- the fund and account structures the State can create or maintain to securely hold those funds
- the methods available to the State of ensuring the directed distribution of monies
- the advantages and disadvantages relative to each budgetary structure in relation to the goals of the Task Force

The Task Force analyzed, as representative examples, funding and financing structures submitted to the Task Force (Attachments 10 - 14):

- Two forms of Endowments
- Two Rolling-Account proposals
- the default, annual General Fund appropriation option

Finally, The Task Force discussed ideas for possible "improvements and additions" to the Scholarship, in areas including:

- mandatory curriculum
- assessment alternatives
- access to education programs through distance delivery
- the postsecondary educational system

Having concluded its fact finding and subsequent deliberations, and in accordance with its statutory mandate, the Task Force has generated a list of consensus recommendations regarding the State's postsecondary financial aid system in general and the Scholarship in particular. Those recommendations, and their supporting rationales, are included in the following report under their corresponding subject heading.

Funding and Finance

The first duty and priority for the Task Force was to "evaluate how best to provide long-term and sustainable funding for state provided financial aid for postsecondary institutions in the state" with particular emphasis being given to the performance-based Alaska Scholarship.

The Task Force analyzed – as representative examples – a number of funding and financing structures which were submitted to the Task Force. Those structures included: heavily capitalized, constitutionally protected endowment funds; heavily capitalized, statutorily created General Fund sub-accounts; moderately capitalized rolling-fund accounts; and, as a control group, the pay-as-you-go default case of annual General Fund appropriations. The Task Force also considered both the numerous revenue sources which could be tapped to provide monies for scholarships and the appropriation mechanisms available for directing such monies to specific programs, as well as the opportunities and challenges associated with each approach.

Relatively speaking, the ideal structure for ensuring a secure, long-term, sustainable funding source for the Scholarship would be a constitutional account, not unlike the Permanent Fund or Constitutional Budget Reserve, specific to the Scholarship and capitalized at a level where revenues generated from investment of the corpus would be sufficient to not only fully fund annual scholarship awards but also sufficient to inflation-proof the fund itself through reinvestment. Though subject to market volatility, such a mechanism (essentially a constitutionally protected endowment) would be highly durable, self-sustaining, more able to attract private donations through the newly augmented education tax-credit system and more likely to provide an adequate, predictable funding stream for the program.

However, such a constitutionally protected endowment account, due to the need for overwhelming legislative support and a further vote of the people, would be difficult and time consuming to create. Another substantial challenge would be capitalizing the account – identifying and appropriating the hundreds of millions of dollars in initial investment necessary to place the fund on the desired self-financing and self-sustaining footing.

One alternative to the constitutionally protected account was reflected in the Governor's original Scholarship proposal. Senate Bill 224 and House Bill 297 each called for the establishment of a "scholarship fund" - a statutorily created sub-account of the General Fund, to hold appropriations, donations and income earned on investments of fund assets. Such a statutory account would have offered, though to a lesser degree, many of the same benefits as its constitutionally protected counterpart yet, because it could be created through a purely legislative process, would have been far easier to make and could have been established on a timeline as compressed as a single legislative session.

This option, however, suffered from the same fund capitalization shortcomings (both in immediacy and scale) as its counterpart. As described in Fiscal Note 2 of SB 224, the purely

statutory endowment would still have required an initial, immediate, investment of no less than $400 million to approach fund self-sustainability.

Attempts to mitigate these capitalization challenges resulted in proposals which functionally resembled the revised School Bond Debt Reimbursement program. Under these designs, termed rolling-fund accounts by the Task Force, the fund capitalization threshold was reduced and the investment timeline extended. Under draft legislation requested for the Task Force (Attachments 15 and 16), the Scholarship Fund would be incrementally capitalized up to $160 million over a series of years as monies were deposited into the fund in excess of those required for distribution as scholarship awards. Such a system would represent a moderate continuing strain on the State's finances but would allow the Legislature to capitalize the fund without the budgetary shock of a large, one-time appropriation. Also, though a smaller account balance would not afford the fail-safe, in perpetuity funding security of a heavily capitalized endowment, the corpus of a rolling-fund would provide a reasonable level of mid-term programmatic funding assurance; allowing the State the potential of a program wind-down while still having sufficient funds to meet its obligations to Scholarship awardees already in the training/education pipeline.

The Task Force considered all of these account options to be preferable to the pay-as-you-go default case of making no specific accommodation for the Scholarship and simply allowing the Administration to submit yearly funding requests for legislative consideration.

Therefore, ***it is the recommendation of the Task Force that the Legislature immediately create, through statute, a Scholarship Fund as a sub-account within the General Fund***. As an account capitalization goal, ***the Task Force recommends the Scholarship Fund account balance to be an amount sufficient to allow the Scholarship Fund to be wholly self-sustaining both for award distribution and inflation-proofing replenishment***. As an optimal capitalization strategy, ***the Task Force would prefer, should sufficient funds be available, immediate account capitalization***. However, recognizing this may not be possible, ***the Task Force recommends, as an alternative, incremental capitalization of the Scholarship Fund to a minimum balance of $160 million***, or whatever amount the Legislature deems sufficient for it to act as a surety account for already obligated awards.

Possible funding sources for the Scholarship are many since the State has multiple sources from which it collects revenue (like severance taxes and corporate income taxes), multiple ways it generates income (like investment returns, dividends and program receipts) and dozens of existing accounts in which it is already holding money. Much of this income flows into the General Fund and is as available for appropriation to the Scholarship as it is for any other state program.

However, relying primarily on General Funds for support of a program is to subject it to the uncertainty of the budgetary process by placing it in competition with all other programs for yearly legislative prioritization and appropriation. This is a situation the Task Force, with an

overarching interest in assuring an adequate, secure and predictable funding stream to the Scholarship, would hope to avoid. Therefore, the Task Force advocates a funding regime which would require General Funds as supplemental funds only, if at all.

In general, and as much as is practicable, ***the Task Force recommends that sources of funding for the Scholarship by positively identified, "funds-in" revenue be affirmatively designated*** and General Funds be used as necessary and in supplement only. In order of preference, from "first place to go" to last, the Task Force advises the Legislature to fund the Scholarship Fund as follows:

1. Designating Interest from Specific, Existing Accounts
2. Designating Program Receipts and Dividends
3. Designating Revenues from Specific, External Sources
4. Re-appropriated Assets from Liquidated Accounts
5. General Funds

Merit-based Component

Curriculum

It is the intent of the Scholarship (Attachment 17), through "increased academic rigor", to improve the academic performance of Alaska students in grades kindergarten through 12 and thereby improve preparedness for postsecondary education and successful performance at postsecondary educational institutions. As such, many Task Force discussions focused on the dual curricular offerings embedded in the codified Scholarship.

To some, the inclusion of a "liberal arts" option, allowing for the taking of three years of mathematics, four years of language arts, three years of science, four years of social studies, and two years of a foreign language or Alaska Native language, represented a diminishment of programmatic rigor, and it was argued that the State should return to the single curricular option described in House Bill 297. To others, the inclusion of the two curricular options better reflected the reality of individual scholastic propensity and represented no such diminishment.

Recognizing that other states, with longer established Taylor Plan-based scholarship programs, have wrestled with this issue, and that future adjustments regarding these broad curricular categories are always within the State's power, ***the Task Force recommends making no immediate amendment to the curricula of the Scholarship until its yearly reporting can provide the data to serve as a factual basis for alteration.***

The Task Force does, however, further recognize that broad statements regarding years of required schooling by discipline are relatively meaningless, and the State's goal of increasing academic proficiency is less likely to achieve success, without a clearer definition of precisely what courses are to be taken and what content is expected to be taught and learned. Succinctly, course rigor is dependent on content not course titles. Therefore, to ensure the quality and uniformity of statewide Scholarship curricular offerings, ***the Task Force recommends the Legislature direct, and statutorily allow, the Alaska State Department of Education & Early Development, in consultation with the Alaska State School Board and any other public or private parties deemed necessary or beneficial, to specify the required courses not specifically delineated in statute for each educational category*** (Ex. 4yrs Math = Algebra 1, Algebra 2, Geometry and Trigonometry, etc.) ***and define the content requirements and standards for those courses in regulation***. Although the State might experience resistance to such a move, the voluntary nature of the Scholarship vis-á-vis student curricular choices, coupled with the size of the State's required investment and the customary ability of scholarship sponsors to set whatever requirements it feels most likely to achieve its desired ends, are compelling justifications for such a move.

Distance Delivery

There is concern the State, due to a lack of physical infrastructure and/or virtual secondary-level educational content, may currently be unable to deliver, on a consistent basis, all facets of the rigorous curriculum required by the Scholarship to all students in all locations throughout Alaska. Therefore, recognizing that a robust, reliable distance delivery system is essential to ensuring all students will have a reasonable opportunity to compete for Scholarship awards, and to ensure equity in the Scholarship Program***, the Task Force recommends the Legislature, in partnership with the State Department of Education and Early Development, the University of Alaska, and any other public or private parties deemed necessary or beneficial, do an assessment of the State's existing distance delivery capacity and****, should it be necessary,* ***develop a plan*** (including cost estimates***) for upgrading the Department's capacity to provide virtual program or distance-delivered secondary courses.***

Needs-Based Component

The original scholarship proposal (SB 224/HB297), as submitted, provided only for merit-based financial assistance but was later amended to include a needs-based component that was supplemental to the merit-based Scholarship. By supplemental, it is meant that the needs-based component was integrated within the merit-based Scholarship, creating a single program whereby a student would have to be a Scholarship recipient to be eligible to receive needs-based assistance. The goal of integrating a needs-based component into the merit scholarship was to ensure that the lesser socio-economically advantaged students who qualified for the merit scholarship would have the ability to use their merit-based award.

However, the statute that created the Scholarship (SB 221) used the AlaskAdvantage education grant program – an existing, stand alone program which, as a function of historic funding levels, had only been able to provide grants to those students demonstrating the highest level of financial need based on the methodology used in the Free Application for Federal Student Aid: primarily non-traditional, older students - to address the possible necessity for added assistance by Scholarship awardees specifically and the acknowledged insufficiency of state-funded needs-based financial assistance in Alaska generally.

This was not a perfect fit as these programs were not designed to work in concert and generally target groups which are not aligned. The AlaskAdvantage grant program has much broader eligibility standards than the Scholarship. Seeking to make the Scholarship's qualifications the same as for AlaskAdvantage would greatly impair, or even eliminate, its efficacy related to its broad-based programmatic goals just as seeking to amend AlaskAdvantage education grant's qualifications to mirror those of the Scholarship would render it unavailable to many of the groups it currently serves. However, the Task Force recognizes the value of the programs, their complementary natures and the statewide benefit of maintaining them both.

Therefore, ***the Task Force recommends the creation of a second needs-based assistance program: a needs-based component, similar or identical to the one proposed in Education Committee versions of SB224/HB297, to be reintegrated into the Scholarship.*** Such a supplement will allow the Scholarship to more fully serve its high achieving, traditional student population. However, recognizing the indeterminate funding liability potential of the need-based supplement, ***the Task Force recommends the integrated needs-based component be capped***, either at a 2010 amount of $4,755 (as the merit-based portion of the Scholarship award has been capped at the 2010 UA tuition amount) or some other reasonable figure. ***The Task Force further recommends continued funding, at a level commensurate with its full functioning, of the AlaskAdvantage grant program***, allowing it to serve the non-traditional, General Education Development (GED), and older students as prioritized for grants under the program's current criteria. Finally, though they are to be programmatically separate***, the Task***

Force recommends the supplemented Scholarship and AlaskAdvantage grant programs be funded through the same mechanism, perhaps, though not necessarily, ***under a funding formula which will ensure adequate support for both***.

Other Policy Recommendations Regarding Scholarship Investments

It is recognized that remedial courses delivered at the postsecondary level may entail public and/or private expense but do not count for degree credit. Also, by delaying progress toward completion, the need for remediation substantially reduces the probability a student will ever complete a degree/certificate program. Therefore, a goal of the Legislature in establishing a merit scholarship program was to create a source of transformational pressure on Alaska's K-12 system - a renewed impetus for it to adequately prepare students for successful entry into college and career/tech - and, in so doing, ensure scholarship awardees will not need to expend time or personal capital on developmental education (remedial) courses.

Degree/certificate completion – not simply attendance – is the investment objective of the State. It should therefore look at factors that produce delay in progress or otherwise contribute significantly to non-completion. What other policies should be instituted in the scholarship program to stimulate postsecondary education changes to incentivize completion and make our money count? On-time completion will also become vital to Alaska institutions as a scholarship program becomes fully implemented because the anticipated growth in student enrollment may well overwhelm available capacity if students do not progress more rapidly. The following suggestions are programmatic recommendations to advance that goal:

The Task Force recommends that any institution which accepts Scholarship awards should integrate an advisor/advocate program to assist Scholarship awardees.

Evidence shows that advisor/advocate programs work at all education levels. Many designs are in use across the nation. Private institutions with traditionally high completion rates almost always incorporate a rigorous advising model. The University of Nevada even aids students through a Course Concierge program (Attachment 18). Some initiatives such as Complete College America presume advising programs as evidenced in discussion of retention rate metrics by the statement that colleges "can actively work to better engage those students during their first year...." The Task Force heard testimony that University of Alaska Fairbanks (UAF), with mandatory advising for all degree seekers, has a five-year completion rate which is 50% higher than University of Alaska Anchorage (UAA) with optional advising for degree candidates. As the State will be making a significant investment in the scholarship student, it is reasonable for the State to request that institutions receiving those funds advise that student on how to remain on track toward graduation.

The Task Force recommends that institutions accepting Scholarship awardees should assist them in maximizing the value of their awards by providing timely course offerings (or courses

of study) that allow for completion of certificate and/or degree programs within a two- or four-year course of study.

This would not guarantee that all students would progress perfectly but would mean that those who desire to move forward would be provided that opportunity. The diversity of methods for providing access to courses for on-time completion has never been more available to Alaska institutions. Programs such as the Western Interstate Commission for Higher Education's Internet Course Exchange (WICHE ICE) or other programs through participating institutions permit students to take courses not otherwise available to them. It will be important for all programs requiring more than 60 units for an AA certificate and more than 120 credits for a BA/BS degree to provide students the estimation of time for completion so they can reasonably assess the probability of their Scholarship funding their education through completion and make further arrangements as appropriate or necessary.

Joint Legislative
Higher Education Scholarship Funding
Task Force

Membership:

Chair: Senator Meyer
Vice-chair: Representative Seaton

Senate	House
Senator Johnny Ellis	Representative Peggy Wilson
Senator Lyman Hoffman	Representative Wes Keller
Senator Gary Stevens	Representative Anna Fairclough
Senator Joe Thomas	Representative Chris Tuck

Administration

Department of Education: Eddy Jeans, Education Policy Coordinator
University of Alaska: Saichi Oba, Associate Vice President
OMB: Karen Rehfeld, Director
ACPE: Diane Barrans, Director
AK State Board of Education: Esther Cox, Chair

Purpose:

Examine higher education costs and identify the best approach in providing financial aid to assist students in the state.

Duties:

- Evaluate how best to provide long-term and sustainable funding for state provided financial aid for postsecondary institutions in the state, including scholarship opportunities
- Evaluate proposals that are based on available facts and conclusions pertaining to financial aid opportunities at postsecondary institutions in the state.
- Recommend improvements or additions to the laws providing for financial aid at postsecondary institutions.
- Take public comments on financial aid opportunities in the state.

Attachment 2

TAYLOR PLAN – Louisiana (2014 Graduates)

*CURRICULUM**

Four (4) years of math
Four (4) years of Language Arts
Four (4) years of Science
Four (4) years of Social Studies
One (1) year Fine Arts
Two (2) years Foreign Language

*Specific required courses spelled out in publications

MINIMUM ACHIEVEMENT

- 2.5 or higher cumulative GPA
- Composite ACT of 20 or above

STANDARD AWARD

State-paid tuition at any public two- or four-year college, university or vocational/technical school or equivalent award at any in-state private institution.

ADDITIONAL AWARDS

- $400 for students with a GPA of 3.5 or better, and ACT of 23 or higher
- $800 for students with a GPA of 3.5 or better, and ACT of 27 or higher

Attachment 3

GOVERNOR'S PERFORMANCE SCHOLARSHIP

QUALIFICATIONS OF APPLICANTS

- Alaska Residents who have applied, or will apply, no more than six (6) months before or after date of graduation.
- Will use the scholarship at a qualified (Alaskan) post secondary institution no later than 6 years after the beginning of the first school year after graduation.

ELIGIBILITY

- Completed Core Curriculum
- Met minimum grade-point average threshold
- Met minimum career-skills assessment or college entrance examination threshold
- Be enrolled in a certificate or degree-seeking program

*CURRICULUM**

Four (4) years of math

Four (4) years of Language Arts

Four (4) years of Science

Three (3) years of Social Studies

*Specifics TBA

AWARD LEVELS ***

- 3.5 and up - 100% of qualified tuition
- 3.0-3.49 - 75% of qualified tuition
- 2.5-2.99 - 50% of qualified tuition

*Minimum test scores per tier, and how they would impact awards, TBA

**Career Scholarship award not to exceed $3,000 per school year

ESTIMATED PROGRAMMATIC COST

FY 2012 - $8,221,935

FY 2016 - $20,556,621

Attachment 4

SENATE EDUCATION COMMITTEE

QUALIFICATIONS OF APPLICANT

- Alaska Residents who have applied, or will apply, no more than six (6) months before or after date of graduation.
- Will use the scholarship at a qualified (Alaskan) post secondary institution no later than 6 years after the beginning of the first school year after graduation.

ELIGIBILITY

- Completed Core Curriculum
- Met minimum grade-point average threshold
- Met minimum career-skills assessment or college entrance examination threshold
- Be enrolled in a certificate or degree-seeking program

*CURRICULUM**

Four (4) years of math
Four (4) years of Language Arts
Four (4) years of Science
Four (4) years of Social Studies, one may include a non-English language, art, etc.

Three (3) years of math
Four (4) years of Language Arts
Three (3) years of Science
Four (4) years of Social Studies
Two (2) years of foreign or Alaska Native language

- The primary operating fund of the state is the General Fund
  - The general fund has numerous sub-funds created by law
- Other fund types outside the general fund include (but not limited to):
  - Permanent Funds
  - Fiduciary Funds
  - Component Units

11/16/2010 Legislative Finance 7

Accounting ≠ Budgeting

Both accounting and budgeting are fiscal systems

- Accounting focuses on recording financial transactions
- Budgeting is more the enactment of a fiscal plan
  - Budget processes are dependent upon the accounting of past and current year expenditures and revenue
- Accounting follows generally accepted accounting practices (GASB)
- Budgeting does not follow a stringent set of rules

11/16/2010 Legislative Finance 8

Attachment 9

How is revenue expended?

- Legislature has the **Power of Appropriation**
  - No expenditure of state funds w/o an appropriation
- Legislature appropriates funds based on levels of discretion

Levels of Discretion (Highest to Lowest)

Fund sources (revenues) grouped according to levels of discretion

- Unrestricted General Funds
- Designated General Funds
- Other State Funds
- Dedicated Funds

Attachment 9

Dedicated

- Very little discretion how appropriated
- Article IX, Section 7 of the Constitution prohibits the dedication of revenue to any special purpose
  - Exceptions:
    - Article IX, Section 15 – Permanent Fund
    - Dedication prior to Statehood
    - Federal

Other State Funds

- Little discretion how appropriated
- Although not dedicated, funding sources in the group typically are restricted in some fashion
  - Contractual obligation
    - Bonds
  - Held in trust
    - PERS, TRS, etc.
  - Court order
    - Mental Health Trust
  - Legal separation
    - Corporate receipts

Attachment 9

Designated General Funds

- Designated General funds consist of fund sources that have been "designated" for a special purpose in statute
- Constitutional prohibition "trumps" statutory designation
- Therefore, Legislature has complete discretion on use of funding
- However, Legislature typically follows statutory "guidelines"

11/16/2010 Legislative Finance 13

Unrestricted General Funds

- Complete discretion how appropriated
- Typically referenced as a measure of state spending
- Utilized when calculating the Fiscal Surplus or Fiscal Gap
  - General Fund Revenue less General Fund Appropriations = Fiscal Surplus or (Gap)
- Approximately 90% of GF revenue is derived from Oil

11/16/2010 Legislative Finance 14

Attachment 9

The Question?

- The levels of discretion play a large role in budgeting and financing programs
- What level is best?
- Example's:
  - PCE – statutory endowment
  - Revenue Sharing – rolling type plan
  - Pay as you go – most state programs

Questions?

Attachment 10

Endowment Structure

Example A: **$400 Million Constitutional Fund**

Equivalent: Permanent Fund

Operation:

- $400 deposited to capitalize constitutionally created fund
- Invested for long-term return
- Earnings ($20 M/yr at assumed 5% ROI) accrue to account
- Excess earnings inflation-proof fund
- Account pays scholarships

STRENGTHS	WEAKNESSES
• Highest potential for long-term programmatic sustainability • Principal is safe • Inflation proof • Earnings provide predictable pay-out funding stream • Earnings: Very safe from "raiding" if const. protected	• Necessity for large Initial investment • Necessity for constitutional amendment • Account is rare • Higher administrative cost? • Subject to market volatility • Questionable base for programmatic evolution
OPPORTUNITIES	**THREATS**
• High profile focal point for State investment • Highest likelihood of attracting outside donations	• Pandora's box and the Christmas tree effect • Earnings susceptible to "raiding" if not const. protected • Subject to market volatility

Attachment 11

Endowment Structure

Example B: **$400 Million Statutory Fund (General Fund Sub-account)**

Equivalent: Power Cost Equalization Fund

Operation:

- $400 deposited to capitalize fund
- Invested for long-term return
- Earnings ($20 M/yr at assumed 5% ROI) accrue to account
- Excess earnings inflation-proof fund
- Account pays scholarships

STRENGTHS	WEAKNESSES
• High potential for long-term programmatic sustainability • Tried mechanism • Principal offers strongest programmatic insurance policy of unprotected fund-types • Earnings provide predictable pay-out funding stream	• Necessity for large initial investment • Higher administrative cost? • Subject to market volatility • Questionable base for programmatic evolution
OPPORTUNITIES	**THREATS**
• High profile focal point for State investment • Strong base for programmatic evolution • Likelihood of attracting outside donations	• Principal susceptible to "raiding" • Earnings susceptible to "raiding"

Attachment 12

"Rolling Fund" Structure

Example A: **Progressive Capitalization**

Equivalent: Community Revenue Sharing

Operation:

- Progressive fund capitalized up to $160 million
- Interest bearing fund
- Principal and interest earnings pay for scholarships
- Yearly appropriations used to maintain value of fund corpus

STRENGTHS	WEAKNESSES
• Low capitalization hurdle • Tried mechanism • Lower administrative cost than endowment • Greater pay-out stream predictability than Default • Principal acts as fixed-term programmatic insurance policy	• Susceptible to budget volatility • Susceptible to budgetary process • Less than predictable pay-out funding stream • Lower likelihood of attracting outside donations than Endowment
OPPORTUNITIES	**THREATS**
• Responsive to programmatic evolution • Some likelihood of attracting outside donations	• Declining oil production/revenue • Declining federal spending • Increasing demand for services • Principal susceptible to "raiding" • Earnings susceptible to "raiding"

Attachment 13

"Rolling Fund" Structure

Example B: **Immediate Capitalization**

Equivalent: Community Revenue Sharing

Operation:

- Immediate fund capitalized up to $200 million
- Interest bearing fund
- Principal and interest earnings pay for scholarships
- Yearly appropriations* used to maintain value of fund corpus
  *Dividends, program receipts and other funds (AIDEA, AK Housing, ACPE) designated to Scholarship Fund

STRENGTHS	WEAKNESSES
• Moderate capitalization hurdle • Tried mechanism • Identified fund replenishment stream • Lower administrative cost than Endowment • Greater pay-out stream predictability than Default • Principal acts as fixed-term programmatic insurance policy	• Necessity for substantial Initial investment • Susceptible to budget volatility • Susceptible to budgetary process • Less than predictable pay-out funding stream • Lower likelihood of attracting outside donations than Endowment
OPPORTUNITIES	**THREATS**
• Responsive to programmatic evolution • Some likelihood of attracting outside donations	• Declining oil production/revenue • Declining federal spending • Increasing demand for services • Principal susceptible to "raiding" • Earnings susceptible to "raiding"

Attachment 14

Default Structure

Example: **Pay-As-You-Go**

Equivalent: Senate Bill 221

Operation: Yearly appropriation to support programmatic costs

STRENGTHS	WEAKNESSES
• Most routine funding mechanism • No need for account creation • Lowest administrative cost • Yearly funding most directly matches yearly programmatic cost • Leaves greatest level of budgetary flexibility	• Most susceptible to budget volatility • Most susceptible to budgetary process • Least predictable pay-out funding stream • Lowest likelihood of attracting outside donations
OPPORTUNITIES	**THREATS**
• Most responsive to programmatic evolution	• Declining oil production/revenue • Declining Federal spending • Increasing demand for services

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to Alaska scholarship awards; and establishing the Alaska scholarship award income account and the Alaska scholarship fund."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.43.825(f) is repealed and reenacted to read:

(f) Payment of a scholarship is subject to appropriation and the availability of funds for expenditure under AS 37.14.750. If insufficient funds are appropriated or available in a fiscal year to pay all eligible scholarships, the commission may not award a scholarship to a new applicant and the commission shall pay existing awards on a pro rata basis for that fiscal year.

*** Sec. 2.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.835. Alaska scholarship award income account. The Alaska scholarship award income account is created as an account in the general fund. Money may be appropriated into the account from the Alaska scholarship fund under AS 37.14.750 and from other sources. The commission may use the money in the

L *New Text Underlined [DELETED TEXT BRACKETED]*

account to pay scholarships awarded to students under AS 14.43.810 - 14.43.849. The amount determined under AS 37.14.750(c) each year and deposited into the account is the maximum amount that may be used to pay scholarships for the immediately succeeding fiscal year.

*** Sec. 3.** AS 37.14 is amended by adding a new section to read:

Article 8A. Alaska Scholarship Fund.

Sec. 37.14.750. Alaska scholarship fund established. (a) The Alaska scholarship fund is established in the general fund for the purpose of making scholarship payments to qualified postsecondary institutions and students under AS 14.43.810 - 14.43.849. The fund consists of money appropriated to the fund. Income earned on money in the fund and donations to the fund may be appropriated to the Alaska scholarship income account established in AS 14.43.835. Money in the fund does not lapse.

(b) Each fiscal year, the legislature may appropriate to the Alaska scholarship fund an amount equal to 20 percent of the money received by the state during the previous calendar year under AS 43.55.011(g). The amount may not exceed the greater of

(1) $40,000,000; or

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $160,000,000.

(c) The balance in the Alaska scholarship fund shall be determined on June 30 of each year. The department shall distribute one-third of that amount or $40,000,000, whichever is less, for deposit into the account established in AS 14.43.835. If the fund balance is less than $80,000,000 in a fiscal year, payments may be made only to satisfy obligations from previous fiscal years.

(d) Notwithstanding the limitation in (b) of this section, the legislature may appropriate any amount to the Alaska scholarship fund. Nothing in this section creates a dedicated fund.

(e) In this section, unless the context requires otherwise, "fund" means the Alaska scholarship fund established in (a) of this section.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to

Attachment 15

read:

TRANSITION: ALASKA SCHOLARSHIP FUND BALANCE. Notwithstanding the $40,000,000 limit in AS 37.14.750(b), the following amounts shall be substituted for that amount as follows for

(1) fiscal year 2012, $15,000,000;

(2) fiscal year 2013, $30,000,000.

HOUSE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to AlaskAdvantage education grant funding and to Alaska scholarship funding; and establishing an account and fund for those purposes."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.43.410 is amended by adding a new subsection to read:

(c) Notwithstanding the provisions of this section, payment of a grant is subject to appropriation and the availability of funds for expenditure under AS 37.14.750. If insufficient funds are appropriated or available in a fiscal year to pay all eligible grants, the commission may not award a grant to a new applicant, and the commission shall pay existing awards on a pro rata basis for that fiscal year.

*** Sec. 2.** AS 14.43.825(f) is repealed and reenacted to read:

(f) Payment of a scholarship is subject to appropriation and the availability of funds for expenditure under AS 37.14.750. If insufficient funds are appropriated or available in a fiscal year to pay all eligible scholarships, the commission may not award a scholarship to a new applicant, and the commission shall pay existing awards

Attachment 16

on a pro rata basis for that fiscal year.

*** Sec. 3.** AS 14.43 is amended by adding a new section to read:

Sec. 14.43.915. AlaskAdvantage education grant and Alaska scholarship award income account. The AlaskAdvantage education grant and Alaska scholarship award income account is created as an account in the general fund. Money may be appropriated into the account from the AlaskAdvantage education grant and Alaska scholarship fund under AS 37.14.750 and from other sources. The commission may use the money in the account to pay grants awarded under AS 14.43.400 - 14.43.420 and scholarships awarded to students under AS 14.43.810 - 14.43.849. The amount determined under AS 37.14.750(c) each year and deposited into the account is the maximum amount that may be used to pay scholarships for the immediately succeeding fiscal year.

*** Sec. 4.** AS 37.14 is amended by adding a new section to read:

Article 8A. AlaskAdvantage Education Grant and Alaska Scholarship Fund.

Sec. 37.14.750. AlaskAdvantage education grant and Alaska scholarship fund established. (a) The AlaskAdvantage education grant and Alaska scholarship fund is established in the general fund for the purpose of making grant payments under AS 14.43.400 - 14.43.420 and scholarship payments to qualified postsecondary institutions and students under AS 14.43.810 - 14.43.849. The fund consists of money appropriated to the fund. Income earned on money in the fund and donations to the fund may be appropriated to the AlaskAdvantage education grant and Alaska scholarship award income account established in AS 14.43.915. Money in the fund does not lapse.

(b) Each fiscal year, the legislature may appropriate to the AlaskAdvantage education grant and Alaska scholarship fund an amount equal to 20 percent of the money received by the state during the previous calendar year under AS 43.55.011(g). The amount may not exceed the greater of

(1) $40,000,000; or

(2) the amount that, when added to the fund balance on June 30 of the previous fiscal year, equals $160,000,000.

(c) The balance in the AlaskAdvantage education grant and Alaska

Attachment 16

scholarship fund shall be determined on June 30 of each year. The department shall distribute one-third of that amount or $40,000,000, whichever is less, for deposit into the account established in AS 14.43.915. If the fund balance is less than $80,000,000 in a fiscal year, payments may be made only to satisfy obligations from previous fiscal years.

(d) Notwithstanding the limitation in (b) of this section, the legislature may appropriate any amount to the AlaskAdvantage education grant and Alaska scholarship fund. Nothing in this section creates a dedicated fund.

(e) In this section, unless the context requires otherwise, "fund" means the AlaskAdvantage education grant and Alaska scholarship fund established in (a) of this section.

* **Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

TRANSITION: ALASKADVANTAGE EDUCATION GRANT AND ALASKA SCHOLARSHIP FUND BALANCE. Notwithstanding the $40,000,000 limit in AS 37.14.750(b), the following amounts shall be substituted for that amount as follows for

(1) fiscal year 2012, $15,000,000;

(2) fiscal year 2013, $30,000,000.

Letter of Intent for Senate Bill 224

An Act establishing the Alaska Student Achievement Program....

It is the intent of the legislature to establish a scholarship program with the following goals:

(1) improving preparedness of Alaska students for postsecondary education;

(2) improving the postsecondary academic achievement;

(3) improving the postsecondary graduation rates of students in the state;

(4) providing a rigorous curriculum in all high schools in the state;

(5) improving the quality of the educational programs offered by high schools in the state;

(6) improving academic performance of students in grades kindergarten through 12 in the state;

(7) increasing high school graduation rates in the state;

(8) increasing the scores of high school students in the state on college entrance examinations;

(9) expanding the pool of high school students in the state who pursue postsecondary opportunities;

(10) increasing participation of Alaska high school graduates in Alaska postsecondary institutions; and

(11) increasing job training opportunities in the state

Need That Class, Desperately? The Course Concierge Will See You Now

Jean Dixon, University of Nevada

Paul Neill, whom students think of as the "course concierge" at the U. of Nevada at Reno, can cut red tape that might be beyond advisers' reach.

By Eric Hoover

Paul Neill's title is director of the core curriculum at the University of Nevada at Reno, but students there know him as the "course concierge." He's the one they contact when they can't get into a class they need.

A few years ago, officials at the university decided that they had to do more to reduce the hassles of registering for courses. They imagined a kind of registration czar, someone who could communicate well with faculty members but who had the authority of an administrator. Mr. Neill, a faculty member who works in the provost's office, fit the bill.

Soon Nevada was promoting Mr. Neill as the course concierge, the man advisers and students could turn to when stuck. Each semester, he helps 50 to 60 students solve their scheduling problems, working one on one with those who need a particular course to graduate, or who have trouble getting into classes they must take in a sequence. Often he creates a spot in a class that's full, or steers students to suitable alternatives.

"In the past, it was often left up to the student and the professor to see who could get in where," Mr. Neill says. "It was very informal."

Attachment 18

Even in times of plenty, students often learn a tough lesson when they register for courses: You can't always get what you want. In this era of budget cuts, however, students on some campuses have scrambled to get not only the courses they would like but also those they need for their majors and to satisfy core requirements.

As colleges pack more students into fewer courses, the scheduling puzzle has become more challenging for administrators, instructors, and students alike. Institutions are using a variety of strategies to alleviate the course crunch, and often that begins with improving the registration process.

Nevada's president, Milton D. Glick, proposed the course-concierge program as a way to improve timely progression toward degrees at the university, which has about 13,000 undergraduates. Over the years he has learned that even small scheduling snags can discourage students, delay their progress, and make them more likely to transfer or drop out.

After he arrived, in 2006, Mr. Glick developed a plan to improve Nevada's retention and graduation rates. He pledged publicly that students would get the courses they needed to graduate on time. To that end, his course-concierge program provides a backstop for the university's academic advisers.

Mr. Neill is not a replacement for advisers, who continue to meet with students and help them select courses. But they sometimes encounter dilemmas that they can't handle on their own. "They don't always have the ability to cut through red tape, to get through to the department, to get something done," Mr. Glick says. "Paul can get a phone call through."

'A Relief Valve'

When Natica Rudavsky contacted Mr. Neill this winter, she was frantic. Ms. Rudavsky, a transfer student who has a bachelor's degree from another university, wanted to pursue a second degree, in nutrition, at Nevada, but she was confused about which core requirements would apply to her. Would the university waive that required mathematics course?

By the time she and her adviser had sorted that out, it was late in the registration cycle, and all the courses she needed were full. Mr. Neill evaluated her record, then discussed her options with her. Ultimately, he found Ms. Rudavsky a spot in three of the four courses she sought. "If he hadn't helped, " Ms. Rudavsky says, "I probably would have just waited until the next semester to enroll."

The course concierge doesn't cater to whims. A student who just wants to avoid that 8 a.m. class would not get help from Mr. Neill. The same might go for a senior who had never bothered to register for a required course that he had every opportunity to take.

The service does cater to those who truly have a need, or are simply stuck or confused. "We've taken some of the burden off the shoulders of advisers," he says. "It's a relief valve."

The course concierge has also helped the university plan more effectively during a difficult time. For the current fiscal year, the state cut the university's budget by $33-million, or 15 percent. Last semester, Nevada offered 96 fewer course sections than it did in the fall of 2008, a 6-percent reduction.

Recently, Mr. Neill's work with students helped him identify scheduling conflicts that made it difficult for them to register for the right courses. For instance, freshmen and sophomores taking biology or chemistry courses are supposed to enroll simultaneously in Math 127. Yet Mr. Neill realized that that math lecture overlapped with several of the laboratory sections.

He discussed the issue with the three departments, which adjusted their schedules accordingly. "The departments probably would have become aware of this," he says, "but the concierge service helped them understand it quickly."

Better Communication

Elsewhere, administrators have looked for ways to make small but meaningful changes in the registration process. This fall the University of California at Santa Barbara, which has seen substantial budget cuts and an enrollment surge, created an online waiting list for courses. The system formalized the process of determining who gets a spot, allowing advisers to better evaluate students' needs and communicate with them more effectively.

"It was a huge help," says Mary Nisbet, acting dean of undergraduate education. "Now faculty aren't getting hundreds of e-mails, and students know there is somewhere to go where advisers will get back to them."

This past fall, the university reduced the number of credits students could sign up for during the second round of registration. As a result, juniors and seniors, who have priority, can snag a total of four classes, instead of five, at that time.

Attachment 18

In the past, many students eventually dropped their fifth course anyway. The new policy has encouraged older students to focus on getting the courses they really need, and the change recently freed up at least 1,500 class spots for other students, Ms. Nisbet says.

For the first time, the university is offering schedule-planning workshops, in which students learn how to prioritize. "We're trying to help students weather a storm," she says.

Many institutions have turned to sophisticated data analysis to better anticipate course demand. At the University of California at Berkeley, Catherine P. Koshland helps lead a task force that will determine which courses students will need—and how many—in the coming years.

To do that, Ms. Koshland and her colleagues have begun to examine a decade's worth of enrollment data, which help them predict how many freshmen will need to take a specific math sequence, for instance, or how many sections of pre-med physics courses the university will need.

"We can bring some rationality to the offerings, rather than having departments guesstimate," says Ms. Koshland, vice provost for teaching, learning, academic planning, and facilities. "We're bringing more and more discipline to something that could grow organically before, when there was elasticity in the system. There's no elasticity now."

(Head Count explores the changing enrollment landscape. Please send ideas to eric.hoover@chronicle.com)

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Sponsor Statement Senate Bill 56

"An Act making a special appropriation for a life sciences innovation and learning facility at the University of Alaska Fairbanks; and providing for an effective date."

SB 56 is an appropriation bill for the proposed Life Sciences Innovation and Learning Facility at the University of Alaska Fairbanks. This project is the University of Alaska's only request for new facility funding in this year's capital budget.

In a world where technological changes are increasing at an exponential rate, it is imperative to have an educational infrastructure which keeps Alaska competitive worldwide. The University of Alaska Fairbanks has a unique opportunity to solidify its place as world leader in life sciences through the addition of the UAF Life Sciences Innovation and Learning Facility.

This building is an investment in the University of Alaska, in the economy of Alaska, and in the future of Alaska.

Conditions in current life sciences laboratories and classrooms are cramped and limited. The proposed 110,000 square foot building will provide new research and teaching facilities that will house existing and new projects, serving the needs of future generations of teachers, researchers and students.

The economic impact of this facility will extend far beyond the campus of UAF. Research is a growth industry in Alaska. Every state general fund dollar invested in research at UAF generates $5.80 in outside funding resources. Each research dollar brought in from federal sources generates $1.70 in direct and indirect economic activity in communities across Alaska.

The direct expenditure on the building construction will generate another $48 million in the local economy in indirect and induced spending. Those benefits will extend to Southcentral Alaska through port and transportation activities and other construction-related jobs.

This project will benefit all of Alaska in other ways. The research done at the Life Sciences facility will improve the quality of life for Alaskans. The Center for Alaska Native Health Research is studying diabetes and obesity rates that are skyrocketing in rural Alaska. There will be an internationally renowned group of researchers studying infectious diseases - many of which could severely impact Alaska's people and

environment - and toxicants which may be transmitted through commercial, sport and subsistence harvest in Alaska. The Alaska Basic Neuroscience Program is currently conducting groundbreaking research in Sudden Infant Death Syndrome, a critical research area for Alaskans, whose children suffer SIDS at a rate 2.5 times the national average. Other revolutionary health research that would be housed at the Life Sciences building involves the study of hibernation, where understanding the science behind Alaska's hibernating animals could be utilized to treat and heal those who suffer paralysis or other nerve damage.

The Life Sciences Innovation and Learning Facility will be a positive asset for education, economic activity, and the general well-being of Alaskans.

SPONSOR SUBSTITUTE FOR SENATE BILL NO. 56

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SIXTH LEGISLATURE - FIRST SESSION

BY SENATOR THOMAS

Introduced: 2/9/09
Referred: Education, Finance

Funding Information:	**General Fund**	**$ 82,200,000**
	Other Funds	**-0-**
	Total	**$ 82,200,000**

A BILL

FOR AN ACT ENTITLED

"An Act making a special appropriation for a life sciences innovation and learning facility at the University of Alaska Fairbanks; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The sum of $82,200,000 is appropriated from the general fund to the University of Alaska for the design and construction of, and utilities and equipment for, a life sciences innovation and learning facility at the University of Alaska Fairbanks.

*** Sec. 2.** The appropriation made by this Act is for a capital project and lapses under AS 37.25.020.

*** Sec. 3.** This Act takes effect July 1, 2009.

MOTION SUPPORTING UAF LIFE SCIENCES CLASSROOM AND LAB FACILITY

"Whereas the Faculty Alliance has in the past supported capital projects that promote the university's mission of teaching and research, and

Whereas, the greatest need for facilities to carry out the university's missions in the FY11 budget is the UAF Life Sciences Classroom and Laboratory Facility, and

Whereas enrollments across the University of Alaska are likely to grow as more students from Alaska's high schools remain in state for college through new scholarship programs, the need for classroom space will become critical,

Therefore, be it resolved that the Faculty Alliance supports the UAF Life Sciences Classroom and Lab facility as the highest priority in the FY11 capital budget.

This action is effective November 27, 2009."

Motion passed unanimously

FAIRBANKS BUILDING & CONSTRUCTION TRADES COUNCIL

RESOLUTION No 2009 – 03

A RESOLUTION REQUESTING THE UNIVERSITY BOARD OF REGENTS TO MAKE THE UNIVERSITY OF ALASKA LIFE SCIENCES FACILITY THE ONLY CAPITAL PROJECT FOR THE FISCAL 2011 STATE BUDGET REQUEST

WHEREAS, the Fairbanks Building and Construction Trades Council is made up of 15 craft unions who represent nearly 5000 tradesman and tradeswomen; and

WHEREAS, the Fairbanks Building and Construction Trades Council has been a chartered member of the American Federation of Labor and Congress of Industrial Organizations since 1961; and

WHEREAS, the Fairbanks Building and Construction Trades recognize the value in education, and that value is enhanced by learning and researching in updated facilities and using the most current technologies; and

WHEREAS, UAF's biology facilities date back to the 1960s, and renovations have not been adequate to accommodate the 25% enrollment increase in biology and wildlife students over the past decade; and

WHEREAS, the project scope includes 37,200 square feet of academic space and 50,000 square feet of research space enabling UAF to address a shortage of instructional classrooms and research lab space, which in turn will also provide space to attract and retain talented research scientist; and

WHEREAS, the estimated cost of construction of $102.8 million will create a substantial benefit to construction industry businesses and craftsman in the way of 300 plus jobs over a four year period.

NOW, THEREFORE, BE IT RESOLVED:

The Fairbanks Building and Construction Trades Council respectfully urges the University Board of Regents to make the University of Alaska Life Sciences Facility the only capital project in the 2011 State budget request.

PASSED AND APPROVED THIS 28th DAY OF October, 2009

RESOLUTION

WHEREAS,

The demand for qualified health care professionals continues to increase and the University of Alaska Fairbanks (UAF) has assisted Fairbanks Memorial Hospital & Denali Center (FMHDC) in educating Alaskans for many positions at FMHDC. UAF has identified the Life Sciences Building project are critical to the growth and development of these programs. State-of-the-art facilities are necessary to attract and keep the best researchers and students.

UAF is the most important single resource for the expansion of educational programs of vital interest to the Fairbanks community and Fairbanks Memorial Hospital. FMHDC relies heavily on the continued excellence of UAF to train and equip many of our health care professionals. Indeed, there has been a long-standing and mutually productive relationship between UAF and FMHDC for 35 years.

THEREFORE, BE IT RESOLVED

Fairbanks Memorial Hospital and Denali Center strongly supports the construction of a new Life Sciences Building on the UAF campus. A new Life Sciences Building is good for UAF; is good for Fairbanks and is good for the State of Alaska. Fairbanks Memorial Hospital & Denali Center fully supports the UA Board of Regents request for full funding of the Life Sciences Building.

Copies of this resolution shall be sent to the Honorable Governor Sean Parnell, Alaska Interior Delegations, and the UA Board of Regents.

1-21-2010

We the 13 trade unions comprising the Juneau and Vicinity Building and Construction Trades Council would like to heartily express our support of full funding for the proposed University of Alaska Life Sciences Innovation and Learning Facility on the Fairbanks campus. It may seem somewhat strange that we would be supporting a project in Fairbanks, but in reality we too are concerned about the entire Alaska economy and want all regions to flourish, not just our own.

We recognize the importance and value of education, and that learning and researching in updated facilities using the most current technologies would be a definite enhancement to our collegians and our University system. The current facilities are nearly forty years old, and the renovations that have been done there over the years don't adequately address what we understand to be a 25% increase in enrollment in biology and wildlife studies over the past decade.

This project would encompass about 37,000 square feet of academic space and 50,000 square feet of research space allowing the University of Alaska Fairbanks to address the current shortage of classrooms and research lab space. This would also go a good distance towards attracting and retaining talented and well-paid research scientists to the community.

This facility would be an economic boon to Fairbanks as well, in that the estimated $102.8 million project would provide a substantial benefit to the construction industry businesses and the nearly three hundred workers constructing it over the estimated four year period.

FAIRBANKS NORTH STAR BOROUGH

RESOLUTION NO. 2009-29

A RESOLUTION SUPPORTING FUNDING FOR THE UNIVERSITY OF ALASKA LIFE SCIENCES INNOVATION AND TEACHING FACILITY

WHEREAS, the Fairbanks North Star Borough Assembly recognizes the importance of the future economic impact the Life Sciences Innovation and Learning Facility at the University of Alaska Fairbanks (UAF), both in research dollars and educational opportunities; and

WHEREAS, the Assembly has supported this project in past years through passage of Resolution No. 2007-08 and 2008-44; and

WHEREAS, the facility will provide the necessary infrastructure for teaching and research in the biological sciences disciplines to attract and retain students, as well as an opportunity to increase research revenues; and

WHEREAS, it will provide much needed space for educational training needs in biomedicine, ecosystem and global change science, biology, population genetics, Alaska Native health, toxicology, environmental physiology, virology and neurosciences; and

WHEREAS, this facility will provide jobs for Alaskans. In the short term, construction of the building will inject approximately $174 million into the economy in direct and indirect economic output and $81 million in labor income, and provide employment to an average of 385 workers over a four-year construction period; and

WHEREAS, in the long term, the facility will provide long-term employment for many Alaskans. In FY07, 2,392 jobs were supported by university research spending; . Each $1 million in state general fund appropriations for university research resulted in 121 jobs and $4.7 million in payroll within the state; and

WHEREAS, life science research is a high-value growth industry in Alaska, attracting increased research revenue and creating jobs. The capacity for increasing research dollars can only be increased with adequate facilities to support the research; and

WHEREAS, the research done in this facility will address public health issues in Alaska, such as heart attacks, stroke, Parkinson's disease, and sudden infant death syndrome to name a few.

NOW, THEREFORE, BE IT RESOLVED, that the Assembly of the Fairbanks North Star Borough urges the University of Alaska Board of Regents to pursue legislative funding of this important and vital infrastructure for the benefit of the state and its residents.

BE IT FURTHER RESOLVED, that a copy of this resolution shall be sent to the University of Alaska Board of Regents and the the Alaska Interior Delegation.

PASSED AND APPROVED THIS 10th DAY OF SEPTEMBER 2009.

FAIRBANKS NORTH STAR BOROUGH BOARD OF EDUCATION

DRAFT RESOLUTION 2010-06:

SUPPORT FOR THE UA LIFE SCIENCES CLASSROOM AND LAB FACILITY

WHEREAS, building a strong research program increases the intellectual capital available in the state to help train residents to solve Alaskan issues, and impacts the quality of life in the state and beyond, and

WHEREAS, this facility will provide the necessary infrastructure to prepare our students for careers in biomedicine, ecosystem and global change science, biology, population genetics, Alaska Native health, toxicology, environmental physiology, virology, and neurosciences, and

WHEREAS, the University of Alaska is committed to meeting the workforce needs of Alaska public schools, and focusing on efforts to maximize resources and increase collaborations, and has an array of programs and activities designed to support teacher recruitment and retention of K-12 educators, and

WHEREAS, the University has made K-12 outreach and bridging programs a priority to complement high school to college bridging opportunities, offering over 120 programs dedicated to college preparation, professional development and teacher recruitment and retention, and

WHEREAS, the Life Sciences Classroom and Lab Facility will complement high school science education and provide modern, consolidated classrooms and integrated laboratories essential for teaching and research in the biological sciences disciplines at a post-secondary level, and

WHEREAS, Alaska students depend on the quality of education they receive from elementary through post-secondary opportunities.

NOW THEREFORE, BE IT RESOLVED, the Fairbanks North Star Borough Board of Education recognizes the importance of future long-term educational impacts of this facility, and strongly urges the Governor and the Alaska State Legislature to support funding the UA Life Sciences Classroom and Lab Facility in FY11 to provide the necessary infrastructure to benefit Alaska and its citizens.

Sharon Tuttle
Secretary to the Board

Fairbanks North Star Borough School District

SUPPORTING THE UNIVERSITY OF ALASKA LIFE SCIENCES PROJECT

The Greater Fairbanks Chamber of Commerce endorses the University of Alaska Board of Regents FY11 capital funding request for the Life Sciences Classroom and Lab project as it benefits all communities in the state of Alaska in the following ways:

• **LIFE-SCIENCE RESEARCH BENEFITS ALASKANS:** Life sciences research is aimed at benefiting Alaska's people and communities. Potential discoveries related to diabetes, food safety and nutrition, SIDS, avian flu, and therapies that may help victims of stroke, heart attack and traumatic brain injury, are just a few examples of the hundreds of research projects currently underway with potential statewide benefits. This facility will provide the necessary infrastructure for integrated research and teaching focusing on biomedicine, ecosystem and global change science, evolutionary biology, population genetics, Alaska Native health, toxicology, environmental physiology, virology and neurosciences.

• **RESEARCH IS A HIGH-VALUE GROWTH INDUSTRY FOR ALASKA**: Life sciences research is a high-value growth industry, and the facility is essential to capitalize on this growth. Externally funded life sciences research expenditures at UAF is $20 million per year, with potential for much more if adequate research space is available, allowing for continued growth (+30 percent in 5 years) in externally-funded research.

• **LIFE SCIENCE RESEARCH INCREASES THE VALUE OF EDUCATION:** Additional research increases the value of student education. The new facility will allow positive interaction among life sciences faculty and students, with hands-on research adding value to the student experience, and in turn, engaging more Alaska students in science and health care related careers.

• **MORE ALASKAN GRADUATES SERVING ALASKA:** A new facility will help attract and retain more Alaskan students and it will have a positive impact on creating **Alaskan graduates for Alaskan jobs**. UAF life sciences graduates tend to stay in Alaska and already fill many important professional positions throughout the state in business, government and health care.

• **THIS IS AN EXCELLENT RETURN ON INVESTMENT OF ALASKA'S PUBLIC DOLLARS:** Every $1 in state general fund money invested in research at the University of Alaska yields $5.80 in research funding attracted from out-of-state sources. In essence, life sciences research functions as a basic industry – mining, tourism, seafood and oil – all attracting revenue and good jobs into Alaska, stimulating economic growth. Just the construction of the facility will inject over $174 million into the Alaska economy, and provide over 370 jobs per year over the course of the four-year construction schedule.

• **GREAT POTENTIAL FOR ADDITIONAL ALASKA ECONOMIC GROWTH:** Continuing economic growth from research will benefit the Alaska. Economic benefits of research include increasing employment, payroll, and expenditure impacts; construction activity impacts; and substantial indirect cost recovery revenue from research programs. Total Life Sciences capacity-building federal grant funding over a period of the past 10 years totals over $95 million, with $17.7 million pending and the potential for increased funding once the facility is completed. For every dollar spent on university research in Alaska, an additional $.70 is generated in economic activity - multiplied by the number of researchers studying Alaskan life-science issues, this can amount to tens of millions of dollars annually.

Action Required for the Position: The Greater Fairbanks Chamber of Commerce recognizes the importance of research, as well as the economic impact and educational opportunities this Life Sciences Project will bring to all Alaskans, and urges the Alaska State Legislature and the Governor to fully support funding of this vital facility.

Position Sponsor Information:
The Greater Fairbanks Chamber of Commerce is the sponsor of this position.

Alaska State Chamber of Commerce
2010 Position

The University of Alaska Life Sciences Project

The Alaska State Chamber of Commerce endorses the University of Alaska Board of Regents FY11 capital-funding request for the Life Sciences Classroom and Lab Facility. This will be the only new construction project on the Board of Regents request.

The Alaska State Chamber of Commerce recognizes the importance of research, as well as the economic impact and educational opportunities this Life Sciences Project will bring to all Alaskans, and urges the Alaska State Legislature and the Governor to fully support funding of this vital facility.

Executive Summary

The purpose of this study is to demonstrate the economic, social, and cultural benefits to Alaskans of the life sciences programs at the University of Alaska Fairbanks. The Life Sciences Innovation and Learning Facility is the number one new capital project priority for the University of Alaska system. This study highlights the important contributions of UAF life sciences research and the critical need for the new facility.

Critical Need for a New Life Sciences Facility

The Life Sciences Innovation and Learning Facility is designed to meet the critical need for updated classrooms and provide research space allowing for UAF's continued growth in its successful life sciences research programs. It will be difficult for UAF to expand life sciences research grant revenues without new facilities. Currently, there is insufficient space in modern facilities to attract and retain top researchers.

The new facility will feature 37,000 square feet of academic space, including approximately 40 classrooms with computer and lab capabilities, and a lecture hall capable of seating 80 students. The research space, at 50,000 square feet, will provide 18 research labs and 10 support labs.

The UAF Life Sciences Innovation and Learning Facility is a scaled-down version of the Biological Sciences Facility (BIOS). Total cost for the new 87,000-square-foot research and teaching facility is $102.82 million. UAF has committed to non-General Fund support for 20 percent of the new facility. The FY10 University of Alaska capital budget requests state General Funds of $82.2 million and provides non-General Fund support from UAF totaling $20.6 million for the new Life Sciences facility.

Benefits to Alaska of a New Life Sciences Innovation and Learning Facility

- **STIMULATES A HIGH-VALUE GROWTH INDUSTRY FOR ALASKA: Life sciences research is a high-value growth industry, and the facility is essential to capitalize on this growth. Externally funded life sciences research expenditures at UAF is $20 million with potential for much more if adequate research space is available.** The new facility is essential for UAF to attract and retain top researchers, and allows for continued growth (+30 percent in 5 years) in externally funded research.

- **EXCELLENT RETURN ON INVESTMENT OF ALASKA'S PUBLIC DOLLARS: Every $1 in General Fund money invested in research at the University of Alaska yields $6 in research funding attracted from out-of-state sources.** In essence, life sciences research functions as a basic industry – just as do mining, tourism, seafood and oil – attracting revenue and good jobs into Alaska, stimulating economic growth. The new facility will stimulate research revenue growth and increase Alaska's funding leverage even further.

- **INCREASES THE VALUE OF ALASKA EDUCATION: Additional research increases the value of student education**. The new facility will allow positive interaction among life sciences faculty and students, with research adding value to the student experience, and in turn, engaging more Alaska students in science and health care related careers.

- **ADDITIONAL RESEARCH PROGRAM GROWTH: Critical mass is essential for attracting the best researchers and tens of millions of dollars in additional research funding**. The University of Alaska competes with other universities for research funding and the best researchers. A competitive facility will help attract top researchers who will intern attract additional researchers.

- **ADDITIONAL ALASKA ECONOMIC GROWTH: Continuing economic growth from research will benefit the overall University of Alaska system and Alaska as a whole.** Economic benefits of research include increasing employment, payroll, and expenditure impacts; construction activity impacts; and substantial indirect cost recovery revenue from research programs ($26 million in FY 2007) that accrues to the overall University of Alaska system.

- **MORE ALASKAN GRADUATES SERVING ALASKA: The facility will have a positive impact on creating Alaskan graduates for Alaskan jobs.** UAF life sciences graduates tend to stay in Alaska and already fill many important professional positions throughout the state in business, government and health care. A new facility will help attract and retain more Alaskan students.

- **RESEARCH BENEFITS ARE FOR ALASKANS: Increased contributions of life sciences research benefit the lives of all Alaskans.** Life sciences research is aimed at benefiting Alaska's people and communities. Potential discoveries related to diabetes, food safety and nutrition, SIDS, avian flu, and therapies that may help victims of stroke, heart attack and traumatic brain injury, are just a few examples of the hundreds of research projects currently underway at UAF with potential statewide benefits.

Below are highlights and key points from this study. The body of the document provides greater detail on the impacts and benefits of the life sciences program at UAF.

Importance of Research at UAF

- The majority of UA research (more than 90 percent as measured by research expenditures) takes place at UAF. UAF research expenditures of funding from external sources was approximately $113 million in FY07, up 30 percent from FY02.

- UAF received 424 grants and managed more than 1,446 grants in FY07.

- Indirect cost recovery (ICR) is an important revenue source for UA. Of the $30.9 million in ICR revenue in FY07, $26 million (85 percent) was generated by research at UAF. If UAF research grants stagnate or decline, so will ICR, which would negatively impact UAF and the entire UA system.

- The federal government, through agencies such as the National Institutes of Health, National Science Foundation and Department of Defense, funded the majority (88 percent) of research at UAF in FY07.

UAF Research Funding

- UAF was successful in acquiring federally funded life sciences research capacity-building grants worth $95 million for 2000 to 2014 with an additional $17.7 million pending.

- As a result of the research capacity created at UAF, they have been able to acquire competitive life sciences grants worth an additional $29 million.
- For every $1 of State-funded research UAF received, UAF was able to leverage an additional $5.80 from external funding sources.
- Even though UAF has been historically successful in leveraging state funding, strong General Fund support is still needed to provide the infrastructure (including facilities and human resources) that will allow UAF to be competitive for future grants. General Fund support is used by the university for recruitment, salaries, offices, laboratories, and equipment to build capacity.

Research at UAF

One area of research where UAF has become particularly strong is life sciences. Almost all UAF life sciences research and teaching takes place in two units, the Institute of Arctic Biology (IAB) and Idea Network of Biomedical Research Excellence (INBRE). There are many research programs within these two units that are important and beneficial to Alaskans.

The largest component of UAF life sciences research and academics is contained within the IAB. IAB currently supports roughly 150 ongoing research projects, and IAB faculty (through the Department of Wildlife and Biology in the College of Natural Sciences and Math) are responsible for all academic delivery for classes in life sciences.

INBRE studies organisms that cause diseases in Alaska and toxic substances in our environment. INBRE also has a mission of outreach and support for students (high school and college) who show interest in life sciences research. Combined, IAB and INBRE have approximately 150 faculty, staff and graduate student assistants at UAF. IAB and INBRE had combined research expenditures of nearly $22 million[1]. The majority of expenditures were for wages and benefits, commodities, services and equipment at UAF.

Life sciences research at UAF is ultimately about people, especially Alaskans. Some of the major life sciences programs and projects beneficial to Alaskans under IAB and INBRE are described below.

Monitoring Toxicants and Disease in Alaska

UAF researcher Todd O'Hara is studying contaminants and infectious disease in the Arctic. Infectious agents and toxicants can be easily transmitted through commercial, sport and subsistence harvest in Alaska. INBRE toxicology projects study animals that are at the top of the food chain such as Arctic fox, polar bear and Stellar sea lions, and numerous subsistence foods.

What effect do toxicants have on animals and people? If diets change because of changing environmental conditions, will these animals be exposed to new or higher levels of toxicants and/or infectious agents? If so, how will this affect their health, as well as the health of Alaskans who rely on fish and game for food?

[1] The majority of INBRE expenditures were at UAF but INBRE also supports research at UAA and UAS.

Another of O'Hara's roles is to study and understand how infectious diseases are present in Alaska and how they can be transmitted to the public via handling and consumption of fish and wildlife. For example, there have been periodic outbreaks of rabies in Arctic foxes on the North Slope; this is potentially hazardous to North Slope residents and oil field workers. The better these outbreaks are understood, the better the public can be educated about the associated risks, and measures that can be taken to avoid contact with these diseases.

Center for Alaska Native Health Research (CANHR)

CANHR's mission is "to build and increase research capacity that will contribute knowledge to improve Alaska Native health." The primary focus of this research center is on obesity and its relationship to diabetes and cardiovascular disease among Alaskan Natives. CANHR seeks new knowledge through research that can ultimately be applied to understand, reduce and prevent health disparities in Alaska's Native communities. CAHNR partners with the Yukon-Kuskokwim Health Corporation and communities in Southwest Alaska, using a collaborative approach that incorporates local knowledge and culture into the process of scientific investigation. Following are two of CANHR's current projects.

