Dr. Mary Snyder, Dean of the UAA College of Education

November 12, 2010

University of Alaska Teacher Education Plan: Executive Summary of Deans' Report

I. OVERVIEW

Alaska's public schools face many challenges that complicate the recruitment and retention of high quality teachers: low salaries; the high cost of living; schools in corrective action; limited teacher housing in rural Alaska; new policies related to teacher certification; the State's retirement system; and more lucrative career opportunities elsewhere are all variables outside of the immediate control of teacher preparation programs. Yet these variables have profound impacts on recruitment of individuals into the profession of education. It is necessary to recognize that there are a number of obstacles facing the success of today's teachers, many of which are unique to Alaska. However, the ongoing challenges have also created opportunity for K-12 education and teacher preparation programs, as there has been significant attention focused on educational issues by both policy makers and the media.

In response to the demands our graduates face, all of the educator preparation programs have revised curriculum; integrated coursework about, and experiences with, diverse learners; and devised instructional delivery strategies to best prepare tomorrow's teachers. For example:

- The UA education units have increased opportunities for students who reside outside Fairbanks, Anchorage, and Juneau to complete degrees and certificates in a variety of education fields.
- The three MAUs graduated a total of 380 educators for Alaska during academic year 2008, 404 during academic year 2009 and 415 in 2010.[1]
- UA's educator preparation programs produce 20 – 25% of the new educators hired each year, and almost 30%[2] of all active FY10 certificated school staff earned a certificate or degree through UA. In the districts immediately surrounding each campus, UA program completers fill as many as 45% of the professional positions.[3]
- The education units have established numerous collaborative partnerships with local school districts for initial training, ongoing professional development, research, and grant writing.

The University of Alaska Education Plan builds on these successes by increasing awareness of the profession; expanding access to educator preparation programs; and enhancing academic and professional support to students as they complete programs and move into the profession. Nevertheless, we know that challenges remain. This plan describes how we will increase the diversity of Alaska's teaching workforce by making teacher education more attractive to underrepresented populations; increase the number of UA education program completers who enter the profession each year; and contribute to the research base on Alaska's educational policies and practices, which is foundational to enhancing P-20 education in Alaska.

The three deans will annually submit a report to the Statewide Academic Council of the University of Alaska summarizing progress on initiatives and priorities. As illustrated in the table below, the goals and priorities contained in the current version of this report reinforce

---

[1] *SB241: Alaska's University for Alaska's Schools.* September, 2010

[2] Alexandra Hill, personal communication, 10/28/10.

[3] Education unit data

those identified by the Alaska Commission on Postsecondary Education, and by the Alaska Department of Education and Early Development in the *2010 Alaska Education Plan: Building Alaska's Future One Student at a Time*.

Goals Alignment

University of Alaska Teacher Preparation Plan
Alaska Department of Education and Early Development
Alaska Commission on Post Secondary Education

University of Alaska Teacher Education Plan Goals	Alaska Postsecondary Education Commission Goals and Strategies	DEED Alaska Education Plan
Recruit and retain more students in Education, particularly Alaska residents.	Increase public awareness of postsecondary education and training value.	Students will have access to safe schools, where they develop healthy and safe practices for life.
Increase program access through multiple delivery methods	Increase Alaskan's successful participation in postsecondary education.	Schools will form strong partnerships with families and communities, and will respect and embrace local cultures.
Enhance educator preparation programs in special education and in math and science teaching.	Collaborate with Alaska school districts and workforce development partners…	All students will graduate prepared for careers or postsecondary training and education.
Conduct research to identify causes and propose solutions for education challenges in Alaska.	Leverage the AlaskAdvantage grant program to provide financial aid to students with greatest financial need.	

Comments

- Goals and strategies for the University of **Alaska Teacher Education Plan** and those of the **Alaska Commission on Postsecondary Education** are clearly aligned and mutually supportive.
- **Department of Education and Early Education** goals are designed for a P-12 public school environment and thus, are not as clearly aligned.
- **DEED** goals are supported by the **UA Teacher Education Plan** as well as the **ACPE** goals and strategies.

II. GOALS

The Education Planning Group has set four goals for the University of Alaska Education Units.

A. Recruit and retain more students in education, particularly Alaska residents
B. Increase program access through multiple delivery methods.
C. Enhance educator preparation programs in Special Education and in Math and Science teaching.
D. Conduct research to identify causes and propose solutions for education challenges in Alaska.

A. RECRUIT AND RETAIN MORE STUDENTS IN EDUCATION, PARTICULARLY ALASKA RESIDENTS.

Rationale

The future of Alaska requires that every child have access to quality educators dedicated to individual student success. The education profession offers rewarding career opportunities. However the general public, policy makers, parents and students are not always fully aware of these opportunities and the rewards of the profession. Recruiting top students into the teaching profession is paramount to improving the Alaska education system.

Action 1: Collaborate to strengthen Special Education programs.

According to data collected through statewide Supply and Demand studies and from partner districts directly, school administrators rank special education positions as their hardest to fill. All three MAUs are working to determine common requirements and core coursework in Special Education that will apply across the System. This effort, which is currently well underway, will allow students to obtain a special education credential by taking courses at any MAU and, in particular, pursue specialized studies that may not be available at their local campus.

Milestone

UAA/UAF/UAS Special Education MOA will be completed by May, 2011.

Action 2: Expand Recruitment, Retention, And Completion Efforts, Particularly Recruiting And Graduating Underrepresented Students

2A. Build on existing efforts to attract and graduate Alaska Native students and students from underrepresented populations. In Education, UAS has demonstrated success with their program, Preparing Indigenous Teachers and Administrators for Alaska's Schools. UAF's Alaska Native Teacher Preparation Program has proven to be effective. And UAA has recently opened a dorm wing for education majors specifically targeting Alaska Native and rural students. In addition, all three institutions have successful programs in other disciplines that focus on serving underrepresented populations. Examples include the Alaska Native Science and

Engineering Program (ANSEP), the Rural Alaska Honors Institute (RAHI), and Upward Bound. The Education Units will learn from the successes of such programs.

Milestones for 2A

a. Collaborate with ISER to design RFPs for faculty research on "best practices" in preparing members of Alaska's underrepresented populations to become educators.
b. Distill, share, and build on best practices from the three MAU's experiences preparing Alaska Native educators, particularly the successes of the education units. Invite APU to participate.
c. Increase the number of all program completers by 4% AY10 to AY11 as indicated in SB241 data process.

2B. Each education unit will hire one additional staff member to serve as a Recruitment and Retention Coordinator, or to allow existing personnel who have the expertise, but do not have the time, to fulfill this function. Recruitment and Retention Coordinators will work with school districts and communities to develop more effective strategies for recruiting qualified candidates for Alaska teacher preparation programs, particularly students from underrepresented populations, and will help assure that each candidate who desires to complete an education program does so.

Milestone for 2B

Secure budget, complete recruitment and hire recruitment & retention staff 6/30/11.

Action 3: Reestablish the Alaska Education Consortium

The UA Education units will assume a leadership role in reestablishing a statewide, education professionals working group that meets on a regular basis. Participants will include representatives from education entities such as the Alaska Department of Education & Early Development, NEA Alaska, Alaska Parent Teachers Association, the Association of Alaska School Administrators, and the Alaska Commission on Postsecondary Education. Because similar workgroups, including TEAC (Teacher Education Advisory Committee) and TEPLAC (Teacher Education Professional Licensure Advisory Committee) were effective models of cross-organizational collaboration, we anticipate that the Consortium will be enthusiastically received. The Alaska Education Consortium will be collaboratively supported by the participating entities and will provide an excellent forum to increase institutional cooperation and leverage resources and expertise.

Milestones

a. Invite partners, secure participation commitments, 1/30/11.
b. Hold first audio conference meeting, 2/28/11.
c. Hold one face-to-face meeting before 6/30/11.

Action 4: Endorse Alaska Educator Loan Repayment and Incentive Options
The UA Education Deans take this opportunity to strongly endorse strengthening Alaska educator loan repayment and incentive opportunities. We support the ACPE's existing Teacher Education Loan to cover education expenses for high school graduates nominated by rural school districts, but in addition, we also advocate broader repayment and incentive plans to attract, prepare, and retain excellent educators for Alaska's schools.

B. INCREASE PROGRAM ACCESS THROUGH MULTIPLE DELIVERY METHODS.

Rationale
The University of Alaska will meet the needs of traditional and non-traditional students with flexible face-to-face, distance and onsite delivery options. UA teacher preparation programs will expand partnerships to offer cohort-specific training as another form of program delivery that allows for more customized, service-oriented approaches to education. We will use synchronous and asynchronous delivery, scheduling flexibility, and inquiry-based learning.

Action 1: Refine and develop UA education programs
Continue to:

a. refine existing successful access methods such as distance delivery, intensives, summer programs, cohort models, and site-based faculty;
b. research and test new instructional strategies that hold potential to enhance effective teaching and learning;
c. develop existing faculty expertise to support expanded program access

Milestones

a. 50% of all AY12 Education courses at each campus will be accessible to non-traditional students or those residing outside our respective metropolitan areas utilizing teaching and learning formats such as online, hybrid, cohort, site-based, alternative scheduling, etc.
b. Building on existing relationships with the Institute for Social and Economic Research and Alaska Teacher Preparation, produce by 5/30/11 a plan to enhance our understanding about districts' needs for specific types of educators and the knowledge, skills, and professional characteristics they seek.

Action 2: Increase Alternative routes to licensure
Build on current efforts to improve and create alternate routes to certification that build on proven teacher preparation models and maintain university rigor. UAA is currently preparing 18 future educators in Chevak, Alaska through a cohort model that features both onsite and distance instruction. Over the past five years, UAF has successfully partnered with the Fairbanks North Star Borough School District to quickly create two highly individualized alternative route preparation programs that leveraged the

availability of short-term funding. UAS has created a secondary cohort program and a graduate program in special education to meet the needs of teachers recruited to teach special needs students but who lack the formal credential.

Milestones

a. Utilize consortium partners to determine if and where sufficient demand for alternative routes to certification may exist, and respond as warranted.
b. Coordinate with Career and Technical programs to help prepare candidates for Type M certificates, and provide professional development for current Type M certificate holders to meet the needs of partner school districts.

Action 3: Invest in instructional technology and professional development

Continue to research and invest in technology that will enhance teaching and learning, both on UA campuses and by distance; and continue to invest in staff and faculty professional development toward using such technology effectively.

Milestone

Establish predictable technology and professional development budgets, developed collaboratively between education units and central administrations at each MAU.

C. ENHANCE EDUCATOR PREPARATION PROGRAMS IN HIGH DEMAND JOB AREAS, PARTICULARLY IN SPECIAL EDUCATION AND IN MATH AND SCIENCE TEACHING.

Rationale

Because of the State's demographics, Alaska's requirements for teachers in high demand job areas are not the same as those in lower 48 states. It is imperative that the Education Units monitor district needs carefully to ensure we are graduating teachers to fulfill those needs. Additionally, dwindling resources require that we partner closely with each other, other UA disciplines, partner districts, community entities, and state departments to optimize opportunities.

Action 1: Increase recruitment into Alaska high demand job areas.

The Education deans will work with administrators at each campus to find ways to financially support recruitment efforts to include projects like FEA and summer camp experiences for junior high and high school students directed toward increasing interest in special education, math and science teaching, and other Alaska high demand job areas.

Milestone

Utilize results of a needs survey conducted in partnership with the Institute for Social and Economic Research and Alaska Teacher Placement to guide decisions regarding recruitment into high demand job areas.

Action 2: Collaborate with colleagues in UA academic disciplines to align program offerings in high demand job areas.

Milestone
Each campus will work with Arts and Sciences and Engineering colleagues to complete a program alignment analysis by 8/30/11.

Action 3: Collaborate with external entities to increase recruitment into, and completion of education programs in Alaska high demand job areas.
Enhance existing—and establish new--collaborative relationships to leverage resources and expertise of Alaska education organizations that are particularly relevant to this plan. Examples include the Alaska Department of Education & Early Development (EED), Alaska Department of Labor and Workforce Development (DOL), and the Alaska Commission on Postsecondary Education (ACPE). This action will:

a. Increase public awareness of opportunities and value of careers in education.
b. Partner with Alaska school districts and workforce development entities to recruit high school students and adult learners into careers in education.
c. Leverage the Alaska Advantage Grant Program to provide financial aid to students with greatest financial need.

The annual data match collaboratively conducted by EED, DOL, and UA provides an excellent example of existing inter-agency collaboration to enhance accountability for individual agencies and for collaborative efforts.

Milestone
Establish a Memorandum of Agreement with the state agencies to create a data system that utilizes unique identifiers to track students into careers.

D. CONDUCT RESEARCH TO IDENTIFY CAUSES AND PROPOSE SOLUTIONS FOR EDUCATION CHALLENGES IN ALASKA.

Rationale
Alaska has a significant need for educational research focused on policy, instructional practice, and the links between policy and practice. In particular, research will help Alaska address the numerous challenges related to teacher recruitment and retention, high dropout rates, finance, and access to education in rural areas. Beneficiaries of such research include policy makers, University departments and programs, the Alaska Department of Education & Early Development, the K-12 community, and the general public.

Action 1: Increase UA Education faculty research capacity

The UA Education units will enhance internal capacity to conduct research and disseminate results in specific areas important to public education in Alaska. This action includes strategies such as:

a. Continuing to internally fund faculty research to the extent financially possible.
b. Enhance professional development opportunities related to research by making better use of campus resources such as expert colleagues and faculty development offices.

Milestones

a. With Provosts, research officer(s), and education faculty, establish strategies, priorities, resources, and responsibilities to increase education research capacity at each campus.
b. As result of (a), develop by 6/15/11 a three-year plan to enhance education faculty research capacity at each campus, including research budget commitments and research agenda and priorities.
c. Issue RFPs and awards
d. Establish appropriate dissemination mechanisms, including the UA Online Journal of Education (eJournal).

Action 2: Conduct Education Research in Collaboration with the Institute of Economic and Social Research

The UA Education Units will work with the Institute of Social and Economic Research to match Alaska education research priorities with UA Education faculty members who have the skills and interests to conduct research and publish results addressing those priorities in a timely manner.

Milestones

a. Issue RFPs to UA faculty, fall '10 and spring '11.
b. Issue awards for research to begin spring '11 and fall '12.
c. Disseminate research results appropriate to nature of each topic by spring '12 and spring '13.
d. Work with ISER to publish findings in the *UA Education eJournal*, as well as in ISER publications.

III. SUMMARY

We recognize we have the opportunity and the obligation to aid the State and its school districts to address historical barriers that have kept our education system from realizing its full potential. Responding to this opportunity will require alternative approaches, additional resources, and ongoing collaboration. Taken together, the initiatives described above will allow the UA Education Units to address in meaningful ways the educator shortage identified in SB241 and to enhance the P-12 education system's effectiveness in developing Alaska's workforce and socioeconomic future.

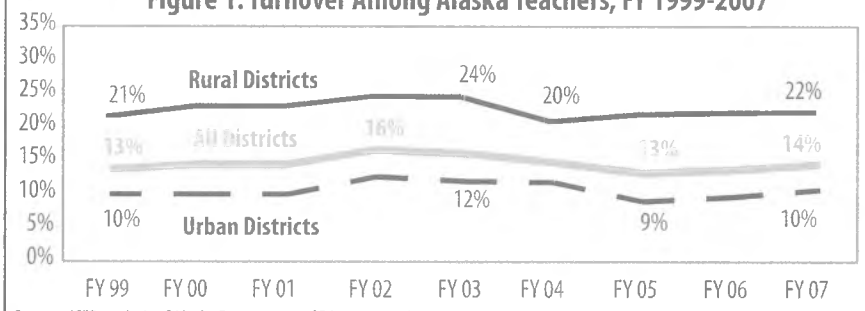
RESEARCH SUMMARY

R.S. No. 69

University of Alaska Anchorage • July 2008

Turnover Among Alaska Teachers: Is It Changing?



By Alexandra Hill and Diane Hirshberg

Turnover among Alaska's teachers was roughly the same in 2007 as it had been in 1999, with about 14% leaving their school districts (Figure 1). Turnover also remained twice as high in rural as in urban districts—about 22%, compared with 10%.

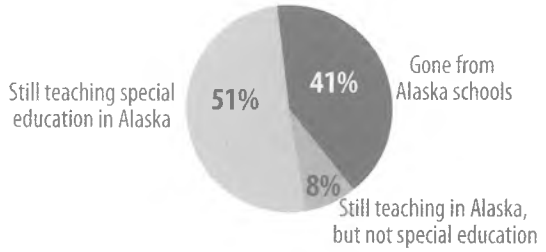
That lack of broad change comes after years of efforts by Alaska's state government, universities, and school districts to reduce teacher turnover, especially in rural areas.

The Institute of Social and Economic Research has been tracking Alaska's progress in reducing teacher turnover since 2004, in partnership with the Alaska Teacher Placement program, the Department of Education and Early Development, and university teacher training programs.

Figure 1. Turnover Among Alaska Teachers, FY 1999-2007

Source: ISER analysis of Alaska Department of Education and Early Development's Certified Staff Accounting Database "Turnover" is the percentage of teachers leaving their districts in a given year. Urban school districts are Anchorage, Juneau, Fairbanks North Star Borough, Kenai Peninsula Borough, and Mat-Su Borough. All others are rural.

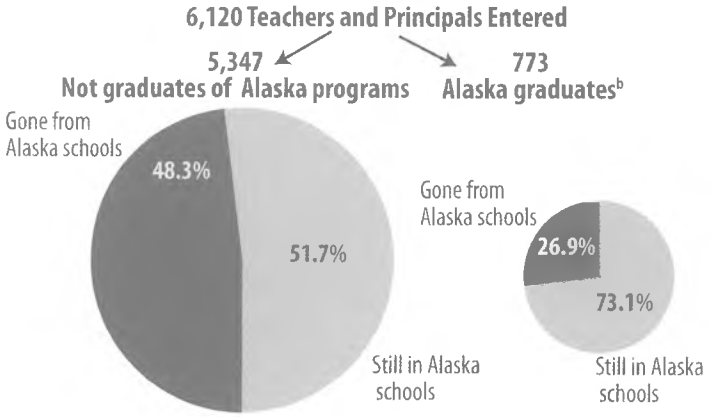
Some turnover is inevitable, as teachers retire, quit teaching, or move to other districts—and up to a point turnover is good, bringing in new teachers and ideas. But schools don't want too much turnover. Recruiting new teachers is expensive, and research has linked high teacher turnover with lower student achievement. There's no broad agreement about how much annual turnover is too much—some think more than 5% is too much—but most educators agree that by 20%, turnover is worrisome.



Here we summarize our latest findings on teacher turnover in Alaska. Earlier reports are available on our Web site (www.iser.uaa.alaska.edu).

• *Efforts to reduce turnover have succeeded in some cases*, even though the statewide figures don't show much change. A good example is the Bering Strait School District in western Alaska, which reduced average annual turnover from about 30% to 20% in recent years.

• *Keeping special education teachers in Alaska schools is particularly difficult, with half the new special education teachers gone within four years.* As Figure 2 shows, only 51% of new special education teachers were still on the job four years after they started. Of the others, 41% were gone from Alaska schools, and 8% were still teaching—but something other than special education. We also know from previous ISER research that special education jobs are also among the hardest to fill to begin with.



• *Teachers and principals who graduate from programs in Alaska are more likely to stay.* Of the Alaska graduates who came into the state's schools between 2000 and 2005, almost three-quarters were still there in 2007, compared with about half among those who graduated from programs outside Alaska (Figure 3). This is of particular interest to policymakers, who wonder if training more teachers here would reduce turnover. But Alaska graduates made up only about 13% of those who came into the schools between 2000 and 2005. To have a bigger effect on turnover rates, Alaska would need to train many more teachers.

I. INTRODUCTION

On September 6 – 10, 2010, a team of five higher education professionals reviewed the general condition of the University of Alaska (UA) (Appendix A). The Review included assessing materials and conducting interviews from August 5 through November 30, 2010.

The purpose of the Review was: 1) To assist the Board of Regents in assessing the condition of the University System; 2) To advise on the attitudes of University and System constituencies; 3) To candidly identify and address issues and opportunities affecting the University System; 4) To recommend a tentative agenda for the future which could be used in strategic planning; and 5) To recommend more efficient and effective governance premises.

The Review considered the following in terms of strengths, limitations, and/or aspirations:

- General
- Academic programs
- Faculty
- Students
- Intercollegiate athletics
- Administration
- Technology
- Budget and finance
- Fund-raising
- Public relations
- Senior Officers
- Governance
- Other issues and conditions presented during the course of this Review.

Before beginning interviews, team members read and evaluated materials assembled by UA staff and position papers prepared by officers of the University. Individual and group interviews included approximately 250 persons including faculty, students, staff, alumni, elected/appointed officials, area residents, local business persons, members of the Board of Regents, potential benefactors, persons selected because of special knowledge and randomly selected persons (Appendix B). Interviewees were selected based on position, stratified random

sample, and random sample. All interviews followed a general format that included 19 separate areas (Appendix C).

Interviewers were to ask about, but not press, each of the areas and all interviewed were advised that their opinions might be used in the final report but *without* attribution.

Readers should bear in mind that although much of the Review can be documented, much of it is based on the opinions of those persons interviewed. Wherever the opinions of the Review team are expressed, it shall be obvious.

This Review is the exclusive work of James L. Fisher, Ltd and should not be attributed to individual members of the Review team.

II. OVERVIEW

Delivering higher education in Alaska is a daunting challenge, given the small population to be served and the vast size of the state. Small colleges that are responsible for serving resident populations of 8,000 or so who live in regions the size of Ohio or Indiana, most of which are without roads, have a extraordinary responsibilities. Administering universities that are responsible for several of these small colleges is challenging as well.

"Planning the Future: Streamlining Statewide Services in the University of Alaska System" (February 2008), a report written by Terry MacTaggart and Brian Rogers, made a number of thoughtful recommendations about the UA System which should be considered. This report has become known as "the MacTaggart report," after its primary author.

The University of Alaska, formally established in 1935, has thrived despite an imposing host of financial, geographic and environmental challenges. The University's three major campuses in Fairbanks, Anchorage and Juneau now enroll approximately 33,000 headcount students and the institution can justifiably claim to serve the most remote areas of the vast State of Alaska.

The earliest vintages of the University of Alaska involved a federal agricultural experiment station in Fairbanks. In 1915, the U.S. Congress approved funds to establish an institution of higher education in the Territory of Alaska and transferred land from the agricultural station for the purpose. The new institution was established as the Alaska Agricultural College and School of Mines in 1922 and generated its first graduate in 1923.

In 1931, the federal agricultural station was transferred to the college and in 1935 the name was changed to the University of Alaska. Over time, many other campuses of the University have been opened. Today, there are three major senior campuses --- the University of Alaska Fairbanks (UAF), the University of Alaska Anchorage (UAA) and the University of Alaska Southeast (UAS) in Juneau that serve as higher education hubs. Thirteen other campuses exist that are parts of UAF, UAA and UAS.

The University of Alaska has grown in nearly every respect over the past several decades. Whether the metric is the number of students served, the number of campuses and sites, the

number of academic programs offered, the volume of funded research activity, the institutions' trajectory nearly always has been uniformly upward. *"The University's progress has been nothing short of amazing,"* averred an elected official who spoke for many Alaskans. This view was supported by a national higher education official: *"This is a university that has exceeded most people's expectations in recent years and has done so even when economic conditions have been bad."*

The social and economic impact of the University of Alaska upon its state is immense. Students and citizens alike use phrases such as *"life-changing experience," "beacon of hope," "cultural asset," "the only library within one hundred miles," "a real unifying influence in our town,"* and *"economic engine"* to describe the influence of the University on their communities.

The University is engaged in a myriad of different service programs throughout the state that impact Alaskans in their home communities. The innovative UA Teacher Education Mentor Project provides a superb illustration. Alaska long has been challenged to retain teachers in its K-12 schools; in the past, many new teachers have departed for "the lower 48" states, or left the profession. The Mentor Program pairs new teachers with experienced mentor teachers and has improved retention in both rural and urban locales. It is not surprising, therefore, that one official told us that the University of Alaska was *the* most important institution in the state, bar none. This is high praise, but consistent with the February 2008 judgment of consultants Terence MacTaggart and Brian Rogers that *"the University of Alaska System has developed into a remarkably high performing organization."*

The State of Alaska is the least densely populated state in the United States and the University of Alaska has made heroic efforts to serve the state's far-flung 700,000 residents. In addition to its three major senior campuses, the University supports twelve diverse community units situated in both rural and urban locations. Some of these branch enterprises enroll more than 3,000 students, while others are quite small (Kuskokwim enrolled only 335 students in Fall 2009). One of the more differentiated units is the UAF Center for Distance Education, a distance learning program that offers more than 100 courses per term through a variety of delivery methods.

Student enrollment at the various units of the University of Alaska has grown significantly in recent years and now approximates 33,000, not the least because the University has established campuses and centers across the state. Between Fall 2008 and Fall 2009, for example, credit hour generation in the UA System grew almost six percent.

The University's programs are on the whole well regarded within the state. *"Without UA, I'd be sitting at home trying to squeeze out an existence,"* commented a student from Alaska's interior who is well on her way to earning an engineering degree. The University's distance learning programs in particular have done much to overcome the geographic isolation experienced by some residents. An UAF administrator somewhat grandly opined, *"We provide opportunities and mobility to thousands of students who otherwise might never achieve their promise."* There is considerable truth in this vision; the University of Alaska provides what another student referred to as *"corridors of opportunity."*

One student appeared to speak for many when he stated, *"I love Alaska; I want to stay here and raise a family. But, I can't stay here if I can't get educated, develop my knowledge, and earn a good living."* This observation underpins an important challenge that UA has accepted---reducing the "brain drain" that sometimes has caused talented individuals to leave the state even though they would prefer to stay.

Love for Alaska generally is a positive and redounds to the benefit of the state and the University. However, as is often true in geographically isolated locales, it can lead to certain degree of parochialism. More than a few Alaskans suggest by words and actions that *"you have to be an Alaskan to understand."* Interestingly, we have worked in virtually every state in the Union and have invariably heard this opinion. To be sure, in many ways, Alaska is unique, but too much provincial thinking introduces resistance to new people, innovative ideas, and entrepreneurial thinking. It can lead to preferential hiring and to staffs composed largely of individuals who have never lived or worked anywhere else.

There is general agreement that the University has become a major engine for economic development in Alaska. By itself, it employs more than 7,000 people and has an annual economic impact exceeding $1.0 billion. *"The University graduates good people that I frequently hire,"* complimented an Anchorage business CEO. *"I only wish we could keep more UA grads here and convince more high schoolers to stay here for college,"* lamented another business leader. "*Yes, we are making progress, but I sent my kids to Washington.*" *"Retaining smart people will become more and more essential as the oil industry gradually becomes less important,"* predicted an elected official. *"The University is our best bet to do so,"* he added.

The University of Alaska is a land grant institution that provides expertise in support of state initiatives in agriculture, natural resource extraction, and business and entrepreneurial ventures. *"They are rather good at incubating ideas and helping to start firms,"* praised an economic development official, *"but we need even more of that in the future."* Related to this, a state government official noted that more than 75 percent of Alaska's tax revenues come from petroleum-related ventures. *"We're not going to go out of the oil business soon, but we know this eventually is going to change,"* he predicted, "and *the University is admirably situated to help us cope with that situation when it occurs."*

Funded research generated by faculty members has been impressive but has not been matched by sources in private fund raising. The percentage of alumni who contribute is remarkably low. Clearly, this must change.

The University, particularly UAF, is beset by serious deferred maintenance problems that currently are estimated to be $800 million. These include an approximate $150-180 million challenge to refurbish and replace an electrical power plant and distribution system at UAF, where buildings average 35 years old. In any case, the plant does not produce sufficient electricity for the needs of the campus and it must purchase expensive electricity locally. While the Board of Regents requires each MAU (major administrative unit) to devote 1.5 percent of the value of its buildings to deferred maintenance types of expenditures, this is not nearly sufficient and needs to be addressed if the system is to fulfill its promise.

FIVE SIGNIFICANT FUTURE CHALLENGES AND QUESTIONS

While the University of Alaska faces numerous future challenges, five are particularly significant in terms of shaping the future University of Alaska.

- First, how much should the UAA campus be developed in size and programs and to what extent might (should) this occur at the expense of UAF?

- Second, how can the University of Alaska further improve its performance in critical areas such as student retention, student graduation, and externally recognized academic quality?

- Third, how can the University of Alaska prepare for a future that plausibly could involve diminished oil tax revenues, increased emphasis upon non-petroleum sources of economic activity, and gradually rising average annual temperatures?

- Fourth, how can the University of Alaska be organized in order to reduce its costs and increase its performance?

- Fifth, the new President, Patrick Gamble, is highly regarded in all quarters: a tested leader whose accomplishments have been extraordinary. President Gamble must develop and endorse a model which sharpens the mission(s), generates support, and reduces costs.

The UAF/UAA Question

The ten ton gorilla lounging in the corner of any room where the mission of the University of Alaska is discussed is the respective roles of the system's two largest senior campuses, UAF and UAA. One can attempt to ignore or even pacify the gorilla (which on occasion some University of Alaska central administrators do), but it isn't going to go away.

While UAF is the system flagship, it is UAA that enrolls the most students (20,368 in Fall 2009 as opposed to UAF's 10,446). These enrollments reflect the reality that the population of Anchorage metropolitan statistical area is about 375,000 (slightly more than one-half of the state's total population), while the population of Fairbanks metropolitan area approximates 100,000. Anchorage's significant growth in recent decades has resulted in the rapid expansion of UAA. Further, UAA is *"a dramatically better institution today than it was ten years ago,"* according to an external higher education authority.

Persons interviewed including faculty, staff, Regents, and others indicated that high levels of competition have developed between UAA and UAF. "Mission differentiation" has become an increasingly contentious issue. Predictably, this has produced a degree of tension between the UAF and UAA. UAF jealously guards its flagship status and the State of Alaska currently would be stretched financially to support two major doctoral research institutions of higher education. Further, most of the State's research infrastructure is located in Fairbanks and it would be quite expensive to replicate it elsewhere. Nevertheless, UAA and many Alaskans in the Anchorage region argue that University of Alaska programs ultimately must be located *"where the people are."* Hence, they assert that UAA's programs must be built up and supported generously. *"This is a painful, but inevitable process,"* commented a prominent Anchorage official, *"and future programs should be put here rather than there so that we don't make an historical circumstance worse. What made sense 100 years ago doesn't necessarily make sense now."*

The perception that the University's programs are poorly distributed geographically is accentuated (at least in the eyes of some) by the location of most of the University of Alaska System offices in Fairbanks rather than Anchorage, or elsewhere in the state. While systems personnel generally receive high grades for intelligence and effort, predictably they and the Board of Regents often receive some criticism for being *"out of touch"* (the observation of a significant number of campus administrators and faculty). The McDowell Group put it this way in 2009 after discussions with the University of Alaska Business Council (an informal organization of non-academic administrators in the UA System): *"The campuses and statewide*

offices of UA are, on occasion, in conflict, competitive, and may lack understanding of each other."

Even so, were the University of Alaska to decide to move significant resources and programs from Fairbanks to Anchorage, it would immediately elicit many of the same *"out of touch"* complaints from Alaskans who reside elsewhere in the state. In the eyes of some Alaskans, entirely too much time, attention and authority already is given to Anchorage *when "it is the rest of the state that represents the real Alaska."*

Thus it seems to have always been so in states where the flagship state university is not located in the state's dominant urban area. The Chicago metropolitan region contains about two-thirds of the population of the State of Illinois, but the flagship campus of the University of Illinois is located in Champaign-Urbana, some 120 miles south of Chicago. Both the University of Florida and Florida State University are far removed from that state's population centers. Analogous situations exist in Alabama, Georgia, Indiana, Michigan, Mississippi, Missouri, Oklahoma, and Oregon---to name a few. Hence, Alaska's situation is hardly unusual.

Typically, these states have resolved their situations by maintaining the research campus in its more rural location (often accompanied by big-time intercollegiate athletic teams), but simultaneously developing significant public university campuses in the dominant urban areas. Ultimately, some variant of this model may provide the path that Alaska walks as well.

However, there are three factors that could mitigate against this solution. First, arguably the state is not well enough heeled financially that it will be able to develop two doctoral research institutions of higher education. The State of Alaska would have to increase its support of higher education significantly if it were to seek to develop a second full-blown research university. **(1) UAA's current strategic plan, which needs refinement, indicates that the institution will *"reinforce and rapidly expand our research mission"* and that it will *"build selected research-centered graduate programs."* It is not clear precisely what these statements mean. They could mask wholesale changes, or instead reflect only marginal changes in the current situation. These goals need to be clarified. As a well-placed**

individual wryly commented, *"Sometimes institutions don't accurately interpret their missions."* In addition, the plan should become more pointed, i.e., timelines, costs, source of funds and accountable officers, et al.

Second, neither UAF nor UAA currently emerge as highly ranked academic institutions in national higher education surveys. While the shortcomings of institutional ratings systems (such as that published by *U.S. News and World Report)* are well known, the absence of UAF and UAA in the higher reaches of such rankings suggests that there is much work to be done. At the very least, the University needs to publicize its efforts and achievements more effectively. Pragmatically, it might not be wise to spread scarce doctoral research resources thinly across two campuses if the University wishes to enhance its reputation for quality. Further, UAF enrolled only 333 doctoral students in eighteen doctoral programs in Fall 2009. Many of its doctoral programs are quite small by national standards, especially if one compares them to highly regarded programs. The implication is that it would be unwise to develop competitive doctoral programs at the two institutions even if UAA continues to grow. Distinctive, one-campus only doctoral programs might be a different matter if resources are available.

Third, roughly comparable institutions of higher education that fare better than the University of Alaska in higher education rankings typically benefit from what sometimes is termed as a "halo effect." These institutions usually have made conscious decisions to develop and invest intensively in five to ten academic programs that have succeeded in attaining legitimate national disciplinary recognition and rankings. The favorable publicity attached to these programs has cast the proverbial halo over the entire institution---the end result being that the reputations of these institutions for general academic excellence have improved. At the end of the day, such an institutional strategy represents a straightforward application of the economic principle of specialization and has particular relevance for institutions hobbled by scarce resources.

While the University of Alaska may be pursuing a variant of the halo strategy with respect to arctic and climate studies at UAF, it does not appear to be doing so in cmost onventional arts and sciences academic disciplines and its professional schools. As a

consequence, the University is substantially an unknown quantity in many academic disciplines and professional schools.

We don't argue that national recognition always reflects actual programmatic quality. Nevertheless, the moral to the story is that the dissipation of resources and a failure to pursue targeted investments in specific disciplines on a single campus seldom are the recipe for recognition and reputational success. To be sure, after reflection, the University might choose to disregard these dynamics. Yet, if it does so, it should not complain when many of its academic programs (and its doctoral research campus) often are not accorded recognition and consequently receive low rankings in national surveys. Mediocrity likely will be the result.

It appears that the further programmatic development of UAA is inevitable and certainly in the long run this is a good thing for the state's largest metropolitan region. However, not all paths to additional programmatic development for UAA are equally sound from the standpoint of the State of Alaska. **(2) We recommend that the UA System: (A) respect the lessons of specialization in graduate work and research and identify a limited number of academic disciplines that will receive special resources and commitment, whether at UAF or UAA; (B) continue to focus UAF on its traditional strengths in the sciences and engineering; (C) focus advanced graduate work and research at UAA on the social and behavioral sciences and education and avoid replicating UAF's primary areas of expertise; (D) locate any future law school—the state does not have one currently---at UAA; and, (E) support and expand WWAMI –type programs (WWAMI is a collaborative medical school among universities in five northwestern states (Washington, Wyoming, Alaska, Montana, and Idaho) and the University of Washington School of Medicine) in expensive disciplines and courses of study.**

Improving Performance

In a section below, we note in greater detail the less than satisfactory performance of the University of Alaska on several critical measures of performance and output, including the

University's freshmen retention rate and its six-year undergraduate graduation rate. The performances of UAF and UAS are below national standards on these metrics and hence beg for additional attention. UAA's graduation rate is disappointingly low. Interestingly, the University System's retention and graduation rates performances have improved over the past decade, yet generally still lag comparable institutions by surprisingly large amounts.

It isn't that UA isn't aware of the problem and it isn't that it hasn't made good faith attempts to address its shortcomings in a variety of ways. Rather, the difficulty is that it has not undertaken sufficient rigorous, statistically controlled analyses of the determinants of retention and graduation rates. Surveys of students provide useful background information, but they are not a substitute for rigorous analysis of actual data because what students say and how they actually behave often differs. We describe some of the parameters that might guide such an analysis the section below.

Currently, the University is more dependent upon subjective notions about retention and graduation rate determinants than it should be. One senior administrator opined, *"We haven't been shooting in the dark on retention. It might be more accurate to say that we have been shooting in twilight. We're not certain we're on the right track."* We agree. While all decisions of campuses should not be determined by data, it is better for decision makers to have reliable data generated by rigorous analysis than not to have such arrows in one's quiver.

(3) Despite improvements, reality is that large numbers of students begin studies at the University, but then disappear. (We note here that the high school dropout rate is also unusually high.) There may be valid reasons why UA lags national standards; if not, then the numbers we observe reflect a waste both of human and financial resources. Whichever is the case, the University needs to determine why its performance lags national norms and then, as necessary, outline how it intends to improve the situation.

The University generally has performed well in other areas, for example, in terms of generating additional graduates who will fill high demand jobs. It also has done a good job controlling its costs. Illustrations include its work to constrain energy expenditures, its decision

to eschew the usual employee cost differential that state employees based in Fairbanks ordinarily receive, and its decision to reimburse those of its employees who travel with a lower per diem than other state employees. Legislators should not ignore these efforts when they are making budgetary allocations.

On the other side of the ledger, UA has been less active in controlling often expensive programmatic expansion and somewhat reluctant to eliminate low enrollment academic programs. For example, in 2009, UAF granted only 37 doctoral degrees spread over 18 doctoral programs and, as already noted, total doctoral student enrollment in Fall 2009 was only 333. These data suggest that some of these doctoral programs enroll suboptimal numbers of students, one result being high costs (though such costs can be offset by external funding). **(4) Elsewhere in this report, we argue that the University of Alaska might be well advised to focus its scarce dollars on a smaller number of programs, especially at the graduate level, many of which can legitimately aspire to national rankings. It is not clear to us that some of the doctoral programs at UAF would survive if such criteria were applied. We recommend that the President and the Board take a long look at this situation and reexamine the viability of programs including enrollment, retention, research productivity and graduation.**

Despite these caveats, if we take a more global view of the University's situation, it is fair to say that its overall performance and efficiency have been remarkable. Over the past two decades, UA's state appropriation increases have fallen well below the increase in the national consumer price index (CPI) and even further behind the growth of the higher education price index (HEPI). Nevertheless, it has continued to perform well and to find ways to do more with less. Our observations and suggestions for changes and improvements should not obscure this conclusion.

The Tangle of Oil, Conservation and Budgetary Constraints

The 1968 discovery of oil at Prudhoe Bay and the 1977 completion of the Trans-Alaska Pipeline led to a well-known oil boom that produced jobs, excitement and many new residents in

Alaska. In fact, the population of the state has increased more than 130 percent since 1970 and about 11 percent in the past decade. These developments hold both academic and financial implications for the University. Population growth generated by the oil boom brought with it new opportunities for higher education in Alaska. Enrollment surged and UA budgets increased, though closer inspection reveals that University budgets waxed and waned with oil prices because more than 75 percent of state revenues are related to petroleum. Thus, it makes a big difference to Alaska and to UA if the international price of oil is $100 per barrel as opposed to $40 per barrel.

Hence, the University clearly has a financial interest in high oil production (though it is wise to note that oil production in Alaska peaked in 1988 and since has declined by about two-thirds). Even so, while high prices prime the University's budget, as an academic institution, it also is legitimately interested in researching the wise use of Alaska's resources and exploring how to preserve its pristine environment.

Almost needless to say, tradeoffs often arise between resource extraction and conservation. As a consequence, the University often finds itself in the middle of conflicts between those who wish to utilize and exploit the state's natural resources and those who wish to preserve and protect them. This is hardly an unusual circumstance in the Western United States, but these tensions can be especially bitter in Alaska and the state's battles on this turf frequently attract the attention and participation of outsiders. An example in point is the controversies that have surrounded the positions taken by a UAF professor concerning offshore oil development. University of Alaska officials must be adept to avoid political damage in such situations.

(5) This is a difficult and often treacherous milieu. Nevertheless, we recommend that the University as an institution seek to avoid adopting official policy stances in such controversies, but instead: (A) insist on scholarly integrity and do its very best to avoid shoddy scholarship that will draw legitimate criticism; (B) seek to apply the University's considerable expertise to the analysis of similar problems; (C) via its faculty, offer prospective solutions, but not endorse those solutions; and, (D) actively sponsor discussions of relevant issues and ensure that the University remains a free and open marketplace for

ideas. On occasion, it may be necessary to defend academic freedom and free inquiry when interested parties are not pleased with the results of University research, or with the expression of particular points of view. However, untrammeled scholarly inquiry and research are foundation stones of any respectable academic community and the University of Alaska should not equivocate in such situations.

Whatever the consequences that oil extraction and conservation activities might have for academic matters, the implications of declining oil extraction for the University's budget are profound. Declining oil production might well lead to reduced state financial support for the University. Yes, the State of Alaska's Permanent Fund (the equivalent of sovereign wealth fund) will buffer possible future declines in state tax revenues. Even so, more than three-quarters of state revenue is derived from oil-related activities. **(6) Therefore, it is prudent for the University of Alaska to plan for the possibility that: (A) its general fund support from the State of Alaska might not keep up with price inflation; and, (B) its share of the state's budget might decline. The University should explore what the University would be like if ten years from today, the "real" (after inflation) value of its state appropriation has not risen, or even declined. What activities must the University improve or discard to operate efficiently in such a world? What things must it begin to do if this will be the state of affairs in 2020? What would this imply for tuition and fees? The number of questions that must be answered is almost endless.**

System Organization

The manner in which a university is structured and organized seldom is the major influence on its performance. The quality of the institution's faculty, staff and students, and the quantity and quality of the resources they have available usually are much more important determinants of performance. Nevertheless, structural organization can make a difference, particularly if it has an impact on operating costs, how decisions are made, and how communication occurs.

(7) Hence, we must recognize that a reorganization of the University of Alaska is not a cure all for whatever ails it. Even so, it is apparent that some improvements can be made. These fall into two main categories. First, as it stands, the University of Alaska is overly centralized and devotes too many resources to a command and control regulator model that should instead place more emphasis upon incentives, distinctiveness and entrepreneurial activities. Increasingly, under the authority of the President, UA Systems administrators should act as staff to the Board and provide recommendations rather than wielding final administrative authority. Second, the University's attempt to seamlessly integrate all post-secondary education into the same administrative structure sounds better than it actually works. UA's vocational, technical and community college activities must be accorded greater prominence and not viewed as *"four-year lite"* (the observation of a sometimes frustrated individual associated with workforce development).

President Gamble and the Board of Regents need to find ways to deal with the two problems just identified. We believe that the University's claim on the state's financial resources will be stronger and general support for its activities if it addresses these two structural concerns candidly and directly. We discuss organization of the UA System in a following section.

III. ACADEMIC PROGRAMS

The University of Alaska System is highly differentiated and geographically distributed across thousands of miles. The University of Alaska Fairbanks (UAF), the flagship campus of UA, is a doctoral research institution and is a land-grant, sea-grant and space-grant institution. It is a high-performing enterprise from the standpoint of research; though it enrolls only about 5,500 students, UAF generates about $110 million of extramurally funded research each year and about $150 million of total outside funding activity overall. According to the *Chronicle of Higher Education*, in 2009, UAF ranked 99th nationally in terms of federally funded research and development expenditures (a different metric than research only).

UAF hosts several major research units: the Agricultural and Forestry Experiment Station; the Geophysical Institute, which operates the Poker Flat Research Range; the International Arctic Research Center; the Arctic Region Supercomputing Center; the Institute of Arctic Biology; the Institute of Marine Science; and, the Institute of Northern Engineering. UAF's location 200 miles south of the Arctic Circle provides it with a comparative advantage for Arctic and climate research. The consensus is that UAF's most prestigious academic programs are those in Arctic biology, cold climate engineering, geology and geophysics, Alaska Native languages and cultures, fisheries and marine science.

The UAF MAU enrolled 10,446 headcount students in Fall 2009, though 4,917 of these were on "community" campuses rather than the Fairbanks University campus. Community campuses within the UAF MAU are located in Nome, Kotzebue, Bethel, Dillingham, and a half-dozen smaller communities throughout Northern Alaska and the Aleutian Chain.

UAF only recently has begun to implement meaningful freshmen admission standards. Students either must present a 3.0 high school GPA, or as lows as a 2.5 high GPA, if they also have an ACT score of at least 18.

The University of Alaska Anchorage (UAA) offers twenty-six Master's degree programs along with a number of Graduate Certificate programs. UAA also offers

cooperative/collaborative doctoral programs with UAF in clinical/community psychology; medical education program with the University of Washington Medical School; and other collaborative master's programs with Creighton University and East Carolina University. It has provided leadership in Alaska for its nursing and health science programs, including the delivery of associate degree nursing programs, in collaboration with other UA campuses, to ten communities throughout Alaska.

UAA is not classified as a research institution by national bodies, though in 2009 it recorded approximately $10 million annually in external research funding. UAA's strategic plan identifies the expansion of research and graduate programs as major campus goals. UAA serves many mature students and many who commute; approximately 60 percent of its student body is part-time, though this appears to be falling. The UAA MAU enrolled 20,368 headcount students in Fall 2009, with 4,706 of these students enrolling at "community" campuses connected to UAA. UAA community campuses are located in Kenai, Kodiak, Palmer and Valdez. The University describes itself as an open access institution.

The University of Alaska Southeast (UAS) is located in Juneau with campuses in Sitka and Ketchikan and serves the needs of Southeast Alaska, energizing the surrounding economic base (which has not prospered in recent years because of timber and logging contractions). UAS's coastal location, including proximity to the Tongass National Forest, provides rich opportunities for teaching and research in programs such as marine and environmental science, marine transportation and outdoor leadership. UAS offers a wide variety of associate and baccalaureate degree programs and about one dozen master's degree programs in education and public administration. UAS aspires to state leadership in the education of individuals in areas such as educational technology, early childhood education, elementary and secondary teaching, special education and educational administration. Currently, UAS produces approximately one-third of all new teachers in the state. The UAS MAU enrolled 3,834 headcount students in Fall 2009, of which 1,023 were at "community" campuses. UAS describes itself as an open enrollment institution.

One success story that needs to be noted is the improved performance of the University in the area of career, occupational and technical education. UA offers many certificate and associate degree programs that prepare students for work in a wide variety of fields including automotive electronics, logistics, pharmacy technology and paralegal studies at the certificate/endorsement level, and architectural and engineering technology, dental assisting, fire and emergency technology, nursing, and welding at the associate degree level. Over 4,600 UA students are enrolled in workforce-related programs. UA offers almost 90 certificate programs (one-year and two-year) and 75 associate degree programs that fall within this rubric. Graduates of these programs have been able to find jobs even in tougher economic times because employers view them as well trained and responsive to their needs. An admiring employer who hires UA graduates coming out of these programs remarked, *"This is where the rubber meets the road for me. The University is producing people who can work for me and begin to be productive immediately."*

Improved performance, however, is not the same as optimal performance. Workforce leaders within the state still see considerable room for improvement. They assert that except for the nursing and process technology programs, most other workforce-related programs are *"uncoordinated across the state and often inconsistent with each other."* They express surprise that one campus will not transfer in a course from another campus. *"They apply four-year thinking to two-year problems too often."* As a consequence, *"it is difficult to gain traction with UA on some of these things"* because this isn't their highest priority, or they don't understand. They also criticize UA for insisting on what they perceive to be excessively high overhead cost recovery rates that discourage joint projects. Many workforce-related professionals within the state would prefer that the University System separately identify and administer workforce-related programs and some prefer a return to the former system of community colleges.

Another programmatic task that must be addressed relates to the distribution of academic programs across the system. Though the philosophy of some members of the Board of Regents is to *"place programs on the campus where they fit the best,"* and the total breadth of academic programs in Alaska is not especially large in the context of other states, there nonetheless is some evidence that the system supports an excessive number of programs in its diverse locations.

Consider teacher education. UAS generates about one-half of the new K-12 teachers in the state and UAA contributes a significant number as well. UAF's teacher education program is the smallest of the three UA programs, though it enrolls 500 students including a significant number of Native Alaskan students, some of whom say they feel comfortable at UAF. Does UA really need to maintain three free-standing teacher education programs? Why should not UAS or UAA be responsible for any teacher education offerings at UAF and then supplement those offerings with NCATE-accredited distance learning courses coming from Western Governors University (WGU)?

(8) Our point is not to concentrate all program-reduction attention on teacher education; instead, why maintain three free-standing teacher education programs, three free-standing MBA degrees, three free-standing environmental studies programs, et al? UA often talks about being "one university," but shrinks from situations where one MAU will supply faculty and courses to another MAU, or one MAU will perform all of a certain type of administrative task for other MAUs. We believe it is time for the UA System to move off the mark on these issues and recommend that the President take steps to see that it occurs.

General/Liberal Education

The baccalaureate degree requirements for University of Alaska students include conventional course requirements in areas such communications, the humanities and social sciences, mathematics, and the natural sciences. These requirements total 38-39 semester hours UAF, but smaller numbers of hours at UAA and UAS. Curiously, the general/liberal education programs are not identical on each campus despite the oft-cited statement that UA is "one university."

UAF has a "core curriculum" of general education courses with some specifically required courses and several sets of courses from which students can make limited choices. General/liberal requirements at UA and UAS reflect a "cafeteria" approach that allows students to elect many different courses within categories. **(9) The problem with this approach is less**

the courses required and more the comparative absence of empirical evidence that the programs "work." Have students learned when they finish these programs and is there a measurable "value added?" Have their attitudes changed? Do they become more or less tolerant of the views of others? Are they better able to integrate and synthesize information? How do they compare to other students nationally? How do graduates from UAF, UAA and UAS compare, since they do not complete the same general/liberal education sequences? Does the "capstone" course at UAA designed to integrate knowledge make a perceptible difference? These are important questions and we strongly recommend that the University employ rigorous means to seek their answers.

The preceding recommendation (and analogous ones in this report that call for badly needed institutional research) reflect the fact that institutional research operations, both on campus and at the system level, have been oriented primarily toward information collection and distribution rather than hard analysis. As one institutional research professional put it, *"We've been data monkeys"* and only recently have become more analytical. Of course, substantially they have done the work they have been requested to do. The result, however, is a dearth of rigorous analytical evidence on many of the crucial questions in front of the MAUs and the UA System. **(10) We recommend that the President refashion the entire institutional research function with the UA System. If necessary, different individuals must be hired who are capable of performing sophisticated multivariate analyses and that have mastered applicable operations research techniques such as linear programming, queuing and simulations. Most of the heavy lifting in terms of institutional research should occur on the MAU campuses and experts on these campuses can be allocated specific tasks as well by the President. Relatively few central system personnel will be needed and these should focus on recording and classifying data and completing necessary reports.**

We have caveats with respect to the content of the UAF liberal education program that for the most part also apply to UAA and UAS:

(11) It appears possible for a UAA student to avoid taking a laboratory science. UAF requires two laboratory science courses of every baccalaureate student, and UAS

requires one course (although the UAS Catalog does not make this point clear for students). For several reasons, a laboratory science experience is an essential part of a respectable liberal undergraduate education. We recommend that UA require such on every campus.

(12) There is no writing competency exit examination. Given that high proportions of UA students transfer into the campuses where they seek to graduate, and many are mature and hence completed writing courses many years previous, it is important that they demonstrate their ability to write clearly and cogently. We recommend that UA take steps to implement such an examination. We can guarantee that citizens and employers will approve.

(13) We are uncertain what "academic" writing is (F211, F213). Such labels suggest these writing courses somehow are not aimed at preparing students for effective writing in other situations, e.g., in business, or everyday life. We recommend different titles.

(14) We recommend that UA institute a computer literacy requirement for all baccalaureate degree candidates. The vast majority of students will come to the University with computer and Internet skills, but will not necessarily be familiar with certain software programs and/or search techniques. Computer and Internet literacy has become a prerequisite for the exercise of intelligent and full citizenship and UA should ensure that its graduates have demonstrated such literacy. We note that computer/Internet literacy and library literacy are not identical.

(15) We recommend that every baccalaureate degree recipient be required to demonstrate competency in a non-English language or culture. UA students will graduate into a world that is increasingly international. The first language of more than one-quarter of all new elementary school students in California is Spanish. In Alaska, approximately fifteen percent of the population speaks a language other than English at the dinner table.

Further, language is the repository of a culture; it is essential that UA students come to grips with other cultures, preferably by means of their languages. Both the understanding of UA students and their employability will increase if they acquire facility with a non-English language at the second-year collegiate level. We recommend that UA introduce such a requirement.

(16) UAS's general/liberal education program appears to be substantially smaller in requirements than UAF. The differences between the three campuses are large enough that it is not clear that one could justifiably say the programs are interchangeable. This is odd given the "one university" slogan that UA frequently promotes. Since UA doesn't have rigorous empirical evidence available that speaks to what actually works and does not work in its general/liberal education programs, it is impossible to say whether these differences are helpful or harmful for students. We recommend that UA examine the differences in programs and rigorously determine if they do make a difference in the System's ultimate product, its graduates. To ignore the differences in the programs is to suggest that it really doesn't make any difference what courses students take. One university should have one set of general education requirements.

Research

Research expenditures at UAF have increased substantially, from $56.4 million in FY97 to $107 million in FY09. While commendable, the $107 million number does not place UAF in the Top 100 institutions nationally, according to the *Chronicle of Higher Education*. However, in 2009, the *Chronicle of Higher Education* did rank UAF 99th nationally in terms of research and development expenditures (a different metric).

The University of Alaska has skillfully leveraged its academic strengths and location to garner federal funds to support its work in Arctic and cold weather research, include Arctic biology. It also has forged ahead in a variety of other areas, including the biomedical sciences, where it has garnered more than $81 million in federal funding since 2000.

Over time, the University also has attracted significant earmarked federal appropriations to support its research work and academic programs. Whether or not one believes earmarked appropriations are good national social and economic policy, they undeniably exist and the University of Alaska typically has done well in the scrum for such funds. Good ideas, time, cultivation, effort and perseverance are essential if one is to succeed in this process. That said, the absence of Senator Ted Stevens and changes in congressional leadership likely will reduce opportunities for earmarks in general. The University has deliberately moved away from earmarks for their on-going programs over the past decade and relies almost exclusively on competitive federal research grants. The one significant exception to this is continued funding for aspects of the super computer program.

Some of the promising avenues for future research endeavors in the UA System include biomedical research, energy-related studies and climate change. **(17) We recommend that the State of Alaska make targeted investments in these areas, as they bode not only address the specific needs of Alaska, but also to attract considerable outside funding. It is plausible for the State to make such investments on an incremental, *"show us what you can do"* basis.**

(18) Incentives count where research is concerned and we recommend that the University reexamine how it utilizes and distributes the indirect cost overhead recovery funds that accompany many grants that it receives. We don't have a formula to offer that magically and optimally distributes these funds amongst researchers, departments, colleges and the University. Nevertheless, the comments of some faculty suggest that increasing the distribution of funds to the actual researchers who generated the funds might induce more grant activity over time. These funds also could be used to nudge institutions (e.g., UAA) in programmatic and research directions consistent with the UA System's overall strategic plan.

The WWAMI Model

As mentioned above, WWAMI is a collaborative medical school among universities in five northwestern states (Washington, Wyoming, Alaska, Montana, and Idaho) and the University of Washington School of Medicine.

The Alaska WWAMI Program began at UAF in 1971 and for Alaskans now is located at UAA. WWAMI admits 20 Alaskans annually and these students complete their first year of medical school at UAA. Students from all five WWAMI states attend second-year courses at the University of Washington School of Medicine in Seattle. The third and fourth years of the medical school curriculum are comprised of "clerkships"---rotations in the various medical specialty areas that may be taken in any of the five WWAMI states. Students who choose the "Alaska Track" potentially can complete most of these clerkships in Alaska.

The WWAMI approach to producing physicians for the State of Alaska is dramatically less expensive than would be the development of a medical school within the state. A WWAMI-like program also exists to generate physicians' assistants. **(19) We recommend that the Board of Regents study extending the WWAMI model to other academic areas, especially high cost, low enrollment programs within particular academic specialties or professional schools. "Buying" spots in reputable graduate programs in others state might save Alaska the expense of operating and equipping small, high-cost graduate training. Veterinary medicine, dentistry, architecture and law could be candidates for WWAMI-like programs, but only if documentable shortages exist that have inflated wage rates. It would make little sense to initiate a WWAMI-like program if Alaska already is able to obtain the individuals it reasonably needs in a particular occupation or specialty.** Reality is that the University cannot be all things to all people and must make choices. If it can find ways to cooperate with other similarly situated Western states, save money and serve the citizens of Alaska, then it should do so.

IV. TECHNOLOGY

The University of Alaska System spends a great deal of money on technology and technology-related items. In FY 2009, the System spent $78.4 million on items labeled as technology; this was eleven percent of the System's total expenditures and represented a 93 percent increase since FY 1999. Technology expenditures per student FTE were $4,453 in FY 2009; on a per FTE faculty member basis, these expenditures amounted to $13,946.

Technology is critical to the operation and efficient performance of the University of Alaska, both inside campuses and between and among the campuses. The huge distances between its campuses require the use of technology if higher education is to be delivered capably. For example, it is 825 miles from Juneau to Fairbanks, 1,100 miles from Juneau to Nome, 1,150 miles from Juneau to Kotzebue, 1,275 miles from Juneau to Unalaska, and 1,700 miles from Juneau to Adak in the Aleutian Islands. All these distances are "as the crow flies." Each pair would involve longer distances if it were possible to drive between them.

It is wise to place these distances in perspective. It is only 711 miles from New York City to Chicago. The University of Alaska deals on a daily basis with distances that easily exceed this. Therefore, the productive use of technology is absolutely essential if the University is going to succeed in delivering higher education across its vast state. UA's College of Rural and Community Development, based at UAF, is primarily responsible for distance learning for UAF. In Fall 2009, Rural College enrolled almost 2,600 students, including 121 at the graduate level. For the most part, these students are place bound, tend to be women (65 percent), and frequently are Native Americans (23 percent). For many of them, distance learning is the only way they can access higher education.

It is important that the System ensure there is no unnecessary duplication or confusion in distance learning. Faculty and students reported courses from separate campuses with the same titles and numbers are often different and transfers can be exceedingly complicated.

The UAF College of Rural & Community Development (CRCD) reports that it delivers distance education to 160 communities statewide by means of both synchronous and asynchronous delivery plus a variety of other modalities such as audio conferencing, CDs, DVDs and the like. CRCD relies heavily on software packages such as Blackboard and utilizes E-Live to supplement CDs. This can be expensive and clearly is subject to economies of scale. For that reason, **(20) we recommend that UA explore the possibility of sharing distance learning courses with institutions in other states and that it give additional consideration to how it might economize by sharing resources with the Western Governor's University (WGU). WGU offers NCATE-accredited teacher education programs, CCNE-accredited nursing programs through the master's degree, and a raft of business programs through the MBA, all via distance learning. The University of Alaska should not casually cast these programs or their courses aside.**

Both in distance learning and on-campus, the University faces predictable challenges relating to the quality of broadband connections to the Internet, high-speed computing and modeling capacity, switches, multi-media classrooms, the number of work stations, the availability of up-to-date software, the ability to service and repair equipment, and the ever present need to train faculty, students and staff in the most productive use of what is available. Nevertheless, distance learning students with the UA System in general have very good things to say about the quality and service they are receiving. They note that UA has become more proficient at distance learning in the past few years (presumably because of Title III funding, though that could disappear). *"They are real problem-solvers,"* commented one distance learning student who noted a half dozen instances in the last year where a UA staffer had *"found a way to get it done."*

Of course, many technology challenges have little to do with distance learning. For example, there are comparatively few "smart" classrooms on the UAF campus (at least compared to the UAA campus, where facilities generally are newer). **(21) Many UAF classrooms do not contain the basic smart classroom essentials---a PC, Internet access, a projector and a large screen. Smart boards are somewhat unusual. We believe that special assessments in the**

form of increasing the student per credit technology fee should be considered to begin to remedy this situation.

One aspect of statewide university technology that generates mixed reviews is the Banner student information and records system. The Banner system is touted as fusing administrative and academic functions that make it easy to manage data and give students, staff and faculty secure, 24x7, on-line access to the diverse information it collects and maintains. Many around the UA System do not believe Banner carries through on these promises (*"It has given us fits."*), though predictably misuse and a lack of training sometimes appear to be present. **(22) A system-wide harmonious student records system is an example of where a statewide approach makes sense. We recommend that the President examine why this particular version meets with so much criticism. Do any legitimate problems that exist reside in the software, how it is managed, how it is used, lack of training, or…?**

While we believe a variety of UA System activities usefully could be devolved to the MAUs, it is eminently sensible for the University to centralize and standardize many technology-related decisions and purchases. Distance learning, for example, would fail almost immediately if there were not standardization in equipment, software and protocols. Similarly, it would be entirely uneconomic for the University to duplicate certain items of hardware in multiple locations. On the other hand, tasks such as equipment repair and training often can only be carried out locally and a distributed or decentralized approach to such matters is required. We give high marks to the University for its understanding and implementation of these sometimes controversial issues.

The relevant question for the University is not whether it needs to utilize technology. It must do so. Nor is the salient question whether centralization in some technology areas and decentralization in other technology areas is required; it is. Rather, the most important questions at this point are these:

- Broadly speaking, does the University's use of technology work? Do students learn more or less when they do use technology? Do students who have a

a choice prefer to utilize technology? What measures of later student success (e.g., retention rates, graduation rates, pre-testing and post-testing results, GRE test scores, job placement, etc.) exist that provide evidence on these points?

- What rigorous evidence is there that the ways in which students use technology and how much they use technology make a difference in their performances? E.g., if students utilize a Blackboard chat room, do they score higher or lower on examinations, once one has controlled for relevant demographic variables?

- What evidence is there that faculty training results in additional use of technology in their teaching, increased student learning, etc.? One UA official estimated to us that while *"80 to 90 percent of faculty have been trained to use Blackboard, only 15 percent actually do."* Perhaps, but data supplied to us indicated that 41 percent of all sections taught at UAA involve Blackboard use. Do students learn more or less in such courses? Are they more or less satisfied and are they retained and graduated at higher rates?

- How does the University decide the amount of resources it devotes to various technology-related tasks? Is there empirical evidence to support the current distribution of expenditures among tasks such as Internet connectivity, work stations, faculty training, etc.? E.g., in FY10, the System will spend $7.48 million on non-personnel services in the area of "central technology." This is up from $5.78 million in FY 00. Is there a metric by which such allocations are decided, or instead is it a more subjective, seat of the pants variety of decision-making?

- The University's goal of eliminating much of its current paper flow and substituting on-line methods (electronic timesheets, purchases, applications, etc.) is admirable. Can it be demonstrated that such an evolution actually will save money after all overhead and maintenance costs are taken into account?

(23) It would take effort for one not to be impressed by the University of Alaska's massive use of technology. We recommend, however, that both the System and individual campuses spend more time evaluating what they are doing with that technology. Strong emphasis should be placed on generating rigorous empirical evidence concerning the University's use of technology and its effect upon learning and subsequent student outcomes such as retention, graduation, and job placement. The questions noted above might serve as a starting point. It is apparent that the University of Alaska already has done some of the analysis called for here; it simply hasn't done enough to justify what now is approaching a $100 million per year expenditure.

(24) Some of the funding for UA's technology efforts is supported by a $5.00 per credit hour student fee (maximum = $60 per semester). We believe there is a strong argument for increasing the size of this user fee, provided the proceeds are used directly to support and assist students. Additional "smart" classrooms (noted above) provide such an example, as would additional work stations. We also recommend, however, that UA administrators utilize student advisory committees to assist them in ascertaining how things are working and what things need to be done.

(25) Finally, while UA's technology intensive distance learning efforts are much appreciated by students, it is fair to note that some knowledgeable outsiders believe that UA is not at the forefront of distance education today. *"There are some outdated in their approaches and high cost in their operations,"* said one, who believes the President should bring in one or more acknowledged experts at institutions that either are on the cusp of new developments, or which currently operate highly successful, profitable programs. We concur.

V. FACULTY

The University of Alaska's 2,383 faculty (1,361 FTE) in general are well qualified and dedicated. Many are part of a self-selected group. Either they originally were Alaska residents, or they are individuals who have selected Alaska because of the attractiveness of its distinctive life style and environment to them. A representative UAA faculty member put it this way: *"I'm here because I want to be here. This is an astonishingly beautiful place to live and in my department , we are right on the cusp of new developments."*

Many UA students give high marks to their faculty for their teaching effectiveness and their willingness to spend extra time with them. *"My faculty and my advisor always make time for me and don't stop until they've taken care of my problems,"* remarked a senior engineering major. Students also are pleased that UA faculty often structure their courses to include practical out-of-class learning experiences and internships. *"I talk to students who attend other universities and here we have lots more opportunities to apply what we are seeing in classrooms than they do,"* commented a political science major.

There is great variation among UA faculty as individuals and across campuses in terms of their devotion to externally refereed scholarly productivity and performances. Not surprisingly, UAF faculty in the sciences and engineering lead the way in terms of their scholarship and grantsmanship, but more than a few faculty in other disciplines and on other campuses publish books with reputable presses, author articles in well-regarded journals, perform artistically, and compete successfully for extramural funding. Nevertheless, taken overall as a group across all sixteen sites, UA faculty are not exceptionally active as scholars. Substantial proportions of them regard high quality teaching as their primary responsibility.

It's fair to say that many faculty, though certainly not all, are reasonably well satisfied with their situation. *"Given the recession and everything else going on, we're not doing too badly,"* averred a faculty member. True, they harbor a variety of gripes and complaints about salaries, research support, teaching loads, office space, computer support, travel money, parking, etc. Further, faculty on some campuses believe they are *"being stifled"* by a variety of forces

located somewhere else, usually either in Fairbanks or Juneau. Still, most believe that *"we are doing something important here and making a real difference."* Most believe the University has been led very capably over the past decade by now departed President Mark Hamilton and are very pleased with the appointment of new President Patrick Gamble.

The notion that the University of Alaska favors UAF over other campuses does occupy the minds of some faculty and legislators. The *Anchorage Daily News* (30 January 2010) reported the perception of a legislator that the Board of Regents favors UAF over other campuses. It appears that more than a few faculty not located at UAF believe some variant of this and several noted to us that fewer than 6,000 students actually attend classes on the UAF campus proper. One noted that the student/faculty ratio is 12:1 at UAF, but 19:1 at UAA (numbers also reported in *U.S. News and World Report*). The Board of Regents responded by noting that UAA (in particular) has received the lion's share of new construction projects and that its budget has increased at a more rapid rate than that of UAF.

Whether or not the perception that UAF receives favored treatment holds any water depends upon each institution's mission and subsequent resource allocation. If UAF's mission differs from that of UAA and UAS, then its funding probably should differ as well. The relevant question, of course, is how much.

(26) In any case, a partial solution to the tension on this issue is to have the Board of Regents adopt refined, distinct institutional mission statements---a step we recommend. We note that as a doctoral, research institution, UAF must be accorded distinctive treatment, or it will fail. However, it is obvious that the majority of the state's population and resources are located in the Anchorage metropolitan area . Hence, the real questions are: (1) how many doctoral programs should be supported at UAF? and, (2) over time, should some free-standing, distinctive doctoral programs be developed at UAA along with a variety of other graduate and research offerings?

Not surprisingly, most UAA faculty favor doctoral status for their institution. *"We're bigger and better than UAF in many departments,"* asserted a UAA faculty member. The

implication is that the state's future allocations of resources and programmatic authority should reflect this.

Training and Supervision of Part-Time and Distant Faculty

Approximately 50 percent of UA faculty system-wide are part-time or adjunct and on some campuses, this percentage exceeds 60 percent. Hundreds of UA faculty teach in locations remote from UAF, UAA and UAS. *"The salient issue,"* observed an administrator, *"is how well supervised and trained these part-time remote faculty are."* The honest answer appears to be---it depends. Some academic departments, college and schools work hard to include part-time and adjunct faculty in their activities and provide them with training and support. Further, they monitor their teaching activities with periodic peer visitations. One academic unit has developed its own training module that covers essential orientation topics. In other situations, however, *"almost nothing at all is being done,"* according to a dean.

The University of Alaska provides heroic service to the state by means of its 16 campuses. **(27) Nevertheless, the extent to which training, course materials, supervision and evaluation are consistent across the campuses, and sometimes even inside campuses, is in doubt. This is an issue that UA must address, as it speaks to academic quality and maintenance of standards. It is possible that resolution of some of these matters might involve collective bargaining issues, but they do need to be addressed.**

Collective Bargaining

Some of the quirks of the faculty salary structure among the campuses may be a function of the three collective bargaining agreements the Board of Regents has negotiated with faculty unions---the UNAC (a joint AAUP/AFT operation), the UAFT and the UNAD (which represents adjunct faculty). The UNAC bargaining unit does not represent community college faculty, vocational-technical faculty, and faculty at rural community campuses, who are represented by the UAFT.

The UAFT bargaining unit is a somewhat unusual arrangement and apparently was designed "to take care of" community college and vocational-technical college faculty when those individuals were merged into the greater, more expansive University of Alaska. Bipartite faculty in the UAFT are those who pursue duties constituting four parts teaching and one part service, while tripartite faculty pursue duties involving four parts teaching and one part research. Much more unusual, however, is the notion of the "bipartite" and "tripartite" faculty members in the UNAC bargaining unit. The UNAC bipartite faculty may have duties composed of research and service, or of teaching and service in any proportion. Tripartite faculty in UNAC have workloads comprised of research, teaching and service with workloads ranging from 5 to 90 percent in any one category. The current collective bargaining agreement (CBA) for UNAC faculty expires on 31 December 2010, while the UAFT CBA expires on 30 June.

(28) The UAFT agreement recognizes that community college, community campus and vocational-technical college faculty are different individuals with different responsibilities. We agree and note that the differing missions and scope of these units is one of the reasons why it would be wise to differentiate further the four-year institutions (UAF, UAA and UAS) from the UAFT-oriented units, and administer them and record their results separately. Elsewhere, we report comments of work force development leaders that all things considered, they would prefer a different administrative arrangement that would better recognize the distinctive nature of the community college/work force mission. We believe their concerns are valid. **(29) Further, we cannot help but note that UAF, UAA and UAS would not be savaged so much in national rating systems if their retention and graduation numbers did not include students from the community campuses who have not already earned an associate degree. We regard this as a win-win proposition for all concerned and recommend that the President move in this direction.**

The CBAs cover the usual topics---faculty status and evaluation, reductions in force, disciplinary actions, workloads, compensation, etc. In the fashion of most other CBAs, the UNAC agreement constrains the ability of the Board, the President and the Chancellors to take certain actions and requires them to take other actions. For example, faculty are responsible for 30 "work load units" per academic year; these units are derived from faculty members' teaching,

research and service activities. Unusual for a CBA, however, is the fact that the precise number of work load units associated with instances of each of these activities is not specified.

Minimum faculty salaries by rank are specified in the UNAC CBA (for example, $55,000 annually for a full professor). The emphasis is upon *"across the board"* salary increments (3.4 percent in FY 10 and 3.5 percent in FY 11). Allowance is made for market salary adjustments, but the size of these is limited to 5.48 percent of the total base payroll of CBA unit members as of 15 November 2007. Market salary adjustments and initial salaries are supposed to pay heed to the 2008 Oklahoma State University (OSU) national faculty salary survey. This turns out to be highly beneficial to faculty at UAA and UAS because the OSU study numbers tend to pump salaries in those locations, but disadvantageous for UAF because the OSU study results in salary quotations for UAF faculty that often are below national averages for doctoral research institutions. Reliance upon the Oklahoma State study also has resulted in seemingly overly generous or even unmerited raises for some faculty whose less than scintillating performances are the reason their salaries fall below the Oklahoma State standards. The result is a distorted salary structure that is a merit-killer.

In any case, the most important salary decision ever made in the life of any University of Alaska faculty members usually is the determination of his/her initial salary. Virtually everything else is built on that initial contractual salary number. If you start behind, then you tend to stay behind. If you start ahead, then you tend to stay ahead. AAUP data reveal that UAF, UAA and UAS faculty tend to start their professorial lives with approximately the same salaries. This situation does not change as these faculty accumulate seniority and are promoted in rank. This is despite the fact that their duties often are very different and they are hired in different salary markets.

The problem, then, is that the UAF, UAA and UAS units are all being treated as if they are operating in the same salary markets and are hiring the same kinds of faculty. However, this is not so. **(30) We recommend that the President give very strong consideration to negotiating changes in the CBA that will provide more faculty salary flexibility among the**

institutions and that UAF be accorded a different set of peer institutions that more closely fits its doctoral research role.

Merit salary increases also are possible in the UNAC CBA, but may not exceed 1.0 percent of the faculty salary base on 1 July of each year, though another, smaller class of "limited" merit bonuses not to exceed $500 may be dispensed on a one-time only basis. Promotion in rank confers a 10.0 percent raise.

All faculty employed since 2006 have been enrolled in a defined contribution pension program in which faculty contribute 8.0 percent of their salaries (pre-tax) and the state contributes 5.0 percent. State contributions are totally vested for faculty members after five years of service. The defined contribution arrangement likely will prove to be beneficial both to faculty and the state in future years and we commend the University and UNAC for moving in this direction.

Allowance also is made in the UNAC CBA for "geographic" salary differentials. Thus, relative to Anchorage, the salary differential in Barrow/Kotzebue is 42 percent. Presumably this differential reflects a variety of factors including cost of living, weather, etc., though as we note below, some of these differentials do not appear to be supported by BLS data. In addition, the University contributes a minimum of 83 to 85 percent of the net cost of a health insurance plan. An attractive tuition waiver for faculty, spouses and dependent children also exists.

The University of Alaska UNAC CBA is unusual in that it is beneficial to faculty (most faculty nationally would endure great pain to receive similar salary increases and such broad tuition waivers) and to the Board of Regents and the general citizenry. This CBA is less prescriptive than many. This is desirable because very few institutions that have highly prescriptive CBAs are prestigious or highly ranked. Highly prescriptive, confining CBAs *"tend to make it very difficult for institutions to move up the ladder"* (the observation of a national higher education leader). The CBA also includes valuable provisions for market and merit pay increments, even if such dispensations are relatively small. Finally, from the standpoint of the

State of Alaska, the switch in 2006 from a defined benefit pension program to a defined contribution program likely will avert major financial problems for the state in the future.

(31) We have two recommendations with respect to the UNAC CBA. First, the President should work to increase the share of the total salary pie devoted to market and merit raises. If the State and the University truly believe in excellence, then they should reward it. It is inconsistent with a commitment to excellence and damaging to morale as well to assign the same raise to a faculty member who is a superb teacher and productive scholar and to one who is mediocre in both pursuits. Plainly speaking, the University of Alaska is unlikely to move up in national rankings, or achieve its potential, if assigns salary increases on an across the board basis. Such a practice is equivalent to assigning all students a C grade, regardless of performance.

(32) Second, the President should end the situation where one external salary survey (the Oklahoma State University study) applies equally to all three MAUs. As we detail below, this has worked distinctly to the disadvantage of UAF, which realistically has a very different set of peer institutions than UAA and UAS. Further, it also sometimes has resulted in a strange pattern of faculty raises that one administrator has labeled "anti-merit."

Faculty Salaries and the Cost of Living

Faculty salaries always are a sensitive topic on college campuses and the University of Alaska is no exception. The Collective Bargaining Agreement (CBA) with the There are at least four significant assertions made by various groups of UA faculty about the UA salary structure:

- UA faculty are not well paid by national standards.
- The cost of living is higher in Alaska and faculty salaries don't reflect this sufficiently.

- UA Fairbanks faculty are not well paid by national doctoral research university standards.

- The salary gap between UA Fairbanks and UA Anchorage faculty is larger than it should be.

Each of these assertions can be examined by means of American Association of University Professors (AAUP) salary data and Bureau of Labor Statistics (BLS) cost-of-living data.

Are UA faculty underpaid relative to national salary norms? The table below reports AAUP salary data for the 2009-2010 academic year.

AAUP FACULTY SALARY DATA, 2009-2010, BY RANK
(000s)

	Professor	Associate Professor	Assistant Professor	Instructor
UA Fairbanks	$97.8	$72.7	$61.7	$48.2
Public Doctoral	$116.8	$80.5	$68.7	$45.8
U of Idaho	$90.5	$70.2	$58.7	$47.7
Montana State U	$82.9	$63.5	$58.3	$42.7
Washington State U	$101.5	$75.2	$68.3	$44.5
UA Anchorage	$93.7	$74.9	$62.4	$47.0
Public Master's	$89.6	$71.1	$60.0	$48.3
Western Washington U	$81.1	$65.6	$55.7	$49.4
Montana State Billings	$66.0	$58.3	$52.6	$35.4
UA Southeast	$95.4	$67.8	$58.5	-------
Public Master's	$89.6	$71.1	$60.0	$48.3
Western Washington U	$81.1	$65.6	$55.7	$49.4
Montana State Billings	$66.0	$58.3	$52.6	$35.4

Lewis & Clark C	$58.1	$48.3	$42.1	-------

The assertion that UA faculty in general are not well paid by national standards is only partially correct. It is true at UAF lags national averages for doctoral research institutions, which pay far higher salaries than does UAF. On the other hand, when UAA and UAS are compared to predominantly master's degree institutions nationally, faculty salaries on both campuses exceed national averages in most ranks.

Of course, whether an institution's compensation package ultimately is competitive, however, depends upon a host of factors, salary being only one. Cost of living, teaching loads, facilities, grant funding, location, etc., all make a difference. UA institutions are distinctive in many ways and therefore one must be careful in drawing conclusions about faculty salaries.

What difference does the cost of living make in these deliberations? Not as much as some believe. Consider the following Consumer Price Index (CPI) data for the first half of 2010, with the 1967 CPI = 100:

Anchorage	194.83
Honolulu	233.82
Portland-Salem	217.51
San Diego	244.24
U.S. City Average	218.01
West Region Average	221.33

Data for Fairbanks and Juneau were not supplied by BLS for the same time period, but other BLS data sources suggest that costs in Fairbanks are about the same as Anchorage, while Juneau is a bit more expensive than Anchorage.

All things considered, it is difficult to make the case that cost of living differentials require higher than national average salaries at the University of Alaska unless one is located in a rural situation. UAA faculty appear to be especially well compensated when cost of living differentials are taken into account. It also appears (from the comments of faculty and

administrators) that UAS ends up paying some faculty more than it would have to pay to attract them because of the CBA's reliance upon the Oklahoma State University salary study.

We recognize that the U.S. Government frequently grants special cost of living allowances to its employees in Alaska; however, it is not clear that this is merited in locations such as Fairbanks and Anchorage. And, if merited in Juneau, such adjustments would be no more than five percent.

Interestingly, several economists argue that the introduction of big-box stores in Anchorage, Fairbanks and Juneau appears to have made a perceptible difference in prices in these locations in recent years. They believe this is partially responsible for more moderate cost of living increases in Alaska in recent years.

(33) Regardless, we recommend that the President commission a new faculty salary study that compares UAF, UAA and UAS faculty salaries to those at carefully selected peer group institutions for each MAU. UAF, UAA and UAS each should have the opportunity to participate in a new and updated selection of peer group institutions, which should reflect comparable size, missions, programs, research output, etc. The goal should be to substitute MAU-specific peer groups for the Oklahoma State University salary study and to amend the CBA as necessary. Such a new analysis should take into account of cost of living differentials and attention also should be given to differing supply/demand conditions, academic discipline, level of programs, and external market factors. Coincidentally, such a study also will present an opportunity to examine if the University has any protected class salary problems relating to gender or ethnic origin. If, after adjusting for relevant other factors, such an analysis leads to the conclusion that salary adjustments need to be made for either individuals or groups, then the President should recommend a plan to the Regents to do so and make it a priority in collective bargaining.

VI. STUDENTS

The more than 33,000 University of Alaska students are diverse in a variety of ways. Approximately 60 percent are women and 15 percent are Alaska Natives/American Indians. Hispanics and Asians account for about eight percent of headcount enrollment and African-Americans about three percent. Some 52 percent are older than 25 and average student age is 30. Approximately ten percent of UA students come from outside Alaska. Eight percent are pursuing a graduate degree. Fully 30 percent are taking only one course per term and 45 percent are taking only two courses. Only about 35 percent of UA's 33,000+ students actually are full-time. At UAA, 80 percent hold a job and the median age is 25. Approximately 20 percent of UA credit hours are generated by students who intend to earn a certificate or associate degree. The typical UA undergraduate student is a first generation student and more than 49 percent of them receive need-based financial aid.

The typical UA undergraduate is pleased with the education he/she is receiving and grateful that the University introduces them *"to ideas and approaches that I had never thought about before"* (the comment of an undergraduate business student). Students perceive accurately that the University opens the doors of opportunity to tens of thousands of Alaskans

The typical UA student tends to view his/her education pragmatically. He/she wants to learn and to be stretched and challenged, but upon graduation clearly wants to be able to compete successfully for a good job related to what they have been studying. They see their University of Alaska education as mobility mechanism *"that will enable me not to have to struggle the way my parents did and to be able to choose where I want to live"* (this was the observation of a health sciences undergraduate). A healthy majority of UA students seek to remain in Alaska and between 80 and 90 percent usually do so immediately after they graduate.

One of former President Mark Hamilton's more popular and productive innovations was the UA Scholars Program, which continues to flourish. The UA Scholars Program provides a four-year scholarship providing partial payment of tuition and fees at any UA campus. There were 1,913 UA Scholars in the UA System in Fall 2009. It is credited with generating

significant increases in the proportion of highly talented Alaska high school graduates who chose to remain in the state for their higher education. In 1999, 33 percent of high school graduates eligible to become a UA Scholar enrolled at an institution in Alaska; by 2009, this had risen to 43 percent. More than 83 percent of UA Scholars are retained in Alaska between their freshmen and sophomore years; the UA System average is 76 percent for those students who are seeking baccalaureate degrees. While UAA enrolls the most UA Scholars, UAF enrolls the highest percentage of UA Scholars within its student body. More than 66 percent of UA Scholars are women.

Historically, Alaska has been challenged by "brain drain." Many of its young people, including some of its highest academic achievers, have departed the state after high school graduation and have not returned. The Alaska Scholars Program addresses this problem. **(34) We strongly commend the Alaska Scholars program, but nevertheless recommend that the President probe its effectiveness along with the University's other financial aid programs. To wit, precisely how successful are all of the University's scholarship programs in terms of retaining and graduating awardees and how many awardees subsequently remain in the state if they graduate? Are there notable difference between and among the academic disciplines in terms of Alaska Scholars attractiveness and success? Would it make more sense to offer more (fewer) scholarships with higher (lower) stipends? Should an attempt be made to endow the well-regarded UA Scholars Program?**

(35) We pose these questions in the context of what we believe should be a general examination of how the University utilizes its scarce scholarship funds. Ideally, the University will expend its limited scholarship funds strategically in order to attain specific goals. Software now exists that permits institutions to vary their scholarship and financial aid offers in order to reach certain goals, e.g., maximization of enrollment, or other magnitudes such as SAT scores, retention, graduation, etc. We recommend that UA explore such software. This would permit intelligent strategic decision-making with respect to enrollment.

University of Alaska students typically are pleased with the quality of the education they are receiving. *"I have lots of great professors,"* enthused one representative undergraduate business student, while a representative undergraduate social sciences major reported that she is *"positively thrilled at the opportunities I have had to do field research and apply what I have been learning."*

There is great appreciation among UA students for what one graduate student termed *"the distributed nature of the University."* By that he meant the many branches around the state that the University maintains and the availability of its distance learning operation.

There is less praise from students for the University's delivery of every day services such as food, parking and financial aid. **(36) *"Bureaucratic"* is an adjective often utilized by UA students to describe their interactions with the University. Many would like more variety and improved quality in the food selections they may choose from; more and less expensive parking; and, more responsive financial aid service from individuals *"who sometimes regard us as adversaries."*** **These are items that UA should work on, though in truth these complaints differ little in tenor and amount from those one hears on nearly any state university campus. If there is a difference here, it is that the University's retention and graduation rates are sufficiently low (see below) that the University really does need to determine why so many of its students drop out.** Perhaps the delivery of student services has something to do with this.

When queried about parking, urban campus students generally indicated that they would be willing to pay higher fees for parking if *"the money actually goes to parking that we can see."* More than a few students harbor the (false) opinion that parking dollars are being diverted to other uses. **(37) In general, students typically spoke in favor of strictly designated fees, whether for additional computer work stations, more Internet bandwidth, additional on-campus entertainment, or intercollegiate athletics. We recommend that the President explore such possibilities with student leaders and determine what, if any, designated fees students might favor in order to improve the quality of their lives at the University.**

Student Retention and Graduation Rates

According to the data the University of Alaska provided *U.S. News and World Report*, the freshmen retention rates and six-year after matriculation undergraduate graduation rates were as follows in 2008-2009:

	Freshmen Retention Rate	Six-Year Graduation Rate
UAF	**74.8%**	**33.0%**
UAA	**71.0%**	**24.5%**
UAS	**55.0%**	**14.3%**
UCLA	**97.0%**	**89.0%**
U Minnesota	**88.0%**	**68.0%**
Wash State U	**83.0%**	**69.0%**
Col State U	**82.2%**	**64.0%**
Oregon State U	**81.5%**	**60.0%**
U Wyoming	**73.5%**	**55.0%**
U Hawaii	**77.8%**	**48.0%**
Cal State U Chico	**80.8%**	**53.0%**
Cent Wash U	**77.2%**	**54.0%**
E Wash U	**73.8%**	**47.8%**
Weber State U	**71.2%**	**41.5%**
So Utah U	**63.5%**	**40.8%**
So Oregon U	**66.0%**	**36.3%**
Mont St U Billings	**59.5%**	**29.3%**

It will suffice to note that UAF's success rates, especially its graduation rate, are well below national averages for doctoral research institutions. To the extent that UAF wishes to be considered in the same breath as other public flagship state universities, these data do not support such claims. Indeed, *U.S. News* classifies 258 institutions of higher education as "national universities" and it ranks UAF 258 of 258 on that list. UAA and UAS fare somewhat more favorably in the rankings, but against a much less demanding peer group. *"There is no question but that we look bad on many of these measures,"* confessed a UA administrator.

(38) A host of factors can be deduced to account for the disappointing retention and graduation performance of University of Alaska students. The most important appears to be the fact that all three major MAU campuses also function as community colleges and technical institutes. As such, they enroll a wide variety of students who variously have no intent of obtaining a degree, or already know they will move, or are under prepared. Distinctive history and culture, financial pressures and the state's weather possibly all may play a role. It is clear that one reason some students depart from UA is the comparative absence of campus-based, need-based student financial aid.

(39) At the end of the day, it is apparent that UAF, UAA and UAS in many ways are not comparable to many of the state universities to which they are compared. Nevertheless, it is incumbent on the University to do more than it has to find out why the University falls short in this arena and take remedial steps.

Since UAA and UAS are classified by *U.S. News* as comprehensive, master's degree institutions, their retention rates are in the ballpark with respect to national averages. However, both have graduation rates are among the lowest in the nation, providing one eliminates historically black public institutions from the comparison.

If only 15.3 percent of UAS freshmen graduate after six years, then why is this so? Is it because these students are highly mobile and transfer elsewhere, or they did not intend to graduate in the first place, or they are receiving deficient instruction, services and financial aid, or...? How effective actually are the ubiquitous student support services, advising, tutoring, learning communities, Smart Start Program, etc., that focus on assisting students? **(40) We strongly recommend that the President of the University of Alaska make the improvement of student retention and graduation one of his very highest priorities in the next few years. The focus should be upon discerning facts, causes and remedies. To ignore this problem is to waste the resources both of students and the State of Alaska.**

VII. BUDGET, FINANCE AND AUXILIARY SERVICES

Comparatively speaking, the University of Alaska depends more upon state appropriations and less upon student tuition than many other public universities today. While the current level of state appropriations is adequate though not generous, the reliability of those state appropriations often times has been in question. Rising and falling oil prices have introduced *"feast and famine budgets,"* according to one administrator.

One of the most distinctive aspects of public finance in Alaska is the Alaska Permanent Fund, which is a legislatively controlled sovereign wealth fund established in 1976 to manage "surplus" state petroleum revenues. Income into the Permanent Fund comes from a portion of the oil and gas leases, bonuses and royalties as well as from all other non-renewable mineral development. The value of the fund grew as high as $40 billion in 2007. Its current market value is about $34 billion. The fund' invests in equities, bonds, commodities and real estate. Historically, the Fund has earned approximately ten percent annually on its investments and typically spends no more than five percent of its corpus.

Starting in 1982, dividends from the fund's annual growth have been paid out each year to eligible Alaskans, ranging from $331.29 in 1984 to $3,269 in 2008 (which included a one-time $1,200 "Resource Rebate"). The 2009 payment was $1,305 per person. To qualify for the Alaska State Permanent Fund one must have lived in the state for a minimum of 12 months, and maintain constant residency. Alaska's citizens have come to expect such payments, almost in the fashion of annual Christmas presents. Thus, Alaska has neither a state sales tax nor a state income tax.

Of what relevance is all of this to the University of Alaska? First, petroleum-related production peaked in 1988 and by 2010 had declined to only about one-third of their 1988 level. State revenues were protected as the price and new state taxes kept revenues high as production declined. But, as production continues to decline, even accounting for new fields coming on line and prices remaining relatively high, state budgets will tighten and the University of Alaska could be in for tough budgetary times, independent of the national recession.

Second, since oil prices are rather volatile, the University's potential state funding sources are similarly volatile. The University can, and has, ameliorated this problem by increasing its non-state support (for example, from tuition, auxiliary services, research grants, etc.). Plausibly, it will need to do this even more often in the future in order to counter the vicissitudes of state appropriations.

Third, when the day finally arrives when the State of Alaska must consider substituting other tax revenues sources (such as sales or income taxes) for oil revenues, *"There will be a huge, bloody political battle that will go on for decades,"* predicted an elected official. **(41) Alaskans now are among the most lightly taxed citizens in the country and changing this circumstance will neither occur quickly, nor without substantial political carnage. While such discussions occur, however, state financial support for the University of Alaska could dwindle. The University should anticipate such circumstances and begin to model less generous budgets. Unfortunately, we observe the strategic plans of UAF, UAA and UAS largely do not appear to reflect such possibilities and appear to assume, or at least hope for, worlds worthy of Dr. Pangloss.**

The $5.5 million "call back" and internal reallocation recently carried out by UAF provides at least a template for more realistic considerations. At some point in the future, however, **(42) repetitive financial cuts at the margin on all programs spread mediocrity. In the long-term, we believe it would be far better that the University completely eliminate whole programs and departments in order to sustain its support for its most vital and highest quality programs.**

Debt

Both the University of Alaska as a whole and its individual units have acted very conservatively in terms of assuming debt. In FY 10, total debt UA debt was $128 million and the accompanying annual debt service was $13.775 million---only 1.8 percent of UA's total operating revenues for FY 10. This places the UA system well below the 7.0 percent standard that many public institution boards apply to their units. It underlines that the UA System possesses a great capacity to assume additional debt. **(43) We point this out because UA is not**

without needs and might well find it attractive to float bonds for student housing or other revenue-generating activities in the future. Suffice it to say that the UA System has the ability to do so though this would require some reallocations.

Financial Carry Forward

One of the marks of a solid, well-run organization is its ability on a consistent basis to carry forward discretionary, unspent funds into its new fiscal year. These funds provide a cushion against unexpected adverse developments and also can be used to deal with attractive, new opportunities. In the case of UA, the oral tradition among some faculty and staff is that it carries forward huge amounts of funds---literally, that it owns an impressively large savings account that could be spent upon deserving departmental and office priorities.

Whatever may have been true in the past, this is not correct today. As the data below reveal, UA overall and each individual UA unit carried funds forward for FY 10, but not excessively large amounts. These levels of carry forward cash are both prudent and appropriate.

UA Overall	3.1% of operating revenues	$23.2 million
UFA	2.4% of operating revenues	$9.5 million
UAA	3.6% of operating revenues	$9.7 million
UAS	3.7% of operating revenues	$1.7 million
USW	4.6% of operating revenues	$2.2 million

Efficiency of Operation

In contrast to many other campuses in "the lower 48," UA campuses in general receive favorable marks for the efficiency of their physical and financial operations. *"There is pride of place here,"* remarked a dean who complimented UA campuses for maintaining attractive grounds, keeping buildings clean, and repairing minor items. Further, there is general agreement that UA campuses typically manage their money well. They consistently receive quite favorable audit reports and one faculty member quoted only a bit inaccurately the Chicago Bears' venerated George Halas, once accused by Mike Ditka of *"making nickels squeal,"* in pointing

out that UA financial leaders were able to stretch their budgetary funds and use them extremely well.

A variety of university offices, including information technology efforts on each campus, typically receive high marks for service and efficiency. *"They're quick to the mark most of the time,"* praised a faculty member, *"and they know what they are doing."* On the other hand, at this point in their evolution, both the University's fund-raising and alumni arms often are seen as inefficient, not able to generate needed data, and *"bumbling around too often."* The Banner records system also is viewed by many as in impediment rather than a help.

Nevertheless, the major place where the UA System encounters considerable static concerning its efficiency is with respect to perceived overlap in functions and authority between the individual UA campuses and the UA Central System. It would be fair to say that many faculty and administrators simply are unconvinced that additional system administration improves their circumstances. *"We could do many things more efficiently on campus,"* asserted an administrator, who spoke for many. They have in mind many IT and human relations functions, foundation activity, institutional research, academic evaluations, and even collective bargaining. **(44) President Gamble and the Regents should bear this in mind as they consider reorganization.** System administrators portray the classic *"We're from the government and we're here to help you,"* attitude, commented a sarcastic administrator. *"Sometimes they just come looking for work and problems,"* commented a faculty member.

We deal with recommended reorganizations of the UA System in another section**. It is sufficient here to note that the major place in the UA System where commentators see inefficiency is in the UA System Central Office.** Whether or not fair, this is a widely held view.

Public/Private Partnerships

Several campuses expressed to us their need for additional student housing, but simultaneously bemoaned their inability to afford such. UAA and UAF appear to have explored

the possibility of public/private partnerships whereby a private entrepreneur might provide the capital for and construct such housing, and then operate that housing. Those initial efforts were done some years ago and might provide different results if done today. After some period of time, perhaps 30 years, in a lease to own arrangement, UA would own the property.

In such circumstances, the rental charge students pay ordinarily is higher than normal, though the amenities in such residence halls usually are higher as well. Experience on other campuses is that a student clientele usually exists that is attracted such situations and will pay premium rents for somewhat upscale living quarters. To be sure, this model might not fit many Alaska campus situations, but it should not be rejected out of hand because experience in "the lower 48" indicates that it often is viable.

When asked why strategies such as these have not been pursued previously, most informed individuals cited *"a culture of risk aversion," "laws and regulations"* (though no one seemed to be able to say what they were), and an egalitarian *"That's not the Alaska way."* Other than laws and regulations, we do not believe these constitute valid reasons. **(45) We recommend that the President charge appropriate staff with the investigation of public/private partnership possibilities with respect to housing, but also with respect to a variety of other activities that might be carried out jointly (including partially privatized services, joint research and development projects, real estate developments, etc.). The President and the Board ultimately might opt not to do any of these things, but nevertheless should make themselves aware of the potential benefits and costs before it makes its choices.**

VIII. INTERCOLLEGIATE ATHLETICS

Most UAF and UAA intercollegiate athletic teams compete at the NCAA Division II level and those teams belong to the Great Northwest Athletic Conference. UAA's women's basketball team has reached the national Division II semi-finals several times and built several long home winning streaks. UAF teams have won nine national rifle championships. Both institutions' ice hockey teams (men) compete at the "big-time" level in ice hockey and televise many of their road contests. UAA attracts national attention each winter with its Great Alaska Shootout men's basketball tournament that historically has attracted many of the nation's most powerful teams.

UAF is a member of the Central College Hockey Association (CCHA), which includes institutions such as Michigan State, Ohio State and Notre Dame, while UAA competes in the Western Collegiate Hockey Association (WCHA), which includes institutions such as Denver, Minnesota, North Dakota and Wisconsin. It seems possible that some type of merger between the CCHA and WCHA might be in the offing because of financial stresses being experienced by some members.

(46) UAS does not compete in intercollegiate athletics, a circumstance we do not believe should change. While intercollegiate athletic teams might improve UAS's identity, community support and student recruitment, they usually bring with them a variety of problems and expenses. Their operating costs would be high and initiating teams would require major investments and general fund tax subsidies for facilities, staff and travel. This seems an ill-advised course to follow at this stage in UAS's development.

The major challenges confronting the existing UAF and UAA intercollegiate athletic programs are functions of distance and weather. UAF and UAA teams must travel long distances to compete against the other teams in their leagues and this is expensive. In addition, the weather introduces a degree of uncertainty to road trips that sometimes disrupts the best devised plans. Indeed, UAF and UAA teams spend 25 to 40 percent of their annual budgets on travel, whereas a typical team in "the lower 48" spends no more than 15 percent on travel. This

makes intercollegiate athletics at UAF and UAA distinctive and huge money losers on a cash basis. The UAF athletic program received a state general fund subsidy of about $3.2 million this year and UAA about $3.8 million. The opportunity cost (alternative use) for these funds is high. It should be noted, however, that both UAF and UAA cleverly utilize the Western University Exchange (WUE) program to reduce the cost of recruiting selected out-of-state athletes, who often constitute as much as two-thirds of a competitive squad.

One of the most interesting and pleasing aspects of UAF and UAA intercollegiate athletics is the fine academic performances of UAF and UAA athletes, who earn higher grades, drop out less often, and graduate more often than conventional students on each campus.

(47) At the end of the day, however, we recommend that the respective campus chancellors keep a close eye both on programmatic expenses in intercollegiate athletics and the amount of time student athletes are unable to attend scheduled classes because of their lengthy road trips. Intercollegiate athletics have gotten more presidents and chancellors into trouble than virtually anything other than presidential houses. Vigilance, good hiring and observable interest in each university's teams will go a long way toward avoiding scandals.

IX. ADMINISTRATION

There are two fundamental topics of interest here. First, what administrative activities should be centralized? Second, how should the Alaska higher education system be organized?

Centralization/Decentralization

One of several important governance questions that surround the University of Alaska is highly practical---what activities and decisions should be centralized and which of these should be decentralized and largely performed on local campuses? These considerations are complicated by the fact that the University of Alaska System in effect is a collection of three MAU sub-systems (UAF, UAA, UAS) that undertake a variety of activities for the institutions under their sway.

Certain activities clearly are system-wide in character and should be centralized. Determination of the missions of the individual campuses clearly falls within this category. The Board of Regents must not allow institutions to determine their own missions, whether formally or by default. We already have recommended that the missions of UAF, UAA and UAS be refined and that in particular address what will hold true in the future.

(48) While the recipe might differ in other states, there are sound reasons in the case of Alaska to centralize programmatic approvals, technology standards and related major technology resource decisions (such as the adoption of common student, employee and financial records systems), the allocation of capital and buildings, the assessment and formulation of budget requests, the overall allocation of maintenance reserve funds, negotiation of collective bargaining agreements (though we see no reason why each MAU might not have its own CBA and be heavily involved in that negotiation) and fringe benefit programs.

(49) On the other hand, there is no persuasive reason why individual professorial and employee evaluations, nearly all hiring, college and departmental budgets, faculty promotion and tenure, disciplinary specific curricular decisions, the provision of student

services, alumni activities, fund raising and most institutional research should be centralized. Individual campuses are much closer to the action.

(50) Note that much greater individual campus autonomy often is sensible in states that boast much larger financial and population bases and multiple large metropolitan areas. In such circumstances, competition among institutions and the development of distinctive, specialized campuses often is highly desirable. Plainly speaking, we do not believe the State of Alaska has sufficient population and resources to permit such unrestrained competition.

(51) The command and control regulatory model that the UA System has is perceived to have adopted over the past decade is in need of clarification and modification. *"The statewide people act like they're listening, but in reality they've already made up their minds and they're simply trying to look reasonable"* (the telling comment of an administrator whose sentiment was oft repeated). Rather than issue *obiter dicta* from Fairbanks, the UA System administration henceforth should emphasize well-designed incentives (often financial, though sometimes in the form of privileges relating to processes and local decision-making) to its institutions. The institutions will respond if the incentives are intelligently designed, clear and the process is not polluted. They need not be dragooned into certain behaviors. Indeed, they will increase their entrepreneurial behavior if incentives exist for them to do so. We note in passing that entrepreneurial behavior sometimes has been in short supply in the Alaska system of higher education. In any case, institutions predictably react negatively to, and even actively subvert, fiats that seem not to recognize their individual circumstances.

(52) Increasingly, UA Systems executive staff, under the authority of the President, should act as staff to the Board and provide them with analysis and recommendations rather than wielding final administrative authority. If all parties behave intelligently, mutual respect will follow. We note here that central board staff often have earned the respect in similar situations in other states.

(53) One of the more productive functions that the refashioned central staff might accomplish is to encourage the development of joint and cooperative academic programs within the system. The clinical/community psychology doctoral program provides a template for such programs. Courses, faculty and support are shared and students have the ability to benefit from a much larger portfolio of resources and specialties. With appropriate incentives, we are convinced that a variety of other programs could be mounted in the same fashion. We also note in passing that this constitutes a very nice way to provide UAA with additional advanced graduate responsibilities without granting it free-standing doctoral program authority and the concomitant additional costs that inevitably would accompany such a development.

(54) The model we have outlined here assumes that the size of the current UA central staff may be reduced, perhaps in the target range of 60 to 80 positions (down from an estimated 200 today). Note that Virginia, which has a highly regarded public system of higher education, maintains a State Commission for Higher Education with a staff approximating 40. The Virginia system, of course, is less bureaucratic and more entrepreneurially oriented than the UA System. We recommend that the Board allocate some of these savings to the MAUs, some to the support of community college/vocational/technical education, and that some be retained to help provide incentives to encourage desired future behavior.

A New Organization

The University's attempt over the past few decades to seamlessly integrate all post-secondary education into the same administrative structure always has sounded better than it actually has worked. **(55) Recognizing this, the major change we have to recommend is to accord UA's vocational, technical and community college activities much greater prominence and not viewed as *"four-year lite"* (the observation of a sometimes frustrated individual associated with workforce development).**

There are two major reasons to do so. One is that the community college/vocational/technical/work force needs of Alaska are not being served as well as they could be. The other is that inclusion of the performance measures of these units in national higher education statistics and ranking systems has seriously disadvantaged UA.

We do not propose to recreate the former community college system. Instead, we recommend that that each MAU separately address and administer the community colleges, community campuses, and vocational/technical units with individuals attuned to those tasks. For example, at each MAU, there might be a Vice Chancellor for Community Campuses (or however titled).

Each MAU should take pains to see that the same rules and criteria for performance success and failure should not always apply to these units in the same fashion as they apply to the senior colleges. For example**, (56) we do not believe tuition and fees at the community colleges/community campuses/vocational/technical units should be identical to that at the senior campuses. Indeed, they should be lower.**

Further, the statistical results associated with the community colleges/community campuses/vocational/technical units should be reported independently of the senior colleges. This will cure a variety of external visibility and ranking problems.

In addition, in the state's two largest metropolitan areas, formal, named community colleges should be created. In the case of Fairbanks, the Tanana Valley campus already serves some of these purposes. These campuses should permit UAF and UAA to begin slowly to increase their admissions standards and to focus student services. Note that the creation of these community college units definitely does not imply the construction of new campuses.

It is clear that many MAU resources and functions should continue to be provided and shared with these differentiated entities. The point is not to divorce the non-senior units from the senior units, but instead to give them additional attention. Work force leaders in the state will

approve and providing appropriate MAU support still is supplied on matters of concern such as technology, the community colleges/community campuses/vocational/technical units will as well. The State of Alaska should reference the State of Hawai'i in terms of how a community college can be incorporated and administered inside a state university system, sharing some resources, but focusing on different tasks.

X. INSTITUTIONAL ADVANCEMENT

Competition for public and private funds across all states has become intense during the past decade. State colleges and universities have increasingly recognized that the cost of education has made it impossible to compete, thrive, and maintain without a combination of ongoing private gift support and substantial endowment income.

Today, the University of Alaska System is adjusting to 50 years of roller-coaster funding with "boom years" filled with impressive funding for lavish buildings and large federal allocations and flat years in which some staffers state they grappled for office supplies. Administrators admit that the effects of the recession have been deferred in Alaska due to a large reserve fund. However, most observers agree that absent a spike in fuel prices, this fund could be depleted rapidly. State appropriations have been adequate; the reserve has enabled the University to adequately meet obligations. Supplemental sources of funding, long neglected, must be nourished to meet the long-term goals of the University.

Today's higher education environment requires significant participation by private funding sources. The University of Alaska will continually need to secure private dollars that state funds and tuition simply cannot provide.

The condition of institutional advancement—the management of private giving—at the University of Alaska is mediocre at best. Despite some large gifts (mostly of a corporate variety), UA does not have a history of a well-organized contemporary approach that is standard for a comparable system. While we found individuals in the advancement offices to be committed, the credentials and organization are limited. Throughout its history, a number of attempts have been made to organize the institutional advancement function. "*We do a lot of starting and stopping,*" stated a long- time staffer. As a result, the fundraising function has continued to exhibit inconsistent productivity.

On the plus-side, funded research is impressive, particularly at the System's flagship institution. UAF is responsible for the lion's share of the funded research, though UAA has begun to compete in this arena more successfully. UAF reports more than $110 million in externally funded research activity (quite impressive for an institution its size) and UAA about

$10 million. The State of Alaska is a splendid laboratory for a myriad of different types of environmental, resource extraction and conservation research and clearly is the nation's preferred location for cold weather science and studies. UAF, according to one knowledgeable observer, *"dominates the American Geophysical Union"* because of the quantity and quality of its geophysical research.

Obviously, the University's success in procuring external research funding has not been matched by success in private fund raising. While UA has received generous gifts from corporate donors, it has yet to convince most of its own alumni to contribute. The giving rates of alumni to UAF's, UAA's and UAS's annual funds ranges between one and six percent; embarrassingly low (more later). We spoke with alumni throughout the System, and virtually all were very proud of their institutions and their degrees. *"There simply is not a culture of private giving in Alaska,"* commented one individual who spoke for many. This has been accentuated by underdeveloped fund raising organizations and the failure to make fund raising a priority. *"We've always depended upon Ted Stevens and the oil companies to take care of us,"* pithily observed an alumnus. Clearly, this must change.

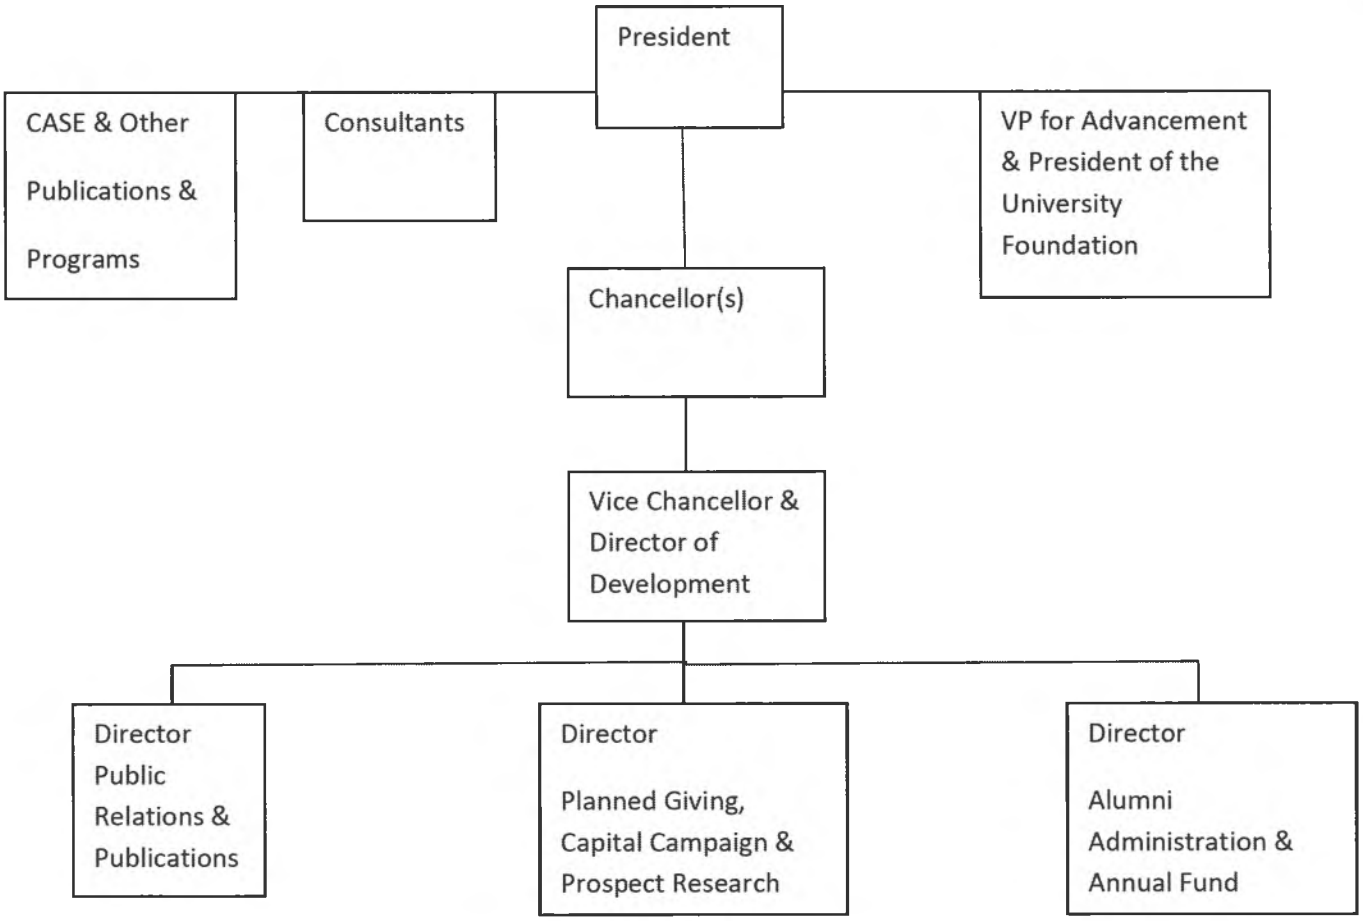
(57) The lesson of "best practice advancement" across all institutional types is three-fold. Members of governing boards must assume responsibility for the advancement effort; it cannot be completely delegated to presidents, no matter how pivotal a role they must play. Second, the governing board, the president, and the professional(s) in charge of the basic functions of advancement—namely alumni relations, communications (incorporating university and government relations), and fund- raising—must work as an integrated team. Every function (alumni, public relations, et. al.) must be related in terms of attracting resources (dollars). Finally, the professionals in charge of these three principal advancement functions must be forward-thinking and broadly competent professionals who enjoy the respect of the academic community they exist to serve. The absence of any one of these characteristics will seriously weaken any institutional advancement program. The University of Alaska, unfortunately, is significantly deficient in most of these areas.

Although created in 1974, the Foundation has not developed a design for private support. The excellent address to the Regents by the current Foundation Board Chair (June 3-4, 2010) points out problems and a proposed solution. Curt Simic, of Indiana University, has been engaged as consultant; he is one of the most respected foundation administrators in the country.

The question from each of the Review team members is: Why did the Foundation wait so long? There is an impressive Foundation staff, and from 1974 to 2010 is a long time. Throughout this period the Council for Support and Advancement of Education (CASE) and others offered meetings, publications and consultancies on fund raising. We also note here that *CASE Currents* listed two conferences held (one in Anchorage and one in Fairbanks) in May 2010 on development for academic officers.

A reconstituted and energized Foundation Board of Directors thoroughly educated in its responsibilities, in agreement on the strategic direction for the institution, and committed to its president will ensure an advancement program that can tap its vast potential. **(58) New Foundation Board of Directors members should be recruited and trained to take responsibility for the fundraising performance of the University.** It is Board members who must open doors. Selection of these volunteer leaders must be done carefully and be well-thought out.

For the year ended June 30, 2010, total private contributions to the University of Alaska Foundation were $16,830,191. Of this total, $13,984,129 came from corporations. A miniscule $495,339 came from alumni with a high of $285,766 at UAF and a low of $5,935 at UAS. The team was unable to determine a "real" alumni participation rate because the calculation method differed among the three main campuses. The market value of the endowment was a respectable $216,424,300 at fiscal year end.



President Gamble has the discipline, energy, and charisma to inspire private support. "*Although he came from the business sector, his experiences with other institutions have provided a perspective that is just what the doctor ordered,*" a staffer noted. It is imperative for the system to capitalize upon his fresh perspective and enthusiasm toward resource acquisition.

What is not yet in place, however, is either the organization that would lead to success, or a commitment by the University of Alaska Foundation Board of Directors to become actively involved in the fundraising process. It is an environment that lacks focus and emphasis. Bluntly put, as indicated in the remarks of the current Foundation Chair, they need to subscribe to the old axiom "give, get or get off."

In interviews with groups and individuals, we were repeatedly told that advancement has not been a high priority for the Board of Regents, Foundation Board, President, or campus Chancellors. "*Nobody questions that staff are well intentioned, very nice people*," one supporter said. "*They (the University) just lack the trained horses—from the top down—to run the race.*"

(59) We suggest a reorganization along the following lines: the office of the President should be the prime agent for corporate research working in close conjunction with the several campuses but virtually all other fund raising activities should be housed in the separate campuses. Typically, alumni and others do not give to systems; indeed, the UA System office is not accredited. Their prime loyalty and sense of obligation is to their individual alma maters, but we note here that whatever, thoughtful consideration should be given to Curt Simic's recommendations.

The Most Efficient and Effective Design for a Fund-Raising Program:

CHARACTERISTICS OF OVERPRODUCTIVE FUND-RAISING PROGRAMS

1. Pay unusual attention to major gifts & planned giving
2. Separate corporate/foundation emphases
3. Telethons
4. Giving clubs & recognition programs
5. High number of names on mailing list
6. High number of solicitation calls
7. Use of technology

(60) The key to private support is relatively simple: do it "right" and support will be forthcoming, and it has not been done "right" in Alaska. The national average for alumni giving is over 17 percent, and some institutions go as high as 60 to 70 percent. The alumni giving percentage is the prime denominator for effective planned giving, capital campaigns and even corporate support. The President and the three Chancellors must each take thoughtful note of this. There are countless publications and conferences available, and Alaska, with its extraordinary academic culture, will be an ideal place to raise support for public higher education. There is only one private institution, Alaska Pacific, and it is relatively small but has a president who appears to appreciate the methodology of fund raising.

If properly administered and directed, fundraising costs should be below 20 percent, and over a five year period, should tend toward 15 percent or lower. It is indeed the case that, "It takes money to raise money." **(61) We recommend staffing the program as necessary and then carefully monitoring the costs. As a guideline, every new dollar spent should generate additional revenues of $6 to $8 over time.**

In light of past accomplishments, assets, and the alumni base, we believe a capital campaign should be considered. **(62) We recommend the employment of an appropriate firm to conduct a feasibility study for a capital campaign. Such a study, independently and anonymously conducted, will test the University's case for private support and help to determine the level of interest by current and prospective donors in providing funding through a comprehensive campaign.** A campaign will bring appropriate focus to the importance of fundraising, and we believe there are tremendous untapped resources. Over time, the impact will be dramatic. **(63) An immediate major gifts and planned giving effort, coupled with the implementation of new processes, should lead to a prompt and positive impact on the "bottom line," engaging alumni and friends in the future of the University while setting the stage for successive campaigns.**

The Chancellors, in coordination with staff or key volunteers, are crucial to soliciting these gifts and providing careful stewardship and attention to this group of donors. Planned gifts

provide examples for others to follow, and the Chancellors, with appropriate help from the President, must be in the forefront of this fund raising activity.

Obviously the significant involvement of major constituencies is crucial to the success of any institution's development program. Students, parents, faculty, alumni, business and government leaders - - all have important roles to play. Key among the leadership groups will be governing boards. For example, a feasibility study determines the direction and board members must be involved as well as other major supporters. Although not all board members are outstanding solicitors, most possess other assets in fulfilling their board responsibilities. In Alaska, Board members can introduce, host, open doors, and endorse the development activities, thus lending the Chancellors and the President critical support in solicitation strategy and implementation.

In this course, outside consulting is an imperative. Noted below are the names of several experienced fund raising consultant firms:

-The Sheridan Group (240-463-1708)

-Barnes & Roche, Inc. (610-527-3244)

-Gonser Gerber Tinker Stuhr (630-505-1433)

-Grenzebach Glier & Associates, Inc. (312-372-4040)

-Ketchum, Inc. (646-935-3900)

-Washburn & McGoldrick, Inc. (518-783-1949)

In a survey of former college presidents, invariably, they indicated that they wished they had more rigorously evaluated every advancement activity (alumni, public relations, publications, et. al.) using development (fund raising) as a model. They also indicated that they had, or wished they had, a development officer in charge of the entire advancement division. For obvious reasons, development officers are by nature inclined to accept performance indices relating to the amount of money raised.

Alumni

The University of Alaska has an estimated 62,000 living alumni. Approximately 80 percent reside in Alaska. Among the more distinguished alumni are:

- Tom Albanese, CEO, Rio Tinto
- Mark Myers, former Director of US Geological Survey
- Syun-Ichi Akasofu, geophysicist and founding director of the International Arctic Research Center
- T. Neil Davis, geophysicist and author
- Curtis Fraser, hockey player
- Otto W. Geist, explorer and naturalist
- Jay S. Hammond, former Governor of Alaska
- Jordan Hendry, hockey player
- Margaret Murie, naturalist and author

UAF, UAA and UAS each maintain their own alumni association; this is a good start. To their credit, the alumni organizations attached to each campus carry out a variety of typical alumni activities including sponsored events, mailings and Internet contacts. What seems to be lacking, however, is a well-defined sense of their mission and purpose---an understanding on their parts of why they are doing what they are doing. The blunt truth is that there is no reason for institutions to sponsor alumni organizations and activities unless those organizations and activities further the educational mission of those institutions. That is, unless there is a positive connection between alumni events and outcomes that an institution desires---notably, enhanced fund raising but also improved admissions, enhanced fund raising, better placement of students, increased political influence, etc.---there is no reason for colleges and universities to sponsor alumni activities. Universities are not social clubs.

As noted above, the annual fund is the cornerstone of successful fund raising programs but today planned giving is at the apex of the development process. Wills, trusts, and pooled income funds preserve institutional quality by establishing endowed scholarships, chairs and professorships.

What is missing at the University of Alaska is the realization that every alumni event and every alumni activity must be directed at improving the University position. It is not sufficient

for alumni associations to assert that alumni like the social events that they sponsor, or that these events keep alumni in touch with the University. What is required is for alumni organizations to plan and carry out events that demonstrably meet the goals of the university. Thus, the associations need to know precisely who attends their events and what, if anything, these people do for the University. Alumni organizations need to know who reads the materials they send, whether via mail or Internet. They need to know how their social networking sites translate to furthering the University's goals.

(64) What is required, then, is a much more analytical, even hard-hearted evaluation of alumni activities and personnel. The bottom line is that either the events and the personnel demonstrably improve the University of Alaska's position, or they should be modified or abandoned. We recommend that each campus analyze its alumni events and personnel to determine the extent to which there is evidence that they actually further UA objectives, particularly alumni and fund raising. As noted below, as is often the case in "the lower 48," we recommend that each of the campus alumni officers be primarily responsible for the annual fund. There is little question that alumni programs can be highly positive tools for institutions of higher education, but one should not automatically assume that this is true. There is often no bridge between friend raising and fund raising; putting the annual fund under an alumni director ensures a marriage between friend raising and fund raising. (The most recent issue of *CASE Currents* in October 2010 includes an article on the integration of alumni relations and development.)

As mentioned above, alumni generally voice strong support for the University of Alaska and indicate appreciation for the quality of the education that received there. However, typically this has not translated into financial support. Data supplied by the University reveal the following:

UAF	3.9% of alumni with addresses made a gift in FY 10
UAA	5.9% of alumni with addresses made a gift in FY 10
UAS	1.3% of alumni with addresses made a gift in FY 10

These figures clearly indicate that there has been no focus in alumni activities upon fund-raising.

Analysis of Web Content and Publications

In the past two years, news developments surrounding former Alaska Governor Sarah Palin and more recently, the Alaska Republican primary and a tragic private plane crash that took the life of Senator Ted Stevens have greatly expanded national and international exposure of the State of Alaska, making it much more visible to Americans in "the lower 48." Good or bad, this enhanced coverage spotlighting Alaska provides an unparalleled opportunity for the University of Alaska System and its member institutions to showcase their strengths to potential students, employers, donors, the national media and other constituencies.

Specifically, the System can use this enhanced, enlarged focus on the State to tell its story and to sell the unique combination of vast natural resources, abundant recreational opportunities, diversified economic strength and multicultural heritage to current and potential stakeholders.

A review of the website and publications indicates that the University of Alaska System both recognizes this opportunity and has already begun to embrace it in a thoughtful, focused and systematic way. In particular, the tagline "Many Traditions One Alaska" and contemporary logo are used consistently and effectively across multiple platforms. In addition, with respect to graphic identity, a "family look" is apparent in both the website and major current publications.

Clear, consistent and compelling messages embracing the above opportunities and also targeting taxpayers and state legislators are evident on both the website and in newer publications. The importance of distance learning and workforce development in a far-flung, rural environment is also addressed strategically.

(65) Additional opportunities remain in creating focus, use of graphics and photography and in targeting future students and families as well as in cross-marketing, using print publications to drive audiences to the excellent website, among others.

System Website

The geographical size of Alaska and remoteness of some constituents makes a clear and compelling website paramount. A review of the homepage as well as interior pages, links to campuses within the system and to key departments and services demonstrates that the System as well as component units have devoted considerable thought and resources to development of a website that is both graphically attractive and highly navigable. The site is clean, clear, student friendly, creative and "fun." The innovative use of contemporary graphics on the homepage is likely to attract potential students and others, while the use of scrolling current news headlines enhances the likelihood of return visits to the site.

While the homepage does contain a lot of information, it is extraordinarily well-organized and does not present a cluttered appearance. A browser can quickly and easily navigate to sites of interest, including links to distance learning, giving and others.

President Gamble's page, easily accessible from the homepage, is well-done, the thumb-nail photo is a good idea, and the site contains helpful cross-links to other sites.

Use of the UA system logo and tagline are consistently repeated and positioned throughout the site on all key pages, though we noted that it is not displayed on the homepages of the member institutions. A standardized, attractive template and palette of colors is apparent throughout the site, with quick links to individual campus sites. Homepages of the latter are also attractively and consistently designed, with good use of the respective institutional logos.

(66) Opportunities to strengthen the System website include stronger use of photography for impact (a need in many publications, as well), a direct link to admissions information for prospective students and families (although it is likely that many would go first to the individual campus sites, which do provide such links) and more interactive features to encourage repeat visits. Many photos on the home page are run too small for maximum impact, and this is also true in many publications. Best practice is fewer photos run larger. Quality of some photos is also mediocre, with too many posed shots of people and not enough showing genuine interaction.

Overall, though, the System and its constituent units can take pride in effective, navigable websites with very fast links.

Messaging

Communications targeting non-students or prospective students and families (these will be addressed later under "admissions publications") are effective in identifying and consistently reinforcing key messages and themes to major stakeholders. These include the following:

- The UA System is a good steward of resources and taxpayer dollars; (legislators, taxpayers, donors);
- The System and campuses deliver a high-quality product cost-effectively in a way (in-person, distance, throughout the state) that potential consumers and employers can utilize;
- The System and its campuses represent a collaborative partner with state employers, business and industry in workforce training and development and especially, in technical education delivered through community colleges;
- The System is progressive and forward-thinking;
- The System and its campuses represent a major resource for the state in health care delivery and other key areas;
- The System and its campuses are a major employer, with a significant economic impact upon the state and communities in which it is located;
- The System acknowledges the multicultural heritage and identity of Alaska and its people as well as the opportunities presented to it by its enormous natural resources and "green" possibilities

Graphic Identity and Use of Tagline in Branding

Use of the very good System tagline, "Many Traditions One Alaska" and attractive, contemporary logos are repeated consistently and effectively throughout the website and publications. Logos of individual campuses appear, appropriately, in subordinate positions as design elements. Newer pieces, "University of Alaska at a Glance,"

"Facts, not Fiction," "Training Tomorrow's Workforce Today" and the piece featuring regents' photos on the back reflect an emphasis on creating a "family look" in design and color

palette. Some older publications do not reflect such design elements, but it is likely that many of these will be phased out and replaced with additional web content.

(67) Publications appearing to target potential students and families feature a secondary tagline, "Learn, engage, change" (University of Alaska Southeast). This, plus a more consistent brand and family look, might be encouraged throughout publications of constituent campuses. For out of state students, who represent a strong source of higher tuition revenue, the advantages of studying in a diverse, outdoors-oriented Pacific Rim environment could appeal to students in many disciplines.

Major System Publications

(68) Photography is an area that needs to be addressed throughout. As noted, many photos are run too small for impact. Too many are obviously posed, showing either no or little interaction, with subjects staring directly into the camera. In others, such as the front page of the Winter 2009 System newsletter, shots of equipment appear with no people for context. Some photos could benefit from tighter cropping. An upgrade in this area would benefit the entire publications and web areas.

System Newsletter

(69) In addition to enhanced photography, as noted above, high-priority needs for this publication are reduced word counts to avoid a cluttered look and to enhance readability and a less static, more contemporary design.

(70) On the front page, for example, the "Inside This Issue" sidebar is much too copy-heavy, discouraging readers from venturing inside. Simple bullets without text would be more effective. Inside features such as "Partnering with business and industry" (pages 2-3, Winter 2009 edition) similarly contain too much "gray." Use of bolding, subheads and larger boxes/screens would make this spread more reader-friendly. Photos without people are uninviting and lack context, and cutlines are too small to read. Call-outs should be run larger with enhanced spacing and leading. Photos bled off the edges of the page would create a less "boxy" look while allowing for greater impact. The use of phone numbers,

websites and e-mail addresses to drive readers to the relevant site at the bottom of the page is effective, but could be run one or two points larger.

(71) Even given budgetary constraints requiring two-color, the second color could be used more effectively in boxes, graduated screens, sidebars and spot color. If budget permits one color signature inside, it would enhance the graphic appearance. More illustration and graphics, in addition to photos, would enhance readability and break up copy.

Content seems appropriate to key constituencies, including employers, legislators and community partners.

If and when this publication is delivered online, a recommendation to encourage readership would be to offer a few pieces in the e-version not available in the print publication, driving audiences to the website.

Other Publications

Generic 4-Panel Color Publication

Primary target audiences for this piece appear to be legislators, taxpayers, donors, employers and the business community and perhaps secondarily, families, students and referral sources.

The piece is attractive and well-designed. Content is appropriate for a generic audience, covering all the bases. The cover is clean and inviting. Use of screens and second color to break up copy is well-executed, although best practice in use of reverse lettering over the dark blue panels would be to run text larger, to screen down the color, or both, for enhanced readability. Heads and subheads are well-displayed. Care has been taken in selection and cropping of photos. The panel displaying the state map with location of campuses and brief blurbs about each campus are effective factoids for potential students. Use of individual campus logos—all very attractive graphically—is well-placed subordinate to the System logo on the front page.

(72) The entire piece, however, appears cluttered, with too much copy and some point sizes too small to read easily. Either a panel needs to be added, or copy needs to be cut in length.

Facts, Not Fiction

This piece is extraordinarily effective graphically, with an attractive color palette and excellent content. If it is not presented online, it should be, perhaps as rotating images on the front page.

(73) Other uses for the "Did You Knows?" could be explored—perhaps as tent cards at System-sponsored events, on the back of business cards, as sidebars in the newsletter, etc.

University of Alaska at a Glance

Evidently designed as a companion piece to "Facts, Not Fiction," the color palette and design of this piece are also attractive and readable. The audience for this publication is unclear. The front panel appears to be designed as a generic stand-alone piece, but the back panel seems to target legislators, donors and taxpayers. The two don't seem to go together. **(74) Again, some of this information – "successes in efficiency" could be presented on a rotating basis on the homepage. Copy on the back panel is crowded, and the graphic, "State Appropriation Comparison" run too small to be easily read.**

"Training Tomorrow's Workforce Today"

This piece, too, appears to be designed as a companion piece to "The University of Alaska at a Glance" and "Facts: Not Fiction," targeting employers, business, industry and educators while showcasing the vital role of community campuses around the state as workforce training centers. It is attractive graphically and contains a large volume of information well-organized and well-presented. The "Partnering for Success" spread could be reprinted as a separate pamphlet for distribution to appropriate audiences and also placed online.

(75) The same comments made above about point size of the font, reduced word counts and use of colored screens behind copy to break up "gray" apply to his publication.

Copy reversed over some sidebars with colored screens is difficult to read because of small type and lack of contrast. While the color palette and use of second, third and fourth colors are effectively graphically, design must always support content and messages.

(76) In addition, while some photos are excellent, well-composed and well-cropped, most are run too small to be effective. Use of bullets to summarize key messages is effective, particularly on the back cover, a space often wasted in publications.

(77) In this and other publications, thought should be given to using them as vehicles to driving audiences to the excellent System website, permitting reduced word counts with additional information available online.

Alaska Career and Technical Education Plan

This report is presented attractively and concisely with consistent messaging; although it contains a great deal of information, use of white space, leading and subheads break up copy for greater readability. The high-quality, coated stock and use of 4-color convey a quality image. Content reinforces messages of quality, innovation, strategic planning and accountability found in other System publications for key constituencies. This is a serious, thoughtful, impressive piece.

Other publications (i.e., "Health Programs," "Finance & Performance Summary") appear to duplicate information found in other publications and might best be replaced with online content and/or integrated into other publications.

Individual Campus/Admissions Publications

It is critical to an effective branding campaign for the System as a whole that individual campus components, while differentiating their offerings and modes of delivery, display consistent messaging and graphics with publications/web content of the System as a whole. This is executed unevenly in regard to individual campus publications.

(78) Most publications reviewed are those of the University of Alaska Southeast. Key messages and graphic identity need to be better integrated with those of the System to

cross-market the brand. This appears to have been done effectively with campus and the System websites, but individual campus publications need to be taken to the next level.

(79) In regard to family look and graphic identity, the UA System logo should appear in a position subordinate to that of the individual campus identity; color palette and design template need to complement that of other campus and System publications.

(80) With regard to messaging and targeting of key audiences, the Alaska Southeast pieces are unfocused and do not seem to target out-of-state students who might enroll because of unparalleled opportunities to live and study in a vast wilderness area that offers opportunities for recreation and fitness not easily found in "the lower 48."

While it is unclear the extent to which the UA System seeks to attract out-of-state students who could generate additional revenue in the form of higher tuition, this audience—especially students in California and the Pacific Northwest—clearly presents a major opportunity for constituent campuses. (The other significant growth opportunity lies in the expansion of distance learning programs and technical/vocational training; existing publications and a dedicated web location seem to adequately address this need.)

With respect to recruiting, program niches capitalizing on Alaska's huge natural resources and environmental concerns could target students interested in "green" careers such as environmental science, sustainable engineering and architecture and others.

(81) Recruiting publications targeting potential students, families and referral sources need to showcase academic programs building on Alaska's unique strengths and capabilities, creating interest and excitement among out-of-state students. In addition, outcomes should be more strongly emphasized: what can a student gain from a UA education that he or she might not obtain from an out-of-state institution? System campuses might consider adding a dedicated "outcomes" page to their websites, with a link from the System site.

(82) Finally, the System might consider investing in a comprehensive publications audit (CASE and others will undertake these free of charge) and also reviewing CASE and other award winners in the "admissions" area to enhance its offerings.

Summary

The scenic beauty, abundant outdoor activities, fitness-oriented lifestyle offering synergy with "green" academic niches and careers and multicultural nature of Alaska, coupled with enhanced national exposure, offer the University of Alaska System a window of opportunity to upgrade and enhance its web presence and publications to fully capitalize on these strengths and developments.

While the existing website is strong and well-integrated with that of constituent campuses, more thought and focus need to be placed on the plethora of publications. Many could likely be eliminated and incorporated into existing web content. Others, especially in the recruiting area, need to be honed with a tighter, more compelling and focused message on the advantages of living and studying in Alaska. Integrated branding and messaging throughout the System and campus publications would strengthen an already strong external and internal communications program.

XI. PLANNING: STRATEGIC AND PHYSICAL

Strategic

The existing strategic plans of the UA System, UAF, UAA and UAS are notable for presenting lofty ambitions. The plans represent classic "wish" documents that for the most part portray what the System and campuses would like to do and become. As such, they often challenge reality. Further, the individual campus strategic plans sometimes stretch the missions of those institutions.

Strategic plans can and should depict aspirations, but the most useful strategic plans ultimately are realistic. They detail the costs of objectives, the sources of funds, who will be responsible for implementation, time lines for implementation, metrics for evaluation, who will evaluate, and when the evaluation will occur. The UA strategic plans often omit one or more of these of critical considerations. Consequently, they are valuable primarily in expressing the aspirations of the System and the campuses. **(83) We recommend that the System and the individual campuses generate new strategic plans that accurately reflect their respective missions, are realistic in terms of their financial implications, and clearly indicate funds sources, responsibility for implementation, and time lines for implementation and assessment.**

As these new strategic plans are generated, all should understand that most strategic plans are out of date the day they are approved because of the dynamic nature of the world in which higher education operates. Because this is so, strategic plans should not be regarded as straitjackets; even the best ones nearly always are in need of updating.

The most valuable outcome of strategic planning often is the analysis and conversations that emanate from them. Well orchestrated strategic planning processes bring together all critical campus constituencies. Both participants and observers gain improved understanding of their institutions' strengths and weaknesses as well as the critical variables in their environments. Good strategic plans result in broad participation, enhanced realism, and critical buy-in

concerning institutional futures. These are valuable results that are somewhat independent of the content of the plans.

(84) In our view, however, before additional strategic planning occurs, it is essential that action be taken to clarify the missions of the respective institutions and that it deal explicitly with the future roles of UAF and UAA. This may well be contentious, but is necessary if the UA System is to maximize its impact and serve the citizens of the State of Alaska in the best possible fashion. Anticipated future financial constraints serve to underline the importance of mission discussions.

Physical Planning

The Board and the UA System Office have done a commendable job in planning and implementing the physical expansion of the 16-campus system. Simultaneously, they have expanded the system into many remote areas of the state, fueled the growth of the UAA campus with a steady stream of new buildings, given reality to the UAS campus, and have provided support for critical research initiatives on the UAF campus.

Well done. However, while most of these needs will continue in the future, the financial capabilities of the system may require a different tenor of decisions. It seems likely that new building construction will decelerate; that distance learning will assume increased importance; and, that maintaining UA's current physical plant will become an even more pressing consideration.

With regard to deferred maintenance, UA reports that it now has $800 million in deferred maintenance projects. This translates to an imposing $43,000 per FTE student and $587,000 per FTE faculty member. It cannot be long before an increasing number of UA facilities are partially or totally unusable because of leaky roofs, inoperative HVAC systems, etc. **(85) We recommend that the President and the Board of Regents meet with the Governor, legislative leaders and citizens throughout the state to outline the full implications of the deferred maintenance challenge and to propose solutions. It is the obligation of the state to**

maintain its physical assets; that is clear. However, the state's willingness to invest in that obligation might increase if the UA System were to propose some substitutions of refurbished, energy efficient buildings for new construction, greater use of technology and distance learning to serve additional students, and a significant reduction in the size of the UA System office. The possibility of earmarked student fees for maintenance of classroom buildings also should be explored, provided the state at least matches student contributions. Proposals of this ilk may antagonize some parties. Nevertheless, action is needed and both the size of the deferred maintenance problem and the likelihood that the state's financial position will deteriorate in the next few years require innovative solutions and compromise.

APPENDIX A

James L. Fisher

Review Team Chair

A registered psychologist with a Ph.D. from Northwestern University, James L. Fisher is President Emeritus of the Council for Advancement & Support of Education (CASE) and President Emeritus of Towson University. He has taught at Northwestern, Illinois State, Johns Hopkins, Harvard, and the University of Georgia. He coined the term institutional review and has conducted hundreds of institutional and governance reviews for public and private institutions and systems. He also conducts presidential searches, presidential evaluations and contracts and serves as counsel to presidents and boards.

He has written scores of professional articles and has also been published in such popular media as *The New York Times*, *The Washington Times*, *The Baltimore Sun, and the Palm Beach Post*. The author or editor of eleven books, his book, *The Board and the President*, "clearly established him as the nation's leading authority on the college presidency," wrote Michael Worth of George Washington University reviewing in *Currents*. His *The Power of the Presidency* was reviewed in *Change* magazine as "... the most important book ever written on the college presidency" and was nominated for the non-fiction Pulitzer Prize. His book, *Presidential Leadership: Making a Difference*, has been reviewed as "...a major, impressive, immensely instructive book, ...a virtual Dr. Spock for aspiring or new college presidents, and ...a must read for all trustees." *The Entrepreneurial College President* (2004) is "...a Bible for those who are presidents..." and "...those engaged in research...," *The Journal of Higher Education* and *Interactive Reviews*. His newest book on corporate CEOs, *Born, Not Made: The Entrepreneurial Personality*, was recently published.

Dr. Fisher has been a trustee at ten private colleges and universities and two preparatory schools. A former Marine, he presently serves as a board member of the Marine Corps University, Marine Military Academy, Millikin University, and Florida Institute of Technology. He has received awards for teaching, writing, citizenship and leadership and has been awarded twelve honorary degrees. At Illinois State, The Outstanding Thesis Award was named by the faculty, The James L. Fisher Thesis Award. The faculty at Towson University recommended that the new psychology building be named after him, and the CASE Distinguished Service to Education Award bears his name.

Gordon K. Davies

Biography

Gordon Davies served as the Director of the State Council of Higher Education for Virginia from 1977 until 1997, and as President of the Kentucky Council on Postsecondary Education from 1998 until 2002. He has taught at Yale University, Richard Stockton State College, the Teachers College of Columbia University, and Birzeit University in Palestine. He was a founding dean of Richard Stockton State College in New Jersey. Born in New York City, he is a Navy veteran and worked for several years in computer sales for the IBM Corporation. His earned degrees are from Yale University in English (BA) and the Philosophy of Religion (MA, PhD).

He currently serves as a senior adviser to a Lumina Foundation project, Making Opportunities Affordable, and to the Miller Center of Public Affairs at the University of Virginia. From 2002 through 2006, he directed a project to improve state higher education policy making. Funding for the project was provided by The Pew Charitable Trusts.

In 2007, he served on a panel appointed by Virginia Governor, Tim Kaine, to investigate shootings at Virginia Tech that left 33 people dead and 17 wounded on April 16, 2007.

During the academic year 2009-10 he taught at Birzeit University.

James V. Koch

Biography

James V. Koch is Board of Visitors Professor of Economics and President Emeritus at Old Dominion University, Norfolk, VA. Dr. Koch served as President of Old Dominion from 1990-2001. Prior to that, he was President of the University of Montana, 1986-1990. An Exxon Foundation study of American college presidents selected him as one of the 100 most effective college presidents in the United States. During his tenure at Old Dominion, the University recorded its first Rhodes Scholar, developed the largest televised, interactive distance learning system in the United States, and initiated more than $300 million in new construction.

Dr. Koch is an economist who has published nine books and 90 refereed journal articles in the field. His *Industrial Organization and Prices* was the leading text in this specialty for several years. The focus of his current research is the economics of e-commerce. He has taught at institutions ranging from Illinois State University to Brown University, the University of Hawaii, and the Royal Melbourne Institute of Technology. He has been individually or collectively involved in the assessment of more than 30 presidents and institutions of higher education.

Dr. Koch earned his Ph.D. degree in Economics from Northwestern University. He has received three honorary doctoral degrees from universities in Japan and Korea and has received a host of honors from organizations such as the Urban League, the National Association for the Advancement of Colored People, and several regional economic development agencies.

Scott D. Miller
Biography

Scott D. Miller is President of Bethany College in West Virginia and M.M. Cochran Professor of Leadership Studies. Respected as one of the most entrepreneurial higher education executives in America, Dr. Miller is in his twentieth year as a college president.

Dr. Miller came to Bethany with the same innovative spirit that enabled him to transform Wesley College in Delaware during his 10-and-a-half-year tenure as President of the College and Du Pont Professor of Leadership Studies. Dr. Miller launched a comprehensive 10-year master plan "Wesley College: From Here to 2010," resulting in the construction of $40 million worth of campus facilities including an Academic Village (student residences), an honors house, new athletic complex, tripling of enrollment, creation of a satellite campus in northern Delaware, acquisition of the historic Schwartz Center for the Performing Arts, and the addition of several new graduate, undergraduate, and non-traditional academic programs. The "Campaign for Wesley" raised more than $67 million. He was named President-emeritus in 2007, and the Wesley National Alumni Association initiated the Dr. Scott D. Miller Leadership Scholarships. The entire sports complex was named the Scott D. Miller Stadium.

Prior to Wesley, he served for seven years (1991-97) as president of Lincoln Memorial University in Tennessee, where he was executive vice president (1988-91) and vice president for development (1984-88). He also served as Director of College Relations and Alumni Affairs at Rio Grande College (now University) in Ohio. Known as an accomplished fundraiser, Dr. Miller has raised more than $140 million in his years as a college president.

During his career, he has earned a number of professional accolades including three Council for Advancement and Support of Education (CASE) "Circle of Excellence Awards." He was one of 17 presidents profiled in a Kauffman Foundation-funded book, "The Entrepreneurial College President." He was featured as one of six transformational case studies profiled in "Weathering Turbulent Times"; as one of four transformational case studies profiled in "The Small College Guide to Financial Health"; and was noted in "Born, Not Made: The Entrepreneurial Personality."

Dr. Miller is a regular columnist for "College Planning and Management" and "The State Journal." He is the author of a widely distributed e-newsletter, "The President's Letter," which is received by more than 12,000 subscribers. He is the co-executive editor of "Presidential Perspectives," an on-line presidential thought series that has resulted in four books, and he recently co-published a second volume of "President to President: Views on Technology in Higher Education."

He has written more than one hundred articles and written or edited eight books, most with his long-time co-author, Dr. Marylouise Fennell, a former college president and current senior counsel for the Washington, DC-based Council of Independent Colleges, of which Dr. Miller is a former board member and officer. He continues to chair the acclaimed CIC New Presidents Program.

Dr. Miller earned an M.A. from the University of Dayton, an Ed.S. from Vanderbilt University, and a Ph.D. in higher education administration from The Union Institute & University. His doctoral dissertation was a landmark study of resource development effectiveness at the 38 institutions with membership in the Appalachian College Association.

James T. Rogers

Biography

As chief executive officer of the Commission on Colleges of the Southern Association of Colleges and Schools, James Travis Rogers provided leadership toward improving the quality of education throughout the South. His work involved accreditation of degree-granting postsecondary institutions in an 11 - state region. A former Navy pilot and college president, he is also known for the leadership he has provided countless professional and civic organizations.

Dr. Rogers was named in 1985 to his position as Executive Director of the Commission on Colleges of the Southern Association of Colleges and Schools after a fifteen-year career as President of Brenau College (now called Brenau University in Gainesville, Georgia). Prior to becoming the President of Brenau, he held various teaching and administrative positions, including that of Director of Student Personnel at Pensacola Junior College and Dean of Student Affairs at Armstrong State College (now called Armstrong Atlantic State University) in Savannah.

A native of Cleveland, Mississippi, he graduated from high school and went on to Delta State University in his hometown to earn a B.S degree in biology. From 1956 to 1960, he served in the U.S. Navy as a pilot and flight instructor, attaining the rank of lieutenant commander. After his naval service, Rogers returned to graduate school at Florida State University where he received a doctorate in administration and higher education. At FSU he was elected into a number of honor societies including Phi Kappa Phi and Phi Delta Kappa, and held a Kellogg Graduate Fellowship.

Rogers has written for various publications and has spoken at college commencements, high school graduations, honors day convocations, and association functions. Topics have encompassed a broad range including management theory, leadership, academic issues, student activism, and institutional effectiveness.

Teacher Certification

Types of Certificates Available

- **Initial Teacher Certificate**
- **Professional Teacher Certificate**
- **Master Teacher Certificate**
- **Type B Administrative Certificate**
- **Type C Special Services Certificate**
- **Reemployment Certificate - Type B and C**
- **Retired (Lifetime) Certificate**
- **Type E Early Childhood Certificate**
- **Type M Limited Certificate**
- **Limited Type I Certificate for Instructional Aides**

INITIAL TEACHER CERTIFICATION

To qualify for an Initial certificate, an applicant must meet the following requirements:

- Bachelor's degree or higher from a regionally accredited institution
- Completion of a teacher preparation program

OR

- Current enrollment in a teacher preparation program (Program must be completed within two (2) years of the issuance of the Initial certificate)

NOTE: Program enrollment cannot be used for individuals enrolled in special education programs. Those individuals must complete their program prior to applying for the Initial certificate.

- Passing **scores** on an approved basic competency exam
- Fingerprint cards submitted with application for background check
- Complete application and fees (*All fees are non-refundable.*)

A one-year teaching certificate may be issued for applicants who have not yet met the testing requirement, but hold a current, valid teaching certificate in another state (out-of-country certificates are not accepted). Official passing scores on an approved **basic competency exam** must be received by the Teacher Certification office within exactly one year from the date the application is received by the Teacher Certification office. Upon receipt of official scores, the Initial certificate will be reissued for one more year.

The Initial Certificate is valid for three (3) years and is NON-RENEWABLE. Although the Initial Certificate is valid for a period of up to three years, you are required to:

1. Under AS 14.20.020 (h) to complete the Alaska studies and Alaska multicultural requirement within two (2) years from the issuance of your Initial Certificate.

The requirements for the Professional or Master certificate must be met during the life of the Initial certificate.

UNDER NO CIRCUMSTANCES MAY TRANSCRIPTS BE SENT DIRECTLY TO TEACHER CERTIFICATION.

PROFESSIONAL TEACHER CERTIFICATION

To qualify for a Professional certificate, an applicant must meet the following requirements:

- Held an Initial Tier I certificate
- Completion of a teacher preparation program
- Approved **Alaska Studies** coursework
- Approved **Multicultural/Cross-Cultural Communications** coursework
- Recency credit (six semester hours of credit in the previous five years)
- Passing scores on a **content area exam**
- Verification of current employment in an Alaska public school district in a position requiring a certificate or fingerprint card submitted with application
- Complete application and fees (*All fees are non-refundable.*)

The Professional certificate is valid for five (5) years and is renewable. To renew a Professional certificate, an applicant must meet the following requirements:

- Recency credit (six semester hours of credit taken during the life of the Professional certificate being renewed. A minimum of three semester hours must be upper division or graduate credit.)
- Verification of current employment in an Alaska public school district in a position requiring a certificate. If an applicant is not employed in this capacity at the time of renewal, fingerprint cards will be required.
- Complete application and fees

MASTER TEACHER CERTIFICATION

To qualify for a Master certificate, an applicant must meet the following requirements:

- Meet all requirements for the **Professional** certificate
- Hold a current Initial or Professional certificate
- Hold current National Board certification issued by NBPTS
- Complete application and fees

The Master certificate is valid for ten (10) years and is renewable. To renew a Master certificate, an applicant must meet the following requirements:

- Current, renewed National Board certification
- Recency credit (Six semester hours of credit taken during the life of the Professional certificate being renewed. A minimum of three semester hours must be upper division or graduate credit.)
- Verification of employment in an Alaska public school district in a position requiring a certificate. If an applicant is not employed in this capacity at the time of renewal, fingerprint cards will be required.
- Complete application and fees (*All fees are non-refundable.*)

If the requirements to renew a Master certificate have not been met, an applicant must meet all current renewal requirements for the **Professional** certificate.

Special Education
If you wish to teach special education to children with disabilities, you must, in addition to meeting other requirements for teacher certification, secure an endorsement based upon completion of an approved teacher training program in special education.

Preschool Handicapped
If you wish to teach preschool handicapped children and are not eligible for an endorsement in preschool handicapped education, you must have completed at least six (6) semester hours in early childhood special education in addition to a teaching certificate. (This does not constitute an endorsement.)

Gifted
If you wish to teach gifted children, you must, in addition to meeting requirements for teacher certification, have completed at least six (6) semester hours in gifted education. (This does not constitute an endorsement.)

Vocational Education
If you wish to teach vocational trades, you must have an endorsement in vocational education or a Type M Limited

Certificate.

TYPE B ADMINISTRATIVE CERTIFICATE

What do I need to receive a five-year Type B Administrative Certificate?

- At least three (3) years experience as a certificated teacher or special service provider
- Completion of an approved teacher education program in school administration
- Master's degree or higher from a regionally accredited institution
- Recommendation of the preparing institution
- Six (6) semester hours or nine quarter hours of credit earned during the five-year period preceding the date of application (See below.)
- Three (3) semester hours of approved Alaska studies and three semester hours of approved multicultural education/cross-cultural communications (See below.)
- Complete application packet, which includes a signed and notarized application, the institutional recommendation form, official transcripts, two sets of completed fingerprint cards, and all processing fees (*All fees are non-refundable.*)

Applicants meeting all other requirements for certification, but who lack six (6) semester hours of credit earned during the five-year period preceding the date of application, may apply for a non-renewable Temporary Certificate, valid for one year.

Applicants meeting all other requirements for certification, but who lack three (3) semester hours of credit in Alaska studies and/or three (3) semester hours of credit in multicultural education or cross-cultural communications, may apply for a non-renewable Provisional Certificate, valid for two years.

The list of approved courses which meet the Alaska Studies and Multicultural Education/Cross-Cultural Communications requirements is available at **www.eed.state.ak.us/teachercertification** under the Certification Requirements header.

Superintendent
Superintendent endorsements require a completed Institutional Recommendation showing completion of an approved superintendency program from a regionally accredited university and verification of at least five years of employment as a classroom teacher or administrator. (At least three years must have been satisfactory employment as a teacher with a teaching certificate or comparable certificate issued by another state. At least one year must have been satisfactory employment as an administrator with a Type B certificate or comparable certificate from another state.)

Special Education Administrator
Special education administrator endorsements require a completed Institutional Recommendation showing completion of an approved special education administrative program from a regionally accredited university and verification of at least three years of employment as a certified special education teacher or school psychologist, with a teaching or special services certificate or comparable certificate issued by another state.

If you wish to be employed solely as the administrator of special education and are not eligible for a special education administrator endorsement, you must possess both a Type B certificate **and** a teaching certificate endorsed for special education or for a related services specialty. (This does not constitute an endorsement.)
4 AAC 12.350

Please note: To be assigned as a classroom teacher in Alaska, you must have a valid teacher certificate. The Type B does not allow the holder to be a classroom teacher.

If you currently hold a valid Alaska teaching certificate and are applying for a Type B certificate, you are considered an initial applicant for the Type B.

TYPE C SPECIAL SERVICES CERTIFICATE

What do I need to receive a five-year Type C Special Services Certificate?

- Completion of a program in a special service area
- Bachelor's or higher degree
- Recommendation of the preparing institution
- Six semester hours or nine (9) quarter hours of credit taken within the past five years
- Three (3) semester hours of approved Alaska studies and three (3) semester hours of multicultural education/cross-cultural communications
- Complete application packet, which includes a signed and notarized application, an institutional recommendation form, official transcripts, two sets of completed fingerprint cards, and all fees. (All fees are non-refundable.)

Applicants who do not meet the requirements of six (6) semester hours of credit earned in the prior five years, but who meet other requirements, may be eligible to apply for a Temporary Certificate valid for one year.

Applicants meeting all other requirements for certification, but who lack three (3) semester hours of credit in Alaska studies and three (3) semester hours of credit in multicultural education or cross-cultural communications, may apply for a Provisional Certificate.

Endorsements under a Type C certificate include audiology, occupational therapy, physical therapy, school nursing, school psychology, school psychometry, school social work, speech pathology, school counselor, and library science-media.

School Psychology
For an endorsement in school psychology, you must also hold a master's or higher degree in school psychology; be recommended by an institution whose school psychology program has been approved by NCATE, the National Association of School Psychologists, or the American Psychological Association; and have completed a 1200 hour internship (with 600 of the hours in a school setting); or be certified under the certification system of the National Association of School Psychologists.

Speech, Language, or Hearing
For endorsement in speech, language, or hearing, you must hold either a master's or higher degree with a major emphasis in speech-language pathology, audiology, or speech-language and hearing science; or possess certification of clinical competence from the American Speech Language-Hearing Association. In addition, you must be recommended for endorsement by an institution with a program approved by NCATE or the American Speech-Language-Hearing Association.

Other
If you wish to be employed to provide such services as speech or language pathology, school psychology, school counseling, orientation and mobility, psychometry, library and/or media services, or school nursing, you must have a Type C Special Services Certificate endorsed in the field of employment.

Please note: A Type C certificate does not qualify the holder for assignment as a classroom teacher or school administrator.

REEMPLOYMENT CERTIFICATE - TYPE B AND C

Applicants who held a certificate that has been expired for over 12 months may be eligible for the Reemployment Certificate. The Reemployment Certificate is valid for one year, effective the date the complete application packet is received in the office of Teacher Education and Certification and is not renewable. During this year, the applicant shall complete all current requirements for the Regular five-year certificate and submit an application. Click below to review the requirements for Regular certification.

- **Type B Administrative Certificate**
- **Type C Special Services Certificate**

Special Notes About the Reemployment Certificate:

1. A Reemployment Certificate is non-renewable. After holding a Reemployment certificate, applicants are only eligible to apply for the Regular five-year certificate, and will not qualify for Temporary or Provisional certification. Before applying for the Regular five-year certificate, applicants must meet all current requirements for certification. **It is the responsibility of the applicant to know what all current certification requirements are.**
2. The endorsements on the Reemployment certificate will be the same as those on my expired administrative or special services certificate.
3. During the life of the Reemployment certificate no endorsements may be added or removed.

RETIRED (LIFETIME) CERTIFICATE

Do I qualify for a Retired certificate?
Anyone who retired from teaching while holding a valid Alaska teaching certificate will qualify to apply for the Retired certificate. You are not required to hold a current Alaska teaching certificate in order to be eligible for the Retired certificate. To verify the effective dates of your Alaska certificate, e-mail **Teacher Certification**.

How many university credits do I need to have in order to apply for the Retired Certificate?
None. You will not need to show completion of any course work in order to apply for the Retired certificate.

How long is the certificate valid?
The Retired certificate is a lifetime certificate.

What forms do I need to apply for the Retired Certificate?
To apply for the Retired certificate, you will need the Retired Certification application. To download the correct application forms, visit the Teacher Certification website at
http://www.eed.state.ak.us/teachercertification/

Will I need to be fingerprinted?
A background clearance is required of all Retired certification applicants who have not previously passed a criminal background check with EED for teacher certification. E-mail **Teacher Certification** and a certification analyst will review your file to determine if fingerprint cards will need to be submitted with your application.

What do I need to submit to EED in my application packet?
All application packets for Retired certification must include the following items:

- Retired Certification application
- Certificate fee of $165 (*All fees are non-refundable.*)
- 2 fingerprint cards (if necessary)
- Fingerprint processing fee of $66 (if necessary)

What does the Retired Certificate allow me to do?
The Retired certificate will allow you to accept short-term substituting positions (any position not more than 20 days in length) with an Alaska public school district. While holding the Retired certificate you are eligible to be paid at a certified rate. (4 AAC 12.380)

Does the Retired Certificate pose any restrictions?
While holding a Retired certificate you may not be in a contracted position requiring a certificate in an Alaska public school district. You are specifically limited to short-term substituting positions and may not accept any long-term positions greater than 20 days in length. (4 AAC 12.380)

TYPE E EARLY CHILDHOOD CERTIFICATE

What is an associate certificate in early childhood education?
The Early Childhood Education certificate is a renewable five-year certificate for those who help in preschools or as instructional aides in public school primary classes. It does not allow the holder to be a regular classroom teacher.
What do I need to receive a Type E associate certificate in early childhood education?

- For an Associate I, you'll need either a Childhood Development Associate (CDA) award or the completion of a 30-credit college program that includes at least 400 hours of supervised practice.
- For an Associate II, you'll need an Associate I plus an approved associate degree (AA) program in early childhood education.

TYPE M LIMITED CERTIFICATE

Who qualifies for a Limited Certificate?

If you can demonstrate subject matter expertise and teaching competency as verified by the local school district,

but do not have a bachelor's degree because such a program is not sufficiently available, you may be eligible for a Limited Certificate in one of these specialty areas:

- Alaska Native language or culture
- military science
- vocational or technical course.

The Limited Certificate must be requested by the local school board, through its chief school administrator. The request must be accompanied by two letters of recommendation verifying the applicant's length of experience and competency in the specialty field.

Please note: A Limited Certificate is valid only in the requesting district. The holder of a Limited Certificate may teach only in the area(s) of endorsement, as indicated on the Limited Certificate.

Alaska Native Language or Culture
For a Limited Certificate in Alaska Native language or culture, you must submit a resume demonstrating competency in an Alaska Native language or a minimum of four year's experience involving an Alaska Native culture, as determined by the school district.

Military Science
For a Limited Certificate in military science, you must meet the criteria of the United States Department of Defense to be a Junior Reserve Officer Training Corps instructor, as verified by the local school district. In addition, you must submit a resume demonstrating competency in the military science area.

Vocational/Technical
For a Limited Certificate in a vocational trade or technical specialty, you must have completed four (4) or more years of full-time work experience in a trade or vocational pursuit, no more than two (2) years of which is formal training in a trade school or technical institute.

LIMITED TYPE I CERTIFICATE FOR INSTRUCTIONAL AIDES

What is the Limited Certificate for Instruction Aides (Type I)?

This certificate is designed to assist experienced instructional aides nominated by their school districts in completing the statutory requirements for full teacher certification. The certificate coordinates the efforts of the applicant, the nominating district, and an approved teacher preparation program toward the applicant's completion of a baccalaureate degree, an approved teacher preparation program, and passage of the Praxis I examination within a four-year time frame beginning with the 2004-2005 school year.

If your meet the following requirements, you are eligible for a Limited Type I certificate:

- nomination by your current employing school district;
- at least three (3) years of successful employment there as an instructional aide;
- expertise in the local Alaska Native culture;
- enrollment in a college or university program leading to a bachelor's degree, the completion of an approved teacher preparation program, and passing scores on the Praxis I teacher tests; and
- a contract among you, your district, and your college or university, outlining annual milestones for you and support from the district and institution.

A Type I certificate is valid for one school year and may be renewed up to three times. The department will base its renewal determination on its review of documentation establishing the parties' full conformance with the contract terms.

An application packet for a Type I certificate requires:

- a completed application form signed by the superintendent of the nominating district;
- a contract detailing the education plan with annual milestones signed by you, the superintendent of your school district, and your approved teacher preparation program's certifying official;
- Proof of Program Enrollment form signed by the college or university;
- Official transcripts;
- a resume verified by the school district and demonstrating at least four (4) years of experience involving the local Alaska Native culture and at least three (3) years as an instructional aide in the district;
- two letters of recommendation from member of the local Native community attesting to cultural expertise;
- two completed FBI fingerprint cards; and
- the fees for the certificate and required fingerprint processing.

The University of Alaska Fairbanks' Rural Educator Preparation Partnership (REPP) and Alaska Pacific University's Rural Alaska Native Adult (RANA) programs are currently working with school districts to help prepare local residents for teaching careers.

The addition of this certificate meets the board's desire to promote the development of more "home grown" teachers. It will benefit students by giving them teachers with a deep understanding of the cultural heritage of Alaska Native students. It will benefit schools and districts both with better stability in classrooms through local hire and with the new teachers' local knowledge to assist their less culturally experienced colleagues. It will benefit communities economically by allowing members to bootstrap themselves up the professional ladder and educationally by offering the most appropriate educational opportunities to children. And it will benefit individuals by allowing them the opportunity to pursue their professional goals without sacrificing their culture.

AGENDA

JOINT HOUSE/SENATE EDUCATION COMMITTEE

Wednesday, January 25, 2012

8:00 a.m. – 9:00 a.m.

Ramona Barnes Committee Room, #124 Capitol Building

\+ ***Presentations:***
Alaska Early Childhood Coordinating Council

\+ Representative Dick – State Intervention in Schools (HB 256)

* First Hearing
= Previously Heard
+ Teleconferenced

Meeting Script – Wednesday, January 25, 2012 – JOINT MEETING

CHAIRMAN MEYER

The JOINT EDUCATION COMMITTEE meeting is called to order.

Today is Wednesday, January 25, 2012, the time is 8 o'clock. Senate members present are:

- Co-Chair Thomas
- *(Vice-Chair)* Senator Davis
- Senator Stevens
- Senator French
- and myself, Senator Meyer.

I will let **Chair Dick** introduce the House members.

{House Introductions}

Welcome everybody.

First, is there any business to come before the committee before we get started?

Seeing none…

…Today the JOINT COMMITTEE will hear a presentation from the Alaska Early Childhood Coordinating Council. We're expecting to spend about ½ hour on their presentation. During the second half of the JOINT COMMITTEE meeting this morning, we will hear from Representative Dick on the subject of his House Bill 256, which is on state intervention in schools. This topic has been generating quite a bit of discussion lately, so it will be a good opportunity for members of both houses to hear some background. **We expect to have both presentations wrapped up by 9 o'clock.**

Alaska Early Childhood
Coordinating Council
Presentation to Joint House and
Senate Education Committees
January 25, 2012

Acknowledgement of Council Members

Establishment of Council

As part of the Head Start Reauthorization Act of 2007, states were required to establish State Advisory Councils on Early Childhood Education and Care, which have also come to be known as Early Childhood Advisory Councils

Mission

Promote positive development, improved health outcomes, and school readiness for children prenatal through age eight by creating a culturally responsive, comprehensive, and accessible service delivery system that links service providers, empowers families, and engages communities. The AECCC shall support the creation of a unified, sustainable system of early care, health, education, and family support for young children and their families.

