation Support

"The legislature shall... establish and maintain a system of public schools open to all children"
- Article 7, Paragraph 1- *Alaska Constitution*

- The need for consistent, sustainable funding to support innovative education for all Alaska children is both an obligation and an opportunity. The challenge is that all children do not have access to an equitable education experience. Additional funding will help school leaders meet that responsibility. Adding funds to the foundation formula and collaboration between individual legislators and school districts to expand digital learning opportunities for students can transform education in Alaska. For us to miss this opportunity to change the face of teaching and learning now would be a tragedy.

- The advantages of digital learning are dramatic, through increased educational resource availability, instructional strategies to better engage and motivate students, differentiate learning and increase teacher productivity.



• Technology changes rapidly and needs to be renewed frequently. Static one time funding sources lead to obsolete equipment and limited adoption of education strategies utilizing technology.

• Adoption of change happens over time. Without consistent funding, technology progress cannot be realized and sustained.

- Key findings from research indicate that while many Alaska's schools are moving forward with digital learning, they are concerned about the funding to sustain their efforts.

- That same research states that many Alaskan children do not have access to one-to one digital learning. For the approximate 90% of Alaska children that don't have access to digital learning, districts will need guidance and funding to initiate projects that bring equity to public education.

- Consistent and stable funding results in the ability for school districts to plan, design, and sustain ongoing uses of technology for all students.

- By including digital learning into the calculation for Basic Need (as does HB 242), school leaders are ensured of designated funding streams. This will enable them to meet their responsibility to provide an equitable education for all Alaskan children and realize the opportunity to transform of Alaska schools through digital learning.

Honorable Alan Dick, Chair
House Education Committee
Alaska State Legislature
120 4th Street, State Capitol, Room 104
Juneau, AK 99801-1182

Dear Representative Dick:

I appreciate your continued leadership, and that of your committee, on issues important to school districts in Alaska. I am writing in support of House Bill 242, "An Act relating to funding for digital learning as a component of public school funding." I also want to thank Representative Wilson, the bill's sponsor, and you and Representative Seaton and Representative Kawasaki for co-sponsoring.

This bill recognizes that we live in, and our students will live and work in, a digital age. The bill will create a necessary on-going funding source for districts to use to support digital learning. The digital media of today is different than just two years ago and will be different than two years from now, so I appreciate the bill's language being as all inclusive as possible, as it is important the funds provided to school districts be able to be used on emerging technology. The bill is also strong in providing for hardware, software, technical assistance and professional development. The North Slope Borough School District was an early adopter of technology in the classroom. We've learned that professional development for teachers is key to allowing the use of technology to transform education for students.

Thank you for your committee's attention to this important aspect of education.

Sincerely,

Peggy Cowan
Superintendent

> **Cc:** Jeannie Blake <jblake@cordovasd.org>
> **Subject: HB 242**
>
> Greetings Representative Dick and Representative Wilson.
> I am writing in support of HB 242 and its efforts to provide adequate technology for our Alaska students. In Cordova, technology and technology access via vital bandwidth is extremely important for our students to be competitive locally as well as globally.
> Technology/access is the lifeline for remote/rural communities such as Cordova. In many communities it is noted how technology and its novelty makes life easier. In rural communities it is much more than a novelty, technology is a necessity that allows for a compromise to the "real world" for many Alaskans.
> HB 242 assists in our efforts to improve communications from school to home (student grades/attendance/daily bulletins), it allows for consistent delivery of communications electronically from Federal and State sources, and it allows users to be better organized in our daily lives.
> And finally, technology has allowed our teaching staff to be held to a higher degree of accountability. Better, more current professional development allows our staff to better engage their students, motivating our students to a higher standard with access to better resources.
> I appreciate your support in HB 242 to provide a sustainable funding source for our schools.
> Respectively,
>

Rep.Alan.Dick@legis.state.ak.us

Re: House Bill 242 by Rep. Peggy Wilson - SUPPORT

Dear Chairman Dick:

TechNet, a CEO-led trade organization representing the world's leading technology companies in the fields of hardware, software, the internet, clean technology, biotechnology, and venture capital is writing to express our strong support for **House Bill 242: relating to funding for digital learning as a component of public school funding.**

House Bill 242 recognizes that our children learn differently than just a generation ago. The way kids receive and process information in the technological age has changed and our schools, school districts, teachers and parents should have the ability to efficiently use state funds appropriated to purchase the tools best-suited to teach and inspire their students. Blended and differentiated learning, made possible via technology, has the ability to bridge learning gaps and geographic conditions.

House Bill 242 recognizes that in today's 21st century learning environment we can no longer so narrowly define learning tools as hard copy textbooks, or simply digitized texts, and limit state funding to these basic materials. To do that fails to capitalize on what is best for our kids and fails to best prepare Alaska's children to be a successful part of a global, interconnected and digital world and workforce.

On behalf of the high tech industry and our member companies, including HP, Dell, Apple, Discovery Education, Intel, Microsoft, Google, Cisco, Facebook and many others, we applaud Representative Wilson's efforts to embrace change, re-engage our children in their education, spend taxpayer dollars more effectively, and give districts and parents local control over how best to teach their students. We urge passage of House Bill 242.

Sincerely,

Geoff Wurzel
Director, Education Initiatives
TechNet

FISCAL NOTE

STATE OF ALASKA **BILL NO.** HB242
2012 LEGISLATIVE SESSION

Analysis

This bill amends AS14.17.420 by adding a digital learning funding adjustment of 1.005 to the public school funding program. The adjustment would generate funding in the amount of $5.9 million. The digital learning funding will assist districts in providing a full range of digital technology solutions including equipment purchases and technical support for grades K-12. The bill states that digital learning excludes costs associated with administration.

If passed, the funding mechanism is a general fund transfer to the Public Education Fund.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. HB242

Analysis

This bill amends AS14.17.420 to create a digital learning funding adjustment of 1.005. The adjustment follows the special needs factor of 1.20 and would generate funding in the amount of $5.9 million. These funds will assist districts in the purchasing of digital technologies for those students enrolled in grades Kindergarten through 12; and excludes those costs associated with administrative services.

It also amends AS 14.17.440(a) which is the mechanism to calculate the digital learning funding adjustment of 1.005 and include it after Special Needs Factor of 1.20.

(This legislation will need to be updated to include the new vocation education factor [or CTE] which passed in the 2011 Legislative Session and signed by the Governor into law.)

Funding would require a General Fund transfer to the Public Education Fund.

A BILL

FOR AN ACT ENTITLED

"An Act relating to the power and duties of the Department of Education and Early Development to improve instructional practices; relating to teacher exit surveys; and relating to duties of the state Board of Education and Early Development."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03.078 is amended to read:

Sec. 14.03.078. Report. The department shall provide to the legislature by February 15 of each year an annual report regarding the progress of each school and school district toward high academic performance by all students. The report required under this section must include

(1) information described under AS 14.03.120(d);

(2) the number and percentage of students in each school who pass the examination required under AS 14.03.075, and the number who pass each section of the examination;

(3) progress of the department

(A) toward implementing the school accountability provisions of AS 14.03.123; and

(B) in assisting high schools to become accredited;

(4) a description of the resources provided to each school and school district for coordinated school improvement activities and staff training in each school and school district;

(5) each school district's and each school's progress in aligning curriculum with state education performance standards;

(6) a description of the efforts by the department to assist a public school that receives a designation of deficient [OR IN CRISIS];

(7) a description of **restoration** [INTERVENTION] efforts by each school district and school for students who are not meeting state performance standards;

(8) the number and percentage of**, and the reasons for,** turnover in certificated personnel and superintendents;

(9) the number of teachers by district and by school who are teaching outside the teacher's area of endorsement but in areas tested by the high school competency examination.

*** Sec. 2.** AS 14.03.123(d) is amended to read:

(d) A public school or district that receives a low performance designation under this section shall**, with the assistance of the department,** prepare and submit to the department a school or district improvement plan, as applicable, in accordance with regulations adopted by the board. The improvement plan must be prepared with the maximum feasible public participation of the community including, as appropriate, interested individuals, teachers, parents, parent organizations, students, tribal organizations, local government representatives, and other community groups.

*** Sec. 3.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.127. Department accountability. (a) By June 1 of each year, the superintendents of each school district in the state shall provide to the Department of Administration an evaluation of the department that addresses the following matters:

(1) whether the department staff were supportive of the district;

(2) a description of the support received, if any, from each division of the department and an evaluation of the support;

(3) the level of contact the district had with the department, on a rating scale of one to five, with five being an excellent level of contact;

(4) an evaluation of the reporting requirements on district activities to the department, including level of burden, necessity, and redundancy of reporting requirements;

(5) a statement on how the department may improve services to the district.

(b) The Department of Administration shall annually compile the evaluations provided under (a) of this section and provide to the governor, the legislature, and the commissioner of education, in a manner that protects the identity of the superintendents, a comprehensive description of evaluation results.

*** Sec. 4.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) **after providing notice and an opportunity for public school and district administrators to participate,** study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools; **the plans adopted or recommended for public schools must**

(A) include appropriate cultural standards consistent with the 1998 Alaska Standards for Culturally Responsive Schools adopted by the Assembly of Alaska Native Educators;

(B) require appropriate cultural standards adopted by the board to be included in instructional practices in districts in which 50 percent or more of the student population is of Alaska Native heritage;

(C) describe intensive early learning opportunities for each district in the state;

(D) require an analysis of community involvement in the district and methods for improving community involvement;

(E) address teaching capacity, retention, and development and provide for technical assistance to teachers;

(F) establish routine evaluations and assistance to ensure that districts develop and maintain elective and career and technical courses;

(G) establish standards and timelines for restoration activities after first notifying a district of a low performance designation and offering technical assistance with predictable and research-based strategies tailored to the state to improve performance;

(H) describe research-based strategies that target educational performance of low-performing students in the state;

(3) **employ qualified personnel who shall** provide advisory and consultative services to all public school governing bodies and personnel; **the services**

(A) must comply with AS 14.07.030(14); and

(B) may not include the use or employment of a trustee;

(4) prescribe by regulation a minimum course of study for the public schools; the regulations must provide that, if a course in American Sign Language is given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe

conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, projected energy consumption and costs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may **restore** [INTERVENE IN] a school **or** district to

improve instructional practices, as described in **(19) of this subsection and** AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the **school and the** district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental **restoration activities** [INTERVENTION], as described in AS 14.07.030(14)**(A) - (D)** [(A) AND (B)] and (15), after the **school or** district demonstrates three consecutive years of improvement **on measures identified as indicators of student success and achievement under AS 14.03.123(f); notwithstanding that a school or district has demonstrated three consecutive years of improvement, the district may, in its discretion, choose to receive restoration services for a fourth year** [CONSISTING OF NOT LESS THAN TWO PERCENT INCREASES IN STUDENT PROFICIENCY ON STANDARDS-BASED ASSESSMENTS IN MATHEMATICS, READING, AND WRITING AS PROVIDED IN AS 14.03.123(f)(2)(A)]; and

(C) a process for districts to petition the department for continuing or discontinuing the department's **restoration activities** [INTERVENTION];

(17) notify the legislative committees having jurisdiction over education before **restoring** [INTERVENING IN] a school **or** district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15);

(18) assist the Department of Natural Resources in developing and implementing the farm-to-school program established under AS 03.20.100**;**

(19) engage in a process of collaborative support to restore and improve school performance when a school is designated as low performing under AS 14.03.123; the process must include

(A) for the first school year after the designation of the school as a low-performing school, by

(i) August 15, selection by the superintendent of the district and the commissioner of an independent expert to evaluate

the areas of business services, board governance, leadership, facilities, human relations, instruction, preparedness of students to learn, or community involvement; the expert shall also evaluate the extent to which the district has implemented the Alaska State Cultural Standards; the expert shall visit the school or district for not more than seven days to conduct the evaluation;

(ii) October 15, preparation of a written report by the expert selected under (i) of this subparagraph and distribution of the report to the commissioner, the local school board, and the superintendent; a summary of the report shall be made available to the public by posting the summary on the Internet;

(iii) November 15, mandatory selection and hiring of two qualified coaches to advise the district with regard to the needs identified in the evaluation completed under (ii) of this subparagraph; one coach shall be selected jointly by the superintendent and the department, and one coach shall be selected jointly by the local school board and the department; the coaches may advise the district for not more than 20 days in total for each school year for which they are hired; and

(iv) June 1, provide to the department, parents, and the legislature and publish on the Internet a summary of the progress of the efforts to restore the school and the observations and recommendations of the coaches hired under (iii) of this subparagraph;

(B) for the second school year after the designation of a school as a low-performing school, by

(i) September 15, mandatory selection and hiring of two additional qualified coaches to advise the district with regard to the needs identified in the evaluation completed under (A)(ii) of this paragraph; one coach shall be selected by the superintendent, and one coach shall be selected by the local school board, after

input from the Association of Alaska School Boards; the coaches may advise the district for not more than 20 days in total for each school year for which they are hired; and

(ii) June 1, provide to the state Board of Education and Early Development, the department, parents, and the legislature and publish on the Internet a summary of the progress of the efforts to restore the school and the observations and recommendations of the coaches hired under this subparagraph;

(C) for the third school year after the designation of a school as a low-performing school,

(i) that the department engage in frequent consultation with the staff at the low-performing school and with the superintendent of the district in which the school is located;

(ii) that the department establish a school improvement team for the purpose of advising the commissioner on restoration activities; the team consists of the commissioner or the commissioner's designee, a member of the state Board of Education and Early Development, the superintendent of the district, the four qualified coaches selected under (A) and (B) of this paragraph, and one member of the local school board; the team shall consider and evaluate evidence at the school of best practices in the state for business services, instructional practices, local school board governance, district leadership, facilities maintenance, human resources, implementation of Alaska State Cultural Standards, and preparedness of students to learn;

(iii) that the team established under (ii) of this subparagraph develop a three-year plan to restore the school; during the three-year plan, the team may redirect funding in the district budget to improve instruction; the superintendent shall implement the plan developed by the team; each year, at the end of the school year, the team shall evaluate and adjust the plan as the

team determines necessary.

*** Sec. 5.** AS 14.07.030(14) is amended to read:

(14) **restore** [NOTWITHSTANDING ANY OTHER PROVISION OF THIS TITLE, INTERVENE IN] a school **or** district to improve instructional practices under standards established by the department in regulation**; the regulations must be consistent with federal and state law and the superior court's findings, dated February 4, 2009, in Moore et al. v. State of Alaska, No. 3AN-04-9756 CI**, including [DIRECTING THE]

(A) [EMPLOYEES IDENTIFIED BY THE DEPARTMENT TO EXERCISE SUPERVISORY AUTHORITY FOR INSTRUCTIONAL PRACTICES IN THE DISTRICT OR IN A SPECIFIED SCHOOL;

(B)] **directing the** use of appropriations under this title for distribution to a district **as necessary under AS 14.07.020(a)(19)**;

(B) providing for training and technical support to a low-performing school or district as necessary to implement the school or district improvement plan submitted under AS 14.03.123(d);

(C) providing for regular monitoring, evaluation, and modification of improvement efforts that are tailored to the strengths and weaknesses of the school or district;

(D) providing for the availability of courses and remedial programs necessary for all students attending a low-performing school to meet state standards for graduation from secondary school in the expected time frame;

*** Sec. 6.** AS 14.07.030(15) is repealed and reenacted to read:

(15) notwithstanding any other provision of this title, redirect public school funding under AS 14.17 appropriated for distribution to a school district, after providing notice to the legislative committees with jurisdiction over education and to the district and an opportunity for the district to respond, if

(A) the department has assembled a school improvement team under AS 14.07.020(a)(19) that has requested the funding to be redirected for a specified purpose related to improvement of instructional practices in a school

or district that is in restoration status under (14) of this section; and

(B) the department has established a timeline for redirecting the funding to the district after the school improvement team determines that the improvement of instructional practices has satisfactorily occurred;

*** Sec. 7.** AS 14.07.165 is amended by adding a new subsection to read:

(b) In addition to the duties enumerated in (a) of this section, the board shall

(1) review and ensure departmental compliance with state law, including departmental duties related to school monitoring, improvement, and restoration provisions under AS 14.03.123, AS 14.07.020, and 14.07.030;

(2) provide to a superintendent and local school board that are affected by an item scheduled for consideration on a board meeting agenda not less than 10 days' notice and an opportunity to respond.

*** Sec. 8.** AS 14.20.130 is amended by adding a new subsection to read:

(b) A contract for a teacher issued after the effective date of this Act, must contain a term requiring a teacher leaving employment to complete the department's exit survey for teachers.

A BILL

FOR AN ACT ENTITLED

"An Act relating to the power and duties of the Department of Education and Early Development to improve instructional practices; relating to teacher exit surveys; and relating to duties of the state Board of Education and Early Development."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.078 is amended to read:

Sec. 14.03.078. Report. The department shall provide to the legislature by February 15 of each year an annual report regarding the progress of each school and school district toward high academic performance by all students. The report required under this section must include

(1) information described under AS 14.03.120(d);

(2) the number and percentage of students in each school who pass the examination required under AS 14.03.075, and the number who pass each section of the examination;

(3) progress of the department

(A) toward implementing the school accountability provisions of AS 14.03.123; and

(B) in assisting high schools to become accredited;

(4) a description of the resources provided to each school and school district for coordinated school improvement activities and staff training in each school and school district;

(5) each school district's and each school's progress in aligning curriculum with state education performance standards;

(6) a description of the efforts by the department to assist a public school that receives a designation of deficient [OR IN CRISIS];

(7) a description of **restoration** [INTERVENTION] efforts by each school district and school for students who are not meeting state performance standards;

(8) the number and percentage of**, and the reasons for,** turnover in certificated personnel and superintendents;

(9) the number of teachers by district and by school who are teaching outside the teacher's area of endorsement but in areas tested by the high school competency examination.

* **Sec. 2.** AS 14.03.123(d) is amended to read:

(d) A public school or district that receives a low performance designation under this section shall**, with the assistance of the department,** prepare and submit to the department a school or district improvement plan, as applicable, in accordance with regulations adopted by the board. The improvement plan must be prepared with the maximum feasible public participation of the community including, as appropriate, interested individuals, teachers, parents, parent organizations, students, tribal organizations, local government representatives, and other community groups.

* **Sec. 3.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.127. Department accountability. (a) By June 1 of each year, the superintendents of each school district in the state shall provide to the Department of Administration an evaluation of the department that addresses the following matters:

(1) whether the department staff were supportive of the district;

(2) a description of the support received, if any, from each division of the department and an evaluation of the support;

(3) the level of contact the district had with the department, on a rating scale of one to five, with five being an excellent level of contact;

(4) an evaluation of the reporting requirements on district activities to the department, including level of burden, necessity, and redundancy of reporting requirements;

(5) a statement on how the department may improve services to the district.

(b) The Department of Administration shall annually compile the evaluations provided under (a) of this section and provide to the governor, the legislature, and the commissioner of education, in a manner that protects the identity of the superintendents, a comprehensive description of evaluation results.

*** Sec. 4.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) **after providing notice and an opportunity for public school and district administrators to participate,** study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools; **the plans adopted or recommended for public schools must**

(A) include appropriate cultural standards consistent with the 1998 Alaska Standards for Culturally Responsive Schools adopted by the Assembly of Alaska Native Educators;

(B) require appropriate cultural standards adopted by the board to be included in instructional practices in districts in which 50 percent or more of the student population is of Alaska Native heritage;

(C) describe intensive early learning opportunities for each district in the state;

(D) require an analysis of community involvement in the district and methods for improving community involvement;

(E) address teaching capacity, retention, and development and provide for technical assistance to teachers;

(F) establish routine evaluations and assistance to ensure that districts develop and maintain elective and career and technical courses;

(G) establish standards and timelines for restoration activities after first notifying a district of a low performance designation and offering technical assistance with predictable and research-based strategies tailored to the state to improve performance;

(H) describe research-based strategies that target educational performance of low-performing students in the state;

(3) **employ qualified personnel who shall** provide advisory and consultative services to all public school governing bodies and personnel; **the services**

(A) must comply with AS 14.07.030(14); and

(B) may not include the use or employment of a trustee;

(4) prescribe by regulation a minimum course of study for the public schools; the regulations must provide that, if a course in American Sign Language is given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe

conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, projected energy consumption and costs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may **restore** [INTERVENE IN] a school **or** district to

improve instructional practices, as described in **(19) of this subsection and** AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the **school and the** district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental **restoration activities** [INTERVENTION], as described in AS 14.07.030(14)**(A) - (D)** [(A) AND (B)] and (15), after the **school or** district demonstrates three consecutive years of improvement **on measures identified as indicators of student success and achievement under AS 14.03.123(f); notwithstanding that a school or district has demonstrated three consecutive years of improvement, the district may, in its discretion, choose to receive restoration services for a fourth year** [CONSISTING OF NOT LESS THAN TWO PERCENT INCREASES IN STUDENT PROFICIENCY ON STANDARDS-BASED ASSESSMENTS IN MATHEMATICS, READING, AND WRITING AS PROVIDED IN AS 14.03.123(f)(2)(A)]; and

(C) a process for districts to petition the department for continuing or discontinuing the department's **restoration activities** [INTERVENTION];

(17) notify the legislative committees having jurisdiction over education before **restoring** [INTERVENING IN] a school **or** district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15);

(18) assist the Department of Natural Resources in developing and implementing the farm-to-school program established under AS 03.20.100**;**

(19) engage in a process of collaborative support to restore and improve school performance when a school is designated as low performing under AS 14.03.123; the process must include

(A) for the first school year after the designation of the school as a low-performing school, by

(i) August 15, selection by the superintendent of the district and the commissioner of an independent expert to evaluate

the areas of business services, board governance, leadership, facilities, human relations, instruction, preparedness of students to learn, or community involvement; the expert shall also evaluate the extent to which the district has implemented the Alaska State Cultural Standards; the expert shall visit the school or district for not more than seven days to conduct the evaluation;

(ii) October 15, preparation of a written report by the expert selected under (i) of this subparagraph and distribution of the report to the commissioner, the local school board, and the superintendent; a summary of the report shall be made available to the public by posting the summary on the Internet;

(iii) November 15, mandatory selection and hiring of two qualified coaches to advise the district with regard to the needs identified in the evaluation completed under (ii) of this subparagraph; one coach shall be selected jointly by the superintendent and the department, and one coach shall be selected jointly by the local school board and the department; the coaches may advise the district for not more than 20 days in total for each school year for which they are hired; and

(iv) June 1, provide to the department, parents, and the legislature and publish on the Internet a summary of the progress of the efforts to restore the school and the observations and recommendations of the coaches hired under (iii) of this subparagraph;

(B) for the second school year after the designation of a school as a low-performing school, by

(i) September 15, mandatory selection and hiring of two additional qualified coaches to advise the district with regard to the needs identified in the evaluation completed under (A)(ii) of this paragraph; one coach shall be selected by the superintendent, and one coach shall be selected by the local school board, after

input from the Association of Alaska School Boards; the coaches may advise the district for not more than 20 days in total for each school year for which they are hired; and

(ii) June 1, provide to the state Board of Education and Early Development, the department, parents, and the legislature and publish on the Internet a summary of the progress of the efforts to restore the school and the observations and recommendations of the coaches hired under this subparagraph;

(C) for the third school year after the designation of a school as a low-performing school,

(i) that the department engage in frequent consultation with the staff at the low-performing school and with the superintendent of the district in which the school is located;

(ii) that the department establish a school improvement team for the purpose of advising the commissioner on restoration activities; the team consists of the commissioner or the commissioner's designee, a member of the state Board of Education and Early Development, the superintendent of the district, the four qualified coaches selected under (A) and (B) of this paragraph, and one member of the local school board; the team shall consider and evaluate evidence at the school of best practices in the state for business services, instructional practices, local school board governance, district leadership, facilities maintenance, human resources, implementation of Alaska State Cultural Standards, and preparedness of students to learn;

(iii) that the team established under (ii) of this subparagraph develop a three-year plan to restore the school; during the three-year plan, the team may redirect funding in the district budget to improve instruction; the superintendent shall implement the plan developed by the team; each year, at the end of the school year, the team shall evaluate and adjust the plan as the

team determines necessary.

* **Sec. 5.** AS 14.07.030(14) is amended to read:

(14) **restore** [NOTWITHSTANDING ANY OTHER PROVISION OF THIS TITLE, INTERVENE IN] a school **or** district to improve instructional practices under standards established by the department in regulation**; the regulations must be consistent with federal and state law and the superior court's findings, dated February 4, 2009, in Moore et al. v. State of Alaska, No. 3AN-04-9756 CI**, including [DIRECTING THE]

(A) [EMPLOYEES IDENTIFIED BY THE DEPARTMENT TO EXERCISE SUPERVISORY AUTHORITY FOR INSTRUCTIONAL PRACTICES IN THE DISTRICT OR IN A SPECIFIED SCHOOL;

(B)] **directing the** use of appropriations under this title for distribution to a district **as necessary under AS 14.07.020(a)(19)**;

(B) providing for training and technical support to a low-performing school or district as necessary to implement the school or district improvement plan submitted under AS 14.03.123(d);

(C) providing for regular monitoring, evaluation, and modification of improvement efforts that are tailored to the strengths and weaknesses of the school or district;

(D) providing for the availability of courses and remedial programs necessary for all students attending a low-performing school to meet state standards for graduation from secondary school in the expected time frame;

* **Sec. 6.** AS 14.07.030(15) is repealed and reenacted to read:

(15) notwithstanding any other provision of this title, redirect public school funding under AS 14.17 appropriated for distribution to a school district, after providing notice to the legislative committees with jurisdiction over education and to the district and an opportunity for the district to respond, if

(A) the department has assembled a school improvement team under AS 14.07.020(a)(19) that has requested the funding to be redirected for a specified purpose related to improvement of instructional practices in a school

or district that is in restoration status under (14) of this section; and

(B) the department has established a timeline for redirecting the funding to the district after the school improvement team determines that the improvement of instructional practices has satisfactorily occurred;

* **Sec. 7.** AS 14.07.165 is amended by adding a new subsection to read:

(b) In addition to the duties enumerated in (a) of this section, the board shall

(1) review and ensure departmental compliance with state law, including departmental duties related to school monitoring, improvement, and restoration provisions under AS 14.03.123, AS 14.07.020, and 14.07.030;

(2) provide to a superintendent and local school board that are affected by an item scheduled for consideration on a board meeting agenda not less than 10 days' notice and an opportunity to respond.

* **Sec. 8.** AS 14.20.130 is amended by adding a new subsection to read:

(b) A contract for a teacher issued after the effective date of this Act, must contain a term requiring a teacher leaving employment to complete the department's exit survey for teachers.

HB 256 By Reps. Alan Dick & Bob Herron

HB 256 was born out of frustration, conflict and a desire to see low performing (intervention) schools improve.

HB 256 brings resolution. The key word is "collaboration."

There are six parts to HB 256.

1) The word "intervention" is changed to "restoration."
2) Superintendents evaluate Department of Education and Early Development (DEED) annually. Survey monkey.
3) Superintendents have voice in Board of Education (BOE) meetings.
4) Restoration districts must incorporate *Cultural Standards.*
5) Strategy for improving schools. *Alaska Standards for Culturally Responsive Schools* is foundational.
    - Year 1. Independent expert evaluates critical components of district. *7x $1,600=$11,200*
    - Year 1. One coach chosen for each superintendent and board. *20x $1,600= $32K*
    - Year 2. One additional coach chosen for each superintendent and board. *20x$1,600= $32K + yr 1 coaches returning 20x$1,600=$32K*
    - Year 3. Team formed. One each from DEED, BOE, Superintendent, Local Board, and four coaches. Develop three-year plan.

      Superintendent carries out plan.

      Team- 8 people x 20 days x $1,600= $256K
6) Exit survey for departing teachers. Survey monkey.

Total $= $299,264 for three years per school district.

HB 256 gives a clear path for improvement in low performing schools, particularly those involving Alaska Native students.

House District 6

Sectional Analysis
CS HB 256(EDC) VERSION U
Intervention & Improving Instructional Practices

Section 1- Department annual report:

Amends the requirements of the Department of Education & Early Development's annual report:

- Removes the reference to schools having a designation of "in crisis" since that term is not defined;
- Replaces the term "intervention", with restoration – as that is the goal of efforts to assist local schools or districts to improve instructional practices.
- Adds a requirement that the Department report the reasons for turnover in certificated personnel and superintendents, not just report the numbers and percentages. This is linked to a change in teacher contracts, requiring teachers leaving a district to complete the Department's exit survey (Section 8).

Section 2- School and district accountability:

Requires the Department to give technical assistance to a public school or district that receives a low performance designation. This is in recognition that smaller districts may not have the technical capacity to devote the appropriate resources to developing a district improvement plan.

Section 3:

Adds a Department accountability section. This section sets up a process for superintendents to evaluate the Department as to:

- Whether the staff were supportive of the district;
- Description of the support received and an evaluation of the support;
- Quality of the level of contact the district had with the Department;
- Its reporting requirements; and
- How the Department may improve services to the district.

These evaluations would be summarized to protect individual identities and provided to the Governor, Legislature, and Commissioner of Education.

Section 4- Duties of the department (*The Department shall*):
Amends the duties of the department to include more cooperative opportunities for the department and school districts.

- Includes opportunity for school and district personnel to participate in the Department's review of the needs of Alaska's public schools toward the goal of improving the schools.
- In adopting or recommending plans for improvements, the plans must incorporate appropriate cultural standards that must be included in instructional practices in districts in which 50% or more of the students are Alaska Native.
- The plans must
    - Identify intensive learning opportunities for each district.
    - Analyze community involvement and methods for improving it.
    - Address teaching capacity, retention and development and provide for technical assistance to teachers.
    - Ensure districts develop and maintain elective and career and technical courses.
    - Notify a district of a low performance designation, offer technical assistance consisting of predictable, research-based strategies tailored to Alaska before beginning state restoration activities.
    - Describe research-based strategies that target educational performance.
- The Department has to employ qualified personnel to provide advisory/consultative services to districts. However, these services must be consistent with AS 14.07.030(14), which is amended in this bill. Restoration activities do not include hiring a trustee.
- Regulations relating to restoration of a school or district must specify the criteria under which a low performing school or district may improve instructional practices. These regulations must include a notice to the school and district of the deficiencies and the instructional practice changes proposed by the Department and must provide an end date for the restoration activities.
- Removes the requirement that student proficiency be tied solely to standards-based assessments. The district must demonstrate three consecutive years of improvement or measures identified as indicators of student success and achievement under AS 14.03.123(f) and may request a fourth year of restoration services.

(Page 6, beginning at Line 25):
When a school is designated as low performing, the rest of Section 4 sets out a collaborative, rather than punitive process for the Department and the district to work together to improve school performance.

- After being designated a low performing school for the first year,
    - Year 1: Selection of one independent expert by August 15. District Superintendent and Commissioner select. Expert will have evaluated the school in the areas requested. Expert's site visit will not exceed seven days.

- Expert produces a written report by October 15 and distributes. A summary is posted on the Internet.
- By November 15, the Superintendent and the Department will select a qualified coach, and the local school board and the Department will select a qualified coach. These coaches will advise the district for not more than 20 days total regarding the needs identified in the evaluation.
- On June 1 provide to the department, parents, legislature and post on the Internet a summary of progress of these efforts and the observations and recommendations of the coaches.

- YEAR 2: Not later than September 15, mandatory selection and hiring of two additional qualified coaches to advise the district. One selected by superintendent and one selected by the local school board, after input from the Association of Alaska School Boards. The coaches will advise the district for not more than 20 days total regarding the needs identified in the evaluation.
  - By June 1, provide to the State Board of Education, department, parents, legislature and post on the Internet a summary of the progress of these efforts.
- YEAR 3: Requires the Department maintain frequent consultation with staff at the low performing school and the school superintendent.
  - Requires the Department establish a School Improvement Team to advise the commissioner on restoration activities.
  - The School Improvement Team will evaluate the school for best practices applicable in Alaska relating to major areas of school administration, governance, instructional practices and for implementation of Alaska State Cultural Standards.
  - Team develops a three-year plan to restore the school. During the three-year plan, the Team may redirect funding in the district budget to improve instruction.
  - Superintendent implements the plan.
  - Team evaluates and adjusts the plan as necessary at the end of each school year.

Section 5 - Powers of the Department *(The Department **may**):*
Specifies that regulations adopted by the Department related to restoration of a school or district must be consistent with federal and state law and the superior court's findings, dated February 4, 2009, in Moore v. State of Alaska, including:

- Directing use of appropriations under this title for distribution to a district (consistent with the school improvement team's recommendations).
- Providing training and other support as necessary to implement a school or district improvement plan.
- Providing for regular monitoring, evaluation and modification of improvement efforts tailored to the strengths and weaknesses of the school or district.
- Providing for the availability of courses and remedial programs necessary for students in these schools to meet state standards for graduation in the expected time frame.

Section 6 - Powers of the Department:
Before the Department may redirect public school funding for a low performing school, the department must:

- Assemble a school improvement team and that team must have requested funding to be redirected for a specified purpose related to improving instructional practices.
- Provide notice to the legislative committees with jurisdiction over education.
- Provide notice to the district and provide an opportunity for the district to respond.
- Establish a timeline for redirecting the funding back to the district after the team determines improvement has occurred.

Section 7 - State Board of Education Duties:
Requires the State Board of Education to review the Department's compliance with its statutory responsibilities related to school monitoring, improvement and restoration.

Requires the Board to provide the Superintendent and local school board who are the subject of an item for consideration on the Board's agenda to be provided notice that the item is on the agenda and an opportunity to respond.

Section 8 – Employment and Tenure:
Contracts for teachers must require a teacher leaving employment to complete the Department's exit survey.

Differences Between CS HB 256 Versions T and U
Version U is dated 3/12/12

1. Page 3: Line 22 – Amends Duties of the Department:
   a. Rather than "regulations adopted", this section was changed to the ***plans*** the Department adopts or recommends.
   b. The Department provides notice and an opportunity for public school and district administrators to participate in the crafting of plans and other studies and evaluations related to the improvement of public schools.
   c. Any plan the Department adopts or recommends for public schools must include the items A-H, which have not changed.
   d. The plans also must comply with federal and state law and the Superior Court's findings dated Feb. 4, 2009.
   e. The plans must provide for training and technical support; regular monitoring, evaluation and modification of improvement efforts tailored to the strengths and weaknesses of the school; availability of courses and remedial programs necessary for all students attending a low-performing school to meet state standards for graduation in the expected timeframe. *(AS 14.07.030(14) Page 9.)*
2. Page 4: Lines 8-11 and 16-17 were rewritten for clarity. The intent has not changed.
3. Page 6: Line 26 change "if" to "<u>when</u>" a school is designated low performing.
4. Beginning at Page 6, Line 29 – Page 8: Line 9 – rewritten to clarify Year 1 and Year 2 activities.
   a. Year 1: Selection of <u>*one*</u> independent expert by August 15. District Superintendent and Commissioner select.
   b. Year 1: Expert will have evaluated the school in the areas requested. **Expert's site visit will not exceed seven days**.

c. Year 1: Expert produces a written report by October 15 and distributes. A summary is posted on the Internet. (*same as previous version*)
d. Year 1: By November 15, the Superintendent and the Department will select a qualified coach, and the local school board and the Department will select a qualified coach. **These coaches will advise the district for not more than 20 days total** regarding the needs identified in the evaluation.
e. Year 1: On June 1 provide to the department, parents, legislature and post on the Internet a summary of progress of these efforts and the observations and recommendations of the coaches. (*same as previous version*)
f. YEAR 2: Not later than September 15, mandatory selection and hiring of two additional qualified coaches to advised the district. One selected by superintendent and one selected by the local school board, **after input from the Association of Alaska School Boards. DELETED [from a high performance school district].** The coaches will advise the district **for not more than 20 days total** regarding the needs identified in the evaluation.
g. YEAR 2: By June 1, provide to the State Board of Education, department, parents, legislature and post on the Internet a summary of the progress of these efforts. (*same as previous version*)

5. Page 8: lines 11-31 – Page 9: Line 1
   a. YEAR 3 activities rewritten for clarity. The intent remains the same. **Added implementation of Alaska State Cultural Standards as one of the areas of best practice for the Team to consider and evaluate.**
6. Page 9: following Line 1
   a. DELETES subsection requiring the Department to request proposals from and provide grants (subject to appropriation) to schools or districts in restoration.

7. Page 9: Lines 3-4
    a. **DELETE [Notwithstanding any other provision of this title...]** This language is confusing and inconsistent with the addition of language specific to the Moore case.
8. Page 9: Lines 9-11

    DELETES the Department's ability to direct the employees of the district or school outside of the collaborative process in AS 14.07.020 (a)(19).
9. Page 9: Lines 12-13

    Ensures that any appropriations redirected under AS 14 are done so as necessary under the new collaborative process involving the School Improvement Team.
10. Page 10: Former Section 7
    a.* DELETED former Section 7 which amended AS 14.07.030-Powers of the Department (*Department may employ coaches if the school or district agrees to the coach...)
11. Page 10: Lines 13-16 adds a requirement that contracts for teachers must require a teacher leaving employment to complete the Department's exit survey.

CS FOR HOUSE BILL NO. 256( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES DICK, Herron

A BILL

FOR AN ACT ENTITLED

"An Act relating to the power and duties of the Department of Education and Early Development to improve instructional practices; and relating to duties of the state Board of Education and Early Development."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.078 is amended to read:

Sec. 14.03.078. Report. The department shall provide to the legislature by February 15 of each year an annual report regarding the progress of each school and school district toward high academic performance by all students. The report required under this section must include

(1) information described under AS 14.03.120(d);

(2) the number and percentage of students in each school who pass the examination required under AS 14.03.075, and the number who pass each section of the examination;

(3) progress of the department

(A) toward implementing the school accountability provisions of AS 14.03.123; and

(B) in assisting high schools to become accredited;

(4) a description of the resources provided to each school and school district for coordinated school improvement activities and staff training in each school and school district;

(5) each school district's and each school's progress in aligning curriculum with state education performance standards;

(6) a description of the efforts by the department to assist a public school that receives a designation of deficient [OR IN CRISIS];

(7) a description of **restoration** [INTERVENTION] efforts by each school district and school for students who are not meeting state performance standards;

(8) the number and percentage of**, and the reasons for,** turnover in certificated personnel and superintendents;

(9) the number of teachers by district and by school who are teaching outside the teacher's area of endorsement but in areas tested by the high school competency examination.

AM #5 Teacher contracts will require completion of DEED ex.t survey. Obj.

*** Sec. 2.** AS 14.03.123(d) is amended to read:

(d) A public school or district that receives a low performance designation under this section shall**, with the assistance of the department,** prepare and submit to the department a school or district improvement plan, as applicable, in accordance with regulations adopted by the board. The improvement plan must be prepared with the maximum feasible public participation of the community including, as appropriate, interested individuals, teachers, parents, parent organizations, students, tribal organizations, local government representatives, and other community groups.

*** Sec. 3.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.127. Department accountability. (a) By June 1 of each year, the superintendents of each school district in the state shall provide to the Department of Administration an evaluation of the department that addresses the following matters:

(1) whether the department staff were supportive of the district;

(2) a description of the support received, if any, from each division of the department and an evaluation of the support;

(3) the level of contact the district had with the department, on a rating scale of one to five, with five being an excellent level of contact;

(4) an evaluation of the reporting requirements on district activities to the department, including level of burden, necessity, and redundancy of reporting requirements;

(5) a statement on how the department may improve services to the district.

(b) The Department of Administration shall annually compile the evaluations provided under (a) of this section and provide to the governor, the legislature, and the commissioner of education, in a manner that protects the identity of the superintendents, a comprehensive description of evaluation results.

*** Sec. 4.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) **after providing notice and an opportunity for public school and district administrators to participate,** study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools; **the regulations must**

(A) include appropriate cultural standards consistent with the 1998 Alaska Standards for Culturally Responsive Schools adopted by the Assembly of Alaska Native Educators;

(B) require appropriate cultural standards adopted by the board to be included in instructional practices in districts in which 50 percent or more of the student population is of Alaska Native heritage;

(C) describe intensive early learning opportunities for each district in the state;

(D) require an analysis of community involvement in the

district and methods for improving community involvement;

(E) address teaching capacity, retention, and development and provide for technical assistance to teachers;

(F) establish routine evaluations and assistance to ensure that districts develop and maintain elective and career and technical courses;

(G) establish standards and timelines for restoration activities that prohibit state restoration activities without first notifying a district of a low performance designation, offering technical assistance with predictable and research-based strategies tailored to the state to improve performance, and complying with the requirements of AS 14.07.030(14);

(H) describe research-based strategies that target educational performance of low-performing students in the state;

(3) **employ qualified personnel who shall** provide advisory and consultative services to all public school governing bodies and personnel; **the services may not include restoration of a school or district except as provided in AS 14.07.030(14) or employment of a trustee;**

(4) prescribe by regulation a minimum course of study for the public schools **that includes elective and career and vocational courses in addition to core curricula**; the regulations must provide that, if a course in American Sign Language is given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, projected energy consumption and costs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may **restore** [INTERVENE IN] a school **or** district to improve instructional practices, as described in **(19) of this subsection and** AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the **school and the** district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental **restoration activities** [INTERVENTION], as described in AS 14.07.030(14)**(A) - (E)** [(A) AND (B)] and (15), after the **school or** district demonstrates **two** [THREE] consecutive years of improvement **on measures identified as indicators of student success and achievement under AS 14.03.123(f); not withstanding that a school or district has demonstrated two consecutive years of improvement, the district may, in its discretion, chose to receive restoration services for a third year** [CONSISTING OF NOT LESS THAN TWO PERCENT INCREASES IN STUDENT PROFICIENCY ON STANDARDS-BASED ASSESSMENTS IN MATHEMATICS, READING, AND WRITING AS PROVIDED IN AS 14.03.123(f)(2)(A)]; and

(C) a process for districts to petition the department for continuing or discontinuing the department's **restoration activities** [INTERVENTION];

(17) notify the legislative committees having jurisdiction over education before **restoring** [INTERVENING IN] a school **or** district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15);

(18) assist the Department of Natural Resources in developing and implementing the farm-to-school program established under AS 03.20.100**;**

(19) engage in a process of collaborative support to restore and improve school performance if a school is designated as low performing under AS 14.03.123; the process must include

(A) for the first school year after the designation of the school as a low-performing school, not later than

Am #4 to evaluate

(i) August 15, selection by the superintendent of the district and the commissioner of at least one independent expert in the areas of business services, board governance, administrative leadership, facilities, human relations, instruction, student preparedness, or community involvement;

(ii) September 15, evaluation of the school by the expert or experts selected under (i) of this subparagraph; the expert or experts shall also evaluate the extent to which the district has implemented the 1998 Alaska Standards for Culturally Responsive Schools, prepared by the Assembly of Alaska Native Educators;

(iii) October 15, preparation of a written report by the expert or experts selected under (i) of this subparagraph and distribution of the report to the commissioner, the local school board, and the superintendent; a summary of the report shall be made available to the public by posting the summary on the Internet;

(iv) November 15, mandatory selection and hiring of two qualified coaches to advise the district with regard to the needs identified in the evaluation completed under this subparagraph; one coach shall be selected jointly by the superintendent and the department, and one coach shall be selected jointly by the local school board and the department; and

(v) June 1, provide to the department, parents, and the legislature and publish on the Internet a summary of the progress of the efforts to restore the school and the observations and recommendations of the coaches hired under this subparagraph;

(B) for the second school year after the designation of a school as a low-performing school, not later than

(i) September 15, mandatory selection and hiring of

two additional qualified coaches to advise the district with regard to the needs identified in the evaluation completed under this paragraph; one coach shall be selected by the superintendent, and one coach shall be selected by the local school board; and

(ii) June 1, provide to the department, parents, and the legislature and publish on the Internet a summary of the progress of the efforts to restore the school and the observations and recommendations of the coaches hired under this subparagraph;

(C) for the third school year after the designation of a school as a low-performing school,

(i) frequent consultation with the staff at the low-performing school and with the superintendent of the district in which the school is located;

(ii) establishment of a school improvement team for the purpose of advising the commissioner on restoration activities; the team consists of the commissioner or the commissioner's designee, a member of the state Board of Education and Early Development, the superintendent of the district, the four qualified coaches selected under (A) and (B) of this paragraph, and one member of the local school board;

(iii) consideration and evaluation by the team established under (ii) of this subparagraph of evidence at the school of best practices in the state for business services, instructional practices, local school board governance, district leadership, facilities maintenance, human resources, and student wellness;

(iv) development of a three-year plan by the team established under (ii) of this subparagraph to restore the school; during the three-year plan, the team may redirect funding in the district budget to improve instruction; the superintendent shall implement the plan developed by the team; each year, at the end of

the school year, the team shall evaluate and adjust the plan as the team determines necessary;

(20) subject to appropriation by the legislature, request proposals from and provide grants to schools or districts being restored.

*** Sec. 5.** AS 14.07.030(14) is amended to read:

(14) notwithstanding any other provision of this title, **restore** [INTERVENE IN] a school **or** district to improve instructional practices under standards established by the department in regulation**; the regulations must be consistent with federal and state law and the superior court's findings, dated February 4, 2009, in Moore et al. v. State of Alaska, No. 3AN-04-9756 CI**, including **providing for** [DIRECTING THE]

(A) **qualified** employees identified by the department to exercise supervisory authority for instructional practices in the district or in a specified school;

(B) use of appropriations under this title for distribution to a district;

(C) training and technical support to a low-performing school or district as necessary to implement the school or district improvement plan submitted under AS 14.03.123(d);

(D) regular monitoring, evaluation, and modification of improvement efforts that are tailored to the strengths and weaknesses of the school or district;

(E) the availability of courses and remedial programs necessary for all students attending a low-performing school to meet state standards for graduation from secondary school in the expected time frame;

*** Sec. 6.** AS 14.07.030(15) is repealed and reenacted to read:

(15) notwithstanding any other provision of this title, redirect public school funding under AS 14.17 appropriated for distribution to a school district, after providing notice to the legislative committees with jurisdiction over education and to the district and an opportunity for the district to respond, if

(A) the department has assembled a school improvement team under AS 14.07.020(a)(19) that has requested the funding to be redirected for a specified purpose related to improvement of instructional practices in a school or district that is in restoration status under (14) of this section; and

(B) the department has established a timeline for redirecting the funding to the district after the school improvement team determines that the improvement of instructional practices has satisfactorily occurred;

*** Sec. 7.** AS 14.07.030 is amended by adding a new paragraph to read:

(16) employ instructional coaches and direct staff members who are experts in their field to assist a low-performing school or district if the school or district agrees to the coach and to the terms of the coach's or staff member's contract or assignment, including the duties and the duration and hours of work at the school or district; under this paragraph, in a district in which 50 percent or more of the student population is of Alaska Native heritage, the duties of a coach or staff member must include implementation of the 1998 Alaska Standards for Culturally Responsive Schools, prepared by the Assembly of Alaska Native Educators, and school improvement and education standards adopted by the board.

*** Sec. 8.** AS 14.07.165 is amended by adding a new subsection to read:

(b) In addition to the duties enumerated in (a) of this section, the board shall

(1) review and ensure departmental compliance with state law, including departmental duties related to school monitoring, improvement, and restoration provisions under AS 14.03.123, AS 14.07.020, and 14.07.030;

(2) provide to a superintendent and local school board that are affected by an item scheduled for consideration on a board meeting agenda not less than 10 days' notice and an opportunity to respond.

Page 8, Line 4:

* who is a school board member

One coach^ from a high performance school district shall be selected by the local school board;

JUSTIFICATION:
The coach selected by the local school board in year 2, will be from a district designated as a high performance district by the department under AS 14.03.123

Differences Between CS HB 256 Versions E and X
Version X is dated 2/27/12

1. Page 6, Lines12-15 adds:
    a. a school or district that has demonstrated two consecutive years of improvement, the district may choose to receive restoration services for a third year.
2. Beginning at Page 6, Line 30 – Page 8, Line 9 – rewritten to reflect sponsor's intention of Year 1 and Year 2 activities.
    a. Year 1: Selection of at least one independent expert by August 15. District Superintendent and Commissioner select.
    b. Year 1: Expert(s) will have evaluated the school in the areas requested. District will be evaluated on implementation of State Cultural Standards. Accomplished by September 15.
    c. Year 1: Expert(s) produce a written report by October 15 and distribute. A summary is posted on the Internet.
    d. Year 1: By November 15, the Superintendent and the Department will select a qualified coach, and the local school board and the Department will select a qualified coach. These coaches will advise the district regarding the needs identified in the evaluation.
    e. Year 1: On June 1 provide to the department, parents, legislature and post on the Internet a summary of progress of these efforts and the observations and recommendations of the coaches.
    f. YEAR 2: Not later than September 15, mandatory selection and hiring of two additional qualified coaches to advised the district. One selected by superintendent and one selected by the local school board.
    g. YEAR 2: By June 1, provide to the department, parents, legislature and post on the Internet a summary of the progress of these efforts.
3. Page 8, lines 10-11 – slightly rewritten.
4. Page 8, lines 18-21
    a. Adds a member of the State Board of Education and the four qualified coaches to the School Improvement team.

Prepared by: A. Kreitzer, Staff to Rep. Alan Dick,
House Education Committee Chairman March 1, 2012

b. Deletes the legislative member from the team.

5. Page 8, Lines 27-31 and Page 9, Lines 1-2
   a. Adds a requirement that the school improvement team develop a three-year plan to restore the school. The team may redirect district funding to improve instruction. The Superintendent must implement the team's plan. At the end of each school year, the team will evaluate and adjust the plan.
6. Page 9, Lines 3-4
   a. Adds a new section requiring the Department to request proposals from and provide grants (subject to appropriation) to schools or districts in restoration.

Prepared by: A. Kreitzer, Staff to Rep. Alan Dick,
House Education Committee Chairman March 1, 2012

FISCAL NOTE

STATE OF ALASKA **BILL NO.** HB256X
2012 LEGISLATIVE SESSION

Analysis

Sec.1. 14.03.078 (8) The current certfied staff accounting data collection would need to be modified to reflect this new district reporting requirement. Staff time for Workbook modification and district technical assistance on new reporting requirement is estimated at **$3,000.00**

Sec. 2. 14.03.123(d) Technical assistance in school and district improvement planning as required under ESEA is currently provided. It is anticipated that requiring the department to provide technical assistance to additional schools would increase the demand for department staff time. Currently, TLS has 1 State System of Support staff and 1 No Child Left Behind Staff whose job assignments include school and district improvement. It is estimated that 5 additional staff would be needed to adequately provide school and district improvement technical assistance. Five new Education Specialist II at $92,378.27=$461,890.00; travel onsite, 6 trips at $1,000 x 5 = $30,000. **Total $491,890**

Sec. 3. 14.03.127- Department of Administration- **no fiscal cost to EED**

Sec. 4. 14.07.020 (2) EED currently provides notice for public comment.

(B)Requires EED to monitor and review district curriculum to ensure that cultural standards are incorporated in a district's curriculum if the district has a population that is 50 percent or more Alaska Native. Currently, 30 districts fall into this category. Contract with 15 reading, writing and math (45 total) curriculum review specialists at $600/day x 60 days (2 days per district)= **Total $1,620,000.00**

(C) Identify Intensive early learning opportunities for each district. EED/TLS currently provides information on early learning opportunities to districts when requested. **No anticipated costs.**

(D) Analysis of Community involvement for each district. Contract for community involvement analysis and recommendations for 50 districts, $15,000 per district X 50= **$750,000.00**

(E) Teacher capacity, retention, development and technical assistance to teachers as required could adequately be met thru an increase in the current teacher mentor program. 15 new mentors X $70,000 per mentor= **$1,050,000.00**.

(F) Routine CTE evaluations and assistance, .5 CTE Education Specialist II = **$46,189.13.**

(G) **No anticipated costs**, part of current "872" process.

(H)) **No anticipated costs,** part of current State System of Support (SSOS)

(3) Employ qualified personnel to provide consultative services; increase SSOS coaches by 12. 12 at $69,000 = **$828,000.00.**

(4) Increase the minimum course of study to include electives and vocational courses. Bring together stakeholders from across the state to draft regulations, (30 people meeting 2 times for 2 days; $65 perdiem + $1,000 for travel); post for public comment. **$67,800.00**

(19) (A)Engage in collaborative support. Independent expert in Business Services; board governance; facilities; human relations;leadership; instruction; student preparedness; or community involvement. Assuming 1 independent expert and write report =**$70,000.00.**

(B) (i) thru (iii) Establishment of a school improvement team consisting of a minimum of 5 members. 4 meetings of 3 days each= 12 days x $65 perdiem=780 x5 members =$3900; $1,000 travel x 4 trips x 5 members = $23,900 per district, 5 districts= **$119,500.00.**

Sec. 5. 14.07.030. (C) thru (E) **No anticipated fiscal cost**

Sec. 6. 14.07.030 (15) N**o anticipated fiscal cost**

Sec. 7 14.07.030 No anticipated fiscal cost

Sec. 8 14.07.165 No anticipated fiscal cost

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSHB256

Analysis

This bill relates to the powers and duties of the Department of Education and Early Development (DEED) to improve instructional practices and relating to duties of the State Board of Education and Early Development.

In Section 14.03.127 of the bill, by June 1 of each year, the superintendents of each school district in the state shall provide the Department of Administration an evaluation of the department (DEED) that address five areas. The Department of Administration shall annually compile the evaluations and provide, to the Governor, the Legislature, and the Commissioner of Education, in a manner that protects the identity of the superintendents, a comprehensive description of evaluation results.

It is anticipated that the Administrative Services Division will have no fiscal impact and therefore submits a zero fiscal note.

CS FOR HOUSE BILL NO. 256( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES DICK, Herron

A BILL

FOR AN ACT ENTITLED

"An Act relating to the power and duties of the Department of Education and Early Development to improve instructional practices; and relating to duties of the Board of Education."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03.078 is amended to read:

Sec. 14.03.078. Report. The department shall provide to the legislature by February 15 of each year an annual report regarding the progress of each school and school district toward high academic performance by all students. The report required under this section must include

(1) information described under AS 14.03.120(d);

(2) the number and percentage of students in each school who pass the examination required under AS 14.03.075, and the number who pass each section of the examination;

(3) progress of the department

(A) toward implementing the school accountability provisions of AS 14.03.123; and

(B) in assisting high schools to become accredited;

(4) a description of the resources provided to each school and school district for coordinated school improvement activities and staff training in each school and school district;

(5) each school district's and each school's progress in aligning curriculum with state education performance standards;

(6) a description of the efforts by the department to assist a public school that receives a designation of deficient [OR IN CRISIS];

(7) a description of **restoration** [INTERVENTION] efforts by each school district and school for students who are not meeting state performance standards;

(8) the number and percentage of**, and the reasons for,** turnover in certificated personnel and superintendents;

(9) the number of teachers by district and by school who are teaching outside the teacher's area of endorsement but in areas tested by the high school competency examination.

* **Sec. 2.** AS 14.03.123(d) is amended to read:

(d) A public school or district that receives a low performance designation under this section shall**, with the assistance of the department,** prepare and submit to the department a school or district improvement plan, as applicable, in accordance with regulations adopted by the board. The improvement plan must be prepared with the maximum feasible public participation of the community including, as appropriate, interested individuals, teachers, parents, parent organizations, students, tribal organizations, local government representatives, and other community groups.

* **Sec. 3.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.127. Department accountability. (a) By June 1 of each year, the superintendents of each school district in the state shall provide to the Department of Administration an evaluation of the department that addresses the following matters:

(1) whether the department staff were supportive of the district;

(2) a description of the support received, if any, from each division of the department and an evaluation of the support;

(3) the level of contact the district had with the department, on a rating scale of one to five, with five being an excellent level of contact;

(4) an evaluation of the reporting requirements on district activities to the department, including level of burden, necessity, and redundancy of reporting requirements;

(5) a statement on how the department may improve services to the district.

(b) The Department of Administration shall annually compile the evaluations provided under (a) of this section and provide to the governor, the legislature, and the commissioner of education, in a manner that protects the identity of the superintendents, a comprehensive description of evaluation results.

* **Sec. 4.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) **after providing notice and an opportunity for public school and district administrators to participate,** study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools; **the regulations must**

(A) include appropriate cultural standards consistent with the 1998 Alaska Standards for Culturally Responsive Schools adopted by the Assembly of Alaska Native Educators;

(B) require appropriate cultural standards adopted by the board to be included in instructional practices in districts in which 50 percent or more of the student population is of Alaska Native heritage;

(C) describe intensive early learning opportunities for each district in the state;

(D) require an analysis of community involvement in the

district and methods for improving community involvement;

(E) address teaching capacity, retention, and development and provide for technical assistance to teachers;

(F) establish routine evaluations and assistance to ensure that districts develop and maintain elective and career and technical courses;

(G) establish standards and timelines for restoration activities that prohibit state restoration activities without first notifying a district of a low performance designation, offering technical assistance with predictable and research-based strategies tailored to the state to improve performance, and complying with the requirements of AS 14.07.030(14);

(H) describe research-based strategies that target educational performance of low-performing students in the state;

(3) **employ qualified personnel who shall** provide advisory and consultative services to all public school governing bodies and personnel; **the services may not include restoration of a school or district except as provided in AS 14.07.030(14) or employment of a trustee;**

(4) prescribe by regulation a minimum course of study for the public schools **that includes elective and career and vocational courses in addition to core curricula**; the regulations must provide that, if a course in American Sign Language is given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, projected energy consumption and costs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may **restore** [INTERVENE IN] a school **or** district to improve instructional practices, as described in **(19) of this subsection and** AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the **school and the** district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental **restoration activities** [INTERVENTION], as described in AS 14.07.030(14)**(A) - (E)** [(A) AND (B)] and (15), after the **school or** district demonstrates three consecutive years of improvement **on measures identified as indicators of student success and achievement under AS 14.03.123(f)** [CONSISTING OF NOT LESS THAN TWO PERCENT INCREASES IN STUDENT PROFICIENCY ON STANDARDS-BASED ASSESSMENTS IN MATHEMATICS, READING, AND WRITING AS PROVIDED IN AS 14.03.123(f)(2)(A)]; and

(C) a process for districts to petition the department for continuing or discontinuing the department's **restoration activities** [INTERVENTION];

(17) notify the legislative committees having jurisdiction over education before **restoring** [INTERVENING IN] a school **or** district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15);

(18) assist the Department of Natural Resources in developing and implementing the farm-to-school program established under AS 03.20.100

(19) engage in a process of collaborative support to restore and improve school performance if a school is designated as low performing under AS 14.03.123; the process must include

(A) for the first two school years after the designation as a low-performing school, not later than

(i) August 15 of each year, selection by the superintendent of the district and the commissioner of at least one independent expert in the area of business services, board

governance, leadership, facilities, human relations, instruction, student preparedness, or community involvement;

(ii) September 15 of each year, evaluation of the school by the expert or experts selected under (i) of this subparagraph; and

(iii) October 15 of each year, preparation of a written report by the expert or experts selected under (i) of this subparagraph and distribution of the report to the commissioner, the local school board, and the superintendent; a summary of the report shall be made available to the public by posting the summary on the Internet;

(B) for year three of designation of a school as a low-performing school,

(i) frequent consultation with the staff at the low-performing school and with the superintendent of the district in which the school is located;

(ii) establishment of a school improvement team for the purpose of advising the commissioner on restoration activities; the team must consist of the commissioner or the commissioner's designee, the superintendent of the district, school improvement coaches, if any, one member of the local school board, and one member of the legislature selected jointly by the presiding officers of the house and senate;

(iii) consideration and evaluation by the team established under (ii) of this subparagraph of evidence at the school of best practices in the state for business services, instructional practices, local school board governance, district leadership, facilities maintenance, human resources, and student wellness.

Doesn't exclude pupil's from another d.'s

*** Sec. 5.** AS 14.07.030(14) is amended to read:

(14) notwithstanding any other provision of this title, **restore** [INTERVENE IN] a school **or** district to improve instructional practices under

standards established by the department in regulation**; the regulations must be consistent with federal and state law and the superior court's findings, dated February 4, 2009, in Moore et al. v. State of Alaska, No. 3AN-04-9756 CI**, including **providing for** [DIRECTING THE]

(A) **qualified** employees identified by the department to exercise supervisory authority for instructional practices in the district or in a specified school;

(B) use of appropriations under this title for distribution to a district;

(C) training and technical support to a low-performing school or district as necessary to implement the school or district improvement plan submitted under AS 14.03.123(d);

(D) regular monitoring, evaluation, and modification of improvement efforts that are tailored to the strengths and weaknesses of the school or district;

(E) the availability of courses and remedial programs necessary for all students attending a low-performing school to meet state standards for graduation from secondary school in the expected time frame;

*** Sec. 6.** AS 14.07.030(15) is repealed and reenacted to read:

(15) notwithstanding any other provision of this title, redirect public school funding under AS 14.17 appropriated for distribution to a school district, after providing notice to the legislative committees with jurisdiction over education and to the district and an opportunity for the district to respond, if

(A) the department has assembled a school improvement team under AS 14.07.020(a)(19) that has requested the funding to be redirected for a specified purpose related to improvement of instructional practices in a school or district that is in restoration status under (14) of this section; and

(B) the department has established a timeline for redirecting the funding to the district after the school improvement team determines that the improvement of instructional practices has satisfactorily occurred;

* **Sec. 7.** AS 14.07.030 is amended by adding a new paragraph to read:

(16) employ instructional coaches and direct staff members who are experts in their field to assist a low-performing school or district if the school or district agrees to the coach and to the terms of the coach's or staff member's contract or assignment, including the duties and the duration and hours of work at the school or district; under this paragraph, in a district in which 50 percent or more of the student population is of Alaska Native heritage, the duties of a coach or staff member must include implementation of the 1998 Alaska Standards for Culturally Responsive Schools, prepared by the Assembly of Alaska Native Educators, and school improvement and education standards adopted by the board.

* **Sec. 8.** AS 14.07.165 is amended by adding a new subsection to read:

(b) In addition to the duties enumerated in (a) of this section, the board shall

(1) review and ensure departmental compliance with state law, including departmental duties related to school monitoring, improvement, and restoration provisions under AS 14.03.123, AS 14.07.020, and 14.07.030;

(2) provide to a superintendent and local school board that are affected by an item scheduled for consideration on a board meeting agenda not less than 10 days notice and an opportunity to respond.

SEQUENCE OF ASSISTANCE

Year 1	Year 2	Year 3
By Sept 15, the district needing assistance will be evaluated by independent recognized expert(s) in the areas that may include: business services, board governance, leadership, maintenance, human relations, instruction and the degree of community interaction with the school and preparedness of students to learn.By Oct 15, the report will be made available. By Nov 15, the **superintendent and DEED will** choose a coach to address the needs identified by the independent expert(s).	The **superintendent will** choose a second coach. Agreement with DEED is not necessary. The existing plan will remain in place. Resources, like content and technical coaches as well as teacher mentors, may be made available.	**A team will** be formed that will evaluate the results of the original restoration plan (RP1). The Team ***will*** develop a three year restoration plan (RP2).
The **school board and DEED will** choose a coach. The coach will address areas identified in the above evaluation.	The **school board will** choose a second coach. Agreement with DEED is not necessary.	The **school board will** be part of the Team. The Team will include 1)DEED 2)Superintendent 3)Coaches 4)School Board 5)Member of Legislature.
In Districts with over 50% Alaska Native Students, the *Alaska Standards for Culturally Responsible Schools* as well a locally developed strategies **shall** be foundational.	In Districts with over 50% Alaska Native Students, the *Alaska Standards for Culturally Responsible Schools* **will** be foundational in improvement strategies.	In Districts with over 50% Alaska Native Students, the *Alaska Standards for Culturally Responsible Schools* **will** be foundational in improvement strategies.
Progress on the plan, as well as additional observations by Coaches, **shall** be sent to parents, DEED, and Legislature by June 1. The information will also be posted on the school website.	**Coaches shall** send observations and suggestions to parents, DEED, and the Legislature by June 1. The information will also be posted on the school website.	**The Team will** develop a three year plan (RP2). A copy will be sent to parents, DEED, and Legislature. The information will also be posted on the school website. The team will additionally consider all aspects of local education, technology, maintenance, admin, etc.
DEED will provide research and data upon request. DEED **will** do a statewide search for best practices that address the concerns identified by the superintendent, school board and coaches. The superintendent will maximize this and all other information for district improvement.	DEED will provide research and data upon request. DEED will do a statewide search for best practices that address the concerns identified by the superintendent, school board and coaches. The superintendent will maximize this and all other information for district improvement.	**DEED will** provide research and data upon request. DEED **will** do a statewide search for best practices that address the concerns identified by the Team. The superintendent **will** carry out RP2.

Sectional Analysis
CS HB 256(EDC)
Intervention & Improving Instructional Practices

Section 1- Department annual report:

Amends the requirements of the Department of Education & Early Development's annual report:

Removes the reference to schools having a designation of "in crisis" since that term is not defined;

Replaces the term "intervention", with restoration – since that is the goal of efforts to assist local school districts to improve instructional practices.

Adds a requirement that the Department report the reasons for turnover in certificated personnel and superintendents, not just report the numbers and percentages.

Section 2- School and district accountability:

Requires the Department to give technical assistance to a public school or district that receives a low performance designation. This is in recognition that smaller districts may not have the technical capacity to devote the appropriate resources to developing a district improvement plan.

Section 3:

Adds a Department accountability section. This section sets up a process for superintendents to evaluate the Department as to:

- Whether the staff were supportive of the district;
- Description of the support received and an evaluation of the support;
- Quality of the level of contact the district had with the Department;
- Its reporting requirements; and
- How the Department may improve services to the district.

These evaluations would be summarized to lessen personal identities and provided to the Governor, Legislature, and Commissioner of Education.

Section 4- Duties of the department:

Amends the duties of the department to include more cooperative opportunities for the department and school districts.

- Includes opportunity for school and district personnel to participate in the Department's review of the needs of Alaska's public schools toward the goal of improving the schools.
- In adopting regulations to implement improvements, the regulations must include appropriate cultural standards that must be included in instructional practices in districts in which 50% or more of the students are Alaska Native.
- The Department must
    - Identify intensive learning opportunities for each district.
    - Analyze community involvement and methods for improving it.
    - Address teaching capacity, retention and development and provide for technical assistance to teachers.
    - Ensure districts develop and maintain elective and career and technical courses.
    - Notify a district of a low performance designation, offer technical assistance consisting of predictable, research-based strategies tailored to Alaska before beginning state restoration activities.
    - Describe research-based strategies that target educational performance.
- The Department has to employ qualified personnel to provide advisory/consultative services to districts. However, these services must be consistent with AS 14.07.030(14), which is amended in this bill. Restoration activities do not include hiring a trustee.
- Ensures that elective and career and vocational courses are included in regulation as a minimum course of study.
- Removes the requirement that student proficiency be tied solely to standards-based assessments. The district must demonstrate three consecutive years of improvement or measures identified as indicators of student success and achievement under AS 14.03.123(f).

(Page 6, beginning at Line 23):
When a school is designated as low performing, the rest of Section 4 sets out a collaborative, rather than punitive process for the Department and the district to work together to improve school performance.

- After being designated a low performing school for two years,
    - The Superintendent of the District and the Commissioner shall select appropriate independent experts to evaluate the school and prepare a report for the Commissioner, the local school board and the Superintendent. The report will also be made available to the public through Internet posting of a summary.
- If a school is designated a low performing school for a third year,

- There will be frequent consultations between the Department and the staff at the school and the Superintendent.
- A School Improvement Team will be established consisting of the Commissioner or his designee, the district Superintendent, school improvement coaches, a member of the local school board and a member of the legislature.
- The School Improvement Team will evaluate the school for best practices applicable in Alaska relating to major areas of school administration, governance and instructional practices.

Section 5 - Powers of the Department:

Specifies that regulations adopted by the Department related to restoration of a school or district must be consistent with federal and state law and the superior court's findings, dated February 4, 2009, in Moore v. State of Alaska. These regulations must provide for:

- Qualified employees to exercise supervisory authority for instructional practices in the district or in a school.
- Training and other support as necessary to implement a school or district improvement plan.
- Regular monitoring, evaluation and modification of improvement efforts tailored to the strengths and weaknesses of the school or district.
- Availability of courses and remedial programs necessary for students in these schools to meet state standards for graduation in the expected time frame.

Section 6 - Powers of the Department:

Before the Department may redirect public school funding for a low performing school, the department must:

- Assemble a school improvement team and that team must have requested funding to be redirected for a specified purpose related to improving instructional practices.
- Provide notice to the legislative committees with jurisdiction over education.
- Provide notice to the district and provide an opportunity for the district to respond.
- Establish a timeline for redirecting the funding back to the district after the team determines improvement has occurred.

Section 7 - Powers of the Department:

Adds language to codify the cooperation that should exist when instructional coaches and expert staff are brought in to assist a low-performing school or district.

Section 8 - State Board of Education Duties:

Requires the State Board of Education to review the Department's compliance with its statutory responsibilities related to school monitoring, improvement and restoration.

Requires the Board to provide the Superintendent and local school board who are the subject of an item for consideration on the Board's agenda to be provided notice that the item is on the agenda and an opportunity to respond.

Sponsor Statement

CS HB 256 (EDC): School District Intervention

CS HB 256 incorporates:

- Information from the recently settled Moore v. State of Alaska case,
- Input from our hearings on the original bill,
- responses from the Department of Education and Early Development (DEED), and
- Consultation with highly qualified individuals like former Commissioner Jerry Covey.

The intent of CS HB 256 is to ensure that the DEED establishes and maintains a healthy, helpful relationship with all school districts, but particularly any school or district whose performance is below standard.

Safeguards are built into this bill that speak specifically to accountability and improvement for the Department as well as the districts. Districts with over 50% Alaska Native populations can be certain that local and cultural concerns will be met when improvement strategies are being developed.

Every element of CSHB 256 speaks to specific needs as expressed by districts in their relationship struggling with DEED while struggling with student performance. The final outcome should be improved services to students and a clearer pathway to help all Alaskan schools in need of assistance.

Simply put, this requires the Department and the districts to cooperate and collaborate for the benefit of Alaska's students. How unfortunate that we have to put that in statute.

CULTURAL STANDARDS

A

Culturally-knowledgeable students are well grounded in the cultural heritage and traditions of their community.

Students who meet this cultural standard are able to:

1) assume responsibilities for their role in relation to the well-being of the cultural community and their lifelong obligations as a community member;

2) recount their own genealogy and family history;

3) acquire and pass on the traditions of their community through oral and written history;

4) practice their traditional responsibilities to the surrounding environment;

5) reflect through their own actions the critical role that the local heritage language plays in fostering a sense of who they are and how they understand the world around them;

6) live a life in accordance with the cultural values and traditions of the local community and integrate them into their everyday behavior; and

7) determine the place of their cultural community in the regional, state, national, and international political and economic systems.

B

Culturally-knowledgeable students are able to build on the knowledge and skills of the local cultural community as a foundation from which to achieve personal and academic success throughout life.

Students who meet this cultural standard are able to:

1) acquire insights from other cultures without diminishing the integrity of their own;

2) make effective use of the knowledge, skills, and ways of knowing from their own cultural traditions to learn about the larger world in which they live;

3) make appropriate choices regarding the long-term consequences of their actions; and

4) identify appropriate forms of technology and anticipate the consequences of their use for improving the quality of life in the community.

C

Culturally-knowledgeable students are able to actively participate in various cultural environments.

Students who meet this cultural standard are able to:

1) perform subsistence activities in ways that are appropriate to local cultural traditions;

2) make constructive contributions to the governance of their community and the well-being of their family;

C *(continued)*

3) attain a healthy lifestyle through which they are able to maintain their social, emotional, physical, intellectual, and spiritual well-being; and

4) enter into and function effectively in a variety of cultural settings.

D

Culturally-knowledgeable students are able to engage effectively in learning activities that are based on traditional ways of knowing and learning.

Students who meet this cultural standard are able to:

1) acquire in-depth cultural knowledge through active participation and meaningful interaction with Elders;

2) participate in and make constructive contributions to the learning activities associated with a traditional camp environment;

3) interact with Elders in a loving and respectful way that demonstrates an appreciation of their role as culture-bearers and educators in the community;

4) gather oral and written history information from the local community and provide an appropriate interpretation of its cultural meaning and significance;

5) identify and utilize appropriate sources of cultural knowledge to find solutions to everyday problems; and

6) engage in a realistic self-assessment to identify strengths and needs and make appropriate decisions to enhance life skills.

E

Culturally-knowledgeable students demonstrate an awareness and appreciation of the relationships and processes of interaction of all elements in the world around them.

Students who meet this cultural standard are able to:

1) recognize and build upon the interrelationships that exist among the spiritual, natural, and human realms in the world around them, as reflected in their own cultural traditions and beliefs as well as those of others;

2) understand the ecology and geography of the bioregion they inhabit;

3) demonstrate an understanding of the relationship between world view and the way knowledge is formed and used;

4) determine how ideas and concepts from one knowledge system relate to those derived from other knowledge systems;

5) recognize how and why cultures change over time;

6) anticipate the changes that occur when different cultural systems come in contact with one another;

7) determine how cultural values and beliefs influence the interaction of people from different cultural backgrounds; and

8) identify and appreciate who they are and their place in the world.

Testimony to HB256 2/22/12

Narrative of Action by DEED involving the Kashunamiut School District
The time period covered in this narrative is September 2009 – April 2010.
Offered by Doug Conboy, Supt. of Schools for KSD July 2009 – June 2012
Background:
I began my tenure as Supt of Schools in Chevak in July of 2009. I knew early on of several important issues that were going to need to be addressed. For starters, the Curriculum was in disarray, the leadership of the district had undergone significant change with a new Principal and Supt. and there were several folks on the teaching staff new to Chevak.
We had started the clean up of the curriculum in April of 2009 shortly after I had accepted the position of Supt. by looking for a reading program, we wanted this program to be literacy based, and scoped and sequenced for grades K-8. We found that in the Treasures reading program. We also made sure that KSD had a team in the state sponsored Curriculum Mapping Institute workshops scheduled for the fall of 2009 My second effort was to work at improving the learning environment, to that end we contracted with PEAK to train our staff in best practice for teaching and learning.

In September of 2009 I was contacted by DEED and told that some DEED people would be coming to Chevak for a visit. I asked what the nature of this visit would be and was told it would be purely supportive in nature. That visit took place over a two or three day period shortly thereafter. In meetings with DEED staff we were asked what we saw as problems in our district, and also what we planned to do to address those problems.
After laying out what we had identified as our most pressing issues and showing the DEED staff what we had planned to address them, we were praised for what had been done and for the direction we were taking to make improvements. DEED staff asked that we document our efforts and record progress. KSD staff was already doing that and we continued to monitor what we were doing noting problems and the adjustments we were making along the way toward the goal of implementing our plan. This kind of re-tooling of the delivery of education services takes time and our plan was to work on this over a much longer period of time than one school year.
This was communicated to the DEED staff with favorable reactions from them.

Later that same school year, a group charged by DEED to conduct an Instructional Audit of our district contacted me. After asking several questions of this audit group I was told that the audit came as a mandate from DEED and that it would occur in early March. We were then presented with a lengthy list of materials and items that the auditors would want to see when they came as well as a list of people they would want to interview as part of their job in Chevak.
These Auditors referred to their work as an "investigation", I took exception to this and asked them if we had done something wrong or had broken a law? At that point

they said no and tried to assure me that what they would be doing was not to find wrongdoing but to help us. We took considerable care in preparing a portfolio for them containing all the information they had requested and a schedule of the people they wished to interview with dates and times. After receiving the portfolio the auditors called back to tell us that they wanted to change the schedule around. They were told that there would be no schedule changes. The auditors were being allowed to disrupt our daily schedule already and that level of disruption was not going to increase. We provided them everything they had asked for in our portfolio and we would adhere to the schedule in it.

The audit was conducted over a three-day period in March of 2010. Several weeks later we received the report from the audit. In that report, we were told things we already knew, Curriculum was weak, assessment also weak, leadership not strong, learning climate quite good, etc; etc. All of these things were the same as we had discussed and gone over with DEED staff back in September. However the report was written in such a way as to indicate that this was news to us. In late April or Early May of 2010 I received a call from DEED in response to this audit report. The purpose of the call was to offer me some "quick fixes". At that point I lost patience and strongly disputed the concept of a "quick fix". First there is no such thing as a quick fix for education, second if there were quick fixes, why wasn't DEED telling schools about them before they got in trouble? In essence this call was made to tell me to do what we were already doing about problems we already knew about. Again I got the impression that we were regarded as too stupid to know what the problems were, and also too stupid to know what to do about them.
My questions:

1. How much money did it cost to send the DEED staff to Chevak in September?
2. How much more money did it cost to first pay the auditors and then bring them to Chevak, to do a totally redundant report?
3. What happened after the visit from DEED staff in September to demand this audit? From my perspective, it had to be that we were not trusted to do what we said we were going to do about the problems we had identified.
4. What sense does it make to expend this amount of funds and time to tell schools things they already know and then order them to do things they are already doing? Is this a reasonable use of state money?

Given what seems to be a scarcity of funding at present, I cannot help but think that this expenditure should have been avoided due its total redundancy.
The individuals involved here were doing what was asked of them. As such, I have no hard feelings toward any of the people mentioned here. I do take exception to a course of action that is redundant and wasteful of both time and funds.
Respectfully Submitted,
Doug Conboy, Supt. of Schools
Kashunamiut School District
Chevak, AK

Leading the Way

February 22, 2012
Testimony to House Education Committee

For the record, I am Dr. Norman Eck, superintendent of Northwest Arctic Borough School District. We have 1950 students in 12 schools in our 11 villages. None of our villages are accessible by roads and all supplies have to be flown in. I have been employed in Northwest Arctic for 14 years, one year as a Director, 5 ½ years as principal, and now I am in my 7th year as superintendent.

I appreciate this opportunity to speak with you today. I support changes in language in School Intervention law. We need to be sure we have as an objective Intervention process as possible. We need to focus on what things are needed based upon the local school situation and listen to local voices as well as provide guidance and support to the educational programs in place.

It does little good to go back and complain about past problems or grievances with the Department of Education over how we were treated when Northwest Arctic was under Intervention by the department. However, now that we are working to craft a better and improved process and model for Intervention, it is valuable to look at past mistakes, mistakes of my own district and mistakes of the Department of Education, in order to put in place an Intervention process that will be a positive model for students, staff, community and school. Working together, and placing the needs of students above all else, we can do this.

First, we must have an objective process for Intervention within a school. To place an entire district under Intervention may not be what needs to be done. For example, Northwest Arctic, as an entire district was placed under Intervention on account of 3 schools with poor academic achievement, but a number of our schools were doing very well. Additionally, when Northwest Arctic was placed under Intervention, two other districts were also placed in Intervention at the same time,

Yupiit and Lower Yukon. However, there were 7 other districts with student achievement scores lower than Northwest Arctic, but those districts were not placed under Intervention. The placement of Northwest Arctic seemed to me to be a political placement rather than an objective placement.

Second, programs that are considered "best practices" in general by educators on a State or National level may not be strategies that work well in some of our isolated rural villages. We need to look at the local situation and evaluate what can work best here and then look at choices and see what the local capacity is for program change. In the case of Northwest Arctic the Department of Education dictated specific "best practices" and had given instructions to observers and consultants to come and do certain things that were in conflict with what is the best program or action to take locally. Much of this failed.

Third, the current instructional improvement plan that the local district or school may have in place needs to be looked at and worked with before it is thrown out or over-written by a new plan that is dictated by the Department of Education. In our case, when Intervention was put upon Northwest Arctic we already had an excellent improvement plan in place. We already had contracted with certain consultants to help us in a constructive manner. We were forced to use the Department of Education's plan, and then overlay that plan and the Departments consultants in our schools.

Fourth, the Department of Education, alone, lacks the depth of knowledge and expertise to conduct the Intervention process. Even today, the situation in the Yupiit District is one of conflict with the local district instead of working in concert and supportive of the District and its administration. For example, expertise from other Districts in the State can be a most valuable resource for advice to a fellow District in need. School Board members from other similar Districts can be a resource and support to the local District Board members in need. Surveys and inventories of processes and programs should be undertaken. Other Districts with similar professionals can be a most valuable resource to the Intervention School and the Department of Education in these cases.

These are good reasons to be concerned about the Intervention process and how it has worked and not worked, well. In the case of Northwest Arctic, we were fortunate to be able to establish good relationships with the head consultants assigned to our District, John Holst and Richard Hebhardt, over a period of 4 years. We learned from them and they each learned from us as we worked together to improve services to students.

Finally, I want to commend the Department of Education for releasing Northwest Arctic from Intervention in August of 2010. In August of 2011, Yukon-Koyukuk was released from Intervention. A national statistic is that only 5% of districts that have gone under Intervention have been released from Intervention.

I want to commend the Department of Education and the Governor for the settlement in the Moore Case. The process for providing targeted assistance to low performing schools as lined out in Moore Settlement can be very instructive to us. The solutions are not dictated or directed by any one party, but by a coming together of parties, listening to the needs of the local school, and providing help that is requested by the Intervention School in the categories authorized in the agreement. In this way, much can be accomplished.

Finally, for successful Intervention (or a better term is school improvement), a process of assistance must be detailed that will provide supports for the students, teachers, administrators, communities, and school board. Districts that need help must be afforded a process of Intervention that truly assists the schools to enable improved student academic performance through targeted assistance in terms of personnel, policy, and finance for specific programs.

Feb. 6, 2012

The Honorable Alan Dick
Chair
House Education Committee
Alaska State Legislature
State Capitol Room 104
Juneau, AK 99801

Dear Mr. Chair:

In my presentation before the House Education Committee on Feb. 6, I referenced the Superior Court's concern that students in the Yupiit School District were not given sufficient exposure to the curriculum, and thus could not be held accountable for the material on the Alaska High School Graduation Qualifying Exam.

I further said the department had not held Yupiit's students to the requirements of the HSGQE for a period of time. Upon rechecking our records, we find that the department did continue to require Yupiit students to pass the HSGQE as a condition of receiving a high school diploma; the judge stayed her decision in that regard while the department worked with the district to provide exposure to the appropriate curriculum.

If you have any questions, please do not hesitate to contact me.

Sincerely,

Mike Hanley

Mike Hanley
Commissioner

Department Of Education & Early Development

Testimony Regarding HB256

February 1, 2012

The 4 Prongs of the Educational Clause

- Rational Educational Standards
- Adequate Method of Assessing
- Adequate Funding
- Adequate Accountability and Oversight

EDUCATION & EARLY DEVELOPMENT

Superior Court Decision 2007

- Pg. 188 "For the State to fail to take a considerably more directive role in the face of chronically poor perfomance, at least for the children in Yupiit, amounts to an impermissible "legislative abdication" of the State's constitutional responsibility to maintain public schools in this state."

Intervention Strategies

- Content Coaches
- Technical Assistance – Grant writing, Curriculum alignment and development
- Professional Development/Training
- Trustee – 1 school district

Superior Court Decision 2007

- Pg. 142 "Even at schools in which student performance has been extremely poor, and has shown no improvement for many years, the State has failed to provide an adequate oversight role with respect to either the considerable State funds that it disburses or with respect to the delivery of instruction to the children in those schools. In short, the State has failed to take meaningful action to maximize the likelihood that the children in these troubled schools are accorded an adequate opportunity to acquire proficiency in the State's standards when a school has demonstrated an unwillingness or inability to correct this situation on its own."

Comm. Hardy read this letter in committee

To whom it may concern:

State Intervention – Team Sipe and Crew

I think a lot of people want me to say that the state intervention teams and assistance didn't help – but that is not true. They did help. They were able to help us when we were short in manpower, short with necessary ideas and they were able to provide the necessary leadership in critical areas like reading, leadership, organizational skills and state needed requirements.

Now, I cannot speak for the other schools or speak for the district and the states help in those areas. All I can do is talk about Tuluksak.

Molli and her crew were able to provide some support, advice, and a lot of necessary skills that we at the time needed. It was and is a good relationship for us to have them in our building.

After a while they were just part of the school and the staff and they were almost part of the community. The kids knew them, the staff welcomed them and our facilities were open to them. It was easy to have them here and it was easy to have them assist us. I would dare say that there was a significant level of trust between both of our organizations.

So, as I mentioned – the state team helped. It worked for us.

Thanks for your help and best wishes for success and prosperity.

Lance Jackson
Principal
Tuluksak Schools

Testimony regarding HB 256 to repeal HB 285

Honorable members of the Alaska Education Committee, Commissioner Hanley, Superintendent Eck and others listening in:

By way of introduction, my name is Dr. Kim Langton. I am the assistant superintendent of instruction for the Yupiit School District. I served as a principal for fourteen years in two Utah districts and a private school in Honduras. I have been superintendent over Iditarod, Kuspuk and Denali Borough School Districts. All schools in Denali made AYP during my tenure there. Several of the schools in Kuspuk and Iditarod made AYP, and continue today. I was president of CEAAC at the time Moore was filed. Before the announcement that Yupiit School District would be assigned a trustee, I was hired to oversee instruction in the Yupiit School District. I also direct the SIG grant.

Much of the conversation last week focused on the lack of collaboration in the intervention efforts of DEED. The following points were made:

- Judge Gleason in Moore vs. State argued that additional support was needed, particularly in the Yupiit School District,
- She stated that the support be done in a collaborative manner,
- We heard testimony that the state provides experienced, capable content coaches,
- The "plan" of support was and is being devised while the plane is in the air,
- The "plan" was/is devised in Juneau, specialists were and continue to be hired and assigned by Juneau, and direction comes from Juneau with minimal YSD input.

We believe that DEED had and has the best intent. However, the history of which I am aware, and the reality I have experienced in the past year and a half, gives a clear indication that the intervention process was implemented with a strong philosophy that the best way to turn a "failing" school district around is to give mandates, create a plan from afar, discount local efforts, programs, and training, and to superimpose your vision on the district. Years ago, I remember hearing about how intervention schools were being treated by educators in the state, and recall finding it hard to believe. Roger Sampson was the commissioner, and was someone I deeply respected due to his success in the Chugach School District, arguably the finest educational system in the state. That district earned its reputation not from top down efforts, but from a collaboration of bottom up, top down, and side-to-side efforts. Time and funding was spent getting people together to study research-proven best practices from wherever they could find them, and all taking responsibility for effective implementation of the plan about which all had a say.

The result was a turn around success that serves students in supporting dynamically increased achievement, preparing students for work and life, preparing them for and helping them get into Job Corp, Avtec and colleges and universities, and overall preparing them for bright futures. The changes in the district were made in all aspects of their operation, from the business office to the maintenance program. This resulted in earning the Baldridge Award, presented by President Bush in early 2001. From scores of

Chugach folks I have known over the years, this was accomplished through the collaborative involvement of folks throughout the organization.

This should be Alaska's model for a turn-around district. It was and is collaborative, which not only gives insight to its success but to its sustainability as well. Nowhere in the turn-around literature are there examples of a state taking over a district or intervening in a top down manner with success. Years ago the state determined that Yupiit's scores were low, and put it on intervention status. From that time the staff and leadership at Yupiit were treated as if they had nothing to bring to the table, little expertise of value to add to the discussion, and were left virtually out of the discussion. Perhaps if Commissioner Sampson had applied his Chugach experience of utilizing, trusting and empowering his staff and leadership with intervention districts across the state, we would not be here today, and Yupiit would be achieving at far higher levels. The world offers a metaphor. DEED has operated in a manner reminiscent of "nation building", where much money is spent, quality expertise is focused, local expertise is ignored, and the results are negative, despite the huge cost.

Regarding the content coaches, we have asked that these expert folks come and live with us, serve with us, to truly enable them adequate time to work as coaches with our teachers so that they could have a deep and lasting effect on instruction. Commissioner LeDeux and his deputy replied to our requests that we would not be having any "boots on the ground." The hiring of the trustee, especially given the timing, was the wrong support for our teachers, especially given his price tag, and the fact that he came, according to him upon arrival, simply to observe. Not to work with the teachers. Not even to work with district leadership in the challenging work of turning around the district. No boots on the ground, despite paying for a trustee with boots on the ground for weeks out of the month. No boots on the ground despite receiving $7,000,000 from the legislature at the end of the 2010 session, earmarked for intervention districts. We would have welcomed that money spent on more time with the coaches to enable them to actually make a difference. The only change we saw after the money was allocated was a trustee sent to observe us.

Our principals, curriculum director, and district leadership team are evaluating data, talking to teachers and observing instruction. We determine together what our needs are. We ask content specialists to work with staff and provide specific support. We often encounter resistance, our requests unmet. When we fail to collaborate, instruction suffers, students pay the price. If we are to make full use of these content coaches, we need to work collaboratively in how they are directed and utilized.

Why is collaboration so important? It obviously is critical for building the kind of professional relationship necessary to be successful. We are told from the business world that we should be teaching children to work collaboratively in groups to solve problems. We certainly should be able to model what it is we expect our students to do. Beyond that, it is pragmatically recognizing the value of the experience and expertise of those closest to the children, the culture and the community where the students live. If you discount the perspective and insight gained there, you will fail.

In 2008-2009 Akiak had 40% of its students proficient in language arts. In 2010-2011 only 32% were. In 2007-2008 47% were proficient in math, in 2010-2011 25% were proficient. Akiachak has remained desperately low in language arts, from 15% proficient in language arts in 2007-2008 to 14% in 2010-2011. Academic achievement, while low enough to earn a spot on the intervention list, has gone progressively lower since intervention. Our MAP (Measures of Academic Progress assessment by Northwest Evaluation Association, NWEA) scores show that over 70% of our students fall in the 1-10%ile in the RIT scores. I do not imply or believe it is all the state's fault. Much of what they have done has value. We all take responsibility for increasing academic achievement for our students. I could spend hours talking about the efforts we are making with the input and direction of our new Curriculum director. But the case can and must be made that the top down intervention process experienced by Yupiit has failed.

Outside of intervention, interactions with the state are very positive and productive. The leadership of the current commissioner has given us hope. I personally believe that had Mr. Hanley been commissioner at the beginning, it would have been initiated in a much more collaborative and mutually respectful manner. The intent of this testimony is to give statute an objective face that will serve students, regardless the personalities serving at DEED.

This is a situation where simple cooperation would go a long way to better preparing our teachers for the students they serve. The structure of intervention needs to be fixed so that the district has a chair (or two) at the table. We need mutual respect and coordination. It is a shame that so much money has been wasted due to poor planning, poor implementation, poor or lacking organization, and an overall top-down philosophy. We could argue forever over strategy, research proven practices, what should the plan or vision be, etc., but what cannot be argued is the failure of the current effort. It can be fixed, but only if everyone is at the table equally, fairly, working together collaboratively to improve our schools for our kids.

It is not so much a question of what, but how.

Excerpts from *Moore v. State* regarding the Need for State Authority to Hold Local Districts Accountable

Excerpts from the June 2007 Order:

Page 23:

> The evidence at trial also indicated that neither of the legislative finance committees have undertaken to review how the school districts are spending the State funds appropriated to them.

Page 24:

> The State exercises very limited oversight as to how a school district spends the money it receives from the State to educate the children that reside within that district.

Page 100:

> Plaintiffs have failed to establish by a preponderance of the evidence that the services that Yupiit seeks to provide to its students could not be provided to those students through redirection of the funds that are currently provided.

Page 100:

> [T]his Court finds by a preponderance of the evidence that it is a structured basic curriculum that is lacking in [Yupiit School District] that would accord to these students the opportunity to learn how to read and write in English and understand basic math.

Pages 100-101:

> Although several witnesses testified to the many dedicated and well-intentioned teachers at Yupiit, and this Court has found by a preponderance of the evidence that the district is provided with sufficient resources to meet these basic educational needs, the majority of the children at Yupiit are not being provided with the opportunity to acquire the basic tools they need to succeed in both traditional and global societies.

Page 142:

Is local control working? . . . . [A] preponderance of the evidence has demonstrated that there are at least some schools in the Plaintiff school districts in which the available resources have not been adequately or effectively directed to the classroom.

Page 142:

Even at schools in which student performance has been extremely poor, and has shown no improvement for many years, the State has failed to provide an adequate oversight role with respect to either the considerable State funds that it disburses or with respect to the delivery of instruction to the children in those schools. In short, the State has failed to take meaningful action to maximize the likelihood that children at these troubled schools are accorded an adequate opportunity to acquire proficiency in the State's standards when a school has demonstrated an unwillingness or inability to correct this situation on its own

Page 143:

Under existing law, EED appears to have virtually no authority to direct how a school district uses its State funds to educate the children within a school district, no matter how poorly the district's students perform. And to the extent EED might have any such authority, it has never exercised it.

Page 144:

The State has severely restricted its own available options for providing meaningful remedial direction in underperforming school districts. . . .The other options provided by regulation are truly a last resort and, according to several witnesses at trial, would likely meet with minimal success.

Page 144:

[T]o the extent that [the Legislature] permits a school district to adopt a curriculum that is not aligned with the State's content and performance standards, or not to adopt any meaningful curriculum at all, it does not maximize the likelihood that all children within the State are going to be accorded a meaningful opportunity to achieve proficiency on the State's assessments.

Page 145:

> While many witnesses testified about the benefits of local control over education, many witnesses also recognized that if a school district is not demonstrating an ability to provide a basic education to their children, then the State needs to intervene.

Page 174:

> [T]he State's constitutional obligation to maintain schools has four components. . . .
>
> First, there must be rational educational standards that set out what it is that children should be expected to learn. These standards should meet or exceed a constitutional floor of an adequate knowledge base for children.
>
> Second there must be an adequate method of assessing whether children are actually learning what is set out in the standards.
>
> Third, there must be adequate funding so as to accord to schools the ability to provide instruction in the standards.
>
> And fourth, where, as here, the State has delegated the responsibility to educate children to local school districts, there must be adequate accountability and oversight by the State over those school districts so as to insure that the districts are fulfilling the State's constitutional responsibility to "establish and maintain a system of public schools" as set forth in Article VII, § 1 of Alaska's Constitution.

Page 175:

> The extensive evidence presented on the State's standards all leads readily to the conclusion that these standards are thorough and appropriate educational standards for Alaska that meet or exceed the constitutional threshold of an adequate education.

Page 176:

> [T]he Education Clause does not require the State to insure that each child achieves proficiency in the content and performance standards.

Page 176:

> [T]he Education Clause requires the State to take ultimate responsibility for insuring that each child in this state is accorded a meaningful opportunity to achieve proficiency in reading, writing, math, and science-the four subjects encompassed within the State's performance standards.

Page 185:

> [I]f a school, despite adequate funding, is failing to accord a child with a constitutionally adequate education-such as failing to give that child a meaningful opportunity to acquire proficiency in the State's own performance standards- then the concept of local control must give way because that school is not being maintained as required by the Education Clause.

Page 186:

> In many respects, EED has done a truly commendable job in improving education for Alaska's children.

Page 187:

> The Education Clause does not require the State to "take over" these troubled districts or fire key personnel.

Page 187:

> [T]his Court finds that the efforts taken as of trial, particularly with respect to the Yupiit School District [in which the State had intervened at the time of trial], are constitutionally inadequate. While the Court recognizes that the State had taken some steps in the right direction in Yupiit as of that date, the State has not satisfied its constitutional obligation to the children in that district to accord them an adequate education. In short, the schools in Yupiit are not being adequately maintained as required by Alaska's Constitution.

Page 188:

> There is "no silver bullet" in education.

Page 188:

Here, the evidence has persuasively demonstrated that more funding is not the answer.

Page 188:

For the State to fail to take a considerably more directive role in the face of chronically poor performance, at least for the children in Yupiit, amounts to an impermissible "legislative abdication" of the State's constitutional responsibility to maintain public schools in this state.

Page 189:

[T]he State must exercise considerably more oversight and provide considerably more assistance and direction to those schools that are identified as failing to meet the State's constitutional obligation, in a concerted effort to remedy the situation.

Excerpts from the February 2009 Order:

Page 8:

No evidence has been presented to this Court that the State is intervening in districts in which it should not be intervening or that the State should be intervening in other districts where it is not.

Page 9:

In the 2008 session, the Alaska State Legislature adopted SB 285. The letter of intent adopted with the legislation state as follows:

> It is the intent of the Legislature that the Department of Education and Early Development (DEED) provide state oversight of public education . . . .[and] that the DEED intervene in a school district when the department has evidence that intervention by the department can result in improvement in instructional practices in the school district . . . .

Page 47

> [T]he State has been ordered to take remedial action to correct an ongoing constitutional breach.

Page 50:

> [T]he State's current district-level interventions have fallen considerably short of complying with [the] oversight requirement in two basic respects: first, because the remedial measures included in the interventions have not been effectively implemented and have not adequately [met] the needs they were meant to serve; and, second, because the interventions target an unjustifiably narrow range of problems, while ignoring many other educational problems that these local districts **have not adequately addressed on their own.** (Emphasis added.)

Page 56:

> [T]his court finds that the Department, through the delegation from the legislature, is not currently meeting the State's constitutional responsibility to "maintain a system of public schools open to all children of the State." The schools in the chronically underperforming school districts are not constitutionally adequate; the Education Clause requires considerably more from the State in the way of oversight and assistance to those districts.

Excerpts from the March 2010 Order:

Page 5:

> The lack of an aligned curriculum persists in the intervention districts.

Page 14

Considerably more work is needed for [the intervention districts' District Improvement] plans to demonstrate compliance with this Court's February 2009 Order.

Page 15:

In evaluating the State's responses at this time, the Court returns once again to the language of the Alaska Constitution, which places the responsibility "to maintain a system of public schools open to all children of the State" squarely upon the Legislature . . . . To date, **the State has not demonstrated that the delegation of this responsibility to school districts that have been identified as chronically underperforming, but which do not appear to have been accorded adequate assistance and oversight, will result in compliance with this constitutional responsibility.** (Emphasis added.)

LAWS OF ALASKA

2008

Source
HCS CSSB 285(HES)

Chapter No.
_____

AN ACT

Relating to the power and duties of the Department of Education and Early Development for improving instructional practices in school districts; and providing for an effective date.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

THE ACT FOLLOWS ON PAGE 1

AN ACT

Relating to the power and duties of the Department of Education and Early Development for improving instructional practices in school districts; and providing for an effective date.

---

* **Section 1.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools; the regulations must provide that, if a course in American Sign Language is given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school

construction or major maintenance project; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may intervene in a school district to improve instructional practices, as described in AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental intervention, as described in AS 14.07.030(14)(A) and (B) and (15), after the district demonstrates three consecutive years of improvement consisting of not less than two percent increases in student proficiency on standards-based assessments in math, reading, and writing as provided in AS 14.03.123(f)(2)(A); and

(C) a process for districts to petition the department for continuing or discontinuing the department's intervention;

(17) notify the legislative committees having jurisdiction over education before intervening in a school district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15).

* **Sec. 2.** AS 14.07.030 is amended to read:

Sec. 14.07.030. Powers of the department. The department may

(1) establish, maintain, govern, operate, discontinue, and combine area,

regional, and special schools;

(2) enter into contractual agreements with the Bureau of Indian Affairs or with a school district to share boarding costs of secondary school students;

(3) provide for citizenship night schools when and where expedient;

(4) provide for the sale or other disposition of abandoned or obsolete buildings and other state-owned school property;

(5) prescribe a classification for items of expense of school districts;

(6) acquire and transfer personal property, acquire real property, and transfer real property to federal agencies, state agencies, or to political subdivisions;

(7) enter into contractual agreements with school districts to provide more efficient or economical education services; reasonable fees may be charged by the department to cover the costs of providing services under an agreement, including costs for professional services, reproduction or printing, and mailing and distribution of educational materials;

(8) provide for the issuance of elementary and secondary diplomas to persons not in school who have completed the equivalent of an 8th or 12th grade education, respectively, in accordance with standards established by the department;

(9) apply for, accept, and spend endowments, grants, and other private money available to the state for educational purposes in accordance with AS 37.07 (Executive Budget Act);

(10) set student tuition and fees for educational and extracurricular programs and services provided and schools operated by the department under the provisions of (1) of this section and AS 14.07.020(a)(9), (11), and (12);

(11) charge fees to cover the costs of care and handling with respect to the acquisition, warehousing, distribution, or transfer of donated foods;

(12) establish and collect fees for the rental of school facilities and for other programs and services provided by the schools;

(13) develop a model curriculum and provide technical assistance for early childhood education programs**;**

(14) notwithstanding any other provision of this title, intervene in a school district to improve instructional practices under standards established

by the department in regulation, including directing the

(A) employees identified by the department to exercise supervisory authority for instructional practices in the district or in a specified school;

(B) use of appropriations under this title for distribution to a district;

(15) notwithstanding any other provision of this title, redirect public school funding under AS 14.17 appropriated for distribution to a school district, after providing notice to the district and an opportunity for the district to respond, when

(A) necessary to contract for services to improve instructional practices in the district; or

(B) the district has failed to take an action required by the department to improve instructional practices in the district; if funding is redirected under this subparagraph, the department shall provide the redirected funding to the district when the department has determined that the required action is satisfactorily completed.

* **Sec. 3.** AS 14.07 is amended by adding a new section to read:

Sec. 14.07.032. Definition for AS 14.07.020 - 14.07.032. In AS 14.07.020 - 14.07.032, "instructional practices" means the strategies and methods used in teaching or delivering information, skills, material, and student learning management tools to a student to help the student achieve intended educational outcomes.

* **Sec. 4.** This Act takes effect immediately under AS 01.10.070(c).

REASONS FOR REPEALING SB 285

- Previous to SB 285, the Department already had authority to intervene in underperforming schools. SB 285 gave more authority.
- SB 285 was in response to the Moore Case. The Moore Case has now been settled and these provisions are no longer necessary.
- Under NCLB, every school in the state will be out of compliance by 2014. This means that every school will be on the path to intervention.
- The Department has not worked collaboratively, and has violated the spirit and intent of SB 285.

HB 256: REPEAL STATE INTERVENTION IN SCHOOLS
Talking points

- In 2004, **Citizens for the Education Advancement of Alaska's Children filed suit** against the State asserting that the state needed to fulfill its responsibility under the Alaska constitution to provide an adequate education to all children. **This is the Moore case,** just recently settled.
- In **2008 as a response to the Moore case legislation, SB 285, addressed the responsibility and role of the Department of Education.**
- **SB 285 amended the powers and duties of the Department for improving instructional practices in school districts.** It was introduced as a "must have" bill that needed to move quickly through the Legislative process.
- However, during discussion of the bill, **there was concern that the Department would use the interception of school district funds as a very heavy hammer because it is a simple approach.**
- **Why DEED chooses to intervene in one district and not another is an admittedly subjective process internal to the Department.**
- The Director of the Council of School Administrators suggested to the committee that was hearing SB 285, that it **consider a collaborative approach with communities that are having difficulty meeting Adequate Yearly Progress.**
- Interestingly, a department representative said it is the Legislature's responsibility to intervene when districts are not making progress. As we know, Yupiit School District scores have not improved since it has been in Intervention with the Department. It's time for the Legislature once more to intervene in this discussion.

MINUTES FROM HEARINGS IN 2008

NEIL SLOTNICK: Her (Judge Gleason) recommendation came from testimony by Commissioner Sampson who was recognizing that as of the date of trial, DEED had, to the best of its ability, implemented the accountability system that the legislature adopted in 1998. But it's time to put more teeth in the accountability system, he said. **DEED is only asking for authority to use district funds to hire contract personnel;**

there's no intention to create more infrastructure. The idea is to do what the judge said and direct additional resources into the classroom. "That's the point of this authority that we're asking for," he said.

MR. JEANS responded **the intent is to work cooperatively through local school district administrations to develop an improvement plan that will lead to increased student achievement. There is no intention for DEED to step into the local school and start directing the principal on how to run his or her school.**

MR. ROSE replied that the affected districts are not going to be in favor of it. Those districts face extreme conditions like differences in language, culture and distance; they are not connected by roads. There are difficulties that even the department is going to have to face, he said, but it is a matter of interpretation in terms of what ought to be done. **He thought they would welcome the assistance, but not the heavy-handed way this is being done.** However, in some ways it is very necessary and if they can ensure that the regulations are not being abused the legislature has some responsibilities and the judge is commanding them.

CHAIR STEVENS said he appreciated that because they were concerned about not hearing from the districts. **The real problem they are facing is that this appears to be a must-have piece of legislation that needs to move through the legislature in 45 days.** He would be loath to hold the bill for another two weeks; so he encouraged her to keep commenting through the whole process.

MR. JEANS said he didn't see this as the department taking control, but rather as the legislature directing school districts to accept guidance and direction from the Department of Education. "We absolutely intend to work collaboratively with the school district administration, with the school board, with the individual school principals, in implementing the school improvement plan."

Senator Stevens wanted to make sure that everyone understood the intervention would not be a hostile takeover, only an opportunity to offer help and support to the school.
Senator Elton questioned the last sentence in the fiscal note from Department of Education: This law will make it clear to Alaska school district that they must cooperate with the Department of Education & Early Development or risk specific directives, delineated in regulation, regarding district personnel decisions and expenditures of district funds necessary to improve instructional practices in the district schools.

Senator Elton remarked that the language in the bill sounded like a "take-over." He contended that the schools have no choice but to allow the intervention and school decisions to be made by central administrators in the Department of Education & Early Development.

Diane George - Yupiit School District

February 1, 2012

I want to thank you for allowing me to tell my story of intervention as it has unfolded in the Yupiit School District since the fall of 2005.

Please understand that it is not my intent to "pick on" any of the individuals who are currently involved in the "intervention plus" occurring in the YSD. Rather it is my intention to let people know what has been happening in our district and how the imposition of the current model has impacted the district.

In the fall of 2005 I received a phone call from then Commissioner of Education, Roger Sampson. He was dissatisfied with our district improvement plan. He felt that our district improvement plan (DIP) was not aligned well with the school improvement plans and was not appropriately focused. His plan was to send out a team to remedy our situation. We were informed that our NCLB funds would not be released until we had participated in the November 2005 training and revised our district improvement plan.

In November 2005 a team of approximately 5 individuals arrived at the YSD district office to provide 5 days of training in order to assist the district in changing its course. The principals (3), teacher leaders from each school and I participated in AIMSweb training as well as goal setting. In all honesty, I thought the goal setting was useful and the facilitator did a good job of honoring our district's perceived needs. By the end of those 5 days the first AIMSweb benchmark had taken place (all students), we had revised our district improvement plan, set some district goals and scheduled weekly collaborative meetings.

It's important to realize that the district administration and staff, prior to the intervention, had recognized that necessity of "tightening" up our literacy instruction in order to improve student learning. We were providing high quality professional development to our staff in reading and writing instruction, had hired a literacy leader for each school and had implemented the following assessments to track student progress (DIBELS – K-2 in Yup'ik and English) and Ed Formation (3-12). We also scheduled a district wide writing assessment twice yearly and had drafted a Writing Plan. I tell you this because I want everyone to understand that as a district we

recognized the educational needs of our students and were doing the best we knew how to address those issues.

During either the 2006-2007 or 2007-2008 school year the DEED assigned a district coach to our district. We were informed just prior to the beginning of the school year that the new coach would be attending our August in-service. The DEED also provided us with a district improvement plan. We did not have any input into the development of the plan. By this time the expectations for monitoring and reporting, by both me and the principals, had increased significantly. The district visits, by the coach, were infrequent and of little assistance to the district. Recollecting back to that time, I don't recall really understanding the role of the coach or the purpose of his occasional visits.

During the 2008-2009 school year the coach was in our district on a monthly basis. He and I talked frequently. I used him as a mentor and a guide. He and I worked together in planning and facilitating monthly principal meetings. During these meetings we tackled components of the district and school improvement plans such as walk-throughs and implementation of an RTI model. I think this was the most productive year (for me) of the intervention because we worked together. We collaborated. He directed his attention to building capacity among the school leaders and supporting us as we tackled difficult issues.

By this time we had functioned under the DEED imposed district improvement plan for three years. As a result of the requirements of the plan we had eliminated the district writing assessment, the DIBELS and Ed formation. We were also experiencing considerable conflict with the requirements of the DEED and the needs that we saw evident. It became increasingly difficult to provide professional development that we thought more appropriate due to the demands of the district improvement plan.

During the 2008-2009 the DEED had once again provided us with a completed district improvement plan. By the end of the year Joe Slats (superintendent), Willie Kasayulie (RSB chair) and I met, via phone, with DEED representatives in order to discuss a newly revised district improvement plan process and how the district was to provide input into that plan. We were told that we could select a few areas to focus our efforts for the upcoming year. The principals and I met for a few days and set goals for

the following school year. We chose to address the areas of curriculum and professional development.

During the ASLI (Alaska State Leadership Institute) in May 2009 I met our new district coach. The district was not consulted at any time that spring regarding the appointment of a new coach or content area specialists for the following school year.

In August 2009 Howard Diamond began his tenure as the superintendent of the YSD. In August then Commissioner Larry LeDeux met with Howard and I to discuss the DEED's continued involvement in our district (intervention plus).

The requirements related to this "Intervention Plus" status were set out in a "MOU" delivered to the District by DEED. The terms of the MOU were not developed in consultation with the District or based on any discussion with District administration about the District's needs.

The MOU indicated that the department's efforts would be coordinated and collaboratively discussed with the District in advance of implementation. I do not feel that DEED's efforts were "coordinated" with the District or collaborative towards it. We were presented with an MOU and certain requirements, even where we had been previously led to believe that specific requirements would not be in place. For instance, we had previously been told that we could choose to focus on the areas of the DIP (district improvement plan) where we felt attention was most urgently needed; the MOU required us to address all areas of the DIP (District Improvement Plan), despite a lack of resources for doing so.

In terms of the design and implementation of the MOU, there was no coordinated effort or meaningful collaboration. We were told that the content specialists would begin visiting the district, and that they would concentrate their efforts in Tuluksak. We were told when they were coming and where they were going and what they would be doing. It was neither "collaborative" nor coordinated with us.

The role of the trustee has been the most frustrating of all since the implementation of the "intervention plus". He arrives in our district (we are often unaware of his travel schedule), sleeps in the school, chats with staff and students, observes the daily goings on in the schools. We have asked for

his assistance with certain matters and have been told he is not there to assist. He is there to observe

A few key points regarding the DEED's intervention:

1. Judge Gleason is the only person who has ever asked me what assistance was needed in the district.
2. The intervention, in my opinion, has never been designed to support the district and build capacity within the district.
3. Test scores have been up and down since the DEED intervention first began and since intervention plus have declined.
4. Prior to the DEED's intervention, the district was in the process of focusing efforts on developing reading skills. We had recognized the need and were providing high quality professional development to our staff. We had a plan. We did need additional support and resources. The process was not approached in a collaborative manner.
5. The district, on its own, had secured a federal competitive Title III grant to address the needs of English language learners, prior to the DEED intervention. Due to the intervention and requirements of the DEED mandated district improvement plan, the implementation of this grant was difficult.
6. Once the DEED began mandating professional development we were no longer able to provide what we had perceived to be the necessary professional development for our staff (reading, content area literacy, strategies for teaching English language learners).
7. We were accused of being "A mile wide and an inch deep". Intervention has only exacerbated the situation.
8. The content area coaches were provided to the district without consultation.
9. The trustee observes in each school. He does not provide support or assistance in any form. His role provides no benefit to the district and is not a productive use of state funds.
10. We were specifically told that there would be "no boots on the ground" when we indicated the need for on-site, full-time support specialists.

11. Staff had to be told that Howard Diamond was the Superintendent of the YSD and in charge of the district (not the trustee) by the RSB Chair during the August 2011 in-service. This was because staff was confused by the role of the trustee.
12. Both the trustee and coaches made statements that caused confusion and undermined the authority of local administration.
13. Trustee role creates confusion among staff members. Why is this person here? What is he doing? Who is our boss?
14. Lack of a plan. No plan developed with district. "We're building the plane as we're flying it."
15. The content area coaches are knowledgeable professionals in their content areas. Their visits are too infrequent and too short in duration to positively impact student learning.

February 1, 2012

Additional thoughts:

1. What might a successful implementation of intervention look like:
    a. Collaborative, problem-solving
    b. The district has a "seat at the table" (or a few for that matter) when planning for change.
    c. Viewing district administration as education professionals with knowledge of the local communities.

2. What infrastructure resources are necessary in order to improve student academic achievement?
    a. School maintenance
    b. Teacher housing
    c. Curricula needs
    d. Specialists in district year round
    e. Culturally relevant curriculum
    f. School safety

3. What district level staffing is required to satisfactorily support our schools to improve academic achievement:
    a. Curriculum director, director of instruction, superintendent, special education director, content area specialists – reading/writing, math, science
    b. Howard has built capacity (from 2 D.O administrators to 4 D.O. administrators)

4. What could be done right now that would help YSD to formulate appropriate plans and turn the District to increasing academic achievement?
    a. Survey district needs
    b. Remove trustee and coaches from district
    c. Sit down with district representatives (RSB, D.O., school staff) to develop a plan to address the needs of the district.
    d. Provide resources to support the plan.

Yupiit/Commissioner Meeting

4:00-5:30

December 4th, 2011

Purpose: To discuss a modified schedule/exit strategy for the trustee in the Yupiit district while incorporating academic benchmarks as goals.

Participants: Howard Diamond, Kim Langton, Diane George, Lexi Hill, Mike Hanley, Darrell Sanborn

Proof of Capacity and Growth

Considerations

Aimsweb Measurements- Kindergarten – Third Grade

Kindergarten:

Move all of the students out of Tier 3 to Tier 2 in Letter Naming Fluency and Phonemic Segmentation Fluency

Move at least half of the Tier 2 students into Tier 1 in Letter Naming Fluency and Phonemic Segmentation Fluency

First Grade:

90% of the students in Tier 1 in Phonemic Segmentation Fluency

Second/Third Grade:

Reduce the number by half in Tier 3

Move all Tier 2 students to Tier 1

Four –Tenth Grades or Benchmark Grades:

Raise RIT scores for all students below proficient 8 points.

Raise RIT scores for all proficient students 5-8 points.

District focus:

10 Students per school- district choice, to show significant growth using measure of your choice.

Judge Gleason's Finding- June 2007

"For the State to fail to take a considerably more directive role in the face of chronically poor performance, at least for the children in Yupiit, amounts to an impermissible "legislative abdication" of the State's constitutional responsibility to maintain public schools in the state."

"The State must exercise considerably more oversight and provide considerably more assistance and direction to those schools that are identified as failing to meet the State's constitutional obligation in a concerted effort to remedy the situation

"The State has failed to exercise adequate supervision and oversight."

In regards to oversight and accountability: "But this Court finds that the efforts taken as of trial, particularly with respect to the Yupiit School District, are constitutionally inadequate."

"The State has failed to provide an adequate oversight role with respect to either the considerable State funds that it disburses or with respect to the delivery of the instruction to the children in those schools. In short, the State has failed to take meaningful action to maximize the likelihood that the children at these troubled schools are accorded an adequate opportunity to acquire proficiency in the State's standards when a school has demonstrated an unwillingness or inability to correct this situation on its own." FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. HB256

Analysis

The fiscal effect of this bill is indeterminate because the legal effect is not clear. This bill repeals department authority to redirect district funding and to direct the personnel in charge of instructional practices. However, under the decision in Moore v. State, the state is still required to exercise oversight and accountability in local school districts. Further, AS 14.03.123 will still require the department to implement federal education law, which requires an accountability system and a state system of support. Federal law also requires the department to implement one or more corrective action in a school district that is identified for corrective action. If HB 256 passes it will be unclear as to what authority the department has to implement the various corrective actions provided for in federal law. In sum, the repeal of department authority, coupled with the requirement to stay compliant with the Alaska Constitution and federal law, may affect the resources needed for school improvement, but it is unclear what the effect will be.

STATE OF ALASKA

ALASKA COMMISSION ON POSTSECONDARY EDUCATION

3030 VINTAGE BLVD.
JUNEAU, ALASKA 99801-7109
VOICE (800) 441-2962
In Juneau (907) 465-6740
TDD (907) 465-3143
FAX (907) 465-3293

March 14, 2012

The Honorable Alan Dick, Chair
House Education Committee
Alaska State Legislature
State Capitol Room 106
Juneau AK, 99801

Dear Representative Dick:

The following information is provided in response to requests made at the March 5, 2012 meeting of the House Education Committee regarding HB272.

1) **The current default rate (and any supporting documents/graphs) for all loan programs.**

The Commission calculates annual cohort default rates based on the ratio of loans that entered repayment between January 1st and December 31st of the cohort year, and were greater than six months in arrears at the end of the first 12 months of repayment.

The Commission publishes the alternative loan default rates in two modes:

1. Institutional Rate: Rate of default on Alaska Supplemental, Alaska Student and Teacher Education Loans at institutions administering education loan programs on behalf of Alaska students.
2. Program Rate: Rate of default by specified loan program.

Institutional Cohort Default Rate (CDR)

Institution Location	2010	2009	2008	2007	2006	2005	2004	2003	2002	2001	2000
Alaska	8.13%	6.88%	5.34%	5.29%	5.30%	5.60%	6.30%	6.10%	5.10%	4.90%	8.40%
Out-of-State	6.96%	4.90%	3.45%	3.93%	3.50%	4.00%	4.10%	3.40%	2.50%	4.80%	5.90%
Combined Rate	7.69%	6.08%	4.56%	4.68%	4.50%	4.70%	4.90%	4.60%	3.60%	4.80%	7.20%

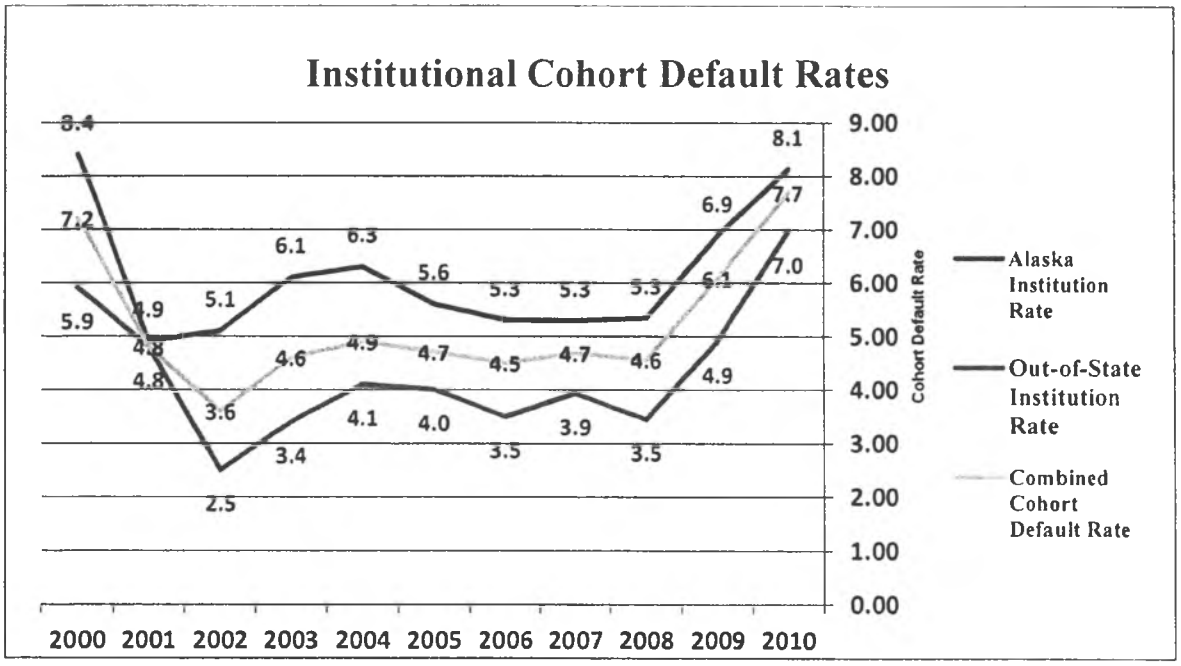
printed on recycled paper

Program Cohort Default Rate

Program	2010	2009	2008	2007
Alaska Supplemental Education Loan	7.68%	6.04%	4.63%	4.85%
Alaska Student Loan	13.57%	8.48%	6.76%	2.97%
Family Education Loan	2.10%	0.00%	0.42%	1.40%
Teacher Education Loan	4.56%	3.01%	3.56%	2.72%
Winn Brindle Education Loan	4.54%	15.33%	0.00%	0.54%
Alternative Loan Consolidation	0.00%	0.00%	0.44%	0.00%

ASLC Federal Cohort Default Rate

2009	2008	2007
7.8%	5.1%	7.0%



2) **Will HB 272 have an effect on the default rate?**

It is unlikely that a potential to earn a 3% cost reduction will impact a borrower's likelihood of default. In the Commission's experience, borrowers typically default 1) due to failure to manage their

loans, including failure to apply for deferments or other repayment options which would allow them to avoid default without having to make payments, or 2) because they lack an ability to repay due to over borrowing relative to their income potential (resulting from one or both of the following--failure to achieve an occupational/professional credential and/or incurring high levels of education/non-education debt due to lifestyle choices). Generally, regardless of the underlying reasons for the lack of capacity to pay as agreed, borrowers fail to be influenced or motivated by the consequences of delinquency or default, so it seems reasonable to conclude that the default rate would not be materially impacted by this new potential benefit.

3) **Percent of students who are completing within 150% of time?**

According to NCHEMS (higheredinfo.org), rates of completion within 150% of expected time in 2009 (most recent year available) for first-time, full-time freshmen are:

	Alaska Rate	US Rate
Three-year rate for associate degree completers	13.3%	29.2%
Six-year rate for baccalaureate students	26.9%	55.5%

Specific to the University of Alaska, rates for 2008 cohorts (most recent available) are:

Two-Year Programs

For full-time, first-time freshmen entering UA two-year certificate or associate programs in fall 2008:
28.9 percent of certificate degree seekers earned the degree in 3 years by FY11 and
8.3 percent associate degree seekers earned the degree within 3 years by FY11.

For all two-year public institutions, about 21 percent of all associate and certificate degree seekers complete the degree within 3 years.

Four-Year Programs

For full-time, first-time freshmen entering UA four-year baccalaureate programs in fall 2005:
28.9 percent earned a baccalaureate degree in 6 years by FY11.

For all four-year public, open admission institutions, 31 percent of baccalaureate degree-seeking students complete the degree within 6 years.

4) **How would the provision regarding no principal reductions for loans otherwise eligible to be repaid or forgiven by the state (14.43.123(a)(4) operate relative to the provision that the principal reduction would be provided in addition to any other reduction of principal or interest (14.43.123(c)?**

It is my understanding that the bill's sponsor seeks to exclude from this new benefit any loans for which the borrower can qualify for full forgiveness or repayment by the state. For example, if the state establishes a program wherein a borrower could perform in an occupation or profession in Alaska and in return the state would repay all of their state education loans, borrowers participating in that program

would *not* qualify for this principal reduction *in addition to* their loan repayment benefit. In the latter provision, the bill would allow otherwise-eligible borrowers who may qualify for a borrower benefit provided by the Alaska Student Loan Corporation, such as the recurring web-pay benefit, whereby borrowers who make their loan repayment electronically receive a .25 interest rate reduction, to receive the principal reduction *in addition to* the web-pay benefit.

5) How would the annual appropriation process, by which the principal reduction would be funded, work?

While an applicable business process has yet to be developed, conceptually, in October of each year the Commission would engage with a third-party aggregator of degree completion information to determine which borrowers, with loans in repayment, were shown to have received a postsecondary credential. Based upon the outstanding balance of loans held by those borrowers, the projected cost of a three percent principal reduction would be developed for the purpose of providing that cost figure to the legislature. The Commission would contact potentially-eligible borrowers to advise them of the potential benefit available to them upon application and documentation of their eligibility. In December of the subsequent year, borrowers determined to have meet all eligibility criteria for that year ending would, subject to the adequacy of the appropriation, receive a credit up to three percent of their outstanding principal balance.

I hope this information is responsive to your members' inquiries and I look forward to making myself available to them for further discussion of HB 272.

Sincerely,

Diane Barrans
Executive Director

Annette Kreitzer

Subject: Explanation of Section 2 of CSSSHB 272
Attachments: CS for 2nd SSHB 272 - Statutes listed under Section 2.pdf

Dear Representative Wilson and Education Committee members-

In response to Rep. Wilson's question about Section 2 of HB 272 (the R Version of the student loan reduction bill), attached is a list of the statutes in that section. The statutes that are listed in Section 2 pertain to loan issues such as default, consolidation, eligibility, etc. The purpose of Section 2 is to include HB 272 within the list of existing statutes so that the reduction in principal under HB 272 will be effective under those statutes. Under HB 272, borrowers will not be eligible for a reduction in principal if they are in default, and Section 2 helps to clarify that.

Please let us know if you have additional questions.

Subject: List of Statutes in Section 2 of CSSSHB 272

Dear Representative Wilson-

In response to your question yesterday morning in the House Education committee regarding the statutes that Section 2 refers to within the CS for the 2nd Sponsor Substitute for HB 272 (lowering of student loan principal bill), attached is a list of the statute titles along with the statutes themselves. Please let us know if you would like additional clarification or have additional questions about the statutes or the bill itself.

Thank you very much.

MEMO

Committee Substitute for 2nd Sponsor Substitute for House Bill 272

List of Statutes included in Section 2

Section 2 AS 14.43.171 is amended to read:

Sec. 14.43.171. **Applicability of other laws.** The provisions of AS.14.43.120(d)(4), 14.43.122, **14.43.123**, 14.43.135, 14.43.140, 14.43.145 – 14.43.160, 14.43.164, 14.43.166, and 14.43.168 apply to the loans made under AS 14.43.170 – 14.43.175 as if the loans were made under those applicable provisions.

Statute Titles:

Sec. 14.43.120(d)(4). Conditions of loans.

Sec. 14.43.122. Consolidation of loans.

Sec. 14.43.135. Discrimination prohibited.

Sec. 14.43.140. Enforceability of certain contracts with minors.

Sec. 14.43.145. Default.

Sec. 14.43.147. Order to withhold and deliver.

Sec. 14.43.148. Nonrenewal of license.

Sec. 14.43.149. Lien.

Sec. 14.43.150. Order to assign wages for defaulted loan.

Sec. 14.43.151. Authority and procedure to administratively establish and enforce a collection order.

Sec. 14.43.152. Initiation of administrative action to establish a collection order; required notice.

Sec. 14.43.153. Hearings in administrative action to establish a collection order; burden of proof.

Sec. 14.43.154. Collection orders as judgments.

Sec. 14.43.155. Nature of remedies.

Sec. 14.43.160. Definitions.

Sec. 14.43.164. Use of loan.

Sec. 14.43.166. Repayment of loans.

Sec. 14.43.168. Default.

Sec. 14.43.170. Creation; purpose.

Sec. 14.43.171. Applicability of other laws.

Sec. 14.43.172. Eligibility.

Sec. 14.43.173. Loan award maximums; use of loan award.

Sec. 14.43.174. Interest.

Sec. 14.43.175. Repayment of loans.

Full Statutes:

Sec. 14.43.120. Conditions of loans.

(d) Education loans may not be made to a student

(4) to attend an institution if the total amount of education loans made to students to attend that institution exceeds $100,000 and the default rate on those loans is (A) greater than 20 percent but less than 25 percent, and the institution is unable to reduce its default rate within 24 months after the rate determination; or (B) equal to or greater than 25 percent for two consecutive calendar years; for purposes of this paragraph, the default rate shall be determined by the commission for each annual group of loans required to be repaid under (g) of this section on or after July 1, 1996; if an education loan is refused based on the provisions of this paragraph and, under a subsequent default rate determination, an institution's default rate does not exceed the limits established under this paragraph, the commission may not refuse to issue an education loan to attend that institution based on the provisions of this paragraph.

Sec. 14.43.122. Consolidation of loans.

(a) The commission may offer

(1) a borrower who has received more than one education loan the option of consolidating the multiple loans into a single loan; or

(2) to consolidate education loans made to married borrowers if the married borrowers agree to be jointly and severally liable for repayment of the consolidated loan, regardless of the borrowers' future marital status or the death of one of the borrowers.

(b) *[Repealed, Sec. 31 ch 63 SLA 2004].*

Sec. 14.43.135. Discrimination prohibited.

The programs established under this chapter shall be carried out without regard to the applicant's or participant's race, creed, sex, color, ancestry, national origin, or membership in fraternal or political organizations.

Sec. 14.43.140. Enforceability of certain contracts with minors.

A written obligation entered into by a minor at least 16 years of age, evidencing a loan or other assistance received by the minor from any person for the purpose of furthering the minor's education in a career education program or an institution of higher learning, is enforceable against the minor with the same effect as if the minor were, at the time of its execution, 18 years of age, if the person making the loan has before making the loan a certification from the institution that the minor is enrolled in the institution or has been accepted for enrollment.

Sec. 14.43.145. Default.

(a) For the purposes of this chapter, a loan is in default after a loan payment has become 180 or more days past due or, for a loan under AS 14.43.161 - 14.43.168 or 14.43.170 - 14.43.175, the default requirements established by the commission have been met. Upon default,

(1) repayment of the remaining balance is accelerated and due;

(2) the commission may take the borrower's permanent fund dividend under AS 43.23.067;

(3) the commission may issue an order to withhold and deliver under AS 14.43.147;

(4) the commission may provide notice of the default to a licensing entity for nonrenewal of the license under AS 14.43.148;

(5) the commission may record the lien created under AS 14.43.149; and

(6) the commission may establish an administrative collection order under AS 14.43.151 - 14.43.155.

(b) The commission shall notify the borrower of the default, and the consequences of default imposed under (a) of this section, by mailing a notice to the borrower's most recent address provided to the commission by the borrower or obtained by the commission.

(c) A borrower may appeal a notice of default by filing a statement with the executive director, within 30 days after the date of the notice, requesting that the loan status be reviewed. AS 44.62 (Administrative Procedure Act) does not apply to the review of default under this section. The borrower has the burden to show that, at the time of the notice of default, (1) no loan payment was more than 180 days past due or, for a loan under AS 14.43.161 - 14.43.168 or 14.43.170 - 14.43.175, the default requirements established by the commission had not yet been met; or (2) that the borrower entered into, and was in compliance with, a default forbearance agreement with the commission. Within 40 days after receiving a written request for

review, the director shall inform the borrower in writing of the executive director's decision. The decision of the executive director is a final decision that may be appealed to the superior court under the Alaska Rules of Appellate Procedure.

Sec. 14.43.147. Order to withhold and deliver.

(a) Thirty days after the date a notice of default under AS 14.43.145(b) is mailed or the date of the decision of the executive director under AS 14.43.145(c), whichever is later, the commission may issue an order to withhold and deliver property to a person, or agency or political subdivision of the state, who the commission has reason to believe possesses property due, owing, or belonging to the borrower.

(b) The order to withhold and deliver shall be served personally or by certified mail, return receipt requested, upon the person, or agency or political subdivision of the state, possessing the property. The order must state the amount of the borrower's liability and include notice of the terms of this section. All real and personal property, including earnings, that are due, owing, or belonging to the borrower are subject to an order to withhold and deliver.

(c) A person, or agency or political subdivision of the state, served with an order to withhold and deliver, is required to make true answers under oath and in writing to inquiries contained in the order within three weeks after service of the order and to all inquiries subsequently made.

(d) Upon receipt of the order, the person, or agency or political subdivision of the state, shall immediately withhold property due, owing, or belonging to the borrower and shall deliver the property to the commission after three weeks have expired from the date of the service of the order. Money shall be delivered by remittance payable to the order of the commission.

(e) An employer shall withhold the earnings of a borrower subject to an order at each succeeding interval of payment until the entire amount of the debt stated in the order has been withheld. An employer may, for each payment made under an order to withhold and deliver, deduct $5 from other wages or salary owed to the borrower.

(f) If a borrower who is subject to an order terminates employment, the employer shall promptly notify the commission and provide the borrower's last known home address and the name and address of the borrower's new employer, if known. The employer shall keep a record of the order for two years after the borrower terminates employment. If the employer reemploys the borrower within that two-year period, the employer shall immediately reimplement the order unless the employer has received notice of satisfaction under (j) of this section.

(g) An employer may not discharge, discipline, or refuse to employ a borrower on the basis of an order issued under this section. A person who violates this subsection or a regulation adopted to implement it is liable for a civil penalty of not more than $10,000. The employee may seek restitution or reinstatement from the employer.

(h) A person, or agency or political subdivision of the state, who complies with an order to withhold and deliver that is regular on its face is not subject to civil liability to an individual or agency for conduct in compliance with the notice. A state agency that complies with an order to withhold and deliver that is regular on its face is not required to pay interest under AS 37.05.285 for failure to make timely payment to the borrower.

(i) An order to withhold and deliver under this section is subject to the exemptions under AS 09.38.

(j) Upon satisfaction of a loan obligation, the commission shall, within 15 working days, notify ail persons served with an order under this section that the order is no longer in force. If the commission receives money under an order after satisfaction of the loan, the commission shall within 15 working days return the overpayment to the borrower. If the commission fails to return an overpayment as required under this subsection, the commission is liable to the borrower for the amount of the overpayment, plus legal interest under AS 45.45.010.

(k) If a person, or agency or political subdivision of the state, knowingly fails to make an answer to an order under this section within the time prescribed, or knowingly fails to honor an order under this section, the person, or agency or political subdivision of the state, is liable to the commission in an amount equal to 100 percent of the amount that is the basis of the order, together with costs, interest, and reasonable attorney fees. In this subsection, "knowingly" has the meaning given in AS 11.81.900.

(l) A borrower against whom an order has been served under this section may apply for relief to the superior court.

Sec. 14.43.148. Nonrenewal of license.

(a) Notwithstanding any other provision of law, a licensing entity may not renew a license issued to a borrower if the licensing entity has received notice from the commission that the licensee is in default on a loan made by the commission. If the licensee has appealed the determination of default status, the commission shall notify the licensing entity and renewal may not be denied under this section unless and until the appeal has been concluded and the default status affirmed. Unless a temporary license is issued under (c) of this section, the denial of renewal is effective at the beginning of that renewal period. Denial of renewal of a license shall continue until the licensing entity receives notice of a release from the commission. If a license is denied under this section, the licensing entity shall refund the renewal fee less the temporary license fee, if any.

(b) The licensing entity shall provide written notice of the denial of renewal of the license by giving written notice to the licensee or sending the notice to the licensee's last known mailing address on file with the licensing entity. The licensing agency shall include with the notice a form to request review under (d) of this section; the form must include the commission's address and telephone number. The notice must inform the licensee of the temporary license granted under (c) of this section if the applicant is otherwise eligible and that, upon expiration of that time period, renewal of the license will be denied unless the licensing entity receives a notice of release under (f) of this section from the commission.

(c) A licensing entity shall issue a temporary license valid for the first 150 days of the renewal period to a licensee whose license renewal is denied under this section if the licensee is otherwise eligible for renewal. Only one temporary license may be issued during a renewal period. The licensing entity shall adopt by regulation a fee for issuance of a temporary license under this section; the amount of the fee shall be set so that the fees collected under this section, to the extent reasonable, cover the costs of implementing and administering this section.

(d) Within 30 days after receiving the notice under (b) of this section, the licensee may request review by the commission. AS 44.62 (Administrative Procedure Act) does not apply to the denial of renewal of a license under this section. Within 30 days after receiving a written request for review, the executive director shall inform the applicant in writing of the executive director's findings. The executive director's finding is a final decision that may be appealed to the superior court under the Alaska Rules of Appellate Procedure.

(e) For the purpose of review under (d) of this section, the licensee has the burden to show that

(1) the commission has not sent a notice of default in compliance with AS 14.43.145(b);

(2) the notice of default has been rescinded after review under AS 14.43.145(c); or

(3) the licensee has met the requirements of (f) of this section.

(f) The commission shall provide a notice of release to the licensing entity if the licensee

(1) pays all costs of collection and the interest and principal that would have been due if the loan had not been accelerated; or

(2) has negotiated a payment schedule with the commission after the loan is in default and has made complete and timely payments under the negotiated agreement for the four most recent and consecutive months.

(g) Notwithstanding (a) of this section, the denial of renewal of a teacher's certificate is effective not sooner than the end of the contract year after the commission has notified the teacher of the default status of the loan as provided under AS 14.43.145.

(h) In this section,

(1) "license"

(A) means, except as provided in (B) of this paragraph, a license, certificate, permit, registration, or other authorization that, at the time of issuance, will be valid for more than 150 days and that may be acquired from a state agency to perform an occupation, including the following:

(i) license relating to boxing or wrestling under AS 05.10;

(ii) authorization to perform an occupation regulated under AS 08;

(iii) teacher certificate under AS 14.20;

(iv) authorization under AS 18.08 to perform emergency medical services;

(v) asbestos worker certification under AS 18.31;

(vi) boiler operator's license under AS 18.60.395;

(vii) certificate of fitness under AS 18.62;

(viii) hazardous painting certification under AS 18.63;

(ix) certification as a municipal correctional, correctional, probation, or parole officer under AS 18.65.245;

(x) security guard license under AS 18.65.400 - 18.65.490;

(xi) license relating to insurance under AS 21.27;

(xii) employment agency permit under AS 23.15.330 - 23.15.520;

(xiii) registration as a broker-dealer, an agent, a state investment adviser, or an investment adviser representative under AS 45.55.030;

(xiv) certification as a pesticide applicator under AS 46.03.320;

(xv) certification as a storage tank worker or contractor under AS 46.03.375;

(xvi) certification as a water and wastewater works operator under AS 46.30; and

(B) does not include

(i) a commercial fishing license under AS 16.05.480, including a crewmember fishing license;

(ii) a vessel license issued under AS 16.05.490 or 16.05.530;

(iii) *[Repealed, Sec. 43 ch 57 SLA 2005].*

(iv) a business license issued under AS 43.70;

(v) an entry permit or interim-use permit issued under AS 16.43; or

(vi) a driver's license issued under AS 28.15;

(2) "licensee" means a person holding a license or applying to renew a license;

(3) "licensing entity" means the state agency that issues or renews a license; in the case of a license issued or renewed by the Department of Commerce, Community, and Economic Development after an applicant's

qualifications are determined by another agency, "licensing entity" means the Department of Commerce, Community, and Economic Development.

Sec. 14.43.149. Lien.

(a) The amount owing on a loan that is in default under this chapter, including principal, interest, and collection costs, is a lien upon all property and right to property, real or personal, belonging to the borrower. The lien arises at the time that the commission mails or otherwise delivers a notice of default under AS 14.43.145(b) and continues until the balance of the loan, including principal, interest, and collection costs, is paid in full.

(b) A lien created under (a) of this section is

(1) not valid against a mortgagee or other lienholder, pledgee, purchaser, or judgment creditor until notice of the lien is recorded in the records of the recording district where the property subject to the lien is situated; and

(2) subject to AS 40.19.040(d).

Sec. 14.43.150. Order to assign wages for defaulted loan.

(a) In a court proceeding regarding a defaulted loan under this chapter in which the court has entered judgment in favor of the commission, the court may, on its own motion or motion of the commission, after notice and an opportunity for hearing, order the loan recipient to assign to the commission that portion of salary or wages due the loan recipient currently and in the future in an amount sufficient to pay the amount ordered by the court to be repaid to the commission.

(b) The order of assignment is binding upon an employer upon service of a copy of the order upon the employer and until further order of the court or until the employment of the obligee is terminated. The employer may, for each payment made under the order, deduct $1 from other wages or salary owed to the employee.

(c) An employer may not terminate an employee's employment because wages of the employee are subject to an order under this section.

(d) An assignment of wages authorized under this section that is made under court order has priority as against an attachment, execution, or other assignment, except for an assignment for payment of child support under AS 25.27.070, restitution to a crime victim authorized under AS 12.55.045, or as otherwise ordered by the court.

Sec. 14.43.151. Authority and procedure to administratively establish and enforce a collection order.

If a judgment in favor of the commission has not been entered by the court regarding a defaulted loan awarded under this chapter, the commission may establish a duty to repay the defaulted loan through a

collection order using the procedures prescribed in AS 14.43.152 - 14.43.155 and may enforce the collection order. Action under this section may be undertaken at the commission's discretion if the borrower is in default under AS 14.43.145.

Sec. 14.43.152. Initiation of administrative action to establish a collection order; required notice.

(a) An action to establish a collection order authorized under AS 14.43.151 is initiated by the commission's serving on the borrower a notice of establishment of collection order. The notice shall be served by mailing the notice to the borrower at

(1) the borrower's most recent address provided to the commission by the borrower; or

(2) another address known to the commission.

(b) The notice served under (a) of this section must state

(1) the amount of the liability for default under AS 14.43.145 for which the borrower is found to be responsible; the amount stated under this paragraph shall include all principal, interest, and collection fees;

(2) that a lien may be recorded against the borrower's property as authorized under AS 14.43.145(a)(5);

(3) that the borrower may appear at a hearing held by the commission and show cause that a collection order should not be entered because, at the time of the notice,

(A) no loan payment was more than 180 days past due or, for a loan under AS 14.43.161 - 14.43.168 or 14.43.170 - 14.43.175, the default requirements established by the commission had not yet been met; or

(B) the borrower had entered into, or was in compliance with, an agreement to forbear default with the commission; and

(4) that, if the borrower served with the notice does not request a hearing within 30 days after the date of mailing of the notice, a collection order will be entered and the property of the borrower will be subject to a lien under AS 14.43.149 in the amount stated in the collection order without further notice or hearing.

Sec. 14.43.153. Hearings in administrative action to establish a collection order; burden of proof.

(a) A borrower served with a notice of establishment of collection order under AS 14.43.152 is entitled to a hearing before the commission if the request for a hearing is served on the commission by registered mail, return receipt requested, within 30 days after the date the notice is mailed to the borrower.

(b) If a request for a hearing in accordance with (a) of this section is made, the issuance of a collection order is automatically stayed pending the decision of the hearing officer for the commission. If a request for a hearing is not made, the collection order is final at the expiration of the 30-day period specified in (a) of this section.

(c) A borrower claiming that the notice is incorrect has the burden at hearing to document the existence of one of the conditions described in AS 14.43.152(b)(3)(A) and (B).

(d) Within 60 days after the date of the hearing, the hearing officer shall enter a decision determining whether default has occurred and, if default has occurred, specifying the amount of the collection order and declaring that the property of the borrower is subject to a lien under AS 14.43.149 in the amount of the collection order.

(e) If the borrower who requested the hearing fails to appear at the hearing, the hearing officer shall enter a decision

(1) confirming that a default has occurred;

(2) confirming the amount of the collection order;

(3) declaring that the property of the borrower is subject to a lien under AS 14.43.149 in the amount stated under (2) of this subsection.

(f) The decision of the hearing officer is a final decision that may be appealed to the superior court under the Alaska Rules of Appellate Procedure.

Sec. 14.43.154. Collection orders as judgments.

A collection order is equivalent to a judgment and becomes vested

(1) at the expiration of the 30-day period described in AS 14.43.153(b) if a hearing is not requested; or

(2) on the date the hearing officer enters a decision in favor of the commission if a hearing was requested by the borrower.

Sec. 14.43.155. Nature of remedies.

AS 14.43.154 provides a remedy in addition to and not as a substitute for any other remedies available to the commission.

Sec. 14.43.160. Definitions.

In AS 14.43.091 - 14.43.160, unless the context otherwise requires,

(1) "career education" means a course or program in vocational-technical training or education approved by the commission;

(2) "federally insured" means a loan covered by the provisions of 20 U.S.C. 1001 - 1155, as amended;

(3) "full-time student" means an undergraduate or career education student who is enrolled and is in regular attendance at classes for at least 12 semester hours of credit or the equivalent during the semester or a

graduate student who is enrolled and is in regular attendance at classes for at least nine semester hours of credit or the equivalent; any combination of semester hours of credit, or the equivalent, aggregating to the requisite number of semester hours and undertaken during a semester at two or more public or private institutions of higher education constitutes full-time student status;

(4) "half-time student" means an undergraduate, graduate, or career education student who during the semester is enrolled and is in regular attendance at classes at one or more public or private institutions of higher education for at least a total of six semester credit hours or an equivalent of six semester credit hours, and includes a career education student enrolled and in regular attendance in classes for at least 15 hours a week;

(5) "school year" means an academic period that is a minimum of 30 weeks of instructional time that begins between September 1 of one year and August 31 of the following year;

(6) "summer term" means the period from June 1 through August 31.

Article 05 . ALASKADVANTAGE LOAN PROGRAM

Sec. 14.43.164. Use of loan.

A borrower may use a loan under AS 14.43.161 - 14.43.168 only for postsecondary education and reasonably related purposes as authorized by the federal guaranteed student loan program.

Sec. 14.43.166. Repayment of loans.

A borrower's obligation to commence repayment of the principal and interest on a loan under AS 14.43.161 - 14.43.166 and 14.43.168 begins six months after the borrower's completion or other termination of the postsecondary education program. The commission may accelerate the repayment of any loan made in error or in reliance upon a false statement made by the borrower. The commission shall determine the period over which loans are repaid; however, the maximum period of repayment of loans may not exceed the maximum period permitted under applicable provisions of the federal guaranteed student loan program.

Sec. 14.43.168. Default.

(a) The commission shall establish the default requirements for loans made under AS 14.43.161 - 14.43.168; however, the requirements may not be less restrictive than those established by the federal guaranteed student loan program.

(b) The provisions of AS 14.43.145 - 14.43.155 apply to loans under AS 14.43.161 - 14.43.168 that are in default.

Article 06 . ALASKA SUPPLEMENTAL EDUCATION LOAN PROGRAM

Sec. 14.43.170. Creation; purpose.

There is created the Alaska supplemental education loan program to provide postsecondary educational supplemental financial assistance. Supplemental financial assistance is available only if the financial aid available through the AlaskAdvantage loan program is insufficient to cover the costs of attendance at a postsecondary institution or if the borrower does not qualify for financial aid under the federal guaranteed student loan program. The commission shall make the public aware of the Alaska supplemental education loan program to facilitate providing loans to as many eligible borrowers as possible.

Sec. 14.43.171. Applicability of other laws.

The provisions of AS 14.43.120(d)(4), 14.43.122, 14.43.135, 14.43.140, 14.43.145 - 14.43.160, 14.43.164, 14.43.166, and 14.43.168 apply to the loans made under AS 14.43.170 - 14.43.175 as if the loans were made under those applicable provisions.

Sec. 14.43.172. Eligibility.

(a) For a borrower to be eligible for a loan under AS 14.43.170 - 14.43.175, the borrower must be, or be about to be, enrolled in a postsecondary institution on at least a half-time basis and must be

(1) a resident of this state

(A) attending or about to attend a postsecondary institution that has been approved by and has executed a program participation agreement with the commission; or

(B) attending or about to attend an approved federal family education loan institution; or

(2) physically present in this state and attending or about to attend an approved federal family education loan institution located in this state.

(b) To meet the residency requirement of (a) of this section, the borrower must meet the standards set out in AS 14.43.162(b).

(c) In addition to the provisions of (a) of this section, a borrower is eligible for a loan under AS 14.43.170 - 14.43.175 if the borrower

(1) is not delinquent in payment on a loan previously awarded by the commission;

(2) at the time of application or loan disbursement, does not have a past due child support obligation established by court order or by the child support services agency under AS 25.27.160 - 25.27.220;

(3) has not, within the previous five years, had a loan discharged or written off by the commission for any reason;

(4) does not have a status, at the time of application for a loan or disbursement of loan money, that would prevent the borrower from repaying the loan as it becomes due;

(5) has not, within the previous five years, defaulted on another loan made to the borrower by a lending entity unless the borrower can show good faith efforts to repay the loan and extraordinary circumstances that led to the default;

(6) has a credit history, at the time of application for a loan, that demonstrates an ability and willingness to pay an extension of credit or loan as it becomes due; and

(7) has complied with the military selective service registration requirements imposed under 50 U.S.C. App. 453 (Military Selective Service Act), if those requirements were applicable to the person.

(d) The commission may not make a loan to a borrower who has been in default on a loan previously awarded by the commission unless the previously awarded loan has been paid in full.

(e) Notwithstanding (c)(4) - (6) of this section, the commission may make a loan to a borrower if another individual who satisfies the requirements of (c) of this section cosigns the loan.

(f) The commission may withhold disbursement of a loan if the borrower no longer meets the eligibility standards set out in this section.

(g) A borrower who is attending a postsecondary institution in this state that has been approved by the commission but is not an approved federal family education loan institution must also comply with and meet any other requirements established by the commission.

Sec. 14.43.173. Loan award maximums; use of loan award.

(a) In a school year, the commission may make a loan to an eligible borrower under AS 14.43.170 - 14.43.175 attending an eligible postsecondary institution not to exceed

(1) $8,500 to an eligible undergraduate student attending a college or university;

(2) $9,500 to an eligible graduate student attending a college or university;

(3) $6,500 to an eligible student attending a career education program.

(b) The commission may not award loans made under AS 14.43.170 - 14.43.175 to a borrower for more than

(1) a total of $42,500 for undergraduate study;

(2) a total of $47,500 for graduate study; or

(3) a combined total of $60,000 for undergraduate and graduate study.

(c) To maintain a loan award under AS 14.43.170 - 14.43.175, the borrower must continue to be in good standing as determined by the institution and approved by the commission.

Sec. 14.43.174. Interest.

(a) The interest rate on a loan made under AS 14.43.170 - 14.43.175 shall be set by the corporation, but the annual rate may not exceed 8.25 percent. Interest on a loan made under AS 14.43.170 - 14.43.175 accrues from the time the loan is disbursed.

(b) A borrower may elect to make payments of interest that is payable during the borrower's term of attendance at the postsecondary institution or during certain deferment periods authorized by the commission; however, the commission shall capitalize any unpaid interest as part of the principal to be repaid as agreed, or upon graduation, withdrawal, or completion of the deferment period.

Sec. 14.43.175. Repayment of loans.

A borrower's obligation to commence repayment of the principal and interest on a loan under AS 14.43.170 - 14.43.175 begins six months following the borrower's completion or other termination of the postsecondary program or the date that the borrower ceases to be enrolled on at least a half-time basis. The commission shall set the repayment terms of a loan under AS 14.43.170 - 14.43.175.

Sponsor Statement

Committee Substitute for 2nd Sponsor Substitute for HB 272: Reducing the Principal of Postsecondary Education Loans for Alaska Students Who Remain in or Return to Alaska

Currently Alaskans pay interest rates of roughly 7% and 8% for outstanding and new student loans. In contrast, used car loans are currently being issued by some lenders at 3% and less. Many Alaskans are struggling and Alaska has a history of losing those who obtain higher education degrees and job training to jobs outside of Alaska.

This legislation is one way we can lessen the financial burden on Alaskans who receive their job training or higher education in Alaska, or who move back to Alaska after receiving that education. It is aimed at strengthening the Alaskan economy, helping Alaskans prosper, and retaining more Alaskan talent.

This bill restructures Alaska student loans by reducing the principal amount of student loans for residents by three percent a year. The borrower must establish and maintain residency for one year prior to obtaining the loan, must maintain residency in Alaska while repaying the loan, and cannot be in default. A reduction in principal provided by this bill is in addition to any other available reduction in principal or interest rate. The purpose of this legislation is to help encourage Alaska's youth to remain in or return to Alaska following completion of their postsecondary studies.

The reduction of principal is subject to appropriation by the legislature for the amount necessary to offset the amount of reduced principal. The commission will establish a system for reducing or prorating principal reductions if the amount appropriated is insufficient to offset the full amount of principal reductions.

Please feel free to contact our office if you have any questions.

MEMORANDUM March 3, 2012

SUBJECT: Loan Principal Reductions -- CS2dSSHB 272( )
(Work Order No. 27-LS1162\R)

TO: Representative Les Gara
Attn: Toby Smith

FROM: Gerald P. Luckhaupt
Assistant Revisor

You have asked if a degree or certificate program must be completed before a loan principal reduction can be obtained by a borrower under proposed AS 14.43.123. The answer is yes. AS 14.43.123(a) provides that

> the commission shall provide for a reduction of three percent a year of the principal amount of a loan issued under AS 14.43.091 - 14.43.160, 14.43.161 - 14.43.168, or 14.43.170 - 14.43.175 at the end of each calendar year if
>
> (1) the borrower establishes and maintains residency for one year before obtaining the loan;
>
> (2) the borrower maintains residency in the state while repaying the loan;
>
> (3) the loan for which the reduction of the principal is allowed is not in default;
>
> (4) the principal of the loan is not otherwise eligible to be fully repaid or forgiven by the state under another program; **and**
>
> (5) **the borrower completed in a timely manner the degree or certificate program for which the loan was issued**.

The completion of the degree or program is a prerequisite to obtaining a loan principal reduction along with requirements listed in (a)(1) - (4). It appears to me that the first loan principal reduction could not occur for a calendar year until the borrower graduates or completes the program and is repaying the loan while a resident of Alaska.

A BILL

FOR AN ACT ENTITLED

"An Act providing for a reduction of the principal of postsecondary education loans for residents."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.123. Reduction of loan principal for residents. (a) Notwithstanding a contrary provision of law, the commission shall provide for a reduction of three percent a year of the principal amount of a loan issued under AS 14.43.091 - 14.43.160, 14.43.161 - 14.43.168, or 14.43.170 - 14.43.175 at the end of each calendar year if

(1) the borrower establishes and maintains residency for one year before obtaining the loan;

(2) the borrower maintains residency in the state while repaying the loan;

(3) the loan for which the reduction of the principal is allowed is not in

default;

(4) the principal of the loan is not otherwise eligible to be fully repaid or forgiven by the state under another program; and

(5) the borrower completed in a timely manner the degree or certificate program for which the loan was issued.

(b) The reduction of principal under (a) of this section is subject to appropriation by the legislature to the commission of the amount necessary to offset the amount of reduced principal provided to borrowers. The commission shall, by regulation, establish an equitable system for reducing or prorating principal reductions among borrowers if the amount appropriated is insufficient to offset the full amount of principal reductions.

(c) A reduction of the principal of the loan provided under this section is in addition to any other available reduction of the principal of the loan or interest rate.

(d) A person who is issued a reduction of the principal of a loan under this section in error shall repay the amount of the reduction, plus interest.

(e) The commission may adopt regulations necessary to implement this section, including regulations for partial reductions in principal during the year when a borrower returns to the state after completing the degree or program under (a)(5) of this section. The regulations must include a description of timely completion of postsecondary education programs.

(f) In this section, "resident" or "residency" means living in the state with the intention of remaining permanently without claiming residency in another state or country.

*** Sec. 2.** AS 14.43.171 is amended to read:

Sec. 14.43.171. Applicability of other laws. The provisions of AS 14.43.120(d)(4), 14.43.122, **14.43.123.** 14.43.135, 14.43.140, 14.43.145 - 14.43.160, 14.43.164, 14.43.166, and 14.43.168 apply to the loans made under AS 14.43.170 - 14.43.175 as if the loans were made under those applicable provisions.

ALASKA STATE LEGISLATURE

REPRESENTATIVE LES GARA

February 28, 2012

Re: Proposed Clarifying Amendment to 2nd SS to HB 272

Dear Chair Dick and committee members:

Attached is a proposed amendment that further addresses concerns brought to us by the Alaska Commission on Postsecondary Education. We have addressed the following concerns:

1) First, they feel it is easier to administer a "reduction of loan principle" than the compounded interest rate.
2) The original bill gave a retroactive interest rebate to students who move back to the state, for the period they were gone. That would have been difficult to administer. We have provided that residents who go to school out of state shall get the loan reduction upon returning to Alaska.
3) We have clarified that the recipient must be an Alaska resident before leaving the state to qualify for the loan reduction when they return.
4) We have clarified that this provision does not apply to students who are already entitled to full loan repayment under another program.
5) We give the Alaska Student Loan Corporation the power to adopt rules for determining how to reduce this benefit if legislative appropriations are inadequate.

Thank you. We would hope this amendment could be adopted if it satisfies the committee, as it will simplify the debate and reduce the time the committee will have to spend working on this bill.

Sincerely,

Rep. Les Gara

ALASKA STATE LEGISLATURE

REPRESENTATIVE LES GARA

February 20, 2012

Representative Alan Dick
Alaska House of Representatives
State Capitol, Room 104
Juneau, Alaska 99801

Executive Director Diane Barrans
Alaska Commission on Postsecondary Education
3030 Vintage Blvd.
Juneau, Alaska 99801

Dear Representative Dick and Ms. Barrans:

Thank you for your letter expressing concerns and issues relative to SSHB 272, an Act providing for a reduction in interest on post-secondary education loans for residents. A Sponsor Substitute has been filed and is attached to this letter. I will also clarify your concerns here.

Regarding residency: A borrower must be an Alaska resident for one year before qualifying for the in-state 3% loan rate reduction, and declare Alaska as his or her residence per the legal rules for residency. A borrower who goes to school out of state and returns to Alaska must be an Alaska resident for the year prior to leaving Alaska to attend school. A borrower who leaves Alaska after completion of the degree or certificate program for which the loan was issued and does not return within two years will not qualify for the discount.

Regarding completion: The intent of the bill is that the discount will apply only to those borrowers who complete their coursework in the time required under existing ASLC regulation. ASLC will determine the time in which the coursework must be completed.

Regarding default: A borrower is ineligible for the discount during periods of default.

Regarding garnishment: Garnishment of funds by third parties would not eliminate a borrower's eligibility for a discount under this bill.

Regarding moving in and out of Alaska: A borrower who maintains residency when he or she leaves the state stills qualifies for the discount unless he or she leaves Alaska for more than one year.

Regarding "Prorated": A borrower who goes to school out of state and returns after completion of the degree or certificate program for which the loan was issued is entitled to the 3% reduction,

January-May: State Capitol • Juneau, AK 99801-1182 • (907) 465-2647 • Fax (907) 465-3518
June-December: 716 W. 4th Avenue • Anchorage, AK 99501• (907) 269-0106• Fax (907) 269-0109
Representative_Les_Gara@legis.state.ak.us

plus repayment of the prior higher interest rate accrual, while he or she is out of the state. Upon returning to Alaska, he or she shall receive a retroactive reimbursement for that higher rate, paid equally over the course of five years. The purpose is to encourage borrowers to return to Alaska, with full repayment of the higher interest rate that was accruing for the period while they were gone as an incentive.

Regarding students who remain in Alaska for school: Borrowers are entitled to the 3% reduction for the full period of their coursework, and while they remain in Alaska after timely completion of their coursework.

ALSC financial viability: Funding from general funds will be necessary to the extent the Director of ALSC determines it cannot cover the cost of this program, and/or determines the shortfall will negatively impact the commission's financial ratings or ability to make loans.

Thank you, and please let me know if you have additional questions.

Rep. Les Gara

interest rates provided under this section.

(h) A person who is issued a reduction in the interest rate under this section is eligible to continue receiving the reduction in interest rate, subject to the availability of funds, if the person was a resident of the state for not less than five years after completion of the program for which the loan was issued and leaves the state for not more than one year during the period of repayment of the loan.

(i) A person who is issued a reduction in the interest rate under this section in error shall repay the amount of the reduction, plus interest.

(j) The commission may adopt regulations necessary to implement this section. The regulations must include a description of timely completion of postsecondary education programs.

(k) In this section, "resident" or "residency" means living in the state with the intention of remaining permanently without claiming residency in another state or country.

*** Sec. 2.** AS 14.43.165 is amended by adding a new subsection to read:

(d) A borrower under AS 14.43.161 - 14.43.168 may be eligible for a reduction in the interest rate under AS 14.43.123. The commission shall reduce the interest rate of a loan under AS 14.43.161 - 14.43.168 as specified in AS 14.43.123 if the borrower meets the eligibility requirements of that section.

*** Sec. 3.** AS 14.43.171 is amended to read:

Sec. 14.43.171. Applicability of other laws. The provisions of AS 14.43.120(d)(4), 14.43.122, **14.43.123.** 14.43.135, 14.43.140, 14.43.145 - 14.43.160, 14.43.164, 14.43.166, and 14.43.168 apply to the loans made under AS 14.43.170 - 14.43.175 as if the loans were made under those applicable provisions.

January 31, 2012

Representative Les Gara, *et al.*
Alaska House of Representatives
State Capitol, Room 500
Juneau, Alaska 99801

Dear Representative Gara:

The following is provided to identify some of the concerns and issues relative to legislation introduced earlier this month, sponsored by you and others. The bill in question is SSHB272, an Act providing for a reduction in interest on postsecondary education loans for residents.

In summary, this bill would require the Alaska Commission on Postsecondary Education (ACPE) to, under certain conditions, reduce the interest rate or provide a rebate of interest on loans which are assets of the Alaska Student Loan Corporation (ASLC). These are: Alaska Student Loans, including consolidation loans (AS 14.43.090-.160); AlaskAdvantage federally guaranteed loans, including consolidation loans (AS 14.43.161-.168); and AlaskAdvantage Supplemental Education Loans (AS 14.170-.175). Not covered are loan types not funded by the ASLC: memorial scholarship loans and WWAMI medical education loans, as well as other ASLC-funded loans: Teacher Education Loans, Alaska Family Education Loans, or WICHE Professional Student Exchange Program Loans.

As currently drafted it appears the rate reduction and/or rebate is to be provided if:

1) the borrower is a state resident;
2) the borrower completed the education for which the loan was issued;
3) the borrower is in repayment;
4) the loan is not in default; and,
5) the loan is not eligible to be repaid or forgiven by a third party.

The reduction/rebate appears to be applicable to any outstanding, otherwise eligible loan.

Let me preface these comments by stating that I recognize the bill sponsors' well-meaning interest in assisting borrowers with managing the increasing costs of postsecondary education. However, as described herein, the approach to doing so as set out in this legislation raises fundamental legal, financial, and operational concerns.

printed on recycled paper

Although the agency services these education loans, ACPE does not own the loans nor are they assets of the state. ASLC is the owner of the loans, and its Board establishes the loan interest rates pursuant to AS 14.43.200, 14.43.165, 14.43.174 etc. As you know, in 1987 the state created ASLC as a separate legal entity and transferred loans originated prior to 1988 to ASLC. Given that, I requested ASLC bond counsel, Ballard Spahr, review and comment on the legislation. The enclosed memorandum from Blake Wade and Darci Stephens of Ballard Spahr identifies two substantial legal issues with the bill as drafted: the possible violation of AS 14.42.270, and a constitutional concern arising from ASLC's contractual relationship with debtholders.

Notwithstanding the legal implications of the proposed legislation, ASLC would face very serious financial and reputational consequences related to this legislative action. Enclosed is a memo from ASLC financial advisor Lee Donner, FirstSouthwest, containing his comments and concerns relative to the proposals in SSHB272. As Mr. Donner notes, the outstanding loans are assets pledged as security for the purposes of repaying outstanding debt and paying operating costs. Any effort to amend the loan terms retroactively will not only result in negative action by bond rating agencies, but even the attempt to do so in this matter may cast a pall over ASLC's future financing opportunities. ASLC anticipates issuing future debt to continue to finance new education loans.

As discussed with you previously, ASLC has, to the extent possible, provided borrower benefits in the form of cost reductions which are annually approved by the Board. Over the past ten years ASLC has provided such benefits to our borrowers totaling approximately $30 million. Benefits have been reduced as a result of various changes impacting ASLC's financial capacity—primarily as a result of the collapse of the asset-backed bond market and resulting increase in the costs of financing. Unlike a depository lender with access to cash at historically low rates, ASLC's lending costs are such that the current net yield on the loan portfolio is less than one percent (0.95%). This bill appears to provide a new entitlement for new and existing borrowers, but without an external source of funding from which to pay the costs of the benefit, which would have serious adverse impacts on ASLC.

In addition to these legal and financial concerns, even were those matters to be resolved in some fashion, implementation of the bill, as proposed, would be highly manual and labor intensive, resulting in significant costs to the state above and beyond the expense of the interest reduction and rebates. Bear in mind that currently covered loan types encompass both fixed and variable rate loans, the base rates of which range from between 2.9% and 9.0%[1] depending on when the loans were originated, and, after borrower benefits are applied, from 0.55% to 7.55%. The bill proposes no floor to the reduction to be paid; therefore, while some borrowers may be

[1] Loans made prior to 2002-03 were charged 0% interest while enrolled in their program of study. The interest began accruing only after they left school, resulting in repayment interest being set at a higher rate.

paying a lower rate, others would be receiving principal reduction credits. Because of the proposed method for determining an individual's rebate, each and every borrower's rebate would be unique given their school enrollment patterns and timeline, and interest rates and related adjustment, as well as their loan(s) status history. As such, both the calculation and benefit application would need to be manually performed.

To be able to respond fully on the feasibility of implementing this benefit program a number of unanswered questions would need to be resolved. These questions include:

- What will be the standard for maintaining residency?
- What does "completion of the education for which the loan was issued" mean—successful completion of the term, academic year, or degree completion/graduation?
- Will a borrower be permitted to move in and out of "default" for the purpose of receiving the interest reduction?
- Will involuntary payments (wage garnishment, PFD garnishment) on a loan make the loan eligible for the interest reduction?
- How will eligibility for loan repayment or forgiveness by a third party be determined?
- What constitutes third-party repayment—does that include available cosigners on the loans?
- Eligibility is "for the time period in which the borrower establishes and maintains residency"—how will instances of borrowers moving in and out of the state while repaying the loan impact their benefit?
- Would borrowers who accelerate their loan repayment be eligible for the benefit, and how would it be paid out in such cases?
- In 14.43.123 (b), what does "amortized and prorated from the beginning of the interest accrual period…" mean?
- In 14.43.123 (c), what does this mean and how is it calculated?
- What is meant by "repayment" period? Loans may be in: in-school, grace, deferment, and forbearance statuses—how are those periods to be treated for borrowers who are in state, either continuously or periodically?
- Given that the language appears to create an unlimited borrower entitlement at the point of loan disbursement, or the effective date of the bill that is triggered by the "completion of education," over what period of years would a borrower be able to stretch their pursuit of that goal and retain their eligibility for the rate reduction and rebate?
- The bill also seems predicated on the idea that the borrower left the state for postsecondary education—how are borrowers who remain in Alaska to be treated with respect to the interest rate reduction and/or interest expense rebate prior to the start of their "repayment period" but before their "completion of education"?

I am very much aware of, and share your growing concerns about, the escalating costs of postsecondary education, specifically as it impacts borrowers' levels of education loan debt. Your support for Alaska Performance Scholarship and AlaskAdvantage Education Grant funding

is much appreciated and, I am convinced, will have a positive impact on Alaska's students. In the case of SSHB272, the proposed approach to lowering costs of education loan borrowing is very problematic, and I wanted to bring these matters to your attention prior to a public hearing.

Sincerely,

Diane Barrans

MEMORANDUM

TO Diane M. Barrans, Alaska Student Loan Corporation

FROM Blake K. Wade
Darci L. Stephens

DATE January 27, 2012

RE Alaska House Bill No. 272

As bond counsel to the Alaska Student Loan Corporation (the "Corporation"), we have been asked to review Alaska House Bill No. 272 ("House Bill 272") on behalf of the Corporation. Set forth below is a brief summary of some of the legal issues raised by House Bill 272.

Violation of Alaska Statutes 14.42.270

As you know, House Bill 272 is designed to provide an interest rate reduction on certain loans (the "Student Loans") issued under the provisions of Alaska law. Pursuant to Alaska Statutes 14.42.100 et seq. (the "Act"), the Corporation has issued various series of bonds and other debt which are secured by a pledge of certain Student Loans. Under Section 14.42.270 of the Act, the State of Alaska (the "State") has pledged to not impair the rights of the Corporation to fulfill its obligations to its bondholders. Section 14.42.270 reads as follows:

> Sec. 14.42.270. Pledge and agreement of state.
> The state pledges to and agrees with holders of bonds issued by the corporation that the state will not limit or alter the rights and powers vested in the corporation under AS 14.42.100 - 14.42.990 to fulfill the terms of a contract made by the corporation with the bondholders or in any way impair the rights and remedies of the bondholders until the bonds, together with the interest on them with interest on unpaid installments of interest, and all costs and expenses in connection with an action or proceeding by or on behalf of the bondholders, are fully met and discharged. The corporation may include this pledge and agreement of the state in a contract with bondholders.

As written, House Bill 272 would result in the reduction of the interest rate on the Student Loans which serve as the source of repayment for the Corporation's bonds. The enactment of House Bill 272 would impair the rights of the Corporation's bondholders and thus appears to violate the "non-impairment" pledge made by the State under Section 14.42.270 of the Act.

Violation of the Alaska and U.S. Constitution

House Bill 272 likely violates both the U.S. Constitution and the Alaska State Constitution. Article I, Section 10 of the U.S. Constitution prohibits a state from passing a "Law impairing the Obligation of Contracts." This "Contract Clause" prohibits states from enacting any law that retroactively impairs contractual rights. Article I, Section 15 of the Alaska Constitution contains a similar provision, which provides that "No law impairing the obligation of contracts . . . shall be passed."

The terms of municipal bonds are contractual obligations protected by the Contract Clause. The U.S. Supreme Court has developed a two-part analysis to determine whether an initiative by a state legislature violates the Contract Clause. This same basic test has been adopted by the courts in Alaska. The Corporation, as a public corporation and governmental instrumentality under Alaska law, would likely be subject to this same analysis. The major determinant for a violation of the Contract Clause is whether the initiative substantially impairs the issuer's obligations to debtholders. House Bill 272 appears to impair the Corporation's obligation to its bond and other debtholders through the reduction of the interest rate on the Student Loans pledged to repay the debt. This reduction in the revenues making up the source of repayment of the Corporation's debt would likely violate both the U.S. Constitution and the Alaska Constitution as an impairment of the Corporation's contract with debtholders.

Date: January 27, 2012

To: Diane Barrans, Executive Officer
Alaska Student Loan Corporation
Cc: Charlene Morrison, Chief Financial Officer
Alaska Student Loan Corporation
Subject: HB 272, an Act providing for a reduction in interest on Postsecondary education loans for residents

---

You have asked that FirstSouthwest Company ("FSC") review Alaska HB 272 and advise Alaska Student Loan Corporation (the "Corporation") as to the implications of this proposed legislation for the currently outstanding student loan financings of the Corporation as well as the impact it might have on future anticipated student loan securitizations issued by the Corporation.

As it currently reads the proposed legislation would create the potential for a significant but unquantifiable reduction in yield on some of the Corporation's student loan portfolios, and does not provide any funding to offset that loss of revenue. In addition, implementation of the provisions in the legislation would be administratively complex and result in the expenditure of some portion of current net revenues on increased operational expense. The Corporation currently has two types of student loan financing vehicles in place: (1) the Straight-A Commercial Paper Conduit program, and (2) multiple student loan revenue bond issues and special project bond issues secured by student loan portfolios. The impact on these financings would vary.

Straight-A Commercial Paper Conduit: Implementation of HB 272 would represent a retroactive addition of a significant "borrower benefit" to loans pledged as security under the Corporation's Straight-A borrowing. Had said "borrower benefit" been in place prior to the Corporation executing it's Straight-A borrowing, the program administrator would have, at the least, imposed a higher borrower benefit reserve requirement, and might have precluded the Corporation from pledging any loans that could be subject to the benefit. Should the benefit created by HB 272 take effect after the Corporation has entered into the Straight-A borrowing, the financial implications range from an unquantifiable impairment to the economics of that transaction to the possibility that the Corporation could be required to repurchase those loans from the Straight-A conduit, a requirement that the Corporation might not be able to comply with because it lacks the requisite liquidity to do so.

Outstanding Bond Issues: All of the Corporation's outstanding bond issues contain certain covenant restrictions with respect to actions taken or not taken that could have a material impact on the yield of the student loans securing the bonds. I will not attempt to address the legal implications of breaching those covenants, but from a financial perspective, it is a virtual certainty that the rating agencies rating the

affected bonds would institute a ratings review with possible outcomes ranging from ratings downgrades to requirements for the deposit of additional assets into the affected trusts, all of which would present significant financial challenges to the Corporation.

Future Bond Issues/Financings: New money or refunding bond issues in the student loan arena are already dramatically more challenging as a result of changes to the Higher Education Act, the market impact of the credit crisis of 2009, changes in rating agency criteria for all types of student loan assets, and new regulatory requirements emanating from Dodd/Frank. The administrative and economic impact of HB 272 would put the Corporation in a position where successful execution of new money or refunding transactions would be doubtful at best.

Even if HB 272 were amended to provide state funds to offset the revenue losses on the affected loans, there would still be significant issues with both currently outstanding and future financings, primarily as a result of annual appropriation risk, time lags between loss of revenue and reimbursement, and the fact that utilization of or "take rates" on the benefit are effectively unquantifiable.

MEMORANDUM February 23, 2012

SUBJECT: Sectional summary (2d Sponsor Substitute for HB 272 (Work Order No. 27-LS1162\D))

TO: Representative Les Gara
Attn: Toby Smith

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Requires the Commission on Postsecondary Education to provide for a three percent reduction in interest rates on specified state issued student loans except in certain circumstances for a student who resides in the state during or after completion of the program for which the loan was issued.

Section 2. Cross references in the AlaskAdvantage Loan Program the interest loan reduction available under sec. 1 of the bill.

Section 3. Cross references in the Alaska Supplemental Education Loan Program the interest loan reduction available under sec. 1 of the bill.

SSHB 272 Reducing Alaska Student Loan Interest Rate by 3% for Those Who Remain In or Return to Alaska: Building a Stronger Alaska Workforce

Currently Alaskans pay interest rates of roughly 7% and 8% for outstanding and new student loans. In contrast, used car loans are currently being issued by some lenders at 3% and less. Many Alaskans are struggling and Alaska has a history of losing those who obtain higher education degrees and job training to jobs outside of Alaska.

This legislation is one way we can lessen the financial burden on Alaskans who receive their job training or higher education in Alaska, or who move back to Alaska after receiving that education. It is aimed at strengthening the Alaskan economy, helping Alaskans prosper, and retaining more Alaskan talent.

This bill restructures Alaska student loan interest rates as follows. As long as a student remains in Alaska the interest on state-issued student and vocational education loans will be reduced by 3%. If a student leaves Alaska for school or job training and returns within two years of completing coursework, that student will receive a rebate of the additional 3% interest that accrued on the loans while they were out of state. That rebate will come in equal amounts over a five year period so that if the student only returns to Alaska for a short period of time, he or she only qualifies for a partial rebate. A 3% reduction in the interest rate on an average loan will reduce interest payments by nearly one-half.

The two-year allowance recognizes that Alaskans may undertake post-schooling training or find employment out of state shortly after completing their coursework, the benefits of which they may intend to bring back to the state afterwards.

January-May: State Capitol • Juneau, AK 99801-1182 • (907) 465-2647 • Fax (907) 465-3518
June-December: 716 W. 4th Avenue • Anchorage, AK 99501• (907) 269-0106• Fax (907) 269-0109
Representative_Les_Gara@legis.state.ak.us

If a student returns more than two years after completing his or her coursework, he or she doesn't receive a rebate on the interest that accrued while he or she was out of state. Upon returning to Alaska, however, he or she will benefit from the lower rate for the remainder of the time he or she is repaying his or her loans and remaining in Alaska. This bill applies to existing and new loans.

A reduction in interest rate provided by this bill is in addition to any other available reduction in interest rate.

If the point is reached whereupon the overall interest rate available to eligible students reaches three percent, the Alaska Student Loan Corporation shall have the discretion to determine whether or not the overall interest rate shall fall below the rate of three percent. Should it be determined that the reduction will negatively affect the corporation's bond rating or its ability to fund future loans, the commission may not provide a reduction in loan interest rates unless an appropriation is made.

Please feel free to contact our office if you have any questions.

2d SPONSOR SUBSTITUTE FOR HOUSE BILL NO. 272

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY REPRESENTATIVES GARA, GUTTENBERG, GARDNER, KERTTULA, HOLMES, TUCK, KAWASAKI, PETERSEN, GRUENBERG, AND CISSNA, Miller

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act providing for a reduction in interest on postsecondary education loans for residents."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.123. Interest rate reduction for residents. (a) Notwithstanding a contrary provision of law and except as provided in (e) - (h) of this section, the commission shall provide for a reduction of three percent a year from the established interest rate for a loan issued under AS 14.43.091 - 14.43.160, 14.43.161 - 14.43.168, or 14.43.170 - 14.43.175 for the time period in which the borrower establishes and maintains residency in the state while repaying the loan if

(1) the loan for which the reduction in interest is allowed is not currently in default;

(2) any portion of the principal or interest on the loan is not otherwise eligible to be repaid or forgiven by the state under another program; and

(3) the borrower completed the degree or certificate program for which the loan was issued in a timely manner.

(b) For a borrower eligible for a reduction in the interest rate under (a) of this section, the commission shall provide for a three percent reduction in the interest rate, prorated from the beginning of the loan interest accrual period for the loan to the date the borrower becomes eligible under (a) of this section, but not for a period longer than five years, if the borrower was a resident of the state for not less than one year before enrolling in the postsecondary program for which the loan was issued and

(1) established residency in the state in the two-year period immediately following completion of the degree or certificate program for which the loan was issued; or

(2) attended the postsecondary program for which the loan was issued and maintained residency in the state.

(c) The commission shall prorate on an annual basis a reduction in the interest rate under (a) of this section over the period of residency that coincides with the loan repayment period.

(d) A reduction in interest rate provided under this section is in addition to any other available reduction in interest rate.

(e) Notwithstanding the reduction in interest rate available to a student under this section, the corporation may maintain a minimum three percent interest rate for loans issued by the corporation if necessary for a purpose that is consistent with the duties of the corporation.

(f) By January 1 of each year, the corporation shall determine whether and to what extent a reduction of interest rates under this section would negatively affect the corporation's bond rating and ability to fund future loans.

(g) If the corporation determines that a reduction of interest rates under this section would negatively affect the corporation's bond rating or its ability to fund future loans, the commission may not provide a reduction in loan interest rates under (a) or (b) of this section for the affected fiscal years unless an appropriation is made to cover the costs of the reduction. If the appropriation is inadequate to pay reductions in interest rates for all eligible loans, the commission shall prorate all reductions in

MEMORANDUM January 21, 2012

SUBJECT: Applicability to outstanding student loans (HB 272)
(Work Order No. 27-LS1162\M)

TO: Representative Les Gara
Attn: Toby Smith

FROM: Jean M. Mischel
Legislative Counsel

You have asked whether current student loan statutes affect the applicability to outstanding student loans issued under the relevant statutes of the above-referenced bill draft that provides for a reduced interest rate for state residents. The short answer is "no"; current statutes do not expressly prohibit the inclusion of outstanding student loans, and the conditions for the reduced interest rate in the draft bill do not limit the applicability of the bill to new loans.

While interest rates for student loans issued in the state are established under current law by the Alaska Student Loan Corporation based on the interest rate paid on bonds issued by the corporation and administrative costs under AS 14.43.120 and 14.43.174, nothing in current law prohibits the reduction of an interest rate by the state either paying the rate difference or otherwise forgiving a portion of the accrued interest. Even if current law otherwise affected interest rates on outstanding loans, the bill draft contains modifying language that would override that effect by providing that the reduction occur "notwithstanding a contrary provision of law." Since the borrower suffers no impairment from a retroactive application of the interest rate loan reduction, an impairment of contract problem does not appear to exist.

The bill as drafted could therefore be applied to both new and outstanding loans, particularly if the legislature appropriated sufficient funds to cover bond holder interest rates, if necessary. The only conditions a borrower must meet to take advantage of the rate reduction are that (1) the loans were issued by the state under specified programs, and (2) the borrower resides in the state during the repayment period. The reduction is also made available to the accrued interest retroactively if the borrower returns to the state within two years of graduation.

If there is confusion about the applicability of the bill as drafted, an uncodified applicability provision may be added to clarify the matter. Courts will also look at legislative intent if the applicability is challenged and the court finds the wording of the

law ambiguous in that regard. The sponsor statement and committee records addressing applicability would then become relevant.

If I may be of further assistance, please advise.

MEMORANDUM December 29, 2011

SUBJECT: Residency preference (Work Order No. 27-LS1162\A)

TO: Representative Les Gara
Attn: Toby Smith

FROM: Jean M. Mischel
Legislative Counsel

The draft bill providing for an interest rate reduction on specified postsecondary student loans issued by the state for state residents is enclosed. While the purpose of the reduction may be legitimate under an equal protection review, that purpose must be clearly stated on the record. In addition, state residency requirements for state benefits has been scrutinized under the privileges and immunities clause of the United States Constitution. Both issues are further analyzed below.

The state constitution may not be applicable any longer to issues involving resident preference within the state. Following decisions in two cases invalidating former Alaska local hire statutes, the legislature proposed, and the voters approved, a state constitutional amendment. That provision, adopted at the November 1988 general election and effective January 4, 1989, says:

> Resident Preference. This constitution does not prohibit the State from granting preferences, on the basis of Alaska residence, to residents of the State over nonresidents to the extent permitted by the Constitution of the United States.

The author of the resolution proposing the addition, then-Representative Dave Donley, provided this statement for publication in the 1988 general election voter information pamphlet:

> Voter approval of Ballot Measure No. 1, a proposed amendment to Alaska's Constitution to give the state clear authority to grant certain preferences to its own citizens consistent with the U.S. Constitution, will give state resident preference laws a fighting chance in the courts.

The Alaska equal protection clause has been interpreted as being more restrictive than the federal clause. With the amendment's approval at the November 1988 general election, the voters have indicated a will to neutralize state constitutional obstacles to the adoption of state resident preferences and leave only the federal constitution as a potential constitutional impediment. This means that consideration of article I, section 23 is

critical to any debate about residency requirements in Alaska; however, its effect is arguably uncertain because, in the only reported decision weighing the scope of art. I, sec. 23, the Alaska Supreme Court declined to rule on the question of whether or not it makes the state constitution irrelevant to resident preference in hiring. At this point, we can only hypothesize that art. I, sec. 23 will be interpreted by future courts as eliminating the state constitution as an impediment to resident preference in hiring. If it is, then only federal constitutional impediments would remain. However, discriminating between Alaska residents based on length of residency will probably still be subject to the state equal protection clause.

The United States Supreme Court in *Martinez v. Bynun,* 461 U.S. 321, 328, (1983), has concluded that there is no fundamental right or suspect class involved in an equal protection analysis of a resident preference. The Court has said that, because of this, resident preference statutes under a state court review should be subject only to rational basis analysis. In a case involving a durational residence requirement in connection with eligibility for welfare benefits, the U.S. Supreme Court found the durational requirement invalid on the basis that it unconstitutionally burdened the right to travel, which it said is "expressly protected" by article IV, section 2 of the federal constitution.

In *Zobel v. Williams*, 457 U.S. 55, 64 (1982), the U.S. Supreme Court found constitutional issues regarding an Alaska statute establishing a durational residency requirement for permanent fund dividend eligibility. Unlike Alaska's existing permanent fund durational residency requirement, the one challenged (and defeated) in *Zobel* rewarded long-term residents with bigger dividends than short-term residents were paid, largely based on a rationale that long-term residency was deserving of a greater reward. The Court found the statute constitutionally invalid because it violated the federal constitution's equal protection clause. In one part of its opinion the Court said of the State of Alaska's claim that it was permissible to discriminate between residents based on their length of residency for the purpose of varying the portions of state benefits each resident is allowed:

> Alaska's reasoning could open the door to state apportionment of other rights, benefits, and services according to length of residency. It would permit the state to divide citizens into expanding numbers of permanent classes. Such a result would be clearly impermissible.

Id.

This bill draft allows for a retroactive interest rate reduction for borrowers who return to the state within two years. That provision may raise both equal protection and privileges and immunities concerns by those who return to the state after the two year point.

If I may be of further assistance, please advise.

Enclosure

The Brain Drain

by Jeff Hadland
Economist

About 38 percent of young Alaskans are leaving for college and jobs in the lower 48 and not coming back

Alaska has one of the highest migration rates in the nation. The general belief is that a disproportionately large percentage of Alaska's young adults leave Alaska after high school or after pursuing some postsecondary education in the state. Also, it is widely assumed that the percentage of Alaskans that continue their education beyond high school is among the lowest in the nation. This report presents data to quantify these phenomena, sometimes characterized as a "brain drain".

This report tracks a study group of 16,114 young Alaskans, age 15-16 in 1994 (1994 Youth). It follows them through their postsecondary education in Alaska and at out-of-state institutions. It examines these data to determine how many of the original study group are currently employed in Alaska.

Summary of Findings

- Just over 62 percent of youth age 15-16 in 1994 were still Alaska residents in 2002, compared with 71.3% of the total Alaska population.
- A little more than 55 percent of the 1994 Youth group reported some postsecondary education, nearly identical to the postsecondary education rate of a group of 17-18 year old Alaska youth in 2000.
- Approximately 62 percent of the 1994 Youth that pursued postsecondary education did so exclusively in Alaska.
- More than 84 percent of the 1994 Youth that had received their postsecondary education exclusively in Alaska were still Alaska residents in 2002, while only 51 percent of those that had received postsecondary education exclusively outside the state were Alaska residents in 2002.
- Nearly 70 percent of the 1994 Youth with postsecondary education attended the University of Alaska at some time from 1996 through 2002.
- More than 12 percent of the total 1994 Youth group earned one or more degrees as of the end of 2002.
- Nearly 54 percent (8,659) of the 1994 Youth group were employed in Alaska in 2002 based upon a match with Alaska unemployment insurance (UI) wage records. Average 2002 earnings varied by educational attainment; youth who had earned a degree at the University of Alaska were the highest earners.

The number of young Alaskans entering the labor force each year is rapidly increasing. In 2002 there were nearly twice as many 16-year-old Alaskans (11,246) as there were new jobs created in Alaska from 2001 to 2002 (6,500). Nevertheless, a significant number of employment

opportunities are available to new entrants to the labor force. The number of new hires each quarter, already large, (see Exhibit 17) may soon increase, as a high percentage of Alaska's workforce approaches retirement age. However, numbers don't tell the whole story; the likelihood exists of a mismatch between the skills of new workers and job openings. Youth face an obvious disadvantage in competition with more experienced workers. The lure of the much larger job markets to the south cannot be ignored. Tracking the postsecondary education and employment patterns of young Alaskans can be helpful in determining priorities and programs in the coming years. Such findings can be used to enhance job opportunities for young Alaskans.

1994 Youth group characteristics

The study group mentioned earlier had significantly more males (52.5%) than females

(47.5%). Males outnumbered females in all age groups in Alaska in 1994. Consistent with the overall population distribution in Alaska, 37.8% of the 1994 Youth population reported their residence in Anchorage, 12.3% in Fairbanks, 10.4% in Mat-Su and 8.7% in Kenai.

No information is currently available indicating whether the 1994 Youth were Alaska high school students in 1994 or graduated from an Alaska high school. In 1996 and 1997, the Alaska Department of Education and Early Development reports 12,209 high school graduates from Alaska school districts. This represents a large percentage of the total high school graduation age population for those years. (The statewide dropout rate for grades 7-12 ranged from 3.4% to 4.1% from 1996 to 1998.)

For purposes of comparison, a second group of Alaska youth age 17 to 18 in 2000 was selected and matched with administrative data. This group of recent high school graduation age youth was examined to determine employment and postsecondary education decisions shortly after their high school years.

Outmigration from Alaska–1994 to 2002

Older youth and young adults typically have the highest migration rates of any population group. This is typically the time when individuals are either continuing their education or considering a serious job or career. In order to achieve these goals, many consider moving to another location. Although the majority of Alaska's 1994 Youth

study group chose to continue their work and/or education close to home, approximately 38 percent chose to leave Alaska to pursue their long-term goals.

Due primarily to outmigration, there was a significant decline in the number of Alaska 1994 Youth from 1994 though 1997, when most of the students would have been old enough to graduate from high school. In 1997, 82.6% of the 1994 Youth group were still Alaska residents based upon PFD application. By 2002, only 62.3% of this population were still Alaska residents. (See Exhibit 1.)

Source Alaska Department of Labor and Workforce Development, Research and Analysis Section

Outmigration rates for Alaska youth age 17-19 and age15-16 in 1994 were the highest of any age group. Fully 37.7% of 15-16 year olds and 38.8% of 17-19 year olds no longer resided in Alaska in 2002, compared to 28.7% of all Alaska residents. (See Exhibit 2.) The migration rate for males and females was virtually the same within the 15-16 age group.

Differences in outmigration rates from Alaska by age group were significant, but they varied dramatically depending on the geographic region where the youth lived in 1994. (See Exhibit 3.) Boroughs in Southeast Alaska exhibited the largest outmigration rates for the 15-16 year old population. Only 50.5% of youth from Ketchikan, 52.5% of Juneau youth, and 57.1% of Sitka youth remained in Alaska in 2002.

Some of Alaska's rural boroughs and census areas had very low outmigration rates. Nearly 90 percent of the 1994 Youth in Wade Hampton, 88.5% of youth in Dillingham, 86.2% in Nome, and 84.9% in Bethel were still in the state through 2002.

More than 14 percent of 1994 Youth moved to another borough or census area in Alaska. (See Exhibit 3.) Rural resident youth were just as likely to move to another part of the state as to move outside Alaska. Seeking a wider variety of education or employment opportunities, most of those that moved from a rural area to other parts of Alaska moved to Anchorage or Fairbanks.

Alaska generally has one of the highest interstate migration rates of any state. Outmigration during the 1990s averaged 7.2% per year for the total population. Based upon analysis of IRS tax return data, 46.9% of gross migration (both inmigration and outmigration) was with states in the western U.S. Washington and California were the two top states for interstate migration. Alaska youth attended postsecondary schools in these same "magnet" states.

Although some of the regions in Alaska with the highest migration rates had slow growing or declining economies, this was not the entire explanation for this pattern. Some of the rural regions of Alaska with relatively low migration rates also exhibited slow growth prospects during the 1990s. Clearly, economic, cultural, and environmental factors play a part in the decision to leave Alaska for continuing education and economic opportunities.

There was very little flow from resident to nonresident status and back over the course of the nine years from 1994 through 2002. For those resident youth in 1994 that were still residents in 2002, more than 90 percent had been residents throughout the entire period. Once they left Alaska and became nonresidents, very few resumed residency in later years.

For the more recent study population of Alaska youth age 17-18 in 2000, 86.1% were still residents of Alaska in 2002, based upon Alaska PFD application.

Postsecondary education rates

At least 55.3% (8,903) of the 1994 Alaska Youth population attended one or more postsecondary schools from 1996 through 2002. More than 34 percent (5,537) of these youth pursued their postsecondary education exclusively in Alaska, 7.4% (1,190) went to school exclusively outside Alaska, while 13.5% (2,176) attended postsecondary education institutions both inside and outside the state.

Nationwide, about 63 percent of high school graduates age 16 to 24, and about 43 percent of all 18 to 24-year-olds had enrolled in college in 1999.

More than 6,200 of Alaska's 1994 Youth attended the University of Alaska at some time from 1996 through 2002. Credits were earned at the University of Alaska from 1996 through 2002 by 34.1% of the 1994 Youth group, with the remainder of those attending having withdrawn, received an incomplete or failed their course(s). Nearly 70 percent of the 1994 Youth that attended a postsecondary institution attended the University of Alaska.

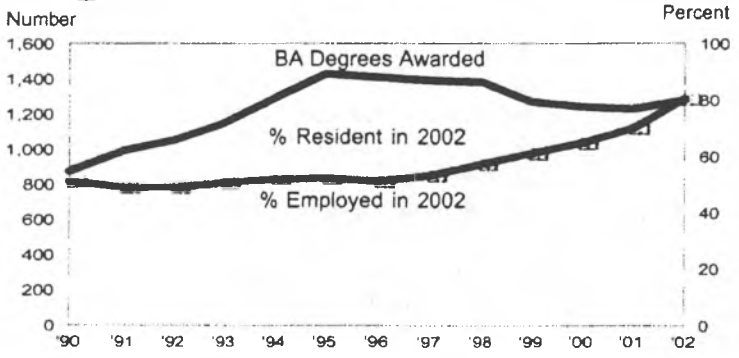
10 Bachelor Degrees from U of A
Percent employed and Alaska resident 2002



Source: Alaska Department of Labor and Workforce Development,Research and Analysis Section

More than 12 percent (1,989) of the 1994 Youth group had earned one or more degrees and/or certificates as of December 2002. From 1996 through 2002, 838 of the youth earned one or more degrees and certificates of all types from the University of Alaska.

Residency and current employment status varied significantly depending upon the location of reported postsecondary education activity. Those 1994 Youth that reported both in-state and out-of-state postsecondary education had the lowest current Alaska employment and residency; only 25 percent of those youth were residents of Alaska and 18 percent reported working in the state in 2002. (See Exhibit 6.)

The percent of the 1994 Youth that attended a postsecondary institution varied significantly by place of residence. (See Exhibit 7.) While the overall postsecondary participation rate was 55 percent, the participation rate by borough/census area varied from 25 percent to 70 percent. Surprisingly, rural areas were represented among both the lowest and highest postsecondary participation groups. Lowest postsecondary participation was reported in the North Slope Borough, Northwest Arctic Borough and Bethel Census Area, while the highest rates were reported in Valdez-Cordova Census Area, Denali Borough and Dillingham Census Area.

The 1994 Youth in the urban areas of Anchorage, Fairbanks and Mat-Su attained the largest number of postsecondary degrees or certificates, and urban areas generally had higher rates of attainment. However, Aleutians West Census Area and Denali Borough both had high rates of degree attainment, but with very small total numbers. In general, rural areas fared poorly in terms of degree attainment, with the North Slope Borough and Wade Hampton having less than two percent of their youth reported as receiving a degree or certificate as of 2002.

Postsecondary education for Alaska residents age 17-18 in year 2000

The 20,413 Alaska resident youth age 17-18 in 2000 were matched with University of Alaska and

National Student Clearinghouse (NSC) files to identify their participation in postsecondary education. (See Exhibits 3 and 4.) Overall participation in postsecondary education mirrored the 1994 Youth group, with a similar 55.1% attending one or more postsecondary institutions. Longer term tracking of the 2000 Youth group will probably result in higher postsecondary education participation rates than the 1994 group.

Although only the most ambitious 17-year-old would have had time to earn a bachelor's degree by the end of 2002, more than 140 youth in this group had earned certificates or associate degrees by that time.

For those youth that had received some postsecondary education as of 2002, two-thirds had received that education exclusively in Alaska. The remainder received some postsecondary education outside the state, with 12.4% continuing their education exclusively outside Alaska.

More females in postsecondary ed

More than 50 percent (4,279) of males and 60.2% (4,602) of females in the 1994 Youth group had some reported postsecondary education. A little less than 10 percent of the males and 15 percent of the females earned a degree. Nearly 59 percent of those with degrees were female. For those attending postsecondary institutions, females were more likely to attend exclusively in Alaska.

Alaska students stay in western U.S.

The 1994 Youth group attended colleges and universities in every state in the union from 2000 to 2002, but most of them attended institutions located in the west coast states. Washington had 530 students from Alaska, Oregon 423, and California 331. Colorado had 213. Utah, Montana, Nevada, and Texas each drew between 113 and 177 of the 1994 Youth.

University of Alaska student data

Nearly 39 percent of the 1994 Youth (6,264 students) attended one or more terms at the University of Alaska from the fall of 1996 through the fall of 2002. However, a large percentage (46.7%) of them attended for three or fewer terms during the period. More than 62 percent of those youth that attended the University of Alaska at some time during the period began attending by the fall of 1997.

The 1994 Youth group attempted 276,866 credits and earned 207,528. The mean number of credits earned from 1996 through fall 2002 was 33, while the median credits earned was 14. More than 53 percent of the students attending the University of Alaska earned between 1 and 30 credits through the fall 2002, while an additional 11.8% of 1994 Youth attended, but earned no credits. (See Exhibit 9.)

More than 43 percent of the female 1994 Youth group and nearly 35 percent of the males attended the University of Alaska at some time from 1996-2002. Approximately 53 percent of the 1994 Youth group that attended the University of Alaska were female. The average number of credits earned by females was 35.2, while males earned on average 30.8 credits.

As of fall 2002, 838 of the youth cohort had received one or more degrees from the University of Alaska. Based upon the first reported degree awarded, 488 had earned a bachelor's degree, 308 an associate degree, and the remainder had earned advanced degrees or other certifications. Each year, the University of Alaska awards approximately 1,300 bachelor's degrees.

Exhibit 13 shows the number of students who earned degrees and the current resident and employment status for each year's degree recipients. As expected, the more recent University of Alaska graduates have the highest current Alaska residency and employment rates, but those students that earned degrees early in the decade have relatively high and stable current employment and residency rates as well. For the more recent youth cohort, those Alaskans age 17-18 in 2000, 38.6% attended the University of Alaska at some time from 1996 through 2002. Nearly 16 percent were still attending the University of Alaska as of fall 2002.

U of A student employment and earnings

A little more than 4,200 current and former students of the University of Alaska from the 1994 Youth cohort were employed in Alaska in 2002. This group earned more than $79 million, based upon administrative record matches with Alaska UI wage records. Students who received one or more degrees at the University of Alaska had the highest average total Alaska earnings in 2002. (See Exhibit 12.) Workers that reported earning between 61 and 90 University of Alaska credits had the second highest average earnings.

No matter the level of educational attainment, males earned more than females in Alaska in 2002. Male University of Alaska degree recipients earned significantly more than females, although females received a much larger number of degrees and many more of them were employed in Alaska in 2002. (See Exhibit 13.) Females who earned a degree at the University of Alaska had wage and salary earnings approximately 50 percent greater than those females who did not attend the University of Alaska. In 2002, males that did not attend the University had average earnings that were 94% as much as the entire male youth cohort while women earned 83.9% as much as all women in the group.

1994 Youth employment and earnings

Total wage and salary earnings in Alaska in 2002 for the 8,659 employed 1994 Youth were $149.3 million. These workers, representing 53.7% of the total 1994 Youth study group, earned on average $17,238 in 2002 compared with $25,808 average annual earnings for all workers employed at some time during the year 2002 in Alaska. The largest number of workers and the largest total earnings were in the Trade, Transportation & Utilities industry. The highest average and median earnings were paid to workers in the Natural Resource & Mining industry. (See Exhibit 15.)

Nearly 53 percent of 1994 Youth employed at some time during 2002 were employed by a single employer. An additional 28.3% of workers were employed by two employers and 12.0% were employed by three. Youth workers were employed an average of 3.2 quarters per year.

Migration and employment opportunities

The relatively high migration rate among youth from Alaska is the result of many factors. The estimated number of youth leaving the state is quite high, but the overall rate of outmigration has not increased in recent years. In fact, the percentage of 18-year-olds leaving the state in the late 1990s (about 9 percent annually) was lower than at any time during that decade.

Each year during this decade, at least 11,000 Alaska youth will enter the labor force. This increase will be more than matched by a growing number of job openings. Current projections call for an increase in Alaska employment of 16.7% over the 2000 to 2010 time period. This means employment is predicted to grow from 302,255 in 2000 to 352,693 in 2010, or an average annual increase of more than 12,000 jobs over the decade. These projected openings are the combined result of employment growth and net separations from the occupations and do not include jobs resulting from employee turnover.

Positions currently filled by nonresident workers represent potential opportunities for Alaska's workers, including new entrants to the labor force. The Alaska Department of Labor and Workforce Development estimates that there were nearly 68,000 nonresidents employed at some time in Alaska in 2001. Industries, occupations, and employers that have high nonresident hire rates signal an unmet training need and a placement opportunity for Alaska's training programs.

Turnover in the workplace provides additional opportunities. In 2001, there were approximately 200,000 new hires, defined as a worker who had not worked for that employer at any time in the previous four calendar quarters. (See Exhibit 17.) New hires, along with other wage record transaction measures can help to identify employment opportunities for jobseekers and training needs for training providers.

Retirement is another avenue through which job openings occur. Alaska's population is aging rapidly. Assuming no significant change in the average retirement age, the quickly increasing average age of workers suggests that retirement (and death) will play an even larger role in the number of Alaska job openings during the next several years. In 2001, 16.6% of private sector workers in Alaska were age 50 and over, 8.5% age 55 and over. More than 20 percent of oil and health care industry workers are age 50 or older, and in state government, more than 28 percent of all workers are over age 50.

Summary

Alaska youth rates of attendance at postsecondary schools appear to be roughly comparable to those in the rest of the U.S. Among geographic areas in Alaska, the difference in participation rates is large. Overall migration from Alaska continues to be quite high, with the highest rates (about 38 percent) found in the older youth and young adult age groups. Just 62.3 percent of the study group of Alaska youth age 15-16 in 1994 retained their Alaska residency through 2002.

The 1990s was a period of slow economic growth, with a shift in predominant industries from resource extraction to services and retail. During the next ten years, overall employment is expected to exhibit growth, while underlying demographic shifts and turnover will provide an increasing number of job openings for the quickly growing young adult population in Alaska. Changes in the types of workers required and the number of youth seeking postsecondary education will continue to present opportunities and challenges to Alaska's educational institutions over the next ten years.

Methodology

More than 16,000 Alaskans age 15-16 in 1994 (1994 Youth) were identified based upon reported date of birth on their Alaska Permanent Fund Dividend application and matched with unemployment insurance wage records and a variety of administrative data. The group of high school age youth were tracked for the next eight years and their continuing education and employment outcomes were evaluated. No high school graduate database is available for Alaska, so this file was used as a proxy for that information. More than 12,200 high school graduates were reported in Alaska in 1996 and 1997. Another group of 20,413 17-18 year olds in 2000 was selected for tracking short-term postsecondary education choices.

The majority of the study group retained their Alaska residency during the evaluation period and had identifiable postsecondary education both within and outside Alaska. However, no information was found for some youth. No national data were used to identify those employed outside Alaska and no information is available for those that died or left the U.S. during this period. New youth arriving in Alaska after 1994 were also excluded from the group.

Administrative Data

The Alaska Permanent Fund Dividend (PFD) is money paid to each Alaska resident from earnings from the Alaska Permanent Fund, an oil revenue funded endowment. In 2002, each Alaskan was paid $1,542, a significant incentive to complete an application form that collects a few key demographic variables. Age, sex and place of residence information is collected from the file and used to identify the population, identify place of residence by year, determine continued residency and track in-state and estimate out-of-state migration.

Youth's continuing education was tracked using University of Alaska, other Alaska postsecondary education files and National Student Clearinghouse data showing education and degrees obtained in other Alaska schools and in other states. Although not all out-of-state schools and all years were available, the Clearinghouse data helped to fill a gap in information about the large number of Alaskans that pursue postsecondary education outside the state. Not all schools report, and information was not available for all years. The data provided was the best look yet at the postsecondary education activity and outcomes of Alaska youth.

Alaska UI Wage Records and the Occupational Database

In addition to industry and earnings information, Alaska's unemployment insurance (UI) wage record file contains occupation and place of work information for most wage and salary workers in the state. Employers are provided with special occupational coding manuals that assist them in coding each of their workers using the Standard Occupational Classification system. Besides being able to follow the progress of workers through a career ladder, it allows for direct comparison with other occupational information to matching an occupation with the typical education level for that occupation and looking at earnings by occupation. In addition, occupation data attached to each worker helped in determining if workers were employed in an occupation related to their education and training. This information is collectively known as Alaska's Occupational Database (ODB). The Wage Record Interchange System (WRIS) could not be used to track the employment outcomes of youth that were employed outside the state, since that file can be used only for evaluating the performance of certain federally funded training programs, primarily those associated with the Workforce Investment Act.

Alaska Alternative Consolidation Loan

The Alternative Consolidation Loan allows students to consolidate all current ACPE alternative student loans into a single fixed-rate loan. Depending on when you took out your alternative loans, the interest rates you are now paying may be less than the consolidation interest rate. Compare the terms and interest rates of your current loans with the consolidation interest rate before deciding if consolidation is right for you.

2011-2012

Family Education Loan

Eligibility

To qualify for an Alternative Consolidation Loan you must:

- have a minimum of $3,500 of eligible debt to consolidate
- have a credit history that includes a FICO credit score of 680 or higher; or have made payments in full and on time for the 18 months preceding the consolidation loan application
- not be more than 29 days delinquent on any loan and voluntarily made the majority of payments

Borrowers must meet all other eligibility requirements, as stated under 20 AAC 15.174.

How to Apply

You may download and submit a paper application.

Download Application

[1] Interest rates and Borrower Benefits are subject to approval annually by the Alaska Student Loan Corporation. Interest rates on loans issued prior to the 2006/2007 academic year are variable and change annually.

[2] The Annual Percentage Rate (APR) assumes a principal loan amount of $10,000 and a repayment term of 10 years. The APR does not include the effects of borrower benefits.

[3] To receive the interest rate reduction for recurring online payment, the loan must be in repayment status.

>
> One of the obstacles we have in middle and high school is the view of the future students have about education. For many families from lower income homes, the idea of college is getting priced out of range. While this bill doesn't affect the actual price tag, it makes managing the loans, grants, and scholarships more possible. Because it's a loan, I would hope that the Sate can still make money and the costs of Alaska students improving their standing can be held down.

Subject: House Bill 272 - Support

Representative Gara,

I am writing in support of House Bill 272 "Reducing Alaska Student Loan Interest Rate by 2% for Those Who Remain In or Return to Alaska:
Building a Stronger Alaska Workforce"

Reducing the interest rate for our children and future workforce for Alaska makes sense. Not only is this a benefit for our children to attend higher education but potentially these college students will have to work in Alaska for 2 years or more, which will aid our economy and provide a baseline for hiring educated workers in state vs. out of state.

The State of Alaska should support Bill 272. SOA's support would encourage college graduates to continue working in the State of Alaska and add money to our economy.

Hello from Petersburg,
Please read the attached letter regarding SSHB 272, a matter of immediate and utmost important to working Alaska families.

Thank you for your time.
D. Louise Lindley Petersburg High School math teacher, business owner and 34 year Alaskan resident

Louise Lindley
P.O. Box 1042
Petersburg, AK 99833

Rep. Alan Dick
Chairman and Committee
Education

Representative Dick and Committee Members,

I am writing to express my support for SSHB 272.
As a math teacher at Petersburg High School for the last ten years I have been rigorously preparing my students for vocational school or college. The cost of post high school education has become a huge burden for working families. My daughter recently graduated with a Masters Degree in Counseling Psychology from Pacific University and returned home to Alaska.
She is very happy to be working for JYS as a Clinician for middle school students in Juneau. She currently owes $90530.67 in loans administered through the Alaska "Advantage" program. The interest rate on most of her loans is around 7 %. I recently refinanced my house for 3.8% so that I could help her relocate and meet her loan payments. Her payments are approximately $1000.00 month and with the cost of rent in Juneau, she could not afford top ramen. SSHB 272 would give her the hope of someday saving for a house in Alaska. The Alaska Scholars program was not available for her in 2003. Many of my students who have achieved Masters Degree and beyond have global opportunities. Alaska should encourage our best and brightest to return home and work for our great state. Thank you for your time and careful consideration to this matter of utmost importance.

Sincerely, D. Louise Lindley Petersburg High School

> **Subject: Support House Bill 272 Lowering Student Loan Interest Rates (revision)**
>
> I am writing about Student Loans, and supporting Representative Gara's House Bill 272 to lower the Student Loan interest rate for students that remain and work in Alaska. Lowering Student Loans the proposed 2 percent will make the repayment of student loans manageable rate and will improve the workforce in Alaska by keeping our graduates in Alaska. According to House Bill 272, "This legislation is one way we can lessen the financial burden on Alaskans who receive their job training or higher education in Alaska, or who move back to Alaska after receiving that education. It is aimed at strengthening the Alaskan economy, helping Alaskans prosper, and retaining more talent that is Alaskan. This bill restructures Alaska student loan interest rates as follows. As long as a student remains in Alaska, the interest on state-issued student and vocational education loans will be reduced by 2%. If a student leaves Alaska for school or job training and returns within 2 years of completing coursework, that student will receive a rebate of the additional 2% interest that accrued on the loans while they were out of state. That rebate will come in equal amounts over a 5-year period so that if the student only returns to Alaska for a short period of time, he or she only qualifies for a partial rebate. A 2% reduction in the interest rate on an average loan will reduce interest payments by roughly one-third" (Gara).
>
> House Bill 272 addresses economic stratification in Alaska by reducing student loan repayment rates to those who stay in Alaska. This also reduces other stratifications such as talent, age, gender, and many other disparities in Alaska. Those with privileged status in Alaska either gain scholarships, or have

parents that can afford to send them to college. It is imperative that the economic and class stratifications of Alaskans are reduced to ensure those with talent, and drive are kept in the state through improved economic, and equalization of privilege to benefit Alaska long term. This will improve the status of Alaska through a workforce that is comparative and competitive with other states, giving Alaska improved status in the United States. According to John Ogbu's book Minority Education and Caste, "Education is a bridge to adult status, but as already indicated in a caste like society all groups do not have equal access to same types of adult roles. Although caste like minorities is generally restricted from participating in the more desirable social, political, and economic sphere" (Ogbu 28). This shows that in any society there are restrictions. However, there should be parameters that guard against this type of discrimination and disadvantages to minds that could bring many benefits to our state. Intelligence doesn't follow social stratification rules and boundaries. Passing House Bill 272 would level the social and economic stratification for all Alaskans. Ember states in "Human Culture: Highlights of Cultural Anthropology" that, "Obtaining more education, particularly a university education, is one of the most effective ways to move upward in contemporary societies. For example, in the United States, individuals with a college bachelor's degree average 75 percent more income than those with only a high school diploma. And individuals with professional degrees earn on average 119 percent more than those with a bachelor's degree. In many countries, educational attainment predicts one's social class better than parents' occupation does.(Ember 116). This being said it is imperative Alaskans support House Bill 272 because an education dictates ones role in society, and Alaska needs educated individuals to keep our economy competitive into the future.

(Revised 1/17/2012 OMB)

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. 2D SSHB272

Analysis

This bill proposes to provide, under certain conditions, up to a 3% reduction in interest on Alaska Student Loan Corporation (ASLC) loans under the following programs: Alaska Student Loan (no longer being issued); Federal Family Education Loan (no longer being issued); and Alaska Supplemental Education Loans on existing and new loans, subject to a minimum rate floor of 3%.

Capital Costs

Implementation and Hardware/Software

ACPE will require $1.3 million in the FY13 capital budget to cover costs for design and implementation of a loan management system to support this interest reduction program as proposed in the current version of HB272:

Implementation Operating Costs

Other implementation costs include a consultant to identify IRS reporting requirements - $10,000; and, program staffing for two new long-term non-perm positions (business analyst and programmer)to integrate the new system with other systems used by the agency (accounting system, credit reporting, etc.) - $139,000

Ongoing Operating Costs

Staff

Three new full-time permanent positions (program manager, business analyst, accountant) will be needed to maintain, monitor and manage the system as well as the program.

Contractual

Rating confirmations are required by existing financing documents when characteristics of pledged loans are changed. Cash flows must be prepared for the rating agencies when requesting rating confirmations . Ongoing mainframe costs of the new servicing system will also be incurred.

Loss in Revenue/GF payment to provide rate reduction without impairing ASLC debt holders

The following method and assumptions were used to estimate the revenue losses shown herein:

*Benefit applies to the following education loan portfolios: FFELP - $175.2 million; Alternative Consolidation - $64.1 million; Alaska Student Loan - $63.1 million; and, Alaska Supplemental Education Loan - $325.3 million.

*Borrower location was assumed to be as follows: FFELP loans – 78% in state and 21% out-of-state; Alternative loans – 54% in state and 46% out-of-state.

*Eligible loan balances at 12/31/2011 were estimated to be: FFELP - $140.4 million; Alternative - $262.2 million.

*The weighted average rate for the portfolio was used as the original rate.

*Declining balance worksheet for the FFELP estimated eligible portfolio assuming an interest rate of 5.91% and a repayment period of 17 years was compared to a declining balance worksheet for the same portfolio assuming an interest rate of 2.91% and a repayment period of 17 years. Seventeen years is the weighted average years to maturity on the portfolio.

*The same comparison was done for the Alternative loan portfolio, assuming an interest rate of 5.55% and 2.55% with a repayment period of 9 years. Nine years is the weighted average years to maturity on the Alternative loan portfolio.

* The difference between the declining balance worksheets represent the cost/forgone revenue associated with the 3% rate reduction.

*The Corporation continues to issue new alternative loans; $13 million in new loans was added to the analysis for each year going forward.

CS FOR HOUSE BILL NO. 282(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES THOMAS, Feige, Saddler, Petersen, Austerman

A BILL

FOR AN ACT ENTITLED

"An Act relating to applying military education, training, and service credit to occupational licensing and certain postsecondary education and employment training requirements; providing for a temporary occupational license for qualified military service members; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 08.01 is amended by adding a new section to read:

Sec. 08.01.064. Military education, training, and service credit; temporary license. (a) Notwithstanding another provision of law, the department or applicable board shall accept military education, training, and service for some or all of the qualifications otherwise required of an applicant for a license or certificate issued under this chapter if

(1) the department or applicable board determines that the military education, training, and service is equivalent to some or all of the qualifications otherwise required of an applicant for a license or certificate issued under this chapter;

and

(2) the applicant provides satisfactory evidence of successful completion of the education, training, or service as a member of the armed forces of the United States, the United States Reserves, the National Guard of any state, the Military Reserves of any state, or the Naval Militia of any state.

(b) If the department issues temporary licenses or certificates as authorized by the department or applicable board under AS 08.01.050(a)(9), the department or applicable board shall issue a temporary license or certificate to a person who

(1) applies to the department or applicable board in a manner prescribed by the department or board;

(2) meets the requirements in AS 08.01.063(a)(3) - (6); and

(3) while on active duty in the armed forces of the United States or any state, as described in (a) of this section,

(A) held a current license or certificate in another state, district, or territory of the United States, practiced in the area of the license or certificate, and maintained the license or certificate in active status before and at the time of application for a license or certificate under this subsection; or

(B) was awarded a diploma or certificate by a branch of the armed forces of the United States or any state, as described in (a) of this section, that met standards for an equivalent license or a certificate of technical training.

(c) The department or applicable board shall expedite the procedure for issuance of a license or certificate under (b) of this section for an applicant who is on active duty.

(d) A license or certificate issued under (b) of this section is valid for 180 days and may be extended at the discretion of the department or applicable board for one additional 180-day period if the holder of the license or certificate applies for an extension on a form approved by the department or applicable board.

(e) The department or applicable board may adopt regulations necessary to implement this section.

*** Sec. 2.** AS 14.40.210 is amended by adding a new subsection to read:

(c) The president of the University of Alaska shall implement a policy and procedure for the acceptance of academic credit toward a degree or technical program offered by the university if an applicant provides satisfactory evidence of successful completion of relevant military education, training, or service as a member of the armed forces of the United States, the United States Reserves, the National Guard of any state, the Military Reserves of any state, or the Naval Militia of any state.

*** Sec. 3.** AS 14.48.060(b) is amended to read:

(b) A postsecondary educational institution must be maintained and operated, or, in the case of a new institution must demonstrate that it can be maintained and operated so that

(1) the quality and content of each course or program of instruction, training, or study are such as may reasonably and adequately achieve the stated objective for which the course or program is offered;

(2) the institution has or has access to adequate space, equipment, instructional materials, and personnel where applicable to achieve the stated objective of the course or program of study and to provide education of good quality;

(3) the education or experience qualifications of directors, administrators, supervisors, and instructors are such as may reasonably ensure that the students will receive education consistent with the objectives of the course or program of study;

(4) the institution provides a catalog or brochure containing information describing the programs offered, program objectives, length of program, schedule of tuition, fees, and all other charges and expenses necessary for completion of the course of study, cancellation and refund policies, and other material facts concerning the institution and the program or course of instruction that are reasonably likely to affect the decision of the student to enroll, together with any other disclosures specified by the commission by regulation; and that this information is provided to prospective students before enrollment;

(5) upon satisfactory completion of training, the student is given appropriate educational credentials by the institution, indicating that the course of instruction or study has been satisfactorily completed by the student;

(6) adequate records are maintained by the institution to show attendance, progress, or grades, and that satisfactory standards are enforced relating to attendance, progress, and performance;

(7) the institution is maintained and operated in compliance with all pertinent ordinances and laws relating to the safety and health of persons upon the premises of the institution;

(8) the institution is financially sound and capable of fulfilling its commitments to students;

(9) neither the institution nor its agents engage in advertising, sales, collection, credit, or other practices which are false, deceptive, misleading, or unfair;

(10) the chief executive officer, trustees, directors, owners, administrators, supervisors, staff, and instructors of the institution are of good reputation and character and have not been convicted of a violation of AS 14.48.020 or 14.48.150 or AS 45.50.471 - 45.50.561 or a comparable law in another state or province;

(11) the student housing owned, maintained, or approved by the institution is appropriate, safe, and adequate;

(12) the institution has a fair and equitable cancellation and refund policy; [AND]

(13) the charges set by the institution for tuition, fees, books, and supplies are fair and equitable**; and**

(14) the institution accepts military education, training, or service credit or hours toward a degree or technical program offered by the institution if

(A) the institution otherwise accepts transfer credits or hours; and

(B) the credit or hours transfer process meets the requirements of the accrediting body of the institution or the commission.

* **Sec. 4.** AS 23.15.820(a) is amended to read:

(a) The Alaska Workforce Investment Board shall

(1) administer the Alaska technical and vocational education program established in AS 23.15.820 - 23.15.850;

(2) facilitate the development of a statewide policy for a coordinated and effective technical and vocational education training system in this state and, to the extent authorized by federal and state law, plan and coordinate federal, state, and local efforts in technical and vocational education programs;

(3) adopt regulations under AS 44.62 (Administrative Procedure Act) to carry out the purposes of AS 23.15.820 - 23.15.850, including regulations that set standards for the percentage of a grant that may be used for administrative costs; the regulations must clearly identify and distinguish between expenses that may be included in administrative costs and those that may not be included in administrative costs; the percentage allowed for administrative costs may not exceed the lesser of five percent or the amount permitted under the requirements of a federal program, if applicable;

(4) administer the grant program under AS 23.15.840 and establish grant administration requirements including accounting procedures that apply to qualified entities and their grantees**;**

(5) facilitate the development and implementation of a statewide policy and procedure that provides for the acceptance of credit or hours toward a degree or technical program offered by a vocational or technical training center in the state for an applicant who provides satisfactory evidence of successful completion of relevant military education, training, or service as a member of the armed forces of the United States, the United States Reserves, the National Guard of any state, the Military Reserves of any state, or the Naval Militia of any state.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

MILITARY EDUCATION, TRAINING, AND SERVICE CREDIT: TRANSITION. The Department of Commerce, Community, and Economic Development and applicable boards may immediately promulgate regulations necessary to implement AS 08.01.064, added by sec. 1 of this Act, except that the effective date of the regulations may not be earlier than the effective date of secs. 1 - 4 of this Act.

*** Sec. 6.** Sections 1 - 4 of this Act take effect December 31, 2013.

* **Sec. 7.** Section 5 of this Act takes effect immediately under AS 01.10.070(c).

HOUSE EDUCATION 1/27/12
HB 282 - MILITARY CREDIT

CHRIS CHRISTENSEN
ASSOCIATE VICE PRESIDENT FOR STATE RELATIONS
UNIVERSITY OF ALASKA

FOR THE RECORD, I AM CHRIS CHRISTENSEN, ASSOCIATE VICE PRESIDENT FOR STATE RELATIONS AT THE UNIVERSITY OF ALASKA. IT FEELS VERY STRANGE TO INTRODUCE MYSELF THAT WAY, AFTER 21 YEARS OF REPRESENTING THE JUDICIARY IN THIS BUILDING. AFTER THREATENING TO DO SO FOR A NUMBER OF YEARS, WENDY REDMAN FINALLY RETIRED SEVERAL MONTHS AGO. REALISTICALLY, IT'S IMPOSSIBLE TO REPLACE THE 40 YEARS OF INSTITUTIONAL MEMORY AND THE UNPARALLELED KNOWLEDGE OF HIGHER EDUCATION THAT WENDY MADE AVAILABLE TO YOU. I HAVE A STEEP LEARNING CURVE BUT I WILL DO MY BEST NOT TO SLOW YOU DOWN. I DO APPRECIATE YOUR INDULGENCE.

I'M HERE TODAY TO TALK ABOUT SECTION 2 OF THIS BILL, WHICH DIRECTS THE UNIVERSITY'S PRESIDENT TO ADOPT POLICIES AND PROCEDURES TO AWARD CREDIT FOR MILITARY TRAINING, EDUCATION, AND SERVICE.

I'D LIKE TO BEGIN BY NOTING THAT THE UNIVERSITY IS COMMITTED TO OFFERING QUALITY EDUCATIONAL EXPERIENCES TO ACTIVE MILITARY, VETERANS, AND THEIR DEPENDENTS. *GIJOBS*, WHICH IS A MAGAZINE AND WEB PORTAL THAT EXISTS SPECIFICALLY TO SERVE PEOPLE WHO ARE TRANSITIONING FROM THE MILITARY BACK TO CIVILIAN LIFE, HAS DESIGNATED BOTH UAA AND UAF AS "GI JOBS MILITARY FRIENDLY SCHOOLS". ONLY 15% OF ALL THE COLLEGES, UNIVERSITIES, AND VOCATIONAL SCHOOLS IN THE COUNTRY HAVE EARNED THIS DISTINCTION, WHICH IS BASED ON AN INSTITUTION'S FINANCIAL AND NON-FINANCIAL COMMITMENT TO RECRUIT

AND RETAIN MILITARY AND VETERAN STUDENTS. IT IS A PRETTY SAD COMMENTARY ON THE LOWER 48 THAT ONLY 15% OF SCHOOLS ARE RATED "MILITARY FRIENDLY." THAT'S PROBABLY WHY THE DEPARTMENT OF DEFENSE IS PROMOTING THIS LEGISLATION AROUND THE COUNTRY. THE WEB PORTAL "GUIDE TO ONLINE SCHOOLS.COM," WHICH BILLS ITSELF AS THE MOST COMPREHENSIVE AUTHORITY ON DISTANCE EDUCATION AND ONLINE LEARNING, JUST RELEASED ITS 2012 RANKINGS OF THE MOST MILITARY-FRIENDLY ONLINE COLLEGES IN THE COUNTRY, AND OUT OF THE MULTITUDE OF SCHOOLS THAT OFFER ONLINE EDUCATION, UA WAS RATED #5. WE'RE PROUD OF THAT, AND AS THE ENTITY THAT MADE THAT RATING POSSIBLE BY YOUR FUNDING DECISIONS AND OTHER SUPPORT, YOU HAVE EVERY RIGHT TO BE PROUD, TOO.

WHILE TRYING TO LEARN THE UNIVERSITY OVER THE LAST FEW MONTHS, THE SINGLE ISSUE I HAVE HEARD ABOUT THE MOST IS TRANSFER OF CREDIT. EVERYBODY'S GOT A STORY. IT IS A SUBJECT THAT AROUSES GREAT PASSION, AND MILITARY TRANSFER CREDIT IS A PIECE OF THIS BIGGER ISSUE.

THE BOARD OF REGENTS HAS ADOPTED A WRITTEN POLICY THAT THE CAMPUSES MUST ACCEPT IN TRANSFER AS MUCH CREDIT AS IS APPROPRIATE TO A STUDENT'S NEW DEGREE AND GRADUATION REQUIREMENTS. ALL THREE CAMPUSES HAVE ESTABLISHED TRANSFER CREDIT POLICIES DESIGNED TO GIVE MAXIMUM CREDIT FOR COURSES AND TRAINING TAKEN ELSEWHERE, INCLUDING IN THE MILITARY. KEEP IN MIND THAT A DEGREE FROM AN INSTITUTION IS A REPRESENTATION TO POTENTIAL EMPLOYERS AND TO OTHERS THAT THE HOLDER HAS ACTUALLY LEARNED WHAT THE DEGREE INDICATES THEY HAVE LEARNED AND THAT THEY CAN DO EVERYTHING THE DEGREE INDICATES THEY CAN DO. THE CREDIT TRANSFER POLICIES HAVE EVOLVED OVER TIME TO MAKE THE PROCESS AS STREAMLINED AS POSSIBLE WHILE STILL PROTECTING THE INTEGRITY OF

THE DEGREES THAT ARE AWARDED.

WE BELIEVE THAT AWARDING APPROPRIATE CREDIT FOR MILITARY TRAINING IS ONE OF THE UNIVERSITY'S RESPONSIBILITIES, AND ANOTHER WAY WE CAN SHOW OUR COMMITMENT TO RECRUIT AND RETAIN MILITARY AND VETERAN STUDENTS.

THERE ARE APPARENTLY A LOT OF MISCONCEPTIONS ABOUT WHAT WE DO FOR MILITARY STUDENTS, SO I WOULD LIKE TO GIVE THE COMMITTEE A BRIEF RECAP.

TRANSFER CREDIT PROCESSES AT THE UNIVERSITY ARE MANAGED AT THE CAMPUS LEVEL, ALTHOUGH THERE IS INTENTIONALLY A GREAT DEAL OF UNIFORMITY IN THE SYSTEM. WITH RESPECT TO CREDIT FOR MILITARY TRAINING, ALL THREE CAMPUSES TRANSFER CREDIT BASED ON RECOMMENDATIONS MADE BY "ACE," WHICH IS THE ACRONYM FOR THE AMERICAN COUNCIL OF EDUCATION. FOR OVER 65 YEARS, ACE HAS HAD AN AGREEMENT WITH THE DEFENSE DEPARTMENT TO REVIEW MILITARY TRAINING AND EXPERIENCE FOR THE AWARD OF EQUIVALENT COLLEGE CREDITS. ITS RECOMMENDATIONS ON EQUIVALENT COLLEGE CREDITS ARE UTILIZED BY THOUSANDS OF COLLEGES AND UNIVERSITIES ACROSS THE COUNTRY. OUR THREE CAMPUSES HAVE WRITTEN AGREEMENTS WITH THE DEFENSE DEPARTMENT TO USE THE ACE RECOMMENDATIONS.

OUR THREE CAMPUSES ARE ALSO MEMBERS OF THE SOC CONSORTIUM. "SOC" STANDS FOR THE SERVICEMEMBERS OPPORTUNITY COLLEGES. THIS IS A CONSORTIUM OF OVER 1,000 COLLEGES AND UNIVERSITIES THAT ENROLL MILITARY, VETERANS, AND DEPENDENTS IN SPECIAL DEGREE PROGRAMS, BOTH ON-CAMPUS AND THROUGH DISTANCE LEARNING. ITS PURPOSE IS TO LET THE MILITARY GET DEGREES, RATHER THAN JUST ACCUMULATE CREDITS AS THEY MOVE FROM BASE TO BASE. TO BE PART OF SOC, OUR CAMPUSES

SIGNED WRITTEN AGREEMENTS TO, AMONG OTHER THINGS, FOLLOW SPECIFIC GUIDELINES TO EASE TRANSFERABILITY OF CREDIT BETWEEN THE MEMBER INSTITUTIONS AND TO LIMIT THE NUMBER OF CREDITS MILITARY STUDENTS HAVE TO EARN AT UA, IN ORDER TO GET A UA DEGREE. FOR EXAMPLE, MILITARY STUDENTS WORKING ON AN ASSOCIATES DEGREE AT UAA ONLY NEED 3 UAA CREDITS TO EARN THE DEGREE; UAA WILL TAKE ALL THE REST OF THE CREDITS FROM OTHER SCHOOLS IN THE SOC CONSORTIUM.

UAA IS CURRENTLY ACCEPTING APPROXIMATELY 51 CREDITS PER STUDENT FROM THOSE MILITARY STUDENTS WHO ATTENDED THE COMMUNITY COLLEGE OF THE AIR FORCE, THE SERVICE ACADEMIES, AND OTHER REGIONALLY ACCREDITED MILITARY INSTITUTIONS.

AT UAF, A MILITARY STUDENT CAN USE APPROXIMATELY 3O CREDITS OF TYPICAL TRAINING FOR THE BACHLEOR OF EMERGENCY MANAGEMENT DEGREE, OR 90 CREDITS FOR A GENERAL STUDIES BA THAT DOESN'T REQUIRE SATISFYING PARTICULAR MAJOR REQUIREMENTS.

NEITHER UAA NOR UAF HAVE ANY LIMITATION ON THE NUMBER OF MILITARY TRANSFER CREDITS THEY WILL AWARD. THEY USED TO; THEY'VE DONE AWAY WITH IT, UAA AS RECENTLY AS LAST YEAR, AS PART OF OUR CONTINUAL PROCESS TO REVIEW THE SYSTEM AND MAKE IT MORE STUDENT-FRIENDLY. RIGHT NOW, FOR EXAMPLE, UAF IS IN THE PROCESS OF DEVELOPING A MINOR BASED ON TYPICAL MILITARY CREDITS, WHICH WILL SATISFY 18 CREDITS TOWARDS ANY BA DEGREE.

I COULD GO ON, BUT WHAT IS THE BOTTOM LINE? I DON'T HAVE FIGURES FOR THE ENTIRE SYSTEM, BUT LAST YEAR, UAA ALONE AWARDED OVER 15,000 HOURS OF MILITARY TRANSFER CREDIT FOR TRAINING, FOR EDUCATION, AND EVEN FOR TIME SPENT IN THE SERVICE. APPROXIMATELY 99.5% OF THE

STUDENTS WHO REQUESTED MILITARY TRANSFER CREDITS RECEIVED THOSE CREDITS.

ALASKA IS WIDELY KNOWN TO SERVICEMEMBERS AS A STATE THAT WELCOMES AND APPRECIATES THE MILITARY. I THINK THAT ALASKA'S UNIVERSITY, AS DEMONSTRATED BY OUR EXISTING CREDIT TRANSFER POLICIES, REFLECTS THOSE PREVAILING SOCIAL VALUES PRETTY DARN ACCURATELY.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVES THOMAS, Feige, Saddler, Petersen, Austerman

A BILL

FOR AN ACT ENTITLED

"An Act relating to applying military education, training, and service credit to occupational licensing and certain postsecondary education and employment training requirements; providing for a temporary occupational license for qualified military service members; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 08.01 is amended by adding a new section to read:

Sec. 08.01.064. Military education, training, and service credit; temporary license. (a) Notwithstanding another provision of law, the department or applicable board shall accept military education, training, and service for some or all of the qualifications otherwise required of an applicant for a license or certificate issued under this chapter if

(1) the department or applicable board determines that the military education, training, and service is equivalent to some or all of the qualifications otherwise required of an applicant for a license or certificate issued under this chapter;

and

(2) the applicant provides satisfactory evidence of successful completion of the education, training, or service as a member of the armed forces of the United States, the United States Reserves, the National Guard of any state, the Military Reserves of any state, or the Naval Militia of any state.

(b) If the department issues temporary licenses or certificates as authorized by the department or applicable board under AS 08.01.050(a)(9), the department or applicable board shall issue a temporary license or certificate to a person who

(1) applies to the department or applicable board in a manner prescribed by the department or board;

(2) meets the requirements in AS 08.01.063(a)(3) - (6); and

(3) while on active duty in the armed forces of the United States or any state, as described in (a) of this section,

(A) held a current license or certificate in another state, district, or territory of the United States, practiced in the area of the license or certificate, and maintained the license or certificate in active status before and at the time of application for a license or certificate under this subsection; or

(B) was awarded a diploma or certificate by a branch of the armed forces of the United States or any state, as described in (a) of this section, that met standards for an equivalent license or a certificate of technical training.

(c) The department or applicable board shall expedite the procedure for issuance of a license or certificate under (b) of this section for an applicant who is on active duty.

(d) A license or certificate issued under (b) of this section is valid for 180 days and may be extended at the discretion of the department or applicable board for one additional 180-day period if the holder of the license or certificate applies for an extension on a form approved by the department or applicable board.

(e) The department or applicable board may adopt regulations necessary to implement this section.

*** Sec. 2.** AS 14.40.210 is amended by adding a new subsection to read:

(c) The president of the University of Alaska shall implement a policy and procedure for the acceptance of academic credit toward a degree or technical program offered by the university if an applicant provides satisfactory evidence of successful completion of relevant military education, training, or service as a member of the armed forces of the United States, the United States Reserves, the National Guard of any state, the Military Reserves of any state, or the Naval Militia of any state.

*** Sec. 3.** AS 14.48.060(b) is amended to read:

(b) A postsecondary educational institution must be maintained and operated, or, in the case of a new institution must demonstrate that it can be maintained and operated so that

(1) the quality and content of each course or program of instruction, training, or study are such as may reasonably and adequately achieve the stated objective for which the course or program is offered;

(2) the institution has or has access to adequate space, equipment, instructional materials, and personnel where applicable to achieve the stated objective of the course or program of study and to provide education of good quality;

(3) the education or experience qualifications of directors, administrators, supervisors, and instructors are such as may reasonably ensure that the students will receive education consistent with the objectives of the course or program of study;

(4) the institution provides a catalog or brochure containing information describing the programs offered, program objectives, length of program, schedule of tuition, fees, and all other charges and expenses necessary for completion of the course of study, cancellation and refund policies, and other material facts concerning the institution and the program or course of instruction that are reasonably likely to affect the decision of the student to enroll, together with any other disclosures specified by the commission by regulation; and that this information is provided to prospective students before enrollment;

(5) upon satisfactory completion of training, the student is given appropriate educational credentials by the institution, indicating that the course of instruction or study has been satisfactorily completed by the student;

(6) adequate records are maintained by the institution to show attendance, progress, or grades, and that satisfactory standards are enforced relating to attendance, progress, and performance;

(7) the institution is maintained and operated in compliance with all pertinent ordinances and laws relating to the safety and health of persons upon the premises of the institution;

(8) the institution is financially sound and capable of fulfilling its commitments to students;

(9) neither the institution nor its agents engage in advertising, sales, collection, credit, or other practices which are false, deceptive, misleading, or unfair;

(10) the chief executive officer, trustees, directors, owners, administrators, supervisors, staff, and instructors of the institution are of good reputation and character and have not been convicted of a violation of AS 14.48.020 or 14.48.150 or AS 45.50.471 - 45.50.561 or a comparable law in another state or province;

(11) the student housing owned, maintained, or approved by the institution is appropriate, safe, and adequate;

(12) the institution has a fair and equitable cancellation and refund policy; [AND]

(13) the charges set by the institution for tuition, fees, books, and supplies are fair and equitable**; and**

(14) the institution accepts military education, training, or service credit or hours toward a degree or technical program offered by the institution if

(A) the institution otherwise accepts transfer credits or hours; and

(B) the credit or hours transfer process meets the requirements of the accrediting body of the institution or the commission.

*** Sec. 4.** AS 23.15.820(a) is amended to read:

(a) The Alaska Workforce Investment Board shall

(1) administer the Alaska technical and vocational education program established in AS 23.15.820 - 23.15.850;

(2) facilitate the development of a statewide policy for a coordinated and effective technical and vocational education training system in this state and, to the extent authorized by federal and state law, plan and coordinate federal, state, and local efforts in technical and vocational education programs;

(3) adopt regulations under AS 44.62 (Administrative Procedure Act) to carry out the purposes of AS 23.15.820 - 23.15.850, including regulations that set standards for the percentage of a grant that may be used for administrative costs; the regulations must clearly identify and distinguish between expenses that may be included in administrative costs and those that may not be included in administrative costs; the percentage allowed for administrative costs may not exceed the lesser of five percent or the amount permitted under the requirements of a federal program, if applicable;

(4) administer the grant program under AS 23.15.840 and establish grant administration requirements including accounting procedures that apply to qualified entities and their grantees;

(5) facilitate the development and implementation of a statewide policy and procedure that provides for the acceptance of credit or hours toward a degree or technical program offered by a vocational or technical training center in the state for an applicant who provides satisfactory evidence of successful completion of relevant military education, training, or service as a member of the armed forces of the United States, the United States Reserves, the National Guard of any state, the Military Reserves of any state, or the Naval Militia of any state.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

MILITARY EDUCATION, TRAINING, AND SERVICE CREDIT: TRANSITION. The Department of Commerce, Community, and Economic Development and applicable boards may immediately promulgate regulations necessary to implement AS 08.01.064, added by sec. 1 of this Act, except that the effective date of the regulations may not be earlier than the effective date of secs. 1 - 4 of this Act.

*** Sec. 6.** Sections 1 - 4 of this Act take effect December 31, 2013.

* **Sec. 7.** Section 5 of this Act takes effect immediately under AS 01.10.070(c).

Sponsor Statement HB 282
"An Act applying military education, training, and service credit to occupational licensing and certain postsecondary education requirements; and providing for a temporary occupational license for a qualified military service members."

According to the Department of Defense, the June 2011 jobless rate for post-9/11 veterans was 13.3%, with young male Veterans (ages 18 to 24) experiencing an unemployment rate of 21.9%. Last year, Alaska had over 1200 service members separate from the military from our posts and bases. These are 1200 potential workers who could contribute to our state's economy. It is our responsibility to assist their transition into our work force swiftly and appropriately.

Our nation's military is one of the most highly trained in the world. These men and women who undertake this challenge face unique challenges and sacrifice many things that the general population does not. We owe it to our men and women to ensure that their distinctive set of skills do not go to waste once they separate from the military. These highly trained individuals deserve to remain productive members of society and to be able to provide for their families.

HB 282 requires the Division of Professional Licensing, University of Alaska and vocational educational facilities to examine the credentials of related military experience. Relevant military experience would be credited for licensing requirements and educational credit would be granted for appropriate training.

In the last 10 years our military has seen record numbers of deployments. HB 282 is one way we can show our thanks and allow our service members the opportunity to create positive and productive futures for themselves.

I would appreciate your support for House Bill 282.

Sectional HB 282

"An Act applying military education, training, and service credit to occupational licensing and certain postsecondary education requirements; and providing for a temporary occupational license for a qualified military service members."

Section 1: Military education, training, and service credit; temporary license.

(a) Credit will be given for military education and training to an applicant who is applying for an occupational license if determined by the applicable board.

(b) Requires the department to issue a temporary license if the applicant meets current statutory requirements and while on active duty:

a. held a current license in another state and has maintained that license, or
b. holds an equivalent military license or certificate of technical training

(c) Applications for active duty members who hold a current license will be expedited.

(d) temporary licenses will be valid for 180 days and maybe extended once with the approval of the department

Sec. 2: Adds a new subsection: University of Alaska

(c) The president of the University of Alaska shall implement a policy to accept academic credit toward a degree or technical program if an applicant provides satisfactory evidence of relevant military education, training or service.

Sec. 3: Adds a new subsection: Post-Secondary Education Commission

(d)The commission shall implement policies and procedures that require a postsecondary education institution to accept academic credit toward a degree or technical program if an applicant provides satisfactory evidence of relevant military education, training or service.

Sec. 4: Adds a new subsection: Alaska Workforce Investment Board

(5) The Alaska Workforce Investment Board shall implement a statewide policy that requires a vocational training center to accept academic credit toward a degree if an applicant provides satisfactory evidence of relevant military education, training or service.

Sec. 5: Adds a new Subsection:

Department of Commerce, Community, and Economic Development may promulgate regulations immediately.

Sec. 6.

Sections 1-4 regulations take effect December 31, 2013

Sec. 7.

Section 5 takes effect immediately

Not in labor force	68,252	69,850	20,915	21,625	47,338	48,225

NOTE: Veterans served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Nonveterans never served on active duty in the U.S. Armed Forces. Veterans could have served anywhere in the world during these periods of service: Gulf War era II (September 2001-present), Gulf War era I (August 1990-August 2001), Vietnam era (August 1964-April 1975), Korean War (July 1950-January 1955), World War II (December 1941-December 1946), and other service periods (all other time periods). Veterans who served in more than one wartime period are classified only in the most recent one. Veterans who served during one of the selected wartime periods and another period are classified only in the wartime period. Updated population controls are introduced annually with the release of January data.

Officer Basic Course (OBC). Upon commissioning, an officer is assigned a career branch in which the emphasis for training and development during the officer's first 7 to 8 years of active duty occurs. Graduates of all commissioning sources receive training in their assigned or detailed branch at an OBC immediately after commissioning. The OBC prepares newly commissioned officers for their first duty assignments with instruction on methods for training individuals, teams, squads and platoons. In addition, the course includes sufficient instruction to provide officers with an under-standing of the environment of the company, battery or troop including tactics, organization and administration. Officers receive training on most lieutenant common and branch tasks in the OBC. There is no active duty service obligation for OBC attendance.

Branch detail program. Upon commissioning, selected lieutenants branched Signal, Quartermaster, Ordnance, Transportation and Finance are detailed to a combat arms branch for 2 years. Selected Military Intelligence and Adjutant General officers are detailed for 4 years. Lieutenants under the branch detail program attend the OBC and participate in branch specific training for the branch to which they are detailed. On completing the 2-year detail, officers attend a 4-week branch transition course before they return to their designated branch. Officers in the 4-year program receive transition branch training in conjunction with their enrollment in the Captains Career Course. All officers continue to participate in branch specific training once they are reassigned back to their designated branches.

Captains Career Course. The branch Captains Career Course prepares company grade officers to command and train at the company, battery or troop level and to serve as staff officers at battalion and brigade levels. There is a 1-year active duty service obligation for attendance at a branch Captains Career Course. The course is divided into two phases.

(1) The first phase provides advanced branch training and common core instruction. The branch specific courses provide selected company grade officers an opportunity to acquire the skills and attributes required to lead company-sized units and serve on battalion and brigade staffs. This instruction prepares students to:

(a) Establish and maintain a disciplined command climate.

(b) Execute the unit's assigned missions.

(c) Command, control, lead, supervise, discipline, train, develop and mentor subordinate leaders and care for subordinates and their families.

(d) Develop the unit's Mission Essential Task List (METL) and training plan.

(e) Schedule, resource, supervise, execute and evaluate unit and sub-unit individual and collective training.

(f) Plan, supervise and evaluate unit leader training and development, and personnel, administration, supply, maintenance, safety and security actions.

(g) Plan, supervise, and evaluate the safe use, maintenance, security, storage and accountability of unit material.

(h) Administer the Uniform Code of Military Justice (UCMJ) at the company level.

(i) Advise the battalion commander and staff on the status of company, platoon and squad-level training, equipment, and personnel readiness.

(2) The second phase provides staff process training. It uses battalion, brigade, division and installation scenarios to train officers to serve on battalion and brigade level staffs. It develops officers to function effectively as staff officers by improving their abilities to analyze and solve military problems, communicate, interact as staff members, and broaden their understanding of Army operations, organizations and procedures. This course is unique in that it provides an officer's first integrated instruction with officers from different branches of the Army. The phase provides the skills necessary for success in Army, joint and multinational environments.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSHB 282 (EDC)

Analysis

HB 282 would require the department or board to accept relevant experience, training or service acquired while serving in the armed forces. The bill would allow greater flexibility for those exiting military service to become temporarily licensed in Alaska.

This bill has zero fiscal impact.

BILL NO. HB 282

Analysis

HB 282 would require the department or board to accept relevant experience, training or service acquired while serving in the armed forces. The bill would allow greater flexibility for those exiting military service to become temporarily licensed in Alaska.

The following is a detailed cost analysis:

Personal Services consist of a long term non-perm Regulations Specialist I (Range 13) and an Administrative Assistant (Range 14). The Regulation Specialist I will work with boards, commissions, and staff to create regulations for new "temporary license" types for all licenses, and will craft clarifying regulations for programs with existing temporary licenses. The Administrative Assistant II will work with the Regulations Specialist and existing Publications Specialist II to draft correspondence to boards and commissions, create new forms and applications, liaison with the Department of Law regarding these regulations changes, and ensure timelines are maintained. This position will administer the military licensing program, including the receiving and tracking of military applications to ensure they are expedited, providing administrative support to licensing staff, customer support to military personnel, and organizing an accurate structure of the new license types into the licensing database. Once these regulations are in place, updates can be managed by existing staff and the Regulations Specialist position will be eliminated.

Services include the initial legal and start up costs, and ongoing support services.

Commodities include general supply costs.

Under the self-sufficiency statue of AS 08.01.065, regulatory programs are required to pay the cost of regulation through licensing fees. The funding source in establishing this position is Receipt Supported Services funded entirely from licensing fees.

2012 LEGISLATIVE SESSION

BILL NO. HB282

Analysis

This bill, as it relates to the Commision, directs the Commission to require authorized institutions to accept military education, training, or service for program credit under specified conditions. There are no associated increased costs to the Commission to develop, through regulation, guidelines for authorized institutions to equate military education, training, or service for credit. The Commission would implement by providing due notice to Alaska institutions and including this requirement within its institutional authorization compliance review program.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** HB282
2012 LEGISLATIVE SESSION

Analysis

The proposed legislation requires the Workforce Investment Board to facilitate a statewide policy to determine credit towards a degree or program offered by a vocational or technical center in the state of Alaska for a member of the nation's armed forces. This will be conducted via teleconferences between the state's applicable training center organizations.

There is no fiscal impact to the department as a result of this legislation.

CS FOR HOUSE BILL NO. 313(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVE FEIGE

A BILL

FOR AN ACT ENTITLED

"An Act relating to student counts, unreserved school operating fund balances, restrictions on school district money, and estimates for public school funding; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.11.100(o) is amended to read:

(o) The total amount of school construction projects approved for reimbursement by the department under (a)(10) of this section

(1) may not exceed $190,644,901; and

(2) after June 30, 1998, and until July 1, 2006, shall be allocated as follows:

(A) $77,897,000 to projects in a municipality with a public school enrollment of 25,000 or more students in fiscal year 2000, as determined under **former** AS 14.17.500;

(B) $14,571,000 to projects in a municipality with a public

school enrollment of at least 15,000 but less than 25,000 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(C) $14,143,000 to projects in a municipality with a public school enrollment of at least 10,000 but less than 15,000 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(D) $7,429,000 to projects in a municipality with a public school enrollment of at least 7,500 but less than 10,000 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(E) $20,712,912 to projects in a municipality with a public school enrollment of at least 5,000 but less than 7,500 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(F) $2,660,000 to projects in a municipality with a public school enrollment of at least 2,750 but less than 3,000 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(G) $454,000 to projects in a municipality with a public school enrollment of at least 2,400 but less than 2,750 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(H) $46,869,989 to projects in a municipality with a public school enrollment of at least 2,050 but less than 2,400 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(I) $329,000 to projects in a municipality with a public school enrollment of at least 1,700 but less than 1,750 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(J) $286,000 to projects in a municipality with a public school enrollment of at least 650 but less than 725 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(K) $519,000 to projects in a municipality with a public school enrollment of at least 500 but less than 525 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(L) $2,224,000 to projects in a municipality with a public school enrollment of at least 425 but less than 482 students in fiscal year 2000,

as determined under **former** AS 14.17.500;

(M) $2,550,000 to projects in a municipality with a public school enrollment of at least 290 but less than 305 students in fiscal year 2000, as determined under **former** AS 14.17.500.

* **Sec. 2.** AS 14.11.100(p) is amended to read:

(p) The total amount of school construction projects approved for reimbursement by the department under (a)(13) and (a)(14) of this section

(1) may not exceed $177,256,000;

(2) after June 30, 1999, and until October 31, 2006, shall be allocated as follows:

(A) $61,925,000 to projects in a municipality with a public school enrollment of 45,000 or more students in fiscal year 2005, as determined under **former** AS 14.17.500;

(B) $40,570,000 to projects in a municipality with a public school enrollment of at least 14,600 but less than 20,000 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(C) $20,000,000 to projects in a municipality with a public school enrollment of at least 10,000 but less than 14,600 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(D) $2,588,000 to projects in a municipality with a public school enrollment of at least 7,500 but less than 10,000 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(E) $5,995,000 to projects in a municipality with a public school enrollment of at least 4,000 but less than 6,000 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(F) $1,237,000 to projects in a municipality with a public school enrollment of at least 2,400 but less than 2,800 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(G) $1,100,000 to projects in a municipality with a public school enrollment of at least 2,200 but less than 2,400 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(H) $7,164,000 to projects in a municipality with a public school enrollment of at least 1,300 but less than 1,500 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(I) $1,260,000 to projects in a municipality with a public school enrollment of at least 740 but less than 757 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(J) $608,000 to projects in a municipality with a public school enrollment of at least 650 but less than 700 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(K) $32,000,000 to projects in a municipality with a public school enrollment of at least 500 but less than 600 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(L) $2,809,000 to projects in a municipality with a public school enrollment of at least 370 but less than 390 students in fiscal year 2005, as determined under **former** AS 14.17.500.

*** Sec. 3.** AS 14.11.100(q) is amended to read:

(q) The total amount of school construction projects approved for reimbursement by the department under (a)(15) of this section

(1) may not exceed $14,644,000;

(2) after June 30, 1999, and until October 31, 2006, shall be allocated as follows:

(A) $6,522,000 to projects in a municipality with a public school enrollment of at least 1,925 but less than 2,025 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(B) $8,122,000 to projects in a municipality with a public school enrollment of at least 398 but less than 400 students in fiscal year 2005, as determined under **former** AS 14.17.500.

*** Sec. 4.** AS 14.14.060(c) is amended to read:

(c) Except as otherwise provided by municipal ordinance, the borough school board shall submit the school budget for the following school year to the borough assembly by May 1 for approval of the total amount. Within 30 days after receipt of

the budget, the assembly shall determine the total amount of money to be made available from local sources for school purposes and shall furnish the school board with a statement of the sum to be made available. If the assembly does not, within 30 days, furnish the school board with a statement of the sum to be made available, the amount requested in the budget is automatically approved. Except as otherwise provided by municipal ordinance, by June 30, the assembly shall appropriate the amount to be made available from local sources from money available for the purpose. **The assembly may not reallocate or reappropriate for another purpose the amount appropriated from local sources to the district for school purposes unless the unrestricted portion of the year-end balance in the district's school operating fund exceeds the amount set in AS 14.17.505(a).**

*** Sec. 5.** AS 14.16.050(a) is amended to read:

(a) The following provisions apply with respect to the operation and management of a state boarding school as if it were a school district:

(1) requirements relating to school district operations:

(A) AS 14.03.030 - 14.03.050 (defining the school term, day in session, and school holidays);

(B) AS 14.03.083 - 14.03.140 (miscellaneous provisions applicable to school district operations);

(C) regulations adopted by the board under authority of AS 14.07.020(a) that are applicable to school districts and their schools, unless the board specifically exempts state boarding schools from compliance with a regulation;

(D) AS 14.12.150 (authorizing school districts to establish and participate in the services of a regional resource center);

(E) AS 14.14.050 (imposing the requirement of an annual audit);

(F) AS 14.14.110 (authorizing cooperation with other school districts);

(G) AS 14.14.140(b) (establishing a prohibition on employment of a relative of the chief school administrator);

(H) AS 14.18 (prohibiting discrimination based on sex in public education);

(2) requirements relating to the public school funding program and the receipt and expenditure of that funding:

(A) [AS 14.17.500 (RELATING TO STUDENT COUNT ESTIMATES);

(B)] AS 14.17.505 (relating to school operating fund balances);

(B) AS 14.17.505 - 14.17.910 [(C) AS 14.17.500 - 14.17.910] (setting out the procedure for payment of public school funding and imposing general requirements and limits on money paid);

(3) requirements relating to teacher employment and retirement:

(A) AS 14.14.105 and 14.14.107 (relating to sick leave);

(B) AS 14.20.095 - 14.20.215 (relating to the employment and tenure of teachers);

(C) AS 14.20.220 (relating to the salaries of teachers employed);

(D) AS 14.20.280 - 14.20.350 (relating to sabbatical leave provisions for teachers);

(E) AS 23.40.070 - 23.40.260 (authorizing collective bargaining by certificated employees), except with regard to teachers who are administrators and except that the board may delegate some or all of its responsibilities under those statutes;

(F) AS 14.25 (provisions regarding the teachers' retirement system);

(4) requirements relating to students and educational programs:

(A) AS 14.30.180 - 14.30.350 (relating to educational services for children with disabilities);

(B) AS 14.30.360 - 14.30.370 (establishing health education program standards);

(C) AS 14.30.400 - 14.30.410 (relating to bilingual and bicultural education).

* **Sec. 6.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420(a)(1) and the high school vocational education factor set out in AS 14.17.420(a)(3);

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted

for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(H) notwithstanding (A) - (C) of this paragraph, if a district's ADM adjusted for school size under (A) of this paragraph increases by the lesser of 200 students or three percent or more from one fiscal year to the next fiscal year, the department shall provide supplemental funding that is equal to the increase in the adjusted ADM for the current fiscal year; however, if a district is otherwise unable to meet current fiscal year funding needs and the district does not qualify for supplemental funding under this subparagraph, the district may apply to the department for, and the department may provide, supplemental funding for the current fiscal year;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and

personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

*** Sec. 7.** AS 14.17.505(a) is amended to read:

(a) A district may not accumulate in a fiscal year an unreserved portion of its year-end fund balance in its school operating fund, as defined by department regulations, that is greater than **15** [10] percent of its expenditures for that fiscal year.

*** Sec. 8.** AS 14.17.600(a) is amended to read:

(a) Within two weeks after the end of the 20-school-day period ending the fourth Friday in October, each district shall transmit a report to the department that, under regulations adopted by the department, reports its ADM for that count period and other student count information that will aid the department in making a determination of its state aid **for the succeeding fiscal year following the count period** under the public school funding program. For centralized correspondence study, the October report shall be based on the period from July 1 through the fourth Friday in October. The department may make necessary corrections in the report submitted and shall notify the district of changes made. The commissioner shall notify the governor of additional appropriations the commissioner estimates to be necessary to fully finance the public school funding program for the current fiscal year.

*** Sec. 9.** AS 14.17.600 is amended by adding new subsections to read:

(c) A student count shall be adjusted for the current fiscal year as provided under AS 14.17.410(b)(1).

(d) Part-time students shall be included in the student count data in accordance with regulations adopted by the department.

(e) When reporting a district's ADM, a part-time student who is a correspondence student may not be counted as more than one full-time equivalent student.

*** Sec. 10.** AS 14.17.500 is repealed.

*** Sec. 11.** This Act takes effect July 1, 2014.

CONCEPTIONAL AMENDMENT HB 313 Version M

Change Sec. 6 AS 14.17.410(b)(1)(H) by deleting [FIVE] and inserting **three**.

increase by the lesser of 200 students or three percent...

Adopted as amended

(2)

CONCEPTIONAL AMENDMENT HB 313 Version M

- subsection H

Add a ~~new~~ section to read: "If a district is unable to meet current year funding ~~needs~~ and is not protected by the provisions of AS 14.17.410(b)(1)(H), the district may apply to the department for supplemental funding for the current fiscal year."

student if District out of reserves, and only if they find themselves without reserve because of a change in student count; can apply for supplemental funding for the current year.

adds new Section I ? → total change to ADM

not relating to H

* subsection H only applies to the 3%

only applies to districts w/ school count change

* relating to ADM *

Sectional Analysis/CS Comparison

HB 313 – Version A/M

Title Change – Incorporates new provisions in Version M that are not in Version A.

Sec. 1, Sec. 2, Sec. 3 – Necessary conforming language pertaining to previous school construction funding caused by repealing AS 14.17.500 – Student Count Estimate in Sec. 10 Version M (Sec. 8 Version A). Statute placed limits on the funding based upon the student count estimate. It now applies to the actual account.

Sec. 4 – Adds a provision to the bill prohibiting a municipal assembly from taking funds away from a school district after having allocated the funding to the district. (Not in Version A of the bill).

Sec. 5 – (Sec. 4 Version A) Necessary conforming language due to the repeal of AS 14.17.500 – Student Count Estimate in Sec. 10 Version M (Sec. 8 Version A). Statute required boarding schools to provide the state a student count estimate for funding purposes, which is no longer needed.

Sec. 6 – (Sec. 5 Version A) Amends AS 14.17.410(b) adding a part (H) to provide a hold harmless provision providing supplemental funding to a district that has a one year increase of five percent in enrollment based upon the average daily membership count adjusted for the school size factor.

Sec. 7 – Amends AS 14.17.505(a) to increase the amount of funds a district may retain in its unrestricted reserve account from 10 percent to 15 percent. (Not in Version A of the bill).

Sec. 8 – (Sec. 6 Version A) Amends AS 14.17.600(a) to apply the student count to funding for the succeeding fiscal year.

Sec. 9 – (Sec. 7 Version A) Amends AS 14.17.600 to replace provisions of AS 14.17.500 that are repealed by the bill but necessary to properly apply the student count to school funding, moving the provisions from AS 14.17.500 to AS 14.17.600.

Email: Representative.Eric.Feige@legis.state.ak.us

Sec. 10 – (Sec. 8 Version A) Repeals AS 14.17.500 – Student Count Estimates because they are no longer necessary under the new application of the student count data to the succeeding fiscal year.

Sec. 11 – (Sec. 9 Version A) Makes the bill effective with funding for FY 2015 funding.

CS FOR HOUSE BILL NO. 313( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVE FEIGE

A BILL

FOR AN ACT ENTITLED

"An Act relating to student counts, unreserved school operating fund balances, restrictions on school district money, and estimates for public school funding; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.11.100(o) is amended to read:

(o) The total amount of school construction projects approved for reimbursement by the department under (a)(10) of this section

(1) may not exceed $190,644,901; and

(2) after June 30, 1998, and until July 1, 2006, shall be allocated as follows:

(A) $77,897,000 to projects in a municipality with a public school enrollment of 25,000 or more students in fiscal year 2000, as determined under **former** AS 14.17.500;

(B) $14,571,000 to projects in a municipality with a public

school enrollment of at least 15,000 but less than 25,000 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(C) $14,143,000 to projects in a municipality with a public school enrollment of at least 10,000 but less than 15,000 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(D) $7,429,000 to projects in a municipality with a public school enrollment of at least 7,500 but less than 10,000 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(E) $20,712,912 to projects in a municipality with a public school enrollment of at least 5,000 but less than 7,500 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(F) $2,660,000 to projects in a municipality with a public school enrollment of at least 2,750 but less than 3,000 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(G) $454,000 to projects in a municipality with a public school enrollment of at least 2,400 but less than 2,750 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(H) $46,869,989 to projects in a municipality with a public school enrollment of at least 2,050 but less than 2,400 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(I) $329,000 to projects in a municipality with a public school enrollment of at least 1,700 but less than 1,750 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(J) $286,000 to projects in a municipality with a public school enrollment of at least 650 but less than 725 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(K) $519,000 to projects in a municipality with a public school enrollment of at least 500 but less than 525 students in fiscal year 2000, as determined under **former** AS 14.17.500;

(L) $2,224,000 to projects in a municipality with a public school enrollment of at least 425 but less than 482 students in fiscal year 2000,

as determined under **former** AS 14.17.500;

(M) $2,550,000 to projects in a municipality with a public school enrollment of at least 290 but less than 305 students in fiscal year 2000, as determined under **former** AS 14.17.500.

* **Sec. 2.** AS 14.11.100(p) is amended to read:

(p) The total amount of school construction projects approved for reimbursement by the department under (a)(13) and (a)(14) of this section

(1) may not exceed $177,256,000;

(2) after June 30, 1999, and until October 31, 2006, shall be allocated as follows:

(A) $61,925,000 to projects in a municipality with a public school enrollment of 45,000 or more students in fiscal year 2005, as determined under **former** AS 14.17.500;

(B) $40,570,000 to projects in a municipality with a public school enrollment of at least 14,600 but less than 20,000 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(C) $20,000,000 to projects in a municipality with a public school enrollment of at least 10,000 but less than 14,600 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(D) $2,588,000 to projects in a municipality with a public school enrollment of at least 7,500 but less than 10,000 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(E) $5,995,000 to projects in a municipality with a public school enrollment of at least 4,000 but less than 6,000 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(F) $1,237,000 to projects in a municipality with a public school enrollment of at least 2,400 but less than 2,800 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(G) $1,100,000 to projects in a municipality with a public school enrollment of at least 2,200 but less than 2,400 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(H) $7,164,000 to projects in a municipality with a public school enrollment of at least 1,300 but less than 1,500 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(I) $1,260,000 to projects in a municipality with a public school enrollment of at least 740 but less than 757 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(J) $608,000 to projects in a municipality with a public school enrollment of at least 650 but less than 700 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(K) $32,000,000 to projects in a municipality with a public school enrollment of at least 500 but less than 600 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(L) $2,809,000 to projects in a municipality with a public school enrollment of at least 370 but less than 390 students in fiscal year 2005, as determined under **former** AS 14.17.500.