UAF Research into Contaminants and Nutrients in Alaskan Subsistence Foods

This CANHR project is also headed by researcher Todd O'Hara. It takes the "under the microscope" work of INBRE and utilizes it to the study of how nutrients and toxicants (such as mercury, PCB's DDT, lead, arsenic and many other pesticides) directly affect Alaskans. As these toxicants work their way up the food chain, they can eventually impact human health.

UAF laboratories measure toxicants in subsistence foods such as salmon, seals, and reindeer and go beyond the lab to study how their consumption affects humans. The project also measures nutrient levels in these traditional foods. Contaminant and nutrient levels in foods that are dried, smoked, baked or rendered may change, becoming more or less concentrated. Certain preservation methods can neutralize toxicants and/or impact the nutrients available. This research is very relevant to the health of all Alaskans who consume fish and game. From an economic standpoint, Alaska needs to be vigilant in protecting the pristine image of our valuable commercial marine resources. Scientists are also learning new things about the nutritional benefits of eating fish, an important message for the state's commercial fishing industry.

Alaska Basic Neuroscience Program (ABNP)

ABNP strives to expand and stimulate basic neuroscience research (scientific study of the nervous system) with a focus on protection of the nervous system, including the brain, from disease such as stroke or physical injury. ABNP scientists also study sudden infant death syndrome (SIDS), a particular risk for Alaska infants, by studying how breathing is controlled.

UAF Sudden Infant Death Syndrome Research

SIDS is the leading cause of death in the US for infants one month to one year old. The national rate of SIDS deaths is about 0.7 (less than one) per 1,000 births. Caucasian babies born in Alaska die of SIDS at more than twice the national rate (1.6 per 1,000), and babies born to Alaska Natives die of SIDS at more than five times the national average at 3.6 per 1,000 births. SIDS is an Alaskan problem.

A look at occupational death rates helps to put Alaska SIDS death rates in perspective. In the 1990s, Alaska workers had a death rate of 0.22 per 1,000. The Alaska rate is five times that of the overall US work-related fatality rate. When you compare the Alaska worker death rate with SIDS death rates for approximately the same period, SIDS mortality among Caucasians in Alaska was seven times higher and 16 times higher among Alaska Natives than worker deaths. By far, the most dangerous occupation in Alaska is being an infant. ABNP researcher Mike Harris and his team are working to reduce vulnerability by looking at genetics, biology and behavior in Alaskan babies.

Another UAF SIDS-related research project is led by Barb Taylor and her team. They are looking at the potential effects of exposure to alcohol and nicotine on infants and unborn babies as risk factors in SIDS vulnerability. Other UAF SIDS research is trying to determine if alcohol and nicotine exposure affects the central nervous system and carbon dioxide transfer.

Hibernation Science

The Center for Molecular and Genetic Studies of Hibernation monitors Alaskan animals like the arctic ground squirrel and black bear. These hibernators spend each winter in a state in which their need for food and water is reduced to zero for six to eight months at a time. During hibernation, these animals are also resistant to harm from low blood pressure and the minimal availability of oxygen and blood sugar. Ground squirrels actually spend part of their time in hibernation with their body temperature below freezing with no ill effect.

If researchers can determine how the mechanisms that allow hibernating animals to slow body function work, there is potential for new therapies and drugs that, when administered to humans, would slow body function (including the onset of damage) and could allow first responders to stabilize patients with life-threatening conditions.

This research could lead to increasing the time that sick and injured patients have to get to a critical care facility, increasing their chances of recovery. This could be especially important in Alaska where many residents are injured in remote vehicle, ATV and snow machine accidents, or work in remote locations in the timber, fishing, oil, gas and mining industries and are hours or even days away from a critical care facility. The US Army has been financially supportive of this cutting edge research at UAF because of the potential for stabilizing seriously injured soldiers prior to treatment.

Bird Flu Research

According to the Center for Disease Control and Prevention, "The highly pathogenic avian influenza A H5N1 animal outbreak in Asia, Europe, the Near East, and Africa is not expected to diminish significantly in the short term. It is likely that H5N1 virus infections among domestic poultry have become endemic in certain areas and that sporadic human infections resulting from direct contact with infected poultry and/or wild birds will continue to occur. So far, the spread of H5N1 virus from person-to-person has been very rare, limited and unsustained. However, this epizootic (transferrable from animals to humans) continues to pose an important public health threat."[2]

[2] Center for Disease Control and Prevention website 2/6/2009. http://www.cdc.gov/flu/avian/outbreaks/

UAF researcher Jon Runstadler and his team have been researching biological mechanisms in birds (mostly ducks). How are the viruses transferred among birds? How are they transferred to humans? What are the risks to human health in Alaska?

The migration routes of many species of ducks cross paths where Alaska and Asia meet over the Bering Sea. There is potential for Asian ducks to spread H5N1 bird flu to Alaska and other parts of North America. If the highly pathogenic H5N1 were to occur in Alaska, there could be serious implications for the health of Alaskans.

Because of the capacity built by INBRE, Runstadler's team was able to acquire RO1 grant funding for the Center for Rapid Influenza Surveillance and Research (CRISAR). This five-year, $3.8 million, NIH-funded RO1 grant is a joint UAF, UCLA and UC Davis research project. The research involves surveillance and monitoring of birds in the US, Russia, Japan, China and Southeast Asia to see were there may be a potential threat of an outbreak of bird flu. The study looks at how the virus is carried and transferred as birds migrate around the Pacific Rim. CRISAR is an excellent example of how place-based research has been enhanced by the research capacity built through INBRE. CRISAR allows UAF to use its traditional strengths in wildlife biology to benefit people both inside and outside of Alaska.

Life Sciences Academic Program

Some of the benefits of investment in UA research are quantifiable; however, many benefits are less readily valued. How do we quantify the results of research spending that excites a young Alaskan student to pursue an academic career in a science or health-related field, who then returns to her home community and increases the quality of life for those she serves? UAF research, in close coordination with academic programs, allows many Alaskans opportunities to pursue science or health-related education that not only lead to better income and increased quality of life for their household, but also provides benefits to many other Alaskans and their communities.

Enrollment

- With nearly 500 degree-seeking students, the UAF biology and wildlife program is one of the largest degree programs in the entire UA system. This includes enrollment of over 300 life sciences graduate students. Compared to other programs, UAF life sciences programs, particularly biology, have seen the greatest increases in enrollments at UAF in recent years.

Quality Faculty

- Academic delivery in life sciences at UAF is provided by some of the best researchers in their fields. In order to attract and retain these top instructors, UAF academic facilities need to be on par with other institutions.

- If top researchers can be attracted to UAF, they not only bring their research skills but also increase the number and quality of classes that can be offered at UAF. Additionally, the availability of high-quality research options provides critical hands-on experiences where students can apply their academics.

Alaskan Graduates

- Producing graduates with the skills needed by businesses, government and other agencies in Alaska is a crucial contribution of UA to the state's economy. UA graduates also contribute to the Alaskan economy at a higher level than non-graduates (on average, university graduates earn substantially more over their lifetime than non-graduates).

- UAF educates Alaskans who will be making policy decisions for Alaskans. UAF graduates have worked for local, state and federal agencies such as schools, Alaska Department of Fish and Game, National Park Service, US Forest Service and US Fish and Wildlife. Many of these positions have direct influence on issues that affect all Alaskans.

- Alaskan graduates tend to live and work in Alaska, helping the economy grow and serving state residents. Nearly two-thirds of UAF graduates (from 1989 to 2006) were still living in the state of Alaska in 2006. Rural Alaskan graduates have an even higher likelihood of staying in the state after graduation.

- As of 2005, nearly three-quarters of UAF graduates still living in Alaska worked in a field related to their UAF education. This high retention rate is an important element in creating economic growth within the state.

The Economic Impact of Life Sciences Research

Impacts of Construction

The following construction impacts for the new Life Sciences Learning and Innovation Facility were estimated based on a 2006 McDowell Group study of the construction impacts of the BIOS facility. Cost estimates were adjusted for the difference between the $105 million BIOS facility in 2006 and the $102.8 million Life Sciences Innovation and Learning Facility.

- **There will be a substantial amount of short-term employment and economic activity related to the construction of a new Life Sciences Facility in Fairbanks** as well as in other areas of the state. Estimated statewide output associated with facility construction would be substantial, at about $170 million in total economic output (direct, indirect and induced) that includes $80 million in labor income, and annual average employment of 370 workers (in construction and other sectors of the economy) over a four-year construction period for the new facility. A total of nearly $145 million ($102.8 million for construction, plus $42 million in indirect and induced spending) would enter the Fairbanks economy.

- **The economic effects of this project would benefit other areas of the state, primarily Anchorage, Mat-Su and the Kenai Peninsula.** Total economic output for the Southcentral region of the state from the facility project would be about $20 million with total direct and indirect annual average employment of about 50, and total payroll of about $8 million. The majority of these benefits would occur in the Anchorage area.

Impacts of a Research Team

- **A new Life Sciences Facility at UAF could generate $1 million to $3 million in new wages and benefits.** Adding new space, and the resulting space made available by intercampus moves, could result in an increase in new research-related wages and benefits in the range of $1 million to $3 million at UAF. In addition to these wages and benefits, there would be increases in direct spending for goods and services. Indirect and induced impacts would have further positive effects on Alaska's economy.

- **On average, a research team at UAF is worth $850,000 to $1 million per year in economic activity for the state.** According the economic modeling system IMPLAN, for every dollar spent on university research in Alaska there is additional economic activity of $0.70.[3] Multiplying the average range of $500,000 to $600,000 in grants acquired per year, per researcher, by the 1.7 multiplier results in a range of $850,000 to $1 million in economic activity for the state, per research team. Twelve research teams at UAF represents approximately $10.2 million to $12 million in economic activity for the state.

[3] Minnesota IMPLAN Group, *IMPLAN Professional Version2*. 2006: Stillwater, MN

Importance of Research at UA

The three primary missions of the University of Alaska are instruction, research and public service. Research at UA plays a key role in expanding and diversifying the state's economy, protecting the health of Alaskans and their environment, and strengthening state agencies and institutions. The extensive economic benefits of UA research programs were documented in a 2007 study by the Institute of Social and Economic Research (ISER).[4]

- In 2006, 2,392 jobs were supported by university research spending, including 1,292 direct jobs and 1,100 indirect jobs.
- The combined direct and indirect payroll for jobs generated by university research was $92 million in 2006.
- Direct and indirect university research generated $125 million in sales throughout Alaska in 2006 (including procurement, business sales, and employee spending).
- In 2006, each $1 million in General Fund appropriations for UA research resulted in 121jobs and $4.7 million in payroll within the state.
- Because non-General Fund research revenue comes mostly from outside Alaska, the University's research programs (like mainstream industries) bring new dollars into the state.

In addition to the economic benefits, research at UA is an important component in the delivery of academic and service programs that are valuable to Alaskans. Building a strong research program also increases the intellectual capital available in the state to help train residents to solve Alaskan problems, increasing the quality of life in the state.

UA is the primary source of research and development in the state of Alaska. In most states, private industry conducts a majority of research and development efforts. The majority of UA research (more than 90 percent as measured by research expenditures) takes place at UAF.

Even though UAF is a small school on a national scale, it has been very successful in research and development. UAF conducts research that is relevant to human health and climate change in Alaska, translating into solutions for problems unique to our environment.[5]

Alaska's proximity to the Arctic has allowed UAF researchers an advantage in competing for grants. While UAF is a small school and does not have the same level of facilities and equipment as some of the largest institutions, "place-based research" has allowed them to be competitive on a national scale.

Measuring UAF Research

Two measures that gauge the scale of research at UAF are the volume of restricted revenue generated by grants and actual research expenditures. Reviewing the volume of grant awards shows the level of success that a university has had in obtaining funding for specific research projects. Some portions of research grant dollars are reallocated through indirect cost recovery (ICR) to fund other campus and system-wide activities. Looking at actual research expenditures allows a more focused view of research program impacts.

Note: Unless otherwise stated, all figures in this document are for FY07.

Grant Awards

The UA system received 694 new grants and managed 2,136 ongoing grants.[6] New grants totaled $237.5 million systemwide. During the year, UAF received 424 of all new grants and managed 1,446 of all ongoing grants. In comparison, UAA received 217 new grant awards and managed 546 ongoing grants.

New grants totaled $237.5 million system wide of which approximately $200 million (83 percent) were at UAF.

Research Expenditures

UAF research expenditures from externally sponsored funding sources totaled about $113 million in FY07, up 30 percent from FY02. (This does not include $22.8 million in State General Fund support.) The majority of UA research (more than 90 percent as measured in research expenditures) takes place at UAF.

Research Expenditures by Major Academic Unit, FY02 to FY07

MAU	FY02 ($millions)	FY07 ($millions)	% Change FY02 – FY07
UAF	$87.2	$113.0	+30%
UAA	9.1	10.3	+13
UAS	0.8	1.2	+42
Total	**$97.1**	**$124.5**	**+28%**

Note: Figures are in millions and have been rounded; they include indirect cost recovery distributed to each MAU (Major Academic Unit).
Source: UA in Review 2008.

Indirect Cost Recovery

Indirect cost recovery (ICR) is an important revenue source for UA. Of the $30.9 million in ICR revenue, $26 million (85 percent) was generated by research at UAF. ICR is revenue captured from federal and other

[6] 2008 UA in Review, UA Statewide Planning and Budget, http://www.alaska.edu/swbir/ir/ua-in-review/

restricted grants that reimburses the University for related administrative, facility, and other support costs. ICR is charged to the grant source as a percentage, up to 42 percent of the grant amount.

UAF Indirect Cost Recovery Distribution, FY02 to FY07

	FY02 ($millions)	FY07 ($millions)	% Change FY02 – FY07
ICR distributed back to originating unit	$10.3	$14.0	+36%
ICR distributed to other UAF departments	5.9	8.9	+50
ICR distributed to UA Statewide MAU	2.4	3.3	+38
Total ICR	**$18.6**	**$26.2**	**+41%**

Note: Figures are in millions and have been rounded.
Source: UA Banner Finance.

Total UAF-generated ICR has increased by 41 percent from FY02 and has become an increasingly important revenue source for maintaining UA facilities and administrative functions.

Slightly more than half (about $14 million) of ICR collected from UAF research went directly to augment the research program or unit that brought in that revenue (the originating unit), while 34 percent ($8.9 million) was distributed to other areas of UAF, such as the library, administrative services and building maintenance. The remaining 13 percent ($3.3 million) was distributed to the UA Statewide MAU.[7] The Statewide MAU provides services such as accounting, legal, human resource and information technology services to UA system-wide.

ICR has been the revenue source for much of the construction of new research space in the last decade, including the West Ridge Research Building, UAF Museum research space, Institute of Arctic Research Center, Lena Point facility, and the BiRD Building.

The $3.3 million distributed to the Statewide MAU represented approximately 6 percent of its revenues. The $8.9 million distributed to other UAF departments accounted for about 2.5 percent of UAF revenues. If the level of UAF research were to stagnate or decline, the effect could have serious implications for university operations.

[7] UA has four major administrative units (MAU's): UAA, UAF, UAS and Statewide.

Funding for UAF Research

Overall, externally funded (non-General Funds) research at UAF increased by 30 percent from FY02 to FY07. The federal government, through agencies such as the National Institutes of Health, National Science Foundation and Department of Defense, funded the majority (88 percent) of research at UAF. Other sources of funding included Native Corporations, non-profit organizations, private businesses and other universities, which accounted for about 11 percent of research revenue. State General Fund support increased slightly from about $1.4 million to $1.5 million and accounted for about 1 percent of total research revenue at UAF.

The majority of growth (in dollars) was due to federal funding, while funding from sources such as Native Corporations, non-profit organizations, private businesses and other universities increased at the highest rate (46 percent) over the period. Examples of state agencies include the Department of Natural Resources and the Department of Health and Social Services.

UAF Externally Funded Research Expenditures by Sponsor, FY02 to FY07

	FY02 ($millions)	FY07 ($millions)	% of Expend. FY07	% Change FY02 – FY07
Federal	$77.6	$99.4	88%	+28%
Other	8.2	12.0	11	+46
State agencies	1.4	1.5	1	+6
Total	**$87.2**	**$113**	**100%**	**+30%**

Note: Figures are in millions and have been rounded. Figures include ICR expenditures.
Source: UA in Review 2008.

Leverage

One measure of the productivity of a research program is to compare the value of external funding leveraged by university General Funds. For every dollar of state-funds for research in FY07, UAF was able to leverage an additional $5.80 from external funding sources. UAF has been fortunate to receive multiple capacity-building grants over the last six to eight years. The State must capitalize on this opportunity.

Strong General Fund support is still needed to build the infrastructure (including facilities and human resources) so that UAF has the capacity to be competitive for new grants. Such funds will be used for recruitment, salaries, offices, laboratories, and equipment to build capacity.

The expectation of top UAF researchers is that they will eventually bring in significant grant funding to support their own salaries, staff and equipment, as well as contribute to the university as a whole.

Building Research Capacity

Since 2000, UAF has made a concentrated effort to build capacity for life sciences research. Since that time UAF has received a series of grants designed to increase capacity in basic and applied research. These grants are for limited periods of time (some can be renewed for a second or third phase) but are not long-term sources of funding for research. The purpose of the grants is to build capacity among research programs so that they can conduct research that is capable of receiving funding on a nationally competitive basis.

Most research at UAF is funded by either the National Institute of Health (NIH) or the National Science Foundation (NSF).

NIH Funding

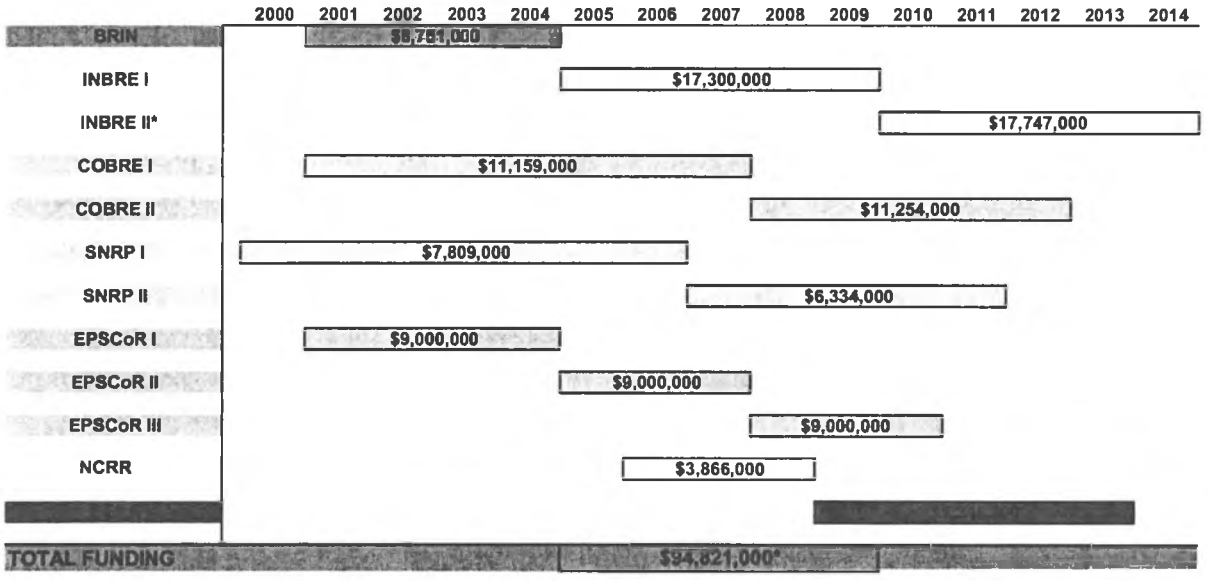
In addition to capacity-building grants, NIH RO1 grants are made to support specific projects to be performed by an investigator in an area representing the investigator's competencies, and to meet the mission of the NIH. One intent of the capacity-building grants is to increase the number of RO1 awards to Alaska which is currently at or near the bottom of all states in NIH-funded RO1 research grants.

NIH RO1 grants are awarded to the top 10 to 15 percent of applicants. Even Harvard University researchers have a success rate of only about 50 percent when applying for NIH grants.

In addition to the merits of an individual proposal, NIH looks at several critical components of a proposed research project:

- Research must be relevant to health issues on a national level.
- NIH panels look for strong scientists with quality degrees, a pattern of excellent work, public speaking, published work, and previous receipt of grant funding.
- Laboratory facilities and equipment must be up to date.
- Research programs need a strong intellectual community (a critical mass of students, graduates and other researchers) for support.

NSF Funding



The National Science Foundation (NSF) is an independent federal agency that promotes science to advance national health, prosperity, welfare and national defense. NSF funds about $6 billion worth of research through term-limited grants. NSF currently issues about 10,000 new awards per year, with an average project duration of three years. Research proposals must be judged the most promising by a rigorous and objective merit-review system. Most of these awards go to individuals or small groups of investigators. Others provide funding for research centers, instruments and facilities that allow scientists, engineers and students to work at the outermost frontiers of knowledge.

"NSF's goals—discovery, learning, research infrastructure and stewardship—provide an integrated strategy to: advance the frontiers of knowledge; cultivate a world-class; broadly inclusive science and engineering workforce and expand the scientific literacy of all citizens; build the nation's research capability through investments in advanced instrumentation and facilities, and support excellence in science and engineering research and education through a capable and responsive organization. NSF's mission includes support for science and engineering education, from pre-K through graduate school and beyond. The research is thoroughly integrated with education to help ensure that there will always be skilled people available to work in new and emerging scientific, engineering and technological fields, and capable teachers to educate the next generation."[8]

The challenge at UAF is to create and maintain a research program that has a critical mass of top researchers, facilities and intellectual strength. To meet these criteria, a research program must have very strong support from the University of Alaska and from the State. In order to meet NIH and NSF qualifications and the goals of UAF, proposed research needs to be relevant not only on a national level, but also relevant within the state.

The table below shows federal funding for capacity-building grants received by UA. Almost all funding shown in the table was for research conducted at UAF. The exceptions are INBRE which has program components at UAA and UAS, and EPSCoR which provides programs statewide. Following the table are brief descriptions of these capacity-building grants. To date approximately $95 million has been received and an additional $17.7 for INBRE II is pending.

Life Sciences Capacity-Building Federal Grant Funding

*Note: INBRE II is not included in this total but the expectation is that this grant will be awarded.

[8] National Science Foundation website 2/8/2009 http://www.nsf.gov/index.jsp

INBRE/BRIN

The Idea Network of Biomedical Research Excellence (INBRE) is a national program of grants from National Institutes of Health designed to increase capacity for high quality research. INBRE provides grants for research institutes like UAF that have strong programs and the potential to be increasingly competitive with top researchers from other states for NIH RO1 grants. After the grant period ends, the program is expected to be at a level where its researchers can be nationally competitive. UAF received its first NIH capacity-building grant (then called BRIN) for 2001 to 2004. The first INBRE grant was for 2004 to 2009. INBRE at UAF is in the process of being renewed and is likely to be funded for 2009 through 2013. More details about INBRE projects will be presented in the UAF Life Sciences Research Programs section of this report. INBRE funds research at UAF, UAA and UAS.

COBRE

The Center of Biomedical Research Excellence (COBRE) is an NIH-funded program to build research capacity in specially designated areas. The COBRE program promotes the initiation and development or expansion of unique, innovative state-of-the-art biomedical and behavioral research centers at institutions. COBRE funds basic and applied research. The objectives of COBRE are to strengthen institutions' biomedical research infrastructure and to enhance the ability of investigators to compete independently for NIH individual research grants.[9] COBRE funds Center for Alaska Native Health Research at UAF.

SNRP

Specialized Neuroscience Research Programs (SNRP) program is designed to strengthen research capabilities of faculty, students, and fellows at minority institutions by supporting the development and/or the enhancement of ongoing, basic and clinical neuroscience research projects and programs. SNRP funds the Alaska Basic Neuroscience Program.

SNRP grants are intended "to enhance the research capacity of a group of academic institutions that historically have not been major participants in NIH [neuroscience] programs specifically." An important long-term goal has been to foster the capability of minority institutions to compete successfully within the NIH peer review process for research grants. SNRP grants were designed to achieve the following programmatic goals:

- To assist in infrastructure development leading to well established, state-of-the-art neuroscience research programs.
- To foster innovative and effective partnerships and collaborations between minority institutions and established neuroscience laboratories at federal and non-federal research institutions.
- To create, support, and maintain a stimulating academic and intellectual milieu to inspire and prepare students and fellows to pursue research centers in neuroscience. [10]

[9] National Institutes of Health website 2/8/09 http://grants.nih.gov/grants/guide/pa-files/PAR-09-079.html#SectionI

[10] National Institutes of Health, Specialized Center Cooperatives Agreement Programs website http://snrp.nih.gov/about_SNRP/about.htm

- To provide support to develop and sustain competitively funded neuroscience research projects and programs.

EPSCoR

The Experimental Program to Stimulate Competitive Research (EPSCoR) is a National Science Foundation university-based grant program that is designed to develop states' research capabilities; increase student participation in science, math and engineering; increase the coordinated efforts between states and their universities; and to ultimately increase economic development. EPSCoR creates partnerships with states and universities to spark interest in research and build capacity among researchers. Alaska EPSCoR began in 2000 and partners with UA and the State of Alaska. Alaska EPSCoR is in its third phase (2007-2010). Each phase has granted about $4 million annually for EPSCoR with three-quarters coming from NSF and one-quarter coming from the State of Alaska (through UA) as matching funds. EPSCoR is a statewide program with a mandate to increase student participation in all areas of the state, including UA's major and remote campuses.

SEPA

Science Education Partnership Awards (SEPA) are NIH-funded, with the goal of increasing biomedical research education in Alaska middle and high schools. The grant is part of an estimated $17 million awarded by NIH to fund 16 Science Education Partnership Awards across the country.

UAF's award will provide support for the Biomedical Partnership for Research Education Pipeline in Alaska, or Alaska BioPREP, to be administrated by INBRE. According to INBRE Director George Happ, "This program blends the talents and facilities of local school teachers and health providers with those of UAF to create venues where secondary school students can pose biological and biomedical questions, find answers using molecular approaches, and gain appreciation of the importance of modem science to the practice of medicine and health policy in their daily lives."

An immediate aim of the project will be to keep students in high school through graduation by ensuring that their high school science courses are focused, challenging and relevant. The BioPREP partnership group includes school districts, teachers, researchers, science education groups and Alaska Teacher Placement. Through the partnership, university researchers provide the technical expertise, teachers provide the instructional expertise, and health care providers and community members supply practical applications and encouragement for the students.

"Hands-on investigations, individual mentoring relationships, community involvement, and incentives such as travel and scholarships all improve student enthusiasm and retention in school, and all are part of BioPREP," explained Sue Hills, outreach director of Alaska INBRE. "With the skills the students learn in BioPREP, they can jump right into undergraduate research programs or lab assistant positions when they get to college."

NCRR

The National Center for Research Resources (NCRR) was funded by NIH. Funds are granted to expand, remodel and renovate research and animal facilities.

A $3.87 million NCRR grant was used to help complete construction of the Biological Research and Diagnostic Facility (known as the BiRD building).

Capacity-Building Success at UAF

Overall, UAF research has been increasingly successful at winning competitive grants. As a result of the research capacity built by BRIN/INBRE, COBRE and SNRP, UA has been able to acquire competitive life sciences grants totaling approximately $29 million dollars.

One example of how capacity-building grants can lead to success with competitive grants is the Center for Rapid Influenza Surveillance and Research (CRISAR) project. This $3.8 million NIH-funded RO1 grant is a joint effort between UAF, UCLA and UC Davis. The 5-year competitive grant was awarded to UAF in 2007 as a result of the capacity built from INBRE funding. The research involves surveillance and monitoring of birds in the US, Russia, Japan, China and Southeast Asia to identify were there may be a potential threat of an outbreak of bird flu. The study looks at how the virus is carried and transferred. According to principal investigator Jon Runstadler, "Our proximity to the birds and the research capacity that we have built from INBRE allowed us to be successful in securing this competitive research proposal for UAF." Runstadler's team works with Mark Lindberg, a UAF wildlife biologist and expert on the life-cycle of ducks in Alaska. His understanding of migration patterns also allows researchers to know when and where to intercept wild birds so that they can be monitored for various strains of avian flu.

CRISAR is an excellent example of how place-based research has been enhanced by the research capacity built through INBRE. CRISAR allows UAF to use its traditional strengths in wildlife biology to benefit people both inside and outside of Alaska.

There are many similar examples of research success at UAF. The next section will provide an overview of the primary life sciences programs at UAF.

UAF Life Sciences Research Programs

One area of research where UAF has become particularly strong is life sciences. Almost all UAF life sciences research and takes place within Institute of Arctic Biology (IAB) or Idea Network of Biomedical Excellence (INBRE).

Institute of Arctic Biology

The largest component of UAF life sciences research and academics is contained within the IAB. IAB currently supports about 150 ongoing research projects, and IAB faculty (through the Department of Wildlife and Biology in the College of Natural Sciences and Math) teach all of the classes for undergraduate majors in biology; teach components of chemistry and biochemistry; and provide support for graduate and post-graduate education and research in biology, molecular biology, wildlife biology, physiology, genetics, and ecology.

IAB had total research expenditures of $20.1 million, up 78 percent from $11.3 million in FY02.[11] The majority (61 percent) of expenditures were for wages and benefits. Nearly one-third (30 percent) of expenditures were for commodities, services and equipment. The remaining 9 percent was spent on travel, land and buildings, student aid and miscellaneous items.

The total number of faculty, staff and graduate students involved in research at IAB was 134. There were 57 faculty and 77 staff and graduate positions (held by either post doctoral researchers, graduate researchers or undergraduate students).

IAB Faculty and Staff, 2007

	# of Faculty and Staff
IAB	105
AK Coop Fish/Wildlife Research Unit	24
Toolik Field Station	5
Total Staff	**134**

Major IAB Programs

Basic and applied research conducted at UAF has significant economic impact and quality of life benefits for Alaskans. Major research programs include the Toolik Field Station, Robert White Large Animal Research Station, Center for Alaska Native Health Research, Alaska Basic Neuroscience Program, Center for Molecular and Genetic Studies of Hibernation, Alaska Geobotany Center, the Resilience and Adaption Program, and Bonanza Creek Long-Term Ecological Research Program. Following are brief discussions of what these programs do and how they are relevant to Alaskans.

[11] Source: UA Unit Profile-UAF IAB. These figures do not include indirect cost recovery.

TOOLIK FIELD STATION (TFS)

IAB maintains the Toolik Field Station (TFS). TFS is a national and international Arctic climate change research center, primarily sponsored by the NSF. The facility is located 158 miles north of the Arctic Circle along the Dalton Highway. TFS has been operating for 30 years and is on the forefront of research on climate change that is gathered by over 300 scientists and students each year. Work at TFS will pay a key role in providing current and historic data that will help researchers, agencies, and industry to understand environmental changes in Arctic land and water based environments. Research based at TFS has been widely published in more than 225 journal articles (including *Nature* and *Science*), and portions of 47 books. The facility provides hands on research opportunities for under graduates, graduates and Alaska high school students.

ROBERT WHITE LARGE ANIMAL RESEARCH STATION (LARS)

LARS was created in 1979 and allows scientists and students hands-on opportunities to work with musk oxen, caribou and reindeer to better understand the nutritional, physiological and behavioral systems of these unique northern animals. The facility also provides educational opportunities for the general public and Alaskan schoolchildren from grade school through high school.

Basic and applied research conducted at UAF has significant economic impact and quality of life benefits for Alaskans. Major research programs include the Center for Alaska Native Health Research, Alaska Basic Neuroscience Program, Center for Molecular and Genetic studies of Hibernation, Alaska Geobotany Center, the Resilience and Adaption Program and Bonanza Creek Long-Term Ecological Research Program. Following are brief discussions of what these programs do and how they are relevant to Alaskans.

Monitoring Toxicants and Disease in Alaska

UAF researcher Todd O'Hara is studying contaminants and infectious disease in the Arctic. Infectious agents and toxicants can be easily transmitted through commercial, sport and subsistence harvest in Alaska. INBRE toxicology projects study animals that are at the top of the food chain such as arctic fox, polar bear and Stellar sea lions, and numerous subsistence foods.

What effect do toxicants have on animals and people? If diets change because of changing environmental conditions, will these animals be exposed to new or higher levels of toxicants and/or infectious agents? If so, how will this affect their health, as well as the health of Alaskans who rely on fish and game for food?

Another of O'Hara's roles is to study and understand how infectious diseases are present in Alaska and how they can be transmitted to the public via handling and consumption of fish and wildlife. For example, there have been periodic outbreaks of rabies in Arctic foxes on the North Slope; this is potentially hazardous to North Slope residents and oil field workers. The better these outbreaks are understood, the better the public can be educated about the associated risks, and measures that can be taken to avoid contact with these diseases.

CENTER FOR ALASKA NATIVE HEALTH RESEARCH (CANHR)

CANHR's mission is "to build and increase research capacity that will contribute knowledge to improve Alaska Native health." CANHR has been funded by two, 5-year, $11 million capacity-building grants (COBRE I and II). The center began operations in 2001 and was again funded in 2007. The primary focus of research at the center is obesity and its relationship to diabetes and cardiovascular disease among Alaska Natives. CANHR seeks new knowledge through basic and applied research that can ultimately be applied to understand, reduce and prevent health disparities in Alaska's Native communities.

CAHNR partners with the Yukon-Kuskokwim Health Corporation and communities in Southwest Alaska, and uses a collaborative approach that incorporates local knowledge and culture into the process of scientific investigation. By working closely with community members, local residents become part of the research process and can help to guide research and facilitate results that are culturally appropriate.

CANHR travels to communities with a team of three to four including researchers, nurses, technicians and other support staff. CANHR makes significant research expenditures in rural Alaska on travel, rent, food, fuel and supplies. They employ local workers to assist on projects as much as possible.

The following projects are an example of how CAHNR research can result in a better quality of life for Alaskans.

UAF Research into Contaminants and Nutrients in Alaska Subsistence Foods

Todd O'Hara is a UAF researcher that conducts studies for both INBRE and CANHR. His INBRE research involves microbial agents (human and wildlife diseases that can be transferred between the two) and toxicants, while his CANHR projects focus on the study of nutrients and toxicants related to human health issues that directly affect Alaskans. All of the toxicants that O'Hara studies as part of his INBRE projects end up in the food chain, such as mercury, PCB's, DDT, lead, arsenic and many other pesticides. As these toxicants work their way up the food chain, they are easily transmitted to humans through commercial, sport and subsistence harvest in Alaska, and can eventually impact human health.

UAF laboratories measure toxicants in subsistence foods such as salmon, seals, and reindeer and study how their use affects humans. This research project also measures nutrient levels in these traditional foods. O'Hara and his CANHR team study the effects that preparation methods can have on concentrations of toxicants and nutrients in food from these Alaskan animals. Contaminant and nutrient levels in foods that are dried, smoked, baked or rendered may change, becoming more or less concentrated. CANHR scientists measure levels of these contaminants to see how various preservation techniques may affect toxicity and critical nutrients. Certain preservation methods can neutralize toxicants and/or impact the nutrients available. This research is very relevant to the health of all Alaskans who consume fish and game.

From an economic standpoint, Alaska needs to be vigilant in protecting the pristine image of our valuable commercial marine resources. For example, the level of contaminants in some fish from around the world has made news in recent years. Alaska needs to be watchful that our species are not caught up in negative publicity. While there may be concerns about contaminants in farm-raised salmon, wild Alaskan salmon are

low in contaminants. Just as important, spreading the message about the nutritional value of Alaskan fish is good for Alaska and the state's economy.

UAF Research into Measuring Alaskan Subsistence Diets

Bert Boyer is a researcher with CANHR studying how diet interacts with genes to predispose people, particularly Yup'ik Eskimos, to obesity. He suspected that the Yup'ik diet, rich in polyunsaturated fatty acids found in salmon and marine mammals, might protect them from diabetes but was frustrated by the difficulty in quantifying what Yukon-Kuskokwim Delta Yup'iks were eating regularly through self-reported diet surveys and questionnaires.

He shared his concern with Diane O'Brien, a new faculty member at UAF who was not yet a part of CANHR. She suggested it is possible to measure PUFAs indirectly by using isotopic signatures that are unique to fish and marine mammals and found in human blood, fingernails or hair. Such analyses are fairly cheap, easy to do and very accurate. That idea resonated with Boyer, and testing her assumption became part of the CANHR II study. She has since proven that these cheap, easily measured markers are highly accurate proxies for polyunsaturated fatty acids in the diet in a study to be published in March.

O'Brien's isotopic work is important on two fronts. First, it will help CANHR researchers understand the relationships between a changing diet and obesity in Alaska Natives, which is a growing public health problem for Alaska; and secondly, it will develop better methods for any researcher who needs diet assessments for a wide range of medical issues."

Alaska Basic Neuroscience Program

The Alaska Basic Neuroscience Program (ABNP) strives to expand and stimulate basic neuroscience research (scientific study of the nervous system) with a focus on protection of the nervous system, including the brain, from disease such as stroke or physical injury. ABNP scientists also study sudden infant death syndrome (SIDS), a particular risk for Alaska infants, by studying how breathing is controlled.

ABNP is supported by an NIH capacity-building grant from the Specialized Neuroscience Research Program (SNRP). The first NIH $7.8 million grant was for 2000 to 2006, and the current grant (2006 to 2011) is for $6.3 million. Other program supporters include National Institute of Mental Health (NIMH) and National Center for Research Resources (NCRR). The following projects are an example of how ABNP research can result in a better quality of life for Alaskans.

UAF Sudden Infant Death Syndrome (SIDS) Research

SIDS is a leading cause of death in the US for infants one month to one year old. The national rate of SIDS deaths is about 0.6 (less than one) per 1,000 births. Alaskan babies born in the Caucasian population die of SIDS at more than twice the national rate (1.6 per 1,000), and babies born to Alaska Natives die of SIDS at more than five times the national average at 3.6 per 1,000 births.

In order to put Alaska SIDS death rates in perspective, consider a comparison with some of the most dangerous occupations in the world. Alaska is seen as a dangerous place to work. Commercial logging, commercial fishing and flying are considered by most as high risk occupations. For the 1990's Alaska workers

had a death rate of .22 per 1,000 (less than one-quarter person per 1,000). When you compare this death rate with the incidence of SIDs for approximately the same period, rates of SIDS death among Caucasians in Alaska were seven times higher than rates of worker deaths, and 16 time higher among Alaska Natives. By far, the most dangerous occupation in Alaska is being an infant. It is a dangerous place to be born and researchers don't know why. SIDS research done outside the state of Alaska will not address why Alaskan rates are so much higher than the national average. Alaskans need to take ownership of this problem. ABNP researcher Michael Harris and his team are working to understand vulnerability by looking at genetics, biology and behavior, with a goal to prevent the occurrence of SIDS in Alaskan babies.

A normal response in babies is to wake up when breathing is hindered, for example from sleeping on their stomach. The sequence is to wake up, move their head and enhance breathing (three separate reflexes.) If any one of the reflexes does not work, a relatively common occurrence, sleeping with a face in the bedding, can become a life threatening situation. One theory is that a serotonin deficiency may lead to greater vulnerability to SIDS by disrupting reflexes such as these. UAF researcher Michael Harris and his team want to know if there is anything about serotonin that can be linked to important reflex functions. They are conducting basic research at the molecular level. If a connection can be made between serotonin dysfunction and vulnerability to SIDS, then pharmacological solutions can be developed.

In order to understand how SIDS works, researchers must first identify not only the causes of increased vulnerability, but also the symptoms associated with vulnerability. If researchers can understand such symptoms then they can more readily identify which infants may be vulnerable. If simple screening tools can be developed to indentify infants at risk of SIDS ahead of time this would help save lives and facilitate further research. For example, if doctors or parents knew a particular infant had symptoms that indicated vulnerability to SIDS, in cases such as failed reflexes, steps could be taken to supplement the reflex or avoid the potentially life threatening situations. This would lead to fewer deaths. One of ABNP's current projects involves trying to develop a non-invasive screening tool that could help predict vulnerability for SIDS. The results of this research could help save lives and reduce the number of Alaskan infants that die of SIDS.

Another UAF SIDS related research project is lead by Barbara Taylor and her team. They are looking at the effects of exposure to alcohol and nicotine in animal models, that can explain why exposure to these substances in infants and unborn babies are risk factor contributing to SIDS vulnerability. Their research is trying to determine if alcohol and nicotine exposure affects the central nervous system and sensitivity to low oxygen or carbon dioxide. Basic animal research shows that exposure does have an impact. Once you have determined that there is an impact you investigate at a cellular level to understand the problem and then find solutions.

Center for Molecular and Genetic Studies of Hibernation

Scientists at the Center for Molecular and Genetic Studies of Hibernation investigate the molecular and genetic basis of hibernation in mammals, focusing on development of potential new therapies and drugs to protect and treat victims of stroke, heart attack, and severe trauma. The project has been funded by the National Science Foundation and the United States Army Medical Research and Materiel Command since 2005. Grant and non-restricted spending for this program is about $5 million to date.

Hibernation Science

Alaskan animals, like the arctic ground squirrel and black bear, spend each winter in a state of hibernation during which their need for food and water is reduced to zero for six to eight months at a time. During hibernation, these animals are also resistant to harm from low blood pressure and the minimal availability of oxygen and blood sugar. Ground squirrels actually spend part of their time in hibernation with their body temperature below freezing with no ill effect.

UAF researchers Brian Barnes, Kelly Drew and their team are trying to develop an understanding of the molecular and biochemical mechanisms that slow body function and protect hibernators, which could lead to the development of new drugs that lessen the harm from stroke, heart attack and injuries such as gunshot and head trauma.

Over 160,000 people die of stroke each year in the US (an age-adjusted rate of about 47 people per 100,000; in Alaska the age-adjusted rate for stroke is even higher, at 53 per 100,000).[12] In 2004, 858 Alaskans died from either heart disease or a stoke.[13] Essential for patient recovery from these dangerous events is to stabilize them as quickly as possible, until advanced medical care is available. If researchers can determine how mechanisms that allow hibernating animals to slow body function work, there is potential for new therapies and drugs that, when administered to humans, would quickly slow body function (including the onset of damage) and could allow first responders to stabilize patients with life-threatening conditions.

This research could lead to increasing the time that sick and injured patients have to get to a critical care facility, increasing their chances of recovery. This could be especially important in Alaska where many residents are injured in remote vehicle, ATV and snow machine accidents, or work in remote locations in the timber, fishing, oil, gas and mining industries and are hours or even days away from a critical care facility. The US Army has been financially supportive of this cutting edge research at UAF because of the potential for stabilizing seriously injured soldiers.

This type of research is an excellent example of place-based research that has significant potential to benefit Alaska and the nation. UAF's northern Alaska location and proximity to ground squirrels and bears allows researchers to study and closely monitor the animals while attempting to unlock the biological keys to slowing body functions.

BONANZA CREEK LONG-TERM ECOLOGICAL RESEARCH PROGRAM

Bonanza Creek Research focuses on improving prediction and understanding of the long-term consequences of changing climate and disturbances such as fire, insects, pathogen outbreaks, and permafrost thaw in Alaska's boreal forests.

The boreal forest is considered the second largest terrestrial ecosystem in the world, after tropical forests. The boreal forest comprises one of the world's largest carbon reservoirs. Changes or disturbances in the volume and distribution of coniferous versus deciduous boreal forests are known to affect regional and global climate.

---

[12] Center for Disease Control (CDC) National Center for Health Statistics and National Vital Statistics Reports

[13] The Burden of Heart Disease and Stroke in Alaska: *Mortality, Morbidity, and Risk Factors* http://www.hss.state.ak.us/dph/chronic/chp/pubs/burden_july06.pdf

The program's objectives are to study factors like fires, melting permafrost and insects that might result in serious changes in the Arctic environment and to identify human and environmental factors that may reduce stresses on ecosystem structure and function that could otherwise lead to serious changes. For example, as the Arctic climate changes (warms), forests are more susceptible and less resistant to insect and pathogen attack. Research is conducted at two main sites: the Bonanza Creek Experimental Forest and Caribou-Poker Creeks Research Watershed.

Changes in the Arctic could have serious implications for Alaskans who rely upon animals and plants for food, soil stability (for houses, roads), water patterns and filtering (streams, rivers, wells), forest productivity (timber), and for recreational opportunities (skiing, snowmachining, camping, hunting, fishing).

Information gathered at Bonanza Creek is used by agencies such as the Alaska Fire Service and the Alaska Department of Fish and Game. For example, the Alaska Department of Fish and Game may use background data from Bonanza Creek to better understand how moose and caribou populations may be affected in fire-damaged areas in order to meet population and harvest goals.

The Bureau of Land Management Alaska Fire Service (AFS) located at Fort Wainwright, Alaska, provides fire suppression services for all Department of the Interior and Native Corporation lands in Alaska. In addition to fire suppression, AFS has other statewide responsibilities, including interpretation of fire management policy. AFS operates on an interagency basis; cooperators include the Bureau of Land Management, State of Alaska Department of Natural Resources, USDA Forest Service, National Park Service, Bureau of Indian Affairs, U.S. Fish and Wildlife Service, and the U.S. Military in Alaska.[14]

The Bonanza Creek Program has received $2.6 million to date from the National Science Foundation and supports 25 large scale research projects. In addition to principal investigator Terry Chapin and co-principal investigators Roger Ruess and David McGuire, the program is staffed by 23 senior investigators, 57 affiliated scientists, 16 master's degree students, ten Ph.D. students, one post-doctoral research associate, one data manager, one site manager, and eight technicians.

Resilience and Adaption Program

The Resilience and Adaptation Program (RAP) explores the links among cultural, economic, and ecological conditions of Alaska and the North, and provides training that prepares scholars, policy-makers, and managers to address issues of sustainability. Alaska and the Circumpolar North are appropriate places to train researchers in the dynamics of social-ecological systems because of climatic, cultural and socio-economic change. This program places special emphasis on training Alaska Native Ph.D.s who are needed as university faculty, researchers, educators, and community leaders.

Students work with UAF faculty on a broad range of interdisciplinary research projects at community, regional, and circumpolar levels. RAP offers master's and Ph.D. degrees in Biology and Wildlife, Anthropology, Resource Economics, Natural Resource Management, Northern Studies, and Interdisciplinary Studies.

RAP has received nearly $1.3 million to date from the National Science Foundation's Integrative Graduate Education and Research Traineeship Program.

---

[14] Alaska Fire Service website 2/10/2009 http://fire.ak.blm.gov/afs/

Alaska Geobotany Center

The Alaska Geobotany Center (AGC) is dedicated to understanding northern ecosystems through the use of geographic information systems (GIS), remote sensing, field experiments, and cooperative team research projects. AGC documents changes in vegetation across the circumpolar Arctic and is a critical component to the understanding of permafrost, carbon reserves, water systems, wildlife populations, and the ability of humans, plants, and animals to live in the Arctic. Researchers examine landscape patterns including vegetation, snow ecology, and the disturbance and recovery of plants. This information is used by resource managers, land-use planners, ecosystem scientists, and government land agencies. These mapping resources are valuable to wildlife biologists, fire managers and timber managers in Alaska.

AGC projects collectively known as "Greening of the Arctic" include:

- **Arctic Systems Science**: Addresses the question of how vegetation of the Arctic has responded to climate change.
- **Land Cover and Land Use Change**: Addresses how the decline in Arctic sea ice will affect, and is affected by, the greening of vegetation in the Arctic.
- **Arctic Geobotanical Atlas**: Education and outreach component comprised of a Web-based, multi-scale collection of geobotanical maps and related data.
- **North American Arctic Transect**: Creates baseline information on Arctic vegetation.
- **Circumpolar Arctic Vegetation Map**: International project that mapped the vegetation and associated characteristics of the circumpolar region using a common base map.

The ACG has $755,534 in current funding from NASA and is expected to confirm receipt of approximately $950,000 in additional NASA funding in the first quarter of 2009.

Idea Network of Biomedical Research Excellence (INBRE)

Another major life sciences unit at UAF is INBRE. INBRE is supported by a national program of capacity-building grants from the National Institute of Health designed to increase capacity for high quality research. INBRE uses expertise in biology to investigate organisms that cause disease and toxic substances in the environment. INBRE operates independently from the Institute of Arctic Biology.

An additional mission of INBRE is outreach and support for students (high school and college) who show interest in life sciences research.

INBRE receives approximately $3.5 million in annual grant revenue with approximately $1.8 million in research expenditures (not including ICR contributions). Wages and benefits made up the greatest portion of expenditures (39 percent). Additionally, significant expenditures were made for commodities, contract services and equipment (32 percent). Travel expenditures accounted for 13 percent of INBRE's research expenses.

INBRE supports research at UAF, UAA and UAS. There are a total of approximately eight faculty and graduate students and four and a half staff positions.

INBRE Faculty and Staff, 2007

	# of Faculty	# of Grad Students	# of Staff
UAF	4	6	4
UAA*	3	2	0.5
UAS	1	0	0
Total INBRE staff	**8**	**8**	**4.5**

*The staff position is less than one full-time equivalent.

The following projects highlight the valuable contributions INBRE research is making to the state of Alaska.

UAF Bird Flu Research

To better understand avian flu research at UAF, following is a brief summary of the current status of avian flu. According to the Center for Disease Control and Prevention,

> *Avian influenza is an infection caused by avian (bird) influenza (flu) viruses. These influenza viruses occur naturally among birds. Wild birds worldwide carry the viruses in their intestines, but usually do not get sick from them. However, avian influenza is very contagious among birds and can make some domesticated birds, including chickens, ducks, and turkeys, very sick and kill them.*
>
> *Usually, avian influenza virus refers to influenza A viruses found chiefly in birds, but infections with these viruses can occur in humans. The risk from avian influenza is generally low for most people because the viruses do not usually infect humans. However, confirmed cases of human infection from several subtypes of avian influenza infection have been reported since 1997. Most cases of avian influenza infection in humans have resulted from contact with infected poultry (e.g., domesticated chicken, ducks, and turkeys) or surfaces contaminated with secretions/excretions from infected birds. The spread of avian influenza viruses from one ill person to another has been reported very rarely, and has been limited. However, (A) viruses are constantly changing, and they might adapt over time to infect and spread among humans.*
>
> *Influenza A H5N1 is an influenza A virus subtype that occurs mainly in birds, is highly contagious among birds, and can be deadly to them. H5N1 virus does not usually infect people, but infections have occurred in humans. Most recently, outbreaks of highly pathogenic avian influenza A (H5N1) among poultry have been associated with illness and death in humans in Asia, Africa, Europe, the Pacific, and the Near East. In the United States, from 1997 to 2005, there were 16 outbreaks of low pathogenic avian influenza A viruses (H5 and H7 subtype) and one outbreak of highly pathogenic avian influenza A (H5N2) in poultry.*
>
> *The highly pathogenic avian influenza A H5N1 animal outbreak in Asia, Europe, the Near East, and Africa is not expected to diminish significantly in the short term. It is likely that H5N1 virus infections among domestic poultry have become endemic in certain areas and that sporadic human infections resulting from direct contact with infected poultry and/or wild birds will continue to occur. So far, the spread of H5N1 virus from person-to-person has been very rare, limited and unsustained. However, this epizootic (transferrable from animals to humans) continues to pose an important public health threat.*[15]

[15] Center for Disease Control and Prevention website 2/6/2009. http://www.cdc.gov/flu/avian/outbreaks/

UAF researcher Jon Runstadler and his team have been researching biological mechanisms in birds (mostly ducks). How are the viruses transferred among birds? How are they transferred to humans? What are the risks to human health in Alaska?

The migration routes of many species of ducks cross paths where Alaska and Asia meet over the Bering Sea. There is potential for Asian ducks to spread H5N1 bird flu to Alaska and other parts of North America. If the highly pathogenic H5N1 were to occur in Alaska, there could be serious implications for the health of Alaskans.

The ability to work with Mark Lindberg, a UAF wildlife biologist specializing in ducks, facilitates Rundstadler's work because Lindberg has intimate knowledge of the life-cycle of ducks in Alaska. His knowledge of migration patterns also allows researchers to know when and where to intercept wild birds so that they can be monitored for various strains of avian flu.

Because of the capacity built by INBRE, Runstadler's team was able to acquire an NIH RO1 grant for the Center for Rapid Influenza Surveillance and Research (CRISAR). Awarded in 2007, this five-year, $3.8 million grant is a joint UAF, UCLA and UC Davis research project. This competitively funded research is a result of the capacity that was built from INBRE funding. The research involves surveillance and monitoring of birds in the US, Russia, Japan, China and Southeast Asia to see were there may be a potential threat of an outbreak of bird flu. The study looks at how the virus is carried and transferred as birds migrate around the Pacific Rim.

Monitoring Toxicants and Disease in Alaskan

UAF researcher Todd O'Hara and his team are studying contaminants, and infectious disease in the Arctic. What affect do they have on animals and people? Infectious agents and toxicants can be easily transmitted through commercial, sport and subsistence harvest in Alaska. O'Hara and his team study toxicants that can end up in the food chain, such as mercury, PCB's DDT, lead, and other pesticides. These contaminants can work their way up the food chain and eventually impact human and wildlife health. INBRE toxicology projects study animals that are at the top of the food chain such as arctic fox, polar bear and Stellar sea lions, and numerous subsistence foods.

INBRE investigator O'Hara has reported on how climate change may affect the distribution and accumulation of toxicants and infectious agents. There have been changes in the Arctic climate, and researchers are monitoring how changes may affect what Alaskan fish and animals eat. If diets change because of changing environmental conditions, will these animals be exposed to new or higher levels of toxicants and/or infectious agents? If so, how will this affect their health as well as the health of Alaskans who rely on fish and game for food?

Another of O'Hara's roles is to study and understand how infectious diseases are present in Alaska, and how they can be transmitted to the public via handling and consumption of fish and wildlife. For example, there have been periodic outbreaks of rabies in Arctic foxes on the North Slope; this is potentially hazardous to North Slope residents and oil field workers. When INBRE monitoring efforts find potentially harmful diseases such as rabies, they are reported to state epidemiology officials and the Center for Disease Control (CDC) via the appropriate management agencies (such as the Alaska Department of Fish and Game). The better these

outbreaks are understood, the better the public can be educated about the associated dangers, and the measures that can be taken to avoid contact with the diseases.

INBRE Outreach Sparks Excitement about Science

According to INBRE outreach coordinator Sue Hills, their goal is to get students (especially Alaskans) in the "pipeline" that leads to careers in health and science. The earlier they can get students involved in science the greater the potential that students will go on to study science and to make a career in science or health related fields. There is an acute shortage of qualified health care workers and scientists in Alaska. Students who have been involved in the program stay in school, and a high percentage have gone on to college, many in science and health. Many have returned to Alaska.

According to Hills, "if UAF can help get students interested in science and health care early on and provide them with some of the tools that will help them continue their education, we feel we can have a positive impact on filling health care and other science-related positions in Alaska with Alaskans."

INBRE has several programs designed to engage students in the sciences.

Alaska Rural Research Partnership (ARRP)

ARRP involves Alaskan high school students in scientific research in their own villages and encourages them to consider science and health care careers. The goal is to bring meaningful, hands-on science to rural schools using modern molecular biology. ARRP students study genetics of the animals that Native and rural children eat. Students are encouraged to graduate high school and go on to college (hopefully pursuing careers in the sciences).

Nearly 60 students, at six sites, from 11 villages, have been involved in ARRP. The students have looked at genes in caribou, reindeer, whales, and salmon. Students have also determined gender in humpback whales, investigated soil bacteria and parasites using genetics.

ARRP loans about $10,000 worth of lab equipment to each partner school, and provides chemical supplies, genetics training for teachers and students, and technical support. The school supplies students, teachers, and a small lab area. Students work during free periods or before or after regular school hours. ARRP sets up a complete genetics lab in the schools with equipment similar to what you would find in a UAF lab, such as a centrifuge (used to isolate DNA samples), a thermal cycler, a PCR (polymerase chain reaction) machine, pipettes, racks and other equipment. Students participate in either the Alaska Science Symposium or the Alaska State Science Fair. The presentations give them experience in critical thinking, scientific writing, and public speaking. Students have competed in local, regional and even national science fairs. Each student completing the project is awarded up to $1,500 as a scholarship to the college of their choice.

ARRP has been very successful. Of the approximately 115 ARRP students, most are Alaska Native. All participants have gone on to graduate from high school. Seventy-five percent of those graduates went on to attend college. To date, most have either graduated from college, or they are still attending school. Many of them are in science and health-related fields.

Alaska Summer Research Academy (ASRA)

The course was started in 2004 by a nurse at Fairbanks Memorial Hospital (FMH) in response to the serious shortage of nurses in Alaska. UAF and FMH teamed up in 2007. During two-week modules, students are exposed to several areas of health care services including handling traumas, x-rays, pharmacy, and operating room procedures. Learning about health care fields gives them an opportunity to think about careers in specific areas while they are still in high school and have time to adequately prepare academically for these challenging careers. The program has created a great deal of excitement; in 2008 there were more applications than spots available. ASRSA is a life-changing experience for many students.

The hospital is going to track students after they graduate high school (the first group graduated in 2008) to see if they continue in health and science-related careers. The hope is that some of them will take health care and science jobs in Alaska when they finish their education and help reduce the significant need for health care professionals in the State. ASRA is currently offered at four schools and will be adding four more schools each year, for the next five years.

Rural Alaska Honors Institute (RAHI)

RAHI was started in 1982. The program brings honors level students from rural communities, as well as Alaska Native honors students from semi-urban areas, to the UAF campus for six weeks. The focus is on math, English, and various science classes. Students who graduate earn between seven and 11 college credits.

RAHI II the Next Step started in 2007 with about a half-dozen students. RAHI students are introduced to more hands-on laboratory techniques, and they participate in real research side-by-side with top UAF scientists. The students take part in top-level experiments. They work with the same high-tech, expensive equipment that graduate students, PhD candidates and the researchers do. Students also earn college credits for their work.

UAF Student Support

Many undergraduate students are not sure if they want to go into a science or health-related degree program. INBRE helps them gain exposure to science in the labs. This helps them understand why they are taking calculus, chemistry, etc. They become comfortable with faculty and staff, and with basic lab procedures. The hands-on lab work and their personal contact makes them feel more comfortable when they are deciding whether to pursue science beyond the undergraduate level. INBRE also helps UAF students interested in medicine apply for the University of Washington's WWAMI program which is administrated through UAA. There are 20 scholarships available and nearly 100 UAF students who apply annually.

WWAMI is a partnership between the University of Washington School Of Medicine and the states of Wyoming, Alaska, Montana, and Idaho. The WWAMI program's purpose is to provide access to publicly-supported medical education across the five-state region. Each of the participating states designates a specific number of medical school seats. These are supported through a combination of appropriated State funds and student tuition which cover the full cost of medical education. The tuition paid by students in Wyoming, Alaska, Montana and Idaho is the same as that paid by Washington state residents. This allows for publicly supported medical education in states where no freestanding medical school exists.

Outcomes of the program at the University of Washington School of Medicine and WWAMI indicate that, over 30 years, 61 percent of graduating students stay within the five-state area to practice. Over the past 20 years, nearly 50 percent of graduating students have chosen to pursue careers in primary care. This is particularly important since 35 percent of the population in the WWAMI region lives in rural, generally underserved areas. Upon graduation, an estimated 20 percent of WWAMI graduates will practice in Health Professional Shortage Areas (HPSAs) following graduate medical education.[16]

[16] University of Washington Medicine website 2/7/2009 http://uwmedicine.washington.edu/Education/WWAMI/

Life Sciences Academic Programs

Life Sciences Programs

Through the Department of Wildlife and Biology in the College of Natural Sciences and Math UAF offers undergraduate and graduate programs in biology, botany, wildlife biology, chemistry, biochemistry, molecular chemistry, environmental chemistry, fisheries, marine biology, ocean fisheries, natural resources and agricultural sciences. A wide range of classes are offered in life sciences including: ecology, conservation biology, and environmental sciences; wildlife biology; zoology, animal physiology and animal behavior; plant biology; marine biology; cell and molecular biology; and genetics and evolutionary biology. There are a substantial number of students not pursuing a life sciences degree who enroll in Life Sciences courses for other reasons, including fulfillment of Core curriculum requirements.

This wide range of programs offers exceptional opportunities for Alaskans to engage in education that could lead to careers with policy-making agencies that are essential to our state such as the Alaska Department of Fish and Game, US Fish and Wildlife Service and the Nation Park Service.