Purpose of Council

Facilitate the integration and alignment of services, planning efforts, resources, policy development, and funding as well as establish connections between health, mental health, education, and family support systems and public and private partners.

Accomplishments of Council

- Met face-to-face four times
- Committees established to carry out Council work between meetings
- Identified Council priorities
- Inventory Project
- Early Childhood Resource Directory

Council Priorities

1. Expand early childhood services to 5,000 new children and families through in home and out of home services.

2. Identify methods to increase the pay in early childhood settings, particularly for those with higher degrees.

3. Implement the QRIS (Quality Rating and Improvement System) plan including an implementation time-line of activities and funding.

Priorities continued

4. Increase awareness of the Alaska Early Learning Guidelines (ELGs) by coordinating efforts (public and private) to include the "universal" early care and learning workforce (parents; extended family, community).

5. Embed "Strengthening Families" protective factors through systems across the board to include grant proposals, policies, materials development, and sustainability of long-term funding efforts.

Priorities continued

6. Support and promote a local partnerships grant process to invest in early childhood and family support.

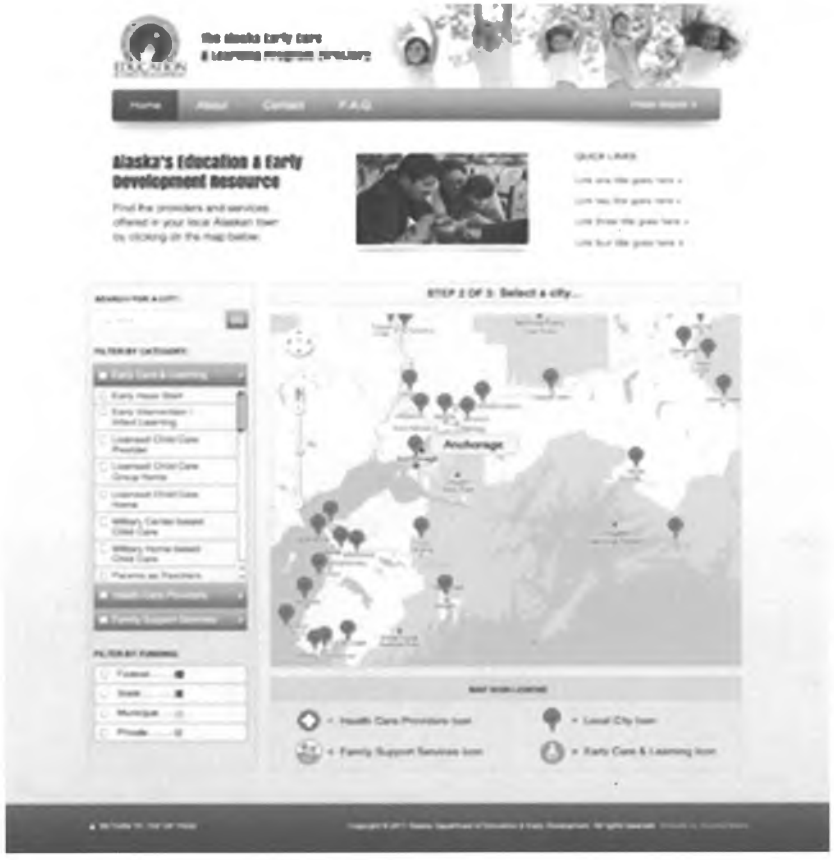
7. Seek to ensure every child will have full access to well-child exams that follow the Alaska Periodicity Schedule which is based on the recommendations of the American Academy of Pediatrics.

Committees

- Policy
- Workforce Development
- Family Support
- Early Care and Learning
- Health and Mental Health

Inventory Project

- Identify early care and learning services
- Program types identified in the Inventory include:
  - Head Start/Early Head Start
  - Licensed Child Care Centers, Homes, and Group Homes
  - Military Child Care Centers and Homes
  - Parents as Teachers
  - Infant Learning/Early Intervention
  - Pre-elementary programs including:
    - Pilot Pre-elementary Programs (AP3)
    - School District Pre-elementary Programs
    - Private Pre-elementary Programs



Inventory continued

- Three phases to date:
  - Early Care and Learning Program Inventory [June 2011]
    - 394 communities in 53 school districts across 9 program types
  - Regional Analysis [Fall/Winter 2011-2012]
    - Regional numbers & percentages of children participating in programs by program type as compared to statewide numbers
  - Community Analysis [Winter/Spring 2011-2012]
    - numbers & percentages of children who participate in these programs by community
    - distribution by program type of all children participating in those programs
    - For communities of 2000 or more compare enrollment and distribution with aggregate regional and state data

Early Childhood Resources Directory

Strategic Report

The Council will produce a report for the Governor and Legislature that will:

- identify opportunities for, and barriers to, collaboration and coordination of early childhood programs and services.
- provide recommendations for:
  - increasing the overall participation of children in early childhood programs
  - a unified, statewide early childhood data collection system
  - a statewide professional development system
  - developing and improving high-quality comprehensive early learning standards
- assess the capacity and effectiveness of public and private institutions of higher education to prepare early childhood workforce

Questions

Introduction and Background Preceding Testimony Regarding Intervention in Alaskan Schools

Statewide, there are many districts that need help. Some are in intervention status.

Under NCLB, *EVERY* district in the Nation will be out of compliance by 2014.

Our current Intervention model needs a huge change-
from punitive to cooperative.

During the interim, I did my best to work with DEED to resolve the problems, but failed.

Therefore, we are here today.

Intervention School Districts

Elements that impact Alaska's intervention model

- History of REAA's
- NCLB
- Moore/Kasaylie Cases

Brief History of REAA's

- 1905 Territorial and Federal systems.
- 1951 Shift began from BIA to Territorial schools.
  (Johnson-O'Malley Act 1931-34)
- 1971 SOS Created- Rural schools only
- 1975 AUBSD …… a time of transition
- 21 REAA's created in 1976 (Tobeluk Consent Decree. Anna Tobeluk)

In 1985 Akiak, Akiachak and Tuluksak became Yupiit School District. Other shuffling went on.

- The good, total local control the bad, & the school boards

  (AASB 1957/ Carl Rose 1988)
- 1991 Former Governor Walter Hickel directed former Commissioner of Ed. Jerry Covey to develop a plan to improve state schools including content standards.

During the early years of REAA's, we discovered that school districts need accountability.

During more recent years, we have also discovered that total authority cannot be given to DEED. The Department also needs accountability.

The Problem

DEED strategies are not working in Yupiit and other intervention districts.

Test scores have gone down in Yupiit in the past three years.

The frustration level on the ground is high.

DEED personnel have brought division between the local administration and teachers.

Teacher turnover is high, so professional development brings only short term benefit.

Simple requests for cooperation have been ignored.

Judge Gleason in the Moore Case:

- Called for a trustee to oversee the workings of the district
- Insisted, over fifty times, on cooperation and collaboration.

DEED installed a trustee that has not been able to work with the district, yet DEED continues to ignore requests for collaboration and cooperation by the district.

School Board Relationships

Originally, the Alaska State Legislature was the school board for the REAAs.

In 1975 the Alaskan Legislature delegated that authority to an elected school board of each REAA district, providing local control and oversight for local schools.

Each REAA school has an advisory school board that makes recommendations to the REAA Board.

The State of Alaska has a Board of Education to whom the Department of Education answers.

Not one member of Alaska BOE lives in a REAA.

Not one BOE member lives in an intervention district… *Good folks*, but little personal knowledge of intervention districts.

NCLB (2001-2002)

States must show a timeline of how every student will be proficient by 2014.

Fact: By 2014 every district in the Nation will be out of compliance.

Schools must make AYP (Annual Yearly Progress)

All states choose their own tests and decide what "proficient" means.

Students are tested in grades 3-8, and again in HS.

There are a few (+) and many (-) of NCLB.

NCLB: If a district doesn't make AYP

- Year 1 Notification
- Year 2 Right to transfer schools
- Year 3 Free Tutoring
- Year 4 Corrective Action: Change staff or curriculum
- Year 5 Restructure. The district must choose from the following:
    1. Convert to charter school
    2. Replace principal and staff
    3. Turn over to private management
    4. Turn over to the State
    5. Other Restructuring.

Again, by 2014, *no* district will be in compliance with NCLB.

There is a real *and* deep fear in Alaska, even among some of the best school districts that, as 2014 approaches, DEED will use its authority to intervene and interfere with the local school budget.

MOORE & KASAYLIE CASES

KASAYLIE CASE 1997 said: State's method of funding capitol projects for education violates the education clause and the equal protection clause of the Alaska State Constitution and Title VI of the Federal Civil Rights Act of 1964.

The Kasaylie Case is about buildings.

MOORE CASE 2007 said: State violated Education Clause… it failed to identify the schools that are not according children a meaningful opportunity and is not providing a concerted effort to remedy the situation. (CEAAC- Citizens for the Educational Advancement of Alaska's Children.)

The Moore Case is about instruction.

Governor Parnell, Former Attorney General John Burns and Commissioner Hanley must truly be congratulated for their efforts on both cases.

Moore Case

State said "You wanted and got local control. Now you want us to fix your problem?" "We have spent a tremendous amount of money on this case, and that money could have gone to instruction."

CEAAC said, "Every child, both urban and rural has a right to a quality education in preparation for higher education or a meaningful career of choice. The State has a role in insuring that teachers are prepared, and districts receive the support they need to provide that education." "If you had worked with us in the beginning, we would not have needed this court case."

The educational atmosphere has been highly toxic with emotion and contention. Educational issues have gone to court that should have been settled "in house."

Other

- $7M from 2010. How $ dispersed? Over $4M went back to the Public School fund with three districts still in intervention.
- Trustee Darrel Sanborn. Icon of Department's authority. $193K/year for 10-14 days a month on the ground.

My strategy

- Show how DEED in Intervention districts, especially Yupiit, is counterproductive and has not followed its own SOSS manual.
- Suggest positive strategies for helping the districts that need it.

SOSS Ops Manual

6 domains- 10 elements

6 Domains:

1. Curriculum
2. Assessment
3. Instruction
4. Professional Development
5. Leadership
6. Supportive learning environment

1) Alignment of Curriculum to Standards
2) Accurate Assessment
3) Educational and Financial Plans
4) Expertise Through Coaches
5) Good Instructional Techniques
6) Supportive Learning Environment
7) Parent Involvement
8) Good Professional Development
9) Visionary Leadership
10) Instructional strategies that are aligned to curriculum and address the needs of diverse learners.

Coming…

- Demonstration of how I believe DEED has not followed its own manual for the best interest of intervention districts.
- Positive suggestions for action in intervention districts that must include collaboration and cooperation.
- "What's wrong and how to fix it." Aligning Mission, methodology and metric in all of Alaska's schools.

Just as tone of voice is important in interpersonal communication,

the “Spirit” in which intervention is carried out is critical in dealing with school districts that need help.

CONFIR-
MATIONS
2011

<TARGET><BILL></BILL><SUBJECT>CONFIRMATIONS
2011</SUBJECT><COMM>SEDC27</COMM></TARGET>

Meeting Script – Monday, March 28, 2011 – Confirmations

CHAIRMAN MEYER

The JOINT EDUCATION COMMITTEE meeting is called to order.

Today is Monday, March 28, 2011, the time is _____. Senate members present are: Co-Chair Thomas, Senator Davis, Senator Stevens, Senator French, and myself, Senator Meyer.

I will let **Chair Representative Dick** introduce the House members.

{House Introductions}

Is there any business to come before the committee before we get started?

Today the JOINT COMMITTEE will hear from the Governor's nominees for the:

- Board of Education and Early Development,
- Professional Teaching Practices Commission, and
- Board of Regents.

All members should have a packet with the nominees' resumes and additional information on the boards and commissions that are before us today.

We'll get started with the nominees for the State Board of Education and Early Development.

The Board is composed of 7 members appointed by the Governor as follows:

- 1 representing each judicial district
- 3 at-large
- At least 1 representing regional educational attendance areas
- The term is 5 years

The Board regulates public elementary and secondary education in Alaska, and regulates the state library, museums and archives. The Board appoints the Commissioner of Education and Early Development with the approval of the Governor, approves the department's budget, establishes statewide goals for education, requires each school district governing body to adopt goals, and may adopt bylaws for the management of the department. Additionally, the Board serves as the governing body for Mt. Edgecumbe High School.

The first nominee is **Pat Shier**, nominee for the Board of Education and Early Development, who we have here with us today. Mr. Shier was originally appointed March 1st, 2007, and was reappointed by the Governor as of March 1st of this year.

Mr. Shier, welcome to the JOINT EDUCATION COMMITTEE. If you would, please join us, put yourself on the record and tell us why you're interested in serving on the State Board of Education and Early Development.

{PAT SHIER}

Are there any questions for Mr. Shier from the Committee?

{Committee Comments, Questions, Discussion}

Thank you. Are there any further questions or comments?

Seeing none, unless there is objection, the Senate and House Education Committees will forward Mr. Shier's name on to a joint session of the legislature for consideration.

As a reminder, this does not reflect any intent by any of the members to vote for or against the confirmation of the nominee during any further sessions.

Next we will hear from the nominees for the Professional Teaching Practices Commission.

The Commission is comprised of 9 members appointed by the Governor as follows:

- They must be actively engaged in teaching profession for 5 years immediately preceding the appointment
- There must be 5 classroom teachers
- 1 principal
- 1 superintendent
- 1 department representative
- 1 higher education representative
- And all of the appointees must have been selected from respective associations
- The term is 3 years

The Commission develops criteria of professional practices in areas of ethics, performance, professional services, and contractual obligations. It holds hearings to judge and sanction educators not meeting standards established by the Commission, and may suspend or revoke certificates of educators based on reasons set out in statute (AS 14.20.030).

The first nominee for the Commission is **Stephen (STEVEN) Atwater,** who is joining us via teleconference. I believe this is his first appointment to the Commission.

Mr. Atwater, welcome to the JOINT EDUCATION COMMITTEE. If you would, please put yourself on the record and tell us why you're interested in serving on the Professional Teaching Practices Commission.

{STEPHEN ATWATER}

Are there any questions for Mr. Atwater from the Committee?

{Committee Comments, Questions, Discussion}

Thank you. Are there any further questions or comments?

Seeing none, unless there is objection, the Senate and House Education Committees will forward Mr. Atwater's name on to a joint session of the legislature for consideration.

As a reminder, this does not reflect any intent by any of the members to vote for or against the confirmation of the nominee during any further sessions.

The next nominee for the Commission is, **Richard Lum,** who is here with us today. This is his second appointment to the Commission, with his first appointment in January of 2008.

Mr. Lum, welcome to the JOINT EDUCATION COMMITTEE. If you would, please join us, put yourself on the record and tell us why you're interested in serving on the Professional Teaching Practices Commission.

{RICHARD LUM}

Are there any questions for Mr. Lum from the Committee?

{Committee Comments, Questions, Discussion}

Thank you. Are there any further questions or comments?

Seeing none, unless there is objection, the Senate and House Education Committees will forward Mr. Lum's name on to a joint session of the legislature for consideration.

As a reminder, this does not reflect any intent by any of the members to vote for or against the confirmation of the nominee during any further sessions.

Next we will hear from the nominees for the University of Alaska Board of Regents.

The Board of Regents is comprised of 11 members who each serve an 8-year term, and are appointed by the Governor. The board was established by the Alaska Constitution and is responsible for University of Alaska policy and management through the University President.

The first nominee for the Board of Regents is **Jo Heckman**, joining us via teleconference. This is her first appointment to the Regents.

Ms. Heckman, welcome to the JOINT EDUCATION COMMITTEE. Please put yourself on the record and tell us why you're interested in serving on the Board of Regents.

{JO HECKMAN}

Are there any questions for Ms. Heckman from the Committee?

{Committee Comments, Questions, Discussion}

Thank you. Are there any further questions or comments?

Seeing none, unless there is objection, the Senate and House Education Committees will forward Ms. Heckman's name on to a joint session of the legislature for consideration.

As a reminder, this does not reflect any intent by any of the members to vote for or against the confirmation of the nominee during any further sessions.

The next nominee for the Board of Regents is, **Michael Powers,** who is joining us via teleconference. This is his first appointment to the Board of Regents.

Mr. Powers, welcome to the JOINT EDUCATION COMMITTEE. If you would, please join us, put yourself on the record and tell us why you're interested in serving on the Board of Regents.

{MICHAEL POWERS}

Are there any questions for Mr. Powers from the Committee?

{Committee Comments, Questions, Discussion}

Thank you. Are there any further questions or comments?

Seeing none, unless there is objection, the Senate and House Education Committees will forward Mr. Power's name on to a joint session of the legislature for consideration.

As a reminder, this does not reflect any intent by any of the members to vote for or against the confirmation of the nominee during any further sessions.

This concludes the hearings on the Governor's appointments for the House and Senate Education Committees.

Members of the Senate Education Committee will sign the Confirmation Committee Report to forward the nominees' names to the full body for consideration at a joint floor session on April 8th.

{REPRESENTATIVE DICK – House members will sign the Confirmation Committee Report for the House Education Committee, to forward the nominees' names to the full body for consideration at a joint floor session April 8th.}

As a reminder, the Senate Education Committee's next meeting will be Wednesday, March 30, at 8:00 a.m. in the Beltz Room. We will hear from several groups on Pre-K and early education programs in relation to Senator Davis and Senator French's SB 6. *<Murray is lining these groups up>*

I understand the House Education Committee will continue their meeting this morning, so I will pass the gavel to **Representative Dick** and with that, the JOINT EDUCATION COMMITTEE meeting is adjourned.

Generic Questions

1. Pat Shier -- Board of Education and Early Development
2. Richard Lum – Professional Teaching Practices Commission
3. Stephen Atwater – Professional Teaching Practices Commission
4. Jyotsna "Jo" Heckman – Board of Regents
5. Michael Powers – Board of Regents

1) What do you bring to this position that you believe is unique? What do you have to offer this particular commission/board?
2) What do you think are the challenges facing your particular commission/board?
3) **[For Pat Shier]** As a home-schooler, what have you been able to bring to the Board of Education? How you think your home school experience helps you in making policy for the state's public schools.
4) **[For Mike]** There has been a bill in the legislature to establish a medical school in Alaska. From your perspective as a hospital administrator, how do you see the University of Alaska providing medical education in the state?
5) **[For Jo]** As an influential businesswoman in the state, how well do you think the University is preparing students to enter the business world? Do you have any suggestions on what ~~they~~ could do differently?

ALASKA STATUTES

Sec. 39.05.080. Procedure for all appointments.

Except as otherwise provided in a law relating to the positions or memberships on a specific board or commission, appointment to a position or membership shall be made in the following manner:

(1) Each governor shall present to the legislature the names of the persons appointed by that governor; each governor may present the name of a person appointed by a previous governor; only presentment that occurs during the time that the legislature is in regular session constitutes presentment under this section. The governor shall, within the first 15 days after the legislature convenes in regular session, present to the legislature for confirmation the names of the following persons: (A) persons appointed to a position or membership who have not previously been confirmed by the legislature, and (B) persons to be appointed to fill a position or membership the term of which will expire on or before March 1 during that session of the legislature. If an appointment is made after the first 15 days after the convening of the regular session but while the legislature is in regular session, the governor shall immediately present to the legislature for confirmation the name of the person appointed.

(2) When appointments are presented to the legislature for confirmation,

(A) the presiding officer of each house shall assign the name of each appointee to a standing committee of that house for a hearing, report, and recommendation; standing committees of the two houses assigned the same person's name for consideration may meet jointly to consider the qualifications of the person appointed and may issue either a separate or a joint report and recommendation concerning that person; then

(B) the legislature shall, before the end of the regular session in which the appointments are presented, in joint session assembled, act on the appointments by confirming or declining to confirm by a majority vote of all of the members the appointments presented.

(3) When the legislature declines to confirm an appointment, the legislature shall notify the governor of its action and a vacancy in the position or membership exists which the governor shall fill by making a new appointment. The governor may not appoint again the same person whose confirmation was refused for the same position or membership during the regular session of the legislature at which confirmation was refused. The person whose name is refused for appointment by the legislature may not thereafter be appointed to the same position or membership during the interim between regular legislative sessions. Failure of the legislature to act to confirm or decline to confirm an appointment during the regular session in which the appointment was presented is tantamount to a declination of confirmation on the day the regular session adjourns.

(4) Pending confirmation or rejection of appointment by the legislature, persons appointed shall exercise the functions, have the powers, and be charged with the duties prescribed by law for the appointive positions or membership. However, the duration of an appointment made during the time period between regular sessions of the legislature by a person who is not still the governor on the first day of the next regular session ends on the date during the next regular session that the sitting governor presents for confirmation an appointment to the office. For the purpose of applying laws that limit the number of terms or parts of terms that may be served by a member of a board or commission, the part of the term of office that is served under an interim appointment immediately before the member is reappointed under this paragraph is considered to be merged with the part of the term of office that is served immediately after reappointment so that the two periods of service constitute only one part of a term. The duration of an appointment made during

a regular session of the legislature and not presented to the legislature by the governor during that session ends no later than the last day of that session. The duration of an appointment made during an interim by a governor who is not in office at the beginning of the next regular session of the legislature ends no later than the last day of that regular session unless the governor who is in office during that session presents the person's name for confirmation. The same governor may not appoint the same person to the same position or membership if the person's appointment ends because of the governor's failure to present the person's name for confirmation.

Sec. 14.40.150. Appointment of regents.

(a) The governor shall appoint the regents subject to confirmation by a majority of all the members of the legislature in joint session. The names of those appointed shall be sent to the legislature within five days after the opening of the session, for confirmation or rejection. If a person appointed is not confirmed by a majority vote of all the members of the legislature, the appointment ceases and the name of another person shall be submitted within three days after the rejection. If the legislature adjourns without confirming the nominee, or if an interim vacancy occurs, the governor may appoint a qualified person to fill the vacancy. However, the person who has failed to be confirmed may not be appointed. The term of office of the appointee expires on the fifth day of the session of the legislature following the appointment.

(b) At least one member of the Board of Regents must be a student. The student shall be appointed from a list of nominees submitted to the governor. The governor shall make the appointment from the list within 60 days after it is submitted. The list shall consist of the names of two students from each campus of the University of Alaska after an election is held at each campus. Elections shall be conducted under rules established by the Office of the Governor. The term of office of the regent appointed from the general student body, University of Alaska, is for two years. The term of office begins June 1 of the year in which the appointment is made. An appointment made under AS 14.40.130 (d) shall be for the unexpired term of the original appointee. The term "campus" used in this subsection means a portion of the University of Alaska designated as a "campus" by the Board of Regents.

AS 14.08.031. Regional Educational Attendance Areas.

(a) The Department of Commerce, Community, and Economic Development in consultation with the Department of Education and Early Development and local communities shall divide the unorganized borough into educational service areas using the boundaries or sub-boundaries of the regional corporations established under the Alaska Native Claims Settlement Act, unless by referendum a community votes to merge with another community contiguous to it but within the boundaries or sub-boundaries of another regional corporation.

(b) An educational service area established in the unorganized borough under (a) of this section constitutes a regional educational attendance area. As far as practicable, each regional educational attendance area shall contain an integrated socio-economic, linguistically and culturally homogeneous area. In the formation of the regional educational attendance areas, consideration shall be given to the transportation and communication network to facilitate the administration of education and communication between communities that comprise the area. Whenever possible, municipalities, other governmental or regional corporate entities, drainage basins, and other identifiable geographic features shall be used in describing the boundaries of the regional school attendance areas.

(c) Military reservation schools shall be included in a regional educational attendance area. However, operation of military reservation schools by a city or borough school district may be required by the department under AS 14.12.020 (a) and AS 14.14.110 . Where the operation of the military reservation schools in a regional educational attendance area by a city or borough school district is required by the department, the military

reservation is not considered part of the regional educational attendance area for the purposes of regional school board membership or elections.

Boards & Commissions Factsheets
EDUCATION and EARLY DEVELOPMENT

Board: Board of Education and Early Development
Board identification number: 029

Department: DEPARTMENT OF EDUCATION AND EARLY DEVELOPMENT

Authority: AS 14.07.075; AS 14.35.020

Status: Active

Sunset date:

Requirements: Legislative Confirmation and Financial Disclosure

Prohibitions: No member may be a candidate for partisan political office while serving; no more than 4 shall be of the same political party as the Governor.

Term: 5 years

Description: 7 members appointed by governor: with consideration of recommendations made by recognized educational associations in the state; 1 representing each judicial district; 3 at-large; at least 1 representing regional educational attendance areas. Board designates chair. Members serve at pleasure of the Governor. (Non-voting advisory members include: student representative nominated by the Board of Directors of the Alaska Association of Student Governments and selected by the board; and military representative nominated by the ranking General of the Alaska Command and selected by the board -- 4 AAC 03.025). Student representative serves 1-year term beginning July 1 and expiring June 30.

Function: Regulates public elementary and secondary education in Alaska, and regulates the state library, museums and archives. Appoints the Commissioner of Education & Early Development with the governor's approval. Approves the department's budget. Establishes statewide goals for education and requires each school district governing body to adopt goals. Serves as governing body for Mt. Edgecumbe High School. May adopt bylaws for the management of the department.

Chair: Board selects.

Special facts: Quorum - 4 members. Serve at the pleasure of the governor.

Compensation: Standard Travel and Per Diem. No additional compensation.

Meetings: At least quarterly in Juneau unless majority of board members changes site; usually 6-8 mtgs/year.

Shier, Patrick

Board of Educ. and Early Dev.

Patrick Shier

OBJECTIVE:

Director, Retirement and Benefits: Leverage recently acquired program knowledge to provide outstanding support to the Administration. To improve economic and social well-being of Alaskans and Alaskan families through efficient and reasonable administration of the Division.

EXPERIENCE:

4/2007 to present

Director, Division of Retirement and Benefits Alaska Department of Administration, Juneau, AK.

Full authority and responsibility for the operation of the Division of Retirement and Benefits in the Alaska Department of Administration, including all personnel actions, budget preparation and execution (over $13 million/yr), law and regulation compliance for programs affecting over 72,000 health plan participants in Alaska and out of state, 32,000 retirees receiving monthly benefits and 260 employers within the State who report wages, service and pay retirement system contributions of over $250 million, annually. Administer, account for and oversee health plan spending exceeding $500 million annually.

Support the Commissioner in the role of Alaska Retirement Management Board trustee, and acts as staff to the Board for the purposes of annual retirement system rate-setting and analysis.

During my tenure we have improved services, secured data and improved division systems independently and in concert with other divisions and departments, all during a time of growing customer bases (approx. 4% retiree growth/yr) and simultaneously handling several significant events such as a contractor security breech and sweeping federal health care law changes. The Division achieved several Denali Awards and adopted the Character First curriculum for improving Division culture and performance. I also supported Administration legislative efforts under the supervision of the Commissioner and Deputy Commissioner, and have developed a positive reputation among most legislators and staff.

Constituent groups include public employees, retirees, municipalities, school districts, labor organizations, medical providers, other departments, legislators and staff and various nonprofit organizations.

Several fundamenta, systemic overhaul initiatives in the Division are underway including data system remediation, document imaging, distance delivery of services, Division integration (removing silos) and system accountabilty. These initiatives are thoroughly described in the Division strategic plan, and promise to permit the customer base to grow (retirees) without adding additional employees.

6/2001 to 4/2007

Chief of Tax and Program Integrity Alaska Department of Labor & Workforce Development, ESD Juneau, AK. Complete oversight and perfomance responsibility for the Employment Security Tax, Quality control and Benefit Payment Control (fraud

and overpayment) functions of the Department: including budget, planning, personnel, projects, legislative issues, federal issues, operational innovations, improved integration with other sections within the division and other agencies o/s the division/department. Combined budget exceeding $4mm, Collection of over $120mm, annually.

6/1997 to 6/2001 (10/1988 to 6/1997, Field Auditor, Fairbanks Office)

Supervisor Audit Operations Alaska Department of Labor and Workforce Development, ESD, ES Tax Juneau, AK, with offices statewide.
Responsible for the successful operation of 6 field tax offices and central office, including budget, personnel, planning and performance review, reorganization and improvement of daily function, improved internal/external customer relations. Participated in numerous cases involving legislative inquiries, bill analysis, and special projects for the Director and Commissioner, frequent assigned to solve difficult employer cases.

1/1981 to 10/1988

Licensed Agent and Licensed Solicitor State Farm Insurance Companies Juneau, AK and Fairbanks AK.
Full service insurance agent: advertising, sales, account service, personnel management of professional staff, training. Specialized in Commercial lines, fire, health and life insurance for large and small employers, Chamber of Commerce.

BOARDS

- State Board of Education and Early Development (3/2007 to present)
- Alaska Home Educators Alliance (2006 to 2009)
- State of Alaska Health Benefits Evaluation Committee (1992 to 2007)
- ASEA Executive Board (1995-97)
- Community Christian Counseling Center, Juneau (President, 2005 to 2007)
- Church Elder Board (2006 - present)
- Civil Air Patrol Public Affairs Officer (3 years)

ACHIEVEMENTS:

- Implemented many procedural and organizational changes; result: improved service to internal and external customers (evaluations available on request), improved information security, Accounts Receivable at historic lows, quality of audits greatly improved (accountability).
- Negotiate with extremely difficult/sensitive constituents; result: compliance through understanding. Used as opportunities to improve our service, innovate.
- Recipient, Denali Award for Leadership, 2009
- Elected/Reelected: union Executive Board, Bargaining Team ('89-93) and Health Insurance Review committee ('90 to 2007).
- Private Pilot, Civil Air Patrol member, 2 documented saves.
- Home school parent of three children.

ETS Acting Director, Pat Shier

Pat Shier was appointed as Acting Director of Enterprise Technology Services in February 2011. He is an experienced manager with strong communication, financial management and leadership skills. He will serve as acting Director for ETS until a permanent replacement is named.

Prior to joining ETS, Pat managed the Division of Retirement & Benefits where he emphasized innovation and refinement of the employer and member services sections of the Division: Retirement, Benefits (health and life), Information Services, Accounting and Administrative Support. He received the Denali Award for Individual Leadership in 2009. Earlier in his State career, Shier was the Deputy Director of the Employment Security Division for two years in the Department of Labor & Workforce Development. During his tenure at Labor, Shier was also Chief of Unemployment Insurance Tax, serving over 17,000 Alaska employers. His initial position with the State, in 1988, was as an auditor. During his state service, Shier has been elected to the Executive Board of ASEA/AFSCME Local 52 in 1992, serving in health plan oversight and advisory roles for both the general government and supervisory units until early 2007.

Shier was born in Fairbanks. He attended Washington State University and the University of Alaska Fairbanks, studying accounting. Having grown up around some of the aviation greats of Alaska, he became hooked on flying at an early age and has continued his private pilot avocation. He contributes both time and piloting expertise to the Civil Air Patrol on a routine basis.

In the private sector, Shier has worked in the banking, insurance, and utility industries, in Fairbanks as well as Juneau.

ALASKA CONSTITUTION

HEALTH, EDUCATION AND WELFARE

Section 7.1 - Public Education.

The legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions. Schools and institutions so established shall be free from sectarian control. No money shall be paid from public funds for the direct benefit of any religious or other private educational institution.

Section 7.2 - State University.

The University of Alaska is hereby established as the state university and constituted a body corporate. It shall have title to all real and personal property now or hereafter set aside for or conveyed to it. Its property shall be administered and disposed of according to law.

Section 7.3 - Board of Regents.

The University of Alaska shall be governed by a board of regents. The regents shall be appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session. The board shall, in accordance with law, formulate policy and appoint the president of the university. He shall be the executive officer of the board.

Jyotsna Heckman

Education
BBA, MBA from UAF, Alaska
Graduate School of Banking, Georgetown Univ. Washington DC
Graduate School of Lending, Southern Methodist University, Dallas TX

Bio
President and CEO
Denali State Bank
Jo Heckman, born and raised in India, came to Fairbanks in 1975 in order to attend the University of Alaska, Fairbanks. Her academic career culminated in 1985 and includes a Master's degree in Business.

One of the original founders of Denali State Bank, which opened its doors in 1986; Heckman occupied various positions within the bank including administration, operations, information systems, marketing, and human resources. In 2003 Heckman succeeded Gary Roth as bank president and thus enjoyed the unique distinction of becoming the first female bank president and CEO in Alaska. That very same year, U.S. Banker magazine declared Heckman one of 25 women to watch in banking. Today, she oversees over 90 employees and five branches in interior Alaska.

In addition to her professional accomplishments, Heckman is active in various community and civic organizations, including the United Way, Foraker Group, Alaska Community Fund, UAF Alumni Association, Rotary, and Greater Fairbanks Chamber of Commerce. Heckman also sits on UAF Chancellor's Board of Visitors.

Jo Heckman has received recognition throughout her professional career, including the University of Alaska Alumni Association's William Cashen Service Award, the Farthest North Girl Scouts Council's Woman of Distinction honor, and the University of Alaska Fairbanks Distinguished Alumnus Award. In 2008, the University of Alaska Fairbanks Associated Students of Business organization honored Heckman with the Business Leader of the Year Award.

1978 BA - English Literature, Lawrence University, Appleton, WI

EXPERIENCE
1986 BANNER HEALTH - Fairbanks Memorial Hospital & Denali Center, Fairbanks, AK
A non-profit 152-bed hospital and 90-bed skilled nursing facility. Gross revenue of $350M, 250,000
Present square mile service area, and over 1,200 employees. FMH/DC is owned by the Greater Fairbanks Community Hospital Foundation, and leased to and operated by Banner Health.

CEO/Administrator (1995 to Present); CFO/Associate Administrator (1986-1995)

Responsibilities: Provide overall strategic, operational and financial direction and analysis of FMHDC activities to ensure stability and access to acute patient care in Interior Alaska. FMHDC was awarded the American Hospital Association's "Living the Vision Award" which was one of two such awards given to American hospitals in 2006 based on their outreach and support to their communities.

Accomplishments:
• Led Fairbanks Memorial Hospital through four unique 3-year strategic planning cycles, helping to transform a 152-bed acute care hospital into a vertically integrated health system providing acute, long term, and critical outpatient care with affiliation with the state's largest primary care clinic.

• Championed master site planning efforts to construct and design a new diagnostic imaging center. Opened $36M, 57,000sf, Fairbanks Imaging Center on July 1, 2005. Met all targets for timing and project budget. Nationally recognized in 2008 as the single Vista Award Recipient for New Construction by the American Society for Healthcare Engineering of the American Hospital Association and American Institute of Architects Academy of Architectures for Healthcare. This is a distinction and honor recognizing the importance of teamwork in the design and construction of healthcare facilities.

• Cultivated positive workplace culture that engages direct reports as indicated by steady rise in employee satisfaction, placing FMHDC in the 98th percentile of all hospitals nationwide in the Gallup organization database. The Alaska Journal

of Commerce named FMHDC back-to-back in 2008 and 2009 as one of the Top 10 Workplaces for Alaska, based on eight key criteria:
- Creating a culture of fair treatment
- Satisfaction and belief in the organization
- Confidence in leadership
- Creating a clean, safe place to work
- Positive relationships with supervisors
- Support for training and education
- Fair pay and benefits
- Employee commitment to the organization

• Partnered with the University of Alaska-Fairbanks to create nursing and radiology schools on campus, as part of our "Grow Our Own" workforce initiative. Since 2003, Nursing has graduated five nursing cohorts of 15 students. Hired 80%+ of these students, reducing our nurse vacancy rate from 17% to 7% and saving FMH roughly $4M in recruiting and training costs. Radiology class graduated 5-6 students in May of 2004 -- 2009.

• Championed a hospital-wide update of the facility's Information Technology systems, creating a fully functional electronic medical record, including numerous Cerner clinical applications, upgrades to Seimens MedSeries 4, and Fuji Synapse PACS, lifting FMHDC into the top 10% of hospitals nationwide with electronic patient care records.

• Championed through a master facility plan, efforts for the $38M remodel and expansion for the ED and IP/ED Imaging project. Construction began June 12, 2006 completed in 2008 phases with little or no disruption to existing operations.

• Lobbied successfully to preserve and strengthen state health planning regulations. Successful CON submissions for Laboratory expansion, Imaging Center, and ED and IP/ED Imaging remodel and expansion.

Board of Regents

March 4th, 2011

Office of the Governor
P.O. Box 110001
Juneau, AK 99811-0001

Honorable Governor Parnell:

I would like to thank you for the opportunity to be considered for the position of University of Alaska Student Regent. Over the past three years I have been increasingly involved with student government and campus activities at UAF, culminating in my election as Vice President of the Associated Students of UAF in the spring of 2011. I have learned effective time management skills through my positions so far, and I feel that I would be an exceptional addition to the Board of Regents.

I know that this position will give me knowledge and experience unique to the State of Alaska and the University system. I am excited for the amount I will learn as regent, and how it would prepare me for my future in law school and consequently within the Alaska state government.

I am confident in my ability to fulfill the responsibilities involved with the student regent position, most importantly effective student outreach. Within UAF, I am well known because of my continuous involvement in student government, as well as having taken classes in different departments spanning from chemistry to justice. In addition, I am from Southeast Alaska and continue to keep in touch with students at the UAS campuses and outlying communities. I have also had the good fortune to work with other student leaders from around the state. For all of these reasons, I feel that I can assure the student body of the entire University of Alaska that I will be an effective and approachable student representative on the board.

Finally, I would like to thank you for your time in considering me for the position of University of Alaska Student Regent. I am an excellent candidate for the position and I feel that my passion for the University and Alaska will show in the enclosed materials.

Sincerely,

Mari B. Freitag

Mari B Freitag

SECTION I

INTRODUCTION

In 1966 the Professional Teaching Practices Act (AS 14.20) was passed to provide a means of policing ethics and for improving the standards and practices within the education profession. The act created a nine-member commission consisting of five classroom teachers, one principal, one superintendent, one representative from the Department of Education and Early Development, and one representative from higher education, all of whom are appointed by the governor for staggered three-year terms. Since 1973, an Executive Director has been employed to implement the policies and responsibilities of the Professional Teaching Practices Commission (PTPC).

A code of ethics for Alaska educators was adopted by the Commission and promulgated as state regulations. The code, which was rewritten in 2000, provides the ethical standards by which members of the profession are judged.

In general, the Commission deals with matters of professional conduct and certification. It has the responsibility and the power to discipline members of the teaching profession and may issue reprimands and suspend or revoke certificates of educators.

The services and resources of the PTPC are available to any individual or group. Members of the education profession, school board members, agencies, and private citizens may approach the Commission for information and assistance concerning matters of ethics and professional practices in public education in the State of Alaska.

It is the intent of the Professional Teaching Practices Commission to serve as a preventative and positive force in helping to enhance the professional performance of all educators so that the public's right to the best education possible for all of Alaska's students is adequately protected.

Further information may be obtained by contacting the PTPC office at:

Professional Teaching Practices Commission
344 West Third Avenue, Suite 127
Anchorage, Alaska 99501
Phone: 269-6579
Fax: 269-6580

SECTION II

COMPLAINT, INVESTIGATION AND HEARING PROCEDURES

The following is a summary of the complaint, investigation and hearing procedures of the PTPC. When filing a complaint, the Alaska Statutes and Regulations provided in this manual should be reviewed for a full legal description.

The Commission has jurisdiction over persons required by Alaska law to hold a Type A certificate, school administrators, instructors in institutions of higher learning, school program administrators, and school counselors.

A. Complaints

Complaints may be submitted to the Commission by members of the education profession or by the public. Notification by a state agency to the Professional Teaching Practices Commission that an educator has committed a crime may also result in action by the PTPC.

In most cases, locally available procedures for processing complaints should be pursued where they are applicable before filing a complaint with the Commission. These procedures may include parent complaint procedures within the local school district, staff grievance procedures, school board hearings and the like.

A formal hearing is the final step in resolving allegations against educators by the Commission. Upon a finding, by a preponderance of the evidence, that one of the four reasons cited in AS 14.20.030 is applicable, one of the following sanctions may be imposed: 1) a warning; 2) a reprimand; 3) a suspension of the certificate; or 4) a revocation of the certificate.

B. Investigation Procedures

The Commission staff may subpoena and interview witnesses, copy documents, and undertake other activities necessarily incident to an investigation.

C. Hearing Procedures

If the Commission staff determines that there are sufficient facts to warrant a hearing, a formal accusation is issued.

If the respondent does not file a notice of defense, the Commission makes a determination on the record. If the respondent files a notice of defense, the governor appoints an administrative law judge who presides over a hearing.

The hearing is a formal proceeding before the Commission in which the staff and the respondent may be represented by attorneys. All testimony is under oath and subject to cross-examination and all the procedures of the Administrative Procedure Act are observed.

D. Reprimand Hearing

If the staff decides that a violation has occurred but is not of the seriousness to warrant suspension or revocation of a certificate, a reprimand hearing may be conducted.

A reprimand hearing is before a panel of not less than three members appointed by the chair and is conducted in the same manner as the formal hearing.

E. Appeal of Executive Director's Decision

Where a complainant has requested that disciplinary action be taken against an educator but the Executive Director has made the administrative decision to dismiss the complaint on its face or to dismiss the complaint after an investigation, the complainant may appeal the decision. A written appeal must be filed within 15 days of the receipt of the notice of the decision.

The appeal will be heard by a three-member panel appointed by the Chair.

The review will be restricted to evidence previously submitted to the Executive Director.

The panel may uphold the decision of the Executive Director or direct that an investigation be completed and/or the matter brought to a hearing.

The decision of the panel is final and not subject to further appeal.

SECTION III

COMPLAINT SCREENING GUIDELINES

The Commission staff or investigating committee shall screen all complaints to determine whether an investigation is warranted.

1. An investigation may not be warranted if:

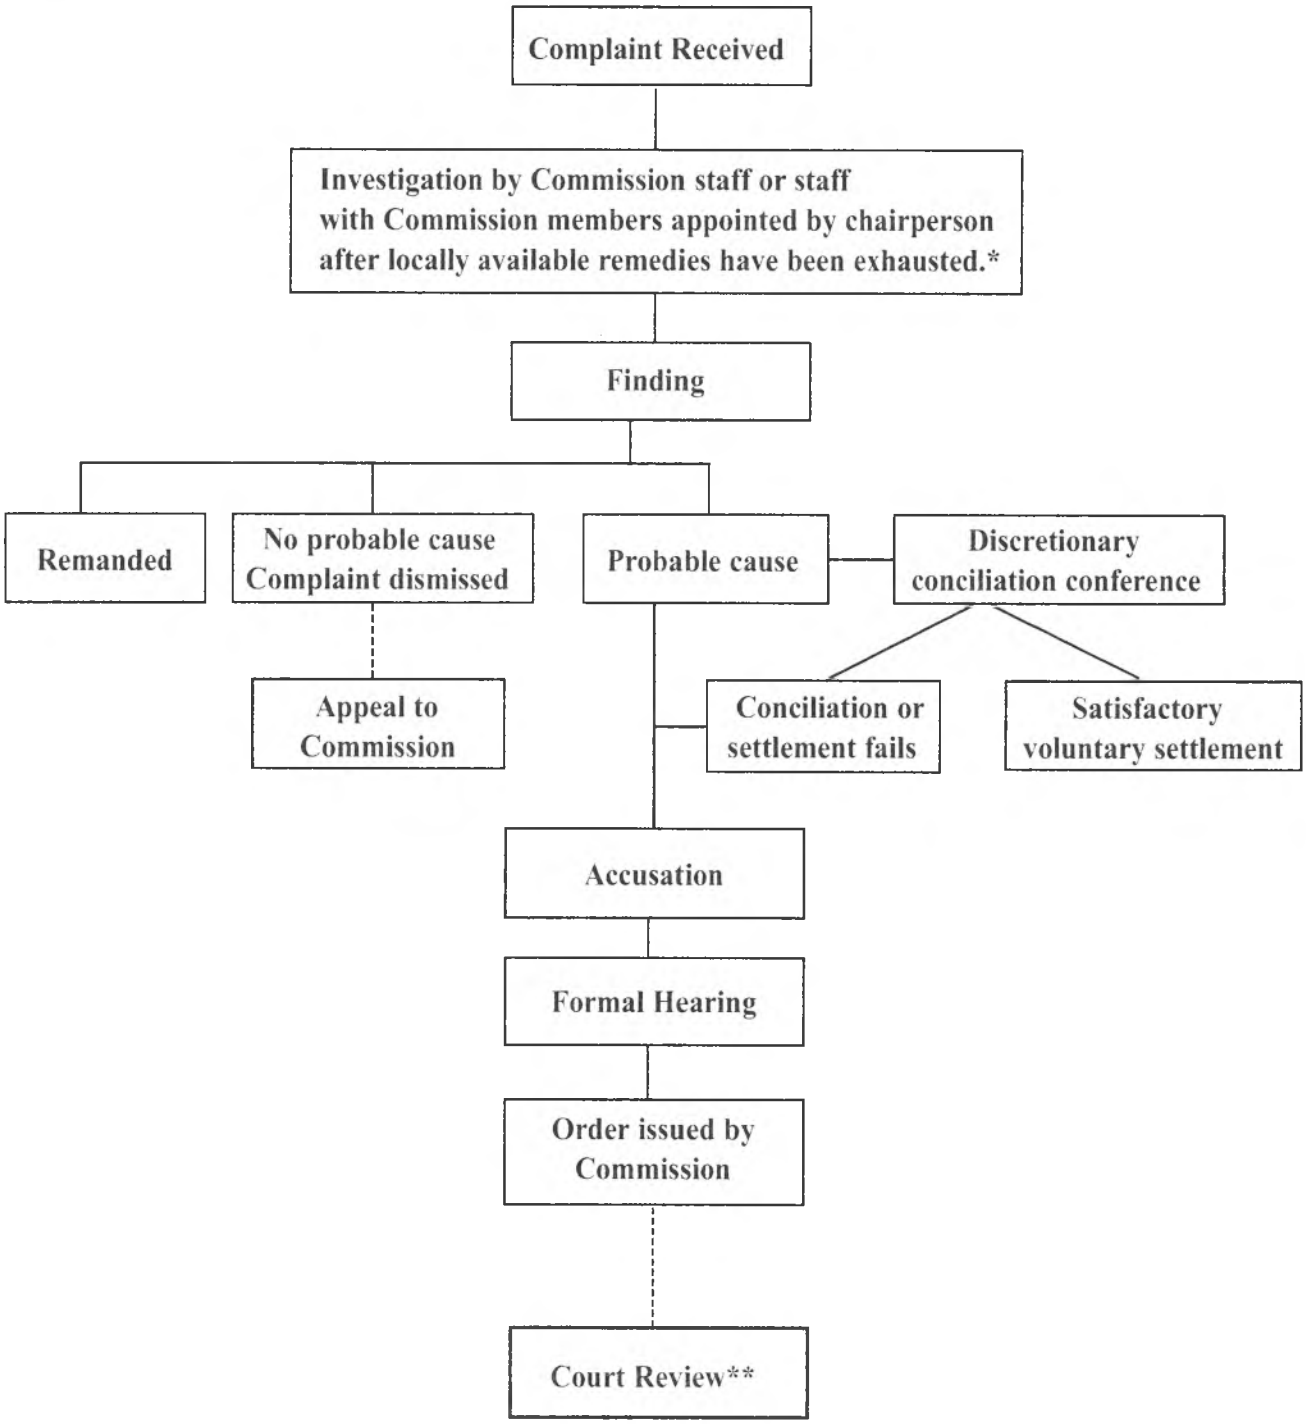
   a. The allegation, if true, would not constitute a violation of ethics or law.

   b. An investigation would place the Commission in a position of initial responsibility for investigating allegations which, by law or otherwise, are more appropriately the responsibility of a court of law or another administrative agency or commission.

   c. The complainant did not exhaust locally available school district remedies, including appeal to the school board. This does not apply if: 1) the complaint alleges a breach of ethics of such a serious nature so as to warrant further consideration by the Commission, or 2) the complaint is brought by the Department of Law, Department of Education & Early Development or other state agency.

   d. The complaint involves an allegation of a contract violation for which a grievance procedure had been an available remedy.

   e. The complaint was filed so late as to cause the respondent undue prejudice.



2. a. No complaint shall be investigated if anonymous.

   b. No complaint shall be investigated if frivolous.

3. If the complaint is filed by a third party, an inquiry will be made to determine why such third party filed the complaint before a decision is made to accept it for investigation.

SECTION IV

COMPLAINT, INVESTIGATION AND HEARING FLOWCHART

* Except in unusual circumstances, the Commission will not investigate a complaint until locally available remedies (e.g., grievance procedures, parental complaint systems) have been exhausted.

** Any order issued by the Commission is subject to court review.

TIME EXPECTATIONS

For a case in which a Notice of Defense is filed.

		Minimum	Maximum
1.	Investigation	1 week	12 weeks
2.	Attorney General review of case	1 week	12 weeks
3.	Appointment of Administrative Law Judge	4 weeks	12 weeks
4.	Hearing schedule set by Administrative Law Judge	3 weeks	12 weeks
5.	Commission action	3 weeks	12 weeks
	TOTAL	**12 weeks**	**60 weeks**

Factors that may increase the time to complete a case:

1 Summer vacation when witnesses are not available.
2. Scheduling investigator to remote areas.
3. Litigation in process which precludes witnesses from giving statements or providing documents.
4. Legal appeals to the Administrative Law Judge or the courts.
5. Time between Commission meetings at which action may be taken.

510. Short title

Sec. 14.20.370. TEACHING PROFESSION. Teachers required by state law to be certificated, instructors in institutions of higher learning, school administrators, school program administrators, and school counselors are within the teaching profession.

Sec. 14.20.380. CREATION OF A COMMISSION. There is a commission of professional educators known as the Professional Teaching Practices Commission.

Sec. 14.20.390. APPOINTMENT AND QUALIFICATIONS. The commission consists of nine members appointed by the governor and confirmed by a majority of the members of the legislature in joint session. Each member, in addition to having been actively engaged in the teaching profession for at least five years immediately preceding appointment, shall be a citizen of the United States and a resident of the state.

Sec. 14.20.400. COMPOSITION OF THE COMMISSION. The commission consists of the following members:

(1) five classroom teachers;
(2) one principal;
(3) one superintendent;
(4) one representative of the office of the commissioner;
(5) one representative of an Alaska institution of higher learning.

Sec. 14.20.410. SELECTION OF MEMBERS.
(a) Members of the commission shall be selected as follows:

(1) the five classroom teachers from lists of names submitted by recognized Alaska teachers' organizations, each list not to exceed 12 names; however, in lieu of one of the five, one classroom teacher may be selected from a list of not more than four names signed and submitted by not less than 25 teachers who have no affiliation with any organization qualified to submit nomination lists, with the limitation that no teacher may

sign more than one list in any year;

(2) the principal from a list of three names submitted by the Alaska Principals Association;

(3) the superintendent from a list of three names submitted by the Superintendents Advisory Commission;

(4) the representative of the office of the commissioner from a list of three names submitted by the commissioner;

(5) the representative of an Alaska institution of higher learning from lists of names submitted by Alaska institutions of higher learning, each list not to exceed three names.

(b) The lists shall be submitted to the commissioner who shall submit them as a group to the governor's office.

(c) At least 30 days before a position on the commission is due to become vacant, the chairman shall cause notice of the impending vacancy to be published and to be conveyed to each organized group eligible to submit a list of nominees.

Sec. 14.20.420. TERM OF OFFICE.

(a) The term of office for each member of the commission is three years and, except as provided in AS 39.05.080(4), each member serves until a successor is appointed.

(b) Vacancies shall be filled by appointment by the governor and, except as provided in AS 39.05.080(4), an appointment to fill a vacancy is for the unexpired term.

(c) An individual may not serve more than a total of two 3-year terms.

(d) The commission shall select a chairman from among its members.

Sec. 14.20.430. DISMISSAL. Any member may be removed by the governor for misconduct, malfeasance or nonfeasance in office, or incapacity.

Sec. 14.20.440. REIMBURSEMENT. Members of the commission shall receive per diem according to law and are to be granted administrative leave with full pay by their employer for time spent in the performance of official duties under AS 14.20.370 - 14.20.510. If a member is required to spend more than 15 days in a fiscal year in the performance of official duties under AS 14.20.370 - 14.20.510, the state shall reimburse the employer for costs incurred after the 15th day.

Sec. 14.20.450. RESPONSIBILITIES OF COMMISSION. The commission shall have the initial responsibility of developing, through the teaching profession, criteria of professional practices in areas including, but not limited to:

(1) ethical and professional performance;

(2) preparation for and continuance in professional services; and

(3) contractual obligations.

Sec. 14.20.460. DUTIES OF COMMISSION.

The commission shall

(1) establish procedures, and adopt regulations to implement the purposes of AS 14.20.370 - 14.20.510;

(2) conduct investigations and hearings on alleged violations of ethical or professional teaching performance, contractual obligations, and professional teaching misconduct;

(3) review the regulations of the department as they relate to teacher certification and recommend necessary changes;

(4) review the decisions of the department regarding the issuance or denial of certificates and in its discretion recommend reversal of decisions.

Sec. 14.20.470. POWERS OF COMMISSION.

(a) The commission may

(1) study proposals developed by regular committees of any existing professional organization whose members are within the teaching profession;

(2) subpoena witnesses, place them under oath, and maintain written records;

(3) warn or reprimand members of the teaching profession, if in the judgment of the commission such action is warranted;

(4) suspend or revoke the certificate of a member of the teaching profession for one of the reasons set out in AS 14.20.030 except that in the case of an administrator, the commissioner must concur;

(5) make any recommendation to the board or to school boards which will promote an improvement in the teaching profession;

(6) request assistance through any of the investigative processes of any existing professional teaching organizations when analyzing charges of breach of ethical or professional teaching practices;

(7) appoint an executive secretary, delegate those ministerial functions to the executive secretary as the commission may decide and set the executive secretary's compensation with a starting salary not exceeding range 26, step B of the pay plan for state employees in AS 39.27.011(a).

(b) A decision issued by the commission with the approval of the commissioner under (a)(4) of this section is final.

Sec. 14.20.475. APPLICABILITY OF THE ADMINISTRATIVE PROCEDURE ACT. The Administrative Procedure Act (AS 44.62) applies to regulations and proceedings under AS 14.20.370 - 14.20.510.

Sec. 14.20.480. EFFECT OF STANDARDS. Members of the teaching profession are obligated to abide by the professional teaching standards adopted by the commission.

Sec. 14.20.500. SUPPORT. In addition to available state funds, the commission shall also be financed by members of the profession in accordance with regulations adopted by the department including, if necessary, an increase in the fees for certificates.

Sec. 14.20.510. SHORT TITLE. AS 14.20.370 - 14.20.510 shall be known as the Professional Teaching Practices Act.

Sec. 14.20.030. CAUSES FOR REVOCATION AND SUSPENSION.

(a) The commissioner or the Professional Teaching Practices Commission may revoke or suspend a certificate only for the following reasons:

(1) incompetency, which is defined as the inability or the unintentional or intentional failure to perform the teacher's customary teaching duties in a satisfactory manner;

(2) immorality, which is defined as the commission of an act which, under the laws of the state, constitutes a crime involving moral turpitude;

(3) substantial noncompliance with the school laws of the state or the regulations of the department; or

(4) upon a determination by the Professional Teaching Practices Commission that there has been a violation of ethical or professional standards or contractual obligations.

(b) The commissioner or the Professional Teaching Practices Commission shall revoke for life the certificate of a person who has been convicted of a crime, or an attempt, solicitation, or conspiracy to commit a crime, involving a minor under AS 11.41.410 - 11.41.460 or a law or ordinance in another jurisdiction with elements similar to an offense described in this subsection.

(c) The commissioner or the Professional Teaching Practices Commission shall request the chief administrative law judge (AS 44.64.020), to appoint an administrative law judge employed by the office of administrative hearings to preside at a hearing conducted under this section. AS 44.64.060 and 44.64.070 do not apply to the hearing.

Sec. 14.20.040. APPLICABILITY OF THE ADMINISTRATIVE PROCEDURE ACT. The Administrative Procedure Act (AS 44.62) applies to all proceedings under AS 14.20.030, and revocations and suspensions are final and reviewable in accordance with AS 44.62.560 - 44.62.570.

Sec. 39.25.120(c)(7)(B). PARTIALLY EXEMPT SERVICE. This section provides that the executive secretary of the Professional Teaching Practices Commission is a partially exempt position.

SECTION VI

REGULATIONS

TITLE 4
CHAPTER 06
ARTICLE 2
PROHIBITION OF SEX DISCRIMINATION

4 AAC 06.580(d). Nothing in 4 AAC 06.500 - 4 AAC 06.600 limits the commissioner or the Professional Teaching Practices Commission from seeking to revoke the certification of, suspend, or otherwise discipline an educator who violates AS 14.18 or 4 AAC 06.500 - 4 AAC 06.600.

CHAPTER 18
EMPLOYMENT OF PROFESSIONAL PERSONNEL
SECTION 10
TEACHERS' AND ADMINISTRATORS' CONTRACTS

4 AAC 18.010 (a)(12) all contracts for teachers (as defined by AS 14.20.370) must contain a clause stating that the teacher is obligated to abide by the code of ethics and the professional teaching standards adopted by the Professional Teaching Practices Commission.

4. GENERAL PROVISIONS

ARTICLE I
PROFESSIONAL STANDARDS

20 AAC 10.020. CODE OF ETHICS AND TEACHING STANDARDS.

(a) The following code of ethical standards governs all members of the teaching profession. A violation of this section is grounds for discipline as provided in AS 14.20.030.

(b) In fulfilling obligations to students, an educator:

(1) repealed 10/25/2000;

(2) may not deliberately distort, suppress, or deny access to curricular materials or educational information in order to promote the personal view, interest, or goal of the educator;

(3) shall make reasonable effort to protect students from conditions harmful to learning or to health and safety;

(4) may not engage in physical abuse of a student or sexual conduct with a student and shall report to the commission knowledge of such an act by an educator;

(5) may not expose a student to unnecessary embarrassment or disparagement;

(6) may not harass, discriminate against, or grant a discriminatory advantage to a student on the grounds of race, color, creed, sex, national origin, marital status, political or religious beliefs, physical or mental conditions, family, social, or cultural background, or sexual orientation; shall

make reasonable effort to assure that a student is protected from harassment or discrimination on these grounds; and may not engage in a course of conduct that would encourage a reasonable student to develop a prejudice on these grounds;

(7) may not use professional relationships with students for private advantage or gain;

(8) shall keep in confidence information that has been obtained in the course of providing professional service, unless disclosure serves a compelling professional purpose or is required by law;

(9) shall accord just and equitable treatment to all students as they exercise their educational rights and responsibilities.

(c) In fulfilling obligations to the public, an educator

(1) repealed 10/25/2000;

(2) shall take reasonable precautions to distinguish between the educator's personal views and those of any educational institution or organization with which the educator is affiliated;

(3) shall cooperate in the statewide student assessment system established under 4 AAC 06.710 - 4 AAC 06.790 by safeguarding and maintaining the confidentiality of test materials and information;

(4) repealed 10/25/2000;

(5) may not use institutional privileges for private gain, to promote political candidates, or for partisan political activities;

(6) may not accept a gratuity, gift, or favor that might influence or appear to influence professional judgment, and may not offer a gratuity, gift, or favor to obtain special advantage;

(7) may not knowingly withhold or misrepresent material information in communicating with the school board regarding a matter before the board for its decision; and

(8) may not use or allow the use of district resources for private purposes not related to district programs and operation.

(d) In fulfilling obligations to the profession, an educator

(1) may not, on the basis of race, color, creed, sex, age, national origin, marital status, political or religious beliefs, physical condition, family, social or cultural background, or sexual orientation, deny to a colleague a professional benefit, advantage, or participation in any professional organization, and may not discriminate in employment practice, assignment, or personnel evaluation;

(2) shall accord just and equitable treatment to all members of the profession in the exercise of their professional rights and responsibilities;

(3) may not use coercive means or promise special treatment in order to influence professional decisions of colleagues;

(4) may not sexually harass a fellow employee;

(5) shall withhold and safeguard information acquired about colleagues in the course of employment, unless disclosure serves a compelling professional purpose;

(6) shall provide, upon the request of the affected party, a written statement of specific reasons for recommendations that led to the denial of increments, significant changes in employment, or termination of employment;

(7) may not deliberately misrepresent

the educator's or another's professional qualifications;

(8) repealed 10/25/2000;

(9) may not falsify a document, or make a misrepresentation on a matter related to licensure, employment evaluation, test results, or professional duties;

(10) may not intentionally make a false or malicious statement about a colleague's professional performance or conduct;

(11) may not intentionally file a false or malicious complaint with the commission;

(12) may not seek reprisal against any individual who has filed a complaint, provided testimony, or given other assistance in support of a complaint filed with the commission;

(13) shall cooperate fully and honestly in investigations and hearings of the commission;

(14) repealed 10/25/2000;

(15) may not unlawfully breach a professional employment contract;

(16) shall conduct professional business through appropriate channels;

(17) may not assign tasks to unqualified personnel;

(18) may not continue in or seek professional employment while unfit due to

(A) use of drugs or alcohol that impairs the educator's competence or the safety of students or colleagues;

(B) physical or mental disability that impairs the educator's competence or the safety of students or colleagues;

(19) may not interfere with a colleague's exercise of political or citizenship rights and responsibilities.

(Eff. 1/30/75, Register 53; am 8/10/80, Register 75; am 6/16/84, Register 90; am 8/5/90, Register 115; am 7/21/91, Register 119; am 7/28/94, Register 131; am 4/8/99, Register 150; am 10/25/2000, Register 156)

Authority: AS 14.20.030
AS 14.20.370
AS 14.20.450
AS 14.20.460
AS 14.20.480

20 AAC 10.035. MORAL TURPITUDE. For the purposes of AS 14.20.030(a)(2),

(1) "moral turpitude" means conduct that is wrong in itself even if no statute were to prohibit the conduct; and

(2) "a crime involving moral turpitude" includes

(A) homicide;
(B) manslaughter;
(C) assault;
(D) stalking;
(E) kidnapping;
(F) sexual assault;
(G) sexual abuse of minor;
(H) unlawful exploitation of a minor;
(I) robbery;
(J) extortion;
(K) coercion;
(L) theft;
(M) burglary;
(N) arson;
(O) criminal mischief;
(P) forgery;
(Q) criminal impersonation;
(R) bribery;
(S) perjury;
(T) unsworn falsification;
(U) interference with official proceedings;
(V) witness tampering;
(W) jury tampering;

(X) terroristic threatening;
(Y) possession or distribution of child pornography;
(Z) unlawful distribution or possession for distribution of a controlled substance;
(AA) unlawfully furnishing alcohol to a minor;
(BB) felony possession of a controlled substance.

(Eff. 4/8/99, Register 150; am 12/25/2005, Register 176)

Authority: AS 14.20.030
AS 14.20.450
AS 14.20.460

20 AAC 10.040. COMMISSION RECORDS. (a) Records of the commission are open for public inspection and copying, with the following exceptions:

(1) a document required by law or court order to be sealed or otherwise kept confidential;

(2) personnel files;

(3) investigative files, except that documents that have been presented as evidence or filed in an administrative adjudicative proceeding are no longer confidential under this paragraph.

(b) The commission staff may share an investigative file with appropriate law enforcement agencies if instances of criminal misconduct have been alleged or discovered in the course of an investigation.

(c) The respondent may obtain access to the investigative file, except privileged information, through a request for discovery after a formal disciplinary proceeding commences based on the investigation.

(d) All references to a minor in an administrative proceeding and in documents available to the public must be by initials or similar method that maintains the minor's confidentiality. If a minor is called to testify as a witness at a hearing, the commission will, in its discretion, close that portion of the hearing to the general public and will determine who may be present while the minor is testifying. A transcript of the proceeding must refer to a minor by initials or similar method that maintains confidentiality. (Eff. 8/12/82, Register 83; am 4/8/99, Register 150)

Authority: AS 14.20.460
AS 14.20.470

ARTICLE III
COMPLAINTS AND INVESTIGATIONS

20 AAC 10.200. COMPLAINTS. (a) An individual having knowledge of an alleged act by an educator, that would be grounds for discipline by the commission under AS 14.20.030, may file a complaint with the commission. The complaint must be in writing and signed by the complainant, and must contain:

(1) the name, mailing address, and contact telephone number of the individual making the complaint;

(2) the name of and school or location of the educator against whom the complaint is made;

(3) a statement of the facts of the alleged misconduct, including the time and place of the misconduct;

(4) the specific statute or regulation alleged to have been violated, if known; and

(5) any documentation that is relevant to the facts alleged and that is available to the complainant.

(b) The executive director may conduct an investigation if the director learns of information that would be grounds for discipline by the commission under AS 14.20.030.
(c) The educator who is named in a complaint or is the subject of an investigation must be an individual and may not be a board, department, district, institution, education association, or similar organization. (Eff. 7/22/89, Register 111; am 4/8/99, Register 150)
Authority: AS 14.20.460
AS 14.20.470

20 AAC 10.210. COMPLAINT PROCESSING. (a) Upon receipt of a complaint, the commission staff shall determine whether the complaint sets out facts that, if true, would constitute a basis under AS 14.20 upon which the commission could impose a sanction on the educator. If the commission staff determines that a complaint is not sufficient upon its face, the staff shall dismiss the complaint without investigation.
(b) Unless the alleged act would be grounds for discipline under AS 14.20.030, the staff may not investigate school district personnel actions, including hiring, evaluation, transfer, reassignment, or dismissal of staff; or curriculum actions.
(c) The commission staff may decline to accept a complaint until locally available remedies have been pursued.
(d) Before completing an investigation, the staff shall provide the respondent with an opportunity to respond to the complaint.
(e) After beginning an investigation the staff may

(1) file an accusation requesting discipline under AS 14.20.030;

(2) negotiate with the educator for an agreement to bring before the commission for approval, for the imposition of discipline; or

(3) dismiss the complaint.

(f) If a complaint is dismissed under (a), (b), or (e)(3) of this section, the staff shall notify the complainant and advise the complainant of the right to a review under 20 AAC 10.220. (Eff. 7/22/89, Register 111; am 4/8/99, Register 150)
Authority: AS 14.20.030
AS 14.20.460
AS 14.20.470

20 AAC 10.220. REVIEW OF DECISION TO DISMISS COMPLAINT. A complainant may request an administrative review of the staff's decision to dismiss the complaint by filing a written request for review with the commission within 15 days after receipt of notice under 20 AAC 210(f). The review shall be conducted by a panel of not less than three commission members appointed by the chair. The review of the staff's decision shall be limited to the written record and materials used by the staff in the determination to dismiss the complaint. The decision of the panel is the final decision of the commission. (Eff. 7/22/89, Register 111)
Authority: AS 14.20.460

20 AAC 10.230. WARNING OR REPRIMAND HEARING. A proceeding in which only a warning or reprimand is sought will be heard by a panel of not less than three commission members appointed by the chair. (Eff. 7/22/89, Register 111)
Authority: AS 14.20.460
AS 14.20.470

ARTICLE IV
GENERAL PROVISIONS

20 AAC 10.300. PUBLICATION OF COMMISSION ACTION.
(a) A warning is a public record of the commission, but the commission will not initiate public dissemination of the document.
(b) The commission staff shall send a copy of the commission's decision and order to impose sanctions greater than a warning to the following:

(1) the chief school administrator in the district in which the respondent is employed;

(2) the school board president in the school district in which the respondent is employed;

(3) the certification section of the Department of Education for placement in the respondent's file;

(4) the national clearinghouse that maintains records of professional discipline against teaching professionals;

(c) If the disciplinary order is against an administrator, the notice required under (b) of this section may not be given until the commissioner concurs as required by AS 14.20.470(a)(4).
(d) The commission will report on all discipline taken since last publication in the commission's periodic publication of commission activity. The commission will not identify the name of the respondent in cases where only a warning was given.
(e) The commission staff shall notify a complainant of the action of the commission. The notification of a warning or reprimand is limited to a summary of the action. (Eff. 7/22/89, Register 111; am 4/8/99, Register 150)
Authority: AS 14.20.460
AS 14.20.470

20 AAC 10.310. DISTRIBUTION OF HANDBOOK. Copies of the Alaska State Professional Teaching Practices Commission's Handbook for Alaska Educators shall be conspicuously displayed, and available, at every education institution in the state whose employees are members of the teaching profession under AS 14.20.370. (Eff. 1/30/75, Register 53; am 7/22/89, Register 111)
Authority: AS 14.20.460
AS 14.20.470

20 AAC 10.900. DEFINITIONS. In this chapter,
(1) "sexual conduct" includes solicitations for sex; explicit sexual jokes and stories; discussion of the educator's sexual feelings or activities; discussion, outside of a professional teaching or counseling context, of a student's sexual feelings or activities; and "sexual penetration" and "sexual contact" as those terms are defined in AS 11.81.900(j).
(2) "physical abuse" is an action beyond reasonable discipline that results in an adverse physical effect upon a student.
(3) "director" means the person appointed to fill the position of "executive secretary" as described in AS 14.20.470(a)(7). (Eff. 8/5/90, Register 115; am 7/28/94, Register 131, am 4/8/99, Register 150)
Authority: AS 14.20.030

AS 14.20.480

DEPARTMENT OF EDUCATION
4 AAC 12.300(h-j).
CERTIFICATION OF TEACHERS.

(h) An applicant for a certificate shall, on the application, disclose a suspension or revocation of a certificate by this or another state. A teacher who has been issued a certificate by this state shall immediately notify the department of suspension or revocation of a certificate issued by another state. Failure to inform the department of a suspension or revocation as required by this subsection may result in denial or revocation of a certificate.

(i) Any misrepresentations or willful omission of information on a certification application may result in denial or revocation of the certificate.

(j) The department may deny an application for issuance or renewal of a teacher certificate for any reasons that is cause for revocation or suspension under AS 14.20.030. (Eff. 9/29/2005, Register 175; am 9/30/2005, Register 175; am 12/20/2005, Register 177)

Authority: AS 14.07.060
AS 14.20.010
AS 14.20.020

SECTION VII

PTPC PROCEDURES

1. The PTPC may issue position statements, subject to the following conditions:

   a. Positions will be formulated on an issue-by-issue basis.

   b. The staff may publicly present only those positions that have been adopted by the Commission on record.

   c. Commission members may, on behalf of the Commission, present only those positions that have been adopted by the commission on record.

   d. Official elaboration and discussion of established positions should be made only by the chairperson and/or the staff.

2. Public comment is limited to five (5) minutes per person. The Commission may extend that to fifteen (15) minutes if deemed appropriate.

SECTION VIII

PTPC BYLAWS

Article I Membership

1. A member of the Commission is encouraged but not required to resign if the member changes professional positions in such a manner that the member does not continue to represent the group making the original nomination for membership. The member is encouraged to make the resignation effective the date that a successor is appointed.

2. In the event a Commission member fails to discharge required duties, removal from office may be requested by a majority vote of the Commission. Such a request will be forwarded by the chairperson to the Governor through the Commissioner of Education & Early Development.

Article II Meetings

1. The Commission shall hold an annual meeting in the fall of each year, with other regular meetings to be set by the Commission.

2. Special meetings may be called by the chairperson or upon written request of four members of the Commission. The Executive Director shall notify all members of the time and place of such meetings.

3. Special meetings may be held by teleconference.

4. The conduct of non-adjudicatory portions of the meetings shall be governed by Robert's Rules of Order, *1971 Edition*, to the extent practicable. In cases of conflict with statutes, regulations, or these by-laws, they will prevail in that order of preference.

Article III Officers

1. The officers of this Commission shall be a chair, vice-chair, and secretary. Each officer shall serve for one year with the privilege of reelection. Elections shall be held in the spring or the first annual meeting in the fall.

2. The chairperson shall preside at all meetings and take such other action as may be authorized by these bylaws or by the members of the Commission. The chairperson shall be privileged to comment or debate from the chair, and must cast a vote on any motion unless there had been prior approval to abstain.

3. The vice-chair shall preside in the absence of the chair, shall perform such other duties as may be specified by the Commission and shall automatically become chair in case the duly elected chair should resign, die or for some other reason fail to serve.

4. The secretary shall insure that records of the activities of the Commission are maintained, and perform such other duties as the Commission may assign.

5. The three officers shall comprise the executive committee of the Commission.

6. The Executive Committee of the Commission shall be empowered to act in emergency situations in order to carry out the responsibilities of the Commission. Any such action must be consistent with the provisions contained in the *Professional Teaching Practices Act*, the *Administrative Code*, and the *Bylaws* of the Commission, as well as any current procedures and/or policies that are in force and which have been approved by the Commission during official meetings of the Commission.

7. Officers shall take office when elected.

Article IV PTPC Staff

1. Director's (referred to as "Executive Secretary" in AS 14.20.470) Job Description. The director:

a. Explains and interprets regulations, code of ethics, school law, and offers advice.

b. Formulates written replies to formal complaints.

c. Conducts investigations of alleged unethical and/or illegal conduct.

d. Initiates and coordinates all aspects of disciplinary hearings, such as writing investigative reports, drafting accusations, requesting administrative law judges, notifying the parties involved both before and after hearings, and arranging for recording court witnesses and meeting(s).

e. Works with the Commission's attorney from the Department of Law regarding complaints and hearings.

f. Prepares the agendas and all relevant reference material and makes all of the necessary arrangements for Commission meetings.

g. Prepares newsletters, annual reports, annual budget documents, case summary documents, charts, and other special reports and projects as required.

h. Regularly reviews school law periodicals, legal opinions, court decisions, arbitration rulings, articles, newsletters, etc.

i. Conducts research on relevant school law issues at the request of the Commission.

j. Writes recommended regulations, position statements, letters, reports, etc.

k. Proposes and administers the Commission's budget.

l. Testifies before the Legislature and State Board of Education & Early Development on Commission matters.

m. Responds to special requests for information by state agencies, educational organizations, the news media, etc.

n. Makes presentations to college classes, conference sections, school district in-service programs, and other public forums regarding professional ethics, certification, and the Commission.

o. Represents the Commission and participates in the State Board of Education & Early Development meetings, conferences, workshops, certification meetings.

p. Drafts subpoenas, accusations and final order documents.

2. Secretary's Job Description. The secretary:

a. Sets up and maintains special files of correspondence and records for current projects.

b. Summarizes and interprets data and prepares reports.

c. Receives and screens telephone calls; uses tact and discretion in public interaction; and maintains confidentiality of Commission business.

d. Arranges for transportation and accommodation of traveling staff members; checks and processes expense claims.

e. Is responsible for all financial coding and budget record keeping.

g. Prepares referrals to the Office of Administrative Hearings and maintains a record of funds encumbered for its services.

h. Keeps current on state administrative procedures.

All members of the teaching profession (as defined in AS 14.20.370) are obligated to abide by the code of ethics and the professional teaching standards adopted by the Professional Teaching Practices Commission.
(Repealed 01/30/75)

Authority: AS 14.20.480

20 AAC 10.020. CODE OF ETHICS AND TEACHING STANDARDS. (a) The following code of ethical and professional standards governs all members of the teaching profession. A violation of this section is grounds for discipline as provided in AS 14.20.030.

(b) In fulfilling obligations to students, an educator:
(1) repealed 10/25/2000;
(2) may not deliberately distort suppress, or deny access to curricular materials or educational information in order to promote the personal view, interest, or goal of the educator;
(3) shall make reasonable effort to protect students from conditions harmful to learning or to health and safety;
(4) may not engage in physical abuse of a student or sexual conduct with a student and shall report to the commission knowledge of such an act by an educator;
(5) may not expose a student to unnecessary embarrassment or disparagement;
(6) may not harass, discriminate against, or grant a discriminatory advantage to a student on the grounds of race, color, creed, sex, national origin, marital status, political or religious beliefs, physical or mental conditions, family, social, or cultural background, or sexual orientation; shall make reasonable effort to assure that a student is protected from harassment or discrimination on these grounds; and may not engage in a course of conduct that would encourage a reasonable student to develop a prejudice on these grounds;
(7) may not use professional relationships with students for private advantage or gain;
(8) shall keep in confidence information that has been obtained in the course of providing professional service, unless disclosure serves a compelling professional purpose or is required by law;
(9) shall accord just and equitable treatment to all students as they exercise their educational rights and responsibilities.

(c) In fulfilling obligations to the public, an educator:
(1) repealed 10/25/2000;
(2) shall take reasonable precautions to distinguish between the educator's personal views and those of any educational institution or organization with which the educator is affiliated;
(3) shall cooperate in the statewide student assessment system established under 4AAC 06.710-4 ACC 06.790 by safeguarding and maintaining the confidentiality of test materials and information;
(4) repealed 10/25/2000;
(5) may not use institutional privileges for private gain, to promote political candidates, or for partisan political activities;
(6) may not accept a gratuity, gift, or favor that might influence or appear to influence professional judgment, and may not offer a gratuity, gift, or favor to obtain special advantage;
(7) may not knowingly withhold or misrepresent material information in communicating with the school board regarding a matter before the board for its decision; and
(8) may not use or allow the use of district resources for private purposes not related to the district programs and operation.

(d) In fulfilling obligations to the profession, an educator:
(1) may not, on the basis of race, color, creed, sex, age, national origin, marital status, political or religious beliefs, physical

condition, family, social or cultural background, or sexual orientation, deny to a colleague a professional benefit, advantage, or participation in any professional organization, and may not discriminate in employment practice, assignment, or personnel evaluation:
(2) shall accord just and equitable treatment of all members of the profession in the exercise of their professional rights and responsibilities;
(3) may not use coercive means or promise special treatment in order to influence professional decisions of colleagues;
(4) may not sexually harass a fellow employee;
(5) shall withhold and safeguard information acquired about colleagues in the course of employment, unless disclosure serves a compelling professional purpose;
(6) shall provide, upon the request of the affected party, a written statement of specific reasons for recommendations that led to the denial of increments, significant changes in employment, or termination of employment;
(7) may not deliberately misrepresent the educator's or another's professional qualifications;
(8) repealed 10/25/2000;
(9) may not falsify a document, or make a misrepresentation on a matter related to licensure, employment evaluation, test results, or professional duties;
(10) may not intentionally make a false or malicious statement about a colleague's professional performance or conduct;
(11) may not intentionally file a false or malicious complaint with the commission;
(12) may not seek reprisal against any individual who has filed a complaint, provided testimony or given other assistance in support of a complaint filed with the commission;
(13) shall cooperate fully and honestly in investigations and hearings of the commission;
(14) repealed 10/25/2000;
(15) may not unlawfully breach a professional employment contract;
(16) shall conduct professional business through appropriate channels;
(17) may not assign tasks to unqualified personnel;
(18) may not continue in or seek professional employment while unfit due to (A) use of drugs or alcohol that impairs the educator's competence or the safety of students or colleagues; (B) physical or mental disability that impairs the educator's competence or the safety of students or colleagues;
(19) may not interfere with a colleague's exercise of political or citizenship rights and responsibilities

20 AAC 10.035. MORAL TURPITUDE. For the purpose of **AS 14.20.030**(a)(2),
(1) "moral turpitude" means conduct that is wrong in itself even if no statute were to prohibit the conduct; and
(2) a crime involving moral turpitude includes:
(A) homicide;
(B) manslaughter;
(C) assault;
(D) stalking;
(E) kidnapping;
(F) sexual assault;
(G) sexual abuse of minor;
(H) unlawful exploitation of a minor;
(I) robbery;
(J) extortion;
(K) coercion;
(L) theft;
(M) burglary;
(N) arson;
(O) criminal mischief;
(P) forgery;
(Q) criminal impersonation;
(R) bribery;
(S) perjury;
(T) unsworn falsification;
(U) interference with official proceedings

(V) witness tampering
(W) jury tampering;
(X) terroristic threatening;
(Y) possession or distribution of child pornography;
(Z) unlawful distribution or possession for distribution of a controlled substance;
(AA) unlawfully furnishing alcohol to a minor. (Eff 4/8/99, Register 150)
(BB) felony possession of a controlled substance. (History: Eff. 4/8/99, Register 150; am 12/25/2005, Register 176)

University of Alaska Statewide System
Bylaws of the Board of Regents

BL01. Name, Authority, and Seal.

A. Name.

The official name of the Board of Regents will be the Board of Regents of the University of Alaska. In these bylaws, the term "board" means the Board of Regents of the University of Alaska.

B. Constitutional Authority.

1. The University of Alaska is established by the Constitution of the State of Alaska, Article VII, Section 2, which provides:

> The University of Alaska is hereby established as the state university and constituted a body corporate. It shall have title to all real and personal property now or hereafter set aside for or conveyed to it. Its property shall be administered and disposed of according to law.

2. The Board of Regents and its authority over the University of Alaska is established by the Constitution of the State of Alaska, Article VII, Section 3, which provides:

> The University of Alaska shall be governed by a board of regents. The regents shall be appointed by the governor, subject to confirmation by a majority of the members of the legislature in joint session. The board shall, in accordance with law, formulate policy and appoint the president of the university. He shall be the executive officer of the board.

C. Statutory Authority.
Statutory provisions related to the authority of the Board of Regents over the University of Alaska are contained in AS 14.40.

D. Corporate Seal.
The corporate seal of the University of Alaska will contain an inner circle and an outer circle. The outer circle will contain the name "University of Alaska" and the inner circle will contain the words "corporate seal," and the year "1917" signifying the founding of the University of Alaska.

(02-07-07)

BL02. Appointment, Term of Office, Compensation and Orientation.

A. Appointment of Regents.
Regents will be selected, appointed, and will hold office in the manner provided by law. For purposes of determining the qualifications for office of the student regent appointed pursuant to AS 14.40.150(b), "full-time student" as used in AS 14.40.130(e) means a student enrolled in at least 12 units, or 9 units if admitted as a graduate student. Unless otherwise disqualified for academic or disciplinary reasons, a person who has met the standard of "full-time student" ceases to be a student only upon failing to enroll as a full-time student at the university by the end of the last applicable late registration deadline for two consecutive semesters. For purposes of the preceding sentence, "semester" includes the fall, spring, or summer semester, summer session, or summer term.

B. Term of Office.
The term of office for a regent other than the student regent appointed pursuant to AS 14.40.150(b) is eight years as provided by AS 14.40.140. The term of office begins on the first Monday in February of the year in which the appointment is made. The term of office for the student regent appointed pursuant to AS 14.40.150(b) is two years and begins on June 1 of the year in which the appointment is made as provided by AS 14.40.150(b). Regents serve for the length of their term, until resignation, or until a replacement has been named by the governor.

C. Compensation.
Regents receive no compensation for their service. Regents will receive actual transportation expenses for attendance at board meetings or for other university purposes approved by the board chair. Each regent may elect on an annual basis to receive meals and lodging expense reimbursement in accordance with board travel policy and university regulation; or to receive a per diem allowance as established by the board travel policy and university regulation for each day or portion of a day spent in an actual meeting, or on authorized official business incident to duties as a regent, in accordance with AS 39.20.

D. Orientation.
Each regent will be informed of the powers and responsibilities of members of the board by the board chair and the university president within a reasonable time following the regent's appointment. (02-07-07)

BL03. Duties of the Board of Regents.

The board will be responsible for the governance of the university as provided by the Constitution of the State of Alaska and the laws enacted pursuant thereto. The board may annually review the performance of the board. A failure to perform an annual review is an internal matter and does not affect the validity of any action. (02-07-07)

BL04. Officers.
The officers of the board will be chair, vice chair, secretary, and treasurer. The board may establish or abolish from time to time such offices and positions as may be appropriate to perform the functions of the board. (02-07-07)

BL05. Officer Election, Term of Office, Removal from Office, and Vacancies.

A. Election.
At the annual meeting of the board, the officers of the board will be elected by a simple majority vote. Voting may be by secret ballot. Nominations will be taken from the floor.

B. Term of Office.
The officers of the board will serve a 1-year term of office or until a successor is elected. A regent may not hold office as chair for more than three full consecutive terms.

C. Removal from Office.
An officer of the board may be removed from the office by a simple majority vote of the whole board at any regular or special meeting.

D. Vacancies.
Upon completion of service of a regent holding office, the office becomes vacant. A vacancy created by death, resignation, expiration of the term of appointment or otherwise may be filled at the same meeting, or the next regular or special meeting of the board. A person elected to fill a vacancy serves the remainder of the term of the office vacated. (02-07-07)

BL06. Duties and Powers of Board Officers.

A. Chair.
The board chair will preside at all meetings of the board; will establish and eliminate committees of the board as appropriate; will appoint the chairs and members of all committees of the board unless otherwise specified in these bylaws; will assign individual regents to external boards and commissions; will sign requisitions as provided in AS 14.40.290(a); and will perform such other duties as may be provided by these bylaws or by law. All decisions of the chair are subject to the will of the board. The chair will be entitled to vote in all matters.

B. Vice Chair.
The vice chair will, in the case of the vacancy, absence, incapacity, or resignation of the chair, perform the duties of the chair until the chair returns or is replaced in the manner provided by these bylaws.

C. Secretary.
The secretary will cause to be kept minutes of the meetings of the board; will attend to the serving of all notices required by these bylaws after consultation with the board chair and the university president; will attend to such correspondence as may be assigned; will

perform all duties incidental to the office of secretary; and will sign requisitions as provided by AS 14.40.290(a).

D. Treasurer.
The treasurer will be the custodian of the funds and securities of the university, and will deposit the same in the name of the university in such bank or banks as the board may designate. The treasurer will pay out money under the direction of the board, and will exhibit the records at any time to any person authorized to inspect the same. The treasurer will give a bond for the faithful performance of duties in such sum as the board may prescribe, the premiums to be paid from the funds of the university.

E. Secretary or Treasurer Pro Tem.
In the absence of the secretary or treasurer, the chair may appoint a regent to serve as secretary pro tem or treasurer pro tem who will have all authority of the secretary or treasurer. The appointments may be terminated by a majority vote of the board.

F. Delegation of Powers.
In case of the absence of any officer of the board, or for any other reason that the board may deem sufficient, the board, by majority vote, may delegate the powers or duties of such officer to any member of the board.

(04-08-11)

BL07. Committees of the Board of Regents.

A. Scope.
The committees of the board will study problems in the areas assigned to them and advise the board as to appropriate policy changes and action. Each committee will keep informed with respect to the manner in which the policies of the board are being administered in its assigned area. Unless otherwise specifically directed by action of the board, all committees will be advisory to the board. Committees will be established and eliminated by the board chair, subject to the will of the board. Decisions of committees may be overruled by action of the board.

B. Composition.
Unless committee composition is otherwise provided by these bylaws, committees will consist of not less than three, nor more than five regents appointed by the chair with the chair serving as an ex-officio member of each committee.

C. Committee Chair.
The chair will appoint the chair of each committee, unless otherwise specified in these bylaws.

D. Term.
The 1-year term of all committee appointees will expire concurrently with the term of the officers of the board.

E. Specially Designated Committee Members.
The chair of each committee may designate any regent who is present at a committee meeting, but is not a regular member of that committee, to serve as a special member of the committee in the event that a regular member is absent from the meeting. Specially designated committee members will enjoy all the rights and privileges of regularly appointed committee members for the duration of the scheduled meeting, including the right to vote.

F. Audit Committee.
The Audit Committee is established as a standing committee of the board. The committee shall be responsible for advising the board on matters relating to stewardship of University finances and assets, for oversight of internal and external audit functions, and for ascertaining the existence and adequacy of accounting and internal control systems and safeguards over University assets. The committee shall recommend to the board the selection of the University's external auditors.

G. Audit Committee Charter.

1. The primary function of the Audit Committee is to assist the board in fulfilling its oversight responsibilities relating to: the university's financial statements, systems of internal control, compliance with legal and regulatory requirements, and the independence and performance of the external and internal audit functions. The committee shall maintain free and open communication among the committee, independent auditors, the internal auditors and management of the university.

2. Members shall be independent of management of the university and its component units and related organizations, and be free of any financial or personal relationship that would impair such independence. If possible, a majority of members shall be financially literate and at least one member shall be a financial expert. "Financial literacy" means being able to read and understand fundamental financial statements. "Financial expert" means a person who has one or more of the following: an understanding of generally accepted accounting principles and financial statements, experience applying such principles, experience preparing or auditing financial statements, experience with internal controls, and an understanding of audit committee functions.

3. Management is directly responsible for the preparation, presentation, and integrity of the university's financial statements and for the appropriateness of the accounting principles and reporting practices used by the university. The committee is responsible for overseeing management's efforts to meet those responsibilities in a reasonable and appropriate manner. The principal duties and responsibilities of the committee include:

   a. the appointment, compensation, oversight, and retention of the independent external auditor; the external auditor shall report directly to the committee;

b. the approval of all audit and non-audit services provided by the external auditor; pre-approval authority may be delegated to the committee chair, subject to later ratification by the committee;

c. appropriate rotation of the lead external audit partner on the audit engagements;

d. providing sufficient opportunity for the external auditors, the internal auditor, and the general counsel to each meet privately with the committee;

e. inquiring of management and the external auditor about the effectiveness of the university's system of internal controls;

f. inquiring of management, the independent auditors and the internal auditors about: the appropriateness of the university's accounting principles, the consistency in the application of those principles, the degree of aggressiveness or conservatism used in applying those principles;

g. inquiring of management, the external auditors and the internal auditors about the clarity and completeness of the financial statements and related disclosures, including the appropriateness of any significant changes in accounting principles;

h. reviewing with management and the independent external auditor all matters required to be communicated to the committee under generally accepted auditing standards, including communications under Statement of Auditing Standards No. 61 "Communications with Audit Committee", as amended; reviewing and approving the annual financial statements of the university and the audit report on Federal Awards as required by OMB Circular A-133, also known as the single audit; the report on the single audit is completed at a later date than the university's financial statements;

i. reviewing periodic reports from the internal auditor regarding all audit activities at the university;

j. reviewing, as needed, the internal audit charter and audit protocols under P05.03.010 – 05.03.018 and making recommendations to the board regarding changes and enhancements;

k. maintaining adequate policies and procedures for addressing complaints regarding accounting controls and reports of financial fraud;

l. reviewing briefings from the internal auditor, general counsel, or management on financial fraud situations and/or whistleblower complaints;

m. the development and monitoring of the university's conflict of interest policies, principles of employee conduct, and fraud policy; and

n. reporting the results of the committee's activities to the board .

H. Special Committees.
The board chair may appoint such special committees with such membership and responsibilities as the chair may determine.

(04-08-11)

BL08. Meetings of the Board of Regents and Committees.

A. Open Meetings and Voting.
Meetings of the board and its committees will be open to the public as required by AS 44.62.310. The board will provide adequate facilities for members of the public to attend board meetings. During public session of the full board, any vote may be taken by roll call at the discretion of the chair. Roll call votes will not be used in committee meetings except those conducted by teleconference.

B. Executive Sessions.
To the full extent allowed and pursuant to procedures provided by AS 44.62.310, the board or a committee of the board may go into executive session upon majority vote. Voice votes are authorized on all motions made during executive sessions. At any time during executive session, without regard to how the regent voted, a motion to reconsider the motion to go into executive session may be made by any regent, and discussed by the board or committee in executive session. If the board makes findings during an executive session, the findings will be made a part of the record of the proceedings and will be open to inspection by the public at reasonable times.

C. Meeting Dates.
The date and location of regular or special meetings of the board will be fixed by the board from time to time. Special and emergency meetings may also be called by the board chair, university president, or at the written request of any three regents, provided the notice as required by these bylaws is given.

D. Annual Meeting.
The Annual Meeting of the board shall be the last regular meeting of the calendar year. The board shall elect its officers at the annual meeting. At the annual meeting, the board shall review its performance and set its goals for the upcoming year.

E. Notice of Meetings.

1. In accordance with AS 14.40.160(b), thirty days public notice will be provided for regular meetings of the board. Ten days public notice will be provided for special meetings of the board. Emergency meetings may be called without public notice.

2. Notice of all board meetings will be given to each regent and will specify the time and place of the meeting. Unless all regents are present, action taken at a special

or emergency meeting must be directly related to the purpose of the meeting as noticed to regents. Notice will be deemed given, whether or not such notice is actually received, by means of any of the following methods:

a. mailing written notice by the United States Postal Service postage prepaid to the last known address of the regent at least 96 hours prior to the time of meeting;
b. attempting to give verbal notice by telephoning the business or residence of the regent at the last known telephone number of the regent and leaving a message notifying the regent of the meeting; or leaving a message to return the call, and, if the call is returned, notifying the regent of the meeting;
c. providing written notice by facsimile transmission to the last known facsimile telephone number of the regent; or
d. mailing notice by electronic mail receipt requested to the last known email address of the regent.

F. Disputes Concerning Notice.
The board has the final determination of all disputes concerning the giving of notice.

G. Quorum.
No business may be transacted at any meeting of the board unless at least six regents are present. There will be no proxy permitted. There is no quorum requirement for committee meetings. Official action of the board requires the affirmative vote of the majority of the whole board.

H. Rules of Order.
When not in conflict with any of the provisions of these bylaws or other law, the latest revision of *Robert's Rules of Order* will constitute the rules of parliamentary procedure applicable to all meetings of the board.

I. Unanimous Consent.
In meetings of the board or its subcommittees that are not held by teleconference, the chair may elect to seek unanimous consent, in which case, the following process shall be used. The chair shall ask if there is any objection to unanimous consent to a motion or action. If no regent objects, all regents present at the time shall be counted and recorded as voting to approve the action or motion. In such event, the chair should announce that there was no objection so all regents present will be counted as voting in favor of the action or motion. If any regent present objects to unanimous consent or requests another method of voting, a roll call vote or other appropriate method of voting shall be used.

J. Agenda.

1. An advance agenda for committee and full board meetings will be prepared by the president as approved by the officers of the board, and distributed along with relevant supporting papers, reports, or other communications or exhibits pertaining to agenda items so that it is received by each regent at least seven days prior to any meeting of the board. The 7-day requirement may be waived by the

chair of the board at the request of the president. The provisions of this paragraph are for guidance in preparation for meetings and do not affect the validity of actions of the board.

2. The first order of business at any meeting of the board will be the adoption of the agenda for the meeting. At that time, an item of business may be added to or deleted from the agenda upon a majority vote of the board or committee members present. After the agenda has been adopted by the board or committee, changes can be made upon a two-thirds vote of the members present.

3. The board, its committees, and subcommittees, may conduct public forums or hearings without a formal agenda for the forums or hearings, provided that such meetings are properly noticed in accordance with these bylaws.

K. Effective Date of Actions.
Board action will be effective at the time of the action, unless otherwise specified in the motion.

(02-07-07)

BL09. Public Testimony.

Subject to the will of a majority of the board, the chair may offer an opportunity for public testimony at regular meetings upon such terms as deemed appropriate and may limit the amount of time allocated to any particular individual or issue.

(02-07-07)

BL10. Presentations.

The board may allow presentations by individuals or groups external or internal to the university. Persons or groups not having submitted a timely request in advance of the meeting to make a presentation at a board meeting may be recognized from the floor at the sole discretion of the chair. The chair may limit the length of any presentation.

(02-07-07)

BL11. Minutes; Public Inspection.

A. The minutes of full board meetings will record the action taken on motions or resolutions and, once approved, will be the official record of board actions. The minutes will reflect at least the statement of the problem considered, pertinent recommendations, action taken by the board, and the result of the vote. The minutes will reflect how each regent voted. Separate minutes will not be prepared for proceedings of executive sessions and committee meetings.

B. The approved minutes of the board and other records of public sessions of the board will be available for public inspection under reasonable rules during regular office hours. Minutes shall be retained indefinitely in printed form.

(02-07-07)

BL12. University President.

In accordance with Article VII, Section 3, of the Alaska Constitution, the board will appoint the president by a majority vote of the whole board and fix the president's compensation. The board may annually review the performance of the president. A failure to conduct a performance review is an internal matter and does not affect the validity of any action.

(02-07-07)

BL13. Indemnification.

The board will defend, indemnify, and hold harmless board members and officers, university officers and employees, and members of advisory bodies and councils established by policy or regulation from any and all liability or damage arising out of acts on behalf of the board and the university performed within the course or scope of their official duties.

(02-07-07)

BL14. Board Policies.

The board may adopt, amend, or repeal policies. Action by the board to adopt or amend a policy of the board may be taken at any regular, special, or emergency meeting by a simple majority vote, but any proposed policy or policy proposed for amendment must appear in the advance agenda of the meeting.

(02-07-07)

BL15. Bylaws and Policy Manual.

The board will maintain its bylaws and policies in the form of a compiled manual entitled "Regents' Bylaws and Policy," which will be made available for public inspection.

(02-07-07)

BL16. University Regulations.

The president is authorized to adopt regulations consistent with bylaws and policies of the board and maintain them in the form of a compiled manual entitled "University Regulations," which will be made available for public inspection. The lack of a regulation anticipated in policy is an internal matter and does not create a right of action for any purpose.

(02-07-07)

BL17. Actions by the Board of Regents; Ratification; Objections.

A. The board at any meeting may take action by motion that is consistent with these bylaws, even if inconsistent with adopted policy.

B. Requirements of these bylaws may be waived at any time by unanimous consent of all regents who are not disqualified from acting on the matter. Actions of the board in violation of these bylaws may be ratified by a majority vote at a meeting of the board at least three days following notice of the action to all regents.

C. Objections to proceedings or action taken during meetings must be made as soon as reasonably possible and the right of a regent to object may be waived by action of that regent which is inconsistent with the objection.

(02-07-07)

BL18. Priority in the Event of Conflict.

If provisions conflict, the following order of priority will apply:

1. Bylaws
2. Regents' Policy
3. University Regulation
4. Major Administrative Unit (MAU) Rules and Procedures.

(02-07-07)

BL19. Amendment and Review of Bylaws.

A. Bylaws may be amended by a majority vote of the whole board at any regular or special meeting. Any proposed amendment, however, must be filed with the secretary of the board at least 14 days prior to the meeting at which the proposed bylaw or amendment to these bylaws will be acted upon, and a copy of the proposed bylaw or amendment to these bylaws will immediately be transmitted by the secretary to each member of the board. A proposed amendment filed and noticed timely may be further amended by a two-thirds majority vote of the whole board at the regular or special meeting specified in the notice.

B. The filing and notice provisions of this section may be waived by unanimous consent of all regents.

C. Every five years, the university administration will report to the board on the status of the bylaws, making such recommendations as to revisions, additions and/or deletions as appear appropriate.

(02-07-07)

BL20. Referral of a Regent for Possible Impeachment

A. Upon a simple majority vote of the whole board finding that it is in the best interests of the university to do so, the board may refer a regent to the senate with a recommendation that the senate consider impeachment of the regent.

B. Grounds for referral may include:

1. A criminal complaint, presentment, information, indictment or conviction involving a felony in any jurisdiction;

2. An information, formal criminal charges or conviction of a misdemeanor involving dishonesty, breach of trust, or the University of Alaska;

3. A probable cause determination of a knowing ethics violation under AS 39.52 that results in an accusation under consideration by the personnel board, or a recommendation of removal from office under AS 39.52.410(b)(3);

4. Circumstances indicating: conduct that necessarily brings the university into disrepute; material, repeated and documented neglect of duty; or a regent's inability to serve for an extended period;

5. Judicial proceedings involving or an adjudication of incompetence;

6. A formal allegation or charge, or a final decision, by a professional or occupational licensing body, alleging or finding a violation of the relevant licensing statutes or regulations that is related to the regent's ability or fitness to serve as a regent; or

7. Failure to possess the qualifications of a regent under AS 14.40.130.

C. The following process shall be followed in considering a motion to refer for possible impeachment. Consistent with AS 44.62.310(d)(5), the Open Meetings Act does not apply and all meetings regarding a possible referral shall be conducted in executive session. The process shall maintain confidentiality consistent with the circumstances and the requirements of the review:

1. Any member may request an executive session to discuss appointment of a review committee;

2. The board may consider a motion to appoint a review committee. If a simple majority of the whole board approves the motion:

   a. The chair shall appoint a review committee of not less than three members and provide written notice to the affected member of the makeup of the committee and the stated grounds for possible referral;

   b. The review committee shall gather information relevant to the stated grounds for referral, offer the affected member an opportunity to comment on the information gathered, and make a written report of its review, findings and recommendation to the secretary of the board. The report shall be confidential unless a referral for impeachment is made, at which point any further release shall be made in accordance with this bylaw and applicable law. The secretary shall immediately distribute the report to all members of the board, including the affected member.

3. The chair shall schedule a meeting to consider the report, to occur at least 14 calendar days after distribution. The board shall consider information

the affected member provides in response to the report that is relevant to the issue of referral and consistent with the question before the board.

4. The board shall consider whether it is in the best interests of the university to refer the affected member for possible impeachment.

   a. In accordance with AS 39.52.120(a)(4), *Roberts Rules of Order* and this bylaw, the affected member may not participate in the vote, but is considered an active member for purposes of the required majority.

5. If the motion passes by the required majority the secretary immediately shall transmit the motion, the report and any written response or materials provided by the affected member to the president of the senate.

   a. The board shall reconvene in public session and the motion shall be entered in the official minutes of the board.

Executive Summary

The purpose of this study is to demonstrate the economic, social, and cultural benefits to Alaskans of the life sciences programs at the University of Alaska Fairbanks. The Life Sciences Innovation and Learning Facility is the number one new capital project priority for the University of Alaska system. This study highlights the important contributions of UAF life sciences research and the critical need for the new facility.

Critical Need for a New Life Sciences Facility

The Life Sciences Innovation and Learning Facility is designed to meet the critical need for updated classrooms and provide research space allowing for UAF's continued growth in its successful life sciences research programs. It will be difficult for UAF to expand life sciences research grant revenues without new facilities. Currently, there is insufficient space in modern facilities to attract and retain top researchers.

The new facility will feature 37,000 square feet of academic space, including approximately 40 classrooms with computer and lab capabilities, and a lecture hall capable of seating 80 students. The research space, at 50,000 square feet, will provide 18 research labs and 10 support labs.

The UAF Life Sciences Innovation and Learning Facility is a scaled-down version of the Biological Sciences Facility (BIOS). Total cost for the new 87,000-square-foot research and teaching facility is $102.82 million. UAF has committed to non-General Fund support for 20 percent of the new facility. The FY10 University of Alaska capital budget requests state General Funds of $82.2 million and provides non-General Fund support from UAF totaling $20.6 million for the new Life Sciences facility.

Benefits to Alaska of a New Life Sciences Innovation and Learning Facility

- **STIMULATES A HIGH-VALUE GROWTH INDUSTRY FOR ALASKA: Life sciences research is a high-value growth industry, and the facility is essential to capitalize on this growth. Externally funded life sciences research expenditures at UAF is $20 million with potential for much more if adequate research space is available.** The new facility is essential for UAF to attract and retain top researchers, and allows for continued growth (+30 percent in 5 years) in externally funded research.

- **EXCELLENT RETURN ON INVESTMENT OF ALASKA'S PUBLIC DOLLARS: Every $1 in General Fund money invested in research at the University of Alaska yields $6 in research funding attracted from out-of-state sources.** In essence, life sciences research functions as a basic industry – just as do mining, tourism, seafood and oil – attracting revenue and good jobs into Alaska, stimulating economic growth. The new facility will stimulate research revenue growth and increase Alaska's funding leverage even further.

- **INCREASES THE VALUE OF ALASKA EDUCATION: Additional research increases the value of student education.** The new facility will allow positive interaction among life sciences faculty and students, with research adding value to the student experience, and in turn, engaging more Alaska students in science and health care related careers.

- **ADDITIONAL RESEARCH PROGRAM GROWTH: Critical mass is essential for attracting the best researchers and tens of millions of dollars in additional research funding.** The University of Alaska competes with other universities for research funding and the best researchers. A competitive facility will help attract top researchers who will intern attract additional researchers.

- **ADDITIONAL ALASKA ECONOMIC GROWTH: Continuing economic growth from research will benefit the overall University of Alaska system and Alaska as a whole.** Economic benefits of research include increasing employment, payroll, and expenditure impacts; construction activity impacts; and substantial indirect cost recovery revenue from research programs ($26 million in FY 2007) that accrues to the overall University of Alaska system.

- **MORE ALASKAN GRADUATES SERVING ALASKA: The facility will have a positive impact on creating Alaskan graduates for Alaskan jobs.** UAF life sciences graduates tend to stay in Alaska and already fill many important professional positions throughout the state in business, government and health care. A new facility will help attract and retain more Alaskan students.

- **RESEARCH BENEFITS ARE FOR ALASKANS: Increased contributions of life sciences research benefit the lives of all Alaskans.** Life sciences research is aimed at benefiting Alaska's people and communities. Potential discoveries related to diabetes, food safety and nutrition, SIDS, avian flu, and therapies that may help victims of stroke, heart attack and traumatic brain injury, are just a few examples of the hundreds of research projects currently underway at UAF with potential statewide benefits.

Below are highlights and key points from this study. The body of the document provides greater detail on the impacts and benefits of the life sciences program at UAF.

Importance of Research at UAF

- The majority of UA research (more than 90 percent as measured by research expenditures) takes place at UAF. UAF research expenditures of funding from external sources was approximately $113 million in FY07, up 30 percent from FY02.

- UAF received 424 grants and managed more than 1,446 grants in FY07.

- Indirect cost recovery (ICR) is an important revenue source for UA. Of the $30.9 million in ICR revenue in FY07, $26 million (85 percent) was generated by research at UAF. If UAF research grants stagnate or decline, so will ICR, which would negatively impact UAF and the entire UA system.

- The federal government, through agencies such as the National Institutes of Health, National Science Foundation and Department of Defense, funded the majority (88 percent) of research at UAF in FY07.

UAF Research Funding

- UAF was successful in acquiring federally funded life sciences research capacity-building grants worth $95 million for 2000 to 2014 with an additional $17.7 million pending.

- As a result of the research capacity created at UAF, they have been able to acquire competitive life sciences grants worth an additional $29 million.
- For every $1 of State-funded research UAF received, UAF was able to leverage an additional $5.80 from external funding sources.
- Even though UAF has been historically successful in leveraging state funding, strong General Fund support is still needed to provide the infrastructure (including facilities and human resources) that will allow UAF to be competitive for future grants. General Fund support is used by the university for recruitment, salaries, offices, laboratories, and equipment to build capacity.

Research at UAF

One area of research where UAF has become particularly strong is life sciences. Almost all UAF life sciences research and teaching takes place in two units, the Institute of Arctic Biology (IAB) and Idea Network of Biomedical Research Excellence (INBRE). There are many research programs within these two units that are important and beneficial to Alaskans.

The largest component of UAF life sciences research and academics is contained within the IAB. IAB currently supports roughly 150 ongoing research projects, and IAB faculty (through the Department of Wildlife and Biology in the College of Natural Sciences and Math) are responsible for all academic delivery for classes in life sciences.

INBRE studies organisms that cause diseases in Alaska and toxic substances in our environment. INBRE also has a mission of outreach and support for students (high school and college) who show interest in life sciences research. Combined, IAB and INBRE have approximately 150 faculty, staff and graduate student assistants at UAF. IAB and INBRE had combined research expenditures of nearly $22 million[1]. The majority of expenditures were for wages and benefits, commodities, services and equipment at UAF.

Life sciences research at UAF is ultimately about people, especially Alaskans. Some of the major life sciences programs and projects beneficial to Alaskans under IAB and INBRE are described below.

Monitoring Toxicants and Disease in Alaska

UAF researcher Todd O'Hara is studying contaminants and infectious disease in the Arctic. Infectious agents and toxicants can be easily transmitted through commercial, sport and subsistence harvest in Alaska. INBRE toxicology projects study animals that are at the top of the food chain such as Arctic fox, polar bear and Stellar sea lions, and numerous subsistence foods.

What effect do toxicants have on animals and people? If diets change because of changing environmental conditions, will these animals be exposed to new or higher levels of toxicants and/or infectious agents? If so, how will this affect their health, as well as the health of Alaskans who rely on fish and game for food?

[1] The majority of INBRE expenditures were at UAF but INBRE also supports research at UAA and UAS.

Another of O'Hara's roles is to study and understand how infectious diseases are present in Alaska and how they can be transmitted to the public via handling and consumption of fish and wildlife. For example, there have been periodic outbreaks of rabies in Arctic foxes on the North Slope; this is potentially hazardous to North Slope residents and oil field workers. The better these outbreaks are understood, the better the public can be educated about the associated risks, and measures that can be taken to avoid contact with these diseases.

Center for Alaska Native Health Research (CANHR)

CANHR's mission is "to build and increase research capacity that will contribute knowledge to improve Alaska Native health." The primary focus of this research center is on obesity and its relationship to diabetes and cardiovascular disease among Alaskan Natives. CANHR seeks new knowledge through research that can ultimately be applied to understand, reduce and prevent health disparities in Alaska's Native communities. CAHNR partners with the Yukon-Kuskokwim Health Corporation and communities in Southwest Alaska, using a collaborative approach that incorporates local knowledge and culture into the process of scientific investigation. Following are two of CANHR's current projects.

UAF Research into Contaminants and Nutrients in Alaskan Subsistence Foods

This CANHR project is also headed by researcher Todd O'Hara. It takes the "under the microscope" work of INBRE and utilizes it to the study of how nutrients and toxicants (such as mercury, PCB's DDT, lead, arsenic and many other pesticides) directly affect Alaskans. As these toxicants work their way up the food chain, they can eventually impact human health.

UAF laboratories measure toxicants in subsistence foods such as salmon, seals, and reindeer and go beyond the lab to study how their consumption affects humans. The project also measures nutrient levels in these traditional foods. Contaminant and nutrient levels in foods that are dried, smoked, baked or rendered may change, becoming more or less concentrated. Certain preservation methods can neutralize toxicants and/or impact the nutrients available. This research is very relevant to the health of all Alaskans who consume fish and game. From an economic standpoint, Alaska needs to be vigilant in protecting the pristine image of our valuable commercial marine resources. Scientists are also learning new things about the nutritional benefits of eating fish, an important message for the state's commercial fishing industry.

Alaska Basic Neuroscience Program (ABNP)

ABNP strives to expand and stimulate basic neuroscience research (scientific study of the nervous system) with a focus on protection of the nervous system, including the brain, from disease such as stroke or physical injury. ABNP scientists also study sudden infant death syndrome (SIDS), a particular risk for Alaska infants, by studying how breathing is controlled.

UAF Sudden Infant Death Syndrome Research

SIDS is the leading cause of death in the US for infants one month to one year old. The national rate of SIDS deaths is about 0.7 (less than one) per 1,000 births. Caucasian babies born in Alaska die of SIDS at more than twice the national rate (1.6 per 1,000), and babies born to Alaska Natives die of SIDS at more than five times the national average at 3.6 per 1,000 births. SIDS is an Alaskan problem.

A look at occupational death rates helps to put Alaska SIDS death rates in perspective. In the 1990s, Alaska workers had a death rate of 0.22 per 1,000. The Alaska rate is five times that of the overall US work-related fatality rate. When you compare the Alaska worker death rate with SIDS death rates for approximately the same period, SIDS mortality among Caucasians in Alaska was seven times higher and 16 times higher among Alaska Natives than worker deaths. By far, the most dangerous occupation in Alaska is being an infant. ABNP researcher Mike Harris and his team are working to reduce vulnerability by looking at genetics, biology and behavior in Alaskan babies.

Another UAF SIDS-related research project is led by Barb Taylor and her team. They are looking at the potential effects of exposure to alcohol and nicotine on infants and unborn babies as risk factors in SIDS vulnerability. Other UAF SIDS research is trying to determine if alcohol and nicotine exposure affects the central nervous system and carbon dioxide transfer.

Hibernation Science

The Center for Molecular and Genetic Studies of Hibernation monitors Alaskan animals like the arctic ground squirrel and black bear. These hibernators spend each winter in a state in which their need for food and water is reduced to zero for six to eight months at a time. During hibernation, these animals are also resistant to harm from low blood pressure and the minimal availability of oxygen and blood sugar. Ground squirrels actually spend part of their time in hibernation with their body temperature below freezing with no ill effect.

If researchers can determine how the mechanisms that allow hibernating animals to slow body function work, there is potential for new therapies and drugs that, when administered to humans, would slow body function (including the onset of damage) and could allow first responders to stabilize patients with life-threatening conditions.

This research could lead to increasing the time that sick and injured patients have to get to a critical care facility, increasing their chances of recovery. This could be especially important in Alaska where many residents are injured in remote vehicle, ATV and snow machine accidents, or work in remote locations in the timber, fishing, oil, gas and mining industries and are hours or even days away from a critical care facility. The US Army has been financially supportive of this cutting edge research at UAF because of the potential for stabilizing seriously injured soldiers prior to treatment.

Bird Flu Research

According to the Center for Disease Control and Prevention, "The highly pathogenic avian influenza A H5N1 animal outbreak in Asia, Europe, the Near East, and Africa is not expected to diminish significantly in the short term. It is likely that H5N1 virus infections among domestic poultry have become endemic in certain areas and that sporadic human infections resulting from direct contact with infected poultry and/or wild birds will continue to occur. So far, the spread of H5N1 virus from person-to-person has been very rare, limited and unsustained. However, this epizootic (transferrable from animals to humans) continues to pose an important public health threat."[2]

[2] Center for Disease Control and Prevention website 2/6/2009. http://www.cdc.gov/flu/avian/outbreaks/

UAF researcher Jon Runstadler and his team have been researching biological mechanisms in birds (mostly ducks). How are the viruses transferred among birds? How are they transferred to humans? What are the risks to human health in Alaska?

The migration routes of many species of ducks cross paths where Alaska and Asia meet over the Bering Sea. There is potential for Asian ducks to spread H5N1 bird flu to Alaska and other parts of North America. If the highly pathogenic H5N1 were to occur in Alaska, there could be serious implications for the health of Alaskans.

Because of the capacity built by INBRE, Runstadler's team was able to acquire RO1 grant funding for the Center for Rapid Influenza Surveillance and Research (CRISAR). This five-year, $3.8 million, NIH-funded RO1 grant is a joint UAF, UCLA and UC Davis research project. The research involves surveillance and monitoring of birds in the US, Russia, Japan, China and Southeast Asia to see were there may be a potential threat of an outbreak of bird flu. The study looks at how the virus is carried and transferred as birds migrate around the Pacific Rim. CRISAR is an excellent example of how place-based research has been enhanced by the research capacity built through INBRE. CRISAR allows UAF to use its traditional strengths in wildlife biology to benefit people both inside and outside of Alaska.

Life Sciences Academic Program

Some of the benefits of investment in UA research are quantifiable; however, many benefits are less readily valued. How do we quantify the results of research spending that excites a young Alaskan student to pursue an academic career in a science or health-related field, who then returns to her home community and increases the quality of life for those she serves? UAF research, in close coordination with academic programs, allows many Alaskans opportunities to pursue science or health-related education that not only lead to better income and increased quality of life for their household, but also provides benefits to many other Alaskans and their communities.

Enrollment

- With nearly 500 degree-seeking students, the UAF biology and wildlife program is one of the largest degree programs in the entire UA system. This includes enrollment of over 300 life sciences graduate students. Compared to other programs, UAF life sciences programs, particularly biology, have seen the greatest increases in enrollments at UAF in recent years.

Quality Faculty

- Academic delivery in life sciences at UAF is provided by some of the best researchers in their fields. In order to attract and retain these top instructors, UAF academic facilities need to be on par with other institutions.

- If top researchers can be attracted to UAF, they not only bring their research skills but also increase the number and quality of classes that can be offered at UAF. Additionally, the availability of high-quality research options provides critical hands-on experiences where students can apply their academics.

Alaskan Graduates

- Producing graduates with the skills needed by businesses, government and other agencies in Alaska is a crucial contribution of UA to the state's economy. UA graduates also contribute to the Alaskan economy at a higher level than non-graduates (on average, university graduates earn substantially more over their lifetime than non-graduates).

- UAF educates Alaskans who will be making policy decisions for Alaskans. UAF graduates have worked for local, state and federal agencies such as schools, Alaska Department of Fish and Game, National Park Service, US Forest Service and US Fish and Wildlife. Many of these positions have direct influence on issues that affect all Alaskans.

- Alaskan graduates tend to live and work in Alaska, helping the economy grow and serving state residents. Nearly two-thirds of UAF graduates (from 1989 to 2006) were still living in the state of Alaska in 2006. Rural Alaskan graduates have an even higher likelihood of staying in the state after graduation.

- As of 2005, nearly three-quarters of UAF graduates still living in Alaska worked in a field related to their UAF education. This high retention rate is an important element in creating economic growth within the state.

The Economic Impact of Life Sciences Research

Impacts of Construction

The following impacts of construction of the new Life Sciences Learning and Innovation Facility are estimated based on a 2006 McDowell Group study of the impacts of construction of the BIOS facility. Cost estimates for BIOS were $105 million in 2006; the cost of the redesigned Life Sciences Innovation and Learning Facility is estimated at $102.8 million. Adjustment were made for inflation and cost differences.

- **There will be a substantial amount of short-term employment and economic activity related to the construction of a new Life Sciences Facility in Fairbanks** as well as in other areas of the state. Estimated statewide output associated with facility construction would be substantial, at about $170 million in total direct economic output, $80 million in labor income, and annual average employment of about 370 workers over a four-year construction period. A total of about $145 million ($103 million for construction plus $42 million in indirect and induced spending) in spending activity would occur in the Fairbanks economy.

- **The economic effects of this project would benefit other areas of the state, primarily Anchorage, Mat-Su and the Kenai Peninsula.** Total economic output for the Southcentral region of the state from the facility project would be about $20 million with total direct and indirect annual average employment of about 50, and total payroll of about $8 million. The majority of these benefits would occur in the Anchorage area.

Impacts of a Research Team

- **A new Life Sciences Facility at UAF could generate $1 million to $3 million in new wages and benefits.** Adding new space, and the resulting space made available by intercampus moves, could result in an increase in new research-related wages and benefits in the range of $1 million to $3 million at UAF. In addition to these wages and benefits, there would be increases in direct spending for goods and services. Indirect and induced impacts would have further positive effects on Alaska's economy.

- **On average, a research team at UAF is worth $850,000 to $1 million per year in economic activity for the state.** According the economic modeling system IMPLAN, for every dollar spent on university research in Alaska there is additional economic activity of $0.70.[3] Multiplying the average range of $500,000 to $600,000 in grants acquired per year, per researcher, by the 1.7 multiplier results in a range of $850,000 to $1 million in economic activity for the state, per research team. Twelve research teams at UAF represents approximately $10.2 million to $12 million in economic activity for the state.

[3] Minnesota IMPLAN Group, *IMPLAN Professional Version2*. 2006: Stillwater, MN

Importance of Research at UA

The three primary missions of the University of Alaska are instruction, research and public service. Research at UA plays a key role in expanding and diversifying the state's economy, protecting the health of Alaskans and their environment, and strengthening state agencies and institutions. The extensive economic benefits of UA research programs were documented in a 2007 study by the Institute of Social and Economic Research (ISER).[4]

- In 2006, 2,392 jobs were supported by university research spending, including 1,292 direct jobs and 1,100 indirect jobs.
- The combined direct and indirect payroll for jobs generated by university research was $92 million in 2006.
- Direct and indirect university research generated $125 million in sales throughout Alaska in 2006 (including procurement, business sales, and employee spending).
- In 2006, each $1 million in General Fund appropriations for UA research resulted in 121jobs and $4.7 million in payroll within the state.
- Because non-General Fund research revenue comes mostly from outside Alaska, the University's research programs (like mainstream industries) bring new dollars into the state.

In addition to the economic benefits, research at UA is an important component in the delivery of academic and service programs that are valuable to Alaskans. Building a strong research program also increases the intellectual capital available in the state to help train residents to solve Alaskan problems, increasing the quality of life in the state.

UA is the primary source of research and development in the state of Alaska. In most states, private industry conducts a majority of research and development efforts. The majority of UA research (more than 90 percent as measured by research expenditures) takes place at UAF.

Even though UAF is a small school on a national scale, it has been very successful in research and development. UAF conducts research that is relevant to human health and climate change in Alaska, translating into solutions for problems unique to our environment.[5]

Alaska's proximity to the Arctic has allowed UAF researchers an advantage in competing for grants. While UAF is a small school and does not have the same level of facilities and equipment as some of the largest institutions, "place-based research" has allowed them to be competitive on a national scale.

[5] Maddox, David C., *Environmental Scan for the University of Alaska's Research Enterprise,* 2006.

Measuring UAF Research

Two measures that gauge the scale of research at UAF are the volume of restricted revenue generated by grants and actual research expenditures. Reviewing the volume of grant awards shows the level of success that a university has had in obtaining funding for specific research projects. Some portions of research grant dollars are reallocated through indirect cost recovery (ICR) to fund other campus and system-wide activities. Looking at actual research expenditures allows a more focused view of research program impacts.

Note: Unless otherwise stated, all figures in this document are for FY07.

Grant Awards

The UA system received 694 new grants and managed 2,136 ongoing grants.[6] New grants totaled $237.5 million systemwide. During the year, UAF received 424 of all new grants and managed 1,446 of all ongoing grants. In comparison, UAA received 217 new grant awards and managed 546 ongoing grants.

New grants totaled $237.5 million system wide of which approximately $200 million (83 percent) were at UAF.

Research Expenditures

UAF research expenditures from externally sponsored funding sources totaled about $113 million in FY07, up 30 percent from FY02. (This does not include $22.8 million in State General Fund support.) The majority of UA research (more than 90 percent as measured in research expenditures) takes place at UAF.

Research Expenditures by Major Academic Unit, FY02 to FY07

MAU	FY02 ($millions)	FY07 ($millions)	% Change FY02 – FY07
UAF	$87.2	$113.0	+30%
UAA	9.1	10.3	+13
UAS	0.8	1.2	+42
Total	**$97.1**	**$124.5**	**+28%**

Note: Figures are in millions and have been rounded; they include indirect cost recovery distributed to each MAU (Major Academic Unit).
Source: UA in Review 2008.

Indirect Cost Recovery

Indirect cost recovery (ICR) is an important revenue source for UA. Of the $30.9 million in ICR revenue, $26 million (85 percent) was generated by research at UAF. ICR is revenue captured from federal and other

[6] 2008 UA in Review, UA Statewide Planning and Budget, http://www.alaska.edu/swbir/ir/ua-in-review/

restricted grants that reimburses the University for related administrative, facility, and other support costs. ICR is charged to the grant source as a percentage, up to 42 percent of the grant amount.

UAF Indirect Cost Recovery Distribution, FY02 to FY07

	FY02 ($millions)	FY07 ($millions)	% Change FY02 – FY07
ICR distributed back to originating unit	$10.3	$14.0	+36%
ICR distributed to other UAF departments	5.9	8.9	+50
ICR distributed to UA Statewide MAU	2.4	3.3	+38
Total ICR	**$18.6**	**$26.2**	**+41%**

Note: Figures are in millions and have been rounded.
Source: UA Banner Finance.

Total UAF-generated ICR has increased by 41 percent from FY02 and has become an increasingly important revenue source for maintaining UA facilities and administrative functions.

Slightly more than half (about $14 million) of ICR collected from UAF research went directly to augment the research program or unit that brought in that revenue (the originating unit), while 34 percent ($8.9 million) was distributed to other areas of UAF, such as the library, administrative services and building maintenance. The remaining 13 percent ($3.3 million) was distributed to the UA Statewide MAU.[7] The Statewide MAU provides services such as accounting, legal, human resource and information technology services to UA system-wide.

ICR has been the revenue source for much of the construction of new research space in the last decade, including the West Ridge Research Building, UAF Museum research space, Institute of Arctic Research Center, Lena Point facility, and the BiRD Building.

The $3.3 million distributed to the Statewide MAU represented approximately 6 percent of its revenues. The $8.9 million distributed to other UAF departments accounted for about 2.5 percent of UAF revenues. If the level of UAF research were to stagnate or decline, the effect could have serious implications for university operations.

[7] UA has four major administrative units (MAU's): UAA, UAF, UAS and Statewide.

Funding for UAF Research

Overall, externally funded (non-General Funds) research at UAF increased by 30 percent from FY02 to FY07. The federal government, through agencies such as the National Institutes of Health, National Science Foundation and Department of Defense, funded the majority (88 percent) of research at UAF. Other sources of funding included Native Corporations, non-profit organizations, private businesses and other universities, which accounted for about 11 percent of research revenue. State General Fund support increased slightly from about $1.4 million to $1.5 million and accounted for about 1 percent of total research revenue at UAF.

The majority of growth (in dollars) was due to federal funding, while funding from sources such as Native Corporations, non-profit organizations, private businesses and other universities increased at the highest rate (46 percent) over the period. Examples of state agencies include the Department of Natural Resources and the Department of Health and Social Services.

UAF Externally Funded Research Expenditures by Sponsor, FY02 to FY07

	FY02 ($millions)	FY07 ($millions)	% of Expend. FY07	% Change FY02 – FY07
Federal	$77.6	$99.4	88%	+28%
Other	8.2	12.0	11	+46
State agencies	1.4	1.5	1	+6
Total	**$87.2**	**$113**	**100%**	**+30%**

Note: Figures are in millions and have been rounded. Figures include ICR expenditures.
Source: UA in Review 2008.

Leverage

One measure of the productivity of a research program is to compare the value of external funding leveraged by university General Funds. For every dollar of state-funds for reserach in FY07, UAF was able to leverage an additional $5.80 from external funding sources. UAF has been fortunate to receive multiple capacity-building grants over the last six to eight years. The State must capitalize on this opportunity.

Strong General Fund support is still needed to build the infrastructure (including facilities and human resources) so that UAF has the capacity to be competitive for new grants. Such funds will be used for recruitment, salaries, offices, laboratories, and equipment to build capacity.

The expectation of top UAF researchers is that they will eventually bring in significant grant funding to support their own salaries, staff and equipment, as well as contribute to the university as a whole.

Building Research Capacity

Since 2000, UAF has made a concentrated effort to build capacity for life sciences research. Since that time UAF has received a series of grants designed to increase capacity in basic and applied research. These grants are for limited periods of time (some can be renewed for a second or third phase) but are not long-term sources of funding for research. The purpose of the grants is to build capacity among research programs so that they can conduct research that is capable of receiving funding on a nationally competitive basis.

Most research at UAF is funded by either the National Institute of Health (NIH) or the National Science Foundation (NSF).

NIH Funding

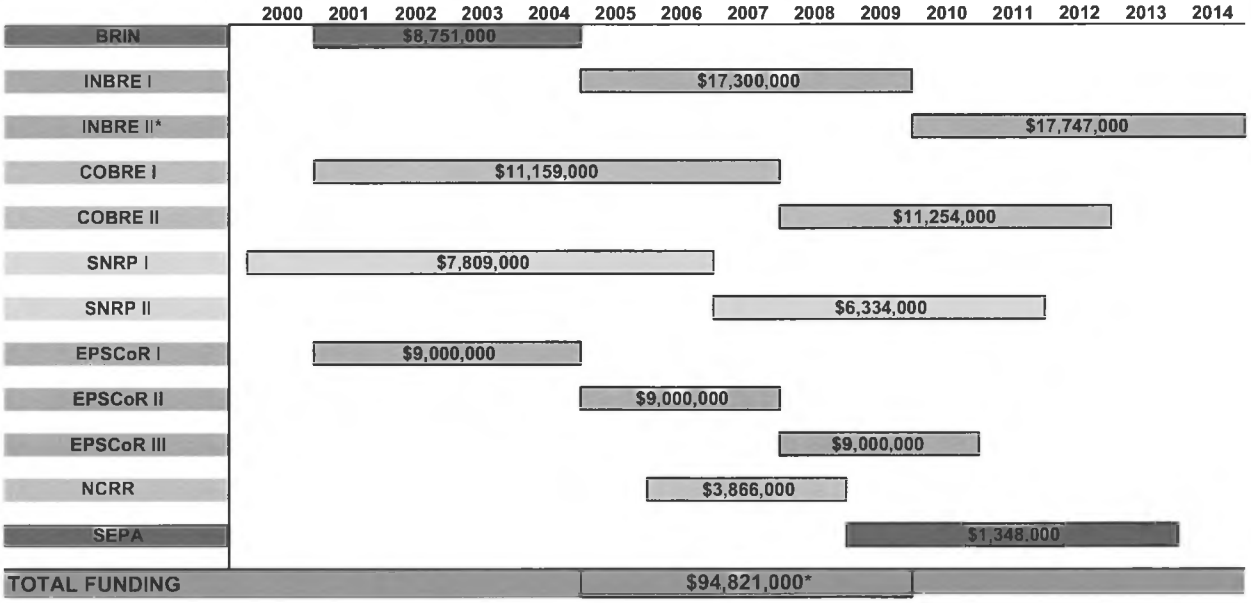
In addition to capacity-building grants, NIH RO1 grants are made to support specific projects to be performed by an investigator in an area representing the investigator's competencies, and to meet the mission of the NIH. One intent of the capacity-building grants is to increase the number of RO1 awards to Alaska which is currently at or near the bottom of all states in NIH-funded RO1 research grants.

NIH RO1 grants are awarded to the top 10 to 15 percent of applicants. Even Harvard University researchers have a success rate of only about 50 percent when applying for NIH grants.

In addition to the merits of an individual proposal, NIH looks at several critical components of a proposed research project:

- Research must be relevant to health issues on a national level.
- NIH panels look for strong scientists with quality degrees, a pattern of excellent work, public speaking, published work, and previous receipt of grant funding.
- Laboratory facilities and equipment must be up to date.
- Research programs need a strong intellectual community (a critical mass of students, graduates and other researchers) for support.

NSF Funding



The National Science Foundation (NSF) is an independent federal agency that promotes science to advance national health, prosperity, welfare and national defense. NSF funds about $6 billion worth of research through term-limited grants. NSF currently issues about 10,000 new awards per year, with an average project duration of three years. Research proposals must be judged the most promising by a rigorous and objective merit-review system. Most of these awards go to individuals or small groups of investigators. Others provide funding for research centers, instruments and facilities that allow scientists, engineers and students to work at the outermost frontiers of knowledge.

"NSF's goals—discovery, learning, research infrastructure and stewardship—provide an integrated strategy to: advance the frontiers of knowledge; cultivate a world-class; broadly inclusive science and engineering workforce and expand the scientific literacy of all citizens; build the nation's research capability through investments in advanced instrumentation and facilities, and support excellence in science and engineering research and education through a capable and responsive organization. NSF's mission includes support for science and engineering education, from pre-K through graduate school and beyond. The research is thoroughly integrated with education to help ensure that there will always be skilled people available to work in new and emerging scientific, engineering and technological fields, and capable teachers to educate the next generation."[8]

The challenge at UAF is to create and maintain a research program that has a critical mass of top researchers, facilities and intellectual strength. To meet these criteria, a research program must have very strong support from the University of Alaska and from the State. In order to meet NIH and NSF qualifications and the goals of UAF, proposed research needs to be relevant not only on a national level, but also relevant within the state.

The table below shows federal funding for capacity-building grants received by UA. Almost all funding shown in the table was for research conducted at UAF. The exceptions are INBRE which has program components at UAA and UAS, and EPSCoR which provides programs statewide. Following the table are brief descriptions of these capacity-building grants. To date approximately $95 million has been received and an additional $17.7 for INBRE II is pending.

Life Sciences Capacity-Building Federal Grant Funding

*Note: INBRE II is not included in this total but the expectation is that this grant will be awarded.

[8] National Science Foundation website 2/8/2009 http://www.nsf.gov/index.jsp

INBRE/BRIN

The Idea Network of Biomedical Research Excellence (INBRE) is a national program of grants from National Institutes of Health designed to increase capacity for high quality research. INBRE provides grants for research institutes like UAF that have strong programs and the potential to be increasingly competitive with top researchers from other states for NIH RO1 grants. After the grant period ends, the program is expected to be at a level where its researchers can be nationally competitive. UAF received its first NIH capacity-building grant (then called BRIN) for 2001 to 2004. The first INBRE grant was for 2004 to 2009. INBRE at UAF is in the process of being renewed and is likely to be funded for 2009 through 2013. More details about INBRE projects will be presented in the UAF Life Sciences Research Programs section of this report. INBRE funds research at UAF, UAA and UAS.

COBRE

The Center of Biomedical Research Excellence (COBRE) is an NIH-funded program to build research capacity in specially designated areas. The COBRE program promotes the initiation and development or expansion of unique, innovative state-of-the-art biomedical and behavioral research centers at institutions. COBRE funds basic and applied research. The objectives of COBRE are to strengthen institutions' biomedical research infrastructure and to enhance the ability of investigators to compete independently for NIH individual research grants.[9] COBRE funds Center for Alaska Native Health Research at UAF.

SNRP

Specialized Neuroscience Research Programs (SNRP) program is designed to strengthen research capabilities of faculty, students, and fellows at minority institutions by supporting the development and/or the enhancement of ongoing, basic and clinical neuroscience research projects and programs. SNRP funds the Alaska Basic Neuroscience Program.

SNRP grants are intended "to enhance the research capacity of a group of academic institutions that historically have not been major participants in NIH [neuroscience] programs specifically." An important long-term goal has been to foster the capability of minority institutions to compete successfully within the NIH peer review process for research grants. SNRP grants were designed to achieve the following programmatic goals:

- To assist in infrastructure development leading to well established, state-of-the-art neuroscience research programs.
- To foster innovative and effective partnerships and collaborations between minority institutions and established neuroscience laboratories at federal and non-federal research institutions.
- To create, support, and maintain a stimulating academic and intellectual milieu to inspire and prepare students and fellows to pursue research centers in neuroscience. [10]

[9] National Institutes of Health website 2/8/09 http://grants.nih.gov/grants/guide/pa-files/PAR-09-079.html#SectionI

[10] National Institutes of Health, Specialized Center Cooperatives Agreement Programs website http://snrp.nih.gov/about_SNRP/about.htm

- To provide support to develop and sustain competitively funded neuroscience research projects and programs.

EPSCoR

The Experimental Program to Stimulate Competitive Research (EPSCoR) is a National Science Foundation university-based grant program that is designed to develop states' research capabilities; increase student participation in science, math and engineering; increase the coordinated efforts between states and their universities; and to ultimately increase economic development. EPSCoR creates partnerships with states and universities to spark interest in research and build capacity among researchers. Alaska EPSCoR began in 2000 and partners with UA and the State of Alaska. Alaska EPSCoR is in its third phase (2007-2010). Each phase has granted about $4 million annually for EPSCoR with three-quarters coming from NSF and one-quarter coming from the State of Alaska (through UA) as matching funds. EPSCoR is a statewide program with a mandate to increase student participation in all areas of the state, including UA's major and remote campuses.

SEPA

Science Education Partnership Awards (SEPA) are NIH-funded, with the goal of increasing biomedical research education in Alaska middle and high schools. The grant is part of an estimated $17 million awarded by NIH to fund 16 Science Education Partnership Awards across the country.

UAF's award will provide support for the Biomedical Partnership for Research Education Pipeline in Alaska, or Alaska BioPREP, to be administrated by INBRE. According to INBRE Director George Happ, "This program blends the talents and facilities of local school teachers and health providers with those of UAF to create venues where secondary school students can pose biological and biomedical questions, find answers using molecular approaches, and gain appreciation of the importance of modern science to the practice of medicine and health policy in their daily lives."

An immediate aim of the project will be to keep students in high school through graduation by ensuring that their high school science courses are focused, challenging and relevant. The BioPREP partnership group includes school districts, teachers, researchers, science education groups and Alaska Teacher Placement. Through the partnership, university researchers provide the technical expertise, teachers provide the instructional expertise, and health care providers and community members supply practical applications and encouragement for the students.

"Hands-on investigations, individual mentoring relationships, community involvement, and incentives such as travel and scholarships all improve student enthusiasm and retention in school, and all are part of BioPREP," explained Sue Hills, outreach director of Alaska INBRE. "With the skills the students learn in BioPREP, they can jump right into undergraduate research programs or lab assistant positions when they get to college."

NCRR

The National Center for Research Resources (NCRR) was funded by NIH. Funds are granted to expand, remodel and renovate research and animal facilities.

A $3.87 million NCRR grant was used to help complete construction of the Biological Research and Diagnostic Facility (known as the BiRD building).

Capacity-Building Success at UAF

Overall, UAF research has been increasingly successful at winning competitive grants. As a result of the research capacity built by BRIN/INBRE, COBRE and SNRP, UA has been able to acquire competitive life sciences grants totaling approximately $29 million dollars.

One example of how capacity-building grants can lead to success with competitive grants is the Center for Rapid Influenza Surveillance and Research (CRISAR) project. This $3.8 million NIH-funded RO1 grant is a joint effort between UAF, UCLA and UC Davis. The 5-year competitive grant was awarded to UAF in 2007 as a result of the capacity built from INBRE funding. The research involves surveillance and monitoring of birds in the US, Russia, Japan, China and Southeast Asia to identify were there may be a potential threat of an outbreak of bird flu. The study looks at how the virus is carried and transferred. According to principal investigator Jon Runstadler, "Our proximity to the birds and the research capacity that we have built from INBRE allowed us to be successful in securing this competitive research proposal for UAF." Runstadler's team works with Mark Lindberg, a UAF wildlife biologist and expert on the life-cycle of ducks in Alaska. His understanding of migration patterns also allows researchers to know when and where to intercept wild birds so that they can be monitored for various strains of avian flu.

CRISAR is an excellent example of how place-based research has been enhanced by the research capacity built through INBRE. CRISAR allows UAF to use its traditional strengths in wildlife biology to benefit people both inside and outside of Alaska.

There are many similar examples of research success at UAF. The next section will provide an overview of the primary life sciences programs at UAF.

UAF Life Sciences Research Programs

One area of research where UAF has become particularly strong is life sciences. Almost all UAF life sciences research and takes place within Institute of Arctic Biology (IAB) or Idea Network of Biomedical Excellence (INBRE).

Institute of Arctic Biology

The largest component of UAF life sciences research and academics is contained within the IAB. IAB currently supports about 150 ongoing research projects, and IAB faculty (through the Department of Wildlife and Biology in the College of Natural Sciences and Math) teach all of the classes for undergraduate majors in biology; teach components of chemistry and biochemistry; and provide support for graduate and post-graduate education and research in biology, molecular biology, wildlife biology, physiology, genetics, and ecology.

IAB had total research expenditures of $20.1 million, up 78 percent from $11.3 million in FY02.[11] The majority (61 percent) of expenditures were for wages and benefits. Nearly one-third (30 percent) of expenditures were for commodities, services and equipment. The remaining 9 percent was spent on travel, land and buildings, student aid and miscellaneous items.

The total number of faculty, staff and graduate students involved in research at IAB was 134. There were 57 faculty and 77 staff and graduate positions (held by either post doctoral researchers, graduate researchers or undergraduate students).

IAB Faculty and Staff, 2007

Total Staff	**134**

Major IAB Programs

Basic and applied research conducted at UAF has significant economic impact and quality of life benefits for Alaskans. Major research programs include the Toolik Field Station, Robert White Large Animal Research Station, Center for Alaska Native Health Research, Alaska Basic Neuroscience Program, Center for Molecular and Genetic Studies of Hibernation, Alaska Geobotany Center, the Resilience and Adaption Program, and Bonanza Creek Long-Term Ecological Research Program. Following are brief discussions of what these programs do and how they are relevant to Alaskans.

[11] Source: UA Unit Profile-UAF IAB. These figures do not include indirect cost recovery.

TOOLIK FIELD STATION (TFS)

IAB maintains the Toolik Field Station (TFS). TFS is a national and international Arctic climate change research center, primarily sponsored by the NSF. The facility is located 158 miles north of the Arctic Circle along the Dalton Highway. TFS has been operating for 30 years and is on the forefront of research on climate change that is gathered by over 300 scientists and students each year. Work at TFS will pay a key role in providing current and historic data that will help researchers, agencies, and industry to understand environmental changes in Arctic land and water based environments. Research based at TFS has been widely published in more than 225 journal articles (including *Nature* and *Science*), and portions of 47 books. The facility provides hands on research opportunities for under graduates, graduates and Alaska high school students.

ROBERT WHITE LARGE ANIMAL RESEARCH STATION (LARS)

LARS was created in 1979 and allows scientists and students hands-on opportunities to work with musk oxen, caribou and reindeer to better understand the nutritional, physiological and behavioral systems of these unique northern animals. The facility also provides educational opportunities for the general public and Alaskan schoolchildren from grade school through high school.

Basic and applied research conducted at UAF has significant economic impact and quality of life benefits for Alaskans. Major research programs include the Center for Alaska Native Health Research, Alaska Basic Neuroscience Program, Center for Molecular and Genetic studies of Hibernation, Alaska Geobotany Center, the Resilience and Adaption Program and Bonanza Creek Long-Term Ecological Research Program. Following are brief discussions of what these programs do and how they are relevant to Alaskans.

Monitoring Toxicants and Disease in Alaska

UAF researcher Todd O'Hara is studying contaminants and infectious disease in the Arctic. Infectious agents and toxicants can be easily transmitted through commercial, sport and subsistence harvest in Alaska. INBRE toxicology projects study animals that are at the top of the food chain such as arctic fox, polar bear and Stellar sea lions, and numerous subsistence foods.

What effect do toxicants have on animals and people? If diets change because of changing environmental conditions, will these animals be exposed to new or higher levels of toxicants and/or infectious agents? If so, how will this affect their health, as well as the health of Alaskans who rely on fish and game for food?

Another of O'Hara's roles is to study and understand how infectious diseases are present in Alaska and how they can be transmitted to the public via handling and consumption of fish and wildlife. For example, there have been periodic outbreaks of rabies in Arctic foxes on the North Slope; this is potentially hazardous to North Slope residents and oil field workers. The better these outbreaks are understood, the better the public can be educated about the associated risks, and measures that can be taken to avoid contact with these diseases.

CENTER FOR ALASKA NATIVE HEALTH RESEARCH (CANHR)

CANHR's mission is "to build and increase research capacity that will contribute knowledge to improve Alaska Native health." CANHR has been funded by two, 5-year, $11 million capacity-building grants (COBRE I and II). The center began operations in 2001 and was again funded in 2007. The primary focus of research at the center is obesity and its relationship to diabetes and cardiovascular disease among Alaska Natives. CANHR seeks new knowledge through basic and applied research that can ultimately be applied to understand, reduce and prevent health disparities in Alaska's Native communities.

CAHNR partners with the Yukon-Kuskokwim Health Corporation and communities in Southwest Alaska, and uses a collaborative approach that incorporates local knowledge and culture into the process of scientific investigation. By working closely with community members, local residents become part of the research process and can help to guide research and facilitate results that are culturally appropriate.

CANHR travels to communities with a team of three to four including researchers, nurses, technicians and other support staff. CANHR makes significant research expenditures in rural Alaska on travel, rent, food, fuel and supplies. They employ local workers to assist on projects as much as possible.

The following projects are an example of how CAHNR research can result in a better quality of life for Alaskans.

UAF Research into Contaminants and Nutrients in Alaska Subsistence Foods

Todd O'Hara is a UAF researcher that conducts studies for both INBRE and CANHR. His INBRE research involves microbial agents (human and wildlife diseases that can be transferred between the two) and toxicants, while his CANHR projects focus on the study of nutrients and toxicants related to human health issues that directly affect Alaskans. All of the toxicants that O'Hara studies as part of his INBRE projects end up in the food chain, such as mercury, PCB's, DDT, lead, arsenic and many other pesticides. As these toxicants work their way up the food chain, they are easily transmitted to humans through commercial, sport and subsistence harvest in Alaska, and can eventually impact human health.

UAF laboratories measure toxicants in subsistence foods such as salmon, seals, and reindeer and study how their use affects humans. This research project also measures nutrient levels in these traditional foods. O'Hara and his CANHR team study the effects that preparation methods can have on concentrations of toxicants and nutrients in food from these Alaskan animals. Contaminant and nutrient levels in foods that are dried, smoked, baked or rendered may change, becoming more or less concentrated. CANHR scientists measure levels of these contaminants to see how various preservation techniques may affect toxicity and critical nutrients. Certain preservation methods can neutralize toxicants and/or impact the nutrients available. This research is very relevant to the health of all Alaskans who consume fish and game.

From an economic standpoint, Alaska needs to be vigilant in protecting the pristine image of our valuable commercial marine resources. For example, the level of contaminants in some fish from around the world has made news in recent years. Alaska needs to be watchful that our species are not caught up in negative publicity. While there may be concerns about contaminants in farm-raised salmon, wild Alaskan salmon are

low in contaminants. Just as important, spreading the message about the nutritional value of Alaskan fish is good for Alaska and the state's economy.

UAF Research into Measuring Alaskan Subsistence Diets

Bert Boyer is a researcher with CANHR studying how diet interacts with genes to predispose people, particularly Yup'ik Eskimos, to obesity. He suspected that the Yup'ik diet, rich in polyunsaturated fatty acids found in salmon and marine mammals, might protect them from diabetes but was frustrated by the difficulty in quantifying what Yukon-Kuskokwim Delta Yup'iks were eating regularly through self-reported diet surveys and questionnaires.

He shared his concern with Diane O'Brien, a new faculty member at UAF who was not yet a part of CANHR. She suggested it is possible to measure PUFAs indirectly by using isotopic signatures that are unique to fish and marine mammals and found in human blood, fingernails or hair. Such analyses are fairly cheap, easy to do and very accurate. That idea resonated with Boyer, and testing her assumption became part of the CANHR II study. She has since proven that these cheap, easily measured markers are highly accurate proxies for polyunsaturated fatty acids in the diet in a study to be published in March.

O'Brien's isotopic work is important on two fronts. First, it will help CANHR researchers understand the relationships between a changing diet and obesity in Alaska Natives, which is a growing public health problem for Alaska; and secondly, it will develop better methods for any researcher who needs diet assessments for a wide range of medical issues."

Alaska Basic Neuroscience Program

The Alaska Basic Neuroscience Program (ABNP) strives to expand and stimulate basic neuroscience research (scientific study of the nervous system) with a focus on protection of the nervous system, including the brain, from disease such as stroke or physical injury. ABNP scientists also study sudden infant death syndrome (SIDS), a particular risk for Alaska infants, by studying how breathing is controlled.

ABNP is supported by an NIH capacity-building grant from the Specialized Neuroscience Research Program (SNRP). The first NIH $7.8 million grant was for 2000 to 2006, and the current grant (2006 to 2011) is for $6.3 million. Other program supporters include National Institute of Mental Health (NIMH) and National Center for Research Resources (NCRR). The following projects are an example of how ABNP research can result in a better quality of life for Alaskans.

UAF Sudden Infant Death Syndrome (SIDS) Research

SIDS is a leading cause of death in the US for infants one month to one year old. The national rate of SIDS deaths is about 0.6 (less than one) per 1,000 births. Alaskan babies born in the Caucasian population die of SIDS at more than twice the national rate (1.6 per 1,000), and babies born to Alaska Natives die of SIDS at more than five times the national average at 3.6 per 1,000 births.

In order to put Alaska SIDS death rates in perspective, consider a comparison with some of the most dangerous occupations in the world. Alaska is seen as a dangerous place to work. Commercial logging, commercial fishing and flying are considered by most as high risk occupations. For the 1990's Alaska workers

had a death rate of .22 per 1,000 (less than one-quarter person per 1,000). When you compare this death rate with the incidence of SIDs for approximately the same period, rates of SIDS death among Caucasians in Alaska were seven times higher than rates of worker deaths, and 16 time higher among Alaska Natives. By far, the most dangerous occupation in Alaska is being an infant. It is a dangerous place to be born and researchers don't know why. SIDS research done outside the state of Alaska will not address why Alaskan rates are so much higher than the national average. Alaskans need to take ownership of this problem. ABNP researcher Michael Harris and his team are working to understand vulnerability by looking at genetics, biology and behavior, with a goal to prevent the occurrence of SIDS in Alaskan babies.

A normal response in babies is to wake up when breathing is hindered, for example from sleeping on their stomach. The sequence is to wake up, move their head and enhance breathing (three separate reflexes.) If any one of the reflexes does not work, a relatively common occurrence, sleeping with a face in the bedding, can become a life threatening situation. One theory is that a serotonin deficiency may lead to greater vulnerability to SIDS by disrupting reflexes such as these. UAF researcher Michael Harris and his team want to know if there is anything about serotonin that can be linked to important reflex functions. They are conducting basic research at the molecular level. If a connection can be made between serotonin dysfunction and vulnerability to SIDS, then pharmacological solutions can be developed.

In order to understand how SIDS works, researchers must first identify not only the causes of increased vulnerability, but also the symptoms associated with vulnerability. If researchers can understand such symptoms then they can more readily identify which infants may be vulnerable. If simple screening tools can be developed to indentify infants at risk of SIDS ahead of time this would help save lives and facilitate further research. For example, if doctors or parents knew a particular infant had symptoms that indicated vulnerability to SIDS, in cases such as failed reflexes, steps could be taken to supplement the reflex or avoid the potentially life threatening situations. This would lead to fewer deaths. One of ABNP's current projects involves trying to develop a non-invasive screening tool that could help predict vulnerability for SIDS. The results of this research could help save lives and reduce the number of Alaskan infants that die of SIDS.

Another UAF SIDS related research project is lead by Barbara Taylor and her team. They are looking at the effects of exposure to alcohol and nicotine in animal models, that can explain why exposure to these substances in infants and unborn babies are risk factor contributing to SIDS vulnerability. Their research is trying to determine if alcohol and nicotine exposure affects the central nervous system and sensitivity to low oxygen or carbon dioxide. Basic animal research shows that exposure does have an impact. Once you have determined that there is an impact you investigate at a cellular level to understand the problem and then find solutions.

Center for Molecular and Genetic Studies of Hibernation

Scientists at the Center for Molecular and Genetic Studies of Hibernation investigate the molecular and genetic basis of hibernation in mammals, focusing on development of potential new therapies and drugs to protect and treat victims of stroke, heart attack, and severe trauma. The project has been funded by the National Science Foundation and the United States Army Medical Research and Materiel Command since 2005. Grant and non-restricted spending for this program is about $5 million to date.

Hibernation Science

Alaskan animals, like the arctic ground squirrel and black bear, spend each winter in a state of hibernation during which their need for food and water is reduced to zero for six to eight months at a time. During hibernation, these animals are also resistant to harm from low blood pressure and the minimal availability of oxygen and blood sugar. Ground squirrels actually spend part of their time in hibernation with their body temperature below freezing with no ill effect.

UAF researchers Brian Barnes, Kelly Drew and their team are trying to develop an understanding of the molecular and biochemical mechanisms that slow body function and protect hibernators, which could lead to the development of new drugs that lessen the harm from stroke, heart attack and injuries such as gunshot and head trauma.

Over 160,000 people die of stroke each year in the US (an age-adjusted rate of about 47 people per 100,000; in Alaska the age-adjusted rate for stroke is even higher, at 53 per 100,000).[12] In 2004, 858 Alaskans died from either heart disease or a stoke.[13] Essential for patient recovery from these dangerous events is to stabilize them as quickly as possible, until advanced medical care is available. If researchers can determine how mechanisms that allow hibernating animals to slow body function work, there is potential for new therapies and drugs that, when administered to humans, would quickly slow body function (including the onset of damage) and could allow first responders to stabilize patients with life-threatening conditions.

This research could lead to increasing the time that sick and injured patients have to get to a critical care facility, increasing their chances of recovery. This could be especially important in Alaska where many residents are injured in remote vehicle, ATV and snow machine accidents, or work in remote locations in the timber, fishing, oil, gas and mining industries and are hours or even days away from a critical care facility. The US Army has been financially supportive of this cutting edge research at UAF because of the potential for stabilizing seriously injured soldiers.

This type of research is an excellent example of place-based research that has significant potential to benefit Alaska and the nation. UAF's northern Alaska location and proximity to ground squirrels and bears allows researchers to study and closely monitor the animals while attempting to unlock the biological keys to slowing body functions.

Bonanza Creek Long-Term Ecological Research Program

Bonanza Creek Research focuses on improving prediction and understanding of the long-term consequences of changing climate and disturbances such as fire, insects, pathogen outbreaks, and permafrost thaw in Alaska's boreal forests.

The boreal forest is considered the second largest terrestrial ecosystem in the world, after tropical forests. The boreal forest comprises one of the world's largest carbon reservoirs. Changes or disturbances in the volume and distribution of coniferous versus deciduous boreal forests are known to affect regional and global climate.

---

[12] Center for Disease Control (CDC) National Center for Health Statistics and National Vital Statistics Reports

[13] The Burden of Heart Disease and Stroke in Alaska: *Mortality, Morbidity, and Risk Factors* http://www.hss.state.ak.us/dph/chronic/chp/pubs/burden_july06.pdf

The program's objectives are to study factors like fires, melting permafrost and insects that might result in serious changes in the Arctic environment and to identify human and environmental factors that may reduce stresses on ecosystem structure and function that could otherwise lead to serious changes. For example, as the Arctic climate changes (warms), forests are more susceptible and less resistant to insect and pathogen attack. Research is conducted at two main sites: the Bonanza Creek Experimental Forest and Caribou-Poker Creeks Research Watershed.

Changes in the Arctic could have serious implications for Alaskans who rely upon animals and plants for food, soil stability (for houses, roads), water patterns and filtering (streams, rivers, wells), forest productivity (timber), and for recreational opportunities (skiing, snowmachining, camping, hunting, fishing).

Information gathered at Bonanza Creek is used by agencies such as the Alaska Fire Service and the Alaska Department of Fish and Game. For example, the Alaska Department of Fish and Game may use background data from Bonanza Creek to better understand how moose and caribou populations may be affected in fire-damaged areas in order to meet population and harvest goals.

The Bureau of Land Management Alaska Fire Service (AFS) located at Fort Wainwright, Alaska, provides fire suppression services for all Department of the Interior and Native Corporation lands in Alaska. In addition to fire suppression, AFS has other statewide responsibilities, including interpretation of fire management policy. AFS operates on an interagency basis; cooperators include the Bureau of Land Management, State of Alaska Department of Natural Resources, USDA Forest Service, National Park Service, Bureau of Indian Affairs, U.S. Fish and Wildlife Service, and the U.S. Military in Alaska.[14]

The Bonanza Creek Program has received $2.6 million to date from the National Science Foundation and supports 25 large scale research projects. In addition to principal investigator Terry Chapin and co-principal investigators Roger Ruess and David McGuire, the program is staffed by 23 senior investigators, 57 affiliated scientists, 16 master's degree students, ten Ph.D. students, one post-doctoral research associate, one data manager, one site manager, and eight technicians.

Resilience and Adaption Program

The Resilience and Adaptation Program (RAP) explores the links among cultural, economic, and ecological conditions of Alaska and the North, and provides training that prepares scholars, policy-makers, and managers to address issues of sustainability. Alaska and the Circumpolar North are appropriate places to train researchers in the dynamics of social-ecological systems because of climatic, cultural and socio-economic change. This program places special emphasis on training Alaska Native Ph.D.s who are needed as university faculty, researchers, educators, and community leaders.

Students work with UAF faculty on a broad range of interdisciplinary research projects at community, regional, and circumpolar levels. RAP offers master's and Ph.D. degrees in Biology and Wildlife, Anthropology, Resource Economics, Natural Resource Management, Northern Studies, and Interdisciplinary Studies.

RAP has received nearly $1.3 million to date from the National Science Foundation's Integrative Graduate Education and Research Traineeship Program.

---

[14] Alaska Fire Service website 2/10/2009 http://fire.ak.blm.gov/afs/

Alaska Geobotany Center

The Alaska Geobotany Center (AGC) is dedicated to understanding northern ecosystems through the use of geographic information systems (GIS), remote sensing, field experiments, and cooperative team research projects. AGC documents changes in vegetation across the circumpolar Arctic and is a critical component to the understanding of permafrost, carbon reserves, water systems, wildlife populations, and the ability of humans, plants, and animals to live in the Arctic. Researchers examine landscape patterns including vegetation, snow ecology, and the disturbance and recovery of plants. This information is used by resource managers, land-use planners, ecosystem scientists, and government land agencies. These mapping resources are valuable to wildlife biologists, fire managers and timber managers in Alaska.

AGC projects collectively known as "Greening of the Arctic" include:

- **Arctic Systems Science:** Addresses the question of how vegetation of the Arctic has responded to climate change.
- **Land Cover and Land Use Change:** Addresses how the decline in Arctic sea ice will affect, and is affected by, the greening of vegetation in the Arctic.
- **Arctic Geobotanical Atlas:** Education and outreach component comprised of a Web-based, multi-scale collection of geobotanical maps and related data.
- **North American Arctic Transect:** Creates baseline information on Arctic vegetation.
- **Circumpolar Arctic Vegetation Map:** International project that mapped the vegetation and associated characteristics of the circumpolar region using a common base map.

The ACG has $755,534 in current funding from NASA and is expected to confirm receipt of approximately $950,000 in additional NASA funding in the first quarter of 2009.

Idea Network of Biomedical Research Excellence (INBRE)

Another major life sciences unit at UAF is INBRE. INBRE is supported by a national program of capacity-building grants from the National Institute of Health designed to increase capacity for high quality research. INBRE uses expertise in biology to investigate organisms that cause disease and toxic substances in the environment. INBRE operates independently from the Institute of Arctic Biology.

An additional mission of INBRE is outreach and support for students (high school and college) who show interest in life sciences research.

INBRE receives approximately $3.5 million in annual grant revenue with approximately $1.8 million in research expenditures (not including ICR contributions). Wages and benefits made up the greatest portion of expenditures (39 percent). Additionally, significant expenditures were made for commodities, contract services and equipment (32 percent). Travel expenditures accounted for 13 percent of INBRE's research expenses.

INBRE supports research at UAF, UAA and UAS. There are a total of approximately eight faculty and graduate students and four and a half staff positions.

INBRE Faculty and Staff, 2007

	# of Faculty	# of Grad Students	# of Staff
UAF	4	6	4
UAA*	3	2	0.5
UAS	1	0	0
Total INBRE staff	**8**	**8**	**4.5**

*The staff position is less than one full-time equivalent.

The following projects highlight the valuable contributions INBRE research is making to the state of Alaska.

UAF Bird Flu Research

To better understand avian flu research at UAF, following is a brief summary of the current status of avian flu. According to the Center for Disease Control and Prevention,

> *Avian influenza is an infection caused by avian (bird) influenza (flu) viruses. These influenza viruses occur naturally among birds. Wild birds worldwide carry the viruses in their intestines, but usually do not get sick from them. However, avian influenza is very contagious among birds and can make some domesticated birds, including chickens, ducks, and turkeys, very sick and kill them.*
>
> *Usually, avian influenza virus refers to influenza A viruses found chiefly in birds, but infections with these viruses can occur in humans. The risk from avian influenza is generally low for most people because the viruses do not usually infect humans. However, confirmed cases of human infection from several subtypes of avian influenza infection have been reported since 1997. Most cases of avian influenza infection in humans have resulted from contact with infected poultry (e.g., domesticated chicken, ducks, and turkeys) or surfaces contaminated with secretions/excretions from infected birds. The spread of avian influenza viruses from one ill person to another has been reported very rarely, and has been limited. However, (A) viruses are constantly changing, and they might adapt over time to infect and spread among humans.*
>
> *Influenza A H5N1 is an influenza A virus subtype that occurs mainly in birds, is highly contagious among birds, and can be deadly to them. H5N1 virus does not usually infect people, but infections have occurred in humans. Most recently, outbreaks of highly pathogenic avian influenza A (H5N1) among poultry have been associated with illness and death in humans in Asia, Africa, Europe, the Pacific, and the Near East. In the United States, from 1997 to 2005, there were 16 outbreaks of low pathogenic avian influenza A viruses (H5 and H7 subtype) and one outbreak of highly pathogenic avian influenza A (H5N2) in poultry.*
>
> *The highly pathogenic avian influenza A H5N1 animal outbreak in Asia, Europe, the Near East, and Africa is not expected to diminish significantly in the short term. It is likely that H5N1 virus infections among domestic poultry have become endemic in certain areas and that sporadic human infections resulting from direct contact with infected poultry and/or wild birds will continue to occur. So far, the spread of H5N1 virus from person-to-person has been very rare, limited and unsustained. However, this epizootic (transferrable from animals to humans) continues to pose an important public health threat.*[15]

[15] Center for Disease Control and Prevention website 2/6/2009. http://www.cdc.gov/flu/avian/outbreaks/

UAF researcher Jon Runstadler and his team have been researching biological mechanisms in birds (mostly ducks). How are the viruses transferred among birds? How are they transferred to humans? What are the risks to human health in Alaska?

The migration routes of many species of ducks cross paths where Alaska and Asia meet over the Bering Sea. There is potential for Asian ducks to spread H5N1 bird flu to Alaska and other parts of North America. If the highly pathogenic H5N1 were to occur in Alaska, there could be serious implications for the health of Alaskans.

The ability to work with Mark Lindberg, a UAF wildlife biologist specializing in ducks, facilitates Rundstadler's work because Lindberg has intimate knowledge of the life-cycle of ducks in Alaska. His knowledge of migration patterns also allows researchers to know when and where to intercept wild birds so that they can be monitored for various strains of avian flu.

Because of the capacity built by INBRE, Runstadler's team was able to acquire an NIH RO1 grant for the Center for Rapid Influenza Surveillance and Research (CRISAR). Awarded in 2007, this five-year, $3.8 million grant is a joint UAF, UCLA and UC Davis research project. This competitively funded research is a result of the capacity that was built from INBRE funding. The research involves surveillance and monitoring of birds in the US, Russia, Japan, China and Southeast Asia to see were there may be a potential threat of an outbreak of bird flu. The study looks at how the virus is carried and transferred as birds migrate around the Pacific Rim.

Monitoring Toxicants and Disease in Alaskan

UAF researcher Todd O'Hara and his team are studying contaminants, and infectious disease in the Arctic. What affect do they have on animals and people? Infectious agents and toxicants can be easily transmitted through commercial, sport and subsistence harvest in Alaska. O'Hara and his team study toxicants that can end up in the food chain, such as mercury, PCB's DDT, lead, and other pesticides. These contaminants can work their way up the food chain and eventually impact human and wildlife health. INBRE toxicology projects study animals that are at the top of the food chain such as arctic fox, polar bear and Stellar sea lions, and numerous subsistence foods.

INBRE investigator O'Hara has reported on how climate change may affect the distribution and accumulation of toxicants and infectious agents. There have been changes in the Arctic climate, and researchers are monitoring how changes may affect what Alaskan fish and animals eat. If diets change because of changing environmental conditions, will these animals be exposed to new or higher levels of toxicants and/or infectious agents? If so, how will this affect their health as well as the health of Alaskans who rely on fish and game for food?