*** Sec. 3.** AS 14.11.100(q) is amended to read:

(q) The total amount of school construction projects approved for reimbursement by the department under (a)(15) of this section

(1) may not exceed $14,644,000;

(2) after June 30, 1999, and until October 31, 2006, shall be allocated as follows:

(A) $6,522,000 to projects in a municipality with a public school enrollment of at least 1,925 but less than 2,025 students in fiscal year 2005, as determined under **former** AS 14.17.500;

(B) $8,122,000 to projects in a municipality with a public school enrollment of at least 398 but less than 400 students in fiscal year 2005, as determined under **former** AS 14.17.500.

*** Sec. 4.** AS 14.14.060(c) is amended to read:

(c) Except as otherwise provided by municipal ordinance, the borough school board shall submit the school budget for the following school year to the borough assembly by May 1 for approval of the total amount. Within 30 days after receipt of

the budget, the assembly shall determine the total amount of money to be made available from local sources for school purposes and shall furnish the school board with a statement of the sum to be made available. If the assembly does not, within 30 days, furnish the school board with a statement of the sum to be made available, the amount requested in the budget is automatically approved. Except as otherwise provided by municipal ordinance, by June 30, the assembly shall appropriate the amount to be made available from local sources from money available for the purpose. **The assembly may not reallocate or reappropriate for another purpose the amount appropriated from local sources to the district for school purposes,** unless the U reserve acct is @ the max amount

* **Sec. 5.** AS 14.16.050(a) is amended to read: unrestricted portion

(a) The following provisions apply with respect to the operation and management of a state boarding school as if it were a school district:

U= Unrestricted

(1) requirements relating to school district operations:

(A) AS 14.03.030 - 14.03.050 (defining the school term, day in session, and school holidays);

(B) AS 14.03.083 - 14.03.140 (miscellaneous provisions applicable to school district operations);

(C) regulations adopted by the board under authority of AS 14.07.020(a) that are applicable to school districts and their schools, unless the board specifically exempts state boarding schools from compliance with a regulation;

(D) AS 14.12.150 (authorizing school districts to establish and participate in the services of a regional resource center);

(E) AS 14.14.050 (imposing the requirement of an annual audit);

(F) AS 14.14.110 (authorizing cooperation with other school districts);

(G) AS 14.14.140(b) (establishing a prohibition on employment of a relative of the chief school administrator);

(H) AS 14.18 (prohibiting discrimination based on sex in public education);

(2) requirements relating to the public school funding program and the receipt and expenditure of that funding:

(A) [AS 14.17.500 (RELATING TO STUDENT COUNT ESTIMATES);

(B)] AS 14.17.505 (relating to school operating fund balances);

(B) AS 14.17.505 - 14.17.910 [(C) AS 14.17.500 - 14.17.910] (setting out the procedure for payment of public school funding and imposing general requirements and limits on money paid);

(3) requirements relating to teacher employment and retirement:

(A) AS 14.14.105 and 14.14.107 (relating to sick leave);

(B) AS 14.20.095 - 14.20.215 (relating to the employment and tenure of teachers);

(C) AS 14.20.220 (relating to the salaries of teachers employed);

(D) AS 14.20.280 - 14.20.350 (relating to sabbatical leave provisions for teachers);

(E) AS 23.40.070 - 23.40.260 (authorizing collective bargaining by certificated employees), except with regard to teachers who are administrators and except that the board may delegate some or all of its responsibilities under those statutes;

(F) AS 14.25 (provisions regarding the teachers' retirement system);

(4) requirements relating to students and educational programs:

(A) AS 14.30.180 - 14.30.350 (relating to educational services for children with disabilities);

(B) AS 14.30.360 - 14.30.370 (establishing health education program standards);

(C) AS 14.30.400 - 14.30.410 (relating to bilingual and bicultural education).

* **Sec. 6.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution,

and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420(a)(1) and the high school vocational education factor set out in AS 14.17.420(a)(3);

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the

difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(H) notwithstanding (A) - (C) of this paragraph, if a district's ADM adjusted for school size under (A) of this paragraph increases by five percent or more from one fiscal year to the next fiscal year, the department shall provide supplemental funding that is equal to the increase in the adjusted ADM for the current fiscal year;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

* **Sec. 7.** AS 14.17.505(a) is amended to read:

(a) A district may not accumulate in a fiscal year an unreserved portion of its

year-end fund balance in its school operating fund, as defined by department regulations, that is greater than **15** [10] percent of its expenditures for that fiscal year.

* **Sec. 8.** AS 14.17.600(a) is amended to read:

(a) Within two weeks after the end of the 20-school-day period ending the fourth Friday in October, each district shall transmit a report to the department that, under regulations adopted by the department, reports its ADM for that count period and other student count information that will aid the department in making a determination of its state aid **for the succeeding fiscal year following the count period** under the public school funding program. For centralized correspondence study, the October report shall be based on the period from July 1 through the fourth Friday in October. The department may make necessary corrections in the report submitted and shall notify the district of changes made. The commissioner shall notify the governor of additional appropriations the commissioner estimates to be necessary to fully finance the public school funding program for the current fiscal year.

* **Sec. 9.** AS 14.17.600 is amended by adding new subsections to read:

(c) A student count shall be adjusted for the current fiscal year as provided under AS 14.17.410(b)(1).

(d) Part-time students shall be included in the student count data in accordance with regulations adopted by the department.

(e) When reporting a district's ADM, a part-time student who is a correspondence student may not be counted as more than one full-time equivalent student.

* **Sec. 10.** AS 14.17.500 is repealed.

* **Sec. 11.** This Act takes effect July 1, 2014.

Sponsor Statement – HB 313

"An Act relating to student counts and estimates for public school funding; and providing for an effective date."

Our school districts need effective tools to plan and budget for the education of our children.

Under HB 313 -- subject to the hold harmless provisions, changes in the Base Student Allocation, or other legislative changes -- districts will be able to complete the budget process and determine staffing levels earlier, eliminate unnecessary layoff notices, and execute employment contracts to improve the stability of the education climate in the state.

The purpose of the bill is to base the funding for each school district in the state on the count under A.S. 14.17.600 for the preceding fiscal year. For example, the count conducted in October 2012 will establish the funding level for the district for the 2014 Fiscal Year.

The new funding formula will not change the "hold harmless" clause currently in existence. If a decrease in enrollment of five percent or more occurs, the district will continue to receive funding based upon the Average Daily Membership plus the 75/50/25 percent addition over the next three years. Other provisions of the foundation formula will remain as well.

If a district has an actual increase in student count of greater than five percent, this legislation will require the Department of Education to provide supplemental funding to the district for the current fiscal year equal to Average Daily Membership for the current year. For example, if the October 2013 count is five percent larger than the October 2012 count, the Department will provide supplemental funding to the district for Fiscal Year 2014 equal to the increase in the Average Daily Membership between the October 2012 count and the October 2013 count.

The new funding method will implement with the FY 2014 year. Thus, the count conducted in the fall of 2012 will provide the funding level for both FY 2013 and FY 2014, subject to the hold harmless provisions.

An important consideration in this legislation is, except for Fiscal Year 2014, the actual funding given a district will not change, only the timing of the funding.

Email: Representative.Eric.Feige@legis.state.ak.us

HB 313

School Count Changes

The purpose of the proposed legislation is to base the funding for each school district in the state on the count under A.S. 14.17.600 for the proceeding fiscal year. For example, the count conducted in October 2012 will establish the funding level for the district for the 2014 Fiscal Year.

These changes pertain to the use of the student count and do not provide changes to the funding calculations, allocation, or other factors.

The motivation for implementing this change is to provide a better budgeting tool for school administration and boards to help reduce the uncertainty in determining staffing levels for the upcoming school year. Under the proposed legislation -- subject to the hold harmless provisions, changes in the Base Student Allocation, or other legislative changes -- districts will be able to complete the budget process and determine staffing levels earlier, eliminate unnecessary layoff notices, and execute employment contracts to improve the stability of the education climate in the state.

The new funding formula will not change the "hold harmless" clause in A.S. 14.17.410(E). If a decrease in enrollment of five percent or more occurs, the district will continue to receive funding based upon the ADM plus the 75/50/25 percent addition over the next three years. Provisions of 14.17.410(F) and (G) will also remain.

If a district has an actual increase in student count of greater than five percent, legislation will require the Department of Education to provide supplemental funding to the district for the current fiscal year equal to Average Daily Membership for the current fiscal year. For example, the October 2013 count, if five percent larger than the October 2012 count, the Department will provide supplemental funding to the district for Fiscal Year 2014 equal to the increase in the Average Daily Membership between the October 2012 count and the October 2013 count.

The proposed legislation will repeal the requirements of A.S. 14.17.500 requiring a student count estimate.

The new funding method will implement with the FY 2014 year. Thus, the count conducted in the fall of 2012 will provide the funding level for both FY 2013 and FY 2014, subject to the hold harmless provisions.

An important consideration in this legislation is, except for Fiscal Year 2014, the actual funding given a district will not change, only the timing of the funding.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** HB313
2012 LEGISLATIVE SESSION

Analysis

HB 313 repeals AS 14.17.500 Student count estimates.

This bill would base school districts current year public school funding entitlement on the prior year's October count. Currently the law provides that the current year October count provides the current year entitlement. For example, under this bill, the October count during the FY2014 school year would be the funding that districts receive for the FY2015 school year.

In addition, the bill provides supplemental funding when a district's average daily membership for school size increases five percent or more from the prior year. For example, FY2014 sets the FY2015 funding entitlement; when a district's FY2015 ADM for school size increases by 5% or more over the FY2014 October count, the district would receive a supplemental for FY2015. The increase incorporated in the FY2015 count that created the supplemental would also be used for the FY2016 funding. Therefore, this provision would increase the public school funding expenditures to the extent that districts were paid for this provision both as a supplemental in the year of the change, and as funding in following year when the count was used to generate entitlement dollars.

This bill would repeal AS 14.17.500 student count estimates that were previously used to project for the following year.

The bill takes effect July 1, 2014.

Based on a comparison from FY2012 to FY2011 the supplemental provision would cost $1,005.0. Actual costs for the supplemental provision would be dependent on annual counts.

AS 14.17.610(a) which currently refers to recomputing state aid based on the student count and other data reported for the current fiscal year. This language could be used to distribute the supplemental.

This bill also creates a subsection to add back in the language that part-time students shall be included in the count and that a correspondence student shall not exceed one full-time equivalent which was previous stated in the repealed AS 14.17.500.

Any supplemental funding would require a General Fund transfer to the Public Education Fund.

CS FOR HOUSE BILL NO. 330( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): REPRESENTATIVE DICK

A BILL

FOR AN ACT ENTITLED

"An Act establishing a Joint Legislative Task Force on Sustainable Education; establishing state education standards; amending the authority of the Department of Education and Early Development to adopt education standards; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

EDUCATION FUNDING AND STANDARDS; LEGISLATIVE FINDINGS. The legislature finds that

(1) state education funding support for public education in grades kindergarten through 12 is increasing at a significant rate and real dollar value;

(2) education standards are developed for a small percentage of students who earn a four-year college degree that may be inappropriate for instructing and preparing a student for vocational or other career goals;

(3) state revenue, including revenue paid for education, is almost entirely dependent on revenue generated by oil production on state-owned land;

(4) production of oil on state-owned land is forecast to continue to decline at an average rate of six percent a year;

(5) the implementation of education standards has significant downstream effects on school districts, teachers, and students;

(6) implementation of new education standards influences capital and operational costs for public education funding;

(7) local school districts achieve varying levels of success, as indicated by drop-out and graduation rates;

(8) the high school graduation qualifying examination may discourage students from reaching their highest potential in the third and fourth years of high school;

(9) the public school funding formula under AS 14.17 may mask the effect of energy, health care, pupil transportation, and other inflationary factors that erode the amount of instructional dollars available to classrooms;

(10) continued increases in public school funding under AS 14.17 restrict the flexibility of both the legislature and local school districts to respond to changing funding needs for public schools in the state.

* **Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ESTABLISHMENT OF JOINT LEGISLATIVE TASK FORCE ON SUSTAINABLE EDUCATION; COMPOSITION; DUTIES. (a) A Joint Legislative Task Force on Sustainable Education is established in the legislative branch of state government for the purpose of examining the efficiency and effectiveness of public education delivery in the state, with a focus on

(1) matters pertaining to education standards for students in grades kindergarten through 12 in the state;

(2) all aspects of public education funding in the state; and

(3) the ability to prepare students in the state for various rewarding careers;

(b) The duties of the task force established under this section include

(1) creation of a process for vetting proposed education standards before the

standards are adopted by the state Board of Education and Early Development;

(2) proposal of separate education tracks for postsecondary vocational and college readiness;

(3) evaluation of school district challenges that result from implementation of federal education laws;

(4) evaluation of the efficacy, cost-effectiveness, and redundancies of various education assessments, including the high school graduation qualifying examination, and the submission of recommendations to the legislature, the governor, and the state Board of Education and Early Development for improvement of assessments;

(5) performance of an analysis of public education funding that includes

(A) a determination of the adequacy of public school funding provided under AS 14.17.410 for coverage of appropriate education expenses;

(B) a determination of the appropriate uses of the base student allocation;

(C) alternative methods of addressing fluctuating energy, health, insurance, personnel, and pupil transportation costs;

(D) a calculation of the total amounts of state, local, and federal funding available to each district and for each category of special needs service area;

(E) a comparison of the allocation of administrative and instructional personnel among districts;

(F) a determination as to whether the allocation of administrative and instructional personnel affects the ability of each district to provide effective instructional services;

(G) a calculation of the effect of pension and health care expenses on total education costs;

(6) evaluation of the availability of courses that meet core academic curriculum requirements under AS 14.43.820(a)(3) in each district; and

(7) submission of a report of its findings and proposed legislation to the governor, the Department of Education and Early Development, and the legislature by September 30, 2013, and of additional reports the task force considers advisable.

(c) The task force established under this section consists of

(1) three members of the senate, one of whom shall be the chair of the senate committee having jurisdiction over education, appointed by the president of the senate;

(2) three members of the house of representatives, one of whom shall be the chair of the house committee having jurisdiction over education, appointed by the speaker of the house of representatives; and

(3) eight members appointed jointly by the president of the senate and the speaker of the house of representatives, as follows:

(A) a representative of the Department of Education and Early Development;

(B) a small business owner in the state;

(C) a local school board member in the state;

(D) a superintendent of a public school district in the state;

(E) a public member; and

(F) three representatives of major career destinations of high school graduates in the state, jointly nominated by the commissioner of labor and workforce development and the commissioner of commerce, community, and economic development.

(d) A majority of the members of the task force constitutes a quorum. A vacancy on the task force shall be filled in the same manner as the original selection or appointment.

(e) Members of the task force serve without compensation but are entitled to per diem and travel expenses authorized for boards and commissions under AS 39.20.180. The staff of the legislative members of the task force shall serve as staff for the task force.

(f) The task force shall meet at the call of the chair. The president of the senate and the speaker of the house of representatives shall jointly appoint the chair and vice-chair of the task force.

*** Sec. 3.** The uncodified law of the State of Alaska is amended by adding a new section to read:

BOARD OF EDUCATION AND EARLY DEVELOPMENT; EDUCATION STANDARDS. (a) Notwithstanding the authority in AS 14.07.020(b), the state Board of Education and Early Development shall adopt content and performance education standards, including grade level expectations, only after the standards have been vetted under a process

created by the Joint Legislative Task Force on Sustainable Education under sec. 1 of this Act.

(b) Until education standards are adopted by the state Board of Education and Early Development as provided under (a) of this section, the education standards for the state public schools serving students in grades kindergarten through 12 are as follows:

(1) the content standards for the subjects listed in this subsection, as set out in the department's publication entitled Alaska Standards: Content and Performance Standards for Alaska Students, as revised on March 2006, are adopted by reference; the subjects are

(A) English/language arts;

(B) mathematics;

(C) science;

(D) geography;

(E) government and citizenship;

(F) history;

(G) skills for a healthy life;

(H) arts;

(I) world languages;

(J) technology; and

(K) employability;

(2) the content standards for physical education, as set out in the department's publication entitled Alaska Physical Education Standards, as revised on March 9, 2010, are adopted by reference;

(3) the performance standards for reading, writing, mathematics, science, and Alaska history for grades three through 10, as set out in the department's publication entitled Alaska Standards: Content and Performance Standards for Alaska Students, as revised on March 2006, are adopted by reference;

(4) the performance standards for reading, writing, and mathematics for grades kindergarten through two, as set out in the department's publication entitled Alaska Performance Standards (Grade Level Expectations) Kindergarten - Grade 2, as revised on September 28, 2006, are adopted by reference.

* **Sec. 4.** This Act is repealed July 1, 2014.

* **Sec. 5.** This Act takes effect immediately under AS 01.10.070(c).

FISCAL NOTE

STATE OF ALASKA **BILL NO.** HB 330
2012 LEGISLATIVE SESSION

Analysis

HB330 establishes the Joint Legislative Task Force on Education Standards within the Legislative Branch. The Task Force consists of ten members, comprised of two Legislators, one member from the Department of Labor and Workforce Development, one member from the Department of Education and Early Development, and six public members. It is anticipated that the Task Force will hold four meetings, to be held in Anchorage, Barrow and Fairbanks. Travel funding for non-Executive Branch members is included in this fiscal note. Meetings will be held in existing LIO sites, with no additional cost to the Task Force. The Task Force will be staffed by the Department of Labor and Workforce Development and existing legislative staff. The Task Force shall create a process for vetting proposed education standards before the standards are adopted by the Board of Education and Early Devlopment. Costs to teleconference meetings and print subject matter will be absorbed in the existing Legislative Affairs Agency Budget.

Sponsor Statement
CS HB 330 ( ) Version E: State Standards

State education funding support for public K-12 education is increasing at a significant rate and yet, many districts are struggling to maintain instructional programs to meet student needs. Additionally, proposed State education standards are on the brink of adoption, without significant private sector input. The stakes and costs for rushing to adoption are high. The standards must be rigorous, but meaningful.

CS HB 330 creates a Joint Legislative Sustainable Education Task Force to:

- examine the efficiency and effectiveness of education delivery in Alaska, with a specific focus on:
  - education funding and educational standards, and
  - the ability to prepare students for significant careers.
- The Task Force will submit a report of its findings and proposed legislative changes to the governor, the legislature and the Board of Education and Early Development by September 30, 2013 and make any additional reports it considers advisable.

Members of the Task Force will represent:

- The Legislature
- The Department of Education & Early Development
- Small business
- Local school officials
- Major Alaska career destinations of high school graduates

The Task Forces' specific duties include:

1. Creating a process for vetting proposed education standards before the standards are adopted by the state board of Education and Early Development
2. Discussing separate education tracks for college bound and vocation bound;
3. Evaluating school district challenges that result from implementation of federal education laws;
4. Evaluating the efficacy, cost-effectiveness, and redundancies of various education assessment, including the high school graduation qualifying examination;
5. Conducting an analysis of public education funding that including:
   A. The adequacy of public school funding for coverage of appropriate education expenses;

B. A determination of the appropriate uses of the base student allocation;

C. Alternative methods of addressing fluctuating energy, health, insurance, personnel, and pupil transportation costs;

D. The total amounts of state, local, and federal funding available to each district and for each category of special needs service area;

E. A comparison of the allocation of administrative and instructional personnel among districts;

F. Whether the allocation of administrative and instructional personnel has an effect on the ability to provide effective instructional services in each district; and

G. The effect of pension and health care expenses on total state education costs

6. Evaluate the availability of courses meeting core academic curriculum requirements under the Alaska Merit Scholarship in each district.

The State educational content and performance standards are the foundation of our educational system. Upon them are built a massive superstructure:

- The writing of the Grade Level Expectations (GLE's);
- The choice of expensive curricula in 53 different districts;
- Thousands of teacher hours aligning new curricula to the new standards;
- Hundreds of thousands of dollars of professional development;
- $7.0 million of new assessment tools;
- Over $1.2B annual funding supporting the system driven by the new standards; and
- The quality of instruction for over 130,000 students.

The cost-to-date of producing the standards the Department of Education & Early Development is proposing for adoption has been $270,886. The standards were created in eight separate meetings attended by a sliver of stakeholders. The superstructure built upon them as well as annual maintenance will cost multiple billions of dollars and directly impact every facet of instruction statewide.

Educational funding and student performance are under continual intense scrutiny. These subjects are the source of great consternation for parents, educators and policy makers. It only makes sense that the foundation of our educational system for the next six-year cycle should be of the highest quality and directed at fulfilling our mission statements.

Sectional Analysis
CS HB 330 ( ) Version E
State Education Standards

Section 1:

Sets out the findings substantiating the creation of the Jt. Legislative Task Force on Sustainable Education.

Section 2:

The purpose of the Task Force is to:

- examine the efficiency and effectiveness of education delivery in Alaska, with a specific focus on
  - education funding and educational standards, and
  - the ability to prepare students for significant careers.
- The Task Force will submit a report of its findings and proposed legislative changes to the governor, the legislature and the Board of Education and Early Development by September 30, 2013 and make any additional reports it considers advisable.

The duties of the task force begin at Page 2, Line 30:

1. Create a process for vetting proposed education standards before the standards are adopted by the state board of Education and Early Development
2. Propose separate education tracks for postsecondary vocational and college readiness;
3. Evaluate school district challenges that result from implementation of federal education laws;
4. Evaluate the efficacy, cost-effectiveness, and redundancies of various education assessment, including the high school graduation qualifying examination, and make recommendations to the legislature, the governor and the state Board of Education and Early Development for improvement or restructuring of assessments;

Prepared By: A. Kreitzer, Staff to
Representative Alan Dick, Sponsor
CS HB 330 Version E March 20, 2012

5. Conduct an analysis of public education that funding that includes:

A. A determination of the adequacy of public school funding for coverage of appropriate education expenses;

B. A determination of the appropriate uses of the base student allocation;

C. Alternative methods of addressing fluctuating energy, health, insurance, personnel, and pupil transportation costs;

D. The total amounts of state, local, and federal funding available to each district and for each category of special needs service area;

E. A comparison of the allocation of administrative and instructional personnel among districts;

F. Whether the allocation of administrative and instructional personnel has an effect on the ability to provide effective instructional services in each district; and

G. The effect of pension and health care expenses on total state education costs

6. Evaluate the availability of courses meeting core academic curriculum requirements under AS 14.43.820(a)(3) in each district.

The membership of the Task Force begins on Page 3, Line 31:

The Task Force members are appointed by the Senate President and House Speaker and represent:

a. Six members of the Legislature including chairmen of the Education Committees

b. Eight members as follows:

i. a representative of the Department of Education and Early Development

ii. a small business owner

iii. a superintendent

iv. a school board member

v. a public member

vi. three representatives of major career destinations of high school graduates in the state, jointly nominated by the commissioner of labor and workforce development and the commissioner of commerce, community, and economic development.

The task force meets at the call of the chair. The Senate President and House Speaker shall jointly appoint the chair and vice chair of the task force.

Section 3:

The existing content and performance standards will remain in effect until the new process is developed and the newly vetted standards are adopted.

Section 4:

The task force is repealed on July 1, 2014. The temporary law in Section 3 is also repealed July 1, 2014.

Section 5:

The bill has an immediate effective date.

HB 330: State Education Standards

HB 330 asks for a meaningful conversation regarding the purpose of education with all stakeholders before adopting and implementing the proposed State standards.

Standards should not be adopted because:

- Their adoption is a six-year irreversible path with an indeterminate fiscal note for all communities throughout Alaska.
- If we do not act, DEED and the BOE, by regulation and default, will adopt the proposed State standards. The Legislature will be obligated to fund the transition and BSA increases. Textbooks, curriculum development and alignment, annual assessment development, and professional development could exceed $100 million.
- There are several questions needing answering:
  1) Who are the standards for? Should we consider dual tracks? College/Vocational Education?
  2) Do we want aspirational or essential standards? How will they be assessed?
- The *Brown Center for Education at the Brookings Institute* says the Common Core standards will **not** produce meaningful improvement. There is no data to refute the Brookings' assertion. Adoption will necessitate a huge cost to school districts with no measurable results.

THE MYTH AND THE LEMMINGS
Common Core ≠ Common Sense

By Ray Mayer

For a brief moment, the Alaska State Legislature is in a position to prevent a massive blunder that is empowered by myth and emotion. If we do not review the proposed State Educational Standards, which are the foundation of education in Alaska, we will enter into another cycle of frustration and failure.

There is a solution.

The fundamental problem is that our educational system is not aligned with the reality students will face after graduation.

The solution is simple. Professionals in the major career paths must have a solid seat at the table, and not be token representatives.

Our current State Educational Standards fall far short. However, they were created by the exact same flawed process by which the proposed State of Alaska Standards (ASA) and the Common Core (CC) standards were created. A flawed process will *always* create a flawed product. Careful comparison shows that only superficial differences exist between the Common Core standards and the proposed State of Alaska Standards.

Rushing to judgment in adopting the Common Core (CC) and proposed State of Alaska Standards (SAS) is unwise for several reasons:

1) **Irreversible.** Adoption of the education standards is an irreversible 6-year process. Standards are the foundation of the educational system. If they are flawed, six years of education will be flawed.

2) **Conclusive data.** The Brown Center of Education under the prestigious Brookings Institute clearly says p.14 *"Don't let the ferocity of the oncoming debate fool you... the Common Core will have little effect on American students' achievement. The nation will have to look elsewhere for ways to improve its schools."* Despite this irrefutable conclusion, with no contrary evidence, Anchorage has chosen to adopt the Common Core Standards. ASB spent less than two hours in discussion before lunging to judgment. What is the cost? Where is the research? Worse yet, where is the evidence that the standards serve anyone other than the elite 7% who will eventually complete a 4-year degree program? In the blind rush, the career/tech students have been sacrificed on the altar.

3) **Rigor Myth.** The myth that more rigorous standards will cause students to perform better is driving the lemmings. The *Brown Center/Brookings Report* clearly refutes this myth. High teacher expectations cause students to perform better. More rigorous standards are *NOT* the same as high teacher expectations!

   Read the Brookings report p.4. Raising standards will NOT improve performance. Standards are not a vacuum hose that sucks students upward.

4) **Lid myth.** We are told that our current standards are holding students back. The misconception borders on deception. Our current standards only determine what our state assessment tests. Schools can raise the bar as high as they want now. Schools are already

teaching algebra II, trig and pre-calc. Our current Alaskan Standards are *NOT* a lid holding students down. The cause for low student performance lies in other variables hidden by denial.

5) **No fiscal note.** There has been *NO* cost analysis for adopting the standards for the State. Will the legislature commit to something for which there is no accurate fiscal note? This alone should stop the CC and SAS movement in its tracks. A reputable Alaskan source has stated the cost of adopting the CC or SAS is "incalculable."

While schools debate whether to adequately heat their buildings or lay off teachers, will the State make a commitment that could easily cost >$100M for new textbooks and curriculum, new assessment tools, teacher time aligning the new curriculum to standards, and professional development? The cost will be staggering, and the improvement to education will be zero!

Texas estimates that it would cost $3B to convert to Common Core Standards.

Educational designers are desperate for a way to improve the struggling system. Expensive fads like the Common Core Standards arise to meet the demand. The Legislature trusts the designers. Four years later, District representatives come to Juneau asking for more money and wonder why the Legislature is "rude."

Only real change will evoke real change.

6) **Stakeholders.** The proposed SAS were modified from the CC by 224 educators and 4 non-educators. Representatives of the career destinations of our students *were not and must be major* stakeholders. The vast majority of CC and SAS high school math standards have *NO* real life applications. If schools are to prepare students for real life, then ALL standards should have a real life application! This, and this alone will repair our broken system.

On-the-ground-educators are doing their best to make the system work, but until the standards are aligned with reality and not the exclusive interests of the intellectual elite, the system will struggle.

7) **Dumbing down.** Those who challenge CC and SAS are accused of dumbing down the standards. The accusers lack real life application skills to envision the obvious. We must redirect rigor from academic abstraction to real life applications.

8) **Elemental or aspirational standards.** The next concept is difficult, but imperative to understand. Standards are either a) elemental, that is, what all students should know, or b) aspirational, that is, what we wish most students would know.

The CC and proposed SAS are aspirational. Since all students will NOT be taking the courses necessary to study the aspirational standards, and our assessments will measure those aspirational standards, we will NEVER know whether students are performing poorly on something they have studied, or whether they have just not taken the courses necessary to learn the aspirational standards.

All we will know is that a majority of students are performing poorly. Districts will get a big "ding" and educational designers will be looking for another fad.

9) **Esoteric language.** The language of the CC and SAS is esoteric and their form inconsistent. What good is public comment if the public cannot read the standards? Additionally, the language and math standards are inconsistent with each other. The language standards are written with a broad brush, the math standards with an ultra-fine Sharpie. Standards are supposed to represent concepts, not curriculum. Some math standards are so specific they better resemble a spare problem on the bottom of a page.

10) **No field testing.** The standards have not been field tested in Alaska. Do Alaskan teachers understand the standards well enough to design comparable lessons? Should we make a $multi-million move to CC or SAS with no field testing? Will we follow the Lower 48 lemmings over another destined-to-fail cliff?

11) **Abandonment.** For those who are able to read the standards, it is obvious: the standards are written for those students going to a 4-year degree program.

The tragic fact is that 93% of our current 9th graders will *NOT* finish a 4-year degree program.

1/3 of our 9th graders will not graduate from high school.

1/3 of our 9th graders will graduate from high school and go on to "life."

1/3 of our 9th graders will go on to a 2-year, a 4-year or a certificated program.

The proposed CC and SAS cater to the upper1/3 and abandon the needs of the lower 2/3.

12) **Definition of insanity.** The state has been through the standards creation and adoption process many times, and seems to have little institutional memory. The identical process of standards development brought us the flawed system we now have. Will repeating the same process on a more stringent level produce a different result? Only when stakeholders from career destinations are major players and when standards are aligned with real life will the system be meaningfully reformed. The simplicity of the solution is overwhelming.

HB 330: State Standards

Testimony to Committee

2/24/2012

Peggy Cowan

I'm Peggy Cowan, superintendent of schools for the North Slope Borough School District.

Good morning Chairman Dick, members of the committee, thank you for inviting me to speak today and for your consideration of HB 330 and other education issues. I am grateful for your dedication to the education of the children of our state. I know you have a busy agenda and I will try to be brief.

I reviewed HB 330: State Standards, Representative Dick's sponsor statement and the material distributed to school districts by the Department of Education and Early Development inviting comment on the current draft of the standards. I agree with Representative Dick's emphasis on the importance of the investment in state standards and their effects on and use by the districts. Our district is in a five year process of comprehensive curriculum development, alignment, integration and mapping and the state standards and grade level expectations are at the heart of rigorous academic content for this curriculum. We are relying on a locally developed Inupiaq Learning Framework for the relevance and integration of local language, history and culture into our curriculum. We turn to the state standards and grade level expectations for guidance on academics.

I also agree with Representative Dick's sponsor statement's emphasis on a thorough vetting process for state standards. The Department of Education and Early Development was right in extending the time between introduction to the State Board of Education and adoption rather than the typical cycle of the next meeting. This is a step in the right direction to allow thorough vetting. As Representative Dick explained industry representatives and employers are important in the review of the standards. Industry and employers are not likely to review the state standards without the state being intentional. As a point of reference, let me summarize the process in the North Slope Borough School

District. The district's Director of Curriculum, Instruction, and Assessment is reviewing them herself and getting teams within the district to review them and provide recommendations for our district's feedback to the Department of Education and Early Development. These teams are made up primarily of members of our district's own curriculum committees who are guiding the work on our curriculum and are for the most part teachers. We do include what we call 'steering committees' which are made up of parents, businesses and community members in the review of our own curriculum, but we are not including these people in the district's review of the state's standards. I do not know, but expect that the review by others districts is similar, so the district's review of the standards will not elicit industry review. To get that review, the state will need to invite and solicit it intentionally.

Thank you again for your service on this committee and to the students in our state. I'd be happy to answer any questions.

Box 169 Barrow, Alaska 99723 (907) 852-5311 Fax (907) 852-9503

Thank you Mr. Chairman and Committee for allowing me to testify,

For the record, my name is Grant Funk. I have lived in Western Alaska for nearly 20 years and in the village of Hooper Bay for the past 13 years. I have raised 5 of our 6 children in this region. Several of our children are currently raising their families in Western Alaska. My kids have had the best of both the public school system as well as a homeschool education. I am an Emergency Medical Instructor as well as an Aviation Instructor. I have volunteered in the local school teaching these skills for 10 years as well as teaching aviation to the middle school and high school students full time for two years. I currently teach an after school aviation class as well as direct a local teen center. Overall, I have been involved in education on various levels for 26 years. I am an Advisory School Board member. I am also the 2012 Alaska Air Carriers Association Community Service Award winner for my work in aviation education in our community.

I am requesting today that the State take the necessary time to provide educational standards that lay the foundation for the future success of all students. We have entered a technological age that has presented new opportunities and challenges for this generation. Their foundational years in elementary, middle school and high school need to be the trailhead for a successful future.

We have much cultural and geographical diversity. That diversity should be reflected in the state educational standards. This diversity is reflected in my own children. Three of our six kids completed a course of study in college. Two completed technical training. One is still in high school but planning on college. As an educator and as a parent, I want to provide the best avenues of success for my students as individuals. They need a set of standards to act as a guiding boundary into the future they desire to pursue.

With that in mind I would like to request that the new standards take a step in a direction that would eliminate the "one size fits all" approach. We have students that are hoping to go to college following graduation and a greater majority of students that will go into the skilled labor force. There needs to be at least two sets of standards to better prepare these students for productive careers in their areas of interest.

A career technical education track (CTE) would give students the opportunity to learn applicable skills for jobs that are more readily available in rural Alaska. Aviation, health care, commercial fishing and construction have opportunities that do not require a college degree. There is also a need in this category for small business training as well as classes in small government. College students often leave the rural areas and enter the job markets appropriate to their degree. That leaves others to start the small businesses and sit on the various local councils and boards. The middle and high school education system could go a long way toward preparing students as lifelong learners and leaders in their local communities through a CTE track standard.

One Western Alaska CTE teacher I met with gave me the example of six of his former students. They were hired in various capacities right after high school and are averaging $40,000 each annual income. These students will not be a part of the welfare system. They will have the opportunity to fund further

training or have their employer provide advancement training. They are becoming productive local citizens without a college education.

If there are CTE standards, the system is freed up for a college track set of standards that will challenge and prepare the college bound high school students with advanced math and science classes. The upper level students are often the neglected group in the education process in rural schools. They need guidelines that will provide realistic challenges better preparing them for college studies.

Bringing in a vocational track as well as a college track would not only benefit the student, but the state in the years to come. When a person has a job, they are less likely to wind up on the welfare system or in the court system. At a recent seminar on international business the speaker said, "Worldwide, one of the best things you can do for a person is to give them meaningful work."

That brings me to my final thoughts on plotting the course for the future direction of education in the state. One of our embarrassing statistics as a state is the high suicide rate. Students graduating ill prepared for the job force or even for a subsistence lifestyle are left to wander the streets of our cities or the rural communities looking for something to do. Hopelessness takes over and lives, that could have made a difference in this world, are lost.

One school teacher, who has also been in Hooper Bay 13 years, told me that she has lost 40 students or former students to suicide or tragic death. Even as I write, our community is again dealing with a suicide of a young man. It takes its toll on families and friends, as well as teachers and staff. The education system suffers as students and teachers are emotionally functioning at less than optimum performance.

The education system is not responsible for the high suicide rate. I do feel, however, that it can go a long way toward prevention by providing standards that allow a student to learn the relevance of an education. Vocational math, applied "hands on" science, and technical reading all connect them to a future with hope of becoming productive. These type of classes give the non-college bound student a reason to succeed in math and science because they understand how it relates to the world they live in.

As an aviation instructor I have had the joy of watching kids connect math to life skills as they calculate take off performance of an aircraft on a flight simulator. Students disinterested in science became consumed by science fair projects that utilized aviation issues. Their eyes were opened to applications of vocational math that encouraged them to learn because it had immediate applications in their world.

In conclusion, I ask the legislature to pass HB 330 allowing time to gain insights from the education industry. In doing so we will prepare a generation with a measure of hope for future jobs that will provide income for their families as well as boost self -confidence and self- reliance. Anything done to improve the family has the potential of decreasing the suicide rates.

Thank you for this opportunity to address this critical issue.

May God bless our state!

Grant Funk

Testimony of Chip McMillan
Ass't Professor of Education, UAS
2-24-12 House Education Committee

AK State Standards for K-12 are not STEM Compliant

I prepare K-8 teachers to teach math and science in Alaska.

What I am about to say will appear critical of our State Standards. It is important that you know that I participated in the writing of the science content standards, the performance standards and the science SBA items. I am as responsible as anyone for any deficiencies in these documents.

I also believe any deficiencies in these documents are not the result of negligence or malfeasance on anyone's part. As we say, hindsight is 20/20.

US students not keeping up with other nations in math and science.
AK cannot afford to lag behind the rest of the country or the rest of the world in math/science.

We are currently falling behind in an even more important area: STEM Education.
Science Technology Engineering Math

"We're doing students, parents and America's competitiveness a disservice by not demanding higher standards for STEM learning," Craig Barrett, former CEO of Intel and current chair of Change the Equation, a group of 110 business executives from Exxon, Lockheed Martin, Google, Dow Chemical, etc,.

"It turns out the most common educational background for the Fortune 500 CEOs in the US is not business or law but engineering."

42 out of the 50 highest paying jobs in Alaska are in STEM fields.
The problem is ⅓ of all engineering jobs in Alaska are done by people who live down south.

Every state I have looked at has some kind of statewide STEM initiative.

We have no engineering standards today. The word "engineering" does not appear anywhere in any of our content standards.

The Science and Technology GLEs have an implied focus on engineering but never call for actually touching or manipulating anything.

I have been unable to find any science SBA items referencing engineering.

The irony is
we used to have engineering and technology standards for K-12 in AK.
we used to have an engineering and technology curriculum for K-12 in AK.

It was mandatory for all children in Alaska!

The technologies include
Alutiiq kayak
Athabascan snowshoe
Tlingit fish trap
Aleut basketry

Even today these are marvels of technology and they resulted from true engineering.

Problem solving, innovation, designing, then testing, refining, optimizing those designs; demonstrating grit, working cooperatively. These are engineering attributes.

These are what our resource and communication industries are looking for in the workforce.

We should infuse these engineering skills and dispositions into the current math, science, technology standards.

We should seek input from business and industry, e.g., ARCO, Greens Creek Mine, GCI, NOAA.

Teachers in AK will not teach to STEM without leadership.

We need STEM in our standards, our curriculum, our SBAs, our teacher evaluations.

It seems to me that passage of this bill will assist in the appearance of STEM in our state standards, GLEs, SBAs, district math and science curricula, and thus our K-12 classrooms.

To: Chair, House Education Committee

Ref: HB330

Thank you for the opportunity to offer testimony today in support of HB 330 creating a Task Force on Education Standards. I am Joe Banghart, interim Superintendent, Denali Borough School District, Healy. Over the past fourteen years I have had the opportunity of serving on various standards committees. These committees have always been composed of educators that have volunteered to help design standards. Our state is fortunate to have these professionals give of valuable time for the process. Our state standards are vital for the continued educational progress of children in Alaska. HB330 would offer the involvement of the Department of Labor and Workforce, Department of Education and Early Development, small business owners, subsistence lifestyle, parents, and three representatives of major career destinations. This type of partnership could be the very foundation that would provide a consistent state network of business, education, parents, and other partners for career technical training, continued high academic standards, and the Department of Labor and Workforce guidance. Our state stands in vital need of this type of Task Force for the vetting of all future educational standards. This Task Force could provide information for resources available across our state. This link will build a firm foundation for future grant potential, partnerships, and the combination of state educational standards in English/language art, mathematics, science, geography, government, history, healthy life styles, arts, world languages, technology, and employability. All the consistent and professional work that has been given towards the development of state standards would benefit from this Task Force.

How can we not afford to stop and evaluate our current educational standards and properly align them with clear pathways to successful careers in Alaska. Accountability is best found in the involvement of multiple partners that design not only assessments for each Performance Standard but consider the application of these skills into actual practice. Accountability measures in this process would include academic growth and employment skills and successful job placement. True accountability is being tested by all our legislatures in consideration of this Task Force. This approach would help lower unemployment, provide future employees across the state, and encourage accountability at every level. If we ignore this vetting of our standards we are turning our backs on the future of Alaska and our children.

Joe Banghart, Supt Tr-Valley (Denali) School District

Annette,

Attached are several responses to questions from the HEDC hearing on Monday, March 19, 2012. Please let us know if members have any related questions or would like additional information. Commissioner Hanley will be referring to these handouts/responses in Wednesday's hearing on HB330.

Committee Questions:

1) Rep. Wilson asked about additional ESEA Waiver deadlines after September 2012. The U.S. Department of Education has not disclosed further dates, however they have indicated that there will be more rolling deadlines. Included as an attachment is a one-page briefing on the ESEA Waiver – first attachment
2) Rep. Cissna asked about research on the successes and failures of NCLB. Included is a report that EED found on the Center for Education Policy (CEP) website that should suffice. Additionally, within the body of this email, we are including the CEP webpage. Center for Education Policy (CEP) studies – CEP is a reputable group - http://www.cep-dc.org/index.cfm?DocumentSubSubTopicID=9 – second attachment
3) Rep. Seaton asked for an explanation of the comparison to proposed Alaska Standards and the Common Core – third attachment
4) Rep. Seaton asked for a side-by-side comparison – fourth attachment
5) Additionally, we are provided two documents that layout the structure of the Mathematics and ELA standards which the Commissioner will use for explanation purposes on Wednesday – fifth and sixth attachments

Thanks Annette, please let me know if you have any questions.

Alaska Department of Education & Early Development

ESEA Waiver Flexibility Summary to Date

March 14, 2012

The US Department of Education is offering states the flexibility to waive certain provisions of the current Elementary and Secondary Education Act (ESEA), formerly known as No Child Left Behind, in exchange for following another set of requirements. The major provisions that would be waived would be the current proficiency targets for Adequate Yearly Progress (AYP) and the labeling and consequences for Title I schools in improvement, corrective action, or restructuring.

Requirements and Flexibility

The waiver would last through the 2013-2014 school year and could be extended if ESEA is not reauthorized by then.

In exchange, Alaska would have to implement an accountability system of its own design that addresses the U.S. Department of Education's principles for improving student achievement and increasing the quality of instruction. Those principles are:

1. Adopt college-ready and career-ready standards and assessments, including for English language learners.

2. Develop a system of differentiated recognition, accountability and support for schools.
    - Each school could have its own annual proficiency targets that are ambitious but achievable.
    - Each year, Alaska would have to identify the lowest-performing 5% of Title I schools and apply specific consequences as required by the U.S. Department of Education.

3. Use student achievement, as shown in state assessments or on other measures, as a significant factor in evaluating teachers and principals.
    - Alaska would set the guidelines for evaluations, and districts would implement the systems.

Current Status

In November, 11 states applied for waivers, and all have now received them. Another 26 states just recently applied for waivers to take effect in the 2012-2013 school year. The next deadline to apply is Sept. 6, 2012; those states would begin to implement the waiver's requirements in the 2013-2014 school year. We anticipate that there will be additional deadlines following the one in September.

EDUCATION

Report Card

With help from education experts, NJ grades the landmark No Child Left Behind Act 10 years after its enactment.

by Fawn Johnson

Updated: January 8, 2012 | 7:26 a.m.
December 8, 2011 | 2:00 p.m.

AP PHOTO/SETH PERLMAN

Mixed results: No Child Left Behind has not dramatically boosted student performance

Jan. 8, 2012, will mark the 10-year anniversary of President George W. Bush's signature on his top domestic priority, the No Child Left Behind Act. The standards-setting education law was unquestionably groundbreaking, even though a decade of experience has revealed deep flaws in its measurement systems. Undaunted, its defenders stand by its original premise—that public schools should take responsibility for the academic achievement of all their students.

The law was a product of political circumstances that would be impossible to replicate today. Unapologetic liberals teamed with conservatives in Congress and the White House to craft a monitoring system for schools that for the first time provided comparable data about students' abilities in math and reading. The law required all students to take standardized tests once a year, and it mandated that schools show they were improving their performance from year to year.

The measure passed the House and Senate with sweeping bipartisan majorities, a feat that reflected a year of in-depth and difficult negotiations between the administration and Congress. At certain points, the legislation stayed alive only because the authors stubbornly refused to give up. The Democratic sponsors fended off teachers unions, and the Republicans deflected conservatives railing against bigger government. The sponsors forged

compromises across the aisle and then cajoled their constituencies into backing their efforts.

It worked. In the House, the vote on the final conference report was 381-41. The Senate vote was 87-10.

"The fundamental principle of this bill is that every child can learn, we expect every child to learn, and you must show us whether or not every child is learning," Bush told a cheering crowd at a high school in Hamilton, Ohio, on the day he signed the bill. "Every school has a job to do, and that's to teach the basics and teach them well. If we want to make sure no child is left behind, every child must learn to read. And every child must learn to add and subtract."

As a country, we have not come close to achieving that goal, but No Child Left Behind has greatly informed our understanding of how far we have to go. School districts and states are now accustomed to giving their students standardized tests and reporting the results. Just as importantly, achievement among minorities and disadvantaged kids is disaggregated, or examined separately, highlighting potential problem areas in schools and communities. Forty-five states, two territories, and the District of Columbia have adopted new state-determined Common Core standards for education.

The results from all of that testing are not very encouraging. In global comparisons, 15-year-olds in the United States rank 14th in reading and 25th in math. Scores have increased slowly and steadily over the past 20 years, but No Child Left Behind did not cause a noticeable uptick.

The law had problems from the beginning. Administrators spent much of their time trying to get their schools in compliance on paper rather than implementing the kind of radical changes the sponsors envisioned. The paperwork burdens were tremendous. The teacher-certification requirements were pretty much a waste of time. Loopholes in the funding provisions had the practical effect of ensuring that financially poor schools still got less money than those in well-off areas. Some states lowered their academic standards to "improve" their performance.

The failure at all levels of government to deliver promised resources to ailing schools made it impossible to give disadvantaged students all the benefits to which they were entitled. It's a matter of debate where the blame lies for the lack of funding, but it's fair to say that the education statute is not the sole cause.

Now, No Child Left Behind's chapter in history is about to close. Lawmakers are proposing to dismantle the law, citing complaints about its one-size-fits-all approach and its effect of encouraging schools to "teach to the test." Because thousands of schools could lose funding for falling short of the law's achievement levels, the Education Department is offering to waive some requirements for states that meet certain criteria.

Against this backdrop, *National Journal* asked 21 education experts—the law's authors, other lawmakers, school officials, academics, and advocates with a variety of perspectives—to evaluate No Child Left Behind's effectiveness based on its original goals.

"Very few [school districts] stepped up and said, 'Whoa, we've really got to do things differently here.'" —Rep. George Miller, an author of No Child Left Behind

It is no simple task to judge a law, particularly one that was enacted after a year of intense bipartisan negotiations in which everyone involved gave up something they cared about. The deal they reached, letting the states set many of the benchmarks, was imperfect from the get-go.

About half of the participants in *NJ*'s survey declined to give letter grades to the individual components of No Child Left Behind, saying that state implementation was so varied that nationwide judgments were impossible. The experts' struggle to assess the law mirrors the statute's own contradictions which labels schools as "blue ribbon" or "failing" even though its report cards miss broad components of learning and despite the fact that states have learned to game the system.

Nevertheless, participants were in striking agreement on what worked and what didn't. Based on their assessments, *NJ* rendered its own judgment of the law's individual components—positive, mixed, and negative.

THE RESULTS IN BRIEF

Of the seven objectives that *NJ* identified, the experts considered the law's spotlight on student achievement its only success.

Collectively, they found no net positive effect from any of No Child Left Behind's primary goals:

• The law did not achieve its defining goal—accountability—but it spurred states and school boards to rethink how they assess and run their education systems. Some called this an achievement in itself.

• The law failed to close the achievement gap between well-off white children and minority or low-income students. But that goal was always more of an aspiration than a realistic objective.

• No Child Left Behind was an outright failure at ensuring teacher effectiveness. Its certification requirements were ineffective; but, at minimum, it focused educators on evaluating teachers.

• On perhaps its most basic goal, improving overall student performance, the law did not dramatically boost students' scores, but neither did it inhibit their progress.

NJ identified three secondary goals of No Child Left Behind. The experts considered these less important, but many saw them as key elements in achieving one or more of the primary goals.

• The spotlight on student achievement is the law's one undisputed success. The intense focus on students' reading and math

proficiency within different subgroups is the game-changer that will endure into the next chapter of education policy.

• Observers hotly debate the law's effect on research and data. Some experts told *NJ* that the more frequent use of data has made a big difference in helping schools understand student progress. Others said that the data don't add up to a coherent picture of student achievement.

• No Child Left Behind failed to improve school choice. Children stuck in failing schools still have little, if any, chance of transferring to better ones.

Full disclosure: *NJ*'s own measuring tool misses some of the education law's key achievements. It does not fully capture the jump in public awareness about student achievement and teacher credentials, and it doesn't reflect the impact of the state-led effort to craft Common Core achievement standards, a direct reaction to No Child Left Behind.

(Mixed results) ACCOUNTABILITY
Assessments Consistent, But States Game the System

The goal behind the accountability provisions in the No Child Left Behind Act was simple: Show parents and teachers whether schools are teaching children to read and write, and hold the schools accountable if they aren't. The law grades schools based on how well they are progressing toward those goals. Test data are broken out by race, gender, and other socioeconomic factors.

No Child Left Behind got about halfway there in getting schools to account for the achievement, or failure, of their students. We know a lot more than we did 10 years ago about students' math and reading abilities. As states have implemented annual standardized tests in reading and math for children in grades three through eight, assessments have become more consistent. Because schools report scores by subgroups, administrators can no longer hide behind their top students to mask the failing ones.

The mandated assessments have prompted a flurry of kindergarten-12 activity at the state level. All states now have academic standards and sophisticated devices for measuring student progress. Before No Child Left Behind, only a smattering of states had such programs in place.

But the law fumbled its measurement and enforcement mechanisms. It allowed states to create their own assessment tools, thus fragmenting the system and making it impossible to tell from state to state how students were performing. School administrators supplanted the initial goal of boosting student achievement with a more benign one—simple regulatory compliance. Achieving compliance became a paper game to jerry-rig the benchmarks so that more schools could meet them.

Because low achievement led to sanctions, some school districts did everything they could to avoid letting the true story of their failures come out. "Very few stepped up and said, 'Whoa, we've really got to do things differently here.' They were managing it.

That's why they were pushing the kids so hard, teaching to the test," said Rep. George Miller, D-Calif., one of the law's authors.

To ensure that some federal teeth survived in the state-determined assessment system, the law's authors inserted a 2014 deadline by which *all* public-school students should be at grade level. Schools that don't achieve that goal face punitive consequences. Under that measure, more than 80 percent of the nation's schools could be labeled as failing next year.

That looming measurement of overwhelming failure offers the best example of where the accountability feature of No Child Left Behind crumbled. "Failure" was only supposed to occur in isolated instances and was supposed to signal to states and the federal government where they needed to intervene with more management—and, importantly, more money.

The federal money didn't materialize, and states skirted their interim proficiency targets by tinkering with their standards. "Expectations, in the form of state-set standards and assessments, were too varied and, for the most part, too low," said Kati Haycock president of the Education Trust, an education-reform group.

The law inserted, a new device—the prospect of penalties—into five decades of K-12 policy; the result was curricula that closely focused on easily measurable outcomes. "Tests become high stakes when we attach sanctions," said Kevin Welner, director of the National Education Policy Center at the University of Colorado (Boulder). "We see the now-familiar signs of goal displacement—narrowed curriculum, teaching to the test, cheating, etc."

The harshest critics of No Child Left Behind say that the proficiency requirements are both meaningless and restrictive. "No Child Left Behind established unrealistic targets, failed to provide schools with resources to meet those targets, and labeled and punished schools based on flawed indicators," said Dennis Van Roekel, president of the National Education Association, the nation's largest teachers union.

The law's defenders acknowledge these shortcomings, but they stand by its central premise that schools should face consequences when their students aren't functioning at grade level.

Report Card: **No Child Left Behind**

The law has succeeded in exposing problems in public schools but has done little to solve them.

Primary Goals of No Child Left Behind

⊗ Symbol meaning failure ✓ Symbol meaning success ⊖ Symbol meaning mixed results

	Did it work?	Goal	Outcome
Accountability for Student Achievement	⊖	Measure and report by disaggregated groups whether students are at grade level on reading and math.	Assessments are more consistent, but states game the system and lower standards to avoid embarrassment.
Closing Achievement Gaps	⊖	Provide school choice and supplemental services for children who are not performing at grade level.	Attention is now focused on disadvantaged groups. Gap still remains, but all scores are up.
Overall Student Improvement	⊖	Improve academic achievement of all students.	Reading and math scores have risen modestly, but there is little evidence that the law had any effect on those outcomes.
Teacher Effectiveness	⊗	Put highly qualified teachers in every public school.	Created certification that was little more than a paper shuffle.

Secondary Goals of No Child Left Behind*

	Did it work?	Goal	Outcome
Spotlight on Student Achievement	✓	Empower citizens with information about students' achievement and progress, disaggregated by subgroup.	This is the real game-changer. The law succeeded in shining a light on achievement gaps and disparities among subgroups.
Use of Research and Data	⊖	Focus learning where it is needed with research-proven methods.	Far more data are available now than before NCLB, but there is little sense of what to do with this info.
Flexibility and Choice	⊗	Create meaningful options for children trapped in failing schools.	Parents face insurmountable hurdles to school transfers even when the opportunities exist.

*NJ ident fied these goals as secondary because they are intended to facilitate one or more of the primary goals.

"Yes, we can get a new speedometer. I'm not opposed to that. But will it close the achievement gap in and of itself? Hell, no. It just moves the goalposts," said Margaret Spellings, who as Bush's Education secretary helped to implement No Child Left Behind. "If it's just information for information's sake, that's a nothing burger. It just is."

(Mixed results) ACHIEVEMENT GAP
Gap Remains, but Educators Now See It

The law's name alone spotlights its fundamental goal of bringing all children up to grade level, regardless of race, disability, or poverty. Those who fall behind are supposed to get supplemental services to help them catch up. If their school can't provide those services, students should have access to one that can.

When No Child Left Behind was being written, black and Hispanic students lagged far behind white students in reading and math. They still do, although the achievement gap has narrowed slightly in some areas, according to the Education Department's National Assessment of Educational Progress. Hispanic eighth-graders this year nudged 2 points closer than they were in 2009 to white students' scores in reading.

The disparity is still big. Hispanics' scores of 252 in reading are now 22 points lower than their white peers' scores of 274. If the 2-point gain doesn't seem like much, consider this: It equals the improvement that Hispanics made from 1992 to 2009.

Leaving aside the comparison with whites, minority students have made dramatic improvements over the past two decades. Math scores among African-American fourth-graders and Hispanic fourth-graders are up three full grade levels since 1990. In reading, both groups have advanced about one grade level higher since 1992. Among eighth-graders, Hispanics and blacks advanced more than two grade levels in math and one grade level in reading. It isn't clear, however, that No Child Left behind had much to do with those improvements.

The education law can claim a major, if somewhat disquieting, success in letting people know just how far behind some students lag. "No Child Left Behind was enormously successful in spotlighting the significant, persistent achievement gaps at the school, district, state, and national level," said Patrick Riccards, who heads ConnCAN, an education-reform group in Connecticut that has inspired sister chapters in several other states.

No Child Left Behind came along at the midpoint of the achievement trend for students, and it didn't alter that momentum in any significant way. Most experts agree, however, that the law didn't hurt either. "White students are not standing in place while minority students gain ground," said Dan Domenech, executive director of the American Association of School Administrators.

Eliminating the achievement gap will require more than just highlighting the disparities, Domenech said. Fully addressing the problem requires the kind of commitment to improving poor performers that many schools can't or won't undertake. It would mean longer school days, a longer school year, and more support services.

"What would happen if every kid who was eligible actually got tutoring? What would that look like?" former Secretary Spellings asked. Implicit in her question is an acknowledgement that even though No Child Left Behind starkly outlined the magnitude of the challenge, it couldn't by itself bring poor and minority children up to grade level.

"If a major component of No Child Left Behind was closing the achievement gaps between subgroups of students, it is hard to claim that it was successful," said Sen. Michael Enzi, R-Wyo., the ranking member on the Senate Health, Education, Labor, and Pensions Committee.

(Mixed results) STUDENT IMPROVEMENT
Scores Have Risen Modestly

The authors of No Child Left Behind envisioned a system in which all students would be given the chance to improve. If provided that opportunity, the reasoning went, all children would improve.

And they have, slowly.

Student reading and math scores have trended upward since 1990. Public schools' academic performance is at its highest point ever. Math scores, in particular, have shown a small but distinct increase in recent years. That is no small accomplishment, given the budget shortfalls in school districts around the country.

Achievement levels still aren't anything to crow about, however. The National Assessment for Educational Progress puts math proficiency for fourth-graders at 40 percent. For eighth-graders, it is 35 percent. Reading proficiency is at 34 percent in both grades. Unless you're grading on a pretty sharp curve, that's an F. No evidence shows that No Child Left Behind affected student scores in either direction. In reading and math, the law probably didn't do any harm and quite possibly propelled acceleration where it otherwise might have slowed.

One undisputed bright spot shines. No Child Left Behind requires a Nation's Report Card every two years from the National Assessment of Educational Progress, which is widely considered to have the most reliable data on student achievement. (Before the 2002 law, the national assessments were done on an ad hoc basis as time and money permitted.)

The Nation's Report Card makes for uncomfortable reading because it doesn't lie. It is a reality check on the halfhearted testing schemes that some states and school districts have used to artificially elevate their students' scores.

"Yes, we can get a new speedometer. I'm not opposed to that. But will it close the achievement gap in and of itself? Hell, no." — Former Education Secretary Margaret Spellings

Critics say that the real damage from No Child Left Behind comes from curricula too focused on reading and math, coupled with standardized tests that don't measure comprehension. Under the law, testing became its own game, which further narrowed the focus within math and reading instruction. Not surprisingly, this trend occurred most frequently in the poorest schools that were most in danger of sanctions under the law. Allowing the states to implement No Child Left Behind, a major concession by its congressional authors, has been detrimental to student achievement in some places, because states have lowered their standards so that fewer schools will be labeled as failing.

"When schools with multiple goals are held accountable only for basic skills in math and reading, they rationally shift emphasis away from history, the sciences, the arts, civic participation, character development, physical fitness, and health," said Richard Rothstein, an education researcher at the Economic Policy Institute. "The more inexpensive the tests, the more they focus on recall rather than reasoning." Tests that can be electronically graded, for example, don't measure reasoning ability as well as, say, essay tests.

State implementation also hurt some students because they suddenly had to do less to be considered proficient. The law "inadvertently and perversely created incentives for states to lower

standards while giving school systems opportunities to take only token steps to fix failing schools," said Thomas Toch, an education journalist who cofounded the research group Education Sector.

That outcome is most definitely not what educators or the law's drafters intended, which makes it difficult to say that No Child Left Behind succeeded in improving students' performance. "The reason we're doing all of this is to 'dramatically' improve student outcomes. That adverb is so important. It means we can't be satisfied with a little bit of progress," said Gene Wilhoit, executive director of the Council of Chief State School Officers.

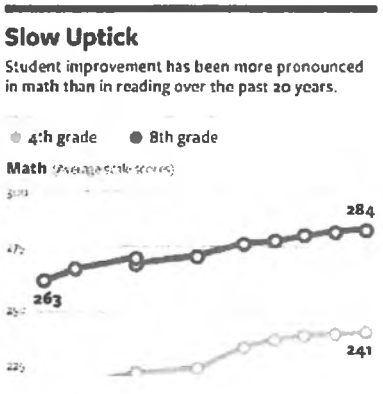
(Failure) EFFECTIVE TEACHERS
Certification Is a Paper Shuffle

No Child Left Behind was intended to ensure high-quality teachers in every school, regardless of poverty level or neighborhood. It aimed to prevent school districts from concentrating low-performing teachers in poor areas where parents were less likely to complain.

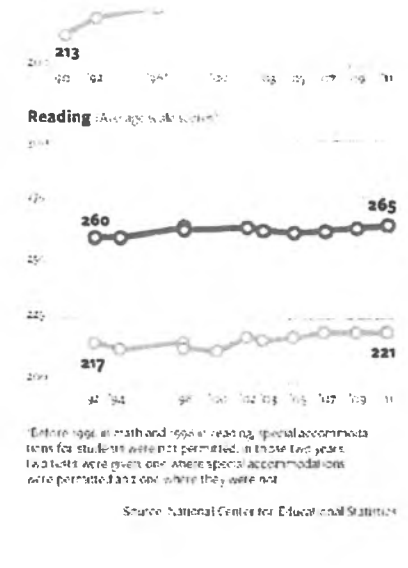
The law didn't even get out of the starting gate in rectifying that situation. Faced with a torrent of protests from teachers unions and schools, the authors stopped short of mandating an ultimate "effectiveness" goal and settled for requiring teacher certifications. To be considered "highly qualified" under the law, teachers need two things—a bachelor's degree in the subject they teach and a teaching credential.

Teachers and school administrators describe the law's certification requirements as ludicrous and time-consuming, causing bureaucratic headaches while doing nothing to indicate a teacher's abilities. Teacher evaluations and professional-development efforts continue on an ad hoc basis depending on the state and the district, but they have little to do with the check-the-box credentialing.

In poor areas, boosting teacher quality is largely a problem of resources. The law requires states to distribute money evenly, but they often find a way out. "The law contains several loopholes that are big enough to drive a truck through," said Haycock, the Education Trust president, who is a staunch defender of many of its provisions. "District budgeting practices end up favoring schools serving the fewest poor children, in some cases by as much as $1 million a year."



Among the experts *NJ* polled, the term "failure" popped up most frequently when referring to this part of the statute. "The highly qualified teacher provision, in particular, has meant merely one more paper shuffle. Indeed, it has proven a distraction," said Frederick Hess, director of education-



policy studies at the American Enterprise Institute.

The law's teacher-effectiveness provisions exist largely because of Rep. George Miller of California, the ranking Democrat on the House Education and the Workforce Committee. Before Miller began negotiating No Child Left Behind in 2001, he had already spent 10 years fighting for teacher-certification mandates. He was mostly on his own. In 1994, he lost a House floor vote, 424-1, on his proposal to require states to certify all teachers and set aside funds to pay exceptional teachers higher salaries.

Miller hoped to eradicate a practice in California in which teachers with temporary certificates were spending six or seven years on the job in bad schools.

"As the lead negotiator for the House Democrats, I can tell you that these [teacher] provisions were hard fought," said Charles Barone, federal-policy director at Democrats for Education Reform. Barone, who worked for Miller when No Child Left Behind was being drafted, said that Democrats wound up giving worried naysayers "the benefit of the doubt" by allowing states to come up with their own teacher-evaluation systems. That concession effectively torpedoed the provision's goals.

"We now know that just because teachers are certified in their core subject matter, it doesn't mean they are actually 'effective,' " said House Speaker John Boehner, who chaired the House Education panel in 2001 and wrote No Child Left Behind with Miller.

Then and now, the unions are the harshest critics of the law's teacher-effectiveness provisions. "The approach relied on arbitrary and narrow measures," said American Federation of Teachers President Randi Weingarten. At the same time, she added, the law did little to provide teachers with what they needed to improve, such as in-service training and job-embedded professional development.

(Success) SPOTLIGHT ON ACHIEVEMENT
School Data Is a Public Commodity

The law's drafters wanted to take a snapshot of schools and broadcast students' skills (or lack thereof) to the world. On that objective, No Child Left Behind succeeded.

In the history of the laws governing K-12 public education, the focus on student achievement has never been as intense as it has been since 2002. The law's simple requirement that schools make public their reading and math test results and show disparities

among different groups of students has changed the way educators and parents view their school systems.

The civil-rights community cheers the requirement that schools must report test data for girls, boys, Caucasians, Latinos, African-Americans, special-needs students, low-income children, and English-language learners. The No Child Left Behind Act is the current reauthorization of the Elementary and Secondary Education Act, first enacted in 1965 and reauthorized every five years. The disaggregation mandate by itself underscores the original law's core purpose as a civil-rights law. "The law has also brought to light rampant education disparities for students of color, students living in poverty, English-language learners, and students with disabilities," a coalition of civil-rights groups declared in an April letter to members of the Senate Health, Education, Labor, and Pensions Committee.

"We've never had this attention to student achievement during the whole history of the Elementary and Secondary Education Act," said Sandy Kress, the senior education adviser in the Bush administration who helped write the law and is now a lawyer at Akin Gump Strauss Hauer & Feld.

(Mixed results) RESEARCH AND DATA
Data Use Is Up; Results Are Unclear

The law's authors wanted schools and states to base their curricula and teaching policies on scientifically proven methods. After all, the ultimate aim of school assessments is to replicate the techniques that work and junk the ones that don't.

Schools' use of data is varied, but all of them know more now than they did 10 years ago about how to administer standardized tests and analyze that data in their schools. The Education Department's Institute of Education Sciences, created after No Child Left Behind, supports and disseminates research on education practices and publicizes statistics on the condition of education in the United States. The institute has significantly boosted the availability of data on student outcomes.

So we know more about what's happening in schools, but we don't necessarily know how to fix the lingering problems. Or, if we do know how, we aren't willing. "This is not something that can be mandated by law," said Barone, of the Democrats for Education Reform. "Regrettably, what we have now are too many state and local policymakers who are either disinclined or unable ... to let research and data drive the continuous improvements that are needed to transform our education systems."

(Failure) SCHOOL CHOICE
Options Are Limited or Nonexistent

For the conservatives who helped write No Child Left Behind, the prospect of enhanced school choice was an essential element. Bona fide choices for families would ensure that the government-run school system would be forced to answer to community and neighborhood concerns, they believed. Families would keep the government in check. "There must be a moment in which parents

can say, 'I've had enough of this school,' " Bush said when he signed the bill.

That moment has yet to come. The logistical difficulties of offering students at failing schools a chance to move to a better place have ensured that the "choice" mandated by law exists on paper only.

The number of charter schools has ticked up, and some systems try to provide parents more flexibility. But demand invariably exceeds availability, and school districts that engage in other turnaround activities can get waivers from the flexible-enrollment mandates to sidestep school-choice requirements. "Choice and supplemental services should *never* have been left in the hands of districts," said Kress, the White House education specialist under Bush.

"WE'VE COME LIGHT-YEARS"

To appreciate the philosophical shift that No Child Left Behind achieved, it is useful to step back and look at where the education debate was before. In the 1980s and '90s, policymakers were fully aware that American students were falling behind in the global marketplace. But the policy negotiations were stubbornly mired in how states should distribute school resources. Then, as now, states sought waivers from requirements about where their federal dollars should go. Testing was all over the place. Curriculum was haphazard.

After No Child Left Behind mandated that school systems test 95 percent of public-school students and publicize the results, the harsh, new light revealed the breadth and depth of the nation's education problems.

"No Child Left Behind established unrealistic targets [and] failed to provide schools with resources to meet those targets." —Dennis Van Roekel, president, National Education Association

"People were stunned at the test scores," Miller said. "We took a snapshot of schools all across the country and said, 'This is what it looks like. Six percent of these kids are reading at grade level; 50 percent of kids are being taught by a qualified teacher under this stupid little definition we have.' They went, 'What the hell is going on in this school?' That's now a discussion over ongoing professional development of teachers and ongoing evaluation of teachers and administrators. We've come light-years, and that's a given. It's resisted. But it's a given."

Ten years ago, policymakers wanted to put schools on the hook for results, any results. "You do what you do based on what you know at the time," Spellings said. "And when you know more, you change it."

We definitely know more. The education conversation currently revolves around defining K-12 academic benchmarks, agreeing on how to measure them, and deciding who the judges should be. That discussion may be the best testament to the impact of No Child Left Behind.

"My law has accomplished all that it can accomplish. I'm very proud of it. It's done," Miller said. "Hello, America—it's time for the next iteration. But don't lose your focus."

Congress is ignoring Miller's plea. The Senate's current reauthorization proposal, which is four years overdue, does not spell out what will happen to schools that don't measure up. (Probably nothing, some education-reform advocates grumble.) No one questioned, though, that the Senate rewrite would maintain the law's once-controversial requirement that annual reports be broken down by race, gender, poverty level, and disability.

Senate Health, Education, Labor, and Pensions Committee Chairman Tom Harkin, D-Iowa, is sponsoring the No Child Left Behind reauthorization bill. "We must be willing to shift to new approaches when the old ones aren't working," he said in a floor speech defending the measure.

In response to *NJ*'s request, Harkin said this of No Child Left Behind: "One-size-fits-all sanctions and the 2014 deadline for 100 percent proficiency, though well-intentioned, have proven to be ineffective."

Like most education policymakers, he wants to rectify the unfair benchmarks that measure schools. His bill simply gets rid of them, raising the hackles of No Child Left Behind supporters. But Harkin has no choice if he wants the measure to go anywhere. To win support from Enzi, the Education Committee's chief Republican, Harkin was forced to abandon any achievement targets. As currently written, the bill would subject schools to benchmarks with no teeth.

Harkin's bill stands to get even weaker in the current political climate. Only three committee Republicans grudgingly supported it, and a Senate floor vote has been delayed indefinitely. Even though the bill greatly weakens the massive federal oversight of states, Republicans think it is still too invasive.

House Republicans, for their part, aren't willing to put together a large rewrite of No Child Left Behind, preferring to nick away at it with smaller, incremental measures. Rep. John Kline, R-Minn., the chairman of the House Education and the Workforce Committee, is keen on local control for schools. He has pushed a charter-school bill and a federal funding flexibility measure to accomplish that. "We need to place more emphasis on the progress being made at the state and local levels," Kline said.

Supporters of Harkin's efforts say that times have changed since No Child Left Behind was passed and that his approach just recognizes a new era for education. Concrete benchmarks, if they worked at all, are no longer needed, these experts say. States have made significant progress in how they assess schools, and they all are moving toward the Common Core state standards.

Those standards have the benefit of being generated outside of Washington as a consensus document from multiple stakeholders. They suffer from being more complex and far-reaching than the

simple grade-level reading and math requirements of No Child Left Behind. They are akin to a five-star restaurant being offered as a replacement for a fast-food burger joint.

Still, the Common Core effort reinserts the "state laboratory" element to public education that some fault No Child Left Behind for squelching. "It gives us a formula for a different kind of accountability," said Wilhoit, the executive director of the Council of Chief State School Officers who helped to craft the Common Core standards.

Wilhoit characterizes No Child Left Behind as a necessary wake-up call to the states to raise their game on education. And now, he says, the law "has run its course."

The Judges

***NJ* consulted the following experts in assessing No Child Left Behind:**

THE AUTHORS

- Rep. George Miller, D-Calif., a lead cosponsor
- House Speaker John Boehner, a lead cosponsor
- Sandy Kress, lead White House negotiator
- Margaret Spellings, former Education secretary

THE REAUTHORIZERS

- Rep. John Kline, R-Minn., chairman, House Education and the Workforce Committee
- Sen. Tom Harkin, D-Iowa, chairman, Senate Health, Education, Labor, and Pensions Committee
- Sen. Michael Enzi, R-Wyo., ranking member, HELP Committee

THE PRACTITIONERS

- Dan Domenech, executive director, American Association of School Administrators
- Gene Wilhoit, executive director,Council of Chief State School Officers
- National School Boards Association

THE ADVOCATES

- American Civil Liberties Union
- Patrick Riccards, CEO of ConnCan
- Kati Haycock, president, Education Trust
- Charles Barone, federal policy director, Democrats for Education Reform
- Dennis Van Roekel, president, National Education Association
- Randi Weingarten, president, American Federation of Teachers

THE ACADEMICS

Department of Education & Early Development

Office of the Commissioner

March 20, 2012

House Education Committee,

In response to your request to compare Alaska's proposed standards to the Common Core, I have gathered research done by an outside reviewer. As background, the Common Core was heavily referenced in the development of our own standards as I felt that it was important that the rigor of Alaska's education system at least match that of the rest of the country. I believe it is critical that our students can compete with their peers, both in and out of state, for the job opportunities that they will have. Once our standards went to the State Board of Education, I asked the Council of Chief State School Officers, who helped develop the Common Core, to review and compare both sets of standards. Below are comments from their comparison.

Overall, the proposed Alaska English Language Arts (ELA) and Math standards track closely with the Common Core, employing a similar structure and language used in the Common Core. The most significant difference between the proposed Alaska ELA standards and the Common Core is that Alaska chose not to include literacy standards for history/social studies, science, and technical subjects. Below is an overview of some of the differences we noted in reviewing the standards.

Proposed Alaska Math Standards

- There are occasions in the K-8 section where Alaska emphasizes certain concepts over multiple years whereas the CCSS addresses such concepts in one year (for example, telling time and achieving money sense and when the concept of circles in introduced).
- Alaska includes patterns in grades 1- 2, which is not included in the CCSS.
- For the high school standards, there were no substantive deviations from the CCSS except for:
    - under the Algebra Standards – Creating Equations, #4 in the CCSS states: "Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. *For example, rearrange Ohm's law V = IR to highlight resistance R.*". Conversely, Alaska's # 4 reads: "Solve literal equations or formulas for a variable involving multi-steps. *For example, solve for h when* $A = 1/2h(b_1 + b_2)$."; and
    - under the function standards, a list of key features for understanding the relationship between two quantities in the CCSS includes periodicity, and Alaska left that off the list in that same part of the standards.
- Alaska has added some content that was not in CCSS:

- 2.MD.6 of Common Core;
- 3.OA.6 of CCSS – the concept seems to be less explicitly covered in Alaska's 3.OA.7; and
- 5.OA.2 of CCSS

Proposed Alaska ELA Standards

In addition to the omission of the literacy standards for contents area, below are additional observations about the proposed standards:

- Alaska includes a few additional references to scaffolding and prompting and support for students in the early grades than what the CCSS calls for;
- There is no specific reference for how text complexity is measured, as is done in the CCSS;
- In the Grade 6 writing standards # 6, the CCSS specifies that a student should be able to type a minimum of three pages in one sitting, whereas Alaska simply says sufficient command of keyboarding skills to create a piece of writing;
- Alaska at times omits examples provided by the CCSS, but the text of the standard is usually identical to the CCSS;
- In Grades 6 and 7 reading standards for literature, the CCSS includes language about determining central ideas distinct from personal opinions and judgments in order to create an objective summary, and Alaska simply states that the student should summarize; and
- In Grade 3 listening skills, Alaska includes language about using techniques that engage the listener such as inflection or different voices, and this is not specified in as much detail as the CCSS.

I believe this summarizes the significant differences between the two sets of standards. I can also point out specific language if it is helpful.

Sincerely,

Mike Hanley

Mike Hanley
Commissioner of Education
And Early Development

Comparison of Structure of Current & Proposed Content Standards

LANGUAGE ARTS

Current Standards	Proposed Standards
Content standards – broad statements of what students should know and be able to do. Performance Standards – define what all students should be able to do at the end of a grade span (Grade 3, 6, 8 and 10). Grade Level Expectations – core content to be mastered at the end of a given grade level, K-10.	Content standards address each grade level, but are organized into two grade spans, with content presented by grade level within the spans: • Grades K-5 • Grades 6-12 There are Anchor Standards for in each content area that run across all grade levels, K-12, to create coherence.
Standards address reading and writing.	Content standards address the additional content areas of speaking & listening.

MATHEMATICS

Current Standards	Proposed Standards
Content standards – broad statements of what students show know and be able to do. Performance standards – define what all students should be able to do at the end of a grade span (Grade 3, 6, 8 and 10). Grade Level Expectations – core content to be mastered at the end of a given grade level, K-10.	Content standards address each grade level from K-8 than separately for high school (grades 9-12). The high school standards outline the content all students should know and the content required for higher level mathematics.
The standards address: 1. Mathematics content. 2. Mathematics content process skills: problem-solving, communication, reasoning, and connections.	The standards include two areas: 1. Standards for mathematical content Organized into domains, such as "number & quantity." The domains for K-8 look different than those for 9-12. 2. Standards for mathematical practice Describes how mathematics is used, such as "attend to precision."

Proposed Alaska Mathematics Standards Organization with Domain Progression

This chart shows the organization of mathematics standards and the domain progression from Kindergarten through High School.

Standards for Mathematical Practice

1. Make sense of problems and persevere in solving them
2. Reason abstractly and quantitatively
3. Construct viable arguments and critique the reasoning of others
4. Model with mathematics
5. Use appropriate tools strategically
6. Attend to precision
7. Look for and make use of structure
8. Look for and express regularity in repeated reasoning

Kindergarten	1	2	3	4	5	6	7	8	High School

Standards for Mathematical Content

Domains

Counting, Cardinality and Ordinality									Number & Quantity	Modeling
Number and Operations in Base Ten						Ratios and Proportional Relationships				
	Number and Operations - Fractions					Number System				
Operations and Algebraic Thinking						Expressions and Equations			Algebra	
							Functions		Functions	
Geometry									Geometry	
Measurement and Data						Statistics and Probability			Statistics and Probability	

Instruction around the **Standards for Mathematical Practices** is delivered across all grades K-12. **Domains** are large groups of related standards. Each color shows how domains at the earlier grades progress and lead to domains in the middle and high school levels. On the right side are the high school domains including the modeling domain which is incorporated throughout standards in the other five domains. To the left of each high school domain, one can find the domains from elementary and middle school levels from which this concept builds.

Sponsor Statement
HB 330: State Standards

The State educational content and performance standards are the foundation of our educational system. Upon them are built a massive superstructure:

- The writing of the Grade Level Expectations (GLE's);
- The choice of expensive curricula in 53 different districts;
- Thousands of teacher hours aligning new curricula to the new standards;
- Hundreds of thousands of dollars of professional development;
- Millions of dollars of new assessment tools;
- Millions of dollars using those tools annually ($7.5M/yr over a six-year period);
- Over $1.2B annual funding supporting the system driven by the new standards; and
- The quality of instruction for over 130,000 students.

The cost-to-date of producing the standards the Department of Education & Early Development is proposing for adoption has been $270,886. The standards were created in eight separate meetings attended by a sliver of stakeholders. The superstructure built upon them as well as annual maintenance will cost multiple billions of dollars and directly impact every facet of instruction statewide.

My research has clearly shown that the proposed standards have not been properly vetted by industry and those involved in the career destinations of our students. All curriculum presented to students should have a clear pathway to potential careers.

Educational funding and student performance are under continual intense scrutiny. These subjects are the source of great consternation for parents, educators and policy makers. It only makes sense that the foundation of our educational system for the next six-year cycle should be of the highest quality and directed at fulfilling our mission statements.

The purpose of this bill is to gather a representative working group that will develop a process by which the standards are vetted. Once the vetting process is developed, it will be available for all future cycles of standards creation and modification.

With well-vetted standards, we can be confident that the billions of dollars spent over the next six-year cycle will bring the best result possible. We can also be confident that we are creating a clear pathway for intelligent, productive and engaged young people to become successful at whatever endeavor they choose. To do less would be irresponsible.

Sectional Analysis
HB 330
State Education Standards

Section 1:

- A joint legislative task force is formed to create a process by which state educational standards are vetted.
- Describes the members of the task force and how they are appointed.
- Describes guidelines by which the task force functions and creates a process by which state standards are vetted.
- This task force will be in effect from July1, 2012 to July 1, 2013.

Section 2:

Specifies that the Department of Labor and Workforce Development will:

- Provide staffing and data requested by the task force.
- Identify major careers in the state as provided under sec. 1 of this Act.

Section 3:

The existing content and performance standards will remain in effect until the new process is developed and the newly vetted standards are adopted.

Section 4:

The task force and Department of Labor and Work Force Development support for the task force are repealed on July 1, 2013.

Section 5:

This repeals the temporary law for the existing standards.

Section 6:

This has an immediate effective date.

Background Information
HB 330: State Education Standards

Cost of bringing stakeholders together for review and revising of the state content standards has cost:

- FY10: $ 47,770 1 meeting
- FY11: $142,686 5 meetings
- FY12: $ 80,430 2 meetings
- FY13: $ 15,000 Publishing

TOTAL COST: $285,886

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. HB330

Analysis

The proposed legislation would establish a task force on education standards, of which the Department of Labor and Workforce Development would be a member. The task force would vet proposed educational standards and advise the Department of Education and Early Development on matters pertaining to education standards for students in grades kindergarten through 12 in the state.

The Department of Labor and Workforce Development's role under this proposed legislation will be to provide staffing and data requested by the task force. The legislation does not clearly identify the scope of data the department must produce for the task force, and currently, the department lacks the expertise to vet education standards. The fiscal impact of this legislation cannot be accurately determined at this time.

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. HB330

Analysis

The proposed legislation would require the Department of Labor to establish a task force for vetting educational standards and advising the Department of Education & Early Development on matters education standards for students in grades kindergarten through 12 in the state.

The Department of Labor and Workforce Development under this proposed legislation would provide staffing and data requested by the task force. The legislation does not clearly identify the scope of data the Department of Labor and Workforce Development must produce for this task force.

While EED would have one member on the task force , travel costs and per diem would be paid by EED.

Testimony of Chip McMillan
Ass't Professor of Education, UAS
2-24-12 House Education Committee

AK State Standards for K-12 are not STEM Compliant

I prepare K-8 teachers to teach math and science in Alaska.

What I am about to say will appear critical of our State Standards. It is important that you know that I participated in the writing of the science content standards, the performance standards and the science SBA items. I am as responsible as anyone for any deficiencies in these documents.

I also believe any deficiencies in these documents are not the result of negligence or malfeasance on anyone's part. As we say, hindsight is 20/20.

US students not keeping up with other nations in math and science.
AK cannot afford to lag behind the rest of the country or the rest of the world in math/science.

We are currently falling behind in an even more important area: STEM Education.
Science Technology Engineering Math

"We're doing students, parents and America's competitiveness a disservice by not demanding higher standards for STEM learning," Craig Barrett, former CEO of Intel and current chair of Change the Equation, a group of 110 business executives from Exxon, Lockheed Martin, Google, Dow Chemical, etc,.

"It turns out the most common educational background for the Fortune 500 CEOs in the US is not business or law but engineering."

42 out of the 50 highest paying jobs in Alaska are in STEM fields.
The problem is ⅓ of all engineering jobs in Alaska are done by people who live down south.

Every state I have looked at has some kind of statewide STEM initiative.

We have no engineering standards today. The word "engineering" does not appear anywhere in any of our content standards.

The Science and Technology GLEs have an implied focus on engineering but never call for actually touching or manipulating anything.

I have been unable to find any science SBA items referencing engineering.

The irony is
we used to have engineering and technology standards for K-12 in AK.
we used to have an engineering and technology curriculum for K-12 in AK.

It was mandatory for all children in Alaska!

The technologies include
Alutiiq kayak
Athabascan snowshoe
Tlingit fish trap
Aleut basketry

Even today these are marvels of technology and they resulted from true engineering.

Problem solving, innovation, designing, then testing, refining, optimizing those designs; demonstrating grit, working cooperatively. These are engineering attributes.

These are what our resource and communication industries are looking for in the workforce.

We should infuse these engineering skills and dispositions into the current math, science, technology standards.

We should seek input from business and industry, e.g., ARCO, Greens Creek Mine, GCI, NOAA.

Teachers in AK will not teach to STEM without leadership.

We need STEM in our standards, our curriculum, our SBAs, our teacher evaluations.

It seems to me that passage of this bill will assist in the appearance of STEM in our state standards, GLEs, SBAs, district math and science curricula, and thus our K-12 classrooms.

Thank you Mr. Chairman and Committee for allowing me to testify,

For the record, my name is Grant Funk. I have lived in Western Alaska for nearly 20 years and in the village of Hooper Bay for the past 13 years. I have raised 5 of our 6 children in this region. Several of our children are currently raising their families in Western Alaska. My kids have had the best of both the public school system as well as a homeschool education. I am an Emergency Medical Instructor as well as an Aviation Instructor. I have volunteered in the local school teaching these skills for 10 years as well as teaching aviation to the middle school and high school students full time for two years. I currently teach an after school aviation class as well as direct a local teen center. Overall, I have been involved in education on various levels for 26 years. I am an Advisory School Board member. I am also the 2012 Alaska Air Carriers Association Community Service Award winner for my work in aviation education in our community.

I am requesting today that the State take the necessary time to provide educational standards that lay the foundation for the future success of all students. We have entered a technological age that has presented new opportunities and challenges for this generation. Their foundational years in elementary, middle school and high school need to be the trailhead for a successful future.

We have much cultural and geographical diversity. That diversity should be reflected in the state educational standards. This diversity is reflected in my own children. Three of our six kids completed a course of study in college. Two completed technical training. One is still in high school but planning on college. As an educator and as a parent, I want to provide the best avenues of success for my students as individuals. They need a set of standards to act as a guiding boundary into the future they desire to pursue.

With that in mind I would like to request that the new standards take a step in a direction that would eliminate the "one size fits all" approach. We have students that are hoping to go to college following graduation and a greater majority of students that will go into the skilled labor force. There needs to be at least two sets of standards to better prepare these students for productive careers in their areas of interest.

A career technical education track (CTE) would give students the opportunity to learn applicable skills for jobs that are more readily available in rural Alaska. Aviation, health care, commercial fishing and construction have opportunities that do not require a college degree. There is also a need in this category for small business training as well as classes in small government. College students often leave the rural areas and enter the job markets appropriate to their degree. That leaves others to start the small businesses and sit on the various local councils and boards. The middle and high school education system could go a long way toward preparing students as lifelong learners and leaders in their local communities through a CTE track standard.

One Western Alaska CTE teacher I met with gave me the example of six of his former students. They were hired in various capacities right after high school and are averaging $40,000 each annual income. These students will not be a part of the welfare system. They will have the opportunity to fund further

training or have their employer provide advancement training. They are becoming productive local citizens without a college education.

If there are CTE standards, the system is freed up for a college track set of standards that will challenge and prepare the college bound high school students with advanced math and science classes. The upper level students are often the neglected group in the education process in rural schools. They need guidelines that will provide realistic challenges better preparing them for college studies.

Bringing in a vocational track as well as a college track would not only benefit the student, but the state in the years to come. When a person has a job, they are less likely to wind up on the welfare system or in the court system. At a recent seminar on international business the speaker said, "Worldwide, one of the best things you can do for a person is to give them meaningful work."

That brings me to my final thoughts on plotting the course for the future direction of education in the state. One of our embarrassing statistics as a state is the high suicide rate. Students graduating ill prepared for the job force or even for a subsistence lifestyle are left to wander the streets of our cities or the rural communities looking for something to do. Hopelessness takes over and lives, that could have made a difference in this world, are lost.

One school teacher, who has also been in Hooper Bay 13 years, told me that she has lost 40 students or former students to suicide or tragic death. Even as I write, our community is again dealing with a suicide of a young man. It takes its toll on families and friends, as well as teachers and staff. The education system suffers as students and teachers are emotionally functioning at less than optimum performance.

The education system is not responsible for the high suicide rate. I do feel, however, that it can go a long way toward prevention by providing standards that allow a student to learn the relevance of an education. Vocational math, applied "hands on" science, and technical reading all connect them to a future with hope of becoming productive. These type of classes give the non-college bound student a reason to succeed in math and science because they understand how it relates to the world they live in.

As an aviation instructor I have had the joy of watching kids connect math to life skills as they calculate take off performance of an aircraft on a flight simulator. Students disinterested in science became consumed by science fair projects that utilized aviation issues. Their eyes were opened to applications of vocational math that encouraged them to learn because it had immediate applications in their world.

In conclusion, I ask the legislature to pass HB 330 allowing time to gain insights from the education industry. In doing so we will prepare a generation with a measure of hope for future jobs that will provide income for their families as well as boost self -confidence and self- reliance. Anything done to improve the family has the potential of decreasing the suicide rates.

Thank you for this opportunity to address this critical issue.

May God bless our state!

Grant Funk

To: Chair, House Education Committee

Ref: HB330

Thank you for the opportunity to offer testimony today in support of HB 330 creating a Task Force on Education Standards. I am Joe Banghart, interim Superintendent, Denali Borough School District, Healy. Over the past fourteen years I have had the opportunity of serving on various standards committees. These committees have always been composed of educators that have volunteered to help design standards. Our state is fortunate to have these professionals give of valuable time for the process. Our state standards are vital for the continued educational progress of children in Alaska. HB330 would offer the involvement of the Department of Labor and Workforce, Department of Education and Early Development, small business owners, subsistence lifestyle, parents, and three representatives of major career destinations. This type of partnership could be the very foundation that would provide a consistent state network of business, education, parents, and other partners for career technical training, continued high academic standards, and the Department of Labor and Workforce guidance. Our state stands in vital need of this type of Task Force for the vetting of all future educational standards. This Task Force could provide information for resources available across our state. This link will build a firm foundation for future grant potential, partnerships, and the combination of state educational standards in English/language art, mathematics, science, geography, government, history, healthy life styles, arts, world languages, technology, and employability. All the consistent and professional work that has been given towards the development of state standards would benefit from this Task Force.

How can we not afford to stop and evaluate our current educational standards and properly align them with clear pathways to successful careers in Alaska. Accountability is best found in the involvement of multiple partners that design not only assessments for each Performance Standard but consider the application of these skills into actual practice. Accountability measures in this process would include academic growth and employment skills and successful job placement. True accountability is being tested by all our legislatures in consideration of this Task Force. This approach would help lower unemployment, provide future employees across the state, and encourage accountability at every level. If we ignore this vetting of our standards we are turning our backs on the future of Alaska and our children.

Joe Banghart, Sup't Tri-Valley (Denali) School District

Alaska High School Mathematics Standards

The high school standards specify the mathematics that all students should study in order to be career ready. Additional mathematics that students should learn in order to take advanced courses such as calculus, advanced statistics, or discrete mathematics is indicated by the symbol +.

Similarity, Right Triangles, and Trigonometry	**G-SRT**

Understand similarity in terms of similarity transformations

1. Verify experimentally the properties of dilations given by a center and a scale factor:

   a. A dilation takes a line not passing through the center of the dilation to a parallel line, and leaves a line passing through the center unchanged.

   b. The dilation of a line segment is longer or shorter in the ratio given by the scale factor.

2. Given two figures, use the definition of similarity in terms of transformations to explain whether or not they are similar.

3. Use the properties of similarity transformations to establish the AA criterion for two triangles to be similar.

Prove theorems involving similarity

4. Prove theorems about triangles. *Theorems include: a line parallel to one side of a triangle divides the other two proportionally, and conversely.*

X+2
X+2
2x+4
x^2+2x
$x^2+4/x+4$

Write expressions in equivalent forms to solve problems

3. Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.

   a. Factor a quadratic expression to reveal the zeros of the function it defines. *For example, $x^2 + 4x + 3 = (x+3)(x+1)$.*

   b. Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines. For example, $x^2 + 4x + 3 = (x+2)^2 - 1$.

   c. Use the properties of exponents to transform expressions for exponential functions. *For example the expression 1.15^t can be rewritten as $(1.15^{1/12})^{12t} \approx 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.*

P. 2

The Complex Number System — N -CN

Perform arithmetic operations with complex numbers.

1. Know there is a complex number i such that $i^2 = -1$, and every complex number has the form $a + bi$ with a and b real.

2. Use the relation $i^2 = -1$ and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers.

3. (+) Find the conjugate of a complex number; use conjugates to find moduli and quotients of complex numbers.

Represent complex numbers and their operations on the complex plane.

4. (+) Represent complex numbers on the complex plane in rectangular and polar form (including real and imaginary numbers), and explain why the rectangular and polar forms of a given complex number represent the same number.

5. (+) Represent addition, subtraction, multiplication, and conjugation of complex numbers geometrically on the complex plane; use properties of this representation for computation. *For example,* $(1 - \sqrt{3}i)^3 = 8$ *because* $(1 - \sqrt{3}i)$ *has modulus* 2 *and argument* 120°.

6. (+) Calculate the distance between numbers in the complex plane as the modulus of the difference, and the midpoint of a segment as the average of the numbers at its endpoints.

Use complex numbers in polynomial identities and equations.

7. Solve quadratic equations with real coefficients that have complex solutions.

8. (+) Extend polynomial identities to the complex numbers. *For example, rewrite* $x^2 + 4$ *as* $(x + 2i)(x - 2i)$.

9. (+) Know the Fundamental Theorem of Algebra; show that it is true for quadratic polynomials.

Vector and Matrix Quantities — N –VM

Represent and model with vector quantities.

1. (+) Recognize vector quantities as having both magnitude and direction. Represent vector quantities by directed line segments, and use appropriate symbols for vectors and their magnitudes (e.g., $\boldsymbol{v}$, $|\boldsymbol{v}|$, $||\boldsymbol{v}||$, $\boldsymbol{v}$).

P. 3

Use polynomial identities to solve problems

4. Prove polynomial identities and use them to describe numerical relationships. *For example, the polynomial identity* $(x^2 + y^2)^2 = (x^2 - y^2)^2 + (2xy)^2$ *can be used to generate Pythagorean triples.*

5. (+) Know and apply the Binomial Theorem for the expansion of $(x + y)^n$ in powers of x and y for a positive integer n, where x and y are any numbers, with coefficients determined for example by Pascal's Triangle.

Model periodic phenomena with trigonometric functions

5. Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency, and midline.*

6. (+) Understand that restricting a trigonometric function to a domain on which it is always increasing or always decreasing allows its inverse to be constructed.

7. (+) Use inverse functions to solve trigonometric equations that arise in modeling contexts; evaluate the solutions using technology, and interpret them in terms of the context.*

Trigonometric Functions — F-TF

Extend the domain of trigonometric functions using the unit circle

1. Understand radian measure of an angle as the length of the arc on the unit circle subtended by the angle.

2. Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers, interpreted as radian measures of angles traversed counterclockwise around the unit circle.

3. (+) Use special triangles to determine geometrically the values of sine, cosine, tangent for $\pi/3$, $\pi/4$ and $\pi/6$, and use the unit circle to express the values of sine, cosines, and tangent for $\pi - x$, $\pi + x$, and $2\pi - x$ in terms of their values for x, where x is any real number.

Congruence	G-CO

Experiment with transformations in the plane

1. Demonstrates understanding of key geometrical definitions, including angle, circle, perpendicular line, parallel line, line segment, and transformations in Euclidian geometry. Understand undefined notions of point, line, distance along a line, and distance around a circular arc.
2. Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).
3. Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.
4. Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.
5. Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.

Understand congruence in terms of rigid motions

6. Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.
7. Use the definition of congruence in terms of rigid motions to show that two triangles are congruent if and only if corresponding pairs of sides and corresponding pairs of angles are congruent.
8. Explain how the criteria for triangle congruence (ASA, SAS, SSS, AAS, and HL) follow from the definition of congruence in terms of rigid motions.

Prove geometric theorems

9. Using methods of proof including direct, indirect, and counter examples to prove theorems about lines and angles. *Theorems include: vertical angles are congruent; when a transversal crosses parallel lines, alternate interior angles are congruent and corresponding angles are congruent; points on a perpendicular bisector of a line segment are exactly those equidistant from the segment's endpoints.*

Grade 8

Expressions and Equations 8.EE

Work with radicals and integer exponents.

8.EE.1. Apply the properties (product, quotient, power, zero, negative exponents, and rational exponents) of integer exponents to generate equivalent numerical expressions. *For example,* $3^3 \times 3^{-5} = 3^{-2} = 1/3^2 = 1/27$.

8.EE.2. Use square root and cube root symbols to represent solutions to equations of the form $x^2 = p$ and $x^3 = p$, where p is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes. Know that $\sqrt{2}$ is irrational.

8.EE.3. Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other. *For example, estimate the population of the United States as* 3×10^8 *and the population of the world as* 7×10^9*, and determine that the world population is more than 20 times larger.*

8.EE.4. Perform operations with numbers expressed in scientific notation, including problems where both standard notation and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities. Interpret scientific notation that has been generated by technology.

Grade 8

Analyze and solve linear equations and pairs of simultaneous linear equations.

8.EE.7. Solve linear equations in one variable.

a. Give examples of linear equations in one variable with one solution infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$, $a = a$, or $a = b$ results (where a and b are different numbers).

b. Solve linear equations with rational coefficients, including equations whose solutions require expanding expressions using the distributive property and combining like terms.

8.EE.8. Analyze and solve systems of linear equations.

a. Show that the solution to a system of two linear equations in two variables is the intersection of the graphs of those equations because points of intersection satisfy both equations simultaneously.

b. Solve systems of two linear equations in two variables and estimate solutions by graphing the equations. Simple cases may be done by inspection. *For example,* $3x + 2y = 5$ *and* $3x + 2y = 6$ *have no solution because* $3x + 2y$ *cannot simultaneously be 5 and 6.*

c. Solve real-world and mathematical problems leading to two linear equations in two variables. *For example, given coordinates for two pairs of points, determine whether the line through the first pair of points intersects the line through the second pair.*

Grade 8

Geometry 8.G

Understand congruence and similarity using physical models, transparencies, or geometry software.

8.G.1. Through experimentation, verify the properties of rotations, reflections, and translations (transformations) to figures on a coordinate plane).

a. Lines are taken to lines, and line segments to line segments of the same length.

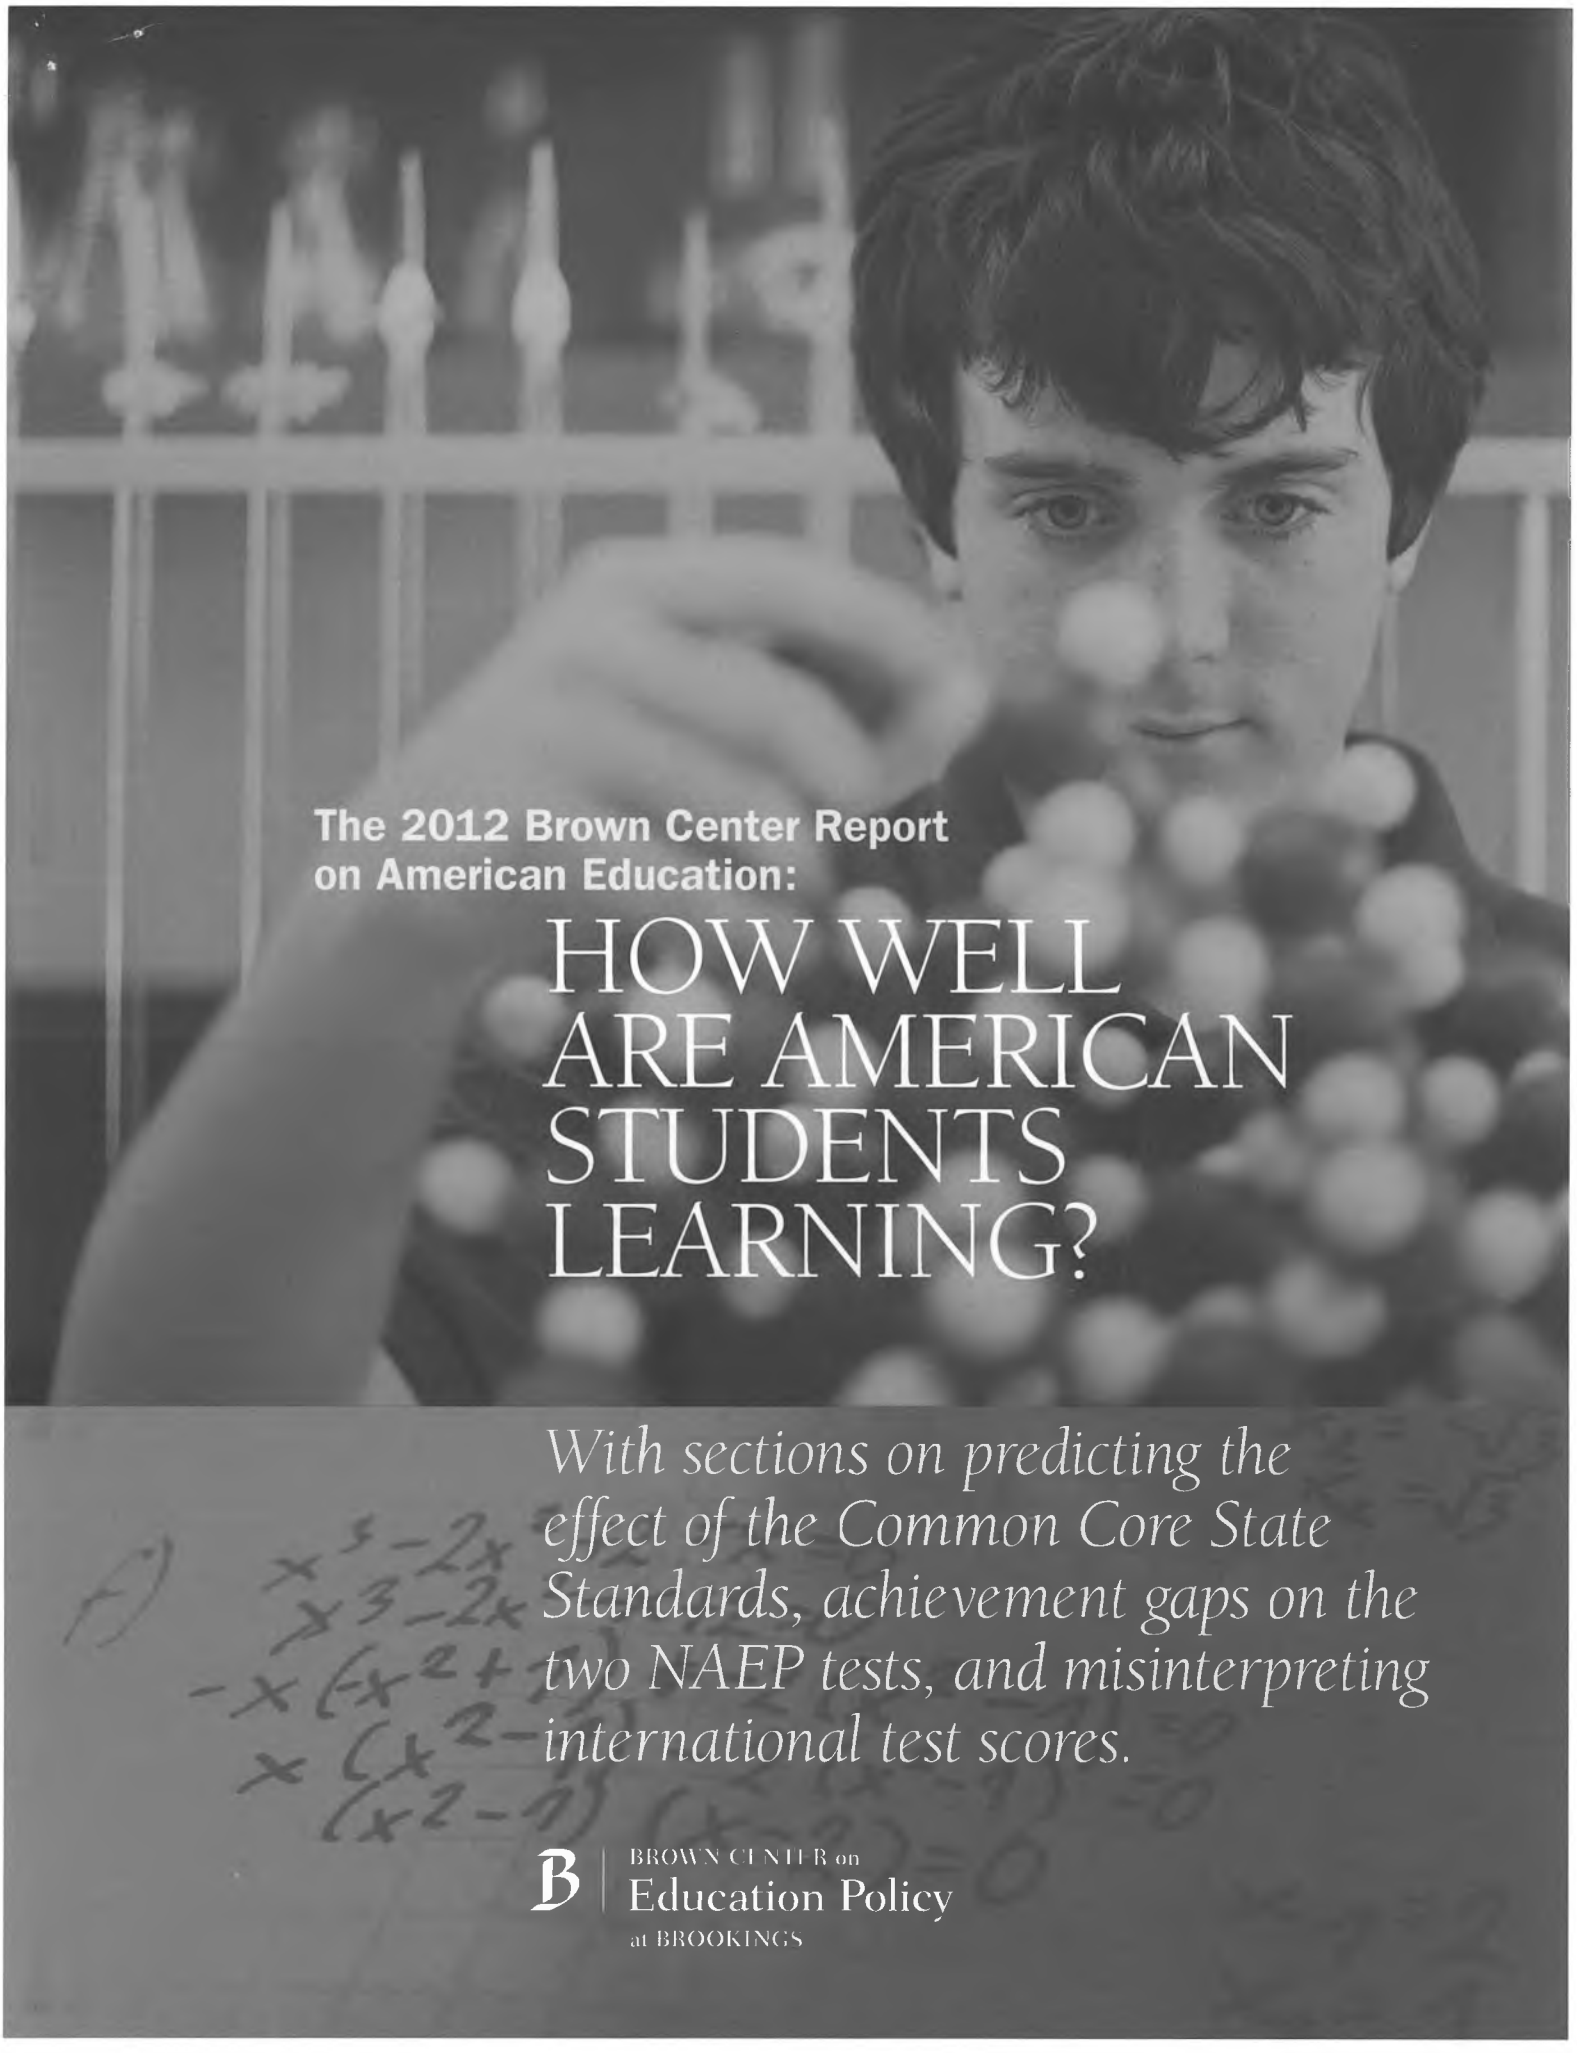
b. Angles are taken to angles of the same measure.

c. Parallel lines are taken to parallel lines.

8.G.2. Demonstrate understanding of congruence by applying a sequence of translations, reflections, and rotations on two-dimensional figures. Given two congruent figures, describe a sequence that exhibits the congruence between them.

8.G.3 .Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.

P5



The 2012 Brown Center Report on American Education:

HOW WELL ARE AMERICAN STUDENTS LEARNING?

With sections on predicting the effect of the Common Core State Standards, achievement gaps on the two NAEP tests, and misinterpreting international test scores.

BROWN CENTER on Education Policy at BROOKINGS

THE 2012 BROWN CENTER REPORT ON AMERICAN EDUCATION

This edition of the Brown Center Report on American Education marks the first issue of volume three—and eleventh issue over all. The first installment was published in 2000, just as the Presidential campaigns of George W. Bush and Al Gore were winding down. Education was an important issue in that campaign. It has not been thus far in the current campaign for the Republican nomination (as of February 2012). And it is unlikely to be a prominent issue in the fall general election. Despite that, the three studies in this Brown Center Report investigate questions that the victor in the 2012 campaign, and the team assembled to lead the U.S. Department of Education, will face in the years ahead.

The first section is on the Common Core State Standards, a project that President Obama has backed enthusiastically. Forty-six states and the District of Columbia have signed on to the Common Core; detailed standards have been written in English language arts and mathematics; and assessments are being developed to be ready by the 2014–2015 school year. The first section attempts to predict the effect of the Common Core on student achievement.

Despite all the money and effort devoted to developing the Common Core State Standards—not to mention the simmering controversy over their adoption in several states—the study foresees little to no impact on student learning. That conclusion is based on analyzing states' past experience with standards and examining several years of scores on the National Assessment of Educational Progress (NAEP).

States have had curricular standards for schools within their own borders for many years. Data on the effects of those standards are analyzed to produce three findings. 1) The quality of state standards, as indicated by the well-known ratings from the Fordham Foundation, is not related to state achievement. 2) The rigor of state standards, as measured by how high states place the cut point for students to be deemed proficient, is also unrelated to achievement. Raising or lowering the cut point is related to achievement in fourth grade, but the effect is small, and the direction of causality (whether a change in cut point produces a change in test score or vice versa) is difficult to determine. 3) The ability of standards to reduce variation in achievement, in other words to reduce differences in achievement, is also weak.

Common standards will only affect variation between and among states (analysts use the grammatically suspect "between-state" as shorthand for this kind of variation). Achievement variation existing within states is already influenced, to the extent that standards can exert influence, by the states standards under which schools currently operate. Within state variation is four to five times larger than the variation between states. Put another way, anyone who follows NAEP scores knows that the difference between Massachusetts and Mississippi is quite large. What is often overlooked is that every state has a mini-Massachusetts and Mississippi contrast within its own borders. Common state standards only target the differences between states, not within them, sharply limiting common state standards' potential impact on achievement differences.

The second section of the Report investigates achievement gaps on NAEP. The NAEP has two different tests: the Long-Term Trend NAEP, which began in 1969, and the Main NAEP, which began in 1990. The two tests differ in several respects, but they both carry the NAEP label and both are integral components of "The Nation's Report Card."

FORTY-SIX STATES AND THE DISTRICT OF COLUMBIA HAVE signed on to the Common Core State Standards Initiative, a project sponsored by the Council of Chief State School Officers (CCSSO) and the National Governors Association (NGA). The Common Core spells out what students should learn in mathematics and English-language arts from kindergarten to the end of high school. The standards were written by teams of curriculum specialists and vetted by panels of academics, teachers, and other experts.[1] In 2010, the federal government funded two consortia to develop assessments aligned with the Common Core. The new tests are to be ready in 2014.

The push for common education standards argues that all American students should study a common curriculum, take comparable tests to measure their learning, and have the results interpreted on a common scale, with the scale divided into performance levels to indicate whether students are excelling, learning an adequate amount, or falling short. Past experience with standards suggests that each part of this apparatus—a common curriculum, comparable tests, and standardized performance levels—is necessary. No one or two of them can stand alone for the project to succeed.

Proponents point to the intuitive appeal of a common curriculum. "It's ludicrous," Bill Gates told the *Wall Street Journal*, "to think that multiplication in Alabama and multiplication in New York are really different."[2] In a report called *The Proficiency Illusion*, The Fordham Institute made a similar point regarding state efforts to evaluate schools using fifty different assessments and fifty different definitions of what constitutes acceptable performance.[3] How can a school in one state be labeled a failure while a school in another state and with almost exactly the same test scores can be considered a success?

The authority to operate school systems is constitutionally vested in states. But states have undermined their own credibility when it comes to measuring student learning. Accounts of dumbed-down and

poorly-written state tests, manipulation of cut scores to artificially boost the number of students in higher performance levels, and assessments on which students can get fewer than 50% of items correct and yet score "proficient", fuel the belief that states individually cannot be trusted to give the public an accurate estimate of how American education is doing.[4]

Three Theorized Effects

The Common Core State Standards are theorized to improve education in three ways. First, proponents argue that the Common Core is superior to most current state standards. In a recent study, The Fordham Institute concluded that Common Core standards are better than 37 states' standards in English-language arts and 39 states in mathematics.[5] It follows, proponents believe, that the Common Core will raise the quality of education nationally by defining a higher-quality curriculum in English-language arts and mathematics than is currently taught. Let's call this the "quality theory." Achievement will increase because students will study a better curriculum.

The second idea is that the Common Core sets higher expectations than current state standards, the assumption being that cut points on the new assessments will be set at a higher level than states currently set on their own tests. Comparisons with the National Assessment of Educational Progress (NAEP) lead many analysts to conclude that states set proficiency standards far too low. States routinely report more students attaining proficiency than NAEP indicates, often 30–40 percentage points more.[6] The *No Child Left Behind Act* left it up to the states to design their own tests and to set performance levels wherever they want, but the pattern of states reporting significantly higher percentages of proficient students preceded NCLB.[7] A new Common Core test will presumably end such discrepancies by evaluating proficiency using the same standards for every state, and these standards are to be more rigorous than those currently used. Schools and students will respond by reaching for these loftier goals. Let's call this the "rigorous performance standards" theory.

The third hypothesis is that standardization yields its own efficiencies. In the same *Wall Street Journal* interview cited above, Bill Gates referred to this idea by complaining about the time and money wasted on the many different versions of textbooks that are published to conform to individual states' curricular tastes.[8] In a reverse spin on the same argument, others argue that textbooks are bloated with redundant content as publishers attempt to incorporate numerous idiosyncratic state curricular mandates into one book.[9] The assumption of both arguments is that one, high-quality textbook—or perhaps a few that are aligned with the same content standards—used by all American students attending the same grade would be an improvement over the status quo. Other proponents point to the potential gaps in learning that occur as students move from state to state. Especially when students move mid-year, important concepts might be missed while other concepts are studied unnecessarily a second time. Teachers who move from state to state experience similar difficulties in terms of lesson planning. Let's call this the "standardization" theory.

Opposing Arguments

Some analysts question the theories behind the Common Core. Writing in *Education Week* in the summer of 2011, Andrew Porter compared the Common Core to existing state standards and international standards from other countries and concluded that

The Common Core State Standards are theorized to improve education in three ways.

... data exist that can help predict the magnitude of effects from the Common Core.

the Common Core does not represent much improvement.[10] Opponents of the Common Core, including Sandra Stotsky, James Milgram, Ze'ev Wurman, and Williamson Evers, criticize the quality of the proposed standards for English-language arts and mathematics. They conclude that the math standards, in particular, are inferior to existing standards in Massachusetts and California.[11]

Critics of the Common Core issued a "counter-manifesto" arguing that the proposed common standards would undermine the decentralized, federalist principles on which education has been governed since America's founding. Declaring that a "one-size-fits-all, centrally controlled curriculum" does not make sense, the counter-manifesto states that only weak evidence supports the push for national standards. International test data are not helpful since most countries have national standards and the few that do not, including Canada and Germany, have both impressive and non-impressive scores. Concern for interstate student mobility is overblown, the counter-manifesto claims, because very few students move between states. Most mobility is within state, which is already addressed by the *No Child Left Behind Act*'s requirement that every state establish standards. Since 2003, every state has state curriculum standards that delineate the curriculum for public schools within its borders.[12]

Can empirical evidence shed light on the main points of contention in this debate? Not entirely. Much of the argument is philosophical. Those who believe that the Common Core enumerates what schools should be teaching and students should be learning support the proposed standards. And those who believe a greater degree of standardization would produce more common educational outcomes—and that common outcomes are desirable—also support the proposed standards. Those holding to the opposite beliefs, and believing that local school governance is preferable to governance by larger entities, are critics of the standards.

Despite the philosophical disagreements, there are empirical questions on which evidence exists. The nation has had several years of experience with education standards—since the 1980s in many states and since 2003 in all states—and data exist that can help predict the magnitude of effects from the Common Core. How much does raising the quality of standards matter in boosting student achievement? Will raising the bar for attaining proficiency—in other words, increasing the rigor of performance standards—also raise achievement? And how much variance will be reduced—or how much "sameness" in achievement will be attained—by having students across the country studying a common curriculum?

Quality and Achievement

Let's start with the theory that high-quality standards promote achievement gains. In October 2009, a colleague at Brookings, Grover "Russ" Whitehurst, investigated whether quality ratings for state standards, as judged by the two most cited ratings (from the American Federation of Teachers and Fordham Foundation), are correlated with state NAEP scores. Whitehurst found that they are not. States with weak content standards score about the same on NAEP as those with strong standards. The finding of no relationship held up whether NAEP scores from 2000, 2003, 2005, 2007, or the gains from 2000–2007 were used in the analysis. And it held up for the scores of both white and black students.[13]

The current study extends that inquiry by looking at NAEP data from 2003–2009. Gain scores on NAEP reading and math tests from 2003 and 2009 are combined to form a composite gain score. The scores

are adjusted to control for demographic characteristics of each state—the percent of students qualifying for free or reduced lunch, special education, or English language learner status. More precisely, scores are adjusted to control for changes that occurred in those demographic characteristics from 2003–2009. That prevents swings in states' demographic characteristics from skewing the results. Ratings of state curricular standards conducted by the Fordham Foundation in 2000 and 2006 are used to model the quality of state standards. It is particularly apt to model the quality of state standards with the Fordham ratings considering Fordham's high opinion of the Common Core.

The results are shown in Table 1-1. Three questions are answered by the data. The first row addresses the question: Do the Fordham ratings in 2000 successfully predict the NAEP gains that states made in reading and math from 2003–2009? One could imagine, since there is undoubtedly some lag time before standards are implemented in classrooms and realized in student learning, that the curriculum standards of 2000 would influence achievement gains made three, six, or even nine years down the road. The correlation coefficient of –0.06 indicates that they do not.

The second row examines whether the ratings of 2006 are statistically related to 2003–2009 NAEP gains. In other words, was the quality of standards in the middle of the gain period related to test score gains? Again, the answer is no, with a correlation coefficient of 0.01. The final row looks at the change in ratings from 2000 and 2006. According to Fordham, some states improved their standards in 2006 while others adopted weaker standards in 2006 than they had back in 2000. Are changes in the quality of standards related to changes in achievement? Again, the answer is that they are not (correlation coefficient of 0.08).

Relationship of Fordham's Ratings of State Content Standards with State NAEP Gains (2003–2009)

Table 1-1

Standards Rating	Correlation Coefficient
Fordham 2000	–0.06
Fordham 2006	0.01
Change in Fordham 2000–2006	0.08

Relationship of State Proficiency Level with NAEP Achievement (Correlation Coefficients)

Table 1-2

	2005 NAEP	2009 NAEP	Change 2005-2009
4th Grade Reading	–0.22	–0.08	0.35*
4th Grade Math	–0.12	0.01	0.34*
8th Grade Reading	–0.11	–0.09	0.06
8th Grade Math	0.00	0.01	0.02

* $p < .05$

Rigorous Performance Standards and Achievement

The second theory of improvement is based on performance standards. A 2006 NCES report found that the difficulty of state performance standards is uncorrelated with achievement.[14] Performance levels (or "cut points") for student proficiency were mapped onto the 2005 NAEP scale. States with higher, more rigorous cut points did not have stronger NAEP scores than states with less rigorous cut points. A new NCES report was released in 2011 with updated measures using 2009 NAEP data.[15]

Table 1-2 summarizes the correlations between the rigor of state performance levels and achievement. In a replication of the earlier NCES study, we also find that the states'

A 2006 NCES report found that the difficulty of performance standards is uncorrelated with achievement.

the absolute level of performance standards does not seem to matter but raising or lowering levels does exhibit a relationship with fourth grade changes in achievement ...

2005 NAEP scores are unrelated to where the states drew the line for proficiency in 2005. Fourth-grade reading and math have slightly negative correlations (–0.22 and –0.12, respectively), as does eighth-grade reading (–0.11). The correlation coefficient for eighth-grade math is 0.00. State achievement is unrelated to the level at which states define proficiency. The same is true for 2009 NAEP scores and the level at which proficiency was placed that year (see the second column of the table).

The final column of Table 1-2 investigates whether changes in state NAEP scores from 2005–2009 are related to changes in proficiency level. Did states that raised the bar also perform better? And did states that lowered the bar perform worse? Correlation coefficients for 8th grade are near zero. Positive and statistically significant correlations were found for fourth-grade reading (0.35) and fourth-grade math (0.34). It is interesting that the absolute level of performance standards does not seem to matter but raising or lowering levels does exhibit a relationship with fourth grade changes in achievement, explaining about 12% of the variation in the change in state NAEP scores.

Whether one phenomenon is causing the other is difficult to tell. Changes in proficiency cut points are probably endogenous to trends in test scores. In other words, states with rising scores may feel emboldened to raise their proficiency cut points and those with declining scores may feel compelled to lower theirs. That is quite a different story than the raising or lowering of cut points producing changes in test scores. Unfortunately, simple correlations cannot determine the direction of causality, or if causality exists at all, only whether these two variables are statistically related. In the current analysis, change in level is related to change in fourth-grade scores.

How Common Will Achievement Become?

The third theory concerns standardization. For the Common Core movement, attaining greater standardization of educational outcomes is an important goal. If standards do not reduce variation, then even if they boost performance, simply raising average scores will still leave many states—and the districts, schools, and students within states—far behind and far below acceptable levels of performance. The two previous analyses indicate that it is unlikely that common standards will boost performance; however, it is possible for the national average on NAEP to remain stable while variation is reduced—for instance, if top states decline a little while states at the bottom rise by the same amount. Another way would be for high flying schools within states to decline a little while poorly performing schools increase their performance by a commensurate amount.

In terms of state NAEP scores, variation comes in two forms: variation between states and variation within states. We would expect common standards to reduce variation between states, so that the NAEP score difference between states at the top and bottom of the rankings would be reduced. States that currently offer vastly different curricula, assessments, and performance standards will harmonize those elements of their educational systems. One would expect test score differences to shrink. That is the essence of common standards. Within-state variation, on the other hand, remains unaffected by common standards. Every state already has standards placing all districts and schools within its borders under a common regime. And despite that, every state has tremendous within-state variation in achievement. Schools that score at the top of the world on

international assessments are within a short car trip, sometimes even within a short subway ride, from schools that score at the level of the world's lowest achieving nations.

Let's compare these two forms of variation. Table 1-3 displays data on NAEP standard deviations between and within states. Standard deviation is a measure of variation, the amount of spread in a group of data. On any particular test, about two-thirds of observations are within one standard deviation (above and below) of the average score. "Between-State SD" is the standard deviation of NAEP scores for the fifty states and the District of Columbia—how much they differ from each other. "Within-State SD" is the average of the standard deviations for the fifty states and the District of Columbia—how much the students within each state, on average, differ from each other.

The findings are clear. Most variation on NAEP occurs within states not between them. The variation within states is four to five times larger than the variation between states. Much of the similarity of state scores comes from aggregating individual student scores, which differ greatly, to the state level. The variation in student performance within states washes out to produce means that are alike across states. Consider this: fourth-grade NAEP scores in math range from Massachusetts at the top with 252 down to the District of Columbia with 219. That 33 point difference is not too much larger than the average standard deviation within states (27.8). What does that mean? Consider Massachusetts and Mississippi, a state with low scores but not at the very bottom. Their NAEP means differ by 25 points. Every state, including Massachusetts and Mississippi, has a mini-Massachusetts and Mississippi contrast within its own borders. That variation will go untouched by common state standards.

Relationship of State Proficiency Level with NAEP Achievement (Correlation Coefficients)

Table **1-3**

	Average State NAEP Score	Between-State SD	Within-State SD	Multiple (Within/Between)
4th Grade Reading	220.1	6.6	34.7	5.3
4th Grade Math	239.5	6.3	27.8	4.4
8th Grade Reading	263.3	6.5	32.9	5.1
8th Grade Math	282.4	8.5	34.8	4.1

Discussion

What effect will the Common Core have on national achievement? The analysis presented here suggests very little impact. The quality of the Common Core standards is currently being hotly debated, but the quality of past curriculum standards has been unrelated to achievement. The rigor of performance standards—how high the bar is set for proficiency—has also been unrelated to achievement. Only a change in performance levels has been related to an increase in achievement, and that could just as easily be due to test score changes driving changes in policy, not the other way around. The Common Core may reduce variation in achievement between states, but as a source of achievement disparities, that is not where the action is. Within-state variation is four to five times greater.

The sources of variation in educational outcomes are not only of statistical importance but also bear on the question of how much state policy can be expected to change schools. Whatever reduction in variation between, say, Naperville and Chicago that can be ameliorated by common standards has already been accomplished by Illinois's state efforts. State standards have already had a crack at it. Other states provide even more deeply rooted historical examples. California has had state curriculum frame-

The Common Core may reduce variation in achievement between states, but as a source of achievement disparities, that is not where the action is.

Standards in education are best understood as aspirational.

works since at least 1962, statewide testing with scores for every school published publically since 1971 (except for a brief timeout in the early 1990s), state textbook adoption for K–8 since the nineteenth century, and a court-ordered equalized spending system since the late 1970s. Any effect that these laws have on reducing achievement variation within the state has already occurred. The Common Core must go beyond these efforts to reduce variation in California's achievement. That is highly unlikely.

Two lessons can be drawn from the analysis above. First, do not expect much from the Common Core. Education leaders often talk about standards as if they are a system of weights and measures—the word "benchmarks" is used promiscuously as a synonym for standards. But the term is misleading by inferring that there is a real, known standard of measurement. Standards in education are best understood as aspirational, and like a strict diet or prudent plan to save money for the future, they represent good intentions that are not often realized.

Why don't aspirational standards make much of a difference? Researchers from the International Association for the Evaluation of Educational Achievement (IEA) first sketched the concept of opportunity to learn using international test score data in the 1970s.[16] Distinctions were drawn among the intended, implemented, and achieved curriculums. The intended curriculum is embodied by standards; it is what governments want students to learn. The differences articulated by state governments in this regard are frequently trivial. Bill Gates is right that multiplication is the same in Alabama and New York, but he would have a difficult time showing how those two states—or any other two states—treat multiplication of whole numbers in significantly different ways in their standards documents.

What is crucial is the distance between the intended curriculum and the two curriculums below. The implemented curriculum is what teachers teach. Whether that differs from state to state is largely unknown; what is more telling is that it may differ dramatically from classroom to classroom in the same school.[17] Two fourth-grade teachers in classrooms next door to each other may teach multiplication in vastly different ways and with different degrees of effectiveness. State policies rarely touch such differences. The attained curriculum is what students learn. Two students in the same classroom and instructed by the same teacher may acquire completely different skills and knowledge. One student understands and moves on; another struggles and is stuck. And that even happens in classrooms with outstanding teachers.

The whole system is teeming with variation. Policies at national, state, district, and school levels sit on top of these internal differences, but they rarely succeed in ameliorating them. The Common Core will sit on top of the implemented and attained curriculums, and notwithstanding future efforts to beef up the standards' power to penetrate to the core of schooling, they will probably fail to dramatically affect what goes on in the thousands of districts and tens of thousands of schools that they seek to influence.

A final word on what to expect in the next few years as the development of assessments tied to the Common Core unfolds. The debate is sure to grow in intensity. It is about big ideas—curriculum and federalism. Heated controversies about the best approaches to teaching reading and math have sprung up repeatedly over the past century.[18] The proper role of the federal government, states, local districts, and schools in deciding key educational questions, especially in deciding what should be taught,

remains a longstanding point of dispute. In addition, as NCLB illustrates, standards with real consequences are most popular when they are first proposed. Their popularity steadily declines from there, reaching a nadir when tests are given and consequences kick in. Just as the glow of consensus surrounding NCLB faded after a few years, cracks are now appearing in the wall of support for the Common Core.

Don't let the ferocity of the oncoming debate fool you. The empirical evidence suggests that the Common Core will have little effect on American students' achievement. The nation will have to look elsewhere for ways to improve its schools.

The empirical evidence suggests that the Common Core will have little effect on American students' achievement.

Differences-in-Differences Evidence Across Countries," *Economic Journal, Royal Economic Society*, 116 (2005), pp. C63–76, 03. The study's coding the U.S. as a late tracking nation (after age 15) does not make sense for two reasons. Based on the European-style tracking that the study uses to define tracking (separating students by ability into separate schools) the U.S. basically *never* tracks, except for a few elite exam schools in a small number of big cities. Moreover, coding the U.S. as a non-tracking nation before age 15 obscures the huge amount of tracking that goes on in middle school mathematics courses and the common practice of within-class ability grouping beginning with first grade reading instruction. Bottom line: the U.S. tracks and ability groups students a lot before age 15 but almost never uses the between-school model of separation and differentiation.

CS HB 352(EDC) – Resource Education

"An Act relating to public school curriculum and textbook restrictions based on science, resource development, and sustained yield principles."

Alaska State Constitution
Section 2. General Authority

"The legislature shall provide for the utilization, development, and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people".

Like many other states, Alaska has educators who come from various backgrounds who may be unfamiliar with Alaska's constitutional directives regarding State resources. The purpose of this bill is to clearly state that the curriculum in local, public schools supports the intent of the Constitution. The bill also amends the statutes governing the University of Alaska Board of Regents. CS HB 352 recognizes the Board of Regents has a constitutional responsibility regarding the University and in its role of regulating courses of instruction, should base a course of instruction for environmental education on Alaska's constitutional principles.

When building a curriculum addressing environmental and resource education, materials must give parity to the viewpoint of use and development as well as conservation of all natural resources. Educational materials should recognize that the economic well-being of the State is totally dependent upon careful, sustainable resource development.

CS FOR HOUSE BILL NO. 352(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): REPRESENTATIVES DICK, Feige, Peggy Wilson

A BILL

FOR AN ACT ENTITLED

"An Act establishing curriculum restrictions based on science, resource development, and sustained yield principles for public school districts and for the University of Alaska."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.30.380 is amended by adding a new subsection to read:

(b) Notwithstanding any other provision of law, the governing body of each public school in the state shall base curriculum development on

(1) the constitutional principles of

(A) utilization, maintenance, and sustained yield of all natural resources belonging to the state, including fish, forests, wildlife, land, water, and other renewable resources; and

(B) utilization and development of all nonrenewable resources in addition to encouragement of balancing resource development and conservation under (a) of this section;

(2) scientific principles, without bias and without regard to personal opinion.

* **Sec. 2.** AS 14.40.170(b) is amended to read:

(b) The Board of Regents may

(1) adopt reasonable rules, orders, and plans with reasonable penalties for the good government of the university and for the regulation of the Board of Regents;

(2) determine and regulate the course of instruction in the university with the advice of the president; **a course of instruction for environmental education must be based on**

(A) the constitutional principles of

(i) utilization, maintenance, and sustained yield of all natural resources belonging to the state, including fish, forests, wildlife, land, water, and other renewable resources; and

(ii) utilization and development of all nonrenewable resources in addition to encouragement of balancing resource development and conservation under (a) of this section;

(B) scientific principles, without bias and without regard to personal opinion;

(3) set student tuition and fees;

(4) receive university receipts and, subject to legislative appropriation, expend university receipts in accordance with AS 37.07 (Executive Budget Act);

(5) apply for and use the proceeds of a loan from the Alaska energy efficiency revolving loan fund (AS 18.56.855).

HB 352: Resource Education

Current Statute:

Sec. 14.30.380. Environmental education.

The board shall encourage each school board to initiate and conduct a program of environmental education for kindergarten through grade 12. The program should include, but is not limited to, education regarding the need to balance resource development with environmental safeguards, the dependence of the state on resource development, and the opportunity for pollution prevention, waste reduction, and recycling. A school board may implement environmental education as a part of regular classroom studies.

HB 352 amends both K-12 public schools and University of Alaska such that if an environmental curriculum is adopted it must meet the following requirements.

*** Section 1. AS 14.30.380 is amended by adding a new subsection to read:**
(b) Notwithstanding any other provision of law, the governing body of each public school in the state shall base curriculum development on

(1) the constitutional principles of

(A) utilization, maintenance, and sustained yield of all natural resources belonging to the state, including fish, forests, wildlife, land, water, and other renewable resources; and

(B) utilization and development of all nonrenewable resources in addition to encouragement of balancing resource development and conservation under (a) of this section;

(2) scientific principles, without bias and without regard to personal opinion

***Section 2. AS 14.40.170(b)** amends the Board of Regents responsibilities with regard to environmental education. It replicates the language above for K-12 public curriculum development.

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. HB 352

Analysis

This is a zero fiscal note. Districts are responsible for their curriculum and textbook selection processes.

March 30, 2012

Fred Parady, Executive Director

Alaska Miners Association

Senate Resources Commitee

Good morning members of the committee, it is good to be with you today. For the record, my name is Fred Parady, and I an honored to serve as the Executive Director of the Alaska Miners Association (AMA). The Alaska Miners Association is a non-profit membership organization established in 1939 to represent the mining industry in Alaska, making us one of the oldest trade associations in the state.

The AMA is composed of more than 1400 individual prospectors, geologists and engineers, vendors, suction dredge miners, small family mines, junior mining companies, and major mining companies. Our members look for and produce gold, silver, platinum, diamonds, lead, zinc, copper, coal, limestone, sand and gravel, crushed stone, armor rock, and other materials. Our members live and work throughout the state.

Let's turn to the bill before you, HB352, which is **relates to public school curriculum and textbook restrictions based on science, resource development, and sustained yield principles.**

Alaska State Constitution Section 2. General Authority
"The legislature shall provide for the utilization, development, and conservation of all natural resources belonging to the State, including land and waters, for the maximum benefit of its people".

More than most other states, Alaska has educators who come from various backgrounds who may be unfamiliar with Alaska's constitutional directives regarding State resources. The purpose of this bill is to clearly state that the curriculum in local schools supports the intent of the Constitution.

Educational materials must give parity to the viewpoint of use and development as well as conservation of all natural resources. Educational materials should recognize that the economic well-being of the State is totally dependent upon careful, sustainable resource development.

The Alaska Miners Association firmly supports the sponsors efforts to bring balance to the teaching of natural resource issues in the context of Alaska's founding fathers and our consititution.

Re: House Education Hearing on HB 352 – Resource Development Curriculum

Dear Chairman Dick and Members of House Education:

The Resource Development Council (RDC) writes to express support for HB 352, an Act regarding Resource Development Curriculum in Alaska's schools.

RDC is a statewide business association comprised of individuals and companies from Alaska's oil and gas, mining, forest products, tourism and fisheries industries. RDC's membership includes Alaska Native Corporations, local communities, organized labor, and industry support firms. RDC's purpose is to encourage a strong, diversified private sector in Alaska and expand the state's economic base through the responsible development of our natural resources.

RDC recognizes Section 8.1 of the Alaska State Constitution, reading, "It is the policy of the State to encourage the settlement of its land and the development of its resources by making them available for maximum use consistent with the public interest."

RDC supports programs educating students on Alaska's natural resources, and specifically on the responsible development of our resources. It is a policy of RDC to support programs, including Alaska Resource Education, to educate students and the general public on responsible resource development activities in Alaska.

The State of Alaska partners with Alaska Resource Education, formerly AMEREF, an education non-profit whose mission is to educate students about Alaska's natural resources. ARE offers educators across the state Resource Education Kits containing nearly $300 worth of materials to help provide students and teachers with balanced information about Alaska's rich heritage of mineral, energy, and forest resources. These non-biased kits have been accepted by all 53 school districts, and are available at no cost to teachers. In addition, a free training is offered, when available, so that teachers are able to correctly utilize the materials in the kits.

121 West Fireweed Lane, Suite 250, Anchorage, Alaska 99503-2035
Phone: 907-276-0700 Fax: 907-276-3887 Email: resources@akrdc.org Website: akrdc.org

Further, it is somewhat appalling that incorporating resource development in the curriculum isn't mandated while conservation education is. Alaska's education curriculum should include educating our students on activities related to and the responsible development of our natural resources. Future generations of Alaskans should have access to a firm foundation of our constitutional principals that guide our state, including multiple-use of resources and land along side conservation education.

Thank you for the opportunity to comment.

Sincerely,

Marleanna Hall
Projects Coordinator
Resource Development Council

Good morning Mr. Chairman and members of the House Education Committee. For the record my name is Michelle Brunner, Executive Director of Alaska Resource Education.

I'm here to testify today with regards to HB 352. Alaska Resource Education (formerly AMEREF) is a partnership between the State of Alaska Department of Education and private industry. We are a non-profit organization that focuses on educating students and teachers about Alaska's natural resources using our Alaska Resource Kit and Curriculum.

The Alaska Resource Kit contains a standards-based, science focused interdisciplinary set of curriculum, activities, and support materials providing K-12 students with information about Alaska's mineral, energy, oil & gas, and forest resources. We deliver our curriculum to educators through our "Rock & Roll around Alaska" course - a 500 level, 1 credit course offered through the University system. We also educate students through our Minor Miner and Energy Einstein programs. Our kit materials include:

A 40 sample Alaska rocks and minerals set complete with oil and gold, DVD's, cd's, posters, maps, books, a Sitka spruce cross-section and other educational materials on Alaska's resources.

In the last 3 years we have had 333 teachers take our Rock & Roll around Alaska course, we've distributed 640 Alaska Resource Kits to school districts across Alaska, our education director has visited 116 classrooms and 172 students have participated in our Minor Miner and Energy Einstein programs statewide. I would invite you to visit our website www.akresource.org to see firsthand a video from students about "what minerals mean to me".

We are interested in this legislation because ARE is consistently providing resource education on a daily basis throughout Alaska. The strength of ARE's program is that it is a partnership between the private and public sectors. Our experience in the classroom is that our educational system is saturated with environmental and conservation education that does not follow Alaska's constitutional principles. The idea of HB352 would assist in adding balance to the classroom and to Alaska's future employees and policymakers.

With regard to HB352, our board has not had time to review the legislation and has not taken official action specifically regarding HB352, but the overall concept I believe ARE would support. We would suggest that as you think about how to provide a science based curriculum based on Alaska's constitutional principles that you consider utilization of existing curriculum that meets this criteria. This concludes my prepared remarks and I'm happy to answer questions.

RDC Testimony:
HB 352 - an Act regarding Resource Development Curriculum

Before House Education (via teleconference)
Testimony provided by Marleanna Hall

April 2, 2012

My name is Marleanna Hall, I am a projects coordinator at the Resource Development Council. Good morning Chairman Dick and Members of the House Education Committee. In brief, RDC is a statewide business association with members in forestry, oil and gas, mining, tourism, fishing, all 12 Native regional corporations, and many others. Our mission is to grow Alaska through responsible resource development.

First, thank you to Representative Dick for introducing HB 352 – an Act regarding Resource Development Curriculum in Alaska's schools.

RDC recognizes Section 8.1 of the Alaska State Constitution, [reading, "It is the policy of the State to encourage the settlement of its land and the development of its resources by making them available for maximum use consistent with the public interest."]

RDC supports programs educating students on Alaska's natural resources, and specifically on the responsible development of our resources. It is a policy of RDC to support programs, including Alaska Resource Education, to educate students and the general public on responsible resource development activities in Alaska.

You've already heard about ARE this morning, so I will not repeat details about their mission to educate students about Alaska's natural resources.

[The State of Alaska partners with Alaska Resource Education, formerly AMEREF, an education non-profit whose mission is to educate students about Alaska's natural resources. ARE offers educators across the state Resource Education Kits containing nearly $300 worth of materials to help provide students and teachers with balanced information about Alaska's rich heritage of mineral, energy, and forest resources. These non-biased kits have been accepted by all 53 school districts, and are available at no cost to teachers. In addition, a free training is offered, when available, so that teachers are able to correctly utilize the materials in the kits.]

I would like to note, it is somewhat appalling that incorporating resource development in the curriculum isn't mandated while conservation education is. Alaska's education curriculum should include educating our students on activities related to and the responsible development of our natural resources. Future generations of Alaskans should have access to a firm foundation of our constitutional principals that guide our state, including multiple-use of resources and land along side conservation education. Thank you again Representative Dick for recognizing this shortcoming in Alaska's curriculum, and for proposing HB 352, which will help provide more balance in educational curriculum in our public schools. In addition to my comments today, RDC will submit a formal letter of support. Thank you for the opportunity to comment.

CS FOR HOUSE BILL NO. 369(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): HOUSE FINANCE COMMITTEE BY REQUEST

A BILL

FOR AN ACT ENTITLED

"An Act relating to student participation in interscholastic activities; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.30.142(d) is amended to read:

(d) A student who has been removed from participation in a practice or game for suspicion of concussion may not return to **participation in practice or game** play until the student has been evaluated and cleared for participation in writing by a qualified person who has received training [AND IS CURRENTLY CERTIFIED], as verified in writing or electronically by the qualified person, in the evaluation and management of concussions. In this subsection, "qualified person" means either a

(1) health care provider who is licensed in the state or exempt from licensure under state law; or

(2) person who is acting at the direction and under the supervision of a physician who is licensed in the state or exempt from licensure under

AS 08.64.370(1), (2), or (4).

* **Sec. 2.** AS 14.30 is amended by adding a new section to read:

Sec. 14.30.365. Interscholastic activities; eligibility. (a) A full-time student who is enrolled in grades nine through 12 in an alternative education program that is located entirely in the state and that does not offer interscholastic activities is eligible to participate in any interscholastic activities program available in the public school that the student would be eligible, based on the residence of the parent or legal guardian of the student, to attend were the student not enrolled in an alternative education program if the student

(1) is otherwise eligible to participate in interscholastic activities under requirements established by the school, the school district, and the statewide interscholastic activities governing body;

(2) provides documentation, including academic transcripts, proof of full-time enrollment, and applicable disciplinary records, and, if required for participation in an activity by the school, requested medical records, to the school providing the interscholastic activities program; and

(3) claims the same school for interscholastic activities eligibility purposes during a school year.

(b) In this section,

(1) "alternative education program" means a public secondary school that provides a nontraditional education program, including the Alaska Military Youth Academy; a public vocational, remedial, or theme-based program; a home school program that is accredited by a recognized accrediting body; a charter school authorized under AS 14.03.250 - 14.03.290; and a statewide correspondence school that enrolls students who reside outside of the district in which the student resides and provides less than three hours a week of scheduled face-to-face student interactions in the same location with a teacher who is certified under AS 14.20.020;

(2) "district" has the meaning given in AS 14.17.990;

(3) "full-time student" means a student who

(A) is enrolled in not less than five classes in grades nine through 11 and not less than four classes in grade 12; and

(B) is on track to graduate from secondary school in not more than four years of attendance in secondary school;

(4) "interscholastic activities" means preparation for and participation in events or competitions involving another school when the preparation or participation

(A) is sanctioned or supported by the statewide interscholastic activities governing body;

(B) is conducted outside of the regular school curriculum; and

(C) does not involve participation in student government at a school.

* **Sec. 3.** Section 1 of this Act takes effect immediately under AS 01.10.070(c).

* **Sec. 4.** Section 2 of this Act takes effect July 1, 2013.

* **Sec. 2.** AS 14.30 is amended by adding a new section to read:

Sec. 14.30.365. Interscholastic activities; eligibility. (a) A full-time student who is enrolled in grades nine through 12 in an alternative education program that is located entirely in the state and that does not offer interscholastic activities is eligible to participate in any interscholastic activities program available in the public school that the student would be eligible, based on the residence of the parent or legal guardian of the student, to attend were the student not enrolled in an alternative education program if the student

(1) is otherwise eligible to participate in interscholastic activities under requirements established by the school, the school district, and the statewide interscholastic activities governing body;

(2) provides documentation, including academic transcripts, proof of full-time enrollment, and applicable disciplinary records, and, if required for participation in an activity by the school, requested medical records, to the school providing the interscholastic activities program; and

(3) claims the same school for interscholastic activities eligibility purposes during a school year.

(b) In this section,

(1) "alternative education program" means a public secondary school that provides a nontraditional education program, including the Alaska Military Youth Academy; a public vocational, remedial, or theme-based program; a home school program that is accredited by a recognized accrediting body; a charter school authorized under AS 14.03.250 - 14.03.290; and a statewide correspondence school that enrolls students who reside outside of the district in which the student resides and provides less than three hours a week of scheduled face-to-face student interactions in the same location with a teacher who is certified under AS 14.20.020;

(2) "district" has the meaning given in AS 14.17.990;

(3) "full-time student" means a student who

(A) is enrolled in not less than five classes in grades nine through 11 and not less than four classes in grade 12; and

(B) is on track to graduate from secondary school in not more than four years of attendance in secondary school;

(4) "interscholastic activities" means preparation for and participation in events or competitions involving another school when the preparation or participation

(A) is sanctioned or supported by the statewide interscholastic activities governing body;

(B) is conducted outside of the regular school curriculum; and

(C) does not involve participation in student government at a school.

* **Sec. 3.** Section 1 of this Act takes effect immediately under AS 01.10.070(c).

* **Sec. 4.** Section 2 of this Act takes effect July 1, 2013.

4 AAC 06.115. Interscholastic activities

(a) The purpose of this section is to provide a procedure that enables school districts to promote and govern interscholastic activities effectively, economically, and fairly, while keeping those activities in their proper perspective educationally.

(b) A school or school district may join and, to the extent authorized by its budget, may pay dues to the Alaska School Activities Association, Inc., or any other voluntary, nonprofit association whose purpose is to administer and promote interscholastic activities in Alaska so long as the association

(1) makes applications and membership available to all public and private schools, and school districts in the state;

(2) is governed by a board that is elected from the association membership and that fairly represents all regions of the state, that participate in the organization and whose membership may also include appointed representatives of other education organizations;

(3) adopts a constitution and bylaws setting out its philosophy, purpose, rules, and procedures, including a fair procedure for challenging interpretation or application of a rule;

(4) operates in compliance with state and federal law; and

(5) administers interscholastic activities in a manner that

(A) encourages high standards of citizenship and complements the academic programs of schools;

(B) is consistent with and advances the state's education policy set out at AS 14.03.015 ; and

(C) recognizes that the organization and governance of interscholastic activities is a public purpose that is best met through the cooperation and association of interested schools and school districts.

(c) The state board considers a decision of an association described in (b) of this section, made when applying association bylaws to a particular person or school, to be an adjudicatory, administrative decision. Under existing case law, when a board performs an administrative function and makes an adjudicatory decision that affects an individual, the final decision is appealable to the superior court under Part VI of the Rules of Appellate Procedure.

(d) In this section, "district" has the meaning given in AS 14.17.990 .

History: Eff. 6/26/94, Register 130; am 8/2/97, Register 143; am 5/4/2000, Register 154
Authority: AS 14.03.015

AS 14.07.020

AS 14.07.060

HB369 Section Summary

Section 1 – Addresses a problem in the language of the statutes dealing with student athlete participation in sports programs when there is a suspicion they have suffered a concussion or brain trauma.

- The legislature passed house Bill 15, sponsored by Rep. Mike Doogan, last year requiring student-athletes to be evaluated by a qualified individual (licensed doctor or a person working under the supervision of a doctor) for symptoms of a concussion or brain trauma before they could return to game play.
- House Bill 15 also required the person evaluating the student to be certified to perform such an evaluation.
    - Changes include the restriction prohibiting student-athletes from returning to practice as well as game play before they are clears by a qualified person.
    - The requirement for certification to perform evaluation for concussion or brain trauma is also removed because there is no organization in Alaska that offers such certification.

Section 2 – Establishes in statute rules allowing students of alternative education programs the opportunity to participate in interscholastic sports programs offered at the high school level in public schools.

- Allows student-athletes to declare a public school as their school of eligibility for the purpose of participation in interscholastic school sports.
- Alternative education programs
    - Alaska Military Youth Academy, public vocational programs, remedial schools, a home school, charter schools and statewide correspondence schools.
- Student must meet all eligibility requirements established by the school, school district and corresponding sport's governing body (in Alaska this would be ASAA – the Alaska Scholastic Activities Association).
- Students must be on track for graduation in not more than four years of attendance in order to participate in sports.
- Establishes a definition for a full-time student for the purpose of participation in this eligibility.
    - Student-athletes in grade 9-11 must be enrolled in not less than five credit hours each semester in 12^{th} grade must be registered in not less than 4 credit hours.

- It is the responsibility of the student-athlete participating in the program to provide all documentation required to be eligible to participate in interscholastic sports.
    - Academic records, medical clearance, and disciplinary records.
        - This includes transcripts verifying the student's grade point average, physical examination and any disciplinary records from schools.
            - The discipline records will prevent students who have been suspended or expelled from a public school from participating as a student from an alternative education program.
    - Student-athletes declaring a school of eligibility cannot change their school of eligibility during the same school calendar year.
- Student-athletes can only select a high school that is within the boundary area in which they reside as their school of eligibility.

Prepared by the House Finance Committee.

Sponsor Statement
House Bill 369

"An Act relating to student participation in sports."

The National Federation of High School Sports reported in a study, The Case for High School Activities that "students who participate in scholastic sports programs tend to have higher grade-point averages, better attendance records, lower dropout rates and fewer discipline problems than students generally." The Federation's report added that "through participation in scholastic sports programs, students learn teamwork, sportsmanship, winning and losing, the rewards of hard work, self-discipline, build self-confidence, and develop skills to handle competitive situations."

House Bill 369 will refine state statutes and make participation in scholastic sports participation available to a larger number of students who otherwise are not eligible. The bill addresses the eligibility of alternative school student-athletes and student-athletes who have suffered concussion or brain trauma.

Last Year the Legislature passed HB15, which requires a student-athlete suspected of suffering a concussion or brain trauma be removed from practice or play, and not be allowed to return until cleared by a certified qualified individual. Since there is no organization in Alaska that "certifies" individuals in the evaluation and management of concussions, this bill eliminates the mandate for certification.

The second part of the legislation defines the eligibility rules for high school sports programs for student-athletes enrolled full time in an alternative education program, allowing them to participate in interscholastic sports programs offered through the public school system.

This bill clarifies the eligibility rules as they apply to student-athletes for participation in team sports, resulting in a better education for all Alaskan student-athletes.

Other States offering participation in public school sports by students enrolled in an alternative program

Twenty-two states currently require public schools to allow homeschoolers some type of access to classes or sports. These include Arizona, Colorado, Florida, Idaho, Illinois, Iowa, Louisiana, Maine, Michigan, Minnesota, Nebraska, Nevada, New Hampshire, New Mexico, North Dakota, Oregon, Pennsylvania, South Dakota, Utah, Vermont, Washington, and Wyoming.

Homeschooler participation in public school activities is usually subject to certain requirements, which are often part of the school's policy and the state high school athletic association's bylaws. Although specific requirements vary from state to state, they generally include: 1) being in compliance with the state homeschool law, 2) meeting the same eligibility requirements (residence, age, etc.) as public school students, and 3) submitting verification that the student is passing his or her core subjects.
Information from the Homeschool Legal Defense Association

Summary of state laws allowing alternative education program students participation

Arizona
Home-instructed students are allowed to participate in the public schools' interscholastic activities. Arizona Revised - Statutes § 15-802.01.

Colorado
Children participating in a nonpublic, home-based education program are allowed equal access to the public schools' extracurricular and interscholastic activities. Colorado Revised Statutes § 22-33-104.5(6) and Colorado Revised Statutes § 22-32-116.5.

Florida
Home-educated students are eligible to participate in the public schools' interscholastic extracurricular activities. - Florida Statutes § 1006.15.

Idaho
Non-public school students are allowed to dual enroll in public schools to participate in nonacademic activities. - Idaho Code § 33-203.

Louisiana
Louisiana home-study students have the ability to participate on a public school sports team, if the principal of the school approves. LA-R.S. 17:236.3.
In 1970, the Louisiana Court of Appeals ruled against the participation of students enrolled in a private school. Sanders v. Louisiana High School Athletic Association, La. App., 242 So.2d 19.

Maryland
An intermediate appellate court ruled against private school students who sought to participate in a public school extracurricular activity. Thomas v. Allegany County Board of Education, 443 A.2d 622 (1982). However, a federal trial court memorandum prohibits the Maryland Public Secondary Schools Athletics Association from excluding from competition private schools with homeschool athletes. Bressler v. Maryland Public Schools Secondary Athletics Association (D. Md. JFM-05CV783, 2005).

Massachusetts
Several trial court decisions have ruled that homeschoolers must be allowed to participate based on the fact that superintendents are allowed to approve homeschool programs. These cases only apply to the districts in question, not the entire state. The Massachusetts Interscholastic Athletic Association allows homeschoolers to participate on public school teams provided they are in compliance with the school's policy. MIAA Handbook Rule 54.

Michigan
No interscholastic activities are permitted unless permission is provided by the local public school district.

Minnesota
School districts "shall allow all resident pupils receiving instruction in a home school...to be eligible to fully participate in extracurricular [but not co-curricular] activities on the same basis as public school students." - Minnesota Statutes Annotated, 123B.49, Subd. 4(a).

Montana
The Supreme Court of Montana ruled that school district policy which kept nonpublic students from participating in sports programs was "reasonable." The district's interest in developing full academic potential in each student outweighed the students' right to play sports. Kaptein v. Conrad School District, 931 P.2d 1311 (Mont. 1997).

Nevada
The board of trustees of the school district must allow homeschooled students to participate in extracurricular and interscholastic activities, and sports in the district in which the student resides, subject to statutory requirements. - Nevada Revised Statutes § 392.070, § 386.462, and § 386.580.

New Hampshire
School districts may adopt policies regulating homeschool participation, as long as the policies are not more restrictive than those governing public school students. - New Hampshire Revised Statutes § 193:1-c.

New Mexico
A homeschool student is eligible to participate in school district athletic activities at the public school in the attendance zone in which the student resides, according to the New Mexico activities association guidelines. The school district shall verify each homeschool student's academic eligibility to participate in school district athletic activities. - New Mexico Statutes Annotated § 22-8-23.8.

New York
An appellate court ruled against homeschoolers who sought access to public school interscholastic sports. Bradstreet v. Sobol, 650 N.Y.S.2d 402 (A.D. 3 Dept. 1996). The Commissioner of Education's Regulations pertaining to interscholastic athletic competitions, Section 135.4(c)(7)(ii)(b)(2), requires that students in grades 9-12 must be a "bona fide student.

North Dakota
A child receiving home education may participate in extracurricular activities either under the auspices of the child's school district of residence or under the auspices of an approved nonpublic school, if permitted by the administrator of the school. A homeschooled student is subject to the same standards for participation as required of full-time students at these schools. - North Dakota Century Code § 15.1-23-16.

Oklahoma
Federal District Court ruled against a homeschooled student seeking to compel the school to allow part-time enrollment. Swanson v. Guthrie Independent School District No. 1-1, 942 F. Supp. 511 (W.D.Okl. 1996) The 10th Circuit court of Appeals upheld this decision. 135 F.3d 694 (10th Cir. 1998).

Ohio
School districts are free to set their own policies regarding homeschooled students' participation in public school activities. According to the Ohio High School Athletic Association's (OHSAA) rules, homeschool students are eligible to participate provided they are enrolled in an OHSAA member school in accordance with the school's partial enrollment policy.

Oregon
School districts must allow homeschool students access to public school interscholastic activities. Oregon Revised Statutes § 339.460.

Pennsylvania
Homeschooled students meeting the same eligibility criteria as public-school students may participate in extracurricular activities of their public school district of residence. Such activities include, but are not limited to clubs, musical ensembles, athletics, and theatrical productions. - 24 Pennsylvania Statutes Annotated § 13- 1327.1(f.1).

Rhode Island
Homeschool students are eligible to participate in activities the Rhode Island Interscholastic League (RIIL) sponsors if they comply with RIIL Rule 3.1.I.

South Dakota
A homeschool student can participate in public school sports if the school board approves. SDCL §13-36-7. A homeschool student has a right to partial enrollment in public school. SDCL §13-28-51.

Tennessee
A member of the Tennessee Secondary School Athletic Association (TSSAA) is permitted to play or scrimmage any secondary school with grades 9 and above in regular season play. For purposes of this rule, a school team may be one school or a cooperative program of one or more schools. This could include homeschool cooperative teams and teams from church-related schools. TSSAA Bylaws, Art. IV, sec. 1. Furthermore, a student being homeschooled under Option I may participate in extracurricular athletics at a member school (at the member school's discretion) if the student meets the eligibility requirements set forth in the TSSAA's most recent publication on homeschool student athlete eligibility.

Utah
Effective May 9, 2010: Homeschool students shall be eligible to participate in extracurricular activities at a public school consistent with eligibility standards. School districts may not impose additional requirements on homeschool students that are not imposed on fully enrolled public school students. Utah Code § 53A-11-102.6

Vermont
School boards are required to adopt rules to integrate home-study students into school courses (cocurricular and extracurricular) and use of facilities. Vermont Statutes Annotated 16 § 563(24). School boards must follow Vermont Department of Education guidelines found in Code of Vermont Rules 22-000-009, Sec. 4401-4405.

West Virginia
The West Virginia Supreme Court ruled that homeschooled students could be prohibited from participating in interscholastic athletics with public school students. The ruling held that there was no violation of equal protection to homeschoolers in permitting the West Virginia Secondary School Activities Association to require eligible students to be enrolled full-time in a member school. Jones v. West Virginia State Board of Education, et al., 218 - W.Va. 52, 622 S.E.2d 289.

Wyoming
The Wyoming High School Activities Association allows home-educated students to play on participating schools' sports teams. WHSAA Rules 3.1.3, 6.2.0, 6.4.

The Case for High School Activities

Introduction

The National Federation of State High School Associations (NFHS) and its membership believe that interscholastic sports and fine arts activities promote citizenship and sportsmanship. They instill a sense of pride in community, teach lifelong lessons of teamwork and self-discipline and facilitate the physical and emotional development of our nation's youth.

There is no better time than today to assert "The Case for High School Activities." Education and community leaders across the nation must be made aware of the facts contained in this material. From interscholastic sports to music, drama and debate, activities enrich a student's high school experience, and the programs must be kept alive.

At a cost of only one to three percent (or less in many cases) of an overall school's budget, high school activity programs are one of the best bargains around. It is in these vital programs – sports, music, speech, drama, debate – where young people learn lifelong lessons as that compliment the academic lessons taught in the classroom.

The NFHS supports co-curricular endeavors through many avenues, including:

- Rules Writing Process- The NFHS produces more than eight million copies of publications and support materials annually for 15 rules books covering 17 sports. The NFHS publishes case books, officials' manuals, hand books, and simplified and illustrated books in many sports.

- The NFHS Coaches Education Program- The NFHS Fundamentals of Coaching Course provides a unique student-centered curriculum for interscholastic coaches that assists coaches in creating a healthy and age appropriate sport experience. The course can be taken either online or in a face to face blended delivery option.

- National High School Activities Week – The nation's high schools are encouraged to promote the values inherent in high school athletics, speech, music, drama, debate, and spirit squads during this week-long celebration in the third week in October.

- Public Service Announcements: Various sportsmanship messages are created and distributed in electronic and radio formats. In addition, healthy lifestyle messages that tackle difficult but current topics such as steroid usage, and hazing education.

- High School Activities: A Community Investment in America – This presentation is a NFHS educational product. It documents the value of high school athletic and activity programs through an excellent PowerPoint presentation with videos on a CD-ROM. You can order this CD-ROM by calling NFHS customer service at 800-776-3462.

Benefits of Co-curricular Activities

- **Activities Support the Academic Mission of Schools.** They are not a diversion but rather an extension of a good educational program. Students who participate in activity programs tend to have higher grade-point averages, better attendance records, lower dropout rates and fewer discipline problems than students generally.

- **Activities are Inherently Educational.** Activity programs provide valuable lessons for practical situations – teamwork, sportsmanship, winning and losing, and hard work. Through participation in activity programs, students learn self-discipline, build self-confidence and develop skills to handle competitive situations. These are qualities the public expects schools to produce in students so that they become responsible adults and productive citizens.

- **Activities Foster Success in Later Life.** Participation in high school activities is often a predictor of later success – in college, a career and becoming a contributing member of society.

Following are some of those benefits, with case studies, where applicable, listed to document the benefits (while many of the studies refer to extracurricular activities, the NFHS prefers the use of the term co-curricular activities, believing that activities support the academic mission of schools and are inherently educational).

Participation in high school activities is a valuable part of the overall high school experience.

- Students who spend no time in extracurricular activities are 49% more likely to use drugs and 37% more likely to become teen parents than those who spend one to four hours per week in extracurricular activities (United States Department of Education. *No Child Left Behind: The facts about 21st Century Learning.* Washington, DC: 2002.)

- In their 2006 report, *Effects of Title IX and Sports Participation on Girls' Physical Activity and Weight,* Professors Kaestner and Xu of the University of Illinois at Chicago, found that the dramatic increase in sports participation among girls in the aftermath of the passage of Title IX was associated with an increase in physical activity and an improvement in weight and body mass among adolescent girls. They conclude that their results strongly suggest that Title IX and the increase in athletic opportunities among adolescent females it engendered had a beneficial effect on the health of adolescent girls.

- A *Harvard Educational Review* article in 2002 found that participation in extracurricular activities in high school appears to be one of the few interventions that benefit low-status, disadvantaged students – those less well served by traditional educational programs – as much or more than their more advantaged peers.

- In telephone interviews of a national sample of teens in 2001, more than half (54%) said they wouldn't watch so much TV or play video games if they had other things to do after school. The same survey found that more than half of teens wish there were more community or neighborhood-based programs available after school, and two- thirds of those surveyed said they would participate in such programs if they were available.

- Bonnie Barber and her colleagues, contributors to the 2005 book, *Organized Activities as Developmental Contexts for Children and Adolescents,* concluded that making diverse clubs and activities available to a wide range of students is important. The opportunity to embed one's identity in multiple extracurricular contexts and to experience multiple competencies facilitates attachment to school and adjustment. Activity participation is also linked to affiliation with peers who are academically focused. Adolescents can benefit from this synergistic system when they have opportunities to participate in diverse activities.

Students who compete in high school activity programs make higher grades and have better attendance.

- According to the National Governors Association Center for Best Practices, students who participate in the arts nine hours or more each week for at least a year are four times more likely to: be recognized for academic achievement, win a school

attendance award, participate in a science and math fairand win an award for writing. They are also three times more likely to be elected to class office.

- A Minnesota State High School League survey of 300 Minnesota high schools showed that the average GPA of a student-athlete was 2.84, compared with 2.68 for the average student, and that student-athletes missed an average of only 7.4 days of school each year, compared with 8.8 for the average student. (Trevor Born. High Standard for GPA, in *Minneapolis Star Tribune*, May 14, 2007.)

- A study published in the August 2007 issue of *Medicine & Science in Sports & Exercise found* that students who took part in more vigorous sports like soccer or football or skateboarding, did approximately 10% better in math, science, English and social studies classes.

- According the College Entrance Examination Board, music students scored about 11 percent higher than non-music students on the 2001 SAT. Students with coursework/experience in music performance and music appreciation scored higher on the SAT than students with no arts participation. Students in music performance scored 57 points high in the verbal area and 41 points higher in math, and students in music appreciation scored 63 points higher on verbal and 44 points higher on math.

Participation in activity programs yields positive results after high school as well.

- Participation in extra-curricular activities provides all students – including students from disadvantaged backgrounds, minorities and those with otherwise less than distinguished academic achievements in high school – a measurable and meaningful gain in their college admissions test scores according to researchers Howard T. Everson and Roger E. Millsap, writing for the College Entrance Examination Board in 2005.

- In a 2006 research project published by the Center for Information & Research on Civic Learning & Engagement (CIRCLE), it was found that 18-25 years old who participate in sports activities while in high school were more likely than non-participants to be engaged in volunteering, regular volunteering, registering to vote, voting in the 2000 election, feeling comfortable speaking in a public setting, and watching news (especially sport news) more closely than non-participants.

- An extensive study commissioned by the Alberta Schools' Athletic Association found, in that Canadian province in 2006, an average of 78.3% of Alberta's top corporate CEOs and Members of the Legislative Assembly had participated in interschool sports. Nearly 80% indicated that being involved in school sports significantly, extensively or moderately complemented their career development and/or academic

pursuits. This same study pointed out that normal participation rate of students in high school sports is around 30 to 35%.

- The corporate and political leaders surveyed in Alberta (see above) cited the following benefits associated with their involvement in high school athletics: teamwork, discipline, goal setting, leadership, independence, self confidence, stress relief, character development and personal growth, fair play, and acceptance of others.

From a cost standpoint, activity programs are an exceptional bargain when matched against the overall school district's education budget.

Generally speaking, the NFHS has researched various school districts' budget information across the country that activity programs make up only one to three percent of the overall education budget in a school. In the Midwest, South, and West that figure is even less. In the 2007 school year, the city of Chicago's Public School Board of Education's overall budget was $4.6 billion dollars, and activity programs received only $36.2 million, a minuscule one-seventh of one percent (.00789). In the Charlotte-Mecklenburg area, their Board of Education proposed in their overall 2008 $1.2 billion dollars. Their activity programs received only $4.7 million dollars, one-third of one percent (.0038). Finally, in the northwestern part of the country, in the Seattle Public School system, their Board of Education has a 2008 overall budget of $339.7 million dollars, while setting aside $3.2 million dollars for activity programs for a scant one-ninth of one percent (.00942).

Activity programs fulfill students' basic needs, help in students' attitudes toward self and school and minimize dropout and discipline problems.

- Researcher Richard Learner, writing in *Promoting Positive Youth Development through Community After-School Programs,* found that informal educational and developmentally supportive experiences offered to young people in the context of after-school or community-based programs are a potent source of resources increasing the probability of positive development among youth.

- In 2003, the *Journal of Adolescent Research* reported that extracurricular activity participation is linked to lower rates of dropping out of school, greater civic involvement and higher levels of academic achievement. Moreover, research tracking participation from eighth through twelfth grades and examining outcomes in the postsecondary years concluded that consistent participation has positive effects that last over a moderate length of time.

- Extracurricular activities stand out from other aspects of adolescents' lives at school because, according to the Winter 2005 issue of the *Journal of Leisure Research,* they

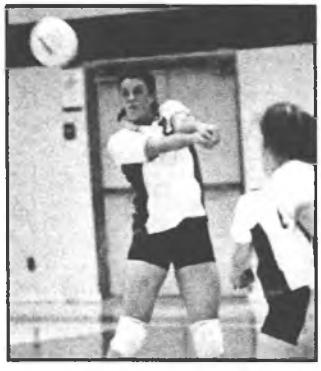
provide opportunities to develop initiative and allow youth to learn emotional competencies and develop new social skills.

- A study conducted by Boston University, and published in *Adolescence*, Winter 2001, reported on a survey of 1,115 Massachusetts high school students. Survey results indicated that athletes were significantly less likely to use cocaine and psychedelics, and less likely to smoke cigarettes.

- Researchers writing in 2004 in the *American Journal of Health Behavior* conducted an examination of cross-sectional data from a nationally representative sample of high school students enrolled in public high schools in the U.S. They showed that students participating in organized sports were 25 percent less likely to be current cigarette smokers

- Stephanie Gerstenblith and her fellow researchers, writing in the 2005 book, *Organized Activities as Developmental Contexts for Children and Adolescents* state, "Just as schools with efficient procedures and structure have been found to have positive outcomes, our findings indicate that participants in after school programs with these qualities experience reductions in rebellious behavior and increases in intentions not to use drugs."

Co-curricular activities teach lessons that lead to better citizens.



- Nancy Darling, et al., writing in the 2005 *Journal of Leisure Research* notes that extracurricular activities allow youth to form new connections with peers and acquire social capital. They are one of the few contexts, outside of the classroom, where adolescents regularly come in contact with adults to whom they are not related.

- Students who spend no time in extracurricular activities are 49% more likely to use drugs and 37% more likely to become teen parents than those who spend one to four hours per week in extracurricular activities (United States Department of Education. *No Child Left Behind: The facts about 21st Century Learning.* Washington, DC: 2002.)

- On June 23, 2000, then President Bill Clinton issued an Executive Memorandum directing the Secretary of Health and Human Services and the Secretary of Education to work together to identify and report within 90 days on "strategies to promote better health for our nation's youth through physical activity and fitness." The resulting report entitled "Promoting Better Health for Young People Through Physical Activity and Sports was released in November 2000 and stated that "enhancing

efforts to promote participation in physical activity and sports among young people is a critical national priority."

- In a recent report entitled "Sports Participation and Health-Related Behaviors Among US Youth" published in the *Archives of Pediatrics & Adolescent Medicine* from September 2000, it was reported that "nationwide, 62.4% of high school students reported participating on 1 or more school and/or nonschool sports teams in the previous year. The major conclusion drawn from the analyses performed in this study is that, in the most populous demographic subgroups of US high school students, sports participation is associated with multiple positive health behaviors....sports programs may promote positive health behaviors and deter negative health behaviors by placing a premium on personal health and fitness as prerequisites to optimal sports performance."

- In a study done by researchers at Clark University in Worchester, Massachusetts, in 2001, "middle-school kids in inner-city neighborhoods who play organized team sports have a higher sense of self-worth and better social skills than their less athletic peers." The Clark researchers noted that "kids living in poor urban neighborhoods have, on average, 40 hours of unstructured, unmonitored time each week. Organized team sports could be a positive alternative to drug use and other delinquent activities." -- "Batters More Likely 'Up'", Amanda Gardner, *HealthScoutNews.*

- Another study (2001) done by Gary Overton, a doctoral candidate in the School of Education at East Carolina University, in collaboration with the North Carolina High School Athletic Association[1], of the academic performance of high school student-athletes in North Carolina revealed significant differences between athletes and non-athletes. Some of the major findings in the study include:

  Grade-Point Average: The mean GPA for athletes in the study was a 2.98, while the mean GPA for non-athletes was only 2.17.

  Attendance: The average number of absences was significantly lower for athletes than non-athletes. The mean average number of days missed by athletes was 6.3 days per 180-day school year, as compared to 11.9 days for non-athletes.

  Discipline referrals: The percentage of discipline referrals by the reporting schools was lower for the athlete group than the non-athlete group; referrals for athletes ran at a 33.3 percentage while the referral percentage for non-athletes was 41.8 percent.

  Dropout rate: There was a dramatic difference in the dropout rate; the mean dropout percentage for athletes was miniscule 0.6 percent, while the corresponding percentage for non-athletes was 10.32 percent.

  Graduation rate: The percentage of graduates was significantly higher for the athlete group than the non-athlete group; the mean graduation percentage for athletes was 99.4 percent as compared to 93.51 percent for non-athletes.

Supplemental Supporting Evidence for the Case for High School Activities

Participation in high school activities is a valuable part of the overall high school experience.

- Of the 60 students listed in the May 14, 1998, USA Today's All-USA High School Academic First, Second and Third Teams and the 51 who earned honorable mention, 75 percent were involved in sports, speech, music or debate.

- The 29th annual Phi Delta Kappa/Gallup Poll of the Public's Attitudes Toward the Public Schools of September 1997 reflects an increase in perceptions about the value of cocurricular activities. In 1978, 45 percent of the public judged extracurricular activities to be very important. That figure fell to 31 percent in 1984. In 1985, the figure was 39 percent and jumped to 63 percent in the 1997 poll. The 1997 poll also asked about the emphasis placed on such sports as football and basketball. Fifty-three percent of the respondents believed the current emphasis was about right.
- The Role of Sports in Youth Development, Carnegie Corporation, New York, in a report of a meeting in March 1996, found that evidence showed that the involvement of young people in sports produces multiple benefits for them. At their best, sports programs promote responsible social behaviors and greater academic success, confidence in one's physical abilities, an appreciation of personal health and fitness, and strong social bonds with individuals and institutions. Teachers attribute these results to the discipline and work ethic that sports require.

- In a survey of 4,800 high school students in March 1995, the Minnesota State High School League found that 91 percent of them said students who participate in school activities tend to be school leaders and role models; 92 percent said that participation in school activities provides an opportunity not found in a regular classroom setting to develop self-discipline.

- Adolescent Time Use, Risky Behavior, and Outcomes: An Analysis of National Data, issued in September 1995, by the Department of Health and Human Services found that students who spend no time in extracurricular activities are 57 percent more likely to have dropped out of school by the time they would have been seniors; 49 percent more likely to have used drugs; 37 percent more likely to have become teen parents; 35 percent more likely to have smoked cigarettes; and 27 percent more likely to have been arrested than those who spend one to four hours per week in extracurricular activities.

- A study by Search Institute in 1995 indicates that cocurricular activities play a central role in students' healthy development. Yet too many schools are finding it necessary to cut these programs for budgetary reasons. With asset building as a focus, these programs are not peripheral to the school's mission, but important components of a comprehensive strategy.

- School-age children and teens who are unsupervised during the hours after school are far more likely to use alcohol, drugs and tobacco, engage in criminal and other high-risk behaviors, receive poor grades, and drop out of school than those children who have the opportunity to benefit from constructive activities supervised by responsible adults. In a 1994 Harris poll, more than one-half of teachers singled out "children who are left on their own after school" as the primary explanation for students' difficulties in class. This information comes from the National Education Commission on Time and Learning.

- Research conducted in 1991 by Skip Dane of Hardiness Research, Casper, Wyoming, revealed the following about participation in high school sports: 1) By a 2-to-1 ratio, boys who participate in sports do better in school, do not drop out and have a better chance to get through college. 2) The ratio for girls who participate in sports and do well in school is three to one. 3) About 92 percent of sports participants do not use drugs. 4) School athletes are more self-assured. 5) Sports participants take average and above-average classes. 6) Sports participants receive above-average grades and do above average on skills tests. 7) Those involved in sports have knowledge of and use financial aid and have a chance to finish college. 8) Student-athletes appear to have more parental involvement than other students. 9) Students involved in athletics appear to change focus from cars and money to life accomplishments during the process.

- A 1989 nationwide study by the Women's Sport Foundation indicated that athletes do better in the classroom, are more involved in school activity programs and stay involved in the community after graduation. The study also revealed that high school athletic participation has a positive educational and social impact on many minority and female students. The study, based on an analysis of data collected by the U.S. Department of Education's High School and Beyond Study, indicated that: 1) Girls receive as many benefits from sports as boys. 2) The "dumb jock" stereotype is a myth. 3) Sports involvement was significantly related to a lower dropout rate in some school settings. 4) Minority athletes are more socially involved than non-athletes.

- In 1985, the NFHS sponsored a national survey of high school principals and nearly 7,000 high school students in all 50 states. The survey, funded by a grant from the Lilly Endowment in Indianapolis, was conducted by Indiana University in cooperation with the National Association of Secondary School Principals. Following are the results of that survey.

95 percent believed that participation in activities teaches valuable lessons to students that cannot be learned in a regular class routine.

99 percent agreed that participation in activities promotes citizenship

95 percent agreed that activity programs contribute to the development of "school spirit" among the student body.

76 percent said they believe the demand made on students' time by activities is not excessive.

72 percent said there is strong support for school activity programs from parents and the community at large.

Students who compete in high school activity programs make higher grades and have better attendance.

- A study of nearly 22,000 students conducted by a University of Colorado professor for the Colorado High School Activities Association which was released in the fall of 1999 indicates students who participate in some form of interscholastic activities have "significantly higher" grade-point averages than students who do not. Data obtained from the spring 1997 study by Dr. Kevin J. McCarthy revealed student participants in Jefferson County high schools had an overall grade-point average of 3.093 on a 4.0 scale, while the GPA for non-participants was 2.444. Jefferson County School District, the state's largest school district, has matched the academic success of its students with success on the playing field. The 16 district schools have won a combined 39 state championships in the 1990s in sports, while its music programs consistently bring home "superior" ratings.

- A study in the September 1998 issue of **NASSP Bulletin** compared academic performance, behavior and commitment of basketball and volleyball athletes and non-athletes in a rural Canadian high school. The article compares mid-term and final grades, visits to an administrator for disciplinary referrals and demerit points for improper behavior and estimates the mean weekly time commitment for athletes in each sport. Findings showed support that athletes match or exceed non-athletes in academic and behavior performance.

- In the March 1997 issue of **School Counselor**, 123 students involved in interscholastic soccer are analyzed. Results indicate that activity participation does not harm and may enhance academic performance. Male athletes showed in-season improvements in academic performance.

- In a comprehensive, statewide study of the academic performance of high school student-athletes in North Carolina over a three-year period, the North Carolina High School Athletic Association found significant differences between athletes and non-athletes. Five criteria were used, including grade-point average, attendance rate, discipline referrals, dropout rate and graduation rate, for the 1994-95 academic year.

	Athletes	Non-athletes
Grade-point average	2.86	1.96
Average number of absences per 180-day school year	6.52 days	12.57 days
Discipline referrals	30.51%	40.29%
Dropout rate	0.7%	8.98%
Graduation rate	99.56%	94.66%

- Findings from the National Center for Education Statistics, *Extracurricular Participation and Student Engagement*, June 1995, revealed that during the first semester of their senior year, participants reported better attendance than their non-participating classmates. Half of them had no unexcused absences from school and half had never skipped a class, compared with one-third and two-fifths of non-participants, respectively. Students who participated were three times as likely to perform in the top quartile on a composite math and reading assessment compared with non-participants. Participants also were more likely than non-participants to aspire to higher education; two-thirds of participants expected to complete at least a bachelor's degree while about half of non-participants expected to do so.

- A 1992 study by the Colorado High School Activities Association and the Colorado Department of Education revealed that Colorado high school students who participate in some form of interscholastic activity have "significantly higher" grade-point averages and better attendance. Of the students surveyed, the average participant's GPA was 2.96 (on a 4.0 scale), compared to 2.35 for the non-participant. In one school, participants had an average reading test score of 76.30, compared to 58.91 for non-participants. In another school, participants scored 16.17 on the math standardized test, compared to 13.31 for non-participants. A participant missed school an average of 3.59 days a year, while a non-participant missed 5.92 days. The survey showed that the larger the school, the more pronounced the differences in participant and non-participant test scores and attendance results.

- High school students who compete in activity programs in New Mexico had a 2.80 grade-point average, compared to 2.00 for non-participants, according to a 1992 survey by the New Mexico Activities Association. The survey also indicated that more than 60 percent of the state's principals found that GPAs of at-risk students improved by being active in interscholastic activities.

- 1990-91 study in the Randolph (North Carolina) County school system showed a strong correlation between participation in athletics and positives such as improved

grades and increased attendance rates. Athletes in grades 9 through 12 in the school system's four high schools recorded an 86 average, compared to 79 for the general population. Athletes averaged four absences, while the general population averaged seven. Eleven percent of the athletes had discipline referrals, compared to 25 percent of the general population. None of the athletes dropped out, while 3.7 percent of the general population were dropouts.

- In a 1988 survey, John Chevrette and Kenneth Patranella concluded from an investigation in San Antonio, Texas, that educational outcomes related to scholastic performance are enhanced for those secondary students who participate in activity programs. A study of a high school population of 3,536 students found that secondary pupils who participated in more than one activity during a semester tended to experience higher academic performance levels than other participants and non-participants.

- Students participating in a number of activities not only achieve better academically but also express greater satisfaction with the total high school experience than students who do not participate, according to a 1985 survey conducted for the NFHS by Indiana University. The grade-point average for "high activity" students was 3.05 on a 4.0 scale, compared to a GPA of 2.54 for "low activity" students. Researchers defined high activity as involvement in four or more activities, while low activity students were involved in one activity or none.

Participation in activity programs yields positive results after high school as well.

- The May 5, 1999, issue of **Education Week** reported on two studies presented at the April annual meeting of the American Educational Research Association. The studies both drew on data from a national sample of 25,000 high school students. The Center for Research on Sport in Society at the University of Miami in Florida looked at how often behavior problems cropped up among 12th graders who had taken part in athletics at some point in their high school careers. Even when the researchers controlled the numbers to account for students who already had behavior problems in 8th grade or those who were predisposed to have more prosocial attitudes toward school, sports participation had a positive effect.

- A separate study done by the Center for the Social Organization of Schools at Johns Hopkins University found that sports had a "small but consistent" impact on a variety of other positive school outcomes, too. The more involved that 10th graders were in athletics, for example, the more likely they were to feel confident of their academic abilities or to be engaged in their schools.

- The Spring 1999 issue of **Assets**, Search Institute, looked at a report from the North Carolina High School Athletic Association. The NCHSAA identified assets that any school-based sports program would inherently develop, along with an additional 26 that purposeful planning could help foster, including:
  School boundaries – Schools provide clear rules and consequences. Most athletic programs have codes of conduct or rules for behavior in addition to school policies.
  Youth programs – Young person spends three or more hours per week in sports, clubs or organizations at school and/or in the community. This is a given with most secondary school interscholastic athletic programs. In fact, far more than three hours per week is usually required.
  Achievement motivation – Young person is motivated to do well in school. Most athletic programs have minimum standards of achievement that must be met in order to participate in athletics.
  Planning and decision making – Young person knows how to plan ahead and make choices. Because of practice and game schedules, in addition to other responsibilities, secondary school athletes have learned to manage their time.

- The February 1996 **Career World** examines the factors that really matter in gaining acceptance to a college or university. Admissions officers consider grades, test scores and involvement in extracurricular activities in deciding whether to accept or reject an applicant.

- Admission officers at Harvard, Yale and 70 percent of the nation's other major universities have stated that high school credit and achievement in the arts are significant considerations for admission to their institutions. This finding was from *Can Colleges Help School Fine Arts Programs?* in a 1992 article in Connecticut Music Educators Association News.

- Results of a 1987 survey of individuals at the executive vice-president level or above in 75 Fortune 500 companies indicated that 95 percent of those corporate executives participated in sports during high school. In addition, 54 percent were involved in student government, 43 percent in the National Honor Society, 37 percent in music, 35 percent in scouts and 18 percent in the school's publication.

- The American College Testing Service compared the value of four factors in predicting success after high school. "Success" was defined as self-satisfaction and participation in a variety of community activities two years after college. The one yardstick that could be used to predict later success in life was achievement in school activities. Not useful as predictors were high grades in high school, high grades in college or high ACT scores.

- The College Entrance Examination Board's Scholastic Aptitude Test (SAT) was examined in much the same way. It was found that having a high SAT score did not necessarily indicate success in a chosen career. The best predictor of later success, the study showed, was a person's independent, self-sustained ventures. Teens who were active in school activities, had hobbies or jobs, were found to be most likely to succeed at their chosen profession and make creative contributions to their community.

From a cost standpoint, activity programs are an exceptional bargain when matched against the overall school district's education budget.

Generally speaking, the NFHS has determined through information received across the country that activity programs make up only one to three percent of the overall education budget in a school. In Chicago, that figure is even less. In 1992, the overall budget for the Chicago Board of Education was $2.6 billion, and activity programs received only $2.9 million, a minuscule one-tenth of one percent (.001).

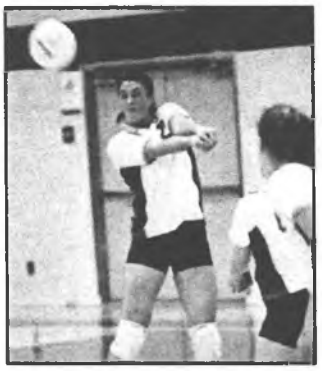
Activity programs fulfill students' basic needs, help in students' attitudes toward self and school and minimize dropout and discipline problems.

- A report on The Condition of Education, United States Department of Education, National Center for Education Statistics in 1995 found that participation in extracurricular activities may affect academic performance, attachment to school and social development. The report further stated that almost every high school in the United States offers some type of extracurricular activity, such as music, academic clubs and sports. These activities provide opportunities for students to learn the values of teamwork, a channel for reinforcing skills and the opportunity to apply academic skills in other arenas as a part of a well-rounded education.

- American Youth and Sports Participation, a survey of 10,000 students by the Sporting Goods Manufacturers Association (1990) revealed that the No. 1 reason that girls and boys participate in high school sports is to have fun. Conversely, lack of fun was the leading reason for dropping out of participation. Winning was not seen as a major benefit of sports by young people who participate – it was ranked No. 8 by boys and No. 12 by girls. Skill development was considered a crucial aspect of fun – it was considered more important than winning even among the best athletes. Another finding: The most rewarding challenges of sports are those that lead to self-knowledge. Finally, intrinsic rewards (self-knowledge that grows out of self-

competition) are more important in creating lifelong athletes than extrinsic rewards (victory or attention from others).

Cocurricular activities teach lessons that lead to better citizens.



❖ An opinion survey conducted in July 1998 by Peter D. Hart Research Associates for Shell Oil Company found that respondents felt the top two goals for schools should be teaching values such as respect and honesty and teaching students how to reason and think well.

❖ A Wyoming High School Activities Association Statewide Student Activities Survey compiled in the summer of 1998 points out addiction dangers of tobacco use. Yearly, monthly and weekly reported use of tobacco by high school students is low when compared to the high percentage of daily users. Approximately 25 percent of those involved in athletics or activities report daily tobacco use, compared to 40 percent for non-participants. For students involved in both athletics and activities, that percentage drops to 13 percent. A focus of future WHSAA surveys will explore the reasons for this outcome.

In light of these findings, the WHSAA encourages coaches and activity sponsors to continue (or begin) an emphasis on teaching the addictive dangers of tobacco and make solutions known and available to all students.

❖ The Alberta Schools' Athletic Association (ASAA), in conjunction with the Metro Edmonton High School Athletic Association and the Alberta Centre for Well-Being, completed a survey of 883 students. The survey, completed in November 1997, was undertaken to assess the potential impact that high school athletics has on the lives and attitudes of students in Alberta.

Findings showed student-athletes are less likely to smoke (30 percent versus 44 percent), and if they do smoke, they are less likely to smoke heavily. Overall, 35 percent of students reported they currently smoke cigarettes. The survey findings indicated student-athletes (9 percent) are less likely to report drinking more than once a week in comparison to non-athletic students (20 percent).

"The results of this survey suggest that students who participate in school-based sport programs are good school citizens and may be even better school citizens than their non-sport peers," said John Paton, executive director, ASAA. "School athletes demonstrate positive lifestyle behaviors, such as less smoking and less drug use when compared to non-sport students."

Paton also indicated that if administrators, teachers or parents are concerned that school sport programs compete for students' attention and participation with other cocurricular activities, the study disputes these concerns. Student-athletes tend to participate at a greater rate in other school activities, and they have a more positive perception of their school.

- A study conducted by Public Agenda released in June 1997 (Kids These Days: What Americans Really Think About the Next Generation) found that more than six in 10 adults, or 61 percent, said youngsters' failure to learn such values as honesty, respect and responsibility is a very serious problem. Only 37 percent believe today's children, once they're grown, will make the United States a better place. Those polled also said greater availability and use of school programs and volunteer groups would be an effective way to help children.

The following two examples don't have dates or other reference material. Assume they are anecdotal stories. Seems like this is best left here, but they could be woven back into main material.

- Consider the captain at a track championship who had won the long jump and was the leader in the triple jump when he reported to the start of the 100-meter dash. Upon his arrival, he discovered another runner from a rival school had forgotten his spikes. This young man was the only person in the league with a chance to defeat him. Without hesitating, he gave the boy his backup pair of spikes. The young man with the borrowed spikes won in the final while setting a league record in the event. The same scenario played itself out in the finals of the 200-meter dash. The boy who lent the spikes indicated, "It never occurred to me to do anything else."

- Early in a soccer championship game, a forward and defender both jumped to head the ball. Their heads collided, and one player was injured but did not drop to the ground – the signal to the referee to stop play. The coach on the opposing team recognized the distress of the player and despite his team having the opportunity to clear the ball and take the advantage in play, he directed his team to kick the ball out of bounds. He gave up possession of the ball near his goal to stop play and allow the player to be assisted.

- The 1996 Surgeon General's report, Physical Activity and Health, said that "regular participation in physical activity during childhood and adolescence:
  Helps build and maintain healthy bones, muscles and joints
  Helps control weight, build lean muscle and reduce fat
  Prevents or delays the development of high blood pressure
  Reduces feelings of depression and anxiety.
  The report goes on to say that "participation in physical activity increases adolescents' self-esteem.
  (U.S. Department of Health and Human Services. Physical activity and health: a report of the Surgeon General. Atlanta, GA: U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, National Center for Chronic Disease Prevention and Health Promotion, 1996.)

- "Other research has shown that students who participate in interscholastic sports are less likely to be regular and heavy smokers or use drugs[1], and are more likely to stay in school and have good conduct and high academic achievement[2]. Sports and Physical activity programs can introduce young people to skills such as teamwork, self-discipline, sportsmanship, leadership and socialization."

April 4, 2012

Representative Alan Dick
State Capital, #104
Juneau, AK 99801

RE: House Bill Number 369

Dear Representative Dick,

It was nice meeting you on Monday after the House Education Committee meeting. Thank you for understanding why I cannot be there today to provide testimony on House Bill 369. High stakes exams (HSGQE) are critical and my presence and participation is necessary to help ensure a successful test day.

On behalf of the Juneau School District and Thunder Mountain High School where I work in the capacity of Activities Director as part of my duties as Assistant Principal, my testimony regarding House Bill 369 is one of opposition for several reasons. While both sections address student participation in sports, they are vastly different and need to be separated. One addresses concussion in sports and one addresses eligibility requirements. In regards to Section 2 (new section added) I have the following concerns:

Time – It will add time to our already busy schedule to check initial eligibility as well as the time to check grades every two weeks to ensure students maintain eligibility. The time to check students in our own home school program is greater. Having to establish a relationship with other outside of our district programs will be time intensive. We are already strapped for time. Will the Governor take this into consideration in next years funding challenges?

School Identity – Students who do not attend our school are not connected to our academic programs. We value the relationships our teachers make with our student athletes. Our motto is, "student first, athlete second". This would be non-existent.

Bumping out Thunder Mountain students – Home school students would bump out a student who physically attends Thunder Mountain High School. Students who attend

Thunder Mountain help to create the culture and climate of the day-to-day school life. Students who are home schooled and have no connection to our school would take away from the building of our culture and climate – our student athletes are an important part of creating and maintaining a positive learning environment. Do you have a recommendation on how we might respond to a tax-paying parent whose student is bumped by a student who we receive no funding (BSA) for?

Graduation Requirements – The Juneau School District has increased our graduation requirements. How can we be sure that a home school student in a program outside of our district is held to the same academic standards? It would not be fair for eligibility reasons that our Thunder Mountain students have to meet higher eligibility requirements by taking more years of core subjects than non-district home school students. Are you familiar with NWEA (Northwest Education Accreditation) transitioning into AdvancED and whether or not the various curriculum these home school students study are recognized as accredited?

In closing, if this is something the legislature strongly believes in then perhaps creating a task force to allow all constituents voices to be heard is necessary? In conversation with my colleagues there is a litany of unintended consequences at a local and state level (not to mention national university entrance requirements), too numerous to list, that would require ample resources over time to even initiate a meaningful/common dialogue in Alaska.

If I can be of any assistance or you need more clarity on my opposition to House Bill 369, please contact me. Again, it was nice meeting you.

Sincerely,

Rhonda Hickok
Assistant Principal

REPRESENTATIVE WES KELLER
DISTRICT 14
SPONSOR STATEMENT

HJR 16

"Proposing amendments to the Constitution of the State of Alaska relating to state aid for education."

For 50 years the State of Alaska has grow from a vast frontier into an important player in the nation and the world. While this is a fair assessment of ourselves, it does not address a growing need for quality higher education in the state. We have and continue to do everything possible for our university system, but that has, to a point, been at the expense of other private institutions of higher learning.

HJR 16 opens some of these doors for both public and private education by allowing the release of funds to more than just public schools. This Constitutional Amendment allows those students seeking to excel in secondary and post secondary education to attend a school that meets their needs.

This resolution is on the table with HB 145, but the language in this resolution goes far beyond this bill. It takes into account state sponsored scholarships for all students regardless of financial position. It says we support higher education for our youth at the best possible college, university or vocational program. Alaska has a wealth of educational opportunities that need our support. We do not need another Sheldon Jackson disaster.

HJR 16 is language that needs to be placed in front of the Alaska voters so they may decide on the future of higher education in the state.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. HJR 16

Passage of this resolution would require the constitutional amendment to appear on the 2012 general election ballot. The cost of providing information about the constitutional amendment in the Official Election Pamphlet, as required by AS 15.58, is $1.5. Should the addition of this question require printing an 8-1/2 by 18 inch ballot, the cost will increase to $22.0.

Bill/Subject

I, Joshua Bartels, believe that a parent of a child should be allowed to spend the money they would on public school, on an education of their choosing. It is the people who are paying taxes for the education, so it should be up to the people to vote on this matter.

I believe that if a person pays taxes, they should be able to make the choice regarding what school that their children go to. I feel that by allowing that money allotted to one child to be available to the parents, that it opens up options for the students that maybe a better fit and that would not be otherwise available. I feel that if a student is not working well within the public school district the parents should be able to put them in a program that would be more appropriate for them, without having to worry about funds that would otherwise be used to help the students. I think it should be opened to the public to vote since it affects them the most.

To House Finance Committee,

Please kill bill HJR16. This bill will in no way improve education ~~[illegible]~~ in the State of Alaska. Our public schools currently take all students. Parents have many choices beyond their neighborhood school. This bill WILL allow private organizations to collect public monies, while EXCLUDING whomever they feel are unworthy to attend their institutions: children with learning disabilities, limited English, behavioral issues - all of whom are currently welcomed in our public schools. expensive to educate and

As a former straight A high school student who dropped out of high school, I challenge the notion that vouchers will solve the drop out rate. During drop out exit interviews, most students drop out due to family issues or a need to get a job. This was the case in my own life. There wasn't anything wrong with my teachers ~~or~~ my school. They were awesome teachers who challenged me and it is because of their caring and academic stimulation that I went back to school later in my life to become a teacher. Vouchers will just undermine our current education system allowing private schools to pick from the cream of the crop. You will actually help to decrease our public schools graduation rates.

HJR 16 is to change the constitution to allow public moneys to go to private and religious schools. The wording makes it so that the money goes to the students for education but this is just another way to fund religion. Students and families have a right to choose the education of their children but not fund religious or private schools with public money.

- The public schools do a very credible job when one looks at the enormity of the situation, the inconsistencies and happenstances of human differences, the regulations, meeting the needs of all students not just the well behaved, middle class, healthy students– but all students. The recent study that was done by Mat Su Schools following students after graduation attests to the quality of the schools.

- The use of public money for private and religious schools goes against my religious beliefs in the separation of church and state. Freedom from religion is as much a part as freedom of religion in my belief system. The public dollars of the state for education need to go into public education. When they go to private organizations there is no control as to what they will be spent for even if one says and puts into place regulations that say there can be no discrimination or other conditions, there will be. The funds will be used to supplant the usual funds for education that the organizations have. The issues of providing money to religious organizations for education means that they will be promoting their faith with public dollars that normally would be spent on education but is back-filled with public money.

- It will not make education better but worsen the issues that already exist.

- Most of our public education dollars go for the people who deliver education because we believe that highly qualified, dedicated people are

needed to provide the instruction. Taking away dollars essentially increases class sizes, adds stress to the delivery of education, and promotes inequality. The students who are struggling will be left in the public schools as the private schools will figure out ways to dismiss them. The students with special accommodations for any reason will be left out maybe not at first but eventually the drain on resources will be felt enough to marginalize those who need more resources and the public schools will be hurt by the inequality.

- In my opinion this change in the constitution opens the door to publicly funding religion in other ways as well. It also takes away the appropriate use of public education dollars. It will create haves and have nots; it will create separation; it will open the door to funding religion on a grand scale. We have forgotten or maybe we never knew of the struggles of the people who came before us concerning separation of church and state. My particular church history is steeped in it. People left their homelands and settled in the new world to keep religion out of state affairs.

(House Joint Resolution 16)

I need to share my concerns in regard to HJR16 and the constitutional amendment that it proposes. This proposal is not a good idea and I urge you to NOT move it forward.

My concerns regarding this measure revolve around the idea of opportunities to serve students, to build our future in the state in the way that families and communities want their children to be served.

Public schools have been built around ideas of equal opportunities for all who come to our doors. Public schools have been held to high standards for all students—those who come from economically disadvantaged homes, those who come with disabilities of all kinds, those who come speaking languages other than English, those who have parents who support their academic work, those who have parents who spend all of their effort struggling to meet the most basic needs so their child can have a chance to succeed in the ~~public~~ any school program.

Public schools are also held to ideas of equity—because we serve all, we cannot serve specific populations to the exclusion of others. We do not promote our personal beliefs in the classroom and in fact can lose licensure if we do teach our personal point of view or prefer one ideology or religion over another. Our job is to respect all of those we serve.

Public schools are also held to high requirements regarding federal mandates and requirements, graduation and attendance rates, curricular conformity requirements, provision of special education and English language acquisition programs.

Our private schools currently own the privilege of serving specifically and differently than the public schools do. They have the option of providing specific and targeted sectarian curriculum that focuses on shared beliefs and world views. They have the option of limiting their clientele to those who are in agreement with their beliefs and premises. They have the option to turn students away for whatever criteria they establish.

If there were a constitutional amendment that would allow for the funding of private and religiously based schools, this would be a granting of government money to sectarian organizations. It would seem that this could not be done without placing the same requirements on those schools as are currently placed on the public schools—requirements such as minimum enrollment; common requirements for building codes, health and safety features; common measurements of achievement regarding student progress such as standardized testing, participation rates, granting of accommodations for students with individualized plans; examination of graduation rates, attendance rates, drop out rates, etc.

Such an amendment would indeed siphon funds from our already struggling public schools. If those funds come from the public coffer, then private schools must also be required to do all that the public schools do-- with the same funding—and should

not be exclusive in any way. They should indeed take all who come to their doors as well as the public institutions do. If dollars are allocated, there must be consistent rules for all who receive those dollars.

Please do not impose the limits that are implied by this proposed amendment—limits regarding what the public schools are able to provide and limits regarding what the private schools can and should teach.

HJR 16 is not a good idea and I urge you to not move it forward in this process.

Marilyn Davidson

ALASKA FEDERATION OF NATIVES, INC.

2011 ANNUAL CONVENTION

RESOLUTION 11-05

TITLE: SUPPORTING EDUCATIONAL REFORM

WHEREAS: The Indigenous peoples of Alaska are distinct people with distinct cultures and traditional knowledge; and,

WHEREAS: There exists a need for Tribal schools to meet the cultural and academic needs of our children, who are impacted by a greater "drop-out" rate than other students in Alaska; and,

WHEREAS: Today's K-12 educational system as offered through our state and local government is not adequate for nor does it respond to the cultural needs of our Native students; and,

WHEREAS: Our state and local government have established a monopoly in that to access free K-12 education one must go to a government school; and,

WHEREAS: Creative, educational opportunities can meet the educational, cultural, and social needs of our Native children; and,

WHEREAS: Pending legislation (House Bill 145, Senate Bill 106, and HJR 16, SJR 9) will permit parental choice and innovations; and,

WHEREAS: HJR 16 and SJR 9, if enacted, would place an amendment to the Constitution on the ballot in the next general election that if passed would amend Art. VII, Sec. 1 of the State Constitution to delete language that prohibits the expenditure of public funds for the direct benefit of any religious or other private educational institution, and add language to Art. IX, section 6 which currently says no public money can be used, except for a public purpose, to say that nothing in that section shall prevent payment from public funds for the direct educational benefit of students as provided by law; and,

WHEREAS: HB 145 and SB 106, would establish a Parental Choice Scholarship Program, whereby public funding could be used to pay for the cost of K-12 education at a public or private school selected by the parent or legal guardian. The school of choice would receive the amount of funding the school district in which the student resides would have received. The legislation sets scholarship amount and eligibility, accountability and enrollment standards for a participating school and the duties of school districts. Public, private, correspondence schools will all compete for the funding that the legislature sends to school districts each year; and,

WHEREAS: The legislation allows Native parents flexibility to start new schools, or select other schools or methods designed to best respond to their children's need and government money follows; and,

NOW THEREFORE BE IT RESOLVED by the Delegates to the 2011 Annual Convention of the Alaska Federation Natives, Inc, endorses the proposed K-12 parental choice legislation.

AS 14.17.410. Public School Funding.

(a) A district is eligible for public school funding in an amount equal to the sum calculated under (b) and (c) of this section.

(b) *Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:*

(1) state aid equals basic need minus a required local contribution and *90 percent of eligible federal impact aid* for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470 ; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450 ;

(B) the number obtained under (A) of this paragraph is multiplied by the district cost factor described in AS 14.17.460 ;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420 (a)(1);

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110 , not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

(c) In addition to the local contribution required under (b)(2) of this section, a city or borough school district in a fiscal year may make a local contribution of not more than the greater of

(1) the equivalent of a two mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110 ; or

(2) 23 percent of the district's basic need for the fiscal year under (b)(1) of this section.

(d) State aid may not be provided to a city or borough school district if the local contributions required under (b)(2) of this section have not been made.

(e) If a city or borough school district is established after July 1, 1998, for the first three fiscal years in which the city or borough school district operates schools, local contributions may be less than the amount that would otherwise be required under (b)(2) of this section, except that

(1) in the second fiscal year of operations, local contributions must be at least the greater of

(A) the local contributions, excluding federal impact aid, for the previous fiscal year; or

(B) the sum of 10 percent of the district's eligible federal impact aid for that year and the equivalent of a two mill tax levy on the full and true value of the taxable real and personal property in the city or borough school district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110 ; and

(2) in the third year of operation, local contributions must be at least the greater of

(A) the local contributions, excluding federal impact aid, for the previous fiscal year; or

(B) the sum of 10 percent of the district's eligible federal impact aid for that year and the equivalent of a three mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110 .

(f) A school district is eligible for additional state aid in the amount by which the local contributions that would otherwise have been required under (b)(2) of this section exceed the district's actual local contributions under (e) of this section.

Excerpted from the book *Alaska's Constitutional Convention*, written by Vic Fischer, one of the delegates to the 1955-56 convention held at the University of Alaska in Fairbanks. When the book was published in 1975, Fischer was the Director of the Institute of Social, Economic and Government Research at the UA in Anchorage. He later served in the Alaska Legislature and is now retired in Anchorage, I believe.

From pp 140&141:

"In drafting the section on education, the committee included language that covered a standard feature of past and present statehood enabling bills, namely that 'provision shall be made for the establishment and maintenance of a system of public schools which shall be open to all children of said state and free from sectarian control.'

"The only significant point raised in plenary consideration of the committee proposal was a suggested amendment to insert the words 'and indirect' after 'direct' in the draft provision 'No money shall be paid from public funds for the direct benefit of any religious or other private educational institution.' Proponents of the proposed amendment stressed the importance of protecting the integrity of public education, while its opponents argued for the provision of services to the individual student if otherwise in keeping with the constitution. The proponents of the amendment to prohibit 'direct and indirect' aid to parochial and other private schools held that sectarian segregation in education is bad for school children and that inadequate restriction could lead to diversion of funds and weakening of public education. A majority (thirty-four to nineteen) opposed the amendment, agreeing with those who argued that more important than these considerations was the need to help each child attain the fullest level of individual development through programs such as free lunches, bus transportation, and even payment by the state welfare agency of room and board to parentless children, so long as the basic principle of separation of church and state was maintained."

Re: Alaska Constitutional Convention Minutes Regarding Public Money and Private Schools

Representative Gara,

In today's House Finance Committee hearing on HJR 16, you inquired as to whether we had reviewed the Alaska Constitutional Convention minutes regarding the discussion on public money going to private schools.

We have indeed reviewed the minutes and they are attached for your review.

Thank you.

Cc: House Finance Committee Members

ALASKA CONSTITUTIONAL CONVENTION

PART 2

Proceedings: December 13, 1955 -- January 9, 1956

Alaska Legislative Council

Box 2199 — Juneau, Alaska

on the floor, the Committee did not ask to withdraw it, but I think Mrs. Hermann raised a very valid point. If this word is inserted now, we can't move later during the course of the debate to strike it. I would move that the rules be suspended and that the Committee be allowed to substitute its unanimous amendment with the thought in mind that we can then later remove it if during the course of the debate it appears to be the wish of the body to do so.

PRESIDENT EGAN: The Chair stated it could not be removed and the Chair would stand corrected to a certain point on that statement, that is by a suspension of the rules or rescinding of the action of course you could do it.

WHITE: I so move, Mr. President, and ask unanimous consent.

PRESIDENT EGAN: Mr. White, please state the motion.

WHITE: That the rules be suspended and that the Committee be allowed to submit its proposed amendment as though a part of the Committee report.

KILCHER: Point of information. Could it possibly be handled in such a manner as to have the report reconsidered and recommitted and come out again a second time?

PRESIDENT EGAN: The effect of Mr. White's motion under suspension of the rules would accomplish that. Mr. Riley

RILEY: Mr. President. I think this is in line with Mr. White's suggestion that this article of this proposal now before us be considered under a suspension of the rules, simply as a committee substitute for the same article. I think that would put the thing in motion.

PRESIDENT EGAN: Right, and have the word "educational" placed before the word "institution".

RILEY: That would enable us to work either way from that word afterwards.

V. RIVERS: That would cover my objection. I have no objection to that.

PRESIDENT EGAN: If there is no objection then, then it is so ordered, and the word "educational" has been inserted before the word "institution" as if this were a substitute committee report. Now, Section 1 is open for amendment. Mr. Hurley.

HURLEY: Mr. President, I would like to ask a question of the Chairman of the Bill of Rights Committee. Would your Committee consider in using the terminology "direct benefit" whether or not that would be a directive or a license to the legislature to appropriate money for the indirect benefits? If so, what was their conclusion?

AWES: I don't think it is a direct order to the legislature to do anything. I think we prohibited what we wanted to prohibit. I don't think that tells the legislature they are supposed to do anything else.

METCALF: I have an amendment.

COGHILL: I rise to a point of order. I submitted an amendment to this section before the noon recess, and it has never been recognized, and I was recognized by the Chair.

PRESIDENT EGAN: Were you recognized for that purpose before the noon recess? If you were, then the Chief Clerk may read the proposed amendment as offered by Mr. Coghill. The Chair feels sorry about that, Mr. Coghill.

CHIEF CLERK: "Section 1, line 7, after the word 'direct' insert the words 'or indirect'."

COGHILL: I move and ask unanimous consent.

R. RIVERS: I object.

METCALF: I second the motion.

PRESIDENT EGAN: It has been moved and seconded that the words "or indirect" be inserted after the word "direct" in line 7, Section 1.

WHITE: Point of order. I believe there was a letter presented to the Convention the other day that the Convention agreed to defer the reading of until we reached this section. It seems to me proper we hear it before we consider any business.

PRESIDENT EGAN: Is there such a communication? The Chief Clerk might read the communication that was referred to before we act upon this amendment.

CHIEF CLERK: (A letter from Mr. Don M. Dafoe, Commissioner of Education, enclosing a statement on Section 1 of the article on health, education and welfare to the effect that he believed the statement somewhat oversimplified and setting forth seven points which he believed should be included in the constitution, was read.)

PRESIDENT EGAN: Mr. Armstrong.

ARMSTRONG: Mr. President, the Committee has asked me to speak to this section, and seeing it has been amended I hope you will liberally construe that I am talking to the amendment, but the Enabling Act that we have before us says on page 3, "The provision shall be made for the establishment and maintenance of a

system of public schools which shall be open to all children of said state and free from sectarian control." Mr. President, your Committee on Health, Education and Welfare approached this whole subject of education with great care and consideration. Many methods were sought out to provide and protect for the future of our public schools. We had to recognize that the public schools were our responsibility and that it was our duty to provide for all children of the state in matters of education. The Convention will note that in Section 1 that the Committee has kept a broad concept and has tried to keep our schools unshackled by constitutional road blocks. May I draw to your attention further the fact that we have used the words "to establish and maintain by general law". This is a clear directive to the legislature to set the machinery in motion in keeping with the constitution and whatever future needs may arise. Your Committee has also spelled out the fact that all children shall have the opportunity of schools, and that if the need arises for vocational schools, rehabilitation centers, schools for the retarded and other forms of education, that it is completely possible under this proposal. It is not only wise but mandatory under the Enabling Act to spell out that schools are operated in the public interest by the state and kept from sectarian control. In the third sentence of this section it deals with the public funds. This term was used because we felt that state funds may at times go through many hands before reaching the point of their work for the public, and so the term "public funds" was then used as a guide to every portion of our state financing, borough, city or other entity for the disbursement of these monies. In this third sentence we have used the word "direct". It was spelled out that the maintenance and operation or other features of direct help would be prohibited. This was not intended and does not prohibit the contracting or giving of services to the individual child, for that child benefits as his part of society. This section gives the education department, or other departments, the right to seek out the child, independent of his religious affiliation, to help him to become a strong and useful part of society wherein it touches health and matters of welfare. We would also point out in the light of letters that have come to this floor relevant to the disbursement of funds to denominational or other private institutions, that this does not prohibit the use of funds in other educational matters, and I am sure that no one on the Committee would object to the inclusion of this word as we have given the amendment here to clarify this one statement. Now it reads as it has been amended by the Committee, "No money shall be paid from public funds for the direct benefit of any religious or other private educational institution." We did this to take any doubt away on the part of this Convention of our motives, and we state that where there are welfare cases for children in homes and when there are indigents in hospitals that we do not wish to interfere with that practice of helping to serve people

through those institutions. It is the feeling of the Committee, after long work and thorough study, that these basic recommendations that we have given here on this section on education should be accepted by the Convention.

V. FISCHER: May I ask the delegate a question?

PRESIDENT EGAN: You may, Mr. Fischer, if there is no objection.

V. FISCHER: The article on finance, the proposal on finance, has the following Section 7: "No tax shall be levied or appropriation of public money made or public property transferred, nor shall the public credit be used, except for a public purpose." Now, that is the article and proposal on finance which would govern not only education but all expenditures of the state, and unless there is a very special reason for having separate and different language here, we probably should treat financial matters only in the finance article, so my question to you is, is there a special reason why we should have the third sentence of Section 1 in the health, education and welfare article?

ARMSTRONG: Your Committee on Health, Education, and Welfare discussed this prior to coming to the floor this afternoon. I believe it was our unanimous feeling that this should be taken as a part of education so that it could always be clarified in relationship to this subject. We realize there are two other matters in proposals that deal directly with finance, but we felt that when we came to those things they would have to be correlated with our action at this point. I feel that this matter needs to be clarified here and that was the action of the Committee and their reason for retaining it here instead of postponing it to the finance section.

R. RIVERS: I speak directly to the proposed amendment to the section. As I understand it, or remember it after all this general discussion --

PRESIDENT EGAN: Before you proceed, it seems that some of the delegates don't realize what the proposed amendment is. After the word "direct" insert the words "or indirect". You may proceed.

R. RIVERS: The standard approach is that no public funds shall be disbursed for the direct benefit of any religious institution or parochial schools. The word "direct" is the standard treatment of that subject. Now when you get into the wording "or indirect", then you are getting into an argument as to whether you can even contract with a private institution for the rendering of certain public services because they might say they might make a profit. Now I agree that it might not be interpreted that way, but you are only stirring up an argument when

you talk about prohibiting the disbursement of money for an indirect benefit to a parochial or private institution. You are reaching clear out to ad infinitum in the realms of logic and association. You don't treat it that way, you don't stir up that kind of an argument. If there is a public purpose for which money is to be expended it does not matter if some of it does result in an indirect benefit to some private concern, which may be a contractor, so I definitely don't want to see the words "or indirect" inserted in this section.

COGHILL: Speaking in defense of my proposed amendment, I would first like to say I am very prone to the problem of putting any religious persecution into the Constitutional Convention or among the delegates. It would be the same thing as me trying to convince Mr. Ralph Rivers of the principles of the Republican party, and he in turn of the party he belongs to. I don't believe that is the problem at all. I think that they certainly have a right, a private right or a religious right, or a parochial right under our constitution to have schools. However, I believe that the way our government was set up 175 years ago, that the founders felt that public education was necessary to bring about a form of educating the whole child for civic benefit through a division of point of the home taking a certain part of the child, the church taking a certain part of this education, and the government or state through public schools taking the other part. I adhere to that principle, and I might say that I am the president of the Association of Alaska School Boards and one of the formers of that twelve-point program we developed in Anchorage last October. I think that the problem could probably be well misconstrued here as to the motive and intent. However, I feel that the intent of public education is primarily a state function and does not belong to any private or any one particular group, whether they are in the minority or the majority. I believe we should take direct steps to maintain a free public education not encroached upon by any quarter. I think it might be well to bring out in the argument for the direct or indirect benefit of public funds for education is the matter that is now being faced in Europe and in particular in the Netherlands where they have what is called the form of educational pacification, where the government is splitting the tax dollar among some 500 different church groups providing for a parochial school benefit on an indirect basis, and in a community where there is maybe 500 school children there will be as high as seven or eight small schools scattered out throughout the community, not providing for the fullest benefit in the educational field as far as having a good complete centralized program. I think that sectarianism segregation in our educational system is bad for the children. I do not deny the right of people to have their own schools. However, I think that we should always look to the interest of the founders of our nation when they brought about the separation of church and state. The

problem was brought, and it was brought about by Thomas Jefferson quite well when he said, "If a nation expects to be ignorant and free in the state of civilization, it expects something that never shall be". Therefore out of his deliberations with John Madison they brought about a form of free public education starting in Virginia, and it has come forward ever since under the intent of having the tax dollar only brought to the public educational system. I know there have been many law cases on it, Supreme Court rulings and what not, and I think that the matter still is divided as far as the general public is concerned, as between the sects of religion and not on the principle of preserving the free public education as an instrument of the state.

RILEY: Mr. President, I should like to address a question, if I may, to the Committee Chairman, but meanwhile I wish to commend Mr. Coghill on quoting with favor, Thomas Jefferson. Miss Awes, it runs in mind and I have not the delegate proposal before me, that there was a delegate proposal submitted in language substantially the same as this would read if Mr. Coghill's amendment were adopted. Could you tell me what your experience was in Committee, what the Committee thinking was in rejecting that language?

AWES: That I believe, if I recall rightly, was Proposal No. 2 and submitted by Mr. Johnson. It was carefully considered by the Committee, and Mr. Johnson was requested to come in and speak with us on it. We considered both the words "direct" and "indirect" and we felt that the words "or indirect" would, as Mr. Rivers said, reach out into infinity practically, and probably it is not even known what the results of that might be. We did feel it would shut out certain things that should not be prohibited. For instance, the welfare department was giving certain free care to the children of the community, and it might be administered through the schools. Well, we feared that "indirect" would make it impossible to give any of these welfare benefits, for instance, to children who were in private schools, and we did not feel that any prohibition should go that far, and so the Committee did carefully consider that word and unanimously agreed we should not use it.

RILEY: It has been said the Committee gave it correct attention and rejected it permanently?

AWES: That is right.

RILEY: Thank you.

METCALF: Mr. Chairman and delegates, I very much favor the inclusion in this section of the words "or indirect". As I read the section, it refers to our school system, and in this book, "Constitutions of the States", there are 16 states that have sections in their constitutions preventing public tax dollars

from being spent for private schools in any way, shape or form. Here is the section from the State of Missouri. The constitution was drawn in 1945, which some of you may have read. It says that, "No money shall ever be taken from the public treasury directly or indirectly in aid of any church, sect or denomination of religion, or in aid of any priest, preacher, minister, or teacher thereof as such, and that no preference shall be given to or any discrimination be made against any church, or any form of religious faith or worship." I am a firm believer in freedom of religion, and we have been aware in the progress of history, medieval times down to colonial times, that at times there have been persecutions practiced. Those are unpleasant things and they have gone past into history. I am for the free public school system, being a licensed teacher and having taught in public school systems in the Territory. I am also a firm believer in the complete separation of church and state, especially with the use of state money and state property. As I said again, I don't believe that the state property or taxes should be used and transferred to a religious group to be used directly or indirectly to the economic or political religious detriment of some other group or individual, and all activity should be on a free and competitive basis, and if I may just have a few minutes, I have a situation in Seward where a religious group have been given the use of the building and land by the Territory, and they are in competition, economic competition to my economic detriment. It is an actual fact, and I not only speak for myself but I speak for four or five people who happen to be affected similarly, and that is why I am trying to point out that I do not like to see state property or money transferred over to religious groups because persecution often times can come about. In this instance here, they have a Territory land, building valued around 60,000 dollars, and they are in active competition with private enterprise, and they have other advantages -- free snow removal, cheap help, no taxes, and I just point out these little things here that make me very much opposed to the use of state money or property in any way, shape or form by religious groups. I therefore favor the inclusion of this phrase "or indirect".

PRESIDENT EGAN: Mr. Smith.

SMITH: Mr. President, I had the opportunity to talk rather at great length with the superintendent of schools in Ketchikan during the Christmas recess on this very subject. He had suggested that the word "indirect" be inserted here, but during the course of the conversation he also said that the public school people were desirous of providing that the standards in the parochial schools be in some manner made equal to those in the public schools. Of course, the only way that could be provided would be through supervision by the State Board of Education. I pointed out to him that the insertion of the word "indirect" here would defeat that purpose and he immediately

said that he agreed and he did not want the word "indirect" inserted.

McCUTCHEON: Mr. President, will the Chair permit a question through the Chair to Mr. Coghill?

PRESIDENT EGAN: The Chair will permit a question through the Chair to Mr. Coghill.

McCUTCHEON: Mr. Coghill, could you cite me at least a few instances how indirect benefit might accrue. Are there specific types of instances within your knowledge of how this would apply? Because of your delivery here a few moments ago I assumed that there must be various types of specific indirect benefits which you would wish to prohibit. I would like to know what they are.

COGHILL: Through the Chair to Mr. McCutcheon, I believe by putting the indirect benefit clause in there that any social welfare, health arrangements that might be made with the state with any private or parochial institution would be on a contractual basis and would be providing a service to the public and not to the institution, and that is the purpose of the indirect clause in there. It would allow them to have a contract to produce or to show full value for the value of money received from the tax coffer, from the funds. In other words, to provide a hot lunch program with Territorial money or to provide a health program in a school, I do not deny that to the private schools because I feel that that is an instrument of public benefit because the child is benefiting from it from a public standpoint, and a contractual agreement between the organization and our organized state would therefore be in effect. Does that answer your question?

McCUTCHEON: In part. Your intent would be then that if some private institution of one nature or another were to supply this particular service under contract to the state that there could be no profit in that as it extended to that institution? That is, they would have to supply that service at the actual cost? That there could be no profit derived from that particular transaction. Is that the point you are making, that it would not prohibit supplying these various types of welfare programs, hot lunches, etc., but there could not be a profit factor involved?

COGHILL: That is correct, because we in the public school system, we are not allowed to make profit on such things.

KILCHER: I think that the position is not clear at all. What Mr. McCutcheon brought up is not clear at all, a benefit is not the same as a profit, so if they don't want any profit, why don't they mention it. I can see where a private school is benefited by getting nonprofit assistance. If, for instance, it is possible

for a private school to get lunch money assistance on nonprofit basis for its children, it may make the difference for them to be able to operate or not. If they are not getting lunch money or such things, they might not be able to operate, so by getting these nonprofit assistances for the children, they are getting benefited greatly. As a matter of fact, the benefit is so great it means survival or not, so I think the issue is not clear. On the principle I think I should be against the amendment because it does not clear the issue at all in that respect.

COGHILL: Maybe to clarify a point for Mr. Kilcher, one thing we want to keep in mind is the fact that the state has set up a public educational system for all children. The people that are sending their children to private, parochial, or any other type of institution are segregating themselves fromthe public and therefore they should not derive the benefit from the tax dollar. We are providing it. We have spent thousands, hundreds of thousands to provide a good educational system, and if we go to the pacification plan, we are destroying that principle and that in turn answers your interpretation of profit or benefit.

PRESIDENT EGAN: Mr. Gray.

GRAY: If I may ask Mr. Coghill, in reference to your remarks, does your state guarantee to offer a complete educational system?

COGHILL: It certainly will, Mr. Gray, after we write the articles on the legislation.

GRAY: You feel you have a complete educational system today?

COGHILL: I certainly think so.

GRAY: I think there are a lot of areas where a lot of children have no opportunity for public education.

COGHILL: I feel that it is quite a privilege to be a part of a public educational system and be able to criticize it, to be able to criticize our methods and our procedures and to work on those. I will agree with you wholeheartedly, Mr. Gray, that there are lots of things we have to do. However, in my recent trip to Washington, D. C., and being a conferee on the White House Conference on Education, we found with the exception of one disgruntled person, we found that our educational system in Alaska was far above the educational systems of the states. We have a progressive educational system in the sense that we are moving forward. I think one of our biggest thorns is the Alaska Native Service, if that's what you are referring to.

TAYLOR: There has been a lot of sparring around here on this subject. Everybody seems to duck the issue, and I am going to

ask Mr. Coghill a question if I may, through the Chair.

PRESIDENT EGAN: You may, Mr. Taylor.

TAYLOR: Mr. Coghill, what--in the event that the word "indirect" was inserted into this measure, what effect would that have on the school bus law that is now in effect?

COGHILL: What effect would that have on the school bus law? I know I am up against a pretty good attorney, but I think that will in turn not affect too much of the school bus system in Alaska because it can be on a public work contractual basis, take it completely out of the educational picture, put it on the welfare picture.

AWES: I would like to make one statement. Mr. Coghill suggested that we insert the words "or indirect". The Committee very carefully considered that word "indirect". We were not sure of the far-reaching effects it would have. Mr. Coghill now proposes that he explains what it means. I can't agree with his interpretation in any respect, and he would have us believe from the explanation he has given so far that it means precisely nothing. I don't believe that any court would so interpret it, and I think he should either give us some reason for having it in there or else if it doesn't mean anything, then I think we should take it out, but I am not satisfied with any explanation he's given yet.

PRESIDENT EGAN: Mr. McCutcheon.

McCUTCHEON: Since the Committee considered this at considerable length about this matter of "direct" or "indirect" wording in this particular section, you must have in mind several specific instances where "indirect" might apply in some fashion in a derogatory manner. If you do have such an idea or some particular questions how this word "indirect" might affect adversely to thinking upon your particular section here, I would like to hear some of them. If your Committee has gone into this so thoroughly, there must have been one or two problems that have arisen where there would be some question about including the word "indirect".

AWES: I have already given one very good example, and that is this question of welfare services which are often administered to children through the schools. Mr. Coghill says that the word "indirect" would not prevent these. I very definitely think that the word "indirect" would prevent them. I think that is one very good example.

POULSEN: May I ask Mr. Coghill a question?

PRESIDENT EGAN: You may, Mr. Poulsen.

POULSEN: If the word "indirect" is put in, would that mean there is such a thing as subsidy to hospitals would be eliminated?

COGHILL: Mr. Poulsen, this is an educational article with the educational institution.

POULSEN: It still comes under public welfare, matching funds for instance.

COGHILL: Mr. Poulsen, if you will note that the Committee amended their proposal to have "educational" inserted before institutions, and so this is strictly an educational article, sir.

WHITE: May I direct a question to Mr. Coghill?

PRESIDENT EGAN: You may, Mr. White.

WHITE: Mr. Coghill, are there children's homes, foster homes in the Territory which provide any education at all to the children who are entitled to admission to those homes?

COGHILL: The children's homes that have schools with them, is that what you mean?

WHITE: Are there any such institutions in the Territory of Alaska that provide any education at all to the children admitted to them?

COGHILL: Yes, there is.

WHITE: What would happen to them under your proposed amendment?

COGHILL: What would happen to these institutions now operating?

WHITE: Do any of these receive any public funds either from the Federal government or the Territorial government?

COGHILL: I don't believe they do because the contract schools went out before 1900. They had a form of contract for schools and that went out. I think that all your foster homes would be deriving an indirect benefit or some sort or another, and there are plenty of them.

WHITE: I think your statement could be corrected, but I'm not the one to do it. I'll defer to someone else, but in the event it is corrected, I would like to hear your answer to the question as to what would happen to them under your amendment.

PRESIDENT EGAN: Mr. Sundborg.

SUNDBORG: I have here a copy of a memorandum from Henry A. Harmon, Director of the Department of Public Welfare of the Territory to the Attorney General on this very subject, listing

a number of schools operated by private and religious organizations to which the Territory now pays funds through the Department of Public Welfare. They show that such institutions not only include a few Catholic institutions, but also Seventh Day Adventists, Moravian, and Presbyterian. It is very brief. I wonder if I might ask to have it read.

PRESIDENT EGAN: If there is no objection the communication can be read. Mr. Fischer.

V. FISCHER: I think it should be read only if it covers educational institutions.

SUNDBORG: It does only that.

PRESIDENT EGAN: The Chief Clerk may read the communication.

(This letter giving information as to payments made by the Territory to various children's institutions in the Territory was read by the Chief Clerk.)

ARMSTRONG: Mr. President, there are several sources of income in the private institution. First of all, an institution can apply for a surplus of food, and upon the signature of the administrator, that food is made available in a limited quantity. I might give an example of butter, beans, and staples of that type. I think that is given on the basis that no Territorial agency is able to give a large enough sum to a private institution to support that child. I might give you an example of one institution that probably is receiving 900 dollars a year from the Territory, but the actual cost breakdown without new buildings and capital expenditures run in excess of 1300 dollars a year to adequately take care of that child. In that institution there was no educational facilities, that is just housing. Another source of income would be then this Territorial grant of 50 dollars which is in lieu of home care. The child as a ward of the Territory and as such must be put into a foster home or into a private institution. They choose, wherever possible, to put the child in a foster home and let that child go to the private school. If a family situation is so complicated, they want to keep that family structure together and hold that family, the child is placed in a private home. There are a few, very few of the schools that have boarding facilities and educational facilities, but there are some that exist, Mr. White, in the Territory, and most of the grants by the Territorial Department of Welfare are given for the boarding home facilities and not for the education, and I think that could be borne out by the fact that they are looking for a holding situation for the child. The educational facilities are incidental at that particular point, but there are a number of places that are together. I hope that will help.

BUCKALEW: Mr. President, I don't think the question has been answered yet by any of the persons who have spoken on this subject.

If the word "indirect" is in there, it is going to eliminate almost any kind of aid. It will, for example, eliminate the free lunch, eliminate bus transportation, eliminate, for example, if we had a school or an institution where they had a school, it would eliminate the state giving any support to the child because that would be indirect support to the institution. I think when the members vote on it, I think they ought to understand the word "indirect" cuts out everything, just eliminates all kinds of support, and I don't think there is any question about it.

PRESIDENT EGAN: Mr. Rosswog.

ROSSWOG: Mr. Chairman, I would like to say that I cannot agree with Mr. Coghill that contracts would not be indirect help. I believe you could construe them to be indirect help. I believe that we should leave these words out of the section, and I believe the Committee has done a very good job. They have considered all angles of it, and I would like to say that I support the Committee resolution.

COGHILL: In closing the argument, I might just leave the thought with the delegates that on this particular subject of the direct or indirect benefit to the private or religious educational institution, would guarantee every citizen of the new State of Alaska that any money diverted from the public funds to any such organization in complete competition with your public institutions, if you will, that there will be a sound contractual agreement between your government and this private institution to provide public service and not to the benefit of the individual institution.

UNIDENTIFIED DELEGATE: Question.

PRESIDENT EGAN: The Chief Clerk will please read the proposed amendment.

CHIEF CLERK: "Section 1, line 7, after the word 'direct' insert the words 'or indirect'."

JOHNSON: I request a roll call.

KILCHER: I am sorry to take another minute. There is one problem that has not come up in this discussion. I am a father of seven children, five of which have had the Calvert course for several years with good results. I understand that the Calvert course could possibly be construed not to be available anymore either if indirect help were not available to a private school. The Territory pays it. My children go to a private school, or most of them. The biggest ones though hike over the road, and the Territory pays an indirect system. It could possibly be construed to include the Calvert course, which is a great problem in Alaska.

COGHILL: I might answer that, being familiar with the Calvert course, that the Territorial Department of Education, that is one of their recognized correspondence courses for the outlying areas, and if any family on a CAA remote station or someone on a remote part of the Yukon River, etc., would want to further the education of their children, write to the Commissioner of Education and they are referred to the Calvert course, and in higher institutions it would be the correspondence courses from the University of Nebraska.

PRESIDENT EGAN: The question is, "Shall the proposed amendment as offered by Mr. Coghill be adopted by the Convention?" The Chief Clerk will call the roll.

(The Chief Clerk called the roll with the following result:

Yeas: 19 - Barr, Boswell, Coghill, Collins, Cooper, Cross, Harris, Hilscher, Hinckel, Johnson, King, Knight, Laws, McCutcheon, Metcalf, Nerland, Poulsen, Robertson, Sweeney.

Nays: 34 - Armstrong, Awes, Buckalew, Davis, Doogan, Emberg, H. Fischer, V. Fischer, Gray, Hellenthal, Hermann, Hurley, Kilcher, Lee, Londborg, McLaughlin, McNealy, McNees, Marston, Nordale, Peratrovich, Reader, Riley, R. Rivers, V. Rivers, Rosswog, Smith, Stewart, Sundborg, Taylor, Walsh, White, Wien, Mr. President.

Absent: 2 - Nolan, VanderLeest.)

CHIEF CLERK: 19 yeas, 34 nays, and 2 absent.

PRESIDENT EGAN: So the "nays" have it and the proposed amendment has failed of adoption.

WHITE: I have an amendment to Section 1.

PRESIDENT EGAN: The Chief Clerk will please read the proposed amendment as offered by Mr. White and Mr. Fischer.

CHIEF CLERK: "Section 1, strike the last sentence."

WHITE: I move the adoption of the amendment.

V. FISCHER: I second it.

ARMSTRONG: I object. Mr. President, I feel that we will complicate our finance situation by trying to write this into a later report for clarification. I think here in one sentence you pinpoint it; you clarify it once and for all, but when you start to define this thing again in a larger amendment, you

PAGES 1525-1529

ALASKA CONSTITUTIONAL CONVENTION

PART 2

Proceedings: December 13, 1955 -- January 9, 1956

Alaska Legislative Council

Box 2199 — Juneau, Alaska

COGHILL: I might answer that, being familiar with the Calvert course, that the Territorial Department of Education, that is one of their recognized correspondence courses for the outlying areas, and if any family on a CAA remote station or someone on a remote part of the Yukon River, etc., would want to further the education of their children, write to the Commissioner of Education and they are referred to the Calvert course, and in higher institutions it would be the correspondence courses from the University of Nebraska.

PRESIDENT EGAN: The question is, "Shall the proposed amendment as offered by Mr. Coghill be adopted by the Convention?" The Chief Clerk will call the roll.

(The Chief Clerk called the roll with the following result:

Yeas: 19 - Barr, Boswell, Coghill, Collins, Cooper, Cross, Harris, Hilscher, Hinckel, Johnson, King, Knight, Laws, McCutcheon, Metcalf, Nerland, Poulsen, Robertson, Sweeney.

Nays: 34 - Armstrong, Awes, Buckalew, Davis, Doogan, Emberg, H. Fischer, V. Fischer, Gray, Hellenthal, Hermann, Hurley, Kilcher, Lee, Londborg, McLaughlin, McNealy, McNees, Marston, Nordale, Peratrovich, Reader, Riley, R. Rivers, V. Rivers, Rosswog, Smith, Stewart, Sundborg, Taylor, Walsh, White, Wien, Mr. President.

Absent: 2 - Nolan, VanderLeest.)

CHIEF CLERK: 19 yeas, 34 nays, and 2 absent.

PRESIDENT EGAN: So the "nays" have it and the proposed amendment has failed of adoption.

WHITE: I have an amendment to Section 1.

PRESIDENT EGAN: The Chief Clerk will please read the proposed amendment as offered by Mr. White and Mr. Fischer.

CHIEF CLERK: "Section 1, strike the last sentence."

WHITE: I move the adoption of the amendment.

V. FISCHER: I second it.

ARMSTRONG: I object. Mr. President, I feel that we will complicate our finance situation by trying to write this into a later report for clarification. I think here in one sentence you pinpoint it; you clarify it once and for all, but when you start to define this thing again in a larger amendment, you

have a hopeless task. I don't think it can be done, and I believe you want it here where they read it, they understand it and they know the precepts we are following. I think we would be wasting time to now delete this after we have had this vote of confidence for the Committee's report and then try to take it up again later. So I shall vote to kill the amendment and would ask the delegates to do likewise.

WHITE: I feel again that we are getting into a legislative matter here, and I feel that the broad policies that have been laid down in the Federal Constitution are good enough for our purposes here. Those policies that are contained in our Section 5 of our bill of rights which says, "No law shall be made respecting an establishment of religion or prohibiting the free exercise thereof". In a section, I forget the number of it, in a finance article saying that no funds shall be spent for other than a public purpose. I think those two sections are good enough to spell out the broad outline. In addition, I feel that while I am not a lawyer that almost every argument that has been applied against the use of the word "indirect" could just as logically be applied against the use of the word "direct", and I think it will lead us into trouble.

PRESIDENT EGAN: The question is, "Shall the proposed amendment as offered by Mr. White and Mr. Fischer be adopted"? Mr. Fischer.

V. FISCHER: I would just like to add, Mr. President, that while this Commissioner Dafoe points out education is an important field, I do not feel that when it comes to an appropriation of public funds it should receive any special, either more restrictive or more favored treatment. As Mr. White pointed out, the general stipulation is that funds be appropriated only for public purpose. Now it seems to me that the definition of public purpose must be made during every age in view of the conditions prevailing at that time. I think that has been one of the strong points of the Federal Constitution. The fact that it has left itself open to that kind of interpretation and, therefore, it seems that if we give favored treatment or discriminatory treatment to this education section, what are we going to do when it comes to health, welfare and just anything else that may come out. I think the public purpose provision should be the only guidance when it comes to appropriating public funds.

PRESIDENT EGAN: Mr. Gray.

GRAY: I would like to ask the Chairman of Style and Drafting if they would have the authority to move this section, if it directly belonged to taxation, would Style and Drafting have that authority?

PRESIDENT EGAN: Would the Rules Committee have the answer to that question?

SUNDBORG: Our rules, I believe, outline the authority of the Style and Drafting Committee and they do provide that after the various proposals have been adopted in third reading that the Style and Drafting Committee has an opportunity to arrange any material, section, subsections and I believe even sentences where it properly belongs in the constitution. It might be that Style and Drafting would have that authority, but, of course, that authority would be subject to approval here on the floor because we can't do anything in our Committee, of course, unless it is approved in a subsequent report that we make to the plenary session.

PRESIDENT EGAN: Mr. Smith.

SMITH: Mr. President, I merely wanted to point out that this problem has arisen in a good many of the States. It has arisen in connection with the education, and therefore I feel that this provision should remain in the section under education.

COGHILL: Mr. White brought up the thought that the Federal Constitution was all-inclusive. However, it might be well to remember that during the years that they were writing the Federal Constitution they left all educational matters to the individual states, and the purpose of leaving these educational matters to them was because of the trouble they were having at that time between different groups and different communities and different states being quite well controlled by different churches of one sort and another, such as the Quakers in Penn State and down in Virginia and over in Rhode Island and through that area. I feel that this should stay in the article, although my amendment did not ride, I am going to vote for it because I feel at least we have a certain provision for the direct benefit of tax dollars. I might, if I may, Mr. President, read the Supreme Court's decision of 1947 of the Emerson case, and I will not read the whole section but just in one part. It says, "No tax in any amount, large or small, can be levied to support any religious activities or institution whatever they may be called, or whatever form they may adopt to teach or practice religion. Neither state nor federal government can openly or secretly participate in the affairs of any religious organizations or groups and vice versa."

WHITE: If I may close briefly. I am not for or against bus transportation to certain institutions. I am not for or against hot lunches to certain institutions. I again think we would be much better advised to stick to the broad outlines. In partial reply to Mr. Coghill, I might mention that 100 years from now the state might wish to get involved in some sort of G.I. Bill of its own, following another war. I would not be in favor of it now, but 100 years from now I might. Why not leave ourselves open?

BARR: Point of information. I seem to remember when we first started out there was a sheet of paper on our desk to outline certain things that was mandatory to place in our constitution to conform with the Federal Constitution and with our accepted principles of American government. I will ask Mr. Armstrong, I believe, wasn't this practically the same wording in one of those paragraphs and did it not specifically mention schools? Mr. White has put in his amendment because he said the other phrasing in the Finance Committee report would take care of it. That mentioned public funds should be used for public purposes, but aren't we required to state in our constitution that public funds should not be used for private schools?

ARMSTRONG: No sir, not according to the House Enabling Act that we have used as a guide. On page 3, line 14, it just makes the general provision that for the establishment and the maintenance of a system of public schools which shall be open to all children of the state and free from sectarian control. That is the only thing, but I might add that I believe that there are 39 states that have added some type of safeguard in their constitutions directly in connection with education, and I believe every new constitution that has come out has held to some provision of this type, practically in every case they have been written in at this point, so I don't know why we should be afraid to follow that pattern. I don't think it is unusual to keep it here. I think it is healthy to keep it here, and I believe this is where it belongs.

McNEES: I call for the question.

PRESIDENT EGAN: The question is, "Shall the proposed amendment as offered by Mr. White and Mr. Fischer be adopted by the Convention?"

JOHNSON: I request a roll call.

PRESIDENT EGAN: The Chief Clerk will call the roll.

(The Chief Clerk called the roll with the following result:

Yeas: 13 - V. Fischer, Hurley, Kilcher, Laws, Lee, McCutcheon, Nolan, Poulsen, Reader, Riley, Sundborg, Walsh, White.

Nays: 41 - Armstrong, Awes, Barr, Boswell, Buckalew, Coghill, Collins, Cooper, Cross, Davis, Doogan, Emberg, H. Fischer, Gray, Harris, Hellenthal, Hermann, Hilscher, Hinckel, Johnson, King, Knight, Londborg, McLaughlin, McNealy, McNees, Marston, Metcalf, Nerland, Nordale, Peratrovich, R. Rivers, V. Rivers, Robertson, Rosswog, Smith, Stewart, Sweeney, Taylor, Wien, Mr. President.

Absent: 1 - VanderLeest.)

CHIEF CLERK: 13 yeas, 41 nays and 1 absent.

PRESIDENT EGAN: The "nays" have it and the proposed amendment has failed of adoption. Are there other amendments to Section 1? Mr. Victor Rivers.

V. RIVERS: May I ask a question? I notice that the Committee has come in with the words "direct benefit". I notice that some of the other states' constitutions, including that of Hawaii, say "support or benefit". What was the intent of limiting them to the word "direct"? I would like to know a little about the intent of the Committee rather than in dealing with both "support" or "benefit".

PRESIDENT EGAN: Miss Awes.

AWES: I don't recall that the Committee considered the words "support" or "benefit". I think the purpose we wanted to achieve was brought out in the arguments on an earlier amendment and we felt these words did it, and I don't recall the words "support" or "benefit" came before the Committee.

V. RIVERS: In other words, the Committee did not consider the words "support" or "benefit"?

AWES: That is right.

PRESIDENT EGAN: That seems to be the understanding of the Chair. Mr. Armstrong.

ARMSTRONG: As I recall, Mr. President, we probably discussed the question of the support of private schools, but we did not feel it needed to be in this particular section, and I don't recall, Mr. Rivers, that we considered that as a part of the text. I certainly would agree with what Miss Awes has said, although we discussed in Committee such things as direct legislation for the building of a school or the maintenance of a private school, which would be support, but it was our understanding that that would be covered under this word "direct benefit". This would prohibit the direct appropriation for building or maintenance of private institutions.

V. RIVERS: Mr. President, I am going to make a motion. I think that the word "direct" limits the interpretation of this. I am going to make a motion that the word "direct" be stricken and insert in lieu thereof the words "support of", line 7.

BARR: I second it.

PRESIDENT EGAN: The matter is open for discussion. Mr. Rosswog.

Court's ruling won't end all voucher issues

Apr 6, 2011|

The U.S. Supreme Court decision issued Monday gives us a glimpse into how school voucher programs in Indiana -- and other states -- might one day look.

Tax-credited contributions made to an Arizona scholarship organization that provides tuition scholarships to secular and religious schools can not be sued for violating the establishment clause, the court ruled Monday.

The court ruled in 2002 that school vouchers, even those that went to religious schools, do not violate the First Amendment clause often referred to as separation of church and state.

So as far as the U.S. law is concerned, school vouchers for parochial schools and tax-credited scholarship contributions that might fund students' tuition at religious-based schools are kosher.

But state laws are a different matter, and one shouldn't expect school voucher issues to be settled or go unchallenged in Indiana or in other states grappling with education reforms.

House Democrats' six-week walkout failed to stop House Bill 1003, the school voucher bill, which continues to wind its way through the General Assembly.

Proponents and opponents of House Bill 1003 speculate how it will change Indiana public and private schools for the better or worse. But in reality, House Bill 1003 is not likely the panacea proponents tout it to be, and it's not the nail in public education's coffin that opponents claim. But it is a potential game changer for both public and private institutions.

If it becomes law, school vouchers will influence how Hoosier children are educated. And since no bill is perfect, the voucher system would likely need tweaking in years to come.

While acknowledging Indiana's education system needs reform, we've not been quick to jump on the school voucher bandwagon -- nor are we doing that today. There are too many questions left unanswered. But it appears the Republican-controlled General Assembly is bent on making school vouchers the law.

If school vouchers are approved, Hoosiers should expect lengthy legal challenges, including whether vouchers comply with Indiana's Constitution. If the U.S. Supreme Court is any indicator, it is likely school vouchers are not the constitutional aberration some paint them to be. If this is the case, the question is whether they are as effective as some claim they are. That remains unknown as of now.

When these cases are inevitably filed, people are likely to barricade themselves behind tired arguments. In the rush to defend their positions, we hope both sides remember that the status quo in education is not working in Indiana -- or anywhere else. To find what might work requires change, and change is never easy to entrenched institutions.

Court ruling on school money stirs voucher bill debate

By: MIKEL LIVINGSTON mlivingston@jconline.com 8:30 PM, Apr. 5, 2011|

U.S. Supreme Court ruling this week is already stirring debate on possible ramifications of controversial legislation that would create a school voucher program in Indiana.

On Monday the Supreme Court ruled 5-4 that ordinary taxpayers cannot challenge government programs that use tax breaks to direct money to religious activities. The ruling was directed at an Arizona scholarship program that has mainly benefited religious schools through tax breaks.

Opponents of private school vouchers, including those promoted by Indiana House Bill 1003, fear the ruling will make it more difficult to use federal courts to claim violations of the Constitution's prohibition on direct government aid to religion.

Chris McGrew, a former consultant for the Indiana Department of Education and former board member for the Indiana Coalition for Public Education, said the ruling will "embolden" and "empower" voucher supporters.

Arizona's program has allowed residents to send up to $500 to a tuition scholarship organization that they would have otherwise paid the state in taxes on their incomes, the bulk of which has gone to private religious schools.

Justice Anthony Kennedy wrote the Supreme Court's majority opinion, saying that because the program operates as a tax credit, instead of a direct appropriation of government money, "contributions result from the decisions of private taxpayers regarding their own funds."

Justice Elena Kagan, who voted against the ruling, predicted lawmakers elsewhere would adopt the "road map" Kennedy provided to subsidize religion without facing judicial review.

But McGrew said differing details in the bill will give some legal leverage.

"Constitutionally the ruling in Arizona is different enough, (the Indiana program) will come before the courts," McGrew said. "I just hate that taxpayers and our schools and students are going to have to pay for it."

Last week, Indiana House Democrats failed with an amendment that would have limited the vouchers to only students attending failing schools.

That amendment was defeated and the bill passed, moving to the Senate. The bill will be discussed by the Senate Education and Career Development Committee later today.

If passed in its current form, Indiana's scholarship program would not be limited to lower-income families, special need students or students in failing schools, making it the broadest voucher program in the nation. The program would be open for families earning up to $60,000 a year and within three years there would be no limit on the number of children who could enroll.

William McLauchlan, a Purdue University associate professor, has written extensively on the Indiana state constitution and the judicial behavior of Supreme Court justices. He said he believes Indiana's voucher bill violates both the state and federal constitutions.

McLauchlan said it's a near guarantee the voucher bill will be protested in court if passed, and he anticipates the Indiana Supreme Court would rule against it.

"I can't imagine, if it is a raw use of public funds for a system that supports private educational institutions, that it will stand the test, but there's no telling for sure," McLauchlan said.

Some private school leaders have also expressed reservations about the plan, but for different reasons.

Lafayette Christian School Principal Ken Goff said he and his staff are waiting for more specifics on the proposal before forming an opinion.

"We are still mixed on it," Goff said. "There are still a lot of details not specified yet. We want to make sure we can remain a private Christian school as we are."

Goff said maintaining the independence of a private school remains paramount.

"We're accredited by the state, so we take ISTEPs and we're accountable with that, but we do have some freedom as we are a private school," Goff said. "We just want to be sure if we accept (vouchers) we can keep that autonomy."

Monday's ruling and a 2002 decision that upheld the use of vouchers "should give state legislatures wide discretion in adopting school choice programs," said Tim Keller, executive director of the Arizona chapter of the Institute for Justice. The group represented both religious and secular scholarship organizations that receive the tax money.

"School choice programs are not about aiding religion," Keller said. "They're aimed at helping individual families."

Michelle Rhee on D.C. Kids' 'Crappy Education'

Firebrand Schools Chancellor Michelle Rhee, the National Face for Education Reform, Could Lose Her Job

By Z. BYRON WOLF and LEE FERRAN

Sept. 16, 2010

"They are getting a crappy education," Rhee said while discussing the district's schoolchildren in an interview with ABC News. "I mean, you could try to sugar coat it all you want. Subpar, or whatever. But what it is in terms that everyone can understand -- they are getting a crappy education."

It could be comments like that, not to mention aggressive and controversial education policies, landed Rhee in the spotlight of a new documentary "Waiting for Superman," and could also cost her her job.

Rhee, who has become the national face of education reform, could end up jobless after D.C. voters ousted Mayor Adrian Fenty.

Under Rhee's three-year watch, more than 200 teachers have been fired, nearly 20 schools closed and pay has been tied to merit evaluations. But test scores have shot up for elementary and secondary school students, and teachers' salaries were raised.

"The situation we inherited three years ago in Washington, D.C., was absolutely deplorable," Rhee said. "People need to understand that and if that makes people uncomfortable, then so be it."

The victor in Tuesday's Democratic primary -- and therefore almost a sure winner come November in this overwhelmingly Democratic city -- is City Council Chairman Vincent Gray, a chief Rhee antagonist at oversight hearings.

Gray has not said he would fire Rhee, but he hasn't said he would keep her on either.

"I have said on many occasions that after this election is over, I'd like to sit down with Michelle Rhee and let us walk and talk through it, you know, how we might work together," Gray said on CNN Tuesday.

Rhee had campaigned for Fenty. The Washington Teacher's Union campaigned for Gray.

"This has been a significant change in direction and it's going to require me sitting down with Mayor Fenty, the chairman and other people to see what's in the best interests of our kids," Rhee said Wednesday in an interview with MSNBC.

Rhee Feels Guilty About Fenty Loss

"I do feel sort of bad and guilty," she said. "This man, Adrian Fenty, is truly the best leader I've ever worked for. We need more leaders like him who are willing to stake everything to make sure our kids are getting a good education."

Obviously, D.C. voters disagree. And so do the leaders of local and national teachers unions.

An op-ed Wednesday morning by George Parker, president of the Washington Teacher's Union, and Randi Weingarten, president of the American Federation of Teachers, made no mention of Rhee. The article was titled "No Turning Back for D.C. Kids," and it suggested that the teachers would be happier and work more collaboratively with Gray.

"Public education is a marathon, not a sprint. Yes, there's urgency to fixing our schools, but we have to set ourselves on a long-term path toward constant and sustainable progress," wrote the union leaders.

President Obama stayed out of the race, but Secretary of Education Arne Duncan appeared at an event with Fenty and Rhee in the closing days of the election. It was not a campaign event, but Duncan announced the award of $75 million in new federal funding for D.C. schools. He was noticeably absent from any event with Gray.

Rhee Tackles Classroom Challenge

By Amanda Ripley / Washington

In 11th grade, Allante Rhodes spent 50 minutes a day in a Microsoft Word class at Anacostia Senior High School in Washington. He was determined to go to college, and he figured that knowing Word was a prerequisite. But on a good day, only six of the school's 14 computers worked. He never knew which ones until he sat down and searched for a flicker of life on the screen. "It was like Russian roulette," says Rhodes, a tall young man with an older man's steady gaze. If he picked the wrong computer, the teacher would give him a handout. He would spend the rest of the period learning to use Microsoft Word with a pencil and paper.

One day last fall, tired of this absurdity, Rhodes e-mailed Michelle Rhee, the new, bold-talking chancellor running the District of Columbia Public Schools system. His teacher had given him the address, which was on the chancellor's home page. He was nervous when he hit SEND, but the words were reasonable. "Computers are slowly becoming something that we use every day," he wrote. "And learning how to use them is a major factor in our lives. So I'm just bringing this to your attention." He didn't expect to hear back. Rhee answered the same day. It was the beginning of an unusual relationship.

The U.S. spends more per pupil on elementary and high school education than most developed nations. Yet it is behind most of them in the math and science abilities of its children. Young Americans today are less likely than their parents were to finish high school. This is an issue that is warping the nation's economy and security, and the causes are not as mysterious as they seem. The biggest problem with U.S. public schools is ineffective teaching, according to decades of research. And Washington, which spends more money per pupil than the vast majority of large districts, is the problem writ extreme, a laboratory that failure made. (See pictures of a diverse group of American teens.)

Rhee took over Anacostia High and the district's 143 other schools in June 2007, when Mayor Adrian Fenty named her chancellor. Her appointment stunned the city. Rhee, then 37, had no experience running a school, let alone a district with 46,000 students that ranks last in math among 11 urban school systems. When Fenty called her, she was running a nonprofit called the New Teacher Project, which helps schools recruit good teachers. Most problematic of all, Rhee is not from Washington. She is from Ohio, and she is Korean American in a majority-African-American city. "I was," she says now, "the worst pick on the face of the earth."

But Rhee came highly recommended by another prominent school reformer: Joel Klein, chancellor of New York City's schools. And Rhee was once a teacher--in a Baltimore elementary school with Teach for America--and the experience convinced her that good teachers could alter the lives of kids like Rhodes.

Anacostia High has a 24% graduation rate, and only 21% of its students read at grade level. Rhodes is well aware of the miserable statistics, and when he first saw his new chancellor from afar, he thought she looked petite, foreign and underqualified. "I was like, She doesn't look ready for urban kids." But after they exchanged e-mails, he agreed to meet her downtown. He realized almost at once that he had underestimated her. "She actually sat

with me," he says, "and talked eye to eye, like I was one of her co-workers." They decided to meet again, this time at Anacostia High. Rhodes began to talk about Rhee to his classmates, and they started writing an agenda for the meeting, detailing all the things that were wrong with the D.C. school system. They had much to tell.

Rhee has promised to make Washington the highest-performing urban school district in the nation, a prospect that, if realized, could transform the way schools across the country are run. She is attempting to do this through a relentless focus on finding--and rewarding--strong teachers, purging incompetent ones and weakening the tenure system that keeps bad teachers in the classroom. This fall, Rhee was asked to meet with both presidential campaigns to discuss school reform. In the last debate, each candidate tried to claim her as his own, with Barack Obama calling her a "wonderful new superintendent."

Hard as it is to imagine Washington schools ranking among the best in the country, the city does have some things working in its favor. The system is relatively small, making it easier to redirect. As in New York City, the board of education was recently dissolved, which means changes can be made without waiting for the blessing of a fractious body of overseers. And now that a third of Washington's kids are in charter schools, there is intense pressure on the public system to keep the students it still has. If they keep fleeing the system at the current rate, enrollment will drop 50% every 10 years.

Each week, Rhee gets e-mails from superintendents in other cities. They understand that if she succeeds, Rhee could do something no one has done before: she could prove that low-income urban kids can catch up with kids in the suburbs. The radicalism of this idea cannot be overstated. Now, without proof that cities can revolutionize their worst schools, there is always a fine excuse. Superintendents, parents and teachers in urban school districts lament systemic problems they cannot control: poverty, hunger, violence and negligent parents. They bicker over small improvements such as class size and curriculum, like diplomats touring a refugee camp and talking about the need for nicer curtains. To the extent they intervene at all, politicians respond by either throwing more money at the problem (if they're on the left) or making it easier for some parents to send their kids to private schools (if they're on the right).

Meanwhile, millions of students left behind in confused classrooms spend another day learning nothing.

See TIME's special report on paying for college.

A Teacher from Toledo

ONE DAY IN AUGUST, I SPENT THE MORNING with Rhee as she made surprise visits to Washington public schools. She emerged from her chauffeured black SUV with two BlackBerrys and a cell phone and began walking--fast--toward the front door of the first school. She wore a black pencil skirt, a delicate cream blouse and strappy high heels. When we got inside, she walked into the first classroom she could find and stood to the side, frowning like a specter. When a teacher stopped lecturing to greet her, she motioned for the teacher to continue. Rhee smiled only when students smiled at her first. Within two minutes, she had seen enough, and she stalked out to the next classroom.

In the hallway, she muttered about teachers who spend too much time cutting out elaborate bulletin-board decorations or chitchatting at "morning meetings" with their third-graders before the real work begins. "We're in Washington, D.C., in the nation's capital," she said later. "And yet the children of this city receive an education that every single citizen in this country should be embarrassed by." (See pictures of teens and how they would vote.)

In the year and a half she's been on the job, Rhee has made more changes than most school leaders--even reform-minded ones--make in five years. She has shut 21 schools--15% of the city's total--and fired more than 100 workers from the district's famously bloated 900-person central bureaucracy. She has dismissed 270 teachers. And last spring she removed 36 principals, including the head of the elementary school her two daughters attend in an affluent northwest-D.C. neighborhood.

Rhee is convinced that the answer to the U.S.'s education catastrophe is talent, in the form of outstanding teachers and principals. She wants to make Washington teachers the highest paid in the country, and in exchange she wants to get rid of the weakest teachers. Where she and the teachers' union disagree most is on her ability to measure the quality of teachers. Like about half the states, Washington is now tracking whether students' test scores improve over time under a given teacher. Rhee wants to use that data to decide who gets paid more--and, in combination with classroom evaluation, who keeps the job. But many teachers do not trust her to do this fairly, and the union bristles at the idea of giving up tenure, the exceptional job security that teachers enjoy.

Rhee grew up in a nice neighborhood in Toledo, Ohio, a middle child, between two brothers. Her parents immigrated from South Korea several years before she was born so that her father could study medicine at the University of Michigan. He became a specialist in rehabilitation and pain medicine, and her mother owned a women's clothing store. Education was highly valued in the family, as was independence. After Rhee finished sixth grade, her parents sent her to South Korea to live with an aunt and attend a Korean school, a harrowing experience for a child in a strange land with limited skills in its language. When she returned a year later, her parents sent her to a private school because they found the public schools lacking.

After Rhee graduated from Cornell University in 1992, she joined Teach for America. She spent three years teaching at Harlem Park Elementary, one of the lowest-performing schools in Baltimore. Her parents visited and were stunned by the conditions of the neighborhood. "The area where the kids lived reminded me of a scene after the Korean War," says her father Shang Rhee.

Rhee suffered during that first year, and so did her students. She could not control the class. Her father remembers her returning home to visit and telling him she didn't want to go back. She had hives on her face from the stress.

The second year, Rhee got better. She and another teacher started out with second-graders who were scoring in the bottom percentile on standardized tests. They held on to those kids for two years, and by the end of third grade, the majority were at or above grade level, she says. (Baltimore does not have good test data going back that far, a problem that plagues many districts, so this assertion cannot be checked. But Rhee's principal at the time has confirmed the claim.) The experience gave Rhee faith in the power of good teaching. Yet what happened afterward broke her heart. "What was most disappointing was to watch these kids go off into the fourth grade and just lose everything," Rhee says, "because they were in classrooms with teachers who weren't engaging them."

The summer after her second year of teaching, Rhee met Kevin Huffman, a fellow Teach for America member. They married two years later and had two daughters, Starr and Olivia, now 9 and 6. They moved to Colorado to be closer to Rhee's parents, but the marriage faltered. Huffman and Rhee separated, agreeing to joint custody of the kids. And then Rhee got the offer to run Washington's schools. Huffman, now head of public affairs for Teach for America, had no illusions about the challenges Rhee would face. But when he heard about

the job offer, he decided to follow her to D.C. "Even though moving didn't sound like a whole lot of fun," he says, "the reality is that I genuinely believed that she had the potential to be the best superintendent in the country. Most people think about their own longevity, about political considerations." He adds, "Very few people genuinely don't care about anything other than the end result for kids. Michelle will compromise with no one when it comes to making sure kids get what they deserve."

Scorched Earth

WHEN THEY ARRIVED IN WASHINGTON, Huffman and Rhee anted up. They enrolled Starr and Olivia in Oyster-Adams, a public elementary school. Although the school is considered among the best in the city, Rhee quickly concluded that it was inferior to the Colorado public school her daughters had been attending. Among other things, the homework was sporadic and unchallenging, she says. Rhee dismissed the principal before the school year was out, a move that sparked outrage across the city and in her own home. "That," she says, "was probably the decision I got the most grief about."

Rhee is, as a rule, far nicer to students than to most adults. In many private encounters with officials, bureaucrats and even fundraisers--who have committed millions of dollars to help her reform the schools--she doesn't smile or nod or do any of the things most people do to put others at ease. She reads her BlackBerry when people talk to her. I have seen her walk out of small meetings held for her benefit without a word of explanation. She says things most superintendents would not. "The thing that kills me about education is that it's so touchy-feely," she tells me one afternoon in her office. Then she raises her chin and does what I come to recognize as her standard imitation of people she doesn't respect. Sometimes she uses this voice to imitate teachers; other times, politicians or parents. Never students. "People say, 'Well, you know, test scores don't take into account creativity and the love of learning,'" she says with a drippy, grating voice, lowering her eyelids halfway. Then she snaps back to herself. "I'm like, 'You know what? I don't give a crap.' Don't get me wrong. Creativity is good and whatever. But if the children don't know how to read, I don't care how creative you are. You're not doing your job."

See pictures of a diverse group of American teens.

See pictures of the college dorm's evolution.

Rhee's ferocity has alienated many people--even those who support her ideas and could be helpful to her. This summer the chair of the Washington city council called dealing with Rhee a "nightmare." There has been talk of passing legislation to rein her in. "Michelle Rhee believes in scorched earth," says Randi Weingarten, president of the American Federation of Teachers, a national union that has become unusually involved in local matters in Washington. "I am not saying that D.C.'s school system doesn't need a lot of help. But I have been part of a lot of reforms, and the one thing I have never seen work is a hierarchical, top-down model."

Rhee is aware of the criticism, but she suggests that a certain ruthlessness is required. "Have I rubbed some people the wrong way? Definitely. If I changed my style, I might make people a little more comfortable," she says. "But I think there's real danger in acting in a way that makes adults feel better. Because where does that stop?"

The Data

ON RHEE'S TOUR OF SCHOOLS DURING the first week of classes this year, a parent stopped her to praise her accomplishments so far. Rhee listened with a small smile while systematically cracking each of her knuckles with the thumb of the same hand. Then she got back into her SUV and began furiously e-mailing. When she calls her staff, she does not say hello; she just starts talking. She answered 95,000 e-mails last year, according to her office.

She frequently sounds exasperated. "People come to me all the time and say, 'Why did you fire this person?'" she says. The whiny voice is back. "'She's a good person. She's a nice person.' I'm like, 'O.K., go tell her to work at the post office.' Just because you're a nice person and you mean well does not mean you have a right to a job in this district."

The data back up Rhee's obsession with teaching. If two average 8-year-olds are assigned to different teachers, one who is strong and one who is weak, the children's lives can diverge in just a few years, according to research pioneered by Eric Hanushek at Stanford. The child with the effective teacher, the kind who ranks among the top 15% of all teachers, will be scoring well above grade level on standardized tests by the time she is 11. The other child will be a year and a half below grade level--and by then it will take a teacher who works with the child after school and on weekends to undo the compounded damage. In other words, the child will probably never catch up.

The ability to improve test scores is clearly not the only sign of a good teacher. But it is a relatively objective measure in an industry with precious few. And in schools where kids are struggling to read and subtract, it is a prerequisite for getting anything else done. In their defense, Washington teachers and principals, like educators in many of the country's worst school districts, talk about trying to teach a seventh-grader who is eight months pregnant; about being assaulted by students; about holding meetings for parents, replete with free food, and no one showing up. Washington Teachers' Union leader George Parker worries that test-score data cannot take all this into account: "I don't think our teachers are afraid of demonstrating student growth, but you have to look at the dynamics of the children you're dealing with. If I'm teaching children who have computers at home, who have educated parents, those students can move a lot faster than kids whose parents can't read."