When top researchers are attracted to UAF, they not only bring their research skills but also increase the number and quality of classes that can be offered at UAF. Additionally, the availability of high-quality research options provides critical hands-on experience for students to apply their academics. UAF must have high quality facilities for research and teaching to attract the best scientists to the campus. One example is Karsten Hueffer and assistant professor of microbiology. Hueffer came to UAF as a part of INBRE's capacity-building grants. Since arriving at UAF, Hueffer has added one class in infectious disease and another in virology. The availability of specific classes like these, taught by skilled scientists, benefits a range of students from those in pre-health to those looking for careers in research.

Enrollment

Total enrollment in UAF life sciences classes is nearly 1,200 students. UAF life sciences programs, most specifically biology, have seen the greatest increase in enrollments at UAF in recent years.

- With nearly 500 degree-seeking students, UAF biology and wildlife programs are among the largest degree programs in the entire UA system.
- The largest undergraduate enrollment increases at UAF have been in biology and wildlife, with an increase of 25 percent from 303 to 380 over a ten-year period (1998 to 2007). Total undergraduate enrollment in life sciences increased by 8 percent, from 473 to 513.
- There were just over 300 graduate students enrolled in life sciences programs. The largest increase over the ten-year period was in biology and wildlife, with a 48 percent increase from 76 to 119 enrollments.
- Undergraduate enrollment in biological sciences increased by 26 percent, from 217 in 1998 to 275 in 2007. Graduate enrollment in biological sciences increased by 170 percent, from 20 in 1998 to 54 in 2007.

Alaskan Graduates Benefit Alaska

Producing workers who have the skills needed by Alaskan businesses, government and agencies is a crucial contribution of UA to the economy of Alaska. In addition to providing the skills and services needed by the state, UA graduates also contribute to the Alaskan economy at a higher level than non-graduates (on average, university graduates earn substantially more over their lifetime than non-graduates).

Alaskan graduates tend to live and work in Alaska, helping the economy grow, and serving state residents. While there has not been a specific study of UAF life sciences program graduates, there are several indicators of the value these graduates offer to the state of Alaska and its residents.

A McDowell Group study of UA graduates[17] showed that in 2006, two-thirds of UAF graduates (from 1989 to 2006) were still living in the state of Alaska, and 54 percent were known to be working in the state. (Note: Employment information was based on private sector, state and local government employment. Graduates working for the federal government or the self employed were not counted. Therefore, it is likely that more than 54 percent are working in Alaska.) Rural Alaskan graduates have an even higher likelihood of staying in the state after graduation.

As of 2005, nearly three-quarters (73 percent) of the UAF graduates still living in Alaska worked in a field related to their UAF education. This high retention rate is an important element in creating economic growth within the state.

UAF Graduate Careers

The tables on the following pages show a sample of some of the agencies and businesses where UAF life sciences program graduates have been employed. The tables of employers and positions were compiled informally in October 2008 by UAF faculty for UAF masters and PhD graduates. The tables do not represent all UAF graduates, undergraduates or transfers. While not complete, the tables show the variety of important positions that UAF life sciences graduates have filled. Many of these positions have direct influence on issues that affect all Alaskans.

[17] McDowell Group, *The Economic Impacts of University of Alaska, 2007 Update* pg 53.

It is of particular importance to Alaskans that decision-makers in areas such wildlife biology and fisheries understand Alaska and our unique environment. It is clearly preferable to have a UAF graduate making decisions about how and when Alaskans are able to harvest moose or salmon, rather than a biologist trained in the lower 48.

UAF Graduate Careers in Alaska

Employer	Position
ABR Environmental Research Services, Fairbanks	Senior wildlife biologist
Alaska Biological Research	Biological technician
Alaska Center for Coastal Studies, Homer	Director of Programs
Alaska Department of Fish and Game, Anchorage	Area wildlife biologist, assistant area biologist, wildlife biologist, research biologist, fisheries biologist, non-game biologist, statistician, wildlife technician
Alaska Department of Natural Resources, Fairbanks	Natural resource specialist
Alaska Sea Life Center	Research biologist
Fairbanks Christian School	Science teacher
Fairbanks North Star Borough School District	Develop curricula on invasive plants
Flint Hills, Fairbanks	Chemical technician
Hart-Crowser, Inc., Anchorage	Wildlife biologist
Juneau School District	K-12 Teacher
National Park Service, Gates of the Arctic	Research biologist
National Park Service, Denali	Ecologist
National Park Service, Glacier Bay	Research scientist
National Park Service, Wrangell-St. Elias	Biological science technician
Nature Conservancy, Anchorage	Biologist
North Pacific Halibut Commission	Research biologist, analyst,
Petersburg High School	Biology teacher
Providence Hospital	Resident, family medicine
Scenarios Network for Alaska Planning (SNAP)	Network coordinator
School of Fisheries and Ocean Sciences, UAF, Fairbanks	Assistant professor of Marine Mammalogy
US Bureau of Land Management, Glennallen	Wildlife biologist
US Fish and Wildlife Service, Anchorage and Tetlin	Wildlife biologist
US Fish and Wildlife Service, Environmental Contaminants, Fairbanks	Biologist
US Fish and Wildlife Service, Migratory Bird Management, Anchorage	Pilot-biologist
US Forest Service	Research technician, staff scientist
US Forest Service, Petersburg	Botanist
US Forest Service, Yakutat	District forester
US Geological Survey, Alaska Science Center, Anchorage	Research biologist, wildlife biologist, research geneticist

Many UAF life sciences graduates hold key positions in national and international organizations, agencies and schools such as those listed below.

UAF Graduate Careers Outside Alaska

Employer	Position
Ducks Unlimited	Biologist
Middlebury College	Affiliate Faculty
National Park Service	Research Technician, data manager
National Park Service, Painted Rocks, Michigan	Research Biologist
NOAA, National Marine Fisheries Service, CA	Analysis Specialist
Olympics National Park	Staff Scientist
Sierra Nevada Aquatic Research Laboratory, CA	Aquatic Biologist
State University of New York (SUNY) Syracuse	Assistant Professor
Syracuse University, New York	Assistant Professor
University of Oklahoma	Affiliate Assistant Professor
University of Puerto Rico	Assistant Professor
Utah Department of Natural Resources, Provo, UT	Endangered Species Specialist
Yukon Flats NWR	Biologist
Yukon Government	Caribou Biologist
Yukon River Intertribal Watershed Council	Water-quality Monitoring Technician
Yukon River Intertribal Watershed Council	Science, Research, and Mapping Technician
Zymogenetics, Inc., WA	Scientist

Benefits of a New UAF Life Sciences Building

Research Space

There is a current lack of space for researchers at UAF, and many of the facilities are not comparable to high quality labs at competing universities. High-quality research facilities (labs and equipment) are required to attract the caliber of researchers needed to enhance and expand current UAF programs. A new life sciences building will greatly increase UAF's ability to attract high-quality researchers. Adding these talented researchers will also facilitate additional staff positions for post graduates, post doctorates and lab technicians.

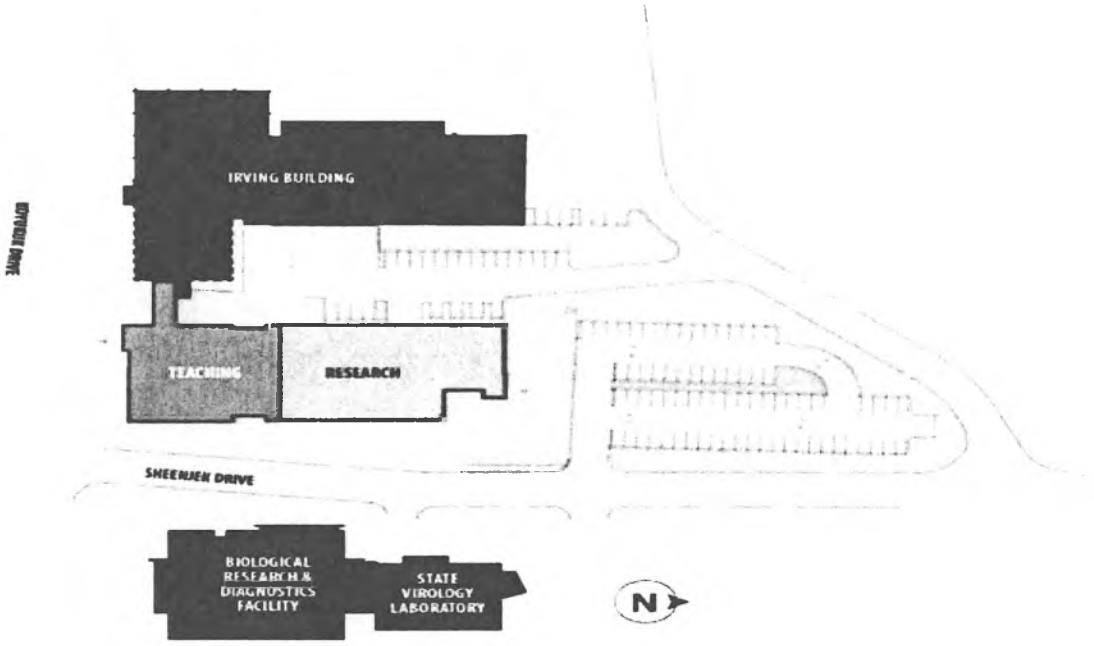
Academics

At UAF there is a serious need for modern classrooms that are appropriate for teaching modern science in fields such as marine biology, cell and molecular biology, and genetics. Most of the current science class rooms and laboratories were built in the 1960s. Some Alaska high schools like West Valley and Barrow have newer lab facilities for teaching than those currently available at UAF.

The Need for a New Life Sciences Facility

BIOS

The original solution to the academic and research space problem at UAF was the Biological Sciences Facility (BIOS). The BIOS facility was originally proposed in FY08 with a total square footage of 110,000 square feet. The plan called for 40,000 square feet of teaching space and 70,000 square feet of research space. The cost of the facility in FY08 was $105 million. The $105 million capital budget request was not funded by the legislature in FY08. In FY09, inflation had increased the cost of the facility to $113 million. The $113 million request was not approved in FY09.



UAF Life Sciences Innovation and Learning Facility

The Life Sciences facility is the UA Board of Regents' number one new capital priority for the UA system. Because of the desperate and immediate need for a new life sciences facility, the UAF project team felt that in order to increase the likelihood of funding for a building, the facility plan should be redesigned to reduce the overall cost, and additional funding should be provided by UAF. The new facility was named the UAF Life Sciences Innovation and Learning Facility and scaled down from 110,000 to 87,000 square feet. The total cost of the new project is $102.8 million. UAF committed to non-General Fund support for 20 percent of the new facility. The FY10 capital budget requests General Funds of $82.2 million with non-General Fund support from UAF of $20.6 million for the Life Sciences facility.

The Life Sciences Innovation and Learning facility is designed to meet the critical need for updated classrooms (both instructional space and lab space) and provide much-needed space that will allow UAF's research programs to continue to grow. The facility will feature 37,000 square feet of academic space, including

approximately 40 classrooms with computer and lab capabilities and a lecture hall capable of seating 80 students. The research space, at 50,000 square feet, will provide 18 research labs and 10 support labs. Additionally, there will be lab space for 12 primary investigators, 36 graduate students and 12 post doctoral researchers.

Life sciences Innovation and Learning Facility Proposed Location

The facility is designed to be constructed in two phases. (The preferred solution is to complete the entire facility in one phase, but it can be completed in two phases if necessary.) The research portion would be constructed first. This would allow for continued growth in research revenues that are critical to UAF and the entire UA system while additional funding is sought to complete the academic portion of the building.

Interaction

As UAF works to transition from their life sciences capacity-building grant programs to seek more competitive grants, they must develop a critical mass of qualified researchers. If additional top-notch scientists can be attracted to UAF, they will in turn attract high quality research staff and students. This critical mass is important to create an atmosphere that enhances teaching and research, and stimulates intellectual growth among faculty and students. It is critical to get Alaskan students excited about research in science and health-related subjects because it will make them much more likely to stay in Alaska.

Because UAF is a small campus with exceptional scientists, undergraduates have the opportunity to work closely with them. Undergraduates actively participate in research at UAF, and their work has even been published alongside top researchers. Students usually do not find these types of opportunities on larger campuses.

Currently biology and other life sciences classes are spread all over campus (mostly away from the building where research is conducted), making logistics difficult for students and faculty – especially when there is a need for laboratory access. New classrooms, all located in the new life sciences building with close proximity to labs and faculty offices, would allow more students to come in contact with research and possibly spark an interest in a life sciences or health-related carrier.

If the new Life Sciences building is completed and UAF is able to attract new high-level research scientists to the campus, these researchers would also teach, increasing the level of academic delivery. This would bring new areas of expertise to the UAF program and build even more capacity for future research. Currently, UAF has to look outside to find top researchers to fill these high-level positions. As life sciences research and academic programs move forward with high-level teaching input from these new researchers, UAF hopes to grow more of their own future researchers.

Proximity to State Virology Lab and BiRD Building

The new Life Sciences facility will be located in the heart of the UAF research campus, on the West Ridge across Sheenjek Drive from the new Alaska State Public Health Virology lab and the Biological Research and Diagnostic facility (known as the BiRD building). Both facilities are heavily used by life sciences researchers. All three facilities would be interconnected. The Life Sciences building would be connected by an underground walkway with the State Public Health Virology lab; the BiRD building is adjacent to the virology lab.

Alaska State Public Health Virology Laboratory

The new $35.5 million Alaska State Public Health Laboratory opened in early 2009 on the UAF campus. The facility provides important routine testing for HIV, hepatitis rabies, rubella, mumps, herpes, rabies, influenza as well as testing for other potentially serious threats to public health such as SARS infections, avian flu, West Nile Virus infections, and norovirus infections. Virus detection services are provided to private and public health care providers throughout the state. The lab also monitors and reports incidents of the outbreaks of disease to national, state and local authorities, and e-mails a weekly report of recent virus disease activity to physicians, nurses, and other interested individuals around the state.

While the Alaska State Public Health Virology lab provides identification and monitoring serves that contribute to public health, to date they have not been tasked with studying what they find. Locating the new Life Sciences facility in close proximity to the Alaska State Public Health Virology lab will allow for close coordination of the virology labs' monitoring function and the high-level research functions available at UAF.

According to Dr. Bernd Jilly, Chief, Alaska State Public Health Laboratories, locating the new state lab on the UAF campus near scientists who conduct basic and applied research was extremely important. The state does not currently have a clinical virologist. They are trying to create a senior virologist position that will be co-funded by the state and UAF. By combining resources with UAF, they will enhance their ability to attract a top quality scientist. This position would run the lab, teach classes at UAF and do basic virology research.

The virology lab will be able to more closely monitor what diseases are present in the state. For example, flu strains start in China, then move east through Alaska, the US and on to Europe. If strains can be identified early, therapies can be developed in time to help prevent serious health problems in other parts of the

country and the world. Another issue of concern is norovirus. Over the last few years, bouts of norvirus have taken place in Southeast Alaska. Likely transferred from cruise ship passengers, the illness can lead to dehydration from loss of body fluids. If outbreaks can be quickly identified, the number of infected people can be reduced. By having a high-level virology scientist available, the state can likely reduce the incidence of illness in Alaska, resulting in less days of missed school and work (which can have a negative economic impact on the state).

Additionally, the state wants to develop a Level III laboratory where potentially dangerous microbes (such as rabies) can be safely studied. UAF currently has the researcher capability but not the laboratory capability to study level II microbes.

BiRD Building

Locating the new Life Sciences facility in close proximity to the BiRD building provides researchers with direct access to this state-of-the-art animal facility. The BiRD facility meets the specific needs of modern researchers by providing them with modern tools for their research. Close proximity allows researchers to better coordinate acquisition of lab animals such as rats and mice without exposure to inclement weather and potential contamination.

Economic Impacts of Life Sciences

Construction Impacts

There will be a substantial level of short-term employment and economic activity in Fairbanks and in other areas of the state related to the construction of the Life Sciences facility.

The original BIOS facility was estimated to cost $105 million[2]. The new Life Sciences facility is proposed to cost about $102.8 million. McDowell Group made slight adjustments to the BIOS impacts estimates to reflect the slightly lower Life Sciences facility cost. This resulted in an estimated $170 million in total economic output (direct, indirect and induced) that includes $80 million in labor income, and annual average employment of 370 workers (in construction and other sectors of the economy) over a four-year construction period for the new facility. A total of nearly $145 million ($102.8 million for construction, plus $42 million in indirect and induced spending) would enter the Fairbanks economy.

The economic effects of this project would benefit other areas of the state, primarily Anchorage, Mat-Su and the Kenai Peninsula. To a large degree, Anchorage is the commercial hub for all of Alaska. Construction companies, engineering firms, wholesalers and retailers, and many other types of businesses are headquartered in Anchorage. Further, large volumes of freight destined for the Interior move through the Port of Anchorage. With half of Alaska's population, the Anchorage area (in combination with the Matanuska-Susitna Borough and Kenai Peninsula Borough) is home to a large pool of skilled construction labor. Because of this, construction activity in the Interior stimulates economic activity in Southcentral Alaska.

[2] The Economic Impact of the University of Fairbanks Biosciences Facility (BIOS) McDowell Group, 2006

Total economic output (direct, indirect and induced) for the Southcentral region of the state from construction of the new Life Sciences facility would be nearly $20 million, with total annual average employment of about 50, and total payroll of about $8 million. The vast majority of these benefits would occur in the Anchorage area.

Research Spending

The new Life Sciences building will also facilitate long-term employment and spending in Alaska. The most significant UAF direct research expenditures are for wages and benefits. Other expenditures include items such as contracted services, equipment, commodities, travel, and student aid, and are purchased within the state. While UAF research spending has the greatest impact in Fairbanks and the vicinity, a significant amount of UAF research spending takes place in Southcentral Alaska. According to the McDowell Group,[18] one-third of all UAF spending takes place in the Anchorage and Mat-Su areas.

The Economic Value of Researchers

One way to estimate the economic value of a researcher to the state is to take an average of the research revenue a top-level researcher is expected to bring and look at the multiplier effect. According the economic modeling system IMPLAN, for every dollar spent on university research in Alaska, there is additional economic activity worth $0.70. [19] On average, an experienced top-level researcher would be expected to bring in annual grants worth between $300,000 and $1 million to fund research (including a portion of their salary and benefits, and the salaries and benefits of a research team).

Multiplying the average range of $500,000 to $600,000 in grants acquired per year, per researcher, by the 1.7 IMPLAN multiplier used for university research in Alaska[20] results in a range of $850,000 to $1.2 million in economic activity for the state, per researcher. Therefore, 12 research positions at UAF represents approximately $10.2 million to $12 million in economic activity for the state.

In general, the largest portion of research expenditures are for wages and benefits. Looking at just the value of wages and benefits generated by a research team provides another measure of a researcher's economic value. There is variability in the size of team that a researcher is able to assemble. Factors that can shape the content of a research team include total funding, subject matter, and availability of lab space. Currently, an average research team at IAB consists of one researcher, one graduate student and one or two technicians. Wages and benefits paid to research teams are in the range of $350,000 to $400,000 annually. For the purpose of this example we will use an average of $375,000 per team. The current facility plan has room for 12 primary investigators, as well as 36 graduate students and 12 post doctoral researchers. A dozen research teams worth an average of $375,000 in wages and benefits would result in approximately $4.5 million in direct wages and benefits.

A realistic scenario when the new facility is built will be movement of eight to ten current researchers (who need an updated facility) to the new building and the addition of two to four new researchers. As researchers move from their current space into the new facility, the space they vacate will be rehabilitated and used by

[18] McDowell Group, *The Economic Impacts of University of Alaska, 2007 Update*
[19] Minnesota IMPLAN Group, *IMPLAN Professional Version2.* 2006: Stillwater, MN
[20] Ibid

other researchers (also increasing their potential to acquire new grants). It seems reasonable to assume that, based on a facility with space for 12 researchers plus the resulting space made available by intercampus moves, UAF could see an increase in new research-related wages and benefits in the range of about $1 million to $3 million annually. In addition to these wages and benefits, there would be increases in direct spending for goods and services. Indirect and induced impacts would have further positive effects on the Alaskan economy.

WASHINGTON RESEARCH COUNCIL Economic Profile

November 2009

WASHINGTON LIFE SCIENCES ECONOMIC IMPACT STUDY

ACKNOWLEDGEMENTS

Washington Research Council has produced this report with funding from We Work for Health. The results of this analysis are the sole responsibility of the Washington Research Council, a nonprofit organization committed to objective analysis of economic and public policy issues in Washington State.

The life sciences have been a rapidly growing part of the world economy as major scientific advances in the past few decades have opened the promise of substantial improvements in health, agriculture, energy and the overall quality of life. These advances have provided cures for diseases and mitigations of a wide range of disabilities common in the industrialized world. They also hold the promise of alleviating widespread suffering and death in developing countries where infectious diseases and poor health infrastructure are common. Agricultural advances have improved crop yields and created promising new sources of renewable energy.

Significant parts of this exciting activity are happening in Washington. Important scientific discoveries are being made by both start-up and established bio-pharmaceutical companies that are turning their innovations into useful products and services. The state's research universities and not-for-profit institutions contribute immensely to the scientific exploration and innovation taking place in the field. And in a short period of time, the state has become a major center for global health, leading efforts to eradicate disease and improve the lives of billions of people.

All of this activity, which has been growing quietly for decades, adds up to an important part of the state's economy. But because it involves a diffuse group of organizations without clearly delineated markets, it is difficult to recognize. Although the life sciences may not meet the exact definition of a "cluster," this group of enterprises and institutions certainly contains many of the characteristics of a self-sustaining activity around which economic development strategies can be built. Hence, we will refer in this report to the "life sciences industry."

This industry is important not only because of its size, but also because of its potential for growth. As societies become wealthier they tend to consume healthcare services at higher rates, and science and technology keep providing new products and services that have value to consumers. The new emphasis on global health increases the need for products and services aimed at developing countries, and the push for reducing carbon emissions is leading to a gold rush for renewable biofuels.

Measuring the life sciences industry is a challenge. The data normally used to undertake economic impact analysis simply does not exist for it. Activities in the life sciences cut across various industry and employment classifications, making it difficult to quantify the industry. Therefore, this report will use a combination of quantitative methods to indicate the economic impact of the life sciences, and qualitative descriptions to show the ways in which these industries shape the economy now and how they will grow in the future.

THE LIFE SCIENCES INDUSTRY AND WASHINGTON'S ECONOMY

The life sciences industry forms an important and growing segment of Washington's economic base – that is, enterprises that bring in money from out of state and export value to the rest of the nation and the world. The earnings of the economic base are what allow us to import consumer products, such as cars or appliances or clothing, that are made elsewhere. Dollars earned by those working in industries that make up the economic base circulate within the state to create jobs in retail, construction and other local services.

Life Sciences Profile

Name:	Amgen
Location:	R&D facility in Seattle. Manufacturing facility in Bothell.
Year founded:	1980.
Structure:	Public corporation
Employees:	~900 in Washington; 16,000 worldwide .
Annual sales:	2008: $15 billion

Business. Amgen is the largest biotechnology company in the world and the largest commercial biotechnology company in Washington state.

Patients suffering from the greatest unmet medical needs are Amgen's first priority. Amgen therapeutics have changed the practice of medicine, helping millions of people around the world in the fight against cancer, kidney disease, rheumatoid arthritis, and other serious illnesses. Approximately 90 percent of the new molecules that Amgen is bringing into the clinic target pathways that have never been previously addressed in humans.

The company has facilities around the world, and its Seattle campus is the largest R&D site outside of its headquarters. Amgen's hundreds of Seattle-based scientist are dedicated to developing novel approaches to treating cancer and inflammatory disease.

Growth potential. A pioneer in biotechnology, Amgen will celebrate 30 years of helping patients in 2010. Amgen currently has eight marketed products, and 50+ molecules in development from late discovery research through phase 3. The company is pursuing programs in bone, cardiovascular disease, inflammation, metabolic disorders, nephrology, neurosciences, oncology and hematology; with nearly 300 active studies and more than 45,000 patients enrolled in Amgen clinical trials in more than 50 countries.

The analysis in this report conservatively estimates that the various segments of the life sciences industry directly employ over 22,000 people in the state. Those jobs may support as many as 55,000 additional jobs throughout the state's economy. This puts life sciences on par with the state's computer and electronics products manufacturing industries

But unlike electronic products, or other familiar industries such as aerospace, food products, software or tourism, life sciences is not an easy industry to grasp in the mind's eye. When we think of a sector of the economic base, we typically think of industries that are dominated by the private sector, such as aerospace or software, or are totally public sector, such as the military. The life sciences, by contrast, comprises private sector firms, not-for-profit research organizations, and public universities and laboratories. The work of the life sciences can move fluidly among these organizations, beginning, say, with a privately funded discovery in a university laboratory, which moves to a non-profit laboratory for further refinement, and then to a private firm for commercialization.

Making things even more complicated is that key personnel also move fluidly among the institutions. Researchers may be on the faculty at a university, hold a fellowship at a research institute, and also have a stake in a for-profit firm. Individuals can shift among these sectors as new opportunities arise.

Perhaps the best way to view the life sciences is to think of it mostly as the creation of knowledge and intellectual property. While the state does have employment in the production of products and services pro-

vided directly to the healthcare, agriculture or energy industries, the bulk of the output of the life science industry in the state is scientific discovery and the translation of discovery into the design and engineering of useful products. This means that the most important policy direction for enhancing the industry in the state is one that promotes innovation, protects intellectual property, and enhances the ability of the industry to attract and retain its most important "capital" assets, its people and the tools they need to do their work.

Life Sciences Profile

Name:	Spiration, Inc.
Location:	Redmond
Year founded:	1999
Structure:	Private corporation
Employees:	45
Annual revenue:	N/A

Business. Spiration has developed a device, the IBV Valve System, that is implanted in lungs to prevent air from getting to damaged areas of the lung. The product is intended mostly for use with patients with emphysema, redirecting airflow to healthier areas of the lungs where it can be processed. It can also be used seal lungs following surgery.

The IBV valve system has been approved for use in Europe for all applications. It received a Humanitarian Device Exemption from the FDA, allowing the device to be used on a limited basis for patients having had lung surgery. The device is still under clinical trials in the U.S. and Canada for general use.

Growth potential. Emphysema is the most common form of lung disease in the U.S., and one of the most common causes of death overall. There are no cures for the disease, and the treatments currently available can only slow progression of the disease and relieve symptoms. Around 2 million Americans suffer from the disease, although it is not clear how many of those would be at a stage where Spiration's products would be applicable. But according to company literature, The IBV Valve is the only device of its type in use today. So, once approved, the device could have wide applicability.

On this last point, one thing is critical: size. Agglomeration economics suggests that the larger the pool of people doing similar work, the more productive those people will be. Concentrations of people lead to the sharing of ideas and perspectives, and maximizes the likelihood that individuals will find the best place to use their talents. Furthermore, a large industry presence decreases risk for individuals by increasing the possibilities for employment should they need to leave their current job. Areas with larger industry concentrations tend to be more attractive place to pursue a career. We can think of the life sciences industry as increasing in quality and vitality exponentially with size. Thus, the discussion below about Washington's success along various metrics with respect to other states is not about bragging rights but about the viability of the industry.

Describing the life sciences industry

The components of the life sciences industry can be categorized in many ways. We will describe the industry in four categories, based roughly on the output or end user of the technologies being developed and sold. While there is some overlap among them, these groupings tend to be the ones within which organizations collaborate and within which individuals move throughout their careers.

Biopharmaceuticals. This category of organization works to develop and sell drugs aimed at curing or mitigating a wide range of disorders, particularly those of concern in industrialized societies. Much of the research that forms the basis for these products begins in privately funded research facilities owned and operated by the bio-pharmaceutical industry, in university laboratories, or in organizations such as the Fred Hutchinson Cancer Research Center in Seattle. Individual for-profit firms, often labeled "biotechnology" companies, can begin with discoveries from universities or laboratories, or with their own proprietary discoveries. But whatever the origins and path of the

technology, the final goal is a pharmaceutical product that gains FDA approval and has a promising market share.

The challenge in the biopharmaceutical business is that capital requirements are extremely high, along with the risk of failure. Investors must put up huge amounts of cash to fund research and clinical trials, always aware that the promised breakthrough may never arrive or that the product may be rejected by regulators. When a firm does achieve success, the outcome is frequently to sell the successful product, or the entire firm, to a large pharmaceutical manufacturer that undertakes production, marketing and distribution.

Life Sciences Profile

Name:	IsoRay Medical
Location:	Richland
Year founded:	1998
Structure:	Public Corporation
Employees:	37
Annual revenue:	'07 –'08: $7.1 million; '08 –'09: $5.4 million

Business. IsoRay Medical was founded to produce therapeutic medical isotopes and associated devices for treatment of solid tumor cancers. Its current sales are based on brachytherapy seeds for the treatment of prostate cancer. The company's major breakthrough was in developing a method of using cesium-131 isotopes which, according to company literature "are expected to decrease radiation exposure to the patient and reduce the severity and duration of side effects, while treating cancer cells as effectively, if not more so, than Iodine-125 or Palladium-103."

The firm expects to expand beyond treatment of prostate cancer and develop treatments for breast, liver, lung and pancreatic cancers. The product has been cleared for these treatments.

IsoRay obtains its radioactive materials from laboratories in the United States, and, increasingly, from laboratories in Russia. Its 15,000 square foot manufacturing facility is located in the Applied Process Engineering Laboratory, an incubator facility in Richland operated by Energy Northwest.

Growth potential. IsoRay believes that its cesium based product has the potential to become the leading seed therapy choice among clinicians. The cancers treated by IsoRay products will occur in hundreds of thousands of patients in the U.S. alone, and the firm still has relatively low market penetration for these treatments. If it can expand beyond the relatively small number of treatment facilities currently using its products, IsoRay has the potential to significantly expand production and sales.

Thus, although the state has seen its share of breakthroughs in biopharmaceuticals, it has not seen many large firms grow out of those. A pattern has emerged 30 years after the first biotech companies formed: the state's formidable talents and resources for research and development of pharmaceuticals support a robust and valuable research industry, but the state's lack of competitiveness as a manufacturing site inhibits the growth of large production and distribution facilities. From an economic development perspective this is a good-news, bad-news story. The good news is that the state continues to attract highly skilled researchers who are paid well and boost the state's average wages. The bad news is that manufacturing jobs do not follow.

Medical devices. This sector produces hardware and its accompanying software, as well as implanted devices, for use in medical diagnostics and treatment. This industry pre-dates the emergence of biopharmaceuticals in the state, with several firms growing out of technologies developed at the University of Washington in the 1970s. In particular, medical ultrasound was developed at the UW, and several firms have spun that technology out into large imaging companies.

The medical device companies face many of the same capital and regulatory hurdles that the biopharmaceutical firms do, but approvals can be shorter, especially for diagnostic equipment. FDA approval for therapeutic and implanted devices, however, can be quite complex and expensive. Manufacturing of medical devices is very complex and costly, as these devices must meet exacting standards.

There is continuing national and global consolidation in the medical device field, and medical device firms are frequently acquired once they

become successful. If the target of the acquisition is simply intellectual property, an acquired firm may lose its presence in the state. But many firms have been acquired by large multi-nationals and kept their state presence. Manufacturing operations, however, can be vulnerable to outsourcing or inter-firm consolidation.

Global health. This collection of organizations cuts across both the biopharmaceutical and medical device categories, but also includes groups that address the management and delivery of health services. Global health efforts operate at several levels. First are efforts to develop new products to prevent and treat diseases that are common in developing countries but that have been given little attention by Western pharmaceutical companies. Second is to promote the distribution of existing medications and vaccines in areas that need them, with the goal that no one should die of a disease that we already know how to cure. Third concerns the development of healthcare infrastructure in developing countries.

As one might imagine, much of the activity in global health is carried out by universities and non-profit research institutions. Washington has seen a significant expansion in such organizations, and is thought by many to be second only to Geneva in its concentration of global health assets. But with the need to produce large quantities of healthcare products destined for developing countries, there are also private firms now targeting those markets. The scale of global health efforts, however, tends to favor large, established firms rather than small start-ups. With the leadership of the Gates Foundation, the World Health Organization and other agencies, the perception that there is no money to be made in global health is changing rapidly.

In a 2007 study, "Economic Impact Assessment of Global Health on Washington State's Economy," an interdisciplinary team at the University of Washington found that global health activities aimed at developing countries produced over $700 million in direct economic activity in the state in 2005. This activity produced 3,650 direct jobs and 10,470 additional jobs throughout the economy. The study found that global health activities at the University of Washington and Washington State University are worth about $130 million per year.

Life Sciences Profile

Name:	Seattle Genetics
Location:	Bothell
Year founded:	1998
Structure:	Public corporation
Employees:	260
Annual revenue:	2007: $22 million; 2008: $35 million

Business. Seattle Genetics describes itself as "a clinical stage biotechnology company advancing a broad product pipeline of antibody-based therapies." Its technology is aimed at treating cancers and autoimmune diseases, and currently has a number of products in the pipeline.

Seattle Genetics' lead product, SGN-35, is currently in pivotal trials with patients experiencing recurring Hodgkins Lymphoma. Three other products for treatment of cancer and autoimmune disorders are also in clinical trials. Even though it has no products on the market currently, the firm does receive revenue from large pharmaceutical firms that partner with Seattle Genetics in the use of its proprietary antibody-drug conjugate (ADC) technology.

The firm has a long term strategy of leveraging its ADC technology and continuing to move new discoveries into the approval pipeline. This is a capital intensive business: in 2008, Seattle Genetics spent $111 million on research and development, and another $16 million on operations, while bringing in $41 million.

Growth potential. The cancers that are the target of Seattle Genetics' initial products affect tens of thousands of people in the United States alone each year. Although initial remission rates have been climbing, substantial numbers of patients have recurrences that would be treated by these products.

Key to the firm's strategy is to maintain an active research program that continually looks for new products and technologies that can feed into the pipeline for eventual clinical trials. Its most recent SEC filings indicate that the firm has six products in various stages of testing, in addition to SGN-35. Seattle Genetics also has six active collaborative agreements with other biopharmaceutical firms for use of its ADC technology.

Agriculture, energy and environment. The life sciences do not stop with medicine. The state has active research and industries in plant and animal sciences to improve agriculture, and, increasingly to develop sustainable biofuels. The state's two research universities are heavily involved in these areas, as is the Pacific Northwest National Laboratory in Richland.

Life Sciences Profile

Name:	Signature Genomics
Location:	Spokane
Year founded:	2003
Structure:	Private LLC
Employees:	107
Annual revenue:	N/A

Business. Signature Genomics Laboratories provides diagnostic testing for a wide range of disorders in its "state-of-the-art array-based comparative genomic hybridization (array CGH) diagnostic laboratory." The firm's testing services are based on proprietary technology embedded in its SignatureChipWG, SignatureChipOS, and Signature PrenatalChip.

Signature Genomics was formed in partnership with Pathology Associates Medical Laboratories and Sacred Heart Medical Center in Spokane. The laboratory began offering testing services directly to clinicians in2004, one year after opening the firm. The laboratory in Spokane accepts direct shipments of samples. Over 30,000 cases have been processed.

Growth potential. In just a few years Signature Genomics grew from three employees to over 100, offering its services nationally. Diagnostic testing is a competitive business, but Signature Genomics growth attests to the strength of its proprietary technology, and future growth will depend on keeping that technology current.

The nation's first attempts to radically increase the use of biofuels – ethanol and bio-diesel – did not turn out well, due to the unsustainability of the stream of feedstocks. Researchers and entrepreneurs are in a race to find ways to create feedstocks that do not compete with food sources, do not use excessive resources, and do not, themselves, result in high output of carbon during production.

This is an intensely competitive business right now, with scientists and engineers around the world looking for ways to extract fuel from various plants and algae, and it is likely that only a few technologies will emerge as winners. So, unlike biomedical industries, where there are thousands of disorders in need of attention, there are just a handful of fuels that need renewable substitutes. The risk for these businesses is very high, but given the amount of fuel that needs to be created, the corresponding rewards are very tempting.

What about healthcare? The delivery of healthcare services—hospitals, clinics, doctors, laboratories—is not included in the definition of life sciences for purposes of this report (we do count research performed at some medical institutions in the state, as specifically delineated by those institutions). The reason for omitting healthcare itself is that the vast majority of healthcare services performed in the state are consumed by residents of the state, and therefore do no constitute part of the state's economic base. It is true that patients do come to Washington from other states and nations to receive specialized care, but those exported services are not measured in any systematic way.

Very little of the output of Washington's life sciences industries is offered at the retail level. The industries, firms and organizations described in this report are in the business of scientific discovery and the translation of that discovery into useful products and services that can be "wholesaled" to healthcare and other "retailers" around the world. Often, the underlying goal of start up firms in the life sciences is to develop valuable intellectual property that can be sold, rather than to develop a viable long term business.

DIVERSE SOURCES OF REVENUE

Describing the life sciences industry is further complicated by the unusual ways in which money flows into the state to the industry: it is often quite different from other parts of the economic base. We can easily imagine money flowing into Washington to purchase aircraft or geoducks, or to pay fees for architectural services or for a hotel stay. We can also imagine money flowing in for payroll at military bases. Large parts of the life sciences industry, however, do not bring dollars into the state in traditional ways – but the dollars are just as green. Sources of revenue for the life sciences industry include:

Internal company funds. Many life sciences firms in Washington are branches of national or global firms, either under their own name or their parent company name. The research and development operations of these firms in Washington are funded by internal operating funds of the parent firm. For example, Amgen's R&D facility in Seattle is one of just four in the nation, with its payroll and operating costs paid for by revenues generated though Amgen's global sales of pharmaceutical products. Amgen reports that in 2008 it spent over $3 billion companywide on R&D, or about one third of its operating expense.

Venture Capital. Research and development activities that take place within private firms with an eye toward commercial products are funded mostly with venture capital. While the state does have a robust venture capital community that attracts investors from within the state, most venture funding still comes from out of state, and most of the investors in those funds are not from Washington. In many respects, the investors in these venture funds are paying firms in the life sciences industry of the state to produce intellectual property that will eventually be sold at a large profit.

Figure 1
Venture capital in Washington

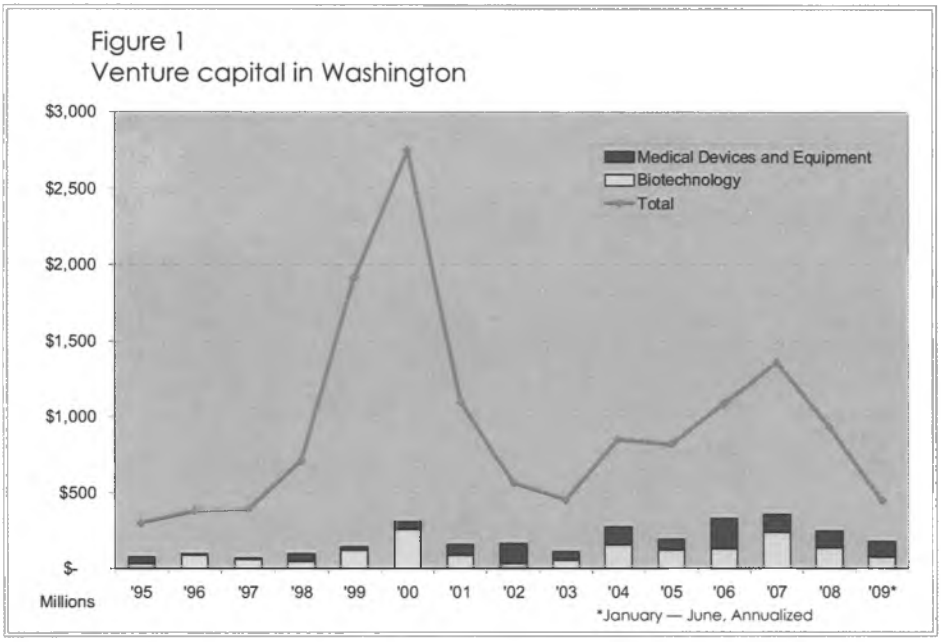

Figure 1 shows venture capital placements in Washington since 1995. The bars show funds going to life sciences, firms, both biotechnology and medical equipment. The line shows the trend in total venture capital investments in the state, reflecting the very high rate of investment during the dot-com boom of 2000. Investments in the life sciences have been more steady, if not as spectacular. Investments in the life sciences now account for about 40 percent of venture capital invested in the state. Figure 2 shows the venture capital deals in the life sciences in Washington that were placed in the second quarter of 2009. In that quarter, three times as much funding went into biotechnology firms as went into medical devices.

Federal research grants. The state's two research universities, the Pacific Northwest National Laboratory, the Fred Hutchinson Cancer Research Center and other non-profit research centers attract billions of dol-

lars in research funding for the life sciences. Most of these grants are competitive, so in many respects, these institutions compete for customers like any service business.

The federal government has long made a commitment to basic research that is not directed at solving any particular problem. Thus, much of what is discovered is not tied to any product or immediately usable outcome, but simply advances knowledge in certain areas. We can think of the state's life sciences research capacity as an industry in itself, rather than as simply a stop on the path toward commercialization.

The vast majority of federal research funding for the life sciences comes through the National Institutes of Health (NIH). In 2008, NIH awarded 1621 separate grants in Washington, totaling $761 million, for an average grant of $470,000. Figure 3 shows the recipients of NIH funding in Washington that received at least $2 million during 2007 and 2008. Figure 4 provides brief descriptions of the top ten grants awarded in 2008.

Foundation grants. The research organizations that receive federal grants also receive grants from private foundations. The largest of these,

Life Sciences Profile

Name:	Pacific Northwest National Laboratory (PNNL)
Location:	Richland
Year founded:	Current contract with Battelle signed in 1965
Structure:	Owned by U.S. Department of Energy. Operated by Battelle.
Employees:	4,600 (all scientific areas)
Annual volume:	$880 million

Services. PNNL is one of ten laboratories owned by the U.S. Department of Energy (DOE). Its mission is to conduct basic research for the department, as well as other federal agencies and private entities. The laboratory is operated by the Battelle Memorial Institute, which operates three other national laboratories.

As would be expected by its ownership, PNNL has a heavy concentration in research on energy, and within this concentration, the lab does extensive work in the area of sustainable biofuels. Current projects include efforts to convert biomass into usable substitutes for gasoline and diesel fuel. PNNL also has an extensive practice in environmental remediation and protection.

PNNL's biological sciences division has a staff of 200 and receives substantial funding from both DOE and NIH.

The laboratory's size and scope make it a natural partner for researchers across the Northwest. Recently, a partnership between PNNL and Washington State University resulted in the opening of the new Bioproducts, Sciences, and Engineering Laboratory, a 57,000-square-foot, $24.8 million facility in Richland.

Growth potential. Because of its diverse funding sources it is difficult to estimate the growth potential for PNNL. It did see 20 percent growth in volume between 2005 and 2008, so the institution is clearly meeting the needs of its federal and private sponsors. In the life sciences, the new partnership with WSU should yield significant growth results in the coming years as that facility hits its stride.

the Gates Foundation, is located in the state, but because its assets are largely held outside the state and it operates on a global basis, its grants are not the same as other money that circulates within the state. Figure 3 shows the five largest recipients of Gates Foundation grants for the life sciences in Washington. At over $150 million in grants for these five institutions alone in 2007, the Gates Foundation is clearly a major influence on the region's life sciences industry.

Licensing and partnership revenue. Most life sciences start up firms are built around proprietary technology that is used to produce innovative pharmaceutical or agricultural products. These new technologies are often of great interest to larger firms elsewhere in the country that see the applicability to their own products. Some of the state's life sciences firms engage in licensing agreements or develop partnerships with out-of-state firms through which they collect fees for the use of their proprietary technology.

Product and service sales. The most basic form of revenue generation in the economy is often the least available source for life sciences companies in Washington. The state has never had a significant presence of pharmaceutical manufacturing firms, so the production, marketing and sales operations that generate direct revenue for these products and services do not occur very much in the state. The state does still have a significant number of manufacturers of medical devices, so revenue from sales of those products will flow into the state.

Life sciences employment in Washington

An economic impact analysis of an industry generally begins with the employment in that industry, and uses an economic model to determine how many additional jobs are generated by the export activity of the industry. The additional employment generated by the industry comes from two sources. "Indirect" employment is generated through purchases made by the industry in the local economy, such as supplies, utilities, financial and legal services. "Induced" employment is generated by the spending of households who are employed either directly or indirectly in the industry. The combination of the three employment sources

– direct, indirect, induced – yields a "multiplier" which, when applied to the direct employment, yields the total employment created by the industry.

Life Sciences Profile

Name:	Seattle Biomedical Research Institute (SBRI)
Location:	Seattle
Year founded:	1976
Structure:	501-c-3 Not-for-profit corporation
Employees:	250
Annual budget:	$40 million

Services. SBRI is an independent research organization that concentrates on finding ways to eliminate infectious diseases, especially those prevalent in developing countries. While infectious disease is not a primary cause of death in industrialized countries, it is by far the leading cause of death in Africa and parts of Asia, and, in all, is the leading cause of death in the world.

SBRI is currently addressing the "unholy trinity" of malaria, HIV/AIDS, and tuberculosis, as well as lesser-known diseases such as African Sleeping Sickness and Leishmaniasis. The institute conducts basic research at its Seattle facility and its field laboratory in Tanzania, often partnering with researchers around the world. The institute is also involved with the development and testing of vaccines.

SBRI began as a small independent research organization, but soon developed strong ties with the University of Washington School of Public Health and Community Medicine. Today, most of the senior research staff at SBRI also hold professorships at the UW, many in the new Department of Global Health.

Growth potential. SBRI is one of the world's leading research institutions in a field that has seen rapid and accelerating growth. It already has a close partnership with the Gates Foundation, the leader in private funding of global health research, and has successfully partnered with organizations around the world. Furthermore, its headquarters is in the center of what may be the second largest global health cluster in the world. All signs point toward continued growth for SBRI

There are two basic ways to collect employment data. The first is to use administrative records that capture data as part of compliance with employment law. The most commonly used employment data is collected through unemployment insurance programs, and measures all individuals who are covered under the program. "Covered employment statistics" are quite accurate in terms of the count of individuals, but are only as useful as the categories into which the employees are placed. This report uses covered employment data, supplemented by other sources. Covered employment data was also used in recent national studies of the life sciences conducted by Battelle (2008) and Archstone Consulting (2009).

The second way to collect employment data is to survey the universe of employers. This method was used in a 2002 study of Washington's biotechnology and medical device industry (Chase 2002), which used employment numbers from a survey by Lifesciences.com. Similarly, the Community Attributes study of biomedical devices (2008) and the UW study of global health (2007) used survey data.. This method is more transparent than using administrative records, but is accurate only to the extent that the surveyor correctly identifies the universe of employers and that these employers respond to the (voluntary) survey. The Lifesciences.com survey has not been updated since 2005.

For purposes of this report, the covered employment data from the Washington State Department of Employment Security (ESD) has some problems, stemming from the categorization available in the North American Industrial Classification System (NAICS). ESD uses NAICS codes for detail on employment in the medical device and pharmaceutical manufacturing sectors, and for the past two years ESD has used a new NAICS code called "biotechnology." But the rest of the private sector life sciences research employment, including most of the employees of the state's non-profit research institutions, are included in a broad NAICS category called "research and development in the physical, engineering, and life sciences." To address this shortcoming, we employ a methodology used by Battelle. For its 2008 State Biosci-

ences Initiatives report, Battelle estimated that 43 percent of those working in the larger five-digit NAICS category (which includes biotechnology) do their work in the life sciences. (In similar studies, the Milken Institute simply ignores the larger NAICS R&D category and only uses the biotechnology category begun in 2007.)

ESD data does not break out two important life sciences employers. Researchers who are on the faculty or staff of a university are listed under "education" and no attempt is made to break them out by research focus. Finally, researchers who work in a hospital are categorized under healthcare. For these categories not broken out in ESD data we use various estimating methods.

Employment impacts of the life sciences are determined as follows:

Manufacturing. The NAICS system provides detailed data on employment in manufacturing operations of all kinds. Figure 8 shows employment in ten categories of manufacturing related to the life sciences, for a 2008 total of 8,930 jobs. The largest of these, electromedical devices, covers the state's substantial industry in medical imaging devices.

Private sector research and development. This category will consist mostly of not-for-profit research institutions, along with some for-profit firms that are strictly engaged in research (as opposed to doing research associated directly with the manufacture of a product or provision of a service). ESD provides two NAICS codes for R&D. The first, 541711, is the category created two years ago to break out R&D in "biotechnology" specifically. ESD reports that in 2008, 2,679 people worked in that category at an average annual wage of $87,482.

The second NAICS code for R&D, 541712, contains all other scientific work in "engineering, physical and life sciences." So, life sciences research work that is not specifically associated with the molecular manipulations that usually define biotechnology, will be found in this category, along with all other kinds of research that have little or nothing to do with life sciences. To find the life sciences component, we revert back to NAICS 54171, which includes both 541711 and 541712. ESD reports that in Washington in 2008, 18,271 people worked in all of NAICS 54171, so, applying Battelle's ratio, we can estimate that 8,039 worked in the life sciences. Then, subtracting the 2,679 people who worked in biotechnology (541711), we arrive at an estimate that 5,360 people worked in non-biotech life sciences R&D.

Figure 6
2007 R&D expenditures in the life sciences at universities and colleges

University faculty and staff. ESD reports none of the state's R&D employment within the public sector, so all university faculty and staff who are working in R&D in the life sciences will appear in the larger "education" category (we assume that faculty and staff at private universities do as well). To estimate the number of jobs attributable to life sciences R&D, we begin with the total value of R&D activity at the state's institutions of higher education. Figure 6 shows that in 2007 the state's higher education institutions performed $647 million worth of life sciences research. Using the ratio of spending to employment from some large institutions we estimate that every $1 million in research spending produces 7.5 jobs (ECONorthwest 2009). Thus, life sciences R&D spending at the state's higher education institutions results in approximately 4,850 jobs.

Figure 8
2008 Employment in the life sciences in Washington

Sector of the life sciences industry	NAICS Code	Employment	Average Annual Wage
Medicinal and Botanical Manufacturing	325411	317	$39,162
Pharmaceutical preparation manufacturing	325412	1,166	$92,520
In-Vitro Diagnostic Substance Manufacturing	325413	429	$60,792
Biological Product (except Diagnostic) Manufacturing	325414	578	$59,782

Estimate of hospital staff in research activities	N/A	530	N/A
Estimated total direct life sciences employment		22,349	

Sources: Washington State Department of Employment Security, National Science Foundation

Hospitals and institutions. Six medical institutions in the state received grants from the NIH in 2008. Further research finds that these hospitals had additional sources of research funding, with the total shown in Figure 7. Using the same ratio of spending to jobs that we used for university research, we can conclude that hospital research generated about 530 direct jobs in the state.

Paper products manufacturing	10,418

Source: Washington State Department of Employment Security

Figure 8 summarizes employment in the life sciences in Washington, based on data from ESD and estimates from other sources. A base of over 22,000 jobs makes the life sciences industry an important part of the state's economy. Figure 9 shows 2008 employment for the life sciences in Washington along with employment in other major industries that contribute importantly to the economic base of the state. Life sciences has surpassed basic industries such as wood products and paper products, replacing employment as those industries have matured.

ESTIMATING THE ECONOMIC IMPACT OF THE LIFE SCIENCES IN WASHINGTON

With reasonable estimates of life sciences employment in the state we can estimate the additional jobs that are produced in the economy as a result of spending by life sciences institutions and firms, and the spending of households. We use a model constructed for the Research Council by Regional Economic Models Inc. (the WRC-REMI model) to derive the multipliers for the various sectors. The REMI model provides multipliers for each of the NAICS codes except the new biotechnology code. We have only one multiplier to use for all of the R&D in the sciences.

Figure 10-a shows the results of applying the multipliers to the employment estimates. We can estimate that the direct employment in the life sciences results in nearly 55,000 additional jobs throughout the state, for a total economic impact of 77,000 jobs. It is worth noting that the 2002 study of the state's biotechnology and medical device industries arrived at a combined multiplier of 3.23, which is very close to the average multiplier of 3.44 derived by dividing the total employment impact by the total direct jobs identified in this study. Figure 10-b shows the impact of these jobs on the state's GDP and personal income.

THE LIFE SCIENCES INDUSTRY AROUND THE STATE

The life sciences industry tends to respond to clustering effects, with the largest concentrations of firms and institutions near the University of Washington. Activity is, however, spread around many other areas of the state. Figure 11, based on employment data from the Puget Sound

Figure 10-a
2008 Economic impact of the life sciences in Washington: Employment

Sector of the life sciences industry	Direct Employment	Multiplier*	Indirect/induced employment	Total employment impact

Regional Council and ESD, shows the distribution of employment in the readily identifiable segments of the life sciences industry in the Puget Sound region and elsewhere in the state. (Data suppression—not providing data that could lead to disclosure of proprietary information about firms – makes it difficult to calculate employment distribution at a finer grain than this.)

Figure 11
Life sciences employment in Washington

	Biotech R&D + Biopharma Manufacturing	Medical Device Manufacturing
Total Employment	4,951	5,293
Seattle	46.5%	6.8%
I-90 & I-405 corridors	18.4%	66.8%
Balance of Puget Sound region	11.9%	6.4%
Balance of state	23.2%	20.0%

Source: Puget Sound Regional Council, ESD

Figure 12 shows the distribution of life sciences businesses and institutions in cities around the state. Figure 13 shows the distribution of grants from the NIH around the state. Both figures indicate that, while most firms want to be near the major research institutions and laboratories, researchers can locate themselves well outside these centers.

ECONOMIC DRIVERS OF THE LIFE SCIENCES INDUSTRY

Washington has among the strongest life sciences industries in the nation, relative to its size. According to a 2008 study by Battelle, on a per capita basis, Washington ranks sixth among the states in research funding from the National Institutes of Health, eighth in biosciences employment, sixth in the awarding of biosciences degrees and seventh in placement of biosciences venture capital. The states that consistently ranked higher than Washington in these per capita measures were Massachusetts, Maryland and Connecticut.

But how can we ensure that the state remains strong in the life sciences? The Battelle study lists a number of key "success factors of biosciences industry growth." Among them are:

Engaged research institutions with active leadership. The report states that "without major research stature, reputation and standing within given fields, no region can succeed with a biosciences-driven strategy for its economic growth." Washington certainly has excellent research institutions, with its two major research universities and non-profit institutes.

Available risk capital covering all stages of the business cycle. Washington consistently ranks among the top states in the placement of venture capital funding. In addition to the Battelle ranking of seventh in the placement of biosciences venture capital, the Milken institute ranks Washington third in overall per capita venture capital placement. A persistent concern in the state, however, has been the reliance on venture funds from out of state: of the 60 venture capital firms that completed at least five financing deals in the second quarter of 2009, only two were from Washington. Another concern has been the challenge of finding "angel" capital for very early stages of firms.

Workforce and talent pool. The pool of talent that feeds the life sciences industry requires specialized training that is not widely available. Washington's universities graduate individuals in these fields, but not

Figure 12

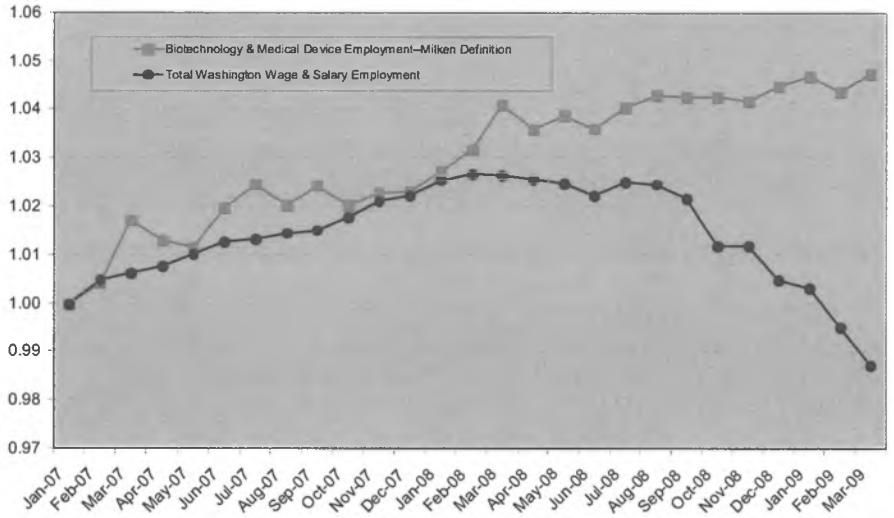
Source: National Institutes of Health

nearly enough to meet the needs of the state's life sciences industry. A glance through the backgrounds of the leading scientists in the state's research institutions and biotech firms indicates that we import the majority of the talent working in the life sciences in the state.

There is perhaps no more important factor for the future of Washington's life sciences industry that our ability to attract and retain top scientific and technical talent from around the world. While Washington is an attractive place to live, we do need to be mindful that we are competing with states such as Massachusetts, California and New Jersey that offer outstanding career prospects for talented scientists and engineers. While impressive, Washington's life sciences industry does not yet offer as many career paths for scientists such that they will move to the state confident that if their current employment ends they will be able to find new employment easily.

Stable and supportive business, tax and regulatory policies. In the past decade Washington has made some progress in becoming friendly to technology businesses, but barriers do remain. The state's tax breaks for R&D equipment are favorable for start-up businesses building or expanding laboratory space and a sales and use tax deferral for life sciences manufacturing. The state also offers a B&O tax credit for a portion R&D expenses for firms that for the most part are still in the unprofitable start-up phase. However, employment taxes in the state are among the highest in the country, which can be a burden for labor-intensive research. Life sciences businesses may be concerned about the stability of the state's tax regime, given the regular calls to eliminate tax preferences such as the B&O tax credit.



Patience and a long term perspective. The Battelle report notes that such well-known life sciences centers as Route 128 in Massachusetts and North Carolina's Research Triangle took decades to develop. Similarly, Washington's life sciences industry has built slowly over decades. The University of Washington built its research and medical capacity over many years. The Fred Hutchinson Cancer Research Center has been steadily growing since the 1970s. The Seattle Biomedical Research Institute began as a three-person laboratory in Issaquah in the 1970s and now employs hundreds of people in its Seattle and Tanzania laboratories.

In some ways, the necessity of this report, documenting the life sciences industry, is a testament to its almost unnoticed growth. While individual institutions have executed growth strategies, and county-level economic development organizations have promoted the life sciences, the industry has grown largely without any high profile, long term strategic actions on the part of government.

Although not mentioned specifically in the Battelle report, another critical factor in the growth of the life sciences industry is the presence of support services. Of particular interest is the legal and accounting ser-

vices required for investors and for intellectual property protection. The steady growth of a range of technology-based businesses has been accompanied by strong growth in the state's related services sector.

Figure 14
Growth in life sciences employment versus total employment

Recent Performance

Figure 14, which is based on a relatively conservative measurement of life sciences employment in the state (the estimating method used by the Milken Institute, as discussed above, which excludes non-biotech life sciences R&D, universities and hospital R&D), shows that in the past two years, while general employment in the state has fallen, employment in the life sciences has expanded. Since this chart shows just employment in private for-profit businesses, many of which are in the research phase, this trend indicates the optimism with which the financial community views the life sciences. Investors are willing to stick with their bets on the future of the life sciences.

Conclusion

The life sciences industry has grown to be an important part of Washington's economy. In employment it has passed many of the traditional resource based industries on which the state's economy was founded, and is in the same range of importance as some of the new, technology-based industries of the state. It is, however, difficult to recognize the importance of the life sciences industry because it is comprised of a diffuse array of organizations and firms, its "product" consists of everything from scientific papers to surgical instruments, and its "revenue" comes from all manner of public and private sources. Describing the life sciences industry is not as easy as describing the production and sale of lumber.

The growth of the life sciences industry is good news for the state. Demand for the products and services generated by the industry will continue to grow rapidly, in three principal areas: domestic healthcare, global health and sustainable biofuels. The state's life sciences industry has a good position in the first of these, is the national leader in the second, and has promise in the third.

The economic potential of the life sciences has, of course, not gone unnoticed in the rest of the country and the world. The competition for talent and investment capital is intense, and in spite of its excellent assets, Washington is still not among the top regions for the life sciences, but perhaps near the top of the second tier. Massachusetts, with its complex of leading universities, the San Francisco Bay area, with its universities and huge technology industry base, and New Jersey, with its large phar-

maceutical industry, all have larger life sciences industries than Washington.

Washington has developed its niches in the areas of research and development and global health, and will not likely be a major area for manufacturing of pharmaceutical products. These are, however, very valuable and lucrative niches which depend primarily on one input: talent. Washington may not have the largest life sciences industry in the nation, but it still competes at the highest level to attract and retain the best scientific and technical minds in the world. The future of Washington's life sciences industry will continue to be tied to the quality of talent in the state.