Another of O'Hara's roles is to study and understand how infectious diseases are present in Alaska, and how they can be transmitted to the public via handling and consumption of fish and wildlife. For example, there have been periodic outbreaks of rabies in Arctic foxes on the North Slope; this is potentially hazardous to North Slope residents and oil field workers. When INBRE monitoring efforts find potentially harmful diseases such as rabies, they are reported to state epidemiology officials and the Center for Disease Control (CDC) via the appropriate management agencies (such as the Alaska Department of Fish and Game). The better these

outbreaks are understood, the better the public can be educated about the associated dangers, and the measures that can be taken to avoid contact with the diseases.

INBRE Outreach Sparks Excitement about Science

According to INBRE outreach coordinator Sue Hills, their goal is to get students (especially Alaskans) in the "pipeline" that leads to careers in health and science. The earlier they can get students involved in science the greater the potential that students will go on to study science and to make a career in science or health related fields. There is an acute shortage of qualified health care workers and scientists in Alaska. Students who have been involved in the program stay in school, and a high percentage have gone on to college, many in science and health. Many have returned to Alaska.

According to Hills, "if UAF can help get students interested in science and health care early on and provide them with some of the tools that will help them continue their education, we feel we can have a positive impact on filling health care and other science-related positions in Alaska with Alaskans."

INBRE has several programs designed to engage students in the sciences.

Alaska Rural Research Partnership (ARRP)

ARRP involves Alaskan high school students in scientific research in their own villages and encourages them to consider science and health care careers. The goal is to bring meaningful, hands-on science to rural schools using modern molecular biology. ARRP students study genetics of the animals that Native and rural children eat. Students are encouraged to graduate high school and go on to college (hopefully pursuing careers in the sciences).

Nearly 60 students, at six sites, from 11 villages, have been involved in ARRP. The students have looked at genes in caribou, reindeer, whales, and salmon. Students have also determined gender in humpback whales, investigated soil bacteria and parasites using genetics.

ARRP loans about $10,000 worth of lab equipment to each partner school, and provides chemical supplies, genetics training for teachers and students, and technical support. The school supplies students, teachers, and a small lab area. Students work during free periods or before or after regular school hours. ARRP sets up a complete genetics lab in the schools with equipment similar to what you would find in a UAF lab, such as a centrifuge (used to isolate DNA samples), a thermal cycler, a PCR (polymerase chain reaction) machine, pipettes, racks and other equipment. Students participate in either the Alaska Science Symposium or the Alaska State Science Fair. The presentations give them experience in critical thinking, scientific writing, and public speaking. Students have competed in local, regional and even national science fairs. Each student completing the project is awarded up to $1,500 as a scholarship to the college of their choice.

ARRP has been very successful. Of the approximately 115 ARRP students, most are Alaska Native. All participants have gone on to graduate from high school. Seventy-five percent of those graduates went on to attend college. To date, most have either graduated from college, or they are still attending school. Many of them are in science and health-related fields.

Alaska Summer Research Academy (ASRA)

The course was started in 2004 by a nurse at Fairbanks Memorial Hospital (FMH) in response to the serious shortage of nurses in Alaska. UAF and FMH teamed up in 2007. During two-week modules, students are exposed to several areas of health care services including handling traumas, x-rays, pharmacy, and operating room procedures. Learning about health care fields gives them an opportunity to think about careers in specific areas while they are still in high school and have time to adequately prepare academically for these challenging careers. The program has created a great deal of excitement; in 2008 there were more applications than spots available. ASRSA is a life-changing experience for many students.

The hospital is going to track students after they graduate high school (the first group graduated in 2008) to see if they continue in health and science-related careers. The hope is that some of them will take health care and science jobs in Alaska when they finish their education and help reduce the significant need for health care professionals in the State. ASRA is currently offered at four schools and will be adding four more schools each year, for the next five years.

Rural Alaska Honors Institute (RAHI)

RAHI was started in 1982. The program brings honors level students from rural communities, as well as Alaska Native honors students from semi-urban areas, to the UAF campus for six weeks. The focus is on math, English, and various science classes. Students who graduate earn between seven and 11 college credits.

RAHI II the Next Step started in 2007 with about a half-dozen students. RAHI students are introduced to more hands-on laboratory techniques, and they participate in real research side-by-side with top UAF scientists. The students take part in top-level experiments. They work with the same high-tech, expensive equipment that graduate students, PhD candidates and the researchers do. Students also earn college credits for their work.

UAF Student Support

Many undergraduate students are not sure if they want to go into a science or health-related degree program. INBRE helps them gain exposure to science in the labs. This helps them understand why they are taking calculus, chemistry, etc. They become comfortable with faculty and staff, and with basic lab procedures. The hands-on lab work and their personal contact makes them feel more comfortable when they are deciding whether to pursue science beyond the undergraduate level. INBRE also helps UAF students interested in medicine apply for the University of Washington's WWAMI program which is administrated through UAA. There are 20 scholarships available and nearly 100 UAF students who apply annually.

WWAMI is a partnership between the University of Washington School Of Medicine and the states of Wyoming, Alaska, Montana, and Idaho. The WWAMI program's purpose is to provide access to publicly-supported medical education across the five-state region. Each of the participating states designates a specific number of medical school seats. These are supported through a combination of appropriated State funds and student tuition which cover the full cost of medical education. The tuition paid by students in Wyoming, Alaska, Montana and Idaho is the same as that paid by Washington state residents. This allows for publicly supported medical education in states where no freestanding medical school exists.

Outcomes of the program at the University of Washington School of Medicine and WWAMI indicate that, over 30 years, 61 percent of graduating students stay within the five-state area to practice. Over the past 20 years, nearly 50 percent of graduating students have chosen to pursue careers in primary care. This is particularly important since 35 percent of the population in the WWAMI region lives in rural, generally underserved areas. Upon graduation, an estimated 20 percent of WWAMI graduates will practice in Health Professional Shortage Areas (HPSAs) following graduate medical education.[16]

[16] University of Washington Medicine website 2/7/2009 http://uwmedicine.washington.edu/Education/WWAMI/

Life Sciences Programs

Through the Department of Wildlife and Biology in the College of Natural Sciences and Math UAF offers undergraduate and graduate programs in biology, botany, wildlife biology, chemistry, biochemistry, molecular chemistry, environmental chemistry, fisheries, marine biology, ocean fisheries, natural resources and agricultural sciences. A wide range of classes are offered in life sciences including: ecology, conservation biology, and environmental sciences; wildlife biology; zoology, animal physiology and animal behavior; plant biology; marine biology; cell and molecular biology; and genetics and evolutionary biology. There are a substantial number of students not pursuing a life sciences degree who enroll in Life Sciences courses for other reasons, including fulfillment of Core curriculum requirements.

This wide range of programs offers exceptional opportunities for Alaskans to engage in education that could lead to careers with policy-making agencies that are essential to our state such as the Alaska Department of Fish and Game, US Fish and Wildlife Service and the Nation Park Service.

When top researchers are attracted to UAF, they not only bring their research skills but also increase the number and quality of classes that can be offered at UAF. Additionally, the availability of high-quality research options provides critical hands-on experience for students to apply their academics. UAF must have high quality facilities for research and teaching to attract the best scientists to the campus. One example is Karsten Hueffer and assistant professor of microbiology. Hueffer came to UAF as a part of INBRE's capacity-building grants. Since arriving at UAF, Hueffer has added one class in infectious disease and another in virology. The availability of specific classes like these, taught by skilled scientists, benefits a range of students from those in pre-health to those looking for careers in research.

Enrollment

Total enrollment in UAF life sciences classes is nearly 1,200 students. UAF life sciences programs, most specifically biology, have seen the greatest increase in enrollments at UAF in recent years.

- With nearly 500 degree-seeking students, UAF biology and wildlife programs are among the largest degree programs in the entire UA system.
- The largest undergraduate enrollment increases at UAF have been in biology and wildlife, with an increase of 25 percent from 303 to 380 over a ten-year period (1998 to 2007). Total undergraduate enrollment in life sciences increased by 8 percent, from 473 to 513.
- There were just over 300 graduate students enrolled in life sciences programs. The largest increase over the ten-year period was in biology and wildlife, with a 48 percent increase from 76 to 119 enrollments.
- Undergraduate enrollment in biological sciences increased by 26 percent, from 217 in 1998 to 275 in 2007. Graduate enrollment in biological sciences increased by 170 percent, from 20 in 1998 to 54 in 2007.

Alaskan Graduates Benefit Alaska

Producing workers who have the skills needed by Alaskan businesses, government and agencies is a crucial contribution of UA to the economy of Alaska. In addition to providing the skills and services needed by the state, UA graduates also contribute to the Alaskan economy at a higher level than non-graduates (on average, university graduates earn substantially more over their lifetime than non-graduates).

Alaskan graduates tend to live and work in Alaska, helping the economy grow, and serving state residents. While there has not been a specific study of UAF life sciences program graduates, there are several indicators of the value these graduates offer to the state of Alaska and its residents.

A McDowell Group study of UA graduates[17] showed that in 2006, two-thirds of UAF graduates (from 1989 to 2006) were still living in the state of Alaska, and 54 percent were known to be working in the state. (Note: Employment information was based on private sector, state and local government employment. Graduates working for the federal government or the self employed were not counted. Therefore, it is likely that more than 54 percent are working in Alaska.) Rural Alaskan graduates have an even higher likelihood of staying in the state after graduation.

As of 2005, nearly three-quarters (73 percent) of the UAF graduates still living in Alaska worked in a field related to their UAF education. This high retention rate is an important element in creating economic growth within the state.

UAF Graduate Careers

The tables on the following pages show a sample of some of the agencies and businesses where UAF life sciences program graduates have been employed. The tables of employers and positions were compiled informally in October 2008 by UAF faculty for UAF masters and PhD graduates. The tables do not represent all UAF graduates, undergraduates or transfers. While not complete, the tables show the variety of important positions that UAF life sciences graduates have filled. Many of these positions have direct influence on issues that affect all Alaskans.

[17] McDowell Group, *The Economic Impacts of University of Alaska, 2007 Update* pg 53.

It is of particular importance to Alaskans that decision-makers in areas such wildlife biology and fisheries understand Alaska and our unique environment. It is clearly preferable to have a UAF graduate making decisions about how and when Alaskans are able to harvest moose or salmon, rather than a biologist trained in the lower 48.

UAF Graduate Careers in Alaska

Employer	Position
ABR Environmental Research Services, Fairbanks	Senior wildlife biologist
Alaska Biological Research	Biological technician
Alaska Center for Coastal Studies, Homer	Director of Programs
Alaska Department of Fish and Game, Anchorage	Area wildlife biologist, assistant area biologist, wildlife biologist, research biologist, fisheries biologist, non-game biologist, statistician, wildlife technician
Alaska Department of Natural Resources, Fairbanks	Natural resource specialist
Alaska Sea Life Center	Research biologist
Fairbanks Christian School	Science teacher
Fairbanks North Star Borough School District	Develop curricula on invasive plants
Flint Hills, Fairbanks	Chemical technician
Hart-Crowser, Inc., Anchorage	Wildlife biologist
Juneau School District	K-12 Teacher
National Park Service, Gates of the Arctic	Research biologist
National Park Service, Denali	Ecologist
National Park Service, Glacier Bay	Research scientist
National Park Service, Wrangell-St. Elias	Biological science technician
Nature Conservancy, Anchorage	Biologist
North Pacific Halibut Commission	Research biologist, analyst,
Petersburg High School	Biology teacher
Providence Hospital	Resident, family medicine
Scenarios Network for Alaska Planning (SNAP)	Network coordinator
School of Fisheries and Ocean Sciences, UAF, Fairbanks	Assistant professor of Marine Mammalogy
US Bureau of Land Management, Glennallen	Wildlife biologist
US Fish and Wildlife Service, Anchorage and Tetlin	Wildlife biologist
US Fish and Wildlife Service, Environmental Contaminants, Fairbanks	Biologist
US Fish and Wildlife Service, Migratory Bird Management, Anchorage	Pilot-biologist
US Forest Service	Research technician, staff scientist
US Forest Service, Petersburg	Botanist
US Forest Service, Yakutat	District forester
US Geological Survey, Alaska Science Center, Anchorage	Research biologist, wildlife biologist, research geneticist

Many UAF life sciences graduates hold key positions in national and international organizations, agencies and schools such as those listed below.

UAF Graduate Careers Outside Alaska

Employer	Position
Ducks Unlimited	Biologist
Middlebury College	Affiliate Faculty
National Park Service	Research Technician, data manager
National Park Service, Painted Rocks, Michigan	Research Biologist
NOAA, National Marine Fisheries Service, CA	Analysis Specialist
Olympics National Park	Staff Scientist
Sierra Nevada Aquatic Research Laboratory, CA	Aquatic Biologist
State University of New York (SUNY) Syracuse	Assistant Professor
Syracuse University, New York	Assistant Professor
University of Oklahoma	Affiliate Assistant Professor
University of Puerto Rico	Assistant Professor
Utah Department of Natural Resources, Provo, UT	Endangered Species Specialist
Yukon Flats NWR	Biologist
Yukon Government	Caribou Biologist
Yukon River Intertribal Watershed Council	Water-quality Monitoring Technician
Yukon River Intertribal Watershed Council	Science, Research, and Mapping Technician
Zymogenetics, Inc., WA	Scientist

Benefits of a New UAF Life Sciences Building

Research Space

There is a current lack of space for researchers at UAF, and many of the facilities are not comparable to high quality labs at competing universities. High-quality research facilities (labs and equipment) are required to attract the caliber of researchers needed to enhance and expand current UAF programs. A new life sciences building will greatly increase UAF's ability to attract high-quality researchers. Adding these talented researchers will also facilitate additional staff positions for post graduates, post doctorates and lab technicians.

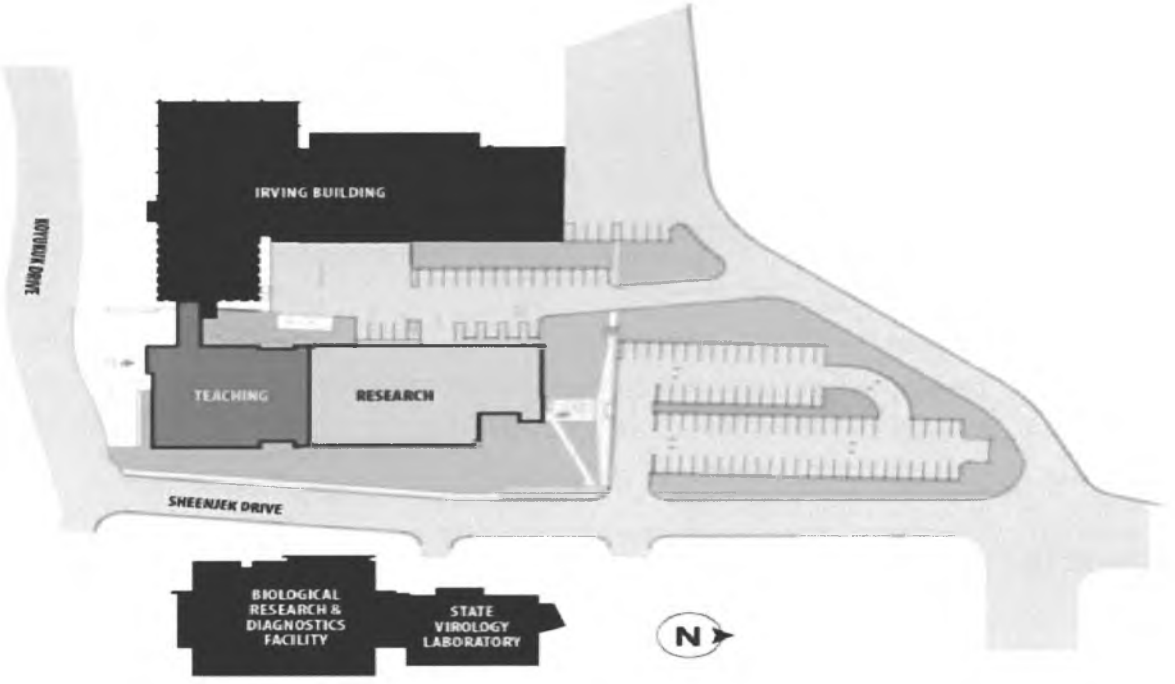
Academics

At UAF there is a serious need for modern classrooms that are appropriate for teaching modern science in fields such as marine biology, cell and molecular biology, and genetics. Most of the current science class rooms and laboratories were built in the 1960s. Some Alaska high schools like West Valley and Barrow have newer lab facilities for teaching than those currently available at UAF.

The Need for a New Life Sciences Facility

BIOS

The original solution to the academic and research space problem at UAF was the Biological Sciences Facility (BIOS). The BIOS facility was originally proposed in FY08 with a total square footage of 110,000 square feet. The plan called for 40,000 square feet of teaching space and 70,000 square feet of research space. The cost of the facility in FY08 was $105 million. The $105 million capital budget request was not funded by the legislature in FY08. In FY09, inflation had increased the cost of the facility to $113 million. The $113 million request was not approved in FY09.



UAF Life Sciences Innovation and Learning Facility

The Life Sciences facility is the UA Board of Regents' number one new capital priority for the UA system. Because of the desperate and immediate need for a new life sciences facility, the UAF project team felt that in order to increase the likelihood of funding for a building, the facility plan should be redesigned to reduce the overall cost, and additional funding should be provided by UAF. The new facility was named the UAF Life Sciences Innovation and Learning Facility and scaled down from 110,000 to 87,000 square feet. The total cost of the new project is $102.8 million. UAF committed to non-General Fund support for 20 percent of the new facility. The FY10 capital budget requests General Funds of $82.2 million with non-General Fund support from UAF of $20.6 million for the Life Sciences facility.

The Life Sciences Innovation and Learning facility is designed to meet the critical need for updated classrooms (both instructional space and lab space) and provide much-needed space that will allow UAF's research programs to continue to grow. The facility will feature 37,000 square feet of academic space, including

approximately 40 classrooms with computer and lab capabilities and a lecture hall capable of seating 80 students. The research space, at 50,000 square feet, will provide 18 research labs and 10 support labs. Additionally, there will be lab space for 12 primary investigators, 36 graduate students and 12 post doctoral researchers.

Life sciences Innovation and Learning Facility Proposed Location

The facility is designed to be constructed in two phases. (The preferred solution is to complete the entire facility in one phase, but it can be completed in two phases if necessary.) The research portion would be constructed first. This would allow for continued growth in research revenues that are critical to UAF and the entire UA system while additional funding is sought to complete the academic portion of the building.

Interaction

As UAF works to transition from their life sciences capacity-building grant programs to seek more competitive grants, they must develop a critical mass of qualified researchers. If additional top-notch scientists can be attracted to UAF, they will in turn attract high quality research staff and students. This critical mass is important to create an atmosphere that enhances teaching and research, and stimulates intellectual growth among faculty and students. It is critical to get Alaskan students excited about research in science and health-related subjects because it will make them much more likely to stay in Alaska.

Because UAF is a small campus with exceptional scientists, undergraduates have the opportunity to work closely with them. Undergraduates actively participate in research at UAF, and their work has even been published alongside top researchers. Students usually do not find these types of opportunities on larger campuses.

Currently biology and other life sciences classes are spread all over campus (mostly away from the building where research is conducted), making logistics difficult for students and faculty – especially when there is a need for laboratory access. New classrooms, all located in the new life sciences building with close proximity to labs and faculty offices, would allow more students to come in contact with research and possibly spark an interest in a life sciences or health-related carrier.

If the new Life Sciences building is completed and UAF is able to attract new high-level research scientists to the campus, these researchers would also teach, increasing the level of academic delivery. This would bring new areas of expertise to the UAF program and build even more capacity for future research. Currently, UAF has to look outside to find top researchers to fill these high-level positions. As life sciences research and academic programs move forward with high-level teaching input from these new researchers, UAF hopes to grow more of their own future researchers.

Proximity to State Virology Lab and BiRD Building

The new Life Sciences facility will be located in the heart of the UAF research campus, on the West Ridge across Sheenjek Drive from the new Alaska State Public Health Virology lab and the Biological Research and Diagnostic facility (known as the BiRD building). Both facilities are heavily used by life sciences researchers. All three facilities would be interconnected. The Life Sciences building would be connected by an underground walkway with the State Public Health Virology lab; the BiRD building is adjacent to the virology lab.

Alaska State Public Health Virology Laboratory

The new $35.5 million Alaska State Public Health Laboratory opened in early 2009 on the UAF campus. The facility provides important routine testing for HIV, hepatitis rabies, rubella, mumps, herpes, rabies, influenza as well as testing for other potentially serious threats to public health such as SARS infections, avian flu, West Nile Virus infections, and norovirus infections. Virus detection services are provided to private and public health care providers throughout the state. The lab also monitors and reports incidents of the outbreaks of disease to national, state and local authorities, and e-mails a weekly report of recent virus disease activity to physicians, nurses, and other interested individuals around the state.

While the Alaska State Public Health Virology lab provides identification and monitoring serves that contribute to public health, to date they have not been tasked with studying what they find. Locating the new Life Sciences facility in close proximity to the Alaska State Public Health Virology lab will allow for close coordination of the virology labs' monitoring function and the high-level research functions available at UAF.

According to Dr. Bernd Jilly, Chief, Alaska State Public Health Laboratories, locating the new state lab on the UAF campus near scientists who conduct basic and applied research was extremely important. The state does not currently have a clinical virologist. They are trying to create a senior virologist position that will be co-funded by the state and UAF. By combining resources with UAF, they will enhance their ability to attract a top quality scientist. This position would run the lab, teach classes at UAF and do basic virology research.

The virology lab will be able to more closely monitor what diseases are present in the state. For example, flu strains start in China, then move east through Alaska, the US and on to Europe. If strains can be identified early, therapies can be developed in time to help prevent serious health problems in other parts of the

country and the world. Another issue of concern is norovirus. Over the last few years, bouts of norvirus have taken place in Southeast Alaska. Likely transferred from cruise ship passengers, the illness can lead to dehydration from loss of body fluids. If outbreaks can be quickly identified, the number of infected people can be reduced. By having a high-level virology scientist available, the state can likely reduce the incidence of illness in Alaska, resulting in less days of missed school and work (which can have a negative economic impact on the state).

Additionally, the state wants to develop a Level III laboratory where potentially dangerous microbes (such as rabies) can be safely studied. UAF currently has the researcher capability but not the laboratory capability to study level II microbes.

BiRD Building

Locating the new Life Sciences facility in close proximity to the BiRD building provides researchers with direct access to this state-of-the-art animal facility. The BiRD facility meets the specific needs of modern researchers by providing them with modern tools for their research. Close proximity allows researchers to better coordinate acquisition of lab animals such as rats and mice without exposure to inclement weather and potential contamination.

Economic Impacts of Life Sciences

Construction Impacts

The new Life Sciences building will facilitate long-term employment and spending in Alaska. Additionally, there will be a substantial level of short-term employment and economic activity related to construction in Fairbanks and in other areas of Alaska.

The original BIOS plan was for construction to take place from 2008 to 2012. According to McDowell Group research,[18] statewide output associated with BIOS facility construction would be substantial, with $170 million in total direct economic output, $80 million in labor income, and annual average employment of 370 workers over a four-year construction period. A total of $145 million ($103 million for construction, plus $42 million in indirect and induced spending) would enter the Fairbanks economy.

The economic effects of this project would benefit other areas of the state, primarily Anchorage, Mat-Su and the Kenai Peninsula. To a large degree, Anchorage is the commercial hub for all of Alaska. Construction companies, engineering firms, wholesalers and retailers, and many other types of businesses are headquartered in Anchorage. Further, large volumes of freight destined for the Interior move through the Port of Anchorage. With half of Alaska's population, the Anchorage area (in combination with the Matanuska-Susitna Borough and Kenai Peninsula Borough) is home to a large pool of skilled construction labor. Because of this, construction activity in the Interior stimulates economic activity in Southcentral Alaska.

[18] The Economic Impact of the University of Fairbanks Biosciences Facility (BIOS) McDowell Group, 2006

Total economic output for the Southcentral region of the state from construction of the new Life Sciences facility would be $20 million, with total direct and indirect annual average employment of 50, and total payroll of about $8 million. The vast majority of these benefits would occur in the Anchorage area.

Research Spending

Most UAF direct research expenditures are for wages and benefits. Most other expenditures are for items such as contracted services, equipment, commodities, travel, and student aid, and are purchased within the state. While UAF research spending has the greatest impact in Fairbanks and the vicinity, a significant amount of UAF research spending takes place in Southcentral Alaska. According to the McDowell Group,[19] one-third of all UAF spending takes place in the Anchorage and Mat-Su areas.

The Economic Value of Researchers

One way to estimate the economic value of a researcher to the state is to take an average of the research revenue a top-level researcher is expected to bring and look at the multiplier effect. According the economic modeling system IMPLAN, for every dollar spent on university research in Alaska, there is additional economic activity worth $0.70. [20] On average, an experienced top-level researcher would be expected to bring in annual grants worth between $300,000 and $1 million to fund research (including a portion of their salary and benefits, and the salaries and benefits of a research team).

Multiplying the average range of $500,000 to $600,000 in grants acquired per year, per researcher, by the 1.7 IMPLAN multiplier used for university research in Alaska[21] results in a range of $850,000 to $1.2 million in economic activity for the state, per researcher. Therefore, 12 research positions at UAF represents approximately $10.2 million to $12 million in economic activity for the state.

In general, the largest portion of research expenditures are for wages and benefits. Looking at just the value of wages and benefits generated by a research team provides another measure of a researcher's economic value. There is variability in the size of team that a researcher is able to assemble. Factors that can shape the content of a research team include total funding, subject matter, and availability of lab space. Currently, an average research team at IAB consists of one researcher, one graduate student and one or two technicians. Wages and benefits paid to research teams are in the range of $350,000 to $400,000 annually. For the purpose of this example we will use an average of $375,000 per team. The current facility plan has room for 12 primary investigators, as well as 36 graduate students and 12 post doctoral researchers. A dozen research teams worth an average of $375,000 in wages and benefits would result in approximately $4.5 million in direct wages and benefits.

A realistic scenario when the new facility is built will be movement of eight to ten current researchers (who need an updated facility) to the new building and the addition of two to four new researchers. As researchers move from their current space into the new facility, the space they vacate will be rehabilitated and used by other researchers (also increasing their potential to acquire new grants). It seems reasonable to assume that, based on a facility with space for 12 researchers plus the resulting space made available by intercampus

[19] McDowell Group, *The Economic Impacts of University of Alaska, 2007 Update*
[20] Minnesota IMPLAN Group, *IMPLAN Professional Version2*. 2006: Stillwater, MN
[21] Ibid

moves, UAF could see an increase in new research-related wages and benefits in the range of about $1 million to $3 million annually. In addition to these wages and benefits, there would be increases in direct spending for goods and services. Indirect and induced impacts would have further positive effects on the Alaskan economy.

About EPI 58

Executive summary

School vouchers have been in the limelight for a decade. The basic argument is that giving parents public funds to send their children to private schools will stimulate innovation and competition among schools. Although vouchers lack broad public support, parents in low-income inner cities are more likely to favor alternatives to traditional public education, and this interest has stimulated small pilot programs in a few urban school districts. Such programs have the potential to inform public debate about vouchers' strengths and weaknesses, but they have been evaluated mainly by researchers who openly and actively support vouchers. Yet the media tend to report results from these analyses without necessary caveats and alternative views. Now that the push for vouchers has reached the federal government through President Bush's education initiative, the urgency for a balanced perspective has become more important than ever.

Do school vouchers improve student performance? A review of the evidence finds that vouchers' effects on student achievement are almost certainly smaller than claimed by pro-voucher researchers. Although programs in many cities were designed to be like randomized-trial medical experiments—with high validity and reliability—common problems in implementation may have compromised validity and produced misleading results. Moreover, the results are marked by broad inconsistencies across grades, academic subjects, and racial groups.

Recent highly publicized research involving Florida schools also highlights the difficulty in attributing test score gains to vouchers, since many of these programs involve not only vouchers but also school grading systems and others variables at the same time. The same researchers who found large effects from earlier voucher programs also found large voucher effects in Florida. But a closer look reveals that most of the gains could have been caused by the school grading system, not vouchers. In three states with school grading systems—Texas, North Carolina, and Florida before vouchers—low-performing schools (sometimes referred to as "F" schools) produced gains quite similar to those of the Florida voucher program. Thus, the "scarlet letter" effect from identifying low-performing schools is as plausible an explanation for the test score gains as is the voucher threat.

Identifying the effects of programs is a challenging task, especially for vouchers. As the evidence slowly comes in, a balanced analysis suggests that voucher effects may exist, but they are significantly smaller than voucher proponents would have the public and the media believe.

Introduction

School vouchers have been in the limelight for almost a decade, mainly at the state and local level. But with George Bush's candidacy and his election to the presidency, they have now become a national issue. At the same time, voucher advocates have produced new reports claiming that students using vouchers improve their academic performance and that the threat of the availability of vouchers leads to improved student performance in public schools. The results of these reports have been widely—and largely uncritically—circulated in the press. They give the impression that vouchers are the solution to the educational woes of minority students in "failing" public schools. The problem is real, but do these studies support their claims? The empirical findings on the educational effects of vouchers deserve a closer look.

The idea of public funding of private schools is not new, nor does it belong exclusively to conservative free market reformers. In the 1960s and early 1970s, academics on the left, such as Christopher Jencks (1966), argued that vast differences between the quality of public schooling for inner-city blacks and suburban whites could not be resolved within the structure of a residentially segregated public education system. Jencks argued for a policy concept introduced by Milton Friedman (1955) more than a decade earlier. Friedman proposed to offer public funds to families that could be used only for education but in any educational institution, public or private. Such "vouchers" would serve to give families increased choice of the kind of education their children received. Friedman saw vouchers as a way to break the "monopoly" of the public sector over education and increase consumer choice, hence economic welfare. Jencks saw vouchers as a way of improving educational opportunities for a historically discriminated-against group within American society. Both shared a distrust of the state—Friedman of the bureau-centric state interfering with "democratic" markets, Jencks of the class/race-centric state reproducing inequality through public education. But conditions may have changed in the last 40 years. While there is still a glaring gap between achievement of black and white students, the gap has

been considerably narrowed. In the last decade the progress seems to have stopped, but it is unclear what the causes of the continued gap might be.[1] The voucher issue therefore has two different political origins. One is a conservative, free market ideology that prefers private to public provision of any services, and the second is the practical demand of low-income parents for better schooling, public or private. Even if private schools were no more effective than public schools, market reformers would insist that vouchers make parents and children better off because of choice and competition, and that private school choice should be made available to all parents, regardless of income. But the demand in inner cities for better schooling is based not on free market ideology but on academic results.

Whatever the origin of their support for vouchers, advocates have been attempting to support two claims: first, that private schools supported by public funds actually can do a better job than public schools of educating the children most at-risk of school failure, whether because vouchers are a route to smaller classes and better teachers, or because private schools are superior in other respects; and second, that vouchers increase incentives for public schools to improve by threatening low-performing public schools with the loss of students to competing private schools.

In the last few years, the leading proponent of the idea that private schools are demonstrably more effective at educating low-income African American students and an effective mechanism for improving public education has been Harvard Professor Paul Peterson. The research support for these claims is controversial, in large part because the Peterson group's statistical analysis seems always tilted to favor a positive result for vouchers. The history of such tilting is no longer just support generated for the alleged greater effectiveness of private education; it has also carried over into the claims regarding vouchers as a stimulus to better public schooling. In February 2001, Jay Greene, now a researcher at the Manhattan Institute, published a short paper assessing the impact of the Florida voucher plan on "failing" schools. All of these studies bear extremely close scrutiny.

This study reviews the recent empirical research in these two areas: (1) the effect of vouchers on student achievement, particularly for low-income minorities enabled to go to private schools; and (2) the effect of the threat of vouchers on low-performing public schools.

Among its findings:

- Research on the effect of vouchers in Milwaukee and Cleveland showed anywhere from no effects to small effects of vouchers for mainly African American students. Studies in Cleveland suggest that the achievement gains after two years in existing religious schools for voucher students

were higher in one subject, science. Voucher students in for-profit private schools did significantly worse than non-voucher students in one study, but did better and then worse according to another. The much larger size of the voucher in Milwaukee (about $5,500 currently) than in Cleveland (maximum $2,500) also suggests that, whether test scores in private schools are higher or not, a larger voucher induces many more families to transfer their children to private schools and induces more private schools to offer educational services to low-income students.

- Research in Dayton, New York, and Washington (conducted and evaluated by voucher proponent Paul Peterson and his colleagues) show no significant test score gains for Hispanic and white voucher recipients, but it did find gains for African Americans that were statistically significant overall in New York and Washington and marginally significant in Dayton (in reading only). But several methodological issues make these comparisons of achievement gains problematic. These issues include the inability to ensure that participants are available for follow-up evaluation; the inability to explain differences in outcome by grade/age and ethnic cohort; inconsistent inclusion and exclusion of data on students who experience either large gains or large drops in test scores.

- Findings that the threat of vouchers for students in "failing" (F) public schools caused math and writing gains among Florida's lowest-performing schools to increase significantly more than the gains of higher-performing schools are plagued by methodological problems. The research tends to overestimate the effect of being designated an F school, and it offers no evidence that the higher estimated test-score gain by an F school should be attributed to the threat of vouchers.

Chapter 1

Do vouchers for private education raise student achievement?

In the most recent salvo in the voucher debate, Paul Peterson and his colleagues (William Howell of the University of Wisconsin, Patrick Wolf of Georgetown University, and David Campbell, also of Harvard (Howell et al. 2000)) announced in August 2000 that their voucher experiments in New York, Washington, D.C., and Dayton, Ohio showed that at least some pupils—African Americans—achieve better in private than in public schools. The finding was widely hailed by voucher supporters across the political spectrum as showing that private schools could solve a problem public schools apparently could not—the lagging achievement of low-income inner-city black children.

As Robert Reich wrote in the *Wall Street Journal* (Reich 2000), "[e]vidence mounts that vouchers do work for kids who use them. A new study of students in New York, Washington, and Dayton, Ohio—conducted by researchers at Harvard, Georgetown, and the University of Wisconsin—found that after two years, the average performance of black students who switched to private schools was 6% higher than that of students who stayed behind in public schools. So why not simply 'voucherize' all education funding and let students and their parents select where they can get the best education?" And, as William Safire commented in the *New York Times* (Safire 2000), "This hard evidence is not what teacher unionists want to hear....The Harvard study shows Bush is on the right side of this. He should embrace the successful voucher students and joyfully join the controversy...."

But soon after the results were presented, another member of the Peterson team, David Myers, contractor for the New York City part of the research, challenged Peterson's interpretation, arguing that the New York results—even for African American students—were not convincing enough to support the Peterson group's policy conclusions. Earlier voucher studies in Milwaukee and Cleveland seemed to support this more carefully worded view.

Who is right? Even if we thought that voucher proponents were willing to limit vouchers programs to low-income, inner-city families, how

sanguine should we be that such inner-city (read African American) pupils would gain by switching to private schools?

The short answer is that the three-city study is not nearly as reliable as its authors claim. As a basis for educational policy, it should be interpreted cautiously. It is possible that a more structured private school environment with smaller classes and higher-achieving peers could help African Americans make greater gains than if they stayed in public schools. It is also possible that improvements to public schools would yield comparable improvements. But that said, the Peterson results may misrepresent gains that typical low-income African American students can make by switching to private schools. Using statistical techniques not easily understood by the media or the public, the studies' methodology is laced with potential biases. In the context of an intense ideological push for privatizing education, the question to ask is not *whether* these latest Peterson-group reports overestimate private school effects, but *by how much*.

In four cities—Dayton, New York, Washington, and Charlotte, N.C. (where data were released more recently)—the Peterson team built evaluations into the voucher plans themselves. Evaluating these evaluations is not easy, because, with the exception of New York, the researchers have not publicly released their data (the New York data were the most transparent because they were reported by grade). Earlier, though, in Milwaukee and Cleveland, the Peterson evaluations were constructed after the fact, and they included responses to research originally carried out by those not politically committed to vouchers. The Peterson estimates in those studies have a different character. For one, "experimental" controls were weaker or nonexistent. More important, the data were available to others and so were subject to re-analysis.

The Milwaukee voucher experiment

The longest-running voucher initiative in the U.S. is Milwaukee's. It began in 1991 on the initiative of Polly Williams, an African American Wisconsin legislator. The $2,500 vouchers were awarded by lottery to low-income families, 75% African Americans, to be used only in secular private schools. Schools had to accept the voucher as full payment (parents could not top it up). Initially, seven private schools agreed to take voucher students. Although the legislature set a maximum of 1,500 vouchers to be awarded, this number was never attained during the five years of the program. Enrollment increased steadily but slowly, from 341 in 1990-91 to 830 in 1994-95. The number of schools participating also increased, from seven in 1990-91 and six in 1991-92 to 11 in 1992-93 and 12 in 1994-5 and 1995-96.

The legislature commissioned University of Wisconsin professor John Witte and his colleagues to study the students who received vouchers and compare their achievement with similar students in public schools. Witte et al. found high levels of satisfaction among families receiving vouchers (Witte, Sterr, and Thorn 1995). Yet, when they analyzed achievement differences between those Milwaukee pupils who used vouchers to attend "choice schools" and Milwaukee public school pupils of similar socioeconomic background, race, and ethnicity, Witte et al. found that, generally, voucher students did no better in either math and reading. The one exception was a statistically significant *negative* effect of attending choice schools on reading scores in the second year of the program (1991-92). According to Witte et al., many of the poorest choice students left the program at the end of that second year. The authors also estimated the achievement effect controlling for the number of years the choice students had been in a private school. Again, private school voucher students did no better than public school students in either math or reading. The only effect that approached statistical significance was a negative reading score for those who had been in private schools for two years.

Witte et al. admitted that such an analysis has its limits, since many new students were being added to the private school sample every year, and a large fraction (about 30%) left the sample. The proportion leaving the sample was about the same for public school pupils. So the sample of private and public school pupils differed from year to year.

Other factors also changed in Milwaukee from year to year. The initial voucher was about one-half of Milwaukee's public school per-pupil spending. The voucher rose quickly, with private schools demanding and getting a higher voucher, until it was close to the primary school public cost per pupil when special education costs were accounted for. This is a major reason that more private schools were attracted into the program and more students could be accommodated in later years. Even so, over the course of the experiment, several of the participating private schools closed, including some due to bankruptcy.

In 1996 Peterson and his colleagues obtained the Milwaukee data and published their own study, using a "quasi-experimental" design that compared achievement of those who got vouchers in the lottery with those who did not. Peterson claimed that Witte had misspecified his model by comparing private school pupils with those who remained in public schools but had not necessarily applied for vouchers (Greene, Peterson, and Du 1996). In contrast, Greene et al. assumed that selection into the voucher program by lottery had resulted in a random sample of *applicants* being chosen to attend private schools. Thus, applicants should be the relevant pool from

which to draw comparison groups. The results of their comparison showed pupils attending private schools making significant gains in both math and reading over the students who applied for vouchers but ended up attending public school. The gains were found in the third and fourth years of the voucher program.

Witte (1997) countered that students who applied but did not get vouchers included students who had gotten vouchers but were rejected by the private schools. In addition, many of those pupils who were in the "control group" (those who had applied for vouchers but not gotten them) could not be located to measure their later test scores as public school students. Some others who had originally applied for vouchers and did not get them attended private religious schools assisted by a parallel, privately funded choice program, Partners for Advancing Values in Education (PAVE), so were not included in the control group. Since these students were more likely to have more educated and motivated parents than those who stayed in public schools, the control group was not necessarily a random sample of those who did not get vouchers.[2]

A third party, Princeton economist Cecilia Rouse, then took the same data, reworked them and found that students in private schools made faster gains in math (after the second year), but none in reading (Rouse 1998a). The gains in math were statistically significant but relatively small. Rouse compared the choice students (those who had been selected to get a voucher, whether or not they had actually used it) with both Greene et al.'s comparison group and a sample of Milwaukee public school students, similar to that used by Witte et al. She corrected all three samples for an implicit set of student characteristics that are invariant over time (including but not limited to, native ability, race, ethnicity, socioeconomic background, as well as other, "unobservable," student attributes) but may be correlated with students' families applying to get vouchers. These are called student "fixed effects." She argues that her results disagree with Witte et al.'s because the latter restricted their samples to students for whom prior test scores were available (her fixed effects variable does not depend on measuring prior test scores) and disagree with Greene et al.'s because Greene et al.'s reading results disappear when student fixed effects are included. A second Rouse paper found that gains for low-income Milwaukee public school students in smaller classes were higher than the gains of voucher students in private schools, which also were characterized by much smaller class sizes than in Milwaukee public schools (Rouse 1998b).

In 1997 the Wisconsin legislature expanded the voucher program to 15,000 low-income students, and included religious schools. The legislation was upheld by the Wisconsin Supreme Court. Initially, about 8,000

students took up the vouchers, which continued to be worth about the cost of Milwaukee's per pupil spending on primary education ($5,500 in 1997). In the first year, about one-third of voucher takers under this expanded program were already in private schools but qualified because of their low family incomes. By the school year 2001-02, about 10,000 children will use vouchers at over 100 mostly religious private schools (Williams 2000).[3] This is a significant fraction of Milwaukee's 100,000 public school students. Even if only 7,500 of the voucher students were not already in private schools and transferred from public schools, the voucher program has shifted almost 8% of Milwaukee's public school students to private schools. This suggests that, given a large enough voucher, many low-income families will take advantage of it, and at least some new schools will come into the market. However, no one knows whether voucher students are performing better in this expanded program because, unlike public school students, they are not required by the legislature to take state tests, and no evaluation program is written into the legislation. We also know little about how many students who took up vouchers returned to public schools after a year or two in a private school.

The Cleveland voucher program

Cleveland's voucher program was approved by the Ohio legislature in June 1995 and began in the 1996-97 school year with a maximum voucher of $2,500. Voucher recipients were chosen by lottery and received a fixed percentage of tuition charged by private schools, the percentage depending on the family's income level. Students whose family income was at or above 200% of the poverty line received 75% of the school's tuition up to $2,500, and those below the poverty line received 90%, up to $2,500.

The Cleveland program differed from the Milwaukee experiment in several important aspects. In Cleveland, more than twice as many vouchers were offered as in Milwaukee (3,700 versus 1,500). Unlike Milwaukee families, Cleveland families had to add to the voucher to attend private schools, both because the voucher covered only part of tuition and because private schools could charge tuition higher than the voucher. As in Milwaukee, the program got off to a slow start, with only about 1,500 students taking advantage of the vouchers.[4] A fraction (about 25%) of Cleveland's vouchers were offered to families with children already in private schools, and vouchers in Cleveland could be used in religious schools, as they later could in the expanded Milwaukee program. About 80% of families in the Cleveland program sent their children to Catholic and other parochial schools.

Nearly all of the others went to Hope Schools—two private for-profit

schools created by David Brennan, a wealthy entrepreneur and major contributor to Ohio's Republican Party, to take advantage of voucher availability. Brennan had been instrumental in getting the voucher program through the Ohio legislature, but was later unable to raise the value of the voucher once he realized that his schools were losing money at the $2,500 level. He subsequently converted the Hope Schools into charters to take advantage of higher levels of financing. This left almost all voucher students attending religious schools. On December 11, 2000, the 6th Circuit Federal Court of Appeals upheld a lower court ruling that these vouchers gave unconstitutional aid to religious schools. The program's future will be decided by the U.S. Supreme Court.

Evaluations of Cleveland vouchers are in even greater disagreement than the Milwaukee analyses. In Cleveland, almost as soon as the voucher program got under way, evaluations were conducted on different sets of students by two different groups of researchers. The Ohio legislature contracted researchers from the University of Indiana, headed by Kim Metcalf, to conduct the state's evaluation. Metcalf et al. could get "baseline" spring 1996 second-grade state test scores for almost all public school pupils. So the researchers focused on the almost 200 third-grade pupils who had received a voucher and switched from public to private schools in fall of 1996 (Metcalf et. al. 1998). They used as their outcome measure the scores on a test they gave to entire third-grade classrooms that contained their sample students.

Independently, the Peterson group (Greene, Howell, and Peterson) was also evaluating the Cleveland voucher program, but it focused on the two Hope Schools and looked at students in all grades, not just the third. The Peterson group did not collect data on previous tests taken by voucher students, but rather estimated increases in scores by comparing scores on tests *they* gave students in fall 1996 with scores on the same test in spring 1997. Greene et al. found higher levels of parent satisfaction in the Hope Schools and significant test score gains from fall 1996 to spring 1997 by students who started in one of grades K-3 in 1996 (Greene, Howell, and Peterson 1998). These findings were almost immediately criticized for using as baseline a test given right after the summer, when students have "lost" skills learned in the previous year (AFT 1997).

Because the Peterson group had already given tests twice in the Hope Schools (fall and spring), the schools' administration declined to test the children again using the Metcalf group's instrument. Metcalf et al. had to do a separate analysis of the Hope students. Their results of the second-grade test scores suggest that those students who used vouchers to get into non-Hope and Hope schools were similar socioeconomically to the sample

taken of students remaining in Cleveland public schools, but they had higher initial test scores than public school students (these differences were not large). Metcalf et al.'s results for the 94 non-Hope School third-grade voucher students for whom they had second-grade scores showed no significant differences in the gains posted by voucher students and students who stayed in public schools, once socioeconomic background differences were accounted for.

The Peterson group was able to obtain Metcalf's data and almost immediately criticized the researchers' results on three main grounds: they limited their analysis to third graders, they used a second-grade test taken in public school the previous year that is not an accurate measure of baseline test scores, and they left the Hope Schools out of the analysis. They also claimed that Metcalf et al. used a statistical technique that underestimated treatment effects. But when the Peterson group reanalyzed Metcalf's data not taking into account second-grade scores, it found significant gains only for private school students in language and science. Controlling for second-grade test scores, even these gains were statistically insignificant at the 5% significance level (Peterson, Greene, and Howell 1998).

Yet another study by the Peterson group confirms that reported gains for students in the Hope Schools depend heavily on the low scores on the initial test in fall 1996. Any later scores compared with those initial test scores result in substantial reported gains, but using spring 1997 as a base results in consistent declines in math and reading scores for students in the Hope Schools (Peterson, Howell, and Greene 1999).

The Metcalf group continued to evaluate the voucher plan, following the third-grade cohort into fourth grade and testing the large cohort of voucher students in first grade. As in Milwaukee, the attrition rate from private schools was substantial from the first to the second year of the program.[5] Second-year results showed that fourth-grade voucher students in the established, non-Hope private schools scored significantly higher than did public school students in language and science but not in other subjects. Students in the Hope Schools, however, scored significantly lower in all subjects than did either public school students or voucher students in non-Hope Schools (Metcalf et al. 1999). The differences in scores between voucher students in non-Hope Schools and public school students were lower when socioeconomic differences were taken into account, but Hope students still had significantly lower scores. As was the case in Milwaukee, Metcalf et al. found that private school classes were marked by fewer students per teacher than were classes in public schools.

To summarize, the Milwaukee and Cleveland research on the effect of vouchers showed anywhere from no effects to small effects of vouchers for

mainly African American student groups. Studies in Cleveland suggest that the achievement gains after two years in existing (religious) schools for voucher students were higher in one subject (science). Voucher students in for-profit private schools (the Hope Schools) did significantly worse than non-voucher students in one study (Metcalf et al.), but did better and then worse according to another study (Greene et al.).

Significantly, in both cities, different researchers, taking somewhat different approaches to the data, came up with different results. And in both cities, the Peterson group's evaluation of the voucher program reported the largest gains for students in private schools.

The new voucher research

The Peterson group's new round of research concerns efforts by well-financed voucher advocates to fund scholarships (vouchers) for low-income children to attend private schools. The programs establish lotteries for parents who apply, give applicants a baseline test, award scholarships to applicants at random, then later test children who did and did not receive the scholarships. Some families who get vouchers do not actually send their children to private school, either because they cannot come up with the extra tuition or because they cannot find convenient private schools to accept their children.[6]

Results for Dayton, New York, and Washington show no significant test score gains for Hispanic and white voucher recipients. Gains in the Howell et al. study are reported as National Percentile Ranking (NPR) points, which run from 0 to 100, with a national median of 50. This measurement allows the gains to be compared with test score gains reported in other studies, such as the Tennessee class size experiment. Gains for African Americans are found to be statistically significant overall in New York and Washington and marginally significant in reading in Dayton.[7] Reported gains are largest in Washington, D.C. (**Table 1**). As shown in **Figure A**, the aggregate math gain for African Americans across the three cities is about 5.5 percentile points in year 1. But math scores fail to increase significantly in year 2. The reading gain is negligible in year 1 and is about 6 percentile points in year 2. As shown in Table 1, gains for other ethnic groups are not significantly different from zero in either years 1 or 2.

Gains can also be expressed relative to the statistical variance of test scores in the sample of African Americans taking the test. This is called the "effect size." Gains are expressed in the proportion of a standard deviation in test score represented by the percentile point gains. One standard deviation is the difference in score between the average score (50th percentile)

TABLE 1 Impact on test score performance in three cities of switching to a private school (gain measured in National Percentile Ranking points)

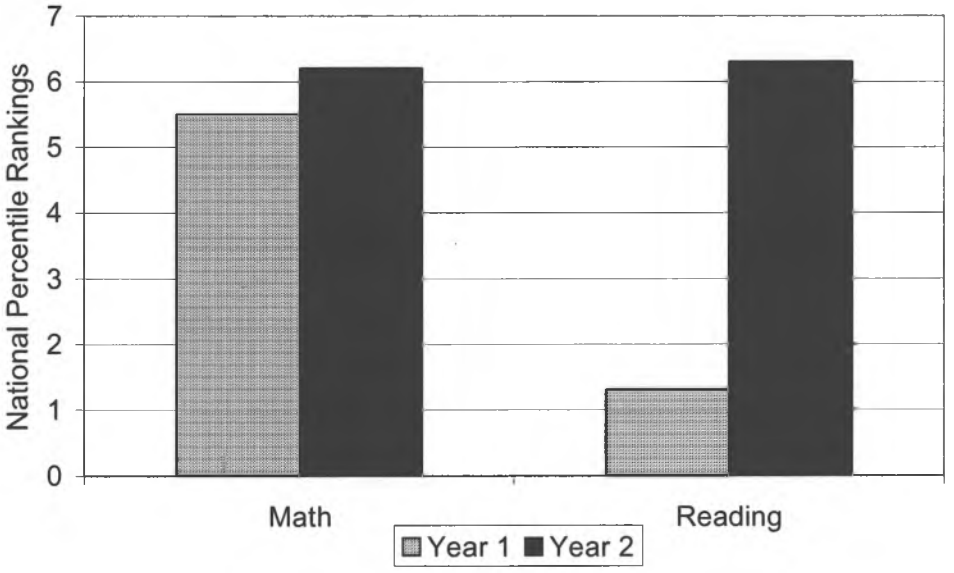
and the 84th percentile on the up side or the 16th percentile on the down side. If the gain represents one-fourth of a standard deviation, it means, approximately, a move from the 50th to the 60th percentile. The percentile point gains for African Americans in Figure A translate into 0.3 standard deviations for math in year 1, with little if no gain in year 2, and, for reading, little gain in year 1 but about a 0.25 standard deviation effect size in year 2.

As shown in **Figure B**, if the major increase in math gains by D.C. middle school students between years 1 and 2 (from negligible to high positive gains) is excluded from the aggregate, the math gains for blacks decline between year 1 and year 2. Furthermore, if the huge turnaround in reading scores among D.C. elementary and middle school students is excluded from the aggregate, Dayton plus New York reading scores show a negligible aggregate gain after year 1.[8]

FIGURE A Test score gains for African Americans switching to a private school, New York, Washington, and Dayton



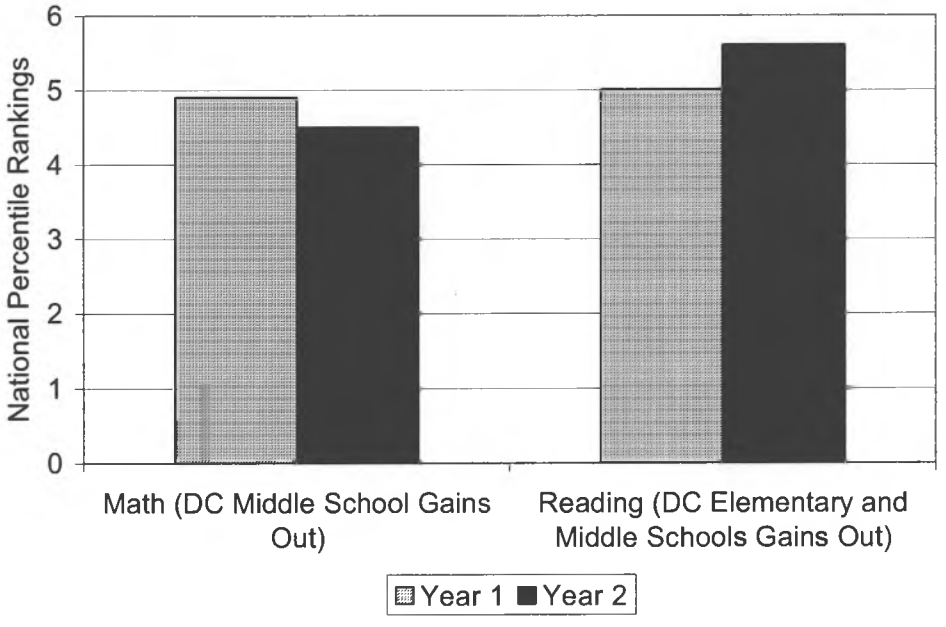


FIGURE B Test score gains for African Americans switching to a private school, Washington gains omitted

Source for figures A and B: see note to Table 1.

Thus, the combined results from two cities, Dayton and New York, suggest that for African American students the main effect of switching to a private school occurs in the year after the switch, and, as shown in Table 1, for other ethnic group (mainly Hispanic) students there is no effect at all. Using the same methodology, the Charlotte gains (not shown in table) are found to be about 6 percentile points in both reading and math. These are not broken down by ethnic group, but 80% of the sample is African American (Greene 2000).

Closer scrutiny

Several methodological issues make these comparisons of achievement gains problematic.

The 'disappointment' and Hawthorne effects problem. Comparing students already in public and private schools has a major disadvantage: private school students may come from more motivated families and have survived selection processes. Solving this problem requires an "experiment:" randomly assigning students to private and public schools.

The Peterson group draws on the statewide Tennessee class size experiment (Mosteller 1995) for much of the experimental method it uses to test the effects of vouchers. In Tennessee, students and teachers were randomly assigned to "normal" size classes (about 24 students) or classes reduced to about 15 students. All the students were followed and tested over the next 12 years. Researchers were able to distinguish those students who had stayed for several years in small classes, the students who had spent only one year in a small class and then switched, and the control group—those who stayed in normal size classes from kindergarten through the third grade. The Tennessee experiment, while randomly choosing the "treatment" (small class) and "control" groups (usual number of pupils in the classroom), was not a "blind" trial, as many medical experiments are. In a truly blind trial controls are given a placebo and do not know whether they are receiving the treatment. Education experiments can never fulfill this condition—families know their child's class size or whether they get a voucher. This makes education experiments subject to a "Hawthorne effect," where the fact that participants know they are involved in a treatment to produce a positive impact can cause them to try harder. The motivation of families who were rejected for the treatment (i.e., the controls) can also be affected by the experiment itself.

The voucher experiments in various cities have families apply for a voucher, give baseline tests to all applicants, then randomly select some to

get vouchers to attend private schools.[9] But the students in these experiments are not necessarily representative of low-income urban students. Families applying for vouchers whose children attend public schools are more motivated to switch their children and more dissatisfied with public schools than are average low-income parents, most of whom do not apply. Not receiving a voucher for parents already dissatisfied with their child's schooling could have an adverse "disappointment" effect on the child's performance. [10]

The differential gains recorded in these experiments may therefore be due partly to lower gains by discouraged voucher rejectees rather than greater gains by recipients. Stanford psychologist Claude Steele has done research showing that test scores are significantly affected by the self-perception of test-takers (Steele and Aronson 1998). Although pupils who did not get a voucher were selected randomly, they and their parents may still feel "unlucky" and less efficacious. For a better comparison, voucher experiments would need also to draw a random sample of pupils from urban public schools whose low-income parents do not apply for vouchers, and give them the initial and follow-up tests. These pupils would come from families who are probably more satisfied with their current situation.

Peterson and Howell (2001) have responded to this criticism by claiming that the level of satisfaction with their children's public schooling by those parents who did not receive a voucher did not decline significantly in the first year following the voucher lottery, but it did in the second. Neither did rejected parents' participation rate in school activities decline. Since the chance of getting a voucher was only one in 20, it is not likely, the authors argue, that getting rejected produces any "sore loser" effect. But this is not very convincing. Peterson and Howell fail to mention that parents who applied for the voucher had rather low satisfaction with their children's schooling to start with. Continued low levels of satisfaction (or even declines after two years) may be enough to affect their children's test scores negatively.

Peterson and Howell also claim that, although there are some signs of a Hawthorne effect, the gains continue to increase in year 2 for African Americans, a trend which suggests that voucher gains persist and are not the result of a Hawthorne effect. The claim that the test score gains persist are based mainly on a large D.C. turnaround in second-year middle school math scores and second-year elementary and middle school reading scores. When these are excluded, there is no second-year increase (see Figure B).

Non-returnees at follow-up. Another problem is self-selection for the follow-up evaluation. Voucher researchers measure academic gains by convincing families to bring children in on a weekend to take follow-up math

and reading tests. As in medical trials, high participation rates may require inducements. For those families who received vouchers, the New York inducement was that children would have to take the test to continue getting a voucher. Researchers used only moral suasion in other cities. For those who received but did not use the voucher and for those in the control group (who did not get a voucher), the inducement was typically $20 plus eligibility for a voucher in the future. Participation rates varied, with the highest rates in New York (about 66% in the second-year follow-up) and about 50% in D.C. and Dayton. The participation rate in Charlotte was particularly low, at 40%. All these are considerably lower than in medical trials.

The Peterson group deals with participation problems by estimating the probability that a student with a certain initial test score and set of family characteristics and attitudes would participate in each follow-up test and then weighting actual scores according to this probability. Probability functions were estimated separately for the control group and for those who received vouchers, using data researchers had gathered on the original questionnaires and the original test scores for all the students who had applied to be in the program. Using these probability functions, the students actually participating in the follow-up tests received a weight that was the inverse of the probability that a student with those characteristics would come back and take a follow-up test. For example, if a student had a set of parent characteristics that made it likely that he/she would participate in the follow-up, he/she was given a lower weight in the calculation of the estimated follow-up test. Thus, students who came back to take follow-up tests but had characteristics that made them unlikely follow-up participants got a bigger weight, so test scores would be more "representative" of the original group of students.

The researchers could not do much more than this to correct for no-shows. But the procedure is hardly free of potential bias. It assumes that follow-up test scores for the many who didn't take the tests would be the same as scores for those who did show up and had similar initial scores and similar parent characteristics. But we really don't know how follow-up scores of no-shows might be related to their not showing up to take the follow-up test. For example, those who did not show up to take the first-year or second-year follow-ups may have had indications from their performance during the school year that they might score low, even though they did reasonably well on the baseline test. This might have been especially true for private school students, or, alternatively, for public school students. Thus, the large non-participation rates could easily have reflected behavior that systematically biased the relative gains of voucher recipients and non-recipients.

Bias issues in taking up the voucher offer. Yet another problem is bias in who takes up the voucher offer. The vouchers, which range from $1,200 to $1,700, depending on the city, are not large enough to cover tuition at most of the private schools available. Many families receiving vouchers were unable to use them. In New York, 62% of families whose children started out in public school used the scholarships for two years; in Dayton and Washington, 53% used the voucher in the first year, with an unreported drop-off in the second year.

Voucher takers in each city, as would be expected, have higher income than non-takers. Critics have argued that this income difference biases results. But the researchers have made a valid attempt to deal with the problem by comparing the controls with all students who were offered the voucher, not only those who actually used it. Here is how it works. Those who receive a voucher and use it may be self-selecting when they choose to go to private school—they may be the better students from higher-educated families, with greater chances to make test score gains. But voucher recipients are randomly chosen, so a good "instrument" in this case is whether the student received a voucher—if there is a major difference between voucher recipients and users, the "instrument" should pick that up. To test whether the measured or unmeasured characteristics of voucher users would produce such a result, the researchers estimated the private school effect conditioned on the probability that someone who got a voucher actually used it.[11]

The single cohort problem. In New York, the only students who made significant gains were African Americans who switched to private schools when they were entering the fifth grade and whose gains were large enough to produce a significant average gain for the entire New York sample of African Americans.

Results for African American students in Dayton also have a strange inconsistency. Certain cohorts—those who entered second, fourth, and sixth grades in the first year of the experiment—had large National Percentile Ranking percentage-point gains in combined math and reading test scores for the two years in private schools, while those in the other grades did not. According to David Howell (who kindly provided unpublished data by grade), African American voucher recipients finishing private school third grades at the end of the study's second year made large two-year gains (in combined math and reading). Those finishing fourth grade performed slightly worse than pupils who did not get vouchers. Those finishing private school fifth grades made large gains, those finishing private school sixth grades made small losses, those finishing seventh grade made large gains, and

TABLE 2 Two-year test score gains for African American students from switching to private schools in Dayton and Washington, math and reading combined, by grade (National Percentile Ranking points)

Grade (in second year of trial)	Dayton point estimate	D.C. point estimate
3	19.7	10.2
4	-1.9	8.1
5	14.5	3.5
6	-1.8	9.7
7	17.0	11.4
8	-5.7	4.0
9	-14.9	-3.6

Source: Data provided to author by William G. Howell.

those finishing eighth and ninth grades made large losses compared to non-voucher students. Only in Washington, D.C. are achievement gains of voucher recipients attending private schools relatively consistent across grades (**Table 2**).With gains so variable by cohort, it is fair to ask, as did Mathematica's David Myers *(New York Times,* September 2000) concerning his New York study for the Peterson group, whether one can claim that students in private schools do better than those in public schools. Shouldn't we, instead, wonder what conditions produced such large gains for some cohorts but not for others?

Tankers and leapers. First-year results were reported in 1999. In Dayton and Washington, D.C., the first-year estimates in those earlier reports excluded "tankers" (test takers whose scores fell more than 1.5 standard deviations) and "leapers" (test takers whose scores rose more than 2 standard deviations). In the more recent second-year report, tankers and leapers are not excluded, changing the first-year results considerably. For example, the 7% gain in math scores reported in year 1 for black students in Dayton is reduced to zero. The Washington math score gain in grades 2-5 rises from 7% in the first-year report to 10% in the latest report, and the reading score in grades 6-8 drops from –8% to –19%. The rationale for not excluding leapers and tankers from the second round of estimates is that, if they stayed high or low, it indicated a more "permanent" effect. But the sample size in both Dayton and Washington dropped considerably in the second year, particularly among African Americans in Washington and highest of all in the highly volatile Washington grades 6-8. How was this drop in sample size related to tankers and leapers? Did more "divers" among voucher

students not show up for the second round of testing? Did more tankers and other low-scoring students leave private schools at the end of the first year, as occurred in Cleveland (Metcalf et al. 1999)? If so, this could have affected the results as to gains in scores. One simple way to test for this would be to present second-year results with tankers and leapers excluded, giving readers an insight into the robustness of the results.

Erratic results. A final problem is erratic results. Big differences between first- and second-year gains in Washington, D.C. may relate to which students failed to show up for testing in the second year. Students might have failed to participate in the second-year testing either because of negative first-year experiences in private schools, or because of disappointment with the first-year testing result. For such students, the probability is higher that they would do badly again than that they would do well. If they leave the sample, that alone could drive up the second-year result.

Chapter 2

Do vouchers improve failing public schools?

In the latest round of voucher advocacy research, Jay Greene, another member of the Peterson group, recently announced that the threat of vouchers in Florida for students in "failing" public schools caused math and writing gains among Florida's lowest-performing schools to increase significantly more than the gains of higher-performing schools (Greene 2001a). The finding was widely publicized as "proving" that vouchers were an effective policy tool for improving education.

In 1999, Florida adopted the A+ accountability system, which included a provision that awarded vouchers to students in schools that "failed" repeatedly. Florida grades schools as A, B, C, D, or F, based on the average scores students achieve on the Florida Comprehensive Assessment Test (FCAT). If a school receives Fs two out of four years, it becomes eligible for some form of corrective action, including but not limited to the offer of vouchers to its students to attend other schools, public or private. In the 1999-2000 school year, two Pensacola schools met the failing criteria and lost 53 children to private schools and 85 children to other public schools.

Greene used results on reading, math, and writing tests by school for the years 1998-99 and 1999-2000 to test the notion that "performance of students on academic tests improves when public schools are faced with the prospect that their students will receive vouchers" (Greene 2001a, 2). He finds that all 78 schools that received an F grade in 1999 (66 primary schools, seven middle schools, and four high schools) received a higher grade in 2000. The gains by F schools were also much higher than those for schools ranked A-D. To get the "voucher effect," Greene compares schools that "were probably very much alike in many respects" (Greene 2001a, 7), namely higher-scoring F schools and lower-scoring D schools. [12] The only thing that differentiates these two types of schools, according to Greene, is that the F's have the threat of vouchers hanging over them, and the D's do not. He concludes from this comparison that the higher-scoring F schools did significantly better on the math and writing tests, with "effect sizes" (the difference in high F and low D scores compared to the standard devia-

tion of the scores in the sample of schools being compared) of 0.12 for reading, 0.30 for math, and 0.41 for writing. This difference, he claims, is the effect that can be assigned to the voucher threat.

Part of this difference, Greene recognizes, may be due to an effect known as "regression to the mean." We would expect that individuals or groups of individuals scoring particularly low in one year would score higher in the next year, not because of any action taken but because of simple variation in performance. Similarly, high scorers in any year are likely to score lower in the following year. Baseball batting averages are a good example of this phenomenon. Players who have been in the majors for several years and had bad years in 1999 will, on average, have higher batting averages in 2000, not necessarily because of the threat of being sent to the minors (even though that threat exists), but because the normal variation associated with batting over a whole season makes it likely that hitters doing badly in a given year will do better rather than worse. The opposite is true for players who had particularly good years. Greene checks for this phenomenon by comparing gains of higher-scoring F schools with lower-scoring F schools. He finds that in reading and math, the higher-scoring F schools have higher gains than lower-scoring F schools. On these grounds, he dismisses the regression to the mean effect.

The Greene analysis has major defects that fall into two categories. First, his statistical analysis tends to overestimate the effect of being designated an F school. His interpretation of the size effects is also probably too large. Second, whatever the correct test score gain caused by a school getting an F grade, Greene presents no evidence that this should be attributed to the threat of vouchers. Florida's school-grading program is relatively new, but was in effect before 1999, the year the voucher threat was first used. How much larger was the effect in that year compared to previous years, when an F designation carried stigma but no voucher threat? Greene does not answer this question, but the data are available to do so. Other states, such as Texas and North Carolina, also have "scarlet letter" designations that trigger sanctions but not vouchers. Do F-graded schools in those states make larger gains than D schools?

Mis-estimating the 'scarlet letter' effect. Gregory Camilli and Katrina Bulkley (2001), professors at Rutgers University, re-estimated the differential gains of F-designated schools, using the same database available to Greene. They chose to compare *all* students who took the test rather than just the "standard" student population (which excludes "special" categories of students) used by Greene. There is no reason to believe that this changes the estimated gains, although Greene argues that F schools are

likely to have more special students when all students are included, dampening their estimated gains compared to gains when only standard students are included. However, a deeper problem exists: FCAT may have been given to two different populations of students in 1998-99 and 1999-2000.[13] In the earlier year, *all* students in school at the time of the test (in early spring) were given the test. In 1999-2000, only those students who were enrolled in that particular school in October took the FCAT. This would tend to increase test score gains because students who have been in school all year are likely to do better on the test than are students who changed schools during the year. This is particularly true for low-income students who are more likely to attend low-scoring schools (Rumberger 1996). This selection bias alone would cast doubt on Greene's results.

Yet, Camilli and Bulkley raise three other objections to Greene's statistical treatment of the data. They argue that Greene inadequately corrects for regression to the mean; that he aggregates data across primary, middle, and high schools; and that he overestimates size effects by inappropriately using the standard deviation of school mean test scores as the reference variable instead of the much larger variation of student test scores. In Greene's answer to Camilli and Bulkley, he rejects all three criticisms. Who is right?

Greene interprets the regression-to-the-mean problem as a floor effect (when scores are very low, they can only go up). However, as Camilli and Bulkley correctly point out, regression to the mean is not mainly the result of a floor effect but of "noise"—unexplainable variation that tends to raise low scores and reduce high scores in any give year toward the mean the next year. Camilli and Bulkley correct for this effect by (1) estimating the predicted school test score in year 2 as a function of school test score in year 1, (2) calculating the gain between second-year score and predicted second-year score, and (3) estimating the relation between this gain and school designations (in A, B, C, D, and F categories). They argue that this gives a "truer" estimate of the effect of school designation, corrected for gains associated with regression to the mean. Greene claims that their form of estimation "overcorrects" for the potential voucher effect because it "takes away" part of the gain of F-designated schools that could have come as a response to vouchers. He would be right if there were little noise in school test scores in a given year, so that all or almost all of the variation were due to policy effects such as school designation. But given what we know about school test score variation from year to year, this is unlikely.

Since Greene sees the regression-to-the-mean problem as a floor effect, he tries to test for it by comparing the gains of low-scoring F-designated schools with high-scoring F-designated schools. He finds no signifi-

cant differences in reading and math score gains between those schools, but significantly larger gains in writing for low-scoring F schools. He concludes that there is no regression-to-the-mean effect and that the F designation itself (the voucher threat) is the main explanation for the larger gain of low-scoring schools. But Haggai Kupermintz, a statistician at the University of Colorado, shows that low-scoring schools within all groups (A, B, C, D, E, and F) make larger gains than high-scoring schools in reading and math, and, that in math and especially writing, low-scoring F schools make much larger gains than high-scoring F schools (Kupermintz 2001, Fig. 2). Yet, even correcting for regression to the mean, Camilli and Bulkley and Kupermintz find a significant effect on math and writing achievement gain associated with the F designation. The estimated effect is not much different from the one Greene estimates when he compares the gains of high-scoring F-designated schools and low-scoring D-designated schools—what he calls the "hard" voucher effect.

The question of whether or not it is proper to divide the analysis into levels of schooling depends on what one wants to know. Camilli and Bulkley's analysis tells us that the big gains in both reading and math are in the seven middle schools that received an F designation. Middle schools made smaller relative gains in writing. High schools that received F's actually went down relative to other schools in math and reading and made about the same gains in writing, and primary schools with F designations made large relative gains in writing, smaller relative gains in math, and no relative gains in reading. Thus, the underlying results by school level and academic area suggest that an F designation has, at best, an uneven impact across school levels and subject areas. Greene's analysis aggregates these results, gaining some statistical significance but losing interesting and important information.

Should the size effects be measured in terms of the variance of scores among schools or among individual students? This depends on the kinds of comparisons being made. If we want to compare effect sizes of gains on different tests within the sample of Florida schools, Greene's use of test score variance among schools is a valid reference for effect size. But that is not the comparison Greene makes. He argues that educational researchers consider "effect sizes of 0.1 to 0.2 standard deviations to be small, effects of 0.3 to 0.4 standard deviations as moderate, and gains of 0.5 or more standard deviations are thought of as large" (Greene 2001a, 8). These are effect sizes based on gains compared to the variation of *individual* student achievement scores, which are much larger than the variation of average school scores. If the gains associated with receiving an F designation are to be compared with, for example, the effect size of the Tennessee class size

reduction experiment (as Greene does), he is claiming an effect on *students* in F schools of a net six-point gain in math scores (Camilli and Bulkley estimate a smaller gain). This gain, to be comparable to the effect sizes of educational research on individual student gains, should be compared to the standard deviation of individual student scores in the FCAT, not of school scores. This makes the effect size of the math gains in F-designated schools quite small (less than 0.1 standard deviations) and the writing gains moderate (about 0.23), as noted in the Camilli and Bulkley critique.

Incorrectly attributing gains at F schools to the threat of vouchers. Throughout Greene's analysis, he claims that the higher gains of F schools (corrected for regression to the mean) must be the result of voucher threat. However, F schools may also tend to raise their test scores more than other schools in other situations where there is no voucher threat. Being branded an F school may itself carry sufficient stigma to cause F schools to raise their test scores, whether or not there is a voucher threat. If that is the case, we (and Greene) have no way of knowing whether vouchers were the cause of higher scores in Florida in 1999-2000.

One way to test that hypothesis is to estimate the net effect of the F designation in Florida in the years before the voucher threat. Another is to make similar estimates for other states that rate schools as failing. Although Greene did not correct properly in his analysis for regression to the mean, it is worth comparing the relative performance of F schools to non-failing schools in these other situations using Greene's flawed methodology. This simulates what Greene might have found were he to do his (flawed) statistical analysis in Florida before the A+ plan was implemented, or in Texas or North Carolina, which have no statewide voucher program.

Data are available on school performance in Florida beginning in 1996-97, a year after the state implemented a testing program and categorized schools by the proportion of students passing the state tests. Doug Harris has analyzed these data and compared them to Greene's results for the first year of the A+ program (see Appendix A for the complete Harris study). Harris also compares his and Greene's results using Camilli and Bulkley's corrections for potential regression to the mean.

Table 3 presents Greene's and Harris' results using the regression to the mean using Greene's method of comparing the gains of high-scoring F schools to the gains of low-scoring D schools. Harris uses 1997-98 gains (pre-voucher), and Greene uses 1999-2000 gains (post-voucher). The gains in math at F schools before vouchers were introduced were larger than in the post-voucher years, but gains in reading and writing are larger post-voucher. In **Table 4** Harris adjusts both his and Greene's estimates for re-

gression to the mean using the Camilli and Bulkley approach. Again, the math gains were much larger for F schools before the voucher threat, and reading gains were slightly larger relative to other schools once vouchers were introduced. If vouchers were the reason that F-designated schools did so much better in 1999-2000, as Greene claims, it is difficult to understand why F schools made larger (and significant) relative gains in math without any voucher sanction and why reading skills made insignificant gains even with a voucher sanction.

Amanda Brownson of the University of Texas' Dana Center duplicated the Greene analysis for Texas schools (see Appendix B). She compared the gains on the Texas Assessment of Academic Skills (TAAS) between the academic years 1996-97 and 1997-98 and the years 1998-99 and 1999-2000 for "low-performing" designated schools (this corresponds to the F designation in Florida) with "exemplary," "recognized," and "acceptable" schools' gains. Brownson argues that, because the Texas assessment is older than Florida's, schools in Texas have been making gains over a longer period than in Florida. She shows that TAAS scores increased steadily throughout the 1990s, but tailed off by 1999-2000. For both sets of comparisons of gains in scores, she found similar results for Texas as Greene found in Florida, even though Texas has no voucher threat.[14]

When Brownson compares the gains in lower-scoring "acceptable" schools with higher-scoring low-performance schools in 1998-99/1999-2000, she finds a very small net effect for low-performing schools in reading gains but a larger, statistically significant effect in math score gains. In both tests, the effect sizes are smaller than in Florida (here it is appropriate to compare relative gains to the standard deviation in mean scores among schools in order to correspond to the Greene results). These results are shown in **Table 5**. (Note that Brownson divides the test score gains by the standard deviation based on Greene's approach. Therefore, Tables 5 and 6 below should not be compared with Tables 3 and 4 above.)

Table 6 shows the same comparison for the early years. The difference in higher-scoring low-performance schools and lower-performing acceptable schools is statistically significant for both reading and math scores, and the effect sizes are close to the effect sizes estimated by Greene for Florida. Brownson's argument that gains were likely to be larger for low-performing schools in earlier years is borne out. More important, her estimates show that, using Greene's methodology, the level of relative gains made by failing schools in Florida is also made by failing schools in Texas, *although Texas uses no voucher threat.* Brownson also corrected her estimates for regression to the mean, using the Camilli-Bulkley method. This correction strengthens her conclusion that failing schools in Texas made

TABLE 6 Isolating the effect of a low-performance rating, 1996-97

	Gains in reading	Number	Gains in math	Number
Lower-scoring 'acceptable'	2.5565	1,714	3.3672	1,750
Higher-scoring 'low performing'	3.1990	55	4.6690	55
Low-performance effect	0.6425		1.3018

relative gains as large or larger than the gains Greene attributes to Florida's voucher plan.[15] Like Florida and Texas, North Carolina has a "strong" accountability system that sanctions schools for continued "low performance." In North Carolina, the four main categories of schools are "exemplary," "meets expectations," "no recognition," and "low performing." Sanctions in North Carolina also do *not* include the threat of vouchers. Duke University's Helen Ladd, a well-known public policy analyst who has written about accountability (Ladd 1996) and about choice in New Zealand (Fiske and Ladd 2000), duplicated Greene's analysis for North Carolina (see Appendix C). She grouped schools into the four categories used by the state to characterize school performance over time[16] and examined two different measures of changes in student performance by school from 1997 to 1998: the change in the percent of students at or above grade level in each year of school based on reading, math, and writing scores (performance composite), and the gain in test scores minus the expected gain in test scores in each year (growth composite). These are the two standards by which schools in North Carolina are judged.

Ladd found that, for both measures of change, "low-performing" schools had a significantly greater positive change than any other school type (**Tables 7A** and **7B**). She also duplicated Greene's Florida comparison of high-scoring "low-performing" schools with low-scoring "no-recognition" schools. This comparison in North Carolina shows that high-scoring low-performing schools had a higher gain on both measures of gain than did no-recognition schools, and this difference was statistically significant (**Tables 8A** and **8B**). Ladd concludes that in North Carolina low-perform-

TABLE 7A Changes in performance composite, North Carolina, 1997-98

1997 school evaluation	Avg. difference in composite	Number of schools
Exemplary	2.37	514
Expected growth	3.43	380
No recognition	4.94	551
Low performing	10.68	114

TABLE 7B Changes in growth composite, North Carolina, 1997-98

1997 school evaluation	Avg. difference in composite	Number of schools
Exemplary	2.11	514
Expected growth	4.66	380
No recognition	7.48	551
Low performing	10.98	114

The change for low-performing schools compared to schools with higher evaluations is statistically significant at $p<.0001$.

ing schools made significantly larger achievement gains than other school categories, *with no voucher threat.*

Thus, Greene's claim that vouchers caused the observed gains in Florida may or may not be true, but the evidence he presents is not sufficient to support his case. We observe that schools designated as failing in Florida before the A+ voucher plan was implemented showed even larger gains in math scores. We also observe similarly large test score gains for schools designated as failing in states without vouchers. This suggests that using larger gains to Florida's F schools in 1999-2000 as evidence that a voucher threat improves low-performing public schools is at best a stretch.

In sum, Greene's statistical estimates have problems, but, more important, he should have been much more careful in attributing the larger gains he found for schools designated as failing to the voucher threat component of the Florida A+ plan. In studies that duplicate Greene's study for Florida in years before the A+ voucher plan was implemented, and in studies of Texas and North Carolina—states that publicize school "failure" but do not use a voucher threat—F-designated schools consistently make larger gains. Given these results, we have no reason to believe that the larger rise in student performance in low-performing schools in Florida in 1999-2000 was due to the threat of vouchers.

Parenthetically, we also cannot argue that the larger test score gains in failing schools in Texas and North Carolina were the result of those states' accountability systems. To prove any of these cases, we would have to show that individual schools' test scores behaved in a particular way over time and then changed significantly when the voucher threat or (in states without vouchers) other policies designed to change their behavior appeared.

Chapter 3

What have we learned?

Voucher evaluations in the U.S. have now gone through several phases. They all analyze voucher experiments aimed at low-income children, mostly African Americans, in medium and large cities, and now, with the Florida study, in states. The first experiments were publicly financed and offered vouchers by lottery. But vouchers were generally *under*-subscribed, and those applicants who did not receive vouchers were not necessarily randomly rejected nor carefully followed up. Thus, evaluations in the first phase generally chose as a "control" group students in public schools who resembled voucher students socioeconomically. These first-phase evaluations were also carried out using similar data by various researchers, some voucher advocates and others not.

The second plans were privately financed, and evaluations were designed to conform to medical experiments, where treatment and control groups are selected randomly. Vouchers were offered to a large group of low-income applicants by lottery. Vouchers were fully subscribed, and both voucher recipients and non-recipients were followed up with tests at the end of the first and second years of the experiment. In comparing pupils who receive vouchers to those who do not in this fashion, bias from differential motivation and socioeconomic background is allegedly eliminated.

The third round of studies have moved into the analysis of the effects of a voucher *threat* on low-performing public schools.

The results of the first round of studies in Milwaukee and Cleveland suggest that parents who receive vouchers and use them (actually send their children to private schools) are more satisfied with their schools than are parents of similar socioeconomic background whose children attend public schools. There is general agreement on that point. There is also general agreement that the vouchers enabled low-income parents who otherwise would not have been able to do so to send their children to private schools. Yet, the sample of low-income, urban parents seeking vouchers does not represent the average low-income urban parent with children in public school. Parents who file for vouchers are, for one, more dissatisfied than other parents. To determine whether private schools are more satisfying to low-income parents than public schools would require taking a random sample of all low-income parents in a particular city with children in public

and private schools and randomly re-assigning students to public and private schools. Parents whose children were assigned to private schools might still be more satisfied than before, but the differences would probably be much smaller than when only the children of dissatisfied parents are switched.

The results are less clear on the achievement effects of vouchers in Milwaukee and Cleveland. Results varied according to which researchers did the studies. The Peterson group produced the most favorable results for vouchers in each of the two cities. When all the results are compared, it appears that voucher-using (choice) students in Milwaukee probably made greater gains by their third and fourth years in private schools—at least in math—than did students in public schools. But the achievement effect was not large, and only a fraction of voucher students stayed in private schools for this long even though the voucher fully covered tuition. In Cleveland, the most reliable results suggest that, after two years, choice students who used their vouchers to attend existing (religious) private schools made greater gains in science than did non-choice students but not in other subjects. Students who used their vouchers in the commercial schools created to take advantage of the voucher plan did significantly worse compared to other students, both students in public schools and voucher users in religious private schools. As in Milwaukee, attrition rates of voucher users from private schools were large over the first and second years of the program.

The Milwaukee and Cleveland cases also indicate that small vouchers of $2,500 or less, such as in the early years of the Milwaukee experiment and in Cleveland, limit the number of low-income families that will actually use the voucher, either because the families cannot supply the extra tuition or because the number of private schools made available at that level of voucher funding is too limited. The eventually much larger Milwaukee voucher increased the number of private schools entering the market and also apparently made the voucher more attractive to low-income families. Nevertheless, we have no information on how the greater number of Milwaukee voucher students are performing compared to their counterparts in Milwaukee's public schools.

The results from the second round of voucher studies show similar satisfaction gains as in Milwaukee and Cleveland, but much larger achievement gains from using a voucher in private schools, at least for African American students. Studies were available only to one set of researchers. All students attended existing private schools, many of them religious, which makes the favorable results not inconsistent with results in Cleveland, although they were still much larger in Dayton and particularly Washington, D.C.

The authors of the second round of studies claim that their results are

better than those done in Milwaukee and Cleveland because of the truly experimental design of the evaluation. However, this strategy does not speak to other issues. The new studies suffer from uncorrected potential biases, including "disappointment effects" of families that did not receive vouchers, low participation rates in follow-up tests, the concentration of gains in particular small cohorts in the sample that the researchers do not attempt to explain, and possibly non-random declines in participation between baseline testing and the first and second years of follow-up testing.

The Peterson group cites Carolyn Hoxby's description of randomized field trials as the "gold standard" of social science research.[17] Hoxby's characterization certainly has merit. But to the extent that the Peterson group's results depend upon instrumental variables and upon weighting to correct for non-participation, they are no longer reporting results of a randomized field trial, but rather are reporting an empirical study with many of the dangers of assuming the relevance of characteristics that the "gold standard" attempts to avoid.

The Peterson group model has yet another problem. Low-income urban pupils attending private schools may do better because private schools are able to select their students. To the degree that a private school can construct a *peer* environment that is conducive to learning in ways that public schools cannot because they must take all comers, the influence of peers on student achievement may be more positive than in a public school. The ability to select students is not a feature of private education that voucher advocates care to stress, because, if this is the source of a positive private school effect, it can imply no condemnation of public schools that are unable to select students. Further, peer effects can run out quickly as private education expands in inner cities.[18] The Cleveland results showing small positive gains to voucher students who entered existing private religious schools and significant relative *declines* in test scores for students who used their vouchers in the commercial Hope Schools could be partly the result of peer effects, not just the relative quality of teaching in different types of schools.

The Peterson group could deal with this problem if it tested a random sample of students already in the private schools attended by voucher recipients, identified them by school, and estimated the peer effect (average test score of non-voucher students in each school) on the score of voucher recipients attending the school. It may not be easy to get the private schools to allow such testing, simply because they would then be subjecting themselves to evaluation. But without such information, it is difficult to understand the source of private school advantage, if such advantage even exists.

Peterson and his colleagues should have an interest in knowing whether it is peer effect or school characteristics that are producing their positive

results for voucher students attending private schools. They claim, contrary to Cecilia Rouse's results in Milwaukee, that smaller class size is not an important factor in explaining the higher gains in private schools of African American students. Indeed, in a recent paper, they were unable to explain why, in New York City, African American students realized a positive effect on test scores from attending a private school while Latino students did not. Private school characteristics as reported by parents, including class size, did not explain test score differences.[19] If peer effects are important in explaining whether students using vouchers make significant gains over their public school counterparts, then we might infer that a voucher plan is likely to benefit relatively few low-income students, i.e., mainly those who can get into existing schools with already better-performing students. Correspondingly, it should be kept in mind that small vouchers of $1,700 (New York City and Washington, D.C.) or $1,500 (President Bush's plan) would be unlikely to induce the creation of many new private schools for low-income voucher students.

Objective evaluations of the currently much larger Milwaukee voucher plan would provide additional information on the extent of voucher benefits. Since relatively large numbers of low-income students have apparently shifted from public to private schools (and some back), and voucher students attend approximately 100 different schools, it would be possible to assess differences in effects by type of school and whether gains are due to student selection or school quality.

In the study of competition effects, the voucher studies, as exemplified by Greene's Florida analysis, attempt to measure the "macro" effect of vouchers on public school improvement. These studies are more indirect than the studies of individual effects in experiments, so they require even more care in estimating voucher effects and interpreting them. Just the opposite has occurred. Jay Greene's study draws attention to Florida's voucher program, but tends to overestimate the degree to which failing schools actually do better than other types of schools and tells us little about whether the threat of vouchers actually makes low-performing public schools do better. Indeed, as the studies of relative gains made in an earlier year in Florida and by failing schools in Texas and North Carolina show, even without a voucher threat failing schools made relative gains as large or larger than in Florida in 1999-2000, when vouchers were introduced. If "failing" schools consistently make larger test score gains than higher-scoring schools in such a wide variety of situations, the fact that they did so in Florida in 1999-2000, when Florida's A+ voucher plan went into effect, is not evidence that the voucher threat was responsible for the larger gains. Much more rigorous empirical tests are required to make that case.

APPENDIX A

What caused the effects of the Florida A+ program: ratings or vouchers?

by Doug Harris, Economic Policy Institute

Criticisms of Jay Greene's analysis of the Florida A+ program fall into two categories: problems in estimating the effect size, and problems in attributing the effect size to the A+ program. This appendix focuses on the second problem. How much of the gain identified by Greene was caused by vouchers and how much was caused by the embarrassment of being labeled an "F" school?

It is often difficult to determine the effects of any individual policy. Governments often change multiple policies at the same time, making it difficult to understand which change had what impact. This same problem arises in the case of the A+ program. The state of Florida assigned labels to schools (A-F) *and* funded vouchers for schools that fell in the F category. This means that A+ is really two programs, which could have been implemented separately. Vouchers could have been funded regardless of school ratings, and the ratings could have been made without vouchers.

In November 1995, the Florida Department of Education (FDOE) released ratings to the public for each school in the state based on test scores from 1993-94 and 1994-95. Level 1 was called "critically low" and included 158 schools. The rules included *non-voucher* sanctions for schools that remained on this list for three consecutive years. However, these sanctions would only occur after three years and only after a series of hearings with the state Board of Education and appeals by the school district. Even if the district were found to be negligent through this process, the state board was not required to take action. Regardless, no sanctions were ever imposed.

Despite the apparent weakness of the sanction threat, anecdotal evidence suggests the schools worked hard to improve their scores to avoid further public embarrassment.[20] Many schools subsequently increased their ratings through test score improvement, decreasing the number of "critically low" schools from 158 to 71 in 1995-96 and to 30 in 1996-97.

In 1999, the state added a provision that students in schools designated as "failing" for two consecutive years would be offered a voucher that could be used in any other school, private or public. This was called the A+ program. At the beginning of the 1999-2000 school year, students in two schools were offered vouchers. They were chosen based on 1998 ratings and a "long history of failure," even though the two-consecutive-year provision of the A+ program

was not yet in effect. In 2000-01, no schools qualified for vouchers; all the 1999-2000 F schools managed to rise to an acceptable rating.

The analysis here attempts to compare the effects of the pre-voucher ratings with the A+ program, which includes both ratings and vouchers. If the effects of the earlier ratings were similar to the ratings-plus-vouchers included in A+, then this would provide evidence that vouchers did not add much value.

Analysis

The general method used here is simple. First, the test score gains achieved by "critically low" schools due to the ratings released in 1995 are estimated. Second, these gains are compared to those of the F schools studied by Greene and others, which also had the threat of vouchers. The methodology follows closely the analysis by Greene (2001), Camilli and Bulkley (2001), Brownson (Appendix B), and Ladd and Glennie (Appendix C).

While the general method is simple, the implementation is somewhat more complicated. One potential problem is that different schools used different tests in both reading and math during 1995-97, just before the FCAT was introduced. In these subject areas, schools were allowed to select from a menu of nationally norm-referenced tests. This is a common circumstance in education research, and it is common practice to make the results comparable by using either percentiles or effect sizes (gains adjusted based on the standard deviation). In this case, the FDOE reports the percentage of students in the school who reach the national 50th percentile on whichever test was taken. The writing scores, in contrast to reading and math, are based on a single statewide test taken by all students. In this case, the FDOE reports the percentage of students who receive a "3" or higher. Therefore, in the case of writing, adjustments are not necessary to compare scores across schools.

One possible effect of the new tests is that schools may achieve gains by "teaching to the test," i.e., teaching test-taking techniques and focusing their teaching on the kinds of material covered in the state exams. This is much more likely after 1999, since major changes were made in Florida testing at about that time. Specifically, Florida created its own test, FCAT, which replaced the nationally normed tests used previously for reading and math. Based on discussions with FDOE officials and other experts, it does not appear that any such changes occurred in the years immediately before the original rating system when into effect. Therefore, the real gains in achievement from A+ may be smaller than they appear.

A third and related issue is that the more recent data provided by the FDOE for the A+ program evaluations is based on raw scores, whereas the older data used here is necessarily reported in terms of "percentages above a set standard." Unfortunately, raw scores and percentages have different statistical properties. This assumption could prove problematic, especially if the "shape of the distribution" of student ability is different across schools. In other words, the test score average across schools can differ, but the variation around that

average cannot. This study tests for possible problems using the A+ data, which includes both raw scores and percentages. The use of these two measures does not significantly affect the results, as discussed later.

A fourth possible issue is that this analysis uses data for the years 1996-97 and 1997-98. The A+ ratings were released in 1999 based on data from the spring of that year. Greene then compares this with the following year's scores. Programs tend to have their biggest impacts in the early years when they receive the most attention. Therefore, it would be beneficial to analyze Florida's pre-voucher rating system using data from 1994-95 and 1995-96 to coincide with that program's first year. However, data for earlier years were not available. It is likely that the effects from pre-voucher ratings would be larger if the earlier data were used in the analysis.

A final issue is that the school rating system changed with the A+ program. Schools were still placed in categories, but the A+ ratings were based on higher standards than previously. This change could make the voucher effect look smaller, since the difficulty of further gains increases as students reach higher levels. For example, moving from the 20th percentile to the 30th percentile is likely to be easier than moving from the 30th to the 40th. The changes in tests and standards shifted 76 schools into the "F" (critically low) category that otherwise would have been in the "D" (level 2) category had the standards remained unchanged. These schools had already made large gains due to the pre-voucher ratings, discussed below.[21]

Results

Table A-1 indicates the gains by school rating and subject area for both the pre-voucher ratings and the A+ program. All of the analysis presented here is based on elementary school scores. The main reason for this restriction is that only one school was rated "critically low" at either the middle or high school level.

Schools not rated critically low were put into three higher categories, 2, 3, and 4. This rating system includes one fewer category than the A+ system. Therefore, to simplify the analysis, the A and B schools were combined into one group. This grouping will not affect the conclusions, since the focus of the analysis is on the low-scoring schools, not A and B schools. All numbers in this table, and throughout this appendix, are gain scores divided by the standard deviation, producing "effect sizes."[22]

Based on Table A-1 alone, it would appear that the A+ program is more effective than the pre-voucher grading system. However, this is quite misleading. Gains in test scores can be separated into three categories: (1) statistical "noise," e.g., a construction project going on near the testing site, which distracts students; (2) the average gain made by everyone, i.e., "trends," which may occur due to idiosyncrasies in the test and other factors; and (3) the unique gains of individual schools due to their own efforts, which are perhaps influenced by incentives created by state policy. The goal of the analysis is to separate the unique gains from statistical noise and trends. One way to account for

TABLE A-1 A simple comparison between the pre-voucher ratings and the A+ program (effect size)

	Harris: Florida ratings (1997-98)			Greene: Florida A+ (1999-2000)

TABLE A-2 Adjusting gains for trends: the grand means (effect size)

	Harris: Florida ratings (1997-98)			Greene: Florida A+ (1999-2000)		
	Reading	Math	Writing	Reading	Math	Writing
4 (A+B)	-0.012	-0.014	-0.077	-0.031	-0.035	-0.065
3 (C)	0.006	0.013	0.088	-0.017	-0.009	-0.009
2 (D)	0.034	0.026	0.105	0.060	0.051	0.074
1 (F)	0.044	0.381	0.206	0.158	0.189	0.486

Source: Author's analysis.

trends is to subtract the sample mean (shown in the first row of Table A-1) from the four individual gains, shown by rating. This yields the "grand means" in **Table A-2**.

The results in Table A-2 imply a quite different conclusion. The gains in math, for instance, are now nearly twice as large in the pre-voucher ratings for the F schools (0.381 versus 0.189). However, more adjustments are necessary. The second source of variation, statistical noise, causes regression to the mean. Greene attempts to deal with this by comparing the low-scoring D schools with the high-scoring F schools. **Table A-3** includes this comparison.[23]

If this were the correct adjustment, the results would be ambiguous. The gains in math are considerably larger in the pre-voucher ratings compared with

TABLE A-3 Adjusting for regression to the mean, Greene's approach (effect size)

the A+ ratings. For writing and reading, the gains are larger for A+. However, the ongoing discussion among researchers since Greene's first paper seems to have produced agreement, even by Greene, that this is not the right approach. The standard approach in education statistics is used by Camilli and Bulkley, in which the gain scores are obtained by subtracting the second year score from the expected second year score. The expected score comes from a regression of the second year score on the first year score. Greene does not report these results in either his original paper or his response. Camilli and Bulkey do report these results, which are presented on the right hand side of **Table A-4**.

Greene is critical of this approach because *larger* real gains due to the program will, paradoxically, make the effect look *smaller*. Therefore, he suggests excluding the F schools from the regression. In theory, he is correct. However, it is highly unlikely that dropping 76 observations out of a total of 2,400 would have any meaningful impact on the results. This is confirmed by performing the same analysis as above but dropping the critically low schools from the regression. Only one of the effect sizes changes by more than 10% in any direction. Most of them changed by less than 5%, as expected.

All of the new analysis above for the pre-voucher ratings is based on the percentage of students above the 50th percentile in math and reading and the

percentage achieving a 3 in writing. This method is different than Greene's analysis based on raw scores. To see whether this difference has any impact on the results, the percentages were converted into raw scores using data from 1999-2000, which include both percentages and raw scores. Specifically, it is assumed that the statistical relationship between the raw scores and the percentages remained roughly the same over the five-year period, which is likely.[24] After creating the estimated raw scores for the earlier years, the results in Table A-4 were re-estimated for reading. The results were similar, implying that the use of percentages does not significantly affect the results.

Conclusion

Based on all of the results above, it does not appear that vouchers have a significant positive impact on public school performance. Using Greene's own approach,[25] the average effect size across subjects (excluding writing) for the pre-voucher ratings is 0.08 standard deviations, compared with 0.10 for the A+ program. This means that *the real effect size of vouchers is only 0.02 standard deviations, which is quite small even by Greene's own standards*. There is still some uncertainty about these numbers, due to the factors mentioned earlier. Two of these factors indicate that the real effect is even smaller than 0.02; only one factor indicates that it is larger. Given this, it is fairly clear that the effects are small, and considerably lower than Greene's original estimates.

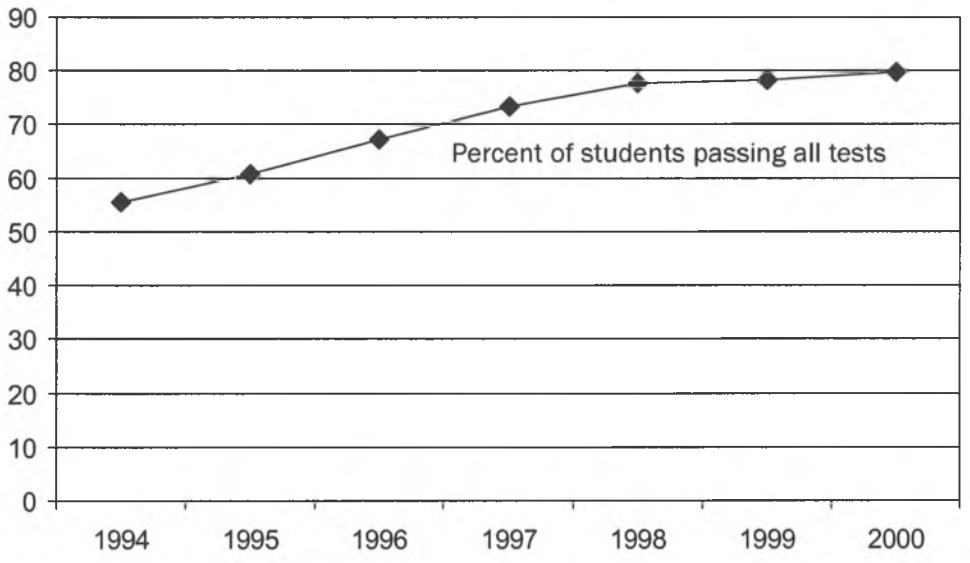
These results should not be surprising to those familiar with how schools work. Outside incentives may be effective, but there is no reason to believe that vouchers, based on a theory of market competition, will work better than school grades or other approaches. Regardless, tens of thousands of students remain at a major disadvantage because they attend "critically low" schools. Finding incentives that improve these schools remains an important task.

APPENDIX B

A replication of Jay Greene's voucher effect study using Texas performance data

by Amanda Brownson, Charles A. Dana Center, The University of Texas at Austin

In an article published in February 2001 by the Manhattan Institute, Jay Greene (2001) examined growth in student performance in Florida schools using achievement test scores from 1999 to 2000. The purpose of the investigation was to determine whether the accountability system, coupled with sanctions in the form of vouchers enabling students to leave schools that received an F-rating for two consecutive years, is having an effect on student performance. Specifically, Greene investigated the effect of vouchers on student performance in schools that received a state-assigned rating of F, which is their lowest of five accountability ratings, to discover whether the potential for losing students who would take their vouchers to other schools resulted in improved test scores.[26]



Greene found that campuses with an accountability rating of F improved at a faster rate than the higher-rated campuses in the state. From this analysis, he hypothesized that the threat of vouchers, which he says affect F-rated schools more than others, is the cause for this faster improvement. However, there a number of other possible explanations for this improvement unrelated to the threat of vouchers. Regression to the mean, which is the idea that extreme scores are likely to move to the average on subsequent measurements, has been discussed by Camilli and Bulkley as a possible explanation for this improvement.[27]

Purpose

A replication of Greene's analysis using data from Texas schools can shed light on this question. Texas, like Florida, administers statewide assessments and bases state-assigned accountability ratings on those assessments. In Texas, ratings range from "exemplary" to "low performing." These ratings have been assigned since 1993 and are based largely on student performance on the state's criterion-referenced test, the Texas Assessment of Academic Skills (TAAS).[28] However, Texas has not adopted a voucher policy.[29] Therefore, similar improvement in the "low-performing" schools in Texas cannot be attributed to a voucher threat.

This analysis uses a measure of student performance on TAAS called the Texas Learning Index (TLI).[30] The TLI scores were aggregated across grade levels for each campus in the state of Texas.[31] Data came from the Texas Education Agency's Academic Excellence Indicator System (AEIS) database and included all students who took the test.

FIGURE B-1 Percentage of Texas students passing all sections of the TAAS, 1994-2000

Source: Author's analysis.

This analysis replicates Greene's using data from two different two-year time periods. The first analysis uses data on student performance growth from the two-year period from 1999 to 2000. Growth from 1996 to 1997 is examined as well, because the accountability system in Texas has been in place longer than in Florida—the current version of Florida's system began in 1998. A quick look at overall Texas achievement scores in **Figure B-1** indicates that test scores were improving at a faster rate in the earlier years of TAAS administration than they are currently. The leveling off of the growth rate in Texas may indicate that it is now more difficult to demonstrate large gains. As a result, the 1996-97 data may more accurately reflect the current situation in Florida.

Finally, this analysis uses an approach described by Camilli and Bulkley in which second-year scores are regressed on first in order to compute an expected score, and then campus ratings are regressed on the difference between the expected scores and the actual second year scores.

TAAS improvement by accountability ratings

An examination of the Texas data reveals many of the same patterns that Greene found in Florida, despite the absence of a voucher threat in Texas. **Table B-1** indicates gains in reading and math test performance between the 1998-99 school year and the 1999-2000 school year aggregated at the campus level and measured by the TLI. These results are presented in standard deviations of the 1998-99 TLI scores.[32] A statistical test of mean differences was conducted to deter-

TABLE B-1 Mean differences in the Texas Learning Index between 1999 and 2000

Low performing	0.771	1.2	99

Source: Author's analysis.

mine if the differences on the change variable were statistically significant between campuses within each rating category.

As was true in Florida, schools with lower ratings had larger gains between 1999 and 2000 than did schools with higher ratings. In Texas, low-performing schools demonstrated gains in both reading and math that were more than three times as high as the gains for schools with a rating of "acceptable." Tests for statistical significance on the reading exam revealed that there were statistically significant differences ($p<.05$) in the average change in TLI between all groups, except between "exemplary" and "recognized" campuses. There were statistically significant differences ($p<.05$) between all campus performance groups in math.

The 1996 to 1997 data (**Table B-2**) reveal similar patterns, though with larger gains for all groups.[33] Again, the low-performing campuses gained almost three times as much as the acceptable campuses during the same period, and this time there were statistically significant differences ($p<.01$) between all performance groups on both tests.

TABLE B-3 Isolating the effect of a low-performance rating using average TLI gains between 1999 and 2000

Source: Author's analysis.

Isolating a 'low-performance' effect

Greene attempted to isolate a "voucher effect" by comparing the higher-performing F schools to the lower-performing D schools. He defined higher-performing F schools as those that had average achievement that was above the mean for F schools, and lower-performing D schools as those that had average achievement below the mean for D schools. In an effort to replicate that analysis, higher-performing campuses rated low performing were compared to lower-performing campuses rated acceptable. This analysis was repeated on Texas data to see if low-performing campuses in Texas produced comparable gains without the threat of vouchers. Results reveal that the upper half of the distribution of campuses rated low performing grew at a faster rate than did the acceptable campuses in the bottom half of the distribution. **Table B-3** shows the growth of both lower-scoring acceptable campuses and higher-scoring low-performing campuses in Texas. Again, all growth is reported in standard deviations of 1999 scores for both the Texas data and the Florida data that Greene reports.

For these years, the Florida effects appear larger, with F-rated schools showing a growth of 0.12 standard deviations in math compared to 0.018 for

Texas, and growth of 0.3 in reading compared to 0.184 for Texas. In both Florida and Texas, the difference was significant for the math test, and not for the reading test.

A replication of this process using gains from 1996 to 1997 shows similar differences, and the Texas low-performance effect now appears to be comparable to the effect that Greene found in Florida. **Table B-4** compares the growth of low-scoring acceptable campuses and higher-scoring low-performing campuses for the 1996 to 1997 data.

For data from 1996 to 1997, the differences between the higher-performing low-performing campuses and the lower-performing acceptable campuses was statistically significant ($p<.05$) for both reading and math gains.

Greene used a second approach to account for possible regression to the mean. He regressed change scores on higher-scoring F and lower-scoring F schools, holding constant prior achievement scores. He argued that if the improvements for the lower-scoring F schools were not a great deal larger than for the higher-scoring F schools, one can safely rule out regression to the mean as the cause of the improvement in F schools and attribute it to a voucher threat. He found that both halves of the distribution of F-rated schools showed statistically significant effects and argued that regression to the mean was not the cause for this effect because the higher-scoring F schools had either larger or similar effects as the lower-scoring F-schools.

A replication of this analysis using Texas data from 1999 to 2000 indicated that, for reading, much of the improvement in the low-performing category may be due to regression to the mean. The lower half of the distribution of low-performing schools had a larger effect than the upper half of the low-performing campuses. Gains in the upper half of the low-performing campus group did not achieve statistical significance.

However, the upper half of the low-performing campus group did show statistically significant effects on the math exam, although the coefficient for the upper half was smaller than the lower half. This may indicate that, while regression to the mean accounts for some of the low-performance effect in math, there may be some other explanation as well. **Table B-5** shows the regression results for the upper half and lower half of low-performing campuses using the 1999 to 2000 data.

A replication of these analyses using 1996 and 1997 data indicate stronger evidence of a low-performance effect. For these years, both the higher and lower halves of the distribution of low-performing campuses showed statistically significant performance gains for both tests. **Table B-6** shows the regression results for the upper and lower halves of the low-performing campuses using the 1996 to 1997 data.

Camilli and Bulkley (2001) propose a different method for correcting for regression to the mean. In this approach, the difference between actual and expected scores is regressed on campus ratings, and, in Texas, low-performing

Table B-5 Regression of TLI change on low performance, 1999-2000

	Reading effect	P value	Math effect	P value
Constant	2.329	.000	2.966	.000
Prior performance	-0.027	.000	-0.040	.000
Upper half of low performing	0.018	.816	0.157	.007
Lower half of low performing	0.235	.012	0.614	.000

Table B-6 Regression of TLI change on low performance, 1996-97

	Reading effect	P value	Math effect	P value
Constant	2.555	.000	3.336	.000
Prior performance	-0.028	.000	-0.038	.000
Upper half of low performing	0.243	.000	0.274	.000
Lower half of low performing	0.367	.000	0.644	.000

Source: Author's analysis.

schools gain more ground than do schools with other ratings for both exams and during both time periods; consistent with the other tests, the effect in math is larger than in reading.

As shown in **Table B-7**, for the 1999 to 2000 data, all campus ratings show statistical significance, and low-performing campuses show stronger gains than other campuses on both tests, but especially in math. Interestingly, acceptable campuses actually seem to lose some ground once the effect of regression to the mean is removed.

As indicated in **Table B-8**, for the 1996 to 1997 data there is a much more practically significant effect for low-performing campuses, which show growth of almost half of a standard deviation in math.

Summary

The above results indicate that schools rated low performing in Texas do grow at a faster rate than other schools even without the threat of vouchers, casting doubt on Greene's claim that a voucher threat was the impetus for such growth in Florida. Low-performing schools in Texas show stronger growth rates than other campuses both when using a replication of the method that Greene used and when employing a different and more commonly used correction for regression to the mean. Furthermore, when using data from 1996 to 1997, which

Table B-7 School rating effects correcting for regression to the mean, 1999 to 2000

Campus rating	Reading effect	P value	Math effect	P value

probably more accurately reflect the current climate in Florida, the effects for low-performing campuses in Texas show gains that appear comparable to the F-rated campuses in Florida.

APPENDIX C

A replication of Jay Greene's voucher effect study using North Carolina data

by Helen F. Ladd and Elizabeth J. Glennie, Sanford Institute of Public Policy, Duke University

Jay Greene of the Manhattan Institute has recently used the large gains in student test scores in Florida's lowest-performing schools to argue that the threat of a voucher leads to school improvement. Because the lowest-performing schools (those rated F in Florida) are the only ones subject to the threat of a voucher, he attributes the larger achievement gains in those schools compared to the gains in the schools rated D to fear of the voucher program. He then refined the approach by comparing the gains in the top half of the F group of schools to those in the bottom half of the D group.

We believe that Greene has inappropriately attributed the differential gains to the voucher program rather than to the other effects of being labeled a failing school, such as shame, increased scrutiny, and possibly additional resources. To provide evidence to support this interpretation, we have replicated his study as closely as possible for North Carolina, a state that rates schools but does not have a voucher program. The logic of our approach is identical to his. The analysis differs only in that the North Carolina ABC's accountability program uses a somewhat different rating system. We base our analysis on test scores in math and reading in grades 3-8 and writing where appropriate.

In North Carolina, the four main categories of schools are exemplary, meets expectations, no recognition and low performing. We view the low-performing schools as comparable to Florida's F-rated schools. In contrast to Florida, North Carolina puts much more emphasis on the gains in scores from one year to the next in ranking the schools. In fact, it is the size of the gains relative to expected gains that essentially determine the top three categories. Each school's expected gain is based on predicted statewide gains by subject and grade level, with small and partially offsetting adjustments for regression to the mean and the initial proficiency of the students.

Exemplary schools meet their expected gains in test scores by more than 10%, and schools meeting expectations are those that have gains at least as large as the gains expected for them. No-recognition schools exhibit gains in student performance below their expected gains. Finally, low-performing schools meet neither a growth nor a performance standard. Such schools do not meet their expected growth and the percent of students at grade level falls short of the 50% performance standard.

TABLE C-1A Changes in performance composite, North Carolina, 1997-98

1997 school evaluation	Average difference in composite	Number of schools
Exemplary	2.37	514
Expected growth	3.43	380
No recognition	4.94	551
Low performing	10.68	114

The change for low-performing schools compared to schools with higher evaluations is statistically significant at p<.0001.

TABLE C-1B Changes in growth composite, North Carolina, 1997-98

1997 school evaluation	Average difference in composite	Number of schools
Exemplary	2.11	514
Expected growth	4.66	380
No recognition	7.48	551
Low performing	10.98	114

The change for low-performing schools compared to schools with higher evaluations is statistically significant at p<.0001.

Source: Authors' analysis.

Method and results

Relying on publicly available data, we first grouped schools by the classification they received from the state in 1997 (exemplary growth, expected growth, no recognition, low performing) and examined two different measures of changes in student performance from 1997 (the first year of the ABCs accountability program) to 1998: the change in the performance composite and the change in the growth composite. The performance composite is the percent of students at or above grade level in each year based on reading, math, and writing scores. The growth composite is the gain in test scores minus the expected gain in test scores in each year. Thus, the change in the performance composite is a change in levels, namely the change in the percent of the students scoring at grade level or above from one year to the next. The change in the growth composite is the difference between the gains in test scores relative to expected gains during the 1997-98 school year and the 1996-97 school year.

For both measures of change, low-performing schools had a greater positive change than any other school type, and significance tests of the difference

TABLE C-2A Changes in performance composite, North Carolina, 1997-98, comparing 'most similar' schools

1997 school evaluation	Average difference in composite	Number of schools
Lower-scoring no recognition	5.91	272
Higher-scoring low performing	9.22	57

The difference between the gains for the two school types is statistically significant at p<.0001.

TABLE C-2B Changes in growth composite, North Carolina, 1997-98, comparing 'most similar' schools

1997 school evaluation	Average difference in composite	Number of schools
Lower-scoring no recognition	7.24	272
Higher-scoring low performing	9.46	57

The difference between the gains for the two school types is statistically significant at p<.0001.

Source: Authors' analysis.

between the change for low-performing schools and that of every other school type show that these differences are statistically significant. In other words, the gains in student achievement observed in the low-performing schools differed from those in other schools by an amount that is very unlikely to have been produced by chance alone (see **Table C-1**.)

Following Greene's logic that high-performing F schools in Florida are very much like low-performing D schools in terms of incentives to improve their performance and challenges in doing so, we compared the high-scoring low-performing schools in North Carolina to low-scoring no-recognition schools. High-scoring low-performing schools are those in the top half of the 1997 performance composite score range, and low-scoring no-recognition schools are those in the bottom half of the 1997 performance composite score range. Repeating the above analysis for this subset of schools shows the same result: high-scoring low-performance schools had a higher gain did than low-scoring no-recognition schools, and this difference is statistically significant. This is true both for comparisons of gains in performance composite and growth composite. (See **Table C-2**.)

Conclusion

We conclude from this North Carolina analysis that the results that Jay Greene found for Florida probably have little or nothing to do with vouchers. If vouchers were the explanation for the gains in the F-rated schools in Florida, it is unlikely we would have found comparable patterns of gains in the low-performing schools in North Carolina.

Endnotes

1. In his latest book, *The Black-White Test Score Gap* (co-edited with Meredith Phillips, 1998), Jencks seems to argue that the biggest cause of the persistent gap is differences in family characteristics over which schools, public or private, have very little control. But he does suggest that some school improvements, like smaller classes or better-prepared teachers, might make a difference.

2. By the fourth year of the program, there were only 40 children left in the unsuccessful applicant comparison group, making their average test score highly sensitive to either high or low scores (Witte 1997).

3. Only 8,000 pupils had taken vouchers by the year 2000. Private schools not in operation when vouchers were offered had to be approved, limiting the supply of new schools. About 90 private schools, 80% religious, took voucher students in 2000-01. According to recent applications, 22 new private schools, still mainly religious, should be approved in 2001-02, enrolling another 2,000 children. Even so, the supply of schools to take advantage of a fairly large voucher ($5,300) is slow in materializing.

4. Many of the children receiving vouchers were scheduled to enter kindergarten in 1995, just as Cleveland abolished full-day kindergarten. This change could have influenced parents to take vouchers.

5. Between year 1 and year 2, 26 third graders in non-Hope Schools did not return to the program (approximately 20%). These were students who achieved significantly lower than other voucher students in the third grade even though all had statistically similar second-grade test results. All left the Cleveland school district.

6. This tuition arrangement differs from the Milwaukee experiment. Private schools in Milwaukee were not allowed to charge tuition over and above the voucher.

7. A 0.10 level of statistical significance indicates that there is a 20% probability that the gain reported is not different from zero. The reporting standard in such studies considers this to be a relatively "high" chance that the gain is indeed not different from zero.

8. These calculations use simple arithmetic means of test score gains for the three cities weighted by the number of observations in each year in each city. The Peterson group paper estimated averages using more complex weights, but it did not provide the data that would have enabled others to test or replicate the conclusions. However, the differences between the averages in Figure B and averages using the Peterson group's weights would be small.

9. Many of the students who applied for vouchers and who were initially tested were already attending private schools (up to 45% in Dayton). Up to one-third (again, in Dayton) of voucher recipients were also already attending private schools. However, the results in all the cities are reported only for those students initially in public school.

10. We would *not* expect a similar effect for children assigned to normal classes in the Tennessee experiment because there both satisfied and dissatisfied parents participated in the random draw.

11. In effect, this turns out to be similar to dividing the unbiased estimate of receiving a voucher by the probability of using the voucher. For example, the estimated reading gain for black students of receiving a voucher was 3.5 percentiles, and the gain of switching to a private school 6.1 percentiles. The ratio of 3.5 to 6.1 is 57%, approximately the probability of voucher recipients actually using the voucher.

12. In fact, the higher-scoring F schools had slightly higher average test scores from the previous year than lower-scoring D schools. This outcome can result because the state grade assigned to schools depends on the percentage of students above a certain threshold on the test score, not by the average test score for the school.

13. As Camilli and Bulkley note (in their footnote 2), this is specified under Rule 6A-1.09981 of the State Board of Education Administrative Rules.

14. In this first round of analyses, Browson does not make the overall correction for regression to the mean because she is trying to make a direct comparison to Greene's results.

15. In duplicating Greene's analysis, Brownson used the same assumptions he made regarding regression-to-the-mean effects. When she re-estimates the relative gains for failing schools in Texas using the Camilli-Bulkley method rather than the Greene method of comparing high-performing F schools to low-performing D schools, the relative gains to F schools increase for reading in both 1999-2000 and 1996-97, and for math in 1996-97.

16. According to Ladd, "[E]xemplary schools meet their expected gains in test scores by more than 10 percent and schools meeting expectations are those that have gains at least as large as the gains expected for them. No recognition schools exhibit gains in student performance below their expected gains. Finally, low-performing schools meet neither a growth nor a performance standard. Such schools do not meet their expected growth and the percent of students at grade level falls short of the 50 percent performance standard."

17. Hoxby's characterization of randomized field trials appears in Howell et al. 2000b, p. 2.

18. Good school management can also run out quickly, particularly since, as private schools expand in inner cities, they face the same fundamental problems as do public schools (see Leovy 2000).

19. One problem with this recent analysis, by Howell and Peterson, however, is that most of the positive result for African Americans in New York City is located in the single fifth/sixth-grade cohort. There might exist a particular cohort effect in that group that has little to do with private schools attended. The fifth/sixth-grade cohort of African Americans is a small proportion of the total African American sample. The difference in test scores between the rest of the African American sample attending private schools and Latinos attending private schools is probably very low to start with, so explaining an already small difference in test scores with school variable differences is unlikely to produce significant results.

20. The authors thank officials at the Florida Department of Education for this and other useful information.

21. According to documentation obtained from the Florida State Board of Education, the original low rating was given when, for two consecutive years, fewer than 33% of students had scored above the 50th percentile on reading and math, and fewer than 33% scored 3 or above on the Florida state writing test. As stated earlier, the newer standards are more stringent, but are difficult to compare because the testing instrument changed.

22. Different standard deviations are required for the 1995-97 data compared with the

1998-2000 data. In the latter case, the sample standard deviations calculated by Camilli and Bulkley are used. In the former case, it is assumed that the relationship between the cross-school standard deviation and the cross-student standard deviation is similar to that calculated by Camilli and Bulkley. Specifically, they found that the cross-student variation is 3.5 times larger in math and reading and 2.2 times larger in writing.

23. All of the regression-to-the-mean adjustments made throughout this appendix automatically adjust for trends; therefore, no additional corrections are necessary to find the real effects.

24. This was accomplished by regressing the raw scores on the percentages. The independent variables included percentages, percentages squared, and percentages cubed. The estimated equation was then applied to the data for earlier years.

25. Greene used two approaches. The one used here is the one he used in his response, subtracting the second-year score from the expected value of the second-year score, based on a regression that excludes the F schools.

26. Florida assigns campus ratings A through F based primarily on the Florida Comprehensive Assessment Test (FCAT).

27. It may also be that the publication of a low accountability rating by itself, or in conjunction with other sanctions besides vouchers, could cause such improvement.

28. See the Texas Accountability Manual at http://www.tea.state.tx.us/perfreport/account/2000/manual/ for a description of the Texas system.

29. While vouchers are not available to Texas families, the option of attending a public charter school does exist. In 1997-98, Texas had 19 charter schools. In the 1999-2000 school year, Texas had 160 charter schools serving about 35,000 students (roughly 0.7% of Texas public school enrollment). In most areas of the state, public charter schools do not offer a meaningful alternative to parents of students attending low-performing schools. First, there are relatively few charter schools from which to choose (they represent 2% of Texas public school campuses). In addition, the distinctive nature of charter schools (over half have programs specifically designed to serve students at risk of school failure and dropout) means that they are not appropriate for the typical student. Most important, student performance in Texas public charter schools is disappointingly low. In 2000, 11.4% of charter schools were rated low performing, compared with 2.1% of traditional public schools rated low performing. Another 13% of the public charter schools were rated "needs peer review"—an indication that the school has other difficulties.

30. For a description of the Texas Learning Index, see the *Technical Digest,* which can be found online at http://www.tea.state.tx.us/student.assessment/resources/techdig/index.html.

31. Camilli and Bulkley (2001) argue that aggregation across grade levels is inappropriate because diagnostic information regarding different effects in different grades may be lost, and because scales of different instruments should not be combined. This analysis aggregates across grade levels in order to replicate Greene's analysis as closely as possible, in spite of some possible limitations.

32. The standard deviation for the average reading TLI in 1999 was 6.6647. The standard deviation of the average math TLI was 6.3705

33. The standard deviation for the average reading TLI in 1996 was 5.61. The standard deviation of the average math TLI in 1996 was 5.36.

About EPI

The Economic Policy Institute was founded in 1986 to widen the debate about policies to achieve healthy economic growth, prosperity, and opportunity.

Today, despite recent rapid growth in the U.S. economy, inequality in wealth, wages, and income remains historically high. Expanding global competition, changes in the nature of work, and rapid technological advances are altering economic reality. Yet many of our policies, attitudes, and institutions are based on assumptions that no longer reflect real world conditions.

With the support of leaders from labor, business, and the foundation world, the Institute has sponsored research and public discussion of a wide variety of topics: trade and fiscal policies; trends in wages, incomes, and prices; education; the causes of the productivity slowdown; labor market problems; rural and urban policies; inflation; state-level economic development strategies; comparative international economic performance; and studies of the overall health of the U.S. manufacturing sector and of specific key industries.

The Institute works with a growing network of innovative economists and other social science researchers in universities and research centers all over the country who are willing to go beyond the conventional wisdom in considering strategies for public policy.

Founding scholars of the Institute include Jeff Faux, EPI president; Lester Thurow, Sloan School of Management, MIT; Ray Marshall, former U.S. secretary of labor, professor at the LBJ School of Public Affairs, University of Texas; Barry Bluestone, University of Massachusetts-Boston; Robert Reich, former U.S. secretary of labor; and Robert Kuttner, author, editor of *The American Prospect,* and columnist for *Business Week* and the Washington Post Writers Group.

For additional information about the Institute, contact EPI at 1660 L Street NW, Suite 1200, Washington, D.C. 20036, (202) 775-8810, or visit www.epinet.org.

School vouchers study finds little difference between public schools, private schools

By Ron Matus, Times Staff Writer

Published Monday, June 29, 2009

Supporters often say school vouchers are lifelines to low-income students trapped in subpar public schools.

But academically, students using vouchers to attend private schools in Florida are doing no better and no worse than similar students in public schools, says a study ordered by the state Legislature.

"We consider the report a validation of what we've always said," said Mark Pudlow, a spokesman for the state teachers union. "There is no quick fix for struggling students."

Northwestern University economics professor David Figlio compared test scores of students in the voucher program, which served 23,259 students last year, to eligible public school students who opted not to participate.

Figlio said it's too early to draw hard-and-fast conclusions, and outlined some technical complications he expects to resolve with another year's worth of data.

But he said more data isn't likely to change the bottom line.

"I'm confident that it's highly unlikely that we're going to see huge differential positive test score gains from this program" or negative results either, he said after the report was released Monday. "My hunch is, when all is said and done ... it's going to be a wash in terms of test scores."

But voucher supporters said the findings prove private schools are educating voucher students as well as public schools, and for a lot less money. Per-pupil spending in Florida is about $7,000 a year. A voucher costs taxpayers $3,950.

"The fact that we're keeping (pace) and we're spending 57 cents on the dollar is a good first step," said Doug Tuthill, president of Step Up For Students, the Tampa nonprofit group that oversees the voucher program.

But critics said the findings show vouchers have failed to deliver. And to a point, one voucher researcher agreed.

Backers "promised the moon, and public policy almost never delivers the moon," said Jay Greene, a University of Arkansas professor who has studied Florida vouchers. "It doesn't mean that these programs can't be a lifeline." But don't expect to see that instantaneously.

The report comes as the tide in Florida's decade-long vouchers war seems to be turning.

In the last two legislative sessions, GOP supporters have successfully expanded the program, which offers businesses a dollar-for-dollar tax credit in return for donations. And a growing number of Democrats have signed on.

Voucher students don't have to take the Florida Comprehensive Assessment Test. But since 2006 the state has required that they take a comparable test.

Figlio compared test results from 2006-07 and 2007-08.

Vouchers are available to any student who qualifies for free or reduced lunch. But he found that students who accept them are more likely to be minorities, and be poorer. And while in public schools, they tended to be among the lowest performers. The latter finding undermines an argument by anti-voucher critics.

"Opponents have always said that you're picking off the best and brightest," said Rep. Will Weatherford, R-Wesley Chapel, who spearheaded last year's voucher expansion.

Figlio does not offer an exact comparison. The 2006-07 data was incomplete, and the applicant pool appears to have been skewed by a high number of families who applied for free or reduced lunch even though they did not qualify. Higher-income families usually correlate to higher-performing students.

With those caveats, Figlio concluded that voucher students made slightly smaller gains than similar nonvoucher students in reading and math, though the difference was not statistically significant.

Monday's report did not dissuade voucher parents, or provoucher lawmakers.

"I know my daughter," said Trinette Hicks, whose 9-year-old daughter, Tekoa, attends Southside Christian in St. Petersburg on a tax credit voucher. In private school, Hicks said, "She gets more attention."

Parents "are passionate about the value of their choice," said Sen. Don Gaetz, R-Niceville.

But the new study's results shouldn't be ignored, said Sen. Dan Gelber, D-Miami Beach, a longtime voucher opponent.

"If the kids aren't doing better, then we really ought to reconsider why we're doing it," he said.

School vouchers: Recent findings and unanswered questions

Lisa Barrow and Cecilia Elena Rouse

Introduction and summary

Many people would argue that U.S. elementary and secondary public schools need to improve, and they would like to see U.S. students perform better in international comparisons. In addition, many people would like to do more to close the achievement gaps within the U.S. between lower-income and minority students and their counterparts. These concerns are shared by parents, employers, policymakers, and society more generally. There is less agreement on the root causes of the problems and how best to tackle them. For example, while some would argue that insufficient funding is the primary factor, others would say that this is not supported by the evidence, since per pupil spending has increased faster than achievement, as reflected in scores on the National Assessment of Educational Progress (NAEP).[1]

One strategy for improving school performance that has received a lot of attention by all those interested in education policy is increased competition. The idea is that just as competition can enhance efficiency and value in the marketplace for goods more generally, it can do the same for education. Namely, if schools must compete for students, then they will take steps to ensure that the educational experiences they offer are valued by parents and students. The primary mechanism proposed by those who favor more competition in elementary and secondary education in the public sector is an education voucher—a coupon redeemable for a maximum dollar amount per child if spent to attend a private school. In this way, voucher programs remove the monopoly power of local public schools. Instead of having to attend a neighborhood public school, students can use the voucher to attend a private school.

In the 2007–08 school year, roughly 55,000 students in three states—Florida, Ohio, and Wisconsin—and the District of Columbia were using publicly funded education vouchers to attend private schools (as well as other higher-performing public schools);[2] see table 1. Several other states have considered voucher programs, and some private organizations have helped create privately funded voucher opportunities. But are voucher programs effective? Do they improve the educational outcomes of the students who use them and do they improve the quality of the public schools? In this article, we review the existing empirical evidence on the impact of school vouchers on student achievement.[3] After reviewing the research, we conclude that expectations about the ability of vouchers to drastically improve student achievement, at least as measured by test scores, should be tempered by the results of the studies to date. That said, many questions remain. For example, no studies have examined the longer-run impact of vouchers on outcomes such as graduation rates, college enrollment, and future wages. Similarly, the research designs for identifying the potential impacts on students who remain in the public schools are far from ideal. Finally, we have little understanding of whether vouchers would represent a cost-neutral alternative to our current system of public education provision at the elementary and secondary school levels.

Lisa Barrow is a senior economist at the Federal Reserve Bank of Chicago. Cecilia Elena Rouse is director of the Education Research Section, director of the Industrial Relations Section, and Theodore A. Wells '29 Professor of Economics and Public Affairs at Princeton University; she is also a research associate at the National Bureau of Economic Research. *The authors thank Clive Belfield, David Figlio, Bhashkar Mazumder, Patricia Muller, Anna Paulson, and Jonathan Plucker for helpful comments and conversations. Emily Buchsbaum and Mitta Isley provided expert research assistance. They also thank the Ohio Department of Education and Washington Scholarship Fund for responding to their queries. Parts of this* Economic Perspectives *article are drawn from the authors' forthcoming article in the* Annual Review of Economics.

In the next section, we discuss the theoretical reasons for why education vouchers should improve student achievement followed by a discussion of the empirical approaches used for identifying the effects of vouchers. We then review the best evidence from studies of publicly and privately financed school voucher programs on the short-run impact on student achievement, discuss the evidence on the potential impact on students who remain in the public schools, consider additional voucher outcomes, and conclude.

Why should competition improve our educational system?

The idea of injecting competition into the public school system is not new; for example, Milton Friedman (1962) argued in the early 1960s for separating the financing and provision of public schooling by issuing education vouchers. The rationale behind school vouchers is that competitive markets allocate resources more efficiently than do monopolistic ones and that public schools in the U.S. have "monopoly" power because children are assigned to attend their local neighborhood school. Parents can always choose to send their children to a private school, but that means paying for schooling twice—once through property taxes (for the public schooling they are not using) and again through private school tuition. If parents had more publicly funded options for their children's schooling—once they had selected a residential location—then schools would have to compete for students. Further, more options may improve the match between the educational interests and needs of students and their schools. Importantly, schools in this model would have an incentive to improve in the areas valued by parents. Thus, if parents select schools based on their academic quality, then schools will compete for students by providing better academics; alternatively, if parents value religious education or sports, then one would expect to see schools compete to serve these interests.

There are two hypothesized ways by which increased school choice would improve student educational outcomes. The first is a "direct" effect for those students who actually exercise choice. Assuming that students would only choose to attend a school other than their neighborhood school if that school were academically *better* (or a better match), then the academic achievement of students who opt for a different school should improve relative to what their performance would have been had they stayed in the neighborhood public school. In addition, there is an "indirect," or "general equilibrium," effect on students remaining in the public schools. Competition should induce the public schools to improve in an effort to attract (or retain) students. Thus, not only should the achievement of those who choose to attend private schools increase, but so should the achievement of those who do *not* choose as well. In other words, competition should increase the efficiency of public schools. Of course, expansion of the private sector is a critical component of increasing competition. Without new school entries and/or increases in the size of current private schools, vouchers would have limited ability to increase choice.

Many empirical studies find that students in private schools have higher educational achievement levels than those in public schools.[4] The findings from such studies are presented by voucher advocates as prima facie evidence that vouchers would improve student achievement for all. Namely, voucher advocates argue that private schools outperform public schools because their existence depends on providing a good product. Educational vouchers are intended to make public schools compete in this same way; so, only schools (either public or private) providing a good product would survive. However, this literature is not conclusive because of the difficulty (described later) in identifying the impact of schools on student achievement. Not surprisingly, critics argue that the observed superiority of private schools in these studies arises because the students who attend private schools differ from the students who attend public schools rather than because private schools are more effective than public schools.[5] If the observed relative superiority of the private sector is due more to the particular background characteristics of its students than the greater effectiveness of its schools, the achievement of current public school students would not necessarily improve in private schools.

While the debate continues on whether private schools, in general, are better at educating children than are public schools, researchers have since turned to more direct evidence on the impact of vouchers by studying actual school voucher programs. We begin with an overview of the challenges of testing whether vouchers improve student outcomes before reviewing the evidence to date.

Empirical approaches to studying school vouchers

To study whether educational outcomes in the presence of vouchers are better than educational outcomes in the absence of vouchers, ideally, one would begin with a group of students and educate them for a period of time under the current public school system. At the end of the period, one would assess various

TABLE 1

Description of publicly funded voucher programs in 2007–08

Voucher program	Start of program	Number of scholarship students in 2007–08	Other information
EdChoice Scholarship Program (Ohio)	2006	6,580	Students are eligible to apply if they currently attend or will be entering an EdChoice-designated public school in the upcoming year or if they currently attend a charter school but would otherwise be assigned by the school district to an EdChoice-designated school. There is currently a maximum of 14,000 scholarships that can be awarded across the state, and there are no income requirements to receive a scholarship. If more than 14,000 students apply, then students who are renewing their scholarships followed by students who are at or below 200 percent of the poverty level receive priority. The program pays the minimum of a school's tuition or $4,375 per student from kindergarten through eighth grade and $5,150 per student from ninth through 12th grades.
Cleveland Scholarship and Tutoring Program (Ohio)	1996–97	6,017	Any student living within the boundaries of the Cleveland Metropolitan School District (CMSD) and entering kindergarten through eighth grade is eligible to apply. Low-income students are given priority, and scholarships are awarded by lottery drawings. A student is not eligible to apply once he or she has entered high school, although scholarships have been made available to program participants once they reach high school. All children currently attending Cleveland Metropolitan Schools in kindergarten through 12th grade are eligible for the tutoring program. The scholarship program pays either 75 percent or 90 percent of a school's tuition (depending on family income) not exceeding $3,450 for the 2007–08 school year.
A+ Opportunity Scholarship Program (Florida)	2000	1,305 in public schools (see next column)	Students are eligible for the A+ Opportunity Scholarship Program through the highest grade of their public school if their school is currently "failing" (graded an F) for its second year in a four-year period. The scholarships could continue into high school if the high school was assigned a grade below C. The program made an average scholarship payment of $4,206 per student in 2005–06. These scholarships (vouchers) for private schools were declared unconstitutional by the Florida Supreme Court in January 2006. Thereafter students could no longer use these vouchers to attend participating private schools; they are, however, still able to use the vouchers to attend higher-graded public schools.

outcomes for the students and administer a test, the results of which would perfectly reflect what the students know. Then one would turn back time so that the same group of students was reverted to their conditions at the beginning of the experiment. That is, the students would be the same age, have the same living conditions, and so on. This time, one would educate the students in a system with education vouchers. At the end of the same period of time, one would again assess the students' outcomes and what they know. The difference between the students' outcomes under the current and voucher systems would isolate the impact of vouchers because vouchers would be the only difference at the beginning of each experimental period.[6] If implemented on a small scale, this experiment would allow one to estimate the direct effect of vouchers; if implemented on a large scale, this would uncover the potential effects on all students, including those who remain in the public schools.

Obviously, such an evaluation is not possible. So, to study the direct effect of vouchers, researchers must rely on comparing the achievement (or other outcomes) of students who were offered a voucher (or actually used a voucher to attend a different school) with the outcomes of students who were denied a voucher, were ineligible for a voucher, or remained in the public schools for other reasons.[7] The empirical challenge is that the outcomes of the nonvoucher students may not provide a valid approximation of what

TABLE 1 (CONTINUED)

Description of publicly funded voucher programs in 2007–08

Voucher program	Start of program	Number of scholarship students in 2007–08	Other information
McKay Scholarships for Students with Disabilities Program (Florida)	1999–2000	19,439	To be eligible for this program, students must have been part of the Florida public school system for at least one year, have been counted in the prior school year's October and February enrollment surveys, and have an individual education plan. For the 19,439 students currently enrolled, there has been a total payment amount of $99,212,622.04 so far for the 2007–08 school year. There was a total payment amount of $119,092,631.54 across the state for the 2006–07 school year, assisting 18,273 students. Scholarship amounts are awarded on an individual basis.
Milwaukee Parental Choice Program (Wisconsin)	1990	18,882	Milwaukee Parental Choice Program students have family incomes at or below 175 percent of the federal poverty level ($35,843 for a family of four in 2007–08). Once a student is in the program, family income may rise to 220 percent of the federal poverty level ($45,057 for a family of four in 2007–08). The voucher was worth a maximum of $6,501 in 2007–08.
DC Opportunity Scholarship Program (District of Columbia)	2004	1,903	Eligibility requirements give preference to students in kindergarten through 12th grade who are eligible for free or reduced lunch and who are enrolled in public schools that fail to make sufficient yearly progress as defined by the No Child Left Behind Act. The program offers scholarships for up to $7,500 to cover the costs of tuition, fees, and transportation for students to attend participating DC private schools. Scholarships are renewable for up to five years as long as students remain eligible and in good academic standing at their private schools.

(2007).

would have happened to the voucher students had they not been offered or used a voucher. The voucher students may not have done as well (or as poorly!) as the nonvoucher students in the absence of the voucher program because their individual characteristics differ substantially. For example, the students with parents who are very educationally focused and motivated may be more likely to apply for a school voucher, and yet these students may have done better than their nonvoucher classmates even in the absence of the voucher program because of their higher level of parental support and encouragement. Unless the research design can take these individual characteristics fully into account, the estimated impact of vouchers will not likely generate the true impact of vouchers on student achievement (in statistical terms the estimated impact will be "biased"). As a result, researchers have relied on analytical strategies that attempt to control for all differences between the two groups of students, observed and unobserved.

The first strategy is to control for students' achievement (typically a test score) prior to using the school voucher in order to adjust for nonschool factors (such as having educationally focused parents or low family income) that affect this achievement and that might also be correlated with a student's likelihood of applying for a voucher. This strategy amounts to comparing the change in achievement of students before and after participation in the voucher program with the change in achievement of students who did not participate in the program. The assumption that must hold for this estimate to generate the true (unbiased) effect of vouchers is that there are no other differences that would explain changes in the test scores between the two groups of students except for the use of a voucher. Although this approach has some appeal, one might reasonably be concerned that students who were not doing well (or were doing very well) in the public schools were more interested in a different schooling experience and that prior test scores do not perfectly reflect academic "ability," achievement, or motivation.

A second, more compelling strategy to generate estimates of the effect of vouchers on student outcomes is to use a random assignment design. In this "experimental" research design, students are randomly assigned to either a "treatment group" that is offered a school

voucher or a "control group" that is not. In this case, there are no differences in the observed or unobserved individual characteristics, on average, between the two groups because the offer of a voucher was determined not by one's family's income or motivation, but purely by the flip of a coin. As a result, one need not control for other student characteristics. Properly implemented, such a strategy is viewed as the "gold standard" for estimating a causal relationship between vouchers and student outcomes. In practice, however, nonrandom differences can emerge between the treatment and control groups to the extent that the researchers conducting the study are not able to adequately follow up with both groups of students.

A simple comparison of the outcomes of students in the treatment group (those offered vouchers) and those in the control group (those not offered vouchers) will generate a true (unbiased) estimate of the impact of being offered a voucher on student outcomes—a parameter known as the "intention to treat" in the research literature. This impact reflects two factors that are important for proper evaluation of a voucher program: the rate at which students who are offered a voucher actually use one and the relative achievement of students in private schools. As such, the intention to treat has two appealing properties: It is the only unambiguously true (unbiased) estimate that one can obtain using typical statistical methods, such as ordinary least squares regression, and it reflects the overall potential gains from offering the vouchers as a policy (since those who are offered vouchers cannot be compelled to use them).

Many are also interested in whether students who actually use vouchers experience academic gains as a result—an effect known as the "treatment on the treated" among researchers. Because actual use of a voucher is not randomly determined, analysts must resort to nonexperimental methods to generate consistent estimates of the treatment-on-the-treated gains by those who actually use vouchers to attend private school. A common approach is to use an instrumental variables strategy: Whether a student was randomly offered a voucher is used as an instrumental variable for the student attending a private school. This type of analysis would generate a consistent estimate of whether the schools that the voucher students attended were more, less, or equally as effective as the schools that the nonvoucher students attended.

Evidence on the direct impact of school vouchers on students

In the U.S., two types of school voucher programs have been studied—those financed by the government (publicly funded school vouchers) and those provided by the private sector (privately funded school vouchers). From a public policy perspective, the evidence from publicly funded programs is most relevant as these programs incorporate some of the design features that might be built into a larger school voucher program, such as limitations on which students are eligible to receive a voucher and the provision or reimbursement of transportation (if any at all). That said, some of the most compelling evidence (from a methodological perspective) comes from the privately funded vouchers, so we review that evidence here as well. We begin with evidence from publicly funded programs.

We translate the estimated impacts for all of the programs into "standardized effect sizes" (σ) in order to compare estimates across studies. In particular, the estimated difference in test scores between voucher and comparison (nonvoucher) students has been divided by the standard deviation of the test score from a national sample of students. The reason for dividing by the standard deviation is to account for the fact that studies have used different tests to assess the students. The problem is that an assessment of whether a gain is "big" or "small" depends on the shape of the underlying distribution of the test. Thus, for example, a five-point gain using a test that has a narrow bell shape (a small standard deviation) implies a larger gain in student learning than does an eight-point gain using a test that has a wide bell shape (a large standard deviation). Thus, researchers "standardize" the test score gain by the spread of the distribution to account for its underlying shape and often report "effect sizes" in standard deviation units.

Once standardized, however, one must still judge whether an estimated effect size is large or small. Recently, Hill et al. (2007) attempted to review effect sizes from many studies of educational interventions. While they caution that it is only valid to compare effect sizes when using comparable populations, contexts, and interventions, as well as the outcomes being measured, they report that effect size estimates from randomized studies average 0.33σ for elementary schools, the typical grade level for the studies of voucher programs we review here.

Table 1 (pp. 4–5) briefly describes publicly funded voucher programs in the U.S. Since the launch of the Milwaukee Parental Choice Program in Wisconsin in the early 1990s, several other publicly financed voucher programs have been started, including one in Washington, DC, in which the vouchers are allocated on a randomized basis. Not only is the Milwaukee Parental Choice Program one of the oldest publicly funded voucher programs in the U.S., it has also been subject to numerous studies. The program is open to

low-income students who may use a voucher to attend any participating school (including religious schools) worth approximately $6,501 in the 2007–08 academic year. Nearly 19,000 students and 120 schools participated that academic year.

Most of the studies regarding potential achievement impacts of the Milwaukee program were conducted when the program had only been in operation for about four years and vouchers could only be used at nonreligious schools. At that time, about 12 schools and 800 students participated. Because the schools participating in the program were required to take all students who applied and to randomly select among applicants in the event of oversubscription, researchers had two potential comparison groups available—unsuccessful applicants and a random sample of low-income students from the Milwaukee Public Schools. Using both comparison groups, Rouse (1998) reports mixed results of the "direct" effect of the program: She estimates intent-to-treat effect sizes ranging from 0.06σ to 0.11σ in math and from -0.03σ to 0.03σ in reading, although the impacts in reading are never statistically different from zero, meaning that the difference may have arisen by chance.[8]

Evidence from the Cleveland Scholarship and Tutoring Program (CSTP) suggests even smaller impacts on student outcomes. The voucher program is open to all students living within the boundaries of the Cleveland Metropolitan School District, with preference given to students in low-income families.[9] Students are permitted to use the vouchers at both nonreligious and religious schools. (The tutoring program provides tutors to interested students from kindergarten through 12th grade.) The CSTP data allow researchers to identify three groups of applicants: voucher recipients who use the voucher, voucher recipients who do not use the voucher, and nonrecipients.[10] Additionally, Cleveland Metropolitan School District and test score data are available for a (nonrandom) sample of public school students.[11]

Analyzing data from the cohort of students who entered kindergarten in 1997, Belfield (2007) compares voucher winners and rejected applicants with the available sample of Cleveland public school students. He also estimates the effect of attending private school by comparing voucher users with the rejected applicants. In the third year of the program (when the cohort is in second grade), he finds that voucher winners scored significantly lower in math (-0.08σ) and lower in reading (-0.05σ) than those in the public school sample. Further, he finds that voucher users scored significantly lower in both math and reading (-0.11σ and -0.13σ, respectively) than the rejected applicants.[12] In the fifth year of the program (when the cohort was in fourth grade), the results are more mixed with estimated effects ranging from -0.08σ in math to 0.07σ in reading for the effect of using a voucher, but neither estimate is statistically different from zero.[13]

While the studies of both Milwaukee and Cleveland attempt to construct valid comparison groups and thereby identify causal impacts of the voucher programs on student outcomes, all of them rely on observational data and therefore may not fully account for preexisting differences between the voucher and comparison groups. This leads to biased estimates of the impact of vouchers. In the case of Milwaukee, the bias could be either positive (in that the students who participated in the voucher program were more motivated) or negative (in that the random sample of low-income students in the public schools was *too* advantaged relative to the voucher participants). While Rouse (1998) attempts to determine the extent of any such bias (and concludes it is likely minimal), it remains an untestable assumption. Belfield (2007) is subject to the same general research design concern.[14]

This methodological concern could, in theory, be addressed in the study of the relatively new DC Opportunity Scholarship Program (DC OSP) in Washington, DC, which is being evaluated using a random assignment program design.[15] In the first two years of the program (2004 and 2005), 2,038 eligible public school students participated in the lotteries; 1,387 of them were awarded scholarships, and the remaining 921 students became the "control group." Wolf et al. (2007) estimate that after one year, intent-to-treat effect sizes for the first two cohorts of students ranged from -0.01σ to 0.08σ in math and from -0.01σ to 0.03σ in reading. After two years, Wolf et al. (2008) report that the impacts ranged from -0.02σ to 0.01σ in math and from 0.05σ to 0.08σ in reading. Not only do these ranges include negative impacts but none of them are statistically different from zero at the 5 percent level.

Thus far, the evidence from the publicly funded voucher programs suggests, at best, mixed improvement among either students who were selected for a voucher (the intent to treat) or students who used a voucher (the treatment on the treated). The largest estimates, from the Milwaukee Parental Choice Program, suggest potential (intent-to-treat) gains of 0.11σ in math and gains of 0.14σ for those who actually use a voucher to attend a private school; most of the other estimates are much smaller or even negative. However, with the exception of the studies on the DC OSP, the studies suffer from potentially unsatisfactory comparison groups. As such, we now turn to evidence from the privately funded programs.

Although a fairly recent U.S. General Accounting Office (2002) report found 78 privately funded voucher programs to review, only a handful have been subject to any evaluation.[16] Three privately funded voucher programs—based in New York City; Dayton, Ohio; and Washington, DC—had randomized study designs, making them the best suited for rigorous evaluation. As in the publicly funded DC OSP, the privately funded programs in each city had greater numbers of applicants than vouchers available; therefore, applicants were randomly selected to receive or not to receive a voucher offer. For the New York City program (School Choice Scholarships Foundation), for example, the number of applicants was so large that the "control group" is made up of a random sample of applicants not selected to receive a voucher. We briefly describe each of the privately funded voucher programs with a randomized study design in table 2.

Across all three cities, Howell, Peterson, et al. (2002) find that using a voucher has no overall impact on student test scores. Indeed, after three years the estimated impact of attending a private school is only 0.02σ. Similarly, both Mayer et al. (2002) and Krueger and Zhu (2004) report very small impacts (at most a 0.06σ impact for using a voucher) in any year for the program in New York City, and none of the estimates are statistically distinguishable from zero.

Nevertheless, a widely publicized result from these privately funded programs is that there may have been differences across subgroups of students. Indeed, Howell, Peterson, et al. (2002) and Mayer et al. (2002) report statistically significant positive effects of private school attendance on test scores for African American students alone. Also, after three years, those African American students who used a voucher are estimated to have experienced a 0.23σ gain in achievement across the three cities; those African American students who used a voucher from the New York City program are estimated to have gained 0.26σ.[17]

However, these results are not robust. In their reanalysis of the data from the New York City program, Krueger and Zhu (2004) report that the results by race are particularly sensitive to two analytical decisions. First, Krueger and Zhu include all students, whereas Mayer et al. (2002) include baseline test scores in all of their specifications, which leads them to exclude the students who were missing baseline test score information; most of the excluded are first grade students who were not administered a baseline test. Because students were randomly chosen to receive or not to receive a voucher, baseline characteristics such as test scores should have been identical for the two groups (on average). The primary reason for including baseline characteristics would be to improve the precision of the estimates. However, Krueger and Zhu find very little difference in the precision of the estimated impact of vouchers when using the larger sample without baseline test scores. As a result, they argue that the gain in terms of statistical precision is not great enough to warrant the cost in terms of not generating estimates that are representative of the original target population.

The second substantive difference between the studies is how the researchers define a student's race. Mayer et al. (2002) identifies a student as African American if the mother's race is reported as African American and non-Hispanic (*irrespective* of the race or ethnicity of the father). Krueger and Zhu (2004) use alternative identifications. They identify a student as African American if either parent is African American and non-Hispanic; also, in their definition of African American, they include the group of students whose parents responded "other" to the survey but indicated that they (the parents) were "black" in the open-ended response. With the larger sample and the broadest identification of students as African American, Krueger and Zhu report that the estimated impact of being offered a voucher (intent-to-treat impact) for African American students falls to 0.05σ after three years and the estimated impact of using a voucher (treatment on the treated) falls to 0.03σ; neither estimate is statistically different from zero.

In sum, there is little evidence of overall improvement in test score outcomes for students offered an education voucher from privately funded voucher programs. Although there may be evidence that some subgroups of students benefit from being offered a voucher, the evidence is not robust to sensible alternative ways of constructing the analysis sample. In addition, the results of these experiments may not be valid for thinking about the average benefits of offering vouchers to all students. Namely, all participants in the experiment—both voucher recipients and nonrecipients—had expressed an interest in vouchers.

Evidence of public school response to competitive pressure

As we have emphasized, the studies discussed previously are based on relatively small voucher programs such that there was likely little competitive pressure to which the public sector would have responded. As such, the estimates are primarily of the direct effect of vouchers for those who use them. However, the true prize of a voucher system—or any significant increase in the competitive pressure experienced by the public schools—is overall improvement in the

TABLE 2

Description of privately funded voucher programs

Voucher program	Evaluation period	Number of scholarship students in program evaluation	Other information
School Choice Scholarships Foundation (New York City, NY)	1997–99	1,200	Students were eligible to apply if they were entering first through fifth grades, currently attending a public school, and qualified for the National School Lunch Program. The program began in 1997, paid up to $1,400 annually, and initially guaranteed three years of receipt. The scholarships were later extended beyond the initial three years.
Parents Advancing Choice in Education, or PACE (Dayton, OH)	1998–99	530	Students in kindergarten through 12th grade whose family income was less than 200 percent of the federal poverty line were eligible. (Students currently enrolled in private school were eligible for the program but not included in the evaluation. The evaluation focuses on students in the first through seventh grades at baseline.) At most, the scholarship was worth $1,200 or 60 percent of tuition, whichever was less. However, voucher awards were smaller for higher-income families. The program began in 1998, and while the evaluation followed students for only two years, PACE continued to award new scholarships through 2008. In 2008 the average scholarship is worth $1,800, and students are guaranteed a scholarship for at least four years.
Washington Scholarship Fund (Washington, DC)	1998–2001	1,000	Students entering kindergarten through eighth grade whose family income was less than 270 percent of the federal poverty line were eligible. (Students currently enrolled in private school were eligible for the program but not included in the evaluation. The evaluation focuses on students in the first through seventh grades at baseline.) At most, the scholarship was worth $1,700 or 60 percent of tuition, whichever was less. However, voucher awards were smaller for higher-income families. The voucher program began in 1993 and continued to offer scholarships in 2008. In 2008–09, the scholarships are worth up to $3,000 per child each year.

performance of the affected education system. Unfortunately, to develop a study that would generate unbiased estimates of any such systemic impacts is extremely difficult. One cannot simply compare the outcomes of students who use a voucher (or who were offered a voucher) to the outcomes of students who remained in the public schools (either by choice or from "bad luck" in a lottery) as this would likely underestimate the general equilibrium impact. The problem is that, in theory, the public schools should improve in response to the increased competition and this improvement should be reflected in the achievement of the public school students. As a result, the control (or comparison) students would not adequately represent what would have happened to the voucher students in the absence of the voucher program.

Rather, one would ideally gather a large group of education "markets" (assuming that any general equilibrium impacts remain within a market and there are no spillovers to others) and randomly assign some markets to a treatment group—in which the students would be eligible for school vouchers—and randomly assign the remaining markets to a control group—in which there would be no vouchers. After some period of time, the researcher would then compare the average outcomes of students in the voucher markets with those of students in the control markets. A simple comparison of the outcomes would yield an unbiased estimate of the general equilibrium impact of vouchers because, on average, the markets would have been similar ex ante. While such an experiment is possible in theory, in practice it would be extremely difficult to implement mostly because it would require the coordination and cooperation of so many different stakeholders. As a result, researchers have turned to other research designs to try to get an estimate of the potential impact of a large-scale voucher program.

Evidence from the expansion of the Milwaukee Parental Choice Program

After the experimental phase of the Milwaukee Parental Choice Program ended in 1995, the program was expanded to allow for a maximum of 15 percent of the public school enrollment; further, in 1998 the Wisconsin Supreme Court ruled that the vouchers could be used in religious schools. These two events led to a dramatic increase in participation in the program by both students and schools. In fact, the program was so popular that in 2006, participation was expanded to 22,500 voucher students. Researchers have attempted to analyze these last two expansions to estimate the potential impact of a large-scale voucher program on student achievement in the public sector (see Hoxby, 2003; Carnoy et al., 2007; and Chakrabarti, 2008). While some of the details differ, the basic strategy of all three studies is to attempt to identify those schools within the Milwaukee Public School District that face differing competitive pressure because of the mix of income levels among their students. (Those schools with a high proportion of low-income students who are eligible for the voucher program presumably face more competitive pressure than those with a low proportion of low-income students who are eligible.) The basic strategy of all three studies also identifies observably comparable districts elsewhere in Wisconsin in which there are no publicly funded vouchers. The following would be evidence of a positive impact of competition on school efficiency, as reflected in student test scores: Disproportionate gains among students attending schools facing competitive pressure compared with their peers at schools within Milwaukee facing relatively little pressure and at schools outside of Milwaukee (facing no pressure from vouchers).

All three studies find evidence that with the expansion of the voucher program in 1998, student performance improved in the first few years, especially in schools that were most likely to be affected by the increased competition. For example, Hoxby (2003) estimates that the fourth grade test scores of students attending schools likely facing the most competitive pressure improved by 0.12σ per year in math and by 0.07σ per year in reading relative to students attending comparison schools outside of Milwaukee.

While interesting, these results must be interpreted as being only suggestive. The identifying assumption is that there are no unobserved changes before and after the voucher program was implemented when comparing the schools with many voucher-eligible students to schools with few or no voucher-eligible students. However, within the Milwaukee Public School District, all schools were potentially affected by the vouchers. Further, outside of the Milwaukee Public School District, the demographic composition of the schools is quite different (specifically, the students are less likely to be minority and more likely to come from wealthier families) such that it is not clear researchers can adequately account for differences between the students. In addition, Carnoy et al. (2007) present some results that are not consistent with a simple interpretation that performance in the Milwaukee public schools improved because of increased competition. For example, they also find that there was little improvement after 2002 despite the fact that interest in the voucher program increased (as proxied by the number of applications). Further, they find no evidence of a general equilibrium impact when they employ other direct measures of competition (such as the number of nearby private schools or the relative number of voucher applications from a school).

Evidence from Florida's A+ Opportunity Scholarship Program

In order for a voucher program to spur improvement within the public schools, there need not be a substantial number (or proportion) of students who use a voucher to attend a private school. Rather, if public school administrators perceive there is the potential that the students will do so, they may have an incentive to improve the education in their schools. Thus, researchers have attempted to gain some insight into the potential response of public schools to increased competitive pressure a second way: by studying the schooling outcomes of students attending schools that were under the "threat" of becoming voucher-eligible—that is, schools with a high probability of their students becoming eligible to use a voucher. Researchers have done so by taking advantage of the design of Florida's school accountability system—its A+ Plan for Education. Specifically, since 1999, schools in Florida are given a grade of A through F, largely depending on the performance of the students. Schools that receive high grades and are improving receive bonuses. In contrast, low-performing schools (graded either D or F) are subject to increased administrative oversight. (These poor performers are also provided with some additional financial assistance.) In addition, if a school received an F in two out of four years and had an F in the current year, students became eligible for vouchers called Opportunity Scholarships.[18] While the other features of Florida's A+ Plan for Education remain in effect, the voucher program was declared unconstitutional by the Florida Supreme Court in January 2006. Thereafter students

could no longer use a voucher to attend a participating private school; they are, however, still able to use a voucher to attend a higher-graded public school.

Under Florida's A+ Plan for Education, school grades are determined by assigning "grade points" based on student test score performance.[19] Grades are then assigned based on whether the school is above or below the predetermined cut points for each of the letter grades. Arguably, schools earning just above the number of grade points needed to receive an overall grade of D are no different than schools receiving just below the number of grade points needed to receive a D grade. As a result, many of the schools that received an F grade are quite similar to many of those that received a D grade. Figlio and Rouse (2006), West and Peterson (2006), Rouse et al. (2007), and Chiang (2008) therefore compare student outcomes from schools earning D and F grades while controlling for the number of grade points earned so that they can recover the causal effect of the policy on educational achievement.

All of the papers find that test scores of students improve following a school's receipt of an F grade. For example, Rouse et al. (2007) and Chiang (2008) report gains ranging from 0.12σ to 0.14σ in math and about 0.10σ in reading. Further, these two studies also find evidence that the improvements persist even once the students leave the voucher-threatened school, particularly in math. In addition, Rouse et al. (2007) report finding evidence that the F-graded schools responded in educationally meaningful ways. For example, following receipt of an F grade, schools were more likely to focus on low-performing students, lengthen the amount of time devoted to instruction, and increase resources available to teachers. As such, these studies may provide some evidence that increased competitive pressure can generate some improvement in public schools.[20]

One should note, however, that the F-graded schools in Florida were also stigmatized as "failing" (one of the intents of the public announcements of the grades). So another possibility is that the stigma of being identified as a failing school (and perhaps the subsequent parental pressure to make changes) led the schools to improve. As such, one cannot strictly distinguish a "voucher effect" from a "stigma effect." That said, Figlio and Rouse (2006) indirectly assess the impact of stigma by comparing student achievement following the implementation of Florida's A+ Plan for Education—which enlisted both the threat of vouchers and stigma—with student achievement following the placement of schools on a critically low performers list in 1996, 1997, and 1998 that involved public stigma but no threat of vouchers. They estimate that the student gains in reading were nearly identical under the two regimes and were actually larger in math following placement on the critically low performers list, suggesting that the relative improvements among the low-performing schools may have been due more to stigma than to the threat of vouchers.

There is some evidence from the expansion of the Milwaukee Parental Choice Program and from the threat of vouchers created by Florida's A+ Plan for Education suggesting that the achievement of students attending schools facing increased competition improves. However, the research strategies do not allow one to definitively rule out other explanations for the improvements. As such, we conclude that the jury is still out on the potential for vouchers to spur public schools to improve.

Other potential social gains from vouchers

There may be other reasons why providing school vouchers may be appealing from a public policy standpoint. One might argue in favor of vouchers as a way to increase equity by giving poor families more opportunities to choose private schools over their neighborhood public schools. Also, based on parents' reports for the publicly funded DC voucher program (DC OSP), the schools that are chosen (private schools) may be safer. Parents of students offered a voucher reported a significantly lower level of perceived school danger than parents of students not offered a voucher.[21]

In a related fashion, student achievement may not be the only criterion by which to judge the success of voucher programs. If school choice means that parents are more satisfied with the education their children are receiving and if voucher programs are no more expensive than our current system, then a voucher program may be a cost-neutral way to increase social welfare. Importantly, one consistent finding in this literature is that voucher parents report being more satisfied with their current schooling than do nonvoucher parents. For example, in the DC OSP, parents of students offered a voucher gave their children's schools a significantly higher overall grade on a five-point scale (grades A through F) and were significantly more likely to give their children's schools a grade of A or B. Further, they reported significantly greater satisfaction with their children's schools on all aspects asked, including location, class sizes, discipline, academic quality, and the racial mix of the students (Wolf et al., 2007). These results have generally been reported for other voucher programs, such as those in New York City (Mayer et al., 2002) and Milwaukee (Witte, Sterr, and Thorn, 1995).[22]

Yet, the potential net improvement in social welfare depends on both the general equilibrium effects of vouchers and the cost advantage over current public schools—two issues that are not well understood. While small-scale voucher programs indicate that parents offered a voucher are more satisfied with their children's schools than those not offered a voucher, a large-scale voucher program might result in some parents who are more satisfied and some who are less satisfied. In order for social welfare to be increased with a cost-neutral voucher program, the gains to the parents who benefit must be large enough to outweigh the losses to parents who do not benefit.

In addition, there is not much information about whether a well-developed voucher program would, indeed, be cost-neutral. On its face an education voucher system should be no more expensive than the current system as the state (or some other public entity) would simply send a voucher check to participating schools for each participating child rather than to the local public school or district. However, if truly implemented on a large scale, there may be other, less obvious costs that would depend critically on the actual design of the program. Levin and Driver (1997) caution that, depending on a number of factors, the cost of a voucher system could actually exceed those of the current geographically based system. These factors include the transportation of children to and from school, recordkeeping, and the monitoring of student enrollment. Two additional concerns are how a program deals with students currently attending private schools and how disputes are adjudicated (particularly if there are differing voucher amounts). While Levin and Driver's estimates are rough, based on hypothetical voucher programs and crudely estimated costs, their analysis suggests, at a minimum, that we should not assume a voucher program would be cost-neutral. Further, there may be large costs associated with the transition to a voucher system that should be considered.

Finally, the studies to date necessarily focus on short-run effects of vouchers when in fact there may be longer-run impacts on high school graduation, college enrollment, or even future earnings. For example, Altonji, Elder, and Taber (2005a) study the effect of Catholic education on a variety of outcomes and find little evidence that Catholic schools raise student test scores. At the same time, their results suggest that Catholic schools increase the probability of graduating from high school and potentially the probability of enrolling in college. These longer-run effects have yet to be credibly examined in studies of school vouchers.

Conclusion

The best research to date finds relatively small achievement gains for students offered education vouchers, most of which are not statistically different from zero, meaning that those gains may have arisen by chance. Further, the very little evidence about the potential for public schools to respond to increased competitive pressure generated by vouchers also suggests that one should remain wary that large-scale improvements would result from a more comprehensive voucher system.

So why has it been so difficult for researchers to observe large improvements in student achievement with school vouchers in the U.S.? One explanation may be that schools already compete for students through residential choice such that the public sector does not operate as poorly as perceived by many. Another explanation may be that the education sector does not meet the conditions for perfect competition (Garner and Hannaway, 1982). For example, information on school quality may be costly and difficult for parents to obtain, so having more choice may generate less additional competitive pressure on schools than one would expect in a perfect information environment. Further, education is not a homogenous good. Therefore, while competition for students may make schools more responsive to parents, this may be achieved through changes in other areas of school life, such as religious education or sports, rather than academic achievement.