Rhee says she does not expect all kids to move up the charts at the same rate; the important thing is to demand that most do move up. "This is a cultural shift," says Kaya Henderson, Rhee's deputy. "For years, there were no data, and you were a good teacher because the parents or your principal told you so. And so this is a scary thing."

The most glaring example of the backward logic of schools is the way most teachers receive lifetime job security after one or two years of work. As Larry Rosenstock, CEO of eight California charter schools, noted at an education panel last spring, we don't give that kind of job security to pilots or doctors--or any others who hold our children's fate in their hands: "What is it that is so exceptional about teachers that they should have this unique right?"

Teachers got tenure rights in the early 20th century to protect them against meddling politicians and school-board members who treated their jobs as patronage pawns. But the rationale is plainly antiquated. Today dozens of federal and state laws protect teachers (and other people) from arbitrary firing. But most teachers still receive tenure almost automatically. In fact, even before they get tenure, they are rarely let go. Schools spend millions of dollars evaluating teachers, but principals have little incentive to shake up their staffs, and so most teachers end up scoring near the top. "What I'm finding is that our principals are ridiculously--like ridiculously--conflict-averse," Rhee says. "They know someone is not so good, and they want to give him a 'Meets expectations' anyway because they don't want to deal with the person coming into the office and yelling and getting the parents riled up."

Right now, schools assess teachers before they teach--filtering for candidates who are certified, who have a master's degree, who have other pieces of paper that do not predict good teaching. And we pay them the same regardless of their effectiveness.

By comparison, if we wanted to have truly great teachers in our schools, we would assess them after their second year of teaching, when we could identify very strong and very weak performers, according to years of research. Great teachers are in total control. They have clear expectations and rules, and they are consistent with rewards and punishments. Most of all, they are in a hurry. They never feel that there is enough time in the day. They quiz kids on their multiplication tables while they walk to lunch. And they don't give up on their worst students, even when any normal person would.

See pictures of teens and how they would vote.

See pictures of college mascots.

Students know this instinctively. Acquirra Carter, 14, attends Washington's Cardozo High School, where, she complains, kids walk out of classes when they get bored and certain teachers talk on their cell phones when they are supposed to be teaching. But there are exceptions, and Carter knows them when she sees them. "Some teachers find a way. Mrs. Brown, they would not dare walk out of her class. She has total control. Mrs. Lawton, nobody leaves her class. This boy whispered, and she knew it!"

Minefields in the Schoolyard

IN THE VIEW OF RHEE AND REFORMERS like her, the struggle to fix America's failing school system comes down to a simple question: How do you get the best teachers and principals to work in the worst schools? In her quest to figure this out, Rhee has already suffered a major setback. Earlier this year, she proposed a revolutionary new model to let teachers choose between two pay scales. They could make up to $130,000 in merit pay on the basis of their effectiveness--in exchange for giving up tenure for one year. Or they could keep tenure and accept a smaller raise. (Currently, the average teacher's salary in Washington is $65,902.) The proposal divided the city's teachers into raging, blogging factions. This fall, the union declined to put Rhee's proposal to a vote, and its relationship with her has become increasingly hostile.

In October, Rhee vowed to purge incompetent teachers through any means necessary. She has brought on extra staff to help principals navigate the byzantine termination process and says an unprecedented number of teachers have already been put on notice. But she cannot give teachers the huge raises she proposed unless the union agrees to a new contract. So this approach will be slower, more litigious and less inspiring. In other words, it will be all stick and no carrot. It's hard to say if anyone else would have been able to persuade the union to trade away tenure for cash bonuses, but Rhee's sometimes dismissive attitude made it harder for some teachers to trust her.

For now, Mayor Fenty says he still has full confidence in Rhee, and he claims that Washington residents share his enthusiasm. "Regular people love the fact that for once someone is making tough decisions for D.C. schools," says Fenty, who attended the district's public schools. But the disconnect between Rhee's confident, sweeping rhetoric and the tortured reality is sizable, and it is most apparent at ground level, in the schools she is trying to save.

Rhee likes to tell the story of how Rhodes got in touch with her. She recounted it on TV on The Charlie Rose Show in July: "A student sent me this e-mail and said, basically, If you really want to know what's wrong with our schools, you should come and talk to the kids because I'm afraid that by talking to the adults, you might not be getting the real story."

Rhodes has a more nuanced version of the story. After their initial meeting, they met for a second time at Anacostia High, in a room off the library. Rhodes had invited eight fellow students, and they gave Rhee their typed agenda. They talked about the need for better teachers, as Rhee emphasizes when she tells the story. But Rhodes says he also told her about the holes in the floors, the lack of supplies and the fact that most classes did not have enough books for the students to take home. Rhee listened but did not offer many specific solutions. "She was vague," Rhodes says. "I got the sense she didn't want to make promises she couldn't keep."

Then one day last May, Rhee dismissed Anacostia's principal. Rhodes was devastated. He sent Rhee a furious e-mail. "My principal is a mother, mentor and a teacher to us all," he wrote. "I refuse, NO! we refuse the students of Anacostia to let her go." Rhee wrote him back. "She told me not to worry about it," Rhodes says quietly.

One of the things that make school reform so wrenching and slow is that schools become embedded in people's hearts. This is true in rich neighborhoods and poor ones, with good

schools and bad. Rhodes talks about his school as if it were an extension of himself. He talks about "my teachers" and "my staff," and he refers to other students as "my colleagues." "I love Anacostia High School," he says. At the same time, he is dismayed by his school. He walks through his halls, pointing out the litter on the floor and the broken lockers. Rhodes is 6 ft. 8 in. (2 m) tall, so he has to look down to talk to almost everyone. He wears white tube socks under his black Nike flip-flops and carries his large frame deliberately, like a gentle overseer. "You see all these lockers? None of them work," he says. "This classroom over here is supposed to be for home economics, but it's never been fixed up."

Rhodes did not contact Rhee again. This year Anacostia has a new principal, and Rhodes admits that the school is functioning better. "All the children are wearing their uniforms," he says. "No kids are in the hallways." If you come to school without your uniform on, a security guard or an assistant principal will "snatch you up and just send you home." All the computers in his Microsoft Word classroom now work.

But on Nov. 19, Rhodes had to evacuate his school when fights broke out in the hallways and three students were stabbed. And he still doesn't use the school bathrooms, which are filthy and sometimes unsafe. He waits until he returns to his grandmother's house, where he lives.

Now that he is a senior, Rhodes spends much of his time worrying about getting into college. As we stand on the front steps of the school one autumn evening after class, I ask him what he wants to study. He answers quickly: "Public administration, with a minor in English." I ask him how he can be so sure. "Because someone told me that's what I have to do to take Chancellor Rhee's job," he says matter-of-factly, watching his drum corps practice and his baton twirlers twirl in the twilight.

MEMORANDUM December 1, 2010

SUBJECT: Education Vouchers as Scholarships
(Work Order No. 27-LS0223\A)

TO: Representative Wes Keller
Attn: Jim Pound

FROM: Jean M. Mischel
Legislative Counsel

I have enclosed a draft version of an education voucher system based generally on the material provided, accommodating your desire to avoid a significant rewrite of the current funding system for public education and to base the draft on the "mission statement" rather than the model legislation provided. I tried to condense the proposal to that end but received no specific staff direction in doing so. The time allotted in your request does not allow for rewrites.

Although this proposal is unlike your previous education voucher request this session in that this draft attempts to provide vouchers as scholarships for use at both public and private schools, it is my opinion that the draft will not survive Alaska's express constitutional prohibition against providing public funds for the benefit of a private school under article VII, section 1. That section provides, in part:

> No money shall be paid from public funds for the direct benefit of any religious or other private educational institution.

The Alaska Supreme Court has interpreted that section to mean that a tuition assistance program awarding students attending private colleges an amount equal to the difference between public and private college tuition is unconstitutional. Sheldon Jackson College v. State, 599 P.2d 127 (Alaska 1979).

Sheldon Jackson is directly relevant to the proposed scholarship system. In that case, the Court established a three part test for determining the validity of public programs that provide economic benefit to private schools. First, the Court looks at the breadth of the class to which the economic benefits are directed. Second, the Court looks at how the public money is to be used; i.e., whether the benefit to the private school is incidental to education (as with fire and police protection) or whether it amounts to direct aid to education (as with tuition and books). Third, the Court looks at the magnitude of the benefit to private education. Significantly, the Court noted that channeling funds to a

private school through an intermediary (such as the student or parent) will not save an otherwise unconstitutional program providing aid to private schools.

In the Sheldon Jackson case, the Court struck down the state's tuition assistance program as violative of all three parts of the test. The class which the tuition assistance program benefitted consisted almost entirely of private schools, the funds were to be used directly for educational purposes (tuition), the benefit conferred on these schools was quite substantial, and the fact that the money was actually paid directly to the students, not the schools, did not mitigate the fact that the students were required to turn the money directly over to the private schools.

The proposed "scholarship" system (which appears to be a voucher system) suffers some of the same infirmities as the tuition assistance program did despite the inclusion of public schools. The money would go to private schools or public schools for the cost of education and facilities. A large part of the class benefitted would be private schools since the public schools currently receive public funding.

The second part of the test would also be violated because the vouchers would be used as a direct benefit to private education rather than an incidental benefit.

The third part of the test, the magnitude of the benefit, also presents a problem. The vouchers are to cover the entire cost of tuition or the cost of tuition plus the facilities spending. Obviously, the benefit to private schools would be substantial and, consequently, unconstitutional.

The proposed scholarship system is also potentially in violation of the "establishment" and "freedom of religion" clauses of article I, section 4 of the Constitution of the State of Alaska. I am aware that voucher systems in Wisconsin and Ohio have survived constitutional challenge under the U.S. First Amendment. See Zelman v. Simmon - Harris 536 U.S. 639 (2002). However, that does not mean scholarships would be upheld under art. I, section 4 of the state constitution. In addition, the Court in Sheldon Jackson noted that First Amendment cases upholding limited forms of assistance to religious schools have no relevance to the preceding analysis of article VII, section 1 of the state constitution. The prohibition against state aid to any private school is much broader than the prohibition under the First Amendment which relates only to religious schools. For example, the United States Supreme Court case upholding a Minnesota program of tax credits for public and private school expenses against a First Amendment challenge (Mueller v. Allen, 463 U.S. 388 (1983)) is not relevant to the analysis of the proposed voucher system in Alaska. Not only did that case involve a tax credit system rather than a voucher system, but it was challenged under the First Amendment. The case did not consider the kind of prohibition against direct aid to private schools found in the Alaska constitution. In other words, even if the scholarship system could survive scrutiny under the First Amendment, it would still violate article VII, section 1 of the state constitution.

In order to survive constitutional scrutiny under the state constitution, a voucher system, such as the proposed parental choice scholarship system, would have to satisfy all three parts of the Sheldon Jackson test and scrutiny under the First Amendment. It is difficult to imagine a voucher system, as I understand the voucher system to work, that would not violate the constitution. The system would have to benefit students in public as well as private schools without giving any substantial direct benefit to education in the private schools. By its nature, the voucher system seems to work against this.

The problem could be circumvented by amending article VII, section 1 of the state constitution as you have proposed in a separate draft resolution.

In addition to constitutional considerations, this draft leaves many unanswered and potentially very expensive questions. For example, do you really intend to make a home district pay transportation costs? How is the student count and scholarship funding affected if a student transfers midyear? How does a public school district which is paid under the existing formula (AS 14.17) account for direct scholarship payments to schools? The material provides no direction on these and other questions that arise under Alaska law.

If I may be of further assistance, please feel free to contact me.

SHELDON JACKSON COLLEGE, Appellant, v. STATE of Alaska, Avrum Gross, Attorney General for the State of Alaska, B. B. Allen, Commissioner of Administration for the State of Alaska, Kerry Romesburg, Executive Director, Post-Secondary Education Commission, Marshall L. Lind, Commissioner of Education for the State of Alaska, Appellees; INUPIAT UNIVERSITY OF the ARCTIC, Appellant, v. STATE of Alaska, Avrum Gross, Attorney General for the State of Alaska, B. B. Allen, Commissioner of Administration for the State of Alaska, Kerry Romesburg, Executive Director, Post-Secondary Education Commission, Marshall L. Lind, Commissioner of Education for the State of Alaska, Appellees

Supreme Court of Alaska
599 P.2d 127;1979 Alas. LEXIS 552
Nos. 3978, 4002
August 28, 1979

Editorial Information: Prior History

Appeal from the Superior Court of the State of Alaska, First Judicial District, Juneau, Thomas B. Stewart, Judge.

Counsel Monte L. Brice, Ely, Guess & Rudd, Juneau, for Appellant Sheldon Jackson College.

B. Richard Edwards, Mark S. Bledsoe, Law Offices of B. Richard Edwards, Anchorage, for Appellant Inupiat University of the Arctic.

Ronald W. Lorensen, Assistant Attorney General, Avrum M. Gross, Attorney General, Juneau, for Appellee.

Robert C. Erwin, Sanford M. Gibbs, Hagans, Smith, Brown, Erwin & Gibbs, Anchorage, for Amicus Curiae Catholic Bishop of Northern Alaska.

Judges: Rabinowitz, Chief Justice, Connor, Boochever, Burke and Matthews, Justices.

CASE SUMMARY

PROCEDURAL POSTURE: Appellant private universities challenged a decision of the Superior Court of the State of Alaska, First Judicial District, Juneau, which granted summary judgment in favor of appellee, the State of Alaska, and held that Alaska's tuition grant program, Alaska Stat. 14.40.751-.806, violated Alaska Const. art. VII, 1. The private universities had filed an action challenging the termination of the program.Tuition grant program that awarded students at private colleges difference between tuition at private and public colleges violated Alaska Constitution, which prohibited payment of public funds for direct benefit of a private educational institution.

OVERVIEW: The grant program awarded Alaska residents attending private colleges in Alaska an amount generally equal to the difference between the tuition charged by the student's private college and that charged by a public college in the same area, not to exceed $ 2,500 annually. The attorney general found that the grants violated Alaska Const. art. VII, 1, which prohibited the payment of money from public funds for the direct benefit of any religious or other private educational institution. The trial court granted summary judgment for the State. On appeal, the court affirmed, holding that the grant program clearly violated 1 because (1) the class primarily benefitted by the tuition grant program consisted only of private colleges and their students; (2) the public funds expended under Alaska Stat. 14.40.776 constituted nothing less than a subsidy of the education received by the student at his private college and thus implicated fully the core concern of the direct benefit provision; (3) the magnitude of benefits bestowed under the program was substantial; and (4) the students to whom benefits were paid were merely conduits for the transmission of state funds to private colleges.

OUTCOME: The summary judgment in favor of the State was affirmed.

Constitutional Law >

Opinion

{599 P.2d 128} The final sentence of article VII, section 1 of our state constitution prohibits the payment of money from public funds "for the direct benefit of any religious or other private educational institution." 1 The question in this case is whether Alaska's tuition grant program, AS 14.40.751-.806, violates this provision.

The tuition grant program awards Alaska residents attending private colleges in Alaska an amount generally equal to the difference between the tuition charged by the student's private college and the tuition charged by a public college in the same area, not to exceed $2,500.00 annually. The student is required to apply the entire amount of the grant towards his or her tuition. AS 14.40.776 (a).

In May of 1976 the attorney general issued an opinion declaring tuition grants to be invalid as a direct benefit to private schools in violation of article VII, section 1. The Department of Administration then stopped paying tuition grants. Appellant Sheldon Jackson College, a private educational institution, filed suit to enjoin the department's termination order, but agreed to dismiss the suit without prejudice when a proposition to amend article VII, section 1, to permit tuition grants was placed on the ballot to be voted on in the general election of November, 1976. 2

The ballot proposition was rejected by the voters 64,211 to 54,636. Sheldon Jackson then renewed its lawsuit and another private university, Inupiat University of the Arctic, filed a complaint in intervention. The superior court concluded that the tuition grant program provides direct benefits to private educational institutions and thus violates article VII, section 1. Summary judgment was thereupon granted in favor of the state. We affirm.

{599 P.2d 129} I

The minutes of the Alaska Constitutional Convention show that an unsuccessful motion was made to delete entirely the direct benefit prohibition of article VII, section 1. 3 The proponent of the motion argued that the state constitutional provisions prohibiting the establishment of religion 4 and prohibiting spending public funds for private purposes, 5 were sufficient to accomplish the objectives of the direct benefit clause. By rejecting this proposal the convention made it clear that it wished the constitution to support and protect a strong system of public schools. 6 Other authorities have also suggested that a constitutional provision barring aid to all private schools serves to enforce the separation of church and state without requiring executive or judicial inquiry into the sectarian affiliation of particular schools, 7 and furthermore disengages the state from the undesirable task of withholding benefits solely on the basis of religious affiliation. 8

At the same time, in expressly rejecting alternative language that would have prohibited "direct *or indirect* benefits," 9 the delegates to Alaska's Constitutional Convention made it abundantly clear that they did not wish to prevent the state from providing for the health and welfare of private school students, 10 or from focusing on the special needs of individual residents. 11 Article VII,

section 1 was thus designed to commit Alaska to the pursuit of public, not private education, without requiring absolute governmental indifference to any student choosing to be educated outside the public school system.

The Alaska Constitution is apparently unique in its express ban only on "direct" benefits. However, in construing state constitutional provisions that prohibit "support" for private schools, 12 or state and federal proscriptions against the establishment of religion, 13 the courts have frequently resorted to a distinction between "direct" and "incidental" benefits. 14 Though the distinction may at times appear more "metaphysical" {599 P.2d 130} than precise, 15 the analyses found in these decisions are helpful in determining generally the type of government action intended to be prohibited by article VII's direct benefit clause. The following generalizations can be drawn from these authorities.

First, constitutional provisions governing aid to private schools have generally been perceived as requiring neutrality rather than hostility from the state; 16 thus the breadth of the class to which statutory benefits are directed is a critical area of judicial scrutiny. 17 For example, though the police and fire protection afforded a private school may provide the school with quite direct benefits, as when a campus fire is extinguished, such benefits are provided without regard to status and affiliation, and have universally been presumed to be constitutional. 18 Conversely, a benefit flowing only to private institutions, or to those served by them, does not reflect the same neutrality and non-selectivity. 19

A second central criterion in determining the constitutionality of a state aid program, is the nature of the use to which the public funds are to be put. As is apparent from the convention debate, the core of the concern expressed in the direct benefit prohibition involves government aid to *Education* conducted outside the public schools. Though any state assistance that relieves the burden on a private school to provide for the health and welfare of its students will free the school to concentrate its funds on its private educational mission, numerous delegates voiced their understanding that the direct benefit clause would not bar such incidental support. 20 An analogous distinction has frequently been drawn in establishment clause cases, where the pertinent inquiry is whether a statute impacts "essentially secular educational functions" that are separable from the school's religious instruction. 21

Third, in determining whether a school is directly benefitted by public funds, a court must consider, though not in isolation, the magnitude of the benefit conferred. A trivial, though direct, benefit may not rise to the level of a constitutional violation, whereas a substantial, though arguably indirect, benefit may. 22

Finally, while a direct transfer of funds from the state to a private school will of course render a program constitutionally suspect, 23 merely channeling the funds through an intermediary will not save an otherwise improper expenditure of public monies. The courts have expressly noted {599 P.2d 131} that the superficial form of a benefit will not suffice to define its substantive character. 24

II

The foregoing observations are readily applicable to the present case. First, the class primarily benefitted by the tuition grant program consists only of private colleges and their students. Though the appellants characterize the statute as merely equalizing the positions of private and public university students, effectively the chief beneficiaries are the private colleges themselves. Unlike a statute that provides comparable dollar subsidies to all students, 25 Alaska's tuition grant program is not neutral, inasmuch as the only incentive it creates is the incentive to enroll in

a private college. Subsidy programs suffering from similar deficiencies have been repeatedly struck down under a variety of state constitutional provisions, 26 as well as under the Federal Constitution. 27

Second, the public funds expended under AS 14.40.776 constitute nothing less than a subsidy of the education received by the student at his or her private college, and thus implicate fully the core concern of the direct benefit provision. While the program may be motivated, as was stated in the preface to the statute as it was originally passed, by the desire to "help retain qualified students in Alaska," 28 such a laudable purpose cannot escape article VII's mandate that Alaska pursue its educational objectives through public educational institutions.

Furthermore, the magnitude of benefits bestowed under the tuition grant program is quite substantial. For the last year in which the tuition grants were paid, 1975-76, Sheldon Jackson received approximately six hundred thousand dollars from the program. The grants were then $1,850 for each eligible student, 29 and for the 1976-77 school year the grants were to be $2,500. 30 According to Sheldon Jackson it has suffered {599 P.2d 132} "a substantially diminished capacity" to function as an educational institution as a result of the termination of the tuition grant program, as reflected in a reduction of students, faculty, income and curriculum offerings. Inupiat University claims a similar impairment of function.

Finally, though the tuition grants are nominally paid from the public treasury directly to the student, the student here is merely a conduit for the transmission of state funds to private colleges. Before the state will deliver a check to the student, the latter must certify under oath and under penalty of perjury that he or she will pay it over to the college. AS 14.40.786. Simply interposing an intermediary "does not have a cleansing effect and somehow cause the funds to lose their identity as public funds. While the ingenuity of man is apparently limitless, the court has held with unvarying regularity that one may not do by indirection what is forbidden directly." *Wolman v. Essex,* 342 F. Supp. 399, 415 (S.D. Ohio), *aff'd mem.,* 409 U.S. 808, 93 S. Ct. 61, 34 L. Ed. 2d 69 (1972).

Based on the foregoing we have no difficulty in concluding that the tuition grant program is in its effect a direct benefit to private educational institutions and therefore violates article VII, section 1 of our constitution. Though Sheldon Jackson points out that several courts have upheld tuition grant programs involving college students, 31 and that aid programs involving colleges have more readily been found constitutional than similar programs involving elementary and secondary schools, 32 the cited decisions rely on the *de minimis* degree of church control in the benefitted sectarian colleges. Such reasoning obviously has no application with respect to article VII's direct benefit prohibition, which bans aid to all private educational institutions, including those with no religious affiliation.

Sheldon Jackson also argues that the direct benefit clause was not meant to apply to colleges and universities, but only to primary and secondary private educational institutions. We see no basis for this contention. Both the plain language of the constitution and the minutes of the constitutional debate 33 indicate that all private educational institutions were meant to be included. The judgment is AFFIRMED.

Footnotes

1 Art. VII, 1 of the Alaska Const. provides:

Public Education. The legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions. Schools and institutions so established shall be free from sectarian control. No money shall be paid from public funds for the direct benefit of any religious or other private educational institution.

2 The proposition would have appended the following language to art. VII, 1: "however nothing in this section shall prevent direct aid to students in accordance with the law." 1976 House Joint Resolution 73 am S. In addition an explanation of the amendment appeared on the ballot as follows:

This is a proposal to amend Article VII, Section 1 of the Constitution of the State of Alaska to allow public funds to be used to provide direct aid such as scholarships and tuition equalization grants to students attending private educational institutions. The Attorney General of the State of Alaska has interpreted Article VII, Section 1 of the constitution as it now reads, to prohibit the state from giving tuition equalization grants to students attending private colleges or universities in the state.

3 Proceedings of the Alaska Constitutional Convention 1526-28 (hereafter cited as Proceedings).

4 Art. I, 4 provides in part: "No law shall be made respecting an establishment of religion . . . ."

5 Art. IX, 6 provides: "No tax shall be levied, or appropriation of public money made, or public property transferred, nor shall the public credit be used, except for a public purpose."

6 For example, delegate Armstrong, speaking for the committee which drafted art. VII, 7, stated that it had sought to "provide and protect for the future of our public schools." 2 Proceedings at 1514. Delegate Coghill expressed the thought that the amount of tax dollars available for the support of public schools might be lessened if public funds were used to support a great many private schools. *Id.* at 1520. In *Spears v. Honda,* 51 Haw. 1, 449 P.2d 130, 135 (1968), the need to ensure that public schools would not be neglected is expressed as the reason underlying Hawaii's constitutional bar to public aid of private schools. Hawaii, however, apparently had an elite private school system, a system having no strong parallels in the Territory of Alaska.

536 U.S. 639 (2002)

ZELMAN, SUPERINTENDENT OF PUBLIC INSTRUCTION OF OHIO, et al. v. SIMMONS-HARRIS et al.

No. 00-1751.

United States Supreme Court.

Argued February 20, 2002.
Decided June 27, 2002.[*]
CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SIXTH CIRCUIT

640*640 641*641 Rehnquist, C. J., delivered the opinion of the Court, in which O'Connor, Scalia, Kennedy, and Thomas, JJ., joined. O'Connor, J., *post,* p. 663, and Thomas, J., *post,* p. 676, filed concurring opinions. Stevens, J., filed a dissenting opinion, *post,* p. 684. Souter, J., filed a dissenting opinion, in which Stevens, Ginsburg, and Breyer, JJ., joined, *post,* p. 686. Breyer, J., filed a dissenting opinion, in which Stevens and Souter, JJ., joined, *post,* p. 717.

Judith L. French, Assistant Attorney General of Ohio, argued the cause for petitioners in No. 00-1751. With her on the briefs were *Betty D. Montgomery,* Attorney General, *David M. Gormley,* State Solicitor, *Karen L. Lazorishak, James G. Tassie,* and *Robert L. Strayer,* Assistant Attorneys General, *Kenneth W. Starr,* and *Robert R. Gasaway. David J. Young* argued the cause for petitioners in No. 00-1777. With him on the briefs were *Michael R. Reed* and *David*642*642 *J. Hessler. Clint Bolick, William H. Mellor, Richard D. Komer, Robert Freedman, David Tryon,* and *Charles Fried* filed briefs for petitioners in No. 00-1779.

Solicitor General Olson argued the cause for the United States as *amicus curiae* urging reversal. With him on the brief were *Assistant Attorney General McCallum, Deputy Solicitor General Kneedler, Gregory G. Garre, Robert M. Loeb,* and *Lowell V. Sturgill, Jr.*

Robert H. Chanin argued the cause for respondents Simmons-Harris et al. in all cases. With him on the brief were *Andrew D. Roth, Laurence Gold, Steven R. Shapiro, Raymond Vasvari, Elliot M. Mincberg,* and *Judith E. Schaeffer. Marvin E. Frankel* argued the cause for respondents Gatton et al. in all cases. With him on the brief were *David J. Strom, Donald J. Mooney, Jr.,* and *Marc D. Stern.*[†]

643*643 Chief Justice Rehnquist delivered the opinion of the Court.

The State of Ohio has established a pilot program designed to provide educational choices to families with children who 644*644 reside in the Cleveland City School

District. The question presented is whether this program offends the Establishment Clause of the United States Constitution. We hold that it does not.

There are more than 75,000 children enrolled in the Cleveland City School District. The majority of these children are from low-income and minority families. Few of these families enjoy the means to send their children to any school other than an inner-city public school. For more than a generation, however, Cleveland's public schools have been among the worst performing public schools in the Nation. In 1995, a Federal District Court declared a "crisis of magnitude" and placed the entire Cleveland school district under state control. See *Reed* v. *Rhodes,* No. 1:73 CV 1300 (ND Ohio, Mar. 3, 1995). Shortly thereafter, the state auditor found that Cleveland's public schools were in the midst of a "crisis that is perhaps unprecedented in the history of American education." Cleveland City School District Performance Audit 2-1 (Mar. 1996). The district had failed to meet any of the 18 state standards for minimal acceptable performance. Only 1 in 10 ninth graders could pass a basic proficiency examination, and students at all levels performed at a dismal rate compared with students in other Ohio public schools. More than two-thirds of high school students either dropped or failed out before graduation. Of those students who managed to reach their senior year, one of every four still failed to graduate. Of those students who did graduate, few could read, write, or compute at levels comparable to their counterparts in other cities.

It is against this backdrop that Ohio enacted, among other initiatives, its Pilot Project Scholarship Program, Ohio Rev. Code Ann. §§ 3313.974-3313.979 (Anderson 1999 and Supp. 2000) (program). The program provides financial assistance to families in any Ohio school district that is or has been "under federal court order requiring supervision and operational 645*645 management of the district by the state superintendent." § 3313.975(A). Cleveland is the only Ohio school district to fall within that category.

The program provides two basic kinds of assistance to parents of children in a covered district. First, the program provides tuition aid for students in kindergarten through third grade, expanding each year through eighth grade, to attend a participating public or private school of their parent's choosing. §§ 3313.975(B) and (C)(1). Second, the program provides tutorial aid for students who choose to remain enrolled in public school. § 3313.975(A).

The tuition aid portion of the program is designed to provide educational choices to parents who reside in a covered district. Any private school, whether religious or nonreligious, may participate in the program and accept program students so long as the school is located within the boundaries of a covered district and meets statewide educational standards. § 313.976(A)(3). Participating private schools must agree not to discriminate on the basis of race, religion, or ethnic background, or to "advocate or foster unlawful behavior or teach hatred of any person or group on the basis of race, ethnicity, national origin, or religion." § 3313.976(A)(6). Any public school located in a school district adjacent to the covered district may also participate in the program. § 3313.976(C). Adjacent public schools are eligible to receive a $2,250 tuition grant for

each program student accepted in addition to the full amount of per-pupil state funding attributable to each additional student. §§ 3313.976(C), 3317.03(I)(1).[1] All participating schools, 646*646 whether public or private, are required to accept students in accordance with rules and procedures established by the state superintendent. §§ 3313.977(A)(1)(a)—(c).

Tuition aid is distributed to parents according to financial need. Families with incomes below 200% of the poverty line are given priority and are eligible to receive 90% of private school tuition up to $2,250. §§ 3313.978(A) and (C)(1). For these lowest income families, participating private schools may not charge a parental copayment greater than $250. § 3313.976(A)(8). For all other families, the program pays 75% of tuition costs, up to $1,875, with no copayment cap. §§ 3313.976(A)(8), 3313.978(A). These families receive tuition aid only if the number of available scholarships exceeds the number of low-income children who choose to participate.[2] Where tuition aid is spent depends solely upon where parents who receive tuition aid choose to enroll their child. If parents choose a private school, checks are made payable to the parents who then endorse the checks over to the chosen school. § 3313.979.

The tutorial aid portion of the program provides tutorial assistance through grants to any student in a covered district who chooses to remain in public school. Parents arrange for registered tutors to provide assistance to their children and then submit bills for those services to the State for payment. §§ 3313.976(D), 3313.979(C). Students from low-income families receive 90% of the amount charged for such assistance up to $360. All other students receive 75% of that amount. § 3313.978(B). The number of tutorial assistance grants offered to students in a covered district must equal the number of tuition aid scholarships provided to students 647*647 enrolled at participating private or adjacent public schools. § 3313.975(A).

The program has been in operation within the Cleveland City School District since the 1996-1997 school year. In the 1999-2000 school year, 56 private schools participated in the program, 46 (or 82%) of which had a religious affiliation. None of the public schools in districts adjacent to Cleveland have elected to participate. More than 3,700 students participated in the scholarship program, most of whom (96%) enrolled in religiously affiliated schools. Sixty percent of these students were from families at or below the poverty line. In the 1998-1999 school year, approximately 1,400 Cleveland public school students received tutorial aid. This number was expected to double during the 1999-2000 school year.

The program is part of a broader undertaking by the State to enhance the educational options of Cleveland's schoolchildren in response to the 1995 takeover. That undertaking includes programs governing community and magnet schools. Community schools are funded under state law but are run by their own school boards, not by local school districts. §§ 3314.01(B), 3314.04. These schools enjoy academic independence to hire their own teachers and to determine their own curriculum. They can have no religious affiliation and are required to accept students by lottery. During the 1999-2000 school year, there were 10 startup community schools in the Cleveland City School

District with more than 1,900 students enrolled. For each child enrolled in a community school, the school receives state funding of $4,518, twice the funding a participating program school may receive.

Magnet schools are public schools operated by a local school board that emphasize a particular subject area, teaching method, or service to students. For each student enrolled in a magnet school, the school district receives $7,746, including state funding of $4,167, the same amount received 648*648 per student enrolled at a traditional public school. As of 1999, parents in Cleveland were able to choose from among 23 magnet schools, which together enrolled more than 13,000 students in kindergarten through eighth grade. These schools provide specialized teaching methods, such as Montessori, or a particularized curriculum focus, such as foreign language, computers, or the arts.

In 1996, respondents, a group of Ohio taxpayers, challenged the Ohio program in state court on state and federal grounds. The Ohio Supreme Court rejected respondents' federal claims, but held that the enactment of the program violated certain procedural requirements of the Ohio Constitution. *Simmons-Harris* v. *Goff*, 86 Ohio St. 3d 1, 8-9, 711 N. E. 2d 203, 211 (1999). The state legislature immediately cured this defect, leaving the basic provisions discussed above intact.

In July 1999, respondents filed this action in United States District Court, seeking to enjoin the reenacted program on the ground that it violated the Establishment Clause of the United States Constitution. In August 1999, the District Court issued a preliminary injunction barring further implementation of the program, 54 F. Supp. 2d 725 (ND Ohio), which we stayed pending review by the Court of Appeals, 528 U. S. 983 (1999). In December 1999, the District Court granted summary judgment for respondents. 72 F. Supp. 2d 834. In December 2000, a divided panel of the Court of Appeals affirmed the judgment of the District Court, finding that the program had the "primary effect" of advancing religion in violation of the Establishment Clause. 234 F. 3d 945 (CA6). The Court of Appeals stayed its mandate pending disposition in this Court. App. to Pet. for Cert. in No. 00-1779, p. 151. We granted certiorari, 533 U. S. 976 (2001), and now reverse the Court of Appeals.

The Establishment Clause of the First Amendment, applied to the States through the Fourteenth Amendment, prevents a State from enacting laws that have the "purpose" 649*649 or "effect" of advancing or inhibiting religion. *Agostini* v. *Felton*, 521 U. S. 203, 222-223 (1997) ("[W]e continue to ask whether the government acted with the purpose of advancing or inhibiting religion [and] whether the aid has the `effect' of advancing or inhibiting religion" (citations omitted)). There is no dispute that the program challenged here was enacted for the valid secular purpose of providing educational assistance to poor children in a demonstrably failing public school system. Thus, the question presented is whether the Ohio program nonetheless has the forbidden "effect" of advancing or inhibiting religion.

To answer that question, our decisions have drawn a consistent distinction between government programs that provide aid directly to religious schools, *Mitchell* v. *Helms*, 530 U. S. 793, 810-814 (2000) (plurality opinion); *id.*, at 841-844 (O'Connor, J., concurring in judgment); *Agostini*, *supra*, at 225-227; *Rosenberger* v. *Rector and Visitors of Univ. of Va.*, 515 U. S. 819, 842 (1995) (collecting cases), and programs of true private choice, in which government aid reaches religious schools only as a result of the genuine and independent choices of private individuals, *Mueller* v. *Allen*, 463 U. S. 388 (1983); *Witters* v. *Washington Dept. of Servs. for Blind*, 474 U. S. 481 (1986); *Zobrest* v. *Catalina Foothills School Dist.*, 509 U. S. 1 (1993). While our jurisprudence with respect to the constitutionality of direct aid programs has "changed significantly" over the past two decades, *Agostini*, *supra*, at 236, our jurisprudence with respect to true private choice programs has remained consistent and unbroken. Three times we have confronted Establishment Clause challenges to neutral government programs that provide aid directly to a broad class of individuals, who, in turn, direct the aid to religious schools or institutions of their own choosing. Three times we have rejected such challenges.

In *Mueller*, we rejected an Establishment Clause challenge to a Minnesota program authorizing tax deductions for various educational expenses, including private school tuition 650*650 costs, even though the great majority of the program's beneficiaries (96%) were parents of children in religious schools. We began by focusing on the class of beneficiaries, finding that because the class included "*all* parents," including parents with "children [who] attend nonsectarian private schools or sectarian private schools," 463 U. S., at 397 (emphasis in original), the program was "not readily subject to challenge under the Establishment Clause," *id.*, at 399 (citing *Widmar* v. *Vincent*, 454 U. S. 263, 274 (1981) ("The provision of benefits to so broad a spectrum of groups is an important index of secular effect")). Then, viewing the program as a whole, we emphasized the principle of private choice, noting that public funds were made available to religious schools "only as a result of numerous, private choices of individual parents of school-age children." 463 U. S., at 399-400. This, we said, ensured that "no `imprimatur of state approval' can be deemed to have been conferred on any particular religion, or on religion generally." *Id.*, at 399 (quoting *Widmar*, *supra*, at 274)). We thus found it irrelevant to the constitutional inquiry that the vast majority of beneficiaries were parents of children in religious schools, saying:

"We would be loath to adopt a rule grounding the constitutionality of a facially neutral law on annual reports reciting the extent to which various classes of private citizens claimed benefits under the law." 463 U. S., at 401.

That the program was one of true private choice, with no evidence that the State deliberately skewed incentives toward religious schools, was sufficient for the program to survive scrutiny under the Establishment Clause.

In *Witters*, we used identical reasoning to reject an Establishment Clause challenge to a vocational scholarship program that provided tuition aid to a student studying at a religious institution to become a pastor. Looking at the program as a whole, we

observed that "[a]ny aid . . .that ultimately 651*651 flows to religious institutions does so only as a result of the genuinely independent and private choices of aid recipients." 474 U. S., at 487. We further remarked that, as in *Mueller,* "[the] program is made available generally without regard to the sectarian-nonsectarian, or public-nonpublic nature of the institution benefited." 474 U. S., at 487 (internal quotation marks omitted). In light of these factors, we held that the program was not inconsistent with the Establishment Clause. *Id.,* at 488-489.

Five Members of the Court, in separate opinions, emphasized the general rule from *Mueller* that the amount of government aid channeled to religious institutions by individual aid recipients was not relevant to the constitutional inquiry. 474 U. S., at 490-491 (Powell, J., joined by Burger, C. J., and Rehnquist, J.,concurring) (citing *Mueller, supra,* at 398— 399); 474 U. S., at 493 (O'Connor, J., concurring in part and concurring in judgment); *Id.,* at 490 (White, J., concurring). Our holding thus rested not on whether few or many recipients chose to expend government aid at a religious school but, rather, on whether recipients generally were empowered to direct the aid to schools or institutions of their own choosing.

Finally, in *Zobrest,* we applied *Mueller* and *Witters* to reject an Establishment Clause challenge to a federal program that permitted sign-language interpreters to assist deaf children enrolled in religious schools. Reviewing our earlier decisions, we stated that "government programs that neutrally provide benefits to a broad class of citizens defined without reference to religion are not readily subject to an Establishment Clause challenge." 509 U. S., at 8. Looking once again to the challenged program as a whole, we observed that the program "distributes benefits neutrally to any child qualifying as `disabled.' " *Id.,* at 10. Its "primary beneficiaries," we said, were "disabled children, not sectarian schools." *Id.,* at 12.

652*652 We further observed that "[b]y according parents freedom to select a school of their choice, the statute ensures that a government-paid interpreter will be present in a sectarian school only as a result of the private decision of individual parents." *Id.,* at 10. Our focus again was on neutrality and the principle of private choice, not on the number of program beneficiaries attending religious schools. *Id.,* at 10-11. See, *e. g., Agostini,* 521 U. S., at 229 ("*Zobrest* did not turn on the fact that James Zobrest had, at the time of litigation, been the only child using a publicly funded sign-language interpreter to attend a parochial school"). Because the program ensured that parents were the ones to select a religious school as the best learning environment for their handicapped child, the circuit between government and religion was broken, and the Establishment Clause was not implicated.

Mueller, Witters, and *Zobrest* thus make clear that where a government aid program is neutral with respect to religion, and provides assistance directly to a broad class of citizens who, in turn, direct government aid to religious schools wholly as a result of their own genuine and independent private choice, the program is not readily subject to challenge under the Establishment Clause. A program that shares these features permits government aid to reach religious institutions only by way of the deliberate

choices of numerous individual recipients. The incidental advancement of a religious mission, or the perceived endorsement of a religious message, is reasonably attributable to the individual recipient, not to the government, whose role ends with the disbursement of benefits. As a plurality of this Court recently observed:

"[I]f numerous private choices, rather than the single choice of a government, determine the distribution of aid, pursuant to neutral eligibility criteria, then a government cannot, or at least cannot easily, grant special 653*653 favors that might lead to a religious establishment." *Mitchell,* 530 U. S., at 810.

See also *id.,* at 843 (O'Connor, J., concurring in judgment) ("[W]hen government aid supports a school's religious mission only because of independent decisions made by numerous individuals to guide their secular aid to that school, `no reasonable observer is likely to draw from the facts . . . an inference that the State itself is endorsing a religious practice or belief' " (quoting *Witters,* 474 U. S., at 493 (O'Connor, J., concurring in part and concurring in judgment))). It is precisely for these reasons that we have never found a program of true private choice to offend the Establishment Clause.

We believe that the program challenged here is a program of true private choice, consistent with *Mueller, Witters,* and *Zobrest,* and thus constitutional. As was true in those cases, the Ohio program is neutral in all respects toward religion. It is part of a general and multifaceted undertaking by the State of Ohio to provide educational opportunities to the children of a failed school district. It confers educational assistance directly to a broad class of individuals defined without reference to religion, *i. e.,* any parent of a school-age child who resides in the Cleveland City School District. The program permits the participation of *all* schools within the district, religious or nonreligious. Adjacent public schools also may participate and have a financial incentive to do so. Program benefits are available to participating families on neutral terms, with no reference to religion. The only preference stated anywhere in the program is a preference for low-income families, who receive greater assistance and are given priority for admission at participating schools.

There are no "financial incentive[s]" that "ske[w]" the program toward religious schools. *Witters, supra,* at 487-488. Such incentives "[are] not present . . . where the aid is allocated on the basis of neutral, secular criteria that neither favor nor disfavor religion, and is made available to both religious 654*654 and secular beneficiaries on a nondiscriminatory basis." *Agostini, supra,* at 231. The program here in fact creates financial *dis* incentives for religious schools, with private schools receiving only half the government assistance given to community schools and one-third the assistance given to magnet schools. Adjacent public schools, should any choose to accept program students, are also eligible to receive two to three times the state funding of a private religious school. Families too have a financial disincentive to choose a private religious school over other schools. Parents that choose to participate in the scholarship program and then to enroll their children in a private school (religious or nonreligious) must copay a portion of the school's tuition. Families that choose a community school, magnet school, or traditional public school pay nothing. Although such features of the program

are not necessary to its constitutionality, they clearly dispel the claim that the program "creates . . . financial incentive[s] for parents to choose a sectarian school." *Zobrest*, 509 U. S., at 10.[3]

Respondents suggest that even without a financial incentive for parents to choose a religious school, the program creates a "public perception that the State is endorsing religious practices and beliefs." Brief for Respondents Simmons-Harris et al. 37-38. But we have repeatedly recognized 655*655 that no reasonable observer would think a neutral program of private choice, where state aid reaches religious schools solely as a result of the numerous independent decisions of private individuals, carries with it the *imprimatur* of government endorsement. *Mueller*, 463 U. S., at 399; *Witters*, *supra*, at 488-489; *Zobrest*, *supra*, at 10-11; *e. g.*, *Mitchell*, *supra*, at 842-843 (O'Connor, J., concurring in judgment) ("In terms of public perception, a government program of direct aid to religious schools . . . differs meaningfully from the government distributing aid directly to individual students who, in turn, decide to use the aid at the same religious schools"). The argument is particularly misplaced here since "the reasonable observer in the endorsement inquiry must be deemed aware" of the "history and context" underlying a challenged program. *Good News Club* v. *Milford Central School*, 533 U. S. 98, 119 (2001) (internal quotation marks omitted). See also *Capitol Square Review and Advisory Bd.* v. *Pinette*, 515 U. S. 753, 780 (1995) (O'Connor, J., concurring in part and concurring in judgment). Any objective observer familiar with the full history and context of the Ohio program would reasonably view it as one aspect of a broader undertaking to assist poor children in failed schools, not as an endorsement of religious schooling in general.

There also is no evidence that the program fails to provide genuine opportunities for Cleveland parents to select secular educational options for their school-age children. Cleveland schoolchildren enjoy a range of educational choices: They may remain in public school as before, remain in public school with publicly funded tutoring aid, obtain a scholarship and choose a religious school, obtain a scholarship and choose a nonreligious private school, enroll in a community school, or enroll in a magnet school. That 46 of the 56 private schools now participating in the program are religious schools does not condemn it as a violation of the Establishment Clause. The Establishment Clause question is whether Ohio is coercing 656*656 parents into sending their children to religious schools, and that question must be answered by evaluating *all* options Ohio provides Cleveland schoolchildren, only one of which is to obtain a program scholarship and then choose a religious school.

Justice Souter speculates that because more private religious schools currently participate in the program, the program itself must somehow discourage the participation of private nonreligious schools. *Post*, at 703-705 (dissenting opinion).[4] But Cleveland's preponderance of religiously affiliated 657*657 private schools certainly did not arise as a result of the program; it is a phenomenon common to many American cities. See U. S. Dept. of Ed., National Center for Education Statistics, Private School Universe Survey: 1999-2000, pp. 2-4 (NCES 2001-330, 2001) (hereinafter Private School Universe Survey) (cited in Brief for United States as *Amicus Curiae* 24). Indeed,

by all accounts the program has captured a remarkable cross-section of private schools, religious and nonreligious. It is true that 82% of Cleveland's participating private schools are religious schools, but it is also true that 81% of private schools in Ohio are religious schools. See Brief for State of Florida et al. as *Amici Curiae* 16 (citing Private School Universe Survey). To attribute constitutional significance to this figure, moreover, would lead to the absurd result that a neutral school-choice program might be permissible in some parts of Ohio, such as Columbus, where a lower percentage of private schools are religious schools, see Ohio Educational Directory (Lodging of Respondents Gatton et al., available in Clerk of Court's case file), and Reply Brief for Petitioners in No. 00-1751, p. 12, n. 1, but not in inner-city Cleveland, where Ohio has deemed such programs most sorely needed, but where the preponderance of religious schools happens to be greater. Cf. Brief for State of Florida et al. as *Amici Curiae* 17 ("[T]he percentages of sectarian to nonsectarian private schools within Florida's 67 school districts . . . vary from zero to 100 percent"). Likewise, an identical private choice program might be constitutional in some States, such as Maine or Utah, where less 658*658 than 45% of private schools are religious schools, but not in other States, such as Nebraska or Kansas, where over 90% of private schools are religious schools. *Id.,* at 15-16 (citing Private School Universe Survey).

Respondents and Justice Souter claim that even if we do not focus on the number of participating schools that are religious schools, we should attach constitutional significance to the fact that 96% of scholarship recipients have enrolled in religious schools. They claim that this alone proves parents lack genuine choice, even if no parent has ever said so. We need not consider this argument in detail, since it was flatly rejected in *Mueller,* where we found it irrelevant that 96% of parents taking deductions for tuition expenses paid tuition at religious schools. Indeed, we have recently found it irrelevant even to the constitutionality of a direct aid program that a vast majority of program benefits went to religious schools. See *Agostini,* 521 U. S., at 229 ("Nor are we willing to conclude that the constitutionality of an aid program depends on the number of sectarian school students who happen to receive the otherwise neutral aid" (citing *Mueller,* 463 U. S., at 401)); see also *Mitchell,* 530 U. S., at 812, n. 6 (plurality opinion) ("*[Agostini]* held that the proportion of aid benefiting students at religious schools pursuant to a neutral program involving private choices was irrelevant to the constitutional inquiry"); *id.,* at 848 (O'Connor, J., concurring in judgment) (same) (quoting *Agostini, supra,* at 229). The constitutionality of a neutral educational aid program simply does not turn on whether and why, in a particular area, at a particular time, most private schools are run by religious organizations, or most recipients choose to use the aid at a religious school. As we said in *Mueller,* "[s]uch an approach would scarcely provide the certainty that this field stands in need of, nor can we perceive principled standards by which such statistical evidence might be evaluated." 463 U. S., at 401.

659*659 This point is aptly illustrated here. The 96% figure upon which respondents and Justice Souter rely discounts entirely (1) the more than 1,900 Cleveland children enrolled in alternative community schools, (2) the more than 13,000 children enrolled in alternative magnet schools, and (3) the more than 1,400 children enrolled in traditional

public schools with tutorial assistance. See *supra,* at 647-648. Including some or all of these children in the denominator of children enrolled in nontraditional schools during the 1999— 2000 school year drops the percentage enrolled in religious schools from 96% to under 20%. See also J. Greene, The Racial, Economic, and Religious Context of Parental Choice in Cleveland 11, Table 4 (Oct. 8, 1999), App. 217a (reporting that only 16.5% of nontraditional schoolchildren in Cleveland choose religious schools). The 96% figure also represents but a snapshot of one particular school year. In the 1997— 1998 school year, by contrast, only 78% of scholarship recipients attended religious schools. See App. to Pet. for Cert. in No. 00-1751, p. 5a. The difference was attributable to two private nonreligious schools that had accepted 15% of all scholarship students electing instead to register as community schools, in light of larger per-pupil funding for community schools and the uncertain future of the scholarship program generated by this litigation. See App. 59a—62a, 209a, 223a—227a.[5] Many of the students enrolled in these schools 660*660 as scholarship students remained enrolled as community school students, *id.,* at 145a—146a, thus demonstrating the arbitrariness of counting one type of school but not the other to assess primary effect, *e. g.,* Ohio Rev. Code Ann. § 3314.11 (Anderson 1999) (establishing a single "office of school options" to "provide services that facilitate the management of the community schools program and the pilot project scholarship program"). In spite of repeated questioning from the Court at oral argument, respondents offered no convincing justification for their approach, which relies entirely on such arbitrary classifications. Tr. of Oral Arg. 52-60.[6]

661*661 Respondents finally claim that we should look to *Committee for Public Ed. & Religious Liberty* v. *Nyquist,* 413 U. S. 756 (1973), to decide these cases. We disagree for two reasons. First, the program in *Nyquist* was quite different from the program challenged here. *Nyquist* involved a New York program that gave a package of benefits exclusively to private schools and the parents of private school enrollees. Although the program was enacted for ostensibly secular purposes, *id.,* at 773-774, we found that its "function" was "*unmistakably* to provide desired financial support for nonpublic, sectarian institutions," *id.,* at 783 (emphasis added). Its genesis, we said, was that private religious schools faced "increasingly grave fiscal problems." *Id.,* at 795. The program thus provided direct money grants to religious schools. *Id.,* at 762-764. It provided tax benefits "unrelated to the amount of money actually expended by any parent on tuition," ensuring a windfall to parents of children in religious schools. *Id.,* at 790. It similarly provided tuition reimbursements designed explicitly to "offe[r] . . . an incentive to parents to send their children to sectarian schools." *Id.,* at 786. Indeed, the program flatly prohibited the participation of any public school, or parent of any public school enrollee. *Id.,* at 763-765. Ohio's program shares none of these features.

Second, were there any doubt that the program challenged in *Nyquist* is far removed from the program challenged here, we expressly reserved judgment with respect to "a case involving some form of public assistance (*e. g.,* scholarships) made available generally without regard to the sectariannonsectarian, or public-nonpublic nature of the institution benefited." *Id.,* at 782-783, n. 38. That, of course, is the very question now before us, and it has since been answered, first in *Mueller,* 463 U. S., at 398-399 ("[A] program . . . that neutrally provides state assistance to a broad spectrum of citizens is

not readily subject to challenge under the Establishment Clause" (citing *Nyquist, supra,* at 782-783, n. 38)), 662*662 then in *Witters,* 474 U. S., at 487 ("Washington's program is `made available generally without regard to the sectariannonsectarian, or public-nonpublic nature of the institution benefited' " (quoting *Nyquist, supra,* at 782-783, n. 38)), and again in *Zobrest,* 509 U. S., at 12-13 ("[T]he function of the [program] is hardly `to provide desired financial support for nonpublic, sectarian institutions' " (quoting *Nyquist, supra,* at 782-783, n. 38)). To the extent the scope of *Nyquist* has remained an open question in light of these later decisions, we now hold that *Nyquist* does not govern neutral educational assistance programs that, like the program here, offer aid directly to a broad class of individual recipients defined without regard to religion.[7]

In sum, the Ohio program is entirely neutral with respect to religion. It provides benefits directly to a wide spectrum of individuals, defined only by financial need and residence in a particular school district. It permits such individuals to exercise genuine choice among options public and private, secular and religious. The program is therefore a program of true private choice. In keeping with an unbroken line of 663*663 decisions rejecting challenges to similar programs, we hold that the program does not offend the Establishment Clause.

The judgment of the Court of Appeals is reversed.

It is so ordered.

Justice O'Connor, concurring.

The Court holds that Ohio's Pilot Project Scholarship Program, Ohio Rev. Code Ann. §§ 3313.974-3313.979 (Anderson 1999 and Supp. 2000) (voucher program), survives respondents' Establishment Clause challenge. While I join the Court's opinion, I write separately for two reasons. First, although the Court takes an important step, I do not believe that today's decision, when considered in light of other longstanding government programs that impact religious organizations and our prior Establishment Clause jurisprudence, marks a dramatic break from the past. Second, given the emphasis the Court places on verifying that parents of voucher students in religious schools have exercised "true private choice," I think it is worth elaborating on the Court's conclusion that this inquiry should consider all reasonable educational alternatives to religious schools that are available to parents. To do otherwise is to ignore how the educational system in Cleveland actually functions.

I

These cases are different from prior indirect aid cases in part because a significant portion of the funds appropriated for the voucher program reach religious schools without restrictions on the use of these funds. The share of public resources that reach religious schools is not, however, as significant as respondents suggest. See, *e. g.,* Brief for Respondents Simmons-Harris et al. 1-2. Data from the 1999-2000 school year indicate that 82 percent of schools participating in the voucher program were religious

and that 96 percent of participating students enrolled in religious 664*664 schools, see App. in Nos. 00-3055, etc. (CA6), p. 1679 (46 of 56 private schools in the program are religiously affiliated; 3,637 of 3,765 voucher students attend religious private schools), but these data are incomplete. These statistics do not take into account all of the reasonable educational choices that may be available to students in Cleveland public schools. When one considers the option to attend community schools, the percentage of students enrolled in religious schools falls to 62.1 percent. If magnet schools are included in the mix, this percentage falls to 16.5 percent. See J. Greene, The Racial, Economic, and Religious Context of Parental Choice in Cleveland 11, Table 4 (Oct. 8, 1999), App. 217a (reporting 2,087 students in community schools and 16,184 students in magnet schools).

Even these numbers do not paint a complete picture. The Cleveland program provides voucher applicants from lowincome families with up to $2,250 in tuition assistance and provides the remaining applicants with up to $1,875 in tuition assistance. §§ 3313.976(A)(8), 3313.978(A) and (C)(1). In contrast, the State provides community schools $4,518 per pupil and magnet schools, on average, $7,097 per pupil. Affidavit of Caroline M. Hoxby ¶¶ 4b, 4c, App. 56a. Even if one assumes that all voucher students came from low-income families and that each voucher student used up the entire $2,250 voucher, at most $8.2 million of public funds flowed to religious schools under the voucher program in 1999-2000. Although just over one-half as many students attended community schools as religious private schools on the state fisc, the State spent over $1 million more—$9.4 million—on students in community schools than on students in religious private schools because per-pupil aid to community schools is more than double the per-pupil aid to private schools under the voucher program. Moreover, the amount spent on religious private schools is minor compared to the $114.8 million the State spent on students in the Cleveland magnet schools.

665*665 Although $8.2 million is no small sum, it pales in comparison to the amount of funds that federal, state, and local governments already provide religious institutions. Religious organizations may qualify for exemptions from the federal corporate income tax, see 26 U. S. C. § 501(c)(3); the corporate income tax in many States, see, *e. g.,* Cal. Rev. & Tax. Code Ann. § 23701d (West 1992); and property taxes in all 50 States, see Turner, Property Tax Exemptions for Nonprofits, 12 Probate & Property 25 (Sept./Oct. 1998); and clergy qualify for a federal tax break on income used for housing expenses, 26 U. S. C. § 1402(a)(8). In addition, the Federal Government provides individuals, corporations, trusts, and estates a tax deduction for charitable contributions to qualified religious groups. See §§ 170, 642(c). Finally, the Federal Government and certain state governments provide tax credits for educational expenses, many of which are spent on education at religious schools. See, *e. g.,* § 25A (Hope tax credit); Minn. Stat. § 290.0674 (Supp. 2001).

Most of these tax policies are well established, see, *e. g.,* *Mueller* v. *Allen,* 463 U. S. 388 (1983) (upholding Minnesota tax deduction for educational expenses); *Walz* v. *Tax Comm'n of City of New York,* 397 U. S. 664 (1970) (upholding an exemption for religious organizations from New York property tax), yet confer a significant relative

benefit on religious institutions. The state property tax exemptions for religious institutions alone amount to very large sums annually. For example, available data suggest that Colorado's exemption lowers that State's tax revenues by more than $40 million annually, see Rabey, Exemptions a Matter of Faith: No Proof Required of Tax-Free Churches, Colorado Springs Gazette Telegraph, Oct. 26, 1992, p. B1; Colorado Debates Church, Nonprofit Tax-Exempt Status, Philadelphia Enquirer, Oct. 4, 1996, p. 8; Maryland's exemption lowers revenues by more than $60 million, see Maryland Dept. of Assessment and Taxation, 2001 SDAT Annual Report (Apr. 25, 2002), http://www.dat.state.md.us/sdatweb/stats/ 666*666 01ar_rpt.html (Internet sources available in Clerk of Court's case file); Wisconsin's exemption lowers revenues by approximately $122 million, see Wisconsin Dept. of Revenue, Division of Research and Analysis, Summary of Tax Exemption Devices 2001, Property Tax (Apr. 25, 2002), http://www.dor. state.wi.us/ra/sum00pro.html ($5.688 billion in exempt religious property; statewide average property tax rate of $21.46 per $1,000 of property); and Louisiana's exemption, looking just at the city of New Orleans, lowers revenues by over $36 million, see Bureau of Governmental Research, Property Tax Exemptions and Assessment Administration in Orleans Parish: Summary and Recommendations 2 (Dec. 1999) ($22.6 million for houses of worship and $14.1 million for religious schools). As for the Federal Government, the tax deduction for charitable contributions reduces federal tax revenues by nearly $25 billion annually, see U. S. Dept. of Commerce, Bureau of Census, Statistical Abstract of the United States 344 (2000) (hereinafter Statistical Abstract), and it is reported that over 60 percent of household charitable contributions go to religious charities, *id.,* at 397. Even the relatively minor exemptions lower federal tax receipts by substantial amounts. The parsonage exemption, for example, lowers revenues by around $500 million. See Diaz, Ramstad Prepares Bill to Retain Tax Break for Clergy's Housing, Star Tribune (Minneapolis-St. Paul), Mar. 30, 2002, p. 4A.

These tax exemptions, which have "much the same effect as [cash grants] . . . of the amount of tax [avoided]," *Regan* v. *Taxation With Representation of Wash.*, 461 U. S. 540, 544 (1983); see also *Rosenberger* v. *Rector and Visitors of Univ. of Va.*, 515 U. S. 819, 859-860, esp. n. 4 (1995) (Thomas, J., concurring), are just part of the picture. Federal dollars also reach religiously affiliated organizations through public health programs such as Medicare, 42 U. S. C. §§ 1395— 1395ggg, and Medicaid, § 1396 *et seq.,* through educational programs such as the Pell Grant program, 20 U. S. C. § 1070a, and the G. I. Bill of Rights, 38 U. S. C. §§ 3451, 3698; and 667*667 through childcare programs such as the Child Care and Development Block Grant Program (CCDBG), 42 U. S. C. § 9858 (1994 ed., Supp. V). Medicare and Medicaid provide federal funds to pay for the healthcare of the elderly and the poor, respectively, see 1 B. Furrow, T. Greaney, S. Johnson, T. Jost, & R. Schwartz, Health Law 545-546 (2d ed. 2000); 2 *id.,* at 2; the Pell Grant program and the G. I. Bill subsidize higher education of low-income individuals and veterans, respectively, see Mulleneaux, The Failure to Provide Adequate Higher Education Tax Incentives for Lower-Income Individuals, 14 Akron Tax J. 27, 31 (1999); and the CCDBG program finances child care for low-income parents, see Pitegoff, Child Care Policy and the Welfare Reform Act, 6 J. Affordable Housing & Community Dev. L. 113, 121-122 (1997). These programs are well-

established parts of our social welfare system, see, *e. g.,* Committee for Public Ed. & Religious Liberty v. Nyquist, 413 U. S. 756, 782-783, n. 38 (1973), and can be quite substantial, see Statistical Abstract 92 (Table 120) ($211.4 billion spent on Medicare and nearly $176.9 billion on Medicaid in 1998), *id.,* at 135 (Table 208) ($9.1 billion in financial aid provided by the Department of Education and $280.5 million by the Department of Defense in 1999); Bush On Welfare: Tougher Work Rules, More State Control, Congress Daily, Feb. 26, 2002, p. 8 ($4.8 billion for the CCDBG program in 2001).

A significant portion of the funds appropriated for these programs reach religiously affiliated institutions, typically without restrictions on its subsequent use. For example, it has been reported that religious hospitals, which account for 18 percent of all hospital beds nationwide, rely on Medicare funds for 36 percent of their revenue. MergerWatch, New Study Details Public Funding of Religious Hospitals (Jan. 2002), http://www.mergerwatch.org/inthenews/ publicfunding.html. Moreover, taking into account both Medicare and Medicaid, religious hospitals received nearly $45 billion from the federal fisc in 1998. *Ibid.* Federal aid 668*668 to religious schools is also substantial. Although data for all States are not available, data from Minnesota, for example, suggest that a substantial share of Pell Grant and other federal funds for college tuition reach religious schools. Roughly one-third or $27.1 million of the federal tuition dollars spent on students at schools in Minnesota were used at private 4-year colleges. Minnesota Higher Education Services Office, Financial Aid Awarded, Fiscal Year 1999: Grants, Loans, and Student Earning from Institution Jobs (Jan. 24, 2001). The vast majority of these funds—$23.5 million— flowed to religiously affiliated institutions. *Ibid.*

Against this background, the support that the Cleveland voucher program provides religious institutions is neither substantial nor atypical of existing government programs. While this observation is not intended to justify the Cleveland voucher program under the Establishment Clause, see *post,* at 709-710, n. 19 (Souter, J., dissenting), it places in broader perspective alarmist claims about implications of the Cleveland program and the Court's decision in these cases. See *post,* at 685-686 (Stevens, J., dissenting); *post,* at 715-716 (Souter, J., dissenting); *post,* p. 717 (Breyer, J., dissenting).

II

Nor does today's decision signal a major departure from this Court's prior Establishment Clause jurisprudence. A central tool in our analysis of cases in this area has been the *Lemon* test. As originally formulated, a statute passed this test only if it had "a secular legislative purpose," if its "principal or primary effect" was one that "neither advance[d] nor inhibit[ed] religion," and if it did "not foster an excessive government entanglement with religion." Lemon v. Kurtzman, 403 U. S. 602, 612-613 (1971) (internal quotation marks omitted). In Agostini v. Felton, 521 U. S. 203, 218, 232-233 (1997), we folded the entanglement inquiry into the primary effect inquiry. This made sense because both inquiries rely on the same evidence, see *ibid.,* and the degree of entanglement 669*669 has implications for whether a statute advances or inhibits religion, see Lynch v.

Donnelly, 465 U. S. 668, 688 (1984) (O'Connor, J., concurring). The test today is basically the same as that set forth in *School Dist. of Abington Township* v. *Schempp*, 374 U. S. 203, 222 (1963) (citing *Everson* v. *Board of Ed. of Ewing*, 330 U. S. 1 (1947); *McGowan* v. *Maryland*, 366 U. S. 420, 442 (1961)), over 40 years ago.

The Court's opinion in these cases focuses on a narrow question related to the *Lemon* test: how to apply the primary effects prong in indirect aid cases? Specifically, it clarifies the basic inquiry when trying to determine whether a program that distributes aid to beneficiaries, rather than directly to service providers, has the primary effect of advancing or inhibiting religion, *Lemon* v. *Kurtzman*, *supra*, at 613-614, or, as I have put it, of "endors[ing] or disapprov[ing] . . . religion," *Lynch* v. *Donnelly*, *supra*, at 691-692 (concurring opinion); see also *Wallace* v. *Jaffree*, 472 U. S. 38, 69-70 (1985) (O'Connor, J., concurring in judgment). See also *ante,* at 652. Courts are instructed to consider two factors: first, whether the program administers aid in a neutral fashion, without differentiation based on the religious status of beneficiaries or providers of services; second, and more importantly, whether beneficiaries of indirect aid have a genuine choice among religious and nonreligious organizations when determining the organization to which they will direct that aid. If the answer to either query is "no," the program should be struck down under the Establishment Clause. See *ante,* at 652-653.

Justice Souter portrays this inquiry as a departure from *Everson*. See *post,* at 687-688 (dissenting opinion). A fair reading of the holding in that case suggests quite the opposite. Justice Black's opinion for the Court held that the "[First] Amendment requires the state to be a neutral in its relations with groups of religious believers and nonbelievers; it does not require the state to be their adversary." *Everson*, *supra*, at 18; see also *Schempp*, *supra*, at 218, 222. 670*670 How else could the Court have upheld a state program to provide students transportation to public and religious schools alike? What the Court clarifies in these cases is that the Establishment Clause also requires that state aid flowing to religious organizations through the hands of beneficiaries must do so only at the direction of those beneficiaries. Such a refinement of the *Lemon* test surely does not betray *Everson*.

III

There is little question in my mind that the Cleveland voucher program is neutral as between religious schools and nonreligious schools. See *ante,* at 653-654. Justice Souter rejects the Court's notion of neutrality, proposing that the neutrality of a program should be gauged not by the opportunities it presents but rather by its effects. In particular, a "neutrality test . . . [should] focus on a category of aid that may be directed to religious as well as secular schools, and ask whether the scheme favors a religious direction." *Post,* at 697 (dissenting opinion). Justice Souter doubts that the Cleveland program is neutral under this view. He surmises that the cap on tuition that voucher schools may charge low-income students encourages these students to attend religious rather than nonreligious private voucher schools. See *post,* at 704-705. But Justice Souter's notion of neutrality is inconsistent with that in our case law. As we put it in

Agostini, government aid must be "made available to both religious and secular beneficiaries on a nondiscriminatory basis." 521 U. S., at 231.

I do not agree that the nonreligious schools have failed to provide Cleveland parents reasonable alternatives to religious schools in the voucher program. For nonreligious schools to qualify as genuine options for parents, they need not be superior to religious schools in every respect. They need only be adequate substitutes for religious schools in the eyes of parents. The District Court record demonstrates that nonreligious schools were able to compete effectively 671*671 with Catholic and other religious schools in the Cleveland voucher program. See *ante,* at 656-657, n. 4. The best evidence of this is that many parents with vouchers selected nonreligious private schools over religious alternatives and an even larger number of parents send their children to community and magnet schools rather than seeking vouchers at all. *Supra,* at 663-664. Moreover, there is no record evidence that any voucher-eligible student was turned away from a nonreligious private school in the voucher program, let alone a community or magnet school. See 234 F. 3d 945, 969 (CA6 2000) (Ryan, J., concurring in part and dissenting in part); Affidavit of David L. Brennan ¶ 8, App. 147a.

To support his hunch about the effect of the cap on tuition under the voucher program, Justice Souter cites national data to suggest that, on average, Catholic schools have a cost advantage over other types of schools. See *post,* at 705-706, n. 15 (dissenting opinion). Even if national statistics were relevant for evaluating the Cleveland program, Justice Souter ignores evidence which suggests that, at a national level, nonreligious private schools may target a market for a different, if not a higher, quality of education. For example, nonreligious private schools are smaller, see U. S. Dept. of Ed., National Center for Education Statistics, Private School Universe Survey, 1997-1998 (Oct. 1999) (Table 60) (87 and 269 students per private nonreligious and Catholic elementary school, respectively); have smaller class sizes, see *ibid.* (9.4 and 18.8 students per teacher at private nonreligious and Catholic elementary schools, respectively); have more highly educated teachers, see U. S. Dept. of Ed., National Center for Education Statistics, Private Schools in the United States: A Statistical Profile, 1993-1994 (NCES 97-459, July 1997) (Table 3.4) (37.9 percent of nonreligious private school teachers but only 29.9 percent of Catholic school teachers have Master's degrees); and have principals with longer job tenure than Catholic schools, see *ibid.* (Table 3.7) (average tenure 672*672 of principals at private nonreligious and Catholic schools is 8.2 and 4.7 years, respectively).

Additionally, Justice Souter's theory that the Cleveland voucher program's cap on the tuition encourages low-income students to attend religious schools ignores that these students receive nearly double the amount of tuition assistance under the community schools program than under the voucher program and that none of the community schools is religious. See *ante,* at 647.

In my view the more significant finding in these cases is that Cleveland parents who use vouchers to send their children to religious private schools do so as a result of true private choice. The Court rejects, correctly, the notion that the high percentage of

voucher recipients who enroll in religious private schools necessarily demonstrates that parents do not actually have the option to send their children to nonreligious schools. *Ante,* at 656-660. Likewise, the mere fact that some parents enrolled their children in religious schools associated with a different faith than their own, see *post,* at 704 (Souter, J., dissenting), says little about whether these parents had reasonable nonreligious options. Indeed, no voucher student has been known to be turned away from a nonreligious private school participating in the voucher program. *Supra* this page. This is impressive given evidence in the record that the present litigation has discouraged the entry of some nonreligious private schools into the voucher program. Declaration of David P. Zanotti ¶¶ 5, 10, App. 225a, 227a. Finally, as demonstrated above, the Cleveland program does not establish financial incentives to undertake a religious education.

I find the Court's answer to the question whether parents of students eligible for vouchers have a genuine choice between religious and nonreligious schools persuasive. In looking at the voucher program, all the choices available to potential beneficiaries of the government program should be considered. In these cases, parents who were eligible to 673*673 apply for a voucher also had the option, at a minimum, to send their children to community schools. Yet the Court of Appeals chose not to look at community schools, let alone magnet schools, when evaluating the Cleveland voucher program. See 234 F. 3d, at 958. That decision was incorrect. Focusing in these cases only on the program challenged by respondents ignores how the educational system in Cleveland actually functions. The record indicates that, in 1999, two nonreligious private schools that had previously served 15 percent of the students in the voucher program were prompted to convert to community schools because parents were concerned about the litigation surrounding the program, and because a new community schools program provided more per-pupil financial aid. Many of the students that enrolled in the two schools under the voucher program transferred to the community schools program and continued to attend these schools. See Affidavit of David L. Brennan ¶¶ 3, 10, App. 145a, 147a; Declaration of David P. Zanotti ¶¶ 4-10, *id.,* at 225a—227a. This incident provides strong evidence that both parents and nonreligious schools view the voucher program and the community schools program as reasonable alternatives.

Considering all the educational options available to parents whose children are eligible for vouchers, including community and magnet schools, the Court finds that parents in the Cleveland schools have an array of nonreligious options. *Ante,* at 655. Not surprisingly, respondents present no evidence that any students who were candidates for a voucher were denied slots in a community school or a magnet school. Indeed, the record suggests the opposite with respect to community schools. See Affidavit of David L. Brennan ¶ 8, App. 147a.

Justice Souter nonetheless claims that, of the 10 community schools operating in Cleveland during the 1999-2000 school year, 4 were unavailable to students with vouchers and 4 others reported poor test scores. See *post,* at 702— 674*674 703, n. 10 (dissenting opinion). But that analysis unreasonably limits the choices available to Cleveland parents. It is undisputed that Cleveland's 24 magnet schools are reasonable

alternatives to voucher schools. See *post,* at 701— 702, n. 9 (Souter, J., dissenting); http://www.cmsdnet.net/ administration/EducationalServices/magnet.htm (June 20, 2002). And of the four community schools Justice Souter claims are unavailable to voucher students, he is correct only about one (Life Skills Center of Cleveland). Affidavit of Steven M. Puckett ¶ 12, App. 162a. Justice Souter rejects the three other community schools (Horizon Science Academy, Cleveland Alternative Learning, and International Preparatory School) because they did not offer primary school classes, were targeted toward poor students or students with disciplinary or academic problems, or were not in operation for a year. See *post,* at 702-703, n. 10. But a community school need not offer primary school classes to be an alternative to religious middle schools, and catering to impoverished or otherwise challenged students may make a school more attractive to certain inner-city parents. Moreover, the one community school that was closed in 1999— 2000 was merely looking for a new location and was operational in other years. See Affidavit of Steven M. Puckett ¶ 12, App. 162a; Ohio Dept. of Ed., Office of School Options, Community Schools, Ohio's Community School Directory (June 22, 2002), http://www.ode.state.oh.us/community_ schools/community_school_directory/default.asp. Two more community schools were scheduled to open after the 1999— 2000 school year. See Affidavit of Steven M. Puckett ¶ 13, App. 163a.

Of the six community schools that Justice Souter admits as alternatives to the voucher program in 1999-2000, he notes that four (the Broadway, Cathedral, Chapelside, and Lincoln Park campuses of the Hope Academy) reported lower test scores than public schools during the school year *after* the District Court's grant of summary judgment to respondents, 675*675 according to report cards prepared by the Ohio Department of Education. See *post,* at 702-703, n. 10 (dissenting opinion). (One, Old Brooklyn Montessori School, performed better than public schools. *Ibid.;* see also Ohio Dept. of Ed., 2001 Community School Report Card, Old Brooklyn Montessori School 5 (community school scored higher than public schools in four of five subjects in 1999— 2000).) These report cards underestimate the value of the four Hope Academy schools. Before they entered the community school program, two of them participated in the voucher program. Although they received far less state funding in that capacity, they had among the highest rates of parental satisfaction of all voucher schools, religious or nonreligious. See P. Peterson, W. Howell, & J. Greene, An Evaluation of the Cleveland Voucher Program after Two Years 6, Table 4 (June 1999) (hereinafter Peterson). This is particularly impressive given that a Harvard University study found that the Hope Academy schools attracted the "poorest and most educationally disadvantaged students." J. Greene, W. Howell, P. Peterson, Lessons from the Cleveland Scholarship Program 22, 24 (Oct. 15, 1997). Moreover, Justice Souter's evaluation of the Hope Academy schools assumes that the only relevant measure of school quality is academic performance. It is reasonable to suppose, however, that parents in the inner city also choose schools that provide discipline and a safe environment for their children. On these dimensions some of the schools that Justice Souter derides have performed quite ably. See Peterson, Table 7.

Ultimately, Justice Souter relies on very narrow data to draw rather broad conclusions. One year of poor test scores at four community schools targeted at the most challenged students from the inner city says little about the value of those schools, let alone the quality of the 6 other community schools and 24 magnet schools in Cleveland. Justice Souter's use of statistics confirms the Court's wisdom in refusing 676*676 to consider them when assessing the Cleveland program's constitutionality. See *ante,* at 658. What appears to motivate Justice Souter's analysis is a desire for a limiting principle to rule out certain nonreligious schools as alternatives to religious schools in the voucher program. See *post,* at 700, 701-702, n. 9 (dissenting opinion). But the goal of the Court's Establishment Clause jurisprudence is to determine whether, after the Cleveland voucher program was enacted, parents were free to direct state educational aid in either a nonreligious or religious direction. See *ante,* at 655-656. That inquiry requires an evaluation of all reasonable educational options Ohio provides the Cleveland school system, regardless of whether they are formally made available in the same section of the Ohio Code as the voucher program.

Based on the reasoning in the Court's opinion, which is consistent with the realities of the Cleveland educational system, I am persuaded that the Cleveland voucher program affords parents of eligible children genuine nonreligious options and is consistent with the Establishment Clause.

Justice Thomas, concurring.

Frederick Douglass once said that "[e]ducation . . . means emancipation. It means light and liberty. It means the uplifting of the soul of man into the glorious light of truth, the light by which men can only be made free."[1] Today many of our inner-city public schools deny emancipation to urban minority students. Despite this Court's observation nearly 50 years ago in *Brown* v. *Board of Education,* 347 U. S. 483, 493 (1954), that "it is doubtful that any child may reasonably be expected to succeed in life if he is denied the opportunity of an education," urban children have been forced into a system that continually fails them. These cases present an 677*677 example of such failures. Besieged by escalating financial problems and declining academic achievement, the Cleveland City School District was in the midst of an academic emergency when Ohio enacted its scholarship program.

The dissents and respondents wish to invoke the Establishment Clause of the First Amendment, as incorporated through the Fourteenth, to constrain a State's neutral efforts to provide greater educational opportunity for underprivileged minority students. Today's decision properly upholds the program as constitutional, and I join it in full.

I

This Court has often considered whether efforts to provide children with the best educational resources conflict with constitutional limitations. Attempts to provide aid to religious schools or to allow some degree of religious involvement in public schools have generated significant controversy and litigation as States try to navigate the line

between the secular and the religious in education. See generally *Illinois ex rel. McCollum* v. *Board of Ed. of School Dist. No. 71, Champaign Cty.*, 333 U. S. 203, 237-238 (1948) (Jackson, J., concurring) (noting that the Constitution does not tell judges "where the secular ends and the sectarian begins in education"). We have recently decided several cases challenging federal aid programs that include religious schools. See, *e. g.*, *Mitchell* v. *Helms*, 530 U. S. 793 (2000); *Agostini* v. *Felton*, 521 U. S. 203 (1997). To determine whether a federal program survives scrutiny under the Establishment Clause, we have considered whether it has a secular purpose and whether it has the primary effect of advancing or inhibiting religion. See *Mitchell*, *supra*, at 807-808. I agree with the Court that Ohio's program easily passes muster under our stringent test, but, as a matter of first principles, I question whether this test should be applied to the States.

678*678 The Establishment Clause of the First Amendment states that "Congress shall make no law respecting an establishment of religion." On its face, this provision places no limit on the States with regard to religion. The Establishment Clause originally protected States, and by extension their citizens, from the imposition of an established religion by the Federal Government.[2] Whether and how this Clause should constrain state action under the Fourteenth Amendment is a more difficult question.

The Fourteenth Amendment fundamentally restructured the relationship between individuals and the States and ensured that States would not deprive citizens of liberty without due process of law. It guarantees citizenship to all individuals born or naturalized in the United States and provides that "[n]o State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws." As Justice Harlan noted, the Fourteenth Amendment "added greatly to the dignity and glory of American citizenship, and to the security of personal liberty." *Plessy* v. *Ferguson*, 163 U. S. 537, 555 (1896) (dissenting opinion). When rights are incorporated against the States through the Fourteenth Amendment they should advance, not constrain, individual liberty.

Consequently, in the context of the Establishment Clause, it may well be that state action should be evaluated on different terms than similar action by the Federal Government. "States, while bound to observe strict neutrality, should be freer to experiment with involvement [in religion]—on a neutral 679*679 basis—than the Federal Government." *Walz* v. *Tax Comm'n of City of New York*, 397 U. S. 664, 699 (1970) (Harlan, J., concurring). Thus, while the Federal Government may "make no law respecting an establishment of religion," the States may pass laws that include or touch on religious matters so long as these laws do not impede free exercise rights or any other individual religious liberty interest. By considering the particular religious liberty right alleged to be invaded by a State, federal courts can strike a proper balance between the demands of the Fourteenth Amendment on the one hand and the federalism prerogatives of States on the other.[3]

Whatever the textual and historical merits of incorporating the Establishment Clause, I can accept that the Fourteenth Amendment protects religious liberty rights.[4] But I 680*680 cannot accept its use to oppose neutral programs of school choice through the incorporation of the Establishment Clause. There would be a tragic irony in converting the Fourteenth Amendment's guarantee of individual liberty into a prohibition on the exercise of educational choice.

II

The wisdom of allowing States greater latitude in dealing with matters of religion and education can be easily appreciated in this context. Respondents advocate using the Fourteenth Amendment to handcuff the State's ability to experiment with education. But without education one can hardly exercise the civic, political, and personal freedoms conferred by the Fourteenth Amendment. Faced with a severe educational crisis, the State of Ohio enacted wide-ranging educational reform that allows voluntary participation of private and religious schools in educating poor urban children otherwise condemned to failing public schools. The program does not force any individual to submit to religious indoctrination or education. It simply gives parents a greater choice as to where and in what manner to educate their children.[5] This is a choice that those with greater means have routinely exercised.

681*681 Cleveland parents now have a variety of educational choices. There are traditional public schools, magnet schools, and privately run community schools, in addition to the scholarship program. Currently, 46 of the 56 private schools participating in the scholarship program are church affiliated (35 are Catholic), and 96 percent of students in the program attend religious schools. See App. 281a—286a; 234 F. 3d 945, 949 (CA6 2000). Thus, were the Court to disallow the inclusion of religious schools, Cleveland children could use their scholarships at only 10 private schools.

In addition to expanding the reach of the scholarship program, the inclusion of religious schools makes sense given Ohio's purpose of increasing educational performance and opportunities. Religious schools, like other private schools, achieve far better educational results than their public counterparts. For example, the students at Cleveland's Catholic schools score significantly higher on Ohio proficiency tests than students at Cleveland public schools. Of Cleveland eighth graders taking the 1999 Ohio proficiency test, 95 percent in Catholic schools passed the reading test, whereas only 57 percent in public schools passed. And 75 percent of Catholic school students passed the math proficiency test, compared to only 22 percent of public school students. See Brief for Petitioners in No. 00-1777, p. 10. But the success of religious and private schools is in the end beside the point, because the State has a constitutional right to experiment with a variety of different programs to promote educational opportunity. That Ohio's program includes successful schools simply indicates that such reform can in fact provide improved education to underprivileged urban children.

Although one of the purposes of public schools was to promote democracy and a more egalitarian culture,[6] failing urban public schools disproportionately affect minority

children most in need of educational opportunity. At the time 682*682 of Reconstruction, blacks considered public education "a matter of personal liberation and a necessary function of a free society." J. Anderson, Education of Blacks in the South, 1860-1935, p. 18 (1988). Today, however, the promise of public school education has failed poor inner-city blacks. While in theory providing education to everyone, the quality of public schools varies significantly across districts. Just as blacks supported public education during Reconstruction, many blacks and other minorities now support school choice programs because they provide the greatest educational opportunities for their children in struggling communities.[7] Opponents of the program raise formalistic concerns about the Establishment Clause but ignore the core purposes of the Fourteenth Amendment.

While the romanticized ideal of universal public education resonates with the cognoscenti who oppose vouchers, poor urban families just want the best education for their children, who will certainly need it to function in our high-tech and advanced society. As Thomas Sowell noted 30 years ago: "Most black people have faced too many grim, concrete problems to be romantics. They want and need certain tangible results, which can be achieved only by developing certain specific abilities." Black Education: Myths and Tragedies 228 (1972). The same is true today. An individual's life prospects increase dramatically with each successfully completed phase of education. For instance, a black high 683*683 school dropout earns just over $13,500, but with a high school degree the average income is almost $21,000. Blacks with a bachelor's degree have an average annual income of about $37,500, and $75,500 with a professional degree. See U. S. Dept. of Commerce, Bureau of Census, Statistical Abstract of the United States 140 (2001) (Table 218). Staying in school and earning a degree generates real and tangible financial benefits, whereas failure to obtain even a high school degree essentially relegates students to a life of poverty and, all too often, of crime.[8] The failure to provide education to poor urban children perpetuates a vicious cycle of poverty, dependence, criminality, and alienation that continues for the remainder of their lives. If society cannot end racial discrimination, at least it can arm minorities with the education to defend themselves from some of discrimination's effects.

* * *

Ten States have enacted some form of publicly funded private school choice as one means of raising the quality of education provided to underprivileged urban children.[9] These programs address the root of the problem with failing urban public schools that disproportionately affect minority students. Society's other solution to these educational failures is often to provide racial preferences in higher education. Such preferences, however, run afoul of the Fourteenth Amendment's prohibition against distinctions based on race. See *Plessy*, 163 U. S., at 555 (Harlan, J., dissenting). By contrast, school choice programs that involve religious schools 684*684 appear unconstitutional only to those who would twist the Fourteenth Amendment against itself by expansively incorporating the Establishment Clause. Converting the Fourteenth Amendment from a guarantee of opportunity to an obstacle against education reform distorts our constitutional values and disserves those in the greatest need.

As Frederick Douglass poignantly noted, "no greater benefit can be bestowed upon a long benighted people, than giving to them, as we are here earnestly this day endeavoring to do, the means of an education."[10]

Justice Stevens, dissenting.

Is a law that authorizes the use of public funds to pay for the indoctrination of thousands of grammar schoolchildren in particular religious faiths a "law respecting an establishment of religion" within the meaning of the First Amendment? In answering that question, I think we should ignore three factual matters that are discussed at length by my colleagues.

First, the severe educational crisis that confronted the Cleveland City School District when Ohio enacted its voucher program is not a matter that should affect our appraisal of its constitutionality. In the 1999-2000 school year, that program provided relief to less than five percent of the students enrolled in the district's schools. The solution to the disastrous conditions that prevented over 90 percent of the student body from meeting basic proficiency standards obviously required massive improvements unrelated to the voucher program.[1] Of course, the emergency may have 685*685 given some families a powerful motivation to leave the public school system and accept religious indoctrination that they would otherwise have avoided, but that is not a valid reason for upholding the program.

Second, the wide range of choices that have been made available to students *within the public school system* has no bearing on the question whether the State may pay the tuition for students who wish to reject public education entirely and attend private schools that will provide them with a sectarian education. The fact that the vast majority of the voucher recipients who have entirely rejected public education receive religious indoctrination at state expense does, however, support the claim that the law is one "respecting an establishment of religion." The State may choose to divide up its public schools into a dozen different options and label them magnet schools, community schools, or whatever else it decides to call them, but the State is still required to provide a public education and it is the State's decision to fund private school education over and above its traditional obligation that is at issue in these cases.[2]

Third, the voluntary character of the private choice to prefer a parochial education over an education in the public school system seems to me quite irrelevant to the question whether the government's choice to pay for religious indoctrination is constitutionally permissible. Today, however, the Court seems to have decided that the mere fact that a family that cannot afford a private education wants its children educated in a parochial school is a sufficient justification for this use of public funds.

For the reasons stated by Justice Souter and Justice Breyer, I am convinced that the Court's decision is profoundly misguided. Admittedly, in reaching that conclusion 686*686 I have been influenced by my understanding of the impact of religious strife on the decisions of our forbears to migrate to this continent, and on the decisions of

neighbors in the Balkans, Northern Ireland, and the Middle East to mistrust one another. Whenever we remove a brick from the wall that was designed to separate religion and government, we increase the risk of religious strife and weaken the foundation of our democracy.

I respectfully dissent.

Justice Souter, with whom Justice Stevens, Justice Ginsburg, and Justice Breyer join, dissenting.

The Court's majority holds that the Establishment Clause is no bar to Ohio's payment of tuition at private religious elementary and middle schools under a scheme that systematically provides tax money to support the schools' religious missions. The occasion for the legislation thus upheld is the condition of public education in the city of Cleveland. The record indicates that the schools are failing to serve their objective, and the vouchers in issue here are said to be needed to provide adequate alternatives to them. If there were an excuse for giving short shrift to the Establishment Clause, it would probably apply here. But there is no excuse. Constitutional limitations are placed on government to preserve constitutional values in hard cases, like these. "[C]onstitutional lines have to be drawn, and on one side of every one of them is an otherwise sympathetic case that provokes impatience with the Constitution and with the line. But constitutional lines are the price of constitutional government." *Agostini* v. *Felton*, 521 U. S. 203, 254 (1997) (Souter, J., dissenting). I therefore respectfully dissent.

The applicability of the Establishment Clause[1] to public funding of benefits to religious schools was settled in *Everson* v. *Board of Ed. of Ewing*, 330 U. S. 1 (1947), which inaugurated 687*687 the modern era of establishment doctrine. The Court stated the principle in words from which there was no dissent:

"No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may adopt to teach or practice religion." *Id.,* at 16.

The Court has never in so many words repudiated this statement, let alone, in so many words, overruled *Everson.*

Today, however, the majority holds that the Establishment Clause is not offended by Ohio's Pilot Project Scholarship Program, under which students may be eligible to receive as much as $2,250 in the form of tuition vouchers transferable to religious schools. In the city of Cleveland the overwhelming proportion of large appropriations for voucher money must be spent on religious schools if it is to be spent at all, and will be spent in amounts that cover almost all of tuition. The money will thus pay for eligible students' instruction not only in secular subjects but in religion as well, in schools that can fairly be characterized as founded to teach religious doctrine and to imbue teaching in all subjects with a religious dimension.[2] Public tax money will pay at a systemic level

for teaching the covenant with Israel and Mosaic law in Jewish schools, the primacy of the Apostle Peter and the Papacy in Catholic schools, the truth of reformed Christianity in Protestant schools, and the revelation to the Prophet in Muslim schools, to speak only of major religious groupings in the Republic.

688*688 How can a Court consistently leave *Everson* on the books and approve the Ohio vouchers? The answer is that it cannot. It is only by ignoring *Everson* that the majority can claim to rest on traditional law in its invocation of neutral aid provisions and private choice to sanction the Ohio law. It is, moreover, only by ignoring the meaning of neutrality and private choice themselves that the majority can even pretend to rest today's decision on those criteria.

I

The majority's statements of Establishment Clause doctrine cannot be appreciated without some historical perspective on the Court's announced limitations on government aid to religious education, and its repeated repudiation of limits previously set. My object here is not to give any nuanced exposition of the cases, which I tried to classify in some detail in an earlier opinion, see *Mitchell* v. *Helms*, 530 U. S. 793, 873-899 (2000) (dissenting opinion), but to set out the broad doctrinal stages covered in the modern era, and to show that doctrinal bankruptcy has been reached today.

Viewed with the necessary generality, the cases can be categorized in three groups. In the period from 1947 to 1968, the basic principle of no aid to religion through school benefits was unquestioned. Thereafter for some 15 years, the Court termed its efforts as attempts to draw a line against aid that would be divertible to support the religious, as distinct from the secular, activity of an institutional beneficiary. Then, starting in 1983, concern with divertibility was gradually lost in favor of approving aid in amounts unlikely to afford substantial benefits to religious schools, when offered evenhandedly without regard to a recipient's religious character, and when channeled to a religious institution only by the genuinely free choice of some private individual. Now, the three stages are succeeded by a fourth, in which the substantial character of government aid is held to have no constitutional significance, and the espoused criteria 689*689 of neutrality in offering aid, and private choice in directing it, are shown to be nothing but examples of verbal formalism.

A

Everson v. *Board of Ed. of Ewing* inaugurated the modern development of Establishment Clause doctrine at the behest of a taxpayer challenging state provision of "tax-raised funds to pay the bus fares of parochial school pupils" on regular city buses as part of a general scheme to reimburse the public-transportation costs of children attending both public and private nonprofit schools. 330 U. S., at 17. Although the Court split, no Justice disagreed with the basic doctrinal principle already quoted, that "[n]o tax in any amount . . . can be levied to support any religious activities or institutions, . . .

whatever form they may adopt to teach . . . religion." *Id.,* at 16. Nor did any Member of the Court deny the tension between the New Jersey program and the aims of the Establishment Clause. The majority upheld the state law on the strength of rights of religious-school students under the Free Exercise Clause, *id.,* at 17-18, which was thought to entitle them to free public transportation when offered as a "general government servic[e]" to all schoolchildren, *id.,* at 17. Despite the indirect benefit to religious education, the transportation was simply treated like "ordinary police and fire protection, connections for sewage disposal, public highways and sidewalks," *id.,* at 17-18, and, most significantly, "state-paid policemen, detailed to protect children going to and from church schools from the very real hazards of traffic," *id.,* at 17. The dissenters, however, found the benefit to religion too pronounced to survive the general principle of no establishment, no aid, and they described it as running counter to every objective served by the establishment ban: New Jersey's use of tax-raised funds forced a taxpayer to "contribut[e] to the propagation of opinions which he disbelieves in so far as . . . religions differ," *id.,* at 45 (internal quotation marks omitted); it exposed religious 690*690 liberty to the threat of dependence on state money, *id.,* at 53; and it had already sparked political conflicts with opponents of public funding, *id.,* at 54.[3]

The difficulty of drawing a line that preserved the basic principle of no aid was no less obvious some 20 years later in *Board of Ed. of Central School Dist. No. 1* v. *Allen,* 392 U. S. 236 (1968), which upheld a New York law authorizing local school boards to lend textbooks in secular subjects to children attending religious schools, a result not self-evident from *Everson*'s "general government services" rationale. The Court relied instead on the theory that the in-kind aid could only be used for secular educational purposes, 392 U. S., at 243, and found it relevant that "no funds or books are furnished [directly] to parochial schools, and the financial benefit is to parents and children, not to schools," *id.,* at 243— 244.[4] Justice Black, who wrote *Everson,* led the dissenters. Textbooks, even when "`secular,' realistically will in some way inevitably tend to propagate the religious views of the favored sect," 392 U. S., at 252, he wrote, and Justice Douglas raised other objections underlying the establishment ban, *id.,* at 254-266. Religious schools would request those books most in keeping with their faiths, and public boards would have final approval power: "If the board of education supinely submits by approving and supplying the sectarian or sectarian-oriented textbooks, the struggle to keep church 691*691 and state separate has been lost. If the board resists, then the battle line between church and state will have been drawn . . . ." *Id.,* at 256 (Douglas, J., dissenting). The scheme was sure to fuel strife among religions as well: "we can rest assured that a contest will be on to provide those books for religious schools which the dominant religious group concludes best reflect the theocentric or other philosophy of the particular church." *Id.,* at 265.

Transcending even the sharp disagreement, however, was

"the consistency in the way the Justices went about deciding the case . . . . Neither side rested on any facile application of the `test' or any simplistic reliance on the generality or evenhandedness of the state law. Disagreement concentrated on the true intent inferrable behind the law, the feasibility of distinguishing in fact between religious and

secular teaching in church schools, and the reality or sham of lending books to pupils instead of supplying books to schools. . . . [T]he stress was on the practical significance of the actual benefits received by the schools." *Mitchell*, 530 U. S., at 876 (Souter, J., dissenting).

B

Allen recognized the reality that "religious schools pursue two goals, religious instruction and secular education," 392 U. S., at 245; if state aid could be restricted to serve the second, it might be permissible under the Establishment Clause. But in the retrenchment that followed, the Court saw that the two educational functions were so intertwined in religious primary and secondary schools that aid to secular education could not readily be segregated, and the intrusive monitoring required to enforce the line itself raised Establishment Clause concerns about the entanglement of church and state. See *Lemon* v. *Kurtzman*, 403 U. S. 602, 620 (1971) (striking down program supplementing salaries for teachers of secular subjects in private schools). To avoid 692*692 the entanglement, the Court's focus in the post-*Allen* cases was on the principle of divertibility, on discerning when ostensibly secular government aid to religious schools was susceptible to religious uses. The greater the risk of diversion to religion (and the monitoring necessary to avoid it), the less legitimate the aid scheme was under the no-aid principle. On the one hand, the Court tried to be practical, and when the aid recipients were not so "pervasively sectarian" that their secular and religious functions were inextricably intertwined, the Court generally upheld aid earmarked for secular use. See, *e. g.*, *Roemer* v. *Board of Public Works of Md.*, 426 U. S. 736 (1976); *Hunt* v. *McNair*, 413 U. S. 734 (1973); *Tilton* v. *Richardson*, 403 U. S. 672 (1971). But otherwise the principle of nondivertibility was enforced strictly, with its violation being presumed in most cases, even when state aid seemed secular on its face. Compare, *e. g.*, *Levitt* v. *Committee for Public Ed. & Religious Liberty*, 413 U. S. 472, 480 (1973) (striking down state program reimbursing private schools' administrative costs for teacher-prepared tests in compulsory secular subjects), with *Wolman* v. *Walter*, 433 U. S. 229, 255 (1977) (upholding similar program using standardized tests); and *Meek* v. *Pittenger*, 421 U. S. 349, 369-372 (1975) (no public funding for staff and materials for "auxiliary services" like guidance counseling and speech and hearing services), with *Wolman*, *supra*, at 244 (permitting state aid for diagnostic speech, hearing, and psychological testing).

The fact that the Court's suspicion of divertibility reflected a concern with the substance of the no-aid principle is apparent in its rejection of stratagems invented to dodge it. In *Committee for Public Ed. & Religious Liberty* v. *Nyquist*, 413 U. S. 756 (1973), for example, the Court struck down a New York program of tuition grants for poor parents and tax deductions for more affluent ones who sent their children to private schools. The *Nyquist* Court dismissed warranties of a "statistical guarantee," that the scheme provided at most 15% of the total cost of an education at a religious school, 693*693 *id.*, at 787-788, which could presumably be matched to a secular 15% of a child's education at the school. And it rejected the idea that the path of state aid to religious schools might be dispositive: "far from providing a *per se* immunity from examination of the substance

of the State's program, the fact that aid is disbursed to parents rather than to the schools is only one among many factors to be considered." *Id.,* at 781. The point was that "the effect of the aid is unmistakably to provide desired financial support for nonpublic, sectarian institutions." *Id.,* at 783.[5] *Nyquist* thus held that aid to parents through tax deductions was no different from forbidden direct aid to religious schools for religious uses. The focus remained on what the public money bought when it reached the end point of its disbursement.

C

Like all criteria requiring judicial assessment of risk, divertibility is an invitation to argument, but the object of the arguments provoked has always been a realistic assessment of facts aimed at respecting the principle of no aid. In *Mueller* v. *Allen,* 463 U. S. 388 (1983), however, that object began to fade, for *Mueller* started down the road from realism to formalism.

694*694 The aid in *Mueller* was in substance indistinguishable from that in *Nyquist,* see 463 U. S., at 396-397, n. 6, and both were substantively difficult to distinguish from aid directly to religious schools, *id.,* at 399. But the Court upheld the Minnesota tax deductions in *Mueller,* emphasizing their neutral availability for religious and secular educational expenses and the role of private choice in taking them. *Id.,* at 397— 398. The Court relied on the same two principles in *Witters* v. *Washington Dept. of Servs. for Blind,* 474 U. S. 481 (1986), approving one student's use of a vocational training subsidy for the blind at a religious college, characterizing it as aid to individuals from which religious schools could derive no "large" benefit: "the full benefits of the program [are not] limited, in large part or in whole, to students at sectarian institutions." *Id.,* at 488.

School Dist. of Grand Rapids v. *Ball,* 473 U. S. 373, 395— 396, and n. 13 (1985), overruled in part by *Agostini* v. *Felton,* 521 U. S. 203 (1997), clarified that the notions of evenhandedness neutrality and private choice in *Mueller* did not apply to cases involving direct aid to religious schools, which were still subject to the divertibility test. But in *Agostini,* where the substance of the aid was identical to that in *Ball,* public employees teaching remedial secular classes in private schools, the Court rejected the 30-year-old presumption of divertibility, and instead found it sufficient that the aid "supplement[ed]" but did not "supplant" existing educational services, 521 U. S., at 210, 230. The Court, contrary to *Ball,* viewed the aid as aid "directly to the eligible students . . . no matter where they choose to attend school." 521 U. S., at 229.

In the 12 years between *Ball* and *Agostini,* the Court decided not only *Witters,* but two other cases emphasizing the form of neutrality and private choice over the substance of aid to religious uses, but always in circumstances where any aid to religion was isolated and insubstantial. *Zobrest* v. *Catalina Foothills School Dist.,* 509 U. S. 1 (1993), like *Wit-*695*695 *ters,* involved one student's choice to spend funds from a general public program at a religious school (to pay for a signlanguage interpreter). As in *Witters,* the Court reasoned that "[d]isabled children, not sectarian schools, [were] the primary

beneficiaries . . . ; to the extent sectarian schools benefit at all . . . , they are only incidental beneficiaries." 509 U. S., at 12. *Rosenberger* v. *Rector and Visitors of Univ. of Va.*, 515 U. S. 819 (1995), like *Zobrest* and *Witters,* involved an individual and insubstantial use of neutrally available public funds for a religious purpose (to print an evangelical magazine).

To be sure, the aid in *Agostini* was systemic and arguably substantial, but, as I have said, the majority there chose to view it as a bare "supplement." 521 U. S., at 229. And this was how the controlling opinion described the systemic aid in our most recent case, *Mitchell* v. *Helms,* 530 U. S. 793 (2000), as aid going merely to a "portion" of the religious schools' budgets, *id.,* at 860 (O'Connor, J., concurring in judgment). The plurality in that case did not feel so uncomfortable about jettisoning substance entirely in favor of form, finding it sufficient that the aid was neutral and that there was virtual private choice, since any aid "first passes through the hands (literally or figuratively) of numerous private citizens who are free to direct the aid elsewhere." *Id.,* at 816. But that was only the plurality view.

Hence it seems fair to say that it was not until today that substantiality of aid has clearly been rejected as irrelevant by a majority of this Court, just as it has not been until today that a majority, not a plurality, has held purely formal criteria to suffice for scrutinizing aid that ends up in the coffers of religious schools. Today's cases are notable for their stark illustration of the inadequacy of the majority's chosen formal analysis.

II

Although it has taken half a century since *Everson* to reach the majority's twin standards of neutrality and 696*696 free choice, the facts show that, in the majority's hands, even these criteria cannot convincingly legitimize the Ohio scheme.

A

Consider first the criterion of neutrality. As recently as two Terms ago, a majority of the Court recognized that neutrality conceived of as evenhandedness toward aid recipients had never been treated as alone sufficient to satisfy the Establishment Clause, *Mitchell,* 530 U. S., at 838-839 (O'Connor, J., concurring in judgment); *id.,* at 884 (Souter, J., dissenting). But at least in its limited significance, formal neutrality seemed to serve some purpose. Today, however, the majority employs the neutrality criterion in a way that renders it impossible to understand.

Neutrality in this sense refers, of course, to evenhandedness in setting eligibility as between potential religious and secular recipients of public money. *Id.,* at 809-810 (plurality opinion); *id.,* at 878-884 (Souter, J., dissenting) (three senses of "neutrality").[6] Thus, for example, the aid scheme in *Witters* provided an eligible recipient with a scholarship to be used at any institution within a practically unlimited universe of schools, 474 U. S., at 488; it did not tend to provide more or less aid depending on

which one the scholarship recipient chose, and there was no indication that the maximum scholarship amount would be insufficient at secular 697*697 schools. Neither did any condition of Zobrest's interpreter's subsidy favor religious education. See 509 U. S., at 10.

In order to apply the neutrality test, then, it makes sense to focus on a category of aid that may be directed to religious as well as secular schools, and ask whether the scheme favors a religious direction. Here, one would ask whether the voucher provisions, allowing for as much as $2,250 toward private school tuition (or a grant to a public school in an adjacent district), were written in a way that skewed the scheme toward benefiting religious schools.

This, however, is not what the majority asks. The majority looks not to the provisions for tuition vouchers, Ohio Rev. Code Ann. § 3313.976 (West Supp. 2002), but to every provision for educational opportunity: "The program permits the participation of *all* schools within the district, [as well as public schools in adjacent districts], religious or nonreligious." *Ante,* at 653 (emphasis in original). The majority then finds confirmation that "participation of *all* schools" satisfies neutrality by noting that the better part of total state educational expenditure goes to public schools, *ante,* at 654, thus showing there is no favor of religion.

The illogic is patent. If regular, public schools (which can get no voucher payments) "participate" in a voucher scheme with schools that can, and public expenditure is still predominantly on public schools, then the majority's reasoning would find neutrality in a scheme of vouchers available for private tuition in districts with no secular private schools at all. "Neutrality" as the majority employs the term is, literally, verbal and nothing more. This, indeed, is the only way the majority can gloss over the very nonneutral feature of the total scheme covering "*all* schools": public tutors may receive from the State no more than $324 per child to support extra tutoring (that is, the State's 90% of a total amount of $360), App. 166a, whereas the tuition voucher schools (which 698*698 turn out to be mostly religious) can receive up to $2,250, *id.,* at 56a.[7]

Why the majority does not simply accept the fact that the challenge here is to the more generous voucher scheme and judge its neutrality in relation to religious use of voucher money seems very odd. It seems odd, that is, until one recognizes that comparable schools for applying the criterion of neutrality are also the comparable schools for applying the other majority criterion, whether the immediate recipients of voucher aid have a genuinely free choice of religious and secular schools to receive the voucher money. And in applying this second criterion, the consideration of "*all* schools" is ostensibly helpful to the majority position.

B

The majority addresses the issue of choice the same way it addresses neutrality, by asking whether recipients or potential recipients of voucher aid have a choice of public schools among secular alternatives to religious schools. Again, however, the majority

asks the wrong question and misapplies the criterion. The majority has confused choice in spending scholarships with choice from the entire menu of 699*699 possible educational placements, most of them open to anyone willing to attend a public school. I say "confused" because the majority's new use of the choice criterion, which it frames negatively as "whether Ohio is coercing parents into sending their children to religious schools," *ante,* at 655-656, ignores the reason for having a private choice enquiry in the first place. Cases since *Mueller* have found private choice relevant under a rule that aid to religious schools can be permissible so long as it first passes through the hands of students or parents.[8] The majority's view that all educational choices are comparable for purposes of choice thus ignores the whole point of the choice test: it is a criterion for deciding whether indirect aid to a religious school is legitimate because it passes through private hands that can spend or use the aid in a secular school. The question is whether the private hand is genuinely free to send the money in either a secular direction or a religious one. The majority now has transformed this question about private choice in channeling aid into a question about selecting from examples of state spending (on education) including direct spending on magnet and community public schools that goes through no private hands and could never reach a religious school under any circumstance. When the choice test is transformed from where to spend the money to where to go to school, it is cut loose from its very purpose.

700*700 Defining choice as choice in spending the money or channeling the aid is, moreover, necessary if the choice criterion is to function as a limiting principle at all. If "choice" is present whenever there is any educational alternative to the religious school to which vouchers can be endorsed, then there will always be a choice and the voucher can always be constitutional, even in a system in which there is not a single private secular school as an alternative to the religious school. See *supra,* at 697 (noting the same result under the majority's formulation of the neutrality criterion). And because it is unlikely that any participating private religious school will enroll more pupils than the generally available public system, it will be easy to generate numbers suggesting that aid to religion is not the significant intent or effect of the voucher scheme.

That is, in fact, just the kind of rhetorical argument that the majority accepts in these cases. In addition to secular private schools (129 students), the majority considers public schools with tuition assistance (roughly 1,400 students), magnet schools (13,000 students), and community schools (1,900 students), and concludes that fewer than 20% of pupils receive state vouchers to attend religious schools. *Ante,* at 659. (In fact, the numbers would seem even more favorable to the majority's argument if enrollment in traditional public schools without tutoring were considered, an alternative the majority thinks relevant to the private choice enquiry, *ante,* at 655.) Justice O'Connor focuses on how much money is spent on each educational option and notes that at most $8.2 million is spent on vouchers for students attending religious schools, *ante,* at 664 (concurring opinion), which is only 6% of the State's expenditure if one includes separate funding for Cleveland's community ($9.4 million) and magnet ($114.8 million) public schools. The variations show how results may shift when a judge can pick and choose the alternatives to use in the comparisons, and they also show what dependably comfortable results the choice criterion 701*701 will yield if the identification of relevant

choices is wide open. If the choice of relevant alternatives is an open one, proponents of voucher aid will always win, because they will always be able to find a "choice" somewhere that will show the bulk of public spending to be secular. The choice enquiry will be diluted to the point that it can screen out nothing, and the result will always be determined by selecting the alternatives to be treated as choices.

Confining the relevant choices to spending choices, on the other hand, is not vulnerable to comparable criticism. Although leaving the selection of alternatives for choice wide open, as the majority would, virtually guarantees the availability of a "choice" that will satisfy the criterion, limiting the choices to spending choices will not guarantee a negative result in every case. There may, after all, be cases in which a voucher recipient will have a real choice, with enough secular private school desks in relation to the number of religious ones, and a voucher amount high enough to meet secular private school tuition levels. See *infra,* at 704-707. But, even to the extent that choice-to-spend does tend to limit the number of religious funding options that pass muster, the choice criterion has to be understood this way in order, as I have said, for it to function as a limiting principle.[9] Otherwise 702*702 there is surely no point in requiring the choice to be a true or real or genuine one.[10]

703*703 It is not, of course, that I think even a genuine choice criterion is up to the task of the Establishment Clause when substantial state funds go to religious teaching; the discussion in Part III, *infra,* shows that it is not. The point is simply that if the majority wishes to claim that choice is a criterion, it must define choice in a way that can function as a criterion with a practical capacity to screen something out.

If, contrary to the majority, we ask the right question about genuine choice to use the vouchers, the answer shows that something is influencing choices in a way that aims the money in a religious direction: of 56 private schools in the district participating in the voucher program (only 53 of which accepted voucher students in 1999-2000), 46 of them are religious; 96.6% of all voucher recipients go to religious schools, only 3.4% to nonreligious ones. See App. 281a— 286a. Unfortunately for the majority position, there is no explanation for this that suggests the religious direction results simply from free choices by parents. One answer to these statistics, for example, which would be consistent with the genuine choice claimed to be operating, might be that 96.6% of families choosing to avail themselves of vouchers choose to educate their children in schools of their own religion. This would not, in my view, render the scheme constitutional, but it would speak to the majority's choice criterion. 704*704 Evidence shows, however, that almost two out of three families using vouchers to send their children to religious schools did not embrace the religion of those schools. App. to Pet. for Cert. in No. 00-1777, p. 147a.[11] The families made it clear they had not chosen the schools because they wished their children to be proselytized in a religion not their own, or in any religion, but because of educational opportunity.[12]

Even so, the fact that some 2,270 students chose to apply their vouchers to schools of other religions, App. 281a—286a, might be consistent with true choice if the students "chose" their religious schools over a wide array of private nonreligious options, or if it

could be shown generally that Ohio's program had no effect on educational choices and thus no impermissible effect of advancing religious education. But both possibilities are contrary to fact. First, even if all existing nonreligious private schools in Cleveland were willing to accept large numbers of voucher students, only a few more than the 129 currently enrolled in such schools would be able to attend, as the total enrollment at all nonreligious private schools in Cleveland for kindergarten through eighth grade is only 510 children, see Brief for California Alliance for Public Schools as *Amicus Curiae* 15, and there is no indication that these schools have many open seats.[13] Second, the 705*705 $2,500 cap that the program places on tuition for participating low-income pupils has the effect of curtailing the participation of nonreligious schools: "nonreligious schools with higher tuition (about $4,000) stated that they could afford to accommodate just a few voucher students."[14] By comparison, the average tuition at participating Catholic schools in Cleveland in 1999-2000 was $1,592, almost $1,000 below the cap.[15]

706*706 Of course, the obvious fix would be to increase the value of vouchers so that existing nonreligious private and nonCatholic religious schools would be able to enroll more voucher students, and to provide incentives for educators to create new such schools given that few presently exist. Private choice, if as robust as that available to the seminarian in *Witters,* would then be "true private choice" under the majority's criterion. But it is simply unrealistic to presume that parents of elementary and middle school students in Cleveland will have a range of secular and religious choices even arguably comparable to the statewide program for vocational and higher education in *Witters.* And to get to that hypothetical point would require that such massive financial support be made available to religion as to disserve every objective of the Establishment Clause even more than the present scheme does. See Part III—B, *infra.*[16]

707*707 There is, in any case, no way to interpret the 96.6% of current voucher money going to religious schools as reflecting a free and genuine choice by the families that apply for vouchers. The 96.6% reflects, instead, the fact that too few nonreligious school desks are available and few but religious schools can afford to accept more than a handful of voucher students. And contrary to the majority's assertion, *ante,* at 654, public schools in adjacent districts hardly have a financial incentive to participate in the Ohio voucher program, and none has.[17] For the overwhelming number of children in the voucher scheme, the only alternative to the public schools is religious. And it is entirely irrelevant that the State did not deliberately design the network of private schools for the sake of channeling money into religious institutions. The criterion is one of genuinely free choice on the part of the private individuals who choose, and a Hobson's choice is not a choice, whatever the reason for being Hobsonian.

III

I do not dissent merely because the majority has misapplied its own law, for even if I assumed *arguendo* that the 708*708 majority's formal criteria were satisfied on the facts, today's conclusion would be profoundly at odds with the Constitution. Proof of this

is clear on two levels. The first is circumstantial, in the now discarded symptom of violation, the substantial dimension of the aid. The second is direct, in the defiance of every objective supposed to be served by the bar against establishment.

A

The scale of the aid to religious schools approved today is unprecedented, both in the number of dollars and in the proportion of systemic school expenditure supported. Each measure has received attention in previous cases. On one hand, the sheer quantity of aid, when delivered to a class of religious primary and secondary schools, was suspect on the theory that the greater the aid, the greater its proportion to a religious school's existing expenditures, and the greater the likelihood that public money was supporting religious as well as secular instruction. As we said in *Meek,* "it would simply ignore reality to attempt to separate secular educational functions from the predominantly religious role" as the object of aid that comes in "substantial amounts." 421 U. S., at 365. Cf. *Nyquist,* 413 U. S., at 787-788 (rejecting argument that tuition assistance covered only 15% of education costs, presumably secular, at religious schools). Conversely, the more "attenuated [the] financial benefit . . . that eventually flows to parochial schools," the more the Court has been willing to find a form of state aid permissible. *Mueller,* 463 U. S., at 400.[18]

709*709 On the other hand, the Court has found the gross amount unhelpful for Establishment Clause analysis when the aid afforded a benefit solely to one individual, however substantial as to him, but only an incidental benefit to the religious school at which the individual chose to spend the State's money. See *Witters,* 474 U. S., at 488; cf. *Zobrest,* 509 U. S., at 12. When neither the design nor the implementation of an aid scheme channels a series of individual students' subsidies toward religious recipients, the relevant beneficiaries for establishment purposes, the Establishment Clause is unlikely to be implicated. The majority's reliance on the observations of five Members of the Court in *Witters* as to the irrelevance of substantiality of aid in that case, see *ante,* at 651, is therefore beside the point in the matter before us, which involves considerable sums of public funds systematically distributed through thousands of students attending religious elementary and middle schools in the city of Cleveland.[19]

710*710 The Cleveland voucher program has cost Ohio taxpayers $33 million since its implementation in 1996 ($28 million in voucher payments, $5 million in administrative costs), and its cost was expected to exceed $8 million in the 2001-2002 school year. People for the American Way Foundation, Five Years and Counting: A Closer Look at the Cleveland Voucher Program 1-2 (Sept. 25, 2001) (hereinafter Cleveland Voucher Program) (cited in Brief for National School Boards Association et al. as *Amici Curiae* 9). These tax-raised funds are on top of the textbooks, reading and math tutors, laboratory equipment, and the like that Ohio provides to private schools, worth roughly $600 per child. Cleveland Voucher Program 2.[20]

The gross amounts of public money contributed are symptomatic of the scope of what the taxpayers' money buys for a broad class of religious-school students. In paying for

practically the full amount of tuition for thousands of qualifying students,[21] cf. *Nyquist, supra,* at 781-783 (state aid amounting to 50% of tuition was unconstitutional), the scholarships purchase everything that tuition purchases, be it instruction in math or indoctrination in faith. The consequences 711*711 of "substantial" aid hypothesized in *Meek* are realized here: the majority makes no pretense that substantial amounts of tax money are not systematically underwriting religious practice and indoctrination.

B

It is virtually superfluous to point out that every objective underlying the prohibition of religious establishment is betrayed by this scheme, but something has to be said about the enormity of the violation. I anticipated these objectives earlier, *supra,* at 689-690, in discussing *Everson,* which cataloged them, the first being respect for freedom of conscience. Jefferson described it as the idea that no one "shall be compelled to . . . support any religious worship, place, or ministry whatsoever," A Bill for Establishing Religious Freedom, in 5 The Founders' Constitution 84 (P. Kurland & R. Lerner eds. 1987), even a "teacher of his own religious persuasion," *ibid.,* and Madison thought it violated by any "`authority which can force a citizen to contribute three pence . . . of his property for the support of any . . . establishment.' " Memorial and Remonstrance ¶ 3, reprinted in *Everson,* 330 U. S., at 65-66. "Any tax to establish religion is antithetical to the command that the minds of men always be wholly free," *Mitchell,* 530 U. S., at 871 (Souter, J., dissenting) (internal quotation marks and citations omitted).[22] Madison's objection to three pence has simply been lost in the majority's formalism.

As for the second objective, to save religion from its own corruption, Madison wrote of the "`experience . . . that ecclesiastical 712*712 establishments, instead of maintaining the purity and efficacy of Religion, have had a contrary operation.' " Memorial and Remonstrance ¶ 7, reprinted in *Everson,* 330 U. S., at 67. In Madison's time, the manifestations were "pride and indolence in the Clergy; ignorance and servility in the laity[,] in both, superstition, bigotry and persecution," *ibid.;* in the 21st century, the risk is one of "corrosive secularism" to religious schools, *Ball,* 473 U. S., at 385, and the specific threat is to the primacy of the schools' mission to educate the children of the faithful according to the unaltered precepts of their faith. Even "[t]he favored religion may be compromised as political figures reshape the religion's beliefs for their own purposes; it may be reformed as government largesse brings government regulation." *Lee* v. *Weisman,* 505 U. S. 577, 608 (1992) (Blackmun, J., concurring).

The risk is already being realized. In Ohio, for example, a condition of receiving government money under the program is that participating religious schools may not "discriminate on the basis of . . .religion," Ohio Rev. Code Ann. § 3313.976(A)(4) (West Supp. 2002), which means the school may not give admission preferences to children who are members of the patron faith; children of a parish are generally consigned to the same admission lotteries as nonbelievers, §§ 3313.977(A)(1)(c)—(d). This indeed was the exact object of a 1999 amendment repealing the portion of a predecessor statute that had allowed an admission preference for "[c]hildren . . . whose parents are affiliated with any organization that provides financial support to the school, at the discretion of

the school." § 3313.977(A)(1)(d) (West 1999). Nor is the State's religious antidiscrimination restriction limited to student admission policies: by its terms, a participating religious school may well be forbidden to choose a member of its own clergy to serve as teacher or principal over a layperson of a different religion claiming 713*713 equal qualification for the job.[23] Cf. National Catholic Educational Association, Balance Sheet for Catholic Elementary Schools: 2001 Income and Expenses 25 (2001) ("31% of [reporting Catholic elementary and middle] schools had at least one full-time teacher who was a religious sister"). Indeed, a separate condition that "[t]he school . . . not . . . teach hatred of any person or group on the basis of . . . religion," § 3313.976(A)(6) (West Supp. 2002), could be understood (or subsequently broadened) to prohibit religions from teaching traditionally legitimate articles of faith as to the error, sinfulness, or ignorance of others,[24] if they want government money for their schools.

714*714 For perspective on this foot-in-the-door of religious regulation, it is well to remember that the money has barely begun to flow. Prior examples of aid, whether grants through individuals or in-kind assistance, were never significant enough to alter the basic fiscal structure of religious schools; state aid was welcome, but not indispensable. See, *e. g., Mitchell,* 530 U. S., at 802 (federal funds could only supplement funds from nonfederal sources); *Agostini,* 521 U. S., at 210 (federally funded services could "`supplement, and in no case supplant, the level of services' " already provided). But given the figures already involved here, there is no question that religious schools in Ohio are on the way to becoming bigger businesses with budgets enhanced to fit their new stream of tax-raised income. See, *e. g.,* People for the American Way Foundation, A Painful Price 5, 9, 11 (Feb. 14, 2002) (of 91 schools participating in the Milwaukee program, 75 received voucher payments in excess of tuition, 61 of those were religious and averaged $185,000 worth of overpayment per school, justified in part to "raise low salaries"). The administrators of those same schools are also no doubt following the politics of a move in the Ohio State Senate to raise the current maximum value of a school voucher from $2,250 to the base amount of current state spending on each public school student ($4,814 for the 2001 fiscal year). See Bloedel, Bill Analysis of S. B. No. 89, 124th Ohio Gen. Assembly, regular session 2001-2002 (Ohio Legislative Service Commission). Ohio, in fact, is merely replicating the experience in Wisconsin, where a similar increase in the value of educational vouchers in Milwaukee has induced the creation of some 23 new private schools, Public Policy Forum, Research Brief, vol. 90, no. 1, p. 3 (Jan. 23, 2002), some of which, we may safely surmise, are religious. New schools have presumably 715*715 pegged their financial prospects to the government from the start, and the odds are that increases in government aid will bring the threshold voucher amount closer to the tuition at even more expensive religious schools.

When government aid goes up, so does reliance on it; the only thing likely to go down is independence. If Justice Douglas in *Allen* was concerned with state agencies, influenced by powerful religious groups, choosing the textbooks that parochial schools would use, 392 U. S., at 265 (dissenting opinion), how much more is there reason to wonder when dependence will become great enough to give the State of Ohio an effective veto over basic decisions on the content of curriculums? A day will come when

religious schools will learn what political leverage can do, just as Ohio's politicians are now getting a lesson in the leverage exercised by religion.

Increased voucher spending is not, however, the sole portent of growing regulation of religious practice in the school, for state mandates to moderate religious teaching may well be the most obvious response to the third concern behind the ban on establishment, its inextricable link with social conflict. See *Mitchell, supra,* at 872 (Souter, J., dissenting); *Everson,* 330 U. S., at 8-11. As appropriations for religious subsidy rise, competition for the money will tap sectarian religion's capacity for discord. "Public money devoted to payment of religious costs, educational or other, brings the quest for more. It brings too the struggle of sect against sect for the larger share or for any. Here one by numbers alone will benefit most, there another." *Id.,* at 53. (Rutledge, J., dissenting).

Justice Breyer has addressed this issue in his own dissenting opinion, which I join, and here it is enough to say that the intensity of the expectable friction can be gauged by realizing that the scramble for money will energize not only contending sectarians, but taxpayers who take their liberty of conscience seriously. Religious teaching at taxpayer 716*716 expense simply cannot be cordoned from taxpayer politics, and every major religion currently espouses social positions that provoke intense opposition. Not all taxpaying Protestant citizens, for example, will be content to underwrite the teaching of the Roman Catholic Church condemning the death penalty.[25] Nor will all of America's Muslims acquiesce in paying for the endorsement of the religious Zionism taught in many religious Jewish schools, which combines "a nationalistic sentiment" in support of Israel with a "deeply religious" element.[26] Nor will every secular taxpayer be content to support Muslim views on differential treatment of the sexes,[27] or, for that matter, to fund the espousal of a wife's obligation of obedience to her husband, presumably taught in any schools adopting the articles of faith of the Southern Baptist Convention.[28] Views like these, and innumerable others, have been safe in the sectarian pulpits and classrooms of this Nation not only because the Free Exercise Clause protects them directly, but because the ban on supporting religious establishment has protected free exercise, by keeping it relatively private. With the arrival of vouchers in religious schools, that privacy will go, and along with it will go confidence that religious disagreement will stay moderate.

* * *

If the divisiveness permitted by today's majority is to be avoided in the short term, it will be avoided only by action 717*717 of the political branches at the state and national levels. Legislatures not driven to desperation by the problems of public education may be able to see the threat in vouchers negotiable in sectarian schools. Perhaps even cities with problems like Cleveland's will perceive the danger, now that they know a federal court will not save them from it.

My own course as a judge on the Court cannot, however, simply be to hope that the political branches will save us from the consequences of the majority's decision.

Everson's statement is still the touchstone of sound law, even though the reality is that in the matter of educational aid the Establishment Clause has largely been read away. True, the majority has not approved vouchers for religious schools alone, or aid earmarked for religious instruction. But no scheme so clumsy will ever get before us, and in the cases that we may see, like these, the Establishment Clause is largely silenced. I do not have the option to leave it silent, and I hope that a future Court will reconsider today's dramatic departure from basic Establishment Clause principle.

Justice Breyer, with whom Justice Stevens and Justice Souter join, dissenting.

I join Justice Souter's opinion, and I agree substantially with Justice Stevens. I write separately, however, to emphasize the risk that publicly financed voucher programs pose in terms of religiously based social conflict. I do so because I believe that the Establishment Clause concern for protecting the Nation's social fabric from religious conflict poses an overriding obstacle to the implementation of this well-intentioned school voucher program. And by explaining the nature of the concern, I hope to demonstrate why, in my view, "parental choice" cannot significantly alleviate the constitutional problem. See Part IV, *infra*.

I

The First Amendment begins with a prohibition, that "Congress shall make no law respecting an establishment of 718*718 religion," and a guarantee, that the government shall not prohibit "the free exercise thereof." These Clauses embody an understanding, reached in the 17th century after decades of religious war, that liberty and social stability demand a religious tolerance that respects the religious views of all citizens, permits those citizens to "worship God in their own way," and allows all families to "teach their children and to form their characters" as they wish. C. Radcliffe, The Law & Its Compass 71 (1960). The Clauses reflect the Framers' vision of an American Nation free of the religious strife that had long plagued the nations of Europe. See, *e. g.,* Freund, Public Aid to Parochial Schools, 82 Harv. L. Rev. 1680, 1692 (1969) (religious strife was "one of the principal evils that the first amendment sought to forestall"); B. Kosmin & S. Lachman, One Nation Under God: Religion in Contemporary American Society 24 (1993) (First Amendment designed in "part to prevent the religious wars of Europe from entering the United States"). Whatever the Framers might have thought about particular 18th-century school funding practices, they undeniably intended an interpretation of the Religion Clauses that would implement this basic First Amendment objective.

In part for this reason, the Court's 20th-century Establishment Clause cases—both those limiting the practice of religion in public schools and those limiting the public funding of private religious education—focused directly upon social conflict, potentially created when government becomes involved in religious education. In *Engel* v. *Vitale,* 370 U. S. 421 (1962), the Court held that the Establishment Clause forbids prayer in public elementary and secondary schools. It did so in part because it recognized the "anguish, hardship and bitter strife that could come when zealous religious groups

struggl[e] with one another to obtain the Government's stamp of approval . . . ." *Id.,* at 429. And it added:

"The history of governmentally established religion, both in England and in this country, showed that whenever 719*719 government had allied itself with one particular form of religion, the inevitable result had been that it had incurred the hatred, disrespect and even contempt of those who held contrary beliefs." *Id.,* at 431.

See also *Lee* v. *Weisman,* 505 U. S. 577, 588 (1992) (striking down school-sanctioned prayer at high school graduation ceremony because "potential for divisiveness" has "particular relevance" in school environment); *School Dist. of Abington Township* v. *Schempp,* 374 U. S. 203, 307 (1963) (Goldberg, J., concurring) (Bible-reading program violated Establishment Clause in part because it gave rise "to those very divisive influences and inhibitions of freedom" that come with government efforts to impose religious influence on "young impressionable [school] children").

In *Lemon* v. *Kurtzman,* 403 U. S. 602 (1971), the Court held that the Establishment Clause forbids state funding, through salary supplements, of religious school teachers. It did so in part because of the "threat" that this funding would create religious "divisiveness" that would harm "the normal political process." *Id.,* at 622. The Court explained:

"[P]olitical debate and division . . . are normal and healthy manifestations of our democratic system of government, but political division along religious lines was one of the principal evils against which [the First Amendment's religious clauses were] . . . intended to protect." *Ibid.*

And in *Committee for Public Ed. & Religious Liberty* v. *Nyquist,* 413 U. S. 756, 794 (1973), the Court struck down a state statute that, much like voucher programs, provided aid for parents whose children attended religious schools, explaining that the "assistance of the sort here involved carries grave potential for . . . continuing political strife over aid to religion."

When it decided these 20th-century Establishment Clause cases, the Court did not deny that an earlier American society 720*720 might have found a less clear-cut church/state separation compatible with social tranquility. Indeed, historians point out that during the early years of the Republic, American schools—including the first public schools—were Protestant in character. Their students recited Protestant prayers, read the King James version of the Bible, and learned Protestant religious ideals. See, *e. g.,* D. Tyack, Onward Christian Soldiers: Religion in the American Common School, in History and Education 217-226 (P. Nash ed. 1970). Those practices may have wrongly discriminated against members of minority religions, but given the small number of such individuals, the teaching of Protestant religions in schools did not threaten serious social conflict. See Kosmin & Lachman, *supra,* at 45 (Catholics constituted less than 2% of American church-affiliated population at time of founding).

The 20th-century Court was fully aware, however, that immigration and growth had changed American society dramatically since its early years. By 1850, 1.6 million Catholics lived in America, and by 1900 that number rose to 12 million. Jeffries & Ryan, A Political History of the Establishment Clause, 100 Mich. L. Rev. 279, 299-300 (Nov. 2001). There were similar percentage increases in the Jewish population. Kosmin & Lachman, *supra,* at 45-46. Not surprisingly, with this increase in numbers, members of nonProtestant religions, particularly Catholics, began to resist the Protestant domination of the public schools. Scholars report that by the mid-19th century religious conflict over matters such as Bible reading "grew intense," as Catholics resisted and Protestants fought back to preserve their domination. Jeffries & Ryan, *supra,* at 300. "Dreading Catholic domination," native Protestants "terrorized Catholics." P. Hamburger, Separation of Church and State 219 (2002). In some States "Catholic students suffered beatings or expulsions for refusing to read from the Protestant Bible, and crowds . .. rioted over whether Catholic children could be 721*721 released from the classroom during Bible reading." Jeffries & Ryan, 100 Mich. L. Rev., at 300.

The 20th-century Court was also aware that political efforts to right the wrong of discrimination against religious minorities in primary education had failed; in fact they had exacerbated religious conflict. Catholics sought equal government support for the education of their children in the form of aid for private Catholic schools. But the "Protestant position" on this matter, scholars report, "was that public schools must be `nonsectarian' (which was usually understood to allow Bible reading and other Protestant observances) and public money must not support `sectarian' schools (which in practical terms meant Catholic)." *Id.,* at 301. And this sentiment played a significant role in creating a movement that sought to amend several state constitutions (often successfully), and to amend the United States Constitution (unsuccessfully) to make certain that government would not help pay for "sectarian" (*i. e.,* Catholic) schooling for children. *Id.,* at 301-305. See also Hamburger, *supra,* at 287.

These historical circumstances suggest that the Court, applying the Establishment Clause through the Fourteenth Amendment to 20th-century American society, faced an interpretive dilemma that was in part practical. The Court appreciated the religious diversity of contemporary American society. See *Schempp, supra,* at 240 (Brennan, J., concurring). It realized that the status quo favored some religions at the expense of others. And it understood the Establishment Clause to prohibit (among other things) any such favoritism. Yet *how* did the Clause achieve that objective? Did it simply require the government to give each religion an equal chance to introduce religion into the primary schools—a kind of "equal opportunity" approach to the interpretation of the Establishment Clause? Or, did that Clause avoid government favoritism of some religions by insisting upon "separation"—that the government achieve 722*722 equal treatment by removing itself from the business of providing religious education for children? This interpretive choice arose in respect both to religious activities in public schools and government aid to private education.

In both areas the Court concluded that the Establishment Clause required "separation," in part because an "equal opportunity" approach was not workable. With respect to

religious activities in the public schools, how could the Clause require public primary and secondary school teachers, when reading prayers or the Bible, *only* to treat all religions alike? In many places there were too many religions, too diverse a set of religious practices, too many whose spiritual beliefs denied the virtue of formal religious training. This diversity made it difficult, if not impossible, to devise meaningful forms of "equal treatment" by providing an "equal opportunity" for all to introduce their own religious practices into the public schools.

With respect to government aid to private education, did not history show that efforts to obtain equivalent funding for the private education of children whose parents did not hold popular religious beliefs only exacerbated religious strife? As Justice Rutledge recognized:

"Public money devoted to payment of religious costs, educational or other, brings the quest for more. It brings too the struggle of sect against sect for the larger share or for any. Here one [religious sect] by numbers [of adherents] alone will benefit most, there another. This is precisely the history of societies which have had an established religion and dissident groups." *Everson* v. *Board of Ed. of Ewing*, 330 U. S. 1, 53-54 (1947) (dissenting opinion).

The upshot is the development of constitutional doctrine that reads the Establishment Clause as avoiding religious strife, *not* by providing every religion with an *equal opportunity* (say, to secure state funding or to pray in the public 723*723 schools), but by drawing fairly clear lines of *separation* between church and state—at least where the heartland of religious belief, such as primary religious education, is at issue.

II

The principle underlying these cases—avoiding religiously based social conflict—remains of great concern. As religiously diverse as America had become when the Court decided its major 20th-century Establishment Clause cases, we are exponentially more diverse today. America boasts more than 55 different religious groups and subgroups with a significant number of members. Graduate Center of the City University of New York, B. Kosmin, E. Mayer, & A. Keysar, American Religious Identification Survey 12-13 (2001). Major religions include, among others, Protestants, Catholics, Jews, Muslims, Buddhists, Hindus, and Sikhs. *Ibid.* And several of these major religions contain different subsidiary sects with different religious beliefs. See Lester, Oh, Gods!, The Atlantic Monthly 37 (Feb. 2002). Newer Christian immigrant groups are "expressing their Christianity in languages, customs, and independent churches that are barely recognizable, and often controversial, for Europeanancestry Catholics and Protestants." H. Ebaugh & J. Chafetz, Religion and the New Immigrants: Continuities and Adaptations in Immigrant Congregations 4 (abridged student ed. 2002).

Under these modern-day circumstances, how is the "equal opportunity" principle to work—without risking the "struggle of sect against sect" against which Justice Rutledge warned? School voucher programs finance the religious education of the young. And, if

widely adopted, they may well provide billions of dollars that will do so. Why will different religions not become concerned about, and seek to influence, the criteria used to channel this money to religious schools? Why will they not want to examine the implementation of the programs that provide this money—to determine, for example, 724*724 whether implementation has biased a program toward or against particular sects, or whether recipient religious schools are adequately fulfilling a program's criteria? If so, just how is the State to resolve the resulting controversies without provoking legitimate fears of the kinds of religious favoritism that, in so religiously diverse a Nation, threaten social dissension?

Consider the voucher program here at issue. That program insists that the religious school accept students of all religions. Does that criterion treat fairly groups whose religion forbids them to do so? The program also insists that no participating school "advocate or foster unlawful behavior or teach hatred of any person or group on the basis of race, ethnicity, national origin, or religion." Ohio Rev. Code Ann. § 3313.976(A)(6) (West Supp. 2002). And it requires the State to "revoke the registration of any school if, after a hearing, the superintendent determines that the school is in violation" of the program's rules. § 3313.976(B). As one *amicus* argues, "it is difficult to imagine a more divisive activity" than the appointment of state officials as referees to determine whether a particular religious doctrine "teaches hatred or advocates lawlessness." Brief for National Committee for Public Education and Religious Liberty as *Amicus Curiae* 23.

How are state officials to adjudicate claims that one religion or another is advocating, for example, civil disobedience in response to unjust laws, the use of illegal drugs in a religious ceremony, or resort to force to call attention to what it views as an immoral social practice? What kind of public hearing will there be in response to claims that one religion or another is continuing to teach a view of history that casts members of other religions in the worst possible light? How will the public react to government funding for schools that take controversial religious positions on topics that are of current popular interest—say, the conflict in the Middle East or the war on terrorism? Yet any major funding program 725*725 for primary religious education will require criteria. And the selection of those criteria, as well as their application, inevitably pose problems that are divisive. Efforts to respond to these problems not only will seriously entangle church and state, see *Lemon*, 403 U. S., at 622, but also will promote division among religious groups, as one group or another fears (often legitimately) that it will receive unfair treatment at the hands of the government.

I recognize that other nations, for example Great Britain and France, have in the past reconciled religious school funding and religious freedom without creating serious strife. Yet British and French societies are religiously more homogeneous—and it bears noting that recent waves of immigration have begun to create problems of social division there as well. See, *e. g.,* The Muslims of France, 75 Foreign Affairs 78 (1996) (describing increased religious strife in France, as exemplified by expulsion of teenage girls from school for wearing traditional Muslim scarves); Ahmed, Extreme Prejudice; Muslims in

Britain, The Times of London, May 2, 1992, p. 10 (describing religious strife in connection with increased Muslim immigration in Great Britain).

In a society as religiously diverse as ours, the Court has recognized that we must rely on the Religion Clauses of the First Amendment to protect against religious strife, particularly when what is at issue is an area as central to religious belief as the shaping, through primary education, of the next generation's minds and spirits. See, *e. g.,* Webster, On the Education of Youth in America (1790), in Essays on Education in the Early Republic 43, 53, 59 (F. Rudolph ed. 1965) ("[E]ducation of youth" is "of more consequence than making laws and preaching the gospel, because it lays the foundation on which both law and gospel rest for success"); Pope Paul VI, Declaration on Christian Education (1965) ("[T]he Catholic school can be such an aid to the fulfillment of the mission of the People of God and to the fostering of dialogue between 726*726 the Church and mankind, to the benefit of both, it retains even in our present circumstances the utmost importance").

III

I concede that the Establishment Clause currently permits States to channel various forms of assistance to religious schools, for example, transportation costs for students, computers, and secular texts. See *Everson* v. *Board of Ed. of Ewing,* 330 U. S. 1 (1947); *Mitchell* v. *Helms,* 530 U. S. 793 (2000). States now certify the nonsectarian educational content of religious school education. See, *e. g., New Life Baptist Church Academy* v. *East Longmeadow,* 885 F. 2d 940 (CA1 1989). Yet the consequence has not been great turmoil. But see, *e. g.,* May, Charter School's Religious Tone; Operation of South Bay Academy Raises Church-State Questions, San Francisco Chronicle, Dec. 17, 2001, p. A1 (describing increased government supervision of charter schools after complaints that students were "studying Islam in class and praying with their teachers," and Muslim educators complaining of "`post-Sept. 11 anti-Muslim sentiment' ").

School voucher programs differ, however, in both *kind* and *degree* from aid programs upheld in the past. They differ in kind because they direct financing to a core function of the church: the teaching of religious truths to young children. For that reason the constitutional demand for "separation" is of particular constitutional concern. See, *e. g., Weisman,* 505 U. S., at 592 ("heightened concerns" in context of primary education); *Edwards* v. *Aguillard,* 482 U. S. 578, 583— 584 (1987) ("Court has been particularly vigilant in monitoring compliance with the Establishment Clause in elementary and secondary schools").

Private schools that participate in Ohio's program, for example, recognize the importance of primary religious education, for they pronounce that their goals are to "communicate the gospel," "provide opportunities to . . . experience a faith community," "provide . . . for growth in prayer," and "provide 727*727 instruction in religious truths and values." App. 408a, 487a. History suggests, not that such private school teaching of religion is undesirable, but that *government funding* of this kind of religious endeavor is far more contentious than providing funding for secular textbooks, computers,

vocational training, or even funding for adults who wish to obtain a college education at a religious university. See *supra,* at 720-722. Contrary to Justice O'Connor's opinion, *ante,* at 665-666 (concurring opinion), history also shows that government involvement in religious primary education is far more divisive than state property tax exemptions for religious institutions or tax deductions for charitable contributions, both of which come far closer to exemplifying the neutrality that distinguishes, for example, fire protection on the one hand from direct monetary assistance on the other. Federal aid to religiously based hospitals, *ante,* at 666 (O'Connor, J., concurring), is even further removed from education, which lies at the heartland of religious belief.

Vouchers also differ in *degree.* The aid programs recently upheld by the Court involved limited amounts of aid to religion. But the majority's analysis here appears to permit a considerable shift of taxpayer dollars from public secular schools to private religious schools. That fact, combined with the use to which these dollars will be put, exacerbates the conflict problem. State aid that takes the form of peripheral secular items, with prohibitions against diversion of funds to religious teaching, holds significantly less potential for social division. In this respect as well, the secular aid upheld in *Mitchell* differs dramatically from the present case. Although it was conceivable that minor amounts of money could have, contrary to the statute, found their way to the religious activities of the recipients, see 530 U. S., at 864 (O'Connor, J., concurring in judgment), that case is at worst the camel's nose, while the litigation before us is the camel itself.

728*728 IV

I do not believe that the "parental choice" aspect of the voucher program sufficiently offsets the concerns I have mentioned. Parental choice cannot help the taxpayer who does not want to finance the religious education of children. It will not always help the parent who may see little real choice between inadequate nonsectarian public education and adequate education at a school whose religious teachings are contrary to his own. It will not satisfy religious minorities unable to participate because they are too few in number to support the creation of their own private schools. It will not satisfy groups whose religious beliefs preclude them from participating in a government-sponsored program, and who may well feel ignored as government funds primarily support the education of children in the doctrines of the dominant religions. And it does little to ameliorate the entanglement problems or the related problems of social division that Part II, *supra,* describes. Consequently, the fact that the parent may choose which school can cash the government's voucher check does not alleviate the Establishment Clause concerns associated with voucher programs.

V

The Court, in effect, turns the clock back. It adopts, under the name of "neutrality," an interpretation of the Establishment Clause that this Court rejected more than half a century ago. In its view, the parental choice that offers each religious group a kind of equal opportunity to secure government funding overcomes the Establishment Clause

concern for social concord. An earlier Court found that "equal opportunity" principle insufficient; it read the Clause as insisting upon greater separation of church and state, at least in respect to primary education. See *Nyquist*, 413 U. S., at 783. In a society composed of many different religious creeds, I fear that this present departure from the Court's earlier understanding risks creating a form of religiously 729*729 based conflict potentially harmful to the Nation's social fabric. Because I believe the Establishment Clause was written in part to avoid this kind of conflict, and for reasons set forth by Justice Souter and Justice Stevens, I respectfully dissent.

Coons, pro se, and *Stephen D. Sugarman, pro se;* for Jesse H. Choper et al. by *Mr. Choper, pro se, William Bassett, Teresa Collett, David Forte, Richard Garnett, Lino Graglia, Michael Heise, Gail Heriot, Roderick Hills, Grant Nelson, Michael Perry, David Post, Charles Rice, Rosemary Salomone, Gregory Sisk, Steve Smith,* and *Harry Tepker;* and for Ira J. Paul et al. by *Sharon L. Browne.*

[1] Although the parties dispute the precise amount of state funding received by suburban school districts adjacent to the Cleveland City School District, there is no dispute that any suburban district agreeing to participate in the program would receive a $2,250 tuition grant *plus* the ordinary allotment of per-pupil state funding for each program student enrolled in a suburban public school. See Brief for Respondents Simmons-Harris et al. 30, n. 11 (suburban schools would receive "on average, approximately, $4,750" per program student); Brief for Petitioners in No. 00-1779, p. 39 (suburban schools would receive "about $6,544" per program student).

[2] The number of available scholarships per covered districtis determined annually by the Ohio Superintendent for Public Instruction. §§ 3313.978(A)—(B).

[3] Justice Souter suggests the program is not "neutral" because program students cannot spend scholarship vouchers at traditional public schools. *Post,* at 697-698 (dissenting opinion). This objection is mistaken: Public schools in Cleveland already receive $7,097 in public funding per pupil—$4,167 of which is attributable to the State. App. 56a. Program students who receive tutoring aid and remain enrolled in traditional public schools therefore direct almost twice as much state funding to their chosen school as do program students who receive a scholarship and attend a private school. *Ibid.* Justice Souter does not seriously claim that the program differentiates based on the religious status of beneficiaries or providers of services,the touchstone of neutrality under the Establishment Clause. *Mitchell* v. *Helms,* 530 U. S. 793, 809 (2000) (plurality opinion); *id.,* at 838 (O'Connor, J., concurring in judgment).

[4] Justice Souter appears to base this claim on the unfounded assumption that capping the amount of tuition charged to low-income students (at $2,500) favors participation by religious schools. *Post,* at 704-705 (dissenting opinion). But elsewhere he claims that the program spends *too much* money on private schools and chides the state legislature for even proposing to raise the scholarship amount for low-income recipients. *Post,* at 697-698, 710-711, 714-715. His assumption also finds no support in the record, which shows that nonreligious private schools operating in Cleveland also seek and receive substantial third-party contributions. App. 194a—195a; App. to Pet. for Cert. in No. 00-1777, p. 119a. Indeed, the actual operation of the program refutes Justice Souter's argument that few but religious schools can afford to participate: Ten secular private schools operated within the Cleveland City School District when the program was adopted. Reply Brief for Petitioners in No. 00-1777, p. 4 (citing Ohio Educational Directory, 1999-2000 School Year, Alphabetic List of Nonpublic Schools, Ohio Dept. of Ed.). All 10 chose to participate in the program and have continued to participate to this day. App. 281a—286a. And while no religious schools have been created in response to the program, several *nonreligious* schools have been created, *id.,* at 144a—148a, 224a—225a, in spite of the fact that a principal barrier to entry of new private schools is the uncertainty caused by protracted litigation which has plagued the program since its inception, *post,* at 672 (O'Connor, J., concurring) (citing App. 225a, 227a). See also 234 F. 3d 945, 970 (CA6 2000) (Ryan, J., concurring in part and dissenting in part) ("There is not a scintilla of evidence in this case that any school, public or private, has been discouraged from participating in the school voucher program because it cannot `afford' to do so"). Similarly mistaken is Justice Souter's reliance on the low enrollment of scholarship students in nonreligious schools during the 1999-2000 school year. *Post,* at 704 (citing Brief for California Alliance for Public Schools as *Amicus Curiae* 15). These figures ignore the fact that the number of program students enrolled in nonreligious schools has widely varied from year to year, *infra,* at 659; *e. g.,* n. 5, *infra,* underscoring why the constitutionality of a neutral choice program does not turn on annual tallies of private decisions made in any given year by thousands of individual aid recipients, *infra,* at 659 (citing *Mueller* v. *Allen,* 463 U. S. 388, 401 (1983)).

[5] The fluctuations seen in the Cleveland program are hardly atypical. Experience in Milwaukee, which since 1991 has operated an educational choice program similar to the Ohio program, demonstrates that the mix of participating schools fluctuates significantly from year to year based on a number of factors,

one of which is the uncertainty caused by persistent litigation. See App. 218a, 229a—236a; Brief for State of Wisconsin as *Amicus Curiae* 10-13 (hereinafter Brief for Wisconsin) (citing Wisconsin Dept. of Public Instruction, Milwaukee Parental Choice Program Facts and Figures for 2001-2002). Since the Wisconsin Supreme Court declared the Milwaukee program constitutional in 1998, *Jackson* v. *Benson*, 218 Wis. 2d 835, 578 N. W. 2d 602, several nonreligious private schools have entered the Milwaukee market, and now represent 32% of all participating schools. Brief for Wisconsin 11-12. Similarly, the number of program students attending nonreligious private schools increased from 2,048 to 3,582; these students now represent 33% of all program students. *Id.,* at 12-13. There are currently 34 nonreligious private schools participating in the Milwaukee program, a nearly five-fold increase from the 7 nonreligious schools that participated when the program began in 1990. See App. 218a; Brief for Wisconsin 12. And the total number of students enrolled in nonreligious schools has grown from 337 when the program began to 3,582 in the most recent school year. See App. 218a, 234a—236a; Brief for Wisconsin 12-13. These numbers further demonstrate the wisdom of our refusal in *Mueller* v. *Allen*, 463 U. S., at 401, to make the constitutionality of such a program depend on "annual reports reciting the extent to which various classes of private citizens claimed benefits under the law."

[6] Justice Souter and Justice Stevens claim that community schools and magnet schools are separate and distinct from program schools, simply because the program itself does not include community and magnet school options. *Post,* at 698-701 (Souter, J., dissenting); *post,* at 685 (Stevens, J., dissenting). But none of the dissenting opinions explain how there is any perceptible difference between scholarship schools, community schools, or magnet schools from the perspective of Cleveland parents looking to choose the best educational option for their school-age children. Parents who choose a program school in fact receive from the State precisely what parents who choose a community or magnet school receive—the opportunity to send their children largely at state expense to schools they prefer to their local public school. See, *e. g.,* App. 147a, 168a—169a; App. in Nos. 00-3055, etc. (CA6), pp. 1635-1645 and 1657-1673 (Cleveland parents who enroll their children in schools other than local public schools typically explore all state-funded options before choosing an alternative school).

[7] Justice Breyer would raise the invisible specters of "divisiveness" and "religious strife" to find the program unconstitutional. *Post,* at 719, 725-728 (dissenting opinion). It is unclear exactly what sort of principle Justice Breyer has in mind, considering that the program has ignited no "divisiveness" or "strife" other than this litigation. Nor is it clear where Justice Breyer would locate this presumed authority to deprive Cleveland residents of a program that they have chosen but that we subjectively find "divisive." We quite rightly have rejected the claim that some speculative potential for divisiveness bears on the constitutionality of educational aid programs. *Mitchell* v. *Helms*, 530 U. S., at 825 (plurality opinion) ("The dissent resurrects the concern for political divisiveness that once occupied the Court but that post-*Aguilar* cases have rightly disregarded") (citing cases); *id.,* at 825-826 ("`It is curious indeed to base our interpretation of the Constitution on speculation as to the likelihood of a phenomenon which the parties may create merely by prosecuting a lawsuit' " (quoting *Aguilar* v. *Felton*, 473 U. S. 402, 429 (1985) (O'Connor, J., dissenting))).

[1] The Blessings of Liberty and Education: An Address Delivered in Manassas, Virginia, on 3 September 1894, in 5 The Frederick Douglass Papers 623 (J. Blassingame & J. McKivigan eds. 1992) (hereinafter Douglass Papers).

[2] See, *e. g.,* *School Dist. of Abington Township* v. *Schempp*, 374 U. S. 203, 309-310 (1963) (Stewart, J., dissenting) ("[T]he Establishment Clause was primarily an attempt to insure that Congress not only would be powerless to establish a national church, but would also be unable to interfere with existing state establishments"); see also *Wallace* v. *Jaffree*, 472 U. S. 38, 113 (1985) (Rehnquist, J., dissenting).

[3] Several Justices have suggested that rights incorporated through the Fourteenth Amendment apply in a different manner to the States than they do to the Federal Government. For instance, Justice Jackson stated, "[t]he inappropriateness of a single standard for restricting State and Nation is indicated by the disparity between their functions and duties in relation to those freedoms." *Beauharnais* v. *Illinois*, 343 U. S. 250, 294 (1952) (dissenting opinion). Justice Harlan noted: "The Constitution differentiates between

those areas of human conduct subject to the regulation of the States and those subject to the powers of the Federal Government. The substantive powers of the two governments, in many instances, are distinct. And in every case where we are called upon to balance the interest in free expression against other interests, it seems to me important that we should keep in the forefront the question of whether those other interests are state or federal." *Roth* v. *United States*, 354 U. S. 476, 503-504 (1957) (dissenting opinion). See also *Gitlow* v. *New York*, 268 U. S. 652, 672 (1925) (Holmes, J., dissenting).

[4] In particular, these rights inhere in the Free Exercise Clause, which unlike the Establishment Clause protects individual liberties of religious worship. "That the central value embodied in the First Amendment— and, more particularly, in the guarantee of `liberty' contained in the Fourteenth—is the safeguarding of an individual's right to free exercise of his religion has been consistently recognized." *Schempp, supra,* at 312 (Stewart, J., dissenting). See also Amar, The Bill of Rights as a Constitution, 100 Yale L. J. 1131, 1159 (1991) ("[T]he free exercise clause was paradigmatically about citizen rights, not state rights; it thus invites incorporation. Indeed, this clause was specially concerned with the plight of minority religions, and thus meshes especially well with the minorityrights thrust of the Fourteenth Amendment"); Lietzau, Rediscovering the Establishment Clause: Federalism and the Rollback of Incorporation, 39 DePaul L. Rev. 1191, 1206-1207 (1990).

[5] This Court has held that parents have the fundamental liberty to choose how and in what manner to educate their children. "The fundamental theory of liberty upon which all governments in this Union repose excludes any general power of the State to standardize its children by forcing them to accept instruction from public teachers only. The child is not the mere creature of the State; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations." *Pierce* v. *Society of Sisters*, 268 U. S. 510, 535 (1925). But see *Troxel* v. *Granville*, 530 U. S. 57, 80 (2000) (Thomas, J., concurring in judgment).

[6] See, *e. g.,* N. Edwards, School in the American Social Order: The Dynamics of American Education 360-362 (1947).

[7] Minority and low-income parents express the greatest support for parental choice and are most interested in placing their children in private schools. "[T]he appeal of private schools is especially strong among parents who are low in income, minority, and live in low-performing districts: precisely the parents who are the most disadvantaged under the current system." T. Moe, Schools, Vouchers, and the American Public 164 (2001). Nearly three-fourths of all public school parents with an annual income less than $20,000 support vouchers, compared to 57 percent of public school parents with an annual income of over $60,000. See *id.,* at 214 (Table 7-3). In addition, 75 percent of black public school parents support vouchers, as do 71 percent of Hispanic public school parents. *Ibid.*

[8] In 1997, approximately 68 percent of prisoners in state correctional institutions did not have a high school degree. See U. S. Dept. of Justice, Bureau of Justice Statistics, Sourcebook of Criminal Justice Statistics2000, p. 519 (Table 6.38).

[9] These programs include tax credits for such schooling. In addition, 37 States have some type of charter school law. See School Choice 2001: What's Happening in the States xxv (R. Moffitt, J. Garrett, & J. Smith eds. 2001) (Table 1).

[10] Douglass Papers 623.

[1] Ohio is currently undergoing a major overhaul of its public school financing pursuant to an order of the Ohio Supreme Court in *DeRolph* v. *State*, 93 Ohio St. 3d 309, 754 N. E. 2d 1184 (2001). The Court ought, at least, to allow that reform effort and the district's experimentation with alternative public schools to take effect before relying on Cleveland's educational crisis as a reason for state financed religious education.

[2] The Court suggests that an education at one of the district's community or magnet schools is provided "largely at state expense." *Ante,* at 660, n. 6. But a public education at either of these schools is provided *entirely* at state expense—as the State is required to do.

[1] "Congress shall make no law respecting an establishment of religion," U. S. Const., Amdt. 1.

[2] See, *e. g.,* App. 319a (Saint Jerome School Parent and Student Handbook 1999-2000, p. 1) ("FAITH must dominate the entire educational process so that the child can make decisions according to Catholic values and choose to lead a Christian life"); *id.,* at 347a (Westside Baptist Christian School Parent-Student Handbook, p. 7) ("Christ is the basis of all learning. All subjects will be taught from the Biblical perspective that all truth is God's truth").

[3] See *Everson,* 330 U. S., at 54, n. 47 (noting that similar programs had been struck down in six States, upheld in eight, and *amicus curiae* briefs filed by "three religious sects, one labor union, the American Civil Liberties Union, and the states of Illinois, Indiana, Louisiana, Massachusetts, Michigan and New York").

[4] The Court noted that "the record contains no evidence that any of the private schools . . . previously provided textbooks for their students," and "[t]here is some evidence that at least some of the schools did not." *Allen,* 392 U. S., at 244, n. 6. This was a significant distinction: if the parochial schools provided secular textbooks to their students, then the State's provision of the same in their stead might have freed up church resources for allocation to other uses, including, potentially, religious indoctrination.

[5] The Court similarly rejected a path argument in *Wolman* v. *Walter,* 433 U. S. 229 (1977), overruled by *Mitchell* v. *Helms,* 530 U. S. 793 (2000), where the State sought to distinguish *Meek* v. *Pittenger,* 421 U. S. 349 (1975), overruled by *Mitchell, supra,* based on the fact that, in *Meek,* the State had lent educational materials to individuals rather than to schools. "Despite the technical change in legal bailee," the Court explained, "the program in substance is the same as before," and "it would exalt form over substance if this distinction were found to justify a result different from that in *Meek.* " *Wolman, supra,* at 250. Conversely, the Court upheld a law reimbursing private schools for state-mandated testing, dismissing a proffered distinction based on the indirect path of aid in an earlier case as "a formalistic dichotomy that bears . .. little relationship either to common sense or to the realities of school finance." *Committee for Public Ed. and Religious Liberty* v. *Regan,* 444 U. S. 646, 658 (1980).

[6] Justice O'Connor apparently no longer distinguishes between this notion of evenhandedness neutrality and the free-exercise neutrality in *Everson.* Compare *ante,* at 669 (concurring opinion), with *Mitchell,* 530 U. S., at 839 (opinion concurring in judgment) ("Even if we at one time used the term `neutrality' in a descriptive sense to refer to those aid programs characterized by the requisite equipoise between support of religion and antagonism to religion, Justice Souter's discussion convincingly demonstrates that the evolution in the meaning of the term in our jurisprudence is cause to hesitate before equating the neutrality of recent decisions with the neutrality of old").

[7] The majority's argument that public school students within the program "direct almost twice as much state funding to their chosen school as do program students who receive a scholarship and attend a private school," *ante,* at 654, n. 3, was decisively rejected in *Committee for Public Ed. & Religious Liberty* v. *Nyquist,* 413 U. S. 756, 782-783, n. 38 (1973): "We do not agree with the suggestion . . . that tuition grants are an analogous endeavor to provide comparable benefits to all parents of schoolchildren whether enrolled in public or nonpublic schools. . . . The grants to parents of private schoolchildren are given in addition to the right that they have to send their children to public schools `totally at state expense.' And in any event, the argument proves too much, for it would also provide a basis for approving through tuition grants the *complete subsidization* of all religious schools on the ground that such action is necessary if the State is fully to equalize the position of parents who elect such schools— a result wholly at variance with the Establishment Clause."

[8] In some earlier cases, "private choice" was sensibly understood to go beyond the mere formalism of path, to ensure that aid was neither systemic nor predestined to go to religious uses. Witters, for example, had a virtually unlimited choice among professional training schools, only a few of which were religious; and Zobrest was simply one recipient who chose to use a government-funded interpreter at a religious school over a secular school, either of which was open to him. But recent decisions seem to have stripped away any substantive bite, as "private choice" apparently means only that government aid follows individuals to religious schools. See, *e. g.,* Agostini v. Felton, 521 U. S. 203, 229 (1997) (state aid for remedial instruction at a religious school goes "directly to the eligible students . . . no matter where they choose to attend school").

[9] The need for a limit is one answer to Justice O'Connor, who argues at length that community schools should factor in the "private choice" calculus. *Ante,* at 672-673 (concurring opinion). To be fair, community schools do exhibit some features of private schools: they are autonomously managed without any interference from the school district or State and two have prior histories as private schools. It may be, then, that community schools might arguably count as choices because they are not like other public schools run by the State or municipality, but in substance merely private schools with state funding outside the voucher program.

But once any public school is deemed a relevant object of choice, there is no stopping this progression. For example, both the majority and Justice O'Connor characterize public magnet schools as an independent category of genuine educational options, simply because they are "nontraditional" public schools. But they do not share the "private school" features of community schools, and the only thing that distinguishes them from "traditional" public schools is their thematic focus, which in some cases appears to be nothing more than creative marketing. See, *e. g.,* Cleveland Municipal School District, Magnet and Thematic Programs/ Schools (including, as magnet schools, "[f]undamental [e]ducation [c]enters," which employ "[t]raditional classrooms and teaching methods with an emphasis on basic skills"; and "[a]ccelerated [l]earning" schools, which rely on "[i]nstructional strategies [that] provide opportunities for students to build on individual strengths, interests and talents").

[10] And how should we decide which "choices" are "genuine" if the range of relevant choices is theoretically wide open? The showcase educational options that the majority and Justice O'Connor trumpet are Cleveland's 10 community schools, but they are hardly genuine choices. Two do not even enroll students in kindergarten through third grade, App. 162a, and thus parents contemplating participation in the voucher program cannot select those schools. See Ohio Rev. Code Ann. § 3313.975(C)(1) (West Supp. 2002) ("[N]o new students may receive scholarships unless they are enrolled in grade kindergarten, one, two, or three"). One school was not "in operation" as of 1999, and in any event targeted students below the federal poverty line, App. 162a, not all voucher-eligible students, see n. 21, *infra.* Another school was a special population school for students with "numerous suspensions, behavioral problems and who are a grade level below their peers," App. 162a, which, as Justice O'Connor points out, may be "more attractive to certain inner-city parents," *ante,* at 674, but is probably not an attractive "choice" for most parents.

Of the six remaining schools, the most recent statistics on fourth-grade student performance (unavailable for one school) indicate: three scored well below the Cleveland average in each of five tested subjects on state proficiency examinations, one scored above in one subject, and only one community school, Old Brooklyn Montessori School, was even an arguable competitor, scoring slightly better than traditional public schools in three subjects, and somewhat below in two. See Ohio Dept. of Ed., 2002 Community School Report Card, Hope Academy, Lincoln Park, p. 5; *id.,* Hope Academy, Cathedral Campus, at 5; *id.,* Hope Academy, Chapelside Campus, at 5; *id.,* Hope Academy, Broadway Campus, at 5; *id.,* Old Brooklyn Montessori School, at 5; 2002 District Report Card, Cleveland Municipal School District, p. 1. These statistics are consistent with 1999 test results, which were only available for three of the schools. Brief for Ohio School Boards Association et al. as *Amici Curiae* 26-28 (for example, 34.3% of students in the Cleveland City School District were proficient in math, as compared with 3.3% in Hope Chapelside and 0% in Hope Cathedral).

I think that objective academic excellence should be the benchmark in comparing schools under the majority's test; Justice O'Connor prefers comparing educational options on the basis of subjective "parental satisfaction," *ante,* at 675, and I am sure there are other plausible ways to evaluate "genuine choices." Until now, our cases have never talked about the quality of educational options by whatever standard, but now that every educational option is a relevant "choice," this is what the "genuine and independent private choice" enquiry, *ante,* at 652 (opinion of the Court), would seem to require if it is to have any meaning at all. But if that is what genuine choice means, what does this enquiry have to do with the Establishment Clause?

[11] For example, 40% of families who sent their children to private schools for the first time under the voucher program were Baptist, App. 118a, but only one school, enrolling 44 voucher students, is Baptist, *id.,* at 284a.

[12] When parents were surveyed as to their motives for enrolling their children in the voucher program, 96.4% cited a better education than available in the public schools, and 95% said their children's safety. *Id.,* at 69a—70a. When asked specifically in one study to identify the most important factor in selecting among participating private schools, 60% of parents mentioned academic quality, teacher quality, or the substance of what is taught (presumably secular); only 15% mentioned the religious affiliation of the school as even a consideration. *Id.,* at 119a.

[13] Justice O'Connor points out that "there is no record evidence that any voucher-eligible student was turned away from a nonreligious private school in the voucher program." *Ante,* at 671. But there is equally no evidence to support her assertion that "many parents with vouchers selected nonreligious private schools over religious alternatives," *ibid.,* and in fact the evidence is to the contrary, as only 129 students used vouchers at private nonreligious schools.

[14] General Accounting Office Report No. 01-914, School Vouchers: Publicly Funded Programs in Cleveland and Milwaukee 25 (Aug. 2001) (GAO Report). Of the 10 nonreligious private schools that "participate" in the Cleveland voucher program, 3 currently enroll no voucher students. And of the remaining seven schools, one enrolls over half of the 129 students that attend these nonreligious schools, while only two others enroll more than 8 voucher students. App. 281a—286a. Such schools can charge full tuition to students whose families do not qualify as "low income," but unless the number of vouchers are drastically increased, it is unlikely that these students will constitute a large fraction of voucher recipients, as the program gives preference in the allocation of vouchers to low-income children. See Ohio Rev. Code Ann. § 3313.978(A) (West Supp. 2002).

[15] GAO Report 25. A 1993-1994 national study reported a similar average tuition for Catholic elementary schools ($1,572), but higher tuition for other religious schools ($2,213), and nonreligious schools ($3,773). U. S. Dept. of Ed., Office of Educational Research and Improvement, National Center for Education Statistics, Private Schools in the United States: A Statistical Profile, 1993-94 (NCES 1997-459 June 1997) (Table 1.5). The figures are explained in part by the lower teaching expenses of the religious schools and general support by the parishes that run them. Catholic schools, for example, received 24.1% of their revenue from parish subsidies in the 2000-2001 school year. National Catholic Educational Association, Balance Sheet for Catholic Elementary Schools: 2001 Income and Expenses 25 (2001). Catholic schools also often rely on priests or members of religious communities to serve as principals, 32% of 550 reporting schools in one study, *id.,* at 21; at the elementary school level, the average salary of religious sisters serving as principals in 2000-2001 was $28,876, as compared to lay principals, who received on average $45,154, and public school principals who reported an average salary of $72,587. *Ibid.*

Justice O'Connor argues that nonreligious private schools can compete with Catholic and other religious schools below the $2,500 tuition cap. See *ante,* at 670-671. The record does not support this assertion, as only three secular private schools in Cleveland enroll more than eight voucher students. See n. 14, *supra.* Nor is it true, as she suggests, that our national statistics are spurious because secular schools cater to a different market from Catholic or other religious schools: while there is a spectrum of

nonreligious private schools, there is likely a commensurate range of low-end and high-end religious schools. My point is that at each level, the religious schools have a comparative cost advantage due to church subsidies, donations of the faithful, and the like. The majority says that nonreligious private schools in Cleveland derive similar benefits from "third-party contributions," *ante,* at 656, n. 4, but the one affidavit in the record that backs up this assertion with data concerns a private school for "emotionally disabled and developmentally delayed children" that received 11% of its budget from the United Way organization, App. 194a—195a, a large proportion to be sure, but not even half of the 24.1% of budget that Catholic schools on average receive in parish subsidies alone, see *supra* this note.

[16] The majority notes that I argue both that the Ohio program is unconstitutional because the voucher amount is too low to create real private choice and that any greater expenditure would be unconstitutional as well. *Ante,* at 656-657, n. 4. The majority is dead right about this, and there is no inconsistency here: any voucher program that satisfied the majority's requirement of "true private choice" would be even more egregiously unconstitutional than the current scheme due to the substantial amount of aid to religious teaching that would be required.

[17] As the Court points out, *ante,* at 645-646, n. 1, an out-of-district public school that participates will receive a $2,250 voucher for each Cleveland student on top of its normal state funding. The basic state funding, though, is a drop in the bucket as compared to the cost of educating that student, as much of the cost (at least in relatively affluent areas with presumptively better academic standards) is paid by local income and property taxes. See Brief for Ohio School Boards Association et al. as *Amici Curiae* 19-21. The only adjacent district in which the voucher amount is close enough to cover the local contribution is East Cleveland City (local contribution, $2,019, see Ohio Dept. of Ed., 2002 Community School Report Card, East Cleveland City School District, p. 2), but its public-school system hardly provides an attractive alternative for Cleveland parents, as it too has been classified by Ohio as an "academic emergency" district. See *ibid.*

[18] The majority relies on *Mueller, Agostini,* and *Mitchell* to dispute the relevance of the large number of students that use vouchers to attend religious schools, *ante,* at 658, but the reliance is inapt because each of those cases involved insubstantial benefits to the religious schools, regardless of the number of students that benefited. See, *e. g., Mueller,* 463 U. S., at 391 ($112 in tax benefit to the highest bracket taxpayer, see Brief for Respondents Becker et al. in *Mueller* v. *Allen,* O. T. 1982, No. 82-195, p. 5);*Agostini,* 521 U. S.,at 210 (aid"must `supplement, and in no case supplant' "); *Mitchell,* 530 U. S., at 866 (O'Connor, J., concurring in judgment) *("de minimis").* See also *supra,* at 694-695.

[19] No less irrelevant, and lacking even arguable support in our cases, is Justice O'Connor's argument that the $8.2 million in tax-raised funds distributed under the Ohio program to religious schools is permissible under the Establishment Clause because it "pales in comparison to the amount of funds that federal, state, and local governments already provide religious institutions," *ante,* at 665. Our cases have consistently held that state benefits at some level can go to religious institutions when the recipients are not pervasively sectarian, see, *e. g., Tilton* v. *Richardson,* 403 U. S. 672 (1971) (aid to church-related colleges and universities); *Bradfield* v. *Roberts,* 175 U. S. 291 (1899) (religious hospitals); when the benefit comes in the form of tax exemption or deduction, see, *e. g., Walz* v. *Tax Comm'n of City of New York,* 397 U. S. 664 (1970) (property-tax exemptions); *Mueller* v. *Allen,* 463 U. S. 388 (1983) (tax deductions for educational expenses); or when the aid can plausibly be said to go to individual university students, see, *e. g., Witters* v. *Washington Dept. of Servs. for Blind,* 474 U. S. 481 (1986) (state scholarship programs for higher education, and by extension federal programs such as the G. I. Bill). The fact that those cases often allow for large amounts of aid says nothing about direct aid to pervasively sectarian schools for religious teaching. This "greater justifies the lesser" argument not only ignores the aforementioned cases, it would completely swallow up our aid-to-school cases from *Everson* onward: if $8.2 million in vouchers is acceptable, for example, why is there any requirement against greater than *de minimis* diversion to religious uses? See *Mitchell, supra,* at 866 (O'Connor, J., concurring in judgment).

[20] The amount of federal aid that may go to religious education after today's decision is startling: according to one estimate, the cost of a national voucher program would be $73 billion, 25% more than

the current national public-education budget. People for the American Way Foundation, Community Voice or Captive of the Right? 10 (Dec. 2001).

[21] Most, if not all, participating students come from families with incomes below 200% of the poverty line (at least 60% are below the poverty line, App. in Nos. 00-3055, etc. (CA6), p. 1679), and are therefore eligible for vouchers covering 90% of tuition, Ohio Rev. Code Ann. § 3313.978(A) (West Supp. 2002); they may make up the 10% shortfall by "in-kind contributions or services," which the recipient school "shall permit," § 3313.976(A)(8). Any higher income students in the program receive vouchers paying 75% of tuition costs. § 3313.978(A).

[22] As a historical matter, the protection of liberty of conscience may well have been the central objective served by the Establishment Clause. See Feldman, Intellectual Origins of the Establishment Clause, 77 N. Y. U. L. Rev. 346, 398 (May 2002) ("In the time between the proposal of the Constitution and of the Bill of Rights, the predominant, not to say exclusive, argument against established churches was that they had the potential to violate liberty of conscience").

[23] And the courts will, of course, be drawn into disputes about whether a religious school's employment practices violated the Ohio statute. In part precisely to avoid this sort of involvement, some Courts of Appeals have held that religious groups enjoy a First Amendment exemption for clergy from state and federal laws prohibiting discrimination on the basis of race or ethnic origin. See, *e. g.,* *Rayburn v. General Conference of Seventh-Day Adventists*, 772 F. 2d 1164, 1170 (CA4 1985) ("The application of Title VII to employment decisions of this nature would result in an intolerably close relationship between church and state both on a substantive and procedural level"); *EEOC v. Catholic Univ. of America*, 83 F. 3d 455, 470 (CADC 1996); *Young v. Northern Ill. Conference of United Methodist Church*, 21 F. 3d 184, 187 (CA7 1994). This approach would seem to be blocked in Ohio by the same antidiscrimination provision, which also covers "race . . . or ethnic background." Ohio Rev. Code Ann. § 3313.976(A)(4) (West Supp. 2002).

[24] See, *e. g.,* Christian New Testament (2 Corinthians 6:14) (King James Version) ("Be ye not unequally yoked together with unbelievers: for what fellowship hath righteousness with unrighteousness? and what communion hath light with darkness?"); The Book of Mormon (2 Nephi 9:24) ("And if they will not repent and believe in his name, and be baptized in his name, and endure to the end, they must be damned; for the Lord God, the Holy One of Israel, has spoken it"); Pentateuch (Deut. 29:19) (The New Jewish Publication Society Translation) (for one who converts to another faith, "[t]he Lord will never forgive him; rather will the Lord's anger and passion rage against that man, till every sanction recorded in this book comes down upon him, and the Lord blots out his name from under heaven"); The Koran 334 (The Cow Ch. 2:1) (N. Dawood transl. 4th rev. ed. 1974) ("As for the unbelievers, whether you forewarn them or not, they will not have faith. Allah has set a seal upon their hearts and ears; their sight is dimmed and a grievous punishment awaits them").

[25] See R. Martino, Abolition of the Death Penalty (Nov. 2, 1999) ("The position of the Holy See, therefore, is that authorities, even for the most serious crimes, should limit themselves to non-lethal means of punishment") (citing John Paul II, *Evangelium Vitae,* n. 56).

[26] H. Donin, To Be a Jew 15 (1972).

[27] See R. Martin, Islamic Studies 224 (2d ed. 1996) (interpreting the Koran to mean that "[m]en are responsible to earn a living and provide for their families; women bear children and run the household").

[28] See The Baptist Faith and Message, Art. XVIII, available at www. sbc.net/bfm/bfm2000.asp#xviii (available in Clerk of Court's case file) ("A wife is to submit herself graciously to the servant leadership of her husband even as the church willingly submits to the headship of Christ").

Matthews v. Quinton
362 P.2d 932
Alaska 1961
April 03, 1961

Term

362 P.2d 932

Supreme Court of Alaska.
Howard A. ◄**MATTHEWS**► (substituted for Don M. Dafoe), Commissioner of Education; Alaska Board of Education; Fairbanks School District; Jack Gourley, Transportation Officer for the Fairbanks School District; and Edgar I. Baggen, in his capacity as President of the Board of Directors of the Fairbanks School District, Appellants,
v.
Judy Kay ◄**QUINTON**►, by next of friend, Lawrence R. ◄**Quinton**► and Loyola I. ◄**Quinton**►, on behalf of herself and all other children similarly situated; Lawrence R. ◄**Quinton**► and Loyola I. ◄**Quinton**►, on behalf of themselves and others similarly situated, Appellees.

No. 48.
April 3, 1961.
Rehearing Denied June 29, 1961.

Ralph E. Moody, Atty. Gen., and Norman L. Schwalb, Asst. Atty. Gen., for appellants.

Edward A. Merdes, McNealy, Merdes & Camarot, Fairbanks, for appellees.

Before NESBETT, C. J., and DIMOND and AREND, JJ.

AREND, Justice.

This is a class action by a school child, Judy Kay Quinton, who, with her parents, sought to enjoin the defendant school authorities from refusing to transport her on a public school bus to the nonpublic school which she was attending. From a summary judgment in favor of Judy and all children of the plaintiff class similarly situated, the defendants have appealed.[FN1]

FN1. This judgment permanently enjoined the defendant Commissioner of Education and the Alaska Board of Education from (1) withholding school bus transportation to the plaintiff class on the basis of their proximity to a public school which they do not attend; (2) applying any other distance test than that of the distance from place of residence to the school of actual attendance for the purpose of determining rights to school bus transportation; and (3) refusing to stop and discharge children attending nonpublic schools at a point along the route nearest to such schools.

With some modifications we shall adopt the statement of facts from a written opinion rendered by the lower court at the time of filing the summary judgment.

The amended complaint in this case was filed on February 21, 1959. At that time the plaintiff Judy was eleven years of age and attending the fourth grade in Immaculate Conception Elementary School, a nonpublic school in Fairbanks and within the Fairbanks School District which is an incorporated independent school district. Under the laws of Alaska all children between seven and sixteen years of age, or until they have completed the eighth grade, are required to attend school. Attendance may be at either a public or private school and it is not compulsory if the child resides more than two miles

from a school, unless transportation is furnished.[FN2] The law also empowers the defendant Alaska Board of Education, among other things, to require school districts to enter into contracts with the Board for the operation, or sub-contracting of the operation, of transportation systems for pupils to and from the schools within their respective service areas.[FN3] Acting for the Board of Education, the Commissioner of Education entered into a contract with the Fairbanks School District for the transportation of pupils residing more than one and one-half miles from the school they were required to attend.

FN2. Section 37-7-1, ACLA 1949.

FN3. Section 37-2-8, ACLA 1949, as amended, SLA 1957, Ch. 51 (§ 37-2-8, ACLA Cum.Supp.1957).

Judy resided more than one and one-half miles from Immaculate Conception School, but there was a public elementary school, with classes up through the sixth grade, less than one and one-half miles from her home. The Fairbanks School District operated a school bus which went by Judy's home and transported children to the public junior and senior high schools in Fairbanks. As this bus went near by Immaculate Conception School, Judy used it for transportation to her school until January 28, 1959, when defendant Jack Gourley, transportation officer for the Fairbanks School District, issued a directive that resulted in this law suit. Under the directive, effective immediately, all public school buses were to discontinue picking up elementary school children living closer than one and one-half miles from a public school and were not to discharge passengers at nonpublic schools en route but were to do such discharging only upon arrival at a public elementary school.

As in the lower court, the controversy here turns upon the effect and constitutionality of an Alaska statute passed by the Territorial legislature in 1955 which relates to the free transportation of children attending nonpublic schools in Alaska. SLA 1955, Ch. 39 (§§ 37-11-4 to 37-6, ACLA Cum.Supp.1957). The statute in question is set out in the margin and will be referred to hereinafter as Chapter 39.[FN4] One reading the statute must bear in mind that, at the time of its enactment, Alaska was still a Territory and had for its constitution the Organic Act of Alaska.[FN5] Section 9 of this Act prohibited the appropriation of public funds for nonpublic school purposes in the following language:

FN4. Chapter 39, SLA 1955: 'Section 1. The Legislature recognizes these facts:'(a) Attendance at schools for all children between the ages of seven and sixteen years is compulsory, except in those cases where a child, residing more than two miles from his school, is not furnished with transportation.'(b) The health of all children is endangered by requiring them to walk long distances to school in inclement weather; and their safety, also, is endangered in requiring them to so walk to their schools along highways that have no sidewalks.'Therefore, in order to protect the health and safety of all school children in Alaska, and to achieve the objectives of the compulsory education laws of Alaska, this statute is enacted.'Section 2. In those places in Alaska where transportation is provided under Section 37-2-8 ACLA 1949 for children attending public schools, transportation shall likewise be provided for children who, in compliance with the compulsory education laws of Alaska, attend nonpublic schools which are administered in compliance with Sections 37-11-1, 37-11-2 and 37-11-3 ACLA 1949, where such children, in order to reach such non-public schools, must travel distances comparable with, and over routes the same as, the distances and routes over which the children attending public schools are transported.'Section 3. This Act shall be administered by the Commissioner of Education under the direction and supervision of the Territorial Board of Education, and the total cost of all such transportation shall be paid from funds appropriated for that purpose by the Legislature.'

FN5. 37 Stat. 512, 48 U.S.C.A. § 21 et seq.

'* * * nor shall any public money be appropriated by the Territory or any municipal corporation therein for the support or benefit of any secarian, denominational or private school, or any school not under the exclusive control of the government; * * * and all laws passed, or attempted to be passed,

by such legislature in said Territory inconsistent with the provisions of this section * * * shall be null and void.'[FN6]

FN6. 37 Stat. 514, 48 U.S.C.A. § 77.

The trial court in its opinion seriously questioned the validity of Chapter 39 in the light of the provision of Section 9 of the Organic Act just quoted, but concluded that such provision yielded to the force and language of the Alaska state constitution subsequently ratified and adopted. We shall have more to say about the pertinent provisions of the constitution further along in this opinion.

The appellants take the position that Chapter 39 does not violate the provisions of the Organic Act if it is given the interpretation to which they claim it is entitled. They argue that Chapter 39, with respect to the transportation of nonpublic school children by public school buses, merely states and means that, if such children live more than a prescribed distance from a public school which they could attend, then they are entitled to ride the public school bus to the nonpublic school which they are actually attending, the other requirements of the statute as to 'comparable distances' and 'same routes' having been met.[FN7] In other words, the appellants are asking us to construe the words 'his school' in Section 1(a) of the statute to mean 'a public school.' On this issue the lower court ruled that in order for Chapter 39 to make sense, the crucial distance is not the distance to the nearest public school or the distance to some other nonpublic school but the distance which the child must travel in order to reach the nonpublic school which he is attending. With that ruling we are in accord.

FN7. See note 4 supra.

Having thus ruled on the construction to be given to Chapter 39, we need to determine next whether it was a valid enactment under the restrictive provisions of Section 9 of the Organic Act. The question of whether statutes providing for the transportation of children to nonpublic schools at public expense are in contravention of a constitutional prohibition against the appropriation of public funds or public school funds for the support or benefit of sectarian or private (nonpublic) schools has been before the courts of the land on a number of occasions. One line of authority holds that such statutes are violative of the constitutional provision mentioned.[FN8] The reasoning employed in support of this position is perhaps best stated in the New York case of Judd v. Board of Education[FN9] wherein the court said:

FN8. State ex rel. Van Straten v. Milquet, 1923, 180 Wis. 109, 192 N.W. 392; State ex rel. Traub v. Brown, 1934, 6 W.W.Harr. 181, 36 Del. 181, 172 A. 835, writ of error dismissed 1938, 9 W.W.Harr. 187, 39 Del. 187, 197 A. 478; Judd v. Board of Education, 1938, 278 N.Y. 200, 15 N.E.2d 576, 118 A.L.R. 789, reargument denied 1938, 278 N.Y. 712, 17 N.E.2d 134; Gurney v. Ferguson, 1941, 190 Okl. 254, 122 P.2d 1002; Sherrard v. Jefferson County Board of Education, 1942, 294 Ky. 469, 171 S.W.2d 963; Mitchell v. Consol. School Dist. No. 201, 1943, 17 Wash.2d 61, 135 P.2d 79, 146 A.L.R. 612; Visser v. Nooksack Valley School Dist. No. 506, 1949, 33 Wash.2d 699, 207 P.2d 198; McVey v. Hawkins, 1953, 364 Mo. 44, 258 S.W.2d 927.

FN9. 1938, 278 N.Y. 200, 15 N.E.2d 576, 582, 118 A.L.R. 789.

'* * * Free transportation of pupils induces attendance at the school. The purpose of the transportation is to promote the interests of the private school or religious or sectarian institution that controls and directs it. 'It helps build up, strengthen and make successful the schools as organizations.' State ex rel. Traub v. Brown * * *. Without pupils there could be no school. It is illogical to say that the furnishing of transportation is not an aid to the institution while the employment of teachers and furnishing of books, accommodations and other facilities are such an aid. * * *'

Then there is another line of authority which holds that a statute such as Chapter 39 is for the benefit of the pupils of the school and that it does not contravene constitutional provisions prohibiting the use of public funds for the benefit of a nonpublic school.[FN10] The rationale of the two courts which support this latter view is set forth by the District Court of Appeals for the Fourth District of California in Bowker v. Baker,[FN11] as follows:

FN10. Board of Education of Baltimore County v. Wheat, 1938, 174 Md. 314, 199 A. 628; Adams v. County Commissioners of St. Mary's County, 1942, 180 Md. 550, 26 A.2d 377; Bowker v. Baker, 1946, 73 Cal.App.2d 653, 167 P.2d 256.

FN11. 1946, 73 Cal.App.2d 653, 167 P.2d 256, 260.

'The general line of reasoning running through those cases which uphold the right of the school district to provide free transportation for [nonpublic] school children finds its starting point in the undoubted police power of the state to promote the public welfare by aiding in practical ways the education of the young. It is generally held that the direct benefit coinferred is to the children with only an incidental and immaterial benefit to the private schools; that this indirect benefit is not an appropriation of public money for private purposes and does not violate any constitutional provision against giving State aid to denominational schools.'

Since the question raised here is one of first impression in Alaska, we have also read and carefully considered the decisions of the courts of Connecticut, Kentucky, Massachusetts and New Jersey, which, at first blush, might seem to follow the Maryland and California rule. We find, however, that those courts did not squarely face the issue before us here.

In Snyder v. Town of Newtown, 1960, 147 Conn. 374, 161 A.2d 770, appeal dismissed 81 S.Ct. 692, 5 L.Ed.2d 688, it was held that school funds could be used only for the support of public or common schools. It was also held that a Connecticut statute permitting municipalities to vote whether they should pay from their general funds for the transportation of children to nonpublic schools did not violate a constitutional provision, C.G.S.A.Const. art. 7, § 1, that '* * * no person shall by law be compelled to join or support * * * any congregation, church or religious association.'[FN12]

FN12. 161 A.2d at page 775 note 2.

In Sherrard v. Jefferson County Board of Education,[FN13] the Kentucky Court of Appeals had held that public school funds could not be used for the transportation of children attending private schools. Three years later, in Nichols v. Henry, 1945, 301 Ky. 434, 191 S.W.2d 930, 168 A.L.R. 1385, the same court, though reaffirming its decision in the Sherrard case, held that the individual counties could pay for such transportation out of their general funds, but not out of any funds or taxes raised or levied for educational purposes.

FN13. 1942, 294 Ky. 469, 171 S.W.2d 963.

The Supreme Judicial Court of Massachusetts in Quinn v. School Committee of Plymouth, 1955, 332 Mass. 410, 125 N.E.2d 410 held that mandamus would lie to compel a town school committee to provide transportation for pupils attending private elementary schools to the same extent that the committee provided transportation for public elementary school pupils. The court avoided the constitutional question by holding that, since no personal or property rights of the committee were involved, that body could not question the constitutionality of the statute which provided for such transportation.

The New Jersey Court of Errors and Appeals, in Everson v. Board of Education of Ewing Tp.,[FN14] on the rule of presumption sustained the coinstitutionality of state legislation which authorized the local school districts to make rules and contracts for the transportation of children to and from school and

also held valid the resolution under which the appellee, a township board of education, authorized reimbursement to parents of money expended by them for transportation of their children to Catholic parochial schools. Since it was not shown, one way or the other, that any of the funds involved came from [133 N.J.L. 350, 44 A.2d 336] 'the fund for the support of free schools' the court presumed that the payment was made out of money constitutionally available for that purpose. It is obvious that the court would have decided otherwise if any showing had been made that the funds had been mingled as argued by the dissenting opinion.[FN15] Be that as it may, New Jersey amended its constitution two years later to permit such transportation. [FN16]

FN14. 1945, 133 N.J.L. 350, 44 A.2d 333, reversing a judgment of the New Jersey Supreme Court in favor of the taxpayer, Everson, who had challenged the right of the Board to reimburse parents of parochial school children for bus fares paid in connection with school transportation. The latter case is reported as Everson v. Board of Education of Ewing Tp., 1944, 132 N.J.L. 98, 39 A.2d 75.

FN15. 44 A.2d at pages 340-341.

FN16. See note 45 infra.

The Everson case eventually reached the Supreme Court of the United States, [FN17] which by an unpersuasive five to four decision upheld the New Jersey statute mentioned above. The majority of the Court accepted the finding of the New Jersey Court of Errors and Appeals as being 'that neither the [New Jersey] statute nor the resolution [of the school board] passed pursuant to it was in conflict with the State constitution or the provisions of the Federal Constitution in issue.'[FN18] Actually, as we view it, the New Jersey court held that only general state funds and general funds of the school districts could be constitutionally used to pay the costs of transportation to nonpublic schools. But 'the fund for the support of free schools' could not be so used. Historically such special school funds were set aside and used entirely for the support of the free schools. The early state constitutions were worded with the thought in mind that the only money available to the schools would come from that fund and would be limited to the support of public free schools. The income from such funds has been found inadequate to supply the money needed for schools in this modern age however, and so recourse is also had to the general funds.[FN19] The New Jersey court concluded that the state constitution did not prohibit the use of 'general funds' to pay for transportation to nonpublic schools. The Alaska Organic Act made no such distinction between 'general funds' and 'funds for the support of free schools.' Its proscription was against the appropriation of 'any public money.' [FN20]

FN17. Everson v. Board of Education, 1947, 330 U.S. 1, 67 S.Ct. 504, 91 L.Ed. 711, 168 A.L.R. 1392.

FN18. Id., 330 U.S. at page 4, 67 S.Ct. at page 505, 91 L.Ed. at page 717, 168 A.L.R. at page 1398.

FN19. Everson v. Board of Education of Ewing Tp., 1945, 133 N.J.L. 350, 44 A.2d 333, 336; see also Visser v. Nooksack Valley School Dist. No. 506, 1949, 33 Wash.2d 699, 207 P.2d 198, 202.

FN20. The same holds true under the provisions of article VII, section 1, and article IX, section 6 of the Alaska state constitution.

In the final analysis, the Supreme Court in the Everson case did nothing more than accept the state court's interpretation of the New Jersey constitution and then hold that the use of the state's general fund to pay for the transportation in question was not a violation of the First and Fourteenth Amendments of the federal constitution.[FN21]

FN21. The majority opinion was written by Justice Black, with Chief Justice Vinson and Justices Murphy, Reed and Douglas concurring. Justices Jackson, Rutledge, Frankfurter and Burton dissented.

Having carefully examined Chapter 39 and that provision of Section 9 of the Alaska Organic Act which proscribed the appropriation of public funds for the support or benefit of any sectarian, denominational or private school, and having weighed the decisions from other jurisdictions for and against the right of a state to provide for the free transportation of children to nonpublic schools, and being mindful of the due regard which should be had for a judicial determination of the United States Supreme Court on a related matter, we hold that Chapter 39 violated the plain provisions of the Organic Act above mentioned.

In its public schools Alaska has long provided for the secular education of all children, but it does not prevent any child from obtaining secular or both secular and sectarian education in nonpublic schools, provided only that these schools meet the secular standards prescribed.[FN22] If those standards are met, the parent or guardian has a constitutional right to send the child to a nonpublic school.[FN23] The exercise of this right by the individual is not inconsistent with our determination that the legislature of the Territory of Alaska under the provisions of Section 9 of the Organic Act had no authority to pass a statute which required the use of public funds to pay for the transportation of children to a nonpublic school; because such use of the public funds, we hold, constitutes a benefit to the nonpublic school. Nor is such legislation a valid exercise of the police power, as we shall later point out.

FN22. These standards are set forth in sections 37-11-1 to 37-11-3, ACLA 1949 and pertain to teachers' certificates, final eighth grade examinations and diplomas, and attendance and annual reports.

FN23. Pierce v. Society of Sisters, 1925, 268 U.S. 510, 45 S.Ct. 571, 69 L.Ed. 1070, 39 A.L.R. 468.

At this point the appellees, Judy Quinton and her parents, interpose the argument that, even if Chapter 39 violated the provisions of the Organic Act here under consideration, no court ever passed upon the question of its constitutionality during Alaska's territorial status. Hence, the statute was in full force and effect when the Alaska state constitution became operative on January 3, 1959,[FN24] and was ratified and confirmed by article XV, section 1 of the constitution which provides:

FN24. The present action was not commenced until January 30, 1959, twenty-seven days after the effective date of the state constitution.

'All laws in force in the Territory of Alaska on the effective date of this constitution and consistent therewith shall continue in full force until they expire by their own limitation, are amended, or repealed.'[FN25]

FN25. This argument may have stemmed from the opinion of the lower court in which it was stated that 'the efficacy of this clause of the Organic Act obviously yielded to the force and language of the Alaska Constitution from and after January 3, 1959, in particular Article VII, Section 1 thereof.'

We cannot accept the argument as a sound one. The dictionary[FN26] gives the word 'valid' as one of the definitions of the phrase 'in force.' Professor Willoughby in his work on constitutional law stated some thirty years ago that the validity of a statute is to be tested by the constitutional powers of a legislature at the time of its enactment and, if so tested, it is beyond the legislative power, it will not be rendered valid by a constitutional amendment, except by subsequent re-enactment.[FN27]

FN26. Webster, New International Dictionary, Unabridged (2d ed. 1960).

FN27. 1 Willoughby, Constitutional Law of the United States § 7, at 11 (2d ed. 1929).

We consider the finding of the Washington State supreme court on a similar question in State v. Ellis, 1900, 22 Wash. 129, 60 P. 136, to be applicable here. In 1854 the legislature of the Territory of Washington passed a law providing that a defendant in a criminal case and the prosecuting attorney, with the assent of the court, might submit the trial to the court except in capital cases. Ellis was charged with robbery and stipulated that he should be tried by eleven jurors. The jury found him guilty and Ellis moved to set aside the verdict as void and for a new trial. The lower court granted the motion for the reason that Ellis could not waive the constitutional right to a trial by twelve jurors. The state appealed from the motion, contending that inasmuch as the law was upon the statute books at the time of the adoption of the Washington state constitution (1889), and section 2 of article 27 of the constitution provided that the laws which were then in force in the Territory of Washington and not repugnant to the constitution should remain in full force until they expired by their own limitation or were repealed by the legislature, this law became incorporated into the laws of the state and had to be considered as valid existing constitutional law until declared to be unconstitutional by competent judicial authority. To this claim of the state, the appellate court replied:

'But we hardly think this rule of construction is sound. Section 2 of article 27 could not be construed as re-enacting a statute, as all the force it had was to continue in force all valid laws which were then in existence.'[FN28]

FN28. 60 P. at page 137.

We recognize the legal principle that a constitutional provision, which from the language used shows expressly or by necessary implication that it was intended to operate retrospectively to validate antecedent unconstitutional legislation, renders valid all such legislation to which the constitutional provision relates, without re-enactment by the legislature, unless such attempted validation would impair the obligations of a contract or diverst vested rights.[FN29] The cases we have examined, bearing on the subject, require that the validating constitutional provision must make some reference, however slight or inferential, to the statute intended to be validated.[FN30] Tested by the principles just stated, section 1 of article XV of the Alaska constitution, in our opinion, does not show by the language used, either directly or by necessary implication, that it was intended to operate retrospectively so as to validate Chapter 39. It follows, therefore, that Chapter 39 remains as void today as it was on the day of its enactment.

FN29. Annotation, 1947, 171 A.L.R. 1072-1079, in which the rule is stated and many cases in relation thereto are cited and discussed.

FN30. People ex rel. McClelland v. Roberts, 1896, 148 N.Y. 360, 42 N.E. 1082, 31 L.R.A. 399; Fontenot v. Young, 1911, 128 La. 20, 54 So. 408; Peck v. Tugwell, 1941, 199 La. 125, 5 So.2d 524; Lee v. Superior Court, 1923, 191 Cal. 46, 214 P. 972; Boyd v. Olcott, 1921, 102 Or. 327, 202 P. 431, 448; Northern Wasco County People's Utility District v. Wasco County, 1956, 210 Or. 1, 305 P.2d 766, 771; Porto Rico Brokerage Co. v. United States, 1934, 71 F.2d 469, 23 CCPA 236.

We next address ourselves to the question of whether under section 1 of article VII and section 6 of article IX of the state constitution, Chapter 39 may now be validated through its re-enactment by the state legislature. We believe not.

Section 6 of article IX of our constitution specifically declares that

'No tax shall be levied, or appropriation of public money made, or public property transferred, nor shall the public credit be used, except for a public purpose.'

This is a general measure and expresses a very definite policy. It needs to be considered, however, in relation to section 1 of article VII which provides that

'The legislature shall by general law establish and maintain a system of public schools open to all children of the State and may provide for other public educational institutions. Schools * * * so established shall be free from sectarian control. No money shall be paid from public funds for the direct benefit of any religious or other private educational institution.'

Appellees concede that there is conflict in the judicial philosophies relative to statutes of such kind as Chapter 39 but maintain that the view favoring their constitutionality is the more persuasive, reflects the current judicial trend and is called for by the decision of the United States Supreme Court in the Everson case. We disagree except as to the statement that there is a conflict in the judicial philosophies.

The key words in section 6 of article IX and section 1 of article VII of the Alsaska constitution, insofar as this case is concerned, are 'for a public purpose' and 'direct benefit.' Appellees contend that Chapter 39 serves a very valuable public purpose by encouraging compliance with the state's compulsory education law and contributes to the health and welfare by eliminating the hazards of highway and climatic conditioins in Alaska for nonpublic school children. It is their further contention that Chapter 39 is designed to aid the parents and their children. In this connection they cite the cases from other jurisdictions which hold that the transportation of school children to nonpublic schools is for the benefit of the children and confers no direct benefit upon the schools concerned.

It is true that the legislature in enacting Chapter 39 recognized the following facts as stated in the statute itself:

'(a) Attendance at schools for all children between the ages of seven and sixteen years is compulsory, except in those cases where a child, residing more than two miles from his school, is not furnished with transportation.

'(b) The health of all children is endangered by requiring them to walk long distances to school in inclement weather; and their safety, also, is endangered in requiring them to so walk to their schools along highways that have no sidewalks.

'Therefore, in order to protect the health and safety of all school children in Alaska, and to achieve the objectives of the compulsory education laws of Alaska, this statute is enacted.'

But this intent of the legislature to protect the health and safety of all school children in Alaska was not carried out in the statute enacted. The only nonpublic school children entitled to free transportation under Chapter 39 are those who must travel comparable distances and the same routes over which the children attending public schools are transported. In other words, nonpublic school children who are fortunate enough to be living along a public school bus route are given transportation. All other nonpublic school children living within the two mile compulsory attendance limit and more than one and one-half miles from their school are left to fend for themselves.

It cannot be truthfully said that the severe winter weather and the highways without sidewalks around Fairbanks are less hazardous to the health, welfare and safety of the nonpublic school child who does not live along a school bus route and therefore has to walk to school than to the health, welfare and safety of his classmate who rides because his home is along the route. Nor can anyone say that the public school first grader, who lives 1.49 miles from his school and has to walk, will feel the cold less than, and not have to face the same traffic risks as, an older sixth grader of the nonpublic school who gets to ride on the public school bus because he lives along the bus route and at a distance of 1.51 miles from the nonpublic school of his choice.

Neither the inclement weather nor highway traffic hazards were used as a justification for the first law passed in Alaska to provide transportation for school children. We refer to section 83 of chapter 97 of the Laws of Alaska, 1929, which simply stated that school boards were authorized to contract for the transportation of pupils 'who reside a distance of more than two (2) miles from the school they are required to attend, or where such transportation is necessary to afford children an opportunity to

attend school.' Distance from school seems to have been the motivating force for legislation at that time.

By what has just been said we do not mean to imply that the legislature has no authority to provide by legislation for the health and safety of all school children in Alaska. Nor do we mean to decide that Chapter 39 is discriminatory in its nature. All we are saying at this time is that Chapter 39 does not effectuate the intent expressed therein by the legislature.

Turning now to the argument that the transportation of school children to nonpublic schools on public school buses is of direct benefit only to the child,[FN31] we say again that, in our opinion, the furnishing of such transportation at public expense constitutes a direct benefit to the school. This was the view expressed by the courts of Delaware, New York, Oklahoma, Washington, and Kentucky,[FN32] and it was also the view favored by the dissenting jurists in Maryland,[FN33] Louisiana (in a textbook case),[FN34] and New Jersey,[FN35] where the state courts have adopted the child benefit theory, and by the four dissenting Justices of the United States Supreme Court in Everson v. Board of Education.[FN36] Said Mr. Justice Rutledge in the Everson case:

FN31. The 'child benefit theory' seems to have been first advanced in support of a Louisiana statute providing for the appropriation of public funds for the purchase of school books for nonpublic school children. In Borden v. Louisiana State Board of Education, 1929, 168 La. 1005, 123 So. 655, 663, 67 A.L.R. 1183, the Louisiana supreme court held that such appropriation was for the benefit of the children and the resulting benefit of the state. Three of seven members of the court took the view that the statute was unconstitutional, stating that 'the maintenance of private or sectarian schools, however valuable may be the work which they perform, is not a public purpose so as to justify the expenditure of the public money in their support.'

FN32. The cases in which the states listed in the text rejected the child benefit theory are cited in note 8 supra.

FN33. Board of Education of Baltimore County v. Wheat, 1938, 174 Md. 314, 199 A. 628, 633-642.

FN34. Borden v. Louisiana State Board of Education, 1938, 168 La. 1005, 123 So. 655, 662-664, 67 A.L.R. 1183.

FN35. Everson v. Board of Education of Ewing Tp., 1945, 133 N.J.L. 350, 44 A.2d 333, 338-343.

FN36. Everson v. Board of Education, 1947, 330 U.S. 1, 47-49, 67 S.Ct. 504, 527, 91 L.Ed. 711, 740.

'Finally, transportation, where it is needed, is as essential to education as any other element. Its cost is as much a part of the total expense, except at times in amount, as the cost of textbooks, of school lunches, of athletic equipment, of writing and other materials; indeed of all other items composing the total burden. Now as always the core of the educational process is the teacher-pupil relationship. Without this the richest equipment and facilities would go for naught. See Judd v. Board of Education, 278 N.Y. 200, 212, 15 N.E.2d 576, 118 A.L.R. 789. But the proverbial Mark Hopkins conception no longer suffices for the country's requirements. Without buildings, without equipment, without library, textbooks and other materials, and without transportation to bring teacher and pupil together in such an effective teaching environment, there can be not even the skeleton of what our times require. Hardly can it be maintained that transportation is the least essential of these items, or that it does not in fact aid, encourage, sustain and support, just as they do, the very process which is its purpose to accomplish. No less essential is it, or the payment of its cost, than the very teaching in the classroom or payment of the teacher's sustenance. Many types of equipment, now considered essential, better could be done without.

'For me, therefore, the feat is impossible to select so indispensable an item from the composite of total costs, and characterize it as not aiding, contributing to, promoting or sustaining the propagation of beliefs which it is the very end of all to bring about. Unless this can be maintained, and the Court does not maintain it, the aid thus given is outlawed. Payment of transportation is no more, nor is it any the less essential to education, whether religious or secular, than payment for tuitions, for teachers' salaries, for buildings, equipment and necessary materials. Nor is it any the less directly related, in a school giving religious instruction, to the primary religious objective all those essential items of cost are intended to achieve. No rational line can be drawn between payment for such larger, but not more necessary, items and payment for transportation. The only line that can be so drawn is one between more dollars and less. Certainly in this realm such a line can be no valid constitutional measure. * * *'[FN37]

FN37. Judge Case of the New Jersey Court of Errors and Appeals, who wrote the dissenting opinion in the Everson case when it was being considered in the state court, pointed out that among the weaknesses in the 'child benefit' argument, as a means of avoiding constitutional limitations, 'are its vagueness and the impossibility of satisfactorily distinguishing one item of expenses from another in the long process of child education.' [133 N.J.L. 350, 44 A.2d 339] He continued:'We quickly perceive that it [the 'child benefit' argument] applies not merely to transportation costs but to the potential costs of the many and varied items entering into modern education. There is no logical stopping point. Related items, already in the public school system, in addition to the vast field having to do with the actual imparting of knowledge, are the installation and maintenance of cafeterias, the preservation and promotion of the health of pupils, the employment of medical inspectors and nurses, the keeping of records of development and growth, and the supervision of athletic activities and bodily exercise. I am unable to distinguish between the logic of using public funds for one as against another of the several parts of the system pursued by the public schools toward 'the advancement of education, the promotion of literacy and the health and safety' of the pupils. Every step in the educational process is, presumably, for the benefit of the child and, therefore, theoretically for the benefit of the state. Consequently, if the argument is sound, it is within the discretion of the legislature, free of constitutional restraint, to provide for practically the entire cost of education in private and parchial as well as in public schools.'

About two years after the United States Supreme Court had handed down its opinion in the Everson case,[FN38] the supreme court of the state of Washington decided in Visser v. Nooksack Valley School District No. 506, [FN39] that the payment of transportation to parochial schools violated the state constitution. The court did not feel itself bound by the decision in the Everson case and in that respect stated:

FN38. Page 936, supra.

FN39. 1949, 33 Wash.2d 699, 207 P.2d 198, 204.

'Our own state constitution provides that no public money or property shall be used in support of institutions wherein the tenets of a particular religion are taught. Although the decicisions of the United States supreme court are entitled to the highest consideration as they bear on related questions before this court, we must, in light of the clear provisions of our state constitution and our decisions thereunder, respectfully disagree with those portions of the Everson majority opinion which might be construed, in the abstract, as stating that transportation, furnished at public expense, to children attending religious schools, is not in support of such schools. While the degree of support necessary to constitute an establishment of religion under the First Amendment to the Federal constitution is foreclosed from consideration by reason of the decision in the Everson case, supra, we are constrained to hold that the Washington constitution although based upon the same precepts, is a clear denial of the rights herein asserted by appellants.'

The most recent appellate court case, which we have found, that strikes down transportation of nonpublic school children on public school buses is that of McVey v. Hawkins, 1953, 364 Mo. 44, 258 S.W.2d 927. Here the Missouri supreme court, sitting en banc, delivered a per curiam opinion that transportation of parochial school pupils on public school buses was an expenditure of public school funds for other purposes than the support and maintenance of free public schools as directed by the constitutional and statutory provisions of the state, notwithstanding the claim that the buses furnishing such transportation did not travel any greater distance or by any different route or make any special stops and that, consequently, no additional expense or outlay of any kind was incurred by the furnishing of such transportation. Without mentioning the Everson case, the court expressly rejected the 'child-benefit theory.'

In spite of appellees' contention that the Everson case is controlling in the case at bar and contrary to the opinion of the District Court for the District of Alaska that it felt itself bound by the holding in the Everson case,[FN40] we propose to follow the reasoning of the Courts of Washington, Missouri, Delaware, Wisconsin and Oklahoma and hold that transportation of school children to nonpublic schools at public expense would be in contravention of our state constitution.

FN40. The Honorable Vernon D. Forbes who wrote the opinion below, upon which the judgment was based, frankly admitted that if he had not felt himself bound by the holding in the Everson case, he would have adopted the reasoning and decision of the dissenting Justices and ruled otherwise. It was his feeling that the wall of separation between church and state in this country had been weakened by Everson.

There remains for consideration the claim of the appellees that the minutes of the Alaska constitutional convention make it unmistakably clear that, in refusing to add the term 'indirect' as an amendment to article VII, section 1, of the constitution, the delegates explicitly intended to continue and not to eliminate bus transportation for nonpublic school children. The minutes of the convention[FN41] do reveal that the Committee on Health, Education and Welfare Provisions in drafting the last sentence of article VII, section 1, which provides that 'No money shall be paid from public funds for the direct benefit of any religious or other private educational institution,' considered the words 'direct' and 'indirect' and felt that the words 'or indirect' after the word 'direct' should not be used for the reason that 'they would reach out to infinity practically' and shut out the children in private schools from such free care as was being given by the state welfare department to all children.[FN42]

FN41. All references in this opinion to the minutes and proceedings of the Alaska constitutional convention are to the Records of Alaska Constitutional Convention, now in the custody of the Secretary of State, Juneau, Alaska.

FN42. Roland Armstrong, a member of the Committee on Health, Education and Welfare Provisions, spoke for the Committee and explained to the convention the reasons for the Committee's action in using the word 'direct' as follows:'* * * This section gives the education or other departments the right to seek out the children, independent of their religious affiliations, to help them to become a strong and useful part of society wherever it touches health and matters of welfare. We would also point out in the light of letters that have come to this floor relative to the disbursement of funds, denominational or other private institutions, this does not prohibit the use of funds in other educational matters, and I am sure that no one on the committee would object to the inclusion of this words as we have given the amendment here to clarify this one statement. Now it reads as has been amended by the Committee, 'No money shall be paid from public funds for the direct benefit of any religious or other private educational institution.' We did this to take any doubt away on the part of this Convention of our motives, and we state that where there are welfare cases for children in homes and when there are indigents in hospitals that we do not wish to interfere with that practice of helping to serve people through those institutions * * *.' Alaska Constitutional Convention Minutes, January 9, 1956, pp. 55-56.

Several delegates to the constitutional convention in the floor debate on the issue of whether section 1 of article VII should be amended to include the words 'or indirect,' mentioned transportation but only one of them, Mr. Buckalew, expressed an opinion in the matter, stating

'Mr. President, I don't think the question has been answered yet by any of the persons who have spoken on this subject. If the word 'indirect' is in there, it is going to eliminate almost any kind of aid. It will, for example, eliminate the free lunch, eliminate bus transportation, eliminate for example, if we had a school or an institution where they had a school, it would eliminate the State giving any support to the child because that would be indirect support to the institution. I think when the members vote on it, I think they ought to understand the word 'indirect' cuts out everything, just eliminates all kinds of support.'[FN43]

FN43. Id. at 69.

From such a state of the record the appellees would have us infer that the minutes of the constitutional convention make it unmistakably clear that the delegates intended not to eliminate free transportation for nonpublic school children. We find no such clear meaning expressed in those minutes as would give us any reliable assistance in interpretation. As Professor Willoughby once observed, 'Every member of such a convention acts upon such motives and reasons as influence him personally, and the motions and debates do not necessarily indicate the purpose of a majority of a convention in adopting a particular clause.'[FN44] We feel that the delegates to the Alaska constitutional convention and the people who by their vote ratified the constitution left it to this court to decide whether free transportation of children to nonpublic schools would constitute a 'direct' benefit to the schools. If they had intended otherwise, we are certain that the framers of our constitution would have followed the example set by the people of New York and New Jersey and settled the controversial issue by providing in the constitution itself for transportation of school children to non-public schools at state expense. [FN45]

FN44. 1 Willoughby, Constitutional Law of the United States § 32 (2d ed. 1929).

FN45. New York amended article 11, section 4, of its constitution in 1938, after the decision in the Judd case (see note 8 and page 935, supra), to permit the legislature to provide for the expenditure of public funds for the transportation of children to and from any school. Board of Education of Central School District No. 1, etc., v. Allen, 1959, 17 Mis.2d 1080, 192 N.Y.S.2d 186. New Jersey, on the other hand, adopted an entirely new constitution in 1947 and provided as a part of article VIII, section 4, paragraph 3, thereof that 'The Legislature may, within reasonable limitations as to distance to be prescribed, provide for the transportation of children within the ages of five (5) and eighteen (18) years inclusive, to and from any school.'

Earlier in this opinion we stated that we did not consider Chapter 39 a valid exercise of the policy power of the state.[FN46] That point needs to be clarified. It has been said that the policy power-broad and comprehensive though it is-may not be exercised in contravention of plain and unambiguous constitutional inhibitions.[FN47] In Board of Education of Baltimore County v. Wheat,[FN48] Judge Parke, dissenting, conceded that the sovereign state has inherent and reserved police power to enact laws to promote the safety, health and general welfare of society but stated that this power must be exercised within constitutional limits. It was his opinion, and that of the other two judges who concurred in the dissent, that the extension of the exercise of the police power to the transportation of school children, because of the dangers of pedestrian travel by children upon the public highway, would be of doubtful legality even if it were an effort of the state to protect, without discrimination, all school children.

FN46. Pages 937 and 938, supra.

FN47. Mitchell v. Consolidated School Dist. No. 201, 1943, 17 Wash.2d 61, 135 P.2d 79, 146 A.L.R. 612, citing authorities.

FN48. 1938, 174 Md. 314, 199 A. 628, 633.

The summary judgment is reversed with directions to dismiss the action.

NESBETT, C. J., concurs.

DIMOND, Justice (dissenting).

I dissent from the majority's harsh and unjust conclusion. In reviving the lifeless corpse of the Alaska Organic Act, the court ignores realities and establishes a harmful rule of constitutional interpretation. In concluding that the transportation of a child directly benefits a school, it disregards facts inescapable on the record of the Constitutional Convention, and assumes a state of facts that the record does not support. In expressing criticism of the school bus statute because literally 'all' school children in Alaska are not afforded transportation, it unjustifiably imputes to the legislature fictitious motives, and usurps the legislative prerogative of determining what is appropriate or necessary for the public good. In pointing out that weather and traffic hazards are as detrimental to the non-public school children who are not entitled to transportation under Chapter 39 as to those who do qualify for the assistance given by the statute, it suggests the existence of an unfair discrimination; and then in ultimately denying bus transportation to all non-public school children, it compounds the very discrimination which it appears to deplore. In construing the constitution so narrowly and constrictively, it saps the strength and takes the meaning from the classic statement of human rights in the first article, that 'This constitution is dedicated to the principles * * * that all persons are equal and entitled to equal rights, opportunities, and protection under the law * * *.' In permitting a child to ride a school bus only on the condition that he attends a public school, it has the coercive effect of restricting the natural right of parents, acting in accordance with their legitimate preferences, to direct the education of their children; and thus it disregards the fundamental theory of liberty which excludes any general power in the government to standardize the education of children.

1. *The Alaska Organic Act*.

The Organic Act prohibited the appropriation of public money for the 'support or benefit' of a private school.[FN1] The state constitution prohibits the payment of money from public funds for the 'direct benefit' of any such school. [FN2] I am convinced that Chapter 39 confers no benefit of any kind on the private school, and therefore is a valid legislative enactment whether tested under the Organic Act or the constitution. But I submit that the court has established a harmful rule of construction in measuring the validity of an existing statute against an organic law which no longer existed after Alaska became a state.[FN3]

FN1. 37 Stat. 514 (1912), 48 U.S.C.A. § 77 (1952).

FN2. Alaska Const. art. VII, § 1.

FN3. Alaska became a state on January 3, 1959. Exec.Proclamation No. 3269, 24 Fed.Reg. 81 (1959), 48 U.S.C.A. note preceding section 21, Alaska Statehood Act, 72 Stat. 339 (1958), 48 U.S.C.A. preceding section 21. At that moment the State Constitution became effective and superseded the Alaska Organic Act.

It is an established doctrine of American jurisprudence that a legislative enactment is presumed to be valid and constitutional,[FN4] and that the final authority in determining whether this is so is vested in the judiciary. [FN5] If this doctrine has any significance at all it means that a statute, until declared invalid by a court, is an operative fact. The act involved here was so considered. Since its enactment in 1955, and at the time the state constitution became effective, it was in operation; it was respected

and obeyed by those charged with the duty of executing the laws. It is in effect now. This is as it ought to be.[FN6]

FN4. 1 Willoughby, Constitutional Law, § 26 at 42-43, and § 27 at 47 (2d ed. 1929).

FN5. Marbury v. Madison, 1803, 1 Cranch 137, 177-178, 5 U.S. 137, 177-178, 2 L.Ed. 60, 73; Pollock v. Farmers' Loan & Trust Co., 1895, 157 U.S. 429, 554, 15 S.Ct. 673, 39 L.Ed. 759, 810; 16 C.J.S. Constitutional Law § 92.

FN6. See Wall v. Close, 1942, 201 La. 986, 10 So.2d 779, 783.

If at the time the constitution became operative the presumption of validity still attached to Chapter 39, and it was recognized by all concerned as something that existed and had meaning, rather than as a nullity or something that did not exist, then I submit that it was a law 'in force' within the meaning of article XV, section 1. So long as it was consistent with the constitution it was intended to continue in force until it expired by its own limitations, or was amended or repealed. The only restriction or limitation was that such a law be in harmony with the constitution; it was not required that it also be consistent with the Territorial Organic Act. Logically, then, this means that the validity or constitutionality of such a statute was thereafter to be tested only against the limitations set forth in the new state constitution.

The delegates to the Convention were not framing an organic law for people entering into political society for the first time, but rather for a community already organized with existing laws. It can be presumed that they knew the nature and effect of those laws. They felt it unnecessary and impracticable to provide for the enactment of an entire new body of law for the state when existing statutes would in most instances suffice. Consequently, they did what was only reasonable and practical; they provided for the continuation of Territorial laws where they were in harmony with the constitution. They thus established for the state a system of statutory law with the same legal effect as if those statutes had been re-enacted by the legislature for the state [FN7] -that branch of the state government which derives all of its authority from the constitution.

FN7. See People ex rel. McClelland v. Roberts, 1895, 13 Misc. 448, 34 N.Y.S. 641, 650, affirmed in 1896, 148 N.Y. 360, 42 N.E. 1082, 1085, 31 L.R.A. 399.

The statutes thus adopted by reference were those that were 'in force' on the effective date of the constitution. The majority says that the dictionary gives the word 'valid' as one of the definitions of the phrase 'in force'. But the dictionary also states that the phrase means 'operative.'[FN8] It is more reasonable to assume that this is what was intended. The delegates could not determine which laws were valid and which were not. If Territorial laws existed and had not been declared invalid by a court, then they were operative-they were in force. It would be presumed that they were also valid.

FN8. Webster, New International Dictionary, Unabridged, at 986 (2d ed. 1960).

The construction adopted by the majority of this court can be explained only on the theory that if an act of the legislature was invalid under the Organic Act it was not a law; it was inoperative, conferred no rights, imposed no duties and afforded no basis for actions taken under it.[FN9] It such a broad statement is universally true, it would logically follow that something that was not a law at the time of enactment could not be a law in force at the time the constitution became effective.[FN10]

FN9. Norton v. Shelby County, 1886, 118 U.S. 425, 442, 6 S.Ct. 1121, 30 L.Ed. 178, 186; Chicago, I. & L. R. Co. v. Hackett, 1913, 228 U.S. 559, 566, 33 S.Ct. 581, 57 L.Ed. 966, 969.

FN10. Ex parte Bustillos, 1920, 26 N.M. 449, 194 P. 886, 889.

But it has been found that this statement must be taken with qualifications. Professor Willoughby recognized this some thirty years ago. He spoke of 'circumstances under which legal rights or obligations or consequences are attached to a legislative enactment which is later held to be unconstitutional', and stated that 'the retroactive force of the judicial pronouncement as to unconstitutionality is not complete.'[FN11] The courts, too, have seen the problem. The Court of Appeals for the Third Circuit, in speaking of a taxing statute, said:

FN11. 1 Willoughby, Constitutional Law, § 8 at 11 (2d ed. 1929).

'Accepting the unconstitutionality of the act of 1929, as determined by the Supreme Court of the State, it was none the less a statute under which the school district acted when it levied its taxes for the years 1937 and 1938.' FN12

FN12. Phipps v. School District of Pittsburgh, 3 Cir., 1940, 111 F.2d 393, 395. And see also J. A. Dougherty's Sons, Inc. v. Commissioner of Internal Revenue, 3 Cir., 1941, 121 F.2d 700, 702.

The Court of Appeals for the District of Columbia, after referring to the belief that if an act is declared unconstitutional it never had any force or effect, said:

'* * * Yet a realistic approach is eroding this doctrine. * * *' FN13

FN13. Warring v. Colpoys, 1941, 74 App.D.C. 303, 122 F.2d 642, 646, 136 A.L.R. 1025.

The principle, and the problem, has perhaps been most explicitly stated by Mr. Chief Justice Hughes when, in speaking for a nuanimous court, he said:

'It is quite clear, however, that such broad statements as to the effect of a determination of unconstitutionality must be taken with qualifications. The actual existence of a statute, prior to such a determination, is an operative fact and may have consequences which cannot justly be ignored. The past cannot always be erased by a new judicial declaration. The effect of the subsequent ruling as to invalidity may have to be considered in various aspects,-with respect to particular relations, individual and corporate, and particular conduct, private and official. Questions of rights claimed to have become vested, of status, of prior determinations deemed to have finality and acted upon accordingly, of public policy in the light of the nature both of the statute and of its previous application, demand examination. These questions are among the most difficult of those which have engaged the attention of courts, state and federal, and it is manifest from numerous decisions that an all-inclusive statement of a principle of absolute retroactive invalidity cannot be justified. * * *' FN14

FN14. Chicot County Drainage District v. Baxter State Bank, 1940, 308 U.S. 371, 374, 60 S.Ct. 317, 318, 84 L.Ed. 329, 332-333. See also National Labor Relations Board v. Rockaway News Supply Co., Inc., 1953, 345 U.S. 71, 77, 73 S.Ct. 519, 97 L.Ed. 832, 837.

There are, indeed, difficult questions, as the Chief Justice stated. Adherence to the rule of absolute retroactive invalidity might well have undesired consequences in this case. It could mean that if Chapter 39 were not really a law when it was enacted in 1955, every action taken under it was invalid, unlawful and without meaning. Monies used to transport children who did not attend the public school were illegal expenditures. In fairness to Alaska taxpayers, those monies should now be recovered by the state.

But this raises serious problems. From whom, for example, would the state seek recovery of those expenditures? Would it be the Commissioner of Education whose duty it was under Chapter 39 to administer the statute? Would it be the school bus contractor to whom the monies have been, and are now, being paid? Or would it be, perhaps, the child who rode the school bus, at public expense, in violation of the Organic Act and the constitution?

I would doubt that the executive branch of our government, which has so successfully assailed the validity of the statute, would choose to go that far. But if it did not, then it places itself in the inconsistent position of saying on one hand that the act was a nullity, of no force and effect whatever, and on the other hand in saying that it really did have some operative force prior to the effective date of this court's judgment declaring the statute invalid. If it is considered that the past may not be disturbed because, e. g., rights have become vested or because prior determinations deemed to have finality have been made or perhaps even because of considerations of broad public policy, then in all fairness there should be recognized the operative force of Chapter 39 at the time the constitution became effective and the fact that it was a law 'in force' within the meaning of article XV, section 1.

Another striking incongruity is found in the court's holding that it is not bound by the decision of the United States Supreme Court in the Everson case.FN15 If Chapter 39 was void on the day of its enactment, as the majority says it was, then to be consistent the court should recognize the status, as

it then existed, of the judicial system which had the power to determine whether the act was void under limitations found in the Organic Act.

FN15. Everson v. Board of Education, 1947, 330 U.S. 1, 67 S.Ct. 504, 91 L.Ed. 711.

In 1955 Alaska was a Territory. Its judiciary consisted of one district court, created by act of Congress.[FN16] Tht court was bound to follow the law as laid down by the United States Supreme Court; it was not free to disregard a pertinent decision of the Supreme Court if it felt, as the majority does here, that such decision was unpersuasive.[FN17]

FN16. 31 Stat. 322 (1900), 48 U.S.C.A. § 101.

FN17. Lindeberg v. Howard, 9 Cir., 1906, 146 F. 467, 472, 2 Alaska Fed. 597, 604; Kroeger v. Twin Buttes R. Co., 1911, 13 Ariz. 348, 114 P. 553, 554; Hawaiian Tuna Packers v. International L. & W. Union, D.C.D.Haw.1947, 72 F.Supp. 562, 565. See also Missouri, K. & T. Ry. Co. v. Walker, 1911, 27 Okl. 849, 113 P. 907, 908.

In Everson it was held that use of New Jersey's general fund to pay for transportation of children to parochial schools was not a violation of the first and fourteenth amendment to the federal constitution. The court found that those monies were used for a public rather than a private purpose, and that they did not have the effect of supporting the parochial schools. It is manifest, also, from what the court said that no benefit was considered to have been conferred upon such schools, and that if it had, the decision on the constitutional questions would have been the other way.

That decision, then, would have been controlling if the validity of Chapter 39 had been determined by the Territorial District Court. That court, regardless of the personal views of a particular judge, would have been required to hold that the use of public monies to provide transportation of children to non-public schools neither supported nor benefited such schools. Chapter 39 would, of necessity, have been declared to be a valid act of the Alaska Legislature and not contrary to the Territorial Organic Act.

This demonstrates the incompatible positions that this court has taken. In order to justify its assumed right to test the validity of Chapter 39 against the now nonexistent Organic Act, it says that one must go back in time and ascertain whether the act would have stood up under limitations found in the roganic law of the Territory of Alaska. But it chooses to ignore a logical condition of utilizing such approach-that of also measuring the validity of Chapter 39 against restrictions on judicial pronouncements then imposed upon the Territorial District Court. This court reaches into the past to resurrect the Organic Act; it then returns to the present to assume the prerogative of a state court, not bound in a matter like this to follow a pertinent decision of the United States Supreme Court.

If the court insists on applying the rule as to absolute retroactive invalidity, then I submit it should be applied in its entirety. If this is done, it would be readily apparent that Chapter 39 was a 'law in froce', within the meaning of the constitution, and that the Alaska Organic Act has no bearing at all on the issue in this case.

2. *Constitutional History*.

If all relevant proceedings of the Constitutional Convention are considered, it will be abundantly clear that the 'direct benefit' proscription in article VII, section 1, was not meant to preclude public transportation of children attending non-public schools. This court, however, refuses to attach importance to any of such proceedings. It takes the position that it was left to the court to decide whether free transportation of children to non-public schools would constitute a direct benefit to the schools, and that if the delegates to the Convention had intended otherwise they would have made specific provision in the constitution for such transportation. In short, the majority sets no value on constitutional history in determining constitutional intent.

That, I think, is unsound. The words 'direct benefit' require definition; if they did not, this case would not be before the court. In such a case it is entirely proper and perhaps even necessary to have recourse to extrinsic evidence in order to ascertain the meaning which those words had at the time the constitution was written and adopted.[FN18] An important source of such evidence would be found in

the history of events which led up to the adoption of the section where the words were used, and this history would include the recorded proceedings of the Constitutional Convention.[FN19] As the United States Supreme Court said with respect to the Federal Constitution:

FN18. 1 Willoughby, Constitutional Law, § 31, at 52 (2d ed. 1929).

FN19. 1 Willoughby, Constitutional Law, supra, at 52, and § 32 at 54. See also 2 Sutherland, Statutory Construction, § 5001, at 481 (3d ed. 1943).

'The necessities which gave birth to the Constitution, the controversies which preceded its formation, and the conflicts of opinion which were settled by its adoption, may properly be taken into view for the purpose of tracing to its source any particular provision of the Constitution in order thereby to be enabled to correctly interpret its meaning. * * *'[FN20]

FN20. Knowlton v. Moore, 1900, 178 U.S. 41, 95, 20 S.Ct. 747, 768, 44 L.Ed. 969, 991. See also Shelley v. Kraemer, 1948, 334 U.S. 1, 23, 68 S.Ct. 836, 92 L.Ed. 1161, 1186.

The court points out that motions and debates do not necessarily indicate the purpose of the majority of a convention in adopting a particular clause. But the point that I make is that if there are other convention proceedings, in addition to motions and debates, which clearly show the purpose of the provision in question, that this furnishes a valuable and satisfactory aid to interpretation which should not be ignored.

At the Convention in November 1955 delegates Johnson and Coghill introduced Delegate Proposal No. 6 which dealt with the subject of education. Section 7 provided in part:

'No public funds * * * shall be used directly or indirectly for the support, operation or maintenance, *including transportation and other auxiliary services*, for any schools or children therein except those Public Schools under the exclusive supervision and direction of the State.'[FN21] (Emphasis added.)

FN21. Alaska Constitutional Convention, Proposal No. 6, Education, November 17, 1955.

On December 15, 1955 the Committee on Preamble and Bill of Rights submitted a report to the Convention and transmitted an article on health, education and welfare. This report stated that Delegate Proposal No. 6 had been considered and that 'the Committee adopted sections 3 and 7 with some changes.'[FN22] Section 7 of that proposal, as modified by the committee, appeared in the last sentence of Section 1 of the committee's article on health, education and welfare, and read:

FN22. Alaska Constitutional Convention, Report of Committee on Preamble and Bill of Rights on Committee Proposal No. 7, December 15, 1955.

'No money shall be paid from public funds for the direct benefit of any religious or other private educational institution.'

This is identical with the last sentence of article VII, section 1 of the constitution.

The changes made by the committee are apparent and significant. Delegates Johnson and Coghill had wanted to prohibit the use of public funds for the direct or indirect support, operation or maintenance of non-public schools, and had specifically included 'transportation and other auxiliary services.' The committee changed this to a prohibition only against 'direct benefit' to such schools, without mention of transportation or other auxiliary services. The meaning of this change is inescapable: the committee rejected the thought that transportation and other auxiliary services should be precluded by the ban against the use of public funds for the direct benefit of private schools. There is no question but that this was its intent. During debate on the floor the chairman of the committee stated, in answer to a question, that the committee had given Johnson and Coghill's proposal correct attention and rejected it permently.[FN23] It obviously did not consider that transportation of children had any legitimate bearing on the support, operation or maintenance of a school or that it would constitute a direct benefit to a school.

FN23. Alaska Constitutional Convention Minutes, Jan. 9, 1956, p. 60.

This did not end the matter. When the committee proposal on education came to the floor of the convention, Delegate Coghill moved to amend the section involved so that not only direct, but also indirect benefit would be prohibited.[FN24] A portion of the debate that followed has been mentioned by the majority. But there was more that has not been referred to, and it mereits consideration. It is revealing in showing that the convention thoroughly considered the implications of a prohibition against indirect benefit, and in showing, by a rejection of the proposed amendment, what was intended to be forbidden and what was not.

FN24. Id. at 53.

Delegate Ralph Rivers, in arguing against the amendment, pointed out what might be involved if indirect benefit were prohibited, i. e., the possibility of not being able to effectuate a legitimate public purpose because of incidental advantages that might result to a private concern. He said:

'* * * if there is a public purpose for which money is to be expended it does not matter if some of it does result in an indirect benefit to some private concern, which may be a contractor; so I definitely don't want to see the words 'or indirect' inserted in this section.'[FN25]

FN25. Id. at 57.

Delegate Coghill was asked how indirect benefits might accrue to a private school. He answered by saying that there would be nothing wrong with the state making 'any social welfare, health arrangements * * * with any private or parochial institution', because they would be on a 'contractual basis and would be providing a service to the public and not to the institution.' He saw nothing wrong with providing a hot lunch program with Territorial money or providing a health program in a school, saying--

'* * * I do not deny that to the private school because I feel that it is an instrument of public benefit because a child is benefiting from it from the public standpoint * * *.'[FN26]

FN26. Id. at 62-63.

This is significant. If the author of the restrictive amendment considered that state health and welfare arrangements with a private school would not be banned by a prohibition against indirect benefit, then it is impossible to understand how state arrangements for transportation of children to the private school could amount to a direct benefit to such school.

On the other hand, Delegate Coghill appeared to contradict himself later. He was asked what effect the proposed amendment would have on children's foster homes which, in addition to caring for the bodily needs of children, also provided education. Delegate Coghill stated that the foster homes 'would be deriving an indirect benefit of some sort or another.'[FN27]

FN27. Id. at 67.

This statement must be considered in connection with a memorandum from the Director of the Alaska Department of Public Welfare which was then read to the convention. It listed the schools in Alaska, operated by private and religious organizations, to which the Territory was paying monies through the Welfare Department.[FN28] The delegates may well have believed, considering these facts along with Delegate Coghill's last statement, that to forbid any indirect benefit would be so prohibitive as to restrict the furnishing of needed welfare services.

FN28. Id. at 67-68.

When the proposed amendment finally came to a vote, it failed by 19 to 34. Delegates Coghill and Johnson, who had wished to prohibit bus transportation for children not attending public schools, voted in favor of the restrictive amendment. The entire committee which had formulated the section on education and had rejected the proposal of Delegates Johnson and Coghill voted against the amendment.[FN29]

FN29. Id. at 70-71.

Finally, in connection with a motion which was later defeated to strike all of the last sentence of the section on education, Delegate Victor Rivers asked why the committee had used the words 'direct benefit' instead of 'support or benefit.'[FN30] A member of the committee, Delegate Armstrong, answered this as follows:

FN30. Id. at 76. 'Support or benefit', not modified by 'direct' or 'indirect', is the language used in the Territorial Organic Act, as noted earlier in this opinion.

'As I recall, Mr. President, we probably discussed the question of the support but we did not feel it needed to be in this particular section, and I don't recall, Mr. Rivers, that we considered that as part of the text. I certainly would agree with what Miss Awes has said, although we discussed in Committee *such things as direct legislation for the building of a school or the maintenance of a private school, which would be support, but it was our understanding that that would be covered under this word 'direct benefit'. This would prohibit the direct appropriation or building and maintenance of private institutions.*'[FN31] (Emphasis added.)

FN31. Alaska Constitutional Convention Minutes, Jan. 9, 1956, p. 76.

This shows clearly what the committee had in mind. It discloses the meaning of the words 'direct benefit', i. e., the building or maintenance of private schools. It was not intended to preclude incidental aid that might result to a private educational institution as a by-product of the expenditure of public funds otherwise legitimate, such as those for health and welfare services.

I submit that this record of the convention proceedings merits the attention of the court. The proposal of Johnson and Coghill to prohibit bus transportation for a certain class of children, and its definite rejection by the committee and by the convention as a whole, certainly ought to be of great value in determining the meaning of 'direct benefit' as it relates to school bus transportation. The discussion that took place on Coghill's motion to prohibit any indirect benefit, and its rejection by the convention, should make it clear that all the convention wanted to prevent was the use of public funds for the establishment and maintenance of other than public schools, or as Delegate Armstrong put it, for the 'direct appropriation or building and maintenance of private institutions.' The delegates realized that in attempting to effect a necessary good, such as the care and education of homeless children and the protection of their health and safety, that the state might not in all cases be able to avoid incidentally aiding other interests which could not be benefited by direct action. It did not wish such a possibility to frustrate the accomplishment of the common good. That is why only direct and not indirect benefit was prohibited.

It is abundantly clear that those who formed the constitution did not wish to stop the payment of public monies directly to a religious or other private institution that cared for needy children, even though such institution also furnished education for those children. But if this does not constitute a direct benefit to such institution, then I fail to see how there is a direct benefit to a parochial school if public funds are paid to a school bus contractor who allows the children to ride over established public school bus routes. If the latter involves an unlawful expenditure of public funds, as the majority holds it does, then so must the former. As a practical matter, this court has construed the prohibition against direct benefit so as to forbid also any indirect benefit. In so doing it has logically committed itself to a harmful and restrictive interpretation of the constitution which will prevent the legislature from effectuating legitimate and needed results in the field of general welfare.

3. *Benefit to the School.*

This court states flatly that the furnishing at public expense of transportation for a child who attends a non-public school constitutes a direct benefit to such school. This is a gratuitous assumption. It finds no justification in the language of Chapter 39. It finds no support in the record of this case and little, if any, support in the decisions of other courts. Considered purely as an assumption, it is irrational.

In Chapter 39 the legislature authorized transportation for children attending non-public schools on a substantially equivalent basis with children attending public schools. It did this for two clearly expressed reasons: to achieve the objectives of the Alaska compulsory education law, and to protect the health and safety of school children.

Both considerations were legitimate ones. A child could comply with the compulsory education statute by attending a private as well as a public school, and he would be excused from the statutory requirement if he lived more than two miles from a school and transportation was not furnished.[FN32] It made sense, then, to make transportation available to the child going to the private school in order to assure that the right of attending such a school, and thus to be in compliance with compulsory education requirements, would be real.

FN32. § 37-7-1, ACLA 1949.

The protection of health and safety was no less a proper concern of the legislature. It is inconceivable that this could be challenged or denied. It is a matter of common knowledge that today's highways with today's motor vehicles are extremely dangerous, especially to children. Any rational person knows the hazards a child is subject to in walking long distances in extreme sub-zero weather, such as exists in the winter months in Fairbanks where this case arose. If proof is necessary, it can be found in the record. There was evidence of a dangerous thoroughfare, with no sidewalks, where children had to walk in order to reach the parochial school. There was evidence of winter temperatures in the vicinity of sixty degrees below zero. There was the incident of first and second grade children walking over one mile from school in weather so cold that two little boys involuntarily urinated and the urine froze to their underwear and clothing. There were cases where other parochial school children had suffered from frozen noses and toes.

These dangers to children are real and not illusory. The provisions made in Chapter 39 have a substantial relation to the public health, safety and welfare. The legislature had the right to concern itself with the needs of children-even those who exercised their constitutional right to attend other than a public school. It had no difficulty in expressing its will-in declaring a legitimate public interest. There was not left to the judiciary the task of imputing to the legislature an undeclared intent and purpose, such as that of aiding or benefiting private schools. It is not the prerogative of this court to say that the purpose of Chapter 39 is not what the legislature said it to be.

There is no evidence in this case creating the slightest inference that transportation of children benefits a school. Thus, the statement by this court that there is such a benefit is not a fact but a mere supposition. And as a supposition it is unwarranted.

The same indefensible assumption appears to have been indulged in by the New York Court of Appeals in Judd v. Board of Education, a decision upon which the majority of this court appears to rely. In that case it was said:

'* * * Free transportation of pupils induces attendance at the school. The purpose of the transportation is to promote the interests of the private school or religious or sectarian institution that controls and directs it. 'It helps build up, strengthen and makes a success of the schools as organization.' * * * Without pupils there could be no school. It is illogical to say that the furnishing of transportation is not an aid to the institution while the employment of teachers and furnishing of books, accommodations and and other facilities are such an aid. * * *'[FN33]

FN33. 1938, 278 N.Y. 200, 15 N.E.2d 596, 582, 118 A.L.R. 789.

I fail to see how it can be said that the purpose of transportation is to promote the interests of the private school. The legislature, in Chapter 39, has said that the purpose of transportation is to assist children in reaching their schools and to safeguard their health and safety.

I fail to see how one may properly assume that if transportation is not provided for children attending the Immaculate Conception parochial school at Fairbanks that the school would provide it at school expense. I could just as readily and properly assume that in this situation the parents would furnish transportation at their expense.

I do not see the justification for assuming that if a specified number of children dropped out of the parochial school because of lack of public transportation, that this would result in detriment to the school. One would be as justified in assuming that in such circumstances those children's places would

be promptly filled by other children who had desired to attend but had been unable to because of crowded classrooms.

If public funds had been used for the construction or maintenance of the Fairbanks parochial school, then I could see where there would be a direct benefit to the school. But I fail to see where there is any benefit when public monies are spent, not for those purpose, but solely for the purpose of aiding children in getting to the school. It seems to me that as children are encouraged to attend school and are given assistanced in getting there, there will be an increased need and demand for additional school facilities. This, logically, will result in additional cost to the school. Thus, the money spent by the state for transportation of school children cannot really benefit the school. The effect of such transportation, if more children will attend school when transported, will not be avantage and profit, but will be just the opposite-increased costs and expenses.

The practical holding in Judd was that as children are assisted in reaching school, there results an increased enrollment, and that this benefits the school because it would 'build up', strengthen and make successful the school as an organization.'[FN34] But even if it could be established that Chapter 39 had a substantial effect on the enrollment in the Immaculate Conception School at Fairbanks, this would not be a 'benefit' in the constitutional sense. The fact that more children attend a school does not necessarily aid the school. In fact, I would think that this would have the opposite effect by increasing the demands on the school and the costs of operation. It would be only when the school was able to find ways of meeting those additional costs, without help from the state, that the results mentioned in the Judd case might be attained.

FN34. Judd v. Board of Education, supra note 33, 15 N.E.2d at page 582.

The transportation of children to school, whether it is by the parents or by the state, does not promote the advantage, prosperity or good of the school, despite the statement in the Judd decision that 'without pupils there could be no school.' An extension of this truism is that without a school there would be no expense of providing a school. I cannot see, then, the existence of any benefit, other than to the child and to society, in aiding the child in reaching a school which would not exist if children were not there to receive education, and which would exist, if children were there, only at considerable cost.

In an effort to bolster its conclusion that transportation directly benefits a school the majority of this court also relies upon arguments made in minority, dissenting opinions in the Everson case-both in the New Jersey Court of Errors and Appeals[FN35] and in the United States Supreme Court.[FN36] I fail to see where those arguments aid this court in its conclusion. But if they are thought to be of assistance, then as applied to the issue involved here they amount in substance to this: (a) Payments made for text books, school lunches, athletic equipment, teachers' salaries, tuitions, buildings, equipment, and necessary materials presumably benefit the child. (b) But those payments also constitute a direct benefit to the school. (c) Therefore, since transportation directly benefits the child, it also directly benefits the school.

FN35. Everson v. Board of Education, 1945, 133 N.J.L. 350, 44 A.2d 333, 338-343.

FN36. Everson v. Board of Education, 1947, 330 U.S. 1, 47-49, 67 S.Ct. 504, 91 L.Ed. 711, 740.

Such an argument, of course has no substance. It says that since certain things directly benefit both the child and the school, then other things related to education which directly benefit the child also must necessarily directly benefit the school-whether in fact this is so or not. Obviously this won't stand the test of logic.

In relying upon such unsound reasoning, I think the court has lost sight of what is really involved in this case. The point is not that payments for textbooks, school lunches, teachers' salaries, buildings, etc., do not constitute a direct benefit to the school. Those things are not involved in this action. What is involved, and the only thing, is whether transportation confers a direct benefit on a school. I say that transportation directly benefits a child and his parents; but that there is no basis in fact or reason for holding that it also directly benefits a school. That is the point.

In a final attempt to vindicate its claim that transportation of children confers a direct benefit upon a school, the court states that this was the view expressed by the courts of Delaware, New York, Oklahoma, Washington and Kentucky. I think that the decisions made by those courts furnish little, if any, support for the majority's point of view.

There are only two decisions that have any real pertinency, and they are of no assistance. In New York, aid or support to a religious school, 'directly or indirectly', was prohibited by the constitution. In passing upon the validity of a transportation statute, the New York Court of Appeals obviously considered that transportation constituted an indirect and not a direct aid. The court said:

'Aid or support to the school 'directly or indirectly' is proscribed. The two words must have been used with some definite intent and purpose; otherwise why were they used at all? Aid furnished 'directly' would be that furnished in a direct line, both literally and figuratively, to the school itself, unmistakably earmarked, and without circumlocution or ambiguity. Aid furnished 'indirectly' clearly embraces any contribution, to whomsoever made, circuitously, collaterally, disguised, or otherwise not in a straight, open and direct course for the open and avowed aid of the school, that may be to the benefit of the institution or promotional of its interests and purposes * * * The purpose of the transportation is to promote the interests of the private school or religious or sectarian institution that controls and directs it.' [FN37]

FN37. Judd v. Board of Education, 1938, 278 N.Y. 200, 15 N.E.2d 576, 582, 118 A.L.R. 789, reargument denied 1938, 278 N.Y. 712, 17 N.E.2d 134.

Similarly, in Oklahoma there was a constitutional prohibition against the use of public money for the use or benefit, directly or indirectly, of any sectarian institution. The Supreme Court of Oklahoma did say that 'The appropriation and directed use of public funds in transportation of public school children is openly in direct aid to public schools 'as such'', and that when such aid was extended to a sectarian school there was a clear violation of the constitution.[FN38] But it followed this by also stating that its conclusion was 'fully supported by the reasoning and conclusion' in the New York case of Judd v. Board of Education.[FN39] The Judd case furnished no such support, since its holding was that transportation conferred aid that was indirect, and not direct. Hence, the Oklahoma court's view that there was direct aid is not convincing.

FN38. Gurney v. Ferguson, 1941, 190 Okl. 254, 122 P.2d 1002, 1004.

FN39. Id., 122 P.2d at page 1004.

Decisions of the courts of Delaware, Kentucky and Washington[FN40] are of even less value, since none of the constitutional provisions involved used either the words 'direct' or 'indirect.' In addition, Washington relied in major part on the Judd decision, and Kentucky, upon the Gurney case in Oklahoma which in turn had based its conclusion on Judd.

FN40. State ex rel. Traub v. Brown, 1934, 6 W.W.Harr. 181, 36 Del. 181, 172 A. 835, writ of error dismissed 1938, 9 W.W.Harr. 187, 39 Del. 187, 197 A. 478; Sherrard v. Jefferson County Board of Education, 1942, 294 Ky. 469, 171 S.W.2d 963; Mitchell v. Consol. School Dist. No. 201, 1943, 17 Wash.2d 61, 135 P.2d 79, 146 A.L.R. 612; Visser v. Nooksack Valley School Dist. No. 506, 1949, 33 Wash.2d 699, 207 P.2d 198.

The majority has failed to point to any clear cut decision of another court where there was directly involved the question of whether transportation amounted to direct or indirect aid to a school, and where the determination was made that it was direct aid. It was only in the Judd case that this was given any real consideration, and the decision there can be used only as precedent for a determination that transportation confers an indirect benefit upon a school. The Alaska constitution does not forbid that.

The holding that transportation of children, as authorized by Chapter 39, confers any benefit upon a school is indefensible, in fact and in reason. I submit that the majority of this court has rendered a judgment on social policy which properly should be left to the legislature. In practical effect the court has held that the legislature may not provide for the public welfare despite the fact that it possesses this authority, both traditionally and under the state constitution. The court does not have the power on such grounds to nullify a legislative act, for to concede the power would be to make the court

sovereign over the legislature, the constitution and the people, and convert the government of this state into a judicial despotism.

4. *Legislative Purpose*.

The court is critical of one of the legislative purposes expressed in Chapter 39, i. e., the protection of the health and safety of all school children in Alaska. It points out that no transportation is provided for non-public school children who do not live along public school bus routes, nor for those children who live within one and one-half miles from the schools they attend.[FN41] The court concludes from this that Chapter 39 does not effectuate the announced legislative intent.

FN41. The Commissioner of Education is authorized by regulation to enter into contracts for the transportation of pupils 'who reside a distance of one and one-half miles or more from the school they are required to attend.' 4 Alaska Adm. Code § 100(a), at 37.

I do not know what purpose is served by this portion of the majority's opinion, unless it was intended to suggest by inference that the legislature had some ulterior motive in enacting the statute-its stated objective being a mere fiction-and that for this reason the act was not an appropriate exercise of police power or did not really serve a public purpose.

Long prior to the enactment of Chapter 39 transportation for school children was provided by virtue of a law conferring upon the Territorial Board of Education the power and authority to 'Provide for the transportation of pupils who reside a distance from established Schools.'[FN42] In its practical operation this statute was construed as applying to children attending public schools, but even here *all* public school children did not receive the benefits of the law. Under limitations prescribed by the Board of Education, children were permitted to ride school buses only if they lived beyond a certain distance from their schools, and other children were afforded no transportation if there were not a sufficient number of them living in a certain area to justify the establishment of a transportation route. This is precisely the situation contemplated by existing regulations of the Commissioner of Education. They provide that a transportation route may not be established where there are fewer than eight children who are residents living along a regularly maintained highway; that extensions to routes already established may not be made unless there are at least three children and the extension is a regularly maintained highway; that a route extension may not be established for a one-way distance of less than one mile; and that a transportation route must be discontinued if the average number of children transported falls to five or below for two consecutive months.[FN43]

FN42. SLA 1933, ch. 114, § 1 (§ 37-2-8, ACLA 1949).

FN43. 4 Alaska Adm.Code § 100(a), at 37.

Thus, the fact that literally 'all' school children in Alaska were not given transportation under Chapter 39 is not a circumstance peculiar to children attending non-public schools. It is applicable to the same extent to children attending public schools. It is apparent, then, that when the legislature in 1955 for the first time extended the assistance of transportation to non-public school children, and spoke of 'all school children in Alaska', it was expressing its legitimate concern for a class of children who up to that time had been discriminated against. The phrase 'all school children' obviously was intended to refer to the fact that all children, regardless of whether they attended a public or non-public school, were entitled to transportation if they were otherwise qualified under applicable regulations of the Board or Commissioner of Education. It was never intended that children attending non-public schools would receive benefits over and above those accorded the children attending public schools. If this had been the effect of the statute, there is little doubt but that the court would be even more critical of such an arrangement because of the resulting discrimination against public school children.

The majority, therefore, is not justified in stating that Chapter 39 does not effectuate the intent of the legislature expressed therein. But even if this were so as it relates to health and safety, the statute still would not fail for a lack of a proper legislative motive. The act does not relate only to health and safety; one of its declared purposes is to 'achieve the objectives of the compulsory education laws of Alaska.'[FN44] This alone would be a sufficient consideration; for legislation intended to

facilitate the opportunity of children to get to school, both public and non-public, serves a distinct public purpose.[FN45]

FN44. SLA 1955, ch. 39, § 1.

FN45. Everson v. Board of Education, 1947, 330 U.S. 1, 7, 67 S.Ct. 504, 91 L.Ed. 711, 719; Snyder v. Town of Newtown, 1960, 147 Conn. 374, 161 A.2d 770, 774, appeal dismissed 81 S.Ct. 692, 5 L.Ed.2d 688.

The majority makes a further attempt to justify its criticism of the legislative objective by stating that neither inclement weather nor highway traffic hazards were used as a justification for the first law passed in Alaska to provide transportation for school children. The court states that distance from school seems to have been the motivating force for legislation at that time.

I have no quarrel with the proposition that distance may have been a prime factor. But this does not mean that health and safety were not legitimate factors. If one thinks only a little about winter weather conditions and the hazards of automobile traffic, it should be apparent that as the distance a child must travel by foot increases so do the hazards to his safety. Distance bears such a real and substantial relation to health and safety that the two cannot be considered as separate motivating forces which influence legislatures to provide transportation for school children. In the light of realities of contemporary living, it is astounding that the court would suggest that health and safety were not factors which the legislature had in mind in authorizing transportation of school children at public expense.

Chapter 39 in fact has a real and substantial relation to the health, safety and welfare of school children, despite the majority's suggestion to the contrary. This court is not justified in denouncing the legislative motive or the legislative arrangement because literally 'all' school children in this state are not transported to their schools. The legislature may do what it can to accomplish what is deemed necessary for the public welfare, and stop short of those cases where the detriment to a few, not afforded state aid, is considered less important than the expense or inconvenience to the state which might result if the rule laid down were mathematically exact. Transportation of school children is an expensive undertaking[FN46], and the legislature may well have felt that the state could not afford to provide transportation for every child in the state and for every distance traveled. 'The problems of government are practical ones and may justify, if they do not require, rough accommodations,-illogical, it may be, and unscientific.'[FN47] It is not within the proper scope of judicial review for this court to sit as a superlegislature and decide whether the statute is fair or unfair, or wise or unwise, or whether it has gone far enough in accomplishing a public purpose. [FN48]

FN46. See note 49, infra.

FN47. Metropolis Theater Co. v. City of Chicago, 1913, 228 U.S. 61, 69, 33 S.Ct. 441, 443, 57 L.Ed. 730, 734.

FN48. Day-Brite Lighting Co. v. State of Missouri, 1952, 342 U.S. 421, 423, 72 S.Ct. 405, 96 L.Ed. 469, 472; Berman v. Parker, 1954, 348 U.S. 26, 32, 75 S.Ct. 98, 99 L.Ed. 27, 37; California State Auto Ass'n, etc. v. Maloney, 1951, 341 U.S. 105, 110, 71 S.Ct. 601, 95 L.Ed. 788, 793; Watson v. Buck, 1941, 313 U.S. 387, 403, 61 S.Ct. 962, 85 L.Ed. 1416, 1425; Sunshine Anthracite Coal Co. v. Adkins, 1940, 310 U.S. 381, 394, 60 S.Ct. 907, 84 L.Ed. 1263, 1272.

5. *Conclusion*.

The basic, underlying controversy which gave rise to this litigation is not disclosed by the briefs or by the opinion of this court. But it does exist and should be recognized.

Those who would deny transportation for children attending non-public schools are not concerned with transportation as such. Nor are they truly solicitous about the relatively minor expense to the state which will result from the operation of Chapter 39.[FN49] Their real anxiety, and the real issue in this case, has to do with the very existence of the sectarian or religious educational institutions, and the belief of some persons in the supremacy of public education administered and controlled by the state.

FN49. The appellants have furnished this court with a copy of a memorandum, dated April 27, 1960, from Dr. Theo J. Norby, Commissioner of Education, to Ralph E. Moody, Attorney General of Alaska. This memorandum indicates that if the lower court's decision had been unheld, the additional expense of providing transportation for non-public school students in 1961 would be $17,937.25. It is interesting to note that the total legislative appropriation for 'pupil transportation' in 1960 was $1,197,197.00 (SLA 1960, ch. 182, § 1, at 289), and that the amount requested in the Governor's budget for fiscal year 1961-62 was $1,300,000 (House Bill 42, First Session, Second Alaska Legislature, 1961, at 6).

This was evident from proceedings of the Constitutional Convention. Delegate Proposal No. 6, mentioned earlier in this opinion, did not deal solely with the subject of the use of public funds for private schools. That proposal spelled out in detail how education should be handled in the new State of Alaska. Section 2 provided that 'The State's responsibility for the education of its people is here declared to be clear, positive and final.' Section 4 would have required the legislature to provide 'for the compulsory attendance at some public school, unless other state approved means of education are provided.' Section 6 would have permitted the legislature to provide 'for the establishment of private schools by individuals, groups, institutions or corporations', but only 'under charter from the state.' That section also would have required the state to establish undefined 'minimum educational standards for such schools', and would have allowed the teaching in private schools of principles over and above the state requirements, provided that such teachings 'were not otherwise contrary to the statutes or the constitution of the state.'

During debate on the floor of the convention, Delegate Coghill, a co-author of proposal No. 6, stated that he was President of the Association of Alaska School Boards and 'one of the framers of that twelvepoint program we developed in Anchorage last October.'[FN50] That program, which had been widely disseminated among the delegates, was a five page document entitled 'Basic Principles of Education to be Included in the Constitution for the State of Alaska', and it stated that it had been formulated and approved by the Alaska School Boards Association and the Superintendents' Advisory Commission at a meeting in Anchorage in October 1955. Since the recommendations and discussion in this document coincide in relevant part with Delegate Proposal No. 6, it is fair to presume that those portions of the proposal discussed here reflected the philosophy of education, not just of the delegates who submitted the proposal, but also of the official representatives of public education in Alaska.

FN50. Alaska Constitutional Convention Minutes, Jan. 9, 1956, p. 58.

The basic thesis which runs through the proposal is that education is primarily, if not exclusively, the prerogative and function of the state; that the state is supreme in this field. Evident is the clear implication that the state should have the right to determine in the first instance whether a private school should even be allowed to exist, and if so, then what it should or should not be permitted to teach. Perhaps there is even implicit here a resentment or fear toward the existence of the private schools-a thought that was revealed by Delegate Coghill when, during debate on the floor of the convention, he said that 'sectarianism segregation in our educational system is bad for the children',[FN51] and 'The people that are sending their children to private parochial or any other type of institution are segregating themselves from the public and therefore they should not derive the benefit from the tax dollar.'[FN52]

FN51. Id. at 59.

FN52. Id. at 64.

Such a philosophy of education was totalitarian in concept; the objective obviously being to standardize children by forcing them, practically, to accept instruction from public school teachers only. It ignored the fact that the child is not the mere creature of the state; it denied the natural right of parents to direct the destiny of their children. It had no proper place in the organic law for the State of Alaska, as the convention ultimately decided by rejecting the proposal.

That constitutional history is important to consider in the background of the present controversy over bus transportation. The effort to place all education under the complete dominion of the state failed to succeed as a constitutional measure. The United States Supreme court's decision in Pierce v. Society of Sisters, 1925, 268 U.S. 510, 45 S.Ct. 571, 69 L.Ed. 1070, was a bar to any possible legislative enactment that would compel attendance at public schools only. The next logical step, then,

was to restrict as far as possible the enjoyment of the right to education not exclusively controlled by the state. The opponents of the right thus sought to bar the extension of general welfare benefits to children who did not attend a public school by attempting to insert a constitutional provision against the use of public funds for any indirect benefit to a private school. They were unsuccessful at the convention, but their defeat has now been turned into victory by the court's decision in this case.

In the Pierce case the Supreme Court of the United States held that a statute which compelled attendance at public schools unreasonably interfered with the liberty of parents and guardians to direct the upbringing of children under their control. The court said:

'The fundamental theory of liberty upon which all governments in this Union repose excludes any general power of the state to standardize its children by forcing them to accept instruction from public teachers only. The child is not the mere creature of the state; those who nurture him and direct his destiny have the right, coupled with the high duty, to recognize and prepare him for additional obligations.'[FN53]

FN53. Pierce v. Society of Sisters, 1925, 268 U.S. 510, 535, 45 S.Ct. 571, 573, 69 L.Ed. 1070, 1078.

This liberty of parents to choose the kind of education to be given to their children, so clearly stated in Pierce, has lost much of its effectiveness and meaning by the majority's decision in this case. Because of the economic and social realities of contemporary living, there undoubtedly will be parents who will now find it impracticable or impossible to continue sending their children to the parochial school. To them, the constitutional and natural right to educate their children in schools of their own selection, and to thus express their conviction of the importance of religious and spiritual ideals in the formation of character, will be an abstract thing, without practical meaning or value.

The transportation of school children provided by Chapter 39 is a benefit common and necessary to public and non-public school children alike. To grant this assistance to some children, and deny it to others unless they forego their freedom of choice of schools, embodies the element of unfair treatment which is so foreign to our American tradition. The concept of liberty and equality of man was expressed in the high purpose and noble convictions of our forefathers who signed the Declaration of Independence. It was again given expression with classic dignity by the men and women who formulated the constitution for the State of Alaska when they said that 'This constitution is dedicated to the principles that all persons have a natural right to life, liberty, the pursuit of happiness, and the enjoyment of the rewards of their own industry; that all persons are equal and entitled to equal rights, opportunities, and protection under the law; * * *.'[FN54]

FN54. Alaska Const. art. I, § 1.

This truly is the American idea-the American tradition. It is the reason for our nation's being; it has been America's strength. But today in Alaska that idea has become an abused phrase. The reality behind it has been obscured by the court's decision in this case; some of its power and meaning have been lost. Those persons who exercise their inherent right to direct the destiny of their children must now pay the price of being denied the equal rights to which the constitution says they are entitled.

This court's decision is a grave injustice to many citizens of this state.

The judgment below should be affirmed.

Alaska 1961
MATTHEWS v. **QUINTON**
362 P.2d 932

<TARGET><BILL>HJR 39</BILL><SUBJECT>HJR 39</SUBJECT><COMM>HEDC27</COMM></TARGET>

ALASKA STATE LEGISLATURE

REPRESENTATIVE BOB MILLER

House Joint Resolution 39:

A Resolution urging the Governor to direct the Department of Education and Early Development (DEED) to prepare and submit a request for flexibility under the federal Elementary and Secondary Education Act of 1965 (ESEA) to obtain a waiver of select requirements of the No Child Left Behind Act of 2001and to direct the commissioner of education and early development to provide a comprehensive improvement plan that will guarantee that students in the state will be adequately prepared for academic and vocational success.

Sponsor Statement

The federal No Child Left Behind Act (NCLB) is largely inadequate and often results in unnecessary difficulties for Alaskan educators because it does not account for the geographic conditions, cultural considerations or economic challenges unique to Alaska. Last year, the federal government offered states a process to opt-out of the NCLB requirements if a state developed its own standards and system to ensure school accountability. This resolution urges the governor to take back control of our schools by developing Alaska-appropriate standards and accountability measures in order to opt out of NCLB.

Developing our own standards and accountability measures to get a waiver from NCLB will provide Alaska educators the tools they need to improve education performance without reducing the state's ability to secure federal funding. It will also allow Alaska to determine **local solutions** based on student needs unique to rural areas. So far, 10 states have applied and been granted waivers and an additional 28 states have filed intent to submit a request for the second round.

Recently, the U.S. Secretary of Education stated that more than four out of five schools will fail to meet the NCLB mandated benchmark standards by 2014.

We understand that the commissioner is already taking steps to potentially develop core standards that could meet the requirements to earn a waiver from NCLB.

I urge you to join me in supporting House Joint Resolution 39

Education Brief

The Common Core State Standards Initiative

February 2011

Executive Summary:
The Top 10 Things to Know about The Common Core Standards Initiative

1. **What is the Common Core Standards Initiative?**

   The Common Core Standards Initiative is a collaborative effort led by the National Governor's Association and the Council of Chief School Officers with partners and leaders across education and business, aimed to establish a shared set of clear educational standards for English language arts and mathematics that states can voluntarily adopt. The intention of the CCSS is to have a rigorous set of standards that specifically identify the learning outcomes needed to help schools prepare students to be college and career ready.

2. **Which states are adopting the Common Core?**

   As of January, 2011, 40 states, and the District of Columbia have formally or informally committed to adopting the Common Core State Standards for English-language arts and mathematics for grades K-12 and are in the process of aligning state assessments, curriculum, and classroom practices to integrate the new standards. Alaska, Texas, and Virginia have indicated that they do not plan to adopt the standards.

3. **How will states assess the Common Core?**

   Two consortia have been awarded competitive grant funds for the development of tests to assess the Common Core Standards. SMARTER Balanced Assessment Consortium (SBAC) was awarded a four-year $176 million Race to the Top assessment grant by the U.S. Department of Education to develop a student assessment system aligned to a Common Core of academic standards. Partnership for the Assessment of Readiness for College and Careers (PARCC or Partnership) PARCC RttT Assessment Consortium was awarded $170 of the $330 million. Assessments are expected for 2014 and are expected to include results from performance-based tasks through testing and traditional end-of-year assessments. Both plan to include end of year assessments offered online.

4. **How will states implement and fund the Common Core?**

   This will be a hot area to watch as districts do not yet know how they will fully manage the implementation of the Common Core and the budget required to introduce new assessments and new curricula. We do know that states will be working within a three-year timeline as assessments are anticipated to be ready for 2014.

5. **What will Common Core Implementation plans need to address?**

   There is currently no governance in place yet so the specifics of implementation are still unfolding as states sign on. It is expected that Common Core implementation plans will need to address the following items:

   - Developing research-based practices using Common Core
   - Developing teacher training and PD
   - Researching and Aligning instructional material
   - Investigating formative and summative assessments to be used before or instead of rollout of common assessments.

6. **What role will the U.S. DOE play?**

   Although the U.S. DOE supports the Common Core Initiative, they have had no role in the development of the Common Core State Standards. Their involvment moving forward will depend heavily on future elections and overall changes to the role of the Federal Government in education. If the Fed continues to be a driving force in setting the education agenda with a reauthorization of the Elementary and Secondary Education Act then they could play a big role in linking competitive grant funding to the adoption and successful implementation of the Common Core Standards and new requirements for College and Career ready students.