There are many complex factors that determine success in the life sciences industry, but none more important than ensuring that the state's universities, research institutions and businesses have the highly skilled people they need working in an environment that encourages innovation.

APPENDIX: ABOUT THE WRC-REMI MODEL

The Washington Research Council uses a model of the Washington State economy constructed especially for WRC by Regional Economic Models, Inc. Because it allows supply and demand to respond to changes in prices and wages, and permits substitution among factors of production, the WRC-REMI model is more elaborate than the standard input-output models commonly employed to estimate regional economic impacts (Treyz 1993).

The core of the standard input-output model is a catalog of interindustry purchases for the region in a base year, arrayed in an input/output matrix. The model assumes that as a specific industry's production increases or decreases, its purchases from the region's other industries will change proportionately. Likewise, the industry's employment will change by the same proportion that its output changes.

Based on these assumptions, the model traces the cascading effects as one industry's increase in output stimulates an increase in the output of other industries (and its own). These effects are distilled in multipliers that measure how a change in the demand for the output of one industry will affect the total output of the local economy, or how a change in the employment of one industry will affect the total output of the local economy (Chase, Bork, and Conway 1993).

But the standard input-output model is incomplete. It fails to model the numerous capacity constraints within the economy, the processes that set prices for goods and services and the responses of consumers and producers to changes in these prices. In the input-output model, industry and labor supply are perfectly elastic—so prices and wage rates do not matter.

Prices and wages do matter in the WRC-REMI model. The model divides the state into two subregions: the four central Puget Sound counties (King, Kitsap, Pierce, and Snohomish) and the balance of the state. There are 53 industrial sectors within each subregion. Within each subregion the model tracks interindustry transactions, much as an input output model would.

Unlike an input-output model, however, the WRC-REMI model incorporates a number of significant behavioral responses to changes in prices and costs: The wage rate depends on the supply and demand for labor, migration and labor force participation rates respond to changes in wage rates, and consumer purchases of specific goods and services respond to changes in relative prices and personal income. In addition, producers substitute among production factors in response to changes in relative factor costs, market shares respond to changes in regional production costs, and investment rises in response to increases in output.

This report uses version PI $^{+}$ 1.0.114 of the WRC-REMI model.

Competition between University of Alaska campuses for state construction money is nothing new or surprising, but legislators this year have something new and surprising to consider: The unanimous support of the UA Board of Regents for a single project.

The competition was on full display last week in Juneau with the comments of Eagle River Rep. Bill Stoltze, who characterized investment in the Fairbanks campus as an imbalanced anachronism.

This view contrasts with that of the regents and the university's president.

With regard to the alleged imbalance, President Mark Hamilton noted that four-fifths of construction spending during his dozen years at the helm has gone to Anchorage.

After an extensive review and discussion in the fall of 2009, the board decided that the highest construction priority for the university system this year is the proposed life sciences building at the Fairbanks campus. To emphasize the point, the board shed mention of all other projects in its annual budget request.

Gov. Sean Parnell agreed with the board and placed funding for the building in the budget he proposed to the Legislature.

This money would not prop up a failing anachronism; it would support a thriving, modern research and teaching program.

The UA Fairbanks life sciences program is succeeding despite relatively ancient facilities. To continue this success, though, those facilities need an update.

The university regents understand this. They understand this despite their geographical origins. The 11-member board has just three regents from Fairbanks, one of them a student. Five regents are from Anchorage, yet every one of them endorsed the board's recommendation.

These regents saw what legislators are also capable of seeing: The moment has come to invest in a new life sciences building, not for Fairbanks but for the entire state of Alaska.

SENATE EDUCATION COMMITTEE

Senators Kevin Meyer & Joe Thomas, Co-Chairs

Senator Steadman:

The Senate Education Committee respectfully requests a hearing on SB 83 before the Senate Finance Committee.

SB 83 provides incentives for teachers to become nationally certified by a national educational certification board. (While not named in statute, the National Board for Professional Teaching Standards would be the certifying body.) National certification is a rigorous, classroom oriented process which will increase the efficacy of Alaska's teachers.

Under SB 83 teachers who are nationally certified will receive a $1,000 annual stipend for the ten-year period of their certification. Teachers who work in low income, low performance areas would receive a $1,500 annual stipend for certification.

To further encourage teachers to become nationally certified, SB 83 establishes a no-interest, three-year loan of $2,500 to pay for the certification process. Teachers from low income, low performing areas would receive a $1,000 stipend and a $1,500 loan to pay certification expenses. These loans would cover most of the cost incurred to become certified.

The bill packet includes:

1) A Sponsor statement
2) Current version of the bill (Version D)
3) Fiscal note from the Department of Education and Early Development
4) Back up information concerning the National Board of Professional Teaching Standards, including areas of certification, basis information concerning the process, their five core propositions, and their convictions on what teachers should know.

We would appreciate a hearing on this bill at your earliest convenience.

Sincerely,

Senator Joe Thomas
Co-Chair, Senate Education Committee

Senator Kevin Meyer

SENATE EDUCATION COMMITTEE

Senators Kevin Meyer & Joe Thomas, Co-Chairs

Senate Bill 83

"An Act providing for payment and loan incentives to public school teachers for national board certification."

...teaching is work of the most demanding sort, for teachers must make dozens of decisions daily, command a wide body of knowledge and skill, learn to react instantly, and be disposed to act wisely in difficult situations. And while there are principles and precepts, skills and techniques, to guide the work, teaching is also an activity with artistic aspects, a craft calling for reflection and judgment.

----From *What Teachers Should Know and Be Able to Do*

Teaching is one of the most difficult and important jobs we have in our society. In order to have good schools, we must have good teachers.

Senate Bill 83 provides an incentive for teachers to ramp up their professional knowledge and skills by becoming nationally certified by the National Board of Professional Teaching Standards. Teachers would be provided with zero interest loans designed to pay the expense of enrolling in the program. Once certified they would receive a $1,000 annual stipend for the duration of their certification period (ten years).

If the teacher is serving in a low performing, high poverty area they would receive a $1,000 stipend for enrolling in the program, and $1,500 loan for the rest of the expense. They would also receive an additional $500 annually as long as they remained in a low performing, high poverty area.

Becoming nationally certified is a rigorous and demanding process, and can take up to three years. There are 25 different areas of certification (see page 7 of the packet), and teachers specialize in their specific subject area. The certification process focuses on five aspects of teaching: Students and their learning, the subjects being taught and how to teach them, managing and monitoring student learning, thinking systematically about the practice of teaching, and being members of the learning community.

We appreciate your support on this important bill.

CS FOR SENATE BILL NO. 83(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act providing for payment and loan incentives to public school teachers for national board certification."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.20 is amended by adding a new section to article 3 to read:

Sec. 14.20.225. Incentive and stipend payments for national board certification. (a) A school district or the department, as applicable, shall, in January of each year, pay an incentive payment of $1,000 to each teacher who is employed by the district or the department and who holds a current and valid national board certification.

(b) In addition to the incentive payment provided in (a) of this section, for a teacher who is employed by a district to teach in a school that is located in a high poverty attendance area and that has received a low performance rating, as determined by the department, a school district shall,

(1) if the teacher holds a current and valid national board certification,

annually pay a supplemental incentive payment of $500; or

(2) if a teacher is not national board certified, pay the national certification board an amount that is not more than $1,000 to be used toward national certification of the teacher for the period in which the teacher is actively seeking national board certification.

(c) The department shall provide sufficient funding, subject to appropriation and in addition to the state aid received under AS 14.17, to a school district to make national board certification incentive payments as provided in this section. The department may establish a form and procedure to be used by a school district to request teacher incentive and stipend payments, including proof of actively pursuing national board certification.

(d) Nothing in this section prohibits a district or the department from providing additional monetary incentives to a teacher.

(e) In this section,

(1) "district" has the meaning given in AS 14.17.990;

(2) "national board certification" means individual achievement of national professional teaching standards as certified by a nationally recognized board.

*** Sec. 2.** AS 14.43 is amended by adding new sections to read:

Article 9A. National Board Teacher Certification Loan Program.

Sec. 14.43.550. Program established. The national board teacher certification loan program is established to provide an incentive for teachers employed by a public school district in the state or a school operated by the department to pursue certification of professional teaching standards by a nationally recognized board.

Sec. 14.43.555. Administration and eligibility. (a) The national board teacher certification loan program shall be administered by the commission in accordance with regulations adopted by the commission. The commission shall

(1) provide on behalf of eligible teachers loan awards of a lump sum of $2,500 for each teacher, to be repaid over three years at zero percent interest;

(2) allocate the loan awards available for national board teacher certification annually to the department for loans on behalf of teachers employed by the department who teach in a public school and to the school district for loans to

teachers employed by the district;

(3) develop and distribute to the department and to the districts an application form for teacher certification loans under this section.

(b) A teacher is eligible to receive the benefit of a national board teacher certification loan if the teacher is currently

(1) employed by the department or a public school district and teaches students who are in grades kindergarten through 12;

(2) actively pursuing national certification of professional teaching standards awarded by a nationally recognized board; and

(3) signs an agreement provided by the commission to secure repayment of the loan within three years.

(c) For a loan awarded under this section, the commission shall

(1) make payments to the national teacher certification board on behalf of an eligible teacher;

(2) establish conditions for repayment;

(3) provide for penalties for default; and

(4) pro rate the amount of the award if insufficient funding is available to provide awards on behalf of all eligible teachers in a fiscal year.

(d) In making loans under this section, the commission shall apply the standards used by the department under AS 14.20.225(c) for determining what constitutes actively pursuing national certification.

Sec. 14.43.590. Definitions. In AS 14.43.550 - 14.43.590,

(1) "department" means the Department of Education and Early Development;

(2) "district" has the meaning given in AS 14.17.990.

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. SB83

Analysis

SB83 provides for payments and loan incentives to public school teachers for national board certification. This includes a basic incentive payment of $1000 for teachers holding a current and valid national board certification and an additional $500 for teachers holding this certification in high poverty attendance areas that have received a low performance rating as determined by the department.

The base count is currently 120 plus an additional 21 teachers anticipated for FY12. The maximum incentive provided under this legislation if all teachers qualified for both incentives would be 141 teachers X $1,500 = $211,500. Each subsequent fiscal year projects an additional 21 teachers receiving the incentives to reflect the anticipated annual growth.

With an average growth rate of 21 teachers per year that would be actively seeking national board certification, not more than $1,000 would be provided annually to pay the national certification board on their behalf. 21 X $1,000 = $21,000. This projection is contained in each subsequent year through FY17.

Using the growth assumption/annual average of 21 teachers per year pursuing certification of professional teaching standards by a nationally recognized board, under the proposed Sec. 14.43.550-555 for the National Board Teacher Certification Loan Program, $2,500 would be provided as loans for eligible teachers. 21 X $2,500 = $52,500 per year.

- Early & Middle Childhood (Ages 3-12)
- Early Childhood through Young Adulthood (Ages 3-18+)
- Early Adolescence (Ages 11-15)
- Adolescence and Young Adulthood (Ages 14-18+)
- Early Adolescence through Young Adulthood (Ages 11-18+)

What is National Board Certification?

What Is National Board Certification?

National Board Certification is an advanced teaching credential. It complements, but does not replace, a state's teacher license. It is valid for 10 years, and renewal candidates must begin the renewal process during their eighth or ninth years as NBCTs.

National Board Certification is achieved upon successful completion of a voluntary assessment program designed to recognize effective and accomplished teachers who meet high standards based on what teachers should know and be able to do. National Board Certification is available nationwide for most preK–12 teachers. As part of the certification process, candidates complete 10 assessments that are reviewed by trained teachers in their certificate areas. The assessments include four portfolio entries that feature teaching practice and six constructed response exercises that assess content knowledge.

Why Standards for Accomplished Teaching?

Every child deserves an accomplished teacher — one who is qualified to equip students with the skills to succeed in the 21st century global community. NBPTS Standards and National Board Certification give teachers and schools the tools to define and measure teaching excellence. NBPTS Standards are based on the Five Core Propositions that form the foundation for what all accomplished teachers should know and be able to do and provide a reference that helps educators link teaching standards to teaching practice.

Five Core Propositions

Teachers are committed to students and their learning.
Teachers know the subjects they teach and how to teach those subjects to students.
Teachers are responsible for managing and monitoring student learning.
Teachers think systematically about their practice and learn from experience.
Teachers are members of learning communities.

What Are the Standards and Certificate Areas?

NBPTS developed standards for accomplished teaching in 16 different subject areas with students at various developmental levels. These standards were developed and validated by representative committees comprised of master teachers, disciplinary organizations and other education experts. Many school systems use the standards as the basis for ongoing teacher and school counselor professional development, and many colleges and universities incorporate them into their undergraduate and graduate teacher-education programs.

Based on these standards, NBPTS offers 25 certificates that are applicable to most teachers in American schools. For more information, see the chart at nbpts.org/certificates.

NBPTS
National Board for Professional Teaching Standards

The Five Core Propositions

This policy set forth our vision for accomplished teaching. The Five Core Propositions form the foundation and frame the rich amalgam of knowledge, skills, dispositions and beliefs that characterize National Board Certified Teachers (NBCTs).

1 Proposition 1: Teachers are Committed to Students and Their Learning

- ✓ NBCTs are dedicated to making knowledge accessible to all students. They believe all students can learn.
- ✓ They treat students equitably. They recognize the individual differences that distinguish their students from one another and they take account for these differences in their practice.
- ✓ NBCTs understand how students develop and learn.
- ✓ They respect the cultural and family differences students bring to their classroom.
- ✓ They are concerned with their students' self-concept, their motivation and the effects of learning on peer relationships.
- ✓ NBCTs are also concerned with the development of character and civic responsibility.

2 Proposition 2: Teachers Know the Subjects They Teach and How to Teach Those Subjects to Students.

- ✓ NBCTs have mastery over the subject(s) they teach. They have a deep understanding of the history, structure and real-world applications of the subject.
- ✓ They have skill and experience in teaching it, and they are very familiar with the skills gaps and preconceptions students may bring to the subject.
- ✓ They are able to use diverse instructional strategies to teach for understanding.

3 Proposition 3: Teachers are Responsible for Managing and Monitoring Student Learning.

- ✓ NBCTs deliver effective instruction. They move fluently through a range of instructional techniques, keeping students motivated, engaged and focused.
- ✓ They know how to engage students to ensure a disciplined learning environment, and how to organize instruction to meet instructional goals.
- ✓ NBCTs know how to assess the progress of individual students as well as the class as a whole.
- ✓ They use multiple methods for measuring student growth and understanding, and they can clearly explain student performance to parents.

4 Proposition 4: Teachers Think Systematically about Their Practice and Learn from Experience.

- ✓ NBCTs model what it means to be an educated person – they read, they question, they create and they are willing to try new things.
- ✓ They are familiar with learning theories and instructional strategies and stay abreast of current issues in American education.
- ✓ They critically examine their practice on a regular basis to deepen knowledge, expand their repertoire of skills, and incorporate new findings into their practice.

5 Proposition 5: Teachers are Members of Learning Communities.

NBCTs collaborate with others to improve student learning.
They are leaders and actively know how to seek and build partnerships with community groups and businesses.
They work with other professionals on instructional policy, curriculum development and staff development.
They can evaluate school progress and the allocation of resources in order to meet state and local education objectives.
They know how to work collaboratively with parents to engage them productively in the work of the school.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Introduction

In 1983, public concern about the state of American education was sharply heightened by the issuance of a federal report titled *A Nation at Risk*. The report provoked a wave of reform initiatives that engulfed the education community. Most of these programs, however, left out a critical element of the education equation: the classroom teacher.

If America is to have world-class schools, it must have a world-class teaching force. Many excellent teachers already work in the schools, but their work often goes unrecognized and unrewarded. As a consequence, many first-rate practitioners leave the schools, and others who could be exceptional teachers never consider teaching. Worse still, the knowledge and skills of the fine teachers who remain are often underutilized, their positive influence allowed only modest scope.

Three years after *A Nation at Risk*, in 1986, the Carnegie Task Force on Teaching as a Profession issued a pivotal report, *A Nation Prepared: Teachers for the 21st Century*. Its leading recommendation called for the establishment of a National Board for Professional Teaching Standards. The following year, this unique institution in the history of American education was born.

The National Board's mission is to advance the quality of teaching and learning by:

- maintaining high and rigorous standards for what accomplished teachers should know and be able to do,
- providing a national voluntary system certifying teachers who meet these standards, and
- advocating related education reforms to integrate National Board Certification in American education and to capitalize on the expertise of National Board Certified Teachers.

National Board Certification®, developed by teachers, with teachers, and for teachers, is a symbol of professional teaching excellence. Offered on a voluntary basis, it complements, not replaces, state licensing. While state licensing systems set entry-level standards for beginning teachers, National Board Certification has established advanced standards for experienced teachers.

Linked to these standards is a new generation of fair and trustworthy assessment processes that honor the complexities and demands of teaching. They focus on teacher work and the difficult issues that accomplished teachers confront on a regular basis. The NBPTS assessments for National Board Certification include having teachers construct a portfolio that represents an analysis of their classroom work and participate in exercises designed to tap the knowledge, skills, disposition and professional judgment that distinguish their practice.

At the time the National Board was founded in 1987, it was understood that a critical first task was the development of a policy that would spell out the National Board's vision of accomplished practice. In 1989, it issued its policy statement, *What Teachers Should Know And Be Able To Do*, which has served as a basis for all of the standards development work NBPTS has conducted. To this day, it remains the cornerstone of the system of National Board Certification and has served as a guide to school districts, states, colleges, universities and others with a strong interest in strengthening the initial and ongoing education of America's teachers. It also holds the promise of being a stimulus to self-reflection on the part of teachers at all levels of accomplishment as well as a catalyst for healthy debate and the forging of a new professional consensus on accomplished practice in each field of teaching.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

What Teachers Should Know and Be Able to Do

In this policy, the National Board presents its view of what teachers should know and be able to do--its convictions about what it values and believes should be honored in teaching. This expression of ideals guides all of the National Board's standards and assessment processes.

The fundamental requirements for proficient teaching are relatively clear: a broad grounding in the liberal arts and sciences; knowledge of the subjects to be taught, of the skills to be developed, and of the curricular arrangements and materials that organize and embody that content; knowledge of general and subject-specific methods for teaching and for evaluating student learning; knowledge of students and human development; skills in effectively teaching students from racially, ethnically, and socioeconomically diverse backgrounds; and the skills, capacities and dispositions to employ such knowledge wisely in the interest of students.

This enumeration suggests the broad base for expertise in teaching but conceals the complexities, uncertainties and dilemmas of the work. The formal knowledge teachers rely on accumulates steadily, yet provides insufficient guidance in many situations. Teaching ultimately requires judgment, improvisation, and conversation about means and ends. Human qualities, expert knowledge and skill, and professional commitment together compose excellence in this craft.

The National Board has led the vanguard effort to develop professional standards for elementary and secondary school teaching. The National Board Certified Teachers® stand for professionalism in the schools. The National Board's responsibility is not only to ensure that teachers who become National Board Certified meet its professional standards of commitment and competence, but also to maintain standards and assessments that are so well regarded that America's accomplished teachers will decide to seek National Board Certification.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Policy Position (Five Core Propositions)

The National Board for Professional Teaching Standards seeks to identify and recognize teachers who effectively enhance student learning and demonstrate the high level of knowledge, skills, abilities and commitments reflected in the following five core propositions.

1. Teachers are committed to students and their learning.

Accomplished teachers are dedicated to making knowledge accessible to all students. They act on the belief that all students can learn. They treat students equitably, recognizing the individual differences that distinguish one student from another and taking account of these differences in their practice. They adjust their practice based on observation and knowledge of their students' interests, abilities, skills, knowledge, family circumstances and peer relationships.

Accomplished teachers understand how students develop and learn. They incorporate the prevailing theories of cognition and intelligence in their practice. They are aware of the influence of context and culture on behavior. They develop students' cognitive capacity and their respect for learning. Equally important, they foster students' self-esteem, motivation, character, civic responsibility and their respect for individual, cultural, religious and racial differences.

2. Teachers know the subjects they teach and how to teach those subjects to students.

Accomplished teachers have a rich understanding of the subject(s) they teach and appreciate how knowledge in their subject is created, organized, linked to other disciplines and applied to real-world settings. While faithfully representing the collective wisdom of our culture and upholding the value of disciplinary knowledge, they also develop the critical and analytical capacities of their students.

Accomplished teachers command specialized knowledge of how to convey and reveal subject matter to students. They are aware of the preconceptions and background knowledge that students typically bring to each subject and of strategies and instructional materials that can be of assistance. They understand where difficulties are likely to arise and modify their practice accordingly. Their instructional repertoire allows them to create multiple paths to the subjects they teach, and they are adept at teaching students how to pose and solve their own problems.

3. Teachers are responsible for managing and monitoring student learning.

Accomplished teachers create, enrich, maintain and alter instructional settings to capture and sustain the interest of their students and to make the most effective use of time. They also are adept at engaging students and adults to assist their teaching and at enlisting their colleagues' knowledge and expertise to complement their own. Accomplished teachers command a range of generic instructional techniques, know when each is appropriate and can implement them as needed. They are as aware of ineffectual or damaging practice as they are devoted to elegant practice.

They know how to engage groups of students to ensure a disciplined learning environment, and how to organize instruction to allow the schools' goals for students to be met. They are adept at setting norms for social interaction among students and between students and teachers. They understand how to motivate students to learn and how to maintain their interest even in the face of temporary failure.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Accomplished teachers can assess the progress of individual students as well as that of the class as a whole. They employ multiple methods for measuring student growth and understanding and can clearly explain student performance to parents.

4. Teachers think systematically about their practice and learn from experience.

Accomplished teachers are models of educated persons, exemplifying the virtues they seek to inspire in students – curiosity, tolerance, honesty, fairness, respect for diversity and appreciation of cultural differences -- and the capacities that are prerequisites for intellectual growth: the ability to reason and take multiple perspectives to be creative and take risks, and to adopt an experimental and problem-solving orientation.

Accomplished teachers draw on their knowledge of human development, subject matter and instruction, and their understanding of their students to make principled judgments about sound practice. Their decisions are not only grounded in the literature, but also in their experience. They engage in lifelong learning which they seek to encourage in their students.

Striving to strengthen their teaching, accomplished teachers critically examine their practice, seek to expand their repertoire, deepen their knowledge, sharpen their judgment and adapt their teaching to new findings, ideas and theories.

5. Teachers are members of learning communities.

Accomplished teachers contribute to the effectiveness of the school by working collaboratively with other professionals on instructional policy, curriculum development and staff development. They can evaluate school progress and the allocation of school resources in light of their understanding of state and local educational objectives. They are knowledgeable about specialized school and community resources that can be engaged for their students' benefit, and are skilled at employing such resources as needed.

Accomplished teachers find ways to work collaboratively and creatively with parents, engaging them productively in the work of the school.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Supporting Statement

We each remember the great teachers who touched our lives, kindled our interest and pressed us to do our best. We hold powerful images of such teachers. They exhibited a deep caring and love for children. They conveyed a passion for the subjects they taught, captivating their students with that passion. They approached their work with creativity and imagination, striving constantly to improve. As committed professionals, they were proud to be teachers.

The images of teaching that we share are deceptive as well as compelling. They emphasize teaching's external aspects, not its inner workings. If we fondly recall the great teachers of our past, we also typically see teaching as a humble undertaking. It concerns itself with the least powerful age group in society. It involves such seemingly routine activities as arranging seatwork, lecturing, reviewing and responding to students' efforts, and disciplining their behavior.

Historically, there is an enduring constancy in the organization of schools, of classrooms and of teaching itself. Self-contained classrooms, whole-group, textbook-centered instruction, teaching as telling, learning as the passive acquisition of facts, standardized testing -- these patterns of schooling are as familiar as chalk dust. They constitute an unintended national curriculum that, as an unrelieved diet, does not adequately serve the educational needs of a diverse and dynamic society. Good teachers, of course, depart in many ways from these routines.

These pervasive images underestimate teaching's complexities and freeze the enterprise into forms that overlook its non-routine nature and the importance of independent professional judgment in the life of the accomplished teacher. But teaching is work of the most demanding sort, for teachers must make dozens of decisions daily, command a wide body of knowledge and skill, learn to react instantly, and be disposed to act wisely in difficult situations. And while there are principles and precepts, skills and techniques, to guide the work, teaching is also an activity with artistic aspects, a craft calling for reflection and judgment.

Although complicated, teaching nonetheless evokes simple, reductionist analysis. Much of the discourse on teaching and learning pulls apart what must be joined in practice. Chroniclers of teaching, for example, often assign the teacher's primary loyalty to the student or to the subject, with elementary teachers often characterized as "student-centered" and secondary teachers seen as "subject-centered." This dichotomy is false. Sound teaching merges commitment to students with allegiance to knowledge at all grade levels. All teachers must uphold the claims of knowledge, yet strive to build spacious avenues from such knowledge to students' understanding.

There is likewise a tendency to frame teaching either in terms of imparting valuable knowledge or as encouraging the acquisition of skills. But knowledge and skill are not disjoint. Knowledge -- in the form of specific facts and organizing principles -- is necessary to the exercise of most skills, just as a range of skills is necessary to the acquisition and construction of knowledge. Knowledge and skill cannot be pulled apart, nor can one assume pride of place over the other.

Another commonplace fallacy is to distinguish "basic" from "higher-order" skills, and to regard mastery of the basics as a precondition to advanced forms of reasoning and functioning. Accomplished teachers realize that higher-order thinking is the hallmark of successful learning at all levels. Students, for example, cannot become good writers without engaging in complex problem-solving processes, nor can they effectively learn basic mathematics simply by memorizing rules for manipulating numbers. There can be no neat division of teaching labor along a basic-to-

advanced skills continuum. All teachers must concern themselves with higher-order skills, with the executive functions of reasoning, and with students' capacities to monitor their own learning.

To unify these dichotomies in practice however, requires skill, wisdom and judgment. Accomplished teachers constantly assess and adjust their practice to maintain fidelity to students and to subjects, to knowledge and to skills, and to basic and advanced functions. Professionalism in teaching entails the ongoing pursuit of these unities. Hence, teachers regularly find themselves confronting hard choices -- sometimes sacrificing one goal for another, sometimes making compromises.

While teaching demands crisp reasoning and few settings yield to only a single approach, teachers do not have free rein to select any approach that strikes them as felicitous. Rather, their choices are anchored in their own experience and in the settled ground of the knowledge base that defines both efficacious and flawed practice. Being able to apply steady, disciplined judgment and reflective scrutiny within the bounds set by this constantly expanding body of knowledge is the hallmark of professionalism in teaching. As such, these values will be found at the heart of the standards the National Board will promulgate.

On the Commitment to Professionalism in Teaching

As its title indicates, the National Board is committed to professional standards for teaching. The term "professional" is an honorific in our society, and denotes occupations characterized by certain attributes. Chief among these are a body of specialized, expert knowledge together with a code of ethics emphasizing service to clients. The knowledge base typically provides substantial, but not complete, guidance for professional practice. Professionals possess expert knowledge, but often confront unique, problematic situations that do not lend themselves to formulaic solutions. Professionals must cultivate the ability to cope with the unexpected and act wisely in the face of uncertainty.

Professionals deal with urgent human problems: matters of life and death, justice, hope and opportunity. Essential to their work is the trust of clients. What warrants such trust is the obligation, upheld within the community of professionals, to pursue an ethic of service and to employ special knowledge and expertise in the interests of their clients.

These general observations apply to teaching, but with important distinctions. While teachers employ their knowledge and skill on students, they also strive to empower students to continue the quest for understanding, so that one day the pupil may surpass the instructor. In this regard, teaching is the most democratic of professions. It aims to place within the hands, head and hearts of students the means for them to teach themselves.

The ethical dimensions of teaching also distinguish it from other professions. Unique demands arise because the client's attendance is compulsory and, more importantly, because the clients are children. Thus, elementary, middle and high school teachers are obligated to meet a stringent ethical standard. Other ethical demands derive from the teacher's role as a model of an educated person. Teaching is a public activity; a teacher works daily in the gaze of his or her students, and the extended nature of their lives together in schools places special obligations on the teacher's behavior. Students learn early to read and draw lessons from their teachers' characters. Teachers, consequently, must conduct themselves in a manner students might emulate. Their failure to practice what they preach does not long elude students, parents or peers. Practicing

with this additional dimension in mind calls for a special alertness to the consequences of manner and behavior. Standards for professional teaching ought, therefore, to emphasize its ethical nature.

What the National Board Will Value in Teaching

The rich amalgam of knowledge, skills, dispositions and beliefs that will characterize National Board Certified teachers are clustered under the five core propositions presented above. What follows is an elaboration of these principles that go to the heart of the National Board's perspective on accomplished teaching.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Proposition #1: Teachers are Committed to Students and Their Learning

Fundamental to the teacher's credo is the belief that all students can learn. Furthermore, they act on that belief. Accomplished teachers like young people and are dedicated to and skilled at making knowledge accessible to all students, even as they acknowledge their distinctive traits and talents. Success depends on teachers' belief in the dignity and worth of all human beings and in the potential that exists within each child. Teachers typically do not work one-on-one with students for extended periods of time because they are responsible for groups. But within this constraint, they are attentive to human variability and its influence on learning.

Teachers Recognize Individual Differences in Their Students and Adjust Their Practice Accordingly

To respond effectively to individual differences, teachers must know many things about the particular students they teach: Alex has a stutter, Maria loves science fiction, Toby is anxious about mathematics, Marcus is captivated by jazz. But accomplished teachers know much more -- whom their students go home to at night, how they have previously performed on standardized tests, what sparks their interest. This kind of specific understanding is not trivial, for teachers use it constantly to decide how best to tailor instruction.

As diagnosticians of students' interests, abilities and prior knowledge, skillful teachers learn to "read" their students. When planning a unit on aging, for example, they will anticipate what concepts and activities certain students may find problematic. Watching a student work on a computer, they will look for signs of progress. By keeping a finger on the pulse of the class, teachers decide when to alter plans, work with individual students, or enrich instruction with additional examples, explanations or activities.

Proficient teachers learn from their experiences. They learn from listening to their students, from watching them interact with peers, and from reading what they write. The information they acquire about students in the course of instruction subsequently becomes part of their general knowledge of education. Such monitoring and learning is no easy feat. What teachers are able to see, hear and learn is colored by their own prior knowledge and experience. Thus teachers must, in their efforts to work with children different than themselves, monitor both what they see and hear, and what is not so close to the surface. They must strive to acquire a deep understanding of their students and the communities from which they come that shape students' outlooks, values and orientations toward schooling.

Teachers Have an Understanding of How Students Develop and Learn

In addition to particular knowledge of their students, teachers use their understanding of individual and social learning theory, and of child and adolescent development theory, to form their decisions about how to teach. They are familiar with the concepts generated by social and cognitive scientists that apply to teaching and learning. Moreover, they integrate such knowledge with their personal theories of learning and development generated from their own practice. For example, accomplished teachers know that old theories of a monolithic intelligence have given way to more complex theories of multiple intelligences. Current thinking no longer casts "intelligence" as a context-free, one-dimensional trait. Instead, it recognizes different kinds of intelligence -- linguistic, musical, mathematical, spatial, kinesthetic, personal. This perspective also holds that there are variations in the sources of intelligence (e.g., practical experience versus formal study) and the forms of intelligence (e.g., procedural skills versus propositional knowledge).

Both their knowledge of these theories and their experiences in classrooms have taught teachers that each student has different strengths, perhaps even gifts. Teachers think about how to capitalize on these assets as they consider how best to nurture additional abilities and aptitudes.

Moreover, teachers recognize that behavior always takes place within a particular setting that, to some extent, defines the behavior. They know, for instance, that students who cannot flawlessly recite multiplication tables may still be able to multiply in other contexts (e.g., in calculating whether they have enough money for items at the grocery store). Accomplished teachers are aware that school settings sometimes obscure a clear vision of students' aptitudes and intelligences. Therefore, they strive to provide multiple contexts in which to promote and evaluate those abilities.

They also recognize the ways in which intelligence is culturally defined. That is, what is considered intelligent behavior is largely determined by the values and beliefs of the culture in which that behavior is being judged. Accomplished teachers recognize that in a multicultural nation students bring to the schools a plethora of abilities and aptitudes that are valued differently by the community, the school and the family. The knowledge, skills, abilities and dispositions that are nurtured in a Native American community in the state of Washington will differ from those valued in an Hispanic community in Florida. Likewise, those cultivated by a suburban community in Utah will differ from those developed in urban New York. Thus, teachers are attuned to the diversity that is found among students and develop an array of strategies for working with it. This includes providing educational experiences which capitalize on and enlarge the repertoires of learning and thinking that students bring to school.

Teachers Treat Students Equitably

As stewards for the interests of students, accomplished teachers are vigilant in ensuring that all pupils receive their fair share of attention, and that biases based on real or perceived ability differences, handicaps or disabilities, social or cultural background, language, race, religion, or gender do not distort relationships between themselves and their students. This, however, is not a simple proposition. Accomplished teachers do not treat all students alike, for similar treatment is not necessarily equivalent to equitable education. In responding to differences among students, teachers are careful to counter potential inequities and avoid favoritism. This requires a well-tuned alertness to such matters and is difficult, as we have only modest knowledge of human differences and how best to respond to them. Hence, accomplished teachers employ what is known about ineffectual and effective practice with diverse groups of students, while striving to learn more about how best to accommodate those differences.

Teachers' Mission Extends Beyond Developing the Cognitive Capacity of Their Students

Teachers are concerned with their students' self-concept, with their motivation, with the effects of learning on peer relationships, and with the development of character, aspiration and civic virtues. These aspects of the student -- important as they are in their own right -- are also essential to intellectual development. Proficient teachers consider students' potential in this broader sense when making decisions about what and how to teach.

Proposition #2: Teachers Know the Subjects They Teach and How to Teach Those Subjects to Students

If one cardinal precept of teaching is a commitment to the welfare and education of young people, the other is a commitment to subject matter. Accomplished teachers are dedicated to exposing students to the social, cultural, ethical and physical worlds in which they live, and they use the subjects they teach as entrees into those worlds. Thus, elementary teachers know about geography and its relationship to commerce and history. Foreign language teachers know how language and culture interact and fuse. But, it is not sufficient that teachers know the facts that fall into these different content domains. Understanding subject matter entails more than being able to recite lists of dates, multiplication tables, or rules of grammar.

Teachers Appreciate How Knowledge in Their Subjects is Created, Organized and Linked to Other Disciplines

Teachers in command of their subject understand its substance -- factual information as well as its central organizing concepts -- and the ways in which new knowledge is created, including the forms of creative investigation that characterize the work of scholars and artists.

Physics teachers know about the roles played by hypothesis generation and experimentation in physics; mathematics teachers know the modes of justification for substantiating mathematical claims; art teachers understand how visual ideas are generated and communicated; history teachers know how historians use evidence to interpret past events; and English teachers understand the relationships among reading, writing and oral language. Many special education teachers have a slightly different orientation -- focusing on skill development as they work to help moderately and profoundly handicapped students achieve maximum independence in managing their lives.

Understanding the ways of knowing within a subject is crucial to the National Board Certified teacher's ability to teach students to think analytically. Critical thinking does not occur in the abstract, for the thinker is always reasoning about something. Proficient teachers appreciate the fundamental role played by disciplinary thinking in developing rich, conceptual subject-matter understandings. They are dedicated to exposing their students to different modes of critical thinking and to teaching students to think analytically about content.

Teachers represent the collective wisdom of our culture and insist on maintaining the integrity of the methods, substance and structures of disciplinary knowledge. In the face of pressures to portray knowledge in weak and diluted forms, they remain firm. Their role, however, is not just to reinforce the status quo. Rather, appreciative of the fact that there are multiple perspectives and interpretations in each discipline, accomplished teachers encourage students to question prevailing canons and assumptions to help them think for themselves.

It is sometimes assumed that elementary school teachers need not be equipped to approach their subjects critically. But all accomplished teachers, regardless of the ages of their students, are charged with teaching students about something, and in order to do so, they must appreciate its complexity and richness. Teachers must possess such knowledge if they are to help their students develop higher-order thinking skills -- the hallmark of accomplished teaching at any level. Being able to engage elementary school children in the broad array of subjects they can profitably come to appreciate makes elementary school practice especially challenging. This does not imply

that fourth-grade teachers should have the same command of biology as high school biology teachers. However, it does mean that they have an understanding of science that allows them to present basic precepts to their students and introduce them to the joy of discovering -- and thinking about -- the natural world of which they are a part.

Teachers Command Specialized Knowledge of How to Convey a Subject to Students

Knowledge of subject matter is not synonymous with knowledge of how to reveal content to students so they might build it into their systems of thinking. Accomplished teachers possess what is sometimes called "pedagogical content knowledge." Such understanding is the joint product of wisdom about teaching, learning, students and content. It includes knowledge of the most appropriate ways to present the subject matter to students through analogies, metaphors, experiments, demonstrations and illustrations. Subject-specific knowledge also includes an awareness of the most common misconceptions held by students, the aspects that they will find most difficult, and the kinds of prior knowledge, experience and skills that students of different ages typically bring to the learning of particular topics. Proficient science teachers, for example, know that some students have misconceptions about gravity that can influence their learning, while proficient art and music teachers know that young children arrive at school at various stages of maturity with respect to eye-hand coordination. Teachers use this knowledge of their students to structure instruction that facilitates further development.

Thus, subject-specific pedagogical knowledge is not a bag of tricks, but a repertoire of representations that combines instructional techniques with subject matter in ways that take into account the mix of students and school contexts that confront the teacher. Such subject-specific teaching knowledge embodies a way of reasoning through and solving the problems that arise in the daily work of teachers -- decisions ranging from what aspects of the subject matter to emphasize to decisions about how to pace instruction. In making these choices, teachers bring to bear their knowledge of students and learning and teaching and subject matter.

Professional teachers' instructional repertoires also include knowledge of available curricular resources such as primary sources, models, reproductions, textbook series, teachers' guides, videotapes, computer software and musical recordings. Their commitment to learning about new materials includes keeping abreast of technological developments that have implications for teaching; for example, how to engage students in the rapidly expanding field of computer technology, as well as how to use the computer to enhance their own teaching. Thus, able teachers keep current with the growing body of curricular materials -- including literature available through their professional organizations -- and constantly evaluate the usefulness of those materials based on their understanding of curriculum theory, of students, of subject matter, and of the school's and their own educational aims.

Teachers Generate Multiple Paths to Knowledge

Knowledgeable teachers are aware there is value in both structured and inductive learning. That is, while it is useful to teach students about the concepts and principles that scholars have generated in the various disciplines, it is also valuable to engage students in learning by discovery, where they themselves search for problems, patterns and solutions. Proficient teachers help students learn to pose problems and work through alternative solutions, in addition to teaching them about the answers that others have found to similar problems.

The posing and solving of problems on their own is central to the development of true understanding by students -- moving far beyond the rote memorization of facts, the easy manipulation

of formulas or the facile playing of a musical scale. Teaching for understanding requires students to integrate aspects of knowledge into their habits of thinking, rather than simply store fragmented knowledge bits. It also means learning to think in a nonlinear way, approaching issues from different angles, weighing multiple criteria and considering multiple solutions. Thus, in the eyes of the proficient teacher, "knowledge" is not conceived narrowly as a lower-level form of understanding. Rather, knowledge is cast in the richest light -- as a combination of skills, dispositions, propositions and beliefs - integrated and flexible, elaborate and deep. Furthermore, understanding involves the ability to apply such knowledge to problems never before encountered by teacher or student. Accomplished teachers appreciate that this is the kind of knowledge and understanding that counts, and that this type of learning cannot be rushed.

Proposition #3: Teachers are Responsible for Managing and Monitoring Student Learning

Professional teachers hold high expectations for all students and see themselves as facilitators of student learning. To fulfill these responsibilities, teachers must create, enrich and alter the organizational structures in which they work with young people. They also find ways to capture and sustain the interest of their students. Because time is a precious commodity in schools, teachers attempt to make the most efficient use of it. To accomplish these tasks, teachers seek to master the body of generic pedagogical knowledge.

Teachers Call on Multiple Methods to Meet Their Goals

Accomplished teachers know and can employ a variety of generic instructional skills -- how to conduct Socratic dialogues, how to lecture, how to oversee small cooperative learning groups. Although much of instruction is determined by the content to be taught, there are some commonalities about teaching methods that guide their practice. They are aware of what can reasonably be covered in a 45-minute roundtable discussion, when to hold back and let students figure out their own solutions, and what types of questions provoke the most thoughtful conversation. But it is not sufficient that teachers know about different modes of instruction; they must also know how to implement those strategies. Traditional distinctions between knowing and doing have obscured the fact that thought and action interpenetrate in teaching -- knowing about something and knowing how to do something are both forms of understanding central to teaching.

Because students vary in learning styles and because different settings afford differing learning opportunities, accomplished teachers know when and how to alter the social and physical organizational structure of the learning environment. It is not enough to be a master lecturer, for there are many times when lecturing is not an effective way to teach. An outdoor experiment, a mock trial or an economic simulation, for example, may be more appropriate. Alternatively, a playlet or a debate might be a more effective way to engage students in thinking and learning. Teachers know about the breadth of options available to them, such as innovative instructional formats that involve discovery learning, conceptual mapping, brainstorming, working with computers, as well as more traditional tried-and-true methods.

Teachers not only have the opportunity to vary instructional settings and to employ a range of instructional materials, they also have the opportunity to call on various human resources to custom-tailor the working environment for students. Accomplished teachers know how to mobilize students to tutor their peers and how to engage aides and volunteers as teaching assistants. In schools where staffing arrangements are not fixed and inflexible, teachers also have a good appreciation of their colleagues' skills and the circumstances in which their colleagues' talents can best complement their own. Professional teachers wisely enlist the knowledge and expertise of their fellow faculty members in a variety of ways as they seek to provide their students with as rewarding a learning experience as possible.

Accomplished teachers also know the strengths and weaknesses of these options, and their suitability or incompatibility for certain students and groups. The settings that a teacher chooses are not just matters of personal preference, but are grounded in the literature of teaching. Teaching, to the accomplished teacher, is an elegant web of alternative activities in which students are engaged with the content; sometimes with the teacher, sometimes with each other, sometimes alone.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Teachers Orchestrate Learning in Group Settings

Teachers know how to manage groups of students. They are responsible for setting forth the social norms by which students and teachers act and interact, helping students learn to adopt appropriate roles and responsibilities for their own learning and that of their peers. This includes teaching students to work independently without constant direct supervision by a teacher.

Accomplished teachers have developed systems for overseeing their classrooms so that students and teacher alike can focus on learning, not on controlling disruptive behavior. Discipline and management techniques vary, and no one system has been proven most effective. Hence, proficient teachers consider the desired learning results, their knowledge of their students and the social context, and their own prior experience in selecting management strategies.

Teachers also know that different instructional formats often require different norms of social interaction. Accomplished teachers can alternate among organizational arrangements and understand how different structures cast students and teachers in different roles. Applying their knowledge of the relative strengths and weaknesses of different structures, they weigh these considerations when deciding which instructional strategy and organizational structure will best enhance student learning. They also continually search for new forms of organization that may expand their repertoire and prove effective.

Teachers Place a Premium on Student Engagement

Facilitating student learning is not simply a matter of placing young people in educative environments, for teachers must also motivate them, capturing their minds and hearts and engaging them actively in learning. Thus, the National Board Certified teacher understands the ways in which students can be motivated and has strategies to monitor student engagement. The teacher's role in building upon student interests and in sparking new passions is central to building bridges between what students know and can do and what they are capable of learning.

Proficient teachers also know that motivating students is not always equivalent to making learning fun, for learning can be difficult work. Developing an acute sense of one's body in dance, for example, requires intense intellectual and physical concentration. Writing a short story requires drafting and re-drafting, editing and re-editing, occasionally submitting oneself to the critiques of peers and teachers. To practice effectively, teachers need to know how to encourage students even in the face of temporary failure and the inevitable doubts that students meet as they push themselves to new affective, intellectual and physical planes. With such learning comes the real joy in education, the satisfaction of accomplishment.

Teachers Regularly Assess Student Progress

While teachers are not always the central actors in their students' educational experiences, they are ultimately responsible for the creation and maintenance of those experiences and bear a considerable responsibility for what students learn at school. Proficient teachers, therefore, can judge the relative success of the activities they design. They can track what students are learning (or not learning), as well as what they, as teachers, are learning.

Assessment in teaching is not a simple task; teachers must monitor the successes and failures of individual students and evaluate their classes as collectives of learners. Additionally, they make judgments about themselves as teachers in relation to those students and classes. Although these judgments are interdependent of one another, they are not necessarily synonymous. One of the essential tensions of teaching is that teachers teach individual students, while managing groups.

What Teachers Should Know and Be Able to Do

National Board for Professional Teaching Standards®

Accomplished teachers do not treat a class as a monolith. They know that a class does not learn; individual students do. But individuals neither learn the same things, nor learn at the same pace.

Accomplished teachers use information about how the students in their classes are doing "on average" as a guide to making judgments about the relative success or failure of an instructional strategy. But they do not forget that there are few average students. They know that some students have moved far beyond that "average" evaluation, while others trail. And while they have to make decisions about what to do with the class as a whole, proficient teachers find ways to accommodate what they know about individual students and what they are learning in their plans for the whole group.

Accomplished teachers understand that the purposes, timing and focus of an evaluation affect its form. They are astute observers of students -- their movements, their words and their minds. Teachers track student progress with a variety of evaluation methods, each with its own set of purposes, strengths and weaknesses. Their knowledge extends to creating their own, sometimes innovative, tools for evaluation, including portfolios, videotapes, demonstrations and exhibitions. In addition, they may use more traditional measures such as quizzes or exams. Sometimes teachers ask questions in the middle of a group discussion in order to assess how well students are following the presentation of information; or they may talk individually with students while they are engaged in independent work. At other times they watch their students' behavior as they read to each other or work in the laboratory.

Teachers frequently do not assign grades, for evaluation is not always for the purpose of recording grades; rather, it allows students and teachers to assess where they stand. Teachers also assess students to determine how much they have learned from a unit of instruction, be it a week on seeds, a semester of photography, or a year of athletic training. Student responses then contribute to teachers' decisions about whether to reteach, review or move on. By continually adding to their repertoire of methods for assessing what students have learned, as well as constantly monitoring student progress, accomplished teachers are able to provide constructive feedback to students, parents and themselves. Finally, such teachers help their students to engage in self-assessment, instilling in them a sense of responsibility for monitoring their own learning.

Teachers Are Mindful of Their Principal Objectives

Teachers also know about planning instruction - identifying and elaborating educational objectives, developing activities to help them meet their goals and drawing upon resources that will serve their purposes. Experienced teachers do not all plan alike. Some do not write elaborate plans prior to teaching, having automated their planning through years of experience in classrooms. Other teachers plan in detail (e.g., creating individual educational plans for special education students). No matter what form their final plans take -- scribbles on a scrap of paper or lengthy and detailed outlines accomplished teachers can clearly articulate their goals for students.

Proposition #4: Teachers Think Systematically About Their Practice and Learn from Experience

As with most professions, teaching requires an open-ended capacity that is not acquired once and for all. Because they work in a field marked by many unsolved puzzles and an expanding research base, teachers have a professional obligation to be lifelong students of their craft, seeking to expand their repertoire, deepen their knowledge and skill, and become wiser in rendering judgments. Accomplished teachers are inventive in their teaching and, recognizing the need to admit new findings and continue learning, stand ready to incorporate ideas and methods developed by others that fit their aims and their students. What exemplifies excellence, then, is a reverence for the craft, a recognition of its complexities, and a commitment to lifelong professional development.

Teachers Are Continually Making Difficult Choices That Test Their Judgment

The demands of teaching often present stiff challenges that do not lend themselves to simple solutions. Conflicting objectives regularly require teachers to fashion compromises that will satisfy multiple parties. A Western Civilization teacher, for example, attempting to reconcile demands for coverage with demands for indepth understanding, will do what is necessary to race from Plato to NATO, yet set aside time to develop in students the understanding that history is evolutionary rather than a series of events strung together chronologically. Likewise, a third-grade teacher will find a way to introduce students to the idea that writing is a thinking process, while ensuring that students are learning the basics of spelling and grammar.

Teachers also face choices that force them to sacrifice one goal for another. For instance, teachers who are committed to teaching mathematics for conceptual understanding want to teach students to see number relationships in the real world, to represent them with appropriate symbols, and to use their knowledge of mathematical formulas and computational skills to manipulate those numbers. Such teaching requires giving students time to frame their own problems, find their own solutions, and compare those solutions with alternatives posed by their classmates. Students who have learned through experience that math class involves filling out worksheets and doing problem sets may dislike the uncertainty inherent in problems with multiple or no solutions; they may be troubled that their teacher now wants them to discuss the reasons why a particular solution makes sense. Abandoning speed and accuracy as the criterion of success may temporarily jeopardize students' performance on standardized tests, even as the teacher fosters growth in the depth of students' mathematical competence. In deciding to teach in this way, a teacher risks alienating students, parents and administrators who have their own strong ideas of what math class is supposed to look like and the kind of competence it is supposed to yield.

Such circumstances call on teachers to employ their professional knowledge of what makes for sound practice, with the interest of their students given paramount consideration. While more than one satisfactory path may be derived to balance non-complementary objectives, the teacher's decision will be grounded in established theory and reasoned judgment.

Teachers Seek the Advice of Others and Draw on Education Research and Scholarship to Improve Their Practice

Aware that experience is not always a good teacher, proficient teachers search out other opportunities that will serve to cultivate their own learning. As savvy students of their own teaching, they know the value of asking others to observe and offer a critique of their teaching. They also know the value of writing about their work and of soliciting reactions from parents and students.

Thus, masterful teachers develop specialized ways to listen to their students, colleagues and administrators, and reflect on their teaching in order that they might improve their practice.

Able teachers are also students of education scholarship and are cognizant of the settled and unsettled territory in their field. They stay abreast of current research and, when appropriate, incorporate new findings into their practice. They take advantage of teacher centers and special conferences and workshops. They might conduct and publish their own research, if so inclined, for testing of new approaches and hypotheses is a commonplace habit among adept teachers, even if a normally overlooked and undocumented one.

Wise teachers understand the legitimacy and limitations of the diverse sources that inform teaching and they continuously draw upon them to enrich their teaching. Their enthusiasm for, and commitment to, continued professional development exemplifies a disposition they hope to nurture in students. Hence, the thinking, reasoning and learning that characterize first-rate teaching are doubly valuable: not only are thoughtful teachers able to teach more efficiently and effectively, they are also models for the critical, analytic thinking that they strive to develop in our youth. Teachers who are themselves exemplars of careful reasoning -- considering purposes, marshaling evidence and balancing outcomes -- are more likely to communicate to students the value and manner of such reasoning. Moreover, they model other dispositions and traits as well, such as a commitment to creativity in their work and the disposition to take risks in exploring new intellectual, emotional, physical or artistic territories.

Proficient teachers, then, are models of educated persons. Character and competence contribute equally to their educative manner. They exemplify the virtues they seek to impart to students: curiosity and a love of learning; tolerance and open-mindedness; fairness and justice; appreciation for our cultural and intellectual heritages; respect for human diversity and dignity; and such intellectual capacities as careful reasoning, the ability to take multiple perspectives, to question received wisdom, to be creative, to take risks, and to adopt an experimental and problem-solving orientation.

Proposition #5: Teachers are Members of Learning Communities

Teaching most commonly is regarded as the daily conduct of lessons and the provision of learning experiences. But the work of teaching reaches beyond the boundaries of individual classrooms to wider communities of learning. In order to take advantage of the broad range of professional knowledge and expertise that resides within the school, accomplished teachers have a range of duties and tasks outside the direct instruction of students that contribute importantly to the quality of the school and to student learning.

There are two broad areas of responsibility. One involves participation in collaborative efforts to improve the effectiveness of the school. The second entails engaging parents and others in the community in the education of young people.

Teachers Contribute to School Effectiveness by Collaborating with Other Professionals

Teaching is often portrayed as the implementation of policy and curriculum developed by others -- as following orders. The National Board advocates a more proactive and creative role for teachers: engaging them in the analysis and construction of curriculum, in the coordination of instruction, in the professional development of staff and in many other school-site policy decisions fundamental to the creation of highly productive learning communities.

While state authorities and local school district leadership establish broad goals, objectives and priorities for the schools, professional teachers share responsibility with colleagues and administrators for decisions about what constitutes valuable learning for students. This includes their participation in critically analyzing the school curriculum, identifying new priorities and communicating necessary changes to the school community. Teachers' knowledge of curriculum and their students are essential to discharging these responsibilities effectively. But a readiness to work collaboratively on such matters and not blindly accept curricular conventions is also necessary.

Accomplished teachers attend to issues of continuity and equity of learning experiences for students that require school-wide collaboration across the boundaries of academic tracks, grade levels, special and regular instruction and disciplines. Such boundaries, constructed as much out of traditional patterns of school organization as out of instructional rationales, are often dysfunctional and damaging to student learning. National Board Certified teachers cultivate a critical spirit in appraising such schooling commonplaces, together with a willingness to work with administrators toward school-wide improvements that can include revision of organizational as well as instructional features of schooling.

The development of curriculum and the coordination of instruction are particularly important functions shared among teachers and administrators. Proficient teachers collaborate in planning the instructional program of the school to assure continuity of learning experiences for students. They possess the interpersonal skills needed to work on teams and a willingness to work together in the interest of the school community. Their understanding of the technical requirements of a well-coordinated curriculum enables them to participate in planning and decision-making within teams, departments or other educational units outside the classroom, laboratory or studio.

Consonant with their role in curriculum planning and coordination, teachers are aware of the learning goals and objectives established by state and local authorities. Professional practice requires that teachers be knowledgeable about their legal obligation to carry out public policy as

represented by state statute and regulation, school board directives, court decisions and other policies.

Accomplished teachers also participate in the coordination of services to students. Today's schools include a wide variety of educational specialists, and with increasing specialization has come the need for coordination, lest pupils' educational experiences become fragmented. The increased practice of "mainstreaming" special-needs students to assure that they are being educated in the least restrictive environment has meant that general and special education teachers need to work with one another. Compensatory education programs typically involve teaching pupils outside regular school settings. The various forms of English as a second language, bilingual and English-immersion programs often require cooperation among teachers of non- and limited-English-speaking youth. National Board Certified teachers are adept at identifying students who might benefit from such special attention and at working in tandem with specialists.

In addition to working on the improvement of school-wide curricula and the coordination of instruction, teachers work together to strengthen their teaching. Sometimes they observe each other teach; at other times they engage in discussions about teaching; and occasionally they collaborate in trying out new instructional strategies. While the particulars of how teachers choose to improve their instruction will vary according to the structure of opportunity and a teacher's dispositions and interests, the principle underlying such engagement is the continuous pursuit of teaching excellence in the company of peers.

Strong schools emphasize a process of continuous improvement. They are organized to find and solve problems and to locate, invent and experiment with different methods of instruction and school organization. Teachers within such schools work not only on professional development, but also on school-wide improvements. This expectation is part of what constitutes a professional orientation to teaching and part of what distinguishes the professional teacher.

The conventional image of the accomplished teacher as solo performer working independently with students is narrow and outdated. Committed career teachers assume responsibility in cooperation with their administrators for the character of the school's instructional program. They are team players willing to share their knowledge and skill with others and participate in the ongoing development of strong school programs. This participation may take many forms, such as mentoring novices, serving on school and district policy councils, demonstrating new methodologies, engaging in various forms of scholarly inquiry and artistic activity, or forming study groups for teachers.

Teachers Work Collaboratively with Parents

Teachers share with parents the education of the young. They communicate regularly with parents and guardians, listening to their concerns and respecting their perspective, enlisting their support in fostering learning and good habits, informing them of their child's accomplishments and successes, and educating them about school programs. Kindergarten teachers, for example, can help parents understand that reading stories to their children is more important to literacy development than completing worksheets on letters.

In the best of all worlds, teachers and parents are mutually reinforcing partners in the education of young people. But three circumstances complicate this partnership. First, the interests of parents and schools sometimes diverge, requiring teachers to make difficult judgments about how best to fulfill their joint obligations to their students and to parents. Second, students vary in the degree and kind of support they receive at home for their school work. The effects of

culture, language, and parental education, income and aspirations influence each learner. Teachers are alert to these effects and tailor their practice accordingly to enhance student achievement. However, when faced with an unavoidable conflict, the teacher must hold the interest of the student and the purposes of schooling paramount. Third, the behavior and mind-set of schools and families can be adversarial. Some parents are distrustful of the school's values, and the schools sometimes underestimate the family's potential to contribute to their children's intellectual growth. Students get caught in the middle, their allegiance to and affection for each party challenged by the other. Accomplished teachers develop skills and understandings to avoid these traditional pitfalls and work to foster collaborative relationships between school and family.

The changing family structure in our society creates new challenges as well, for there are now more youth with single parents, working parents and parents with inadequate income. Thus, creating home-school partnerships has become more difficult for teachers and parents in many communities. In attempting to work creatively and energetically with families in the interest of students' development, able teachers acquire knowledge and understanding of individual students' lives outside school. A teacher's foremost responsibility is to the intellectual development of our youth, but they are mindful of the broad range of children's needs, including the need for guidance and the strong presence of caring and nurturing adults. This is a difficult set of obligations to fulfill. On the one hand, teachers are prepared neither by training nor by role to serve as parent surrogates or social workers. The distinctive mission of teaching is to promote learning, a complex undertaking in itself. On the other hand, education's broad and humane purposes do not admit any narrow specialization. Students' physical, emotional, and social well-being cannot be separated from their intellectual growth.

Teachers Take Advantage of Community Resources

Professional teachers cultivate knowledge of their school's community as a powerful resource for learning. The opportunities are many for enriching projects, lessons, and study: observing the city council in action; collecting oral histories from senior citizens; studying the ecology of the local environment; visiting a nearby planetarium; drawing the local architecture; or exploring career options on-site. Any community -- urban or rural, wealthy or poor -- can be a laboratory for learning under the guidance of an effective teacher. Moreover, within all communities there are valuable resources such as other teachers and students, senior citizens, parents, business people, and local organizations that teachers can engage to assist, enhance and supplement their work with students. Teachers need not teach alone.

Teachers also cultivate knowledge about the character of the community and its effects on the school and students. They develop an appreciation of ethnic and linguistic differences, of cultural influences on students' aspirations and expectations, and of the effects of poverty and affluence. Cultural and other discontinuities between home and school frequently can confound teachers' efforts to promote learning. Conversely, the cultural diversity represented in many communities can serve as a powerful resource in teaching about other cultures, in encouraging tolerance and understanding of human differences, and in promoting civic ideals. Accomplished teachers seek to capitalize on these opportunities and to respond productively to students' diverse backgrounds.

There is a balance here. Schools and teachers cannot alleviate all the social problems that they encounter. Yet teachers confront the human condition daily in all its variety, splendor and misery. They must be humane, caring and responsive to students and their problems, while they maintain a focus on their distinctive professional responsibilities.

Conclusion

Accomplished teaching involves making difficult and principled choices, exercising careful judgment and honoring the complex nature of the educational mission. Teachers employ technical knowledge and skill, yet must be ever mindful of teaching's ethical dimensions. The primary mission is to foster the development of skills, dispositions and understanding, while responding thoughtfully to a wide range of human needs and conditions. Teachers owe joint allegiance to the forms and standards of knowledge within and across disciplines and to the students they serve.

They must acquire and employ a repertoire of instructional methods and strategies, yet remain critical and reflective about their practice, drawing lessons from experience. Teachers' professional responsibilities focus on instructing the students in their immediate care, while they participate as well in wider activities within the school and in partnership with parents and the community.

Teaching is often portrayed as an activity that conserves valued knowledge and skills by transmitting them to succeeding generations. It is that and more. Teachers also have the responsibility to question settled structures, practices, and definitions of knowledge; to invent and test new approaches; and, where necessary, to pursue change of organizational arrangements that support instruction. As agents of the public interest in a democracy, teachers through their work contribute to the dialogue about preserving and improving society, and they initiate future citizens into this ongoing public discourse. In the development of its assessment procedures and certification standards, the National Board has sought to represent these ideals faithfully and comprehensively.

Assertations about what teachers should know sometimes conceal inadequacies in the current state of knowledge. In this respect, teaching is not unlike other professions where practitioners confront unavoidable uncertainty in their work. However, the knowledge base for teaching is growing steadily. Professional consensus and research findings have begun to provide authoritative support for knowledge related to many of the tasks, responsibilities and results of teaching. But much remains to be learned.