Despite the heretofore lackluster empirical findings, the theoretical rationale behind school vouchers remains compelling: If parents choose schools based on academic performance and if we allow them more choice, then the schools will need to improve academically in order to attract students. In addition, others have endorsed vouchers to promote greater equity: If rich families have the means to opt out of the public school system, should not poor families have a similar opportunity? It is perhaps for these reasons—combined with frustration that other approaches to improve the U.S. education system have proven weak or futile—that school vouchers remain high on the agenda for many policymakers.[23] However, expectations about the ability of vouchers to drastically improve student achievement, at least as measured by test scores, should be tempered by the results of the studies to date, and arguments for vouchers as a cost-neutral alternative should be subject to more careful analysis of the full costs.

NOTES

[1]The National Assessment of Educational Progress is the only nationally representative and continuing assessment of what students in the U.S. know and can do in various subject areas, such as mathematics and reading. The commissioner of education statistics, who heads the National Center for Education Statistics in the U.S. Department of Education, is responsible by law for carrying out the NAEP project; for further details, see http://nces.ed.gov/nationsreportcard/. See also Hoxby (2003).

[2]The Florida A+ Opportunity Scholarship Program—a publicly funded voucher program initially created for students to attend private schools—was declared unconstitutional by the Florida Supreme Court in January 2006. After this ruling, students could no longer use the voucher to attend a participating private school; they are, however, still able to use the voucher to attend a higher-rated public school. For further details, see the discussion on the Florida A+ Opportunity Scholarship Program later in the text and in table 1.

[3]A less efficient public sector and a less competitive (public schooling) environment may explain the larger impacts of school vouchers that have been estimated in other countries, such as Columbia (see, for example, Angrist et al., 2002). In the U.S., elementary and secondary public schooling has largely depended on local financing, meaning that choice between local school districts may already generate strong competitive pressure. As a result, there may be less potential for vouchers to generate large efficiency gains (see, for example, Barrow and Rouse, 2004).

[4]See, for example, Coleman, Hoffer, and Kilgore (1982a, 1982b); Evans and Schwab (1995); Neal (1997); and Altonji, Elder, and Taber (2005b).

[5]See, for example, Goldberger and Cain (1982), Cain and Goldberger (1983), and Altonji, Elder, and Taber (2005a).

[6]Of course, even if vouchers improved outcomes in the long run, there might be a transition period in which the full benefits were not realized. A more complex version of this hypothetical experiment would be needed to identify both the transitional costs and long-run effects of a voucher program.

[7]Ironically, this also means that this literature bears striking similarity to that of the differential effectiveness of private and public schools.

[8]The range reflects estimates from different model specifications. Other studies using these early data from Milwaukee include Witte (1997) and Witte, Sterr, and Thorn (1995), as well as Greene, Peterson, and Du (1999). Using only the sample of low-income students from the Milwaukee Public Schools as a comparison group, Witte (1997) and Witte, Sterr, and Thorn (1995) estimate no impact of the program on student achievement. Greene, Peterson, and Du (1999) only use the unsuccessful applicants as a comparison group and estimate a positive impact in both math and reading. See Rouse (1998) for further discussion of the differences between the studies.

[9]The voucher is also progressive in that it pays 90 percent of tuition up to $3,450 for those with family income below 200 percent of the poverty line and only 75 percent of tuition up to $3,450 for those from families earning above 200 percent of the poverty line. The original program paid tuition up to a maximum of $2,250 (Metcalf et al., 1998). The Cleveland Metropolitan School District changed its name from the Cleveland Municipal School District in 2007.

[10]The nonrecipient group potentially contains both students who did not win the voucher lottery and students not entered into the lottery due to the preference given to students from low-income families (Metcalf, 2001).

[11]The public school sample was generated by using the first grade classmates of voucher recipients who did not use their voucher, as well as the first grade classmates of program applicants who were not awarded a voucher (Metcalf, 2001).

[12]Although Belfield (2007) only reports results for the third and fifth years of the program, he notes that the results are similar for the fourth year when the cohort was in third grade.

[13]Belfield (2007) finds a statistically significant -0.06σ difference in math between voucher winners and the public school sample.

[14]In addition, Belfield (2007) includes some measures in his empirical specifications that are arguably outcomes of the voucher program, namely, class size and teacher's years of experience. That said, his results are largely similar when these controls are excluded.

[15]See Wolf et al. (2007) for more details. Students attending low-performing public schools were given a better chance of winning the lottery. Although private school students were eligible for the vouchers, they were excluded from the study.

[16]The U.S. General Accounting Office's legal name became the U.S. Government Accountability Office on July 7, 2004. For further details, see www.gao.gov/about/namechange.html.

[17]In contrast, Howell, Peterson, et al. (2002) estimate a negative impact for African American students after three years in the privately funded voucher program in Washington, DC, although the impact is not statistically different from zero. Results for the third year of the privately funded programs apply only to those in Washington, DC, and New York City because the Dayton, Ohio, program was evaluated for only two years.

[18]Currently Florida has two other voucher programs as well: an income tax credit for corporations to fund vouchers for low-income students and the McKay Scholarship for Students with Disabilities Program. Greene and Winters (2008) study the impact of the McKay Scholarships on the achievement gains of students with disabilities who remain in the public schools. Because their estimation strategy identifies the general effect of vouchers by using students whose disability status changes, the extent to which these results generalize to overall improvements in the public schools is unclear.

[19]Literally speaking, school grades were not assigned using "grade points" before 2002 when Figlio and Rouse (2006) studied the system. Nevertheless, their strategy is quite similar in spirit.

[20]A statistical issue with which all of the researchers wrestle is whether the disproportionate gains by students in the F-graded schools resulted from mean-reverting measurement error or reflected actual changes in response to Florida's A+ Plan for Education. Mean-reverting measurement error occurs when gains the year after a school scores unusually low—and is thereby labeled as F—reflect the measurement error in test scores. That is, the test scores of students might have increased in many of the F-graded schools even in the absence of Florida's education plan simply because they were transitorily low in the prior year. The reliance on a regression discontinuity design (one that compares the D-graded and

F-graded schools while also controlling for the grade points) helps to mitigate against the presence of mean-reverting measurement error, although the researchers employ other strategies as well.

[21]See Wolf et al. (2007), table H-3. While student perceptions also suggest that the chosen schools are safer on average, the difference was not statistically significant (see table H-4 of the same study).

[22]At the same time, not all parents are satisfied with the voucher schools. Focus groups among parents of DC OSP participants found that they believed a few schools misrepresented aspects of their programs and that there was a need for an evaluation of participating schools (Stewart et al., 2007). Similarly, in the early years of the Milwaukee Parental Choice Program, 43 percent of the parents who took their children out of the voucher schools cited the poor quality of the voucher school as one of the primary reasons they withdrew their children from the program. More specifically, they cited being unhappy with the staff, the education their children were receiving, and the lack of programs for special needs; they also noted that the teachers were too disciplinarian. Thirty percent cited the poor quality of the overall Milwaukee program—including hidden school fees, difficulties with transportation, and the limitation on religious instruction—as the primary reason for withdrawing their children (Witte, Sterr, and Thorn, 1995).

[23]Most recently the George W. Bush Administration proposed the strengthening of the choice provisions in the reauthorization of the federal No Child Left Behind Act, and there were (unsuccessful) ballot initiatives in California and Utah to create statewide voucher programs open to all students.

Voucher study finds parity

Students achieve about as well as those at MPS

By Alan J. Borsuk, Journal Sentinel, Inc
Feb. 26, 2008

The first full-force examination since 1995 of Milwaukee's groundbreaking school voucher program has found that students attending private schools through the program aren't doing much better or worse than students in Milwaukee Public Schools.

The study, released Monday in Madison, is the first from a five-year project aimed at providing a comprehensive evaluation of the voucher program, which this year is allowing more than 18,000 Milwaukee children from low-income families to attend private schools, 80% of them religious schools.

The authors caution repeatedly that stronger conclusions will come only when trends over several years can be examined, and not much should be read into this year's results.

But the early findings, based on examining standardized test results for voucher students and comparing them to those of a matched set of MPS students, are unlikely to be seen as good news by advocates of the program that was launched in 1990 with hopes of being a powerful step to increase educational success among the city's children.

The Milwaukee program is the largest, oldest and arguably most significant school voucher effort in the United States. As Patrick J. Wolf, the lead researcher in the project, wrote, "When one thinks of school choice, one thinks of Milwaukee."

"We have displayed a rough and limited snapshot of the average performance of Choice (Milwaukee Parental Choice Program) students in certain grades that suggests they tend to perform below national averages but at levels roughly comparable to similarly income-disadvantaged students in MPS," Wolf, a professor at the University of Arkansas, concluded.

At one point in the reports, researchers use the phrase "relative parity" in describing the small differences between the performance of MPS students and voucher students.

They say there is little evidence that voucher schools are "skimming the cream" by taking the best students from MPS, as some critics have claimed. What they conclude is that the performance of both MPS and voucher students is fairly typical for low-income students nationally, pointing at the broader American dilemma of how to achieve widespread educational success among poor children, minority

children and children from homes where there is little history of educational success.

Apples-to-apples effort

The researchers' conclusions are based on test results from the 2006-'07 school year, when they gave a sample of voucher students the same tests given to public school students in Wisconsin and compared the results to those of a scientifically matched group of MPS students.

• Overall, they found, fourth-grade voucher students scored "somewhat lower" than MPS students but eighth-grade voucher students scored "somewhat higher."

• At all grades, both MPS and voucher students had overall test scores well below the 50th percentile nationally, and generally around the 33rd percentile, meaning they were generally scoring lower than two-thirds of students.

Results for individual voucher schools were not released as part of the study, despite calls from several legislators and others to see the private school results.

The study was conducted by the School Choice Demonstration Project, part of the Department of Education Reform at the University of Arkansas. The main researchers included John Witte, a University of Wisconsin-Madison professor who conducted studies of the Milwaukee voucher program from 1990 to 1995, before the Legislature dropped the requirement for such studies.

Since Witte's last study, the program has grown enormously, but there has been a minimal amount of research on its effectiveness.

The program provides up to $6,501 per student to private schools in the city. State officials expect about $120 million in voucher payments to be made in this school year.

As part of a deal in 2006 between Democratic Gov. Jim Doyle and Republican legislative leaders, the voucher program was allowed to grow to as many as 22,500 students, but the private schools were required for the first time to administer nationally accepted standardized tests, and the School Choice Demonstration Project was authorized to launch its study.

In his summary, Wolf calls the research "the most comprehensive evaluation of a school choice program ever attempted."

Some surprises

Researchers released the first year's analysis in the form of four reports dealing with finances of the voucher program, characteristics of the schools involved, student performance, and parent and student opinion of both MPS and voucher schools.

Some of the findings confirm assumptions about the program - for example, that religion is a major reason why parents enroll children in private schools. Other findings are more surprising - for example, that MPS parents who were surveyed were more likely than voucher parents to help their children with homework, and that teachers in voucher schools had more experience on average than MPS teachers.

One trend the researchers found is that the variation in scores on tests among MPS schools tended to be much narrower than the variation among private schools. In other words, it could be that the range of quality among voucher schools is much wider - from very weak to outstanding - while the range of schools in MPS tends to stick closer to the system averages. That would square with observations of classes in both MPS and the voucher schools made by education reporters for the Journal Sentinel, especially in a major reporting project on the voucher program in 2005.

The researchers emphasize that the results are a snapshot that does not address many possible factors behind the differences. "It would be a mistake for readers to draw conclusions about the effectiveness of the MPCP based on these simple annual descriptive statistics," the report says.

How families compare

Surveys of students and parents in MPS and the voucher schools found that voucher and MPS students are about equally likely to be living with both parents (38% and 36% respectively).

Voucher parents are notably more likely to be involved in activities at their children's schools, such as doing volunteer work or taking part in parent/teacher organizations, but MPS parents are more likely than voucher parents to help their children with homework or read books with them, the study found.

Both MPS and voucher parents express high levels of satisfaction with their children's schools, but voucher parents are much more likely to say they are "highly satisfied," while MPS parents are more likely to pick the "satisfied" response.

Witte, one of the most experienced school choice researchers in the U.S., said the high level of parental satisfaction with the voucher schools is an important aspect of answering the question of whether the program is successful.

The researchers found that voucher schools are, on average, much smaller than those in MPS overall and have smaller class sizes, a factor that clearly appealed to the parents who were surveyed.

Of 120 schools examined by the researchers, 95 identified themselves as religious and seven were classified as non-religious but operating within a religious tradition. Thirty-six of the schools were Catholic, 26 Lutheran and 22 were from other Christian denominations.

The reports say that 43% of MPS teachers have a master's degree or higher, compared with 29% in the voucher schools. But 66% of voucher school teachers have at least five years of experience, compared with 56% in MPS.

The reports do not include figures on what percentage of voucher school teachers have state certification or college degrees, both points of debate about the program. State law does not require private school teachers to meet those standards - it requires only that they have high school diplomas - but a relatively new requirement that the voucher schools become accredited by independent agencies is expected to result in the near-elimination of teachers without college degrees.

While cautioning that the figures are a bit uncertain, the researchers came up with student/teacher ratios of 13.6 to 1 for voucher schools and 16.6 to 1 for MPS.

While there is not much difference between MPS and voucher parents when it comes to the percentage who say their children have physical disabilities, there is a significant difference when it comes to other special education needs.

"The percentage of respondents who said that their child had a learning disability is twice as large in the MPS sample (18.2%) than in the MPCP sample (8.7%)," the researchers wrote. They say some of the difference might be due to differences between the two streams of schools in labeling children with special needs.

MPS officials have said frequently in recent months that the public schools are shouldering a far larger portion of special education students than the private schools are, and that the trend is causing major stresses on MPS.

Fiscal impact

Among other findings, the researchers' report on finances concludes that the way the voucher program is funded puts a greater burden on Milwaukee property-tax payers, while actually providing financial help to property-tax payers in the rest of the state and some reduction in state income taxes.

In simplified form, the reasons are that voucher students receive less public money than MPS students, while the formula for how to come up with the public money puts a larger load on Milwaukee property taxes than MPS students put.

Milwaukee Mayor Tom Barrett and others have argued for fixing the "funding flaw" in the voucher program to help city taxpayers. Action by the Legislature last fall provided partial relief.

The research project is being paid for with private funds, primarily from major foundations, including at least three that are firmly identified with advocacy for school choice programs such as Milwaukee's. They are the Walton Foundation, funded by Wal-Mart heirs and based in Arkansas; the Lynde and Harry Bradley Foundation, based in Milwaukee; and the Kern Family Foundation, a relative newcomer to the scene, based in Waukesha.

Plans call for reports in future years that will examine such questions as how much progress students in the voucher program are making from year to year, and how that compares with a comparable MPS group. Ninth-graders identified in the 2006-'07 school year will be followed to determine graduation rates and other outcomes several years from now.

"Stay tuned," Wolf said.

<TARGET><BILL>SB 1</BILL><SUBJECT>SB
1</SUBJECT><COMM>SEDC27</COMM></TARGET>

Meeting Script – February 2, 2011

CHAIRMAN MEYER

This meeting of the Senate Education Committee is called to order.

Today is Wednesday, February 2, 2011 and the time is _____. In attendance today are:
Co-Chair Thomas, Vice-Chair Davis, Senator Stevens, Senator French, and myself, Co-Chair Meyer. We do have a quorum to conduct business.

Good morning everyone - thank you all for being here. We have 2 items on today's agenda, SB 1 from Senator Davis -- it's our 2nd look at this bill – and SB 43, the administration's Performance Scholarship bill.

We will go ahead and continue discussion on **for SB 1** at this time. This bill proposes to require the *Board of Education/Early Development to prepare an annual report, which describes the efforts made to develop, maintain, and continuously improve a comprehensive quality public school system, and present the report to the legislative education committees.*

Public testimony was closed at our previous meeting.

At the previous meeting, there was discussion on amending the bill to require the Board to "present a report" a more concise descriptor, specifically by inserting the words "*in person*" after "*present*" on line 6.)

Senator Thomas?

SENATOR THOMAS

Mr. Chair, I move that we amend
SB 1, Version \A, Page 1, Line 6 – inserting the words "*in person*" after "*present*" to read:
"*...the board shall prepare and present in person to the legislative committees...*"

SENATOR MEYER

Is there any objection to the motion? Seeing none the bill is amended.

Are there any questions, comments, discussion from committee members?

{Committee comments}

Any further questions? Seeing none, **Senator Thomas?**

CO-CHAIR THOMAS

Thank you, Mr. Chairman. I move **Senate Bill 1 as amended** from committee with individual recommendations and attached fiscal note.

CHAIRMAN MEYER

Seeing no objection, **SB 1 as amended** is moved from Committee.

AT EASE **(For signatures)**

We are back on the record.

The next item of business before the committee is **SB 43, "Alaska Performance Scholarships."** We will hear a presentation from the administration and hold the bill over until Friday's meeting, when we will hear a presentation on the Legislature's Scholarship Funding Task Force report.

I see we have Eddy Jeans, Diane Barrans and Jerry Burnett in the audience, welcome. So if you're ready, please come forward, put yourself on the record and proceed.

{SB 43 presentation}

Are there any questions, comments, discussion from committee members, **Senator Thomas**?

{Committee questions/comments/discussion}

CHECK TIME – if there is time, continue with public testimony, if not wrap up.

(IF TIME PERMITS)
We will now open it up to public testimony. I see a number of people here with us today in the audience, and I have a list of those who wish to testify via teleconference; let's start with _____.

Please come forward, put yourself on the record, and proceed with your testimony.

{Audience testimony}

Thank you.

Are there any questions, comments, discussion from committee members, **Senator Thomas**?

{Committee questions/comments}

Is there anyone else in the audience wishing to testify?

Online we should have _____, are you there? Please put yourself on the record and proceed.

{Teleconference testimony}

Are there any questions, comments, discussion from committee members, **Senator Thomas**?

Is there anyone else wishing to testify?

Seeing no more questions or comments, I'd like to go ahead and close public testimony.

Are there any questions, comments, discussion from committee members, **Senator Thomas**?

{Committee questions/comments}

At this time I'd like to bring this meeting to a close.

We will hear a presentation from staff who worked on the Legislative Scholarship Funding Task Force over the interim on Friday, February 4th at 8:00 a.m., here in the Beltz Room.

We are adjourned at _____ a.m.

RE: Request for Hearing for SB 1, 27-LS0001\A

SB 1 - "An Act requiring the state Board of Education and early Development to provide an annual report to the legislature."

Dear Senators Meyer and Thomas:

Senator Davis respectfully requests a hearing on SB 1 before the Senate Education Committee.

This bill which is slightly over one page long simply requires that the State Board of Education prepare and present annually to the legislature by the 30th day of session a report summarizing the Board's resolves and rationales provided in support of policy decisions; program and curriculum changes; and additional information relevant to efforts made to improve and maintain the public education system.

Included in this hearing package are:

1. Sponsor Statement
2. Current version of SB 1, 27-LS0001\A.
3. *Note: There is no sectional summary required as the single new section AS 14.07.168 is self-explanatory. Likewise, there is no fiscal note, but cost to the Board and Department should be minimal.*

Anticipated is in-person or teleconference testimony from the Board and Department of Education & Early Childhood Development.

Please contact me if you need additional information.

Sincerely,

Thomas S. Obermeyer
Legislative Assistant

Senator_Bettye_Davis@legis.state.ak.us
http://www.akdemocrats.org

Senator Bettye Davis

SB 1 - "An Act requiring the state Board of Education and Early Development to provide an annual report to the legislature."

SPONSOR STATEMENT

This bill requires that the Alaska State Board of Education shall prepare and present to State Legislature not later than the 30th day of each regular session an annual report that describes the efforts of the Board to develop, maintain, and continuously improve a comprehensive quality public education system as provided for under the bylaws of the Board.
The report to the Legislature must include:

1. a summary of resolves and rationales provided in support of policy decisions;
2. program and curriculum changes made, discussed, or recommended in meetings; and
3. additional information relevant to efforts made to improve and maintain the public education system.

This bill is intended to create a greater dialogue among Alaska legislators, Department of Education and Early Development (DEED), and the Board of Education which meets at least quarterly. Since Alaska legislators appropriate over $1 billion per year for state public education which a significant portion of the state budget, they must be at the center of the state's efforts to identify strengths and weaknesses of the current system, help determine a public agenda, set clear goals for K-12 and higher education, and hold institutions accountable for performance. The only way to achieve this is through cooperation and communication with the Board and the Department.

Legislators take great pride and tremendous amounts of time and effort every session in trying to provide the best possible education, scholarships, and funding for Alaska students. The annual report required by this bill will assist both DEED and legislators early in each session in assessing new programs, curriculum changes, goals and priorities which may require more information or administrative and legislative action during session.

SENATE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATORS WIELECHOWSKI, ELLIS, DAVIS, EGAN, FRENCH, KOOKESH, MCGUIRE, MENARD, PASKVAN, AND THOMAS

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act providing for funding for school lunch and breakfast."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.127. State funding for school lunch and breakfast. (a) To supplement the cost of lunch and breakfast provided to each student who is eligible for a free or reduced-price lunch under 42 U.S.C. 1771 - 1784, in addition to public school funding and subject to appropriation, the department shall provide funding to a school district for lunch and for breakfast to each eligible student. To implement this subsection, the department shall provide a base amount of 15 cents for each lunch or 35 cents for each breakfast, to which amount the department shall add an additional amount, expressed in cents and not applied as a cost factor, that is determined by

(1) reducing the applicable district cost factor provided in AS 14.17.460 by 1.0; and

(2) dividing the remainder determined under (1) of this subsection by four; the department shall round to the nearest cent a quotient that is not a whole

number.

(b) Beginning July 1, 2012, the base amount under (a) of this section shall be adjusted annually on October 1 according to changes in the Consumer Price Index for all urban consumers for the Anchorage metropolitan area compiled by the United States Department of Labor, Bureau of Labor Statistics. The index for 2009 is the reference base index for an adjustment made under this subsection.

(c) In this section, "district" has the meaning given in AS 14.17.990.

CITY OF KENAI

RESOLUTION NO. 2011-08

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF KENAI, ALASKA, IN SUPPORT OF SENATE BILL 3, "AN ACT PROVIDING FOR FUNDING FOR SCHOOL LUNCH AND BREAKFAST."

WHEREAS, Alaska Senate Bill 3 was pre-filed on January 7, 2011 and introduced in the Alaska Senate on January 19, 2011; and,

WHEREAS, the bi-partisan bill proposes amendment to the Alaska Statutes, Chapter 14.03, by adding a new section to provide for improved funding of school lunches and breakfasts for eligible students; and,

WHEREAS, the State of Alaska's education policy set forth in AS 14.03.015 states: It is the policy of this state that the purpose of education is to help ensure that all students will succeed in their education and work, shape worthwhile and satisfying lives for themselves, exemplify the best values of society, and be effective in improving the character and quality of the world about them; and,

WHEREAS, Senate Bill 3, if enacted, would supplement the cost of lunches and breakfasts provided to each student who is eligible for a free or a reduced-price lunch under 42 U.S.C. 1771 – 1784; and,

WHEREAS, scientific research shows that adequate nourishment and nutrition is imperative for proper cognitive and behavioral development in students, and that eating quality meals, especially breakfast, is directly related to increases in test scores, decreases in the rate of childhood obesity, and a decrease in school violence; and,

WHEREAS, Alaska is one of only a few states that currently does not supplement school lunch and breakfast funding, and ranks 48th in the nation for participation in school breakfast programs; and,

WHEREAS, Senate Bill 3 has the support of the Food Bank of Alaska, the Alaska Food Coalition, and other organizations, school districts and education boards throughout Alaska.

NOW, THEREFORE BE IT RESOLVED BY THE COUNCIL OF THE CITY OF KENAI, ALASKA, the City of Kenai recognizes the importance of the adequate nourishment and nutrition of our children and students and supports enactment of Alaska Senate Bill 3; and,

BE IT FURTHER RESOLVED that a copy of this resolution shall be forwarded to Alaska Senate President Gary Stevens, Alaska House Speaker Rep. Chenault and the

other members of the Kenai Peninsula Legislative Delegation, and the Senate Bill 3 sponsors including Senators Wielechowski, Ellis, Davis, Egan, French, Kookesh, McGuire, Menard, Paskvan, and Thomas.

PASSED BY THE COUNCIL OF THE CITY OF KENAI, ALASKA, this second day of February, 2011.

RE: ***CITY OF KENAI RESOLUTION NO. 2011-08 -- IN SUPPORT OF SENATE BILL 3, "AN ACT PROVIDING FOR FUNDING FOR SCHOOL LUNCH AND BREAKFAST"***

At its February 2, 2011 meeting, the Kenai City Council unanimously passed its Resolution No. 2011-08, supporting Senate Bill 3, to provide for funding for school lunch and breakfast.

Scientific research shows that adequate nourishment and nutrition is imperative for proper cognitive and behavioral development in students and eating quality meals, especially breakfast, is directly related to increases in test scores, decreases in the rate of childhood obesity, and a decrease in school violence.

The City of Kenai recognizes the importance of adequate nourishment and nutrition of our children and students and strongly supports enactment of Senate Bill 3.

Resolution 11-03

A Resolution of the Wrangell Public School Board Supporting State Funding for School Meals

Whereas, Wrangell Public Schools has developed a breakfast and lunch program to help feed hungry students nutritious meals; and

Whereas, Alaska State Senators passed SB213 during the 2010 legislative session supporting efforts to ensure children start each day with a healthy and balanced meal; and

Whereas, Feeding America analysis of 2006-2008 United States Department Agriculture data on food insecurity found 14.3% of children in Alaska under 18 years of age are food insecure, meaning they don't have access at all times to enough food for a healthy, active life; this problem is more severe in rural Alaska, where nearly one child in four experienced food insecurity; and

Whereas, insufficient nutrition puts children at risk for illness and weakens their immune system. In comparison to food secure children, children from food insecure families are 90% more likely to be in fair or poor health and have 30% higher rates of hospitalization; and

Whereas, the lack of adequate nutrition affects the cognitive and behavioral development of children. Food insecurity is associated with grade repetition, absenteeism, tardiness, anxiety, aggression, poor mathematics scores, psychosocial dysfunction and difficulty with social interaction among 6 to 12 years old children; and

Whereas, food insecurity puts children in development in jeopardy, characterized by challenges with speaking, behavior, and movement; increasing he likelihood of later problems with attention, learning and social interaction. Young children living in low income and food insecure households are more likely to be developmentally at risk than children from food secure households; and

Whereas, federal programs exist to assist in providing nutrition to children through the schools, most notably the National School Lunch Program and the School Breakfast Program; and

Whereas, the federal reimbursement program does not cover the high costs of food and transportation in Alaska;

THEREFORE BE IT RESOLVED, that Wrangell Public Schools supports an adequate financial appropriation from the state to strengthen and expand the School Breakfast Program in Alaska, so that breakfast may be available to all children at all schools throughout the state, including low income children and children with food insecurity. No child in Alaska should go without breakfast or lunch.

ENACTED THIS 21st **DAY OF** March **, 2011.**

Dean Hamburg

Alaska School Nutrition Association

TO: Honorable Senator Joe Thomas

FROM: Dean Hamburg- Alaska School Nutrition Association

We wish to thank you for your kind consideration and co-sponsorship for legislation supporting Alaska children as reflected in Senate Bill 3.

This school meal assistance is a big deal for those of us tasked with providing the 11 million USDA school meals each year to Alaska Children.

The $.35 per Breakfast in SB 3 will be partnered with the well established USDA support of $2.36 per breakfast for students qualifying as free.

The $.15 per Lunch in SB 3 will be partnered with the well established USDA support of $4.43 per lunch for students qualifying as free.

The long time successful USDA staffers serving students in Fairbanks and all across Alaska need the SB 3 help supporting school meals.

It turns out, that successful school meal programs are a very important support for success in Alaska classrooms.

The USDA school meal programs in Alaska very successfully comply with and exceed the criteria for appropriate nutrition for student health.

The accountability practices for per meal service are well established for finances and nutrition support.

Audits and trainings and documentation criteria are all well in place for school meal purchases, service, and reimbursement claims.

School Meal providers can be trusted with funding responsibility.

We take great pride in what we do for Alaska kids.

"An Act providing for funding for school lunch and breakfast."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.127. State funding for school lunch and breakfast. (a) To supplement the cost of lunch and breakfast provided to each student who is eligible for a free or reduced-price lunch under 42 U.S.C. 1771 - 1784, in addition to public school funding and subject to appropriation, the department shall provide funding to a school district of 15 cents for lunch and 35 cents for breakfast to each eligible student. For each meal, the department shall add an additional amount, expressed in cents and not applied as a cost factor, that is determined by

(1) reducing the applicable district cost factor provided in AS 14.17.460 by 1.0; and

(2) dividing the remainder determined under (1) of this subsection by four; the department shall round to the nearest cent a quotient that is not a whole number.

(b) Beginning July 1, 2012, the base amount under (a) of this section shall be adjusted annually on October 1 according to changes in the Consumer Price Index for all urban consumers for the Anchorage metropolitan area compiled by the United States Department of Labor, Bureau of Labor Statistics. The index for 2009 is the reference base index for an adjustment made under this subsection.

(c) In this section, "district" has the meaning given in AS 14.17.990.

Sponsor Statement

Senate Bill 3 – Funding for School Meals

"An Act providing for funding for school lunch and breakfast."

Senate Bill 3 will provide a state match for schools participating in the federal Free and Reduced Price School Breakfast and Lunch Program. This legislation will encourage more schools to provide nutritious meals for underprivileged children and allow schools that already do so to improve their programs. Currently in Alaska, twenty percent (20%) of schools participating in the school lunch program do not offer school breakfast, impacting 22,253 Alaskan children, 6,850 of whom are children from low income families who qualify for free or reduced price meals. For many children, these are the only nutritious meals they will get on a regular basis. Alaska is one of the only states that does not help supplement the program.

This legislation will provide school districts with a base amount of 35 cents for each breakfast served and 15 cents per lunch. To compensate for higher costs, rural schools will receive additional assistance through a funding formula based on the applicable School District Cost Factor for each district.

In addition to fighting childhood hunger, investing in school meals has been shown to improve school performance, attendance and test scores while reducing violence, and combating childhood obesity.

This legislation was requested by the Food Bank of Alaska, The Alaska Food Coalition, and the Alaska School Nutrition Association; and currently has been endorsed by the Yakutat Board of Education, the Petersburg Indian Association, the Petersburg School District, the Lower Kuskokwim School District, the Bering Strait School Board, the Cordova School District, the Yupiit School District, the Kenai Peninsula School District, the Chugach School District, the Anchorage School District, the Homer Food Pantry and the AARP.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 3

Analysis

This legislation will establish a state school and breakfast grant program to assist districts in supplementing the costs of providing free and reduced breakfast and lunch meals under 42 U.S.C. 1771-1784 for eligible students. School districts will be eligible for 35 cents for each breakfast and 15 cents for each lunch served to eligible students plus an additional amount generated by applying the specified formula to the district cost factors under AS 14.17.460. The base allowance will be adjusted annually according to the Anchorage CPI beginning July 1, 2012 (FY13) using 2009 as the reference base index.

SB3 - School Meals Witness List

HEARING: Senate Education Committee
When: 8AM, Friday, January 28th
Call-In: 877-763-5073
Bill: SB3

Superintendent Carol Comeau
Phoning in from out of state - 877-763-5073
BIO:
Carol Comeau, the superintendent of the Anchorage School District, began her career in Anchorage schools as a noon duty attendant and teacher aide in 1974. She worked as a teacher for many years before serving as a school principal, Executive Director of Elementary Education and Assistant Superintendent for Instruction. She's been the ASD superintendent since 2000. She has served as president of the Alaska Association of School Administrators, the Council of the Great City Schools Executive Committee, and the Alaska Council of School Administrators (ACSA). In May 2010, the Governor appointed her to the Council on Education for Military Children. She serves on numerous boards of community organizations because she believes it is essential to be an active participant in our community and has received recognition from many community groups for her service.

Dr Brent Rock
Phoning in - 877-763-5073
Dr. Brent L. Rock Ed.D, is the Director of the ASD Student Nutrition Department. He currently serves as a Director in the Alliance For School Foodservice Leadership and the Alaska Team Nutrition Advisory Committee. He previously served as a board member for ASSETS in Anchorage, Member of the Advisory Board, Anchorage Community College, President of the Utah Superintendent's Association, Chairman of Public Television Advisory Board, Austin, Texas, Dr. Rock has written over 100 articles published in major journals, magazines, and newspapers.

Carl Rose
Association of Alaska School Boards
Testifying in person
Bio:
Carl Rose has been executive director of the Association of Alaska School Boards since 1987. He is currently a member of the Advisory Task Force on Higher Education and Workforce Development.

Assistant Superintendent Dave Jones
Attending from the LIO office in Kenai, Alaska at 8:00 AM on the 28th.
Bio:
Mr. Jones is the Assistant Superintendent for the- Kenai Peninsula Borough School District - has agreed to provide testimony. Dave Jones serves as Legislative Liaison for our Kenai

Peninsula Borough School District. Asst. Superintendent Jones also serves as a legislative contact for the Alaska School Business Officials.(ALASBO)

Jordis Clark, an Anchorage School Nurse
Phoning In from Anchorage: 877-763-5073
Bio
Jordis Clark has been a school nurse in Anchorage for 10 years. She is a board member for Food Bank of Alaska and has been a member of the Anchorage School District wellness committee and health education curriculum committee. The school she works at started a breakfast program 2 weeks ago.

Fast Facts: Alaska's School And Lunch Program

Alaskan Children In Need:

- One out of every 8 Alaska families struggles to put enough food on the table.[USDA]
- According to Hunger in America 2010, 74,000 Alaskans seek food assistance each year.The study also showed that 43% of households visiting food pantries in Alaska have a child under the age of 18. [Hunger In America]
- An estimated 42% of Alaska students, more than 51,000 children, are eligible for free or reduced-cost school meals.

School Meals Programs In Need

- Alaska is one of only twelve states in the country that does not have any state legislative support for their school meals programs. [Alaska Food Coalition Hunger Data]
- Currently, the federal funds the majority of the school meal program at $32 million. That still leaves Alaska schools with a $25 shortfall. [Alaska Department of Education and Early Development]
- In Alaska, the school lunch program feeds over 36,000 students at a free/reduced rate for lunch. School breakfast participation is over 18,000 with 14,000 of those being free/reduced price. [FRAC scorecard]
- Currently in Alaska, twenty percent (20%) of schools participating in the school lunch program do not offer school breakfast, impacting 22,253 Alaskan children, 6,850 of whom are children from low income families who qualify for free or reduced price meals.
- For many children, these are the only nutritious meals they will get on a regular basis.

Alaska Missing Out On $1.9 Million

- Alaska is in the bottom 10 states for lowest participation in the School Breakfast Program in the nation.
- Our state is not taking advantage of a large amount of potential federal funding that would come to the state on a per-meal basis.
- If Alaska lifted breakfast participation from 38.3% to 60%, the state would receive an additional $1.9 million in federal funds.
- That would entail feeding approximately 8,006 additional free and reduced-price students.[FRAC scorecard]

Studies Relating To The Benefits Of School Meals

Better Memory, Cognition and Test Scores

Improved School Achievements A review of 18 studies showed students who ate breakfast consistently showed improvement in verbal fluency, arithmetic, tests of attention, memory, creativity, physical endurance, and general tests of academic achievement and cognitive functioning. - "Nutrition and Student Performance at School." The Journal of School Health 2005

Improved Standardized Test Scores: Scores on the Comprehensive Test of Basic Skills improved significantly in schools that had larger participation in their school breakfast programs. -- "School Breakfast Program and School Performance." American Journal of Diseases of Children 1989

Improved Scores in Language, Reading, Math: Low-income students in a breakfast test program in the United States improved their combined scores in language, reading and math. --"Breakfast and Cognition: An Integrative Summary." American Journal of Clinical Nutrition 1998

Improved Math Scores, Participation: Researchers found students who ate breakfast improved math scores and participated more in class. --"Diet, Breakfast, and Academic Performance in Children." Annals of Nutrition & Metabolism 2002

Improved Memory, Listening Skills: A Tufts University study showed elementary school students who ate breakfast listened better and had both better spatial memory and short-term memory than students who skipped breakfast. -- "Effect of Breakfast Consumption on Cognitive Processes in Elementary School Children." Physiology & Behavior 2005

Improved Vocabulary: Research from the University of California showed eating breakfast had a significant positive effect on vocabulary test performance. --Food and Nutrition Bulletin 1996

Skipping Breakfast = Slower Brain Function: A study conducted by the University of California Davis showed skipping breakfast alters brain function and had an adverse affect on the speed and accuracy with which children were able to retrieve information from memory. -- "Does Breakfast Make a Difference in School?" Journal of the American Dietetic Association 1995

Better Behavior

Calmer, More Obedient: Researchers noted a significant decrease in behavioral "oppositional scores" for students eating school breakfast. "Oppositional scores" measure whether or not students are likely to break the rules, have problems with authority or are quick to anger than most individuals in their age groups. -- "Evaluation of the School Breakfast Program Pilot Project: Findings from the First Year of Implementation." U.S. Department of Agriculture, Food and Nutrition Service 2002.

Better Behaved: Researchers found low-income students who ate meals at school were less likely to be hyperactive and had fewer behavioral or attention problems than their hungry peers. -- "Relationship Between Hunger and Psychosocial Functioning in Low-Income American Children." Journal of the American Academy of Child & Adolescent Psychiatry 1998

Fewer Disciplinary Referrals Needed: Researchers conclude that classroom breakfast works and that a pilot program in New York resulted in decreased hunger and improvements in factors critical to student learning such as tardiness and disciplinary referral rates. -- "Academics & Breakfast Connection Pilot: Final Report on New York's Classroom Breakfast Project." Nutrition Consortium of New York State. Albany, New York. July 2005.

Fewer Emotional Problems: Increased school breakfast participation is associated with fewer emotional or behavioral problems. Teachers at schools that increased participation in their school breakfast programs reported a positive change in student behavior (60%) and improved in student attentiveness (63%). "The Boston Public Schools Universal Breakfast Program: Final Evaluation Report." Massachusetts General Hospital, Boston, MA, 2000

Better Attendance Rates

Higher Rates Of Attendance: Studies show that universal school breakfast program participation is associated with higher rates of attendance and declines in tardiness. "Universal-Free School Breakfast Program Evaluation Design Project. Review of the Literature on Breakfast and Learning. Final Report." Mathematica Policy Research 1999

Lower Rates Of Tardiness: Schools with increased participation in school breakfast programs had their proportion of children chronically tardy decreased by 67%. -- "Evaluation of a Universally-Free School Breakfast Program Demonstration Project, Central Falls, Rhode Island," Tufts University, 1996

Better Health/ Weight

Lower Obesity Rates: Girls from "food insecure" households are significantly less likely to become overweight (68 percent) if they participate in school lunch and breakfast programs. -- "Lower Risk of Overweight in School-aged Food Insecure Girls Who Participate in Food Assistance: Results from the Panel Study of Income Dynamics Child Development Supplement." Archives of Pediatric and Adolescent Medicine 2003.

More Physically Active: Students who ate breakfast daily were more likely to participate in physical activity three or more times a week than breakfast skippers. --"Smoking, Physical Activity and Breakfast Consumption among Secondary School Students in a Southwestern Ontario Community." Canadian Journal of Public Health 2003

More Vitamins: Children who consumed breakfast at school had significantly higher mean daily intakes of energy and protein were more likely to obtain two-thirds of the RDA for vitamins A, E, D, and B6, as well as other minerals than children who did not eat school breakfast. -- "Breakfast Consumption Affects Adequacy of Total Daily Intake in Children." Journal of the American Dietetic Association 1993

How School Breakfast/Lunch Works

Schools are not required to provide or operate school lunch or breakfast programs. For eligible children, however, they are reimbursed per meal through the Federal Government (through DEED) based on poverty level.

Children whose families fall below 130 percent of the Federal Poverty Level (FPL) are eligible for a free meal. Those children between 130 percent and 185 percent of the FPL are eligible for a reduced-price meal ($0.30 for breakfast and $0.40 for lunch).

Income Eligibility Guidelines, 2010-11

Reduced priced meals	Reduced Priced Meals	Free Meals
Household size		
1	$25,031	$17,589
2	33,689	23,673
3	42,347	29,757
4	51,005	35,841

Meal prices For Students

Breakfast	**Elementary**	**Middle**	**High**
Full price	$1.80	$1.80	$2.25
Reduced price	30¢	30¢	30¢
Milk (alone)	50¢	50¢	50¢
Lunch	**Elementary**	**Middle**	**High**
Full price	$3.15	$3.55	$4.00
Reduced price	40¢	40¢	40¢
Milk (alone)	50¢	50¢	50¢

Average Cost of Each Lunch To The Schools

Average Cost of Lunch to School District in Alaska				
	Average Cost of Breakfast	Max. Reimburse	Average Cost of Lunch	Max. Reimburse
Road System School	$3.20	$2.82	$4.90	$4.43
Rural School	$4.80	$2.82	$7.35	$4.43

How Much The Federal Government Reimburses Per Breakfast and Lunch

	Lunch		**Breakfast**	
	Regular	Severe** Need	Regular	Severe** Need
Paid	0.42	0.44	0.39	0.39
Reduced	4.03	4.01	2.06	2.52
Free	4.41	4.43	2.36	2.82

*Note prices are not adjusted for cost differentials across communities. Severe need is based on 40% of the meals having been served to students qualifying for free or reduced price meals.

**A school is eligible for severe need reimbursement if 40 percent or more of the student lunches served at the school in the second preceding school year (2007-2008) were served free or at a reduced price.

Sec. 14.17.460. District cost factors.

(a) For purposes of calculating a district's adjusted ADM under AS 14.17.410 (b)(1), the district cost factor for a school district is (1) for the fiscal year ending June 30, 2009, the factor set out under column (A) of this subsection, (2) for the fiscal year ending June 30, 2010, the factor set out under column (B) of this subsection, (3) for the fiscal year ending June 30, 2011, the factor set out under column (C) of this subsection, (4) for the fiscal year ending June 30, 2012, the factor set out under column (D) of this subsection, and (5) for fiscal years ending on or after June 30, 2013, the factor set out under column (E) of this subsection:

School lunches, breakfasts vital to state

COMPASS: Other points of view

By MICHAEL SOBOCINSKI

(03/08/10 19:18:14)

"How many more sleeps before we can have meals at school again?"

An elementary school student in the Kenai Peninsula asked her teacher this question recently, just before a long weekend. For this girl and her younger brother, one of the most important things that school provided them was reliable breakfast and lunch.

Congress created the School Lunch Program in 1946 "as a measure of national security" because too many young men were unfit for military service due to malnutrition. The School Breakfast Program was piloted in 1966 and made permanent in 1975. The experience of the Kenai girl, and many others besides, shows that these programs are still vitally needed.

Schools are not required to offer meals, although the federal government provides reimbursement for meals for low income children. Forty percent of Alaska students -- more than 45,000 children -- qualify for free or reduced cost school meals.

Despite the huge geographic and logistic challenges they face, to their credit most schools in Alaska offer lunch. In all, there are 10 school districts educating 1,698 students in Alaska that do not offer the lunch program.

However, breakfast is more of a challenge. One hundred four Alaska schools and eight school districts that offer lunch do not offer breakfast. In total, 15 percent of the students who qualify for free/reduced price school meals do not attend schools that offer a breakfast program -- that's more than 7,000 missed meals each day, more than 1.2 million a year.

Why doesn't every Alaska school offer breakfast and lunch? They cannot afford it. The federal reimbursement is too low to make it economical for schools that serve too few children overall, or too few low income children, or face high food costs because of their remote locations.

Our kids need these meals. While I suspect we would all agree that parents should feed their children, some simply can't. According to Hunger in America 2010, 74,000 Alaskans seek food assistance each year. A significant percentage of these households include children younger than 18.

Children who have breakfast at school attend school more regularly, perform better on standardized tests, pay better attention, and perform better in math and reading. They are less likely to be disruptive or violent, and are less likely to struggle with obesity. In other words, meals at school encourage kids to concentrate on the business of learning, even older children.

On the other hand, teens who are hungry are more likely to be suspended from school, to have difficulty getting along with others, and to have fewer friends. The schools know this, which is why even many schools who don't offer breakfast regularly still manage to offer breakfast during testing week.

The Alaska Senate is currently considering whether to provide state funds to match federal funds

for school meals -- which will make it more economical to provide school meals. To me this is a very straightforward decision that we can make, one that will directly impact the health and education of our children. We should make such a reasonable investment in our children's future, and help give every child the best chance to succeed in school. I am sure that the young girl on the Kenai would agree. Please encourage your legislators to support SB 213 -- for the children and their academic future.

Michael Sobocinski is a board member of the Food Bank of Alaska.

School lunch programs might break poverty cycle

Tue, Nov 23 2010

By Adam Marcus

NEW YORK (Reuters Health) - Teens who live in households where food is scarce suffer academically, but a new study has found that government programs to provide meals in schools can reverse this effect.

According to the researchers, the findings suggest that school programs aimed at reducing so-called food insecurity can break an insidious cycle of poverty: poor children go hungry, get bad grades, don't go on to college and fail to rise out of their socioeconomic status -- raising children whose lives follow the same unfortunate narrative.

"Food insecurity is more problematic in the long term if it occurs prior to adolescence, but it doesn't mean that adolescents are more resilient than younger children," said study leader Christelle Roustit, of the Research Group on the Social Determinants of Health and Healthcare, in Paris, France. The researchers reported their findings in the medical journal Pediatrics.

The severe recession has taken a toll on food security. In the United States, a recent report by the Department of Agriculture found that nearly 15% of American households faced food insecurity at some point in 2009, the highest level since officials began tracking the measure in 1995.

Food insecurity in childhood is thought to undercut scholastic achievement in at least two ways. It deprives the body of nutrients necessary for proper mental and physical development, and it creates an atmosphere of stress and uncertainty that saps a kid's desire to attend school and to perform well.

In the new study, Roustit and her colleagues analyzed questionnaires given to 2,346 public high school students in Quebec, Canada, along with nearly 2,000 of their parents. The surveys asked about issues of school performance and socioeconomic status and included several questions addressing food security at home. These included whether a lack of money prevented the family from eating enough, or from buying a sufficient variety of foods.

Just over 11 percent of teens in the study experienced food insecurity at home, according to the researchers. Of those, two -thirds attended schools that offered free or low-cost breakfast, lunch or snacks, allowing the researchers to look for an effect of the meals program on academic performance.

The study revealed that food insecurity was strongly associated with problems in school. However, children with food insecurity at home performed significantly better academically if their school offered meal assistance. They were much less likely to be held back a year, to score badly in language testing or to rate their overall academic performance as poor.

Although the data come from the 1990s, Roustit said a new survey of Quebec adolescents is now in progress. "We would be able to compare the results of 1999 to 2009 in few years," she said.

Nicola Edwards, a dietician and food policy expert at California Food Policy Advocates, an Oakland-based nonprofit, said the results of the study are unsurprising. If children are hungry they cannot learn, Edwards said. "There is a direct correlation between food insecurity and academic performance," she said.

In the United States, teachers and school administrators report that children who take advantage of food assistance programs in schools have improved behavior, fewer absences and better test scores, Edwards added.

Under the federal Child Nutrition Act, more than 31 million American school children receive free or inexpensive lunches through the National School Lunch Program. Children from families with incomes at or below 130 percent of the poverty level ($28,665 for a family of four) are eligible for free meals. Those with incomes between 130 percent and 185 percent of the poverty level ($40,793 for a family of four) are eligible to receive lunch for a cost of no more than 40 cents.

According to the U.S. Department of Agriculture, the National School Lunch Program cost $9.8 billion in 2009. A study of this program that was published earlier this year supports the Canadian findings. Dr. Peter Hinrichs at Georgetown University in Washington DC reported in the Journal of Policy Analysis and Management that for children who participate in the National School Lunch Program, "the effects on educational attainment are sizable."

Congress Approves Child Nutrition Bill

By ROBERT PEAR

WASHINGTON — Congress gave final approval on Thursday to a child nutrition bill that expands the school lunch program and sets new standards to improve the quality of school meals, with more fruits and vegetables.

Michelle Obama lobbied for the bill as a way to combat obesity and hunger. About half of the $4.5 billion cost is financed by a cut in food stamps starting in several years.

Mrs. Obama said she was thrilled by passage of what she described as a groundbreaking piece of legislation.

By a vote of 264 to 157, the House on Thursday passed the bill, which was approved in the Senate by unanimous consent in August. It goes now to President Obama, who intends to sign it.

On the final roll call, 247 Democrats and 17 Republicans voted for the bill. Four Democrats and 153 Republicans voted no.

Some liberal House Democrats and advocates for the poor railed against the bill in September, saying it was wrong to pay for the expansion of child nutrition programs by cutting money for food stamps, now known as the Supplemental Nutrition Assistance Program.

Democrats put aside their disagreements on Thursday, after concluding that it was better to take what they could get than to gamble on their chances in the next Congress when Republicans will control the House. Mr. Obama tamped down concern by telling Democrats he would work with them to find other ways to pay for the bill, before the cuts in food stamps take effect.

"The president will do everything he can to restore these unconscionable cuts," said Representative Barbara Lee, Democrat of California and chairwoman of the Congressional Black Caucus.

Democrats and a few Republicans praised Mrs. Obama. "She has been an incredible champion for our children, particularly in the areas of nutrition and obesity," said Representative Jim McGovern, Democrat of Massachusetts.

Mr. McGovern, who is co-chairman of the House Hunger Caucus, said: "Hunger and obesity are two sides of the same coin. Highly processed, empty-calorie foods are less expensive than fresh nutritious foods."

School meal programs have a major impact on the nation's health, and supporters of the bill said it could reduce the prevalence of obesity among children. The lunch program feeds more than 31 million children a day.

Representative Rosa DeLauro, Democrat of Connecticut, said, "The bill sets national nutrition standards that will finally get all of the junk food infiltrating our classrooms and our cafeterias out the door."

But Representative Paul Broun, Republican of Georgia and a physician, said: "This bill is

not about child nutrition. It's not about healthy kids. It's about an expansion of the federal government, more and more control from Washington, borrowing more money and putting our children in greater debt. The federal government has no business setting nutritional standards and telling families what they should and should not eat."

The bill gives the secretary of agriculture authority to establish nutrition standards for foods sold in schools during the school day, including items in vending machines. The standards would require schools to serve more fruits and vegetables, whole grains and low-fat dairy products. And for the first time in more than three decades, the bill would increase federal reimbursement for school lunches beyond inflation — to help cover the cost of higher-quality meals. It would also allow more than 100,000 children on Medicaid to qualify automatically for free school meals.

One of the most contentious provisions of the bill regulates prices for lunches served to children with family incomes over 185 percent of the poverty level (more than $40,793 a year for a family of four).

"This provision would require some schools to raise their lunch prices," the Congressional Budget Office said.

Representative John Kline, Republican of Minnesota, said this provision was tantamount to a tax increase on middle-class families. The National Governors Association and local school officials objected to it as a new federal mandate.

But Margo G. Wootan, director of nutrition policy at the Center for Science in the Public Interest, a research and advocacy group, said: "The price of paid lunches needs to go up. Schools are not charging enough to cover the cost. As a result, money intended to provide healthy food to low-income kids is being diverted to subsidize food for higher-income children."

School districts that comply with the new standards can receive an additional federal payment of 6 cents for each lunch served. The National School Boards Association, representing local board members, said "the actual increased cost of compliance" was at least twice that amount.

The bill was written mainly by Senator Blanche Lincoln, Democrat of Arkansas and chairwoman of the Senate Agriculture Committee, who lost her bid for re-election.

The bill rounds out the tenure of Speaker Nancy Pelosi, Democrat of California. When she took the gavel in January 2007, she was surrounded by the children of House members, and she called the House to order in the name of "all America's children."

RE: SB 213 (Wielechowski)--Support

Dear Co-Chairs Meyer and Thomas:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Education Committee to support SB 213, authored by Senator Bill Wielechowski, and co-sponsored by Senators McGuire, Ellis, Paskvan, Menard, Thomas, Davis, French and Kookesh.

AARP is the world's largest organization of grandparents. We are concerned about good nutrition for everyone's grandchildren.

We have many grandparents who are raising their grandchildren.

- As of October, 2007, Alaska had 8,188 children living in grandparent-headed households (4.3% of all the children in the state).
- Of the children living in households headed by grandparents in Alaska, 5,110 are living there without either parent present.
- 5,419 grandparents report they are responsible for their grandchildren living with them (43% are Alaska Natives, 41% are White).
- 67.4% of these grandparents are under age 60. Many of them are still in the workforce.
- 11.5% of these grandparents live below the federal poverty level.

A healthy future for Alaska's children should be something everyone can agree on.

You will see all the statistics about how school breakfasts and lunches improve education for these children. Their test scores are higher, their cognition is enhanced, and they make fewer mistakes and work faster. Children who participate in the school nutrition programs have fewer problems with obesity and school violence even drops. All these factors will help grandparents who are raising grandchildren, especially those who are

Jennie Chin Hs President
William D. No... ef Executive Officer

still in the workforce and leave home before the grandchildren leave for school. Obviously these programs are even more important for those 11.5% of grandparents raising grandchildren who are themselves below the poverty level.

Grandparents don't plan on raising their grandchildren. Circumstances happen to families and these grandparents step up to the plate to take care of these kids and keep them out of the foster care program. SB 213 is one more way that the state can help support the efforts of these grandparents. They can certainly use it.

AARP requests an "AYE" vote on SB 213.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

RESOLUTION

Supporting for State Funding for School Meals
Passed at Regional School Board Meeting Nov 19, 2009

WHEREAS The mission of the Alaska Food Coalition (AFC) – a statewide group of 27 non-profit, faith-based, tribal and government organizations is working to help feed hungry Alaskans in their communities and strengthen and coordinate public and private food and nutrition assistance programs in the state, and

WHEREAS Yupiit School District fully supports AFC's efforts to ensure children start each school day with a healthy and balanced meal; and

WHEREAS according to data from the 2006 Behavioral Risk Factor Surveillance System (BRFSS), 15% of Alaskan children experience food insecurity, compared with 11% of Alaskan adults, meaning they don't have access at all times to enough food for a healthy active life; this problem is more severe in rural Alaska, where nearly one child in four experience food insecurity, and

WHEREAS insufficient nutrition puts children at risk for illness and weakens their immune system. In comparison to food secure children, children from food insecure families are 90% more likely to be in fair or poor health and have 30% higher rates of hospitalization, and

WHEREAS the lack of adequate nutrition affects the cognitive and behavioral development of children. Food insecurity is associated with grade repetition, absenteeism, tardiness, anxiety, aggression, poor mathematics scores, psychosocial dysfunction and difficulty with social interaction among 6 to 12 year old children, and

WHEREAS food security puts children in development in jeopardy, characterized by challenges with speaking, behavior and movement, increasing the likelihood of later problems with attention, learning and social interaction. Young children living in low income and food insecure households are more likely to be developmentally at risk than children from food secure households, and

WHEREAS federal programs exist to assist in providing nutrition to children through the schools, most notably the National School Lunch Program and the School Breakfast Program, and

WHEREAS the School Breakfast Program decreases food insecurity in children by providing five healthy meals a week in Alaska schools. 40% of students qualify for free/reduced school meals, over 15,000 students, of these, 15% do not attend schools that offer a breakfast program – that's over 7,000 missed meals each day, and

WHEREAS 101 out of 400 schools in Alaska did not offer the federal School Breakfast Program in the 2008-2009 school year, and

WHEREAS Alaskan schools primarily do not offer breakfast programs because it is not economically feasible. The federal reimbursement for breakfast does not cover the high cost of food and transportation in Alaska.

THEREFORE BE IT RESOLVED that Yupiit School District supports an adequate financial appropriation from the state to strengthen and expand the School Breakfast Program in Alaska, so that breakfast may be available to all children at all schools throughout the state, including low income children and children with food insecurity. No child in Alaska should go without breakfast.

ADOPTED this 19th day of November 2009 at the YSD's Regional Board of Education meeting held in Tuluksak, Alaska, at which a duly constituted quorum of Regional Board members were present.

KENAI PENINSULA BOROUGH SCHOOL DISTRICT

RESOLUTION 09-10-2

SUPPORT FOR STATE FUNDING FOR SCHOOL MEALS

Pursuant to the filing of Senate Bill No. 213, "An Act providing for funding for school lunch and breakfast", the Board of Education of the Kenai Peninsula Borough School District at a meeting held at Soldotna, Alaska on February 1, 2010, proposed the following resolution:

WHEREAS, according to data from the 2006 Behavioral Risk Factor Surveillance System (BRFSS), 15% of Alaskan children experienced food insecurity, compared with 11% of Alaskan adults, meaning they don't have access at all times to enough food for a healthy active life; this problem is more severe in rural Alaska, where nearly one child in four experienced food insecurity; and

WHEREAS, insufficient nutrition puts children at risk for illness and weakens their immune system. In comparison to food secure children, children from food insecure families are 90% more likely to be in fair or poor health and have 30% higher rates of hospitalization; and

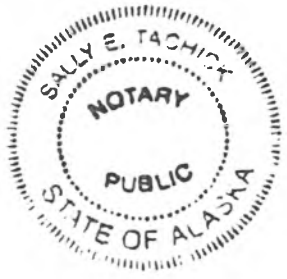
WHEREAS, the lack of adequate nutrition affects the cognitive and behavioral development of children. Food insecurity is associated with grade repetition, absenteeism, tardiness, anxiety, aggression, poor mathematics scores, psycho-social dysfunction and difficulty with social interaction among 6 to 12 year old children; and

WHEREAS, food insecurity puts children in development in jeopardy, characterized by challenges with speaking, behavior, and movement; increasing the likelihood of later problems with attention, learning, and social interaction. Young children living in low income and food insecure households are more likely to be developmentally at risk than children from food secure households; and

WHEREAS, the United States Department of Agriculture (USDA) lunch and breakfast programs exist as the base support for nutrition to children through the school meal programs, most notably the National School Lunch Program and the National School Breakfast Program; and

WHEREAS, the National School Breakfast Program decreases food insecurity in children by providing five healthy meals a week. In Alaska schools 40% of students qualify for free/reduced school meals, over 45,000 students; of these, 15% do not attend schools that offer a breakfast program – that's approximately 7,000 missed meals each day; and

WHEREAS, 104 out of 406 schools in 46 districts in Alaska did not sponsor/offer the federal School Breakfast Program in the 2008-2009 school year; and



WHEREAS, Alaskan schools primarily do not sponsor National School Breakfast Programs because it is not economically feasible. While USDA funding support per meal for Alaska school breakfasts if 43% greater than support for school breakfasts in the contiguous states, funding levels are still not sufficient for many Alaska school meal sponsors to sustain or enhance nutrition services to students; and

WHEREAS, 29 states do take responsibility for assisting federally supported school meal programs for success in the classroom and relief from food security;

THEREFORE BE IT RESOLVED, that the Kenai Peninsula Borough School District supports an adequate financial appropriation from the state to strengthen and expand the National School Lunch and Breakfast Program in Alaska, so that school breakfast programs and sustainable lunch may be available to all children at all schools throughout the state, including low income children and children with food insecurity. No child in Alaska should go without breakfast.

The Honorable Joe Thomas, Co-Chair
Senate Education Committee
Alaska State Capitol, Room 514
Juneau, AK 99801-1182

RE: SB 3 (Wielechowski)--Support

Dear Co-Chairs Meyer and Thomas:

On behalf of the members of AARP in Alaska, we encourage you and your colleagues on the Senate Education Committee to support SB 3, authored by Senator Bill Wielechowski with primary co-sponsors Senators Ellis, Davis, Egan, French, Kookesh, McGuire, Menard, Paskvan, and Co-chair Thomas.

AARP is the world's largest organization of grandparents. We are concerned about good nutrition for everyone's grandchildren.

We have many grandparents who are raising their grandchildren.

- As of October, 2007, Alaska had 8,188 children living in grandparent-headed households (4.3% of all the children in the state).
- Of the children living in households headed by grandparents in Alaska, 5,110 are living there without either parent present.
- 5,419 grandparents report they are responsible for their grandchildren living with them (43% are Alaska Natives, 41% are White).
- 67.4% of these grandparents are under age 60. Many of them are still in the workforce.
- 11.5% of these grandparents live below the federal poverty level.

A healthy future for Alaska's children should be something everyone can agree on.

You will see all the statistics about how school breakfasts and lunches improve education for these children. Their test scores are higher, their cognition is enhanced, and they make fewer mistakes and work faster. Children who participate in the school nutrition programs have fewer problems with obesity and school violence even drops. All these factors will help grandparents who are raising grandchildren, especially those who are

still in the workforce and leave home before the grandchildren leave for school. Obviously these programs are even more important for those 11.5% of grandparents raising grandchildren who are themselves below the poverty level.

Grandparents don't plan on raising their grandchildren. Circumstances happen to families and these grandparents step up to the plate to take care of these kids and keep them out of the foster care program. SB 3 is one more way that the state can help support the efforts of these grandparents. They can certainly use it.

AARP requests an "AYE" vote on SB 3.

Should you have any questions about our position, please feel free to contact me (586-3637) or Patrick Luby, AARP Advocacy Director (907-762-3314).

Thank you for your consideration.

Sincerely,

Marie Darlin

ALASKA FOOD COALITION

Funding for School Meals
Talking Points

In 2011 the Alaska State Legislature will consider legislation (SB05 and HB 132) which would provide state funding to supplement federal dollars received for school meals served to students who qualify for free or reduced price meals. The state funds would provide $.35 per breakfast served and $.15 per lunch served. This additional funding would encourage schools to start breakfast programs and to continue to provide healthy lunches despite rising costs.

Background:

Nearly 7,000 low income children in Alaska can't get a free or reduced price meal at school because their schools do not participate in the School Breakfast Program. Why not? The federal reimbursement for breakfast is simply too low to make it economically feasible for many schools.

School Meals

- 42% of Alaska students are eligible for free or reduced price school meals (DEED) – Approximately 51,533 students
- There are 6 school districts in Alaska that do not offer the lunch or breakfast program (DEED)
- 20% of schools participating in the school lunch program, 79 schools do not offer school breakfast, impacting 22,253 Alaskan children of whom 6,850 qualify for free or reduced price meals (DEED)
- In FY11, 92 public schools did not provide breakfast to approximately 23,180 Alaskan students from all income level families
- Alaska is one of 12 states that does not support school meals in some way by either mandate and/or financial support (based on FRAC data in 2009)
- Research shows that school breakfast (see attached resource sheet)
    - Improves student performance
    - Increases school attendance
    - Decreases school violence
    - Fights obesity and improves nutrition

- Schools that participate in the National School Lunch Program (NSLP) and School Breakfast Program (SBP) currently receive a federal reimbursement for each meal served. In Alaska, the balance of the cost is carried by the school districts. The Alaska School Nutrition Association (AKSNA) estimates the average costs for preparation and serving meals in Alaska schools:
    - For "road system" schools:
        - Cost of a typical school lunch = $4.90
        - 2010-11 federal reimbursements
            - For free lunch = $4.41 for a $.49 per meal loss
            - For reduced lunch = $4.01 for a $.89 per meal loss
    - For "off-road system" schools:
        - Cost of a typical school lunch = $7.35
        - 2010-11 federal reimbursement
            - For free lunch = $4.41 for a $2.94 per meal loss
            - For reduced lunch = $4.01 for a $3.34 per meal loss
- 2010-2011 federal reimbursement rates (basic)
    - Breakfast – Free-$2.36; Reduced-$2.06; Paid-$.39
    - Lunch – Free-$4.41; Reduced-$4.01; Paid-$.42

Consequences of Missing Meals

- Food insecurity (worrying about the next meal) puts children in jeopardy of development risk, characterized by challenges in speaking, behavior and movement. This increases likelihood of later problems with attention, learning, and social interaction.
- Lack of adequate nutrition affects the cognitive and behavioral development of children. Food insecurity is associated with grade repetition, absenteeism, tardiness, anxiety, aggression, poor mathematics scores, psychosocial dysfunction and difficulty social interaction.
- Research shows that skipping breakfast is related to obesity. The School Breakfast Program has been found to be a valuable tool in fighting childhood obesity as children who have breakfast at school eat more fruits, drink more milk, and consume less saturated fat than those who skip breakfast or eat breakfast at home.

SUPPORT FOR ALASKA STATE SUPPORT OF SCHOOL MEALS

The organizations listed below have signed resolutions in support of State Funding for School Meals:

State Educational Organizations:

- Aleutians East School District
- Anchorage School District
- Bering Strait School Board
- Bristol Bay Borough School Board
- Chugach School District
- Copper River School District
- Cordova School Board
- Haines Borough School Board
- Iditarod Area School District
- Kenai Peninsula Borough School District
- Lake and Peninsula School District
- Kuspuk School District
- Lower Kuskokwim School District
- Nenana School Board
- Petersburg City Schools
- Sitka Shool District
- Yakutat School District
- Yukon Koyukuk School District
- Yupiit School District
- Valdez School District

Additional Organizations:

- ALPHA – Alaska Public Health Association
- Alaska Association of Social Workers
- City of Kenai
- Homer Community Food Pantry
- Kenai Peninsula Food Bank
- NEA-Alaska Chapter
- Petersburg Indian Association

- Unity Outreach, North Pole, AK

Organizational support through letters, testimony, etc. has been submitted by:

- AARP Alaska
- Alaska Action for Healthy Kids Team
- Alaska School Nutrition Association
- Alaska Youth & Parent Foundation
- Association of Alaska School Boards
- Food Bank of Alaska

Benefits of Breakfast

Eating breakfast can help improve math, reading, and standardized test scores.[i] [ii] [iii]

Children who eat breakfast are more likely to behave better in school and get along with their peers than those who do not.[iv] [v]

Breakfast helps children pay attention, perform problem-solving tasks, and improves memory.[vi] [vii]

Children who eat school breakfast are likely to have fewer absences and incidents of tardiness than those who do not.[viii]

By eating breakfast, students get more of important nutrients, vitamins and minerals such as calcium, dietary fiber, folate and protein.[ix] [x]

Studies have shown that children who eat breakfast on a regular basis are less likely to be overweight.[xi] [xii] [xiii]

Eating breakfast as a child is important for establishing healthy habits for later in life.

Schools that provide breakfast in the classroom to all students have shown decreases in tardiness and suspensions as well as improved student behavior and attentiveness.[xiv] [xv]

What you eat for breakfast can have an impact on learning. One study showed that eating breakfast food high in fiber and low in sugar for breakfast helped students sustain the cognitive effects of breakfast.[xvi]

School Breakfast provides ¼ the recommended amounts of protein, calcium, iron, vitamin A, and vitamin C for the day.[xvii]

Meeting Script – January 28, 2011

CHAIRMAN Thomas

Senator Thomas: This meeting is called to order.

The date is January 28, 2011 and the time is 8:00 am. In attendance today are Co-Chair Meyer, ~~Vice-Chair Davis~~, Senator Stevens, Senator French, and myself, Co-Chair Thomas. We do have a quorum to conduct business.

This is a meeting of the Senate Education Committee for this, the First session, of the 27th Alaska Legislature. Good morning, everyone.

The purpose of the meeting today is to hear SB 3, "An Act providing for funding for school lunch and breakfast."

The original bill had a typographical error, ~~and~~ so we are taking up a sponsor substitute today. The version we are looking at is Work Draft 27-LS0020\B. ~~So~~ We are looking at Version B today. I would entertain a motion ~~that we~~ to adopt ~~it~~ for the purposes of discussions. Senator Meyer?
Version B

Senator Meyer: I move that we adopt, for the purpose of discussion, the sponsor substitute for Senate Bill ~~3, version B;~~ SB 1

Senator Thomas: Is there ~~any~~ objection ~~to the bill?~~

Senator Meyer: I object for the sake of discussion.

Senator Thomas: Thank you.

There is a fiscal note for the bill, which you will find in your packet. Should we have discussion or have Elizabeth Nöodle may to speak to fiscal Note. Do we want to do this?
The sponsor of the bill is here with us this morning, Senator Wielechowski ~~He and his~~ and his staff are here today, and will speak to the bill.
Sen Wielechowski
Please come ~~up~~ and identify yourself for the record. & present your Bill
Forward

Elizabeth Nöodleman

CS FOR SENATE BILL NO. 3(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS WIELECHOWSKI, ELLIS, DAVIS, EGAN, FRENCH, KOOKESH, MCGUIRE, MENARD, PASKVAN, AND THOMAS

A BILL

FOR AN ACT ENTITLED

"An Act providing for funding for school lunch and breakfast."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.127. State funding for school lunch and breakfast. (a) To supplement the cost of lunch and breakfast provided to each student who is eligible for a free or reduced-price lunch under 42 U.S.C. 1771 - 1784, in addition to public school funding and subject to appropriation, the department shall provide funding to a school district of 15 cents for lunch and 35 cents for breakfast to each eligible student. For each meal, the department shall add an additional amount, expressed in cents and not applied as a cost factor, that is determined by

(1) reducing the applicable district cost factor provided in AS 14.17.460 by 1.0; and

(2) dividing the remainder determined under (1) of this subsection by four; the department shall round to the nearest cent a quotient that is not a whole number.

(b) Beginning July 1, 2012, the base amount under (a) of this section shall be adjusted annually on October 1 according to changes in the Consumer Price Index for all urban consumers for the Anchorage metropolitan area compiled by the United States Department of Labor, Bureau of Labor Statistics. The index for 2009 is the reference base index for an adjustment made under this subsection.

(c) In this section, "district" has the meaning given in AS 14.17.990.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSSB 3(EDC)

Analysis

This legislation will establish a state school and breakfast grant program to assist districts in supplementing the costs of providing free and reduced breakfast and lunch meals under 42 U.S.C. 1771-1784 for eligible students. School districts will be eligible for 35 cents for each breakfast and 15 cents for each lunch served to eligible students plus an additional amount generated by applying the specified formula to the district cost factors under AS 14.17.460. The base allowance will be adjusted annually according to the Anchorage CPI beginning July 1, 2012 (FY13) using 2009 as the reference base index.

SPONSOR SUBSTITUTE FOR SENATE BILL NO. 3

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATORS WIELECHOWSKI, ELLIS, DAVIS, EGAN, FRENCH, KOOKESH, MCGUIRE, MENARD, PASKVAN, AND THOMAS

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act providing for funding for school lunch and breakfast."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.127. State funding for school lunch and breakfast. (a) To supplement the cost of lunch and breakfast provided to each student who is eligible for a free or reduced-price lunch under 42 U.S.C. 1771 - 1784, in addition to public school funding and subject to appropriation, the department shall provide funding to a school district of 15 cents for lunch and 35 cents for breakfast to each eligible student. For each meal, the department shall add an additional amount, expressed in cents and not applied as a cost factor, that is determined by

(1) reducing the applicable district cost factor provided in AS 14.17.460 by 1.0; and

(2) dividing the remainder determined under (1) of this subsection by four; the department shall round to the nearest cent a quotient that is not a whole number.

(b) Beginning July 1, 2012, the base amount under (a) of this section shall be adjusted annually on October 1 according to changes in the Consumer Price Index for all urban consumers for the Anchorage metropolitan area compiled by the United States Department of Labor, Bureau of Labor Statistics. The index for 2009 is the reference base index for an adjustment made under this subsection.

(c) In this section, "district" has the meaning given in AS 14.17.990.

Referred:

Sponsor(s): SENATORS DAVIS AND FRENCH

A BILL

FOR AN ACT ENTITLED

"An Act relating to prekindergarten programs within a school district; relating to pre-elementary students and pre-elementary schools; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03.060(a) is amended to read:

(a) Except as provided in (e) of this section, an elementary school consists of grades kindergarten through grade eight or any appropriate combination of grades within this range**, and a prekindergarten program provided by a school district for students four and five years of age**.

* **Sec. 2.** AS 14.03.060(e) is amended to read:

(e) In addition to the grades enumerated in (a) of this section, an elementary school consists of a **prekindergarten** [PRE-ELEMENTARY] program supervised by the department under AS 14.07.020(a)(8), operated by the department as a head start program under AS 14.38.010, or located in a public school [FOR FEDERAL FUNDING PURPOSES. EXCEPT FOR A CHILD WITH A DISABILITY WHO IS

New Text Underlined [DELETED TEXT BRACKETED]

RECEIVING SPECIAL EDUCATION OR RELATED SERVICES UNDER AS 14.30.180 - 14.30.350, PRE-ELEMENTARY STUDENTS MAY NOT BE COUNTED IN A SCHOOL'S AVERAGE DAILY MEMBERSHIP UNDER AS 14.17].

* **Sec. 3.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.065. Prekindergarten program. (a) A school district may provide a prekindergarten program for students who are four or five years of age and who reside in the district if the program is

(1) optional for a student;

(2) supervised by the department under AS 14.07.020(a)(8); and

(3) consistent with regulations adopted by the board under AS 14.07.165.

(b) A student who is enrolled in and attends a prekindergarten program provided by a district shall be counted as a part-time student in the district average daily membership count estimate under AS 14.17.500, except that for the first year of the program the student count estimate used shall be for the current fiscal year.

* **Sec. 4.** AS 14.03.080 is amended by adding a new subsection to read:

(g) A child who is four or five years of age on or before September 1 following the beginning of the school year and who is under school age may enter a public school prekindergarten program.

* **Sec. 5.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public

schools; the regulations must provide that, if a course in American Sign Language is given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools **and district prekindergarten programs** that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans"

include educational specifications, schematic designs, projected energy consumption and costs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may intervene in a school district to improve instructional practices, as described in AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental intervention, as described in AS 14.07.030(14)(A) and (B) and (15), after the district demonstrates three consecutive years of improvement consisting of not less than two percent increases in student proficiency on standards-based assessments in math, reading, and writing as provided in AS 14.03.123(f)(2)(A); and

(C) a process for districts to petition the department for continuing or discontinuing the department's intervention;

(17) notify the legislative committees having jurisdiction over education before intervening in a school district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15);

(18) assist the Department of Natural Resources in developing and implementing the farm-to-school program established under AS 03.20.100.

* **Sec. 6.** AS 14.07.020(c) is amended to read:

(c) In this section, "pre-elementary school" means a school for children [AGES] three through five years **of age,** if the school's primary function is

educational**, and a prekindergarten program for children four or five years of age that is provided by a school district**.

* **Sec. 7.** AS 14.07.165 is amended to read:

Sec. 14.07.165. Duties. The board shall adopt

(1) statewide goals and require each governing body to adopt written goals that are consistent with local needs;

(2) regulations regarding the application for and award of grants under AS 14.03.125;

(3) regulations implementing provisions of AS 14.11.014(b);

(4) regulations requiring approval by the board before a charter school, state boarding school, or a public school may provide domiciliary services;

(5) regulations implementing the secondary school student competency examination provisions of AS 14.03.075, including the criteria and procedure under which a governing body uses a waiver to grant a diploma to a student; criteria regarding granting a waiver must include provisions that a waiver may only be granted for students who enter the system late or have rare or unusual circumstances meriting a waiver;

(6) regulations for the implementation of a prekindergarten program by a school district using the model curriculum developed by the department under AS 14.07.030(13).

* **Sec. 8.** AS 14.17.905(a) is amended to read:

(a) For purposes of this chapter, the determination of the number of schools in a district is subject to the following:

(1) a community with an ADM of at least 10, but not more than 100, shall be counted as one school;

(2) a community with an ADM of at least 101, but not more than 425, shall be counted as

(A) one elementary school, which includes those students in grades kindergarten through six**, and, except as provided in (c) of this section, a prekindergarten program provided by a school district for students four and five years of age**; and

(B) one secondary school, which includes students in grades seven through 12;

(3) in a community with an ADM of greater than 425, each facility that is administered as a separate school shall be counted as one school, except that each alternative school with an ADM of less than 175 shall be counted as a part of the school in the district with the highest ADM.

* **Sec. 9.** AS 14.17.905 is amended by adding a new subsection to read:

(c) A school district may not include in the average daily membership of a school students who are four or five years of age if the students are enrolled in a program that receives funding other than funding under this chapter.

* **Sec. 10.** This Act takes effect July 1, 2013.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB6

Analysis

This bill defines elementary schools as kindergarten through grade eight and a prekindergarten program for students four and five years of age. The prekindergarten program must be optional.

This bill will allow districts to receive prekindergarten funding through the foundation formula provided the students meet the age requirement of four and five years of age before September 1 following the beginning of the school year, and are not funded by another source.

This fiscal note general fund appropriation was calculated by taking the most recent kindergarten enrollment , to represent a kindergarten cohort, and multiplying by the FY2012 projected average state aid per student.

Future eligibility for space allocations and capital improvment projects through the department's facilities programs are not analyzed in this fiscal note.

Alaska State Legislature

Please enter into the record my testimony to the Senate Education Comm.
COMMITTEE NAME

committee on SB6, dated 3/30/11.
BILL / SUBJECT TODAY'S DATE

I want to thank all of you for your on-going efforts to build a comprehensive early education program for Alaska. As you know, the current research on the importance of early learning (birth to 5) is compelling. We must take advantage of these early years to build strong, healthy brains if we want to have children who succeed in school and become young adults ready to work, to contribute to our economy and to engage in our democratic process.

The Title I preschool pilot project is a good start, but does not begin to address the needs of all our young children. I strongly believe that there should be high quality preschool for 3 and 4 year olds in all communities, and it must be available to ALL children, not just the so-called disadvantaged or "at risk".

I also urge you to look at developing a diverse delivery system for such programs. All the funding should not be placed only in the hands of public schools. I appreciate the good work done in public schools, but in some communities, it might be appropriate to have preschools as part of child care centers, or to provide supplemental funding so the local Head Start can accept more children (not restricted to the Federal income guidelines).

One of the reasons Head Start and Even Start programs do so well is because of the addition of home visiting staff who can connect families to resources, help parents learn life skills, strengthen parenting skills, provide support to assist in cases of domestic violence ...in short, helping families develop the protective factors that will allow them to flourish. So, I urge you to commit to including the cost of having home-school liaison staff, or developing collaborations between pre-schools to other local programs such as Parents as Teachers or Healthy Families that can provide that component.

Thank you for your attention,

DeWayne Bahnsen, Principal

David Herbert, Superintendent

Senator Joe Thomas
State Capitol Room 514

Dear Senator Thomas:
This letter is being written in support of funding a voluntary four year old, half day, preschool program for the State of Alaska. Early childhood education is one of the most important investments the State of Alaska can make for the children of the state. Not every family in the state has access to the resources required to provide their children with the needed educational material or the instructional abilities required to teach early childhood education.

Currently, the children of St. Mary's have access to programs such as early head start from ages zero to three, however, there is no program for students once they turn four years of age. The St. Mary's School District feels that it is imperative we offer a voluntary half day program to the four year old students in our community. Offering students a half day preschool program allows students to overcome separation anxiety, learn how to socially interact in a school setting, develop some of the basic academic skills needed to be successful in school, and become accustomed to the structure required to learn. In addition, the parents of the students become involved in helping their child to learn at an earlier age and it provides an avenue for the district to give parents resources and guidance on how to help their children learn at an earlier age.

There are many districts throughout the state which can demonstrate that students are coming into their kindergarten programs one to two years behind. By providing a voluntary half day, four year old preschool program funded by the State of Alaska the state would be helping to ensure that students enter kindergarten at grade level. There is a tremendous amount of evidence that demonstrates if a child enters kindergarten below grade level that chances are that student will remain below grade level throughout their educational years.

The St. Mary's School District is very proud of the fact that we have made AYP and that we have a 90% graduation rate. These successes are related in part to the fact that we offer a half day four year old preschool program. The District is very concerned that without some sort of funding for the preschool program that the program may no longer be affordable. The district makes every effort to be accountable to the state for all funds received by producing students who can demonstrate that they are proficient on the state standards based assessments in reading, writing, and math. Although we continue to strive for excellence and we are not yet where we want to be, we have been producing students who are proficient and we have been making AYP.

Funding a half day voluntary four year old preschool program would help many districts throughout the state produce students who are proficient on the state standards based assessments and would be one of the wisest investments the state could make in the field of education.

Respectfully,

David Herbert

Dear Edra and Murray,

Attached is the sectional summary for SB 6, 27-LS0058\M.

Have you requested or received fiscal note(s) for SB 6? The Anchorage Daily News reported statewide cost numbers for the bill in an AP article over the weekend.

Please forward to me all fiscal notes on Senator Davis's bills when you receive them so we are better prepared for (S)EDC hearings.

Thank you for your consideration. Have a great week.

MEMORANDUM February 4, 2011

SUBJECT: Sectional Summary of SB 6 (Work Order No. 27-LS0058\M)

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends the description of an elementary school to include a prekindergarten program provided by a district.

Section 2. Establishes standards for a school district to provide an optional prekindergarten program.

Section 3. Amends the school age to include four or five year olds who attend a district prekindergarten program.

Section 4. Amends the current definition of "pre-elementary school" to include a prekindergarten program provided by a district.

Section 5. Adds a duty of the Board of Education and Early Development to adopt regulations for the implementation of a district prekindergarten program.

Section 6. Amends the determination of the number of schools in a district to include prekindergarten students for state funding purposes.

Section 7. Provides an exception to state funding of prekindergarten students for students four or five years of age who are enrolled in an alternatively funded preschool program at the school.

MEMORANDUM February 7, 2011

SUBJECT: Explanation of secs. 6 and 7 (SB 6)
(Work Order No. 27-LS0058\M)

TO: Senator Bettye Davis
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have asked about the effect of secs. 6 and 7 in the above bill. Those sections amend AS 14.17.905, pertaining to facilities constituting a school, by including prekindergarten students in the student count for school size purposes. A school size factor is applied under the funding formula under AS 14.17.450. For communities with an average daily membership of at least 101 but not more than 425, only one elementary school and one secondary school may be counted, but the size of the elementary school is affected by public prekindergarten students under sec. 6. That section clarifies the age of students who should be counted as elementary school students to include 4 and 5 year olds who are prekindergarten students at a district school. Since the smaller and larger districts do not differentiate between elementary and secondary students, the same change is not necessary, but the prekindergarten students are also counted in the average daily membership. Sec. 7 provides that no district, of whatever size, may include 4 or 5 year olds in the average daily membership count if the program in which the child is enrolled receives funding that is not provided for in the funding formula for the school under that section.

The context of bill sections 6 and 7 makes them more clear. In each section of the statutes where a description of a public elementary or pre-elementary school appears, the bill amends the description to include the optional district-based prekindergarten program students. Although the bill does not explicitly state that the students will be included in the average daily membership count (consistent with the structure of AS 14.17), if the prekindergarten students are enrolled in a public school, they are counted as such unless they are funded by another source. In other words, if the prekindergarten student is enrolled in a public school district program, by implication, the student is counted along with all other enrolled students. If the program is half day, then the 4 and 5 year olds will be counted as part-time students.

If I may be of further assistance, please advise.

Senator Bettye Davis

Senate Bill 6 27-LS0058

"An Act relating to providing a prekindergarten program within a school district; and providing for an effective date."

SPONSOR STATEMENT

Pre-K programs are growing in popularity across the country. Developmental research, neuroscience, and program evaluations have found that a child's experiences from birth to age five shape the brain's architecture and influence later life outcomes. SB 6 provides for a prekindergarten (Pre-K) program within Alaska school districts for students four and five years of age. Parents are not required to enroll their children in a Pre-K program. School districts are not required to initiate Pre-K programs but they must be supported in funding and development if they do. Students who are enrolled in a prekindergarten program will be counted in the "average daily membership" count for foundation formula funding.

Early education programs are one of the best public investments available to states. Over 40 states and the District of Columbia offer state-funded prekindergarten, and at least 17 states have provided funding supplements to Head Start. Early childhood policies vary from state to state, as well as program options, such as private child care, preschools, federally funded Head Start, and state prekindergarten programs. State leaders are responding to the realities of today's working families, federal and state policy pressures, and demands of the No Child Left Behind Act. More women with young children are in the workforce than in previous decades, and many children spend full workday hours in the care of others. For every dollar invested in Pre-K, there is estimated a $4 to $9 return to society in higher graduation and employment rates, higher earnings, less crime, less need for special education services, less use of public welfare systems, and better health.

Alaska not only has the benefit of building on a long history of successful early education programs for the last decade, but it now has the experience and results of the Alaska Pilot Pre-kindergarten Project (AP3) funded by the Legislature in 2009. Year One of the Pilot Pre-K Project found high numbers of children exceeding expected growth. While there is still extremely high need for the majority of children coming to the Pilot Pre-K Project behind typically-developing peers, this program shows what can be done with unprecedented levels of cooperation, coordination, and collaboration between Head Start programs and school districts which helped in alignment, transition, common planning and training. SB 6 expands on the $2 million start up funding in the Pilot Prekindergarten Project in an effort to make prekindergarten a reality and available all Alaska children statewide.

Early Care & Education

2008 Pre-K Legislative Update

May 2008

Preschool Expansions | Preschool Age Requirement | Other Preschool Program Components | Quality | Teachers | Community-based Providers |Assessment | Transportation | Governance, Councils and Studies | Movement in Non-PreK States | Other |

During the 2008 legislative session, at least 32 states and the District of Columbia introduced over 150 pieces of legislation on preschool, including bills to expand eligibility, increase or decrease funding, promote higher quality, support teachers, and establish early learning councils. This document provides an overview of proposed state legislation in these areas. Some state legislatures have completed their sessions and a few enacted bill examples are provided in this update.

At least eleven state legislatures— Alabama, Iowa, Florida, Tennessee, Kansas, Michigan, Missouri, Massachusetts, North Carolina, South Carolina and Virginia—are currently considering appropriation bills for preschool. Most of these are governor driven with some states considering significant funding increases even with budget deficits. At least two states have proposed changing their funding structure allocations for preschool. **Illinois** lawmakers proposed a bill that would increase the set-aside amount of the Early Childhood Block Grant from 11 percent to at least 20 percent by 2014 used to fund programs for children birth to age 3, depending on sufficient funding for grants to existing preschool programs. A **Missouri** bill would increase the annual allocation of gaming revenues to the Veteran's Commission and decrease the allocation to the Early Childhood Development, Education and Care Fund, which funds Missouri's pre-k program.

Also, there was legislative activity in states that currently do not have state-funded preschool programs. Seven state legislatures— Alaska, Idaho, Mississippi, New Hampshire, Rhode Island, South Dakota and Utah— proposed bills that focused on establishing statewide preschool programs, standards, and taskforces. To date, three state legislatures— Alaska, New Hampshire and Rhode Island—still have bills that are currently pending. A bill overview of these seven states' progress on pre-k is provided later in the document.

Preschool Expansions

Legislators in at least 12 states — California, Colorado, Georgia, Illinois, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Missouri, New York, Tennessee—and the District of Columbia proposed bills to expand their current state preschool programs. **Kentucky, Louisiana, Minnesota, Tennessee** and the **District of Columbia** proposed establishing universal preschool for 4-year-olds and **Georgia** proposed a bill to expand pre-k to all 3-year-olds. **Kentucky** and **Minnesota** also proposed bills establishing an at-risk preschool program for 3- and 4-year-olds. A **Kentucky** bill would establish a trust fund to allot grants to provide collaborative community-based preschool to serve low-income children living at 200 percent of FPL. **Illinois** lawmakers proposed removing certain provisions that limit funding distribution so that the state may achieve the goal of preschool for all. **Colorado's** school finance bill proposed an increase of 300 preschool spaces to bring its statewide total to 20,160 to be funded by a freeze on property tax mill levies. **Maryland** lawmakers proposed two bills that would expand eligibility to children of military families.

A **Missouri** bill would establish a pilot preschool plus grant program to serve up to 10,000 children with high-quality early childhood education services in school districts with at last 30 percent free or reduced lunch population. A **California** bill specifies that preschool is available to 3-and 4-year-olds and consolidates the funding for pre-k. **New York** lawmakers proposed a bill that would allow the commissioner to grant a waiver to certain school districts to expand grants to certain programs to fund full-day pre-k. A **Minnesota** bill would establish a Preschool through 3rd grade community grant program and would appropriate $5 million for the imitative. **Michigan** lawmakers passed a bill to allocate $99.6 million for school readiness, preschool and parent program grants to enable eligible districts to develop or expand preschool and parenting education programs. The bill is currently awaiting the governor's signature.

Preschool Age Requirement

Three states legislatures—Illinois, Iowa, and Tennessee—proposed changing preschool age requirements. **Iowa** lawmakers proposed that any child who is 4 years old on or before September 15 can enroll in preschool. A **Tennessee** bill changes the date from

September 30 to September 1 of which children must reach age 4 to enter preschool. **Illinois** legislators proposed allowing a child who has attended preschool and who will be 5-years-old by December 31 (currently September 1) to be allowed to attend school.

Other Preschool Program Components

A **Florida** bill proposed revising the number of preschool instructional hours from 540 to 720 hours for private preschool providers to be considered a full-time equivalent student in the voluntary pre-k program. **Colorado** lawmakers proposed a pre-k alignment bill, which would require preschool students to have a numerical identifier that would follow the child through the state's P-16 system. **Florida** legislators proposed a few bills that provide legislative intent to revise laws relating to pre-k through 12th grade and also proposed a bill for an amendment to the state constitution relating to preschool through 12th grade education.

Quality

State legislatures proposed bills on preschool quality, including quality rating systems (QRS), teacher quality improvements and supports. **Florida** lawmakers proposed two bills that would establish the Florida's Sunshine State Star QRS requirement for early learning programs including those participating in the voluntary pre-k program.

Professional Development

A **Florida** bill would establish a pilot program to enhance the quality of pre-k and provide education requirements for teachers. A **California** bill would require a system of professional development for prekindergarten teachers and would require the state to develop teaching competencies. An **Iowa** bill would appropriate $750,000 for implementation of a statewide professional development system to support the statewide 4-year-old preschool program. Another Iowa bill proposes if funding is made available for a professional development system that it be implemented by the state's department of education.

Teachers

State legislatures are examining ways to promote better teacher quality through training, certification and degree requirements for early education teachers. In recent years, some state lawmakers have proposed and enacted bills to increase teacher requirements while other legislatures have proposed or enacted bills to relax requirements. A **Florida** bill would require that pre-k classes by the 2010-11 school year have at least one pre-k instructor who holds an associate or bachelor's degree. **Vermont's** bill would require by 2011 all school district prekindergarten teachers be licensed. The bill also would require the commissioner of education and the commissioner of children and families examine the availability of sufficiently higher trained pre-k teachers. **Minnesota** lawmakers proposed a bill that would require preschool instructors to complete a reading instruction competence assessment before being granted an initial teaching license. **Oklahoma's** bill would require teacher early childhood certification be approved by the Oklahoma Commission for Teacher Preparation. **New Jersey** legislators proposed a bill that would require certification of new teachers hired by licensed child care centers that provide preschool classes in Abbott districts. A **Florida** bill would allow preschool teachers to be allowed to access Florida's retirement system benefits.

Maine enacted legislation that requires the rules established by the state board of education be amended before being approved to establish eligibility for an endorsement of a teacher employed during a certain period of time in a prekindergarten to 3rd grade program. **Tennessee** enacted legislation that directs the state to survey local school districts with preschool programs to determine if all employment rights for K-12 teachers apply to preschool teachers and report the findings to the legislature.

Community-based Providers

Four state legislatures—Missouri, New Jersey, Pennsylvania, and Vermont—proposed legislation on community-based providers. **Pennsylvania's** bill would allow center or family child care settings that have met or exceed a 3-star standard under the Keystone Stars quality rating system to be eligible for Pre-k Counts funding. **Vermont** lawmakers proposed authorizing school districts that do not yet participate in the STARS programs to be granted a 3-star eligibility if the program is in good regulatory standing. The bill also requires the department of children and families and education to approve rules for the STARS program for public and private providers. A **Missouri** bill would require the state to provide fully subsidized preschool at licensed child facilities that employ highly qualified teachers for children residing in a school district classified as unaccredited or provisionally accredited by the state board of education. **New Jersey's** bill would require the state to monitor twice a year contacts with private preschool providers in Abbott districts.

Assessment

Washington lawmakers proposed a bill that would require the state and Thrive by Five to make recommendations regarding the implementation of a statewide kindergarten entry assessment. **Florida** legislators proposed a bill that would have required private pre-k providers and public schools to conduct certain assessments of the progress of students enrolled in the voluntary pre-k program.

Transportation

Lawmakers in four states—Iowa, Illinois, Maine and New York—proposed legislation addressing transportation of preschool students. **New York's** bill would define "bus" to include preschool programs. **Illinois'** bill proposes to change the reimbursement for preschool transportation. **Iowa** lawmakers proposed a bill that would allow community empowerment areas to offer preschool transportation without approval of all the school districts. **Maine** enacted legislation requiring school districts to provide transportation to preschool

students.

Governance, Councils and Studies

Legislators in two states—Kansas and Connecticut—are considering governance bills. The **Kansas** bill transfers the prekindergarten pilot program from the Department of Social Services and the Children's Cabinet to the State Board of Education. **Connecticut's** bill proposes to add new members to the early childhood education cabinet.

At least six states legislatures —California, Hawaii, Iowa, Minnesota, New Hampshire and New Jersey—are considering bills that would establish a council, commission or partnership to examine early learning. **Hawaii** lawmakers are considering two bills to create an Early Learning Council. **California** legislators introduced legislation to create a preschool advisory council. A **New Hampshire** bill would establish a commission to study the feasibility of creating a preschool program. **Minnesota** lawmakers proposed three bills to create a P-20 Partnership and **New Jersey** proposed to create a P-20 Council. The **Iowa** legislature established a state committee on research an development of preschool through 12th grade. The governor signed the bill and is based on the prek-12 feasibility study committee created in 2007.

Five state legislatures—California, Georgia, Mississippi, Oklahoma and Tennessee—proposed bills to create a task force or conduct a study to examine preschool. **Mississippi** lawmakers proposed three bills establishing a task force to study universal pre-k. **California** legislators proposed a preschool quality commission to examine standards for programs educating 3-and 4-year-olds, including examining a quality rating system (QRS). **Oklahoma's** proposed legislation requires the Oklahoma Partnership for School Readiness Board to conduct an assessment of existing pre-k programs for effectiveness and accessibility. A **Tennessee** bill directs the state department of education to report on the costs associated with its preschool programs. **Georgia** passed a measure creating a House study committee on Georgia's pre-k program.

Movement in Non-Prekindergarten States

During the 2008 legislative session, seven states without state-funded preschool programs—Alaska, Idaho, Mississippi, New Hampshire, Rhode Island, South Dakota and Utah—proposed bills that focused on preschool.

Alaska lawmakers introduced two prekindergarten bills. One bill would allow the state board of education to adopt regulations to provide early education programs. Another bill, which is currently awaiting the governor's signature, allows school districts to provide pre-elementary and Head Start programs. Alaska's governor also proposed additional funding for the state early childhood education initiatives. **New Hampshire** legislators proposed legislation to establish a commission to study the feasibility of creating a preschool program. **Utah's** proposed bill would create a pilot project using a home-based educational technology program to develop school readiness skills of preschool children. **Utah** lawmakers enacted a bill that appropriates state funds for Head Start for the first time. The **Idaho** legislature considered two bills on pre-k, including a bill to establish a state funded community-based preschool program for at-risk 4-year-olds. Idaho maintained its Head Start supplement with TANF funds at the same level of FY 2007. **South Dakota's** proposed legislation would establish standards for pre-k programs and certified personnel. Lawmakers also proposed a bill that would allow pre-k programs in public schools and funds through the state aid education formula for preschoolers in accredited pre-k programs. **Rhode Island's** bill proposes a preschool program for at-risk 3-and 4-year-olds in communities with low performing schools.

Lawmakers in **Mississippi** introduced a total of seven bills in both houses on prekindergarten, which all failed. One bill would have established a pilot pre-k program eighteen counties that meet certain criteria. Three of the bills proposed would have created a task force to study universal pre-k. Three bills proposed appropriated funding to fund the Early Learning Collaborative Act of 2007, which set up a professional development system for early childhood caregivers and teachers. At the end of the session, legislators appropriated $3 million to support the governor's request to provide financial incentives for preschools to increase their educational content.

Other

- Hawaii lawmakers proposed a bill that would require qualified preschool teachers and aides for its junior kindergarten program. Minnesota proposed funding for voluntary full-day kindergarten.
- A New Jersey bill would continue the property tax exemption for portions of tax exempt building for preschool.
- California legislators proposed a bill that would require the creation and funding of a preschool pilot program to develop and demonstrate methods for preschool information transfer to public schools.
- A New Mexico bill would provide for an education data warehouse to serve pre-k through post-graduate education.

- A Minnesota bill would make changes to the prekindergarten exploratory projects and the involvement of the Minnesota Early Learning Foundation.

This document contains proposed and a few examples of enacted legislation from January 1, 2008 to April 21, 2008. The author used a variety of sources including state legislative websites and State Net, a legislative tracking database, for bill searches. Bills in carry-over states were highlighted when there was movement on the bill in 2008. This analysis is intended to provide examples of significant legislation in each state and does not include bills with technical changes. Alaska prekindergarten project gets high marks

(02/05/11 15:57:49)

An experimental prekindergarten project has produced good results, shining a light on a need for more attention to developmental education, education specialists told state lawmakers.

The education department delivered a report this week on the pilot project that focuses on Alaska Native households at or below the poverty level in six regions of the state, the Fairbanks Daily News-Miner reported. The pupils were 4-year-olds and some 5-year-olds.

Program director Cyndy Curran said more than 70 percent of the 345 students improved their vocabulary levels as expected or performed better during the first year.

But vocabulary tests suggested almost three-quarters of those students entered the pilot program lagging behind their peers nationally, the department said.

The program, which costs $2 million annually, is in its second year.

Gov. Sean Parnell's proposed budget included another $2 million to continue the program, Curran told the House Finance Committee's education subcommittee on Thursday.

Rep. Tammie Wilson, a North Pole Republican who is chairwoman of the subcommittee, asked Curran's office for more information to help lawmakers weigh the project's performance. She said the department estimated a statewide prekindergarten program, similar in function to the pilot project, would cost $130 million.

"Those are big numbers," she said.

The newspaper reported that in the Yukon-Koyukuk district, the project opened new preschool classrooms in Minto, where administrators worked closely with the Tanana Chiefs Conference Head Start program, and Allakaket, where teachers incorporated Athabaskan language immersion into programming.

Press Release

COMMISSIONER'S OFFICE

FOR IMMEDIATE RELEASE
July 22, 2009

Six school districts will pilot preschool programs with state grants

JUNEAU -- Six Alaska school districts have been awarded state grants to pilot preschool programs over the next school year, Alaska Education Commissioner Larry LeDoux announced today.

The grants, ranging from $150,000 to $380,000 each, will allow the recipients to serve approximately 330 children and their families in half-day programs during the school year. The pilot program was proposed by the Palin administration and funded at $2 million by the legislature this past session.

"The pilot's purpose is not to establish whether preschool is beneficial for children. We already know it does help prepare children to start kindergarten ready to learn," LeDoux said. "Rather, the pilot will allow school districts to create preschool programs that incorporate Alaska's early learning guidelines in ways that are tailored to their communities."

Improving families' voluntary access to affordable, high-quality early care and education programs is one of the actions recommended in the Alaska Education Plan, created by educators and members of the public at a summit in November 2008. The education plan also recommends that Alaska's public education system be aligned from preschool to postsecondary, so that students are prepared to transition to the next level of education and eventually the work force.

Aside from operating in-school programs, the grant recipients are expected to form partnerships that will strengthen current early learning providers in their communities, and to provide guidance to families that choose to care for their young children at home. The grant also requires the recipients to use specific assessment tools to evaluate the children.

The following school districts received grants:
Anchorage, two classrooms serving 32 children $167,684.
Bering Strait, four classrooms serving 62 children, $362,828.

Nome, two classrooms serving 50 children, $219,539.
Juneau, two classrooms serving 40 children, $201,073.
Lower Kuskokwim, two classrooms serving 40 students, $337,732.
Yukon Koyukuk, seven classrooms serving 39 students, $325,445.

In addition, the department will use the remaining $385,699 of the legislative appropriation to support early learning in chronically underperforming school districts, affecting up to seven additional communities and 100 additional children.

Early Returns

Lawmakers are sold on the importance of early learning programs. Now they're figuring out how to pay for them.

BY JULIE POPPE

Early education programs that prepare children for kindergarten may be the single most important thing that helps them graduate from high school, stay out of trouble with the law and hold good jobs later in life.

Even though the poor economy has restricted the money available for these early programs, state lawmakers have increased funding for pre-K in the last several years. But as states try to cope with shrinking revenues—a situation expected to last at least a couple of more years—they will find it more difficult to do so.

Steve Barnett, a national researcher and economist with the National Institute for Early Education Research, argues that pre-K is an investment in the future. "When states cut pre-K, they increase the future costs of state and local government and decrease future tax revenues, so families get hurt now and in the future," he says. Cuts in state pre-K budgets now come at "just the time when parents have less ability to pay for such programs themselves."

Research shows pre-K improves kids' lives in the short and long term. High-quality preschool programs help promote a child's intellect, build strong social and emotional skills, and boost motivation.

Illinois Representative Roger Eddy, a school superintendent, started pre-K in his district more than 20 years ago. He has seen first-hand the benefits of preschool, but knows cuts are sometimes necessary. "So far," he says, "budget cuts are not trimming [preschool] classrooms."

Some 80 percent of all 4-year-olds attend a preschool program, with about half in public programs and the other half in private, according to the National Institute for Early Education Research. More than 1 million 3- and 4-year-olds attended state-funded pre-K programs in 2008.

Julie Poppe covers pre-K issues for NCSL.

HOLDING ONTO FUNDING

Maybe the most surprising thing about pre-K is that, for the most part, it has not been on the chopping block. According to a recent Pew Center on the States report, overall state pre-K funding in fiscal year 2010 increased by more than $64 million. A legislative fiscal survey by the National Conference of State Legislatures also showed lawmakers increased support for early care and education programs in the previous fiscal year even as budget gaps emerged.

REPRESENTATIVE ROGER EDDY ILLINOIS

Forty states and the District of Columbia currently provide a total of $5.3 billion in state funding for pre-K programs. Twenty-three states and D.C. increased pre-K investments for FY 2010. Alaska and Rhode Island—states that have not previously invested money in pre-K—started pilot programs. Alabama increased funding by $19 million, New Jersey increased funding by 10 percent, and Texas lawmakers authorized a $25 million

increase over two years and pushed for quality improvements. And amid large budget shortfalls, Pennsylvania and Tennessee were able to keep preschool funding stable.

Some state lawmakers last year faced big proposed cuts, however. Illinois, a leader over the years in pre-K support, cut funding, along with nine other states—Connecticut, Louisiana, Massachusetts, Michigan, New York, North Carolina, Ohio, South Carolina and Washington.

Illinois Representative Elizabeth Coulson was relieved pre-K funding was cut by only 10 percent compared to the proposed 50 percent cut, and that the cuts were made to administrative costs, not services to children. "In a bad budget year," she says, "Illinois lawmakers were able to enact a capital budget bill and provide construction dollars for preschool facilities, with no or limited decreases to services."

REPRESENTATIVE ELIZABETH COULSON ILLINOIS

GETTING CREATIVE

A little creativity goes a long way as state policymakers look for ways to pay for early childhood education.

Maryland and New Jersey have used money provided under Title I of the federal Elementary and Secondary Education Act. A recent Pew Center on the States report, in fact, recommends state and local policymakers consider new money under the act that was made available through the federal stimulus act.

Decision makers, including school superintendents, may not be aware that Title I can be used for preschool. This flexible funding stream allows districts to subcontract with Head Start and child care programs that meet certain standards to provide services. The U.S. Department of Education issued guidelines for using the money in 2004 and again in September 2009.

In Maryland, 24 school districts use the money for pre-K. The Montgomery County Public Schools used $900,000 from Title I last year to extend 13 Head Start preschool classes from half day to full day for a small group of children. The results are encouraging. These students made strong gains in reading and some gains in math, according to a recent study by the district. It is now using the federal stimulus money and in-kind contributions from Head Start to expand another 21 classrooms to full time. Money also is being used to provide instructional materials and professional development for early education teachers.

"Pre-K is a better use of time and a wiser expenditure of money" than remediation, says Jerry Weast, schools superintendent in Montgomery County, Md. He says he's confident that his district's pre-K programs are setting the foundation for academic, social and emotional skills, and the life-long desire for kids to learn.

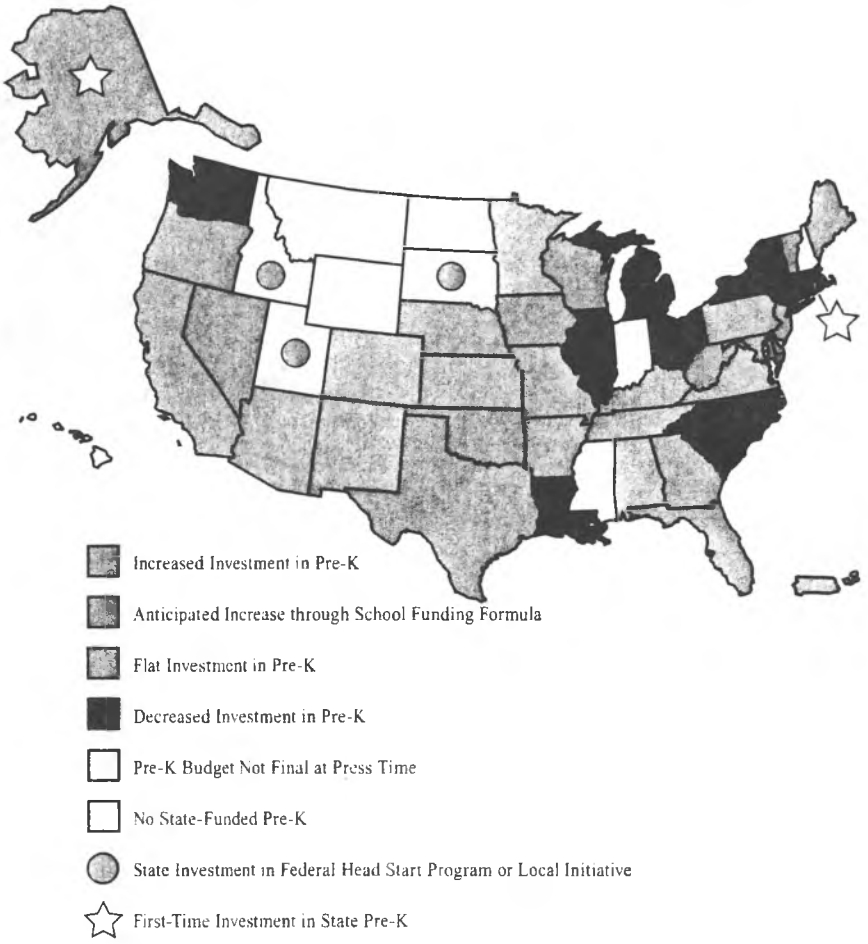
FEDERAL FUNDS FILL GAPS

In April 2009, the U.S. Department of Health and Human Services announced it would provide $100 million in federal stimulus money to states to establish State Advisory Councils on Early Childhood Education and Care, which were mandated by the federal Head Start Act of 2007.

The federal mandate and stimulus money for each state to create an advisory council is an opportunity for legislators to get involved in early childhood policy in their state and address the needs of their youngest citizens. The councils will coordinate existing early childhood efforts among federally and state-funded programs and agencies.

States with early childhood advisory councils that pre-date the Head Start Act also can apply to receive stimulus money. Twenty-one states started early childhood leadership bodies before the federal model was mandated.

Seventeen states included legislators in council membership. Shortly after the federal act went into effect, Massachusetts and Minnesota passed legislation to create councils and both included legislators, though the federal law does not require it.



Minnesota Representative Nora Slawik, member of the governor's Early Childhood Advisory Council, says the council has been working hard to secure the ARRA funds for strategic planning purposes. "Having this money will fill in some of the gaps in the early childhood system and allow us to move forward together more strategically," says Slawik.

REPRESENTATIVE NORA SLAWIK MINNESOTA

LEGISLATIVE ACTION ON PRE-K BUDGETS IN FY 2010

In 15 states, lawmakers increased pre-K funding, including two with first-time investments. Nine states and the District of Columbia anticipate increases through their school funding formulas. Six states funded their programs at 2009 levels. Another 10 legislatures decreased pre-K investments. Overall, state pre-K funding increased by a projected $64 million.

Source: Votes Count: Legislative Action on Pre-K Fiscal Year 2010, 2009, Pew Center on the States.

EXPANDING IN TEXAS

During the mid-1980s, Texas began a state-funded early education program for children considered at risk—poor and homeless kids, and those for whom English was a second language. In 2006 and 2007, the state added children of military families and children in foster care. With 18 active military installations and nearly 40 percent of children of active duty military personnel under age 6, Texas lawmakers thought it was important to support the educational needs of these youngsters.

Senator Judith Zaffirini, chair of the higher education committee, believes that success for students in college begins as early as preschool. "We need to look at this as a continuum. The solution to reducing the dropout rate or kids not making it to college is in early childhood education," she says.

Representative Diane Patrick introduced a bill in 2009 aimed at creating a new grant program to provide money to school districts that want to offer full-day programs. "We can't afford dropouts and incarceration, and we can't afford for citizens to not be productive. We need to get kids off to the right start," says Patrick.

SENATOR JUDITH ZAFFIRINI TEXAS

REPRESENTATIVE DIANE PATRICK

The bill received bipartisan support from both Texas chambers—Zaffirini co-sponsored the bill in the Senate—and passed with two-thirds of the votes. The governor vetoed the bill, however, saying fewer children would be served if the bill were enacted because it targeted full-day programs. The Legislature was able to add $25 million to the existing pre-K grant program, bringing the funding total to more than $100 million for FY 2011.

"The bill was focused on higher quality standards, such as certified early childhood teachers, standardized curriculum, evaluation, collaborative partnerships with private providers, and increased funding to local districts to pay for the actual cost," says Patrick.

It also would have set the child-to-staff ratio at 1:11, close to the national benchmark of 1:10. "I think the bill would have raised the level of importance of quality of preschool," she says. She intends to address the issue again in 2011 when the legislature holds its next session.

RHODE ISLAND QUALITY

Rhode Island lawmakers faced a $500 million budget gap while crafting their 2010 budget, which is on top of the $449 million gap they closed in 2009. The state is facing more budget cuts for FY 2011, revenue estimates are dire, and nearly 16 percent of the state's 248,000 kids live in poverty.

Even so, the General Assembly is providing $700,000 for pilot programs in a variety of settings in seven school districts. Two of these new pprograms also use Title I stimulus money to help pay for pre-K. Pilot classrooms must adhere to high standards, with all pre-K teachers holding a B.A. with a state certification in early childhood education, and other national benchmarks, including smaller classrooms and fewer children per teacher.

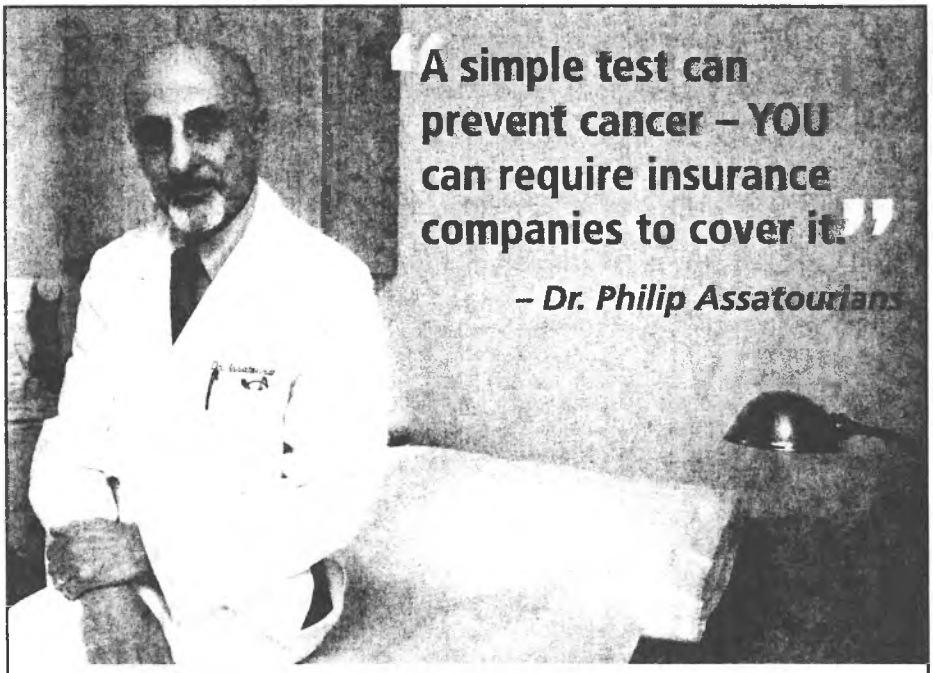
Some in the state see early learning as the "little engine that could" moving another

SENATE PRESIDENT TERESA PAIVA WEED RHODE ISLAND

inch forward even in tough economic times because of legislative, business and community support and advocacy.

Rhode Island Senate President Teresa Paiva Weed has made sure early care and education programs hire certified instructors who have the appropriate skills to deal with young children. She sponsored a bill to create a quality improvement and rating system in 2007, and then sponsored a pre-K bill to explore policy and funding options in 2008. Both were enacted.

"During this serious fiscal situation, I am optimistic that the pre-K pilots will prove their value," says Paiva Weed.



The state is using stimulus money for child care and Head Start, too. Close to $700,000 in stimulus money will pay for better quality infant and toddler care, training for early childhood teachers, financial incentives for providers to meet higher standards, and scholarships for teachers to pursue advanced degrees.

"We have learned to use a combination of strategies to increase quality and access," says Paiva Weed. "Together, they will have a positive impact on a range of social, health and educational outcomes."

Lawmakers are bracing themselves for prolonged fiscal difficulties as revenues decline and federal stimulus money runs out. And while legislators may be less likely to cut programs they have worked hard to expand in recent years, it's going to be a tough year for pre-K.

Illinois' Eddy sums up the difficult position in which many legislators find themselves. "Preschool is definitely among the priorities," he says. "But when property values are down, pension costs are up, Medicaid costs are up and revenue doesn't rebound in our state, this raises some tough questions."

CHECK OUT pending federal legislation that could have a huge effect on funding for preschool education at www.ncsl.org/magazine.

Colon cancer is one of the most preventable and curable forms of cancer, but only if caught early by cancer screenings like colonoscopies. Put simply, colonoscopies save lives, but not every insurance plan covers regular screenings, leaving millions of people without access to a lifesaving test that can eliminate their chances of ever getting cancer.

Legislators: Require insurance companies to cover the cost of lifesaving cancer screenings.

2008 Pre-K Legislative Update

May 2008

Preschool Expansions | Preschool Age Requirement | Other Preschool Program Components | Quality | Teachers | Community-based Providers |Assessment | Transportation | Governance, Councils and Studies | Movement in Non-PreK States | Other |

During the 2008 legislative session, at least 32 states and the District of Columbia introduced over 150 pieces of legislation on preschool, including bills to expand eligibility, increase or decrease funding, promote higher quality, support teachers, and establish early learning councils. This document provides an overview of proposed state legislation in these areas. Some state legislatures have completed their sessions and a few enacted bill examples are provided in this update.

At least eleven state legislatures— Alabama, Iowa, Florida, Tennessee, Kansas, Michigan, Missouri, Massachusetts, North Carolina, South Carolina and Virginia—are currently considering appropriation bills for preschool. Most of these are governor driven with some states considering significant funding increases even with budget deficits. At least two states have proposed changing their funding structure allocations for preschool. **Illinois** lawmakers proposed a bill that would increase the set-aside amount of the Early Childhood Block Grant from 11 percent to at least 20 percent by 2014 used to fund programs for children birth to age 3, depending on sufficient funding for grants to existing preschool programs. A **Missouri** bill would increase the annual allocation of gaming revenues to the Veteran's Commission and decrease the allocation to the Early Childhood Development, Education and Care Fund, which funds Missouri's pre-k program.

Also, there was legislative activity in states that currently do not have state-funded preschool programs. Seven state legislatures— Alaska, Idaho, Mississippi, New Hampshire, Rhode Island, South Dakota and Utah— proposed bills that focused on establishing statewide preschool programs, standards, and taskforces. To date, three state legislatures— Alaska, New Hampshire and Rhode Island—still have bills that are currently pending. A bill overview of these seven states' progress on pre-k is provided later in the document.

Preschool Expansions

Legislators in at least 12 states — California, Colorado, Georgia, Illinois, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Missouri, New York, Tennessee—and the District of Columbia proposed bills to expand their current state preschool programs. **Kentucky, Louisiana, Minnesota, Tennessee** and the **District of Columbia** proposed establishing universal preschool for 4-year-olds and **Georgia** proposed a bill to expand pre-k to all 3-year-olds. **Kentucky** and **Minnesota** also proposed bills establishing an at-risk preschool program for 3- and 4-year-olds. A **Kentucky** bill would establish a trust fund to allot grants to provide collaborative community-based preschool to serve low-income children living at 200 percent of FPL. **Illinois** lawmakers proposed removing certain provisions that limit funding distribution so that the state may achieve the goal of preschool for all. **Colorado's** school finance bill proposed an increase of 300 preschool spaces to bring its statewide total to 20,160 to be funded by a freeze on property tax mill levies. **Maryland** lawmakers proposed two bills that would expand eligibility to children of military families.

A **Missouri** bill would establish a pilot preschool plus grant program to serve up to 10,000 children with high-quality early childhood education services in school districts with at last 30 percent free or reduced lunch population. A **California** bill specifies that preschool is available to 3-and 4-year-olds and consolidates the funding for pre-k. **New York** lawmakers proposed a bill that would allow the commissioner to grant a waiver to certain school districts to expand grants to certain programs to fund full-day pre-k. A **Minnesota** bill would establish a Preschool through 3rd grade community grant program and would appropriate $5 million for the imitative. **Michigan** lawmakers passed a bill to allocate $99.6 million for school readiness, preschool and parent program grants to enable eligible districts to develop or expand preschool and parenting education programs. The bill is currently awaiting the governor's signature.

Preschool Age Requirement

Three states legislatures—Illinois, Iowa, and Tennessee—proposed changing preschool age requirements. **Iowa** lawmakers proposed that any child who is 4 years old on or before September 15 can enroll in preschool. A **Tennessee** bill changes the date from

September 30 to September 1 of which children must reach age 4 to enter preschool. **Illinois** legislators proposed allowing a child who has attended preschool and who will be 5-years-old by December 31 (currently September 1) to be allowed to attend school.

Other Preschool Program Components

A **Florida** bill proposed revising the number of preschool instructional hours from 540 to 720 hours for private preschool providers to be considered a full-time equivalent student in the voluntary pre-k program. **Colorado** lawmakers proposed a pre-k alignment bill, which would require preschool students to have a numerical identifier that would follow the child through the state's P-16 system. **Florida** legislators proposed a few bills that provide legislative intent to revise laws relating to pre-k through 12th grade and also proposed a bill for an amendment to the state constitution relating to preschool through 12th grade education.

Quality

State legislatures proposed bills on preschool quality, including quality rating systems (QRS), teacher quality improvements and supports. **Florida** lawmakers proposed two bills that would establish the Florida's Sunshine State Star QRS requirement for early learning programs including those participating in the voluntary pre-k program.

Professional Development

A **Florida** bill would establish a pilot program to enhance the quality of pre-k and provide education requirements for teachers. A **California** bill would require a system of professional development for prekindergarten teachers and would require the state to develop teaching competencies. An **Iowa** bill would appropriate $750,000 for implementation of a statewide professional development system to support the statewide 4-year-old preschool program. Another Iowa bill proposes if funding is made available for a professional development system that it be implemented by the state's department of education.

Teachers

State legislatures are examining ways to promote better teacher quality through training, certification and degree requirements for early education teachers. In recent years, some state lawmakers have proposed and enacted bills to increase teacher requirements while other legislatures have proposed or enacted bills to relax requirements. A **Florida** bill would require that pre-k classes by the 2010-11 school year have at least one pre-k instructor who holds an associate or bachelor's degree. **Vermont's** bill would require by 2011 all school district prekindergarten teachers be licensed. The bill also would require the commissioner of education and the commissioner of children and families examine the availability of sufficiently higher trained pre-k teachers. **Minnesota** lawmakers proposed a bill that would require preschool instructors to complete a reading instruction competence assessment before being granted an initial teaching license. **Oklahoma's** bill would require teacher early childhood certification be approved by the Oklahoma Commission for Teacher Preparation. **New Jersey** legislators proposed a bill that would require certification of new teachers hired by licensed child care centers that provide preschool classes in Abbott districts. A **Florida** bill would allow preschool teachers to be allowed to access Florida's retirement system benefits.

Maine enacted legislation that requires the rules established by the state board of education be amended before being approved to establish eligibility for an endorsement of a teacher employed during a certain period of time in a prekindergarten to 3rd grade program. **Tennessee** enacted legislation that directs the state to survey local school districts with preschool programs to determine if all employment rights for K-12 teachers apply to preschool teachers and report the findings to the legislature.

Community-based Providers

Four state legislatures—Missouri, New Jersey, Pennsylvania, and Vermont—proposed legislation on community-based providers. **Pennsylvania's** bill would allow center or family child care settings that have met or exceed a 3-star standard under the Keystone Stars quality rating system to be eligible for Pre-k Counts funding. **Vermont** lawmakers proposed authorizing school districts that do not yet participate in the STARS programs to be granted a 3-star eligibility if the program is in good regulatory standing. The bill also requires the department of children and families and education to approve rules for the STARS program for public and private providers. A **Missouri** bill would require the state to provide fully subsidized preschool at licensed child facilities that employ highly qualified teachers for children residing in a school district classified as unaccredited or provisionally accredited by the state board of education. **New Jersey's** bill would require the state to monitor twice a year contacts with private preschool providers in Abbott districts.

Assessment

Washington lawmakers proposed a bill that would require the state and Thrive by Five to make recommendations regarding the implementation of a statewide kindergarten entry assessment. **Florida** legislators proposed a bill that would have required private pre-k providers and public schools to conduct certain assessments of the progress of students enrolled in the voluntary pre-k program.

Transportation

Lawmakers in four states—Iowa, Illinois, Maine and New York—proposed legislation addressing transportation of preschool students. **New York's** bill would define "bus" to include preschool programs. **Illinois'** bill proposes to change the reimbursement for preschool transportation. **Iowa** lawmakers proposed a bill that would allow community empowerment areas to offer preschool transportation without approval of all the school districts. **Maine** enacted legislation requiring school districts to provide transportation to preschool

students.

Governance, Councils and Studies

Legislators in two states—Kansas and Connecticut—are considering governance bills. The **Kansas** bill transfers the prekindergarten pilot program from the Department of Social Services and the Children's Cabinet to the State Board of Education. **Connecticut's** bill proposes to add new members to the early childhood education cabinet.

At least six states legislatures —California, Hawaii, Iowa, Minnesota, New Hampshire and New Jersey—are considering bills that would establish a council, commission or partnership to examine early learning. **Hawaii** lawmakers are considering two bills to create an Early Learning Council. **California** legislators introduced legislation to create a preschool advisory council. A **New Hampshire** bill would establish a commission to study the feasibility of creating a preschool program. **Minnesota** lawmakers proposed three bills to create a P-20 Partnership and **New Jersey** proposed to create a P-20 Council. The **Iowa** legislature established a state committee on research an development of preschool through 12th grade. The governor signed the bill and is based on the prek-12 feasibility study committee created in 2007.

Five state legislatures—California, Georgia, Mississippi, Oklahoma and Tennessee—proposed bills to create a task force or conduct a study to examine preschool. **Mississippi** lawmakers proposed three bills establishing a task force to study universal pre-k. **California** legislators proposed a preschool quality commission to examine standards for programs educating 3-and 4-year-olds, including examining a quality rating system (QRS). **Oklahoma's** proposed legislation requires the Oklahoma Partnership for School Readiness Board to conduct an assessment of existing pre-k programs for effectiveness and accessibility. A **Tennessee** bill directs the state department of education to report on the costs associated with its preschool programs. **Georgia** passed a measure creating a House study committee on Georgia's pre-k program.

Movement in Non-Prekindergarten States

During the 2008 legislative session, seven states without state-funded preschool programs—Alaska, Idaho, Mississippi, New Hampshire, Rhode Island, South Dakota and Utah—proposed bills that focused on preschool.

Alaska lawmakers introduced two prekindergarten bills. One bill would allow the state board of education to adopt regulations to provide early education programs. Another bill, which is currently awaiting the governor's signature, allows school districts to provide pre-elementary and Head Start programs. Alaska's governor also proposed additional funding for the state early childhood education initiatives. **New Hampshire** legislators proposed legislation to establish a commission to study the feasibility of creating a preschool program. **Utah's** proposed bill would create a pilot project using a home-based educational technology program to develop school readiness skills of preschool children. **Utah** lawmakers enacted a bill that appropriates state funds for Head Start for the first time. The **Idaho** legislature considered two bills on pre-k, including a bill to establish a state funded community-based preschool program for at-risk 4-year-olds. Idaho maintained its Head Start supplement with TANF funds at the same level of FY 2007. **South Dakota's** proposed legislation would establish standards for pre-k programs and certified personnel. Lawmakers also proposed a bill that would allow pre-k programs in public schools and funds through the state aid education formula for preschoolers in accredited pre-k programs. **Rhode Island's** bill proposes a preschool program for at-risk 3-and 4-year-olds in communities with low performing schools.

Lawmakers in **Mississippi** introduced a total of seven bills in both houses on prekindergarten, which all failed. One bill would have established a pilot pre-k program eighteen counties that meet certain criteria. Three of the bills proposed would have created a task force to study universal pre-k. Three bills proposed appropriated funding to fund the Early Learning Collaborative Act of 2007, which set up a professional development system for early childhood caregivers and teachers. At the end of the session, legislators appropriated $3 million to support the governor's request to provide financial incentives for preschools to increase their educational content.

Other

- Hawaii lawmakers proposed a bill that would require qualified preschool teachers and aides for its junior kindergarten program. Minnesota proposed funding for voluntary full-day kindergarten.
- A New Jersey bill would continue the property tax exemption for portions of tax exempt building for preschool.
- California legislators proposed a bill that would require the creation and funding of a preschool pilot program to develop and demonstrate methods for preschool information transfer to public schools.
- A New Mexico bill would provide for an education data warehouse to serve pre-k through post-graduate education.
- A Minnesota bill would make changes to the prekindergarten exploratory projects and the involvement of the Minnesota Early Learning Foundation.

This document contains proposed and a few examples of enacted legislation from January 1, 2008 to April 21, 2008. The author used a variety of sources including state legislative websites and State Net, a legislative tracking database, for bill searches. Bills in carry-over states were highlighted when there was movement on the bill in 2008. This analysis is intended to provide examples of significant legislation in each state and does not include bills with technical changes. Please contact Julie Poppe at julie.poppe@ncsl.org for more information.

The Science of Early Childhood Development

Closing the Gap Between What We Know and What We Do

National Scientific Council
Center on the Developing Child at Harvard University
www.developingchild.net

- Environmental protection policies need continuous updating and enforcement if they are to succeed in reducing prenatal and early childhood exposures to substances that have clearly documented toxic effects on the immature brain. These include mercury in fish, lead in soil, and organophosphates in insecticides, among many others.
- The fact that fetal exposure to alcohol is the leading preventable cause of mental retardation in the United States directs our attention to the need for new and creative efforts to reduce alcohol consumption during pregnancy.

Concept 3: The interactive influences of genes and experience literally shape the architecture of the developing brain, and the active ingredient is the "serve and return" nature of children's engagement in relationships with their parents and other caregivers in their family or community.

The architecture of the brain is composed of highly integrated sets of neural circuits (i.e., connections among brain cells) that are "wired" under the continuous and mutual influences of both genetics and environment. Genes determine when specific brain circuits are formed and individual experiences then shape how that formation unfolds. This developmental process is fueled by a self-initiated, inborn drive toward competence that is an essential characteristic of human nature. Appropriate sensory input (e.g., through hearing and vision) and stable, responsive relationships build healthy brain architecture that provides a strong foundation for lifelong learning, behavior, and health. The most important relationships begin in the family but often also involve other adults who play important roles in the lives of young children, including providers of early care and education.

What scientists refer to as interaction, mutuality, and reciprocity can be understood as comparable to the process of "serve and return" in games such as tennis and volleyball. In early childhood development, serve and return happens when young children naturally reach out for interaction through babbling, facial expressions, words, gestures, and cries, and adults respond by getting in sync and doing the same kind of vocalizing and gesturing back at them, and the process continues back and forth. Another important aspect of the serve and return notion of interaction is that it works best when it is embedded in an ongoing relationship between a child and an adult who is responsive to the child's own unique individuality. Decades of research tell us that mutually rewarding interactions are essential prerequisites for the development of healthy brain circuits and increasingly complex skills.

Implications for Policy and Practice

- Healthy communities foster the development of healthy children through the informal support that families provide for each other. When parents are inexperienced in child-rearing or overwhelmed by economic insecurity or threatening community conditions, effective parent education and family support programs can help them sustain the kinds of growth-promoting experiences that build child competence and shape healthy brain architecture. When informal supports and community programs are not sufficient, professional assistance can make an important difference in preventing the formation of faulty brain circuits and the developmental problems that follow. However, professionals with appropriate expertise are relatively limited in number, and their availability will require significant investment in specialized training,

particularly in the domains of maternal and early childhood mental health.

- Business executives, civic leaders, and government officials at all levels should work together to develop better private sector and public policies to provide parents with more viable choices about how to balance their work and parenting responsibilities after the birth of a baby or adoption of a child. During early infancy, when parent-child bonding and emerging attachments are so important, there is a pressing need to strike a better balance between options that support parents to care for their babies at home and those that provide affordable, quality child care for parents who return to work or attend school. This also calls our attention to the need for a more child-oriented perspective on the implications of mandated employment for mothers of very young children who receive welfare support.

Increasingly complex skills build on the more basic, foundational capabilities that precede them.

- The important influence of positive relationships in shaping the architecture of the developing brain indicates that all of society would benefit from better trained personnel in early child care settings, as well as reduced staff turnover rates which currently undermine the relationships that young children have with the adults who provide much of their daily care. Policy makers should examine the potential impact of alternative strategies for increasing the retention of qualified staff, such as competitive salaries and benefits, opportunities for career advancement linked to additional education, and greater respect for their work as a valued profession. Promising initiatives can be modeled after the successful investments made by the U.S. Department of Defense, which has a very high quality system of early care and education.

Concept 4: Both brain architecture and developing abilities are built "from the bottom up," with simple circuits and skills providing the scaffolding for more advanced circuits and skills over time.

Brain circuits that process basic information are wired earlier than those that process more complex information. Higher level circuits build on lower level circuits, and adaptation at higher levels is more difficult if lower level circuits were not wired properly. Parallel to the construction of brain circuits, increasingly complex skills build on the more basic, foundational capabilities that precede them. For example, the ability to understand and then say the names of objects depends upon earlier development of the capacity to differentiate and reproduce the sounds of one's native language. And the circuits that underlie the ability to put words together to speak in phrases form a foundation for the subsequent mastery of reading a written sentence in a book. Stated in simple terms, circuits build on circuits and skill begets skill.

Implications for Policy and Practice

- Policy makers should consider increasing the availability of parent education and family support programs that have been demonstrated to be effective. These services should begin soon after birth for mothers and fathers with limited education to help them create a home environment that provides the kind of rich language exposure, positive social interactions, and early literacy experiences that increase the probability that their child will enter school with the skills needed to succeed. When children are born under significantly adverse circumstances, immediate intervention is warranted, including prenatal support services where feasible. Effective programs can be provided through voluntary associations, community-based organizations, and employer-sponsored initiatives, as well as through government-funded services. Evidence-based supports that are provided earlier rather than later will have the greatest impact, as they help establish healthy brain architecture during the period when lower-level circuits are being constructed (even before birth), thereby creating a strong foundation on which higher-level skills can be built.

Emotional well-being, social competence, and cognitive abilities together are the bricks and mortar that comprise the foundation of human development.

- To help children with developmental impairments master the adaptive skills needed to realize their full potential, outreach efforts should be increased to enroll all eligible children in early intervention programs. When positive changes in development are promoted through interventions at a young age, they help build a sturdier foundation for the later achievement of higher level abilities. This underscores the urgent need to identify sensory impairments as soon after birth as possible, so that corrective devices (e.g., hearing aids and eyeglasses) as well as appropriate habilitative services can be provided during the time that basic brain architecture is being established.

Concept 5: Cognitive, emotional, and social capabilities are inextricably intertwined throughout the life course.

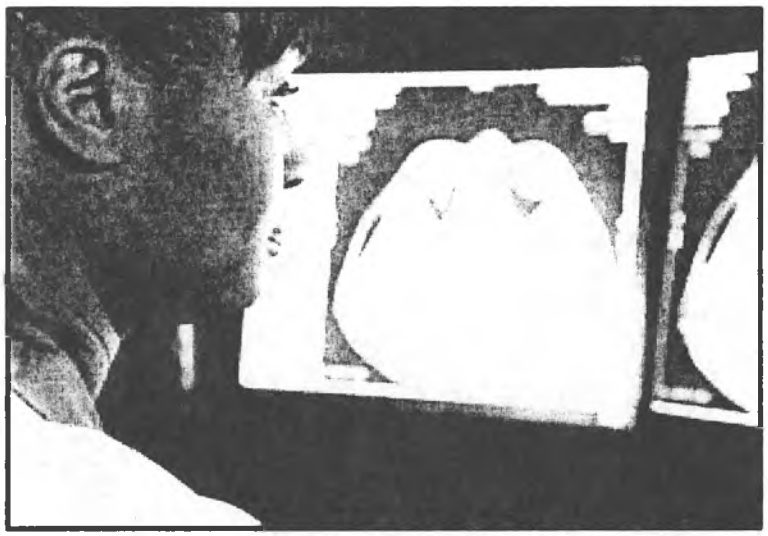
The brain is a highly integrated organ and its multiple functions operate in a richly coordinated fashion. Emotional well-being and social competence provide a strong foundation for emerging cognitive abilities, and together they are the bricks and mortar that comprise the foundation of human development. Thus, oral language acquisition depends not only on adequate hearing, the ability to differentiate sounds, and the capacity to link meaning to specific words, but also on the ability to concentrate, pay attention, and engage in meaningful social interaction. Furthermore, the emotional health, social skills, and cognitive-linguistic capacities that emerge in the early years are all important prerequisites for success in school and later in the workplace and community. Brain architecture and the immune system also interact as they mature, which influences all domains of development and health.

Implications for Policy and Practice

- When parents, informal community supports, and professionally staffed early childhood care and education programs all pay attention to young children's emotional and social needs as well as to their mastery of literacy and cognitive skills, they have maximum impact on the development of sturdy brain architecture.

Conversely, preschool policies and programs that place disproportionate emphasis on didactic approaches to academic skills are less likely to prepare young children to succeed in school than experiences that embed the promotion of literacy and numeracy in a rich environment of age-appropriate social interaction. The science of early childhood and early brain development clearly indicates that state and local officials should support the implementation of both child care standards and preschool curricula that promote a balanced and developmentally appropriate approach to the "whole child."

- Parents, child care providers, and early educators who are seeking help to manage problematic behavior in young children warrant serious attention. With increasing numbers of children being expelled from preschool programs and/or treated with drugs, greater investments are needed to confront the serious shortage of professionals who are qualified to address the behavioral and mental health needs of infants, toddlers, and preschoolers. Expanded opportunities for professional training, stronger incentives for clinicians to work with young children and their parents, and the promotion of consulting relationships among early childhood mental health experts, child care providers, and preschool teachers would provide important first steps toward closing the gap between what we know and what we do to deal with difficult behavior and prevent more serious mental health problems in the earliest years of life.



Concept 6: Toxic stress in early childhood is associated with persistent effects on the nervous system and stress hormone systems that can damage developing brain architecture and lead to lifelong problems in learning, behavior, and both physical and mental health.

Activation of the body's stress management systems produces a variety of physiological reactions. These include an increase in heart rate, rise in blood pressure, and elevated levels of stress hormones (e.g., cortisol) and proteins associated with inflammation (e.g., cytokines). Such responses prepare the body to deal with threat (i.e., "fight or flight") and are essential to survival. Healthy development depends on the capacity of these systems to ramp up rapidly in the face of stress as well as their ability to return to baseline when the threat has been mastered. When these physiological responses remain activated at high levels over a significant period of time, they can have adverse effects. Most prominent among these are the consequences of persistently elevated cortisol levels, which can literally be toxic to developing brain architecture.

The experience of stress in early childhood can be either growth-promoting or seriously damaging, depending on the intensity and duration of the experience, individual differences in children's physiological responsiveness to stress, and the extent to which a supportive adult is available to provide individualized support to help the child deal with adversity. This can be understood within the context of three different kinds of stress, which lead to different outcomes.

- The first, called **positive stress**, is associated with moderate, short-lived physiological responses, such as brief increases in heart rate and blood pressure or mild elevations in cortisol or cytokine levels. Precipitants include a wide variety of normal early childhood experiences, such as the challenges of meeting new people, dealing with frustration, mastering separation, getting an immunization, and coping with adult limit-setting or discipline. Positive stress is an important and necessary aspect of healthy

development that occurs in the context of stable and supportive relationships, which help to bring levels of cortisol and other stress hormones back within a normal range and assist the child to develop a sense of mastery and self control.

- The second kind of stress experience, called **tolerable stress,** is associated with physiological responses that could disrupt brain architecture, but are relieved by supportive relationships that facilitate adaptive coping and thereby restore heart rate and stress hormone levels to their baseline. Precipitants include significant threats, such as the death or serious illness of a loved one, a frightening injury, parent divorce, a natural disaster (such as Hurricane Katrina), or an act of terrorism (such as 9-11). These kinds of experiences could have long term consequences but they are tolerable when they occur in a time-limited period in which supportive adults protect the child by reducing the stressful experience, thereby giving the brain an opportunity to recover from the potentially damaging effects of an overactive stress management system.
- The third and most threatening kind of stress experience, called **toxic stress,** is associated with strong and prolonged activation of the body's stress management systems in the absence of the buffering protection of adult support. Precipitants include extreme poverty in conjunction with continuous family chaos, recurrent physical or emotional abuse, chronic neglect, severe and enduring maternal depression, persistent parental substance abuse, or repeated exposure to violence in the community or within the family. The essential feature of toxic stress is the absence of consistent, supportive relationships to help the child cope and thereby bring the physiological response to threat back to baseline. In such circumstances, persistent elevations of stress hormones and altered levels of key brain chemicals produce an internal physiological state that disrupts the architecture of the developing brain and can lead to difficulties in learning, memory, and self-regulation. Continuous stimulation of the stress response system also can affect the immune system and other metabolic regulatory mechanisms, leading to a permanently lower threshold for their activation throughout life. As a result, children who experience toxic stress in early childhood may develop a lifetime of greater susceptibility to stress-related physical illnesses (such as cardiovascular disease, hypertension, and diabetes) as well as mental health problems (such as depression, anxiety disorders, and substance abuse). They also are more likely to exhibit health-damaging behaviors and adult lifestyles that undermine well-being.

Stress in early childhood can be either growth-promoting or seriously damaging.

Implications for Policy and Practice

- Policy makers who administer early intervention programs should update their eligibility criteria, based on new brain research, and actively enroll infants and toddlers who are experiencing toxic stress for either preventive or therapeutic services, as needed. Two groups of children and families already known to public agencies are prime candidates for assessment. The first (which is currently mandated for referral by new federal legislation) includes all young children referred to the child welfare department for evaluation of suspected abuse or neglect. When circumstances require removal of a child from his or her home, it is especially critical that policies be in place and implemented consistently to make sure that the

establishment of a nurturing relationship with a new primary caregiver is given the highest priority. The second group that warrants closer attention is young children of mothers supported by welfare who have reached their time limits for public assistance and are unable to secure stable employment. Effective developmental intervention for both groups will require expanded access to child and adult mental health services, which are already burdened by demands that far exceed their capacity.

The essential feature of toxic stress is the absence of consistent, supportive relationships to help the child cope.

- Greater attention should be directed toward maternal depression, not only because it is a common adult mental health problem but also because it is a threat to the health and well-being of a young child. The prevention of developmental impairments in children of depressed mothers requires prompt diagnosis and specialized treatment of both the mother and the mother-child relationship. These findings direct our attention to the need for early detection of maternal depression in pediatric offices and in all programs that serve very young children, as well as the need for expanded clinical services that focus on the mother and child together.
- When accessible and affordable mental health services are available, they put a preventive system in place that catches children before they fall. Programs that target vulnerable young children within a family-centered model can be particularly effective, but the current gap between the supply and demand for skilled personnel requires a major investment in professional development. The costs of increased training and expanded services in early childhood mental health are substantial, but the money "saved" by not treating emotional problems in early childhood is likely to be modest in comparison to the greater long-term costs of serious adult mental illness and/or criminal behavior.

- Generally speaking, policies that focus on the delivery of evidence-based services for the most vulnerable young children will achieve greater financial return than services for children at lesser risk. To this end, issues of quality and cost must be viewed in the context of what a program is expected to do. Programs for families coping with severe depression, substance abuse, or violence must be staffed by skilled clinicians who require higher compensation and smaller case loads than basic supportive services for inexperienced mothers. When program resources match the needs of the children and families they are set up to serve, they can be very effective. When services are asked to address needs that are beyond their capacity to meet, they are likely to have little impact and are therefore too expensive, despite their low cost.

Concept 7: Creating the right conditions for early childhood development

is likely to be more effective and less costly than addressing problems at a later age.

As the maturing brain becomes more specialized to assume more complex functions, it is less capable of reorganizing and adapting to new or unexpected challenges. Once a circuit is "wired," it stabilizes with age, making it increasingly difficult to alter. Scientists use the term "plasticity" to refer to the capacity of the brain to change. Plasticity is maximal in early childhood and decreases with age. Although "windows of opportunity" for skill development and behavioral adaptation remain open for many years, trying to change behavior or build new skills on a foundation of brain circuits that were not wired properly when they were first formed requires more work and is more "expensive." For the brain, this means that greater amounts of physiological energy are needed to compensate for circuits that do not perform in an expected fashion. For society, this means that remedial education, clinical treatment, and other professional interventions are more costly than the provision of nurturing, protective relationships and appropriate learning experiences earlier in life. Stated simply, getting things right the first time is more efficient and ultimately more effective than trying to fix them later.

Implications for Policy and Practice

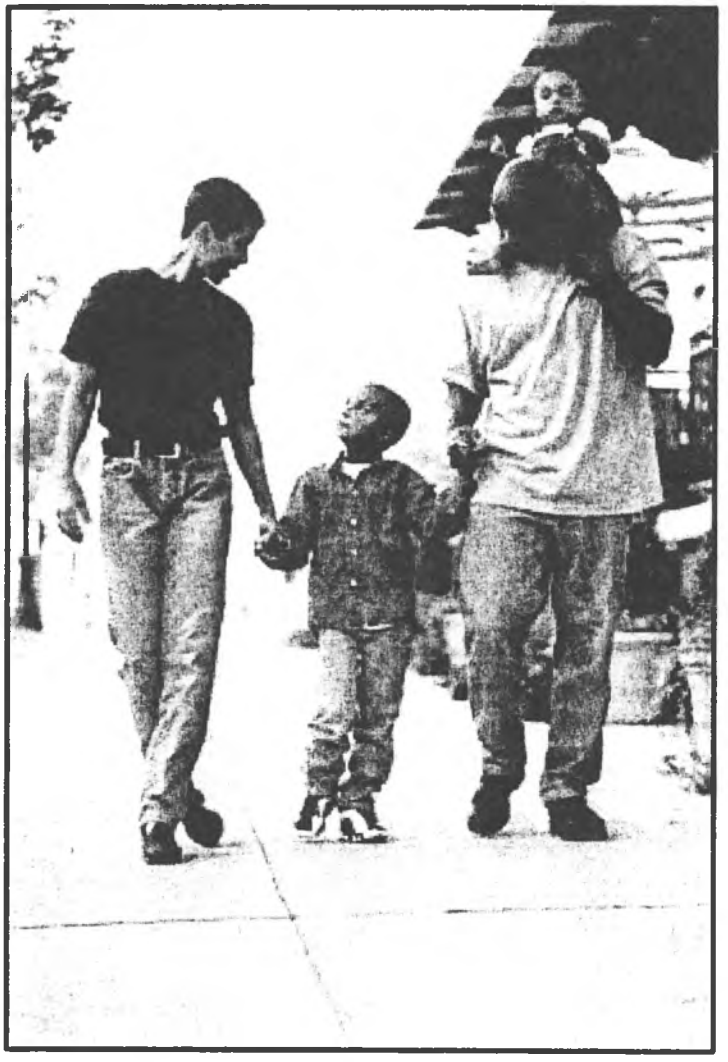
- These findings direct our attention to the importance of informal family support and formal preventive services (when needed) for vulnerable children before they exhibit significant problems in behavior or development. When policy makers assure that all young children who are at high risk for poor outcomes are enrolled in high quality programs whose effectiveness has been documented, the returns are far greater than those achieved when only a subgroup of eligible children are served. At the same time, the extent to which some early concerns may be self-correcting maturational delays underscores the need to avoid premature labelling of vulnerable children and families who could benefit from early assistance.
- The basic principles of neuroscience and the process of human skill formation indicate that early intervention for the most vulnerable children will generate the greatest payback. Although the large number of children and families who could benefit from additional assistance will require significant increases in funding, extensive research indicates that investment in high quality interventions will generate substantial future returns through increased taxes paid by more productive adults and significant reductions in public expenditures for special education, grade retention, welfare assistance, and incarceration. Stated simply, the largest returns will be realized from effective services for the neediest children and families well before they enter school.

Getting things right the first time is more efficient and ultimately more effective than trying to fix them later.

- Research indicates that policy makers can achieve greater return on investments in early childhood education for children from families with low incomes and limited parent education than from remedial programs for adults with limited workforce skills. In fact, long-term studies show that model programs for three- and four-year-olds living in poverty can produce benefit-cost ratios as high as 17:1 and annualized internal rates of return of 18% over 35 years, with most of the benefits from these investments accruing to

the general public. While it is not realistic to assume that all scaled-up early childhood programs will provide such handsome returns, it is likely that benefit-cost ratios still will be considerably greater than 1:1.

- The essence of quality in early childhood services is embodied in the expertise, skills, and relationship-building capacities of their staff. The striking imbalance between the supply and demand for well-trained personnel in the field today indicates that substantial investments in training, recruiting, compensating, and retaining a high quality workforce must be a top priority for society.



Responsible investments in services for young children and their families focus on benefits relative to cost. Inexpensive services that do not meet quality standards are a waste of money. Stated simply, sound policies seek maximum value rather than minimal cost.

Concluding Thoughts

Decades of rigorous science and centuries of common sense all converge on the core principles articulated in this paper. Within this context, the time has come to begin to close the gap between what we know (from systematic scientific inquiry across a broad range of disciplines) and what we do (through both public and private sector policies and practices) to promote the healthy development of all young children.

The need to address significant inequalities in opportunity, beginning in the earliest years of life, is both a fundamental moral responsibility and a critical investment in our nation's social and economic future. As such, it is a compelling task that calls for broad, bipartisan collaboration. And yet, debate in the policy arena often highlights ideological differences and value conflicts more than it seeks common interest. In this context, the science of early childhood development can provide a values-neutral framework for informing choices among alternative priorities and for building consensus around a shared plan of action. The well-being of our nation's children and the security of our collective future would be well-served by such wise choices and concerted commitment.

It is in this spirit that we, as scientists, offer this paper as a way to share what we know about how brain architecture is constructed and competence is built over time, beginning in the earliest years of life. We trust that the content of this document will inform the important work of citizens and policy makers to support families and communities in promoting the healthy development of young children, just as it will serve as a foundation on which the next generation of scientific knowledge will be built.

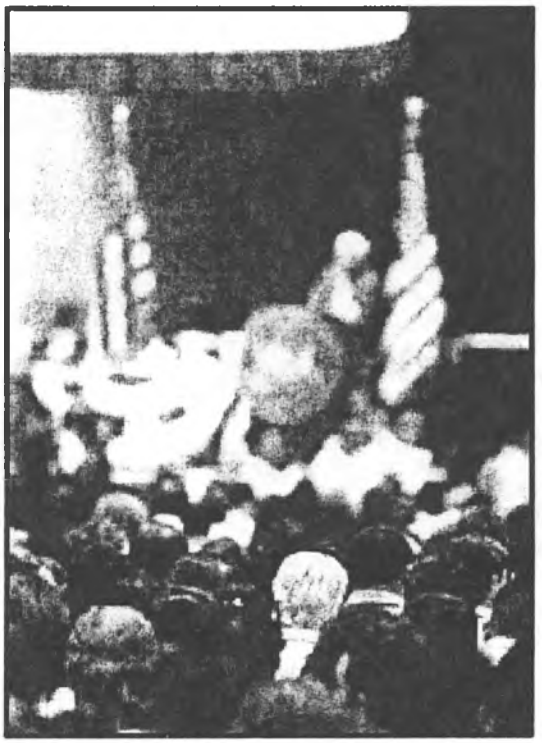
Executive Summary

The future of any society depends on its ability to foster the health and well-being of the next generation. Stated simply, today's children will become tomorrow's citizens, workers, and parents. When we invest wisely in children and families, the next generation will pay that back through a lifetime of productivity and responsible citizenship. When we fail to provide children with what they need to build a strong foundation for healthy and productive lives, we put our future prosperity and security at risk.

Two recent developments have stimulated growing public discussion about the right balance between individual and shared responsibility for that strong foundation. The first is the explosion of research in neurobiology that clarifies the extent to which the interaction between genetics and early experience literally shapes brain architecture. The second is the increasingly recognized need for a highly skilled workforce and healthy adult population to confront the growing challenges of global economic competition and the rising costs of Social Security, Medicare, and Medicaid for the aging baby boomers.

In an effort to identify those aspects of development that are accepted broadly by the scientific community, the National Scientific Council, based at the Center on the Developing Child at Harvard University, brought together several of the nation's leading neuroscientists, developmental psychologists, pediatricians, and economists. This document presents their critical review of the existing literatures in their fields and a consensus about what we now know about development in the early childhood years. The objective of the Council is to move beyond the public's fascination with "the latest study" and focus on the cumulative knowledge of decades of research that has been subjected to rigorous and continuous peer review. The goal of this document is to help the public and its policy makers understand the core principles of that body of work that are now sufficiently accepted across the scientific community to warrant public action.



It is our hope and belief that better public understanding of the rapidly growing science of early childhood and early brain development can provide a powerful impetus for the design and implementation of policies and programs that could make a significant difference in the lives of all children. Without that understanding, investments that could generate significant returns for all of society stand the risk of being rejected or undermined. Thus, there is a compelling need for scientists to share with the public and its representatives an objective basis for choosing wisely among competing demands on limited resources.

This paper is designed to provide a framework within which this complex challenge can be addressed most effectively. Its goal is to promote an understanding of the basic science of early childhood development, including its underlying neurobiology, to inform both public and private sector investment in young children and their families. To this end, the paper presents a set of core developmental concepts that have emerged from decades of rigorous research in neurobiology, developmental psychology, and the economics of human capital formation, and considers their implications for a range of issues in policy and practice.

Core Concepts of Development

- Child development is a foundation for community development and economic development, as capable children become the foundation of a prosperous and sustainable society.
- Brains are built over time.
- The interactive influences of genes and experience literally shape the architecture of the developing brain, and the active ingredient is the "serve and return" nature of children's engagement in relationships with their parents and other caregivers in their family or community.

- Both brain architecture and developing abilities are built "from the bottom up," with simple circuits and skills providing the scaffolding for more advanced circuits and skills over time.
- Toxic stress in early childhood is associated with persistent effects on the nervous system and stress hormone systems that can damage developing brain architecture and lead to lifelong problems in learning, behavior, and both physical and mental health.
- Creating the right conditions for early childhood development is likely to be more effective and less costly than addressing problems at a later age.

Implications for Policy and Practice

- Policy initiatives that promote supportive relationships and rich learning opportunities for young children create a strong foundation for higher school achievement followed by greater productivity in the workplace and solid citizenship in the community.
- Substantial progress toward this goal can be achieved by assuring growth-promoting experiences both at home and in community-based settings, through a range of parent education, family support, early care and education, preschool, and intervention services.
- When parents, informal community programs, and professionally staffed early childhood services pay attention to young children's emotional and social needs, as well as to their mastery of literacy and cognitive skills, they have maximum impact on the development of sturdy brain architecture and preparation for success in school.
- When basic health and early childhood programs monitor the development of all children, problems that require attention can be identified in a timely fashion and intervention can be provided.
- The basic principles of neuroscience and the technology of human skill formation indicate that later remediation for highly vulnerable children will produce less favorable outcomes and cost more than appropriate intervention at a younger age.
- The essence of quality in early childhood services is embodied in the expertise and skills of the staff and in their capacity to build positive relationships with young children. The striking shortage of well-trained personnel in the field today indicates that substantial investments in training, recruiting, compensating, and retaining a high quality workforce must be a top priority.
- Responsible investments in services for young children and their families focus on benefits relative to cost. Inexpensive services that do not meet quality standards are a waste of money. Stated simply, sound policies seek maximum value rather than minimal cost.

The need to address significant inequalities in opportunity, beginning in the earliest years of life, is both a fundamental moral responsibility and a critical investment in our nation's social and economic future. Thus, the time has come to close the gap between what we know (from systematic scientific inquiry across a broad range of disciplines) and what we do (through both public and private sector policies and practices) to promote the healthy development of all young children. The science of early childhood development can provide a powerful framework for informing sound choices among alternative priorities and for building consensus around a shared plan of action. The well-being of our nation's children and the security of its future would be well-served by such wise choices and concerted commitment.

The Science of Early Childhood Development

The future of any society depends on its ability to foster the health and well-being of the next generation. Stated simply, today's children will become tomorrow's citizens, workers, and parents. When we fail to provide children with what they need to build a strong foundation for healthy and productive lives, we put our future prosperity and security at risk.

Science has a lot to offer about how we as a community can use our collective resources most effectively and efficiently to build that strong foundation. When we invest wisely in children and families, the next generation will pay that back through a lifetime of productivity and responsible citizenship. When we do not make wise investments in the earliest years, we will all pay the considerable costs of greater numbers of school-aged children who need special education and more adults who are under-employable, unemployable, or incarcerated.

Two recent developments have stimulated growing public discussion about the right balance between individual and shared responsibility for child well-being. The first is the explosion of research in neuroscience and other developmental sciences that highlights the extent to which the interaction between genetics and early experience creates either a sturdy or weak foundation for all the learning, behavior, and health that follow. The second is the increasingly recognized need for a highly skilled workforce and healthy adult population to confront the growing challenges of global economic competition and the rising costs of Social Security, Medicare, and Medicaid for the aging baby boomers.

Most policy makers who face decisions among competing actions lack both the time and means to secure sound scientific advice about which investments offer the greatest potential value and what program elements are critical to their effectiveness. Those same policy makers must explain their decisions to business executives and civic leaders who hold a wide range of beliefs about child-rearing and developmental influences. Without better public understanding of the science of early childhood and brain development, policies and programs that could make a significant difference in the lives of children and all of society stand the risk of being rejected or undermined. Thus, there is a compelling need to educate the public and its representatives about how to choose wisely among competing demands.

When we invest wisely in children and families, the next generation will pay that back through a lifetime of productivity and responsible citizenship.

For some, the most important decisions focus on the allocation of resources among alternative approaches defined by need (e.g., universal versus targeted investments) or age (e.g., pre-K for four-year-olds versus parent support programs beginning at birth). Others move quickly to questions about the relative merits of different program models. Some are interested primarily in the results of benefit-cost analyses. Others view the reduction of inequalities in opportunity

as a moral imperative. All are united in the responsibility to assure that limited resources are invested wisely.

Regardless of the questions, it is essential that the answers be grounded in accurate scientific knowledge where it is available and sound professional judgment when it is needed. This is particularly important in the face of inevitable debates over alternative interpretations of the mountains of program evaluation data generated in a policy environment characterized by ideological differences about the means and ends of raising young children.

In October 2000, the Institute of Medicine and National Research Council of the National Academy of Sciences released a report entitled *From Neurons to Neighborhoods: The Science of Early Childhood Development.* The final paragraph of that 588-page report presented a compelling challenge:

The charge to this committee was to blend the knowledge and insights of a broad range of disciplines to generate an integrated science of early childhood development. The charge to society is to blend the skepticism of a scientist, the passion of an advocate, the pragmatism of a policy maker, the creativity of a practitioner, and the devotion of a parent—and to use existing knowledge to ensure both a decent quality of life for all of our children and a promising future for the nation.

This paper is designed to provide a framework within which this complex charge can be addressed most effectively. Its goal is to promote an understanding of the basic science of early childhood development, including its underlying neurobiology, to inform both public and private sector investment in young children and their families. To this end, the paper presents a set of core developmental concepts that have emerged from decades of rigorous research in neuroscience, developmental psychology, and the economics of human capital formation—and that have survived a rigorous process of debate among the members of the National Scientific Council on the Developing Child about what science can tell us about brain architecture and the foundations of learning, behavior, and health.

Core Concepts of Development

Concept 1: Child development is a foundation for community development and economic development, as capable children become the foundation of a prosperous and sustainable society.

The early development of cognitive skills, emotional well-being, social competence, and sound physical and mental health builds a strong foundation for success well into the adult years. Beyond their short-term importance for positive school achievement, these abilities are critical prerequisites for economic productivity and responsible citizenship throughout life. All aspects of adult human capital, from work force skills to cooperative and lawful behavior, build on capacities that are developed during childhood, beginning at birth.

Implications for Policy and Practice

- Policy initiatives that promote supportive relationships and rich learning opportunities for young children create a strong foundation for higher school achievement followed by greater productivity in the workplace and solid citizenship in the community throughout the adult years. Thus, current calls for greater emphasis on early literacy must not diminish the importance of attention to other essential capacities,

such as initiative, self-confidence, and persistence in learning, as well as the ability to work cooperatively and resolve conflict with peers—all of which are core characteristics of students in a successful school, citizens in a healthy community, and the workforce of a prosperous nation.

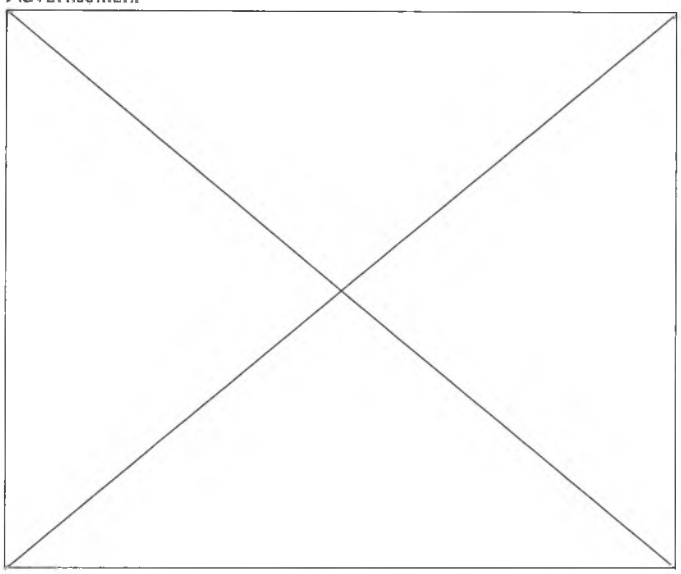
- All of society would benefit from a coordinated effort to reduce significant inequalities in the skills of young children at school entry. Substantial progress toward this goal can be achieved by assuring high quality early learning experiences both at home and in community-based settings, through a range of parent education, family support, early care and education, preschool, and intervention services.

All aspects of adult human capital, from work force skills to cooperative and lawful behavior, build on capacities that are developed during childhood, beginning at birth.

- This calls for a long-term investment by all segments of society—including the business community, private philanthropy, both faith-based and secular voluntary organizations, professional associations, and government at all levels—to work together to strengthen families, educate mothers and fathers, and provide professional assistance for those young children and their parents who need help. In fact, the future vitality of the institutions that each these sectors represent will depend on the wisdom of their investment, as today's children either take up society's important work and roles as adults or are ill-prepared and unable to do so.
- Effective early childhood policies and practices will not eliminate all social and economic inequalities. However, when successful interventions are followed by continuing investments throughout the childhood years, they increase the odds that many more children will grow up to be adults who contribute positively to their communities and raise healthy and competent children themselves, while many fewer will end up on public assistance or in jail.

Concept 2: Brains are built over time.

The basic architecture of the brain is constructed through an ongoing process that begins before birth and continues into adulthood. Like the construction of a home, the building process begins with laying the foundation, framing the rooms, and wiring the electrical system in a predictable sequence, and it continues with the incorporation of distinctive features that reflect increasing individuality over time. Brain architecture is built over a succession of "sensitive periods," each of which is associated with the formation of specific circuits that are associated with specific abilities. The development of increasingly complex skills and their underlying circuits builds on the circuits and skills that were formed earlier. Through this process, early experiences create a foundation for lifelong learning, behavior, and both physical and mental health. A strong foundation in the early years increases the probability of positive outcomes and a weak foundation increases the odds of later difficulties.



Implications for Policy and Practice

- When systems are put in place to monitor the development of all children continuously over time, problems that require attention can be identified early and appropriate responses can be made. This can be accomplished by appropriately trained physicians, nurse practitioners, or developmental specialists within the context of regular health care, as well as through the ongoing observations of skilled providers of early care and education. Fully meeting this goal requires prenatal care for all pregnant women and sustained access to a consistent source of primary health care for all children.

The Washington Post

How teacher development could revolutionize our schools

Advertisement

By Bill Gates
Monday, February 28, 2011;

As the nation's governors gather in Washington for their annual meeting, they are grappling with more than state budget deficits. They're confronting deep education deficits as well.

Over the past four decades, the per-student cost of running our K-12 schools has more than doubled, while our student achievement has remained virtually flat. Meanwhile, other countries have raced ahead. The same pattern holds for higher education. Spending has climbed, but our percentage of college graduates has dropped compared with other countries.