7. **What's happening with The Common Core Standards in Reading/ELA?**

   1. The following are the areas that have surfaced as leading considerations/factors with the Common Core State Standards for English Language Arts and Literacy in History/Social Studies, Science, Technical Subjects:

      - Increased Rigor/Text Complexity: An emphasis on supporting students in being able to work with increasingly more complex texts.
      - Nonfiction & Informational Text: While this includes a heavy focus on nonfiction, in particular information texts; and on

- Writing: Increased emphasis on writing, in particular across the curriculum.
- Content area responsibility for literacy: An acknowledgement that literacy development is a shared responsibility across the content domains.
- Vocabulary: A focus on general academic vocabulary and domain-specific vocabulary.
- Independent reading: While the emphasis of the CCSS is upon reading, writing, speaking and listening; the intention is that a concentrated effort be placed upon developing content-area literacy in science, social studies and technical subjects.

2. Common Core Curriculum Mapping Project in English/Language Arts has created curriculum maps to translate the CCS for K-12.
3. Based on the Fordham Institute Study of Common Core Standards (State of the State Standards – and the Common Core in 2010) the Common Core Standards are more rigorous than a majority of state's standards (37 states).

8. What are key points to remember about the Common Core for English Language Arts/Literacy?

- Standards support a balance of literacy and informational texts
- Standards emphasize text complexity, canonical texts, and text evidence in K-12
- Language standards include vocabulary, with an emphasis on academic vocabulary
- History/social studies, science and media/technology are integrated
- Emphasis on multiple texts and critical/evaluative reading

9. What's happening with the Common Core in Mathematics?

1. The following are the areas that have surfaced as leading considerations/factors with the Common Core and Mathematics.
   - Shifting from mile-wide, inch-deep curriculum: Deepen understanding of the most critical key topics at each grade level.
   - Coherent progression: Further enhance mastery of these key grade level topics through coherent progressions across grade levels.
   - Conceptual understanding and procedural fluency: Strike a balance between building conceptual understanding while increasing procedural fluency.
   - Foster reasoning and sense-making in mathematics: Encourage the critical-thinking and problem-solving skills students need to be successful 21st century thinkers.
2. Common Core Curriculum Mapping Project in English/Language Arts has created curriculum maps to translate the CCS for K-12.
3. Based on the Fordham Institute Study of Common Core Standards (State of the State Standards – and the Common Core in 2010) the Common Core Standards are more rigorous than a majority of state's standards (37 states).

10. What are key points to remember about the Common Core for Mathematics?

- Focus and coherence: standards focus on key topics at each grade level and coherent progressions across grade levels
- Balance of concepts and skills: Standards require both conceptual understanding and procedural fluency
- Mathematical practices: Standards foster reasoning and sense-making in mathematics
- College and career readiness: Standards are ambitious but achievable

Important Note: What the Common Core Standards do NOT define:

- How teachers should teach
- All that can or should be taught
- The nature of advanced work beyond the common core
- Interventions needed for students well below grade level
- Full range of support for English Language Learners
- Full range of support for students with special needs

ESEA Flexibility

Request

Revised February 10, 2012

U.S. Department of Education
Washington, DC 20202

OMB Number: 1810-0708

Paperwork Burden Statement

According to the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless such collection displays a valid OMB control number. The valid OMB control number for this information collection is 1810-0708. The time required to complete this information collection is estimated to average 336 hours per response, including the time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection. If you have any comments concerning the accuracy of the time estimate or suggestions for improving this form, please write to: U.S. Department of Education, Washington, D.C. 20202-4537.

TABLE OF CONTENTS

Insert page numbers prior to submitting the request, and place the table of contents in front of the SEA's flexibility request.

Overview of SEA's Request for the ESEA Flexibility		
Principle 1: College- and Career-Ready Expectations for All Students		
1.A	Adopt college-and career-ready standards	
1.B	Transition to college- and career-ready standards	
1.C	Develop and administer annual, statewide, aligned, high-quality assessments that measure student growth	
Principle 2: State-Developed Differentiated Recognition, Accountability, and Support		
2.A	Develop and implement a State-based system of differentiated recognition, accountability, and support	
2.B	Set ambitious but achievable annual measurable objectives	
2.C	Reward schools	
2.D	Priority schools	
2.E	Focus schools	
2.F	Provide incentives and supports for other Title I schools	
2.G	Build SEA, LEA, and school capacity to improve student learning	
Principle 3: Supporting Effective Instruction and Leadership		
3.A	Develop and adopt guidelines for local teacher and principal evaluation and support systems	
3.B	Ensure LEAs implement teacher and principal evaluation and support systems	

TABLE OF CONTENTS, CONTINUED

For each attachment included in the *ESEA Flexibility Request*, label the attachment with the corresponding number from the list of attachments below and indicate the page number where the attachment is located. If an attachment is not applicable to the SEA's request, indicate "N/A" instead of a page number. Reference relevant attachments in the narrative portions of the request.

LABEL	LIST OF ATTACHMENTS	PAGE
1	Notice to LEAs	
2	Comments on request received from LEAs (if applicable)	
3	Notice and information provided to the public regarding the request	
4	Evidence that the State has formally adopted college- and career-ready content standards consistent with the State's standards adoption process	
5	Memorandum of understanding or letter from a State network of institutions of higher education (IHEs) certifying that meeting the State's standards corresponds to being college- and career-ready without the need for remedial coursework at the postsecondary level (if applicable)	
6	State's Race to the Top Assessment Memorandum of Understanding (MOU) (if applicable)	
7	Evidence that the SEA has submitted high-quality assessments and academic achievement standards to the Department for peer review, or a timeline of when the SEA will submit the assessments and academic achievement standards to the Department for peer review (if applicable)	
8	A copy of the average statewide proficiency based on assessments administered in the 2010–2011 school year in reading/language arts and mathematics for the "all students" group and all subgroups (if applicable)	
9	Table 2: Reward, Priority, and Focus Schools	
10	A copy of the guidelines that the SEA has developed and adopted for local teacher and principal evaluation and support systems (if applicable)	
11	Evidence that the SEA has adopted all of the guidelines for local teacher and principal evaluation and support systems	

WAIVERS

By submitting this flexibility request, the SEA requests flexibility through waivers of the ten ESEA requirements listed below and their associated regulatory, administrative, and reporting requirements by checking each of the boxes below. The provisions below represent the general areas of flexibility requested; a chart appended to the document titled *ESEA Flexibility Frequently Asked Questions* enumerates each specific provision of which the SEA requests a waiver, which the SEA incorporates into its request by reference.

☐ 1. The requirements in ESEA section 1111(b)(2)(E)-(H) that prescribe how an SEA must establish annual measurable objectives (AMOs) for determining adequate yearly progress (AYP) to ensure that all students meet or exceed the State's proficient level of academic achievement on the State's assessments in reading/language arts and mathematics no later than the end of the 2013–2014 school year. The SEA requests this waiver to develop new ambitious but achievable AMOs in reading/language arts and mathematics in order to provide meaningful goals that are used to guide support and improvement efforts for the State, LEAs, schools, and student subgroups.

☐ 2. The requirements in ESEA section 1116(b) for an LEA to identify for improvement, corrective action, or restructuring, as appropriate, a Title I school that fails, for two consecutive years or more, to make AYP, and for a school so identified and its LEA to take certain improvement actions. The SEA requests this waiver so that an LEA and its Title I schools need not comply with these requirements.

☐ 3. The requirements in ESEA section 1116(c) for an SEA to identify for improvement or corrective action, as appropriate, an LEA that, for two consecutive years or more, fails to make AYP, and for an LEA so identified and its SEA to take certain improvement actions. The SEA requests this waiver so that it need not comply with these requirements with respect to its LEAs.

☐ 4. The requirements in ESEA sections 6213(b) and 6224(e) that limit participation in, and use of funds under the Small, Rural School Achievement (SRSA) and Rural and Low-Income School (RLIS) programs based on whether an LEA has made AYP and is complying with the requirements in ESEA section 1116. The SEA requests this waiver so that an LEA that receives SRSA or RLIS funds may use those funds for any authorized purpose regardless of whether the LEA makes AYP.

☐ 5. The requirement in ESEA section 1114(a)(1) that a school have a poverty percentage of 40 percent or more in order to operate a schoolwide program. The SEA requests this waiver so that an LEA may implement interventions consistent with the turnaround principles or interventions that are based on the needs of the students in the school and designed to enhance the entire educational program in a school in any of its priority and focus schools that meet the definitions of "priority schools" and "focus schools," respectively, set forth in the document titled *ESEA Flexibility*, as appropriate, even if those schools do not have a poverty percentage of 40 percent or more.

☐ 6. The requirement in ESEA section 1003(a) for an SEA to distribute funds reserved under that

section only to LEAs with schools identified for improvement, corrective action, or restructuring. The SEA requests this waiver so that it may allocate section 1003(a) funds to its LEAs in order to serve any of the State's priority and focus schools that meet the definitions of "priority schools" and "focus schools," respectively, set forth in the document titled *ESEA Flexibility*.

☐ 7. The provision in ESEA section 1117(c)(2)(A) that authorizes an SEA to reserve Title I, Part A funds to reward a Title I school that (1) significantly closed the achievement gap between subgroups in the school; or (2) has exceeded AYP for two or more consecutive years. The SEA requests this waiver so that it may use funds reserved under ESEA section 1117(c)(2)(A) for any of the State's reward schools that meet the definition of "reward schools" set forth in the document titled *ESEA Flexibility*.

☐ 8. The requirements in ESEA section 2141(a), (b), and (c) for an LEA and SEA to comply with certain requirements for improvement plans regarding highly qualified teachers. The SEA requests this waiver to allow the SEA and its LEAs to focus on developing and implementing more meaningful evaluation and support systems.

☐ 9. The limitations in ESEA section 6123 that limit the amount of funds an SEA or LEA may transfer from certain ESEA programs to other ESEA programs. The SEA requests this waiver so that it and its LEAs may transfer up to 100 percent of the funds it receives under the authorized programs among those programs and into Title I, Part A.

☐ 10. The requirements in ESEA section 1003(g)(4) and the definition of a Tier I school in Section I.A.3 of the School Improvement Grants (SIG) final requirements. The SEA requests this waiver so that it may award SIG funds to an LEA to implement one of the four SIG models in any of the State's priority schools that meet the definition of "priority schools" set forth in the document titled *ESEA Flexibility*.

Optional Flexibilities:

If an SEA chooses to request waivers of any of the following requirements, it should check the corresponding box(es) below:

☐ 11. The requirements in ESEA sections 4201(b)(1)(A) and 4204(b)(2)(A) that restrict the activities provided by a community learning center under the Twenty-First Century Community Learning Centers (21st CCLC) program to activities provided only during non-school hours or periods when school is not in session (*i.e.*, before and after school or during summer recess). The SEA requests this waiver so that 21st CCLC funds may be used to support expanded learning time during the school day in addition to activities during non-school hours or periods when school is not in session.

☐ 12. The requirements in ESEA sections 1116(a)(1)(A)-(B) and 1116(c)(1)(A) that require LEAs and SEAs to make determinations of adequate yearly progress (AYP) for schools and LEAs, respectively. The SEA requests this waiver because continuing to determine whether an LEA and its schools make AYP is inconsistent with the SEA's State-developed differentiated recognition, accountability, and support system included in its ESEA flexibility request. The

SEA and its LEAs must report on their report cards performance against the AMOs for all subgroups identified in ESEA section 1111(b)(2)(C)(v), and use performance against the AMOs to support continuous improvement in Title I schools that are not reward schools, priority schools, or focus schools.

☐ 13. The requirements in ESEA section 1113(a)(3)-(4) and (c)(1) that require an LEA to serve eligible schools under Title I in rank order of poverty and to allocate Title I, Part A funds based on that rank ordering. The SEA requests this waiver in order to permit its LEAs to serve a Title I-eligible high school with a graduation rate below 60 percent that the SEA has identified as a priority school even if that school does not rank sufficiently high to be served.

ASSURANCES

By submitting this application, the SEA assures that:

☐ 1. It requests waivers of the above-referenced requirements based on its agreement to meet Principles 1 through 4 of the flexibility, as described throughout the remainder of this request.

☐ 2. It will adopt English language proficiency (ELP) standards that correspond to the State's college- and career-ready standards, consistent with the requirement in ESEA section 3113(b)(2), and that reflect the academic language skills necessary to access and meet the new college- and career-ready standards, no later than the 2013–2014 school year. (Principle 1)

☐ 3. It will develop and administer no later than the 2014–2015 school year alternate assessments based on grade-level academic achievement standards or alternate assessments based on alternate academic achievement standards for students with the most significant cognitive disabilities that are consistent with 34 C.F.R. § 200.6(a)(2) and are aligned with the State's college- and career-ready standards. (Principle 1)

☐ 4. It will develop and administer ELP assessments aligned with the State's ELP standards, consistent with the requirements in ESEA sections 1111(b)(7), 3113(b)(2), and 3122(a)(3)(A)(ii). (Principle 1)

☐ 5. It will report annually to the public on college-going and college credit-accumulation rates for all students and subgroups of students in each LEA and each public high school in the State. (Principle 1)

☐ 6. If the SEA includes student achievement on assessments in addition to reading/language arts and mathematics in its differentiated recognition, accountability, and support system and uses achievement on those assessments to identify priority and focus schools, it has technical documentation, which can be made available to the Department upon request, demonstrating that the assessments are administered statewide; include all students, including by providing appropriate accommodations for English Learners and students with disabilities, as well as alternate assessments based on grade-level academic achievement standards or alternate assessments based on alternate academic achievement standards for students with the most significant cognitive disabilities, consistent with 34 C.F.R. § 200.6(a)(2); and are valid and reliable for use in the SEA's differentiated recognition, accountability, and support system. (Principle 2)

☐ 7. It will report to the public its lists of reward schools, priority schools, and focus schools at the time the SEA is approved to implement the flexibility, and annually thereafter, it will publicly recognize its reward schools as well as make public its lists of priority and focus schools if it chooses to update those lists. (Principle 2)

☐ 8. Prior to submitting this request, it provided student growth data on their current students and the students they taught in the previous year to, at a minimum, all teachers of reading/language arts and mathematics in grades in which the State administers assessments in those subjects in a manner that is timely and informs instructional programs, or it will do so no later than the deadline required under the State Fiscal Stabilization Fund. (Principle 3)

☐ 9. It will evaluate and, based on that evaluation, revise its own administrative requirements to reduce duplication and unnecessary burden on LEAs and schools. (Principle 4)

☐ 10. It has consulted with its Committee of Practitioners regarding the information set forth in its request.

☐ 11. Prior to submitting this request, it provided all LEAs with notice and a reasonable opportunity to comment on the request and has attached a copy of that notice (Attachment 1) as well as copies of any comments it received from LEAs (Attachment 2).

☐ 12. Prior to submitting this request, it provided notice and information regarding the request to the public in the manner in which the State customarily provides such notice and information to the public (*e.g.*, by publishing a notice in the newspaper; by posting information on its website) and has attached a copy of, or link to, that notice (Attachment 3).

☐ 13. It will provide to the Department, in a timely manner, all required reports, data, and evidence regarding its progress in implementing the plans contained throughout this request.

☐ 14. It will report annually on its State report card, and will ensure that its LEAs annually report on their local report cards, for the "all students" group and for each subgroup described in ESEA section 1111(b)(2)(C)(v)(II): information on student achievement at each proficiency level; data comparing actual achievement levels to the State's annual measurable objectives; the percentage of students not tested; performance on the other academic indicator for elementary and middle schools; and graduation rates for high schools. It will also annually report, and will ensure that its LEAs annually report, all other information and data required by ESEA section 1111(h)(1)(C) and 1111(h)(2)(B), respectively.

If the SEA selects Option A in section 3.A of its request, indicating that it has not yet developed and adopted all the guidelines for teacher and principal evaluation and support systems, it must also assure that:

☐ 15. It will submit to the Department for peer review and approval a copy of the guidelines that it will adopt by the end of the 2011–2012 school year. (Principle 3)

CONSULTATION

An SEA must meaningfully engage and solicit input from diverse stakeholders and communities in the development of its request. To demonstrate that an SEA has done so, the SEA must provide an assurance that it has consulted with the State's Committee of Practitioners regarding the information set forth in the request and provide the following:

1. A description of how the SEA meaningfully engaged and solicited input on its request from teachers and their representatives.

Click here to enter text.

2. A description of how the SEA meaningfully engaged and solicited input on its request from other diverse communities, such as students, parents, community-based organizations, civil rights organizations, organizations representing students with disabilities and English Learners, business organizations, and Indian tribes.

Click here to enter text.

EVALUATION

The Department encourages an SEA that receives approval to implement the flexibility to collaborate with the Department to evaluate at least one program, practice, or strategy the SEA or its LEAs implement under principle 1, 2, or 3. Upon receipt of approval of the flexibility, an interested SEA will need to nominate for evaluation a program, practice, or strategy the SEA or its LEAs will implement under principles 1, 2, or 3. The Department will work with the SEA to determine the feasibility and design of the evaluation and, if it is determined to be feasible and appropriate, will fund and conduct the evaluation in partnership with the SEA, ensuring that the implementation of the chosen program, practice, or strategy is consistent with the evaluation design.

☐ Check here if you are interested in collaborating with the Department in this evaluation, if your request for the flexibility is approved.

OVERVIEW OF SEA'S REQUEST FOR THE ESEA FLEXIBILITY

Provide an overview (about 500 words) of the SEA's request for the flexibility that:

1. explains the SEA's comprehensive approach to implement the waivers and principles and describes the SEA's strategy to ensure this approach is coherent within and across the principles; and

2. describes how the implementation of the waivers and principles will enhance the SEA's and its LEAs' ability to increase the quality of instruction for students and improve student achievement.

Click here to enter text..

PRINCIPLE 1: COLLEGE- AND CAREER-READY EXPECTATIONS FOR ALL STUDENTS

1.A ADOPT COLLEGE- AND CAREER-READY STANDARDS

Select the option that pertains to the SEA and provide evidence corresponding to the option selected.

Option A	**Option B**
☐ The State has adopted college- and career-ready standards in at least reading/language arts and mathematics that are common to a significant number of States, consistent with part (1) of the definition of college- and career-ready standards. i. Attach evidence that the State has adopted the standards, consistent with the State's standards adoption process. (Attachment 4)	☐ The State has adopted college- and career-ready standards in at least reading/language arts and mathematics that have been approved and certified by a State network of institutions of higher education (IHEs), consistent with part (2) of the definition of college- and career-ready standards. i. Attach evidence that the State has adopted the standards, consistent with the State's standards adoption process. (Attachment 4) ii. Attach a copy of the memorandum of understanding or letter from a State network of IHEs certifying that students who meet these standards will not need remedial coursework at the postsecondary level. (Attachment 5)

1.B TRANSITION TO COLLEGE- AND CAREER-READY STANDARDS

Provide the SEA's plan to transition to and implement no later than the 2013–2014 school year college- and career-ready standards statewide in at least reading/language arts and mathematics for all students and schools and include an explanation of how this transition plan is likely to lead to all students, including English Learners, students with disabilities, and low-achieving students, gaining access to and learning content aligned with such standards. The Department encourages an SEA to include in its plan activities related to each of the italicized questions in the corresponding section of the document titled *ESEA Flexibility Review Guidance*, or to explain why one or more of those activities is not necessary to its plan.

Insert plan and explanation here.

1.C Develop and Administer Annual, Statewide, Aligned, High-Quality Assessments that Measure Student Growth

Select the option that pertains to the SEA and provide evidence corresponding to the option selected.

Option A	**Option B**	**Option C**
☐ The SEA is participating in one of the two State consortia that received a grant under the Race to the Top Assessment competition. i. Attach the State's Memorandum of Understanding (MOU) under that competition. (Attachment 6)	☐ The SEA is not participating in either one of the two State consortia that received a grant under the Race to the Top Assessment competition, and has not yet developed or administered statewide aligned, high-quality assessments that measure student growth in reading/language arts and in mathematics in at least grades 3-8 and at least once in high school in all LEAs. i. Provide the SEA's plan to develop and administer annually, beginning no later than the 2014–2015 school year, statewide aligned, high-quality assessments that measure student growth in reading/language arts and in mathematics in at least grades 3-8 and at least once in high school in all LEAs, as well as set academic achievement standards for those assessments.	☐ The SEA has developed and begun annually administering statewide aligned, high-quality assessments that measure student growth in reading/language arts and in mathematics in at least grades 3-8 and at least once in high school in all LEAs. i. Attach evidence that the SEA has submitted these assessments and academic achievement standards to the Department for peer review or attach a timeline of when the SEA will submit the assessments and academic achievement standards to the Department for peer review. (Attachment 7)

For Option B, insert plan here

PRINCIPLE 2: STATE-DEVELOPED DIFFERENTIATED RECOGNITION, ACCOUNTABILITY, AND SUPPORT

2.A DEVELOP AND IMPLEMENT A STATE-BASED SYSTEM OF DIFFERENTIATED RECOGNITION, ACCOUNTABILITY, AND SUPPORT

2.A.i Provide a description of the SEA's differentiated recognition, accountability, and support system that includes all the components listed in Principle 2, the SEA's plan for implementation of the differentiated recognition, accountability, and support system no later than the 2012–2013 school year, and an explanation of how the SEA's differentiated recognition, accountability, and support system is designed to improve student achievement and school performance, close achievement gaps, and increase the quality of instruction for students.

Insert description, plan, and explanation here.

2.A.ii Select the option that pertains to the SEA and provide the corresponding information, if any.

Option A	**Option B**
☐ The SEA includes student achievement only on reading/language arts and mathematics assessments in its differentiated recognition, accountability, and support system and to identify reward, priority, and focus schools.	☐ If the SEA includes student achievement on assessments in addition to reading/language arts and mathematics in its differentiated recognition, accountability, and support system or to identify reward, priority, and focus schools, it must: a. provide the percentage of students in the "all students" group that performed at the proficient level on the State's most recent administration of each assessment for all grades assessed; and b. include an explanation of how the included assessments will be weighted in a manner that will result in holding schools accountable for ensuring all students achieve college- and career-ready standards.

Insert text for Option B here.

2.B SET AMBITIOUS BUT ACHIEVABLE ANNUAL MEASURABLE OBJECTIVES

Select the method the SEA will use to set new ambitious but achievable annual measurable objectives (AMOs) in at least reading/language arts and mathematics for the State and all LEAs, schools, and subgroups that provide meaningful goals and are used to guide support and improvement efforts. If the SEA sets AMOs that differ by LEA, school, or subgroup, the AMOs for LEAs, schools, or subgroups that are further behind must require greater rates of annual progress.

Option A	**Option B**	**Option C**
☐ Set AMOs in annual equal increments toward a goal of reducing by half the percentage of students in the "all students" group and in each subgroup who are not proficient within six years. The SEA must use current proficiency rates based on assessments administered in the 2010–2011 school year as the starting point for setting its AMOs. i. Provide the new AMOs and an explanation of the method used to set these AMOs.	☐ Set AMOs that increase in annual equal increments and result in 100 percent of students achieving proficiency no later than the end of the 2019–2020 school year. The SEA must use the average statewide proficiency based on assessments administered in the 2010–2011 school year as the starting point for setting its AMOs. i. Provide the new AMOs and an explanation of the method used to set these AMOs.	☐ Use another method that is educationally sound and results in ambitious but achievable AMOs for all LEAs, schools, and subgroups. i. Provide the new AMOs and an explanation of the method used to set these AMOs. ii. Provide an educationally sound rationale for the pattern of academic progress reflected in the new AMOs in the text box below. iii. Provide a link to the State's report card or attach a copy of the average statewide proficiency based on assessments administered in the 2010–2011 school year in reading/language arts and mathematics for the "all students" group and all subgroups. (Attachment 8)

Insert text for Option C here.

2.C REWARD SCHOOLS

2.C.i Describe the SEA's methodology for identifying highest-performing and high-progress schools as reward schools . If the SEA's methodology is not based on the definition of reward schools in *ESEA Flexibility* (but instead, e.g. based on school grades or ratings that take into account a number of factors), the SEA should also demonstrate that the list provided in Table 2 is consistent with the definition, per the Department's "Demonstrating that an SEA's Lists of Schools meet ESEA Flexibility Definitions" guidance.

Insert methodology here.

2.C.ii Provide the SEA's list of reward schools in Table 2.

2.C.iii Describe how the SEA will publicly recognize and, if possible, reward highest-performing and high-progress schools.

Insert description here.

2.D PRIORITY SCHOOLS

2.D.i Describe the SEA's methodology for identifying a number of lowest-performing schools equal to at least five percent of the State's Title I schools as priority schools. If the SEA's methodology is not based on the definition of priority schools in *ESEA Flexibility* (but instead, e.g. based on school grades or ratings that take into account a number of factors), the SEA should also demonstrate that the list provided in Table 2 is consistent with the definition, per the Department's "Demonstrating that an SEA's Lists of Schools meet ESEA Flexibility Definitions" guidance.

Insert methodology here.

2.D.ii Provide the SEA's list of priority schools in Table 2.

2.D.iii Describe the meaningful interventions aligned with the turnaround principles that an LEA with priority schools will implement.

Insert description here.

2.D.iv Provide the timeline the SEA will use to ensure that its LEAs that have one or more priority schools implement meaningful interventions aligned with the turnaround principles in each priority school no later than the 2014–2015 school year and provide a justification for the SEA's choice of timeline.

Insert timeline and justification here.

2.D.v Provide the criteria the SEA will use to determine when a school that is making significant progress in improving student achievement exits priority status and a justification for the criteria selected.

Insert criteria and justification here.

2.E FOCUS SCHOOLS

2.E.i Describe the SEA's methodology for identifying a number of low-performing schools equal to at least 10 percent of the State's Title I schools as "focus schools." If the SEA's methodology is not based on the definition of focus schools in *ESEA Flexibility* (but instead, e.g. based on school grades or ratings that take into account a number of factors), the SEA should also demonstrate that the list provided in Table 2 is consistent with the definition, per the Department's "Demonstrating that an SEA's Lists of Schools meet ESEA Flexibility Definitions" guidance.

Insert methodology here.

2.E.ii Provide the SEA's list of focus schools in Table 2.

2.E.iii Describe the process and timeline the SEA will use to ensure that its LEAs that have one or more focus schools will identify the specific needs of the SEA's focus schools and their students and provide examples of and justifications for the interventions focus schools will be required to implement to improve the performance of students who are the furthest behind.

Insert description here.

2.E.iv Provide the criteria the SEA will use to determine when a school that is making significant progress in improving student achievement and narrowing achievement gaps exits focus status and a justification for the criteria selected.

Insert criteria and justification here.

TABLE 2: REWARD, PRIORITY, AND FOCUS SCHOOLS

Provide the SEA's list of reward, priority, and focus schools using the Table 2 template. Use the key to indicate the criteria used to identify a school as a reward, priority, or focus school.

TABLE 2: REWARD, PRIORITY, AND FOCUS SCHOOLS

LEA Name	School Name	School NCES ID #	REWARD SCHOOL	PRIORITY SCHOOL	FOCUS SCHOOL
Ex. Washington	*Oak HS*	*111111100001*		*C*	
	Maple ES	*111111100002*			*H*
Adams	*Willow MS*	*222222200001*	*A*		
	Cedar HS	*222222200002*			*F*
	Elm HS	*222222200003*			*G*
TOTAL # of Schools:					

Total # of Title I schools in the State: _____
Total # of Title I-participating high schools in the State with graduation rates less than 60%: _____

Key	
Reward School Criteria: **A.** Highest-performing school **B.** High-progress school **Priority School Criteria:** **C.** Among the lowest five percent of Title I schools in the State based on the proficiency and lack of progress of the "all students" group **D-1.** Title I-participating high school with graduation rate less than 60% over a number of years **D-2.** Title I-eligible high school with graduation rate less than 60% over a number of years **E.** Tier I or Tier II SIG school implementing a school intervention model	**Focus School Criteria:** **F.** Has the largest within-school gaps between the highest-achieving subgroup(s) and the lowest-achieving subgroup(s) or, at the high school level, has the largest within-school gaps in the graduation rate **G.** Has a subgroup or subgroups with low achievement or, at the high school level, a low graduation rate **H.** A Title I-participating high school with graduation rate less than 60% over a number of years that is not identified as a priority school

2.F Provide Incentives and Supports for other Title I Schools

2.F Describe how the SEA's differentiated recognition, accountability, and support system will provide incentives and supports to ensure continuous improvement in other Title I schools that, based on the SEA's new AMOs and other measures, are not making progress in improving student achievement and narrowing achievement gaps, and an explanation of how these incentives and supports are likely to improve student achievement and school performance, close achievement gaps, and increase the quality of instruction for students.

Insert description and explanation here.

2.G Build SEA, LEA, and School Capacity to Improve Student Learning

2.G Describe the SEA's process for building SEA, LEA, and school capacity to improve student learning in all schools and, in particular, in low-performing schools and schools with the largest achievement gaps, including through:

i. timely and comprehensive monitoring of, and technical assistance for, LEA implementation of interventions in priority and focus schools;

ii. ensuring sufficient support for implementation of interventions in priority schools, focus schools, and other Title I schools identified under the SEA's differentiated recognition, accountability, and support system (including through leveraging funds the LEA was previously required to reserve under ESEA section 1116(b)(10), SIG funds, and other Federal funds, as permitted, along with State and local resources); and

iii. holding LEAs accountable for improving school and student performance, particularly for turning around their priority schools.

Explain how this process is likely to succeed in improving SEA, LEA, and school capacity.

Insert description and explanation here.

PRINCIPLE 3: SUPPORTING EFFECTIVE INSTRUCTION AND LEADERSHIP

3.A DEVELOP AND ADOPT GUIDELINES FOR LOCAL TEACHER AND PRINCIPAL EVALUATION AND SUPPORT SYSTEMS

Select the option that pertains to the SEA and provide the corresponding description and evidence, as appropriate, for the option selected.

Option A	**Option B**
☐ If the SEA has not already developed and adopted all of the guidelines consistent with Principle 3, provide: i. the SEA's plan to develop and adopt guidelines for local teacher and principal evaluation and support systems by the end of the 2011–2012 school year; ii. a description of the process the SEA will use to involve teachers and principals in the development of these guidelines; and iii. an assurance that the SEA will submit to the Department a copy of the guidelines that it will adopt by the end of the 2011–2012 school year (see Assurance 14).	☐ If the SEA has developed and adopted all of the guidelines consistent with Principle 3, provide: i. a copy of the guidelines the SEA has adopted (Attachment 10) and an explanation of how these guidelines are likely to lead to the development of evaluation and support systems that improve student achievement and the quality of instruction for students; ii. evidence of the adoption of the guidelines (Attachment 11); and iii. a description of the process the SEA used to involve teachers and principals in the development of these guidelines.

Insert text here.

3.B ENSURE LEAS IMPLEMENT TEACHER AND PRINCIPAL EVALUATION AND SUPPORT SYSTEMS

3.B Provide the SEA's process for ensuring that each LEA develops, adopts, pilots, and implements, with the involvement of teachers and principals, including mechanisms to review, revise, and improve, high-quality teacher and principal evaluation and support systems consistent with the SEA's adopted guidelines.

Insert process here.

SAMPLE FORMAT FOR PLAN

Below is one example of a format an SEA may use to provide a plan to meet a particular principle in the *ESEA Flexibility*.

Key Milestone or Activity	Detailed Timeline	Party or Parties Responsible	Evidence (Attachment)	Resources (*e.g.*, staff time, additional funding)	Significant Obstacles

ESEA Flexibility

September 23, 2011

FLEXIBILITY TO IMPROVE STUDENT ACADEMIC ACHIEVEMENT AND INCREASE THE QUALITY OF INSTRUCTION

In order to move forward with State and local reforms designed to improve academic achievement and increase the quality of instruction for all students in a manner that was not originally contemplated by the No Child Left Behind Act of 2001 (NCLB), a State educational agency (SEA) may request flexibility, on its own behalf and on behalf of its LEAs, through waivers of ten provisions of the Elementary and Secondary Education Act of 1965 (ESEA) and their associated regulatory, administrative, and reporting requirements. In order to receive this flexibility, an SEA must meet the principles described in the next section. Terms that are defined in the Definitions section of this document are in bold type the first time they appear.

1. Flexibility Regarding the 2013–2014 Timeline for Determining Adequate Yearly Progress (AYP): An SEA would no longer need to follow the procedures in ESEA section 1111(b)(2)(E) through (H) for setting annual measurable objectives (AMOs) to use in determining AYP. Instead, an SEA would have flexibility to develop new ambitious but achievable AMOs in reading/language arts and mathematics in order to provide meaningful goals that will be used to guide support and improvement efforts for the State, local educational agencies (LEAs), schools, and student subgroups.

2. Flexibility in Implementation of School Improvement Requirements: An LEA would no longer be required to comply with the requirements in ESEA section 1116(b) to identify for improvement, corrective action, or restructuring, as appropriate, its Title I schools that fail, for two consecutive years or more, to make AYP, and neither the LEA nor its schools would be required to take currently required improvement actions; however, an SEA may still require or permit an LEA to take such actions. An LEA would also be exempt from all administrative and reporting requirements related to school improvement under current law.

3. Flexibility in Implementation of LEA Improvement Requirements: An SEA would no longer be required to comply with the requirements in ESEA section 1116(c) to identify for improvement or corrective action, as appropriate, an LEA that, for two consecutive years or more, fails to make AYP, and neither the LEA nor the SEA would be required to take currently required improvement actions. An LEA would also be exempt from all associated administrative and reporting requirements related to LEA improvement under current law.

4. Flexibility for Rural LEAs: An LEA that receives Small, Rural School Achievement Program funds or Rural and Low-Income School Program funds would have flexibility under ESEA sections 6213(b) and 6224(e) to use those funds for any authorized purpose regardless of the LEA's AYP status.

5. Flexibility for Schoolwide Programs: An LEA would have flexibility to operate a schoolwide program in a Title I school that does not meet the 40 percent poverty threshold in ESEA section 1114(a)(1) if the SEA has identified the school as a **priority school** or a **focus school**, and the LEA is implementing interventions consistent with the **turnaround principles** or interventions that are based on the needs of the students in the school and designed to enhance the entire educational program in the school, as appropriate.

6. Flexibility to Support School Improvement: An SEA would have flexibility to allocate ESEA section 1003(a) funds to an LEA in order to serve any priority or focus school, if the SEA determines such schools are most in need of additional support.

7. Flexibility for Reward Schools: An SEA would have flexibility to use funds reserved under ESEA section 1117(c)(2)(A) to provide financial rewards to any **reward school**, if the SEA determines such schools are most appropriate for financial rewards.

8. Flexibility Regarding Highly Qualified Teacher (HQT) Improvement Plans: An LEA that does not meet its HQT targets would no longer have to develop an improvement plan under ESEA section 2141 and would have flexibility in how it uses its Title I and Title II funds. An SEA would be exempt from the requirements regarding its role in the implementation of these plans, including the requirement that it enter into agreements with LEAs on the uses of funds and the requirement that it provide technical assistance to LEAs on their plan. This flexibility would allow SEAs and LEAs to focus on developing and implementing more meaningful evaluation and support systems. An SEA would not be exempt from the requirement of ESEA section 1111(b)(8)(C) that it ensure that poor and minority children are not taught at higher rates than other children by inexperienced, unqualified, or out-of-field teachers; however, once more meaningful evaluation and support systems are in place in accordance with principle 3 (described below), an SEA may use the results of such systems to meet that requirement.

9. Flexibility to Transfer Certain Funds: An SEA and its LEAs would have flexibility to transfer up to 100 percent of the funds received under the authorized programs designated in ESEA section 6123 among those programs and into Title I, Part A. Moreover, to minimize burden at the State and local levels, the SEA would not be required to notify the Department and its participating LEAs would not be required to notify the SEA prior to transferring funds.

10. Flexibility to Use School Improvement Grant (SIG) Funds to Support Priority Schools: An SEA would have flexibility to award SIG funds available under ESEA section 1003(g) to an LEA to implement one of the four SIG models in any priority school.

OPTIONAL FLEXIBILITY

In addition to its request for waivers of each of the requirements above, an SEA may wish to request flexibility through a waiver related to the following:

Flexibility in the Use of Twenty-First Century Community Learning Centers (21st CCLC) Program Funds: An SEA would have flexibility under ESEA sections 4201(b)(1)(A) and 4204(b)(2)(A) to permit community learning centers that receive funds under the 21st CCLC program to use those funds to support expanded learning time during the school day in addition to activities during non-school hours or periods when school is not in session (*i.e.*, before and after school or during summer recess).

PRINCIPLES FOR IMPROVING STUDENT ACADEMIC ACHIEVEMENT AND INCREASING THE QUALITY OF INSTRUCTION

To receive flexibility through the waivers outlined above, an SEA must submit a request that addresses each of the following four principles, consistent with the definitions and timelines described later in this document, to increase the quality of instruction for students and improve student academic achievement in the State and its LEAs. In the SEA's request, the SEA must describe how it will ensure that LEAs will fully implement these principles, consistent with the SEA's authority under State law and the SEA's request.

1. **College- and Career-Ready Expectations for All Students**

   Over the past few years, Governors and Chief State School Officers have developed and adopted rigorous academic content standards to prepare all students for success in college and careers in the 21st century. States are also coming together to develop the next generation of assessments aligned with these new standards, and to advance essential skills that promote critical thinking, problem solving, and the application of knowledge. To support States in continuing the work of transitioning students, teachers, and schools to a system aligned to college and career ready expectations, this flexibility would remove obstacles that hinder that work.

   To receive this flexibility, an SEA must demonstrate that it has college- and career-ready expectations for all students in the State by adopting **college- and career-ready standards** in at least reading/language arts and mathematics, transitioning to and implementing such standards statewide for all students and schools, and developing and administering annual, statewide, aligned, **high-quality assessments**, and corresponding academic achievement standards, that measure **student growth** in at least grades 3-8 and at least once in high school. An SEA must also support English Learners in reaching such standards by committing to adopt English language proficiency (ELP) standards that correspond to its college- and career-ready standards and that reflect the academic language skills necessary to access and meet the new college- and career-ready standards, and committing to develop and administer aligned ELP assessments. To ensure that its college- and career-ready standards are truly aligned with postsecondary expectations, and to provide information to parents and students about the college-readiness rates of local schools, an SEA must annually report to the public on college-going and college credit-accumulation rates for all students and student subgroups in each LEA and each high school in the State.

2. **State-Developed Differentiated Recognition, Accountability, and Support**

   Fair, flexible, and focused accountability and support systems are critical to continuously improving the academic achievement of all students, closing persistent achievement gaps, and improving equity. Based on the principles for accountability developed by the Council of Chief State School Officers, many States are already moving forward with next-generation systems that recognize student growth and school progress, align accountability determinations with support and capacity-building efforts, and provide for systemic, context-specific interventions that focus on the lowest-performing schools and schools with the largest achievement gaps. This flexibility would give SEAs and LEAs relief from the school and LEA improvement requirements of NCLB so they can implement these new systems.

To receive this flexibility, an SEA must develop and implement a system of differentiated recognition, accountability, and support for all LEAs in the State and for all Title I schools in these LEAs. Those systems must look at student achievement in at least reading/language arts and mathematics for all students and all subgroups of students identified in ESEA section 1111(b)(2)(C)(v)(II); graduation rates for all students and all subgroups; and school performance and progress over time, including the performance and progress of all subgroups. They may also look at student achievement in subjects other than reading/language arts and mathematics, and, once an SEA has adopted high-quality assessments, must take into account student growth. An SEA's system of differentiated recognition, accountability, and support must create incentives and include differentiated interventions and support to improve student achievement and graduation rates and to close achievement gaps for all subgroups, including interventions specifically focused on improving the performance of English Learners and students with disabilities. More specifically, the SEA's system must, at a minimum:

- Set new ambitious but achievable AMOs in at least reading/language arts and mathematics for the State and all LEAs, schools, and subgroups, that provide meaningful goals and are used to guide support and improvement efforts.
- Provide incentives and recognition for success on an annual basis by publicly recognizing and, if possible, rewarding Title I schools making the most progress or having the highest performance as "reward schools."
- Effect dramatic, systemic change in the lowest-performing schools by publicly identifying "priority schools" and ensuring that each LEA with one or more of these schools implements, for three years, meaningful interventions aligned with the turnaround principles in each of these schools. The SEA must also develop criteria to determine when a school that is making significant progress in improving student achievement exits priority status.
- Work to close achievement gaps by publicly identifying Title I schools with the greatest achievement gaps, or in which subgroups are furthest behind, as "focus schools" and ensuring that each LEA implements interventions, which may include tutoring and public school choice, in each of these schools based on reviews of the specific academic needs of the school and its students. The SEA must also develop criteria to determine when a school that is making significant progress in improving student achievement and narrowing achievement gaps exits focus status.
- Provide incentives and supports to ensure continuous improvement in other Title I schools that, based on the SEA's new AMOs and other measures, are not making progress in improving student achievement and narrowing achievement gaps.
- Build SEA, LEA, and school capacity to improve student learning in all schools and, in particular, in low-performing schools and schools with the largest achievement gaps. The SEA must provide timely and comprehensive monitoring of, and technical assistance for, LEA implementation of interventions in priority and focus schools, and must hold LEAs accountable for improving school and student performance, particularly for turning around their priority schools. The SEA and its LEAs must also ensure sufficient support for implementation of interventions in priority schools, focus schools, and other Title I schools identified under the SEA's differentiated recognition, accountability, and support system (including through leveraging funds the LEA was previously required to reserve under ESEA section 1116(b)(10), SIG funds, and other Federal funds, as permitted, along with State and local resources).

3. **Supporting Effective Instruction and Leadership**
   In recent years, many SEAs and LEAs have begun to develop evaluation systems that go beyond NCLB's minimum HQT standards, provide more meaningful information about the effectiveness of teachers and principals, and can be used to inform professional development and improve practice. High-quality systems, informed by research that affirms that educators have significant and lasting effects on student learning, draw on multiple measures of instructional and leadership practices to evaluate and support teacher and principal effectiveness. This flexibility will give SEAs and LEAs the ability to continue this work designed to increase the quality of instruction for all students by building fair, rigorous evaluation and support systems and developing innovative strategies for using them.

   To receive this flexibility, an SEA and each LEA must commit to develop, adopt, pilot, and implement, with the involvement of teachers and principals, teacher and principal evaluation and support systems that: (1) will be used for continual improvement of instruction; (2) meaningfully differentiate performance using at least three performance levels; (3) use multiple valid measures in determining performance levels, including as a significant factor data on student growth for all students (including English Learners and students with disabilities), and other measures of professional practice (which may be gathered through multiple formats and sources, such as observations based on rigorous teacher performance standards, teacher portfolios, and student and parent surveys); (4) evaluate teachers and principals on a regular basis; (5) provide clear, timely, and useful feedback, including feedback that identifies needs and guides professional development; and (6) will be used to inform personnel decisions. An SEA must develop and adopt guidelines for these systems, and LEAs must develop and implement teacher and principal evaluation and support systems that are consistent with the SEA's guidelines. To ensure high-quality implementation, all teachers, principals, and evaluators should be trained on the evaluation system and their responsibilities in the evaluation system. As part of developing and implementing these evaluation and support systems, an SEA must also provide student growth data on current students and the students taught in the previous year to, at a minimum, teachers of reading/language arts and mathematics in grades in which the State administers assessments in those subjects in a manner that is timely and informs instructional programs. Once these evaluation and support systems are in place, an SEA may use data from these systems to meet the requirements of ESEA section 1111(b)(8)(C) that it ensure that poor and minority children are not taught at higher rates than other children by inexperienced, unqualified, or out-of-field teachers.

4. **Reducing Duplication and Unnecessary Burden**
   In order to provide an environment in which schools and LEAs have the flexibility to focus on what's best for students, an SEA should remove duplicative and burdensome reporting requirements that have little or no impact on student outcomes. To receive the flexibility, an SEA must assure that it will evaluate and, based on that evaluation, revise its own administrative requirements to reduce duplication and unnecessary burden on LEAs and schools.

Nothing in these principles shall be construed to alter or otherwise affect the rights, remedies, and procedures afforded school or school district employees under Federal, State, or local laws (including applicable regulations or court orders) or under the terms of collective bargaining agreements, memoranda of understanding, or other agreements between such employees and their employers.

CONSULTATION

Each SEA must engage diverse stakeholders and communities in the development of its request. By engaging relevant stakeholders at the outset of the planning and implementation process, an SEA can ensure they have input in shaping the SEA's comprehensive plan, which will help ensure successful implementation of the SEA's plan. Ideally, an SEA will solicit input from stakeholders representing diverse perspectives, experiences, and interests, including those that will be impacted by and implement the policies included in the SEA's plan, and will strengthen its request by revising it based on this input.

Each SEA must provide a description of how the SEA meaningfully engaged and solicited input on its request from teachers and their representatives. Each SEA must also provide a description of how the SEA meaningfully engaged and solicited input on its request from other diverse communities, such as students, parents, community-based organizations, civil rights organizations, organizations representing students with disabilities and English Learners, business organizations, and Indian tribes. Finally, each SEA must provide an assurance that it has consulted with the State's Committee of Practitioners regarding the information set forth in its request.

EVALUATION

Implementing this flexibility presents a valuable opportunity for SEAs, LEAs, and the Department to learn more about the effectiveness of various programs, practices, and strategies and to contribute to the evidence base of what works. The Department encourages an SEA that receives approval to implement this flexibility to collaborate with the Department to evaluate at least one program, practice, or strategy the SEA or its LEAs implement under principle 1, 2, or 3. For example, an SEA could propose to evaluate an aspect of its plan for transitioning to college- and career-ready standards; the interventions the SEA and its LEAs are implementing in priority or focus schools; or its teacher and principal evaluation and support systems. Interested SEAs will need to, upon receipt of approval of this flexibility, nominate for evaluation a program, practice, or strategy the SEA or its LEAs will implement under principle 1, 2, or 3. The Department will work with the SEA to determine the feasibility and design of the evaluation and, if it is determined to be feasible and appropriate, will fund and conduct the evaluation in partnership with the SEA, ensuring that the implementation of the chosen program, practice, or strategy is consistent with the evaluation design.

DEFINITIONS

1. **College- and Career-Ready Standards:** "College- and career-ready standards" are content standards for kindergarten through 12th grade that build towards college and career readiness by the time of high school graduation. A State's college- and career-ready standards must be either (1) **standards that are common to a significant number of States**; or (2) standards that are approved by a **State network of institutions of higher education**, which must certify that students who meet the standards will not need remedial course work at the postsecondary level.

2. **Focus School:** A "focus school" is a Title I school in the State that, based on the most recent data available, is contributing to the achievement gap in the State. The total number of focus schools in a State must equal at least 10 percent of the Title I schools in the State. A focus school is—
   - a school that has the largest within-school gaps between the highest-achieving subgroup or subgroups and the lowest-achieving subgroup or subgroups or, at the high school level, has the largest within-school gaps in graduation rates; or
   - a school that has a subgroup or subgroups with low achievement or, at the high school level, low graduation rates.

   An SEA must also identify as a focus school a Title I high school with a graduation rate less than 60 percent over a number of years that is not identified as a priority school.

   These determinations must be based on the achievement and lack of progress over a number of years of one or more subgroups of students identified under ESEA section 1111(b)(2)(C)(v)(II) in terms of proficiency on the statewide assessments that are part of the SEA's differentiated recognition, accountability, and support system, combined, or, at the high school level, graduation rates for one or more subgroups.

3. **High-Quality Assessment:** A "high-quality assessment" is an assessment or a system of assessments that is valid, reliable, and fair for its intended purposes; and measures student knowledge and skills against college- and career-ready standards in a way that—
   - covers the full range of those standards, including standards against which student achievement has traditionally been difficult to measure;
   - as appropriate, elicits complex student demonstrations or applications of knowledge and skills;
   - provides an accurate measure of student achievement across the full performance continuum, including for high- and low-achieving students;
   - provides an accurate measure of student growth over a full academic year or course;
   - produces student achievement data and student growth data that can be used to determine whether individual students are college and career ready or on track to being college and career ready;
   - assesses all students, including English Learners and students with disabilities;
   - provides for alternate assessments based on grade-level academic achievement standards or alternate assessments based on alternate academic achievement standards for students with the most significant cognitive disabilities, consistent with 34 C.F.R. § 200.6(a)(2); and

- produces data, including student achievement data and student growth data, that can be used to inform: determinations of school effectiveness for purposes of accountability under Title I; determinations of individual principal and teacher effectiveness for purposes of evaluation; determinations of principal and teacher professional development and support needs; and teaching, learning, and program improvement.

4. **Priority School:** A "priority school" is a school that, based on the most recent data available, has been identified as among the lowest-performing schools in the State. The total number of priority schools in a State must be at least five percent of the Title I schools in the State. A priority school is—
   - a school among the lowest five percent of Title I schools in the State based on the achievement of the "all students" group in terms of proficiency on the statewide assessments that are part of the SEA's differentiated recognition, accountability, and support system, combined, and has demonstrated a lack of progress on those assessments over a number of years in the "all students" group;
   - a Title I-participating or Title I-eligible high school with a graduation rate less than 60 percent over a number of years; or
   - a Tier I or Tier II school under the SIG program that is using SIG funds to implement a school intervention model.

5. **Reward School:** A "reward school" is a Title I school that, based on the most recent data available, is—
   - a "**highest-performing school**," which is a Title I school among the Title I schools in the State that have the highest absolute performance over a number of years for the "all students" group and for all subgroups, on the statewide assessments that are part of the SEA's differentiated recognition, accountability, and support system, combined, and, at the high school level, is also among the Title I schools with the highest graduation rates. A highest-performing school must be making AYP for the "all students" group and all of its subgroups. A school may not be classified as a "highest-performing school" if there are significant achievement gaps across subgroups that are not closing in the school; or
   - a "**high-progress school**," which is a Title I school among the ten percent of Title I schools in the State that are making the most progress in improving the performance of the "all students" group over a number of years on the statewide assessments that are part of the SEA's differentiated recognition, accountability, and support system, and, at the high school level, is also among the Title I schools in the State that are making the most progress in increasing graduation rates. A school may not be classified as a "high-progress school" if there are significant achievement gaps across subgroups that are not closing in the school.

6. **Standards that are Common to a Significant Number of States:** "Standards that are common to a significant number of States" means standards that are substantially identical across all States in a consortium that includes a significant number of States. A State may supplement such standards with additional standards, provided that the additional standards do not exceed 15 percent of the State's total standards for a content area.

7. **State Network of Institutions of Higher Education (IHEs):** A "State network of institutions of higher education" means a system of four-year public IHEs that, collectively, enroll at least 50 percent of the students in the State who attend the State's four-year public IHEs.

8. **Student Growth:** "Student growth" is the change in student achievement for an individual student between two or more points in time. For the purpose of this definition, student achievement means—
   - For grades and subjects in which assessments are required under ESEA section 1111(b)(3): (1) a student's score on such assessments and may include (2) other measures of student learning, such as those described in the second bullet, provided they are rigorous and comparable across schools within an LEA.
   - For grades and subjects in which assessments are not required under ESEA section 1111(b)(3): alternative measures of student learning and performance such as student results on pre-tests, end-of-course tests, and objective performance-based assessments; student learning objectives; student performance on English language proficiency assessments; and other measures of student achievement that are rigorous and comparable across schools within an LEA.

9. **Turnaround Principles:** Meaningful interventions designed to improve the academic achievement of students in priority schools must be aligned with all of the following "turnaround principles" and selected with family and community input:
   - providing strong leadership by: (1) reviewing the performance of the current principal; (2) either replacing the principal if such a change is necessary to ensure strong and effective leadership, or demonstrating to the SEA that the current principal has a track record in improving achievement and has the ability to lead the turnaround effort; and (3) providing the principal with operational flexibility in the areas of scheduling, staff, curriculum, and budget;
   - ensuring that teachers are effective and able to improve instruction by: (1) reviewing the quality of all staff and retaining only those who are determined to be effective and have the ability to be successful in the turnaround effort; (2) preventing ineffective teachers from transferring to these schools; and (3) providing job-embedded, ongoing professional development informed by the teacher evaluation and support systems and tied to teacher and student needs;
   - redesigning the school day, week, or year to include additional time for student learning and teacher collaboration;
   - strengthening the school's instructional program based on student needs and ensuring that the instructional program is research-based, rigorous, and aligned with State academic content standards;
   - using data to inform instruction and for continuous improvement, including by providing time for collaboration on the use of data;
   - establishing a school environment that improves school safety and discipline and addressing other non-academic factors that impact student achievement, such as students' social, emotional, and health needs; and
   - providing ongoing mechanisms for family and community engagement.

A priority school that implements one of the four SIG models is implementing an intervention that satisfies the turnaround principles. An SEA may also implement interventions aligned with the turnaround principles as part of a statewide school turnaround strategy that allows for State takeover of schools or for transferring operational control of the school to another entity such as a recovery school district or other management organization.

TIMELINES

The dates identified in the chart as deadlines (bolded in the chart) for complying with a principle are the latest by which an SEA or LEA must meet a particular principle. The dates identified as when an SEA or LEA may begin to implement a waiver represent the earliest the SEA or LEA may take advantage of the specified waiver.

The "At Submission" column describes generally the information an SEA must supply in order to receive the flexibility. See the document titled *ESEA Flexibility Request* for more detail on the specific evidence that States must submit to meet the principles. The initial waiver period will be through the 2013–2014 school year; however, an SEA that wishes to receive the flexibility must develop a plan that covers all four years identified in the chart. The "SY 2014–2015" column identifies the additional actions that an SEA must take if it receives an extension of the flexibility.

TIMELINE FOR IMPLEMENTATION OF ESEA FLEXIBILITY

Principle or waiver	Required during initial waiver period				Required if approved for extension
	At submission	SY 2011–2012	SY 2012–2013	SY 2013–2014	SY 2014–2015
Adopt college- and career-ready standards	**Request includes evidence that the State has formally adopted college- and career-ready standards**				
Implement college- and career-ready standards	Request includes plan for transitioning to and implementing college- and career-ready standards	SEA and LEAs prepare to implement college- and career-ready standards		**SEA and LEAs implement college- and career-ready standards**	
Develop and administer high-quality assessments aligned with college- and career-	Request includes plan for developing and administering high-quality assessments aligned with college- and career-ready	SEA develops statewide high-quality assessments aligned with college- and career-ready standards		**SEA administers pilot high-quality assessments aligned with college- and**	**SEA administers high-quality assessments aligned with**

Principle or waiver	Required during initial waiver period				Required if approved for extension
	At submission	SY 2011–2012	SY 2012–2013	SY 2013–2014	SY 2014–2015
ready standards	standards, and assurance that SEA will develop and administer alternate assessments consistent with 34 C.F.R. § 200.6(a)(2)			**career-ready standards**	**college- and career-ready standards**
Adopt ELP standards that correspond to college- and career-ready standards	Request includes assurance that SEA will adopt ELP standards			**SEA adopts ELP standards that correspond to State's college- and career-ready standards, consistent with the requirement in ESEA section 3113(b)(2)**	
Develop and administer ELP assessments	Request includes assurance that SEA will develop and administer ELP assessments				SEA develops and administers ELP assessments aligned with the State's ELP standards, consistent with the requirements in ESEA sections 1111(b)(7), 3113(b)(2), and 3122(a)(3)(A)(ii)

Principle or waiver	Required during initial waiver period				Required if approved for extension
	At submission	SY 2011–2012	SY 2012–2013	SY 2013–2014	SY 2014–2015
Annually report college-going and college credit-accumulation rates for all students and subgroups of students in each LEA and each public high school in the State	Request includes assurance that SEA will annually report to the public the required data				**SEA annually reports to the public college-going and college credit-accumulation rates, as defined under State Fiscal Stabilization Fund Indicators (c)(11) and (c)(12)**
Waiver to set new ambitious but achievable AMOs	Request includes proposed new AMOs and justification that they are ambitious but achievable	**SEA may apply new AMOs to AYP determinations beginning with SY 2011-2012 assessment results**			**Continue applying new AMOs**
Waiver of requirements to identify schools and LEAs for improvement status		**Beginning with release of AYP determinations based on SY 2011–2012 assessments, SEA and LEAs need not identify LEAs or schools, respectively, for improvement**			**Continue waiver**
Waiver of requirements for schools and LEAs in improvement status to take certain specified actions			**Beginning in SY 2012-2013, LEAs and schools need not take required actions under ESEA section 1116(b) or (c) (per the waiver discussed in the preceding row, LEAs and schools will no longer be in improvement status)**		**Continue waiver**

Principle or waiver	Required during initial waiver period				Required if approved for extension
	At submission	SY 2011–2012	SY 2012–2013	SY 2013–2014	SY 2014–2015
Develop and implement a State-based system of differentiated recognition, accountability, and support	Request includes a description of the SEA's differentiated recognition, accountability, and support system and the SEA's plan for implementation		**SEA implements its system of differentiated recognition, accountability, and support**		**Continue implementing differentiated recognition, accountability, and support system**
Annually identify and recognize or reward highest-performing and high-progress Title I schools	Request includes SEA's methodology for identifying schools and list of schools based on SY 2010-2011 assessment results	**SEA annually publicly identifies and recognizes or rewards highest-performing and high-progress Title I schools**			**Continue annually publicly identifying reward schools**
Implement school interventions consistent with the turnaround principles in priority schools	Request includes SEA's methodology for identifying schools, list of schools based on SY 2010–2011 assessment results, and a plan to implement interventions consistent with the turnaround principles in such schools over the period of the flexibility	**SEA makes public its list of priority schools**	**LEAs implement interventions consistent with the turnaround principles in each Title I school identified as a priority school and consistent with SEA's timeline for implementing such interventions in all of those schools over the period of the flexibility**		**Continue implementing interventions in priority schools**
Implement interventions in focus schools	Request includes SEA's methodology for identifying schools, list of schools based on SY 2010–2011 assessment results, SEA's process for	**SEA makes public its list of focus schools**	**LEAs implement interventions in each Title I school identified as a focus school**		**Continue implementing interventions in focus schools**

Principle or waiver	Required during initial waiver period				Required if approved for extension
	At submission	SY 2011–2012	SY 2012–2013	SY 2013–2014	SY 2014–2015
	ensuring LEAs implement interventions based on needs, and examples of interventions				
Build capacity to improve student learning	Request includes description of the SEA's process for building SEA, LEA, and school capacity		**SEA implements its process for building SEA, LEA, and school capacity through monitoring and technical assistance; holding LEAs accountable for improving school and student performance; and ensuring sufficient support for implementation of interventions in priority schools, focus schools, and other identified schools**		
Waiver of poverty threshold for priority and focus schools to operate a schoolwide program			**LEAs may operate a schoolwide program in their priority schools to implement interventions consistent with the turnaround principles and in their focus schools to implement interventions that are based on the needs of the students in the school and designed to enhance the entire educational program in a school**		**Continue waiver**
Waiver providing flexibility for rural LEAs			**LEAs that receive Small, Rural School Achievement Program or Rural and Low-Income School Program funds may use those funds for any authorized purpose regardless of their AYP status**		**Continue waiver**
Develop, adopt,	Request includes a plan to	**SEA adopts**	LEAs develop	**LEAs pilot**	**LEAs fully**

Principle or waiver	Required during initial waiver period				Required if approved for extension
	At submission	SY 2011–2012	SY 2012–2013	SY 2013–2014	SY 2014–2015
and implement teacher and principal evaluation and support systems	develop guidelines for evaluation and support systems, process for ensuring LEA implementation, and assurance that SEA has provided student growth data to teachers or will do so by the deadline required under the State Fiscal Stabilization Fund	**guidelines for teacher and principal evaluation and support systems** **SEA provides student growth data to teachers**	evaluation and support systems consistent with State guidelines	**implementation of evaluation and support systems** (*e.g.*, pilot in a few schools; implement in all schools but do not publicize results) or fully implement evaluation and support systems	**implement evaluation and support systems**
Waiver of limits on transferability of funds and requirements to report transfers prior to transferring funds		**Limits on transferability do not apply to FY 2011 and subsequent funds**			**Continue waiver**
Waiver for flexibility to support school improvement			**SEA may allocate ESEA section 1003(a) funds to any LEA in order to serve focus and priority schools identified under the State-developed differentiated recognition, accountability, and support system, if the SEA determines such schools are most in need of additional support**		**Continue waiver**
Waiver for flexibility to reward schools			**SEA may use funds reserved under ESEA section 1117(c)(2)(A) to provide financial rewards to any**		**Continue waiver**

Principle or waiver	Required during initial waiver period				Required if approved for extension
	At submission	SY 2011–2012	SY 2012–2013	SY 2013–2014	SY 2014–2015
			reward school identified under the State-developed differentiated recognition, accountability, and support system, if the SEA determines such schools are most appropriate for financial rewards		
Waiver regarding Highly Qualified Teacher (HQT) improvement plan		**LEAs that do not meet the State's HQT targets need not develop an improvement plan or restrict their use of Title I and Title II funds; SEA need not implement HQT plans or agreements regarding the use of funds and need not provide technical assistance to LEAs in implementing their plans**			**Continue waiver**
Waiver to use SIG funds to support priority schools		**SEA may award SIG funds to an LEA to implement one of the four SIG models in a priority school, even if that school is not otherwise a Tier I or Tier II school**			**Continue waiver**
Review and evaluate State-level administrative and reporting requirements to reduce duplication and unnecessary burden	SEA assures it will review and evaluate State-level administrative requirements and adjust appropriately in order to reduce duplication and unnecessary burden on LEAs and schools.	**SEA reviews and evaluates State-level administrative and reporting requirements and adjusts appropriately in order to reduce duplication and unnecessary burden on LEAs and schools.**			**Continue reviewing, evaluating, and adjusting administrative and reporting requirements**

I am strongly in support of rigorous instruction & high expectations for achievement by all st., and I am speaking in support of requesting & supporting DEED in seeking a waiver from select requirements of NCLB along w/a request for flexibility.

I am confident that our DEED commissioner, in partnership w/the skillful & knowledgeable educators & residents of Alaska, can meet the requirements of obtaining a waiver - particularly b/c some districts - such as the KPBSD - have already made great strides towards implementing effective early intervention methods to address academic deficits - as well as towards developing effective measures to evaluate teacher & administrative performance - which are 2 of the requirements in obtaining a waiver.

I also see that obtaining a waiver is absolutely necessary to avoid continuing to waste valuable resources in jumping through hoops already identified as deeply flawed AND to avoid the innacurate & socially damaging labeling of public schools as <u>all</u> failing - despite the tremendous successes of many public schools from <u>ALL</u> communities, economic strata & w/a variety of needs - which is the charge given to <u>public</u> schools in our <u>great nation</u>.

Failing to seek a waiver will effectively chip away at the strides public educators in AK have made in ensuring success for all students and ensuring that the mixed political messages the public receives are NOT overshadowed by the ~~many~~ success <u>many</u> Alaskan students actually experience as a result in our schools.

Christine Ermold 3/21/12

Senator Bettye Davis

SB 1 - "An Act requiring the state Board of Education and Early Development to provide an annual report to the legislature."

SPONSOR STATEMENT

This bill requires that the Alaska State Board of Education shall prepare and present to State Legislature not later than the 30th day of each regular session an annual report that describes the efforts of the Board to develop, maintain, and continuously improve a comprehensive quality public education system as provided for under the bylaws of the Board.
The report to the Legislature must include:

1. a summary of resolves and rationales provided in support of policy decisions;
2. program and curriculum changes made, discussed, or recommended in meetings; and
3. additional information relevant to efforts made to improve and maintain the public education system.

This bill is intended to create a greater dialogue among Alaska legislators, Department of Education and Early Development (DEED), and the Board of Education which meets at least quarterly. Since Alaska legislators appropriate over $1 billion per year for state public education which a significant portion of the state budget, they must be at the center of the state's efforts to identify strengths and weaknesses of the current system, help determine a public agenda, set clear goals for K-12 and higher education, and hold institutions accountable for performance. The only way to achieve this is through cooperation and communication with the Board and the Department.

Legislators take great pride and tremendous amounts of time and effort every session in trying to provide the best possible education, scholarships, and funding for Alaska students. The annual report required by this bill will assist both DEED and legislators early in each session in assessing new programs, curriculum changes, goals and priorities which may require more information or administrative and legislative action during session.

Senator Bettye Davis

CSSB 1(EDC) - 27-LS0001\B *"An Act requiring the state Board of Education and Early Development to provide an annual report to the legislature."*

Explanation of Changes

The CS for SB 1(EDC), 27-LS0001\B added the two words "in person" on page 1, lines 6-7.

Senator Davis, sponsor, explained in testimony on CSSB 1(EDC) on April 1, 2011 that the intent of the bill was to require that the Board of Education should have a face to face verbal presentation of a formal written annual report to the legislature at the beginning of each regular session. For that reason the words "in person" were added in the Committee Substitute, version "B." She added that all board members would not need to be present. House Education Committee member Representative Seaton confirmed a similar finding by the Education Task Force that the legislature should have more interaction with the board and department.

The requirement that the annual report be in writing is not expressed in the bill but it was understood and acknowledged in testimony on CSSB 1(EDC) by Les Morse, Deputy Commissioner, Department of Education and Early Development in the House Education Committee on April 1, 2011. ***Mr. Morse also commented on the zero fiscal note that in his opinion the Board and Department had adequate resources to prepare and present the annual report without need for additional funds.***

2012 LEGISLATIVE SESSION

BILL NO. SB008

Analysis

This legislation removes the requirement that a student's parent or legal guardian must provide written permission before a student can participate in the Youth Risk Behavior Survey. It requires the school district to provide notice of the survey and give the parent or legal guardian the opportunity to deny permission.

There is no fiscal impact on the Department of Health and Social Services.

BILL NO. SB008

Analysis

This legislation has no fiscal impact on the Department of Education and Early Development.

This bill would return the administration of the Youth Risk Behavior Survey (YRBS) to passive parental consent from active parental consent.

MEMORANDUM February 23, 2012

SUBJECT: Revised sectional summary (SB 8; Work Order No. 27-LS0084\A)

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Adds an exception for the Youth Risk Behavior Survey (YRBS) to the written permission requirement for student surveys.

Section 2. Provides detailed written notice requirements for all student surveys, including YRBS.

Section 3. Allows a student to refuse to answer specific questions and provides a process for a parent to deny permission for a student to take a survey.

Section 4. Provides an exception to written permission for YRBS and a minimum two week notice provision that is consistent with the requirements in sec. 2.

Senator Bettye Davis

SB 8 - "An Act relating to questionnaires and surveys administered in the public schools."

Sponsor Statement

The purpose of SB 8 is to increase participation in the national biennial Youth Risk Behavior Survey (YRBS) in order to meet the minimum 60% participation level required by the Centers for Disease Control (CDC) for the results to be validated and published along with other states. There have been years when the state has not met minimum participation levels. Failure to obtain survey information adversely affects the ability of educators, planners, policy makers, and parents to understand and address the important health and social issues that affect students' happiness and success in the future.

To help achieve this objective SB 8 changes the parental consent requirement for the YRBS from active to passive, that is, from written to implied consent if parents are given notice at least two weeks in advance of the survey by U.S. mail, or home delivery; the opportunity to review the entire survey at the school or the district's web site; and a form with return envelope to deny permission in writing.

Parents who do not want their children to participate usually notify the school immediately at registration in the beginning of the school year, or after notice and before the YRBS is given early in the spring semester. It is the attention of the other parents SB 8 is designed to reach. Failure of parents to return written consent forms in the past has been found often to be the result of lack of attention rather than refusal. Since the biennial survey is only given to a representative number of the 53 Alaska School Districts and only to a representative sampling of high school classes, many parents and students will never be involved with the survey.

Students are not forced or required to participate. They may independently decline to participate or to answer specific questions in this completely voluntary and anonymous survey. If they do participate, absolute privacy and anonymity are maintained by strict administrative procedures and the return of individual surveys in private and secure sealed envelopes to CDC.

The Youth Risk Behavior Survey helps guide and evaluate important health and prevention programs in both the public and private sectors. Local, state, and federal officials, schools, state and federal agencies, public and private grant programs, and nonprofit health organizations rely on these surveys to educate, allocate resources, and compare trends concerning safe behaviors. These include injury prevention, tobacco prevention and control, obesity prevention, diabetes, heart disease, and stroke prevention, safe and drug free schools, substance abuse prevention, violence and suicide prevention, HIV and STD prevention, and connectedness to teachers, parents and other adults.

In short, SB 8 simply makes it easier to obtain information on youth risk behaviors without violating students' or parents' rights to privacy, nor diminishing the ability of parents to supervise their children. At the same time SB 8 increases parental notice with ample opportunity, instructions, and forms to opt out.

(c) Nothing in this section limits the ability of a peace officer, chief administrative officer, or other appropriate person, acting in compliance with local, state, or federal laws, to search a locker or other container provided in a public or private school by the school district. (§ 5 ch 33 SLA 1995)

Sec. 14.03.110. Questionnaires and surveys administered in public schools. (a) A school district, principal or other person in charge of a public school, or teacher in a public school may not administer or permit to be administered in a school a questionnaire or survey, whether anonymous or not, that inquires into personal or private family affairs of the student not a matter of public record or subject to public observation unless written permission is obtained from the student's parent or legal guardian.

(b) For an anonymous questionnaire or survey, written permission required under (a) of this section may be obtained annually and is valid until the commencement of the subsequent school year or until the parent or legal guardian who gave permission submits a written withdrawal of permission to the school principal. The school shall provide each student's parent or legal guardian at least two weeks' notice before administering a questionnaire or survey described under this subsection.

(c) If a school administers to a student a questionnaire or survey that is not anonymous, the school shall obtain the written permission required under (a) of this section from the student's parent or legal guardian at least two weeks before the questionnaire or survey is administered.

(d) The school shall give a student's parent or guardian an opportunity to review the questionnaire or survey described under (b) or (c) of this section and shall give the parent or guardian written notice regarding

(1) how the questionnaire or survey will be administered to the student;

(2) how the results of the survey or questionnaire will be used; and

(3) who will have access to the questionnaire or survey.

(e) A student may refuse to participate in a questionnaire or survey administered in a public school. A student's parent or legal guardian may refuse to allow the student to participate in a specified questionnaire or survey.

(f) In this section, "questionnaire or survey" means a list of questions to, or information collected from, a class or group of students. (§ 1 ch 23 SLA 1979; am §§ 1, 2 ch 63 SLA 1999)

Opinions of attorney general. — AS 14.03.110 — As long as survey questions are limited to the student's own activities and the survey does not ask the student questions about parents or other activities occurring within a student's home, the 1997 Youth Behavior Risk Survey does not impermissibly invade the domain of the student's private '*family*' affairs. September 28, 1998 Op. Att'y Gen. (Issued before 1999 amendment to this section.)

Sec. 14.03.115. Access to school records by parent, foster parent, or guardian. Upon request of a parent, foster parent, or guardian of a child under 18 years of age who is currently or was previously enrolled in a municipal school district or a school district that is a regional educational attendance area, the school district shall provide a copy of the child's record. This section does not apply to

(1) a record of a child who is an emancipated minor; or

(2) record information that consists of the child's address if the school district determines that the release of the child's address poses a threat to the health or safety of the child. (§ 1 ch 36 SLA 1999)

Sec. 14.03.120. Education planning; reports. (a) A district shall annually file with the department, and make available to the public, a report that

(1) establishes district goals and priorities for improving education in the district;

(2) includes a plan for achieving district goals and priorities; and

2011 Alaska Youth Risk Behavior Survey Results

The Youth Risk Behavior Survey is part of a national surveillance system developed by the Centers for Disease Control and Prevention (CDC) to assist with assessing and addressing the health risks of youth. It is conducted in Alaska every other year by the Department of Education & Early Development and the Department of Health and Social Services in cooperation with public high schools.

In spring 2011, the department surveyed 1,327 students from 40 high schools that were scientifically selected to represent all public high schools (excluding boarding schools, alternative schools, correspondence and home study schools, and correctional schools) in Alaska. These results are representative of Alaska's high school students grades 9-12 in traditional public high schools. At the same time and for the second time, 969 students from 16 alternative high schools (defined as serving high-risk students) in Alaska were surveyed to evaluate and address the health risks of this unique population.

The 2011 Alaska Youth Risk Behavior Survey Results are summarized in the presentations available below. The 2011 data presentations are displayed by gender and grade.

Alaska Youth Risk Behavior Survey

Alaska's Youth Risk Behavior Survey

The Alaska Youth Risk Behavior Survey (YRBS) is part of an epidemiological surveillance system that was established in 1990 by the Centers for Disease Control and Prevention (CDC) to monitor the prevalence of health-risk behaviors among youth. The survey was first implemented in Alaska in 1995. The YRBS is a biennial, anonymous and voluntary survey of students grades 9 - 12 in public traditional high schools (excluding boarding, correspondence, home study, alternative, and correctional schools). The YRBS is a joint project between the Department of Education & Early Development and the Department of Health and Social Services, in cooperation with the CDC.

The YRBS asks students to self-report on their behaviors in six major areas of health that directly lead to morbidity and mortality in youth and adult populations within our country. These six areas are:

- behaviors that result in unintentional and intentional injuries;
- tobacco use;
- alcohol and other drug use;
- sexual behaviors that can result in human immunodeficiency virus (HIV) infection, other sexually transmitted diseases (STDs) and unintended pregnancies;
- dietary behaviors; and
- physical activity.

In 2009 and 2011, a statewide survey of alternative high schools in Alaska was also implemented.

For more information on the Alaska YRBS go to:
www.hss.state.ak.us/dph/chronic/school/YRBS.htm

2011 Comparison: Alaska Traditional High School and Alternative High School Students**

Traditional High Schools	Alternative High Schools	Alternative students were at*:
Rarely or never wore a seat belt:		
8.7%	11.5%	= Equal risk
Rode with a driver who had been drinking alcohol:		
18.6%	28.1%	⊕ Greater risk
Carried a weapon on school property on at least 1 day:		
5.7%	9.4%	⊕ Greater risk
In a physical fight during the past year:		
23.7%	43.5%	⊕ Greater risk
Did not go to school because they felt unsafe at school or on their way to or from school on at least 1 day:		
4.7%	6.6%	⊕ Greater risk
Seriously considered attempting suicide:		
14.5%	21.2%	⊕ Greater risk
Attempted suicide during the past year:		
8.7%	13.2%	⊕ Greater risk
Current smoking:		
14.1%	47.7%	⊕ Greater risk
Current smokeless tobacco use:		
8.4%	17.4%	⊕ Greater risk
Current drinking:		
28.6%	49.1%	⊕ Greater risk
Binge drinking:		
16.7%	37.9%	⊕ Greater risk
Current marijuana use:		
21.2%	47.6%	⊕ Greater risk
Ever had sexual intercourse:		
38.3%	80.4%	⊕ Greater risk
Currently sexually active:		
25.2%	61.3%	⊕ Greater risk
Used condom before last sexual intercourse:		
59.6%	46.9%	⊕ Greater risk
Percentage of students who were overweight or obese:		
25.8%	32.9%	⊕ Greater risk
Ate fruits and vegetables 5 or more times per day:		
21.4%	22.2%	= Equal risk
Drank 1 or more sodas every day in past week:		
17.6%	30.6%	⊕ Greater risk
Attended physical education daily in an average week:		
17.4%	16.5%	= Equal risk

*Statistically significant difference.

**Comparable U.S. 2011 YRBS data were not available at the time of the publication of this preliminary *2011 Highlights* report. The final *2011 Highlights* report, including U.S. comparison data, will be published in 2012.

Summary of the 2011 Survey Results

On average, in an Alaska high school class of 30 students*:

- 5 - 6 rode (in the past month) with a driver who had been drinking alcohol
- 1 - 2 had carried a weapon to school
- 7 were in a physical fight in the past year
- 2 - 3 attempted suicide in the past year
- 4 smoked cigarettes and 2 - 3 used smokeless tobacco in the past month
- 8 - 9 drank alcohol in the past month
- 5 engaged in binge drinking in the past month
- 6 - 7 used marijuana in the past month
- 11 - 12 had ever had sexual intercourse
- 8 were either overweight or obese
- 16 - 17 were physically active for less than the recommended total of at least 60 minutes per day (on 5 or more days of the past 7 days).

Many students started engaging in risk behaviors before the age of 13:

- 11.1% had smoked a whole cigarette
- 16.9% had consumed their first drink of alcohol
- 10.4% had tried marijuana.

We also know that:

- 23% were bullied at school last year
- 15.3% were cyber-bullied last year
- 12% were physically hurt by a boyfriend or girlfriend in the past year, and
- 9.2% had ever been forced to have unwanted sexual intercourse

Many high school students are still engaging in unhealthy behaviors, increasing their likelihood of being hurt, fatally injured or developing diseases:

- Some of the goals set forth in Healthy Alaskans 2010 have been achieved and health-risk behaviors have been reduced in the following major areas: tobacco use, alcohol and other drug use, violence, and risky sexual behavior.
- Alternative high school students were at significantly greater risk than students in traditional high schools in Alaska for most health-risk behaviors and more likely to have engaged in risky behavior before the age of 13.
- Alternative high school students were more likely than traditional school students to feel that their teachers really cared about them and gave them a lot of encouragement and that their school had clear rules and consequences for behavior.

*Traditional high schools only.

Preliminary 2011 Highlights

Healthy Alaska

December 2009/January 2010

2009 Alaska Youth Risk Behavior Survey

The Youth Risk Behavior Survey (YRBS) is part of a national surveillance system developed by the Centers for Disease Control (CDC). Administered every other year by the Department of Education & Early Development and the Department of Health and Social Services in conjunction with Alaska's public high schools, the YRBS is used to evaluate and address the prevalence of health risk behaviors among Alaska's youth that contribute to the leading causes of death and disease.

Due to the hard work of teachers and the high participation level of high school students, enough surveys were collected for the state to be able to draw conclusions about the level of youth risk behavior in Alaska.

Alaska 2009 results compared to 2007: In general the 2009 results were very similar to those of 2007, which is not surprising since changes are usually gradual.

Alaska trends over time: In general the prevalence of many risk behaviors have decreased over the last 14 years. The prevalence of smoking cigarettes, drinking alcohol, using marijuana, physical fightng , and contemplating suicide seem to be going down. The percent of students who have ever had sexual intercourse or reported having sexual intercourse in the past three months has stayed about the same. The percent of students reporting they did not go to school one or more days in the past month because they felt unsafe at school seems to be increasing.

Alaska compared to the US: The 2009 Alaska YRBS results are very similar to the national YRBS data from 2007 (which is the last available data — 2009 national survey results will be released this summer). Fewer students in Alaska reported being in a physical fight in the past 12 months compared to the national results (27.8 percent vs. 35.5 percent), but more students in Alaska reported being hit, slapped, or physically on purpose by their boyfriend or girlfriend in the past 12 months (13.3 percent vs. 9.9 percent). The percent of high school students attending daily PE is less than the national. Only 17.7 percent of high school students attend daily PE in Alaska compared to 30.3 percent of those in the national YRBS survey (2007).

Other Points:

Suicide is the leading cause of death of Alaska youth age 15-19

- 11.7% have made a plan about how they would attempt suicide and 8.5% actually attempted suicide one or more times in the past 12 months.

Motor vehicle crashes are the second leading cause of death among Alaska youth

- 21.3% report having driven in a car driven by someone who had been drinking and 8.9% reported driving a car when they had been drinking.

The obesity epidemic in Alaska and the nation contributes to the risk of heart disease, stroke, diabetes, and other chronic diseases. Health habits such as good nutrition and being physically active are the key to maintaining a health weight.

- 81.8% of high school students do not eat the recommended daily servings of fruits and vegetables.
- 57.6% did not get the recommended 60 minutes of physical activity per day for most days of the week.
- 82.3% did not attend daily PE classes.

Traditional High School YRBS Key Findings

The following key findings compare the 2009 traditional high school survey results to the 2007 results.

Weight Issues:

- 14.4% of students are overweight, compared to 16.2% in 2007.
- 11.8% of students are obese, compared to 11.1% in 2007.

Traditional High School Key Findings Continued...

Alcohol, Tobacco and Drug Usage:

- 15.7% of students smoked cigarettes one or more of the past 30 days, compared to 17.8% in 2007.
- 21.7% of students had five or more drinks of alcohol in a row on one or more of the past 30 days, compared to 25.8% in 2007.
- 22.7% of students used marijuana one or more times during the past 30 days, compared to 20.5% in 2007.
- 24.8% of students were offered, sold, or given an illegal drug by someone on school property during the past 12 months, compared to 25.1% in 2007.

Safety Behaviors:

- 12.1% of students never or rarely wear a seat belt when riding as a passenger, compared to 7% in 2007.
- 21.3% of students have rode one or more times within the past 30 days with a driver who had been drinking, compared to 23.5% in 2007.
- 8.9% of students drove drunk within the past 30 days, compared to 9.7% in 2007.

Violence and Suicide:

- 27.8% of students were involved in a physical fight one or more times during the past 12 months, compared to 29.2% in 2007.
- 13.3% of students reported being hit, slapped, or physically hurt on purpose by their boyfriend or girlfriend during the past 12 months, compared to 12.4% in 2007.
- 13.9% of students seriously considered attempting suicide in the past 12 months, compared to 16.5% in 2007.

Sexual Behaviors:

- 43.5% of students have ever had sexual intercourse, compared to 45.1% in 2007.
- 30.4% of students had sexual intercourse with one or more people during the past three months, compared with 30.9% in 2007.
- 17.1% of students who had sexual intercourse during the past three months drank alcohol or used drugs before last sexual intercourse, compared to 22.1% in 2007.

Connectedness:

- 59.4% of students agree or strongly agree that their teachers really care about them and give them a lot of encouragement, compared to 56.1% in 2007.
- 83.3% of students feel comfortable seeking help from one or more adults besides their parents if they had an important question affecting their life, compared 87% in 2007.

Alternative High School YRBS Key Findings

Alternative High Schools were selected to participate in a statewide YRBS for the first time in 2009. EED determined that capturing risk-behavior data on Alternative Schools was essential for 2 reasons: 1) Alternative Schools are intentionally excluded from the Traditional Schools YRBS and therefore no data on their levels of risk behavior was being captured 2) several of the programs the Department manages require it to dedicate resources to Alaska's greatest at-risk youth so data confirming Alternative Schools serve this population was needed.

The data to follow is quite compelling, and indicates significantly higher levels of reported risk behavior in Alternative Schools students than is reported by their Traditional Schools peers for almost every measure. The following data represent key findings from the Alternative High School YRBS only. To view a side-by-side comparison of the Traditional high school responses and the Alternative high school responses, visit: http://www.hss.state.ak.us/dph/chronic/school/pubs/COMPARISON_TRAD_ALT_2009.pdf

Weight Issues:

- 18.3% of students are overweight.
- 18.9% of students are obese.

Alternative High School YRBS Key Findings Continued...

Alcohol, Tobacco and Drug Usage:

- 58% of students smoked cigarettes one or more of the past 30 days.
- 42.7% of students had five or more drinks of alcohol in a row on one or more of the past 30 days.
- 50.5% of students used marijuana one or more times during the past 30 days.
- 32.4% of students were offered, sold, or given an illegal drug by someone on school property during the past 12 months.

Safety Behaviors:

- 13.6% of students never or rarely wear a seat belt when riding as a passenger.
- 29.9% of students have rode one or more times within the past 30 days with a driver who had been drinking.
- 12.3% of students drove drunk within the past 30 days.

Violence and Suicide:

- 9.1% of students were involved in a physical fight one or more times during the past 12 months.
- 21.3% of students reported being hit, slapped, or physically hurt on purpose by their boyfriend or girlfriend during the past 12 months.
- 18.1% of students seriously considered attempting suicide in the past 12 months.

Sexual Behaviors:

- 82.2% of students have ever had sexual intercourse.
- 65.5% of students had sexual intercourse with one or more people during the past three months.
- 27.7% of students who had sexual intercourse during the past three months drank alcohol or used drugs before last sexual intercourse.

Connectedness:

- 72.4% of students agree or strongly agree that their teachers really care about them and give them a lot of encouragement.
- 84.2% of students feel comfortable seeking help from one or more adults besides their parents if they had an important question affecting their life.

Healthy Reading Kits Available

Healthy Reading is an initiative that seeks to promote K-12 health education sponsored by the Department of Education & Early Development (EED). Healthy Reading offers teachers the ability to teach about important health issues while simultaneously supporting reading practices.

Healthy Reading is comprised of a collection of age appropriate books that are selected and field tested by Alaskan teachers. Each kit contains 9 pieces of children's literature. These books cover an array of health issues that emerge naturally as children grow and develop and allow students to connect reading and writing skills to relevant life thinking skills. Ultimately, Healthy Reading is meant to empower and inform students about health issues, leaving them better able to obtain information, set goals, and develop skills that will promote their individual health.

Currently, the Department of Education & Early Development has three Healthy Reading kits available, Grades 2-4, Grades 4-8, and Grades 9-12. These kits are available to teachers, **FREE** of charge. For more information or to request a kit, please contact Kiara Alexander (907) 465-2304 or kiara.alexander@alaska.gov

Readiness and Emergency Management For Schools Grant (USDOE)

The US Department of Education recently announced the opening of the FY 2010 Readiness and Emergency Management for Schools Grant (REMS). Grants are available to local education agencies. For information regarding the REMS grant, view the USDOE REMS website at http://www.ed.gov/

Did You Know?

According to research by the NHTSA, teens are involved in 5 times as many fatal accidents as adults.

National Drunk and Drugged Driving Prevention (3D) Month

Alcohol-related car crashes rise in frequency during the holiday season, making this season the deadliest season of the year. Due to the increase in events involving alcohol, more people are more likely to find themselves driving while impaired. Unlike other types of accidents, drunk and drugged driving is one of the most preventable tragedies on the road.

Because of this, December has been designated, by presidential proclamation, as the National Drunk and Drugged Driving Prevention Month (or 3D Month). 3D month strives to bring public awareness to and prevention of alcohol and drug related crashes by campaigning for tighter laws and for alcohol checkpoints and by educating youth and adults about the perils of driving under the influence.

In 2008, 45% of all vehicular fatalities in Alaska resulted from alcohol-related incidents. Of all the fatalities and major injuries that occur on Alaska's roads and highways, teen drivers account for approximately 20% of incidents, most caused either by not wearing a seatbelt or by driving under the influence.

Traffic accidents are the leading cause of death among the United States teenage population and, according to the National Highway Traffic Safety Administration (NHTSA), more than one-third are alcohol related. Furthermore, drunk driving often results in the injury or loss of life among passengers and individuals outside the vehicle.

A recent study by the Alaska Department of Transportation & Public Facilities found a link between minor consuming and future DUIs (Driving Under the Influence). This study compared 1995-1999 minor consuming cases in Alaska to 1995-2006 DUI cases and found that 24% of youth charged with minor consuming will go onto have a DUI charge before their 31st birthday (Evaluation of Risk Factors for Repeat DUI Offenses, Preliminary Draft Report, November 2008).

The State of Alaska has developed a plan to reduce and prevent underage drinking, based on the national strategy put forth by the National Research Council, the Institute of Medicine of the National Academics of Science, and Congress. This plan highlights the national strategies as well as strategies that state and local agencies can employ.

To view state's plan, visit: http://www.dot.state.ak.us/stwdplng/hwysafety/assets/pdf/2009_underagedrinkplan.pdf

Youth Alliance for a Healthier Alaska Art Contest

The Youth Alliance for a Healthier Alaska presents: *Make Art. Not Babies. An art contest to promote healthy teen relationships and sexual responsibility.*

Rules and Regulations:

Winning entries for each category will receive: $150 VISA gift card for first place, $50 VISA gift card for second place, $25 VISA gift card for third place

Categories: 1. Video/radio 2. photography/graphic art

There will be a total of 6 winning entries.

Guidelines:

-The competition will be open to teenagers 14 through 19 years of age.

-Participants may enter one entry per category. Participants can only win in one category.

-Entry deadline is **February 19, 2010**. Entries received after this date will not be evaluated.

-Email submission to Sophie Wenzel: Sophie.wenzel@alaska.gov OR Mail to: YAHA, 4701 Business Park Blvd, Suite 20, Bldg J, Anchorage, AK 99503

-By entering the contest the entrant is giving YAHA and the State of Alaska the right to: (1.) publicly display his or her artwork. (2.) The right to photograph or otherwise reproduce the artwork for the use in connection with promotional or advertising activities by YAHA.

-All artwork must be original. All photographs must have been taken by the contestant. All videos and radio announcements must have been produced by contestant

-All entries must be "PG-13"- entries that are not appropriate will not be considered.

Regulations:

Video: Must be 2 minutes or less, Must be on a decrypted disc

Audio: Must be 30 seconds or less, Must be in MP3, WIM, or MPEG4 format

Photograph/Graphic art: Must be no less than 4" x 6" and no bigger than 11"x 17" in JPEG or Adobe format, Must have caption/name on entry

Criteria to Judge: Must have reality, originality and creative pizzazz, and relevancy to the issue.

For questions, please write Sophie.wenzel@alaska.gov

Division of Adolescent and School Health

	Youth Risk Behavior Surveillance System (YRBSS)			School Health Policies and Programs Study (SHPPS)	
	National	State/Territorial/ Tribal/District	Other		
Purpose	■ To determine the prevalence of health-risk behaviors among students ■ To assess trends in these behaviors ■ To examine the co-occurrence of health-risk behaviors			To provide national data on eight components of a school health program at the state, school district, school, and classroom levels	To provide data on school health policies and practices at schools among states, territories, tribal governments, and large urban school districts
Content	■ Unintentional injuries and violence ■ Tobacco use ■ Alcohol and other drug use ■ Sexual behaviors that contribute to unintended pregnancy and sexually transmitted diseases, including HIV infection ■ Unhealthy dietary behaviors ■ Physical inactivity			■ Health education ■ Physical education and activity ■ Health services ■ Mental health and social services ■ Nutrition services ■ Healthy and safe school environment ■ Faculty and staff health promotion ■ Family and community involvement	■ School health education requirements and content ■ Physical education requirements ■ Health services ■ Nutrition-related policies and practices ■ Family and community involvement in school health programs ■ School health policies on HIV and AIDS prevention, tobacco-use prevention, and physical activity ■ Professional preparation and staff development for lead health education teachers
Sample	Nationally representative sample of public and private high school students	Representative sample of public high school students in each jurisdiction	Representative sample of students in: ■ Middle schools ■ Alternative schools ■ Juvenile justice facilities	■ All states ■ Nationally representative sample of school districts ■ Nationally representative sample of public and private elementary schools, middle schools and high schools	Representative sample of public middle schools and high schools in a state, territory, tribal government, or school district
Methods	Self-administered paper-and-pencil questionnaire, conducted in classrooms			Computer-assisted telephone and personal interviews and self-adminstered, mailed questionnaires	Self-administered, mailed questionnaires
Timing	Biennially, since 1991		Varied	Every 6 years, since 1994	Biennially, since 1994
Example Statements	In 2007, 57.3% of Hispanic female high school students in the U.S. attended physical education classes on 1 or more days in an average week when they were in school.	In 2007, 24.4% of female high school students in Kentucky attended physical education classes on 1 or more days in an average week when they were in school.	In 2007, 87.4% of middle school students in Wyoming attended physical education classes on 1 or more days in an average week when they were in school.	**State:** In 2006, 70.5% of states required districts or schools to follow national or state physical education standards or guidelines. **District:** In 2006, 68.9% of districts had someone oversee or coordinate physical education. **School:** In 2006, 78.3% of schools required students to take some physical education.	In 2006, 60.1% of secondary schools in Alabama required students to take 2 or more physical education courses.
Ownership of Data	CDC	States, territories, tribal governments, and districts	Varied	CDC	States, territories, tribal governments, and districts

*Surveillance is the ongoing collection, analysis, and interpretation of data from generalizable samples.

Alaska 2009 Youth Risk Behavior Survey (YRBS) Results

These risk behaviors among high school students[1] ...

Unintentional Injuries and Violence

12% Rarely or never wore a seat belt
21% Rode with a driver who had been drinking alcohol, during the past month
20% Carried a weapon during the past month
28% Were in a physical fight during the past year
9% Attempted suicide during the past year

Alcohol and Other Drug Use

33% Drank alcohol during the past month
22% Reported episodic heavy drinking during the past month[2]
23% Used marijuana during the past month
7% Ever used cocaine
10% Ever used inhalants
21% Ever used prescription drugs without prescription

Sexual Behaviors

44% Ever had sexual intercourse
11% Had sexual intercourse with ≥ 4 people
30% Had sexual intercourse during the past three months
% Did not use a condom during last sexual intercourse[3]

Tobacco Use

48% Ever tried cigarette smoking
16% Smoked cigarettes during the past month
5% Smoked cigarettes on ≥ 20 days during the past month
14% Used smokeless tobacco during the past month
10% Smoked cigars during the past month

Dietary Behaviors

83% Ate fruits and vegetables < 5 times/day during the past 7 days
20% Drank soda or pop one or more times a day during the past 7 days (not including diet soda or pop)

Physical Activity

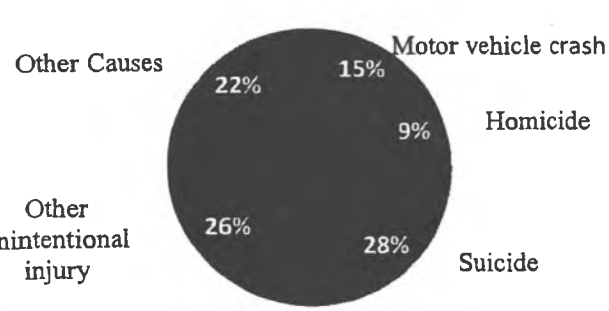
58% Did not meet currently recommended levels of physical activity[4]
54% Did not attend physical education class
82% Did not attend physical education class daily

Overweight

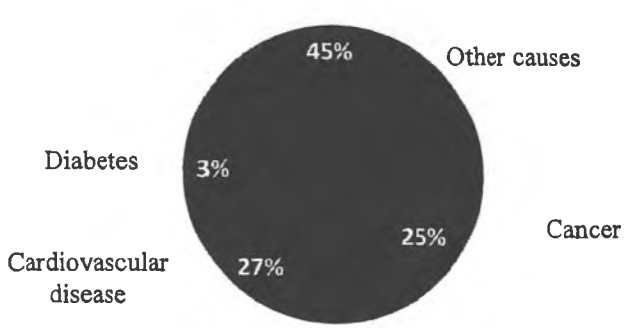
14% Were overweight[5]
12% Were obese[6]

... contribute to these leading causes of death[7]

Youth Aged 10-24 Years



Adults Aged 25 Years and Older



[1] High school students grades 9-12 in Alaska excluding alternative schools and boarding schools, weighted data.

[2] Students who had five or more drinks of alcohol in a row within a couple of hours on at least 1 day during the past 30 days

[3] Among students who had sexual intercourse during the past 3 months.

[4] Students who were not physically active for a total of at least 60 minutes per day on 5 or more days of the past 7 days.

[5] Students who were at or above the 85th percentile but below the 95th percentile for body mass index by age and sex.

[6] Students who were at or above the 95th percentile for body mass index by age and sex.

[7] 2004-2006 Alaska mortality data, Centers for Disease Control and Prevention.

The Alaska Youth Risk Behavior Survey is a joint project between the Department of Health and Social Services and the Department of Education & Early Development in cooperation with the Centers for Disease Control and Prevention

2009 Alaska
Youth Risk Behavior Survey

This survey is about health behavior. It has been developed so you can tell us what you do that may affect your health. The information you give will be used to develop better health education for young people like yourself.

DO NOT write your name on this survey. The answers you give will be kept private. No one will know what you write. Answer the questions based on what you really do.

Completing the survey is voluntary. Whether or not you answer the questions will not affect your grade in this class. If you are not comfortable answering a question, just leave it blank.

The questions that ask about your background will be used only to describe the types of students completing this survey. The information will not be used to find out your name. No names will ever be reported.

Make sure to read every question. Fill in the ovals completely. When you are finished, follow the instructions of the person giving you the survey.

Thank you very much for your help.

Directions

- **Use a #2 pencil only.**
- **Make dark marks.**
- **Fill in a response like this: A B ● D.**
- **If you change your answer, erase your old answer completely.**

1. How old are you?
   - A. 12 years old or younger
   - B. 13 years old
   - C. 14 years old
   - D. 15 years old
   - E. 16 years old
   - F. 17 years old
   - G. 18 years old
   - H. 19 years old or older

2. What is your sex?
   - A. Female
   - B. Male

3. In what grade are you?
   - A. 9th grade
   - B. 10th grade
   - C. 11th grade
   - D. 12th grade
   - E. Ungraded or other grade

4. Are you Hispanic or Latino?
   - A. Yes
   - B. No

5. What is your race? (**Select one or more responses.**)
   - A. American Indian or Alaska Native
   - B. Asian
   - C. Black or African American
   - D. Native Hawaiian or Other Pacific Islander
   - E. White

6. How tall are you without your shoes on?

Directions: Write your height in the shaded blank boxes. Fill in the matching oval below each number.

Example

Height	
Feet	Inches
5	7
③	⓪
④	①
●	②
⑥	③
⑦	④
	⑤
	⑥
	●
	⑧
	⑨
	⑩
	⑪

7. How much do you weigh without your shoes on?

Directions: Write your weight in the shaded blank boxes. Fill in the matching oval below each number.

Example

Weight		
Pounds		
1	5	2
⓪	⓪	⓪
●	①	①
②	②	●
③	③	③
	④	④
	●	⑤
	⑥	⑥
	⑦	⑦
	⑧	⑧
	⑨	⑨

8. During the past 12 months, how would you describe your grades in school?
   A. Mostly A's
   B. Mostly B's
   C. Mostly C's
   D. Mostly D's
   E. Mostly F's
   F. None of these grades
   G. Not sure

The next 4 questions ask about safety.

9. **When you rode a bicycle** during the past 12 months, how often did you wear a helmet?
   A. I did not ride a bicycle during the past 12 months
   B. Never wore a helmet
   C. Rarely wore a helmet
   D. Sometimes wore a helmet
   E. Most of the time wore a helmet
   F. Always wore a helmet

10. How often do you wear a seat belt when **riding** in a car driven by someone else?
   A. Never
   B. Rarely
   C. Sometimes
   D. Most of the time
   E. Always

11. During the past 30 days, how many times did you **ride** in a car or other vehicle **driven by someone who had been drinking alcohol?**
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or more times

12. During the past 30 days, how many times did you **drive** a car or other vehicle **when you had been drinking alcohol?**
   A. 0 times
   B. 1 time
   C. 2 or 3 times
   D. 4 or 5 times
   E. 6 or more times

The next 10 questions ask about violence-related behaviors.

13. During the past 30 days, on how many days did you carry a **weapon** such as a gun, knife, or club?
    A. 0 days
    B. 1 day
    C. 2 or 3 days
    D. 4 or 5 days
    E. 6 or more days

14. During the past 30 days, on how many days did you carry **a gun?**
    A. 0 days
    B. 1 day
    C. 2 or 3 days
    D. 4 or 5 days
    E. 6 or more days

15. During the past 30 days, on how many days did you carry a weapon such as a gun, knife, or club **on school property?**
    A. 0 days
    B. 1 day
    C. 2 or 3 days
    D. 4 or 5 days
    E. 6 or more days

16. During the past 30 days, on how many days did you **not** go to school because you felt you would be unsafe at school or on your way to or from school?
    A. 0 days
    B. 1 day
    C. 2 or 3 days
    D. 4 or 5 days
    E. 6 or more days

17. During the past 12 months, how many times has someone threatened or injured you with a weapon such as a gun, knife, or club **on school property?**
    A. 0 times
    B. 1 time
    C. 2 or 3 times
    D. 4 or 5 times
    E. 6 or 7 times
    F. 8 or 9 times
    G. 10 or 11 times
    H. 12 or more times

18. During the past 12 months, how many times were you in a physical fight?
A. 0 times
B. 1 time
C. 2 or 3 times
D. 4 or 5 times
E. 6 or 7 times
F. 8 or 9 times
G. 10 or 11 times
H. 12 or more times

19. During the past 12 months, how many times were you in a physical fight in which you were injured and had to be treated by a doctor or nurse?
A. 0 times
B. 1 time
C. 2 or 3 times
D. 4 or 5 times
E. 6 or more times

20. During the past 12 months, how many times were you in a physical fight **on school property?**
A. 0 times
B. 1 time
C. 2 or 3 times
D. 4 or 5 times
E. 6 or 7 times
F. 8 or 9 times
G. 10 or 11 times
H. 12 or more times

21. During the past 12 months, did your boyfriend or girlfriend ever hit, slap, or physically hurt you on purpose?
A. Yes
B. No

22. Have you ever been physically forced to have sexual intercourse when you did not want to?
A. Yes
B. No

The next question asks about bullying. Bullying is when 1 or more students tease, threaten, spread rumors about, hit, shove, or hurt another student over and over again. It is not bullying when 2 students of about the same strength or power argue or fight or tease each other in a friendly way.

23. During the past 12 months, have you ever been bullied **on school property**?
A. Yes
B. No

The next 5 questions ask about sad feelings and attempted suicide. Sometimes people feel so depressed about the future that they may consider attempting suicide, that is, taking some action to end their own life.

24. During the past 12 months, did you ever feel so sad or hopeless almost every day for **two weeks or more** in **a row** that you stopped doing some usual activities?
A. Yes
B. No

25. During the past 12 months, did you ever **seriously** consider attempting suicide?
A. Yes
B. No

26. During the past 12 months, did you make a plan about how you would attempt suicide?
A. Yes
B. No

27. During the past 12 months, how many times did you actually attempt suicide?
A. 0 times
B. 1 time
C. 2 or 3 times
D. 4 or 5 times
E. 6 or more times

28. **If you attempted suicide** during the past 12 months, did any attempt result in an injury, poisoning, or overdose that had to be treated by a doctor or nurse?
   A. **I did not attempt suicide** during the past 12 months
   B. Yes
   C. No

The next 13 questions ask about tobacco use.

29. Have you ever tried cigarette smoking, even one or two puffs?
   A. Yes
   B. No

30. How old were you when you smoked a whole cigarette for the first time?
   A. I have never smoked a whole cigarette
   B. 8 years old or younger
   C. 9 or 10 years old
   D. 11 or 12 years old
   E. 13 or 14 years old
   F. 15 or 16 years old
   G. 17 years old or older

31. During the past 30 days, on how many days did you smoke cigarettes?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

32. During the past 30 days, on the days you smoked, how many cigarettes did you smoke **per day**?
   A. I did not smoke cigarettes during the past 30 days
   B. Less than 1 cigarette per day
   C. 1 cigarette per day
   D. 2 to 5 cigarettes per day
   E. 6 to 10 cigarettes per day
   F. 11 to 20 cigarettes per day
   G. More than 20 cigarettes per day

33. During the past 30 days, how did you **usually** get your own cigarettes? (Select only **one** response.)
   A. I did not smoke cigarettes during the past 30 days
   B. I bought them in a store such as a convenience store, supermarket, discount store, or gas station
   C. I bought them from a vending machine
   D. I gave someone else money to buy them for me
   E. I borrowed (or bummed) them from someone else
   F. A person 18 years old or older gave them to me
   G. I took them from a store or family member
   H. I got them some other way

34. During the past 30 days, on how many days did you smoke cigarettes **on school property?**
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

35. Have you ever smoked cigarettes daily, that is, at least one cigarette every day for 30 days?
   A. Yes
   B. No

36. During the past 12 months, did you ever try **to quit** smoking cigarettes?
   A. I did not smoke during the past 12 months
   B. Yes
   C. No

37. During the past 30 days, on how many days did you use **chewing tobacco, snuff, or dip**, such as Redman, Levi Garrett, Beechnut, Skoal, Skoal Bandits, or Copenhagen?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

38. During the past 30 days, on how many days did you use **chewing tobacco, snuff, or dip on school property?**
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

39. During the past 30 days, on how many days did you smoke **cigars, cigarillos, or little cigars**?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

40. During the past 7 days, on how many days were you in the same room with someone who was smoking cigarettes?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days
   G. 6 days
   H. 7 days

41. How much do you think people risk harming themselves (physically or in other ways), if they smoke one or more packs of cigarettes per day?
A. No risk
B. Slight risk
C. Moderate risk
D. Great risk

The next 7 questions ask about drinking alcohol. This includes drinking beer, wine, wine coolers, and liquor such as rum, gin, vodka, or whiskey. For these questions, drinking alcohol does not include drinking a few sips of wine for religious purposes.

42. During your life, on how many days have you had at least one drink of alcohol?
A. 0 days
B. 1 or 2 days
C. 3 to 9 days
D. 10 to 19 days
E. 20 to 39 days
F. 40 to 99 days
G. 100 or more days

43. How old were you when you had your first drink of alcohol other than a few sips?
A. I have never had a drink of alcohol other than a few sips
B. 8 years old or younger
C. 9 or 10 years old
D. 11 or 12 years old
E. 13 or 14 years old
F. 15 or 16 years old
G. 17 years old or older

44. During the past 30 days, on how many days did you have at least one drink of alcohol?
A. 0 days
B. 1 or 2 days
C. 3 to 5 days
D. 6 to 9 days
E. 10 to 19 days
F. 20 to 29 days
G. All 30 days

45. During the past 30 days, on how many days did you have 5 or more drinks of alcohol in a row, that is, within a couple of hours?
A. 0 days
B. 1 day
C. 2 days
D. 3 to 5 days
E. 6 to 9 days
F. 10 to 19 days
G. 20 or more days

46. During the past 30 days, how did you **usually** get the alcohol you drank?
A. I did not drink alcohol during the past 30 days
B. I bought it in a store such as a liquor store, convenience store, supermarket, discount store, or gas station
C. I bought it at a restaurant, bar, or club
D. I bought it at a public event such as a concert or sporting event
E. I gave someone else money to buy it for me
F. Someone gave it to me
G. I took it from a store or family member
H. I got it some other way

47. During the past 30 days, on how many days did you have at least one drink of alcohol **on school property**?
A. 0 days
B. 1 or 2 days
C. 3 to 5 days
D. 6 to 9 days
E. 10 to 19 days
F. 20 to 29 days
G. All 30 days

48. How much do you think people risk harming themselves (physically or in other ways), if they have one or two drinks of an alcoholic beverage (beer, wine, or liquor) nearly every day?
A. No risk

B. Slight risk
C. Moderate risk
D. Great risk

The next 5 questions ask about marijuana use. Marijuana also is called grass or pot.

49. During your life, how many times have you used marijuana?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 to 99 times
G. 100 or more times

50. How old were you when you tried marijuana for the first time?
A. I have never tried marijuana
B. 8 years old or younger
C. 9 or 10 years old
D. 11 or 12 years old
E. 13 or 14 years old
F. 15 or 16 years old
G. 17 years old or older

51. During the past 30 days, how many times did you use marijuana?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

52. During the past 30 days, how many times did you use marijuana **on school property**?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

53. How much do you think people risk harming themselves (physically or in other ways), if they smoke marijuana regularly?
A. No risk
B. Slight risk
C. Moderate risk
D. Great risk

The next 9 questions ask about other drugs.

54. During your life, how many times have you used **any** form of cocaine, including powder, crack, or freebase?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

55. During the past 30 days, how many times did you use **any** form of cocaine, including powder, crack, or freebase?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

56. During your life, how many times have you sniffed glue, breathed the contents of aerosol spray cans, or inhaled any paints or sprays to get high?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

57. During your life, how many times have you used **heroin** (also called smack, junk, or China White)?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

58. During your life, how many times have you used **methamphetamines** (also called speed, crystal, crank, or ice)?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

59. During your life, how many times have you used **ecstasy** (also called MDMA)?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

60. During your life, how many times have you used a needle to inject any **illegal** drug into your body?
A. 0 times
B. 1 time
C. 2 or more times

61. During your life, how many times have you taken a **prescription drug** (such as OxyContin, Percocet, Vicodin, Adderall, Ritalin, or Xanax) without a doctor's prescription?
A. 0 times
B. 1 or 2 times
C. 3 to 9 times
D. 10 to 19 times
E. 20 to 39 times
F. 40 or more times

62. During the past 12 months, has anyone offered, sold, or given you an illegal drug **on school property**?
A. Yes
B. No

The next 7 questions ask about sexual behavior.

63. Have you ever had sexual intercourse?

A. Yes
B. No

64. How old were you when you had sexual intercourse for the first time?
A. I have never had sexual intercourse
B. 11 years old or younger
C. 12 years old
D. 13 years old
E. 14 years old
F. 15 years old
G. 16 years old
H. 17 years old or older

65. During your life, with how many people have you had sexual intercourse?
A. I have never had sexual intercourse
B. 1 person
C. 2 people
D. 3 people
E. 4 people
F. 5 people
G. 6 or more people

66. During the past 3 months, with how many people did you have sexual intercourse?
A. I have never had sexual intercourse
B. I have had sexual intercourse, but not during the past 3 months
C. 1 person
D. 2 people
E. 3 people
F. 4 people
G. 5 people
H. 6 or more people

67. Did you drink alcohol or use drugs before you had sexual intercourse the **last time**?
A. I have never had sexual intercourse
B. Yes
C. No

68. The **last time** you had sexual intercourse, did you or your partner use a condom?

A. I have never had sexual intercourse
B. Yes
C. No

69. The **last time** you had sexual intercourse, what **one** method did you or your partner use to **prevent pregnancy**? (Select only **one** response.)
   A. I have never had sexual intercourse
   B. No method was used to prevent pregnancy
   C. Birth control pills
   D. Condoms
   E. Depo-Provera (injectable birth control)
   F. Withdrawal
   G. Some other method
   H. Not sure

The next 4 questions ask about body weight.

70. How do **you** describe your weight?
   A. Very underweight
   B. Slightly underweight
   C. About the right weight
   D. Slightly overweight
   E. Very overweight

71. Which of the following are you trying to do about your weight?
   A. **Lose** weight
   B. **Gain** weight
   C. **Stay** the same weight
   D. I am **not trying to do anything** about my weight

72. During the past 30 days, did you **exercise** to lose weight or to keep from gaining weight?
   A. Yes
   B. No

73. During the past 30 days, did you **eat less food, fewer calories, or foods low in fat** to lose weight or to keep from gaining weight?
   A. Yes
   B. No

The next 9 questions ask about food you ate or drank during the past 7 days. Think about all the meals and snacks you had from the time you got up until you went to bed. Be sure to include food you ate at home, at school, at restaurants, or anywhere else.

74. During the past 7 days, how many times did you drink **100% fruit juices** such as orange juice, apple juice, or grape juice? (Do **not** count punch, Kool-Aid, sports drinks, or other fruit-flavored drinks.)
   A. I did not drink 100% fruit juice during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

75. During the past 7 days, how many times did you eat **fruit?** (Do **not** count fruit juice.)
   A. I did not eat fruit during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

76. During the past 7 days, how many times did you eat **green salad**?
   A. I did not eat green salad during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

77. During the past 7 days, how many times did you eat **potatoes?** (Do **not** count french fries, fried potatoes, or potato chips.)
   A. I did not eat potatoes during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

78. During the past 7 days, how many times did you eat **carrots?**
   A. I did not eat carrots during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

79. During the past 7 days, how many times did you eat **other vegetables**? (Do **not** count green salad, potatoes, or carrots.)
   A. I did not eat other vegetables during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

80. During the past 7 days, how many times did you drink a **can, bottle, or glass of soda or pop**, such as Coke, Pepsi, or Sprite? (Do **not** include diet soda or diet pop.)
   A. I did not drink soda or pop during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

81. During the past 7 days, how many times did you drink a **can, bottle, or glass of a sugar sweetened drink**, such as sports drinks, sweetened energy drinks, Snapple, fruit punch, Kool-Aid, Tang, or Capri-Sun? (Do **not** include soda or pop, diet drinks, or 100% fruit juice.)
   A. I did not drink sugar sweetened drinks during the past 7 days
   B. 1 to 3 times during the past 7 days
   C. 4 to 6 times during the past 7 days
   D. 1 time per day
   E. 2 times per day
   F. 3 times per day
   G. 4 or more times per day

82. During the past 7 days, how many **glasses of milk** did you drink? (Include the milk you drank in a glass or cup, from a carton, or with cereal. Count the half pint of milk served at school as equal to one glass.)
   A. I did not drink milk during the past 7 days
   B. 1 to 3 glasses during the past 7 days
   C. 4 to 6 glasses during the past 7 days
   D. 1 glass per day
   E. 2 glasses per day
   F. 3 glasses per day
   G. 4 or more glasses per day

The next 6 questions ask about physical activity.

83. During the past 7 days, on how many days were you physically active for a total of **at least 60 minutes per day?** (Add up all the time you spent in any kind of physical activity that increased your heart rate and made you breathe hard some of the time.)
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days
   G. 6 days
   H. 7 days

84. On an average school day, how many hours do you watch TV?
   A. I do not watch TV on an average school day
   B. Less than 1 hour per day
   C. 1 hour per day
   D. 2 hours per day
   E. 3 hours per day
   F. 4 hours per day
   G. 5 or more hours per day

85. On an average school day, how many hours do you play video or computer games or use a computer for something that is not school work? (Include activities such as Nintendo, Game Boy, PlayStation, Xbox, computer games, and the Internet.)
   A. I do not play video or computer games or use a computer for something that is not school work
   B. Less than 1 hour per day
   C. 1 hour per day
   D. 2 hours per day
   E. 3 hours per day
   F. 4 hours per day
   G. 5 or more hours per day

86. In an average week when you are in school, on how many days do you go to physical education (PE) classes?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days

87. During an average physical education (PE) class, how many minutes do you spend actually exercising or playing sports?
   A. I do not take PE
   B. Less than 10 minutes
   C. 10 to 20 minutes
   D. 21 to 30 minutes
   E. 31 to 40 minutes
   F. 41 to 50 minutes
   G. 51 to 60 minutes
   H. More than 60 minutes

88. During the past 12 months, on how many sports teams did you play? (Include any teams run by your school or community groups.)
   A. 0 teams
   B. 1 team
   C. 2 teams
   D. 3 or more teams

The next 3 questions ask about other health-related topics.

89. Have you ever been taught about AIDS or HIV infection in school?
   A. Yes
   B. No
   C. Not sure

90. Has a doctor or nurse ever told you that you have asthma?
   A. Yes
   B. No
   C. Not sure

91. Do you still have asthma?

A. I have never had asthma
B. Yes
C. No
D. Not sure

The next 8 questions ask about other health topics.

92. How often does one of your parents talk with you about what you are doing in school?
A. Never
B. Less than once a month
C. About once or twice a month
D. About once or twice a week
E. About every day

93. Do you agree or disagree that your teachers really care about you and give you a lot of encouragement?
A. Strongly agree
B. Agree
C. Not sure
D. Disagree
E. Strongly disagree

94. Besides your parents, how many adults would you feel comfortable seeking help from if you had an important question affecting your life?
A. 0 adults
B. 1 adult
C. 2 adults
D. 3 adults
E. 4 adults
F. 5 or more adults

95. During an average week, how many hours do you spend helping or volunteering at school or in the community (such as helping elders or neighbors; watching young children; teaching or tutoring; peer helping; mentoring; or helping out at local programs, health clinics, faith organizations, tribal organizations, or environmental organizations)?
A. 0 hours
B. 1 hour
C. 2 hours
D. 3 to 5 hours
E. 6 to 10 hours
F. 11 or more hours

96. During an average week, on how many days do you take part in organized after school, evening, or weekend activities (such as school clubs; community center groups; music, art, or dance lessons; drama; church; or cultural or other supervised activities)?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days
   G. 6 days
   H. 7 days

97. Do you agree or disagree that you feel alone in your life?
   A. Strongly agree
   B. Agree
   C. Not sure
   D. Disagree
   E. Strongly disagree

98. Do you agree or disagree that in your community you feel like you matter to people?
   A. Strongly agree
   B. Agree
   C. Not sure
   D. Disagree
   E. Strongly disagree

99. Do you agree or disagree that your school has clear rules and consequences for behavior?
   A. Strongly agree
   B. Agree
   C. Not sure
   D. Disagree
   E. Strongly disagree

This is the end of the survey.
Thank you very much for your help.

Dear Honorable House Representatives:

We are writing to you on behalf of the Alaska Wellness Coalition in support of Senate Bill 8, *"An Act relating to questionnaires and surveys administered in the public schools."* The Alaska Wellness Coalition is pleased to support the state's Youth Risk Behavior Survey (YRBS) and changing legislation for consent to participate in the survey. The information collected through the YRBS is vitally important for local, state and national level information about the behaviors affecting the health and well-being of our youth. The data provided by the YRBS is an invaluable resource that schools, health care and public health professionals, and others can use to set and monitor program goals, develop and evaluate effective health education programs and community-based prevention strategies, and assess protective and risk factors among our youth at community, state, and nationwide levels.

The YRBS has been established across the country as a psychometrically valid assessment instrument for measuring the following risky behaviors: tobacco use, poor eating habits, inadequate physical activity, alcohol and other drug use, sexual behaviors that contribute to unintended pregnancy and sexually transmitted diseases, and behaviors that contribute to unintentional injuries and violence. YRBS data is a critical resource used by many of our organizations to set and monitor program goals, develop health education programs, support health-related legislation, and seek funding for programs that focus on reducing health risk behaviors among youth.

Reliable and statistically valid community data is critical to our mission of supporting our youth. Routine standardized surveys such as the YRBS allows us to track trends over time and help guide and evaluate the important youth programs we implement to keep our youth on track to graduate from high school, avoid delinquency and reject substance use.

The YRBS has a required response rate of 60% to make it statistically valid. Current legislation requires active parental consent which presents significant obstacles and costs to achieving this response rate. Approximately $90,000 is spent for just one survey cycle in order to provide the incentives necessary to simply get permission slips returned. However, failure to return permission slips is primarily linked to apathy, oversight, and student error, not parental refusal of permission, which averages around 10%.

SB 8 protects previously legislated parental rights to consent, parental rights to notification, and children's right to refuse participation. We support SB 8 because it continues to provide these protections and respects the privacy of families, while removing the obstacles to obtaining this vital data that allows us to track and improve conditions for our youth.

Senator Bettye Davis
Alaska Senate Education Committee
Alaska State Senate
State Capitol Room 30
Juneau, Alaska 99801

Dear Senator Davis and Members of the Senate Education Committee:

The Leadership Team of Anchorage United for Youth requests your support for Senate Bill 8, "*An Act relating to questionnaires and surveys administered in the public schools.*"

Anchorage United for Youth has been making real headway at addressing the issues that impact Anchorage youth through a coordinated community effort with over 40 non-profit, public and private partners committed to increasing graduation rates, decreasing youth substance use and reducing juvenile crime rates. Current success with the Anchorage United for Youth plan and its implementation has led to interest from around the state in replicating this effort. Reliable and valid data like that obtained through the Youth Risk Behavior Survey (YRBS) is integral to the success and sustainability of this effort.

Reliable and statistically valid community data is critical to our mission of supporting Anchorage youth. Routine standardized surveys such as the YRBS allow us to track trends over time and help guide and evaluate the important youth programs we implement to keep our youth on track to graduate from high school, avoid delinquency and reject substance use. The YRBS must have a response rate of 60% to make it statistically valid, yet current legislation requires active parental consent which presents significant obstacles and costs to achieving this response rate. Approximately $90,000 is spent for just one survey cycle in order to provide the incentives necessary to simply get permission slips returned. However, failure to return permission slips is primarily linked to apathy, oversight, and student error, not parental refusal of permission, which averages around 10%.

Senate Bill 8 protects previously legislated parental rights to consent, parental rights to notification, and children's rights to refuse participation. We support Senate Bill 8 because it continues to provide these protections and respects the privacy of families, while removing the obstacles to obtaining this vital data that allows us to track and improve conditions for our youth.

We thank you for your commitment to youth in the state of Alaska and ask for your support of Senate Bill 8.

Sincerely,

Greg Razo, Cook Inlet Region, Inc.

Juneau, AK 99801

Re: Letter of Support for SB 8

Dear Senator Davis:

Thank you for introducing SB 8: *An Act Relating to Questionnaires and Surveys Administered in the Public Schools*. The Alaska Network on Domestic Violence & Sexual Assault is committed to prevention efforts and serving victims of violence. This bill can help. SB 8 will provide a valuable tool in our efforts to understand the prevalence and shared risks of youth experiencing violence, while retaining a family's rights to remove their child from participating in the survey and allow a key segment of the student population, often the most vulnerable students, to participate in the survey.

The Centers for Disease Control and Prevention (CDC) Youth Risk Behavioral Survey (YRBS) is used nationally, and within Alaska, to determine risk behaviors among the Alaska high school student population. CDC developed YRBS data is a credible data source that can be compared to national data. This survey covers a broad range of risk behaviors and streamlines information gathering and administering surveys in the schools. However, currently with our opt-in YRBS policies, many communities, and sometimes our state, have struggled to have enough responses to consider the data valid.

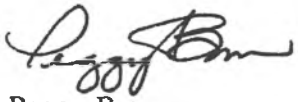
This information and data is essential to help educators, health workers, social service agencies, victim service programs, and other allied professionals to better serve our communities. This data helps teachers working on prevention education to determine the best age to teach various skills and health topics in their classrooms. This data also helps organizations seeking resources to advocate for real needs in their communities as well as assisting health practitioners and others to determine how to best approach students with co-occurring risk behaviors.

Within the field of domestic and sexual violence prevention, current YRBS data indicates that in traditional high schools, more than 17% of 12th grade students have experience physical violence in a dating relationship and more than 11.5% have been forced to have sexual intercourse. We also know that in alternative schools, these numbers are 22.6% and 21.9%. While these numbers are staggering, they are incomplete, due to the current opt-out YRBS policies, with many of the most vulnerable students failing to return permission forms.

This bill is also very timely and in line with Governor Parnell's initiative to end domestic and sexual violence in our state in the next 10 years. One of the key strategies to ending the violence is by focusing on primary prevention efforts that employs various strategies to stop perpetration of violence, *before it ever occurs*. To achieve this, the Governor has brought together a multi-disciplinary group of allied professionals from communities throughout Alaska to look at the current gaps in the data needed to reach our primary prevention goals. SB 8 will help to fill ones of those gaps.

Thank you for bringing forth a bill that will provide a low cost way to better understand the scope of teen dating and sexual violence in Alaska and will assist in strengthening our violence prevention efforts.

Sincerely,



Peggy Brown

STATE OF ALASKA

Alaska Youth Risk Behavior Survey

Alaska's Youth Risk Behavior Survey

The Alaska Youth Risk Behavior Survey (YRBS) is part of an epidemiological surveillance system that was established in 1990 by the Centers for Disease Control and Prevention (CDC) to monitor the prevalence of health-risk behaviors among youth. The survey was first implemented in Alaska in 1995. The YRBS is a biennial, anonymous and voluntary survey of students grades 9 - 12 in public traditional high schools (excluding boarding, correspondence, home study, alternative, and correctional schools). The YRBS is a joint project between the Department of Education & Early Development and the Department of Health and Social Services, in cooperation with the CDC.

The YRBS asks students to self-report on their behaviors in six major areas of health that directly lead to morbidity and mortality in youth and adult populations within our country. These six areas are:

- behaviors that result in unintentional and intentional injuries;
- tobacco use;
- alcohol and other drug use;
- sexual behaviors that can result in human immunodeficiency virus (HIV) infection, other sexually transmitted diseases (STDs) and unintended pregnancies;
- dietary behaviors; and
- physical activity.

In 2009 and 2011, a statewide survey of alternative high schools in Alaska was also implemented.

For more information on the Alaska YRBS go to:
www.hss.state.ak.us/dph/chronic/school/YRBS.htm

2011 Comparison: Alaska Traditional High School and Alternative High School Students**

Traditional High Schools	Alternative High Schools	Alternative students were at*:
Rarely or never wore a seat belt:		
8.7%	11.5%	= Equal risk
Rode with a driver who had been drinking alcohol:		
18.6%	28.1%	⊕ Greater risk
Carried a weapon on school property on at least 1 day:		
5.7%	9.4%	⊕ Greater risk
In a physical fight during the past year:		
23.7%	43.5%	⊕ Greater risk
Did not go to school because they felt unsafe at school or on their way to or from school on at least 1 day:		
4.7%	6.6%	⊕ Greater risk
Seriously considered attempting suicide:		
14.5%	21.2%	⊕ Greater risk
Attempted suicide during the past year:		
8.7%	13.2%	⊕ Greater risk
Current smoking:		
14.1%	47.7%	⊕ Greater risk
Current smokeless tobacco use:		
8.4%	17.4%	⊕ Greater risk
Current drinking:		
28.6%	49.1%	⊕ Greater risk
Binge drinking:		
16.7%	37.9%	⊕ Greater risk
Current marijuana use:		
21.2%	47.6%	⊕ Greater risk
Ever had sexual intercourse:		
38.3%	80.4%	⊕ Greater risk
Currently sexually active:		
25.2%	61.3%	⊕ Greater risk
Used condom before last sexual intercourse:		
59.6%	46.9%	⊕ Greater risk
Percentage of students who were overweight or obese:		
25.8%	32.9%	⊕ Greater risk
Ate fruits and vegetables 5 or more times per day:		
21.4%	22.2%	= Equal risk
Drank 1 or more sodas every day in past week:		
17.6%	30.6%	⊕ Greater risk
Attended physical education daily in an average week:		
17.4%	16.5%	= Equal risk

*Statistically significant difference.

**Comparable U.S. 2011 YRBS data were not available at the time of the publication of this preliminary *2011 Highlights* report. The final *2011 Highlights* report, including U.S. comparison data, will be published in 2012.

Summary of the 2011 Survey Results

On average, in an Alaska high school class of 30 students*:

- 5 - 6 rode (in the past month) with a driver who had been drinking alcohol
- 1 - 2 had carried a weapon to school
- 7 were in a physical fight in the past year
- 2 - 3 attempted suicide in the past year
- 4 smoked cigarettes and 2 - 3 used smokeless tobacco in the past month
- 8 - 9 drank alcohol in the past month
- 5 engaged in binge drinking in the past month
- 6 - 7 used marijuana in the past month
- 11 - 12 had ever had sexual intercourse
- 8 were either overweight or obese
- 16 - 17 were physically active for less than the recommended total of at least 60 minutes per day (on 5 or more days of the past 7 days).

Many students started engaging in risk behaviors before the age of 13:

- 11.1% had smoked a whole cigarette
- 16.9% had consumed their first drink of alcohol
- 10.4% had tried marijuana.

We also know that:

- 23% were bullied at school last year
- 15.3% were cyber-bullied last year
- 12% were physically hurt by a boyfriend or girlfriend in the past year, and
- 9.2% had ever been forced to have unwanted sexual intercourse

Many high school students are still engaging in unhealthy behaviors, increasing their likelihood of being hurt, fatally injured or developing diseases:

- Some of the goals set forth in Healthy Alaskans 2010 have been achieved and health-risk behaviors have been reduced in the following major areas: tobacco use, alcohol and other drug use, violence, and risky sexual behavior.
- Alternative high school students were at significantly greater risk than students in traditional high schools in Alaska for most health-risk behaviors and more likely to have engaged in risky behavior before the age of 13.
- Alternative high school students were more likely than traditional school students to feel that their teachers really cared about them and gave them a lot of encouragement and that their school had clear rules and consequences for behavior.

*Traditional high schools only

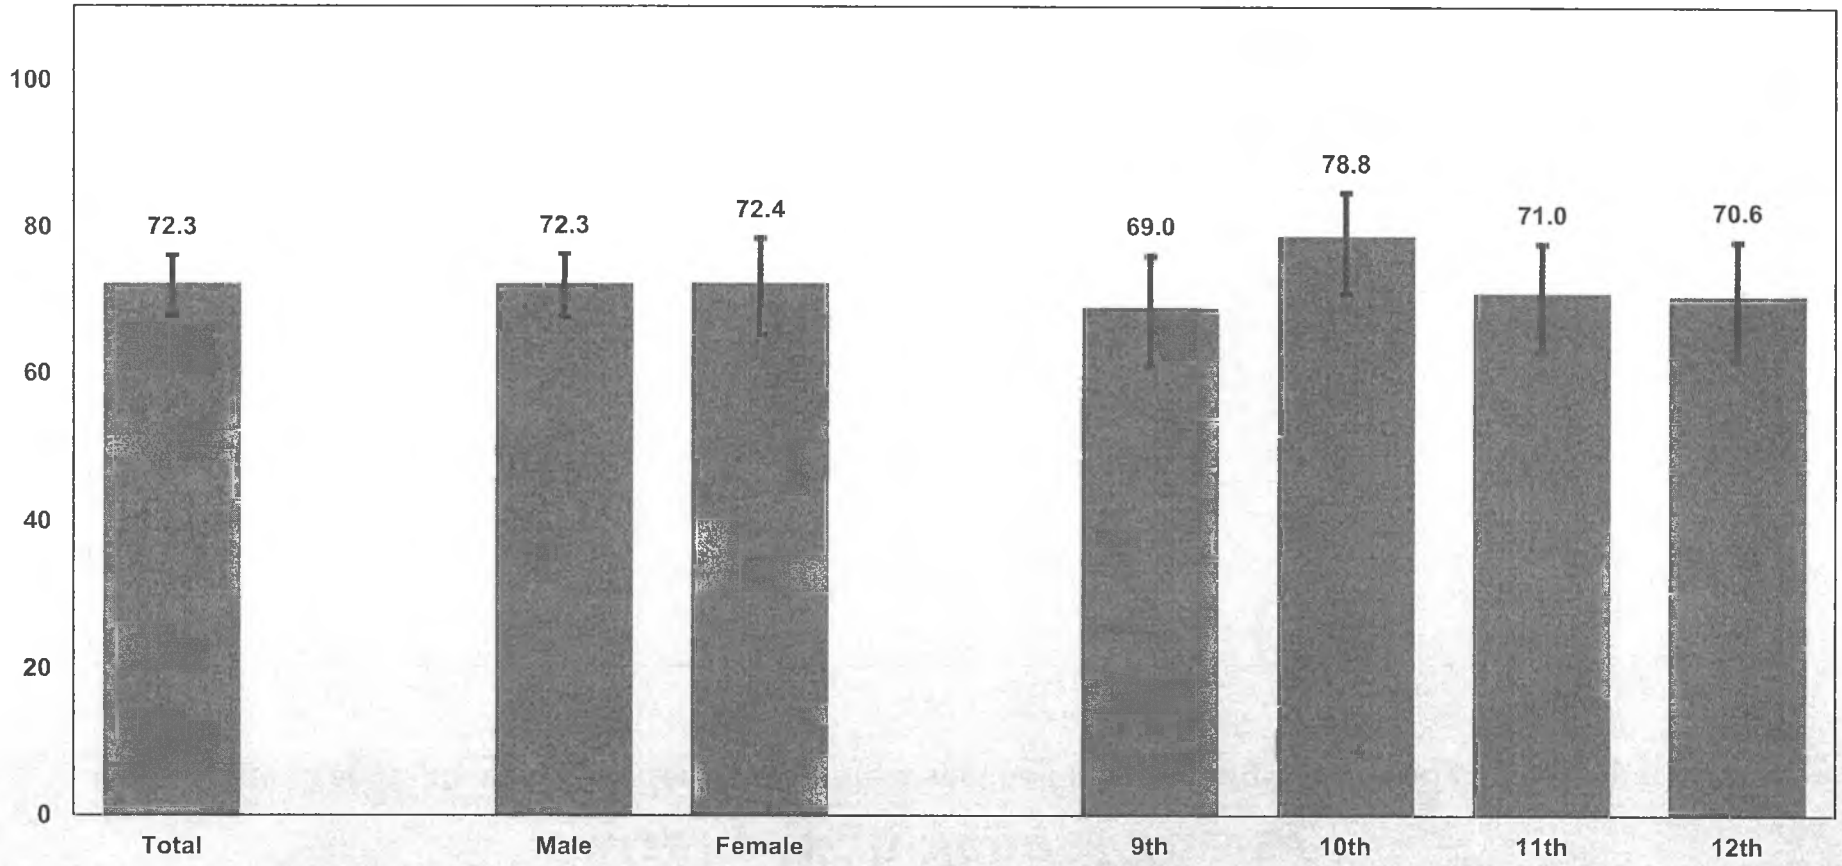
Preliminary 2011 Highlights

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Among students who rode a bicycle during the past 12 months, the percentage who never or rarely wore a bicycle helmet

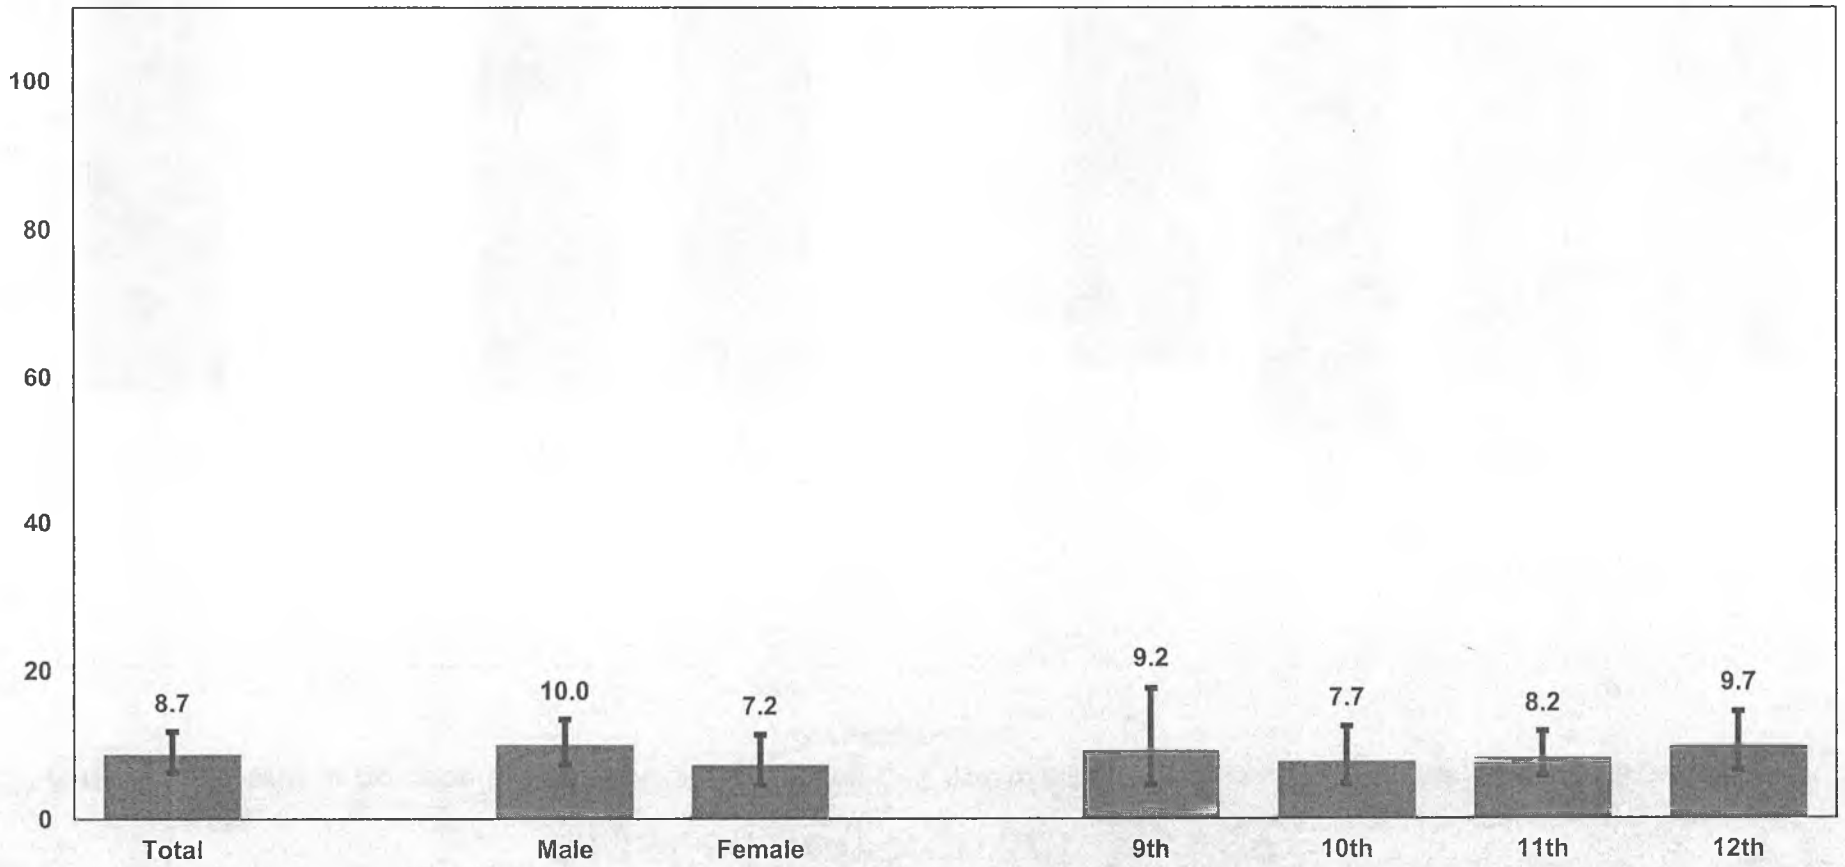


Q8 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who never or rarely wore a seat belt when riding in a car driven by someone else

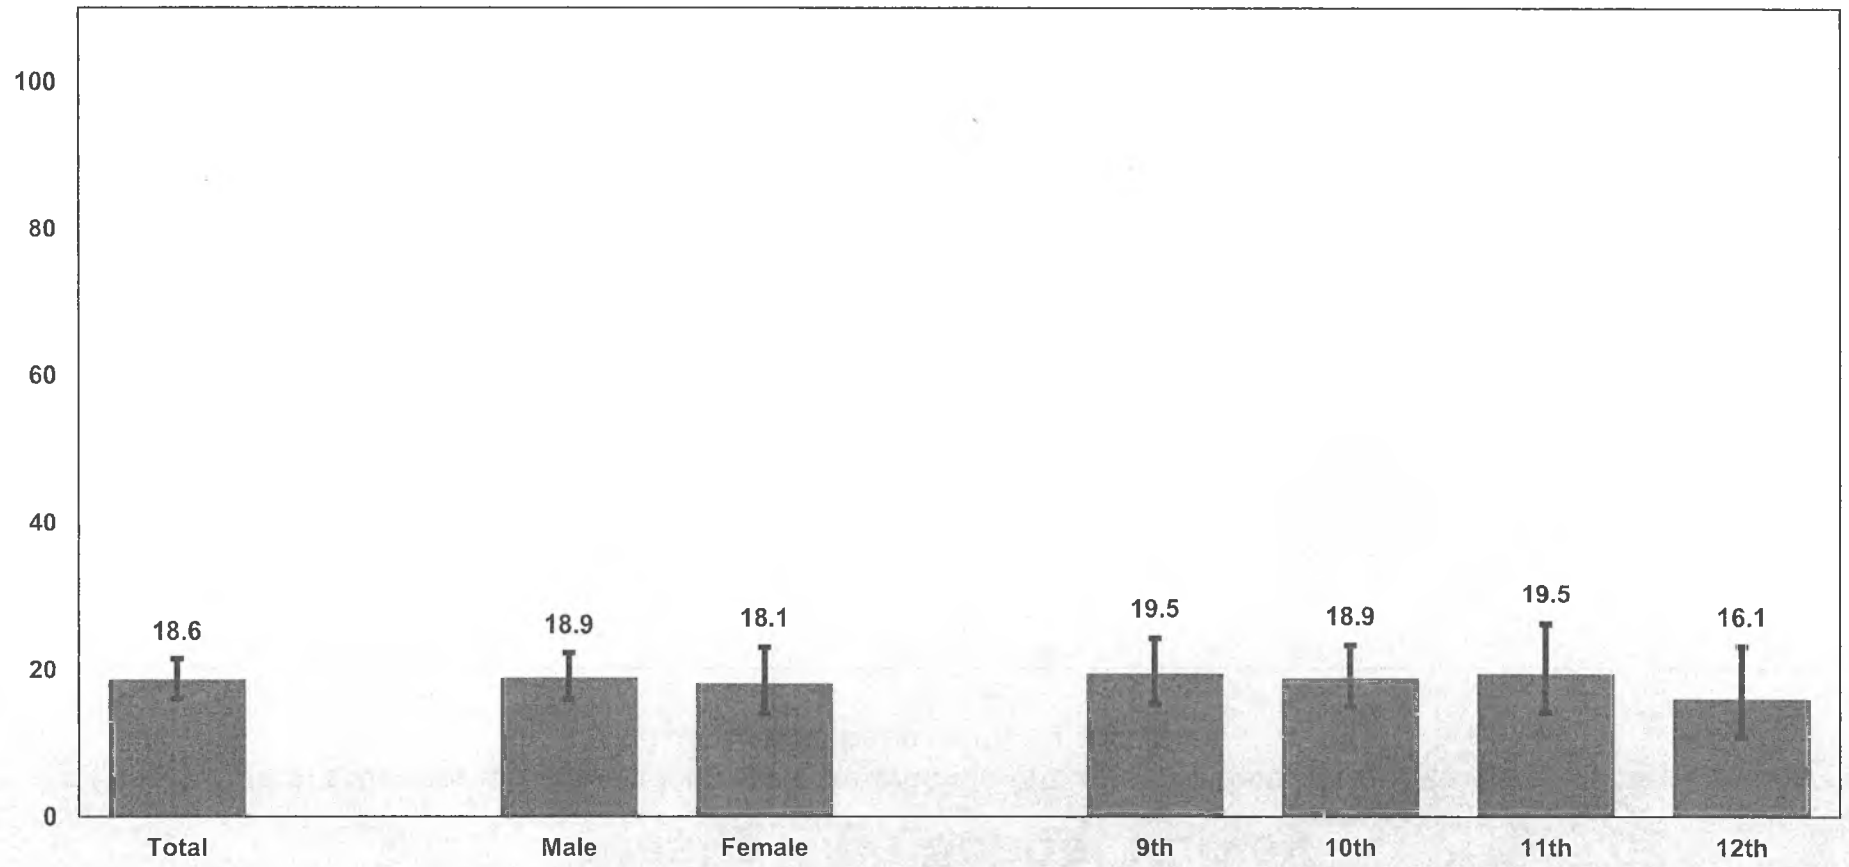


Q9 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who rode one or more times during the past 30 days in a car or other vehicle driven by someone who had been drinking alcohol

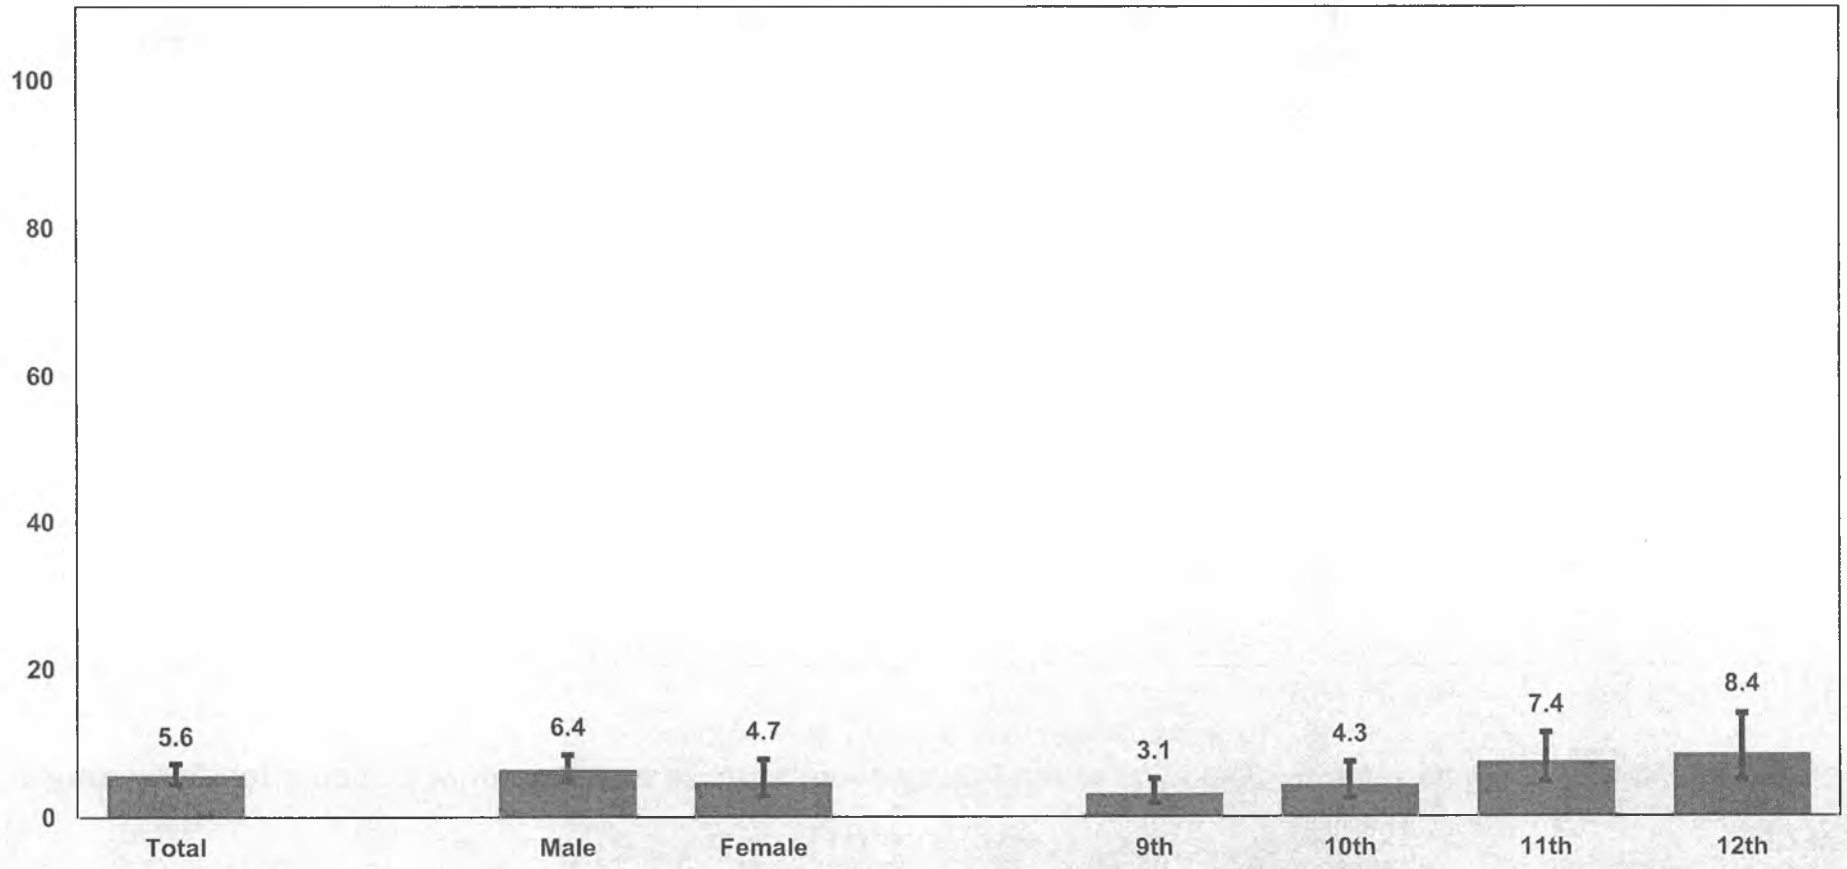


Q10 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who drove a car or other vehicle one or more times during the past 30 days when they had been drinking alcohol

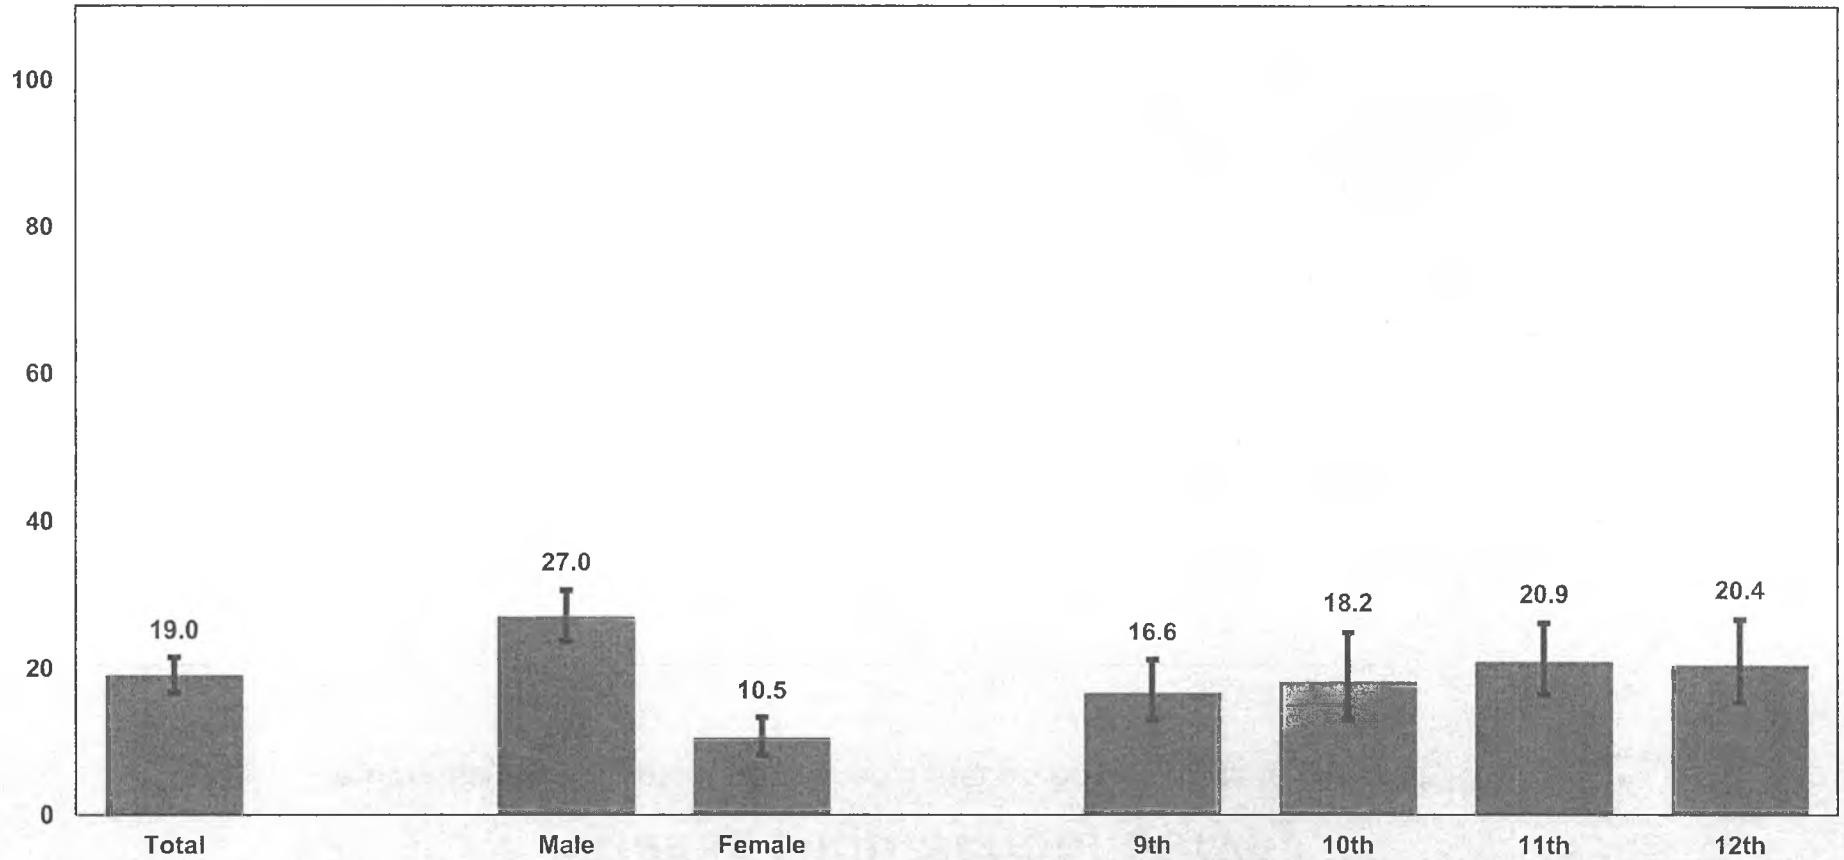


Q11 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who carried a weapon such as a gun, knife, or club on one or more of the past 30 days

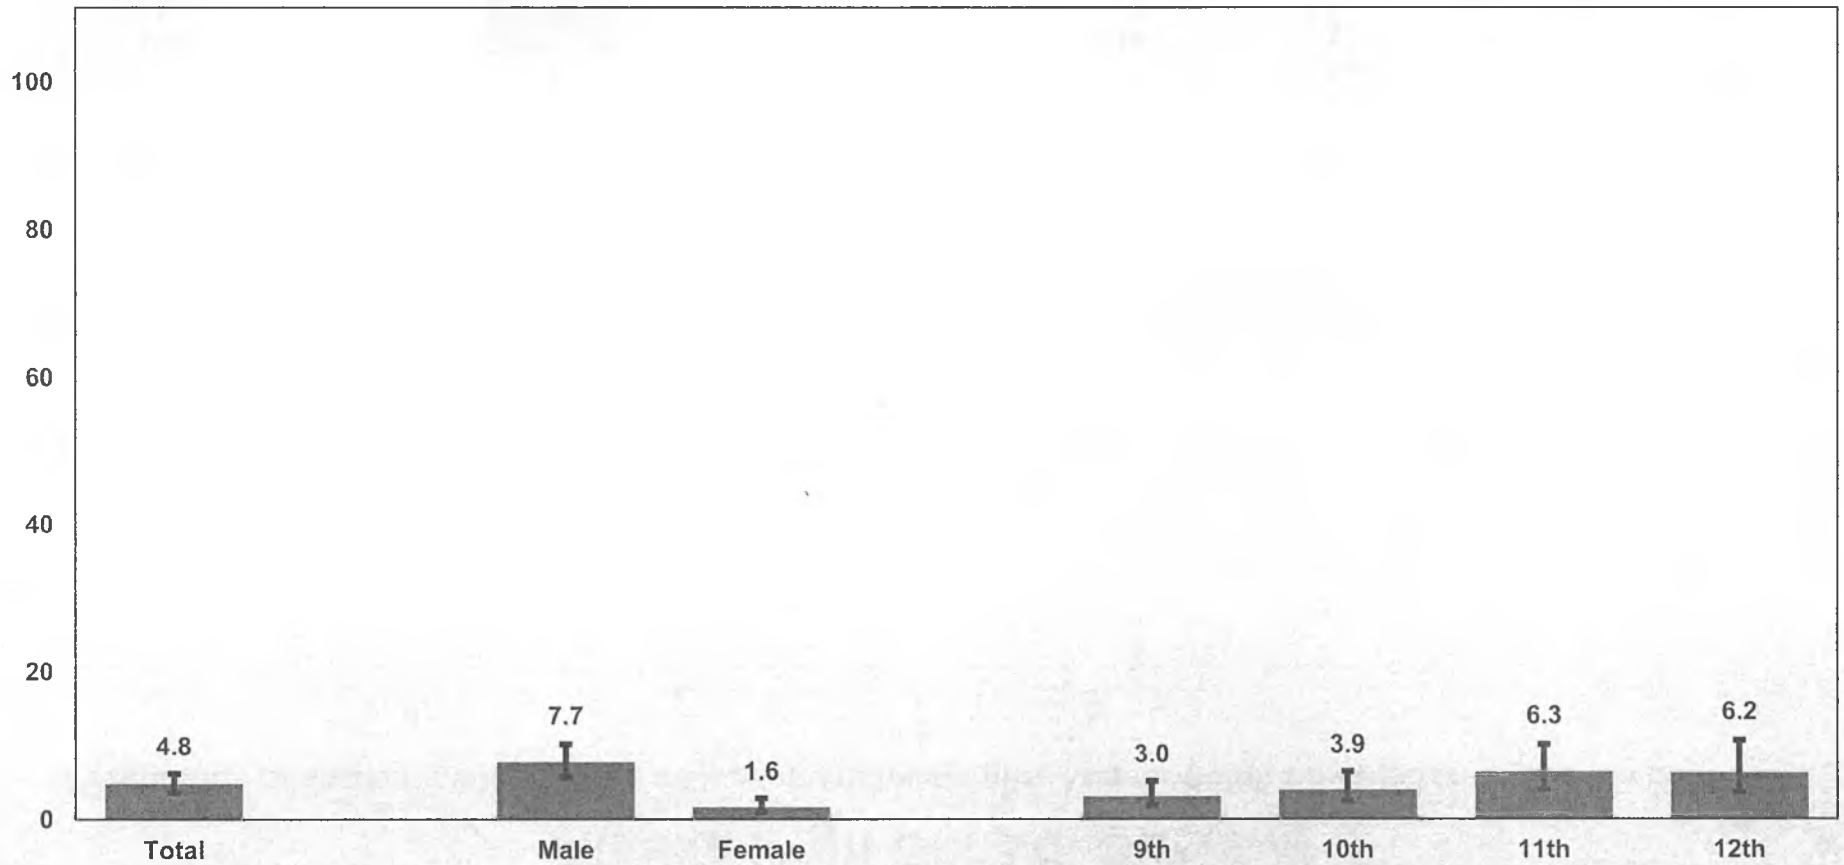


Q12 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who carried a gun on one or more of the past 30 days

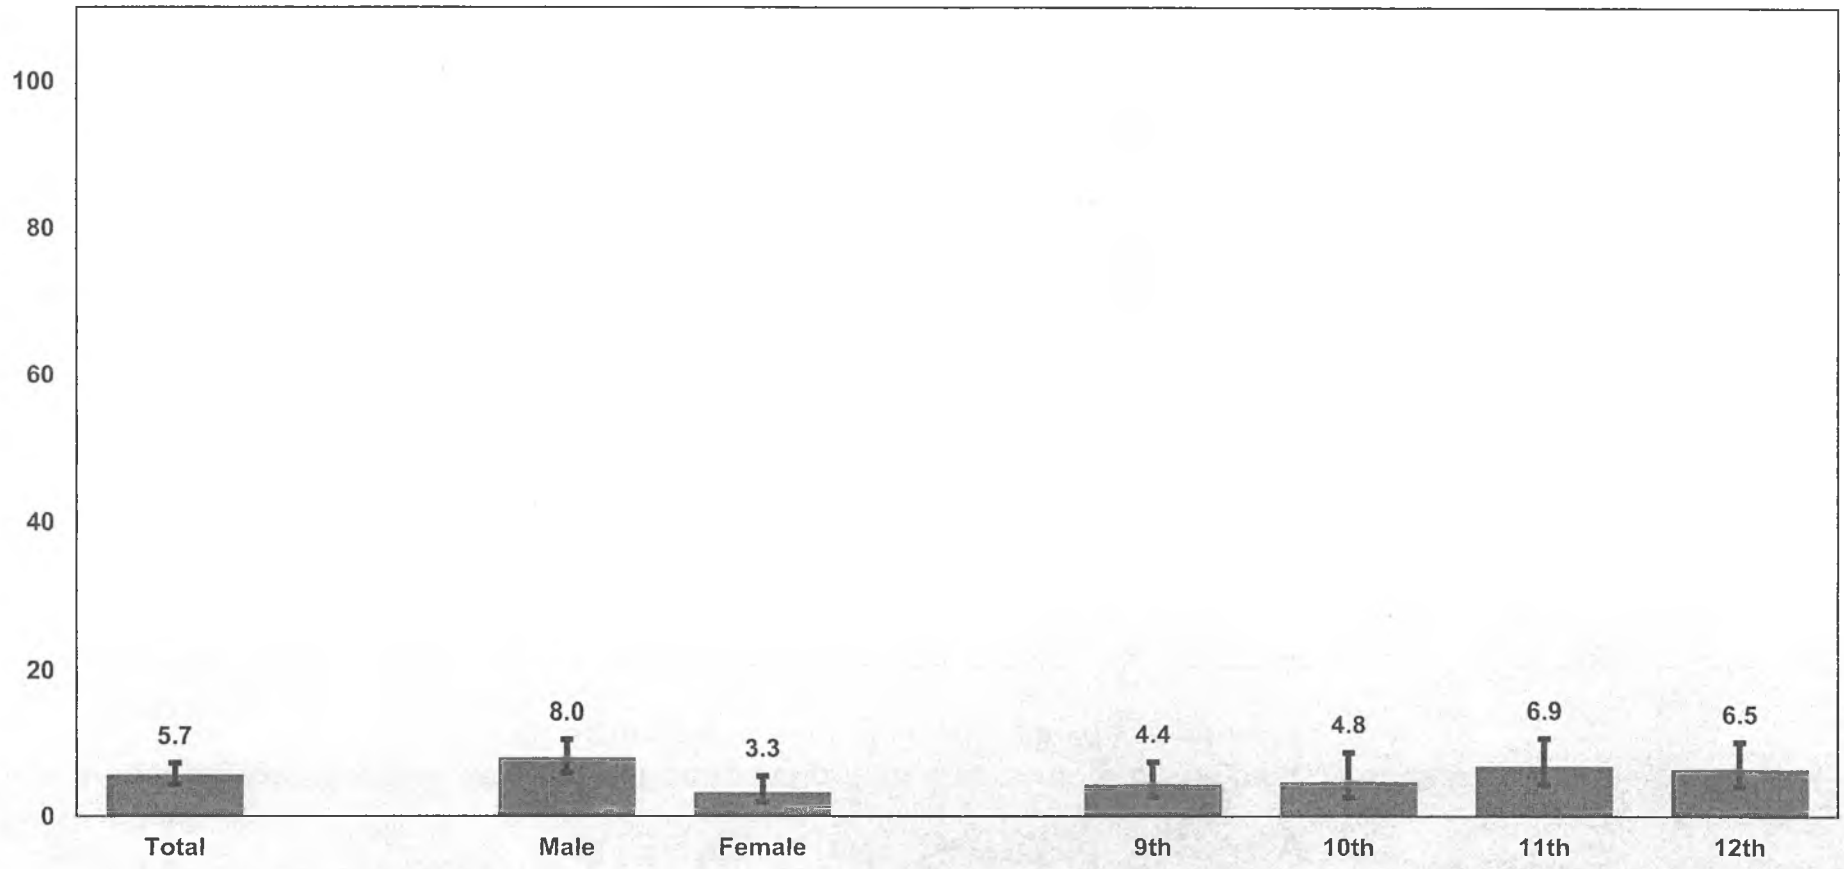


Q13 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who carried a weapon such as a gun, knife, or club on school property on one or more of the past 30 days

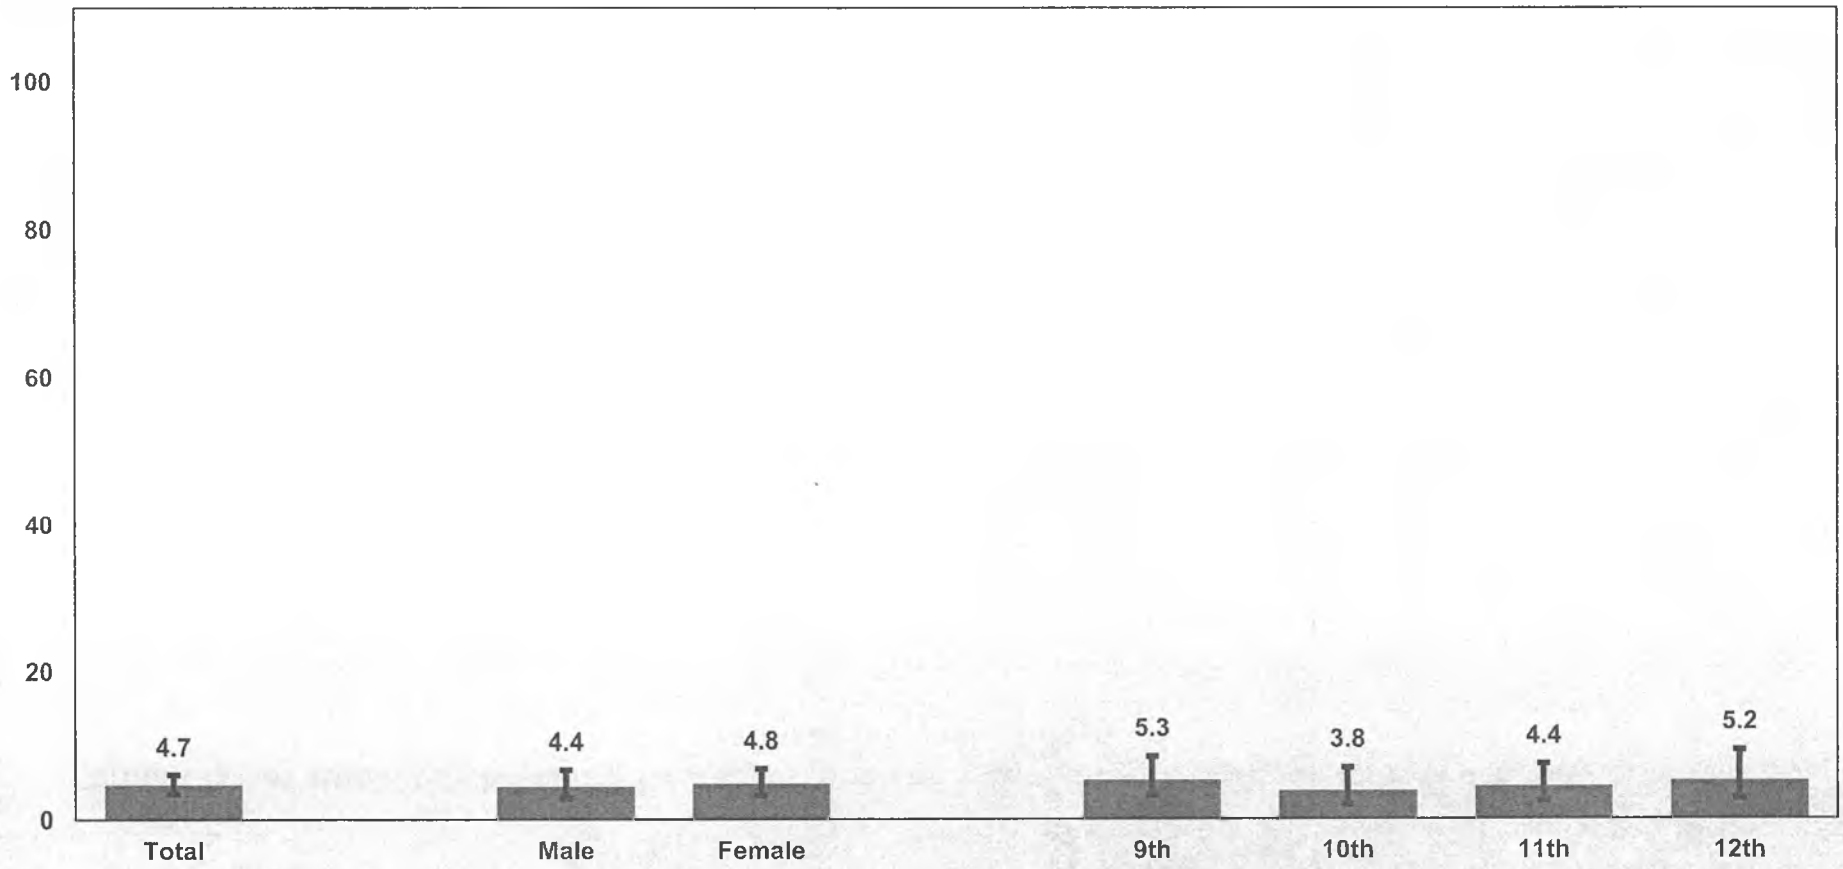


Q14 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who did not go to school on one or more of the past 30 days because they felt they would be unsafe at school or on their way to or from school

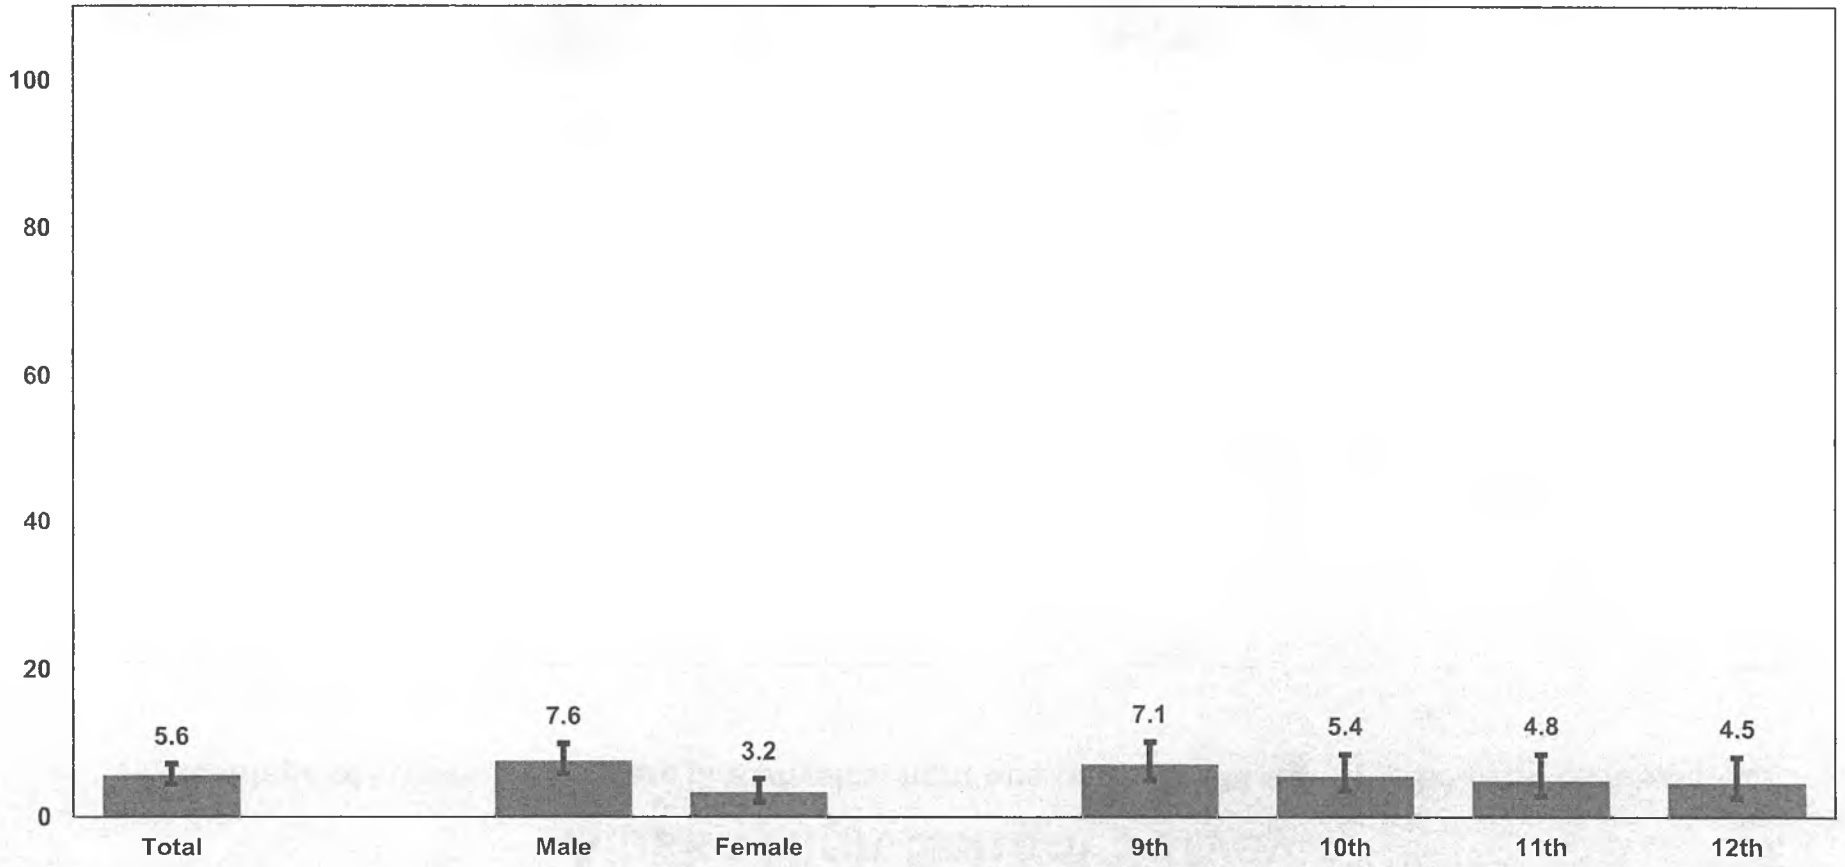


Q15 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who had been threatened or injured with a weapon such as a gun, knife, or club on school property one or more times during the past 12 months

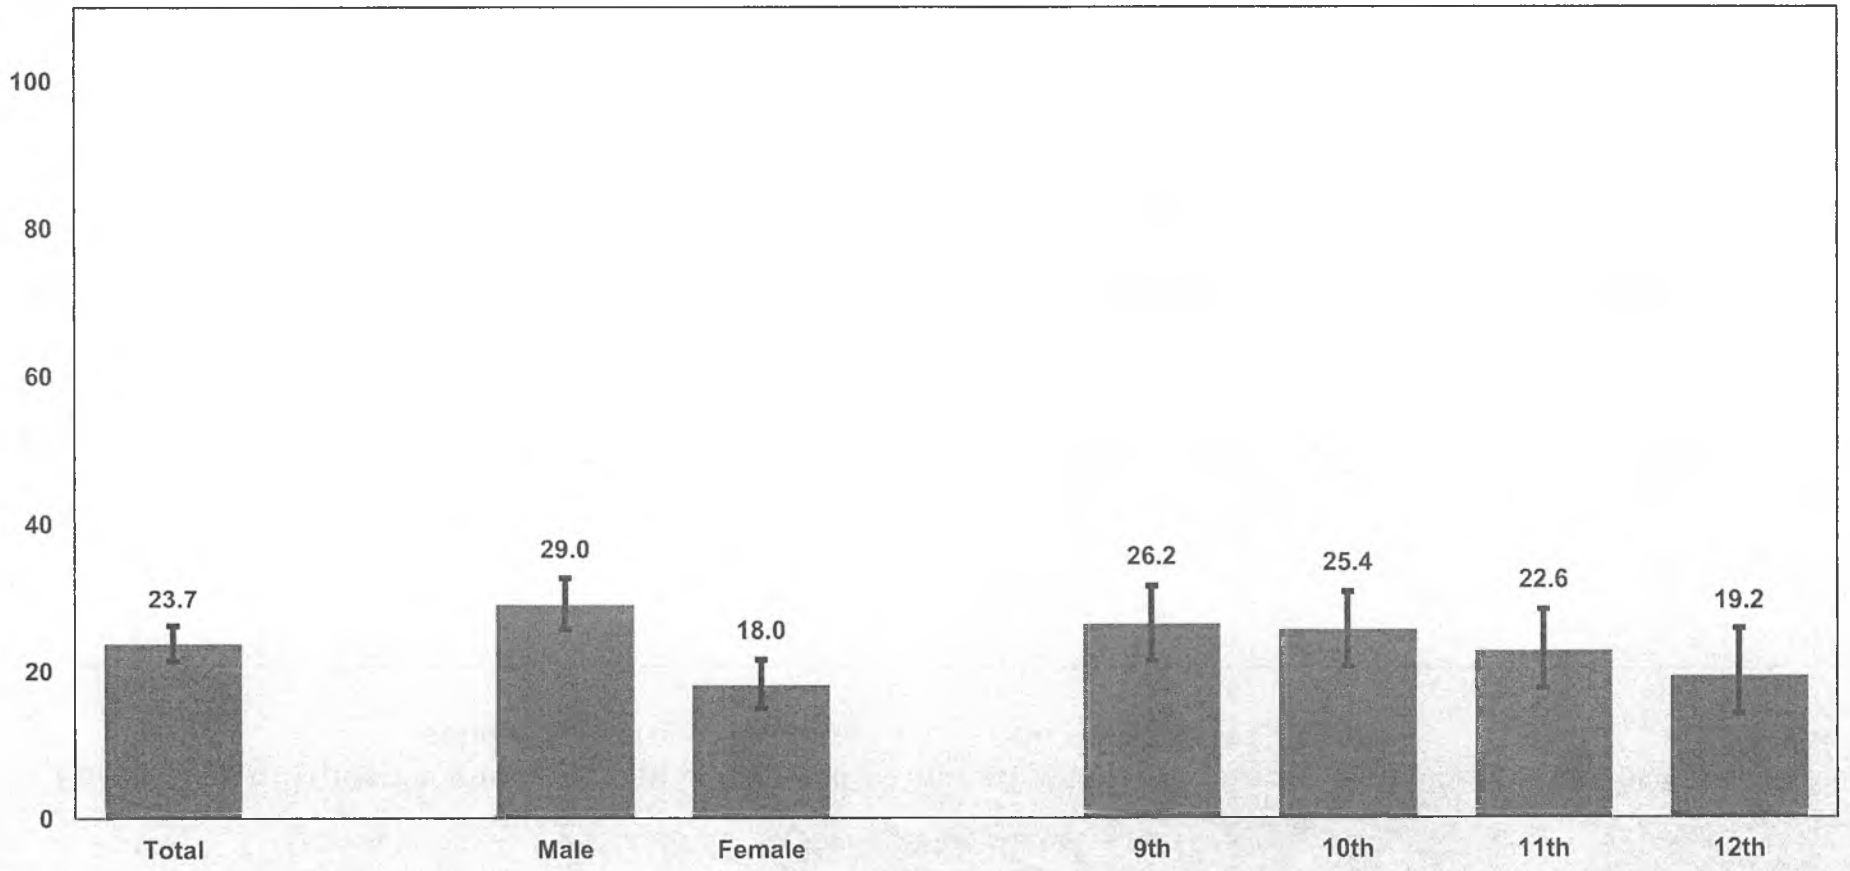


Q16 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who were in a physical fight one or more times during the past 12 months

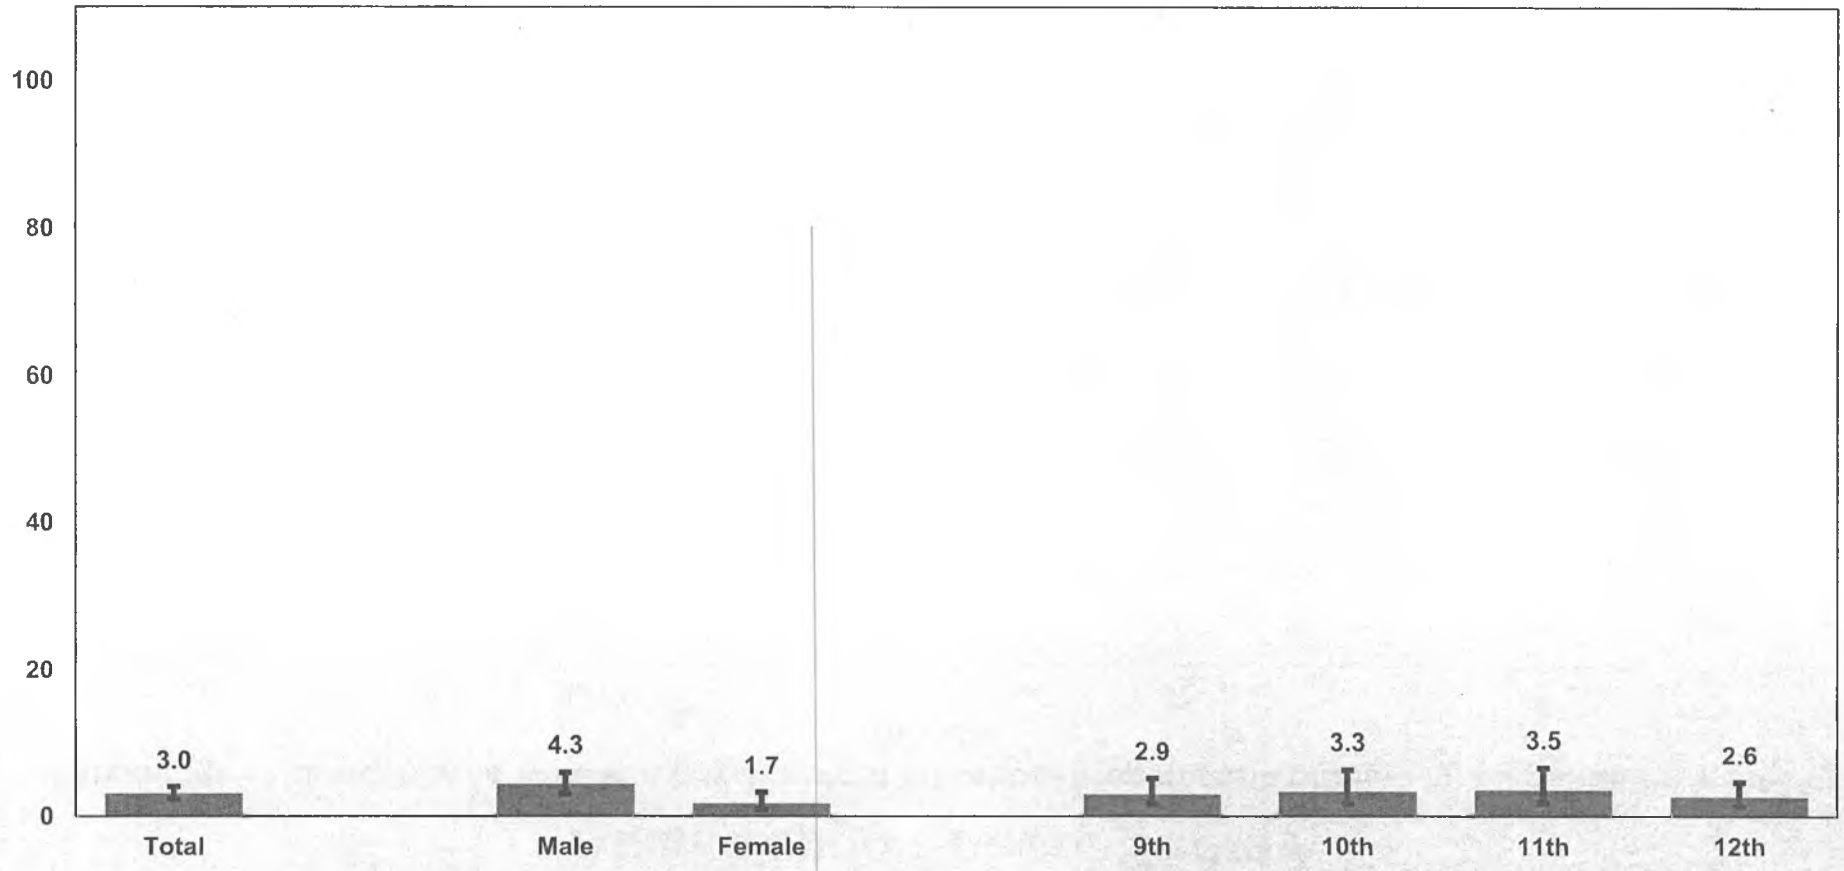


Q17 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who were in a physical fight one or more times during the past 12 months in which they were injured and had to be treated by a doctor or nurse

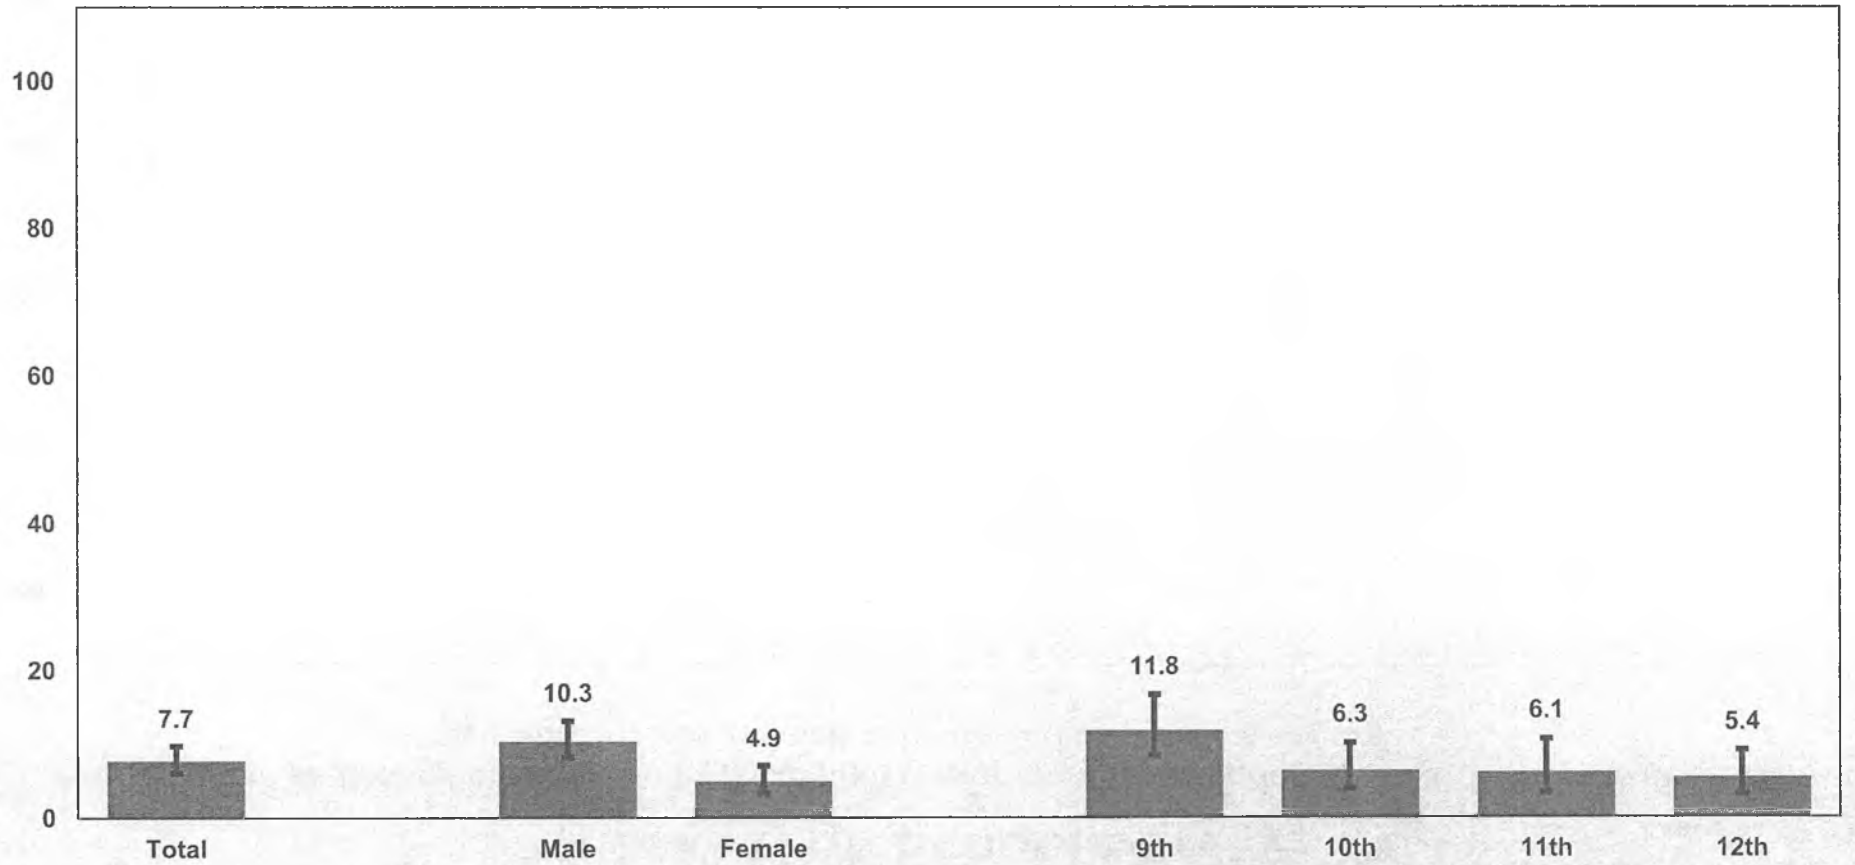


Q18 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who were in a physical fight on school property one or more times during the past 12 months

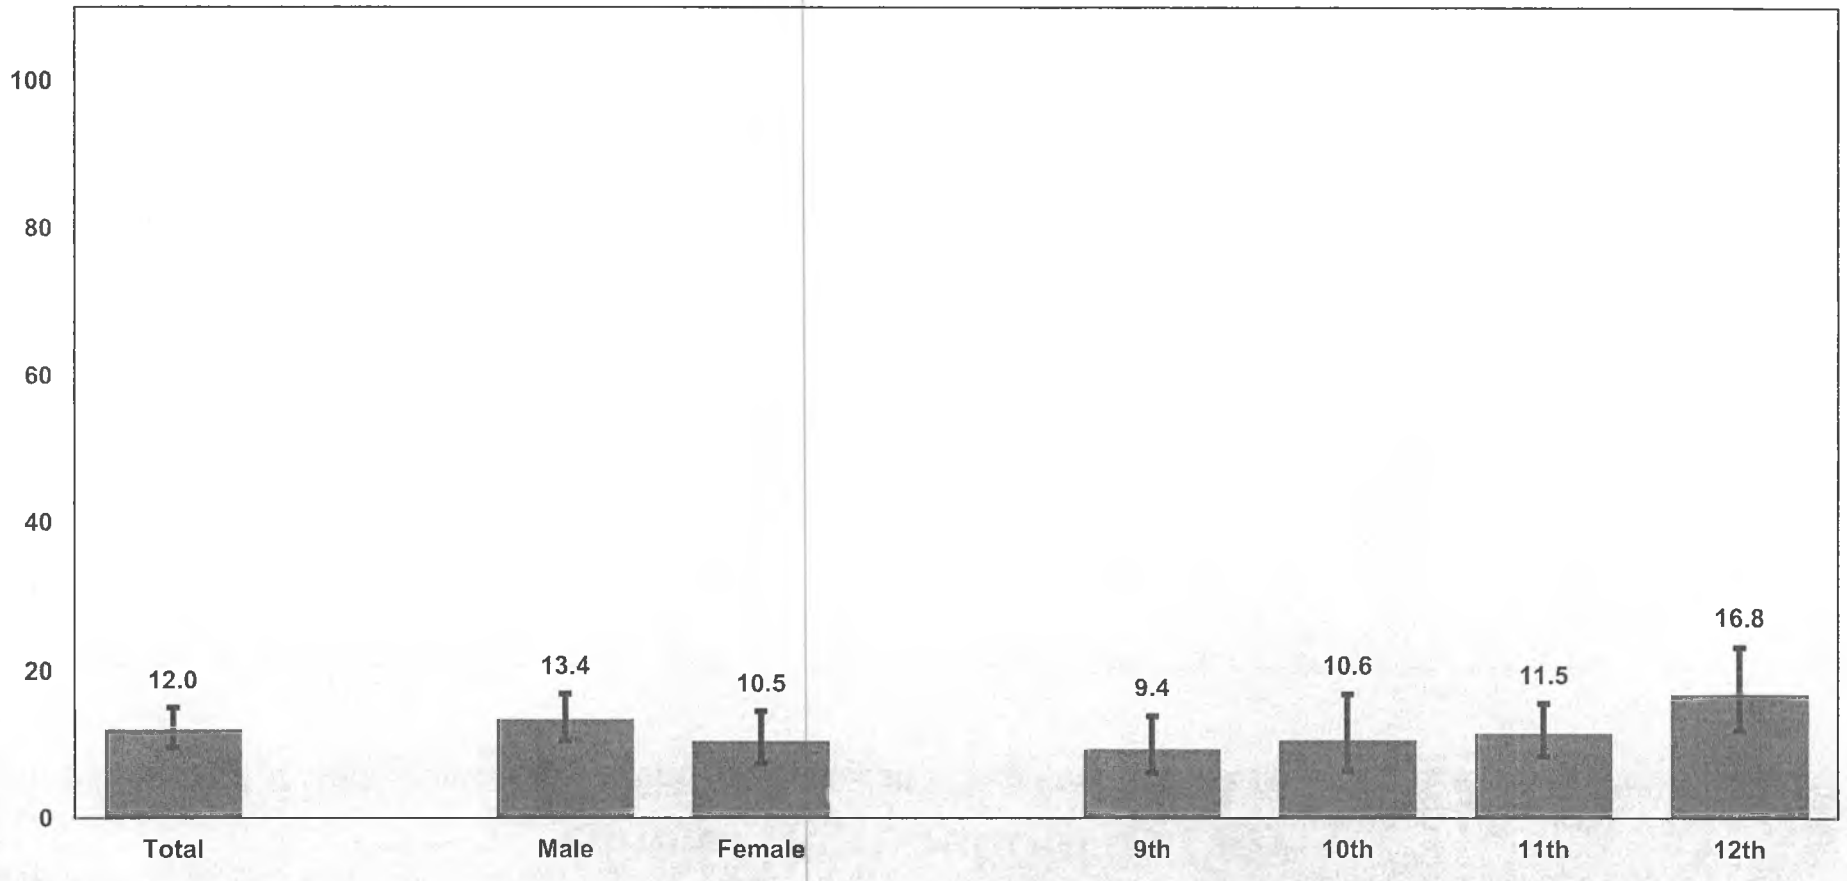


Q19 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who were ever hit, slapped, or physically hurt on purpose by their boyfriend or girlfriend during the past 12 months

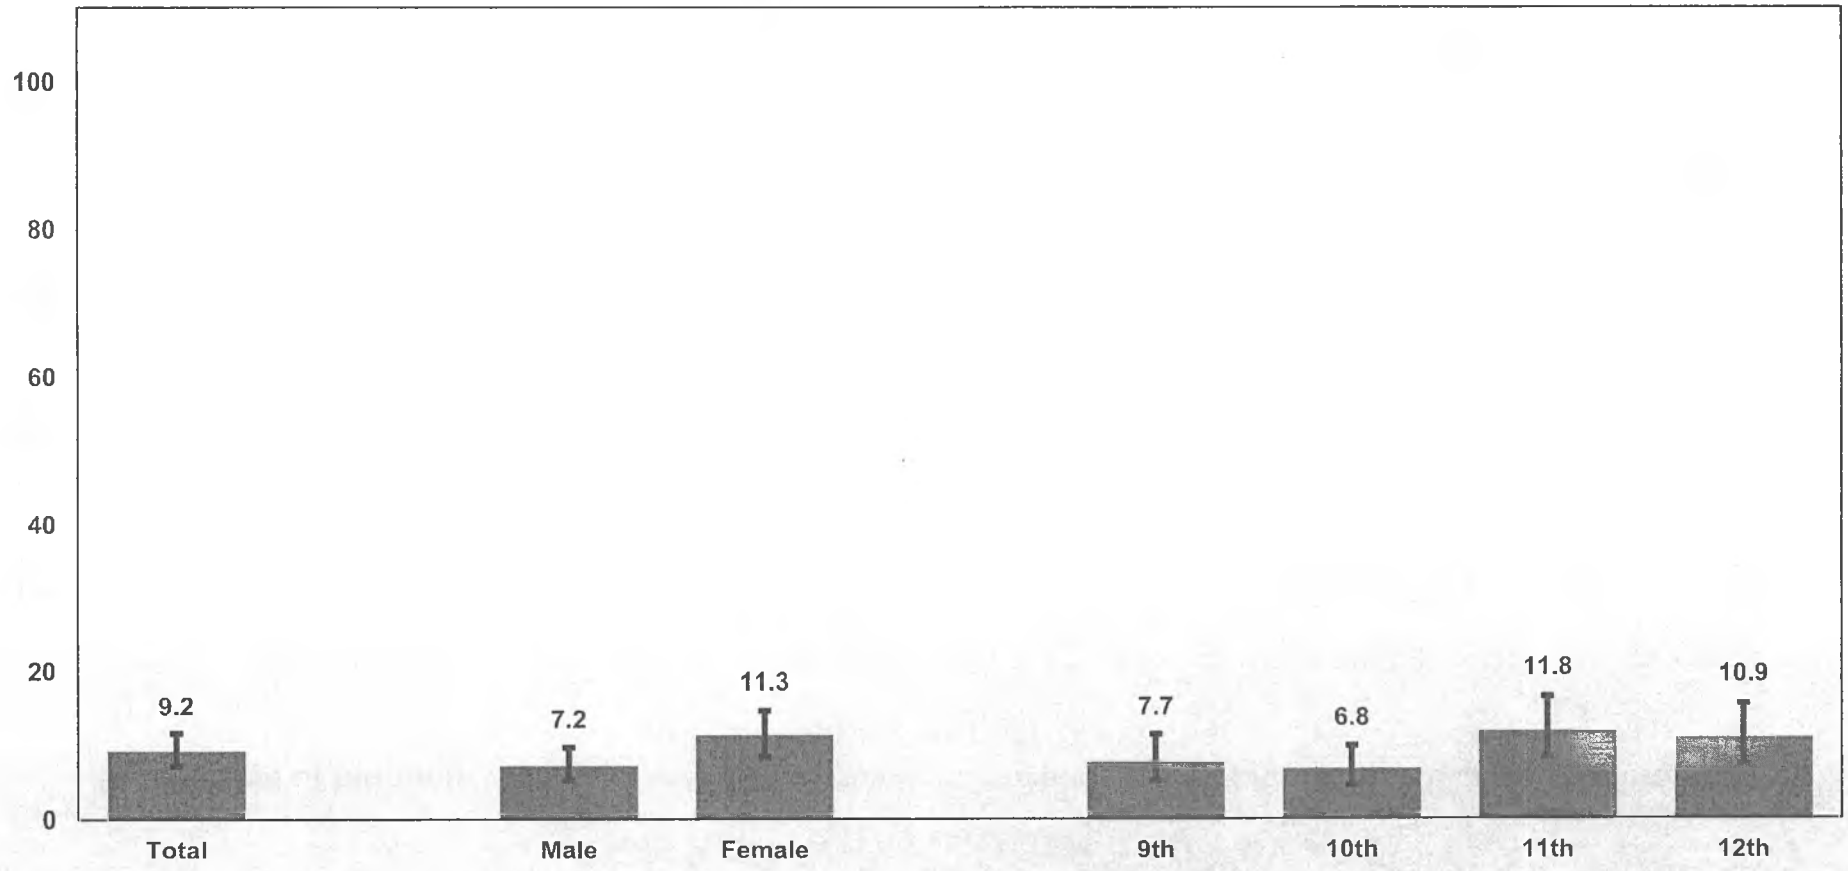


Q20 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who had ever been physically forced to have sexual intercourse when they did not want to

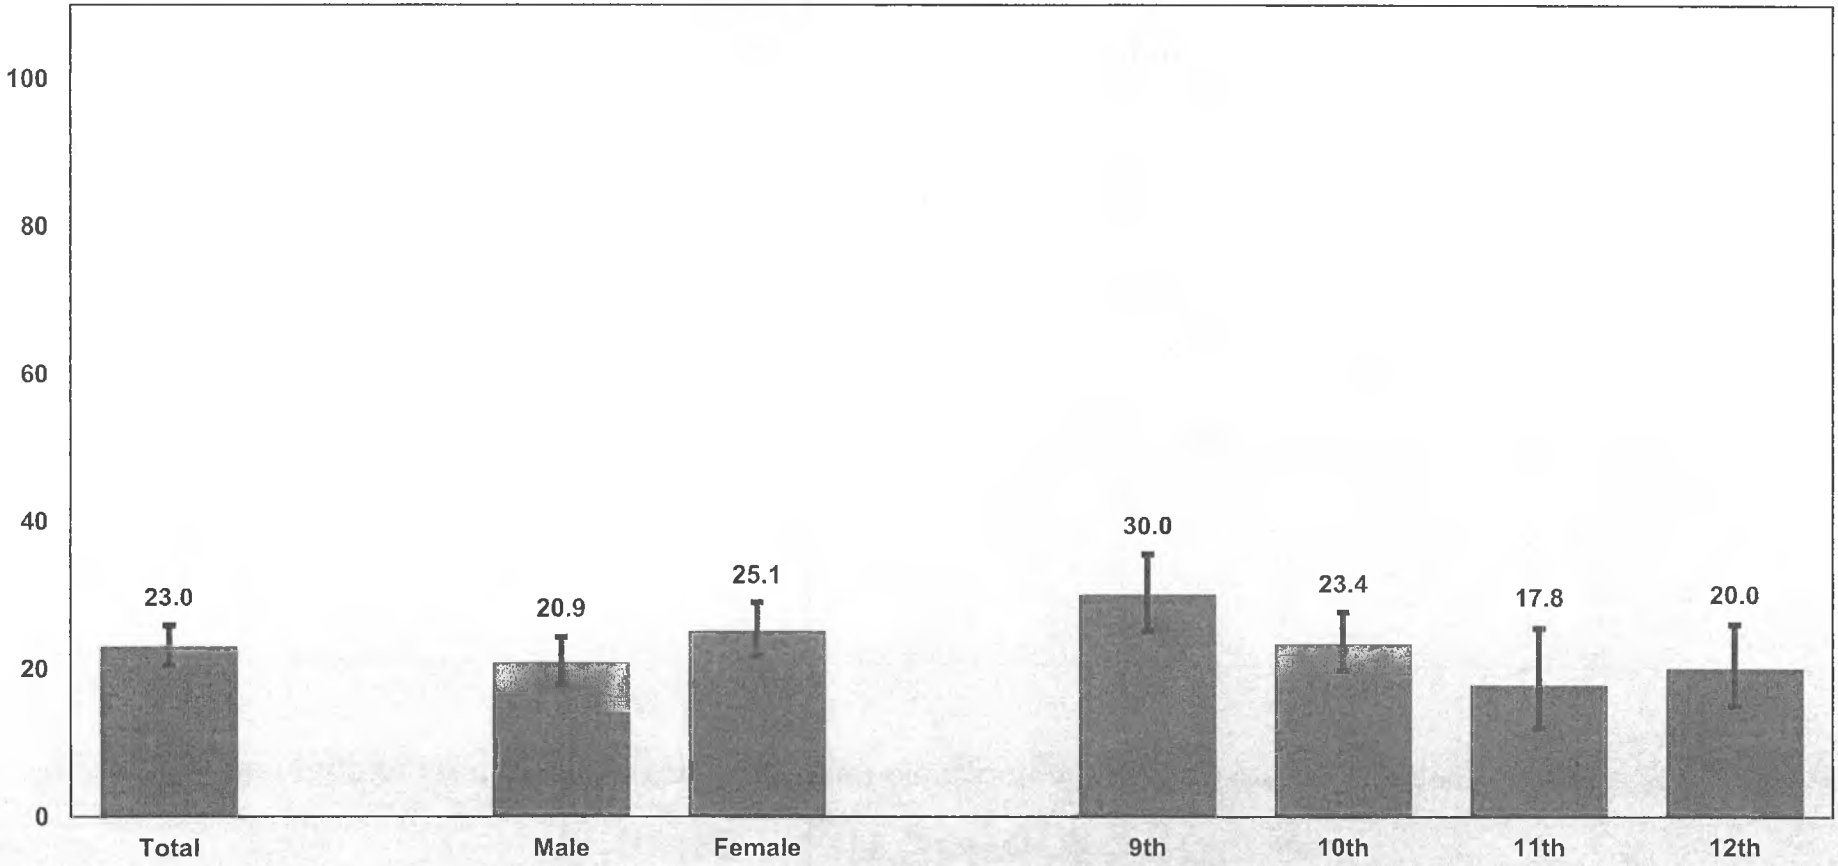


Q21 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who had ever been bullied on school property during the past 12 months

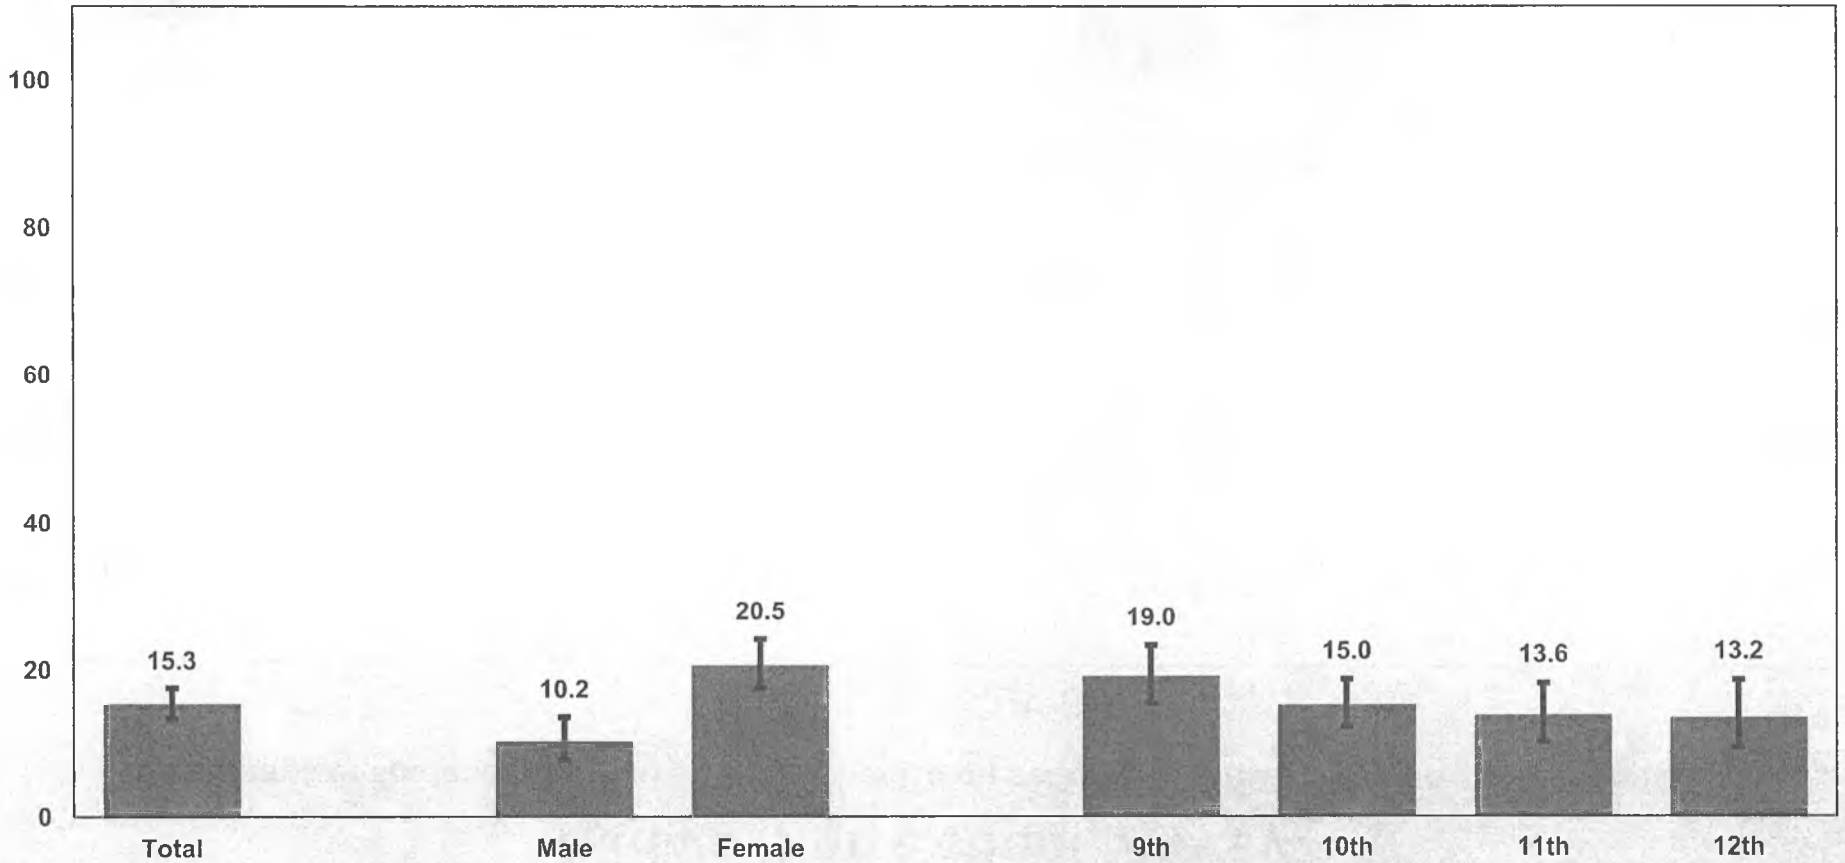


Q22 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who had ever been electronically bullied during the past 12 months

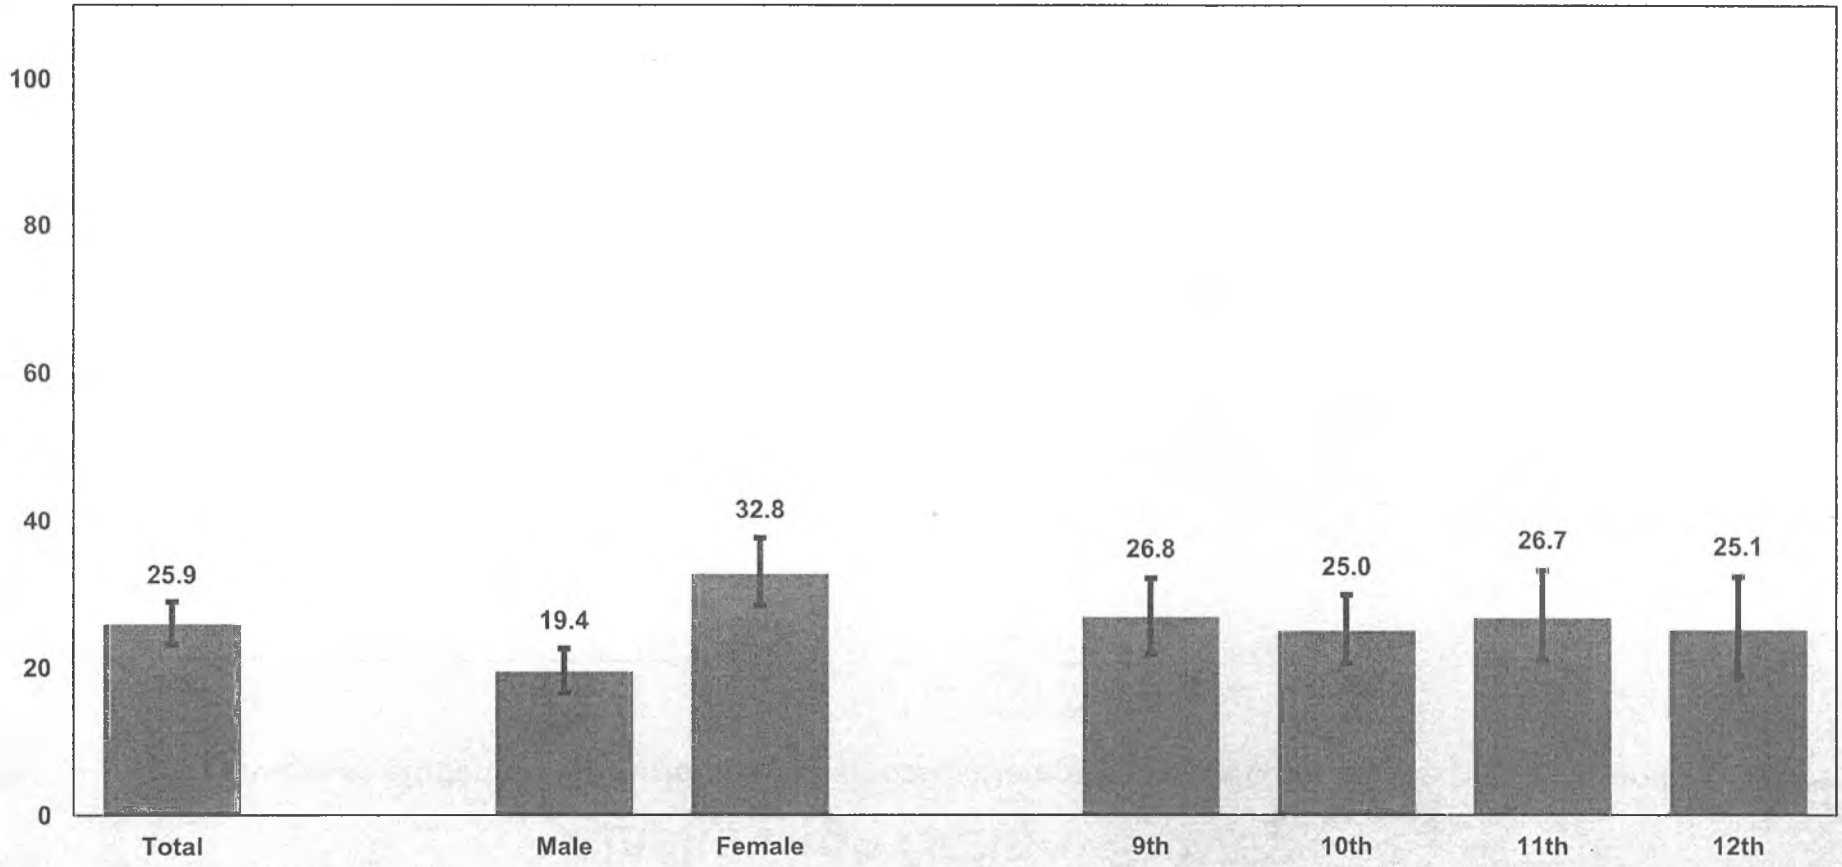


Q23 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who felt so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities during the past 12 months

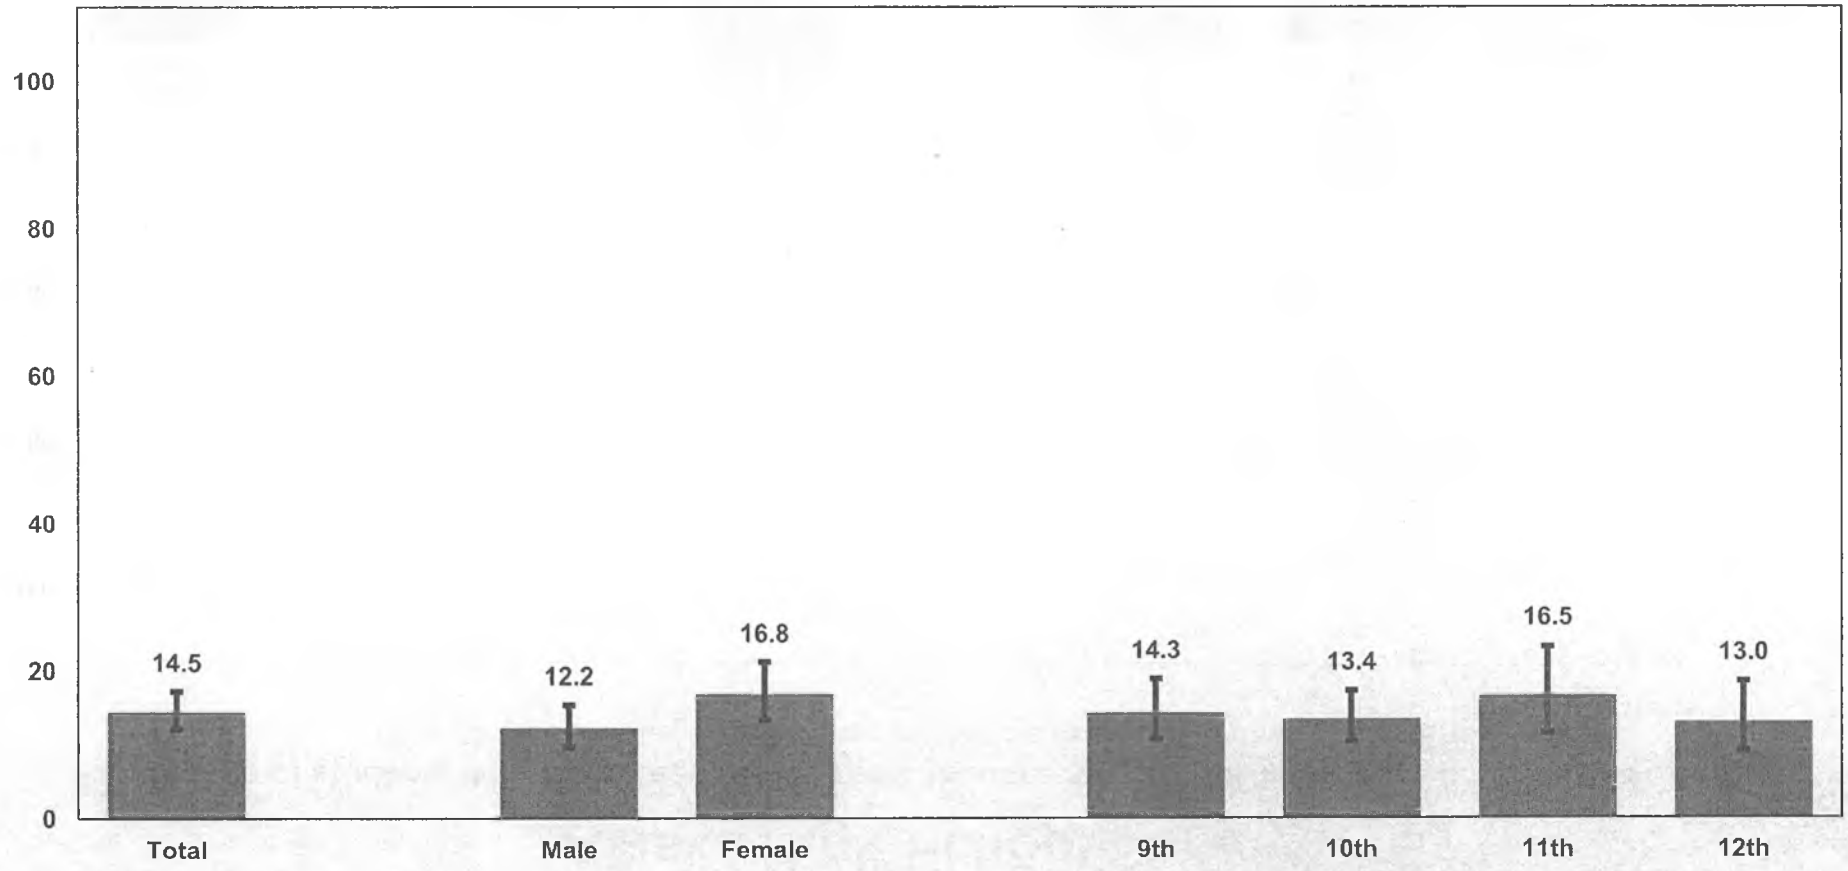


Q24 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who seriously considered attempting suicide during the past 12 months

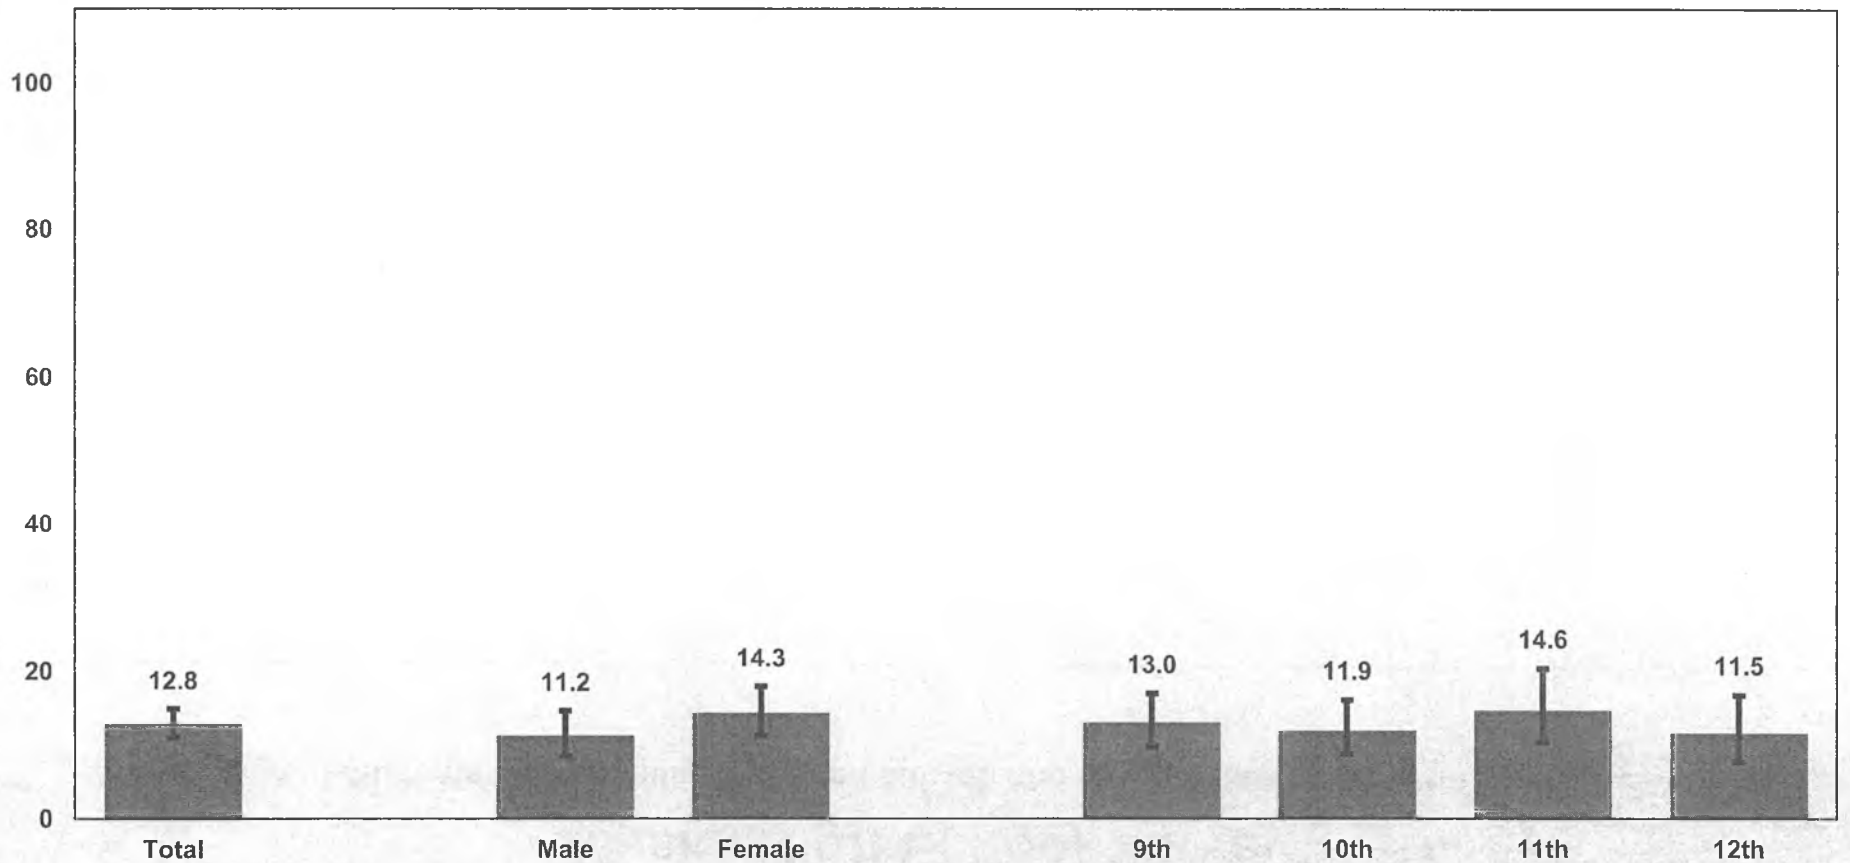


Q25 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who made a plan about how they would attempt suicide during the past 12 months

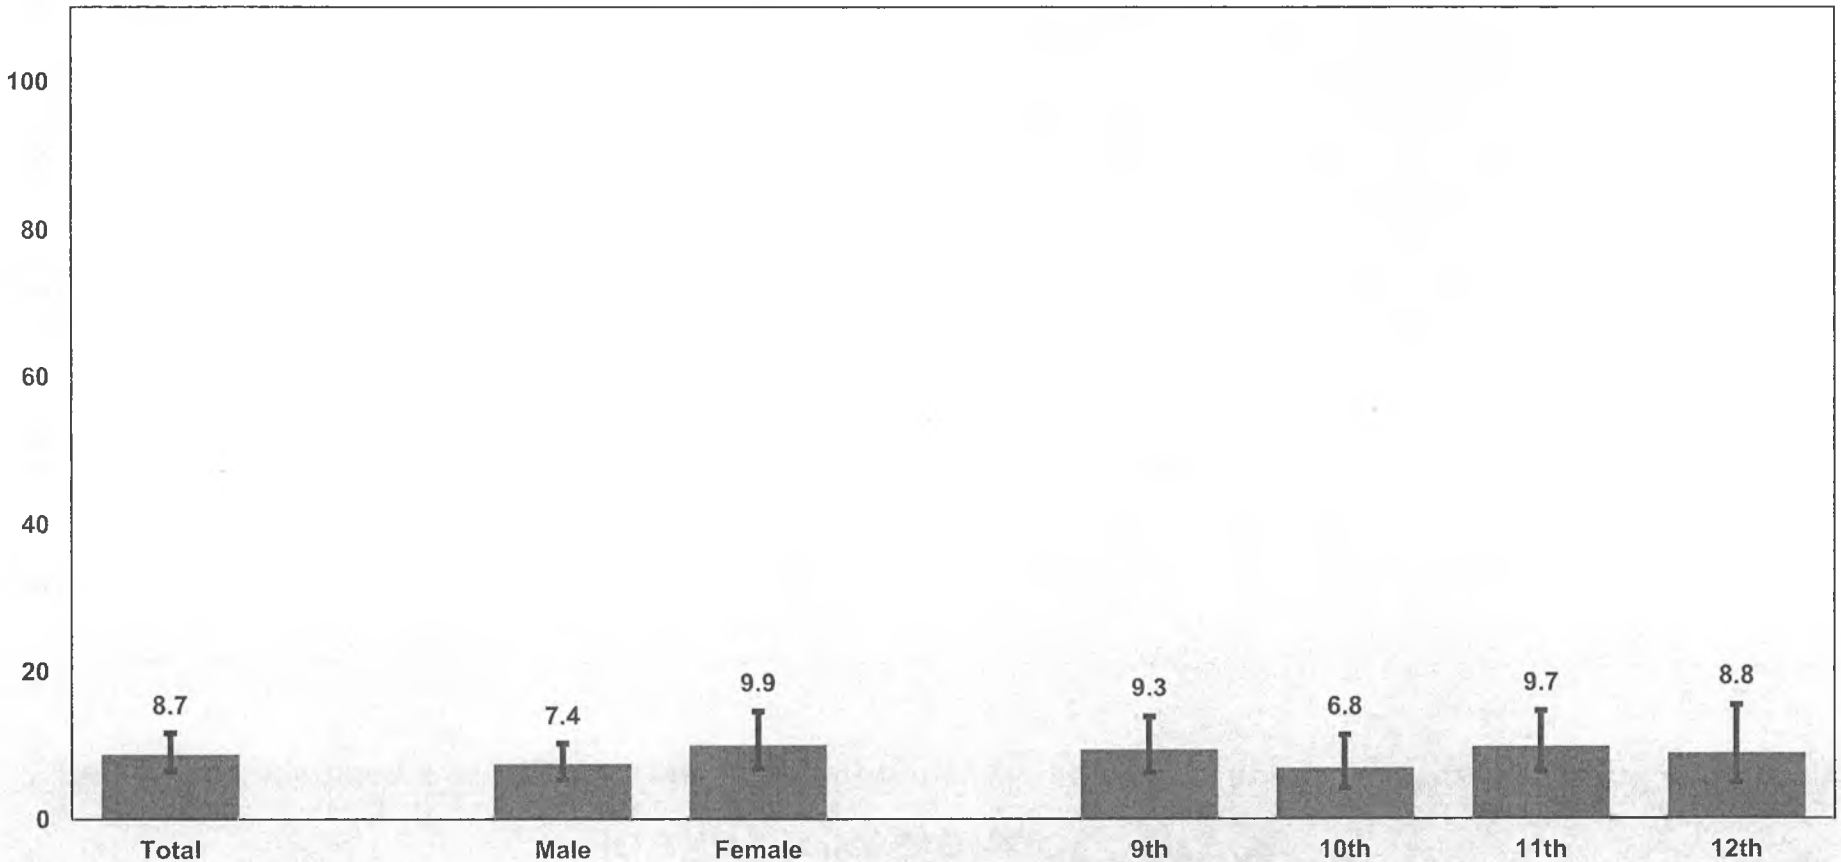


Q26 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who actually attempted suicide one or more times during the past 12 months

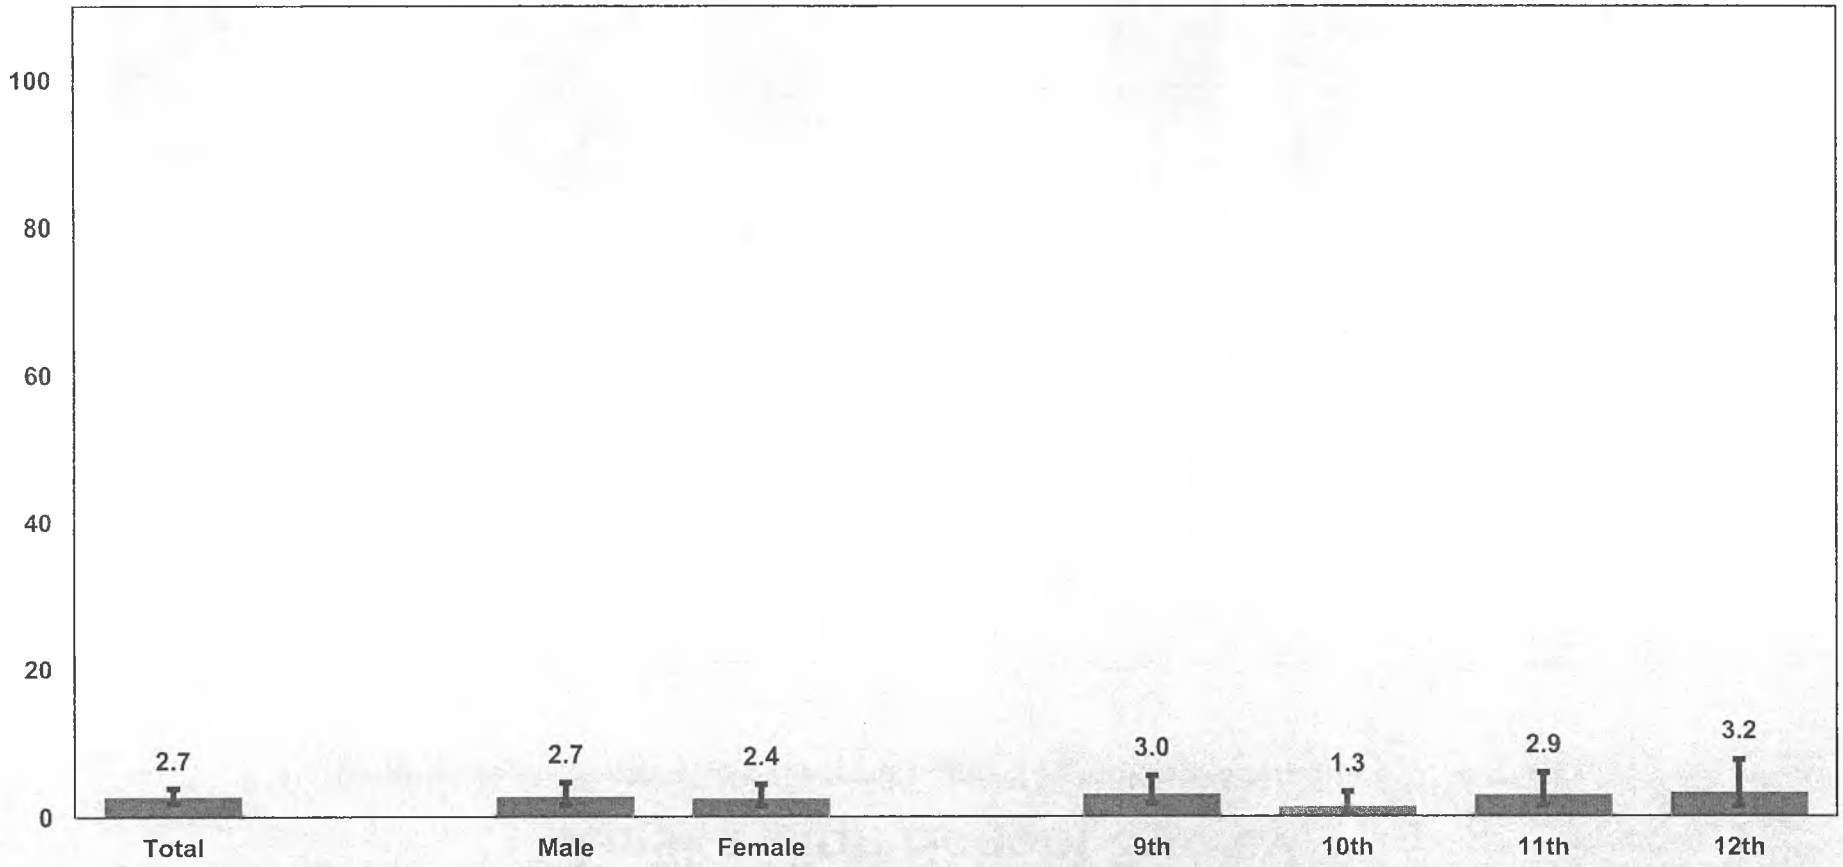


Q27 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who made a suicide attempt during the past 12 months that resulted in an injury, poisoning, or overdose that had to be treated by a doctor or nurse

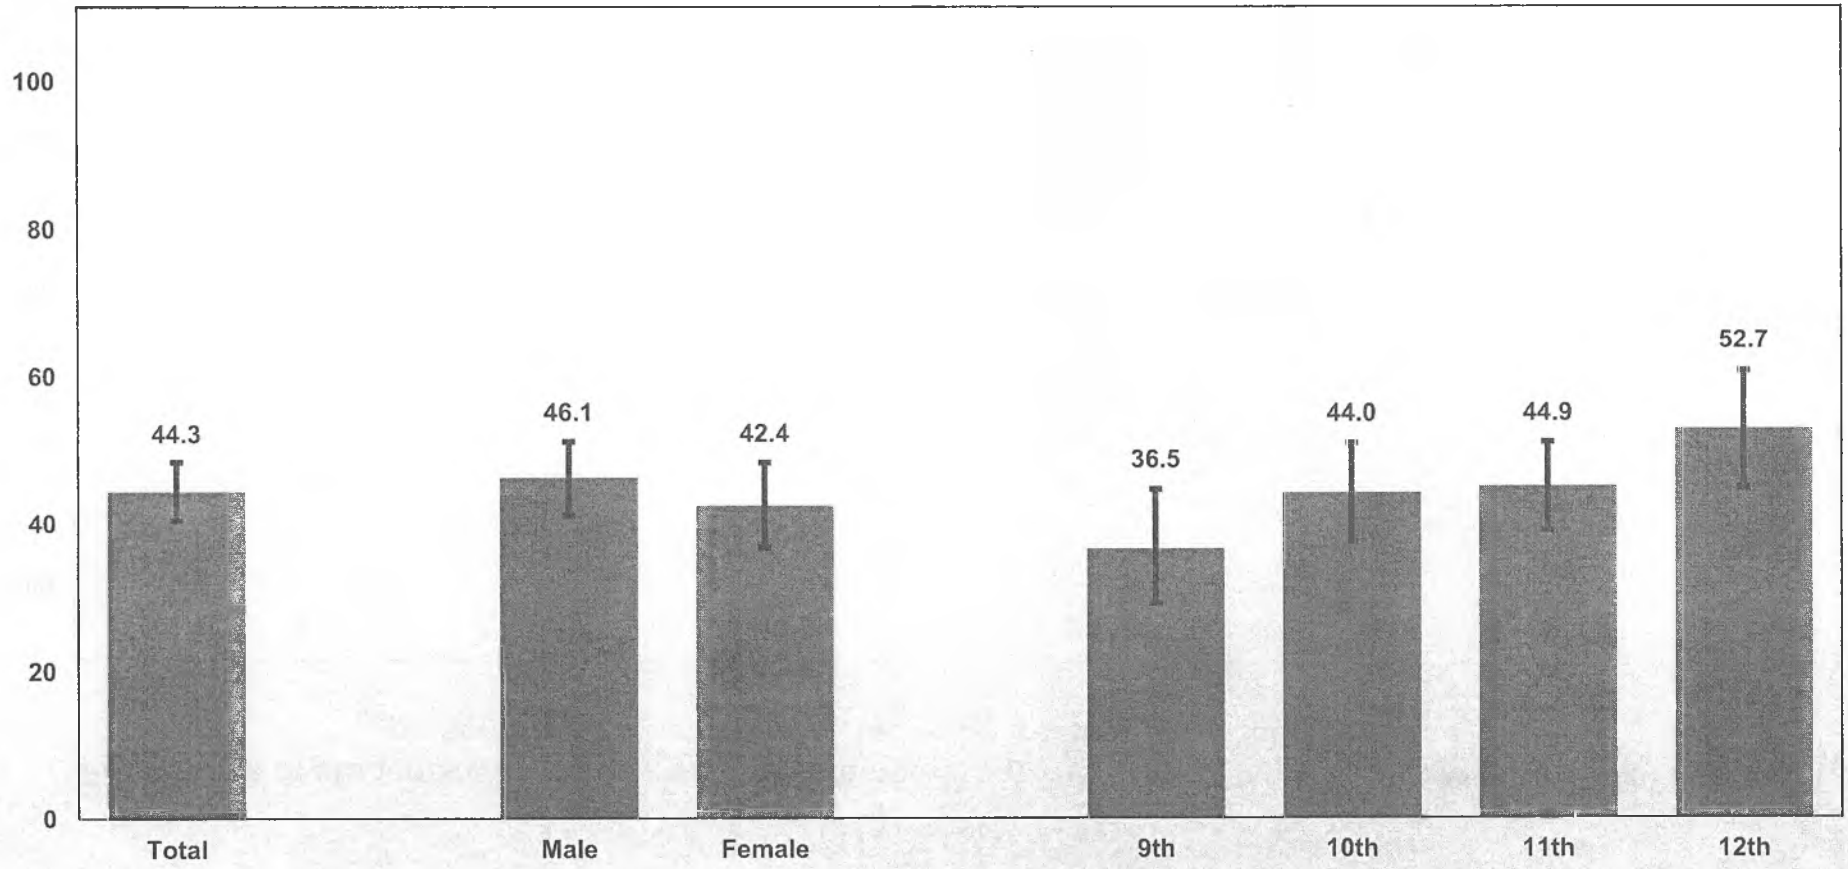


Q28 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who ever tried cigarette smoking, even one or two puffs

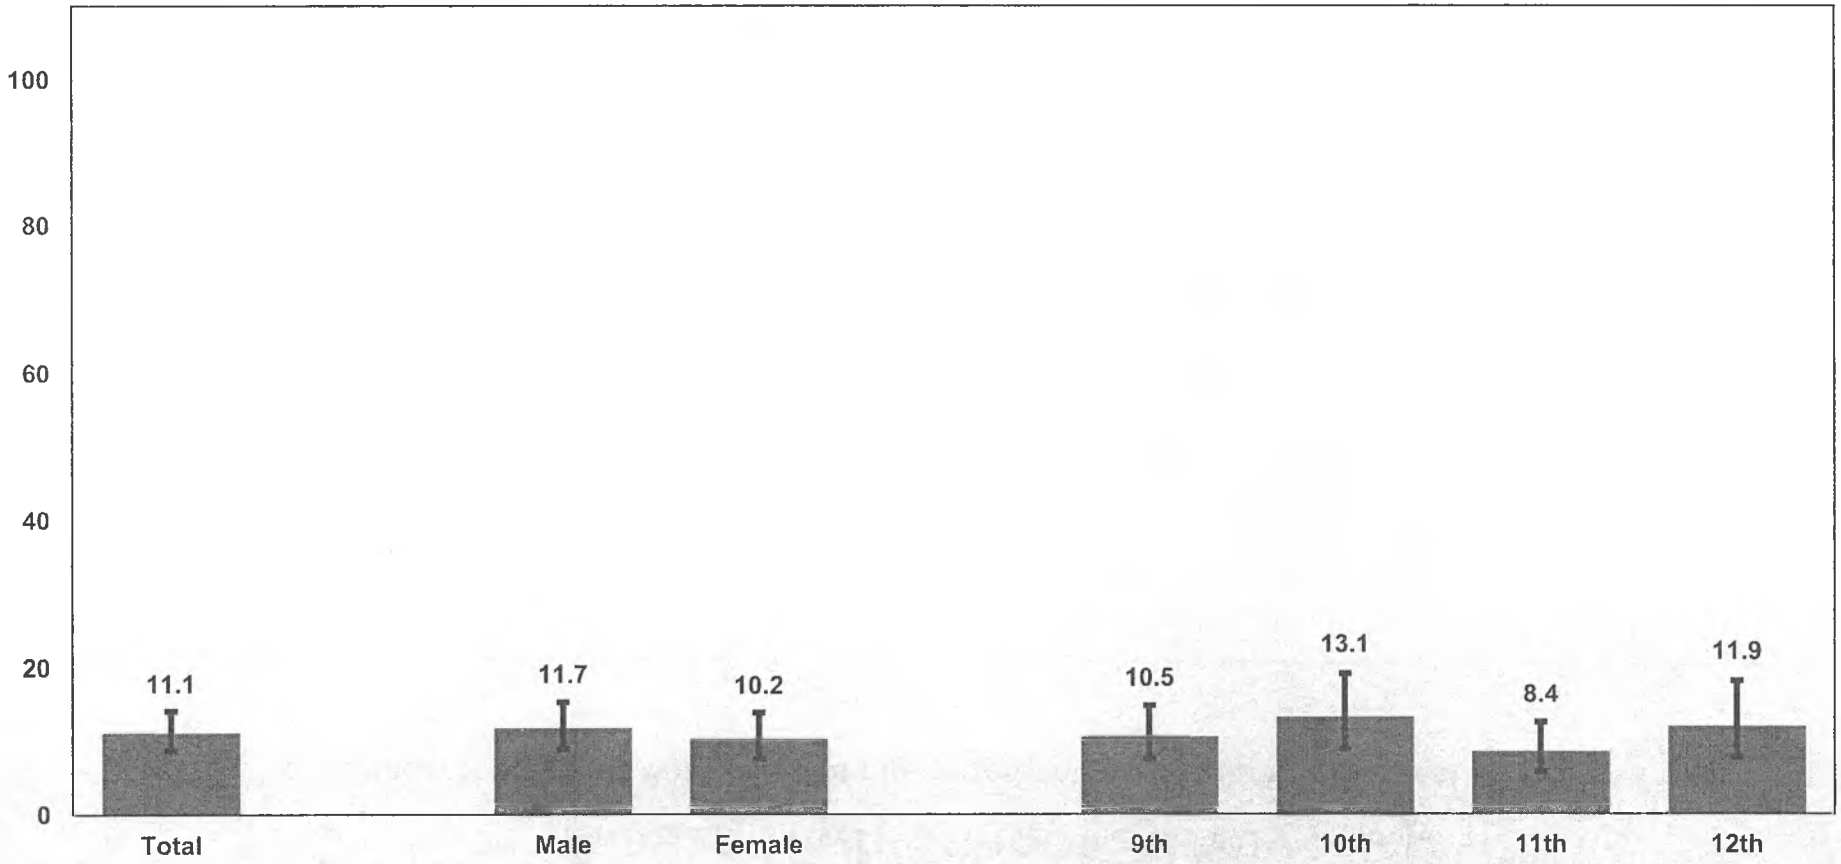


Q29 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who smoked a whole cigarette for the first time before age 13 years

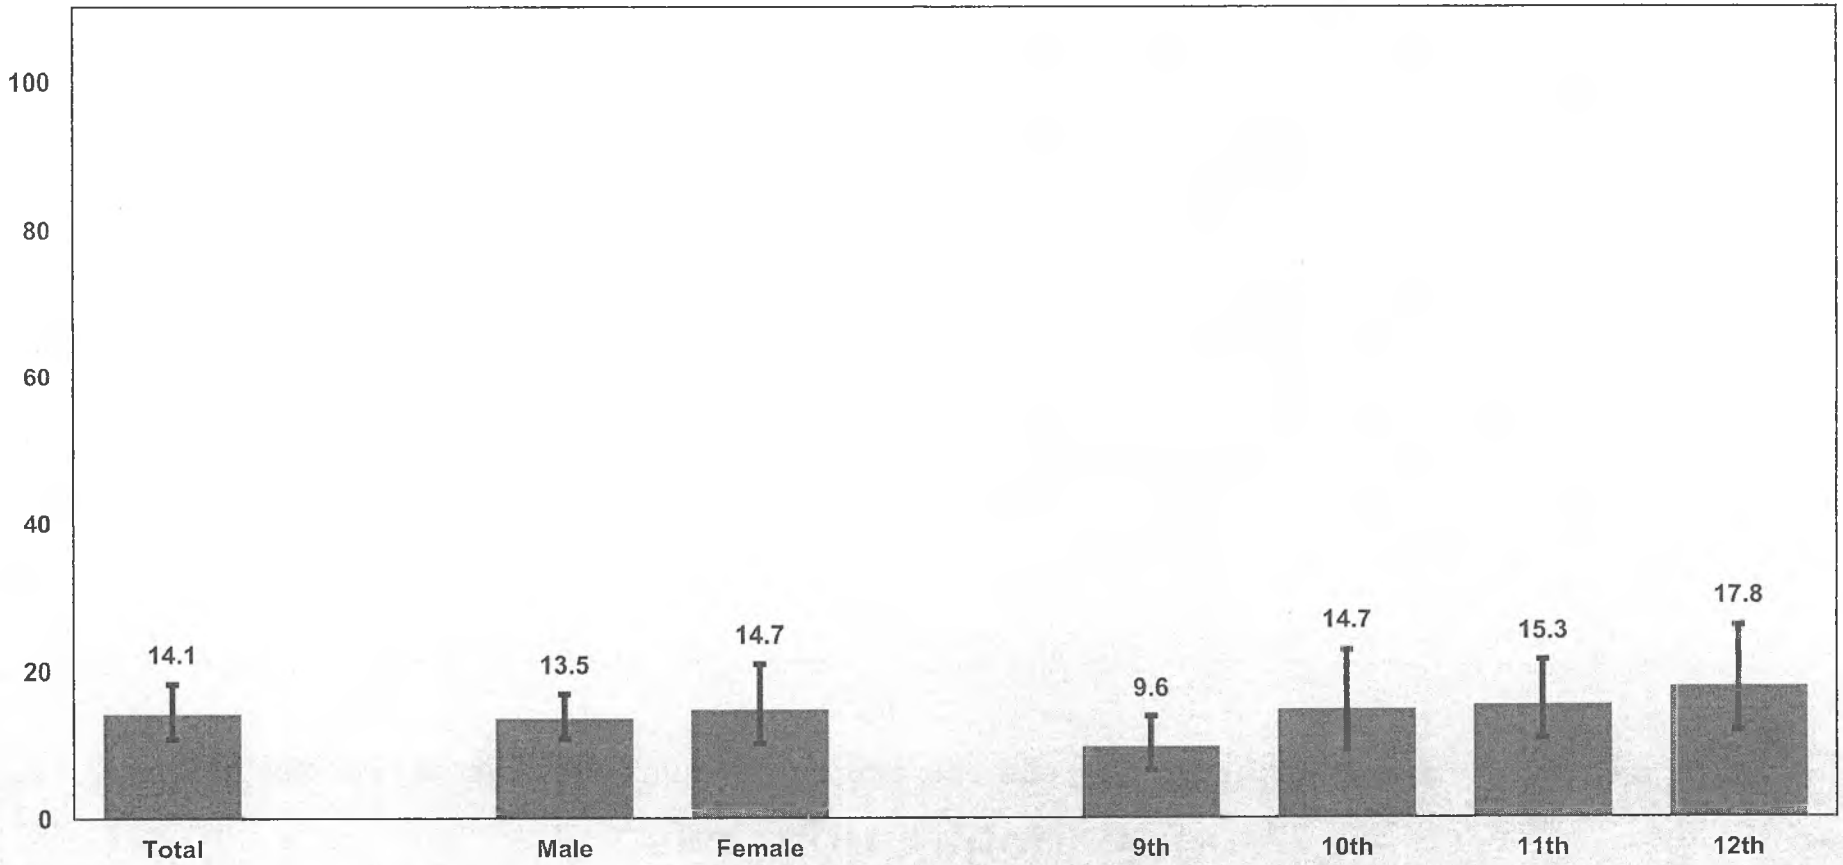


Q30 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who smoked cigarettes on one or more of the past 30 days



Q31 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

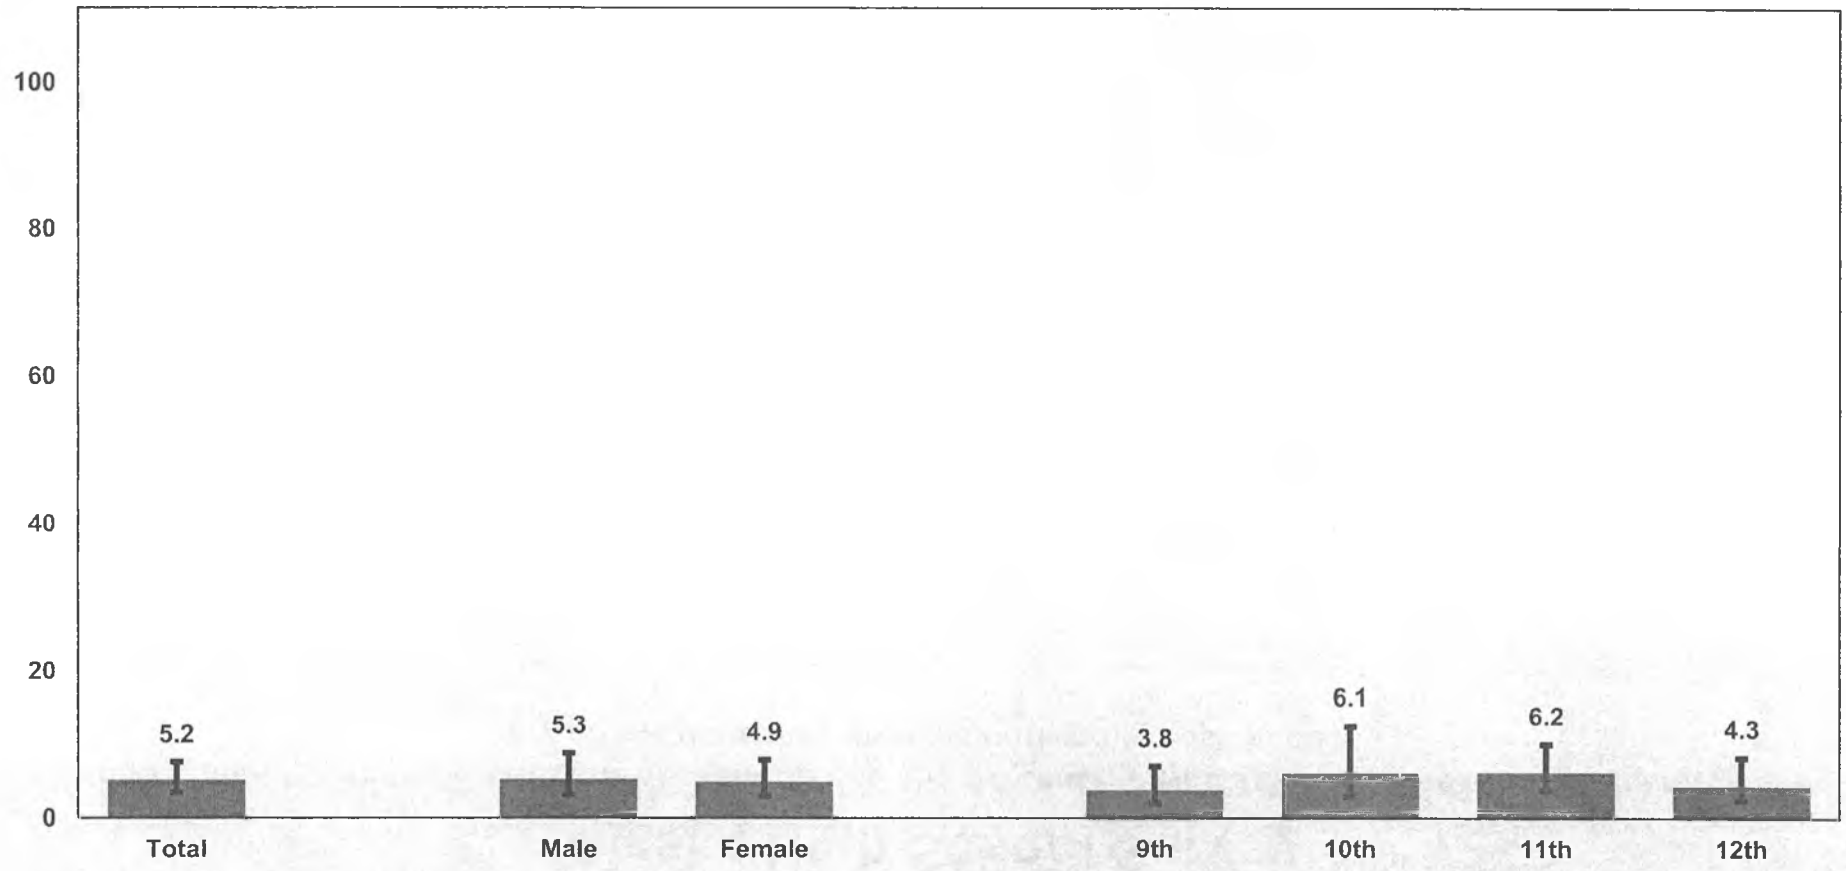
Percentage of students who smoked cigarettes on 20 or more of the past 30 days



QNFRCIG - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

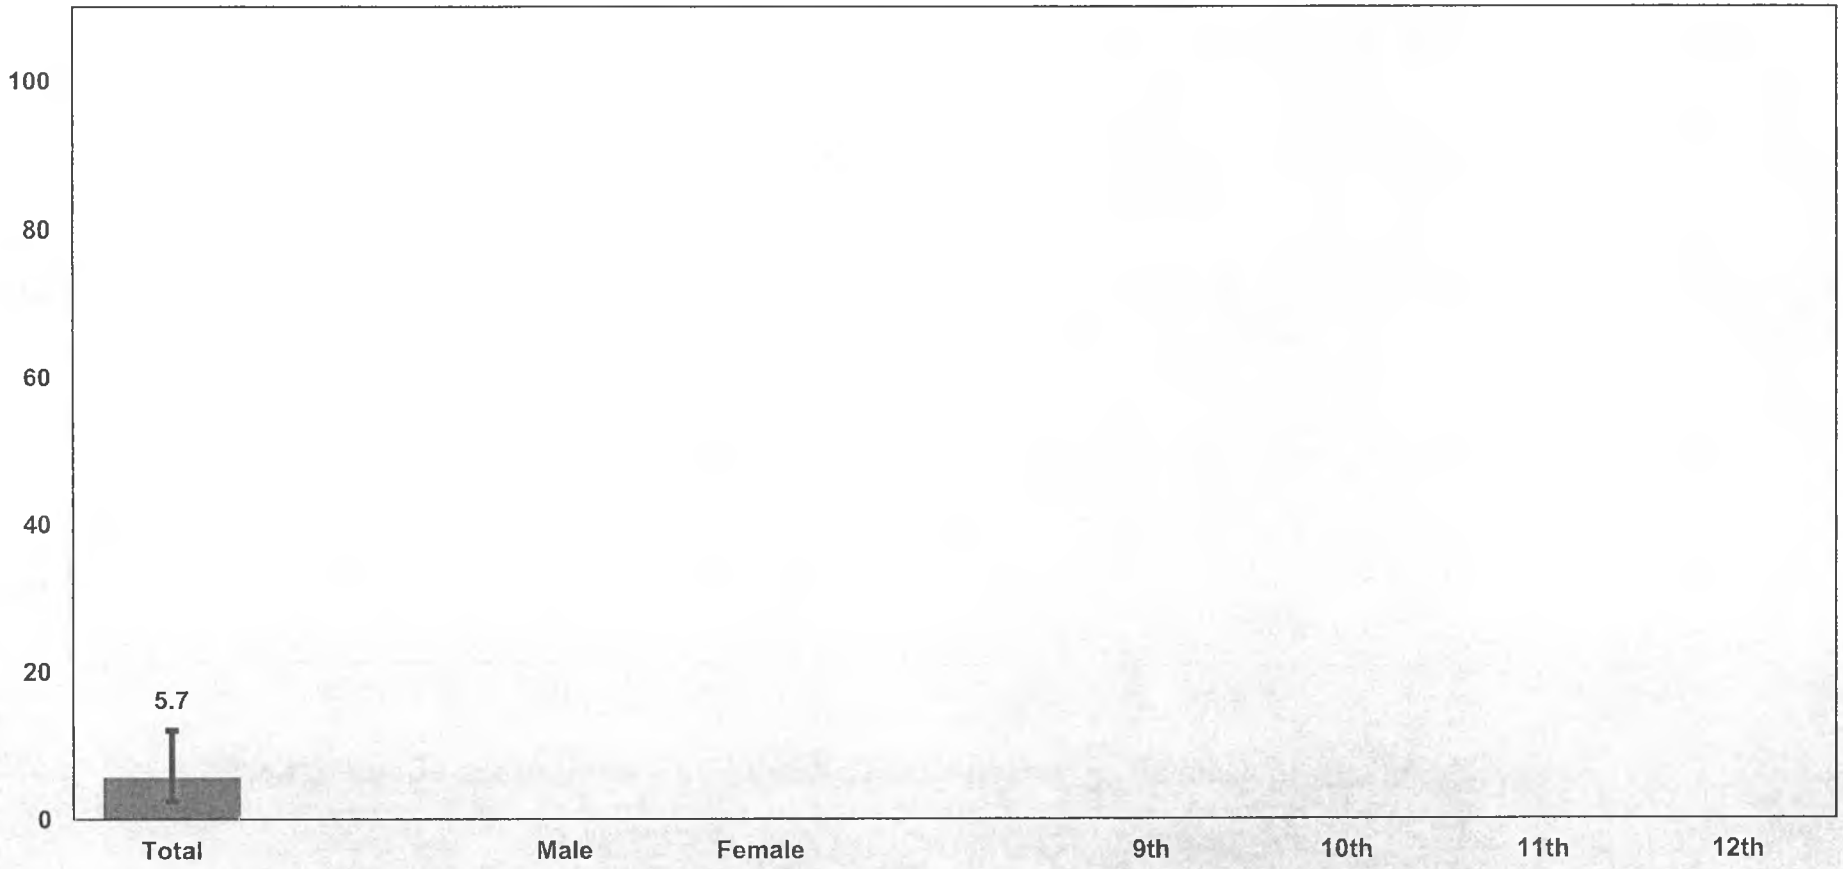
Among students who reported current cigarette use, the percentage who smoked more than 10 cigarettes per day on the days they smoked during the past 30 days