The National Board draws on existing knowledge in developing its standards but also relies on the professional judgment of accomplished teachers and scholars in designing its assessment procedures. Recognizing that new knowledge about teaching is continually being formulated, the National Board continually reviews its work to reflect new findings and to update its standards and assessments as appropriate.

The National Board also considers the effects of school context on standards for teaching. The very existence of a National Board suggests common standards that prevail across teaching's many settings. However, teaching in an Alaskan village exacts demands different from teaching in Chicago. Teachers in both settings, though, blend and adapt their knowledge of teaching with their knowledge of the community in which they work to ensure effective student learning. For accomplished teachers, the wisdom of practice that they accrue depends on the settings in which they work, the communities they serve, and the students they encounter.

The assessment procedures developed by the National Board take context into account in a variety of ways. This is achieved by the use of assessment formats such as essays, videotaping and reflective commentaries. The National Board offers National Board Certification to all qualified

teachers irrespective of the teaching environments in which they work. But the opportunities available to teachers to acquire and exercise many of the professional capacities and responsibilities endorsed by the National Board vary markedly from community to community. Some schools feature strong professional cultures whose norms support collaboration, innovative teaching, a high degree of collegiality, and participation in a broad array of professional activities. Other schools provide few such opportunities, and some even discourage such activity. To address this tension, the National Board's assessments acknowledge that there are multiple paths to meeting the standards, which take into account the diversity of teaching contexts.

These are the touchstones that guide the development of the National Board's certification standards and assessments. Our view of the responsibilities of the National Board Certified Teacher is deliberately complex and demanding, for this is how we see the work of American professional teachers, who are challenged to create excellence in education for all our nation's youth.

Notes for SB 83 Presentation

1) Educated dog story
    a. Transition to the tough job of teaching.
    b. We don't want trained teachers

2) SB 83—offers incentives to teachers to become board certified.
    a. **Section 1**
        i. $1,000 a year for teachers who hold valid, current national certification
            1. If from a high poverty low performing area
                a. An additional $500
                b. $1,000 to be used toward getting certified
    b. Section 2
        i. Interest free loan of $2,500 to cover most of the costs of getting certified
            1. Allocate money to the department and districts
            2. Develop an application process
            3. Defines who is eligible
                a. Employed by department or district
                b. Actively pursuing accreditation
                c. Signs a loan agreement
                d. Loans made directly to organization
                e. Penalties for default
                f. Pro rate loans if not enough available

3) National Board for Professional Teaching Standards
    a. THE recognized national certification board
    b. 25 different areas for certification
    c. Very rigorous process

CS FOR SENATE BILL NO. 83(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act providing for payment and loan incentives to public school teachers for national board certification."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.20 is amended by adding a new section to article 3 to read:

Sec. 14.20.225. Incentive and stipend payments for national board certification. (a) A school district or the department, as applicable, shall in January of each year pay an incentive payment of $1,000 to each teacher who is employed by the district or the department and who holds a current and valid national board certification.

(b) In addition to the incentive payment provided in (a) of this section, for a teacher who is employed by a district to teach in a school that is located in a high poverty attendance area and that has received a low performance rating, as determined by the department, a school district shall,

(1) if the teacher holds a current and valid national board certification,

annually pay a supplemental incentive payment of $500; or

(2) if a teacher is not national board certified, pay the national certification board an amount that is not more than $1,000 to be used toward national certification of the teacher for the period in which the teacher is actively seeking national board certification. $350 to retake sections

(c) The department shall provide sufficient funding, subject to appropriation and in addition to the state aid received under AS 14.17, to a school district to make national board certification incentive payments as provided in this section. The department may establish a form and procedure to be used by a school district to request teacher incentive and stipend payments, including proof of actively pursuing national board certification. $20,000 - paid directly to Board

(d) In this section,

1) Addendum to what districts provide.

(1) "district" has the meaning given in AS 14.17.990;

(2) "national board certification" means individual achievement of national professional teaching standards as certified by a nationally recognized board.

*** Sec. 2.** AS 14.43 is amended by adding new sections to read:

Article 9A. National Board Teacher Certification Loan Program.

Sec. 14.43.550. Program established. The national board teacher certification loan program is established to provide an incentive for teachers employed by a public school district in the state or a school operated by the department to pursue certification of professional teaching standards by a nationally recognized board.

Sec. 14.43.555. Administration and eligibility. (a) The national board teacher certification loan program shall be administered by the commission in accordance with regulations adopted by the commission. The commission shall

quarterly

(1) provide on behalf of eligible teachers loan awards of a lump sum of $2,500 for each teacher, to be repaid over three years at zero percent interest;

(2) allocate the loan awards available for national board teacher certification annually to the department for loans on behalf of teachers employed by the department who teach in a public school and to the school district for loans to teachers employed by the district;

(3) develop and distribute to the department and to the districts an

(c) The department shall provide sufficient funding, subject to appropriation and in addition to the state aid received under AS 14.17, to a school district to make national board certification incentive payments as provided in this section. The department may establish a form and procedure to be used by a school district to request teacher incentive and stipend payments, including proof of actively pursuing national board certification.

(d) In this section,

(1) "district" has the meaning given in AS 14.17.990;

(2) "national board certification" means individual achievement of national professional teaching standards as certified by a nationally recognized board.

* **Sec. 2.** AS 14.43 is amended by adding new sections to read:

Article 9A. National Board Teacher Certification Loan Program.

Sec. 14.43.550. Program established. The national board teacher certification loan program is established to provide an incentive for teachers employed by a public school district in the state or a school operated by the department to pursue certification of professional teaching standards by a nationally recognized board.

Sec. 14.43.555. Administration and eligibility. (a) The national board teacher certification loan program shall be administered by the commission in accordance with regulations adopted by the commission. The commission shall

(1) provide on behalf of eligible teachers loan awards of a lump sum of $2,500 for each teacher, to be repaid over three years at zero percent interest;

(2) allocate the loan awards available for national board teacher certification annually to the department for loans on behalf of teachers employed by the department who teach in a public school and to the school district for loans to teachers employed by the district;

(3) develop and distribute to the department and to the districts an

application form for teacher certification loans under this section.

(b) A teacher is eligible to receive the benefit of a national board teacher certification loan if the teacher is currently

(1) employed by the department or a public school district and teaches students who are in grades kindergarten through 12;

(2) actively pursuing national certification of professional teaching standards awarded by a nationally recognized board; and

(3) signs an agreement provided by the commission to secure repayment of the loan within three years.

(c) For a loan awarded under this section, the commission shall

(1) make quarterly payments to the national teacher certification board on behalf of an eligible teacher;

(2) establish conditions for repayment;

(3) provide for penalties for default; and

(4) pro rate the amount of the award if insufficient funding is available to provide awards on behalf of all eligible teachers in a fiscal year.

(d) In making loans under this section, the commission shall apply the standards used by the department under AS 14.20.225(c) for determining what constitutes actively pursuing national certification.

Sec. 14.43.590. Definitions. In AS 14.43.550 - 14.43.590,

(1) "department" means the Department of Education and Early Development;

(2) "district" has the meaning given in AS 14.17.990.

Notes - SB 83

Key comments, questions or points have been put in bold and italics. The other info in each paragraph provides additional information related to the bolded comment or question.

We recommend focusing only on National Board Certification (NBC) from the National Board for Professional Teaching Standards (NBPTS) at this point. The language in this bill seems based on information from NBPTS. For instance, the cost of certification is $2565, and this bill references loans of $2500.

NBPTS offers a wide variety of certificate areas in many different age ranges. http://www.nbpts.org/become_a_candidate/available_certificates1/fields_of_certification

Related to this, in section 14.43.555, item 3(b)(1) – ***I would like to see the statement that eligible teacher teach in grade K-12 be amended to, at a minimum include preschool.*** The age range for exceptional needs is birth-21+. The statement currently in the bill would deny funding to teacher currently working in our Special Education preschool classes. It may also deny funding to those working in the ACT/ACE program for our older special education students.

We would like to see this stipend come directly from the department. Some school districts such as Anchorage, Fairbanks, and Mat-Su, already have incentives in place for teachers who hold NBC from NBPTS. Anchorage pays a $2000 annual addendum. Fairbanks places teachers who earn NBC in the last column of their salary schedule (not sure if I have the correct wording here). I don't know what will happen with Mat-Su's next negotiated agreement, but they were paying a $2000 annual increase for the life of the certification. If districts are required to pay only a $1000 annual stipend, could this negatively impact some NBCTs who already received more than $1000 annually? The majority of Alaska's NBCTs are in Anchorage, Fairbanks and Mat-Su, perhaps partly due to the financial incentives. Also, having the money come directly from the department seems to give the impression that the state of Alaska values this certification and wants to encourage educators to pursue NBC. In states where the stipend/addendum has come directly from the state department, numbers of NBCTs started to skyrocket. Though I don't know how all the behind the scenes stuff works in terms of logistics, it seems less complicated not to make the districts the middleman for dispersing payment.

In the Anchorage School District, a stipend does not count toward retirement, but an addendum does. ***Would this be paid as an addendum so it could be counted toward retirement?***

Line 2 on page 2 mentions an annual payment of 'no more than $1000' for teachers actively pursuing certification. Some teachers achieve NBC after one year, but teachers have up to three years to certify. If a teacher doesn't achieve after three years, he/she would need to begin the process again in order to certify. The initial cost of certification is currently $2565. If a teacher doesn't certify after one year, he/she may retake one or

more sections. It costs about $350 to retake one component, and many candidates retake more than one section. If no more than $1000 was paid annually while a teacher was pursuing certification, could the 'no more than $1000' be used toward retake fees? A teacher doing retakes would be actively pursuing certification. ***This section may need to be more specific…. $1000 paid toward the cost of 'initial certification' and 'no more than $1000 annually for teachers retaking one or more components.'***

Currently, NBPTS allocates federal monies to each state in the form of subsidies. Each state determines how to distribute the subsidies. Alaska typically gets about 10 of these subsidies. ***Would this subsidy money be absorbed into the incentive program?*** If a teacher gets $1000 paid to NBPTS based on the language in this bill, would he/she still be eligible for a state subsidy? (We have a lot of concerns regarding the way the subsidy money is distributed. We'd like to see that changed, but we don't want to see it go away.) I hope the $1000 payment toward certification wouldn't replace the federal subsidies that are currently given to a limited number of candidates. If this was the case, it would exclude all teachers who didn't teach in a high poverty/low performing area. Though I understand the reasoning for giving incentive to teachers in high poverty attendance areas with a low performance rating, I think it is important for all teachers to have an opportunity to receive assistance paying for NBC. All students benefit from quality teaching!

NBPTS application window and fee schedule:
--Apply between 1/1/11 and 12/31/11. Pay $565 at the time of application. The remaining $2000 is due 1/31/12. ***Quarterly payments from the state to NBPTS (on behalf of the teacher) would be difficult.*** For instance, if a teacher applied on 12/31/11, they would only have one month to pay the remaining $2000 to NBPTS.
--Teachers who do not achieve NBC after one year, may retake one or more sections for $350 each.

SENATE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR THOMAS

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to the legal age for attending school; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.30.010(a) is amended to read:

(a) Every child between **six** [SEVEN] and 16 years of age shall attend school at the public school in the district in which the child resides during each school term. Every parent, guardian or other person having the responsibility for or control of a child between **six** [SEVEN] and 16 years of age shall maintain the child in attendance at a public school in the district in which the child resides during the entire school term, except as provided in (b) of this section.

*** Sec. 2.** AS 14.30.010(c) is repealed.

*** Sec. 3.** This Act takes effect July 1, 2011.

SENATE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE EDUCATION COMMITTEE

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act providing for payment and loan incentives to public school teachers for national board certification."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.20 is amended by adding a new section to article 3 to read:

Sec. 14.20.225. Incentive and stipend payments for national board certification. (a) A school district or the department, as applicable, shall in January of each year pay an incentive payment of $1,000 to each teacher who is employed by the district or the department and who holds a current and valid national board certification.

(b) In addition to the incentive payment provided in (a) of this section, for a teacher who is employed by a district to teach in a school that is located in a high poverty attendance area and that has received a low performance rating, as determined by the department, a school district shall,

(1) if the teacher holds a current and valid national board certification,

annually pay a supplemental incentive payment of $500; or

(2) if a teacher is not national board certified, annually pay the national certification board an amount that is not more than $1,000 to be used toward national certification of the teacher for the period in which the teacher is actively seeking national board certification.

(c) The department shall provide sufficient funding, subject to appropriation and in addition to the state aid received under AS 14.17, to a school district to make national board certification incentive payments as provided in this section. The department may establish a form and procedure to be used by a school district to request teacher incentive and stipend payments, including proof of actively pursuing national board certification.

(d) In this section,

(1) "district" has the meaning given in AS 14.17.990;

(2) "national board certification" means individual achievement of national professional teaching standards as certified by a nationally recognized board.

* **Sec. 2.** AS 14.43 is amended by adding new sections to read:

Article 9A. National Board Teacher Certification Loan Program.

Sec. 14.43.550. Program established. The national board teacher certification loan program is established to provide an incentive for teachers employed by a public school district in the state or a school operated by the department to pursue certification of professional teaching standards by a nationally recognized board.

Sec. 14.43.555. Administration and eligibility. (a) The national board teacher certification loan program shall be administered by the commission in accordance with regulations adopted by the commission. The commission shall

(1) provide on behalf of eligible teachers loan awards of a lump sum of $2,500 for each teacher, to be repaid over three years at zero percent interest;

(2) allocate the loan awards available for national board teacher certification annually to the department for loans on behalf of teachers employed by the department who teach in a public school and to the school district for loans to teachers employed by the district;

(3) develop and distribute to the department and to the districts an

application form for teacher certification loans under this section.

(b) A teacher is eligible to receive the benefit of a national board teacher certification loan if the teacher is currently

(1) employed by the department or a public school district and teaches students who are in grades kindergarten through 12;

(2) actively pursuing national certification of professional teaching standards awarded by a nationally recognized board; and

(3) signs an agreement provided by the commission to secure repayment of the loan within three years.

(c) For a loan awarded under this section, the commission shall

(1) make quarterly payments to the national teacher certification board on behalf of an eligible teacher;

(2) establish conditions for repayment;

(3) provide for penalties for default; and

(4) pro rate the amount of the award if insufficient funding is available to provide awards on behalf of all eligible teachers in a fiscal year.

(d) In making loans under this section, the commission shall apply the standards used by the department under AS 14.20.225(c) for determining what constitutes actively pursuing national certification.

Sec. 14.43.590. Definitions. In AS 14.43.550 - 14.43.590,

(1) "department" means the Department of Education and Early Development;

(2) "district" has the meaning given in AS 14.17.990.

PRINTER'S NO. 1709

THE GENERAL ASSEMBLY OF PENNSYLVANIA

SENATE BILL

No. 1252 Session of 2010

INTRODUCED BY DINNIMAN, PICCOLA, FONTANA, COSTA, ERICKSON, O'PAKE, MUSTO, FARNESE AND STACK, FEBRUARY 26, 2010

REFERRED TO EDUCATION, FEBRUARY 26, 2010

AN ACT

Amending the act of March 10, 1949 (P.L.30, No.14), entitled "An act relating to the public school system, including certain provisions applicable as well to private and parochial schools; amending, revising, consolidating and changing the laws relating thereto," providing for payment of fees associated with certification by the National Board for Professional Teaching Standards.

The General Assembly of the Commonwealth of Pennsylvania hereby enacts as follows:

Section 1. The act of March 10, 1949 (P.L.30, No.14), known as the Public School Code of 1949, is amended by adding an article to read:

ARTICLE XI-B

CERTIFICATION OF TEACHERS BY THE NATIONAL BOARD FOR PROFESSIONAL TEACHING STANDARDS

Section 1101-B. Definitions.

The following words and phrases when used in this article shall have the meanings given to them in this section unless the context clearly indicates otherwise:

"Department." The Department of Education of the

Commonwealth.

"Eligible teacher." A teacher who:

(1) Is a current Pennsylvania resident.

(2) Currently holds a valid Pennsylvania teaching certification in good standing.

(3) Has completed three full years of teaching or school counseling in a Pennsylvania public school.

(4) Holds a current, full-time teaching or school counseling position in a Pennsylvania public school.

(5) Has not previously received Commonwealth funds for participating in any certification area of the NBPTS program.

(6) Has not repaid any Commonwealth funds previously received for the NBPTS certification process.

(7) Has not received a waiver of repayment from the Department of Education.

"National Board for Professional Teaching Standards" or "NBPTS." The independent, nonprofit organization established in 1987 to establish high standards for teachers' knowledge and performance and for development and operation of a national voluntary system to assess and certify teachers who meet those standards.

"Public school." A school operated by a school district, intermediate unit, charter school, cyber charter school or an area vocational-technical school.

Section 1102-B. Program.

(a) Establishment.--A program to help defray the cost to teachers of becoming certified by the National Board for Professional Teaching Standards is established.

(b) Goal.--It is the goal of the Commonwealth to provide opportunities and incentives for excellent teachers and to

retain them in the teaching profession. To attain this goal, the Commonwealth shall support the efforts of teachers to achieve national certification by providing reimbursement in accordance with section 1103-B to public schools for substitute fees associated with teachers participating in the certification process and paying the assessment fee for teachers who seek to attain national certification from the National Board for Professional Teaching Standards.

Section 1103-B. Payment of fees.

To the extent funds are available, the Commonwealth shall do all of the following:

(1) Pay all or a portion of the cost of NBPTS assessment fees on behalf of an eligible teacher to become NBPTS certified or recertified.

(2) Reimburse school districts for substitute fees for each day the eligible teacher participates in preparation for NBPTS certification, up to three days.

Section 1104-B. Priority.

(a) Schools in school improvement or corrective action.--Eligible teachers who teach in schools identified by the department as in school improvement or corrective action shall receive first priority for payment of assessment fees under this article. The eligible teachers' districts shall also receive first priority for substitute fees reimbursement.

(b) Other priority.--Eligible teachers who teach early childhood education, mathematics or science at the middle or secondary level or who teach special education or foreign languages shall receive second priority for payment of assessment fees under this article. The eligible teachers' districts shall also receive second priority for substitute fees

reimbursement.

Section 1105-B. Duties of eligible teachers.

(a) Completion of process.--An eligible teacher on whose behalf the assessment fee is paid shall agree to complete the certification process or be subject to repayment as set forth in section 1106-B(a).

(b) Three-year commitment.--An eligible teacher on whose behalf the assessment fee is paid and who receives NBPTS certification shall, in addition to the requirement under subsection (a), agree to serve as a teacher or administrator in a Pennsylvania public school for a period of at least three years or be subject to repayment as set forth in section 1106-B(b). Eligible teachers who receive priority under section 1104-B and who receive NBPTS certification shall teach in that priority class for the three-year commitment period. If an eligible teacher receives priority under section 1104-B(a) and the school is removed from improvement or corrective action during the three-year commitment period, service in the same school or in another school identified by the department as in school improvement or corrective action shall continue to fulfill the requirements of this subsection.

Section 1106-B. Repayment.

(a) Failure to complete the certification process.--When an eligible teacher for whom the Commonwealth has paid the assessment fee fails to complete the certification process, the teacher shall reimburse the Commonwealth for the amount of the assessment fee. A candidate who completes the certification process but is denied NBPTS certification shall not be subject to repayment pursuant to this subsection.

(b) Failure to continue teaching.--When an eligible teacher

for whom the Commonwealth has paid the assessment fee fails to meet the requirements of section 1105-B(b), the teacher shall reimburse the Commonwealth for the amount of the assessment fee. The teacher shall certify to the department each year that the teacher is in compliance with section 1105-B(b).

(c) Waiver of repayment.--Upon the application of the eligible teacher, the department shall waive the repayment requirement if the department finds that the teacher was unable to complete the process or meet the requirements of section 1105-B(b) for teaching in a priority class or school identified by the department as in school improvement or corrective action due to administrative action on the part of the school district or area vocational-technical school for other than causes enumerated in section 1122, or continue teaching due to illness of the teacher, the death or catastrophic illness of a member of the teacher's immediate family, or parental leave to care for a newborn or newly adopted child and may waive the repayment requirement due to other extraordinary circumstances.

Section 1107-B. Duties of department.

(a) Guidelines.--The department shall develop guidelines necessary for the implementation of this article.

(b) Technical assistance.--To the extent funds are available, the department shall provide technical assistance to NBPTS applicants. The department may contract with one or more institutions of higher education or intermediate units in order to provide technical assistance.

Section 2. This act shall take effect immediately.

CS FOR SENATE BILL NO. 83(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act providing for payment and loan incentives to public school teachers for national board certification."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.20 is amended by adding a new section to article 3 to read:

Sec. 14.20.225. Incentive and stipend payments for national board certification. (a) A school district or the department, as applicable, shall, in January of each year, pay an incentive payment of $1,000 to each teacher who is employed by the district or the department and who holds a current and valid national board certification.

(b) In addition to the incentive payment provided in (a) of this section, for a teacher who is employed by a district to teach in a school that is located in a high poverty attendance area and that has received a low performance rating, as determined by the department, a school district shall,

(1) if the teacher holds a current and valid national board certification,

annually pay a supplemental incentive payment of $500; or

(2) if a teacher is not national board certified, pay the national certification board an amount that is not more than $1,000 to be used toward national certification of the teacher for the period in which the teacher is actively seeking national board certification.

(c) The department shall provide sufficient funding, subject to appropriation and in addition to the state aid received under AS 14.17, to a school district to make national board certification incentive payments as provided in this section. The department may establish a form and procedure to be used by a school district to request teacher incentive and stipend payments, including proof of actively pursuing national board certification.

(d) Nothing in this section prohibits a district or the department from providing additional monetary incentives to a teacher.

(e) In this section,

(1) "district" has the meaning given in AS 14.17.990;

(2) "national board certification" means individual achievement of national professional teaching standards as certified by a nationally recognized board.

*** Sec. 2.** AS 14.43 is amended by adding new sections to read:

Article 9A. National Board Teacher Certification Loan Program.

Sec. 14.43.550. Program established. The national board teacher certification loan program is established to provide an incentive for teachers employed by a public school district in the state or a school operated by the department to pursue certification of professional teaching standards by a nationally recognized board.

Sec. 14.43.555. Administration and eligibility. (a) The national board teacher certification loan program shall be administered by the commission in accordance with regulations adopted by the commission. The commission shall

(1) provide on behalf of eligible teachers loan awards of a lump sum of $2,500 for each teacher, to be repaid over three years at zero percent interest;

(2) allocate the loan awards available for national board teacher certification annually to the department for loans on behalf of teachers employed by the department who teach in a public school and to the school district for loans to

teachers employed by the district;

(3) develop and distribute to the department and to the districts an application form for teacher certification loans under this section.

(b) A teacher is eligible to receive the benefit of a national board teacher certification loan if the teacher is currently

(1) employed by the department or a public school district and teaches students who are in grades kindergarten through 12;

(2) actively pursuing national certification of professional teaching standards awarded by a nationally recognized board; and

(3) signs an agreement provided by the commission to secure repayment of the loan within three years.

(c) For a loan awarded under this section, the commission shall

(1) make payments to the national teacher certification board on behalf of an eligible teacher;

(2) establish conditions for repayment;

(3) provide for penalties for default; and

(4) pro rate the amount of the award if insufficient funding is available to provide awards on behalf of all eligible teachers in a fiscal year.

(d) In making loans under this section, the commission shall apply the standards used by the department under AS 14.20.225(c) for determining what constitutes actively pursuing national certification.

Sec. 14.43.590. Definitions. In AS 14.43.550 - 14.43.590,

(1) "department" means the Department of Education and Early Development;

(2) "district" has the meaning given in AS 14.17.990.

(1) "district" has the meaning given in AS 14.17.990;

(2) "national board certification" means individual achievement of national professional teaching standards as certified by a nationally recognized board.

* **Sec. 2.** AS 14.43 is amended by adding new sections to read:

Article 9A. National Board Teacher Certification Loan Program.

Sec. 14.43.550. Program established. The national board teacher certification loan program is established to provide an incentive for teachers employed by a public school district in the state or a school operated by the department to pursue certification of professional teaching standards by a nationally recognized board.

Sec. 14.43.555. Administration and eligibility. (a) The national board teacher certification loan program shall be administered by the commission in accordance with regulations adopted by the commission. The commission shall

quarterly)

(1) provide on behalf of eligible teachers loan awards of a lump sum of $2,500 for each teacher, to be repaid over three years at zero percent interest;

(2) allocate the loan awards available for national board teacher certification annually to the department for loans on behalf of teachers employed by the department who teach in a public school and to the school district for loans to teachers employed by the district;

(3) develop and distribute to the department and to the districts an

application form for teacher certification loans under this section.

(b) A teacher is eligible to receive the benefit of a national board teacher certification loan if the teacher is currently

(1) employed by the department or a public school district and teaches students who are in grades kindergarten through 12;

(2) actively pursuing national certification of professional teaching standards awarded by a nationally recognized board; and

(3) signs an agreement provided by the commission to secure repayment of the loan within three years.

(c) For a loan awarded under this section, the commission shall

(1) make payments to the national teacher certification board on behalf of an eligible teacher;

(2) establish conditions for repayment;

(3) provide for penalties for default; and

(4) pro rate the amount of the award if insufficient funding is available to provide awards on behalf of all eligible teachers in a fiscal year.

(d) In making loans under this section, the commission shall apply the standards used by the department under AS 14.20.225(c) for determining what constitutes actively pursuing national certification.

Sec. 14.43.590. Definitions. In AS 14.43.550 - 14.43.590,

(1) "department" means the Department of Education and Early Development;

(2) "district" has the meaning given in AS 14.17.990.

National Board for Professional Teaching Standards

From Wikipedia, the free encyclopedia

The **National Board for Professional Teaching Standards** (NBPTS) is a nonpartisan, nonprofit organization dedicated to promoting excellence in education. Founded in 1987, NBPTS improves teaching and student learning by enhancing overall educator effectiveness and recognizing and rewarding highly accomplished educators who meet high and rigorous standards. NBPTS develops and maintains advanced standards for educators and offers a national, voluntary assessment, National Board Certification, based on the NBPTS Standards. As of December 2010, more than 91,000 educators have become National Board Certified Teachers in the United States. The NBPTS headquarters is located in Arlington, Va.[1]

Mission

The mission of the National Board for Professional Teaching Standards is to advance the quality of teaching and learning by

- Maintaining high and rigorous standards for what accomplished teachers should know and be able to do[2]
- Providing a national voluntary system certifying teachers who meet these standards, and
- Advocating related education reforms to integrate National Board Certification in American education and to capitalize on the expertise of National Board Certified Teachers.

History

NBPTS was formed in response to a 1986 report issued by the Task Force on Teaching as a Profession, a group funded by the Carnegie Forum on Education. The report, entitled *A Nation Prepared: Teachers for*

the 21st Century, called for the creation of a board to "define what teachers should know and be able to do" and to "support the creation of a rigorous, valid assessment to see that certified teachers do meet these standards." The founding president of NBPTS was James A. Kelly, and the original chair of the board of directors was the Honorable James B. Hunt Jr., former governor of North Carolina.

Standards

NBPTS Standards are based on the Five Core Propositions[3] — the foundation of what all accomplished teachers should know and be able to do — and provide a reference that helps educators link teaching standards to teaching practice. NBPTS publishes standards of "accomplished teaching" for 25 subject areas and developmental levels for pre-K through 12th grade. These standards were developed and validated by representative councils of master teachers, disciplinary organizations and other education experts.

National Board Certification

National Board Certification is advanced professional certification based on the NBPTS standards. There are 25 different certificates available. The assessment for National Board Certification consists of a multimedia teaching portfolio that is used to evaluate pedagogy and student outcomes, and a three-hour assessment center examination.[4]

The assessment fee is $2500; however, financial support is available, and many candidates pay less than half that amount themselves.[5]

School counseling is one of the advanced professional certificates available by NBPTS. *The School Counselor's Study Guide to Credentialing Exams*, published by Routledge, is the only study guide currently on the market that is based on the ASCA School Counselor Competencies, CACREP Standards, NBCC NCSCE content requirements, and the NCATE and NBPTS Standards. The study guide prepares users for the NCSCE, Praxis II School Counseling Specialty Exam, NBPTS School Counseling national certification exam, Comprehensive School Counselor Education program exams, and State certification exams for professional school counseling. Highlights of the text include: case scenarios, guided reflections, end of chapter and full-length practice tests with justifications for correct and incorrect responses, and a foreword written by the ASCA President for 2012-2013. The author of the study guide is Dr. Rita Schellenberg, an associate professor and director of the school counseling program for Liberty University. Dr. Schellenberg has over a decade of experience as a licensed professional school counselor in public schools at both the elementary and secondary levels and is also a Licensed Professional Counselor (LPC) with a Ph.D. in Counselor Education and Supervision. Her national credentials include National Certified School Counselor (NCSC), National Certified School Counselor (NCSC), Distance Credentialed Counselor (DCC), and Approved Clinical Supervisor (ACS). More information about the credentialing exam study guide can be found at www.thenewschoolcounselor.com.

Take One!

Take One! provides a standards-based approach for improving teaching practice and links student learning to effective instruction. Teachers prepare and submit one pre-selected video portfolio entry from

any of the current certificate areas of National Board Certification. A teacher can later transfer the score if he or she pursues National Board candidacy.[6]

National Board Certification for Principals

To create a consistently reliable process to develop, recognize and retain effective principals, the National Board for Professional Teaching Standards (NBPTS) has announced an initiative to develop National Board Certification for Principals. National Board Certification for Principals, the first national certification program focused on principals, is also the first phase of an expanded umbrella program, National Board Certification for Educational Leaders, which builds on the National Board's highly successful program, National Board Certification for teachers and school counselors. National Board Certification for Educational Leaders not only creates standards and an assessment process for principals, it also lays the groundwork for a new educator-leadership initiative for assistant principals, teachers and other school-based educators who positively impact the culture of learning in schools.[7]

Research

Since its founding, NBPTS has become one of the most researched areas of education. Research has reviewed the impact of National Board Certification on student performance,[8] the quality of teaching by National Board Certified Teachers in the classroom, and the influence of the process on teacher retention. Most, but not all of the research, is positive.[9]

In 2008, the United States National Research Council a division of the National Academies published a report stating that "Students taught by NBPTS-certified teachers make greater gains on achievement tests than students taught by teachers who are not board-certified."[10]

Publications

All 25 of the NBPTS Standards are published and available on the internet.[11] NBPTS also has a number of published resources about National Board Certification.[12]

In 2010, NBPTS released *Accomplished Teachers, Institutional Perspectives*,[13] a publication that provides perspectives from a wide range of policymakers, administrators and practitioners on the value and utility of the National Board for Professional Teaching Standards. In describing their various experiences working with NBPTS, the authors challenge the nation's Pre K-12 and post secondary education system and state/local governing bodies—as well as the National Board itself—to expand the linkage between the NBPTS standards and assessment process and teacher preparation, program accreditation and state licensure.[14]

ALASKA

Amount available per provider:

Alaska pays the educational costs that are not covered by tuition; the 2006-07 scholarship amount for Alaska WWAMI students was $21,822.

WWAMI participants must return to Alaska upon completion of the program. A participant who does not return to the state and become employed in the medical field for which the support was provided must repay the financial support plus interest. In accordance with state statute governing the WWAMI program, the financial support to be repaid is equal to 50 percent of the amount the state pays to UWSOM on behalf of the participant, plus interest.

The participant who successfully completes the graduate education program for which the financial support was provided and is employed within Alaska in a qualifying medical residency program or other qualifying professional medical practice and who is otherwise qualified shall have the outstanding principal* and accrued interest forgiven and considered a grant in accordance with the following percentages:

1. For employment in rural** areas of the state, up to three years of employment at 33⅓ percent for each year;
2. For employment in areas of the state that do not qualify under the program definition as rural, up to five years of employment at 20 percent for each year.

Participants who initially practice medicine in a rural community will receive their first forgiveness of 33⅓ percent of the loan after their first year of practice. If the participant should then choose to move to a non-rural community and practice medicine, he or she will then receive forgiveness benefits of 20 percent of the remaining loan amount for each year they practice medicine until the balance of the loan is forgiven. The same is true for a participant who practices medicine in a non-rural community and receives forgiveness of 20 percent of the loan and then moves to a rural community to practice medicine. The subsequent forgiveness will be for 33⅓ percent of the remaining loan balance until the loan balance is forgiven.

Forgiveness Benefit	Forgiveness % for all rural practice	Forgiveness % for 2 years of rural practice	Forgiveness % for 1 year of rural practice	Forgiveness % for all non-rural practice
1	33⅓%	33⅓%	33⅓%	20%
2	66⅔%	66⅔%	53⅓%	40%
3	100%	86⅔%	73⅓%	60%
4		100%	93⅓%	80%
5			100%	100%

Match requirements:

None.

Eligibility requirements/preferences:

Students of allopathic medicine/M.D. graduates of the WWAMI program who practice in rural Alaska.

State UF = 20% p9. Line 62. 2mil
2,964,800
70 - 90 = in loans = forgiveness.

ALASKA

Program Results:

Numbers/types placed:

The State of Alaska recently doubled the number of new medical (M.D.) students to be admitted to the program. Beginning with the entry class of 2007, 20 Alaska residents will be admitted into the program each year.

** No amount due and payable prior to the participant entering deferment or forgiveness-qualifying employment is subject to forgiveness.*

*** "Rural" is defined in Alaska law as a community with a population of 7,500 or less that is not connected by road or rail to Anchorage or Fairbanks or with a population of 3,500 or less that is connected by road or rail to Anchorage or Fairbanks.*

ANOTHER TOOL FOR SCHOOL REFORM

BY MICHELLE EXSTROM

One of the great challenges facing state lawmakers is balancing cuts to education budgets with the need to close the achievement gap and turn around low-performing schools.

One popular approach—legislators in 30 states and the District of Columbia have signed on—is supporting National Board for Professional Teaching Standards certification for teachers. The voluntary program, which is based on advanced teaching standards and a rigorous assessment process, has been around since 1987. Recently, however, more policymakers, teachers and school leaders are recognizing its promise and potential for addressing challenges in today's classrooms.

"Reforming education requires a multi-faceted approach that includes school leadership, community involvement, safe campuses, rigorous curricula and common core standards," says Hawaii Representative Roy Takumi. "It also requires highly effective classroom teachers, and national board certification is one way to achieve this goal."

REPRESENTATIVE ROY TAKUMI HAWAII

More than 91,000 teachers are certified by the board, or a little less than 3 percent of all public school teachers. California, Florida, North Carolina, South Carolina and Washington are the states with the most certified teachers.

These board certifications are being used as a turn-around strategy to improve teaching and learning in low-performing schools. Struggling districts and schools from California to Maryland and Arizona to Illinois are supporting their top teachers through the certification process and hiring board-certified teachers when possible to fill vacant positions. These teachers have met high standards through study, expert evaluation, self-assessment, a subject knowledge test and peer review. Education experts believe these teachers will improve student learning and become leaders in their schools.

Schools districts are finding this strategy makes a difference.

Michelle Exstrom tracks teaching quality issues for NCSL.

Students taught by certified teachers make higher gains on achievement tests than those taught by non-certified teachers, and the certified teachers also stay longer in the classroom than their non-certified peers, according to a report by the National Research Council of the National Academies.

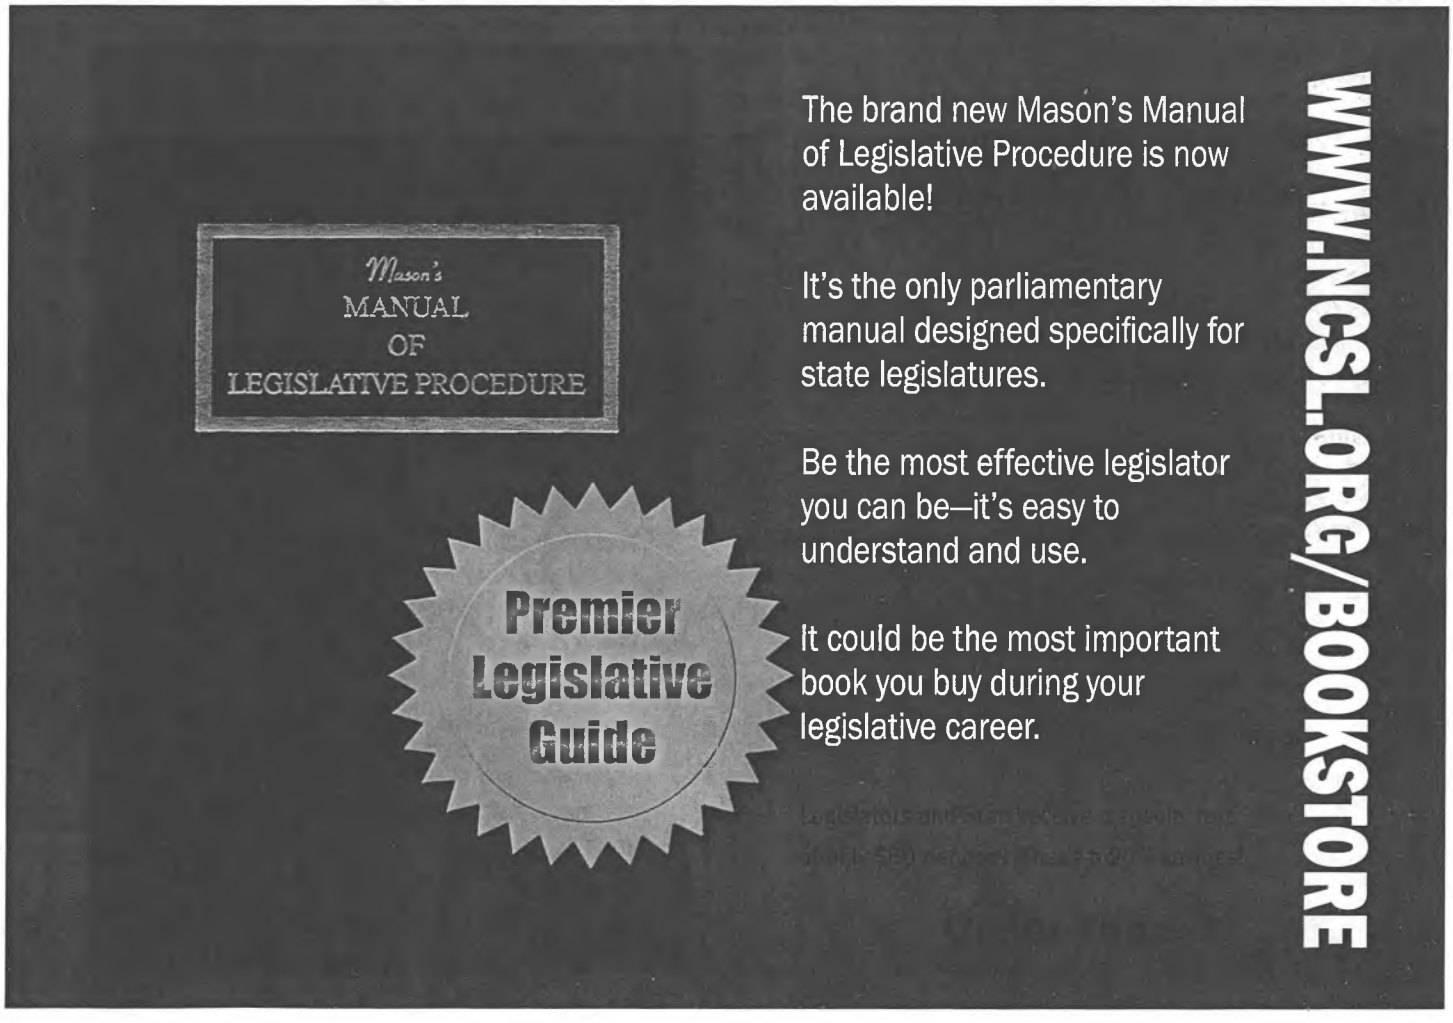
A REFORM TOOL

The board-certification approach also has become central to discussions on how best to define and evaluate effective teaching. Since many states are grappling with implementing educational reform legislation passed in 2010 and federal Race to the Top awards, some top researchers say the key elements used for board certification should become criteria in a new teacher evaluation system. The board's standards have defined the highest level of teacher certification for years and can now be adapted in state policy. In fact, many states included board certification as a key component of their Race to the Top application.

Certification can take from one to three years, and involves a fee of $2,500, plus a $65 processing charge. The certificate is valid for 10 years and can be renewed. The national board certification program is considered more rigorous than existing state programs required to receive a license or certification to teach pre-K-12 classes. It requires the applicant to be familiar with all the standards in the area where they teach, to take assessment tests to show their expertise in the subject matter, and to evaluate their own teaching as part of preparing a portfolio required for certification.

The key role for lawmakers is to provide financial support for certification. Twenty states offer assistance with application fees, and many offer financial incentives for completion. Mississippi, for example, offers a $6,000 annual salary increase to teachers during during which they are board certified. North Carolina offers a 12 percent premium on base salaries for the life of the certificate. States such as Illinois, New Mexico and Ohio require board certification to achieve the highest level of state licensure, sometimes known as the mastery level, which provides for a higher salary.

The decision to provide state-funded support for certification, however, doesn't come easily. While most states still offer some type of fee support or financial incentives, others are cutting back, including California, Colorado, Florida, Idaho, Illinois, Maine, Michigan, Missouri, Oklahoma and South Carolina.



SENATOR JOHN GOEDDE IDAHO

"In the last budget year, the Legislature opted to withhold the stipend for National Board certification," says Idaho Senator John Goedde. "But in the school reform bills before us, we have included national board certification as one of the criteria for leadership awards as part of an individualized compensation package for educators in Idaho."

(Revised 8/17/2011 OMB)

FISCAL NOTE #4

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 83(EDC)

Analysis

SB83 provides for payments and loan incentives to public school teachers for national board certification. This includes a basic incentive payment of $1000 for teachers holding a current and valid national board certification and an additional $500 for teachers holding this certification in high poverty attendance areas that have received a low performance rating as determined by the department.

The count projects 162 teachers anticipated for FY13. The maximum incentive provided under this legislation if all teachers qualified for both incentives would be 162 teachers X $1,500 = $243,000. Each subsequent fiscal year projects an additional 21 teachers receiving the incentives to reflect the anticipated annual growth.

With an average growth rate of 21 teachers per year that would be actively seeking national board certification, not more than $1,000 would be provided annually to pay the national certification board on their behalf. 21 X $1,000 = $21,000. This projection is contained in each subsequent year through FY18.

Using the growth assumption/annual average of 21 teachers per year pursuing certification of professional teaching standards by a nationally recognized board, under the proposed Sec. 14.43.550-555 for the National Board Teacher Certification Loan Program, $2,500 would be provided as loans for eligible teachers. 21 X $2,500 = $52,500 per year.

FISCAL NOTE #3

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. CSSB 83(EDC)

Analysis

This bill establishes payment and loan incentives intended to assist Alaska public school teachers seeking to earn national board certification. One component is the establishment and funding of a zero interest loan to otherwise eligible teachers who are actively pursuing national certification of professional teaching standards awarded by a nationally recognized board. The loan amount is set at $2,500 and the funds are to be paid directly to the national board from which the certification is being sought.

The Commission anticipates that, based on expected limited demand for the loan, servicing the loan can be accomplished with existing staff resources. Assuming the loans will be funded by an appropriation to the Department of Education and Early Development, no funding is requested for that purpose.

SENATE EDUCATION COMMITTEE
Senators Kevin Meyer & Joe Thomas, Co-Chairs

North to the Future
Education and Vocational Training Act
FACT SHEET

The Senate Education Committee, under the leadership of Senators Joe Thomas (D-Fairbanks) and Kevin Meyer (R-Anchorage), will be sponsoring the *North to the Future* Education and Vocational Training Act, a school funding bill that **increases the Base Student Allocation (BSA) over the next three years** and establishes a separate Vocational Education funding stream for high school students.

The BSA is currently $5680 per student (subject to geographical and school size factors), and has increased by $100 increments (a rate of less than 2% per year) from FY09-FY11. The Education Committee proposal will continue with similar, modest increases in the next three fiscal years (FY12-FY14).

The committee also proposes to **create a High School Vocational Education Allocation**. This will be an on-going allocation, designed to give high schools the ability to provide consistent vocational education programs that train Alaska's students for Alaska's jobs.

The proposed bill will not alter in any way the existing Special Needs Funding Factor for special education, bilingual education, gifted and talented programs or vocational education programs currently existing in state statute and available to all grade levels. The proposed High School Vocational Education Allocation would instead result in new funding to strengthen career and technical education for students in grades 9-12.

It is the intent of the committee chairmen to introduce the *North to the Future* Education and Vocational Training Act during the week of January 31, 2011.

For more information on the *North to the Future* Education and Vocational Training Act contact Education Committee Aide Murray Richmond in the Office of Senator Joe Thomas at 907-465-2327 or at murray.richmond@legis.state.ak.us or Edra Morledge at 907-465-4945 (edra.morledge@legis.state.ak.us) .

SENATE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR THOMAS

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to funding for vocational education as a component of special needs funding for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is

multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the ~~**combined**~~ special needs **factor** [FACTOR] set out in AS 14.17.420(a)(1) **and (3)**;

and the high school vocational education factor

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

*** Sec. 2.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs funding and may be eligible for intensive services funding as follows: and high school vocational education funding

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13;

(3) in addition to the special needs and intensive services funding available under (1) and (2) of this subsection, a district is eligible for high school vocational education ~~supplemental special needs~~ funding for ~~direct~~ vocational education instruction

for each student who is enrolled in grades nine through 12 ~~on the last day of the count period~~ as determined by the department; a supplemental special needs funding factor of 1.025 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "direct vocational education instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

*** Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the combined special needs factors [FACTOR] in AS 14.17.420(a)(1) and (3) and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

*** Sec. 4.** AS 14.17.470 is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is $5,790 [$5,680].

*** Sec. 5.** AS 14.17.470, as amended by sec. 4 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is $5,905 [$5,790].

*** Sec. 6.** AS 14.17.470, as amended by secs. 4 and 5 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is $6,025 [$5,905].

*** Sec. 7.** Section 4 of this Act takes effect July 1, 2011.

*** Sec. 8.** Section 5 of this Act takes effect July 1, 2012.

*** Sec. 9.** Section 6 of this Act takes effect July 1, 2013.

- **Comments:** Jean,

We found out that the department can get data needed to get a high school voc ed factor, and so…we are back to your first version, with some minor changes. Also, this is an Education Committee Bill, as is 27-LS0425\M the act providing for payment and loan incentives to public teachers for certification.

Can we get finals of both of these bills. We would love to be able to drop these bills this afternoon. Sorry for the rush. Is there any way you can get it to us by 3:30?

And do you need us to return the other two finals you sent of these bills?

SENATE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR THOMAS

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to funding for High school vocational education as a component of ~~special needs~~ funding for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is

multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the ~~combined~~ special needs **factors** [FACTOR] set out in AS 14.17.420(a)(1) **and (3)**; and the vocational (high school) educational factor as set out in 14.17.420?

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

*** Sec. 2.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13**;**

(3) in addition to the special needs and intensive services funding available under (1) and (2) of this subsection, a district is eligible for ~~supplemental special needs~~ funding for ~~direct~~ vocational education instruction

high school vocational education

as determined by the department.

for each student who is enrolled in grades nine through 12 ~~on the last day of the count period;~~ a high school vocational education ~~supplemental special needs~~ funding factor of 1.025 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "~~direct~~ vocational education instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

*** Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the **combined** special needs **factors** [FACTOR] in AS 14.17.420(a)(1) **and (3)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

*** Sec. 4.** AS 14.17.470 is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,790** [$5,680].

*** Sec. 5.** AS 14.17.470, as amended by sec. 4 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,905** [$5,790].

*** Sec. 6.** AS 14.17.470, as amended by secs. 4 and 5 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$6,025** [$5,905].

*** Sec. 7.** Section 4 of this Act takes effect July 1, 2011.

*** Sec. 8.** Section 5 of this Act takes effect July 1, 2012.

*** Sec. 9.** Section 6 of this Act takes effect July 1, 2013.

SENATE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR THOMAS

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to funding for vocational education ~~as a component of special needs funding~~ for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is

multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the ~~combined~~ special needs **factors** [FACTOR] set out in AS 14.17.420(a)(1)~~ and (3)~~;

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

*** Sec. 2.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13;

See p. 6 — **(3) in addition to the special needs and intensive services funding available under (1) and (2) of this subsection, a district is eligible for supplemental special needs funding for direct vocational education instruction**

for each student who is enrolled in grades nine through 12 on the last day of the count period; a supplemental special needs funding factor of 1.025 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "direct vocational education instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

*** Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the **combined** special needs **factors** [FACTOR] in AS 14.17.420(a)(1) **and (3)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

*** Sec. 4.** AS 14.17.470 is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,790** [$5,680].

*** Sec. 5.** AS 14.17.470, as amended by sec. 4 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,905** [$5,790].

*** Sec. 6.** AS 14.17.470, as amended by secs. 4 and 5 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$6,025** [$5,905].

*** Sec. 7.** Section 4 of this Act takes effect July 1, 2011.

*** Sec. 8.** Section 5 of this Act takes effect July 1, 2012.

*** Sec. 9.** Section 6 of this Act takes effect July 1, 2013.

Page five, to be inserted AS 14.17.420(a)(3)

In addition to the special needs and intensive services funding available under (1) and (2) of this subsection, a district is eligible for high school vocational education funding for the students who are enrolled in grades nine through 12 as determined by the department; high school vocational education funding is equal to the number of high school students in the district as determined by the department multiplied by 1.025; in this paragraph, "high school vocational education" excludes costs associated with

(A) Administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

In addition to the special needs and intensive services funding available under (1) and (2) of this subsection, a district is eligible for high school vocational education funding for the students who are enrolled in grades nine through 12 as determined by the department; high school vocational education funding is equal to the number of high school students in the district as determined by the department multiplied by 1.25; in this paragraph, "high school vocational education" excludes costs associated with

(A) Administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

SENATE BILL NO.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY SENATOR THOMAS

Introduced:
Referred:

A BILL

FOR AN ACT ENTITLED

"An Act relating to funding for vocational education ~~as a component of special needs~~ funding for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is

multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the **combined** special needs **factors** [FACTOR] set out in AS 14.17.420(a)(1) **and (3)**;

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

*** Sec. 2.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13;

(3) in addition to the special needs and intensive services funding available under (1) and (2) of this subsection, a district is eligible for supplemental special needs funding for [direct] vocational education instruction

for each student who is enrolled in grades nine through 12 on the last day of the count period; a supplemental special needs funding factor of 1.025 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "direct vocational education instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

*** Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the **combined** special needs **factors** [FACTOR] in AS 14.17.420(a)(1) **and (3)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

*** Sec. 4.** AS 14.17.470 is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,790** [$5,680].

*** Sec. 5.** AS 14.17.470, as amended by sec. 4 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,905** [$5,790].

*** Sec. 6.** AS 14.17.470, as amended by secs. 4 and 5 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$6,025** [$5,905].

*** Sec. 7.** Section 4 of this Act takes effect July 1, 2011.

*** Sec. 8.** Section 5 of this Act takes effect July 1, 2012.

*** Sec. 9.** Section 6 of this Act takes effect July 1, 2013.

ANALYSIS: *(Attach a separate page if necessary)*

HB 317 beginning in FY 2012 the following increases will affect the foundation formula:
FY2012 special needs funding factor of 1.20 to 1.215; BSA increase of $125 to $5,805.
FY2013 speical needs funding factor of 1.215 to 1.230; BSA increases of $125 to $5,930.

In addition the Pupil Transportation language has been altered to use only increases to the CPI-U for all urban consumers for the Anchorage metropolitan area rather than changes. If there is a reduction in the CPI-U then the pupil transportation grants will be unaffected.

Part-time							
Temporary							

ANALYSIS: *(Attach a separate page if necessary)*

This bill would set the district cost factors in FY09 at 50% of the ISER increase over the original cost factors and implement the remaining 50% over the next 4 years; offers 9x the Base Student Allocation (BSA) for intensives plus it will increase it to 11x the BSA in FY10 and 13x the BSA in FY11; provide a hold harmless provision for those districts whose School Size adjusted ADM has decreased by more than 5% over the prior year; and increase the BSA by $100 for FY09 to $5,480, FY10 to $5,580, & FY11 to $5,680.

The Legislature funded 50% of ISER in FY08 outside the formula for approximately $50million and the School Improvement Grant for approximately $20million. If the $70million provided in FY08 is taken into consideration, then the actual increase in FY09 over FY08 is approximately $42million.

The GF capitalizes on the Public Education Fund (PEF). **BASED ON FY09 PROJECTED ADM**

Prepared by: Eddy Jeans, Director — Phone 465-8679
Division: School Finance — Date/Time 1/18/08 12:00 AM

Subject: Please read re education bill drafting

Dear Murray and Joe,
I have given some thought to the way the new 2.5% for high school voc-ed can be referenced in the existing school funding formula, so the student count adjustment is made at the beginning of the calculation and is, therefore, subject to the school size and district cost factor adjustments.

In addition to the language creating the high school voc-ed factor of 1.025 (which I offered in my first email below,) I believe we will need an amendment to AS 14.17.410 (the existing statute that says how the number of real students is manipulated to reach the final number that is multiplied by the BSA)

I suggest that AS 14.17.410(b)(1)(A) be amended to read, "the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450 as modified by application of the vocational education factor to the students enrolled in grades nine through twelve in each school

Of course, the Legal Services drafter will not accept my language as written, but it may be helpful to communicate an approach that we think works, rather than waiting to see what voluminous language they send us at 4:30 pm ☺

Joe – Murray and I discussed two other things related to the bill this evening:

1) We may discover that districts do not report to the department the grade levels of the students in the October count, and that it would be difficult/costly to require them to do so for the purposes of calculating how many are in high school. For example, it may be more complicated than it seems to decide if a student is in 9th grade vs. 8th grade during the month of October...although I would think No Child Left Behind data would require determining who is in high school. If the department says this is a problem that would trigger a large fiscal note, we will have to develop another method. For example, we might have to multiply the entire student enrollment (K-12) by a smaller factor (1%?), but only allow the money to be spent on high school students.

2) Given the need for department feedback on our method and our cost estimates, as well as discussion with Stevens and approval of the final draft by Meyers, it is probably unrealistic to plan to submit a final version to the Senate Secretary this Friday afternoon.

3) I suggest producing a 1-page sheet that describes the legislation conceptually and announcing that a Senate Education Committee bill will be introduced next week. Ideally, the conceptual description would be given to members of the Committee during the Friday morning meeting, and then distributed to the school board association Friday afternoon. If Thomas and Meyer's issue a press release Friday, we are somewhat protected from having our thunder stolen by another legislator dropping in a BSA bill Friday or Monday (a rep. or a Senate minority member or Weilechowski, for example.)

   Distributing the conceptual page Friday morning would prevent Committee members from being caught unprepared if their local school board members ask what they think about the Thomas/Meyer proposal during visits Monday, and will allow the school boards to lobby in support as they travel through the building. The school board association work sessions take place on Saturday, so it would be ideal if they could discuss our legislation then. Since no one will have a bill draft, the focus will be on the concepts (BSA increase and high school voc-ed multiplier) rather than the wording details. This big picture focus will be more comfortable for Joe Thomas, will be easier for school boards and superintendents to get behind quickly, and will protect us from being undercut by discussion of department technical issues or identification of error.

Finally, regarding co-sponsors Joe: am I correct that committee bills cannot have co-primes? Can they have regular cosponsors at the time of introduction?

Thanks for reading!
--Catherine

Subject: definition of vocational education

I did not spot a definition of "vocational education " in the statutes. There may be a definition in regulation. Legal Services can do a quick search to answer that question.

Since the new 2.5% vocational education money will be provided only for students in grades 9-12, I think this new "vocational education factor" of 1.025 will have to be set out in its own paragraph of AS 14.17.420(a).

I suggest the following approximate language, which I modeled after the wording in AS 14.17.420(a)(2):
"(3) in addition to the special needs and intensive **services** funding for which a district is eligible under (1) and (2) of this subsection, a district is eligible for vocational education funding for each student enrolled in grades 9-12 during the count period; a vocational education funding factor of 1.025 shall be applied as set out in AS 14.17.410(b)(1). The funding provided by this paragraph shall be used by school districts only for direct vocational education instruction, supplies and equipment and shall not be used for administrative costs or instruction in general literacy, mathematics, or job-readiness skills."

--Catherine

Murray,
This is a correction.
I wrote "intensive needs"
in my original email.
-Catherine

School Funding Legislation Plan

School Board Meeting

1) Maintain the Base Student Allocation at workable levels.
   a. Increase the Base Student Allocation by **$110** ***[$26M]*** on July 1, 2011, by **$115** *[$27.5M]* on July 1, 2012, and by **$120** *[$29M]* on July 1, 2013.
   b. Around a **two percent increase** per year.
   c. Helps districts keep up with rising costs of operation
   d. It is by no means certain that a BSA increase will pass.
      i. A lot of legislators who don't yet accept that the BSA must increase modestly every year to provide a stable educational program. *It is your job to contact your legislators and push for this*
      ii. School districts must convince legislators **that predictable annual increases are fiscally responsible** because they result in less waste and more efficiency than the previous unpredictable pattern.
   e. The BSA is currently $5,680 and the total cost of school funding in the Governor's FY12 budget is $1.13 billion

2) Create high school Vocational Education fund for students in grades 9-12
   a. **Would not change** the definition or funding of the existing special needs factor for current Special Needs, Gifted and Talented, current Voc Ed programs or Bi-lingual education.
   b. The legislation would establish 2.5% specifically for high school vocational education similar to current special education funding
   c. Vocational Education money tends to get used special education, because it is the in the same fund.
   d. To be given to districts and used for High School Voc Ed.

4) Education Committee wants to hear different **ways to deliver education in Alaska** during this session. What are you doing that works? Want to know what works, and let districts use what will best serve them, combining, structuring and synchronizing existing programs,

    a. Teacher preparedness—Teachers able to identify problems, especially in younger years and implement plans for remediation
        i. Encourage national teacher certification
    b. Counselors to help guide students, especially in career decisions
    c. Early Education; different options for early childhood education including public/private partnerships.
        i. Parents as Teachers
        ii. Best Beginnings
        iii. Headstart
        iv. Traditional classroom Pre-K program

5) We are interesting in hearing what works in your communities. Help us adapt different strategies to provide the best education for our children.

BASE Student Allocation FY 1999 – FY 2011

3% average annual BSA increase in 12 years from July 1, 1998 to June 30, 2010

Year	FY99	FY00	FY01	FY02	FY03	FY04	FY05	FY06	FY07	FY08	FY09	FY10	FY11	FY99-FY11
BSA	4,010	4,010	4,010	4,010	4,010	4,169	4,576	4,919	5,380	5,380	5,480	5,580	5,680	----
$ Change	----	0	0	0	0	159	407	343	461	0	100	100	100	1,670
% Change	----	0	0	0	0	3.96%	9.76%	7.49%	9.37%	0	1.85%	1.82%	1.79%	36.04%
Anchorage Cost of Living Increase	1.0%	1.7%	2.8%	1.9%	2.7%	2.6%	3.1%	3.2%	2.2%	4.6%	1.2%	1.8%	----	28.8%

2.4% average annual Anchorage COL increase in 12 years from January 1, 1999 – December 31, 2010 (US Bureau of Labor Statistics)

BSA Increase

- Not necessarily and increase; helps them keep even with rising cost
- We estimate that increasing the BSA by $110, $115 and $120 would result in incremental increases of approximately $24, $24.5 and $25 Million in FY11-FY13.
- (In 2009 the $100 increase in the BSA cost $23,611,701)
- Represents a 1.94%, 1.99%, and 2.03% increase in the BSA over the next three years.
- Less than what the Fairbanks and Anchorage schools are asking.

High School Vocational Education

- We estimate the 2.5% increase for high school voc-ed would cost $9.5 million.
    - Based on the assumption that one third of state education funding (or $377 million) goes to high school students, and 2.5 percent of $377 million is $9,425,000.
- The specific amount generated for each district is subject to the same cost adjustments as the current Base Student Allocation.
- Vocation Education is more expensive than regular classroom instruction
- Vocational Education money tends to get used special education, because it is the in the same fund.

Intend to introduce Bill the week of January 31.

      iii. Headstart
      iv. Traditional classroom Pre-K program

Combine, strengthening, synchronizing programs w/ existing programs public/private partnerships.

4) We are interesting in hearing what works in your communities. Adapt different strategies to provide best education for our children.

let districts use programs that best serve.