To build a dynamic 21st-century economy and offer every American a high-quality education, we need to flip the curve. For more than 30 years, spending has risen while performance stayed relatively flat. Now we need to raise performance without spending a lot more.

When you need more achievement for less money, you have to change the way you spend. This year, the governors are launching "Complete to Compete," a program to help colleges get more value for the money they spend. It will develop metrics to show which colleges graduate more students for less money, so we can see what works and what doesn't.

In K-12, we know more about what works.

We know that of all the variables under a school's control, the single most decisive factor in student achievement is excellent teaching. It is astonishing what great teachers can do for their students.

Yet compared with the countries that outperform us in education, we do very little to measure, develop and reward excellent teaching. We have been expecting teachers to be effective without giving them feedback and training.

To flip the curve, we have to identify great teachers, find out what makes them so effective and transfer those skills to others so more students can enjoy top teachers and high achievement.

To this end, our foundation is working with nearly 3,000 teachers in seven urban school districts to develop fair and reliable measures of teacher effectiveness that are tied to gains in student achievement. Research teams are analyzing videos of more than 13,000 lessons - focusing on classes that showed big student gains so it can be understood how the teachers did it. At the same time, teachers are watching their own videos to see what they need to do to improve their practice.

Our goal is a new approach to development and evaluation that teachers endorse and that helps all teachers improve.

The value of measuring effectiveness is clear when you compare teachers to members of other professions - farmers, engineers, computer programmers, even athletes. These professionals are more advanced than their predecessors - because they have clear indicators of excellence, their success depends on performance and they eagerly learn from the best.

The same advances haven't been made in teaching because we haven't built a system to measure and promote excellence. Instead, we have poured money into proxies, things we hoped would have an impact on student achievement. The United States spends $50 billion a year on automatic salary increases based on teacher seniority. It's reasonable to suppose that teachers who have served longer are more effective, but the evidence says that's not true. After the first few years, seniority seems to have no effect on student achievement.

Another standard feature of school budgets is a bump in pay for advanced degrees. Such raises have almost no impact on achievement, but every year they cost $15 billion that would help students more if spent in other ways.

Perhaps the most expensive assumption embedded in school budgets - and one of the most unchallenged - is the view that reducing class size is the best way to improve student achievement. This belief has driven school budget increases for more than 50 years. U.S. schools have almost twice as many teachers per student as they did in 1960, yet achievement is roughly the same.

What should policymakers do? One approach is to get more students in front of top teachers by identifying the top 25 percent of teachers and asking them to take on four or five more students. Part of the savings could then be used to give the top teachers a raise. (In a 2008 survey funded by the Gates Foundation, 83 percent of teachers said they would be happy to teach more students for more pay.) The rest of the savings could go toward improving teacher support and evaluation systems, to help more teachers become great.

Compared with other countries, America has spent more and achieved less. If there's any good news in that, it's that we've had a chance to see what works and what doesn't. That sets the stage for a big change that everyone knows we need: building exceptional teacher personnel systems that identify great teaching, reward it and help every teacher get better.

It's the thing we've been missing, and it can turn our schools around.

The writer is co-chair of the Bill and Melinda Gates Foundation.

Executive Summary

Over the past few decades, participation in preschool programs has become much more common, and public support for these programs has grown dramatically. Child development research, neuroscience, and program evaluations demonstrate that the experiences a child has between birth and age five shape the developing brain's architecture and directly influence later life outcomes, including economic stability, work productivity, and mental health. Positive early childhood experiences also improve developmental and school readiness outcomes, increase K - 12 achievement, and contribute to higher rates of high school graduation.

Positive early childhood learning experiences contribute to the following:

29% higher high school graduation rates

20% higher college attendance

70% lower crime incidence

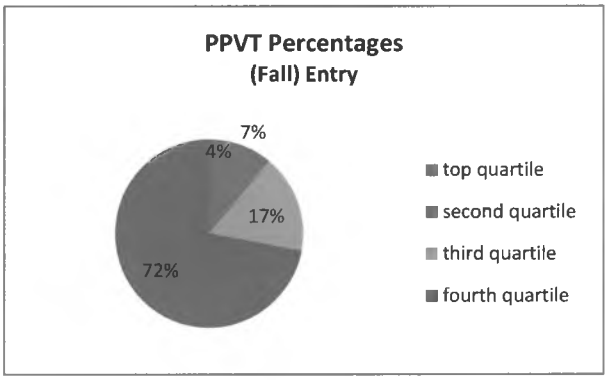
20% lower welfare dependence

Early childhood policies vary across states, as well as across program options, such as private child care, preschools, Head Start, and state pre – kindergarten. Policy makers face key questions about the value of preschool education, whom it should serve, and which program designs are the best to meet our state's needs.

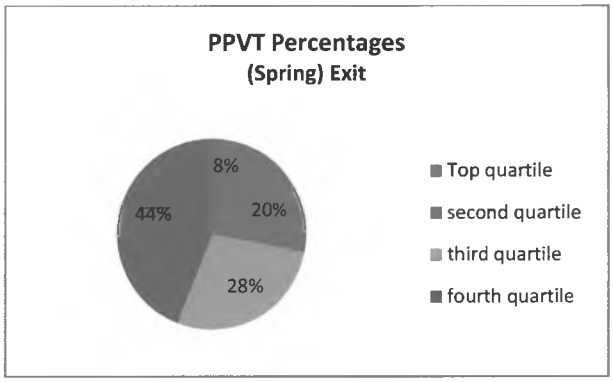
In addition to its primary purpose of providing project evaluation information on the Alaska Pilot Pre-Kindergarten Project (AP3), this document provides a brief review of some of the last decade's early childhood education initiatives in Alaska, as well as a description of grantee and site selection for this project. An outline of each grantee's approach to the project and the partnerships they have formed to provide for its success is included.

- The Anchorage School District (ASD) provided two new complete classrooms in partnership with Kids Corps Inc. (KCI) Head Start. Both are federally recognized Head Start classrooms being jointly provided by the ASD & KCI in a school district setting.
- The Bering Strait School District (BSSD) project is a partnership among three educational agencies: BSSD, Kawerak, Inc. Head Start, and RurAL CAP Head Start. All four BSSD programs are housed in Head Start settings and jointly provided by the district and either of the two Head Start programs.
- The Juneau School District (JSD) provided two complete classrooms in partnership with the Central Council of Tlingit and Haida Indian Tribes of Alaska (CCTHITA) Head Start.

Both are federally recognized Head Start classrooms being jointly provided by the JSD & CCTHITA.



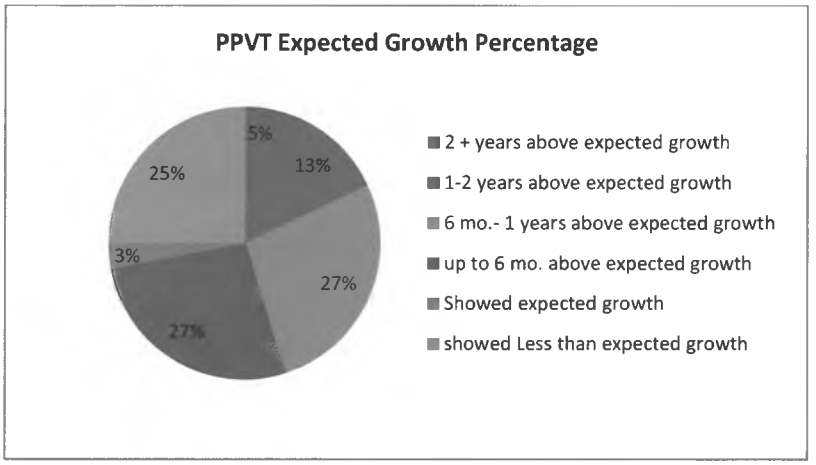
- The Lower Kuskokwim School District (LKSD) provided services to children in one school-based classroom in Bethel.
- In Nome, the program ran two classrooms: one in the Nome Preschool (a private entity) and the other a Kawerak Head Start. Both are run jointly with the Nome Public Schools.
- Yukon-Koyukuk School District (YKSD) provided two new preschool classrooms. One was a district-run program in Allakaket (building in one additional hour of Athabascan language immersion daily as requested by the community). The other new classroom in Minto was in partnership with Tanana Chiefs Conference (TCC) Head Start. They also worked in Huslia, and Kaltag with TCC Head Start programs.



While the majority of this document evaluates the child outcome data from the first year of the Alaska Pilot Pre-Kindergarten Project, it also provides information on programmatic outcomes from each grantee, Department of Education and Early Development outcomes, State outcomes, and conclusions concerning what we have learned so far through this project.

Results: State Aggregate

PPVT Child Outcomes



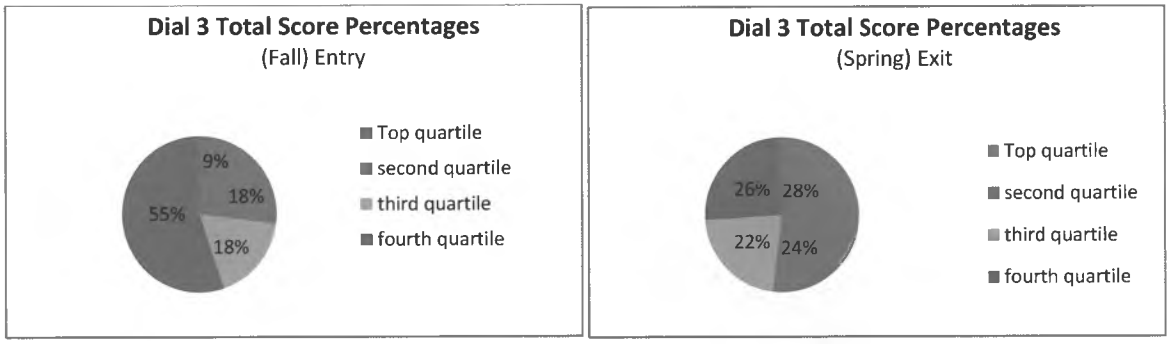
The Peabody Picture Voacabulary Test (PPVT) provides information on vocabulary and receptive language development.

The charts illustrate the large numbers of children entering the AP3 program significantly below their same age peers nationally and the numbers of children showing significant improvement in percentile ranking by the end of the year compared to same age peers nationally. 17% of the children have moved from the bottom 2 quartiles to the top two, almost tripling the percentage of children at or above the 51st percentile. 28% of the children have moved out of the bottom quartile.

The PPVT data in terms of Age Equivalence shows a greater depth of growth of the students' vocabulary. The Age Equivalence data shows information on the children's, and the programs', success in closing gaps in vocabulary development.

The chart illustrates children's actual growth compared to the expected growth for the time between assessments.

72% of students have shown above-expected growth.



DIAL – 3 State Aggregate Results

The Developmental Indicators for the Assessment of Learning (DIAL -3) provides information on three areas of development in relation to school readiness:

1. Motor Development
2. Concept Development
3. Language Development

A total score based on the scores in all three areas is also given. Dial - 3 data shows how children compare to their peers nationally in terms of percentile.

Total Score Fall & Spring DIAL - 3

The charts above illustrate the large numbers of children entering the AP3 program significantly below their same age peers nationally and the numbers of children showing significant improvement in percentile ranking compared to same age peers nationally.

28% of the children are now in the top quartile, more than tripling the percentage of children at or above the 76th percentile.

29% of the children have moved out of the bottom quartile. Over half of the children who started the program in the bottom quartile have moved up.

Results: State Aggregate

ECERS – R Program Outcomes

The Early Childhood Environment Rating Scale-Revised Edition (ECERS-R) is designed for use in classroom-based early childhood care and education programs aged two to six years. It is organized into the seven scales below:

State Aggregate	Fall	Spring
Overall Score:	3.76	4.69
Space and Furnishings	3.06	4.08
Personal Care Routines	2.64	3.33
Language-Reasoning	4.10	5.43
Activities	3.16	4.33
Interaction	4.54	4.80
Program Structure	4.26	5.41
Parents and Staff	5.44	6.13

Each program is scored on a seven-point scale, with benchmarks established for 1 = Inadequate, 3 = Minimal, 5 = Good, and 7 = Excellent. Programs that pass some of the items that are part of the benchmark for a 3, but not all of them, are scored a 2 on that subscale. Similarly programs that fall between good and excellent are scored a 6.

These scores represent significant programmatic growth. The AP3 programs began the year above minimal and ended approaching good (almost a full point of improvement in less than a year's time).

Project Results Year-One

Year-one data has shown an extremely high need, with the majority of the children coming to the program behind typically-developing peers. High numbers of children in the program have exceeded expected growth, and there has been significant or higher program growth. The data, coupled with the observations, facilitation, and training provided by the Department as well as anecdotal information from the field, leads to the following conclusions:

- The data shows a significant need for quality early childhood programs.

- While the pre-k children are making large strides in their development and a large number have closed the gap, there are still children performing below expectations. It will be important to see the growth they have accomplished continue through kindergarten, first and second grade so that all our children will have closed the gaps by their third grade assessments.

- Unprecedented levels of cooperation, coordination, and collaboration between Head Start programs and school districts are leading to improved alignment, transition and common planning & training.

While this is a large first step, there is still much more that can be accomplished.

- Year 2 will seek continuous improvement in both child and program outcomes. Child outcome focus will be placed on the children's language and concept development. Program development, beyond the needs expressed in the ECERS data, will also focus on cross-system connections looking to:

    1. Strengthen alignment with and transition to Kindergarten and K-12;
    2. Improve outreach to communities and the programs that serve young children under four years of age;
    3. Share what is working for programs in the AP3 with each other and with other early childhood programs: and
    4. Seek continuation of funding to expand Alaska's AP3 with a focus on both providing for un-served populations and developing better partnerships with a larger number of school districts and/or early childhood programs and systems.

At the state system level we will seek improvement in two directions:

- Within EED to improve integration of early childhood across existing structures:
  1. Teaching and Learning Support;
  2. Assessment;
  3. State System of Support;
  4. Libraries, Archives, and Museums;

- Across departments to:
  1. avoid duplication of services;
  2. integrate data and information on early childhood;
  3. conduct state-wide needs assessments;
  4. assess the capacity and need for professional development.

EED will continue to work to provide support, training, and technical assistance and facilitation to aid program improvement in any and all areas needed.

Introduction

A Brief History of Early Childhood Initiatives in Alaska

In 2001, the Departments of Education & Early Development and Health & Social Services published "Building Blocks" to guide Alaska's initiative looking at the challenges facing young children and their families in Alaska and developing a framework to help address those challenges. After securing a federal grant, the state established the System for Early Education Development (SEED), the main focus of which was to develop a pathway to credentialing for staff working with children in early care and education settings. The Career Ladder that was created is reviewed and revised regularly and continues to serve the early care and education workforce. SEED also funded assistance to existing early childhood systems to improve the quality of service provided to children and families. Through SEED, Alaska's Head Start programs increased the number of teaching staff with Associate of Arts Degrees from 13% to just fewer than 40%. Additionally, Head Starts and childcare increased the number of staff members receiving CDA Certificates.

With the creation of No Child Left Behind and Good Start Grow Smart at the Federal level in 2002, Alaska began its efforts to define the state's expectations concerning the development of young children from birth to kindergarten entry. Gathering Alaskans from around the state to look across all domains of development, EED developed Early Learning Guidelines for the State of Alaska. These guidelines are still in use and are required for all pre-elementary programs in the state that receive state or federal funding. Training is available and being provided around the state on their use in early care and education centers and classrooms, as well as with community groups. Additionally, parent activity booklets have been developed in multiple languages based on the guidelines.

In 2003, EED received a federal grant for the Alaska Community Preschool Project (ACPP). EED provided funding to school districts and encouraged partnerships with existing early childhood care and education providers. This funding allowed districts to choose to work alone or to partner to effect quality improvement in both the district and partner programs. Specific curricula, approaches, and training were required in this project.

Starting in 2004, the Alaska Department of Health & Social Services received a federal grant to support the development of a state Early Childhood Comprehensive Systems plan. The Inter-departmental Early Childhood Coordination Council worked to put the plan together covering the required areas of Medical Home & Health, Mental Health and Social Emotional Development, Early Care and Learning, and Family Support and Parenting Education. The plan was published in 2006 and has been disseminated to the early care and learning field and is available on the Web through the Department of Health & Social Services.

In 2005, the *Alaska Ready to Read, Ready to Learn Task Force* was created. This task force was the beginning of a public/private partnership for Alaska's early childhood investment. The task force focused on developing recommendations for early childhood in the home, out of the home in early care and education settings, and on looking ahead to long-term sustainability for investment from private, nonprofit, foundation, and government sources.

As the task force completed its work, the public/private partnership began the implementation phase as "Best Beginnings," working to mobilize people and resources to ensure all Alaska children begin school ready to succeed. Using funds from businesses, foundations, nonprofits, government, and individuals, Best Beginnings provides supports for parents as a child's first teacher, advocates for high quality affordable and accessible child care and early learning programs for all families who want them, and works to make early learning a priority for Alaskans. Best Beginnings has also partnered with EED on the development of the parent activity booklets.

In 2008 & 2009, the state funded expansion grants for Head Start. This initiative was focused on utilizing the existing infrastructure of Alaska Head Start programs to maximize the number of eligible families and children served in our federally recognized Head Start programs.

Alaska Pilot Pre-Kindergarten Project (AP3)

In April of 2009, the Alaska Legislature provided EED with $2,000,000.00 in General Funds for a pilot pre-kindergarten project. EED focused on how the entrance of a new and large player like state-funded school districts coming into the early care and learning field could create a sea of change that would raise the tide of early childhood quality for all boats. The application process was built on the lessons learned in the ACPP model and offered bonus points in the Request for Application (RFA) for partnerships with other entities and for those willing to participate in Department-offered training. EED also required the use of certified teachers with an early childhood background along with specific pre- and post-assessments for outcomes for both the children and the program.

Selection of AP3 Grantees and Sites

Requests for Applications (RFAs) were sent to all Alaska school districts in late April of 2009. Twenty-four districts submitted letters of intent to EED in early May. Twelve of those districts submitted full applications in late May. In early June a five-person review team comprised of Department staff, University of Alaska staff, and Best Beginnings staff with early childhood backgrounds read, scored, deliberated and debated the merits of the applications. After setting aside $300,000.00 for use with Intervention districts (as stated in the RFA), EED negotiated amounts with the top six scoring districts to enable the top half of the applicants to receive grant

awards. The lists of interested districts, those who submitted applications, and those funded are below.

Intent to Apply Forms Received

1. Alaska Gateway Borough School District
2. Anchorage School District
3. Annette Island School District
4. Bering Strait School District
5. Chatham School District
6. Cordova School District
7. Denali Borough School District
8. Galena City School District
9. Juneau School District
10. Ketchikan Gateway Borough School District
11. Kodiak Island Borough School District
12. Lower Kuskokwim School District
13. Matanuska-Susitna Borough School District
14. Nome Public Schools
15. North Slope Borough School District
16. Northwest Arctic Borough School District
17. Pribilof School District
18. Southeast Island School District
19. Southwest Region School District
20. St. Mary's School District
21. Valdez City Schools
22. Wrangell City Schools
23. Yukon Flats School District
24. Yukon-Koyukuk School District

RFA's Received and Funded

1. Anchorage School District
2. Bering Strait School District
3. Juneau School District
4. Lower Kuskokwim School District
5. Nome Public School
6. Yukon-Koyukuk School District

RFA's Received but not Funded

1. Alaska Gateway Borough
2. Galena City School
3. Ketchikan Gateway Borough
4. Kodiak Island Borough
5. Northwest Arctic Borough
6. Valdez City School

Each district outlined the specific sites, partnerships, and approaches in its application. Fifteen classrooms were supported in this initial pilot project under these grantees. EED initially projected serving approximately 300 children. However the actual number served under these grantees was 200. Additionally EED served 145 students in two intervention districts as described on page 50 of this report for a total of 345 students served. While there was a large diversity of populations served across the AP3, the main groups of children served were Alaska Native children and/or children near, at, or below poverty level. There were a variety of ethnicities represented as well as children with special needs.

Anchorage School District (ASD) provided two new complete classrooms in partnership with Kids Corps Inc. (KCI) Head Start. Both are federally recognized Head Start classrooms being jointly provided by the ASD and KCI in a school district setting. They worked to measurably and significantly reduce the student achievement gap at two Title I elementary schools, Creekside Park and Willow Crest, by collaborating to provide a high quality, comprehensive pre-kindergarten program for 32 children and their families. ASD and KCI bring complementary funding sources and expertise to the project that creates a higher quality pre-school program than either organization could develop independently. The AP3 project met federal Head Start Performance standards and increased school readiness, as defined by Alaska's Early Learning Guidelines (ELG), for children most at risk for school failure.

Bering Strait School District (BSSD) partnered with three educational agencies: BSSD, Kawerak, Inc. Head Start, and RurAL CAP Head Start. All four BSSD programs are housed in Head Start settings and are jointly provided by the district and either of the two Head Start programs. Building upon existing partnerships with both Head Start Programs through this project, BSSD provided ECE teachers for the Head Start programs in four rural villages. The Head Start programs, which met federal standards, implemented the Success for All Curiosity Corner curriculum and other components that supported the Alaska Early Learning Guidelines. The ECE teachers in Gambell, Shishmaref, St. Michael, and Stebbins worked with the Head Start staff in educating the preschool children. They acted as role models of effective teaching practices, and, together with the Head Starts, they provided and shared in on-going professional development for all staff.

Juneau School District (JSD) provided two complete classrooms in partnership with the Central Council of Tlingit and Haida Indian Tribes of Alaska (CCTHITA) Head Start. Both are federally recognized Head Start classrooms being jointly provided by the JSD & CCTHITA. Tlingit and Haida Head Start is the only center-based preschool provider in Juneau serving low socioeconomic children and families. The project includes two Title I elementary school sites — Gastineau Elementary, where JSD added a full time certified teacher with strong ECE background, and Glacier Valley Elementary School, where the program matches the model at Gastineau Elementary and 20 additional Head Start eligible children were served by opening a preschool there.

Lower Kuskokwim School District (LKSD) provided services to children in one school-based classroom in Bethel. All children and parents had access to a parent resource center, parent meetings, and trainings. The preschool staff was qualified to work with children of this age. In addition they received training, support, and curriculum resources to meet the academic, social, emotional, cognitive, health, safety, and cultural needs of the children. The program blended what is known about brain development and child development with holding traditional child rearing practices with respect, all to the end of meeting each child's needs for safe, healthy, meaningful individual development, as well as, social and kindergarten readiness.

Nome ran two classrooms -- one in the Nome Preschool (a private entity) and the other a Kawerak Head Start. Both are run jointly with NPS. The program's two certified teachers worked with families with eligible children, particularly those who might not otherwise have considered sending their children to preschool. Using comprehensive assessments, the ECE teachers screened applicants to select the children at the highest risk of school failure. In collaboration with existing staff, the certified ECE teachers used supplemental intervention techniques and materials when focusing specifically on the targeted students in small groups. Parent support and involvement, regular home visits, open-door policies, and monthly family nights were key components of the program. They used ongoing assessment across developmental domains and adjusted instruction accordingly.

Yukon-Koyukuk School District (YKSD) provided the widest range of models within one partnership in the form of two new preschool classrooms -- one by itself in Allakaket (building in one additional hour of Athabascan language immersion daily as requested by the community), and the other new classroom in Minto was in partnership with Tanana Chiefs Conference (TCC) Head Start. They also worked in Huslia and Kaltag with TCC Head Start providing materials and common assessments to the existing federal Head Start programs. Together YKSD and TCC Head Start worked to implement a comprehensive Pre-K program that integrated activities across the five domains of the Alaska Early Learning Guidelines.

Location & Description of AP3 Programs

Determining Project Outcomes

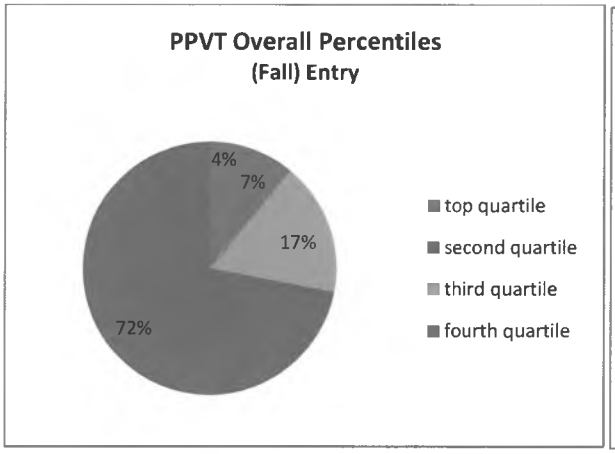
The AP3 project was designed to effect positive development on a number of levels. Positive outcomes in the areas listed below will demonstrate success. The stronger the growth, the greater the success.

1. Child Outcomes
    - On nationally recognized assessments
    - Through observation
2. Program Outcomes
    - On nationally recognized assessments
    - On the use of the data gathered to drive decision-making for both the children and the program
    - On the level of collaboration between partners
    - On the types of change in how both systems operate
3. EED Outcomes
    - The level of outreach, facilitation, training, and technical assistance provided to grant recipients and their partners
    - The sharing and dissemination of information to AP3 programs, among AP3 programs, with the early childhood field, with the board, and across EED
    - The level of integration of early childhood in the systems and structures of EED
4. State Outcomes
    - The sharing and dissemination of information with the Governor's Office, the Legislature, other state Departments, and the public
    - The level of integration of early childhood in other state structures and systems

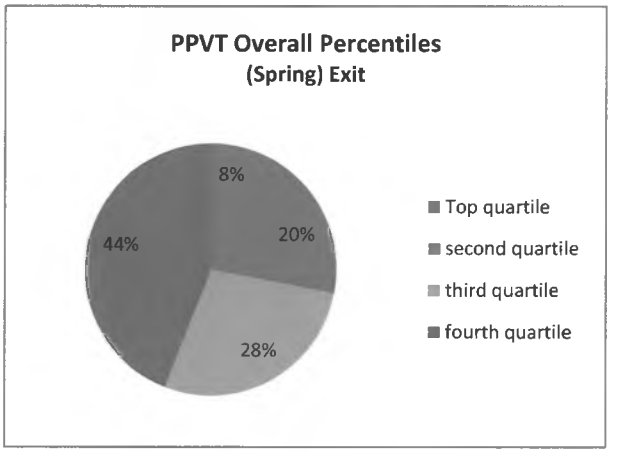
Determining Child Outcomes

The child outcome data for the AP3 sites have been generated through the use of the two following instruments: The Peabody Picture Vocabulary Test and the Developmental Indicators for the Assessment of Learning. General information, reliability, and validity data as reported in the literature about all instruments follows.

Peabody Picture Vocabulary Test Third Edition (PPVT)



The PPVT is a norm-referenced test designed to assess children's scholastic aptitude in terms of verbal ability from age 2 years 6 months, to age 7 years and 4 months. The PPVT is an English language assessment that has been in use with large numbers of early childhood settings for many

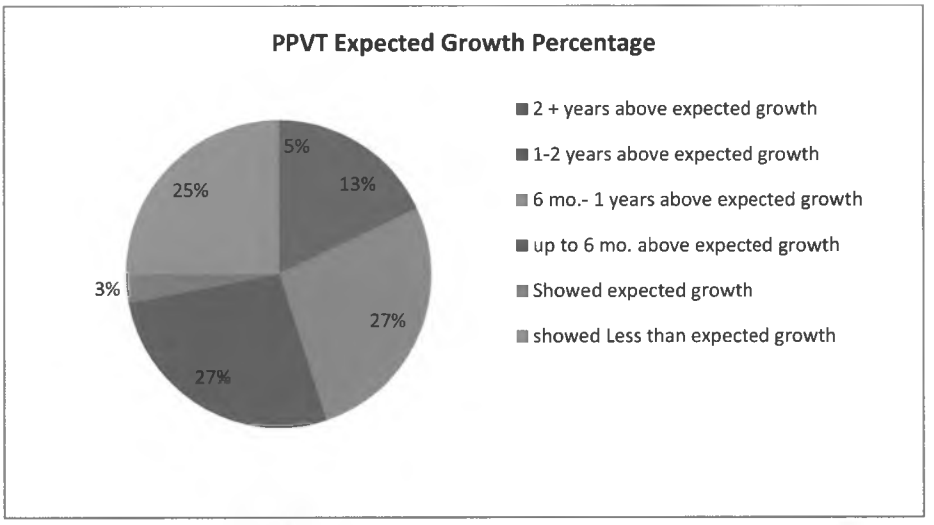


years. It is known for its correlation to later school success. This assessment allows for national comparison and for growth model use in a pre and post methodology.

State Aggregate

PPVT Child Outcomes

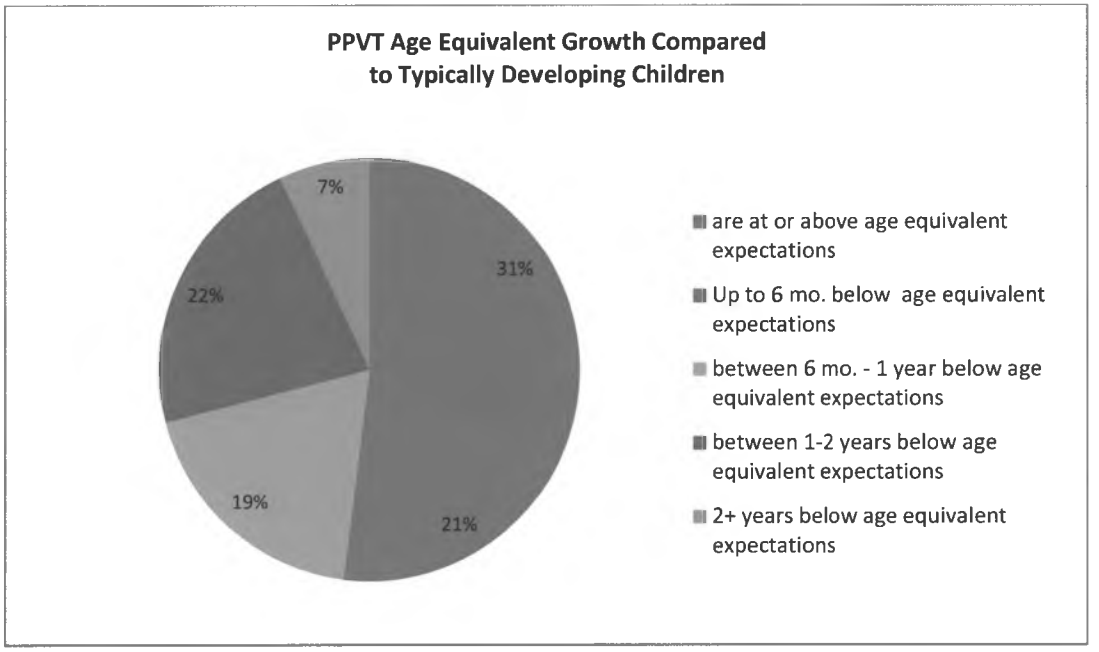
The PPVT provides information on vocabulary and receptive language development.



The charts illustrate the large numbers of children entering the AP3 program significantly below their same age peers nationally and the numbers of children showing significant improvement in percentile ranking compared to same age peers nationally.

17% of the children have moved from the bottom 2 quartiles to the top two, almost tripling the percentage of children at or above the 51st percentile.

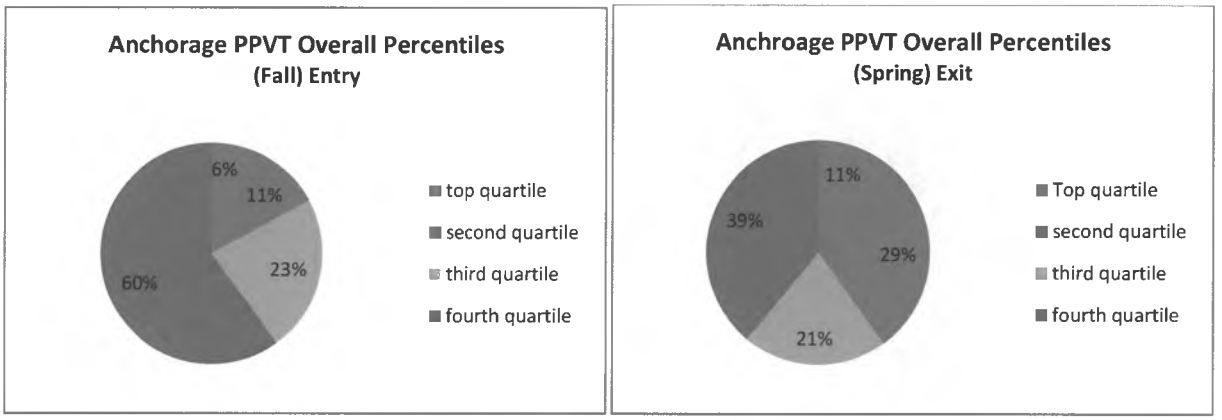
28% of the children have moved out of the bottom quartile.



In terms of Age Equivalence, the PPVT data shows greater depth of growth of the students' vocabulary. The Age Equivalence data shows information on the children's (and the programs' success) in closing gaps in vocabulary development.

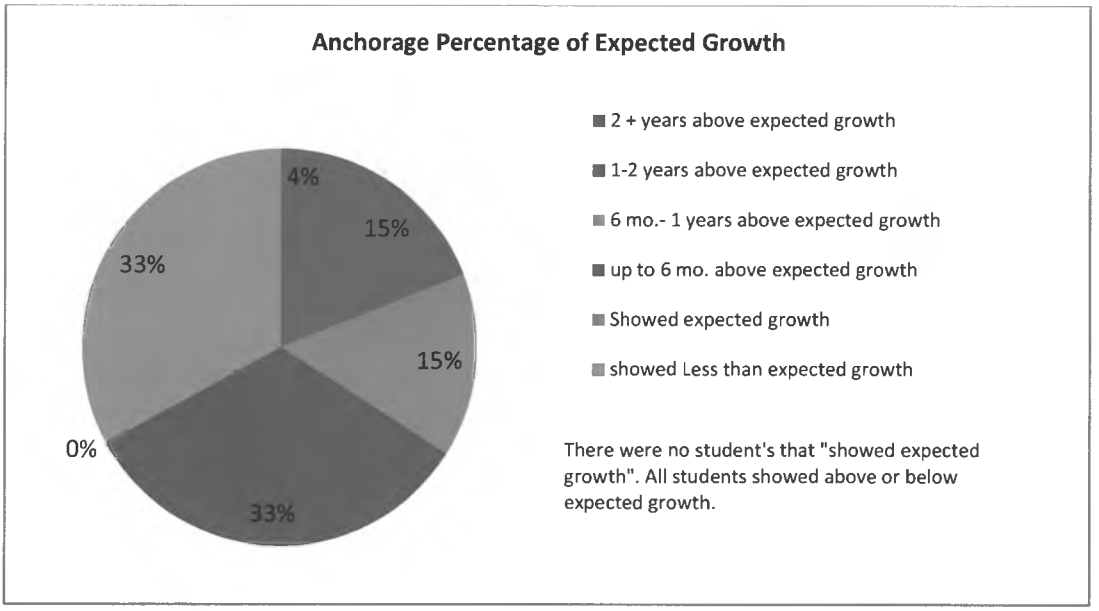
The chart above illustrates children's actual growth compared to the expected growth for the time between assessments.

72% of students have shown above-expected growth.



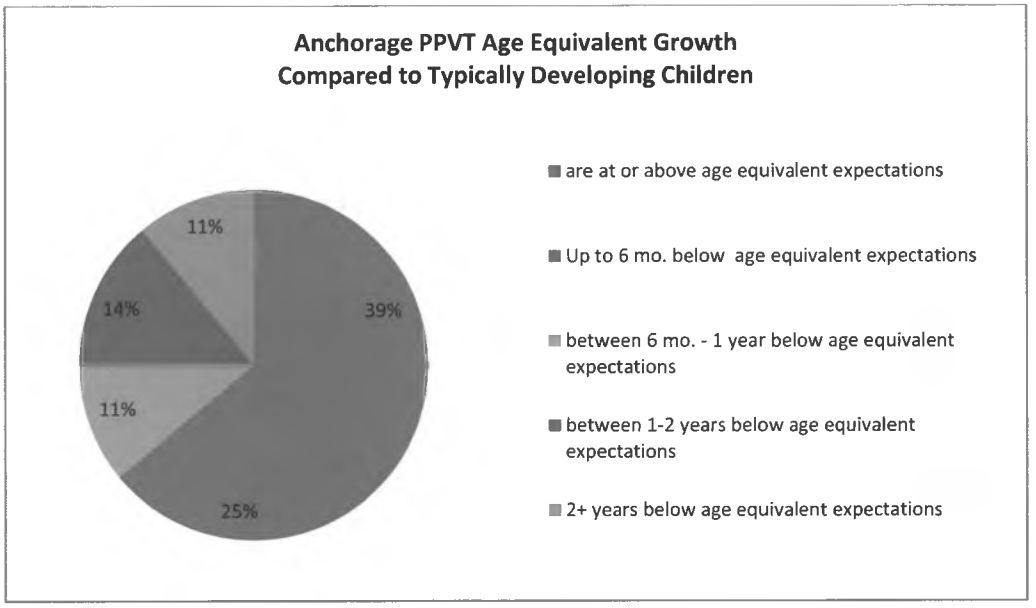
Additional pre and post PPVT analysis:

This final analysis illustrates the students' growth in relation to an age-equivalent typically-developing child on a national level.



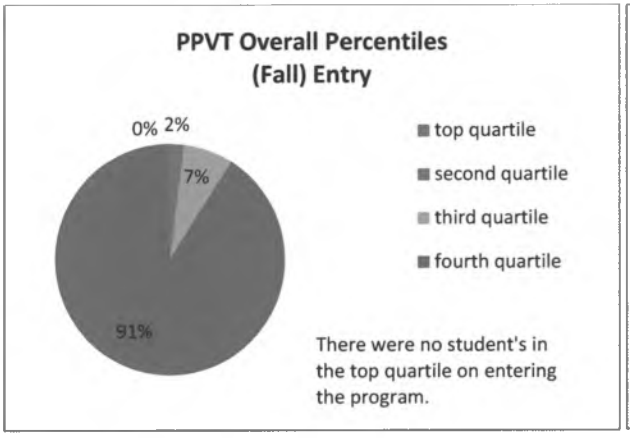
PPVT Results by District

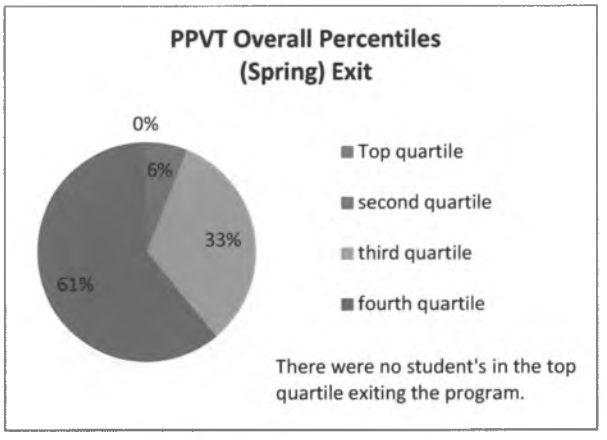
Anchorage School District



23% of the children have moved from the bottom 2 quartiles to the top two.

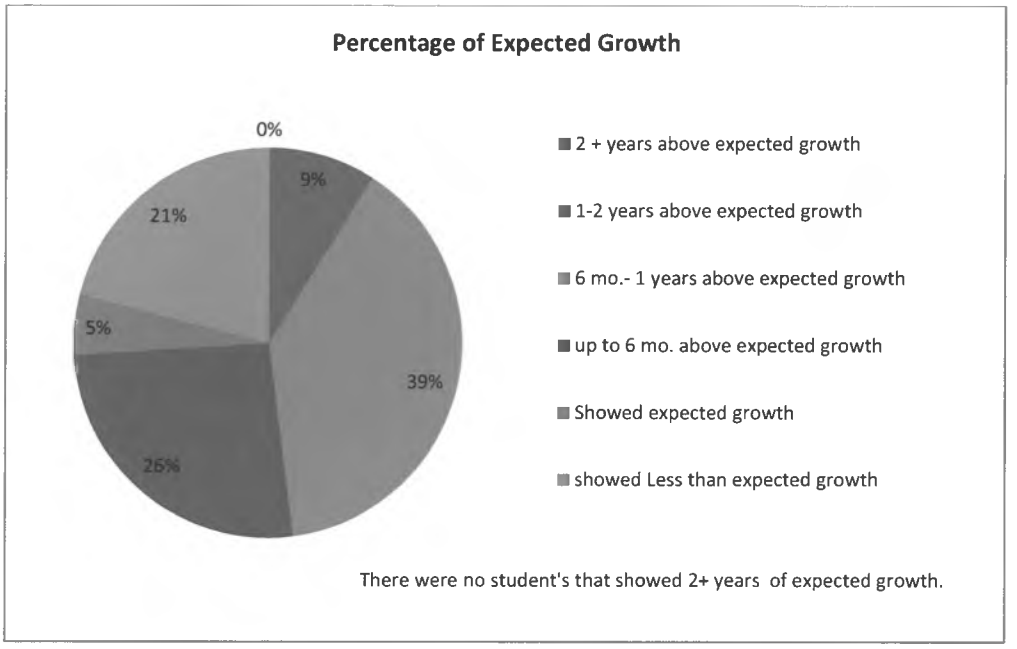
Age Equivalence data below shows information on the children's (and the programs' success) in closing gaps in development.



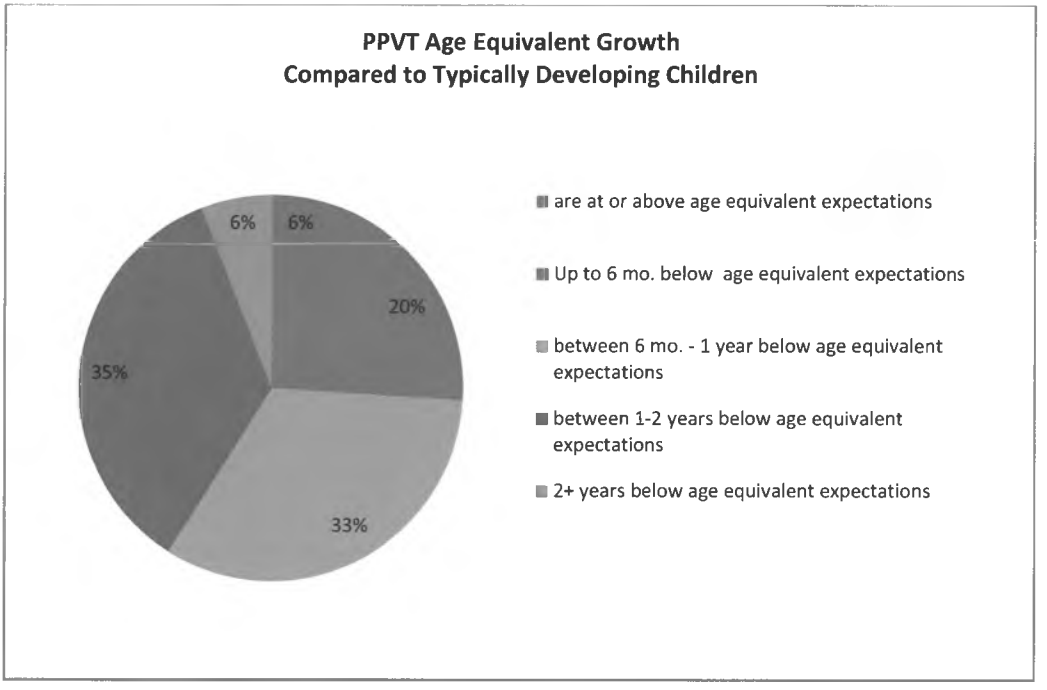


67% of the ASD four year olds showed above expected gains (more months of growth in vocabulary than months in between the pre and post tests).

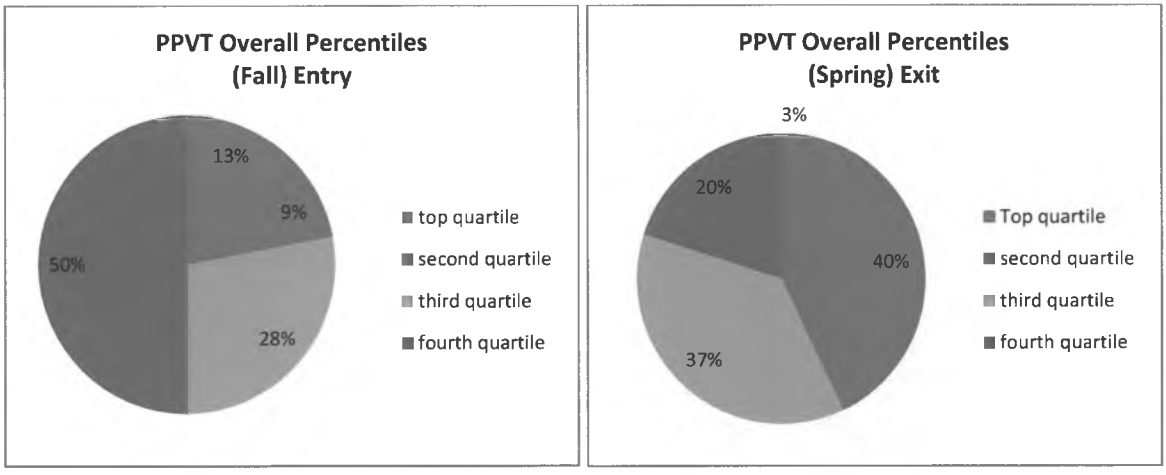
One final analysis shows the students' growth in relation to an age-equivalent, typically developing child on a national level.



Bering Straits School District

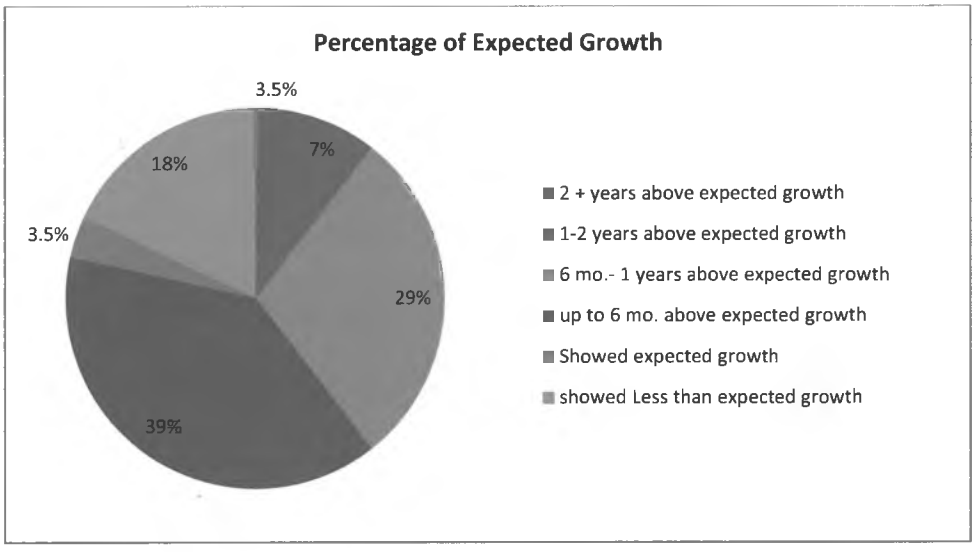


4% of the children have moved from the bottom 2 quartiles to the top two.
31% of the children have moved up from the bottom quartile.

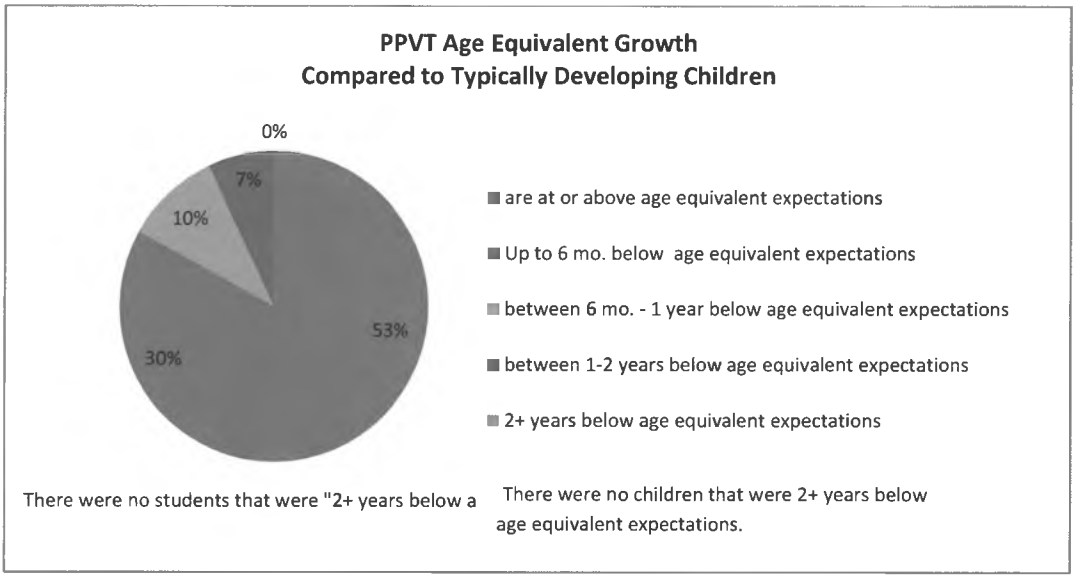


Age Equivalence data shows information on the children's (and the programs' success) in closing gaps in development.

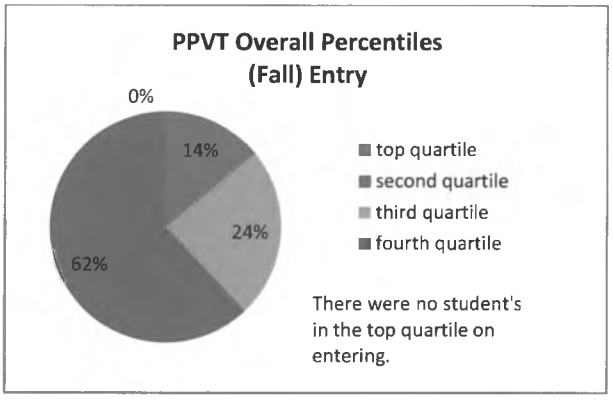
One final analysis looks to show the students' growth in relation to an age-equivalent typically developing child on a national level.



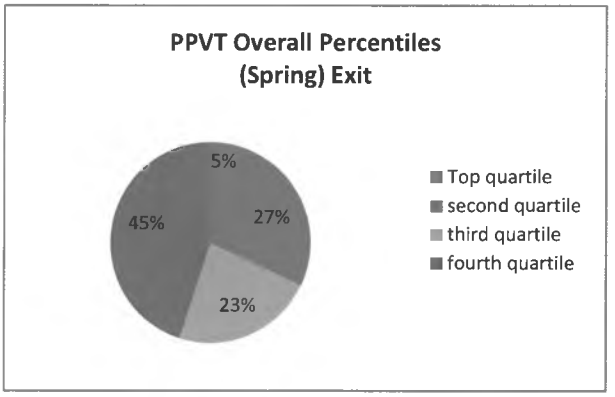
Juneau School District



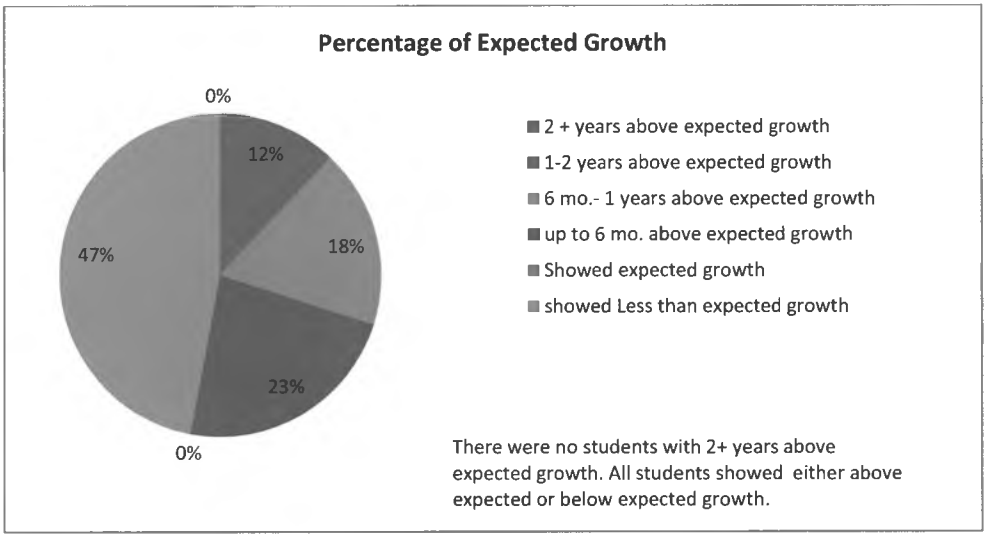
21% of the children have moved from the bottom 2 quartiles to the top two.
30% of the children have moved up from the bottom quartile.



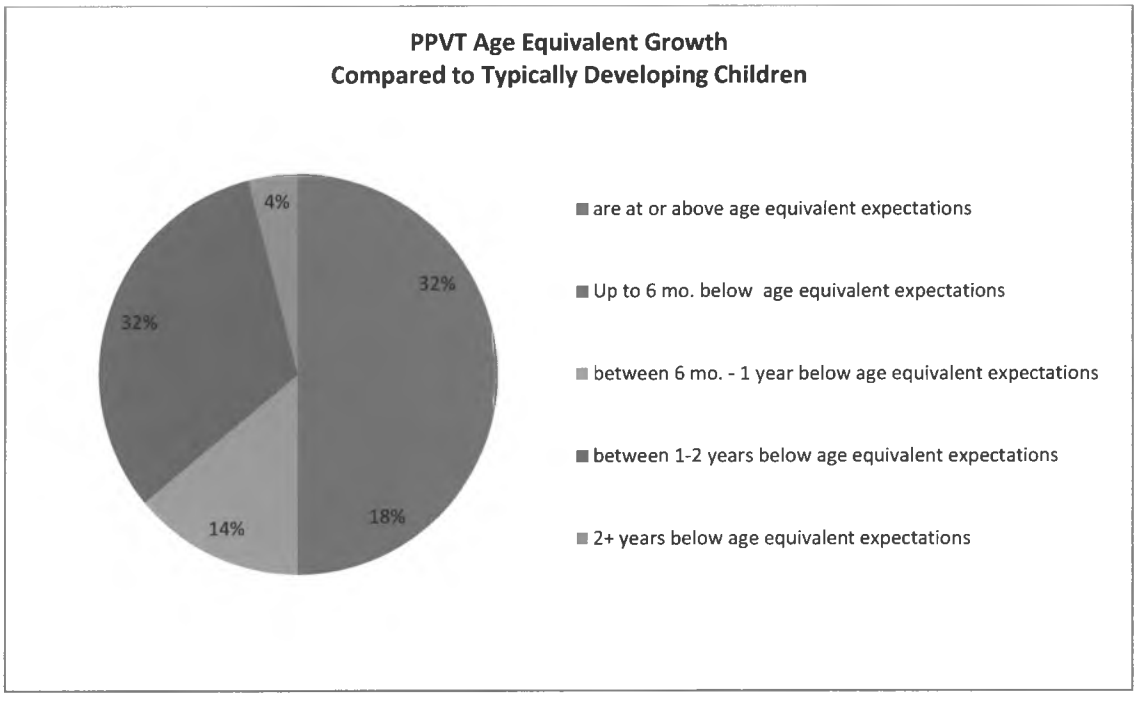
Age Equivalence data shows information on the children's (and the programs' success) in closing gaps in development.



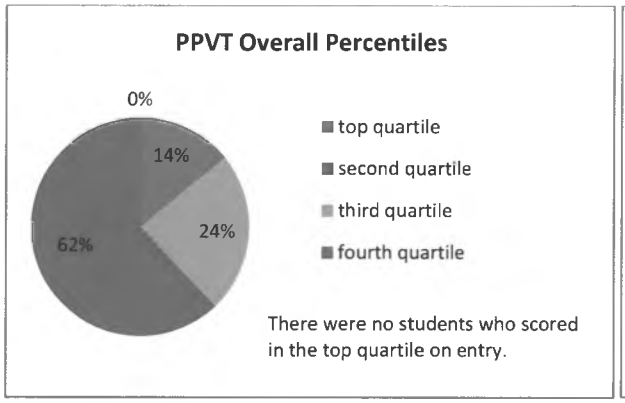
One final analysis shows the students' growth in relation to an age-equivalent typically developing child on a national level.



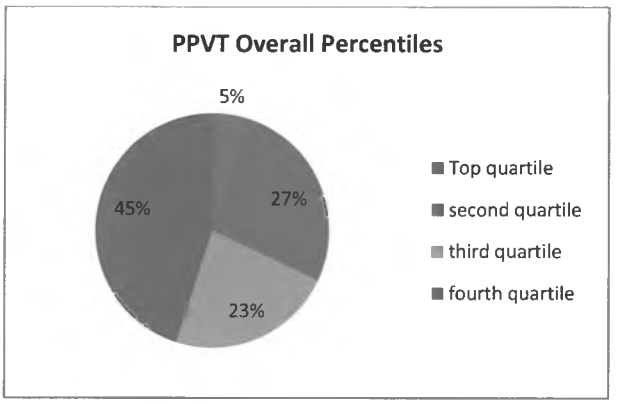
Lower Kuskokwim School District



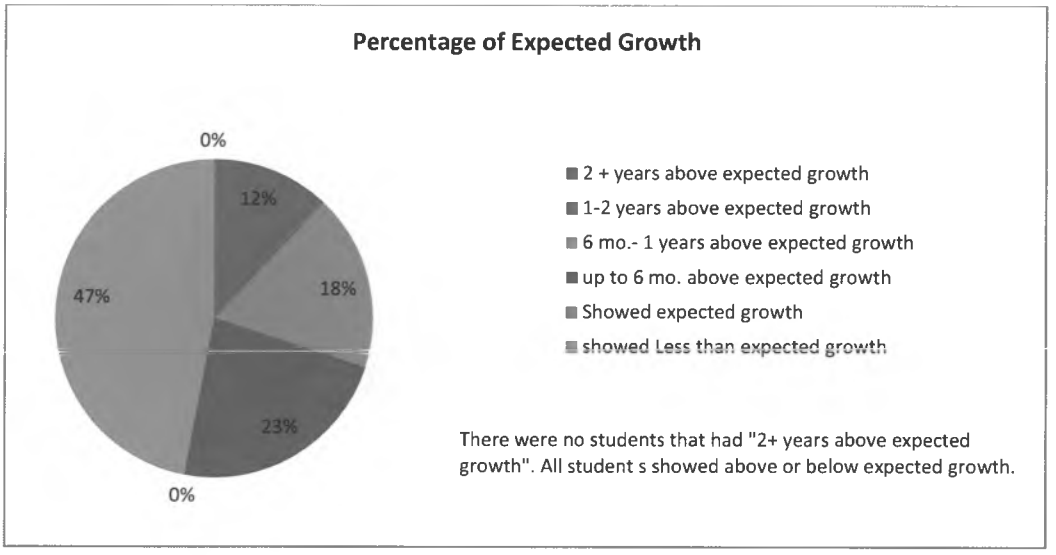
18% of the children have moved from the bottom 2 quartiles to the top two.
17% of the children have moved up from the bottom quartile.



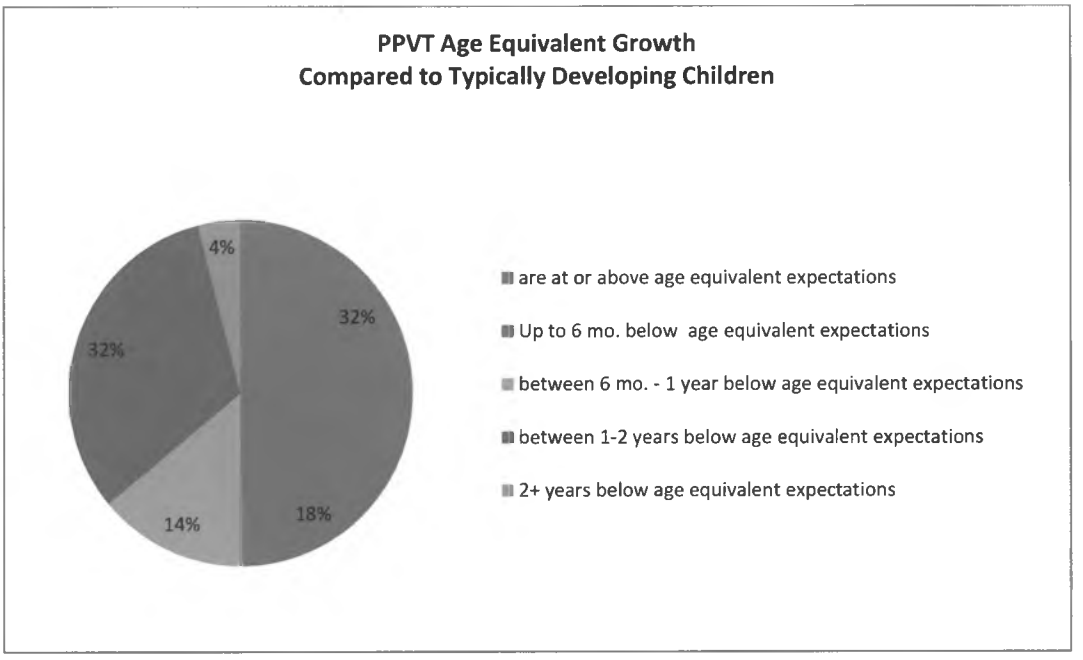
Age Equivalence data shows us information on the children's (and the programs' success) in closing gaps in development.



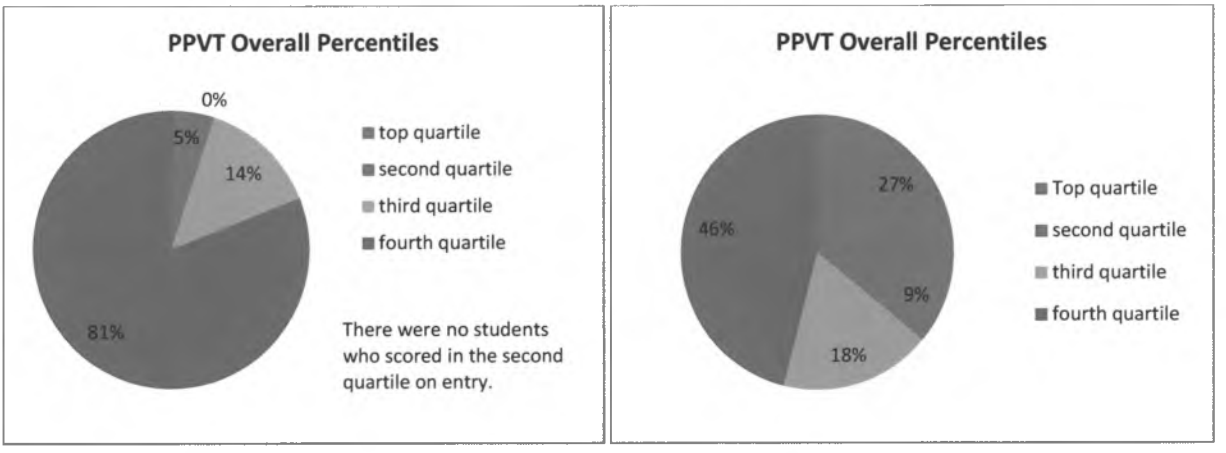
One final analysis shows the students' growth in relation to an age-equivalent typically developing child on a national level.



Nome Public Schools

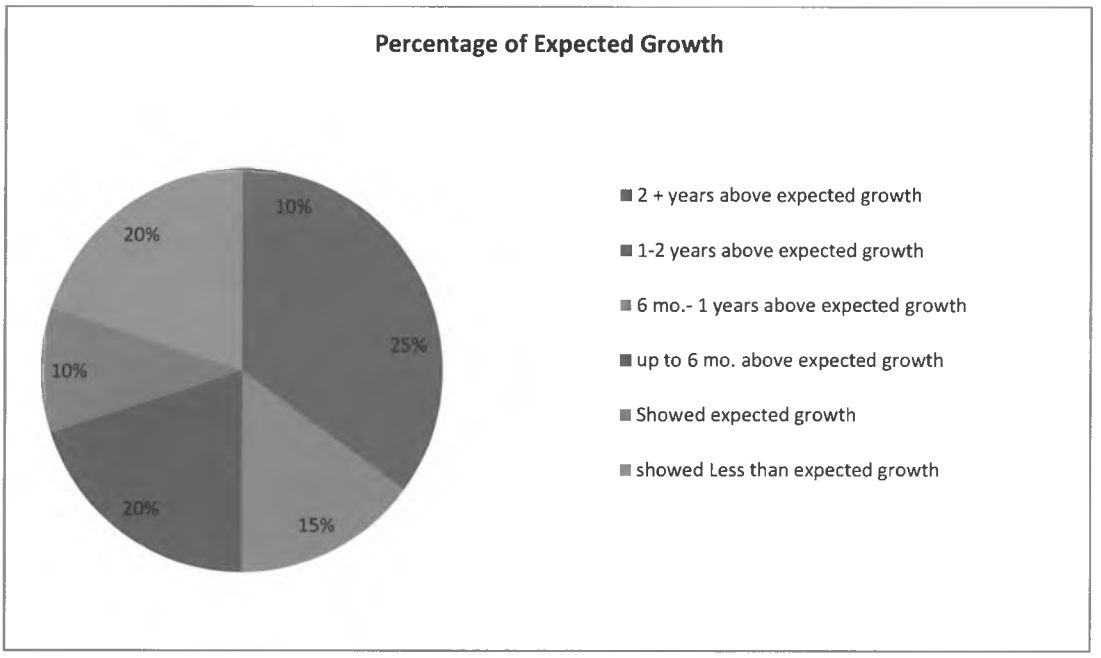


18% of the children have moved from the bottom 2 quartiles to the top two.
17% of the children have moved up from the bottom quartile.

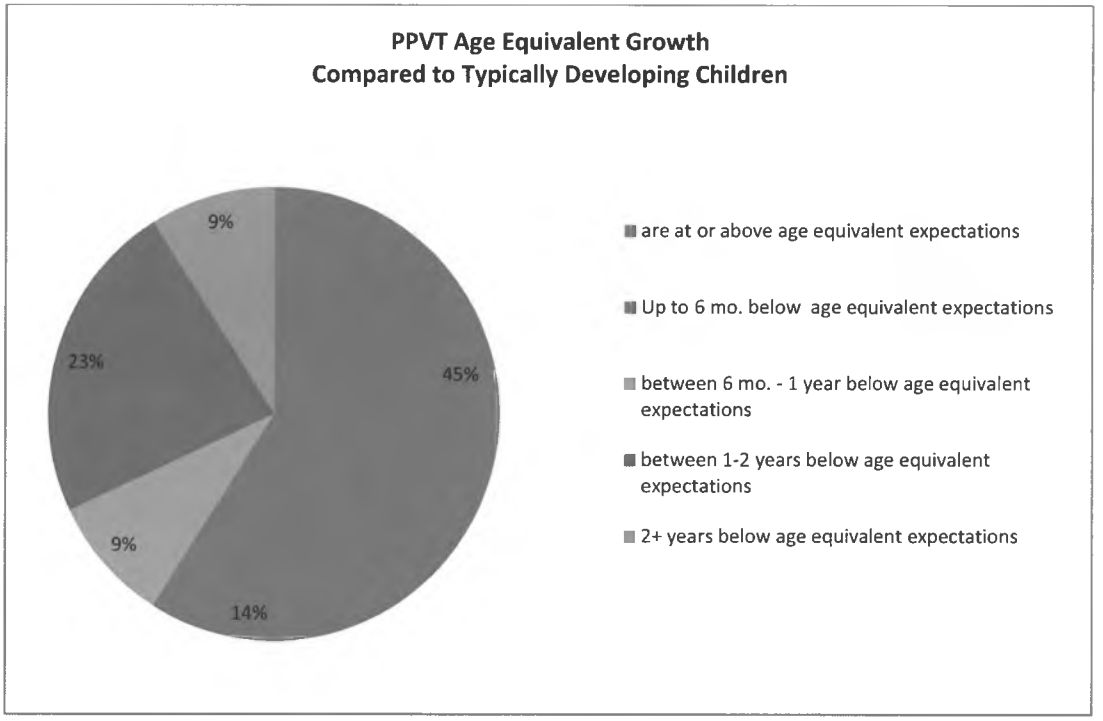


Age Equivalence data shows us information on the children's (and the programs' success) in closing gaps in development.

One final analysis shows the students' growth in relation to an age-equivalent typically developing child on a national level.



Yukon Koyukuk School District



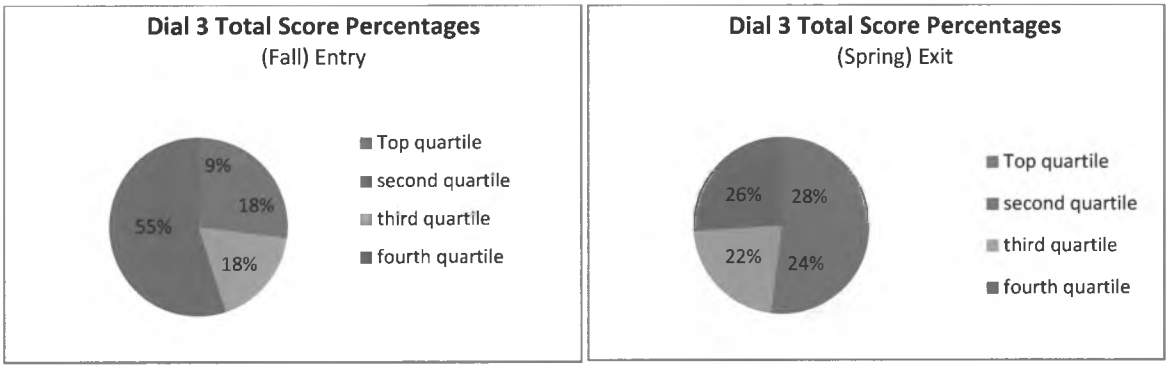
31% of the children have moved from the bottom 2 quartiles to the top two.
35% of the children have moved up from the bottom quartile.

Age Equivalence data shows us information on the children's (and the programs' success) in closing gaps in development.

One final analysis shows the students' growth in relation to an age equivalent typically developing child on a national level.

Developmental Indicators for the Assessment of Learning Third Edition (DIAL-3)

The DIAL-3 is a screening tool of cognitive developmental delays in children who are of ages 3 years, 0 months, to 6 years 11 months. Its three subtests are designed to assess developmental skills that are relevant foundations for academic learning, including the following: the *Motor* skills subtest measuring skills that are relevant for learning to write, the *Concepts* subtest measuring skills that they deemed relevant for learning arithmetic, and the *Language* subtest they considered relevant for learning to read. This assessment in a pre- and post-methodology allows us to focus on prerequisite skills needed for later successful academic achievement.



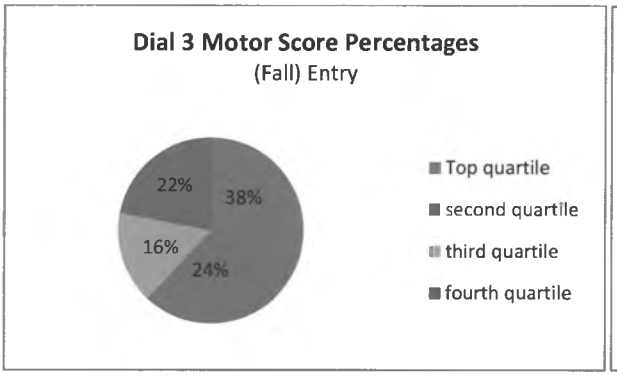
DIAL – 3 State Aggregate Results

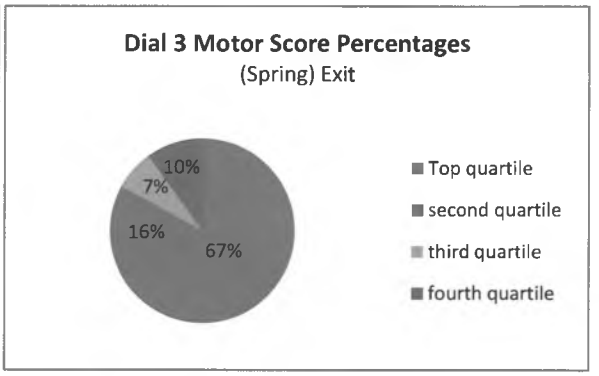
The DIAL -3 provides information on three areas of development in relation to school readiness:

1. Motor Development
2. Concept Development
3. Language Development

A total score based on the scores in all three areas is also given. When we look at the Dial - 3 data in terms of percentile, we can see how children compare to their peers nationally.

Total Score Fall & Spring DIAL - 3



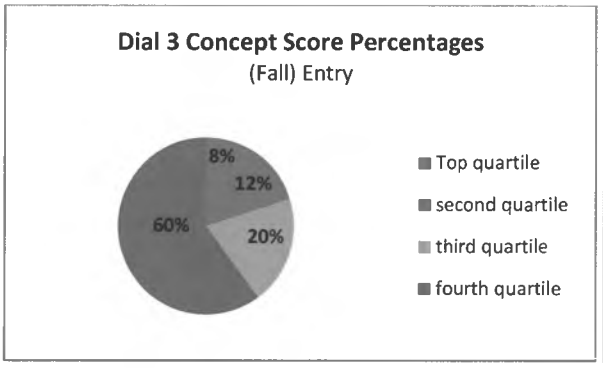


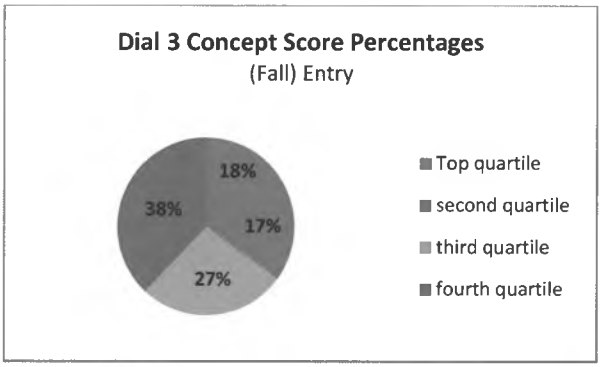
The charts above illustrate the large numbers of children entering the AP3 program significantly below their same age peers nationally and the numbers of children showing significant improvement in percentile ranking compared to same age peers nationally.

28% of the children are now in the top quartile, more than tripling the percentage of children at or above the 76th percentile.

29% of the children have moved out of the bottom quartile (over half of the children who started the program in the bottom quartile have moved up).

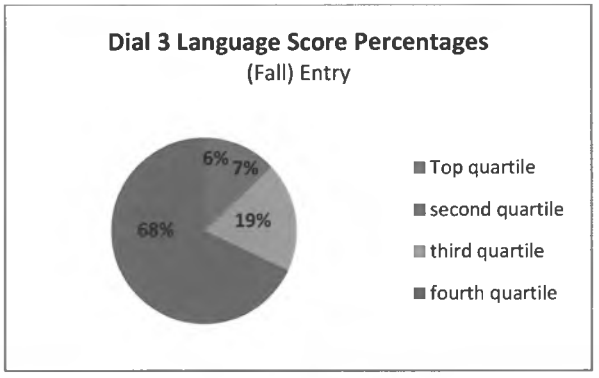
Motor Development Score Fall & Spring DIAL - 3



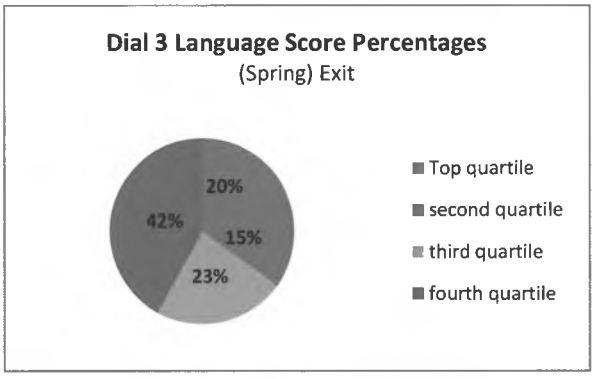


The charts above illustrate the placement of children entering the AP3 program compared to their same age peers nationally in motor development and the improvement of children in the AP3 program.

62% of AP3 children are entering the program in the top two quartiles.
83% of AP3 children are finishing the program in the top two quartiles.

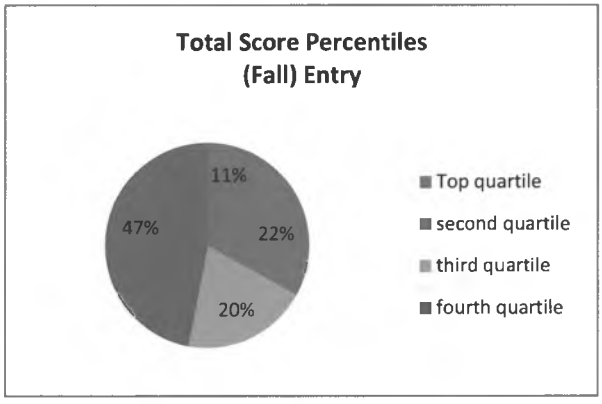


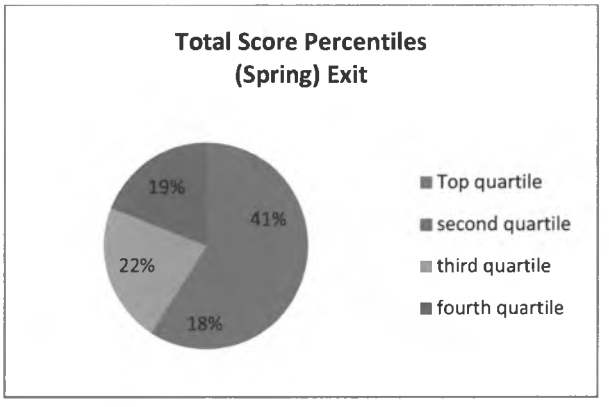
Concept & Language Development Scores Fall & Spring DIAL - 3



The next sets of charts show the large numbers of children entering the AP3 program significantly below their same age peers nationally in both concept and language development, and the improvement of children participating in the AP3 program.

80% of our AP3 children are entering the program in the bottom two quartiles
35% of our AP3 children are finishing the program in the top two quartiles.
15% have moved from the bottom two quartiles to the top two.

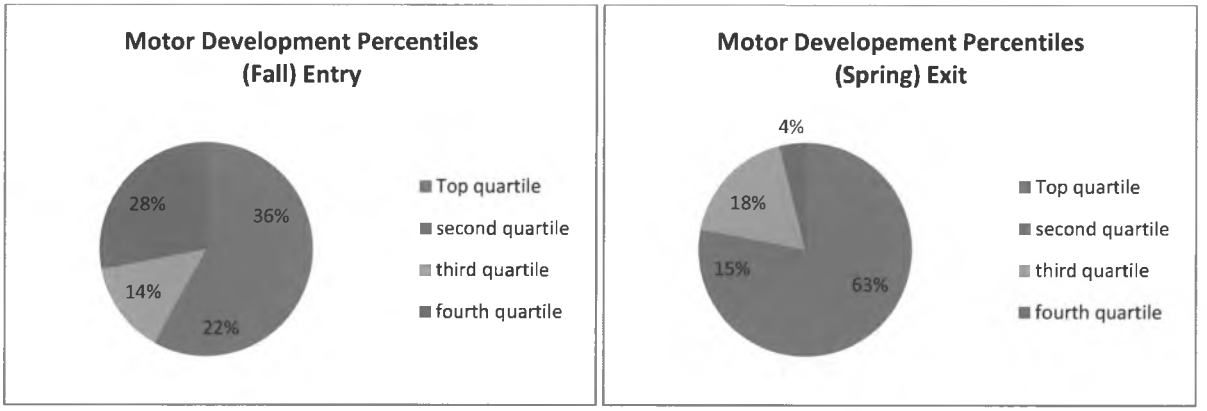




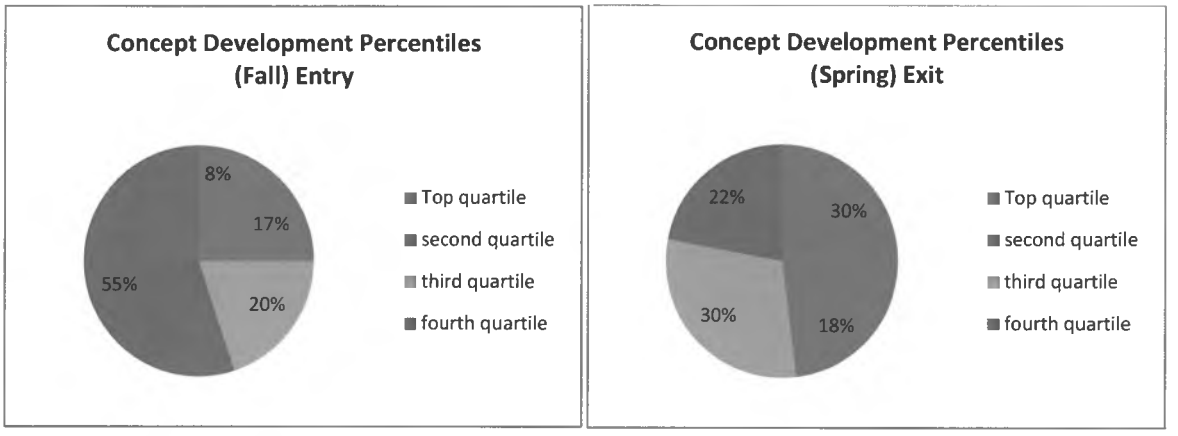
87% of AP3 children are entering the program in the bottom two quartiles.
35% of AP3 children are finishing the program in the top two quartiles.
22% have moved from the bottom two quartiles to the top two.

Dial - 3 Results by District

Anchorage School District

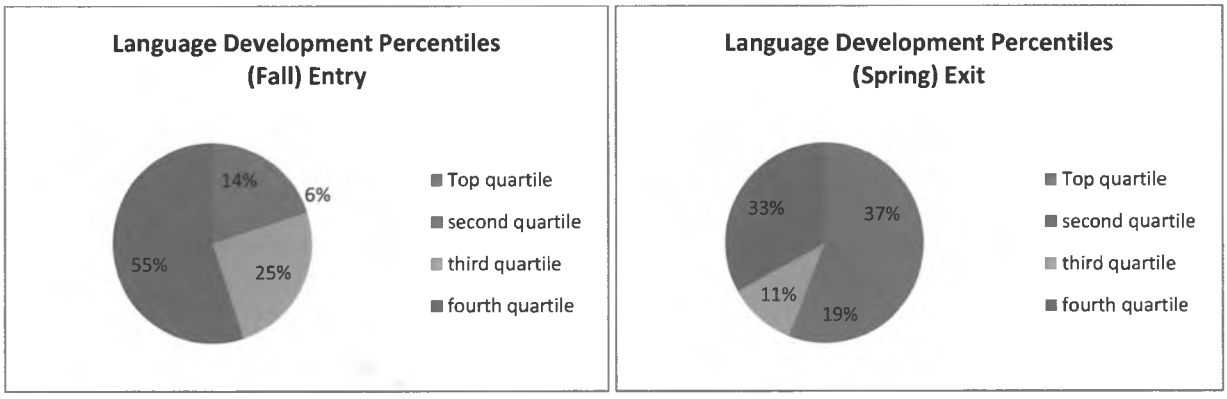


Total Score Fall & Spring DIAL - 3



In total score, 30% of the children moved into the top quartile. This means 41% of all children ended the year scoring at or above the 76th percentile. Additionally 28% of the children who started the year in the bottom quartile have moved up, leaving only 19% of the children ending the year at or below the 25th percentile.

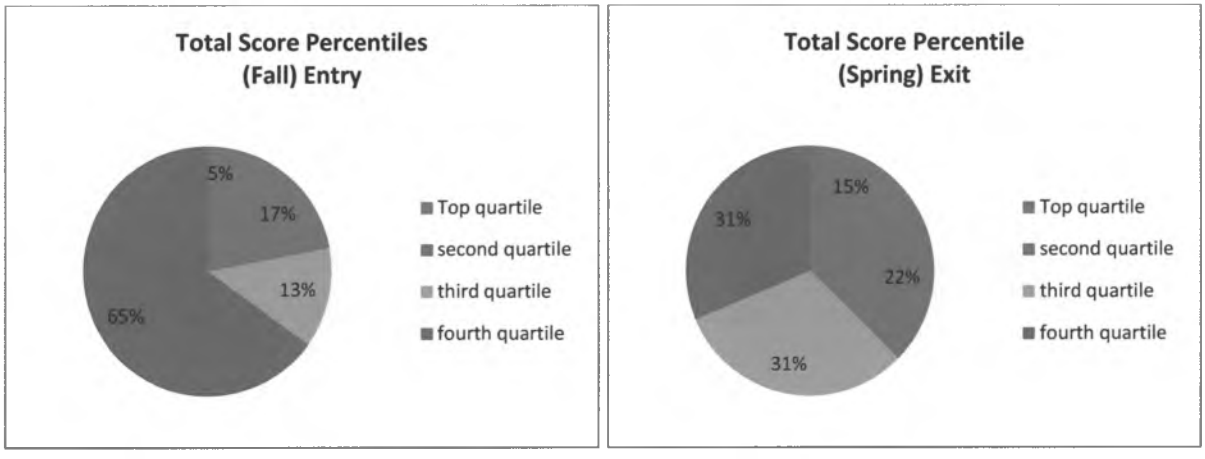
Motor Development Score Fall & Spring DIAL - 3



Growth in motor development was substantial, with 63% of the children ending the year at or above the 76th percentile. Whereas 28% began the year in the bottom quartile, only 4% ended the year there.

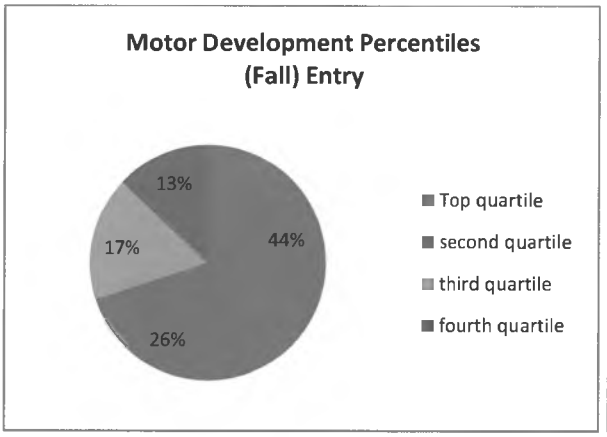
Concept Development Score Fall & Spring DIAL - 3

Concept development showed 22% of the children moving up into the top quartile and 33% moving out of the bottom quartile. The Anchorage School District showed the highest performance of all the grantees in this area of the DIAL-3.

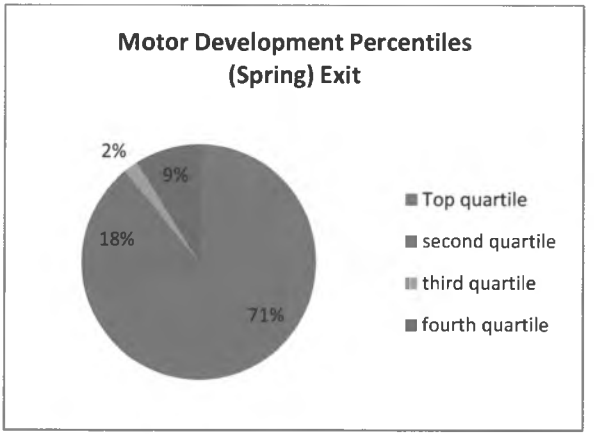


Language Development Score Fall & Spring DIAL - 3

As for language development, 37% of the children ended the year at or above the 76th percentile. That showed 23% of the children moving up to the top quartile throughout the year. At the same time, 22% of the children advanced out of the bottom quartile, leaving 33% of the children still scoring at or below the 25th percentile.

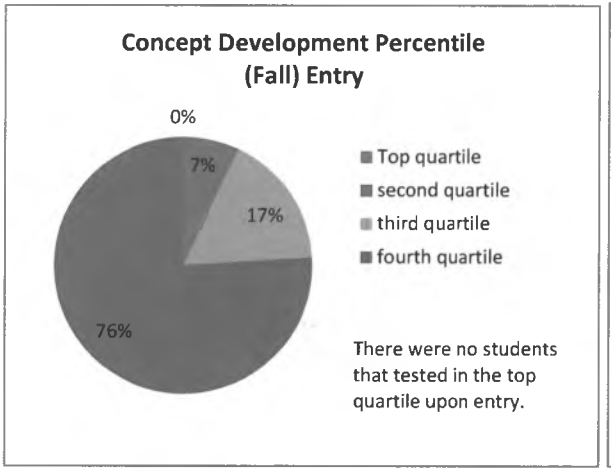


Bering Straits School District

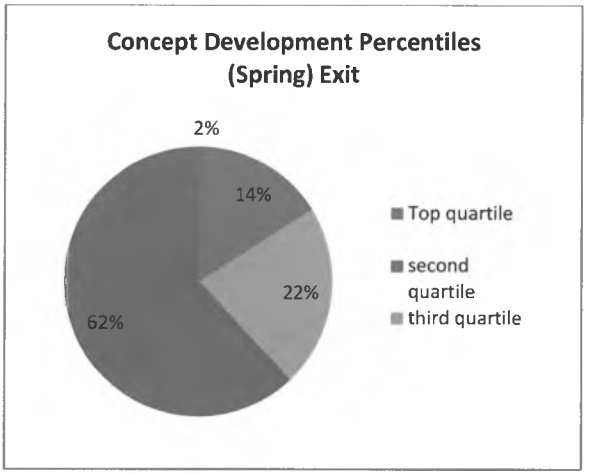


Total Score Fall & Spring DIAL - 3

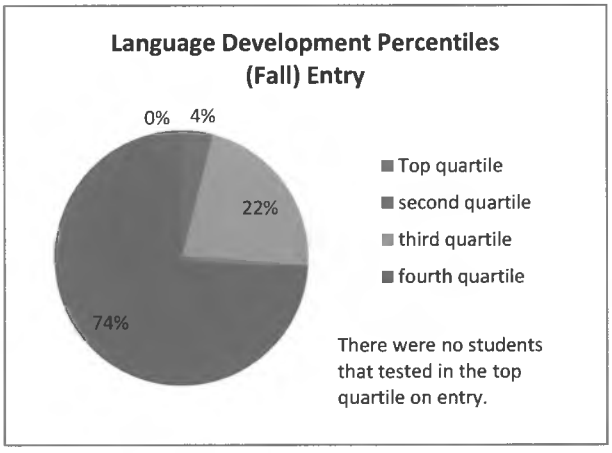
The total score showed 10% of the students moving into the top quartile, with 15% ending the year at or above the 76th percentile ranking. 34% of the children moved out of the bottom quartile by the end of the school year.



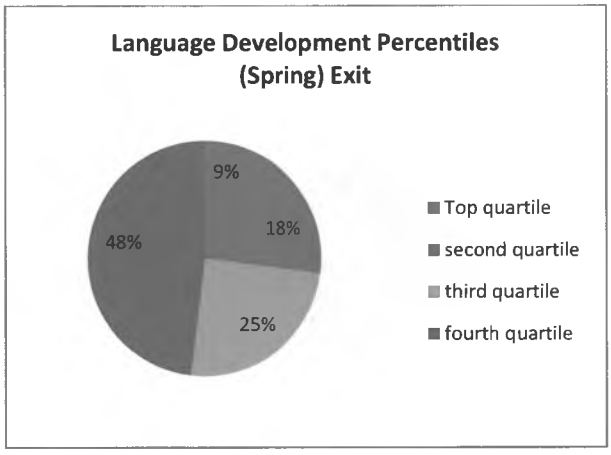
Motor Development Score Fall & Spring DIAL - 3



The children in BSSD showed the strongest performance in the area of motor development. 71% of their children ended the school year in the 76th percentile or above. 88% ended the year in the top two quartiles.

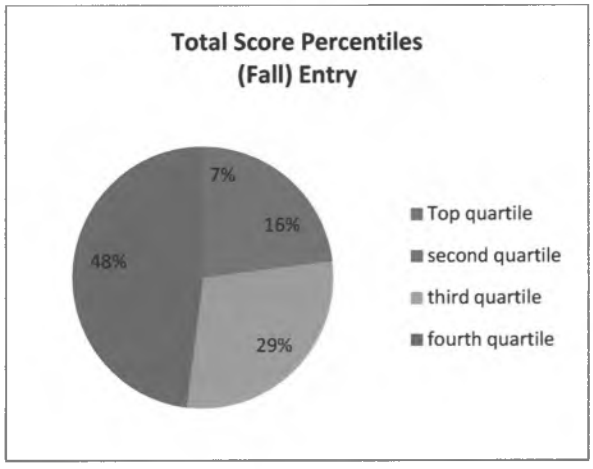


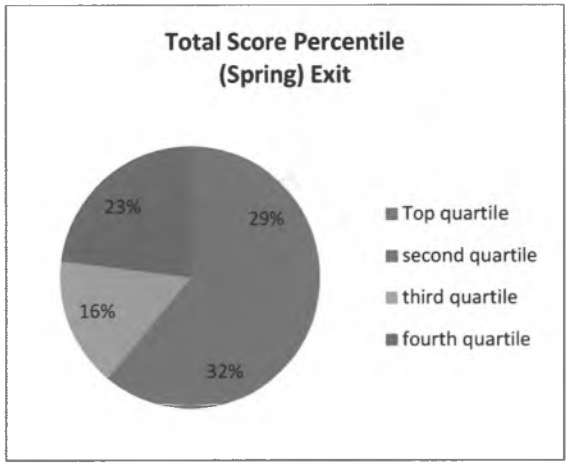
Concept Development Score Fall & Spring DIAL - 3



In concept development, 76% of the incoming four year olds scored in the lowest quartile. There were no students in the top quartile. By spring 14% of the children left the bottom quartile and the number of children in the top two quartiles more than doubled.

Language Development Score Fall & Spring DIAL - 3

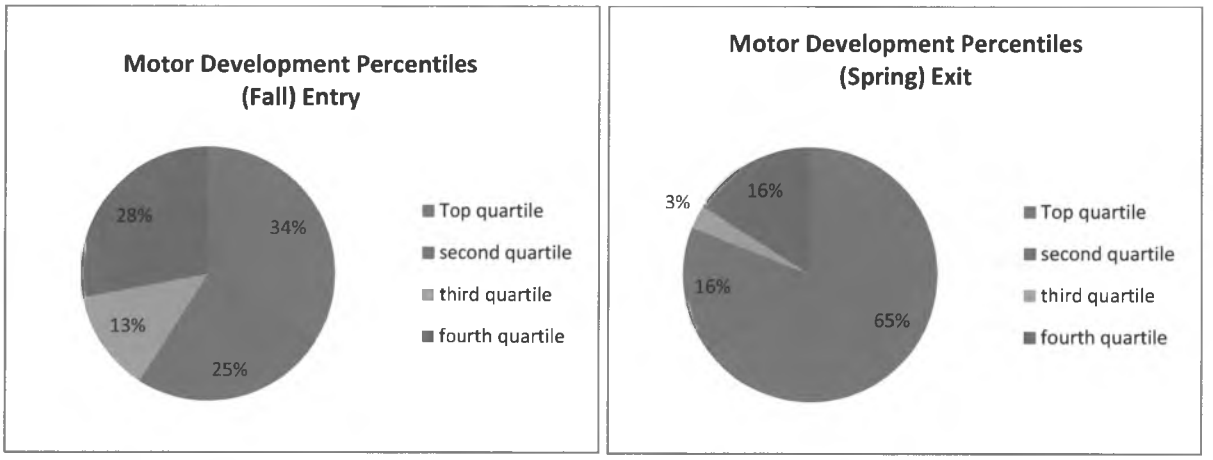




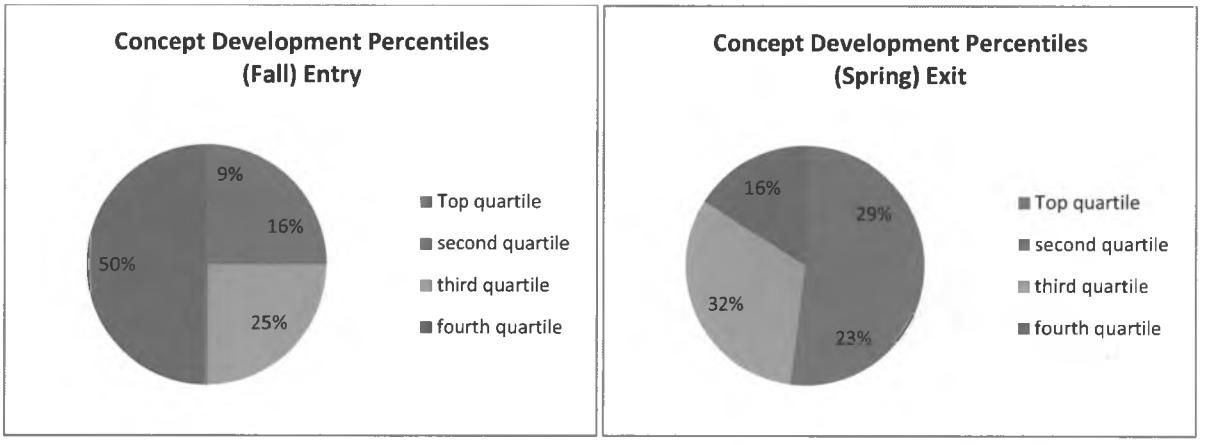
74% of the BSSD students began the year at or below the 25th quartile in language development. Again there were no children in the top quartile. At year's end, 26% of the preschoolers left the bottom quartile, 14% joined the second quartile, and 9% scored at or above the 76th percentile.

Juneau School District

Total Score Fall & Spring DIAL - 3

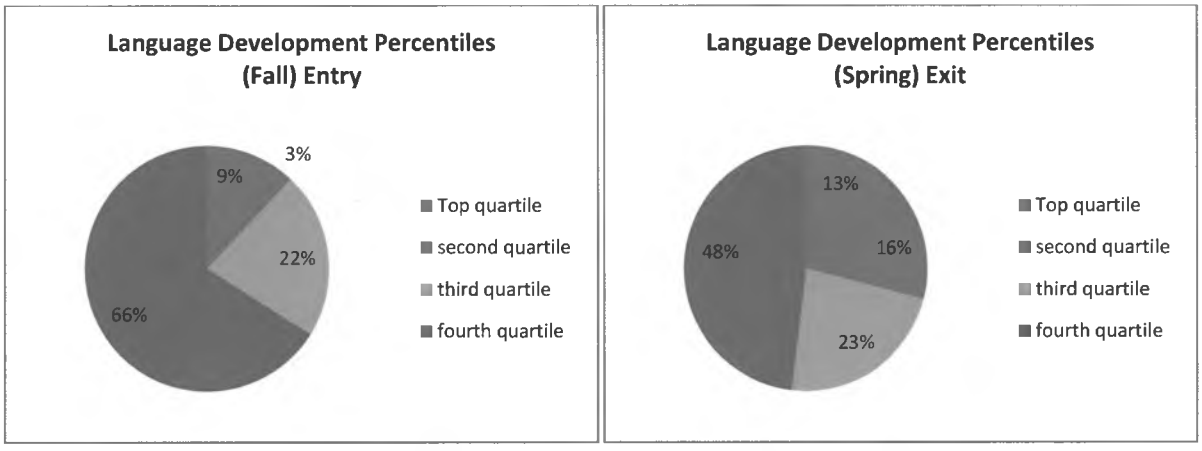


In the fall, 77% of Juneau's preschoolers were in the bottom two quartiles on their total score, with 48% scoring at or below the 25th quartile. 7% scored in the top quartile. The post



assessment showed 25% of the JSD children moved up from the bottom quartile and an additional 22% moved into the top quartile

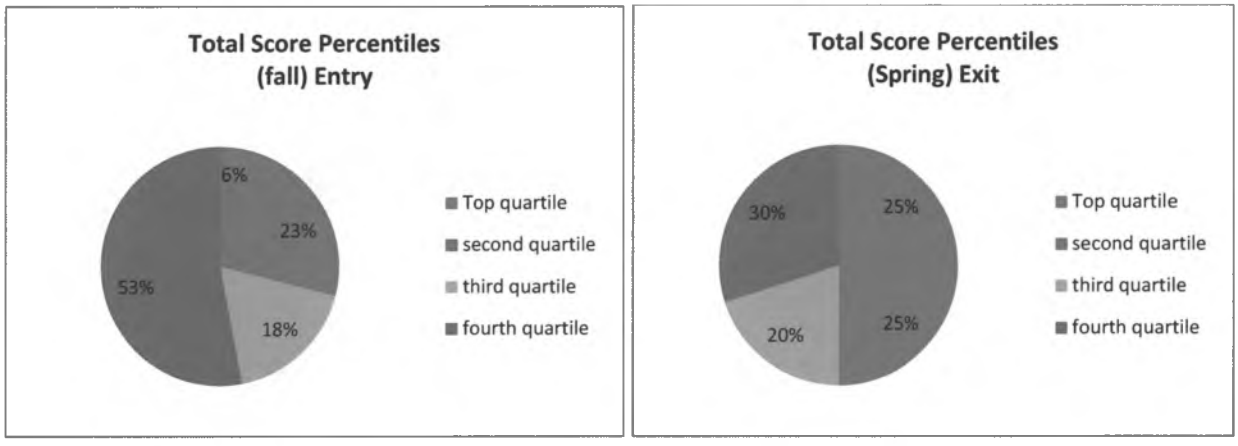
Motor Development Score Fall & Spring DIAL - 3



In motor development, 34% of the children started the year in the top quartile with 28% scoring at or below the 25th percentile. The post assessment showed 12% had moved out of the bottom quartile and an additional 31% moved into the top quartile.

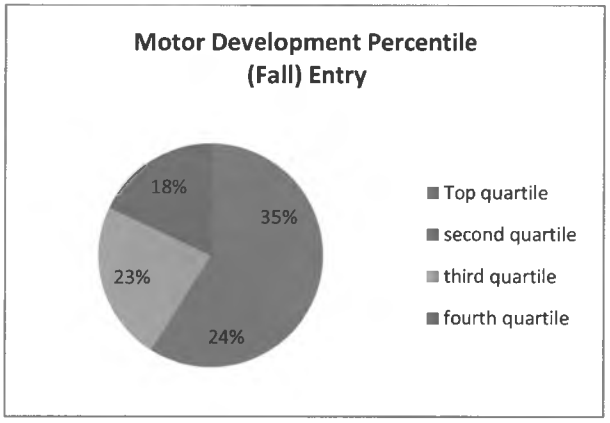
Concept Development Score Fall & Spring DIAL - 3

As for concept development, 9% of the preschoolers began the fall in the top quartile. 75% of the students were in the bottom two quartiles with half of the children scoring at or below the 25th percentile. By spring, 34% of the preschoolers moved out of the bottom quartile and another 20% had joined the top quartile.

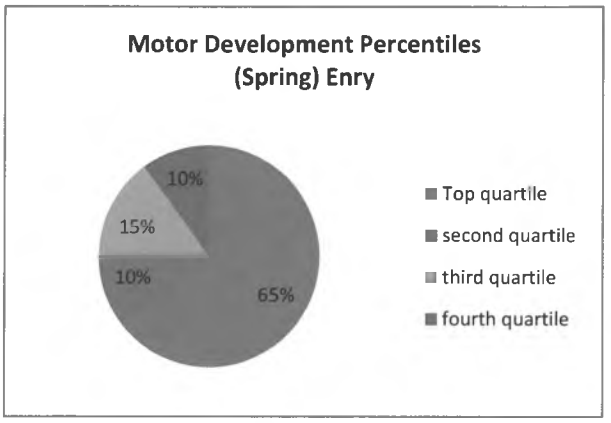


Language Development Score Fall & Spring DIAL - 3

In language development, 66% of the children performed in the bottom quartile on the fall pre-assessment with an additional 22% scoring between the 26th and 50th percentile. 12% scored in the top two quartiles. At year end 18% had left the bottom quartile. An additional 17% moved from the bottom two quartiles into the top two quartiles.

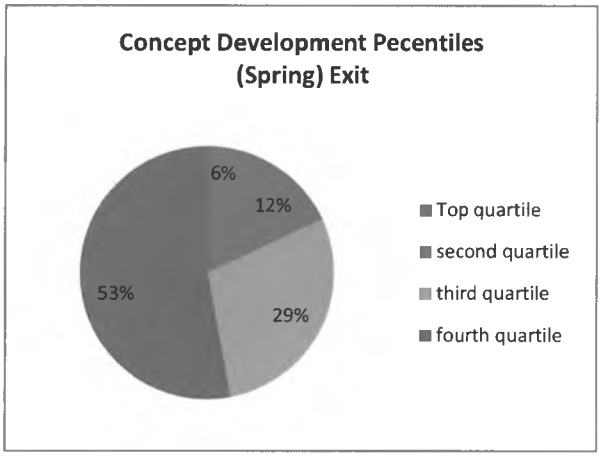


Lower Kuskokwim School District

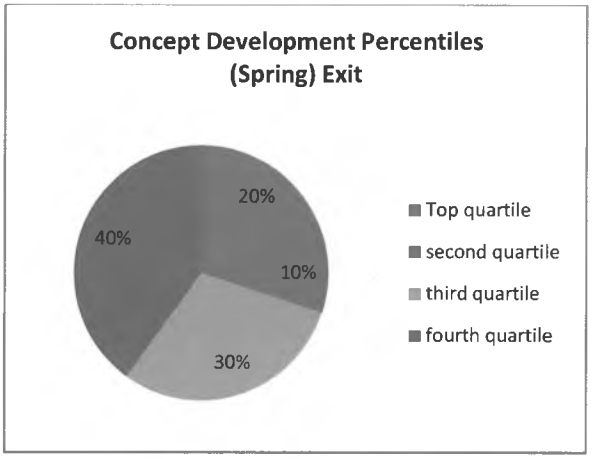


Total Score Fall & Spring DIAL - 3

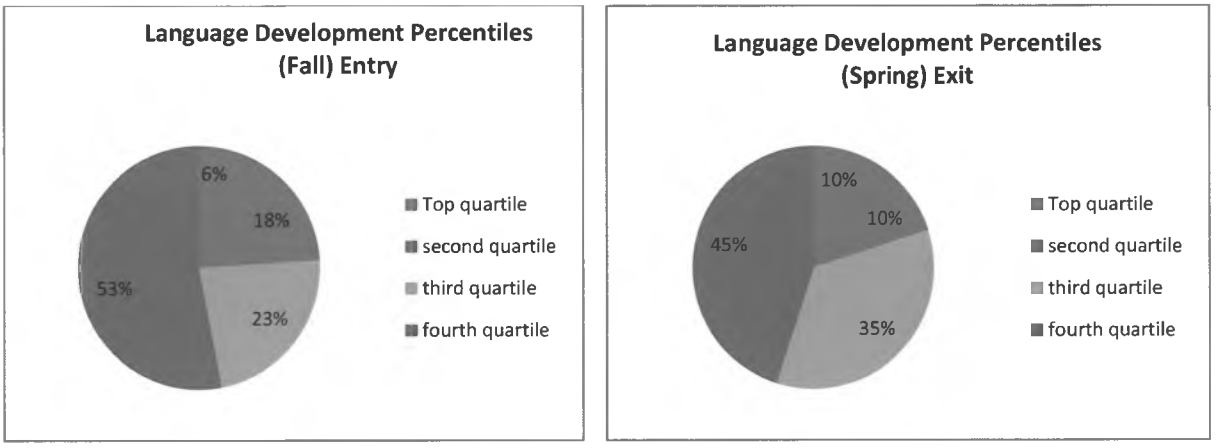
In total score 53% of LKSD's AP3 students began the year in the bottom quartile, with 6% in the top quartile. The spring DIAL – 3 assessment showed 23% of the children moved out of the bottom quartile. 19% joined the top quartile, scoring at or above the 76th percentile.



Motor Development Score Fall & Spring DIAL - 3

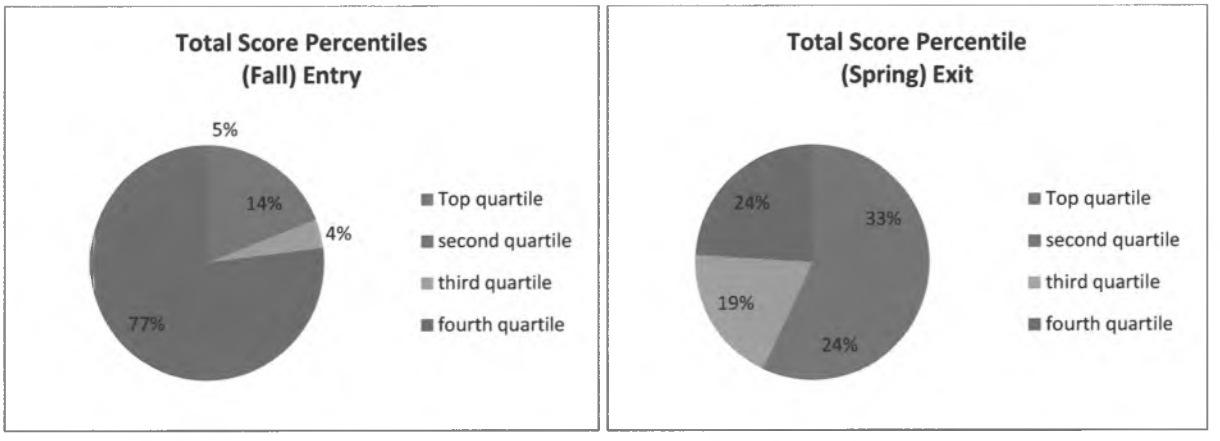


As in most of the AP3 programs, motor development was a strong point for the children in LKSD. They started the year with 35% of the children in the top quartile and only 18% in the bottom. At the closure of the first year of the program, another 30% joined the top quartile, scoring at least in the 76th percentile or higher. An additional 8% left the bottom quartile.



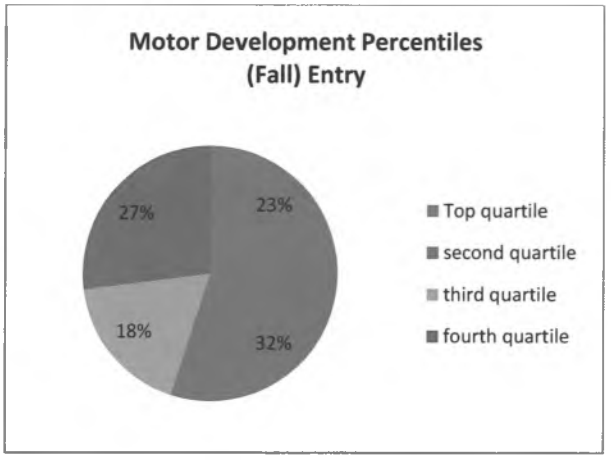
Concept Development Score Fall & Spring DIAL - 3

The scores in concept development showed 82% of the students in the bottom two quartiles to start the school year; 53% were at or below the 25th percentile. Only 6% scored in the top quartile. 13% ended the year moving up and out of the bottom quartile. An additional 14% joined the top quartile.

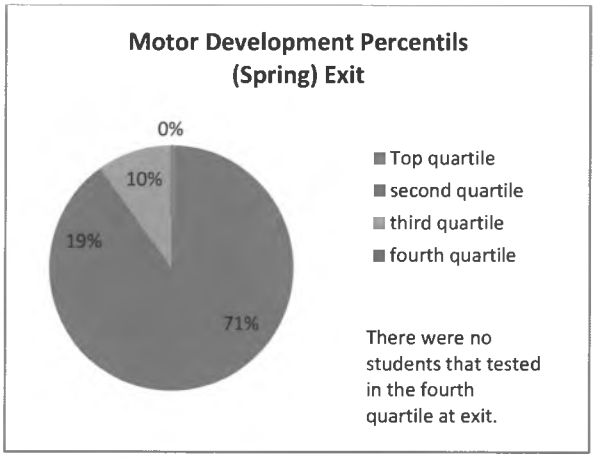


Language Development Score Fall & Spring DIAL - 3

Language development scores showed 53% of the preschoolers started the year at or below the 25th percentile with 6% in the top quartile. At year's end 8% left the bottom quartile and 4% moved into the top quartile.

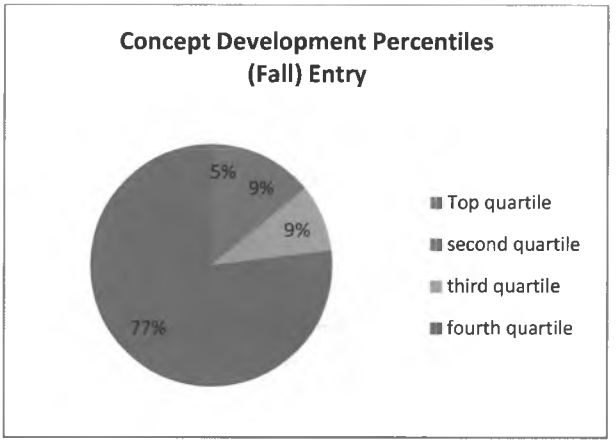


Nome Public Schools

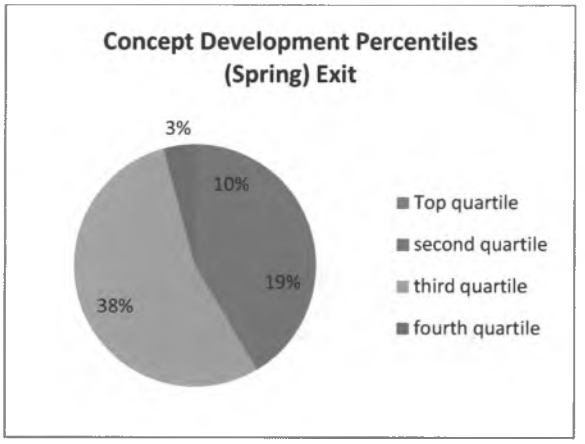


Total Score Fall & Spring DIAL - 3

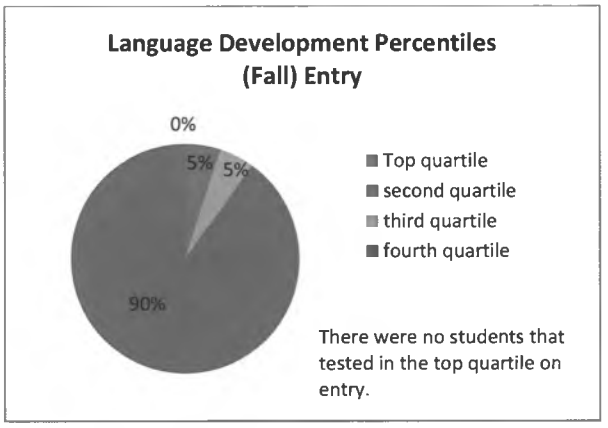
The Nome DIAL – 3 total score saw 77% of the children start the school year in the bottom quartile with 19% in the top two quartiles, 5% of which scored at or above the 76th percentile. By the spring assessment, 53% of the preschoolers moved up and out of the bottom quartile. 28% joined the top quartile, while 10% moved into the second quartile, and an additional 15% scored between the 26th and 50th percentiles.



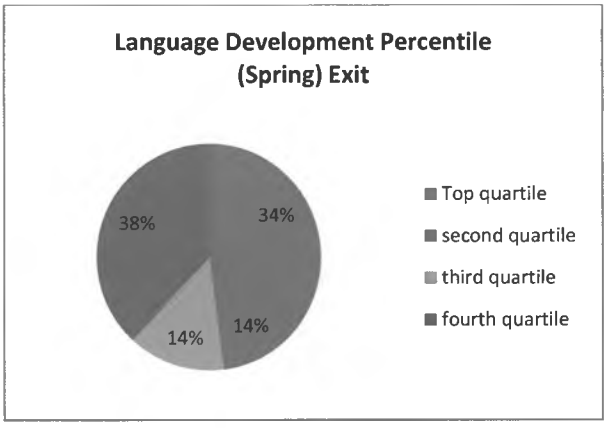
Motor Development Score Fall & Spring DIAL - 3



In the fall, the motor development scores showed a fairly even distribution with 23% scoring at or above the 76th percentile and 27% performing in the bottom quartile. At the end of the year, an additional 48% joined the children in the top quartile. None of the Nome AP3 students ended the year in the bottom quartile.

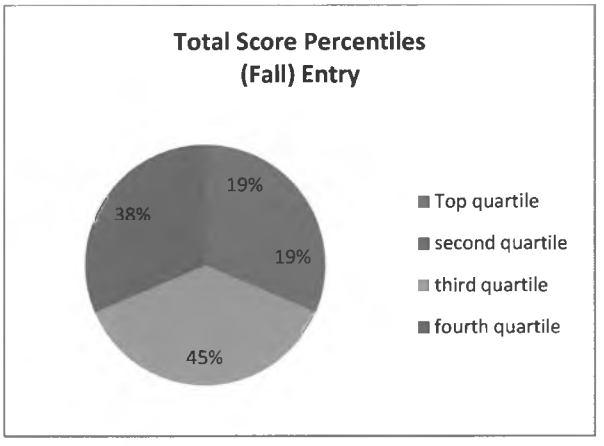


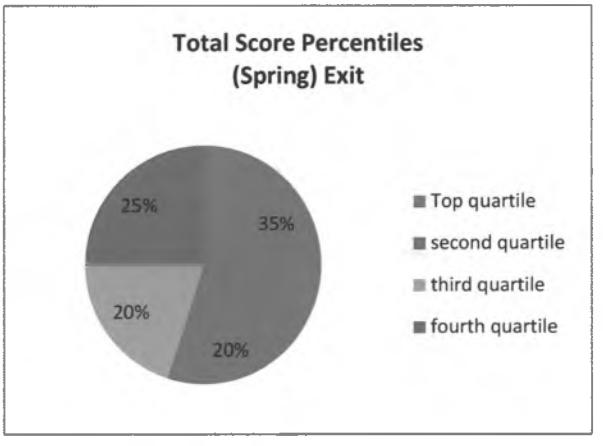
Concept Development Score Fall & Spring DIAL - 3



The pre-assessment in concept development showed 77% of the children performing at or below the 25th percentile and 5% in the top quartile. After the spring post-assessment, 44% of the students left the bottom quartile. An additional 5% joined the top quartile, with another 10% scoring between the 51st and 75th percentile.

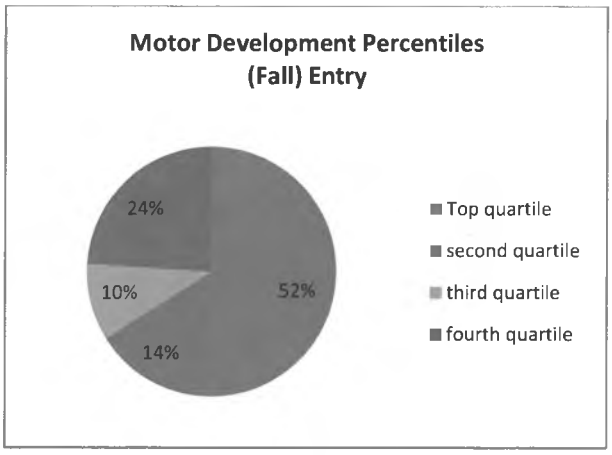
Language Development Score Fall & Spring DIAL - 3



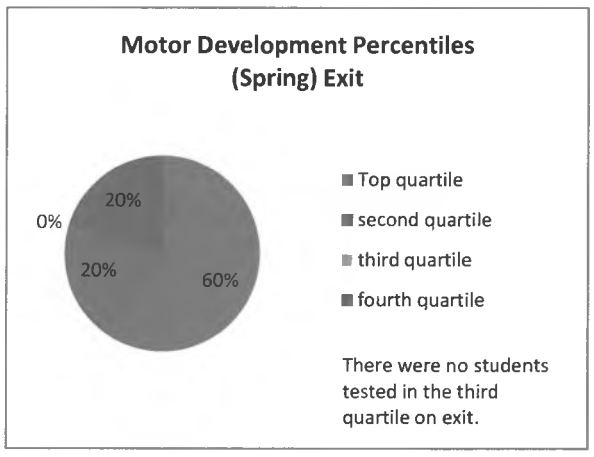


As for language development, 90% of the children began the year at or below the 25th percentile. There were no children performing in the highest quartile. By the end of the year, 52% of the Nome students had moved out of the bottom quartile. 34% entered the top quartile, while 9% joined each of the middle two quartiles.

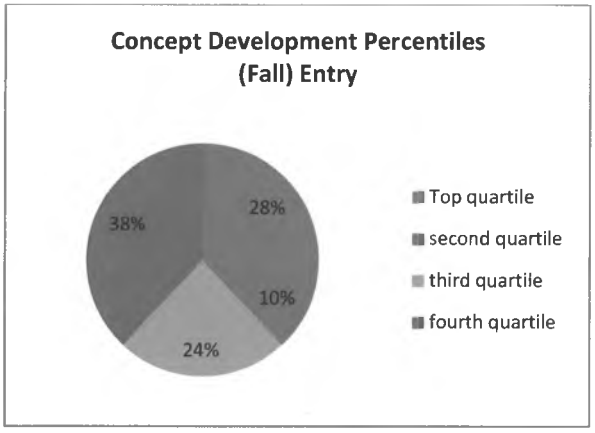
Yukon Koyukuk School District



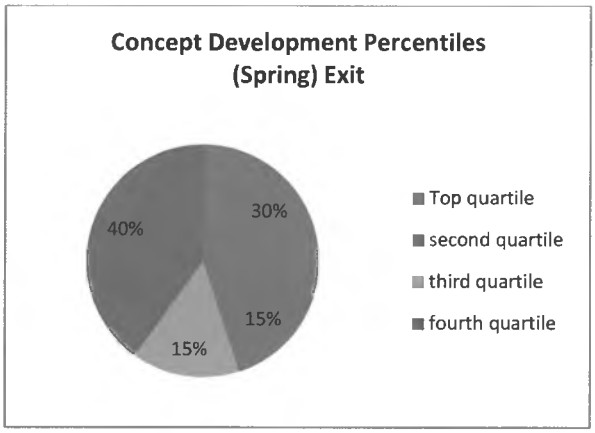
Total Score Fall & Spring DIAL - 3



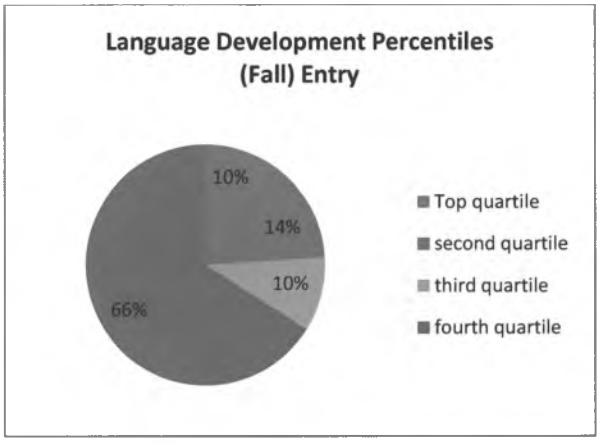
Upon completion of the fall DIAL – 3 assessment, 19% of the YKSD children scored in the top quartile in total score, with 38% scoring at or below the 25th percentile. After the spring assessment, another 16% of the AP3 students joined the top quartile, while 13% left the bottom quartile.



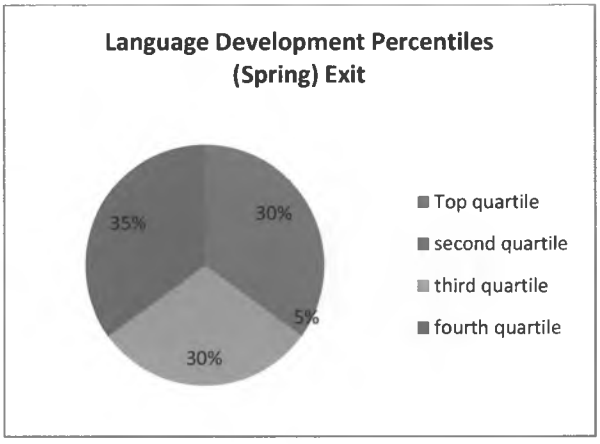
Motor Development Score Fall & Spring DIAL - 3



As for motor development, 52% of the children began the year scoring at or above the 76th percentile and 24% began in the bottom quartile. By the year's end, 4% of the students left the bottom quartile and an additional 8% joined the top quartile.



Concept Development Score Fall & Spring DIAL - 3



Regarding concept development the YKSD preschoolers started the year with 28% of their children in the top quartile and 38% performing at or below the 25th percentile. At the end of the year, 7% moved from the bottom two quartiles into the top two quartiles.

Language Development Score Fall & Spring DIAL - 3

As school began for the YKSD AP3 program, 66% of the children performed in the bottom quartile in language development. 10% were at the top with scores at or above the 76th percentile. School's end saw 31% of the children move out of the bottom quartile, with an additional 20% of the children joining the top quartile.

Determining Program Outcomes

Early Childhood Environment Rating Scale-Revised Edition (ECERS-R)

The Early Childhood Environment Rating Scale-Revised Edition (ECERS-R) is a 43- item scale designed for use in classroom-based early childhood care and education programs aged two to six years. It is organized into seven scales: Space and Furnishings, Personal Care Routines, Language-Reasoning, Activities, Interaction, Program Structure, and Parents and Staff. Each scale has additional subscales, with multiple items that must be passed to receive a given score. Each subscale is scored on a seven-point scale, with benchmarks established for 1 = Inadequate, 3 = Minimal, 5 = Good, and 7 = Excellent. Programs that pass some of the items that are part of the benchmark for a 3, but not all of them, are scored a 2 on that subscale. Similarly programs that fall between good and excellent are scored a 6.

Why is the ECERS - R a Valuable tool?

The ECERS-R was developed at the Frank Porter Graham Child Development Institute at the University of North Carolina at Chapel Hill. It was designed for use in preschool, kindergarten, and childcare classrooms serving children two and a half through five years of age. It is widely used across a variety of early childhood programs and across the country as a program quality assessment instrument. It can be used by directors for program improvement and staff supervision, by teaching staff for self- assessment, and by agency staff, or other over-site entities staff, for monitoring. The tool has a long history of research demonstrating that quality as measured by the ECERS has good predictive validity and a well-established reliability that makes it particularly useful for research and program evaluation.

Results: State Aggregate. District. & Site ECERS – R Program Outcomes

The Early Childhood Environment Rating Scale-Revised Edition (ECERS-R) is designed for use in classroom-based early childhood care & education programs aged two to six years. It is organized into seven scales.

The following chart shows the 43 subscales used to determine the 7-point scales found in the ECERS-R.

Space and Furnishings	Personal Care Routines
1. Indoor space	1. Greeting/departing
2. Furniture for routine care, play and learning	2. Meals/snacks
3. Furnishings for relaxation and comfort	3. Nap/rest
4. Room arrangement for play	4. Toileting/diapering
5. Space for privacy	5. Health practices
6. Child-related display	6. Safety practices
7. Space for gross motor play	
8. Gross motor equipment	**Activities**
	1. Fine motor
Language-Reasoning	2. Art
1. Books and pictures	3. Music/movement
2. Encouraging children to communicate	4. Blocks
3. Using language to de develop reasoning skills	5. Sand/water
4. Informal use of language	6. Dramatic play
	7. Nature/science
Interaction	8. Math/number
1. Supervision of gross motor activities	9. Use of TV, video, and/or computers
2. General supervision of children (other than gross motor)	10. Promoting acceptance of diversity
3. Discipline	
4. Staff-child interactions	**Program Structure**
5. Interactions among children	1. Schedule
	2. Free play
Parents and staff	3. Group time
1. Provisions for parents	4. Provisions for children with disabilities
2. Provisions for personal needs of staff	
3. Provisions for professional needs of staff	
4. Staff interaction and cooperation	
5. Supervision and evaluation of staff	
6. Opportunities for professional growth	

State Aggregate	Fall	Spring
Overall Score:	3.76	4.69
Space and Furnishings	3.06	4.08
Personal Care Routines	2.64	3.33
Language-Reasoning	4.10	5.43
Activities	3.16	4.33
Interaction	4.54	4.80
Program Structure	4.26	5.41
Parents and Staff	5.44	6.13

These scores represent significant programmatic growth. The AP3 programs began the year above minimal and ended approaching good (almost a full point of improvement in less than a year's time). Our goal will be to continue improvement to 5 or above in year two.

District & Site Results
ECERS – R Program Outcomes

Anchorage School District

Anchorage School District	Fall	Spring
Overall Score:	4.56	4.72
Space and Furnishings	3.63	3.82
Personal Care Routines	2.8	2.2
Language-Reasoning	4.88	5.75
Activities	4	4.52
Interaction	5.9	4.7
Program Structure	4.75	5.54
Parents and Staff	6.67	7

Site: Creekside Elm.	Fall	Spring	Site: Willow Crest Elm.	Fall	Spring
Overall Score:	4.32	4.40	**Overall Score:**	4.80	5.03
Space and Furnishings	3.13	3.50	Space and Furnishings	4.13	4.13
Personal Care Routines	2.80	2.0	Personal Care Routines	2.80	2.40
Language-Reasoning	5.00	4.50	Language-Reasoning	4.75	7.00
Activities	3.67	4.60	Activities	4.33	4.44
Interaction	6.00	4.00	Interaction	5.80	5.40
Program Structure	4.25	4.75	Program Structure	5.25	6.33
Parents and Staff	6.33	7.00	Parents and Staff	7.00	7.00

These scores represent significant programmatic growth. The Anchorage AP3 programs began the year working towards an overall rating of good (5) and showing growth in the seven individual areas assessed on the ECERS.

Year one showed high growth in Language and Reasoning, Activities, and Program Structure with the highest score possible received in Parents and Staff.

The goal for year two will be to continue improvement to 5 or above on the overall measure, with a focus on continued growth especially in Personal Care Routines, Interactions, and Space and Furnishings.

Space and Furnishings	3.38	2.00	Space and Furnishings	2.38	3.25
Personal Care Routines	2.40	2.20	Personal Care Routines	2.60	2.40
Language-Reasoning	4.00	4.50	Language-Reasoning	3.75	5.25
Activities	3.10	3.10	Activities	3.11	4.00
Interaction	4.60	4.80	Interaction	3.40	1.80
Program Structure	4.25	3.33	Program Structure	2.00	2.67
Parents and Staff	5.17	5.83	Parents and Staff	4.83	4.67

These scores represent significant programmatic growth. The Bering Strait AP3 programs began the year working to move from a minimal rating towards an overall rating of good (5) and showed growth in the seven individual areas assessed on the ECERS.

Their highest levels of growth came in Language and Reasoning, Activities (both with gains of more than a full point on the seven point scale), and Parents and Staff.

The goal for year two will be to continue improvement to 5 on the overall measure, with a focus on continued growth especially in Interactions, Program Structure, and Personal Care Routines.

Juneau School District

Juneau School District	Fall	Spring
Overall Score:	2.91	5.4
Space and Furnishings	2.75	5
Personal Care Routines	1.8	3.4
Language-Reasoning	3.38	6.25
Activities	3.06	4.23

Interaction	1.60	7.00	Interaction	2.60	7.00
Program Structure	2.75	5.75	Program Structure	2.33	7.00
Parents and Staff	4.50	6.00	Parents and Staff	4.17	7.00

These scores represent highly significant programmatic growth. The Juneau AP3 programs began the year working to move from below a minimal rating towards an overall rating of good (5) and showing growth in the seven individual areas assessed on the ECERS.

Not only did they show growth in all areas, but they achieved outstanding levels of growth (more than two points of growth on the seven point scale) in Space and Furnishing, Language and Reasoning, Interaction, Program Structure, Parents and Staff and in the Overall scale. Personal Care Routines and Activities both showed gains of more than a full point on the seven point scale.

The goal for year two will be to continue improvement from the good rating on the overall measure towards a rating of excellent. We will focus on continued growth especially in Personal Care Routines, and Activities.

Lower Kuskokwim School District

Site: Mikelnguut Elitnaurviat	Fall	Spring
Overall Score:	3.17	5.38
Space and Furnishings	2.25	4.50
Personal Care Routines	1.20	2.60
Language-Reasoning	4.50	6.00
Activities	3.10	5.90
Interaction	3.60	5.80
Program Structure	2.33	6.50
Parents and Staff	5.33	6.50

There is only one classroom in the LKSD AP3 project.

These scores represent highly significant programmatic growth. The LKSD AP3 program began the year working to move from a minimal rating towards an overall rating of good (5) and showing growth in the seven individual areas assessed on the ECERS.

Not only did they show growth in all areas, but they achieved an incredible level of growth in Program Structure of over four points on a seven point scale. They also achieved outstanding levels of growth (more than two points of growth on the seven point scale) in Space and Furnishing, Activities, Interaction, and in the Overall scale. Personal Care Routines, Language and Reasoning, and Parents and Staff all showed gains of more than a full point on the seven point scale.

The goal for year two will be to continue improvement from the good rating on the overall measure towards a rating of excellent. We will focus on continued growth especially in Personal Care Routines, and Space and Furnishings.

Program Structure	5.50	6.50	Program Structure	4.67	5.00
Parents and Staff	6.00	6.00	Parents and Staff	5.33	4.67

These scores represent significant programmatic growth. The YKSD AP3 programs began the year working to move from an above minimal rating towards an overall rating of good (5) and showing growth in the seven individual areas assessed on the ECERS.

Year one showed significant growth of over one point on the seven point scale in Personal Care Routines, and near one point growth in Space and Furnishing, Language and Reasoning, and Activities.

The goal for year two will be to continue improvement to 5 or above on the overall measure, with a focus on Interactions, Parents and Staff, and Space and Furnishing.

EED Outcomes

EED Outcomes

Increase the level of outreach, facilitation, training and technical assistance provided to grant recipients and their partners:

- Letters, E-mails, and phone calls were made to announce the availability of funds for the project.
- Multiple audio conferences and technical assistance were provided throughout the application process.
- Training was provided prior to fall start-up by EED. Districts and their partners were supported in specific curriculum training and for program and site specific training. Additional training and onsite technical assistance was offered and provided by the department.
- EED provided assessment materials, forms, and technical assistance for data gathering and reporting.
- EED provided face to face and distance delivered facilitation for any issues needing collaborative decision making, such as system development, partnership enhancement, common policy development, and classroom interactions and activities

Expand the sharing and dissemination of information to AP3 programs, among AP3 programs, with the early childhood field, with the State Board, and across EED:

- To and among AP3 programs: Training and technical assistance, ongoing feedback on the specific requested issues, data reporting, shared information on common issues, data driven programmatic information, and shared successful partnership approaches.
- The Early Childhood field: Multiple presentations, updates, and audio conferences at meetings, conferences, and trainings around the state.
- The State Board received updates and pre- and a post-data report.
- There has been close collaboration among EED staff, Head Start, Special Education, Pre-Elementary Approval, the State System of Support, The Director of Teaching & Learning Support, the Deputy Commissioner, and the Commissioner.

Increase the level of integration of early childhood within the systems and structures of EED:

- The main areas of integration have been around facilitation, training and technical assistance, and materials creation and dissemination.

- To a lesser extent there has been integration of data collection and reporting.

Early Learning Efforts in Other Districts

The department provided $300,000 to increase funding for early learning projects in Lower Yukon School District and Yupiit School District. Approximately 90 students in Lower Yukon School District and 55 students in Yupiit School District have been served.

Lower Yukon School District

Lower Yukon School District hired an Early Childhood Specialist in 2010 who focused her work in two directions; providing family training and activities for children who will transition into Kindergarten in Nunam Iqua, a community with no existing early learning program and outreach to the department for involvement in communication, coordination, collaboration, transition and alignment with Head Start and other community entities in targeted communities.

Teleconference calls and face to face meetings were held with district leadership and staff to outline the needs of the district for improving community connections, and for support they would like provided to all early learning programs in order to close the 18 month to two year gap they find in many incoming kindergarteners These meetings were followed by a joint community training with parents, school district and Head Start staff provided in Mountain Village and Hooper Bay. Topics covered were parent involvement, school readiness and transition to Kindergarten, as well as early brain and language development. Community meetings also focused on school connections to Head Start and other community programs, and outreach to provide early learning services to un-served children.

Additionally the department provided Lower Yukon School District with training and technical assistance on site for district staff in preparation for initial discussions with Rural Cap and AVCP Head Start. Issues of curriculum, assessment, interventions, training, and outreach to parents were discussed, as well as clarifying the districts expectations for transition to Kindergarten. District and Head Start Administration held discussions in early October, 2010, with face to face joint training to follow later in the school year. The topics for training and scheduling for regular on site meetings is determined jointly by the District and the Head Start programs.

Yupiit School District

Yupiit School District hired a coordinator to work with district run home visiting programs, local Head Starts, and other local early care and education providers in their three communities; Akiak, Akiachak, and Tuluksak. Work focused on transition and alignment between the birth to three programs, Head Start or other early care and learning programs and the five year olds'

transition to Kindergarten programs and the K-12 system. Shared training and coursework for professional development for all program staff is being developed. An Early Childhood Leadership Team with local representatives from early learning programs was created and joint outreach to local councils is ongoing.

YSD implemented a summer skill enhancement program with the children transitioning into the school in the fall. A face to face meeting was held last spring with district leadership (including a board member), AVCP & RurAL CAP Head Start leadership, and EED. Kindergarten entry data was reviewed; transition and alignment efforts were discussed along with community needs and common issues. Schedules for on-going audio conferences were set around topics of Head Start data sharing, defining school readiness, and shared in-service and pre-service planning.

In FY11 the Yupiit School District continued discussions with Rural Cap Head Start, and AVCP Head Start. They have been holding weekly planning & training meetings with local staff, and hold regular meetings with local early childhood leadership teams in each community. The Department provided training on the use of the Early Learning Guidelines, and helping parents understand their involvement in assessing the progress of their young children.

State Outcomes

Increase the sharing and dissemination of information with the Governor's Office, the Legislature, other state departments, and the public:

- Updates to the Governor's Office and legislative requests, presentations to legislative committees and sub-committees, and a report to the public.

Expand the level of integration of early childhood in other state structures and systems:

- Introduction and expansion of the use of the unique identifier for preschool (first with the AP3 and now with Alaska Head Start programs).
- Interdepartmental work on a comprehensive set of early childhood indicators.
- Expanding the cadre of inter-rater reliable ECERS – R observers, gaining data and experience in the costs and processes of the baseline program data for use across all early childhood programs and systems in the state.
- Additional data towards a statewide needs assessment (24 school districts have stated a need for quality Early Childhood Programs in their service areas).

What We Have Learned

Year one data has shown an extremely high need, with the majority of the children coming to the program behind typically-developing peers. High numbers of children in the program have exceeded expected growth, and there has been significant or higher program growth. The data, coupled with the observations, facilitation, and training provided by EED as well as anecdotal information from the field, have led to the following conclusions:

- The data shows a significant need for quality early childhood programs.

- While the pre-k children are making large strides in their development and a large number have closed the gap; there are still children performing below expectations. The growth they have accomplished needs to continue through kindergarten, first and second grade so that all our children will have closed the gaps by their third grade assessments.

- An unprecedented level of cooperation, coordination, and collaboration between Head Start programs and school districts is leading to improved alignment, transition and common planning & training.

    1. ASD and JSD and their partners have shown high levels of system integration through shared policy development, shared recruitment, training, decision-making, budgeting (beyond the funding and scope of the AP3 program), community outreach, and integration of community based services.
    2. BSSD, NPS, and their partners have created a multi-system block of early childhood programs using common training, curriculum, and community outreach
    3. YKSD and TCC have shared trainings, some joint staffing, community outreach, and coordination of community based services.
    4. LKSD is a stand-alone program provided by the district.

While this is a large first step there is still much more that can be accomplished.

- Year 2 will seek continuous improvement in both child and program outcomes. Child outcome focus will be placed on the children's language and concept development. Program development, beyond the needs expressed in the ECERS data, will also focus on cross system connections looking to accomplish the following:

    1. Strengthen alignment with and transition to kindergarten and K-12;

    2. Improve outreach to communities and the programs that serve young children under four years of age;

    3. Share what is working for programs in the AP3 with each other and with other early childhood programs.

a. JSD & Tlingit & Haida: focus on the social/emotional development domain and connections to local support systems as well as whole staff involvement in the use of the ECERS data and processes.

b. BSSD, NPS, Kawerak, & RurAL CAP: curricular alignment with common training on curriculum use, Head Start requirements and systems, and state training on the uses of the Early Learning Guidelines leading to a common approach on a regional level.

c. ASD and Kids Corps Inc.: extensive coordination between the partners and across the other district early childhood programs, direct contacts with all of the departments in ASD leading to more comprehensive and higher quality programs for both entities, increased expectations for quality comprehensive services from this project into and across the other early childhood programs throughout the district, use of a comprehensive screening tool that looks across all domains in all the ASD & KCI preschool classrooms, a greater understanding of the requirements for both programs, greater staff recognition of the value of families and greater teacher interaction with families in more meaningful ways through the incorporation of the Strengthening Families Initiative model.

d. LKSD: system involvement in the ECERS processes and its use in decision-making, including budgetary decisions.

e. YKSD & TCC: coordination between programs, strengthening connections with the departments within YKSD and Head Start, bringing a health fair for young children and their families to Minto (screenings for kids and health information for parents), and the development of an extended day Athabascan immersion program for the AP3 classroom in Allakaket.

4. Seek continuation of funding to expand Alaska's AP3 with a focus on both providing for un-served populations and developing better partnerships with a larger number of school districts and early childhood programs and systems.

At the state system level we will seek improvement in two directions:

- Within EED to improve integration of early childhood across existing structures:
  1. Teaching and Learning Support;
  2. Assessment;
  3. State System of Support;
  4. Libraries, Archives, and Museums;

- Across departments to:
  1. avoid duplication of services;
  2. integrate data and information on early childhood;
  3. conduct state-wide needs assessments;

4. assess the capacity and need for professional development.

EED will continue to work to provide support, training and technical assistance and facilitation to aid program improvement in any and all areas needed.

MEMORANDUM April 5, 2011

SUBJECT: Changes from version "B" to version "I" (CSSB 6( )
(Work Order No. 27-LS0058/I))

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Tom Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have asked for a summary of the changes from CSSB 6( ), draft version "B" to draft version "I". Draft version "I" changes the age for a student enrolled in a public pre-kindergarten program from four and five years of age to four years of age. This version also expressly provides for inclusion of the prekindergarten students in the student count, without providing for an exception for the first year of the program to allow for an estimated count, and changes the inclusion from a "part-time" student to "not more than a half-time student".

If I may be of further assistance, please advise.

CS FOR SENATE BILL NO. 6( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS DAVIS AND FRENCH

A BILL

FOR AN ACT ENTITLED

"An Act relating to prekindergarten programs within a school district; relating to pre-elementary students and pre-elementary schools; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.060(a) is amended to read:

(a) Except as provided in (e) of this section, an elementary school consists of grades kindergarten through grade eight or any appropriate combination of grades within this range**, and a prekindergarten program provided by a school district for students four years of age**.

*** Sec. 2.** AS 14.03.060(e) is amended to read:

(e) In addition to the grades enumerated in (a) of this section, an elementary school consists of a **prekindergarten** [PRE-ELEMENTARY] program supervised by the department under AS 14.07.020(a)(8), operated by the department as a head start program under AS 14.38.010, or located in a public school [FOR FEDERAL FUNDING PURPOSES. EXCEPT FOR A CHILD WITH A DISABILITY WHO IS

RECEIVING SPECIAL EDUCATION OR RELATED SERVICES UNDER AS 14.30.180 - 14.30.350, PRE-ELEMENTARY STUDENTS MAY NOT BE COUNTED IN A SCHOOL'S AVERAGE DAILY MEMBERSHIP UNDER AS 14.17].

*** Sec. 3.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.065. Prekindergarten program. (a) A school district may provide a prekindergarten program for students who are four years of age and who reside in the district if the program is

(1) optional for a student;

(2) supervised by the department under AS 14.07.020(a)(8); and

(3) consistent with regulations adopted by the board under AS 14.07.165.

(b) A student who is enrolled in and attends a prekindergarten program provided by a district shall be counted as not more than a half-time student in the district average daily membership count estimate under AS 14.17.500.

*** Sec. 4.** AS 14.03.080 is amended by adding a new subsection to read:

(g) A child who is four years of age on or before September 1 following the beginning of the school year and who is under school age may enter a public school prekindergarten program.

*** Sec. 5.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools; the regulations must provide that, if a course in American Sign Language is

given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools **and district prekindergarten programs** that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, projected energy consumption

and costs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may intervene in a school district to improve instructional practices, as described in AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental intervention, as described in AS 14.07.030(14)(A) and (B) and (15), after the district demonstrates three consecutive years of improvement consisting of not less than two percent increases in student proficiency on standards-based assessments in math, reading, and writing as provided in AS 14.03.123(f)(2)(A); and

(C) a process for districts to petition the department for continuing or discontinuing the department's intervention;

(17) notify the legislative committees having jurisdiction over education before intervening in a school district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15);

(18) assist the Department of Natural Resources in developing and implementing the farm-to-school program established under AS 03.20.100.

*** Sec. 6.** AS 14.07.020(c) is amended to read:

(c) In this section, "pre-elementary school" means a school for children [AGES] three through five years **of age,** if the school's primary function is educational**, and a prekindergarten program for children four years of age that is**

provided by a school district.

* **Sec. 7.** AS 14.07.165 is amended to read:

Sec. 14.07.165. Duties. The board shall adopt

(1) statewide goals and require each governing body to adopt written goals that are consistent with local needs;

(2) regulations regarding the application for and award of grants under AS 14.03.125;

(3) regulations implementing provisions of AS 14.11.014(b);

(4) regulations requiring approval by the board before a charter school, state boarding school, or a public school may provide domiciliary services;

(5) regulations implementing the secondary school student competency examination provisions of AS 14.03.075, including the criteria and procedure under which a governing body uses a waiver to grant a diploma to a student; criteria regarding granting a waiver must include provisions that a waiver may only be granted for students who enter the system late or have rare or unusual circumstances meriting a waiver;

(6) regulations for the implementation of a prekindergarten program by a school district using the model curriculum developed by the department under AS 14.07.030(13).

* **Sec. 8.** AS 14.17.905(a) is amended to read:

(a) For purposes of this chapter, the determination of the number of schools in a district is subject to the following:

(1) a community with an ADM of at least 10, but not more than 100, shall be counted as one school;

(2) a community with an ADM of at least 101, but not more than 425, shall be counted as

(A) one elementary school, which includes those students in grades kindergarten through six**, and, except as provided in (c) of this section, a prekindergarten program provided by a school district for students four years of age**; and

(B) one secondary school, which includes students in grades

seven through 12;

(3) in a community with an ADM of greater than 425, each facility that is administered as a separate school shall be counted as one school, except that each alternative school with an ADM of less than 175 shall be counted as a part of the school in the district with the highest ADM.

* **Sec. 9.** AS 14.17.905 is amended by adding a new subsection to read:

(c) A school district may not include in the average daily membership of a school students who are four years of age if the students are enrolled in a program that receives funding other than funding under this chapter.

* **Sec. 10.** This Act takes effect July 1, 2013.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB006

Analysis

This bill defines elementary schools as kindergarten through grade eight and a prekindergarten program for students four and five years of age. The prekindergarten program must be optional.

This bill will allow districts to receive prekindergarten funding through the foundation formula provided the students meet the age requirement of four and five years of age before September 1 following the beginning of the school year, and are not funded by another source.

This fiscal note general fund appropriation was calculated by taking the most recent kindergarten enrollment , to represent a kindergarten cohort, and multiplying by the FY2012 projected average state aid per student.

Future eligibility for space allocations and capital improvement projects through the department's facilities programs are not analyzed in this fiscal note.

CS FOR SENATE BILL NO. 6(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATORS DAVIS AND FRENCH, Olson, Kookesh, Ellis

A BILL

FOR AN ACT ENTITLED

"An Act relating to prekindergarten programs within a school district; relating to pre-elementary students and pre-elementary schools; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.060(a) is amended to read:

(a) Except as provided in (e) of this section, an elementary school consists of grades kindergarten through grade eight or any appropriate combination of grades within this range**, and a prekindergarten program provided by a school district for students four years of age**.

*** Sec. 2.** AS 14.03.060(e) is amended to read:

(e) In addition to the grades enumerated in (a) of this section, an elementary school consists of a **prekindergarten** [PRE-ELEMENTARY] program supervised by the department under AS 14.07.020(a)(8), operated by the department as a head start program under AS 14.38.010, or located in a public school [FOR FEDERAL FUNDING PURPOSES. EXCEPT FOR A CHILD WITH A DISABILITY WHO IS

RECEIVING SPECIAL EDUCATION OR RELATED SERVICES UNDER AS 14.30.180 - 14.30.350, PRE-ELEMENTARY STUDENTS MAY NOT BE COUNTED IN A SCHOOL'S AVERAGE DAILY MEMBERSHIP UNDER AS 14.17].

*** Sec. 3.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.065. Prekindergarten program. (a) A school district may provide a prekindergarten program for students who are four years of age and who reside in the district if the program is

(1) optional for a student;

(2) supervised by the department under AS 14.07.020(a)(8); and

(3) consistent with regulations adopted by the board under AS 14.07.165.

(b) A student who is enrolled in and attends a prekindergarten program provided by a district shall be counted as not more than a half-time student in the district average daily membership count estimate under AS 14.17.500.

*** Sec. 4.** AS 14.03.080 is amended by adding a new subsection to read:

(g) A child who is four years of age on or before September 1 following the beginning of the school year and who is under school age may enter a public school prekindergarten program.

*** Sec. 5.** AS 14.07.020(a) is amended to read:

(a) The department shall

(1) exercise general supervision over the public schools of the state except the University of Alaska;

(2) study the conditions and needs of the public schools of the state, adopt or recommend plans, administer and evaluate grants to improve school performance awarded under AS 14.03.125, and adopt regulations for the improvement of the public schools;

(3) provide advisory and consultative services to all public school governing bodies and personnel;

(4) prescribe by regulation a minimum course of study for the public schools; the regulations must provide that, if a course in American Sign Language is

given, the course shall be given credit as a course in a foreign language;

(5) establish, in coordination with the Department of Health and Social Services, a program for the continuing education of children who are held in detention facilities in the state during the period of detention;

(6) accredit those public schools that meet accreditation standards prescribed by regulation by the department; these regulations shall be adopted by the department and presented to the legislature during the first 10 days of any regular session, and become effective 45 days after presentation or at the end of the session, whichever is earlier, unless disapproved by a resolution concurred in by a majority of the members of each house;

(7) prescribe by regulation, after consultation with the state fire marshal and the state sanitarian, standards that will assure healthful and safe conditions in the public and private schools of the state, including a requirement of physical examinations and immunizations in pre-elementary schools; the standards for private schools may not be more stringent than those for public schools;

(8) exercise general supervision over pre-elementary schools **and district prekindergarten programs** that receive direct state or federal funding;

(9) exercise general supervision over elementary and secondary correspondence study programs offered by municipal school districts or regional educational attendance areas; the department may also offer and make available to any Alaskan through a centralized office a correspondence study program;

(10) accredit private schools that request accreditation and that meet accreditation standards prescribed by regulation by the department; nothing in this paragraph authorizes the department to require religious or other private schools to be licensed;

(11) review plans for construction of new public elementary and secondary schools and for additions to and major rehabilitation of existing public elementary and secondary schools and, in accordance with regulations adopted by the department, determine and approve the extent of eligibility for state aid of a school construction or major maintenance project; for the purposes of this paragraph, "plans" include educational specifications, schematic designs, projected energy consumption

and costs, and final contract documents;

(12) provide educational opportunities in the areas of vocational education and training, and basic education to individuals over 16 years of age who are no longer attending school;

(13) administer the grants awarded under AS 14.11;

(14) establish, in coordination with the Department of Public Safety, a school bus driver training course;

(15) require the reporting of information relating to school disciplinary and safety programs under AS 14.33.120 and of incidents of disruptive or violent behavior;

(16) establish by regulation criteria, based on low student performance, under which the department may intervene in a school district to improve instructional practices, as described in AS 14.07.030(14) or (15); the regulations must include

(A) a notice provision that alerts the district to the deficiencies and the instructional practice changes proposed by the department;

(B) an end date for departmental intervention, as described in AS 14.07.030(14)(A) and (B) and (15), after the district demonstrates three consecutive years of improvement consisting of not less than two percent increases in student proficiency on standards-based assessments in mathematics, reading, and writing as provided in AS 14.03.123(f)(2)(A); and

(C) a process for districts to petition the department for continuing or discontinuing the department's intervention;

(17) notify the legislative committees having jurisdiction over education before intervening in a school district under AS 14.07.030(14) or redirecting public school funding under AS 14.07.030(15);

(18) assist the Department of Natural Resources in developing and implementing the farm-to-school program established under AS 03.20.100.

* **Sec. 6.** AS 14.07.020(c) is amended to read:

(c) In this section, "pre-elementary school" means a school for children [AGES] three through five years **of age,** if the school's primary function is educational**, and a prekindergarten program for children four years of age that is**

provided by a school district.

*** Sec. 7.** AS 14.07.165 is amended to read:

Sec. 14.07.165. Duties. The board shall adopt

(1) statewide goals and require each governing body to adopt written goals that are consistent with local needs;

(2) regulations regarding the application for and award of grants under AS 14.03.125;

(3) regulations implementing provisions of AS 14.11.014(b);

(4) regulations requiring approval by the board before a charter school, state boarding school, or a public school may provide domiciliary services;

(5) regulations implementing the secondary school student competency examination provisions of AS 14.03.075, including the criteria and procedure under which a governing body uses a waiver to grant a diploma to a student; criteria regarding granting a waiver must include provisions that a waiver may only be granted for students who enter the system late or have rare or unusual circumstances meriting a waiver**;**

(6) regulations for the implementation of a prekindergarten program by a school district using the model curriculum developed by the department under AS 14.07.030(13).

*** Sec. 8.** AS 14.17.905(a) is amended to read:

(a) For purposes of this chapter, the determination of the number of schools in a district is subject to the following:

(1) a community with an ADM of at least 10, but not more than 100, shall be counted as one school;

(2) a community with an ADM of at least 101, but not more than 425, shall be counted as

(A) one elementary school, which includes those students in grades kindergarten through six**, and, except as provided in (c) of this section, a prekindergarten program provided by a school district for students four years of age**; and

(B) one secondary school, which includes students in grades

seven through 12;

(3) in a community with an ADM of greater than 425, each facility that is administered as a separate school shall be counted as one school, except that each alternative school with an ADM of less than 175 shall be counted as a part of the school in the district with the highest ADM.

* **Sec. 9.** AS 14.17.905 is amended by adding a new subsection to read:

(c) A school district may not include in the average daily membership of a school students who are four years of age if the students are enrolled in a program that receives state funding other than funding under this chapter.

* **Sec. 10.** This Act takes effect July 1, 2013.

Senator Bettye Davis
Alaska Senate Education Committee
Alaska State Senate
State Capitol Room 30
Juneau, Alaska 99801

Dear Senator Davis and Members of the Senate Education Committee:

The Leadership Team of Anchorage United for Youth requests your support for Senate Bill 8, "*An Act relating to questionnaires and surveys administered in the public schools.*"

Anchorage United for Youth has been making real headway at addressing the issues that impact Anchorage youth through a coordinated community effort with over 40 non-profit, public and private partners committed to increasing graduation rates, decreasing youth substance use and reducing juvenile crime rates. Current success with the Anchorage United for Youth plan and its implementation has led to interest from around the state in replicating this effort. Reliable and valid data like that obtained through the Youth Risk Behavior Survey (YRBS) is integral to the success and sustainability of this effort.

Reliable and statistically valid community data is critical to our mission of supporting Anchorage youth. Routine standardized surveys such as the YRBS allow us to track trends over time and help guide and evaluate the important youth programs we implement to keep our youth on track to graduate from high school, avoid delinquency and reject substance use. The YRBS must have a response rate of 60% to make it statistically valid, yet current legislation requires active parental consent which presents significant obstacles and costs to achieving this response rate. Approximately $90,000 is spent for just one survey cycle in order to provide the incentives necessary to simply get permission slips returned. However, failure to return permission slips is primarily linked to apathy, oversight, and student error, not parental refusal of permission, which averages around 10%.

Senate Bill 8 protects previously legislated parental rights to consent, parental rights to notification, and children's rights to refuse participation. We support Senate Bill 8 because it continues to provide these protections and respects the privacy of families, while removing the obstacles to obtaining this vital data that allows us to track and improve conditions for our youth.

We thank you for your commitment to youth in the state of Alaska and ask for your support of Senate Bill 8.

Sincerely,

Greg Razo, Cook Inlet Region, Inc.
Chair, Anchorage United for Youth Leadership Team

Subject: SB 9 - Addtional documents for hearing package regarding improvement in graduation rates with increase in school age to 18
Attachments: SB 9 Docs-NCSL email summary 2-15-2011.pdf; SB 9 Docs-Bldg.Grad.Nation 11-2011.pdf; SB 9 Docs-NCSL TaskForce-Path.Grad.1-2011.pdf; SB 9 Docs - MD Task Force -Incr.sch. age 18.pdf; SB 9 Docs-ADN-Legis.-sch.age to 18 2-15-11.pdf

Edra and Murray,

In part to answer Senator Thomas's question, I have attached information excised from larger and complete documents I received and reviewed today from NCSL. I can forward the complete documents if you wish. But they run close to 200 pages. I also have placed paper copies to each of you in interoffice mail.

While close to half the states have increased the compulsory school age to 17 or 18 and 13 states last year introduced legislation to do this, most of the data indicates that increasing the school age alone will not improve graduation rates and reduce dropouts. It becomes clear, however, that increasing the school age raises the **standard** expected of high school students, i.e., staying in school long enough to graduate. By increasing the school age coupled with programs and curriculum to help kids graduate, the savings in "social transfer costs" from avoiding prisons, heath and social service costs, and the opportunity costs of lost income and productivity over a lifetime are more than offset by the $14.8 million fiscal note which is about 1% of the state's school budget of $1.3 billion. I might add that this fiscal note is pretty rough, multiplying 1406 dropouts between ages 16 and 18 last year by an average $10,565 per student in the FY12 Foundation Formula.

If you think (S)EDC will hear the bill Monday, February 21 for sure, please confirm by email as soon as possible.

Subject: (ding, final answer) - grad rates for 6 states that recently raised compulsory school age
Attachments: gradnation.pdf

Tom, I think the most reliable research – to your question – was conducted recently by the Grad Nation researchers (report attached) –
p. 46:
Of the 6 states that increased the compulsory school age between 2002 and 2008, two states (Illinois and South Dakota) experienced increases in their graduation rates. Only Nevada experienced a decline.
6 states: Illinois, Indiana, Nebraska, Nevada, New Hampshire, and South Dakota
(Michigan increased in 2009 - not included here)

Perhaps bringing copies of that report to the committee will satisfactorily answer the question. These are very well respected researchers.
What else can I do to help?
Sunny

Subject: research - compulsory school age

Tom,
Attached are the two reports referred to in the NCSL Dropout task force report. Especially, see p. 46 of the Building a Grad Nation report:

Increasing Compulsory School Age Requirements

In our previous research, students identified "too much freedom" as a key factor that enabled them to drop out of high school, and poor attendance is a strong predictor of dropping out.[36] Most states originally enacted compulsory school attendance laws between 1870 and 1910, a time when fewer than 10 percent of 17-year-olds graduated from high school, due in large part to the fact that a high school education was not a prerequisite to participating in the mainstream workforce.[37] Over the last year, extensive research has been conducted at the state level that highlights the growing gap between the areas where states are experiencing job growth and the educational levels of their populations.[38] Students required to attend high school for an additional year experience a 12 percent increase in earnings. These students are also less likely to report being unemployed, having health problems, being depressed, and working in lower-skilled jobs. They are also more likely to report higher levels of satisfaction with their lives overall.[39] Many states have responded to these issues by raising the compulsory school age to send the message to students that graduating from high school is absolutely essential.

Since 2002, 12 states have raised the compulsory school age from 16 to 17 or 18.[40] Currently, 21 states have a compulsory school age of 18 and 32 states have a compulsory school age of 17 or 18.[41] In some states that have a compulsory school attendance age of 17, like Tennessee and West Virginia,

students must remain in school until they are 18 to keep their driver's license.

A 1991 MIT and Harvard study shows that raising the compulsory school age acts as a constraint on dropping out.[42] **Of the 6 states that increased the compulsory school age between 2002 and 2008, two states (Illinois and South Dakota) experienced increases in their graduation rates. Only Nevada experienced a decline.**

Despite broad movement on raising the compulsory school age, this movement has not been uniformly embraced within the states. Over the last year alone, 13 states have introduced legislation to raise their compulsory school age to 17 or 18 that has stalled or died in committee.[43] Among the states that were unsuccessful in raising the compulsory school age, opposition from home school educators, parents, students, local businesses, and advocacy groups; an inability to determine if an increase in graduation and attendance rates or decrease in dropout rates can be attributed to increasing the compulsory school age; and the fiscal estimate were cited as critical barriers.[44] In some states where officials cited raising the compulsory school age law as a key tool to set clear expectations at the state level and to drive anti-truancy efforts locally, they also indicated that they feared in some cases parents were home schooling their children to get around the compulsory school age and to enable them to enter the workforce full time at an earlier age.

44 See: Maryland State Department of Education (2007). Attending to Learn: The Implications of Raising the Compulsory Age for School Attendance. Final report of the Task Force to Study Raising the Compulsory Public School Attendance Age to 18. Submitted to the Maryland General Assembly and Governor.

Also attached is a Spring 2009 pub I just discovered – it analyzes state data on grad rates /dropout rates for states that have set the compulsory school age to 18. It's a really useful overview of the issue – but it concludes that there's not enough evidence to focus on age 18 as a policy over other dropout prevention efforts.
But – interestingly, it does not compare grad rates from when the policy took effect through now. Also, the data they refer to is 2004-05 NCES data.

Also attached is the final report of the Maryland task on compulsory school age of 18. It recommends raising the age and has lots of useful arguments and data.