Q32 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

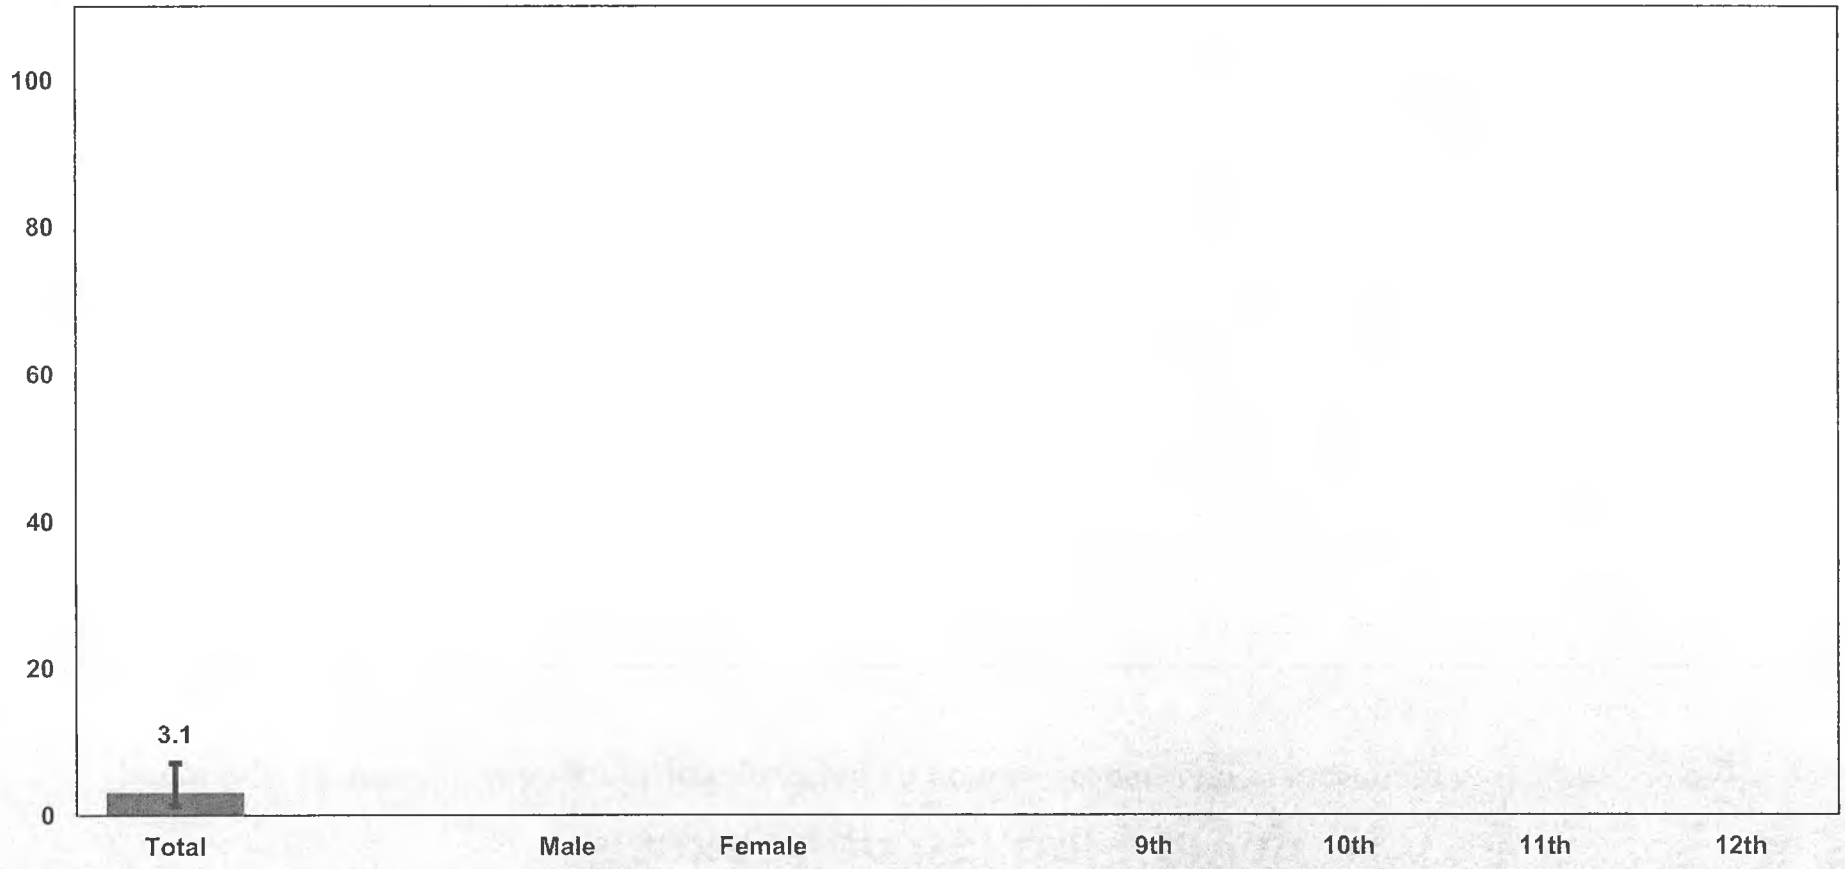
Among students who were less than 18 years of age and who reported current cigarette use, the percentage who usually got their own cigarettes by buying them in a store or gas station during the past 30 days



Q33 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

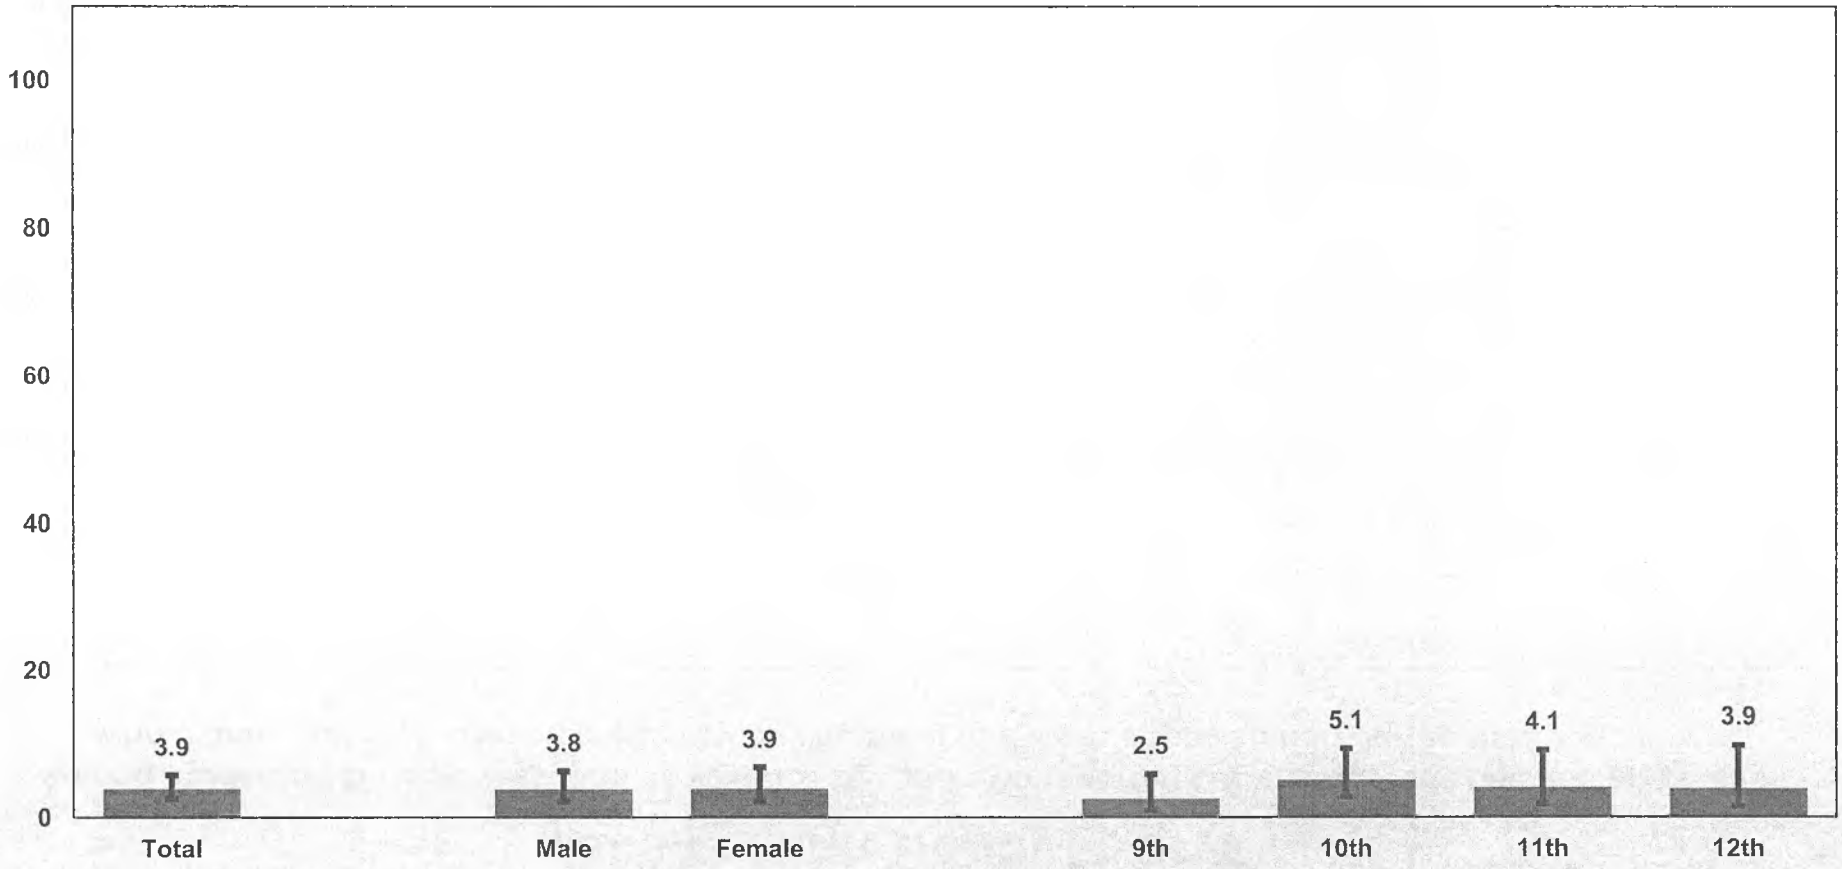
Percentage of students who smoked cigarettes on school property on one or more of the past 30 days



Q34 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

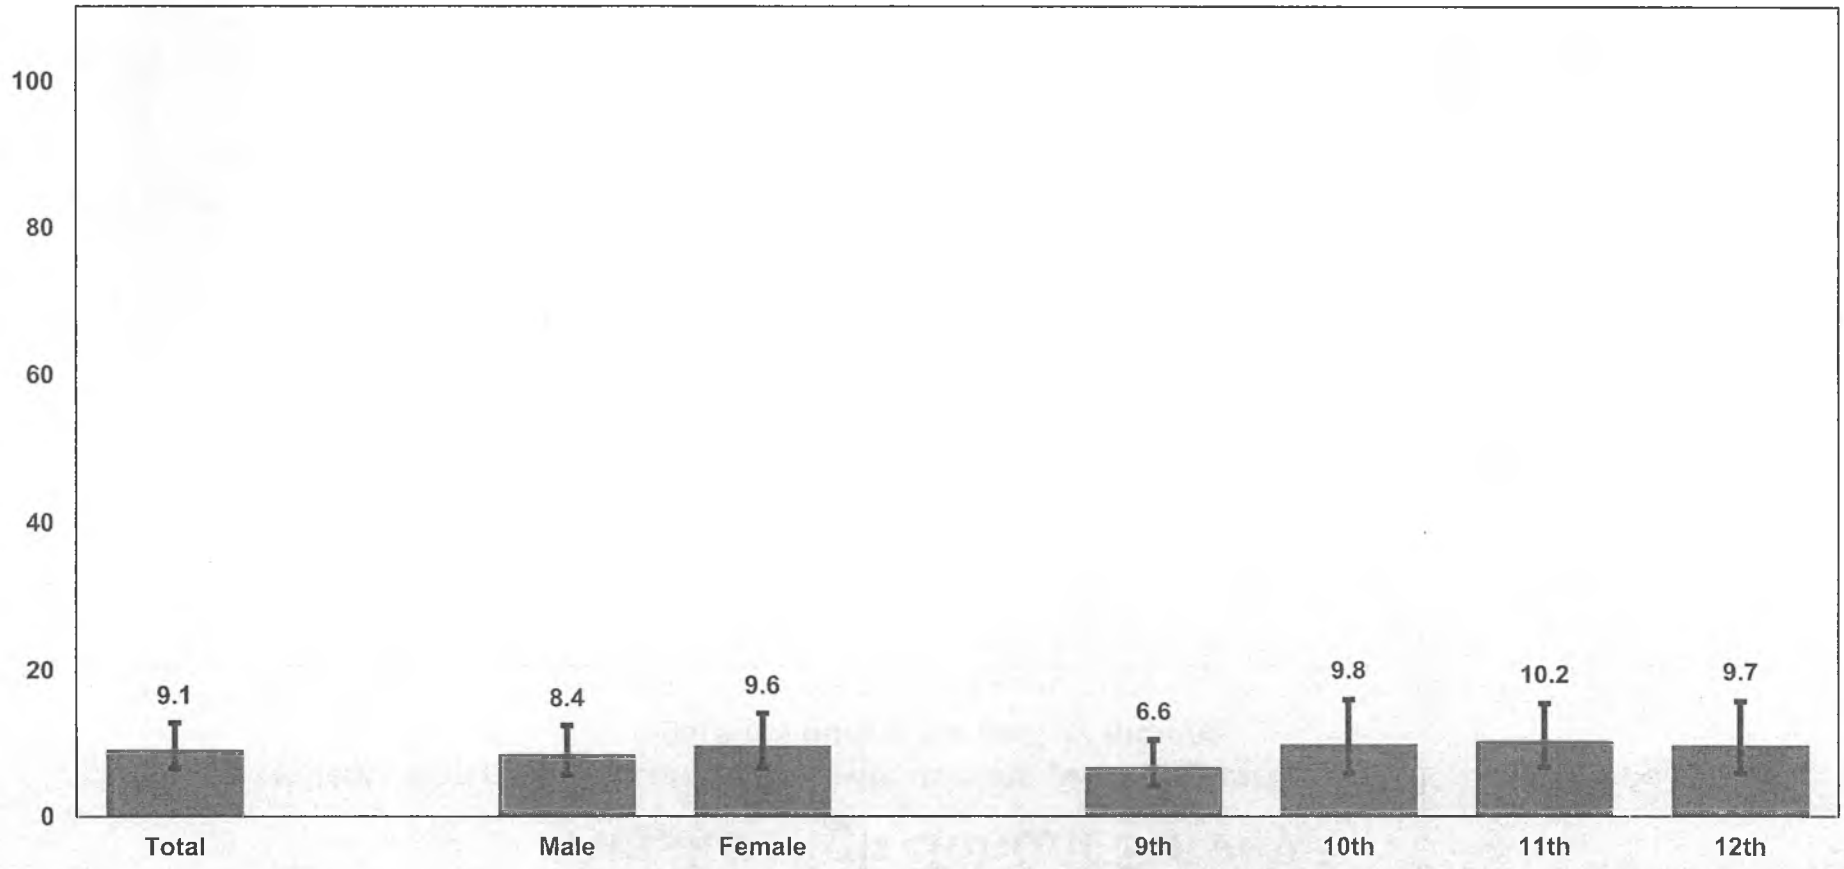
Percentage of students who ever smoked cigarettes daily, that is, at least one cigarette every day for 30 days



Q35 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

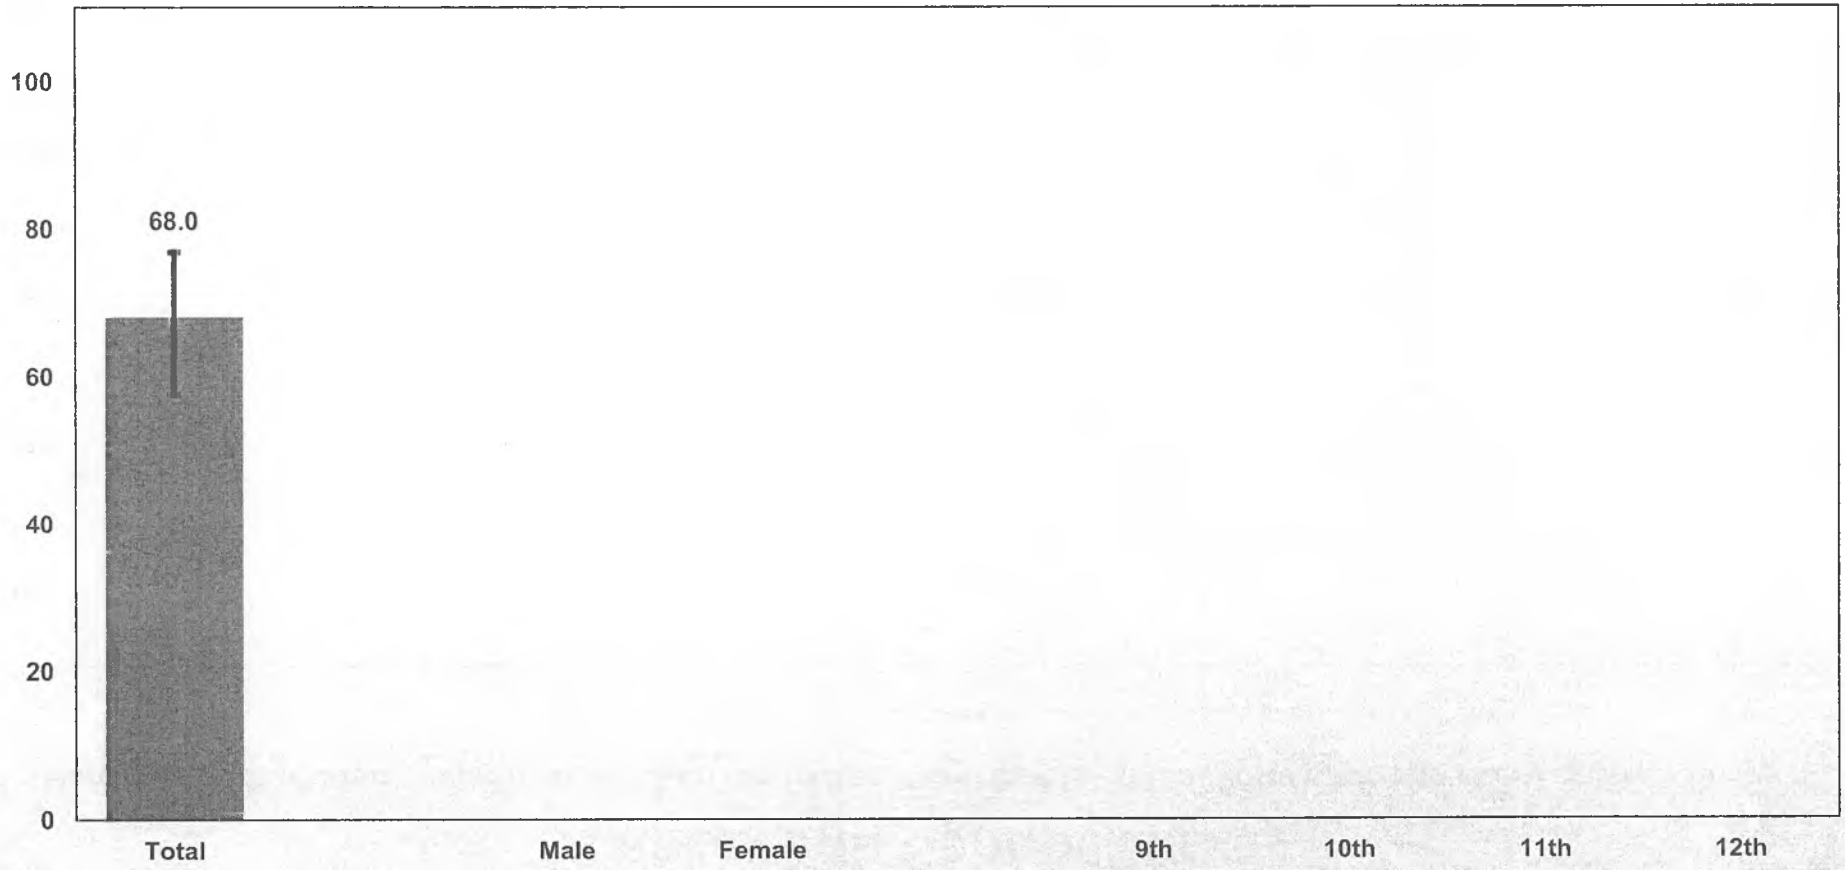
Among students who reported current cigarette use, the percentage who ever tried to quit smoking cigarettes during the past 12 months



Q36 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

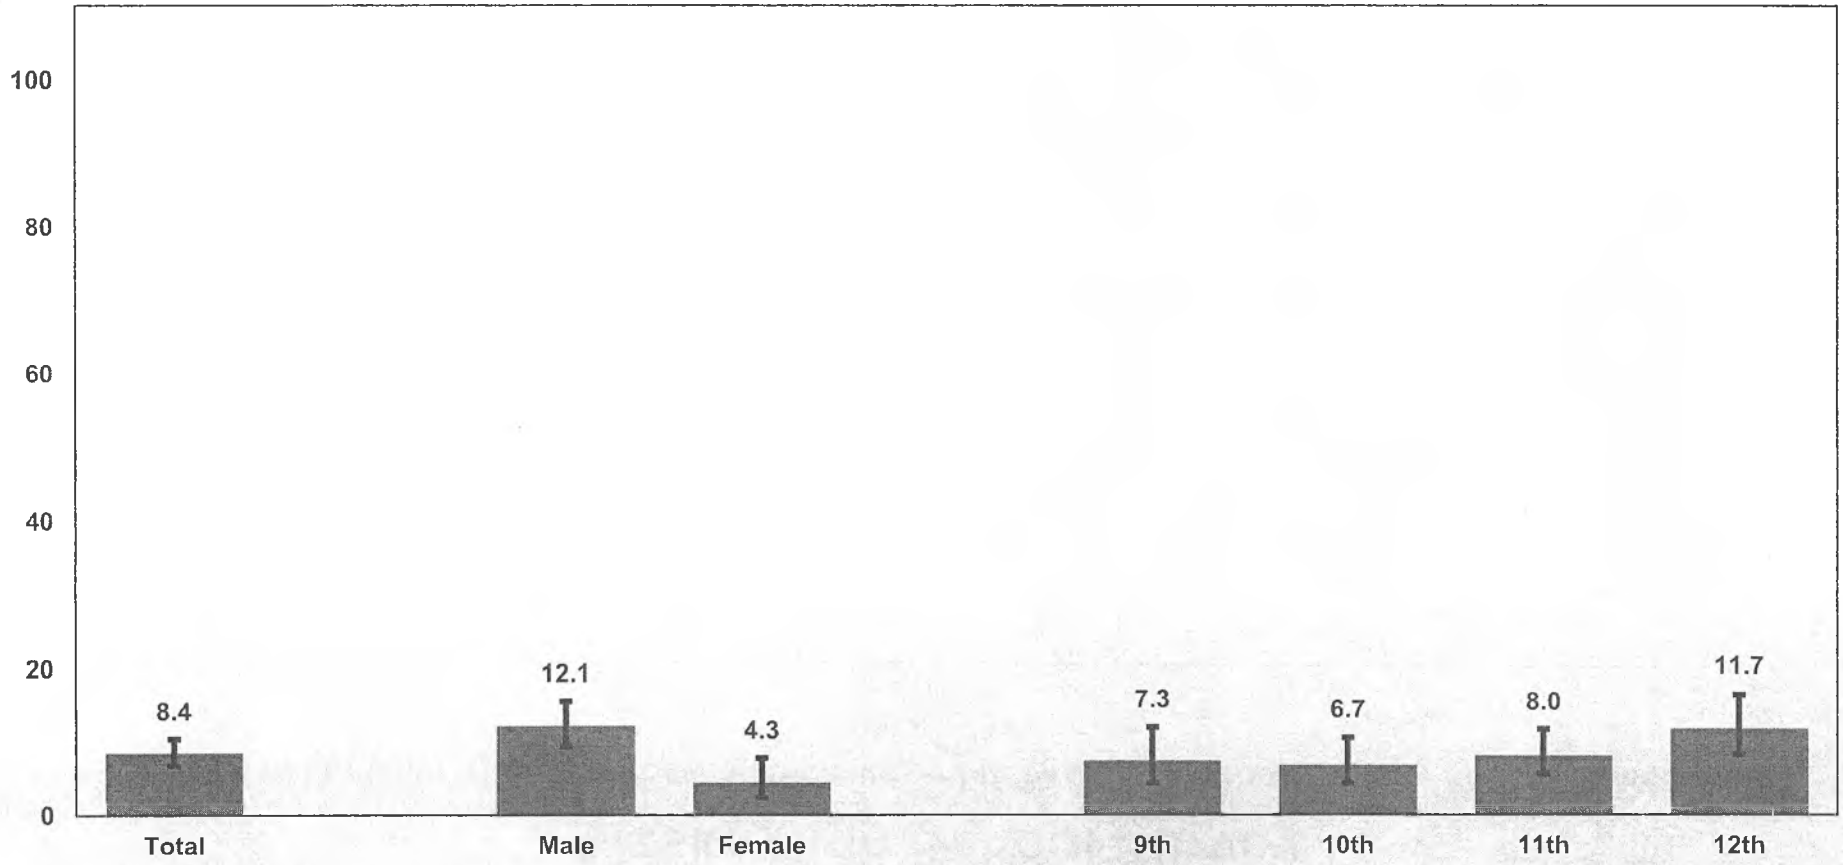
Percentage of students who used chewing tobacco, snuff, or dip on one or more of the past 30 days



Q37 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

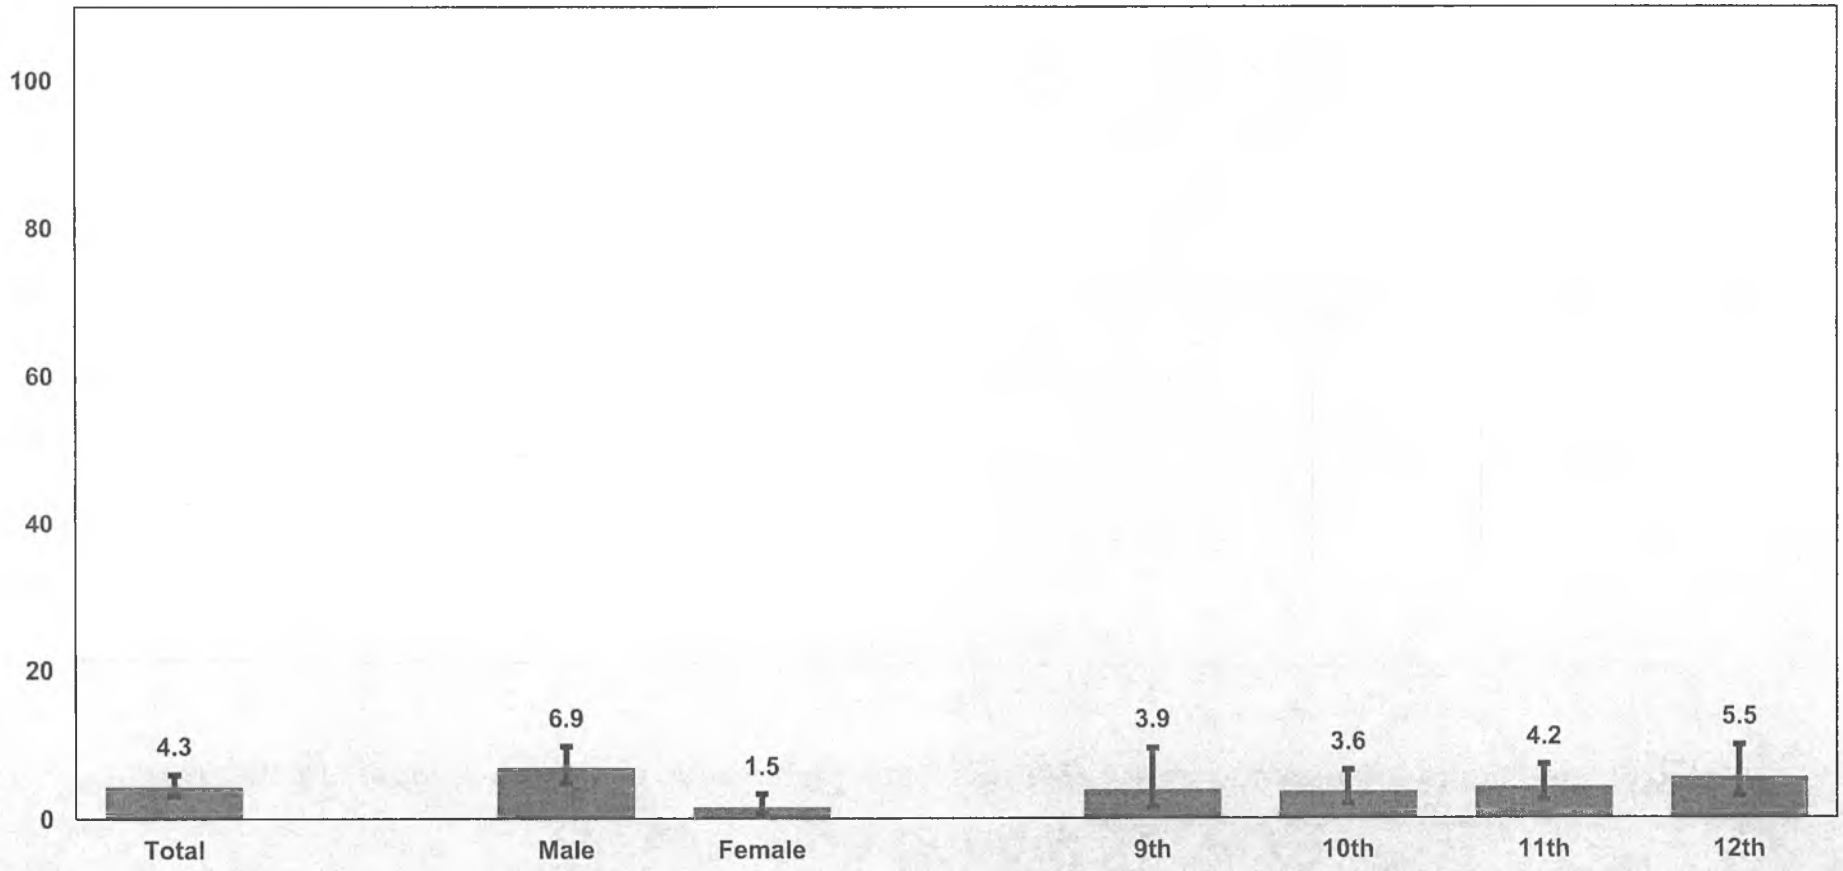
Percentage of students who used chewing tobacco, snuff, or dip on school property on one or more of the past 30 days



Q38 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

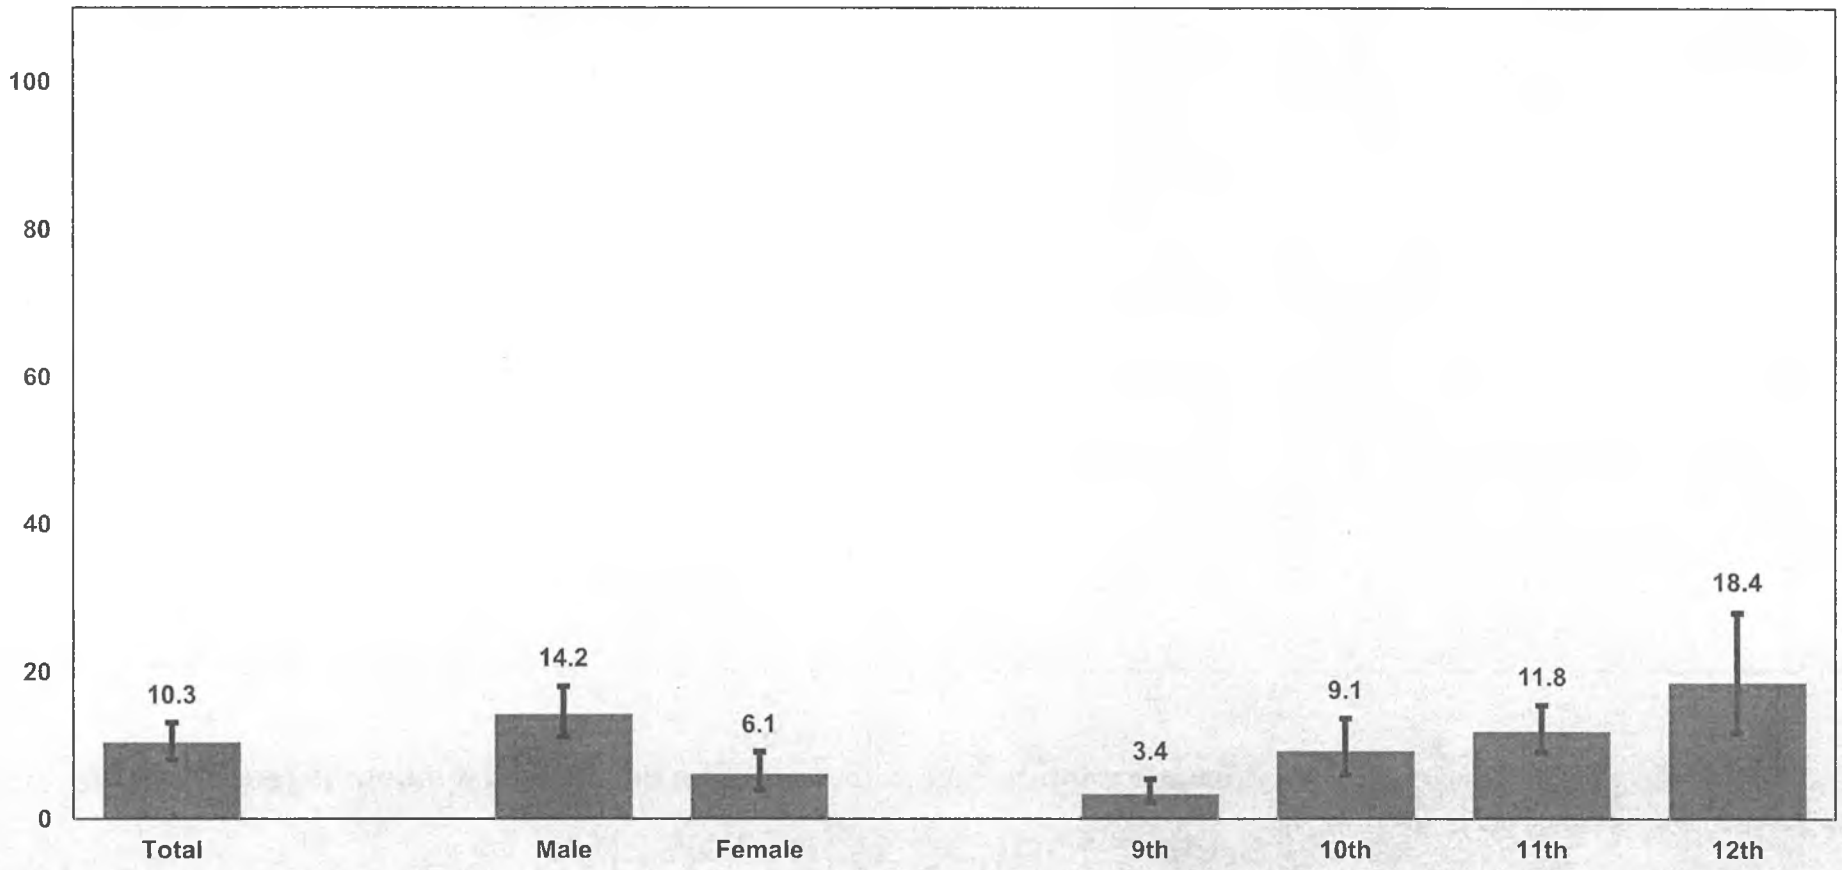
Percentage of students who smoked cigars, cigarillos, or little cigars on one or more of the past 30 days



Q39 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

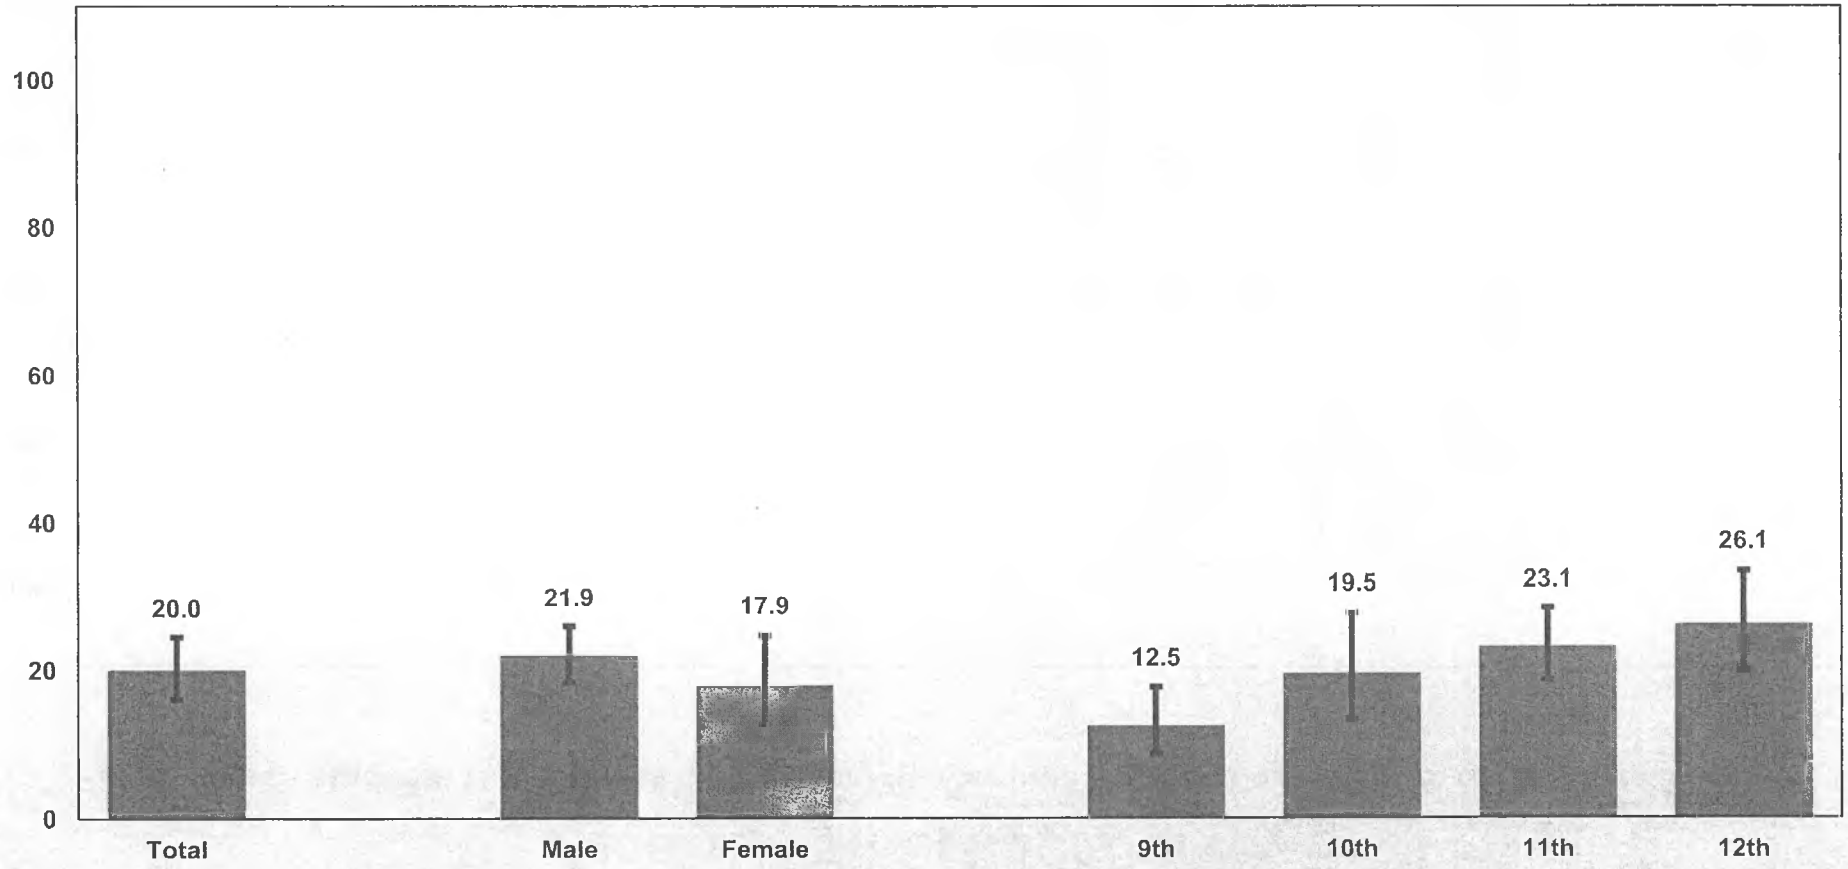
Percentage of students who smoked cigarettes or cigars or used chewing tobacco, snuff, or dip on one or more of the past 30 days



QNANYTOB - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

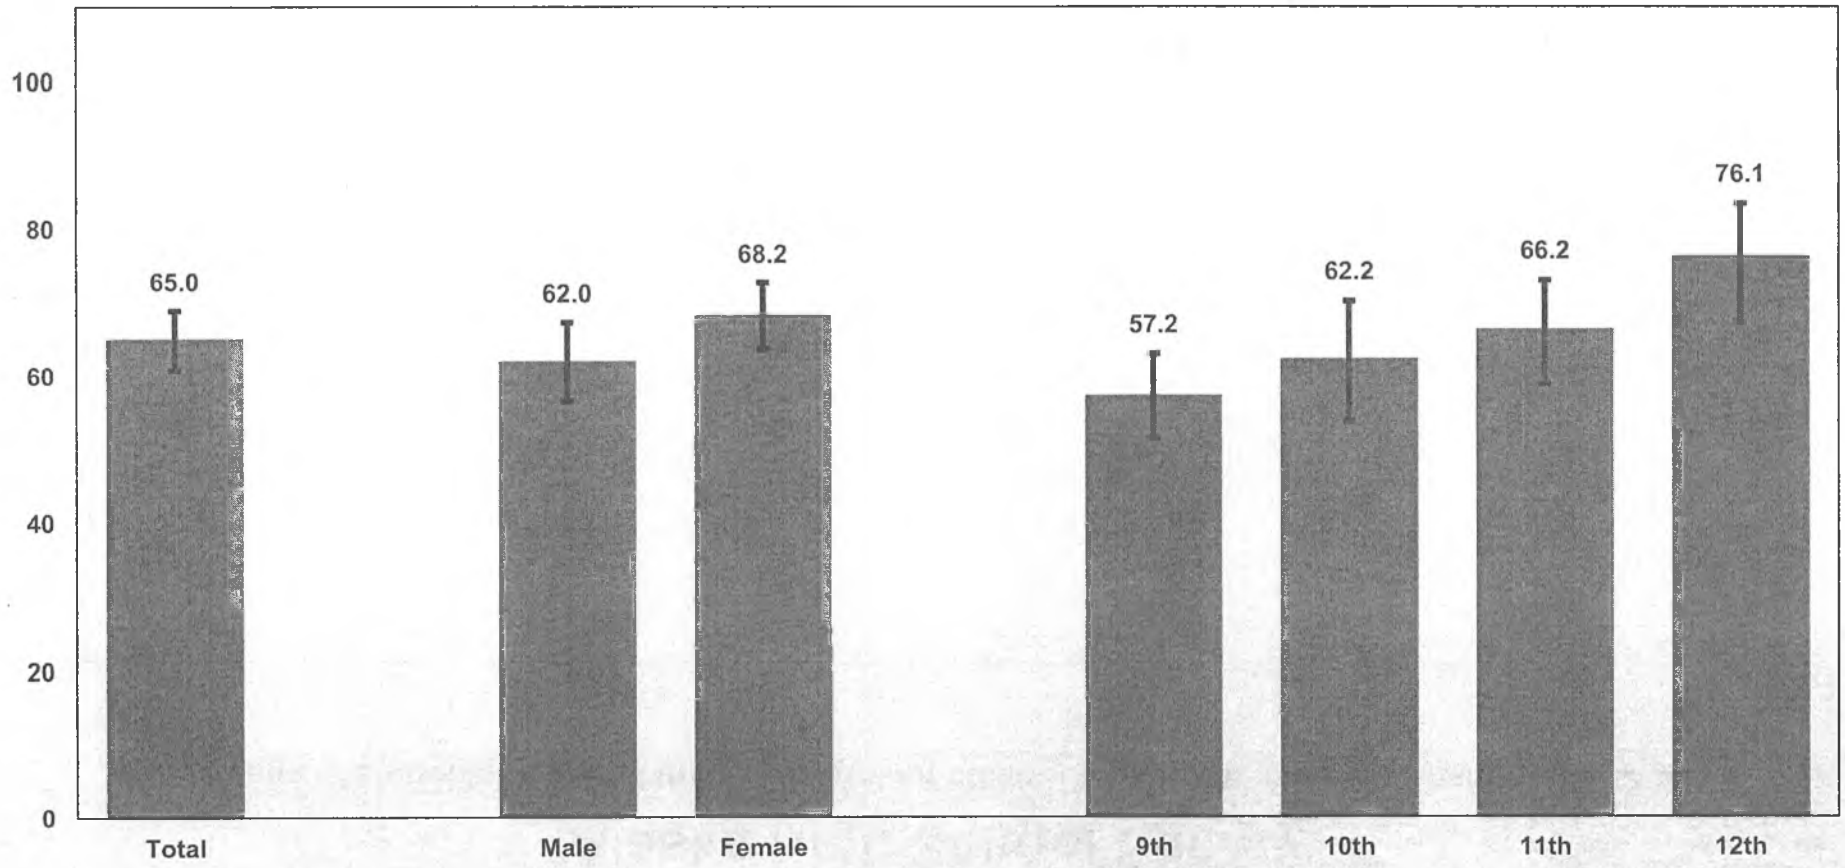
Percentage of students who had at least one drink of alcohol on one or more days during their life



Q40 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

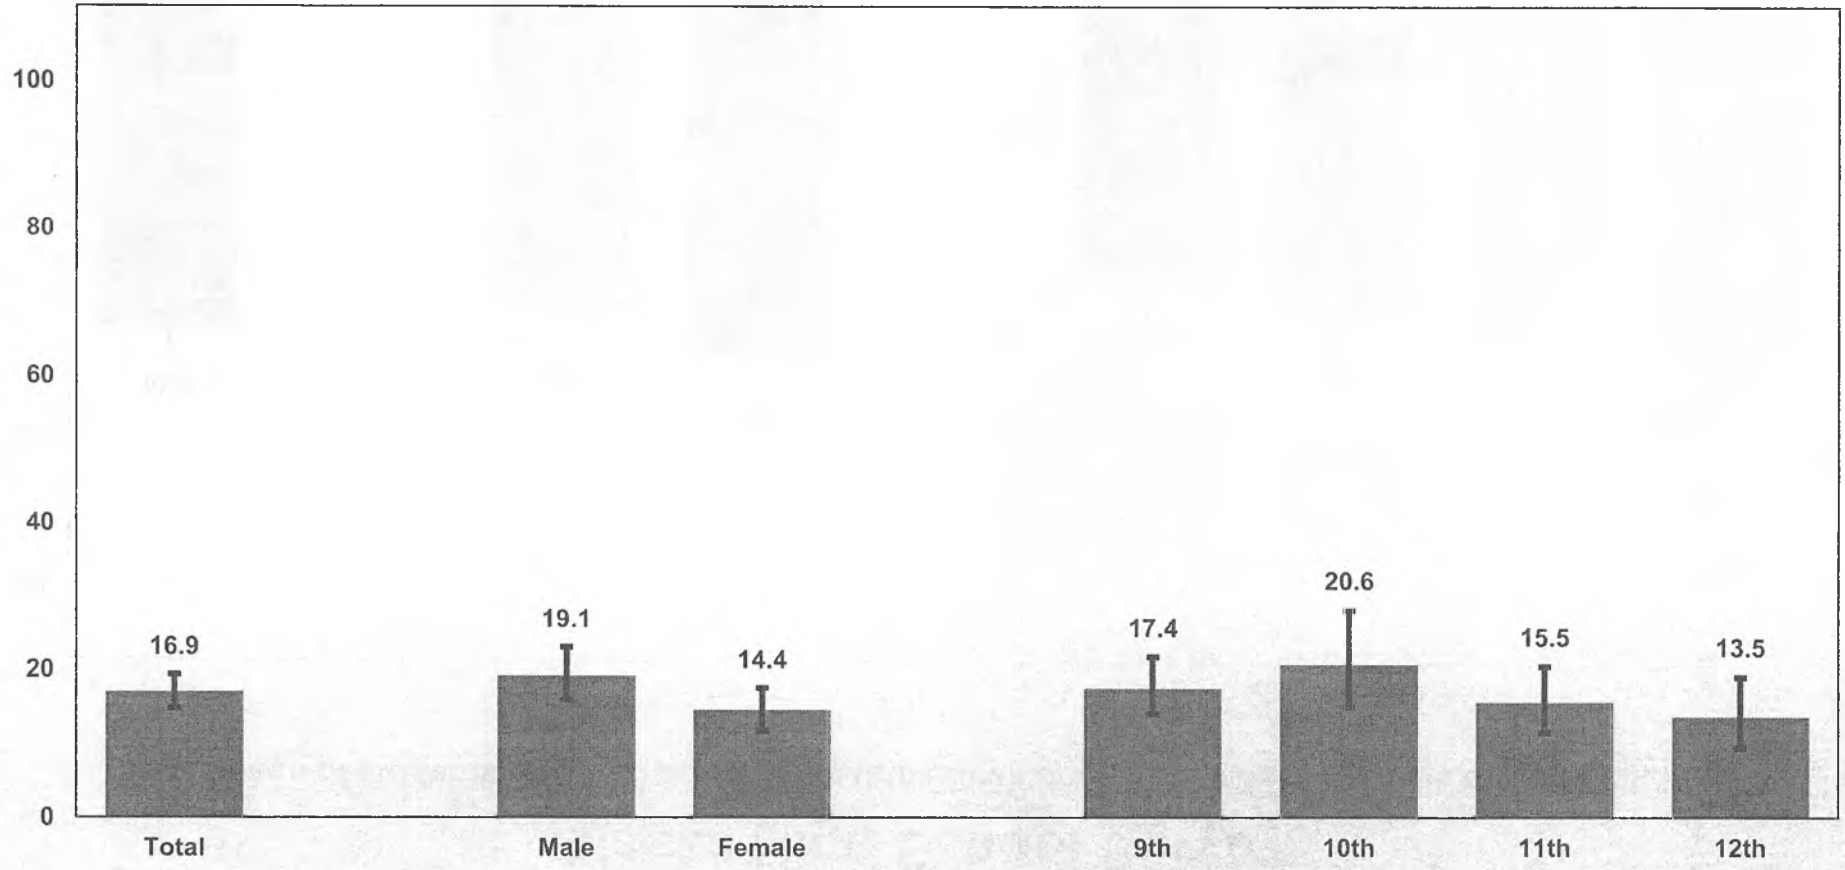
Percentage of students who had their first drink of alcohol other than a few sips before age 13 years



Q41 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

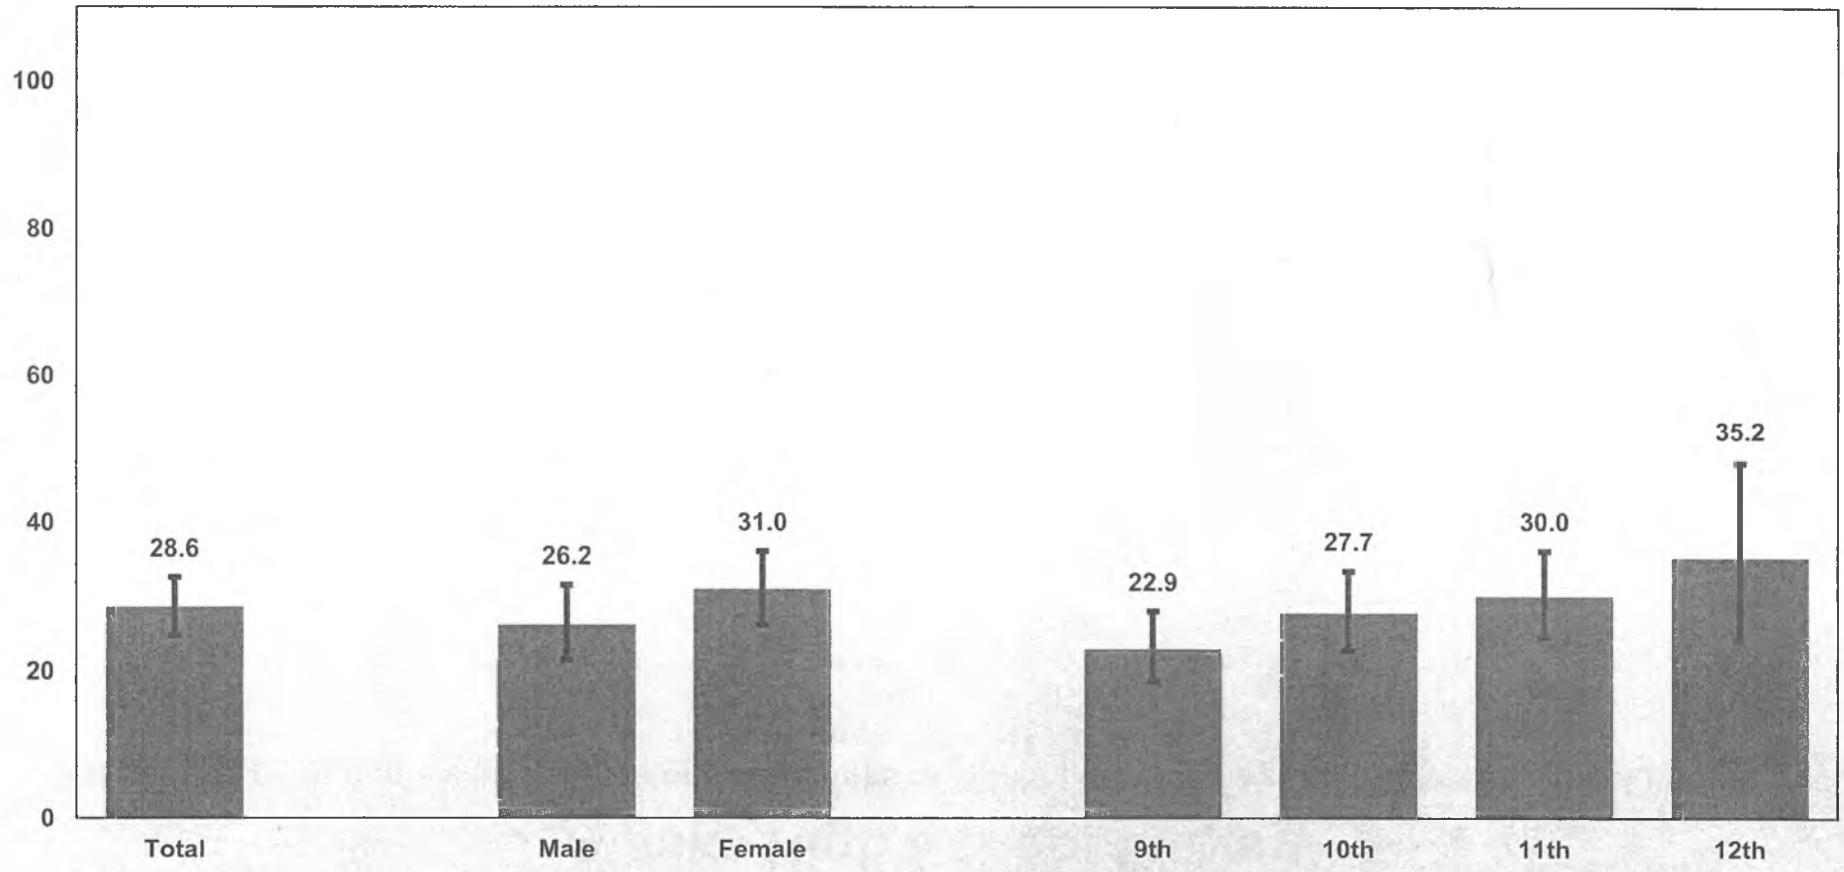
Percentage of students who had at least one drink of alcohol on one or more of the past 30 days



Q42 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

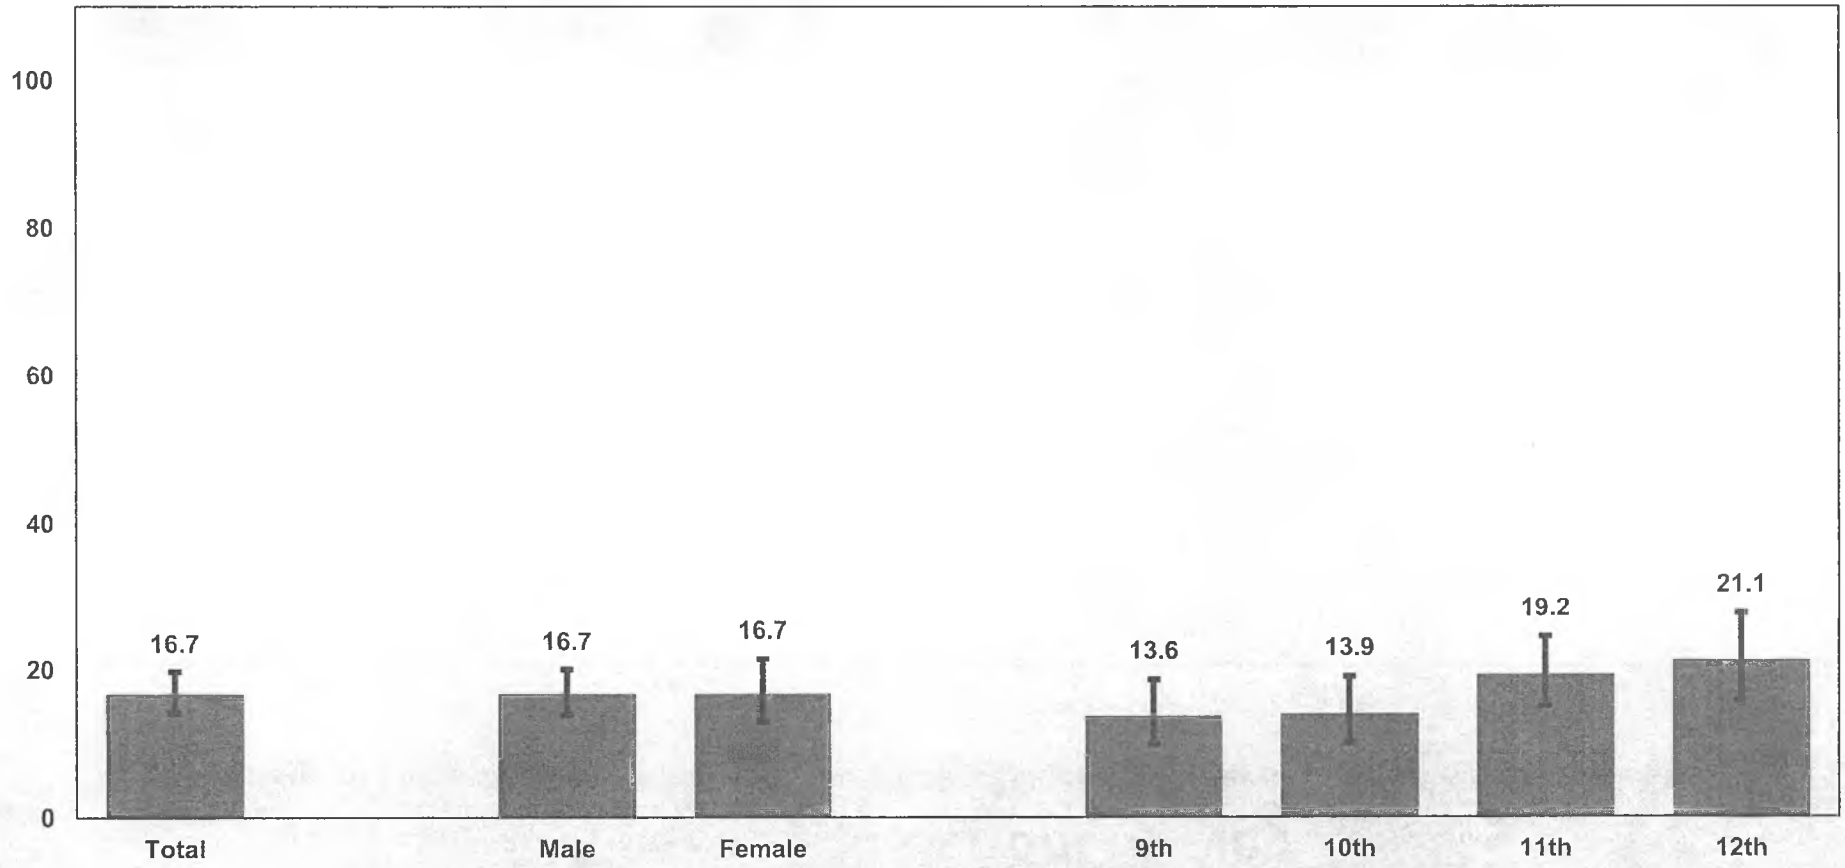
Percentage of students who had five or more drinks of alcohol in a row, that is, within a couple of hours, on one or more of the past 30 days



Q43 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

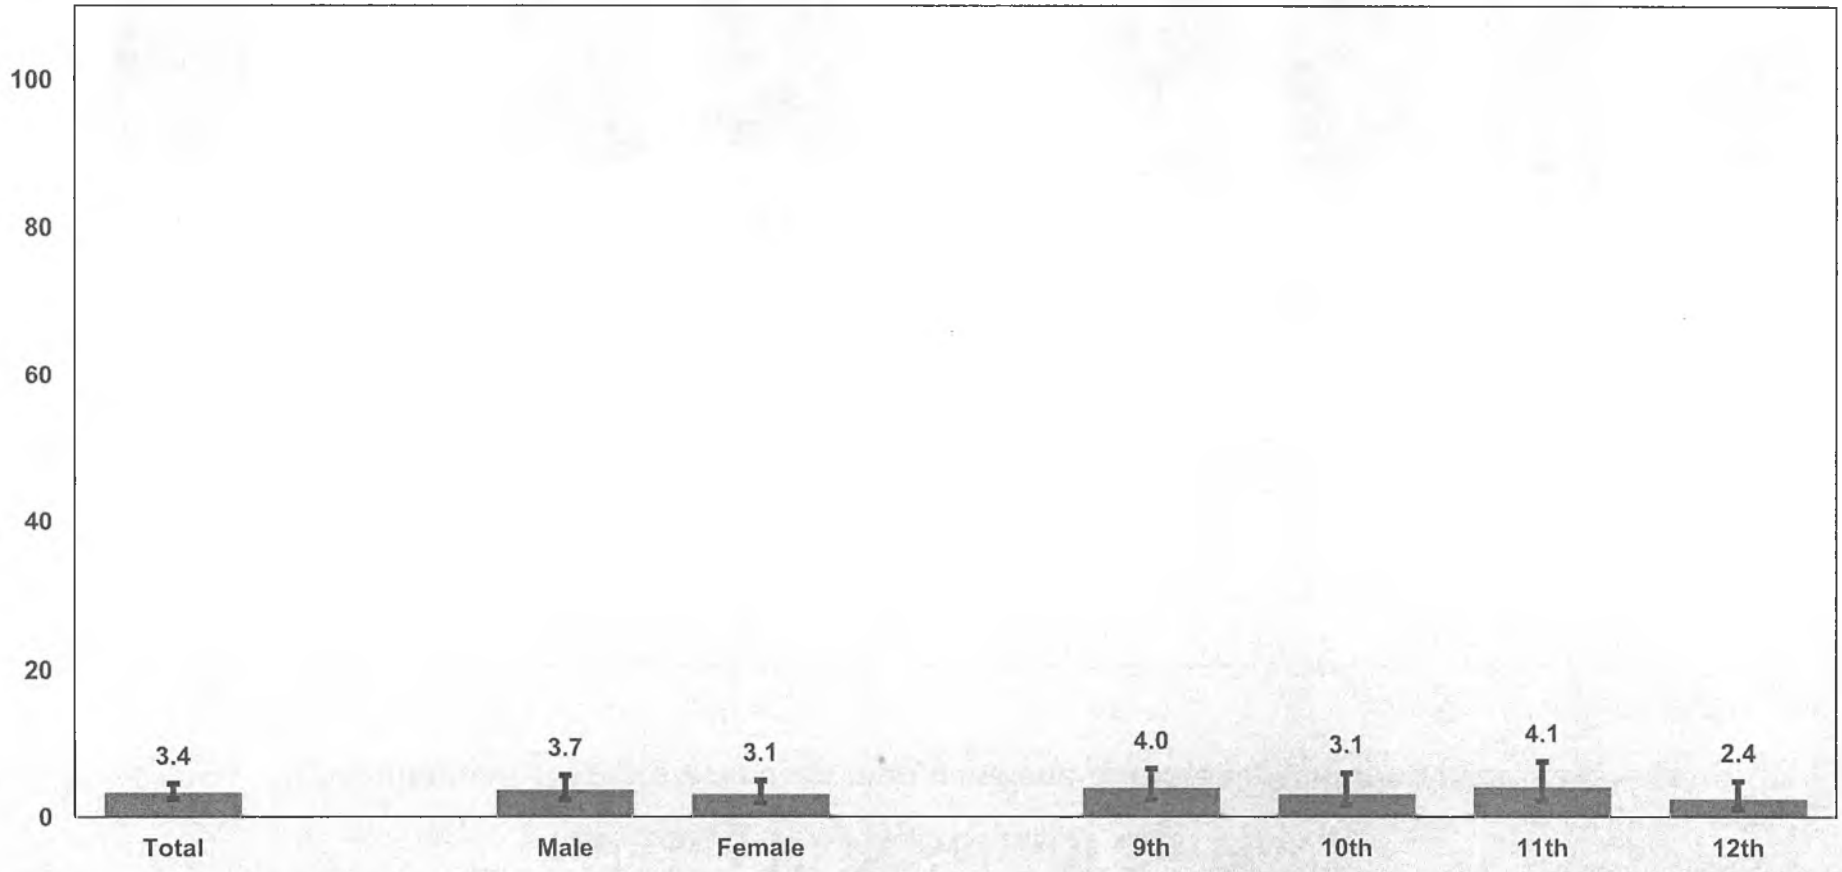
Percentage of students who had at least one drink of alcohol on school property on one or more of the past 30 days



Q45 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

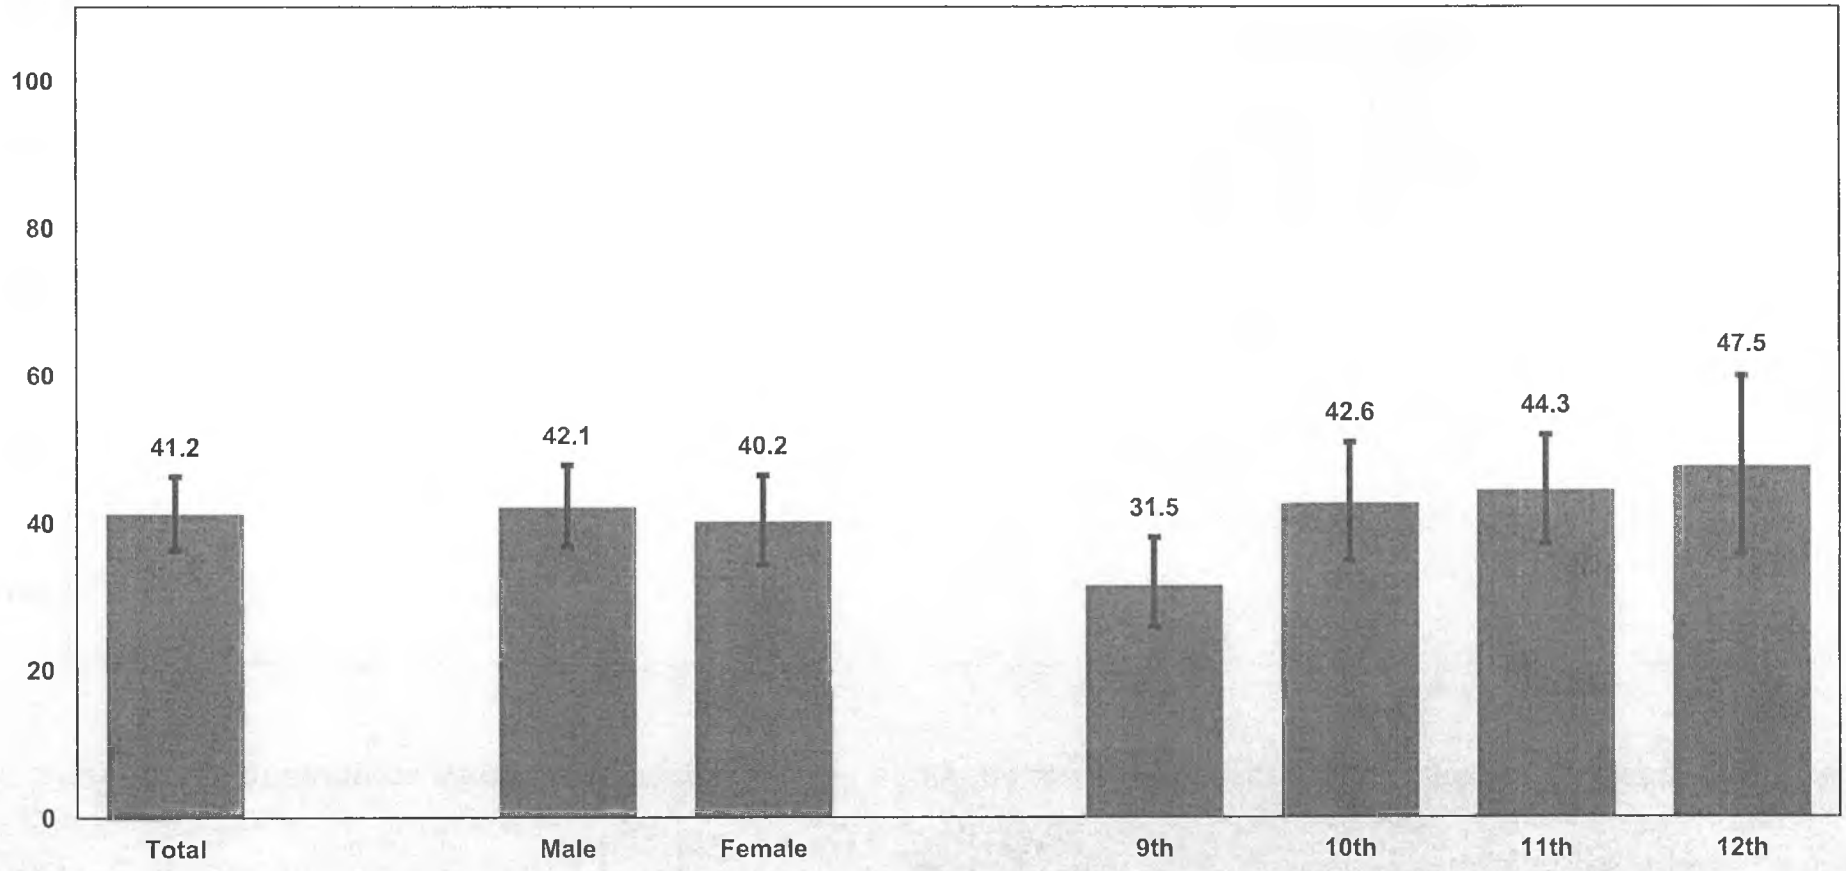
Percentage of students who used marijuana one or more times during their life



Q46 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

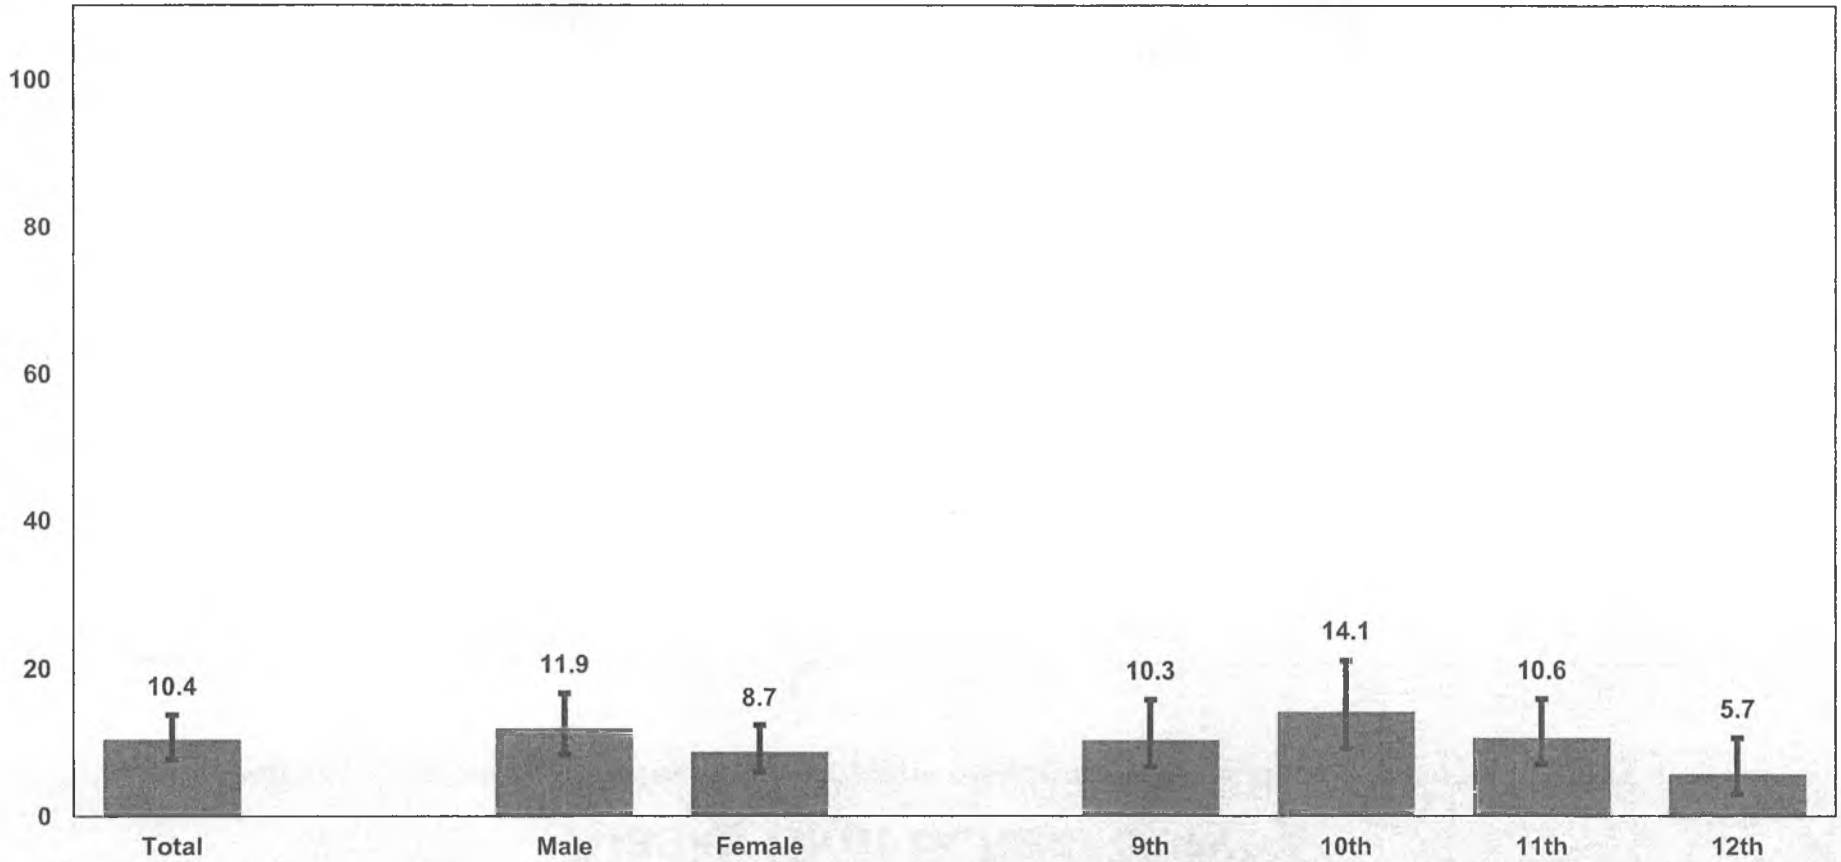
Percentage of students who tried marijuana for the first time before age 13 years



Q47 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

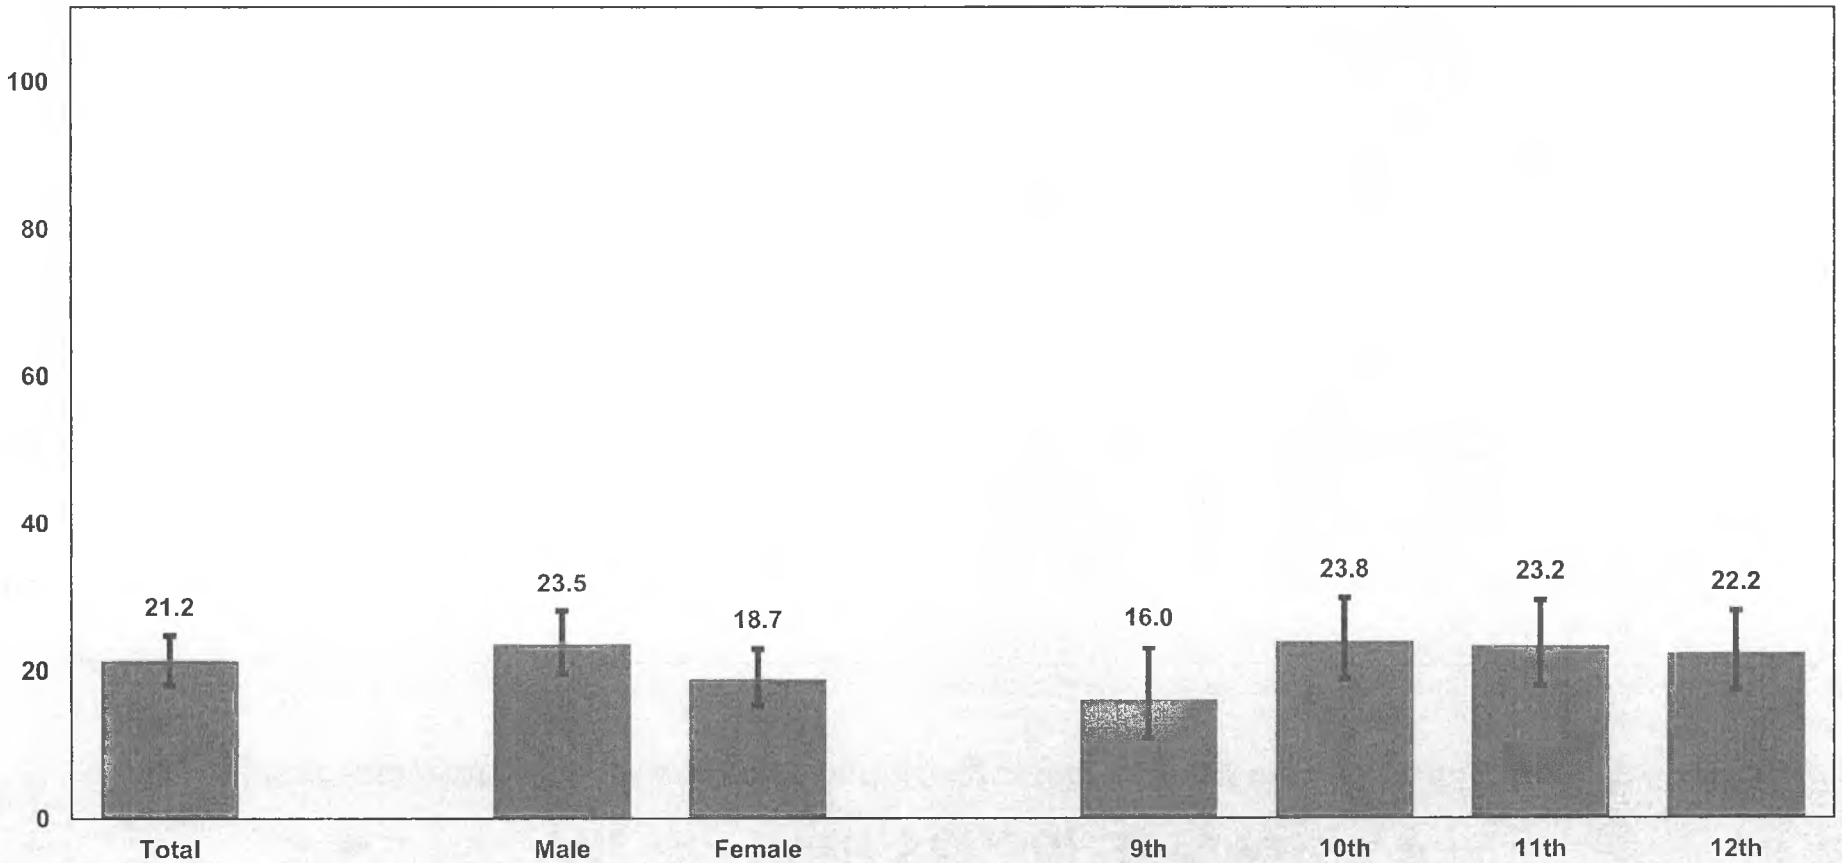
Percentage of students who used marijuana one or more times during the past 30 days



Q48 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

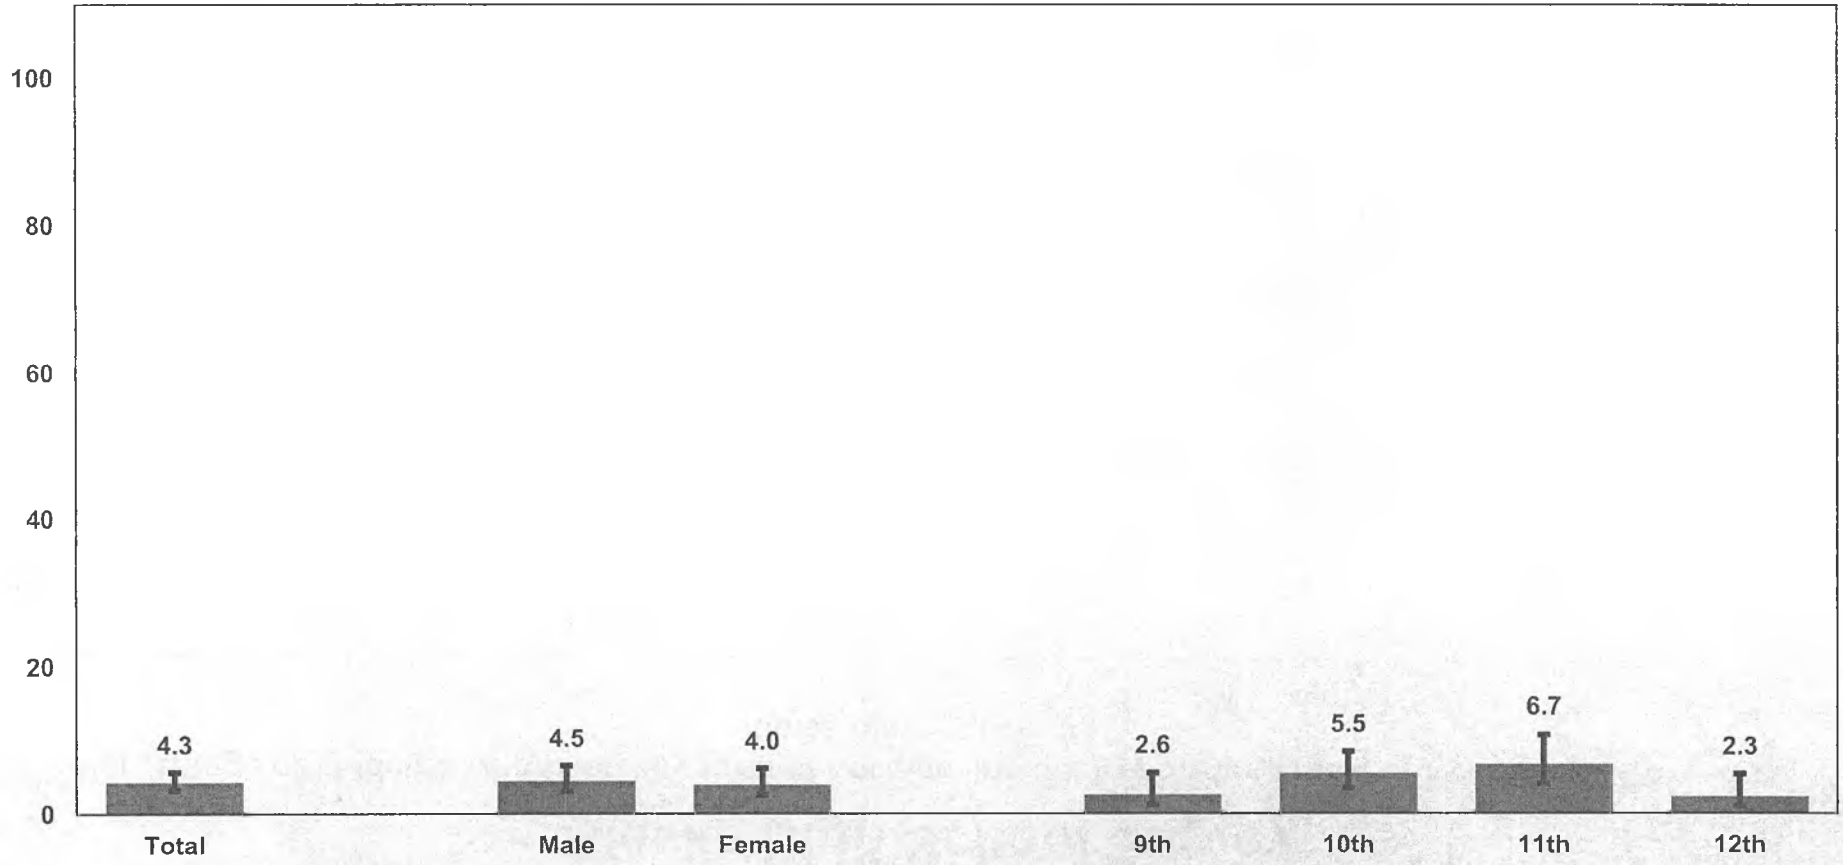
Percentage of students who used marijuana on school property one or more times during the past 30 days



Q49 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

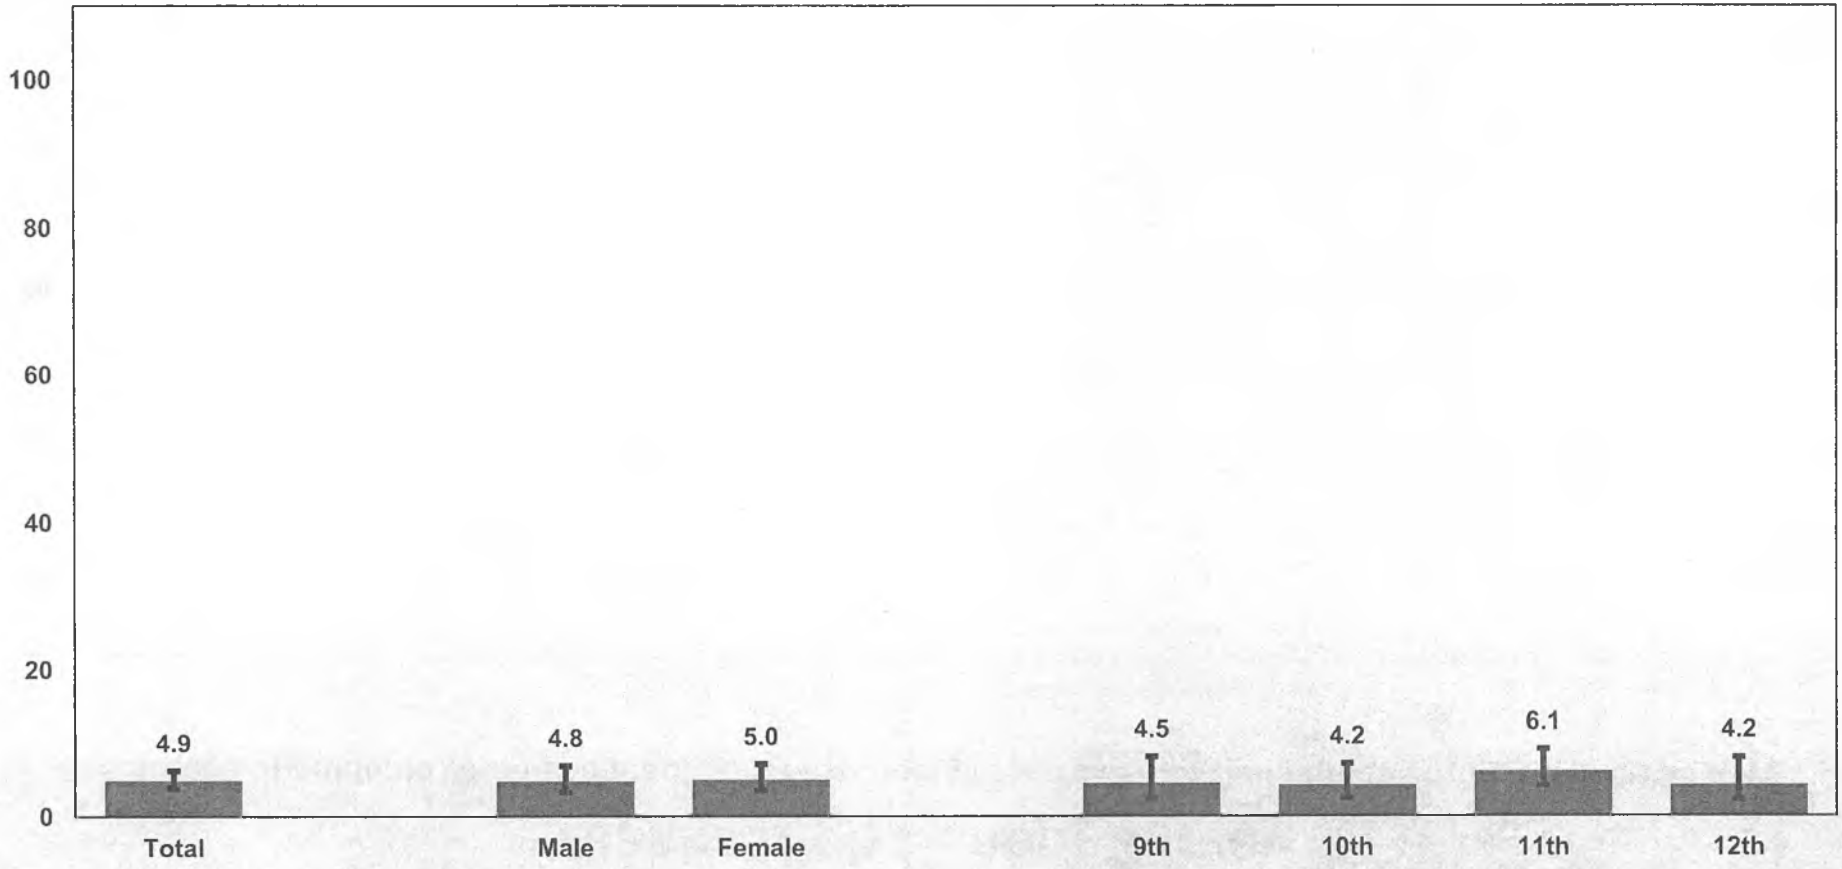
Percentage of students who used any form of cocaine, including powder, crack, or freebase one or more times during their life



Q50 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

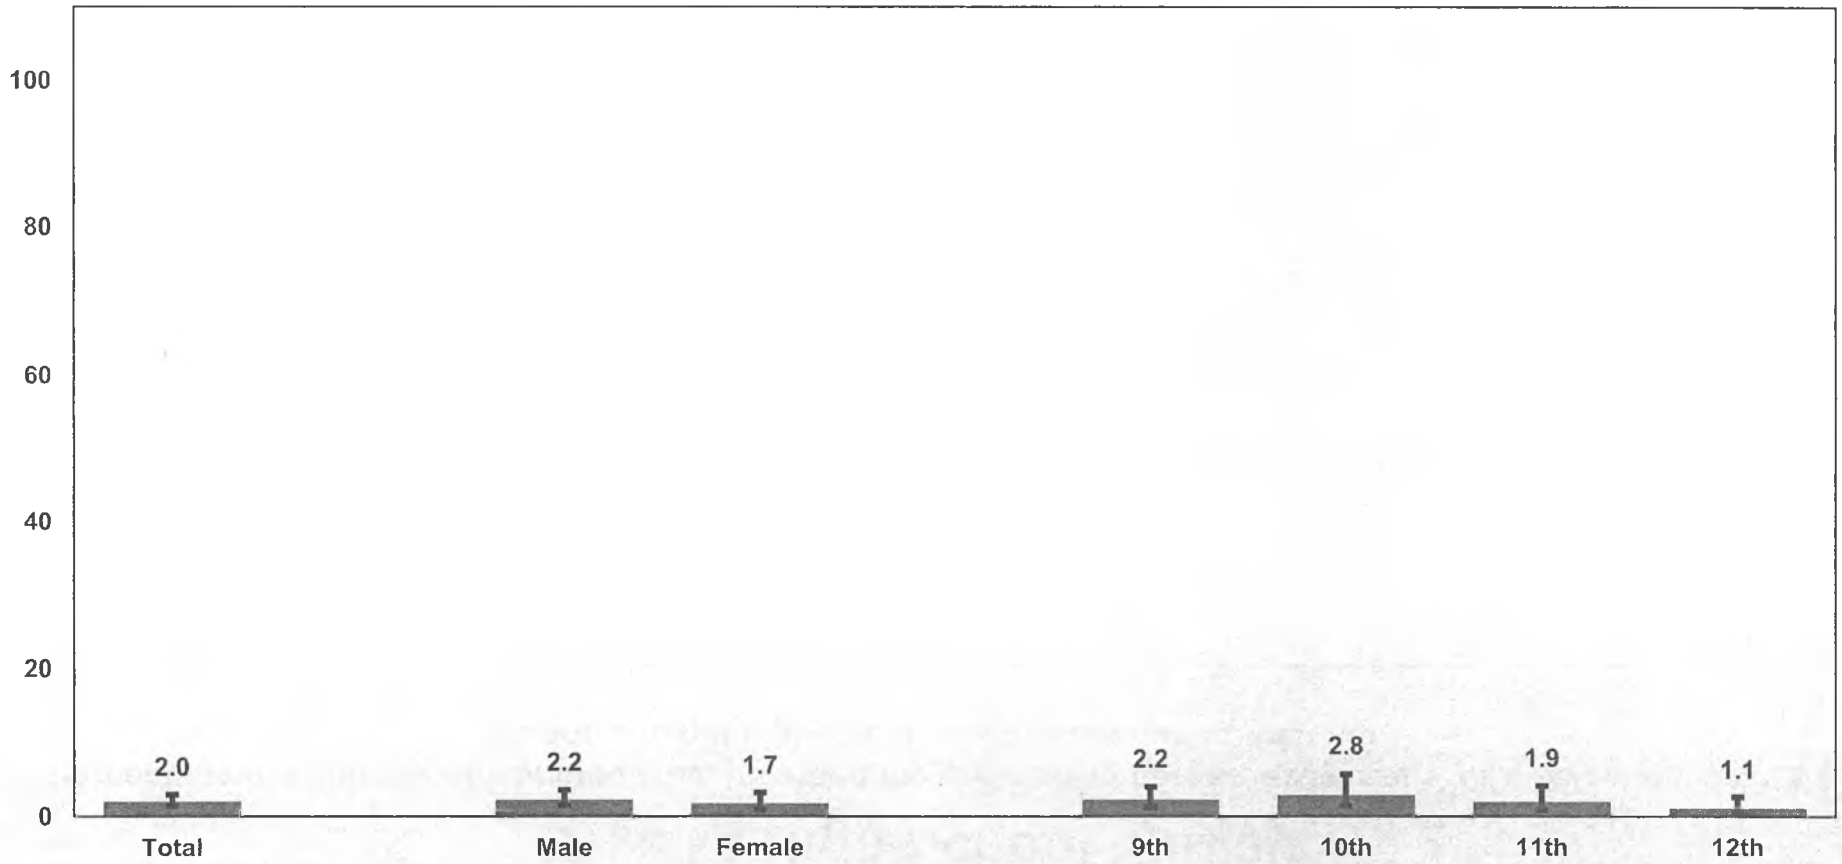
Percentage of students who used any form of cocaine, including powder, crack, or freebase one or more times during the past 30 days



Q51 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

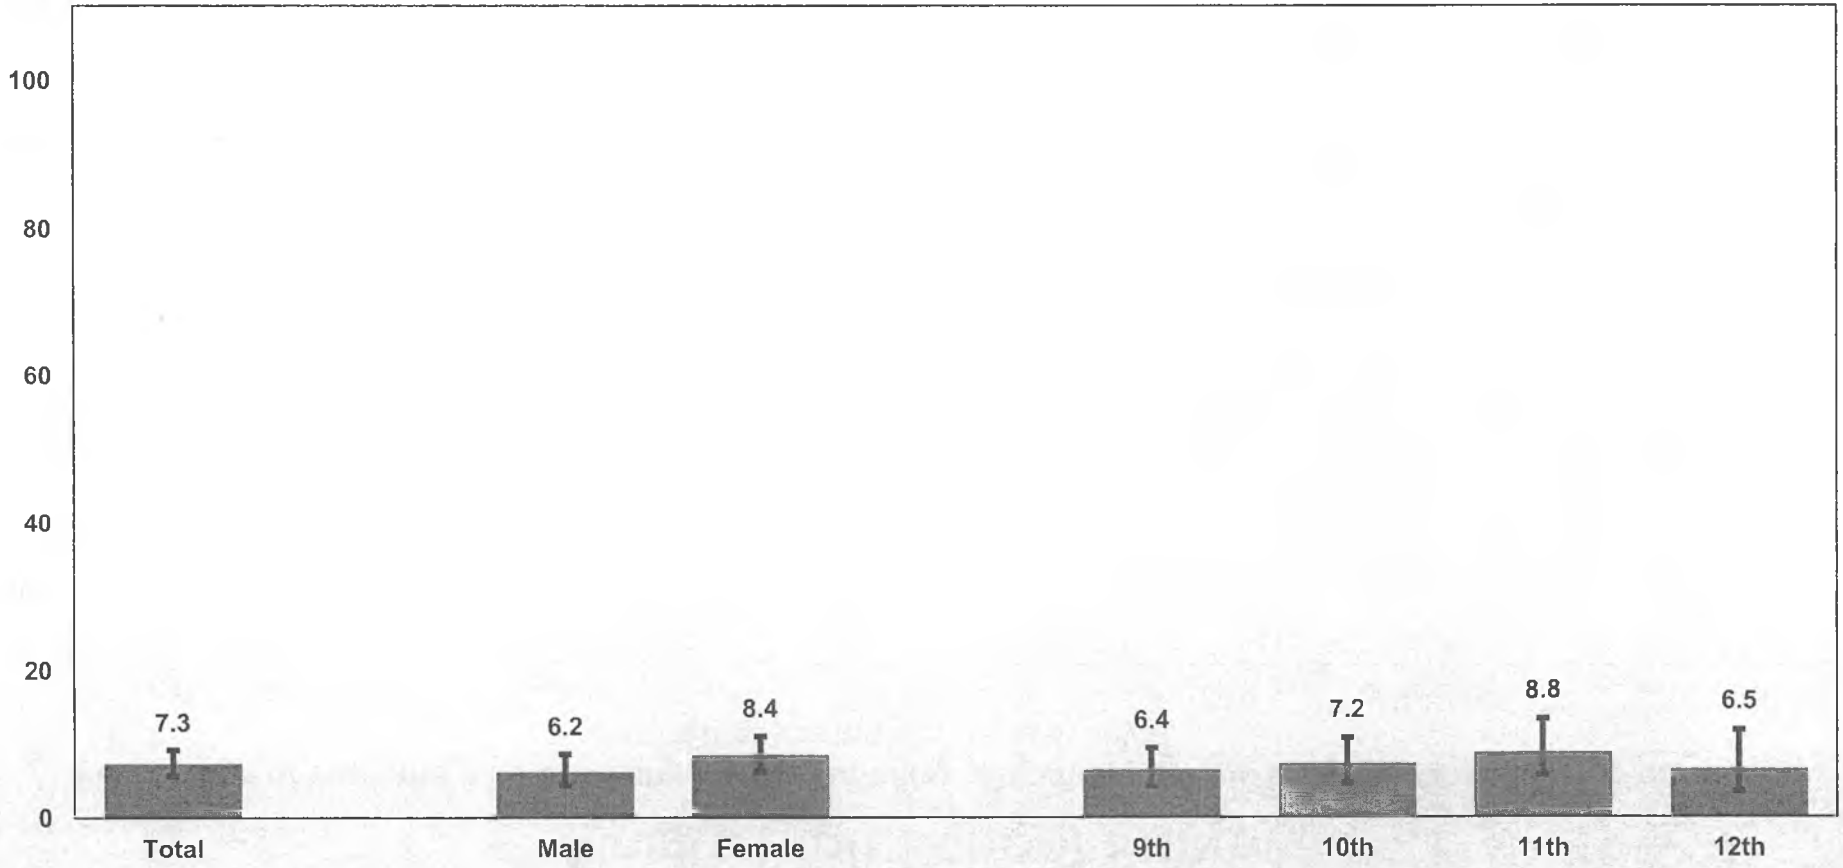
Percentage of students who sniffed glue, breathed the contents of aerosol spray cans, or inhaled any paints or sprays to get high one or more times during their life



Q52 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

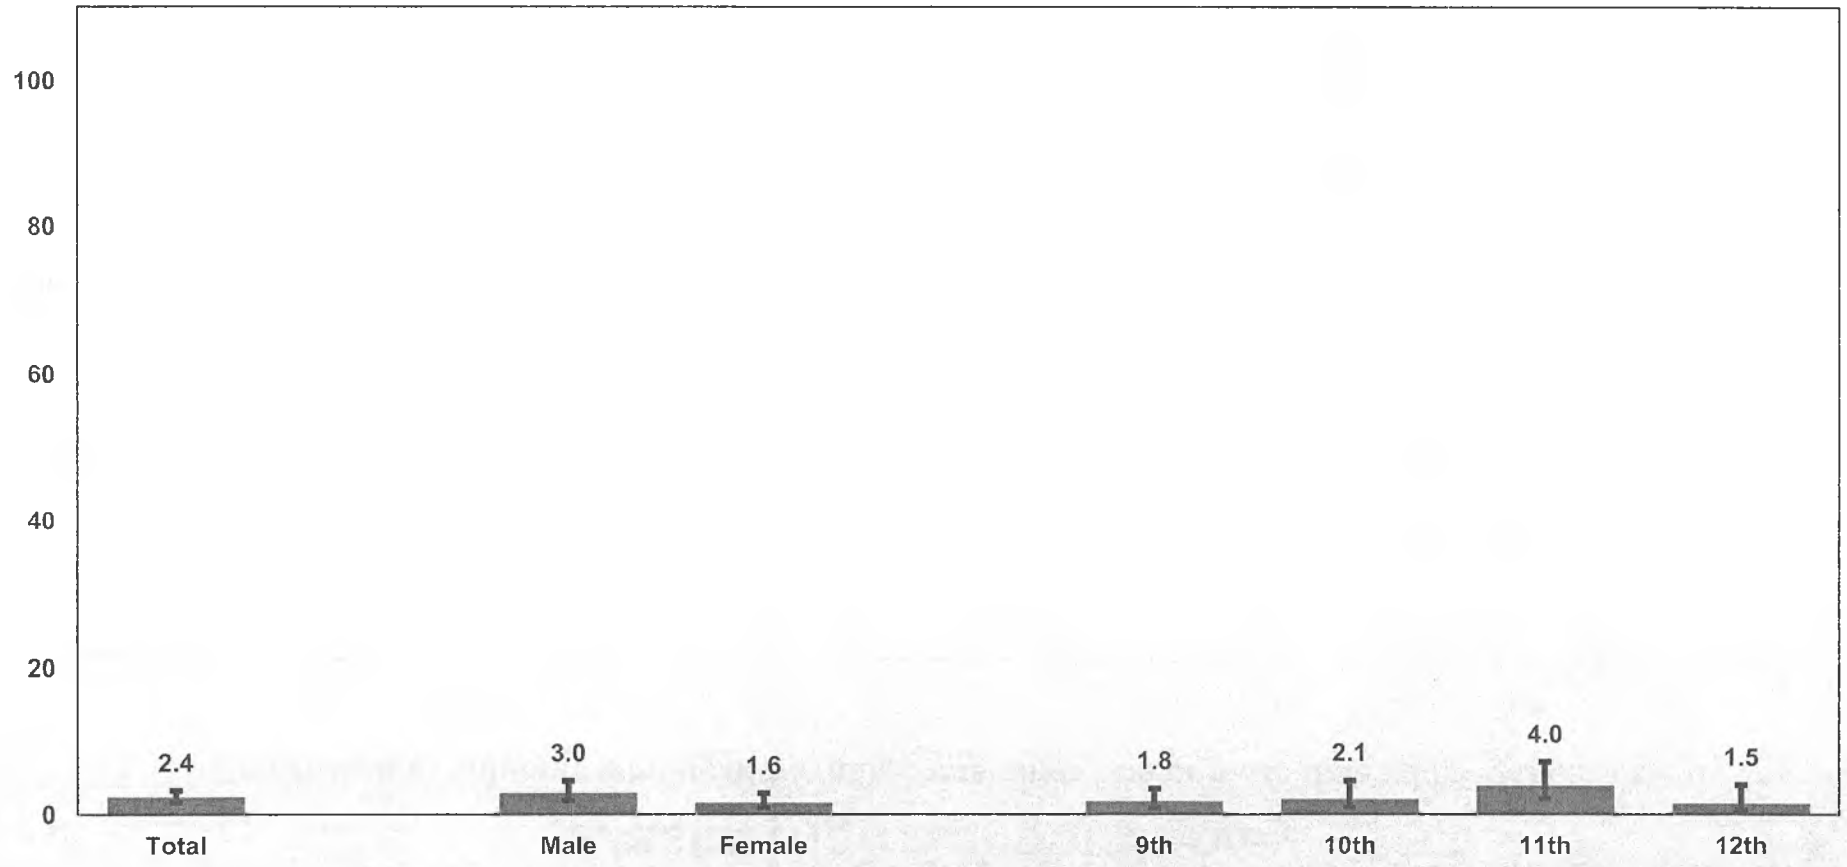
Percentage of students who used heroin one or more times during their life



Q53 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

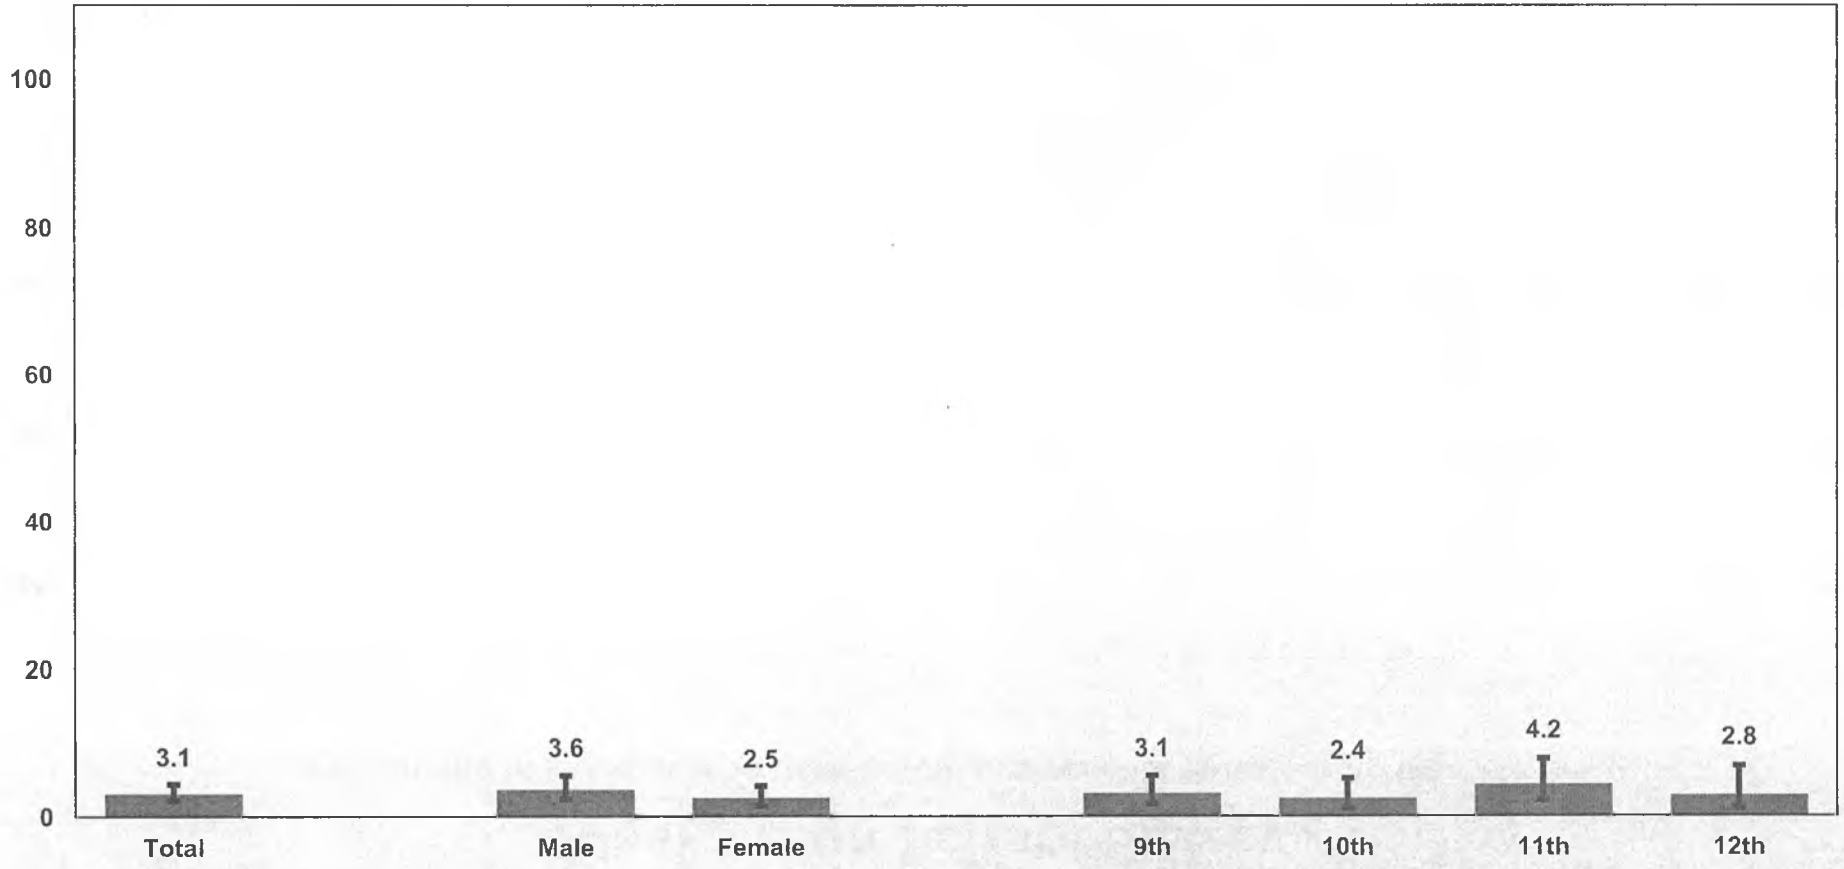
Percentage of students who used methamphetamines one or more times during their life



Q54 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

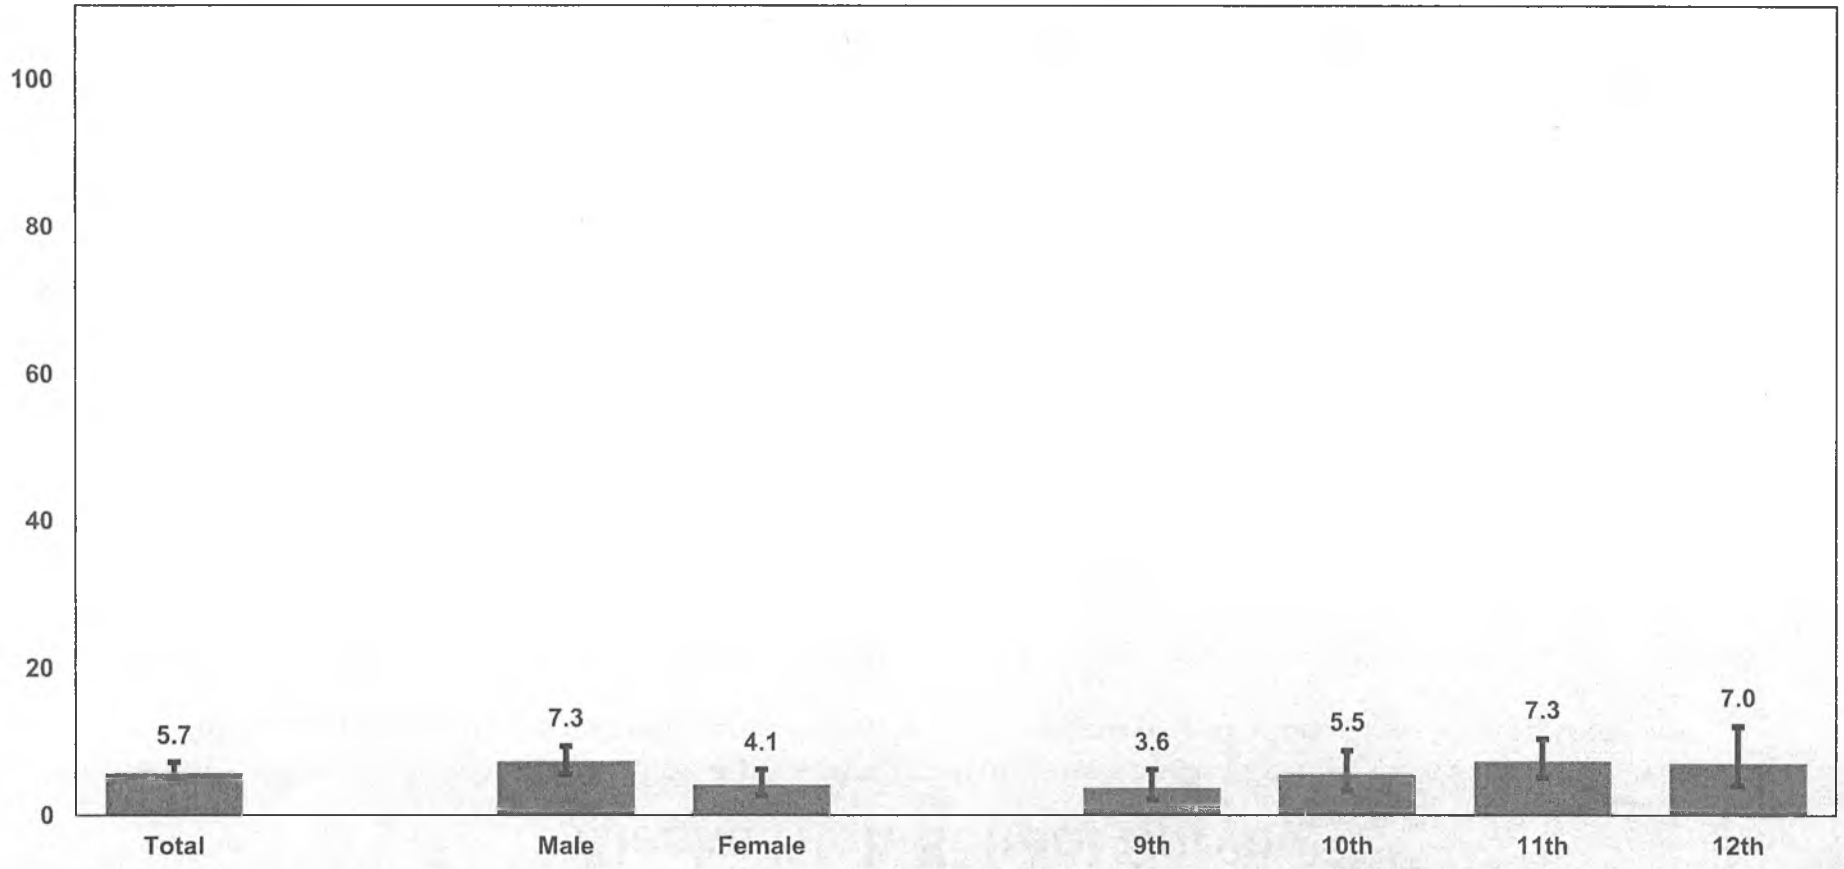
Percentage of students who used ecstasy one or more times during their life



Q55 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

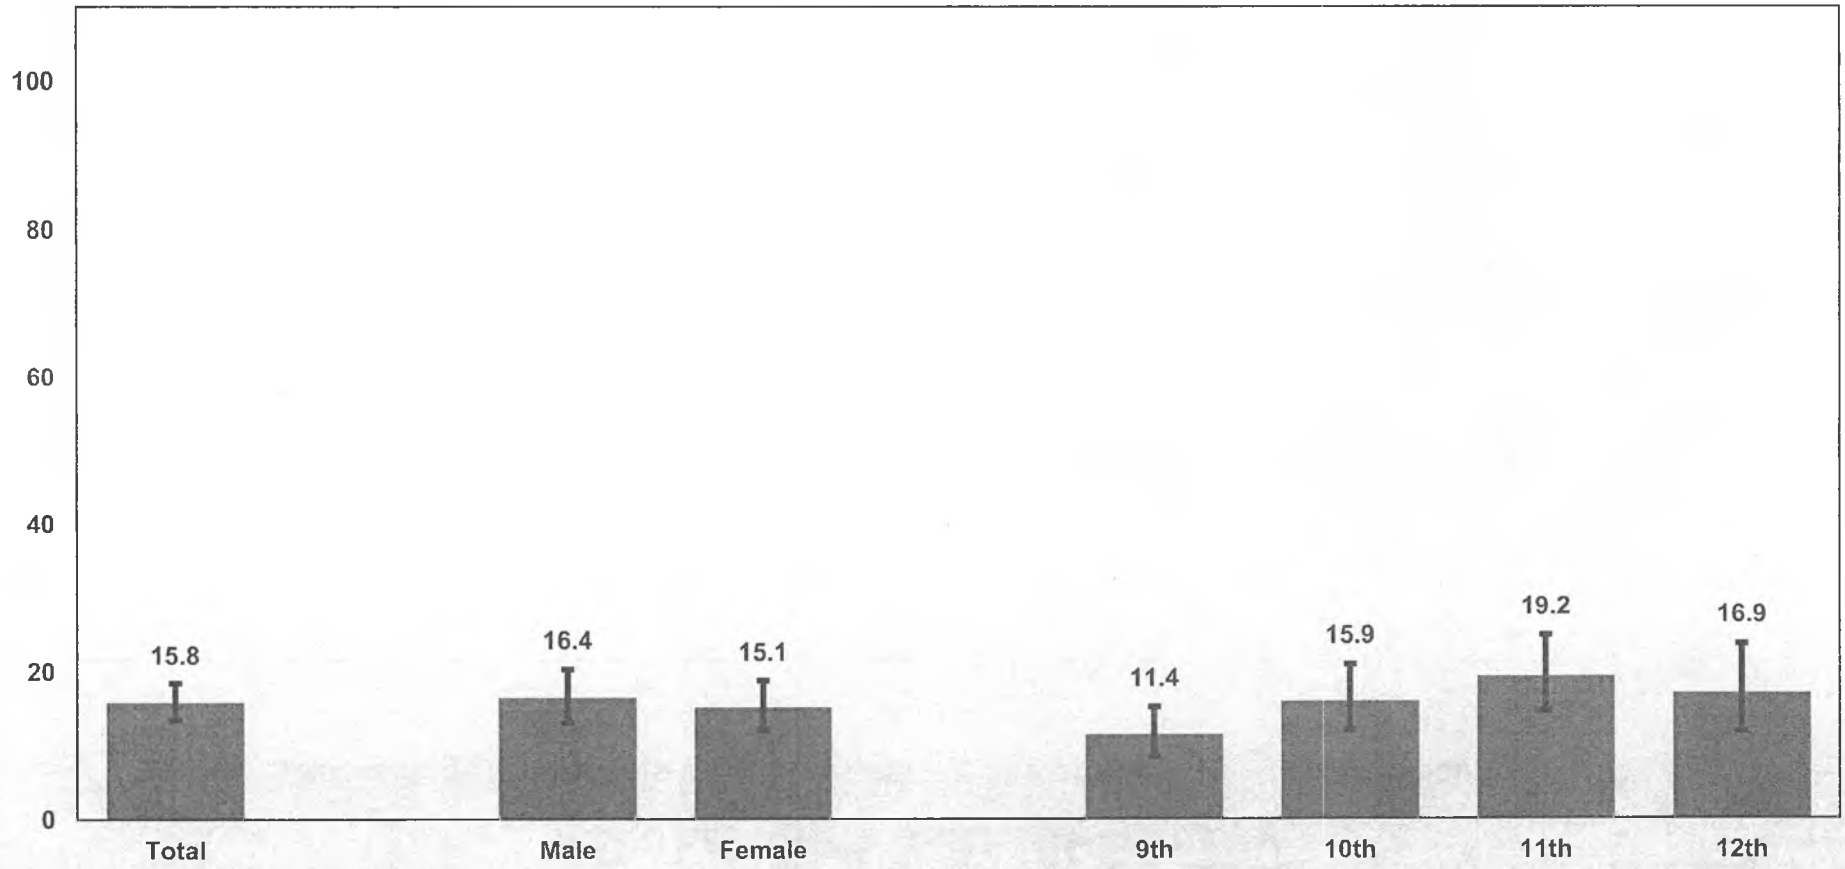
Percentage of students who have taken a prescription drug (such as OxyContin, Percocet, Vicodin, codeine, Adderall, Ritalin, or Xanax) without a doctor's prescription one or more times during their life



Q57 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

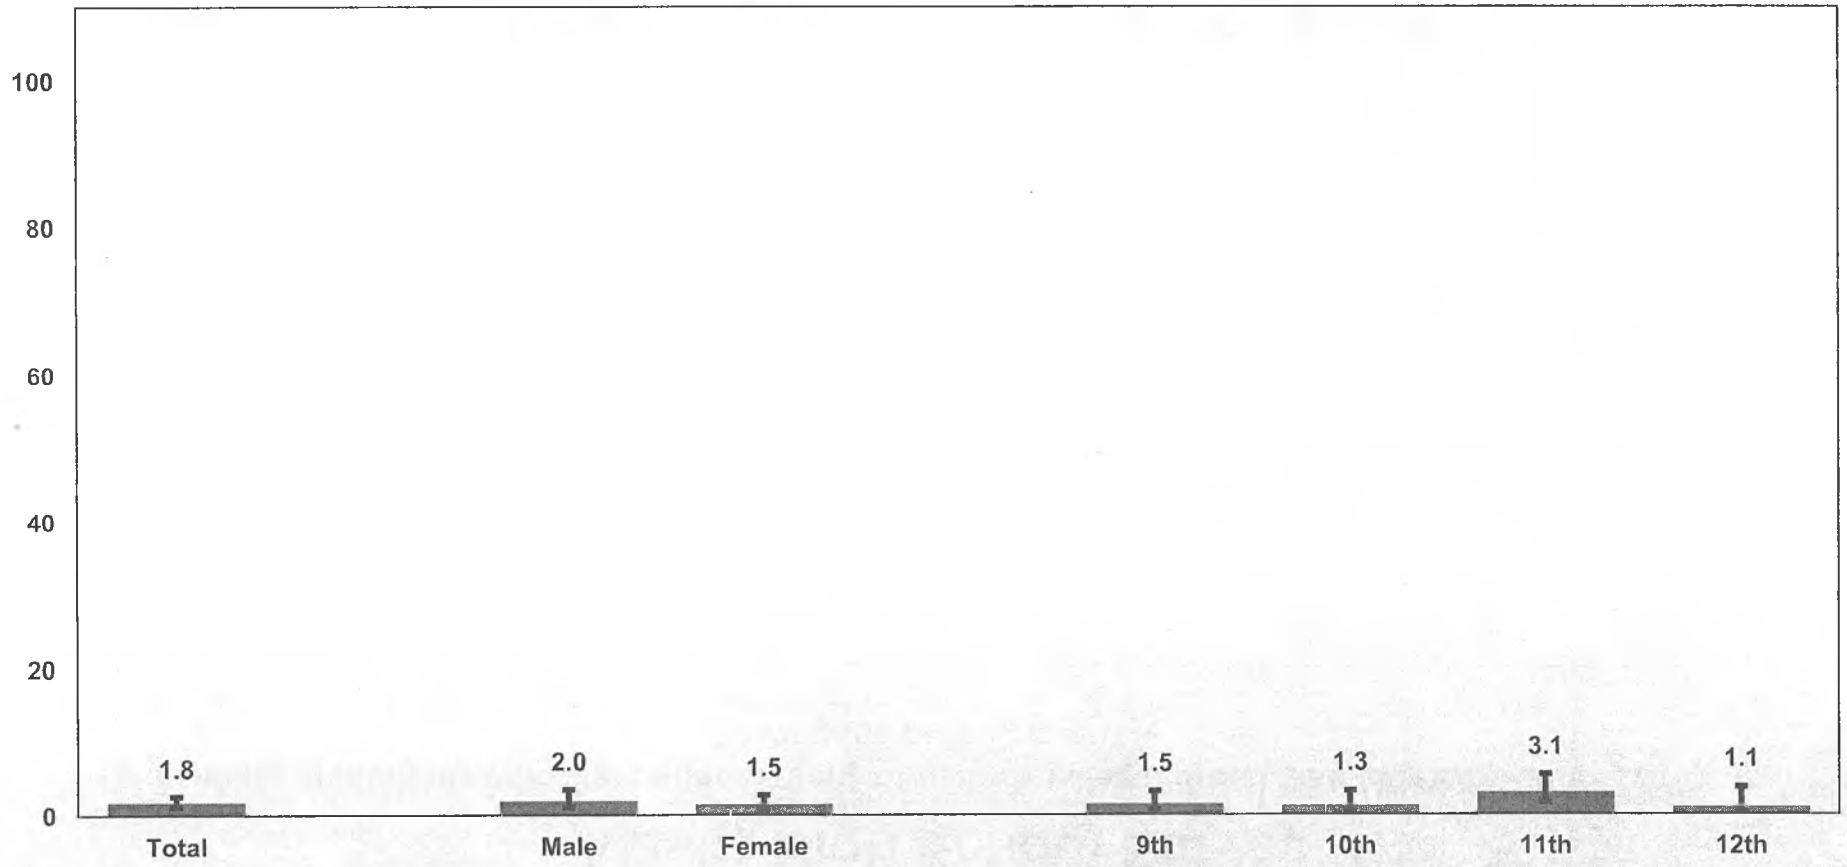
Percentage of students who used a needle to inject any illegal drug into their body one or more times during their life



Q58 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

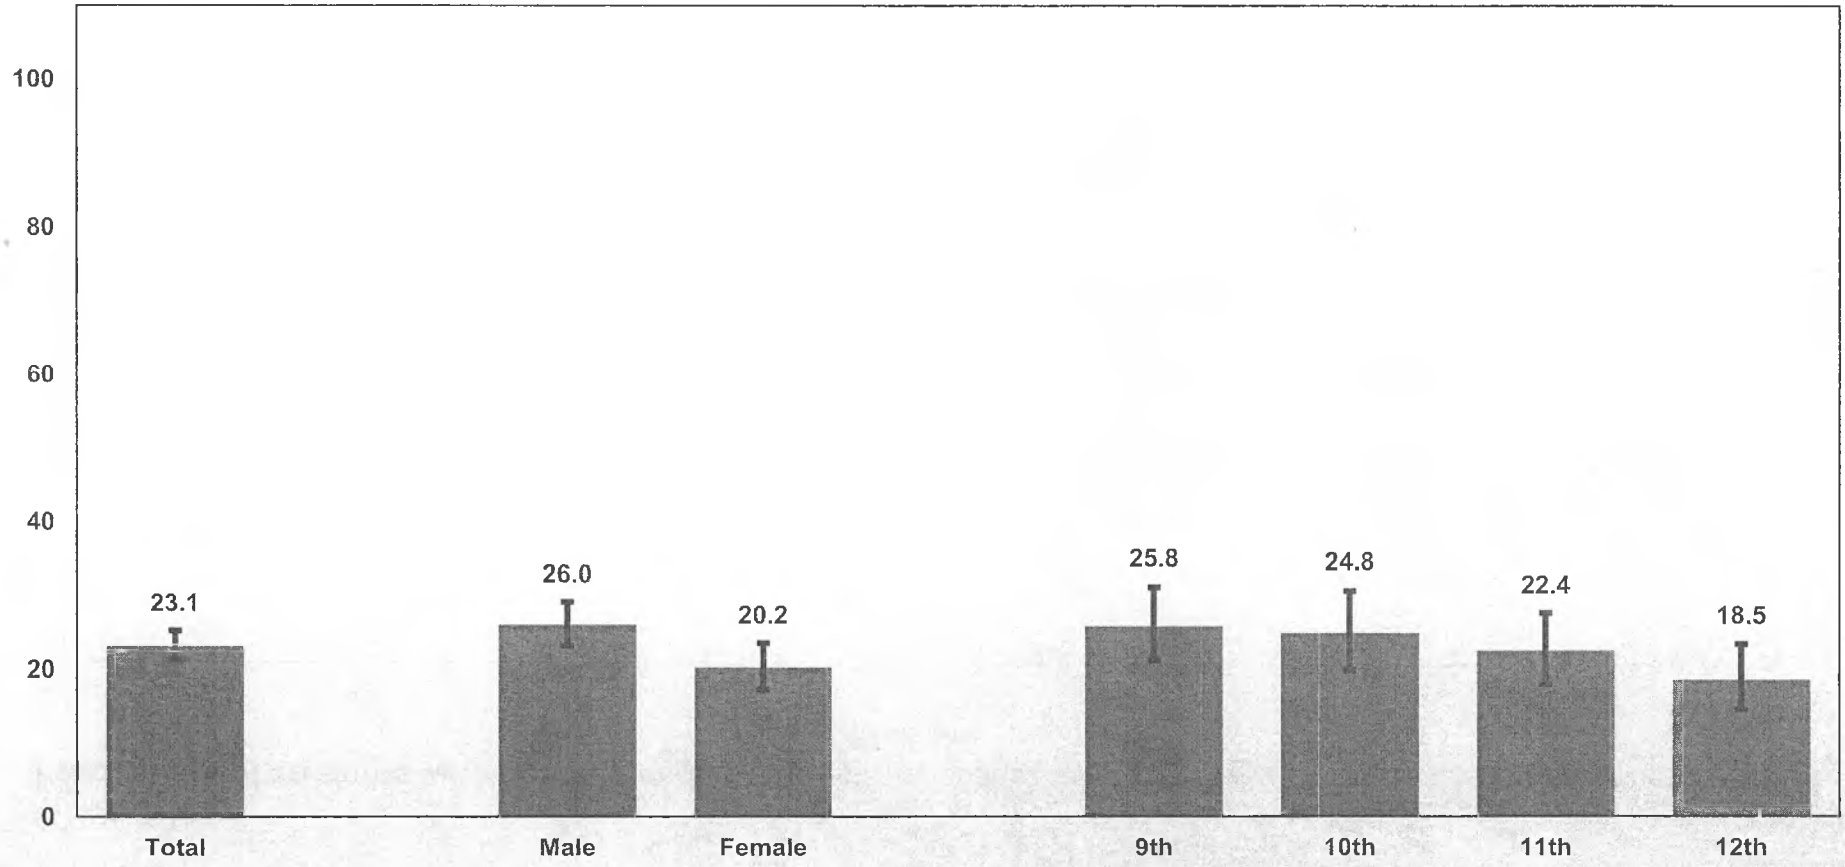
Percentage of students who were offered, sold, or given an illegal drug by someone on school property during the past 12 months



Q59 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

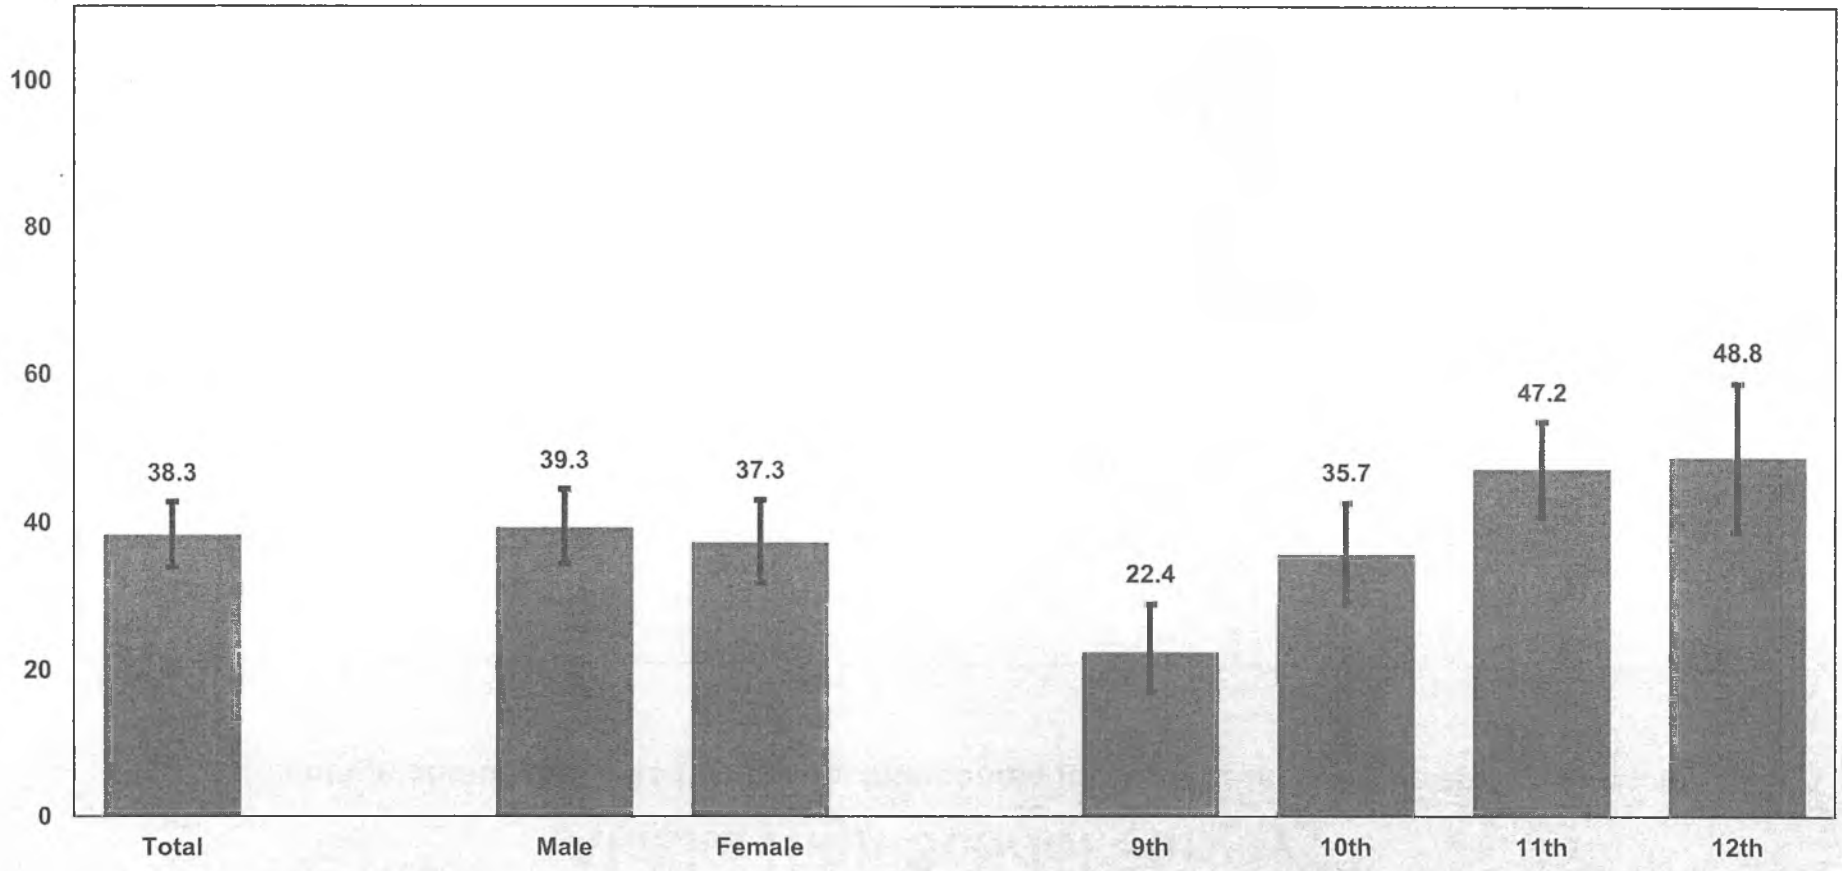
Percentage of students who ever had sexual intercourse



Q60 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

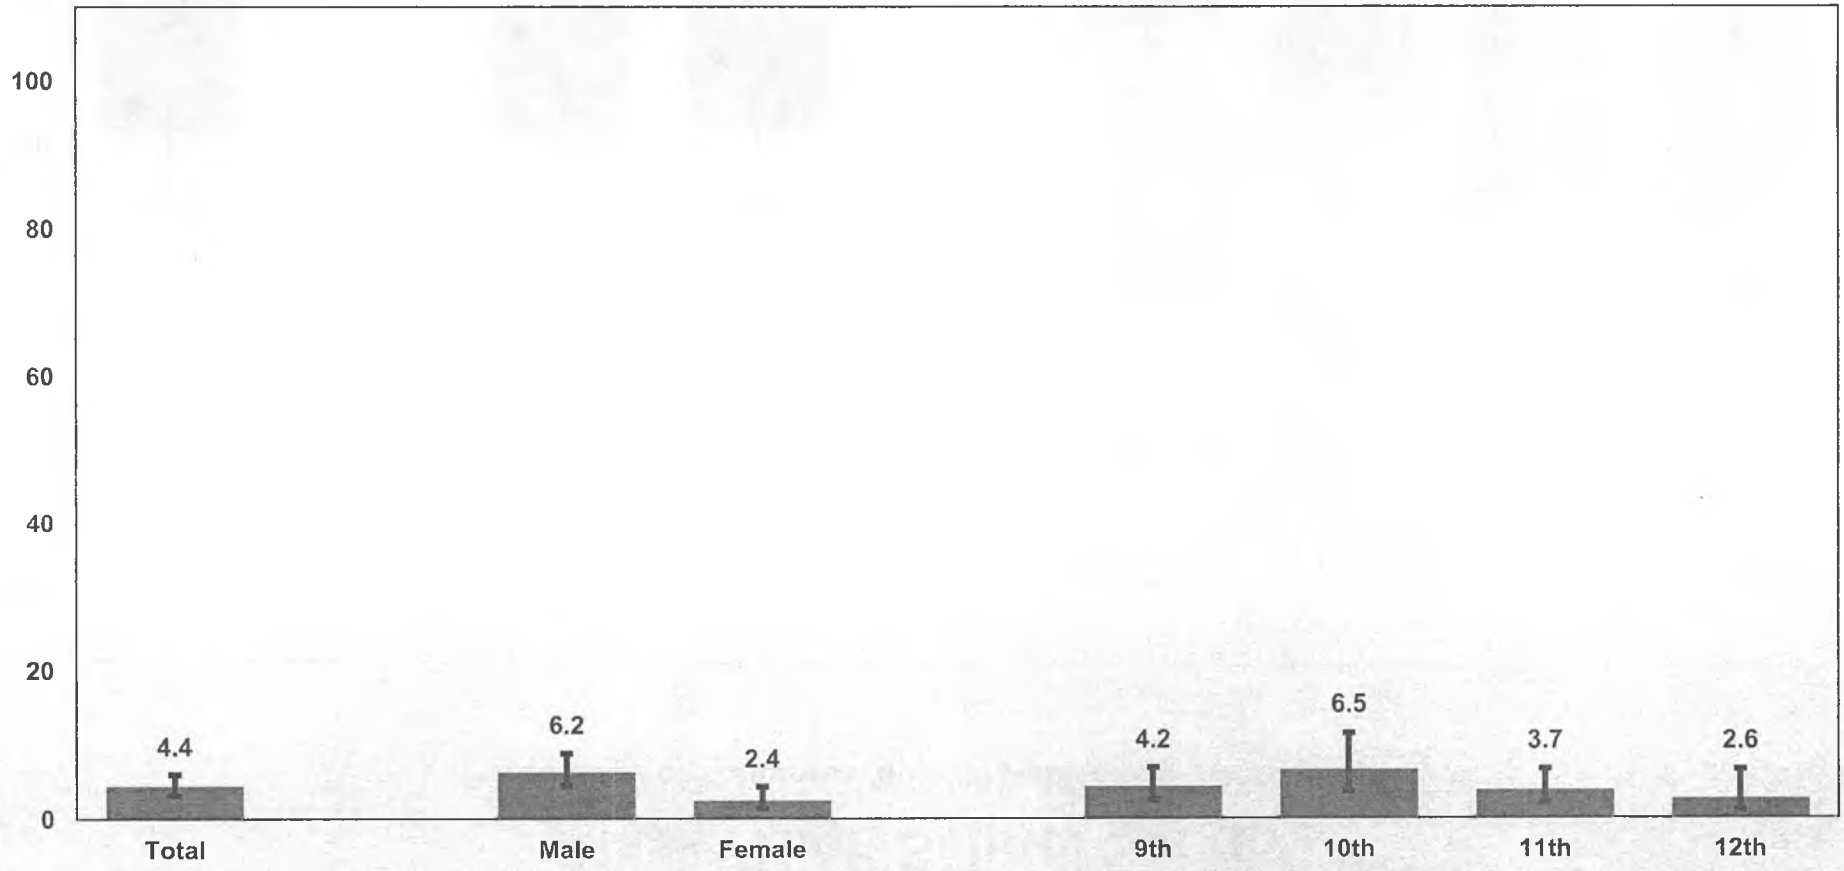
Percentage of students who had sexual intercourse for the first time before age 13 years



Q61 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

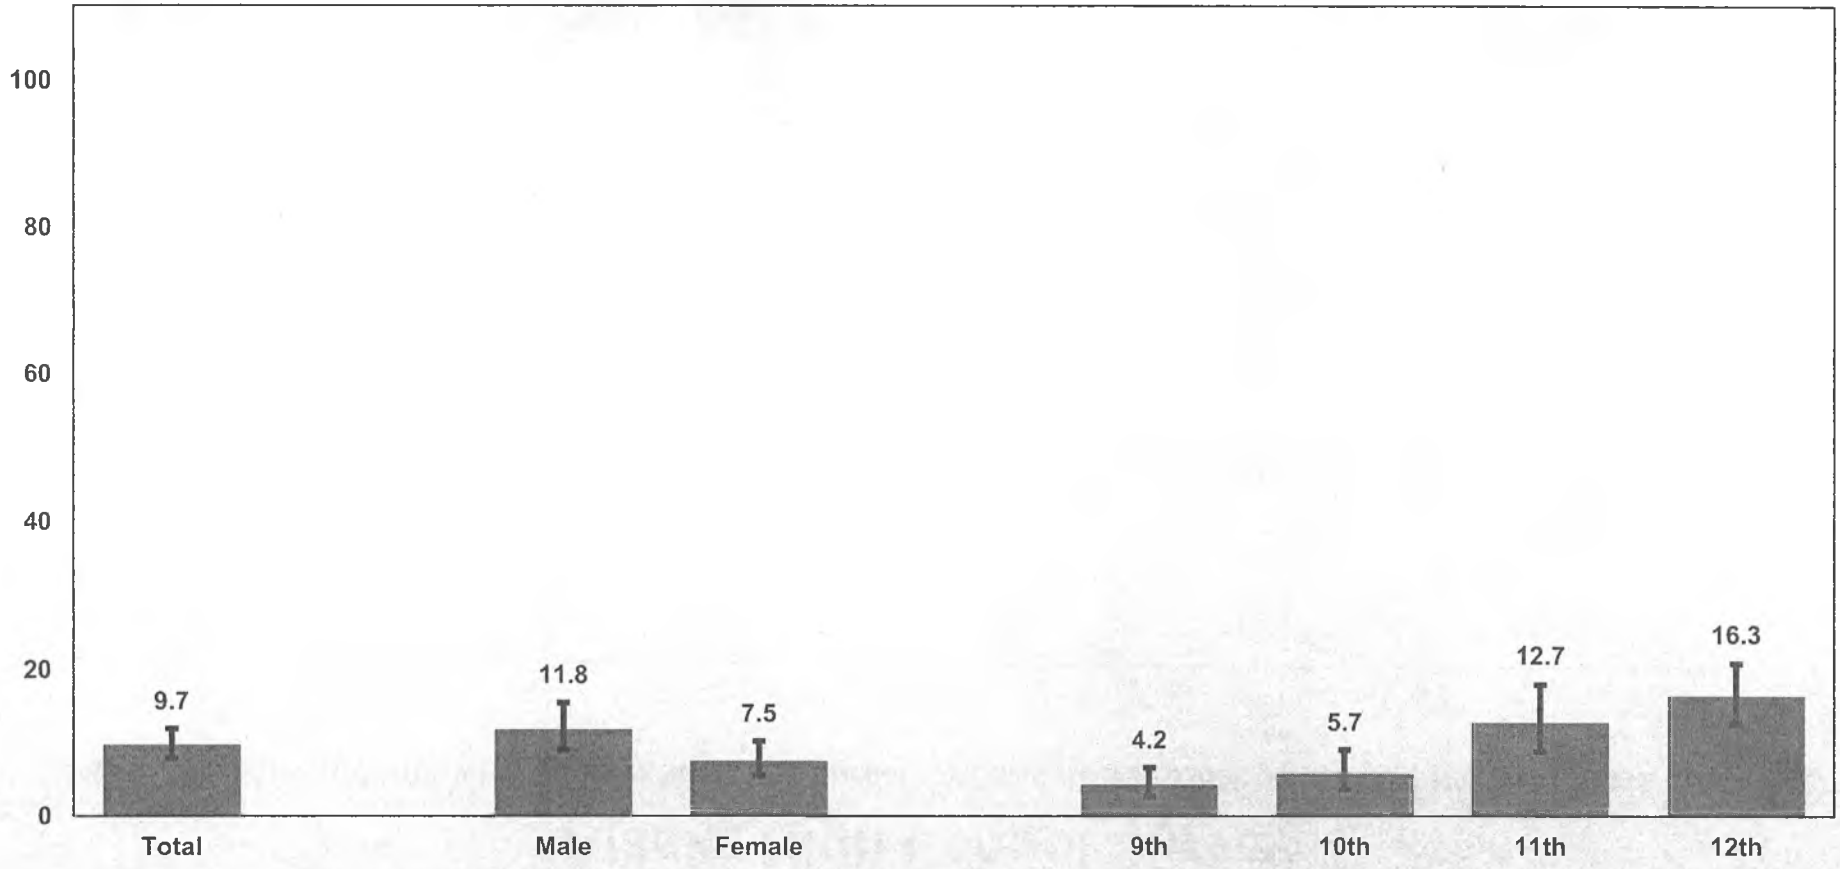
Percentage of students who had sexual intercourse with four or more people during their life



Q62 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

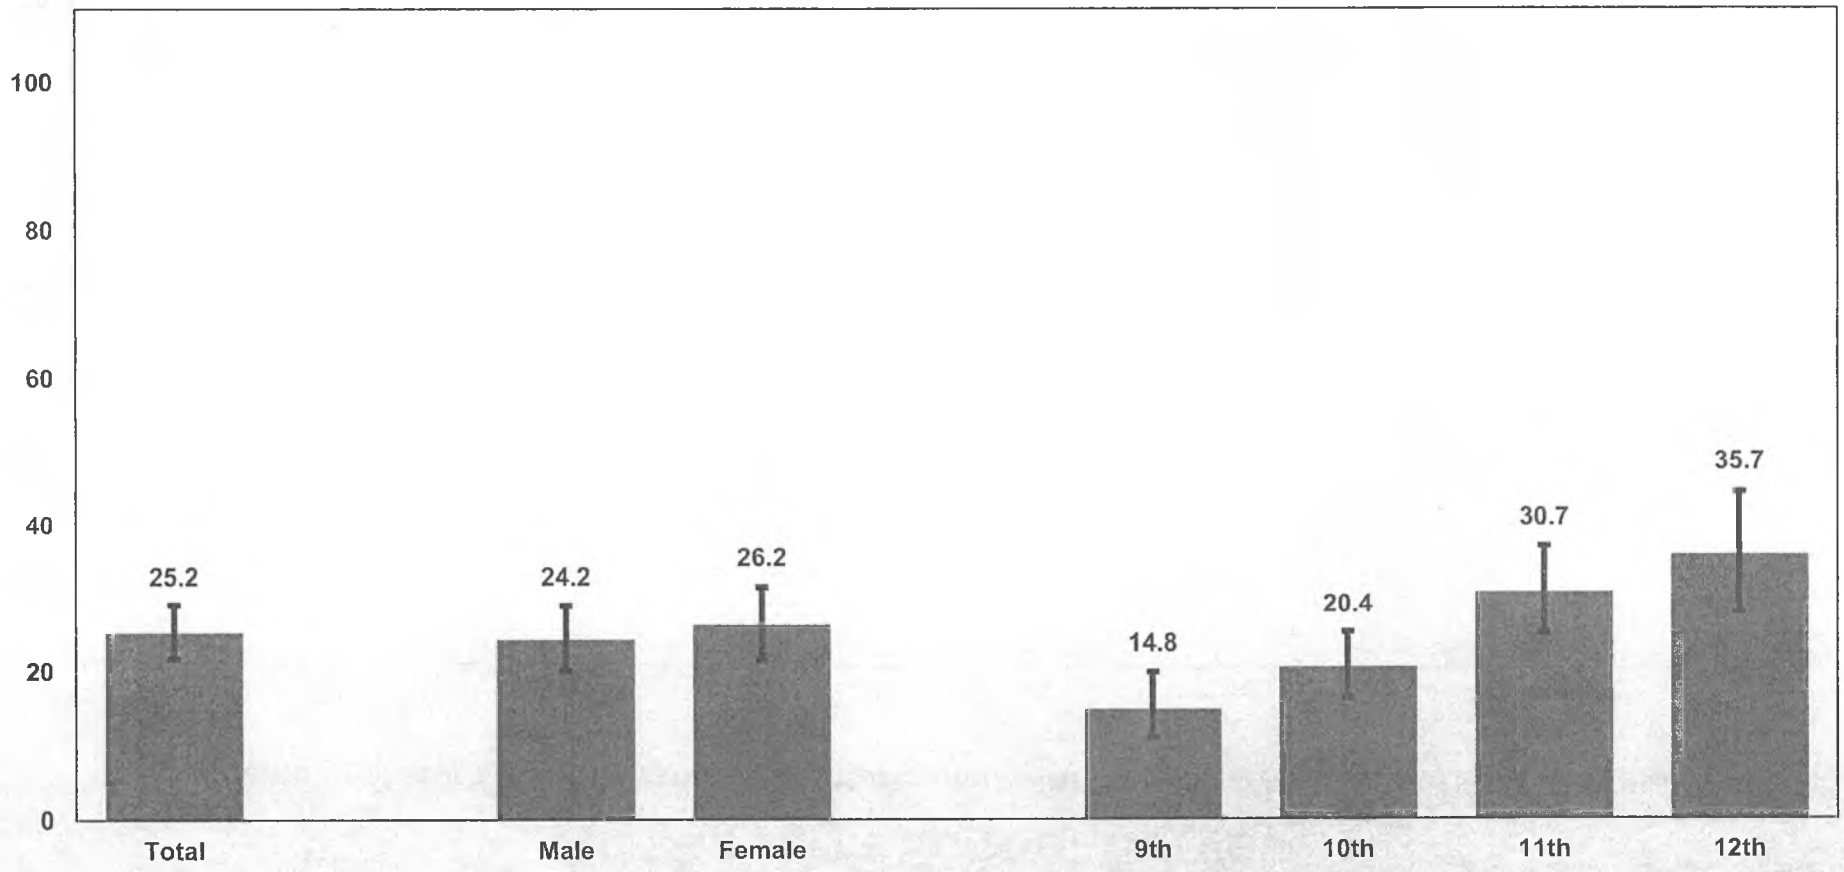
Percentage of students who had sexual intercourse with one or more people during the past three months



Q63 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

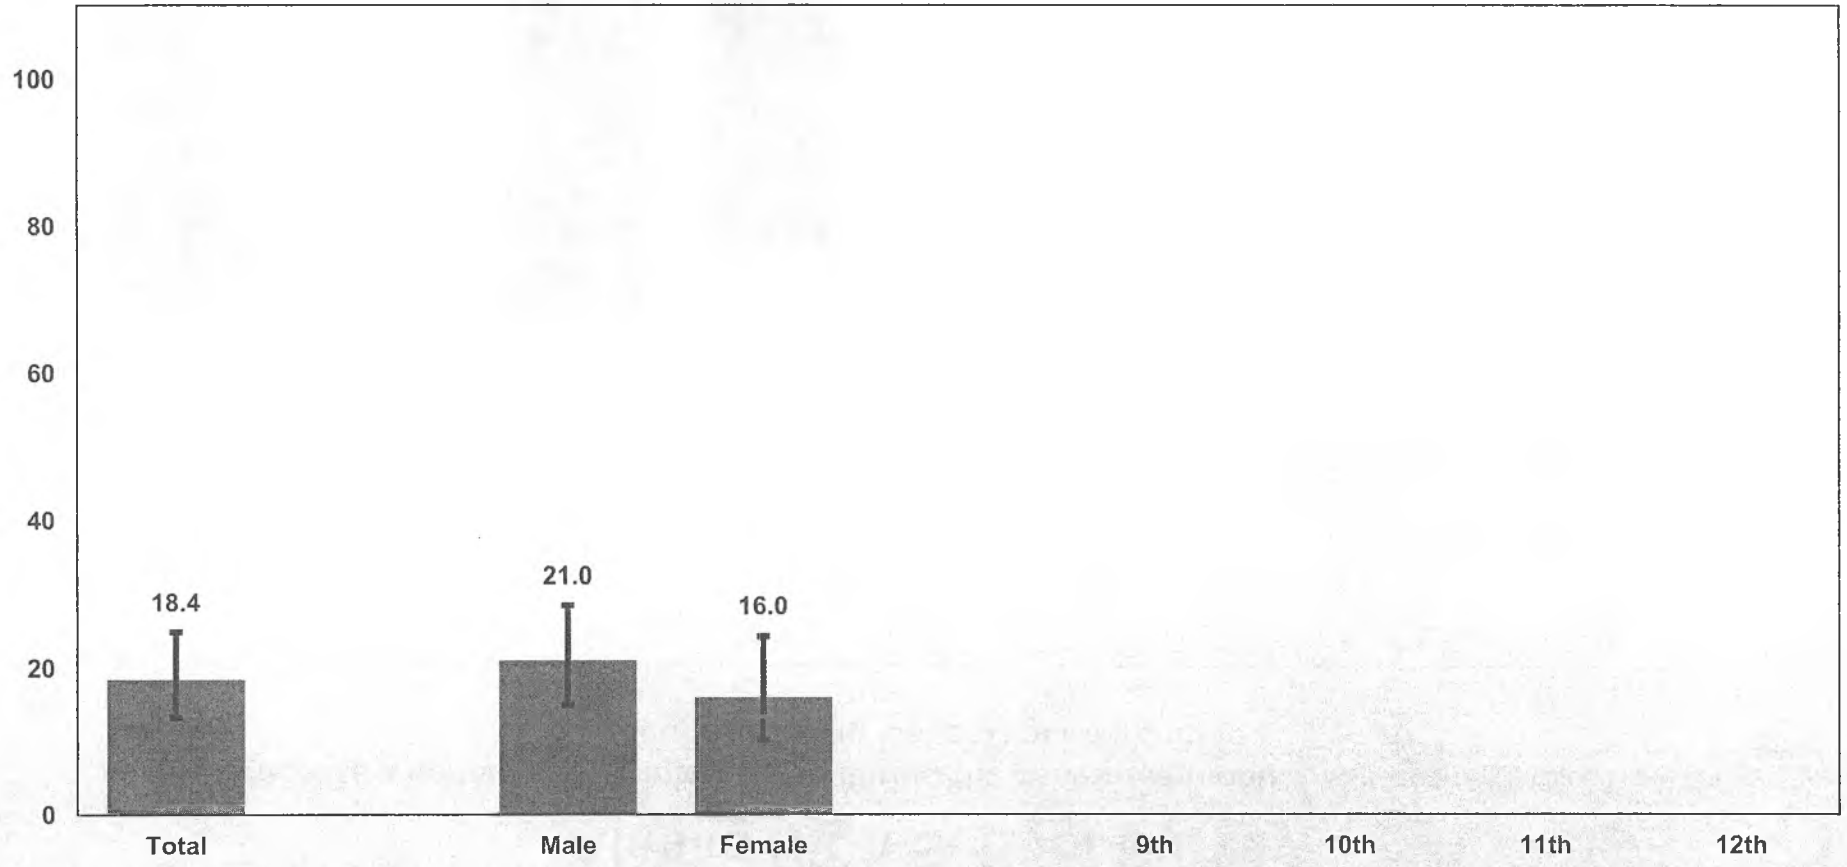
Among students who had sexual intercourse during the past three months, the percentage who drank alcohol or used drugs before last sexual intercourse



Q64 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

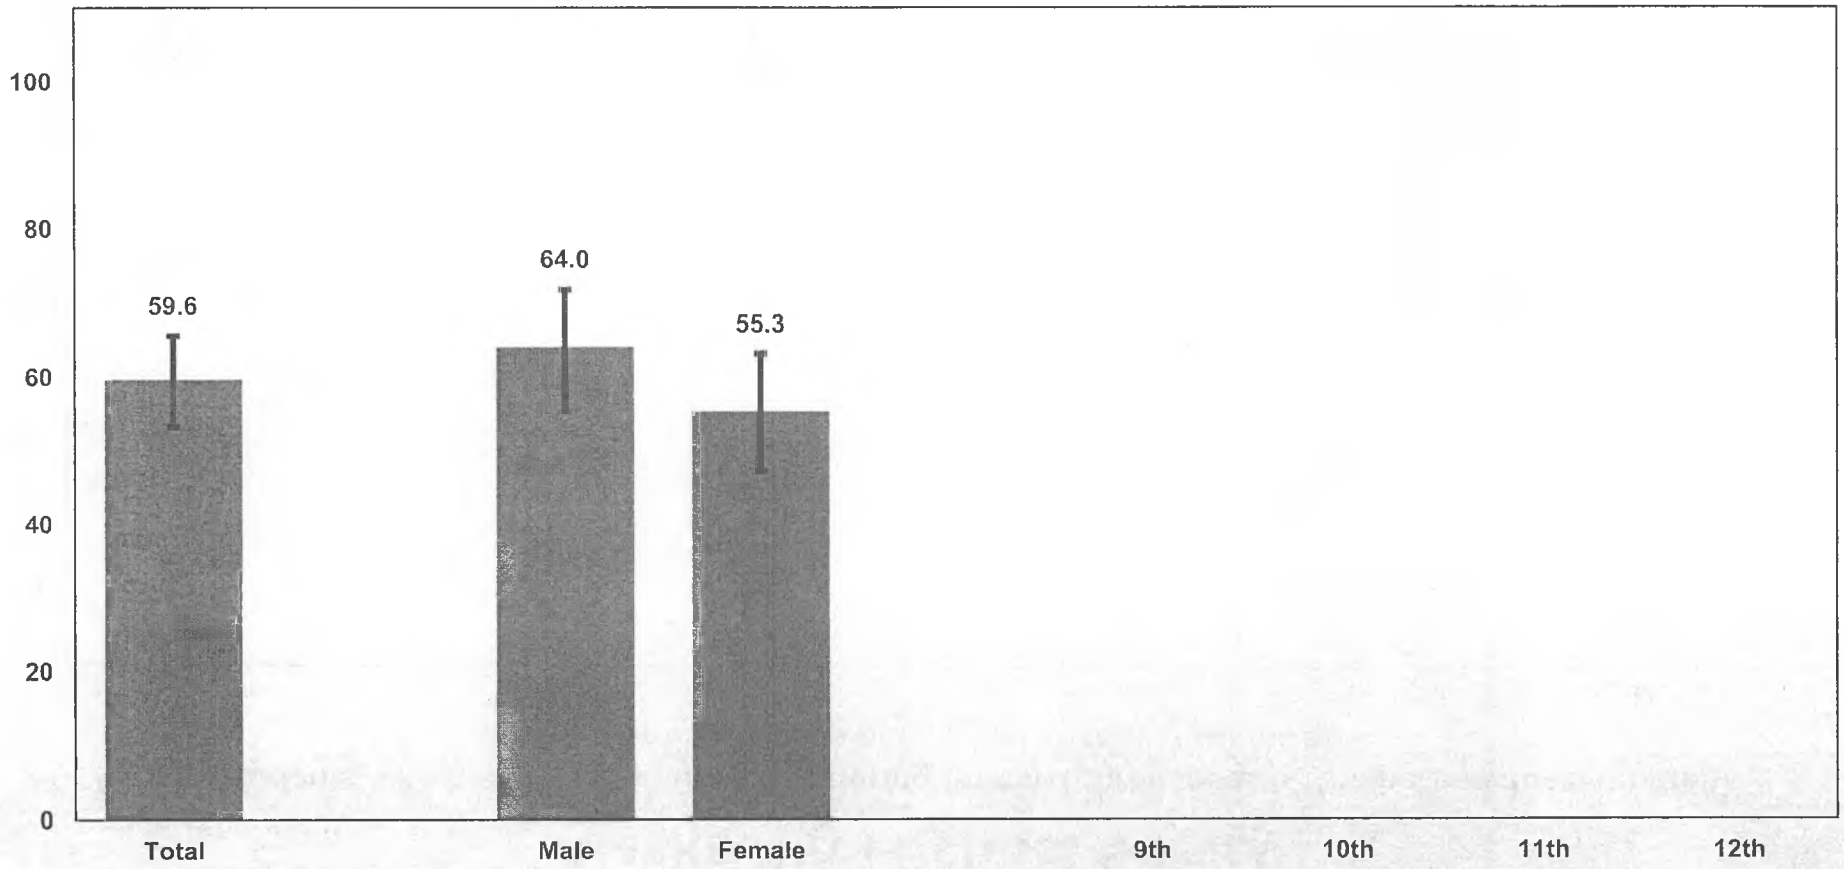
Among students who had sexual intercourse during the past three months, the percentage who used a condom during last sexual intercourse



Q65 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

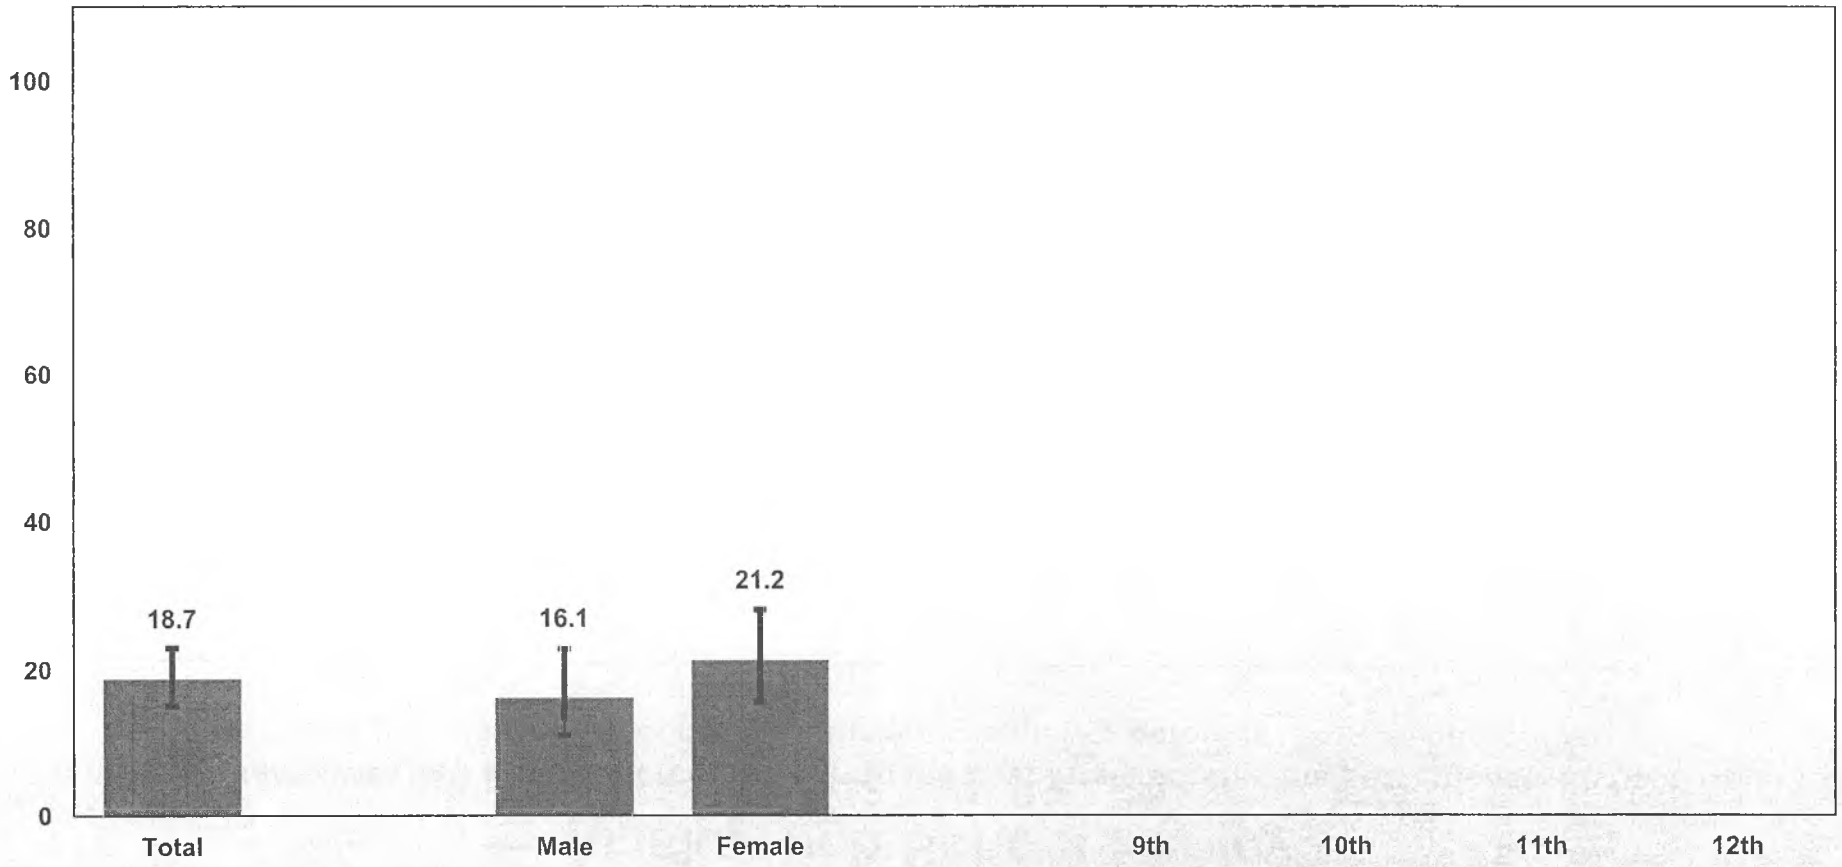
Among students who had sexual intercourse during the past three months, the percentage who used birth control pills to prevent pregnancy before last sexual intercourse



Q66 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

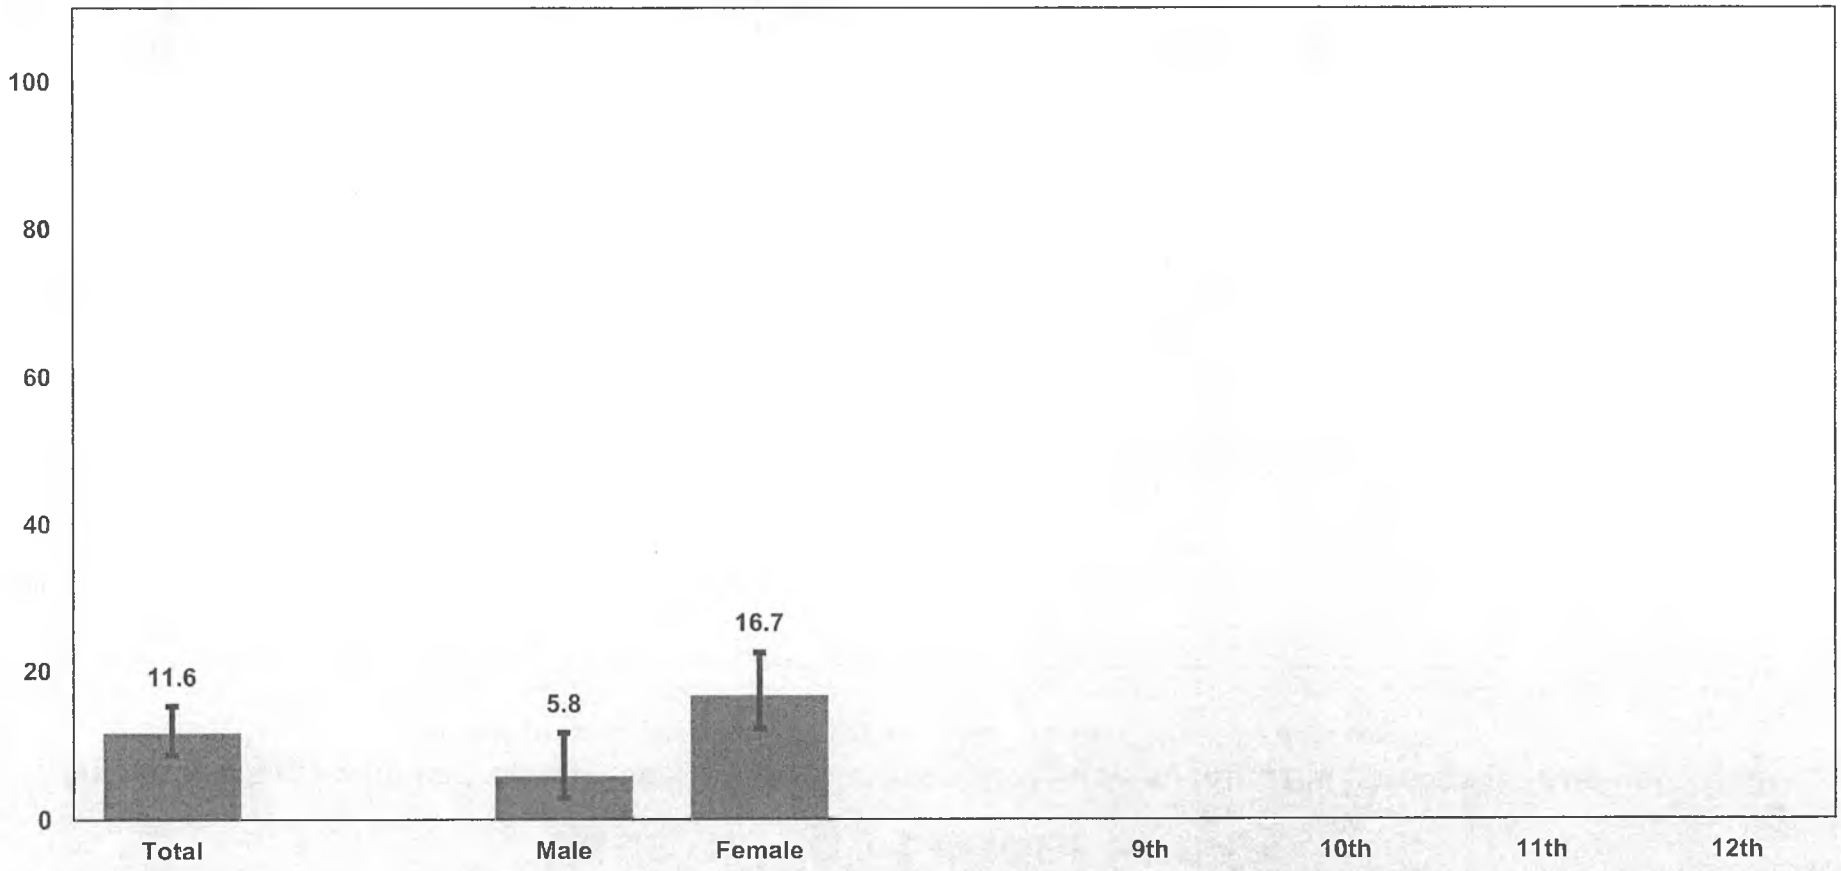
Among students who had sexual intercourse during the past three months, the percentage who used Depo-Provera (injectable birth control) to prevent pregnancy before last sexual intercourse



QNDEPO - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

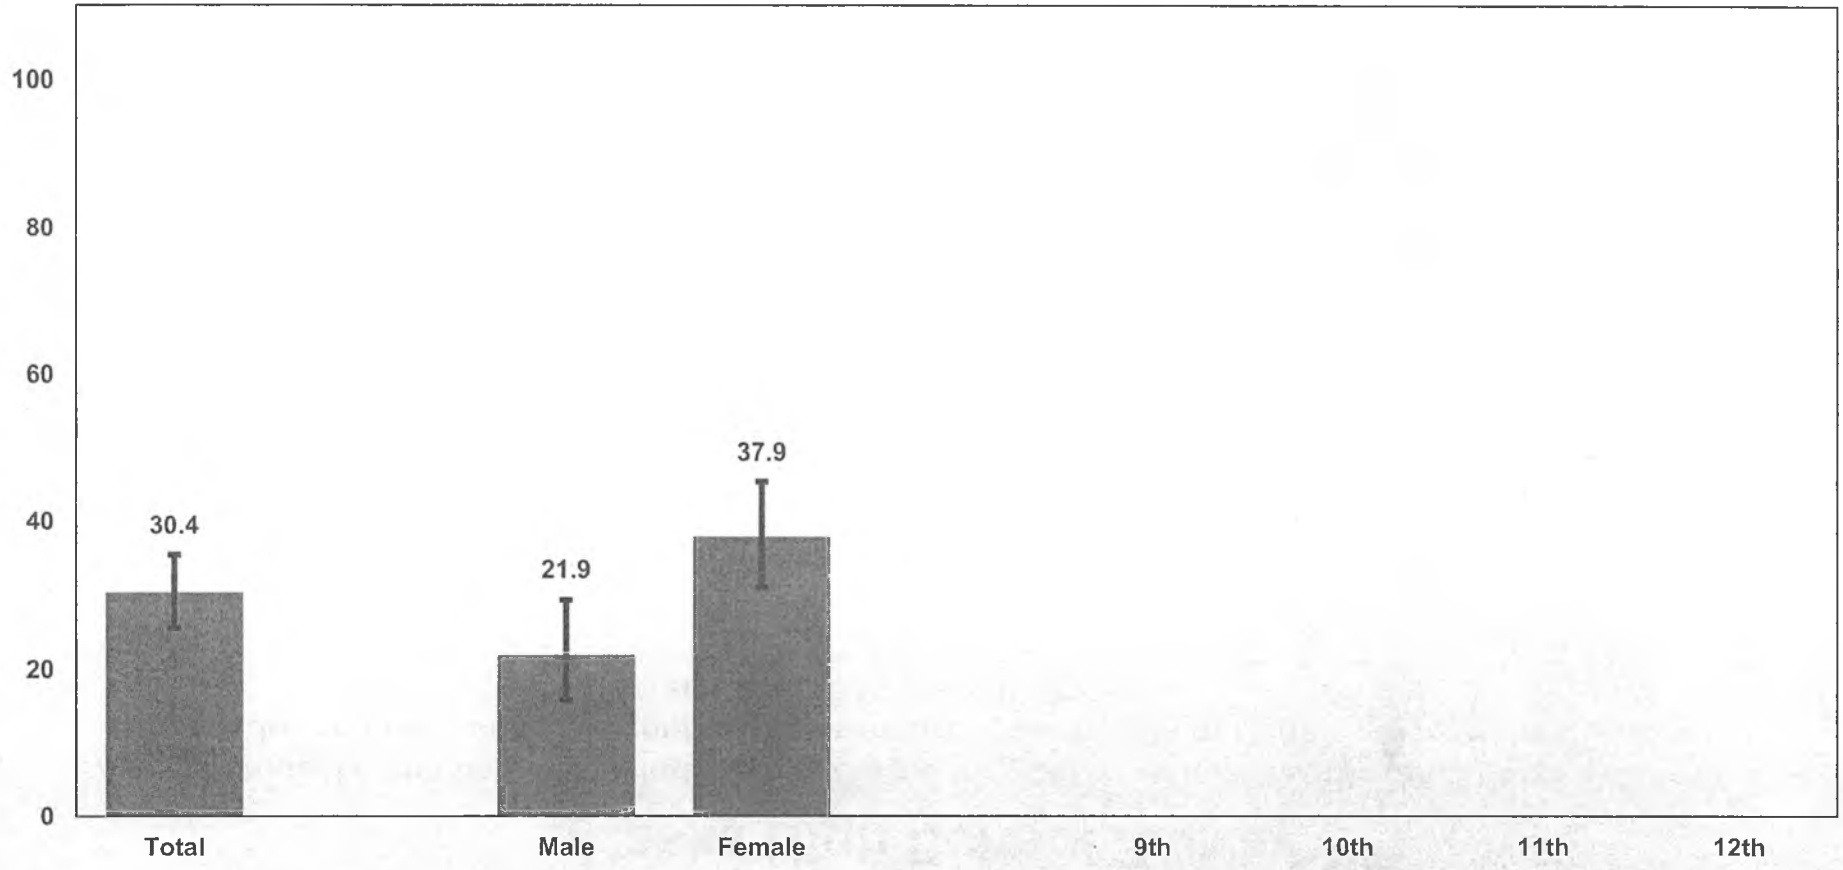
Among students who had sexual intercourse during the past three months, the percentage who used Depo-Provera (injectable birth control) or birth control pills to prevent pregnancy before last sexual intercourse



QNDEPOPL - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

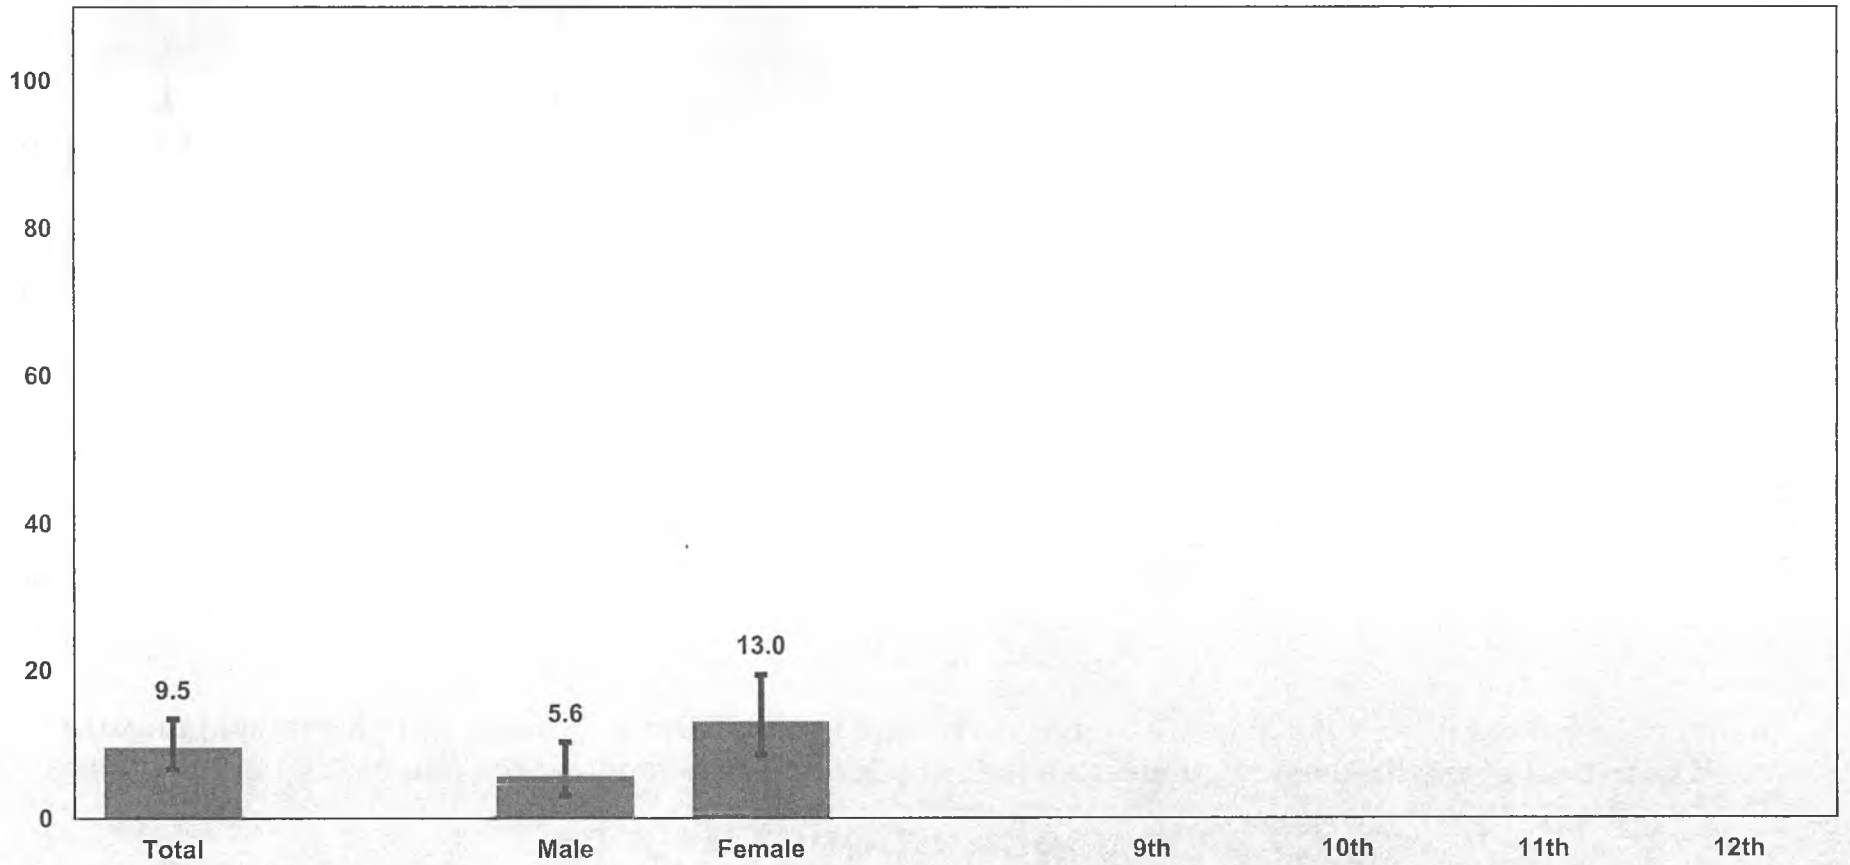
Among students who had sexual intercourse during the past three months, the percentage who used a condom during last sexual intercourse and used birth control pills or Depo-Provera before last sexual intercourse to prevent pregnancy



QNDUAL - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

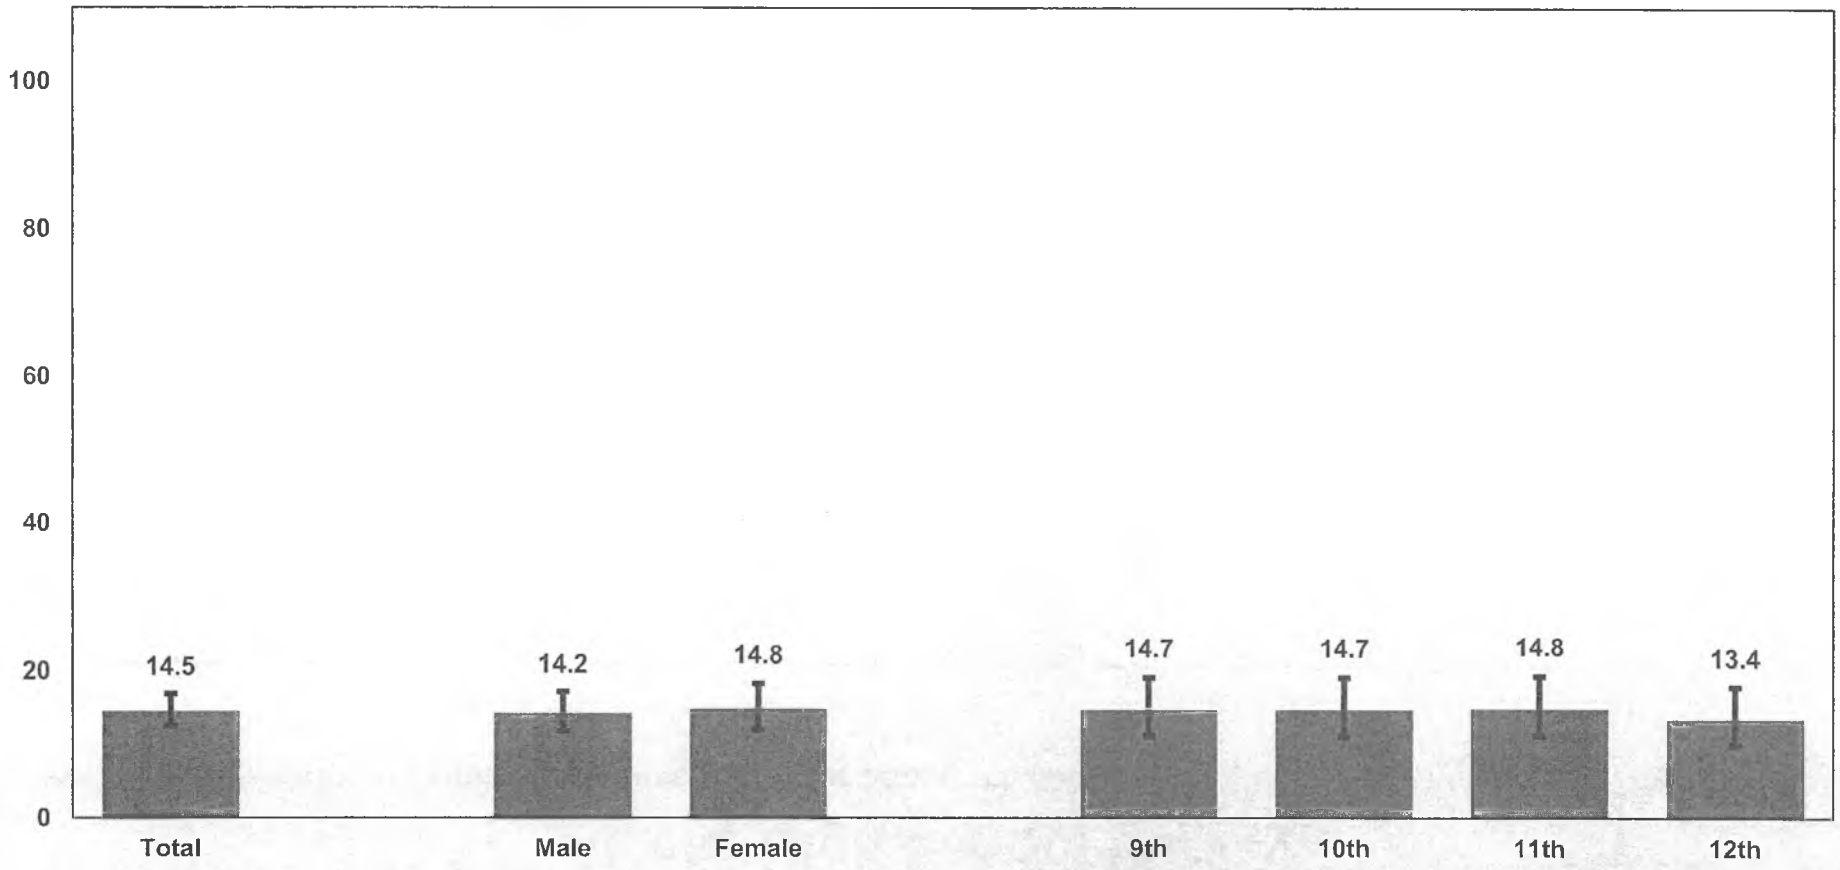
Percentage of students who were overweight (i.e., at or above the 85th percentile but below the 95th percentile for body mass index, by age and sex)**



**QNOWT - Weighted Data - Based on reference data from the 2000 CDC Growth Charts.
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

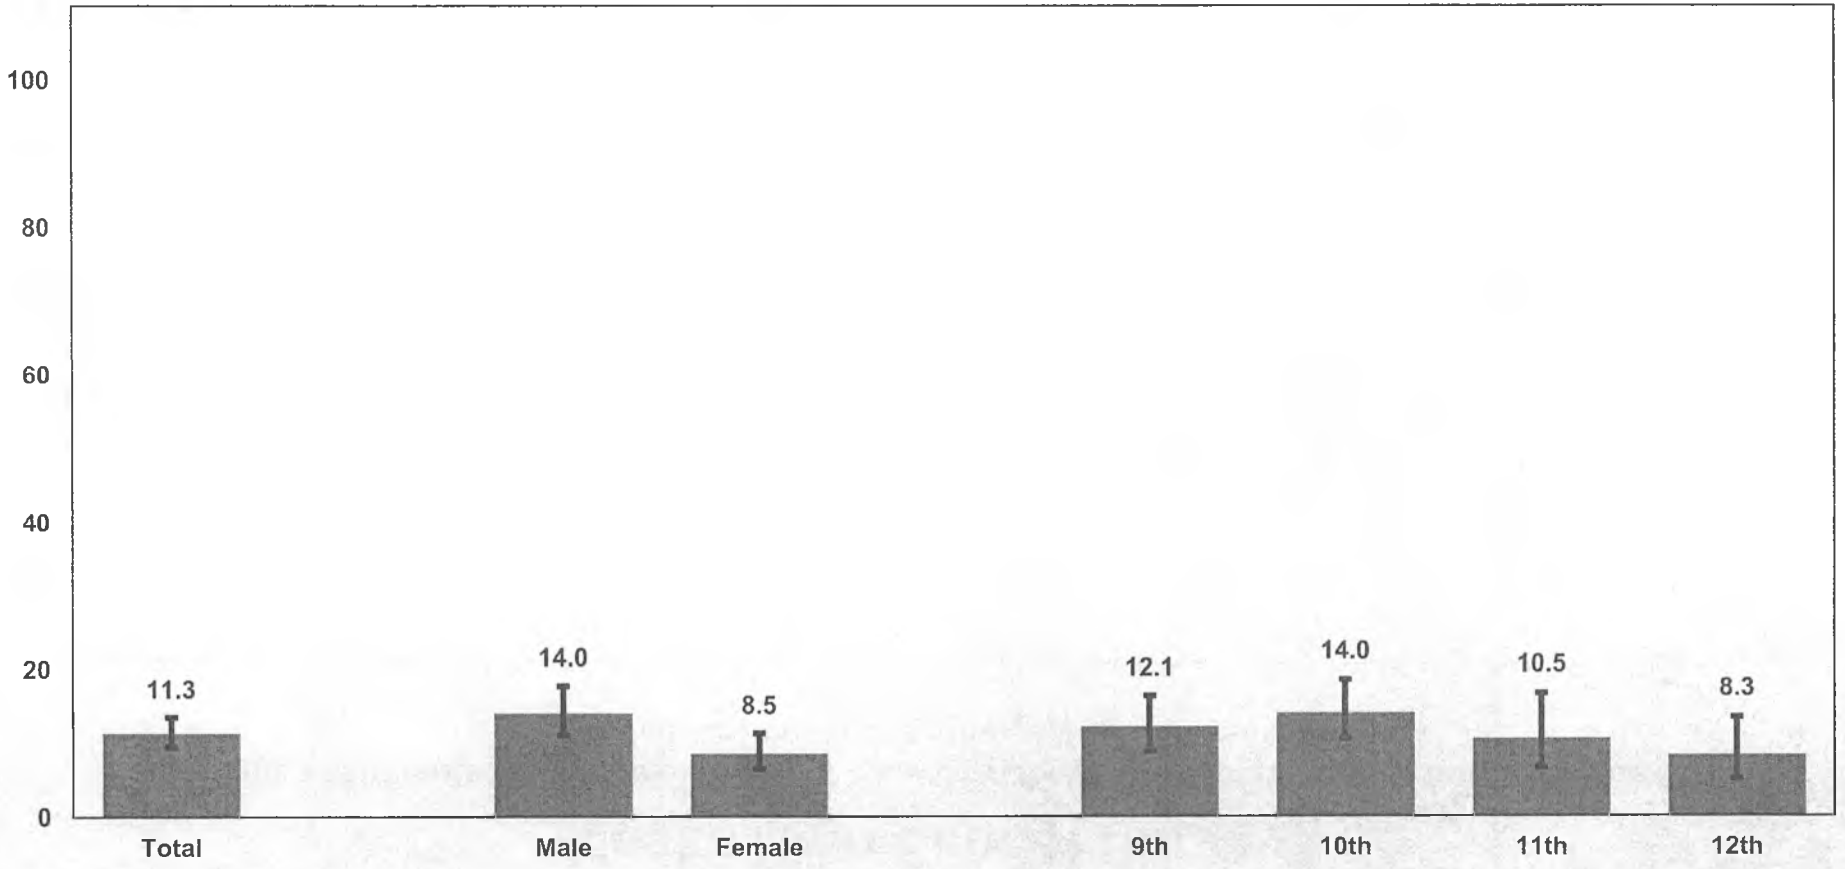
Percentage of students who were obese (i.e., at or above the 95th percentile for body mass index, by age and sex)**



**QNOBESE - Weighted Data - Based on reference data from the 2000 CDC Growth Charts.
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

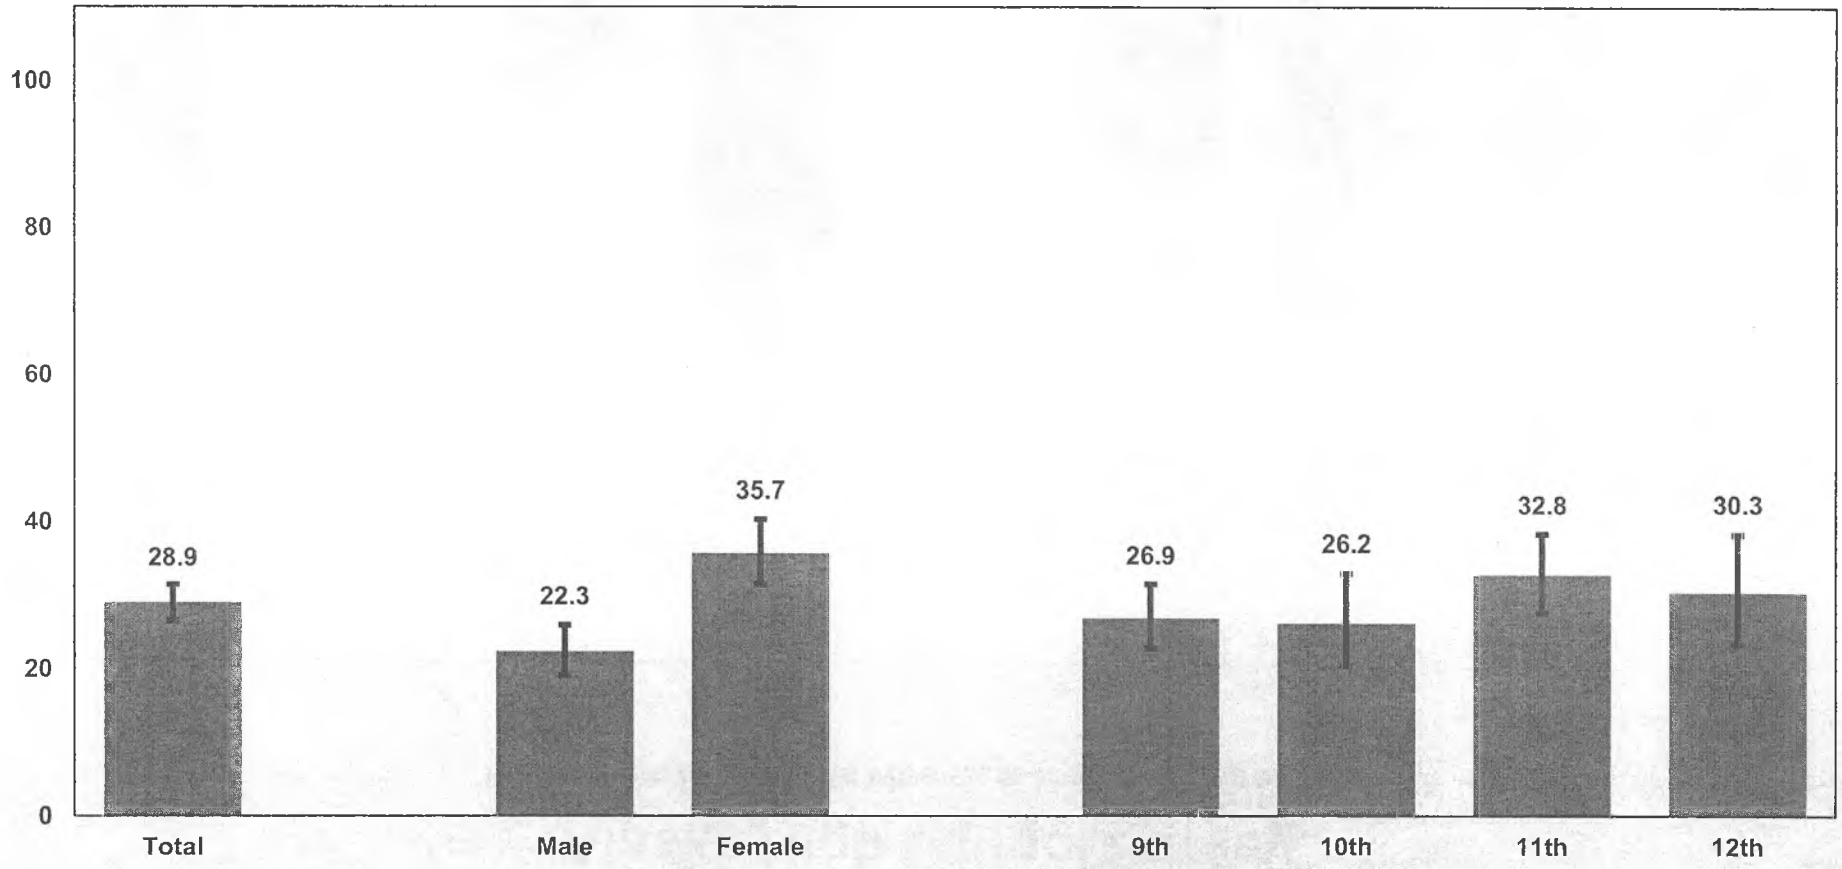
Percentage of students who described themselves as slightly or very overweight



Q67 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

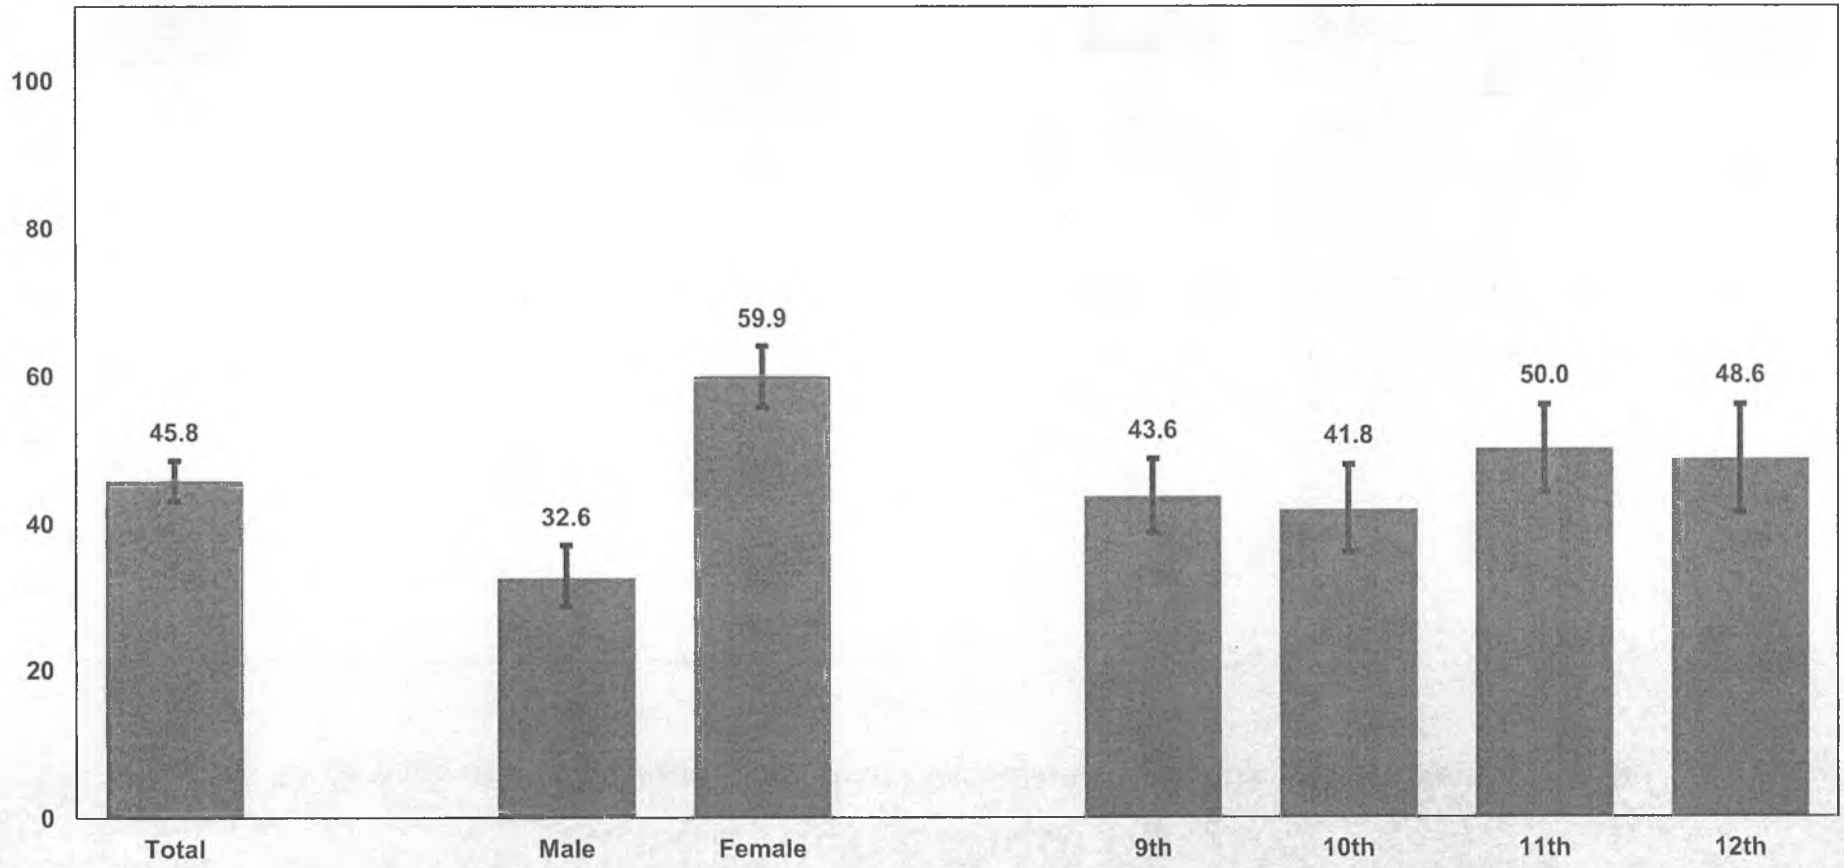
Percentage of students who were trying to lose weight



Q68 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

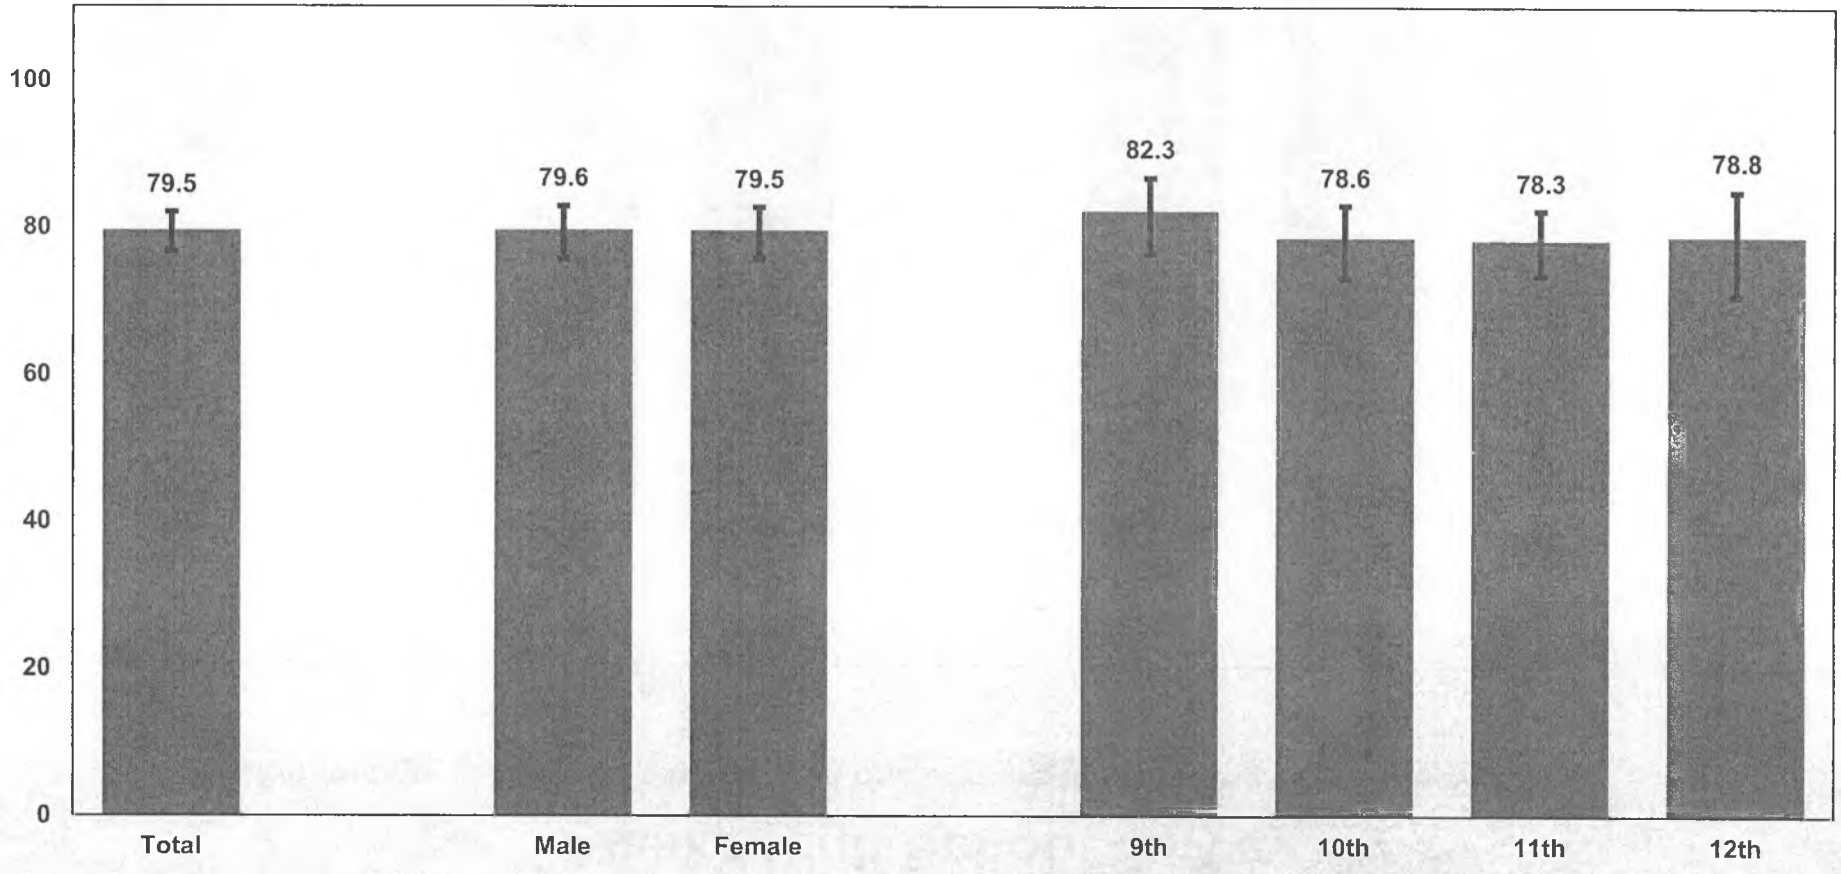
Percentage of students who drank 100% fruit juices one or more times during the past seven days



Q72 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

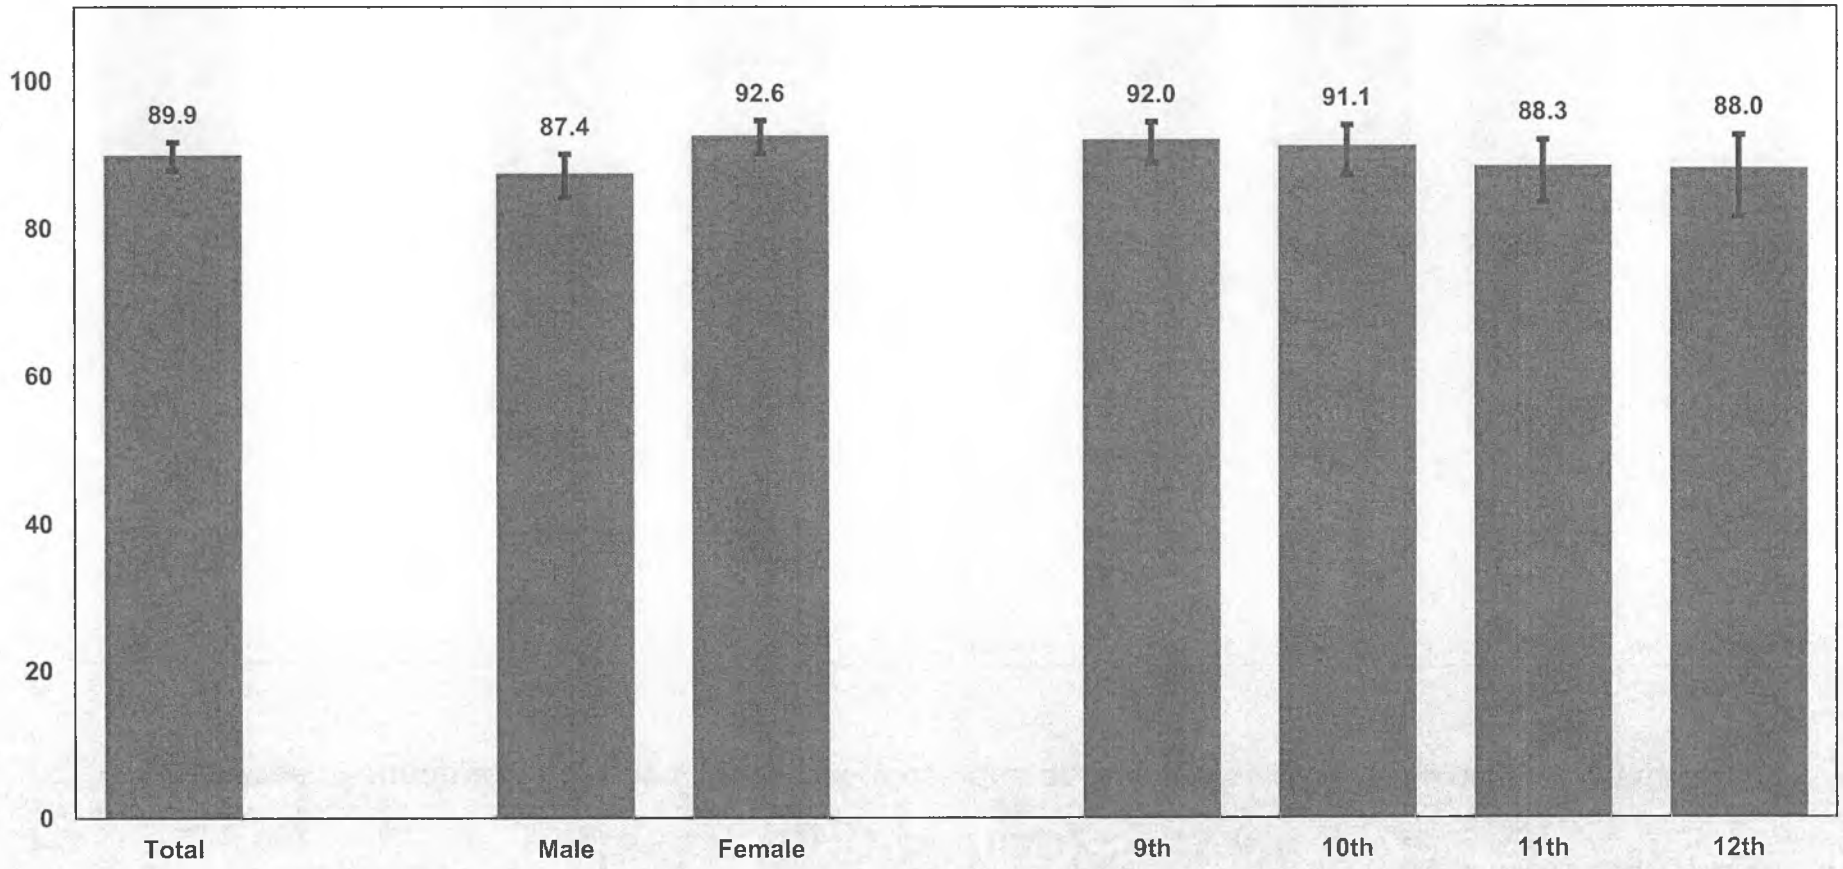
Percentage of students who ate fruit one or more times during the past seven days



Q73 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

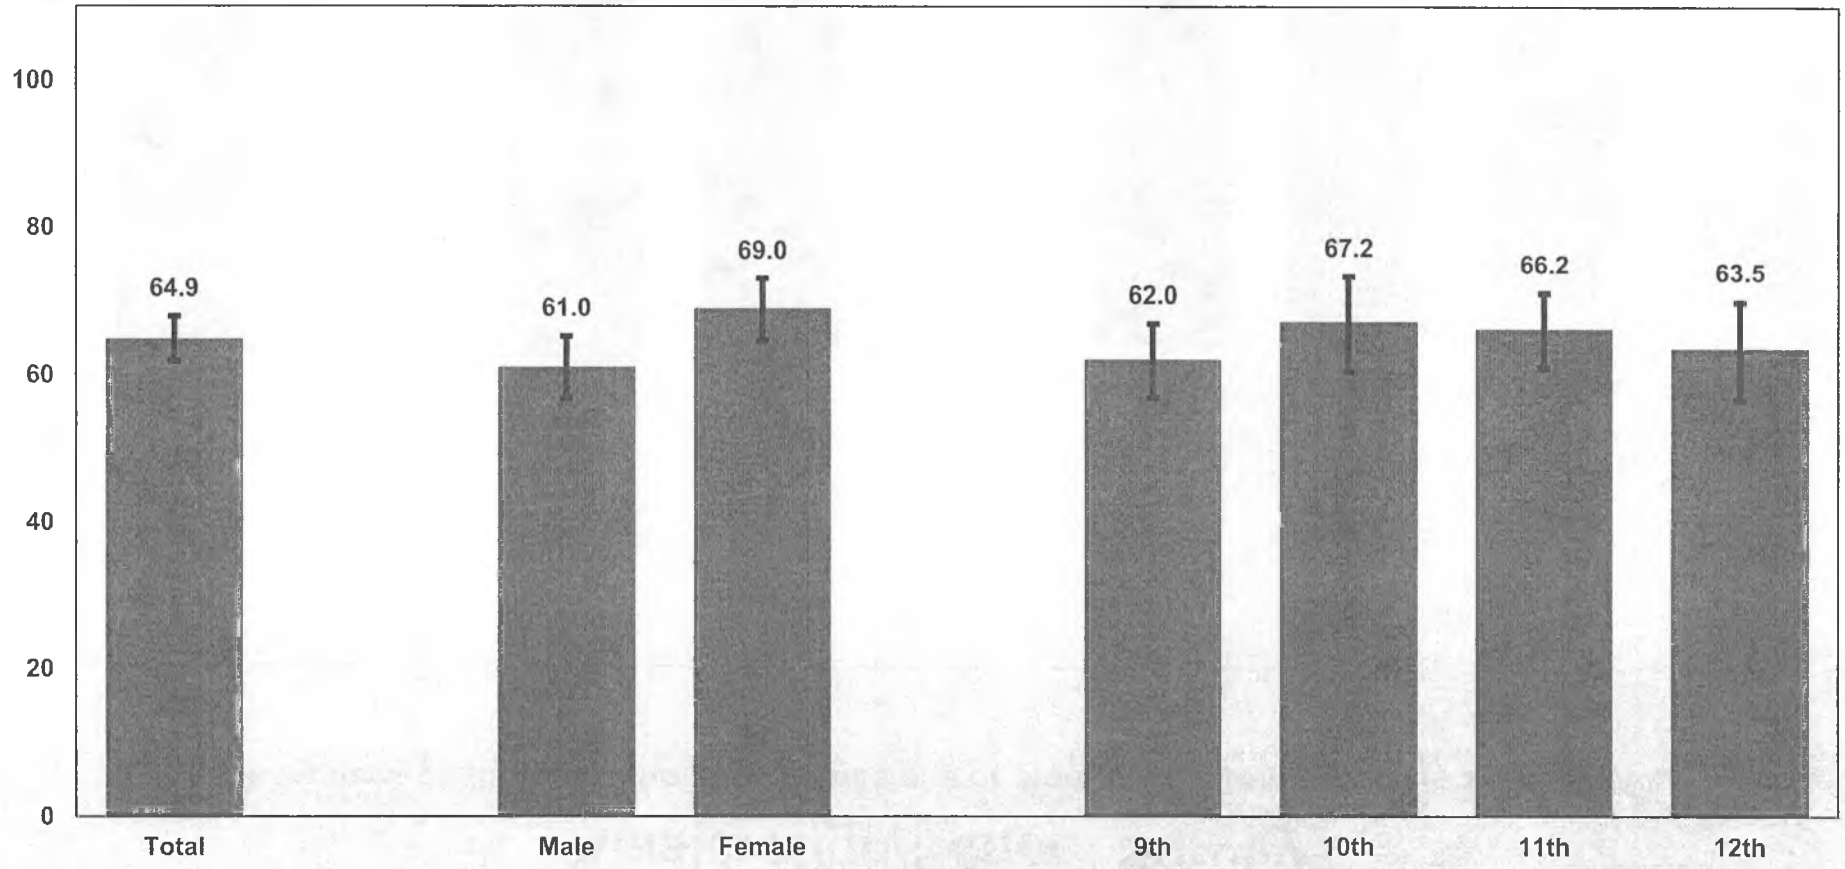
Percentage of students who ate green salad one or more times during the past seven days



Q74 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

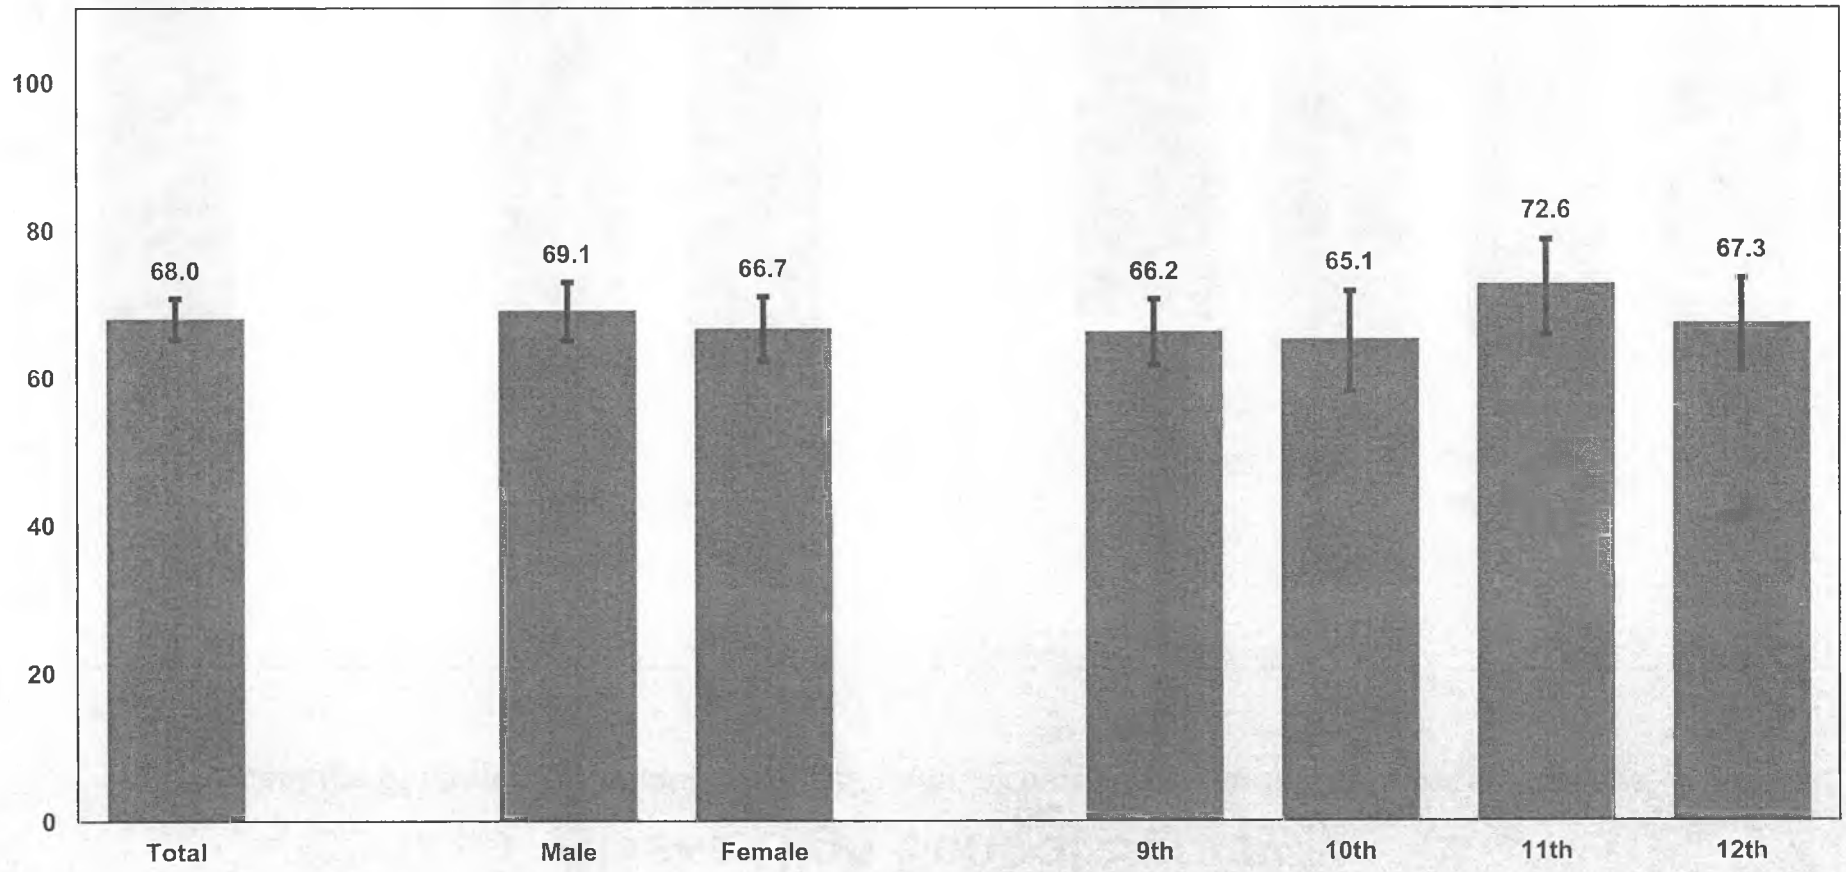
Percentage of students who ate potatoes one or more times during the past seven days



Q75 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

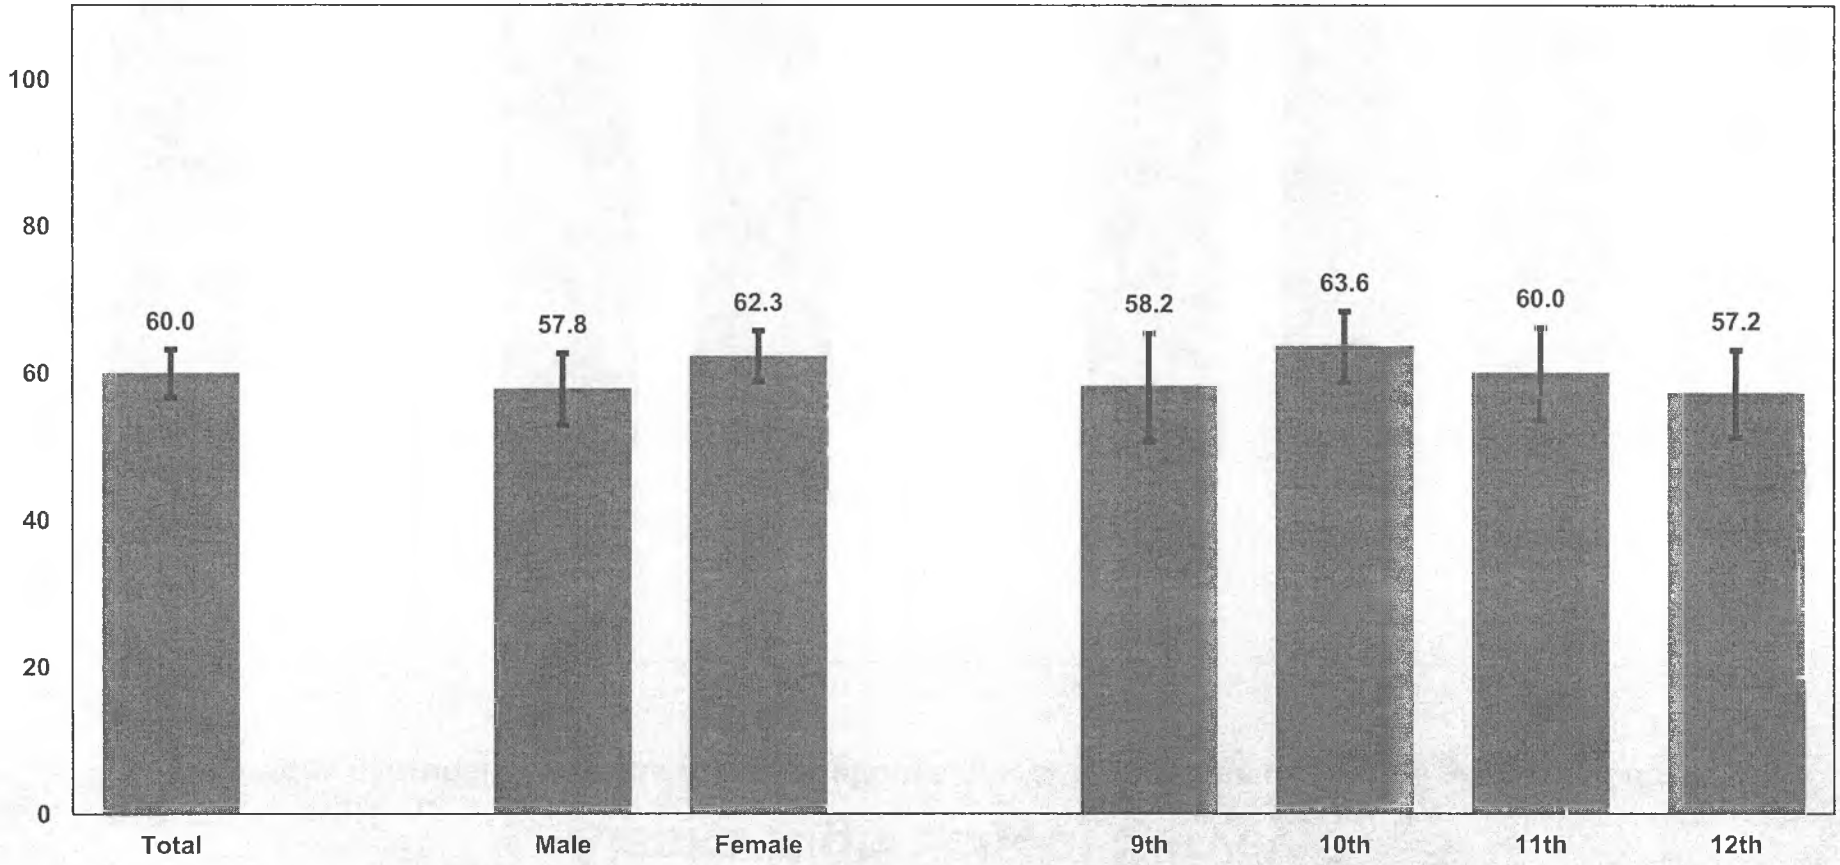
Percentage of students who ate carrots one or more times during the past seven days



Q76 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

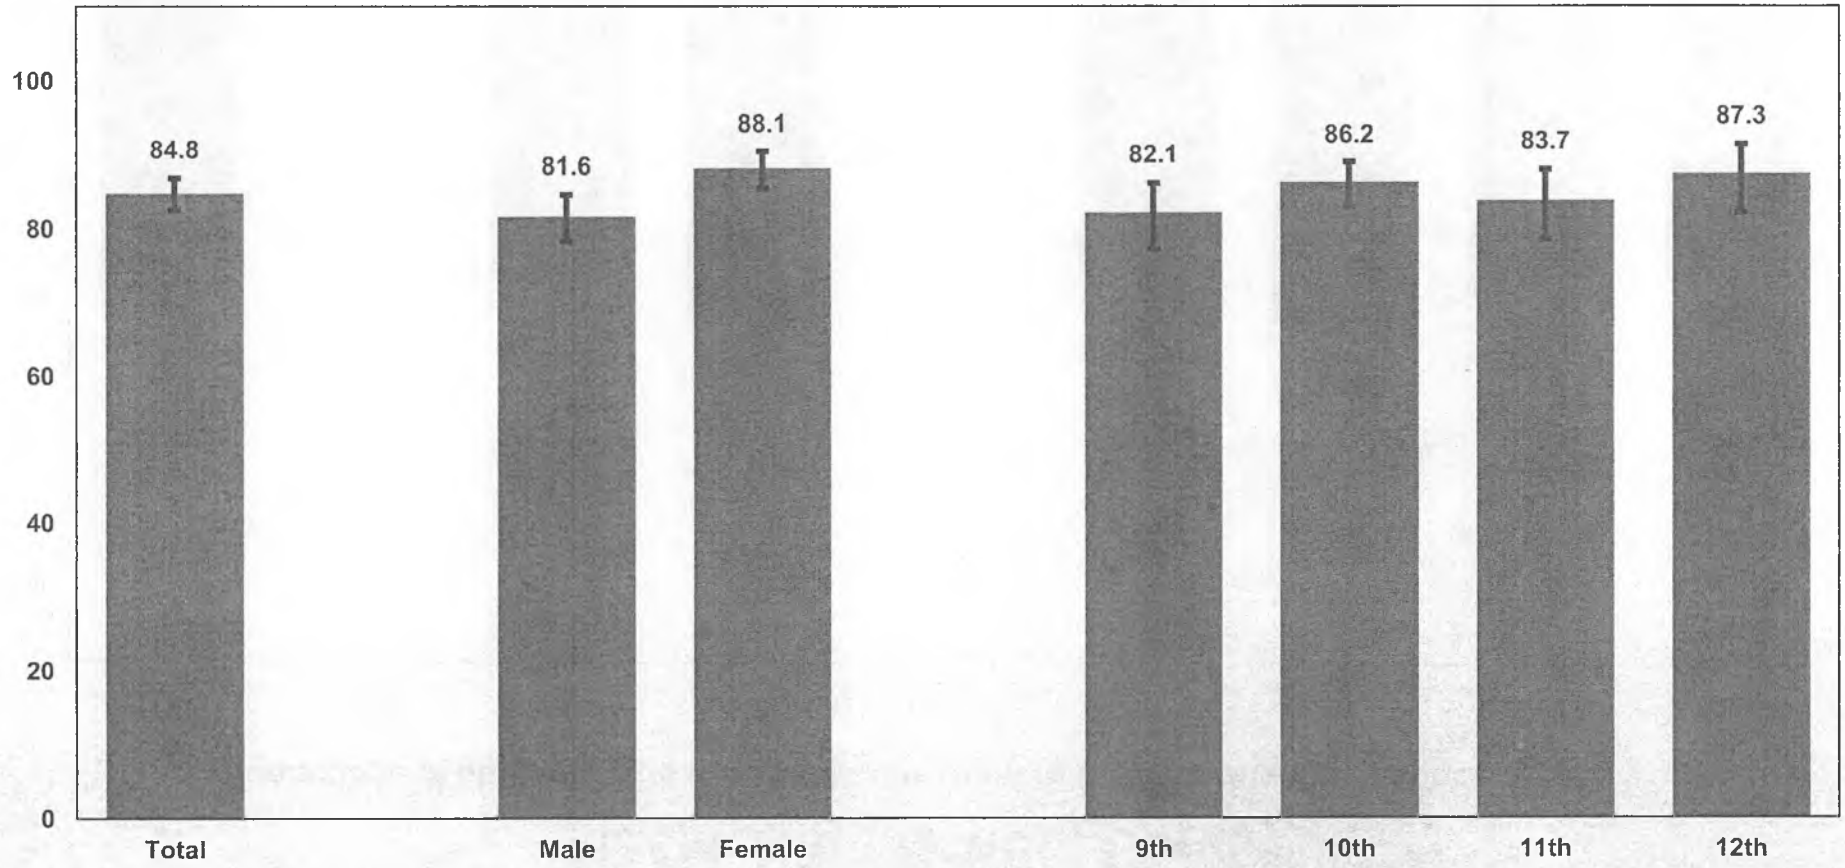
Percentage of students who ate other vegetables one or more times during the past seven days



Q77 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

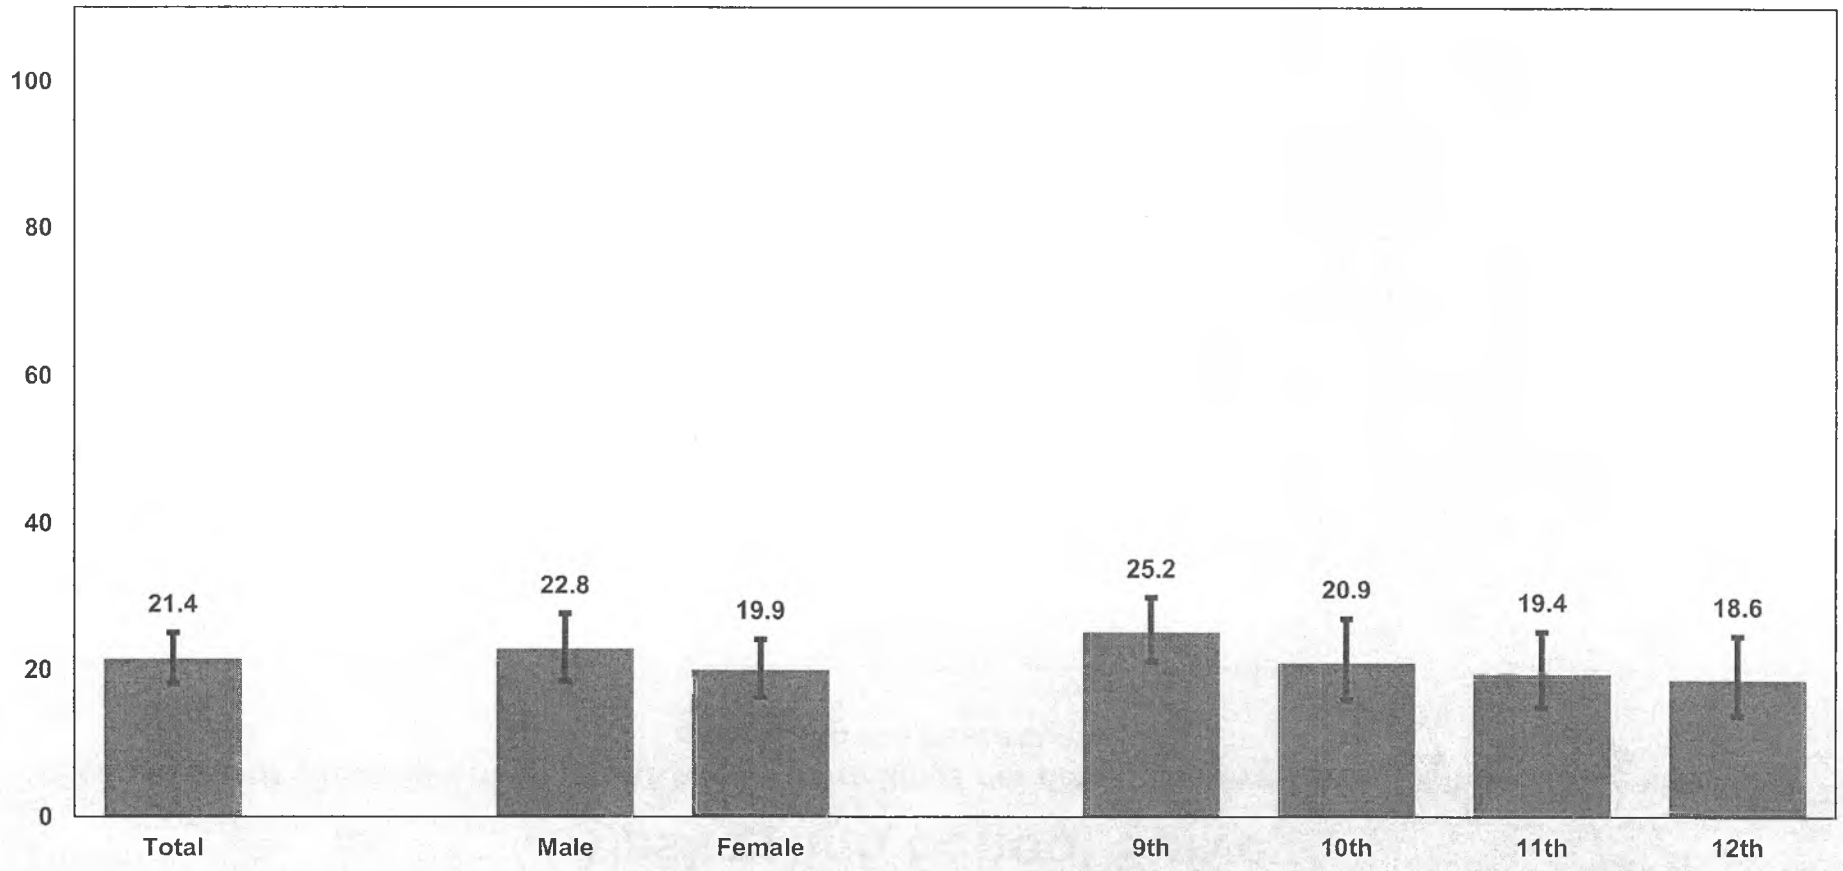
Percentage of students who ate fruits and vegetables five or more times per day during the past seven days



QNFRVG - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

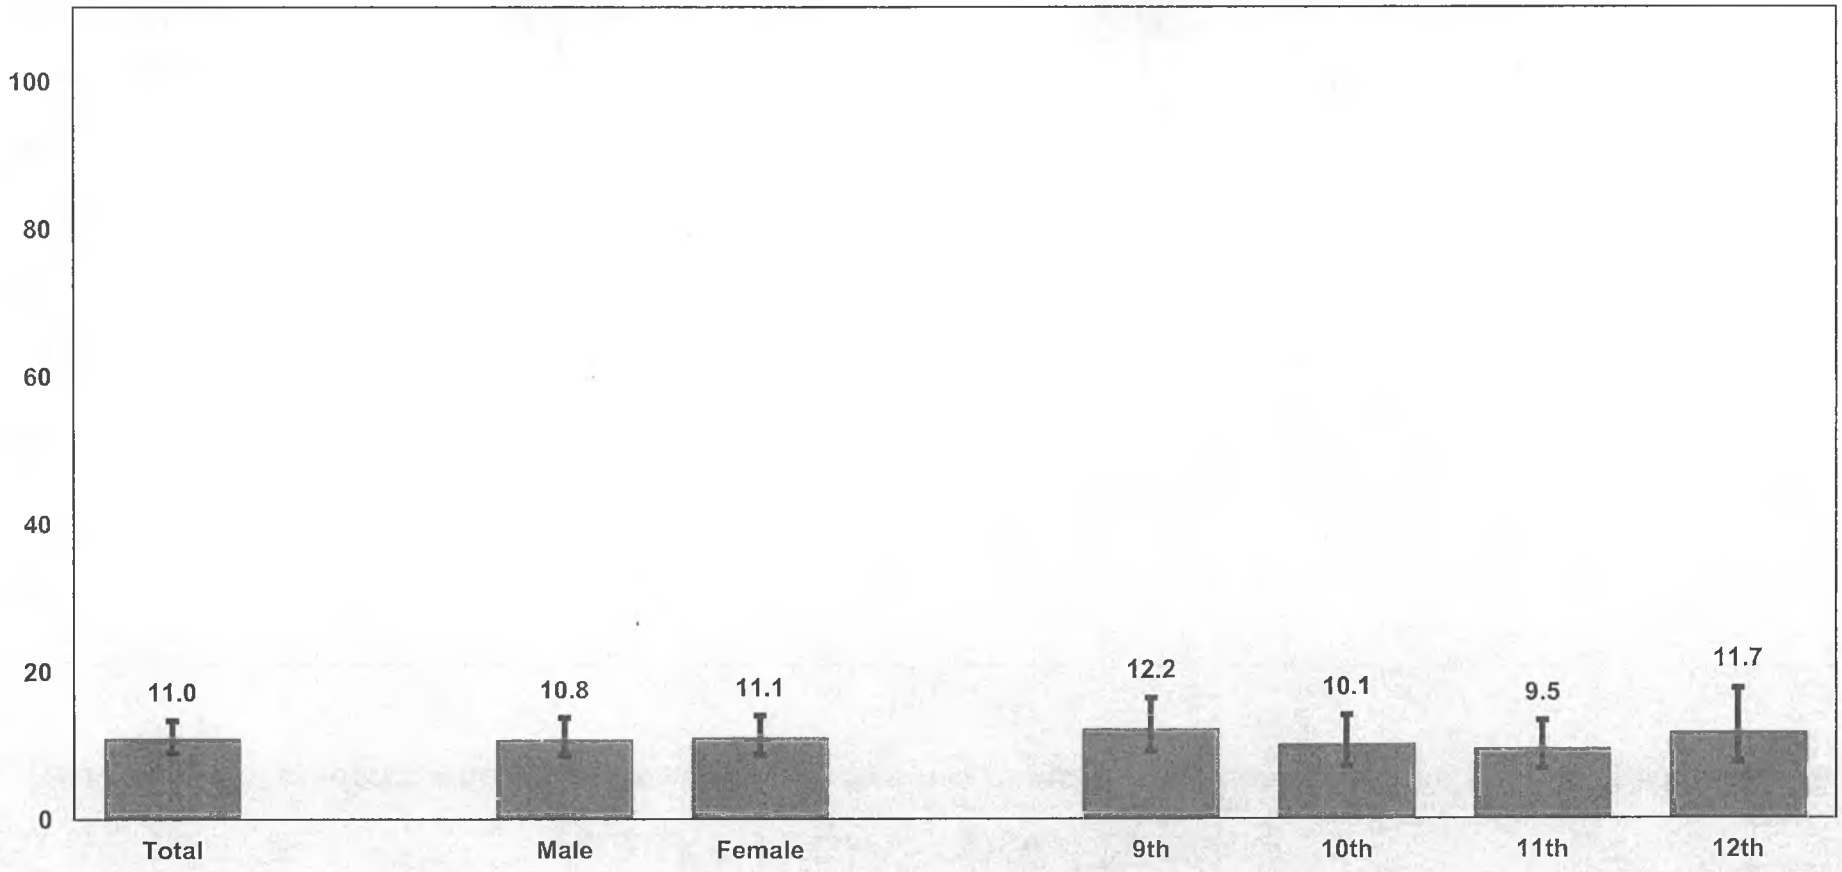
Percentage of students who ate fruits two or more times per day and ate vegetables three or more times per day during the past seven days



QNFRVG2 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

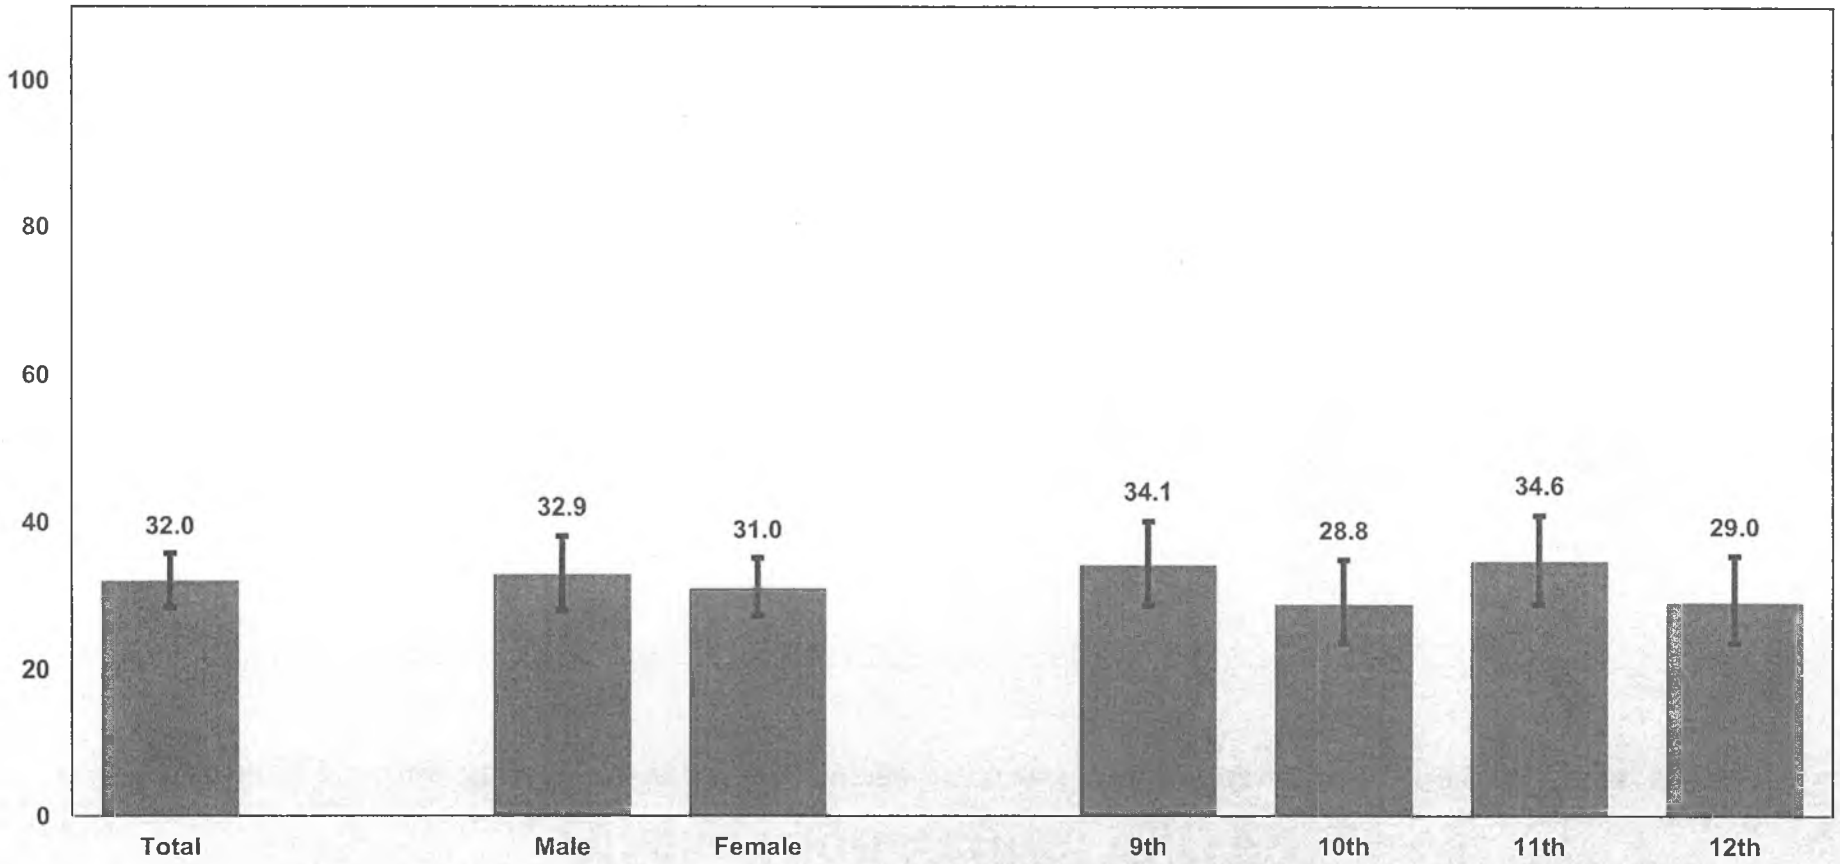
Percentage of students who ate fruits two or more times per day during the past seven days



QNFRUIT - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

Percentage of students who ate vegetables three or more times per day during the past seven days

*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

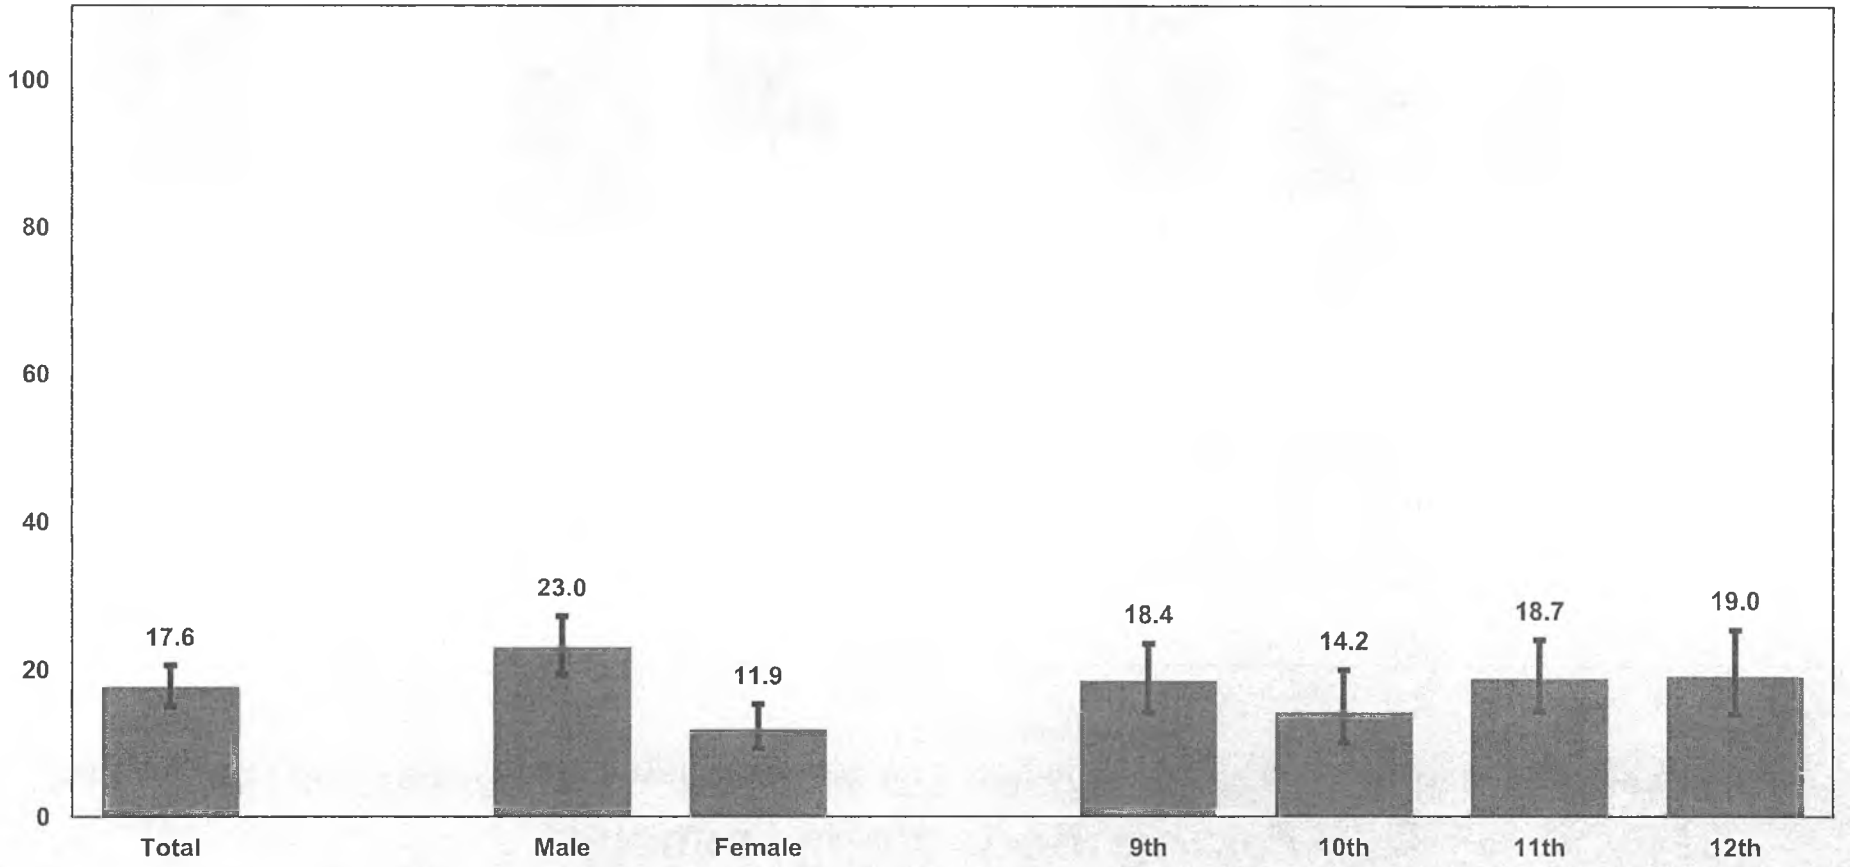
Percentage of students who drank a can, bottle, or glass of soda or pop one or more times per day during the past seven days



Q78 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

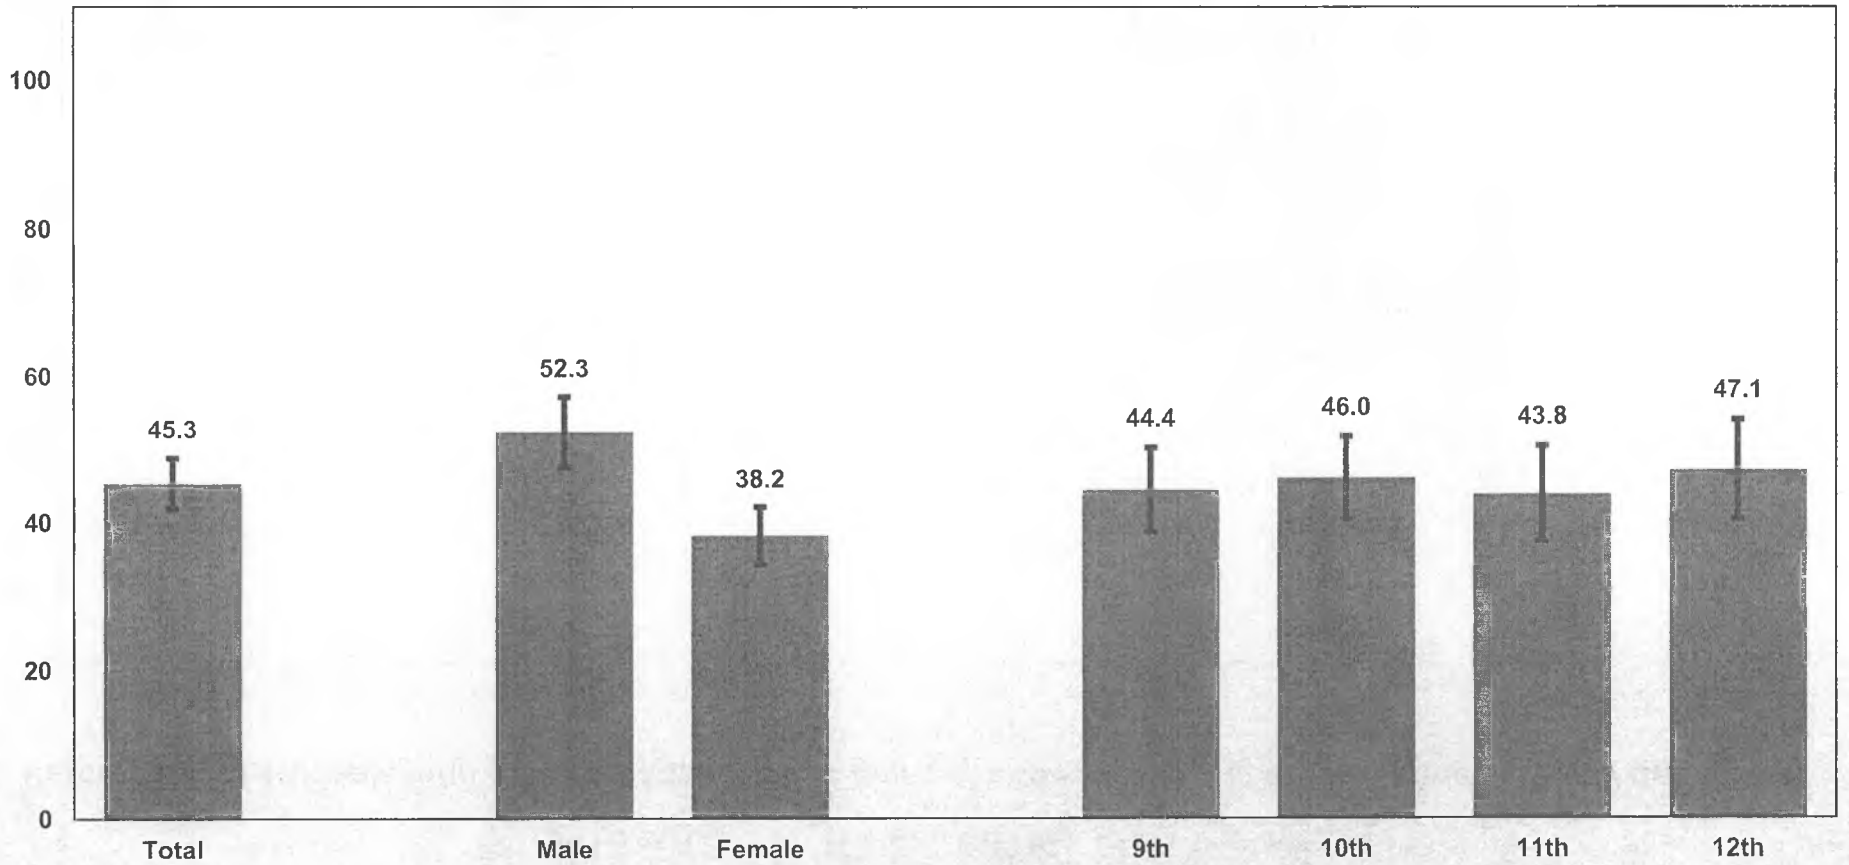
Percentage of students who were physically active for a total of at least 60 minutes per day on five or more of the past seven days