School Funding Legislation Plan
School Board Meeting

1) **Maintain the Base Student Allocation** at workable levels.
    a. **around a two percent per year**.
    b. Helps districts **keep up with rising costs** of operation;
    c. The BSA is currently $5,680 and the total cost of school funding in the Governor's FY12 budget is $1.13 billion
    d. **It is by no means certain that a BSA increase will pass.**
        i. A lot of legislators who **don't yet accept** that the BSA must **increase modestly every year** to provide a stable educational program.
        ii. School districts must convince legislators that **predictable annual increases** are fiscally responsible because they result in **less waste and more efficiency** than the previous unpredictable pattern.

2) Create **high school Vocational Education** fund for students in grades 9-12
    a. The legislation would establish **block funding** for high school vocational education **similar to current special education funding**
    b. **Would not change** the existing special needs factor.
    c. Vocational Education money tends to get used special education, because it is the in the same fund.
    d. To be given to districts and used for High School Voc Ed.

3) Education Committee wants to hear different **ways to deliver education in Alaska** during this session. What are you doing that works?

Specifically we are interested in:

    a. **Teacher preparedness**—Teachers able to identify problems, especially in younger years and implement plans for remediation
        i. Encourage **national teacher certification**
    b. **Counselors** to help guide students, especially in career decisions
    c. **Early Education; different options** for early childhood education
    d) parents as teachers
    e) Virtual education & curriculum that as many experts indicate open the mind to learning

5825 - 5960 - 6085

$145 in FY 12 = 2.55%
$135 in FY 13 = 2.32%
$125 in FY 14 = 2.10%

5805 - 5940 - 6085

$125 in FY 12 = 2.20%
$135 in FY 13 = 2.33%
$145 in FY 14 = 2.44%

ASSOCIATION OF ALASKA SCHOOL BOARDS

Position Statement on Education Issues in the 27th Alaska Legislature

The Alaska Advisory Task Force on Higher Education and Career Readiness is conducting an honest appraisal of our public education system. AASB believes that our priorities are particularly relevant to the conversation and goals of the Task Force.

The focus of the Task Force centers around the cost and challenges of remediation and the rates of post secondary completion. be they university or career technical preparation. One of the fundamental questions to be examined is whether remediation is most effective and appropriate in the 13th year, or is it more effectively addressed at the earliest identification of deficiency, the 3rd grade benchmark. Research indicates that 3rd grade is where instruction and curriculum steepen and that children who are not grade level proficient in reading, writing and math will begin to experience the learning gap. Correcting this deficiency at the earliest point of identification is less costly, more effective and will assist students throughout their k-12 experience.

Research shows that 40 percent of children entering kindergarten are not prepared. How can the state enhance a rich learning environment for all children to close this gap?

Early Childhood Development: The state can assist in providing a rich learning environment for all children through community based early childhood efforts at a fraction of the cost and without expanding state government.
Talking Points:

- Young Alaskans can use all help available, especially from parents and families, in preparing for a successful start to elementary school.
- AASB requests a state investment in community- and school-based early development programs, including Head Start, Parents as Teachers and Best Beginnings.

Innovation for Student Success: AASB believes that schools should teach students in ways that engage them in their own learning.
Talking Points:

- Focused instructional strategies and professional development can provide early remediation to help students get to where they need to go.
- Alaska should support programs of merit, including distance learning, extended learning and early remediation.
- Distance learning must provide opportunities for all kids.
- The AASB Consortium for Digital Learning is a proven program now operating in 100 schools statewide.

Career and Technical Education: We should train Alaskans for Alaska jobs.
Talking Points:

- Many K-12 schools have facilities that can be the backbone of a revitalized system of career and technical education.
- The existing partnership between the University, EED and the Department of Labor & Workforce Development should be strengthened.
- Barriers to offering CTE as part of a school's core curriculum should be eliminated.

Funding: A vision without funding is an illusion.
Talking Points:

- AASB supports forward funding of K-12 education, including a multi-year increase to the Base Student Allocation.
- The 20 percent block grant is insufficient to cover special education, bilingual and cultural, and vocational education.

HOUSE CS FOR CS FOR SENATE BILL NO. 84(FIN)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE HOUSE FINANCE COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act amending the funding for statewide residential educational programs; relating to funding for high school vocational and technical instruction as a component of funding for public schools; relating to education tax credits; creating a pilot project in the Iditarod Area School District; providing for an effective date by amending the effective date in sec. 57, ch. 92, SLA 2010; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.16.200 is amended by adding a new subsection to read:

(c) In addition to the programs eligible for reimbursement of costs under (a) of this section, the department may approve three district-operated statewide residential educational programs that began operating after January 1, 2005, for reimbursement of costs incurred by the district in operating the program under regulations adopted by the department.

* **Sec. 2.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)**;

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as

the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

* **Sec. 3.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs **and high school vocational and technical instruction** funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education,

and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13**;**

(3) in addition to the special needs and intensive services funding available under (1) and (2) of this subsection, high school vocational and technical instruction funding is available to assist districts in providing vocational and technical instruction to students who are enrolled in grades nine through 12; a high school vocational and technical instruction funding factor of 1.01 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "vocational and technical instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

* **Sec. 4.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the special needs factor in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

* **Sec. 5.** AS 21.96.070(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under AS 21.09.210 or AS 21.66.110 for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility **or an annual intercollegiate sports tournament** by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for Alaska Native cultural or heritage programs and educational support, including mentoring and tutoring, provided by a nonprofit agency for public school staff and for students who are in grades kindergarten through 12 in the state.

* **Sec. 6.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility **or an annual intercollegiate sports tournament** by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for Alaska Native cultural or heritage programs and educational support, including mentoring and tutoring, provided by a nonprofit agency for public school staff and for students who are in grades kindergarten through 12 in the state.

* **Sec. 7.** AS 43.55.019(a) is amended to read:

(a) A producer of oil or gas is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility **or an annual intercollegiate sports tournament** by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for Alaska Native cultural or heritage programs and educational support, including mentoring and tutoring, provided by a nonprofit agency for public school staff and for students who are in grades kindergarten through 12 in the state.

* **Sec. 8.** AS 43.56.018(a) is amended to read:

(a) The owner of property taxable under this chapter is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility **or an annual intercollegiate sports tournament** by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for Alaska Native cultural or heritage programs and educational support, including mentoring and tutoring, provided by a nonprofit agency for public school staff and for students who are in grades kindergarten through 12 in the state.

*** Sec. 9.** AS 43.65.018(a) is amended to read:

(a) A person engaged in the business of mining in the state is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility **or an annual intercollegiate sports tournament** by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for Alaska Native cultural or heritage programs and educational support, including mentoring and tutoring, provided by a nonprofit agency for public school staff and for students who are in grades kindergarten through 12 in the state.

*** Sec. 10.** AS 43.75.018(a) is amended to read:

(a) A person engaged in a fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes,

including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility **or an annual intercollegiate sports tournament** by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for Alaska Native cultural or heritage programs and educational support, including mentoring and tutoring, provided by a nonprofit agency for public school staff and for students who are in grades kindergarten through 12 in the state.

*** Sec. 11.** AS 43.77.045(a) is amended to read:

(a) In addition to the credit allowed under AS 43.77.040, a person engaged in a floating fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility **or an annual intercollegiate sports tournament** by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for Alaska Native cultural or heritage programs and educational support, including mentoring and tutoring, provided by a nonprofit

agency for public school staff and for students who are in grades kindergarten through 12 in the state.

* **Sec. 12.** The uncodified law of the State of Alaska is amended by adding a new section to read:

IDITAROD AREA SCHOOL DISTRICT; PILOT PROJECT. (a) The regional school board for the Iditarod Area School District shall establish a pilot project for the purpose of developing and implementing culturally relevant and theme-based curriculum materials and strategies for students who are enrolled in the district in grades kindergarten through 12. The materials and strategies developed under this section shall be made available to other school districts in the state on request.

(b) The legislature may appropriate not more than $1,500,000 to the Iditarod Area School District to carry out the pilot project established in (a) of this section.

(c) The Iditarod Area School District regional school board shall provide data and information developed under this section in an annual report to the legislature and shall cooperate with and provide information requested by a joint legislative task force established for the purpose of evaluating and implementing theme-based curriculum in the state.

(d) The pilot project established under this section shall terminate on June 30, 2014.

* **Sec. 13.** The uncodified law of the State of Alaska is amended by adding a new section to read:

STATEWIDE RESIDENTIAL EDUCATIONAL PROGRAMS; ROOM AND BOARD STIPEND. (a) Notwithstanding the amounts established in AS 14.16.200(b)(2), for the fiscal years ending June 30, 2012, and June 30, 2013, a district may claim room and board expenses for reimbursement under AS 14.16.200(a) as a per-pupil monthly stipend for a period of not more than 10 months in the following maximum amounts:

(1) for the Southeast Region (Region I), $820;

(2) for the Southcentral Region (Region II), $800;

(3) for the Interior Region (Region III), $968;

(4) for the Southwest Region (Region IV), $1,006;

(5) for the Northern Remote Region (Region V), $1,184.

(b) In this section, "district" has the meaning given in AS 14.17.990.

* **Sec. 14.** AS 21.96.070(a)(4), 21.96.070(a)(5); AS 43.20.014(a)(4), 43.20.014(a)(5);

AS 43.55.019(a)(4), 43.55.019(a)(5); AS 43.56.018(a)(4), 43.56.018(a)(5); AS 43.65.018(a)(4), 43.65.018(a)(5); AS 43.75.018(a)(4), 43.75.018(a)(5); AS 43.77.045(a)(4), 43.77.045(a)(5) are repealed January 1, 2021.

* **Sec. 15.** Section 57, ch. 92, SLA 2010, is amended to read:

Sec. 57. Except as provided in sec. 56 of this Act, this Act takes effect January 1, **2021** [2014].

* **Sec. 16.** This Act takes effect July 1, 2011.

— Draft —

by Catherine 4/4/11

CSSB 97 (FIN): An Act authorizing additional appropriations for public education and for community revenue sharing based on the price of Alaska North Slope crude oil, and adjusting the formula for payments to communities; and providing for an effective date."

Sponsored by Senate Finance
Passed Senate 19/1 on April 1 (nay was Sen. Coghill)
Referred to House Education, then C&RA, then Finance

This bill establishes a system for additional money to be distributed to schools through the existing school funding formula, and to communities through the existing revenue sharing system.

After the end of each fiscal year, (during July-August) the Division of Legislative Finance will calculate how much surplus there was and how much of it will be distributed to school districts and communities. The division will determine:

1. **How much was appropriated from the General Fund for the fiscal year that just ended**. The total will include capital, operating and supplemental appropriations, but will not include deposits into the statutory budget reserve or the appropriations for these additional education and revenue sharing payments.

2. **Given oil production figures for the fiscal year that just ended and the existing tax system, the average price of ANS oil that would have generated the amount of GF revenue needed to fund the above GF appropriations**. This price will be rounded to the nearest whole dollar and then $2 will be added to cover a margin of error and provide the money to pay the additional education and revenue sharing money.

3. **The difference between the oil price that would have produced the necessary GF, and the actual average ANS price.** If the actual average oil price was high enough to produce a surplus, then additional money will be distributed. The amount of additional money will be $5 million for each dollar the actual price exceeded the price needed to cover the year's appropriations (the price in #2 above.)

The additional money will be distributed to school districts and communities when the above calculations have been completed, probably in September or October.

CITY OF NORTH POLE

RESOLUTION 11-14

A RESOLUTION OF THE CITY OF NORTH POLE IN SUPPORT OF SENATE BILL 84 ESTABLISHING INCREMENTAL THREE-YEAR INCREASES IN THE BASE STUDENT ALLOCATION AND SETS ASIDE FUNDS FOR HIGH SCHOOL VOCATIONAL EDUCATION

WHEREAS, the City of North Pole places great value on public education and recognizes the powerful relationship between public schools and community and economic development, and

WHEREAS, the historic compact between the business community and public schools is based on high expectations for student achievement and workforce preparedness, and

WHEREAS, the mission of the Fairbanks North Star Borough School District is to provide an excellent and equitable education in a safe, supportive environment so all students can become productive members of a diverse and changing society; and

WHEREAS, without a funding commitment from the legislature in advance, problems arise from the misalignment of the legislative session and the school district budget cycle since the school district must submit a balanced budget to the Borough Assembly by April 1 of each year (before the legislative session is over); and

WHEREAS, educators, employers, and government officials agree schools must prepare students to transition from public education to a career pathway or higher education; and

WHEREAS, a lack of categorical funding for vocational (career and technical) education inhibits the school district's ability to provide a dynamic and meaningful career and technical education to its large and diverse student population; and

WHEREAS, SB 84 has broad support from both parties in that it passed 18-0 from Senate Finance.

NOW, THEREFORE, BE IT RESOLVED, that the North Pole City Council urges the legislature to pass Senate Bill 84, which provides an increase to the Base Student Allocation for Fiscal Years 2012 through 2014, and establishes categorical funding for career and technical education for grades 9-12, thereby sustaining and growing Alaska's investment in education.

Sponsored by: Mayor Isaacson
Introduced and Passed: April 18, 2011

PASSED AND APPROVED by a duly constituted quorum of the North Pole City Council on the 18th day of April, 2011.

Douglas W. Isaacson, Mayor

SENATE EDUCATION COMMITTEE

Senators Kevin Meyer & Joe Thomas, Co-Chairs

Dear Senator Stedman:

The Senate Education Committee respectfully requests a hearing on SB 84 before the Senate Finance Committee.

SB 84 provides stable and predictable school funding, so districts can concentrate on improving educational outcomes rather than managing volatile budgets. In 2007, the legislature passed legislation raising the BSA $100 per year for three years, ending with FY11. SB 84 follows that responsible precedent, increasing the BSA by approximately 2% each of the next three years. This helps districts maintain current programs in the face of rising costs.

SB 84 also builds into the school funding formula a 1% Career and Technical Education factor, to assist districts in providing vocational education to their high school students. In recent years, school districts have told us they had to reduce their vocational education programs in order to direct funds to mandated programs. The career and technical education funding will be subject to the same school-size and district cost modifications as other school funding.

This hearing request includes:

1) A Sponsor statement
2) Current version of the bill (Version D)
3) Fiscal notes from the Department of Education and Early Development
4) Support letters from a variety of people around the state.

We would appreciate a hearing on this bill at your earliest convenience.

Sincerely,

Senator Joe Thomas
Co-Chair, Senate Education Committee

Senator Kevin Meyer
Co-Chair, Senate Education Committee

Crawford

Why this fiscal note differs from previous version (if initial version, please note as such)

This portion of House Finance CS removes the Base Student Allocation increase. There are now two additional fiscal notes associated with the House Finance CS which include a grant to the Iditarod School District for theme-based education; and a two-year increase for Boarding Home Grants/Stipends.

BILL NO. CSSB084

Analysis

This bill would create a high school vocational education factor adjustment of 1.01 in the foundation formula. The adjustment follows the special needs factor adjustment of 1.20, and would generate state funding in the amount of approximately $11.7 million. These funds are intended to assist districts in providing vocational and technical instruction for students enrolled in grades nine through 12.

Why this fiscal note differs from previous version (if initial version, please note as such)

This portion of House Finance CS remains unchanged. There are now two additional fiscal notes associated with the House Finance CS which include a grant to the Iditarod School District for theme-based education; and a two-year increase for Boarding Home Grants/Stipends.

DRAFT

FISCAL NOTE
DRAFT

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSSB084

Analysis

This bill would create a high school vocational education factor adjustment of 1.01 in the foundation formula. The adjustment follows the special needs factor adjustment of 1.20, and would generate state funding in the amount of approximately $11.7 million. These funds are intended to assist districts in providing vocational and technical instruction for students enrolled in grades nine through 12.

In addition there is an increase to the base student allocation of $110 amending it from $5,680 to $5,790 for FY2012.

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSSB084

Analysis

The Alaska Challenge Youth Academy would see an increase of $110 to the current base student allocation of $5,680 to $5,790 for FY2012.

ALASKA MILITARY YOUTH ACADEMY

FY2012 Current Projection	
194 x $5680 x 7 =	7,713,440
292 x $5680 x 60% =	995,136
less $2,700,000	(2,700,000)
TOTAL $	**6,008,576**

CSSB 84 - FY2012	
194 x $5790 x 7 =	7,862,820
292 x $5790 x 60% =	1,014,408
less $2,700,000	(2,700,000)
TOTAL $	**6,177,228**

FY12 Est. change over FY12 F $	**168,652**

Section 1 – This is the section that outlines the funding formula.

Page 2, Line 4; establishes vocational education factor as a multiplier in the funding formula.

1) Add the adjusted ADMs of each school district (which includes the school size factor and district cost factor.
2) Multiply that by the special needs factor (1.20) (which includes money for special, vocational, bilingual and gifted and talented education.)
3) **Multiply by the high school vocational education factor (1.01)**

Section 2 – Establishes and defines the various funding available to school districts

Page 3, Line 19,

Adds "high school vocational and technical instruction funding" to the funds that school districts are eligible to receive.

Page 3, Line 30 – Page 4, Line 8

Defines the high school vocational and technical education fund

1) Available to use for students in grades 9-12
2) Is a funding factor of 1.01
3) Excludes funding for administrative expenses and general literacy, math, and basic job readiness skills.

Section 3—allows state boarding schools to receive the vocational education factor per their funding formula.

Why ~~special~~ Voc Ed.

Vocational education

1) capital intensive - if auto mech. - need can, weildy = weild.

[REFER TO CHART]

2) specialized instruction.

Quote from Sitka School Board member Thomas Conley: *Though we in the educational community have always been somewhat leery of categorical funding, we recognize that dollars going into the 20% Block Grant for Special ED, ESL, Gifted and Talented, & Vocational ED are being siphoned off almost exclusively by Special ED due to federal mandates and leaving Vocational Education seriously short funded;*

A 2003 Cornell study showed that:

A) *Giving students the option of choosing career-technical courses in high school will help retain some students in high school, raise the high school graduation rate and induce some to continue their occupational preparation in college.*

B) *Students who start preparing for an occupation in high school are more successful in the labor market both in the short and long run. They are more likely to find a job, more likely to enter the occupation of their choice and they end up earning more.*

We know we need to improve our graduation rate, this can be a key element in that process.

Following sections refer to the Base Student Allocation.

Section 4 sets the Base Student Allocation at $5,790, an increase of $110, or less than 2 percent.
Section 7 sets the effective date at July 1, 2011 (FY12).

Section 5 sets the Base Student Allocation at $5,905, an increase of $115, or less than 2 percent.
Section 8 sets the effective date for July 1, 2012 (FY13)

Section 6 sets the Base Student Allocation at $6,025 an increase of $120, a shade more than 2%.
Section 9 sets the effective date at 2013 (FY14)

One time BSA—Rising fuel costs,
Also Insurance costs, water costs,
Adding it to the BSA lets districts know this is reliable funding.

for many, most districts if not

2 budgets = 1. with increase in BSA
2. with no increase in BSA — Both budgets involved cuts not increases.

On the one hand this sends a clear message to the school districts—this is what you have to work with. This is what you get. This allows them to do longer term planning, and allocate funds, knowing what they will have for the next three years. This gives them the opportunity to do fiscally responsible planning.

Not throwing money =

On the other hand, this sends a clear message to the districts—this is what you have to work with. You will work within these budget parameters.

I have heard people say in the last few days that schools need to prove they are doing a better job. Some of them are doing a better—much better. Alaska schools have problems, but Alaska schools are also graduating many bright, promising, well-educated students. There are drop outs, but there are also students who go on to success in college and career.

SENATE EDUCATION COMMITTEE
Senators Kevin Meyer & Joe Thomas, Co-Chairs

Senate Bill 84
Vocational Education Factor

As proposed in SB 84, the vocational education factor is an addition to the current funding formula. It is calculated after the Adjusted Average Daily Membership and District Cost factor come into play.

Current Formula

Step 1	Adjust the ADM for school size
Step 1a	Review the Hold Harmless eligibility (in case of a greater than 5% decrease in ADM)
Step 2	Apply District Cost Factor
Step 3	Apply Special Needs, Vocational Education, Gifted and Talented and Bilingual Ed factors (1.20)
Step 4	Add Intensive Services Counts 5NS x .0134 ADM
Step 5	Add Correspondence Students Counts 90% of full count

Under SB 84

Step 1	Adjust the ADM for school size
Step 1a	Review the Hold Harmless eligibility (in case of a greater than 5% decrease in ADM)
Step 2	Apply District Cost Factor
Step 3	Apply Special Needs, Vocational Education, Gifted and Talented and Bilingual Ed factors (1.20)
Step 4	**Apply Vocational Education Factor (1.01)**
Step 5	Add Intensive Services Counts
Step 6	Add Correspondence Students Counts

A BILL

FOR AN ACT ENTITLED

"An Act relating to funding for high school vocational and technical instruction as a component of funding for public schools; relating to education tax credits; providing for an effective date by amending the effective date in sec. 57, ch. 92, SLA 2010; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

New Text Underlined [DELETED TEXT BRACKETED]

(B) the number obtained under (A) of this paragraph is multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)**;

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the

base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

*** Sec. 2.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs **and high school vocational and technical instruction** funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13;

(3) in addition to the special needs and intensive services funding

available under (1) and (2) of this subsection, high school vocational and technical instruction funding is available to assist districts in providing vocational and technical instruction to students who are enrolled in grades nine through 12; a high school vocational and technical instruction funding factor of 1.01 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "vocational and technical instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

*** Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the special needs factor in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

*** Sec. 4.** AS 21.96.070(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under AS 21.09.210 or AS 21.66.110 for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 5.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 6.** AS 43.55.019(a) is amended to read:

(a) A producer of oil or gas is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or

four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 7.** AS 43.56.018(a) is amended to read:

(a) The owner of property taxable under this chapter is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 8.** AS 43.65.018(a) is amended to read:

(a) A person engaged in the business of mining in the state is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 9.** AS 43.75.018(a) is amended to read:

(a) A person engaged in a fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 10.** AS 43.77.045(a) is amended to read:

(a) In addition to the credit allowed under AS 43.77.040, a person engaged in a floating fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 11.** AS 21.96.070(a)(5), AS 43.20.014(a)(5), AS 43.55.019(a)(5), AS 43.56.018(a)(5), AS 43.65.018(a)(5), AS 43.75.018(a)(5), and AS 43.77.045(a)(5) are repealed January 1, 2021.

* **Sec. 12.** Section 57, ch. 92, SLA 2010, is amended to read:

Sec. 57. Except as provided in sec. 56 of this Act, this Act takes effect January 1, **2021** [2014].

* **Sec. 13.** This Act takes effect July 1, 2011.

A BILL

FOR AN ACT ENTITLED

"An Act relating to funding for high school vocational and technical instruction as a component of funding for public schools; relating to the base student allocation; relating to education tax credits; providing for an effective date by amending the effective date in sec. 57, ch. 92, SLA 2010; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)**;

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the

base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

* **Sec. 2.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs **and high school vocational and technical instruction** funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13;

(3) in addition to the special needs and intensive services funding

available under (1) and (2) of this subsection, high school vocational and technical instruction funding is available to assist districts in providing vocational and technical instruction to students who are enrolled in grades nine through 12; a high school vocational and technical instruction funding factor of 1.01 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "vocational and technical instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

* **Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the special needs factor in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

* **Sec. 4.** AS 14.17.470 is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,790** [$5,680].

* **Sec. 5.** AS 21.96.070(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under AS 21.09.210 or AS 21.66.110 for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or

four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 6.** AS 43.20.014(a) is amended to read:

(a) A taxpayer is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 7.** AS 43.55.019(a) is amended to read:

(a) A producer of oil or gas is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

*** Sec. 8.** AS 43.56.018(a) is amended to read:

(a) The owner of property taxable under this chapter is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 9.** AS 43.65.018(a) is amended to read:

(a) A person engaged in the business of mining in the state is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 10.** AS 43.75.018(a) is amended to read:

(a) A person engaged in a fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an

institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 11.** AS 43.77.045(a) is amended to read:

(a) In addition to the credit allowed under AS 43.77.040, a person engaged in a floating fisheries business is allowed a credit against the tax due under this chapter for cash contributions accepted

(1) for direct instruction, research, and educational support purposes, including library and museum acquisitions, and contributions to endowment, by an Alaska university foundation or by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association;

(2) for secondary school level vocational education courses, programs, and facilities by a school district in the state;

(3) for vocational education courses, programs, and facilities by a state-operated vocational technical education and training school; [AND]

(4) for a facility by a nonprofit, public or private, Alaska two-year or four-year college accredited by a regional accreditation association**; and**

(5) for education, research, rehabilitation, and facilities by an institution that is located in the state and that qualifies as a coastal ecosystem learning center under the Coastal America Partnership established by the federal government.

* **Sec. 12.** AS 21.96.070(a)(5), AS 43.20.014(a)(5), AS 43.55.019(a)(5), AS 43.56.018(a)(5), AS 43.65.018(a)(5), AS 43.75.018(a)(5), and AS 43.77.045(a)(5) are repealed January 1, 2021.

* **Sec. 13.** Section 57, ch. 92, SLA 2010, is amended to read:

Sec. 57. Except as provided in sec. 56 of this Act, this Act takes effect January 1, **2021** [2014].

* **Sec. 14.** This Act takes effect July 1, 2011.

A BILL

FOR AN ACT ENTITLED

"An Act amending the funding for statewide residential educational programs; relating to funding for high school vocational and technical instruction as a component of funding for public schools; relating to education tax credits; creating a pilot project in the Iditarod Area School District; providing for an effective date by amending the effective date in sec. 57, ch. 92, SLA 2010; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.16.200 is amended by adding a new subsection to read:

(c) In addition to the programs eligible for reimbursement of costs under (a) of this section, the department may approve three district-operated statewide residential educational programs that began operating after January 1, 2005, for reimbursement of costs incurred by the district in operating the program under regulations adopted by the department.

* **Sec. 2.** AS 14.17.410(b) is amended to read:

H

Alaska SeaLife Center
windows to the sea

April 15, 2011

The Honorable Beth Kerttula
House Minority Leader
Alaska State House
State Capitol
Juneau, AK 99801

Re: HCS CSSB 84 (FIN)

Dear Representative Kerttula,

We understand that language has been removed from SB 84 that would allow tax credits for contributions to the Alaska SeaLife Center. The Center is an educational and research organization with legitimate reasons to be included in the existing line up-of tax credit allowances for private investment in education in our state. Please let us encourage you to restore that language.

Although the Alaska SeaLife Center is situated in Seward, Alaska, we serve over 3,000 K-12 students statewide, particularly in the Kenai Peninsula, Mat-Su, and Anchorage areas, through our overnight Nocturne program or day visits. Additionally, we connect with over 7,000 K-12 students through distance education, many of these from Alaska.

We also foster the educational development of, on average, 25 college and postgraduate level interns annually in numerous biological sciences fields. Many of our interns go on to serve Alaska as veterinarians, scientists, and educators.

We host 4 full-time faculty and a varying number of graduate students from the University of Alaska Fairbanks School of Fisheries and Ocean Sciences who conduct cutting edge research on marine mammals and sea birds using state-of-the-art facilities unmatched elsewhere in the state. Tax credits will enable industry partners such as BP to collaborate with Center scientists to invest in research programs which benefit their sector.

The Alaska SeaLife Center is owned by the City of Seward and operated by a non-profit organization. We annually seek financial assistance in the form of state and federal grants. Including the language in the Senate version of CSSB 84 (FIN) would add private industry to our list of potential revenue sources. These tax credits will enable the Center to develop the critical infrastructure and programs necessary to sustain its role as the leading non-profit marine research and education facility in Alaska. Please give us this important tool to attract investment in our worthwhile educational, scientific, and rehabilitative mission, which has statewide impact.

Sincerely,

Ian M. Dutton, Ph.D.

Senators Kevin Meyer & Joe Thomas, Co-Chairs

The legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions.

In our country we have accepted a daunting challenge—to provide a quality education to every single child in our nation. For Alaska this is an especially daunting task. The immensity of the state combined with the small scale of many communities poses challenges no other state faces, especially in the economic arena.

In 2008 the 25th Legislature saw fit to pass an annual $100 increase to the Base Student Allocation for three consecutive years to ensure stable and adequate funding of education. 2011 is the last of that three-year cycle. The legislature also revisited and increased funding for intensive needs special education, and incorporated new district cost factors to provide equitable funding across the state. The foresight of the Legislature on these two issues is commendable, and should be emulated by future legislatures.

To that end we are introducing SB 84, which establishes incremental three-year increases in the BSA and sets aside funds for high school vocational education. This additional annual amount added to the BSA allows schools to keep up with the rising cost of educating our children. The incremental increases represent less than two percent a year, which is below the current inflation rate.

This bill also sends a clear message to the school districts—this is the amount they will have to work with for the next three years. It allows them to act in fiscally responsible ways by giving them financial parameters for the next three years.

SB 84 also establishes a vocational education factor in the school funding formula. Currently vocational education is combined with bilingual, gifted and talented and special education. Legal mandates require districts to offer certain special education programs, and often those required programs take a huge amount of money, leaving little left over for vocational education.

Throwing money at the educational issues in our will not solve our problems, but neither will allowing inflation to erode two to three percent of funding every year.

SB 84 is a moderate and responsible piece of legislation designed to provide funding, stability and predictability so school districts can concentrate on the essential work of improving educational outcomes.

We urge you to support this important bill.

CS FOR SENATE BILL NO. 84(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - FIRST SESSION

BY THE SENATE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act relating to funding for high school vocational and technical instruction as a component of funding for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is

multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)**;

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

* **Sec. 2.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs **and high school vocational and technical instruction** funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13;

(3) in addition to the special needs and intensive services funding available under (1) and (2) of this subsection, high school vocational and

technical instruction funding is available to assist districts in providing vocational and technical instruction to students who are enrolled in grades nine through 12; a high school vocational and technical instruction funding factor of 1.01 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "vocational and technical instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

* **Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the special needs factor in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

* **Sec. 4.** AS 14.17.470 is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,790** [$5,680].

* **Sec. 5.** AS 14.17.470, as amended by sec. 4 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,905** [$5,790].

* **Sec. 6.** AS 14.17.470, as amended by secs. 4 and 5 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$6,025** [$5,905].

* **Sec. 7.** Sections 1 - 4 of this Act take effect July 1, 2011.

* **Sec. 8.** Section 5 of this Act takes effect July 1, 2012.

* **Sec. 9.** Section 6 of this Act takes effect July 1, 2013.

SB 97

$2 x (amount oil is over $89 pb. on July 1)

1) Doesn't help with long term planning
2) Not all increased funding is due to cost of oil
3) Increased funding needed to implement programs to ~~reduce~~ increase graduation rates.
4) If oil drops, no increase in funding.
   If oil skyrockets, more money than can responsibly be used.
5) ~~Doesn't~~ Does not affect long-term planning

FISCAL NOTE

STATE OF ALASKA
2011 LEGISLATIVE SESSION

BILL NO. CSSB84

Analysis

The Alaska Challenge Youth Academy would see an increase to the current base student allocation of $5,680 over the next three fiscal years as follows:
FY2012: increase of $110 to $5,790
FY2013: increase of $115 to $5,905
FY2014: increase of $120 to $6,025

ALASKA MILITARY YOUTH ACADEMY

SB 84 - FY2012	
194 x $5790 x 7 =	7,862,820
292 x $5790 x 60% =	1,014,408
less $2,700,000	(2,700,000)
TOTAL $	**6,177,228**

CSSB 84 - FY2013	
194 x $5905 x 7 =	8,018,990
292 x $5905 x 60% =	1,034,556
less $2,700,000	(2,700,000)

Section 1 – This is the section that outlines the funding formula.

Page 2, Line 4; establishes vocational education factor as a multiplier in the funding formula.

1) Add the adjusted ADMs of each school district (which includes the school size factor and district cost factor.
2) Multiply that by the special needs factor (1.20) (which includes money for special, vocational, bilingual and gifted and talented education.)
3) **Multiply by the high school vocational education factor (1.01)**

AADM x SNFF x VTEFF
AADM x 1.20 x 1.01

Section 2 – Establishes and defines the various funding available to school districts

Page 3, Line 19,

Adds "high school vocational and technical instruction funding" to the funds that school districts are eligible to receive.

Page 3, Line 30 – Page 4, Line 8

Defines the high school vocational and technical education fund

1) Available to use for students in grades 9-12
2) Is a funding factor of 1.01
3) Excludes funding for administrative expenses and general literacy, math, and basic job readiness skills.

Section 3 – Provides high school vocational education funding factor for state boarding schools

Sections 4-9 – Establish the base student allocation over the next three years

1) As of July 1, 2011, the base student allocation is $5,790, an increase of $110 (1.94%)
2) As of July 1, 2012, the base student allocation is $5,905, an increase of $115 (1.99%)
3) As of July 1, 2013, the base student allocation is $6,025, an increase of $120 (2.03%)

A BILL

FOR AN ACT ENTITLED

"An Act relating to funding for high school vocational and technical instruction as a component of funding for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is

multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)**;

(D) the number obtained for intensive services under AS 14.17.420(a)(2) and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

*** Sec. 2.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs **and high school vocational and technical instruction** funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13**;**

(3) in addition to the special needs and intensive services funding available under (1) and (2) of this subsection, high school vocational and

technical instruction funding is available to assist districts in providing vocational and technical instruction to students who are enrolled in grades nine through 12; a high school vocational and technical instruction funding factor of 1.01 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "vocational and technical instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

*** Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the special needs factor in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

*** Sec. 4.** AS 14.17.470 is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,790** [$5,680].

*** Sec. 5.** AS 14.17.470, as amended by sec. 4 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,905** [$5,790].

*** Sec. 6.** AS 14.17.470, as amended by secs. 4 and 5 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$6,025** [$5,905].

*** Sec. 7.** Sections 1 - 4 of this Act take effect July 1, 2011.

* **Sec. 8.** Section 5 of this Act takes effect July 1, 2012.

* **Sec. 9.** Section 6 of this Act takes effect July 1, 2013.

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

*** Sec. 2.** AS 14.17.420(a) is amended to read:

(a) As a component of public school funding, a district is eligible for special needs **and high school vocational and technical instruction** funding and may be eligible for intensive services funding as follows:

(1) special needs funding is available to a district to assist the district in providing special education, gifted and talented education, vocational education, and bilingual education services to its students; a special needs funding factor of 1.20 shall be applied as set out in AS 14.17.410(b)(1);

(2) in addition to the special needs funding for which a district is eligible under (1) of this subsection, a district is eligible for intensive services funding for each special education student who needs and receives intensive services and is enrolled on the last day of the count period; for each such student, intensive services funding is equal to the intensive student count multiplied by 13**;**

(3) in addition to the special needs and intensive services funding available under (1) and (2) of this subsection, high school vocational and

technical instruction funding is available to assist districts in providing vocational and technical instruction to students who are enrolled in grades nine through 12; a high school vocational and technical instruction funding factor of 1.01 shall be applied as set out in AS 14.17.410(b)(1); in this paragraph, "vocational and technical instruction" excludes costs associated with

(A) administrative expenses; and

(B) instruction in general literacy, mathematics, and job readiness skills.

*** Sec. 3.** AS 14.17.440(a) is amended to read:

(a) Except as provided in AS 14.17.400(b), funding for state boarding schools established under AS 14.16.010 includes an allocation from the public education fund in an amount calculated by

(1) determining the ADM of state boarding schools by applying the school size factor to the student count as described in AS 14.17.450;

(2) multiplying the number obtained under (1) of this subsection by the special needs factor in AS 14.17.420(a)(1) **and the high school vocational education factor set out in AS 14.17.420(a)(3)** and multiplying that product by the base student allocation; and

(3) multiplying the product determined under (2) of this subsection by the district cost factor that is applicable to calculation of the state aid for the adjacent school district under AS 14.17.460.

*** Sec. 4.** AS 14.17.470 is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,790** [$5,680].

*** Sec. 5.** AS 14.17.470, as amended by sec. 4 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$5,905** [$5,790].

*** Sec. 6.** AS 14.17.470, as amended by secs. 4 and 5 of this Act, is amended to read:

Sec. 14.17.470. Base student allocation. The base student allocation is **$6,025** [$5,905].

*** Sec. 7.** Sections 1 - 4 of this Act take effect July 1, 2011.

* **Sec. 8.** Section 5 of this Act takes effect July 1, 2012.

* **Sec. 9.** Section 6 of this Act takes effect July 1, 2013.

The rational for the vocational and technical education fund

To guide money toward high school vocational education. (CTE)

Quote from Sitka School Board member Thomas Conley: *Though we in the educational community have always been somewhat leery of categorical funding, we recognize that dollars going into the 20% Block Grant for Special ED, ESL, Gifted and Talented, & Vocational ED are being siphoned off almost exclusively by Special ED due to federal mandates and leaving Vocational Education seriously short funded;*

There are a lot of people leery of categorical funding, including people from the department. However it is not the intent of this bill to mandate the department to chase down how specific money is being used. It is the intent to establish usage for this money, and to provide it to the districts to use for vocational education.

The rational for an increase in the BSA

Base student allocation
The JLETF recognizes that *school districts are better able to plan and budget their programs when the amount of their student funding is known and predictable.*

This is from the report of the September 1, 2007 Joint Legislative Education Task Force, Chaired by Representative Mike Hawker.

Your packets include 22 letters of support from school districts, school board members, teachers, and parents and I have received an additional six more this weekend, for a total of 28 letters of support. These letters are from communities that range in size from Anchorage to Kuspuk.

The increase amounts to around 2 percent a year, which is less than the rise in the cost of living for Anchorage.

But most important, it lets schools make fiscally responsible budgets over the next three years. Many of them are well into budget process. If they know what they will be getting, they can be working on reliable budgets based on accurate figures.

In 2007 the legislature had the foresight to provide schools with the resources they needed to make responsible financial decisions. This bill allows the 27th Legislature to do the same.

The fiscal note has been prepared, and is ready to be presented. If you have any questions that I can answer, I will be glad to.

SUPPORT

<TARGET><BILL>SB 84</BILL><SUBJECT>SB 84 (FILE 2) LETTERS OF SUPPORT</SUBJECT><COMM>SEDC27</COMM></TARGET>

105 Cascade Creek Road
Sitka, Alaska 99835
February 27, 2011

The Honorable Joe Thomas
Alaska Senate
Co-Chair Senate Education
State Capitol, Room 514
Juneau, Alaska 99801

Dear Senator Thomas

I am writing to urge endorsement of SB 84 by the Education Committee and its forwarding to Finance and eventually the Senate floor. Like virtually all Alaska School Districts we in Sitka are facing major budget shortfalls this year. On a budget of just under $17 million, needed to simply maintain the present program, we are facing a deficit of $1.3 million. Without relief we are facing significant layoffs of teachers and significant increases in pupil-teacher ratios and possible deletion of whole academic programs. SB 84 by increasing the BSA by $110 for FY 2011-12 will help though not solve the problem especially when coupled with the proposal to create categorical funding for Vocational Education. Though we in the educational community have always been somewhat leery of categorical funding, we recognize that dollars going into the 20% Block Grant for Special ED, ESL, Gifted & Talented, & Vocational ED are being siphoned off almost exclusively by Special ED due to federal mandates and leaving Vocational Education seriously short funded; this at a time when it time when its importance is being increasingly recognized.

Thank you to you personally and the committee as a whole for introducing the legislation. It has our strong support.

Sincerely,

Thomas L. Conley

February 25, 2011

Senator Joe Thomas
State Capital Room 514
Juneau, AK 99801

Dear Senator Thomas:

On behalf of the Board of Education and Administration of the Klawock City School District, I would like to express our support for SB 84.

The passage of SB 84 would address three major concerns of our school district namely increasing the BSA, forward funding, and funding for vocational education.

As a small rural school district we are especially vulnerable to rising "fixed" costs. We are particularly concerned about the cost of energy. We have been recently told by our supplier to expect significant increases in the cost of heating fuel, propane, and gasoline. Clearly world events have a direct impact on our energy budget. In addition, insurance costs continue to increase. We realize that Klawock is not unique in this situation. However, due to the size of our budget (generally less than $3 million) we have an especially difficult time absorbing these costs.

SB 84 also affords us the opportunity to do a better job of sound financial planning. Knowing the Base Student Allocation for the next three years provides school districts with needed information to strategically plan programs, budgets, and staffing, providing for a more efficiently run school district.

For years the Klawock City School District has struggled to keep a quality vocational education program alive. Fortunately due to dedicated staff, creative funding, and the commitment of the Board of Education, our students have been able to enjoy an excellent, though small program. SB 84 provides us with the opportunity to expand our program by increasing course offerings while staying committed to excellence.

SB 84 is an excellent piece of legislation that will decrease the financial burden caused by rising prices, allow for better planning of programs and resources, and allow students opportunities to participate in quality vocational education programs that will help them transition from secondary school to post-secondary training and the Alaska workforce. Therefore, we fully support SB 84.

Sincerely,

Richard E. Carlson
Superintendent

Unalaska City School District

Senator Joe Thomas
State Capitol Room 103
Juneau, AK 99801

February 22, 2011

Dear Senator Thomas,

I am writing on behalf of the Unalaska City School District (UCSD) Board of Education in support of Senate Bill 84. SB 84 provides a modest increase to the Base Student Allocation (BSA) for each of the next three fiscal years and funding for a separate grant program within the foundation formula for high school vocational education. This bill allows school districts to plan their budgets and programs for at least the next three years with greater certainty.

Knowing the education funding outlook for the next three years will enable UCSD to plan for the implementation of additional high school courses needed to meet the eligibility requirements for the Governor's Alaska Performance Scholarship (APS) program. Specifically, the District seeks to hire an additional high school teacher so that students have access to the rigorous core curriculum required for eligibility for the APS.

The vocational education funding component of SB 84 will enable UCSD to build capacity within its Career and Technical Education programs. UCSD would utilize the additional vocational education funding to upgrade equipment, technology, and shop and classroom facilities. The District would expand its Tech Prep Program to include career paths other than welding, which is the only Tech Prep program presently offered through a partnership with UAF.

Like many school districts throughout the state, UCSD is faced with significant budgetary challenges due to rapidly rising health insurance and utilities costs. The increases to education funding proposed in SB 84 would allow UCSD to meet these rising costs and implement programs that fulfill the Governor and legislature's mandates to keep students in school, provide rigorous curriculum, and prepare students to enter Alaska's workforce.

Sincerely,

John P. Conwell

Senator Joe Thomas
State Capitol Room 514
Juneau AK, 99801
Sen.Joe.Thomas@legis.state.ak.us

Dear Senator Thomas,

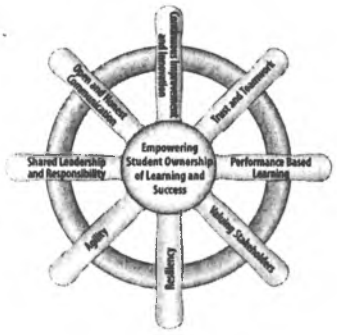
Southwest Region School District (SWRS)D, as well as other school districts across the State, is in need of a funding mechanism that allows for a proactive approach to annual budgeting, as well as one that provides adequate funding to meet the needs necessary to educate each of our 634 students. Thank you for your sponsorship of Senate Bill 84 that will raise the Base Student Allocation (BSA) gradually over the next three years. SWRSD also concurs with the Bill's effort to establish a separate grant program within the foundation formula to provide support of high school vocational education.

By creating a forward funding mechanism, SWRSD is able to anticipate future budget allocations during the budget planning process. As with any process that requires stakeholder input, the knowledge of the actual amount of the BSA allows the District to more accurately anticipate its revenues so that each community may provide comment on a more complete proposed budget. This also allows staffing patterns to be set well before the recruitment and selection process so that personnel resources may be more accurately identified.

The additional funds that are provided in SB84 will help to cover the continually rising costs of insurance and energy. As these non-instructional items' costs continue to rise, our instructional program is impacted either through shortages in staff or the reduction in teaching materials in the classroom.

Thank you for your attention in this matter.

Sincerely yours,



Lee Ann Andrew

The Honorable Joe Thomas
State Senate
Capitol Building, Room 103
Juneau, AK 99801

February 24, 2011

Dear Senator Thomas,

I am writing in your support for your important education-funding proposal, Senate Bill 84. I would encourage action on this important legislation raising the BSA from the current $5,680 per student to $5,790 in July 2011, and then to $5,905 in 2012 and to $6,025 in 2013. The increases will be affordable to the state and important to the quality and stability of public education. It will help stabilize the ability of school districts to plan for the future rather then guessing from year to year.

I also support the portion of Senate Bill 84 that proposes the state fund a separate grant program within the foundation formula for high school vocational education. This is an investment that will help keep students in school and be prepared for Alaska jobs upon graduation from high school.

Sincerely,

Charlene Arneson, President
Chugach School District Board of Education

Senator Kevin Meyer
Majority Leader
State Capitol, Room 103
Juneau, AK 99801

Senator Joe Thomas
State Capitol, Room 514
Juneau, AK 99801

Dear Senators Meyer and Thomas:

On behalf of the Anchorage School District, I want to thank you for co-sponsoring Senate Bill 84. This legislation would insure that the Anchorage School District, and all other districts in the State, would be able to plan responsibly for the next three years, and would allow us to make much needed improvements to our Career and Technical/Vocational Education Programs. I applaud your leadership on this important issue.

The past three years of advance planning for education has allowed the Anchorage School District to advance their efforts in meeting our goal of graduating more of our high school students with a diploma, and reducing the drop-out rate. The efforts of the Joint Education Funding Task Force (JEFTF), chaired by Representative Mike Hawker and Senator Bert Stedman, have made a significant difference in our ability to plan ahead and we are grateful to the legislature and the governor for successful implementation of the three-year forward funding. Even with those significant increases, the Anchorage School District still had a $12 million budget gap in the general fund to maintain current programs, pay for negotiated salary and benefit increases, pay for increased utility and fuel costs. The gap was NOT necessitated by our use of the ARRA (federal stimulus funds), but rather the ongoing general fund costs.

We still have a long way to go to insure that our students are college and/or career ready when they leave the Anchorage School District. We are very appreciative of the legislature's strong support for increases to the Base Student Allocation (BSA), the Intensive Needs Factor, and to pupil transportation. We are also supportive of the phased-in Area Cost Differential for all districts, even though Anchorage does not receive any funding under this part of the education formula. The increases to the Intensive Needs factor has allowed the ASD to use our general fund resources for non-special education students and programs for the first time; we are very grateful for that as many of our over 900+ Intensive Needs students require extra-ordinary services to meet the requirements of their Individual Educational Plans (IEP's).

We support Senate Bill 84's three year increases to the BSA as a way to assist districts in meeting the costs of inflation, fuel and energy cost increases, and to

allow us to retain important programs and staff who are key to increasing our graduation rate over time. We believe the proposed increases are reasonable for the State of Alaska in support of quality education. We know that we must increase the rigor of our course offerings in order to meet the challenges of the Alaska Performance Scholarship; we have a graduation task force reviewing our requirements and soliciting input in where to make needed changes. The additional funding will allow us to retain our effective teachers while keeping class sizes reasonable so our students receive quality education.

The Anchorage School District is also increasing our Career and Technical/Vocational Education offerings in order to better meet the needs of our non-college going student population. We have made great strides in this area at all of our comprehensive high schools, as well as at the King Career Center. We have strong partnerships with Alaska General Contractors, Alaska Works, and CITC at our Construction Academy at the King Career Center. We have incorporated upgrades to our high schools and middle schools in order to offer more CTE courses at home schools, as well as the King Career Center in our upcoming school bond election. Having additional funding to support the necessary teacher positions and the professional development required will go a long way to meeting the needs of our students in this vital area of 21st century education so all of our students are eligible for the Alaska Performance Scholarship for either college and/or career and technical training.

Again, I thank you for your leadership in bringing Senate Bill 84 forward. I urge the Senate Education Committee to hold hearings on the legislation and move it forward to Senate Finance and then hopefully to the floor for a vote of the Senate. At that point, I hope that a similar bill will have worked its way through the House for passage and eventual reconciliation in a joint conference committee.

Please do not hesitate to contact me at comeau_carol@asdk12.org or 907-742-4312.

Sincerely yours,

Carol Comeau

Subject: Support for SB 84

Dear Senator Thomas,
I want to offer my strong support for Senate Bill 84, an important education funding proposal. This legislation would make a huge different to our district for the following reasons:
1. It allows us to plan three years in advance, 2. it allows us to hire and retain the best teachers with certain funding, 3. it will allow us to keep programmatic staffing including our interventionists who work with children to make sure they meet the benchmarks by third grade, and 4. would allow us to continue our vocational ed programs and add to our successful construction academies.
Our district, the Kenai Peninsula Borough, has worked diligently to cut unnecessary costs. We have an energy incentive plan at each school in the district where students and staff work to decrease energy costs. We have rebid our copy contract to reduce paper copy costs. We took a tough look at our budget and eliminated unnecessary budgeted funds from several different areas. We still have no full time librarians in any of our 44 schools as a result of cost cutting measures in the past several years.
Our district is currently looking at a deficit of $3.5 million for next year - about 42 teachers.
We really appreciate your sponsorship of SB 84.
Sincerely.
Sammy Crawford

Honorable Sen. Joe Thomas,

As superintendent of DCSD, I am asking for your support to increase the funding for Alaskan schools. As an educator I sincerely appreciate the past funding efforts from our state legislature and hope you continue to assist us. I know you are aware of the ever increasing costs in locations like Dillingham for such items as fuel for energy, rising insurance costs, the need to offer competitive compensation to attract and retain rural teachers, and things as simple as the cost of a loaf of bread. More importantly is the need we have to improve the academic performance of our kids. As a district faced with not meeting AYP, being a level 5 designated school, and recognizing we need to do a better job of meeting the SBA's of the Alaska standards we have begun major initiatives for improvement. We are moving to a standards based instructional program implementing research based best practices for our district. This year we have implemented the DEED recommended model for a universal screening assessment-Measured Academic Performance program, Response to Intervention, curriculum alignment to ensure we are teaching the AK Standards in all assessed areas, and volunteered as one of 16 school district participating in the new school improvement process known by the acronym of STEPP. One result of our efforts has been the identification that we need an additional reading specialist to help our teachers and kids with interventions for success. Without some increase in funding we will not be able to make even this modest effort to help our staff and kids. We are showing gains in our students using the processes I have noted and feel confident that your investment in the kids of Dillingham will not be wasted. We are showing positive results and with a little more help we can move our students ever closer to meeting the standards of Alaska.

Respectfully,

Bill McLeod,

Dear Senator Meyer and Senator Thomas,

I am writing on behalf of the Kenai Peninsula Borough School District (KPBSD) to comment on Senate Bill 84; thank you for your part in sponsoring this legislation. The KPBSD strongly supports passage of this bill and encourages the legislature to give it priority status so that it is considered well before the end of the legislative session. Our urgency for this consideration is due to the timing of our issuance of contracts.

KPBSD prides itself on being fiscally prudent and financially efficient. During the state's previous education fiscal plan that increased the Base Student Allocation (BSA) by $100 each year, we made significant improvements to our students' learning opportunities. We used this new money to expand our vocational offerings, add interventionists to help our struggling students and increase the number of counselors to help students from dropping out. We are preparing a brochure that highlights the positive effect of our improvements; I will share this with you when I am Juneau next week.

KPBSD's FY12 budget is based on rolling forward our existing level of service. With the BSA at its current level and our borough's contribution holding steady, we expect that our FY12 revenue will be 3.5 million dollars less than our budgeted expenditures. The proposed increase to the BSA that is included in SB84 will approximately cut this deficit in half.

I look forward to sharing the mentioned brochure with you and thank you for considering this encouragement to pass SB84.

Sincerely,

Steve Atwater, Ph.D.
Superintendent

Thank you for your support of education and the future of Alaska kids. As President of Delta Greely School Board, REAA #15, I urge passage of **SB84**. Not only will it provide much needed stability for planning and development purposes, it addresses the much needed support of High School vocational education. As we watch the dramatically increasing oil prices and other basic costs of operating a school, an increased BSA with the 3 year formula could not come at a more critical time. We strongly support this very vital legislation.

Thank you!

Subject: SB 84 VOC ED FUNDING/BASE STUDENT ALLOCATION

RE: Senate Bill 84 VOC ED FUNDING/BASE STUDENT ALLOCATION

Senator Thomas,

Thank you for supporting adequate funding for education. Cutting funding should not be a reaction when student performance does not instantly jump the next year after adequate funding is made available. Because there was more funding last year does not make up for all the compounded lack of resources over the years.

Children are not like cars: You can't pour more "gasoline" in one year and have that jumpstart the stalled vehicle. These little human "vehicles" have to have years of fertilizer, watering and proper pruning which builds on each year until the "plant" is mature and bears fruit.

It is not so different from plants that start out healthy and are later neglected. It is even better if you start working with "the little plants" at a very early start just after they can stand, say at about 3 or 4 years. Even if you give them a good first start, they will wither when you withhold adequate support (funds). They may never completely pull out of their withering just because you invest more dollars one year. They may instead forever bear the marks of neglect.

Look at the little stunted trees along the windswept areas of highway. You can see some that struggled to get through a hard period and survived and some have fallen. Think also of the trees in areas where they always had good growing in a rich soil and protected area. They stand proud and tall. That is not so different from our school children.

Please make sure the education funding level stays at the highest level possible. Also make sure that all children have the kind of education that meets their needs.

A good portion of children need to have Vocational Education. In fact, I am one who believes that all children need to have broad exposure to all kinds of learning. All children need to know how to do basic vocational and home economics skills that will aid them in taking care of themselves and their homes in the future. Some will discover that is an area where they do their best work and others will have some very useful skills that they will find handy all their lives.

Sincerely,

Doris Robbins

Subject: Support for SB84

Dear Chairman Meyer and Chairman Thomas,

Thank you very much for your introduction of SB 84. As the Vice President of the Anchorage School Board and the President of the Association of Alaska School Boards, I can testify to the fact that the increases to the BSA in SB84 will be of great benefit to the Anchorage School District as well as the other school districts in our state.

This week the Anchorage School Board passed a Six Year Fiscal Plan. Two projections in the plan show that if revenues to our district remain status quo or are increased by $100 to the BSA and by one and a half percent from our local tax base, the Anchorage School District will have a $54 - $101 million gap within six years in order to continue to deliver the services to our students that we currently do. Please keep in mind that Anchorage does not benefit from any implementation of the Cost Differential factor but must rely on an increase to the BSA for any relief to the effects of inflation on our educational programs.

Both from the perspective of the Anchorage School District and that of the Association of Alaska School Boards, the addition in SB 84 of targeted funding for vocational programs would be well received. The Association of Alaska School Boards has a resolution crafted and supported by our membership that promotes separate funding outside of the block grant that can be specifically focused on technical/ vocational improvements in our districts. Over the past few years the Anchorage School District has made significant strides in providing greater technical/vocational opportunities to our students and many districts are making similar efforts geared toward helping our students become more prepared for careers and post-secondary education. It is important to continue to improve and expand in our vocational offerings in all of Alaska's school districts and this bill will be very valuable toward that end.

The Anchorage School District has a graduation rate of 70% and has a drop out rate that has been under the 4% mark for the past several years. We have worked diligently to make those improvements and will continue to do so. Passage of SB 84 with the increases to the BSA and the vocational funding program will go a long way toward helping us meet those educational goals and allow our students to be more successful.

Thank you again!

February 21, 2011

Alaska State Senate Education Committee
The Honorable Joe Thomas and the Honorable Kevin Meyer, Co-Chairs

Senators,

We are writing in support of a new multi-year plan to increase the base student allocation (BSA) in the K-12 foundation funding formula. This type of multi-year plan appears in **SB 84 – Base Student Allocation Increase and High School Vocational Education Funding.**

The Alaska Association of School Business Officials (ALASBO) represents school business professionals from across the state, many of whom are responsible for budgeting and financial planning for their districts.

The multi-year increases to the Base Student Allocation applied during the years FY09-FY11 had a profound effect on the focus of the budget dialogue in school districts across the state. Instead of concern primarily about budget cuts to keep our heads above water, stakeholders participating in the budget process were able to plan instructional programs over a multi-year period. Although education is a long-term project, we can see that these efforts are already beginning to bear fruit, to the benefit of Alaskan students.

ALASBO members also know very well that school districts need regular funding increases to function effectively, in order to keep up with the increases in health insurance, energy, wages, benefits and other costs that are a reality in our current economy.

We believe that a multi-year funding plan for the BSA is one of the most effective actions the Legislature can take to promote continued improvement to the quality of instruction across the state. We'd like to see our districts focus on instructional planning, rather than the debilitating distraction of pink slips and the uncertainty of cuts to promising programs each spring.

We urge your support for a new multi-year funding plan for the Base Student Allocation. Please contact ALASBO Executive Director Amy Lujan using the contact information above if we can provide further assistance to your efforts.

Sincerely,

Luke D. Fulp
ALASBO President

7 March 2011

Dear Senator Meyer and Senator Thomas:

On behalf of Alaska's fifth largest school district, we thank you for sponsoring Senate Bill 84, Vocational Education Funding/Increasing Base Student Allocation (BSA).

I understand that some legislators are reluctant to increase the BSA due to frustration that increases have not resulted in improvements to student learning. The Juneau School District is frustrated that progress is slower than desired, but we are proud of the results achieved so far:

- Reading proficiency of students rose from 83.1% to 84.7% between 2009 and 2010
- Math proficiency of students rose from 71.1% to 73.9 %, between 2009 and 2010 reversing a declining trend over the past several years.
- In 2010 six of the seven elementary schools, including all Title 1 elementary schools, met Adequate Yearly Progress (AYP) under "No Child Left Behind". The percent of AYP targets achieved in 2010 increased to 94% up from 93% in 2009. Those schools that have yet to meet AYP are precariously close in all but a few hard to serve student populations.
- The Juneau School District achieved $1 million is cost savings in 30 months after forming a strategic alliance with Energy Education, a national energy conservation company. The district received an *Energy Excellence Award* and four schools have received *Energy Star* ratings for their progress in energy conservation.

Recent increases in the BSA have helped the Juneau School District toward its goal of creating a local education system that ensures all students possess skills to compete in the world labor market. Steps the Juneau School District are taking to improve our local educational system include:

- Increasing the number of instructional school days by one day in each of three years.
- Requiring a one-hour early release of students every other Monday so teachers may assess student data and collaborate on ways to improve teaching to specific student needs.
- Implementing a common formative assessment (Measuring Academic Progress) in which all of our students take a one-hour nationally-normed computerized test three times a year. Results are available the next day (not the next school year) so teachers may assess student performance and take immediate steps to improve teaching to that student.
- Examining our graduation requirements and looking to increase the number of credits required as well as the rigor of course offerings to be sure our student graduate with mastery of core subjects and a well-rounded array of classes.
- Investing in teacher training for a nationally renowned program called AVID (Advancement Via Individual Determination) which is designed to provide often overlooked talented and minority students with the skills and abilities to succeed with their studies.

- Implementing a zero-tolerance substance abuse policy of random drug testing, voluntary for all students and mandatory for all students engaged in state sanctioned school sponsored activities.
- We are in the third year of a five year plan to build high school programs in which students connect their core academic subjects with possible post-secondary plans in Alaska and in global markets.

The final point above is the perfect segue to the second part of your bill, which would provide schools with a specific funding algorithm for career and technical education (formerly known as vocational education). Current Federal Carl Perkins funds amount to less than $80.0 in Juneau and come with so many strings that it takes creativity and fortitude to use them wisely to build our career and technical options that are being aligned with Alaska jobs. Funds provided by this legislation would help ensure we have a sufficient number of teachers trained to deliver curricula resulting in real-world endorsements that make our students more marketable beyond high school. I have attached a copy of the career options we are building in our district to give you a good idea of the structure we are creating.

In closing, the increase to the BSA proposed in this bill would enable us to progress more quickly in our efforts to redesign teaching and learning to help our students leave our schools poised and prepared to enter the world ready to contribute. Our goal is that students leave our district with less need for remedial university course work (thus saving limited postsecondary dollars for higher level classes), and possessing the skills to enter an apprenticeship, the military or the world of work with the skills employers demand to be competitive in our world economy. Our job is to help them master those skills and make those connections.

Thank you for sponsoring this bill and recognizing that budget certainty enables our district to operate effectively and efficiently, while providing our employees with the knowledge that they will be employed next year. This enables them to focus on teaching as opposed to looking, or wondering if they should be looking, for a new job, and this enables us to continue to structure our operations to successfully prepare our students.