I am trying to compile information about grad rates in the 20 states that have set their age to 18; but it's a big job and I'm not sure I can complete it in time for you – the thing is, I need to figure out when each state's compulsory ed age took effect; then look at grad rates from that year to 2006-07 (latest year data is available from NCES) – and I don't know if I can do that all by tomorrow – I'll try!

Setting Clear and High Academic and Graduation Standards

Increasing Compulsory School Age Requirements

In our previous research, students identified "too much freedom" as a key factor that enabled them to drop out of high school, and poor attendance is a strong predictor of dropping out.[36] Most states originally enacted compulsory school attendance laws between 1870 and 1910, a time when fewer than 10 percent of 17-year-olds graduated from high school, due in large part to the fact that a high school education was not a prerequisite to participating in the mainstream workforce.[37] Over the last year, extensive research has been conducted at the state level that highlights the growing gap between the areas where states are experiencing job growth and the educational levels of their populations.[38] Students required to attend high school for an additional year experience a 12 percent increase in earnings. These students are also less likely to report being unemployed, having health problems, being depressed, and working in lower-skilled jobs. They are also more likely to report higher levels of satisfaction with their lives overall.[39] Many states have responded to these issues by raising the compulsory school age to send the message to students that graduating from high school is absolutely essential.

Since 2002, 12 states have raised the compulsory school age from 16 to 17 or 18.[40] Currently, 21 states have a compulsory school age of 18 and 32 states have a compulsory school age of 17 or 18.[41] In some states that have a compulsory school attendance age of 17, like Tennessee and West Virginia, students must remain in school until they are 18 to keep their driver's license.

A 1991 MIT and Harvard study shows that raising the compulsory school age acts as a constraint on dropping out.[42] Of the 6 states that increased the compulsory school age between 2002 and 2008, two states (Illinois and South Dakota) experienced increases in their graduation rates. Only Nevada experienced a decline.

Despite broad movement on raising the compulsory school age, this movement has not been uniformly embraced within the states. Over the last year alone, 13 states have introduced legislation to raise their compulsory school age to 17 or 18 that has stalled or died in committee.[43] Among the states that were unsuccessful in raising the compulsory school age, opposition from home school educators, parents, students, local businesses, and advocacy groups; an inability to determine if an increase in graduation and attendance rates or decrease in dropout rates can be attributed to increasing the compulsory school age; and the fiscal estimate were cited as critical barriers.[44] In some states where officials cited raising the compulsory school age law as a key tool to set clear expectations at the state level and to drive anti-truancy efforts locally, they also indicated that they feared in some cases parents were home schooling their children to get around the compulsory school age and to enable them to enter the workforce full time at an earlier age.

Combating Chronic Absenteeism

In the past few years, there has been growing awareness that communities with low graduation rates often have very high rates of chronic absenteeism from the early elementary grades forward. Recently, a number of communities have begun to organize to establish the norm that every student should be in school every day. Both Baltimore and New York City have launched joint efforts involving the school system and city agencies to create multi-pronged efforts to provide the range of supports needed to get more students to attend school on a regular basis. In addition, a new national effort called Attendance Counts has launched a website to spread best practices.[45] The federal government and most states and districts, however, do not track or report chronic absenteeism (commonly defined as missing a month or more of school) at the school or district level, instead focusing on aggregate attendance that can often mask serious chronic absenteeism challenges.

3. Task Force Recommendations

The state legislature plays a critical role in raising public awareness about the dropout problem; setting expectations for schools and districts and holding them accountable; and providing the data infrastructure to help schools and districts identify and support struggling students. The following recommendations identify how legislators can be most effective in dropout prevention and recovery efforts.

Create and sustain urgency to improve high school graduation rates

Legislatures can make it a state priority to improve high school graduation rates. Legislatures cannot do this alone, however. We must help organize and participate in powerful partnerships among key stakeholders, including legislators, governors, superintendents, state boards of education, educators, community-based organizations, parents, and business leaders. These stakeholders each play a critical role in developing the many options and solutions necessary to help all kids navigate a path to graduation and beyond.

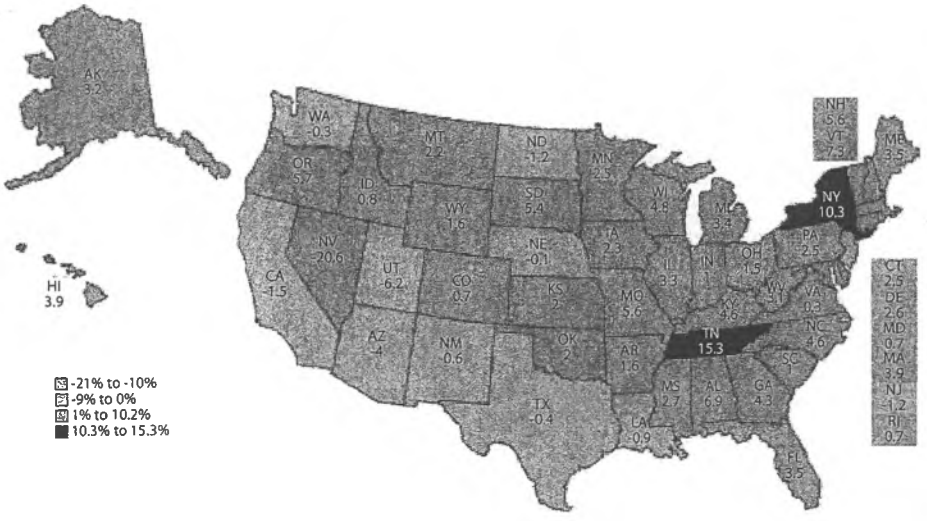
Creating or participating in a statewide task force, advisory board, commission, office or other entity that can take a long-term view of the state dropout problem indicates bipartisan support, brings statewide visibility to the dropout problem, and raises awareness among the media and constituents. When legislators establish or participate in such a process, we send the message that improving dropout rates is a state legislative priority and that stakeholders have allies in the legislature who can codify their efforts in statute.

States need to set ambitious goals for improving high school graduation rates, and legislatures are well-positioned to ensure that state goals are understood by the public; that progress is accounted for and recognized; and that incentives and resources are available to help schools and districts meet state goals. Publicizing the goal and state progress will help inform citizens, parents and students about the costs and consequences of dropping out, and the many options available to keep kids on the path to graduation.

Task Force Recommendations

- Create and sustain urgency to improve high school graduation rates.
- Insist on high expectations and a rigorous curriculum for all students.
- Provide options and pathways to engage all students.
- Put excellent teachers, principals, and other caring adults in schools.
- Identify and support struggling students.
- Develop dropout recovery programs to reengage out-of-school youth.
- Build capacity to transform or replace low graduation-rate high schools.
- Conduct policy audits, eliminate counterproductive policies and provide incentives for collaboration.
- Hold schools and districts accountable for improving high school graduation rates.

4. Call to Action



The costs of dropping out are high—to the student; to the states; and to the nation. For students who do not earn their high school diploma, the future is grim. We no longer live in a society where high school dropouts can earn a living wage. Not only do dropouts see a significant decrease in earning power and workforce opportunities, but they also are far more likely to spend their lives periodically unemployed, on government assistance, or cycling in and out of the prison system.[39] Each high school dropout is a loss to our states and communities through costs to society, diminished quality of life, and—most importantly—loss of productive, engaged citizens.

The current economic crisis offers an opportunity to act. The economic downturn has wreaked havoc on state budgets, forcing difficult choices and driving important conversations about state economic priorities, responsibilities and accountability. The current crisis in state budgets is expected to continue for several more years. It provides an opportunity to pare duplicate services; hold agencies accountable for improving results; and find new ways to collaborate, share information, and ensure that state policy environments provide incentives for improving high school graduation rates.

State legislators must be leaders in dropout prevention and recovery and set the expectation that all students will successfully graduate from high school ready for success in college, careers and life. The time is now—we cannot wait until the current economic crisis subsides. We must take advantage of this opportunity to reexamine our expectations, policies and processes to ensure that schools and districts have every incentive and opportunity to help kids navigate a path to graduation and beyond.

This is our responsibility and thus our call to action: We must ensure that graduating every child means graduating every child. The clock is ticking for our children, our states and our nation.

ɟure 7. Percentage Change in Graduation Rates, 2001-2002 to 2007-2008, by State

Note: Data for South Carolina from 2006-2007; 2007-2008 data not available.

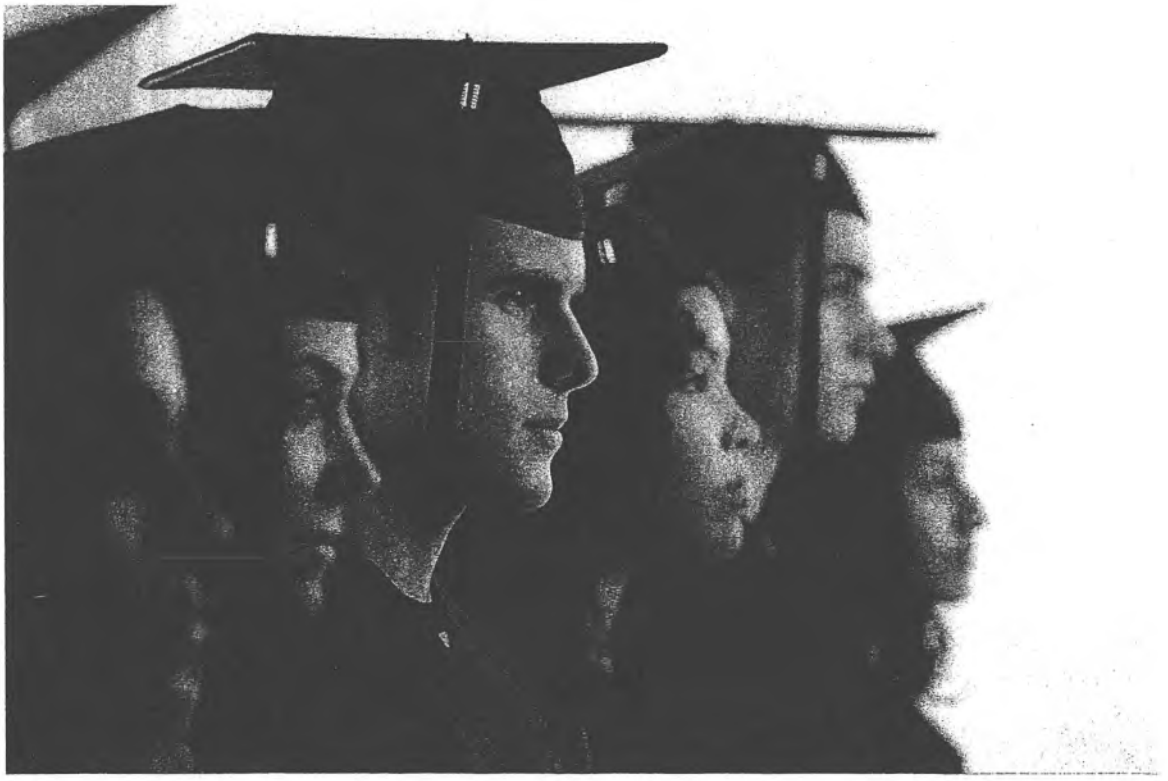
States Making Great Gains

The education recommendations, policy guidelines and legislation that state lawmakers have put in place during the past decade are playing a vital role in decreasing the number of students who drop out of high school in Tennessee and Alabama.

A new report shows positive signs that states are making progress in reducing the number of students who drop out of high school. The report—released in November 2010 by the America's Promise Alliance, Civic Enterprises and Johns Hopkins University's Everyone Graduates Center—highlights successful case studies in Tennessee and Alabama. It acknowledges the role of state legislators in creating policy environments that have helped increase high school graduation rates, including strong leadership with clear graduation rate goals; collaboration among many sectors that is guided by data; commitment to innovation and continuous improvement; technical assistance for evidence-based solutions; and high expectations, better policies and more support for students.



Tennessee: From 2002 to 2008, Tennessee led the nation in increasing its high school graduation rate from just under 60 percent to 75 percent. Researchers credit a statewide approach that included collaboration and coordination among stakeholders; setting clear and high statewide expectations; effectively using data to improve teaching and learning; and improving technical assistance to struggling schools.

Alabama: Between 2002 and 2008, Alabama's high school graduation rate increased from 62 percent to 69 percent. Researchers credit leadership from state policymakers that made dropout prevention and increased graduation rates a statewide priority; set clear and high statewide expectations and standards for students; built capacity for comprehensive school improvement, including state-sponsored professional development and training; and provided intensive supports to students to finish high school.

Recommendations

The Task Force believes that Maryland must do more to engage children and keep them in school. However, the Task Force agrees that in isolation, a change in the compulsory attendance age will not reduce the dropout rate. The reality is a policy change can require students to attend school, but it can't make them learn. Whether the students benefit from being in school depends largely upon the programs and support they receive there. Accordingly, the Task Force supports the implementation of these recommendations, and the engagement of students at an earlier age, in order to address the needs of children at risk of dropping out of school. In the context of strengthened, expanded supports for the students who would be affected, students who would otherwise drop out, would, of their own volition, choose to remain in school and earn a diploma. Thereby, addressing the issue of legally mandating students to remain in school would become unnecessary.

Recommendation One

Establish a statewide initiative that will:

a) Be flexible while maintaining a consistent approach to meeting the needs of 16- to - 18 year old dropouts and potential dropouts, regardless of where they live or attended school;

b) Expand the data collection work on existing dropout-prevention and re-entry programs that has been done, and design and implement a program to analyze the effectiveness of these dropout-prevention programs;

c) Establish pilot model programs based on proven or promising approaches, and evaluate their success prior to statewide implementation. (Consideration should be given to geographic location, size, and diversity of school systems.);

d) Provide an infrastructure (people, organization, time of day, location, resources, community and family involvement), and identify reallocation of funding and new funding that guarantee effective interagency services and assure increased numbers of students will stay in school and graduate; and,

e) Examine articulation and funding agreements and formulas among agencies and institutions to determine which of these enhance students' opportunities and which serve as barriers.

efforts; provide professional development; and allocate the resources, both financial and otherwise, to ensure that all Maryland students maximize their educational potential.

Rationale

If the compulsory attendance age is raised, Maryland will immediately need to put in place a system of supports and services for students who under the previous requirement would have dropped out, and for those young adults who have already dropped out but will be required to return to school. A statewide framework must be built to accommodate these students; this multi-faceted recommendation can serve as the blueprint.

Before Maryland puts dropout prevention and intervention programs and practices in place, devoting staff, resources, and time, we must know that these programs and practices will be effective.

Task Force research on current practices and programs included collecting data from school systems on existing programs. Members analyzed the evidence shared by districts, and examined the findings of national longitudinal dropout studies. This process revealed weaknesses in data collected on programs across the state. Task Force findings in this area included the following:

- There is a significant discrepancy among districts in what is identified as an alternative education or dropout-prevention program.
- The data evaluating these programs are inconsistent.
- It is difficult, if not impossible, to compare the costs per student of these programs.

Better data collection is essential to confirming programs' success before statewide implementation. It is also essential for reasons of accountability. Although there are programs that address at-risk students, there have been limited studies done on the effectiveness of these programs. This lack of robust data has inhibited the Task Force from making more specific recommendations regarding the designs of ideal dropout-prevention and re-entry programs. Scant data has also constrained this Task Force's analysis of the need for alternative programming, the additional years to educate students, and the associated costs. Before moving forward with costly initiatives, it is imperative that evidence-based decisions be made that support both the need for change, as well as the justification for funding.

A review of promising practices in other states indicated a significant expense (around $200 million dollars per year) to simply raise the compulsory age requirement to 18 under the present school environment and current instructional delivery systems. The additional expenses associated with truly alternative programs—over and above the school systems' commitment to the typical child served—should be based on research that has taken place in Maryland, with Maryland children, ideally in multiple settings. The analysis of these pilot programs would then

inform further discussion of the fiscal support needed for an alternative program to meet the needs of Maryland's students, teachers, businesses, and families.

Recommendation Two

Support and promote the awarding of a High School Diploma by Assessment as a valid credential, and work with the federal government to remove any disincentives for recognizing a high school diploma earned by passing the national GED Tests.

Rationale

The traditional route to the diploma must remain the preferred pathway. However, Maryland must acknowledge that the traditional, four-year high school experience is an unrealistic expectation for some children. Alternatives, including the awarding of a High School Diploma by Assessment through the GED Tests, must be provided, supported, and promoted. Maryland must support and promote alternative pathways for those students for whom it is appropriate. Certainly, these pathways should not be promoted to every child at risk of dropping out.

INCREASE ACCESS TO GED INSTRUCTION AND TESTING

GED instructional programs should be more effectively publicized and more widely available. Schools should be encouraged to distribute accurate information about local GED instructional programs, including the cost of testing, both to students who have already dropped out of school and to students at risk of dropping out. Students also need to know that a High School Diploma by Assessment is a valid credential to enter Maryland community colleges. They also need to know that without a college degree their future income potential is limited compared to that of a college graduate. One opportunity for providing this information is the exit interview that COMAR requires of all students who withdraw from Maryland public schools. In order to implement this recommendation, instructional programs and testing services would need to be expanded. For example, demand for GED instruction exceeds current capacity.

IMPLEMENT THE "GED OPTION" PROGRAM

Maryland students wishing to attempt the GED Tests must first drop out of school to conform to the American Council on Education (ACE) requirement. ACE does offer an alternative for targeted students who remain in school. The GED Option program targets students who are able to complete high school requirements, but who, for a variety of circumstances, are behind in the credits needed to graduate with their class. With the GED Option, the student remains enrolled and attends high school for at least 15 hours of instruction per week. This

instruction includes not only GED preparation, but also workforce development skills and/or career and technology education. As the GED Tests are a valid method of earning a diploma, Maryland should consider implementing the GED Option program, which has been adopted in 11 states, including New York and Virginia. To implement a similar GED Option in Maryland, the State Board of Education would need to amend COMAR to recognize the GED Option program as an approved pathway leading to a Maryland high school diploma.

REMOVE DISINCENTIVES

The GED Tests are a valid route to the diploma and should be promoted as such, regardless of how the federal government categorizes GED Tests under No Child Left Behind (NCLB). Currently, NCLB requires Maryland to count its graduates with a High School Diploma by Assessment as dropouts. As a result, these students negatively affect the school, school system, and state graduation rates, which are used in the determination of Adequate Yearly Progress. There is much at stake here for schools and school systems. Those not making Adequate Yearly Progress are subject to a series of escalating consequences that include corrective actions and complete restructuring of the school or school system. It is easy to see why a school or school system might not promote the GED program as positively or as often as it should. This is a damaging disincentive to meeting students' needs, and it must be eliminated. This Task Force urges the Maryland Congressional delegation to work with the Congress and the President to amend No Child Left Behind to allow students who earn a GED to be counted as high school graduates. Implementing this recommendation would increase Maryland's high school graduates by five percent (based on FY 2006 data).

CHOOSE DIPLOMA PATHS INDIVIDUALLY

Identifying the GED Tests as the most appropriate path for a student to earn a diploma must be done with careful consideration for each student. However, the GED Tests are not appropriate or attainable for every child. Some students, including some English Language Learners and some students with special needs, would not be successful on the GED Tests. Together, parents, school personnel, and the student must review the student's skills, needs, and future goals against all of the diploma routes and choose the best one for the student.

Recommendation Three

Create multiple pathways to the Maryland High School Diploma for students with disabilities and English Language Learners. These diploma pathways should include these options: work study beginning in grade 9; a five-year high school program; and instruction at times outside of the traditional school schedule.

Rationale

Raising the compulsory attendance age alone will not produce more high school graduates. Indeed, whether the compulsory attendance age is raised or not, other actions and new alternatives to help students complete a path to graduation are needed. Particularly in need of alternatives to traditional high school programs are students with disabilities and students with little or no English language skills, referred to as English Language Learners.

Flexible, alternative routes to the Maryland High School Diploma will provide these students additional opportunities to be successful. Allowing five-year high school programs, for example, will allow more time for remediation for students having difficulty passing the High School Assessments. The additional time may also be used to meet the requirements for a Maryland High School Diploma. Another consideration in creating these diploma pathways is the age of English Language Learners at the time of enrollment. For example, an English Language Learner may enroll in high school at age 17 speaking no English. To be successful, some students may need to be enrolled for a period of time past age 18.

An alternative route to the Maryland High School Diploma that offers instruction outside of the traditional school schedule is also essential. It is not unusual for some families to place obligations (e.g., working to support the family or supervising siblings) on students that make it difficult for the students to fully participate in school. A flexible schedule with opportunities for learning in the evening, on the weekend, or during the summer would allow these students to attend school while still fulfilling their familial responsibilities.

Based on student feedback on a Maryland school district survey (Cecil County Public Schools, 2007), a five-year high school program could address the special needs of students at risk by providing:

- Additional help in academic subjects;
- Work-study opportunities that can be built into student schedules beginning at an earlier age; and,
- Additional time to meet graduation requirements, including the High School Assessments.

Alternate formats and creative solutions for instruction may enable students to complete their education. For example, school schedules may use part-time day classes; combine part-time day classes with night school; and/or include work study and technical post-secondary education.

Recommendation Four

The State Board of Education must adopt a definition of alternative education that addresses different modes of instruction and appropriate strategies for current dropouts and for children and young adults at risk of dropping out.

Rationale

Unlike several other states, Maryland has no formal definition of alternative education. This omission must be addressed promptly. Adopting a formal definition in state regulations is necessary: to ensure that alternative education programs deliver instruction that meets content standards; to offer appropriate, targeted courses that enable students to reintegrate into a comprehensive school when ready; to address individual learning styles of students; and generally to meet standards for education as set forth by the Maryland State Board of Education. The Task Force must emphasize that flexible schedules should be considered for these programs to meet the needs of students with personal obligations such as job responsibilities and other family obligations.

A review of the literature and current practices for alternative education programs across the nation revealed common types of program locations and common elements of quality practice and programming, summarized below.

Alternative Education Program Locations

- Separate room or teacher within a comprehensive high school where additional services are provided
- School within a comprehensive high school
- Separate facility

(Source: State of Wisconsin, Department of Public Instruction)

Elements of Quality Practice and Programming

- Low student/teacher ratio
- Accredited
- Authority to grant credentials (High School Diplomas or GED)

- Credit recovery (allowing students the opportunity to make up credits that were lost due to failure)
- Certified teachers
- Flexible scheduling
- Strong relationships with the district office and other high schools
- Private funding and/or public-private partnerships

(Source: State of Wisconsin, Department of Public Instruction)

To support students, alternative education models need to offer a range of services and instruction, including anger management; small group instruction; some individualized instruction; computerized, self-paced instruction; guidance services; and study skills. Strong, consistent and persistent support services are critical to students' success.

In crafting a regulatory definition for alternative programs, the State Board of Education should consider the aforementioned program locations, elements of quality practice and programming, and range of services and instruction. Also important to the process is encouraging and considering the input of stakeholders, such as local school systems, higher education, community organizations, experts in alternative programs, parents, and students.

During the process of developing the alternative program definition, the State Board of Education and/or Maryland State Department of Education should also work to change perceptions of alternative programs. Too often, alternative education programs carry a reputation in their respective communities as programs for "bad kids." This view must be changed as an alternative program infrastructure is put into place. While these programs do serve some students with behavioral problems, they also serve many other students who do not have behavior issues but do require an alternative educational setting in order to be successful. Alternative programs have great potential for helping children achieve success; communities must understand this so they can get involved with and support the school and its students.

Recommendation Five

Should the compulsory age of attendance be raised to 18, Maryland should provide the adequate financial support to raise the age of compulsory attendance to age 18.

Rationale

This Task Force has identified many, but not all, of the costs that would be associated with an increase in the compulsory attendance age. Raising the compulsory attendance age can be done responsibly and effectively only by providing the resources necessary to engage all students at a young age and keep them engaged until they successfully complete high school.

While it is not the job of this Task Force to identify specific funding sources necessary to support an increase in the compulsory attendance age, or otherwise implement these recommendations, students will not benefit from an unfunded mandate. The subcommittee recognized that much more than an infusion of money would be necessary to effect this legislated change should it come to fruition. Preparation time would need to be built into the implementation date to allow systems to hire and professionally develop additional teachers, build additional classrooms, purchase and outfit relocatable classrooms, order needed textbooks and supplies, redraw school boundaries, analyze transportation needs, account for the special needs of the physically and educationally disabled students returning or remaining, and include the appropriate amount of money in the local school boards' funding requests to the local political jurisdictions in time to meet all of the deadlines for adequate consideration in the budgetary process. Public-private partnerships may need to be explored as the State and local school systems attempt to marshal sufficient resources to implement any changes to the compulsory age of attendance.

Recommendation Six

Appoint a group to study Maryland's existing truancy courts, examine their structure, assess their effectiveness, and, if appropriate, make a recommendation for expanding truancy courts statewide.

Rationale

Currently, Maryland lacks an established system of support and consequences for frequently truant students. And while Maryland has established consequences for parents/guardians, they are rarely enforced. Without enforcement in place, the compulsory attendance law is insignificant, and raising the compulsory attendance age will have little or no influence on keeping students in school. Therefore, the State should consider a truancy court system in each county to instill hope, improve student attendance, enhance achievement, and reduce delinquent behavior through a proactive partnership of schools, courts, and families.

Truancy courts currently exist in several Maryland counties, but data on their effectiveness is not known. Truancy courts have been used with strong success in several states, including North Carolina, where a newly developed truancy court has successfully transformed truant elementary and middle school students in two counties into perfect or nearly perfect attendance students. According to Judge Richard Chaney of Durham, North Carolina, only one student failed to graduate high school out of the students who regularly came into his courtroom. In St. Louis County, Missouri, a three-year evaluation of the truancy court showed 60 percent of students significantly improved their attendance rates, reducing absences by an average of 44

percent (St. Louis County Truancy Court, 2005). Additionally, in Ingham County, Michigan, approximately 63 percent of the 600 students referred to truancy court in the first two years have improved their attendance (Burton, 2003). Dramatic successes have also been found in Delaware. In 2003, 55 percent of the 739 students with cases closed achieved overall compliance with the truancy court; 94 percent of the students achieving full compliance remained in school at the end of the year; 70 percent of all students were still in school at the end of the year; and, 66 percent of all 2002 students involved with the truancy court continued to remain in school more than a year later (State of Delaware Justice of the Peace Court, 2003).

Should truancy courts be established, Maryland should consider a system whereby each truancy court works closely with the local State's Attorneys office, Sheriff's department, Department of Social Services, local leaders, and local boards of education to ensure compliance with compulsory attendance laws.

A statewide truancy court system should consider targeting students who were absent between 10 and 30 times. One judge, volunteer or appointed, per court could handle truancy cases once a week before or after school. The truancy judge would review a student's attendance, behavior, and academic performance. After an accumulation of multiple absences, the student would be placed on probation. If there is no improvement, the student might face community service, juvenile detention, or parental supervision in school.

The court would also intervene with issues underlying a student's truancy, including depression and drug and/or alcohol abuse, and make the appropriate referrals and placements.

Suggestions for keeping students in school through the truancy court system include transportation assistance; parent participation; counseling; parenting classes; support groups; and positive reinforcement, such as praise for small accomplishments and rewards for attendance and compliance with the truancy system.

Legislation would raise high school dropout age to 18

State educators say 16 is too young to make vital decision.

By LISA DEMER
ldemer@adn.com
(02/15/11 07:48:07)

JUNEAU -- Some are so far behind they can't see a way to the finish. Some feel bullied at school and are scared to go. Some stay home to take care of younger siblings while parents work.

Struggling Alaska students drop out in astonishing numbers, and the state allows it once they turn 16.

A bill now in the state Senate aims to raise the age that kids must be in school. Senate Bill 9 had its first hearing Monday. A similar bill died in the last Legislature.

Both were sponsored by Sen. Bettye Davis, an Anchorage Democrat and retired social worker.

The bill would require kids to start school by age 6 and stay in through age 17. Current law says kids must attend from age 7 through 15. The change for younger children is a formality, Davis said. Young children already are starting by age 5 or 6 to attend kindergarten.

The problem is at the other end. Too many quit at age 16 or 17, not anticipating the lost opportunities that may result.

"It's not a magic bullet to heal all the ills that we have, but it's one of the tools in the toolbox that we need," Davis said in Monday's hearing before the Senate Education Committee.

Legislators, teachers and school district leaders have long been frustrated by Alaska's high dropout rates. Davis says she wants to raise the school attendance age as part of larger reforms that do more to motivate rather than alienate students on the edge.

LONG A PRIORITY

Many educators love the idea, but some parents have been skeptical, worried that troubled students forced to stay in school will only disrupt classes for others.

Davis said students who don't fit into the regular classrooms could be reached in other ways, by hands-on vocational classes or through an alternative school. Serious troublemakers could be suspended or expelled.

Raising the school attendance age has been a legislative priority of the Anchorage School District for years, said Superintendent Carol Comeau.

"No. 1, we think it's too young for a kid to make a decision that is that potentially life changing at 16," Comeau said. Some teens quit school thinking they'll join the military, but the Army generally requires a regular high school diploma, or a G.E.D. with college credits, said Capt. Francisco Jaume, commander of the recruiting company for the Army in Alaska.

"That's a real misconception," he said.

Those who get in with a G.E.D. are limited to the most basic Army jobs, such as infantry positions, he said.

HIGHER AGES IN MOST STATES

Alaska attendance age dates to territorial days when many students quit after eighth grade and fewer jobs required a high school diploma, Davis's office said.

Twenty states require students to attend school until they turn 18 and 11 more set the cutoff age at 17. Alaska is among 19 states that let students quit on their 16th birthday.

Laury Scandling, assistant superintendent of the Juneau School District, has spent years teaching in or overseeing programs to reach kids at risk of dropping out. She told legislators that she has always refused to sign dropout papers for a teen wanting to quit. The state shouldn't make it easy for kids to quit, she said.

The Association of Alaska School Boards backs the bill, too, said executive director Carl Rose.

But would this make a difference? Sen. Hollis French, D-Anchorage, asked.

The educators said it would.

Students aren't dropping out because standards are too high, Scandling said. They leave because they aren't connected to school, because they feel invisible, because the curriculum isn't relevant. Anchorage is trying to address that with graduation coaches, who identify students at risk of dropping out and work with a team to keep them in, Comeau said.

Gov. Sean Parnell hasn't taken a position on the bill but generally prefers incentives, such as the scholarship program he backed last year, rather than mandates, his spokeswoman said. In the last school year, about 1,400 Alaska students between the ages of 16 and 18 dropped out, according to the state Department of Education. It would cost nearly $15 million a year to keep them in school, the department says.

Maybe, says Davis. But dropouts already cost society, she said. If more money is spent on educating the students, she said, fewer will be absorbed by prisons and social services.

Office of Senator Bettye Davis

January 31, 2011

Senator Meyer, Senator Thomas Co-Chairs, Senate Education Committee

RE: Request for Hearing for SB 9, 27-LS0085\M - "An Act relating to compulsory school attendance; and relating to the crime of contributing to the delinquency of a minor.

Dear Senators Meyer and Thomas:

Senator Davis respectfully requests a hearing on SB 9 before the Senate Education Committee.

Included in this hearing package are:

1. Sponsor Statement
2. Current version of SB 9, 27-LS0085\M.
3. Sectional Summary (requested and to be provided under separate cover).
4. Additional Documents
    - "Compulsory School age Requirements" – Education Commission of the States
    - "Compulsory Education" NCSL 2009
    - " Graduation Rates in Alaska and Dropout Information" - EED 11/09/2010
    - "Employment Provisions in Compulsory School Attendance"- US Dept Labor
    - "NEA's 12 Point Plan to Reduce Dropout Rate" 2009
    - "High School Dropout: Stats" National High School Center 2007
    - Letters supporting increasing school age in previous SB 102, 26th Legislature
    - *Boston Globe* 10/212/09 "Law urged to make teens stay in school."

Please plan on in-person and teleconference testimony.

Please do not schedule this bill February 21-24. Call if you have any questions.

Sincerely,

Thomas S. Obermeyer
465-3762

MEMORANDUM January 31, 2011

SUBJECT: Sectional Summary of SB 9 (Work Order No. 27-LS0085\M)

TO: Senator Bettye Davis
Chair of the Senate Health and Social Services Committee
Attn: Thomas Obermeyer

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Raises the age from 16 to 18 for the crime of contributing to the delinquency of a minor for repeated absences from school.

Section 2. Raises the compulsory school age from 16 to 18.

Section 3. Amends an exception to the compulsory school attendance age to provide for graduation for a secondary school.

Senator Bettye Davis

SB 9 27-LS0085 "An Act relating to compulsory school attendance; and relating to the crime of contributing to the delinquency of a minor."

SPONSOR STATEMENT

This bill changes the Alaska compulsory school attendance ages from 7-16 to 6-18. At the same time it necessarily amends the criminal statute of contributing to the delinquency of a minor from the maximum age 16 to 18. The legislative intent of this bill is to require all students to start school earlier when their brains are growing and developing at a dramatic rate from birth to age 7 and to stay in school long enough to graduate. This bill allows earlier identification of children with learning disabilities and more time to take successful corrective action. This bill will not preclude parents from homeschooling children, or using charter or alternative schools, or any other of the twelve enumerated exceptions to compulsory education under AS 14.30.010(b), including completion of grade 12 or graduation from a secondary school before age 18.

The Alaska compulsory school age statute is out of date with modern educational practice and thinking. The law has not changed since territorial days when few children attended school beyond 8th grade or bothered to graduate, because most jobs did not require much education. The majority of Alaskan students today are already in school by age six and many by the minimum age five. Head Start and prekindergarten programs are growing in popularity. The state already funds a pilot pre-kindergarten program and SB 6 this year proposes funding such a program statewide.

In 1852 Massachusetts became the first state to pass compulsory school attendance laws, and by 1918 all states required children to receive an education. Today every state and territory requires children to enroll in public or private education or to be home-schooled. Thirty-two states require students to begin their education by age 6 or 5 and to remain in school until 16 or older. Twenty-four states and American Samoa set the minimum at age 6, and eight states and the District of Columbia, Puerto Rico and the Virgin Islands set the minimum at age 5. All children are required to continue their education into their high school years, with twenty states setting the compulsory cutoff age at age 18; eleven at age 17; and nineteen states including Alaska and the Virgin Islands at age 16.

By increasing the school attendance age to 18, this bill should discourage earlier dropouts and reduce juvenile crime, teen pregnancy and other at risk behaviors. Studies have found that students without a diploma earn less than 75% of those with a diploma; they are more likely to live in poverty, go to jail, and have health problems.

The Alaska Department of Education and Early Development reported 8,245 students or 67.7% graduated in 2010 while 3,186 dropped out. The graduation rate of Alaska Native students was 55.4%, a group which experienced twice the dropout rate of all students. These rates remain well below the national average. The National Education Association's first priority two years ago in its "12-Point Action Plan for Reducing the School Dropout Rat" was to "*mandate high school graduation or equivalency as compulsory for everyone below the age of 21.*" It reported:

"Just as we established compulsory attendance to the age of 16 or 17 in the beginning of the 20th century, it is appropriate and critical to eradicate the idea of 'dropping out' before achieving a diploma. To compete in the 21st century, all of our citizens, at minimum, need a high school education."

Opponents to increasing compulsory school age who are concerned about forcing students to be in the classroom against their will argue that these students may become disruptive and require more time and expense on behavior and truancy problems. This bill, however, is directed at more than just "seat time." It is to become part of a larger plan to motivate rather than to punish or ignore students. It aims to help students stay in school long enough to graduate and go on to college or better-paying jobs. Students will want to come to school, stay in school, and graduate, if academic problems are identified early and they helped long before they dropout. For those students who want to work or are not as academically inclined, school districts are encouraged to continue accredited alternative schools and work-study programs to help students earn credits toward a diploma if they must work at the same time. Coupled with early efforts to retain, train, and graduate, this bill can bring hope and success to thousands of Alaskan students who otherwise might not stay in school long enough to graduate or develop to the best of their potential.

Compulsory School Age Requirements

Updated by Melodye Bush

Last Updated June 2010

Summary

Compulsory school attendance refers to the minimum and maximum age required by each state in which a student must be enrolled in and attending public school or some equivalent education program defined by the law.

The vast majority of states include an added clause providing for pupils to be released from compulsory attendance requirements upon graduation of high school, regardless of their age.

Arizona, **Vermont** and **Wyoming** all exempt children from compulsory attendance requirements upon completion of the 10th grade.

Five states – Virginia, South Dakota, Nevada, Maryland **and** Connecticut **– allow the minimum compulsory age to be extended by at least one year if the parent(s) obtain a waiver from their assigned school.**

Nearly half of all states allow children ranging from age 14 to 18 to be exempt from the compulsory attendance requirement if they meet one or more of the following stipulations: are employed, have a physical or mental condition that makes the child's attendance infeasible, have passed the 8th-grade level, have their parents' permission, have the permission of the district court or the local school board, meet the requirements for an exit interview, or have arranged alternative education such as vocational or technical school. Endnotes are provided for Indiana, Louisiana, Massachusetts and Virginia as examples of such legislation.

Part I: Age Ranges

Minimum compulsory age and corresponding number of states:

- Age 5: 8 states and the District of Columbia, Puerto Rico and Virgin Islands
- Age 6: 24 states and American Samoa
- Age 7: 16 states
- Age 8: 2 states

Maximum compulsory age and corresponding number of states:

- Age 16: 19 states and the Virgin Islands
- Age 17: 11 states
- Age 18: 20 states and the District of Columbia, American Samoa, and Puerto Rico

Notes:

[1] Arkansas: "Any parent, guardian, or other person residing within the state and having custody or charge of any child may elect for the child not to attend kindergarten if the child will not be age six on September 15 of that particular school year."

[2] Connecticut: "The parent or person having control of a child five years of age shall have the option of not sending the child to school until the child is six years of age and the parent or person having control of a child six years of age shall have the option of not sending the child to school until the child is seven years of age.

[3] Indiana: An individual is required to stay in school until he or she: graduates; is between 16 and 18 and meets the requirements for an exit interview; or reaches at least 18 years of age. Withdrawal before 18 requires parent/guardian's and principal's written permission.

[4] Louisiana: "A child between the ages of seventeen and eighteen may withdraw from school prior to graduation if both the following circumstances exist: (a) The written consent of his parents, tutor, or legal guardian. (b) An exit interview is conducted where the student and his parent, tutor, or legal guardian provide written acknowledgment that withdrawal from school shall likely reduce the student's future earning potential and increase the student's likelihood of being unemployed in the future. During such exit interview, a student who is withdrawing from school shall be given information that has been prepared and supplied by the Louisiana Workforce Commission regarding available training and employment opportunity programs, provided such information is available."

[5] Massachusetts: "Every child between the minimum and maximum ages established for school attendance by the board of education, except a child between fourteen and sixteen who meets the requirements for the completion of the sixth grade of the public school as established by said board and who holds a permit for employment in private domestic service or service on a farm, under section eighty-six of chapter one hundred and forty-nine, and is regularly employed thereunder for at least six hours per day, or a child between fourteen and sixteen who meets said requirements and has the written permission of the superintendent of schools of the town where he resides to engage in non-wage-earning employment at home, or a child over fourteen who holds a permit for employment in a cooperating employment, as provided in said section eighty-six, shall, subject to section fifteen, attend a public day school in said town, or some other day school approved by the school committee, during the number of days required by the board of education in each school year, unless the child attends school in another town, for said number of days, under sections six to twelve, inclusive, or attends an experimental school project established under an experimental school plan, as provided in section one G of chapter fifteen, but such attendance shall not be required of a child whose physical or mental condition is such as to render attendance inexpedient or impracticable subject to the provisions of section three of chapter seventy-one B or of a child granted an employment permit by the superintendent of schools when such superintendent determines that the welfare of such child will be better served through the granting of such permit, or of a child who is being otherwise instructed in a manner approved in advance by the superintendent or the school committee."

[6] Montana: requires that a child shall remain in school until the latter of either the child's 16th birthday or the date of completion of the work of the eighth grade.

[7] New Hampshire: The superintendent, may grant waivers upon proof that the pupil is 16 years of age or older and has an alternative learning plan for obtaining either a high school diploma or its equivalent. This law takes effect July 1st, 2009.

[8] New York: Both New York City and Buffalo require minors to attend school from the age of 6 until the age of 17. Each district in the state is authorized to require minors between 16 and 17 who are not employed to attend school. The board of education of the Syracuse city school district is authorized to require minors who are five years of age on or before December first to attend kindergarten instruction.

[9] South Carolina: In South Carolina, kindergarten is mandatory. However, state statutes permit parental waiver for kindergarten at age five.

[10] Tennessee: "A parent or guardian who believes that such parent's or guardian's child is not ready to attend school at the designated age of mandatory attendance may make application to the principal of the public school which the child would attend for a one semester or one year deferral in required attendance.

[11] Texas: School districts may require persons who voluntarily enroll in school or voluntarily attend school after their 18th birthday to attend school until the end of the school year.
[12] Virginia: "For a student who is at least 16 years of age, there shall be a meeting of the student, the student's parents, and the principal or his designee of the school in which the student is enrolled in which an individual student alternative education plan shall be developed in conformity with guidelines prescribed by the Board..."

Part II: Statutory Excerpts

Alabama – "Every child between the ages of **7** and **16** . . . ."

Alaska – "Every child between **7** and **16** years of age . . . ."

American Samoa – " . . . the age of **six** through **eighteen** . . . ."

Arizona – "Every child between the ages of **6** and **16** years . . ." or " . . . has completed the high school course of study necessary for completion of grade ten as prescribed by the State Board of Education . . ."

Arkansas – ". . . age **5** through **17** years on or before September 15th of that year...."

California – "Each person between the ages of **6** and **18** . . . ."

Colorado – "Every child who has attained the age of **6** years on or before August 1st of each year and is under the age of **17** years . . . ."

Connecticut – ". . . a child **five** years of age and over and under **eighteen** years of age . . ."

Delaware – ". . . a child between **5** years of age and **16** years of age . . . ."

District of Columbia – ". . . a minor who has reached the age of **5** years or will become **5** years of age on or before December 31st of the current school year . . . until the minor reaches the age of **18** years."

Florida – "All children who have attained the age of **6** years or who will have attained the age of **6** years by February 1 of any school year or who are older than **6** years of age but who have not attained the age of **16** years . . . ."

Georgia – ". . . between their **sixth** and **sixteenth** birthdays . . . ."

Hawaii – ". . . all children who will have arrived at the age of **6** years, and who will not have arrived at the age of **18** years, by January 1 of any school year . . . ."

Idaho – ". . . any child resident in this state who has attained the age of **7** years at the time of commencement of school in his district, but **not the age of 16** years . . . ."

Illinois - ". . . any child between the ages of **7** and **17** years . . . ."

Indiana – ". . . the individual becomes **7** years of age until . . . reaches at least **16** years of age but who is less than **18** years of age and the requirements under subsection (j) concerning an exit interview are met enabling the individual to withdraw from school before graduation; or . . . the individual reaches at least **18** years of age . . . ."

Iowa – "A child who has reached the age of **6** and is under **16** years of age by September 15 . . . ."

Kansas – ". . . any child who has reached the age of **7** years and is under the age of **18** years . . . ."

Kentucky – ". . . any child between the ages of **6** and **16** . . . A child's age is between **6** and **16** when the child has reached his **6**th birthday and has not passed his **16**th birthday. . . ."

Louisiana – ". . . from that child's **seventh** birthday until his **eighteenth** birthday . . . ."

Maine – "Persons . . . who are at **7** and under **17** years of age . . . ."

Maryland – ". . . each child who . . . is **5** years old or older and under **16** . . . ."

Massachusetts – "Each child must attend school beginning in September of the calendar year in which he or she attains the age of **six**." (Language for the maximum age found in MASS. GEN. LAWS ANN. 76 § 1.)

Michigan – ". . . a child from the age of **6** to the child's **16**th birthday . . . ."

Minnesota – ". . . every child between **7** and **16** years of age...A parent may withdraw a child under the age of 7 from enrollment at any time."

Mississippi – ". . . a child who has attained or will attain the age of **6** years on or before September 1 of the calendar year and who has not attained the age of **17** years on or before September 1 of the calendar year...and any child who has attained or will attain the age of 5 years on or before September 1st and has enrolled in a full-day public school program."

Missouri – ". . . a child between the ages of **7** and the compulsory attendance age for the district...Any parent, guardian or other person who enrolls a child between the ages of 5-7 years in a public school program of academic instruction shall cause such a child to attend the academic program on a regular basis." The school board of a metropolitan school district ". . .may adopt a resolution to establish a compulsory attendance age of **17** to take effect no later than the school year next following the school year during which the resolution is adopted." In all other cases, compulsory attendance shall mean "Seventeen years of age or having successfully completed sixteen credits towards high school graduation. The school board of a metropolitan school district for which the compulsory attendance age is 17 years may adopt a resolution to lower the compulsory attendance age to sixteen years; provided that such resolution shall take effect no earlier than the school year next following the school year during which the resolution is adopted. "

Montana – ". . . any child who is **7** years of age or older prior to the first day of school in any school fiscal year . . . until . . . the child's **16**th birthday . . . ."

Nebraska – ". . . a child is of mandatory attendance age if the child (i) will reach **six** years of age prior to January 1 of the then-current school year. . . .and (iii) **has not reached eighteen** years of age."

Nevada – ". . . any child between the ages of **7** and **18** years..."

New Hampshire – ". . . any child at least **6** years of age and under **18** years of age . . . ."

New Jersey – ". . . a child between the ages of **6** and **16** years . . . ."

New Mexico – ". . . *is at least five years of age prior to 12:01 a.m. on September 1 of the school year;* . . . until the school age-person is at least 18 years of age unless that person has graduated from high school or received a general educational development certificate."

New York – ". . . each minor from **6** to **16** years of age . . . ."

North Carolina – ". . . a child between the ages of **7** and **16** years . . . ."

North Dakota – ". . . child of an age of **7** years to **16** years. . ..and if a person enrolls a child of age 6 in a public school, the person shall ensure that the child is in attendance for the entire school year."

Ohio – "A child between **6** and **18** years of age is 'of compulsory age'..."

Oklahoma – ". . . a child who is over the age of **5** years, and under the age of **18** years . . . ."

Oregon – ". . . all children between the ages of **7** and **18** years who has not completed the 12th grade. . ."

Pennsylvania – ". . . not be later than at the age of **8** years, until the age of **17** years."

Puerto Rico – ". . . all children between the ages of five (**5**) and eighteen (**18**) . . . ."

Rhode Island – "Every child who has completed or will have completed **6** years of life on or before September 1st of any school year and has not completed **16** years of life . . . ."

South Carolina – ". . . the child or ward is **5** years of age before September first until the child or ward attains his **17**th birthday . . . ."

South Dakota – ". . . a child who is **6** years old by the first day of September and who has not exceeded the age of 18..."

Tennessee – ". . . any child or children between **six** years of age and **seventeen** years of age. . . ."

Texas – ". . . a child who is at least **6** years of age . . . and who has completed the academic year in which the child's **18**th birthday occurred . . . ."

Utah – ". . . a minor between **6** and **18** years of age . . . ."

Vermont – ". . . a child between the ages of **six** and **16** years . . ." or " . . . has completed tenth grade . . . " or " . . . is excused by the superintendent or a majority of the school directors . . . ."

Virgin Islands – "All children shall commence their school education . . . in the calendar year in which they reach their **5**th birthday . . . until the expiration of the school year nearest their **16**th birthday . . . ."

Virginia – ". . . any child who will have reached the **fifth** birthday on or before September 30 of any school year and who has not passed the **eighteenth** birthday . . . ."

Washington – ". . . any child **8** years of age and under **18** years of age . . . ."

West Virginia – "Compulsory school attendance shall begin with the school year in which the **6**th birthday is reached prior to the first day of September of such year . . . and continue to the **16**th birthday."

Wisconsin – ". . . a child who is between the ages of **6** and **18** years old . . . ."

Wyoming – " . . . a child . . . whose **7**th birthday falls on or before September 15 of any year and who has not attained his **16**th birthday . . ." or " . . . completed the tenth grade . . . . "

Compulsory Education

Overview

Legislation & Laws

News Articles

Overview

More than 150 years have passed since Horace Mann helped Massachusetts establish a statewide system of education that eventually led to the requirement that all children attend public school. In 1852, Massachusetts became the first state to pass compulsory school attendance laws, and by 1918, all states required children to receive an education.

Compulsory Education Requirements

Today, every state and territory requires children to enroll in public or private education or to be home-schooled. More than half—32 states—require students to begin their education by age 6. Some states' set their age requirements as low as age 5 and as high as age 8. All children are required to continue their education into their high school years, with 26 states setting the cutoff age at 16. The remaining states require students to stay in school through age 17 or 18.

Compulsory education laws vary greatly from state to state. While some states use a student's date of birth to determine the beginning and ending dates for compulsory education, other states require a student to begin school if he or she will turn 6 during the school year and require a student to remain in school until completion of the school year in which he or she turns 17. Four states—Arizona, Montana, Vermont and Wyoming—require students to remain in school through a specified grade. Most states allow parents to petition their local school board or principal for a waiver of these requirements under certain circumstances, such as enrollment in a vocational education program or an institution of higher education or early completion of required coursework.

Kindergarten Enrollment

States and territories also set a minimum age for children to enroll in kindergarten, which is typically one or two years earlier than the compulsory education age. Every state or territory with a policy on this issue has established age 5 as the minimum age. However, six states—Colorado, Massachusetts, New Hampshire, New Jersey, New York and Pennsylvania—leave this decision up to local education agencies. In addition to the age requirement, each state also sets a date by which students must have attained the specified age in order to attend kindergarten. The cutoff dates range from August 1 in Indiana and Missouri to Jan. 1 in Connecticut and Vermont.

The School Age Debate

School attendance ages are often controversial. Many early childhood experts argue that if policymakers establish early cutoff dates for kindergarten, they should also establish aggressive school readiness programs to ensure students' success. Others argue that because there has been an increased emphasis on early childhood development and school readiness, we should continue to challenge children at a younger age. Some experts assert that age may be an arbitrary indicator or measure of a child's ability to succeed in school and should not be used at all. Others point out that when a state considers legislation, such as Nebraska, allowing younger children to enter kindergarten, policymakers must understand that there is likely to be a large increase in the number of children entering kindergarten during the first year of the new policy, thereby straining already tight school district budgets and increasing the need for teachers.

The age through which students must attend school can also be controversial. To encourage more students to attend institutions of higher education and to decrease dropout rates, juvenile crime and teen pregnancy, some state legislatures have increased the school attendance requirement to age 17 or 18. Opponents are concerned about forcing students to be in the classroom against their will. They say that these students may become disruptive and may require teachers and principals to spend more time and resources disciplining such students for disruptive or violent behavior and truancy. They also point out that there probably will be a greater need for funding, teachers and classrooms for alternative education.

State Action

Many state legislatures continue to debate school attendance policies. During the 2005 legislative session, Indiana changed their kindergarten enrollment date from July 1st to August 1st. During the 2004 legislative session, at least seven states enacted legislation regarding compulsory education. Alaska extended the required school age for a child who is six years of age on or before Sept. 1 following the beginning of the school year, and who is under the age of 20 and has not completed the 12th grade. Illinois increased the compulsory school age from 16 to 17 years of age, with certain exceptions. Kansas and Kentucky will both, under specific circumstances, grant exemptions from compulsory attendance. Nebraska changed the mandatory ages for compulsory education beginning in the 2005-06 school year to age of 6 by Jan. 1 of the current school year through the age of 17, with certain exceptions. In New York, local school districts will have the power to require minors from 16 to 17 years of age to attend full time day instruction. Finally, Virginia strengthened the mechanisms for enforcement of the compulsory school attendance law.

Attachments: Graduation Rate Fact Sheet.doc; Dropout Rate Fact Sheet.doc

Thomas,

As promised I have attached the Fact Sheets that we discussed. I find them most helpful for both the historical view and the explanation of the calculation. I hope to have the 2010 Dropout calculation ready next week.

Graduation Rates in Alaska
Fact Sheet

The Graduation Rate is reported as a fraction. The numerator is the sum of the number of graduates receiving a regular diploma before June 30. The denominator is the sum of the number of graduates, plus the number of dropouts in grade nine three school years prior, plus the number of unduplicated dropouts in grade ten two school years prior, plus the number of unduplicated dropouts in grade eleven in the prior school year, plus the number of unduplicated dropouts in grade 12 during the current year, plus the number of grade 12 continuing students.

A **graduate** is defined as a student who has received a regular diploma from a state- or district-approved education program, as evidenced by receipt of a secondary school diploma from school authorities. Any student who receives a diploma under a waiver from the competency examination required under AS 14.03075 (a), as specified by the state board is considered to be a graduate. This does not include an individual who:

- receives a certificate of completion;
- receives a certificate of attendance;

The statewide Graduation Count has increased significantly over the last five years.

School Year	Graduation Rate	Graduate Count
2004	62.9%	7,290
2005	61.4%	6,905
2006	61.6%	7,361
2007	63.0%	7,666
2008	62.6%	7,855
2009	67.5%	8,008
2010	67.7%	8,245

The Alaska Native/American Indian Graduation Rate has shown improvement over the same five year time period:

School Year	Graduation Rate	Graduate Count
2004	46.1%	1,327
2005	43.2%	1,233
2006	45.1%	1,442
2007	51.2%	1,689
2008	48.1%	1,523
2009	55.4%	1,508
2010	55.4%	1,616

Please note that the new Graduation Rate required by the Final Title 1 Regulations under NCLB will use a different calculation. The new Graduation Rate, also known as the Four-Year Adjusted Cohort Rate, will follow an actual group of students across four

years of high school. Alaska will no longer be incorporating prior years' counts of dropouts to calculate the Graduation Rate.

Dropout Rates in Alaska
Fact Sheet

The Dropout Rate is computed by dividing the number of dropouts in the current school year by the number of students enrolled in grades 7-12 on October 1 of the current school year. School year is defined as the12-month period beginning with July 1 and ending June 30.

A **Dropout** is defined as a student who was enrolled in the district at some time during the school year and whose enrollment terminated. This does not include an individual who:

- graduated from high school or completed a state or district approved education program, as evidenced by receipt of formal recognition from school authorities;
- transferred to another public school, private school or state or district approved education program;
- is temporarily absent due to suspension;
- is absent due to illness or medical condition;
- died.

The statewide Dropout Rate has decreased as well as the number of dropouts for three consecutive years:

School Year	Dropout Rate	Dropout Count (Grades 7-12)
2005	6.0%	3,791
2006	5.8%	3,642
2007	5.5%	3,434
2008	5.2%	3,232
2009	5.2%	3,146

The Alaska Native/American Indian Dropout Rate has not reflected the proportionate decrease over the same time period:

School Year	Dropout Rate	Dropout Count (Grades 7-12)
2005	8.2%	1,276
2006	8.4%	1,333
2007	8.3%	1,299
2008	8.5%	1,224
2009	8.5%	1,172

In 2007-2008 Alaska showed a wide range in difference with district by district comparisons of Dropout Rates. Four districts reported 0 dropouts. Two districts reported over 25% Dropout Rates. Both districts with the highest rates, Delta/Greely School District and the Nenana City School District, had a large percentage of dropouts reported in the statewide correspondence schools.

Employment Related Provisions in State Compulsory School Attendance Laws - January 1, 2009

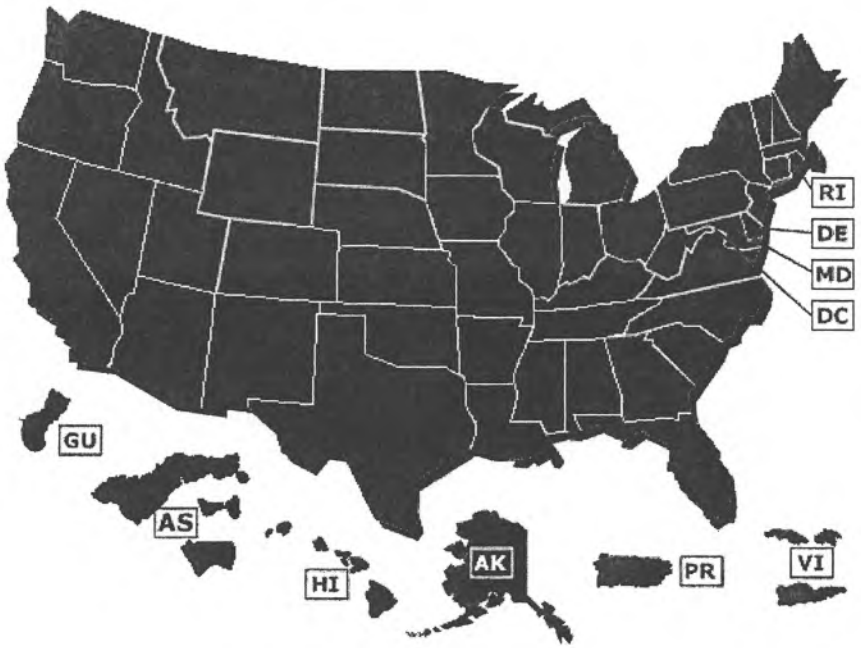

Table of Employment Related Provisions in State Compulsory School Attendance Laws By State

State	Age of Required School Attendance		Exemptions 1/ Employed		High School Graduate
	from	to	Age	Completion of Grade	
Alabama	7	16	legally and regularly employed under child labor law.	---	X
	3	21	permitted for special education students.		
Alaska	7	16	---	---	X
			14 with parental		

Arizona	6	16	consent and gainfully employed.	---	---
Arkansas	5	17 must complete school year.	---	---	X
California	6	18	---	---	X
Colorado	7	16	has current age and school certificate or work permit.	---	X
Connecticut	5	18	16 with parental consent.	---	---
Delaware	5	16	---	---	---
District of Columbia	5	18	children who are age 5 by September 30 are required to be enrolled in kindergarten.	---	---
Florida	6	17	may terminate attended at 16 with parental consent.	---	---
Georgia	6	16	---	---	X
Hawaii	6	18	15	---	X
Idaho	7	16	---	---	---
Illinois	7	17	employed and excused by school official.	---	---
Indiana	7	18	16 with consent of parent and principal. 14 if a parent agrees and State Labor bureau issues a certificate. must go back to school within 5 days of termination of employment for which certificate was issued.	---	X
Iowa	6	16	---	---	X
Kansas	7	18	17 or 16 with parental consent.	---	---
Kentucky	6	16	---	---	X
Louisiana	7	18 or 17 with parental consent.	---	---	X
Maine	7	17	15 or	9	X
Maryland	5	16	---	---	---
Massachusetts	6	16	14	---	---
Michigan	6	16	---	---	---
Minnesota	7	16	---	---	X

Mississippi	6	17	5 years of age if in public kindergarten.	---	---
Missouri	7	16	14	---	---
Montana	7	16 or completion of 8th grade, whichever is later.	---	---	---
Nebraska	7	18	14 and16 with parental consent; special legislation for home schooling.	8 ---	X
Nevada	7	upper age limit has been changed to 18 unless the child has graduated from high school.	14 and excused by board of trustees. 14 if work is necessary for own or parents' support.	8 ---	X
New Hampshire	6	16 presently; however, effective July 2009, upper age limit will change to 18 or the student must have received diploma or qualifies for exception. With passage of NH House Bill 927, all districts are making plans to offer kindergarten.	---	---	---
New Jersey	6	16	---	---	---
New Mexico	5, or 8 if parents and school board agree	effective July 1, 2007, neither school districts or state chartered school districts shall excuse a student from attending school except as provided by law or for parent-authorized medical reasons.	---	---	X
New York	6	17 in cities with 4,500 or more population and union-free school districts, otherwise 16 if approved by local school board.	---	---	X
North Carolina	7	16	---	---	---
North Dakota	7	16	necessary to support of family.	---	X

Ohio	6	18	16 with parents' and superintendents permission.	---	X
Oklahoma	5	18 or 16 if excused by written joint agreement.	---	---	X
Oregon	7	18 or excused by district school board; 16 with consent of school administration and parent; 21 for a child with a disability.	16	---	X
Pennsylvania	8	17	16 if regularly engaged in employment with a certificate. 15 in farm work or domestic service in private home with permit. Or, 14 employed as above if completed elementary school with permit recommended by district superintendent of schools or principal of private school.	---	X
Rhode Island 2	6	18	16 with written parental consent. Dropout Prevention Act of 2007.	---	---
South Carolina	5	17	16 further attendance is determined by court to be disruptive, unproductive or not in best interest of child.	8th grade completed and employment is necessary for maintenance of home.	X
South Dakota	6	16 or completion of 8th grade if member of certain religious organizations. effective July 1, 2009, the upper limit of the compulsory age law changes to	---	---	---

		18.			
Tennessee	6	18th birthday.	---	local exemptions at 17th birthday for discipline problems.	X
Texas	6	18; person 18 years of age may enroll but failure to attend can result in permanent revocation if 5 or more unexcused absences occur in a semester. Students suspected of violating school attendance laws when apprehended must be taken into custody and delivered to their school campus.	---	---	---
Utah	6	18	16 and 8th grade completed. home schooled minors has exempt from attendance.	8th for employment purposes.	X
Vermont	6	16	15 and completed 6th grade and services needed for support of family.	---	---
Virginia	5	18	exempt any pupil with parent's consent along with that of principal or superintendent or a court which believes the minor cannot benefit from education at school.	---	X
Washington	8	18 16 and parent agrees that child should not be required to attend, or child is emancipated, or child has received certificate of competence.	16	---	X and age 16
West Virginia	6	16	---	---	X
Wisconsin	6	18	---	---	X

Wyoming	7	16	---	---	---

1 Nearly all States exempt those whose physical or mental condition precludes attendance. Other exemptions not directly related to employment include those because of distance from school or school transportation; expulsion, suspension or determined to be disruptive; marriage; excused by court or judge; and receiving religious education.

2 The Dropout Prevention Act is a comprehensive program to have all the schools within the state make an attempt to keep students in school. There were no changes to the age limits for school attendance, but the establishment of a state-wide program is a major effort to prevent students from leaving school early - for any reason.

NEA's 12-Point Action Plan for Reducing the School Dropout Rate

To address the nation's school dropout crisis, NEA has developed a 12-point action plan that includes the most promising actions supported by experience and data.

1. Mandate high school graduation or equivalency as compulsory for everyone below the age of 21. Just as we established compulsory attendance to the age of 16 or 17 in the beginning of the 20th century, it is appropriate and critical to eradicate the idea of "dropping out" before achieving a diploma. To compete in the 21st century, all of our citizens, at minimum, need a high school education.

2. Establish high school graduation centers for students 19-21 years old to provide specialized instruction and counseling to all students in this older age group who would be more effectively addressed in classes apart from younger students.

3. Make sure students receive individual attention in safe schools, in smaller learning communities within large schools, in small classes (18 or fewer students), and in programs during the summer, weekends, and before and after school that provide tutoring and build on what students learn during the school day.

4. Expand students' graduation options through creative partnerships with community colleges in career and technical fields and with alternative schools so that students have another way to earn a high school diploma. For students who are incarcerated, tie their release to high school graduation at the end of their sentences.

5. Increase career education and workforce readiness programs in schools so that students see the connection between school and careers after graduation. To ensure that students have the skills they need for these careers, integrate 21st century skills into the curriculum and provide all students with access to 21st century technology.

6. Act early so students do not drop out with high-quality, universal preschool and full-day kindergarten; strong elementary programs that ensure students are doing grade-level work when they enter middle school; and middle school programs that address causes of dropping out that appear in these grades and ensure that students have access to algebra, science, and other courses that serve as the foundation for success in high school and beyond.

7. Involve families in students' learning at school and at home in new and creative ways so that all families-single-parent families, families in poverty, and families in minority communities-can support their children's academic achievement, help their children engage in healthy behaviors, and stay actively involved in their children's education from preschool through high school

graduation.

8. Monitor students' academic progress in school through a variety of measures during the school year that provide a full picture of students' learning and help teachers make sure students do not fall behind academically.

9. Monitor, accurately report, and work to reduce dropout rates by gathering accurate data for key student groups (such as racial, ethnic, and economic), establishing benchmarks in each state for eliminating dropouts, and adopting the standardized reporting method developed by the National Governors Association.

10. Involve the entire community in dropout prevention through family-friendly policies that provide release time for employees to attend parent-teacher conferences; work schedules for high school students that enable them to attend classes on time and be ready to learn; "adopt a school" programs that encourage volunteerism and community-led projects in school; and community-based, real-world learning experiences for students.

11. Make sure educators have the training and resources they need to prevent students from dropping out including professional development focused on the needs of diverse students and students who are at risk of dropping out; up-to-date textbooks and materials, computers, and information technology; and safe modern schools.

12. Make high school graduation a federal priority by calling on Congress and the president to invest $10 billion over the next 10 years to support dropout prevention programs and states who make high school graduation compulsory.

Quick Stats Fact Sheet

High School Dropout: A Quick Stats Fact Sheet

By Maggie Monrad, National High School Center at AIR

Each year almost one-third of public high school students fail to graduate from high school.[1] The high school dropout problem is a crisis for the United States, in part because it impacts not only individuals and their education, but also because the economic and social costs are so dramatic. Globally, the United States ranks seventeenth in high school graduation rates and fourteenth in college graduation rates among developed nations.[2] Domestically, the nation and its communities suffer from a lack of productive workers and higher costs associated with incarceration, health care, and other social services.[3] As the 21st century United States moves towards an increasingly global economy, more individuals are discovering that higher levels of education are critical to their own and their nation's ability to compete and thrive – in fact, about 90 percent of the fastest growing jobs will require some postsecondary education.[4] Understanding the magnitude of the dropout problem and the forces that impact dropout rates is critically important to developing dropout prevention strategies.

Who drops out?

- Secretary of Education Margaret Spellings' testimony to the U.S. House of Representatives Appropriations Subcommittee on Labor, HHS, and Education estimated that approximately one million students drop out every year.[5]
- High school dropouts are more likely to be unemployed, earn lower wages, have higher rates of public assistance, are more likely to be single parents, and have children at a younger age.[6]
- Every school day 7,000 U.S. students leave high school never to return.[7] In 2004, approximately 3.8 million 16- through 24- year olds were not enrolled in high school and had not earned a high school diploma or alternative credential, such as a GED.[8]
- Based on calculations per school day (180 days of school, seven hours each day), one high school student drops out every nine seconds.[9]
- The dropout rate for students with emotional/behavioral disabilities is approximately twice that of general education students.[10]
- Research has confirmed that the lowest-performing readers are most at risk of dropping out of high school. Those achieving in the lowest quartile are 3.5 times more likely to drop out than students in the next highest quarter of academic achievement, and 20 times more likely to drop out than top-performing students.[11]

Race/Ethnicity/Socioeconomic Status

- Male students are consistently eight percent less likely to graduate than female students, and the gap is as large as 14 percent between male and female African-American students.[12]

Quick Stats Fact Sheet

- Among minorities, only about 52 percent of Hispanic students and 56 percent of African-American students will graduate in four years, compared with 78 percent of white students.[13]

- High school students from low-income families (the lowest 20 percent) were six times more likely to drop out than students from higher income families. Ultimately, about one half of all dropouts never receive a high school credential.[14]

Students with Disabilities Aged 14 and Older Who Dropped Out, by Race/Ethnicity

Race/Ethnicity	Percent of Group who Dropped Out
American Indian/Alaska Native	52.2%
Black	44.5%
Hispanic	43.5%
White	33.9%
Asian/Pacific Islander	28.0%

Source: U.S. Department of Education, Office of Special Education Programs, Data Analysis System (DANS), 2003.These data are for the 50 states, DC, Puerto Rico and the four outlying areas. This is based on a cumulative 12-month count.

Impact: Crime

- Estimates indicate that approximately 30 percent of federal inmates, 40 percent of state prison inmates, and 50 percent of persons on death row are high school non-completers. Moreover, non-completers are 3.5 times more likely than high school completers to be imprisoned at some point during their lifetime .[15]

- Raising the high school completion rate one percent for all men ages 20- through 60- would save the US $1.4 billion annually in crime related costs.[16] Each class of high school dropouts costs the U.S. economy more than $8 billion in incarceration expenses and lost wages *per year.*[17] If the male graduation rate was increased by only five percent, the U.S. could save $7.7 billion a year through reducing crime related costs and increasing earnings.[18]

Impact: Economy

- A single 18-year-old dropout earns $260,000 less over a lifetime and contributes $60,000 less in federal and state income taxes. Combined income and tax losses for one cohort of 18-year-olds who drop out is $192 billion which is 1.6 percent of the GDP.[19] America loses more than $26 billion in federal and state income taxes each year from the 23 million high school dropouts aged 18 to 67.[20]

- Almost 1.3 million students didn't graduate from US high schools in 2004, costing more than $325 billion in lost wages, taxes, and productivity over their lifetimes.[21] The Alliance for Excellent Education has estimated that the more than 12 millions students who will drop out over the next decade will cost the nation $3 trillion dollars.[22]

Unemployment and Earnings for Full-time Wage and Salary Workers Age 25 and Over, by Educational Attainment

Unemployment Rate in 2005 (Percent)	Education Attained	Median Weekly Earnings in 2005 (Dollars)
1.6	Doctoral degree	$1,421
1.1	Professional degree	1,370
2.1	Master's degree	1,129
2.6	Bachelor's degree	937
3.3	Associate degree	699
4.2	Some college, no degree	653
4.7	High-school graduate	583
7.6	Some high-school, no diploma	409

Source: Bureau of Labor Statistics, U. S. Department of Labor. (2006, May). *Occupational employment and wages, May 2005.* Washington: Author. Retrieved April 20, 2007, from http://www.bls.gov/news.release/ocwage.toc.htm

Impact: Personal Income and Employment

- A male high school graduate who works until age 65 will earn, on average, nearly $333,000 more than a dropout; a worker with some college will earn $538,000 more. According to a recent report published by Teachers College at Columbia University, male high school graduates earn up to $322,000 more over the course of their lifetimes than dropouts, while college graduates earn up to $1.3 million more.[23] In total, there is more than $309 billion lost wages over the students' lifetimes.[24]

- In 1964, a high school dropout earned 64 cents for every dollar earned by an individual with at least a high school degree. In 2004, the high school dropout earned only 37 cents for each dollar earned by an individual with more education.[25]

- The median income of high school dropouts aged 18 and over was $12,184 in 2003. By comparison, the median income of those aged 18 and over who completed their education with a high school credential (including GED) was $20,431.[26]

NEA-ALASKA

Affiliated with the National Education Association

February 20, 2009

Senator Bettye Davis
State of Alaska
State Capital
Juneau, AK 99801-1182

Dear Senator Davis:

NEA-Alaska supports SB 102, a raise in the age of compulsory school attendance to eighteen for Alaska's children. Truancy and dropout rates are too high and we believe every effort should be made to encourage our youth to become as fully educated as possible. Raising the age of mandatory school attendance may serve to keep students in school longer than they now stay. If this bill causes even one child to complete their education it will be worthwhile.

Further, the annual Delegate Assembly of members in January 2009 passed a resolution which states:

> NEA-Alaska believes the Legislature should establish penalties for non-compliance with Alaska's compulsory attendance laws.

It is our belief that a law with no teeth serves little purpose. Alaska's school employees work hard to offer our children opportunities which prepare them for life. We cannot fulfill the promise of a high quality education for Alaska's children if they are not in our classrooms.

Thank you for sponsoring this piece of legislation and the work you do on behalf of Alaska's future.

Respectfully,

Barb Angaiak

Barb Angaiak, President

Subject: SB 102

Dear Senator Elton and Education Committee Members:

I am writing in support of SB 102, a bill to raise the compulsory age of school attendance.

The Anchorage School Board has consistently supported raising the age of school attendance to 18 years of age or graduation with a high school diploma, which ever comes first. This bill would accomplish that. While raising the school age would not prevent all students from dropping out, it would change the minds of some students. Over the years, we have heard of students whose parents tell them to leave school and get a job because the family needs the money and school is not required once they turn 16. We also hear of students who convince their parents that they should be permitted to stop going to school after they turn 16 because the current law says it is okay.

It is not okay for a 16 or 17 year old to stop going to school if they do not have a diploma. A high school diploma has become too important in today's society. We need to take all reasonable steps to reduce the number of students who leave school before graduating, and this is one of those steps. It is not the entire solution, but it is one piece of the solution.

The second part of this bill addresses procedures to reduce truancy. The Anchorage School Board has not yet had an opportunity to take a position on this issue, but I am confident that the Board would be interested in looking at ways to reduce truancy. I have personally noticed one thing in this portion of the bill that I want to bring to your attention.

The proposed definition of truancy says it is an unexcused absence without the prior knowledge and consent of the parent or guardian. From talking to teachers, it seems that a significant problem is that some parents routinely give their children permission to be absent from school. Because they have permission, they could not be considered truant under this bill. From an educational point of view, I don't think it would matter whether a student misses class with or without parental permission. The problem is missing too many instructional days. I don't know how best to address this, but I thought I would bring it to your attention.

Thank you for your consideration, and I urge you to support raising the compulsory age for school attendance.

Subject: SB 102: RAISE COMP. SCHOOL ATTENDANCE AGE/TRUANCY

Good evening.

On behalf of Senator Davis, I am notifying you that Senate Bill 102: Raise Compulsory School Attendance Age/Truancy bill is being heard this Monday morning at 8 am in the Senate Education Committee. We are requesting your testimony in support of this bill, and in addition, hope that you will spread the word to other members of your board or association regarding this bill's first hearing this session in the Senate Education committee on Monday, February 23rd at 8am.

The teleconference number is 1-888-295-4546. If you are unable to testify during the meeting, you can also email your testimony to Senator Davis's email: Senator_Bettye_Davis@legis.state.ak.us.

Thank you.

Law urged to make teens stay in school

The Boston Globe

By James Vaznis, Globe Staff | October 21, 2009

Massachusetts students would be required to stay in school until age 18 under an ambitious proposal, part of a broader effort to halve the state's high school dropout rate, to be announced today by a special state commission.

With approximately 10,000 Massachusetts students quitting school each year, some as young as 14 years old, commission members say the state can no longer afford to ignore the dropout crisis, especially when striving to develop a more highly educated and skilled workforce.

For more than a decade, the state's dropout rate has remained stagnant. According to the most recent data available, 3.4 percent of students statewide quit school during the 2007-08 academic year, while several urban districts have rates nearly triple that. Under current state law, students can legally drop out by choice at age 16, and students as young as 14 can withdraw from school with permission from the superintendent for medical reasons, employment, or to do nonwage work at home.

If these dropouts never return to receive a diploma, they can become a huge drain on the state's economy. They are less likely to have a job and are far more likely to go to jail or depend on public assistance than residents who have graduated from high school, according to the commission's report, which is being released this afternoon.

"This whole report is a call to action," said Paul Reville, the secretary of education and chairman of the commission, which was created under a 2008 law to develop dropout prevention strategies. "It's critical work. We can ill afford the waste, loss, and tragedy these persistent rates represent."

In the coming months, the Patrick administration plans to put together legislation to raise the compulsory school age, a measure that will be tied to creation of an array of programs aimed at preventing students from dropping out and reaching out to those who have. By April this year, 19 states required students to stay in school until 18, according to the Education Commission of the States. The group includes New Hampshire, where the change took effect this year.

Some strategies recommended by the commission include hiring case managers to make the school experience more personal for these students, creating internships so students clearly see the connection between the classroom and potential careers, and using standardized test scores and other data to gauge, as early as elementary school, whether a student runs the risk of not finishing high school.

Given the state's dire budget predicament, Reville said, gaining the funding needed to push the effort forward could be a challenge. Already, sluggish state revenues have forced a sharp reduction in funding for dropout prevention this year.

But Reville emphasized that fighting for these students is worthwhile. "We are not going to hold back because of a budget crisis and say this problem doesn't exist," he said.

While the commission did not put a pricetag on its proposals, the report pointed out that overall enrollment in alternative education programs at local high schools would more than double, from 4,500 to 12,000, as more students stay in school.

Some members of the Legislature have expressed skepticism in the past about raising the age of school leaving, worried about the cost associated with creating programs for these students or further exacerbating problems that many districts already have with truancy. Those concerns led to passage of the bill that created the commission.

But others in the Legislature strongly support raising the attendance age. Representative Garrett Bradley, Democrat of Hingham, has already filed a bill to raise the maximum attendance age, which will be the subject of a hearing next month.

Reville said he has not examined that legislation yet, but anticipates that it will need to be reworked to encapsulate all the panel's recommendations.

Representative Martha M. Walz, a Boston Democrat who cochairs the Joint Committee on Education, has not yet taken a position on Bradley's bill, but said she was encouraged that the commission had given the age change a favorable recommendation and had suggested other programs and resources that could help these students succeed in school.

"My gut instinct tells me keeping students in school until age 18 is the right way to go if we can address underlying reasons that cause them to drop out and create programs that address their need," Walz said.

Students drop out of school for a wide array of reasons. Some grow frustrated because of consistently poor academic performance in school, particularly those not fluent in English and those who require special education, according to the report. Other students say they don't have time for school because they need to help their families earn income.

The commission also found that some students said they did not stick with school simply because no one seemed to care whether they did.

Compared with the national average, Massachusetts loses a smaller share of students. According to the most recent federal data available, from 2007, the national high school dropout average was 8.7 percent.

But rates in several Massachusetts urban districts often exceed or hover around the national average. In the 2007-08 school year, Lawrence lost 12.9 percent of its students; Fall River, 12.5 percent; Holyoke, 11.6 percent; Springfield, 9.7 percent; and Boston, 7.6 percent.

Reducing dropout rates is one part of the state's strategy to boost the state's high school graduation rate, which for the class of 2008 stood at about 81 percent. Dropouts accounted for about half of the students who did not earn a diploma in four years, while most of the others in that group opted for a fifth year of school.

Each dropout, over his or her lifetime, costs more than $118,000 in government expenditure and other benefits, according to research conducted a few years ago by Northeastern University's Center for Labor Market Studies.

Some districts are already working on reducing dropout rates. Boston opened a "re-engagement center" last month where high school dropouts can receive extra support as they resume their quest for a diploma.

Thomas Scott, executive of the Massachusetts Association of School Superintendents, said that decreasing the dropout rate is a good goal, but that the state needs to put money behind the policy. "You have to invest in this population for them to stay in school," said Scott. ■

Office of Senator Bettye Davis

January 31, 2011

Senator Meyer, Senator Thomas Co-Chairs, Senate Education Committee

RE: Request for Hearing for SB 10, 27-LS0086\A - "An Act repealing the secondary student competency examination and related requirements; and providing for an effective date."

Dear Senators Meyer and Thomas:

Senator Davis respectfully requests a hearing on SB 10 before the Senate Education Committee.

Included in this hearing package are:

1. Sponsor Statement
2. Current version of SB 1, 27-LS0086\A.
3. Sectional Summary (requested and to be provided under separate cover).
4. Additional Documents
    - Current Law: AS 14.03.075
    - SB 10 Bullet Points
    - Board of Education Meeting Summary January 13, 2010
    - DEED answer to questions 1/27/2010 (Eddy Jeans)
    - Alaska State Profile HSGQE – Center for Education Policy (CEP)
    - DEED "Out of State HS Exit Exam Guidance (CEP)
    - Letters
    - *Anchorage Daily News* 1/30/10 "Kill high school exit exam . . ."
    - "State High School Exit Exams: Trends. . . ." CEP, November, 2009

Please plan on in-person and teleconference testimony.

Please do not schedule this bill February 21-24. Call if you have any questions.

Sincerely,

Thomas S. Obermeyer

Senator Bettye Davis

SB 10 27-LS0086

"An Act repealing the secondary student competency examination and related requirements; and providing for an effective date."

Sponsor Statement

This bill repeals the Alaska secondary student competency examination, also known as the High School Graduation Qualifying Exam (HSGQE) or "exit" exam. The HSGQE is the only "high stakes" exam given in grades 10-12 and for continuing students that can prevent a student from graduating after satisfactorily completing all state-required credit hours. Although the HSGQE has been reduced in difficulty closer to 8th and 9th grade levels since it was initiated in 2001 and fully implemented in 2004, failure on the exam has caused some students to dropout, thinking they were incapable of graduating, just as passage on the exam has led some students to drop out thinking they knew enough to leave school without a diploma. The Department of Education and Early Development reported in Spring 2010 that over 1,117 students statewide failed to pass the HSGQE, while 8,526 passed.

It was never clear that the HSGQE would improve performance and measure whether students would be better prepared for college, much less determine conclusively that students were receiving diplomas but lacking basic skills. Alaska arguably does not need the HSGQE, as the state already requires standards based assessments including provisions of the No Child Left Behind Act (NCLB) to determine student progress and competency. To save time and money, beginning in the spring of 2006 sophomores took a test that combined the HSGQE with a standards-based reading and math assessment required by the federal No Child Left Behind Act. Although students took only one exam, some questions counted for one or the other or both exams to satisfy state requirements.

The Board of Education decided to retain the high stakes HSGQE in its January, 2010 meeting. The Department supported this decision, positing that the exit exam is a powerful motivator of higher student performance and should be retained until there is a comparable exam in the school system to replace it. The department also cited the excessive or unnecessary costs and difficulty required to separate the HGQE from the NCLB test in the middle of a multi-year contract. However, it was estimated that after eliminating the exam and renegotiating the contract, the state would save $1.3 million per year.

At best the HSGQE only confirmed and exacerbated poor graduation rates in consistently low performing school districts where the Alaska Superior Court found that the State was violating students' constitutional rights to an education without providing proper assistance and direction (See *Moore, et al. v. State of Alaska*, 3AN04-9756). At worst, many students never returned to school to earn a diploma after failing the HSGQE. If they did return and began preparing with others for the next exit exam, some teachers reported that test preparation detracted from the standard curriculum and promoted "teaching to the test."

The Center on Education Policy (CEP) reported in December, 2009 that 26 states with more than 2/3 of the nations' public high school students still required students to take and pass exit exams to receive a high school diploma. However, 19 of the 26 states now also use the data for assessing the performance of schools and teachers as well as students, and for remediation and assessing alternative pathways to graduation. As more districts continue the trend to replace exit exams with end-of-course exams, the CEP recommends that states address the need for greater rigor in the content of their exams and provide for greater coordination of high school requirements with college preparedness and work readiness demands. While eliminating the HSGQE does not remedy underlying problems in delivering quality education, repealing the HSGQE will encourage more youth to stay in school long enough to get a diploma and either transition into college or obtain a better paying job.

(e) In addition to the grades enumerated in (a) of this section, an elementary school consists of a pre-elementary program supervised by the department under AS 14.07.020(a)(8), operated by the department as a head start program under AS 14.38.010, or located in a public school for federal funding purposes. Except for a child with a disability who is receiving special education or related services under AS 14.30.180 — 14.30.350, pre-elementary students may not be counted in a school's average daily membership under AS 14.17. (§ 1 ch 98 SLA 1966; am §§ 1, 2 ch 117 SLA 2008)

Effect of amendments. — The 2008 amendment, effective October 21, 2008, added "Except as provided in (e) of this section" at the beginning of subsection (a), and added subsection (e).

Collateral references. — Zoning regulations as applied to public elementary and high schools. 74 ALR3d 136.

Sec. 14.03.070. School age. A child who is six years of age on or before September 1 following the beginning of the school year, and who is under the age of 20 and has not completed the 12th grade, is of school age. (§ 1 ch 98 SLA 1966; am § 1 ch 1 FSSLA 1987; am § 19 ch 85 SLA 1988; am § 1 ch 101 SLA 2004)

Effect of amendments. — The 2004 amendment, effective July 1, 2004, substituted "on or before September 1" for "before August 15."

Collateral references. — Power of public school authorities to set minimum or maximum age requirements for pupils in absence of specific statutory authority. 78 ALR2d 1021.

Sec. 14.03.075. Secondary student competency testing. (a) A student may not be issued a secondary school diploma unless the student passes a competency examination in the areas of reading, English, and mathematics or receives a waiver from the governing body. A governing body may not grant a waiver to a student before the student's final semester of attendance. The department shall determine the form and contents of the examination and shall score completed examinations.

(b) A student who fails the examination required under this section shall be retested at least once during a school year on those portions of the examination that the student has not passed. A student who passes any portion of the test may not retake that portion of the test. A student who, when retested, passes the portions of the test not previously passed and who meets any other graduation requirements shall receive a diploma from the school district. This subsection does not apply to a student who is a child with a disability if the student's individualized education program team recommends that the student not be retested.

(c) Notwithstanding (a) of this section,

(1) a student who is a child with a disability and who does not achieve a passing score on the examination required under (a) of this section, with or without accommodation, is eligible to receive a diploma if the student successfully completes an alternative assessment program required by the student's individualized education program or required in the education plan developed for the student under 29 U.S.C. 794; an alternative assessment program must, to the maximum extent possible, conform to state performance standards established for the competency examination required under (a) of this section; this paragraph does not apply to a student unless the department determines that the student has taken and failed to pass the competency examination with or without accommodations and the department approves the student's alternative assessment program described under this paragraph; and

(2) a student who transfers into a public high school in this state shall receive a diploma if the student

(A) meets graduation requirements imposed by the governing body and the state; and

(B) has passed a competency examination in the state from which the student transferred.

(d) A student who fails to qualify for the issuance of a diploma under (a) of this section or a retest under (b) of this section by the end of the student's final semester of

attendance, but who has met all other graduation requirements of a governing body and the state, shall be awarded a certificate of achievement. A certificate of achievement may include the following information:

(1) the portions of the examination described under (a) of this section that were passed;

(2) the student's attendance record; and

(3) other information indicating the qualifications of the student that the governing body determines appropriate.

(e) The department shall by regulation establish uniform standards for

(1) pre-examination study materials; and

(2) procedures to be followed during administration of an examination.

(f) The department shall by regulation establish uniform standards for an alternative assessment program required under (c)(1) of this section. The alternative assessment program required under (c)(1) of this section applicable to an individual student may not be changed after February 1 of the student's junior year of study.

(g) In this section,

(1) "child with a disability" has the meaning given in AS 14.30.350;

(2) "individualized education program team" has the meaning given in AS 14.30.350. (§ 1 ch 58 SLA 1997; am § 2 ch 94 SLA 2001; am § 24 ch 35 SLA 2003)

Effect of amendments. — The 2001 amendment rewrote subsections (a) and (b) and added subsections (c)-(g). The amendment to subsections (a) and (b) by section 2, ch. 94, SLA 2001 amended those subsections before they became effective. Sections 7 and 11, ch. 94, SLA 2001 amend §§ 3, ch. 58, SLA 1997 to make this entire section effective February 1, 2004.

The 2003 amendment, effective February 1, 2004, at the end of paragraph (1) of subsection (g), substituted "in AS 14.30.350" for "'children with disabilities' in AS 14.30.350".

Effective dates. — Section 3, ch. 58, SLA 1997 made this section effective January 1, 2002. However, § 7, ch. 94, SLA 2001 changes the effective date of the section to February 1, 2004.

Editor's notes. — AS 14.30.350, cited in (g)(2) of this section, was repealed by § 41, ch. 67, SLA 2001.

Sec. 14.03.077. High school diploma for certain veterans. (a) Notwithstanding other provisions of this chapter, the commissioner shall award a high school diploma to a person who

(1) makes application under (b) of this section; if a person is deceased or incapacitated, an immediate family member may apply on behalf of the person;

(2) never received a high school diploma; and

(3) actively served in the United States armed forces or the Alaska Territorial Guard during the period of August 7, 1940, through July 25, 1947, and

(A) died in active service;

(B) was honorably discharged; or

(C) was released from active duty because of a service-related disability.

(b) The commissioner shall provide a form or electronic format for a person to apply under this section. The commissioner may accept an affidavit to support the award if documentation is not readily available from the military or other sources. (§ 1 ch 13 SLA 2001)

Sec. 14.03.078. Report. The department shall provide to the legislature by February 15 of each year an annual report regarding the progress of each school and school district toward high academic performance by all students. The report required under this section must include

(1) information described under AS 14.03.120(d);

(2) the number and percentage of students in each school who pass the examination required under AS 14.03.075, and the number who pass each section of the examination;

(3) progress of the department

(A) toward implementing the school accountability provisions of AS 14.03.123; and

(B) in assisting high schools to become accredited;

http://www.akdemocrats.org

SB 10 Exit Exam
Bullet Points

- The Exit Exam is the only exam which denies diplomas to hundreds of students each year after 12 years of schooling.
- Even if all credits have been satisfied for graduation, a student failed on the Exit Exam receives a non-remarkable and non-marketable "certificate of achievement," self-confidence, and self-esteem, an discouraging continuing in school.
- Exit exam encourages dropouts both by those who pass think they can drop out of school without earning a diploma, and those who fail and see no future in continued education.
- Exit Exam disadvantages poor and non-white students and English Language Learners who might not have access to high-quality schools.
- Passage rates of Alaska natives and other minorities in Alaska are much lower than whites.
- Delivery of education in Alaska is unique and does not need to follow a national testing model. Roughly half the states primarily in high density population areas covering about 2/3-3/4 of all students have an Exit Exam. Alaska is not high density education with 53 school districts spread over vast areas, and many districts with few students.
- The Exit Exam has been "watered down" over the years and tests roughly 8th grade proficiency in a few subjects.
- The trend is toward End of Course Exams which more accurately test achievement and progress throughout high school years.
- The expense outweighs the benefit – This money could be better spent in other areas of education.

- The Alaska Exit Exam costs $6.5 million through expiration the 7-year contract with Data Recognition Corporation (DRC), an average of $1.5 million per year, $123 per student or about 20% of the $48 million 7 –year contract with DRC.
- Hidden and indirect costs of the Exit Exam have not been adequately calculated by DEED including:
- remediation in the millions of dollars not only to the state, but to individual districts
- teacher and administrator training time and expense
- teaching to the exam while skipping substantive subjects in the curriculum.
- school disruption during Exit Exam
- lost days of instruction and learning while students prepare for and take or retake the exam
- While the long 7-year contract through 2016 with DRC creates a disincentive to eliminate the Exit Exam which has been combined with NCLB, the main rationales offered for keeping the exam include improvement in graduation and dropout rates, waiting for a replacement test, and contemplation of alternative paths to graduation, including WorkKeys (which is an entirely different work-ready assessment).
- The slight improvement in graduation rates touted by DEED since introducing the Exit Exam may have less to do with motivation of individual students on the Exit Exam than renewed emphasis on achievement and assessment per NCLB and other assessment standards.
- Despite a court order that the State in *Moore v. State* is still in violation of Constitutional Due Process and Equal Protection in a number of districts, the Board of Education and the Department determined to retain the Exit Exam in a Board Meeting in January, 2010 while indefinite remediation continues.

STATE OF ALASKA

Department of Education & Early Development

Office of the Commissioner

SEAN PARNELL, GOVERNOR

Goldbelt Place
801 West 10th Street, Suite 200
P.O. Box 110500
Juneau, Alaska 99811-0500

January 22, 2010

The Honorable Kevin Meyer
Co-Chair Senate Education Committee
State Capitol Room 101
Juneau, AK 99801

Dear Senator Meyer:

Enclosed are summaries of the discussions the State Board of Education & Early Development recently held regarding the High School Graduation Qualifying Examination and the age of compulsory attendance. If you have any questions, please call Eddy Jeans at 465-8679.

Sincerely,

Eric Fry

Eric Fry
Public Information Officer

printed on recycled paper

Summary of the State Board of Education & Early Development's discussion on January 13, 2010, of the Alaska High School Graduation Qualifying Exam.

Board members recognized there are serious concerns with the exit exam, but they unanimously supported retaining it for now. It fills a critical role while state and federal accountability systems are in flux. For example, there could be a national assessment in the future. The state will implement WorkKeys next school year. And the Governor's Performance Scholarship, if passed, will require students to take the ACT or WorkKeys.

The exit exam provides a type of accountability that does not exist in the rest of our accountability system precisely because it has high stakes. Students who want a diploma will work hard to pass the exam. Schools will feel pressure from students and parents to help them do so. In fact, a state regulation requires schools to offer extra help to students who have not passed the test after taking it twice.

Although the test is deliberately at a basic level, it nonetheless spurs improvement among our lowest-achieving students.

The test particularly spurs schools to help children with disabilities pass the test. In the past, these students received good grades and diplomas but did not necessarily have even basic skills. The greatest threat to the education of children with disabilities is low expectations by adults.

In a graduation system based only on high school credits, students with a D- average will receive a diploma.

The test provides businesses with assurance that anyone who holds an Alaska high school diploma can read, write and compute at a basic level. Sadly, even that modest goal was not true in the past.

We have seen a dramatic increase in the number of high school graduates since the test was implemented. Even with slightly declining enrollments, we graduated 1,000 more students last year than in 2005.

The exit exam holds the state accountable for ensuring that schools provide students the opportunity to acquire the skills tested on the exit exam. The legislature has provided funding for the Department of Education & Early Development to increase its system of support for struggling schools and districts.

Summary of State Board of Education & Early Development's discussion on January 13, 2010, on raising the compulsory age of attendance from 16 to 18

Board members varied in their opinions. Generally, they concluded that raising the age of attendance from 16 to 18 probably would do no harm but would do little to improve graduation rates.

Many expressed doubts about the value of a law that will not be enforced. They noted it is very bad practice to give teens a rule and not enforce it. They wondered if research that shows the effectiveness of raising the age to 18 was in states that do enforce attendance laws.

Raising the age does not address why students want to leave school, board members said. The Alaska Education Plan and a graduation working group have produced multiple ideas for raising graduation rates.

They felt that focusing on early education would produce better educational results than focusing on students 16 to 18.

Some board members were concerned that students forced to stay in school would disrupt the other students.

Board members said the bill focuses on how many years students spend in school. The high school of the future will be defined by student mastery of subjects, not seat time.

On the positive side, some board members said the law would express society's expectations that students should attend school until they graduate. The law would give parents moral support when they urge their kids to stay in school.

Some felt that if more students are compelled to stay in school, more students will in fact get an education. It gives schools two more years to engage students. And it gives students two more years to mature.

Subject: RE: SB 109 - Repeal of secondary school exit exam - Cost to State of HSGQE since implementation in 2004

Senator Davis & Mr. Obermeyer,

I plan to be in attendance at the SB 109 hearing tomorrow. I have been out of the office this week attending meetings but our staff is working diligently to answer the questions that you have presented.

My responses are in red font below your questions. If we have more information to share prior to the hearing we will not hesitate to send that to you.

Thank you.

Subject: SB 109 - Repeal of secondary school exit exam - Cost to State of HSGQE since implementation in 2004

Eddy Jeans, Division Director,
DEED, Education Support Services
465- 8679

Dear Eddy,

1) **SB 109 sponsored by Senator Davis is being heard on Friday morning, 8:00 a.m. in (S)EDC, Fahrenkamp Room #203. Could you be present?**
2) Senator Davis asks if you could provide her with the cost to date of the secondary school exit exam (HSGQE) since inception and implementation in 2004. It would be ideal if you could pull this information together, or as much information as possible in this short time before the meeting on Friday morning. I know some numbers may be wrapped into the existing 5-year contract with the outside firm for a package of assessments. But clearly that firm in preparing its bid must have identified the HSGQE as a separate expense item before arriving at a final contract offer. The first test as I recall was prepared by McGraw-Hill and funded by Exxon. From memory, the subsequent test cost

$60 per student, and in recent years, without confirmation, has been about $123. But those numbers are predicated on the number of students tested each year and the portion of the contract related to HSGQE before or after blending with NCLB. What we are looking for is the total cost of the HSGQE to the state to date. I will need to be back in the office to research the total costs. We can put this together on Friday but not likely in time for the hearing at 8:00 a.m.

3) What is the cost and expiration date of the current assessment contract with the outside firm?

The current contract that we have with Data Recognition Corporation (DRC) is for $48 million. The contract runs through 2015 with a transition period budgeted in that extends into 2016.

4) Do you have any idea of indirect or hidden costs to Alaska school districts, including requirements for additional teacher training; lost teaching time in certain academic subjects due to a redirected curriculum in teaching to the exam; remediation in preparation for taking the exam the first time, or remediation for students who failed the exam; and lost whole days of lost classroom instruction as schools prepare for and administer these exams.

AKEED does not maintain these costs. The costs would vary greatly across districts. The HSGQE is designed to measure knowledge and skills against Alaska state standards. It can be debated whether redirecting curriculum in support of our standards, which were developed by Alaskan educators, is an expected positive consequence or whether it is considered a negative consequence to teach to our standards.

5) Is there an estimate of the number of days, Department hours, district hours and student hours involved in administering the HSGQE each year?

The Department will be conducting District Test Coordinator training in three weeks. We can certainly collect anecdotal information at that time to get some estimates.

In the Spring all tenth grade students are required to take the combined SBA/HSGQE exam over three days, one for each required subject area. If the HSGQE were to be repealed those 10th grade students would still be participating in the same amount of time as they would still be required to take the SBA. The 11th and 12th grade students that need to retest could miss anywhere from one to six days of instructional time depending on which subjects they still need to pass. Our procedures for the exams are basically the same when administering the SBA and HSGQE. Training involves coverage of both tests so eliminating the HSGQE would have a minimal effect on training of district staff.

6) Has the Department attempted to calculate the opportunity (lost) costs in purchasing and administering the mandatory HSGQE in lieu of dedicating these funds to other needed areas of education? The Department has not attempted to calculate the opportunity costs for the purchasing and the administering the HSGQE.

7) What would it cost to split HSGQE from the existing assessment contract? Is there a penalty or additional costs for pulling HSGQE questions from the blended NCLB exam? Is it cheaper to let the contract run out and repeal the HSGQE after expiration of the

contract? These negotiations would need to take place with our current vendor in order to specifically answer these questions. There will likely not be a cost penalty for splitting the SBA from the HSGQE but there certainly could be a considerable amount of money required to develop enough items to support the SBA at the 10th grade. Test item development is the most expensive process in large-scale assessments. A review would likely need to be conducted for test items to see which existing HSGQE items could continue to be used for the new 10th grade SBA. In effect we would be asking the testing vendor to develop a new test for the tenth grade. It is possible that those expenses could exceed what we currently pay for the HSGQE, at least in the initial year of the proposed change.

8) How many complaints does the Department receive each year about the HSGQE and does it count/catalog/file contacts of support or repeal?

The Department does not keep a catalog file for specifically tracking HSGQE support or criticisms of the exam.

Thank you for your consideration.
Sincerely,

Tom Obermeyer

Alaska

Alaska High School Graduation Qualifying Exam (HSGQE)

Part I: Policy Trends

Type of test	Comprehensive standards-based
Purpose	To meet a state mandate
Major changes in exit exam policy since the 2007-08 school year or any pending changes	A bill to remove the HSGQE as a graduation requirement by July 1, 2011 was presented to the state legislature as SB 109. However, it did not pass both houses of the legislature. The HSGQE is still a graduation requirement.
Status of state's decision regarding the Common Core State Standards and impact of that decision on exit exam policies	The state has opted *not* to adopt either set of Common Core State Standards.
Test used by colleges or universities for undergraduate admission?	No
Year first administered	2000
Year diplomas first withheld	2004 for most students (delayed from 2001)
Subjects tested	Reading, writing, mathematics
Types of questions	Multiple choice, constructed response
Grade first administered	10^{th}
Grade(s) exam aligned to	8^{th}-10^{th}
Number of retakes allowed before end of grade 12	Two per year
Retakes after grade 12	Two per year indefinitely
Does the state have reciprocity with other states?	Transfer students who have passed all subtests of another state's high school graduation exam in reading, English, and mathematics may submit passing scores.

Exit exam used for No Child Left Behind?	As of 2005-06, Alaska no longer uses the HSGQE to meet NCLB high school testing requirements, but instead uses the Grade 10 Standards-Based Assessment.
Same cut score for graduation and NCLB?	Not applicable
Evaluations of state exit exam	The test vendor produces a technical report each year. This technical report is available on request.
State test contractor	Data Recognition Corporation
Does the state provide students with alternate paths to graduation?	No
Alternate paths to graduation specifically for English language learners	No. However, accommodations are available for English language learners. The participation guidelines as well as the list of accommodations available to ELL students is available online at http://www.eed.state.ak.us/tls/assessment/participation_guidelines/ParticipationGuidelinesSept2007.pdf
Alternate paths to graduation specifically for students with disabilities	Students with disabilities who do not pass the High School Graduation Qualifying Examination by their sophomore year may be allowed to take an alternative assessment program, which consists of the modified or non-standardized version of the exam. Students with disabilities may use the HSGQE with modifications with state approval. The non-standardized HSGQE consists of an extensive collection of work that reflects competency in each of the state standards tested in the HSGQE. The modified assessment is scored by the vendor. The state convenes a committee of three from the field for each content area to review the non-standardized assessment. Two out of three approvals determine whether a student who takesthe non-standardized HSGQE meets the state standards. If a student has been ruled not to meet the standards, the modified assessment can be rescored. The non-standardized assessment allows for the student to resubmit additional documentation. Accommodations are available for students with disabilities. The participation guidelines as well as the list of

	accommodations available to students is available online at http://www.eed.state.ak.us/tls/assessment/participation_guidelines/ParticipationGuidelinesSept2007.pdf In the 2008-09 school year, 481 students (24%) took the modified HSGQE, and in the 2009-10 school year, 500 (22%) took the modified exam.
Who makes decisions on whether a student is eligible to use alternate paths?	The individualized education program (IEP) team determines the alternate path for students with disabilities. Alternate paths do not exist for regular education students or students with limited English.
How are students identified as eligible for alternate paths to graduate?	The IEP team will determine whether an alternate path is the appropriate path for a student with disabilities. The IEP team will then apply to the department for approval. Forms are available on the department website: http://www.eed.state.ak.us/tls/assessment
When calculating the graduation rate for adequate yearly progress (AYP) purposes, does the state count students taking alternate paths together with graduates who passed the high school exit exams?	As of 2005-06, Alaska no longer uses the HSGQE to meet NCLB high school testing requirements, but instead uses the Grade 10 Standards-Based Assessment. So the HSGQE is not used for calculating AYP. Students receiving regular diplomas on the traditional path are counted the same as students receiving regular diplomas on an alternative path.
How many full-time equivalent staff in the state department of education are involved in implementing alternate paths?	One
Types of assistance the state provides for all districts to raise *initial* pass rates for all students on the high school exit exam	The state offers technical assistance to help: • Teachers administer the exam, which includes online assistance and train-the-trainer workshops; • All teachers prepare students for the exam, which includes online assistance; • Schools implement comprehensive school reform, which includes online assistance and specialist(s) in the state education agency; • Districts improve formative uses of assessment, which includes online assistance and specialist(s) in the state education agency; and • All districts improve the instructional leadership

provided by administrators, which includes field-based specialists.

The state also provides state-developed benchmark/formative assessments and exam preparation materials for students.

Types of assistance or remediation the state provides for all districts to help students who have failed to pass the exit exam

The state does *not* provide assistance or remediation to all districts to help students who have failed to pass the exit exam.

Does the state provide funding for remediation?

Yes. Districts are expected to use funding for mandated remediation.

Are districts mandated by law to provide remediation?

Yes. State regulation mandates a district to provide remediation to a student who has not passed one or more subtests of the state high school graduation qualifying examination after the fall administration of the HSGQE in the student's 11th-grade year.

Remediation must begin no later than the start of the second semester of the student's 11th-grade year and continue as necessary for the student to pass all subtests of the HSGQE. Nothing prevents a district from offering remediation at an earlier time.

Are students required to participate in remediation?

No

Part II: Student Performance

Initial pass rates, 2008-09

Percentage of Students Passing on the First Try in 10th grade, 2008-09

Student Group	Reading	Writing	Math
All students	90%	79%	80%
Caucasian	96%	86%	89%
African American	89%	76%	72%
Hispanic	89%	76%	77%
Asian	89%	81%	78%

Current state graduation rate calculation formula for AYP purposes.	Alaska uses the Leaver Rate.

Out of State
High School Exit Exam
Guidance

Not all of the states listed below offer high school exit exams that are equivalent to Alaska's High School Graduation Qualifying Examination (HSGQE). The exams may vary in type of test, subjects tested, grade test first administered, and grade level of alignment. It is important to be cautious when determining if completion of another state's high school exit exam will waive a student from taking the HSGQE. The following guidance is provided for your assistance. Contact the Department of Education & Early Development (EED) directly if you have any questions about approval.

Guidance for Determining Approval:

1. Is the assessment type comprehensive?
2. Does the assessment cover mathematics (not algebra), reading, and writing?
3. Was the applicant attending the high school the year of administration? And, if the assessment administers subjects in different years, was the applicant assessed in all subjects? (See Minnesota)
4. If a state is transitioning to a new assessment type, was the applicant administered a comprehensive assessment?
5. Is the assessment level of alignment at least grade eight?

If the answer is "no" to **any** of these five questions, the applicant is not eligible for a waiver.[1]

The table below is extracted from the Center on Education Policy's (CEP) *State High School Exit Exams: Trends in Test Programs, Alternate Pathways, and Pass Rates* full report released November 2009. The table changes yearly, therefore districts are responsible for monitoring all changes prior to submitting waiver applications to governing bodies for approval.

~~Be sure to read all footnotes included with the table. ~~

In addition to the full report, individual state profiles are available on CEP's Web site at: http://www.cep-dc.org/index.cfm?fuseaction=Page.viewPage&pageId=493&parentID=481

EED Contact: Kari Quinto

[1] Whether New York qualifies for reciprocity with Alaska is pending EED investigation.

Dear Commissioner LeDoux:

In response to the request for review and public comment on the proposed regulation changes on the timeline for the mandated WorkKeys/WIN assessments and on the Quality Schools application and reports for small districts, the Anchorage School District submits the attached comments.

I appreciate the opportunity to forward our comments as they relate to the proposed changes in Department of Education and Early Development regulations.

My staff and I are available to answer any questions regarding our responses and will forward any additional remarks to the proposed changes, as you deem necessary.

Sincerely,

Carol

SUBJECT: 4 AAC 06.715 Work ready/college ready transitional skills curriculum and benchmark assessments; 4 AAC 06.717 Work ready/college ready transitional skills assessment

The Anchorage School District believes the WorkKeys exam is a quality assessment that provides important information for students and families, educators, employers, and universities about student achievement related to college and work readiness. Further, the WIN curriculum and benchmark assessments provide opportunities for students to advance their studies in and awareness of work related proficiencies.

However, at minimum, the Anchorage School District supports the proposed regulation to delay the mandated use of these assessments by one year. These tools and assessments are available to students and districts ready to access them, and a delay in implementing the mandate doesn't limit a school or district's ability to more forward. The delay would enable districts that have technological or other implementation challenges to continue to work through them to ensure a smooth roll out should the mandate come.

Under the current system of assessment, the Anchorage School District does not believe the WorkKeys/WIN assessments should be mandated. Between the mandated Standards Based Assessments, HSGQE, TerraNova, NAEP, ELPA, Kindergarten Profile, etc., and district-specific formative, benchmark, and progress monitoring assessments that are a critical part of any instructional program, districts do not have the time or resources to invest in another mandated exam.

The Anchorage School District proposes bolder action, however. We propose that the State Board and the Department of Education of Early Development work with the Alaska Legislature and districts to replace the essential skills High School Graduation Qualifying Exam with the much more robust and meaningful WorkKeys Exam at the 10th grade.

The requirement for the HSGQE was created in response to concern that some students were graduating high school without the essential skills necessary to be productive in the world of work. An unintended consequence of that action has been that many students now set their sights too low – only on passing the HSGQE rather than reaching toward even higher levels of proficiency and achievement. Many students question why they should be required to continue high school when they have already passed the exam as 10th graders. Unfortunately, since the exam is essential skills, the students' perception that they have met necessary levels of achievement for life-long success is misguided.

The Anchorage School District believes there is a much better alternative that would provide businesses and universities information they need about the academic preparation of graduated students, that would inspire students to continue their studies rather than end them prematurely, and that would provide students invaluable information about career fields available to them as well as their relative preparation for them. That alternative is WorkKeys.

In addition, WorkKeys is part of the ACT continuum of assessments accessed by many schools and students that includes, among others, the Explore (8th grade), PLAN (10th grade), and ACT (11th and 12th grade). For students and their advisors to be able to plan the student's education over a series of years with information from these exams would be much more valuable than a pass/fail score on the HSGQE. Because of the availability of these exams, we do not believe the WIN assessments need ever be mandated. Rather, we suggest the assessments and very valuable curriculum remain available for those who choose to use them to augment their existing system of assessment.

Because WorkKeys is designed expressly to reflect what businesses expect of entering workers and the ACT is designed expressly to reflect what colleges expect of entering students, the two assessment programs are unique in what they measure and in the scores they report. But there are also commonalities in the expectations for readiness in the two tests.

ACT conducted a statistical concordance between the respective college and workforce training readiness levels in reading and mathematics. They found that the concordance between ACT College Readiness Benchmarks and WorkKeys Level 5 shows that the levels of readiness in reading and mathematics are comparable.

Comparability between WorkKeys Job Profile Level 5 and ACT College Readiness Benchmarks in Reading and Mathematics[4]

WorkKeys Test	WorkKeys Readiness Level	Comparable ACT Score Range and College Readiness Benchmark
Reading for Information	5	19–23 Benchmark = 21
Applied Mathematics	5	18–21 Benchmark = 22

This statistical concordance adds value to the assessment from the perspective of the individual student for course planning and post-secondary guidance. The

student receives information about their readiness to make successful transitions to college and work after high school from one assessment. If a student scores below a 5 in the Reading for Information and/or Applied Mathematics test, it provides critical information in terms of necessary coursework to be completed during the student's remaining time in high school in order to be prepared for first-year college courses. The student also receives information about whether he or she has the skills that businesses expect of entering workers through the WorkKeys Readiness Level. This also provides valuable information in course planning so, if necessary, students can take the coursework to ensure that they have the workforce skills when they graduate from high school. Since it is a national exam, WorkKeys results and certificates are also portable throughout our highly mobile country and mean the same thing regardless of the state in which our students ultimately choose to work or attend post-secondary programs.

The bottom line is that the WorkKeys exam has the potential to inspire and encourage students to higher levels of achievement while providing desired accountability and information for prospective employers and universities, whereas the HSGQE encourages apathy and low expectations. Further, the HSGQE causes significant harm to the small number of students who, largely due to special needs or language acquisition challenges, are unable to pass and are thus denied a diploma.

Rather than artificially set a pass/fail mark on this exam for which such a distinction was never intended, we propose instead that the final scores received by the student, after however many attempts the student makes while in high school to achieve higher scores, be placed on the transcript and the diploma. The diploma could also be printed in such a way that an explanation of those scores is printed on the back of the diploma or transcript to provide that information to prospective employers.

We encourage the State Board of Education and Early Development, along with Alaska legislators, to take this bold step in increasing both the academic expectations and the relevancy of state assessments for Alaska's students.

SUBJECT: 4 AAC 33.310 Applications; 4 AAC 33.320 Grant Awards; 4 AAC 33.330 Reporting Requirements, Regarding Quality School Funding Grants

This regulation does not directly impact the Anchorage School District as our Quality School Grant exceeds $10,000. We have never found the required application and report to be particularly onerous for our district.

Subject: FW: Senate Bill RE: High School Qualifying Exam

Hi Don,

A constituent of Rep. Seaton recently wrote in with concerns about the High School Graduation Qualifying Exam. I told her that I would forward her comment along to the sponsor of SB 109, Senator Davis.

Thanks,

Louie Flora

Subject: Senate Bill RE: High School Qualifying Exam

Good Morning Rep. Seaton:

I am writing to you about a senate bill for which I don't know the number...109 maybe? It has to do with the High School Graduation Qualifying exam.

I tried to make a comment at the School Board Meeting and was unsuccessful. Fortunately there were other parents there who voiced my concern: that the HSGQE is inappropriate for learning disabled students. At one point a Board Member asked if the test was successful for guiding the IEP meetings toward reading and math skills and what I would have liked to have said was, "Because of the HSGQE we have been forced to focus a good part of our meeting time on accommodations and how we are going to get our student to pass the test instead of how we are going to get him to be successful with other skills required by life!"

I would have loved for my son to have taken personal finance this year, but instead, because he could not pass the math portion of the HSGQE's he had to take Algebra A instead. We are thrilled to say that this week we learned that he passed the quiz and he will be graduating in the spring with his classmates. He is eager to drop math from his life all together and move on. I don't blame him. We are thrilled that he will be able to obtain an entry level postion when he finishes this year at somewhere other than McDonalds.

Another large problem with the HSGQE for students with learning disabilities is the time it takes for the results to be posted. We have had to postpone applying to post graduate programs because of this test and the required diploma that passing this test provides.

As I listened to the testimony given to the school board, one of the things that I was completely flabbergasted with was the level of respect given to different members of the community that were trying to voice their concerns to the board. The meeting started with one of your constituents from Voznesenka telling the board about the problem that the Old Believer Community is having with the HSGQE this year. The test days are falling on the most Holy of weeks for them this year and the students will not be able to take the test without breaking their spiritual customs. This is not only for students at the end of the bay but also for Old Believers throughout the state. This group of students will not be taking the test this year and will have one less chance to pass the test before they can receive a high school diploma.

I happen to know that this woman worked hard on her presentation and even translated her position from Russian to English for the board. They thanked her and moved on. But when a State Senator got on the line to ask the Board not to throw out the HSGQE without having something else in place the board seemed to fawn all over him. "Gosh it's so nice to hear something postitve. Ususally the only people we hear from are the people with problems."

I got the sense that the desires of the Old Believer community have little clout with state government. I can not be sure if it is because of bias or misguided perceptions but it reminds me of the time you sat in the gym at McNeil School with grant money and these villages were all but forgotten...

It sounded that the School Board does not want to get rid of the HSGQE. Even though studies indicate that it has done nothing to improve our educational system. I got the feeling that the only thing that the test was beneficial for was a punitive system that the Board of Education could hang over students heads to force them to read, write and do math, because before it's inception there is nothing the state could do to force these kids to improve their skills.

That is sad reasoning.

I hope that you will consider your vote on this measure to take into account more than the School Boards position. This requirement affects students and their families on such deep levels and affects otherwise hard working kids to the negative. If you would like to hear more about how this test has personally affected our family or the families in the Old Believer community, please feel free to contact me.

Thank you for your time,

North Slope Borough School District

Resolution 2010-10

A RESOLUTION ON THE NORTH SLOPE BOROUGH SCHOOL DISTRICT BOARD OF EDUCATION'S POSITION ON SENATE BILL 224 AND HOUSE BILL 297, 'AN ACT ESTABLISHING THE GOVERNOR'S PERFORMANCE SCHOLARSHIP PROGRAM AND RELATING TO THE PROGRAM; RELATING TO STUDENT RECORDS; MAKING CONFORMING AMENDMENTS; AND PROVIDING FOR AN EFFECTIVE DATE."

WHEREAS, Senate Bill 224 and House Bill 297 establish a merit scholarship program for Alaskan high school graduates, the Governor's Performance Scholarship;

WHEREAS, the scholarship program will require a high school program with four years each of mathematics, science, and language arts and three years of social studies;

WHEREAS, access to college and post-secondary training are critical to students' success in the work force;

WHEREAS, providing an incentive for increased vigor in course load will benefit students future; and

WHERE AS, a needs-based scholarship if it relied on federal definitions of needs such as FAFSA and Free and Reduced Lunch would inaccurately measure need of students living in arctic communities.

NOW, THEREFORE, BE IT RESOLVED, that the North Slope Borough School District Board of Education supports Senate Bill 224 and House Bill 297 with merit based criteria or needs based criteria that accurately reflect needs in arctic Alaska.

(1)

Good morning, my name is LaDawn Druce. I am currently the president of the Kenai Peninsula Education Association, representing over 600 certified employees of the Kenai Peninsula Borough School District. I could not attend in person today because I am NEA-Alaska's Delegate Assembly in Anchorage. I hold three teaching certificates in the fields of High School English, drama and speech as well as a certificate in school counseling. I have been an educator for over 20 years, and my husband is finishing the first semester of his 38th year of teaching. Needless to say education is important to our family. And I am here today to speak to you as a parent about a member of my family, my oldest son Stephen.

Stephen was a well behaved boy, but always struggled throughout school. I knew we were in for a long road when he called and wanted to come home his first day of kindergarten. We had him tested for special service twice. He never "qualified" and subsequently did not receive the additional services that might have helped. He always did poorly on tests, particularly if they were timed. In high school he knew that he had to go to school every day, turn in all homework, complete any extra credit offered, and pray that tests did not make up 60% or more of any given class.

In high school a gifted and caring school psychologist realized that by today's criteria Stephen would have qualified for special services and a 504 plan was written allowing him accommodations particularly centered around the HSGQE. Math was the subject Stephen struggled in the most. He passed the writing portion of the HSGQE as a sophomore. We began to focus on math knowing the reading would take care of itself. He continued to retake both tests. He passed the math test the fall of his senior year. That was certainly a relief, but we couldn't understand what was going on with the reading test. His scores were all over the map.

Weeks before graduating in 2006 he retook the reading test for the last time. One of the most difficult conversations I have ever had was when the principal of the high school called me and said he had not made the cut score. He was going to get a certificate of completion for high school, not a diploma. He had all the credits and had never failed a class. Having that conversation with our son was

JAN-27-2010 WED 08:17 AM KENAI LIO FAX NO. 907 283 3075 P. 02
Jan 26 10 06:31p Kenai Penin Educ Assoc 907-260-7824 p.2

one of toughest moments as a parent. We reinforced how proud we were of him and he was not a failure, even though his words were "I guess I am really stupid." Stephen had already been accepted to a post – secondary vocational education program in Norman, Oklahoma. He finished a two year course in automotive technology in April of 2008. He was scheduled to be back in AK, a few days before the HSGQE retake. As a side note, after Stephen received a certificate of completion, the cut score on the reading test was lowered by 35 points; he would have passed it 3 of the 5 times he had taken the test with the new score.

When I told him he could retake the reading test, he jumped at the chance. I was in Juneau visiting with Senator Bettye Davis regarding this very bill the morning my son was retaking that test. When his scores came back they were 55 points above the cut off, and 20 points higher than the old cut off score. He received a perfect score in Supporting the Main Idea: Critique Arguments. He finally received his diploma two years after his graduation.

He was employed within 48 hours of returning to Alaska at an Anchorage automotive dealership and has now worked his way up to a service advisor. I object to comments that say "If students cannot pass this test, they must be illiterate." That is not and was not true of my son. He suffered from test anxiety and the higher the stakes, the greater the anxiety.

There are other "Stephens" in this state. Without parental support, they will give up and drop out believing they are stupid. I ask that you thoughtfully consider all of the reasons why the qualifying exam should not be used as a standard for a diploma and support Senate Bill 109.

LaVaun Deuce

February 10, 2010
Attn: Senate Bill 109: Removal of the Exit Exam Requirement

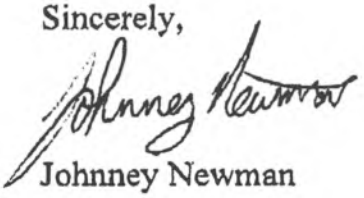
As high school counselors, we are in support of Senate Bill 109: Removal of the Exit Exam Requirement. We agree that by removing the Exit Exam Requirement, it would remove the risk that a student can be denied a diploma after 12 years of education by one exam. We are in favor of encouraging youth to stay in school long enough to get a diploma and reduce the dropout rate.

We believe that the resources and staff that are utilized in administering the HSGQE are tremendous. Classroom instructional time, staff training, administrative planning, and direct counseling services to students in the personal/social/academic domains have suffered due to the time required to prepare and administer the HSGQE.

The HSGQE favors the left-brained students, who tend to learn by lecture, memorize easier, and don't become confused with the answer choices. Right-brained students don't do as well on these tests in spite of knowing the topic; rather, they see every answer as a possibility under the right conditions. In spite of knowing the information, they are likely to select an incorrect answer.

Finally, we feel that the HSGQE does not truly reflect the knowledge students hold. It does not prepare the students for the real world where they are allowed to use resources, manuals, ask questions, and are not allowed to perform at the 50% percentile.

Thank you for considering our comments.



Sincerely,

Margaret Griffin and Micki Dunn
School Counselors, Skyview High School
907-260-2300

2/16/10
Concerning Senate Bill 109

Hi my name is Johnney Newman. I believe that the High School Qualifying exams should be taken. But the test shouldn't determine whether the student could graduate or not. In my situation the test helped me figure out where I stood academically. I think the test should be more like a placement test than a qualifying test. Students should take the test with out having to worry whether there going to pass, because it's a great learning experience that I believe will help student through out high school.

Sincerely,

Johnney Newman

2/15/10

Concerning Senate Bill 109: Repeal Secondary School Exit Exam

I think that the High School Graduation Qualifying Exam should not be required to pass in order to actually receive your diploma from high school. The following reasons will be stated below to explain my point of view on the discussion.

First of all, I think that it puts to much pressure on students, especially seniors, because students are already trying to pass the required classes that they are taking. Along with the finals students have to take just to pass those other six or so classes, is just not right to do. There is already a lot of pressure for students to pass the class and should not have more put on them. If students already pass all of their required classes, then they should be allowed to graduate. For me this will be my third time taking the test. Last year I was just focusing on my regular classes and trying to finish them, I could not properly prepare for the High School Graduating Qualifying, Exam which led to me rushing through it so I could be done with it.

Test anxiety is my second reason why students should not have to take the High School Graduation Qualifying Exam. Being so nervous from testing anxiety can mess up a student's performance during tests. Test Anxiety could lead to failing the test, which would not let that student graduate from high school.

My last reason is that seniors in high school should focus on what they are doing now and in the future, like college or trade schools. They need to start focusing on what they need to do for the future, and not worry about a test.

Sincerely,

Daniel Franklin

2/16/2010
Concerning Senate Bill 109: Repeal Secondary School Exit Exam

I think the High School Graduation Qualifying Exam should be required.

The stress of the schoolwork and test preparations should teach the students an important life skill, multitasking. Going between schoolwork and test prep is very stressful, it also provides the experience of managing two very important events so you would be ready for anything.

Sincerely,

Mihael Kuzmin

Kill high school exit exam, critics tell committee

SENATE: Parents, educators testify that tests devour both class time and resources.

By JEREMY HSIEH
The Associated Press
(01/30/10 03:07:26)

JUNEAU -- A high school exit exam is keeping hundreds of Alaska students from earning diplomas and jobs for which they're otherwise qualified, proponents of repealing the test told a state Senate committee Friday.

Educators and parents from around the state testifying in support of a bill to eliminate the High School Graduation Qualifying Exam said the tests also eat up both classroom time and resources for yet another standardized test.

The exams' only defender to testify was Finance Director Eddy Jeans of the Department of Education and Early Development, who relayed the State Board of Education's position. The board sees the test as a crucial accountability tool and wants it to stay in place until there is an alternative.

"It's the hammer in the system. It's the only hammer in the system," Jeans said.

Alaska students are already subject to standardized tests throughout their public education but those tests are designed to index and track progress or skills. They provide information but don't hold the individual students accountable, Jeans said.

In contrast, the exit exam guarantees that someone with an Alaska high school diploma has at least minimum competency in reading, writing and math, he said. Eliminating it with no alternative would revert an Alaska high school diploma to the equivalent of a certificate of attendance, Jeans said.

Sen. Bettye Davis, the repeal's sponsor, took issue with that assertion. "I can't believe this is the glue that's holding the system together," she said. "We're doing a disservice to our children."

Graduation rates have risen since the exit exam requirement took effect in 2004, from 62.9 percent to 67.5 percent last year, according to the Department of Education. Of the 1,549 Alaska seniors who finished the school year in 2008 but didn't receive a diploma, a third did not pass the exit exam. Other unfulfilled graduation requirements, such as credit counts, kept the rest from graduating.

The exit exam has triggered two significant lawsuits. Noon vs. Alaska led to accommodations for special-needs students during testing. The judge in Moore vs. Alaska concluded that the combination of an inadequate education in chronically underperforming school districts and the high-stakes exit exams was unconstitutional.

"It is fundamentally unfair ... to hold students accountable for failing this exam when some students in the state have not been accorded a meaningful opportunity to learn the material on the exam," Anchorage Superior Court Judge Sharon Gleason wrote in her 2007 opinion. Remedies in

that case are still being addressed.

The Department of Education estimates that eliminating the test would save the state $1.3 million in the first year.

Nationally, 23 states have exit exam policies in place and three more are planning such tests.

Office of Senator Bettye Davis

January 20, 2010

Senator Meyer, Co-Chair
Senate Education Committee

RE: Request for Hearing for SB 109, 26-LS0527\A

"An Act repealing the secondary student competency examination and related requirements; and providing for an effective date."

Dear Senator Meyer:

Senator Davis respectfully requests a hearing on SB 109 before the Senate Education Committee. SB 109 repeals the High School Graduation Qualifying Exam (HSGQE) or "Exit Exam" which was fully implemented in Alaska in 2004. The efficacy of the HSGQE has been greatly diminished by other assessment requirements of the No Child Left Behind Act and by purchase of the WorkKeys assessment Program by DEED to be implemented for all 11th graders in 2011. In addition, the Center on Education Policy (CEP) in a November, 2009 report (attached) summarizes state trends and progress for the last 8 years to alternative pathways to graduation, end-of-course exams, and increased technical and financial assistance.

There is no uniformity in testing across the country, but the CEP reports two-thirds to three-fourths of students in the country are now affected by exit exams. States are struggling to develop standards and testing systems that are sufficiently demanding but also achievable and fair. The Alaska HSGQE remains a continuing concern for students with disabilities, English language learners (ELLs), and students in rural school districts per *Moore, et al. v. State of Alaska*, 3AN04-9756 (see *infra*). There is considerable concern that we are testing too much, too often, and limiting curriculum and class time by teaching to the test.

The cost of the HSGQE in Alaska has risen to an estimated $123 per student, excluding hidden costs of remediation, lost school time, and teacher training. The HSGQE is currently funded by DEED through a recent contract with an outside firm providing a 5-year package of testing HSGQE with NCLB and other assessments. Separating the tests and costs at this time could be costly and difficult, but repeal of the HSGQE could be accomplished legislatively by simply not withholding diplomas for failure of this high-risk exam.

Included in this hearing package are:

1. Sponsor Statement
2. Current version of SB 109, 26-LS0527\A.
3. Sectional Summary
4. Additional Documentation
5. Anticipated teleconference testimony from the Department of Education & Early Childhood Development, School Districts, state educators, and parents
6. *Note: There is no fiscal note at this time, but numbers separating the costs of the HSGQE from the NCLB contract can be obtained from Eddy Jeans or Eric McCormick in DEED. The separated costs divided by the number of students taking the HSGQE annually should approximate the above estimated cost of $123 per student for the HSGQE.*

Sincerely,

Thomas S. Obermeyer
Legislative Assistant

Senator Bettye Davis

SB 109, 26-LS0527\A

"An Act repealing the secondary student competency examination and related requirements; and providing for an effective date."

Sponsor Statement

SB 109 repeals the Alaska secondary student competency examination, also known as the High School Graduation Qualifying Exam (HSGQE) or "Exit" exam. The HSGQE was initiated in 2001 and became fully effective in 2004, following the trend for more assessment in the No Child Left Behind Act of 2001. It was never clear that the Alaska HSGQE would improve performance and measure whether students would be better prepared for college, much less determine conclusively that students were receiving diplomas but lacking basic skills. The HSGQE has become a "high stakes" hurtle that has harmed many students in Alaska while exacerbating a court finding in 2007 that the State was violating students' constitutional rights to an education without providing proper assistance and direction. (See *Moore, et al. v. State of Alaska*, 3AN04-9756).

It may be argued that State does not need the HSGQE, as the State and all school districts already require many assessment tests to determine student progress and competency. At the same time there is a trend away from exit exams. The Center on Education Policy (CEP) report in August, 2008 that most states are moving toward end-of course exams which assess mastery of content of a specific high school course in lieu of exit exams. The current Alaska HSGQE reportedly has been changed by the Board of Education and made less difficult than at inception. As a result, the HSGQE has become somewhat redundant, time-consuming, and expensive to administer. To save time and money, beginning in the spring of 2006 sophomores took a test that combined the HSGQE with a standards-based reading and math assessment required by the federal No Child Left Behind Act. Although students took one only exam, some questions counted for one or the other or both exams to satisfy state requirements. (*See Legislative Research Report 06.233, " History, Results, and cost of the HSGQE," June 28, 2006*). The HSGQE reportedly has detracted from the standard curriculum and has also promoted "teaching to the test."

The Department reported in 2007 that over 1,100 students statewide failed to pass the HSGQE after five opportunities, while 8,524 passed. See *Moore*, supra, exhibit 2514, p. 13 of 58, "Findings of Fact, Conclusions of Law and Order." These numbers excluded all students who had dropped out or transferred to another school before passing. The court in *Moore* determined that the State was violating the substantive due process rights of students by denying high school diplomas to students in chronically underperforming school districts. Students were failing the High School Graduation Qualifying Exam, while the State was failing to provide the oversight, assistance, and direction with clear standards to guide districts attempting to meet content and performance standards. As a result, the court concluded that the Department was ultimately failing to "maintain a system of public schools" as required under the Alaska Constitution, Article VII, Section 1. Finding insufficient proof of compliance with its 2007 court order, the court in *Moore* on February 4, 2009 gave the Department 60 days to establish compliance with its constitutional duties and to file with the court "revised district intervention plans that address and incorporate as appropriate remedial measures related to each of the problem areas identified in these Findings."

Alaska's experience with high school exit exams is not new but widespread. Fearful that hundreds of thousands of students would be left behind by one set of standardized, time-pressured tests in New York, an article appeared in the *New York Times* headed "Albany Legislators Seek to Dilute New, Tougher Graduation Exams." It was stated in the article that "an unusual bipartisan coalition of state lawmakers, whose constituents ranged from inner-city residents to affluent suburbanites, is pushing to scale back new more stringent graduation requirements for nearly all pubic high school students." *New York Times*, May 12, 1999.

The Center on Education Policy (CEP) reported in August, 2008 that in the 2007-2008 school year 23 states required students to take and pass exit exams to receive a high school diploma. Three more states, Arkansas, Maryland, and Oklahoma, will begin withholding diplomas within the next few years, leading to a total of 26 states with such policies by 2012. Additionally, Connecticut, Pennsylvania, and Oregon are considering exit exams, but Oregon and Pennsylvania are opting to use multiple measures. The CEP reported that 68% of the nations' public high school students attend school in the 23 states with such policies. By 2012 approximately 75% of the nation's public high school students will be affected, including 84% of low income students and students of color.

The Center on Education Policy (CEP) recommends more funding should be allocated to research aimed at better understanding the impact of exit exams, considering the vast number of students affected by state-mandated high school exit exams. State governments, the CEP reports, should move immediately to collect and release data on final passage rates on these and the rate of students using alternative paths to graduation. As they implement more end-of-course exams, the CEP recommends that states address the need for greater rigor in the content of their exams and provide for greater coordination of high school requirements with college preparedness and work readiness demands.

While dropping the HSGQE does not remedy underlying problems in delivering quality education in underperforming districts already identified by other assessments, it does remove the risk that a student can be denied a diploma after 12 years of education by one exam. Eliminating the HSGQE may also encourage youth to stay in school long enough to get a diploma and reduce the dropout rate. After complying with court-ordered requirements in *Moore*, and perhaps after experience with other on-going assessments, the Department and the Board of Education may better determine whether an exit exam or HSGQE Exam is in the best interests of the state, recognizing that more states seem to be moving away from exit exams toward end-of-course exams.

ANALYSIS: *(Attach a separate page if necessary)*

This bill would repeal those statutes and language related to secondary students taking the competency examination which was required in order to graduate from high school. [AS 14.03.075 & AS 14.07.165(5)] This would take effect beginning July 1, 2011.

The EED entered into a contract in FY'09 with the test contractor and has 7, one year renewal options.
The actual savings related to this bill will be realized after negotiations have occurred with the test contractor.

February 2, 2009

Mr. Larry LeDoux
Commissioner of Education and Early Development
Department of Education and Early Development
P.O. Box 110500
Juneau, Alaska 99811-0500

Attention: Dottie Knuth
Via FAX (907) 465-4156

Dear Commissioner LeDoux:

In response to the request for review and public comment on the proposed regulation changes on the timeline for the mandated WorkKeys/WIN assessments and on the Quality Schools application and reports for small districts, the Anchorage School District submits the attached comments.

I appreciate the opportunity to forward our comments as they relate to the proposed changes in Department of Education and Early Development regulations.

My staff and I are available to answer any questions regarding our responses and will forward any additional remarks to the proposed changes, as you deem necessary.

Sincerely,

Carol

SUBJECT: 4 AAC 06.715 Work ready/college ready transitional skills curriculum and benchmark assessments; 4 AAC 06.717 Work ready/college ready transitional skills assessment

The Anchorage School District believes the WorkKeys exam is a quality assessment that provides important information for students and families, educators, employers, and universities about student achievement related to college and work readiness. Further, the WIN curriculum and benchmark assessments provide opportunities for students to advance their studies in and awareness of work related proficiencies.

However, at minimum, the Anchorage School District supports the proposed regulation to delay the mandated use of these assessments by one year. These tools and assessments are available to students and districts ready to access them, and a delay in implementing the mandate doesn't limit a school or district's ability to more forward. The delay would enable districts that have technological or other implementation challenges to continue to work through them to ensure a smooth roll out should the mandate come.

Under the current system of assessment, the Anchorage School District does not believe the WorkKeys/WIN assessments should be mandated. Between the mandated Standards Based Assessments, HSGQE, TerraNova, NAEP, ELPA, Kindergarten Profile, etc., and district-specific formative, benchmark, and progress monitoring assessments that are a critical part of any instructional program, districts do not have the time or resources to invest in another mandated exam.

The Anchorage School District proposes bolder action, however. We propose that the State Board and the Department of Education of Early Development work with the Alaska Legislature and districts to replace the essential skills High School Graduation Qualifying Exam with the much more robust and meaningful WorkKeys Exam at the 10th grade.

The requirement for the HSGQE was created in response to concern that some students were graduating high school without the essential skills necessary to be productive in the world of work. An unintended consequence of that action has been that many students now set their sights too low – only on passing the HSGQE rather than reaching toward even higher levels of proficiency and achievement. Many students question why they should be required to continue high school when they have already passed the exam as 10th graders. Unfortunately, since the exam is essential skills, the students' perception that they have met necessary levels of achievement for life-long success is misguided.

The Anchorage School District believes there is a much better alternative that would provide businesses and universities information they need about the academic preparation of graduated students, that would inspire students to continue their studies rather than end them prematurely, and that would provide students invaluable information about career fields available to them as well as their relative preparation for them. That alternative is WorkKeys.

In addition, WorkKeys is part of the ACT continuum of assessments accessed by many schools and students that includes, among others, the Explore (8th grade), PLAN (10th grade), and ACT (11th and 12th grade). For students and their advisors to be able to plan the student's education over a series of years with information from these exams would be much more valuable than a pass/fail score on the HSGQE. Because of the availability of these exams, we do not believe the WIN assessments need ever be mandated. Rather, we suggest the assessments and very valuable curriculum remain available for those who choose to use them to augment their existing system of assessment.

Because WorkKeys is designed expressly to reflect what businesses expect of entering workers and the ACT is designed expressly to reflect what colleges expect of entering students, the two assessment programs are unique in what they measure and in the scores they report. But there are also commonalities in the expectations for readiness in the two tests.

ACT conducted a statistical concordance between the respective college and workforce training readiness levels in reading and mathematics. They found that the concordance between ACT College Readiness Benchmarks and WorkKeys Level 5 shows that the levels of readiness in reading and mathematics are comparable.

Comparability between WorkKeys Job Profile Level 5 and ACT College Readiness Benchmarks in Reading and Mathematics[4]

WorkKeys Test	WorkKeys Readiness Level	Comparable ACT Score Range and College Readiness Benchmark
Reading for Information	5	19–23 Benchmark = 21
Applied Mathematics	5	18–21 Benchmark = 22

This statistical concordance adds value to the assessment from the perspective of the individual student for course planning and post-secondary guidance. The

student receives information about their readiness to make successful transitions to college and work after high school from one assessment. If a student scores below a 5 in the Reading for Information and/or Applied Mathematics test, it provides critical information in terms of necessary coursework to be completed during the student's remaining time in high school in order to be prepared for first-year college courses. The student also receives information about whether he or she has the skills that businesses expect of entering workers through the WorkKeys Readiness Level. This also provides valuable information in course planning so, if necessary, students can take the coursework to ensure that they have the workforce skills when they graduate from high school. Since it is a national exam, WorkKeys results and certificates are also portable throughout our highly mobile country and mean the same thing regardless of the state in which our students ultimately choose to work or attend post-secondary programs.

The bottom line is that the WorkKeys exam has the potential to inspire and encourage students to higher levels of achievement while providing desired accountability and information for prospective employers and universities, whereas the HSGQE encourages apathy and low expectations. Further, the HSGQE causes significant harm to the small number of students who, largely due to special needs or language acquisition challenges, are unable to pass and are thus denied a diploma.

Rather than artificially set a pass/fail mark on this exam for which such a distinction was never intended, we propose instead that the final scores received by the student, after however many attempts the student makes while in high school to achieve higher scores, be placed on the transcript and the diploma. The diploma could also be printed in such a way that an explanation of those scores is printed on the back of the diploma or transcript to provide that information to prospective employers.

We encourage the State Board of Education and Early Development, along with Alaska legislators, to take this bold step in increasing both the academic expectations and the relevancy of state assessments for Alaska's students.

SUBJECT: 4 AAC 33.310 Applications; 4 AAC 33.320 Grant Awards; 4 AAC 33.330 Reporting Requirements, Regarding Quality School Funding Grants

This regulation does not directly impact the Anchorage School District as our Quality School Grant exceeds $10,000. We have never found the required application and report to be particularly onerous for our district.

State Enters Stipulation In Disabilities Class Action Lawsuit

Students with Disabilities Can Get Diplomas in 2004 Without Passing Exit Exam

Attorney General Gregg Renkes and Education Commissioner Roger Sampson announced the filing of a joint stipulation today in U.S. District Court that would allow students with disabilities in the Class of 2004 to get a diploma without passing the state's high school exit exam. The stipulation was based on an agreement by the State of Alaska and the lawyers who filed a class action lawsuit in U.S. District Court.

As many as 500 high school seniors with disabilities have not passed all three parts of the high school exam – reading, writing and math. Under the injunction, the students still need to complete all other state and district graduation requirements. About 800 seniors have disabilities.

The lawsuit was filed March 16 against the State Board of Education & Early Development, two Department of Education & Early Development officials and the Anchorage School District.

"We have stated from the outset that we have concerns any time the State Board and Department of Education & Early Development are implicated in treating students unfairly," said Education Commissioner Roger Sampson. "Our aim is exactly the opposite. We are working to provide a top rate education for each and every child in the state and to help them make a successful transition to life after graduation." Sampson added: "The agreement with the plaintiffs will allow both sides to negotiate in good faith the issues raised in the suit to reach a resolution that is fair for all involved."

Sampson and Attorney General Gregg Renkes said the stipulation will provide time for the State to seek guidance from the Legislature and the State Board of Education regarding options for settling the lawsuit. "We need to know whether the legislature will act on pending legislation affecting this case before we can engage in meaningful settlement negotiations," said Renkes.

The key points of the stipulation are:

- Members of the class action lawsuit include all students who have an Individualized Education Program (IEP) under the federal Individuals with Disabilities Education Act or a Section 504 Plan under the Rehabilitation Act of 1973 and who have taken or who must the high school graduation qualifying exam. About 18,000 students statewide at all grade levels have IEPs.
- The high school exam will not be used to deny a class member a high school diploma in the spring of 2004 if the student has met all other requirements for a diploma.
- The State of Alaska will notify secondary school principals and special education directors about the stipulation. Schools will be required to notify parents, special education teachers and affected students.
- The State of Alaska and the plaintiffs' lawyers will enter into negotiations to try to resolve the issues raised in the lawsuit. The first negotiation is expected to be May 18.
- The State of Alaska and lawyers for the plaintiffs will report to the court progress on the negotiations no later than July 9.

###

ASSESSED PERFORMANCE STANDARDS

HIGH SCHOOL GRADUATION QUALIFYING EXAMINATION

EDUCATION
& EARLY DEVELOPMENT

READING PERFORMANCE STANDARDS FOR THE HSGQE

R4.1 Apply knowledge of syntax, roots, and word origins, and use context clues and reference materials, to determine the meaning of new words and to comprehend text.
R4.2 Summarize information or ideas from a text and make connections between summarized information or sets of ideas and related topics or information.
R4.3 a. Identify and assess the validity, accuracy, and adequacy of evidence that supports an author's main ideas. b. Critique the power, logic, reasonableness, and audience appeal of arguments advanced in public documents.
R4.4 Read and follow multi-step directions to complete complex tasks.
R4.7 Express and support assertions, with evidence from the text or experience, about the effectiveness of a text.
R4.8 Analyze and evaluate themes across a variety of texts, using textual and experiential evidence.

WRITING PERFORMANCE STANDARDS FOR THE HSGQE

W4.1 Write a coherent composition with a thesis statement that is supported with evidence, well-developed paragraphs, transitions, and a conclusion.
W4.2 Demonstrate understanding of elements of discourse (purpose, speaker, audience, form) when completing expressive (creative, narrative, descriptive), persuasive, research-based, informational, or analytic writing assignments.
W4.3 Use the conventions of Standard English independently and consistently including grammar, sentence structure, paragraph structure, punctuation, spelling, and usage.
W4.4 Revise writing to improve style, word choice, sentence variety, and subtlety of meaning in relation to the purpose and audience.

MATHEMATICS PERFORMANCE STANDARDS FOR THE HSGQE

NOTE: Clarifying comments for the HSGQE are in italics. Some performance standards are not in the full versions found in the Alaska Standards booklet; if certain aspects of a performance standard are not assessed on the HSGQE, they are not included in this document.

Numeration

M1.3.1 Read, write, model, and order real numbers, explaining scientific notation *(read only)*, exponents (*square and cube only*) and percents.
M1.2.2 Use, model, and identify place value positions from 0.001 to 1,000,000.
M1.4.3 Compare and contrast the relationship between various applications of the same operation.
M1.3.3 Translate between equivalent representations of the same number, *including simple exponents*. Select a representation that is appropriate for the situation.
M1.3.4 Describe and model the relationship of fractions to decimals, percents, ratios and proportions.
M1.3.5 Use, explain, and define the rules of divisibility, prime and composite numbers, multiples, and order of operations.
M1.4.5 Recognize, describe, and use properties of the real number system.

Measurement

M2.3.1 Estimate and measure various dimensions to a specified degree of accuracy.
M2.4.2 Estimate and convert measurements between different systems.
M2.2.3 Use a variety of measuring tools; describe the attribute(s) they measure.
M2.3.4 Describe and apply the relationships between dimensions of geometric figures to solve problems using indirect measurement; describe and apply the concepts of rate and scale.
M2.3.5 Apply information about time zones and elapsed time to solve problems.
M2.2.6 Read, write, and use money notation, determining possible combinations of coins and bills to equal given amounts; count back change for any given situation.

Estimation and Computation

M3.4.1 Use estimation to solve problems and to check the accuracy of solutions; state whether the estimation is greater or less than the exact answer.
M3.3.2 Apply basic operations efficiently and accurately, using estimation to check the reasonableness of results.
M3.4.2 Add and subtract real numbers using powers.
M3.4.3 Multiply and divide real numbers in various forms including powers.
M3.3.5 Convert between equivalent fractions, decimals, percents, and proportions. Convert from exact to decimal representations of irrational numbers.
M3.4.5 Use ratios and proportions to model and solve fraction and percent problems with variables.

Functions and Relationships

M4.3.1 Identify numeric and geometric patterns to find the next term and predict the nth term.
M4.4.2 Create and solve linear equations and inequalities.
M4.4.3 Create and solve simple systems of equations.
M4.3.4 Translate among and use tables of ordered pairs, graphs on coordinate planes, and linear equations as tools to represent and analyze patterns.
M4.3.5 Find the value of a variable by evaluating formulas and algebraic expressions for given values.

Geometry

M5.3.1 Identify, classify, compare, and sketch regular and irregular polygons.
M5.2.2 Compare and contrast plane and solid figures (e.g., circle/sphere, square/cube, triangle/pyramid) using relevant attributes, including the number of vertices, edges, and the number and shape of faces.
M5.3.3 Apply the properties of equality and proportionality to solve problems involving congruent or similar shapes.
M5.3.4 Estimate and determine volume and surface areas of solid figures using manipulatives and formulas; estimate and find circumferences and areas of circles.
M5.2.6 Locate and describe objects in terms of their position with and without compass directions; identify coordinates for a given point or locate points of given coordinates on a grid.
M5.2.7 Sketch and identify line segments, midpoints, intersections, parallel, and perpendicular lines.

Statistics/Probability

M6.3.1 Collect, analyze, and display data in a variety of visual displays including frequency distributions, circle graphs, histograms, and scatter plots.
M6.3.2 Interpret and analyze information found in newspapers, magazines, and graphical displays.
M6.3.3 Determine and justify a choice of mean, median, or mode as the best representation of data for a practical situation.
M6.3.4 Make projections based on available data and evaluate whether or not inferences can be made given the parameters of the data.
M6.1.4 Find and record the possibilities of simple probability experiments; explain differences between chance and certainty, giving examples.
M6.2.5 Conduct simple probability experiments using concrete materials and represent the results using fractions and probability.

* Process Skills
(Problem Solving, Communication, Reasoning, Connections)

M8.3.3 Use appropriate vocabulary, symbols, and technology to explain, justify, and defend mathematical solutions.
M7.2.2 Select and apply a variety of strategies including making a table, chart or list, drawing pictures, making a model, and comparing with previous experience to solve problems.
M10.3.1 Apply mathematical skills and processes to science and humanities.
M10.3.2 Apply mathematical skills and processes to situations with peers and community

*Process skills are assessed but not separately reported on individual student reports.

Graduation Rates in Alaska
Fact Sheet

The Graduation Rate is reported as a fraction. The numerator is the sum of the number of graduates receiving a regular diploma before June 30. The denominator is the sum of the number of graduates, plus the number of dropouts in grade nine three school years prior, plus the number of unduplicated dropouts in grade ten two school years prior, plus the number of unduplicated dropouts in grade eleven in the prior school year, plus the number of unduplicated dropouts in grade 12 during the current year, plus the number of grade 12 continuing students.

A **graduate** is defined as a student who was received a regular diploma from a state- or district-approved education program, as evidenced by receipt of a secondary school diploma from school authorities. Any student who receives a diploma under a waiver from the competency examination required under AS 14.03075 (a), as specified by the state board is considered to be a graduate. This does not include an individual who:

- receives a certificate of completion;
- receives a certificate of attendance;

The statewide Graduation Rate has remained relatively consistent over the last five years, however the number of graduates has increased for four consecutive years:

School Year	Graduation Rate	Graduate Count
2004	62.9%	7,270
2005	61.4%	6,905
2006	61.6%	7,361
2007	63.0%	7,666
2008	62.4%	7,796

The Alaska Native/American Indian Graduation Rate has shown improvement over the same five year time period:

School Year	Graduation Rate	Graduate Count
2004	46.1%	1,327
2005	43.2%	1,233
2006	45.1%	1,442
2007	51.2%	1,689
2008	47.8%	1,508

Please note that the new Graduation Rate required by the Final Title 1 Regulations under NCLB will use a different calculation. The new Graduation Rate, also known as the Four-Year Adjusted Cohort Rate, will follow an actual group of students across four years of high school. Alaska will no longer be incorporating prior years' counts of dropouts to calculate the Graduation Rate.

Thomas Obermeyer

From: McCormick, Erik A (EED) [erik.mccormick@alaska.gov]

Subject: SB 109 Hearing 03/16/09
Attachments: Erik McCormick (erik.mccormick@alaska.gov).vcf; HSGQESpring2008Statewide.pdf; Graduation Rate Fact Sheet.doc; 2008 Graduation Rates by Subgroup.xls

Mr. Obermeyer,

Attached are three documents in support of the SB 109 Hearing hearing on Monday, chaired by Senator Davis.

- HSGQESpring2008Statewide.pdf
Spring 2008 HSGQE statewide results showing trend data from the Spring administrations 2006 through 2008. Subgroup information is provided as promised.

- Graduation Rate Fact Sheet.doc
This document provides our regulatory definition and calculation for the current Graduation Rate that we use in Alaska. NCLB requires us to report a graduation rate that measures a percentage of students graduating over a four year period. The document brings to attention that although the statewide Graduation Rate has remained relatively consistent over the last five years, the number of graduates has increased for four consecutive years. This is due largely to the efforts of public school districts to retain those students that may need more than four years to graduate.

- 2008 Graduation Rates by Subgroup.xls
In the hearing I stated that in 2008, there were 1,500 seniors identified as continuing seniors and that did not receive a diploma. Of those 1,500 seniors I stated that 69% of them had passed all three parts of the exam. The 1,500+ seniors were identified in the denominator of the Graduation Rate and represent those seniors that completed the school year but did not receive a diploma.

Please don't hesitate to contact me if you have any questions or concerns.

Thank you.
Erik

rcent Proficient and Percent Not Proficient rates only include students that participated in the exams.

rticipation rate is calculated by dividing the total count of students tested by the enrollment on the first day of testing.

2008 is the first year both a 10th grade SBA and 10th grade HSGQE test was administered. 10th graders' results represent both populations using only the HSGQE questions. The Participation clude all of these students as some may be 2nd year 10th graders.

Moore v. Alaska, decision 6-21-07

RE: HSGQE – Exit Exam

p. 33 # 81. "This reform was a reaction by the legislature to frustration that children were receiving high school diplomas but were lacking in basic skills."

p.34 #83. "State acknowledges that 'children have a property interest in their prospective diploma, and cannot be deprived of that property interest by a test that is unfair to them because they have not had notice of the content of the test.'"

p. 36 #92 'Bering Strait's graduation rate has fallen significantly since 2002-2003, when it was 59.4%. This may be due to the introduction of the exit exam requirement since that date, but also may be due in part to the "Quality Schools" program in place there that allows students additional time to complete their studies past 12th grade."

p. 38 #95 "While the dropout rate may be some indication as to whether an educational program is meeting a student's need, the evidence showed that not all students drop out because of low academic achievement. Family and work commitments, among other reasons, may also be factors."

p.38 #96 "Some students drop out because they are unable to pass the exit exam.

p.56 #164 Mr. Morgan was concerned about the exit exam and the impact may have on students dropping out: "There's so much focus to pass [the exit exam] and I think there's more to life than just passing the exist exam."

p. 56 #165 Mr. Morgan ... had classes in photography, foreign languages and pottery, which have not been available to his children. He also believes there were more teachers. And he remembered that everyone graduated then. Now, he is 'saddened by the kid who [does not] get the diploma but still walks.

p. 72. #226 "Dr. Davis (BSSD) testified that small schools in Alaska should not be expected to offer all of the course available in large schools. Instead, his position is that "we should offer an adequate education."

p. 72. #229 Dr. Davis defines an adequate education as an "education that gives young people the tools to succeed in whatever live they choose." He testified that BSSD students are receiving an adequate education due in part to supplemental activities and education from families. He does not think they meet state standards but they are successful based on their own standards and the improvements they have made.

p. 77. Note: Bering Strait School District has some of the highest paid teachers and highest funding per student (Kuspuk School District: received $21,758 per student in 2005).

p. 79 #246 Dr. Laster testified that "we are in good faith really working to try to get those core competencies to students: reading, writing and math. But it's really important to have an interdisciplinary approach; an approach that respect the community that kids come from, the culture that they come from, that engages them in a way that grabs them and engages them and has them working on stuff that that is rally meaningful to them."

26. No evidence was presented that the State has redirected any district supervisory personnel or any school district appropriations, except that in the 2007-2008 school year, the State required the school districts in which it had intervened to pay for the cost of the district coaches.

III. HSGQE Remediation Plans

27. This Court's June 2007 decision held that because the State had failed to meet its constitutional oversight responsibilities, the State was violating the substantive due process rights of students by deny high school diplomas to students in chronically underperforming school districts who had failed the High School Graduation Qualifying Exam (HSGQE).[24]

28. Following this Court's 2007 decision, the State Board adopted a regulation that requires all school districts to have a HSGQE remediation plan in place for all high school juniors and seniors who had not passed one or more section of the HSGQE.[25] For intervention districts, the regulation provides that the remediation plans must be reviewed and approved by the Commissioner and must "begin no later than the start of the second semester of the students' 11th grade year."[26] Remediation is defined as "additional instruction and study that targets the skills tested on the HSGQE."[27]

---

[24] Decision and Order at 191-194.

[25] 4 AAC 06.759.

[26] 4 AAC 06.759(b)(1)(B).

[27] 4 AAC .06.759(f).

29. In December 2007, each of the intervention districts submitted remediation plans to the Department. [Exs. 2548-2552]

30. Of the five intervention districts, the Department has approved one remediation plan -- the plan submitted by the Yupiit School District. [Ex. 2548]

31. The interim Commissioner wrote to each of the four other intervention districts in December 2007 that the district's plan needed further information before Departmental approval would be forthcoming. [Exs. 2549-52] However, there is no indication in the record before this Court that the Department has done any additional follow up on the remediation plans since that time. [Tr. 10/7/08 at 88; *see also* ex. 436]

32. This Court has reviewed each of the remediation plans from the intervention districts. [Exs. 2548-2552] The plans do not appear to require that each student who has failed the exam who is in 11th or 12th grade has an individualized plan that focuses on the student's area(s) of deficiency in an effort to maximize that student's likelihood of passage of the exam. And the plans do not insure that each such student has an assigned professional to monitor that student's progress toward proficiency on the exam. Nor is there any evidence that the Department has taken steps to confirm that the districts actually have the plans in operation for each of these students.

33. The Department presented a detailed analysis of HSGQE results at the evidentiary hearing in June 2008. [Exs. 2514-2522] The analysis focused on how many students in the classes of 2006 and 2007 had passed all three sections of the exam by their senior year. [Tr. 6/10/08 at 39-41] The analysis showed that a substantial majority of students who stay in school are passing the exit exam, including

students in the intervention districts. However, the Department's analysis excluded all those students who had dropped out or transferred to another school before passing all three sections. Superintendents from intervention and plaintiff districts testified that those students who remain in school have the opportunity to learn the material tested on the HSGQE. [*See, e.g.*, tr. 10/21/08 at 147-148] Yet a review of the Department's statistics demonstrates that numerous students throughout the state are unable to pass the exam even after five opportunities. According to the Department's statistics, and excluding all students who have dropped out before they passed the exam, in 2007 over 1,100 students statewide failed to pass the HSGQE exam after five opportunities, while 8,524 students passed. [Ex. 2514 at 8]

IV. Findings Regarding the Components of the District Level Interventions

A. The Northwest Lab Evaluation

34. An evaluation of the State's improvement process prepared by Timothy Speth of the Northwest Regional Educational Laboratory, in partnership with the Alaska Comprehensive Center, was admitted as an exhibit at the October 2008 evidentiary hearing. [Ex. 477][28] The Lab is a federally-funded research institution with a reputation for performing quality research. Both former Commissioner Sampson and Dr. John Davis were on the Lab's Board for many years, and Commissioner LeDoux is currently on the Lab's Board. [Tr. 10/6/08 at 114; 10/8/08 at 71, 129] Dr. Darling-Hammond

[28] Although the report is entitled an evaluation of the "District Improvement Coaches Project," it also addressed other aspects of the district improvement process. [Ex. 477]

thereby negatively impacting the likelihood of prompt and significant improvement in student achievement.

155. The evidence indicated that the Department is currently undertaking some efforts to expand its capacity to provide assistance to the districts. But no evidence was presented that the Department has undertaken any effort to assess its capacity to determine what it would require to effectively assist districts and schools to provide students with a constitutionally adequate education. Yet Eddy Jeans, the Department's legislative liaison, testified that "the legislature gave us a very clear message that when we determine what additional resources we need, we are to come back to them and ask for them." [Tr. 10/7/08 at 46]

CONCLUSIONS OF LAW

1. This Court's June 2007 Decision and Order concluded that the Department was not fulfilling its constitutional oversight responsibility in chronically underperforming districts and schools, and ordered the Department to take adequate remedial measures to establish compliance. The State asks this Court to now find that the deficiencies identified in the June 2007 Order have been cured, and that this Court should accept "the State's system as compliant with the Education Clause."[46] But the Plaintiffs ask this Court to find that the State's current intervention efforts fail to comply with the requirements of the Court's June 2007 Order and that the Department continues to be

[46] State's Proposed Findings of Fact and Conclusions of Law at 53, ¶ 22.

out of compliance with the oversight duties imposed by the Education Clause of the Alaska Constitution."[47]

2. In an order issued near the outset of this case in June 2006, this Court held that under the Education Clause, it is the Court's responsibility "to determine a constitutional floor with respect to educational adequacy, and to determine if that constitutional floor is currently being met."[48]

3. The District Plaintiffs remaining in this action now seek to have this Court expressly hold that the Education Clause establishes a fundamental right to education. But at this juncture, where the issue is the adequacy of the State's oversight of and assistance to chronically underperforming school districts, and no individual student plaintiffs are asserting that they are not being accorded their constitutional right to an education, this Court will instead maintain the "constitutional floor" analysis first set out in this case in June 2006 and determine whether the State's current efforts to comply with the Education Clause are adequate. Stated differently -- has the State now demonstrated that it is fulfilling its constitutional responsibility to "maintain a system of public schools?"[49]

4. Because the State has been ordered to take remedial action to correct an ongoing constitutional breach, it bears the burden of proof on the issue of compliance.

---

[47] District Plaintiffs' Proposed Findings of Fact and Conclusions of Law at 54, ¶ 20.

[48] *Order re State's Motion to Establish Standard of Review* at 4, *quoting Campaign for Fiscal Equity, Inc. v. State of New York*, 86 N.Y. 2d 307, 315 (N.Y. 1995).

[49] Alaska Const. Article VII, § 1.

5. The first prong of the June 2007 Order addressed the State's obligation to establish "clear standards" for school districts to retain full local control.[50] Certainly, the Legislature has the authority to delegate its constitutional responsibility to maintain public schools to the Department of Education and Early Development as well as to local school districts.[51] But for the reasons more fully articulated in this Court's June 2007 decision, when making a broad delegation to local school districts of the constitutional responsibility to maintain schools, the State "must establish clear standards" for those districts necessary to retain local control.[52]

6. By clearly describing the boundaries that insure full local control, these standards correspondingly serve to define the threshold that activates the Department's constitutional duty to intervene and provide oversight and assistance to local officials. Clear standards should also reduce the risk of premature and untimely intervention by giving specific and reliable notice to all interested parties of the circumstances that would activate the State's duty to intervene and assist.

7. The State has developed comprehensive desk audit and instructional audit regulations to determine those districts and schools that necessitate State intervention. The District Plaintiffs in this action are not asserting that the State has improperly intervened in certain districts, or that the State should have intervened in other districts. The evidence at the compliance hearings did demonstrate several concerns with the audit process, such as restrictions on the distribution of the narrative audit summaries,

[50] Decision and Order at 189.

[51] Decision and Order at 162-165, 173, ¶ 2.

[52] Decision and Order at 189.

and the lack of clear standards for when an instructional audit will not result in an intervention. But on the current record, this Court agrees with the State with respect to this component of this Court's June 2007 Order, such that any constitutional questions arising from the details of implementing the audit regulations should be asserted by future challenge, and are not directly before this Court at this time. *See State v. Alaska Civil Liberties Union*, 159 P.3d 513, 514-515 (Alaska 2006).[53]

8. For the same reasons, this Court finds that any constitutional questions arising from the implementation of school-level interventions are not now directly before this Court, as to date no such interventions have been undertaken and no party is before this Court at this time asserting a claim of unconstitutionality with respect to those potential school-level interventions.

9. The "clear standards" prong of this Court's June 2007 Decision and Order contains a separate component that is applicable to the intervention districts. The Order also emphasized the need for the State to "insure that each school district has a demonstrated plan to provide children a meaningful opportunity to achieve proficiency in the State's performance standards, and meaningful exposure on the remaining content standards, and insure that the district plan is fully implemented and actually in use in the district classrooms."[54]

10. Although the Department has created a set of content standards, it has not provided clear guidance to school districts as to how much and what kind of exposure to

---

[53] Likewise, constitutional questions that might arise from SB 285's provisions concerning the potential redirection of appropriations and redirection of school district personnel are not properly before this Court at this time.

[54] Decision and Order at 189, ¶ 41.

those standards must be given in order to insure that students receive an education that is adequately broad in content, as well as adequately demanding in performance.

11. Without clear standards to guide them in attempting to meet the content standards, the underperforming districts focusing their efforts on meeting performance standards have no way of ensuring that their students have an adequate opportunity to obtain a well-rounded education, and not just an education that builds proficiency in a set of narrow, albeit critical, skills. Likewise, the Department has not articulated any standard that it will apply to determine whether and when its oversight duty requires it to give troubled districts assistance in assuring meaningful exposure to the content standards.

12. For the foregoing reasons, this Court finds that the State has not met its constitutional responsibility to "maintain a system of public schools" with respect to this component of the first prong of the June 2007 Order.

13. The second prong of the June 2007 Order focused on the State's oversight responsibility of chronically underperforming districts, and required the State to provide "considerably more" "oversight," "assistance" and "direction" in "a concerted effort to remedy the situation."[55]

14. Strong and persuasive evidence was presented at the compliance hearing demonstrating that, for a variety of reasons, the State's current district-level interventions have fallen considerably short of complying with this oversight requirement in two basic respects: first, because the remedial measures included in the interventions have not been effectively implemented and have not adequately meet the

[55]Decision and Order at 189.

needs they were meant to serve; and, second, because the interventions target an unjustifiably narrow range of problems, while ignoring many other educational problems that these local districts have not adequately addressed on their own.

15. The State's district-level intervention plans provide districts with measurement and assessment tools and some organizational assistance meant to enhance the districts' use of those tools. But the Department underestimated the complexity involved in implementing the use of tools like "Response to Instruction" and AIMSWeb in chronically underperforming districts. As a result, the State has not provided sufficient training and technical support to allow the tools to be effectively and efficiently implemented. Moreover, the State's intervention plans mistakenly assumed that the districts would have the expertise and experience to make appropriate use of the assessment tools after implementation, and as a result did not provide adequate follow up and on-site assistance.

16. The State did not adequately tailor its remedial efforts to the particular needs of the schools and districts in which they were implemented. To the contrary, the Department's only significant effort to assess particularized needs -- its instructional audits -- played no role in the Department's choice of the remedial measures included in its district interventions. Nor did the Department make any systematic effort to monitor and evaluate its intervention efforts so that its remedial measures could be adjusted, refined, and supplemented when information established the need for change.