Q79 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

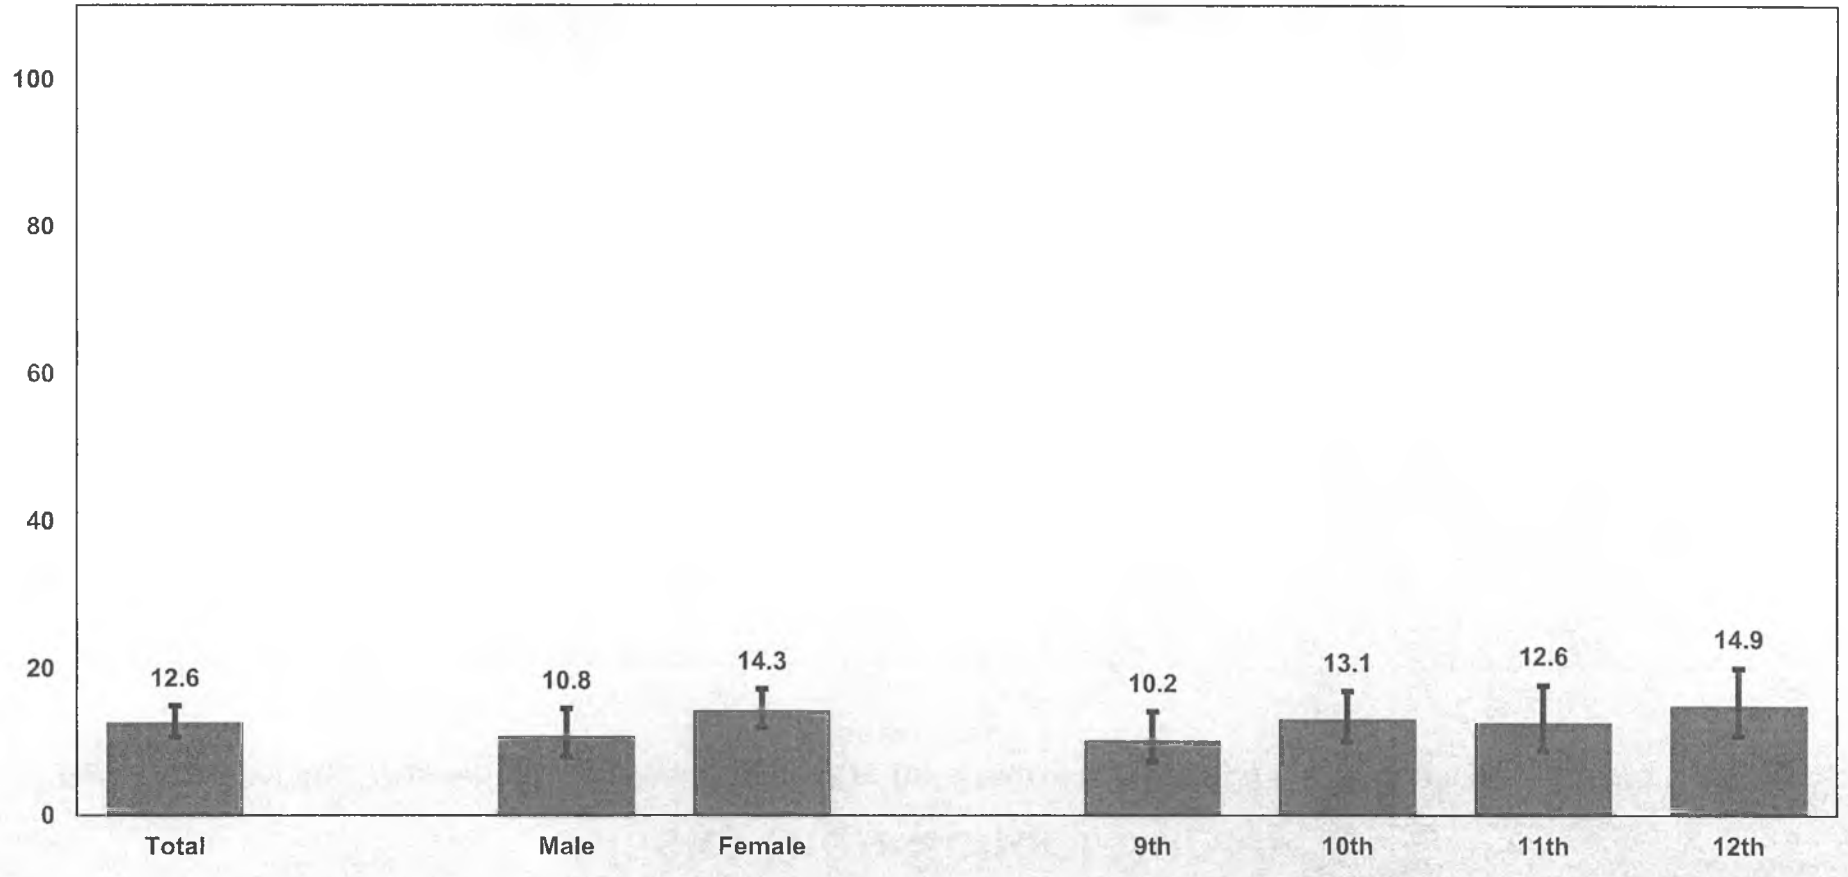
Percentage of students who were physically active for a total of at least 60 minutes per day on 0 of the past seven days



QNPA0DAY - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

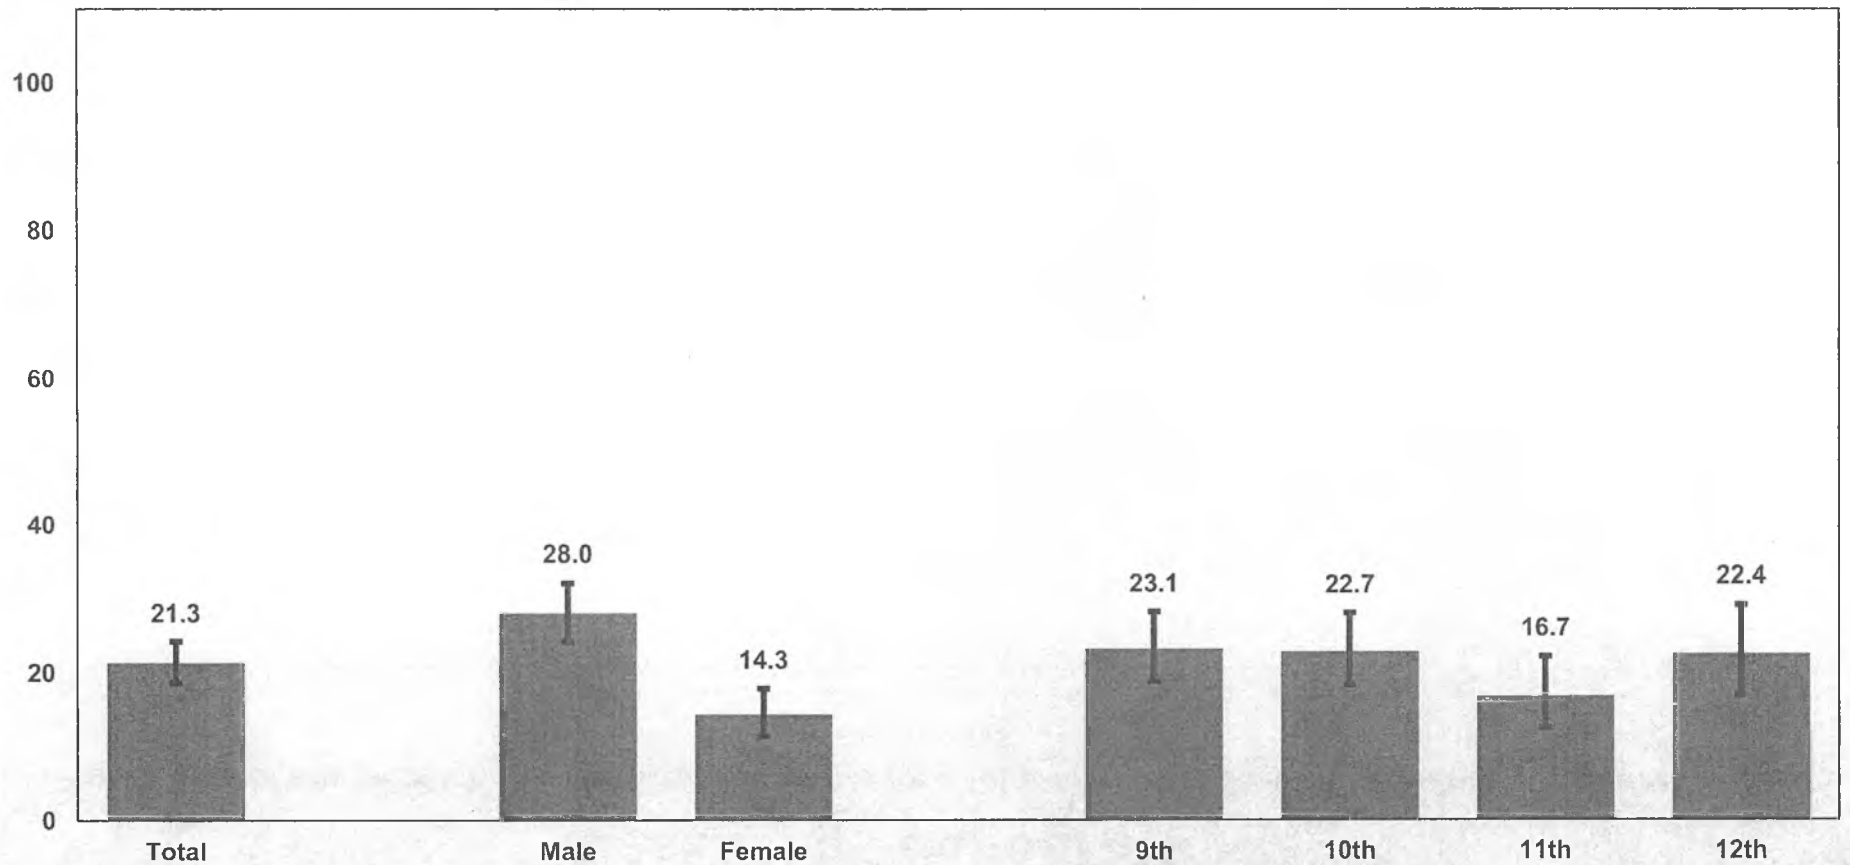
Percentage of students who were physically active for a total of at least 60 minutes per day on 7 of the past seven days



QNPA7DAY - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

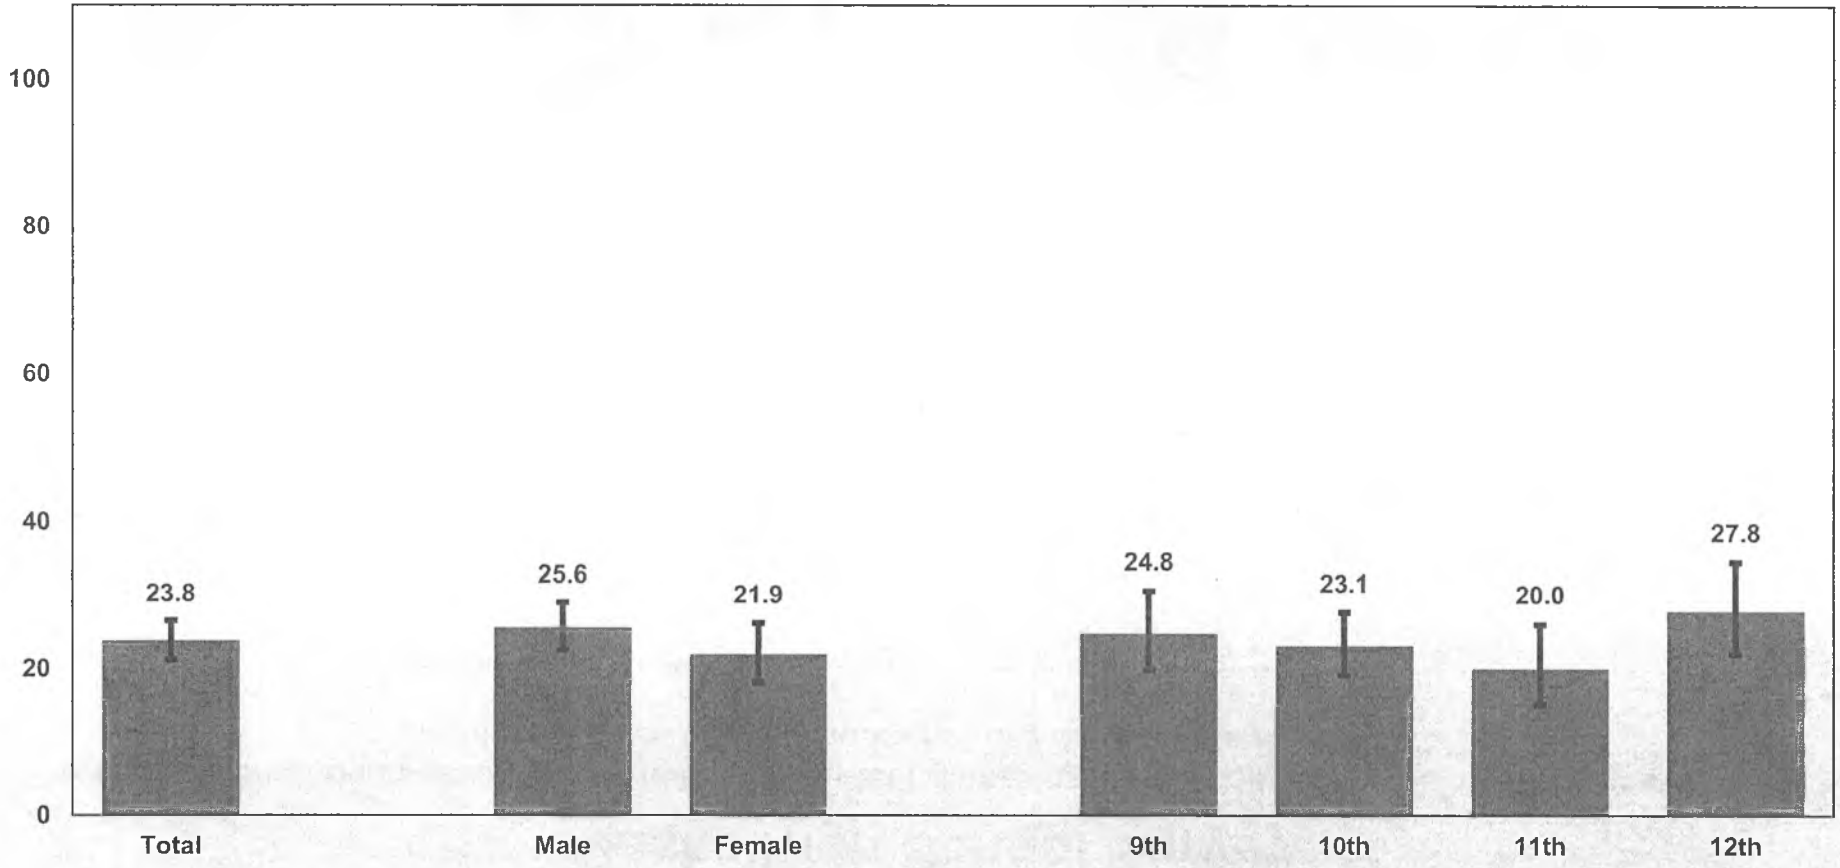
Percentage of students who watched three or more hours per day of TV on an average school day



Q80 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

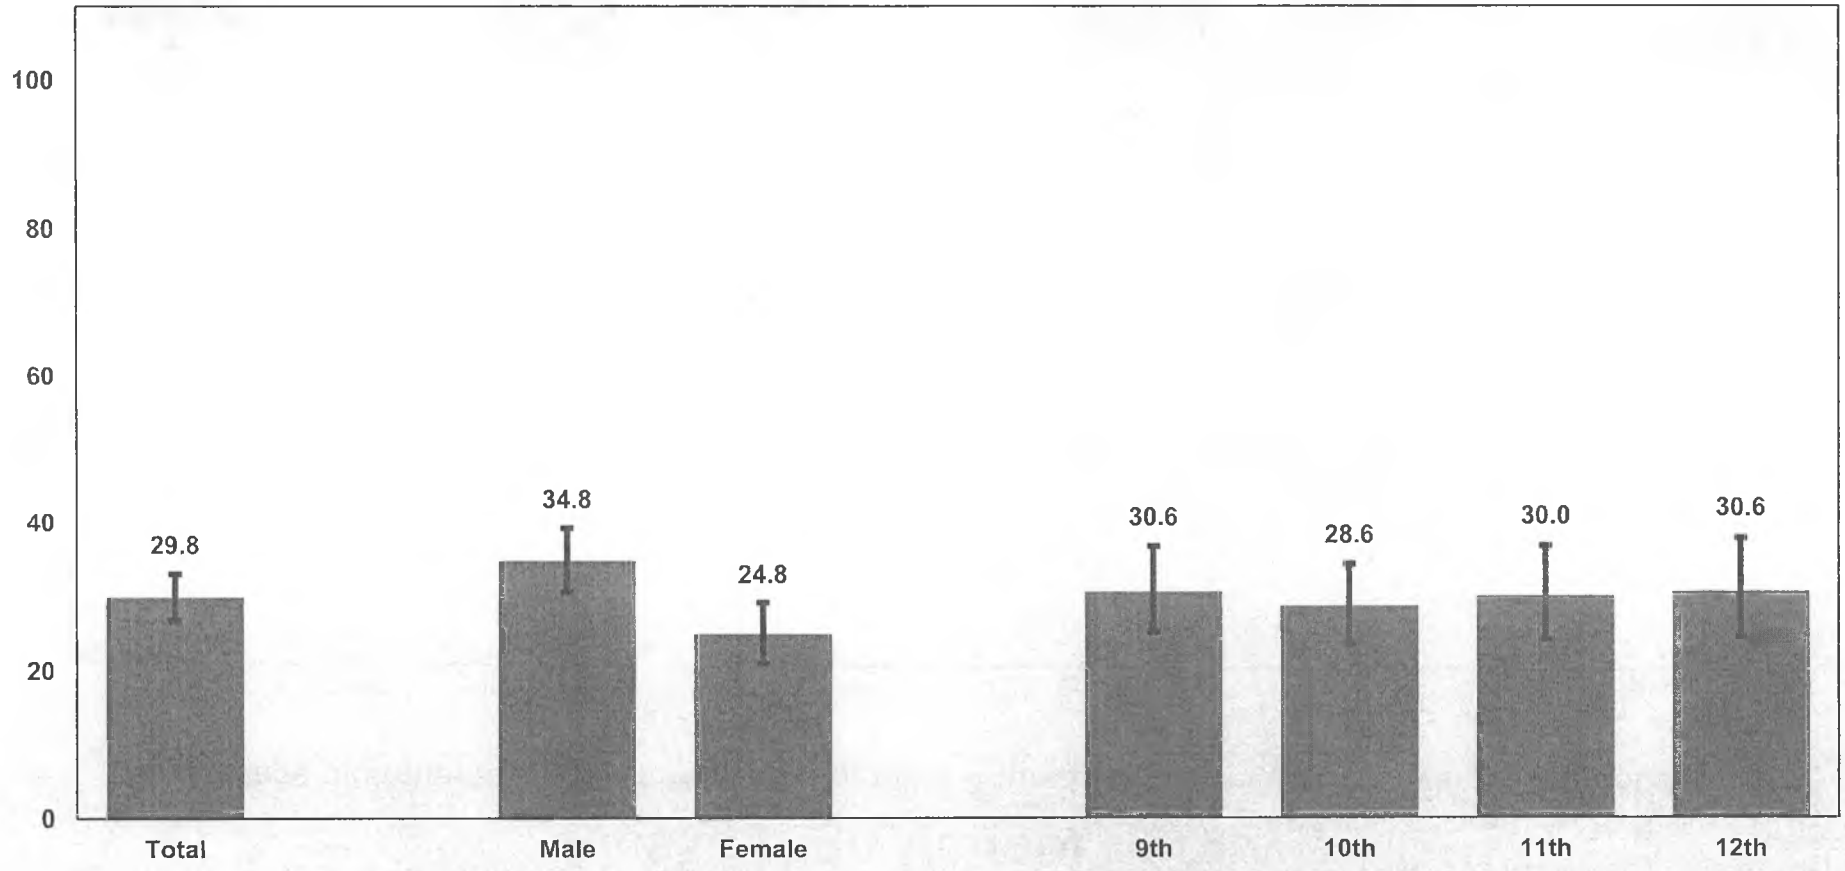
Percentage of students who played video or computer games or used a computer for something that was not school work three or more hours per day on an average school day



Q81 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

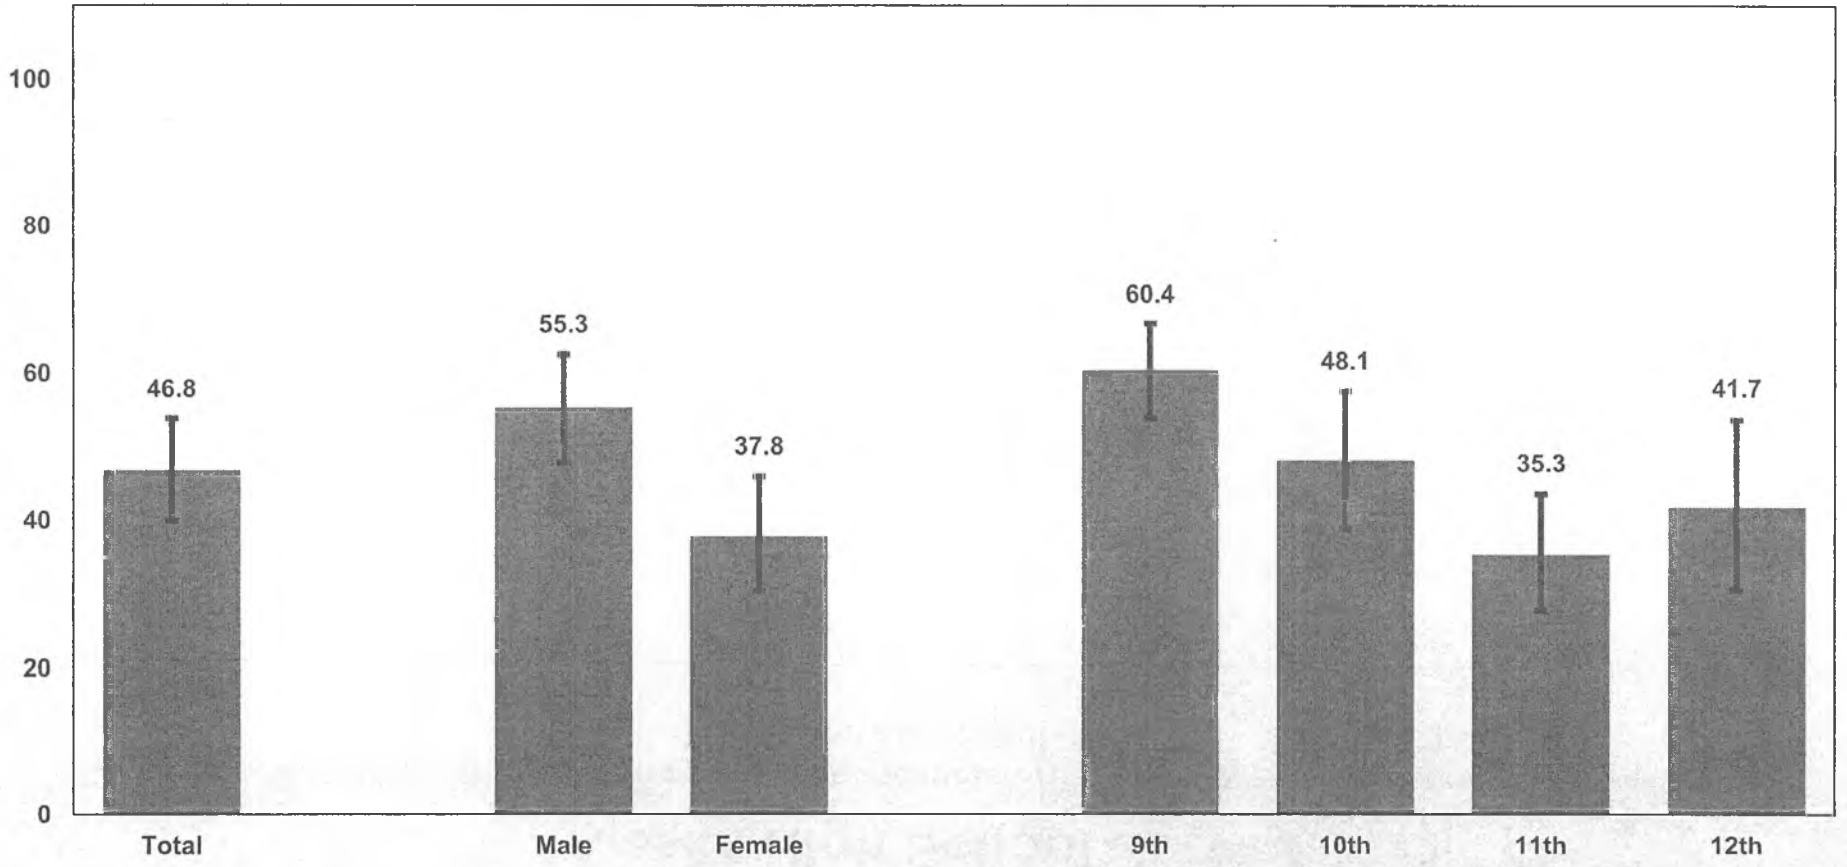
Percentage of students who attended physical education (PE) classes on one or more days in an average week when they were in school



Q82 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

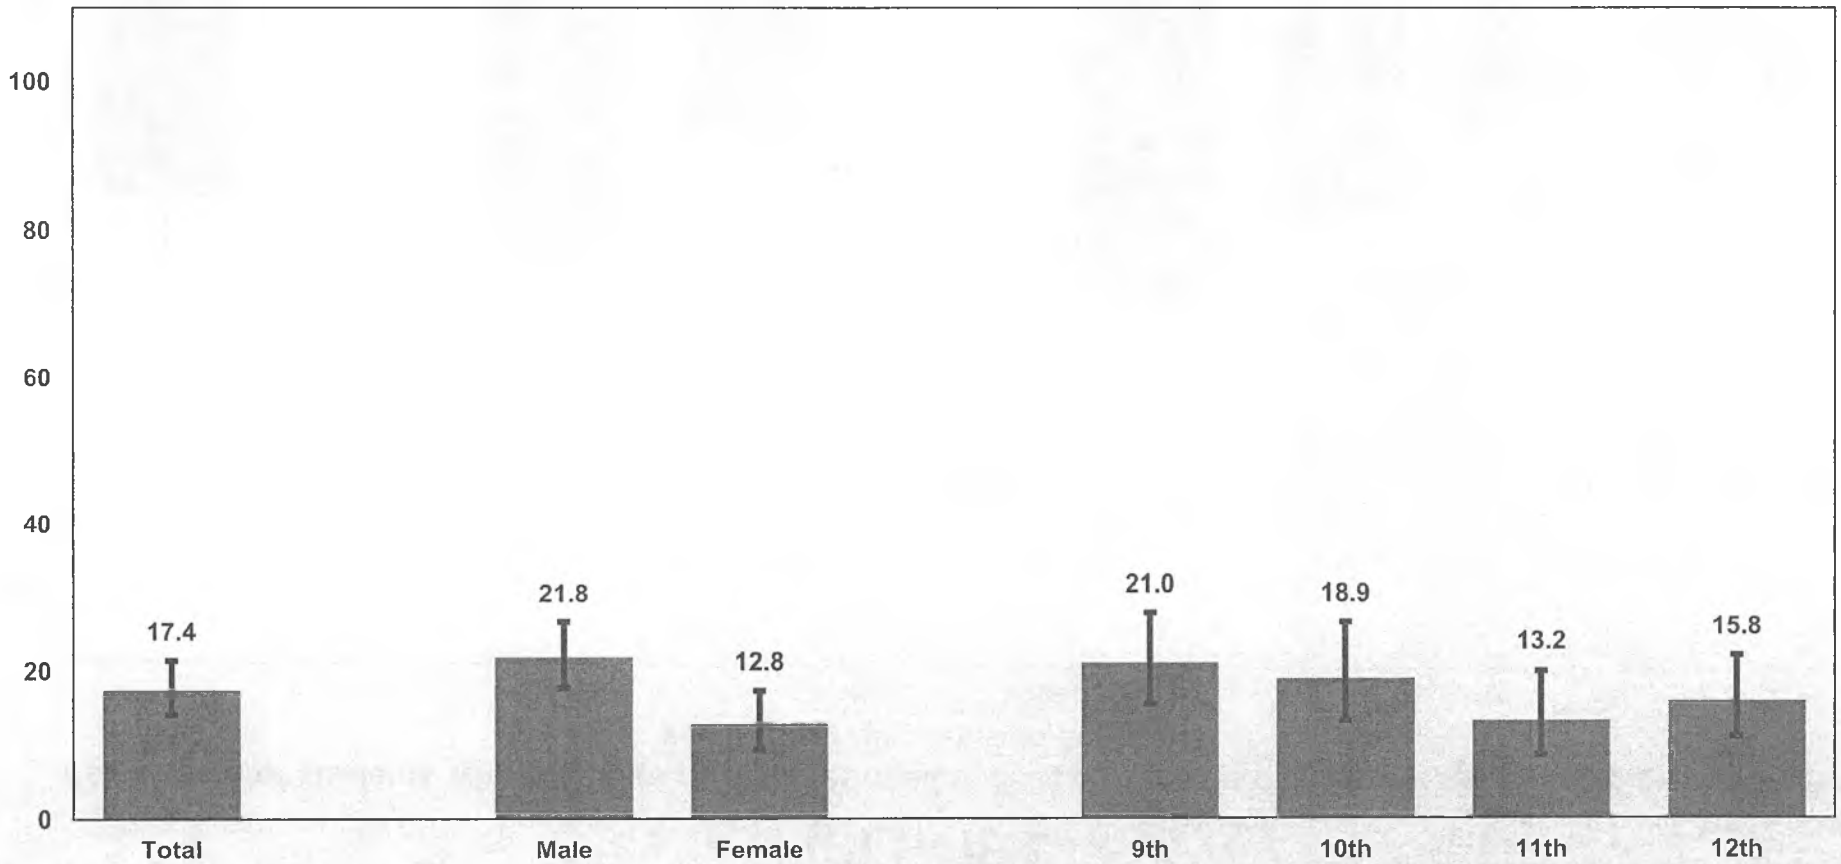
Percentage of students who attended physical education (PE) classes daily in an average week when they were in school



QNDLYPE - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

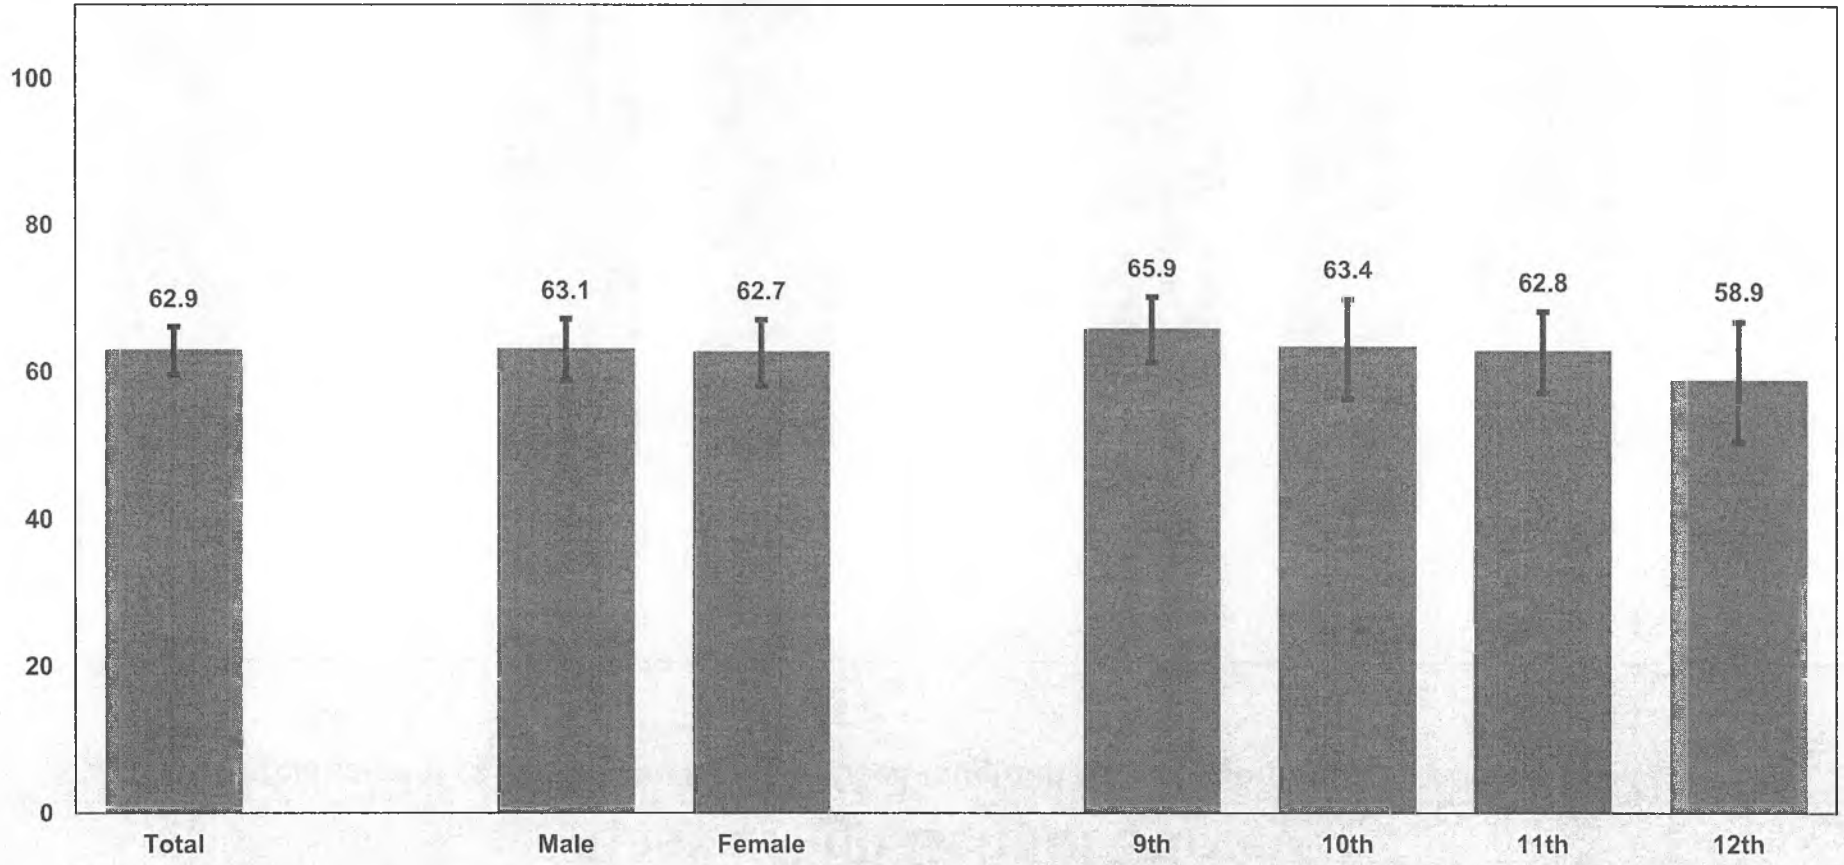
Percentage of students who played on one or more sports teams during the past 12 months



Q83 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

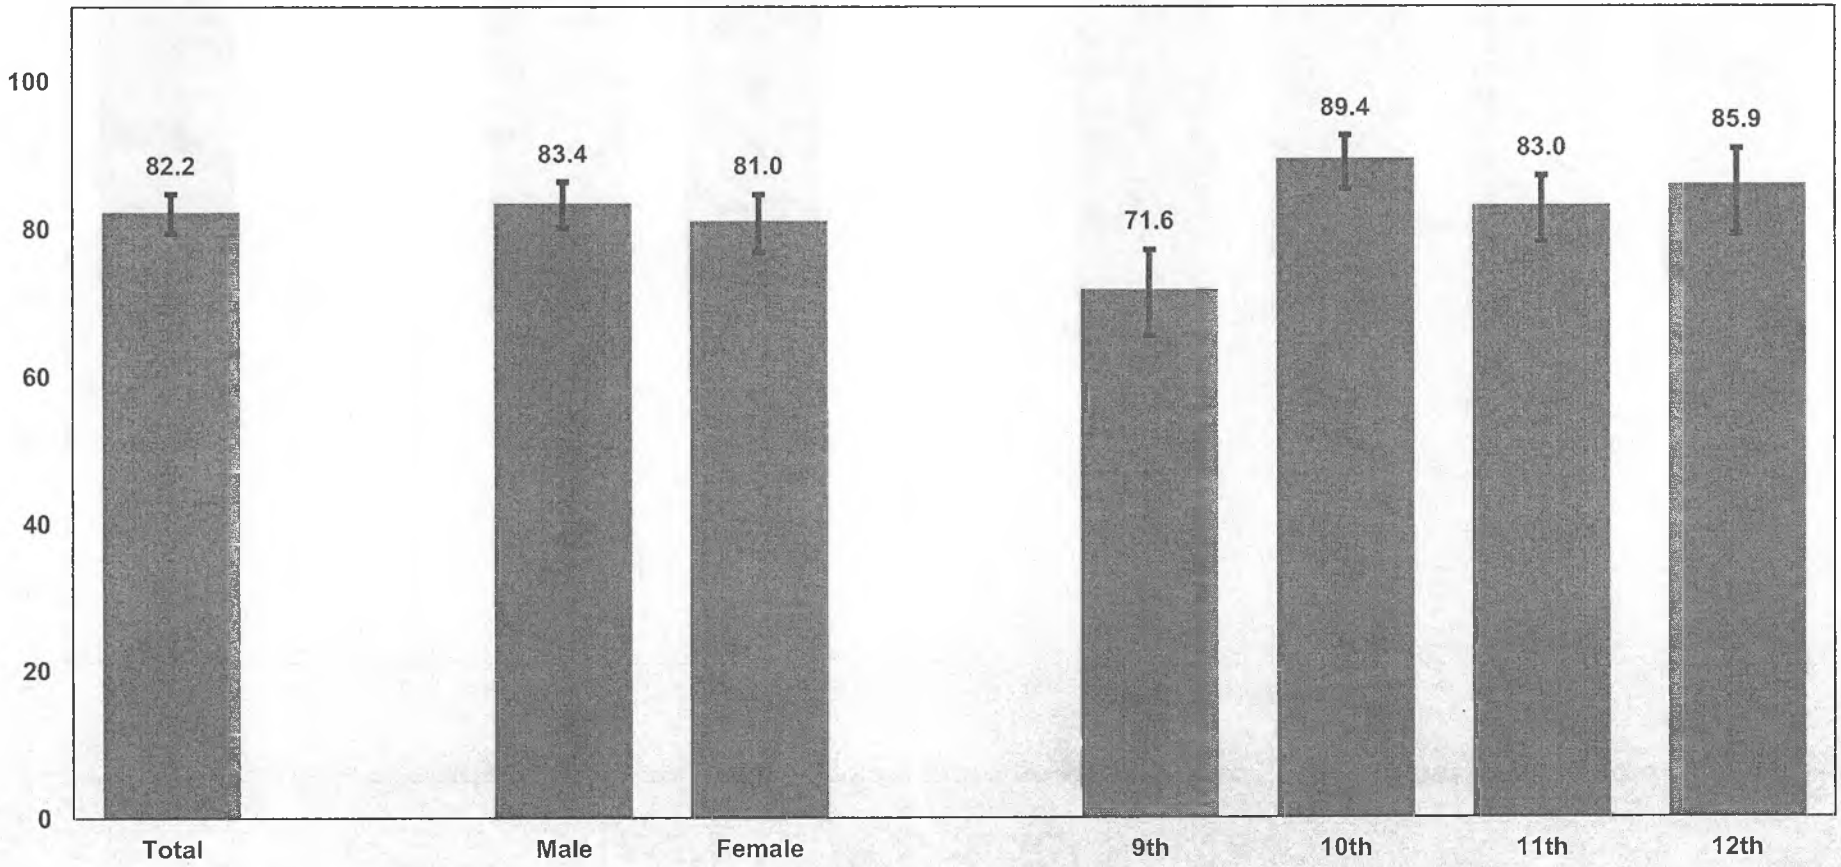
Percentage of students who had ever been taught in school about AIDS or HIV infection



Q84 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

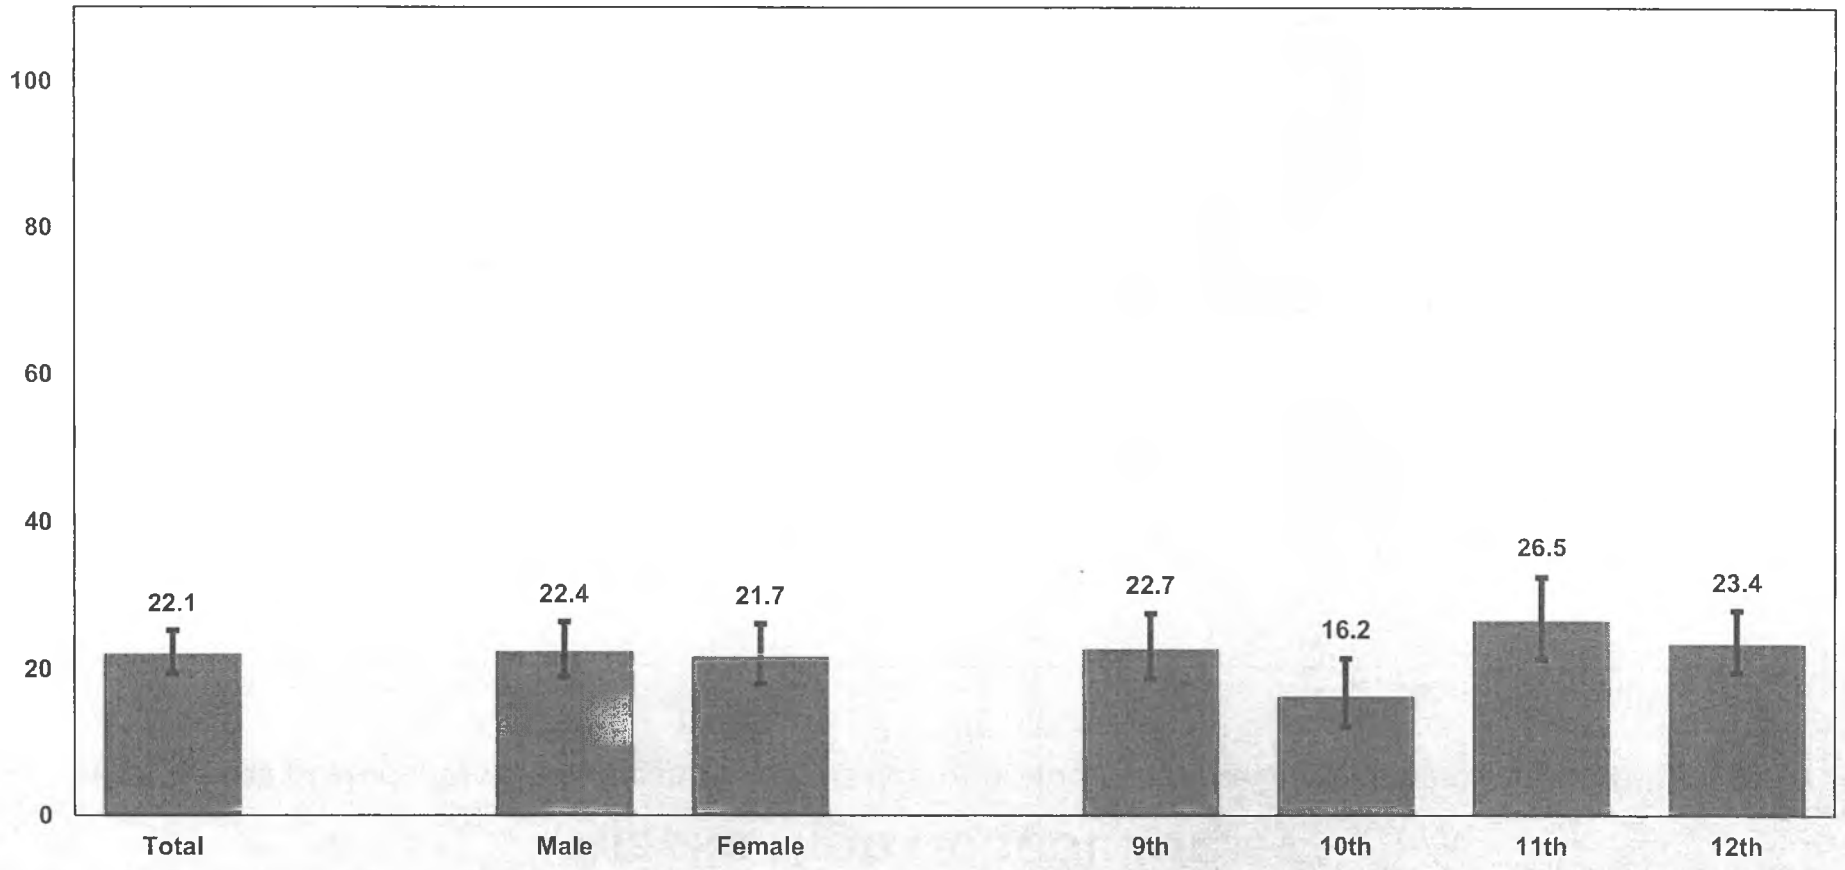
Percentage of students who had ever been told by a doctor or nurse that they had asthma



Q85 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

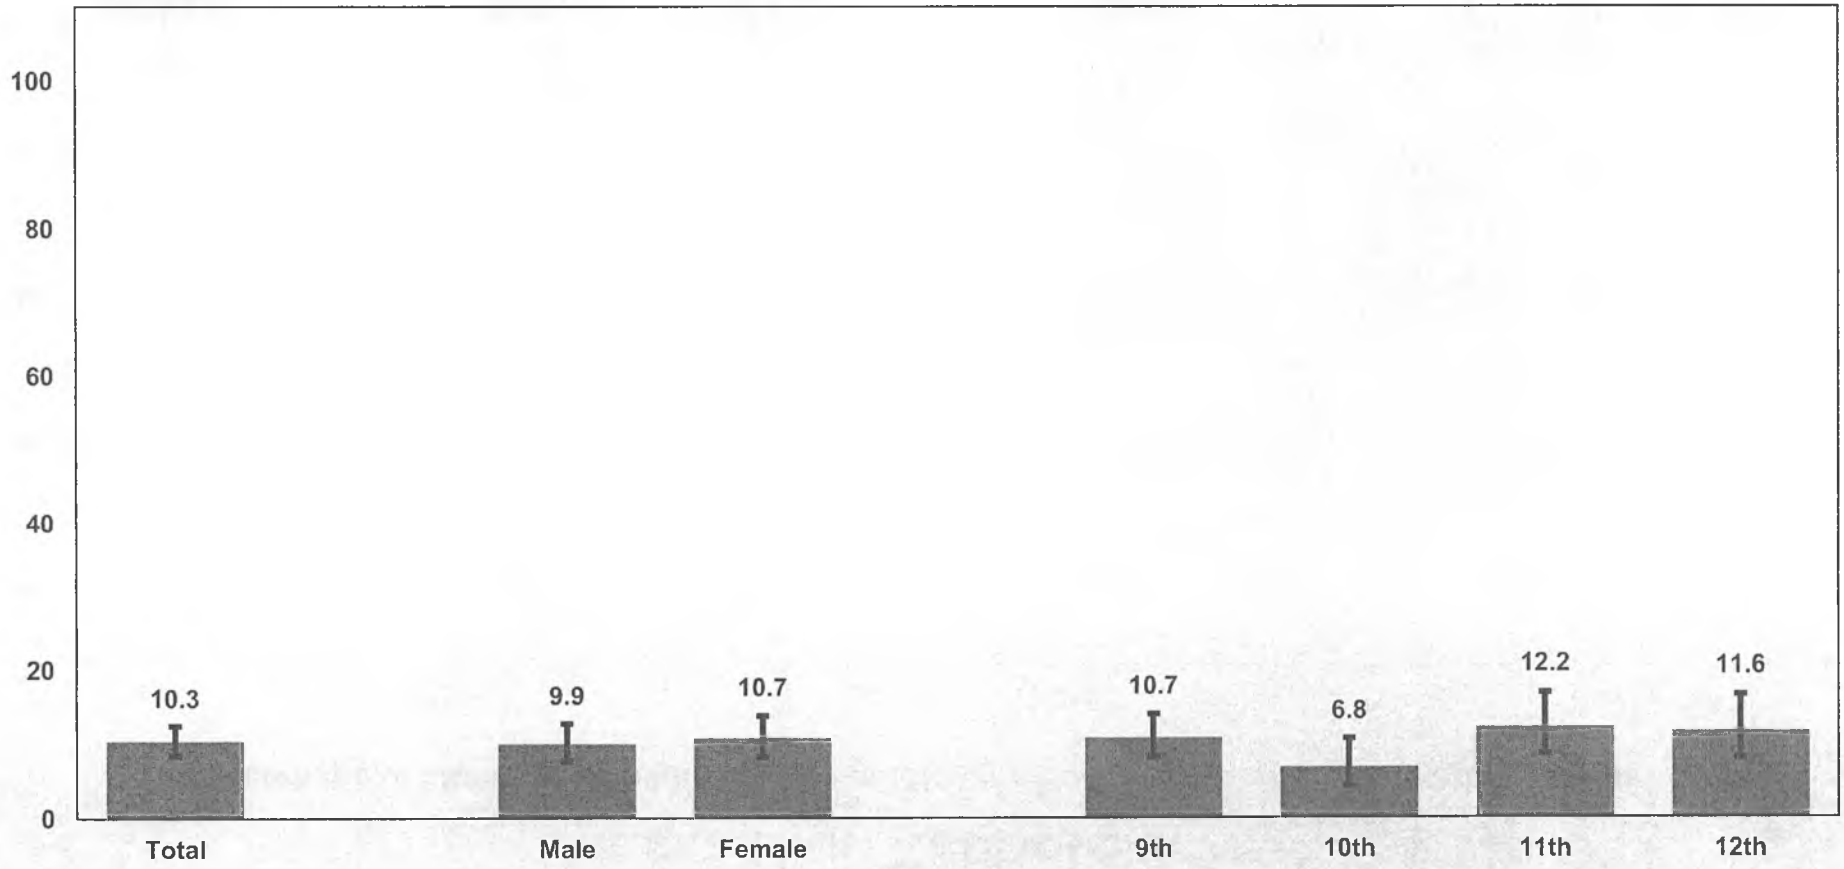
Percentage of students who had been told by a doctor or nurse that they had asthma and who still have asthma



Q86 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

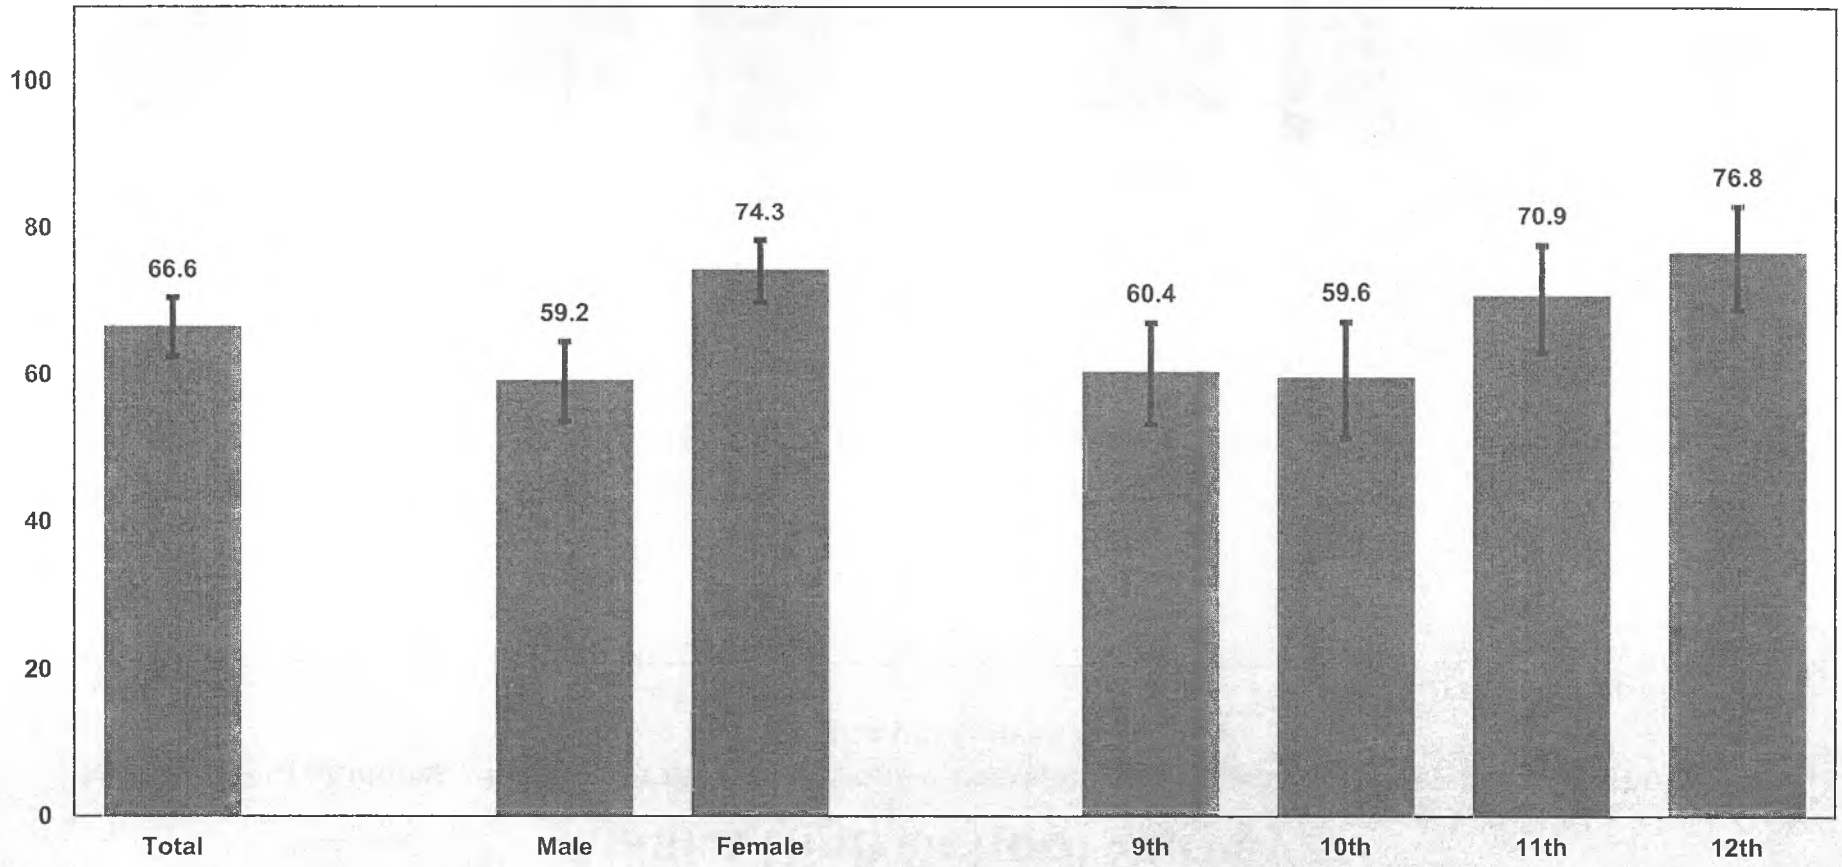
Percentage of students who would describe their grades in school as mostly A's or B's during the past 12 months



Q87 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

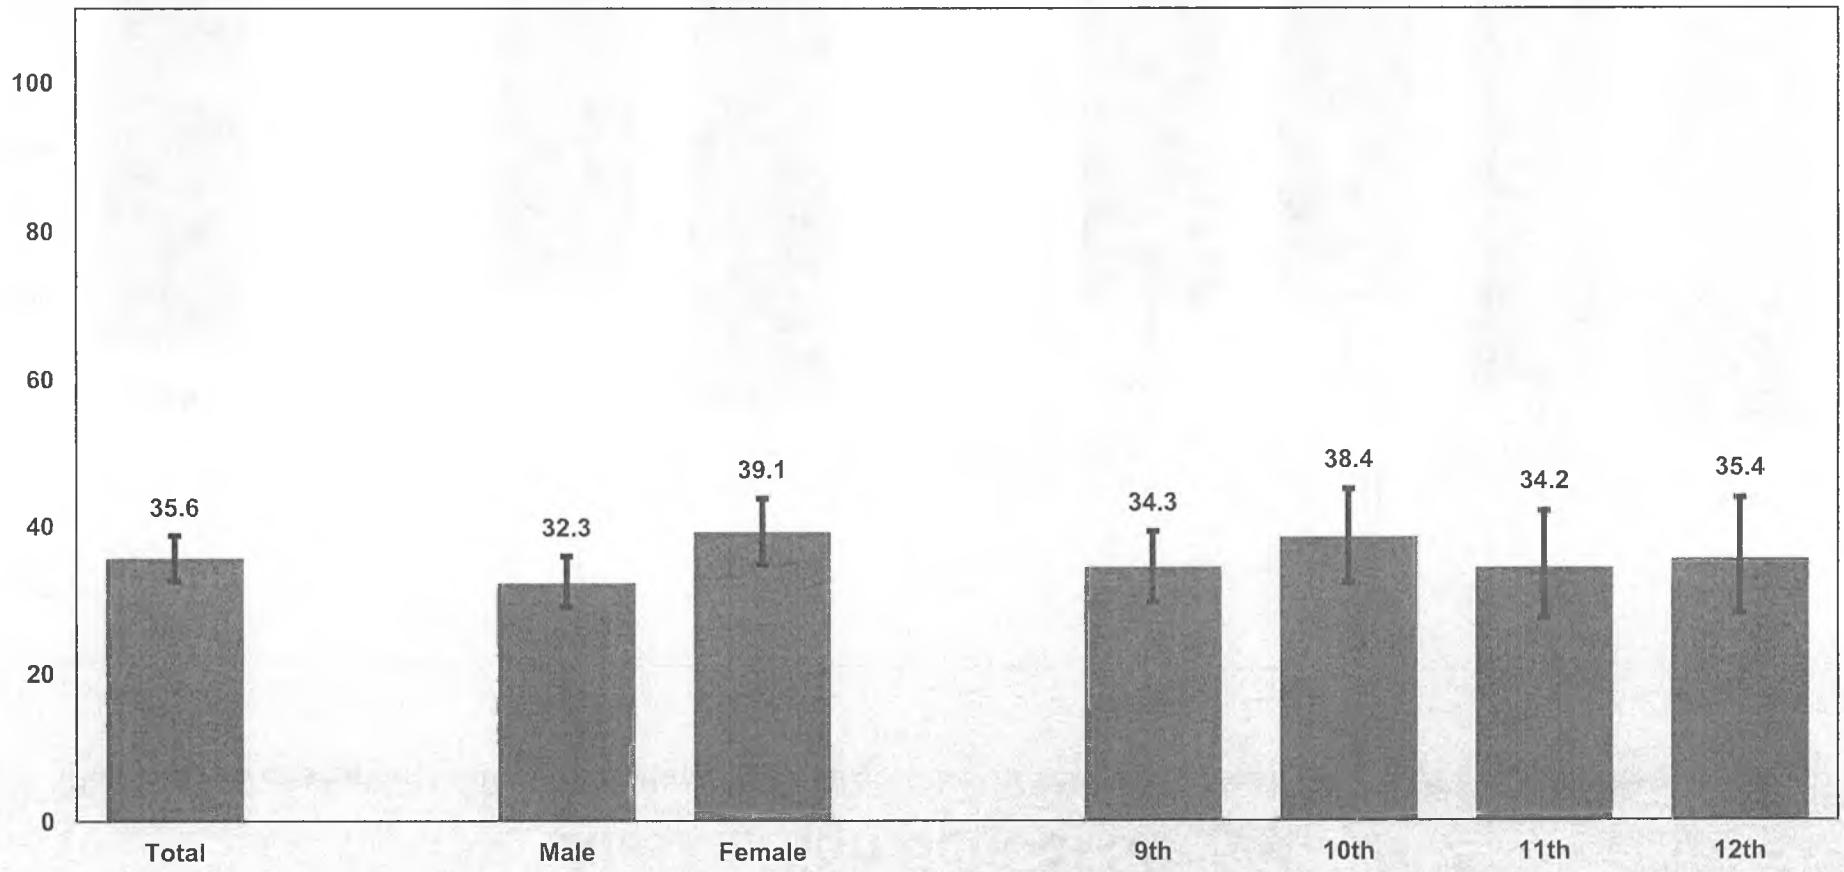
Percentage of students who were in the same room with someone who was smoking cigarettes on one or more of the past seven days



Q88 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

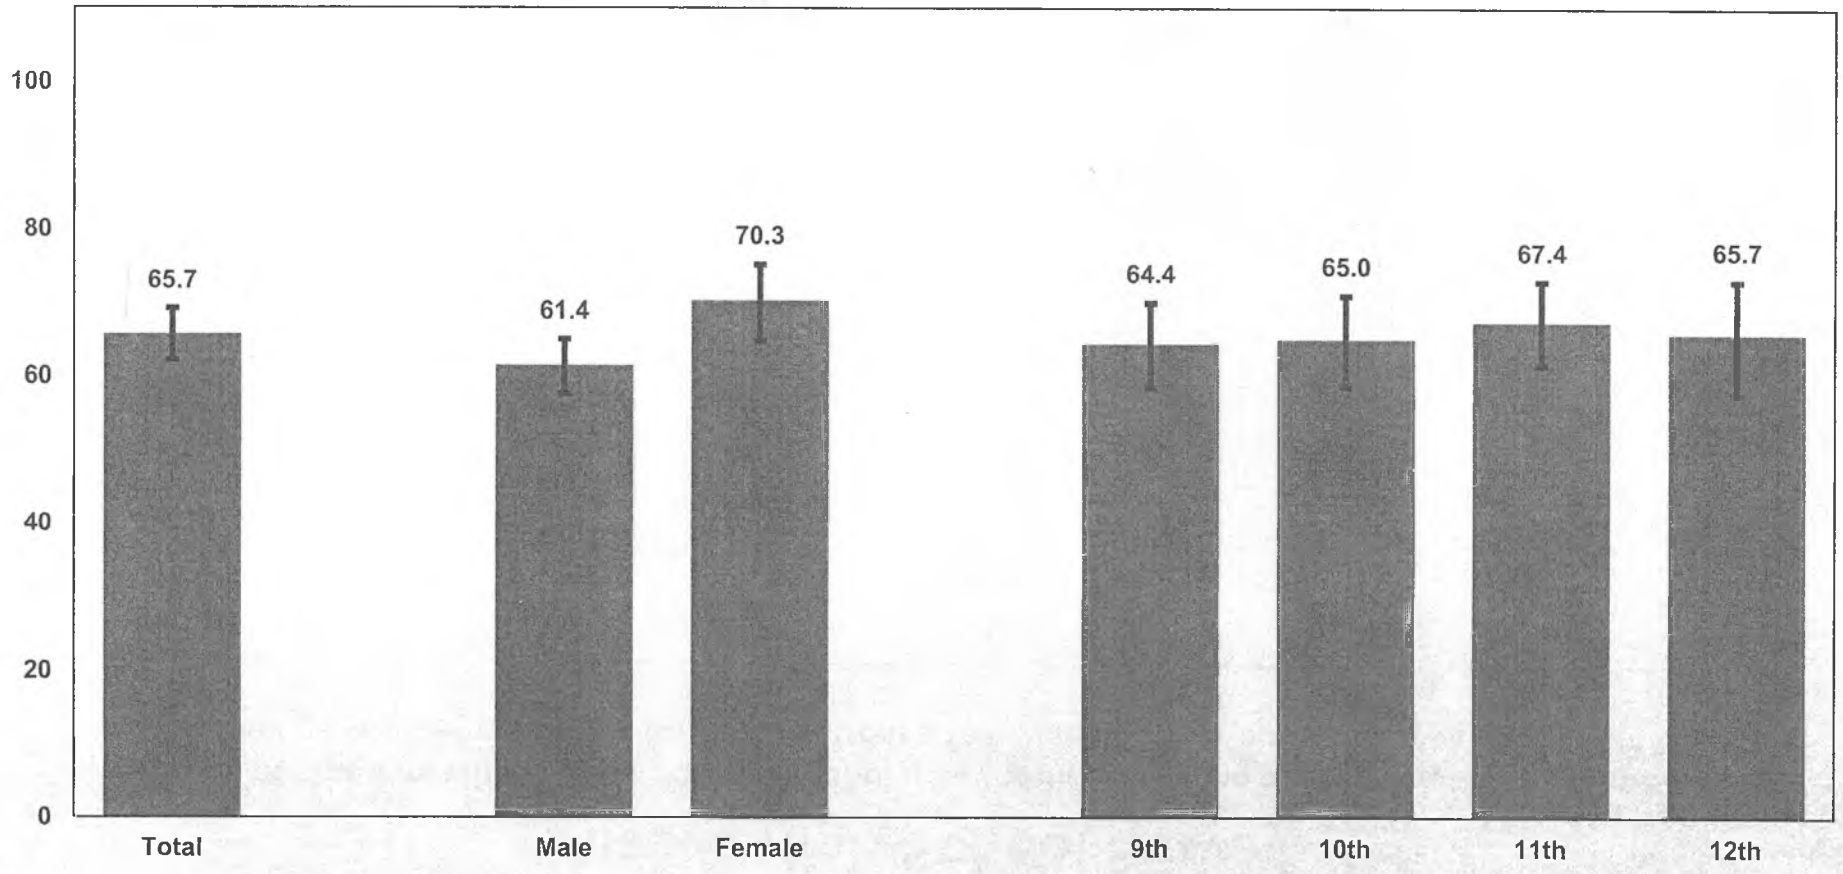
Percentage of students who think people greatly risk harming themselves (physically or in other ways), if they smoke one or more packs of cigarettes per day



Q89 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

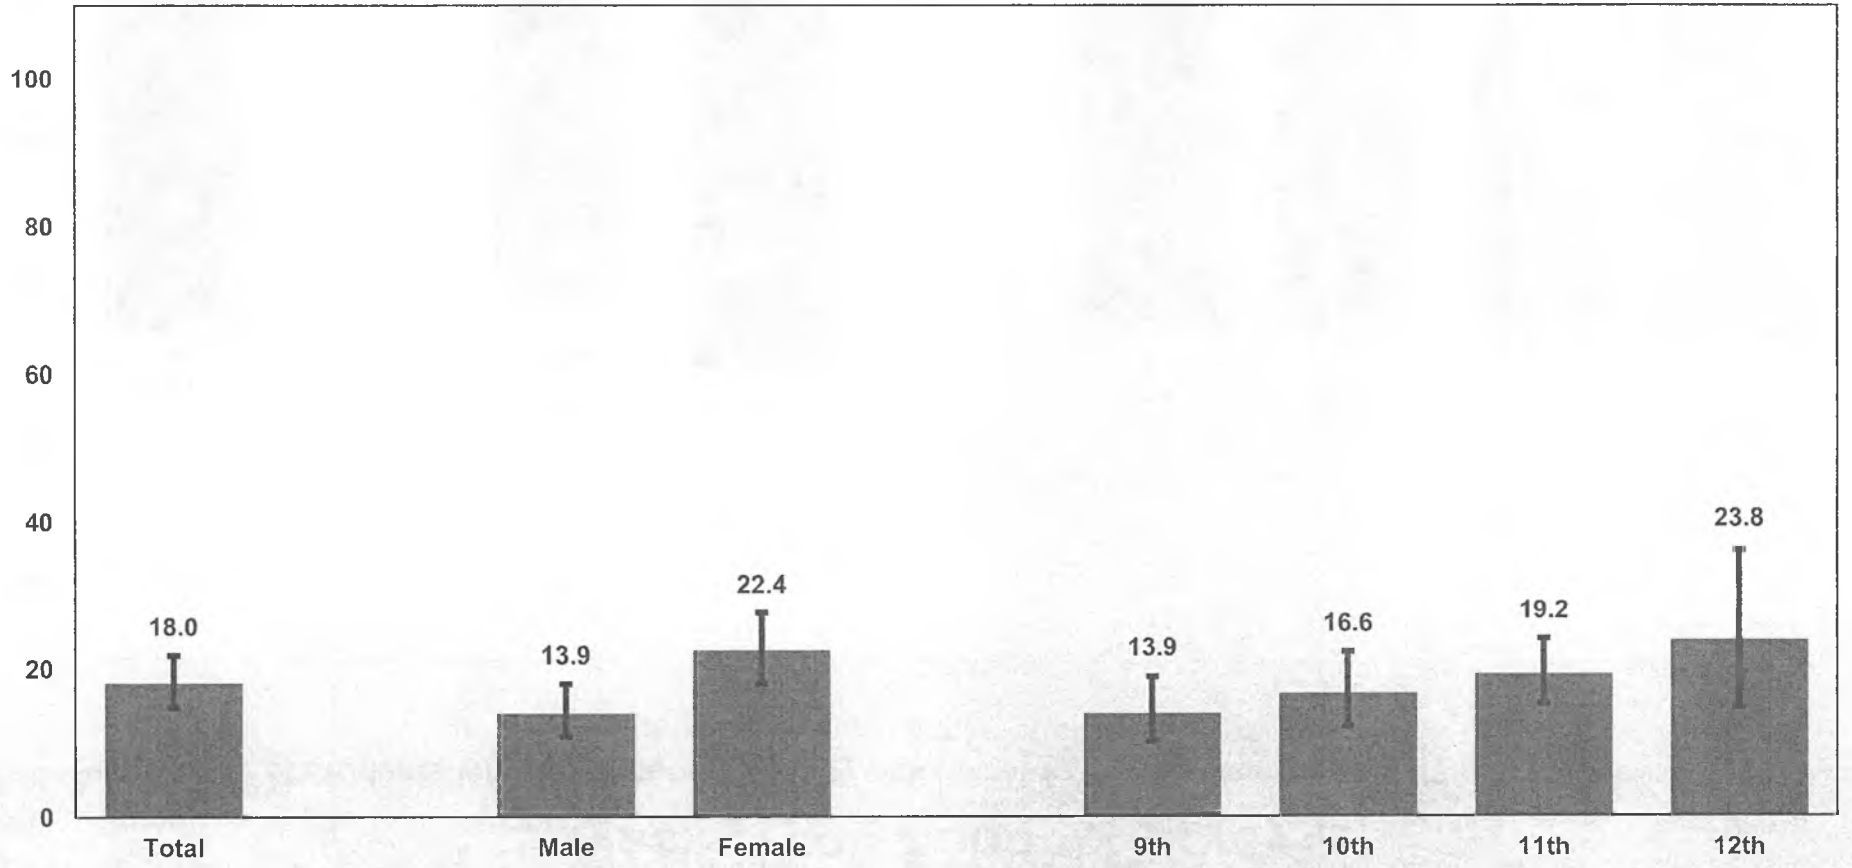
Percentage of students who usually got the alcohol they drank during the past 30 days from someone else whom they gave money to buy it for them or from a family member or someone else giving it to them



Q90 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

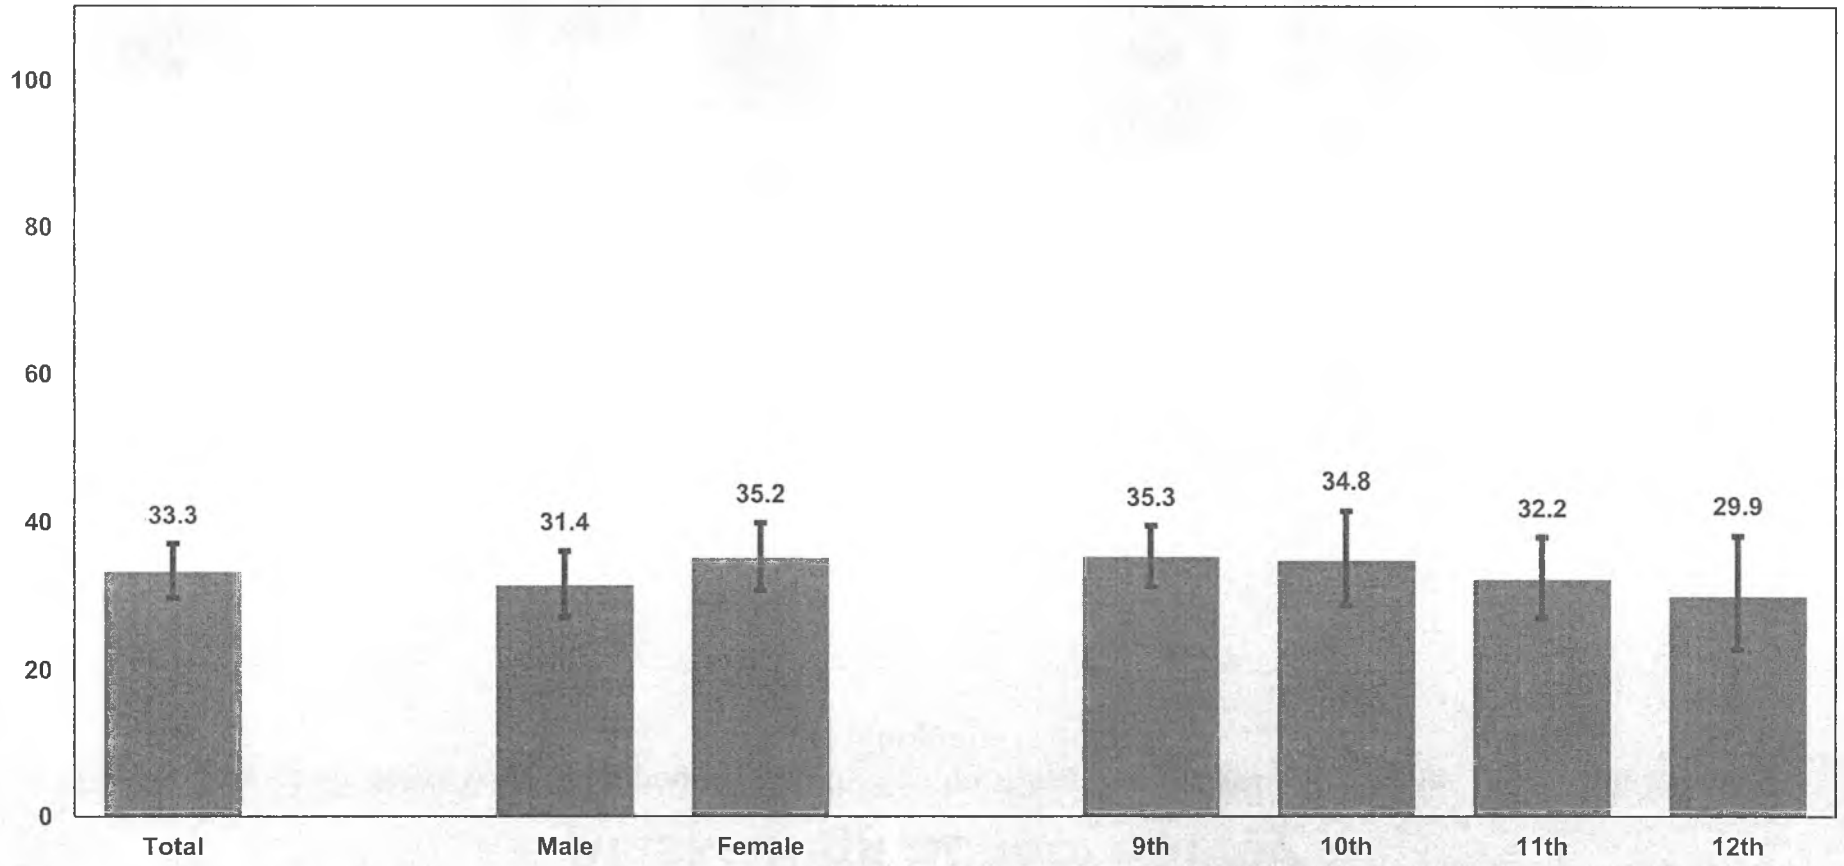
Percentage of students who think people greatly risk harming themselves (physically or in other ways) if they have one or two drinks of an alcoholic beverage nearly every day



Q91 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

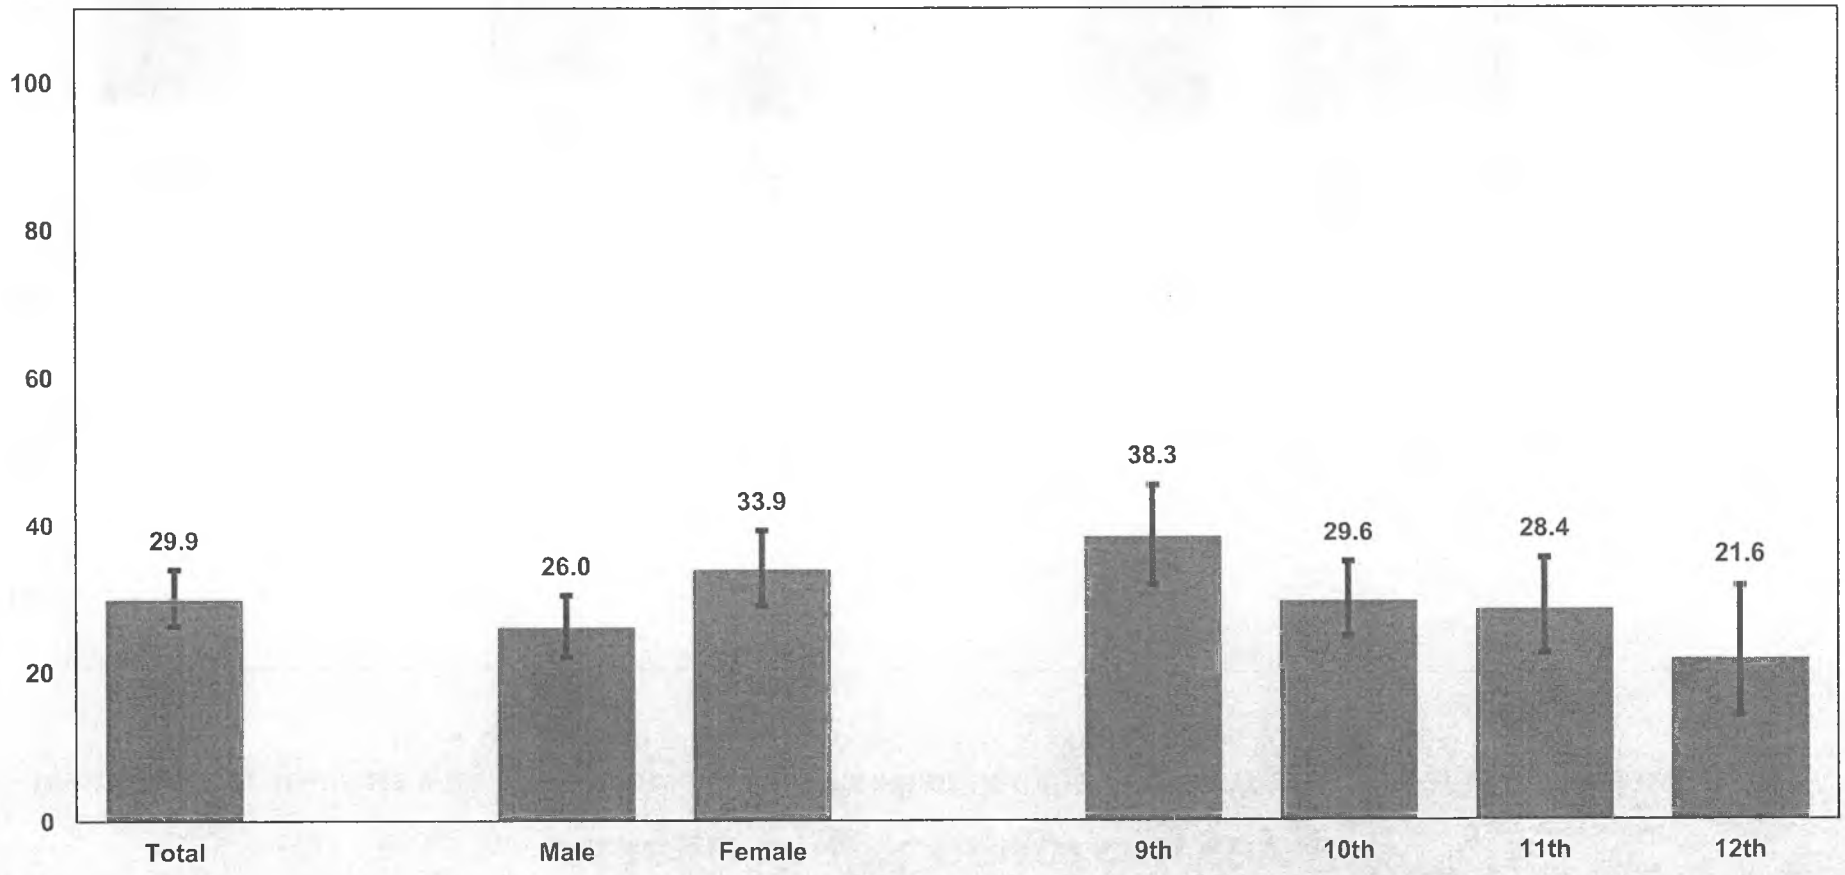
Percentage of students who think people greatly risk harming themselves (physically or in other ways), if they use marijuana regularly



Q92 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

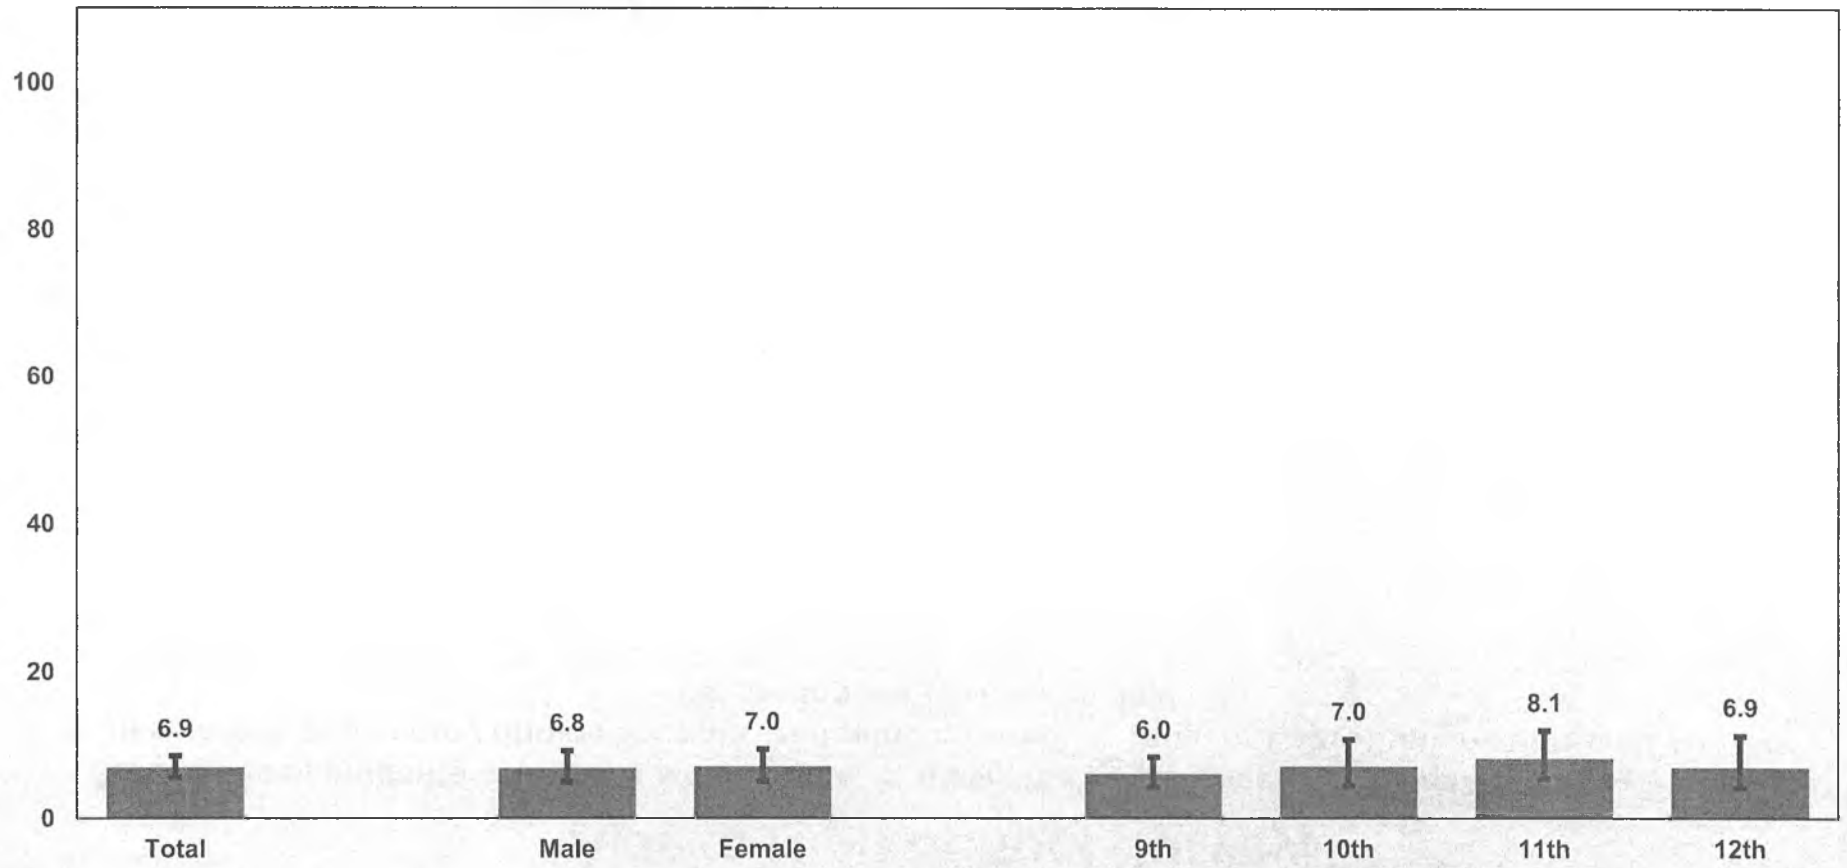
Percentage of students who took a prescription drug without a doctor's prescription one or more times during the past 30 days



Q93 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

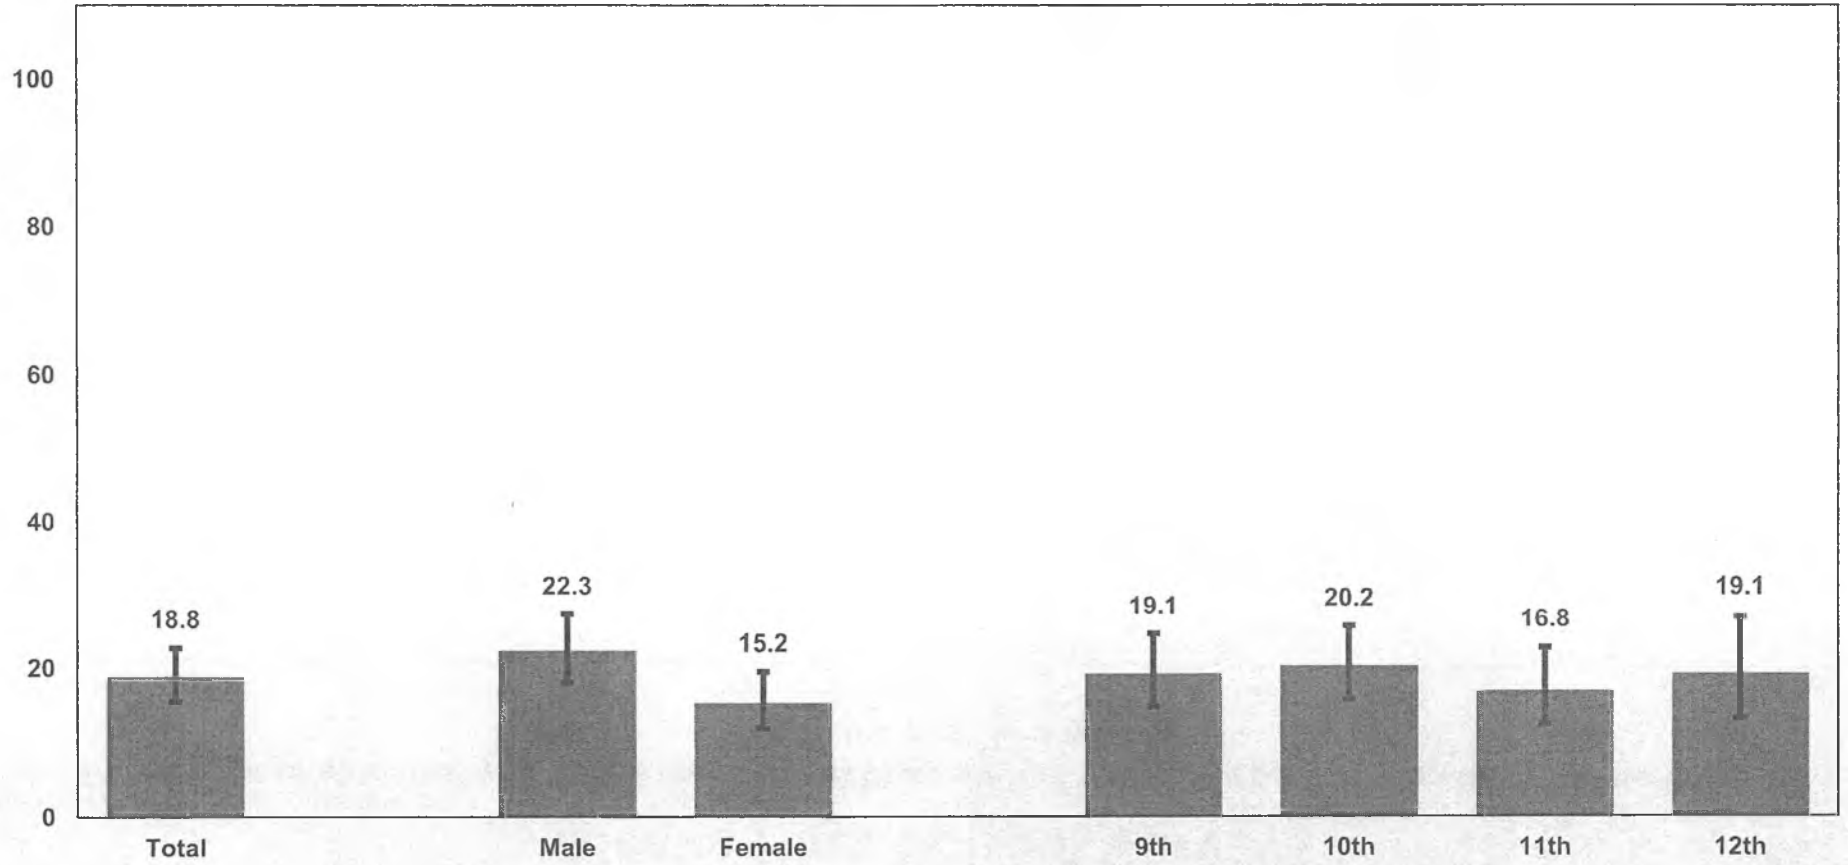
Percentage of students who drank a can, bottle, or glass of a sugar-sweetened beverage such as sports drinks, sweetened energy drinks, Snapple, fruit punch, Kool-Aid, Tang, or Capri-Sun one or more times per day during the past seven days



Q94 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

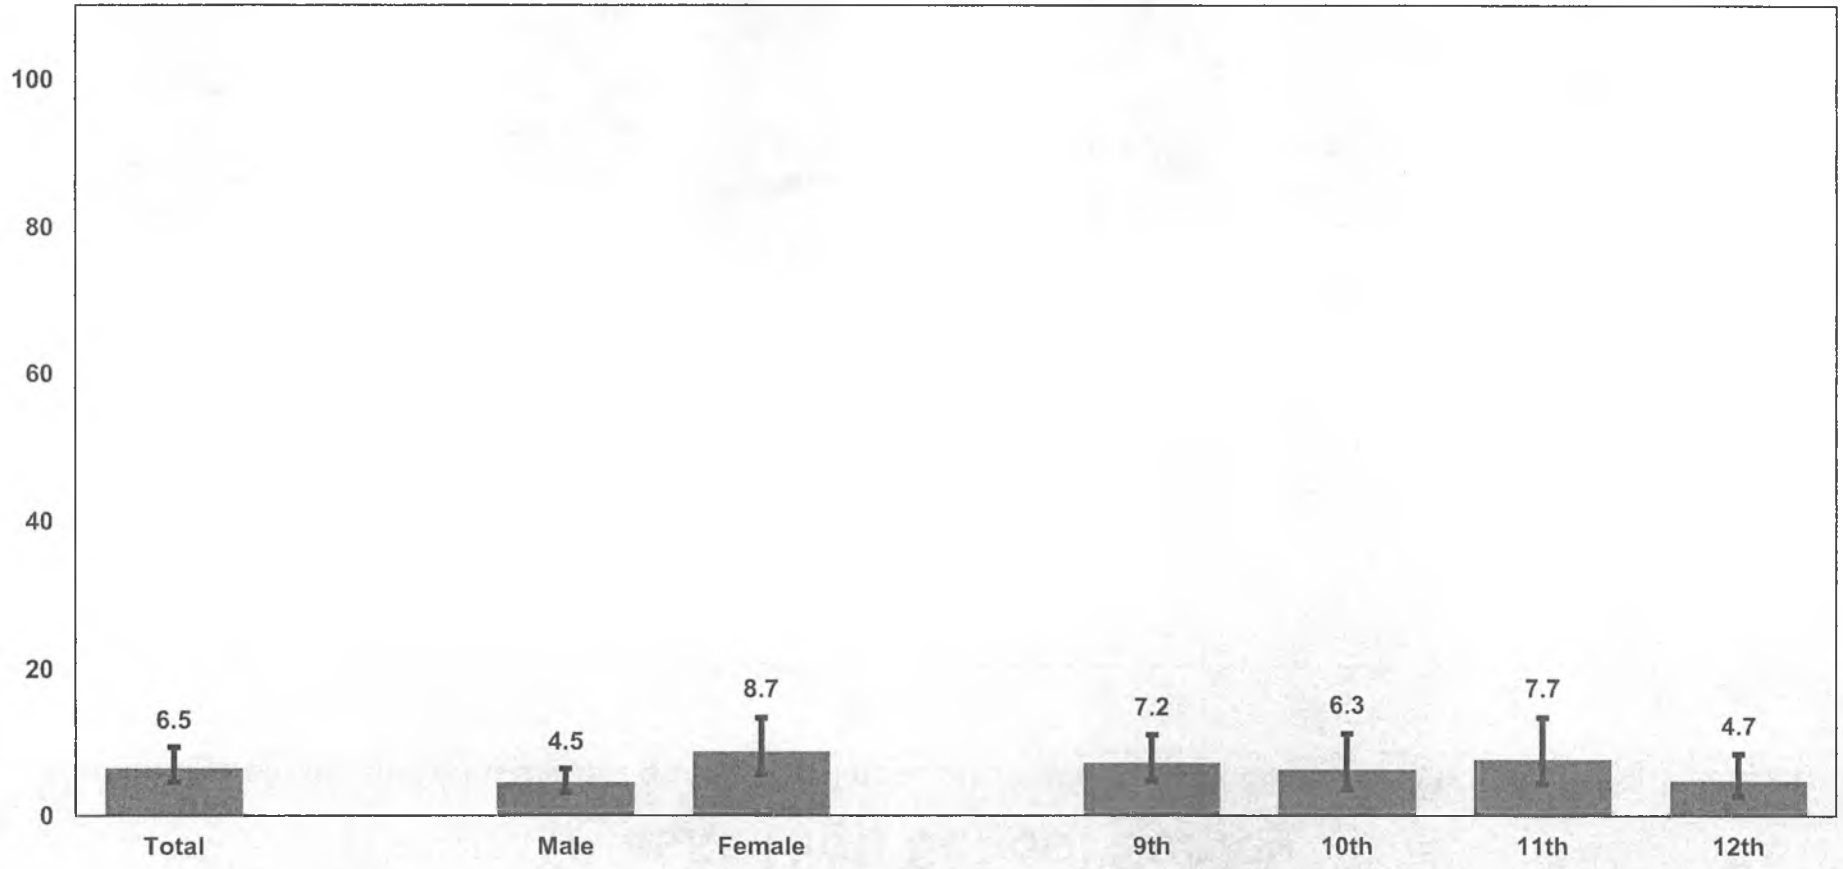
Percentage of students who spend no more than 20 minutes actually exercising or playing sports during an average physical education (PE) class



Q95 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

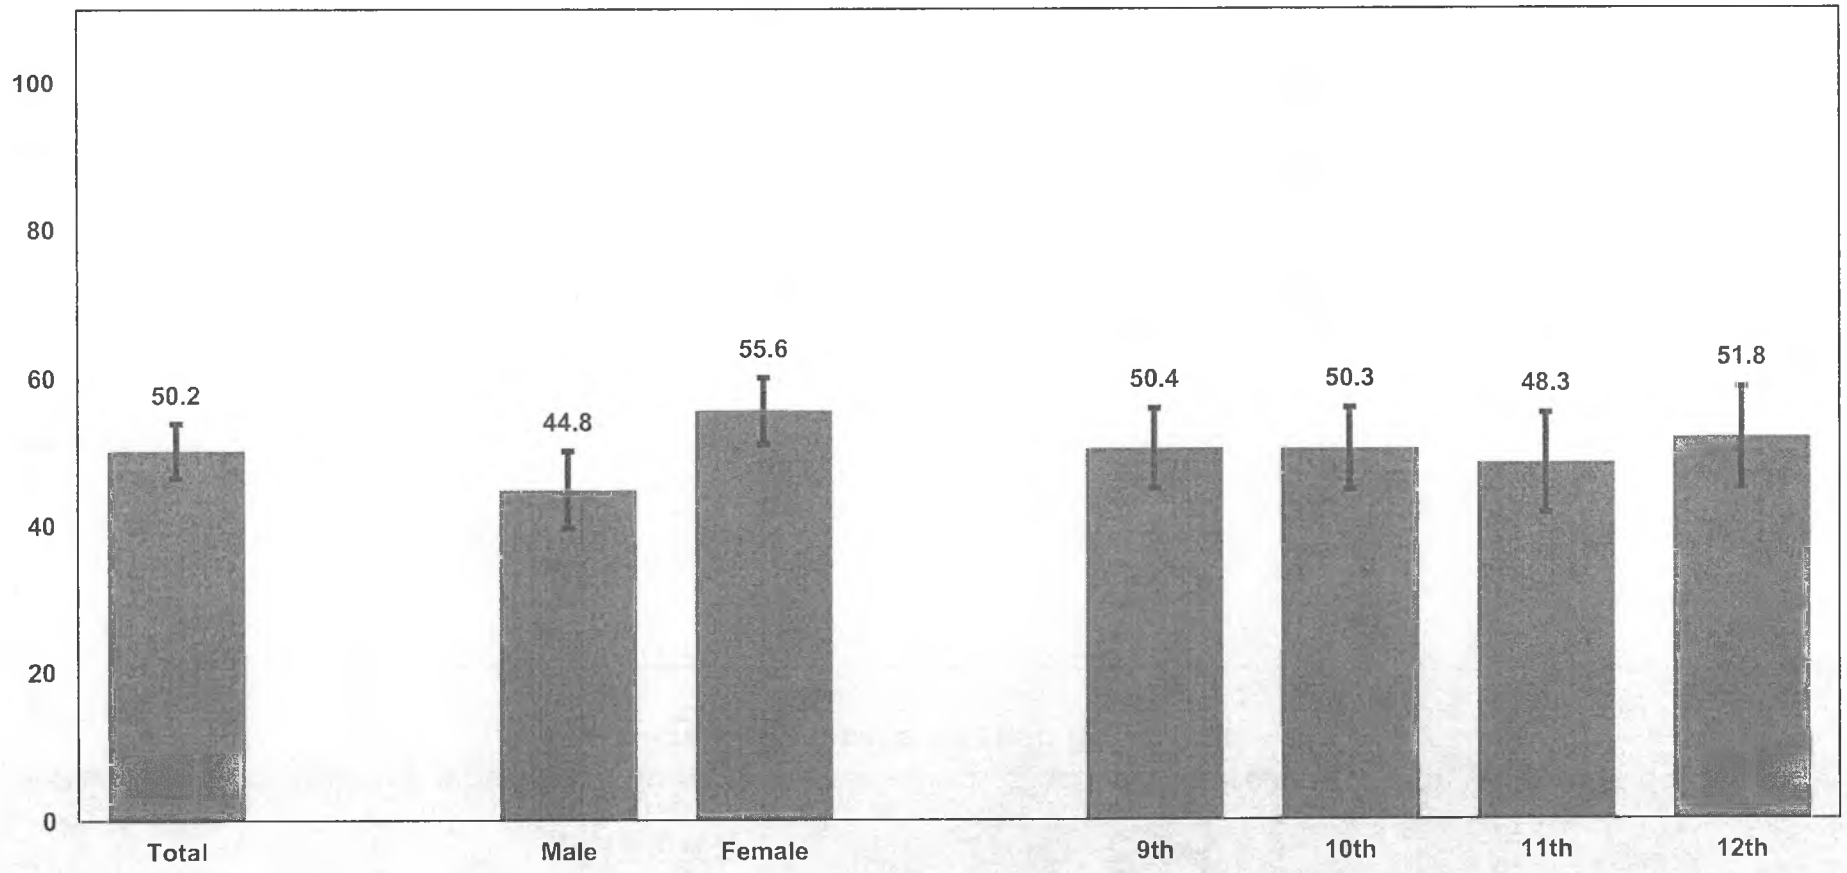
Percentage of students who did not go to school because they were sick on one or more of the past 30 days



Q96 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

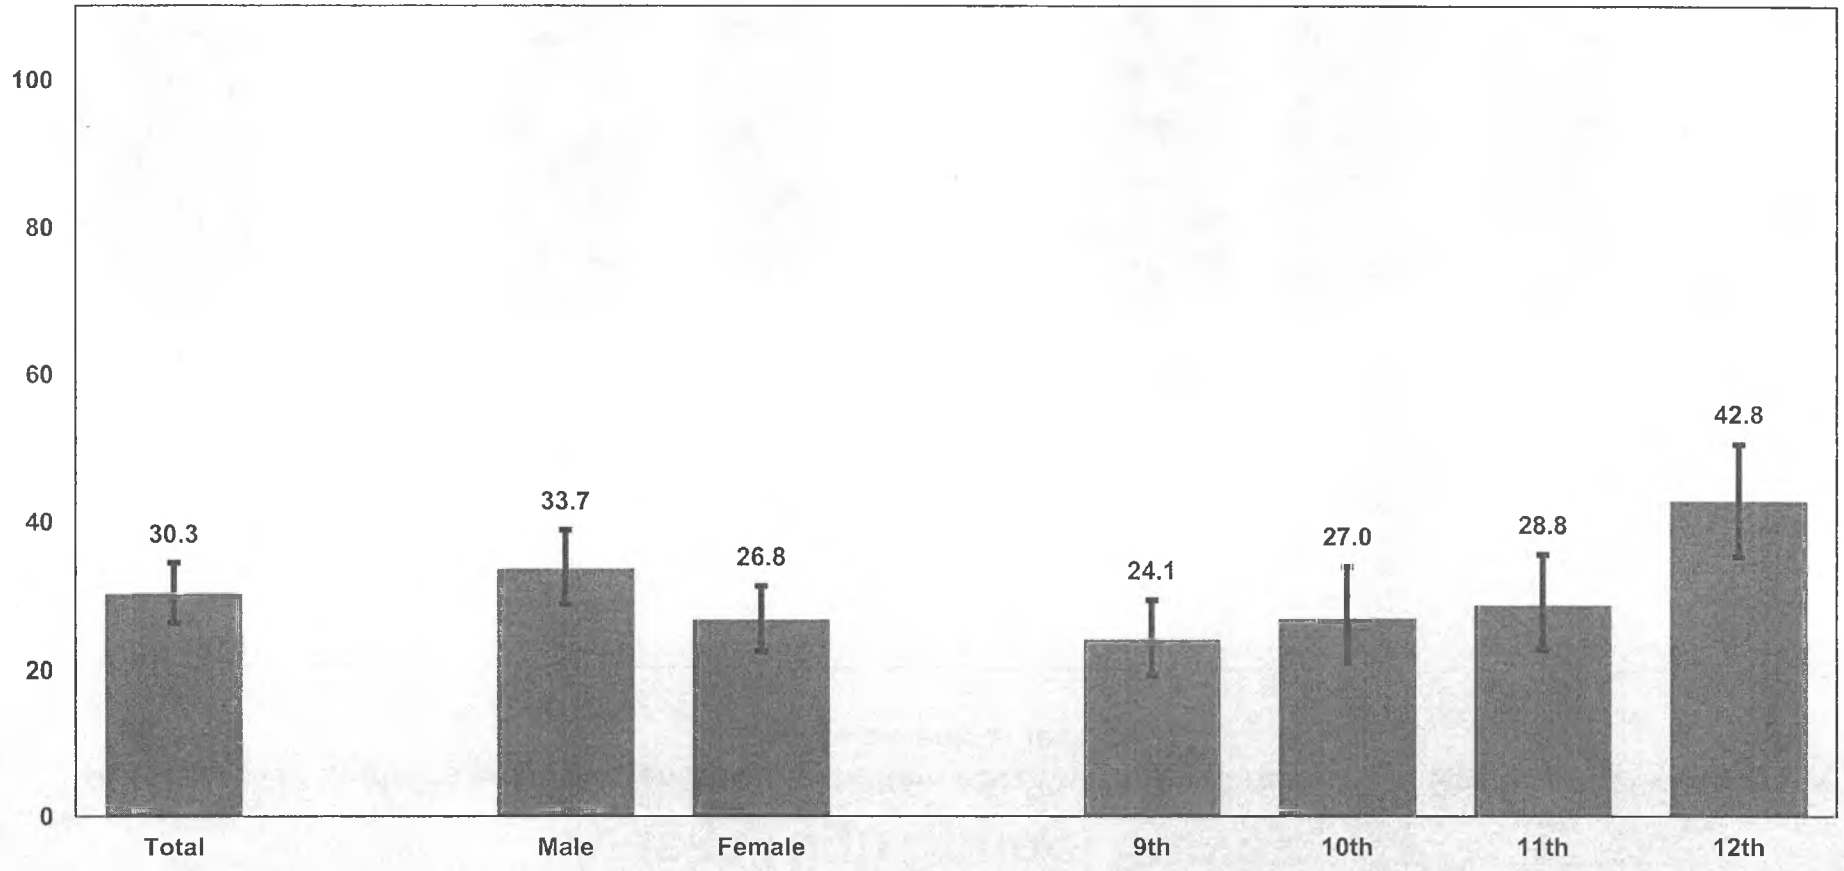
Percentage of students who missed classes or school without permission on one or more of the past 30 days



Q97 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

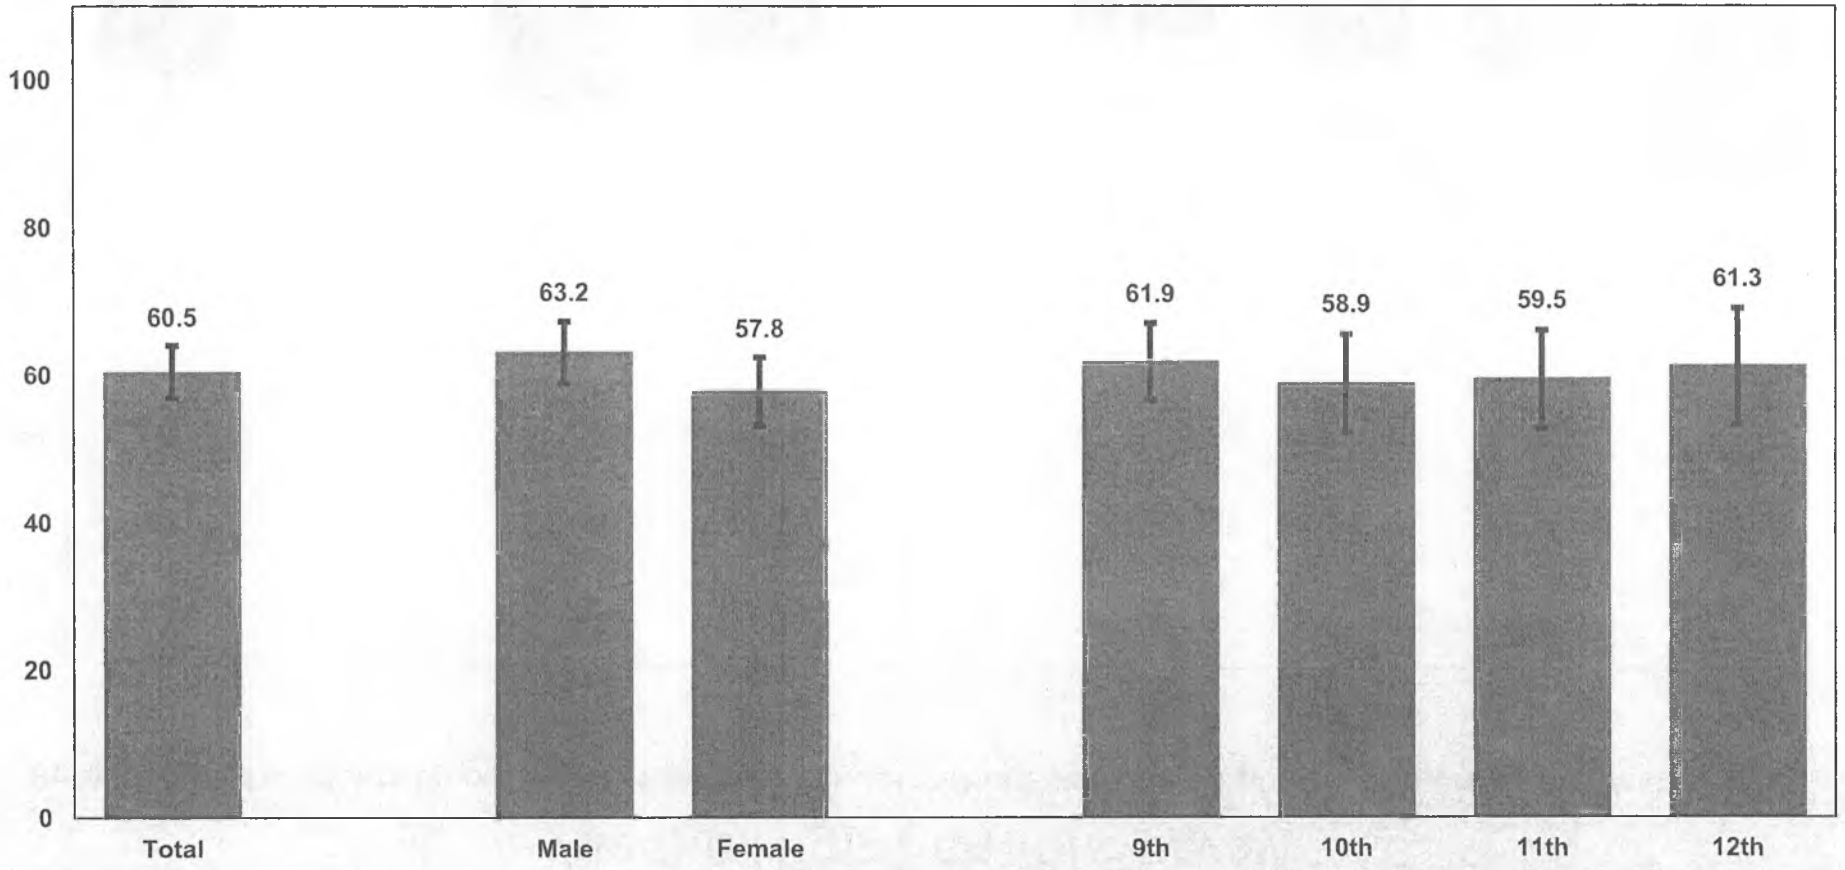
Percentage of students whose parent talks with them about what they are doing in school about once or twice a week or less



Q98 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

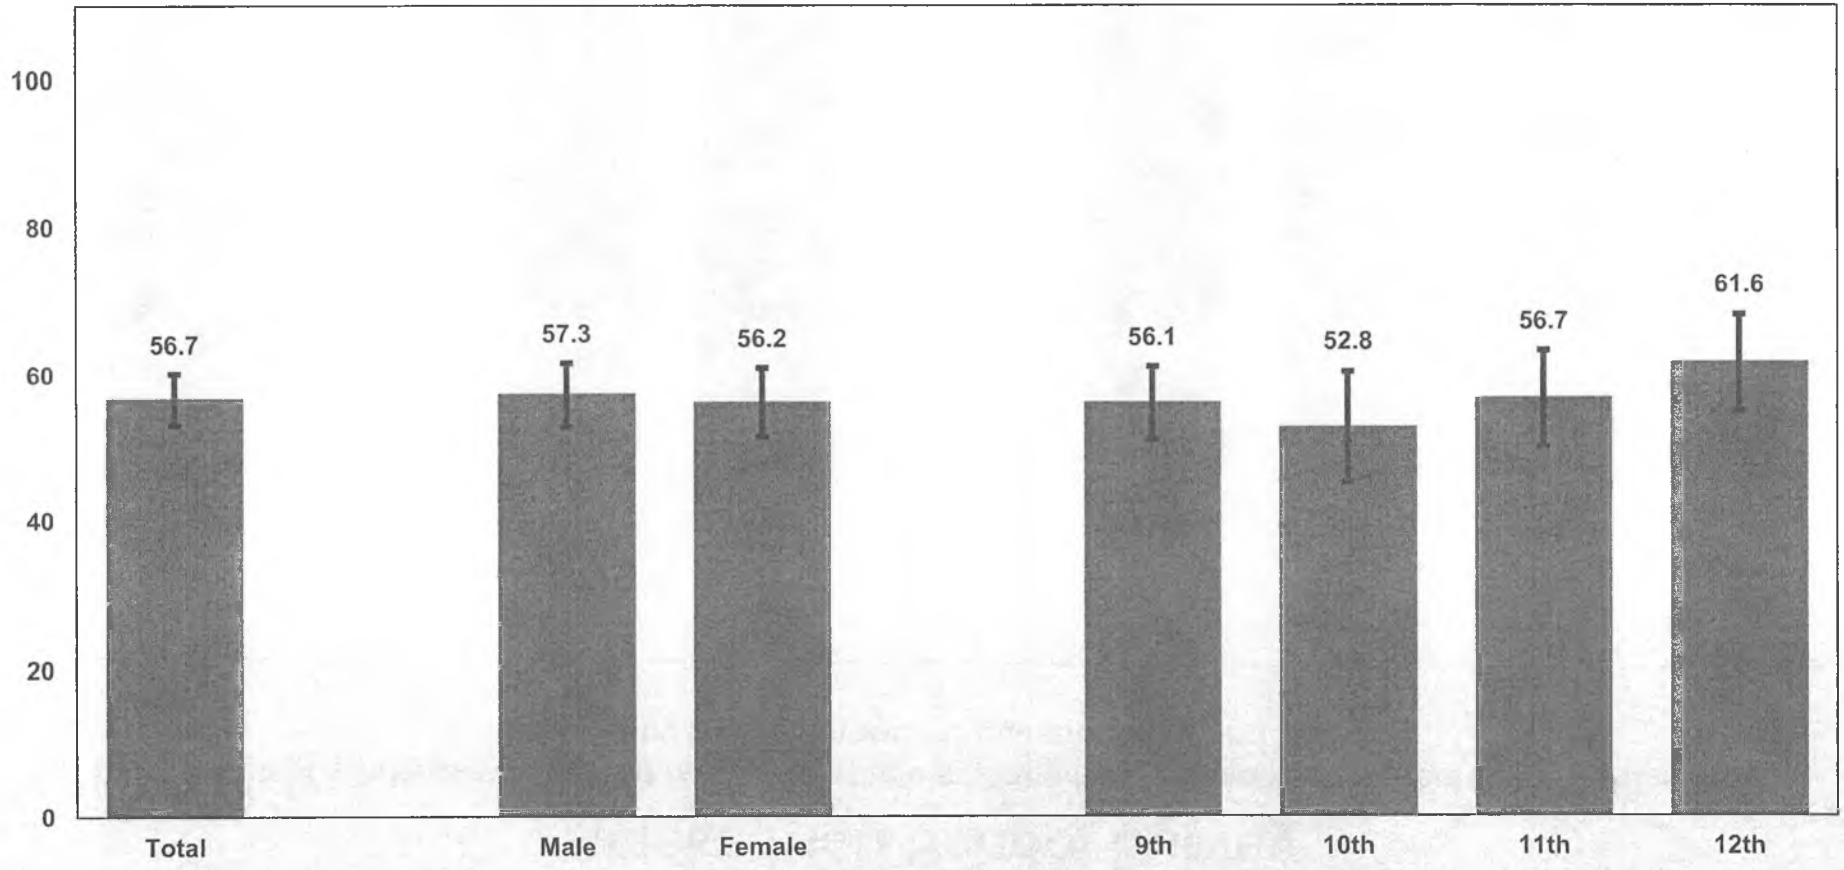
Percentage of students who strongly agree or agree that their teachers really care about them and give them a lot of encouragement



Q99 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

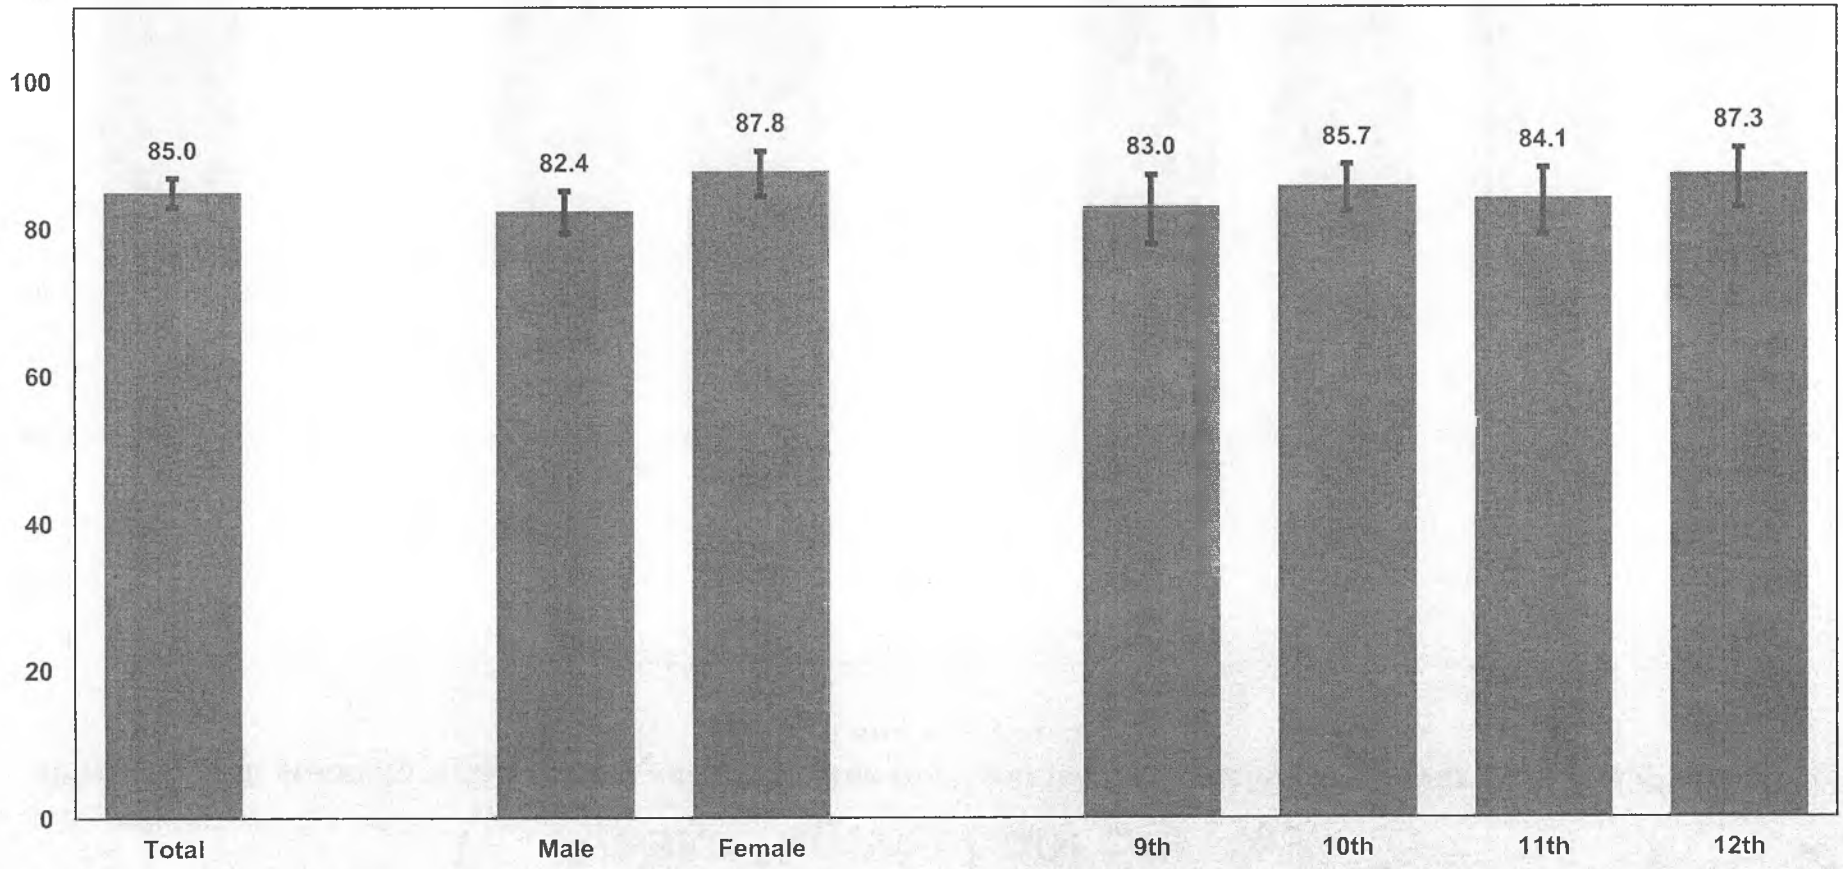
Percentage of students who would feel comfortable seeking help from one or more adults besides their parents if they had an important question affecting their life



Q100 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

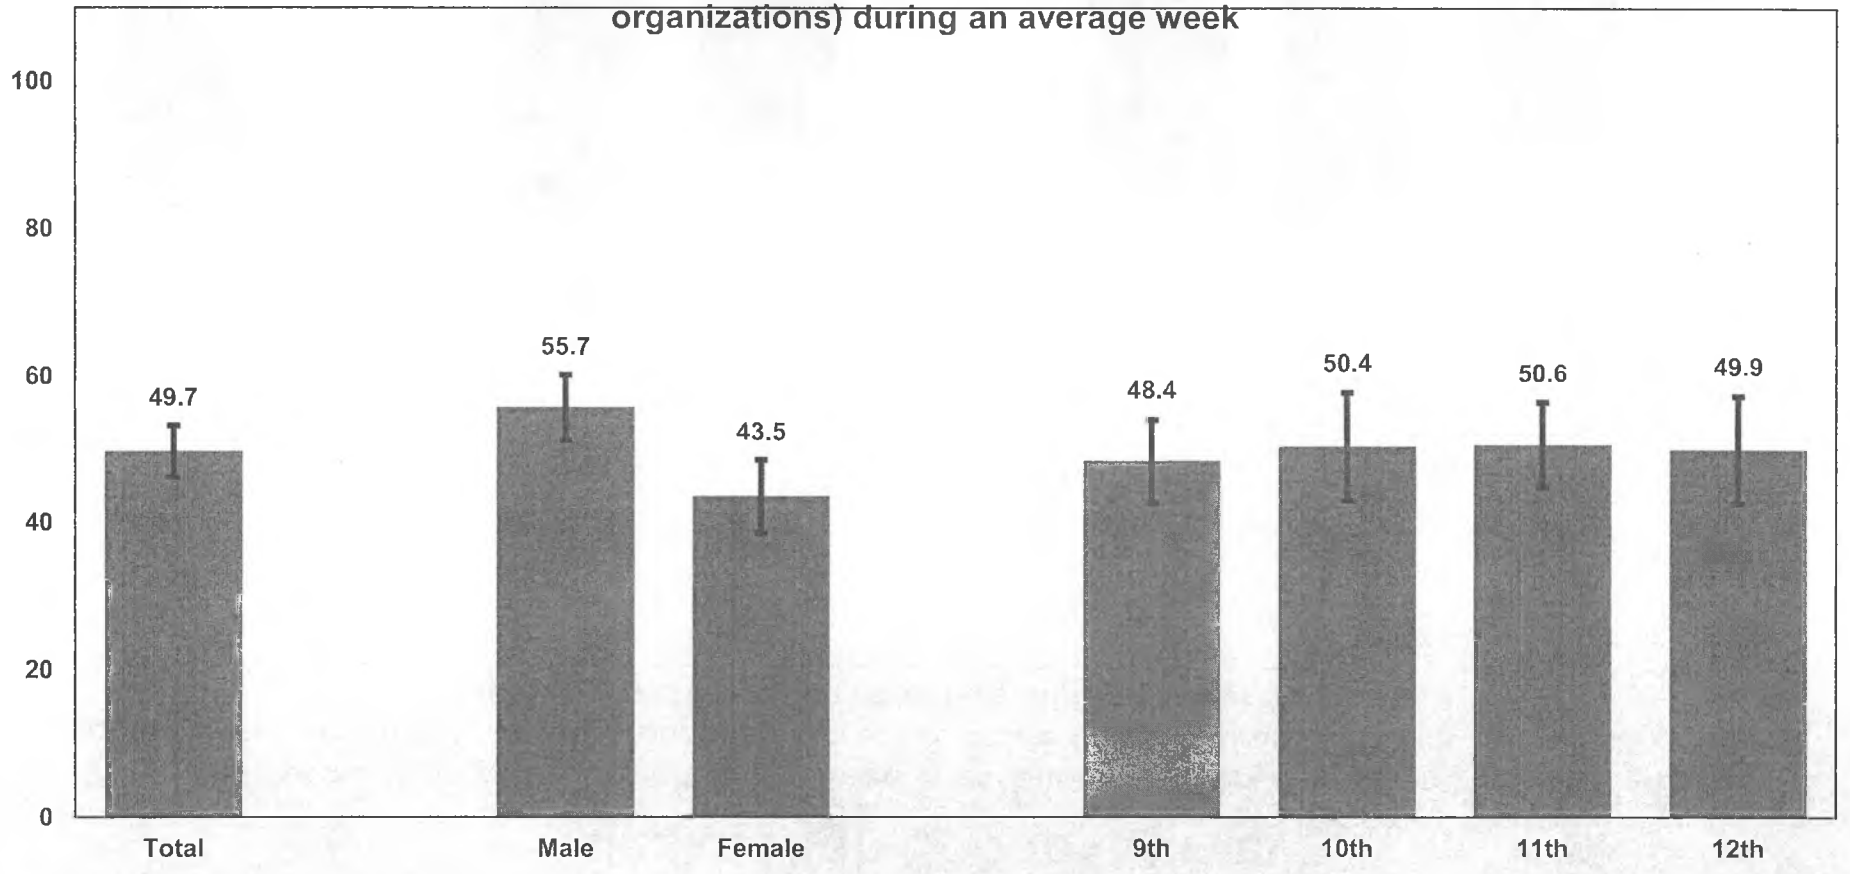
Percentage of students who spend zero hours helping or volunteering at school or in the community (such as helping elders or neighbors; watching young children; teaching or tutoring; peer helping; mentoring; or helping out at local programs, health clinics, faith organizations, tribal organizations, or environmental organizations) during an average week



Q101 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

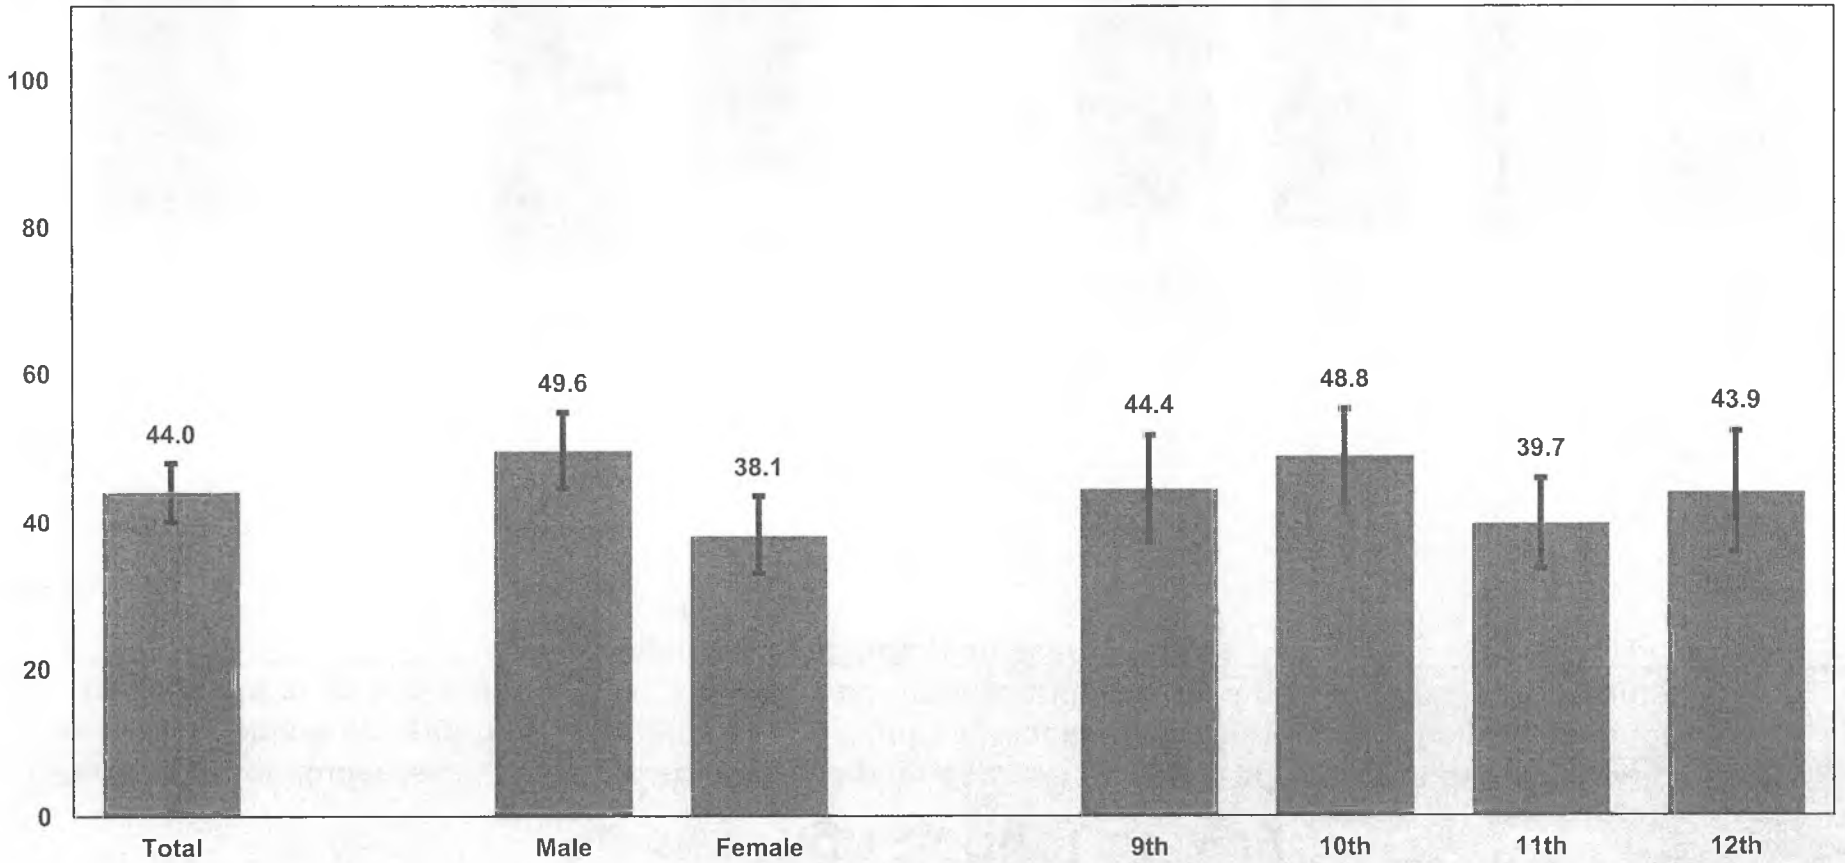
Percentage of students who take part in organized after school, evening, or weekend activities (such as school clubs; community center groups; music, art, or dance lessons; drama; church; or cultural or other supervised activities) on zero days during an average week



Q102 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

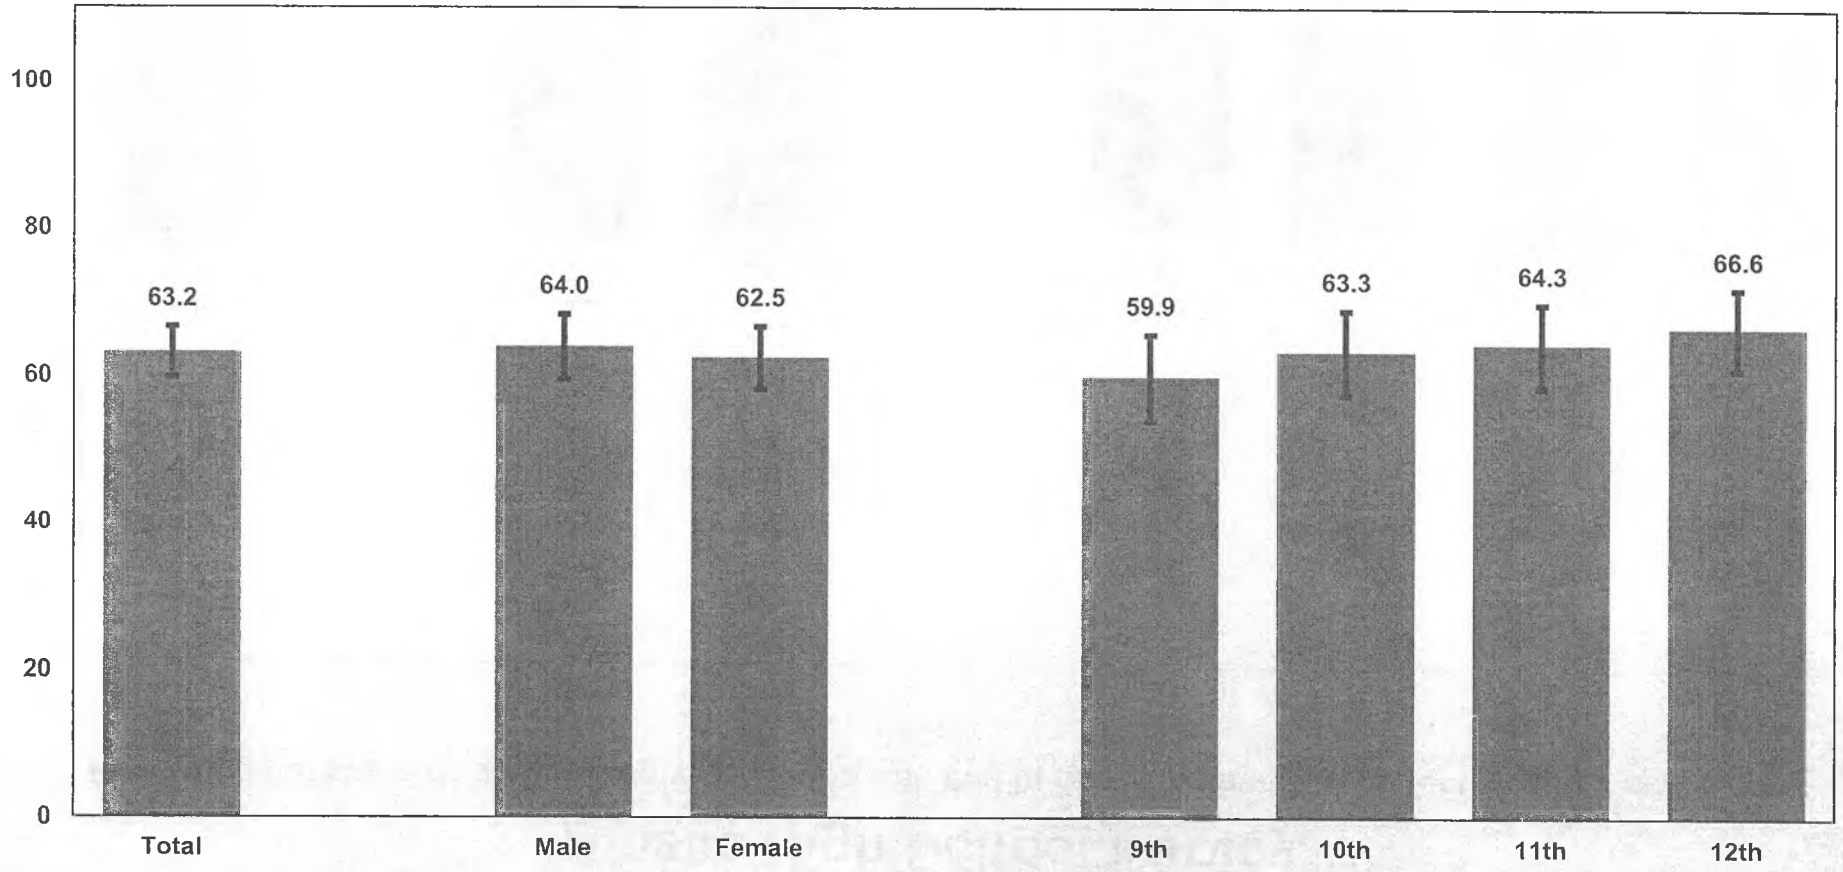
Percentage of students who disagree or strongly disagree that they feel alone in their life



Q103 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

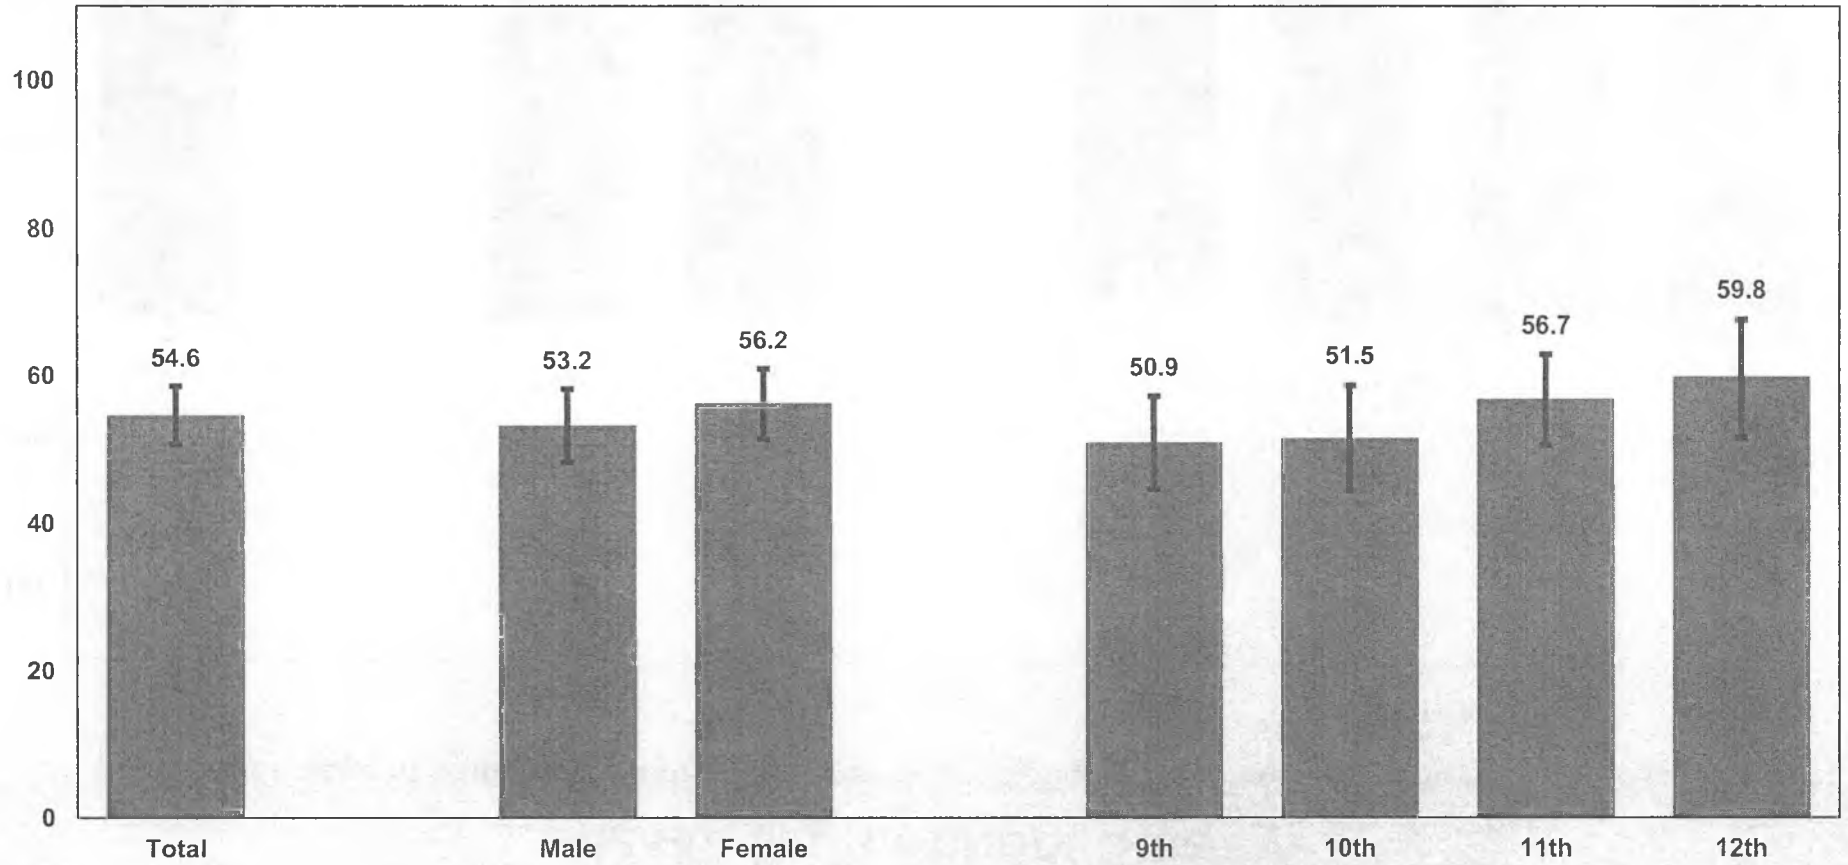
Percentage of students who strongly agree or agree that in their community they feel like they matter to people



Q104 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

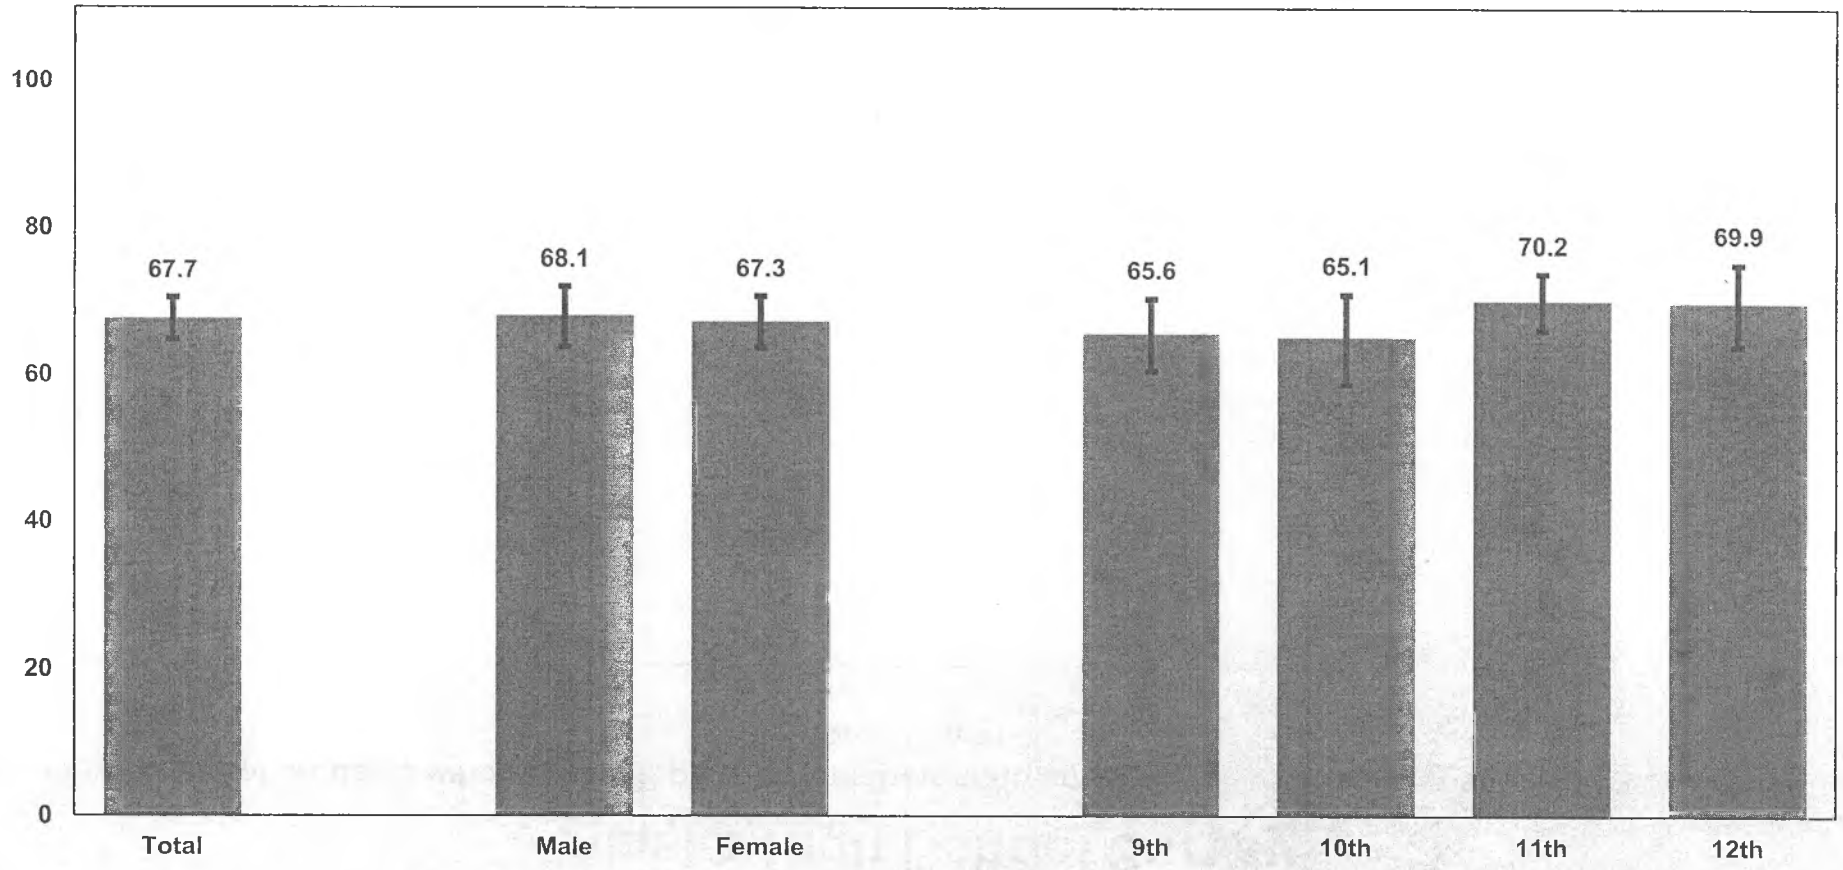
Percentage of students who strongly agree or agree that their school has clear rules and consequences for behavior



Q105 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

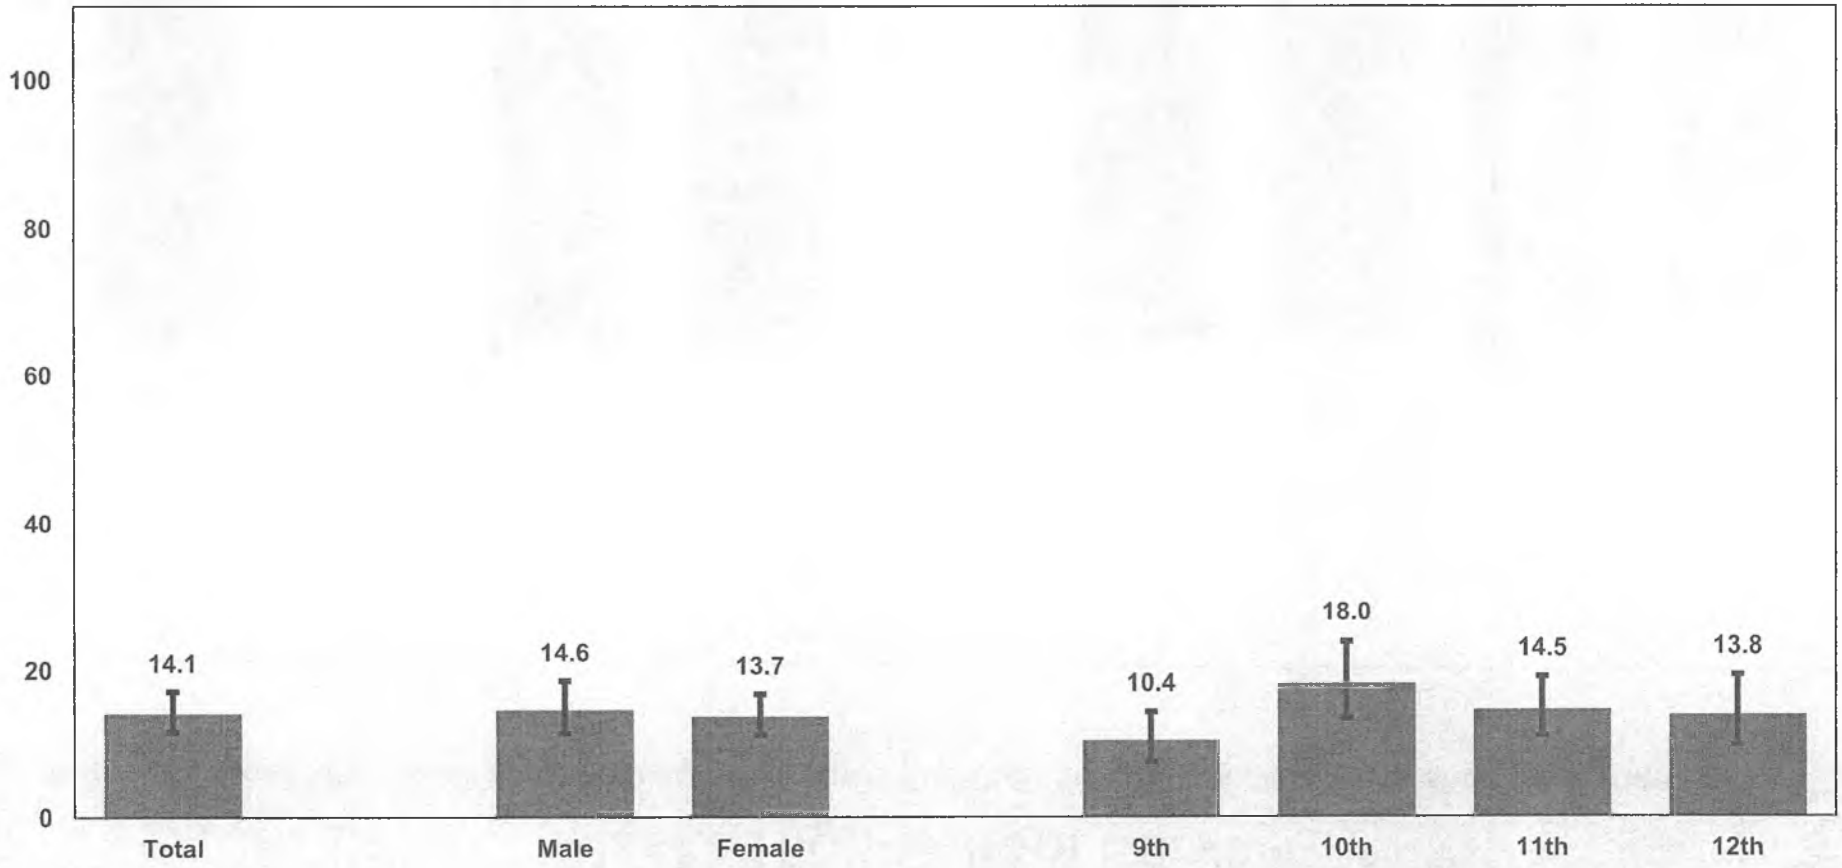
Percentage of students who said their parents feel their child smoking marijuana is either a little bit wrong or not wrong at all



Q106 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

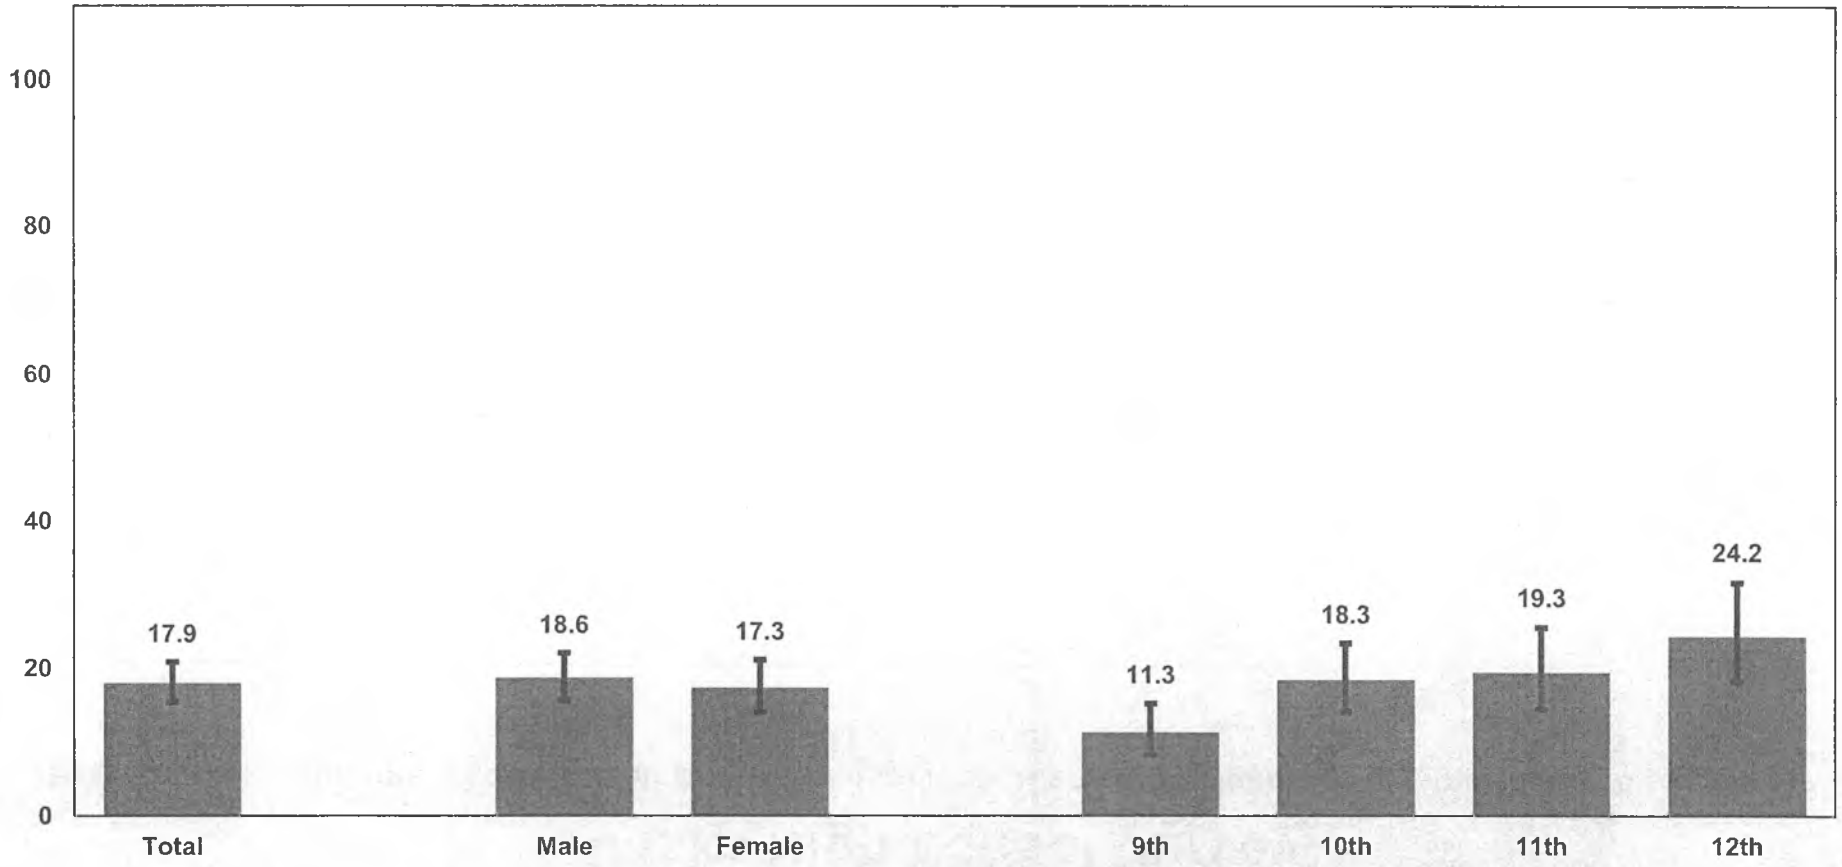
Percentage of students who said their parents feel their child drinking alcohol regularly is either a little bit wrong or not wrong at all



Q107 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

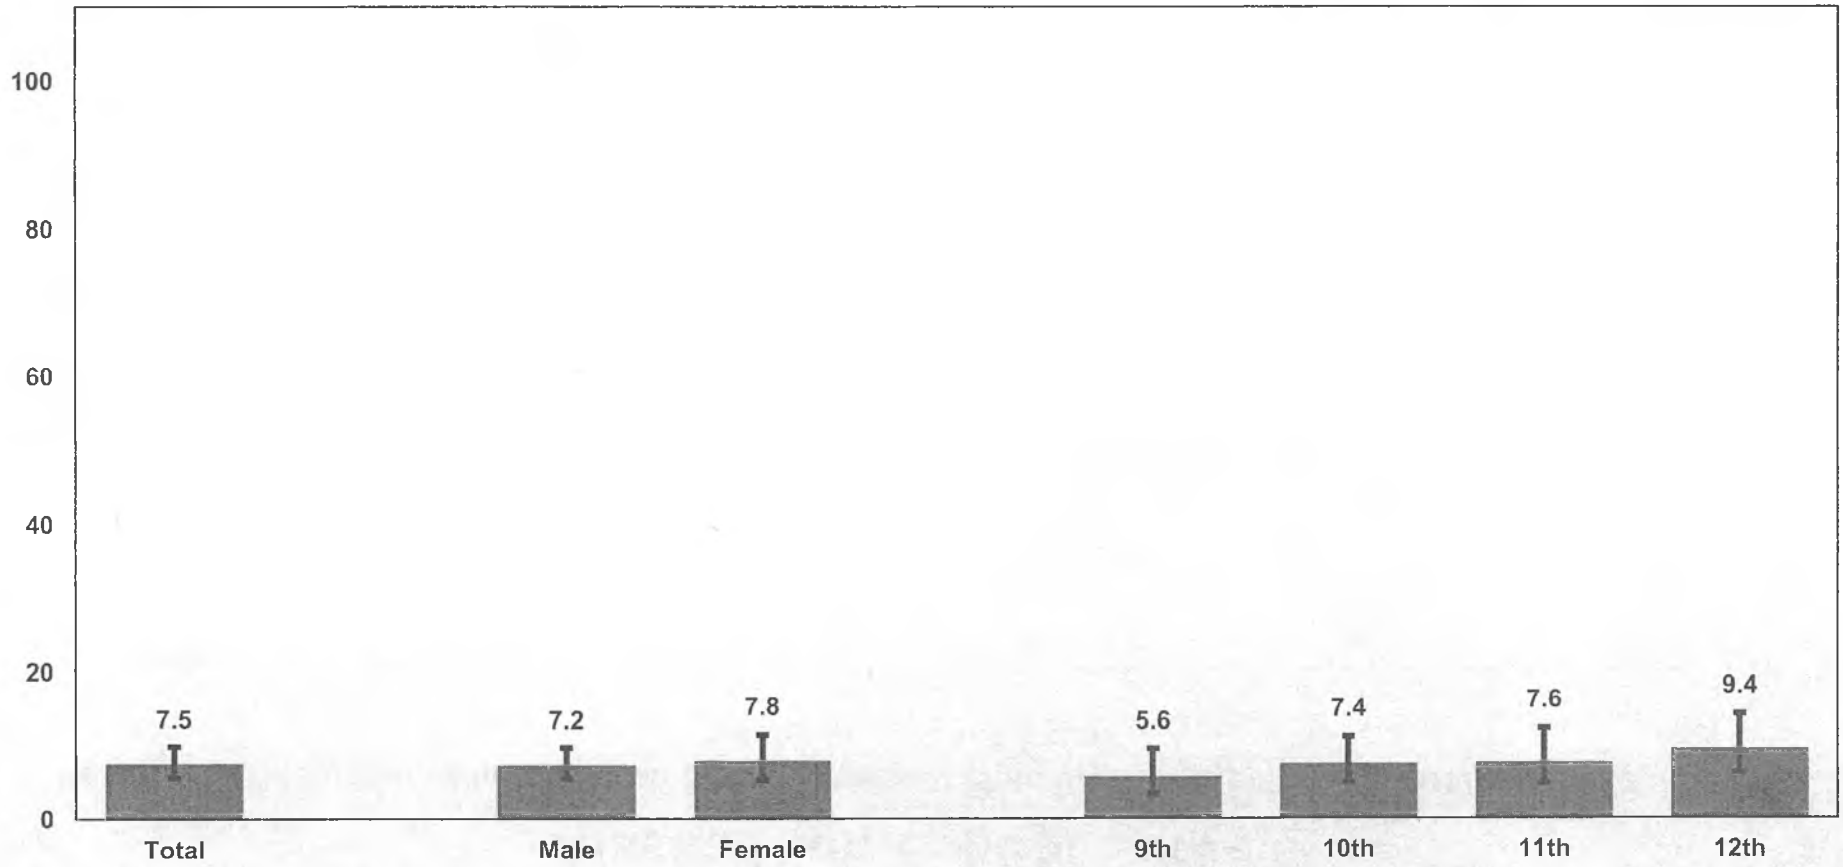
Percentage of students who said their parents feel their child smoking cigarettes is either a little bit wrong or not wrong at all



Q108 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

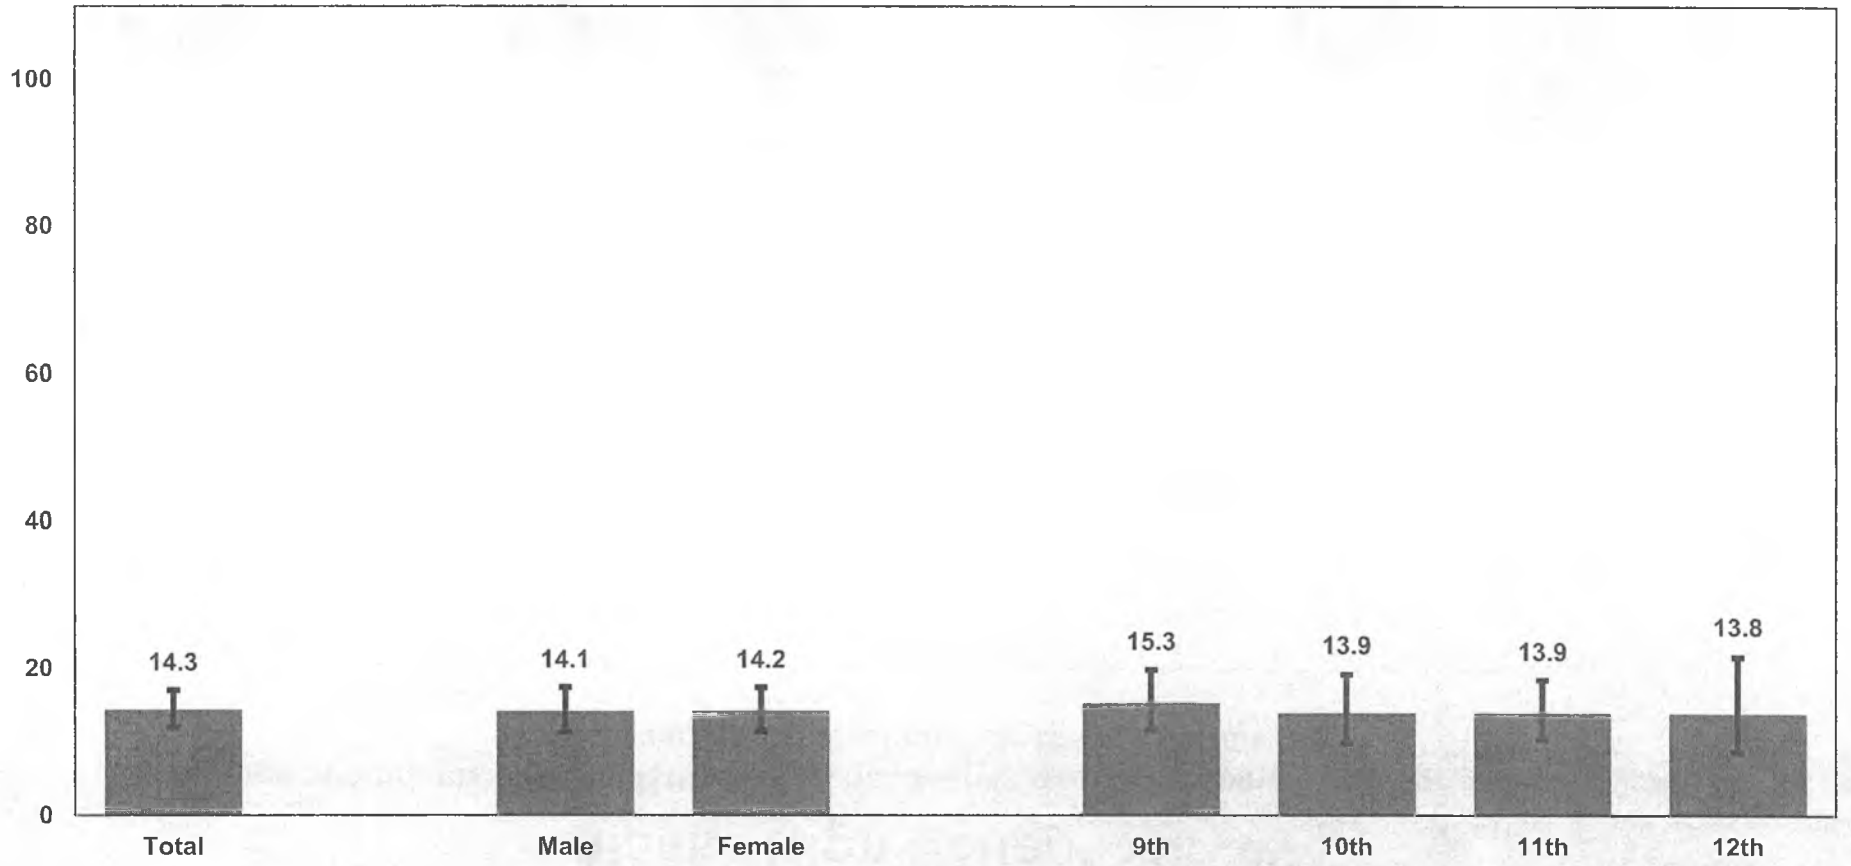
Percentage of students who think there is a chance they would be seen as cool for smoking cigarettes



Q109 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

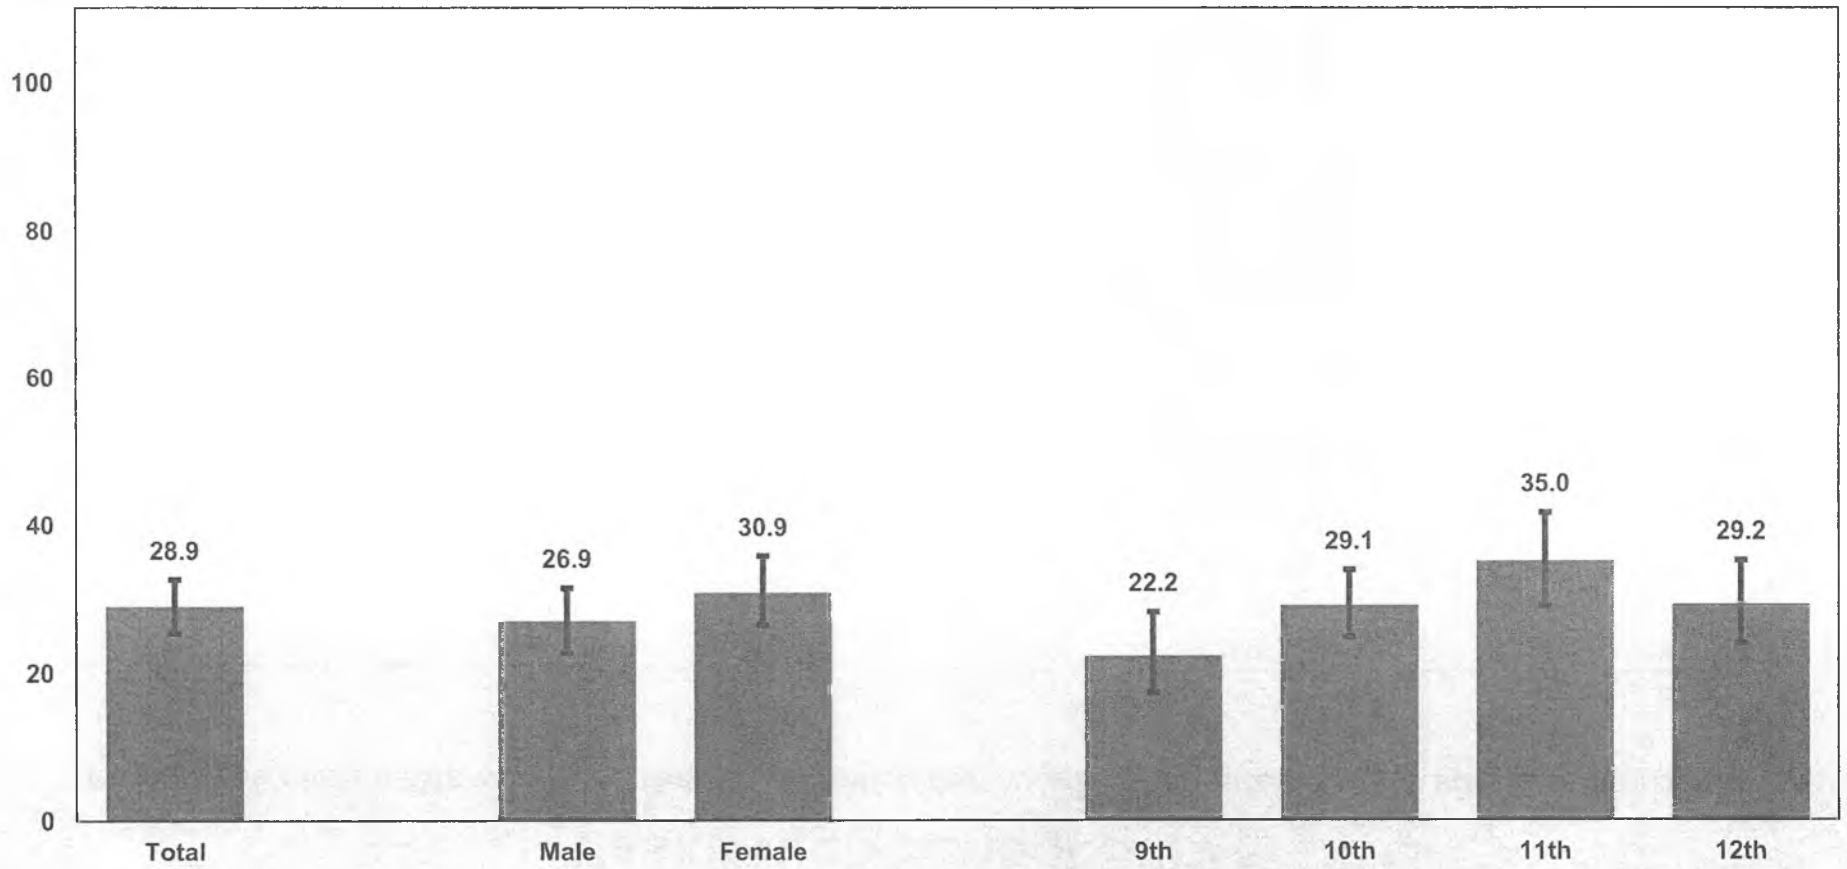
Percentage of students who think there is a chance they would be seen as cool for drinking alcoholic beverages at least once or twice a month



Q110 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska High School Survey

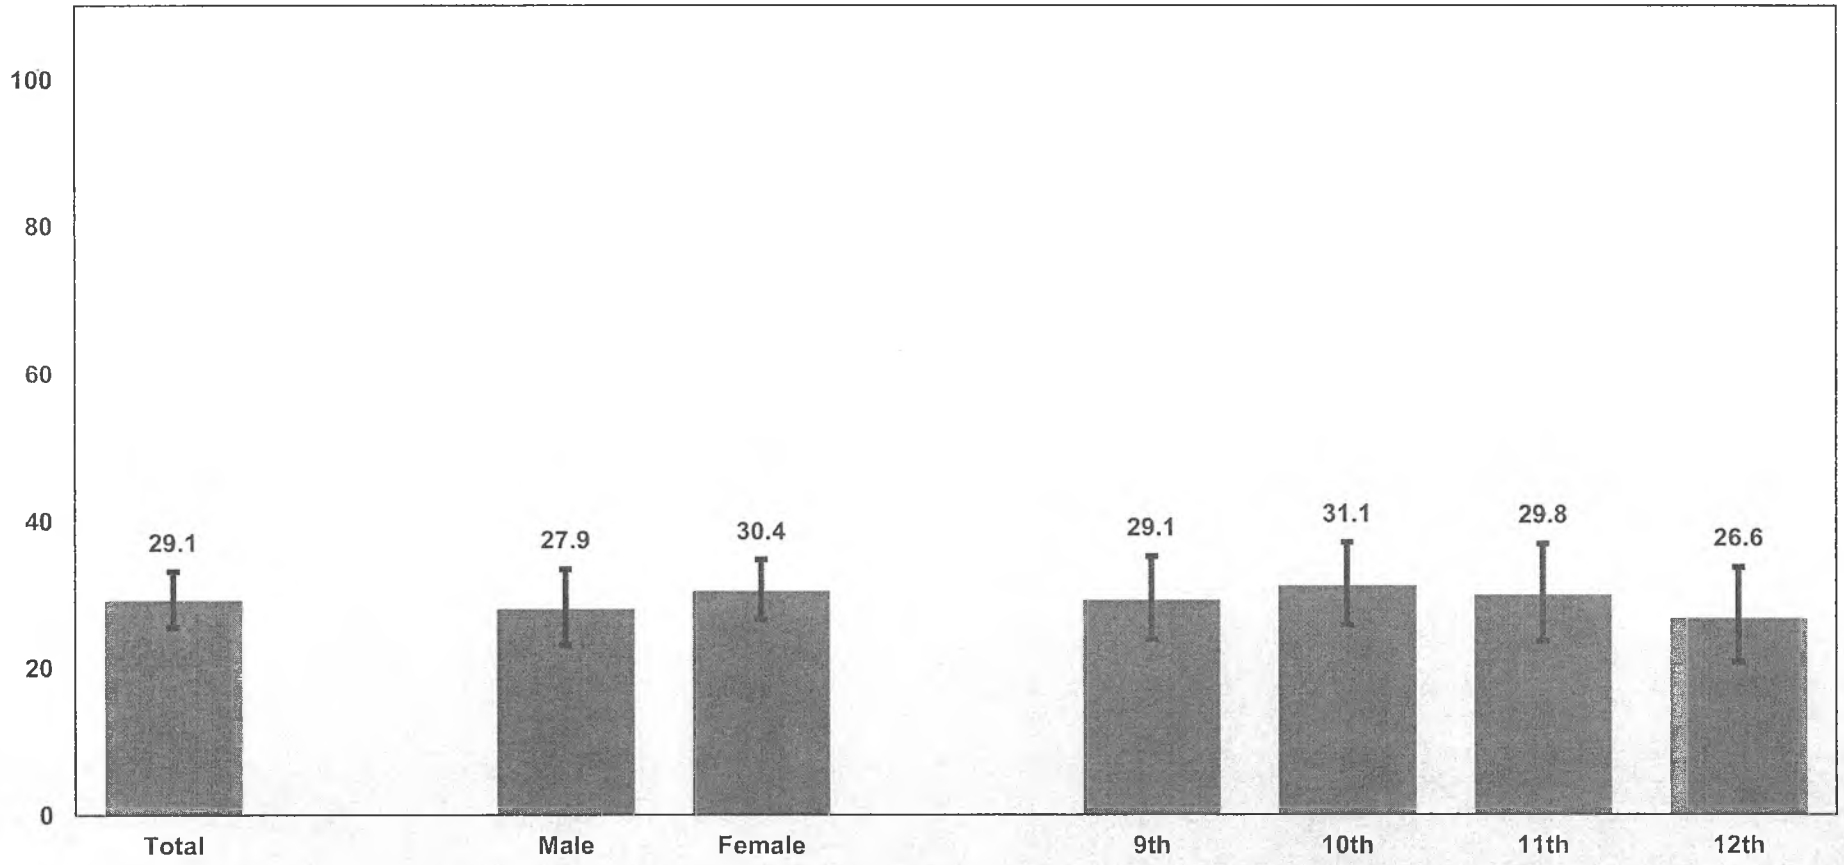
Percentage of students who think there is a chance they would be seen as cool for smoking marijuana



Q111 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

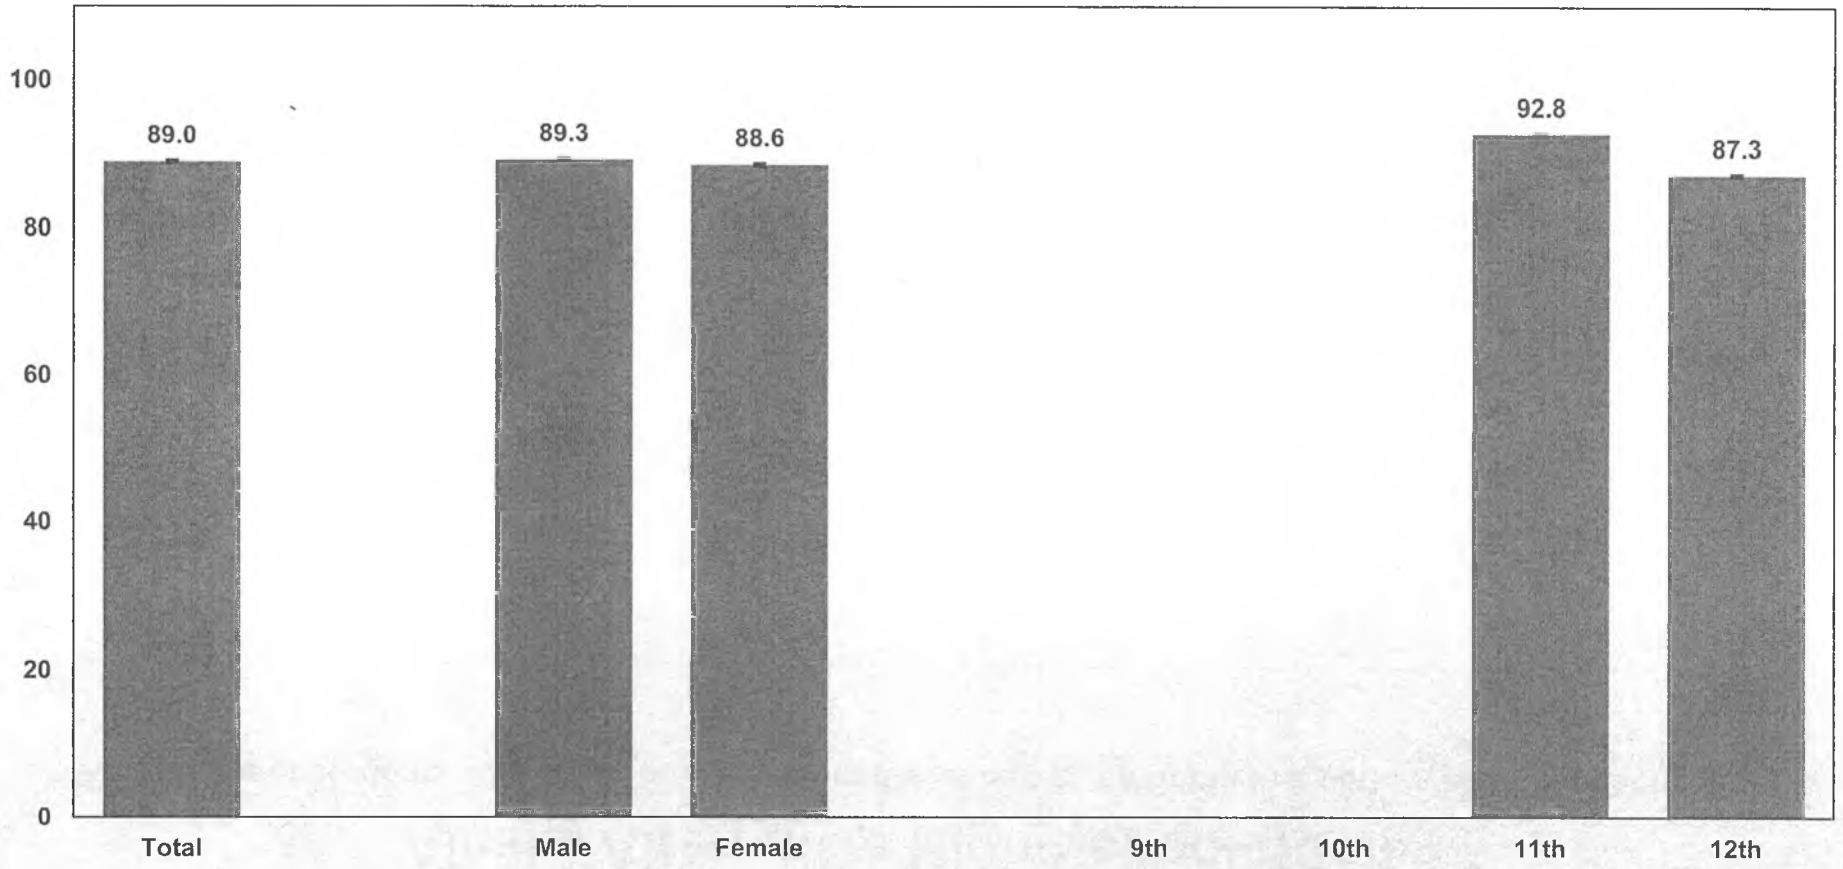
Alaska Alternative High School Survey

Among students who rode a bicycle during the past 12 months, the percentage who never or rarely wore a bicycle helmet



Q8 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

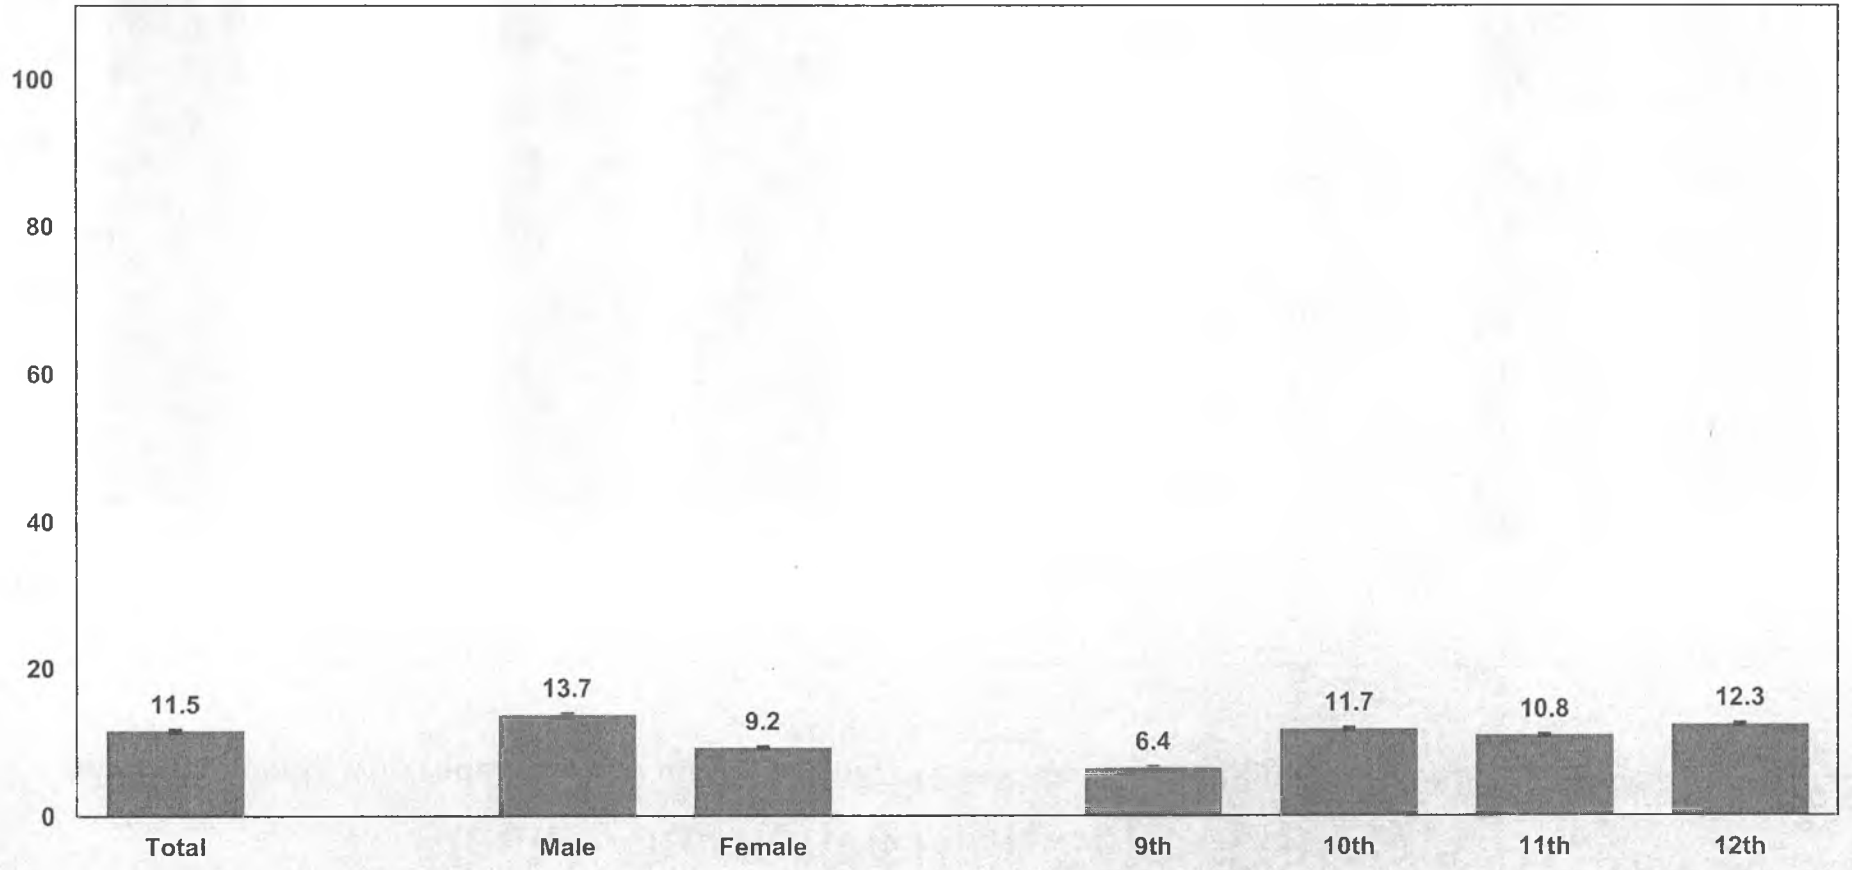
Alaska Alternative High School Survey

Percentage of students who never or rarely wore a seat belt when riding in a car driven by someone else



Q9 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

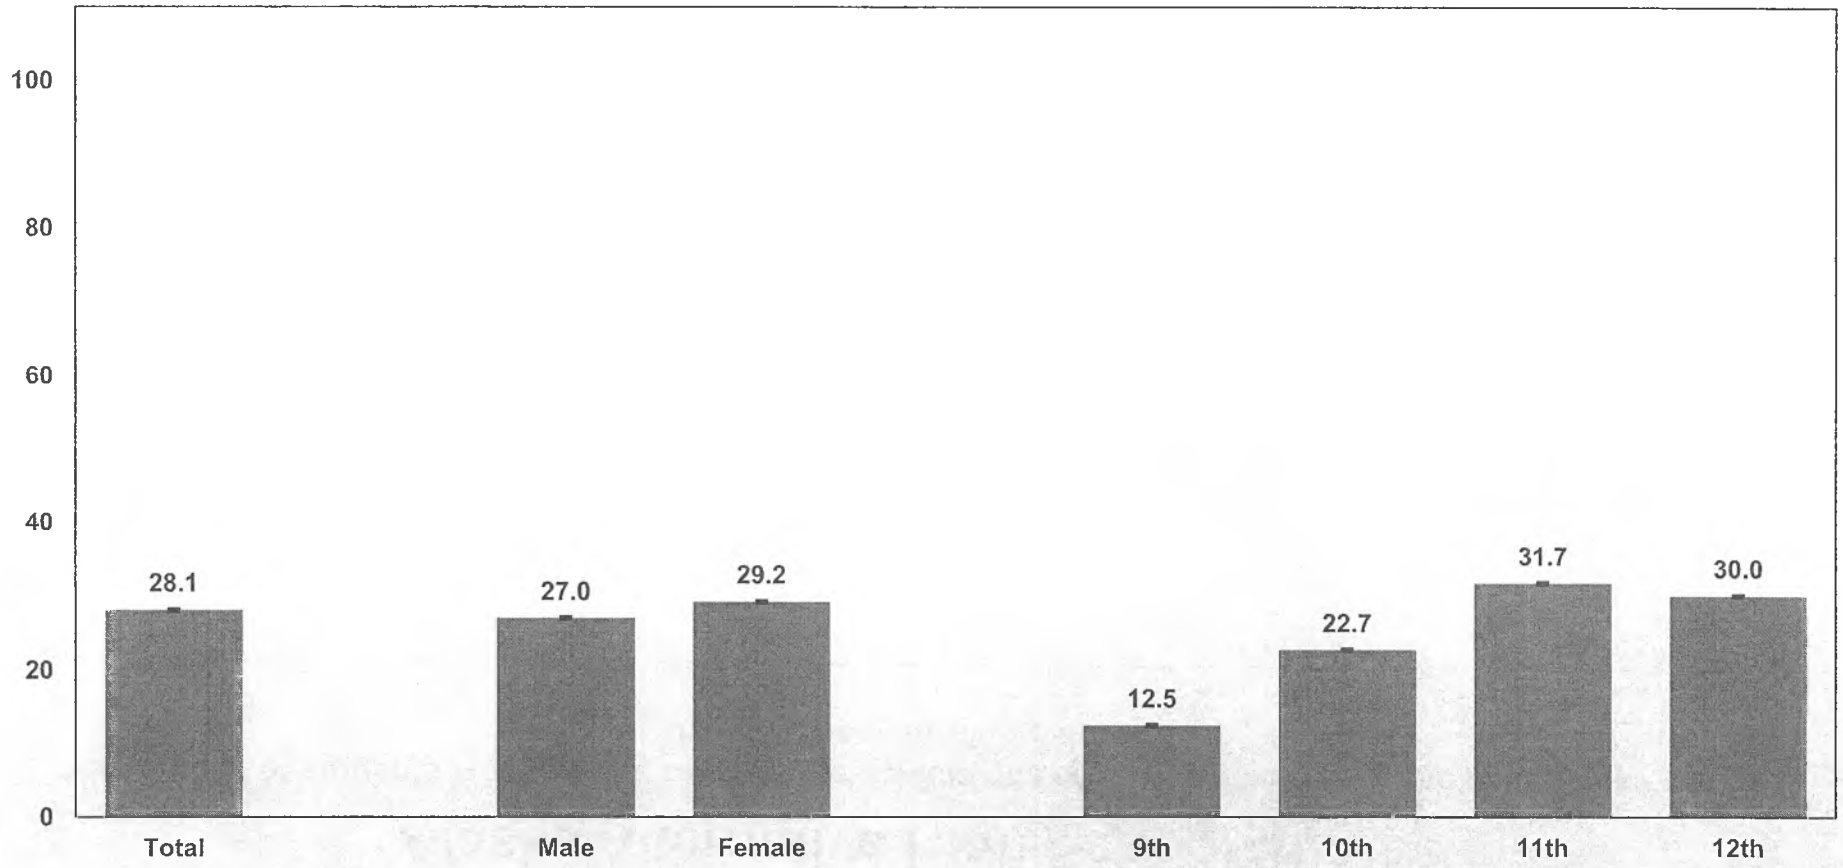
Alaska Alternative High School Survey

Percentage of students who rode one or more times during the past 30 days in a car or other vehicle driven by someone who had been drinking alcohol



Q10 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

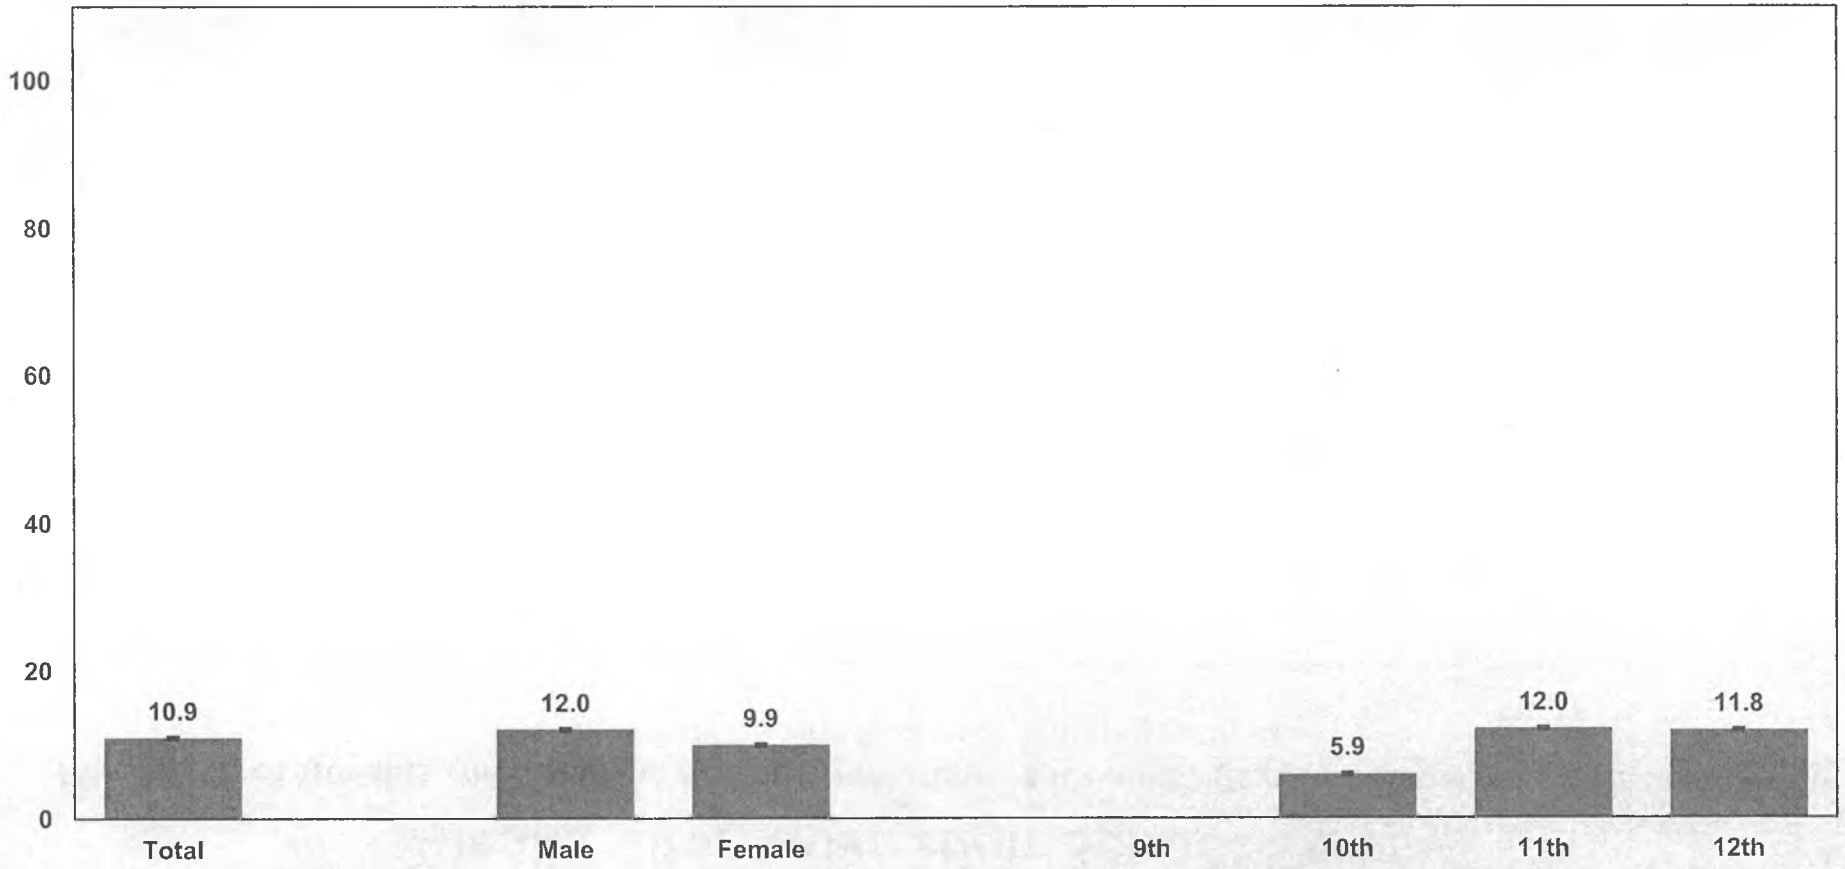
Alaska Alternative High School Survey

Percentage of students who drove a car or other vehicle one or more times during the past 30 days when they had been drinking alcohol



Q11 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

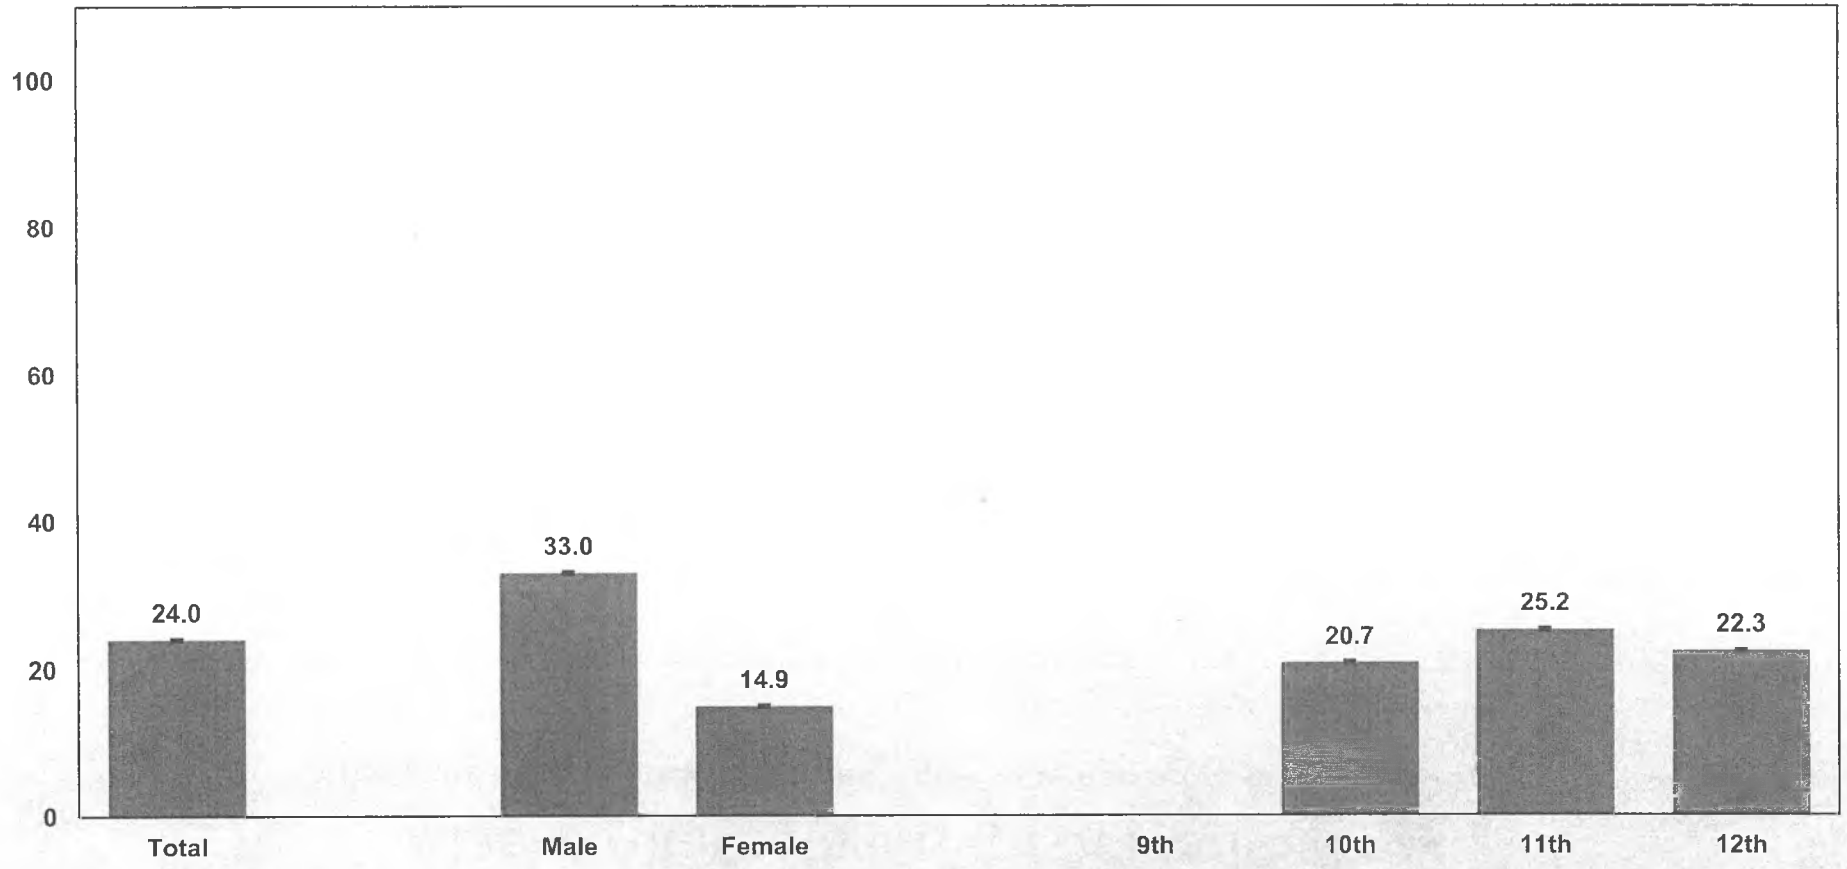
Alaska Alternative High School Survey

Percentage of students who carried a weapon such as a gun, knife, or club on one or more of the past 30 days



Q12 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

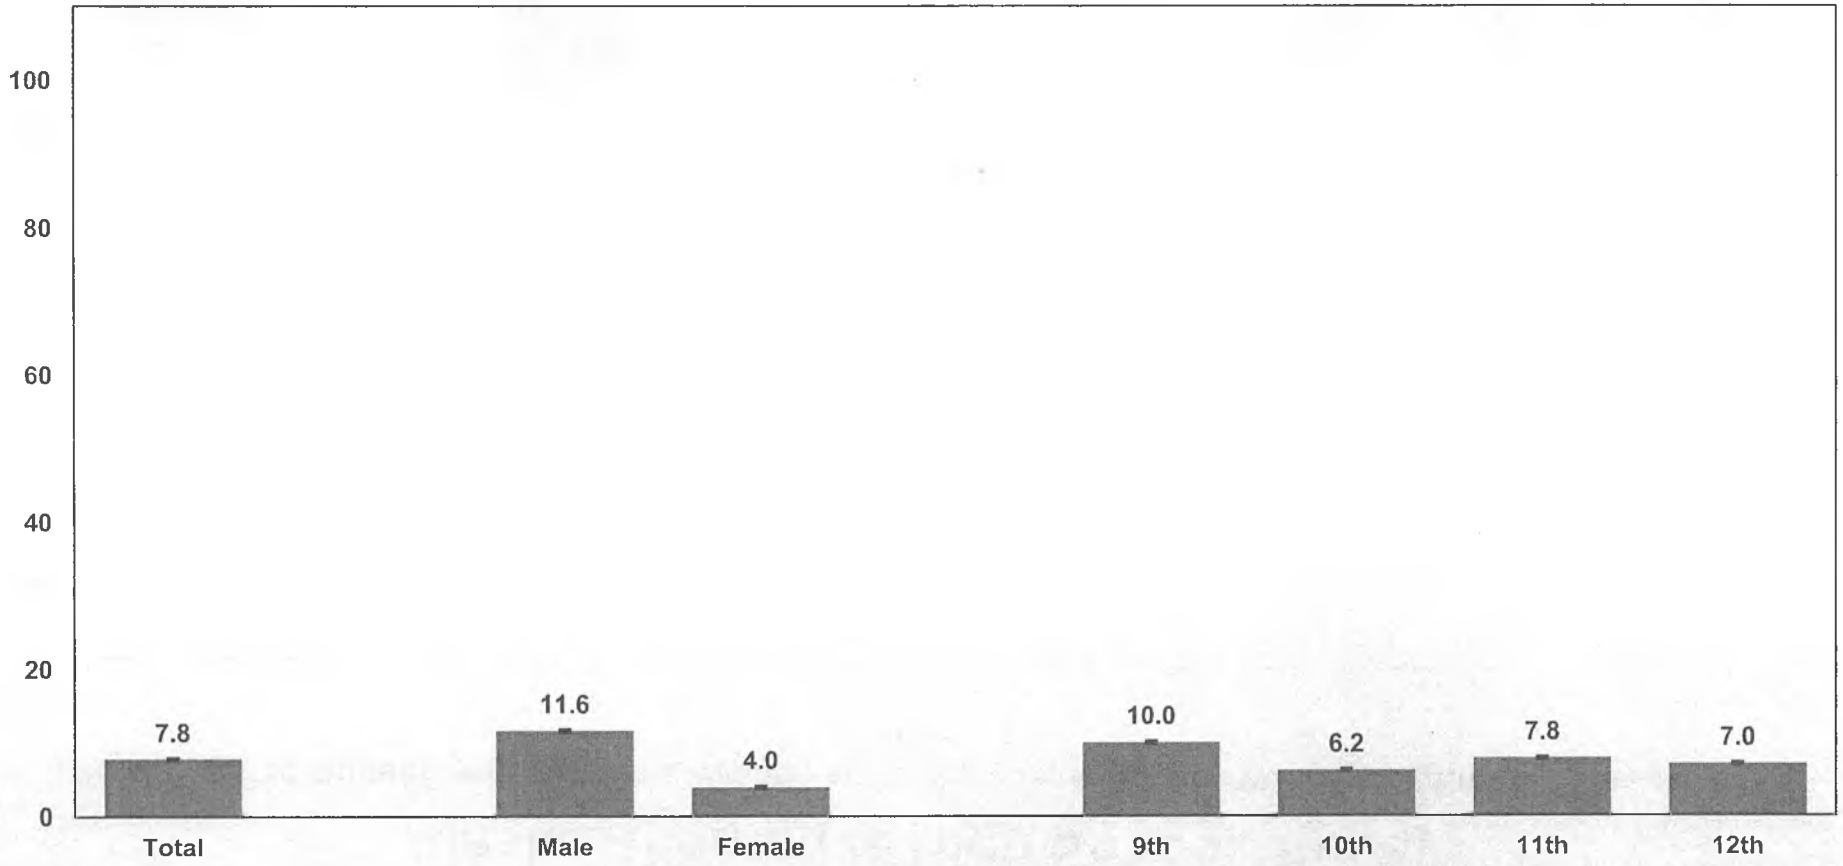
Alaska Alternative High School Survey

Percentage of students who carried a gun on one or more of the past 30 days



Q13 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

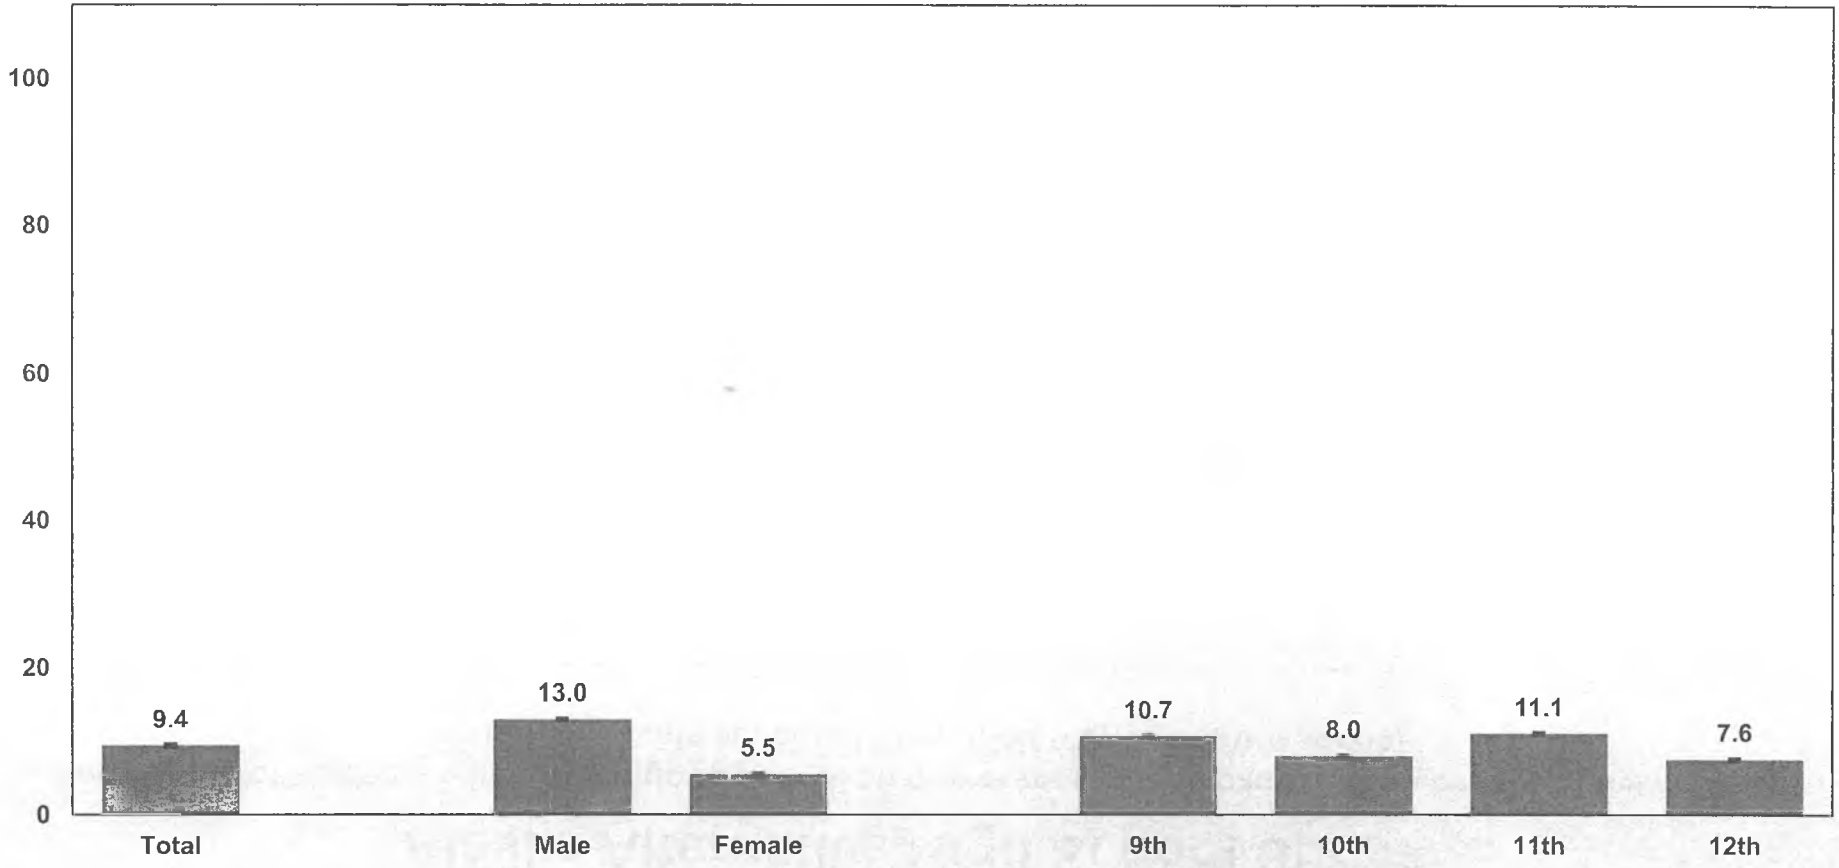
Alaska Alternative High School Survey

Percentage of students who carried a weapon such as a gun, knife, or club on school property on one or more of the past 30 days



Q14 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

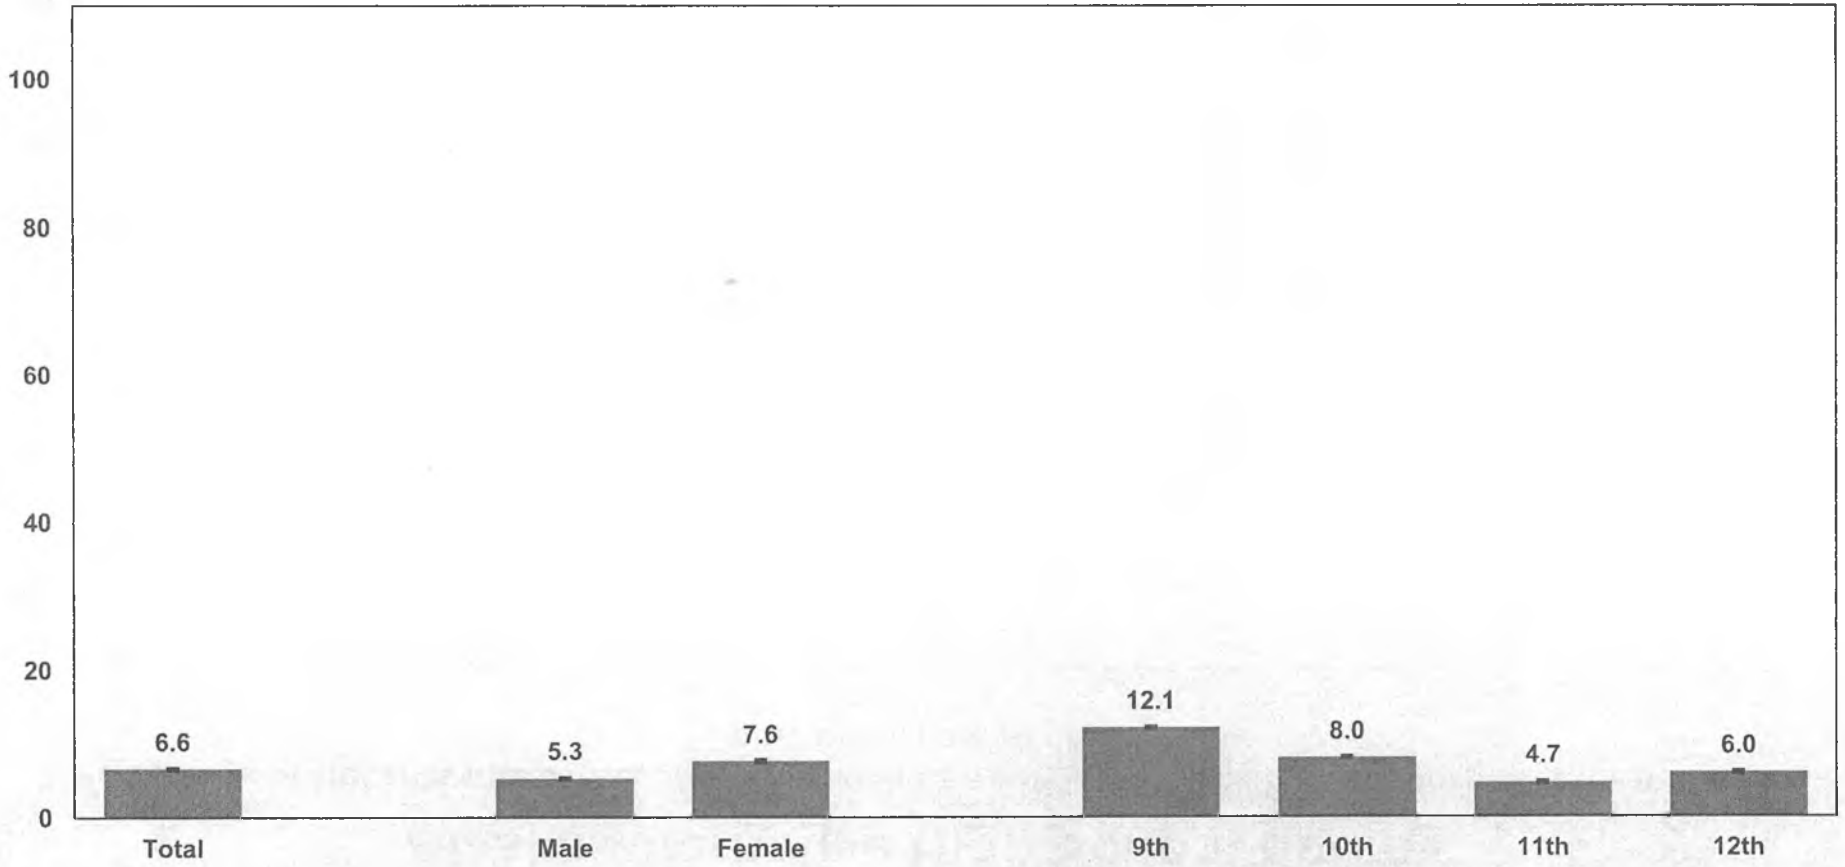
Alaska Alternative High School Survey

Percentage of students who did not go to school on one or more of the past 30 days because they felt they would be unsafe at school or on their way to or from school



Q15 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

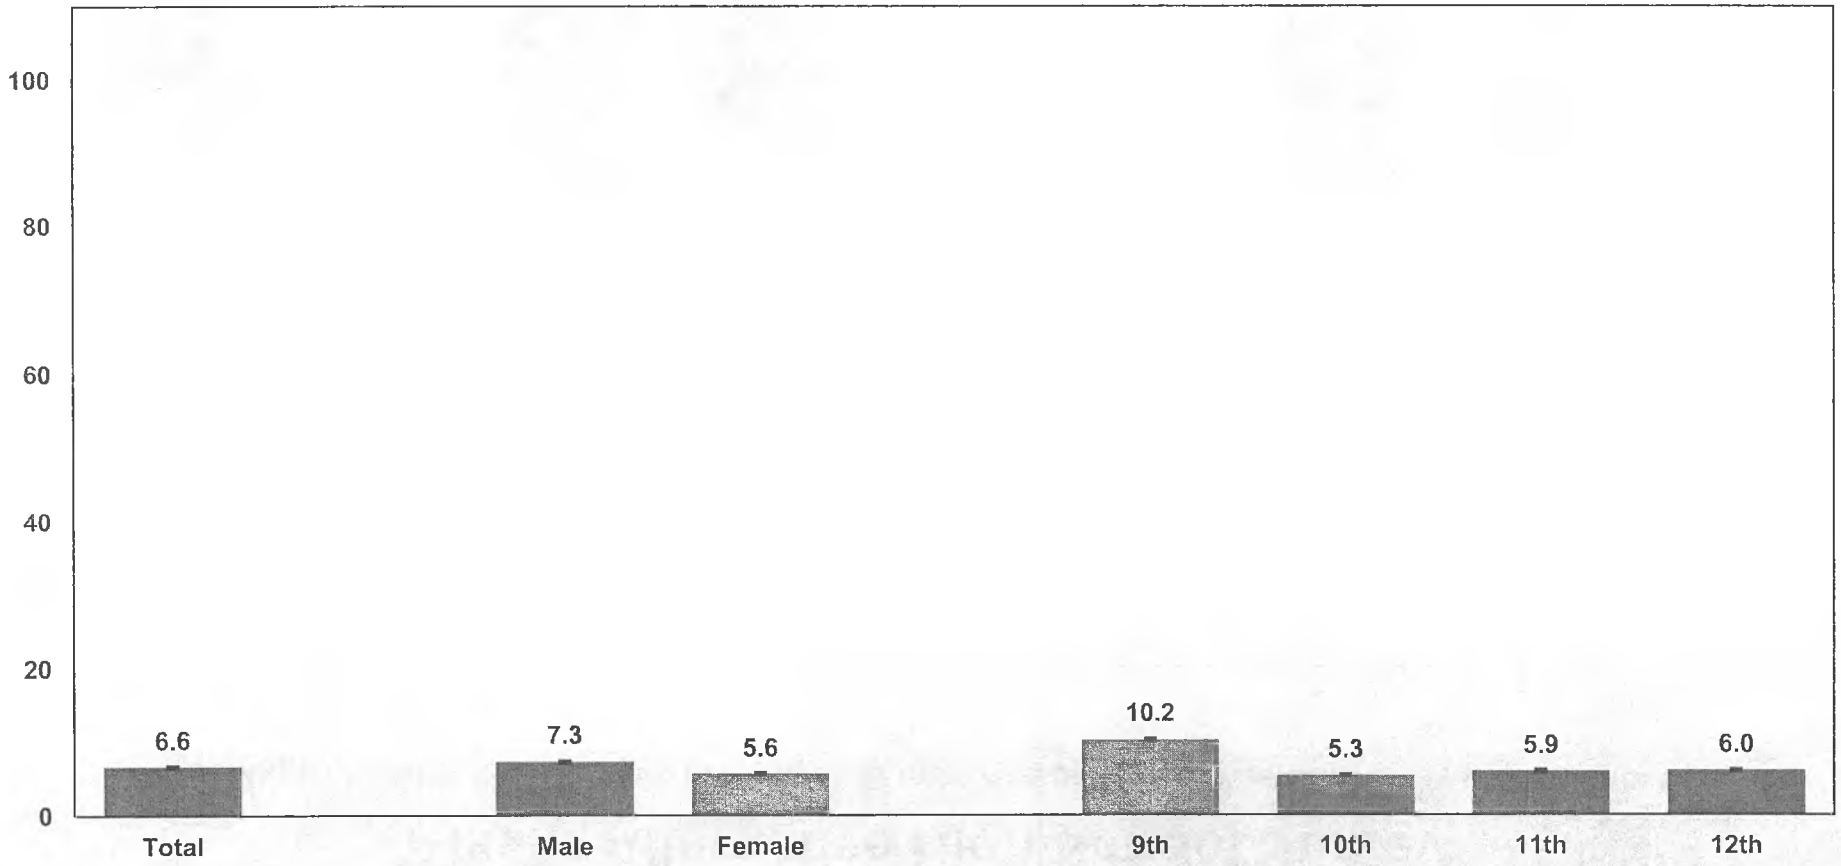
Alaska Alternative High School Survey

Percentage of students who had been threatened or injured with a weapon such as a gun, knife, or club on school property one or more times during the past 12 months



Q16 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

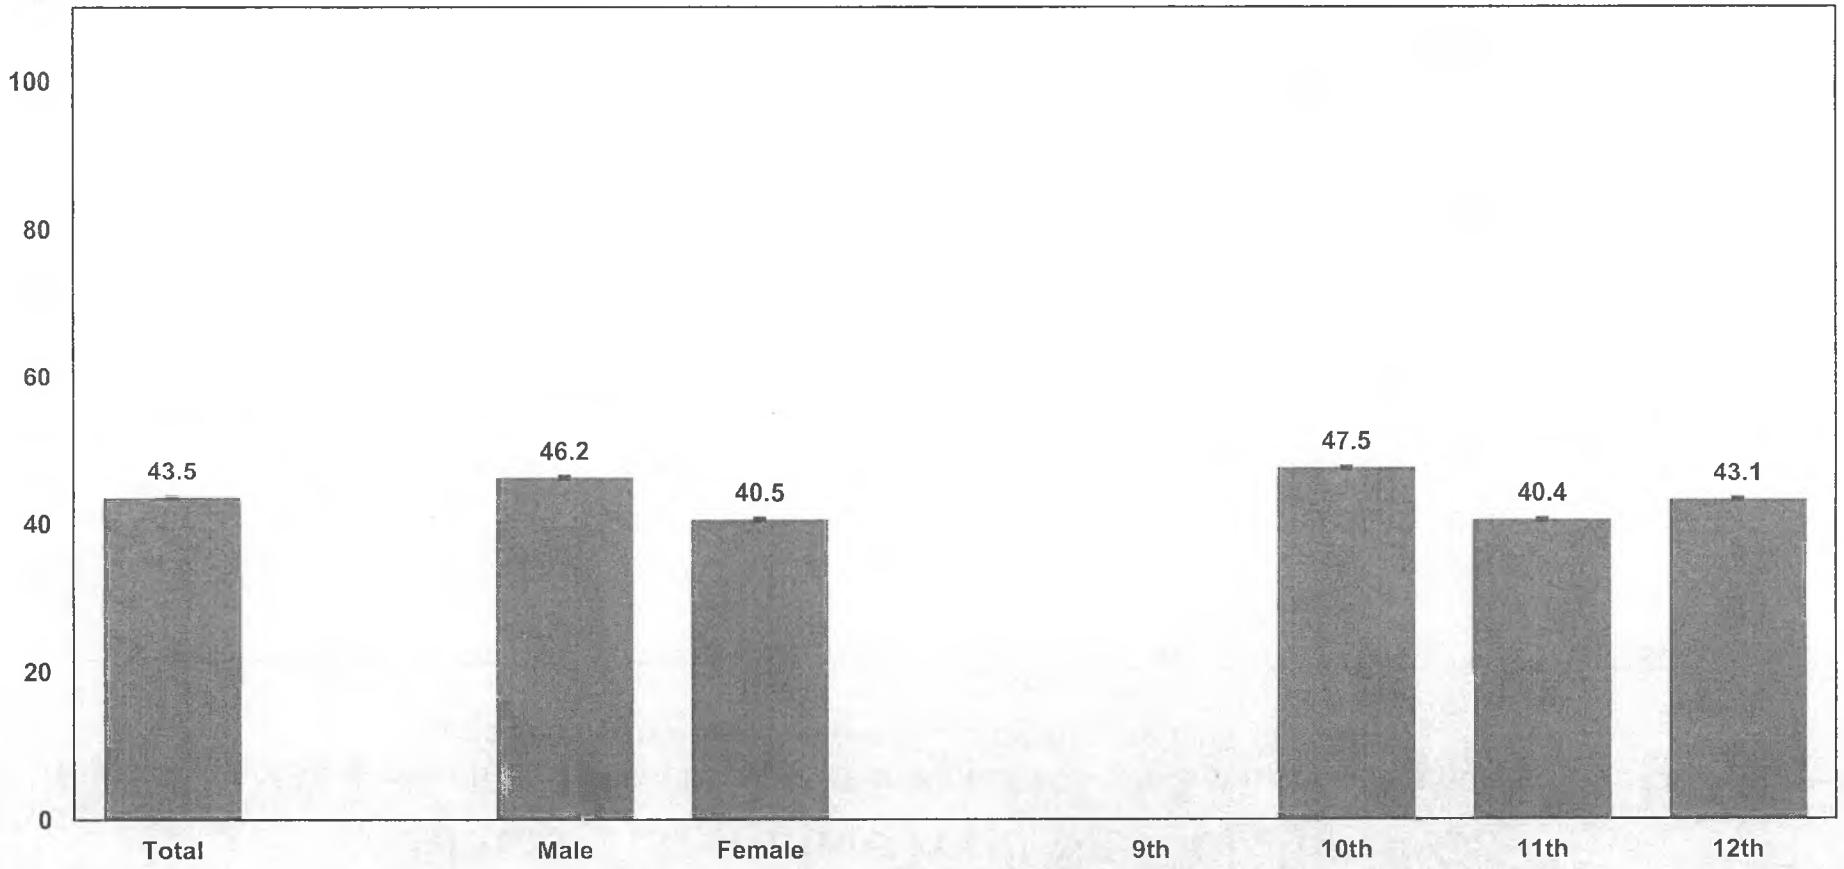
Alaska Alternative High School Survey

Percentage of students who were in a physical fight one or more times during the past 12 months



Q17 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

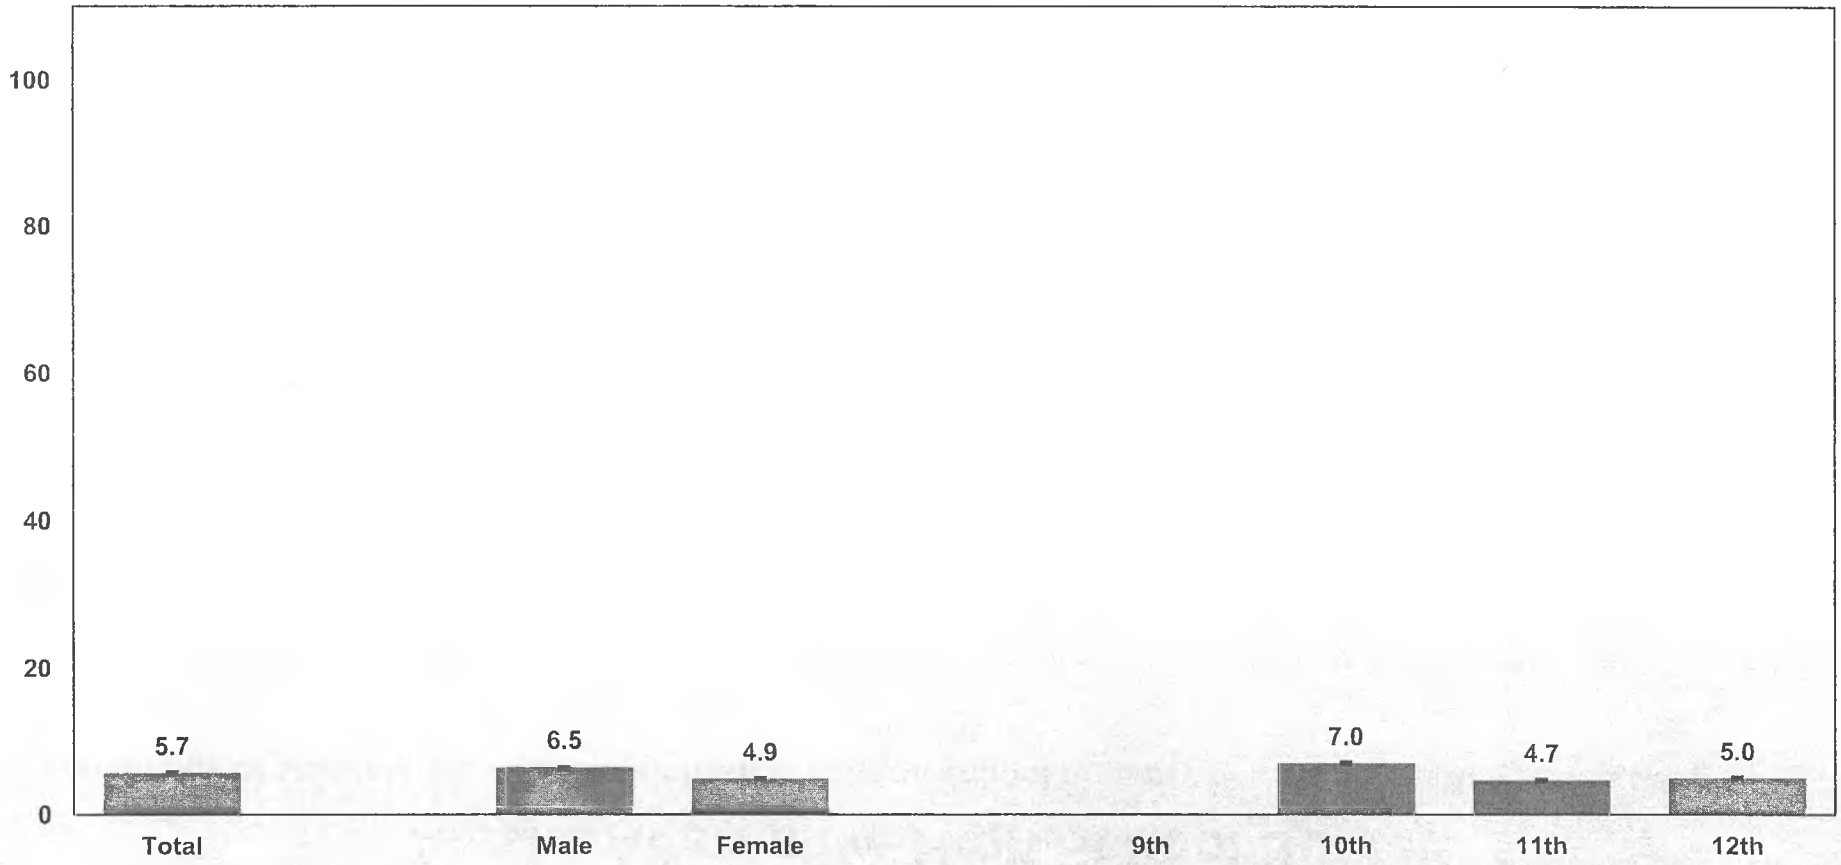
Alaska Alternative High School Survey

Percentage of students who were in a physical fight one or more times during the past 12 months in which they were injured and had to be treated by a doctor or nurse



Q18 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

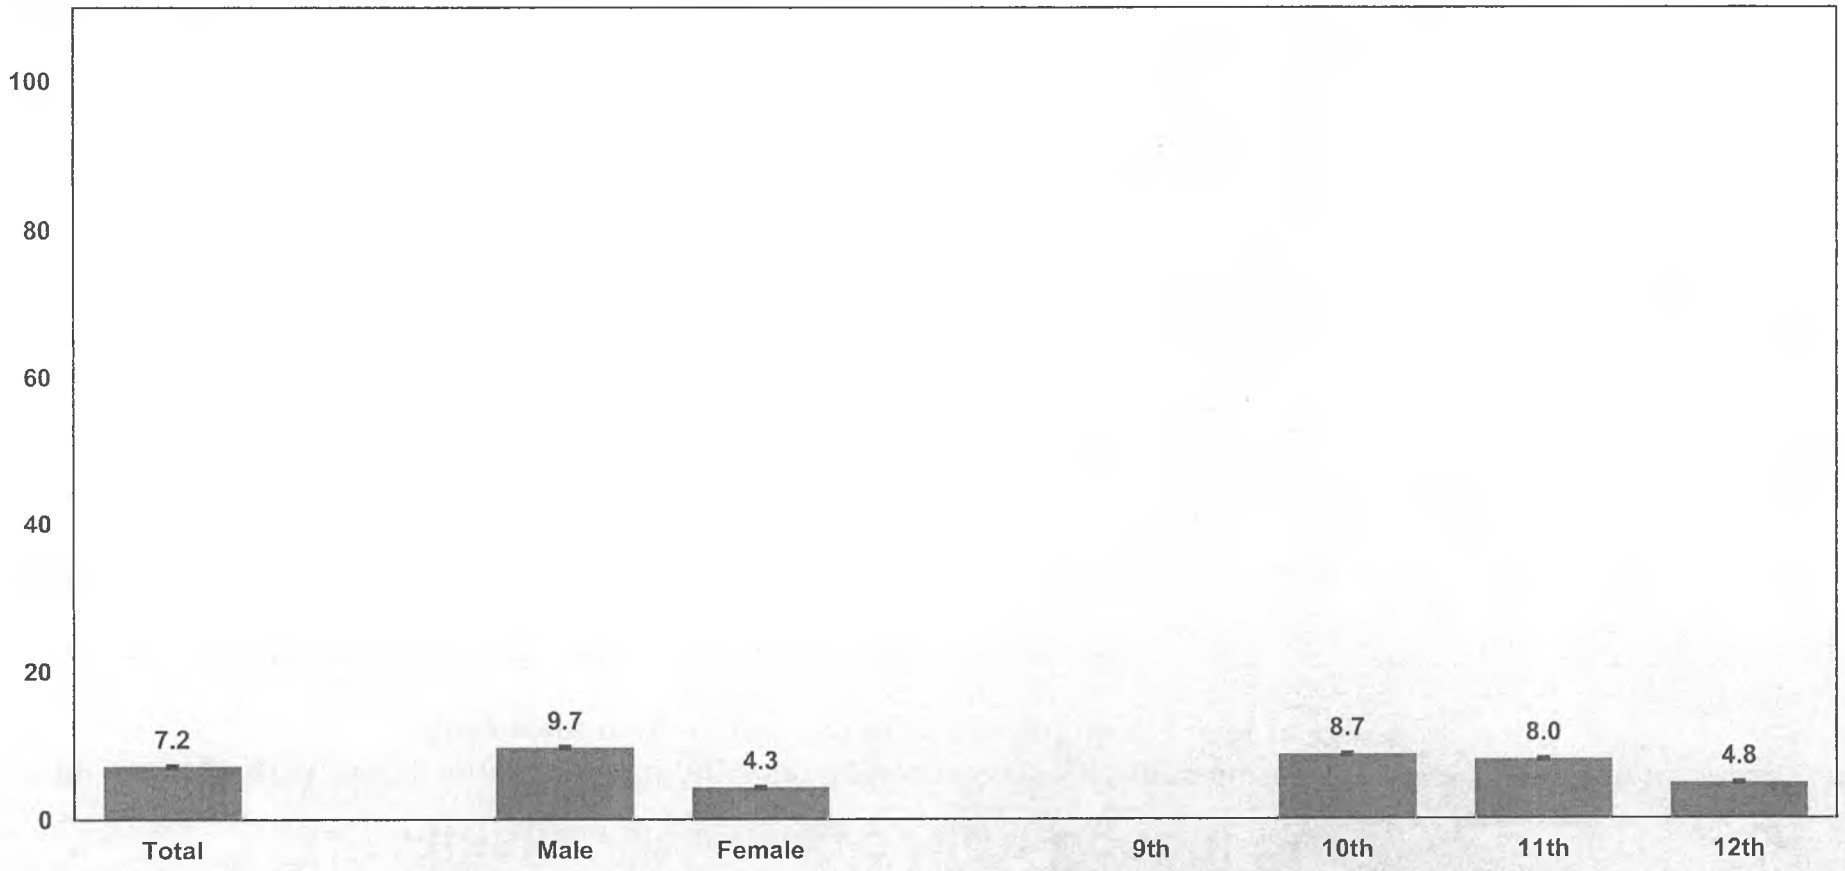
Alaska Alternative High School Survey

Percentage of students who were in a physical fight on school property one or more times during the past 12 months



Q19 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

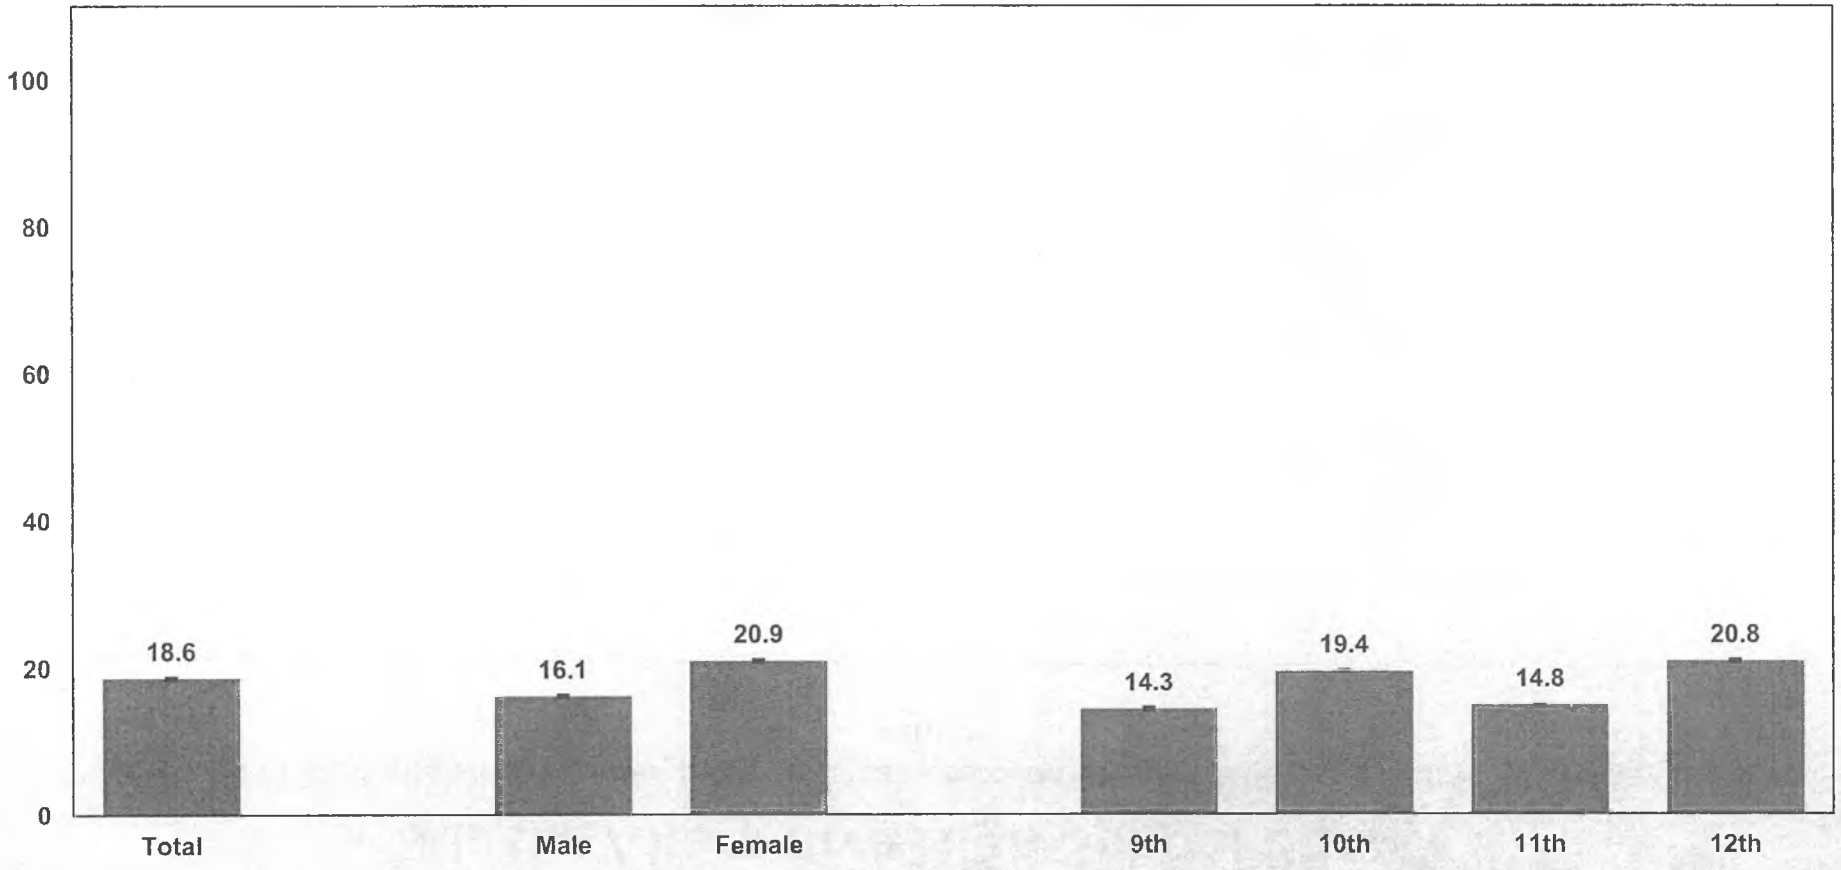
Alaska Alternative High School Survey

Percentage of students who were ever hit, slapped, or physically hurt on purpose by their boyfriend or girlfriend during the past 12 months



Q20 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

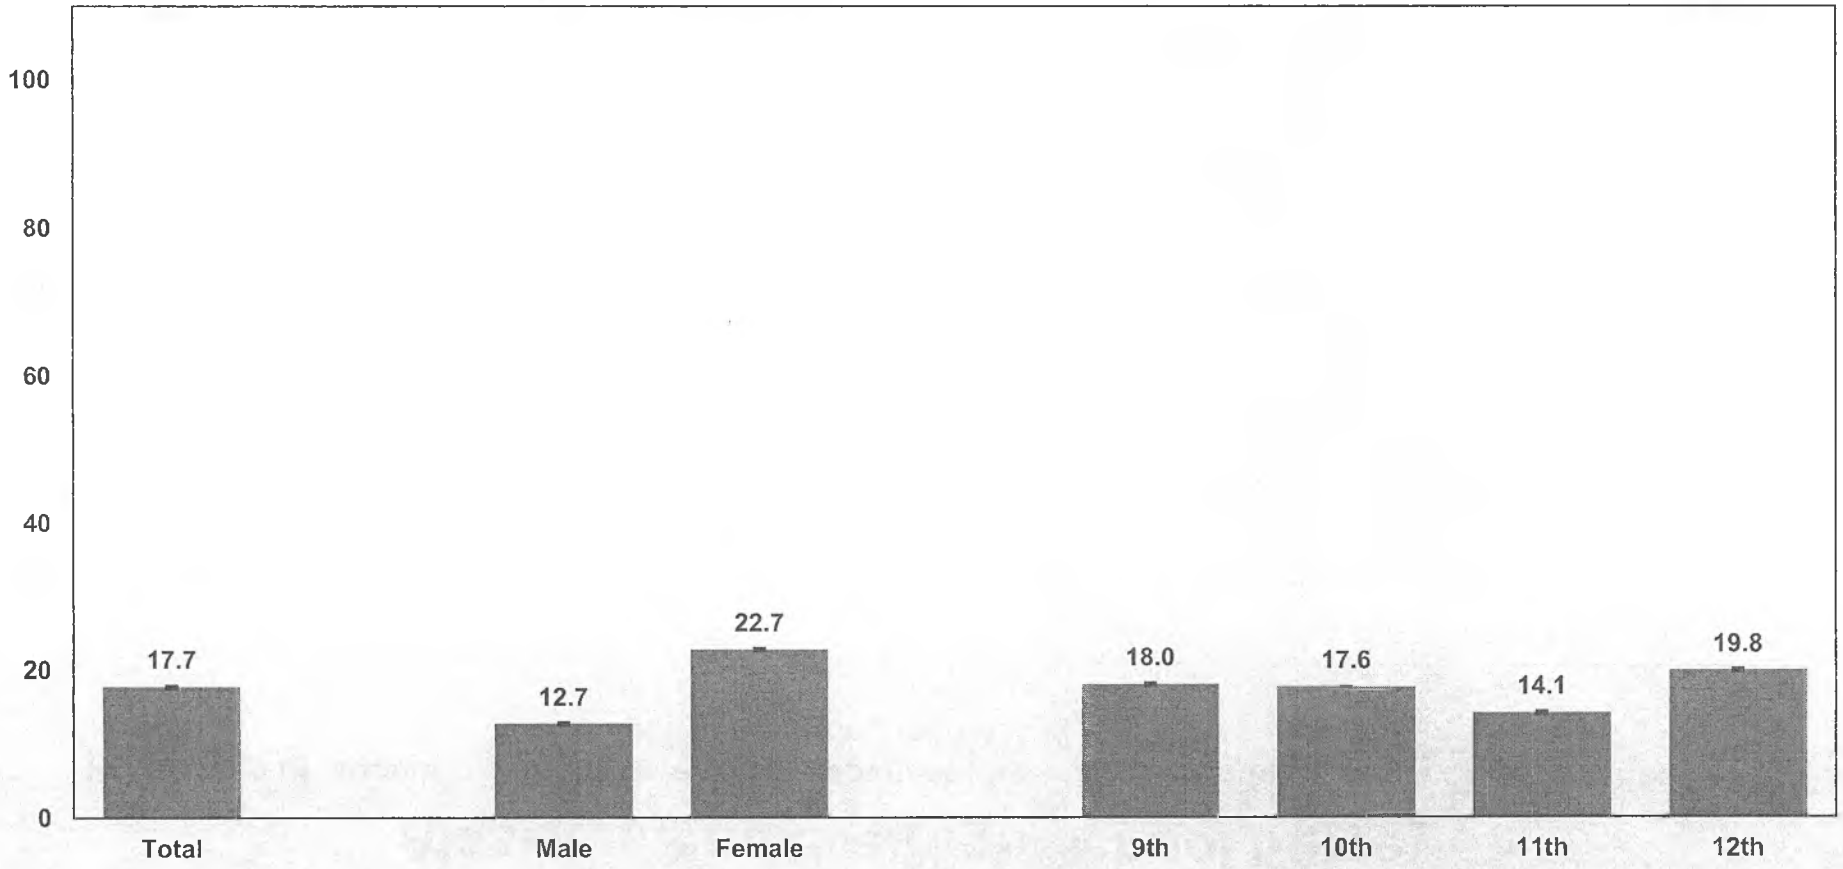
Alaska Alternative High School Survey

Percentage of students who had ever been physically forced to have sexual intercourse when they did not want to



Q21 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

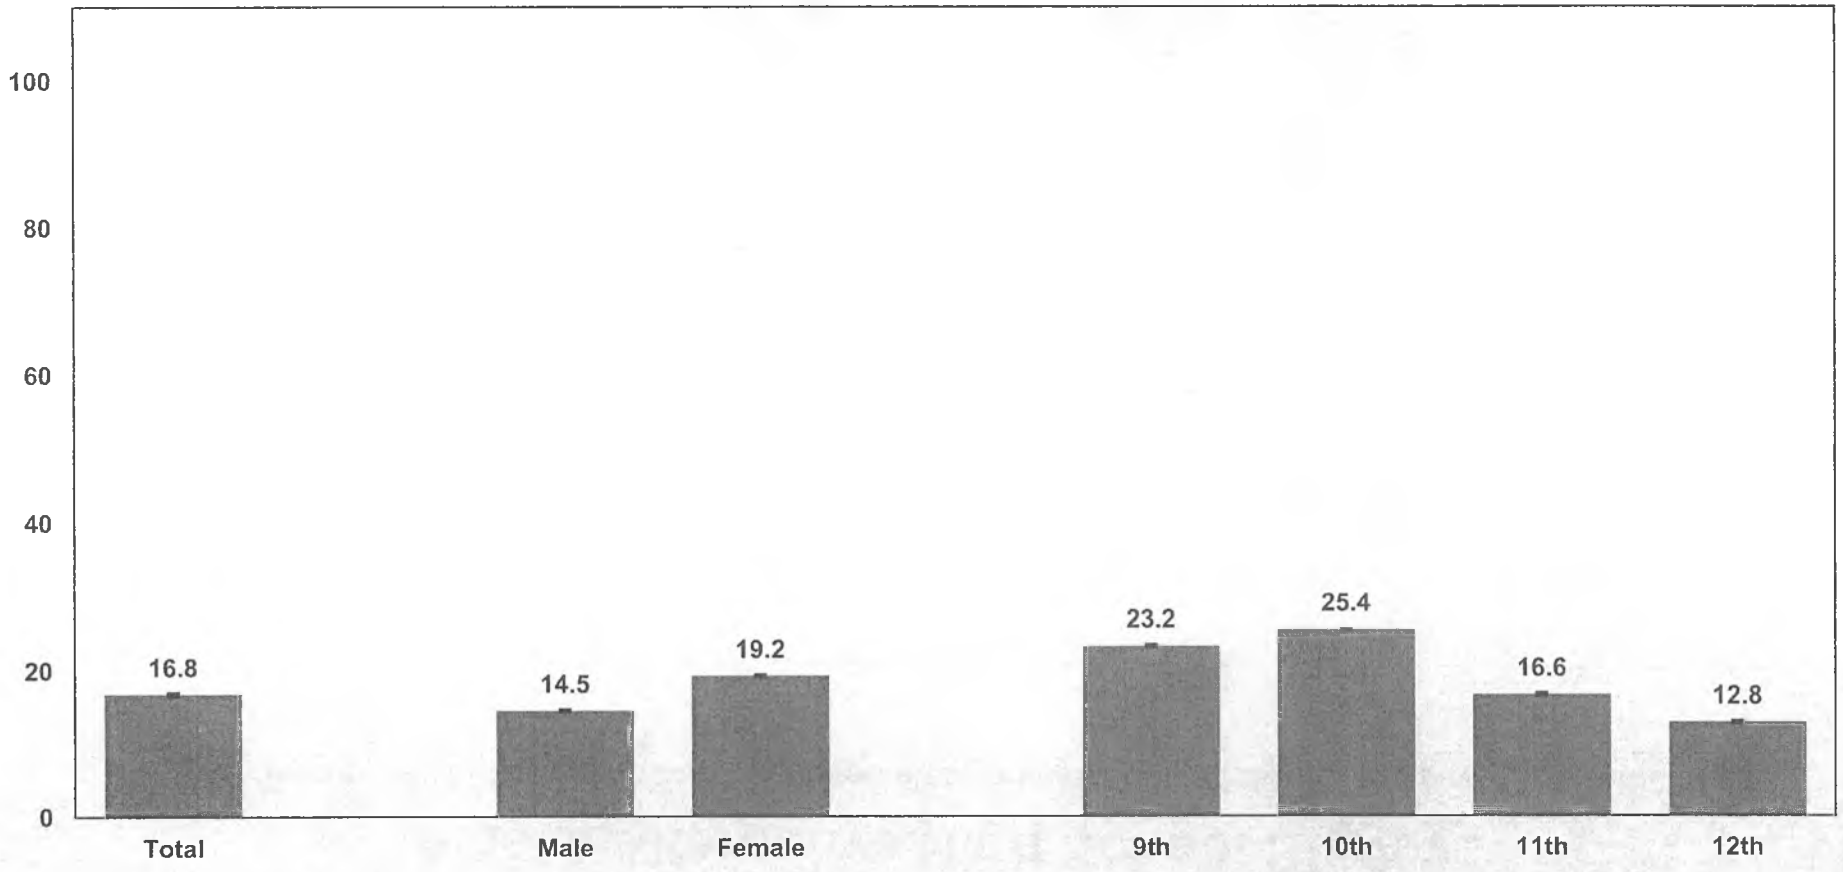
Alaska Alternative High School Survey

Percentage of students who had ever been bullied on school property during the past 12 months