Sincerely,

Sally Saddler

Juneau School District
"Next Generations"
High School Structure for Post-Secondary Success

Juneau's two comprehensive high schools are comprised of smaller learning communities* for freshman to build a strong foundation to move into classes organized by career pathways. ** Pathways align with Alaska career clusters. After the freshman year, students may select a pathway, which is a series of classes that offer a career endorsement. **

Juneau Douglas High School Learning Communities

Freshmen Learning Community 1
Freshmen Learning Community 2

ACE-Architecture, Auto, Construction, Engineering Learning Community pathways and endorsements *Students are engaged in hands-on learning including the design and construction of a house or industry internships. The Engineering Pathway has adopted the national pre-engineering program, Project Lead the Way, with a full sequence of courses. Students can earn up to 24 credits through dual credit opportunities with UAS that lead to postsecondary and apprenticeship programs.*

- Architecture Pathway and Endorsement
- Auto Mechanics Pathway and Endorsement
- Construction Pathway and Endorsement
- Engineering Pathway and Endorsement

Athletics, Recreation and Medicine Learning Community pathways and endorsements
Students prepare for pathways into high demand health occupations and gain skills supporting healthy living and lifelong fitness. Students can earn certifications in ETT, EMT, First Aide and CPR, Lifeguarding, Water Safety, and apply their skills in community- based experiences. Students can earn up to 16 UAS credits that lead to postsecondary programs by completing courses in these pathways.

- Health Sciences Pathway and Endorsement
- Fitness and Recreation Pathway and Endorsement

Business and Communications Learning Community pathways and endorsements
The Business and Communications Pathways and Endorsements prepare students with skills for high growth occupations in finance, business, and media communications. Students gain hands-on media training in writing and video production courses. Desktop publishing and web design courses are aligned with digital arts to prepare students with skills for working in graphic design. Students can earn 6 UAS credits for Accounting I and II.

- Finance Pathway and Endorsement
- Marketing Pathway and Endorsement
- Graphic Design Pathway and Endorsement
- Media Communications Pathway and Endorsement

Humanities Learning Community pathways and endorsements
Humanities offer broad-based experiences that require students to earn credits from nearly every department including two years of a foreign language. Literature, history and philosophy are connected with communication and cultural studies, and linguistics. Fine Arts endorsements provide students with opportunities to engage fully in the arts world and express themselves in visual and performance venues.

- Instrumental Pathway and Endorsement

- Theater Pathway and Endorsement

March 10, 2011

Co-Chairs and Members
Senate Education Committee

Re: SB 84

Dear Co-Chairs and Members:

Hydaburg City School District supports SB 84 which provides a vocational education factor and incrementally increases the BSA.

The present block grant, which is intended to cover special education, bilingual/bicultural education, and vocational education is insufficient. Vocational education often involves specialized equipment and classes are often small for the sake of safety. This proposed recognition of the cost and importance of vocational education is welcomed.

The proposed increases in the BSA are critical to school districts' ability to maintain programs in the face of rising costs and, in many cases, declining enrollment.

Thank you for your consideration.

Respectfully,

B. A. Weinberg, CEO
HYDABURG CITY SCHOOL DISTRICT

Subject: SB 84 Increased education funding

Dear Senator Meyer,

I am the principal of Ptarmigan Elementary in Anchorage. Please support SB 84 and increased funding for education. My school has 460 students. 100% of our students qualify for free and reduced lunch. Few of our parents are politically active, so as a representative of this community I am speaking up and asking to help our kids.

Ptarmigan has benefited over the years from State and Federal funds. We need your support to continue providing a quality program and to meet the needs of our students.

Thank you for your consideration,
Lori Cheek
Principal

Subject: SB 84

Senator Meyer;
I am writing to ask for your support of Senate Bill 84 to help increase the Base Student Allocation and to help fund career-technical education.
With the increases felt across Alaska to school districts due to increased costs of materials and shipping/freight as well as the increased cost to keep schools open, the action of increasing the BSA is incredibly important to help districts do their job of educating kids. The funding to help provide students a quality education is paramount to the success of our young people to help guide Alaska into the next generation - and that is why this bill is so crucial to help districts' accomplish this task.
It also begins to address the long overlooked issue of career-technical education and the funding for these types of programs. While it is certainly the schools job to educate our young people, we are also tasked with helping them to be ready for employment and career options when they are ready to leave our instructional care. Having funding to help not only provide this critical component is essential but to help give all of our students the opportunity to be exposed to these resources is part of the solution to helping Alaska have a ready to hire work force - or go to college or whatever post-secondary training an individual would like to ascend to. While all district's face issues in providing these items, as a REAA, I can speak first hand about why these career readiness and vocational education programs are important to our students - they provide relative employability skills that can be readily used whether you are in bush Alaska or downtown Anchorage.
I encourage you to help make SB 84 an reality for the youth of Alaska. This piece of legislation has the opportunity to make real opportunities to our youth.
Thank you for your consideration in this matter, Respectfully, Brad Allen - Superintendent, Kuspuk School District

Alaska State Legislature

Please enter into the record my testimony to the Senate Education committee name

Committee on Education bill # / subject, dated March 7, 2011 public hearing date

I wish to offer my strong support for SB 84. The increase to the base for the next three years will allow our district to plan well in advance, it will allow us to keep the very best teachers with certain funding - instead of spring layoffs - and this would allow us to keep our interventionists - those who work to bring our youngest students up to grade level in reading + math by third grade this is proven to be effective and the "biggest bang for the buck".
We are currently looking at a deficit of $3.5 million for next year — about 42 teachers + administrators.

Sara Irwin Goudreau
Career Counselor
Valdez High School

Dear Education Committee,

As a parent of a Juneau high school student, who has also raised two other older children in the Juneau community, I urge support of SB84. It is very saddening to see our education system faced with choosing which of the important student programs it provides to cut funding for. Our students need support and guidance in order to lead healthy, productive lives, and cutting back on what they receive at school is a step in the wrong direction during these times of rampant substance abuse and delinquent behaviors.

I also tutor students preparing to take their GED examination, and hold a masters degree in social work. I am very much an advocate for career tech programs in our schools, at a much higher level than they are presently provided. Many students don't intend to pursue a college degree following high school, and there is nothing wrong with this. In fact, there is a lot right about it - college is not for everybody. We need plumbers, electricians, and other people in the trades - why is it that their preparation at the high school level is so much less valued than that of the college -bound student? Instead we have countless students who are not motivated to finish high school because it doesn't give them what they need - preparation to support themselves at a decent wage after they graduate. They end up dropping out,and with low-paying jobs, thus continuing the viscious cycle of poverty, and often the associated substance abuse and other societal problems that can be associated with people living difficult lives.

Please support SB84, thus increasing the BSA and also providing some additional funding for our career tech programs.

Sincerely,
Ellen Pavitt, parent of Juneau high school students

Subject: Senate Bill 84

As a long-time Alaska resident, parent of two school-aged students, and member of the Juneau school board, I urge you to support Senate Bill 84, which increases the base student allocation, and provides additional funding for vocational and career tech classes.

The single most important thing we can do to assure a successful future for our children and the State of Alaska is to make sure all of our students graduate from high school with the skills they need to succeed in college or the workforce. Like school districts around the state, the Juneau School District has been changing the way we do things in order to achieve this goal. A few examples:

-- We are increasing the number of career tech classes offered, and coordinating with the university to assure the quality of these courses and allow high school students to receive university credit for taking them.

-- We are increasing the type and number of advanced level classes offered at our middle and high schools, to allow more students to be well prepared for college.

--We are providing literacy support for students who have fallen behind, to enable them to catch up with their classmates as quickly as possible.

-- We are implementing the AVID program, which targets students in the academic "middle", helping them to prepare for college, and realize that college really is a viable option for them.

The district has been successful in adopting these approaches within the current budget, and plans to continue to do so, however, it is extremely difficult to maintain programs at a time that budgets are being cut. While it's true that "throwing money at a problem" is generally not enough to fix that problem, it is similarly true that cutting funding makes it even more difficult to make improvements.

Leaving the BSA unchanged is not "flat funding", it is an effective funding decrease for schools -- higher energy and personnel costs, among other things, mean that the same amount of funding will cover less next year than it does this year. The increase in the BSA included in SB84 and the additional funding for vocational education will go a long way toward offsetting those built-in cost increases and enable us to make the changes that are needed for our students and our state.

I urge you to support SB 84. Feel free to contact me if you have any questions.

Barbara Thurston

HAINES BOROUGH SCHOOLS

P.O. Box 1289

Haines, Alaska 99827

March 30, 2011

Senator Joe Thomas
Alaska State Senate
Alaska State Capitol
Juneau, AK 99801-1182

Dear Senator Thomas:

Continued increases to the BSA that allow districts to contend with the increasing cost of goods and services are vital. Energy costs are skyrocketing along with the cost of health care. Keeping vocational education classes and other classes that students are interested in our schedule keeps them coming to school. This helps reduce the dropout rate, which though low, at less than 10% in Haines, still needs to improve. These costs are worth funding.

Forward funding is also of extreme importance. It is cost-effective. It reduces uncertainty and helps us to more quickly and efficiently budget. This allows us to spend more time focusing on ways to improve our students' education. It was one of the essential recommendations to come out of the work of the bipartisan task force on education back in 2007 and should be sustained.

Right now **SB 84** appears the best vehicle for maintaining necessary funding increases and forward funding. It also addresses vocational education. **The Haines Borough School Board has passed a resolution supporting this bill.** This bill is in Senate Finance and we hope it will quickly get on the schedule and be kept moving forward. If there is another way of accomplishing the same or similar result, we'd be supportive as well. We hope that we have your active support and that you will exert whatever efforts you can. We will continue to follow the movement of this bill (or any other effort) and will be available to provide additional testimony as needed.

We thank you again for your time and for your service to the needs of our school district and other districts across the State.

Thank you,

Michael Byer, Superintendent

HAINES BOROUGH SCHOOLS
P.O. Box 1289
Haines, Alaska 99827-1289

March 11, 2011

Senator Kevin Meyer
Majority Leader
State Capitol, Room 103
Juneau, AK 99801

Senator Joe Thomas
State Capitol, Room 514
Juneau, AK
99801

Dear Senators Meyer and Thomas:

Thank you for coauthoring SB84. The provisions of this bill would insure our school district's ability to continue building our capacity to provide a higher quality and more relevant education for our students. The recommendations of the Joint Education Funding Task Force (JEFTF) that met in 2007 and were incorporated into law made a huge contribution to our ability to do our jobs. We have had three years in which we've been able to more accurately budget. Consequently, we spend more time dealing with educational issues rather then trying to anticipate different funding scenarios. This has been huge for us. We have been able to work our strategic plan. We've focused on improving our reading and math curriculum and instruction. We've added additions to our Career and Technical/Vocational Education program. We've improved services to our "high needs" students.

We know that keeping kids in school so they don't drop-out, but continue through and graduate, includes several crucial factors. First they need to have high quality, highly skilled teachers who care about them. Second, they need a strong core curriculum. Third, they need immediate and effective interventions to help them catch-up and keep-up when they are behind. And forth, they need options and relevance in their classes. All these things help them connect to school and experience the success they need that will result in their graduating.

With the rising cost of energy and the consequent increase in goods and services, being able to continue our efforts for our children depends on the provisions SB84 encompasses. We thank you for leading the way in addressing the important issues we face and offering what we feel is a good solution that will allow us to continue our important work in partnership with the legislature, our local government and our immediate community.

Thank you,

Michael Byer
Superintendent, Haines Borough School District

HAINES BOROUGH SCHOOLS

P.O. Box 1289

Haines, Alaska 99827

A Resolution Supporting the Passage of Senate Bill No. 84 Submitted by the Senate Education Committee on 2/4/11

"An Act relating to funding for high school vocational education as a component of funding for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

Whereas, The Alaska Legislature in 2008 passed HB 273 that put into effect the recommendations of its own Joint Legislative Education Funding Task Force that were based on a reasoned and deliberate discussion of important issues to public education in the state; and

Whereas, these recommendations included 1) forward funding of districts with yearly additions to the BSA, 2) funding the actual costs of "intensive needs students," 3) providing a "hold harmless" provision for districts with dramatic enrollment decreases, and 4) implementation of the "District Cost Factor;" and

Whereas, this legislative support has greatly assisted districts to do early forward planning and provide better educational services to students; and

Whereas, the need for forward funding, vocational education and the other provisions within HB 273 continues on; and

Whereas, Senate Bill No. 84 addresses these important concerns and continues the crucial support already begun by the legislature for the next three years; and

Whereas, flat funding will cause reductions in educational services and further constrain our district's capacity to meet the diverse needs of all students, each of whom are essential for Alaska's future;

THEREFORE BE IT RESOLVED, we respectfully request that Senate Bill No. 84 be passed by the Alaska State Legislature and signed into law by Governor Sean Parnell.

PASSED AND APPROVED this 16th day of March 2011.

OR – Without the Sealife Center language:

Sec. 27. Section 57, ch. 92, SLA 2010, is amended to read:

Sec. 57. Except as provided in sec. 56 of this Act, this Act takes effect January 1, 2021 [2014].

My name is Tami Seekins. I have three children who attend schools in the Fairbanks School District. I'm speaking today in support of SB 84. As a parent of children who are currently attending school in the Fairbanks District, I believe that it is important that this legislature demonstrate that that they value education. Our children are this state's future. Our children are no longer competing with other kids from other states - they are competing with kids globally. As a state we need to say that we value education, we understand that if we are to be competitive and move our state forward, we need to have an highly educated workforce that wants to remain in Alaska. We do that by putting our resources where it is needed the most, AND will have the highest pay off in the future. Our schools need to be able to plan financially to the best of their abilities to offer the most that they can. If you were to ask me, I would say that this bill is the first step of what really needs to happen. I don't actually believe that this bill goes far enough.

We live in a fast pace world, our children need to know more and more in order to be productive members of society and we are charged with helping them become successful, productive Alaskans. SB84 will begin the steps to allow school districts to meet that charge. We cannot sit by and continue to let other states and other countries pass us by.

By passing this bill, you will be help sustain and grow Alaska's future. By your action to support this bill, you will indicate that you value education; you will indicate that the future of Alaska is important; and you will indicate that you understand the importance of a well educated and trained workforce. It is long range thinking - but it is one that will have a high pay off for Alaska.

I want to close by saying that I believe the Fairbanks School District is doing a good job. My oldest son is a sophomore at West Valley. This spring, at the end of his sophomore year he will have earned 12 credits through UAF from classes that he has taken at West Valley. The teachers and staff care about his education and they working hard to develop classes and opportunities that will ensure that he will be successful and help him get ahead . He wants to attend UAF to study engineering. He wants to stay in Alaska. This is what it is all about and this is why I support SB 84

Subject: RE: SB 84 and CSSB 84

Dear Co-Chairs Meyer and Thomas and Senate Education Committee members:

I attended this morning's Education Committee meeting off-site by call-in, but you were apparently not made aware that I was on the line waiting to testify in support of SB 84--really CSSB 84. There was much excellent testimony, and your packet included input from the Anchorage School District and our board vice-president, Crystal Kennedy. Superintendent Comeau has also sent an email just this morning. Although the Anchorage School Board has not taken a formal position on this specific bill, we have strongly endorsed the changes it would make.

A number of points, however, bear emphasis:

1. Doing nothing would not "flat-fund" education, it would allow education funding to erode. So long as the BSA is stated in nominal dollars and inflation continues to exist, to leave the BSA unchanged would be a real-dollar decrease in education funding.
2. Even CSSB 84 would not really increase education funding; it would merely--or perhaps not quite--maintain education funding. With inflation estimated at 2.5%, SB 84's 2% adjustments would only mitigate real-dollar erosion.
3. The Anchorage School District has embarked on value-based budgeting to use our limited resources where they will produce the greatest results for student achievement, graduation rates and drop-out reduction, while preparing students for success in life. Budgeting for the coming year, we faced a nearly $20 million shortfall, due to the erosion described above, and receiving no cost-differential adjustment like other districts. That will be partly mitigated by one last year of supplemental federal funds, but we still had to make substantial cuts, saving some critical services and activities only by increasing class size and digging deep into fund balance reserves. The projected FY 2013 shortfall is nearly $30 million, and it gets much worse further in the future, without at least the erosion mitigation of CSSB 84.
4. Having to budget and plan devoid of real information as to future funding is a horrendous waste of time and energy, imposing needless trauma on the community and school staff. Three-year running erosion-mitigation would allow us to focus more on program rather than just on money.
5. Increasing Career Technical and Vocational Education is a central theme of the Anchorage School Board, with strong community support. We expect resounding approval of a bond for improvements to CTVE facility capacity in high schools across the District, but operating budget constraints will limit our ability to serve this need. The increased block grant increment for that purpose would help make school more relevant and useful for more students, and be a sound investment in Alaska's workforce, enhancing our human capital and helping to stem the export of local jobs.

Finally, but perhaps most importantly, because SB 84 and CSSB 84 are committee bills, you may already know all of this and be ready to pass the bill on with favorable recommendations. But it is not nearly enough just to pass the bill out of committee. Last session, a similar bill died in House Rules. Though none of your individual names may be on this bill, I ask each of you to commit jointly to making it your flagship bill. Press it on through the Senate; shepherd it through the House. Let your colleagues in both chambers, as well as the Governor, know that what this bill would do is a must-have for Alaska's future.

I thank you for this opportunity to provide input on this very important bill and look forward to thanking and congratulating you when I come to Juneau later this month.

John Steiner
Anchorage School Board President

Subject: SB 84 and CSSB 84

I was unable to testify on SB 84 and CSSB 84 this morning due to an emergency death of one of our staff over the weekend. I did want to comment on this important proposed legislation.

First, and foremost, I want to thank all of you for your long-time support for public education; our students, staff, and families have truly benefitted from the past three years of increased funding in the Base Student Allocation, the Intensive Needs factor, and in Pupil Transportation. The increased funding has allowed us to fully pay for our over 900 Intensive Needs students from the increased funding, and not to have to divert other general education funding to provide these required intensive services. In addition, it has allowed us to keep up with the inflationary costs of education. By knowing our funding levels for three years, we were able to more effectively plan to our instructional programs and student needs, as well as negotiate reasonable collective bargaining agreements.

I urge you to support either SB 84 or CSSB 84 with the three years of incremental increases to the Base Student Allocation as well as the increase of a specific factor for career and technical education. For too long, our funding in the block grant which assists us with our bilingual eduation, special needs, gifted, and career and techical/vocational education funding has been used up with the needs of our bilingual (English Language Learners) and special needs students with little left to enhance our career and technical education. Our school board has prioritized career and technical education for the past three years, and we are seeing significant increases in student interest and participation in these courses. We have elements of C and TE in all three bond propositions on our April 5 ballot. We have added C and TE opportunities in our after school and summer school programs due to student interest. We believe that more funding in this vital area will assist us in providing more classes for our students, and thus increasing the graduation rate, and decreasing the drop out rate.

Again, we urge you to support SB 84 or the CSSB 84 in this legislative session. It will make a significant difference in the quality of education for our students.

Thank you,
Carol Comeau
Superintendent

March 14, 2011

The Honorable Joe Thomas
Co-chairman, Senate Education Committee
State Capitol, Room 514
Juneau, Alaska 99801

Dear Senator Thomas:

We are writing this morning to express our strong support for Senate Bill 84, and our deep appreciation for your sponsorship of this effort. It is especially important to structure education funding so that Districts can make financial plans with some reasonable sense of the near term, and the three year funding used in the bill gives us the necessary financial parameters for that purpose.

In order to cover inflation and increases to pay in contractual obligations NSBSD would need $500 increase in BSA, which we realize we won't get, but we need some increase and support $110. We have made prudent cuts in our budgets – 17 positions were cut last year alone – but inflationary pressures in salaries, benefits, energy, utilities and logistics are driving our costs up.

Since 75% of District costs are for labor (certified and classified), any pay increase or benefits increase that must be absorbed results in deep cuts on other costs (which are only 25%) or cuts in positions. Over time, this is a prescription to starve the engine (people) that drives improvement.

Specifically for our District, the FY2012 Base Budget requires an additional $2,476,551 in revenue to sustain the District's current efforts – that is with no increase in positions or programs. Using current adjusted ADM of 4737.67, the proposed $110 increase to the BSA contained in SB84 would provide $521,143 of that shortfall, or 21%. Beyond the base budget, the District has identified an additional $1,993,867 in unmet needs, which will have to met by offsetting cuts or done without.

Thus, the funding increases proposed in SB84 are welcome and necessary, and are a prudent portion of what is needed to move education in Alaska forward.

Before closing, we wanted to provide a short summary of NSBSD progress on SBA's last year to note that we are using our appropriations to good effect, as follows:

1. We recognize our need to continue to focus on increasing student achievement and that our current achievement level is not good enough. We are improving

and need funding to continue do so. We need to do more, not less and need the resources to do so. The challenges our students face are enormous, and money invested in education

2. Six of eleven schools made AYP, which is an imperfect measure but nonetheless an indicator.

3. Reading scores increased 7.2% district-wide, with double-digit gains in grades 3, 4, 5 and 8. The percent proficient in grades 7, 8 and 9 are the highest since SBA testing began

4. Writing scores are essentially flat (0.2% decline), so we need to put emphasis there as we have recently put on reading.

5. In math scores, we saw an overall gain of 5.9%.

6. Six-year trend line in both language arts and math indicates district is now on a growth path.

In closing, we again wish to express our appreciation for your leadership in education, and our strong support for the three year commitments to education funding contained in SB84.

Sincerely,

Peggy Cowan,
Superintendent

Ref: SB 84, "An Act relating to funding for high school vocational education as a component of funding for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

Dear Senators Meyer and Thomas:

The Juneau Economic Development Council (JEDC) applauds the Legislature's commitment to Alaska's K-12 public schools. JEDC is home to a statewide K-12 Science Technology, Engineering and Mathematics (STEM) initiative, working to increase student interest and competencies in STEM fields. With funding from the U.S. Department of Defense, the STEM program has directly benefited over 5,000 students, 323 teachers, in 23 school districts over the last four years.

We support the Senate Education Committee's proposal to increase the Base Student Allocation (BSA) within the Foundation formula and urge the Committee to increase the BSA to keep pace with inflation and meet those costs that are beyond a District's direct control – such as rising fuel oil prices. Erosion of schools' purchasing power is counter-productive, and highly unlikely to move schools faster towards the success we all hope for.

JEDC also supports attention to and increase in funding for vocational education, which we understand encompasses STEM courses as well as more traditional vocational education course options.

STEM skills reflect the changing job requirements in our increasingly global and technology-driven economy. These skills are required not only for professional sector jobs, but also, increasingly, infused in and required for mid-level occupations. The Alaska Department of Labor predicts that by 2018 there will be over 8,000 job openings in STEM-related jobs in Alaska (2,700 new STEM jobs and 5,400 more openings as workers retire). Jobs within health occupations add even more jobs to this total.

These jobs require the ability to apply math and science skills in a real world context. Unfortunately, Alaska high school graduates are often ill prepared for the caliber of work required in colleges and technical schools to access these jobs. For example, of the Alaskan students taking the ACT test in 2010,

- Only 47% were prepared for college level math; and
- Only 31% met college-ready benchmarks in science.

In short, vocational education, including STEM programs that include a robust hands-on element and links to real world challenges, opportunities and jobs, are increasingly important to our state's economic health.

We encourage the Committee to expand funding for vocational education into the middle school grades. The middle school years are pivotal in shaping a young person's attitudes towards jobs, future possibilities and their place in the world. Through JEDC's STEM initiative it is clear that for many students, STEM projects such as FIRST robotics and SeaPerch underwater ROV "build" are often a student's first introduction to building, tinkering, designing, redesigning, and messing around with science, technology, engineering and mathematics. It is important there be more hands-on, vocational and STEM opportunities for students in the middle school years.

Thank you for your thoughtful consideration and ongoing work on behalf of the students of Alaska.

Sincerely,

Kurt Fredriksson
Board Chair

Brian Holst
Executive Director

RESOLUTION of the Board of Directors in support of State of Alaska Senate Bill 84
"An Act relating to funding for high school vocational education as a component of funding for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

Resolution 04-11

WHEREAS, U.S. jobs that demand technical training are growing five times faster than those requiring no technical training. *(National Math & Science Initiative)*

WHEREAS, by 2018, it is projected that 90% of U.S. occupations will require either a bachelor's degree or a combination of college-level technical courses and employer sponsored technical training. *(US Bureau of Labor Statistics)*

WHEREAS, since 2007, JEDC has developed a robust STEM program to support STEM education in 23 school districts across the State which includes teacher professional development, providing an array of summer and after-school enrichment programs, developing and subsidizing the cost of over 750 classroom science kits.

WHEREAS, providing designated funding for vocational education, which has a strong connection to STEM curriculum will further advance JEDC's objectives in the area of workforce development.

WHEREAS, forward funding increases in the per-student base level appropriation will assist school districts across the state to develop sound fiscal plans in an era of rapidly rising costs.

WHEREAS, Senate Bill 84 provides an increase to the per-student base level appropriation for education and provides funding for vocational education.

WHEREAS, Senate Bill 84 is a legislative priority for many school districts across the state, large and small, rural and urban.

NOW, THEREFORE, BE IT RESOLVED THAT:

On this 15th day of Marcy 2011, the Board of Directors of the Juneau Economic Development Council hereby authorizes JEDC to issue appropriate letters of support for Senate Bill 84.

April 1, 2011

Honorable Senator Joe Thomas
State Capitol
Juneau, AK. 99801

Dear Senator Thomas:

I am writing in support of Senate Bill 84, which would increase the Base Student Allocation for K-12 education and provide additional funds for vocational and career education. Base Student Allocation increases and an increase in support for high school vocational and career education classes are crucial for districts to "maintain" programs. Our health insurance, liability insurance, salaries, energy costs increase annually. This amount will not keep up with all of our inflationary costs. However, if we can at least stay close to inflation the cuts we have to make will be easier.

Also being forward funded is the only common sense way to run the state's business. With tenured teacher contracts rolling over in March, for a district not to know how much money it will have is extremely dangerous.

I also appreciate your insight for Alaska's worker preparation. We should be training our own people to take the jobs that are available in state. Adding a dedicated amount to the Vocational allotment is a good thing.

Without this additional money we will be forced to cut programs and services. I strongly support both parts of this bill and thank you for leadership in proposing it.

Sincerely yours,

Woody Wilson

President & CEO

April 7, 2011

Representative Alan Dick
Chair, House Education Committee
Alaska State Capital, Room 104
Juneau, AK 99811

Dear Representative Dick:

The Alaska State Hospital and Nursing Home Association (ASHNHA) would like to express our support for Senate Bill 84, relating to funding for high school vocational and technical instruction as a component of funding for public schools.

Alaska is facing a critical shortage of health care workers. Efforts to develop a cadre of qualified, capable and trained Alaskans are fundamental to addressing the growing needs of the health care industry. In 2010 the Alaska Workforce Investment Board, the UA Department of Regents, and the Board of Education endorsed a statewide Career and Technical Education Plan as a blueprint for assuring articulation among the major players in delivering education to young Alaskans as they enter a career pathway. This plan needs resources dedicated on a local level to ensure that the state is "growing our own" for entry into these high-demand occupations.

The health care industry is Alaska's fastest growing job market; Alaska's health care employment increased 46% between 2000 and 2009, far outpacing the 13% average of other industries. Entry-level positions in health care are often the gateway to professional careers. Dedicated and designated resources for Career and Technical Education (CTE) are critical to exposing young people to health careers and help ensure that they have the skills to enter the workforce and develop the capacity achieve the certificates, training, education, and clinical experiences necessary to succeed. Without the specific funding provided in this legislation to advance CTE, Alaska will continue to see increased numbers of non-resident hires.

Thank you again for hearing this legislation and please let me know if ASHNHA can supply any additional information to you or the committee.

Sincerely,

Karen Perdue
CEO/President

Consumer Price Index - Calculating Index Changes

Movements of the indexes from one period to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. This example illustrates the computation of index points and percent changes.

Step 1:

Calculating the index point change:

CPI- Anchorage 2010	195.144
Less CPI for previous period- Anchorage 2009	-191.744
Equals index point change	3.4

Step 2:

Calculating the percent change:

Index point difference Divided by the previous index (Anchorage 2009)	3.4 / 191.744 = 0.01773
Results multiplied by 100	0.01773 * 100 = 1.773
Percent change (Anchorage CPI 2010)	1.8 (rounded 1.773 to 1.8)

(b) The department shall monitor the cost factors established under (a) of this section and shall prepare and submit to the legislature by January 15 of every other fiscal year proposed district cost factors.

Sec. 14.17.470. Base student allocation. The base student allocation is $3,940.

Sec. 14.17.480. Quality school funding. (a) As a component of public school funding, a district is eligible to receive a quality school funding grant not to exceed the district's adjusted ADM multiplied by $16. The department shall by regulation establish a grant process to implement this section.

(b) For purposes of the reduction required under AS 14.17.400(b), funding authorized under (a) of this section is treated the same as the state share of public school funding under AS 14.17.410.

Sec. 14.17.490. Supplementary public school funding floor. (a) Except as provided in (b) - (e) of this section, if, in fiscal year 1999, a city or borough school district or a regional educational attendance area would receive less public school funding under AS 14.17.410 than the district or area would have received as state aid, the district or area is, in each fiscal year, eligible to receive additional public school funding equal to the difference between the public school funding the district or area was eligible to receive under AS 14.17.410 in fiscal year 1999 and the state aid the district or area would have received in fiscal year 1999.

(b) A city or borough school district is not eligible for additional funding authorized under (a) of this section unless, during the fiscal year in which the district receives funding under (a) of this section, the district received a local contribution equal to at least the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year as determined by the Department of Community and Regional

Re: Support of Senate Bill 84

Dear Senator Thomas:

On behalf of the Valdez City School District Administration, Board of Education, and Staff Members we wish to thank you for your sponsorship of Senate Bill 84. This funding is helpful to our school district in many ways: 1. It allows us to strategically plan for the next three years; 2. It allows the continuation of many new and innovative programs for students; 3. It allows the VCSD to consider the expansion of current highly desired programs.

Over the last few years the VCSD has worked hard to expand and create additional learning opportunities for students. We currently have many programs that are unique to Valdez and we would like to be able to expand on those successes. We have forged a very strong collaboration with Prince William Sound Community College and we are able to offer many concurrent enrollment options for our students. We also are working together with industry professionals to not only prepare our students for college, but also prepare them of the workplace upon graduation.

The VCSD strongly supports Senate Bill 84 and we encourage swift passage to allow us to plan for the future.

Thank you,

Jacob Jensen, Superintendent
Valdez City School District

Daniel Walker, President
Valdez Board of Education

March 11, 2011

Alaska State Senate Education Committee

The Honorable Joe Thomas and the Honorable Kevin Meyer, Co-Chairs

Senators,

On behalf of the Lake and Peninsula School District I am writing in support of Senate Bill 84 – Base Allocation Increase and High School Vocational Education Funding. The multi-year increases applied during the past several years were very helpful in our strategic planning process. SB 84 proposes a similar multi-year plan.

Along with the ability to plan ahead financially, SB 84 also gives districts much needed funding increases that allow us to better respond to rising costs. In the past several years LPSD has experienced dramatic increases in medical insurance and utility costs. The yearly increase to the base allocation formula allows us to respond to such increases without cutting educational programs.

While the rest of the country is cutting teachers and educational systems are faltering, this is a positive step for Alaska. A sustainable, stronger education system is sure to be the result. On behalf of my Board and School District, I urge your support for multi-year funding of schools.

Sincerely,

Ty Mase
Superintendent

Subject: SB 84 and CSSB 84
Importance: High

Dear Senators Meyer and Thomas and Senate Education Committee members:
I was unable to testify on SB 84 and CSSB 84 this morning due to an emergency death of one of our staff over the weekend. I did want to comment on this important proposed legislation.

First, and foremost, I want to thank all of you for your long-time support for public education; our students, staff, and families have truly benefitted from the past three years of increased funding in the Base Student Allocation, the Intensive Needs factor, and in Pupil Transportation. The increased funding has allowed us to fully pay for our over 900 Intensive Needs students from the increased funding, and not to have to divert other general education funding to provide these required intensive services. In addition, it has allowed us to keep up with the inflationary costs of education. By knowing our funding levels for three years, we were able to more effectively plan to our instructional programs and student needs, as well as negotiate reasonable collective bargaining agreements.

I urge you to support either SB 84 or CSSB 84 with the three years of incremental increases to the Base Student Allocation as well as the increase of a specific factor for career and technical education. For too long, our funding in the block grant which assists us with our bilingual eduation, special needs, gifted, and career and techical/vocational education funding has been used up with the needs of our bilingual (English Language Learners) and special needs students with little left to enhance our career and technical education. Our school board has prioritized career and technical education for the past three years, and we are seeing significant increases in student interest and participation in these courses. We have elements of C and TE in all three bond propositions on our April 5 ballot. We have added C and TE opportunities in our after school and summer school programs due to student interest. We believe that more funding in this vital area will assist us in providing more classes for our students, and thus increasing the graduation rate, and decreasing the drop out rate.

Again, we urge you to support SB 84 or the CSSB 84 in this legislative session. It will make a significant difference in the quality of education for our students.

Thank you,
Carol Comeau
Superintendent

GREATER FAIRBANKS CHAMBER OF COMMERCE

Interior Alaska – The "Place" To Do Business

100 Cushman St., Suite 102 | Fairbanks, Alaska 99701-4665
ph (907) 452-1105 | fax (907) 456-6968 | www.FairbanksChamber.org

Introduced By: Education Committee
Date Introduced: April 4, 2011
Date Passed: April 4, 2011
Date Transmitted: April 5, 2011

RESOLUTION 11-0404A
A RESOLUTION BY THE GREATER FAIRBANKS CHAMBER OF COMMERCE IN SUPPORT OF SENATE BILL 84: ESTABLISHING INCREMENTAL THREE-YEAR INCREASES IN THE BASE STUDENT ALLOCATION AND SETS ASIDE FUNDS FOR HIGH SCHOOL VOCATIONAL EDUCATION

WHEREAS, the Greater Fairbanks Chamber of Commerce places great value on public education and recognizes the powerful relationship between public schools and community and economic development; and

WHEREAS, the historic compact between the business community and public schools is based on high expectations for student achievement and workforce preparedness; and

WHEREAS, the mission of the Fairbanks North Star Borough School District is to provide an excellent and equitable education in a safe, supportive environment so all students can become productive members of a diverse and changing society; and

WHEREAS, without a funding commitment from the legislature in advance, problems arise from the misalignment of the legislative session and the school district budget cycle since the school district must submit a balanced budget to the Borough Assembly by April 1 of each year (before the legislative session is over); and

WHEREAS, educators, employers and government officials agree schools must prepare students to transition from public education to a career pathway or higher education; and

WHEREAS, a lack of categorical funding for vocational (career and technical) education inhibits the school district's ability to provide a dynamic and meaningful career and technical education to its large and diverse student population; and

NOW, THEREFORE, BE IT RESOLVED that the Greater Fairbanks Chamber of Commerce urges the legislature to pass Senate Bill 84, which provides an increase to the Base Student Allocation for Fiscal Years 2012 through 2014, and establishes categorical funding for career and technical education for grades 9-12, thereby sustaining and growing Alaska's investment in education; and

Dear Senators,

I am sending you this email in support of Senate Bill 84. As a middle school business education and CTE teacher, I can tell you firsthand how important CTE is to education. I have witnessed students who had little interest in school come "alive" in their first computer, home ec and applied tech classes. CTE encourages lifelong learning by applying hands-on CTE concepts to real world examples. Students learn about career options and discover they have many choices.

I hope you will support Career and Tech Education programs with SB 84.

With much gratitude,

Frances Lucas

Subject: SB 84

Dear Co-Chairs Thomas and Meyer, and Committee Members:

I am writing to express my support for SB 84 and for CSSB 84.

During my eight years on the Anchorage School Board, I have seen a lot of growth in the district's efforts to enhance career training in both professional and non-professional job skill areas. The added vocational and technical instruction funding will allow us to continue those efforts without reducing funding for other vital programs.

I also appreciate the planned increases in the BSA. Inflation chips away at our funding every year. The increases provided for in SB 84 and CSSB 84 will help us maintain our purchasing power. Equally important in my view, knowing for three years what our funding will be lets us plan in advance.

With increased funding comes increased responsibilities and I know the ASD will not shy away from those responsibilities. Over the last eight years, we have made large gains in our graduation rate, seen large decreases in our drop out rate, and made progress in our test scores. All of this while seeing a large influx of students who don't speak English, come from low income families, or who transfer in and out of the district repeatedly. In addition, the wars in Iraq and Afghanistan put stress on our many military families, which makes teaching their children more of a challenge. Just to maintain test scores and graduation rates while teaching increasing numbers of harder to teach students is a huge accomplishment. The credit for that goes to our many dedicated employees, as well as to the Legislature's recognition that financial support, while not THE solution, is certainly a necessary element to providing the solution.

I would appreciate your support for either SB 84 or CSSB 84.

Subject: hearing for SB 84

Dear Senators,

I have become aware that there is funding in question regarding monies that could be used to help the funding of future opportunities for Career and Technology class for students in the state of Alaska.
As a parent of two students in high school and in Junior High I would absolutely encourage you to pass the Senate Bill that would bring more money to continue and add to the education in high school students. I believe there are more students who are interested in hands-on classes and having those opportunities keeps them interested in school, interested in attending school which then creates less dropout rates. I have one son who has taken multiple classes from the King Career Center and every semester those classes have been his favorite classes. He's received excellent grades in all those classes and I believe part of the reason for that is because it's more hands-on and he's been able to choose classes in areas he's interested in. My son is graduating early and as a result of attending Technology Classes he's made a decision on what he wants his further education to be and what career field he plans on building his future on.
My daughter has started high school and wants the hands-on classes so much that she's chosen to attend the after school sessions that are offered at King Career Center and as a 9th grader has even said she believes she's going to go into this field as a career. These classes have a HUGE impact on our kids.

Please consider passing the funding. More students needs these opportunities.

Sincerely,
Mary DeSpain
Parent of three in the ASD

Dear Senators,

I heard that Monday morning a bill was being voted on regarding putting more money towards Career and Technology education. As a freshman in the Anchorage School District I just wanted to tell you that I hope you'll spend the money on these types of classes. I have already started taking a class on Photography at The King Career Center and I enjoy in very much. I'm taking this class not only for the credit but also for the learning. It is allowing me to be able to tell if I will want to be a photographer when I grow up or if there is something else I'm wanting to be.
I would love to see more of these types of classes provided at my school as well.

Subject: SB 84 CTE support!

Dear Senator Thomas,

My name is Julye Neel and I am the Principal at Hanshew Middle School in Anchorage. I've learned that the Senate Education Committee is preparing to take public testimony on SB 84 increasing the Base Student Allocation and funding for vocational/career and technical-education. I'm so pleased to hear that.

This funding would support the work of educators with students through expanded CTE programs such as programs that currently exist successfully at Hanshew and our local Service Hgh School. Currently, Hanshew offers Applied Technology, directly preparing students for high school and the construction trades, Family Consumer Science directly preparing middle school students for Service High's Pro Start program, Business Education that prepares students for business courses such as accounting and marketing at the high school. We working on offering a course next year that prepares students for Service High's Bio Medical Academy. This purpose and goal would be to prepare students for the many career opportunities in the health field.

The increase in funding will support professional development for educators so that we can continue to support student and community interest. I believe that the CTE programs are relevant to students and their future more than ever before.

Thank you for your time and consideration. Please consider this an invitation to visit our school and learn more about the opportunities we are currently providing for students.

Sincerely,
Julye Neel

Subject: SB 84 CTE Education Update

Dear Senator Thomas,

I am very involved in Alaska FIRST programs. I have seen the positive impact on students participating in these programs and their decisions to pursue STEM fields for future careers. Students that are interested in STEM fields such as engineering can advance their education by taking CTE courses in high school that would be supported by the increased funding outlined in this bill. Please move SB84 through committee and give it a positive recommendation.

Thank you.

Subject: SB 84-BSA increase is needed for improvement to education

Dear Senate Education Committee,

I am a parent of three children in Juneau. One is in college at Dartmouth College and two are in high school. I am also the President of the Arts For Kids board, which has tirelessly fought to keep the arts education in place in the Juneau School District. Our non-profit was instrumental in getting an elementary art program into our school district, after 25 years of having no elementary art across our district.

In looking at our school district, I see success. My son has gone to a very competitive college from Juneau Douglas Highschool. My children are doing well at this school also. This is because the parents, businesses and legislators have also fought tirelessly to keep funding education with inflation considered and cost of fuel considered.

To say that an increase in education money is not showing higher graduation rates, so why fund more money is foolhardy.

Our state must keep up with inflation rates and the rising cost of fuel alone, let alone the cost of drug counselors, high school counselors, art, physical fitness, and the four main core area of study,

If the legislators choose not to do this, then you will pay for incarceration rates, and adults that do not function in this society that is changing at a overwhelming rate. We want our kids to run the government in the future and we must continue to fund them to have this happen. Schools are continuing to look at ways to get test scores up. But you cannot go on test scores and graduation rates alone. You must look at the students that have succeeded and ask yourself why??? I feel it is because the legislature has continued to forward fund education, so our rates of success are not going down.

Simply put, you can feed a kid fruits and vegetables, which cost more than an unhealthy diet of cheerios and Mcdonalds. It simply cost alot to keep up with technology, abuse in the families, fitness and serving our children, that encompasses educating the whole child.

Please see that an increase to our district will keep all the programs that make a child happy and succeed. If this BSA is not increased our district will lose an art elementary specialist that services 2,000 children. This program alone is amazingly sucessful and creates learning with both sides of the brain. I could send lots of info that proves this. We will also loose a high school counselor. My son would never have made it to Dartmouth without a counselor that had time to help him in his high school carreer, but also help him get through the rigorous college application process. We will also loose our elementary EL program. You may think "oh, these smart kids will do fine without this," but studies show

that kids drop out of school that do not have their needs met with EL. These kids are considered special education because they have many needs to survive making it to adult life. I have raised three of these kids, and they have developed in a positive way due to this program.

Please make the right choice and forward fund education. We should have the best schools in the nation; since we don't, we need to let the educators try and still find success with a population base that is so diverse and facing so many issues.

Thank you for your work on this and continued effort on the part of our citizens.

Whenever I write to people I say that I am representing 200 voices because most people are afraid to contact the legislators. The average person on the street thinks that there voice is not heard and actually not worthwhile. They don't see that it matters. I have listened to 200 voices on my own that have relayed what I have said to you in this email.

Sincerely

Shelagh Sands a concerned parent.

Please support school funding on SB 84 and any other bill that seeks to support public education in Alaskan schools. Schools are not being adequately funded. The communities are strangled by caps and poorly calculated funding formulas that do not take into account the needs of small schools.

Dear Senators,

Thank you for your attention to this urgent matter.

I don't know if you are aware of what dire straights Alaska's small schools are in. School budgets are in crisis all over the state. I don't think schools should attempt to balance their budgets at the expense of teachers and programs. The teaching staffs have been hit particularly hard as programs are eliminated and positions cut. Many districts are experiencing a wage freeze. This has been happening for up to three years already in some districts. Imagine being a teacher in an outlying village and not getting a cost of living increase each year. We're in Alaska, where we pay the highest fuel prices in the nation! Please look into the current budget crisis for your districts who are, or soon will be, negotiating teachers' contracts.

I repeat for emphasis- Alaska's teachers should not be responsible for balancing budgets and finding money to run mandated programs in Alaska's schools. I did not enter the teaching profession to be a fundraiser. I am a professional and I expect that my priority and focus should be my students. Its costs more to live here. Professionals like me will not be able to sustain living and working in Alaska with the added burden of having to subsidize our schools.

Support SB 84 and any other bill that seeks to increase state contributions to public schools. You do your job and I'll do mine.

Sincerely,

Denise Caposey, Elementary School Teacher

Please support increased funding for SB 84. I am employed by the Cordova School District and more importantly a community member. I see teachers and others work hard to support our children in academics and skills for life. With increased funding we can see smaller class sizes, which to me means children are not falling through the cracks, more small group instruction. Please help us give our best to our children. We want to do everything we can to ensure the best for our children.... and they are all our children, in Cordova, and in Alaska.
I realize that increased funding does not always ensure our children will receive a better education, but money is needed to build and maintain a strong program like we are proud to have in Cordova.
Thank you,
Debbie Collins

Subject: Senate Bill 84...vitally important to CTE needs in our state!

Re: Senate Bill 84 "An Act relating to funding for high school vocational education as a component of funding for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

A few weeks ago my colleague, Leslie Moore and I met with many of you to discuss a number of issues, including this CTE initiative and forward, full funding, with a cap on core class (English, math, science, social studies) size of 27-28 students. We are grateful for your time and willingness to listen to our concerns, since testing and graduation rates are the main focus of our state.

Legislators, the need for the passage of this legislation has not gone away, and we support this new 2011 CTE initiative, Senate Bill 84. We are so grateful to Senator Joe Thomas and Senator Kevin Meyers and their staffs for introducing this much delayed and much needed CTE funding proposal. SB 84 assures that Legislative funds as provided in the education funding formula will be spent on secondary CTE programs.

As a middle school Career Guide, I see the daily importance in our school for 'hope', when students learn more about career options, they never thought attainable or knew anything about. Learning about these early in their school environment, opens doors. Through yearly Career Fairs, guest speakers from businesses and organizations, talks by community leaders, work with School Business Partnerships and available apprenticeships, our secondary students are given the tools to research their passions and seek out meaningful elective courses.

PLEASE don't let This bill stall in committee, like HB 317 last year. Senators, we need you to take action now. It is vitally important that the hearings be scheduled and that Senate Bill 84 be passed.

Gratefully,
Mrs. Pam Collins
Mother of three successful college graduates and 50 year Alaskan resident

March 12, 2011

Dear Senate Education Committee Members,

I am writing to encourage your committee to support SB 84, as it maintains critical support for Alaska's educational system. At a time when much of the legislature is fighting the lawsuits brought on by underfunded education, it is gratifying to see the efforts brought forward by SB 84. While the expectation of NCLB establishes unprecedented increases during its final years, it simply does not make sense to reduce support of Alaska's Schools and children.

SB 84 also complements the needs for vocational education...as "not everyone goes to college" hold true for a growing number of students. As the Governor campaigns for Alaska's Oil Resources/Pipeline, let's not forget the need to supply the necessary workers required to make these projects successful. SB84 brings a balance to the necessary support for Alaska's educational needs.

A review of data provided by EED will show substantial growth in schools across Alaska. Continued support brought forward by SB 84 will ensure uninterrupted progress for all of Alaska's children.

Thank you for your continued support of Alaska's most valuable resource.

Sincerely,

Jim Hyppard

Superintendent of Schools
Cordova School District

Senator Meyer and Senator Thomas,

Thank you for taking the time to consider support for SB 84. As a secondary special education teacher, I urge you to support SB 84. Often times the students I work with thrive in vocational educational programs and having specific funding for such programs would ensure that students who don't always thrive in traditional classes, can feel success and build employability skills through vocational education programs. I also urge you to support the increase in base allocation for student funding. Being able to anticipate student allocations for the next few years, will help administrators in the budget process. Please continue to support districts throughout Alaska by providing the funding that we need to continue to build and maintain successful programs for our students.

Thank You,
Wendy Jacobsen

Subject: SB84 K-12 funding

Senators,

I support SB84 but think that it needs to be amended to provide increases in the BSA of $170, 175 and 180 in FY2012, 13, and 14.

My reasons are:
1) The increase you are proposing doesn't even cover the increase the MatSu Borough District has incurred in health insurance expense this year.
2) Our schools need to do a better job of educating students in order to be competitive on the world market. You can't expect better performance without better funding.
3) The increase you are proposing (1.9%) is less than the 10 yr average for inflation of 2.8%. With the price of oil going up, expenses will increase, especially for rural districts which are disproportionately impacted by increases in the cost of diesel and transportation expenses.
4) We can afford it. House Finance passed a budget with a 5.2% increase in spending. A 5.2% increase in the BSA would be $295. Certainly, under those circumstances we can afford a 3% increase for k-12 education.
5) Due to borough ordinance which confiscates 50% of the year-end fund balance of the MSB School District, the MatSu Boro SD has no reserves into which it can dip to cover budget shortfalls.
6) If you can consider giving TWO BILLION DOLLARS to the oil companies with nothing in return, you can give $50 million more to our children who will be supporting more seniors than any other generation of Americans.
7) This is starvation funding. Our children deserve more than a 1.9% increase.
8) Without an increase the MatSu Boro Sch Distr will have to lay off about 35 teachers and class sizes will go up 4 to 6 students.

Thank you for consideration of my concerns,
Anne Kilkenny

Senator Joe Thomas
Co-Chair Senate Education Committee
Alaska State Legislature

Dear Senator Thomas,

I am writing in support of SB 84 Vocational Education Funding / Base Student Allocation. We in Petersburg have been experiencing declining student enrollment. Our school has stepped up to the challenge and is reducing staff and making fiscally sound changes to our program.

However two items that continue to increase are heating fuel costs and health insurance costs. Through contract negotiations we have significantly increased the medical deductible which lowered our insurance costs however they are increasing again for next year and continue to be a large portion of our budget. Our elementary school (Stedman Elementary) built in the late 60's has single pane windows and uninsulated walls. It is on the DEED CIP list however energy needs receive a low ranking under the current system so it remains far down the list. The high heating fuel costs are hitting us hard.

We are currently projecting a budget shortfall for 2012 of $177,000. An increase to the Base Student Allocation as proposed in SB 84 would not eliminate our shortfall but would be a significant help. Forward funding is extremely beneficial as it allows the School District to make decisions on staffing (job or no job) and programs in a timely manner.

The Vocational Education Funding portion of SB 84 is particularly important. In Petersburg we need more electricians, plumbers, cooks, welders, and the list goes on. We are shortchanging our community and our students by not offering more training in the vocational trades.

Petersburg is a great school with a very low drop out rate, high graduation rate, and high rate of students passing the HSGQE. However funding continues to be a real challenge, passage of SB 84 would greatly benefit our school district and community.

Thanks,

Jean L. Ellis

April 5, 2011

Senator Joe Thomas
Senate Finance Committee
Alaska State Legislature

Dear Senator Thomas,

I am writing in support of SB 84 Vocational Education Funding / Base Student Allocation. The Vocational Education Funding portion of SB 84 is particularly important. In Petersburg we need more electricians, plumbers, cooks, welders, and the list goes on. We are shortchanging our community and our students by not offering more training in the vocational trades. However to increase our vocational offerings we need additional on-going money that we can count on not one time funding.

Health insurance costs are skyrocketing. We just received notice from Aetna that our health insurance costs may increase by as much as 66.5% for next year. Through contract negotiations we have significantly increased the medical deductible which lowered our insurance costs for this fiscal year. This increase in Health Insurance costs is going to be very hard on our district as this will mean an increased expense of almost $500,000.

Prior to the notice from Aetna we were projecting a budget shortfall for 2012 of $177,000 if we add the $500,000 for increased insurance costs that would bring shortfall to $677,000. Obviously we are now facing some very tough choices. Any assistance you could provide through SB 84 would be greatly appreciated.

Our elementary school (Stedman Elementary) built in the late 60's has single pane windows and un-insulated walls. It is on the DEED Major Maintenance list however energy needs receive a low ranking under the current system so it remains far down the list. The high heating fuel costs are hitting us hard.

Petersburg is a great school with a very low drop out rate, high graduation rate, and high rate of students passing the HSGQE. However funding continues to be a real challenge, passage of SB 84 would greatly benefit our school district and community.

Thanks,

Subject: Letter of Support for Senate Bill 84

Good afternoon Senator Meyer and Senator Thomas,
Please find attached Superintendent Carol Comeau's letter in support of Senate Bill 84. It is also below for your convenience:

Dear Senators Meyer and Thomas:

On behalf of the Anchorage School District, I want to thank you for co-sponsoring Senate Bill 84. This legislation would insure that the Anchorage School District, and all other districts in the State, would be able to plan responsibly for the next three years, and would allow us to make much needed improvements to our Career and Technical/Vocational Education Programs. I applaud your leadership on this important issue.

The past three years of advance planning for education has allowed the Anchorage School District to advance their efforts in meeting our goal of graduating more of our high school students with a diploma, and reducing the drop-out rate. The efforts of the Joint Education Funding Task Force (JEFTF), chaired by Representative Mike Hawker and Senator Bert Stedman, have made a significant difference in our ability to plan ahead and we are grateful to the legislature and the governor for successful implementation of the three-year forward funding. Even with those significant increases, the Anchorage School District still had a $12 million budget gap in the general fund to maintain current programs, pay for negotiated salary and benefit increases, pay for increased utility and fuel costs. The gap was NOT necessitated by our use of the ARRA (federal stimulus funds), but rather the ongoing general fund costs.

We still have a long way to go to insure that our students are college and/or career ready when they leave the Anchorage School District. We are very appreciative of the legislature's strong support for increases to the Base Student Allocation (BSA), the Intensive Needs Factor, and to pupil transportation. We are also supportive of the phased-in Area Cost Differential for all districts, even though Anchorage does not receive any funding under this part of the education formula. The increases to the Intensive Needs factor has allowed the ASD to use our general fund resources for non-special education students and programs for the first time; we are very grateful for that as many of our over 900+ Intensive Needs students require extra-ordinary services to meet the requirements of their Individual Educational Plans (IEP's).

We support Senate Bill 84's three year increases to the BSA as a way to assist districts in meeting the costs of inflation, fuel and energy cost increases, and to allow us to retain important programs and staff who are key to increasing our graduation rate over time. We believe the proposed increases are reasonable for the State of Alaska in support of quality education. We know that we must increase the rigor of our course offerings in order to meet the challenges of the Alaska Performance Scholarship; we have a graduation task force

reviewing our requirements and soliciting input in where to make needed changes. The additional funding will allow us to retain our effective teachers while keeping class sizes reasonable so our students receive quality education.

The Anchorage School District is also increasing our Career and Technical/Vocational Education offerings in order to better meet the needs of our non-college going student population. We have made great strides in this area at all of our comprehensive high schools, as well as at the King Career Center. We have strong partnerships with Alaska General Contractors, Alaska Works, and CITC at our Construction Academy at the King Career Center. We have incorporated upgrades to our high schools and middle schools in order to offer more CTE courses at home schools, as well as the King Career Center in our upcoming school bond election. Having additional funding to support the necessary teacher positions and the professional development required will go a long way to meeting the needs of our students in this vital area of 21st century education so all of our students are eligible for the Alaska Performance Scholarship for either college and/or career and technical training.

Again, I thank you for your leadership in bringing Senate Bill 84 forward. I urge the Senate Education Committee to hold hearings on the legislation and move it forward to Senate Finance and then hopefully to the floor for a vote of the Senate. At that point, I hope that a similar bill will have worked its way through the House for passage and eventual reconciliation in a joint conference committee.

Please do not hesitate to contact me at comeau_carol@asdk12.org or 907-742-4312.

Sincerely yours,

Carol Comeau

Subject: School Funding

To All Anchorage Legislators and members of Senate Finance:
Thank you to many of you for meeting with us when we were in Juneau earlier in the week. I want to thank you for your time, and for your past support for increasing the Base Student Allocation, the Intensive Needs funding, pupil transportation, and for all districts except Anchorage, the Area Cost Differential. Your long-time support for debt reimbursement has been a huge benefit for our taxpayers, and I do hope our voters approve our three ballot propositions on Tuesday.

I am hoping that you will carefully consider the importance of increasing the BSA and CTE funding in Senate Bill 84. This piece of legislation would allow us to keep up with inflation and to increase our CTE offerings. We are hoping to be able to reinstate some of our $12 million in cuts for our 2011-2012 budget that passed the Anchorage Assembly on Tuesday night;we based our budget on not increasing the BSA. Senate Bill 84 would allow some of our cuts to be reinstated. In addition, we applaud the thought behind SB 97, sponsored by Senator Hoffman. As you all know, increasing energy costs are impacting our educational offerings at a time we are trying to increase graduation rates and reducing our drop out rates. We are definitely losing ground if we receive no increases in either the BSA or SB 97 for the 2011-2012 school year.

I hope you will give careful consideration to an increase in public school funding. Thank you very much.
Carol Comeau
Superintendent
Anchorage School District

Subject: education funding

Dear Senate Education Committee members,

I am writing to urge you to ensure that districts around the state are given resources to do the important work of educating Alaska's kids.
Increased funding for K12 education is important every year to keep up with rising costs, as you know. Please make sure that, with the resources we have in our state, we are not stripping our schools and reducing what students need to succeed. I can't think of anything more important.

Thank you for making sure the student base allocation keeps up with rising costs by adding at least $100 per student per year, knowing that any more would add additional programing and resources that would make an even bigger difference for many of our students. As a parent of children in our schools, I feel that it would be drastically harmful to have larger class sizes and less individual and small group help for students who are struggling. Also, when districts have to make cuts, often the programs to go are programs like the arts which often are the key to learning for many students. Please keep our schools healthy.

I really appreciate your thoughtful service,

Nancy Lehnhart

Dear Senator:

As a parent of two students (11th and 7th grades), and as a member of our local high school's site council, I write to encourage your support for increased education funding in this year's budget. In particular, please support SB 84, which would increase the base student allocation amount by (almost) enough to keep up with inflation.

The Legislature's support for education over the last few years has been greatly appreciated and has made a difference in our children's education. By all measures, Alaska's educational system needs improvement – and your help has started to make those improvements. But it takes time, and adequate funding, to achieve educational goals. The momentum is going in the right direction. Please keep it up by supporting SB 84 and an increased education budget!

Thanks

Subject: SB 97 and SB 84

Dear Senator Thomas,

I noticed the attention that SB 97 has recently gotten and I have grave concerns that this bill might be considered as the one avenue to providing any additional funding for K-12 schools for their 2011-12 budgets. SB 97 does not provide for any increase or any inflationary adjustment for this year's budget (2011-12). Many districts had to develop a reduced services budget for the next school year and SB 97 will not even come into effect until July 2012 which is after the deadline for budget development of our 2012-13 school year. That two year gap will force us to reduce the 2012-13 budget at even greater levels than we did for next year. And there is absolutely no way to speculate, let alone guarantee, what the price of oil will be in July 2012 so there is no certainty of any additional funding getting to the school districts through this mechanism. SB 97 cannot be the only way to address school funding this year but certainly could be a compliment to SB 84 should any additional resources actually materialize from this bill.

Only SB 84 provides for a guaranteed nominal adjustment in the BSA for school funding and continues that trend for the next three years.
SB 84 will allow districts to build budgets on known funding levels. Though it will be a nominal increase lower than current inflationary rates it will at least be an increase that will help to mitigate devastating cuts to our educational programs and services. Keep in mind that Anchorage does not benefit from any cost differential adjustment but relies on an adjustment to the BSA for any funding increases.

Please support SB 84. Our Alaska school districts need it.
Thank you!

Crystal Kennedy
Anchorage School Board, Vice President
Association of Alaska School Boards, President
907-696-2624

Dear Alaska Representatives and Senators:

My name is Rick Rios. I am the Coordinator for Career and Technology Education for the Anchorage School District. I also am past chairperson of Alaska Vocational and Technical Education Providers (VTEP), having served for over six years.

Thank you for your service and for this opportunity. I especially want to thank Senator Kevin Meyer of Anchorage and Senator Joe Thomas of Fairbanks, and their staffs, for their forward thinking and vision that resulted in Senate Bill 84, which supports vocational education for all Alaskans.

Please continue to advance Senate Bill 84 and persuade your colleagues in the Senate and House to pass it.

Nationally, vocational education programs were abandoned and disassembled during the 1980s and 1990s. During that era, skilled workforce education was ignored in place of federal special education mandates and college-driven admissions. This has resulted in the low graduation rates and high dropout rates of disenfranchised and misguided students. Because of other mandates and the cost of programs, CTE course became elective add-ons rather than relevant requirements. Now, the ability to revive and restore the infrastructure for CTE is beyond the capacity of local districts. This current situation is unsatisfactory and needs new vision for a smarter, engaged and relevant workforce to benefit Alaska's and America's future.

The vocational skills of the last century have changed. Skill sets and training tracks no longer serve 21st century workers. Initiatives such as Science, Technology, Engineering, and Math, better known as STEM, are now merging both academics and application into new models of learning. Career and Technical Education (CTE) is the application component. Problem-solving, processing, innovation and creative design are the worker's tools for the today and the future. Even our military is rejecting our high school graduates as unfit for service. The military not only needs a tough fighting force, but more importantly, it needs a better thinking and innovative force.

Career and Technical Education is slowly but steadily making this transformation. It starts in middle school and continues to employment with exploration and pathway education. It includes new engineering technology literacy skills in every career area.

This is a monumental task facing a program that was abandoned more than twenty years ago. In some districts, CTE classes consist of only a few elective options to serve the students who desperately need them and thrive on them. In many rural Alaskan communities, CTE courses are completely non-existent.