17. Despite the June 2007 Order's specific mandate of a "concerted effort" to provide "considerably more" assistance in resolving the districts' problems, the State's own

witnesses described the Department's interventions as considerably less. Multiple witnesses described the current intervention components as "somewhat minimalistic," an "initial intervention," a "first step," or a "foundation" for other needed elements. But in chronically underperforming school districts, setting up an initial intervention, then waiting five to seven years as the Department proposes to assess the results is not sufficient to remedy the constitutional violations identified in the June 2007 Order.[56]

18. The State has also failed to adequately address its constitutional responsibility to "insure that its educational standards are being implemented at the local level."[57] Instead, it appears that the State is just beginning to determine the extent to which a curriculum aligned to the State's performance standards is being taught in all the public schools in this state. The State asserts that its approach "to focus the first years of the intervention on changing the delivery of instruction" and then "dealing with the issue of curriculum was based on appropriate professional judgment."[58] But all public schools in this state should be teaching a curriculum that includes (yet certainly should not be limited to) materials aligned with the State's performance standards. The instructional audits of the chronically underperforming districts that the Department undertook in the fall of 2006 -- over two years ago -- clearly demonstrated that was not the case. In these circumstances, an incremental, minimalist initial approach, that is only now beginning to address curriculum, is constitutionally inadequate.

---

[56] *See, supra*, Findings at paragraph 141.

[57] Decision and Order at 186.

[58] State's Proposed Findings of Fact and Conclusions of Law at 17, ¶ 22.

19. Positive evidence concerning the interventions has been presented. For example, many of the technical and organizational problems that initially surfaced have been addressed and resolved, collaborative meetings appear to have been quite helpful at many schools, and additional training has been provided. [*See, e.g.*, tr. 10/6/08 at 45-47] Pointing to this progress, the State's expert, Dr. Guthrie, urges that the best thing to do at this juncture is essentially nothing – to wait for several years in order to allow the current remedial measures an opportunity to work. The State echoes this position, urging the Court to conclude that the State is doing enough, that it will continue to assist chronically underperforming schools, and that this action should now be dismissed.

20. A "first step" or "initial intervention" or "somewhat minimalistic" approach may well be the best approach in some settings, as when the Department initiates timely steps to address incipient problems arising well before a district chronically fails. But here, the districts targeted for intervention are districts with chronically underperforming schools -- schools with lengthy histories of failing to overcome the achievement gap for generations of children -- and the Department was ordered to take concerted remedial action because it has violated its constitutional oversight duty by failing to meaningfully intervene before the problems became chronic.

21. The parties do not dispute that the intervention districts face significant hurdles in attempting to correct their students' underperformance, including geographic, cultural, environmental and cultural influences. But the evidence also establishes that there is an array of promising, research-backed remedial measures to address the educational needs of students in these districts which have not yet been successfully implemented.

Such measures could include efforts to build in-house expertise, to increase the level of available teaching capacity, to create meaningful incentives to promote the recruitment and retention of high quality teachers, to provide content specialists, on-site coaches and mentors, targeted educational resources, and more extensive professional development focused on the particularized needs of the intervention districts. They could also include pre-K, curriculum development and alignment, and resources directed at improving student attendance and the school's interface with the local community.

22. Although the State asserted in its closing argument that teaching capacity is a problem for local districts to address, teacher qualifications and training are controlled by the State through the certification process.[59] And the State did not demonstrate an insurmountable conflict between local control/local capacity on the one hand, and State assistance with targeted support on the other hand. The two are complementary, not mutually exclusive: "A more efficient state system operates when the state is able to fulfill its responsibilities well and doesn't leave that to every little local district to try to have to replicate or create because the state hasn't provided some of the foundation that's needed for the districts to be able to proceed effectively." [Tr. 10/9/08 at 65; Dr. Darling-Hammond] And, in any event, "local control does not supersede a child's right to learn." [Tr. 10/8/08 at 185; Dr. John Davis]

23. To date, the State has categorically declined to consider an early-education component such as pre-K in its interventions. In ruling out this option, the State has relied on this Court's holding that the Education Clause does not require pre-K to be included as

[59] AS 14.20.020; 4 AAC 12.200 – 4 AAC 12.900.

an integral part of the system of public education that the Legislature must routinely provide throughout the state.[60] But that ruling was not intended to exempt pre-K from being considered and used as a case-specific measure to remedy a constitutional violation.

24. During the 2008 hearings the State occasionally referred to the problem of children being unprepared to begin school as stemming from problems within the community. These references echoed the report of the State's expert, Dr. Guthrie, who referred to "cultural and community misalignment."[61] But to the extent local conditions create unique educational problems that impair a public school's ability to provide a constitutionally adequate education, then the school district and the Department have a constitutional duty to address the educational aspects of those problems that are amenable to educational solutions. And when a local district lacks the capability to resolve these educational problems on its own, the Department's oversight duty requires it to intervene and provide assistance to the local district in a concerted effort to remedy these problems. This Court finds persuasive the response of a New York court to a similar argument, which "rejects the argument that the state is excused from its constitutional obligations when public school students present with socio-economic deficits."[62] Conditions within a community do not diminish the State's constitutional duty to "maintain a system of public schools open to all children of the State."

---

[60] Decision and Order at 177, ¶¶ 11, 12.

[61] Ex. 2584 at 62406-07.

[62] *Campaign For Fiscal Equity v. State*, 719 N.Y.S.2d 475, 516 (Sup. Ct. N.Y. 2001), *aff'd.* 769 N.Y.S.2d 106, 116 (N.Y. 2003).

25. In addition to addressing the Education Clause of Alaska's Constitution, this Court's June 2007 Order held that due process is violated if the State withheld high school diplomas from students in chronically underperforming districts who had not passed the HSGQE but were "not being accorded a meaningful opportunity to acquire proficiency in the very material that is tested on the exam,"[63] when the State had failed to provide adequate oversight and assistance to the district.

26. The State has now required the intervention districts to submit copies of their HSGQE remediation plans to the Department for review. But this Court's expectations were, and are, that in each chronically underperforming school district, the Department would immediately insure that an individualized remedial plan had been developed for each current 11th and 12th grader who has not yet passed the exam, including but not limited to appropriate formative assessments, and that each such student would have a designated professional at the school district (or Department, if necessary) with the responsibility of monitoring that student's remedial plan. In addition, the Department, through on-site visits and follow-up interviews, would insure that such a plan was actually in place for each of the students in chronically underperforming districts who had not yet passed the exam. To date, there is no indication that this has occurred in any of the intervention districts.

27. Based upon all of the evidence presented, this Court finds that the Department, through delegation from the Legislature, is not currently meeting the State's constitutional responsibility to "maintain a system of public schools open to all children of the State." The schools in the chronically underperforming school districts are not constitutionally

[63] Decision and Order at 193-194.

adequate; the Education Clause requires considerably more from the State in the way of oversight and assistance to those districts. And yet, while this Court has identified several shortcomings in the above Findings, it may well be that the requisite constitutional floor could be met without all of those deficiencies being fully rectified. Rather, it is the entirety of the deficiencies which together result in this Court's finding that the requisite constitutional floor has not been met at this time.

28. The Court further concludes, however, that the Department has made good faith efforts to achieve compliance with the June 2007 Order and the Education Clause and that the deficiencies in its efforts to date may well stem from uncertainty about the extent of the requirements in the June 2007 Order and the scope of the Department's oversight responsibilities. Moreover, the dedication to school improvement of the many educators in this process -- including the educators and other personnel within the Department and in the school districts -- is well evident and deserving of considerable respect. For these reasons, this Court will accord to the Department an additional opportunity to comply voluntarily with requirements of the Education Clause and this Court's orders, as further directed below.

ORDER

To establish compliance, IT IS ORDERED that the State shall proceed as follows:

A. Prepare and file with this Court a draft of standards that address the State's constitutional responsibility to insure that chronically underperforming school

districts are providing students in those districts with meaningful exposure to the State's content standards.

B. Review, reconsider, and -- after consulting with the districts and giving due considerations to their views -- file with this Court revised district intervention plans that address and incorporate as appropriate remedial measures related to each of the problem areas identified in these Findings. [*See* Findings of Fact, Parts V, A-E and Part VII]

C. File with this Court a plan of action that addresses the concerns identified in these Findings with respect to the adequacy of the remediation plans in the intervention districts for the High School Graduation Qualifying Exam.

Given the Department's continuing non-compliance with its constitutional duty to date, the time that has already been lost in attempting to establish compliance, and the severe consequences to students in the intervention districts caused by continued non-compliance, time is of the essence at this point in the proceedings. Accordingly, the State shall file and serve the materials described above no later than sixty days from the date of distribution of this Order. The State is strongly encouraged to work closely with each of the intervention districts in preparing these materials. The District Plaintiffs are accorded ten days thereafter to file and serve any objections. Additional proceedings shall be scheduled thereafter as warranted.

IT IS SO ORDERED this 4th day of February, 2009.

Albany Legislators Seek to Dilute New, Tougher Graduation Exams

By RAYMOND HERNANDEZ

An unusual bipartisan coalition of state lawmakers, whose constituents range from inner-city residents to affluent suburbanites, is pushing to scale back new, more stringent graduation requirements for nearly all public high school students.

The lawmakers contend that the new graduation standards are being phased in too quickly, do not accurately measure the overall academic performance of students and could result in increased failure and dropout rates in school districts across the state.

The rising concern in the State Legislature comes as the Board of Regents, the body charged with setting educational policy for the state, and the State Education Commissioner press ahead with new standardized tests that all high school students will eventually have to pass to graduate. Some lawmakers fear that as many as 20 percent of seniors may be unable to pass the tests.

Beginning next year, students will have to pass a more rigorous English Regents exam to earn a high school diploma. In later years, students will have to pass similar standardized tests in four other subjects: math; American history and government; global studies, and science.

It is not clear what action the Legislature might take to scale back the new standards, or whether such a move would have the support of Gov. George E. Pataki, whose aides declined to comment today. But one measure has already been proposed in the Assembly to allow school districts to use alternative standards to the Regents exam for graduation. The Democratic-controlled Assembly and the Republican-led Senate are holding joint hearings on the issue around the state.

Aides to the leaders of both chambers say they have heard widespread concerns that the new graduation requirements may deny diplomas to thousands of students.

That the Senate and the Assembly have found common ground on this issue is remarkable, given that their leaders agree on almost nothing else. To date, both houses have jointly passed only about two dozen pieces of legislation this session, none of them major, and budget talks are still deadlocked almost six weeks past the deadline.

"There's growing concern that relying on one set of standardized, time-pressured tests will leave hundreds of thousands of students behind," said Assemblyman Richard L. Brodsky, a Democrat from Westchester County who proposed legislation to allow alternative standards.

"This issue has resonance that goes well beyond the traditional fault lines that have polarized education debates in the past," Mr. Brodsky added. "It affects every community in the state, whether they are in the inner cities or in the suburbs."

Dean G. Skelos, a Republican from Nassau County who is a deputy majority leader in the State Senate, agreed. "There is really universal and bipartisan concern with what they are doing," he said of the new Regents standards. "We are hopeful that the Board of Regents will get the message that the Legislature is not happy with what they have done."

But in an interview late this afternoon, Richard P. Mills, the State Education Commissioner and one of the architects of the new graduation standards, said any move to relax the standards would rob students of the education they need to compete in the workplace. "The reason we raised the standards was in response to a public outcry that the old standards were too low," he said, adding, "We just have to stay the course and insist that children get the education that they need."

Mr. Mills said the new standards had already raised academic performance. He said 78 percent of high school seniors passed the Regents English exam last year, even though it was not required for graduation. "The standards are working," he said.

The Commissioner is chosen by the Regents, who in turn are appointed by the Legislature.

An aide to Mayor Rudolph W. Giuliani said the Mayor favored the tougher standards. The Regents' plan "restores the value of a high school diploma," said the spokeswoman, Sunny Mindel. "To reverse this would be a terrible step backward in time."

The state first offered the Regents exam in 1879 as a standard for colleges to use in evaluating high school graduates. But until now, students only needed to pass a competency test to graduate, and only a minority -- fewer than 25 percent of graduates in New York City -- have taken diplomas showing they passed the more difficult Regents exams.

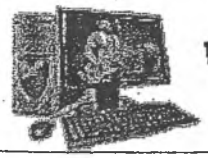
Mr. Mills and the Board of Regents have contended that the old two-tiered testing system had created two classes of students: high

achievers, who often go on to college, and low achievers, who lack the skills to function well in the workplace.

But Mr. Mills and the Regents are not just requiring students to pass the Regents exams to graduate. They also say that they are making the exams considerably harder. The new exams are being phased in gradually, beginning this June, when 11th graders will be required to take the two-day, six-hour reading, writing and listening test in English. The class of 2003 will be required to take five subject exams: in math, science, global studies, American history and government, and English.

That has led to widespread concern, if not panic, among parents, teachers and administrators over the prospect of widespread failures.

Lawmakers here are careful to point out that they heartily applaud the Regents' effort to raise the academic performance of students. But they also argue that the tests are just one measure of academic ability, and that many school districts, particularly poor ones, lack the resources to prepare low-achieving students to take the new tests.



Jeffrion L. Aubrey, a Democratic Assemblyman from Queens, said he was particularly troubled that teachers did not have enough time to review the tests. "How can teachers construct a curriculum or conduct classes around a test they haven't really had a chance to see?" Mr. Aubrey asked. "That's not fair. I would raise the curriculum standard first, without tying it to a test that means as much as this one does."

Steven Sanders, a Democrat from Manhattan who is the chairman of the Assembly's Education Committee, expressed similar concerns. "Are we really prepared in this state to witness perhaps as many as 15 or 20 percent of our high school seniors not to graduate, and then to suffer the very real consequences of what that will mean?" he asked.

Senator Michael A. L. Balboni, a Republican from Nassau County, said he supported the effort to enact higher standards, but questioned the reliance on a single series of tests to determine the academic fate of a high school student.

"This is an example of rushing perhaps in the right direction, but not having all the details worked out ahead of time," he said.

High school graduation tests have little tie to college, report finds

WASHINGTON (AP) — Many high school graduation tests don't measure whether students are ready for college or work, and some states haven't even made clear what the purpose of their test is, a study finds.

Of the 25 states that have or plan graduation exams, only one, Georgia, says its test ensures students are prepared for higher education or work. Most of the states gear their tests toward 10th or 11th grade learning, and some gauge pre-9th grade skills, according to a study released Wednesday by the Center on Education Policy, a nonprofit research group.

With 20 states now withholding diplomas from students who don't pass tests in English and math, if not other subjects, the common assumption is that the tests measure college readiness, said Keith Gayler, the lead author of the report. That's wrong, he said.

The center found some states had little clarity about the purpose of their tests, which makes the exams harder to explain and defend politically, said director Jack Jennings.

"If they're not clear, then they can't write an exam that's legitimate," Jennings said of state leaders. "We're urging states to re-examine their policies."

High-school graduation now hinges on exit exams for more than half of all public school students, and that number is expected to grow to seven in 10 students by 2009.

Meanwhile, colleges and employers continue to warn that schools are graduating students who cannot communicate, analyze or reason well enough to succeed without remediation. High school exit exams have been promoted as a way to ensure students leave with quality skills.

The graduation exams appear to be encouraging schools to cover more content and to add remedial courses or other help for students at risk of failing the tests, the report said.

But there are drawbacks to the tests, too, it said, such as a narrowing of curriculum and the steering of some students away from a traditional diploma.

The center takes no position on the tests, aiming instead to highlight what's working and what's not as state leaders weigh decisions. For its annual report, the center collected data from the states, reviewed research and convened a national panel on the tests' impacts.

Many state officials said their high schools and colleges have not discussed tying the exit exams to what students need to know in college. Maryland and Washington were exceptions, and several states have moved toward more challenging tests.

With the debate over the exams quieting somewhat, states have a chance to close gaps in achievement for blacks, Hispanics and poor kids, Gayler said. To move right to high school tests that measure college readiness, he said, would yield "so few students passing at this point that the reforms would crumble under their own weight."

Typically, 65% to 85% of students pass their test on their first try. Comparisons between states are inappropriate because tests are different, the report said.

Advertisement

Thousands of students did not graduate this year because they failed exit tests, but the total number is not available because of appeals and a lack of data tracking, the report said.

Earlier this year, an alliance of education groups called the American Diploma Project warned that high school graduation has lost its meaning. In calling for more rigor, the group said exit exams should be broad enough to test years of high school content, and colleges should use the tests in determining where to place new students.

Few higher education systems do that now. Among the 25 states with current or planned exit exams, only New Mexico, New York and Texas reported that some of their public colleges and universities consider high school exit tests in admitting or placing students.

Media Advisory

COMMISSIONER'S OFFICE

FOR IMMEDIATE RELEASE
AUGUST 3, 2009

Annual AYP Results to be Announced

The Alaska Department of Education & Early Development on Friday, August 7, in Anchorage will release the school-level results of the No Child Left Behind accountability system. These are the "adequate yearly progress" reports for public schools.

Alaska Education Commissioner Larry LeDoux and Director of Assessment, Accountability & Information Management Erik McCormick will hold a news conference on August 7, starting at 10 a.m., in the Governor's Office conference room at the Atwood Building in Anchorage. It is located at 550 West 7th Ave., Suite 1700.

The news conference also will be available by teleconference. Call 1-800-315-6338. The code is 0707#.

The press packet will be available at www.eed.state.ak.us at 8:30 a.m. on August 7. Copies will be available at the news conference.

CENTER ON EDUCATION POLICY CEP

State High School Exit Exams: Trends in Test Programs, Alternate Pathways, and Pass Rates

November 2009

Credits and Acknowledgments

This report was researched and written by Ying Zhang, CEP research associate. Jack Jennings, CEP's president and CEO, co-authored the recommendations and provided advice and guidance. Diane Stark Rentner, CEP's national program director, Nancy Kober and Naomi Chudowsky, CEP consultants, gave helpful comments to the report. Jennifer McMurrer, CEP research associate, assisted in verifying and editing the report and state profiles. Rebecca Barns, CEP consultant, edited the report and the state profiles. Laura Sobchik, CEP intern, assisted in data entry and verification. Jody Peltason, CEP intern, provided general assistance on the report.

The Center on Education Policy extends its deepest gratitude to the officials in the 26 states who responded to our state survey on exit exams, verified the information in the state profiles, and answered other questions about exit exam policies. Without their assistance, this report would not have been possible.

We would also like to thank Keith Gayler, CEP consultant, who helped with the development of the state survey, and three external reviewers who provided insightful comments and suggestions: Dr. David Conley, professor and director, Center for Education Policy Research, University of Oregon; Dr. John Robert Warren, professor, University of Minnesota; and Dr. Lauress Wise, principal scientist, the Human Resources Research Organization (HumRRO).

The Center draws on general support resources from the George Gund Foundation and the Phi Delta Kappa International Foundation. The statements made and the views expressed in this report are solely the responsibility of the Center.

Summary

Since 2002, the Center on Education Policy (CEP), an independent nonprofit organization, has been studying state high school exit examinations—tests students must pass to receive a high school diploma. This is our eighth annual report of findings from this comprehensive study, which is based on a survey of all 26 states with current or planned mandatory exit exams, interviews with officials in three states, and other information.

Unlike our past reports that focused mostly on changes that occurred during a single year, this year's report looks across the entire eight years of the study to identify longer-term trends in state policies and student performance. Chapter 1 describes the evolvement of policies governing state exit exams and the features of these exams over the past eight years. This chapter also examines long-term changes in the types and amount of technical assistance and financial support that states provide to school districts, educators, and students. Chapter 2 examines this year's special topic—alternate pathways to graduation that states offer students who are struggling to pass exit exams. Chapter 3 analyzes trends in students' pass rates on exit exams and gaps in pass rates between different subgroups of students.

Key Findings

Several key findings emerged from this year's study of state high school exit exams.

Policy Changes and Changes in Tests

- **Changes in exit exam policies over the past eight years reflect states' struggles to develop standards and testing systems that are sufficiently demanding but also achievable and fair.** Since 2002, the stakes attached to state high school exit exams have risen for students and schools. Sixteen more states have begun withholding diplomas from students based on their exam performance, and the number of states that also use their high school exit exams for accountability under the federal No Child Left Behind Act (NCLB) has risen from 2 to 24. Many states have changed their exams to reflect new academic standards and curricula. Since 2002, most states have increased the number of subjects tested. And several states have shifted from minimum competency exams to comprehensive or end-of-course (EOC) exams aligned to content at a higher grade level.

- **At the same time, states have sought to soften the sting of exit exam mandates by phasing in requirements and allowing for adjustments.** On average, states with exit exam requirements have waited four years between the time their tests were first administered and the time diplomas were first withheld based on test performance. Some states have also taken a gradual approach to introducing new subjects to be tested. All of the exit exam states have modified their requirements to accommodate students with disabilities. In addition, most states have instituted alternate pathways to graduation that a few students utilize. Exit exam policies continue to be controversial, and future changes are likely.

- **Since 2004, states have expanded the purposes of their exit exams to include improving teaching and monitoring school performance, in addition to assessing whether students are well-prepared academically.** In 2004, most states with exit exams reported that the purpose of these tests was to assess whether students have acquired the competencies expected at the high school level; only a limited number of states also reported using the exams for other purposes. By 2009, most states with exit exams reported that they also used these tests to evaluate school and district performance and encourage early identification of students who needed extra instructional support, among other purposes. Eighteen states reported using performance data from exit exams to inform policy decisions, and 9 used the tests to guide instruction. In 2009, 11 states cited improving students' readiness for work and postsecondary education as a purpose of their exit exams, up from just 1 state in 2004.

- **Even though states have made some similar changes in exit exam policies, the key features of exit exams continue to vary greatly across states, as does data collected to gauge exam impact.** Although all of these exams rely mainly on multiple-choice questions, they differ in the subjects tested, testing time, standards to which they are aligned, cut scores, and the use of test results.

- **States have developed exit exam policies using input from peer and external reviews.** This input includes reviews by third-party testing experts, studies of alignment with state standards, special task forces to address particular concerns such as high failure rates, and peer review by the U.S. Department of Education to ensure the exams comply with NCLB requirements.

- **In recent years, many states have increased technical assistance to districts and schools related to exit exams, but many have also dramatically cut funding for remediation programs.** In 2002, only half the states with exit exams required districts to provide remediation services, and just one-third provided students with study guides to the exams; even fewer states provided teachers with instructional resources related to exit exams. By 2009, the scope of technical assistance tied to exit exams had expanded greatly. For example, 19 of the 26 states with exit exams assist schools in identifying and helping struggling students, 18 provide teachers with professional development to raise pass rates on the exams, and 14 provide districts with direct technical assistance for student remediation programs. At the same time, however, states report a significant decline in state funding for remediation.

Alternate Pathways to Graduation

- **Nineteen states of the 26 states offer alternate pathways to graduation for general education students who have difficulty passing the regular exit exam but can demonstrate mastery of high-school-level knowledge in other ways.** Passing an alternative assessment, such as the SAT, and collecting a portfolio assessment of classroom work are the most common alternate pathways that states offer general education students. Four states offer waivers or flexible cut scores that allow students to graduate if they have failed the exit exam but meet other graduation requirements and comply with very specific criteria, such as completing additional courses or scoring within a certain margin of the cut score on an exit exam. Students who graduate through a waiver, however, do not always receive a regular diploma.

- **Twenty-two of the 26 states also offer specific alternate pathways for students with disabilities, but only two states have alternatives for English language learners.** Fourteen states make available alternative assessments, including portfolio assessments or modified standardized tests, as pathways for students with disabilities who are struggling to pass exit exams. Eleven states offer waiver options specifically for students with disabilities. Most states allow English language learners (ELLs) to take exit exams with accommodations, and most offer ELLs the same alternate pathways available to general education students. Idaho and Minnesota offer alternate pathways aimed at ELLs who have been in the country for a limited number of years.

- **States rely heavily on advisory committees to design and implement alternate pathway policies; states also stress the importance of monitoring, training, and communication in implementing these alternatives.** In Maryland, New Jersey, and Washington, the three states where we conducted case study interviews, committees that were broadly representative of stakeholders were involved in the details of designing, implementing, revising, and evaluating state exit exams, including policies for alternate pathways. All three states also faced political challenges in balancing flexibility against rigor and fairness, and technical challenges in developing and implementing alternate pathways with limited state staff. Officials in the three states also emphasized the importance of monitoring the use of alternate pathways, providing training to teachers, and actively communicating with stakeholders about policies concerning alternate pathways.

Trends and Gaps in Exit Exam Pass Rates

- **Improvements in initial pass rates varied across states, although increases in pass rates were greater in mathematics than in reading.** Sixteen of the 26 states had three or more years of consecutive data on the percentages of students who passed exit exams on the first try (the "initial" pass rate). Over three or more years, 8 of these 16 states showed average annual growth in the initial math pass rates of more than 2 percentage points, and four more states made gains that exceeded 1 percentage point. In reading, only three states showed growth in initial pass rates of more than 2 percentage points, and five more states had gains that exceeded 1 percentage point. Initial pass rates decreased slightly in a few states.

- **Five states (Alabama, Arizona, California, Massachusetts, and Texas) reported the data needed to calculate three-year trends in the percentages of students passing exit exams by the end of grade 12 (the "cumulative" pass rate).** Between 2006 and 2008, Alabama, California, and Massachusetts had cumulative pass rates around 95 percent in both reading and mathematics. The cumulative pass rates in Texas have been consistently higher in reading than mathematics, but the difference has become smaller in the past three years. The difference between initial and cumulative pass rates varies from less than 8 percentage points in Massachusetts to more than 20 percentage points in California. Alabama had a gradual decrease in its initial pass rates in reading, but its cumulative pass rate was steady. Arizona also shows a widened difference in both subjects as its cumulative pass rates grow faster than its initial pass rates.

- **Gaps in initial pass rates between subgroups remain large.** Gaps in initial pass rates were evident in all states between Latino and white students, between African American and white students, and between low-income students and the general student population. In most cases, these gaps were wider than 5 percentage points, and in some cases exceeded 30 percentage points.

- **In most states, gaps in initial pass rates have narrowed, but at different paces.** States that have made more progress in narrowing gaps in pass rates are not limited to those with relatively large gaps. Rather, some states with relatively small gaps have made great progress in closing initial pass rate gaps. Other states have made no progress in closing these gaps, but their pass rate gaps have remained relatively narrow since they began withholding diplomas. And some states with relatively large gaps in initial pass rates showed no improvement in narrowing the gaps. There is no clear-cut pattern or explanation for these differences.

Profiles with detailed information about exit exams in individual states can be found on CEP's Web site (www.cep-dc.org). **Table 1** summarizes the major characteristics of exit exams in these 26 states. **Figure 1** displays the 24 states that, as of school year 2008-2009, require students to pass exams to receive a high school diploma.

Table 1 **Major Characteristics of State Exit Exams**

State	Current Exam	Year Diplomas First Withheld Based on Current Exam	Subjects Tested	Type of Test	Grade Level of Alignment	Grade Test First Administered	Prior Exit Exam or Exit Exam Being Phased Out
Alabama	Alabama High School Graduation Exam (AHSGE) 3rd Edition[1]	2001	Reading, language, math, science, social studies	Comprehensive	11th	10th	Alabama High School Graduation Exam (AHSGE) 1st and 2nd Editions
Alaska	Alaska High School Graduation Qualifying Exam (HSGQE)	2004	Reading, writing, math	Comprehensive	8th-10th	10th	None
Arizona	Arizona's Instrument to Measure Standards (AIMS)	2006	Reading, writing, math, science	Comprehensive	10th	10th	None
Arkansas	Arkansas Comprehensive Assessment Program	2010	English II, algebra I	End-of-course	Varies	Varies	None
California	California High School Exit Examination (CAHSEE)	2006	ELA, math	Comprehensive	ELA (through 10th), math (6th - 7th and algebra I)	10th	None
Florida	Florida Comprehensive Assessment Test (FCAT)	2003	Reading and math	Comprehensive	10th	10th	High School Competency Test (HSCT)
Georgia	Georgia High School Graduation Tests (GHSGT)	1994	ELA, writing, math, science, social studies	Comprehensive	9th - 11th	11th	Basic Skills Test
Idaho	Idaho Standards Achievement Test (ISAT)	2006	Reading, language usage, math, and science	Comprehensive	10th	10th	None

Washington	Washington Assessment of Student Learning (WASL)[1]	2008	Reading, writing, math (2013), science (2013)	Comprehensive plus end-of-course exams	10th	10th	None

Table reads: Alabama currently administers the Alabama High School Graduation Exam (AHSGE), 3rd Edition, for which consequences began for the class of 2001. The exam assesses reading, language, math, science, and social studies, and is considered by the state to be a comprehensive, standards-based exam aligned to 11th grade standards. The current test replaced the Alabama High School Graduation Exam, 1st and 2nd Editions.

[1] Alabama, Indiana, Minnesota, New Mexico, North Carolina, Texas and Washington will transition to new exams. See state profiles, found in the accompanying CD or online, for detailed information.

Note: This year's report uses the term "comprehensive" to refer to exit exams aligned to state standards in several subject areas and generally targeted to the 9th- or 10th-grade level. Previous CEP reports referred to these as "standards-based" exams.

Note: ELA = English language arts.

Figure 1 **States with Mandatory Exit Exams**

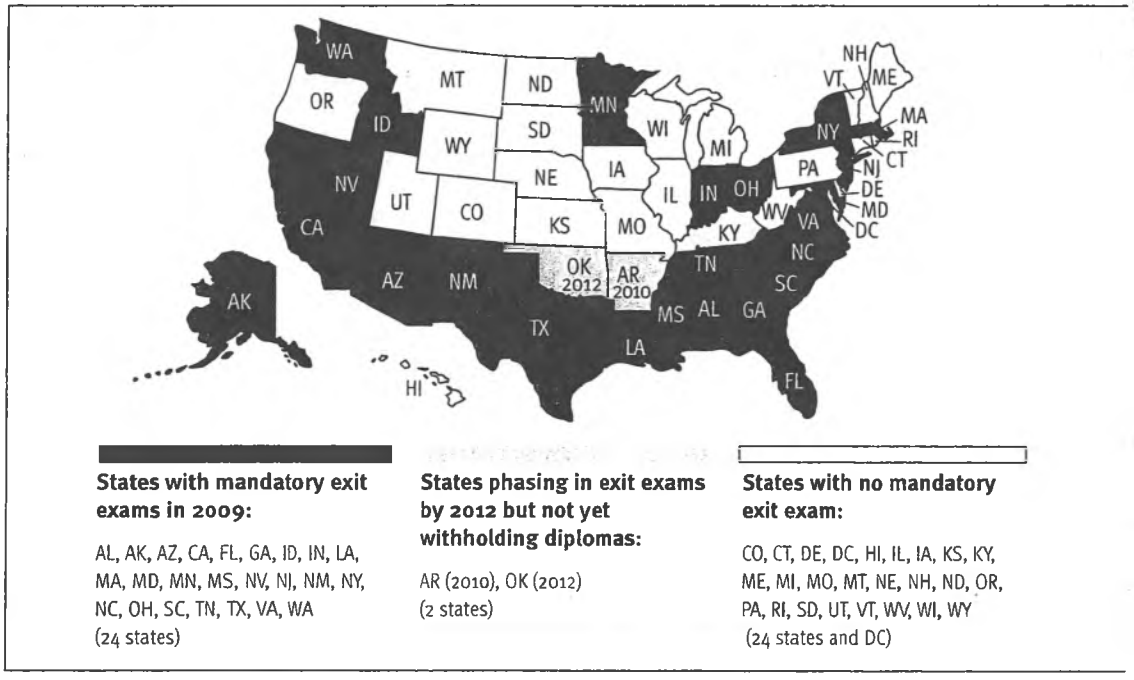

Figure reads: Alabama has a mandatory exit exam and is withholding diplomas from students based on exam performance. Arkansas is phasing in a new mandatory exit exam and plans to begin withholding diplomas based on this exam in 2010. Colorado does not have an exit exam, nor does it plan to implement one.

Source: Center on Education Policy, exit exam survey of state departments of education, August 2009.

Recommendations

In this report we review the development over eight years of state policies affecting high school exit exams, showing both the commonalities and the differences among the states. We also review state policies setting out alternate paths to high school diplomas, and analyze the trends in initial and cumulative pass rates for these exams.

From this work, we have arrived at recommendations both to improve the immediate implementation of state policies in this area and to assist the states in making sounder long-term policies as they seek to ensure that all students are able to earn a diploma.

Immediate Recommendations

- **States should increase funding to ensure that all students are prepared for the exams and are given assistance in preparing for re-takes of the exams if they do not pass on the first try.** In this report we have noted that several states initially provided remediation funds to assist students taking the exams after failing them, and that these states have cut back on this funding. If states want students to pass the exams, they must not only ensure that they are properly prepared for the first try but that they also have access to additional assistance to prepare for re-taking the exams.

- **With alternate pathways, there should be much greater communication to students and their parents about these different ways to secure a diploma.** Although these alternates are always meant to

be for a minority of students, all students should be aware that they can use alternate pathways, especially if they have already passed another qualifying exam or will have great problems taking a standardized multiple-choice exam.

➤ **States need to increase oversight of alternate pathways designed for students with disabilities.** In many states, it is the responsibility of local schools and districts to administer alternate pathways, to decide qualifications for graduation through the pathways, and to keep records of student performance. States have little information about how well the state-designed pathways serve their target student population. Consequently, states are not able to easily apply lessons learned from current policy implementation to inform future decisions.

➤ **States should collect and make public data on cumulative pass rates on these exams.** Trend analyses in this report heavily rely on initial pass rates because cumulative pass rates are not easily accessible in many states. Such information on cumulative pass rates, however, could have been very helpful for the public to understand the effects of these exams.

Long-term Research Recommendations

In Appendix A we summarize recent studies on the effects of these exams. Research is sparse in this area, as shown by the relatively few studies we list; and the findings of these studies are contradictory or at best mixed. Since these exams now affect more than two-thirds of American students, and soon will affect about three-fourths of students (when all the states have carried out their intended policies), much greater attention ought to be paid to understanding the effects of these exams.

Therefore, we recommend that the following questions be addressed comprehensively through research:

- Are these exams helping to prepare students for further education or employment after completion of high school? Since the states vary in their exams, are some state exams better than others in achieving this goal?
- Are students passing these exams in states with these policies better prepared for further education and employment than are students in states without such exam policies? If there are such effects, are they due to demographic factors or to the test policies or to some other factors?
- What impact are these exams having on curriculum, instruction, and student motivation to learn?
- Are students earning diplomas through alternate pathways less well prepared for further education or employment than are students passing the regular exams?
- Are policies requiring passage on these exams for receipt of diplomas leading to higher dropout rates from school?
- How can the rigor of different state exams be examined and publicized to encourage a fuller public understanding of these policies?
- If all or some of the states adopt common academic standards, what is the future for high school exit exam policies?

Study Methods

CEP used the following methods, explained in more detail in this section, to identify issues and collect information for this year's study:

- Conducted a detailed survey of all 26 states with current or planned high school exit exams
- Interviewed officials in Maryland, New Jersey, and Washington State who were familiar with the state high school exit exams
- Reviewed major research conducted by others on exit exams
- Kept abreast of important events related to exit exams

As in previous years of this study, CEP designed and conducted an annual survey of state department of education officials in the 26 states with current or planned exit exams. The survey was piloted with Maryland and was revised further based on comments and suggestions from that state. Respondents were designated by their state's chief state school officer and usually worked in the state assessment department. CEP staff partially filled in the survey, based on information collected and reported in 2008. In February 2009 we asked these designated officials to verify, update, and add information to survey forms for their state. All 26 states responded to our survey.

We used the states' survey responses to develop detailed profiles about exit exams in each of the 26 states, which the state contacts reviewed for accuracy. We also used the survey responses to tally the state exam features, policies, and actions that appear throughout the report. The state profiles are available on CEP's Web site at www.cep-dc.org.

Some states did not answer all the survey questions, often because the data were unavailable or their policies were in flux. (Exam policies are in flux for several reasons, but a main one is that state legislatures are under continuing and significant political pressure to moderate or ameliorate the effects of these exams.) In many states, we followed up with e-mails and phone calls to ensure the information in this report was accurate and up-to-date. However, some statistics or policies will undoubtedly have changed soon after publication because events in this field move quickly.

To further understand how exit exam policies evolve, we conducted open-ended, semi-structured interviews with officials in Maryland, New Jersey, and Washington State. These three states were chosen because of their different designs of alternate pathways, the recent public discussions about their exit exams, and the volatility of high school assessment policies in these states. Interviews were recorded, transcribed, verified by the interviewees, coded, and analyzed for themes.

In addition, we collected state and federal policy documents and reviewed relevant studies that were either published or publicized during the past year. We tracked media coverage of exit exams and searched state and U.S. Department of Education Web sites for exit exam developments and information.

To be included in this study, state exit exams had to meet the following criteria:

1. The state requires students to pass state exit exams to receive a high school diploma, even if the students have completed the necessary course work with satisfactory grades.
2. The exit exams are a state mandate rather than a local option—in other words, the state requires students in all local school districts to pass exit exams, rather than allowing districts to decide for themselves whether to make the exams a condition of graduation.

We have also included states that are phasing in exit exam policies that meet these criteria, referred to in this report as "planned" exit exams. By this we mean that the state has a legislative or state board directive to have a test in place between 2002 and 2012; has already begun developing the tests; and is piloting the tests with students, although diplomas are not yet being withheld.

Chapter 1: Evolution of Exit Exam Policies over the Past Eight Years

Since 2002, the Center on Education Policy (CEP) has been collecting extensive information about high school exit exams, including test characteristics, testing policies related to accountability and state assistance, and student performance on the exams. As the data accumulate, some general trends in exit exam policies have emerged.

This chapter summarizes exit exam policy changes across states over the past eight years (2001-2008 school years). It provides a longitudinal perspective on the evolving nature of state testing policy. In the past, CEP's annual reports focused on the policy changes within a single year. We realize that policy change often involves several years of effort, and an examination of the development of these changes can be instructive to future policy decision making. Unlike the "New Developments" chapters in the previous annual reports, this chapter synthesizes the changes over several years and across states in order to find underlying patterns of policy development. What actions have states taken to improve exit exam policies as they gain experience with the tests? Are there any commonalities in their actions?

The purpose of this report is not to identify the optimal design for high school testing policy. State policies are diverse, and even similar policies may yield divergent outcomes in different contexts. Our goal, therefore, is to acknowledge the diverse policy options and to discuss how each functions in its particular context.

Changes in Exit Exam Policies

For the past eight years, changes in exit exam policies reflect the states' struggles to set high standards and at the same time, make those high standards achievable and fair for schools. Many states have changed their standards and curricula and the way they use exit exams. When implementing the exit exam policies, states have been very careful about the way exit exams are introduced or phased in, making adjustments for students with special needs. In this chapter, we discuss in detail some common actions states have taken to develop exit exam policies, starting with updating standards and test purposes, followed by various phase-in approaches and adjustments for students with special needs. We also look at the role that external and peer review play in shaping policy.

Changes in Standards and Curricula

Many states have changed their high school standards and curriculum in recent years to either meet federal requirements or respond to the public push for high school graduates' readiness for work or postsecondary education. Exit exams have been developed or revised to reflect new standards and curricula and to push the local implementation of these changes.

Changes in standards have inevitably resulted in various changes in exit exams. Alabama, for example, shifted the testing focus from basic skills to 11th-grade state standards in the late '90s as the state set out to pursue higher standards. Arizona introduced new test items in 2005 based on the state's new standards adopted in 2003 for reading and math and in 2004 for writing. North Carolina voted in 2005 to adopt new standards by including requirements for passing additional end-of-course (EOC) exams.[1] Mississippi revised its Algebra I and English II exams in 2007-08 to reflect the state's new curriculum frameworks. Tennessee also reported changes in its high school curriculum in 2008 and the alignment of EOC exams with the new curricula. In 2009, New Jersey approved revised core curriculum standards in six content areas and plans to phase in new graduation requirements to ensure college and work readiness over the next seven years (New Jersey Department of Education, 2009). Colorado, though not currently requiring exit exams, is considering revamping high school assessments in 2010 and changing its diplomas to reflect the new high school standards approved by the state school board and the higher education commission in July 2009 (Brown, 2009). While most changes have been toward increased rigor, some have narrowed the scope of tests. In 2004, California revised the blueprint for its mathematics test by replacing questions with less frequently encountered data display with more frequently encountered data display.

Expanded Purposes of Exit Exams

As accountability for student performance has increased over the years, the purposes of exit exams have expanded to be more relevant to teaching and school monitoring. In 2004, when CEP first began surveying states about the purposes for their exit exams, most states reported that the tests were to assess whether individual students have achieved competencies to be expected at the high school level. Only one state (South Carolina) reported that the purpose of exit exams was to "identify areas in which students need additional support and indicate the academic achievement for schools, districts and the State." By 2009, all states except Alaska and Texas reported using part of the exit exams for federal accountability purposes; nine states use the exams to provide information to guide instruction; eighteen states indicate that they use performance data from high school exit exams to inform policy decisions; and most states reported using exit exams to evaluate school and district performance, encourage early identification of students needing additional instructional support, promote service to minority students, and help schools align curricula with state standards. The expanded use of high school exit exams signifies that exit exams play an increasingly important role in high school accountability.

By 2009, eleven states[2] included readiness for work and postsecondary education as a purpose of their exit exams. (In 2004, only one state, Georgia, indicated that its exit exam was aimed at certifying that students were prepared to enter the work force or college.) However, few external evaluations examine the relationship between student performance on exit exams and performance at work or in college. A study by the Center for Educational Policy Research found that state high school exams were generally at a level of challenge that was not sufficient for test scores to be good measures of student readiness for college (Brown & Conley, 2007). A study by Achieve (2004) also concluded that state exit exams did not adequately measure the necessary knowledge and skills needed for college and the work place.

Phase-in Approaches

States used various types of phase-in approaches to introduce new exit exam policies. The development of exit exams is often shaped by reactions received during early years of implementation; therefore, how exit exams are introduced and phased in sometimes plays an important role in policy formation.

[1] North Carolina fully transitioned to EOC exams in 2009. Please see the state's profile for detailed information.

[2] Arkansas, California, Indiana, Maryland, Minnesota, Nevada, New York, North Carolina, Oklahoma, Texas, and Washington.

Some states phase in exit exam requirements by allowing time between the year tests are first administered and the first year high school diplomas are withheld. Arkansas, for instance, began administering its EOC exams in the 2000-01 school year but will not withhold diplomas until 2010. On average, states start to withhold diplomas four years after the first administration of a new exit exam.

Other states phase in the exit exam policy by gradually increasing the number of subjects tested. English and mathematics are usually the first subjects tested. Though NCLB does not require exit exams for high school graduation, some states, such as Arkansas, Massachusetts, Nevada, and New Jersey, added exit exams in science in recent years to fulfill NCLB requirements for testing science at the high school level. Alabama included social studies as a test subject in 2004; Massachusetts voted in 2006 to test social studies as a required subject in 2012, but the state board voted to waive the requirement in 2009 for the classes of 2012 and 2013 (Valero, 2009).

Idaho exemplifies another phase-in approach that focuses on gradually increasing cut scores and aligning test content to standards at higher grade levels. It began administering the Idaho Standards Achievement Test (ISAT) as an exit exam in 2004. Its phase-in approach allowed the class of 2006 to pass the exam at an 8th-grade proficiency level, the class of 2007 at a 9th-grade level, and the class of 2008 at the full 10th-grade level.

Some states used a phase-in approach to introduce new tests or to transition from old to new tests. For example, Minnesota has been making the transition since 2006 from the Basic Skills Tests (BSTs) to the Graduation Required Assessments for Diploma (GRAD). The GRAD writing test replaced the Basic Skills written composition test in 2007; the GRAD reading tests replaced the Basic Skills reading test in 2008; and the GRAD mathematics test replaced the Basic Skills mathematics test in 2009.[3] Mississippi adopted a similar approach when replacing its Functional Literacy Exams (FLE) with the Mississippi Subject Area Testing Program (SATP).

Adjustment for Special Groups

State exit exams are often under attack for the challenges they present to students with special needs. All states that mandate exit exams have made some modifications to their policy to accommodate students with disabilities. These policy accommodations include alternative assessments, alternative diplomas or certificates, and waivers. In this report, we consider all these modifications to be alternate pathways to graduation. We will discuss the development of alternate pathways in greater detail in Chapter 2.

Input from external and peer review provides important information for the changes described above. Though these different types of review serve distinctively different purposes, both have helped many states establish and consolidate their high school testing systems. While external reviews examine the quality, rigor, and alignment of exit exams with state standards, the peer review from the Department of Education (ED) ensures that exit exams used for NCLB purposes[4] are in compliance with NCLB requirements.

Seventeen states have their exit exams reviewed by a third party, such as testing companies, evaluation specialists, or researchers at local universities. Conducted by specialists or test developers, external reviews report student performance and content alignment and vary widely in study scope and approach (CEP 2006); nevertheless, the review provides empirical evidence for test validity and detailed analysis of student performance. For instance, Virginia conducted an alignment study in which researchers found that the State Standards of Learning (SOLs) for the EOC tests in Algebra I and II and geometry are inconsistent with the cognitive demand of the tests; the EOC reading test emphasizes some SOLs more than others (Abrams & McMillan, 2007). ED recommended in 2007 that the state develop and implement a plan to address the findings of the report.

[3] It is reported in our survey that the state is still administering the BST tests in 2009. The mathematics and reading BSTs are administered as retests until the class of 2009 has graduated and sufficient notice of retirement of the exam has been given.

[4] Of the 26 states, only Alaska and Texas do not use their exit exams for NCLB purposes.

States also organize special task forces and ongoing review by technical advisory committees for advice on specific state concerns. For example, in response to a higher-than-anticipated failure rate on the Graduation Required Assessments for Diploma (GRAD) in late 2008 and early 2009, Minnesota established a legislative task force to review the policy implications of the GRAD and its effect on high school graduation. In 2005, Maryland also established a task force to examine alternative assessment options for special education students and others unlikely to be able to demonstrate their mastery of state standards on the High School Assessments (HSAs), even with continued intervention. As a result, the state approved an alternate pathway to graduation called the Bridge Plan for Academic Validation in November 2007 and administered modified HSAs in 2008.

As 24 of the 26 states use at least part of the exit exams for NCLB accountability, recommendations from the U.S. Department of Education also play an important role in shaping state exit exam policies. The purpose of peer review by ED is to see if the state testing systems are in compliance with NCLB. ED has given full approval to ten[5] of the 26 states through its peer review process. All ten states except Alaska[6] include high school exit exams in the evaluation of state assessment systems.

Another ten states with exit exams earned the status of Full Approval with Recommendations, meaning that the state standards and assessment system meet all statutory and regulatory requirements, but some elements of the system could be improved.[7] Most of the suggestions for improvement concern the use of alternative assessments for special education students and English language learners. For instance, in 2006 ED recommended that Arizona "strengthen its Arizona Instrument to Measure Standards Alternate (AIMS-A), expand the range of accommodations for English language learners and address discrepancies in test participation rates." Another set of recommendations from ED to the states focuses on alignment between tests and standards. Idaho, for instance, was urged by ED in 2006 to conduct an alignment study of Idaho Standards Achievement Tests to examine "the level of success of the State's major revisions and provide a basis for continued improvement." A recommendation was also made to Indiana to "increase the rigor and challenge of the Graduate Qualifying Exam (GQE) in mathematics at grade 10 in terms of alignment to grade-level content standards."

Three states that require exit exams for graduation (Mississippi, Nevada, and New Jersey) have not met the statutory and regulatory requirements of NCLB; they are currently designated as Approval Pending. Specifically pertaining to high school assessment systems, ED recommends that Mississippi and Nevada collect additional evidence for their high school exit exams, since they are used to meet NCLB requirements. In 2007, ED expressed concerns with the alignment of Nevada's High School Proficiency Examination (HSPE) to grade-level content standards. ED also challenged the technical quality of Mississippi's High School Alternative Assessment and its alignment with grade-level content standards.

State-mandated exit exams still face many challenges and are prone to revision. Recently, California's budget crisis has pressured its budget conference committee in 2009 to propose eliminating high school exit exams as a graduation requirement (Mitchell, 2009); the provision was defeated, but California reinstated the exemption for students with disabilities pending development of some alternative form of assessment for these students. Alabama overhauled its graduation exams by replacing its comprehensive high school exit exams with EOC exams and the ACT[8]. Many states are still searching for a valid approach to evaluate the learning of special education students and English language learners. Last but not least, little is known about the connection between passing the high school exit exams and future job and college performance.

[5] Alabama, Alaska, Georgia, Louisiana, Maryland, Massachusetts, Minnesota, Ohio, Oklahoma, and Tennessee.

[6] Alaska uses the Grade 10 Standards-based Assessment for NCLB purposes instead of the Alaska High School Graduation Qualifying Exam.

[7] Decision letters on states' final assessment systems under NCLB can be found at www.ed.gov/admins/lead/account/nclbfinalassess/index.html. All citations in this section are quoted from state letters. All ten states include high school exit exams for peer review. States may use different cut scores for graduation and NCLB purposes.

[8] Information retrieved on September 13, 2009, from www.al.com/news/birminghamnews/metro.ssf?/base/news/1252656964314590.xml&coll=2.

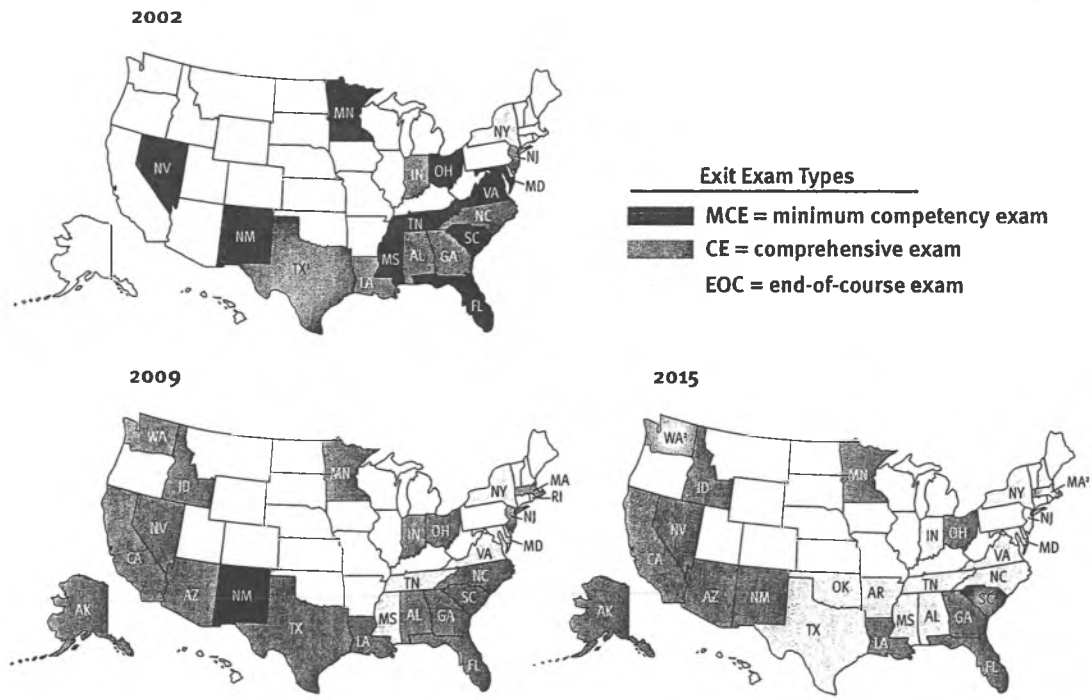
Diversity of Exit Exams

Most of the states in our study were no strangers to state testing before high school assessment was required for federal accountability purposes. Of the 26 states currently or soon to be withholding high school diplomas based on state exit exams, 18 had developed and started administering state tests at the high school level before the enactment of NCLB. Some states had more years of experience in high school testing than others. For example, North Carolina, New York, and Florida administered minimum-competency tests in the 1970s or earlier, while most of the other states started requiring high school testing in the late '90s or right before NCLB.

All 26 states mandated high school exit exams as a way to improve academic rigor and accountability. Since 2002, not only have more states administered high school exit exams, state high school exams have also become increasingly high-stakes for both students and schools. More states began withholding diplomas from individual students and using exit exams for both federal and state accountability at the school level. In 2009, seven states indicated that they use exit exams for both NCLB and additional state accountability purposes.

Exit exams are of three types: 1) minimum-competency tests that measure only a small body of knowledge and skills as defined by the state standards, 2) comprehensive tests that integrate content knowledge in several relevant courses together, or 3) End-of-Course (EOC) tests that gauge student learning at the end of specific courses. CEP (2008) identified a movement toward EOC exams in several states and analyzed the benefits and challenges of using EOC assessments. According to the report, state officials perceived EOC exams as more efficient in assessing content mastery, improving school accountability, and increasing alignment between standards and curriculum. However, because EOC exams involve numerous tests, they tend to present logistical challenges around score reporting and maintenance as well as schedules for tests, remediation, and retests. **Figure 2** illustrates state's use of the three types of exams at different time points.

High school exit exams may be aligned to various grade levels, ranging from 8th to 12th grade. Even if two states test the same subjects, the tests may differ greatly in content and difficulty. In addition to the different test types, the test results are often reported using different achievement levels—advanced/proficient/needs improvement/failing, pass with distinction/pass/low pass, or advanced/mastery/basic/approaching basic/unsatisfactory, to name a few—which reveal varying amounts of information on the level of achievement and the achievement gaps among students.



Most of the states require students to pass the exams in certain subject areas with specific cut scores, but some states permit students to graduate without passing every subject. For example, Maryland employs a compensatory scoring system so students may meet the graduation testing requirement by meeting a minimum score on each test (which is lower than the previously set passing score) and achieving a combined passing score. Since May 2008, Alabama has adopted the credit-based endorsement system wherein students are required to take tests in five subject areas, but only need to pass three (reading, mathematics, and one other in science, language, or social studies) to graduate with "diplomas with endorsement."[9] Ohio and Texas also allow students who have passed part of EOC exams to graduate.

The cut scores for passing exit exams are not necessarily the same as the cut scores states use for reporting adequate yearly progress (AYP) under NCLB. As of 2009, of the 24 states that use high school exit exams for NCLB purposes, 14 use the same cut scores for graduation and NCLB proficiency, and 9 use lower cut scores for graduation than for NCLB proficiency.[10] States also differ in terms of which test administration is used for NCLB. The majority of the states use student performance on the first administration of the tests for NCLB accountability purposes, but states such as Nevada, New York, and Tennessee count students' retest performance as well.

[9] A regular diploma requires passage of all five tests. Students earning diplomas with endorsement are counted as graduates for school accountability purposes.

[10] Alaska and Texas do not use high school exit exams to meet NCLB requirements. The cut scores in New Mexico are under consideration.

Figure 2 Types of Exit Exams States are Using or Plan to Use

In 2002 (out of 18 states)	In 2009 (out of 24 states)	By 2015 (out of 26 states)
MCE: FL, MD, MN, MS, NV, NM, OH, SC, TN, VA (10 states)	**MCE:** NM (1 state)	**MCE:** (0 state)
CE: AL, GA, IN, LA, NJ, NC, TX[1] (7 states)	**CE:** AL, AK, AZ, CA, FL, GA, ID, IN, LA, MA, MN, NC, NJ, NV, OH, SC, TX, WA (18 states)	**CE:** AK, AZ, CA, FL, GA, ID, LA, MA[2], MN, NM, NV, OH, SC[2], WA[2] (14 states)
EOC: NY, TX[1](2 states)	**EOC:** MD, MS, NY, TN, VA (5 states)	**EOC:** AL, AR, IN, MA[2], MD, MS, NC, NJ, NY, OK, SC[2], TN, TX, VA, WA[2] (15 states)

Figure reads: In 2002, 10 of the 18 states with fully implemented exit exams, including Florida, used minimum-competency exams, while 7 states, including Alabama, used comprehensive exams, and 2 states, including New York, used end-of-course exams. By 2015, none of the 26 states with mandatory exit exams will use minimum-competency exams, 14 will use comprehensive exams, and 15 will use end-of-course exams. Three states, Massachusetts, South Carolina and Washington will use a combination of comprehensive and end-of-course exams.

[1] In 2002, Texas gave students the option to pass either a CE or an EOC exam.

[2] By 2015, Massachusetts, South Carolina and Washington will require students to pass the comprehensive exams plus end-of-course exams.

Source: Center on Education Policy, exit exam survey of state departments of education, August 2009.

The range of tested subjects has evolved since 2002 and varies widely across states. Some states, such as California, test only English language arts and mathematics, while graduation in states such as Tennessee now depends on tests in as many as ten subjects. Most states have increased the number of tested subjects since 2002. A major drive of the expansion is NCLB's requirement for including science in state assessments by 2007-08. In 2003, 8 of the 23 states with high school exit exams reported science as a tested subject for high school graduation purposes; in 2005, 16 of 25 states reported that they would use the existing science exit exams or develop new science exams to meet NCLB's requirement. As of 2009, 22 of the 26 states have tested or plan to test science in high school, though some states do not withhold diplomas for not passing the science tests.

As states test more subjects, the cost of state testing has become a concern. In 2009, the Massachusetts Board of Elementary and Secondary Education voted to waive the history and social science requirement for a Competency Determination (CD) for the classes of 2013 because of budget constraints (Massachusetts Department of Elementary and Secondary Education, 2009). The tests were scheduled for full operation in fall 2009, but officials expect "the FY2010 budget item pertaining to assessment to be lower than the amount in this year's budget, which would make the transition of the history tests cost-prohibitive." Florida has also cut testing budgets in 2009, citing financial pressures (Valero, 2009).

High school exit exams differ across states with regard to how much time a student has to take a test. Of the 26 states, 13 implemented power tests[11] that attach no time constraints at all. In Nevada, though the tests are timed, students are allowed to use as much time as they need to complete the exam. In other states, the total testing time ranges from 97 minutes (North Carolina's math tests[12]) to 194 minutes (Indiana's English language arts test). Some tests have multiple sessions or allow more time as an accommodation, and may continue for days.

One test design feature that states have in common is the use of multiple-choice test items. All states use multiple-choice questions in their tests, and some, such as Alabama, Idaho, Maryland, and Tennessee, use only multiple choice question items. In addition to multiple-choice items, 19 states include essay writing in their writing or English language arts tests. Of the 26 states, 16 use a combination of constructed-response and multiple-choice questions.

Item format is an important consideration for testing policy because it determines cost, communication of test results, teacher training and, most importantly, classroom instruction that prepares students for tests. As the current economic recession crimps state budgets, some states have pared constructed-response or extended-response test items. In 2008, Washington State Superintendent Randy Dorn defeated longtime school chief Terry Bergeson, an ardent supporter of the Washington Assessment of Student Learning (WASL), with a promise to make high school exams shorter and cheaper with fewer extended-response questions to shorten the turnaround time on test results. Computerized scoring, often used with multiple-choice test items, has also been embraced to save time, money, and staffing for the test administration. In 2005, 18 states reported that they relied on testing contractors to score constructed-response questions.

While designing a high-stakes, mandatory test is difficult, attaching consequences to test results is even more fraught with problems. In 2009, the Minnesota legislature decided to repeal the requirement that students must pass the mathematics test to earn a diploma, in fear of a precipitous drop in graduation rates. The daunting prospect of withholding large numbers of diplomas and the challenge of aligning exams to school curricula and state standards, along with public opposition to high-stake assessments, have led some states, such as Alaska, Arizona, California, and Maryland, to postpone the implementation of high school exit exams. States that have not required exit exams, such as Pennsylvania, have also had heated discussion about whether to do so. In June 2009, Pennsylvania put off developing state-mandated EOC exams because consensus could not be reached. The state board of education proposed a revised plan in July and the review board approved the state exit exams in October (Barnes, 2009; Mauriello, 2009; Hardy, 2009).

[11] In so-called "power tests," enough time is given for test takers to answer as many test items as they can.

[12] This high school competency test was eliminated in 2009.

State Assistance for Local Implementation of Exit Exams

The evolution of state exit exams suggests that, as the state testing systems are institutionalized, exit exams have become a powerful policy lever to influence teaching and learning in high schools. Since 2002, many states have reported increased technical support to districts and schools but decreased financial support for remedial programs.

In 2002, only half of the states required districts to have remediation services, let alone provided support with these services. When we first explored state assistance in 2003, most states delivered their support to schools through professional training, with an emphasis on test content, format, and the interpretation of test results. About one-third of the states (8 out of 25), provided students with study guides to tests, and fewer states provided teachers with resources for classroom instruction.

As of 2009, state assistance tied to exit exams that goes to teachers, schools, and districts has expanded dramatically. Some states have become more actively and directly involved in informing instruction, improving school leadership, and influencing curriculum. Eighteen states provide professional development for teachers that goes beyond test preparation, helping teachers become "more proficient in their content areas" to raise initial pass rates on the exit exams. Nineteen states reported that they provide assistance to schools in terms of helping schools identify and target students for assistance and/or implement comprehensive school reform. At the district level, 15 states reported that they assist districts in using formative assessment and/or improving the instructional leadership. Additionally, 14 states provide direct technical assistance for remediation programs for students who have failed the tests, and 10 states provide funding for remediation as well. A recent example is a special summer program sponsored by the Georgia Department of Education in 2009. The Project Exam Preparation for Science and Social Studies (Project ExPreSS) gives two weeks of intense instruction to students who narrowly missed passing the science and social studies portions of the Georgia High School Graduation Tests. Sixty-eight percent of participating students passed the portion they failed before (Fowler, 2009).

On the other hand, state budget data we collected indicates a significant decline in the amount of state funding for remediation programs. For example, Louisiana reported $3 million funding for remediation for 2001-02 school year, and this budget had dropped to $2,039,284 in 2008-09. South Carolina reported that its 2008-09 budget for remediation programs was at $62 million, half of the amount schools received in 2004-05. In Massachusetts, funding for MCAS remediation was cut from $50 million in fiscal year 2003 to $7.65 million in 2005 and $7.58 million in 2006. CEP's high school exit exam report in 2006 suggested that remediation programs can be effective in improving passing rates if provided with adequate funding and efficient management. The decreasing state funding may diminish the benefits these programs offer to struggling students.

Conclusions

This chapter highlighted changes in high school exit exam policies in four different aspects: the changing standards and curriculum the tests are aligned to, the expanded purposes exit exams are designed for, the different phased-in approaches that introduce exit exam policy changes, and the test adjustments for students with special needs. Feedback on exit exams from external and peer review is an important factor shaping these changes. Despite some common changes in exit exam policies across states, exit exams remain diverse in terms of test features, such as grade levels tests are aligned to, tested subjects, test time, test item format, scoring, and the use of test outcomes. Lastly, in a number of states, provision of technical assistance has been increased for local implementation of exit exam policies, but at the same time, in a number of states financial support for remediation programs has decreased.

Chapter 2: Trends in Alternate Pathways to High School Graduation

The stakes for high school exit examinations are so high for students and schools that states are often pushed to employ additional policies to give more flexibility in determining whether students have met graduation requirements. Many states have responded by providing alternate pathways to graduation that give students options of ways to graduate from high school without passing the state-mandated exit exams. These pathways, usually for students with special needs or those with records of failing the exit exams, may give students additional opportunities to demonstrate their levels of knowledge and skills. The main goal of alternate pathways is to provide appropriate and reasonable options for students without creating loopholes that water down the value of the high school diploma. Therefore, discussions about alternate pathways in many states have centered on test equivalence and integrity as understood by the public to make the exit exam system more resilient.

This chapter provides an overview of the various state policies that offer alternate pathways to graduation. It also describes the challenges associated with alternate paths: adding flexibility to accountability while assuring test fairness and maintaining high standards. The term *alternate pathways* refers to options for students to graduate high school without passing the state-mandated regular exit exams. One design of alternate pathways is the use of *alternative tests* (or alternative assessments in some states) where regular exit exams are substituted by other standardized tests with similar or adapted formats and objectives. For instance, the alternate pathways in Washington State allow students to graduate through alternative assessments, such as SAT and ACT; the state's alternate pathways also include other options for graduation, such as portfolio assessment, grade comparison, and scores on Advanced Placement exams.

Multiple forces have shaped the development of alternate pathway policies. First and foremost is the desire to address the needs of students receiving special education services, English language learners, and other students who do not demonstrate their best performance on standardized tests. Unlike remediation, which seeks to prepare students to pass the exit exams after failure, alternate paths allow students to demonstrate their learning using different measures. Ideally, alternate path policies reflect a broader way of thinking about test validity and fairness to these students that goes beyond standardized tests, though some of them can be logistically and technically cumbersome.

A second motivation behind alternate path policy is the need to address concerns about making valid judgments about student learning based on standardized assessments, particularly for students with achievement around the cut score level. Multiple retake opportunities may ease such concerns, but may not be the most effective way for students to spend their learning time as they repetitively prepare for the same exams. States have adopted various approaches, such as alternative or substitute tests, flexible cut scores, and grade comparison, as explained later in this chapter, to ensure decisions made based on test results take other factors into consideration. Some of the alternate pathways, however, make exit exams more norm-referenced than criteria-referenced tests.

Alternate pathways are sometimes employed to avoid redundancy of testing. One example is the use of Advanced Placement (AP) tests as substitutes for exit exams. Maryland waives the exit exams for students who have earned satisfactory scores on corresponding AP exams[13]. The assumption is that satisfying AP scores provide evidence for students' mastery of a subject; therefore, students should not spend time preparing for the exit exams. Washington State offers a similar AP score option, but it does not relieve students of taking multiple tests. Students are not exempt from taking the state's exit exam, the WASL, but if they fail the WASL, they can still graduate if they have earned satisfactory AP scores. Few students take advantage of the AP score option because it is rare for students who score well on AP tests to fail the WASL in the first place. As other substitute tests, AP exams are not necessarily designed based on state content standards; states that adopt this approach need to verify the comparability of AP and exit exams.

Overall, alternate pathways try to address concerns about test validity and fairness, and at the same time to reach the same or a similar level of rigor as the regular state exit exams. Increasing flexibility without loosening standards is the central goal in designing and implementing alternate pathway policies.

We distinguish alternate pathways for general students from those for students receiving special education services because policies designed for these two student groups address different sets of concerns about standardized testing and are usually managed at different institutional levels in the education system. Alternate pathways for general education students can be categorized into four major types of designs: alternative assessments, portfolio assessments, waivers, and flexible cut scores.

Alternative and Portfolio Assessments for General Education Students

Nineteen[14] of the 26 states with exit exams offer alternate pathways for general education students to graduate without earning passing scores in all tested subjects. **Table 2** summarizes the alternate pathways available to general education students in each of these nineteen states. Compared to previous years, more states were able to provide CEP with detailed information about how general education students use different routes to graduate from high school. For example, some states were able to report the specific number of students using each of the multiple pathways. This will contrast somewhat with the data availability for students with disabilities presented later in the chapter.

All substitute and portfolio assessments reported in Table 2 lead to a regular diploma, which indicates that they are most likely to be accepted as comparable to the substituted exit exams. However, the limited number of students who took substitute and portfolio assessments in most states seems to suggest, among other things, that these tests are not necessarily easier than the regular exit exams.

The most commonly used substitute test is published standardized tests, such as Advanced Placement exams, the PSAT, the ACT, the SAT, the CPT, and International Baccalaureate exams. States that picked the same tests may set different cut scores depending on the grade levels in which the replaced state-mandated exit exams are given.

Six states[15] allow general education students to use substitute tests. Virginia and Washington reported less than 1% of students graduating through this route, while Florida reported 4.5% (about 7,110 students) satisfied the graduation test requirement through substitute tests.

New Jersey developed its own alternative assessments, Performance Assessment Tasks (PATs), which consist of all constructed response questions. As part of the state's Special Review Assessments (SRAs)[16], PATs are

[13] Maryland started withholding diplomas in 2008-09 and was not able to report the percentage of students who graduated using AP scores.

[14] These states are: Arizona, Florida, Georgia, Idaho, Indiana, Maryland, Massachusetts, Mississippi, Nevada, New Jersey, New Mexico, New York, North Carolina, Ohio, Oklahoma, South Carolina, Tennessee, Virginia, and Washington.

[15] The six states are Florida, Maryland, New York, North Carolina, Virginia, and Washington.

[16] In 2009 the SRA was renamed the Alternate High School Assessment (AHSA).

Table 2 **Alternate Pathways for General Education Students to Graduate**

	CEP Classification	State Survey Response	Diploma Eligibility	Number and Percentage of All Students Who Graduated Through Alternate Pathways in 2008
AZ	Class performance	Students who completed high school and failed to pass one or more sections of the assessment can augment their scores with points derived from course grades of C or better.	Regular diploma	1,841 students (3%)
FL	Substitute tests	Criteria for alternate paths to graduation are prescribed in Florida law. Sections 1003.428(4)(b) and 1008.22(10), Florida Statutes, provide for the use of concordant scores from "widely used high school achievement tests" (e.g., PSAT, PLAN, ACT, SAT, CPT) in lieu of FCAT scores to satisfy Florida's graduation test requirements in reading and math. The state's Department of Education identifies concordant scores on applicable examinations for this purpose.	Regular diploma;	7,110 students graduated through an alternative assessment (4.5%)
		Students who do not meet the exit exam requirements may be awarded a certificate of completion instead of diploma.	Certificate of completion	9,299 students graduated with Certificate of Completion (as of Feb. 11, 2009)
GA	Waiver	The state has a waiver process that the student's home school. All students are eligible for the waiver, but the waiver request must include documentation of limitations that would account for failing the test.	Certificate of attendance;	83 waivers (July 1, 2007-June 30, 2008)
	Flexible cut scores	A variance process allows an alternate means of demonstrating academic proficiency for students who have not been rendered incapable of passing a section of the GHSGT or the Georgia High School Writing Test (GHSWT). One of the five criteria for eligibility for a variance is obtaining a scale score that falls within one standard error of measurement of the passing score for the relevant section of the tests.	Regular diploma	1,398 variances (July 1, 2007-June 30, 2008)
ID	Class performance	Board rule allows each district to adopt an alternate route that requires courses to be offered to and completed by students. The courses must be valid and reliable and are required to be standards-based at 10th grade. The board reviews these plans and keeps them on file.	Regular diploma	NA
IN	Waiver	Please see the state's profile at eligibility criteria.	Regular diploma	5061 students (8.4%)

	CEP Classification	State Survey Response	Diploma Eligibility	Number and Percentage of All Students Who Graduated Through Alternate Pathways in 2008
MD	Substitute tests	Specific Advanced Placement (AP) and International Baccalaureate (IB) course exams are acceptable substitutes for specific HSAs provided students receive the specified MSDE-approved scores on the exams.	Regular diploma;	NA
	Portfolio assessment	The Bridge Plan for Academic Validation allows students who repeatedly fail the HSAs to instead complete assigned projects for the assessments that they are unable to pass.	Regular diploma;	NA
			External high school diploma is available for students who have exited high schools	NA
MA	Portfolio assessment	*MCAS Performance Appeals (portfolio and cohort)* The student must demonstrate through course work that he or she meets or exceeds the English language arts and/or mathematics passing standard of 220 on grade 10 MCAS tests.	Regular diploma	314 students granted appeals
MS	Portfolio assessment	Students who fail a subject area test twice may submit an appeal for a evaluation that relies on other evidence to demonstrate their mastery of the subject.	Regular diploma	Less than 1% of students submitted appeals substitute
NV	Portfolio assessment	Students may pursue the alternate route to demonstrate proficiency for writing and science by submitting work completed during high school to meet the HSPE requirements.	Regular diploma	35 students attempted alternative writing assessment (0.13% of a total student other population of 24,954)
		Students who do not demonstrate proficiency on all portions of the high school proficiency examinations can receive a certificate of attendance.	Certificate of attendance	NA
NJ	Alternative assessment	Students who fail one or both sections of the HSPA may go through a special review assessment (SRA) process that is designed to allow students to be assessed in the state standards through a series of extended performance tasks (i.e., all constructed response) aligned to the state content standards.	Regular diploma	11,513 students (11.5% of graduates)

Table 2 **continued**

	CEP Classification	State Survey Response	Diploma Eligibility	Number and Percentage of All Students Who Graduated Through Alternate Pathways in 2008
SC		Students who do not pass the HSAP may receive a certificate of attendance issued by a school district.	Certificate of attendance	NA
		Students may receive a state certificate if they complete all credit requirements but have not passed the exit exams.	State certificate	NA
TN		Students who do not receive a regular diploma because they could not pass the exit exams are eligible to receive a certificate of attendance.	Certificate of attendance	NA
VA	Substitute tests	Students may earn verified credits by taking substitute tests. The substitute tests include the Advanced Placement, International Baccalaureate, SAT II, TOEFL, APIEL, Cambridge International Examination, ACT, and CLEP tests.	Standard diploma, advanced diploma, or a modified standard diploma	Less than 1% of students use the alternative assessments
		Students who do not meet the requirements for a diploma may receive a certificate of program completion, a general achievement diploma or earn a GED.	Certificate of program completion	0.51%
			General achievement diploma	Group below state definition for personally identifiable result
WA	Portfolio assessment	Assembling a collection of classroom-based evidence of a student's learning that includes specified work samples	Regular diploma	0.3% of graduates in reading, 0.1% in writing, and 1.8% in math
	Class performance	Comparing a student's grades in certain classes with the grades of other students who took the same classes and met the standard	Regular diploma	0.02% of graduates in reading, 0.02% in writing, and 0.5% in math
	Substitute tests	Meeting a specific cut score on the SAT, ACT, or PSAT tests. Scoring a 3 higher on select graduates in or Advanced Placement (AP) exams.	Regular diploma	Score on the SAT, ACT, or PSAT tests: 0.3% of reading, 0.1% in writing, and 0.9% in math; Advance Placement (AP) exams: 0% of graduates

Table reads: Florida allows general education students to take substitute tests as alternate pathways to graduate from high school. Students graduating through the substitute tests are eligible for a regular diploma. 7,110 students (approximately 4.5% of graduates in 2007-08 school year) satisfied the graduation test requirement through an alternative assessment (e.g., ACT/SAT). Students may also earn a Certificate of Completion. As of February 11, 2009, the state awarded 9,299 students with Certificates of Completion in 2007-08.

developed by the state and administered by the schools to students who repeatedly fail exit exams, even after additional instruction. Though the state assigns common cut scores, scoring rubrics, and guidelines, district-appointed SRA panels conduct the actual review and scoring. A greater-than-expected number of students have graduated through the SRAs process in the past few years, which raised state concern about the rigor of local policy implementation[17]. To curb increasing reliance on SRAs in the future, effective in 2009-10 the state will allow no more than 10% of students in a district to use this alternate pathway to graduate unless the district submits a plan that will increase the number of graduates using the HSPA. Though a much higher percentage than in most other states, the 10% threshold is considered fairly conservative, since the state SRA rate is about 11.5%. Over a hundred schools met this 10% threshold in 2008.

General education students in seven states[18] also have the option to graduate through portfolio assessments, where students demonstrate mastery through a collection of work. The portfolio assessment in Maryland, called the Bridge Plan for Academic Validation, assigns project modules to students who repeatedly fail the High School Assessments (HSAs). These modules are designed to address areas where students have not fully demonstrated mastery in their HSA performance. The Collection of Evidence option in Washington State allows students who have failed the WASL in math, reading, or writing to show their skills tested on the WASL through a compilation of classroom work samples. These subject-specific work samples are developed under a teacher's supervision and must follow state guidelines for collection. Massachusetts allows students to request a portfolio assessment if they do not belong to a school cohort (6 students or more) that has taken the same sequence of courses. The portfolio includes work collected during one or more years in a subject area. The state specifies minimum components for English language arts, mathematics, and science and technology/engineering. In 2009, the Oklahoma State Board of Education also approved a policy that allows high school freshmen to demonstrate mastery through an end-of-course project. In all four states, the state departments of education determine if the evidence provided in the portfolio qualifies a student to graduate. Starting in the 2010-11 school year, students in New Mexico will also be able to demonstrate competency through portfolio indicators in subjects they failed to pass on the exit exams.

Waivers and Flexible Cut Scores Used By General Education Students

A more controversial set of alternate pathways excuses students from certain exit exams or allows them to graduate with lower cut scores. Georgia, Indiana, New Mexico, and Ohio offer waivers where students may graduate without passing exit exams if they meet all the other graduation requirements. For the waiver option, the eligibility criteria become particularly important to maintain the rigor of the state testing system, so states often attach specific conditions for using the waiver. In Ohio, for instance, diplomas are given to waived students only when they pass four of the five exit exams and the score on the fifth exam is no more than 10 scale-score points below the cut scores. In 2008, only 379 students (0.3%) in Ohio and 83 students in Georgia earned diplomas using the waiver.

Other states take a similar approach to flexible cut scores. The Georgia Board of Education, for instance, offers a variance process that enables students who failed to pass all exit exams to earn a diploma only if they obtained a scale score that falls within one standard error of measurement of the passing score. Students in New York may also appeal for permission to graduate with a local Regents Diploma if their test scores are within three points of the cut scores.

In contrast to substitute and portfolio assessments, waiver and flexible cut score policies often do not lead students to regular diplomas. In Georgia and New Mexico, for example, students who graduate using waivers earn certificates of completion or attendance rather than regular diplomas, which indicate that students met lower than standard high school criteria. Whether or not an alternate pathway results in regular diplomas is an important consideration in designing alternate pathway policies. It influences not only the

[17] For more information, refer to www.njpsa.org/documents/NJDOE_SRA_Paper.doc

[18] Maryland, Massachusetts, Mississippi, Nevada, New Mexico, Oklahoma, and Washington

calculation of graduation rates that are tracked under state accountability systems, but more importantly a student's opportunity to pursue postsecondary education and a future career.

Of the nineteen states with alternate pathways to general education students, eight offer alternative diplomas for general education students who cannot pass all the exit exams or fully meet the state standards. Florida, Maryland, Nevada, New Mexico, North Carolina, and Virginia offer both alternative diplomas and alternate pathways that lead to a regular diploma; South Carolina and Tennessee provide no alternate pathways to a regular high school diploma but grant certificates of attendance to students who fail the exit exams.

Alternate pathways in some states are designed to tie the exit exams more closely to class performance. In Idaho, for example, seniors who are enrolled in the fall semester and have not passed the exit exams may graduate by completing additional courses. The state reviews the course plans to make sure they are aligned to the 10th-grade standards. Arizona's augmentation policy allows students to add to their exit exam scores with points derived from course grades. Washington State uses a "grade comparison" option, where students who failed the exit exams can earn diplomas if they have a grade-point average equivalent to that of students at the same school who took the same course in mathematics or English and pass the exit exams. This option, however, is limited to students who have a 3.2 cumulative grade point average or higher across all courses.

Alternate pathways impact general education students to varying degrees across states. Some alternate pathways, such as the option to substitute Advance Placement scores in Washington State, are barely used, while other pathways, such as the special review process in New Jersey, are used quite widely. Most states reported that a relatively small proportion of students graduated through alternate pathways, but the actual number of students can be quite significant. In Florida, for example, over 7,000 students graduated through an alternative assessment in the 2007-08 school year, although this number represents less than 5% of the overall graduates.

Alternate Pathways for Students with Disabilities

To meet NCLB requirements, students with disabilities must be included in state assessments, and for most of the 26 states mandating exit exams, the state assessments in high schools are exit exams. The alternate pathways, therefore, are mostly applied for *after* students with disabilities fail the exit exams. The remedial, instead of preventative, nature of alternate pathways also applies to general education students, but it tends to impact a higher percentage of students with disabilities because of the low pass rates with this student subgroup.

Compared to general education students, it is harder to collect information on students with disabilities using alternate pathways to graduation because decisions on students' qualifications for waiver or the designs of alternative assessment are often made at the local level, and states do not usually collect this information[19]. For example, the eligibility for waivers is usually determined by individualized education program (IEP) teams, and many states do not collect data on the number or the percentage of students with disabilities graduating with waivers.

Most states provide particular alternate pathways to students with disabilities in addition to the ones available for general education students. States have different policy designs to address the needs of students with disabilities. In tables 3 and 4 we highlight some of the specific alternate pathways. These pathways include variations of three policy designs, alternative assessments, portfolio assessments and waivers.

Fourteen states offer alternative or portfolio assessment options **(table 3)**. The alternative assessments in most states are tests with modified questions or aligned to modified standards. Some states, such as Alaska, Maryland, Oklahoma and Washington, make both forms available. Compared to waivers, more states allow students with disabilities to graduate with regular diplomas after passing alternative or portfolio assessments.

[19] For example, Arizona, Minnesota, New Mexico, and North Carolina.

Table 3 **Alternate Pathways for Students with Disabilities: Alternative Assessment, Portfolio Assessments and Flexible Cut Scores**

	CEP Classification	State Survey Response	Diploma Eligibility	Number and Percentage of Students with Disabilities Using Alternative Assessments in 2008
AK	Portfolio assessment	The nonstandardized HSGQE consists of an extensive collection of work that reflects competency in each of the state standards tested in the HSGQE.	Regular diploma	NA
	Alternative assessment	The modified HSGQE is the regular exam, but students with disabilities may use modifications with state approval.	Regular diploma	NA
ID	Portfolio assessment	A student with disabilities may appeal for an alternate measure to reach graduation (district proposed or IEP recommended plan to collect evidence)	Regular diploma	NA
MD	Alternative assessment	A modified HSA, known as the "Mod-HSA" is available to students with disabilities whom the IEP team has determined eligible. The Mod-HSA is based on course level content standards and modified academic achievement standards.	Regular diploma	NA
	Alternative assessment	Those students with the most significant cognitive disabilities, for whom the IEP team has determined eligible, will participate in the Alternate Maryland School Assessment (Alt-MSA). The Alt-MSA is a portfolio assessment tailored to each student's unique instructional needs in reading, mathematics, and science.	Maryland High School Certificate of Program Completion	NA
MA	Portfolio assessment	*The MCAS Alternate Assessment (MCAS-Alt) Competency Portfolio* The student must submit a portfolio that demonstrates knowledge and skills at grade-level expectations for a student in grade 10.	Regular diploma	NA
MN	Flexible cut scores	The individualized education program (IEP) team may set a different passing score on the BST.	Regular diploma	NA
	Alternative assessment	The IEP team may also decide an alternate assessment is best for the student and set performance criteria appropriate for the student.	Regular diploma	Writing: 798 test takers (1.2% of total population tested) Reading: 834 test takers (1.3% of total poplulation tested) Math: 881 test takers (1.4% of total population tested)

Table 3 continued

	CEP Classification	State Survey Response	Diploma Eligibility	Number and Percentage of Students with Disabilities Using Alternative Assessments in 2008
TX	Alternative assessment	TAKS–Modified (TAKS–M), which is based on modified academic achievement standards	Minimum-standard diploma	NA
	Alternative assessment	TAKS–Alternate (TAKS–Alt), which is based on alternate academic achievement standards and designed for students with significant cognitive disabilities.	Minimum-standard diploma	NA
WA	Flexible cut scores	WASL-Basic, in which students take the high school WASL (with or without accommodations) but IEP (individualized education program) teams adjust passing criteria to Level 2-basic proficiency.	Regular diploma	WASL-Basic: 1.0% in reading, 1.0% in writing, and 0.5% in math
	Portfolio Assessment	Washington Alternate Assessment System (WAAS)- Portfolio, in which students unable to take paper-and-pencil tests show their skills and knowledge through a collection of their work.	Regular diploma	WAAS-Portfolio: 0.5% in reading, 0.5% in writing, and 0.5% in math
	Alternative assessment	Developmentally Appropriate WASL (DAW), in which students in grades 11 and 12 only take the WASL (with or without accommodations) at the grade level that best matches their abilities.	Regular diploma	WAAS -DAW: 2.2% in reading, 1.7% in writing, and 2.3% in math

Table reads: Mississippi allows students with disabilities to take an alternative assessment to graduate from high school. Students with disabilites pursuing a regular diploma may participate in the High Stakes Alternative Assessment after their initial participation in subject area testing. Students graduating through the alternative assessment are eligible for a regular diploma. In 2008, less than 1 percent of students with disabilities submitted a substitute evaluation.

Source: CEP High School Exit Exam Survey, 2002-2009, Center on Education Policy, State Department websites, email and phone inquiries with state department staff.

Officials in Washington State revealed in an interview with CEP that portfolio assessments can be costly. The classroom-based evidence option in Washington State, for instance, costs about $600 per collection of student work, while the cost of a standardized WASL exam is about $22 per student.

Twelve of the 26 states have waiver options for students with disabilities so they do not need to earn passing scores on the state exit exams to graduate (**table 4**). As with waivers for general students, some states are very specific about the graduation status that different waiver programs may lead to. Alabama, for instance, has two waivers for students with disabilities that lead to different graduation status. The state waives the requirements for passing exit exams, which results in an occupational diploma upon graduation. The state also allows the local school system to waive one subject area for students with disabilities; with passing scores in the other four areas, students are still able to earn a regular diploma.

Table 4 **Alternate Pathways for Students with Disabilities: Waiver Options and Alternative Diploma**

	CEP Classification	State Survey Response	Diploma Eligibility	Number and Percentage of Students with Disabilities Graduated Through Waiver in 2008
AL	Exempt from passing →	Students with disabilities may receive an Alabama Occupational Diploma, which does not require passing the AHSGE	Occupational diploma	929 (34.9%)
	Exempt from participation in one subject →	The school system may offer students with disabilities a waiver for one subject-area test in the student's major disability	Regular diploma	
AK		If a student does not achieve a proficient score on the HSGQE or the alternative assessment program, the student is eligible to receive a certificate of achievement if all other state and local requirements for graduation have been met.[20]	Certificate of achievement	NA
AZ	Exempt from passing	Students with disabilities may be exempted from having to pass AIMS to graduate from high school. Students with disabilities who are not exempt from passing the exam and who complete high school may qualify for AIMS augmentation.	Regular diploma	NA
AR	Exempt from passing	Students with disabilities may graduate based on their individualized education plan.	Regular diploma	NA
CA	Exempt from passing*	Local waiver request. CAHSEE maybe waived for eligible students with disabilities. Students must be permitted to use any modifications specified in their individualized education program (IEP) or Section 504 Plan. Modifications fundamentally alter what the test measures and can affect the comparability of scores.	Regular diploma	4,230 (11.2%)
FL	Exempt from passing	The FCAT requirement may be waived for students with disabilities who have not achieved a passing score on the exam after two attempts and have met all other requirements.	Regular diploma	3,157 (18%)
GA	Exempt from passing	Students with disabilities may apply for the general waiver.	Certificate of attendance	55 students
		A special education diploma is also available for students with disabilities who complete the requirements of their individualized education program.	Special education diploma	NA

	CEP Classification	State Survey Response	Diploma Eligibility	Number and Percentage of Students with Disabilities Graduated Through Waiver in 2008
OH	Exempt form passing	The decision for an exemption is made by the individualized education program (IEP) team on a test-by-test basis because the student has a curriculum that is significantly different in depth and breadth from the general education curriculum.	Regular diploma	NA
SC		Students with or without disabilities who complete all course credit requirements but do not pass the exit examination are eligible for a state certificate.	State certificate	NA
VA		Students with disabilities who do not meet the requirements for a standard or advanced diploma but meet the credit and literacy and numeracy requirements established by the state board of education may receive a modified standard diploma.	modified standard diploma	2,044 (19.53%)
		Students with disabilities who do not meet the requirements for other diplomas but have completed the requirements of their individualized education program (IEP) may receive a special diploma.	special diploma	2,489 (23.79%)

Table reads: Students with disabilities in Alabama may graduate from high school with occupational diplomas without passing the Alabama High School Graduation Exams (AHSGE). In 2008, 929 students with disabilities (34.9% of all graduating student with disabilities) graduated with occupational diplomas. Students with disabilities in Alabama may be exempt from participating in one of the five subjects to graduate from high school with regular diplomas.

*Note: Beginning in the 2009-10 school year, students with disabilities will be exempt from meeting the CAHSEE requirement as a graduation requirement. More information can be found at www.cde.ca.gov/ta/tg/hs/cahseeABx4.asp. For more detailed information on requirements for the local waiver request please contact the California department of education.

Source: CEP High School Exit Exam Survey, 2002-2009, Center on Education Policy, State Department websites, email and phone inquiries with state department staff.

In addition to alternative and portfolio assessments and waivers, some states use lower cut scores for students with disabilities, as in the case of New Mexico's Career Readiness Path, Minnesota's flexible pass scores decided by IEP teams, and Washington's WASL-Basic. Others use modified school curricula, such as North Carolina's Occupational Course of Study program that focuses on post-school employment and independent living. These policy approaches do not hold students with disabilities to the same state standards that are applied to general students, and they lead to a graduation status that may not be comparable to that received by general students who have passed all exit exams.

Comparing tables 3 and 4, we notice some differences between the option of alternative or portfolio assessments and waivers for students with disabilities. As shown in Table 3, three of the four states that reported percentage data, Mississippi, New Jersey, and Washington State, had less than 2.5% of students with disabilities who attempted or graduated through alternative assessment in 2008. In contrast, the three states that reported the percentage data in Table 4 show a much larger student population using waivers to graduate.

Alternate Pathways for English Language Learners

Few states with exit exams offer alternate pathways specifically for ELLs, though many of them allow specific testing accommodations for these students. While most of the states offer ELLs the same alternate pathways offered to general education students, Idaho and Minnesota have policies for students with limited experience in the U.S. education system. ELLs in Idaho may appeal for an alternate measure if they have been in the program for three years or less; if they successfully meet the requirements for this alternate pathway, they will be able to graduate with regular high school diplomas[21]. Minnesota allows districts to exempt ELLs from passing exit exams if they have been in the country for less than four years before graduation.

The Process of Shaping Alternate Path Policy in Three States

To understand the design and implementation of alternate pathways, we interviewed officials working with state high school assessment policies in Maryland, New Jersey, and Washington State. Appendix B explains the rationale for selecting these three states and describes policy background for each state.

The alternate pathway policies in these three states are shaped by recommendations from state advisory committees. The committees in these three states are composed of a broad selection of stakeholders, including representatives from higher education, state and county offices, the business community, advocacy groups, schools, and local education agencies. These committees are involved in the details of designing, implementing, revising, and evaluating the state testing programs. Washington, for example, has multiple advisory committees, and each committee focuses on a particular graduation option in the state testing system. One state official explains the role of advisory committees in Washington as follows:

> *[The committee members] determine if things are running; they will determine the procedural guidelines and recommend to the legislature if things need to be modified. They are our technical advisors in the area... Though the legislature determines whether students are qualified for diplomas, the CAA Option Advisory Committee would determine what strategies we need to take to prove equivalency [of different alternate pathways]. They would recommend to us what procedures are needed and what analyses would be needed to prove [the equivalency].*

Since 2005, Maryland has relied on a special task force to examine alternative options for assessing special student subgroups, such as students with disabilities and English language learners. Since the establishment of its Bridge Plan program, the state's test design group has also worked with teachers to design project modules to ensure the equivalency of its alternate pathways to the regular state exit exams. The advisory committees in New Jersey have been guiding the development of the Special Review Assessment since the 1990s. They help the state education department collect information from the field about the best way to serve students and give advice on policy changes. Recently, the committee has been helping the state respond to criticism of SRA.

Criticisms of alternate pathways policies in these three states have focused on the potential threats alternate pathways pose to the rigor of student testing systems. New Jersey's state department of education issued a report in 2008[22] that revealed its concern regarding the unexpectedly high number of students using the

[21] For more detailed information see adm.idaho.gov/adminrules/rules/idapa08/0203.pdf, p.11.

[22] The report can be found at www.njpsa.org/documents/NJDOE_SRA_Paper.doc.

Special Review Assessment to graduate. This concern has precipitated a series of policy adjustments since the 2008 report. As the SRA heavily relies on districts for appropriate implementation, the state faces the challenge of making sure that the districts take the SRA materials seriously and treat them in a secure and confidential manner. One state official described the state's reliance on local implementation in this way:

> *SRA is locally administered and scored; there is much more latitude and trust invested with local districts. And we try to communicate the validity of diplomas resulting from that path, the validity of results is tied to the credibility of that process. We need them to make sure they take it seriously so that the results can be credible.*

For states such as New Jersey, the monitoring strategy is critical because the implementation of alternate pathways is executed by districts and schools. Maryland has reported some promising monitoring strategies to oversee its Bridge Plan, which is also administered and scored at students' schools. In Maryland, a panel of graders makes recommendations to the local superintendent about students' qualifications for passing, and the state spot-reviews this local decision-making process to ensure that student projects demonstrate sufficient qualifications. The state not only gives specific rubrics for grading but also uses a review system to make sure student projects are graded appropriately and that the objectives of the project module are met as expected.

Maryland and New Jersey also reported providing professional training to strengthen local implementation of alternate pathways. Maryland organizes intensive training and publishes guides to explain the use of rubrics, shows samples of student projects, and specifies goals that need to be met under certain timelines. Similar training was also reported by New Jersey. As New Jersey transitions from comprehensive standardized tests to end-of-course exams, training for SRA will change accordingly. The state is planning to bring teachers together to score anonymous student work in future training sessions. In this way, teachers will be able to see student work in other schools, which may help even out differences in grading.

These strategies, however, do not fully address the challenges posed by locally implemented alternate pathways. All three states experience some degree of technical challenge in designing and developing alternate pathways. In Maryland, the amount of content-specific work involved in developing project modules has created tremendous pressure for state staff:

> *…It's a matter of state belt tightening and this is a whole new set of enormous tasks… of training and developing materials [and] the scoring rubrics. [The projects] require [students] to set up experiments or do significant research; they turn in pretty substantial sets of work … It's a ton of work to make [projects] fresh and different each time, to also make sure that they're rigorous and in-depth enough to be meaningful.*

Washington expressed similar technical challenges when it comes to specifying and communicating learning objectives for math. It has tried to solve the problem by posting sample problems on the state Web site; however, new concerns have ensued regarding the uniqueness of student work:

> *We have a number of high schools in the state where all the submissions from students are essentially the same, and at this point in time we don't necessarily think that that is teachers deliberately trying to cheat, but we think it's teachers, in a misguided sense of what the target is, thinking that, "So here are some math problems. If I can demonstrate that all the kids can do these math problems, then they will have met the criteria, and so, kids, let me teach you how to do these problems."*

Despite the tremendous amount of work and technical challenges, none of the 26 states assigned more than four full-time equivalent staff members to develop, facilitate, and oversee alternate pathways. In some states, alternate pathways are considered local decisions, and no state staff is involved at all. Staffing needs may

vary due to the diverse policies that require different lengths of time for reviewing evidence collected through alternate pathways. The time to review and make a decision on one student document ranges from an hour to a couple of weeks; the appeal process and communication of the results can further increase the work load and lengthen the time needed for implementing alternate pathways. Some states, such as New Jersey, rely on local staff, particularly when alternate pathways are administered by local schools and districts, but it can be difficult sometimes to recruit teachers to score student work.

Conclusions

Alternate pathways to graduation can serve as a way to address limitations of standardized assessments and to balance the state accountability system with a certain amount of flexibility. We see both strengths and weaknesses in the approaches states have taken with their alternate pathway policies. Portfolio assessments, for example, allow students to demonstrate their learning in a sometimes less stressful environment and pushes them to learn what they may not have mastered, but it is hard to gauge how comparable the portfolios are with the exit exams. The same dilemma exists for substitute tests. It is cheaper and more convenient for states to use the ACT or SAT than to develop state alternative assessments from scratch; however, these tests are not designed to reflect state curricula and standards; therefore, we must be cautious about comparing student performance on substitute tests with exit exams.

Other alternate pathway policies, such as flexible cut scores and waiver programs, may be more straightforward to implement with detailed descriptions of state rules and direct state oversight; unfortunately, they face some criticism that they lower graduation standards and reinforce or widen existing achievement gaps. In light of the important roles advisory committees play, officials in New Jersey recommended that states proactively connect with and consult relevant stakeholders in the early stage of developing alternate pathways to graduation so their approach can be scrutinized through multiple perspectives, preventing unnecessary complications for implementation.

As supplemental policies to add flexibility to state-mandated assessment, alternate pathways may prevent high school exit exams from denying many struggling high school students a bright future. We count on the future development of state data systems to learn more about how alternate pathways serve students with disabilities. We also hope to see more empirical evidence on how the provision of alternate pathways impacts student learning in high school, and how various graduation statuses through alternate pathways influence student development after high school.

Chapter 3: Trends and Gaps in Exit Exam Pass Rates

In this chapter we turn to the question of how student performance on exit exams has changed since the exams became mandatory for graduation. We are particularly interested in the degree to which the student pass rate on exit exams has increased and the extent to which the pass rate gap between different subgroups of students has changed. We use the initial pass rates—the percentage of students passing on their first attempt—as a proxy for student performance on the exit exams.

Given the variety of tested subjects and numerous policy changes in the 26 states studied, we focus on the initial pass rates in 16 states because they have reported their test results in our surveys for at least three consecutive years. We chose to focus on reading[23] and mathematics because both subjects are required for federal accountability purposes.[24] We also limit the data to years in which current exit exams were used to withhold diplomas.[25] Table 1 at the beginning of this report shows the years when the states began withholding diplomas based on their exams.

As discussed in Chapter 1, exit exams across states differ greatly in content, question format, and test difficulty levels. Such diversity makes initial pass rates in various states not directly comparable to one another. For instance, difficult test content and low student performance can both contribute to relatively low initial pass rates, but give completely different implications about the state's exit exams. Therefore, we can only compare a state with itself to see if it makes progress from year to year, and we can only do year to year comparisons in states where the exit exam remains unchanged for the years studied. We calculated the average annual growth by dividing the sum of annual changes in the initial pass rates by the number of years for which we had comparable data.[26] States are categorized by their amount of average annual growth.

Following the longitudinal trend analysis, we examine the average annual change in the initial pass rate gaps between various subgroups of students. Initial pass rates of African American and Latino students are compared to those of white students, and students eligible for free or reduced-price lunch are compared to all students. Initial pass rates of subgroups of students are limited to years when current exit exams were used to withhold diplomas. The average annual change in initial pass rate gaps reveals the pace at which such gaps narrowed on the state's exit exams. The faster the pace, the greater changes between subgroups in gaps and the narrower the state's gaps.

In comparing average growth or change in pass rates, we need to be cautious about drawing appropriate conclusions. A higher growth in initial pass rate may indicate a state's progress in student performance over time, but we cannot simply infer that student performance in the state's exit exams is better than that in other states with lower growth rates. We cannot conclude that students perform better in states with a high average annual change in gaps, because exit exams vary across states.

---

[23] Reading is called English language arts (ELA) in some states.

[24] Alaska and Texas use high school tests different from exit exams for NCLB.

[25] For more detailed information on the year diplomas were first withheld based on current exit exams, refer to table 1, pp. 5-9.

[26] Years of data vary across states because states first withheld diplomas based on current exit exams beginning in different years.

Initial pass rate is not a flawless measure of student performance. Some states, such as Alabama, allow students to take exit exams before they reach the grade level in which the exams are supposed to be first administered. As a result, the initial rates may include students who have taken tests before reaching the tested grades. Most states do not hold schools accountable for the initial pass rate; therefore, students may not demonstrate their best effort to pass on their first try, which is a limitation of using initial pass rates as a means to measure the outcome of testing policy.

Last but not least, some states show more or less improvement in initial pass rates or gap closing because of a dramatic change (increase or decrease) occurring in one year. Considering that many states started implementing current exit exams only a few years ago, such abrupt and unsustained changes may skew our conclusions about some states' passage rates over time.

On the disk accompanying the printed version of this report and posted on the CEP Web site (www.cep-dc.org) are supplemental figures and tables that provide more detailed state by state information on initial and cumulative pass rates as well as information on the gap in pass rates between different subgroups of students.

Longitudinal Trends in Initial and Cumulative Pass Rates

The 16 states[27] included in the analysis show a wide range of change in initial pass rates over varied periods of time.[28] Some, such as the initial reading pass rate in Florida and Georgia, barely changed, while some, such as the initial math pass rate in Alaska and Nevada, fluctuate more than 10%. Such fluctuation can be either an increase or a decrease in pass rate.

We then took a closer look at the changes in initial pass rates in each subject area. Eleven of the 16 states showed an average annual growth in the proportion of students passing the test in reading and 13 states showed average annual growth in math. For initial pass rates in reading, Alaska and Nevada had an average annual increase of more than 3 percentage points in initial pass rates (**Table 5**). Six states showed average annual gains ranging from 1 to 3 percentage points, while initial pass rates in five states changed slightly over the years studied. The initial pass rates in Alabama, California, and New Mexico showed an average annual decrease of more than 1 percentage point.

In math, Louisiana, Nevada, and Tennessee had average annual increases in initial pass rates of more than 3 percentage points. Nine states showed average annual increases from 1 to 3 percentage points in initial pass rates. Initial pass rates in math decreased in California and slightly decreased in Indiana and New Mexico.

In five states, we also compared the initial and cumulative pass rates on exit exams. (Cumulative pass rates include the percentage of students who passed exit exams by the end of grade 12.) The analysis is limited to five states, due to not enough years of comparable test data or missing data in the other states. Fifteen states provided cumulative pass rate data for 2008, but many of them did not report data for 2006 and/or 2007. Some states report cumulative pass rates by subjects and subgroups; some report only certain subjects; some estimate ranges. Alabama, Arizona, California, Massachusetts, and Texas are included in the cumulative pass rate analysis since they provided both initial and cumulative pass rates from 2006 to 2008 in a consistent form and had relatively few changes in their exit exams and relevant policies.

In reading, cumulative pass rates in Alabama, California, Massachusetts and Texas reached around 95% for the three years we studied. The difference between the initial and cumulative pass rate, however, varied by

[27] Alabama, Alaska, Arizona, California, Florida, Gerogia, Indiana, Louisana, Massachusetts, Nevada, New Jersey, New Mexico, South Carolina, Tennessee, Texas, Virginia.

[28] States began withholding diplomas based on student performance on their current exit exams in different years. Table 1 provides the beginning years we used for calculating annual average changes.

Table 5 **Longitudinal Trends of Initial Pass Rate in Reading and Math**

Reading	Math
States with more than 3 percentage points of average annual gain in initial pass rate	
AK, NV	LA, NV, TN
States with between 2 and 3 percentage points of average annual gain in initial pass rate	
LA	AK, MA, SC, TX, VA
States with between 1 and 2 percentage points of average annual gain in initial pass rate	
AZ, MA, SC, TX, VA	AL, AZ, FL, NJ
States with less than 1 percentage point of average annual gain in initial pass rate	
FL, NJ, TN	GA
States with average annual decrease in initial pass rate	
AL, CA, GA, IN, NM	CA, IN, NM

Table reads: Initial reading pass rates in Alaska and Nevada increased by an average of more than three percentage points annually. Initial math pass rates in Alaska, Massachusetts, South Carolina, Texas, and Virginia increased by an average of more than two but less than three percentage points annually.

Source: CEP High School Exit Exam Survey, 2002-2009, Center on Education Policy.

state. For example, the difference in California's initial pass rate compared to its cumulative pass rate was about 20 percentage points while the difference in Massachusetts was about 5 percentage points. From 2006 to 2008, the difference between the initial and cumulative pass rates in reading remained at 5 to 6 percentage points in Texas, narrowed from 3 to 1 percentage point in Massachusetts, and widened in Alabama, Arizona and California. Arizona, for example, increased its cumulative pass rate by 8 percentage points, from 80% in 2006 to 88% in 2008, while its initial pass rates increased by 2 percentage points, from 71% to 73%.

In mathematics, the cumulative pass rates in Alabama, California and Massachusetts were also about 95% from 2006 to 2008. The average difference between the initial and cumulative pass rates in Massachusetts was greater in mathematics than in reading—about 10 percentage points in math compared to about 5 percentage points in reading. The difference between California's initial and cumulative pass rates in mathematics was about the same as the difference in reading, about twenty percentage points. Cumulative pass rates were consistently lower in math than in reading in Arizona and Texas. From 2006 to 2008, the difference between the initial and cumulative pass rates in mathematics was kept at 10 percentage points in Alabama, narrowed from 8 to 6 percentage points in Massachusetts, and widened in Arizona, California and Texas. For example, both initial and cumulative pass rates increased from 2006 to 2008 in Texas, but the growth in the initial pass rate over the three years was less than the growth in the cumulative pass rates over the same time period. As a result, the difference between initial and cumulative pass rate in Texas widened from 7 percentage points in 2006, to a difference of 9 percentage points in 2007, to an 11 percentage point gap in 2008.

Detailed tables and figures with information on each of the five states' initial and cumulative pass rates on reading and mathematics exit exams can be found on the disk accompanying this report and on the CEP Web site at www.cep-dc.org.

There are many possible reasons for the differences between initial and cumulative pass rates. For example, if the cumulative pass rate reflects a high proportion of students passing the exam, it may indicate that remediation programs are successful and that greater proportions of students are succeeding on subsequent retakes of the test. It could also mean that some students took the exam before they had completed the appropriate courses that would help prepare them for the test. It may also indicate that students who failed to pass the test the first time they took it are increasingly reliant on pursuing additional preparation to help them past the test. Fifteen states[29] indicated in our survey that they currently use the initial pass rate to determine adequate yearly progress (AYP) under NCLB. The initial pass rate weighs more for school accountability than for students who simply care if eventually they graduate. The deviation of school accountability from student accountability may have contributed to students' reliance on remediation and retake opportunities, which in turn increase the cost of exit exams, and schools' reluctance to communicate with students about state policies regarding alternate pathways (CEP, 2009).

The big difference between initial and cumulative pass rates in some states reveals that, of the high school graduates who pass the state exit exams, quite a few rely on additional help beyond teaching in everyday classes. A growing number of states have taken action in recent years by increasing assistance to the improvement of instruction and school leadership, as reported in Chapter 1. However, the persistence of big differences in pass rates in some states highlights the importance of identifying struggling students early and providing them with assistance before they fail the tests.

Gaps in Initial Pass Rates

The gap analysis[30] focuses on three student subgroups: African American and Latino students as well as students eligible for free or reduced-price lunch. At varying rates, most states have narrowed the gaps; however, initial pass rate gaps remain large for these subgroups.

Gaps Between African American and White Students

In 2008, African-American students in all of the 15 states[31] analyzed have a lower initial pass rate than their white peers by 5 to 36 percentage points in reading and by 7 to 40 percentage points in mathematics across states. Looking across the 15 states, the gap in initial pass rates has narrowed annually by an average of 1.1 percentage points in reading and 1.7 percentage points in mathematics.

Table 6 shows that South Carolina, Louisiana, and Nevada narrowed the initial pass rate gaps in reading by an average of more than 3 percentage points every year. Gaps in seven states changed less than 1 percentage point. Annual changes in initial pass rate gaps have fluctuated in Alabama, Indiana, and Florida, but the average changes across years show widened gaps between African American and white students.

For mathematics, gaps in nine states narrowed by more than one percentage point per year. In three of the nine states, Louisiana, Massachusetts, and Tennessee, the gaps have closed by an average of more than three percentage points per year. Initial pass rate gaps between African American and white students in six other states have stalled for the past few years, four (Alabama, Georgia, Indiana and New Jersey) with average annual gap narrowed by less than 1 percentage point, and two (California and Nevada) with slightly widened gaps. Annual gap changes have fluctuated in Nevada since 2004.

[29] Alabama, Arizona, California, Florida, Georgia, Idaho, Indiana, Louisiana, Massachusetts, Mississippi, New Jersey, Ohio, Oklahoma, Tennessee, Washington. www.eed.state.ak.us/tls/assessment/participation_guidelines/ParticipationGuidelinesSept2007.pdf

[30] Only initial pass rates are used to calculate gaps.

[31] This gap analysis is based on data drawn from 15 of the 16 states. New Mexico is not included in this analysis due to missing data for African American students in reading and math.

Table 6 **Initial Pass Rate Gaps Between African American and White Students in Reading and Math**

Reading	Math
States with more than 3 percentage points of average annual gain in narrowing the achievement gap	
LA, NV, SC	LA, MA, TN
States with between 1 and 3 percentage points of average annual gain in narrowing the achievement gap	
AZ, AK, MA, TN, VA	AK, AZ, FL, SC, TX, VA
States with less than 1 percentage point of average annual gain in narrowing the achievement gap	
CA, GA, NJ, TX	AL, GA, IN, NJ
States with less than 1 percentage point of average annual loss in narrowing the achievement gap	
AL, FL, IN	CA, NV

Table reads: Louisiana, Nevada and South Carolina narrowed the initial reading pass rate gaps between African American and white students by an average of more than three percentage points annually. Louisiana, Massachusetts, and Tennessee narrowed the initial math pass rate gaps between African American and white students by an average of more than three percentage points annually.

Source: CEP High School Exit Exam Survey, 2002-2009, Center on Education Policy.

Gaps Between Latino and White Students

In 2008, the initial pass rate gaps between Latino students and their white peers ranged from 6 to 27 percentage points in reading and from 5 to 28 percentage points in mathematics. Across the 15 states[32], the gap has narrowed at an average annual rate of 1.5 percentage points in reading and 1.4 percentage points in mathematics.

Table 7 shows the pace at which the initial pass rate gaps in reading have narrowed in the 15 states. The initial pass rate gap between Latino students and their white peers in South Carolina has narrowed at an average annual rate of 6.7 percentage points since the state began withholding diplomas based on its High School Assessment Program (HSAP) in 2006. Initial pass rate gaps in Massachusetts and Nevada have also narrowed by more than an average of 2 percentage points every year. Both Massachusetts and Nevada have used their current exit exams to withhold diplomas since 2003. Indiana had a slightly widened initial pass rate gap in reading between Latino and white students due to their fluctuating annual gap changes.

For most of the 15 states, the average annual progress toward closing the Latino-white initial pass rate gap is greater in mathematics than reading. Gaps between Latino and white students in twelve states narrowed by more than 1 percentage point per year in mathematics. Massachusetts is closing its gap at an average of 3.2 percentage points per year. Three states showed less than a 1 percentage point change in closing the initial pass rate gap.

[32] This gap analysis is based on data drawn from 15 of the 16 states. New Mexico is not included in this analysis due to missing data for Latino students in reading and math.

Table 7 **Initial Pass Rate Gaps Between Latino and White Students in Reading and Math**

Reading	Math
States with more than 2 percentage points of average annual gain in narrowing the achievement gap	
AK, MA, NV, SC	GA, MA, TX
States with between 1 and 2 percentage points of average annual gain in narrowing the achievement gap	
AZ, GA, TX, VA	AL, AK, AZ, FL, NV, NJ, SC, TN, VA
States with less than 1 percentage point of average annual gain in narrowing the achievement gap	
AL, CA, FL, LA, NJ, TN	CA, IN, LA
States with less than 1 percentage point of average annual loss in narrowing the achievement gap	
IN	

Table reads: Alaska, Massachusetts, Nevada and South Carolina narrowed the initial reading pass rate gaps between Latino and white students by an average of more than two percentage points annually. Georgia, Massachusetts and Texas narrowed the initial math pass rate gaps between Latino and white students by an average of more than two percentage points annually.

Source: CEP High School Exit Exam Survey, 2002-2009, Center on Education Policy.

Gaps Between Students Eligible for Free and Reduced-price Lunch (FRL) and All Students[33]

In 2008, the average annual gap in initial pass rate between FRL and all students ranged from 4 to 18 percentage points in reading and from 5 to 18 percentage points in mathematics. Across the 16 states, the gap narrowed by an average of about 1 percentage point per year in both reading and mathematics. Alaska had an average rate of 4 percentage points in closing the gap in reading per year (**Table 8**). Half of the states have made little progress in closing the gap between FRL students and all students in reading. The gap in Alabama widened between 2003 and 2004 and remained steady since 2006. In mathematics, two states closed the gap by more than 2 percentage points, and all 16 states made some progress.

Conclusions

States have made progress in improving the overall initial pass rate and closing initial pass rate gaps between student subgroups, but that progress has varied across states and subject matter. Eight states increased their average annual initial pass rates for all students in mathematics by more than 2 percentage points compared to three states in reading. Five states showed a decrease in their initial pass rates in reading.

The gaps in initial pass rates between different subgroups of students are narrowing, however, remain daunting in both subjects. The average annual change in initial pass rate gaps is a measure that helps illustrate how well states have addressed achievement gaps in high-stakes exit exams. Initial pass rate gaps in most states narrowed, but at different rates. A few recent studies (See Appendix A) provide empirical evidence about the negative effects that exit exams have had on minority and disadvantaged students. It has become a key con-

[33] We compare this subgroup to all students because many states do not report initial pass rates of students who are not eligible for free and reduced-price lunch.

Table 8 **Initial Pass Rate Gaps Between FRL and All Students in Reading and Math**

Reading	Math
States with more than 2 percentage points of average annual gain in narrowing the achievement gap	
AK, MA, NV, NJ, VA	GA, NJ
States with between 1 and 2 percentage points of average annual gain in narrowing the achievement gap	
AZ, GA, LA	AK, LA, MA, SC, TN, TX
States with less than 1 percentage point of average annual gain in narrowing the achievement gap	
CA, FL, IN, NM, SC, TN, TX	AL, AZ, CA, FL, IN, NV, NM, VA
States with less than 1 percentage point of average annual loss in narrowing the achievement gap	
AL	

Table reads: Alaska, Massachusetts, Nevada, New Jersey, and Virginia narrowed the initial reading pass rate gaps between FRL and all students by an average of more than two percentage points annually. Georgia and New Jersey narrowed the initial math pass rate gaps between FRL and all students by an average of more than two percentage points annually.

sideration in the design of effective exit exam policy to mitigate the negative effects of high-stakes assessment on these students.

It would be fallacious to compare the pass rates directly and conclude that exit exams in a state are better simply because it has higher pass rates. Some states, such as Nevada and Arizona, have relatively low initial pass rates but faster average annual growth than some others.

Initial pass rate trends within each state reflect both progress and persistent gaps that need to be addressed more effectively in the future. If the ultimate goal of exit exam policies is to promote achievement of all students, states with initial pass rates that have not improved over time may need to reconsider their exit exam policies, particularly when there is a considerable proportion of students who are failing to pass and who are relying on remediation and re-take opportunities to pass the exams.

Appendix A: Studies of High School Exit Exams in 2009

A few recent studies have looked at the effects of exit exams on high school graduation and dropout rates (Martorell, 2005; Jacob, 2001; Warren & Edwards, 2005; Ou, 2009). For example, Jacob and Dee's 2009 analysis of the 2000 census data shows that exit exams have a small but statistically significant impact on high school completion; their analysis of Common Core of Data shows that Minnesota's Basic Skills Tests (BST) improved student performance in 9th through 11th grade but increased the dropout rate of 12th graders who, in most cases, have failed the exam repeatedly. Reardon and colleagues (2009) compared district data on student achievement and graduation rates before and after the implementation of the California High School Exit Exam (CAHSEE). They found that the CAHSEE decreases the probability of graduation by 15% for 10th graders in the bottom quartile of achievement. The negative impact is larger on the graduation rate of minority low-achieving students, English language learners, and students eligible for free or reduced-price lunch. We summarize a few recent studies as additional resources for readers.

Warren and colleagues (2008) examined the effect of high school exit exams on labor force status or earnings. They found that the rate of postsecondary schooling was not significantly higher in states that required exit exams than in those that did not. Neither was there a significant difference in employment status and wage between high school graduates in states mandating exit exams and those in states that did not. The authors use data from the 1980-2000 U.S. census and the 1984-2002 outgoing rotation groups of the current population survey.

Ou (2009) analyzed data from the New Jersey High School Proficiency Assessment (HSPA) exam to look at the impact of the state's exit exams on student dropout rates. He found that students who barely fail the exam are more likely to drop out than students who barely pass it, indicating that passage or failure on the exam may sway students with comparable achievement levels toward or away from staying in school. The effect is more pronounced for racial minorities and economically disadvantaged students.

Jacob and Dee (2009) examined the impact of exit exams through analysis of two data sets. Using the 2000 Census Public Use Microdata Sample (2000 PUMS), they found that the presence of exit exams reduced the probability of completing high school among white male students and black students. Their analysis of Common Core of Data (CCD) showed that Minnesota's exit exams reduced the dropout rate in grade 10 and 11 but increased the rate in grade 12, particularly in districts with higher proportions of minority students.

Reardon and colleagues (2009) compared ELA test scores, persistence through 11th and 12th grade, and graduation rates of students who were not subject to exit exams with those of students who were in four large California districts (subject to the CAHSEE). They found that exit exams had modest negative effects or no effects at all on student persistence and achievement, but significant negative effects on graduation rates, particularly for minority students whose scores were in the bottom quartile.

Appendix B: Methods of Study

Multiple sources provide information on the 26 states' exit exams, including CEP's high school exit exam survey in 2009, CEP's annual and special reports on high school exit exams in the past seven years, policy documents from state departments of education, and reports from the U.S. Department of Education.

State profiles in CEP's 2002 report provide baseline information, and policy changes since then have been tabulated by state and year. The 2009 survey was administered from February 2009 to June of 2009 to state officials in the 26 states that mandate high school exit exams. The survey collected information on the features of high school exit exams and alternate pathways policies. All 26 states responded to the survey.

Based on data collected in these profiles, we group policy changes into five areas for analysis: historical policy background, test characteristics, student options, state support, and accountability. Themes of policy changes are identified through inductive coding, where we summarize changes across states and years in each of the five areas and then link these changes to see if common policy trends can be identified. We verify background and update policy status in our survey with designated state contacts, and follow news on high school exit exams—i.e. for this report generally from October 1, 2008 to July 15, 2009.

Selection of Interview States

In addition to the state surveys, CEP staff interviewed state officials in Maryland, New Jersey, and Washington State to examine in greater detail the design and implementation of alternate pathway policy in these states.[34] These three states were selected based on their designs of alternate pathways to graduation, the recent public debate about their high school assessment policy, and the volatility of state policy pertaining to high school exit exams.

Maryland

Beginning in 2009, Maryland requires all students to meet designated cutoff points on state High School Assessments (HSA) to graduate. To earn a high school diploma, students must pass all four grade-level tests in government, biology, English, and Algebra I and earn a combined score of 1602. In the meantime, the state department of education designed and offered an alternate pathway to graduation called the Bridge Plan to Academic Validation.

The Design of Alternate Pathways

The Bridge Plan is an alternative program through which students can earn their diploma if they failed one or more of the HSAs needed to graduate. The program was piloted in summer 2008 and requires students to complete one or more project modules in failed content areas. Students qualify for the Bridge Plan if they:

1. Have passed the HSA related course
2. Have taken the specific HSA or mod-HSA test twice without passing or earning a combined HSA score of 1602
3. Are firmly on the path to completing all other local and state graduation requirements (including attendance), and
4. Have participated in approved assistance

[34] See Appendix C for interview protocols.

After the local school system determines that a student will complete a project, a designated school staff member meets with the student and parent/guardian to design an Academic Validation Project Package. The number of projects required varies from one to seven and is determined based upon the size of the gap between a student's HSA score and the cut score needed to attain proficiency. All projects are linked to the Core Learning Goals and are supposed to be comparable to the HSA. Upon completion, a review panel established by the local school system reviews the project and provides recommendations to the local superintendent, who conducts a final review for approval or refusal of the student's work. If a student's package is refused, written feedback is provided to the student so revised work can be resubmitted at a later date.

Students with disabilities may meet graduation requirements by taking the Modified HSAs (Mod-HSAs), alternative assessments based on the same course content as HSA. They are also eligible to participate in the Bridge Plan, should they fail to meet the standards set for the Mod-HSA.

In December 2008, the Maryland State Board of Education set forth a limited waiver process for seniors who failed to meet the state's new graduation requirements. The waiver is designed for students "who were prevented from fulfilling the HSA requirement because of school system decisions regarding class scheduling, course sequencing, testing, process of interventions, or some other special circumstances."

The school principal may recommend the waiver or the family may request it. Local school systems' superintendents have the authority to either grant or deny the waiver, and the denials may be appealed to the state superintendent.

Maryland refers to a "Parallel Path," meaning that a student may be pursuing more than one pathway at any given time. For example, he or she may be attempting to pass the HSA exam (or Mod-HSA) and completing a Bridge Plan at the same time.

Recent Public Debate

Maryland is the most recent state to impose exit exams as graduation requirements; most of the debate has centered on whether or not there should be such a requirement. Many critics of the exam allege that having a high school exit exam encourages dropouts, a phenomenon that is ultimately detrimental to all involved.

The Bridge Plan is offered to reduce the possibility of misjudgment based solely on HSA requirements. The critics of the plan reflect public concerns over holding all students to the same standards; other critics voiced concern that the requirements of the Bridge Plan seemed unclear.

The Volatility of Policy

Maryland started administering HSAs in 2001. Many parents and students were not convinced that Maryland would enforce the HSA graduation requirement. As the school year progressed and people began to realize that the state was not going to back off the policy, they became concerned. In October 2008, the Maryland Board of Education reviewed the policy to require HSA for graduation and upheld its decision.

At the start of the 2008-09 school year, 50% of students with disabilities and 15% of English language learners had passed all four sections of the HSA exam. At the end of May 2009, fewer than 1,500 seniors had not met the HSA requirement.

New Jersey

New Jersey's High School Proficiency Assessment (HSPA) is a comprehensive standards-based test in language arts, mathematics, and science. The class of 2003 was the first required to pass the HSPA to earn a diploma. In 2009, the board of education voted to phase out the HSPA over time in favor of end-of-course assessments.

The Design of Alternate Pathways

Before Maryland passed the Bridge Plan in the 2008 legislature, New Jersey was the only state that allowed an alternate pathway to be administered and scored at the local level. SRA consists of two components, remedial course work and performance assessment tasks (PATs). Currently, teachers score these tests and districts audit the scoring. The test is untimed and is composed of open-ended questions (tasks). If students fail one task, they are given a chance to review and attempt another question. The SRA will be replaced with the Alternate High School Assessment.

Based on their individualized education program, some students with disabilities are exempt from passing—but not from taking—the HSPA. Students designated with "IEP-exempt from passing" will not be affected by their scores for graduation purposes.

Recent Public Debate

In 2007, 14.7% of graduates obtained a diploma through the SRA path. In some districts, more than three-quarters of students took advantage of SRA. The scoring at the local level caused some concern because there was little or no standardization of scoring and it could be highly subjective. The SRA was branded by critics as a loophole to graduation and as a false inflator of the state's high graduation rates. Businesses and higher education groups argued that SRA had devalued the high school diploma as an indicator of readiness for employment or college.

In 2008, the state department of education started requiring that districts in which 10% or more of the graduates need the SRA to attain their diploma submit a report analyzing their SRA student population and describing their plans to reduce their dependence on the SRA. A contracted vendor will distribute performance tasks directly to high schools and organize the process of scoring. These changes will become effective in 2009-10.

The Volatility of Policy

In order to address the massive criticisms of SRA, the board of education voted in 2006 to completely abolish the alternate pathway. In 2009, the board renamed the alternate pathway the Alternative High School Assessment (available in the 2009-10 school year), and amended the assessment in several ways. The timing of the test administration was shortened from over several months to only a few weeks. Also, districts in which 10% or more of high school students are using an alternate assessment to fulfill graduation requirements will be required to submit a plan that will increase the number of students using the HSPA to demonstrate academic achievement. Since New Jersey will be moving toward an end-of-course assessment program, this will also change the alternate pathway that is available to students. The state has yet to release details about this new plan.

Washington

The Washington Assessment of Student Learning (WASL) was first administered in 2003 and diplomas were first withheld in 2008. Students need to pass reading and writing tests and take the mathematics exam to meet graduation requirements.

The Design of Alternate Pathways

By 2008, the state legislature had approved four alternate methods to graduate from high school with a diploma noted as a Certificate of Academic Achievement (CAA):

1. **Collection of Evidence:** Assembling a collection of classroom-based evidence that includes specified work samples demonstrating that they meet grade-level academic standards;
2. **WASL/Grades Comparison:** Comparing a student's grades in certain classes with the grades of other students who took the same classes and met the standard (available only for 12th-grade students);
3. **College admission tests:** Meeting a specific cut score on SAT or ACT tests; or
4. **Advanced Placement (AP):** Scoring a 3 or higher on select AP exams.

For students with disabilities, the state developed several alternate options for graduation:

1. **WASL-Basic:** Students take the high school WASL (with or without accommodations) and IEP teams adjust passing criteria to Level 2 (basic proficiency);
2. **Washington Alternate Assessment System (WAAS) portfolio:** Students unable to take paper-and-pencil tests show their skills and knowledge through a collection of their work;
3. **Developmentally Appropriate WASL (DAW):** Students in grades 11 and 12 only take the WASL (with or without accommodations) at the grade level that best matches their abilities.
4. **Locally Determined Assessments:** 12th grade students who need modified achievement standards can pursue this option.

Recent Public Debate

The WASL has been a high-priority item after the election of a new state superintendent, Randy Dorn. The superintendent announced in January 2009 that WASL would be replaced in the spring of 2010 with tests that are shorter, have more rapidly reported scores, and contain data that will be more useful to teachers and parents. Little has been said about the future of the state's alternate pathway policy.

The Volatility of Policy

The previous superintendent of education, Terry Bergeson, implemented the WASL after much public debate. Bergeson's support of the WASL was the key issue in the 2008 election. The WASL went through many transformations and revisions before it arrived in its final state.

In 2009, Dorn began plans to change the WASL. Within a month of taking office he held a press conference to announce the changes discussed above. The superintendent has proposed several changes to the state assessment system. In spring 2010, the WASL may be replaced with the High School Proficiency Exams (HSPE). These new computerized exams may become mandatory in 2011. In addition to the sweeping changes that Dorn proposed, he also requested that the math and science graduation requirements for 2013 be removed until adequate standards and assessments are designed.

Appendix C: Interview Protocols

Alternate Paths

1. What is your role with the state department of education? (Previous positions, how long at the state department of education, etc.)

2. Please tell me briefly about the history of the state's alternate paths to graduation. How were alternate paths created? For example, through committees, seeking advice from other states, etc.

3. What is the rationale/premise for the design of these alternate paths? For example, to serve a target population (general students, students with disabilities, ELLs, etc.), to collect information to accommodate exit exam results, etc.

4. What strategies has the state adopted to ensure the proper use of these alternate paths? (Equivalence to regular exit exams, implementation oversight, technical training, and consideration of special student groups, etc.)

5. What are some of the challenges the state faces in implementing alternate paths? What has worked well, and what could be improved? In other words, what are the lessons/policy changes that other states could benefit from knowing? What do you think the state should be doing differently?

Impact of Policy Change

1. What are the rationales for policy changes in the past?

2. How have these changes impacted:
   - Organizational structure
   - Partnerships
   - Capacity (staff, finance, technical support)

3. What are some of the challenges the state is facing to implement exit exams?

4. Does the new graduation rate formula have any impact on high school exit exam policy? For example, data collection and reporting, etc. What changes does the state have to make to use the new graduation formula?

5. How do you envision the future development of exit exams in your state?

January 20, 2011

The Honorable Joe Thomas
Co-Chair, Senate Education Committee
Alaska State Senate
Capitol, Room 514
Juneau, Alaska 99801

Dear Senator Thomas:

This letter serves as request for the Senate Education Committee to hold a hearing on Senate Bill 43 at the committee's earliest convenience. Senate Bill 43 is short-titled "An Act renaming the Alaska performance scholarship and relating to the scholarship and tax credits... "

Senate Bill 43 would rename the Alaska merit scholarship program, removing each reference to that name, and replacing them with Alaska performance scholarship. The bill would also create funding mechanisms for the Alaska performance scholarship that are in accordance with recommendations of the Alaska State Legislature's Joint Higher Education Scholarship Funding Task Force.

The Alaska Performance Scholarship encourages Alaska students to take a rigorous curriculum and earn scholarships for postsecondary and training in Alaska. Such students are more likely to remain in state, contributing their talents to Alaska's economy. Seven out of 10 alumni of the University of Alaska remain in state after graduation. The scholarship provides a strong incentive for families to become involved in their children's education.

If you have any questions or need information, please contact our Legislative Liaison, Marcy Herman at marcy.herman@alaska.gov or at 465-2803. Thank you for your consideration of this request and we look forward to presenting to the committee.

Sincerely,

Les Morse

Les Morse
Acting Commissioner

SENATE BILL NO. 43

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

Introduced: 1/19/11
Referred: Education, Finance

A BILL

FOR AN ACT ENTITLED

"An Act renaming the Alaska performance scholarship and relating to the scholarship and tax credits applicable to contributions to the scholarship; establishing the Alaska performance scholarship investment fund and the Alaska performance scholarship award fund and relating to the funds; making conforming amendments; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.113, as enacted by sec. 1, ch. 14, SLA 2010, is amended to read:

Sec. 14.03.113. District determination of scholarship eligibility. A school district shall determine whether a student who graduates from a high school in the district is eligible for an award of an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849. If a student is eligible, the district shall state in the student's permanent record the highest level of funding for which the student is eligible. A district shall provide a student with an opportunity to

request that the district correct an error in the eligibility determination.

*** Sec. 2.** AS 14.43.810, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.810. Alaska <u>performance</u> [MERIT] scholarship [PROGRAM] established; regulations. (a) The Alaska **<u>performance</u>** [MERIT] scholarship [PROGRAM] is established to provide scholarships for high school graduates who are Alaska residents to attend a qualified postsecondary institution in the state.

(b) The department shall, in consultation with the commission, adopt regulations necessary to implement the **<u>scholarships</u>** [PROGRAM]. The commission shall administer the daily operations of the **<u>scholarships</u>** [PROGRAM] and financing of the **<u>scholarships</u>** [PROGRAM], including the procedures for applying for the scholarships, establishing standards for and ensuring continuing compliance with programmatic standards, and requiring students to apply for other nonloan financial aid, consistent with federal law.

*** Sec. 3.** AS 14.43.820(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) Subject to appropriation, the commission shall award an Alaska **<u>performance</u>** [MERIT SCHOLARSHIP PROGRAM] scholarship to an applicant who

(1) is a resident of the state as defined in AS 01.10.055;

(2) graduated or will graduate within six months from a high school in the state;

(3) has completed a core academic curriculum in high school that includes

(A) four years of mathematics, four years of language arts, four years of science, and four years of social studies, one year of which may include a foreign language, an Alaska Native language, fine arts, or cultural heritage; or

(B) three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or an Alaska Native language;

(4) has a minimum grade-point average in high school of 2.5 or higher; the department shall set by regulation minimum requirements based on a substantially similar standard for districts that do not assign grades;

(5) has achieved a minimum score on a

(A) college entrance examination; or

(B) standardized examination designed to measure a student's level of preparedness to make the transition to work, as selected by the department; and

(6) is enrolled in good standing in a course of study at a qualified postsecondary institution in this state that is intended to result in the award of a certificate or degree.

* **Sec. 4**. AS 14.43.825(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) The maximum annual awards for the Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarships are as follows:

(1) the first award level is $4,755 and requires a 3.5 grade-point average or above and a very high minimum score on a college entrance examination;

(2) the second award level is $3,566 and requires a 3.0 grade-point average or above and a high minimum score on a college entrance examination;

(3) the third award level is $2,378 and requires a 2.5 grade-point average or above and a moderately high minimum score on a college entrance examination.

* **Sec. 5**. AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

sect 7

Sec. 14.43.830. Qualified postsecondary institutions. (a) The following institutions are qualified postsecondary institutions for purposes of awarding an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship:

adds requirements for counseling and time frame

(1) a university or college physically located in the state that is

(A) authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); and

(B) accredited by a regional accreditation association;

(2) a career and technical school program physically located in the state that has been included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment.

(b) The Department of Labor and Workforce Development shall, in

consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska **performance** [MERIT] scholarship [PROGRAM].

*** Sec. 6.** AS 14.43.840, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.840. Report to the legislature. (a) To the extent permitted under law, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall share data necessary to prepare public reports regarding the **scholarships** [PROGRAM].

(b) Not more than 10 days after the convening of each regular legislative session, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall present an annual report to the public, the governor, and the legislature containing information of public interest regarding the **scholarships** [PROGRAM], including

(1) the number of applicants and number and types of scholarships awarded;

(2) the dollar amount of scholarships awarded in past years and the dollar amount expected to be awarded for the next year; and

(3) data and trends in the data regarding high school and postsecondary student performance, programmatic changes, and retention and graduation rates over time.

*** Sec. 7.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.845. Alaska performance scholarship award fund. (a) The Alaska performance scholarship award fund is established. The fund consists of appropriations for Alaska performance scholarship awards under AS 37.14.750 - 37.14.790.

(b) The commission may use money in the fund to pay scholarships to students under AS 14.43.810 - 14.43.849. Money appropriated to the fund may be expended without further appropriation. Money appropriated to the fund does not lapse. The money in the fund may be expended only in awarding scholarships under

AS 14.43.810 - 14.43.849.

*** Sec. 8.** AS 14.45.130(a), as amended by sec. 7, ch. 14, SLA 2010, is further amended to read:

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, courses taken at the school, and level of eligibility for an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849.

*** Sec. 9.** AS 37.14 is amended by adding new sections to read:

Article 8A. Alaska Performance Scholarship Investment Fund.

Sec. 37.14.750. Alaska performance scholarship investment fund established. (a) The Alaska performance scholarship investment fund is established as a fund of the state. The fund consists of

(1) appropriations to the fund;

(2) donations to the fund; and

(3) income earned on investments of fund assets.

(b) The commissioner of revenue shall manage the fund with the goal that the purchasing power of the fund will not diminish over time without regard to additional contributions that may be made to the fund. The commissioner shall invest the assets of the fund in a manner likely to yield at least a five percent real rate of return over time.

(c) Nothing in this section creates a dedicated fund.

Sec. 37.14.755. Powers and duties of the commissioner of revenue. In carrying out the investment duties under AS 37.14.750 - 37.14.790, the commissioner of revenue has the powers and duties set out in AS 37.10.071. The commissioner shall provide reports to the Department of Education and Early Development, the Department of Labor and Workforce Development, and the Alaska Commission on Postsecondary Education on the condition and investment performance of the fund.

Sec. 37.14.760. Use of fund. As soon as practicable after July 1 of each year, the commissioner of revenue shall determine the average month-end market value of the fund for the immediately preceding three fiscal years. The commissioner shall

identify five percent of that amount as available for appropriation by the legislature for appropriation to the Alaska performance scholarship award fund created under AS 14.43.845 from which the Alaska Commission on Postsecondary Education may award scholarships under AS 14.43.810 - 14.43.849. The commissioner shall also report as available for appropriation a running total of amounts previously identified as available for appropriation to the Alaska performance scholarship award fund but not appropriated.

Sec. 37.14.790. Definitions. In AS 37.14.750 - 37.14.790, unless the context requires otherwise,

(1) "commissioner" means the commissioner of revenue;

(2) "fund" means the Alaska performance scholarship investment fund established in AS 37.14.750(a).

*** Sec. 10.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a).

*** Sec. 11.** AS 43.20.014(a), as amended by sec. 14, ch. 92, SLA 2010, is further amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses and programs by a school district in the state; [AND]

(3) by a state-operated vocational technical education and training school**; and**

(4) for the Alaska performance scholarship investment fund under AS 37.14.750(a).

*** Sec. 12.** AS 14.43.849(4), as enacted by sec. 5, ch. 14, SLA 2010, is repealed.

*** Sec. 13.** Section 8, ch. 14, SLA 2010 is amended to read:

TRANSITION: **SCHOLARSHIP** [PROGRAM] STANDARDS AND IMPLEMENTATION FOR INITIAL SCHOOL YEARS. Notwithstanding any contrary provision of this Act, the Department of Education and Early Development and the Department of Labor and Workforce Development, after consultation with the Alaska Commission on Postsecondary Education, may adopt regulations under AS 44.62 (Administrative Procedure Act) to implement their respective duties under the Alaska **performance** [MERIT] scholarship [PROGRAM] established in AS 14.43.810, enacted by sec. 5 of this Act, so that a student

(1) may be eligible for the **Alaska performance scholarship** [PROGRAM] even though the student did not fully meet the required core academic curriculum for the school years beginning July 1, 2010, through June 30, 2014; and

(2) who graduated from high school in this state after January 1, 2011, and before July 1, 2011, and meets eligibility requirements for the **Alaska performance scholarship** [PROGRAM] may apply for a scholarship on or after January 1, 2011, for enrollment in a program of study beginning on or after July 1, 2011.

*** Sec. 14.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the

heading of

(1) Article 12 of AS 14.43 from "Alaska Merit Scholarship Program" to "Alaska Performance Scholarship";

(2) AS 14.43.820 from "Alaska merit scholarship program; eligibility" to "Alaska performance scholarship; eligibility".

* **Sec. 15.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Education and Early Development, the Department of Labor and Workforce Development, the Department of Revenue, and the Alaska Commission on Postsecondary Education may proceed to adopt regulations necessary to implement changes made to their respective authorities by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2011.

* **Sec. 16.** Section 15 of this Act takes effect immediately under AS 01.10.070(c).

* **Sec. 17.** Section 11 of this Act takes effect January 1, 2014.

* **Sec. 18.** Except as provided in secs. 16 and 17 of this Act, this Act takes effect July 1, 2011.

Meeting Script – February 2, 2011

CHAIRMAN MEYER

This meeting of the Senate Education Committee is called to order.

Today is Wednesday, February 2, 2011 and the time is _____. In attendance today are:
Co-Chair Thomas, Vice-Chair Davis, Senator Stevens, Senator French, and myself, Co-Chair Meyer. We do have a quorum to conduct business.

Good morning everyone - thank you all for being here. We have 2 items on today's agenda, SB 1 from Senator Davis -- it's our 2nd look at this bill – and SB 43, the administration's Performance Scholarship bill.

We will go ahead and continue discussion on **for SB 1** at this time. This bill proposes to require the *Board of Education/Early Development to prepare an annual report, which describes the efforts made to develop, maintain, and continuously improve a comprehensive quality public school system, and present the report to the legislative education committees.*

Public testimony was closed at our previous meeting.

At the previous meeting, there was discussion on amending the bill to require the Board to "present a report" a more concise descriptor, specifically by inserting the words "*in person*" after "*present*" on line 6.)

Senator Thomas?

SENATOR THOMAS

Mr. Chair, I move that we amend
SB 1, Version \A, Page 1, Line 6 – inserting the words "*in person*" after "*present*" to read:
"...the board shall prepare and present in person to the legislative committees..."

SENATOR MEYER

Is there any objection to the motion? Seeing none the bill is amended.

Are there any questions, comments, discussion from committee members?

{Committee comments}

Any further questions? Seeing none, **Senator Thomas?**

CO-CHAIR THOMAS

Thank you, Mr. Chairman. I move **Senate Bill 1 as amended** from committee with individual recommendations and attached fiscal note.

CHAIRMAN MEYER

Seeing no objection, **SB 1 as amended** is moved from Committee.

AT EASE **(For signatures)**

We are back on the record.

The next item of business before the committee is **SB 43, "Alaska Performance Scholarships."** We will hear a presentation from the administration and hold the bill over until Friday's meeting, when we will hear a presentation on the Legislature's Scholarship Funding Task Force report.

I see we have Eddy Jeans, Diane Barrans and Jerry Burnett in the audience, welcome. So if you're ready, please come forward, put yourself on the record and proceed.

{SB 43 presentation}

Are there any questions, comments, discussion from committee members, **Senator Thomas**?

{Committee questions/comments/discussion}

CHECK TIME – if there is time, continue with public testimony, if not wrap up.

(IF TIME PERMITS)
We will now open it up to public testimony. I see a number of people here with us today in the audience, and I have a list of those who wish to testify via teleconference; let's start with _____.

Please come forward, put yourself on the record, and proceed with your testimony.

{Audience testimony}

Thank you.

Are there any questions, comments, discussion from committee members, **Senator Thomas**?

{Committee questions/comments}

Is there anyone else in the audience wishing to testify?

Online we should have _____, are you there? Please put yourself on the record and proceed.

{Teleconference testimony}

Are there any questions, comments, discussion from committee members, **Senator Thomas**?

Is there anyone else wishing to testify?

Seeing no more questions or comments, I'd like to go ahead and close public testimony.

Are there any questions, comments, discussion from committee members, **Senator Thomas**?

{Committee questions/comments}

At this time I'd like to bring this meeting to a close.

We will hear a presentation from staff who worked on the Legislative Scholarship Funding Task Force over the interim on Friday, February 4th at 8:00 a.m., here in the Beltz Room.

We are adjourned at _____ a.m.

Alaska Performance Scholarship

An invitation to excellence, extended to students, parents and educators alike.

SB43/HB104 Renaming the Alaska performance scholarship...and establishing scholarship investment and award funds

What does SB43/HB104 do?

1. The Governor's bill amends statutes to rename the statewide scholarship. The name "merit scholarship" currently in statute puts Alaska at risk of infringing on an existing copyright held by the National Merit Scholarship organization.
2. Further, the bill establishes both an award fund into which appropriations can be made and from which scholarship awards will be paid to students, and an investment fund into which the legislature may make appropriations and others may make donations. The bill specifies the Legislature may make appropriations from the investment fund into the award fund.
3. Finally, the bill permits Alaska taxpayers to make donations into the scholarship investment fund and qualify for a tax credit against the corporate income tax.

Why is SB43/HB104 necessary?

During the 2010 legislative session Governor Parnell proposed establishing a statewide scholarship for Alaska's students based on the principle that if our students: (1) take a curriculum which prepares them to succeed in postsecondary education, and (2) work hard and perform well in school, we should incent and reward them for pursuing postsecondary education and training in Alaska. This not only will benefit students but also the state as a whole by growing a skilled, local workforce and reducing the need for non-resident hires. The Alaska Legislature embraced this strategy and approved a merit scholarship which the Governor then signed into law.

The Governor has introduced this bill to avert the consequences of the copyright infringement noted above, and, more importantly, to propose establishment of a fund with characteristics consistent with the final recommendation of the Legislature's Joint Higher Education Scholarship Funding Task Force[1].

Why is this funding structure being proposed?

Governor Parnell strongly believes the scholarship is a commitment to Alaska's students, and it is critical to the success of the program that these scholarship awards have a long-term, sustainable funding stream. Additionally, the Governor seeks to make it possible for any interested party to support the scholarship's workforce development objectives by donating to the fund. To the extent that there are Alaska taxpayers with an interest in donating, they are incented to do so through the corporate income tax credit for eligible donations.

Thank you for taking the time to discuss SB43/HB104. We are extremely appreciative of the support and valuable time and attention legislative leaders have given this matter and look forward to continuing our collaborative work to advance education and workforce development in Alaska.

Prepared by Diane Barrans, Alaska Commission on Postsecondary Education, January 29, 2011

SECTIONAL

AMENDMENT A.1 – Education Tax Credits

Section	Change
Page 1, line 4 following "amendments;"	Insert language providing for an effective date – amends sunset date to 1/1/2011
Page 5, following line 8	Allows education tax credit on title insurance; allows education tax credit for insurers
Page 6, line 28 through page 7, line 10	Allows education tax credits for oil or gas producers, property owners, mining operations, fisheries businesses, and floating fisheries businesses
Page 7, following line 11	Extends education tax credit sunset date to 1/1/2021
Page 8, following line 13	Extends education tax credit sunset date to 1/1/2021

AMENDMENT A.2 – Advisory/Counseling Program for Freshmen

SECTION	CHANGE
Page 3, following line 26	Requires an advisory program for freshmen (counseling)

AMENDMENT A.3 – Timely Course Delivery for Timely Graduation

SECTION	CHANGE
Page 3, following line 26	Requires institution to provide courses and credits in expected time-frame

AMENDMENT A.6 – Assessment/Report on Distance Delivery Capabilities

SECTION	CHANGE
Page 4, line 22, following "time"	Requires assessment and report on various distance delivery mechanisms as they pertain to the scholaship

Amendment A.1

The original version of SB 43 extended the education tax credit to corporations only. Amendment A.1 expands the credit to include tax credits for cash contributions to:

- Producers of oil or gas
- Certain Property owners
- Mining operations
- Fisheries and floating fisheries businesses

The tax credit, when extended to the above groups, includes credits on the following tax types:

- Petroleum Production and Property Taxes
- Corporate Income Taxes
- Fisheries Business Taxes
- Fisheries Landing Taxes
- Mining License Taxes
- Insurance Taxes

Background

SB 236 (2010), "An act relating to tax credits for cash contributions by taxpayers that are accepted for certain educational purposes or facilities," increased the amount of credit allowable for contributions as follows:

CREDIT UNDER PREVIOUS LAW	EFFECTIVE 1/1/2011 (SB 236)
50% up to $100,000	50% up to up to $100,000
100% between $100,000 - $200,000	100% between $100,000 and $300,000
	50% for anything over $300,000
Maximum = $150,000	Maximum = $5,000,000

Amendment A.2

This amendment follows the recommendation of the Scholarship Funding Task Force to require qualified postsecondary institutions participating in the scholarship program to establish an advisory/counseling program for freshman.

The intention is to provide resources for students to determine which courses they'll need at which times to obtain their credential (degree/certificate) within the expected time frame (Bachelor Degree = 4 years, AA degree = 2 years, etc.).

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 43

Analysis

This fiscal note is indeterminate to allow the discussion of the Funding and Finance section of the Scholarship Funding Task Force Report. The report recommends that the legislature create, in statute, a Scholarship Fund as a sub-account within the General Fund. The Task Force recommended that the Scholarship Fund have an account balance amount sufficient to sustain award distribution and inflation proofing replenishment. The Task Force report suggested the immediate capitalization of the Scholarship Fund and also offered other alternatives if that was not possible.

The administration looks forward to discussing the Task Force Funding recommendations and identifying a long term sustainable funding mechanism for the Alaska Performance Scholarship.

FISCAL NOTE #1

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 43

Analysis

The bill provides for a separate fund designated for performance scholarships. In order to generate enough revenue to fund the performance scholarships, the Department anticipates the need for a $400 million capitalization.

It is anticipated the fund will be managed with asset allocation of 60% fixed income and 40% domestic equity in order to yield a real annual rate of return of 5%. These costs include investment management fees, audit, accounting and custody fees and are projected based on the assumptions provided by the division's investment advisor and the division's cost allocation plan.

FISCAL NOTE #2

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB 43

Analysis

Bill Language:
This bill expands the existing education credit allowed against the corporate income tax to include contributions made to the newly created Alaska Performance Scholarship Fund under AS 37.14.750.

Revenues:
This bill does not increase or decrease the amount of total education credits allowed against corporate income tax. Therefore, this bill has no affect on state revenues.

Expenditures:
The department can implement the provisions of the bill with existing resources.

Senator Gary Stevens
President of the Senate

SECTIONAL ANALYSIS
Senate Bill 221

SECTION 1:
Establishes an advisory task force on higher education for the purpose of compiling data and advising the legislature on matters pertaining to college readiness of students who graduate from public secondary schools in Alaska.

It's composed of 13 members representing the Governor, the Alaska Commission on Postsecondary Education, the University of Alaska, the Alaska School Board Association, the National Education Association, Alaskan private colleges or universities, other public (non-UA) postsecondary institutions in Alaska, relevant faculty from around the UA system, and the chairpersons of the respective House and Senate Education Committees.

The respective entity that each task force member represents is expected to pay for their share of the expenses of participating in the task force.

The staff of the legislative members of the task force shall serve as staff for the task force.

The members of the task force shall elect a chair from among its members.

The task force shall compile research and summarize data regarding remediation, retention, and graduation rates in the state. There shall be developed a definition of remediation. The task force shall identify contributing causes for lack of college readiness, and best practices to reduce the need for remediation, and prepare a report to the legislature outlining strategies and recommendations to reduce remediation, improve college readiness, and increase college graduation rates. The report is to be submitted by March 1, 2011.

SECTION 2:
Repeals the act and dissolves the task force on July 1, 2011.

SECTION 3:
Makes the act take effect the day after the governor signs it.

AN ACT

Relating to the AlaskAdvantage education grant program; relating to professional student exchange program availability; establishing the Alaska merit scholarship program and relating to the program; relating to student records; making conforming amendments; establishing a Joint Legislative Higher Education Scholarship Funding Task Force; establishing an advisory task force on higher education and career readiness in the legislative branch of government; and providing for an effective date.

---

* **Section 1.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.113. District determination of scholarship eligibility. A school district shall determine whether a student who graduates from a high school in the district is eligible for an award of an Alaska merit scholarship program scholarship under AS 14.43.810 - 14.43.850. If a student is eligible, the district shall state in the student's permanent record the highest level of funding for which the student is

eligible. A district shall provide a student with an opportunity to request that the district correct an error in the eligibility determination.

*** Sec. 2.** AS 14.42.030(e) is amended to read:

(e) The commission may

(1) adopt regulations under AS 44.62 (Administrative Procedure Act) to

(A) carry out the purposes of

(i) **AS 14.43.091 - 14.43.850** [AS 14.43.091 - 14.43.750], 14.43.990, AS 14.44, and AS 14.48; and

(ii) AS 14.43.910 and 14.43.920 as they relate to the purposes of **AS 14.43.091 - 14.43.850** [AS 14.43.091 - 14.43.750], 14.43.990, AS 14.44, and AS 14.48;

(B) ensure compliance with the requirements imposed by state and federal statutes and regulations governing the guaranty, insurance, purchase, or other dealings in eligible loans by federal agencies, instrumentalities, or corporations; and

(C) establish standards for the

(i) administration of hearings conducted under AS 14.43.153; and

(ii) administrative enforcement of collection orders under AS 14.43.151 - 14.43.155;

(2) delegate to the executive director of the commission or a subcommittee of the commission any duty imposed on or power granted to the commission by this chapter, AS 14.43, AS 14.44, or AS 14.48, except its power to adopt regulations and its duty to consider appeals under AS 14.43.100(b) and AS 14.48.120;

(3) establish task forces, committees, or subcommittees, not necessarily consisting of commission members, to advise and assist the commission in carrying out its functions;

(4) contract with or use existing institutions of postsecondary education or other individuals or organizations to make studies, conduct surveys,

submit recommendations, or otherwise contribute to the work of the commission;

(5) establish fees for the review of an out-of-state institution that

(A) requests approval for participation in the programs under AS 14.43.091 - 14.43.750, 14.43.990, and AS 14.44; and

(B) is not accredited by a national or regional accreditation association recognized by the Council for Higher Education Accreditation; and

(6) collect all fees and costs incurred in collection of the amount owed on a loan or repayment obligation if the loan or repayment obligation becomes delinquent or in default; in this paragraph, fees and costs include attorney fees, court costs, and collection fees charged by a collection agency.

* **Sec. 3.** AS 14.43.420(a) is amended to read:

(a) A grant made under AS 14.43.400 - 14.43.420 may not be in an amount less than $500 nor more than **$3,000** [$2,000] for each school year.

* **Sec. 4.** AS 14.43.420(c) is amended to read:

(c) A student may receive not more than a total of **$12,000** [$8,000] in grants awarded under AS 14.43.400 - 14.43.420.

* **Sec. 5.** AS 14.43 is amended by adding new sections to read:

Article 11A. Alaska Merit Scholarship Program.

Sec. 14.43.810. Alaska merit scholarship program established; regulations. (a) The Alaska merit scholarship program is established to provide scholarships for high school graduates who are Alaska residents to attend a qualified postsecondary institution in the state.

(b) The department shall, in consultation with the commission, adopt regulations necessary to implement the program. The commission shall administer the daily operations of the program and financing of the program, including the procedures for applying for the scholarships, establishing standards for and ensuring continuing compliance with programmatic standards, and requiring students to apply for other nonloan financial aid, consistent with federal law.

Sec. 14.43.820. Alaska merit scholarship program; eligibility. (a) Subject to appropriation, the commission shall award an Alaska merit scholarship program scholarship to an applicant who

(1) is a resident of the state as defined in AS 01.10.055;

(2) graduated or will graduate within six months from a high school in the state;

(3) has completed a core academic curriculum in high school that includes

(A) four years of mathematics, four years of language arts, four years of science, and four years of social studies, one year of which may include a foreign language, an Alaska Native language, fine arts, or cultural heritage; or

(B) three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or an Alaska Native language;

(4) has a minimum grade-point average in high school of 2.5 or higher; the department shall set by regulation minimum requirements based on a substantially similar standard for districts that do not assign grades;

(5) has achieved a minimum score on a

(A) college entrance examination; or

(B) standardized examination designed to measure a student's level of preparedness to make the transition to work, as selected by the department; and

(6) is enrolled in good standing in a course of study at a qualified postsecondary institution in this state that is intended to result in the award of a certificate or degree.

(b) The commission shall establish in regulation standards for continuing and regaining eligibility for a scholarship.

Sec. 14.43.825. Maximum annual awards. (a) The maximum annual awards for the Alaska merit scholarship program scholarships are as follows:

(1) the first award level is $4,755 and requires a 3.5 grade-point average or above and a very high minimum score on a college entrance examination;

(2) the second award level is $3,566 and requires a 3.0 grade-point average or above and a high minimum score on a college entrance examination;

(3) the third award level is $2,378 and requires a 2.5 grade-point average or above and a moderately high minimum score on a college entrance examination.

(b) A student's eligibility for a scholarship terminates six years after the date the student graduated from high school unless the student qualifies for an extension of time allowed by the department by regulation.

(c) Except as provided in (b) of this section, a student receiving a scholarship may remain eligible for up to eight semesters of enrollment in good standing at a qualified university or college, which may include graduate courses.

(d) Scholarships may be awarded to a full-time student or, if a student is enrolled part time, prorated based on the number of credits. In this subsection, "full time" means enrollment in a course of study that is not less that 12 credits, and "part time" means enrollment in a course of study that is not less than six credits but less than 12 credits.

(e) The amount of a scholarship award may not exceed the amount of the student's costs of attendance as certified by the postsecondary institution for the purposes of federal financial aid, less any other scholarships or nonloan financial aid awarded to the student.

(f) Payment of a scholarship is subject to appropriation. If insufficient funds are appropriated to pay all eligible scholarships, the commission shall pay existing awards on a pro rata basis.

Sec. 14.43.830. Qualified postsecondary institutions. (a) The following institutions are qualified postsecondary institutions for purposes of awarding an Alaska merit scholarship program scholarship:

(1) a university or college physically located in the state that is

(A) authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); and

(B) accredited by a regional accreditation association;

(2) a career and technical school program physically located in the state that has been included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission

shall publish the list on or before June 30 of the year preceding enrollment.

(b) The Department of Labor and Workforce Development shall, in consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska merit scholarship program.

Sec. 14.43.840. Report to the legislature. (a) To the extent permitted under law, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall share data necessary to prepare public reports regarding the program.

(b) Not more than 10 days after the convening of each regular legislative session, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall present an annual report to the public, the governor, and the legislature containing information of public interest regarding the program, including

(1) the number of applicants and number and types of scholarships awarded;

(2) the dollar amount of scholarships awarded in past years and the dollar amount expected to be awarded for the next year; and

(3) data and trends in the data regarding high school and postsecondary student performance, programmatic changes, and retention and graduation rates over time.

Sec. 14.43.850. Definitions. In AS 14.43.810 - 14.43.850, unless the context requires otherwise,

(1) "department" means the Department of Education and Early Development;

(2) "grade-point average" means the average of all grades on a four-point scale, or five-point scale for advanced placement classes, obtained by the student in high school;

(3) "high school" means a public or accredited secondary school in the

state and a home school program that is approved by the department;

(4) "program" means the Alaska merit scholarship program established under AS 14.43.810 - 14.43.850;

(5) "school district" means a borough school district, a city school district, a regional educational attendance area, and a state boarding school.

* **Sec. 6.** AS 14.44.025 is amended by adding a new subsection to read:

(b) Notwithstanding the funding priorities established under (a) of this section, the Alaska Commission on Postsecondary Education shall provide adequate funding for not fewer than five students each year to attend four-year programs in each of the following fields:

(1) dentistry;

(2) optometry; and

(3) pharmacy.

* **Sec. 7.** AS 14.45.130(a) is amended to read:

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, [AND] courses taken at the school**, and level of eligibility for an Alaska merit scholarship program scholarship under AS 14.43.810 - 14.43.850**.

* **Sec. 8.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: PROGRAM STANDARDS AND IMPLEMENTATION FOR INITIAL SCHOOL YEARS. Notwithstanding any contrary provision of this Act, the Department of Education and Early Development and the Department of Labor and Workforce Development, after consultation with the Alaska Commission on Postsecondary Education, may adopt regulations under AS 44.62 (Administrative Procedure Act) to implement their respective duties under the Alaska merit scholarship program established in AS 14.43.810, enacted by sec. 5 of this Act, so that a student

(1) may be eligible for the program even though the student did not fully meet the required core academic curriculum for the school years beginning July 1, 2010, through June 30, 2014; and

(2) who graduated from high school in this state after January 1, 2011, and before July 1, 2011, and meets eligibility requirements for the program may apply for a scholarship on or after January 1, 2011, for enrollment in a program of study beginning on or after July 1, 2011.

* **Sec. 9.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Education and Early Development, the Department of Labor and Workforce Development, and the Alaska Commission on Postsecondary Education may proceed to adopt regulations necessary to implement changes made to their respective authorities by secs. 1, 2, 5, 7, and 8 of this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2011, except that regulations pertaining to applications for scholarships may take effect on or after January 1, 2011.

* **Sec. 10.** The uncodified law of the State of Alaska is amended by adding a new section to read:

JOINT LEGISLATIVE HIGHER EDUCATION SCHOLARSHIP FUNDING TASK FORCE. (a) The legislature finds that

(1) there is a growing problem of students entering degree programs at postsecondary institutions in Alaska but not completing the degree programs;

(2) at 22.4 percent, Alaska ranks last in the nation for first-time full-time bachelor degree-seeking students who complete their degrees within six years;

(3) it is estimated that, by 2025, 50 percent of all jobs in the United States will require a college-level degree;

(4) having an educated population is integral to economic development and promotion of lifetime success;

(5) the cost of attending postsecondary institutions continues to rise while financial aid for students fails to alleviate their unmet financial need so that they may attend college;

(6) improving financial aid opportunities for Alaska students would likely improve postsecondary graduation rates in the state; and

(7) establishing a state scholarship program to improve access to student

financial aid requires a more thorough examination by the legislature.

(b) The Joint Legislative Higher Education Scholarship Funding Task Force is established in the legislative branch for the purpose of examining higher education costs and identifying the best approach in providing financial aid to assist students in the state.

(c) The duties of the task force established under this section include

(1) evaluating how best to provide long-term and sustainable funding for state-provided financial aid for postsecondary institutions in the state, including scholarship opportunities;

(2) evaluating proposals that are based on available facts and conclusions pertaining to financial aid opportunities at postsecondary institutions in the state;

(3) recommending improvements or additions to the laws providing for financial aid at postsecondary institutions; and

(4) taking public comments on financial aid opportunities in the state.

(d) The task force consists of 15 members, as follows:

(1) five members of the senate appointed by the president of the senate;

(2) five members of the house of representatives appointed by the speaker of the house of representatives; and

(3) five members appointed by the governor, as follows:

(A) the commissioner of education and early development or the commissioner's designee;

(B) the president of the University of Alaska or the president's designee;

(C) the director of the office of management and budget or the director's designee;

(D) a member of the state Board of Education and Early Development;

(E) the executive director of the Alaska Commission on Postsecondary Education.

(e) The president of the senate and the speaker of the house of representatives shall jointly appoint the chair and vice-chair of the task force.

(f) The task force shall meet during the interim between legislative sessions.

(g) The task force shall submit a report of its findings and proposed legislative

changes to the governor, the Alaska Commission on Postsecondary Education, the Department of Education and Early Development, and the legislature by December 1, 2010, and may make any additional reports it considers advisable.

(h) The Joint Legislative Higher Education Scholarship Funding Task Force is terminated on January 1, 2011.

* **Sec. 11.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ESTABLISHMENT OF ADVISORY TASK FORCE ON HIGHER EDUCATION AND CAREER READINESS; COMPOSITION. (a) An advisory task force on higher education and career readiness is established in the legislative branch of state government for the purpose of compiling data and advising the legislature on matters pertaining to college and career readiness of students who graduate from public secondary schools in the state and students who are nontraditional students.

(b) The task force established under this section consists of 20 members, as follows:

(1) the governor or the governor's designee;

(2) the executive director of the Alaska Commission on Postsecondary Education or the executive director's designee;

(3) the commissioner of education and early development or the commissioner's designee;

(4) one member appointed by the governor who represents vocational, technical training, or apprenticeship programs in the state;

(5) a student representative appointed by the state Board of Education and Early Development;

(6) the student member of the Board of Regents of the University of Alaska or the student's designee;

(7) the president of the University of Alaska or the president's designee;

(8) the executive director of the Association of Alaska School Boards or the executive director's designee;

(9) the executive director of the Alaska Association of School Administrators or the executive director's designee;

(10) the president of the National Education Association of Alaska or the

president's designee;

(11) the president of the Alaska Federation of Natives or the president's designee;

(12) two members of the house of representatives, appointed by the speaker of the house of representatives, one of whom shall be appointed co-chair;

(13) two members of the senate, appointed by the president of the senate, one of whom shall be appointed co-chair;

(14) one member appointed by the governor who represents private colleges or universities;

(15) one member appointed by the governor who represents public postsecondary institutions and who is not affiliated with the University of Alaska;

(16) three members appointed by the governor who have specialized knowledge, skill, or experience in education remediation and who are employed as faculty at postsecondary institutions located in separate major administrative units in the state, at least one of whom resides outside of Anchorage, Fairbanks, and Juneau.

(c) A majority of the members of the task force constitutes a quorum. A vacancy on the task force shall be filled in the same manner as the original selection or appointment.

(d) Members of the task force serve without compensation but are entitled to per diem and travel expenses authorized for boards and commissions under AS 39.20.180, except that per diem and travel expenses shall be paid from the budget of the agency or institution the member represents on the task force. The agency or institution may opt out of participating to avoid payment of per diem and travel expenses. The staff of the legislative members of the task force shall serve as staff for the task force.

(e) The task force shall meet at the call of the chair not less than once every three months. The co-chairs shall call the first meeting of the task force not later than 30 days after the effective date of this section. The members of the task force shall elect other officers as needed to conduct the business of the task force.