Q22 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

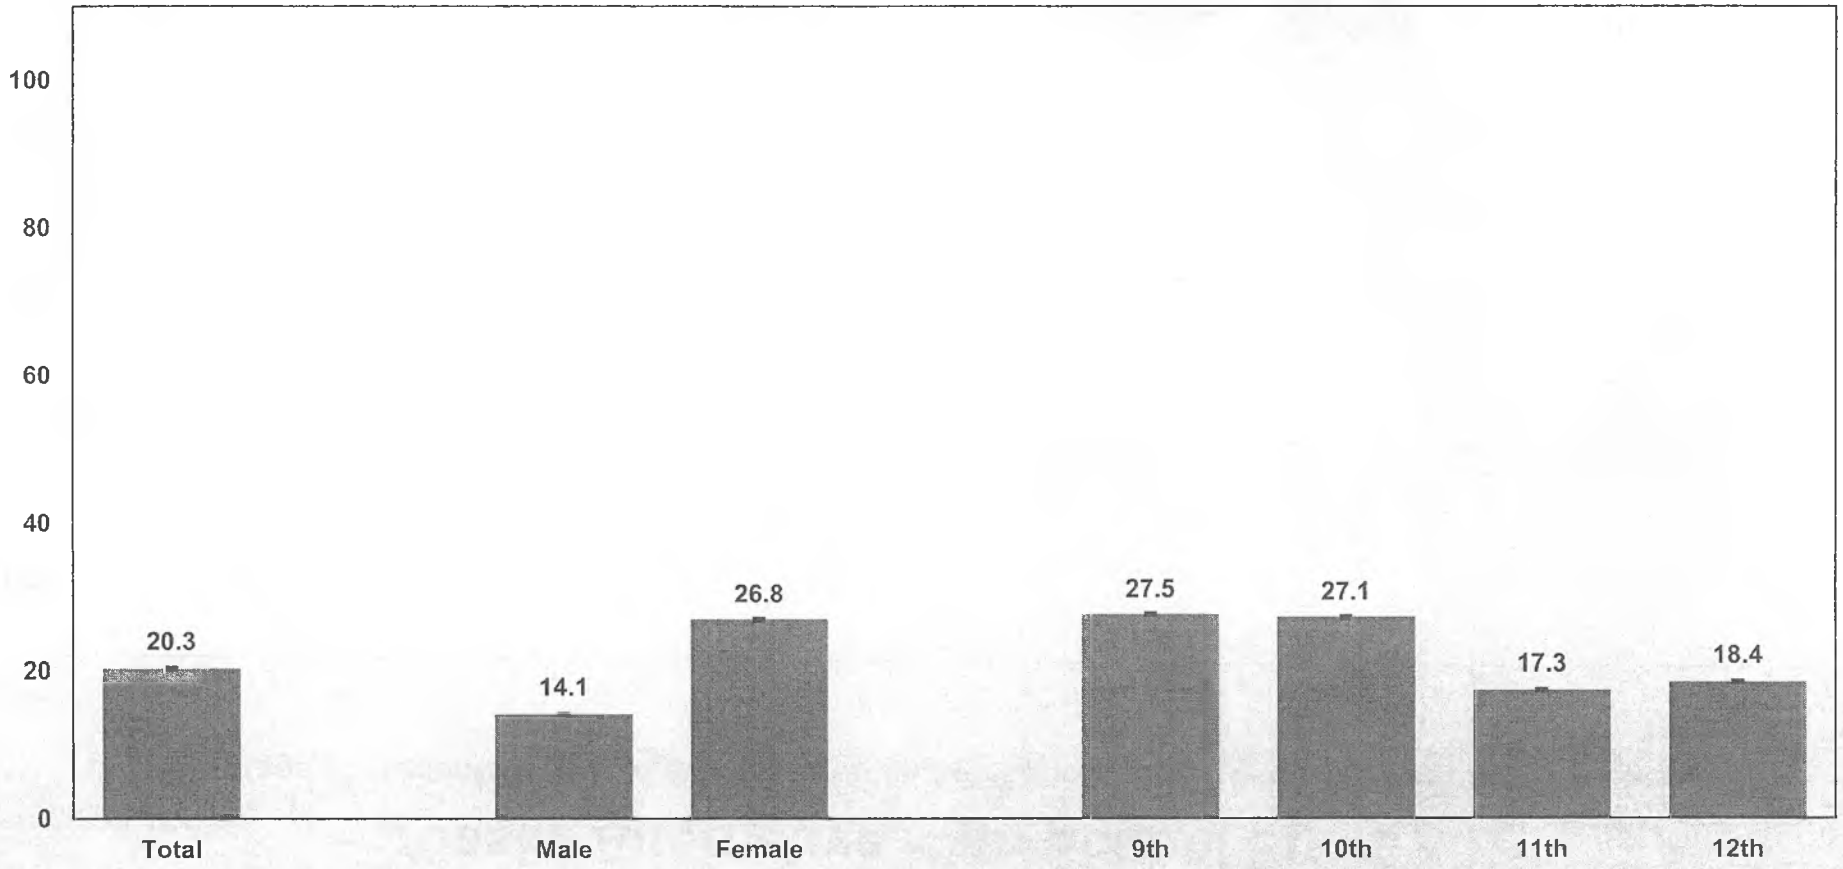
Alaska Alternative High School Survey

Percentage of students who had ever been electronically bullied during the past 12 months



Q23 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

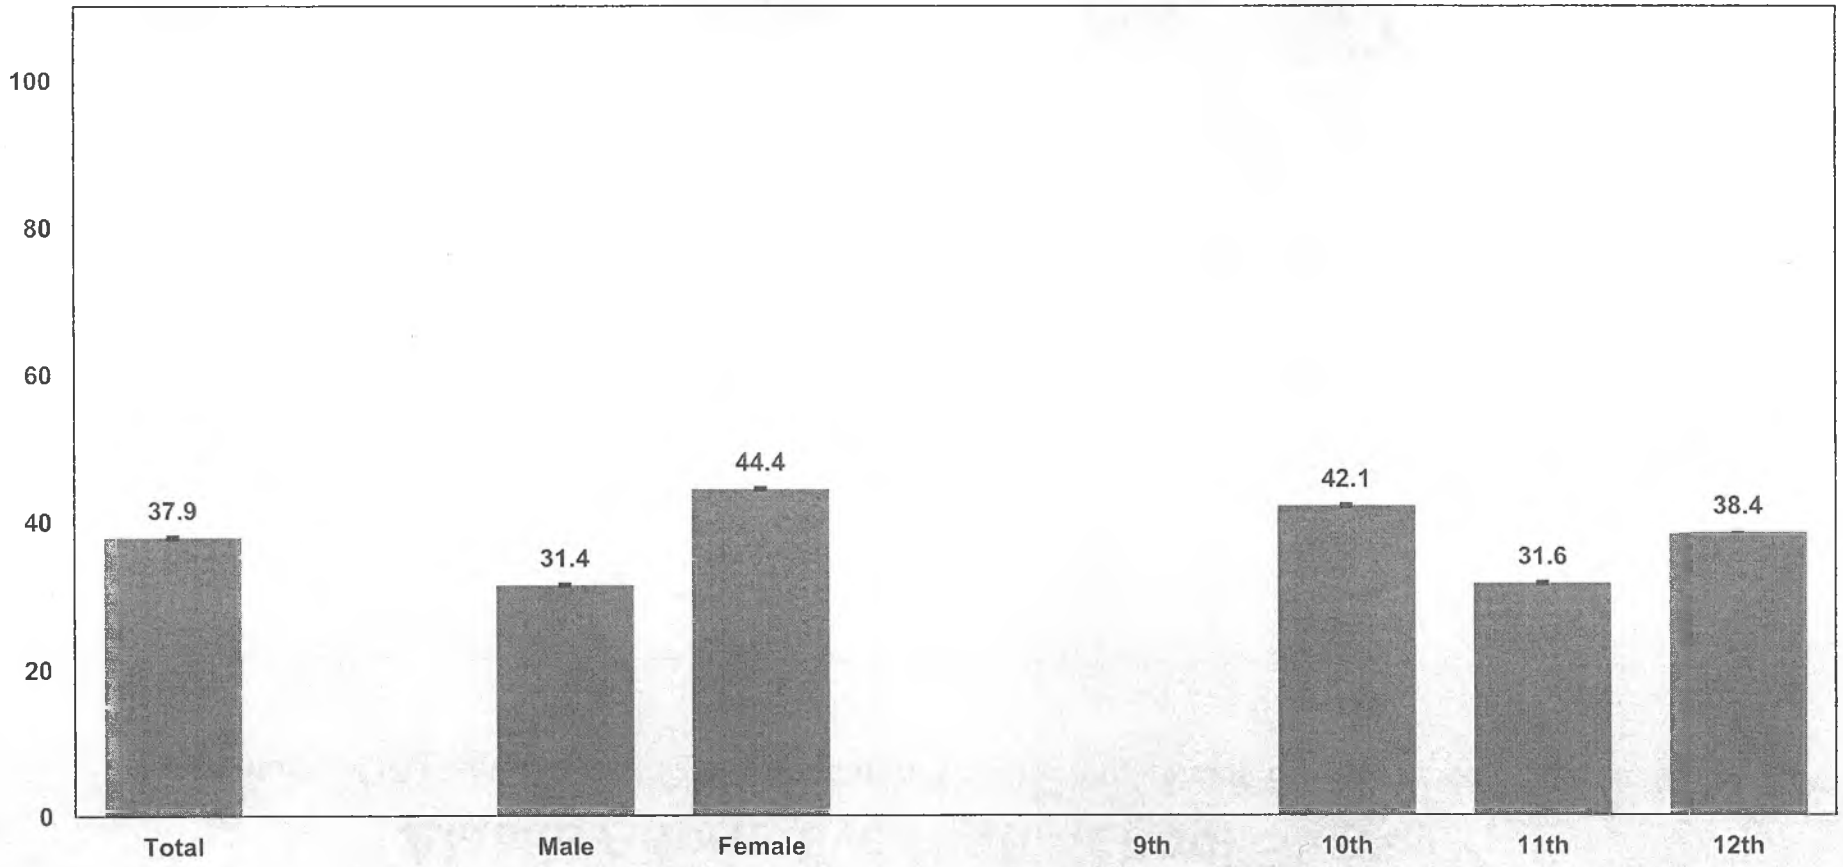
Alaska Alternative High School Survey

Percentage of students who felt so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities during the past 12 months



Q24 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

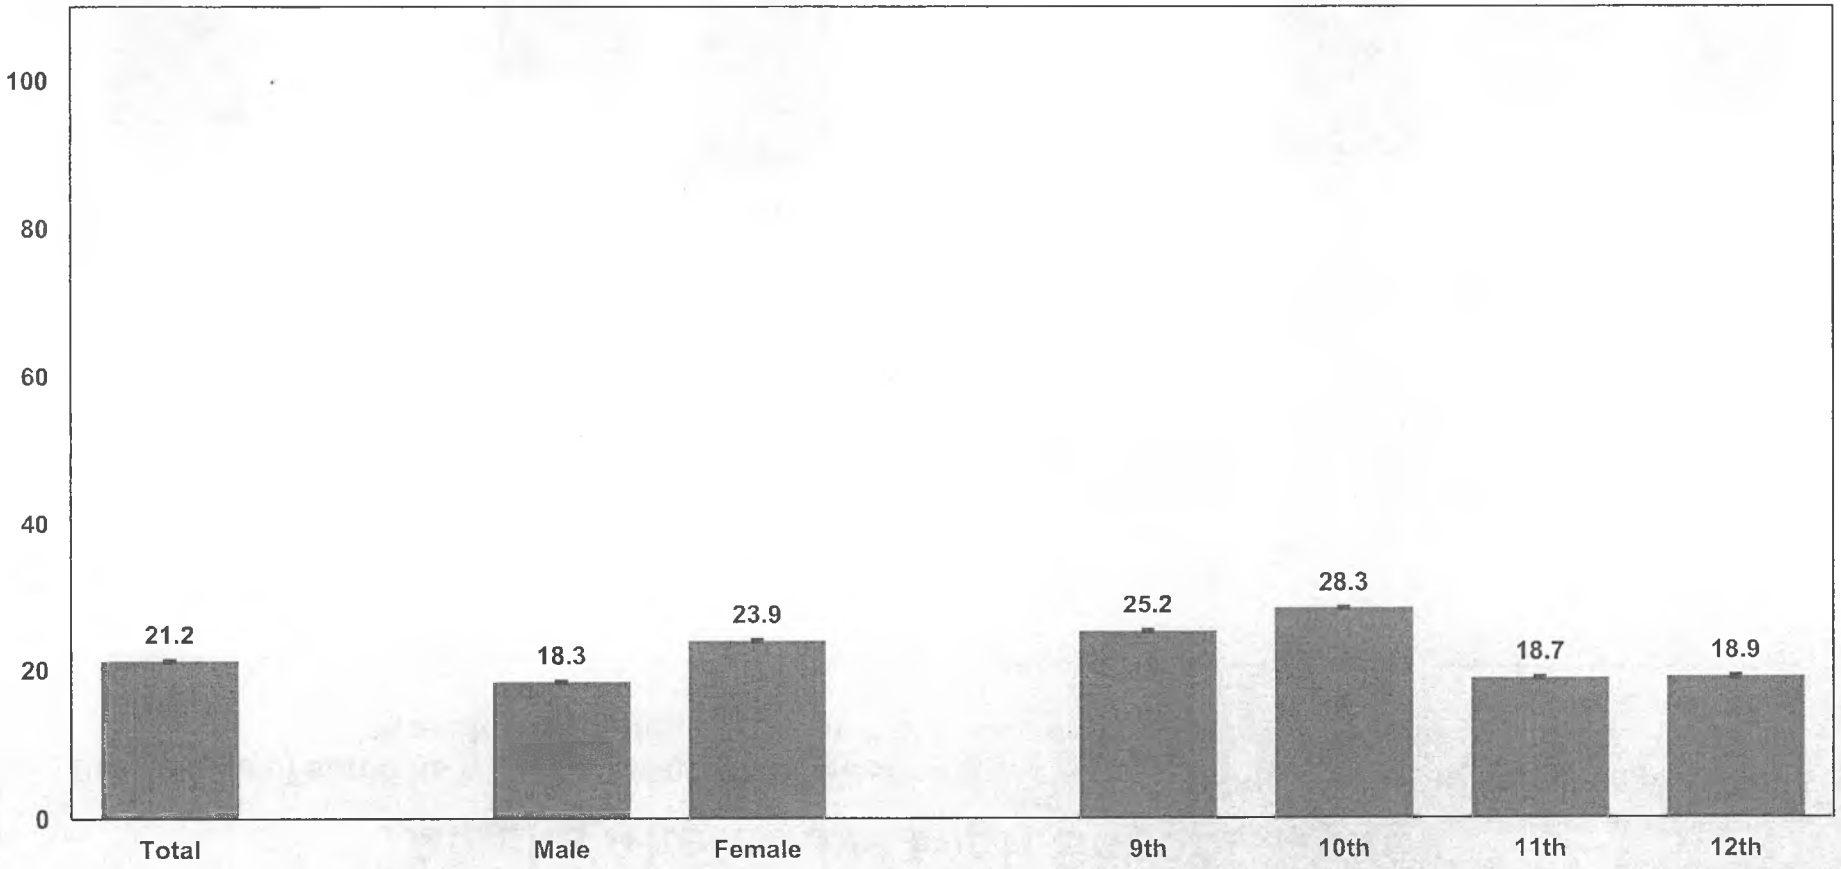
Alaska Alternative High School Survey

Percentage of students who seriously considered attempting suicide during the past 12 months



Q25 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

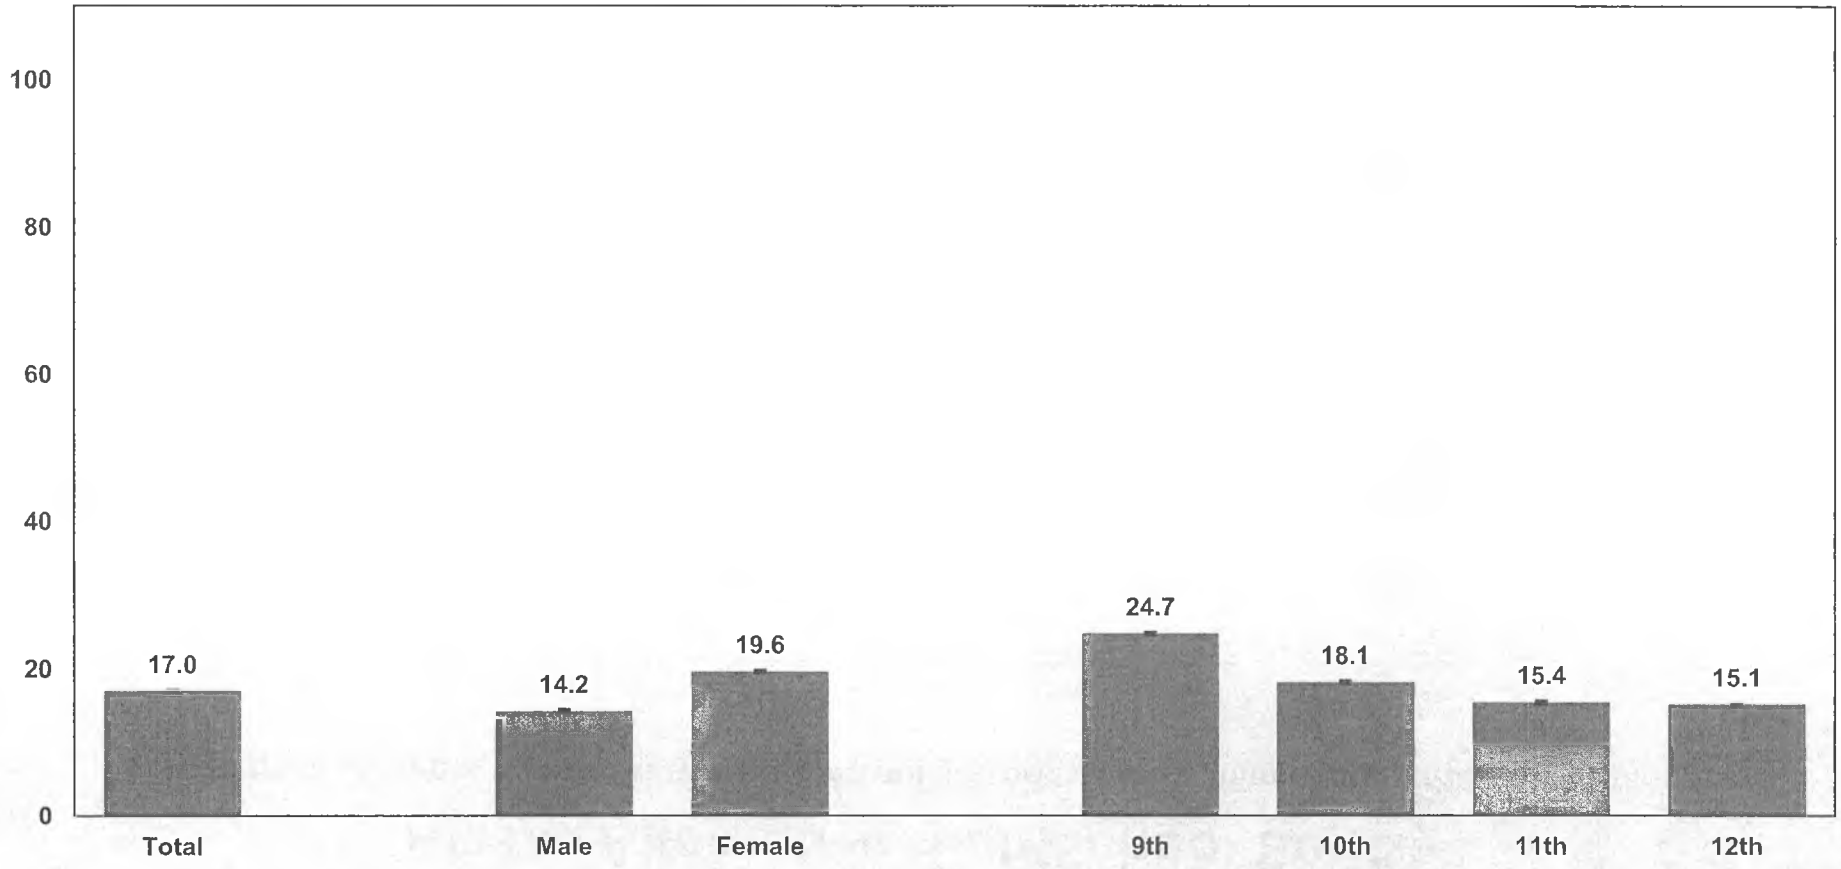
Alaska Alternative High School Survey

Percentage of students who made a plan about how they would attempt suicide during the past 12 months



Q26 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

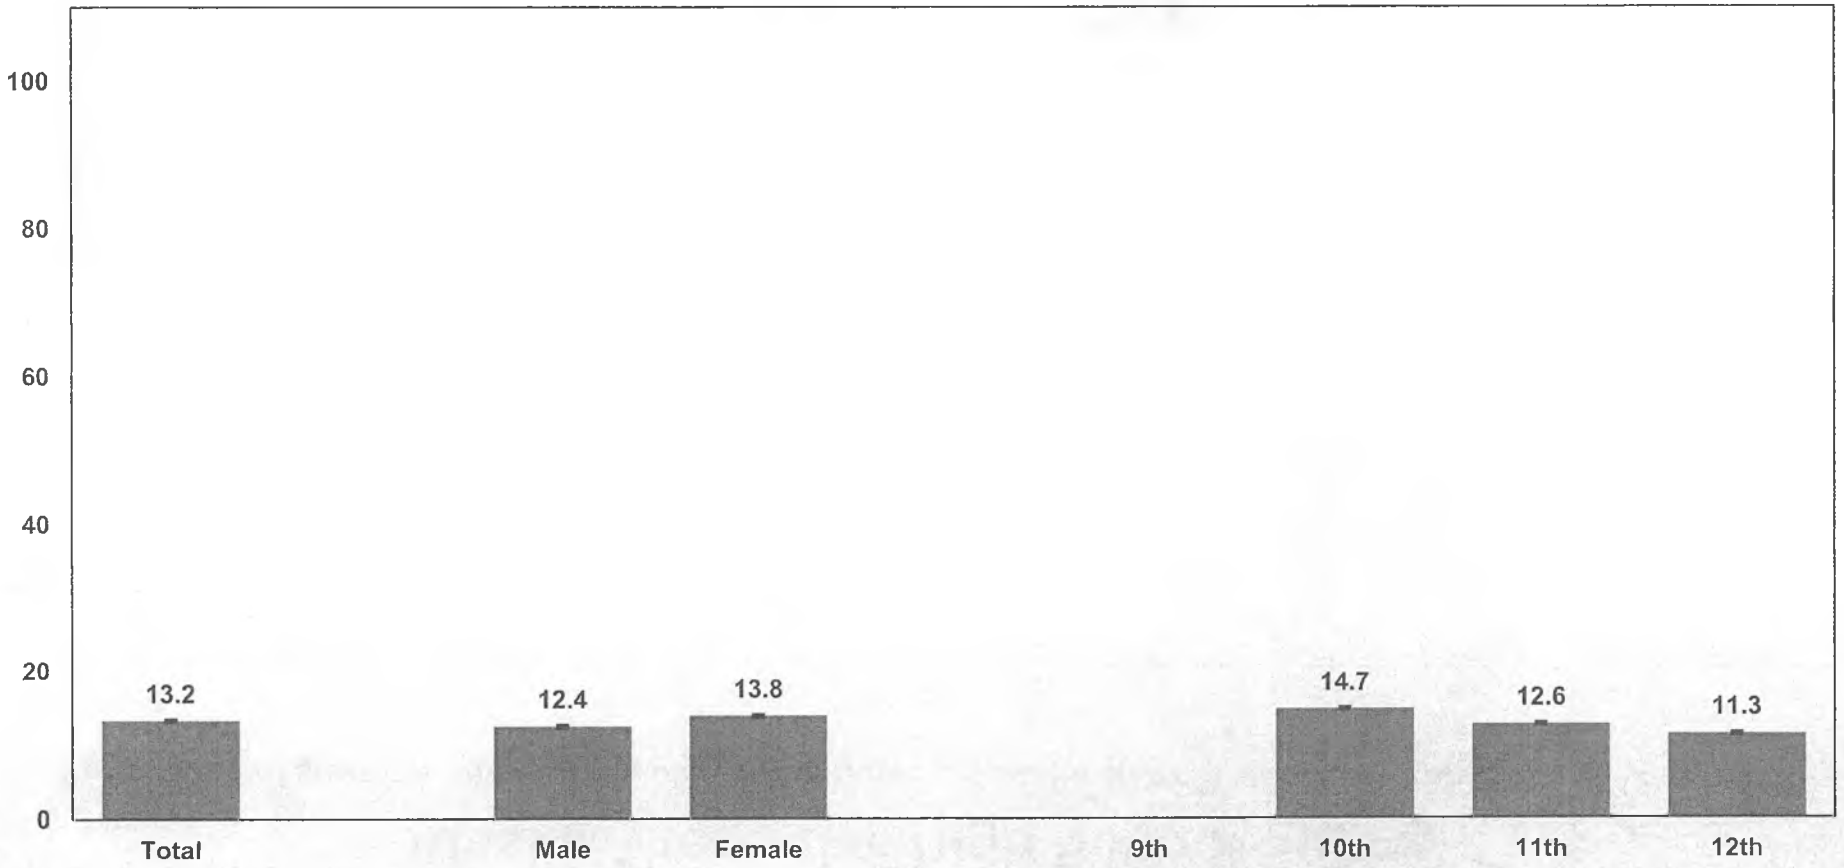
Alaska Alternative High School Survey

Percentage of students who actually attempted suicide one or more times during the past 12 months



Q27 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

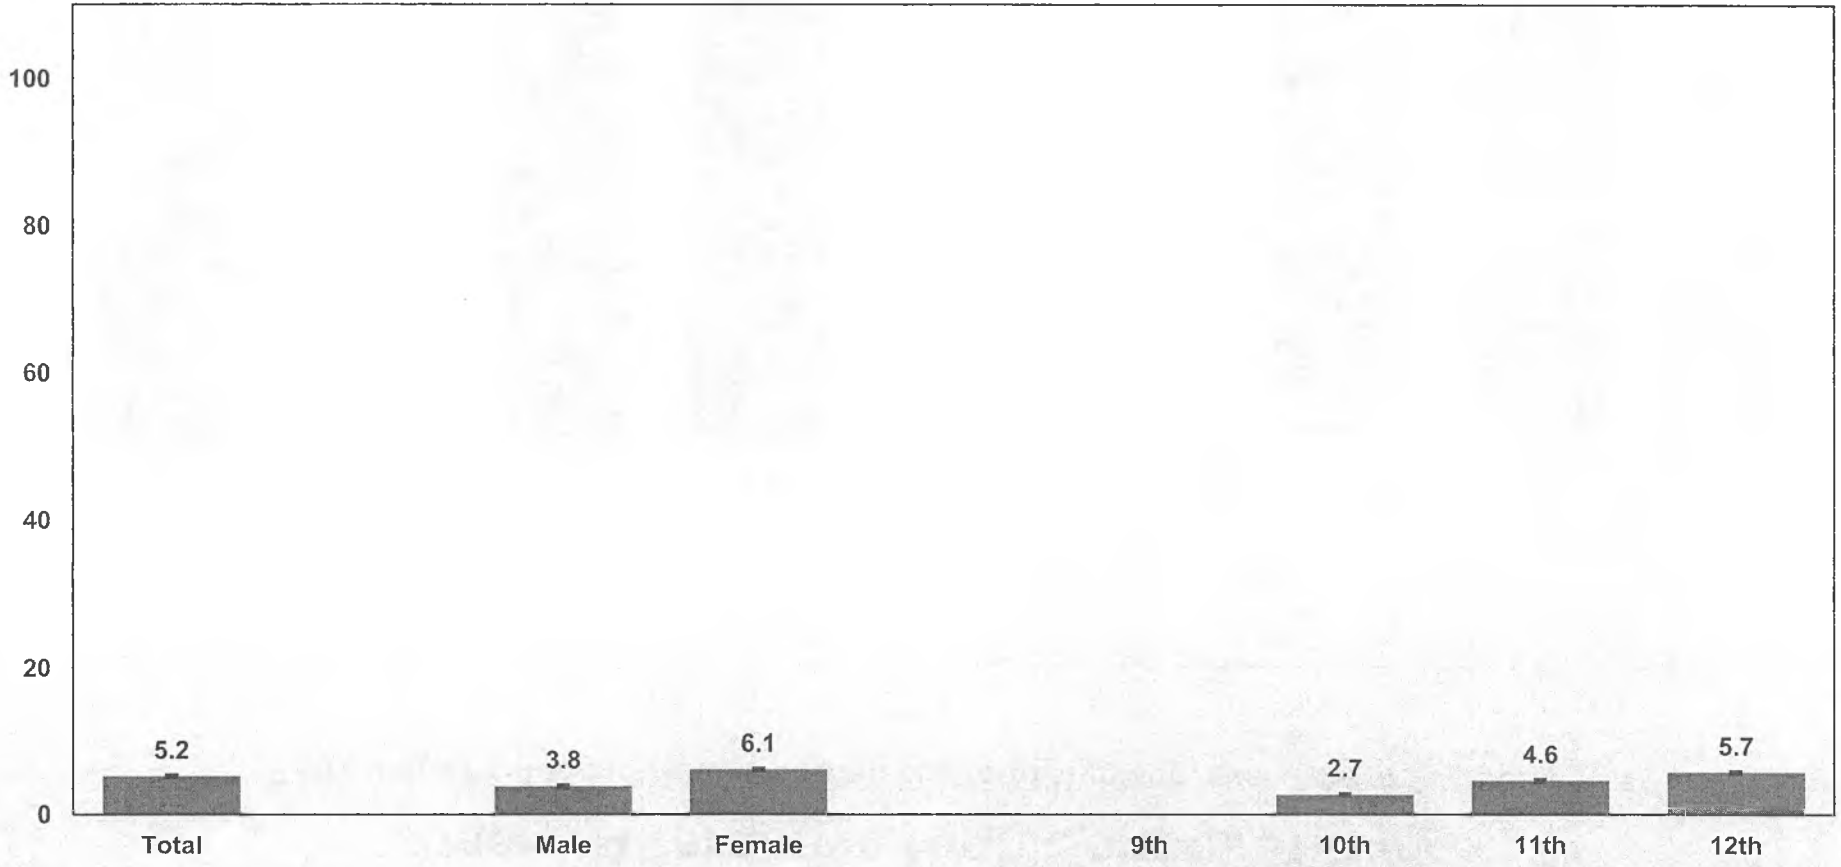
Alaska Alternative High School Survey

Percentage of students who made a suicide attempt during the past 12 months that resulted in an injury, poisoning, or overdose that had to be treated by a doctor or nurse



Q28 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

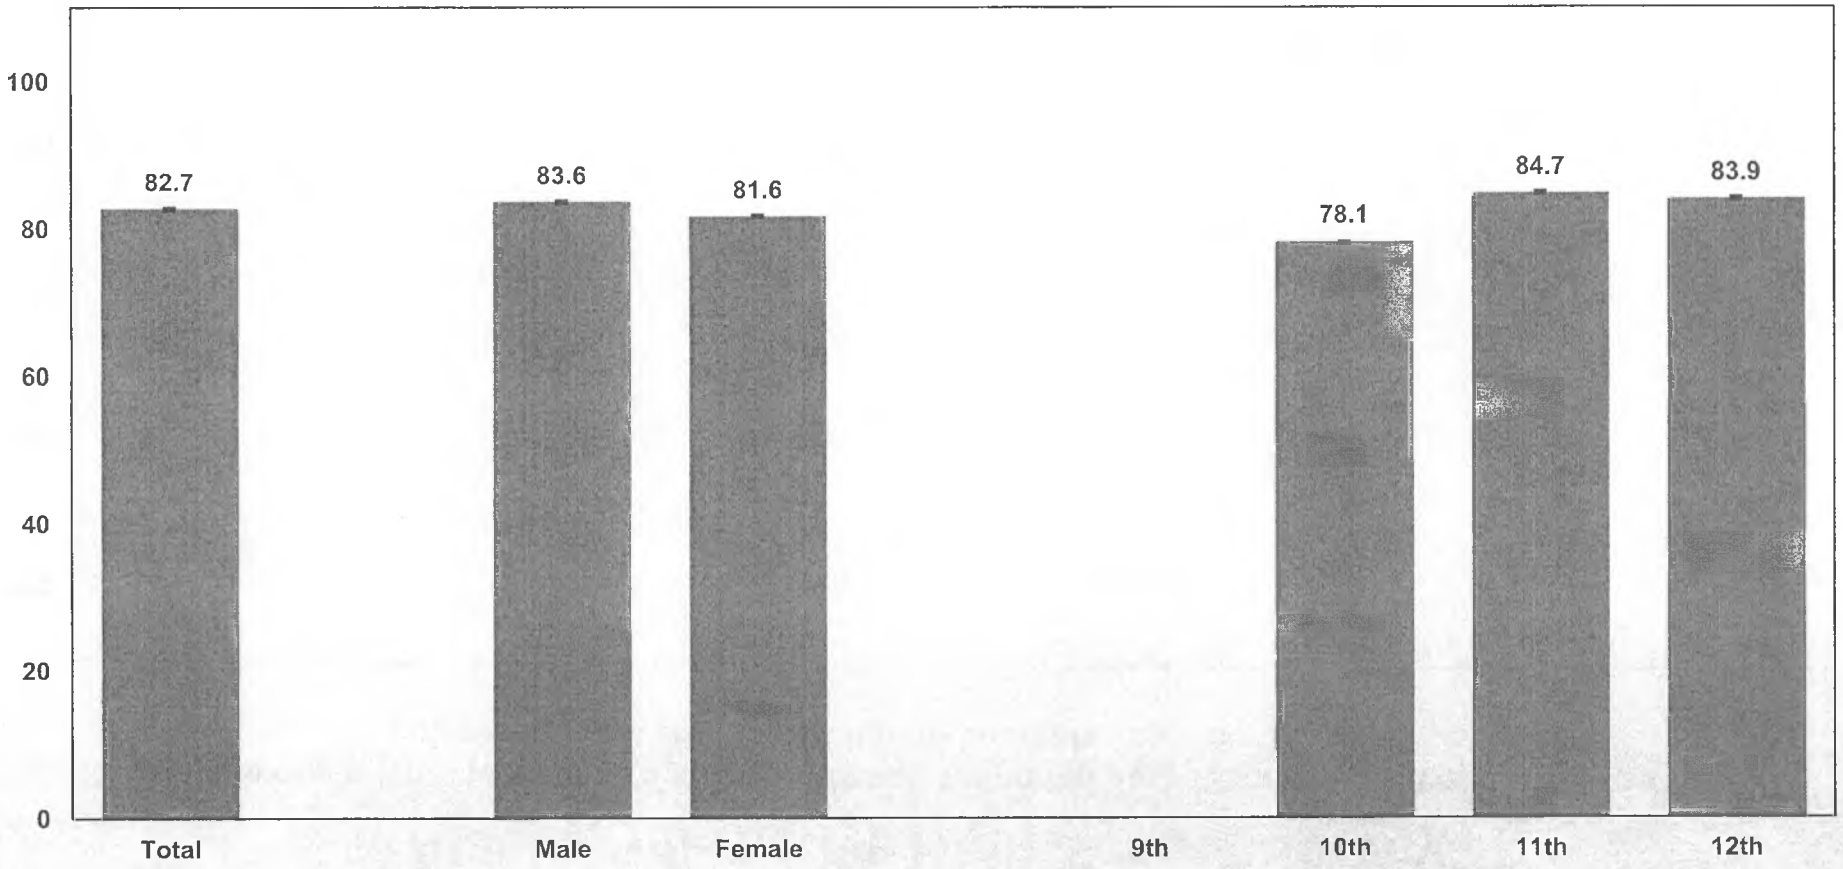
Alaska Alternative High School Survey

Percentage of students who ever tried cigarette smoking, even one or two puffs



Q29 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

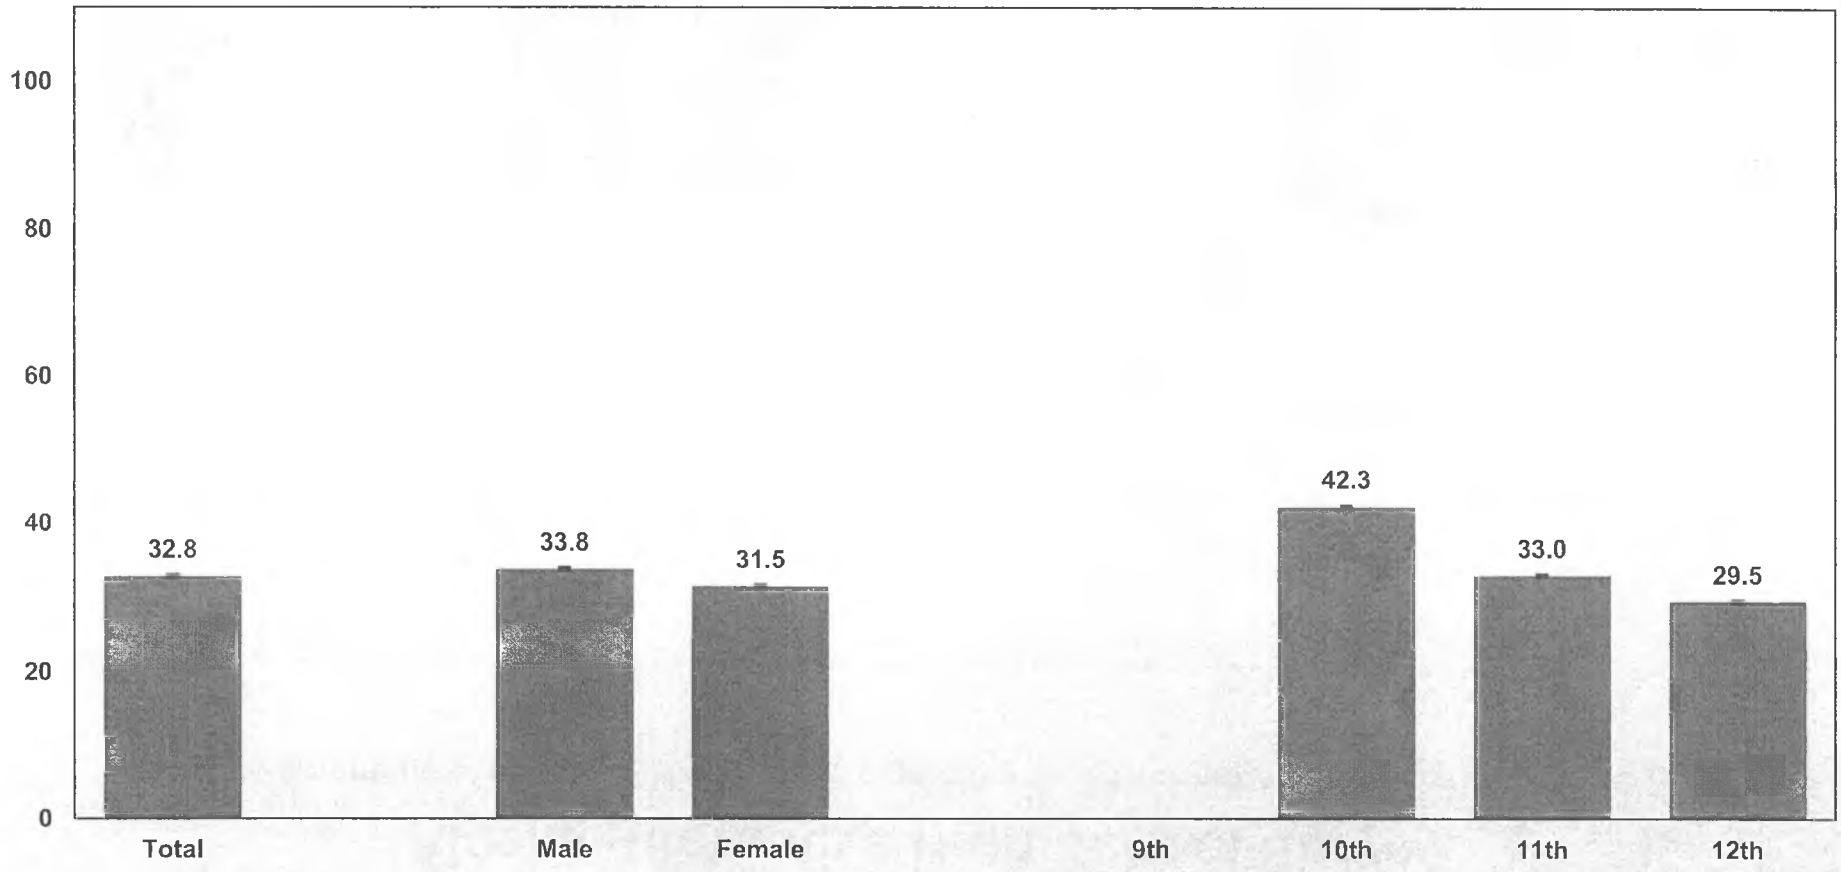
Alaska Alternative High School Survey

Percentage of students who smoked a whole cigarette for the first time before age 13 years



Q30 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

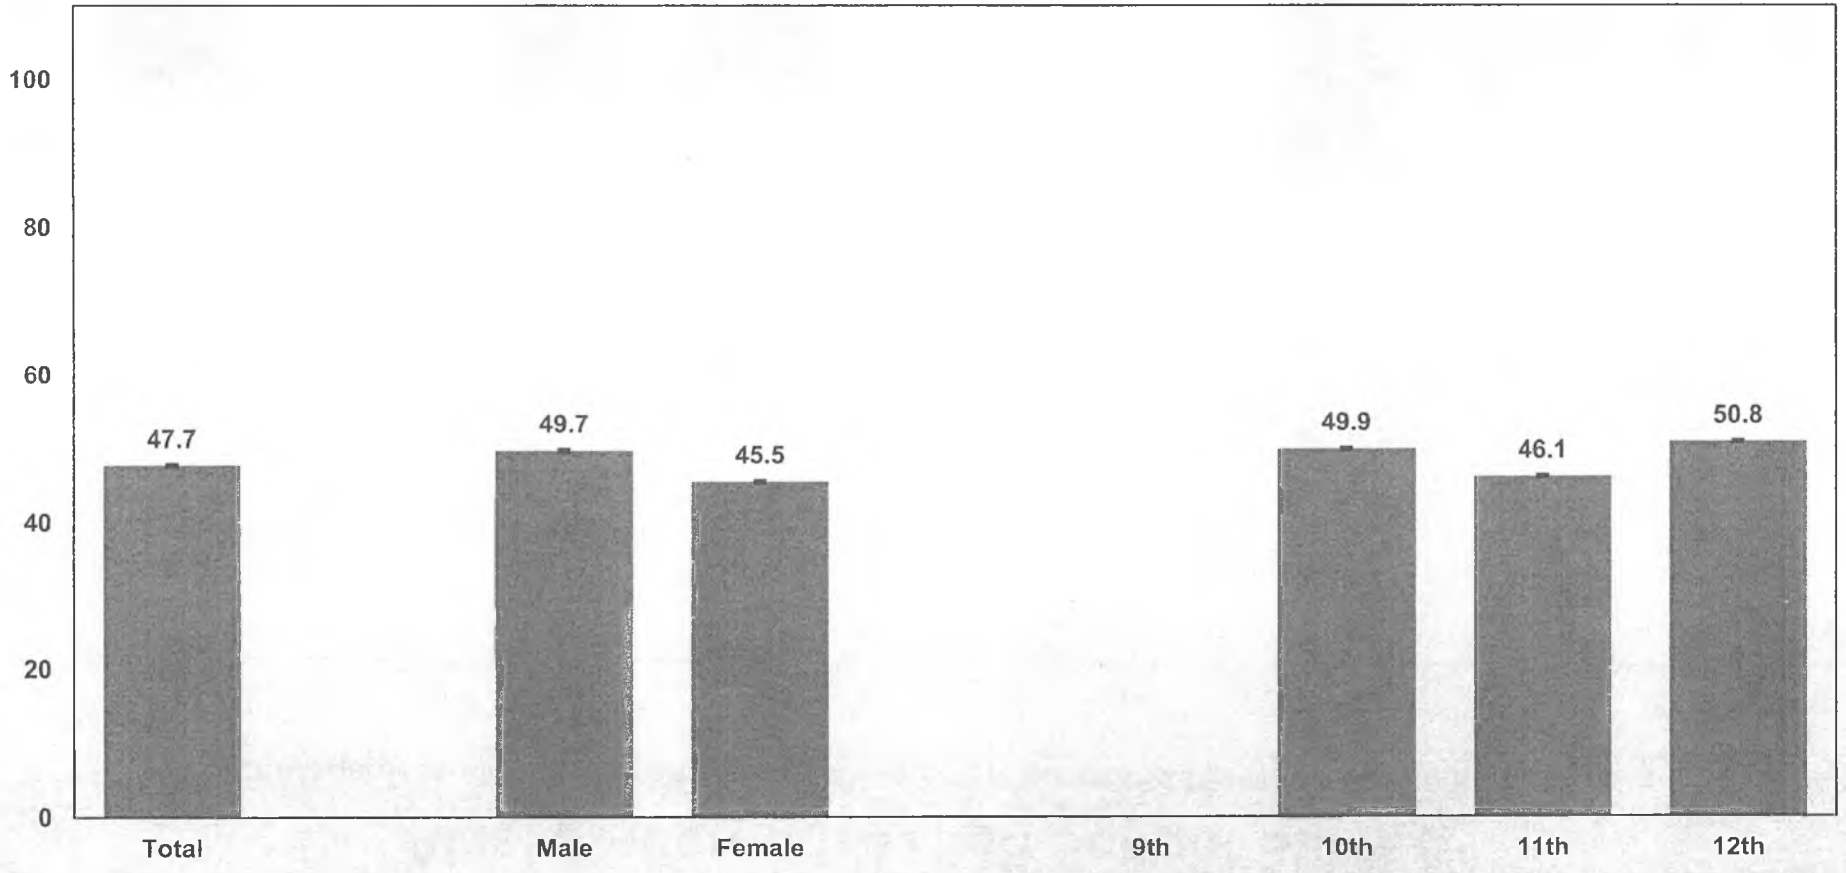
Alaska Alternative High School Survey

Percentage of students who smoked cigarettes on one or more of the past 30 days



Q31 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

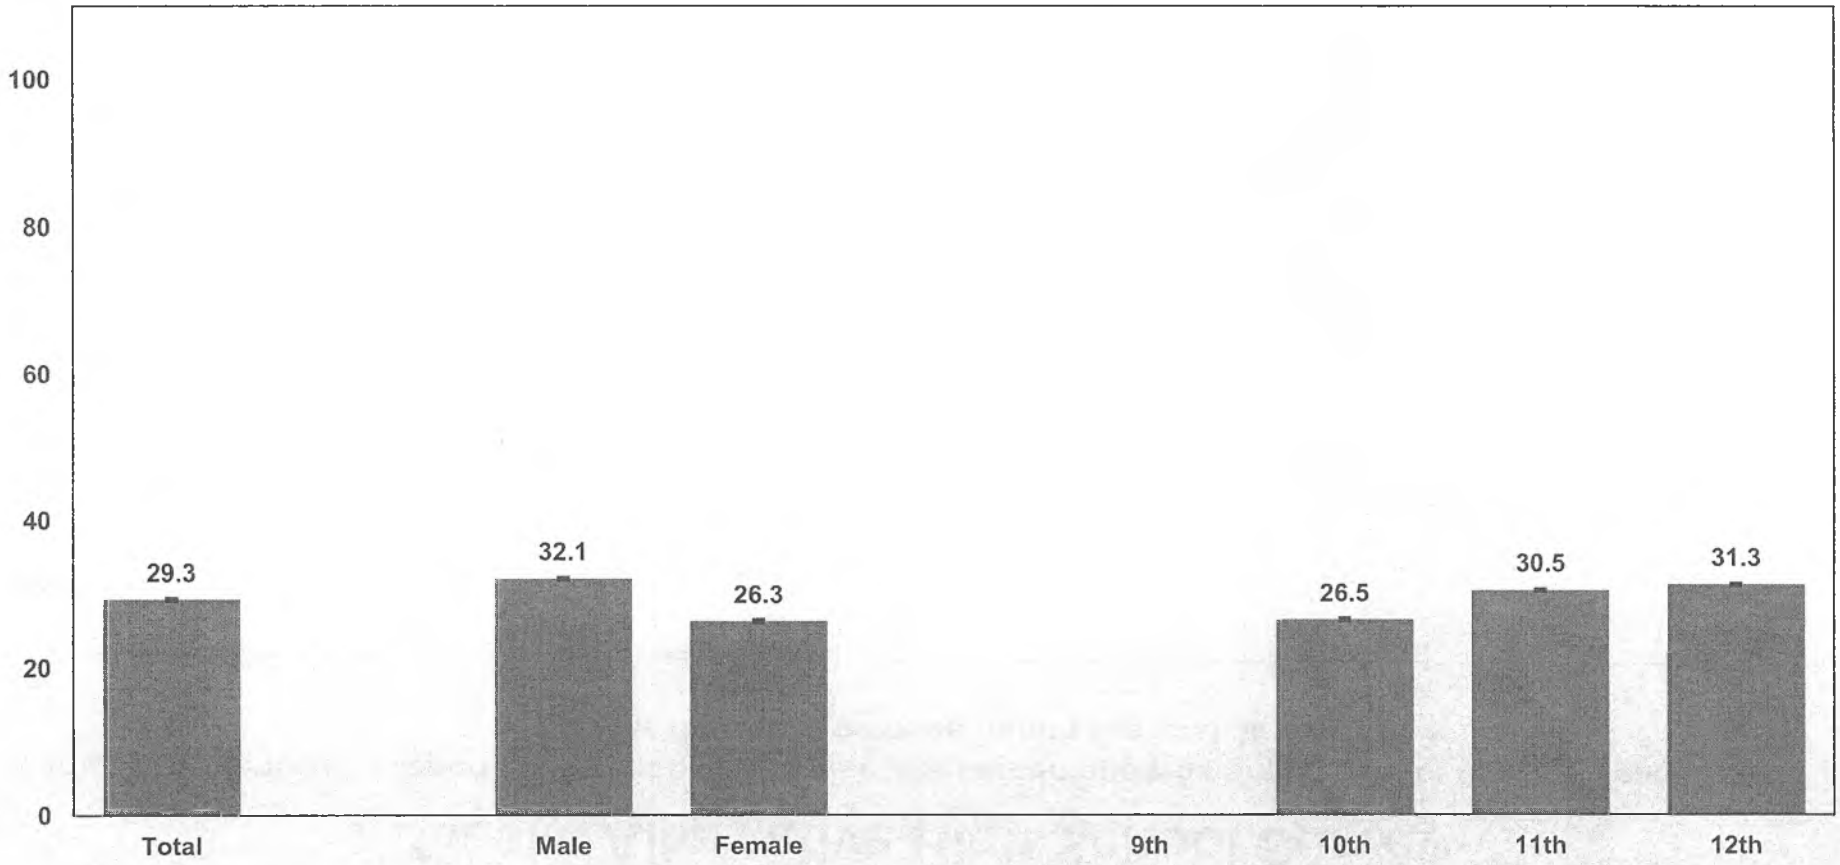
Percentage of students who smoked cigarettes on 20 or more of the past 30 days



QNFRCIG - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

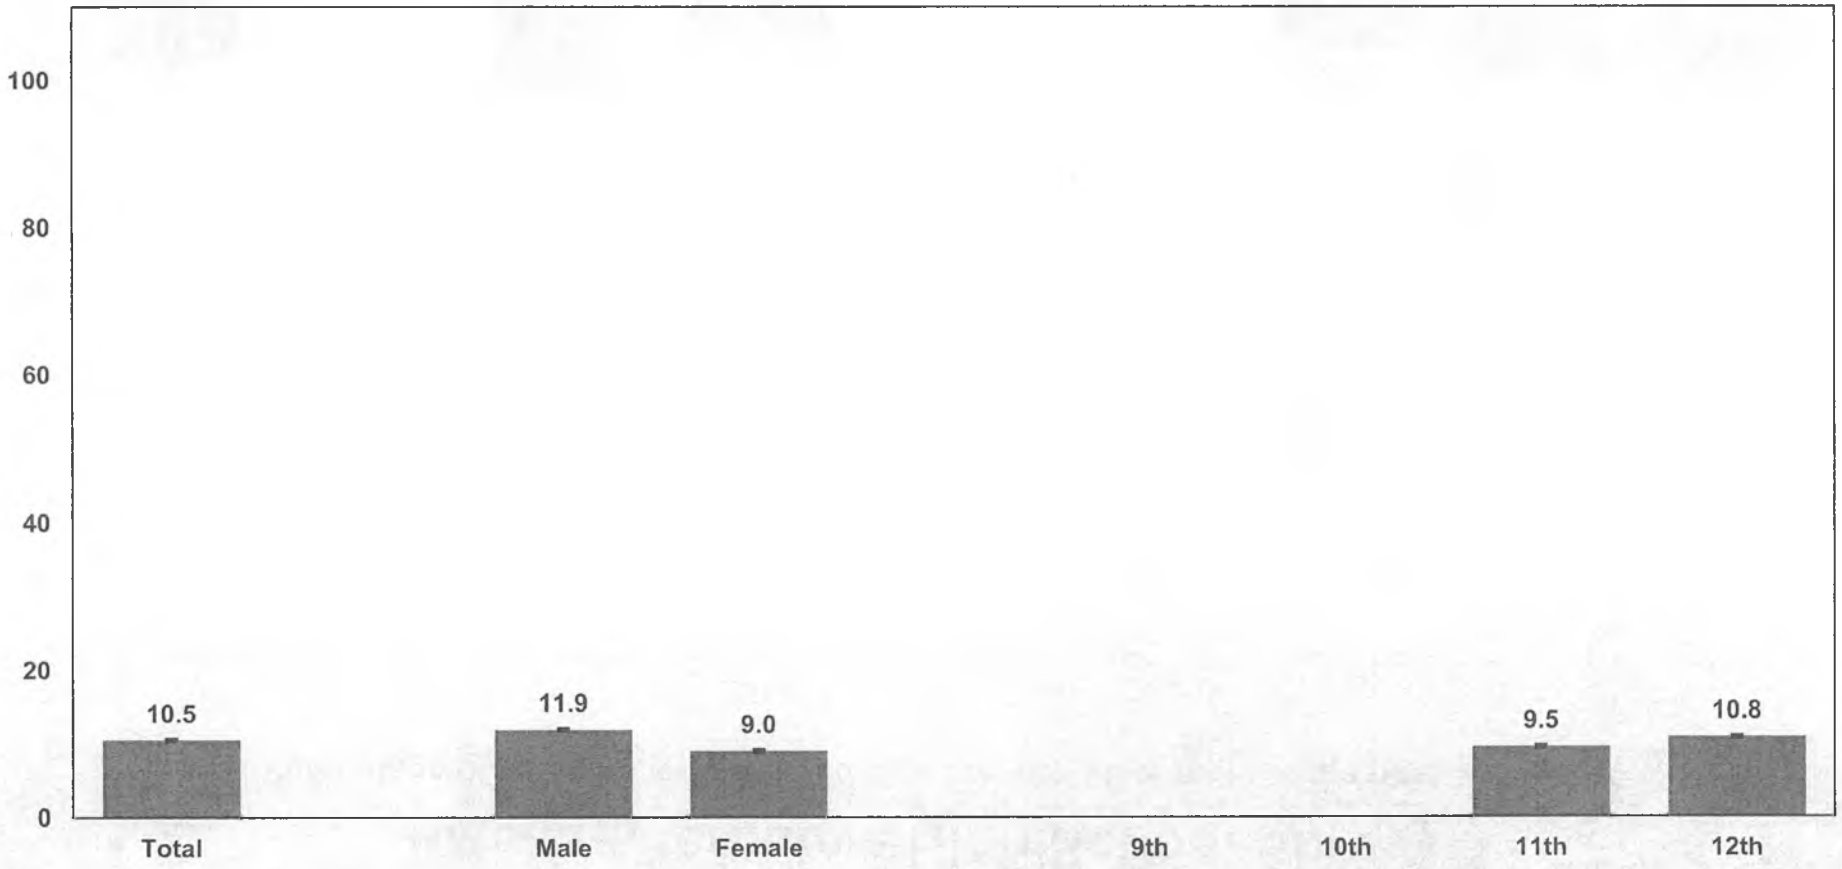
Among students who reported current cigarette use, the percentage who smoked more than 10 cigarettes per day on the days they smoked during the past 30 days



Q32 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

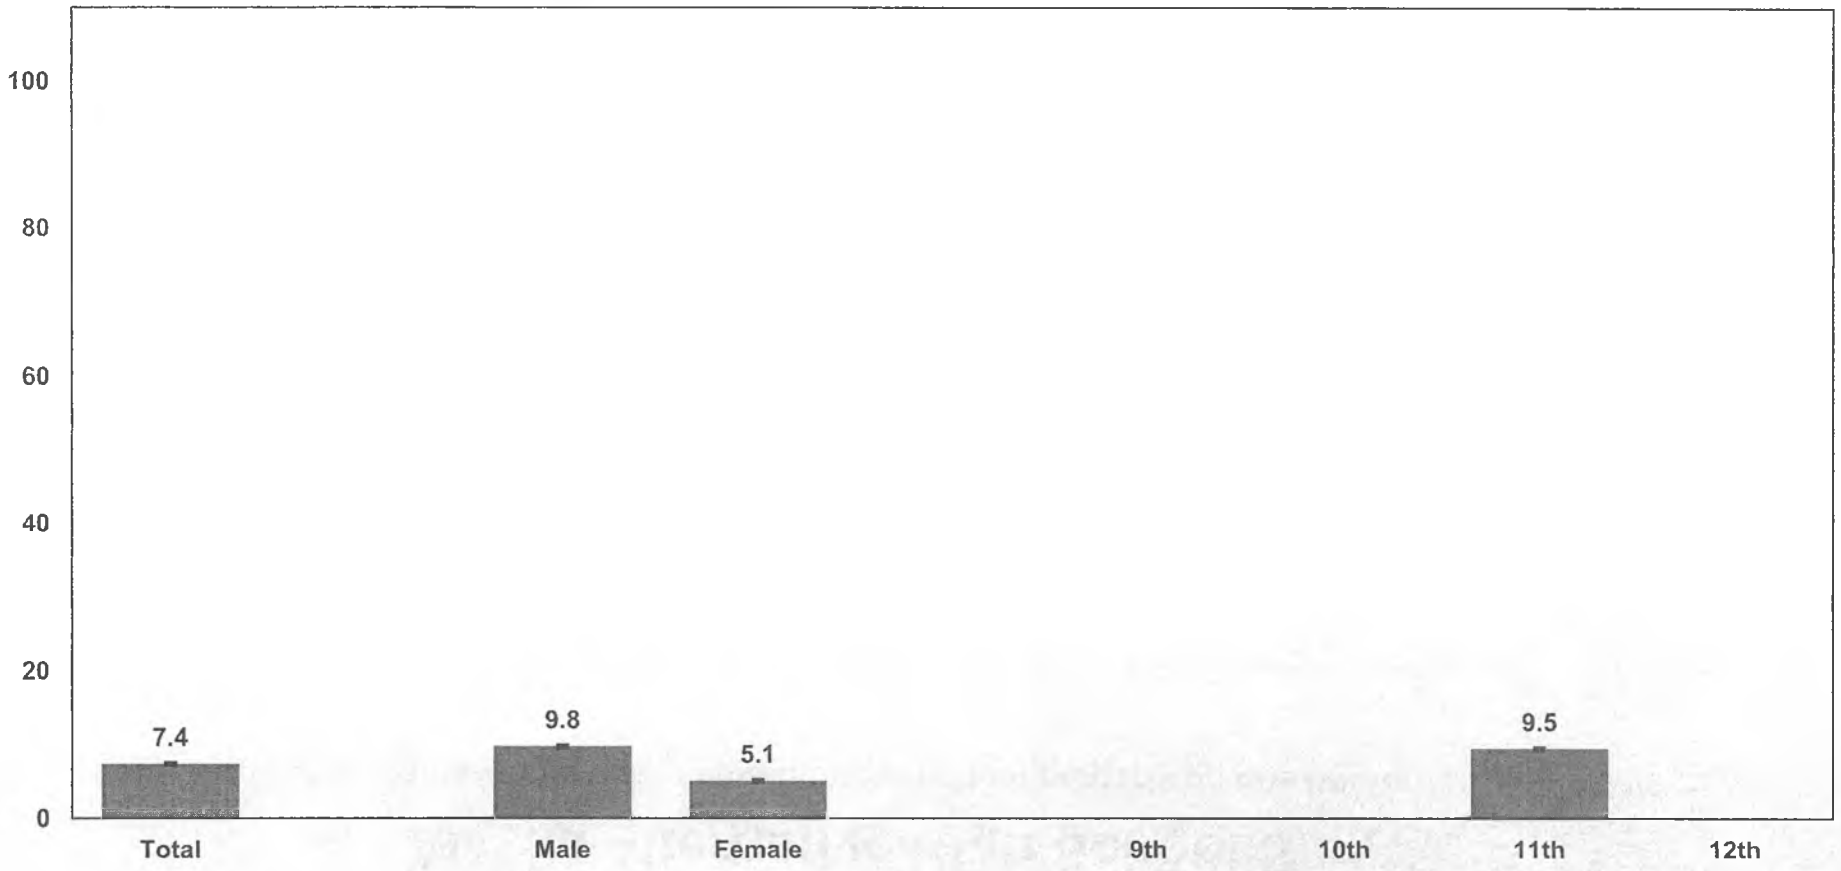
Among students who were less than 18 years of age and who reported current cigarette use, the percentage who usually got their own cigarettes by buying them in a store or gas station during the past 30 days



Q33 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

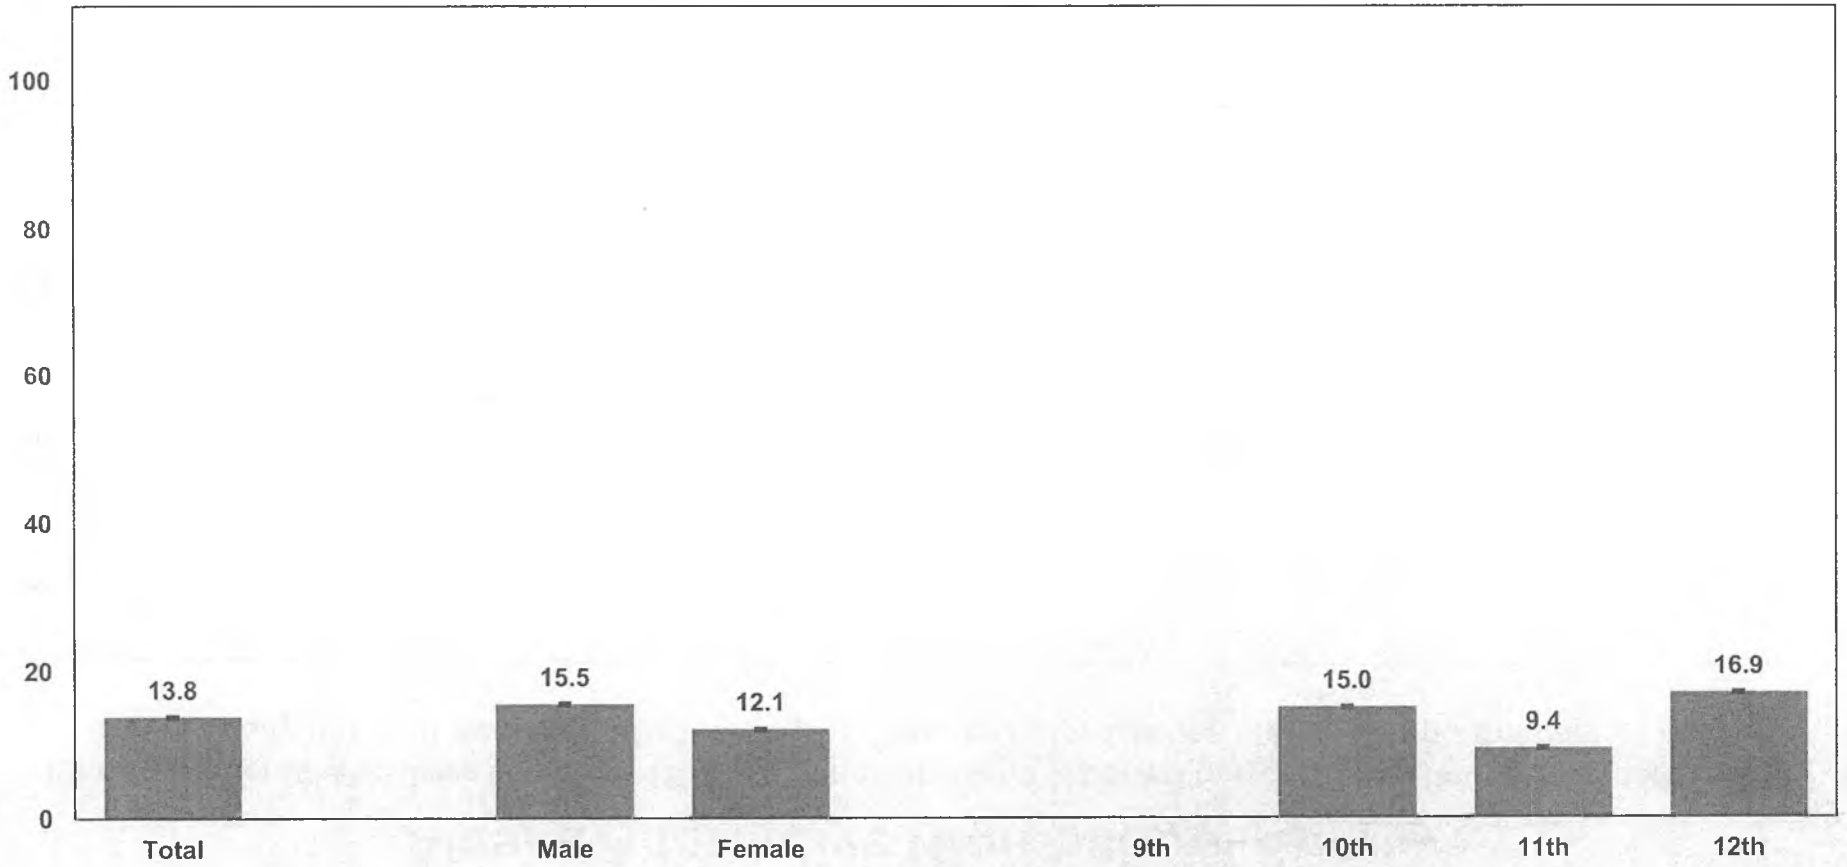
Percentage of students who smoked cigarettes on school property on one or more of the past 30 days



Q34 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

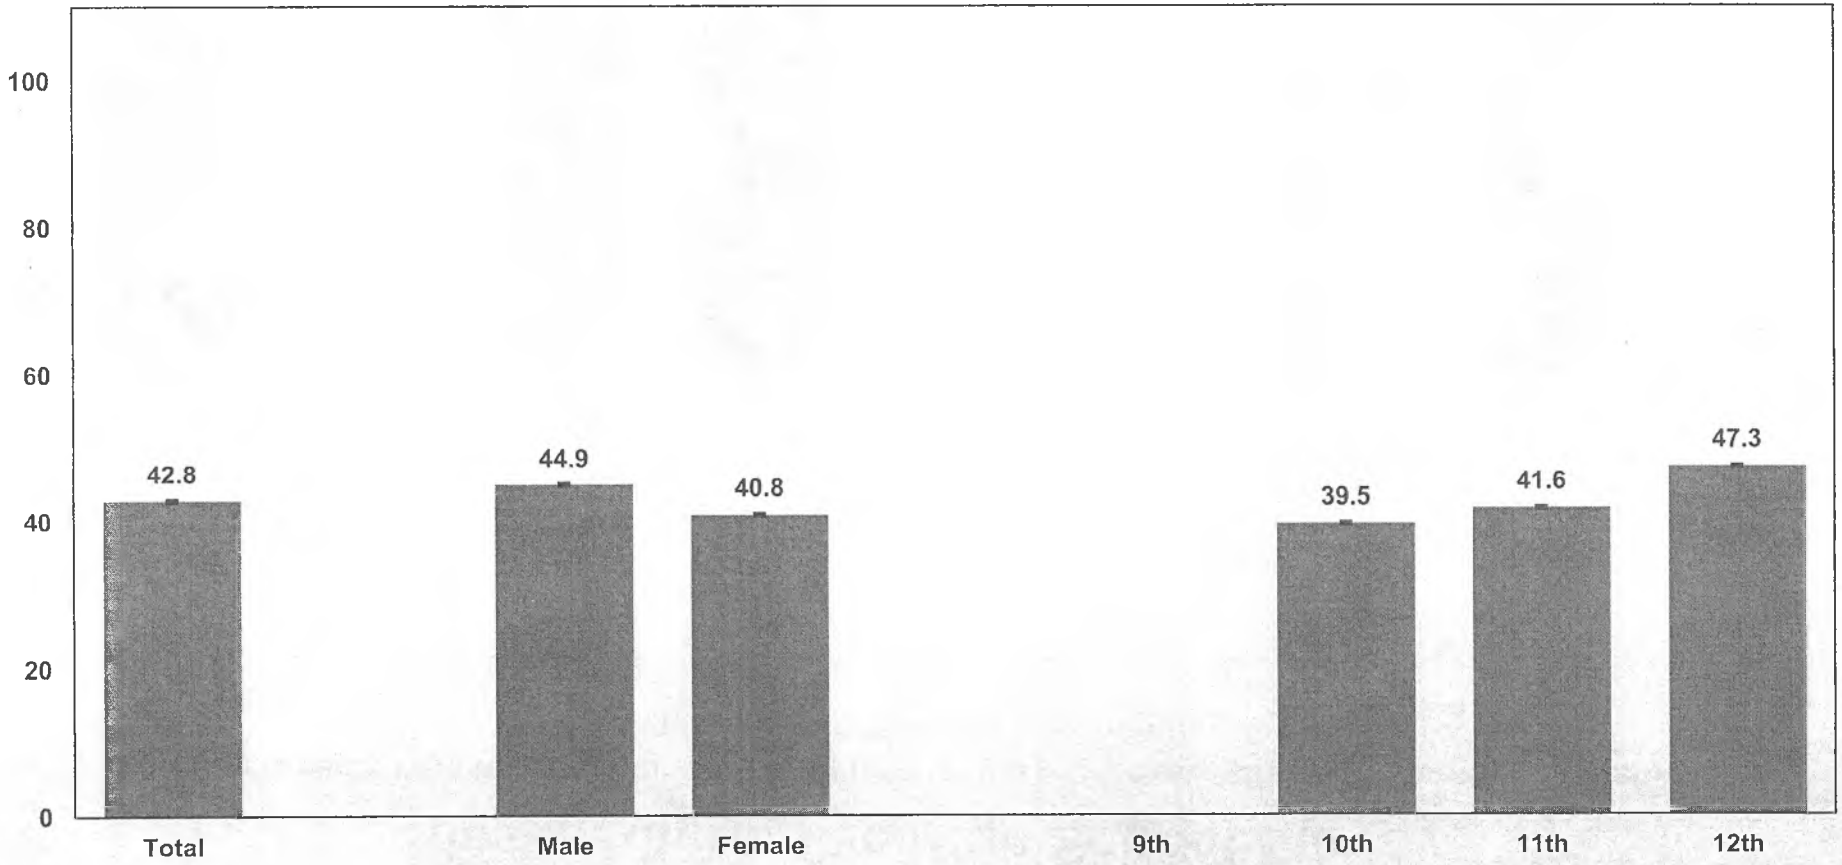
Percentage of students who ever smoked cigarettes daily, that is, at least one cigarette every day for 30 days



Q35 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

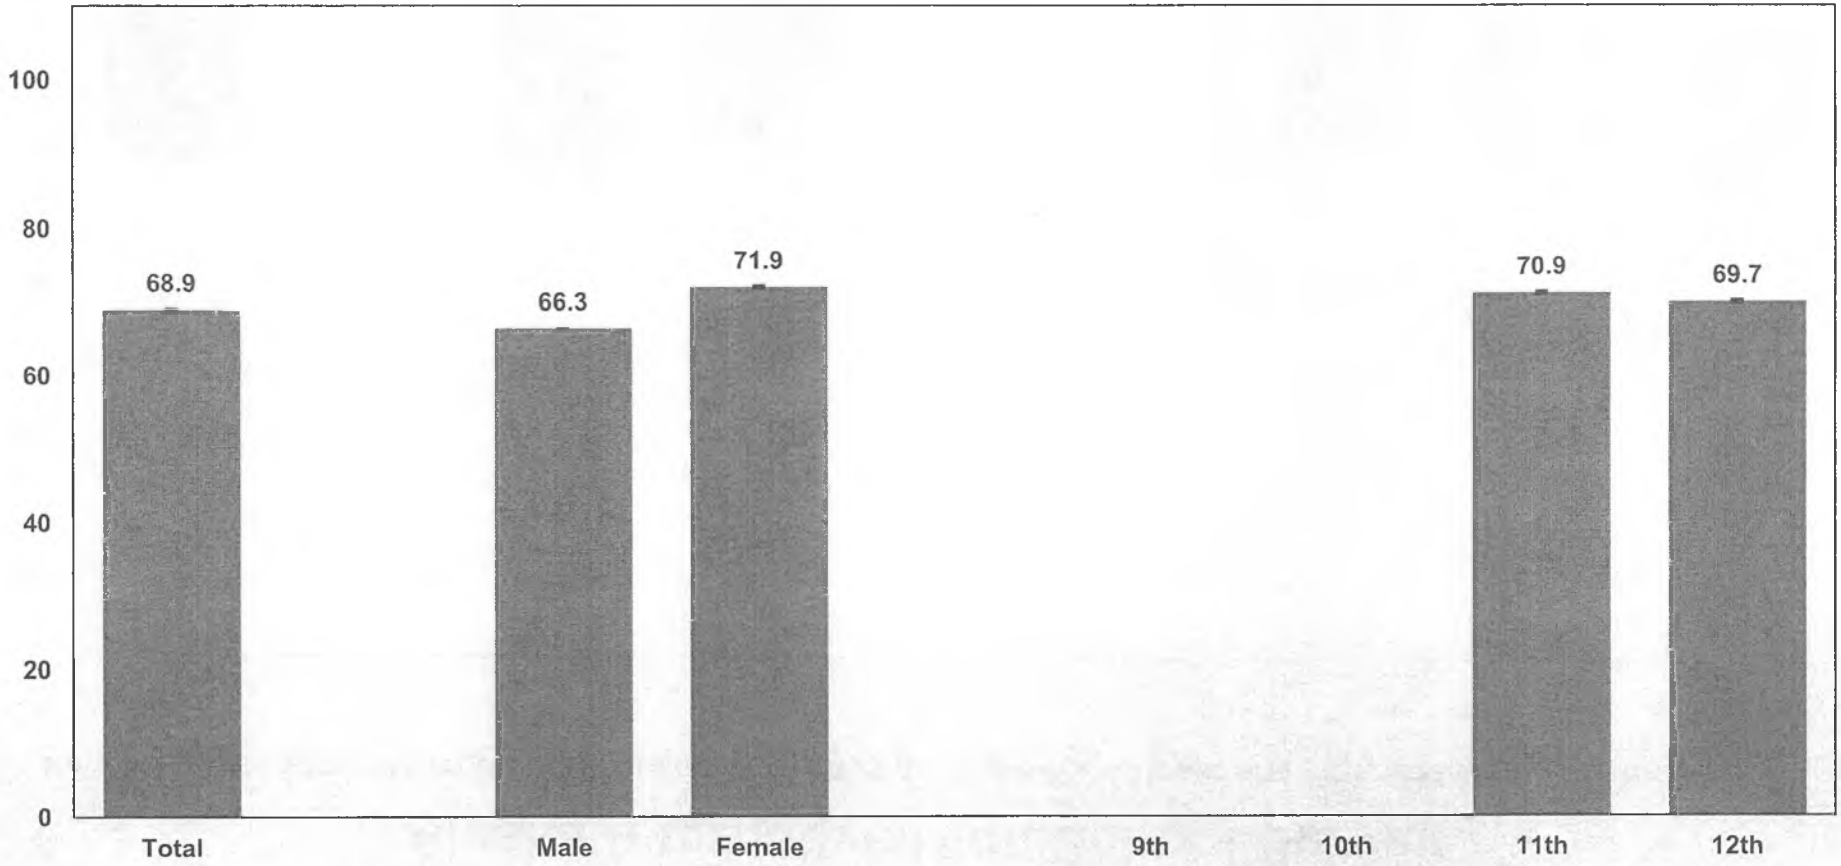
Among students who reported current cigarette use, the percentage who ever tried to quit smoking cigarettes during the past 12 months



Q36 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

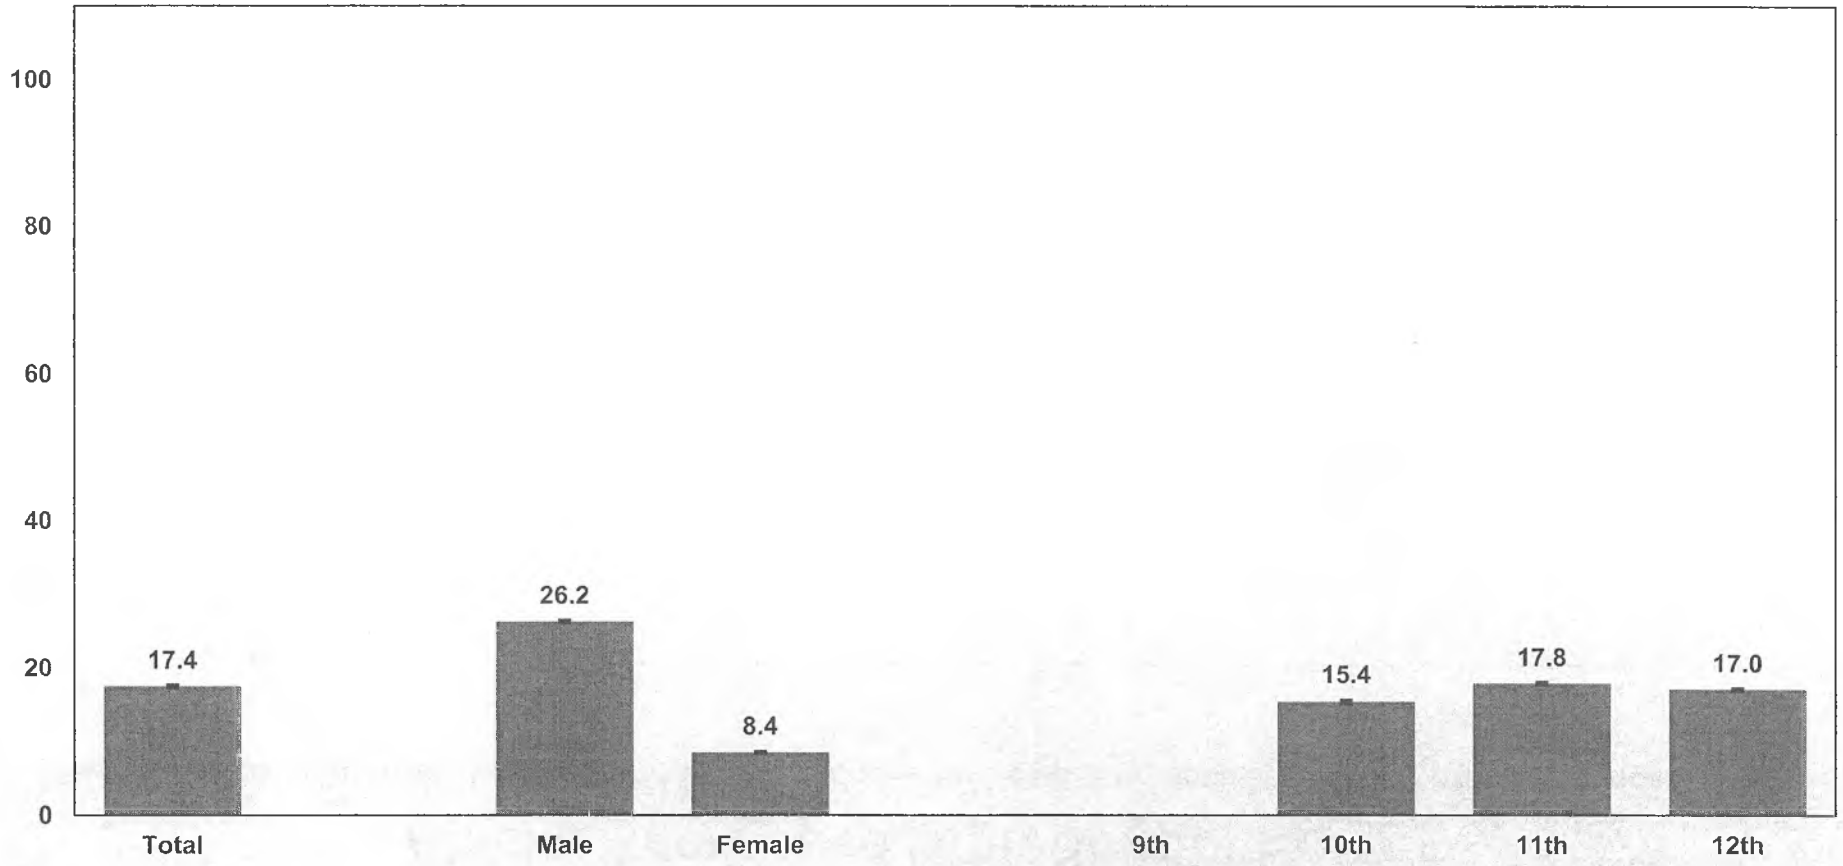
Percentage of students who used chewing tobacco, snuff, or dip on one or more of the past 30 days



Q37 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

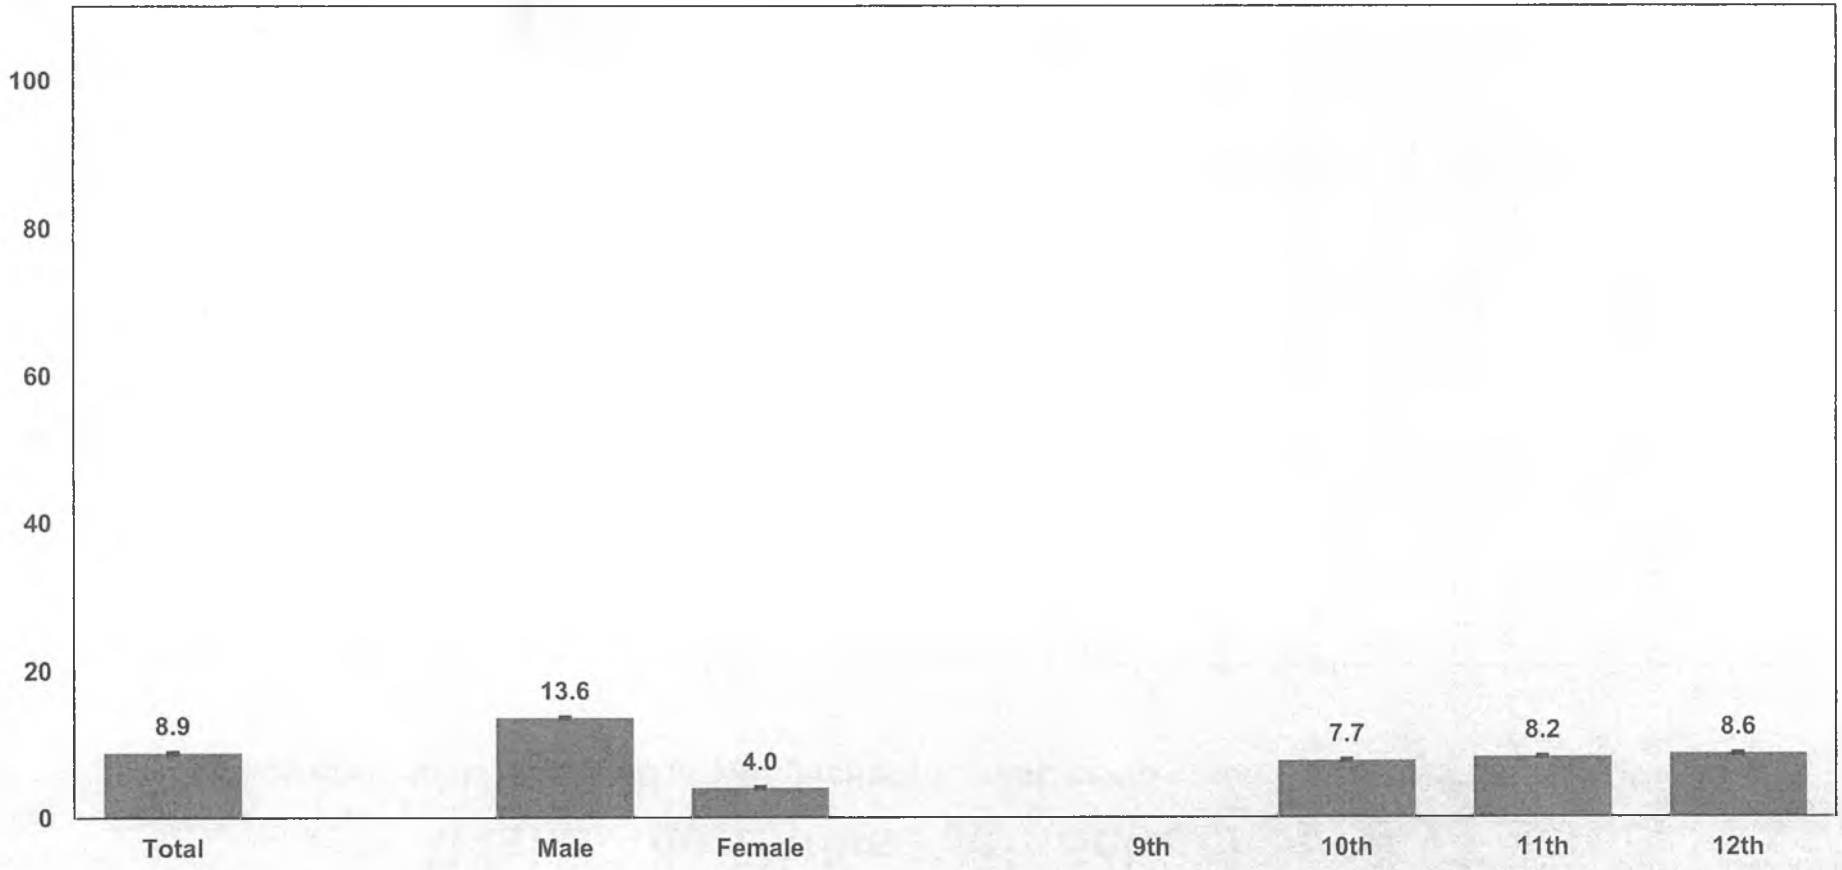
Percentage of students who used chewing tobacco, snuff, or dip on school property on one or more of the past 30 days



Q38 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

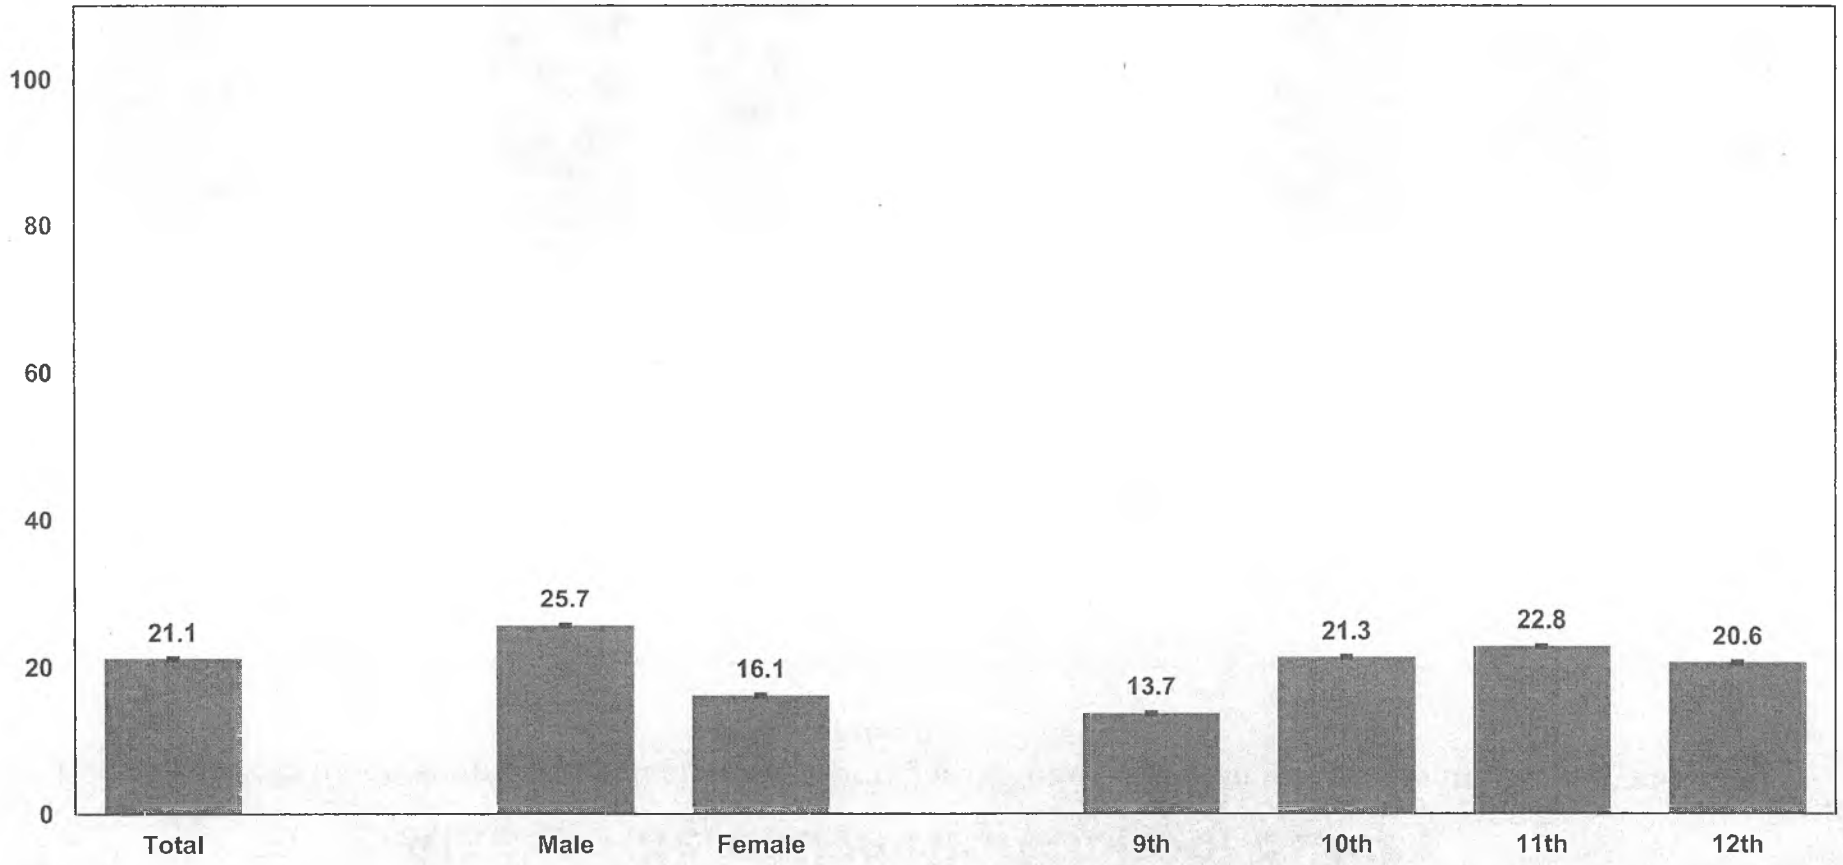
Percentage of students who smoked cigars, cigarillos, or little cigars on one or more of the past 30 days



Q39 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

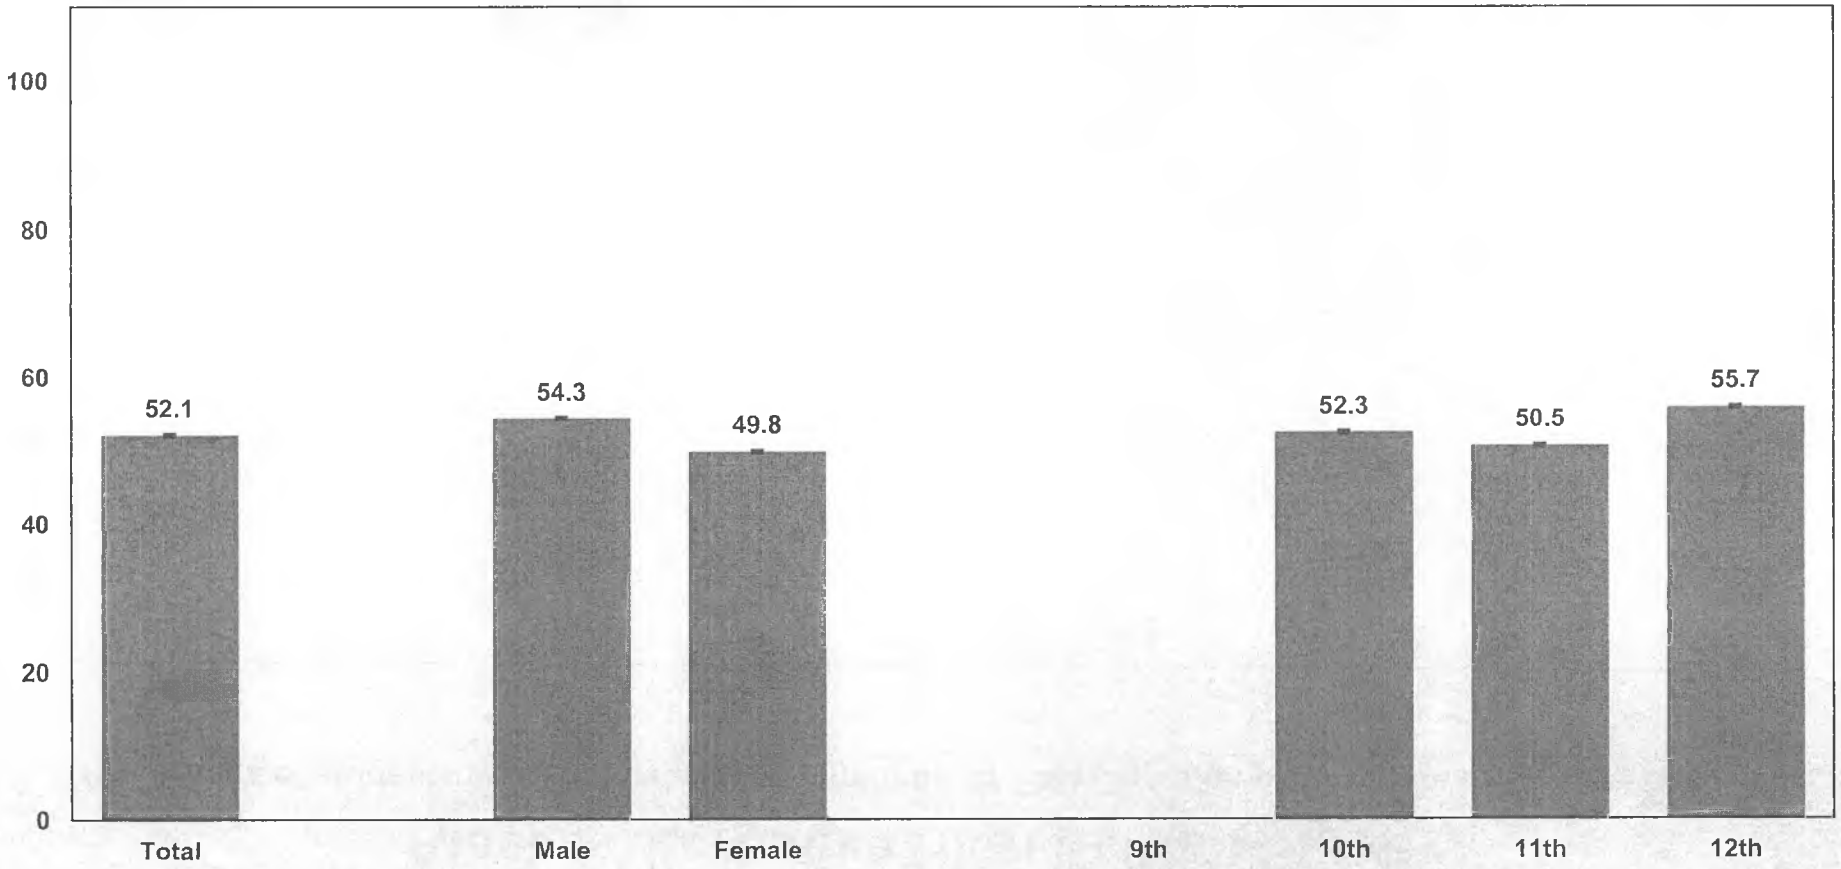
Percentage of students who smoked cigarettes or cigars or used chewing tobacco, snuff, or dip on one or more of the past 30 days



QNANYTOB - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

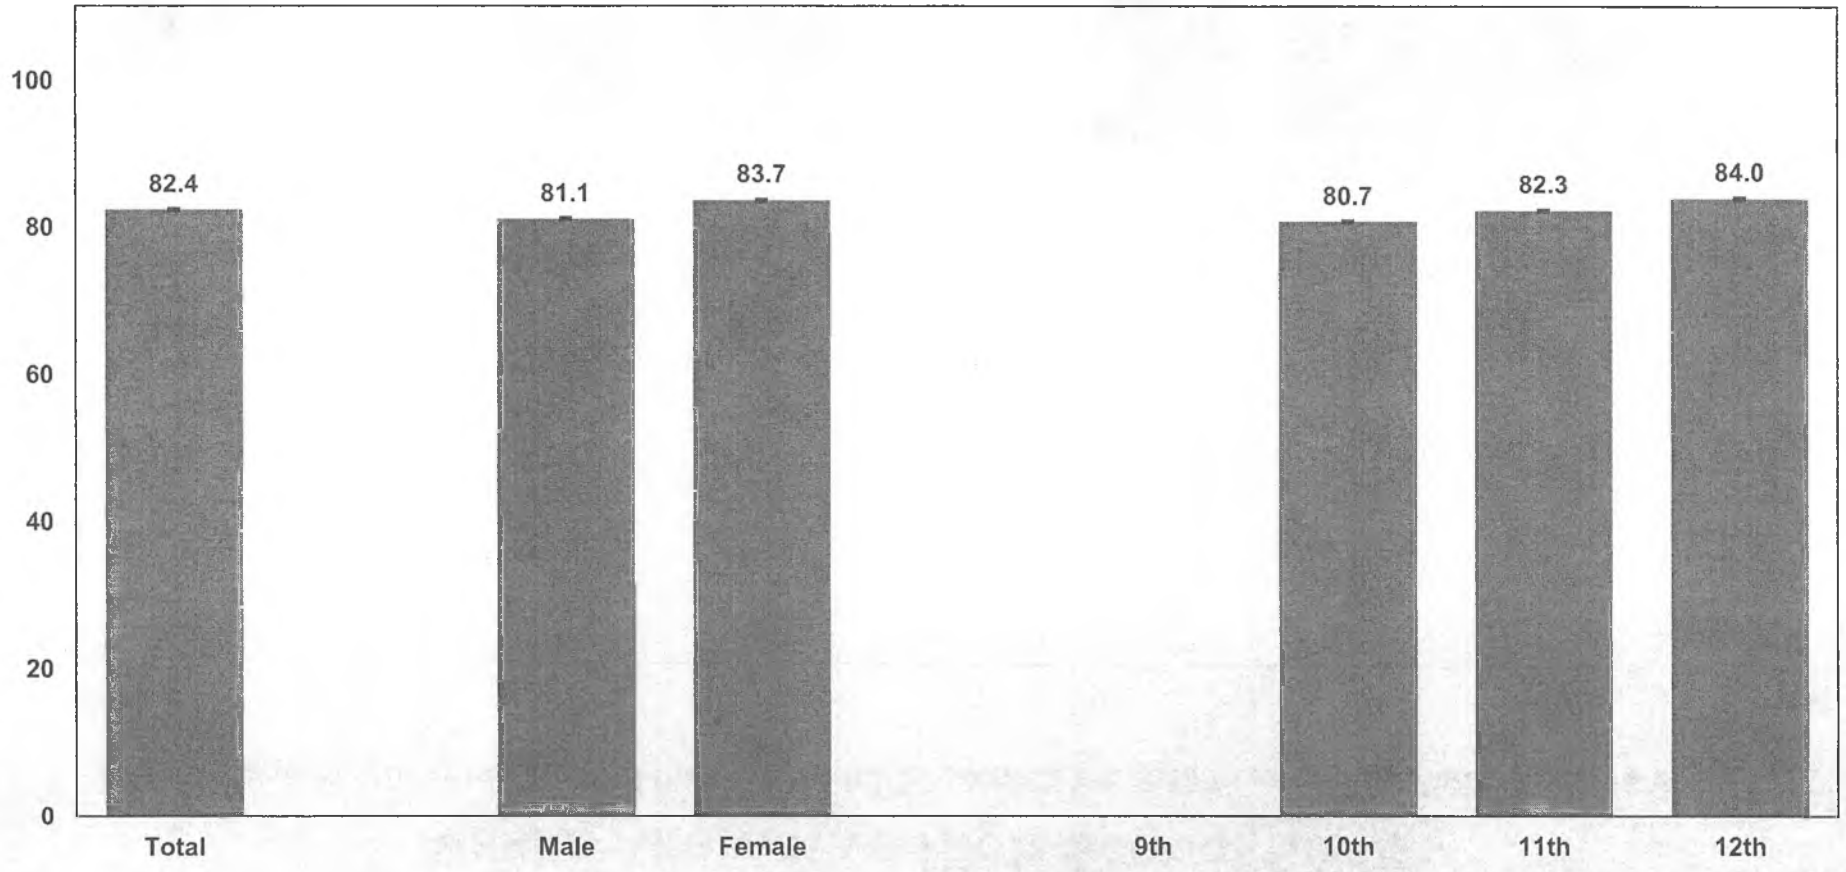
Percentage of students who had at least one drink of alcohol on one or more days during their life



Q40 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

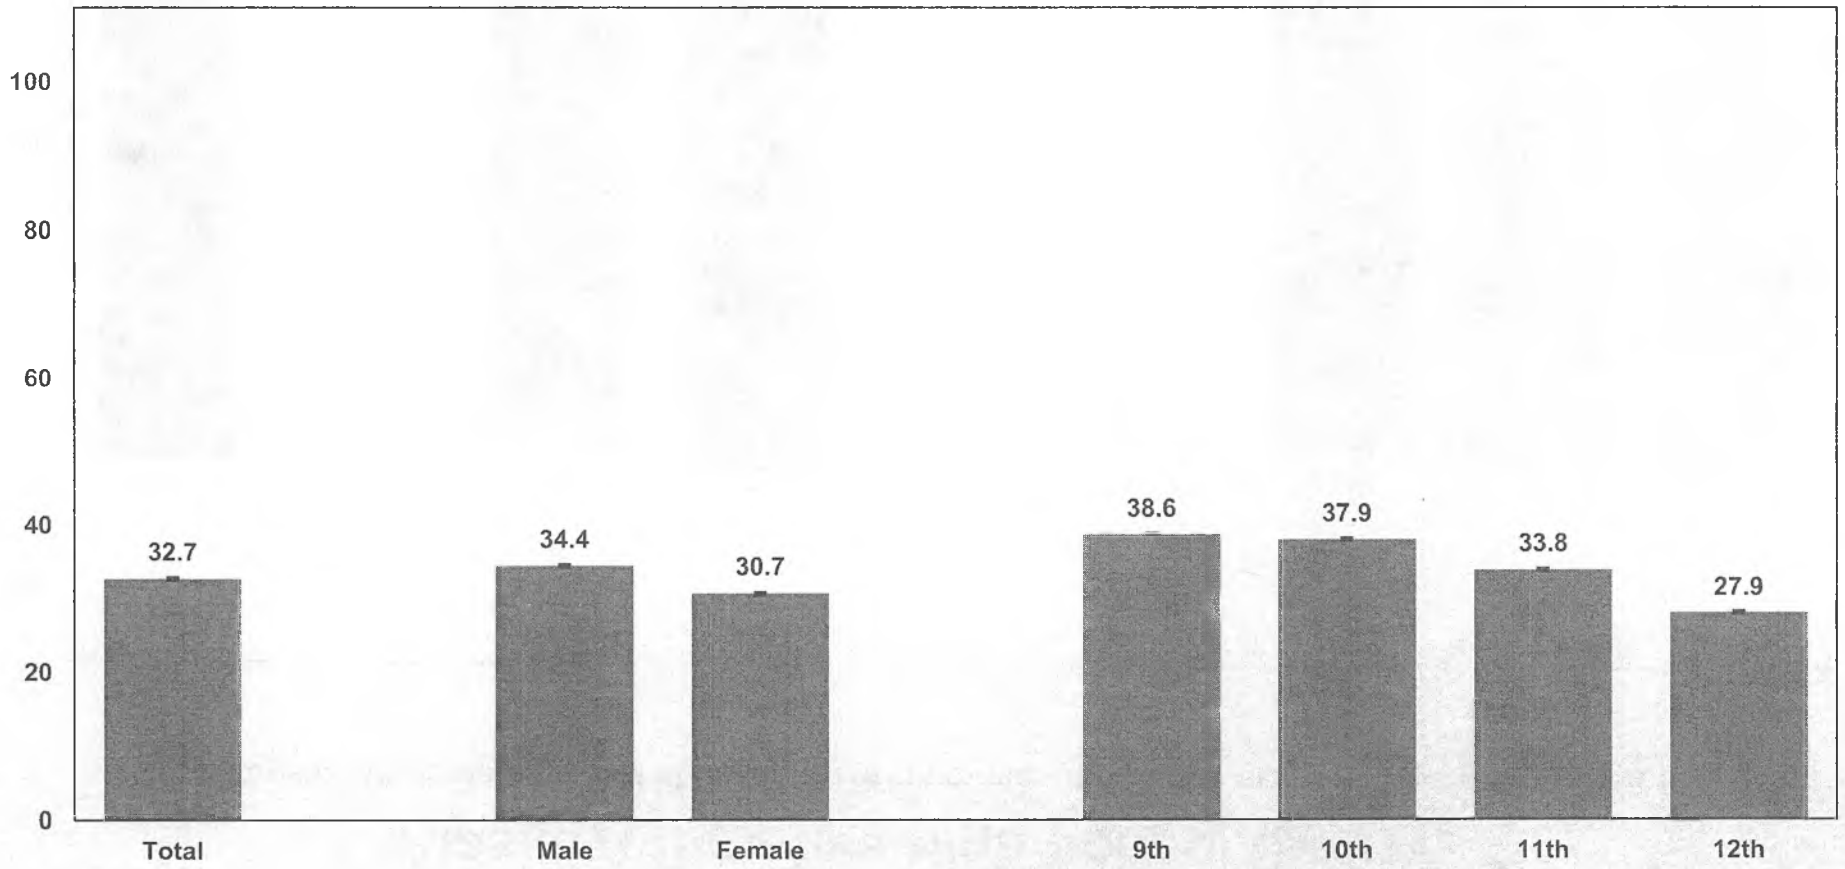
Percentage of students who had their first drink of alcohol other than a few sips before age 13 years



Q41 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

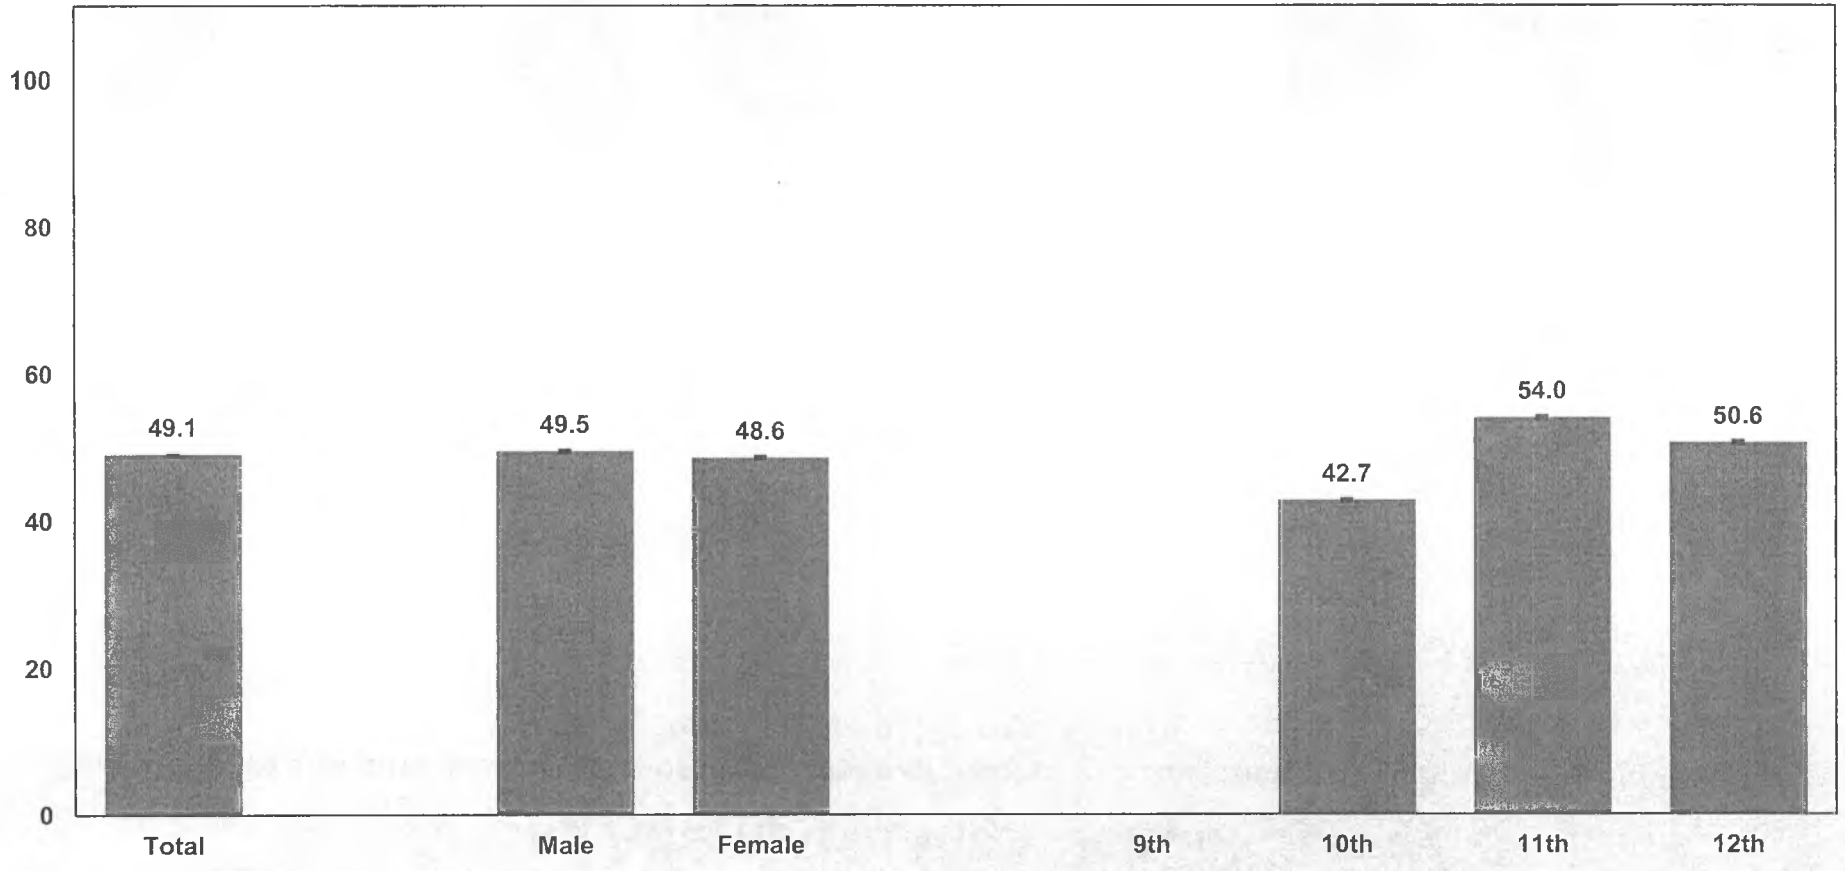
Percentage of students who had at least one drink of alcohol on one or more of the past 30 days



Q42 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

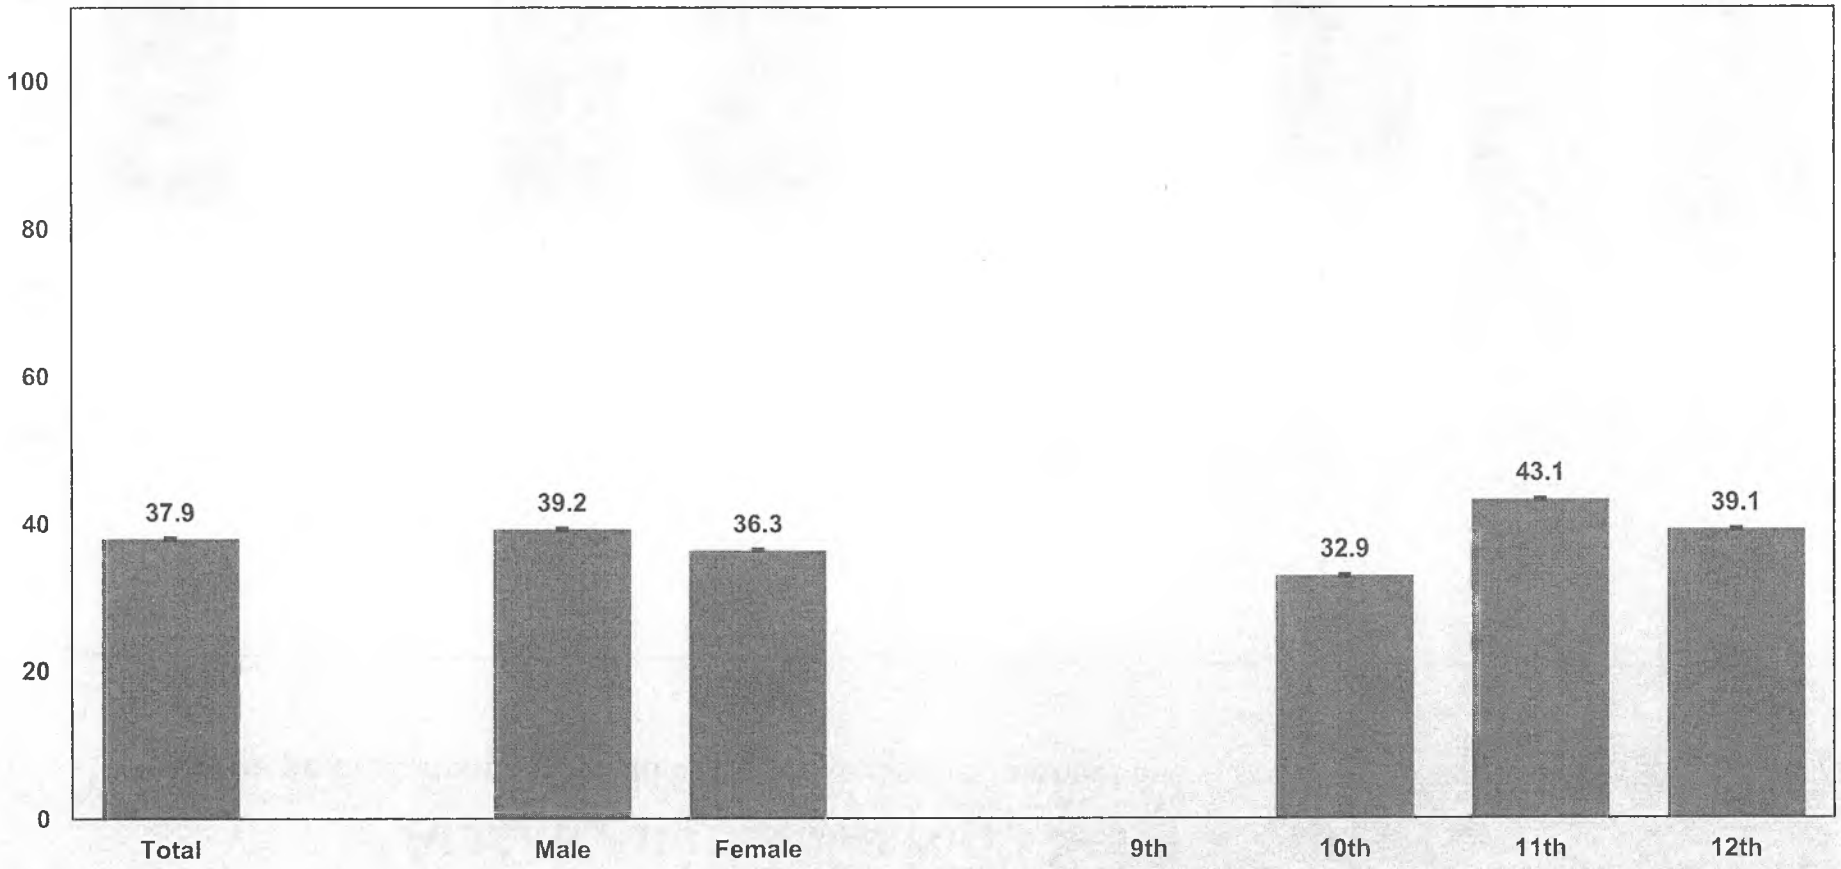
Percentage of students who had five or more drinks of alcohol in a row, that is, within a couple of hours, on one or more of the past 30 days



Q43 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

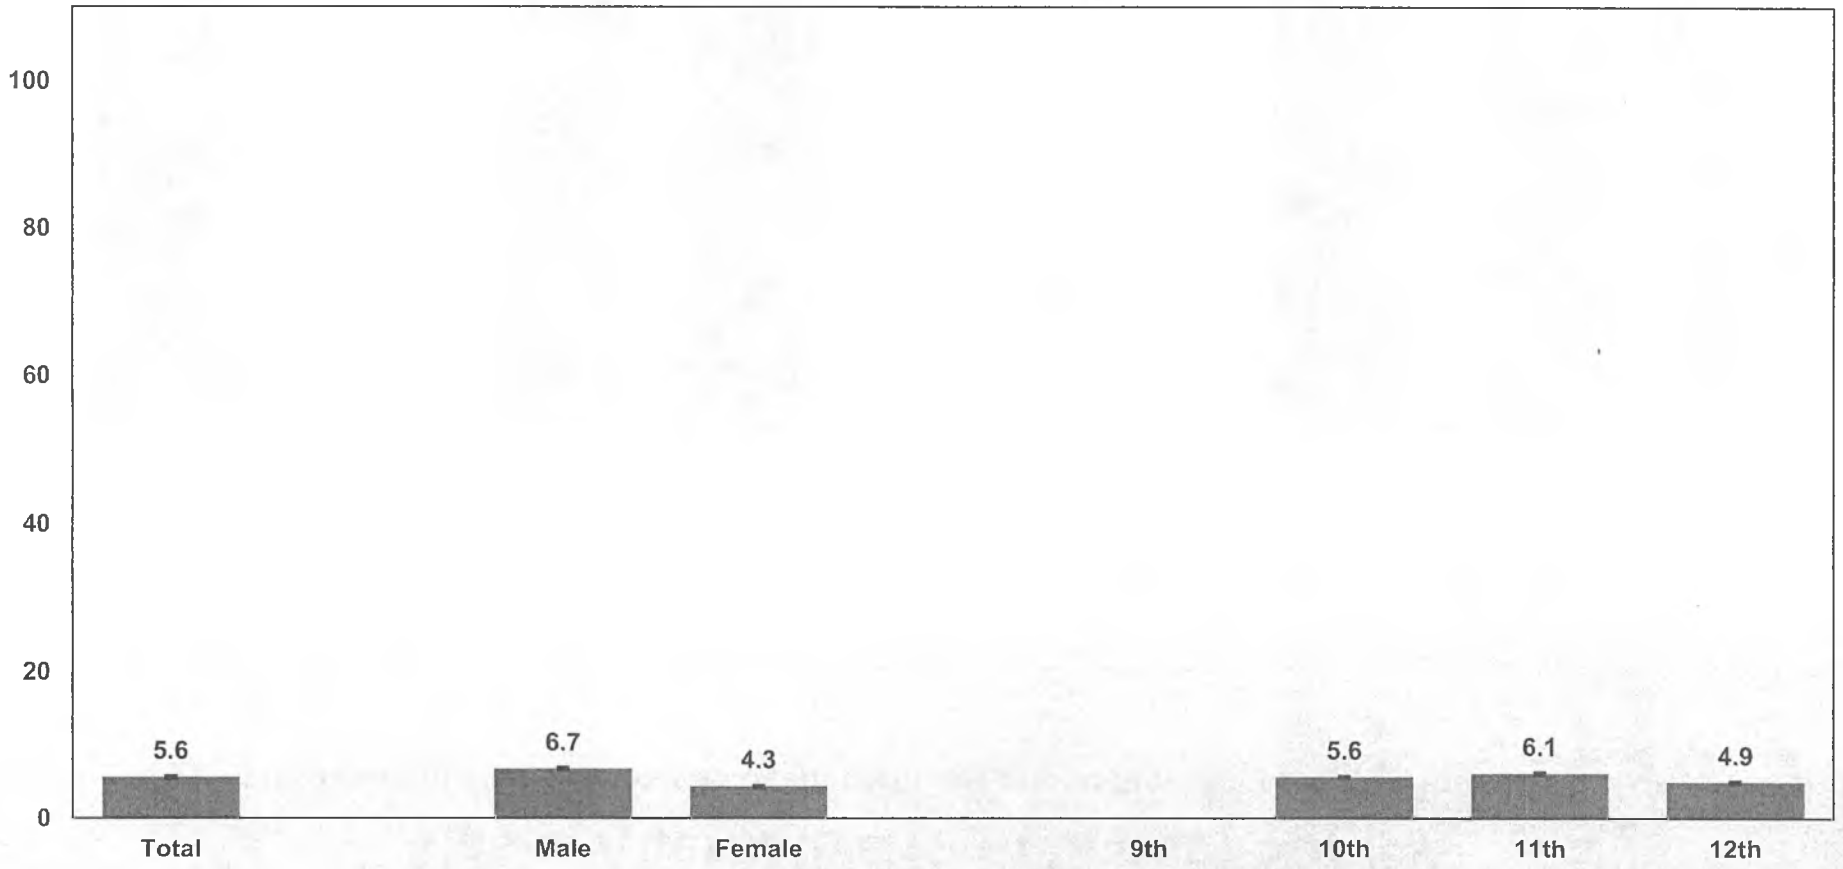
Percentage of students who had at least one drink of alcohol on school property on one or more of the past 30 days



Q45 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

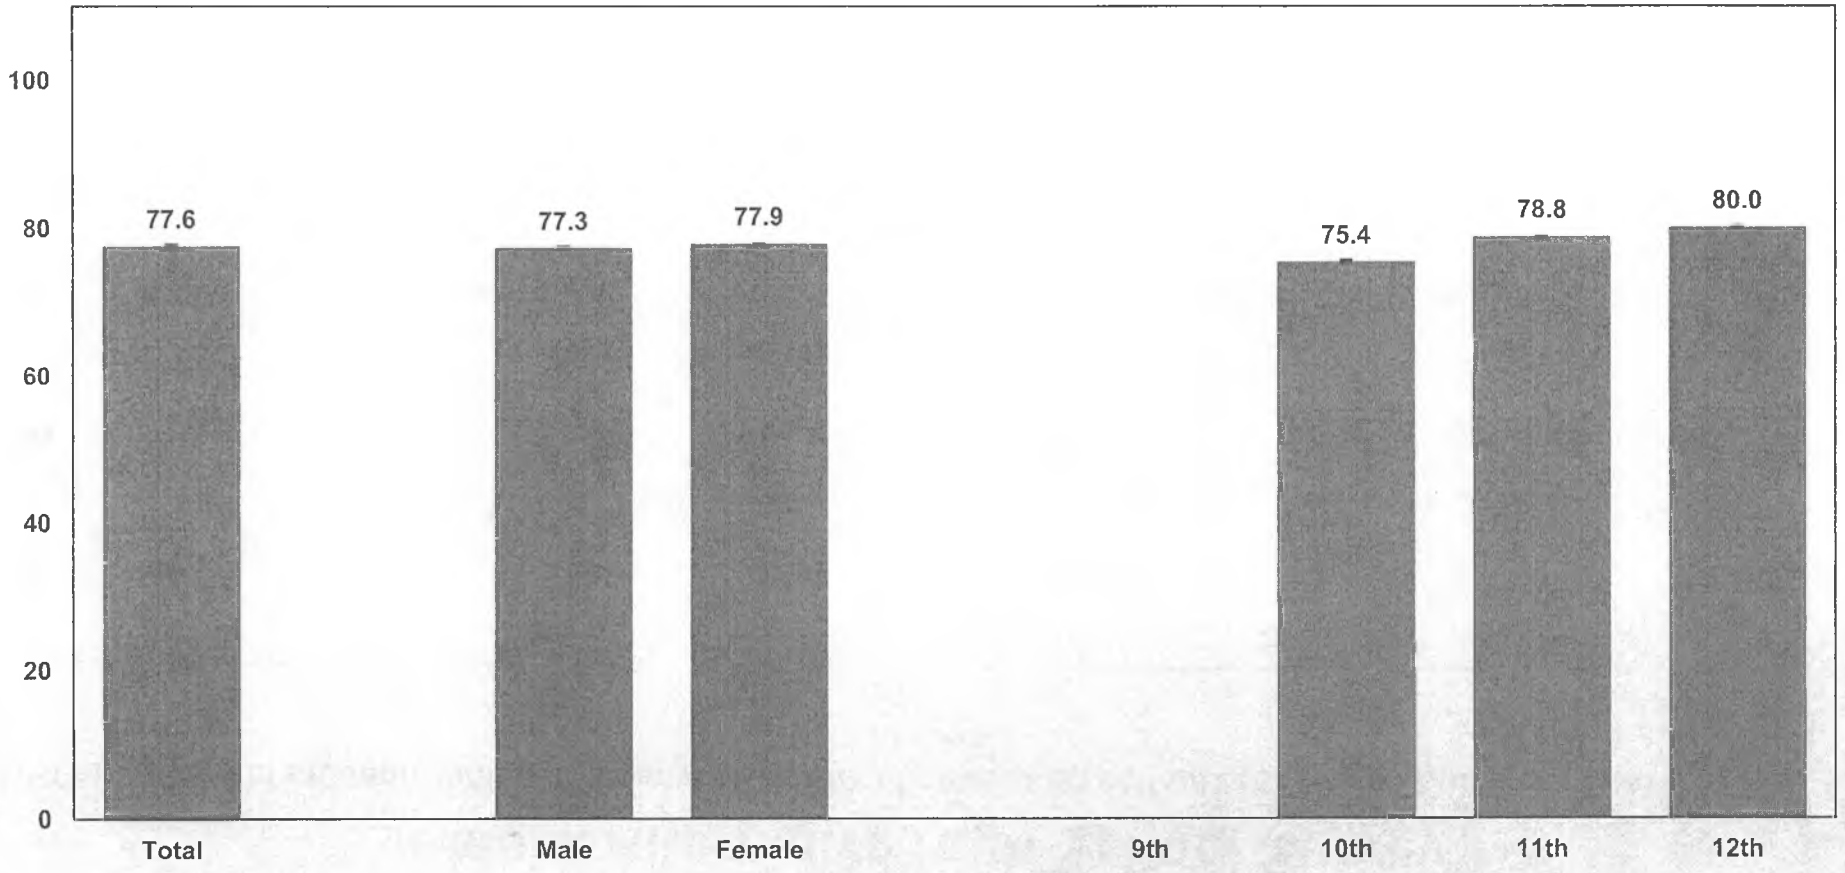
Percentage of students who used marijuana one or more times during their life



Q46 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

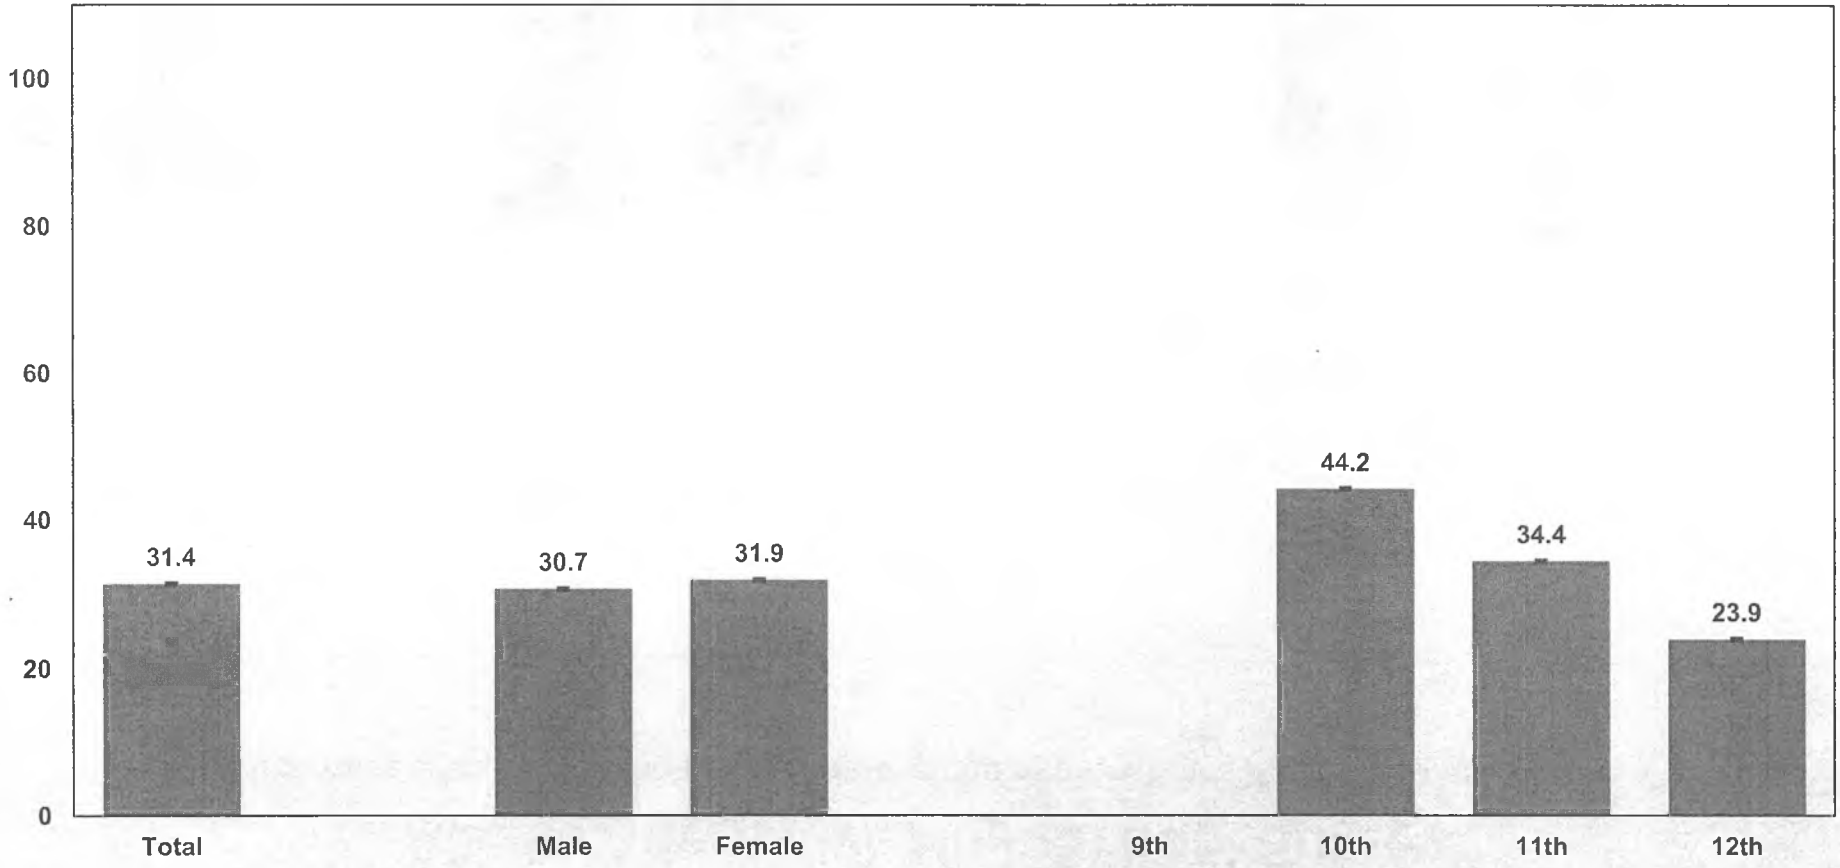
Percentage of students who tried marijuana for the first time before age 13 years



Q47 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

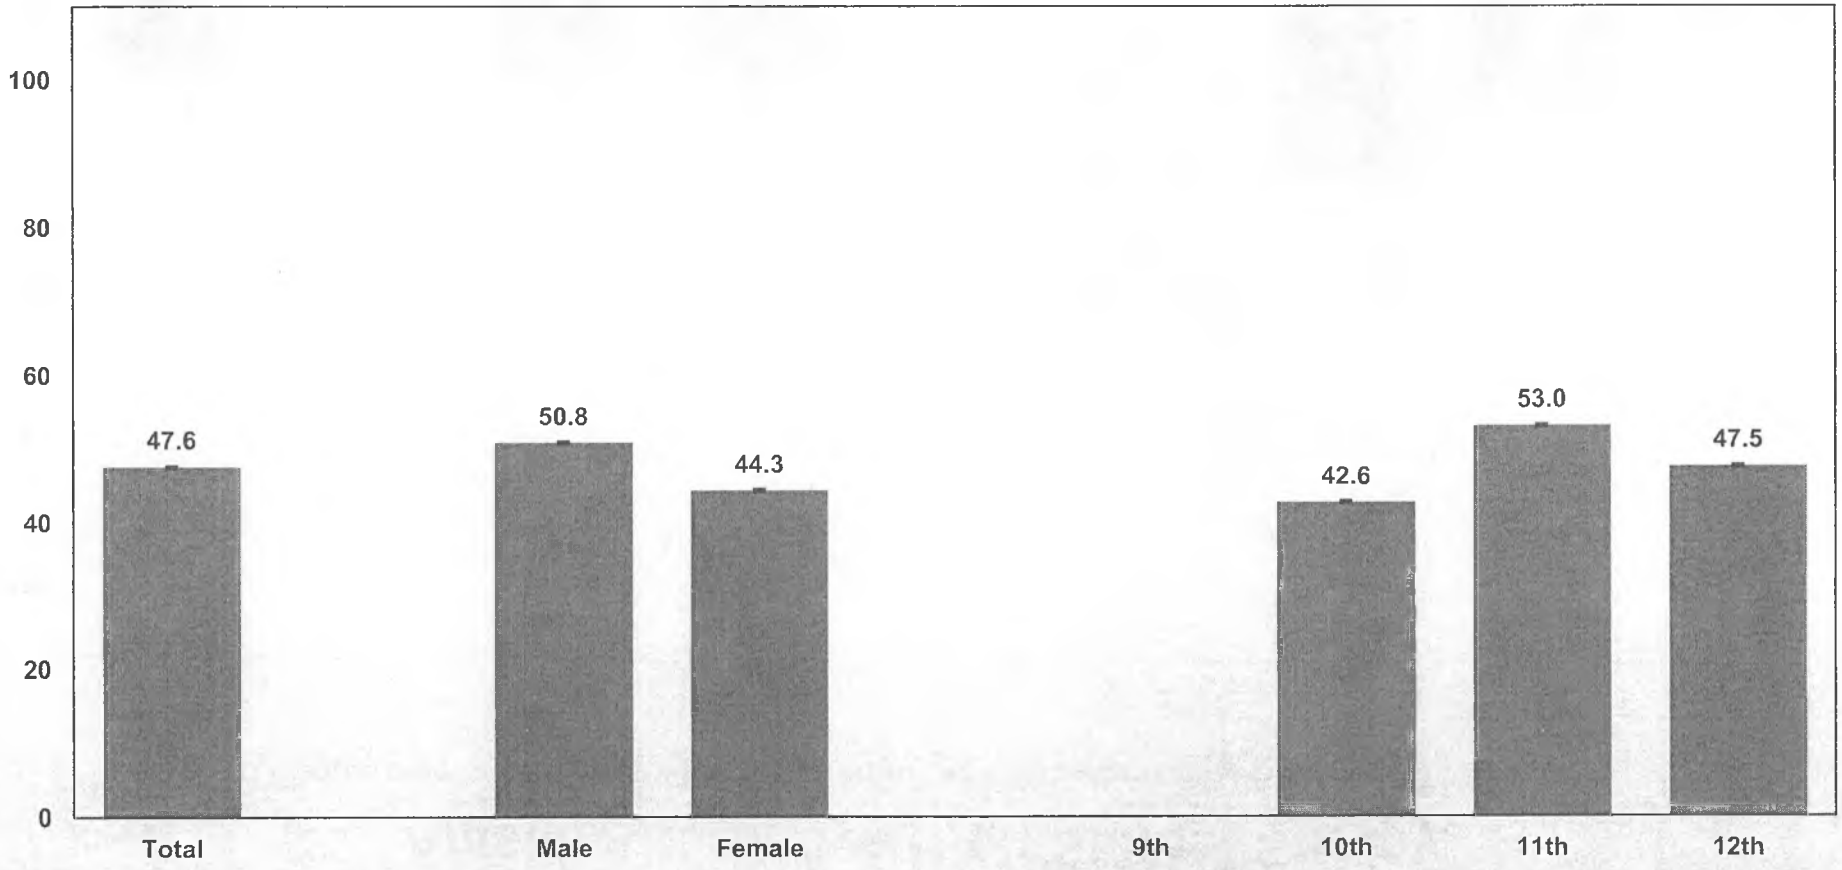
Percentage of students who used marijuana one or more times during the past 30 days



Q48 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

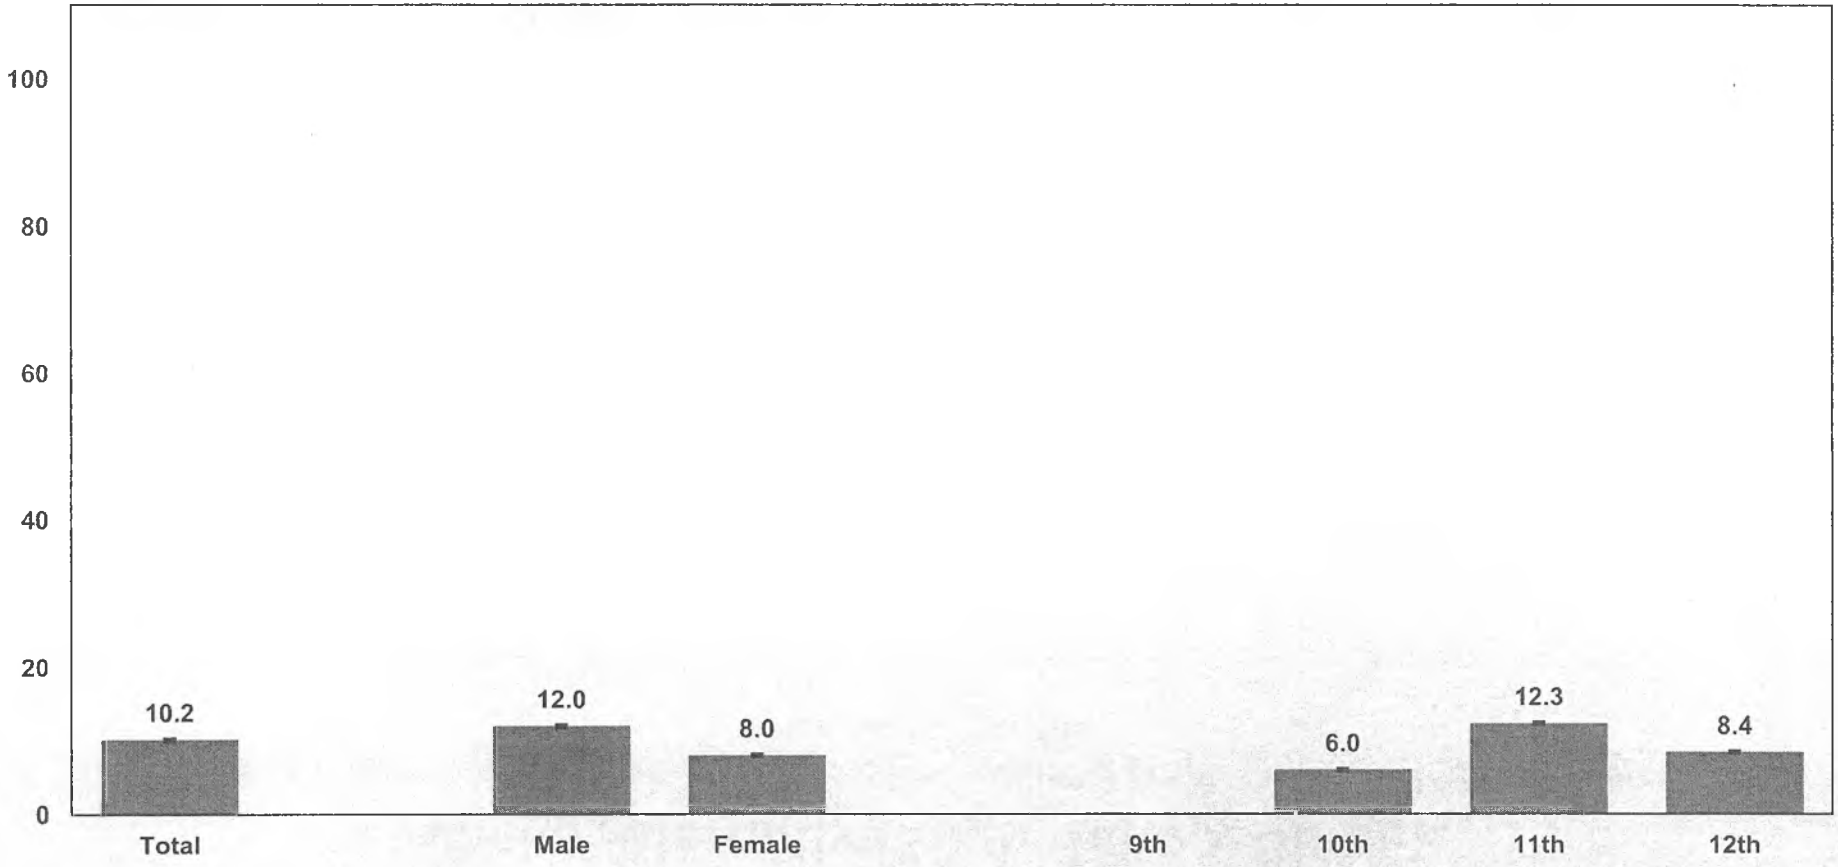
Percentage of students who used marijuana on school property one or more times during the past 30 days



Q49 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

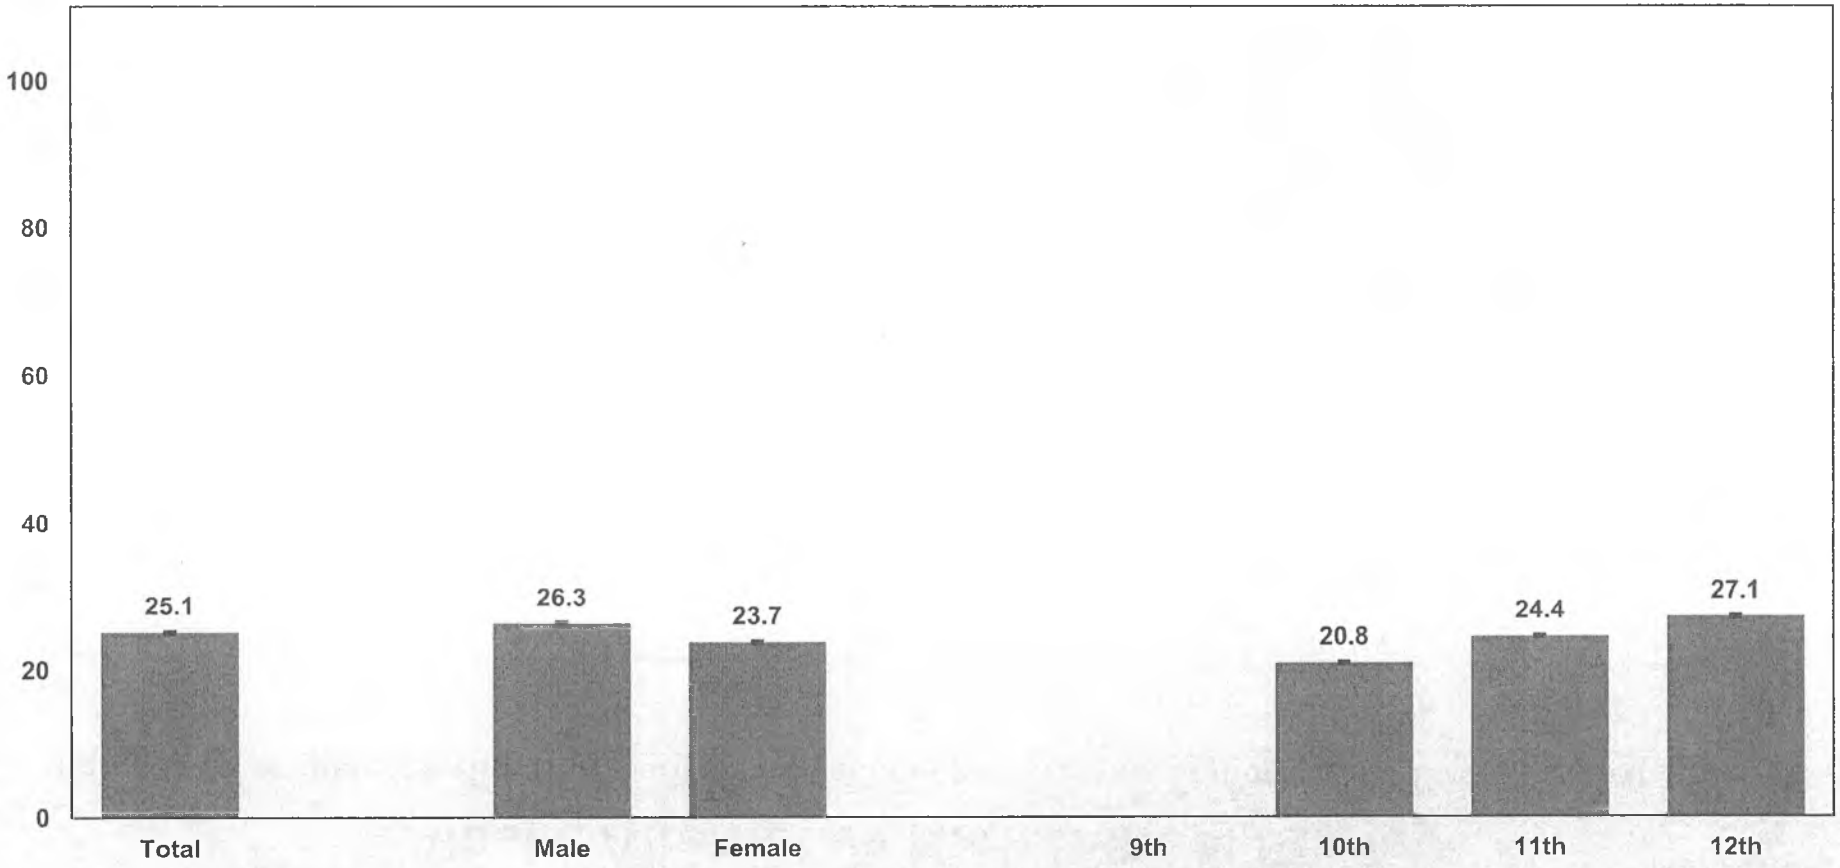
Percentage of students who used any form of cocaine, including powder, crack, or freebase one or more times during their life



Q50 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

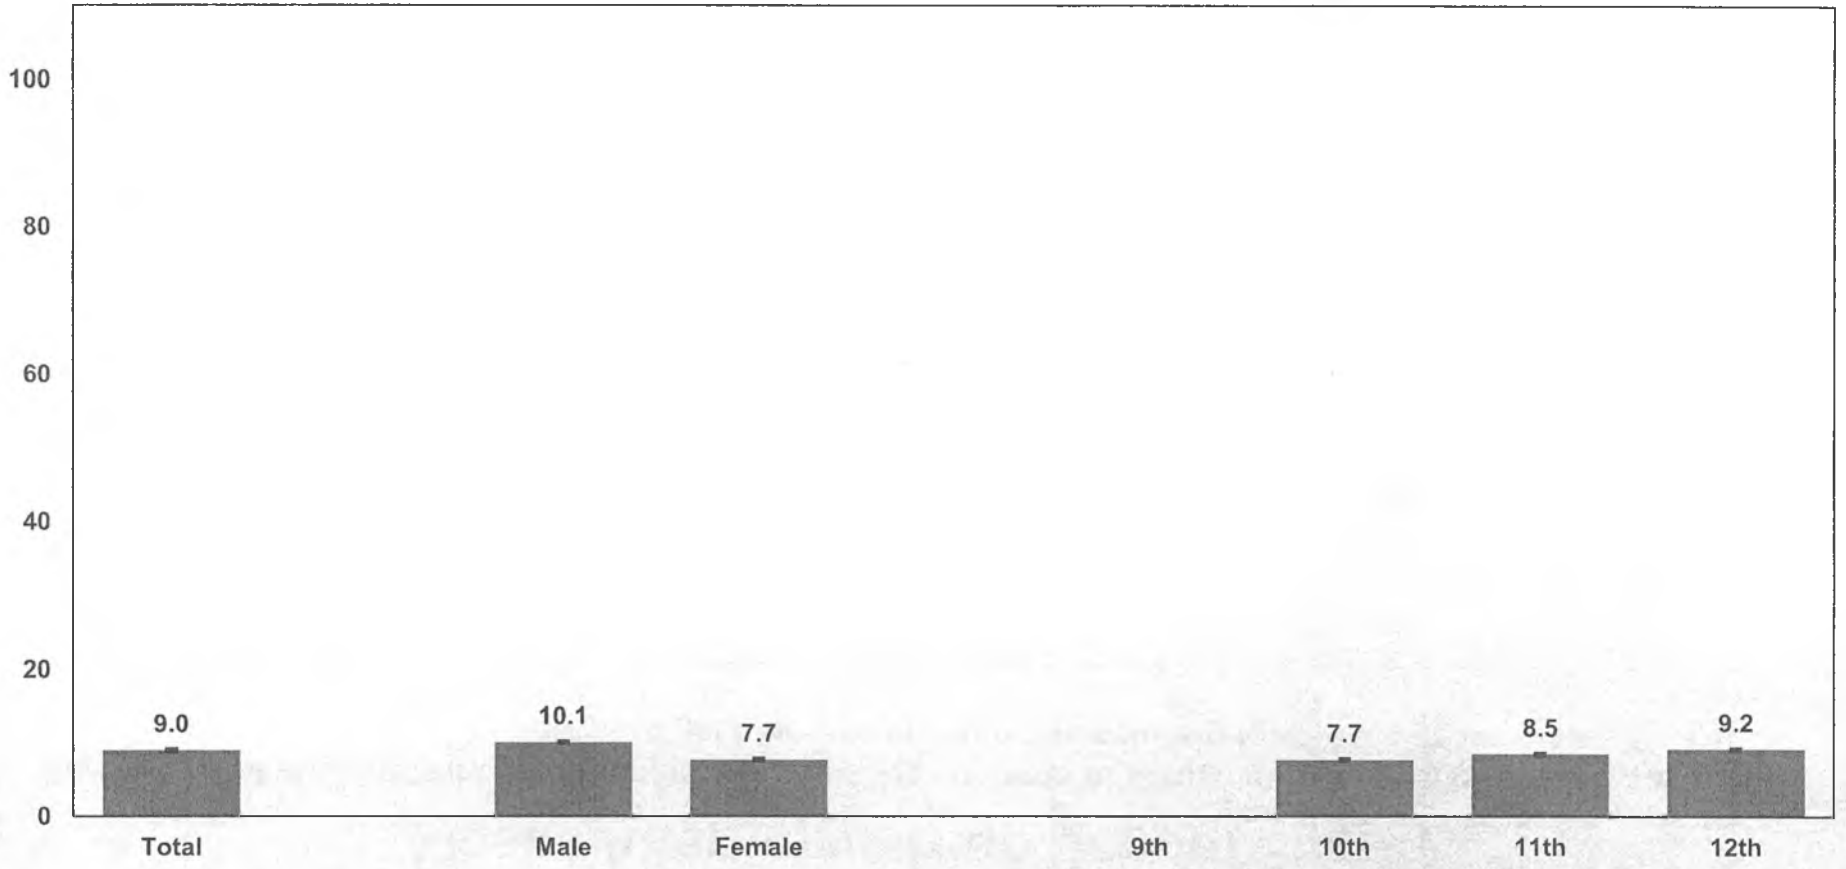
Percentage of students who used any form of cocaine, including powder, crack, or freebase one or more times during the past 30 days



Q51 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

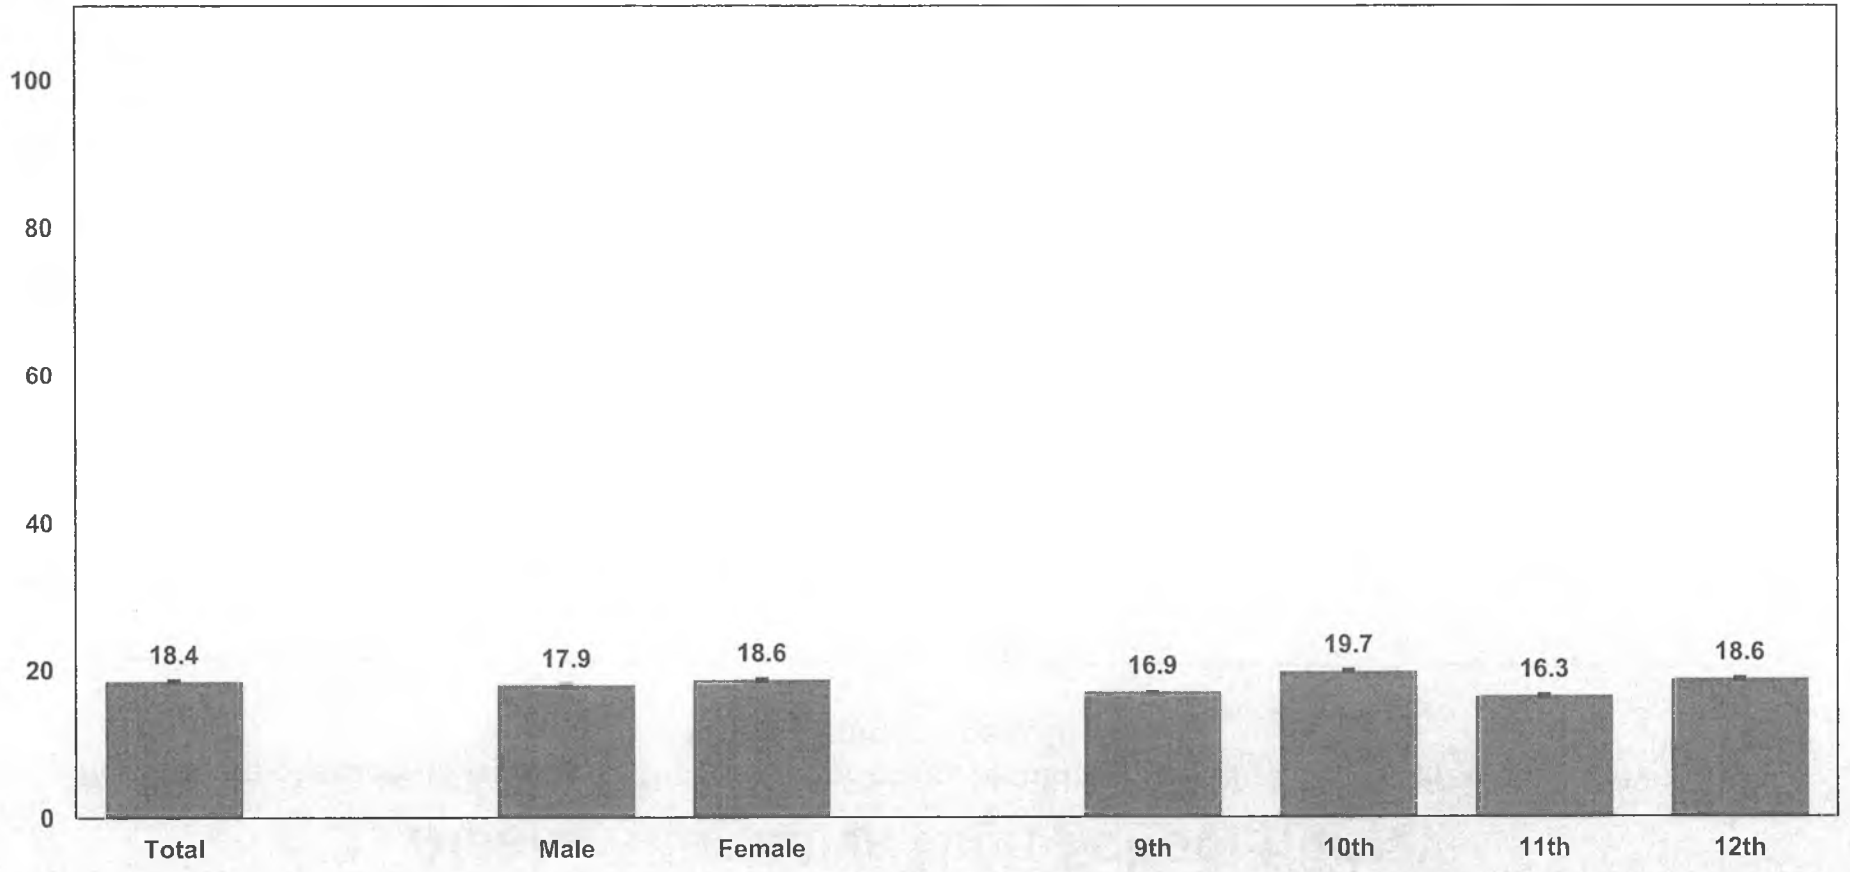
Percentage of students who sniffed glue, breathed the contents of aerosol spray cans, or inhaled any paints or sprays to get high one or more times during their life



Q52 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

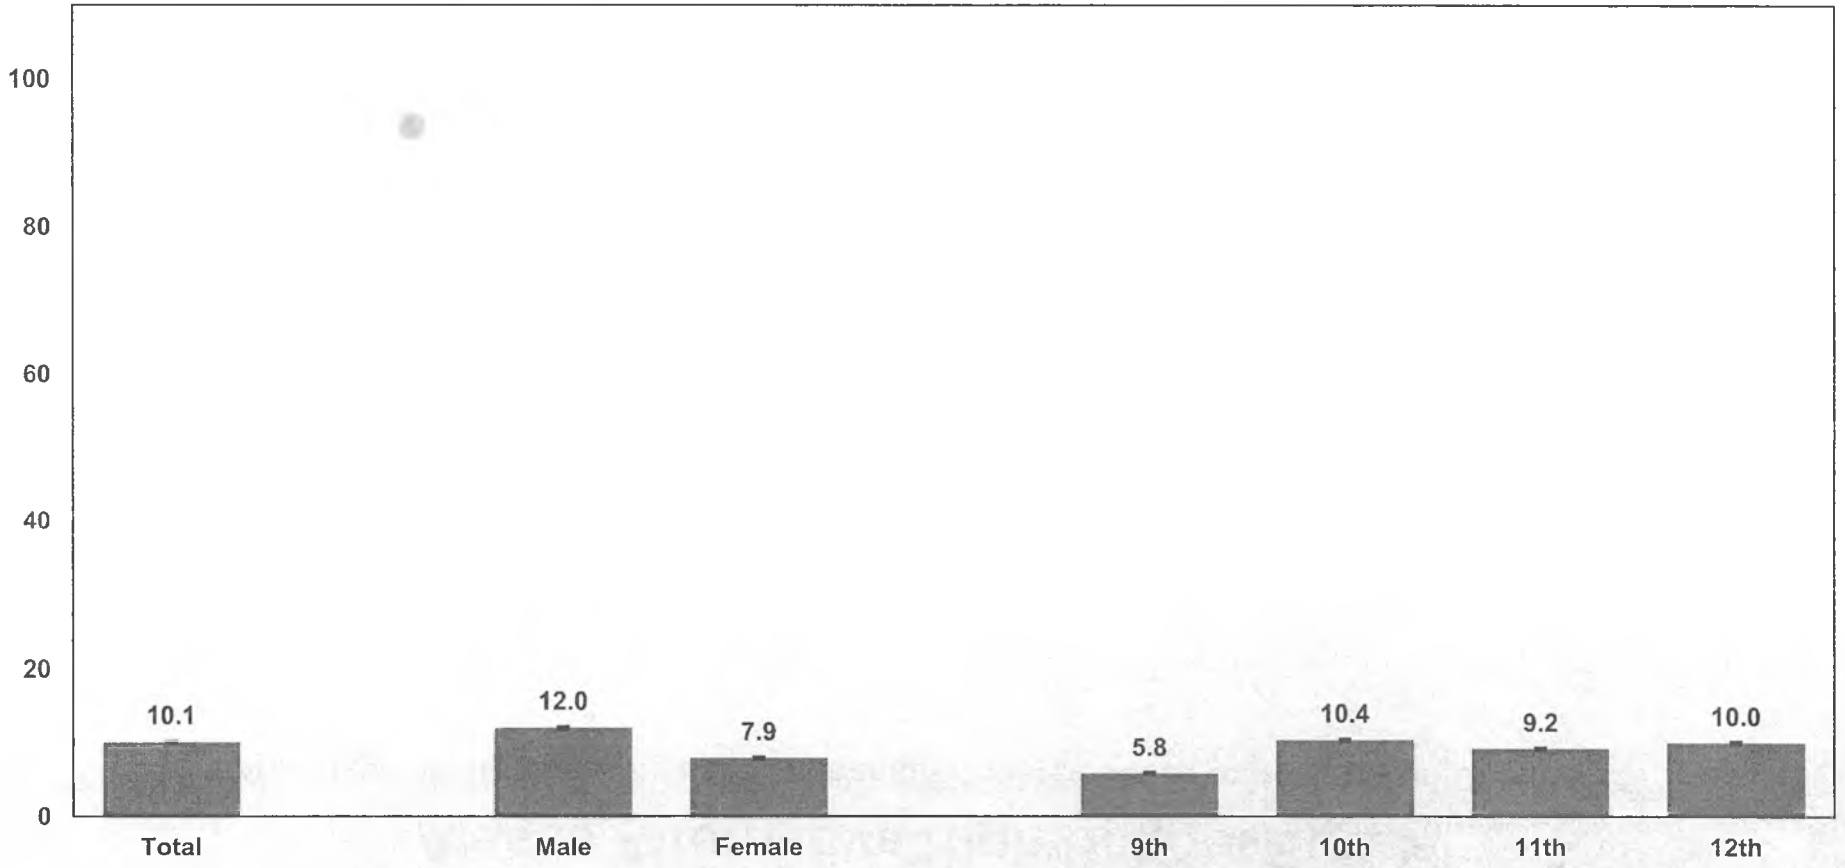
Percentage of students who used heroin one or more times during their life



Q53 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

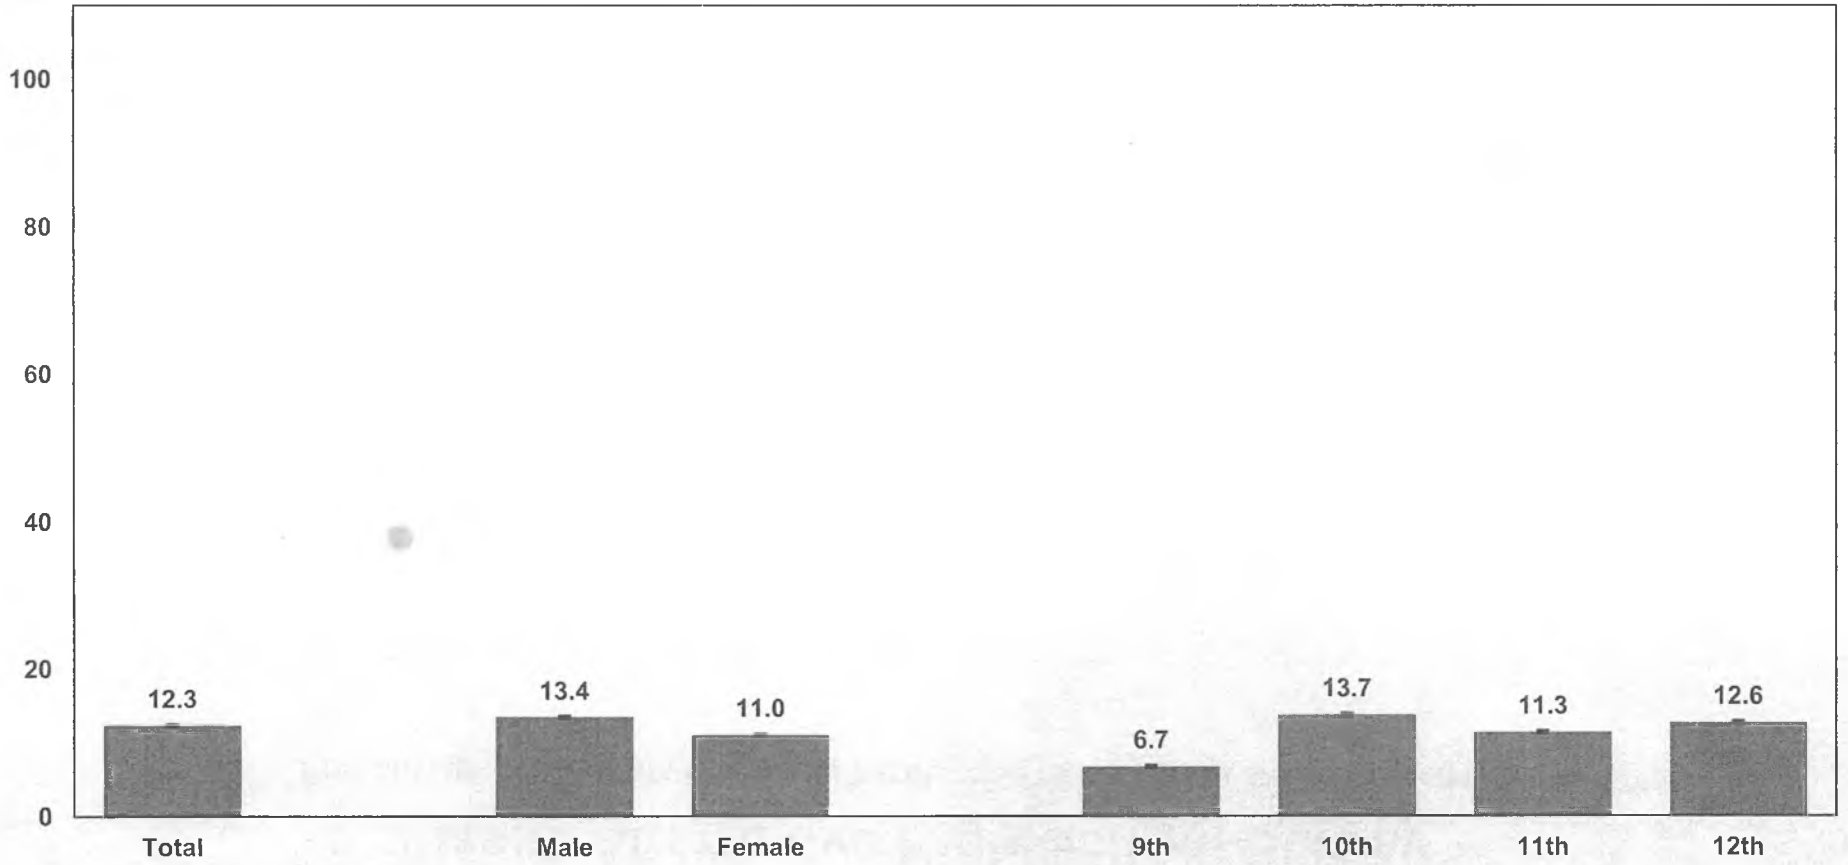
Percentage of students who used methamphetamines one or more times during their life



Q54 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

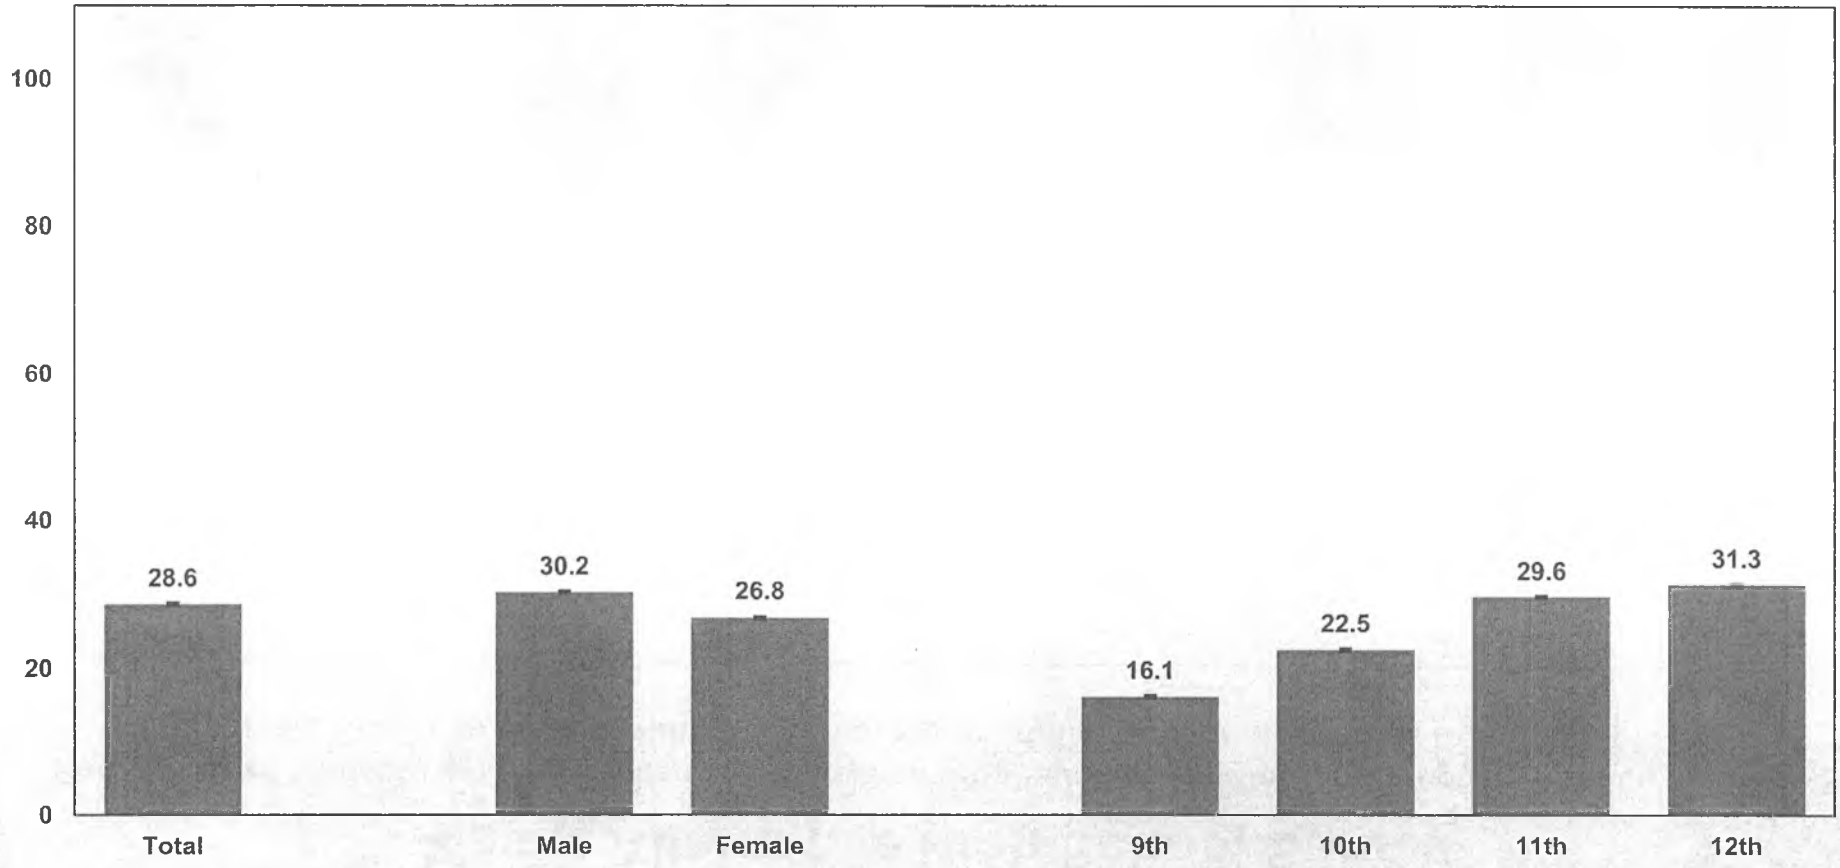
Percentage of students who used ecstasy one or more times during their life



Q55 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

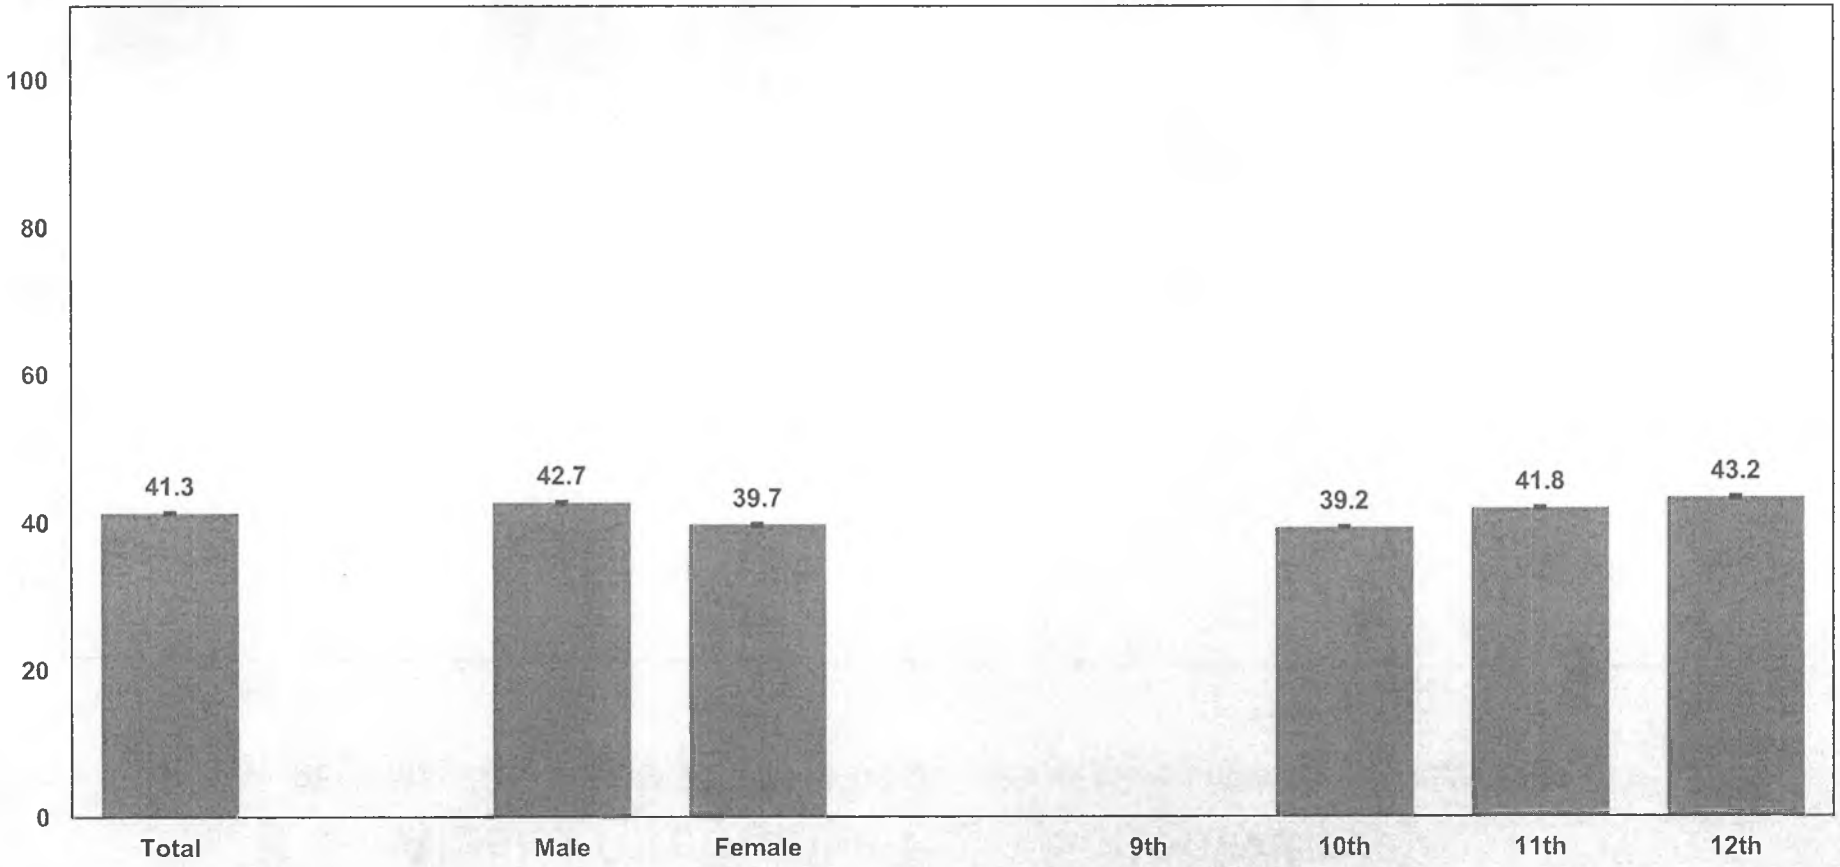
Percentage of students who have taken a prescription drug (such as OxyContin, Percocet, Vicodin, codeine, Adderall, Ritalin, or Xanax) without a doctor's prescription one or more times during their life



Q57 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

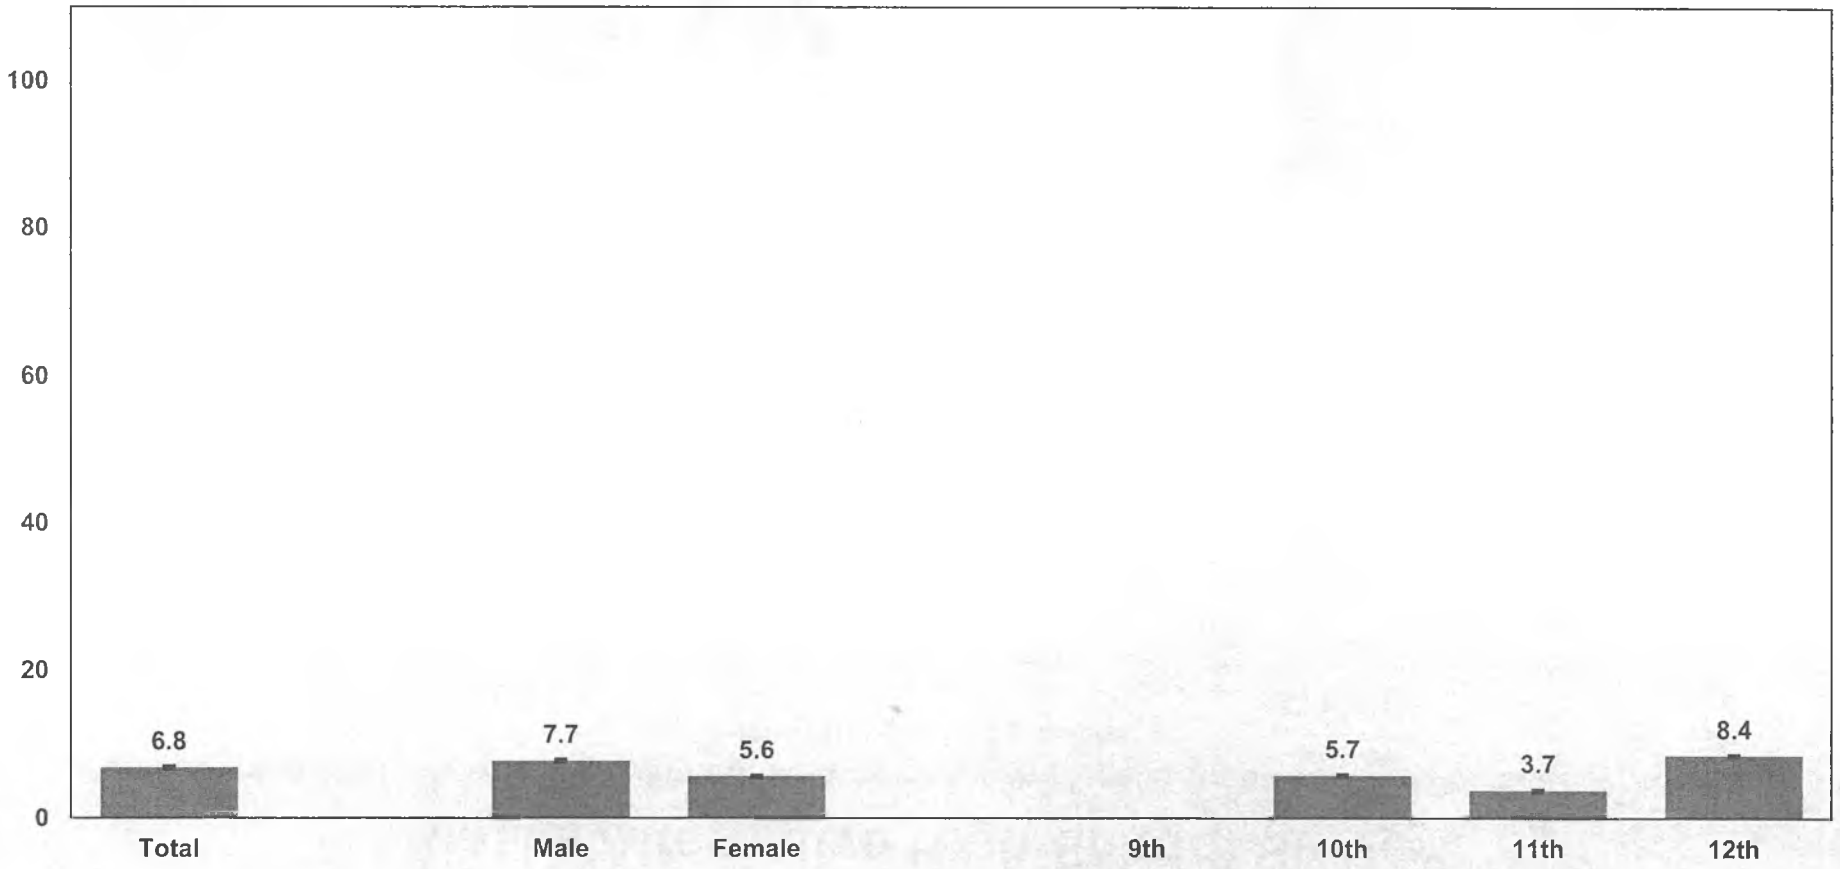
Percentage of students who used a needle to inject any illegal drug into their body one or more times during their life



Q58 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

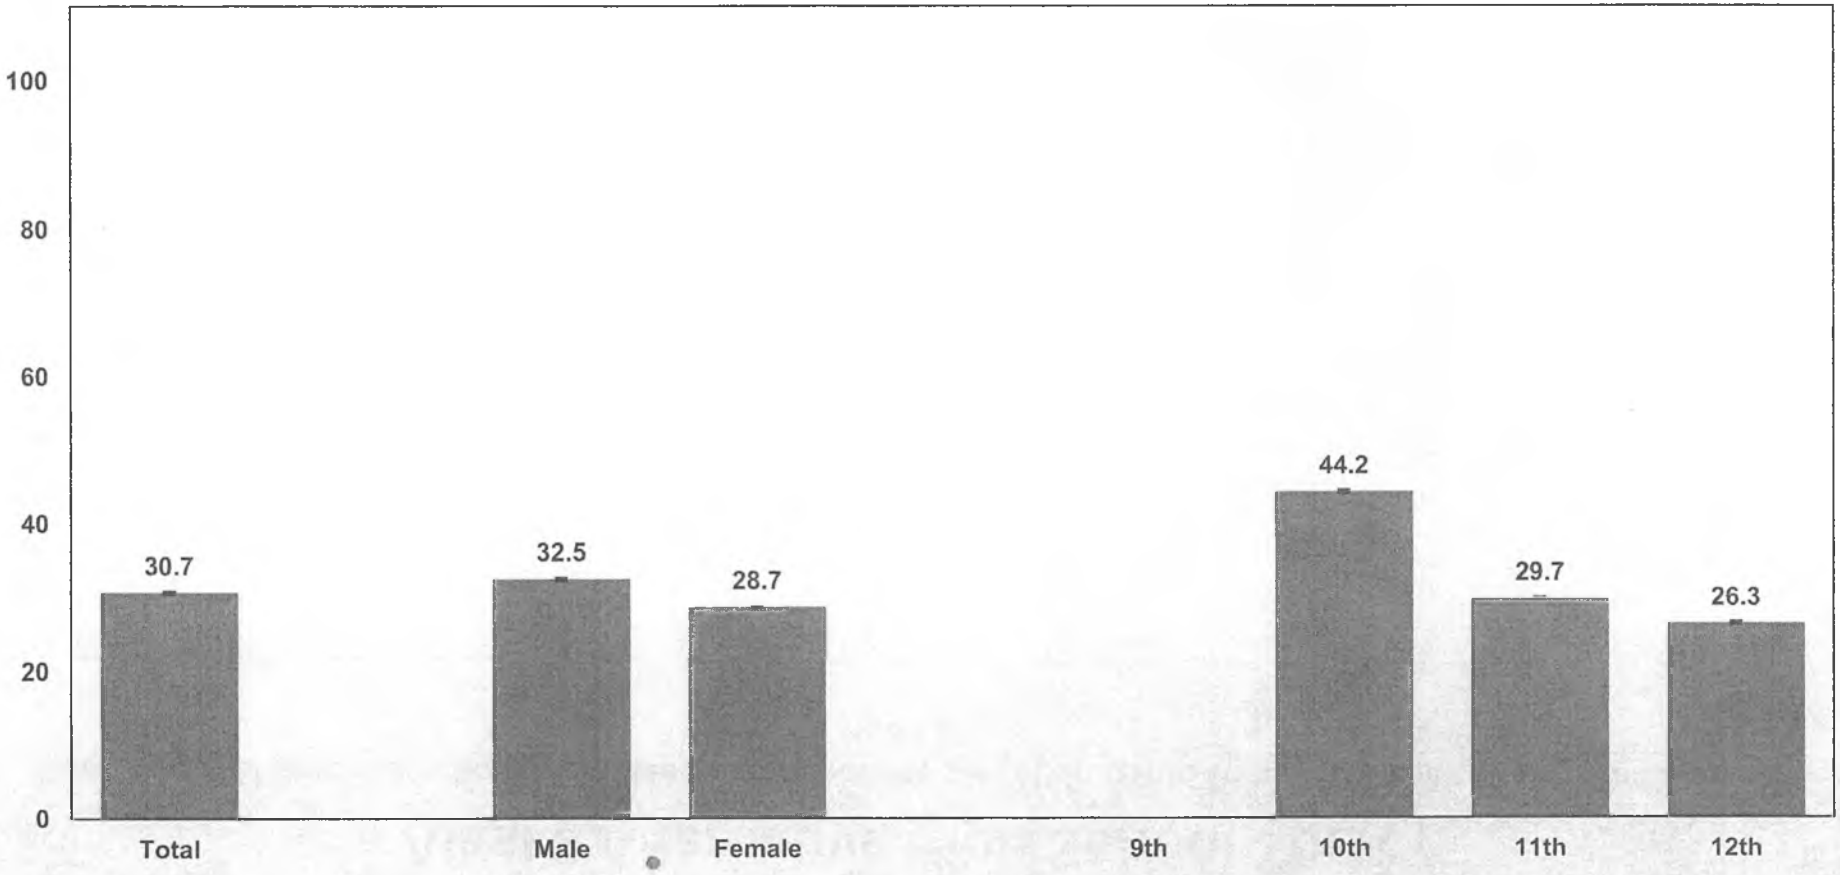
Percentage of students who were offered, sold, or given an illegal drug by someone on school property during the past 12 months



Q59 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

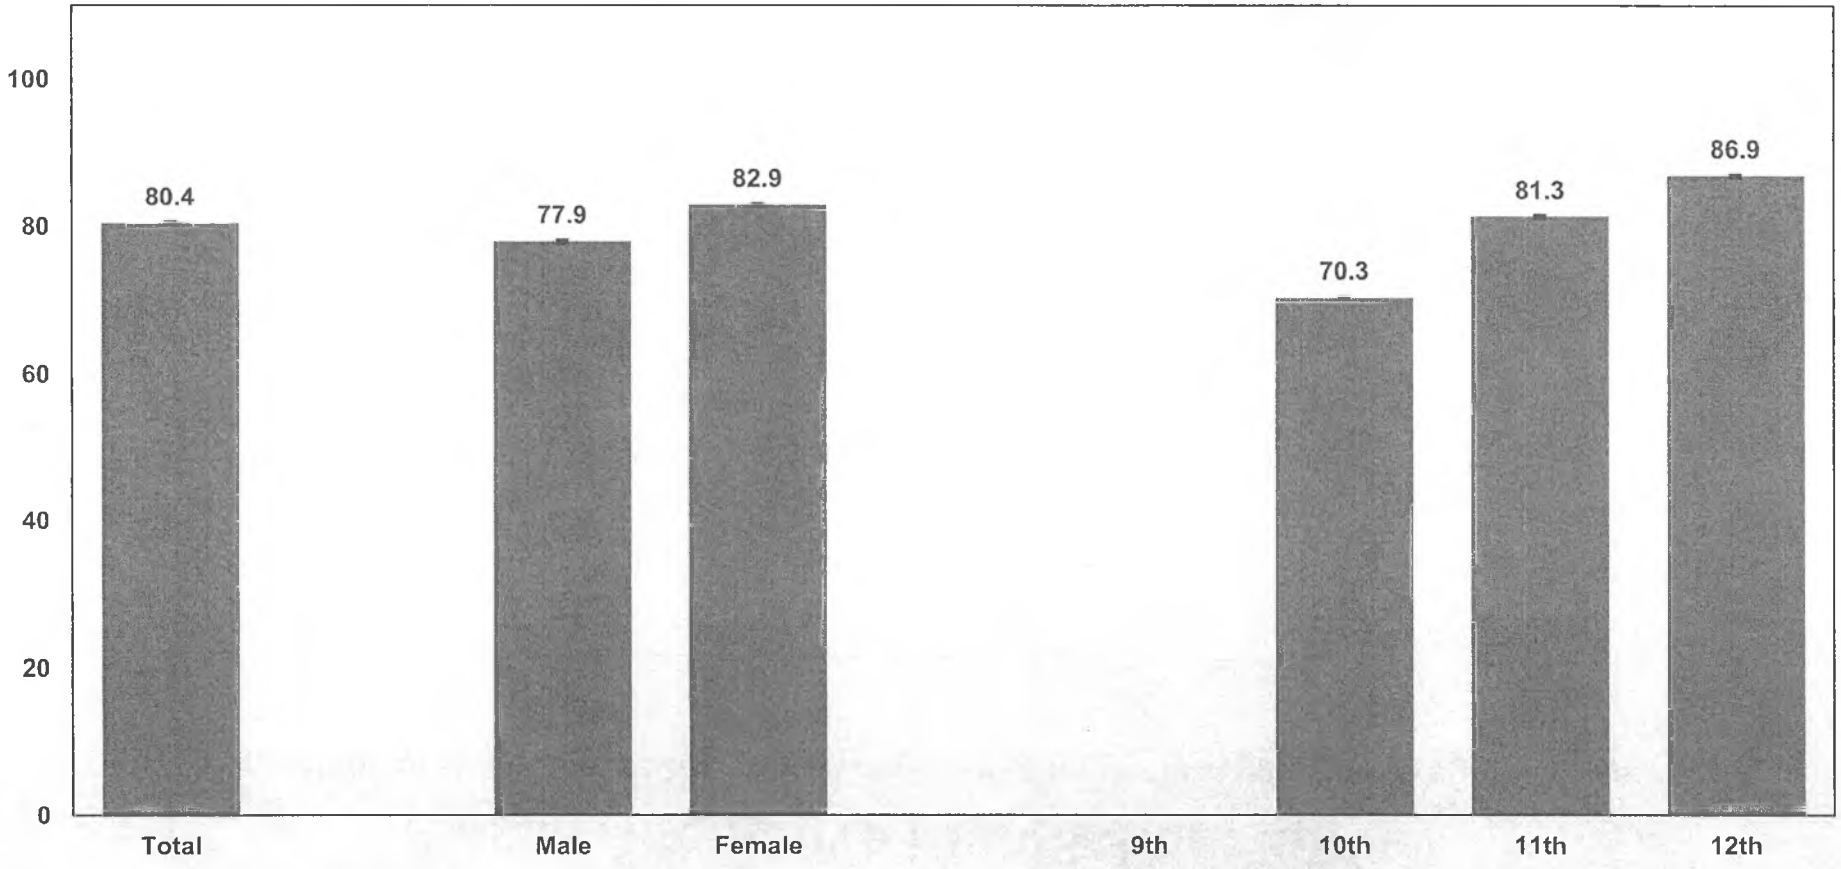
Percentage of students who ever had sexual intercourse



Q60 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

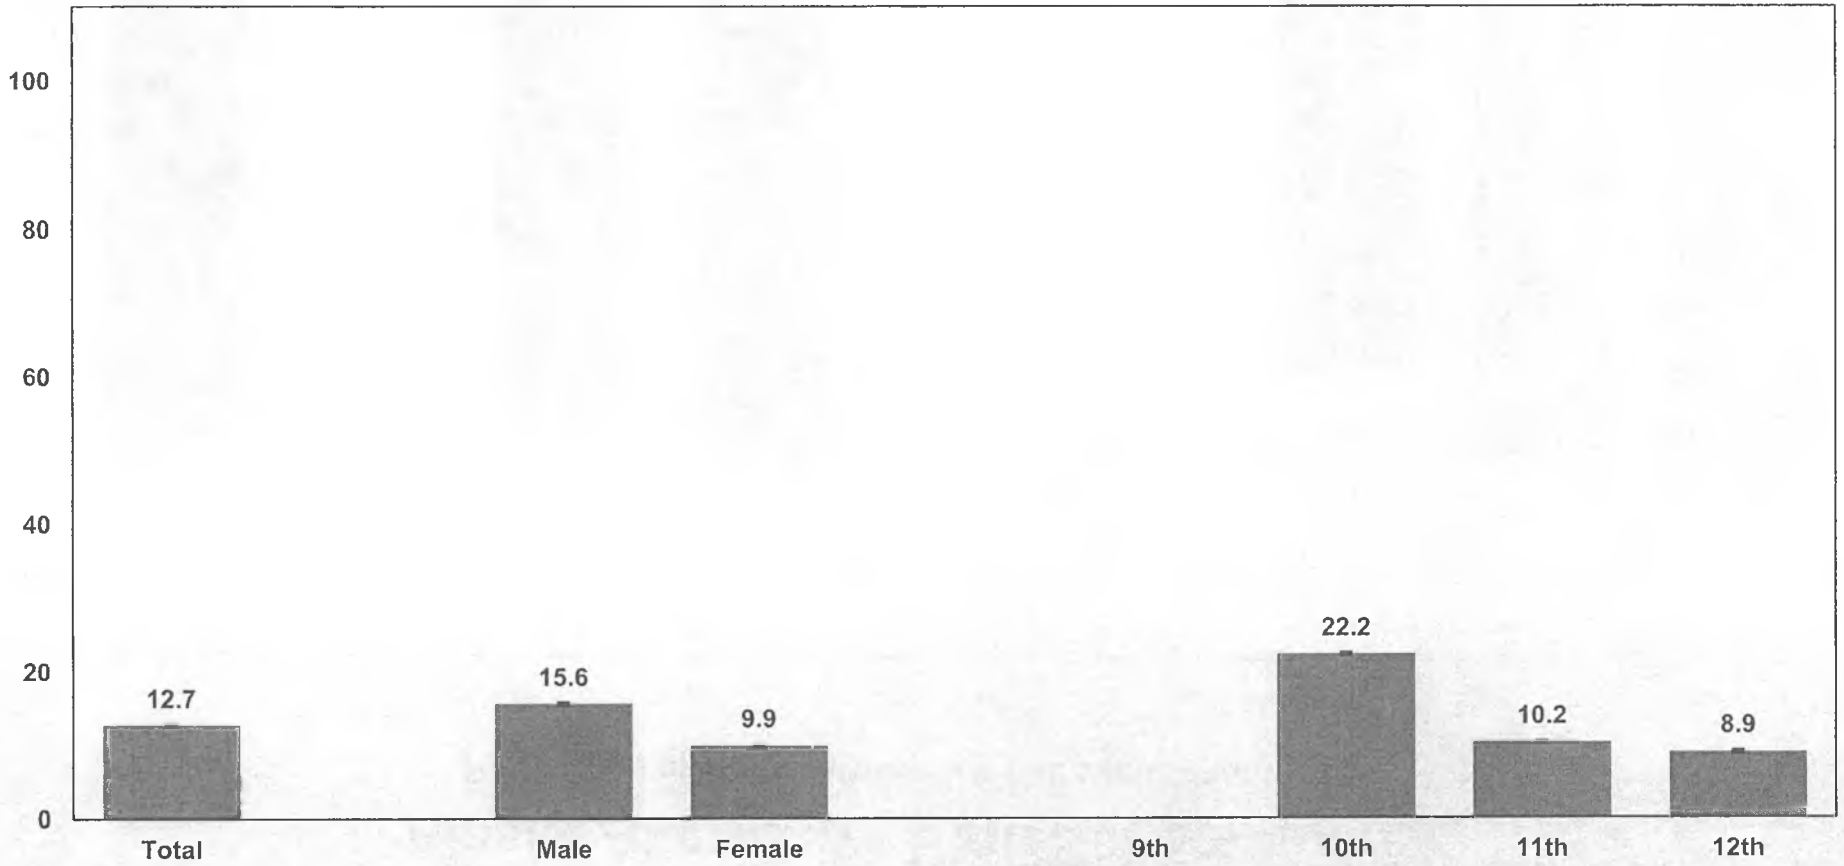
Percentage of students who had sexual intercourse for the first time before age 13 years



Q61 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

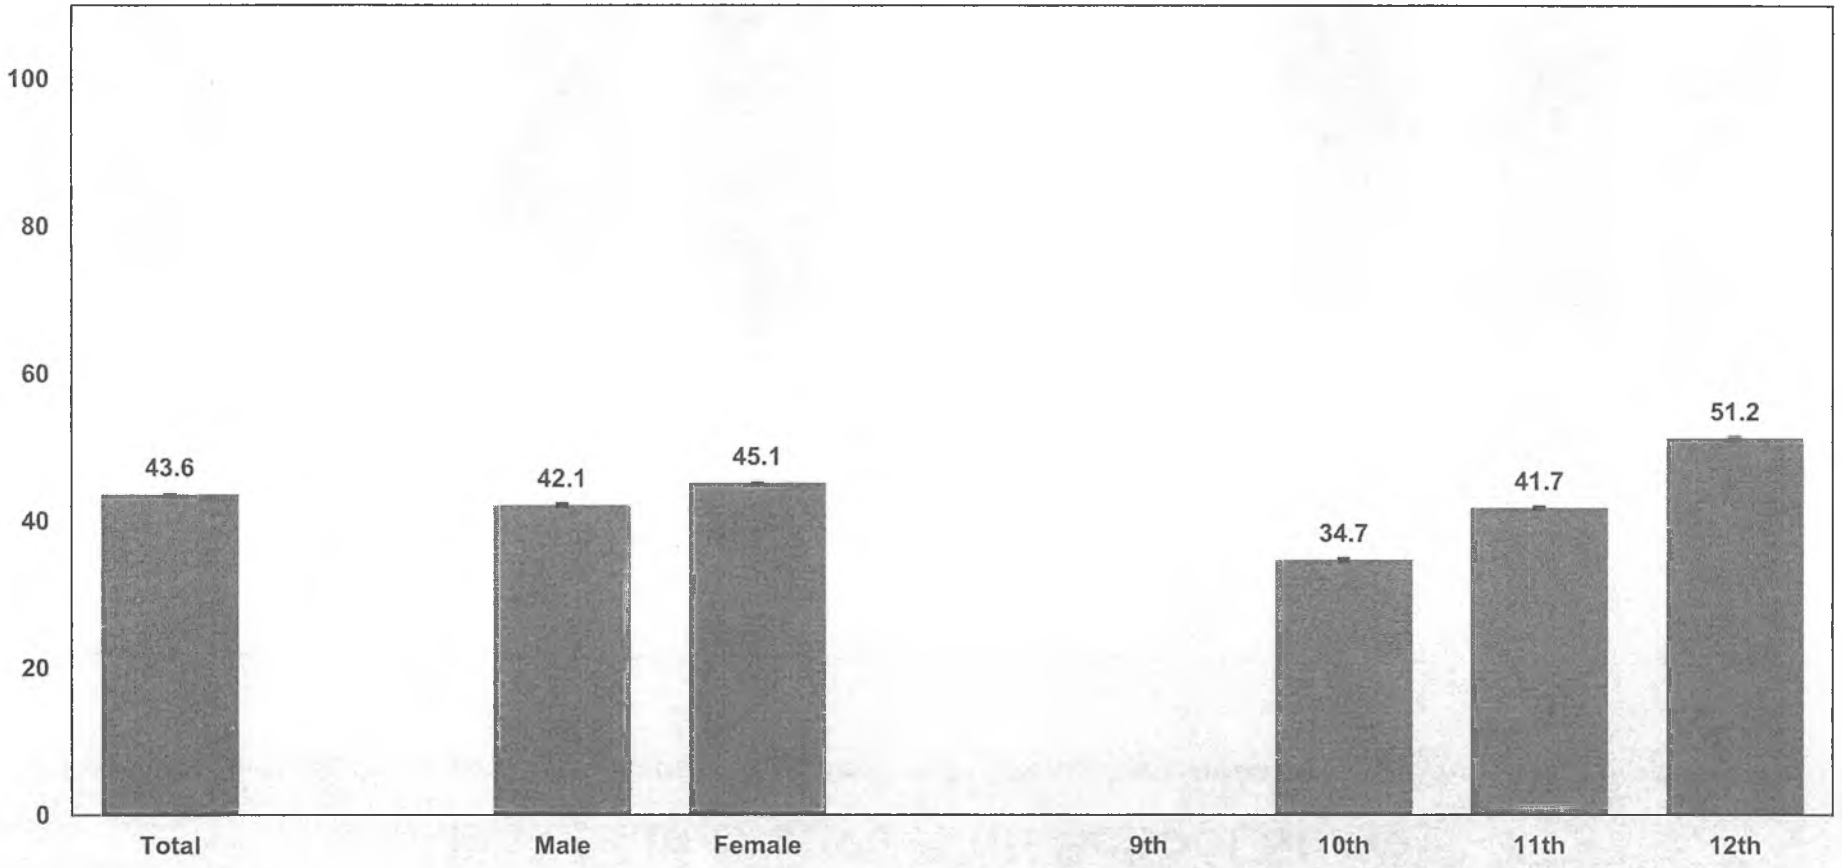
Percentage of students who had sexual intercourse with four or more people during their life



Q62 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

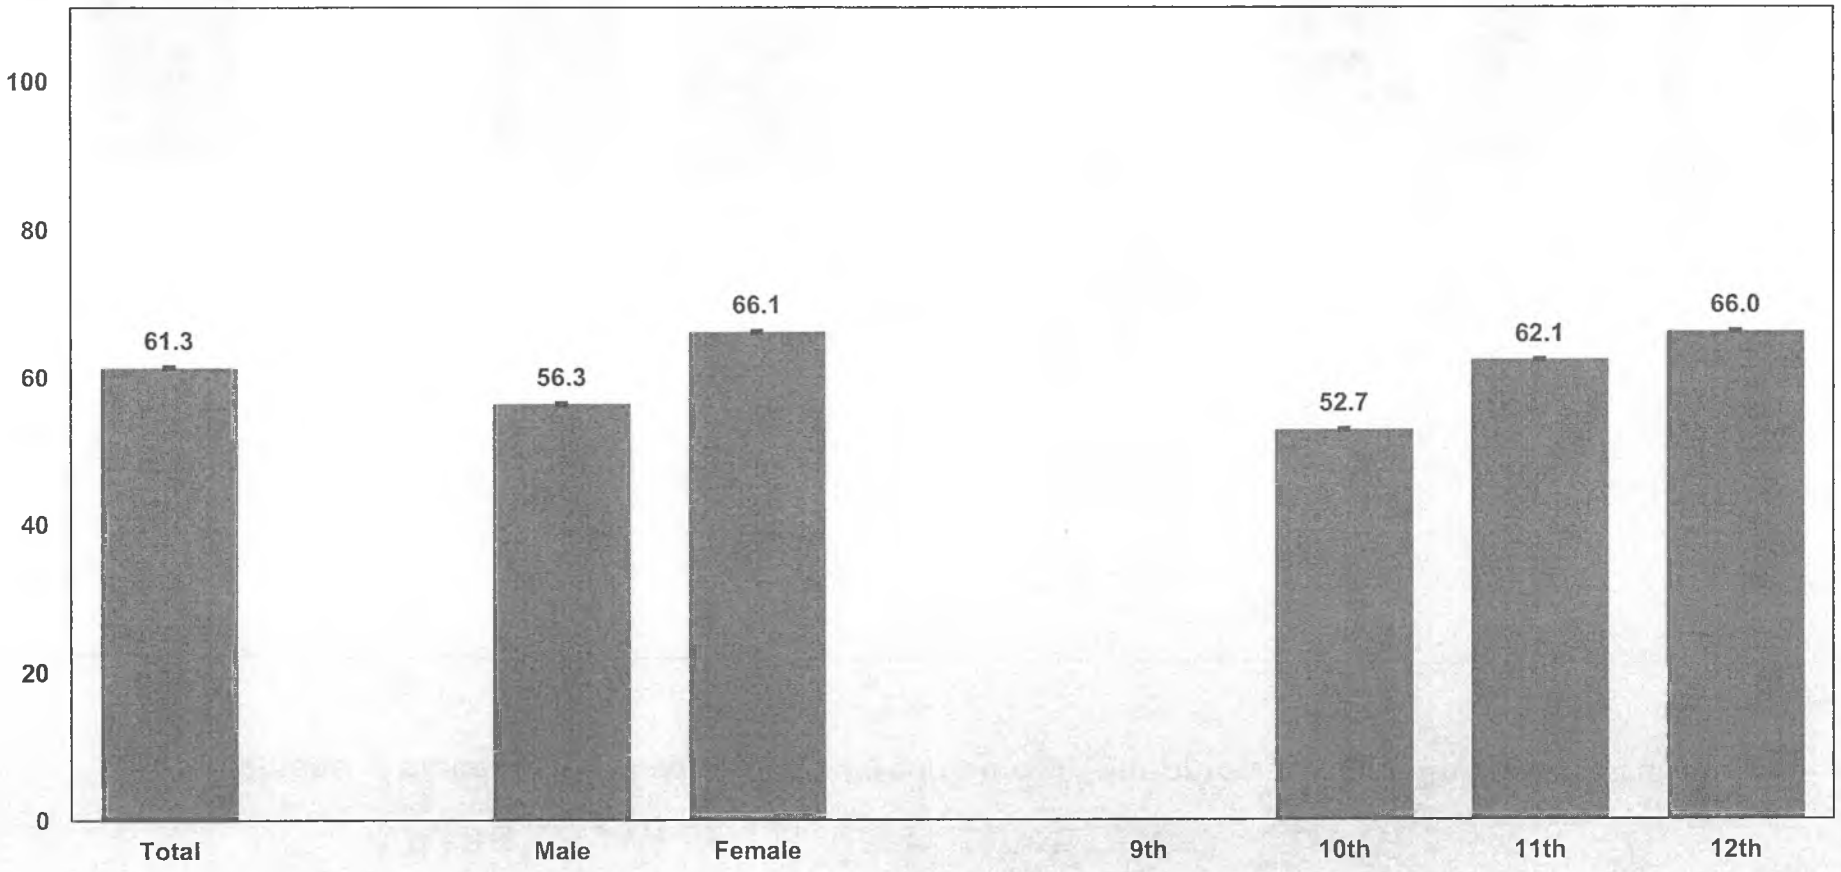
Percentage of students who had sexual intercourse with one or more people during the past three months



Q63 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

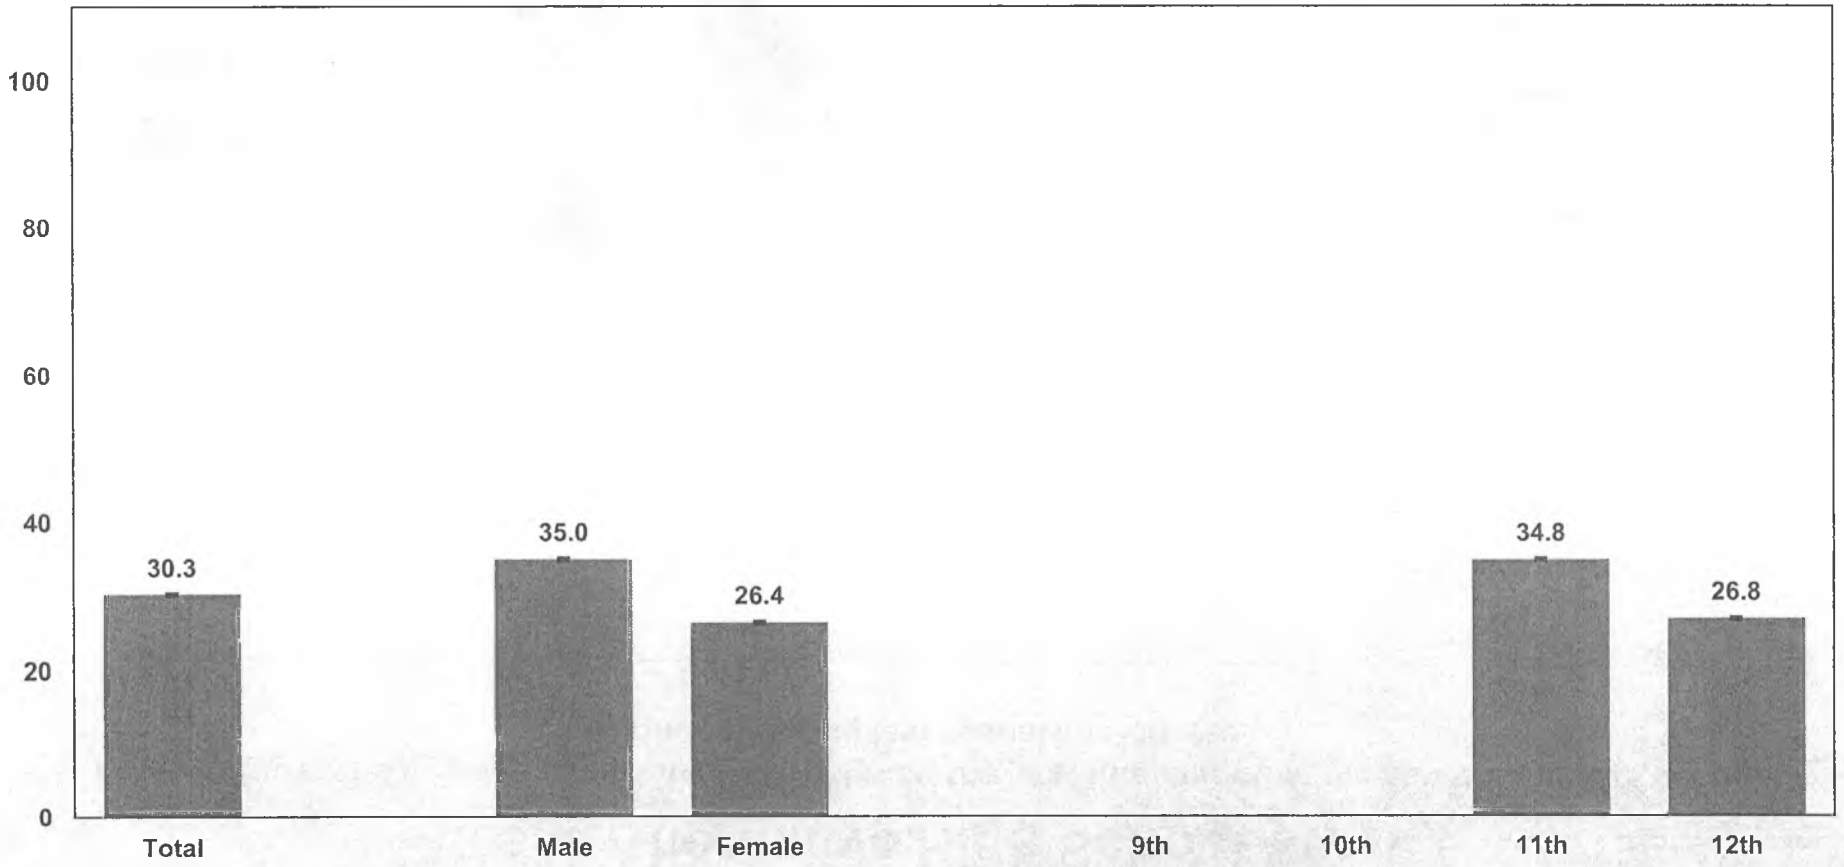
Among students who had sexual intercourse during the past three months, the percentage who drank alcohol or used drugs before last sexual intercourse



Q64 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

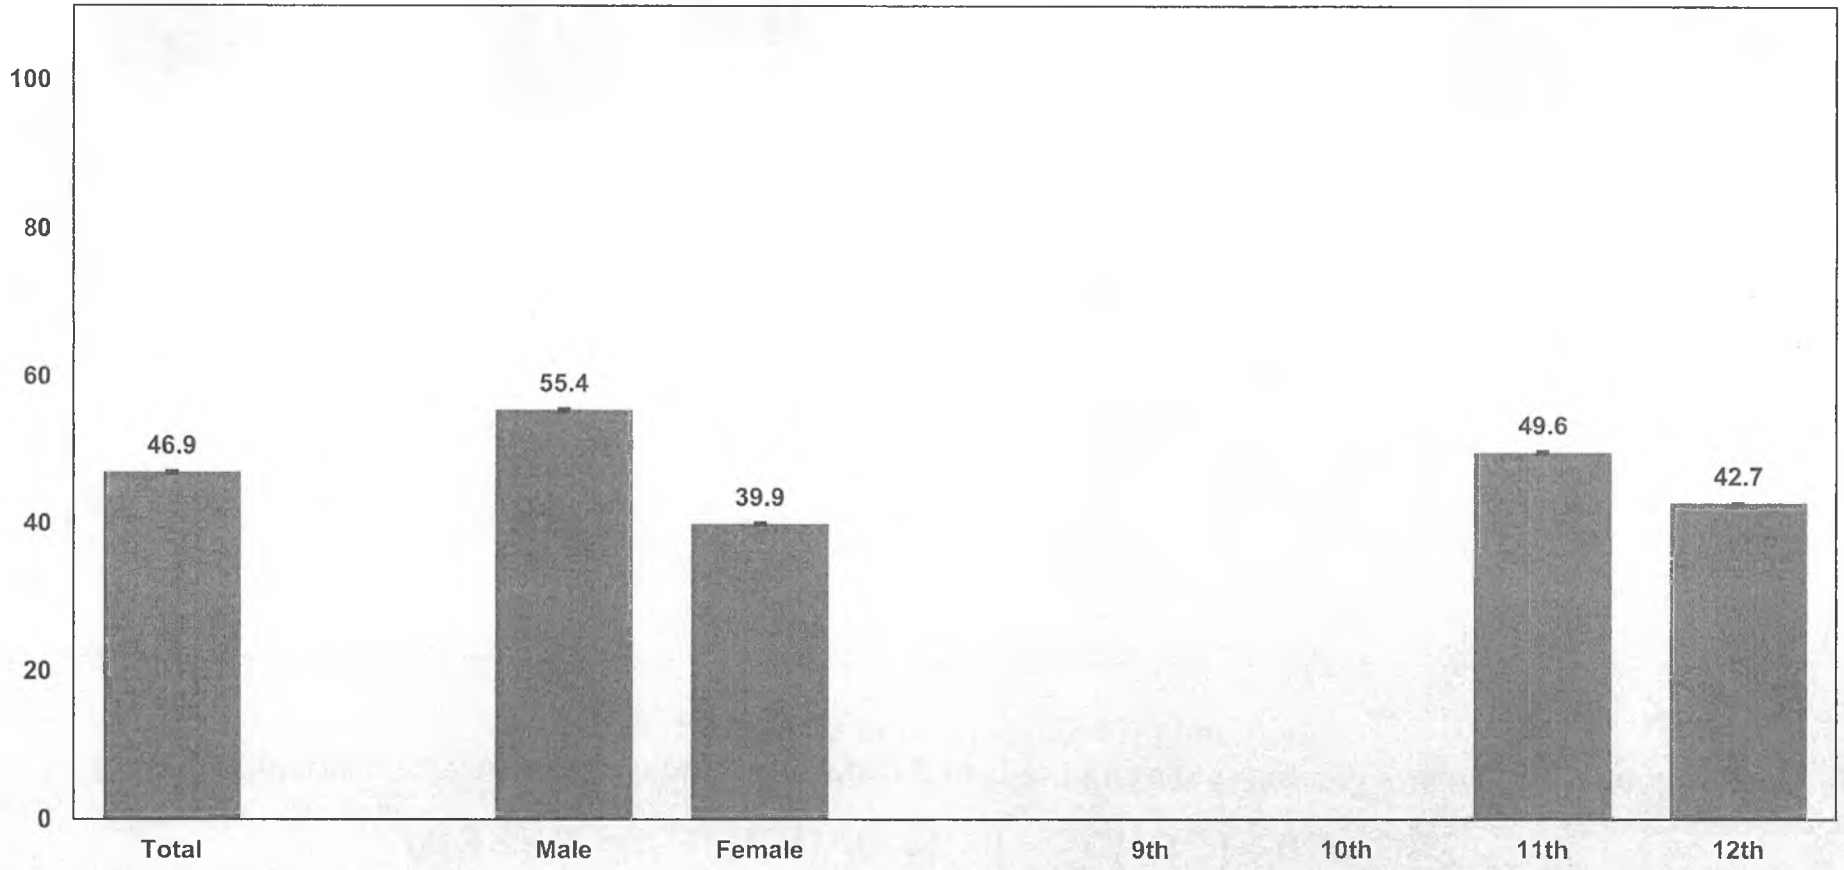
Among students who had sexual intercourse during the past three months, the percentage who used a condom during last sexual intercourse



Q65 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

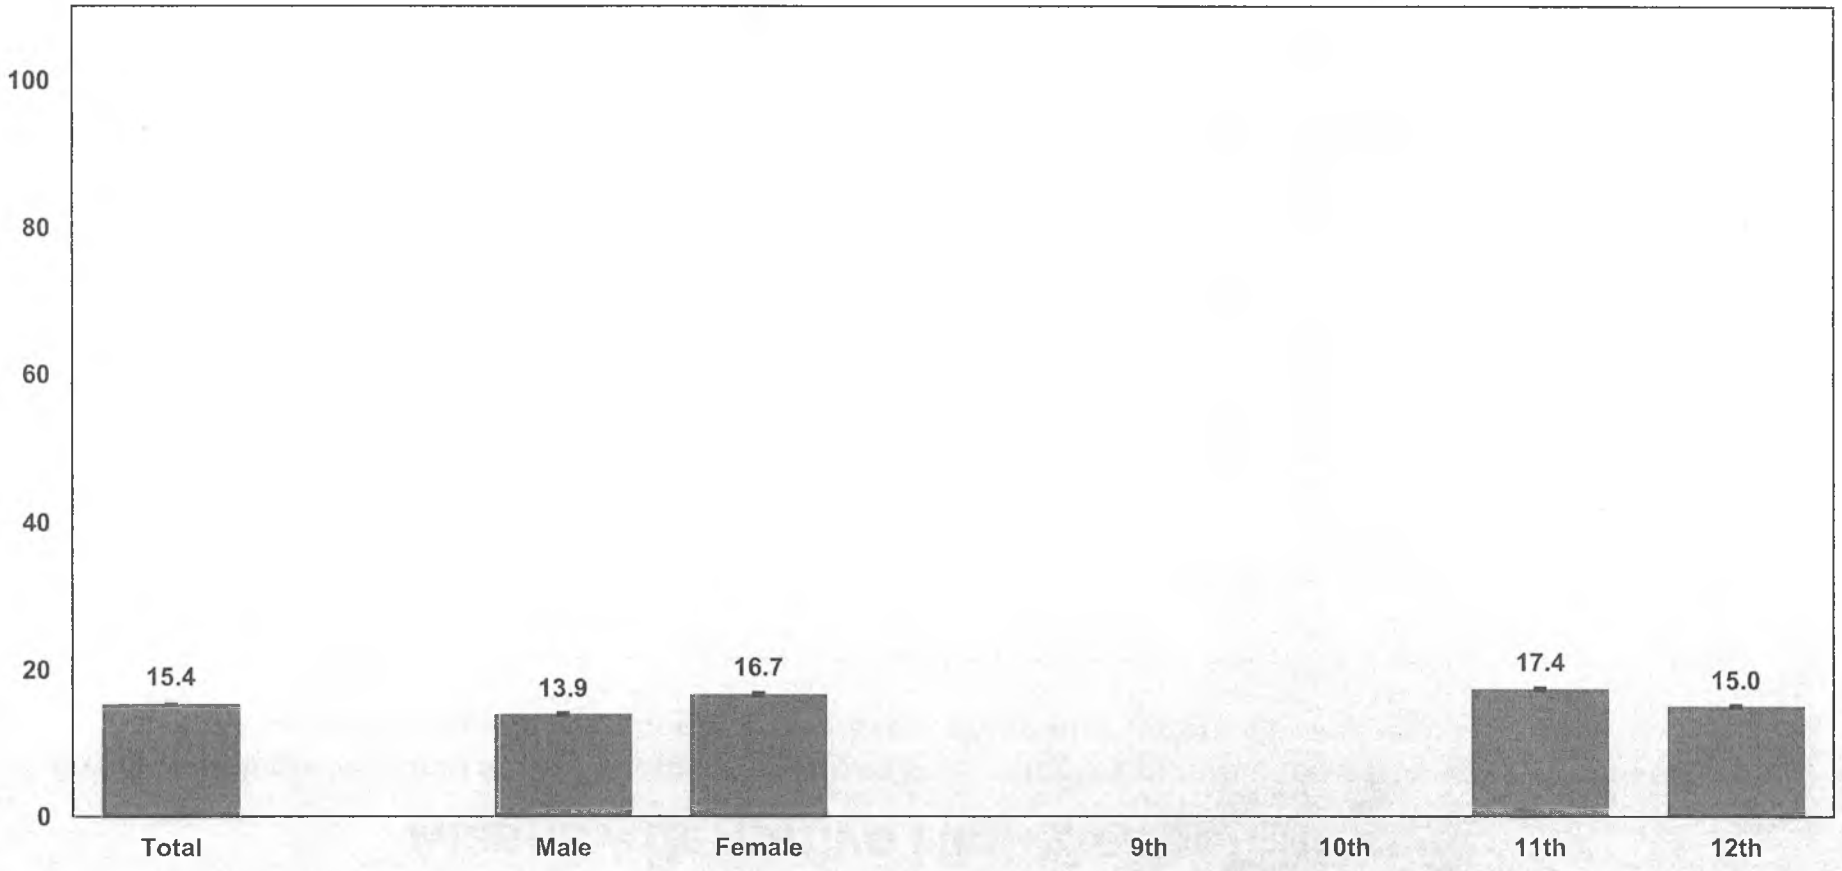
Among students who had sexual intercourse during the past three months, the percentage who used birth control pills to prevent pregnancy before last sexual intercourse



Q66 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

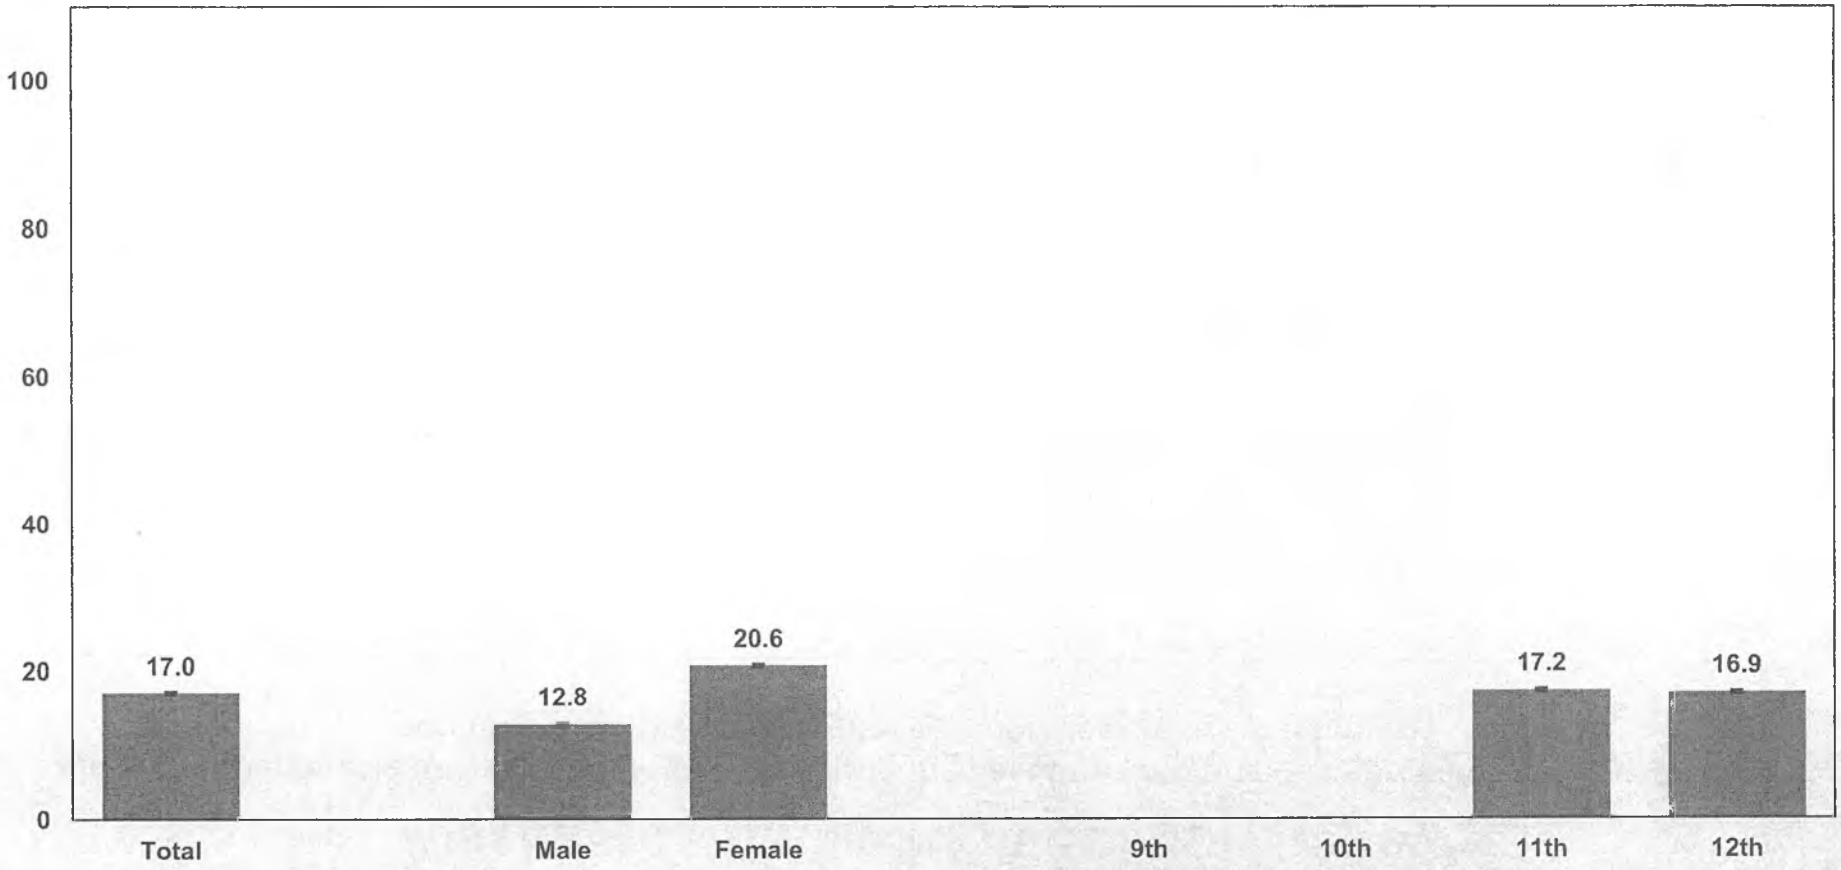
Among students who had sexual intercourse during the past three months, the percentage who used Depo-Provera (injectable birth control) to prevent pregnancy before last sexual intercourse



QNDEPO - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

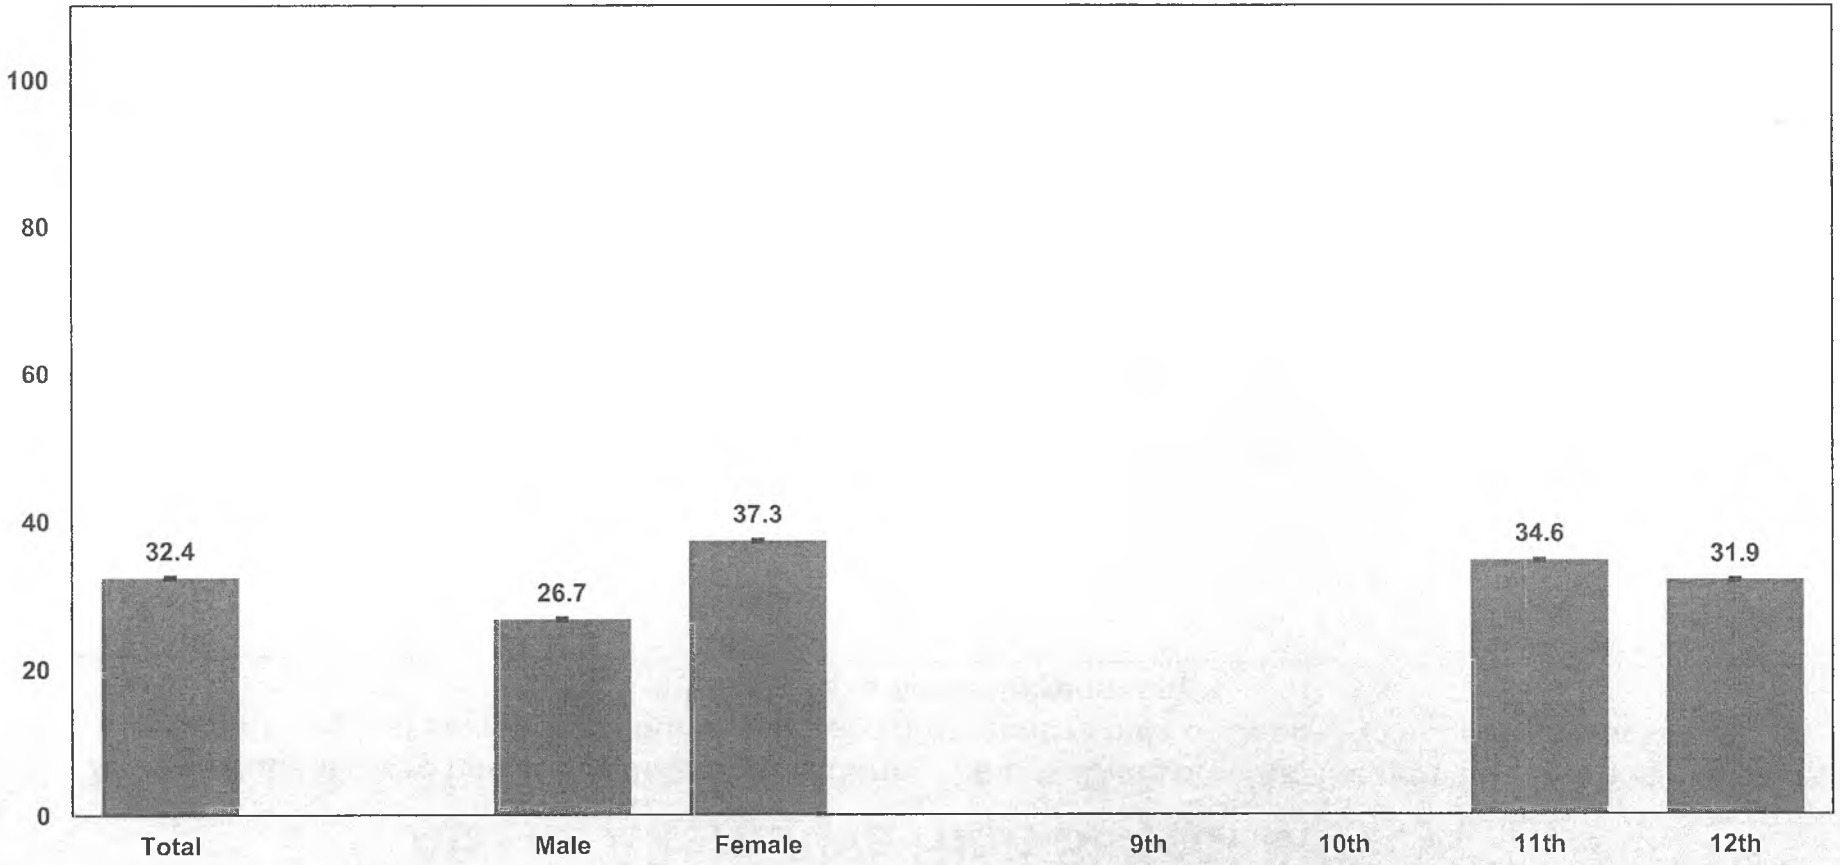
Among students who had sexual intercourse during the past three months, the percentage who used Depo-Provera (injectable birth control) or birth control pills to prevent pregnancy before last sexual intercourse



QNDEPOPL - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

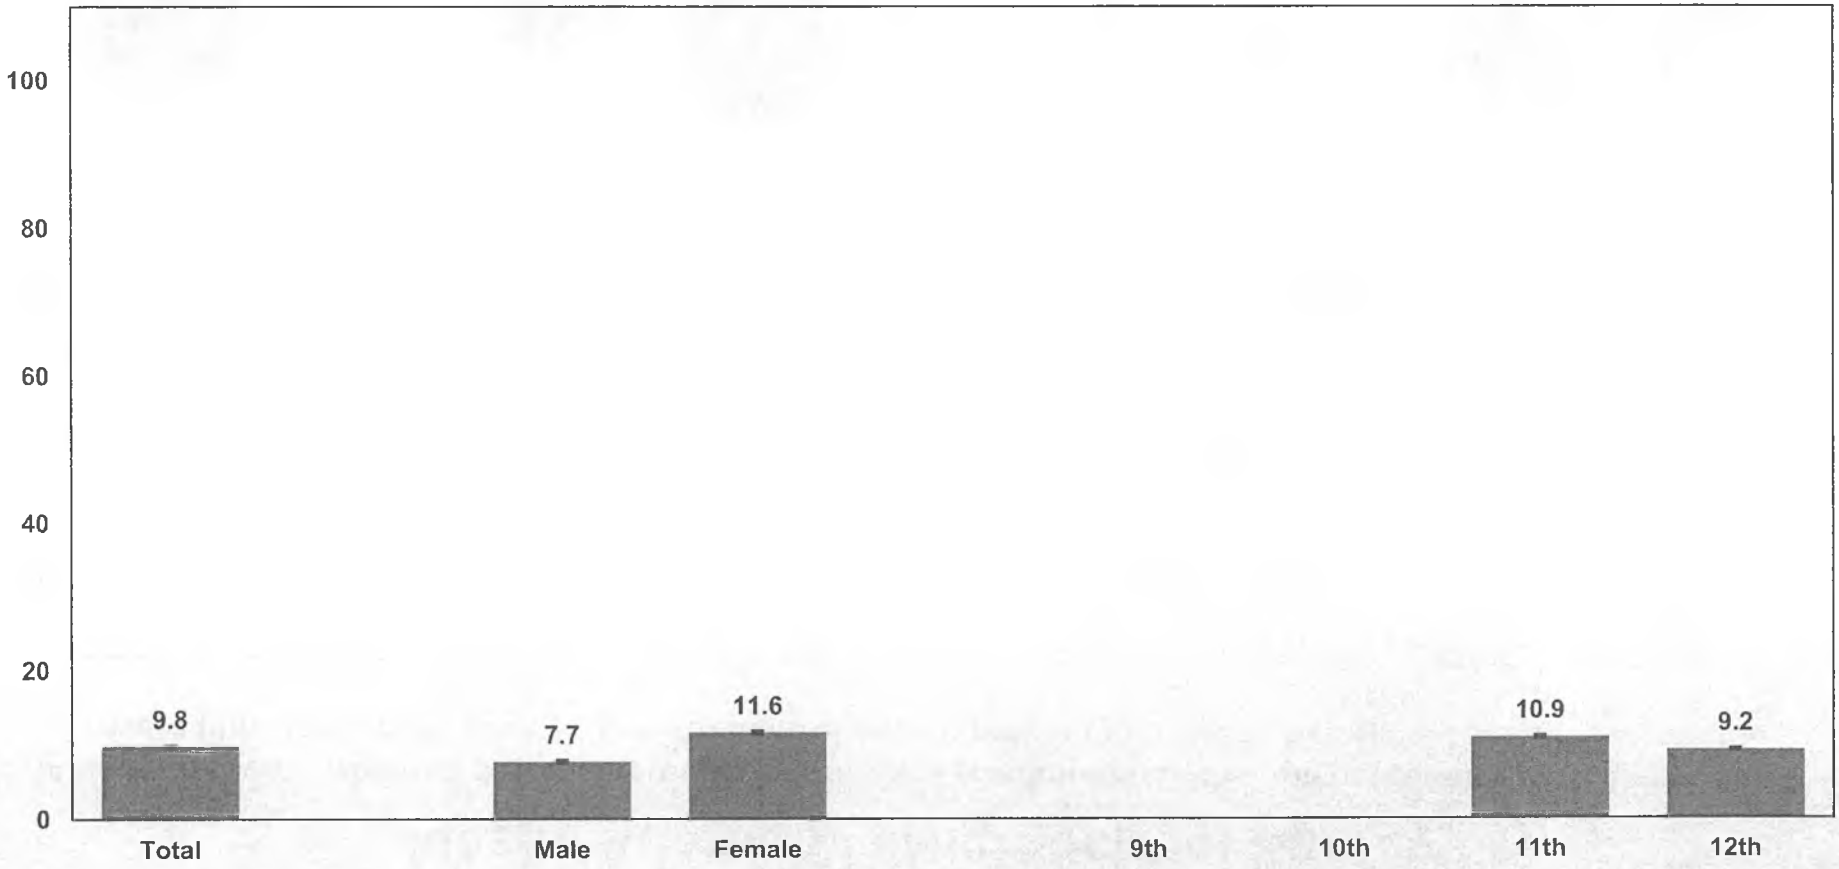
Among students who had sexual intercourse during the past three months, the percentage who used a condom during last sexual intercourse and used birth control pills or Depo-Provera before last sexual intercourse to prevent pregnancy



QNDUAL - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

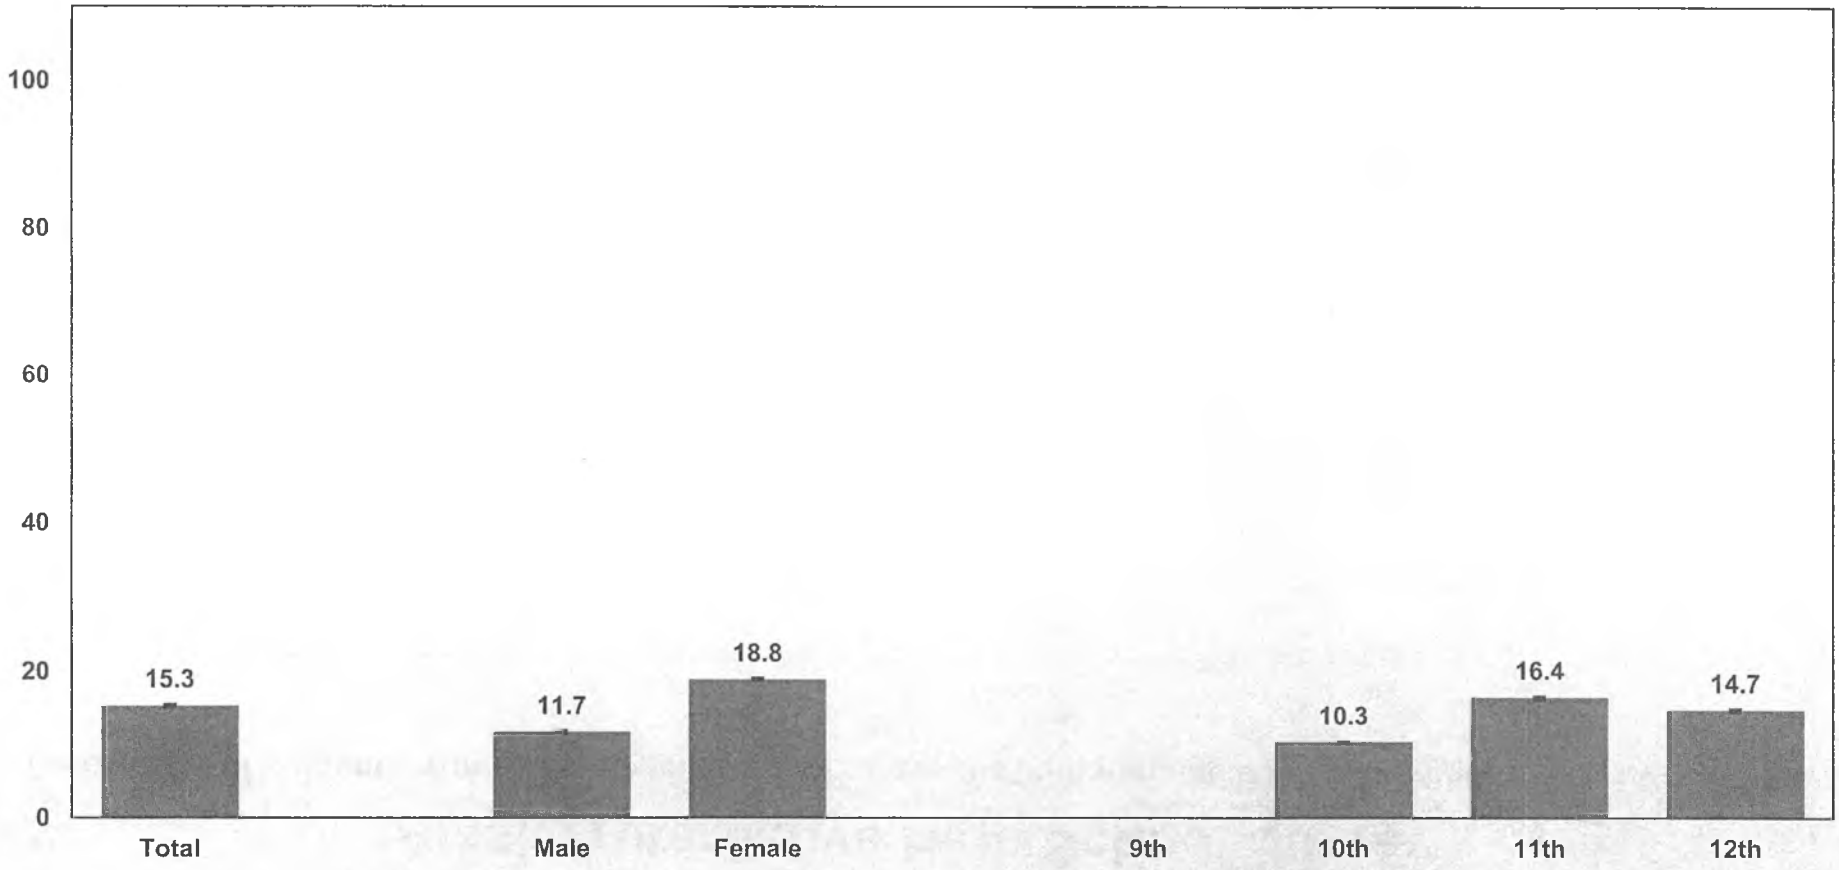
Percentage of students who were overweight (i.e., at or above the 85th percentile but below the 95th percentile for body mass index, by age and sex)**



**QNOWT - Weighted Data - Based on reference data from the 2000 CDC Growth Charts.
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

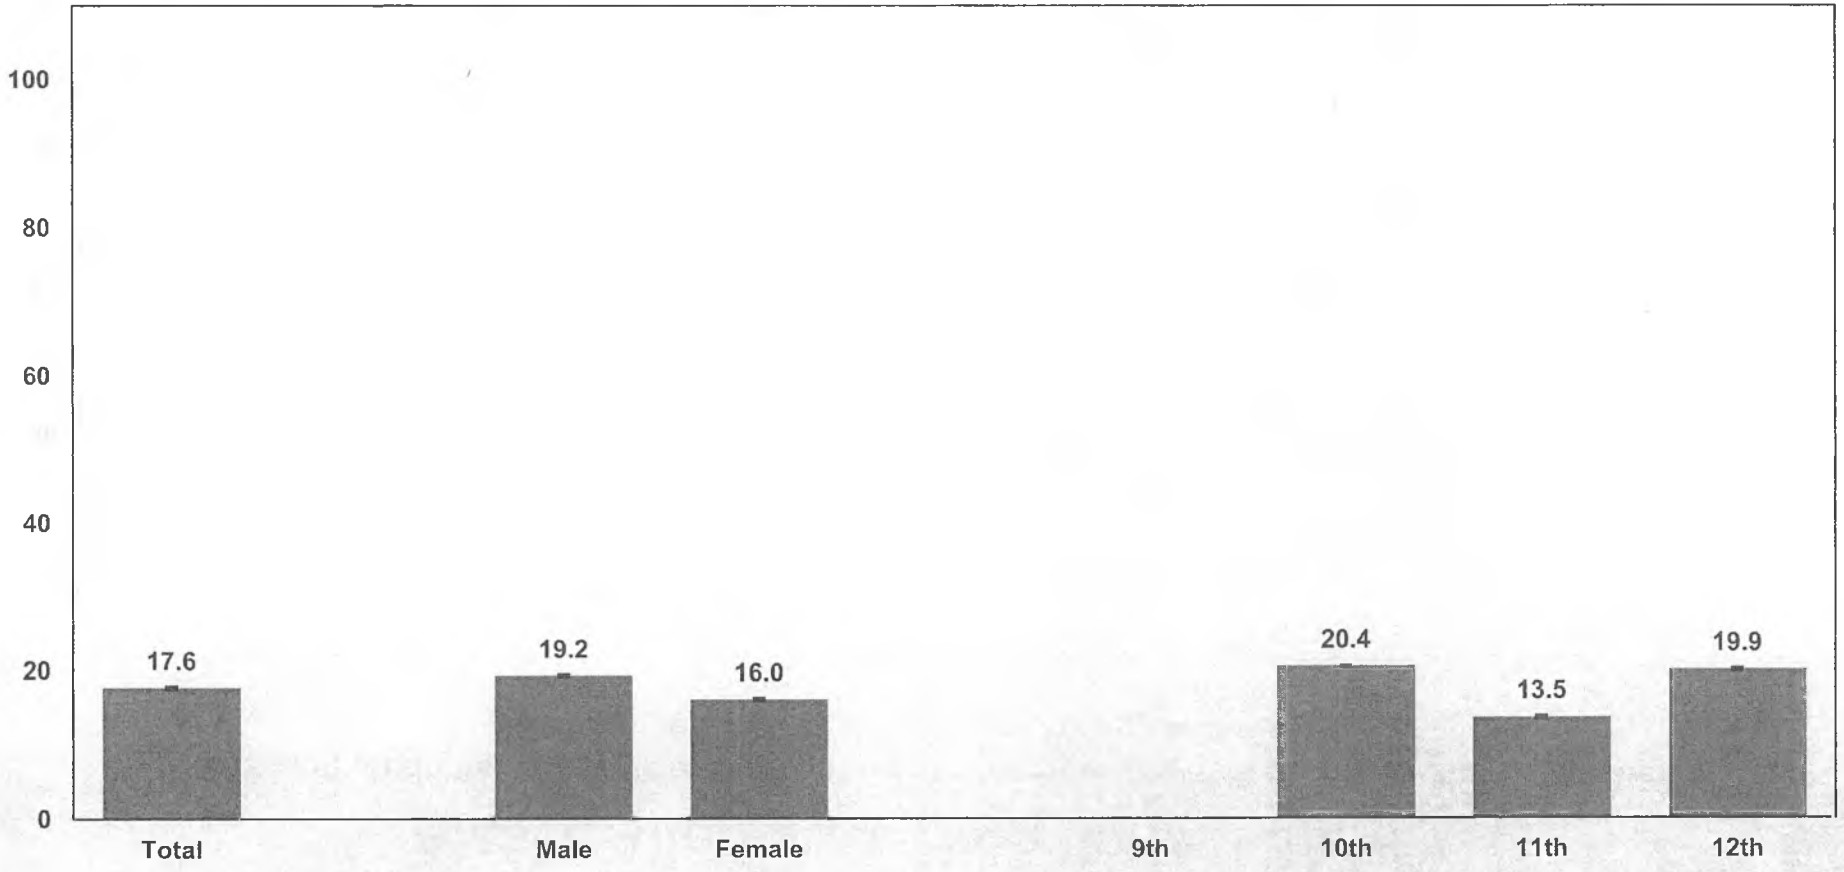
Percentage of students who were obese (i.e., at or above the 95th percentile for body mass index, by age and sex)**



**QNOBESE - Weighted Data - Based on reference data from the 2000 CDC Growth Charts.
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

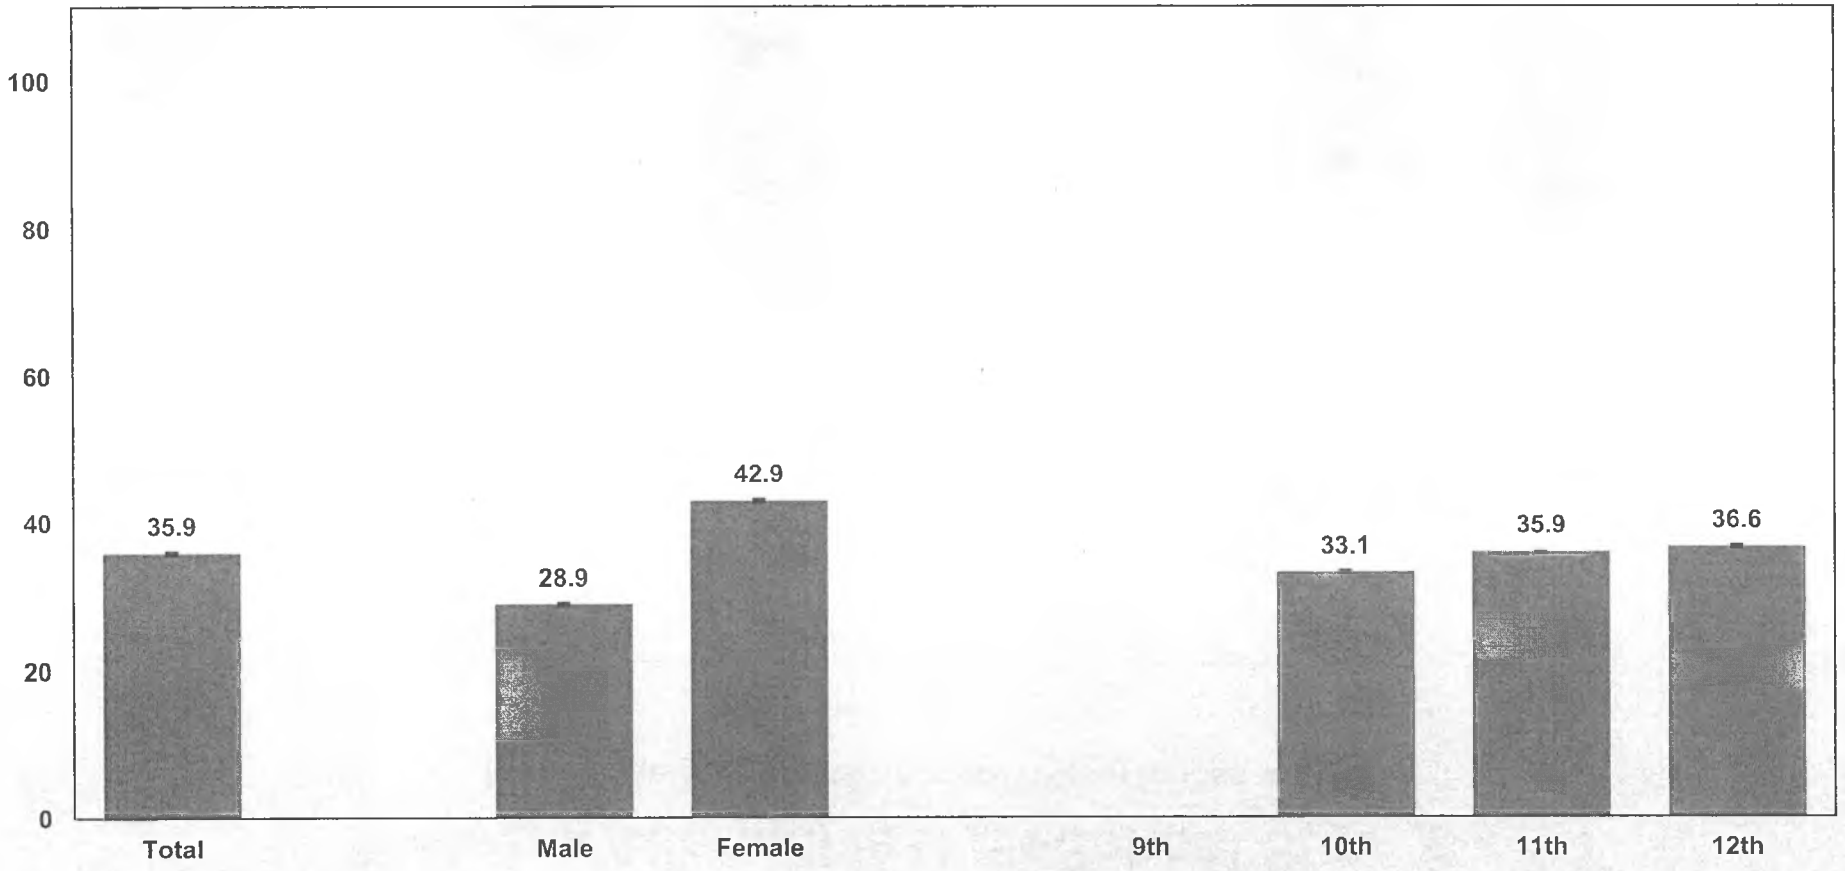
Percentage of students who described themselves as slightly or very overweight



Q67 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

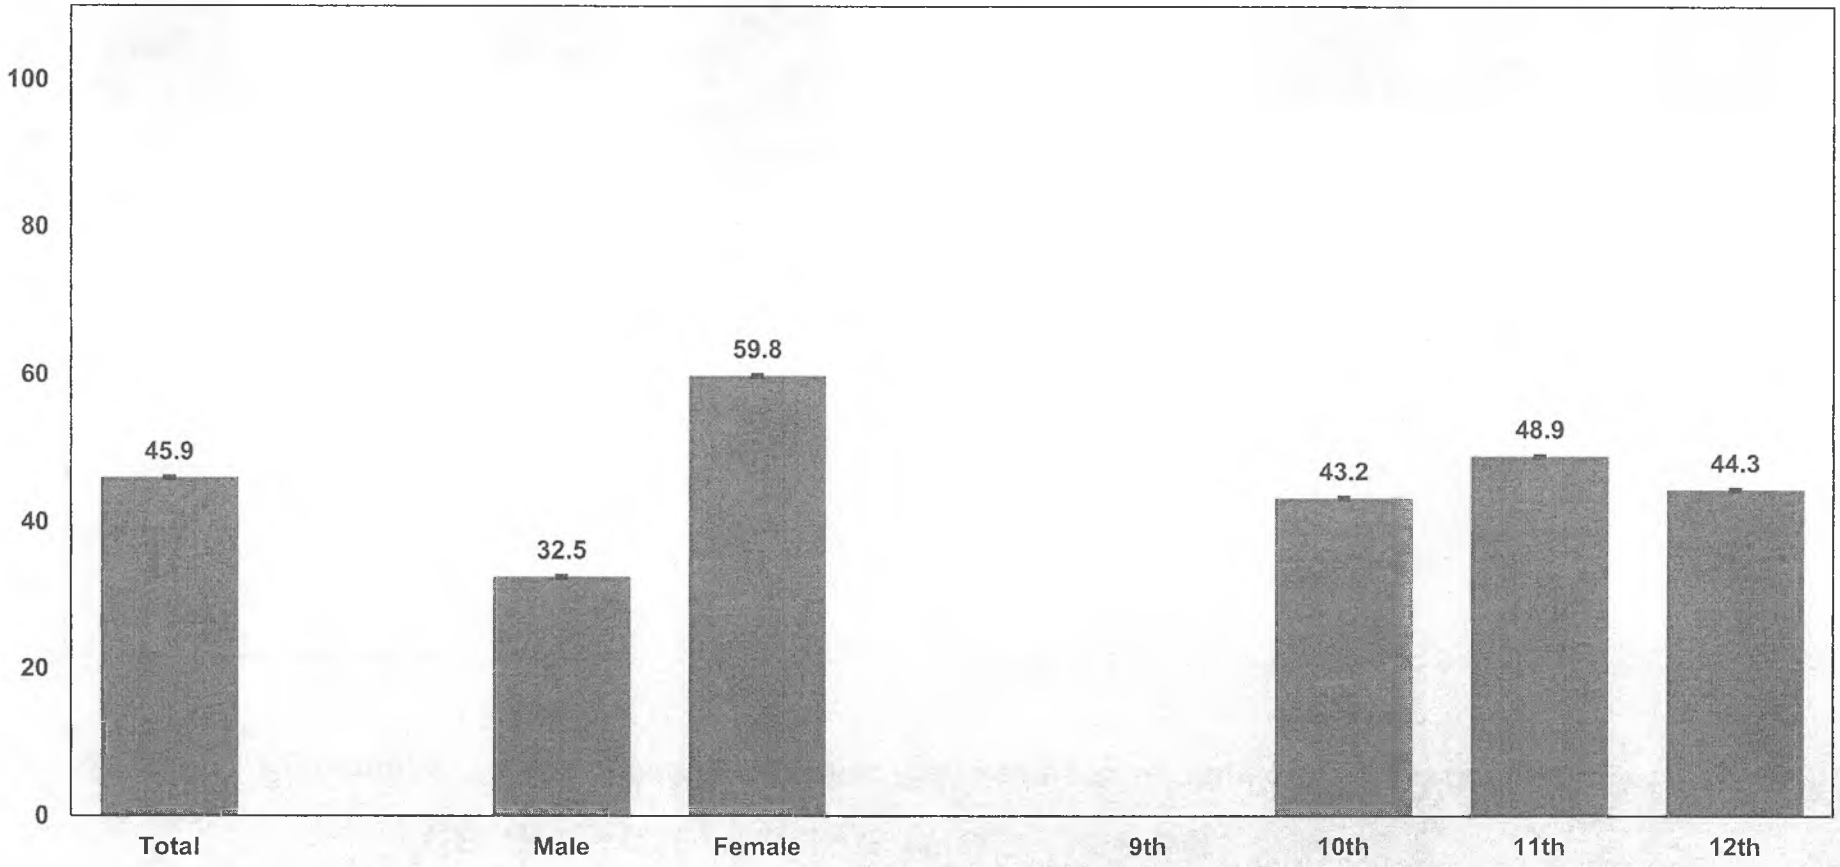
Percentage of students who were trying to lose weight