(f) The task force shall

(1) compile research conducted in the state and nationally on reducing remediation, improving retention, and increasing college and postsecondary vocational or technical program graduation rates;

(2) summarize data on

(A) types of testing used to determine college and career readiness;

(B) remediation rates;

(C) effectiveness of remediation for students entering college or postsecondary vocational or technical training programs with skill deficits;

(D) characteristics of programs that are most effective in addressing skill deficits;

(3) create a definition of remediation to ensure consistency in reporting of remediation rates by postsecondary institutions in the state;

(4) identify the contributing causes of a lack of college and career readiness of students who graduate from public secondary schools in the state and the course topics taken in college or postsecondary vocational or technical training programs for which students require remediation;

(5) identify best practices examples of school systems, colleges, and postsecondary vocational or technical training programs that are succeeding in reducing the need for remedial education;

(6) explore new approaches that may be effective in producing increased levels of college and career readiness;

(7) determine the availability of broadband and Internet capabilities and the effect of the use of electronic, Internet, and virtual instruction on student learning and success in schools;

(8) determine the role various types of postsecondary institutions may play in addressing the need for remediation;

(9) review graduation rates of colleges, universities, and postsecondary vocational or technical training programs located in the state for the six years preceding the effective date of this section;

(10) prepare for the legislature a set of written recommendations to improve remediation, retention, and graduation rates at colleges, universities, and postsecondary vocational or technical training programs in the state;

(11) review completion rates for career skill certificate programs, disaggregated by program and postsecondary campus.

(g) The task force shall submit the assessment and recommendations developed under (f) of this section in a report to the legislature not later than April 1, 2011.

* **Sec. 12.** Section 11 of this Act is repealed on July 1, 2011.

* **Sec. 13.** Sections 3, 4, 6, and 8 - 11 of this Act take effect immediately under AS 01.10.070(c).

* **Sec. 14.** Except as provided in sec. 13 of this Act, this Act takes effect July 1, 2011.

ANALYSIS: *(Attach a separate page if necessary)*

SB 221 establishes an Advisory Task Force on Higher Education in the Legislative Branch of government. The Task Force consists of 13 members from various education and government entities. Members serve without compensation but are entitled to per diem and travel expenses. The legislation provides that per diem and travel expenses shall be paid from the budget of the agency or institution the member represents on the Task Force. The agency or institution can opt out of participating to avoid payment of per diem and travel expenses. The Legislature has two members on the Task Force, the Chairs of the Senate and House Education Committees.

It is anticipated that the Task Force will hold six meetings. Travel costs for the Legislators and staff are included in this fiscal note for two meetings in Anchorage and two meetings in Fairbanks. The other two meetings will be teleconferenced. The costs for employees of the Education Committee Chairs to staff the Task Force, costs for teleconferencing meetings, and printing the final the report which is due March 1, 2011 will be absorbed within existing budgets.

ANALYSIS: *(Attach a separate page if necessary)*

Relative to ACPE this bill: 1) establishes an administrative role for the agency relative to managing the Alaska Merit Scholarship program, 2) amends the existing AlaskAdvantage Education Grant program by increasing the annual maximum grant award from $2,000 to $3,000 per recipient, and 3) modifies Alaska's participation in the Western Interstate Commission on Higher Education's (WICHE) Professional Student Exchange Program (PSEP) by setting an annual minimum number of loans to support Alaska participants in the pharmacy, dentistry, and optometry fields of study.

The contractual funds noted above represent the cost of implementation for scholarship management software.

STATE OF ALASKA
2010 LEGISLATIVE SESSION

BILL NO. HCS CSSB 221(FIN)

ANALYSIS CONTINUATION

It is important to note the costs reflected in FY12 and subsequent years represent the administration's best estimate. However, given that the bill also establishes a Task Force, the recommendations of which could substantially alter related program costs, these estimates may be characterized as tentative pending the Task Force reports.

Assumptions:
1) Baseline count of high school graduates (8,008) based on 2009 data.
2) Referenced utilization rate of 28.8% for similarly structured program in WY. While Alaska has lower college-going rates historically than WY, in recent years a higher percentage of students continuing to postsecondary education have attended Alaska institutions.
3) Per student Alaska Merit Scholarship award amount is an average of all award levels.
4) Scholar attrition rate is 25% per year based upon UA five-year graduation rate data.
Participation numbers are assumed to be: Year 1=2,305; Year 2=4,034; Year 3=5,187; Year 4=5,763

In Wyoming, approximately 28.8% of graduates utilize the merit scholarship program.
At the same utilization rate, an estimated 2,305 AK high school grads will earn a scholarship.

Per Education Trust, the graduation rate after 5 years for UAF is 25% and UAA is 16.5%.
The four-year graduation rate is significantly lower.

Cohort: 2,305 students per year

	Participation rates	Number of Students	Average Scholarship	Est. annual cost	Year 1 Est. cost	Year 2 Est. cost	Year 3 Est. cost
Year 1	100%	2,305	$3,567	$ 8,221,935	$8,221.9		
Year 2	75%	1,729	$3,567	$ 6,167,343		$14,389.3	
Year 3	50%	1,153	$3,567	$ 4,112.751			$18,502.0
Year 4	25%	576	$3.567	$ 2.054.592			
Est. merit-based cost (full implementation)		5,763		$20,556,621			

As noted above, pending Task Force examination of the appropriate level of additional needs based aid, funding for the AlaskAdvantage Education Grant is requested at a continuation level relative to the annual average amounts paid out over the past four years--approximately $1.05 million. The FY11 grant funding in the amount of $400,000 will supplement the $620,000 remaining from the FY09 capital budget appropriation of $2.5 million. In FY12 and later years, $1.1 million for program funding is included in the program costs noted herein.

There are no costs anticipated relative to the changes to the PSEP loan program.

ANALYSIS: *(Attach a separate page if necessary)*

WD26-LS1309\W, Sec.10 establishes n 15 member Jt Legislative Higher Education Task Force composed of 10 Legislators, 2 Executive Branch members and 3 public members. It is assumed the Task Force will meet six times with all meetings requiring travel. This fiscal note includes travel funding for the Legislators and public members in the amount of $75.0. Travel costs for Executive Branch members will be absorbed in Executive Branch Budgets. Sec. 11 establishes a 20 member Advisory Task Force on Higher Education and Career Readiness. Members of this Task Force will meet not less than every 3 months. Members of this Task Force serve without compensation but are entitled to per diem and travel expenses paid from the budget of the agency or institution the member represents. Travel for the 4 Legislators on this Task Force and their employees who staff this Task Force is included in this fiscal note in the amount of $ 17.0 for FY11. Costs to teleconference the meetings and to print reports will be absorbed within existing Legislative Budgets.

MEMORANDUM February 4, 2011

SUBJECT: Dedicated fund issue (SB 43; Work Order No. 27-GS1893\A)

TO: Senator Kevin Meyer
Co-Chair of the Senate Education Committee

FROM: Jean M. Mischel
Legislative Counsel

The structure of the governor's performance scholarship fund set forth in 27-GS1893\A is problematic. It includes income earned on investments of fund assets in the balance of the fund. If that income is not specifically appropriated to the fund by the legislature, its inclusion in the fund may violate the dedicated fund clause.[1] The Alaska Supreme Court recently mentioned this issue in Southeast Alaska Conservation Council v. State, 202 P.3d 1162 (Alaska 2009):

> First, there is a substantial question as to whether appropriating unrestricted funds into the ETF would in itself violate the dedicated funds clause. While the dedicated funds clause is not, of course, violated merely by the fact of an appropriation for a specific purpose, it would be of concern that the income generated by the appropriation would be dedicated. We think that there is sufficient doubt as to the constitutionality of an appropriation made for the purpose of generating dedicated income that the University's suggestion that this might be done cannot justify severance.
>
> . . .

[1] Art. IX, sec. 7 of the Constitution of the State of Alaska provides:

> **SECTION 7. Dedicated Funds**. The proceeds of any state tax or license shall not be dedicated to any special purpose, except as provided in section 15 of this article or when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska.

So, although the court has not decided the issue, it has observed that there is "doubt as to the constitutionality of an appropriation made for the purpose of generating dedicated income." Generating dedicated income is precisely what the draft bill appears to anticipate in sec. 37.14.750.

If I may be of further assistance, please advise.

MEMORANDUM February 4, 2011

SUBJECT: Amendments to SB 43: Dedicated Funds Issue
(Work Order Nos. 27-GS1893\A.4 and A.7)

TO: Senator Joe Thomas
Co-Chair of the Senate Education Committee

FROM: Jean M. Mischel
Legislative Counsel

The above amendments' attempt to limit the expenditure and appropriation of funds from the performance scholarship award fund created in sec. 7 of the bill raises constitutional issues. Some of these issues raised by the amendments are related to an underlying constitutional issue in the bill itself.

The fund established in the bill may violate the dedicated fund clause.
The structure of the governor's performance scholarship investment fund set forth in sec. 9 of SB 43 is problematic. It includes income earned on investments of fund assets in the balance of the fund. If that income is not specifically appropriated to the fund by the legislature, its inclusion in the fund may violate the dedicated fund clause.[1] The Alaska Supreme Court recently mentioned this issue in Southeast Alaska Conservation Council v. State, 202 P.3d 1162 (Alaska 2009):

> First, there is a substantial question as to whether appropriating unrestricted funds into the [endowment trust fund] would in itself violate the dedicated funds clause. While the dedicated funds clause is not, of course, violated merely by the fact of an appropriation for a specific purpose, it would be of concern that the income generated by the appropriation would be dedicated. We think that there is sufficient doubt as to the constitutionality of an appropriation made for the purpose of

[1] Art. IX, sec. 7 provides:

> **SECTION 7. Dedicated Funds.** The proceeds of any state tax or license shall not be dedicated to any special purpose, except as provided in section 15 of this article or when required by the federal government for state participation in federal programs. This provision shall not prohibit the continuance of any dedication for special purposes existing upon the date of ratification of this section by the people of Alaska.

> generating dedicated income that the University's suggestion that this might be done cannot justify severance.
>
> . . .
>
> Our cases have not specifically addressed whether income earned by an agency from appropriated funds is covered by the dedicated funds clause. A 1982 attorney general opinion considered this question and concluded that such income likely would be covered. The opinion discusses policy reasons that would also apply to appropriating money to dedicated funds:
>
> > A difficulty that arises from the view that the dedicated funds prohibition is not applicable to interest or investment income on separate funds is that it permits steadily increasing amounts of money to be received and used by state departments and agencies without legislative control through the annual budget process. This is precisely the problem posed by the dedication of revenue sources which the drafters sought to avoid. For this reason, while we are not certain about the likely outcome, we doubt that a blanket exception for derivative income would be approved by the courts.
> >
> > . . . . Although not expressly addressed by them, the framers were very much aware of the boom-bust cycle of Alaska's economy. In fact, a driving force behind statehood was the desire of Alaskans themselves to be able to manage the income derived from those brief periods . . . when the state may receive enormous sums of money which are then immediately available for expenditure or placement, by appropriation, into a variety of funds and accounts for various permissible purposes. Depending on the number and size of those funds and accounts, the interest earned on the money placed in them could itself be substantial . . . . [T]he significance of that interest income in properly managing the state's budget leads us to the conclusion that our framers would have considered it to be within the dedicated fund prohibition.

Southeast Alaska Conservation Council v. State, 202 P.3d 1162, 1175 and n. 71 (Alaska 2009), quoting 1982 Op. Alaska Att'y Gen. No. 13 at 16 - 17 (Nov. 26). See also Myers v. Alaska Housing Finance Corporation, 68 P.3d 386, 391 (Alaska 2003) ("the anti-dedication clause would prohibit the legislature from appropriating the tobacco settlement revenue stream for more than the immediately forthcoming fiscal year directly to secure a bond issue"). But see 1982 Op. Alaska Att'y Gen. (Nov. 30) ("[u]ntil the question is

ruled on by the courts, we will defend legislative action dedicating, by general law, derivative income to the funds which 'earned' them").

So, although the court has not decided the issue, it has observed that there is "doubt as to the constitutionality of an appropriation made for the purpose of generating dedicated income." Generating income is precisely what the draft bill appears to anticipate in sec. 37.14.750(a).

Of course, this problem could be remedied with a constitutional amendment establishing the performance scholarship fund as a dedicated fund, or removing the prohibition on dedicated funds altogether. If you choose this approach, then the fund provisions in the bill and the amendments should be made contingent on adoption of the constitutional amendment.

Amendments A.4 and A.7 raise additional constitutional issues.
Amendments A.4 and A.7 purport to limit the ability of the legislature to make future appropriations to the fund, by setting a maximum fund balance of $160,000,000 in amendment A.4 and by requiring a one-third minimum amount for grant appropriations in A.7.[2] Both are contrary to the legislature's appropriation power under art. II, sec. 13 of the state constitution and annual budget process required under art. IX, sec. 12 of the state constitution (see quote from the AG Opinion, above), which are meant to give the legislature the flexibility to deal with budgetary needs on an annual basis as circumstances change. Art. IX, sec. 13 of the state constitution provides:

> No money shall be withdrawn from the treasury except in accordance with appropriations made by law. No obligation for the payment of money shall be incurred except as authorized by law. Unobligated appropriations outstanding at the end of the period of time specified by law shall be void.

Article IX, sec. 12 of the state constitution provides:

> The governor shall submit to the legislature, at a time fixed by law, a budget for the next fiscal year setting forth all proposed expenditures and anticipated income of all departments, offices, and agencies of the State. The governor, at the same time, shall submit a general appropriation bill to authorize the proposed expenditures, and a bill or bills covering recommendations in the budget for new or additional revenues.

---

[2] It is worth noting here that the bill draft at p. 5, l. 22, asserts that "[n]othing in this section creates a dedicated fund." Given this, a court might choose to interpret the statute creating the fund as requiring that interest earned on investments of fund assets be appropriated into the fund at the discretion of the legislature, rather than automatically being incorporated into the fund's balance.

The amendments may violate both of these provisions. The Alaska Supreme Court has recognized that "[o]ne legislature may not bind future legislatures." Mount Juneau Enterprises, Inc. v. City and Borough of Juneau, 923 P.2d 768, 776 (Alaska 1996). Also, as a practical matter, a future legislature could further amend sec. 37.14.750, or perhaps simply ignore its provisions on the theory that an attempt to bind a future legislature is void.

If I may be of further assistance, please advise.

MEMORANDUM February 4, 2011

SUBJECT: Amendment to SB 43: capital income fund repeal
(Work Order No. 27-GS1893\A.5)

TO: Senator Joe Thomas
Co-Chair of the Senate Education Committee

FROM: Jean M. Mischel
Legislative Counsel

The enclosed amendment allows the Amerada Hess settlement funds to be deposited directly into a combined education grant and scholarship fund. In doing so, we have repealed the capital income fund (AS 37.05.565) since that was the purpose of that fund, and amended AS 37.13.145(d). We also have repealed the 1992 SLA pertaining to the handling and deposit of the Amerada Hess funds to avoid the possibility, however unlikely, that a court would issue an opinion triggering the repeal of AS 37.13.145(d).

Section 28, ch. 134, SLA 1992 provides:

> AS 37.13.145(d), added by sec. 19 of this Act, is repealed on the day that the revisor of statues certifies to the legislature that the Alaska Supreme Court has made a final determination that, in the absence of AS 43.23.045(c), repealed by sec. 29 of this Act, or AS 37.13.145(d), added by sec. 19 of this Act, no judge or juror is disqualified from serving as judge or juror solely because the judge or juror may qualify to receive a permanent fund dividend.

If I may be of further assistance, please advise.

(b) In addition to the budget and bills submitted under (a) of this section, the governor shall submit a capital improvements program covering the succeeding six fiscal years. The governor shall also submit a fiscal plan with estimates of significant sources and uses of funds for the succeeding 10 fiscal years. The fiscal plan

(1) must include sufficient details to identify

(A) significant sources of funds;

(B) significant uses of funds, including lump sum projections of

(i) operating expenditures;

(ii) capital expenditures;

(iii) debt service expenditures;

(iv) fund capitalizations;

(v) appropriations of income of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska), if any;

(2) must balance sources and uses of funds held while providing for essential state services and protecting the economic stability of the state;

(3) must include projected balances of significant funds held in separate accounts, including the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska), the public education fund (AS 14.17.300), and the **AlaskAdvantage education grant and Alaska performance scholarship fund (AS 37.14.750)** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)];

(4) must set out significant assumptions used in the projections with sufficient detail to enable the legislature to rely on the fiscal plan in understanding, evaluating, and resolving issues of state budgeting, including information that supports major areas of operating increases, such as population demographics that affect the need for particular government services.

* **Sec. 10.** AS 37.13.145(d) is amended to read:

(d) Notwithstanding (b) of this section, income earned on money awarded in

or received as a result of State v. Amerada Hess, et al., 1JU-77-847 Civ. (Superior Court, First Judicial District), including settlement, summary judgment, or adjustment to a royalty-in-kind contract that is tied to the outcome of this case, or interest earned on the money, or on the earnings of the money shall be treated in the same manner as other income of the Alaska permanent fund, except that it is not available for distribution to the dividend fund or for transfers to the principal under (c) of this section, and shall be annually deposited into the **AlaskAdvantage education grant and Alaska performance scholarship fund (AS 37.14.750)** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)]."

AMENDMENT

OFFERED IN THE SENATE

BY SENATOR THOMAS

TO: SB 43

Page 5, line 16, following "assets":

Insert "and appropriated to the fund"

The Fund consists of:

(3) income earned on investments of fund assets and appropriated to the fund.

Amerada HESS Fund:

Balance of the AmHess account = $424,398,972.03 (this will never change under current law, as nothing is added to it anymore)

Prior year transfers (generally sent in the last week of July each year):
6/30/2010 = $0
6/30/2009 = $0
6/30/2008 = $32,962,838.52
6/30/2007 = $42,287,323.53
6/30/2006 = $36,747,608.50

The zero transfer years are due to realized losses in the market crisis. In FY2009 there were $33,343,373.41 in realized losses attributed to the Amerada Hess balance. In FY2010 $20,830,076.96 was realized, and served to decrease ("pay back") that negative balance. Anything greater than $12,513,296.45 (the remaining negative balance) in earnings this year will be transferred to the AK Capital Income Fund in July 2011.

Capital Income Fund transfers from AmHESS:

The balance of the Alaska Capital Income Fund was $221,104,397.49 at 12/31/10.

Alaska Performance Scholarship

SB43/HB104 Renaming the Alaska performance scholarship...and establishing scholarship investment and award funds

What does SB43/HB104 do?

1. The Governor's bill amends statutes to rename the statewide scholarship. The name "merit scholarship" currently in statute puts Alaska at risk of infringing on an existing copyright held by the National Merit Scholarship organization.
2. Further, the bill establishes both an award fund into which appropriations can be made and from which scholarship awards will be paid to students and, an investment fund into which the legislature may make appropriations and others may make donations. The bill specifies the Legislature may make appropriations from this fund into the award fund.
3. Finally, the bill permits Alaska tax-payers to make donations into the scholarship investment fund and qualify for an education tax credit.

Why is SB43/HB104 necessary?

During the 2010 legislative session Governor Parnell proposed establishing a statewide scholarship for Alaska's students based on the principle that if our students: 1) take a curriculum which prepares them to succeed in postsecondary education, and 2) work hard and perform well in school, we should incent and reward them for pursuing postsecondary education and training in Alaska. This not only will benefit students but also the state as a whole by growing a skilled, local workforce and reduce the need for non-resident hires. The Alaska Legislature embraced this strategy and approved a merit scholarship which the Governor then signed into law.

The Governor has introduced this bill to avert the consequences of the copyright infringement noted above and more importantly, to propose establishment of a fund the characteristics of which are consistent with the final recommendation of the Legislature's Joint Higher Education Scholarship Funding Task Force[1].

Why is this funding structure being proposed?

Governor Parnell strongly believes the scholarship is a commitment to Alaska's students and it is critical to the success of the program that these scholarship awards have a long-term and sustainable funding stream. Additionally, the Governor seeks to make it possible for any interested party to support the scholarship's workforce development objectives by donating to the fund. To the extent that there are Alaska tax-payers with an interest in donating, they are incented to do so through the education tax credit for which the donations would be eligible.

Thank you for taking the time to discuss SB43/HB104. We are extremely appreciative of the support and valuable time and attention legislative leaders have given this matter and look forward to continuing our collaborative work to advance education and workforce development in Alaska.

Honorable Senator Thomas
State Capitol Room 514
Juneau, AK 99801

Dear Senator Thomas,

You requested the balance and transfer amounts of the Amerada HESS Fund. The Fund is managed by the Alaska Permanent Fund Corporation The interest earnings that are transferred to the Capital Income Fund are managed by the Department of Revenue Treasury Division.

Amerada HESS Fund:
Balance of the AmHess account = $424,398,972.03 (this will never change under current law, as nothing is added to it anymore)

Prior year transfers (generally sent in the last week of July each year):
6/30/2010 = $0
6/30/2009 = $0
6/30/2008 = $32,962,838.52
6/30/2007 = $42,287,323.53
6/30/2006 = $36,747,608.50

The zero transfer years are due to realized losses in the market crisis. In FY2009 there were $33,343,373.41 in realized losses attributed to the Amerada Hess balance. In FY2010 $20,830,076.96 was realized, and served to decrease ("pay back") that negative balance. Anything greater than $12,513,296.45 (the remaining negative balance) in earnings this year will be transferred to the AK Capital Income Fund in July 2011.

Capital Income Fund transfers from AmHESS:
The balance of the Alaska Capital Income Fund was $221,104,397.49 at 12/31/10.

MEMORANDUM February 4, 2011

SUBJECT: Amendment to SB 43: capital income fund repeal
(Work Order No. 27-GS1893\A.5)

TO: Senator Joe Thomas
Co-Chair of the Senate Education Committee

FROM: Jean M. Mischel
Legislative Counsel

The enclosed amendment allows the Amerada Hess settlement funds to be deposited directly into a combined education grant and scholarship fund. In doing so, we have repealed the capital income fund (AS 37.05.565) since that was the purpose of that fund, and amended AS 37.13.145(d). We also have repealed the 1992 SLA pertaining to the handling and deposit of the Amerada Hess funds to avoid the possibility, however unlikely, that a court would issue an opinion triggering the repeal of AS 37.13.145(d).

Section 28, ch. 134, SLA 1992 provides:

> AS 37.13.145(d), added by sec. 19 of this Act, is repealed on the day that the revisor of statues certifies to the legislature that the Alaska Supreme Court has made a final determination that, in the absence of AS 43.23.045(c), repealed by sec. 29 of this Act, or AS 37.13.145(d), added by sec. 19 of this Act, no judge or juror is disqualified from serving as judge or juror solely because the judge or juror may qualify to receive a permanent fund dividend.

If I may be of further assistance, please advise.

JMM:ljw

SB 43

AMENDMENT A.10

This amendment would give students more schooling options by adding to the list of "qualified postsecondary institutions" eligible to receive scholarship funds. Many schools, particularly "non-traditional" schools such as faith-based institutions, technical training schools, flight schools, and salon/beauty schools, cannot receive "regional" accreditation. Instead, such institutions typically pursue other specialized "national" accreditation. They are all officially recognized by the ACPE and are licensed to operate in Alaska. Similarly, such institutions are also recognized federally by the U.S. Dept. of Education and are authorized to receive federal financial aid. This would allow qualifying students who choose to pursue a non-traditional career path to apply their scholarships to a broader swath of legitimate institutions in Alaska.

Senate Education Committee

A.5

Sec. 37.05.565. Alaska capital income fund.

(a) There is established in the general fund the Alaska capital income fund consisting of money deposited to the fund under AS 37.13.145(d) and of appropriations to the fund. The fund shall be invested by the Department of Revenue to yield competitive market rates as provided in AS 37.10.071. Income earned on money in the fund may be appropriated to the fund.

(b) Money may be appropriated from the Alaska capital income fund for any public purpose, including to cover annual debt service and reserves for debt service on bonds authorized by state law. Nothing in this subsection creates a dedicated fund.

A.9

*** Sec. 9.** AS 37.14 is amended by adding new sections to read:
Article 8A. Alaska Performance Scholarship Investment Fund.
Sec. 37.14.750. Alaska performance scholarship investment fund established. (a) The Alaska performance scholarship investment fund is established as a fund of the state. The fund consists of
(1) appropriations to the fund;
(2) donations to the fund; and
(3) income earned on investments of fund assets.

A.11

Establishes GRANT and SCHOLARSHIP fund

Page 1, line 10: issue dealt with later

Page 2, starting line10:

1) C: Establishes a 3:1 relationship between scholarship awards and grants
2) If insufficient funds are available, the relationship still exists
    a. Defines insufficient funds as $80M No new scholarships or grants awarded
    b. If more more than $80M, grants are made on a pro rata basis

The intent is that there enough to pay for freshman cohort to go through four years of college.

A.12

If no grants are or awards are made, the funds are obligated but unused, which is not in the public interest. Suggested by Leg Legal.

MEMORANDUM February 1, 2011

SUBJECT: Tax credit question (CSHB 104( ))
(Work Order No. 27-GH1893\M)

TO: Representative Paul Seaton
Attn: Katie Koester

FROM: Jean M. Mischel
Legislative Counsel

The changes to the above governor's bill have been made as requested but there is an issue, perhaps unintentional, that exists with the governor's bill as originally drafted pertaining to education tax credits. The bill includes only the income tax credit for corporations under AS 43.20.014 for cash contributions made to the performance scholarship program. Various education tax credits appear in seven other locations in the statute with a combined cap of $5,000,000. See the list in AS 43.20.014(d)(3). If you would like the other education tax credits to include scholarship contributions, let me know.

Also, do you want to repeal sec. 28, ch. 134, SLA 1992, which repeals AS 37.13.145(d), amended in sec. 12 of this Act?

Enclosure

27-GH1893\M
Mischel
1/31/11

CS FOR HOUSE BILL NO. 104( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): HOUSE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act renaming the Alaska performance scholarship and relating to the scholarship and tax credits applicable to contributions to the scholarship; relating to AlaskAdvantage education grant funding and to Alaska performance scholarship funding; establishing an account and fund for those purposes; repealing the Alaska capital income fund; making conforming amendments; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.113, as enacted by sec. 1, ch. 14, SLA 2010, is amended to read:

Sec. 14.03.113. District determination of scholarship eligibility. A school district shall determine whether a student who graduates from a high school in the district is eligible for an award of an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849. If a student is eligible, the district shall state in the student's permanent record the highest level of funding for

which the student is eligible. A district shall provide a student with an opportunity to request that the district correct an error in the eligibility determination.

*** Sec. 2.** AS 14.43.410 is amended by adding a new subsection to read:

(c) Notwithstanding the provisions of this section, payment of a grant is subject to appropriation and the availability of funds for expenditure under AS 37.14.750. If insufficient funds are appropriated or available in a fiscal year to pay all eligible grants, the commission may not award a grant to a new applicant, and the commission shall pay existing awards on a pro rata basis for that fiscal year.

*** Sec. 3.** AS 14.43.810, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.810. Alaska <u>performance</u> [MERIT] scholarship program established; regulations. (a) The Alaska **<u>performance</u>** [MERIT] scholarship program is established to provide scholarships for high school graduates who are Alaska residents to attend a qualified postsecondary institution in the state.

(b) The department shall, in consultation with the commission, adopt regulations necessary to implement the **<u>scholarship</u>** program. The commission shall administer the daily operations of the **<u>scholarship</u>** program and financing of the **<u>scholarship</u>** program, including the procedures for applying for the scholarships, establishing standards for and ensuring continuing compliance with programmatic standards, and requiring students to apply for other nonloan financial aid, consistent with federal law.

*** Sec. 4.** AS 14.43.820(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) Subject to appropriation, the commission shall award an Alaska **<u>performance</u>** [MERIT SCHOLARSHIP PROGRAM] scholarship to an applicant who

(1) is a resident of the state as defined in AS 01.10.055;

(2) graduated or will graduate within six months from a high school in the state;

(3) has completed a core academic curriculum in high school that includes

(A) four years of mathematics, four years of language arts, four years of science, and four years of social studies, one year of which may include a foreign language, an Alaska Native language, fine arts, or cultural

heritage; or

(B) three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or an Alaska Native language;

(4) has a minimum grade-point average in high school of 2.5 or higher; the department shall set by regulation minimum requirements based on a substantially similar standard for districts that do not assign grades;

(5) has achieved a minimum score on a

(A) college entrance examination; or

(B) standardized examination designed to measure a student's level of preparedness to make the transition to work, as selected by the department; and

(6) is enrolled in good standing in a course of study at a qualified postsecondary institution in this state that is intended to result in the award of a certificate or degree.

*** Sec. 5.** AS 14.43.825(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) The maximum annual awards for the Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarships are as follows:

(1) the first award level is $4,755 and requires a 3.5 grade-point average or above and a very high minimum score on a college entrance examination;

(2) the second award level is $3,566 and requires a 3.0 grade-point average or above and a high minimum score on a college entrance examination;

(3) the third award level is $2,378 and requires a 2.5 grade-point average or above and a moderately high minimum score on a college entrance examination.

*** Sec. 6.** AS 14.43.825(f) is repealed and reenacted to read:

(f) Payment of a scholarship is subject to appropriation and the availability of funds for expenditure under AS 37.14.750. If insufficient funds are appropriated or available in a fiscal year to pay all eligible scholarships, the commission may not award a scholarship to a new applicant, and the commission shall pay existing awards on a pro rata basis for that fiscal year.

* **Sec. 7.** AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.830. Qualified postsecondary institutions. (a) The following institutions are qualified postsecondary institutions for purposes of awarding an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship:

(1) a university or college physically located in the state that [IS]

(A) **is** authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); [AND]

(B) **is** accredited by a regional accreditation association;

(C) has an advisory program established for incoming students that provides counseling related to course selection, career choice, and personal challenges; and

(D) provides courses and credits that will result in the issuance of a degree or certificate available at the institution within a time frame expected for that degree or certificate;

(2) a career and technical school program physically located in the state that **meets the standards established in (a)(1)(C) and (D) of this section and that** has been included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment.

(b) The Department of Labor and Workforce Development shall, in consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska **performance** [MERIT] scholarship program.

* **Sec. 8.** AS 14.43.849, as enacted by sec. 2, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.849. Definitions. In AS 14.43.810 - 14.43.849, unless the context requires otherwise,

(1) "department" means the Department of Education and Early Development;

(2) "grade-point average" means the average of all grades on a four-

point scale, or five-point scale for advanced placement classes, obtained by the student in high school;

(3) "high school" means a public or accredited secondary school in the state and a home school program that is approved by the department;

(4) "program" means the Alaska **performance** [MERIT] scholarship program established under AS 14.43.810 - 14.43.849;

(5) "school district" means a borough school district, a city school district, a regional educational attendance area, and a state boarding school.

* **Sec. 9.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.915. AlaskAdvantage education grant and Alaska performance scholarship award income account. The AlaskAdvantage education grant and Alaska performance scholarship award income account is created as an account in the general fund. Money may be appropriated to the account from the AlaskAdvantage education grant and Alaska performance scholarship fund under AS 37.14.750 and from other sources. The commission may use the money in the account to pay grants awarded under AS 14.43.400 - 14.43.420 and scholarships awarded to students under AS 14.43.810 - 14.43.849. The amount determined under AS 37.14.750(d) each year and deposited into the account is the maximum amount that may be used to pay scholarships for the immediately succeeding fiscal year.

* **Sec. 10.** AS 14.45.130(a), as amended by sec. 7, ch. 14, SLA 2010, is amended to read:

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, courses taken at the school, and level of eligibility for an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849.

* **Sec. 11.** AS 37.07.020(b) is amended to read:

(b) In addition to the budget and bills submitted under (a) of this section, the governor shall submit a capital improvements program covering the succeeding six fiscal years. The governor shall also submit a fiscal plan with estimates of significant sources and uses of funds for the succeeding 10 fiscal years. The fiscal plan

(1) must include sufficient details to identify

(A) significant sources of funds;

(B) significant uses of funds, including lump sum projections of

(i) operating expenditures;

(ii) capital expenditures;

(iii) debt service expenditures;

(iv) fund capitalizations;

(v) appropriations of income of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska), if any;

(2) must balance sources and uses of funds held while providing for essential state services and protecting the economic stability of the state;

(3) must include projected balances of significant funds held in separate accounts, including the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska), the public education fund (AS 14.17.300), and the **AlaskAdvantage education grant and Alaska performance scholarship fund (AS 37.14.750)** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)];

(4) must set out significant assumptions used in the projections with sufficient detail to enable the legislature to rely on the fiscal plan in understanding, evaluating, and resolving issues of state budgeting, including information that supports major areas of operating increases, such as population demographics that affect the need for particular government services.

*** Sec. 12.** AS 37.13.145(d) is amended to read:

(d) Notwithstanding (b) of this section, income earned on money awarded in or received as a result of State v. Amerada Hess, et al., 1JU-77-847 Civ. (Superior Court, First Judicial District), including settlement, summary judgment, or adjustment to a royalty-in-kind contract that is tied to the outcome of this case, or interest earned on the money, or on the earnings of the money shall be treated in the same manner as other income of the Alaska permanent fund, except that it is not available for distribution to the dividend fund or for transfers to the principal under (c) of this section, and shall be annually deposited into the **AlaskAdvantage education grant and Alaska performance scholarship fund (AS 37.14.750)** [ALASKA CAPITAL

INCOME FUND (AS 37.05.565)].

*** Sec. 13.** AS 37.14 is amended by adding a new section to read:

Article 8A. AlaskAdvantage Education Grant and Alaska Performance Scholarship Fund.

Sec. 37.14.750. AlaskAdvantage education grant and Alaska performance scholarship fund established. (a) The AlaskAdvantage education grant and Alaska performance scholarship fund is established in the general fund for the purpose of making grant payments under AS 14.43.400 - 14.43.420 and scholarship payments to qualified postsecondary institutions and students under AS 14.43.810 - 14.43.849 by appropriation to the income account established under AS 14.43.915. Money in the fund does not lapse. The fund consists of

(1) money appropriated to the fund;

(2) income earned on investment of fund assets;

(3) donations to the fund; and

(4) money deposited to the fund under AS 37.13.145(d).

(b) Each fiscal year, the legislature may appropriate to the AlaskAdvantage education grant and Alaska performance scholarship fund an amount equal to 15 percent of the money received by the state during the previous calendar year under AS 43.55.011(g).

(c) The amount annually appropriated and deposited to the fund may not exceed the greater of

(1) $40,000,000; or

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $160,000,000.

(d) The balance in the AlaskAdvantage education grant and Alaska performance scholarship fund shall be determined on June 30 of each year. The department shall distribute one-third of that amount or $40,000,000, whichever is less, for deposit into the account established in AS 14.43.915. If the fund balance is less than $80,000,000 in a fiscal year, payments may be made only to satisfy obligations from previous fiscal years.

(e) Notwithstanding the limitation in (d) of this section, the legislature may

appropriate any amount to the AlaskAdvantage education grant and Alaska performance scholarship fund. Nothing in this section creates a dedicated fund.

(f) In this section, unless the context requires otherwise, "fund" means the AlaskAdvantage education grant and Alaska performance scholarship fund established in (a) of this section.

*** Sec. 14.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted **for**

(1) [FOR] direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) [FOR] secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) [FOR] vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) [FOR] a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) the AlaskAdvantage grant and Alaska performance scholarship fund under AS 37.14.750(a).

*** Sec. 15.** AS 43.20.014(a), as amended by sec. 14, ch. 92, SLA 2010, is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses and programs by a school district in the state; [AND]

(3) by a state-operated vocational technical education and training school**; and**

(4) for the AlaskAdvantage grant and Alaska performance scholarship fund under AS 37.14.750(a).

*** Sec. 16.** Section 8, ch. 14, SLA 2010 is amended to read:

TRANSITION: **PERFORMANCE SCHOLARSHIP** PROGRAM STANDARDS AND IMPLEMENTATION FOR INITIAL SCHOOL YEARS. Notwithstanding any contrary provision of this Act, the Department of Education and Early Development and the Department of Labor and Workforce Development, after consultation with the Alaska Commission on Postsecondary Education, may adopt regulations under AS 44.62 (Administrative Procedure Act) to implement their respective duties under the Alaska **performance** [MERIT] scholarship program established in AS 14.43.810, enacted by sec. 5 of this Act, so that a student

(1) may be eligible for the **Alaska performance scholarship** [PROGRAM] even though the student did not fully meet the required core academic curriculum for the school years beginning July 1, 2010, through June 30, 2014; and

(2) who graduated from high school in this state after January 1, 2011, and before July 1, 2011, and meets eligibility requirements for the **Alaska performance scholarship** program may apply for a scholarship on or after January 1, 2011, for enrollment in a program of study beginning on or after July 1, 2011.

*** Sec. 17.** AS 37.05.565 is repealed.

*** Sec. 18.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: ALASKADVANTAGE EDUCATION GRANT AND ALASKA PERFORMANCE SCHOLARSHIP FUND BALANCE. (a) Notwithstanding the $40,000,000 limit in AS 37.14.750(d), the following amounts may be substituted for that amount as follows for

(1) fiscal year 2012, $15,000,000;

(2) fiscal year 2013, $30,000,000.

(b) The money deposited in the Alaska capital income fund established under AS 37.05.565 shall be transferred to the AlaskAdvantage education grant and Alaska performance scholarship fund established under AS 37.14.750 on the effective date of this section.

*** Sec. 19.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Education and Early Development, the Department of Labor and Workforce Development, the Department of Revenue, and the Alaska Commission on Postsecondary Education may adopt regulations necessary to implement changes made to their respective authorities by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2011.

*** Sec. 20.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the

(1) heading of article 12 of AS 14.43 from "Alaska Merit Scholarship Program" to "Alaska Performance Scholarship Program";

(2) catch line for AS 14.43.820 from "Alaska merit scholarship program; eligibility" to "Alaska performance scholarship program; eligibility."

*** Sec. 21.** Section 19 of this Act takes effect immediately under AS 01.10.070(c).

*** Sec. 22.** Section 15 of this Act takes effect January 1, 2014.

*** Sec. 23.** Except as provided in secs. 21 and 22 of this Act, this Act takes effect July 1, 2011.

CS FOR SENATE BILL NO. 43( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act renaming the Alaska performance scholarship and relating to the scholarship; relating to education tax credits; relating to AlaskAdvantage education grant funding and to Alaska performance scholarship funding and establishing an account and funds for those purposes; repealing the Alaska capital income fund and a provision relating to the Alaska capital income fund; making conforming amendments; providing for an effective date by amending the effective date in sec. 57, ch. 92, SLA 2010; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.113, as enacted by sec. 1, ch. 14, SLA 2010, is amended to read:

Sec. 14.03.113. District determination of scholarship eligibility. A school district shall determine whether a student who graduates from a high school in the district is eligible for an award of an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849. If a student is eligible, the

district shall state in the student's permanent record the highest level of funding for which the student is eligible. A district shall provide a student with an opportunity to request that the district correct an error in the eligibility determination.

* **Sec. 2.** AS 14.43.810, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.810. Alaska performance [MERIT] scholarship program established; regulations. (a) The Alaska **performance** [MERIT] scholarship program is established to provide scholarships for high school graduates who are Alaska residents to attend a qualified postsecondary institution in the state.

(b) The department shall, in consultation with the commission, adopt regulations necessary to implement the **scholarship** program. The commission shall administer the daily operations of the **scholarship** program and financing of the **scholarship** program, including the procedures for applying for the scholarships, establishing standards for and ensuring continuing compliance with programmatic standards, and requiring students to apply for other nonloan financial aid, consistent with federal law.

* **Sec. 3.** AS 14.43.820(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) Subject to appropriation, the commission shall award an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship to an applicant who

(1) is a resident of the state as defined in AS 01.10.055;

(2) graduated or will graduate within six months from a high school in the state;

(3) has completed a core academic curriculum in high school that includes

(A) four years of mathematics, four years of language arts, four years of science, and four years of social studies, one year of which may include a foreign language, an Alaska Native language, fine arts, or cultural heritage; or

(B) three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or an Alaska Native language;

(4) has a minimum grade-point average in high school of 2.5 or higher;

the department shall set by regulation minimum requirements based on a substantially similar standard for districts that do not assign grades;

(5) has achieved a minimum score on a

(A) college entrance examination; or

(B) standardized examination designed to measure a student's level of preparedness to make the transition to work, as selected by the department; and

(6) is enrolled in good standing in a course of study at a qualified postsecondary institution in this state that is intended to result in the award of a certificate or degree.

*** Sec. 4.** AS 14.43.825(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) The maximum annual awards for the Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarships are as follows:

(1) the first award level is $4,755 and requires a 3.5 grade-point average or above and a very high minimum score on a college entrance examination;

(2) the second award level is $3,566 and requires a 3.0 grade-point average or above and a high minimum score on a college entrance examination;

(3) the third award level is $2,378 and requires a 2.5 grade-point average or above and a moderately high minimum score on a college entrance examination.

*** Sec. 5.** AS 14.43.825(f), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(f) Payment of a scholarship is subject to appropriation. [IF INSUFFICIENT FUNDS ARE APPROPRIATED TO PAY ALL ELIGIBLE SCHOLARSHIPS, THE COMMISSION SHALL PAY EXISTING AWARDS ON A PRO RATA BASIS.]

*** Sec. 6.** AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.830. Qualified postsecondary institutions. (a) The following institutions are qualified postsecondary institutions for purposes of awarding an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship:

(1) a university or college physically located in the state that [IS]

(A) **is** authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); [AND]

Amendment 10

(B) **is** accredited by a regional **or national** accreditation association;

Amendment 2 7/1/12

(C) has an advisory program established for incoming students that provides counseling related to course selection, career choice, and personal challenges; and

Amendment 3 7/1/12

(D) provides courses and credits that will result in the issuance of a degree or certificate available at the institution within a time frame ~~expected~~ (customary) **for that degree or certificate;** ~~established by the commission~~

(2) a career and technical school program physically located in the state that has been included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment.

(b) The Department of Labor and Workforce Development shall, in consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska **performance** [MERIT] scholarship program.

*** Sec. 7.** AS 14.43.840, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.840. Report to the legislature. (a) To the extent permitted under law, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall share data necessary to prepare public reports regarding the **scholarship** program.

(b) Not more than 10 days after the convening of each regular legislative session, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall present an annual report to the public, the governor, and the legislature containing information of public interest regarding the **scholarship** program, including

(1) the number of applicants and number and types of scholarships awarded;

(2) the dollar amount of scholarships awarded in past years and the

dollar amount expected to be awarded for the next year; [AND]

(3) data and trends in the data regarding high school and postsecondary student performance, programmatic changes, and retention and graduation rates over time**; and**

Amendment C **(4) an assessment of the statewide centralized correspondence study program as it relates to the scholarships, including Internet access capabilities, plans to upgrade the quality and quantity of distance delivery of education, and the availability by district of correspondence courses required for the performance scholarship**.

*** Sec. 8.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.915. AlaskAdvantage education grant and Alaska performance scholarship award fund. (a) The AlaskAdvantage education grant and Alaska performance scholarship award fund is established. The fund consists of appropriations for AlaskAdvantage education grant awards under AS 14.43.400 - 14.43.420 and Alaska performance scholarship awards under AS 37.14.750 - 37.14.790.

and appropriated

(b) The commission may use money in the fund to pay grants awarded under AS 14.43.400 - 14.43.420 and scholarships for students under AS 14.43.810 - 14.43.849. Money appropriated to the fund may be expended without further appropriation. The money in the fund may be expended only in awarding grants under AS 14.43.400 - 14.43.420 and scholarships under AS 14.43.810 - 14.43.849.

Amendment 14 (c) The amount annually ~~awarded by~~ available to the commission for payment of grants awarded under AS 14.43.400 - 14.43.420 may not be less than one-third of the amount ~~awarded~~ available for scholarships under AS 14.43.810 - 14.43.849, except to the extent that the total amount necessary to pay all eligible grant applicants in a fiscal year is less than that amount.

(d) If insufficient funds are appropriated to pay all eligible grants and scholarships, the commission shall allocate one-third of the balance of the fund established under this section for payment of grant awards based on the highest to lowest financial need and, if the balance of the fund established under AS 37.14.750 on July 1 is

(1) less than $80,000,000, pay only

(A) grants as provided in this subsection; and

(B) eligible previously obligated scholarship awards; the awards may be made on a pro rata basis if necessary;

(2) $80,000,000 or more, pay

(A) grants as provided in this subsection;

(B) eligible previously obligated scholarship awards; and

(C) all other scholarship awards on a pro rata basis to be paid out within four years.

Amendment 12

(e) Money appropriated to the fund does not lapse except after the fourth consecutive fiscal year in which no appropriations have been made to the fund, or all awards have been paid to eligible recipients as provided in this chapter, whichever occurs last.

*** Sec. 9.** AS 14.45.130(a), as amended by sec. 7, ch. 14, SLA 2010, is further amended to read:

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, courses taken at the school, and level of eligibility for an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849.

*** Sec. 10.** AS 21.96.070(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under AS 21.09.210 or AS 21.66.110 for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

Amendment 8 **(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government**.

*** Sec. 11.** AS 37.07.020(b) is amended to read:

(b) In addition to the budget and bills submitted under (a) of this section, the governor shall submit a capital improvements program covering the succeeding six fiscal years. The governor shall also submit a fiscal plan with estimates of significant sources and uses of funds for the succeeding 10 fiscal years. The fiscal plan

(1) must include sufficient details to identify

(A) significant sources of funds;

(B) significant uses of funds, including lump sum projections of

(i) operating expenditures;

(ii) capital expenditures;

(iii) debt service expenditures;

(iv) fund capitalizations;

(v) appropriations of income of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska), if any;

(2) must balance sources and uses of funds held while providing for essential state services and protecting the economic stability of the state;

(3) must include projected balances of significant funds held in separate accounts, including the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska), the public education fund (AS 14.17.300), and the **AlaskAdvantage education grant and Alaska performance scholarship fund (AS 37.14.750)** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)];

(4) must set out significant assumptions used in the projections with

sufficient detail to enable the legislature to rely on the fiscal plan in understanding, evaluating, and resolving issues of state budgeting, including information that supports major areas of operating increases, such as population demographics that affect the need for particular government services.

* **Sec. 12.** AS 37.13.145(d) is amended to read:

Amendment 5 (d) Notwithstanding (b) of this section, income earned on money awarded in or received as a result of State v. Amerada Hess, et al., 1JU-77-847 Civ. (Superior Court, First Judicial District), including settlement, summary judgment, or adjustment to a royalty-in-kind contract that is tied to the outcome of this case, or interest earned on the money, or on the earnings of the money shall be treated in the same manner as other income of the Alaska permanent fund, except that it is not available for distribution to the dividend fund or for transfers to the principal under (c) of this section, and shall be annually deposited into the **AlaskAdvantage education grant and Alaska performance scholarship investment fund (AS 37.14.750)** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)].

* **Sec. 13.** AS 37.14 is amended by adding new sections to read:

Article 8A. AlaskAdvantage Education Grant and Alaska Performance Scholarship Investment Fund.

Sec. 37.14.750. AlaskAdvantage education grant and Alaska performance scholarship investment fund established. (a) The AlaskAdvantage education grant and Alaska performance scholarship investment fund is established as a fund of the state. The fund consists of

(1) appropriations to the fund;

(2) donations to the fund;

Amendment 9 (3) income earned on investments of fund assets and appropriated to the fund; and

Amendment 5 (4) money deposited to the fund under AS 37.13.145(d).

(b) The commissioner of revenue shall manage the fund with the goal that the purchasing power of the fund will not diminish over time without regard to additional contributions that may be made to the fund. The commissioner shall invest the assets of the fund in a manner likely to yield at least a five percent real rate of return over

time.

(c) Nothing in this section creates a dedicated fund.

Sec. 37.14.755. Powers and duties of the commissioner of revenue. In carrying out the investment duties under AS 37.14.750 - 37.14.790, the commissioner of revenue has the powers and duties set out in AS 37.10.071. The commissioner shall provide reports to the Department of Education and Early Development, the Department of Labor and Workforce Development, and the Alaska Commission on Postsecondary Education on the condition and investment performance of the fund.

Sec. 37.14.760. Use of fund. As soon as practicable after July 1 of each year, the commissioner of revenue shall determine the average month-end market value of the fund for the immediately preceding three fiscal years. The commissioner shall identify five percent of that amount as available for appropriation by the legislature for appropriation to the AlaskAdvantage education grant and Alaska performance scholarship award fund created under AS 14.43.915 from which the Alaska Commission on Postsecondary Education may award grants under AS 14.43.400 - 14.43.420 and scholarships under AS 14.43.810 - 14.43.849. The commissioner shall also report as available for appropriation a running total of amounts previously identified as available for appropriation to the AlaskAdvantage education grant and Alaska performance scholarship award fund but not appropriated.

Sec. 37.14.790. Definitions. In AS 37.14.750 - 37.14.790, unless the context requires otherwise,

(1) "commissioner" means the commissioner of revenue;

(2) "fund" means the AlaskAdvantage education grant and Alaska performance scholarship investment fund established in AS 37.14.750(a).

* **Sec. 14.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the AlaskAdvantage education grant and Alaska performance scholarship investment fund under AS 37.14.750(a); and

Amendment 8 **(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government**.

* **Sec. 15.** AS 43.55.019(a) is amended to read:

Amendment 1 (a) A producer of oil or gas is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 16.** AS 43.56.018(a) is amended to read:

Amendment 1 (a) The owner of property taxable under this chapter is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**;**

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 17.** AS 43.65.018(a) is amended to read:

Amendment 1 (a) A person engaged in the business of mining in the state is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or

four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 18.** AS 43.75.018(a) is amended to read:

Amendment 1 (a) A person engaged in a fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 19.** AS 43.77.045(a) is amended to read:

Amendment 1 (a) In addition to the credit allowed under AS 43.77.040, a person engaged in a floating fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes,

including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**;**

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 20.** Section 8, ch. 14, SLA 2010, is amended to read:

TRANSITION: **SCHOLARSHIP** [PROGRAM] STANDARDS AND IMPLEMENTATION FOR INITIAL SCHOOL YEARS. Notwithstanding any contrary provision of this Act, the Department of Education and Early Development and the Department of Labor and Workforce Development, after consultation with the Alaska Commission on Postsecondary Education, may adopt regulations under AS 44.62 (Administrative Procedure Act) to implement their respective duties under the Alaska **performance** [MERIT] scholarship program established in AS 14.43.810, enacted by sec. 5 of this Act, so that a student

(1) may be eligible for the **Alaska performance scholarship** [PROGRAM] even though the student did not fully meet the required core academic curriculum for the school years beginning July 1, 2010, through June 30, 2014; and

(2) who graduated from high school in this state after January 1, 2011, and before July 1, 2011, and meets eligibility requirements for the **Alaska performance scholarship** [PROGRAM] may apply for a scholarship on or after January 1, 2011, for enrollment in a program of study beginning on or after July 1,

2011.

* **Sec. 21.** AS 37.05.565 is repealed.

* **Sec. 22.** AS 21.96.070(a)(5), 21.96.070(a)(6); AS 43.20.014(a)(5), 43.20.014(a)(6); AS 43.55.019(a)(5), 43.55.019(a)(6); AS 43.56.018(a)(5), 43.56.018(a)(6); AS 43.65.018(a)(5), 43.65.018(a)(6); AS 43.75.018(a)(5), 43.75.018(a)(6); AS 43.77.045(a)(5), and 43.77.045(a)(6) are repealed January 1, 2021.

* **Sec. 23.** Section 28, ch. 134, SLA 1992, is repealed.

* **Sec. 24.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: ALASKADVANTAGE EDUCATION GRANT AND ALASKA PERFORMANCE SCHOLARSHIP INVESTMENT FUND. The money deposited in the Alaska capital income fund established under AS 37.05.565 shall be transferred to the AlaskAdvantage education grant and Alaska performance scholarship investment fund established under AS 37.14.750 on July 1, 2011.

* **Sec. 25.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Education and Early Development, the Department of Labor and Workforce Development, the Department of Revenue, and the Alaska Commission on Postsecondary Education may adopt regulations necessary to implement changes made to their respective authorities by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2011.

* **Sec. 26.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the heading of

(1) Article 12 of AS 14.43 from "Alaska Merit Scholarship Program" to "Alaska Performance Scholarship";

(2) AS 14.43.820 from "Alaska merit scholarship program; eligibility" to "Alaska performance scholarship; eligibility".

* **Sec. 27.** Section 57, ch. 92, SLA 2010, is amended to read:

Sec. 57. Except as provided in sec. 56 of this Act, this Act takes effect January 1, **2021** [2014].

* **Sec. 28.** Section 24 of this Act takes effect immediately under AS 01.10.070(c).

* **Sec. 29.** Except as provided in sec. 28 of this Act, this Act takes effect July 1, 2011.

Amendments 4 and 7 were subsumed into Amendment 11, which was revised before presentation as amendments 13, and presented as Amendment 14.

Section 8 (Amendment 14)

If the commission were to pay to $9M in performance scholarships, then they would need to appropriate at least $3M in AlaskAdvantage grants, (unless all applicants for AlaskAdvantage requested less than $3M in total).

For example, $9M divided by 3 equals $3M

$12M divided by 3 equals $4M

AMENDMENT

OFFERED IN THE SENATE BY SENATOR STEVENS

TO: CSSB 43( ), Draft Version "M"

Page 3, line 25, through page 4, line 18:

Delete all material and insert:

"* **Sec. 6.** AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is repealed and reenacted to read:

Sec. 14.43.830. Qualified postsecondary institution. (a) A university, college, or career and technical school that is physically located in the state is a qualified postsecondary institution for purposes of awarding an Alaska performance scholarship if the institution

(1) is either

(A) authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); or

(B) included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment;

(2) is accredited by a regional or national accreditation association;

(3) has an advisory program established for incoming students that provides counseling related to course selection, career choice, and personal challenges; and

(4) provides courses and credits that will result in the issuance of a degree or certificate available at the institution within a time frame customary for that degree or certificate.

(b) The Department of Labor and Workforce Development shall, in

consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska performance scholarship program."

MEMORANDUM February 11, 2011

SUBJECT: Ambiguities and constitutional questions (CSSB 43(EDC))
(Work Order No. 27-GS1893\B)

TO: Senator Joe Thomas
Senator Kevin Meyer
Co-Chairs of the Senate Education Committee

FROM: Jean M. Mischel
Legislative Counsel

The above-referenced CS is enclosed with the changes requested by the committee. However, the substitution of the word "available" for "award" made by the committee at the request of the director of postsecondary education pertaining to the awarding of grants and scholarships on a ratio of 1:3 to AS 14.43.915(c) creates both an ambiguity and possible unlawful dedication or expenditure of funds. The substitution alters the effect of subsection (c), which was intended to limit the award of funds by the Postsecondary Education Commission to the ratio provided except when the eligible grant application amounts didn't meet the ratio. Instead, the substitution now appears to direct the commissioner of revenue or some unnamed entity to make the funds available to the postsecondary education commission in that ratio. If that is the new intent, the substituted language appears in the wrong fund, the award fund accessible to the commission for expenditure under AS 14.43.915, rather than the investment fund from which award funds become "available" and appropriated under AS 37.14.760.

In addition to the problems created by using the ambiguous term "available," the dedication issue is compounded in sec. 12 of this bill by the request to move the automatic annual deposits of the income generated by the Amerada Hess principal to the grant and scholarship award fund from which the postsecondary education commission makes expenditures.[1] The dedicated fund issue was the subject of a prior opinion. It is also unclear to me how the money appropriated from the investment fund established in sec. 13 of the bill and the money automatically deposited from sec. 12 will be handled by the postsecondary education commission for purposes of awarding grants and scholarships or by the legislature for purposes of making an annual appropriation. The bill as originally structured avoided the dedication of the Amerada Hess income deposits by requiring an appropriation from the investment fund into the award fund. As

[1] Note that the change in sec. 12 required conforming changes to AS 14.43.915 in sec. 8 and AS 37.14.750(a) in sec. 13.

proposed, the CS would unconstitutionally dedicate the funds for awarding grants and scholarships and allow the Amerada Hess income to be spent without ever being appropriated. Although I have attempted to require an additional appropriation within the award fund to authorize expenditures from the deposited amounts (page 5, line 21), I am skeptical that this will work at all or that the constitutional prohibition on dedicated funds is avoided. The legislature should instead annually appropriate the deposited money from the investment fund as provided for in the previous CS.

There are two other problems with this CS that occurred as a result of the Amerada Hess income diversion in the amendment that in retrospect should be addressed by the education or the finance committee before transmittal to the second house. The revisor has concluded that since the Alaska capital income fund established under AS 37.05.565 and repealed by the CS has "other appropriations" authorized as sources to the fund, the bill may, as currently drafted, suffer from a single subject problem. The Alaska capital income fund was not established to fund education. We recommend, then, retaining the Alaska capital income fund while diverting the Amerada Hess income stream and amending, not repealing, AS 37.05.565. That would also necessitate a title change from "repealing the Alaska capital income fund" to "amending funding for" that fund.

The last issue has to do with the date of the transfer of the Alaska capital income fund balance in sec. 24. In order to avoid the possibility of a sweep to the reserve fund, the date of the transfer should occur on June 30 rather than on July 1 and sec. 25 should be given an immediate or retroactive effective date. That can, of course, be addressed in the finance committee if you prefer.

If I may be of further assistance, please advise.

Our view: Higher ed

Lawmakers should find way to fund merit, needs program

(02/09/11 19:39:12)

This is no time to lose ground.

Alaska has made some tremendous progress in building its university system in the last dozen years, not least with the UA Scholars Program that offers $11,000 scholarships to all students who finish in the top 10 percent of their high-school graduating classes.

Ask the vast majority of students, and they'll tell you that's real money.

But here's the kicker. When the scholars program began in 1999, its $10,800 covered four years of tuition, books and fees at a UA campus. Today, the $11,000 barely covers two years.

That's why efforts from Juneau to create a more comprehensive Alaska scholarship program have been welcome in the last several years. Both lawmakers like Sen. Johnny Ellis and Gov. Sean Parnell have proposed programs that reward achievement -- make higher grades, receive more aid.

Lawmakers are likely to add a needs-based element, as other states have. The idea is to reward hard work while recognizing that some students need more help than others. And the purpose is simple: Give any student who qualifies for college or other post-secondary education and training the chance to get that education.

This is an investment in Alaska's future, a chance to keep more of Alaska's young talent working at home, and a way to lighten the student-loan burden that puts so many students deep in debt from the get-go of their working lives. Alaska has enriched its campuses in recent years. Alaska still lags behind the rest of the country in help for its students.

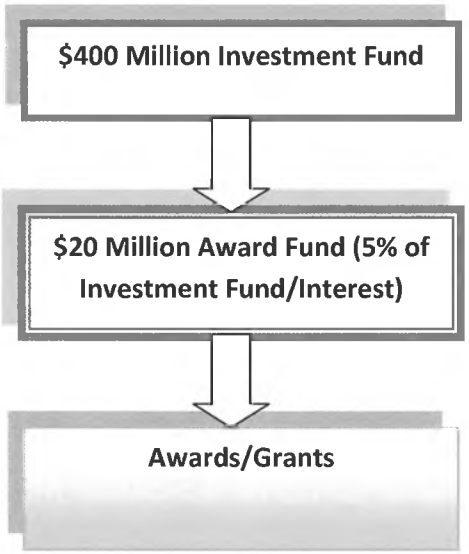
How to pay for it? The governor has suggested a $400 million endowment that would cover scholarships from earnings. Lacking that, he'd like an $8.2 million appropriation to get the program started this year.

Legislators are caught between wariness of setting up such a large endowment when Alaska's fiscal future looks uncertain, and a desire not to have to revisit funding for the program every year.

The wariness is understandable. But fiscal uncertainty is a fact of Alaska life -- neither the price of oil nor the volume in our pipeline nor the prospects for a gas line are writ in anything like stone.

At the same time, our need for an educated work force with a wide range of talents and skills is a certainty.

This is an investment Alaska should make. And an endowment is a good idea -- whether from a royalty oil settlement fund or current surplus, and in what amount, lawmakers can work out.



Alaska has a framework for a good program. But the program won't send anyone to school without the money.

BOTTOM LINE: Merit and needs scholarships are a solid investment in a smarter, more prosperous Alaska.

GOVERNOR'S BILL -- SB 43

COMMITTEE SUBSTITUTE -- CSSB43

27-GS1893\I
Mischel
2/11/11

CS FOR SENATE BILL NO. 43( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act renaming the Alaska performance scholarship and relating to the scholarship; relating to education tax credits; relating to AlaskAdvantage education grant funding and to Alaska performance scholarship funding and establishing an account and funds for those purposes; amending funding for the Alaska capital income fund; making conforming amendments; providing for an effective date by amending the effective date in sec. 57, ch. 92, SLA 2010; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03.113, as enacted by sec. 1, ch. 14, SLA 2010, is amended to read:

Sec. 14.03.113. District determination of scholarship eligibility. A school district shall determine whether a student who graduates from a high school in the district is eligible for an award of an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849. If a student is eligible, the district shall state in the student's permanent record the highest level of funding for

which the student is eligible. A district shall provide a student with an opportunity to request that the district correct an error in the eligibility determination.

*** Sec. 2.** AS 14.43.810, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.810. Alaska performance [MERIT] scholarship program established; regulations. (a) The Alaska **performance** [MERIT] scholarship program is established to provide scholarships for high school graduates who are Alaska residents to attend a qualified postsecondary institution in the state.

(b) The department shall, in consultation with the commission, adopt regulations necessary to implement the **scholarship** program. The commission shall administer the daily operations of the **scholarship** program and financing of the **scholarship** program, including the procedures for applying for the scholarships, establishing standards for and ensuring continuing compliance with programmatic standards, and requiring students to apply for other nonloan financial aid, consistent with federal law.

*** Sec. 3.** AS 14.43.820(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) Subject to appropriation, the commission shall award an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship to an applicant who

(1) is a resident of the state as defined in AS 01.10.055;

(2) graduated or will graduate within six months from a high school in the state;

(3) has completed a core academic curriculum in high school that includes

(A) four years of mathematics, four years of language arts, four years of science, and four years of social studies, one year of which may include a foreign language, an Alaska Native language, fine arts, or cultural heritage; or

(B) three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or an Alaska Native language;

(4) has a minimum grade-point average in high school of 2.5 or higher; the department shall set by regulation minimum requirements based on a substantially

similar standard for districts that do not assign grades;

(5) has achieved a minimum score on a

(A) college entrance examination; or

(B) standardized examination designed to measure a student's level of preparedness to make the transition to work, as selected by the department; and

(6) is enrolled in good standing in a course of study at a qualified postsecondary institution in this state that is intended to result in the award of a certificate or degree.

* **Sec. 4.** AS 14.43.825(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) The maximum annual awards for the Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarships are as follows:

(1) the first award level is $4,755 and requires a 3.5 grade-point average or above and a very high minimum score on a college entrance examination;

(2) the second award level is $3,566 and requires a 3.0 grade-point average or above and a high minimum score on a college entrance examination;

(3) the third award level is $2,378 and requires a 2.5 grade-point average or above and a moderately high minimum score on a college entrance examination.

* **Sec. 5.** AS 14.43.825(f), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(f) Payment of a scholarship is subject to appropriation. [IF INSUFFICIENT FUNDS ARE APPROPRIATED TO PAY ALL ELIGIBLE SCHOLARSHIPS, THE COMMISSION SHALL PAY EXISTING AWARDS ON A PRO RATA BASIS.]

* **Sec. 6.** AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.830. Qualified postsecondary institutions. (a) The following institutions are qualified postsecondary institutions for purposes of awarding an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship:

(1) a university or college physically located in the state that [IS]

(A) **is** authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); [AND]

(B) **is** accredited by a regional **or national** accreditation

association;

(C) has an advisory program established for incoming students that provides counseling related to course selection, career choice, and personal challenges; and

(D) provides courses and credits that will result in the issuance of a degree or certificate available at the institution within a time frame customary for that degree or certificate;

(2) a career and technical school program physically located in the state that

(A) is accredited by a regional or national accreditation association; and

(B) has been included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment.

(b) The Department of Labor and Workforce Development shall, in consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska **performance** [MERIT] scholarship program.

*** Sec. 7.** AS 14.43.840, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.840. Report to the legislature. (a) To the extent permitted under law, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall share data necessary to prepare public reports regarding the **scholarship** program.

(b) Not more than 10 days after the convening of each regular legislative session, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall present an annual report to the public, the governor, and the legislature containing information of public interest regarding the **scholarship** program, including

(1) the number of applicants and number and types of scholarships awarded;

(2) the dollar amount of scholarships awarded in past years and the dollar amount expected to be awarded for the next year; [AND]

(3) data and trends in the data regarding high school and postsecondary student performance, programmatic changes, and retention and graduation rates over time**; and**

(4) an assessment of the statewide centralized correspondence study program as it relates to the scholarships, including Internet access capabilities, plans to upgrade the quality and quantity of distance delivery of education, and the availability by district of correspondence courses required for the performance scholarship.

*** Sec. 8.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.915. AlaskAdvantage education grant and Alaska performance scholarship award fund. (a) The AlaskAdvantage education grant and Alaska performance scholarship award fund is established. The fund consists of

(1) appropriations for AlaskAdvantage education grant awards under AS 14.43.400 - 14.43.420 and Alaska performance scholarship awards under AS 37.14.750 - 37.14.790;

(2) money appropriated to the fund under AS 37.13.145(d); and

(3) income earned on the fund and appropriated to the fund.

(b) The commission may use money in the fund appropriated to pay grants awarded under AS 14.43.400 - 14.43.420 and scholarships for students under AS 14.43.810 - 14.43.849. Money appropriated to the fund may be expended without further appropriation. The money in the fund may be expended only in awarding grants under AS 14.43.400 - 14.43.420 and scholarships under AS 14.43.810 - 14.43.849.

(c) The amount annually awarded to the commission for payment of grants awarded under AS 14.43.400 - 14.43.420 may not be less than one-third of the amount awarded for scholarships under AS 14.43.810 - 14.43.849, except to the extent that the total amount necessary to pay all eligible grant applicants in a fiscal year is less than

that amount.

(d) If insufficient funds are appropriated to pay all eligible grants and scholarships, the commission shall allocate one-third of the balance of the fund established under this section for payment of grant awards based on the highest to lowest financial need and, if the balance of the fund established under AS 37.14.750 on July 1 is

(1) less than $80,000,000, pay only

(A) grants as provided in this subsection; and

(B) eligible previously obligated scholarship awards; the awards may be made on a pro rata basis if necessary;

(2) $80,000,000 or more, pay

(A) grants as provided in this subsection;

(B) eligible previously obligated scholarship awards; and

(C) all other scholarship awards on a pro rata basis to be paid out within four years.

(e) Money appropriated to the fund does not lapse except after the fourth consecutive fiscal year in which no appropriations have been made to the fund, or all awards have been paid to eligible recipients as provided in this chapter, whichever occurs last.

*** Sec. 9.** AS 14.45.130(a), as amended by sec. 7, ch. 14, SLA 2010, is further amended to read:

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, courses taken at the school, and level of eligibility for an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849.

*** Sec. 10.** AS 21.96.070(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under AS 21.09.210 or AS 21.66.110 for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an

Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**;**

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 11.** AS 37.05.565(a) is amended to read:

(a) There is established in the general fund the Alaska capital income fund consisting [OF MONEY DEPOSITED TO THE FUND UNDER AS 37.13.145(d) AND] of appropriations to the fund. The fund shall be invested by the Department of Revenue to yield competitive market rates as provided in AS 37.10.071. Income earned on money in the fund may be appropriated to the fund.

* **Sec. 12.** AS 37.07.020(b) is amended to read:

(b) In addition to the budget and bills submitted under (a) of this section, the governor shall submit a capital improvements program covering the succeeding six fiscal years. The governor shall also submit a fiscal plan with estimates of significant sources and uses of funds for the succeeding 10 fiscal years. The fiscal plan

(1) must include sufficient details to identify

(A) significant sources of funds;

(B) significant uses of funds, including lump sum projections of

(i) operating expenditures;

(ii) capital expenditures;

(iii) debt service expenditures;

(iv) fund capitalizations;

(v) appropriations of income of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska), if any;

(2) must balance sources and uses of funds held while providing for essential state services and protecting the economic stability of the state;

(3) must include projected balances of significant funds held in separate accounts, including the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska), the public education fund (AS 14.17.300), **the AlaskAdvantage education grant and Alaska performance scholarship investment fund (AS 37.14.750),** and the Alaska capital income fund (AS 37.05.565);

(4) must set out significant assumptions used in the projections with sufficient detail to enable the legislature to rely on the fiscal plan in understanding, evaluating, and resolving issues of state budgeting, including information that supports major areas of operating increases, such as population demographics that affect the need for particular government services.

*** Sec. 13.** AS 37.13.145(d) is amended to read:

(d) Notwithstanding (b) of this section, income earned on money awarded in or received as a result of State v. Amerada Hess, et al., 1JU-77-847 Civ. (Superior Court, First Judicial District), including settlement, summary judgment, or adjustment to a royalty-in-kind contract that is tied to the outcome of this case, or interest earned on the money, or on the earnings of the money shall be treated in the same manner as other income of the Alaska permanent fund, except that it is not available for distribution to the dividend fund or for transfers to the principal under (c) of this section, and **may** [SHALL] be annually **appropriated to** [DEPOSITED INTO] the **AlaskAdvantage education grant and Alaska performance scholarship award fund (AS 14.43.915). Nothing in this subsection creates a dedicated fund** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)].

*** Sec. 14.** AS 37.14 is amended by adding new sections to read:

Article 8A. AlaskAdvantage Education Grant and Alaska Performance Scholarship Investment Fund.

Sec. 37.14.750. AlaskAdvantage education grant and Alaska performance scholarship investment fund established. (a) The AlaskAdvantage education grant and Alaska performance scholarship investment fund is established as a fund of the state. The fund consists of

(1) appropriations to the fund;

(2) donations to the fund; and

(3) income earned on investments of fund assets and appropriated to the fund.

(b) The commissioner of revenue shall manage the fund with the goal that the purchasing power of the fund will not diminish over time without regard to additional contributions that may be made to the fund. The commissioner shall invest the assets of the fund in a manner likely to yield at least a five percent real rate of return over time.

(c) Nothing in this section creates a dedicated fund.

Sec. 37.14.755. Powers and duties of the commissioner of revenue. In carrying out the investment duties under AS 37.14.750 - 37.14.790, the commissioner of revenue has the powers and duties set out in AS 37.10.071. The commissioner shall provide reports to the Department of Education and Early Development, the Department of Labor and Workforce Development, and the Alaska Commission on Postsecondary Education on the condition and investment performance of the fund.

Sec. 37.14.760. Use of fund. As soon as practicable after July 1 of each year, the commissioner of revenue shall determine the average month-end market value of the fund for the immediately preceding three fiscal years. The commissioner shall identify five percent of that amount as available for appropriation by the legislature for appropriation to the AlaskAdvantage education grant and Alaska performance scholarship award fund created under AS 14.43.915 from which the Alaska Commission on Postsecondary Education may award grants under AS 14.43.400 - 14.43.420 and scholarships under AS 14.43.810 - 14.43.849. The commissioner shall also report as available for appropriation a running total of amounts previously identified as available for appropriation to the AlaskAdvantage education grant and Alaska performance scholarship award fund but not appropriated.

Sec. 37.14.790. Definitions. In AS 37.14.750 - 37.14.790, unless the context requires otherwise,

(1) "commissioner" means the commissioner of revenue;

(2) "fund" means the AlaskAdvantage education grant and Alaska performance scholarship investment fund established in AS 37.14.750(a).

*** Sec. 15.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**;**

(5) for the AlaskAdvantage education grant and Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 16.** AS 43.55.019(a) is amended to read:

(a) A producer of oil or gas is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 17.** AS 43.56.018(a) is amended to read:

(a) The owner of property taxable under this chapter is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 18.** AS 43.65.018(a) is amended to read:

(a) A person engaged in the business of mining in the state is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**;**

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 19.** AS 43.75.018(a) is amended to read:

(a) A person engaged in a fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or

four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 20.** AS 43.77.045(a) is amended to read:

(a) In addition to the credit allowed under AS 43.77.040, a person engaged in a floating fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 21.** Section 8, ch. 14, SLA 2010, is amended to read:

TRANSITION: **SCHOLARSHIP** [PROGRAM] STANDARDS AND IMPLEMENTATION FOR INITIAL SCHOOL YEARS. Notwithstanding any contrary provision of this Act, the Department of Education and Early Development

and the Department of Labor and Workforce Development, after consultation with the Alaska Commission on Postsecondary Education, may adopt regulations under AS 44.62 (Administrative Procedure Act) to implement their respective duties under the Alaska **performance** [MERIT] scholarship program established in AS 14.43.810, enacted by sec. 5 of this Act, so that a student

(1) may be eligible for the **Alaska performance scholarship** [PROGRAM] even though the student did not fully meet the required core academic curriculum for the school years beginning July 1, 2010, through June 30, 2014; and

(2) who graduated from high school in this state after January 1, 2011, and before July 1, 2011, and meets eligibility requirements for the **Alaska performance scholarship** [PROGRAM] may apply for a scholarship on or after January 1, 2011, for enrollment in a program of study beginning on or after July 1, 2011.

* **Sec. 22.** AS 21.96.070(a)(5), 21.96.070(a)(6); AS 43.20.014(a)(5), 43.20.014(a)(6); AS 43.55.019(a)(5), 43.55.019(a)(6); AS 43.56.018(a)(5), 43.56.018(a)(6); AS 43.65.018(a)(5), 43.65.018(a)(6); AS 43.75.018(a)(5), 43.75.018(a)(6); AS 43.77.045(a)(5), and 43.77.045(a)(6) are repealed January 1, 2021.

* **Sec. 23.** Section 28, ch. 134, SLA 1992, is repealed.

* **Sec. 24.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: ALASKADVANTAGE EDUCATION GRANT AND ALASKA PERFORMANCE SCHOLARSHIP INVESTMENT FUND. (a) The unobligated balance of the Alaska capital income fund established under AS 37.05.565 shall be transferred to the AlaskAdvantage education grant and Alaska performance scholarship investment fund established under AS 37.14.750 on June 30, 2011.

(b) Notwithstanding the required calculation to be made by the commissioner of revenue under AS 37.14.760, enacted by sec. 14 of this Act, for fiscal years 2013 and 2014, as soon as practicable after July 1 of each year, the commissioner of revenue shall determine the average month-end market value of the AlaskAdvantage education grant and Alaska performance scholarship investment fund established under AS 37.14.750, enacted by sec. 14 of this Act, for the immediately preceding fiscal year and identify five percent of that amount

as available for appropriation by the legislature to the AlaskAdvantage education grant and Alaska performance scholarship award fund created under AS 14.43.915.

*** Sec. 25.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Education and Early Development, the Department of Labor and Workforce Development, the Department of Revenue, and the Alaska Commission on Postsecondary Education may adopt regulations necessary to implement changes made to their respective authorities by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2011.

*** Sec. 26.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the heading of

(1) Article 12 of AS 14.43 from "Alaska Merit Scholarship Program" to "Alaska Performance Scholarship";

(2) AS 14.43.820 from "Alaska merit scholarship program; eligibility" to "Alaska performance scholarship; eligibility."

*** Sec. 27.** Section 57, ch. 92, SLA 2010, is amended to read:

Sec. 57. Except as provided in sec. 56 of this Act, this Act takes effect January 1, **2021** [2014].

*** Sec. 28.** The uncodified law of the State of Alaska is amended by adding a new section to read:

RETROACTIVITY. If sec. 24(a) of this Act takes effect after June 30, 2011, sec. 24(a) of this Act is retroactive to June 30, 2011.

*** Sec. 29.** Sections 24, 25, and 28 of this Act take effect immediately under AS 01.10.070(c).

*** Sec. 30.** AS 14.43.830(a)(1)(C) and (D), added by sec. 6 of this Act, take effect July 1, 2012.

*** Sec. 31.** Except as provided in secs. 29 and 30 of this Act, this Act takes effect July 1, 2011.

Delete all material and insert:

"* **Sec. 6.** AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is repealed and reenacted to read:

Sec. 14.43.830. Qualified postsecondary institution. (a) A university, college, or career and technical school that is physically located in the state is a qualified postsecondary institution for purposes of awarding an Alaska performance scholarship if the institution

(1) is either

(A) authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); or

(B) included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment;

(2) is accredited by a regional or national accreditation association;

(3) has an advisory program established for incoming students that provides counseling related to course selection, career choice, and personal challenges; and

(4) provides courses and credits that will result in the issuance of a degree or certificate available at the institution within a time frame customary for that degree or certificate.

(b) The Department of Labor and Workforce Development shall, in

consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska performance scholarship program."

CS FOR SENATE BILL NO. 43(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act renaming the Alaska performance scholarship and relating to the scholarship; relating to education tax credits; relating to AlaskAdvantage education grant funding and to Alaska performance scholarship funding and establishing an account and funds for those purposes; amending funding for the Alaska capital income fund; making conforming amendments; providing for an effective date by amending the effective date in sec. 57, ch. 92, SLA 2010; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.113, as enacted by sec. 1, ch. 14, SLA 2010, is amended to read:

Sec. 14.03.113. District determination of scholarship eligibility. A school district shall determine whether a student who graduates from a high school in the district is eligible for an award of an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849. If a student is eligible, the district shall state in the student's permanent record the highest level of funding for

which the student is eligible. A district shall provide a student with an opportunity to request that the district correct an error in the eligibility determination.

* **Sec. 2.** AS 14.43.810, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.810. Alaska <u>performance</u> [MERIT] scholarship program established; regulations. (a) The Alaska <u>**performance**</u> [MERIT] scholarship program is established to provide scholarships for high school graduates who are Alaska residents to attend a qualified postsecondary institution in the state.

(b) The department shall, in consultation with the commission, adopt regulations necessary to implement the <u>**scholarship**</u> program. The commission shall administer the daily operations of the <u>**scholarship**</u> program and financing of the <u>**scholarship**</u> program, including the procedures for applying for the scholarships, establishing standards for and ensuring continuing compliance with programmatic standards, and requiring students to apply for other nonloan financial aid, consistent with federal law.

* **Sec. 3.** AS 14.43.820(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) Subject to appropriation, the commission shall award an Alaska <u>**performance**</u> [MERIT SCHOLARSHIP PROGRAM] scholarship to an applicant who

(1) is a resident of the state as defined in AS 01.10.055;

(2) graduated or will graduate within six months from a high school in the state;

(3) has completed a core academic curriculum in high school that includes

(A) four years of mathematics, four years of language arts, four years of science, and four years of social studies, one year of which may include a foreign language, an Alaska Native language, fine arts, or cultural heritage; or

(B) three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or an Alaska Native language;

(4) has a minimum grade-point average in high school of 2.5 or higher; the department shall set by regulation minimum requirements based on a substantially

similar standard for districts that do not assign grades;

(5) has achieved a minimum score on a

(A) college entrance examination; or

(B) standardized examination designed to measure a student's level of preparedness to make the transition to work, as selected by the department; and

(6) is enrolled in good standing in a course of study at a qualified postsecondary institution in this state that is intended to result in the award of a certificate or degree.

* **Sec. 4.** AS 14.43.825(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) The maximum annual awards for the Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarships are as follows:

(1) the first award level is $4,755 and requires a 3.5 grade-point average or above and a very high minimum score on a college entrance examination;

(2) the second award level is $3,566 and requires a 3.0 grade-point average or above and a high minimum score on a college entrance examination;

(3) the third award level is $2,378 and requires a 2.5 grade-point average or above and a moderately high minimum score on a college entrance examination.

* **Sec. 5.** AS 14.43.825(f), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(f) Payment of a scholarship is subject to appropriation. [IF INSUFFICIENT FUNDS ARE APPROPRIATED TO PAY ALL ELIGIBLE SCHOLARSHIPS, THE COMMISSION SHALL PAY EXISTING AWARDS ON A PRO RATA BASIS.]

* **Sec. 6.** AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is repealed and reenacted to read:

Sec. 14.43.830. Qualified postsecondary institution. (a) A university, college, or career and technical school that is physically located in the state is a qualified postsecondary institution for purposes of awarding an Alaska performance scholarship if the institution

(1) is either

(A) a college or university that is

(i) authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); and

(ii) accredited by a regional or national accreditation association; or

(B) included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment;

(2) has an advisory program established for incoming students that provides counseling related to course selection and career choice; and

(3) provides courses and credits that will result in the issuance of a degree or certificate available at the institution within a period of time customary for that degree or certificate.

(b) The Department of Labor and Workforce Development shall, in consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska performance scholarship program.

*** Sec. 7.** AS 14.43.840, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.840. Report to the legislature. (a) To the extent permitted under law, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall share data necessary to prepare public reports regarding the **scholarship** program.

(b) Not more than 10 days after the convening of each regular legislative session, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall present an annual report to the public, the governor, and the legislature containing information of public interest regarding the **scholarship** program, including

(1) the number of applicants and number and types of scholarships awarded;

(2) the dollar amount of scholarships awarded in past years and the dollar amount expected to be awarded for the next year; [AND]

(3) data and trends in the data regarding high school and postsecondary student performance, programmatic changes, and retention and graduation rates over time**; and**

(4) an assessment of the statewide centralized correspondence study program as it relates to the scholarships, including Internet access capabilities, plans to upgrade the quality and quantity of distance delivery of education, and the availability by district of correspondence courses required for the performance scholarship.

*** Sec. 8.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.915. AlaskAdvantage education grant and Alaska performance scholarship award fund. (a) The AlaskAdvantage education grant and Alaska performance scholarship award fund is established. The fund consists of

(1) appropriations for AlaskAdvantage education grant awards under AS 14.43.400 - 14.43.420 and Alaska performance scholarship awards under AS 14.43.810 - 14.43.849;

(2) appropriations from the AlaskAdvantage education grant and Alaska performance scholarship investment fund under AS 37.14.750 - 37.14.790;

(3) money appropriated to the fund under AS 37.13.145(d); and

(4) income earned on the fund and appropriated to the fund.

(b) The commission may use money in the fund appropriated to pay grants awarded under AS 14.43.400 - 14.43.420 and scholarships for students under AS 14.43.810 - 14.43.849. Money appropriated to the fund may be expended without further appropriation. The money in the fund may be expended only in awarding grants under AS 14.43.400 - 14.43.420 and scholarships under AS 14.43.810 - 14.43.849.

(c) The amount annually available to the commission for payment of grants awarded under AS 14.43.400 - 14.43.420 may not be less than one-third of the amount awarded for scholarships under AS 14.43.810 - 14.43.849, except to the extent that the total amount necessary to pay all eligible grant applicants in a fiscal year is less than

that amount.

(d) If insufficient funds are appropriated to pay all eligible grants and scholarships, the commission shall allocate one-third of the balance of the fund established under this section for payment of grant awards based on the highest to lowest financial need and, if the balance of the fund established under AS 37.14.750 on July 1 is

(1) less than $80,000,000, pay only

(A) grants as provided in this subsection; and

(B) eligible previously obligated scholarship awards; the awards may be made on a pro rata basis if necessary;

(2) $80,000,000 or more, pay

(A) grants as provided in this subsection;

(B) eligible previously obligated scholarship awards; and

(C) all other scholarship awards on a pro rata basis to be paid out within four years.

(e) Money appropriated to the fund does not lapse except after the fourth consecutive fiscal year in which no appropriations have been made to the fund, or all awards have been paid to eligible recipients as provided in this chapter, whichever occurs last.

*** Sec. 9.** AS 14.45.130(a), as amended by sec. 7, ch. 14, SLA 2010, is further amended to read:

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, courses taken at the school, and level of eligibility for an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849.

*** Sec. 10.** AS 21.96.070(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under AS 21.09.210 or AS 21.66.110 for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an

Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 11.** AS 37.05.565(a) is amended to read:

(a) There is established in the general fund the Alaska capital income fund consisting [OF MONEY DEPOSITED TO THE FUND UNDER AS 37.13.145(d) AND] of appropriations to the fund. The fund shall be invested by the Department of Revenue to yield competitive market rates as provided in AS 37.10.071. Income earned on money in the fund may be appropriated to the fund.

*** Sec. 12.** AS 37.07.020(b) is amended to read:

(b) In addition to the budget and bills submitted under (a) of this section, the governor shall submit a capital improvements program covering the succeeding six fiscal years. The governor shall also submit a fiscal plan with estimates of significant sources and uses of funds for the succeeding 10 fiscal years. The fiscal plan

(1) must include sufficient details to identify

(A) significant sources of funds;

(B) significant uses of funds, including lump sum projections of

(i) operating expenditures;

(ii) capital expenditures;

(iii) debt service expenditures;

(iv) fund capitalizations;

(v) appropriations of income of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska), if any;

(2) must balance sources and uses of funds held while providing for essential state services and protecting the economic stability of the state;

(3) must include projected balances of significant funds held in separate accounts, including the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska), the public education fund (AS 14.17.300), **the AlaskAdvantage education grant and Alaska performance scholarship investment fund (AS 37.14.750),** and the Alaska capital income fund (AS 37.05.565);

(4) must set out significant assumptions used in the projections with sufficient detail to enable the legislature to rely on the fiscal plan in understanding, evaluating, and resolving issues of state budgeting, including information that supports major areas of operating increases, such as population demographics that affect the need for particular government services.

* **Sec. 13.** AS 37.13.145(d) is amended to read:

(d) Notwithstanding (b) of this section, income earned on money awarded in or received as a result of State v. Amerada Hess, et al., 1JU-77-847 Civ. (Superior Court, First Judicial District), including settlement, summary judgment, or adjustment to a royalty-in-kind contract that is tied to the outcome of this case, or interest earned on the money, or on the earnings of the money shall be treated in the same manner as other income of the Alaska permanent fund, except that it is not available for distribution to the dividend fund or for transfers to the principal under (c) of this section, and **may** [SHALL] be annually **appropriated to** [DEPOSITED INTO] the **AlaskAdvantage education grant and Alaska performance scholarship award fund (AS 14.43.915). Nothing in this subsection creates a dedicated fund** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)].

* **Sec. 14.** AS 37.14 is amended by adding new sections to read:

Article 8A. AlaskAdvantage Education Grant and Alaska Performance Scholarship Investment Fund.

Sec. 37.14.750. AlaskAdvantage education grant and Alaska performance scholarship investment fund established. (a) The AlaskAdvantage education grant and Alaska performance scholarship investment fund is established as a fund of the state. The fund consists of

(1) appropriations to the fund;

(2) donations to the fund; and

(3) income earned on investments of fund assets and appropriated to the fund.

(b) The commissioner of revenue shall manage the fund with the goal that the purchasing power of the fund will not diminish over time without regard to additional contributions that may be made to the fund. The commissioner shall invest the assets of the fund in a manner likely to yield at least a five percent real rate of return over time.

(c) Nothing in this section creates a dedicated fund.

Sec. 37.14.755. Powers and duties of the commissioner of revenue. In carrying out the investment duties under AS 37.14.750 - 37.14.790, the commissioner of revenue has the powers and duties set out in AS 37.10.071. The commissioner shall provide reports to the Department of Education and Early Development, the Department of Labor and Workforce Development, and the Alaska Commission on Postsecondary Education on the condition and investment performance of the fund.

Sec. 37.14.760. Use of fund. As soon as practicable after July 1 of each year, the commissioner of revenue shall determine the average month-end market value of the fund for the immediately preceding three fiscal years. The commissioner shall identify five percent of that amount as available for appropriation by the legislature for appropriation to the AlaskAdvantage education grant and Alaska performance scholarship award fund created under AS 14.43.915 from which the Alaska Commission on Postsecondary Education may award grants under AS 14.43.400 - 14.43.420 and scholarships under AS 14.43.810 - 14.43.849. The commissioner shall also report as available for appropriation a running total of amounts previously identified as available for appropriation to the AlaskAdvantage education grant and Alaska performance scholarship award fund but not appropriated.

Sec. 37.14.790. Definitions. In AS 37.14.750 - 37.14.790, unless the context requires otherwise,

(1) "commissioner" means the commissioner of revenue;

(2) "fund" means the AlaskAdvantage education grant and Alaska performance scholarship investment fund established in AS 37.14.750(a).

*** Sec. 15.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**;**

(5) for the AlaskAdvantage education grant and Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 16.** AS 43.55.019(a) is amended to read:

(a) A producer of oil or gas is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 17.** AS 43.56.018(a) is amended to read:

(a) The owner of property taxable under this chapter is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 18.** AS 43.65.018(a) is amended to read:

(a) A person engaged in the business of mining in the state is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**;**

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 19.** AS 43.75.018(a) is amended to read:

(a) A person engaged in a fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or

four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 20.** AS 43.77.045(a) is amended to read:

(a) In addition to the credit allowed under AS 43.77.040, a person engaged in a floating fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 21.** Section 8, ch. 14, SLA 2010, is amended to read:

TRANSITION: **SCHOLARSHIP** [PROGRAM] STANDARDS AND IMPLEMENTATION FOR INITIAL SCHOOL YEARS. Notwithstanding any contrary provision of this Act, the Department of Education and Early Development

and the Department of Labor and Workforce Development, after consultation with the Alaska Commission on Postsecondary Education, may adopt regulations under AS 44.62 (Administrative Procedure Act) to implement their respective duties under the Alaska **performance** [MERIT] scholarship program established in AS 14.43.810, enacted by sec. 5 of this Act, so that a student

(1) may be eligible for the **Alaska performance scholarship** [PROGRAM] even though the student did not fully meet the required core academic curriculum for the school years beginning July 1, 2010, through June 30, 2014; and

(2) who graduated from high school in this state after January 1, 2011, and before July 1, 2011, and meets eligibility requirements for the **Alaska performance scholarship** [PROGRAM] may apply for a scholarship on or after January 1, 2011, for enrollment in a program of study beginning on or after July 1, 2011.

* **Sec. 22.** AS 21.96.070(a)(5), 21.96.070(a)(6); AS 43.20.014(a)(5), 43.20.014(a)(6); AS 43.55.019(a)(5), 43.55.019(a)(6); AS 43.56.018(a)(5), 43.56.018(a)(6); AS 43.65.018(a)(5), 43.65.018(a)(6); AS 43.75.018(a)(5), 43.75.018(a)(6); AS 43.77.045(a)(5), and 43.77.045(a)(6) are repealed January 1, 2021.

* **Sec. 23.** Section 28, ch. 134, SLA 1992, is repealed.

* **Sec. 24.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: ALASKADVANTAGE EDUCATION GRANT AND ALASKA PERFORMANCE SCHOLARSHIP INVESTMENT FUND. (a) The unobligated balance of the Alaska capital income fund established under AS 37.05.565 shall be transferred to the AlaskAdvantage education grant and Alaska performance scholarship investment fund established under AS 37.14.750 on June 30, 2011.

(b) Notwithstanding the required calculation to be made by the commissioner of revenue under AS 37.14.760, enacted by sec. 14 of this Act, for fiscal years 2013 and 2014, as soon as practicable after July 1 of each year, the commissioner of revenue shall determine the average month-end market value of the AlaskAdvantage education grant and Alaska performance scholarship investment fund established under AS 37.14.750, enacted by sec. 14 of this Act, for the immediately preceding fiscal year and identify five percent of that amount

as available for appropriation by the legislature to the AlaskAdvantage education grant and Alaska performance scholarship award fund created under AS 14.43.915.

* **Sec. 25.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Education and Early Development, the Department of Labor and Workforce Development, the Department of Revenue, and the Alaska Commission on Postsecondary Education may adopt regulations necessary to implement changes made to their respective authorities by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2011.

* **Sec. 26.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the heading of

(1) Article 12 of AS 14.43 from "Alaska Merit Scholarship Program" to "Alaska Performance Scholarship";

(2) AS 14.43.820 from "Alaska merit scholarship program; eligibility" to "Alaska performance scholarship; eligibility."

* **Sec. 27.** Section 57, ch. 92, SLA 2010, is amended to read:

Sec. 57. Except as provided in sec. 56 of this Act, this Act takes effect January 1, **2021** [2014].

* **Sec. 28.** The uncodified law of the State of Alaska is amended by adding a new section to read:

RETROACTIVITY. If sec. 24(a) of this Act takes effect after June 30, 2011, sec. 24(a) of this Act is retroactive to June 30, 2011.

* **Sec. 29.** Sections 24, 25, and 28 of this Act take effect immediately under AS 01.10.070(c).

* **Sec. 30.** AS 14.43.830(a)(2) and (3) take effect July 1, 2012.

* **Sec. 31.** Except as provided in secs. 29 and 30 of this Act, this Act takes effect July 1, 2011.

CS FOR SENATE BILL NO. 43( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): SENATE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act renaming the Alaska performance scholarship and relating to the scholarship; relating to education tax credits; relating to AlaskAdvantage education grant funding and to Alaska performance scholarship funding and establishing an account and funds for those purposes; amending funding for the Alaska capital income fund; making conforming amendments; providing for an effective date by amending the effective date in sec. 57, ch. 92, SLA 2010; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.113, as enacted by sec. 1, ch. 14, SLA 2010, is amended to read:

Sec. 14.03.113. District determination of scholarship eligibility. A school district shall determine whether a student who graduates from a high school in the district is eligible for an award of an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849. If a student is eligible, the district shall state in the student's permanent record the highest level of funding for

which the student is eligible. A district shall provide a student with an opportunity to request that the district correct an error in the eligibility determination.

*** Sec. 2.** AS 14.43.810, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.810. Alaska performance [MERIT] scholarship program established; regulations. (a) The Alaska **performance** [MERIT] scholarship program is established to provide scholarships for high school graduates who are Alaska residents to attend a qualified postsecondary institution in the state.

(b) The department shall, in consultation with the commission, adopt regulations necessary to implement the **scholarship** program. The commission shall administer the daily operations of the **scholarship** program and financing of the **scholarship** program, including the procedures for applying for the scholarships, establishing standards for and ensuring continuing compliance with programmatic standards, and requiring students to apply for other nonloan financial aid, consistent with federal law.

*** Sec. 3.** AS 14.43.820(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) Subject to appropriation, the commission shall award an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship to an applicant who

(1) is a resident of the state as defined in AS 01.10.055;

(2) graduated or will graduate within six months from a high school in the state;

(3) has completed a core academic curriculum in high school that includes

(A) four years of mathematics, four years of language arts, four years of science, and four years of social studies, one year of which may include a foreign language, an Alaska Native language, fine arts, or cultural heritage; or

(B) three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or an Alaska Native language;

(4) has a minimum grade-point average in high school of 2.5 or higher;

the department shall set by regulation minimum requirements based on a substantially

similar standard for districts that do not assign grades;

(5) has achieved a minimum score on a

(A) college entrance examination; or

(B) standardized examination designed to measure a student's level of preparedness to make the transition to work, as selected by the department; and

(6) is enrolled in good standing in a course of study at a qualified postsecondary institution in this state that is intended to result in the award of a certificate or degree.

* **Sec. 4.** AS 14.43.825(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) The maximum annual awards for the Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarships are as follows:

(1) the first award level is $4,755 and requires a 3.5 grade-point average or above and a very high minimum score on a college entrance examination;

(2) the second award level is $3,566 and requires a 3.0 grade-point average or above and a high minimum score on a college entrance examination;

(3) the third award level is $2,378 and requires a 2.5 grade-point average or above and a moderately high minimum score on a college entrance examination.

* **Sec. 5.** AS 14.43.825(f), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(f) Payment of a scholarship is subject to appropriation. [IF INSUFFICIENT FUNDS ARE APPROPRIATED TO PAY ALL ELIGIBLE SCHOLARSHIPS, THE COMMISSION SHALL PAY EXISTING AWARDS ON A PRO RATA BASIS.]

* **Sec. 6.** AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is repealed and reenacted to read:

Sec. 14.43.830. Qualified postsecondary institution. (a) A university, college, or career and technical school that is physically located in the state is a qualified postsecondary institution for purposes of awarding an Alaska performance scholarship if the institution

(1) is either

(A) a college or university that is

(i) authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); and

(ii) accredited by a regional or national accreditation association; or

(B) included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment;

(2) has an advisory program established for incoming students that provides counseling related to course selection and career choice; and

(3) provides courses and credits that will result in the issuance of a degree or certificate available at the institution within a period of time customary for that degree or certificate.

(b) The Department of Labor and Workforce Development shall, in consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska performance scholarship program.

* **Sec. 7.** AS 14.43.840, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.840. Report to the legislature. (a) To the extent permitted under law, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall share data necessary to prepare public reports regarding the **scholarship** program.

(b) Not more than 10 days after the convening of each regular legislative session, the department, the commission, the University of Alaska, and the Department of Labor and Workforce Development shall present an annual report to the public, the governor, and the legislature containing information of public interest regarding the **scholarship** program, including

(1) the number of applicants and number and types of scholarships awarded;

(2) the dollar amount of scholarships awarded in past years and the dollar amount expected to be awarded for the next year; [AND]

(3) data and trends in the data regarding high school and postsecondary student performance, programmatic changes, and retention and graduation rates over time**; and**

(4) an assessment of the statewide centralized correspondence study program as it relates to the scholarships, including Internet access capabilities, plans to upgrade the quality and quantity of distance delivery of education, and the availability by district of correspondence courses required for the performance scholarship.

*** Sec. 8.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.915. AlaskAdvantage education grant and Alaska performance scholarship award fund. (a) The AlaskAdvantage education grant and Alaska performance scholarship award fund is established. The fund consists of

(1) appropriations for AlaskAdvantage education grant awards under AS 14.43.400 - 14.43.420 and Alaska performance scholarship awards under AS 14.43.810 - 14.43.849;

(2) appropriations from the AlaskAdvantage education grant and Alaska performance scholarship investment fund under AS 37.14.750 - 37.14.790;

(3) money appropriated to the fund under AS 37.13.145(d); and

(4) income earned on the fund and appropriated to the fund.

(b) The commission may use money in the fund appropriated to pay grants awarded under AS 14.43.400 - 14.43.420 and scholarships for students under AS 14.43.810 - 14.43.849. Money appropriated to the fund may be expended without further appropriation. The money in the fund may be expended only in awarding grants under AS 14.43.400 - 14.43.420 and scholarships under AS 14.43.810 - 14.43.849.

(c) The amount annually available to the commission for payment of grants awarded under AS 14.43.400 - 14.43.420 may not be less than one-third of the amount awarded for scholarships under AS 14.43.810 - 14.43.849, except to the extent that the total amount necessary to pay all eligible grant applicants in a fiscal year is less than

that amount.

(d) If insufficient funds are appropriated to pay all eligible grants and scholarships, the commission shall allocate one-third of the balance of the fund established under this section for payment of grant awards based on the highest to lowest financial need and, if the balance of the fund established under AS 37.14.750 on July 1 is

(1) less than $80,000,000, pay only

(A) grants as provided in this subsection; and

(B) eligible previously obligated scholarship awards; the awards may be made on a pro rata basis if necessary;

(2) $80,000,000 or more, pay

(A) grants as provided in this subsection;

(B) eligible previously obligated scholarship awards; and

(C) all other scholarship awards on a pro rata basis to be paid out within four years.

(e) Money appropriated to the fund does not lapse except after the fourth consecutive fiscal year in which no appropriations have been made to the fund, or all awards have been paid to eligible recipients as provided in this chapter, whichever occurs last.

*** Sec. 9.** AS 14.45.130(a), as amended by sec. 7, ch. 14, SLA 2010, is further amended to read:

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, courses taken at the school, and level of eligibility for an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849.

*** Sec. 10.** AS 21.96.070(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under AS 21.09.210 or AS 21.66.110 for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an

Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 11.** AS 37.05.565(a) is amended to read:

(a) There is established in the general fund the Alaska capital income fund consisting [OF MONEY DEPOSITED TO THE FUND UNDER AS 37.13.145(d) AND] of appropriations to the fund. The fund shall be invested by the Department of Revenue to yield competitive market rates as provided in AS 37.10.071. Income earned on money in the fund may be appropriated to the fund.

*** Sec. 12.** AS 37.07.020(b) is amended to read:

(b) In addition to the budget and bills submitted under (a) of this section, the governor shall submit a capital improvements program covering the succeeding six fiscal years. The governor shall also submit a fiscal plan with estimates of significant sources and uses of funds for the succeeding 10 fiscal years. The fiscal plan

(1) must include sufficient details to identify

(A) significant sources of funds;

(B) significant uses of funds, including lump sum projections of

(i) operating expenditures;

(ii) capital expenditures;

(iii) debt service expenditures;

(iv) fund capitalizations;

(v) appropriations of income of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska), if any;

(2) must balance sources and uses of funds held while providing for essential state services and protecting the economic stability of the state;

(3) must include projected balances of significant funds held in separate accounts, including the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska), the public education fund (AS 14.17.300), **the AlaskAdvantage education grant and Alaska performance scholarship investment fund (AS 37.14.750),** and the Alaska capital income fund (AS 37.05.565);

(4) must set out significant assumptions used in the projections with sufficient detail to enable the legislature to rely on the fiscal plan in understanding, evaluating, and resolving issues of state budgeting, including information that supports major areas of operating increases, such as population demographics that affect the need for particular government services.

* **Sec. 13.** AS 37.13.145(d) is amended to read:

(d) Notwithstanding (b) of this section, income earned on money awarded in or received as a result of State v. Amerada Hess, et al., 1JU-77-847 Civ. (Superior Court, First Judicial District), including settlement, summary judgment, or adjustment to a royalty-in-kind contract that is tied to the outcome of this case, or interest earned on the money, or on the earnings of the money shall be treated in the same manner as other income of the Alaska permanent fund, except that it is not available for distribution to the dividend fund or for transfers to the principal under (c) of this section, and **may** [SHALL] be annually **appropriated to** [DEPOSITED INTO] the **AlaskAdvantage education grant and Alaska performance scholarship award fund (AS 14.43.915). Nothing in this subsection creates a dedicated fund** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)].

* **Sec. 14.** AS 37.14 is amended by adding new sections to read:

Article 8A. AlaskAdvantage Education Grant and Alaska Performance Scholarship Investment Fund.

Sec. 37.14.750. AlaskAdvantage education grant and Alaska performance scholarship investment fund established. (a) The AlaskAdvantage education grant and Alaska performance scholarship investment fund is established as a fund of the state. The fund consists of

(1) appropriations to the fund;

(2) donations to the fund; and

(3) income earned on investments of fund assets and appropriated to the fund.

(b) The commissioner of revenue shall manage the fund with the goal that the purchasing power of the fund will not diminish over time without regard to additional contributions that may be made to the fund. The commissioner shall invest the assets of the fund in a manner likely to yield at least a five percent real rate of return over time.

(c) Nothing in this section creates a dedicated fund.

Sec. 37.14.755. Powers and duties of the commissioner of revenue. In carrying out the investment duties under AS 37.14.750 - 37.14.790, the commissioner of revenue has the powers and duties set out in AS 37.10.071. The commissioner shall provide reports to the Department of Education and Early Development, the Department of Labor and Workforce Development, and the Alaska Commission on Postsecondary Education on the condition and investment performance of the fund.

Sec. 37.14.760. Use of fund. As soon as practicable after July 1 of each year, the commissioner of revenue shall determine the average month-end market value of the fund for the immediately preceding three fiscal years. The commissioner shall identify five percent of that amount as available for appropriation by the legislature for appropriation to the AlaskAdvantage education grant and Alaska performance scholarship award fund created under AS 14.43.915 from which the Alaska Commission on Postsecondary Education may award grants under AS 14.43.400 - 14.43.420 and scholarships under AS 14.43.810 - 14.43.849. The commissioner shall also report as available for appropriation a running total of amounts previously identified as available for appropriation to the AlaskAdvantage education grant and Alaska performance scholarship award fund but not appropriated.

Sec. 37.14.790. Definitions. In AS 37.14.750 - 37.14.790, unless the context requires otherwise,

(1) "commissioner" means the commissioner of revenue;

(2) "fund" means the AlaskAdvantage education grant and Alaska performance scholarship investment fund established in AS 37.14.750(a).

* **Sec. 15.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the AlaskAdvantage education grant and Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 16.** AS 43.55.019(a) is amended to read:

(a) A producer of oil or gas is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 17.** AS 43.56.018(a) is amended to read:

(a) The owner of property taxable under this chapter is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 18.** AS 43.65.018(a) is amended to read:

(a) A person engaged in the business of mining in the state is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 19.** AS 43.75.018(a) is amended to read:

(a) A person engaged in a fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or

four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 20.** AS 43.77.045(a) is amended to read:

(a) In addition to the credit allowed under AS 43.77.040, a person engaged in a floating fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(5) for the Alaska performance scholarship investment fund under AS 37.14.750(a); and

(6) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 21.** Section 8, ch. 14, SLA 2010, is amended to read:

TRANSITION: **SCHOLARSHIP** [PROGRAM] STANDARDS AND IMPLEMENTATION FOR INITIAL SCHOOL YEARS. Notwithstanding any contrary provision of this Act, the Department of Education and Early Development

and the Department of Labor and Workforce Development, after consultation with the Alaska Commission on Postsecondary Education, may adopt regulations under AS 44.62 (Administrative Procedure Act) to implement their respective duties under the Alaska **performance** [MERIT] scholarship program established in AS 14.43.810, enacted by sec. 5 of this Act, so that a student

(1) may be eligible for the **Alaska performance scholarship** [PROGRAM] even though the student did not fully meet the required core academic curriculum for the school years beginning July 1, 2010, through June 30, 2014; and

(2) who graduated from high school in this state after January 1, 2011, and before July 1, 2011, and meets eligibility requirements for the **Alaska performance scholarship** [PROGRAM] may apply for a scholarship on or after January 1, 2011, for enrollment in a program of study beginning on or after July 1, 2011.

* **Sec. 22.** AS 21.96.070(a)(5), 21.96.070(a)(6); AS 43.20.014(a)(5), 43.20.014(a)(6); AS 43.55.019(a)(5), 43.55.019(a)(6); AS 43.56.018(a)(5), 43.56.018(a)(6); AS 43.65.018(a)(5), 43.65.018(a)(6); AS 43.75.018(a)(5), 43.75.018(a)(6); AS 43.77.045(a)(5), and 43.77.045(a)(6) are repealed January 1, 2021.

* **Sec. 23.** Section 28, ch. 134, SLA 1992, is repealed.

* **Sec. 24.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: ALASKADVANTAGE EDUCATION GRANT AND ALASKA PERFORMANCE SCHOLARSHIP INVESTMENT FUND. (a) The unobligated balance of the Alaska capital income fund established under AS 37.05.565 shall be transferred to the AlaskAdvantage education grant and Alaska performance scholarship investment fund established under AS 37.14.750 on June 30, 2011.

(b) Notwithstanding the required calculation to be made by the commissioner of revenue under AS 37.14.760, enacted by sec. 14 of this Act, for fiscal years 2013 and 2014, as soon as practicable after July 1 of each year, the commissioner of revenue shall determine the average month-end market value of the AlaskAdvantage education grant and Alaska performance scholarship investment fund established under AS 37.14.750, enacted by sec. 14 of this Act, for the immediately preceding fiscal year and identify five percent of that amount

as available for appropriation by the legislature to the AlaskAdvantage education grant and Alaska performance scholarship award fund created under AS 14.43.915.

* **Sec. 25.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Education and Early Development, the Department of Labor and Workforce Development, the Department of Revenue, and the Alaska Commission on Postsecondary Education may adopt regulations necessary to implement changes made to their respective authorities by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2011.

* **Sec. 26.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the heading of

(1) Article 12 of AS 14.43 from "Alaska Merit Scholarship Program" to "Alaska Performance Scholarship";

(2) AS 14.43.820 from "Alaska merit scholarship program; eligibility" to "Alaska performance scholarship; eligibility."

* **Sec. 27.** Section 57, ch. 92, SLA 2010, is amended to read:

Sec. 57. Except as provided in sec. 56 of this Act, this Act takes effect January 1, **2021** [2014].

* **Sec. 28.** The uncodified law of the State of Alaska is amended by adding a new section to read:

RETROACTIVITY. If sec. 24(a) of this Act takes effect after June 30, 2011, sec. 24(a) of this Act is retroactive to June 30, 2011.

* **Sec. 29.** Sections 24, 25, and 28 of this Act take effect immediately under AS 01.10.070(c).

* **Sec. 30.** AS 14.43.830(a)(2) and (3) take effect July 1, 2012.

* **Sec. 31.** Except as provided in secs. 29 and 30 of this Act, this Act takes effect July 1, 2011.

REPRESENTATIVE Paul Seaton
District 35

MEMORANDUM

TO: Representative Alan Dick
Chair, House Education Committee

FROM: Representative Paul Seaton

DATE: February 11, 2011

RE: Back up documents for CSHB104

I would like to submit the information below for consideration by the House Education Committee on CSHB104v.I, amending the governor's scholarship bill to incorporate a needs based component to APS, require institutions provide student support, fund AlaskaAdvantage, and create a funding mechanism with a steady revenue stream and ability to phase down scholarship obligations.

Attached please find: Sponsor Statement for CSHB104v.I: ACPE Sectional CSHB 104v.I; Excerpts from Scholarship Funding Task Force Report to the Legislature; diagram to explain funding mechanism in CSHB104; and Alaska Capital Income Fund chart from Leg Finance.

CS FOR HOUSE BILL NO. 104( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Offered:
Referred:

Sponsor(s): HOUSE RULES COMMITTEE BY REQUEST OF THE GOVERNOR

A BILL

FOR AN ACT ENTITLED

"An Act renaming the Alaska performance scholarship and relating to the scholarship and tax credits applicable to contributions to the scholarship; relating to AlaskAdvantage education grant funding and to Alaska performance scholarship funding; establishing an account and fund for those purposes; relating to an unmet need scholarship supplement for Alaska performance scholarship recipients; repealing the Alaska capital income fund; making conforming amendments; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03.113, as enacted by sec. 1, ch. 14, SLA 2010, is amended to read:

Sec. 14.03.113. District determination of scholarship eligibility. A school district shall determine whether a student who graduates from a high school in the district is eligible for an award of an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849. If a student is eligible, the

district shall state in the student's permanent record the highest level of funding for which the student is eligible. A district shall provide a student with an opportunity to request that the district correct an error in the eligibility determination.

* **Sec. 2.** AS 14.43.810, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.810. Alaska performance [MERIT] scholarship program established; regulations. (a) The Alaska **performance** [MERIT] scholarship program is established to provide scholarships for high school graduates who are Alaska residents to attend a qualified postsecondary institution in the state.

(b) The department shall, in consultation with the commission, adopt regulations necessary to implement the **scholarship** program. The commission shall administer the daily operations of the **scholarship** program and financing of the **scholarship** program, including the procedures for applying for the scholarships, establishing standards for and ensuring continuing compliance with programmatic standards, and requiring students to apply for other nonloan financial aid, consistent with federal law.

* **Sec. 3.** AS 14.43.820(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) Subject to appropriation, the commission shall award an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship to an applicant who

(1) is a resident of the state as defined in AS 01.10.055;

(2) graduated or will graduate within six months from a high school in the state;

(3) has completed a core academic curriculum in high school that includes

(A) four years of mathematics, four years of language arts, four years of science, and four years of social studies, one year of which may include a foreign language, an Alaska Native language, fine arts, or cultural heritage; or

(B) three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or an Alaska Native language;

(4) has a minimum grade-point average in high school of 2.5 or higher;

the department shall set by regulation minimum requirements based on a substantially similar standard for districts that do not assign grades;

(5) has achieved a minimum score on a

(A) college entrance examination; or

(B) standardized examination designed to measure a student's level of preparedness to make the transition to work, as selected by the department; and

(6) is enrolled in good standing in a course of study at a qualified postsecondary institution in this state that is intended to result in the award of a certificate or degree.

* **Sec. 4.** AS 14.43.825(a), as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

(a) The maximum annual awards for the Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarships are as follows:

(1) the first award level is $4,755 and requires a 3.5 grade-point average or above and a very high minimum score on a college entrance examination;

(2) the second award level is $3,566 and requires a 3.0 grade-point average or above and a high minimum score on a college entrance examination;

(3) the third award level is $2,378 and requires a 2.5 grade-point average or above and a moderately high minimum score on a college entrance examination.

* **Sec. 5.** AS 14.43.825(f) is repealed and reenacted to read:

(f) Payment of a scholarship is subject to appropriation and the availability of funds for expenditure under AS 37.14.750. If insufficient funds are appropriated or available in a fiscal year to pay all eligible scholarships, the commission may not award a scholarship to a new applicant, and the commission shall pay existing awards on a pro rata basis for that fiscal year.

* **Sec. 6.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.828. Eligibility for a scholarship supplement based on unmet need; minimum and maximum awards. (a) Subject to appropriation, the commission shall award a scholarship supplement based on unmet need to a student who meets the eligibility criteria for the award under this section.

(b) A student is eligible to receive a scholarship supplement based on unmet need if the student

(1) is eligible for an Alaska performance scholarship; and

(2) can demonstrate, in a year in which the student receives a scholarship, that the student has unmet financial need greater than $2,000.

(c) The annual maximum of a scholarship supplement based on unmet need is the lesser of

(1) 50 percent of the unmet financial need that exceeds $2,000; and

(2) $4,000.

(d) The commission shall determine unmet financial need by

(1) requiring the postsecondary institution attended by the student to verify all nonloan sources of financial support, including an expected family contribution and all federal, state, and private scholarships received by the student; and

(2) subtracting all nonloan sources of financial support from the student's allowable standard costs of attendance at the institution, as determined by the commission.

(e) Notwithstanding any other provision of this section, the minimum annual scholarship supplement for a student eligible under (b) of this section is $500.

(f) In this section,

(1) "allowable standard costs of attendance" means the lesser of the

(A) standard costs of attendance at the University of Alaska, as determined by the commission; or

(B) actual costs of attendance at the qualified postsecondary institution that the student attends or plans to attend, as determined by the commission;

(2) "expected family contribution" means the amount a student or the student's family is expected to pay toward the student's cost of attendance, as determined by completion of the most recent federal Free Application for Federal Student Aid.

* **Sec. 7.** AS 14.43.830, as enacted by sec. 5, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.830. Qualified postsecondary institutions. (a) The following institutions are qualified postsecondary institutions for purposes of awarding an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship:

(1) a university or college physically located in the state that [IS]

(A) **is** authorized to operate in the state under AS 14.48.020 or is exempt from authorization under AS 14.48.030(b)(1); [AND]

(B) **is** accredited by a regional accreditation association;

(C) has an advisory program established for incoming students that provides counseling related to course selection, career choice, and personal challenges; and

(D) provides courses and credits that can result in the issuance of a degree or certificate available at the institution within a time frame expected for that degree or certificate;

(2) a career and technical school program physically located in the state that **meets the standards established in (a)(1)(C) and (D) of this section and that** has been included on a list of certified career and technical school programs received from the Department of Labor and Workforce Development; the commission shall publish the list on or before June 30 of the year preceding enrollment.

(b) The Department of Labor and Workforce Development shall, in consultation with the Department of Education and Early Development, adopt regulations under AS 44.62 (Administrative Procedure Act) establishing criteria under which the Department of Labor and Workforce Development shall certify career and technical school programs in the state as eligible to participate in the Alaska **performance** [MERIT] scholarship program.

* **Sec. 8.** AS 14.43.849, as enacted by sec. 2, ch. 14, SLA 2010, is amended to read:

Sec. 14.43.849. Definitions. In AS 14.43.810 - 14.43.849, unless the context requires otherwise,

(1) "department" means the Department of Education and Early Development;

(2) "grade-point average" means the average of all grades on a four-point scale, or five-point scale for advanced placement classes, obtained by the student

in high school;

(3) "high school" means a public or accredited secondary school in the state and a home school program that is approved by the department;

(4) "program" means the Alaska **performance** [MERIT] scholarship program established under AS 14.43.810 - 14.43.849;

(5) "school district" means a borough school district, a city school district, a regional educational attendance area, and a state boarding school.

* **Sec. 9.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.915. AlaskAdvantage education grant and Alaska performance scholarship award income account. The AlaskAdvantage education grant and Alaska performance scholarship award income account is created as an account in the general fund. Money may be appropriated to the account from the AlaskAdvantage education grant and Alaska performance scholarship fund under AS 37.14.750 and from other sources. The commission may use the money in the account to pay grants awarded under AS 14.43.400 - 14.43.420 and scholarships awarded to students under AS 14.43.810 - 14.43.849. The amount determined under AS 37.14.750(d) each year and deposited into the account is the maximum amount that may be used to pay scholarships for the immediately succeeding fiscal year.

* **Sec. 10.** AS 14.45.130(a), as amended by sec. 7, ch. 14, SLA 2010, is amended to read:

(a) A religious or other private school that elects to comply with AS 14.45.100 - 14.45.130 shall maintain permanent student records reflecting immunizations, physical examinations, standardized testing, academic achievement, courses taken at the school, and level of eligibility for an Alaska **performance** [MERIT SCHOLARSHIP PROGRAM] scholarship under AS 14.43.810 - 14.43.849.

* **Sec. 11.** AS 37.07.020(b) is amended to read:

(b) In addition to the budget and bills submitted under (a) of this section, the governor shall submit a capital improvements program covering the succeeding six fiscal years. The governor shall also submit a fiscal plan with estimates of significant sources and uses of funds for the succeeding 10 fiscal years. The fiscal plan

(1) must include sufficient details to identify

(A) significant sources of funds;

(B) significant uses of funds, including lump sum projections of

(i) operating expenditures;

(ii) capital expenditures;

(iii) debt service expenditures;

(iv) fund capitalizations;

(v) appropriations of income of the Alaska permanent fund (art. IX, sec. 15, Constitution of the State of Alaska), if any;

(2) must balance sources and uses of funds held while providing for essential state services and protecting the economic stability of the state;

(3) must include projected balances of significant funds held in separate accounts, including the budget reserve fund (art. IX, sec. 17, Constitution of the State of Alaska), the public education fund (AS 14.17.300), and the **AlaskAdvantage education grant and Alaska performance scholarship fund (AS 37.14.750)** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)];

(4) must set out significant assumptions used in the projections with sufficient detail to enable the legislature to rely on the fiscal plan in understanding, evaluating, and resolving issues of state budgeting, including information that supports major areas of operating increases, such as population demographics that affect the need for particular government services.

* **Sec. 12.** AS 37.13.145(d) is amended to read:

(d) Notwithstanding (b) of this section, income earned on money awarded in or received as a result of State v. Amerada Hess, et al., 1JU-77-847 Civ. (Superior Court, First Judicial District), including settlement, summary judgment, or adjustment to a royalty-in-kind contract that is tied to the outcome of this case, or interest earned on the money, or on the earnings of the money shall be treated in the same manner as other income of the Alaska permanent fund, except that it is not available for distribution to the dividend fund or for transfers to the principal under (c) of this section, and shall be annually deposited into the **AlaskAdvantage education grant and Alaska performance scholarship fund (AS 37.14.750)** [ALASKA CAPITAL INCOME FUND (AS 37.05.565)].

* **Sec. 13.** AS 37.14 is amended by adding a new section to read:

Article 8A. AlaskAdvantage Education Grant and Alaska Performance Scholarship Fund.

Sec. 37.14.750. AlaskAdvantage education grant and Alaska performance scholarship fund established. (a) The AlaskAdvantage education grant and Alaska performance scholarship fund is established in the general fund for the purpose of making grant payments under AS 14.43.400 - 14.43.420 and scholarship payments to qualified postsecondary institutions for students under AS 14.43.810 - 14.43.849 by appropriation to the income account established under AS 14.43.915. Money in the fund does not lapse. The fund consists of

(1) money appropriated to the fund;

(2) income earned on investment of fund assets;

(3) donations to the fund; and

(4) money deposited to the fund under AS 37.13.145(d).

(b) Each fiscal year, the legislature may appropriate to the AlaskAdvantage education grant and Alaska performance scholarship fund an amount equal to 15 percent of the money received by the state during the previous calendar year under AS 43.55.011(g).

(c) The amount annually appropriated and deposited to the fund may not exceed the greater of

(1) $40,000,000; or

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $160,000,000.

(d) The balance in the AlaskAdvantage education grant and Alaska performance scholarship fund shall be determined on June 30 of each year. The department shall distribute one-third of that amount or $40,000,000, whichever is less, for deposit into the account established in AS 14.43.915.

(e) Notwithstanding the limitation in (d) of this section, the legislature may appropriate any amount to the AlaskAdvantage education grant and Alaska performance scholarship fund. Nothing in this section creates a dedicated fund.

(f) In this section, unless the context requires otherwise, "fund" means the

AlaskAdvantage education grant and Alaska performance scholarship fund established in (a) of this section.

* **Sec. 14.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted **for**

(1) [FOR] direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) [FOR] secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) [FOR] vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) [FOR] a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) the AlaskAdvantage grant and Alaska performance scholarship fund under AS 37.14.750(a).

* **Sec. 15.** AS 43.20.014(a), as amended by sec. 14, ch. 92, SLA 2010, is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses and programs by a school district in the state; [AND]

(3) by a state-operated vocational technical education and training school**; and**

(4) for the AlaskAdvantage grant and Alaska performance scholarship fund under AS 37.14.750(a).

* **Sec. 16.** Section 8, ch. 14, SLA 2010, is amended to read:

TRANSITION: **PERFORMANCE SCHOLARSHIP** PROGRAM STANDARDS AND IMPLEMENTATION FOR INITIAL SCHOOL YEARS. Notwithstanding any contrary provision of this Act, the Department of Education and Early Development and the Department of Labor and Workforce Development, after consultation with the Alaska Commission on Postsecondary Education, may adopt regulations under AS 44.62 (Administrative Procedure Act) to implement their respective duties under the Alaska **performance** [MERIT] scholarship program established in AS 14.43.810, enacted by sec. 5 of this Act, so that a student

(1) may be eligible for the **Alaska performance scholarship** [PROGRAM] even though the student did not fully meet the required core academic curriculum for the school years beginning July 1, 2010, through June 30, 2014; and

(2) who graduated from high school in this state after January 1, 2011, and before July 1, 2011, and meets eligibility requirements for the **Alaska performance scholarship** program may apply for a scholarship on or after January 1, 2011, for enrollment in a program of study beginning on or after July 1, 2011.

* **Sec. 17.** AS 37.05.565 is repealed.

* **Sec. 18.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: ALASKADVANTAGE EDUCATION GRANT AND ALASKA PERFORMANCE SCHOLARSHIP FUND BALANCE. (a) Notwithstanding the $40,000,000 limit in AS 37.14.750(d), the following amounts may be substituted for that amount as follows for

(1) fiscal year 2012, $20,000,000;

(2) fiscal year 2013, $30,000,000.

(b) The money deposited in the Alaska capital income fund established under AS 37.05.565 shall be transferred to the AlaskAdvantage education grant and Alaska performance scholarship fund established under AS 37.14.750 on the effective date of this section.

* **Sec. 19.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: REGULATIONS. The Department of Education and Early

Development, the Department of Labor and Workforce Development, the Department of Revenue, and the Alaska Commission on Postsecondary Education may adopt regulations necessary to implement changes made to their respective authorities by this Act. The regulations take effect under AS 44.62 (Administrative Procedure Act), but not before July 1, 2011.

* **Sec. 20.** The uncodified law of the State of Alaska is amended by adding a new section to read:

REVISOR'S INSTRUCTION. The revisor of statutes is instructed to change the

(1) heading of article 12 of AS 14.43 from "Alaska Merit Scholarship Program" to "Alaska Performance Scholarship Program";

(2) catch line for AS 14.43.820 from "Alaska merit scholarship program; eligibility" to "Alaska performance scholarship program; eligibility."

* **Sec. 21.** Section 19 of this Act takes effect immediately under AS 01.10.070(c).

* **Sec. 22.** Section 6 of this Act, AS 14.43.830(a)(1)(C) and (D), added by sec. 7 of this Act, and the amendment to AS 14.43.830(a)(2) made by sec. 7 of this Act take effect July 1, 2012.

* **Sec. 23.** Section 15 of this Act takes effect January 1, 2014.

* **Sec. 24.** Except as provided in secs. 21 - 23 of this Act, this Act takes effect July 1, 2011.

House Education Committee Substitute for HB 104

The Education Committee Substitute for HB 104 makes changes to the governor's bill funding the Alaska Performance Scholarship (APS) program to correspond with recommendations from the Joint Legislative Higher Education Scholarship Funding Task Force that met over the interim. The CS incorporates a needs based component to APS, requires institutions provide student support, funds AlaskaAdvantage, and creates a funding mechanism with a steady revenue stream and ability to phase down scholarship obligations.

The Task Force felt it was important to give those students who had worked hard and received the merit scholarship the real possibility for higher education even if their families could not afford it. The needs based component in the CS awards 50% of the total unmet need for attending school after all other funding sources and the $2,000 student work commitment have been subtracted. The award is capped at the 2010 UAF level of $4,000.

The House Education CS also requires institutions that accept scholarship funds to provide the support and structure these new adults need to succeed. A school must institute an advisory program to provide students with career counseling, course planning and help with personal challenges. Institutions are also required to offer the necessary classes for students to complete their degree in a timely manner.

The bill varies from the governor's proposed endowment account for the structure of the AlaskaAdvantage education grant and Alaska performance scholarship award income account (AEG-APS). In order to identify a steady revenue stream for the AlaskAdvantage grants and Alaska performance scholarships the CS directs the earnings of the Amerada Hess fund to the newly created AEG-APS fund and repeals the capital income fund where Amerada Hess earnings were previously held. This represents approximately 22 million a year in potential revenue assuming a 7% rate of return. Fifteen percent of progressivity, the increase in net oil tax revenue when oil goes over $30 a barrel profit, would make up the annual difference while capping AEG - APS fund at $160 million.

The AEG-APS fund is modeled after community revenue sharing with a built in step down mechanism. If another legislature decides not to transfer Amerada Hess earnings, oil tax revenue or general fund money into the AEG-APS fund, there will be enough in the account to fulfill the state's obligations to the current scholarship recipients.

The House Education CS for HB 104 translates the hard work of the Scholarship Funding Task Force into improvements to the governor's bill.

Alaska State Legislature Joint Legislative Higher Education

Scholarship Funding Task Force

Report to the Legislature

Task Force Recommendations on

The Alaska Scholarship Program and

State-supported Educational Financial Assistance

Fall 2010

Funding and Finance

The first duty and priority for the Task Force was to "evaluate how best to provide long-term and sustainable funding for state provided financial aid for postsecondary institutions in the state" with particular emphasis being given to the performance-based Alaska Scholarship.

The Task Force analyzed – as representative examples – a number of funding and financing structures which were submitted to the Task Force. Those structures included: heavily capitalized, constitutionally protected endowment funds; heavily capitalized, statutorily created General Fund sub-accounts; moderately capitalized rolling-fund accounts; and, as a control group, the pay-as-you-go default case of annual General Fund appropriations. The Task Force also considered both the numerous revenue sources which could be tapped to provide monies for scholarships and the appropriation mechanisms available for directing such monies to specific programs, as well as the opportunities and challenges associated with each approach.

Relatively speaking, the ideal structure for ensuring a secure, long-term, sustainable funding source for the Scholarship would be a constitutional account, not unlike the Permanent Fund or Constitutional Budget Reserve, specific to the Scholarship and capitalized at a level where revenues generated from investment of the corpus would be sufficient to not only fully fund annual scholarship awards but also sufficient to inflation-proof the fund itself through reinvestment. Though subject to market volatility, such a mechanism (essentially a constitutionally protected endowment) would be highly durable, self-sustaining, more able to attract private donations through the newly augmented education tax-credit system and more likely to provide an adequate, predictable funding stream for the program.

However, such a constitutionally protected endowment account, due to the need for overwhelming legislative support and a further vote of the people, would be difficult and time consuming to create. Another substantial challenge would be capitalizing the account – identifying and appropriating the hundreds of millions of dollars in initial investment necessary to place the fund on the desired self-financing and self-sustaining footing.

One alternative to the constitutionally protected account was reflected in the Governor's original Scholarship proposal. Senate Bill 224 and House Bill 297 each called for the establishment of a "scholarship fund" - a statutorily created sub-account of the General Fund, to hold appropriations, donations and income earned on investments of fund assets. Such a statutory account would have offered, though to a lesser degree, many of the same benefits as its constitutionally protected counterpart yet, because it could be created through a purely legislative process, would have been far easier to make and could have been established on a timeline as compressed as a single legislative session.

This option, however, suffered from the same fund capitalization shortcomings (both in immediacy and scale) as its counterpart. As described in Fiscal Note 2 of SB 224, the purely

statutory endowment would still have required an initial, immediate, investment of no less than $400 million to approach fund self-sustainability.

Attempts to mitigate these capitalization challenges resulted in proposals which functionally resembled the revised School Bond Debt Reimbursement program. Under these designs, termed rolling-fund accounts by the Task Force, the fund capitalization threshold was reduced and the investment timeline extended. Under draft legislation requested for the Task Force (Attachments 15 and 16), the Scholarship Fund would be incrementally capitalized up to $160 million over a series of years as monies were deposited into the fund in excess of those required for distribution as scholarship awards. Such a system would represent a moderate continuing strain on the State's finances but would allow the Legislature to capitalize the fund without the budgetary shock of a large, one-time appropriation. Also, though a smaller account balance would not afford the fail-safe, in perpetuity funding security of a heavily capitalized endowment, the corpus of a rolling-fund would provide a reasonable level of mid-term programmatic funding assurance; allowing the State the potential of a program wind-down while still having sufficient funds to meet its obligations to Scholarship awardees already in the training/education pipeline.

The Task Force considered all of these account options to be preferable to the pay-as-you-go default case of making no specific accommodation for the Scholarship and simply allowing the Administration to submit yearly funding requests for legislative consideration.

Therefore, ***it is the recommendation of the Task Force that the Legislature immediately create, through statute, a Scholarship Fund as a sub-account within the General Fund***. As an account capitalization goal, ***the Task Force recommends the Scholarship Fund account balance to be an amount sufficient to allow the Scholarship Fund to be wholly self-sustaining both for award distribution and inflation-proofing replenishment***. As an optimal capitalization strategy, ***the Task Force would prefer, should sufficient funds be available, immediate account capitalization***. However, recognizing this may not be possible, ***the Task Force recommends, as an alternative, incremental capitalization of the Scholarship Fund to a minimum balance of $160 million***, or whatever amount the Legislature deems sufficient for it to act as a surety account for already obligated awards.

Possible funding sources for the Scholarship are many since the State has multiple sources from which it collects revenue (like severance taxes and corporate income taxes), multiple ways it generates income (like investment returns, dividends and program receipts) and dozens of existing accounts in which it is already holding money. Much of this income flows into the General Fund and is as available for appropriation to the Scholarship as it is for any other state program.

However, relying primarily on General Funds for support of a program is to subject it to the uncertainty of the budgetary process by placing it in competition with all other programs for yearly legislative prioritization and appropriation. This is a situation the Task Force, with an

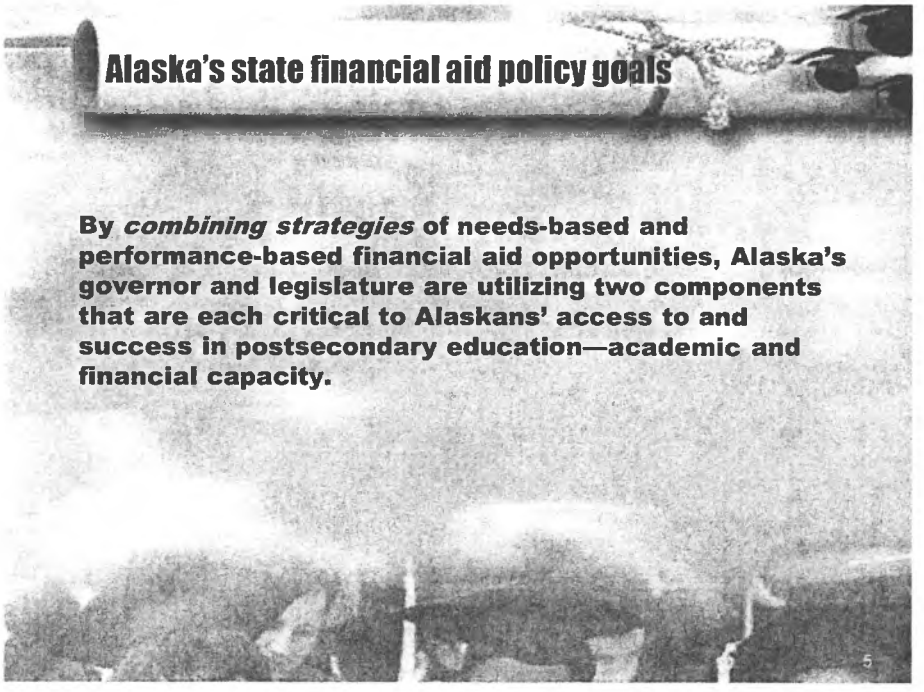
overarching interest in assuring an adequate, secure and predictable funding stream to the Scholarship, would hope to avoid. Therefore, the Task Force advocates a funding regime which would require General Funds as supplemental funds only, if at all.

In general, and as much as is practicable***, the Task Force recommends that sources of funding for the Scholarship by positively identified, "funds-in" revenue be affirmatively designated*** and General Funds be used as necessary and in supplement only. In order of preference, from "first place to go" to last, the Task Force advises the Legislature to fund the Scholarship Fund as follows:

1. Designating Interest from Specific, Existing Accounts
2. Designating Program Receipts and Dividends
3. Designating Revenues from Specific, External Sources
4. Re-appropriated Assets from Liquidated Accounts
5. General Funds

Needs-Based Component

The original scholarship proposal (SB 224/HB297), as submitted, provided only for merit-based financial assistance but was later amended to include a needs-based component that was supplemental to the merit-based Scholarship. By supplemental, it is meant that the needs-based component was integrated within the merit-based Scholarship, creating a single program whereby a student would have to be a Scholarship recipient to be eligible to receive needs-based assistance. The goal of integrating a needs-based component into the merit scholarship was to ensure that the lesser socio-economically advantaged students who qualified for the merit scholarship would have the ability to use their merit-based award.



However, the statute that created the Scholarship (SB 221) used the AlaskAdvantage education grant program – an existing, stand alone program which, as a function of historic funding levels, had only been able to provide grants to those students demonstrating the highest level of financial need based on the methodology used in the Free Application for Federal Student Aid: primarily non-traditional, older students - to address the possible necessity for added assistance by Scholarship awardees specifically and the acknowledged insufficiency of state-funded needs-based financial assistance in Alaska generally.

This was not a perfect fit as these programs were not designed to work in concert and generally target groups which are not aligned. The AlaskAdvantage grant program has much broader eligibility standards than the Scholarship. Seeking to make the Scholarship's qualifications the same as for AlaskAdvantage would greatly impair, or even eliminate, its efficacy related to its broad-based programmatic goals just as seeking to amend AlaskAdvantage education grant's qualifications to mirror those of the Scholarship would render it unavailable to many of the groups it currently serves. However, the Task Force recognizes the value of the programs, their complementary natures and the statewide benefit of maintaining them both.

Therefore, ***the Task Force recommends the creation of a second needs-based assistance program: a needs-based component, similar or identical to the one proposed in Education Committee versions of SB224/HB297, to be reintegrated into the Scholarship.*** Such a supplement will allow the Scholarship to more fully serve its high achieving, traditional student population. However, recognizing the indeterminate funding liability potential of the need-based supplement, ***the Task Force recommends the integrated needs-based component be capped***, either at a 2010 amount of $4,755 (as the merit-based portion of the Scholarship award has been capped at the 2010 UA tuition amount) or some other reasonable figure. ***The Task Force further recommends continued funding, at a level commensurate with its full functioning, of the AlaskAdvantage grant program,*** allowing it to serve the non-traditional, General Education Development (GED), and older students as prioritized for grants under the program's current criteria. Finally, though they are to be programmatically separate, ***the Task***

- ***Force recommends the supplemented Scholarship and AlaskAdvantage grant programs be funded through the same mechanism***, perhaps, though not necessarily, ***under a funding formula which will ensure adequate support for both***.

How AEG-APS Fund Works

There were no earnings directed from AmHess to the Capital Income Account in 2009 & 2010 due to realized losses in market crisis. Fiscal year 2011 earnings were used to pay back the AmHess principal until losses to the corpus are replaced. It is projected that under a "normal" income environment Am Hess will earn approximately 7%, or 22m a year. The year end balance of the fund was $53.3m.

Updated 2-11-2011

State and Federal Scholarship and Grant Programs Information

AlaskAdvantage Education Grant (AEG): The AEG is a state-funded need-based grant to Alaska students to promote access to postsecondary education. Annual grant awards range from $500 to $3,000 based upon: unmet cost of attendance less the student's expected family contribution and any non-loan aid, level of enrollment, and whether a student meets the requirements of one of the priority award categories. Priority categories are: having demonstrating college-readiness by scoring in the top quartile on either the SAT or ACT assessment; or, being enrolled in certain workforce shortage programs of study: education, protective and social services, allied health, and process and resource extraction industries. The AEG is available to students enrolled in a first undergraduate degree and attending at least half time at a Title IV-approved postsecondary institution in Alaska. The maximum amount a single student may receive under this program is $12,000. The application for the AEG is the Free Application for Federal Student Aid (FAFSA).

Alaska Performance Scholarship (APS): The APS is a merit-based scholarship designed to incent and reward Alaska high school students who (1) take a curriculum which prepares them to succeed in postsecondary education, and (2) work hard and perform well in school to continue on and pursue postsecondary education and training in Alaska. Annual awards for full-time enrollment range from $2,378 to $4,755. The amount is a student is eligible to receive is determined by a combination of the high school grade point average and score on the SAT, ACT or WorkKeys assessment. Recipients must attend a participating postsecondary education institution in Alaska and may use the scholarship for up to eight semesters over the six years following graduation from high school. The maximum amount a student may receive under this program is $19,020. The application for the APS is the FAFSA.

University of Alaska Scholars: The UA Scholars program is a merit-based scholarship designed to reward student achievement and promote postsecondary attendance at the University of Alaska. This program was established by the University of Alaska and is funded by UA's Land Grant Trust Fund. An award is available to Alaska high school graduates identified by their school as being in the top 10% of their class. Recipients are awarded $11,000 to be spread across eight semesters of attendance and must be used within six years of graduation from high school. The annual award is $2,750.

Federal Pell Grant: The Federal Pell Grant Program provides need-based grants to low-income undergraduate students to promote access to postsecondary education. Grant amounts are dependent on: the student's expected family contribution (EFC); the cost of attendance; the student's enrollment status; and whether the student attends for a full academic year or less. For the 2010-11 award year (July 1, 2010 to June 30, 2011), the maximum award is $5,550 and minimum is approximately $1,180. The maximum amount can change each award year and depends on program funding. The application for the federal Pell grant is the FAFSA.

Federal Supplemental Educational Opportunity Grants (FSEOG) are for undergraduates with exceptional financial need. Pell Grant recipients with the lowest EFCs are first to receive these

federal supplemental grants. These annual awards range between $100 and $4000, depending on the time of application, financial need, and available funding at the school. FSEOGs are awarded only to first-time undergraduate students.

Pell-eligibility is the cross-cutting qualification for each of the grants described above. Following are *generally* applicable annual gross family income ranges within which a full-time student may expect to receive a Pell grant, assuming one family member in college.

Net Assets	Income/3 in family	Income/4 in family	Income/5 in family	Income/6 in family
$25,000	$30k -- $55k	$30k -- $65k	$40k -- $70k	$50k -- $75k
$50,000	$30k -- $55k	$30k -- $65k	$40k -- $70k	$40k -- $75k
$100,000	$20k --$45k	$20k -- $55k	$30k -- $60k	$40k -- $65k

U.S. DOE has developed an online tool to assist families in estimating their precise EFC at www.fafsa4caster.ed.gov. A general rule of thumb is that if the family's EFC is at or above $4600, they will not be Pell-eligible.

UA Scholars Program Highlights

- Started by UA in 1999 to attract students from high schools in every corner of the state
- Funded by UA
- 5,266 students have benefited
- 1,873 degrees awarded
- 79% pursuing bachelor's degrees and 14% associate degrees or certificates
- 90% remain in Alaska after graduation
- 66% receive additional financial aid including loans

UNIVERSITY of ALASKA

Many Traditions One Alaska

UA Scholars Program and APS – a comparison

Different Programs, Multiple Objectives, One Goal: Alaska Student Success

The UA Scholars program and the Alaska Performance Scholarship are both merit-based scholarships designed to reward student achievement and promote post-secondary attendance in Alaska.

UA Scholars Program

The UA Scholars Program was established in 1999 by the University of Alaska to attract the top 10 percent of students from every graduating high school class in the state. The program keeps top performers in Alaska and increases student diversity.

The $11,000 cash scholarship is not reduced if other aid is received. Funding for the scholarship comes from the university's own Land Grant Trust Fund.

Alaska Performance Scholarship (APS)

The Alaska Performance Scholarship (APS) was established in 2010 as an invitation to excellence for high school students. It rewards students who complete a rigorous high school curriculum, earn good grades and score well on achievement tests.

The goal of APS is to better prepare students for post-secondary education and to incent them to continue their education in Alaska.

The amount of the APS can be reduced when other scholarships or grants the student receives decreases his or her cost of attendance. APS funding proposals are currently under legislative consideration.

Receiving Both Scholarships

More scholarships mean greater opportunity for Alaska's students. While some students may receive both scholarships; others will receive only one. And some college-bound students will not receive either one.

The criteria for each scholarship are different and the goals of each scholarship are different.

A student receiving both scholarships would have considerable help paying for post-secondary education or workforce training if they attend the University of Alaska.

Please see the back of this page for a side-by-side comparison.

	UA SCHOLARS PROGRAM	ALASKA PERFORMANCE SCHOLARSHIP
OBJECTIVE	To incent top students from every community in Alaska to attend the University of Alaska	To incent students to be well prepared for higher education and career success and to pursue those in Alaska
TYPE OF SCHOLARSHIP	Merit-based: class standing	Merit-based: curriculum, GPA and college/career test scores
NEED-BASED COMPONENT	None	None
FUNDED BY	University of Alaska	State of Alaska
IMPLEMENTED	1999	2011 subject to appropriation
ELIGIBILITY	Graduate in the top 10% from qualified high school Scholars are designated from virtually every community in Alaska	Complete rigorous curriculum Achieve minimum 2.5 GPA Earn at least moderate scores on ACT, SAT or Work Keys
WHO DETERMINES ELIGIBILITY	Designated by qualified high schools based on class standing	School districts determine initial eligibility according to APS statutes and regulations
TERM OF SCHOLARSHIP	8 semesters over 5 years	From 2-8 semesters over 6 years
AWARD AMOUNT	$1,375 per semester for $11,000 total award	$1,189 - $2,378 based on award level per semester Lifetime $9,512-$19,020 based on award level
CONTINUING ELIGIBILITY REQUIREMENTS	Satisfactory Academic Progress and GPA	Annual Credits and GPA based on class standing
FINANCIAL RESTRICTIONS	The award is not tied to cost of attendance and not limited by other scholarships or financial aid received by student	"Last Dollar" award that cannot exceed the cost of attendance after all other scholarships and grants have been paid (including UA Scholars)
APS/UA SCHOLARS ELIGIBILITY OVERLAP	Scholar may be eligible for APS based on curriculum, test scores and GPA	APS recipient may be eligible for UA Scholars Award based on class rank
FUNDING	Provided by earnings of UA's Land Grant Trust Fund which is comprised of revenue generated by UA natural resource development. No State appropriation	Concepts Under Consideration Annual Direct Appropriation Renewable Funding Source
COST OF PROGRAM	Approx $3.5 million annually	Est. $8.5 to $20 million annually
OUTCOMES	UA Scholars Have High Retention Rates 85% return for a second year UA Scholars Have High Graduation Rates more than 50% graduate within 6 years 1,873 degrees UA Scholars Stay In-State 90% remain in Alaska today UA Scholars Increase Diversity in fall 2009 nearly 20% were Alaska Natives	Anticipated Outcomes: Increase in higher education readiness Increase in post-secondary education enrollment Increase in post-secondary graduation rates Increase in qualified local hire, Alaska workforce

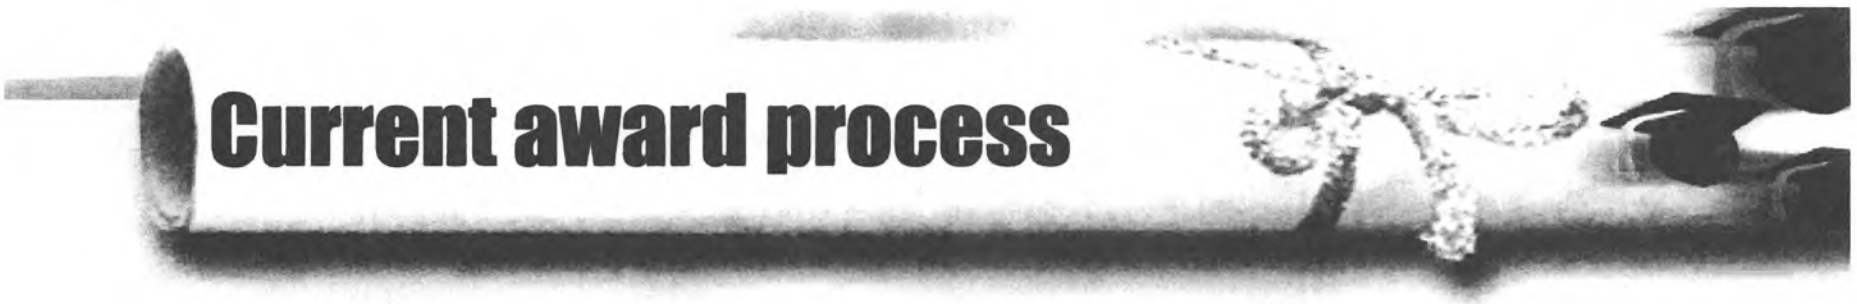
Current grant criteria

- Alaska resident enrolled in state at a regionally or nationally accredited school, be in a cert. or degree program and attending at least half time
- Meet institution's satisfactory acad. progress requirements
- Demonstrate financial need based on the methodology used in the Free Application for Federal Student Aid
- Meet other criteria to receive federal financial aid (not already have an undergraduate degree, registered for the draft, no drug convictions while receiving aid, etc.)
- Have a high school diploma or GED
- Have unmet need of at least $500 after all other non-self-help financial aid considered

Current award process

- **Applicant pool is all otherwise eligible students who file a FAFSA on or before April 15**
- **Applicant information is made available to schools students have listed on their FAFSAs; schools provide information about other financial aid awarded and verify enrollment**
- **Using a set standard cost of attendance (based on current year UA COA), ACPE reduces the COA by each student's other non-loan aid and the Estimated Family Contribution (EFC)**

<u>Standard Cost of Attendance</u>



– Other non-loan aid

– Estimated family contribution

= Unmet need

Current award process

Applicants are then sorted, by unmet need amounts, in a descending order;

ACPE makes awards until the available funds are exhausted

In the event of equivalent unmet need amounts, two additional ordering criteria are:

1) lowest adjusted gross income; and,

2) closest to program completion

Current grant structure

AlaskAdvantage priority awards

- **Program rules provide for priority awards, in the form or higher grant amounts, for students in two categories:**
  1. Those enrolled in severe workforce shortage area programs, or
  2. Those whose secondary school performances demonstrate high likelihood for postsecondary education success
- **For category one, the Commission annually determines qualifying shortage programs and they are:**
  1. education,
  2. social and protective services,
  3. allied health, and
  4. process and resource extraction industries
- **For category two, by regulation, eligibility is based on having scored in the top quartile of test takers on either the SAT or ACT (1740/24)**

Current grant amounts

Award type	Full-time student	Half-time student
Standard Award	$1,500	$750
Workforce Shortage Award	$3,000	$1,500
Top quartile of SAT/ACT test takers scores	$3,000	$1,500

(All amounts shown for full academic years)

Program funding history

- Grant funding source since current program inception in 2005-06: federal LEAP funds, ASLC Ofee account interest, FY09 Capital appropriation
- Until FY09 annually funded at approximately $650,000
- Most recent 3-year average total awarded is $1.161 million
- Over five years number of AK FAFSA filers is up 70% with greater increases in the number of grant-eligible applicants
- Because demand has outstripped funding, only applicants with very high need have been funded

Population served in 2009-2010

Population characteristics	Alaska FAFSAs	Eligible population	Awarded	Certified & disbursed
# of students	17,284	4,960	1,543	870
Average Age	27.8	27.7	30.3	32.6
Average AGI	$53,954	$34,994	$18,527	$16,617
Average unmet need	$8,333	$10,966	$14,965	$14,538

Alaska FAFSAs – number of Alaska resident filers for attendance at Alaska schools

Eligible population – a total population subset having filed by the April 15 deadline, indicating enrollment at a participating school and w/unmet need of $500 or greater

Awarded – the portion of the population with unmet need in excess of $14,000

Certified & disbursed – enrolled and eligible as certified by school officials

AGI – adjusted gross income

Amerada Hess Royalty Oil Dispute and Settlement

FY 06 Capital Projects Financing

The Administration proposes to use the earnings from the Amerada Hess settlement to pay the debt service on bonds to be issued by Alaska Housing Finance Corporation. The estimated $30 million in annual interest earnings from the settlement is expected to support a $343 million bond package. The proposal is to use these bond proceeds to fund capital projects that range from road construction to deferred maintenance to a new University science building.

In addition to the legislation necessary to authorize sale of the bonds, other legislation will be introduced to create the "Legacy Capital Fund" into which the earnings of the Amerada Hess principal will be transferred and accumulate until they are appropriated.

The following is background regarding the Amerada Hess settlement.

Settlement's History

The fight with North Slope oil producers started in 1977, almost as soon as oil began to flow through the Trans-Alaska pipeline. That year the state filed a lawsuit accusing oil companies of undervaluing their oil and gas and thus denying the state the full value of its 12.5% royalty share. In 1989, the state filed claims against 15 companies for $902 million. The dispute became known as the Amerada Hess case, named after the first company listed alphabetically in the lawsuit.[1]

Royalty oil is the state's ownership share of the crude coming out of the ground. The state takes its royalty share in two ways: in-kind, which is sold to Railbelt refineries and a Fairbanks electrical utility; and in value, which is sold back to the producers and priced at the wellhead net of transportation costs. The problem came in figuring out how to value the royalty oil. The state claimed that the companies used "bookkeeping fictions and intracorporate transactions" to under value the oil at market and overstate transportation costs, which combined to artificially lower

[1] The Amerada Hess company was actually a very minor player in the case and settled out of court with the state in 1989 for $319,000.

the wellhead value.[2] The production at issue occurred between 1977 and 1986 from the Kuparuk River and Prudhoe Bay oilfields.

The case became the longest running legal battle between the state and North Slope producers, lasting 18 years. One issue that came up early in the course of the litigation was that since 25% of royalty payments are dedicated to the Permanent Fund, earnings from settlement payments would eventually trickle into annual dividends paid out to Alaska residents. This issue was first raised in 1987 when three oil company defendants filed a lawsuit in federal district court to enjoin the Amerada Hess case from proceeding to trial in any court in Alaska. They claimed they could not receive a fair trial in Alaska because every judge and juror had a financial interest in the outcome of the case by reason of their respective annual Permanent Fund Dividends, which would be increased by any earnings derived from damages awarded to the state in Amerada Hess.3

In June 1988, the federal district court dismissed the action, ruling that the due process issue must be addressed in the state court before being asserted in the federal court. The companies appealed. In 1989, the Ninth Circuit Court of Appeals encouraged the parties to seek a legislative solution. Governor Cowper immediately introduced corrective legislation. This was ultimately passed into law (Ch 38, SLA 1989) in May 1989. Codified as AS 43.23.045 (b) Dividend Fund, it provided that:

> *income earned on money awarded after trial in State v. Amerada Hess, et al, 1JU-77-847 Civ. (Superior Court, First Judicial District) shall be treated in the same manner as the Alaska permanent fund except that it is not available for distribution to the (dividend) fund, and shall be annually deposited into the principal of the Alaska permanent fund.*

Independently, in April of the same year the Ninth Circuit affirmed the district court's disposition, requiring the oil companies to raise the issue of disqualification in state Superior Court. The companies sought review by the U.S. Supreme Court but their petition was denied.

In October 1990, the companies filed a motion to disqualify the Alaska courts. In March 1991, Judge Carpeneti ruled that AS 43.23.045(b) removes most, but not all, of the sources of revenue flowing to the

---

[2] "State Settles Oil Fight - $100 Million Ends 18-Year Battle," Ralph Thomas, *Anchorage Daily News*, April 7, 1995.

[3] Transmittal from Governor Hickel for SB 213, March 18, 1991.

Permanent Fund dividend that created the bias. He also found that the statute failed to prevent additional monies from going to the dividend fund as a result of the so-called Amerada Hess price adjustment clauses in royalty-in-kind (RIK) contracts. He agreed with claims by the oil companies that if the state prevailed, it would result in a $300 million judgement against refineries and the Fairbanks utility for in-kind purchases. Part of any judgement then would flow to the Permanent Fund and increase Permanent Fund Dividends (by $81 over the next 15 years).

According to Judge Carpeneti, this failure to deal with RIK recoveries would require the Alaska court to disqualify itself. The result was another piece of legislation introduced by Governor Hickel in March of 1991 that became part of a more comprehensive rewrite of Permanent Fund statutes (19 Ch 134 SLA 1992) that included repealing AS 43.23.045(b) above. A new section was added to AS 37.13.145 Disposition of Income statute:

> *(d) Notwithstanding (b) of this section, income earned on money awarded in or received as a result of State v. Amerada Hess et al, 1JU-77-847 Civ. (Superior Court, First Judicial District), including settlement, summary judgement, or adjustment to a royalty-in-kind contract that is tied to the outcome of this case, or interest earned on the money, or on the earnings of the money shall be treated in the same manner as other income of the Alaska permanent fund, except that it is not available to the dividend fund, and shall be annually deposited to the principal of the Alaska permanent fund.*

One final note on the legal history: 19 Ch. 134 SLA 1992 contained a conditional repealer stating that if the Alaska Supreme Court made a final determination that "no judge or juror is disqualified from serving as a judge or juror solely because the judge or juror may qualify to receive a permanent fund dividend," subsection (d) would be repealed, i.e., earnings on the Amerada Hess principal would be added into the annual dividend calculation.

Eventually, almost all of the state's claims were settled out of court. The final piece fell into place in 1995, when the state settled an assortment of gas royalty claims against three companies—BP, Exxon, and Mobil—for the last $100 million of about $1 billion in total settlements. Altogether the state spent nearly $100 million in building its legal case. Over the course of the litigation, the share of settlements deposited into the Permanent Fund totaled $194.1 million. Realized earnings on the Amerada Hess settlement money since the first deposit in FY 92 have added another $230.3 million to the settlement principal, which totaled $424.4 million at the end of FY 04.

Amerada Hess as a subset of the Permanent Fund Principal

The Amerada Hess portion of Permanent Fund principal is tracked separately in accounting records solely because its earnings cannot be included in the dividend calculation as previously discussed. Otherwise it is invested and managed exactly like the rest of the Permanent Fund. Realized earnings are deposited into the principal of the Permanent Fund, with the amount of realized earnings for inflation proofing accounted for separately. The inflation proofing piece is primarily informational to show how much the Amerada Hess earnings contributes to overall inflation proofing of the Amerada Hess portion of principal of the Permanent Fund.

Amerada Hess Settlement

	Principal			Realized Earnings (over inflation)			Inflation-proofing			
	Beginning	Contributions	Ending	Beginning	Additions	Ending	Beginning	Additions	Ending	Total Settlement Principal

Department of Education: Eddy Jeans, Education Policy Coordinator

December 1, 2010

Senate President Gary Stevens
State Capitol Room 111
Juneau, AK 99801-1182

Speaker of the House Mike Chenault
State Capitol Room 208
Juneau, AK 99801-1182

Dear President Stevens and Speaker Chenault,

This report is submitted to the Legislature by the Joint Legislative Higher Education Scholarship Funding Task Force, established by the 26th Alaska State Legislature under Senate Bill 221 to "examine higher education costs and identify the best approach in providing financial aid to assist students in the state".

Pursuant to this purpose, the Task Force has spent the interim performing three of the duties outlined in SB 221. These included evaluating how best to provide long-term and sustainable funding for state provided financial aid, evaluating proposals pertaining to financial aid opportunities and taking public comments on financial aid opportunities in the state.

Having completed all these assigned duties, the Task Force now respectfully submits the attached report in fulfillment of its fourth and final duty: "recommend improvements or additions to the laws providing for financial aid at postsecondary institutions." Those recommendations, along with supporting justifications and documentation, as included herein.

Respectfully,

Kevin Meyer

Senator Kevin Meyer,
Chairman, Joint Legislative Higher Education Scholarship Funding Task Force

Alaska State Legislature Joint Legislative Higher Education

Scholarship Funding Task Force

Report to the Legislature

Task Force Recommendations on

The Alaska Scholarship Program and

State-supported Educational Financial Assistance

Fall 2010

Executive Summary

Throughout the fall of 2010, the Scholarship Funding Task Force, established by Senate Bill 221 during the 26th Alaska State Legislature, performed an analysis of higher education financial aid policy in an effort to arrive at a set of recommendations for providing financial assistance for the post-high school education and training of Alaska students.

Specifically, the Task Force had been asked to consider options to ensure a long-term and sustainable funding stream for the newly created Alaska Scholarship program (Scholarship) and other state-provided financial aid. To do this, the Task Force solicited input from professionals with knowledge and expertise in education, administration, financial aid and governmental budgeting. It also took public testimony from groups and individuals (including current postsecondary students) who would benefit from or be impacted by the new program. The Task Force performed an in-depth analysis of the existing and potential components of the Scholarship and then, finally, reviewed the budgetary means and mechanisms available to the State to sustain programs like the Scholarship.

In a series of meetings, the Task Force reviewed the legislative history of the Scholarship, from inception to passage into law, and examined the form and function of the merit-based scholarship program created in statute with passage of SB 221. The Task Force also considered needs-based financial aid and examined the State's existing needs-based education assistance program – the AlaskAdvantage education grant program. Finally, the Task Force reviewed the budgetary tools available for supporting state-sponsored programs and analyzed structures the State might use to fund and finance the Scholarship.

Within the context of these reviews, evaluations and analyses, the Task Force formulated a consensus opinion on the funding strategy members agreed would be most efficient and effective in placing the Scholarship on a firm and enduring financial footing. It also considered numerous structural conditions and modifications through which the State's scholarship and financial aid systems might be strengthened to support the optimal functioning of the Scholarship.

This work of the Task Force formed the basis for the following recommendations to the Legislature and the State.

Implementation of these recommendations is expected to provide the structure necessary for the Scholarship to meet its two great promises: Its promise to Alaska that it can raise student academic performance by raising expectations, and its promise to students that, if they challenge themselves and achieve academic success under a highly rigorous curriculum, the State will reward them with a Scholarship.

Summary of Recommendations

Funding and Finance

- The Legislature should immediately create a Scholarship Fund for the Scholarship program.
- If possible, the Scholarship Fund should be immediately capitalized to the point where it can be both self-sufficient and self-sustaining.
- Otherwise, the Scholarship Fund should be incrementally capitalized to a minimum balance of $160 million using sources which have been positively identified and with revenues that have been affirmatively designated.

Merit-Based Component

Curriculum:

- No immediate amendment should be made to the Scholarship curriculum until its yearly reporting can provide the data to serve as a factual basis for such alterations.
- The Department of Education & Early Development should specify the "required courses" not specifically delineated in statute for each curricular subject area and define the content requirements and standards for those courses.

Distance Delivery:

- The Legislature should do an assessment of the State's existing distance delivery capacity and, should it be necessary, develop a plan (including cost estimates) for upgrading the Department of Education & Early Development's capacity to provide virtual program or distance-delivered secondary courses.

Needs-Based Component

- To directly support Scholarship awardees, a capped needs-based supplement should be reintegrated into the Scholarship.
- To assist all students, however, the Legislature should continue its support of the AlaskAdvantage grant program but do so at higher than historic levels.
- The supplemented Scholarship and AlaskAdvantage grant programs should be programmatically separate but should be funded through the same mechanism, under a funding formula which ensures adequate support for both.

Other Policy Recommendations

- Any institution which accepts Scholarship awards should integrate an advisor/advocate program to assist Scholarship awardees in expediting the students' time to education program completion.

Summary of Recommendations

- Institutions accepting Scholarship awardees should make their best effort to provide course delivery structures that allow for two and/or four year certificate/degree completion timelines.

Introduction

Throughout the fall of 2010, the Joint Legislative Higher Education Scholarship Funding Task Force (hereafter referred to as the "Task Force"), established by Senate Bill 221 during the 26th Alaska State Legislature and in accordance with the Purpose and Duties described therein (Attachment 1), performed an examination of higher education financial aid policy options relative to student success in its effort to arrive at a set of recommendations for providing state financial assistance to Alaska students for post-high school education and training. Specifically, the Task Force was asked to consider options for securing a long-term and sustainable funding stream for the Alaska Scholarship (hereafter referred to as the "Scholarship"), and other state-provided financial aid meant to assist students in attending postsecondary institutions within the State, and to offer guidance to the Legislature on how it might best achieve that goal.

In furtherance of its statutory mandate, the Task Force solicited input from professionals with knowledge and expertise in education, administration, financial aid and governmental budgeting, and took public testimony from impacted groups and individuals, as it performed an in-depth analysis of the existing and potential components of the Scholarship and the means and mechanisms available to the State to sustain it.

The Task Force reviewed the legislative history of the Scholarship (Attachments 2 – 6):

- the Taylor Plan, which served as its preliminary model
- the proposal submitted by the Governor
- the versions created by the House and Senate Education Committees
- the Alaska Performance Scholarship codified in statute today

The Task Force discussed the merit-based component of the Scholarship:

- how students become eligible
- how they apply and the level of awards they can achieve
- where and how recipients can use their scholarships
- how many students are likely to apply for and receive awards
- how much it is likely to cost the State to provide those awards (Attachment 7)

The Task Force discussed the needs-based complement to the Scholarship (Attachment 8):

- the rationale for needs-based assistance
- the proposals on the issue vetted by the Legislature
- the vehicle the Legislature used to mitigate the Scholarship's lack of an integrated needs-based assistance component - the AlaskAdvantage education grant program
- an estimate of the annual full cost of funding the current AlaskAdvantage grant program to serve as the state's needs-based assistance component

- potential modification of the AlaskAdvantage grant program to better align it with the student performance goals of the Scholarship

The Task Force discussed the budgetary tools available to the State for funding and financing the Scholarship (Attachment 9):

- the revenues available for appropriation for its support