Q68 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

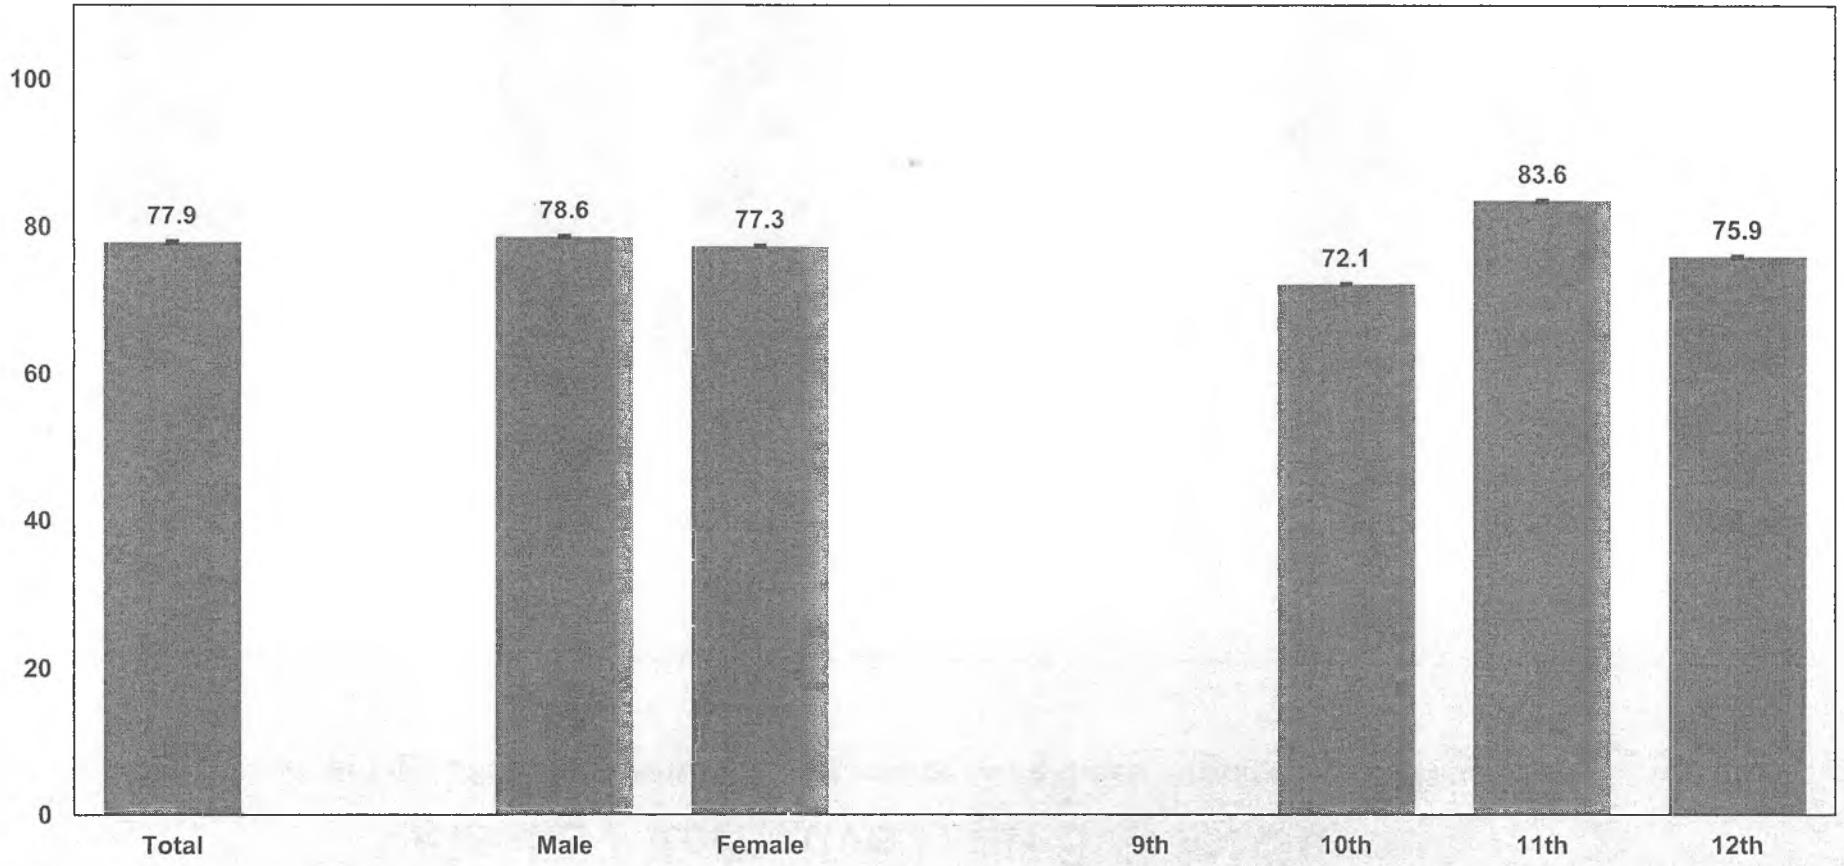
Percentage of students who drank 100% fruit juices one or more times during the past seven days



Q72 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

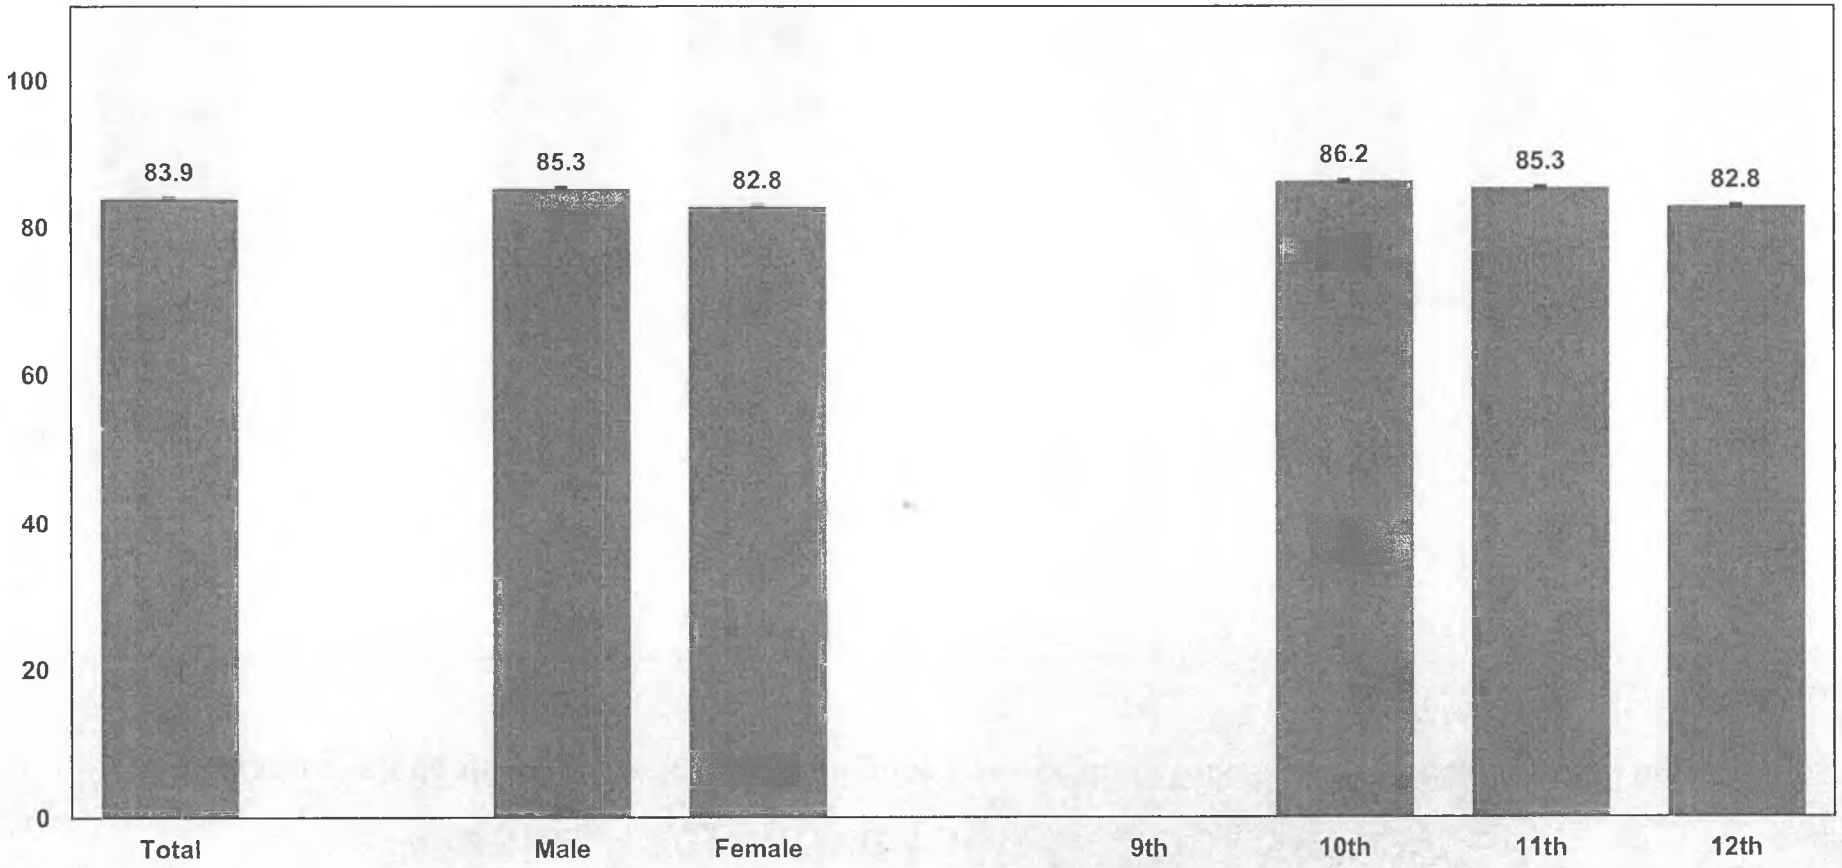
Percentage of students who ate fruit one or more times during the past seven days



Q73 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

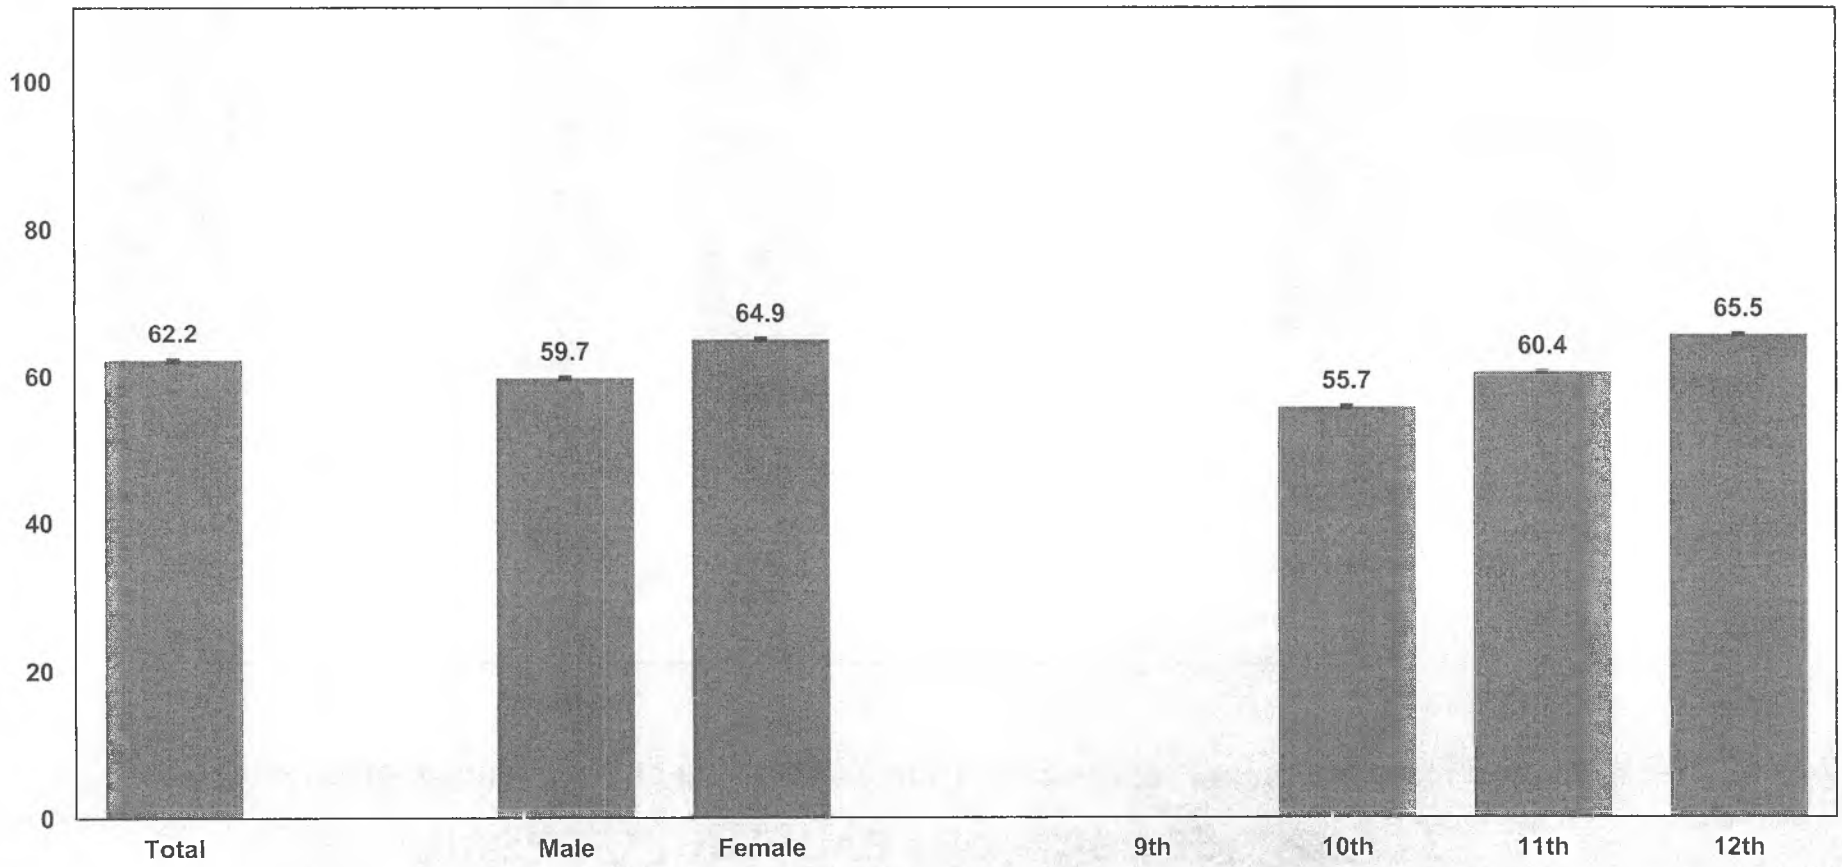
Percentage of students who ate green salad one or more times during the past seven days



Q74 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

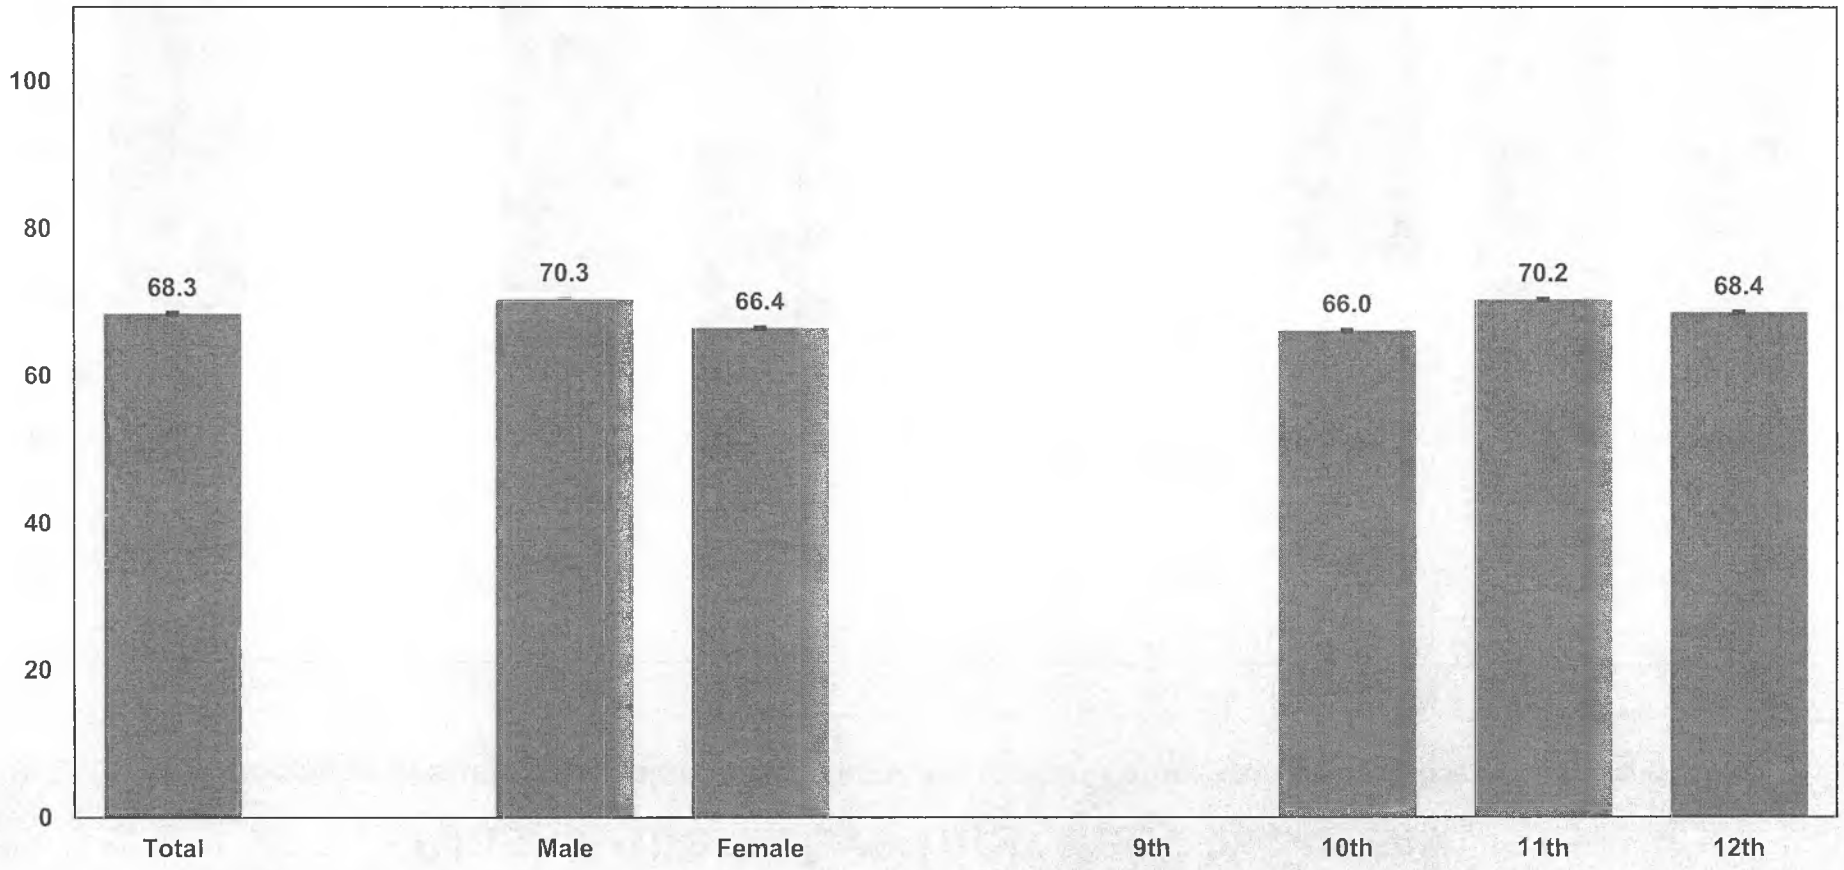
Percentage of students who ate potatoes one or more times during the past seven days



Q75 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

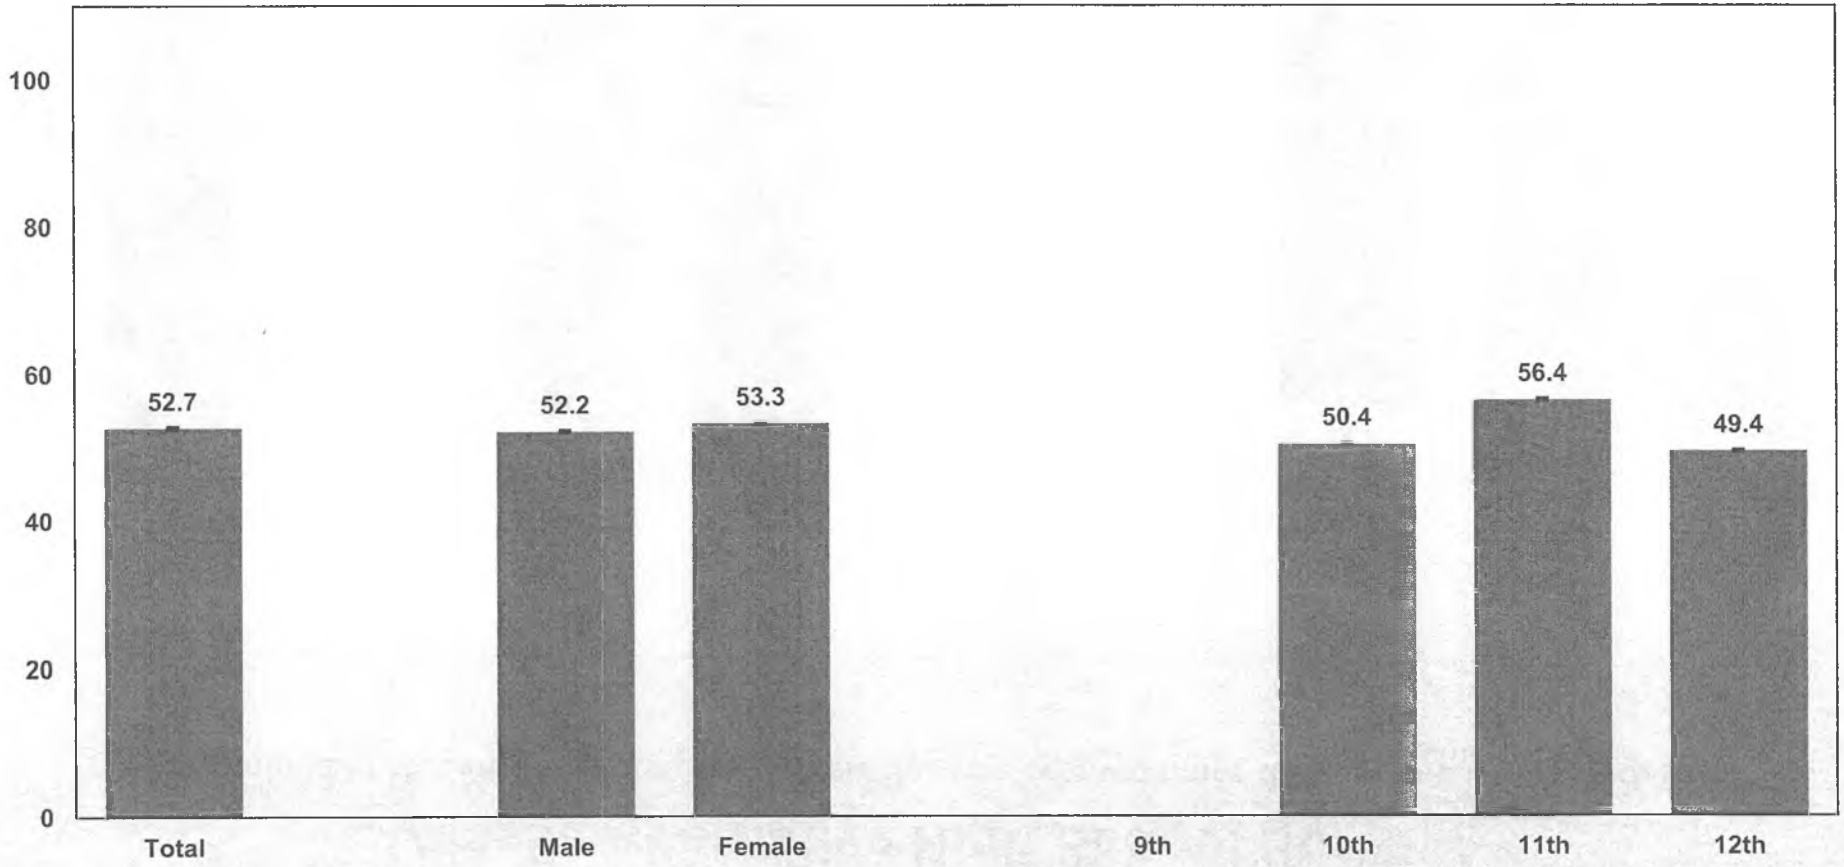
Percentage of students who ate carrots one or more times during the past seven days



Q76 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

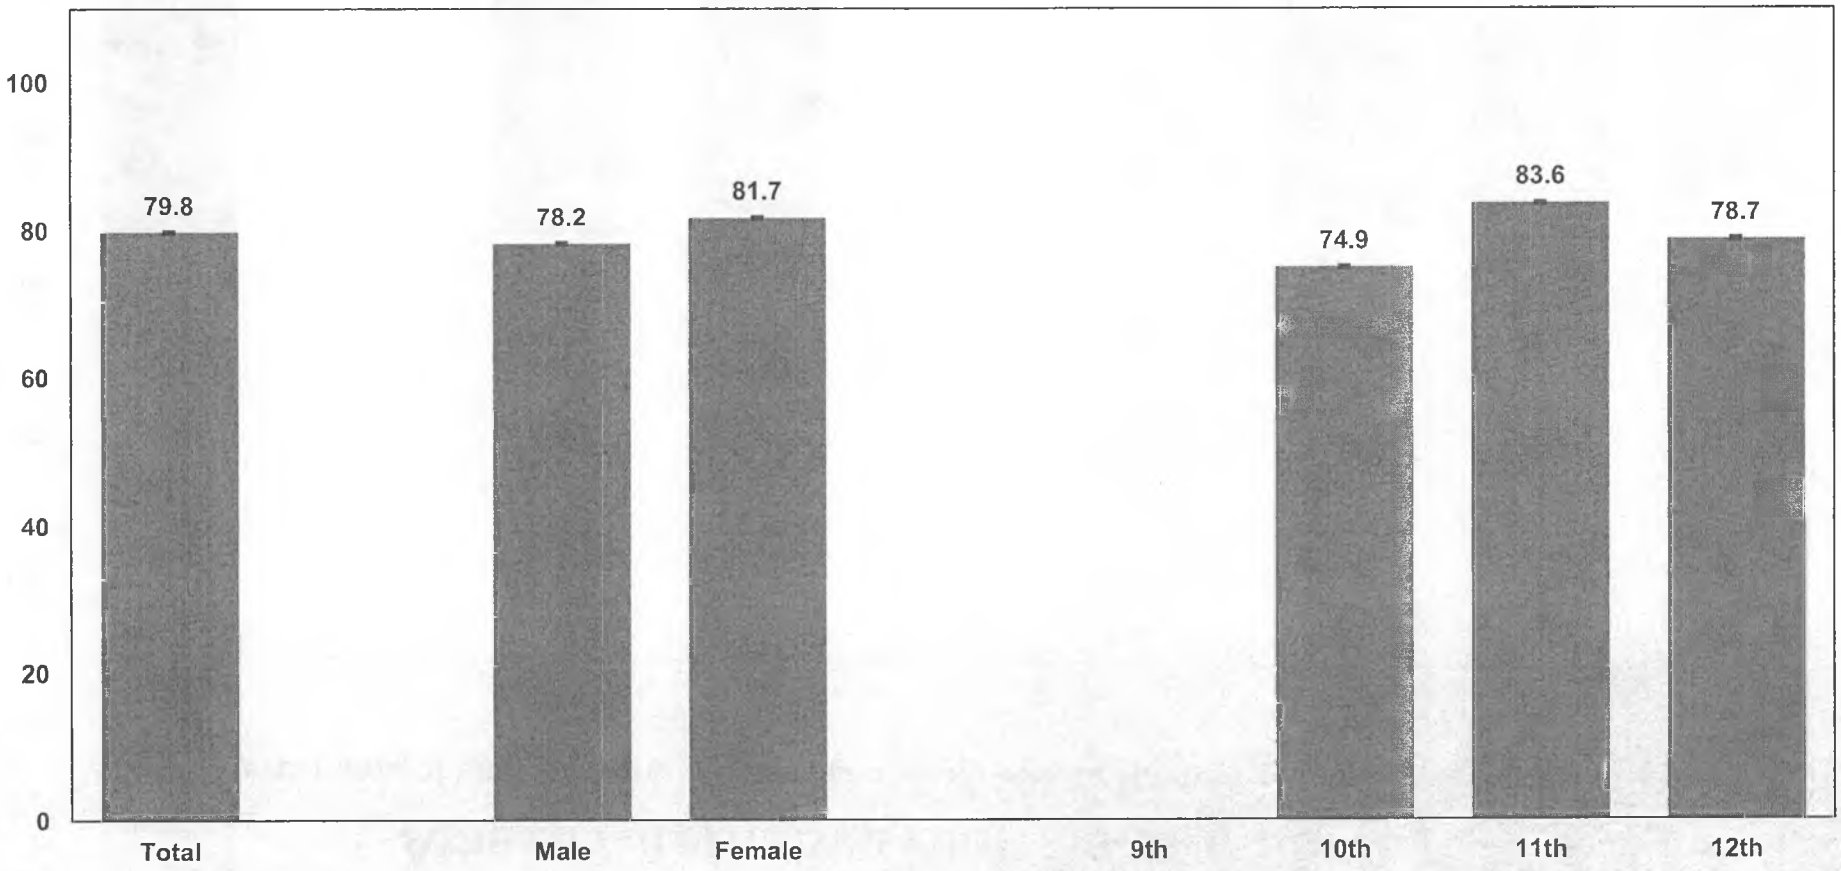
Percentage of students who ate other vegetables one or more times during the past seven days



Q77 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

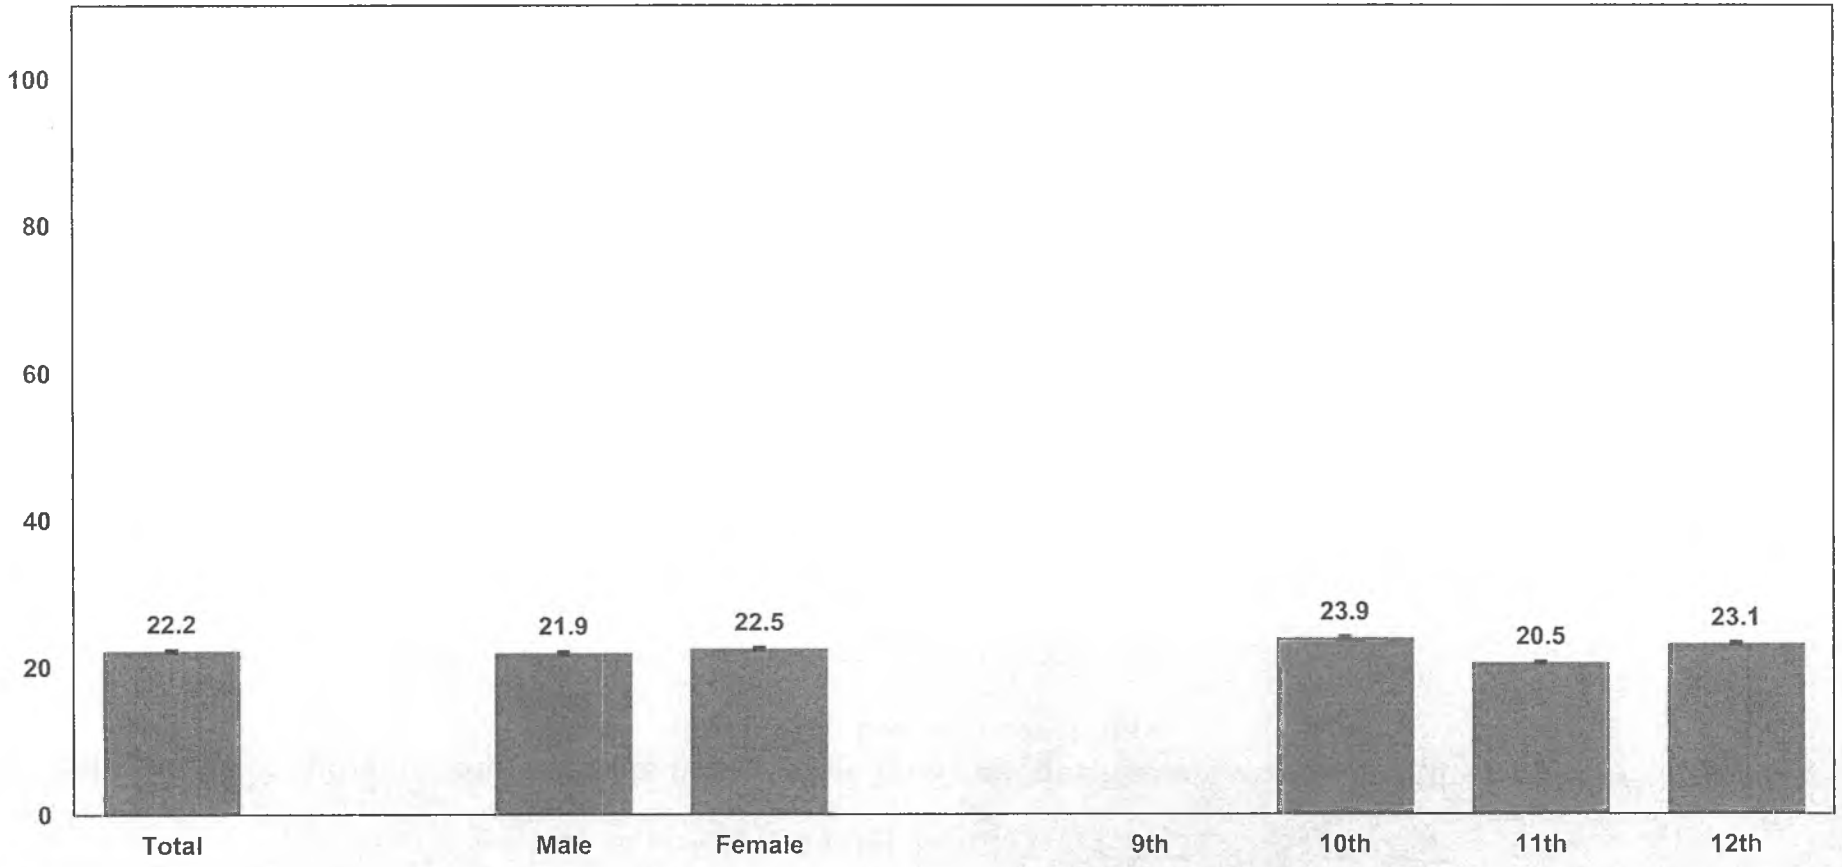
Percentage of students who ate fruits and vegetables five or more times per day during the past seven days



QNFRVG - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

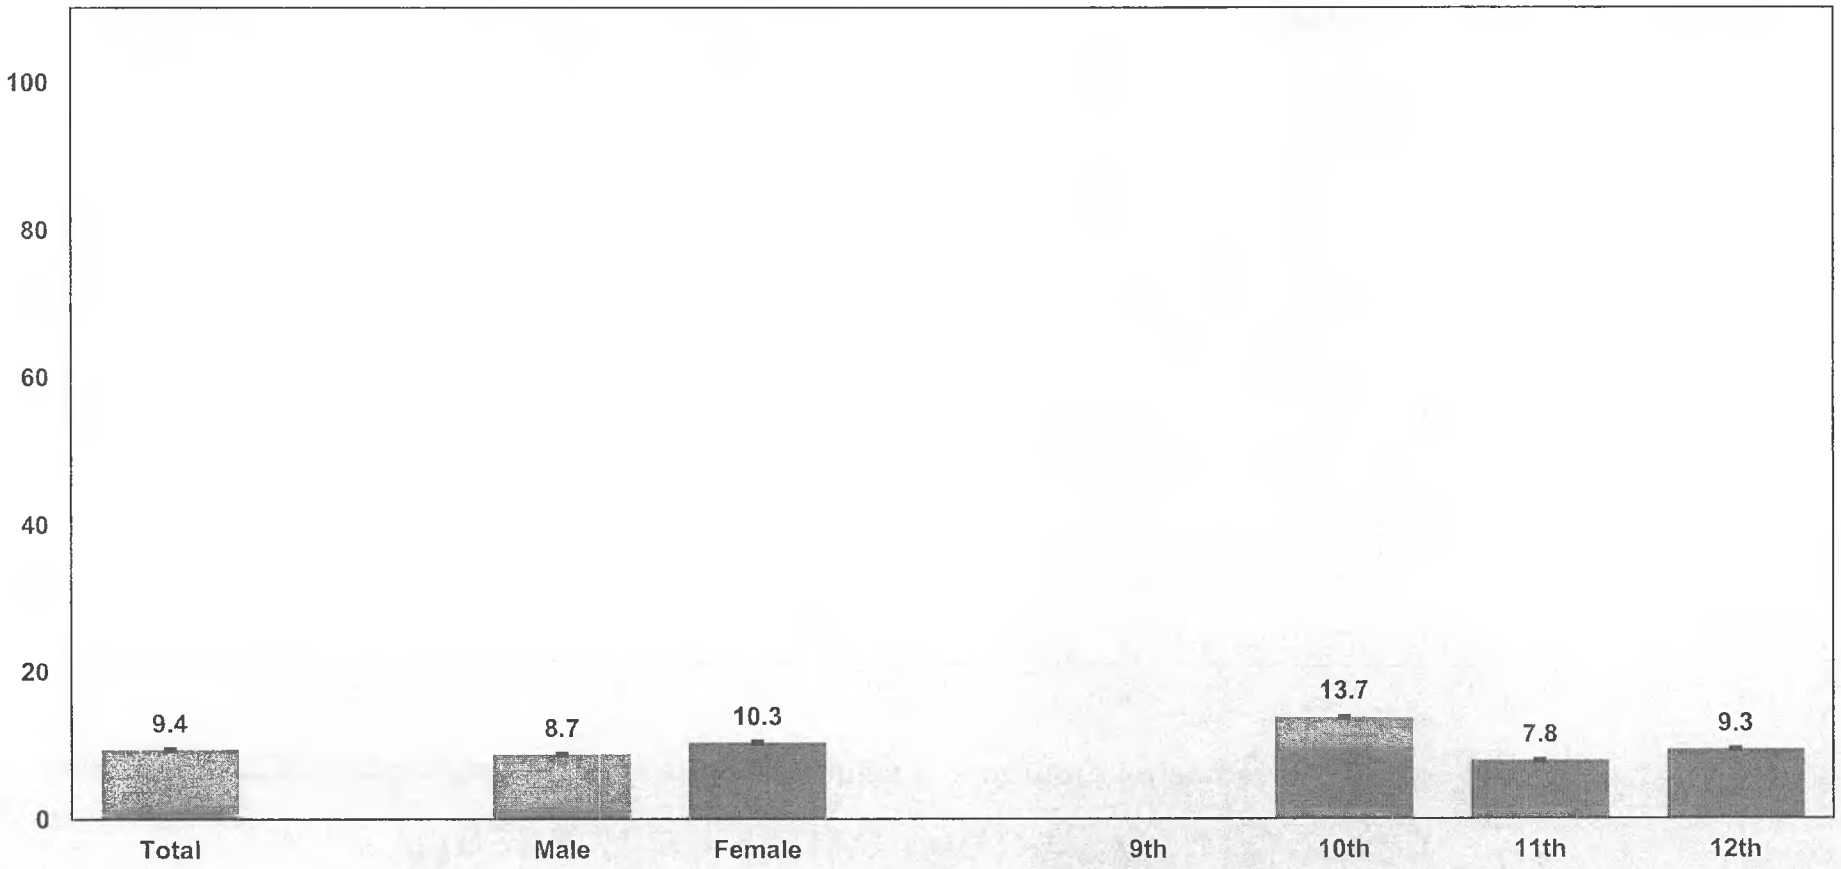
Percentage of students who ate fruits two or more times per day and ate vegetables three or more times per day during the past seven days



QNFRVG2 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

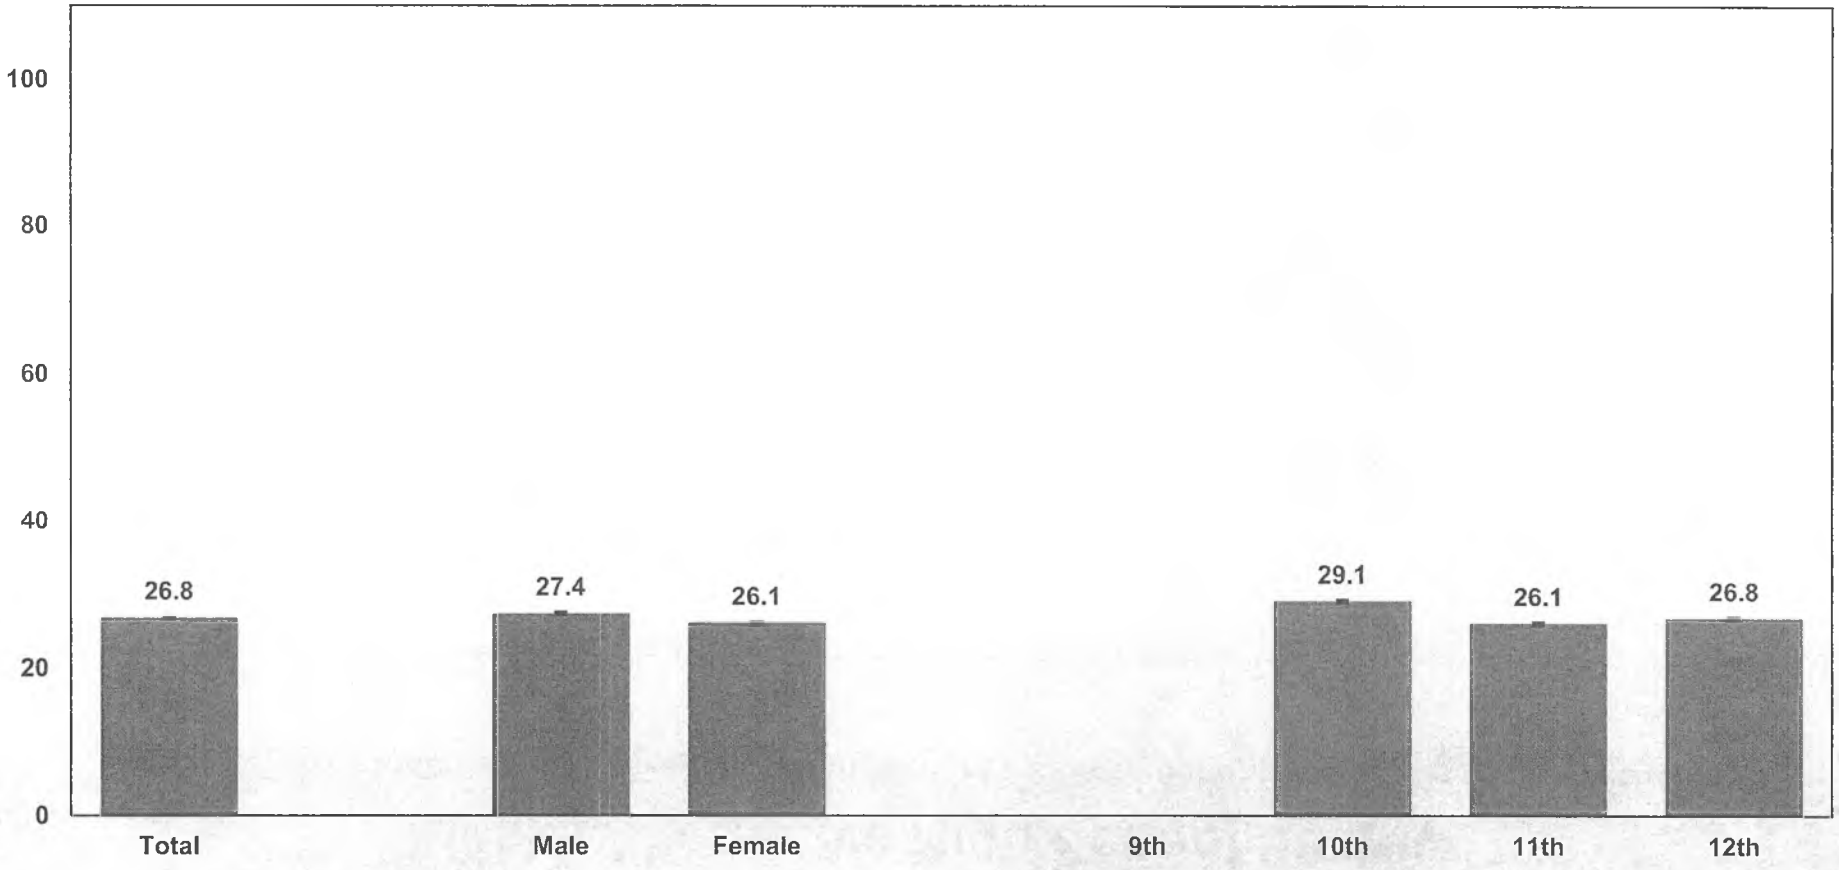
Percentage of students who ate fruits two or more times per day during the past seven days



QNFRUIT - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

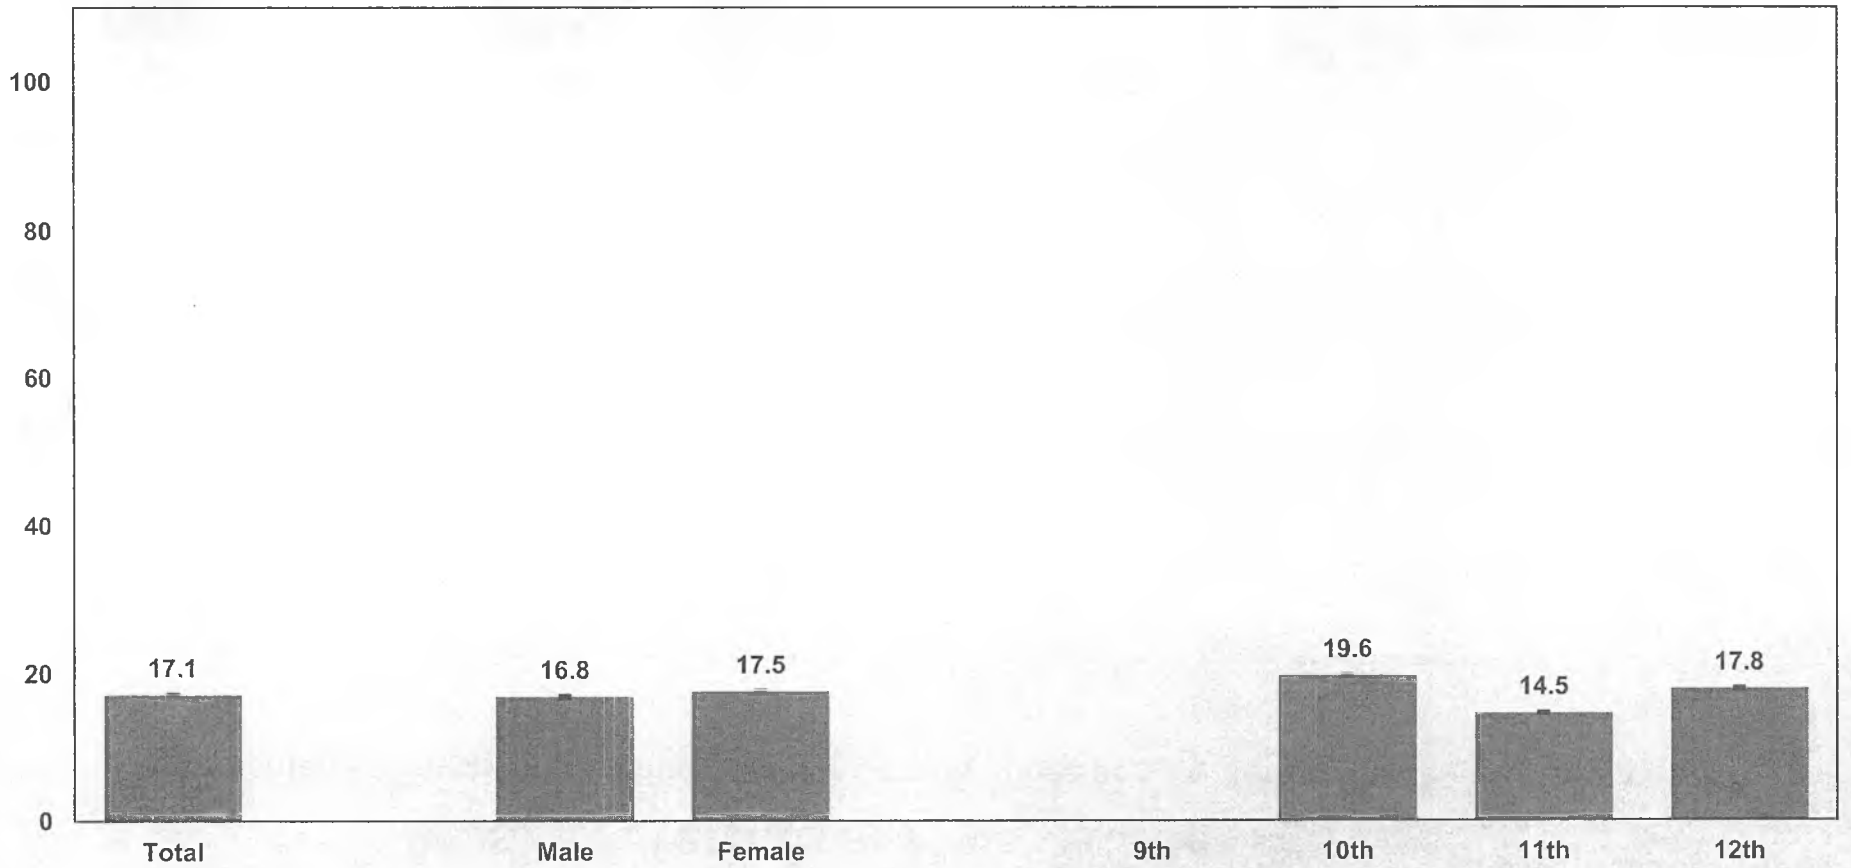
Percentage of students who ate vegetables three or more times per day during the past seven days



QNVEG - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

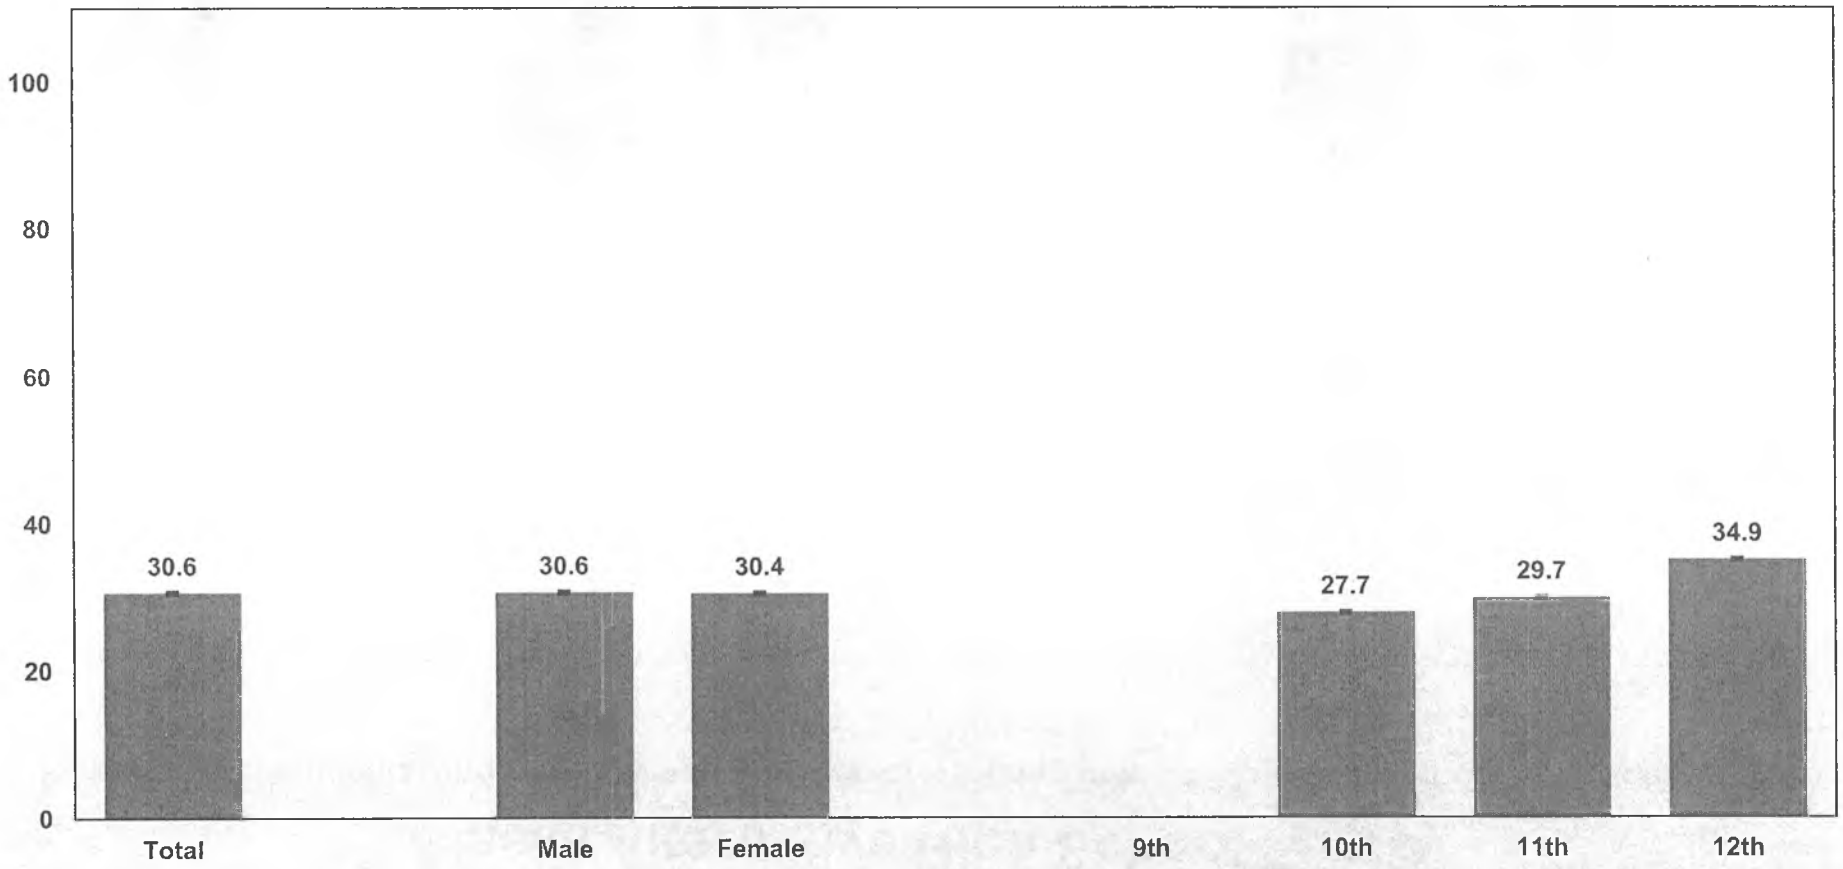
Percentage of students who drank a can, bottle, or glass of soda or pop one or more times per day during the past seven days



Q78 - Weighted Data
*Non-Hispanic.
Missing bars indicate less than 100 students in the subgroup.

2011 Youth Risk Behavior Survey Results

Alaska Alternative High School Survey

Percentage of students who were physically active for a total of at least 60 minutes per day on five or more of the past seven days

FISCAL NOTE #4

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 83(EDC)

Analysis

SB83 provides for payments and loan incentives to public school teachers for national board certification. This includes a basic incentive payment of $1000 for teachers holding a current and valid national board certification and an additional $500 for teachers holding this certification in high poverty attendance areas that have received a low performance rating as determined by the department.

The count projects 162 teachers anticipated for FY13. The maximum incentive provided under this legislation if all teachers qualified for both incentives would be 162 teachers X $1,500 = $243,000. Each subsequent fiscal year projects an additional 21 teachers receiving the incentives to reflect the anticipated annual growth.

With an average growth rate of 21 teachers per year that would be actively seeking national board certification, not more than $1,000 would be provided annually to pay the national certification board on their behalf. 21 X $1,000 = $21,000. This projection is contained in each subsequent year through FY18.

Using the growth assumption/annual average of 21 teachers per year pursuing certification of professional teaching standards by a nationally recognized board, under the proposed Sec. 14.43.550-555 for the National Board Teacher Certification Loan Program, $2,500 would be provided as loans for eligible teachers. 21 X $2,500 = $52,500 per year.

FISCAL NOTE #3

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 83(EDC)

Analysis

This bill establishes payment and loan incentives intended to assist Alaska public school teachers seeking to earn national board certification. One component is the establishment and funding of a zero interest loan to otherwise eligible teachers who are actively pursuing national certification of professional teaching standards awarded by a nationally recognized board. The loan amount is set at $2,500 and the funds are to be paid directly to the national board from which the certification is being sought.

The Commission anticipates that, based on expected limited demand for the loan, servicing the loan can be accomplished with existing staff resources. Assuming the loans will be funded by an appropriation to the Department of Education and Early Development, no funding is requested for that purpose.

SB83 TESTIMONY
April 9, 2012
House Education Committee

Hello, my name is Dr. Deena M. Paramo, superintendent from MSBSD. I am testifying today in support of SB83.

Please know that I strongly believe:

1. The National Board Certification assists teachers in becoming more effective.
2. The National Board Certification improves student learning and engagement.

The National Board Certification is a rigorous process for which teachers engage to improve their instruction. A main focus of the National Board Certification process is on teacher reflection---specifically, reflection on a teacher's own skills and knowledge in teaching and his/her effectiveness.

In addition to the writing and research necessary for the certification, throughout the process, teachers must video tape classroom lessons to submit as entries to be scored. The National Board then analyzes various components of the lesson including lesson goals, evidence of student learning, and evidence of engagement to assist the teacher in seeing his/her teaching more objectively. The instructor him or herself, then learns to analyze his/her lesson with a critical eye.

Watching students' actions and reactions in various lessons also helps identify effective teaching strategies that increase critical thinking and engagement and those practices that diminish student achievement. This process of observing, identifying, and practicing helps continue to improve teaching approaches in the classroom to influence positive changes and increase success for students.

Overall, National Board is all about building & enduring, reflective practices that ultimately improve instruction and learning. MSBSD sees that SB83 is about honoring and placing value on effective teaching practices, not strictly tenure or experience.

MSBSD has 10 teachers (out of 1200) who currently hold certification through the National Board. MSBSD does award stipends for National Board Certification as well. I can attest that the MSBSD teachers who hold the certification get results in student achievement.

Chairman Dick and Members of the committee: I am Michelle Accardi and I am a National Board Certified Teacher. I certified in Exceptional Needs in 2005 while I was teaching in New Mexico. I am currently serving as the Director of State Policy for the National Board of Professional Teaching Standards. Thank you for the opportunity to testify before you today on Senate Bill 83, sponsored by Senator Joe Thomas. This bill supports Alaska's National Board program by providing a no-interest loan for teachers seeking National Board Certification and a salary supplement for National Board Certified Teachers. My comments today will focus on the efficacy of the National Board Certification process and why supporting this bill makes sense for Alaska.

For 25 years, the National Board for Professional Teaching Standards has been at the forefront in establishing the highest measure of teaching excellence. It is the highest recognition of excellence in professional educational practice in the United States. Yet, National Board Certification is not simply about rewarding high quality teaching. As in other professions, such as medicine and law, National Board Certification assures the public that the people who educate their children are *experts* in their fields and have the skills to help *all* students learn.

The National Board Certification process is sound—but does it work? The answer is an unqualified yes. In the 25 years since the National Board was founded, National Board Certification has become one of the most heavily researched areas in the teaching field.

On June 11, 2008, the National Research Council (NRC) of the National Academies completed an extensive, multi-year study of National Board Certification. In the most rigorous and comprehensive study to date, the highly respected NRC formally affirmed the National Board's positive impact on student achievement, teacher retention, and professional development. The findings from the NRC study:

- Showed that students taught by NBCTs make higher gains on achievement tests than those taught by teachers who have not applied and those who did not achieve certification
- Substantiated previous research showing that National Board Certification has a positive impact on teacher retention and that NBCTs are more likely to stay in teaching longer than other teachers
- Observed that the National Board Certification process is an effective professional development experience that positively affects teaching practices
- Acknowledged that NBPTS Standards and National Board Certification have taken the culture of teaching to a higher level

Several independent studies indicate that students of NBCTs do better on standardized tests than students of non-National Board Certified Teachers.

A study by L. Vandervoort of Arizona State University demonstrated that students of National Board Certified Teachers also showed learning gains equivalent to spending an extra month in school.
Other studies, demonstrate that students of NBCTs exhibit great comprehension of classroom instruction and better writing abilities and are able to apply knowledge more successfully than students of non-NBCTs.

We have evidence that NBCTs create more challenging curricula, present subject matter in greater depth and provide better feedback. They are also better able to adapt their teaching strategies to reach diverse student learning styles within their classrooms.

The Board Certification process is also a key strategy for helping save and create jobs for effective teachers. A recent report found that the nationwide cost of replacing public school teachers who have dropped out of the profession is $7.3 billion annually. However, research has shown that up to 90 percent of Board Certified Teachers stay in the classroom. The rigorous standards and assessments of the Board are also being used as a recruitment tool to evaluate the effectiveness of incoming teachers in school districts across the country.

As a recognized leader in defining educator effectiveness, National Board is strengthening its role as a force in school transformation at the national, state and local levels. NBPTS is working in a number of ways to leverage the best practices of National Board into successful school-wide reform, including the following examples:

- Implementing a $27 million Teacher Incentive Fund federal grant that NBPTS received in fall 2010 to reform teacher and principal evaluation and compensation systems in 23 high-need urban and rural schools in Richmond, Virginia and Maine. The key to this school transformation model is its unrelenting focus on infusing National Board best practices into all facets of building teacher and principal excellence – recruitment, development, evaluation, advancement and compensation.
- Collaborating with states and districts to implement current and future School Improvement Grants and Race to the Top grants using NBPTS whole school job-embedded professional development.
- Teaming up with the Bill & Melinda Gates Foundation to help define effective teaching.
- Launching an NBPTS Principal Certification program in 2013 to identify effective principals and inform the development of state and district principal evaluation systems.
- Developing a new NBPTS teacher evaluation framework to help states and districts improve their educator development and evaluation systems.
- Partnering with a number of business and philanthropic organizations, including Amgen, GlaxoSmithKline and Oracle, to specifically focus on enhancing the skills of math and science teachers.

Let me talk a little bit about the National Board program in Alaska. There are currently 135 National Board Certified Teachers in Alaska, with over 40 percent of the state's NBCTs teaching in Anchorage and about 20 percent teaching in Fairbanks. This number represents about 1.5

percent of the Alaska K-12 teaching force, compared to three percent of teachers nationwide. However, Alaska's growth rate last year was 11.6 percent, compared to the national growth rate of 6.9 percent. This is reflected in the new total numbers of NBCTs. In December 2011, fourteen new Alaska teachers earned National Board Certification, tying 2004 for the highest number recorded.

There are several reasons that account for this increase. Especially in a very rural state like Alaska, it is critical to provide high quality candidate support. The process is most impactful when cadres of teachers can pursue the process together. NEA-Alaska has immolated the very successful Jump Start program in Washington state that supports candidates for National Board Certification. Jump Start is a four-day course designed to familiarize participants with the National Board to better prepare them to be successful in the certification process. NEA-Alaska has invested almost $60,000 in 50 Jump Start attendees over the past three years.

The State Department of Education and Early Development recognizes the value of National Board Certification as one method of attaining an Alaska Master teaching certificate, and NBCTs are considered highly-qualified. So, Alaska has the foundation from which a strong National Board program can grow and flourish. Senate Bill 83 would put in place the policy to support that growth and to help sustain it.

National Board Certification is one of the most powerful tools to grow and sustain educational excellence in Alaska, but its full potential is far from realized. NBCTs can serve as a means for effective change. For all these reasons—effective teaching, improved learning, teacher retention—I ask you to support Senate Bill 83.

In closing, I want to underscore the *transformative nature* of the National Board Certification process. When asked what's so special about the National Board process, an NBCT I know replies that it is the professional equivalent of becoming a parent. Once you have a child you look at the world differently. In a similar fashion, when a teacher experiences the National Board Certification process, he or she looks at teaching with new eyes.

Thank you for your time. I am happy to answer any questions.

Mr Chairman, members of the committee, my name is Steve Atwater, I am the superintendent of the Kenai Peninsula Borough School District. I am calling in to testify in support of CS SB 83. I encourage you to pass this bill out of committee.

One of the expectations that I have for all the employees of the Kenai Peninsula Borough School District is that they will work to improve their job performance. On the Kenai we recognize the importance of professional development and have spent a lot of time refining our professional development processes. I am pleased to note that our teachers report that our work in this area is helping them better meet the learning needs of our 9,000 students. Representative Seaton's remarks this morning are evidence of this.

But as you know, much of a teacher's professional development is pursued independently of the home school district. And while teachers' PD work away from the districts is well intentioned, it does not always lead to the desired increase in student learning. I believe however, that our teachers who receive their national board certification consistently have excellent evaluations and good student results.

The five core propositions for national board certification include teachers working as a part of learning communities. It is well established that teachers who collaborate with one another are more effective than those who do not. I mention this because increasing the level of Teacher collaboration is one of our district goals. Adding board certified teachers will thus allow a district to reap benefits beyond the immediate teacher's classroom, it will lead to other teachers learning from the board certified teacher. It is fair then to assume, that the addition of board certified teachers to a district will help several other teachers improve their craft.

As you know, there is a lot of conversation about raising standards as a way to do improve education. And while this is a necessary part of the school improvement equation, in itself, it is not enough. We must also improve our teachers' pedagogical skills. I believe that the rigorous national board certification process is an excellent way to do this. I know that it will help our teachers meet our student's learning needs.

In closing, I am convinced that increasing the number of board certified teachers in Alaska will lead to a higher level of achievement for our state's students, I encourage you to pass this bill.

Finally, I want to end my testimony with a comment from one of our board certified teachers

The certification process is what makes a person a better teacher, not the certificate. Teachers that start the certification process are good teachers, but the process helps them analyze and articulate their teaching. To name a few things: I found myself having to articulate how I knew a student was engaged during a classroom lecture, I had to analyze how I assessed all students, how I accounted for diversity, I had to show that I was an active member in my profession, I had to video tape several lessons, analyze them and speak to the lessons. All this reflection and analyzing made me look at what it was about my teaching that made me a good teacher. Many times teachers work at a level of unconscious competence, where they do things very well but maybe don't even have to think about what it is they do. This process requires a teacher to be conscious of this and reflect on what it is that they do well and not so well. This process also made me very aware of areas I am weak in and had to improve upon. The time required to complete this process is immense but the benefits are tremendous.

National Board Certified teachers seem to be very involved in their profession, through committees, inservices, trainings, education, etc... These teachers do not do this to be recognized or to be certified they do it because it is a vital part of how they view education and their role in the education process. However, it would be nice if someone stepped in and recognized all the extra effort that most NBCT's put in and incentive pay would be a nice gesture of appreciation.

The certification process is what makes a person a better teacher, not the certificate. Teachers that start the certification process are good teachers, but the process helps them analyze and articulate their teaching. To name a few things: I found myself having to articulate how I knew a student was engaged during a classroom lecture, I had to analyze how I assessed all students, how I accounted for diversity, I had to show that I was an active member in my profession, I had to video tape several lessons, analyze them and speak to the lessons. All this reflection and analyzing made me look at what it was about my teaching that made me a good teacher. Many times teachers work at a level of unconscious competence, where they do things very well but maybe don't even have to think about what it is they do. This process requires a teacher to be conscious of this and reflect on what it is that they do well and not so well. This process also made me very aware of areas I am weak in and had to improve upon. The time required to complete this process is immense but the benefits are tremendous. I wish I had the time to do this every year or every other year but that is not realistic. Following the initial certification I do find that I go through parts of the certification process on a continuous basis and that definitely makes me a better teacher.

It is hard to say how long it took to complete the coursework. I hate to try and put a number on it, but I think a conservative rough estimate would be 100+ hours (and it would not surprise me if I spent closer to 200 hours) scattered over 2-3 months time. This 100+ hours includes: spending nearly every free moment and many very late nights of that last two weeks editing the papers, organizing my course work, and putting the final touches on the papers, spending hours watching and analyzing video of my classroom, spending hours writing around 50 pages of text (for a math guy that is a lot). On top of the 100+ hours I had to demonstrate involvement in my profession and course specific education over a five year period, this meant I had attended conferences, kept up on current topics in math, led inservices, sat on committees, etc.... I am currently finishing up my recertification, which occurs every ten years. I would say I have spent around 50 hours so far and I could see another 50 before I am done on April 30th, doing similar tasks as I did the first time around but on a smaller scale.

Our district currently provides an additional $2,000 per year for those who have National Board Certification. I think the piece in the email that is important is the state stipend would be in addition to the district stipend. We have so very few nationally board certified teachers in this district. This bill might provide a great incentive for teachers to consider this.
I was in Juneau last year and attended a hearing on this.
I know NEA-AK is in favor of this.
Is that enough info?
Thanks for asking

SENATE EDUCATION COMMITTEE

Senators Kevin Meyer & Joe Thomas, Co-Chairs

Senate Bill 83

"An Act providing for payment and loan incentives to public school teachers for national board certification."

...teaching is work of the most demanding sort, for teachers must make dozens of decisions daily, command a wide body of knowledge and skill, learn to react instantly, and be disposed to act wisely in difficult situations. And while there are principles and precepts, skills and techniques, to guide the work, teaching is also an activity with artistic aspects, a craft calling for reflection and judgment.

----From *What Teachers Should Know and Be Able to Do*

Teaching is one of the most difficult and important jobs we have in our society. In order to have good schools, we must have good teachers.

Senate Bill 83 provides an incentive for teachers to ramp up their professional knowledge and skills by becoming nationally certified by the National Board of Professional Teaching Standards. Teachers would be provided with zero interest loans designed to pay the expense of enrolling in the program. Once certified they would receive a $1,000 annual stipend for the duration of their certification period (ten years).

If the teacher is serving in a low performing, high poverty area they would receive a $1,000 stipend for enrolling in the program, and $1,500 loan for the rest of the expense. They would also receive an additional $500 annually as long as they remained in a low performing, high poverty area.

Becoming nationally certified is a rigorous and demanding process, and can take up to three years. There are 25 different areas of certification (see page 7 of the packet), and teachers specialize in their specific subject area. The certification process focuses on five aspects of teaching: Students and their learning, the subjects being taught and how to teach them, managing and monitoring student learning, thinking systematically about the practice of teaching, and being members of the learning community.

We appreciate your support on this important bill.

NBPTS
National Board for Professional Teaching Standards

Fields of Certification

NBPTS offers the following 25 certificate areas that cover 16 subject areas and are classified into seven student age categories. As a candidate you can opt for a generalist certificate or one that is subject-specific.

NBPTS
National Board for Professional Teaching Standards

What is National Board Certification?

What Is National Board Certification?

National Board Certification is an advanced teaching credential. It complements, but does not replace, a state's teacher license. It is valid for 10 years, and renewal candidates must begin the renewal process during their eighth or ninth years as NBCTs.

National Board Certification is achieved upon successful completion of a voluntary assessment program designed to recognize effective and accomplished teachers who meet high standards based on what teachers should know and be able to do. National Board Certification is available nationwide for most preK–12 teachers. As part of the certification process, candidates complete 10 assessments that are reviewed by trained teachers in their certificate areas. The assessments include four portfolio entries that feature teaching practice and six constructed response exercises that assess content knowledge.

Why Standards for Accomplished Teaching?

Every child deserves an accomplished teacher — one who is qualified to equip students with the skills to succeed in the 21st century global community. NBPTS Standards and National Board Certification give teachers and schools the tools to define and measure teaching excellence. NBPTS Standards are based on the Five Core Propositions that form the foundation for what all accomplished teachers should know and be able to do and provide a reference that helps educators link teaching standards to teaching practice.

Five Core Propositions

Teachers are committed to students and their learning.
Teachers know the subjects they teach and how to teach those subjects to students.
Teachers are responsible for managing and monitoring student learning.
Teachers think systematically about their practice and learn from experience.
Teachers are members of learning communities.

What Are the Standards and Certificate Areas?

NBPTS developed standards for accomplished teaching in 16 different subject areas with students at various developmental levels. These standards were developed and validated by representative committees comprised of master teachers, disciplinary organizations and other education experts. Many school systems use the standards as the basis for ongoing teacher and school counselor professional development, and many colleges and universities incorporate them into their undergraduate and graduate teacher-education programs.

Based on these standards, NBPTS offers 25 certificates that are applicable to most teachers in American schools. For more information, see the chart at nbpts.org/certificates.

NBPTS
National Board for Professional Teaching Standards

The Five Core Propositions

This policy set forth our vision for accomplished teaching. The Five Core Propositions form the foundation and frame the rich amalgam of knowledge, skills, dispositions and beliefs that characterize National Board Certified Teachers (NBCTs).

1 Proposition 1: Teachers are Committed to Students and Their Learning

- ✓ NBCTs are dedicated to making knowledge accessible to all students. They believe all students can learn.
- ✓ They treat students equitably. They recognize the individual differences that distinguish their students from one another and they take account for these differences in their practice.
- ✓ NBCTs understand how students develop and learn.
- ✓ They respect the cultural and family differences students bring to their classroom.
- ✓ They are concerned with their students' self-concept, their motivation and the effects of learning on peer relationships.
- ✓ NBCTs are also concerned with the development of character and civic responsibility.

2 Proposition 2: Teachers Know the Subjects They Teach and How to Teach Those Subjects to Students.

- ✓ NBCTs have mastery over the subject(s) they teach. They have a deep understanding of the history, structure and real-world applications of the subject.
- ✓ They have skill and experience in teaching it, and they are very familiar with the skills gaps and preconceptions students may bring to the subject.
- ✓ They are able to use diverse instructional strategies to teach for understanding.

3 Proposition 3: Teachers are Responsible for Managing and Monitoring Student Learning.

- ✓ NBCTs deliver effective instruction. They move fluently through a range of instructional techniques, keeping students motivated, engaged and focused.
- ✓ They know how to engage students to ensure a disciplined learning environment, and how to organize instruction to meet instructional goals.
- ✓ NBCTs know how to assess the progress of individual students as well as the class as a whole.
- ✓ They use multiple methods for measuring student growth and understanding, and they can clearly explain student performance to parents.

4 Proposition 4: Teachers Think Systematically about Their Practice and Learn from Experience.

- ✓ NBCTs model what it means to be an educated person – they read, they question, they create and they are willing to try new things.
- ✓ They are familiar with learning theories and instructional strategies and stay abreast of current issues in American education.
- ✓ They critically examine their practice on a regular basis to deepen knowledge, expand their repertoire of skills, and incorporate new findings into their practice.

5 Proposition 5: Teachers are Members of Learning Communities.

NBCTs collaborate with others to improve student learning.
They are leaders and actively know how to seek and build partnerships with community groups and businesses.
They work with other professionals on instructional policy, curriculum development and staff development.
They can evaluate school progress and the allocation of resources in order to meet state and local education objectives.
They know how to work collaboratively with parents to engage them productively in the work of the school.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Introduction

In 1983, public concern about the state of American education was sharply heightened by the issuance of a federal report titled *A Nation at Risk*. The report provoked a wave of reform initiatives that engulfed the education community. Most of these programs, however, left out a critical element of the education equation: the classroom teacher.

If America is to have world-class schools, it must have a world-class teaching force. Many excellent teachers already work in the schools, but their work often goes unrecognized and unrewarded. As a consequence, many first-rate practitioners leave the schools, and others who could be exceptional teachers never consider teaching. Worse still, the knowledge and skills of the fine teachers who remain are often underutilized, their positive influence allowed only modest scope.

Three years after *A Nation at Risk*, in 1986, the Carnegie Task Force on Teaching as a Profession issued a pivotal report, *A Nation Prepared: Teachers for the 21st Century*. Its leading recommendation called for the establishment of a National Board for Professional Teaching Standards. The following year, this unique institution in the history of American education was born.

The National Board's mission is to advance the quality of teaching and learning by:

- maintaining high and rigorous standards for what accomplished teachers should know and be able to do,
- providing a national voluntary system certifying teachers who meet these standards, and
- advocating related education reforms to integrate National Board Certification in American education and to capitalize on the expertise of National Board Certified Teachers.

National Board Certification®, developed by teachers, with teachers, and for teachers, is a symbol of professional teaching excellence. Offered on a voluntary basis, it complements, not replaces, state licensing. While state licensing systems set entry-level standards for beginning teachers, National Board Certification has established advanced standards for experienced teachers.

Linked to these standards is a new generation of fair and trustworthy assessment processes that honor the complexities and demands of teaching. They focus on teacher work and the difficult issues that accomplished teachers confront on a regular basis. The NBPTS assessments for National Board Certification include having teachers construct a portfolio that represents an analysis of their classroom work and participate in exercises designed to tap the knowledge, skills, disposition and professional judgment that distinguish their practice.

At the time the National Board was founded in 1987, it was understood that a critical first task was the development of a policy that would spell out the National Board's vision of accomplished practice. In 1989, it issued its policy statement, *What Teachers Should Know And Be Able To Do*, which has served as a basis for all of the standards development work NBPTS has conducted. To this day, it remains the cornerstone of the system of National Board Certification and has served as a guide to school districts, states, colleges, universities and others with a strong interest in strengthening the initial and ongoing education of America's teachers. It also holds the promise of being a stimulus to self-reflection on the part of teachers at all levels of accomplishment as well as a catalyst for healthy debate and the forging of a new professional consensus on accomplished practice in each field of teaching.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

What Teachers Should Know and Be Able to Do

In this policy, the National Board presents its view of what teachers should know and be able to do--its convictions about what it values and believes should be honored in teaching. This expression of ideals guides all of the National Board's standards and assessment processes.

The fundamental requirements for proficient teaching are relatively clear: a broad grounding in the liberal arts and sciences; knowledge of the subjects to be taught, of the skills to be developed, and of the curricular arrangements and materials that organize and embody that content; knowledge of general and subject-specific methods for teaching and for evaluating student learning; knowledge of students and human development; skills in effectively teaching students from racially, ethnically, and socioeconomically diverse backgrounds; and the skills, capacities and dispositions to employ such knowledge wisely in the interest of students.

This enumeration suggests the broad base for expertise in teaching but conceals the complexities, uncertainties and dilemmas of the work. The formal knowledge teachers rely on accumulates steadily, yet provides insufficient guidance in many situations. Teaching ultimately requires judgment, improvisation, and conversation about means and ends. Human qualities, expert knowledge and skill, and professional commitment together compose excellence in this craft.

The National Board has led the vanguard effort to develop professional standards for elementary and secondary school teaching. The National Board Certified Teachers® stand for professionalism in the schools. The National Board's responsibility is not only to ensure that teachers who become National Board Certified meet its professional standards of commitment and competence, but also to maintain standards and assessments that are so well regarded that America's accomplished teachers will decide to seek National Board Certification.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Policy Position (Five Core Propositions)

The National Board for Professional Teaching Standards seeks to identify and recognize teachers who effectively enhance student learning and demonstrate the high level of knowledge, skills, abilities and commitments reflected in the following five core propositions.

1. Teachers are committed to students and their learning.

Accomplished teachers are dedicated to making knowledge accessible to all students. They act on the belief that all students can learn. They treat students equitably, recognizing the individual differences that distinguish one student from another and taking account of these differences in their practice. They adjust their practice based on observation and knowledge of their students' interests, abilities, skills, knowledge, family circumstances and peer relationships.

Accomplished teachers understand how students develop and learn. They incorporate the prevailing theories of cognition and intelligence in their practice. They are aware of the influence of context and culture on behavior. They develop students' cognitive capacity and their respect for learning. Equally important, they foster students' self-esteem, motivation, character, civic responsibility and their respect for individual, cultural, religious and racial differences.

2. Teachers know the subjects they teach and how to teach those subjects to students.

Accomplished teachers have a rich understanding of the subject(s) they teach and appreciate how knowledge in their subject is created, organized, linked to other disciplines and applied to real-world settings. While faithfully representing the collective wisdom of our culture and upholding the value of disciplinary knowledge, they also develop the critical and analytical capacities of their students.

Accomplished teachers command specialized knowledge of how to convey and reveal subject matter to students. They are aware of the preconceptions and background knowledge that students typically bring to each subject and of strategies and instructional materials that can be of assistance. They understand where difficulties are likely to arise and modify their practice accordingly. Their instructional repertoire allows them to create multiple paths to the subjects they teach, and they are adept at teaching students how to pose and solve their own problems.

3. Teachers are responsible for managing and monitoring student learning.

Accomplished teachers create, enrich, maintain and alter instructional settings to capture and sustain the interest of their students and to make the most effective use of time. They also are adept at engaging students and adults to assist their teaching and at enlisting their colleagues' knowledge and expertise to complement their own. Accomplished teachers command a range of generic instructional techniques, know when each is appropriate and can implement them as needed. They are as aware of ineffectual or damaging practice as they are devoted to elegant practice.

They know how to engage groups of students to ensure a disciplined learning environment, and how to organize instruction to allow the schools' goals for students to be met. They are adept at setting norms for social interaction among students and between students and teachers. They understand how to motivate students to learn and how to maintain their interest even in the face of temporary failure.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Accomplished teachers can assess the progress of individual students as well as that of the class as a whole. They employ multiple methods for measuring student growth and understanding and can clearly explain student performance to parents.

4. Teachers think systematically about their practice and learn from experience.

Accomplished teachers are models of educated persons, exemplifying the virtues they seek to inspire in students - curiosity, tolerance, honesty, fairness, respect for diversity and appreciation of cultural differences -- and the capacities that are prerequisites for intellectual growth: the ability to reason and take multiple perspectives to be creative and take risks, and to adopt an experimental and problem-solving orientation.

Accomplished teachers draw on their knowledge of human development, subject matter and instruction, and their understanding of their students to make principled judgments about sound practice. Their decisions are not only grounded in the literature, but also in their experience. They engage in lifelong learning which they seek to encourage in their students.

Striving to strengthen their teaching, accomplished teachers critically examine their practice, seek to expand their repertoire, deepen their knowledge, sharpen their judgment and adapt their teaching to new findings, ideas and theories.

5. Teachers are members of learning communities.

Accomplished teachers contribute to the effectiveness of the school by working collaboratively with other professionals on instructional policy, curriculum development and staff development. They can evaluate school progress and the allocation of school resources in light of their understanding of state and local educational objectives. They are knowledgeable about specialized school and community resources that can be engaged for their students' benefit, and are skilled at employing such resources as needed.

Accomplished teachers find ways to work collaboratively and creatively with parents, engaging them productively in the work of the school.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Supporting Statement

We each remember the great teachers who touched our lives, kindled our interest and pressed us to do our best. We hold powerful images of such teachers. They exhibited a deep caring and love for children. They conveyed a passion for the subjects they taught, captivating their students with that passion. They approached their work with creativity and imagination, striving constantly to improve. As committed professionals, they were proud to be teachers.

The images of teaching that we share are deceptive as well as compelling. They emphasize teaching's external aspects, not its inner workings. If we fondly recall the great teachers of our past, we also typically see teaching as a humble undertaking. It concerns itself with the least powerful age group in society. It involves such seemingly routine activities as arranging seatwork, lecturing, reviewing and responding to students' efforts, and disciplining their behavior.

Historically, there is an enduring constancy in the organization of schools, of classrooms and of teaching itself. Self-contained classrooms, whole-group, textbook-centered instruction, teaching as telling, learning as the passive acquisition of facts, standardized testing – these patterns of schooling are as familiar as chalk dust. They constitute an unintended national curriculum that, as an unrelieved diet, does not adequately serve the educational needs of a diverse and dynamic society. Good teachers, of course, depart in many ways from these routines.

These pervasive images underestimate teaching's complexities and freeze the enterprise into forms that overlook its non-routine nature and the importance of independent professional judgment in the life of the accomplished teacher. But teaching is work of the most demanding sort, for teachers must make dozens of decisions daily, command a wide body of knowledge and skill, learn to react instantly, and be disposed to act wisely in difficult situations. And while there are principles and precepts, skills and techniques, to guide the work, teaching is also an activity with artistic aspects, a craft calling for reflection and judgment.

Although complicated, teaching nonetheless evokes simple, reductionist analysis. Much of the discourse on teaching and learning pulls apart what must be joined in practice. Chroniclers of teaching, for example, often assign the teacher's primary loyalty to the student or to the subject, with elementary teachers often characterized as "student-centered" and secondary teachers seen as "subject-centered." This dichotomy is false. Sound teaching merges commitment to students with allegiance to knowledge at all grade levels. All teachers must uphold the claims of knowledge, yet strive to build spacious avenues from such knowledge to students' understanding.

There is likewise a tendency to frame teaching either in terms of imparting valuable knowledge or as encouraging the acquisition of skills. But knowledge and skill are not disjoint. Knowledge – in the form of specific facts and organizing principles – is necessary to the exercise of most skills, just as a range of skills is necessary to the acquisition and construction of knowledge. Knowledge and skill cannot be pulled apart, nor can one assume pride of place over the other.

Another commonplace fallacy is to distinguish "basic" from "higher-order" skills, and to regard mastery of the basics as a precondition to advanced forms of reasoning and functioning. Accomplished teachers realize that higher-order thinking is the hallmark of successful learning at all levels. Students, for example, cannot become good writers without engaging in complex problem-solving processes, nor can they effectively learn basic mathematics simply by memorizing rules for manipulating numbers. There can be no neat division of teaching labor along a basic-to-

advanced skills continuum. All teachers must concern themselves with higher-order skills, with the executive functions of reasoning, and with students' capacities to monitor their own learning.

To unify these dichotomies in practice however, requires skill, wisdom and judgment. Accomplished teachers constantly assess and adjust their practice to maintain fidelity to students and to subjects, to knowledge and to skills, and to basic and advanced functions. Professionalism in teaching entails the ongoing pursuit of these unities. Hence, teachers regularly find themselves confronting hard choices -- sometimes sacrificing one goal for another, sometimes making compromises.

While teaching demands crisp reasoning and few settings yield to only a single approach, teachers do not have free rein to select any approach that strikes them as felicitous. Rather, their choices are anchored in their own experience and in the settled ground of the knowledge base that defines both efficacious and flawed practice. Being able to apply steady, disciplined judgment and reflective scrutiny within the bounds set by this constantly expanding body of knowledge is the hallmark of professionalism in teaching. As such, these values will be found at the heart of the standards the National Board will promulgate.

On the Commitment to Professionalism in Teaching

As its title indicates, the National Board is committed to professional standards for teaching. The term "professional" is an honorific in our society, and denotes occupations characterized by certain attributes. Chief among these are a body of specialized, expert knowledge together with a code of ethics emphasizing service to clients. The knowledge base typically provides substantial, but not complete, guidance for professional practice. Professionals possess expert knowledge, but often confront unique, problematic situations that do not lend themselves to formulaic solutions. Professionals must cultivate the ability to cope with the unexpected and act wisely in the face of uncertainty.

Professionals deal with urgent human problems: matters of life and death, justice, hope and opportunity. Essential to their work is the trust of clients. What warrants such trust is the obligation, upheld within the community of professionals, to pursue an ethic of service and to employ special knowledge and expertise in the interests of their clients.

These general observations apply to teaching, but with important distinctions. While teachers employ their knowledge and skill on students, they also strive to empower students to continue the quest for understanding, so that one day the pupil may surpass the instructor. In this regard, teaching is the most democratic of professions. It aims to place within the hands, head and hearts of students the means for them to teach themselves.

The ethical dimensions of teaching also distinguish it from other professions. Unique demands arise because the client's attendance is compulsory and, more importantly, because the clients are children. Thus, elementary, middle and high school teachers are obligated to meet a stringent ethical standard. Other ethical demands derive from the teacher's role as a model of an educated person. Teaching is a public activity; a teacher works daily in the gaze of his or her students, and the extended nature of their lives together in schools places special obligations on the teacher's behavior. Students learn early to read and draw lessons from their teachers' characters. Teachers, consequently, must conduct themselves in a manner students might emulate. Their failure to practice what they preach does not long elude students, parents or peers. Practicing

with this additional dimension in mind calls for a special alertness to the consequences of manner and behavior. Standards for professional teaching ought, therefore, to emphasize its ethical nature.

What the National Board Will Value in Teaching

The rich amalgam of knowledge, skills, dispositions and beliefs that will characterize National Board Certified teachers are clustered under the five core propositions presented above. What follows is an elaboration of these principles that go to the heart of the National Board's perspective on accomplished teaching.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Proposition #1: Teachers are Committed to Students and Their Learning

Fundamental to the teacher's credo is the belief that all students can learn. Furthermore, they act on that belief. Accomplished teachers like young people and are dedicated to and skilled at making knowledge accessible to all students, even as they acknowledge their distinctive traits and talents. Success depends on teachers' belief in the dignity and worth of all human beings and in the potential that exists within each child. Teachers typically do not work one-on-one with students for extended periods of time because they are responsible for groups. But within this constraint, they are attentive to human variability and its influence on learning.

Teachers Recognize Individual Differences in Their Students and Adjust Their Practice Accordingly

To respond effectively to individual differences, teachers must know many things about the particular students they teach: Alex has a stutter, Maria loves science fiction, Toby is anxious about mathematics, Marcus is captivated by jazz. But accomplished teachers know much more -- whom their students go home to at night, how they have previously performed on standardized tests, what sparks their interest. This kind of specific understanding is not trivial, for teachers use it constantly to decide how best to tailor instruction.

As diagnosticians of students' interests, abilities and prior knowledge, skillful teachers learn to "read" their students. When planning a unit on aging, for example, they will anticipate what concepts and activities certain students may find problematic. Watching a student work on a computer, they will look for signs of progress. By keeping a finger on the pulse of the class, teachers decide when to alter plans, work with individual students, or enrich instruction with additional examples, explanations or activities.

Proficient teachers learn from their experiences. They learn from listening to their students, from watching them interact with peers, and from reading what they write. The information they acquire about students in the course of instruction subsequently becomes part of their general knowledge of education. Such monitoring and learning is no easy feat. What teachers are able to see, hear and learn is colored by their own prior knowledge and experience. Thus teachers must, in their efforts to work with children different than themselves, monitor both what they see and hear, and what is not so close to the surface. They must strive to acquire a deep understanding of their students and the communities from which they come that shape students' outlooks, values and orientations toward schooling.

Teachers Have an Understanding of How Students Develop and Learn

In addition to particular knowledge of their students, teachers use their understanding of individual and social learning theory, and of child and adolescent development theory, to form their decisions about how to teach. They are familiar with the concepts generated by social and cognitive scientists that apply to teaching and learning. Moreover, they integrate such knowledge with their personal theories of learning and development generated from their own practice. For example, accomplished teachers know that old theories of a monolithic intelligence have given way to more complex theories of multiple intelligences. Current thinking no longer casts "intelligence" as a context-free, one-dimensional trait. Instead, it recognizes different kinds of intelligence - linguistic, musical, mathematical, spatial, kinesthetic, personal. This perspective also holds that there are variations in the sources of intelligence (e.g., practical experience versus formal study) and the forms of intelligence (e.g., procedural skills versus propositional knowledge).

Both their knowledge of these theories and their experiences in classrooms have taught teachers that each student has different strengths, perhaps even gifts. Teachers think about how to capitalize on these assets as they consider how best to nurture additional abilities and aptitudes.

Moreover, teachers recognize that behavior always takes place within a particular setting that, to some extent, defines the behavior. They know, for instance, that students who cannot flawlessly recite multiplication tables may still be able to multiply in other contexts (e.g., in calculating whether they have enough money for items at the grocery store). Accomplished teachers are aware that school settings sometimes obscure a clear vision of students' aptitudes and intelligences. Therefore, they strive to provide multiple contexts in which to promote and evaluate those abilities.

They also recognize the ways in which intelligence is culturally defined. That is, what is considered intelligent behavior is largely determined by the values and beliefs of the culture in which that behavior is being judged. Accomplished teachers recognize that in a multicultural nation students bring to the schools a plethora of abilities and aptitudes that are valued differently by the community, the school and the family. The knowledge, skills, abilities and dispositions that are nurtured in a Native American community in the state of Washington will differ from those valued in an Hispanic community in Florida. Likewise, those cultivated by a suburban community in Utah will differ from those developed in urban New York. Thus, teachers are attuned to the diversity that is found among students and develop an array of strategies for working with it. This includes providing educational experiences which capitalize on and enlarge the repertoires of learning and thinking that students bring to school.

Teachers Treat Students Equitably

As stewards for the interests of students, accomplished teachers are vigilant in ensuring that all pupils receive their fair share of attention, and that biases based on real or perceived ability differences, handicaps or disabilities, social or cultural background, language, race, religion, or gender do not distort relationships between themselves and their students. This, however, is not a simple proposition. Accomplished teachers do not treat all students alike, for similar treatment is not necessarily equivalent to equitable education. In responding to differences among students, teachers are careful to counter potential inequities and avoid favoritism. This requires a well-tuned alertness to such matters and is difficult, as we have only modest knowledge of human differences and how best to respond to them. Hence, accomplished teachers employ what is known about ineffectual and effective practice with diverse groups of students, while striving to learn more about how best to accommodate those differences.

Teachers' Mission Extends Beyond Developing the Cognitive Capacity of Their Students

Teachers are concerned with their students' self-concept, with their motivation, with the effects of learning on peer relationships, and with the development of character, aspiration and civic virtues. These aspects of the student - important as they are in their own right - are also essential to intellectual development. Proficient teachers consider students' potential in this broader sense when making decisions about what and how to teach.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Proposition #2: Teachers Know the Subjects They Teach and How to Teach Those Subjects to Students

If one cardinal precept of teaching is a commitment to the welfare and education of young people, the other is a commitment to subject matter. Accomplished teachers are dedicated to exposing students to the social, cultural, ethical and physical worlds in which they live, and they use the subjects they teach as entrees into those worlds. Thus, elementary teachers know about geography and its relationship to commerce and history. Foreign language teachers know how language and culture interact and fuse. But, it is not sufficient that teachers know the facts that fall into these different content domains. Understanding subject matter entails more than being able to recite lists of dates, multiplication tables, or rules of grammar.

Teachers Appreciate How Knowledge in Their Subjects is Created, Organized and Linked to Other Disciplines

Teachers in command of their subject understand its substance -- factual information as well as its central organizing concepts -- and the ways in which new knowledge is created, including the forms of creative investigation that characterize the work of scholars and artists.

Physics teachers know about the roles played by hypothesis generation and experimentation in physics; mathematics teachers know the modes of justification for substantiating mathematical claims; art teachers understand how visual ideas are generated and communicated; history teachers know how historians use evidence to interpret past events; and English teachers understand the relationships among reading, writing and oral language. Many special education teachers have a slightly different orientation -- focusing on skill development as they work to help moderately and profoundly handicapped students achieve maximum independence in managing their lives.

Understanding the ways of knowing within a subject is crucial to the National Board Certified teacher's ability to teach students to think analytically. Critical thinking does not occur in the abstract, for the thinker is always reasoning about something. Proficient teachers appreciate the fundamental role played by disciplinary thinking in developing rich, conceptual subject-matter understandings. They are dedicated to exposing their students to different modes of critical thinking and to teaching students to think analytically about content.

Teachers represent the collective wisdom of our culture and insist on maintaining the integrity of the methods, substance and structures of disciplinary knowledge. In the face of pressures to portray knowledge in weak and diluted forms, they remain firm. Their role, however, is not just to reinforce the status quo. Rather, appreciative of the fact that there are multiple perspectives and interpretations in each discipline, accomplished teachers encourage students to question prevailing canons and assumptions to help them think for themselves.

It is sometimes assumed that elementary school teachers need not be equipped to approach their subjects critically. But all accomplished teachers, regardless of the ages of their students, are charged with teaching students about something, and in order to do so, they must appreciate its complexity and richness. Teachers must possess such knowledge if they are to help their students develop higher-order thinking skills -- the hallmark of accomplished teaching at any level. Being able to engage elementary school children in the broad array of subjects they can profitably come to appreciate makes elementary school practice especially challenging. This does not imply

that fourth-grade teachers should have the same command of biology as high school biology teachers. However, it does mean that they have an understanding of science that allows them to present basic precepts to their students and introduce them to the joy of discovering -- and thinking about -- the natural world of which they are a part.

Teachers Command Specialized Knowledge of How to Convey a Subject to Students

Knowledge of subject matter is not synonymous with knowledge of how to reveal content to students so they might build it into their systems of thinking. Accomplished teachers possess what is sometimes called "pedagogical content knowledge." Such understanding is the joint product of wisdom about teaching, learning, students and content. It includes knowledge of the most appropriate ways to present the subject matter to students through analogies, metaphors, experiments, demonstrations and illustrations. Subject-specific knowledge also includes an awareness of the most common misconceptions held by students, the aspects that they will find most difficult, and the kinds of prior knowledge, experience and skills that students of different ages typically bring to the learning of particular topics. Proficient science teachers, for example, know that some students have misconceptions about gravity that can influence their learning, while proficient art and music teachers know that young children arrive at school at various stages of maturity with respect to eye-hand coordination. Teachers use this knowledge of their students to structure instruction that facilitates further development.

Thus, subject-specific pedagogical knowledge is not a bag of tricks, but a repertoire of representations that combines instructional techniques with subject matter in ways that take into account the mix of students and school contexts that confront the teacher. Such subject-specific teaching knowledge embodies a way of reasoning through and solving the problems that arise in the daily work of teachers -- decisions ranging from what aspects of the subject matter to emphasize to decisions about how to pace instruction. In making these choices, teachers bring to bear their knowledge of students and learning and teaching and subject matter.

Professional teachers' instructional repertoires also include knowledge of available curricular resources such as primary sources, models, reproductions, textbook series, teachers' guides, videotapes, computer software and musical recordings. Their commitment to learning about new materials includes keeping abreast of technological developments that have implications for teaching; for example, how to engage students in the rapidly expanding field of computer technology, as well as how to use the computer to enhance their own teaching. Thus, able teachers keep current with the growing body of curricular materials -- including literature available through their professional organizations - and constantly evaluate the usefulness of those materials based on their understanding of curriculum theory, of students, of subject matter, and of the school's and their own educational aims.

Teachers Generate Multiple Paths to Knowledge

Knowledgeable teachers are aware there is value in both structured and inductive learning. That is, while it is useful to teach students about the concepts and principles that scholars have generated in the various disciplines, it is also valuable to engage students in learning by discovery, where they themselves search for problems, patterns and solutions. Proficient teachers help students learn to pose problems and work through alternative solutions, in addition to teaching them about the answers that others have found to similar problems.

The posing and solving of problems on their own is central to the development of true understanding by students -- moving far beyond the rote memorization of facts, the easy manipulation

of formulas or the facile playing of a musical scale. Teaching for understanding requires students to integrate aspects of knowledge into their habits of thinking, rather than simply store fragmented knowledge bits. It also means learning to think in a nonlinear way, approaching issues from different angles, weighing multiple criteria and considering multiple solutions. Thus, in the eyes of the proficient teacher, "knowledge" is not conceived narrowly as a lower-level form of understanding. Rather, knowledge is cast in the richest light - as a combination of skills, dispositions, propositions and beliefs - integrated and flexible, elaborate and deep. Furthermore, understanding involves the ability to apply such knowledge to problems never before encountered by teacher or student. Accomplished teachers appreciate that this is the kind of knowledge and understanding that counts, and that this type of learning cannot be rushed.

Proposition #3: Teachers are Responsible for Managing and Monitoring Student Learning

Professional teachers hold high expectations for all students and see themselves as facilitators of student learning. To fulfill these responsibilities, teachers must create, enrich and alter the organizational structures in which they work with young people. They also find ways to capture and sustain the interest of their students. Because time is a precious commodity in schools, teachers attempt to make the most efficient use of it. To accomplish these tasks, teachers seek to master the body of generic pedagogical knowledge.

Teachers Call on Multiple Methods to Meet Their Goals

Accomplished teachers know and can employ a variety of generic instructional skills -- how to conduct Socratic dialogues, how to lecture, how to oversee small cooperative learning groups. Although much of instruction is determined by the content to be taught, there are some commonalities about teaching methods that guide their practice. They are aware of what can reasonably be covered in a 45-minute roundtable discussion, when to hold back and let students figure out their own solutions, and what types of questions provoke the most thoughtful conversation. But it is not sufficient that teachers know about different modes of instruction; they must also know how to implement those strategies. Traditional distinctions between knowing and doing have obscured the fact that thought and action interpenetrate in teaching -- knowing about something and knowing how to do something are both forms of understanding central to teaching.

Because students vary in learning styles and because different settings afford differing learning opportunities, accomplished teachers know when and how to alter the social and physical organizational structure of the learning environment. It is not enough to be a master lecturer, for there are many times when lecturing is not an effective way to teach. An outdoor experiment, a mock trial or an economic simulation, for example, may be more appropriate. Alternatively, a playlet or a debate might be a more effective way to engage students in thinking and learning. Teachers know about the breadth of options available to them, such as innovative instructional formats that involve discovery learning, conceptual mapping, brainstorming, working with computers, as well as more traditional tried-and-true methods.

Teachers not only have the opportunity to vary instructional settings and to employ a range of instructional materials, they also have the opportunity to call on various human resources to custom-tailor the working environment for students. Accomplished teachers know how to mobilize students to tutor their peers and how to engage aides and volunteers as teaching assistants. In schools where staffing arrangements are not fixed and inflexible, teachers also have a good appreciation of their colleagues' skills and the circumstances in which their colleagues' talents can best complement their own. Professional teachers wisely enlist the knowledge and expertise of their fellow faculty members in a variety of ways as they seek to provide their students with as rewarding a learning experience as possible.

Accomplished teachers also know the strengths and weaknesses of these options, and their suitability or incompatibility for certain students and groups. The settings that a teacher chooses are not just matters of personal preference, but are grounded in the literature of teaching. Teaching, to the accomplished teacher, is an elegant web of alternative activities in which students are engaged with the content; sometimes with the teacher, sometimes with each other, sometimes alone.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Teachers Orchestrate Learning in Group Settings

Teachers know how to manage groups of students. They are responsible for setting forth the social norms by which students and teachers act and interact, helping students learn to adopt appropriate roles and responsibilities for their own learning and that of their peers. This includes teaching students to work independently without constant direct supervision by a teacher.

Accomplished teachers have developed systems for overseeing their classrooms so that students and teacher alike can focus on learning, not on controlling disruptive behavior. Discipline and management techniques vary, and no one system has been proven most effective. Hence, proficient teachers consider the desired learning results, their knowledge of their students and the social context, and their own prior experience in selecting management strategies.

Teachers also know that different instructional formats often require different norms of social interaction. Accomplished teachers can alternate among organizational arrangements and understand how different structures cast students and teachers in different roles. Applying their knowledge of the relative strengths and weaknesses of different structures, they weigh these considerations when deciding which instructional strategy and organizational structure will best enhance student learning. They also continually search for new forms of organization that may expand their repertoire and prove effective.

Teachers Place a Premium on Student Engagement

Facilitating student learning is not simply a matter of placing young people in educative environments, for teachers must also motivate them, capturing their minds and hearts and engaging them actively in learning. Thus, the National Board Certified teacher understands the ways in which students can be motivated and has strategies to monitor student engagement. The teacher's role in building upon student interests and in sparking new passions is central to building bridges between what students know and can do and what they are capable of learning.

Proficient teachers also know that motivating students is not always equivalent to making learning fun, for learning can be difficult work. Developing an acute sense of one's body in dance, for example, requires intense intellectual and physical concentration. Writing a short story requires drafting and re-drafting, editing and re-editing, occasionally submitting oneself to the critiques of peers and teachers. To practice effectively, teachers need to know how to encourage students even in the face of temporary failure and the inevitable doubts that students meet as they push themselves to new affective, intellectual and physical planes. With such learning comes the real joy in education, the satisfaction of accomplishment.

Teachers Regularly Assess Student Progress

While teachers are not always the central actors in their students' educational experiences, they are ultimately responsible for the creation and maintenance of those experiences and bear a considerable responsibility for what students learn at school. Proficient teachers, therefore, can judge the relative success of the activities they design. They can track what students are learning (or not learning), as well as what they, as teachers, are learning.

Assessment in teaching is not a simple task; teachers must monitor the successes and failures of individual students and evaluate their classes as collectives of learners. Additionally, they make judgments about themselves as teachers in relation to those students and classes. Although these judgments are interdependent of one another, they are not necessarily synonymous. One of the essential tensions of teaching is that teachers teach individual students, while managing groups.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Accomplished teachers do not treat a class as a monolith. They know that a class does not learn; individual students do. But individuals neither learn the same things, nor learn at the same pace.

Accomplished teachers use information about how the students in their classes are doing "on average" as a guide to making judgments about the relative success or failure of an instructional strategy. But they do not forget that there are few average students. They know that some students have moved far beyond that "average" evaluation, while others trail. And while they have to make decisions about what to do with the class as a whole, proficient teachers find ways to accommodate what they know about individual students and what they are learning in their plans for the whole group.

Accomplished teachers understand that the purposes, timing and focus of an evaluation affect its form. They are astute observers of students - their movements, their words and their minds. Teachers track student progress with a variety of evaluation methods, each with its own set of purposes, strengths and weaknesses. Their knowledge extends to creating their own, sometimes innovative, tools for evaluation, including portfolios, videotapes, demonstrations and exhibitions. In addition, they may use more traditional measures such as quizzes or exams. Sometimes teachers ask questions in the middle of a group discussion in order to assess how well students are following the presentation of information; or they may talk individually with students while they are engaged in independent work. At other times they watch their students' behavior as they read to each other or work in the laboratory.

Teachers frequently do not assign grades, for evaluation is not always for the purpose of recording grades; rather, it allows students and teachers to assess where they stand. Teachers also assess students to determine how much they have learned from a unit of instruction, be it a week on seeds, a semester of photography, or a year of athletic training. Student responses then contribute to teachers' decisions about whether to reteach, review or move on. By continually adding to their repertoire of methods for assessing what students have learned, as well as constantly monitoring student progress, accomplished teachers are able to provide constructive feedback to students, parents and themselves. Finally, such teachers help their students to engage in self-assessment, instilling in them a sense of responsibility for monitoring their own learning.

Teachers Are Mindful of Their Principal Objectives

Teachers also know about planning instruction - identifying and elaborating educational objectives, developing activities to help them meet their goals and drawing upon resources that will serve their purposes. Experienced teachers do not all plan alike. Some do not write elaborate plans prior to teaching, having automated their planning through years of experience in classrooms. Other teachers plan in detail (e.g., creating individual educational plans for special education students). No matter what form their final plans take -- scribbles on a scrap of paper or lengthy and detailed outlines accomplished teachers can clearly articulate their goals for students.

Proposition #4: Teachers Think Systematically About Their Practice and Learn from Experience

As with most professions, teaching requires an open-ended capacity that is not acquired once and for all. Because they work in a field marked by many unsolved puzzles and an expanding research base, teachers have a professional obligation to be lifelong students of their craft, seeking to expand their repertoire, deepen their knowledge and skill, and become wiser in rendering judgments. Accomplished teachers are inventive in their teaching and, recognizing the need to admit new findings and continue learning, stand ready to incorporate ideas and methods developed by others that fit their aims and their students. What exemplifies excellence, then, is a reverence for the craft, a recognition of its complexities, and a commitment to lifelong professional development.

Teachers Are Continually Making Difficult Choices That Test Their Judgment

The demands of teaching often present stiff challenges that do not lend themselves to simple solutions. Conflicting objectives regularly require teachers to fashion compromises that will satisfy multiple parties. A Western Civilization teacher, for example, attempting to reconcile demands for coverage with demands for indepth understanding, will do what is necessary to race from Plato to NATO, yet set aside time to develop in students the understanding that history is evolutionary rather than a series of events strung together chronologically. Likewise, a third-grade teacher will find a way to introduce students to the idea that writing is a thinking process, while ensuring that students are learning the basics of spelling and grammar.

Teachers also face choices that force them to sacrifice one goal for another. For instance, teachers who are committed to teaching mathematics for conceptual understanding want to teach students to see number relationships in the real world, to represent them with appropriate symbols, and to use their knowledge of mathematical formulas and computational skills to manipulate those numbers. Such teaching requires giving students time to frame their own problems, find their own solutions, and compare those solutions with alternatives posed by their classmates. Students who have learned through experience that math class involves filling out worksheets and doing problem sets may dislike the uncertainty inherent in problems with multiple or no solutions; they may be troubled that their teacher now wants them to discuss the reasons why a particular solution makes sense. Abandoning speed and accuracy as the criterion of success may temporarily jeopardize students' performance on standardized tests, even as the teacher fosters growth in the depth of students' mathematical competence. In deciding to teach in this way, a teacher risks alienating students, parents and administrators who have their own strong ideas of what math class is supposed to look like and the kind of competence it is supposed to yield.

Such circumstances call on teachers to employ their professional knowledge of what makes for sound practice, with the interest of their students given paramount consideration. While more than one satisfactory path may be derived to balance non-complementary objectives, the teacher's decision will be grounded in established theory and reasoned judgment.

Teachers Seek the Advice of Others and Draw on Education Research and Scholarship to Improve Their Practice

Aware that experience is not always a good teacher, proficient teachers search out other opportunities that will serve to cultivate their own learning. As savvy students of their own teaching, they know the value of asking others to observe and offer a critique of their teaching. They also know the value of writing about their work and of soliciting reactions from parents and students.

Thus, masterful teachers develop specialized ways to listen to their students, colleagues and administrators, and reflect on their teaching in order that they might improve their practice.

Able teachers are also students of education scholarship and are cognizant of the settled and unsettled territory in their field. They stay abreast of current research and, when appropriate, incorporate new findings into their practice. They take advantage of teacher centers and special conferences and workshops. They might conduct and publish their own research, if so inclined, for testing of new approaches and hypotheses is a commonplace habit among adept teachers, even if a normally overlooked and undocumented one.

Wise teachers understand the legitimacy and limitations of the diverse sources that inform teaching and they continuously draw upon them to enrich their teaching. Their enthusiasm for, and commitment to, continued professional development exemplifies a disposition they hope to nurture in students. Hence, the thinking, reasoning and learning that characterize first-rate teaching are doubly valuable: not only are thoughtful teachers able to teach more efficiently and effectively, they are also models for the critical, analytic thinking that they strive to develop in our youth. Teachers who are themselves exemplars of careful reasoning -- considering purposes, marshaling evidence and balancing outcomes - are more likely to communicate to students the value and manner of such reasoning. Moreover, they model other dispositions and traits as well, such as a commitment to creativity in their work and the disposition to take risks in exploring new intellectual, emotional, physical or artistic territories.

Proficient teachers, then, are models of educated persons. Character and competence contribute equally to their educative manner. They exemplify the virtues they seek to impart to students: curiosity and a love of learning; tolerance and open-mindedness; fairness and justice; appreciation for our cultural and intellectual heritages; respect for human diversity and dignity; and such intellectual capacities as careful reasoning, the ability to take multiple perspectives, to question received wisdom, to be creative, to take risks, and to adopt an experimental and problem-solving orientation.

Proposition #5: Teachers are Members of Learning Communities

Teaching most commonly is regarded as the daily conduct of lessons and the provision of learning experiences. But the work of teaching reaches beyond the boundaries of individual classrooms to wider communities of learning. In order to take advantage of the broad range of professional knowledge and expertise that resides within the school, accomplished teachers have a range of duties and tasks outside the direct instruction of students that contribute importantly to the quality of the school and to student learning.

There are two broad areas of responsibility. One involves participation in collaborative efforts to improve the effectiveness of the school. The second entails engaging parents and others in the community in the education of young people.

Teachers Contribute to School Effectiveness by Collaborating with Other Professionals

Teaching is often portrayed as the implementation of policy and curriculum developed by others -- as following orders. The National Board advocates a more proactive and creative role for teachers: engaging them in the analysis and construction of curriculum, in the coordination of instruction, in the professional development of staff and in many other school-site policy decisions fundamental to the creation of highly productive learning communities.

While state authorities and local school district leadership establish broad goals, objectives and priorities for the schools, professional teachers share responsibility with colleagues and administrators for decisions about what constitutes valuable learning for students. This includes their participation in critically analyzing the school curriculum, identifying new priorities and communicating necessary changes to the school community. Teachers' knowledge of curriculum and their students are essential to discharging these responsibilities effectively. But a readiness to work collaboratively on such matters and not blindly accept curricular conventions is also necessary.

Accomplished teachers attend to issues of continuity and equity of learning experiences for students that require school-wide collaboration across the boundaries of academic tracks, grade levels, special and regular instruction and disciplines. Such boundaries, constructed as much out of traditional patterns of school organization as out of instructional rationales, are often dysfunctional and damaging to student learning. National Board Certified teachers cultivate a critical spirit in appraising such schooling commonplaces, together with a willingness to work with administrators toward school-wide improvements that can include revision of organizational as well as instructional features of schooling.

The development of curriculum and the coordination of instruction are particularly important functions shared among teachers and administrators. Proficient teachers collaborate in planning the instructional program of the school to assure continuity of learning experiences for students. They possess the interpersonal skills needed to work on teams and a willingness to work together in the interest of the school community. Their understanding of the technical requirements of a well-coordinated curriculum enables them to participate in planning and decision-making within teams, departments or other educational units outside the classroom, laboratory or studio.

Consonant with their role in curriculum planning and coordination, teachers are aware of the learning goals and objectives established by state and local authorities. Professional practice requires that teachers be knowledgeable about their legal obligation to carry out public policy as

represented by state statute and regulation, school board directives, court decisions and other policies.

Accomplished teachers also participate in the coordination of services to students. Today's schools include a wide variety of educational specialists, and with increasing specialization has come the need for coordination, lest pupils' educational experiences become fragmented. The increased practice of "mainstreaming" special-needs students to assure that they are being educated in the least restrictive environment has meant that general and special education teachers need to work with one another. Compensatory education programs typically involve teaching pupils outside regular school settings. The various forms of English as a second language, bilingual and English-immersion programs often require cooperation among teachers of non- and limited-English-speaking youth. National Board Certified teachers are adept at identifying students who might benefit from such special attention and at working in tandem with specialists.

In addition to working on the improvement of school-wide curricula and the coordination of instruction, teachers work together to strengthen their teaching. Sometimes they observe each other teach; at other times they engage in discussions about teaching; and occasionally they collaborate in trying out new instructional strategies. While the particulars of how teachers choose to improve their instruction will vary according to the structure of opportunity and a teacher's dispositions and interests, the principle underlying such engagement is the continuous pursuit of teaching excellence in the company of peers.

Strong schools emphasize a process of continuous improvement. They are organized to find and solve problems and to locate, invent and experiment with different methods of instruction and school organization. Teachers within such schools work not only on professional development, but also on school-wide improvements. This expectation is part of what constitutes a professional orientation to teaching and part of what distinguishes the professional teacher.

The conventional image of the accomplished teacher as solo performer working independently with students is narrow and outdated. Committed career teachers assume responsibility in cooperation with their administrators for the character of the school's instructional program. They are team players willing to share their knowledge and skill with others and participate in the ongoing development of strong school programs. This participation may take many forms, such as mentoring novices, serving on school and district policy councils, demonstrating new methodologies, engaging in various forms of scholarly inquiry and artistic activity, or forming study groups for teachers.

Teachers Work Collaboratively with Parents

Teachers share with parents the education of the young. They communicate regularly with parents and guardians, listening to their concerns and respecting their perspective, enlisting their support in fostering learning and good habits, informing them of their child's accomplishments and successes, and educating them about school programs. Kindergarten teachers, for example, can help parents understand that reading stories to their children is more important to literacy development than completing worksheets on letters.

In the best of all worlds, teachers and parents are mutually reinforcing partners in the education of young people. But three circumstances complicate this partnership. First, the interests of parents and schools sometimes diverge, requiring teachers to make difficult judgments about how best to fulfill their joint obligations to their students and to parents. Second, students vary in the degree and kind of support they receive at home for their school work. The effects of

culture, language, and parental education, income and aspirations influence each learner. Teachers are alert to these effects and tailor their practice accordingly to enhance student achievement. However, when faced with an unavoidable conflict, the teacher must hold the interest of the student and the purposes of schooling paramount. Third, the behavior and mind-set of schools and families can be adversarial. Some parents are distrustful of the school's values, and the schools sometimes underestimate the family's potential to contribute to their children's intellectual growth. Students get caught in the middle, their allegiance to and affection for each party challenged by the other. Accomplished teachers develop skills and understandings to avoid these traditional pitfalls and work to foster collaborative relationships between school and family.

The changing family structure in our society creates new challenges as well, for there are now more youth with single parents, working parents and parents with inadequate income. Thus, creating home-school partnerships has become more difficult for teachers and parents in many communities. In attempting to work creatively and energetically with families in the interest of students' development, able teachers acquire knowledge and understanding of individual students' lives outside school. A teacher's foremost responsibility is to the intellectual development of our youth, but they are mindful of the broad range of children's needs, including the need for guidance and the strong presence of caring and nurturing adults. This is a difficult set of obligations to fulfill. On the one hand, teachers are prepared neither by training nor by role to serve as parent surrogates or social workers. The distinctive mission of teaching is to promote learning, a complex undertaking in itself. On the other hand, education's broad and humane purposes do not admit any narrow specialization. Students' physical, emotional, and social well-being cannot be separated from their intellectual growth.

Teachers Take Advantage of Community Resources

Professional teachers cultivate knowledge of their school's community as a powerful resource for learning. The opportunities are many for enriching projects, lessons, and study: observing the city council in action; collecting oral histories from senior citizens; studying the ecology of the local environment; visiting a nearby planetarium; drawing the local architecture; or exploring career options on-site. Any community -- urban or rural, wealthy or poor -- can be a laboratory for learning under the guidance of an effective teacher. Moreover, within all communities there are valuable resources such as other teachers and students, senior citizens, parents, business people, and local organizations that teachers can engage to assist, enhance and supplement their work with students. Teachers need not teach alone.

Teachers also cultivate knowledge about the character of the community and its effects on the school and students. They develop an appreciation of ethnic and linguistic differences, of cultural influences on students' aspirations and expectations, and of the effects of poverty and affluence. Cultural and other discontinuities between home and school frequently can confound teachers' efforts to promote learning. Conversely, the cultural diversity represented in many communities can serve as a powerful resource in teaching about other cultures, in encouraging tolerance and understanding of human differences, and in promoting civic ideals. Accomplished teachers seek to capitalize on these opportunities and to respond productively to students' diverse backgrounds.

There is a balance here. Schools and teachers cannot alleviate all the social problems that they encounter. Yet teachers confront the human condition daily in all its variety, splendor and misery. They must be humane, caring and responsive to students and their problems, while they maintain a focus on their distinctive professional responsibilities.

Conclusion

Accomplished teaching involves making difficult and principled choices, exercising careful judgment and honoring the complex nature of the educational mission. Teachers employ technical knowledge and skill, yet must be ever mindful of teaching's ethical dimensions. The primary mission is to foster the development of skills, dispositions and understanding, while responding thoughtfully to a wide range of human needs and conditions. Teachers owe joint allegiance to the forms and standards of knowledge within and across disciplines and to the students they serve.

They must acquire and employ a repertoire of instructional methods and strategies, yet remain critical and reflective about their practice, drawing lessons from experience. Teachers' professional responsibilities focus on instructing the students in their immediate care, while they participate as well in wider activities within the school and in partnership with parents and the community.

Teaching is often portrayed as an activity that conserves valued knowledge and skills by transmitting them to succeeding generations. It is that and more. Teachers also have the responsibility to question settled structures, practices, and definitions of knowledge; to invent and test new approaches; and, where necessary, to pursue change of organizational arrangements that support instruction. As agents of the public interest in a democracy, teachers through their work contribute to the dialogue about preserving and improving society, and they initiate future citizens into this ongoing public discourse. In the development of its assessment procedures and certification standards, the National Board has sought to represent these ideals faithfully and comprehensively.

Assertations about what teachers should know sometimes conceal inadequacies in the current state of knowledge. In this respect, teaching is not unlike other professions where practitioners confront unavoidable uncertainty in their work. However, the knowledge base for teaching is growing steadily. Professional consensus and research findings have begun to provide authoritative support for knowledge related to many of the tasks, responsibilities and results of teaching. But much remains to be learned.

The National Board draws on existing knowledge in developing its standards but also relies on the professional judgment of accomplished teachers and scholars in designing its assessment procedures. Recognizing that new knowledge about teaching is continually being formulated, the National Board continually reviews its work to reflect new findings and to update its standards and assessments as appropriate.

The National Board also considers the effects of school context on standards for teaching. The very existence of a National Board suggests common standards that prevail across teaching's many settings. However, teaching in an Alaskan village exacts demands different from teaching in Chicago. Teachers in both settings, though, blend and adapt their knowledge of teaching with their knowledge of the community in which they work to ensure effective student learning. For accomplished teachers, the wisdom of practice that they accrue depends on the settings in which they work, the communities they serve, and the students they encounter.

The assessment procedures developed by the National Board take context into account in a variety of ways. This is achieved by the use of assessment formats such as essays, videotaping and reflective commentaries. The National Board offers National Board Certification to all qualified

teachers irrespective of the teaching environments in which they work. But the opportunities available to teachers to acquire and exercise many of the professional capacities and responsibilities endorsed by the National Board vary markedly from community to community. Some schools feature strong professional cultures whose norms support collaboration, innovative teaching, a high degree of collegiality, and participation in a broad array of professional activities. Other schools provide few such opportunities, and some even discourage such activity. To address this tension, the National Board's assessments acknowledge that there are multiple paths to meeting the standards, which take into account the diversity of teaching contexts.

These are the touchstones that guide the development of the National Board's certification standards and assessments. Our view of the responsibilities of the National Board Certified Teacher is deliberately complex and demanding, for this is how we see the work of American professional teachers, who are challenged to create excellence in education for all our nation's youth.

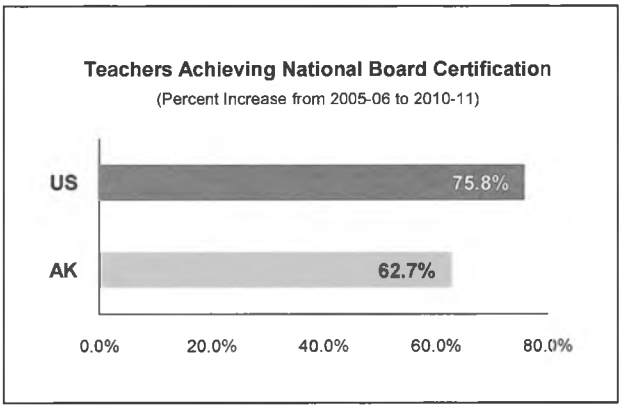
Grow great schools.™

Alaska

America's partner in growing great schools - 2011 Statistics for Alaska

In 2011, 6,266 teachers became National Board Certified Teachers (NBCTs) through NBPTS, bringing the total number of NBCTs nationwide to 97,291.



These accomplished teachers comprise approximately 3 percent of the national teaching force - more than half teach in high-need schools and 15 percent are certified in STEM-related areas. This year, 19 states had at least a 10 percent increase in the number of teachers earning certification over the prior year. Nineteen states have more than doubled the number of NBCTs in the past five years. In Washington and Wyoming, NBCT populations have more than quadrupled in the past five years. Research shows that students taught by Board Certified teachers consistently see the highest gains in achievement.

Here are the key 2011 statistics for Alaska.

Increase in Teachers Achieving National Board Certification*			
	Number in 2010-2011	**% Increase**	**Total Number Certified**
AK	14	11.6%	135
Total	6,266	6.9%	97,291

"As the nation focuses on building the strongest possible teaching workforce, National Board Certification is the gold standard in affirming excellence in the classroom. These highly qualified teachers are true 'nation builders,' and are the educators who are best positioned to lead the ground-up movement our schools need to reach their potential."

- Ron Thorpe, NBPTS president and CEO

HOUSE CS FOR SENATE BILL NO. 137(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE HOUSE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS DAVIS, Ellis, Dyson, Coghill, McGuire, Meyer, Stedman, Menard, Paskvan, Egan

A BILL

FOR AN ACT ENTITLED

"An Act requiring suicide awareness and prevention training for certain school personnel."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SHORT TITLE. This Act may be known as the Jason Flatt Act.

*** Sec. 2.** AS 14.20 is amended by adding a new section to read:

Sec. 14.20.690. Mandatory youth suicide awareness and prevention training; immunity. (a) A school district, regional educational attendance area, and the department shall annually provide youth suicide awareness and prevention training approved by the commissioner to each teacher, administrator, counselor, and specialist who is employed by the district, regional educational attendance area, or department to provide services to students in grades seven through 12 in a public school in the state at no cost to the teacher, administrator, counselor, or specialist.

(b) The commissioner shall approve youth suicide awareness and prevention training provided under this section if the training is not less than two hours each year, meets standards for professional continuing education credit in the state, and is periodically reviewed by a qualified person or committee for consistency with generally accepted principles of youth suicide awareness and prevention. The training may be offered through videoconferencing or an individual program of study of designated materials.

(c) A person may not bring a civil action for damages against the state or a school district, or an officer, agent, or employee of the state or a school district for a death, personal injury, or property damage that results from an act or omission in performing or failing to perform activities or duties authorized under this section. This subsection does not apply to a civil action for damages as a result of intentional misconduct with complete disregard for the safety and property of others. In this subsection, "school district" has the meaning given "district" in AS 14.17.990.

(d) The training provided or the failure to provide training under this section may not be construed to impose a specific duty of care on any person.

MEMORANDUM February 17, 2012

SUBJECT: Immunity for suicide prevention training (SB 137 amendment)
(Work Order No. 27-LS0994\M.1)

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have asked whether the amendment providing for limited immunity from suits resulting from the training or lack of training for suicide prevention awareness required by the above-referenced bill as suggested by the Anchorage School District is necessary. AS 09.50.250 and 09.50.253 already cover tort immunity for state employees, and AS 09.50.253(g)(2)(A)(ii) includes "a person appointed to a board or commission of state government." AS 09.65.070(d)(2) grants immunity to municipalities and their agents and employees for performing or failing to perform a ""discretionary function." The case law on what constitutes a "discretionary function" is extensive and complicated; I could not say with certainty that it would immunize a municipal school district and its employees in all cases.

The issue of whether school districts and their employees are immune from suit for an alleged violation of federal law as an "arm of the state" under the 11th amendment of the United States Constitution was decided against an Alaska municipal school district in *Holz v. Nenana City Public School District,* 347 P.3d 1176 (9th Circuit) (Alaska 2003). In that case, an applicant for a position with a city school district was allowed to sue the district and district officials for alleged violations of federal civil rights laws. In contrast, the United States District Court for the District of Alaska had previously decided in an unappealed decision that a regional educational attendance area in Alaska was an "arm of the state" for immunity purposes.

Although this amendment will not affect federal immunity, the more specific language proposed in amendment M.1 will provide additional state law protections from liability for damages that may be alleged to have been caused by a failure to provide the training required by the bill or the failure to prevent injury or death from a suicide. While the proof needed to find a causal connection is difficult, the amendment makes it clear that only intentional misconduct resulting in death, injury, or damage may be actionable.

Senator Bettye Davis

SB 137, 27-LS0994\M – "An Act requiring suicide awareness and prevention training for certain school personnel."

SPONSOR STATEMENT

This bill, short titled the Jason Flatt Act, requires mandatory youth suicide awareness and prevention training approved by the Commissioner, Department of Education and Early Development to each teacher, administrator, counselor, and specialist who is employed by a school district, regional educational attendance area, or department each year for services to students in grades 7-12. Training is important because suicide is the 3rd leading cause of death for ages 10-24 and the number one cause of death for Alaskans under the age 50 years.

Awareness and education are key to prevention. Tying suicide prevention efforts into teacher training has proved very helpful in other states in reducing teen suicides. Most young people contemplating suicide show clear warning signs prior to the attempt. It is imperative that educators know how to recognize signs of at-risk youth and are prepared to intervene when they identify a problem.

Recognizing that Alaska has by far the highest rate of suicide per capita in the country, particularly among teens, young men, and Alaska Natives, the Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse, in partnership with the Statewide Suicide Prevention Council, the Alaska Association of Student Governments, the University of Alaska, and the Jason Foundation have established goals, training programs, and resources for teachers, coaches, and staff in suicide prevention.

The Alaska Bureau of Vital Statistics 2000-2009 reported the following suicide facts and statistics:

- 21.8 suicides per 100,000 Alaskans; vs. 11.5 suicides per 100,000 nationwide
- 56.1 suicides per 100,000 Alaskan young men ages 15-24, and 141.6 Native young men and 50.3 young women in same age group.
- 1369 suicides in 176 Alaska communities between 2000 and 2009; 11 per month; 2.6 per week

- 78% of suicides were committed by men and 22% by women who made twice as many but many more failed attempts
- 90% of suicide victims experience depression or have diagnosable and treatable mental health or substance abuse disorders

The 2011 Youth Risk Behavior Survey revealed that in the last 12 months:

- 12.8% Alaska High School students reported they seriously considered suicide
- 8.7% Alaska High School Students actually attempted suicide one or more times
- 2.7% Alaska High School Students –attempted suicide resulting in injury, poisoning, or overdose treated by a doctor or nurse

Just as "it takes a village to raise a child," it takes parents, teachers, mentors, and communities to support efforts to reduce suicides by developing environments of respect and connectedness among youth and adult role models. This will create in youth the needed hope, promise, and optimism to build healthy and appropriate relationships and behaviors. By requiring – and making resources available for – suicide prevention training for educators and school staff through this bill, the state of Alaska can ensure that youth at risk of suicide are more likely to be identified and receive help.

Alaska has many state agencies, non-profits, private citizens, health care providers, and policy makers working on this problem with programs and materials. This bill is but one part of suicide prevention which has proven successful in other states. The Jason Foundation which was named after the tragic loss of the founder's son to suicide has made available to Alaska and a limited number of other states its library of suicide awareness and prevention training materials free of charge.

Not only will this bill and community efforts reduce suicides, particularly among vulnerable youth, but it will also reduce the number of self-inflicted injuries occasioned in over 1200 hospitalizations per year due to suicide attempts at cost of $9,000 per case excluding physicians' and specialists' fees, as researched and reported by the Alaska Mental Health Trust Authority in 2001-2002. The same research found 75% of the costs of Alaska suicide hospitalizations were paid through public funding sources and 15% were written off as losses by hospitals.

Suicides and attempted suicides have taken an incalculable toll on individuals and families in Alaska. The burden of this tragedy is shared by society as a whole. With all of our efforts the numbers have not decreased very much over the years. This bill, admittedly not a solution by itself, will help reduce the "silent epidemic" of youth suicide through educational and awareness programs that equip young people, educators and parents with the tools and resources to help identify and assist at-risk youth.

Why this fiscal note differs from previous version (if initial version, please note as such)

As there are existing trainings modules available at no cost to school districts, regional educational attendance areas and the department, there will be no need for additional funding. Therefore, the Department has reduced the fiscal impact to zero.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB137

Analysis

The legislation would require annual two hour suicide awareness and prevention training for each teacher, administrator, counselor and specialist who is employed by a district, regional educational attendance area, or department teaching grades 7-12.

The short title of SB 137 is Jason Flatt Act, which is a reference to a student who committed suicide in Tennessee. Jason's father then created the Jason Foundation. The foundation is a non-profit suicide prevention organization. The Jason Flatt Foundation currently has four modules available free online with each module being two hours long.

Additionally there are other commercially available products that the Department would consider for approval if school districts are interested in using them. One available product, that the Department will approve, is Kognito At-Risk, an evidence based and rigourousl y evaluated best practice training.

MEMORANDUM January 24, 2012

SUBJECT: Sectional Summary (SB 137 (Work Order No. 27-LS0994\M))

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Requires public school districts, regional educational attendance areas, and the Department of Education and Early Development to provide approved youth suicide awareness and prevention training to school personnel. Specifies standards for training approval by the Commissioner of Education.

JMM:plm

Alaska Suicide Facts and Statistics

- Alaska has the highest rate of suicide per capita in the country.
- The rate of suicide in the United States was 11.5 suicides per 100,000 people in 2007. In 2007, **Alaska's rate was 21.8 suicides per 100,000 people.** The rate of suicide among Alaska Native peoples was 35.1 per 100,000 people in 2007.
- **Alaska had 1,369 suicides between 2000 and 2009**, an average of 136 deaths by suicide per year. The highest number of suicides, 167, occurred in 2008. The lowest number, 123, occurred in 2003. That is an average of about 2.6 suicides in Alaska every week, or more than 10 a month.
- At least one suicide occurred in **176 Alaskan communities** between 2000 and 2009.
- About 78% of suicides in Alaska are committed by men and 22% are committed by women, according to the Suicide Prevention Resource Center.
- Alaska Native men between the ages of 15-24 have the highest rate of suicide among any demographic in the country, with an average of **141.6 suicides per 100,000 each year between 2000 and 2009.**
- Youth who are exposed to suicide or suicidal behaviors are more at-risk for attempting suicide, according to the American Association of Suicidology.
- Suicide deaths consistently outnumber homicide deaths by a margin of three to two, according to the American Association of Suicidology.
- More than 90% of people **who die by suicide have depression or another diagnosable, treatable mental or substance abuse disorder**, according to American Association of Suicidology.

Information is from the Alaska Bureau of Vital Statistics unless otherwise specified.

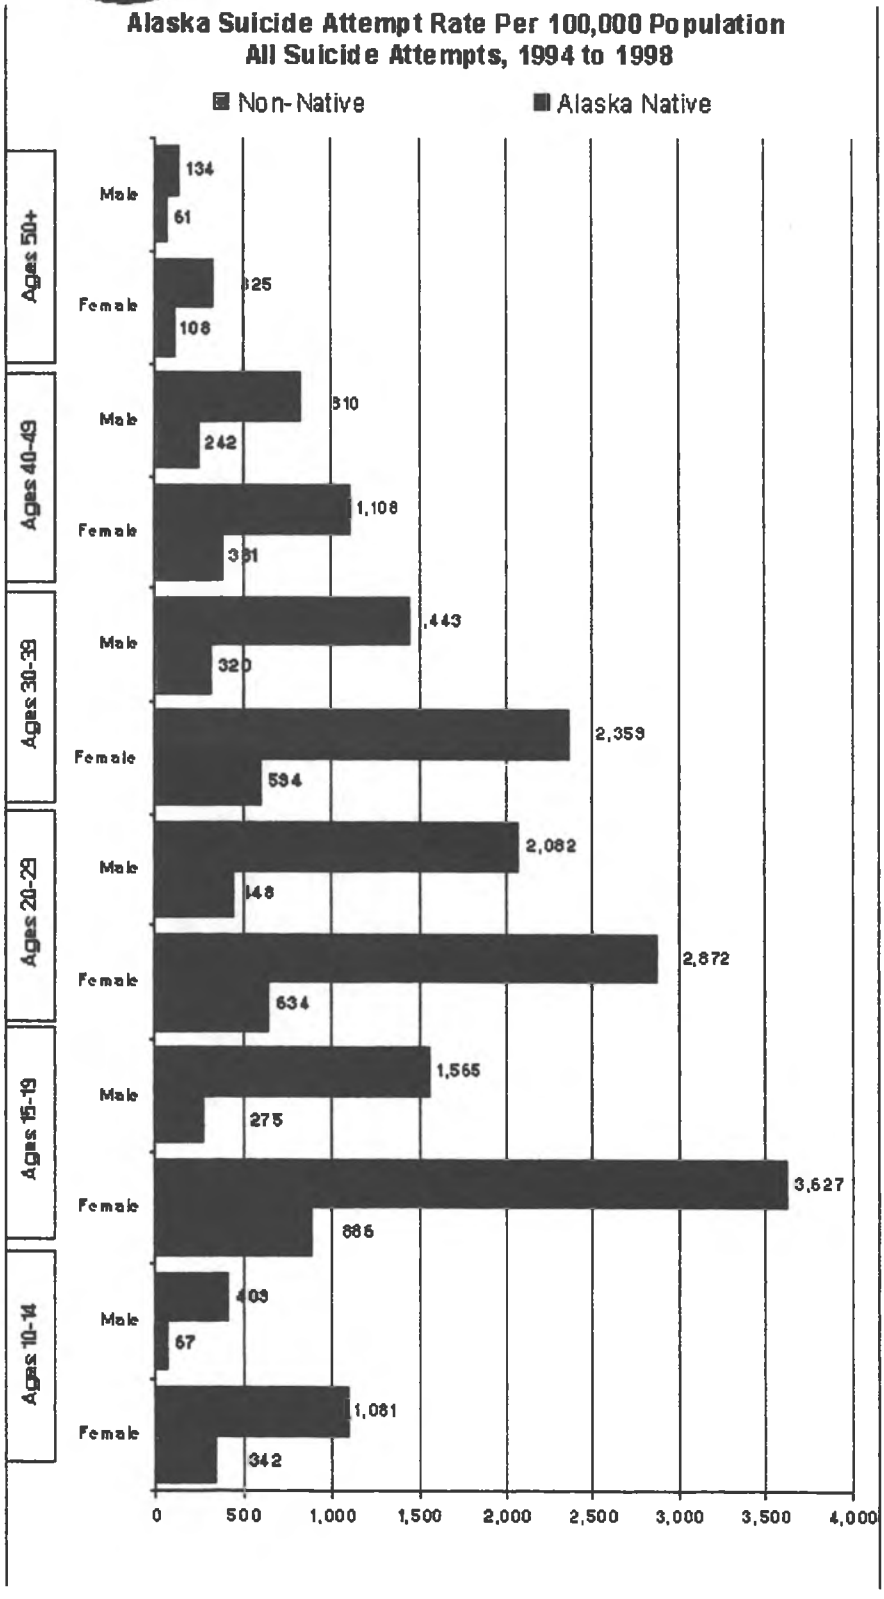
Alaska Suicide Attempts



RECOMMENDATIONS FOR REPORTING ON SUICIDE

IMPORTANT POINTS FOR COVERING SUICIDE

- More than 50 research studies worldwide have found that certain types of news coverage can increase the likelihood of suicide in vulnerable individuals. The magnitude of the increase is related to the amount, duration and prominence of coverage.
- Risk of additional suicides increases when the story explicitly describes the suicide method, uses dramatic/graphic headlines or images, and repeated/extensive coverage sensationalizes or glamorizes a death.
- Covering suicide carefully, even briefly, can change public misperceptions and correct myths, which can encourage those who are vulnerable or at risk to seek help.

Suicide is a public health issue. Media and online coverage of suicide should be informed by using best practices. Some suicide deaths may be newsworthy. However, the way media cover suicide can influence behavior negatively by contributing to contagion or positively by encouraging help-seeking.

Suicide Contagion or "Copycat Suicide" occurs when one or more suicides are reported in a way that contributes to another suicide.

References and additional information can be found at: www.ReportingOnSuicide.org.

INSTEAD OF THIS:	DO THIS:
• Big or sensationalistic headlines, or prominent placement (e.g., "Kurt Cobain Used Shotgun to Commit Suicide").	• Inform the audience without sensationalizing the suicide and minimize prominence (e.g., "Kurt Cobain Dead at 27").
• Including photos/videos of the location or method of death, grieving family, friends, memorials or funerals.	• Use school/work or family photo; include hotline logo or local crisis phone numbers.
• Describing recent suicides as an "epidemic," "skyrocketing," or other strong terms.	• Carefully investigate the most recent CDC data and use non-sensational words like "rise" or "higher."
• Describing a suicide as inexplicable or "without warning."	• Most, but not all, people who die by suicide exhibit warning signs. Include the "Warning Signs" and "What to Do" sidebar (from p. 2) in your article if possible.
• "John Doe left a suicide note saying...".	• "A note from the deceased was found and is being reviewed by the medical examiner."
• Investigating and reporting on suicide similar to reporting on crimes.	• Report on suicide as a public health issue.
• Quoting/interviewing police or first responders about the causes of suicide.	• Seek advice from suicide prevention experts.
• Referring to suicide as "successful," "unsuccessful" or a "failed attempt."	• Describe as "died by suicide" or "completed" or "killed him/herself."

AVOID MISINFORMATION AND OFFER HOPE

- Suicide is complex. There are almost always multiple causes, including psychiatric illnesses, that may not have been recognized or treated. However, these illnesses are treatable.
- Refer to research findings that mental disorders and/or substance abuse have been found in 90% of people who have died by suicide.
- Avoid reporting that death by suicide was preceded by a single event, such as a recent job loss, divorce or bad grades. Reporting like this leaves the public with an overly simplistic and misleading understanding of suicide.
- Consider quoting a suicide prevention expert on causes and treatments. Avoid putting expert opinions in a sensationalistic context.
- Use your story to inform readers about the causes of suicide, its warning signs, trends in rates and recent treatment advances.
- Add statement(s) about the many treatment options available, stories of those who overcame a suicidal crisis and resources for help.
- Include up-to-date local/national resources where readers/viewers can find treatment, information and advice that promotes help-seeking.

SUGGESTIONS FOR ONLINE MEDIA, MESSAGE BOARDS, BLOGGERS & CITIZEN JOURNALISTS

- Bloggers, citizen journalists and public commentators can help reduce risk of contagion with posts or links to treatment services, warning signs and suicide hotlines.
- Include stories of hope and recovery, information on how to overcome suicidal thinking and increase coping skills.
- The potential for online reports, photos/videos and stories to go viral makes it vital that online coverage of suicide follow site or industry safety recommendations.
- Social networking sites often become memorials to the deceased and should be monitored for hurtful comments and for statements that others are considering suicide. Message board guidelines, policies and procedures could support removal of inappropriate and/or insensitive posts.

MORE INFORMATION AND RESOURCES AT:
www.ReportingOnSuicide.org

HELPFUL SIDE-BAR FOR STORIES

WARNING SIGNS OF SUICIDE

- Talking about wanting to die
- Looking for a way to kill oneself
- Talking about feeling hopeless or having no purpose
- Talking about feeling trapped or in unbearable pain
- Talking about being a burden to others
- Increasing the use of alcohol or drugs
- Acting anxious, agitated or recklessly
- Sleeping too little or too much
- Withdrawing or feeling isolated
- Showing rage or talking about seeking revenge
- Displaying extreme mood swings

The more of these signs a person shows, the greater the risk. Warning signs are associated with suicide but may not be what causes a suicide.

WHAT TO DO

If someone you know exhibits warning signs of suicide:

- Do not leave the person alone
- Remove any firearms, alcohol, drugs or sharp objects that could be used in a suicide attempt
- Call the U.S. National Suicide Prevention Lifeline at 800-273-TALK (8255)
- Take the person to an emergency room or seek help from a medical or mental health professional

THE NATIONAL SUICIDE PREVENTION LIFELINE
800-273-TALK (8255)

A free, 24/7 service that can provide suicidal persons or those around them with support, information and local resources.

NATIONAL SUICIDE PREVENTION LIFELINE 1-800-273-TALK (8255)

The **Jason Foundation**

- **The Jason Flatt Act** (we request each state name this legislation as such to help us build a national awareness about this legislation – much like the "Amber Alert" legislation) – is a legislative action that builds within a state's current In-Service Training / Certification requirements two hours training in youth suicide awareness and prevention. It is important to note, this does not increase the number of hours required – only shifts hours from what would be "elective subject hours" to "required subject hours".
- **The Jason Flatt Act** has had the endorsement from the Teacher's Association and Department of Education in every state it has passed.
- **The Jason Flatt Act** has been passed in Tennessee; Mississippi; California; Louisiana; Illinois; Arkansas.
- If passed as proposed / outlined, **The Jason Flatt Act** can be passed as a mandatory requirement without a fiscal note or any cost to the educator, school, school district or state for the training. The Jason Foundation will provide at no-cost to the participants / state access to their On-Line In-Service Training Library that will satisfy the requirements of the law and acts as a "fail-safe" safety net to insure access to training by all educators without cost. (will be glad to discuss why "mandatory" is an important part to assure all youth have benefit of a teacher who has been trained).
- Although The Jason Foundation offers its On-Line In-Service Training Library as a resource, **The Jason Flatt Act <u>does not</u>** require any specific program be utilized. We have found, as we have foretold, that many groups such as NAMI, MHA, Crisis Response Centers and Suicide Prevention Coalitions have eagerly offered to provide such training to schools at no-cost.
- In a recent national survey of educators who had satisfied their requirement utilizing The Jason Foundation's On-Line In-Service Training Library (we don't have access to other organization's records) – almost 90% of the educators reported now feeling more confident in reaching out to a student whom they feel may be struggling with issue of suicidal ideation or more confident should a student come to them for help.
- As to an argument that some have utilized – "not putting any other responsibility on our teachers": The Child Abuse Statute that most states have adopted already specifically names "teachers" as "First Reporters" in issues that deal with physical or emotional abuse (suicidal ideation is such a sign). It can be argued that teacher's are already legally responsible to report signs of suicidal ideation, they just have not been trained which could raise legal questions.

- Over a five-year period (2004-2008) in Tennessee, It was reported by the Department of Health that although suicide rates increased overall 15% - youth suicide continued its decrease...31.4% over 5 years. Two of these years The Jason Flatt Act was active in TN, but the previous three years – although not mandated – JFI had trained several thousand educators. Since this training was one of the only differences of resources

provided across Tennessee's population – we believe the importance is easily seen in the training of educators as an impact on lowering suicide attempts and suicide deaths.

- Providing training to our educators is also listed as one of the "Goals" of the National Strategy for Suicide Prevention – a model most states utilize for the state plans.

Jason Flatt
1981 - 1997

The Jason Foundation, Inc.

Youth Suicide: The "Silent Epidemic"

Alaska

Statistics from the Youth Risk Behavioral Survey conducted by the Center for Disease Control (CDC)

When young people were asked:

"Have you experienced the feeling of hopelessness and sadness for a constant period of two weeks or greater during the past twelve months (possible beginning of clinical depression)?"

25.2% answered YES or **Over 1 out of every 4** young people. **Compared to Nationally – 26.1%**
This equates to **15,579** youth in the state that have these feelings.

"Have you seriously considered suicide in the past twelve months?"

13.9% answered YES or **Almost 1 out of every 7** young people. **Compared to Nationally – 13.8%**
This equates to **8,593** youth in the state that will consider suicide in the next 12 months.

"Have you made a plan to commit suicide in the past twelve months?"

11.7% answered YES or **Over 1 out of every 9** young people. **Compared to Nationally – 10.9%**
This equates to **7,233** youth in the state that will make a plan.

"Have you attempted suicide in the past twelve months?"

8.5% answered YES or **Over 1 out of every 12** young people. **Compared to Nationally – 6.3%**
This equates to **5,255** youth in the state that will make an attempt in the next 12 months.
This is an average of **14** per day.

"Suicide is one of the LEADING causes of PREVENTABLE death in our nation today"
-Dr. David Satcher, former U.S. Surgeon General

Alaska Association of Student Governments
Resolution #5 (PASSED)
Requirement for Teachers to receive Suicide Prevention Training
By Donald Handeland and Tessa Baldwin

Be it resolved by the Alaska Association of Student Governments:

1. Whereas, Alaska has the highest suicide rates in the nation,
2.Whereas, people between the ages of 15-22 commit the majority of the
3.suicides which is the age group that are in high school
4.Whereas the signs of potential suicide can be unrecognizable,
5.Whereas, in Alaska most teachers are not required to get suicide
6.prevention training,
7.Whereas, teachers interact with students on a daily basis,
8.Whereas, the State of Alaska doesn't require teachers to receive suicide
9.prevention training,
10.Whereas, resources are available for training, like Kognito online training,
11.Whereas, schools usually provide grief counseling immediately after a
12.suicide, but its tends to eventually be discontinued,
13.Therefore be it resolved by the Alaska Association of Student
14.Governments that the State of Alaska look into developing a system to
15.require all teachers in Alaska to participate in a suicide prevention
16.program.

Action statement: if passed by the Alaska Association of Student Governments, this resolution will be sent to the Statewide Suicide Prevention Council as well as the State Board of Education and Early Development.

ALASKA SCHOOL COUNSELOR ASSOCIATION

February 5, 2012

Senator Bettye Davis
State Capitol Room 30
Juneau, Alaska 99801

Re: Letter of support for Senate Bill (SB) 137 – Suicide Awareness and Prevention Training

Dear Senator Davis,

On behalf of the Alaska School Counselor Association (AkSCA), we whole heartedly support SB 137, requiring two hours of training for certain educators and school personnel.

School Counselors know that thoughts of suicide are present at school on a regular basis. School Counselors are trained to intervene during a crisis, to include suicide ideation, suicide intervention, as well as aftermath of a crisis. School Counselors need other school personnel to help identify students at risk of suicide. The AkSCA board believes educating our school staff in identifying a student at risk of suicide and properly intervening by engaging and connecting the student to the appropriate help will save lives.

Nationally, suicide is the third leading cause of death for young people ages 10-19. In our state, suicide is the second leading cause of death for this same age group. While some suicides occur without any outward warning, *most* people who are suicidal *do* give clear warning signs. With educators having such a direct connection with our young people, they are in a prime position to recognize the signs of suicide and make the appropriate referrals for the next step of intervention. By training our educators to recognize these signs and to have an action plan in place, young lives will ultimately be saved.

Our students spend about a third of their life at school. The school staff needs to know that staff can learn skills to keep students alive and that keeping students alive is part of education and student success. Student safety is everyone's duty.

Thank you for your time, we fully support SB 137. If you would like to contact AkSCA, please feel free to email or call Sheila Beardsley, president at 907-401-0929 sbeardsley@yksd.com or Eric Kelly, past president at 907-852-3880 eric.kelly@nsbsd.org.

Sincerely,

Sheila Beardsley
AkSCA President

Sincerely,

Eric W. Kelly

February 13, 2012

Dear Senator Bettye Davis,

Thank you for your valuable sponsorship on this important bill. I have been waiting on this bill to be sponsored by someone like you. This bill is very important to me and my fellow citizens in the rural areas of the small villages along the Yukon-Kuskokwim area where poverty and suicide go hand in hand.

Sorry to inform you, but we had another 17-year-old suicide victim at our neighboring village of Hooper Bay on February 12, 2012. The victim was transported to Anchorage for autopsy.

You're a champion to our region in Western Alaska for sponsoring SB 137, even if you're representing Anchorage residents. Along with people around the Yukon-Kuskokwim area, we fully support your sponsorship of SB 137 and thank you for that. I could've easily emailed you this information but I wanted to hand-deliver this message of support as it might be more effective this way and I wanted to meet you personally.

Again, I want to thank you on behalf of my people for your hard for representing all Alaskans on our needs. You're most welcome to visit our small town at Chevak, Alaska anytime to meet our people, or any of your staff. Please feel free to contact me at my email address at johnatchak@yahoo.com or any of your staff. I can go on and on thanking you but I know you're very busy and thanks for your time on this important bill and also thank your staff for their hard work.

Keep up the good work!

Dear Senator Davis:

On behalf of the Alaska Peace Officers Association (APOA), I would like to thank you for introducing Senate Bill 137; an act requiring suicide awareness and prevention training for certain school personnel.

The APOA State Board of Directors recently reviewed this proposed legislation and decided to unanimously support this bill. APOA is committed to increased awareness and education in combating suicide among the youth of Alaska.

We thank you for addressing this issue. Please contact the APOA office in Anchorage at 277-0515, if there is anything our organization can do to assist in the passage of this bill.

Sincerely,

John Lucking, Jr.

Senator Bettye Davis
State Capitol Room 30
Juneau, Alaska 99801

Re: Letter of Support for Senate Bill 137 – Suicide Awareness and Prevention Training

Dear Senator Davis,

On behalf of the Statewide Suicide Prevention Council, I express support for SB 137, a Jason Flatt Act, requiring two hours of training for certain educators and school personnel. As you know, one of the groups of Alaskans most at risk for suicide are youth age 15-24.[1] To connect with this high-risk group, suicide prevention must be part of the education system.

Research shows that, when educators and staff are equipped with the skills and support to identify when a student is at risk and properly intervene, lives are saved. This is why the Council endorsed the state suicide prevention strategy mandating training for **all school district personnel.** Children and youth interact with more than just their teachers at school -- coaches, cafeteria staff, maintenance staff, librarians, and others all have the chance to support a student and save a life. By requiring suicide prevention training, SB 137 will help ensure that youth experiencing depression, hopelessness, and other risk factors associated with suicide are identified and connected with the help they need before they attempt suicide.

There are many resources available to support this effort. Some are even available at little or no cost to school districts. The Jason Foundation offers training and resources for school personnel at no cost to the school or teachers. The Division of Behavioral Health offers Gatekeeper trainings, also at no cost. In the FY13 proposed budget, there is funding to support a three year pilot for evidence-based training through a web-based program. Kognito Interactive offers interactive online training, At-Risk, for high school and university educators and staff (as well as other health education training).

The Council supports SB 137 and the policy of requiring suicide awareness and prevention training for school personnel. We thank you for your work on behalf of Alaskans, especially our youth.

Sincerely,

J. Kate Burkhart
Executive Director

cc: William Martin, Chairman

[1] The age-adjusted rate of suicide for young men age 15-24 in Alaska between 2000-2009 was 56.1/100,000.

Suicide Attempts: Alaska Suicide Hospitalization Study 2001-2002

- The Alaska Injury Prevention Center conducted a thorough analysis of the 1,223 hospitalized suicide attempts in Alaska for 2001 and 2002.
- This analysis looks at the epidemiology and costs associated with hospitalizations for self inflicted injuries
  - http://www.alaska-ipc.org/documents/Hospital_Suicide_report.pdf

NCSL
NATIONAL CONFERENCE of STATE LEGISLATURES

A few facts revealed by this study:

- The average age for the patients was 30 years.
- The average length of hospital stays was 4 days.
- The average hospital costs per year were $5,508,363.
- The average cost per case was $8,986.
- Over 75% of the hospital costs were paid through public funding sources.
  - More than $4 million in "public funds" is spent each year to pay for hospitalizations for suicide attempts.
- The hospital cases were over-represented by people from rural communities.

CASTING THE NET UPSTREAM: PROMOTING WELLNESS TO PREVENT SUICIDE

Alaska State Suicide Prevention Plan

Statewide Suicide Prevention Council
William Martin, Chairman
Sean Parnell, Governor

Acknowledgements and Appreciation

This state plan for reducing suicide in Alaska is truly the result of statewide effort by individuals and organizations all over our state. We would like to thank the following people for their contributions, expertise, wisdom, and support throughout this planning process:

James Sipary • Dr. Rita Blumenstein • Sam Trivette • Gayle Trivette • Paul O'Brien • Kimberlee Jones • Bernard Gatewood • Alvin Jimmie • Audrey Saganna • Dr. Mark Erickson • Thomas Chard • Ella Craig • Dr. James Allen • Susan Soule • Iva Greywolf • Andrew Jessen • Patrick Sidmore • Margaret "Peggy" West • Phyllis Rhodes • Matt Sena • Bryson Corbett • Dr. Jay Butler • Doug Harris • Kyla Hagan • Eric Boyer • Gary Ferguson • Lt. Kris Sell • Michelle Woods • Bridie Trainor • Jessie Dybdahl • Brendan Kiernan • Barbara Martin • Col. Audie Holloway • Michael Kerosky • Eric Holland • Jim Biela • Carol Waters • Nina Allen • Amanda Murdoch • Chris Gunderson • Officer Wendi Shackelford • Scott Saxon • Ian Erlich • Amber Latham • TJ Wocasek • Russell Overman • Karen Forrest • Randall Burns • Dr. Ephraim Palermo • William Hogan • Patricia Harding • Mary Russell • Bob Curtis • Liz Moore • Elizabeth Hensley • Matt Lazarus • Doug Modig • Bruce Alver • Rep. Reggie Joule • Linda Joule • Sgt. Duane Stone • Stan Hawling • Brian Laurent • Renee Schofield • Mary Sullivan • Hillary Strayer • Ariel Zlatkovski • Geordie Sherrick • Ann Brainerd • Larry Ledoux • Patrick Hefley • Jim Henkelman • Joan Boltz • Reynold Okitkun • Sally Rue • Patrick Anderson • Sarah Dewane • Richard Nault • Karen Shaff • Chris Washko • Kalynn Peak • Mindy Cason • Stephanie McPeeks • Cynthia Erickson • Dr. Kathy Graves • Francine Harbour • Marlene Adams • Katie Baldwin-Johnson • Patty Owen • Diane Casto • James Gallanos • Wilbur Brown • Sharon Fishel • Christian Montean • Joe Yates • Paul John • Kendra Kloster • Desiree Compton • Joe Davis • Joseph Felix • Larson King • Thomas Jumbo • John Abraham • Suzy Walter • Mr. Pete Peter • Bobbi Outten • Myron P. Naneng, Sr. • Dr. Stacy Rasmus • Bill Charles • Diane Bensen • Glen Ramos • Doreen Shumacher • Beth Smart • Laura Brooks • Jeanine Sparks • Christian Stettler • Michelle Faison • Brian Houston • Lance Brown • Scott Ciambor • Teri Tibbett • Brittany Arey

Letter from William Martin, Chairman

Statewide Suicide Prevention Council

Friends,

Suicide is such a painful, personal issue that it is often too hard to think about, which makes solving the problem of suicide seem impossible. I am so grateful that brave people from all over our great state are speaking openly about suicide and how it affects our families and communities. Thanks to this more open and honest conversation about suicide, Alaska has a new state plan of action for preventing suicide.

We started the process of updating Alaska's state suicide prevention plan in January 2010 with the *Mending the Net* Statewide Suicide Prevention Summit. The work that was done at that summit, and for months after, helped us see that our suicide prevention system had just as many strengths as it did weaknesses. Together, we were able to start to build a more coordinated and comprehensive approach to preventing suicide. And we were able to bring the excellent work of our tribal organizations and the suicide prevention efforts of state and local organizations together in a new way. This was the foundation for a broad and inclusive planning process driven by the **people of Alaska**.

We call this plan *Casting the Net Upstream* because, in addition to helping someone in crisis, Alaskans have to focus on what is happening during life that can lead a person to being at risk for suicide. It is based on an idea – a prevention parable – long used in public health systems. The further up the wellness stream you go to intervene, the more likely you are to avoid serious health problems like suicide.

Casting the Net Upstream is a **plan of action.** Every single Alaskan has a job to do if we are going to prevent suicide in our families, schools, work places, and communities. We have provided resources and information to help individuals, communities, and the State of Alaska take action to achieve these goals and objectives. We hope that you will read the plan, and then you will use it to help build stronger, healthier communities.

Every life matters. Your life matters. And you are not alone.

Together, we can prevent suicide and save lives.

Table of Contents

Parable of the River.....1

Introduction.....2

Goal 1: Alaskans Accept Responsibility for Preventing Suicide.....4

Strategy 1.1 ~ Alaskans learn and understand that suicide is preventable.....4

Strategy 1.2 ~ Alaskan adults and elders choose healthy, responsible lifestyles in order to serve as role models for younger generations.....5

Strategy 1.3 ~ Alaskan youth seek out healthy and appropriate relationships with role models in their community.....6

Strategy 1.4 ~ Communities will develop environments of respect, value, and connectedness for all members.....7

Strategy 1.5 ~ Communities will engage parents and other mentors important in the lives of children and youth in health promotion efforts.....9

Strategy 1.6 ~ Communities will prioritize building protective factors and resiliency in all comprehensive prevention efforts.....9

Strategy 1.7 ~ Communities will participate in efforts to destigmatize suicide and accessing treatment for mental health crises.....10

Strategy 1.8 ~ Community organizations will offer supports to promote healthy families.....11

Strategy 1.9 ~ The State of Alaska will support peer-to-peer wellness promotion and supports as an integral part of health promotion and suicide prevention.....12

Goal 2: Alaskans Effectively and Appropriately Respond to People at Risk of Suicide.....13

Strategy 2.1 ~ Alaskans know how to identify when someone is at risk of suicide and how to respond appropriately to prevent a suicide.....13

Strategy 2.2 ~ Alaskans know about Careline and other community crisis lines, and can share that information with others.....14

Strategy 2.3 ~ Providers of services to veterans will prioritize suicide prevention screenings and effective interventions.....14

Strategy 2.4 ~ Spiritual leaders will encourage suicide prevention awareness and training in their communities of faith/belief.....16

Strategy 2.5 ~ The primary health care system will prioritize suicide prevention screenings.....17

Strategy 2.6 ~ School districts will implement broad screenings to identify not just imminent risk of suicide, but risk factors for suicide (substance use, violence, depression, etc.).....17

Strategy 2.7 ~ Senior services providers will implement broad screenings to identify not just imminent risk of suicide, but risk factors for suicide (substance abuse, violence, depression, etc.).....18

Strategy 2.8 ~ The State of Alaska and its partners will engage village police and public safety officers in developing tailored community based responses and protocols for responding to crises.....19

Goal 3: Alaskans Communicate, Cooperate, and Coordinate Suicide Prevention Efforts.....20

Strategy 3.1 ~ Communities will partner with non-traditional organizations to raise awareness about limiting access to lethal means.....20

Strategy 3.2 ~ The State of Alaska and its partners will make training in evidence-based suicide prevention and intervention models accessible to all interested Alaskans.....21

Strategy 3.3 ~ The State of Alaska will mandate evidence-based suicide prevention and intervention training for all school district personnel.....22

Strategy 3.4 ~ Communities will develop wellness coalitions that include suicide prevention in their mission/area of focus.....23

Strategy 3.5 ~ Community suicide prevention efforts will expressly address the contributing factor of substance abuse.....24

Strategy 3.6 ~ The State of Alaska will coordinate all prevention efforts across all departments and divisions, to ensure that Alaska has a comprehensive prevention system that recognizes the "web of causality" implicated in suicide, substance abuse, domestic violence, bullying, child abuse, teen risk behaviors, etc.....25

Strategy 3.7 ~ The State of Alaska will balance the policy of comprehensive and integrated prevention with the use of evidence based practices to achieve verifiable outcomes reducing the impact of suicide, substance abuse, violence, sexual abuse, and mental illness on communities.....26

Strategy 3.8 ~ The State of Alaska will provide financial and technical support for innovative, research-based suicide prevention practices.....27

Strategy 3.9 ~ The State of Alaska will coordinate and support stigma reduction efforts around mental illness, addiction, depression, and suicide.....28

Goal 4: Alaskans Have Immediate Access to the Prevention, Treatment, and Recovery Services They Need.....29

Strategy 4.1 ~ Alaskans know who to call and how to access help — and then ask for that help — when they feel like they are in crisis and/or at risk of suicide.....29

Strategy 4.2 ~ Community behavioral health centers will provide outreach to ensure that community members know what services are available and how to access them.....29

Strategy 4.3 ~ Community health providers will offer bridge services for young people identified as experiencing serious emotional disturbance, other behavioral health disorders after age 18-21.....30

Strategy 4.4 ~ The State of Alaska and its partners will, through StopSuicideAlaska.org, create and support a learning network among communities to share ideas and strategies that work.....30

Goal 5: Alaskans Support Survivors in Healing.....31

Strategy 5.1 ~ Survivors of a loss to suicide know about suicide prevention resources and how to participate in suicide prevention efforts that support their own healing.....31

Strategy 5.2 ~ The State of Alaska will provide resources, tools, and technical support for community postvention efforts, with emphasis on natural, organic responses developed in the community.....31

Goal 6: Quality Data and Research is Available and Used for Planning, Implementation, and Evaluation of Suicide Prevention Efforts.....32

Strategy 6.1 ~ The State of Alaska will improve statewide suicide data collection efforts, employing epidemiological standards/models to ensure quality reporting, analysis, and utilization for timely data driven policy decisions.....32

Strategy 6.2 ~ The State of Alaska will partner with tribal and academic organizations to continue to explore and research the "web of causality" of suicide, prioritizing the health and environmental factors affecting high-risk populations.....33

Strategy 6.3 ~ The State of Alaska, with its partners, will evaluate the effectiveness of crisis intervention models and responses in use in Alaska.....34

Conclusion.....35

The Parable of the River

There once was a village along a river. The people there were good and kind, and life was good there. One day, a villager noticed someone floating down the river. He quickly dove into the river, swimming out to rescue the person from drowning. He dragged the person onto the bank, saving a life.

The next day, the same villager noticed two people floating down the river. He called for help. Another villager came running. Together they saved both people from the river. The next day, there were four people caught in the river, and the next day, eight people!

The good and kind villagers organized themselves to save as many of the people as possible. They built a watchtower, to better see the people rushing by in the river. They trained their strongest villagers to swim through the swift waters. Soon, they had watchers and rescue teams working all day and all night. And yet, each day more and more people came down the river.

The good and kind villagers rescued many people, but there were just too many coming down the river. Not every person was saved, though the villagers felt they were doing good work to save as many as they could each day. For many weeks, life continued this way. One day, someone asked, "Where are these people coming from, anyway?" The villagers looked to each other, but no one had an answer. Being good and kind and very efficient, the villagers organized a group to go upstream to find out why the people were ending up in the river. Because it might be a long and hard journey, they decided their strongest members would go.

The village leaders objected: "If our strongest rescuers go upstream to find this out, who will save the people from the river here? We need everyone here."

Some villagers argued in favor of sending a group upstream: "If we find out why they are ending up in the river, we can stop whatever is happening and save everyone! By going upstream, we can solve the problem."

The leaders weren't convinced, and so the villagers continued to rescue the people from the river as they passed by the village. The number of people continued to grow each day, and while the villagers managed to save a few more people each day, there were more and more they did not save.

This parable is used to describe the difference between a system focused on intervention – rescuing people from the river – and one that emphasizes prevention. We are **all of us** villagers with an opportunity to save lives. The State of Alaska and its partners have spent the last two years "mending the net" of our suicide prevention systems. It's time now to cast that net "upstream," to determine why Alaskans are at risk for suicide and to help strengthen our peoples, families and communities.

Introduction

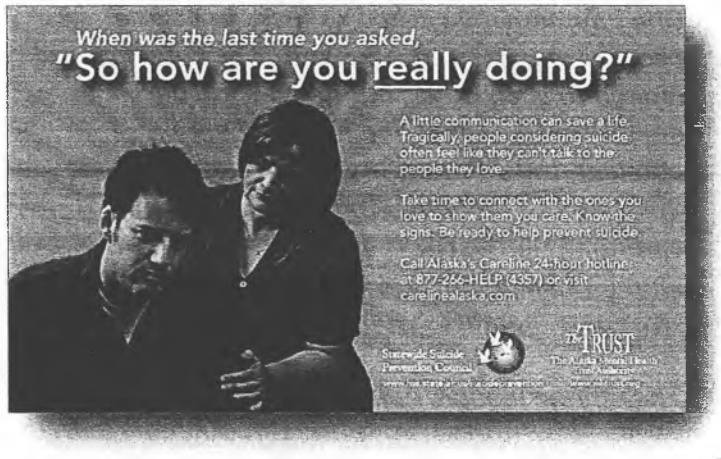
The Statewide Suicide Prevention Council ["Council"] was established by the Alaska Legislature in 2001. After a legislative audit in 2008, it was extended by the Legislature to June 30, 2013. The Council is responsible for advising legislators and the Governor on ways to improve Alaskans' health and wellness by reducing suicide, improving public awareness of suicide and risk factors, enhancing suicide prevention efforts, working with partners and faith-based organizations to develop healthier communities, creating a statewide suicide prevention plan and putting it in action, and building and strengthening partnerships to prevent suicide.

Casting the Net Upstream: Promoting Wellness to Prevent Suicide in Alaska is offered to fulfill the Council's statutory duty to create a statewide suicide prevention plan. It is an update of the Council's 2004 plan. Unlike the previous plan, this is a five year plan with specific measures (indicators) that will be evaluated to ensure that the state suicide prevention system is effective – or to allow for further development if the expected results are not achieved. It is based on extensive public input and stakeholder efforts to create a suicide prevention plan that responds to the unique needs of our communities and benefits from the creativity and culture of Alaska's people.

This is a call to action. Specific strategies have been identified to achieve the goals and objectives of the suicide prevention system. These strategies were developed from the wisdom and experience of Alaskans all over our state. They are based on the most current and credible data and research available. These strategies are ways that individuals, communities, and the State of Alaska can act together to prevent suicide. Examples of programs and initiatives that fit within these strategies are provided. However, these are not all of the ways Alaskan communities are working to prevent suicide. Tribes, tribal health organization, teachers, school districts, and individuals are all working together to prevent suicide in unique and creative ways.

This is a uniquely Alaskan endeavor, though is aligned with the National Strategy for Suicide Prevention and the American Indian and Alaska Native National Suicide Prevention Strategic Plan (2011-2015). This will help us evaluate our system against national standards and other states' efforts. The Council and its partners will be able to offer annual scorecards and implementation reports, highlight the successes of evidence-based suicide prevention programs as well as emerging and innovative prevention efforts, and foster better coordination and communication among suicide prevention providers.

The plan is organized to reflect the most current research and understanding of the "web of causality" of suicide. Suicidal behavior results from a combination of genetic, developmental, environmental, physiological, psychological, social, and



cultural factors operating in complex, and often unseen, ways. Human beings are innately resilient but the events and experiences of a lifetime can weaken that resiliency to a point when a person becomes at risk of suicide. The warning signs of suicide are provided in Appendix A.

The Council has stressed the need to mend the net of services and supports in place to prevent suicide. In this plan, the Council is encouraging Alaskans to cast that net in a way that promotes physical, emotional, and mental wellness and strengthens personal and community resilience – to prevent suicide by promoting the health of our people, families, and communities. Over the next five years, Alaskan individuals, families, communities, and state government will be challenged to take responsibility for the entire spectrum of suicide prevention.

It starts with Wellness Promotion, the overall health and environmental condition that can increase or decrease the risk of suicide. The next layer is Suicide Prevention, universal efforts to improve awareness and understanding about suicide among all Alaskans.

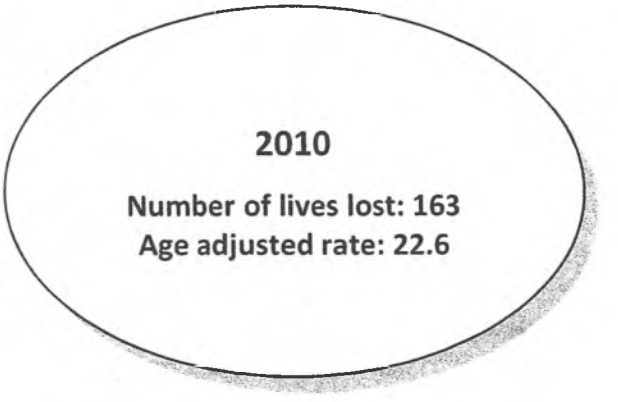
Then there is Crisis Intervention, the services and supports provided to a person who is experiencing a mental or emotional crisis that creates a serious risk of suicide. Finally, there is Postvention. This is a term that includes the ways that we respond after a suicide occurs to prevent further loss, and how we support survivors of a loss to suicide as they grieve and heal. The Council calls for postvention in Alaska to include how we support the person who survives an attempted suicide and his or her family and community in preventing further attempts.

The plan is organized to make it easy to see who can act and how. There are six (6) goals. You will learn about the specific strategies that individuals and families can use to reach these goals. You will also learn what practices communities and organizations can adopt in prevention efforts, and how the State of Alaska can improve the effectiveness of suicide prevention system.

Because *Casting the Net Upstream* is a call to action, it references but does not include a comprehensive look at the data or a historic perspective of the problem of suicide in Alaska. The Council's FY2010 Annual Report, *Mending the Net: Suicide Prevention in Alaska*, provides an extensive review of the data and funding information related to suicide in Alaska since 2000. Additional data and research resources are available on StopSuicideAlaska.org, the State's suicide prevention portal, and the Council's website. A bibliography and resource guide is included in Appendix B.

Goal 1: Alaskans Accept Responsibility for Preventing Suicide

Preventing suicide is every Alaskan's responsibility. Like any other public health problem, suicide can be prevented through increased awareness, education, and targeted interventions to reduce and address risk. In order for these efforts to be successful, Alaskan individuals, families, communities, and governments must take ownership of the problem – and the solution.



Strategy 1.1 ~ Alaskans learn and understand that suicide is preventable.

Suicide is preventable. While each suicide or attempted suicide can be as unique as the person who experiences it, there are ways to address the "web of causality" – the multiple social, emotional, environmental, and health factors – involved. If every one of us learned about suicide, and the risk factors and protective factors involved, we would be better prepared to prevent suicide in our families and communities.

How can Alaskans learn about suicide and how it is prevented?

Resources:

1. Go to StopSuicideAlaska.org and read through the resources provided there.

2. Go to the Council's website and read:
   - annual reports tracking suicide and suicide prevention in Alaska since 2002;
   - the 2007 Alaska Follow-Back Study; and
   - newsletters and periodic updates on research, data, and practices.

3. Attend a meeting of the local suicide prevention or wellness coalition.

4. Explore national suicide prevention organizations' resources:
   - American Association of Suicidology www.suicidology.org;
   - American Foundation for Suicide Prevention www.afsp.org;
   - Suicide Prevention Resource Center www.sprc.org;
   - Indian Health Service www.ihs.gov/NonMedicalPrograms/nspn;
   - National Action Alliance for Suicide Prevention www.actionallianceforsuicideprevention.org/; and
   - Substance Abuse and Mental Health Services Administration Suicide Prevention Section www.samhsa.gov/prevention/suicide.aspx

5. Attend a Council meeting (in person or by telephone).

Learning about suicide will allow Alaskans to talk openly with their families, friends, and neighbors about suicide and how to prevent it.

Indicator: 1.1.a. Number of unique visits to StopSuicideAlaska.org: 11,306 (2010-2011)

Strategy 1.2 ~ Alaskan adults and elders choose healthy, responsible lifestyles in order to serve as role models for younger generations.

Throughout the planning process, Alaskan youth shared the profound need for healthy role models at home and in their communities. Substance abuse by parents and community leaders was identified by stakeholders young and old as a major contributor to suicide. Given the evidence that substance abuse is involved in many reports of harm to Alaskan children, and research shows how adverse childhood experiences[1] increase the risk of suicide in adulthood, it is important that every Alaskan adult make healthy and responsible lifestyle choices and model those choices for others.

Alaskans seeking to make healthy choices and overcome addictions and negative behaviors can learn more about treatment and support services from their medical provider, health educator, or community health/behavioral health aide. Mental health and substance abuse treatment options vary from community to community. Information about what is available is provided by Alaska 2-1-1, community behavioral health centers, health corporations, Careline, and the Advisory Board on Alcoholism and Drug Abuse.

Research shows that mental and emotional health can be improved and maintained just like physical health. Mental health promotion is as simple as adding five things to your life: exercise, social connection, acts of giving, self-awareness, and learning.

[1] Extensive research on the impact of child abuse, parental addiction, and other negative events during childhood has been documented by the Adverse Childhood Experiences Study (ACES). This is a longitudinal study by the Centers for Disease Control and Prevention and Kaiser Permanente, tracking the consequences of adverse childhood events in over 17,000 people. Information about the study and its findings are available at http://acestudy.org/.

Promoting mental and emotional wellness in your life and the lives of your family members is directly related to reducing the risk of suicide. Nationally, the data reflects a distinct link between depression and risk of suicide. The American Association of Suicidology reports that about 66% of people who complete suicide are depressed at the time of their deaths.[2] The risk of suicide in people with major depression is about 20 times that of the general population.[3] Depression can be prevented in some cases, and in others, it can be mitigated and managed, through proactive lifestyle changes that improve or maintain health.

Resources:

To find a mental health treatment provider in your community, call Alaska 2-1-1 or the Alaska Mental Health Board at 1-888-464-8920.

To find a substance abuse treatment provider in your community, call Alaska 2-1-1 or the Advisory Board on Alcoholism and Drug Abuse at 1-888-464-8920.

To find a primary care provider in your community, call Alaska 2-1-1 or the Alaska Primary Care Association at (907) 929-2722.

To learn more about how to improve and maintain mental and emotional health, talk to your medical provider, health educator, or community health/behavioral health aide or visit the *Sound Minds in Sound Bodies* project at http://hss.state.ak.us/abada/sound.htm.

[2] American Association for Suicidology, *Some Facts About Suicide and Depression* at 2 (online at http://www.suicidology.org/c/document_library/get_file?folderId=232&name=DLFE-246.pdf).

[3] *Id.*

Indicators:

1.2.a. Rate of adult binge drinking: 17.9% (BRFSS, 2009)

1.2.b. Child seeing violence or physical abuse in person: 4% (CUBS, 2009)

Strategy 1.3 ~ Alaskan youth seek out healthy and appropriate relationships with role models in their community

Just as it is important that Alaskan adults and elders become good role models, it is important that young people seek out healthy role models of their own. Not every child or young person has the benefit of a family member who can model resiliency and wellness. That should not mean that there is no one for youth to look up to.

Young people consistently cited the value of school social workers, coaches, teachers, ministers, and other trusted adults in their lives. These adults are a source of support and guidance. Young people can establish healthy and appropriate relationships with adults by getting involved in sports and clubs at school, cultural activities, scouting, church/faith-based organization activities, and mentoring programs that promote connectedness and other protective factors.

Resources:

Facing Foster Care in Alaska is a group of foster care youth and alumni (over age 15) focused on improving Alaska's foster care system. Facing Foster Care offers the added benefit of youth supporting each other through shared experience and education. For more information, call (907) 230-8237.

Juneau Youth is a community coalition sponsored by United Way of Southeast Alaska. Through its website and social media, Juneau Youth provides a clearinghouse of opportunities to participate in healthy activities and connect with appropriate adults (coaches, teachers, etc.) in the community. Visit www.juneauyouth.org for the activity clearinghouse, or email: compass@unitedwayseak.org for more information about the coalition.

Big Brothers Big Sisters is a nationally recognized mentoring program. Children and youth are matched with adults through community-based mentorship (long-term, traditional matches) or site-based mentorship (at school or through a youth program). Big Brothers Big Sisters of Alaska also has a Native American Mentoring Initiative to strengthen programs in rural Alaska, a mentoring program for youth at McLaughlin Youth Center (a juvenile justice facility), Operation Bigs for children of military families and military members seeking to be a big brother or sister, and the Amachi program for children with a parent in prison.

To learn more about how to enroll a child in Big Brothers Big Sisters or how to become a mentor, email info@bbsak.org or call your local office.

Youth can also connect with healthy and responsible adults through their communities of faith, scouting programs, and school programs. Student government, Boy Scouts, Girls Scouts, Campfire, sports teams,

and church youth groups are all excellent opportunities to find positive role models.

Indicators: 1.3.a. Traditional high school students participating in organized after-school activities 2 or more days a week: 44% (YRBS, 2011)
1.3.b. Alternative high school students participating in organized after-school activities 2 or more days a week: 64.9% (YRBS, 2011)

Strategy 1.4 ~ Communities will develop environments of respect, value, and connectedness for all members.

Risk factors for suicide include low self-esteem, psychological pain in response to loss or rejection, and lack of personal or familial acceptance of sexual orientation.

Shame, guilt, hopelessness, and purposelessness are also risk factors.[4] These risk factors often develop as a result of racism, discrimination, and exclusion based on cultural and personal differences.

Bullying, including "cyberbullying," is rampant in American schools. Studies have found that 32-65% of high school students have reported being bullied in school because of "their perceived or actual appearance, gender, sexual orientation, gender expression, race/ethnicity, disability, or religion."[5] Bullying is associated with increased depression and risk of suicide among victims.[6]

Research has shown connections between experienced and/or perceived racism and negative health consequences, especially regarding mental health.[7] Experienced and perceived racial discrimination can have physiological consequences, as well as result in the "adaptation and maladaptation of the individual to the circumstances of life."[8] This means that, when someone is discriminated against, it has a real impact on his or her life and health.

Lack of acceptance, bullying, discrimination and exclusion from familial and community relationships have been cited as contributing

[4] The American Association of Suicidology has compiled a list of chronic and acute risk factors based on the current research (online at http://www.suicidology.org/web/guest/current-research).

[8] "Protective and Damaging Effects of Mediators of Stress," B.S. McEwen and T. Seeman, *Annals of the New York Academy of Science* 896: 31 (1999) (cited in *Undoing Racism in Public Health: A Blueprint for Action in Urban MCH*, D. Barnes-Josiah (2004) (online at http://webmedia.unmc.edu/community/citymatch/CityMatCHUndoingRacismReport.pdf).

factors to higher rates[9] of suicide among lesbian, gay, bisexual, transgender, and questioning (LGBTQ) individuals.[10]

The Centers for Disease Control and Prevention's Strategic Direction for Prevention of Suicidal Behavior proposes to prevent suicide by "building and strengthening connectedness or social bonds within and among persons, families and communities."[11] That feeling of connectedness or belonging has been proven to be highly protective against suicidal thoughts and behaviors.[12] Communities can promote equality, inclusion, respect, and acceptance by:

- coordinating and supporting efforts to create safe, inclusive, respectful environments for all members of the community;
- emphasizing the strengths and contributions of different cultures in the community;
- instituting school and workplace policies that encourage inclusiveness and prohibit bullying and discrimination.

Resources:

The PACER National Center on Bullying Prevention was founded in 2006 to unite, engage, and educate communities to address bullying. It provides creative and interactive resources, like Kids Against Bullying (for younger children) and Teens Against Bullying. These are interactive and age-appropriate websites designed to educate about bullying and encourage action to prevent it.

PACER provides classroom resources and peer advocacy tools. PACER coordinates National Bullying Prevention Month in October each year. Visit PACER's National Bullying Prevention Month Facebook page or http://www.PACER.org/bullying for more information about the event and how to participate.

Indicators: 1.4.a. Traditional high school students reporting being bullied in the past 12 months: 23% (YRBS, 2011)
1.4.b. Alternative high school students reporting being bullied in the past 12 months: 16.8% (YRBS, 2011)
1.4.c. Traditional high school students who agree/strongly agree that they feel they matter to people in the community: 64% (YRBS, 2011)
1.4.d. Alternative high school students who agree/strongly agree that they feel they matter to people in the community: 46% (YRBS, 2011)

---

[9] Since 1990, population-based surveys of American adolescents that have included questions about sexual orientation have consistently found rates of suicide attempts reported by LGBTQ youth 2-7 times higher than average. "Suicide and Suicide Risk in Lesbian, Gay, Bisexual, and Transgender Populations: Review and Recommendations," A. P. Haas et al., *Journal of Homosexuality* (Jan. 2011) (available online at http://www.informaworld.com/smpp/section?content=a931819675&fulltext=713240928).

[10] *Id.* "Over the past decade, consensus has grown among researchers that at least part of the explanation for the elevated rates of suicide attempts and mental disorders found in LGB people is the social stigma, prejudice and discrimination associated with minority sexual orientation (Cochran, Mays & Sullivan, 2003; de Graaf at al., 2006; King et al., 2008; Mays & Cochran, 2001; McCabe, Bostwick, Hughes, West, & Boyd, 2010)."

[11] "Promoting Individual, Family, and Community Connectedness to Prevent Suicidal Behavior," Centers for Disease Control and Prevention (online at http://www.cdc.gov/ViolencePrevention/pdf/Suicide_Strategic_Direction_Full_Version-a.pdf).

[12] *Id.* at 4.

Strategy 1.5 ~ Communities will engage parents and other mentors important in the lives of children and youth in health promotion efforts.

In order for Alaskan youth to build healthy and appropriate relationships with adult role models, communities must engage parents and other mentors to be involved in the lives of children and youth. A 1995 impact study of Big Brothers Big Sisters programs documented a positive impact on the lives of children and youth served over several life domains implicated in suicide risk.[13] Reduced likelihood of initiating drug or alcohol use, reduced incidence of violent/antisocial behaviors, improved academic performance, and improved connection and relationships with parents and peers were all included.[14] This sort of change can be achieved through other efforts to connect youth with healthy mentors and role models. Anchorage United for Youth is an example of how a community can do this.

Anchorage United for Youth, led by United Way of Anchorage, is a community coalition focused on increasing opportunities for, and providing supportive adult relationships to, youth. It supports families and works to change community norms to promote positive lifestyle choices by youth.

Anchorage United for Youth was formed in 2007. In less than five years, this coalition and its partners have helped improve the graduation rate in the Anchorage School District by over 6% and reduced youth substance use.

Even the smallest village can assemble a group of healthy role models to help youth thrive. By encouraging parents, elders, and other adults to get involved in the lives of youth, every community can promote healthy lifestyles and connections with family and friends.

Resources:

United Way has shown success in engaging community members in all sorts of endeavors. In Juneau and Anchorage, the local United Ways have helped connect parents and mentors with health promotion efforts (*see also* Strategy 1.3). To find out how, contact United Way of Anchorage at (907) 263-3803 or Juneau Youth at United Way of Southeast Alaska at (907) 463-5530.

Indicator: 1.5.a. Students who would feel comfortable seeking help from one or more adults (besides their parents) if they had an important question affecting their life: 85% (YRBS, 2011)

Strategy 1.6 ~ Communities will prioritize building protective factors and resiliency in all comprehensive prevention efforts.

Some Alaskan communities are already engaged in collaborative prevention efforts to help children and youth thrive. Others are not. While prevention efforts that target people in crisis or at risk of suicide are effective, they focus on "fixing a problem" rather than building personal and community strength. By increasing protective factors in their youth and families, communities can prevent suicide – as well as violence, substance abuse, academic failure, and other social problems – far "upstream."

The Alaska ICE Initiative of the Alaska Association of School Boards is an example of how a concerted effort to promote connectedness and inclusion can have positive outcomes on many of the life domains (academic success, alcohol/drug

[13] *Making a Difference, An Impact Study of Big Brothers Big Sisters*, Public/Private Ventures at iii (2000 re-issue) (http://www.ppv.org/ppv/publications/assets/111_publication.pdf).
[14] *Id.*

use, personal safety) implicated in suicide risk.[15] The Anchorage Youth Development Coalition is a group of 60 youth-serving organizations working together to promote resiliency and health among Anchorage's children and youth. They offer intensive evidence-based training for people working with Anchorage's youth. This ensures that people working with youth have the tools and skills needed to help build protective factors and resiliency.

Alaskan communities can promote resiliency and protective factors against suicide risk. Focusing on the strength and talents of our children and youth can, over time, protect them from many of the underlying risks associated with suicide.

Resources:

The 40 Assets, part of the Developmental Assets framework developed by the Search Institute of Minnesota, provides concrete, common sense, and positive qualities essential to healthy development.

The Association of Alaska School Boards and Department of Health and Social Services created *Helping Kids Succeed – Alaskan Style.* This handbook is for parents, teachers, coaches, aunties, uncles, and community members. You can purchase a copy from the Association of Alaska School Boards for $15, or call the Council (which has a limited number of free copies).

Indicator: 1.6.a. Student Overall Connectedness (statewide, weighted): 3.49 (on a 1-5 scale)(SCCS, 2010).

Strategy 1.7 ~ Communities will participate in efforts to de-stigmatize suicide and accessing treatment for mental health crises.

The stigma associated with mental illness creates a significant barrier to accessing services. People are afraid of being judged or treated differently if they go to see a mental health professional. Stigma is especially serious among older Alaskans, a population with high rates of suicide.[16] Senior services providers have reported that it is often difficult to engage seniors in behavioral health services because of stigma. Veterans, active duty military, ethnic minorities, and youth are other groups for whom stigma is a barrier to accessing the help they need.

It is important for communities to explicitly address this stigma and to support people seeking help for depression, grief, and mental health disorders as part of suicide prevention efforts. Communities can develop their own anti-stigma efforts, or participate in ongoing efforts like Mental Health Awareness Week and the National Day Without Stigma, Mental Health Month, World Suicide Prevention Day, Children's Mental Health Awareness Day, and other widely recognized public awareness events.

Events such as the Walk for Life, television and radio public service announcements, and educational efforts can be as complex or as simple as a community's readiness and resources permit.

Resources:

Successful campaigns involve simple messages of hope: "Treatment Works and Recovery Happens," "It Gets Better," "What a Difference a Friend Makes," "Reach Out,"

[15] The Alaska Association of School Boards Initiative for Community Engagement is focused on creating positive school and community environments for Alaska's children. www.alaskaice.org

[16] From 2000 to 2009, the rate of suicide among Alaskans over age 85 (34.4/100,000) was almost as high as for adolescents and young adults. The actual number of suicides was low (13) but this is an alarming trend that bears further attention.

"Live to Ride, Call to Live." The Substance Abuse and Mental Health Services Administration offers a **FREE** tool to help develop an anti-stigma campaign: *Developing a Stigma Reduction Initiative* helps with planning, recruiting partners, and outreach. It includes public service announcement scripts.

SAVE (Suicide Awareness Voices of Education) is a national organization that offers many public education and anti-stigma materials. While these are not free, they can be customized. Visit www.SAVE.org for more information about the organization and the resources available.

Indicator: 1.7.a. Alaskans comfortable with a family member, coworker, guest, or neighbor experiencing mental illness: 77.3% (AMHTA, 2010)

Strategy 1.8 ~ Community organizations will offer supports to promote healthy families.

There are many ways a community can support families and promote healthy relationships. In some communities, there are agencies and coalitions specifically focused on providing these supports. Supports and skills are provided through a variety of community parenting classes offered by tribal health corporations and village clinics, hospitals, domestic violence shelters, churches/faith-based organizations, mental health centers, and other organizations.

Alaska's early childhood learning program, *thread,* offers supports and services, as well as local referrals, statewide. For more information, visit www.threadalaska.org.

In some communities, there are specialized services and supports for families with high risk situations. Examples of these programs include Alaska Youth and Family Network, helping families and youth engaged in mental health services, and Fairbanks Native Association, providing case management services to families engaged with the Office of Children's Services to help parents successfully engage in substance abuse treatment.

Unfortunately, not all communities have readily accessible parenting classes and supports, especially those designed for young parents, parents from other cultures, or parents with disabilities. In order for all Alaskan children to grow up protected from risk of suicide, communities must offer ways for families to build the skills necessary to help their children grow up healthy.

Resources:

The Alaska Association for the Education of Young Children (AEYC) offers a wide variety of services and supports for families and communities. In Southeast Alaska, they have partnered with Partnerships for Families and Children to offer an interactive calendar of parent and family events and resources organized by community. Find community programs at www.southeastfamilies.org or contact the coordinator at (907) 789-1235 to learn about how the partnership was formed and the resource developed.

In Anchorage, the public library offers the Ready to Read Resource Center, dedicated to promoting early literacy. This is a **statewide** resource for anyone working with infants and toddlers. The Resource Center has over 200 reading kits that can be loaned to child care centers, health clinics, churches/faith-based organizations, and other early childhood providers. Call (907) 343-2970 for more information.

Indicator: 1.8.a. Number of communities offering parenting/caregiver classes (new)

Strategy 1.9 ~ The State of Alaska will support peer-to-peer wellness promotion and supports as an integral part of health promotion and suicide prevention.

Peer support is an effective and affordable way to help people achieve and maintain recovery from all manner of illnesses, from cancer and diabetes to mental health and substance use disorders. Peer support is also an effective tool in promoting overall wellness and preventing suicide.

Peer support can take many forms. It can involve one-on-one counseling and support, or group support. Peer support can help someone cope with a chronic disease, like diabetes or mental illness, or overcome a periodic or temporary issue like grief.

The Natural Helpers and Youth Leaders peer programs in the Lower Kuskokwim and Northwest Arctic school districts are an excellent example of how youth mentoring and supporting youth can reduce risk of suicide. Peer-identified natural helpers receive training and guidance from teachers and school staff to share positive coping skills, peer counseling, and support with other students. These programs also provide a way for youth who have experienced a loss to suicide to support each other (a form of postvention).

While some communities, like Anchorage and Juneau, have active peer support networks, not all communities do. Peer support is a cost-effective and locally available way of helping promote physical, emotional, and mental wellness to reduce risk of suicide. The State of Alaska has begun efforts to expand peer support services in rural communities.[17] This commitment supports communities as they develop local peer support resources.

Resources:

The Alaska Peer Support Consortium is the statewide coalition of peer support providers offering technical assistance to help communities plan and develop local peer support services. Call (907) 258-2772 for more information.

The Alaska Mental Health Trust Authority's Beneficiary Project Initiative also provides technical assistance to peer support organizations. Call (907) 269-7960 for more information. The Division of Behavioral Health can also provide support to communities developing peer support resources. Contact the Vocational Specialist at (907) 269-2051.

Indicator: 1.9.a. Number of Alaskans receiving state funded peer support services (new)

[17] Annualized funding ($225,000 GF/MH) for rural peer support services was appropriated for FY12.

Goal 2: Alaskans Effectively and Appropriately Respond to People at Risk of Suicide

Strategy 2.1 ~ Alaskans know how to identify when someone is at risk of suicide, and how to respond appropriately to prevent a suicide.

Understanding the warning signs of suicide is the first step in helping someone in crisis. Appendix A includes an explanation of the warning signs and a pocket card you can carry with you.

There are many types of trainings available to help Alaskans better identify when someone is at risk of suicide. These trainings provide the skills and tools needed to help. Mental Health First Aid, Applied Suicide Intervention Skills Training, and SafeTALK are internationally recognized intervention models that are all available here in Alaska. We have people trained in these models in communities statewide, and the opportunity to be trained in them ourselves. We also have a Gatekeeper model developed right here in Alaska by the Department of Health and Social Services and University of Alaska.

Mental Health First Aid educates people about mental health disorders and crises and provides skills to identify and help when someone is developing a disorder or experiencing a crisis. It teaches how to respond and how to connect someone in crisis with professional help. It is a 12-hour training designed for everyone, not just mental health professionals. Mental Health First Aid teaches people how to help someone experiencing a wide range of mental health emergencies, including thoughts of suicide. Mental Health First Aid is coordinated through the Trust Training Cooperative, a state-funded health care workforce trainer. The cost is currently $85.00. Call (907) 264-6228 for more information.

ASIST stands for Applied Suicide Intervention Skills. It is a two-day training that increases understanding about suicide and provides skills to recognize suicide risk and intervene to prevent suicide. The Alaska Native Tribal Health Consortium coordinates ASIST trainings statewide. ASIST trainers have trained nearly 1,000 teachers, health aides, counselors, clergy, and others in communities from Barrow to Klawock, King Cove to Tok.[18] To learn more about hosting an ASIST training, contact Alaska Native Tribal Health Consortium Behavioral Health and Rural Services at (907) 729-3751.

safeTALK complements ASIST. It is a half-day training for anyone over age 15. safeTALK provides education about how to respond when someone expresses thoughts of suicide, how to identify a person at risk of suicide, and how to connect a person thinking about suicide to the resources to keep them safe. The TALK steps are Tell, Ask, Listen, and Keep Safe. The person at risk "tells" someone they are thinking about suicide. The

[18] A map of communities with local ASIST trainers is available at from ANTHC online at http://www.anthc.org/chs/wp/injprev/upload/Map-of-ASIST-Trainers-6-11.pdf.

safeTALK trained person "asks" the person what's going on and then really "listens" to the person. The last step is to connect the person with resources, like an ASIST trained intervention caregiver, so the person can "keep safe." To learn more about hosting an safeTALK training, contact Alaska Native Tribal Health Consortium Behavioral Health and Rural Services at (907) 729-3751.

Alaska Gatekeeper Training is designed to educate people about suicide and help them identify warning signs and risk factors for suicide as well as protective factors that could help someone get through a crisis. Gatekeepers learn active listening skills and how to develop a safety plan that includes referral to appropriate community resources. Call (907) 465-8536 for more information.

The Jason Foundation, which opened an Alaska affiliate in Fall 2011, offers students, parents, and teachers/youth workers the tools and resources to identify and help at-risk youth. This is accomplished through a series of programs and services that focus on information about the awareness and prevention of youth suicide. For more information, contact the Jason Foundation affiliate at (907) 264-4304.

Indicator: 2.1.a. Number of Alaskans trained in suicide prevention/intervention (new)

Strategy 2.2 ~ Alaskans know about Careline and other community crisis lines, and can share that information with others.

Even without special training, you can always encourage someone who you think is at risk of suicide to call Careline, Alaska's statewide suicide prevention and crisis intervention hotline. There is also a national Suicide Prevention Lifeline, a Veterans Suicide Prevention Hotline, and the Trevor Project hotline for lesbian, gay, bisexual, transgender and questioning youth. All of these are 24/7 confidential call lines. Some communities have a local or regional call line. A wallet card with all these numbers is provided in Appendix A. You are encouraged to cut it out and keep it in your wallet so you can share it with anyone who might need it.

Indicators: 2.2.a. Number of calls to Careline annually: 5,507 (2010)
2.2.b. Alaskans who report knowing how to access services for suicide prevention: 69.6% (AMHTA, 2010)

Strategy 2.3 ~ Providers of services to veterans will prioritize suicide prevention screenings and effective interventions.

Veterans are at a higher risk for suicide, with an annual rate that increased 50% between 2001-2008.[19] Research about suicide by members of the armed forces indicates that gender (male), depression, substance abuse, and relationship difficulties (divorce, infidelity, etc.),[20] as well as prior attempts, traumatic brain injury, access to firearms, and loss of a close friend or loved one to suicide are all contributors to suicide.[21] Also an issue is homelessness, which sadly many Alaskan veterans face – 7% of Anchorage homeless identified in the 2010 Project Homeless Connect were veterans.

As with any population, veterans and military service members benefit from programs that identify risk factors and address them with

---

[19] *See* The War Within: Preventing Suicide in the US Military, Rand Corporation (2011).
[20] James LC, Kowalski TJ. Suicide prevention in an army infantry division: a multi-disciplinary program. Mil Med 1996; 161:97-101.
[21] Summary of The War Within: Preventing Suicide in the US Military, Rand Corporation, at 8-9 (2011).

effective – usually evidence-based – practices. The U.S. Air Force designed and implemented a universal, multi-layer suicide prevention program that involved many disciplines and engaged with service members throughout their system.[22] The result was a 33% decrease is the suicide rate over 6 years.[23]

The Veterans Administration has a robust suicide prevention program that includes a crisis line, specialized media tools and resources, local suicide prevention coordinators at every Veterans Administration Medical Center, an online clearinghouse, the "Ask, Care, Escort" model for identifying and connecting at risk veterans to services, and other tools.

Providers of services to Alaska's veterans should prioritize screening and early identification of warning signs/risk factors for suicide. This should include promotion of self-care and awareness. Evidence-based interventions should be chosen to specifically address the special needs of Alaska veterans – including homelessness, geographical barriers to accessing veterans health care services, stigma, and cultural differences. Use of telemedicine (through the systems provided by Alaska Native Tribal Health Consortium and Alaska Psychiatric Institute) should be encouraged and reimbursed so that veterans in rural Alaska have better access to mental health and substance abuse treatment service. Restriction of lethal means (Strategy 3.1) and effective postvention supports are also key to reducing suicide among Alaska's veterans.[24]

Resources:

The Anchorage Veterans Health Care Facility has a suicide prevention coordinator who works with mental health providers in the VA system to address suicide risk and responses. Call 907-257-4824 for more information.

The Department of Defense and Veterans Administration online clearinghouse is www.suicideoutreach.org. Outreach and awareness resources and education materials are available here. There is also a local resource center at the Anchorage Veterans Health Care Facility. Call 907-257-4824 for more information.

A national crisis line is available for veterans: 1-800-273-8255 and press 1. Veterans can also have a confidential online "chat" with trained staff at http://veteranscrisisline.net/.

The Veterans Health Care Administration offers Telehealth Services programs for some Alaskan veterans with chronic health disorders, including depression and PTSD. This program is not available to all veterans.

The AFHCAN System is the tribal health system's telemedicine program. This

[22] *See* Knox KL, Litts DA, Talcott GW, Feig JC, Caine ED. Risk of suicide and related adverse outcomes after exposure to a suicide prevention program in the US Air Force: cohort study. BMJ 2003; 327:1376

[23] *Id.*

[24] After an extensive review of research and program evaluations, the Rand Corporation identified best practices for preventing veteran suicide. These include: raising awareness and self-care, identification of those at risk, improving access to and providing quality care, restricting access to lethal means, and responding to suicides appropriately. *See* Summary of The War Within: Preventing Suicide in the US Military, Rand Corporation, at 10-11 (2011).

connects tribal health corporation clients to specialized services – including behavioral health services – not available in their local community. This system is not limited to clinical services; it can be used to deliver training to providers in remote communities.

Alaska Psychiatric Institute also coordinates tele-psychiatry services for the publicly funded behavioral health system. Like the AFHCAN system, the API Tele-behavioral Health Care Program can used for training.

Indicator: 2.3.a. Number of suicides among Alaska veterans (new)

Strategy 2.4 ~ Spiritual leaders will encourage suicide prevention awareness and training in their communities of faith/belief.

Many people considering suicide turn to a minister, clergy member, or spiritual leader for help.[25] This may be due to an existing relationship of trust with the spiritual leader or the lack of stigma associated with pastoral counseling (unlike that attached to mental health treatment services). In order for leaders of faith based groups to be prepared to help individuals at risk of suicide, they need to be trained to recognize suicidal tendencies and have the resources and abilities to intervene.

In addition to helping someone in crisis, spiritual leaders have an opportunity to encourage entire congregations to learn about the issues and warning signs of suicide, basic gatekeeper and advanced intervention skills, and how to support community members and families after a suicide occurs.

Spiritual leaders have an important role in responding when someone expresses thoughts of suicide directly, as well as in identifying when a congregant displays signs of risk of suicide. This does not mean ministers and spiritual leaders must become mental health professionals. Instead, by learning how to be a gatekeeper – someone who helps identify when someone is in crisis and then connects them to appropriate services – they can help prevent suicide among the members of their community of faith. Expanding that awareness and preparedness to include the entire congregation can strengthen the faith of a community and have a wider "ripple effect" through an entire region.

Resources:

Alaska Gatekeeper Training teaches about suicide and how to identify warning signs and risk factors, as well as protective factors that could help someone get through a crisis. Call (907) 465-8536 for more information. Other trainings are available (*see* Strategy 2.1 for more information).

The Suicide Prevention Resource Center has a catalog of more than 100 resources for clergy: Resource Scan of Faith-Based Materials Addressing Suicide Prevention. Brochures, prayers, web sites, and other training-related materials on topics including stigma, raising awareness of suicide, and depression are included. Most of these resources are available at little or no cost. Recommendations for leading suicide prevention efforts are also presented.

The Iason Foundation offers training and education resources for Christian youth groups. Contact the Jason Foundation affiliate in Alaska at (907) 264-4304.

[25] Suicide Prevention Resource Center, *The Role of Clergy in Preventing Suicide* (citing Goldsmith, S. K., et al. (Eds.). ***Reducing Suicide: A National Imperative (2002)).***

Indicator: 2.4.a. Number of spiritual leaders trained as Gatekeepers (new)

Strategy 2.5 ~ The primary health care system will prioritize suicide prevention screenings in practices.

People considering suicide often visit their primary care providers within days or weeks of taking their lives.[26] Primary care providers (doctors, nurses, physicians assistants, health aides, etc.) are on the front lines when it comes to preventing suicide. Unfortunately, few primary care providers receive training in suicide prevention as part of their education.

Rural primary care providers face additional challenges: a hectic practice, complicated by geography, lack of access to mental health services, and stigma. Stigma and discrimination regarding mental health is pervasive in many rural areas and hampers efforts to treat behavioral health problems.

There are resources for primary care providers. The Suicide Prevention Resource Center (SPRC) has developed a free tool kit with information and tools to allow primary care providers to implement a practice-wide suicide prevention practice that is connected with local and statewide resources. In addition to this free toolkit, technical assistance is available from the Council and Suicide Prevention Resource Center.

Suicide Prevention Toolkit for Rural Primary Care

http://www.sprc.org/pctoolkit/index.asp

Contact Kate Burkhart, Statewide Suicide Prevention Council, for more information about using the tool kit. (907) 465-6518.

[26] According to the Alaska Suicide Follow-back Study, 64% of the cases reviewed involved people who had seen their physician within 6 months of committing suicide. (Follow-Back Study at 38). This is confirmed as a trend among people who commit suicide nationwide by the Suicide Prevention Resource Center.

There are other practice models that focus more specifically on depression. IMPACT, a model developed at the University of Washington, has been implemented by the Anchorage Neighborhood Health Center and other Alaska providers to help identify adults with co-morbid depression and then offer care. The evaluation of IMPACT in other states shows positive outcomes for patients and providers, reducing risk of suicide by improving physical and mental well-being.[27]

Primary care providers can also implement standards of care and practices that promote wellness. Patient education about nutrition, Vitamin D, exercise, stress management, chronic disease management, prescription medications, and other health issues can help individuals better manage their health.

Indicators: 2.5.a. Number of practices implementing suicide prevention protocols (new)
2.5.b. Number of practices implementing IMPACT (new)

Strategy 2.6 ~ School districts will implement broad screenings to identify not just imminent risk of suicide, but risk factors for suicide (substance use, violence, depression, etc.).

Signs of Suicide and other school based screenings have been implemented in Alaska school districts with success. The Matanuska Susitna Borough School District has been actively screening and responding to students

[27] Learn more about the research and evaluation of IMPACT at http://impact-uw.org/about/research.html.

at risk for several years, reporting successful outcomes for students and teachers. The Juneau Douglas School District has tailored a student-centered response around the Signs of Suicide screening. Students receive wrap-around services to address all the problems (substance abuse, domestic violence, teen parenting, poverty) they face that contribute to suicide risk. The Lower Kuskokwim School District is also using evidence-based school screenings, to help address the youth suicide problem in their region.

Interested in how school-based screenings might work in your school district?

Contact the Department of Education and Early Development Suicide Prevention Coordinator at (907) 465-6523.

With these successes, and the strong research base[28] that shows how effective school-based screenings can be, Alaskan school districts have a foundation for expanding school screenings so that no student is left vulnerable to suicide. Screenings can be done in a way that balances student health with privacy and parental notification concerns while engaging parents and the community to protect youth from suicide.

Indicator: 2.6.a. Number of school districts implement evidence-based screening: 5 (2011).

[28] See "An Outcome Evaluation of the SOS Suicide Prevention Program," R. Aseltine, Jr. and R. DeMartino, (*Am. J. Public Health*, March 2004); see also the NREPP overview of Signs of Suicide for additional research/ evaluation (available online at www.nrepp.samhsa.gov/ViewIntervention.aspx?id=53).

Strategy 2.7 ~ Senior services providers will implement broad screenings to identify not just imminent risk of suicide, but risk factors for suicide (substance abuse, violence, depression, etc.), too.

There has been an alarming increase in suicide among Alaskans over age 65 since 2000.[29] Many people think depression is just part of "getting old," but it's not. Nor is feeling lonely, hopeless, or worthless. Neglecting to pay attention to the mental and emotional well-being of Alaskan seniors increases the risk of suicide. Just like schools are a primary environment for addressing youth suicide, senior centers and senior services providers are a primary environment in which to address suicide among seniors.

While every senior services provider may not be able to screen older Alaskans for suicide risk or contributing factors, there are many ways that senior services providers can help identify and respond when a senior is at risk of suicide. Nursing homes conduct basic periodic screenings, asking residents if they are feeling suicidal. Some medical practices are using IMPACT (*see* Strategy 2.3), SBIRT,[30] and other integrated care models to help identify seniors at risk of depression and/or suicide.

[29] See *Mending the Net*, FY10 Annual Report at 9 (http://www.hss.state.ak.us/suicideprevention/pdfs_sspc/2010SSPCAnnualReport.pdf).

[30] Screening, Brief Intervention, and Referral to Treatment (SBIRT) is a comprehensive, integrated, public health approach to the delivery of early intervention and treatment services for persons with substance use disorders, as well as those who are at risk of developing these disorders. Screening quickly assesses the severity of substance use and identifies the appropriate level of treatment. Brief intervention focuses on increasing insight and awareness regarding substance use and motivation toward behavioral change. Referral to treatment provides those identified as needing more extensive treatment with access to specialty care. For more information, visit http://www.samhsa.gov/prevention/SBIRT/index.aspx.

Resources:

In 2011, the Council provided copies of *Promoting Emotional Health and Preventing Suicide, A Toolkit for Senior Living Communities* to senior centers statewide.

This is a free toolkit, available online, that can help senior living communities promote the mental health of clients and prevent suicide. It contains resources for an agency to conduct in-service style training for staff. For more information about the toolkit, or help using it, call the Council at (907) 465-6518.

Indicator: 2.7.a. Rate of suicide, Alaskans age 65-84: 18.8 (2000-2007, crude rate, AABVS)[31]

Strategy 2.8 ~ The State of Alaska and its partners will engage village police and public safety officers in developing tailored community-based responses and protocols for responding to crises.

Anchorage, Fairbanks, and Juneau have Crisis Intervention Team[32] (CIT) trained officers to help respond appropriately to suicide emergencies. These trainings are made possible through a partnership between the municipalities, NAMI, and the Alaska Mental Health Trust Authority. Communities with CIT officers report positive outcomes for mental health consumers and officers, with crises more often averted than escalating.

[31] The crude rate average for 2000-2007 is used due to the small sample size. The average crude rate for individuals over age 84 was not included, due to the very small *n* of the sample. However, this population will continue to be monitored for upward or downward trends.

[32] The Crisis Intervention team model was developed by the police department in Memphis, Tennessee. It is a community partnership to ensure effective and appropriate law enforcement responses to situations involving mental health consumers. Learn more at http://www.memphispolice.org/crisis%20intervention.htm.

Cynthia Erickson and Alaska Wildlife Trooper Jon Simeon, part of the Live to Ride, Call to Live suicide prevention campaign in 2011. (Photograph courtesy of Beth Ipsen, Department of Public Safety)

CIT training is not offered as a standard part of training offered to public safety officers or village law enforcement. It may be that an essentially urban community policing model is not best suited for the everyday situations faced by Alaska's rural law enforcement officers. Instead, a tailored community-based response and protocol that provides support to the often only officer in a community may be a better tool for preventing suicide in Alaska's villages and rural towns.

This community-based model should include elements of postvention and critical incident stress management, to ensure that first responders to a suicide in a small community have the supports needed to deal with the experience.

Resources:

Information about the Crisis Intervention Team model is available from the Memphis Police Department, online or from the CIT Coordinator (901) 636-3700. For information about developing a CIT training, contact NAMI-Fairbanks at (907) 456-4704.

For information about Critical Incident Stress Management and other postvention

trainings, contact the Alaska Police and Fire Chaplains' Ministries at (907) 272-3100.

Indicators: 2.8.a Number of officers attending CIT trainings annually (new)

2.8.b Number of communities with Emergency Response Plans that include responding to a suicide (new)

Goal 3: Alaskans Communicate, Cooperate, and Coordinate Suicide Prevention Efforts

Strategy 3.1 ~ Communities will partner with non-traditional organizations to raise awareness about limiting access to lethal means (guns, drugs, alcohol, etc.).

From 2003-2008, 55% of Alaskan suicides were by firearm.[33] The number of suicide attempts and deaths by poisoning (drugs, alcohol, prescription medication, etc.) is increasing. In 2005, the Alaska Trauma Registry published a review of suicide hospitalizations for 2001-2002. During that time, 77% of hospital visits resulting from suicide attempts (or other self-harm) involved an overdose on medications. Of those medication overdoses, 64% were prescription medications. Tylenol was the most common medication on which children age 0-19 years overdosed.[34] The Alaska Violent Death Reporting System reported that 20.1% of suicides in 2003-2008 were by hanging.[35]

Preventing suicide means preventing access to means of suicide.[36] The American Association of Suicidology recommends supervision of youth by parents and communities, maintaining drug and alcohol free homes, and safely storing guns as a universal means of preventing suicide.[37] Effectively preventing access to the most common lethal means includes looking widely for partners to help raise awareness and promote safety.

Communities in the Bristol Bay region have a unique relationship with the local housing authorities – not a usual partner in suicide prevention – to help prevent suicide in Dillingham and the region's villages. Bristol Bay Area Health Corporation, Bristol Bay Housing Authority, and the Alaska Native Tribal Health Consortium partnered to install gun lockers in village homes in the region. This project was so successful that it expanded from one region in 2009 to two regions in 2010 and four regions in 2011.[38] These programs have proven, in Alaska and elsewhere, to help reduce the number of suicides in communities where implemented.

Promoting effective and safe prescription drug disposal is another way of reducing

---

[36] See *Consensus Statement on Youth Suicide by Firearms*, American Association of Suicidology (1998) (online at http://www.suicidology.org/c/document_library/get_file?folderId=235&name=DLFE-44.pdf).

[37] *Id.* at 3.

[38] Alaska Native Tribal Health Consortium has participated as a partner in all these gun locker projects. More information about the project is available at http://www.anthc.org/chs/wp/injprev/suicide-and-suicide-attempt-prevention.cfm. A similar project implemented in Norway resulted in reduction of firearm suicides by almost half (more information at http://www.hsph.harvard.edu/means-matter/examples-of-means-restriction-programs/#norway).

lethal means. The Senior Behavioral Health Coalition began assembling partners to conduct disposal events in 2009. These events continue to grow and are usually held in conjunction with the National Drug Take Back Initiative. Ketchikan's Wellness Coalition. of which the local suicide prevention task force is a part, helped establish a permanent way for people to safely dispose of their unused medications by partnering with the local police department.

These are just two examples of how Alaskan communities are working to restrict access to lethal means. There are other ways. Some are as simple as locking away prescription and over-the-counter medications. Keeping liquor cabinets locked is another way of limiting access to the means of suicide. Other strategies include evidence-based education and intervention models,[39] partnering with medical schools to train new doctors on lethal means restriction, and implementing prescription drug monitoring systems.

Interested in learning how to start a gun locker project in your community?

Contact the Injury Prevention Program at the Alaska Native Tribal Health Consortium (907) 729-3799.

Go to Means Matter, from the Harvard School of Public Health, for more information and examples of effective restriction programs.

[39] The Emergency Department Means Restriction Education model is part of the SAMHSA evidence-based practice registry, available online at: http://nrepp.samhsa.gov/ViewIntervention.aspx?id=15.

Indicator:

3.1.a. Rate of suicides by firearm: 55% (AKVDRS, 2003-2008)

3.1.b. Rate of suicide by poisoning/overdose: 22% (AKVDRS, 2003-2008)

Strategy 3.2 ~ The State of Alaska and its partners will make training in evidence-based suicide prevention and intervention models accessible to all interested Alaskans.

Training in several suicide prevention and intervention models is available to Alaskans. Some are evidence-based and some are not. Some are more expensive than others, which means that some Alaskans can't afford to be trained to help someone in crisis.

Mental Health First Aid. is coordinated through the Trust Training Cooperative. a state-funded health care workforce trainer. The cost of the training is currently $85.00. Call (907) 264-6228 for more information.

Applied Suicide Intervention Skills Training (ASIST) is coordinated by the Alaska Native Tribal Health Consortium. The training cost is currently $35.00 per trainee plus costs of the trainers' travel expenses. To learn more about hosting an ASIST training, contact Alaska Native Tribal Health Consortium Behavioral Health and Rural Services at (907) 729-3751.

Gatekeeper Training is offered through the Department of Health and Social Services Division of Behavioral Health and is **FREE.** Call (907) 465-8536 for more information.

The Iason Foundation offers students, parents, and teachers/youth workers the tools and resources to help at-risk youth. These programs are offered at no cost. Call (907) 264-4304 for more information.

One way to ensure that all Alaskans have access to training and ongoing support would

be to enhance Alaska's Gatekeeper program. The Gatekeeper program could be tailored to meet the level and areas of need for specific groups if a more robust pre-training process of assessing current competencies, goals for the training, and plans for implementing the skills learned was undertaken.

This pre-training process would need to include a complete assessment of available resources for someone in crisis. This would help Gatekeepers learn where to refer someone at risk of suicide and how to access those services. If Gatekeeper trainings were coordinated with local suicide/wellness coalitions, Gatekeepers would have a local source of support and resources to help them use their skills more confidently and effectively in the community.

While many Alaskans have been trained as Gatekeepers, there is no capacity for ongoing support or periodic "refresher" trainings. If all trained Gatekeepers were connected through a StopSuicideAlaska.org online community, they could provide support and share resources more effectively. They could also create and make use of a learning network through StopSuicideAlaska.org (*see* Strategy 4.4).

These intensive suicide prevention trainings are very valuable, but they are not the only options. In an effort to make suicide prevention training accessible and affordable, the Juneau Suicide Prevention Task Force and local NAMI affiliate developed a video-based training that is offered monthly to the public.

By responding to the opportunity presented during a 2010 visit from a grief and bereavement expert, Dr. Bob Baugher, the local coalition and its partners were able to develop a video and curriculum – *Building Intervention Skills* – that can be offered at no cost to attendees. This sort of community led education and awareness building is a key component to preventing suicide.

Want to learn more about the Building Intervention Skills training?

Contact NAMI Juneau at (907) 463-4251

The State of Alaska can ensure that every Alaskan who seeks to be trained to prevent a suicide has access to training by a) providing adequate funding to support scholarships/ sliding fee scales for the intensive trainings like ASIST and b) providing flexible grant funding for community coalitions and organizations seeking to develop culturally and/or locally relevant and accessible trainings.

Indicator: 3.2.a. Number of Alaskans trained in suicide prevention/intervention (new)

Strategy 3.3 ~ The State of Alaska will mandate evidence-based suicide prevention and intervention training for all school district personnel.

In Alaska, the suicide rate for young men age 15-24 is 56.1 per 100,000; for young women, it is 16.6 per 100,000.[40] For Alaska Natives, the rate for this age group is 141.6 per 100,000 for young men and 50.3 per 100,000 for young women.[41] To connect with this high-risk group, suicide prevention must be

[40] Data is for the period 2000-2009, provided by the Bureau of Vital Statistics.
[41] *Id.*

part of the education system. Research shows that, when educators and staff are equipped with the skills and support to identify when a student is at risk and properly intervene, lives are saved.

The Alaska Association of Student Governments (AASG), a statewide organization of student leaders, recognizes the importance of teachers and school staff being trained in suicide prevention. They passed a resolution calling for teachers to receive suicide prevention training in 2011. The Alaska Mental Health Board and Advisory Board on Alcoholism and Drug Abuse, in partnership with the Council and AASG, have advocated for funding to make training available for all Alaskan secondary school educators and staff.

By requiring – and making resources available for – suicide prevention training for educators and school staff, the State of Alaska can ensure that youth experiencing depression, hopelessness, and other risk factors associated with suicide are identified and connected with the help they need before they attempt suicide.

Resources:

The Iason Foundation offers training and resources for teachers, coaches, etc. Call (907) 264-4304 for more information. Kognito Interactive offers interactive online training for high school and university educators and staff (as well as other health education training). School personnel can also take advantage of other training opportunities (*see* Strategy 2.1 for more information).

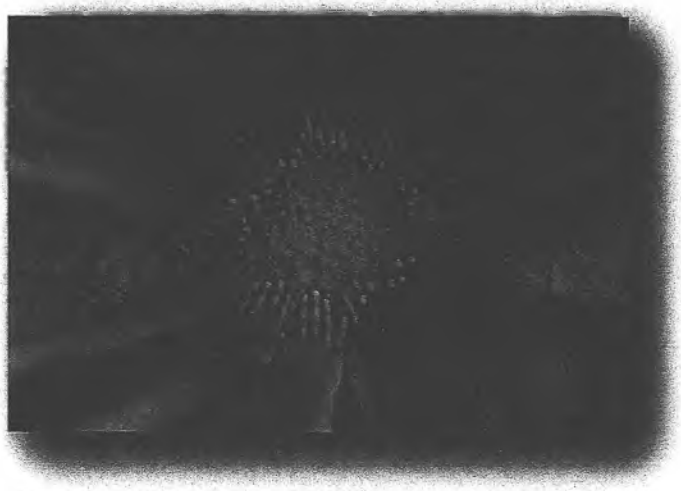
Indicator: 3.3.a. Number of school districts offering suicide prevention training to educators/staff (new)

Strategy 3.4 ~ Communities will develop wellness coalitions that include suicide prevention in their mission/area of focus.

Given the "web of causality" underlying suicide, it is important that local efforts to prevent substance abuse, violence, school drop outs, etc. are coordinated with health promotion efforts. Blending efforts to build protective factors and reduce risk factors will more comprehensively address the many factors involved in suicide.

Some communities, like Juneau, Bethel, Fairbanks, and Barrow, have active suicide prevention coalitions. Other communities have coalitions that include, but are not focused on, suicide. Ketchikan has ensured that suicide prevention is linked to health promotion and other prevention efforts in the community by making their suicide prevention coalition, SPEAK, a sub-committee of the umbrella wellness coalition. This has helped coordinate the community's overall prevention and health promotion efforts over several years, increasing their impact throughout Ketchikan.

It only takes one or two champions to start a health or wellness coalition, as long as the community is ready to come together to address the specific concerns facing their people. In other communities, coalitions form to address a serious issue under the



leadership of a respected person or agency.

For some communities, a planning process is necessary to identify those concerns. The Mobilizing for Action through Planning and Partnerships (MAPP) and COMPASS II (q United Way of America community assessment tool) planning frameworks have seen success in Homer, Fairbanks, Juneau, and other Alaskan communities.

Whether starting a new coalition or expanding an existing coalition to address suicide, Alaskan communities must provide a meaningful role and opportunity for leadership to youth, survivors of an attempted suicide, and survivors of a loss to suicide. By including these important stakeholders, coalitions can support the strategies in Goals 1 and 4. They can also engage the people in their community with the most to share with and learn from the coalition.

Resources:

You can connect with Alaska coalitions and learn from their experience. This has worked well for Ketchikan and Juneau, communities where the coalitions have shared to inform each other's efforts.

The Suicide Prevention Resource Center provides a list of resources, as well as technical assistance, to communities developing suicide prevention coalitions. Visit these resources online at www.sprc.org/taking_action/build.asp.

The National Highway Traffic Safety Administration has a "how to" guide for coalition building. Community Anti-Drug Coalitions of America (CADCA) offers a host of resources, publications, webinars, and trainings to help people create, grow, and maintain community coalitions. These resources focus on substance abuse prevention, but are very helpful. CADCA also offers training and tools for youth leaders and youth-led coalitions (http://www.cadca.org/training-events).

Indicator: 3.4.a. Number of active wellness and suicide prevention coalitions (new)

Strategy 3.5 ~ Community suicide prevention efforts will expressly address the contributing factor of substance abuse.

Alcohol and drugs play a role in the suicide problem in Alaska but they are not a cause of suicide.[42] In some cases, the addiction of a parent or parents creates an environment in which a child cannot grow up safely. In some cases, a person with an undiagnosed mental illness self-medicates with drugs or alcohol to feel better but inadvertently increases the risk they will commit suicide. In some cases, the use of drugs or alcohol decreases the natural inhibitions that would prevent someone from acting on a suicidal impulse. Whatever the case, the role of drugs and alcohol in suicide in Alaska is clear.

In order for a community to effectively address suicide, the contributing factor of substance abuse must also be addressed. This can be done through a single comprehensive wellness coalition, coordination of substance abuse and suicide prevention efforts through an organization like the Ketchikan Wellness Coalition, or through regular and consistent partnerships between existing prevention groups.

Implementing this strategy might be hard in communities that have made possession and use of alcohol unlawful. It might be difficult to deal with substance abuse openly when there are legal consequences, as well as

[42] For discussion of the data related to drugs, alcohol, and suicide, go to *Mending the Net*, FY10 Annual Report at 10 (http://www.hss.state.ak.us/suicideprevention/pdfs_sspc/2010SSPCAnnualReport.pdf).

issues of reputation and stigma. However, it is important to recognize that, even in "dry" communities, drugs and alcohol are contributors to suicide.

There are resources to help coalitions bring suicide and substance abuse prevention together. Because the State of Alaska focuses on comprehensive prevention programs based on the Strategic Prevention Framework, the Division of Behavioral Health is an excellent resource. The Advisory Board on Alcoholism and Drug Abuse can also provide technical assistance. The Suicide Prevention Resource Center has specialized tribal technical assistance as well as general support for community coalition building.

Indicators: 3.5.a. Rate of adult binge drinking: 17.9% (BRFSS, 2009)
3.6.b. New mothers reporting that someone close to them had a bad drinking/drug problem: 13.1% (CUBS, 2009)

Suicide Prevention
Resource Center
1-877-438-7772

Strategy 3.6 ~ The State of Alaska will coordinate all prevention efforts across all departments and divisions, to ensure that Alaska has a comprehensive prevention system that recognizes the "web of causality" implicated in suicide, substance abuse, domestic violence, bullying, child abuse, teen risk behaviors, poor school performance, etc.

The factors involved in suicide include a wide range of personal and environmental issues: depression and mental illness, poverty, sexual assault, bullying, lack of education, unemployment, historic trauma and loss of culture, alienation, grief, victimization and exploitation, alcohol abuse, addiction, and others. By addressing these factors in a unified and cohesive way through health, education, employment, and community development efforts, the State of Alaska could reap far reaching benefits with greater efficiency.

The National Prevention Strategy, released in June 2011, emphasizes the need for broad collaborations between state, tribal, and community organizations involved in prevention. States are encouraged to support truly comprehensive prevention efforts that involve all governmental departments and broad groups of stakeholders in creating healthy and safe communities, improving community and clinical prevention, empowering individuals to make good health and lifestyle decisions, and eliminating health disparities. Alaska employed this sort of model at the community level with the Alaska Tobacco Prevention and Control Program – and successfully reduced the amount of cigarette sales to adults by almost 50%, to a

level below the national average.[43] (It is important to note that this success took significant investment of resources and over 15 years to achieve.)

Resources:

Alaska has already undertaken this sort of interdepartmental collaboration with the Criminal Justice Working Group. The commissioners of Health and Social Services, Corrections, Public Safety, and Education and Early Development, as well as the Chief Justice of the Alaska Supreme Court, work through this group on joint efforts to prevent crime and reduce recidivism.

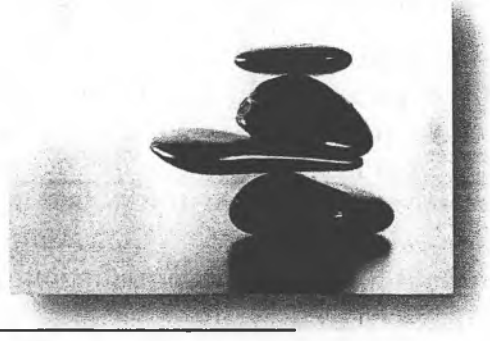
A similar sort of interdepartmental collaboration is involved in Governor Parnell's Choose Respect initiative to end domestic violence and sexual assault in Alaska.

Indicator: 3.6.a. Number of executive agencies and partners engaged in a comprehensive prevention workgroup (new)

Strategy 3.7 ~ The State of Alaska will balance the policy of comprehensive and integrated prevention with the use of evidence-based practices to achieve verifiable outcomes reducing the impact of suicide, substance abuse, violence, sexual abuse, and mental illness on communities.

An evidence-based practice is a prevention program or intervention shown to be effective through strong scientific research. Evidence-based practices have been evaluated and peer reviewed to ensure quality and integrity. When available and used with fidelity in an appropriate context, an evidence- based practice ensures that the intervention will achieve the desired outcomes. Promoting use of evidence-based practices will help spread effective suicide prevention programs and interventions throughout Alaska, benefiting more communities and families. Use of evidence-based practices is part of the National Strategy for Suicide Prevention (NSSP),[44] which includes a specific objective of increasing the number of evidence-based suicide prevention programs in schools, colleges and universities, work sites, correctional institutions, aging programs, and family, youth, and community service programs.

Part of requiring that grantees use evidence-based practices is providing the support and technical assistance needed to implement them effectively. The State of Alaska has provided this sort of technical assistance to prevention grantees, particularly those funded by the Strategic Prevention Framework State Incentive Grant. However, technical assistance resources are limited and do not always meet grantees' needs.



[43] Between FY96 and FY09, the number of cigarette packs sold per adult in Alaska dropped 48%, from 128.6 packs to 67.4 packs per adult. This drop in cigarette sales translates to 405 million fewer cigarettes sold in Alaska in 2009 compared to 1996. (*Tobacco Prevention & Control in Alaska Annual Report: 2009 Update*, Alaska Department of Health and Social Services, http://www.hss.state.ak.us/dph/chronic/tobacco/PDF/TobaccoARFY09.pdf).

[44] The National Strategy for Suicide Prevention Goals and Objectives for Action: Summary is available online at http://mentalhealth.samhsa.gov/suicideprevention/strategy.asp.

By coordinating with the Council, Alaska Native Tribal Health Consortium, and other in-state providers of technical assistance – as well as the Suicide Prevention Resource Center, Substance Abuse and Mental Health Services Administration (SAMHSA), and other national sources of technical assistance, the State of Alaska can expand the supports available to prevention providers. This will enhance the delivery of suicide prevention services, having greater impact statewide.

Resources:

The National Registry of Evidence-based Programs and Practices is a searchable online database of more than 200 peer reviewed interventions in mental health promotion, substance abuse prevention, and mental health and substance abuse treatment (www.nrepp.samhsa.gov/).

The Best Practices Registry for Suicide Prevention is a searchable online database from the Suicide Prevention Resource Center. It includes evidence-based suicide prevention interventions, expert statements, and other less rigorously evaluated practices that are aligned with the objectives of the National Strategy for Suicide Prevention (www2.sprc.org/bpr/index).

Indicator: 3.7.a. Percentage of state grantees using evidence-based practices (new)

Strategy 3.8 ~ The State of Alaska will provide financial and technical support for innovative, research-based suicide prevention practices.

While there are many evidence-based practices that can be implemented in Alaska to help prevent suicide, we must recognize that our state is unique: geographically, culturally, economically, and spiritually. Our people are smart, creative, and dedicated to improving the lives of our neighbors so that no one feels that suicide is the only option. With these strengths and talents, Alaskans can – and have– created promising suicide prevention programs and interventions.

The Qungasvik Project was developed through inclusive and participatory research by the Center for Alaska Native Health Research, Alakanuk, and another Southwestern village, with substantial support through a National Institutes of Health grant. Qungasvik is founded on traditional Alaska Native values and traditions, to build protective factors and resiliency while healing any hurt. They were able to create a suicide prevention practice that resonated with community members and met rigorous evaluation and review standards.[45] One participant, Marvin Kelly, described the Qungasvik Project as "celebrating life" instead of "suicide prevention" – taking a strength based approach to resolving the underlying contributors to suicide. In FY12, the State of Alaska provided an additional $1.5 million to extend this project in Southwest Alaska.

Creating, testing, and evaluating an Alaskan suicide prevention practice takes time,

[45] Read about the Qungasvik Project in *Aurora Magazine*, Fall 2009 (http://www.uaf.edu/aurora/archives/fall-2009/canhr/). Contact the Center for Alaska Native Health Research at (907) 474-5528 for more information about this and other participatory research efforts.

expertise, and funding. There is no consistent source of funding or resources for developing innovative, research-based practices. By providing financial and technical support to develop research-based practices, the State of Alaska will enrich our suicide prevention system and help every Alaskan take responsibility for preventing suicide (Goal 1).

Resources:

The Center for Alaska Native Health Research (CANHR) and University of Alaska Anchorage Center for Behavioral Health Research and Services have experience and credibility in this field. The CANHR focus on collaborative research in partnership with local people is very well suited to Alaska's cultural differences and traditions. The Center for Behavioral Health Research and Services has been active in the evaluation of suicide prevention projects in Alaska.[46]

Indicator: 3.8.a. Number of Alaskan research-based suicide prevention practices receiving state funding/technical assistance: 2 (2011).

Strategy 3.9 ~ The State of Alaska will coordinate and support stigma reduction efforts around mental illness, addiction, depression, and suicide.

Stigma is not just a major barrier to accessing mental health care. It prevents people from reaching out to someone they suspect might be suicidal or experiencing a mental illness or addiction. Stigma can also prevent a survivor from talking about what happened or asking for help, because he or she is afraid of being judged – often when they need help most.

The Council's 2011 media campaign *How Are You Really Doing?* was designed to educate about suicide and encourage action to help someone at risk of suicide. The Alaska Mental Health Trust Authority partners with the Council, Advisory Board on Alcoholism and Drug Abuse, and Alaska Mental Health Board to educate people about the realities of suicide and behavioral health disorders. The *You Know Me* and *Treatment Works, Recovery Happens* campaigns are part of these anti-stigma efforts. It is important that the State of Alaska continue these efforts and broaden them to reach every Alaskan. Research shows that knowledge of mental illness and suicide is not enough to eradicate stigma. Effective campaigns include direct contact with people who experience or have experienced suicidal thoughts, depression, or mental illness and with people who have experienced a loss to suicide.[47] Effective anti-stigma campaigns do not just educate – they transform fear and ignorance into concern and compassion.

Resources:

The Council, Department of Health and Social Services, and Alaska Mental Health Trust Authority partner with organizations in anti-stigma campaigns. Contact the Council at (907) 465-6518 for more information.

Indicator: 3.9.a. Alaskans comfortable with a family member, coworker, guest, or neighbor experiencing mental illness: 77.3% (AMHTA, 2010)

[46] Read about active and completed evaluation projects at the Center for Behavioral Health Research and Services website (http://www.uaa.alaska.edu/cbhrs/).

[47] For a more in depth discussion of the roots of stigma and research about effective ways to address it, see *Mental Health: A Report of the Surgeon General*, Chapter 1 (US Department of Health and Human Services, 1999).

Goal 4: Alaskans Have Immediate Access to the Prevention, Treatment, and Recovery Services They Need

Strategy 4.1 ~ Alaskans know who to call and how to access help — and then ask for that help — when they feel like they are in crisis and/or at risk of suicide.

Part of preventing suicide in Alaska is being aware of when we ourselves are potentially at risk – and then reaching out for help. Periodically ask yourself if you have any of the warning signs (there is a wallet card in Appendix A you can cut out and keep handy). If you answer yes, **ASK FOR HELP!** Your life is precious, and you are not alone.

Resources:

If you do not have someone you feel comfortable talking to, or you aren't sure who to talk to, help really is just a phone call away.

Indicator: 4.1.a. Number of calls to Careline annually: 5,507 (2010)

Strategy 4.2 ~ Community behavioral health centers will provide outreach to ensure that community members know what services are available and how to access them.

In order for Alaskans to know where to go for help, community behavioral health centers must provide outreach. In some communities, the behavioral health center is a partner in the wellness or suicide prevention coalition. However, this is not true of all communities.

Providing outreach and information about how to access services is key to effectively preventing suicide. Alaskans experiencing depression and other mental health disorders need to know where to go for help – before they experience a crisis and become at risk for suicide.

CARELINE
CRISIS INTERVENTION

1-800-273-8255
www.carelinealaska.com

Resources:

Outreach can be as simple as creating a Facebook page and linking it to the local coalition's page and StopSuicideAlaska.org. Outreach can include having booths at local health fairs, public markets, and other venues. It can involve a free public service announcement on the radio or scanner channel (often very effective in rural communities). However the community behavioral health center engages in outreach, the message should include Careline information, what services are available locally, and how to get help when someone is having thoughts of suicide.

Indicator: 4.2.a. Number of community behavioral health centers reporting outreach (new)

Strategy 4.3 ~ Community health providers will offer bridge services for young people identified as experiencing serious emotional disturbance or other behavioral health disorders after age 18/21.

Youth and young adults are Alaska's highest risk group for suicide, with rates up to five times the national average.[48] While communities and states have invested heavily in the adolescent mental health system, the services for youth transitioning to adulthood are not always seamless. Many youth and young adults experiencing a behavioral health disorder face increased stress and risks during this time. Community health providers need to partner to provide bridge services to maintain mental and emotional stability – and sobriety, sometimes – so that youth can effectively move into adulthood. Southcentral Foundation's Denaa Yeets' program offers case management, information and referrals to services for young adults at risk of suicide and their families. In order to expand these sorts of programs, the State of Alaska must prioritize resources for these bridge services (which currently aren't always paid for by parents' or public insurance programs).

Resources:

The State of Alaska has invested in services for transition-age youth. Grant funds for programs for youth coming out of foster care, tuition waivers, job training services, and transitional housing have increased.

Indicator: 4.3.a. Number of Alaskans age 18-24 experiencing serious behavioral health disorders who receive mental health services (new)

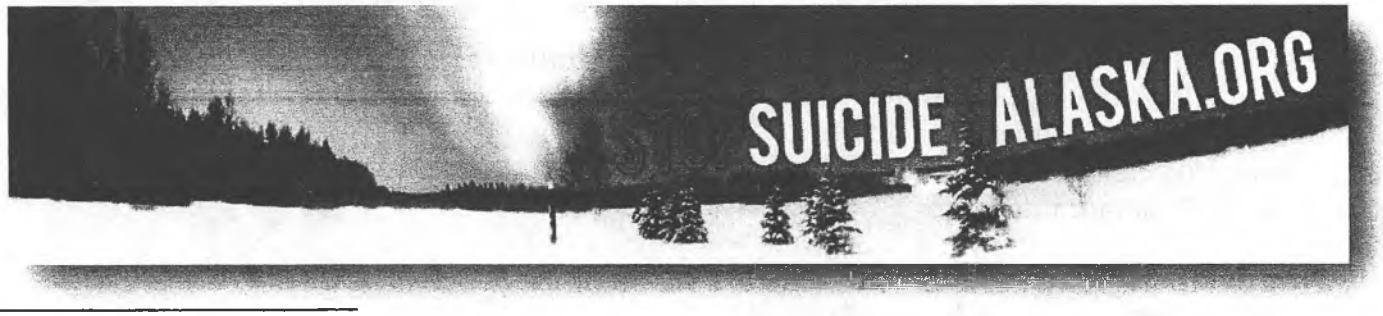
Strategy 4.4 ~ The State of Alaska and its partners will, through StopSuicideAlaska.org, create and support a learning network among communities to share ideas and strategies that work.

Many resources are provided in this Plan, and many more exist here in Alaska and from national and other states' organizations. We learn how to prevent suicide through education, experience, and sometimes, heartache. Sharing that wisdom effectively requires having a central learning network where every Alaskan can access information and resources (at low or no cost) to help prevent suicide.

Resources:

StopSuicideAlaska.org provides an excellent platform for this learning network, but it requires partners to give life to the learning network. Interested in helping? Contact the Council at (907) 465-6518.

Indicator: 4.4.a. Number of active group administrators on StopSuicideAlaska.org (new)



[48] *Mending the Net*, FY10 Annual Report at 9 (http://www.hss.state.ak.us/suicideprevention/pdfs_sspc/2010SSPCAnnualReport.pdf).

Goal 5: Alaskans Support Survivors in Healing

Survivors include individuals who have experienced a loss to suicide and those who have attempted suicide

Strategy 5.1 ~ Survivors of a loss to suicide know about suicide prevention resources and how to participate in suicide prevention efforts that support their own healing.

Survivors of a loss to suicide need their own forms of support and help. Just like with any grieving process, what a particular survivor needs can be as unique as the person. Survivors' support groups are one way that people can find help, but there are others. Cultural activities, healing circles, therapy, or counseling – all are sources of support.

Not every community in Alaska has a survivors' support group. In addition to formal survivors' support groups, survivors can support other survivors informally. Whether it's by reaching out through local suicide prevention coalitions or one-on-one, establishing informal networks to help survivors, or incorporating cultural traditions to help healing, individuals can share their experiences and support ongoing healing.

Resources:

- Survivors can connect through support groups in Fairbanks. Contact Fairbanks Counseling and Adoption at (907) 456-4729.
- Survivors can also connect informally through StopSuicideAlaska.org and its social media outlets. There is a map of active groups on StopSuicideAlaska.org.
- The American Foundation for Suicide Prevention has a database you can search for online and in-person groups, as well as a Survivor Outreach Program.

Indicator: 5.1.a. Number of survivor support groups with contact information available on StopSuicideAlaska.org: 1 (2011)

Strategy 5.2 ~ The State of Alaska will provide resources, tools, and technical support for community postvention efforts, with emphasis on natural, organic responses developed in the community.

The Council and Division of Behavioral Health developed the Postvention Resource Guide. This guide provides tools, information, and resources for use after a suicide occurs.

Resources:

- The Postevention Resource Guide is available online on the Council's website. You can also request a printed copy from the Division of Behavioral Health. Call (907) 465-8536 for a copy.
- Training on the Postvention Resource Guide was provided in June, 2011; on-going technical assistance is available from the Division of Behavioral Health. Call (907) 465-8536 for information.

Indicator: 5.2.a. Number of Alaskans trained in the Postvention Resource Guide: 70 (2011)

Goal 6: Quality Data and Research is Available and Used for Planning, Implementation, and Evaluation of Suicide Prevention Efforts

Strategy 6.1 ~ The State of Alaska will improve statewide suicide data collection efforts, employing epidemiological standards/models to ensure quality reporting, analysis, and utilization for timely data-driven policy decisions.

Suicide attempt and completion data is collected through the Alaska Trauma Registry and the Bureau of Vital Statistics. These surveillance systems provide data based on the information collected by acute care hospitals and emergency services providers, as well as through cause of death information provided on death certificates. The surveillance system is supplemented by data collected through the Alaska National Violent Death Reporting System,[49] Youth Risk Behavior Survey, and Behavioral Risk Factor Surveillance System. The data, being available from only a few sources, can be correlated and collectively analyzed.

The current surveillance system relies on third party reports of suicide attempts and certifications of cause of death. Suicide attempts that do not result in treatment at an emergency department are not counted. Suicide attempts that are attributed to "accident" are not counted.

Deaths are not always investigated. Some deaths attributed to accident may be undocumented suicides. The Alaska Violent Death Reporting System does investigate **potential** violent deaths to collect data from different sources and determine whether the death was a "violent death" (suicide, homicide, undetermined intent, accidental firearm, legal intervention, or terrorism) and why. For this reason, the Alaska Violent Death Reporting System is a valuable source of information in tracking suicide data.

Data on suicide and suicide attempts is reviewed, analyzed, and used by state, tribal, and community organizations to guide and evaluate suicide prevention efforts. The efforts are uncoordinated – with even internal sections of the Department of Health and Social Services releasing differing reports or analysis. This hinders planning at the statewide and local level and prevents any meaningful attempts to address data gaps. It also makes pursuit of long-term data collection efforts, such as follow-back studies (also known as psychological autopsies), a lower priority. By bringing all the partners involved in data collection, analysis, reporting, and utilization together to coordinate the way Alaska uses data to drive decision making, the State of Alaska can improve the surveillance system for all users.

Resources:

The Strategic Prevention Framework State Incentive Grant workgroup structure brought many partners together to identify, validate, and analyze data from a wide range of sources. This ensured that the multi-year, multi-million dollar grant was aimed at the most pressing prevention issues.[50] With this recent experience, the State of Alaska and its tribal health partners can transform the suicide surveillance system.

Indicator: 6.1.a. Data sources available on StopSuicideAlaska.org: 3 (2011)

[49] Alaska is one of 18 states participating in the National Violent Death Reporting System. Learn more at http://www.cdc.gov/ViolencePrevention/NVDRS/index.html.

[50] For more information about the SPF SIG Epidemiology Workgroup and how it informed the overall project, visit http://hss.state.ak.us/dbh/prevention/programs/spfsig/EPIwrkgrp.htm.

Strategy 6.2 ~ The State of Alaska will partner with tribal and academic organizations to continue to explore and research the "web of causality" of suicide, prioritizing the health and environmental factors affecting high-risk populations.

While we know there are many factors that can lead someone to consider suicide, the field of suicide research is still developing. Add to that our state's significant indigenous population, an ethnically diverse overall population, a unique geography, weather patterns and frequent natural disasters, historic and current social issues related to historic and personal trauma, and many other "Alaskan" characteristics (positive and negative). There is much we do not know (or do not know we know) about suicide and protecting our people from it.

Alaska is home to a high-quality university system with access to researchers, such as those at the Center for Alaska Native Health Research, with experience working with Alaskans and Alaskan issues. The Alaska Native Tribal Health Consortium's and the State of Alaska's epidemiology programs are robust. However, because Alaska has many pressing health concerns, suicide is not always a priority for funding and resources.

Alaska's institutions and universities should build on the work already being done with Alaskan communities to improve the science related to suicide and understanding of the issue. Research and study must comply with rigorous protections for the people involved, and must be conducted and used in a way that benefits all Alaskans.

In addition to academic and health research, the State of Alaska should prioritize rigorous and thorough study of suicide through "follow-back studies" (also known as psychological autopsies).[51] Follow-back studies are considered a best practice in documenting and understanding a death by suicide, helping to answer the painful question of "why?" These studies can also improve overall prevention efforts. They are complex, multi-dimensional investigations that require careful planning and thoughtful implementation. A long-term study through which investigation and interviews are conducted contemporaneously – yet respectfully – could provide a more thorough understanding of suicide as it occurs in Alaskan communities.

The follow-back study of Alaskan suicides occurring between 2003-2006 was a study of deaths already certified as being by suicide. Data was reviewed on 426 cases, but survivor interviews – a crucial component of the follow-back study protocol – were conducted for only 56 cases. Thus, the information gleaned from those interviews (71 in total) is for 13% of the total study population. Thus, the results are illustrative but not sufficient to serve as any basis for drawing broad conclusions.

[51] For an overview of psychological autopsies, see *Suicide: Psychological Autopsy, A Research Tool for Prevention*, INSERM Collective Expert Reports, 2005 (a synthesis of international scientific literature and recommendations by an expert advisory group) available online through the U.S. National Library of Medicine, National Institutes of Health (http://www.ncbi.nlm.nih.gov/books/NBK7126/).

Resources:

Conducting ethical and effective health science research takes time, expertise, and money. There are state and national resources to support these undertakings. There are federal and philanthropic sources of funding for research and study.

Examples of agencies and organizations that fund research projects include the National Institutes of Health (including the National Institute of Mental Health), the American Foundation for Suicide Prevention, and the Agency for Healthcare Research and Quality. Resources supporting inclusive and participatory research include *Research that Benefits Native People: A Guide for Tribal Leaders*. This was developed by the National Congress of American Indians, the First Americans Land-Grant College and Organization Network, National Indian Child Welfare Association, Administration for Native Americans to address that fact that indigenous Americans are underrepresented in data collection and analysis (and have too often had negative experiences with outside research of their peoples).

Alaska's universities, and the Alaska Native Medical Center, have institutional review boards that can be engaged to ensure that the study complies with all research standards and protects the participants from harm. The American Association on Suicidology offers training and certification in the best practices of follow-back study investigations, so that investigators have the tools and understanding necessary to conduct an effective and respectful study.[52]

Indicator: 6.2.a. Number of follow-back studies completed since 2011 (new)

Strategy 6.3 ~ The State of Alaska, with its partners, will evaluate the effectiveness of crisis intervention models and responses in use in Alaska.

The State of Alaska and other organizations and communities have worked in suicide prevention for decades. However, there has been no systemic evaluation of the effectiveness of the interventions and programs implemented in our communities. While some organizations employ evidence-based practices, others rely on cultural or locally developed programs. With this wide array of suicide prevention efforts, and varying success from community to community, we need a guide as to what works best in Alaska.

There is precedent for reviewing prevention models and determining the practices – or the elements of practices – that have proven effective in Alaska. Through the Strategic Prevention Framework State Incentive Grant, a wide group of Alaskan practitioners and experts on substance abuse prevention came together to review the field of evidence-based prevention practices. They worked together to determine what evidence-based practices have worked, or could be expected to work, well in Alaskan communities. They were careful to consider that some practices would work in a large urban community, while others would work better in a small village or within a cultural community.

This process helped ensure that the programs funded by the Strategic Prevention Framework State Incentive Grant had the information and

[52] For more information about the training and certification program, visit the American Association on Suicidology at http://www.suicidology.org/web/guest/psychological-autopsy-investigator.

resources to choose a prevention strategy that best suited their goals and the population they served. We can do the same service for communities engaged in preventing suicide.

There has been preliminary evaluation of the Gatekeeper suicide prevention trainings, and evaluation of ASIST by the Alaska Native Tribal Health Consortium has begun.

Resources:

Evaluations of assessment tools, prevention programs, and other research are available to help in this quality improvement effort. For example, the American Association of Suicidology has completed a review suicide assessment measures for adults, older adults, and youth.[53]

Evaluation and research done by outside organizations could supplement a review of Alaskan programs and practices, to ensure a comprehensive look at how well our efforts to prevent suicide are working – and how our successes can spread.

Indicator: 6.3.a. Number of suicide prevention programs evaluated by the State of Alaska and/or its partners (new)

Conclusion

Casting the Net Upstream, Promoting Wellness to Prevent Suicide in Alaska is a call to every Alaskan to prevent suicide. In ways big and small, we can work together to prevent suicide. By improving the health and well-being of our children, our elders, our families, and our communities, we can reduce the rate of suicide in Alaska.

Over the life of this plan, the Council and its partners will provide annual reports on the progress being made. That progress will be weighed against the indicators in the plan. While the Council isn't solely responsible for moving the needle on most of these indicators, these population outcomes and performance measures will help show whether we are in fact making progress. In order to do this, we need every Alaskan to act. Review the checklist on the next page and start checking off all the ways that you, your family, your community, and your state can help to prevent suicide.

Overall Indicators: Rate of suicide: 22.6/100,000 (AABVS, 2010)
Rate of suicide attempt: 98.11/100,000 (Trauma Registry, 2001-2008)

[53] Available at www.suicidology.org/web/guest/current-research.

CASTING THE NET UPSTREAM CHECKLIST

Individuals/Families

- ☐ Visit StopSuicideAlaska.org
- ☐ Attend a Council meeting
- ☐ Attend a prevention coalition meeting
- ☐ Print out Appendix A & put it in your wallet
- ☐ Get trained in suicide prevention
- ☐ Lock up your guns
- ☐ Lock up your medicines
- ☐ Lock up your liquor
- ☐ Get help to overcome unhealthy behaviors (drinking, drugs, etc.)
- ☐ Feeling depressed? Talk to a mental health provider.
- ☐ Join an after-school program (as a participant or leader)
- ☐ Call Careline if you or someone you love need help
- ☐ Have you lost someone to suicide? Reach out for help.
- ☐ Get (& read) *Helping Kids Succeed – Alaskan Style*
- ☐ Ask the elders in your life if they feel depressed or suicidal (and connect them to services if they say yes)
- ☐ Get (and read) a copy of the Postvention resource Guide

Communities

- ☐ Set up a coalition
- ☐ Create a webpage on StopSuicideAlaska.org for your coalition
- ☐ Create an anti-stigma campaign or host an event
- ☐ Host a suicide prevention training
- ☐ Start an after-school program
- ☐ Establish a parenting class or support service
- ☐ Adopt an anti-bullying rule at school/at work
- ☐ Coordinate an anti-bullying campaign
- ☐ Contact United Way Anchorage or Southeast about starting a youth prevention coalition in your community
- ☐ Implement the 40 Assets
- ☐ Implement suicide prevention in your medical practice
- ☐ Implement evidence-based screening for suicide risk in schools & senior centers
- ☐ Implement a means restriction program
- ☐ Ensure youth have treatment and support services after age 18/21

State

- ☐ Promote and coordinate prevention programs across disciplines
- ☐ Encourage research and study of suicide in Alaska
- ☐ Mandate suicide prevention training for teachers
- ☐ Promote evidence and research based practices
- ☐ Evaluate effectiveness and outcomes of suicide prevention programs
- ☐ Create and implement suicide prevention, intervention and postvention for rural police and public safety officers
- ☐ Improve data and surveillance systems related to suicide
- ☐ Fund a long-term follow back study
- ☐ Ensure every Alaskan has access to suicide prevention training, regardless of means
- ☐ Fund innovative research based prevention models
- ☐ Create a learning network via StopSuicideAlaska

Appendix A – Warning Signs

Warning Signs of Suicide

These signs may mean someone is at risk for suicide. Risk is greater if a behavior is new or has increased and if it seems related to a painful event, loss, or change. Seek help as soon as possible by contacting a mental health professional or by calling Careline at **1-800-266-HELP (4357)** if you or someone you know exhibits any of the following signs:

- Talking about wanting to die or to kill oneself.
- Looking for a way to kill oneself, such as searching online or buying a gun.
- Talking about feeling hopeless or having no reason to live.
- Talking about feeling trapped or in unbearable pain.
- Talking about being a burden to others.
- New or increased use of alcohol or drugs.
- Acting anxious or agitated.
- Behaving recklessly or taking more risks than usual.
- Sleeping too little or too much.
- Withdrawing or feeling isolated.
- Showing rage or talking about seeking revenge.
- Displaying extreme mood swings.

Appendix C - Contact List, 2012

Part of equipping Alaskans to take action and implement *Casting the Net Upstream* is ensuring that you can quickly contact the right person for the specific information you need. This list is provided so that you can do that. Because we know that people change jobs, retire, get promoted and move, the Council will publish an updated contact list with each annual implementation report.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB170

Analysis

This is an zero fiscal note. The amendment language in both AS 14.07.020 (a) (19) requires that: "if a school district is unable to provide vocational education and training counseling, the department shall provide additional resources and technical assistance that result in the delivery of the counseling; AS 14.14.090 (11) has similar language that states this training will occur in grades seven, nine, and eleven; if a district is unable to provide this counseling that they shall request the department to provide the resources and technical assistance necessary to deliver the counseling.

Currently web-based career guidance and counseling materials are available to all citizens of the state through the Alaska Commission on Postsecondary Education's support of AKCIS, the Alaska Career Information System. EED staff frequently recommends this resource to district and school personnel who are planning to implement Strategy 1 of the Alaska Career & Technical Education Plan.

In order to ensure this free resource meets the intent of this bill, a review of this available resource by counselors/teachers/advisors would be recommended. This review could include recommendations for specific staff training and identify how students are given sufficient time and guidance to learn its content. This review falls under the scope of allowable expenses under the current federal Career and Technical Education funding.

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Senate Bill 170

"An Act requiring vocational education counseling in public schools."

One of the major functions of public education is to prepare our future workforce. During their school years young people make critical decisions which will ultimately affect their choice of a career later in life. Some young people have a clear idea of what they want to be doing after graduation, but many do not.

The adolescent years in particular are filled with many changes, making it a one of the critical phases of a person's life. If childhood is like traveling down a busy street, seventh grade is the junction. Recent research has specifically targeted the early adolescent years as a crucial point in development. It is a perfect time to introduce realistic career options.

Senate Bill 170 recognizes this junction in a young person's life, and provides for career counseling for every student in seventh, ninth and eleventh grades. Many schools are already offering this for all secondary students, but it should be available to every student in our state. The Department of Education and Early Development already has resources that can be directed toward this important task.

This bill would not prevent schools or districts from providing a more comprehensive program. It sets the minimum standards for career counseling, starting at seventh grade and continuing in ninth and eleventh grades. Seventh grade is when students start making important life choices. Ninth grade is the beginning of high school, when they are choosing courses which will affect their readiness for the workforce. In eleventh grade they are starting to look ahead to high school graduation, and what will come after commencement.

It is vital that we give our children the tools they need to prepare for their future, and to become a productive part of our workforce. SB 170 provides this for our students.

School-Based Career Development: A Synthesis of the Literature

Katherine L. Hughes
and
Melinda Mechur Karp

Institute on Education and the Economy
Teachers College, Columbia University

February 2004

Conclusion and Recommendations

In general, this review of the career guidance and academic counseling literature has produced many positive findings. Meta-analyses have found positive impacts of career guidance. Researchers have found benefits to students of comprehensive guidance programs, career courses, academic counseling and computer-based guidance systems. However, there are also limitations to these interventions and to the research methods studying them.

With regard to comprehensive guidance programs, much more research is needed. The attempts of Lapan, Gysbers and their colleagues to use statewide data to uncover relationships between the implementation of such programs and student outcomes are admirable. However, their research relies on self-report of variables such as student GPA, which would be better reported through transcripts. In addition, it would be useful to have a conceptual model explaining how the different elements of comprehensive guidance programs might impact students' grades and other variables.

Students do seem to benefit, both vocationally and academically, from participation in career courses. In particular, they seem to increase their knowledge of careers and their ability to make career-related decisions. On most career-related measures, students did see increased outcomes when compared with students not enrolled in a career course. In the one study exploring academic measures (Fouad, 1995), participants in a career course did improve academically. However, there is little evidence that any gains—either academic or career-related—are maintained over time.

The few studies on academic counseling or advising showed positive findings. It is interesting that this very common but rather low-profile intervention, helping students

plan their secondary school program, appears to be valuable according to certain academic measures. And the meta-analyses found that, of the different types of career guidance interventions, individual counseling interventions were most effective. This simple planning intervention may help students understand the connections between their goals and the necessary steps to take towards them. Thus this intervention is potentially very effective, but more research is needed.

Computer-assisted career guidance programs appear to contribute to students' career development, according to some career-focused inventories. However, these interventions were very short-term and the research tended to consist solely of pre- and post-test inventories, sometimes administered less than a week apart. As more than one author pointed out, the level of dosage of some of the interventions was quite low. With such small amounts of treatment, it is unclear what long-term benefits students might gain. It is also unclear whether computer-assisted programs alone or in combination with other interventions are most effective. Some have found that computer-based interventions by themselves fail to match outcomes produced in combination with some other intervention (Meier, 1991), while others have found that adding a computer program to a career course produces no additional benefits beyond the course alone (Garis & Niles, 1990).

One limitation found in common to many of the interventions and the research is that they focus on change in students' knowledge, and even more commonly, their attitudes. Students' actual behaviors were a minor focus, as in the studies that examined the effects of career courses on students' later course-taking, or research examining the relationship between academic counseling and later academic achievement. The element

of time was also a weakness in much of the research. Much like a history test that measures what students have learned in a half-semester of a history course, inventories were used to measure the digestion of career information, or a change in an attitude. In most cases no follow-up research was conducted over time to see the lasting nature of any knowledge gain or attitude change, or the relationship of these with actions taken later.

There is general agreement that career development is a desirable part of schooling, and there is evidence that many different types of career guidance interventions are effective, according to the measures chosen. Yet, the research overall does not help us in determining the optimum content of or method of delivery of career guidance. We have reviewed various interventions, but because of the diversity of goals, methods and measures, a clear direction for policy in this area is still unclear. We can, however, recommend the following:

Other career development activities that are more experiential in nature have been found to positively influence such variables as school attendance and completion. Compared to these types of activities, many of the guidance interventions reviewed seem inauthentic and artificial. Until additional research is done, students should engage in a variety of career development activities that complement one another.

Given the finding that career guidance and academic counseling is potentially very effective with middle school students, a greater investment in these activities in the middle schools should be made, and future research should be focused there as well.

Academic counseling appears to be a straightforward and cost-effective way to improve student outcomes. Resources should be targeted to ensure that all middle- and

high-school students have regular conferences with counselors to discuss their current and future academic programs.

Finally, research should focus on exploring the relationships between guidance interventions and positive student behaviors.

Senate Bill 199

"An Act relating to the vocational and technical instruction funding factor for public school funding."

Research shows that voc-tech programs have consistently increased graduation rates nationwide and here in Alaska's schools. The ideal high school curriculum needs to incorporate both academic rigor and cutting-edge career preparation. Last year, as Co-Chair of the Senate Education Committee, I helped ensure that SB 84 created a steady, secure stream of funding for vocational-technical programs in Alaska's high schools. The implementation of SB 84, which the Governor signed into law last summer, has been a resounding success in schools across the state. I hear time and again from districts that schools must offer both college-preparatory requirements and challenging professional and technical knowledge grounded in industry standards – and that these courses should be offered and supported in middle school as well.

Now, with Senate Bill 199, districts will have more flexibility in providing technical and other career programs, in high schools *and* middle schools, that focus on hands-on workplace training for jobs that don't necessarily require a college degree. By allowing the funding to be used in 7th and 8th grades, in addition to 9th through 12th grades, we can capture more of the students who are losing interest in their education prior to high school. Not only will these voc-tech programs better engage Alaska's youth and increase our graduation rates, they will also help develop a dynamic and diverse workforce for our state.

STATE OF ALASKA **BILL NO.** SB199
2012 LEGISLATIVE SESSION

Analysis

Senate Bill 199 amends the language related to the vocational and technical instruction factor of 1.01 as provided for in the public school funding formula under AS 14.17. This bill would change it from high school to secondary school for the vocational and technical instruction factor.

As defined in AS 14.03.060(b) a secondary school consists of grades seven through 12 or any appropriate combination of grades within this range.