The Anchorage School District has seen a recent rise in graduation rates with the addition of CTE courses in after-hour, after-school programs, which we were able to offer using special grant funds.

This summer we are offering a Summer Career Camp with 24 intensive and enrichment CTE classes serving 600 students. This is not enough when you consider we have 15,000 students. The Anchorage School Board and the Anchorage Municipal Assembly recognize the need for more CTE and they are doing something about it. Welcome home to the sound of radio campaign ads! This is the time when we hear the ring of messages that are important to all of us. You are well experienced in the process. But this is the first time I have ever heard School Bond announcements promoting and promising a better workforce and employment, as well as college, for our students.

Anchorage is providing a general school bond this spring to advance CTE opportunities with new innovative middle and high school academies in construction, health and engineering.

We are providing new middle school career guides to help students align their interests and talents with career targets, college, work, and future contributions as citizens.

We are developing new plans for our graduation requirements. We are fighting to keep students in school for all the right reasons: to learn, to train, to prepare, and to provide and contribute to the community. These are the credentials of an Alaska High School diploma.

However, none of these urgent and essential initiatives will meet the immediate need for teachers, counselors, and classes. Remodeled facilities and new graduation requirements will not provide the teachers and programs need to fill the classrooms with students. More classes will need to be offered in extended day and extended school opportunities.

While Anchorage has some capacity to make a few of these difficult changes, rural Alaska does not. Senate Bill 84 provides equitable funding for all districts, without a competitive grant processes that deflects funding from classrooms and teachers into administrative and clerical sumps.

Now is the time to drill down to the core bedrock of workforce development. The pillars are in the minds and hearts of our next generation. The work has begun as the CTE foundation forms have been constructed. Now, I urge you to pour some concrete into them and establish a solid foundation for the future of Alaska, our students. Pass and fund Senate Bill 84 this year.

Thank you

Murray Richmond

Hello,
I support Senate Bill 84 whole heartedly for many reasons. I work in the Juneau School District and see how hard the teachers work teaching the kids. They deserve more support than they are getting.
I hope you all saw the editorial page in the Juneau Empire on Wednesday where the cartoon asked "Which underperformer is getting addition U.S. aid?" The picture showed a student and a Libyan rebel.
Please support our schools and our under performing students.
Thank you for your time.

Subject: SB 84 - Support for Increasing the BSA

Dear Senate Finance Committee,

My name is Andi Story, I am a parent, 24 year resident of Alaska, and a member of the Juneau School Board. Many parents count on the Legislature and School Board members working together to provide for a sound educational system, K - 12. Let us not forget the work of the Legislative Task Force under the leadership of Representative Hawker, in prior years to providing for a stable funding picture for Alaska's school children. Many parents will not even be aware of the less resources to schools, until their children show up in school this fall.

I am writing to advocate for SB 84 to be approved by Senate Finance and moved in the legislative process, so it can come before the whole legislative body and be passed in this session. This bill provides for a three year adjustment in the BSA, and an increase for career and technical education for Alaska's high schools. The testimony in Senate Education committee was compelling for this bill. Juneau parent, Ellen Pavitt (also co-owner of Pavitt Health and Fitness in Juneau) wrote, "Many students don't intend to pursue a college degree following high school, and there is nothing wrong with this. In fact, there is a lot right with it . .. we need plumbers, electricians, and other people in the trades - why is it that their preparation at the high school level is so much less valued then that of the college bound student?"

Many commented on the importance of a multi-year funding plan for the BSA. It provides for certainty in instructional and budget planning and not the uncertainty of cuts to programs and services. As a Board member I can attest that we are working to maximize services to students in the classroom. I can attest that our Board and Board's across the state are implementing services that top performing districts are using. Whatever the career path of students; technical, military, college, work, School Board are working toward providing high standards and supportive climates for all students, Kindergarten thru 12th grade.

Please provide a stable funding picture that allows for BSA adjustment for increased costs. Please hear and approve SB 84 You have an opportunity to make an immediate difference in class size and services for students with the passage of this bill.

Sincerely,

Andi Story

Subject: Re: POM

Thank you for your response, Mr Richmond. Here is something for you to include in the packet:

As a parent of a Juneau high school student, who has also raised two other older children in the Juneau community, I urge support of SB84. It is very saddening to see our education system faced with choosing which of the important student programs it provides to cut funding for. Our students need support and guidance in order to lead healthy, productive lives, and cutting back on what they receive at school is a step in the wrong direction during these times of rampant substance abuse and delinquent behaviors.

I also tutor students preparing to take their GED examination, and hold a masters degree in social work. I am very much an advocate for career tech programs in our schools, at a much higher level than they are presently provided. Many students don't intend to pursue a college degree following high school, and there is nothing wrong with this. In fact, there is a lot right about it - college is not for everybody. We need plumbers, electricians, and other people in the trades - why is it that their preparation at the high school level is so much less valued than that of the college -bound student? Instead we have countless students who are not motivated to finish high school because it doesn't give them what they need - preparation to support themselves at a decent wage after they graduate. They end up dropping out,and with low-paying jobs, thus continuing the viscious cycle of poverty, and often the associated substance abuse and other societal problems that can be associated with people living difficult lives.

Please support SB84, thus increasing the BSA and also providing some additional funding for our career tech programs.

Sincerely,
Ellen Pavitt, parent of Juneau high school students

Subject: SB 84

Senator Thomas;
I am writing to ask for your support of Senate Bill 84 to help increase the Base Student Allocation and to help fund career-technical education.
With the increases felt across Alaska to school districts due to increased costs of materials and shipping/freight as well as the increased cost to keep schools open, the action of increasing the BSA is incredibly important to help districts do their job of educating kids. The funding to help provide students a quality education is paramount to the success of our young people to help guide Alaska into the next generation - and that is why this bill is so crucial to help districts' accomplish this task.
It also begins to address the long overlooked issue of career-technical education and the funding for these types of programs. While it is certainly the schools job to educate our young people, we are also tasked with helping them to be ready for employment and career options when they are ready to leave our instructional care. Having funding to help not only provide this critical component is essential but to help give all of our students the opportunity to be exposed to these resources is part of the solution to helping Alaska have a ready to hire work force - or go to college or whatever post-secondary training an individual would like to ascend to. While all district's face issues in providing these items, as a REAA, I can speak first hand about why these career readiness and vocational education programs are important to our students - they provide relative employability skills that can be readily used whether you are in bush Alaska or downtown Anchorage.
I encourage you to help make SB 84 an reality for the youth of Alaska. This piece of legislation has the opportunity to make real opportunities to our youth.
Thank you for your consideration in this matter, Respectfully, Brad Allen - Superintendent, Kuspuk School District

Dear Senator Thomas,

I am writing you in support for SB 84. I am a Petersburg school board member and I taught here for 27 years. Our school district will be cutting or not replacing several certified and classified positions and one administrative position next year. Our health insurance company has advised us to plan for a 10% increase amounting to $130,000. Fuel costs will increase $60,000 next year. Our business manager has projected even with our planned cuts a $177,000 deficit in our budget for next year. This budget was based on "flat funding" from State appropriations. Of course, flat funding means significant reduced funding as a result of rising inflation. The increases detailed in SB 84 represent less than a 2% increase each year for schools. In light of the extraordinary budget surplus seen this year and the surplus projected next year it seems reasonable to pass SB 84. Please support SB 84 and voice your influence with other members of the legislature for their support. It will make a huge positive difference for our school district. Thank you for the work you do for Alaska.

Sincerely,
Jim Schwartz
Petersburg School Board member

Subject: SB 84

Dear Senator Thomas,

Continued increases to the BSA that allow districts to contend with the increasing cost of goods and services are vital. Energy costs are skyrocketing along with the cost of health care. Keeping vocational education classes and other classes that students are interested in our schedule keeps them coming to school. This helps reduce the dropout rate, which though low, at less than 10% in Haines, still needs to improve. These costs are worth funding.

Forward funding is also of extreme importance. It is cost-effective. It reduces uncertainty and helps us to more quickly and efficiently budget. This allows us to spend more time focusing on ways to improve our students' education. It was one of the essential recommendations to come out of the work of the bipartisan task force on education back in 2007 and should be sustained.

Right now **SB 84** is the best vehicle for maintaining necessary funding increases and forward funding. It also addresses vocational education. **The Haines Borough School Board has passed a resolution supporting this SB 84.** This bill is in Senate Finance and we hope it will quickly get on the schedule and be kept moving forward. We hope that we have your active support and that you will exert whatever efforts you can. We will continue to follow the movement of this bill and will be available to provide additional testimony as needed.

We thank you again for your time and for your service to the needs of our school district and other districts across the State.

Thank you,

Michael Byer, Superintendent
Haines Borough School District

Subject: Education Funding

Dear Senator Thomas,

I am writing in your support for your important education-funding proposal, Senate Bill 84. I would encourage action on this important legislation raising the BSA from the current $5,680 per student to $5,790 in July 2011, and then to $5,905 in 2012 and to $6,025 in 2013. The increases will be affordable to the state and important to the quality and stability of public education. It will help stabilize the ability of school districts to plan for the future rather then guessing from year to year.

I also support the portion of Senate Bill 84 that proposes the state fund a separate grant program within the foundation formula for high school vocational education. This is an investment that will help keep students in school and be prepared for Alaska jobs upon graduation from high school.

Sincerely,

Janet Reed

Dear Senator Thomas,

I am not sure of the specifics of Senate Bill 84, but encourage you to support anything that can help keep class sizes down, or helps teachers in classrooms. I think it would be great if more money was designated for only teachers and classroom aides/support staff, and less was for district office positions. I was a teacher and am currently a parent volunteer and active PTA member. I see, and have experienced, first hand how much is put on a teacher's plate. I also know that tutoring programs continue to need funding, but I believe money would be better spent on aides in the classrooms assisting teachers with those that need more help. I see students pulled out multiple times a day by various tutors and aides and feel that the constant disruption to both the students that need the help, and the rest of the class is just more for teachers to have to keep track of, distracting them from teaching- and students from learning.

Our children are the future of Alaska. Please support them by supporting funding for the employment of teachers and support staff that work directly with the students.

Thank you for taking the time to read this letter.

Sincerely,

Karine Janssen Chingliak, Fairbanks mom

Subject: Support for SB84

Members of the Senate Finance Committee;

I would like to express my support for SB84 on behalf of Southwest Region School District and as a parent of a student of Dillingham City School District.

Currently Southwest Region School District has built a budget the on FY11 foundation amount which has caused us to be conservative on our programs that are offered to the students. If we knew we were getting an increase in foundation we could either add a reading specialist at our largest site or we could properly budget for our science curriculum review and possible adoption of a new program. As it stands we cut a regular classroom teacher for the reading specialist and do not have the science curriculum review in the budget. Our classroom sizes will be increased to a point that may be detrimental to our current academic program but we had to make the choice. If we knew we could finance the science curriculum review and adoption we could be gearing up now so that we will be farther along in the fall and possibly finalize the decision in one year. With forward funding we would know if we had the funding for budget items such as these and could maximize our educational program each year as opposed to holding back and jumping when we find out funding is available. The sooner we know the actual funding the better chance we have of hiring an additional top notch teacher and we can move forward with the process for reviewing, adopting and implementing a new science curriculum. Our state dollars could be spent much more efficiently if the foundation amount is known up front during the budget development process.

Thank you for your consideration on SB84.

Lee Ann Andrew

Subject: SB 84

Dear Senator Thomas,
Below is a written statement I prepared for members of our community in Kodiak, Alaska. We are encouraging our Senate to do what's best for youth in Alaska - please support SB 84.
Sincerely,

Bill Watkins
KHS Principal and Parent

Without SB 84 moving forward, KIBSD staff and programs are in Jeopardy.
The senate finance will be hearing SB 84 on Wednesday, April 6th. SB 84 is a bill that increases the base student allocation in an attempt to keep up with inflation and ensures consistent funding for vocational education. Another bill (SB 97) will provide school district and municipal energy relief when the price of oil is above $89.00 per barrel. While SB 97 is potentially helpful, it does not provide additional funds until FY 13, nearly two years from now! SB 97 does not offer a guarantee that funds would ever be appropriated given the required trigger price of $89.00 per barrel for Alaska crude oil. A few Senators are trying to convince the public that SB 84 is dead and they are now focusing on SB 97 as the solution for education funding. SB 84 is not dead! But the Senate Finance committee needs to hear from their constituents that without SB 84, education programs (especially vocational, the arts, music and physical education programs) are in jeopardy.
Do we really want our children's educational funding to be tied to the unpredictability of the oil market? SB 97 gives us no consistent formula for funding education from year to year. It is a great solution for high-energy costs and when available in FY 2013 would be a welcome tool to assist school districts and communities with high-energy costs. SB 97 will not solve our current dilemma of being forced to lay off teachers, administrators and cut programs with the additional funding from SB 84. Without SB 84, the pressure is put on the back of our local communities to increase funding - which means a direct burden on the local taxpayer. KHS has the potential of losing teaching and administrative positions and when staffing is cut we see a direct negative impact on programs. Districts cannot afford to cut Core (Math, English, Science and Social Studies) programs with the requirements for meeting adequate yearly progress (AYP). Instead, districts will be forced to cut the programs that make practical connections to physical, intellectual, emotional and social needs of every child we serve. These programs are our vocational classes, art classes, music classes and physical education classes. SB 84 allows consistent funding to support the existing staff and programs. SB 97 would not allow any additional funding for 2 years and only if the price of oil is above $89.00 per barrel. Again, do we really want our children's educational funding to be tied to the unpredictability of the oil market? One year we have it, the next year we don't?

Subject: Support Education

I am not sure of the specifics of Senate Bill 84, but encourage you to support anything that can help keep class sizes down, or helps teachers in classrooms. I think it would be great if more money was designated for only teachers and classroom aides/support staff, and less was for district office positions. I was a teacher and am currently a parent volunteer and active PTA member. I see, and have experienced, first hand how much is put on a teacher's plate. I also know that tutoring programs continue to need funding, but I believe money would be better spent on aides in the classrooms assisting teachers with those that need more help. I see students pulled out multiple times a day by various tutors and aides and feel that the constant disruption to both the students that need the help and the rest of the class. Plus, all of the pull- outs for so many students is just more for teachers to have to keep track of, distracting them from teaching- and students from learning.

Our children are the future of Alaska. Please support them by supporting funding for the employment of teachers and support staff that work directly with the students.

Thank you for taking the time to read this letter.

Sincerely,

Karine Janssen Chingliak, Fairbanks mom

Subject: SB 84

Please support Senate Bill 84. As other funding for schools decreases, class sizes increase. Larger classes mean there are more students who are sitting on the fence and will fail to learn with out the funding programs provided by SB 84. Math and reading tutoring is hugely successful, and is fundamental.

The vocational and technical training funding in this Bill are also vital to certain students' futures. They keep kids in school and provide a trained workforce for Alaska's future.

PLEASE support Senate Bill 84!

Thanks you,

Putt Clark

Subject: SB 84

Dear Senator Thomas,

Thank you for your continuing work for the children of the State of Alaska. I believe that their safety, health, education and future should be our top priority. So I applaud the discussion that is beginning to take place.

As we have worked with those involved in the legislation regarding education, we have attempted to be responsive to specific questions and requests. We have seriously taken your stated concerns to our local school districts to provide more and better data showing the results of your financial commitment. We brought that information to you. We have been careful to use Stimulus funds and any other one time money in a way that did not create ongoing need for support. We documented that. We have shown the improvement in our administration when we had the ability to plan ahead because of forward funding. We have explained the need for more and continued funding for career tech programs, documenting our use of those stimulus funds for equipment, technology and training.

Now it is the time to pass legislation. Our support for SB 84 is unequivocal. It is a vehicle that provides the minimum increase to maintain our programs across the state. It gives us forward funding which is one of our greatest needs and it provides for Career Tech monies, which we do not currently receive. Please consider getting this bill passed out as quickly as possible.

Thank you,

Sunni Hilts

Dear Senate Finance Committee Members:

Please pass SB 84 for education funding. Even if this bill passes, with an increase in the BSA, our schools in Juneau will be cutting numerous important teaching and support positions and programs. I hate to imagine the depth of cuts if the bill doesn't pass.

I would like to see Alaskans be able to be proud of our public schools some day. Without the planned increase in BSA, our schools will degrade further from the current evidence of funding shortfalls.

To: Sen. Joe Thomas
Subject: SB84 & SB97

Dear Senator Thomas-Thank you and the committee for the work on SB97 providing supplemental funds to schools and municipalities pegged to the fluctuating price of oil. It will be particularly beneficial to bush/rural communities where the price of heating and transportation fuel is so ruinous and an impediment to providing other routine services.

I am also delighted that the committee has decided to hear SB84 on April 6. For all of the state's schools this is critical legislation as it proposes to enact a three year schedule of modest increases to the Base Student Allocation and provide categorical funding for career and technical education (VocEd) in our high schools. With inflation, the need to ready students for the technological demands of our future workplaces, and rising insurance and other expenses we need the increased funding to keep our heads above water. The three year cycle of forward funding also permits more rational planning and budgeting. Importantly the targeted career and technical funding gives us the wherewithal to address this sadly neglected area of curriculum and begin the training the majority of our students will need for Alaska's future jobs.

As adjournment rapidly approaches, I would urge that SB84 get speedy attention so that it can get to the Senate floor and have time for consideration by the House.

To: Sen. Joe Thomas
Subject: SB 84 Support

Dear Senator Thomas,

Thank you for your concern and interest in doing what is best for students and schools across the state of Alaska. As a small rural school district, Petersburg City School District is especially vulnerable to rising fixed costs (insurance rates, fuel oil, electricity, gasoline). Each additional dollar devoted to heating fuel is one less dollar available for education. As an example, the cost of fuel oil has increased from $2.69 in March 2010 to $3.37 in March 2011.

SB 84, while not completely "filling the gap" is certainly better than flat funding for the coming year. This bill will allow districts to plan for the future through the forward funding mechanism and it will allow district to infuse valuable but underfunded vocational education programs.

I support SB 84 because it is needed, it is responsible, and the kids of Alaska need stable, functional schools.

Sincerely,

Robert Thomason

Sent: Friday, April 01, 2011 3:39 PM
To: Sen. Joe Thomas
Subject: Senate Bill 84

Senator Joe Thomas,

Please ensure the future of Alaska. Funding for public education does just that. Currently SB 84 calls for an increase in the BSA of $110, $115 and $120 over a three year period. It also contains a provision that provides funding for vocational education (CTE) that is vital to sustaining and enhancing programs that deliver job-ready graduates. Your support of this legislation is critical to our future.

With or without a surplus I would be advocating for an increase in the BSA. However, with a current surplus of over $2.5 billion dollars, funding SB 84 with a fiscal note of $37 million (1.5% of the surplus) is logical and a moral imperative. Failure to fund an increase of the BSA (SB84) will mean additional cuts of over 2.6 million dollars to the Fairbanks North Star Borough School District. A loss of $2.6 million will dramatically impact what we do each and every day for students.

Thank you for your consideration.

Respectfully,

Pete Lewis, Superintendent

Unalaska City School District

Senate Finance Committee
Juneau, AK 99801

March 31, 2011

Dear Senate Finance Committee Members:

I am writing to urge you to support Senate Bill 84. SB 84 provides a modest increase to the Base Student Allocation (BSA) for each of the next three fiscal years and funding within the foundation formula for vocational education. Similar to the forward funding bill passed in 2007 at the recommendation of the Joint Legislative Education Funding Task Force, this bill enables school districts to plan their budgets and programs for at least the next three years with greater certainty.

Knowing the education funding outlook for the next three years will enable our District to plan more precise budgets and eliminate some of the uncertainty of fluctuating health care and energy costs. Further, our District hopes to implement the additional high school courses needed to meet the eligibility requirements for the Governor's Alaska Performance Scholarship (APS) program.

The vocational education funding component of SB 84 will enable UCSD to build capacity within its Career and Technical Education programs. UCSD would utilize the additional vocational education funding to upgrade equipment, technology, and shop and classroom facilities. The District hopes to expand its Tech Prep Program to include career paths in addition to welding, which is presently offered at UCSD through a partnership with UAF.

With North Slope oil at $118.44 per barrel today, the State of Alaska is in a position to appropriately fund its K-12 public education programs. As the father of two school-age children, and as a school district administrator responsible for the education of many more children, I implore you to invest in Alaska's children and pass Senate Bill 84.

Sincerely,

John P. Conwell

Senator Kookesh, Senator Stevens, Senator Stedman, Senator Hoffman, Senator Thomas, Senator McGuire, Senator Egan, Senator Olson and Senator Ellis:

I am writing in support of SB84, the education funding bill which relates to funding high school vocational education as a component of funding and increasing the base student allocation used in the public school funding formula. I would respectfully ask you to consider passing this bill which is so badly needed for our public schools.

During the past three years, we have been so very fortunate as school business leaders to have the benefit of forward funding which came about as a result of the Education Task Force. I want to sincerely thank you for that. It made planning for the best use of our state funding possible because we could depend on getting a base amount when writing our annual budgets. Here at Yukon Koyukuk School District (YKSD) forward funding allowed us to bargain with our teacher's union for a period of three years, allowing our teachers to spend less time at negotiations and more time in their classrooms with students. Last year, when we began bargaining with our teachers, we could only do so for a year at a time because we didn't know at what level we would be funded beyond FY11. We did the same this year when we reopened bargaining for salaries, deciding only on FY12 salaries, making it necessary to plan to come back to the table next year once again. And even now, we have arrived at a salary schedule for which we hope funding will be available since these decisions have not yet been made.

As with most school districts, we have been moving ever closer to reductions in staffing due to inflationary costs, not only in salaries and benefits, but also utilities, staff travel and the high cost of shipping necessary supplies and equipment to our villages. The Stimulus funds were very helpful in staving off these cuts, but we have been planning for them to go away this year as we had been told at the time they were given. I am thankful for the boost these funds gave our district; however now we find ourselves in the unenviable position of needing to cut staff. Seven of our nine village schools have fewer than 40 children K-12. Many of them are staffed to the bare bones now with multi-age classrooms, so there is no place to cut but in the jobs that are available for our local people. This is a further hit on the villages and their economies. By investing in our schools, you have the opportunity to multiply the State dollars as they bolster local economies.

I am very excited about the addition of vocational education funding as part of the foundation formula. YKSD has been analyzing student data looking particularly close at what happens to our graduates. In one study, we found that nearly three quarters of our 2009 graduates had not begun "real life" choosing instead to hang out at home in their village. Our school board and Superintendent Boyd has been moving us toward more voc ed in our schools for the purpose of making sure our graduates have practical and usable skills when they leave high school, realizing that many of them have no aspirations for post-secondary education. Our villages will be stronger and better places with skilled laborers in them to upgrade infrastructure. We have been able to provide intensive 2 week academies in the villages over the past few years in the areas of construction and welding. Next year, we hope to add a health care academy and to join with Kuspuk School District in their "Kick Ash" Firefighting Academy. Knowing we have the funding support from the State would certainly make attaining these goals easier.

With the predictions of falling oil production and dwindling state funding from oil, I know the temptation must be great to pull back and conserve the huge dollars our state is currently reaping from the oil industry. However, I would ask that you consider instead investing the money we have now in our State's future by touching our young residents who will be

the great minds leading us in the future. Please consider carefully the position we are in currently as a State with healthy coffers that are the envy of the rest of the United States, and pass SB84. Your support of Alaska's students is so very much appreciated, and will pay huge dividends in the future.

Thank you for your kind consideration and time.

To: Sen. Joe Thomas; Sen. Bert Stedman; Sen. Lyman Hoffman; Sen. Dennis Egan; Sen. Lesil McGuire; Sen. Johnny Ellis; Sen. Donny Olson
Subject: SB 84

Dear Senators Thomas, Stedman, Hoffman, Egan, McGuire, Ellis, and Olson,

Alaska's future lies in the hands of our children. The decisions you make regarding SB 84 will impact our children's ability to receive a good education and make Alaska even greater than it is today. Whether college bound or pursuing a career in the trades after high school, each student deserves our support. In order for us to do our good work for the benefit of Alaska's students, I cannot emphasize enough the importance of a multi year funding plan for the BSA and an increase in career and technical education in Alaska's high schools.

In Fairbanks, the budget we forwarded to the Assembly includes a $100 increase to the BSA. This was not a random decision, but based on avoiding a climate of uncertainty and fear for district staff and the community prior to knowing conclusively what the legislature's decision would be regarding education funding. Currently, our budget includes cuts to technology, the curriculum, middle school math tutors, and graduation success coaches. Without the $100 increase to the BSA, we will face an additional 2.6 million dollars in cuts. Knowing the increase to the BSA for the past three years has been extremely helpful as we conscientiously developed a reasonable budget. I am hopeful that you will once again support a three-year schedule of increases to the BSA.

Thank you for your consideration and for all you do for the citizens, and students, of this great State of Alaska!

Kristina Brophy

Davis-Ramoth Memorial School

April 1, 2011

Senate Finance Committee Members
Alaska State Legislature

Dear Senators Stedman and Hoffman and the entire Senate Finance Committee:

I am writing to you on behalf of Davis-Ramoth Memorial School of the Northwest Arctic Borough School District located in Selawik, and asking you to make education a funding priority. Our Selawik school community includes parents and concerned community members who recognize the vital role of public education and the need to maintain its core purpose. We are very aware of the painful choices that must be made as you go through the budget process and we ask that you consider the long-term repercussions of depriving our children of an adequate education.

The State of Alaska has the responsibility of funding school districts adequately and this has never been more urgent than the present time with needed support for increased Base Student Allocation, Career Tech programs and the higher level of service required to reach federally mandated AYP requirements in rural villages. Because of the State's budget difficulties, your committee is considering not providing the funding needed to cover many required costs, instead opting to defer funding with the passage of the School District and Municipal Energy Relief bill providing for future relief. SB84 provides for additional funding over 3-years that will assist districts in addressing increasing costs and will help to invigorate vocational/career tech. The alternative, SB97, is a good solution for high energy costs and when the money becomes available in Fy13 would be a welcome tool to assist school districts and communities with high energy costs. 2013 is a lengthy amount of time to wait for needed funding causing the following detrimental issues:

- By not providing full funding you are depleting our school of critical classroom resources, including the loss of three certified teachers.
- Anything less than full funding places additional financial burdens on our school.
- The lack of priority placed on fully funding our schools for the costs incurred in implementing vital programs, including physical education and alternative education, suggests that the programs themselves are not of a high priority, giving reason to the argument that Alaska's legislature needs to review and sustain only the critical programs that it can afford to fund on an annual basis.

Davis-Ramoth Memorial School has a diverse membership that is united by support for maintaining full educational funding. We all have different positions on common issues but are united in the belief that during an economic crisis our State Leaders should make Education a priority. We want the following solutions considered:

- All unfunded programs should be immediately suspended and reviewed for their relevance.
- All programs deemed irrelevant or with duplicity shall be immediately eliminated

P.O. Box 119 Selawik, Alaska 99770 Phone: 907-484-2142 Fax: 907-484-2127
E-Mail: ecampbell@nwarctic.org Web: www.nwarctic.org

- The Legislature should adopt SB84 to fully fund current education programs.
- Education programs deemed necessary shall be prioritized and only fully funded programs will be required by the State Department of Education.
- School districts may continue to expect full funding via the State on State required programs for costs incurred.
- The Legislature should increase funding and staffing levels.

We are all feeling the strain and making tremendous sacrifices. We need you, our Elected Leaders, to publicly acknowledge that you understand the current situation and are committed to working together in finding solutions. We want you to take a leadership role in finding and implementing real results. This will require personal sacrifices that may reach into your comfort zones; just remember it is for the betterment of our State. This is your time to be our children's hero and make the hard decisions that will ultimately end Alaska's economic decline and start us back on the road to prosperity.

We appreciate your attention in this matter and look forward to your response.

Sincerely,

Eddie R. Campbell, Jr., Ed. D.
Principal

Subject: Support for SB84 from Lon Garrison, Sitka School Board President

Members of the Senate Finance Committee,

As a member of the Sitka School Board and a parent of a child in the Sitka school district I am imploring you to support increased education funding by supporting **SB84**. This is the only bill the legislature has put forward that continues the good work accomplished by the Education Funding Task Force begun in the summer of 2007. For the past three years, school boards have had the ability to budget knowing what the state would be contributing and knowing that the increases included in that package provided funds that helped to address increasing costs. Now as FY2012 approaches, we find ourselves right back where we had hoped we would not be: what can we expect from the state? Is there a plan? SB 84 continues that plan with moderate increases in the BSA over three years that barely keep up with the rate of inflation. We need to be able to know in advance what our funding picture looks like in order to plan appropriately. We are in jeopardy of eliminating programs such as extracurricular activities, music, art and so on if we cannot keep up with escalating costs. We may not even be able to provide the rigor of coursework the Governor is so keen on demanding for the Alaska Performance Scholarships, a program put forward as a way to motivate students to do better. Fewer resources mean fewer choices.

School districts and school boards face a variety of challenges in our constitutionally mandated charge to educate all of Alaska's children no matter who they are, where they come from, and whether they are prepared to learn. In Sitka it is a responsibility we take seriously and with zeal because we know **it is the right thing to do**. This is the essence of a free public education.

SB84 also provides funding that is intended to go directly to career and technical education(CTE) (voc-ed as we used to call it) as a block grant and we enthusiastically support this. In Sitka, we have maintained an excellent CTE curriculum that can readily use these funds and potentially expand its offerings. We know that upwards of 80% of our students may not choose a college path of post secondary education. This gives us the opportunity to continue or better yet, improve what we offer those students. Alaska will need these graduates to eventually fill the many skilled trades positions that are crucial to our economy and success.

On Sunday March 27th, I listened to Karen Rehfeld, Budget Director for the Parnell administration tell those of us attending the AASB legislative fly-in that the state is likely to receive nearly $2 billion in excess revenue for FY2011 and another $2 billion in excess revenue in FY2012. So there is a good chance the state could see an additional $4 billion in the next 2 years. The current fiscal note for SB84 is just over $95 million dollars for all three years combined! **Only 2.3% of the projected surplus**! I can't buy the argument we cannot afford this. We cannot afford to miss the opportunity to invest in our future each and every year, one student at a time!

Senators, let me be plain, to not support passage of SB84 is wrong. Please, explain to me how not doing this helps Sitka? How this won't helps kids in this state and how this is not good for your constituents? Senators, you are in a critically important position as a leadership committee and we look to your leadership at this moment. The senate has been the only body in this session to show leadership and forethought regarding education. Please don't let us down. I have appreciated your measured and what I considered thoughtful

approach to our state budget. The state has work to do and education is one of the cornerstones of its constitutional responsibilities. Why can you not help but be compelled to continue that good work?

Respectfully yours,

Lon Garrison
President, Sitka School Board

To: Sen. Joe Thomas
Subject: SB 84

April 1, 2011

Dear Senator Thomas,

As both a parent and a school administrator, and a resident of Alaska for 47 years, I see the youth of Alaska as our most important resource. I ask you to please support SB 84 to provide a long-term solution for maintaining and sustaining quality education programs in our great state.

While SB 97 may provide a short-term solution in FY 13 if the price of oil is more than $89.00 a barrel, it is a very risky solution. We all know that oil prices are volatile and unpredictable, and for that reason our children's educational funding should not be dependent on the price of oil, which is affected by many international issues outside of our control.

Currently, school districts are doing everything they can to provide students with a "whole" education, one that includes Career and Technical Studies (Vocational) the arts, and music. To sustain quality CTE, Art, Music and Physical Education programs, districts must have a consistent funding formula. Connecting funding to the price of oil will allow districts to fund CTE, Music, Arts and Physical Educationwhen the price of oil is above $89.00 a barrel. However, when the price of oil decreases below $89.00 per barrel thefirst programs to be cut will be CTE, Music, arts and physical education.

SB 84 provides for additional funding over 3-years that will assist all districts in addressing ever increasing inflationary costs and help invigorate vocational/career tech education. SB 97 is also a good solution for high-energy costs and when it's available in 2013 would assist school districts and communities with high-energy costs. Without SB 84, we would not have any consistency in the delivery of CTE, Music, Art and Physical Education programs.

On another note, I have heard legislators speak to the need for districts to cut administration as a solution for balancing the budget. As a high school principal providing oversight for 800 students, please know that I wear many other hats. I am also the director of two alternative programs, I manage over $500,000 in grants that support these programs, and I am the CTE director and the director of secondary education. I am one administrator taking on the responsibilities of three full-time administrators. Most of my administrative colleagues in Alaska take on many more responsibilities than just providing leadership and supervision for one school or one program.

Without SB 84, our district will be forced to cut seven teaching positions and two administrative positions. In addition, with fewer teachers and administrators I will need to eliminate vocational/CTE choices from the Master Schedule.

For the sake of Alaska Youth please support SB 84

Sincerely,

Bill Watkins
KHS Principal

Dear Senator Thomas,
Please consider supporting SB 84 for the Senate and moving on to the House. Our kids need this 3 year funding guarantee and voc tech training. Our kids and grandkids don't wait for the price of oil to settle but need these funds now.
Thank you.
Sincerely,
Lorraine Crawford

Subject: Senate Bill 84

Dear Senators;

I am writing to ask for your support for SB 84. Our district is presently cutting teachers, considering classified staff reductions and non-replacement of retiring teachers to cope with the proposed flat funding for next year.

Our district has made academic improvements in our students' performance based on last year's SBA test results. At least one of our struggling schools has made AYP for two years in a row for the first time. The potential for losing ground is very high if our staffing is reduced due to flat funding; reduced class sizes equate to better test results. Given the recent state budget projections of 2.5 to 3.0 billion in increased state revenue due to higher oil prices, the logic for holding the line is less logical. We realize there are always competing interests for the existing funds, but K-12 public education serves our future by helping prepare our current students for taking our place as they grow up and take their rightful place in our wonderful state. Please do not let them down.

Here are some to the reasons to support SB 84:

- Alaska is receiving a strong financial return from high oil prices and it is appropriate to invest more in Alaska's future through K-12 education.

- The tremendous benefits that districts, teachers, support staff, families and students enjoyed with our recent three-year forward funding package that allowed for more precise budget planning and eliminated much of the upheaval that occurs with staff layoffs and program reductions.

- SB84 provides for additional funding over 3-years that will assist all districts in addressing ever increasing inflationary costs and help invigorate vocational/career tech.

- SB97 is a good solution for high energy costs and when available in Fy13 would be a welcome tool to assist school districts and communities with high energy costs.

Thank you for your consideration on this very important piece of legislation. I appreciate your efforts to put children first!

Dear Senators,

Thank you for your hard work in Juneau to ensure the well-being of this great State.

I would like to share my thoughts with you on SB84. I have worked for Copper River School District for seven years now and the budget has always been a worrisome affair for the coming school year. With the continuing increase in energy costs, pay increases, and health benefits our district has had to continue to make budget cuts to balance each year. As you know, the education of our children is so important to the future of our country. SB84 would allow all school districts to plan for that future in a more efficient and effective way.

As Alaska benefits from the high cost of oil, please consider SB97 as well to help school districts deal with the rising cost of energy.

Sincerely,

Dear Govenor, Senate Finance Committee and Juneau Legislators,

Thank you for your work and dedication.

We came to Alaska in 1975, two years after we were married. We are parents of Alaskan adult children, and grandparents of 3 local children. We have worked in the field of education as teachers, and counselors in the schools, and community since 1978. We do not like wasting money. We understand what quality education is and much of what it takes to get there. We basically understand the fiscal challenges of our country and state.

We **SUPPORT SB 84**. We **DO NOT** SUPPORT SB 97. It is too little, if at all, and late. We urge you to be the legislative leaders of our wonderful state of Alaska that views children as our most valuable resource.

Thank you again.

Sincerely,

Lynnette and Nils Dihle

Hello Senators,

On behalf of Dillingham City School District I want to thank each of you for your previous support of education funding. I am sure you have received many correspondence regarding the reasons for approving SB84 and continuing support for educational funding. Our district is one that has struggled with student achievement, limited resources, and many demands on our limited resources. That being said we are in the process of implementing significant instructional changes that are based on the Alaska Standards, current research, and best practices. We are starting to see significant improvement such as **increasing our graduation rate from around 50% for several previous years to 70% last year. Student improvement is increasing with our current initiatives** and we expect this years annual assessments to reflect this. We initially forecast our FY12 budget on a modest increase to the student base allocation of $100 which included two new staff positions (a reading specialist and a K-2 instructional aide) that we know is needed to help our struggling learners. We focused these positions on our youngest kids (k, 1, & 2) knowing if we do more to help them get up to grade level proficiency by the 3rd grade they will have a much higher opportunity for academic success. The reality of removing this modest increase from the budget we submitted to the City of Dillingham has been the reduction of these needed positions. I am asking each of you to support a modest increases for education funding in SB84 and thus significantly helping DCSD meet the needs our kids.

Respectfully,

William (Bill) McLeod,
Superintendent DCSD

This email is to encourage your support for Senate Bill 84. This 3 year forward funding would allow districts to plan their budgets more precisely.
It would help to invigorate our vocational education programs which haven't been funded sufficiently in the past. Districts have faced increase energy costs and have had to cut staff in order to meet these costs. Our district has had to cut teachers at all levels due to budget cuts. We have had the support of the community to renovate our grade school, but due to these cuts, we can't afford to hire a maintenance person to keep the building well-maintained.

Please consider supporting this bill as a critical investment in our children's future.

Alaska Legislature Education Committee Chairs
Senator Joe Thomas / Senator Kevin Meyer
Representative Alan Dick
State Capitol
Juneau, AK 99801-1182

Senators Thomas and Meyer, Representative Dick:

I'm writing on behalf of the Alaska Business Education Compact (ABEC) with congratulations on your committee appointments and thanks for your participation in the 27th Alaska Legislature. The Education committees you will lead are critical to preparing Alaskans for the future, both as part of the workforce and for their own success in life.

In 2010 a major effort was made to put together a plan for Career and Technical Education in Alaska. Endorsed by the Board of Education, Alaska Workforce Investment Board and the UA Board of Regents, the collaborative plan of the DOLWD, DEED and UA is now a blueprint for preparing our Alaskan students for successful and economic careers. The Alaska Business Education Compact was among many groups in Alaska to both support the initiative and to participate in the development. From our perspective, the CTE plan is a great step forward in attaining the goals of the state in educating Alaskans. The collaboration of the state departments and the university marks a long overdue step in assuring articulation among the major players in delivering education to Alaskans for a clear career pathway.

The Vocational Technical Education Providers (VTEP, a sub-committee of AWIB) and the ABEC led an effort to inform legislators, business and industry and other groups across Alaska about the plan and supported efforts to help allocate funding to support the plan. Those efforts included supporting bills (like HB 317) to route funding from the state to CTE programs as well as communications to school districts regarding budget planning and information to business communities about support for the plan.

Partners in the effort included business and industry associations, school districts and education associations. Part of the information process included packaging of letters of support from over 50 entities from across the state, urging the state and the local communities to provide strong career and technical education for all students in all regions.

While the Legislative bills have not yet addressed the allocation issue of funding, we would encourage the education committees to look at the previous bills and some new approaches. At

the local level, many districts are already including support in their budgets and bonds for the infrastructure to deliver CTE per the plan: as examples, with their board support, ASD and Mat-Su are working with their local governance entities to assure that the CTE is strengthened in their regions.

There is strong support from the ABEC and other business / industry organizations to enhance and support the basic elements of the CTE plan. That support should include such integral concepts as the following:

- Designated state funding for CTE should be provided with categorical designation in the funding formula or a budget appropriation from the legislature to the locally controlled school districts or institutions with intent to support CTE.
- Increase and Enhance Industry Financial Support by way of allowing tax incentive for a broad type of business entities that financially support CTE programs.
- CTE Programs of Study should be industry driven and validated and should lead to a certification and/or placement in a post-secondary program. They should be developed, implemented, and evaluated, based on their ability to link students to high wage, high skill, or high demand occupations.
- CTE Course Credits should be able (as applicable) to qualify for core academic status (i.e. math, science) to enable students to use these credits to meet graduation requirements and qualifications for the Alaska Performance Scholarships. The requirement for instructors to attain highly qualified teacher status for the core subject area should be sufficiently flexible to include industry-qualified CTE instructors.
- Alaska Department of Education and Early Development should have an adequate administrative support unit specified for administering, regulating, and monitoring CTE in Alaska.

The Alaska Business Education Compact would like to reiterate our continuing advocacy of the CTE plan as an integral part of the state's education plan. We hope to work to provide insights to the Legislature from the Business / Industry sectors as well as to continue the dialogue of employers, educators, parents and communities. We would offer to assist the legislative committees in developing the appropriate bills and processes

Dave Rees, Facilitator

Alaska Business Education Compact

Subject: School Funding

Elected officials,
Having seen Anchorage Superintendent Comeau's email to you, please also accept my thanks for your long-time efforts in support of our community and state through funding of education. As a 30 year Eagle River resident, with a special needs son who was provided excellent educational opportunities in ASD, and as uncle to seven nephews and nieces (all current ASD students or graduates), I have directly experienced the difference your efforts and those of your predecessors have made for our community.

My urging your support of Senate Bills 84 and 97 is motivated by my strong interest in our community, and is informed by 28 years of teaching and administrative work with ASD. I'm retiring this June, and expect to live in this area the rest of my life. Although my professional life will no longer be directly impacted by K-12 funding decisions, the quality of the place I call home clearly will diminish if the cuts our current FY12 budget reflect go into effect. It is no secret that education is the smartest investment we can make for the future of our community in a highly competitive global economy. Your actions now in support of increased school funding would make a substantial difference in the return on our current investment.

The ASD Board, superintendent and her leadership team have worked incredibly hard to minimize negative impacts to nearly 50,000 students in making those cuts. Nonetheless, there remains vital work the current budget cannot support. As the curriculum coordinator responsible for K-12 social studies, I can assure you that our students and teachers need more support than is possible with available resources. Like others in the curriculum department, I consistently seek and frequently obtain grant funding to strengthen that situation. ARRA (federal stimulus) funding the past two years made possible some critically needed curriculum support. The current budget cannot provide for other curriculum work that is long overdue. Those projects directly impact students and teachers, because they involve updating instructional materials and providing professional development.

Your passage of Senate Bills 84 and 97 would allow ASD leadership to seriously consider such projects through budget prioritization. I know they will act in the best interest of our students in that process, investing in what is perceived as most urgently needed. Thanks in advance for your serious consideration of this legislation.

Sincerely, Steve Ex

Dear Senators,

I am a parent of three children, two who are in the Juneau School District, one who is at Dartmouth and made it there from the same district. I am begging you to support Senate Bill 84. Our schools cannot cut another million dollars from there budget. We will lose our Elementary Art position, who services over 1200 kids. We will lose a highschool counselor that serves 400 hundred kids, plus many more programs and teachers.

I am the President of the Arts For Kids board. I have worked diligently to place and fund the Elementary Art Program that exists in our schools. Before this is had been 25 years since we had elementary art throughout our district. Kids need to have things like art to stay in school. It has been documented that art increases math and science scores.

Please relize that if you don't keep kids in school they cost the government more later in life. It is wise to fund our children now and keep forward funding education.

I look forward to hearing from you and hope you see the future for our children by supporting this bill to raise SBA.

Subject: Funding for Education, Senate Bill No. 84

Dear Senator Thomas:

Recently, a friend shared an article with me that was posted on the New York Times website, which caused me to want to share it with my friends and it is something that I'd like to share with you. If you have a few minutes, please read this article, and maybe reflect on who was the most influential teacher in your education.

Funding for schools is of the utmost importance and any increase in school funding will help our schools. I see many classrooms that are overcrowded; my daughter is currently in a fourth grade class with 32 students. Schools are holding fundraisers and collecting aluminum cans to buy construction paper and basic supplies. Teachers' are spending money out of their own pockets for educational tools that the District won't or can't supply. There is a lack of resources to help those kids with emotional and physical needs, especially when dealing with a deployed parent, who is away for a year in Iraq or Afghanistan.

I urge you to support Senate Bill No. 84. The increase that is within the bill allows the school district's funding to keep pace with inflation and maybe the increased cost of utilities. I urge you to keep increasing the funding for education. Our teachers' work hard with the resources that they have, they are not the "glorified baby sitters" as some would view them, but are caring people who want to make a difference.

Regards,

Arthur (Art) Gelvin

What I Learned at School

By MARIE MYUNG-OK LEE

Providence, R.I.

THE tumult over state budgets and collective bargaining rights for public employees has spilled over into resentment toward public school teachers, who are increasingly derided as "glorified baby sitters" whose pay exceeds the value of the work they do.

But how exactly do we measure the value of a teacher?

As a writer, I often receive feedback from readers I have never met. But the other day, I received a most unexpected message in response to one of my essays:

"I am so proud of you and all you have accomplished. I shared your opinion from The L.A. Times with my family and reminisced about you as my student at Hibbing High School."

It was signed Margaret Leibfried, who was my English teacher — a teacher who appeared at a critical juncture in my life and helped me believe that I could become a writer.

Thirty years ago, in Hibbing, a town in northern Minnesota that is home to the world's largest open-pit iron mine, I entered high school as a bookish introvert made all the more shy because I was the school's only nonwhite student. I always felt in danger of being swept away by a sea of statuesque blond athletes. By 10th grade, I'd developed a Quasimodo-like posture and crabwise walk, hoping to escape being teased as a "brain" or a "chink," and then finding being ignored almost equally painful. I spent a lot of time alone, reading and scribbling stories.

Ms. Leibfried taught American literature and composition grammar, which involved the usual — memorizing vocabulary and diagramming sentences — but also, thrillingly, reading novels.

Thrilling to me, that is. Many of my classmates expressed disdain for novels because they were "not real." For once, I didn't care what they thought. Ms. Leibfried seemed to notice

my interest in both reading and writing, and she took the time to draw me out; she even offered reading suggestions, like one of her favorite novels, "The Bell Jar."

That year's big project was a book report, to be read aloud to the class. However, Ms. Leibfried took me aside and suggested I do something "a little different." Instead of a report, I was to pick a passage from a book, memorize it and recite it in front of the class.

While I longed for the safety and routine of the report, I was curious how this new assignment might work out. By then obsessed with "The Bell Jar," I chose a passage that I thought showed off the protagonist's growing depression as well as Sylvia Plath's sly humor.

The morning of the presentations, I remember my palms sweating so badly as I walked to the front of the class that I held my hands cupped in prayer formation, so I wouldn't wipe them on my shirt.

> I saw the days of the year stretching ahead like a series of bright, white boxes, and separating one box from another was sleep, like a black shade. Only for me, the long perspective of shades that set off one box from the next had suddenly snapped up, and I could see day after day glaring ahead of me like a white, broad, infinitely desolate avenue.
>
> It seemed silly to wash one day when I would only have to wash again the next.
>
> It made me tired just to think of it.
>
> I wanted to do everything once and for all and be through with it.
>
> Dr. Gordon twiddled a silver pencil. "Your mother tells me you are upset."

I finished and, to my surprise, the class broke out in applause. "As a writer and a good reader, Marie has picked out a particularly sensitive piece of prose and delivered it beautifully," Ms. Leibfried said, beaming. I felt, maybe for the first time, confident.

Ms. Leibfried was followed the next year by Mrs. Borman, quiet, elderly and almost as shy as I was. She surprised everyone when she excused me from her grammar class, saying my time would be spent more productively writing in the library. I took the work seriously, and on a whim submitted an essay I'd come up with to Seventeen Magazine. When they published it, it was big news for the high school — it was even announced on the P.A. system. Mrs. Borman wasn't mentioned, nor did she ever take any credit; in her mind she

was just doing her job.

I can now appreciate how much courage it must have taken for those teachers to let me deviate so broadly from the lesson plan. With today's pressure on teachers to "teach to the test," I wonder if any would or could take the time to coax out the potential in a single, shy student.

If we want to understand how much teachers are worth, we should remember how much we were formed by our own schooldays. Good teaching helps make productive and fully realized adults — a result that won't show up in each semester's test scores and statistics.

That's easy to forget, as budget battles rage and teacher performance is viewed through the cold metrics of the balance sheet. While the love of literature and confidence I gained from Ms. Leibfried's class shaped my career and my life, after only four short years at Hibbing High School, she was laid off because of budget cuts, and never taught again.

Marie Myung-Ok Lee, the author of the novel "Somebody's Daughter," teaches writing at Brown.

Honorable Senator Joe Thomas
State Capitol
Juneau, AK. 99801

Dear Senator Thomas:

I am writing in support of Senate Bill 84, which would increase the Base Student Allocation for K-12 education and provide additional funds for vocational and career education. Base Student Allocation increases and an increase in support for high school vocational and career education classes are crucial for districts to "maintain" programs. Our health insurance, liability insurance, salaries, energy costs increase annually. This amount will not keep up with all of our inflationary costs. However, if we can at least stay close to inflation the cuts we have to make will be easier.

Also being forward funded is the only common sense way to run the state's business. With tenured teacher contracts rolling over in March, for a district not to know how much money it will have is extremely dangerous.

I also appreciate your insight for Alaska's worker preparation. We should be training our own people to take the jobs that are available in state. Adding a dedicated amount to the Vocational allotment is a good thing.

Without this additional money we will be forced to cut programs and services. I strongly support both parts of this bill and thank you for leadership in proposing it.

Sincerely yours,

Woody Wilson

Subject: Support for SB84 - increasing the Base Student Allocation and funding for vocational/career and technical-education

ATTN:
Sen. Joe Thomas
Senate Education Co-Chair

Dear Senator Thomas:

I understand that the Senate Education Committee will be hearing testimony on Monday, March 14, 2011 on SB 84, VOC ED FUNDING/BASE STUDENT ALLOCATION.

The Alaska Association of Secondary School Principals supports this bill as it provides for a new multi-year funding formula with annual increases in the base student allocation, and additional funds that support career and technical education. SB84 will be beneficial, as it will allow the continuation of the recommendations that were part of the 2007 Joint Legislative Education Task Force. The multi-year funding has been extremely helpful for district and school planning for instruction and avoiding layoffs due to funding uncertainty.

With the current three year funding plan ending this school year, without the passage of SB84, schools and school districts will be facing renewed funding uncertainty. Faced with the certainty of greater fuel costs in 2011-12, increases in health insurance, food service, transportation and other costs, districts require funding certainty to make wise budget decisions that reduce the impact of cuts to instructional programs and reduce the disruption caused by lay-offs that are avoidable with funding certainty.

SB84 is a reasonable bill that will ensure no ground is lost in the progress districts have made over the past three years to offer a rigorous core curriculum. The provision in this bill would also allow districts to offer a vibrant career and technical education curriculum; something industry leaders have said is a priority if Alaska is to have a qualified workforce and a diverse economy. SB 84 will be very important in furthering the implementation of the state Career and Technical Education Plan

The Alaska Association of Secondary School Principals supports SB84 and appreciates your efforts to move this bill forward.

Sincerely,

Andre' Layral, M. Ed

Subject: AASSP supports CSSB84

ATTN:
Sen. Joe Thomas
Senate Finance Committee

Dear Senator Thomas:

I understand the Senate Finance Committee will be allowing testimony on Wednesday, April 6, 2011 on CSSSB 84, a bill introduced by the Senate Education Committee that provides for a new multi-year funding formula with annual increases in the base student allocation (BSA). The provision in this bill would also allow districts to offer a vibrant career and technical education curriculum; something industry leaders have said is a priority if Alaska is to have a qualified workforce and a diverse economy. SB 84 will be very important in furthering the implementation of the state Career and Technical Education Plan

The Alaska Association of Secondary School Principals supports SB84 as written. We support this bill because it will allow the continuation of the recommendations that were part of the 2007 Joint Legislative Education Task Force. The prior funding plan included annual increases in the BSA. This was extremely helpful for district and school planning for instruction and helped schools avoid unnecessary layoffs and disruption due to funding uncertainty each spring.

AASSP acknowledges that SB 97 appears to be attractive as it would provide relief to school districts when oil prices are anticipated to be high. However, SB 97 does not provide schools with the the needed multi-year funding predictability in the BSA or predictable vocational funding that would allow districts to plan, implement and evaluate expanded vocational/CTE programs.

SB84 provides schools with certainty each year that the previous funding plan provided in annual defined BSA increases to keep pace with inflation for health insurance, food service, transportation and other costs. This certainty would ensure wise school district budget decisions that reduce the impact of cuts to instructional programs and reduce the disruption caused by lay-offs that are avoidable with funding certainty.

SB84 is a reasonable bill that will ensure no ground is lost in the progress districts have made over the past three years to offer a rigorous core curriculum. The Alaska Association of Secondary School

Principals supports SB84 and appreciates your efforts to move this bill forward so that schools can continue progress made the past three years.

Sincerely,

Andre' Layral

I'm a lifelong Alaskan who loves this great state I work, play and raise a family in. I have one child in the JSD and two more that will be in JSD soon. I'm writing to state my support of education. With all the recent talk about cutting billions of dollars from unconscionably rich oil companies it greatly saddens me that in the same breath we would not adequately fund education for the children of Alaska. I hope your conscious leads you when considering this issue.

Luke Dihle

April 4, 2011

Honorable Senator Joe Thomas
Senate Finance Committee

Senator Thomas,

I am a concerned parent of two students in the Anchorage School System.

I understand you are involved in an important piece of legislation, School Funding Bill SB84; that would provide a modest increase in the base student allocation for the next three fiscal years.

I would like to ask you to consider the importance of strong educational system and vote to ensure proper funding is included in SB84 when it is voted on during the current session.

I understand there are other bills in consideration; however, I don't believe they provide a solid funding that ensures our schools have the resources they need to provide for our children.

I appreciate your consideration and hope I can count on your vote in this important matter.

Sincerely,

Edward M. Faith

Subject: Senate Bill 84

Dear Senator Thomas:

I am a Special Education Director in Kodiak, AK. Many students receiving Special Education services have very limited career options with coursework which prepare them only for college. As public education in most states moved from a balanced pre collegiate/vocational curriculum, Alaska remained a strong advocate for vocational training. Students in Kodiak have enjoyed several strong vocational programs. However, those programs are overtaxed. Kodiak High School offers many vocational programs during zero hour (before school.) All students do not have access to zero hour due to lack of transportation or family commitments. An improved funding stream is needed to develop additional programs outside our outstanding welding, shipbuilding, automotive, and culinary arts programs. An improved funding stream is also needed to create increased opportunities in our established programs.

Kodiak Island Borough School District is a fiscally responsible district. We squeeze all the instruction possible out of our BSA. With an increase in the BSA, we can continue to support instruction which will help our students meet the rigorous and increasing targets set by our state.

Thank you for your time,
Heather Christian Martens, PhD
Special Services Administrator
Kodiak Island Borough School District

Subject: SB 84 and I need you to read this

The increase in the base student allocation in the last few years has helped our school district fund programs that are making huge differences in our children's lives. Math is the best example I can give. In my school there are a number of students who fail to learn when class sizes are too large. Every day I see 5-6 different at-risk students going to math tutoring class at 8:30 a.m.--their own time! They WOULD NOT be passing a math class without this one-on-one instruction.

. We will go backwards if this allocation does not keep up with inflation. Understand that every child is unique, they do not learn new concepts in a one mold-fits-all concept.

. Kids are Alaska's future. We should fund programs that are making all the difference in our children's lives now, and in the future.

. Vocational and technical training are critical to Alaska's future. These programs not only keep kids in school, they also provide a trained workforce for our economy and support business. If vocational and technical training is not funded, individuals will suffer, and Alaska's economy will suffer. Every year I am asked to write a letter of recommendation for a student who wants to be admitted to a school to learn auto mechanics, or nursing. Not every student wishes to pursue college, we need to keep the appropriate curriculum open for them to succeed.

. Please support Senate Bill 84.

Sincerely,

Murray Richmond

Dear Senator,

I am a resident of Noatak, AK in the Northwest Arctic Borough and I am urging you to support the passage of SB84. Without the funding that comes with this bill, crucial teaching positions will be cut in the high school and our children will have very few class selections. The teachers have been working to improve our children's achievement and test scores have started rising. With the loss of teaching positions, our children will lose ground. Again, I ask you to please support SB84!

Sincerely,

Lori Moore

Subject: Support SB84

Senators,
I would like to communicate my support to fund SB84. With 2 Children in the Noatak School, I would like to see them have the best opportunity to learn in my hometown. Increased funding would allow them to receive more time with a teacher that may otherwise not be able to return to teach. Increasing the load on teachers would reduce their opportunity to receive quality learning. I am sending this urgent message on behalf of many constituents who are unable to voice their concerns over the potential to lose teachers in our community.

Respectfully,

Robert J. Kirk

My name is Kim Dorner and I would like to express my support of raising the base student allocation for public schools. This is an important legislative issue that deserves your consideration. As you know, any 'one shot' monies (while better than nothing) don't help us invest in sustainable programming to improve our schools. One time monies don't help us increase funding available for salary increases (which we need to stay competitive and retain and recruit quality educators to a state). Funding that doesn't allow school districts the local control that they need to make improvements over time is not very helpful. At a time when education is under the gun to raise standards, have 100% of our students proficient, and keep up with federal and state mandates; it is impossible for us to move forward if we are not given increases that allow us to expand programs to meet student needs.

The costs go up- just like they do for every government program annually. Yet, the dollars we have to make it all happen remain the same. It doesn't add up and I believe students suffer and programs get cut so that we can barely keep our heads above water. I am aware that there is a limited amount of money and that we need to be fiscally responsible as a state but really if it's a problem- then I will gladly pay a state income tax or you can have my dividend but PLEASE we have to be able to meet our students where they are to give them the best hope for the future that they can have. We've cut it all- right here at home. There is less art, music, PE, theater, vocational programs, social studies, science, health now then there was 15 years ago and that is just SAD. You can't ask us to do MORE for kids on less money annually because a dollar 10 years ago was worth more than today.

I am an educator in Kodiak because I want to invest in my community and I want to raise my children in the place I call home but they deserve a better than 'average' education and since when are we striving for 'average?" I want the BEST. I am willing to pay for the BEST, and I want to work for the BEST.

Ok- thank you for all of your hard work and commitment to Alaska's schools.

Kim Dorner

To: Sen. Joe Thomas
Subject: base allocation

Hi,

I would like to express my support for raising the base allocation given to schools per student. I've heard that in lieu of this you are considering a one time payment. I do not accept this as a solution. One time moneys can not replace the base allocation. It can not give the stability and foundation to build long lasting and meaningful programs.

Please fight for the future of education in Alaska, please support increasing the base student allocation.

Thanks,
Doug Dorner

Subject: Our community implores your help

Senators, Donny, Bert, Lyman, Joe, Lesil, Dennis, Johnny, and Gary:

Please read these 3 short paragraphs that I've written following a Alaska School Council meeting just yesterday and incorporate them into the bigger picture of our great State's need for educational support and the passing of SB84. When it gets to paragraph 3, I am practically in tears and despair as I contemplate the struggle that our community(ies) face with an enormous imbalance of resources to unmet need. We need YOUR help.

Tina, Please include these comments from the community concerns of the ASC Napaaqtugmiut School meeting held on April 4, 2011.

As a parent when I went to the school at the end of the school day I was approached by 2 community members that said a School Board meeting was in progress that regarded 2 teachers being cut. I assumed one to be Jr.
High teacher Darlene Campbell who had spoken of taking a sabbatical and was told the other was Timm Nelson, Jr. High/High School teacher. Seeing that the library was quite full including students, I was prompted to take part since I knew that our students and staff needed help, not "cuts". I had volunteered and subbed for the school this year and last year did school practicums, with any less help our children would have little chance of meeting adequate progress goals and in my opinion actually recieve less than adequate education.

2 things I heard were quite appalling to me: 1, that Timm Nelson had received only this morning an e-mail from the NWABSD that said he was being offered either a volunteer transfer to Buckland or to accept an involuntary transfer if he wished to remain in the district. The appalling/shocking part of this news was he had only 24 hours in which to respond; I am sure there are many reasons and other sides we might not be privy to know, but where is the courtesy in this? Timm is highly involved in our students and community lives. He is well accepted and just now getting to a point of where after a couple of years of learning can make a tremendous impact; longevity and less turnover is proven to be a key factor in being able to reach a population effectively.

The other detriment to this happening, is it appears that "ok...Darlene Campbell is leaving, so let's not fill that position". Losing one junior high teacher could be bad enough and is unacceptable but cut another one who also happens to teach high school would leave only 1 teacher to cover our entire junior high population and only 2 teachers to cover all of the high school. 3 teachers in a village of 500+ to adequately instruct all of our jr high/senior high students? We want our kids to be ready and succeed in college? We want our kids to grab a hold of professions and role model success for future generations? I'm sorry, but 3 teachers do not have the resources, time or expertise in areas to give adequate education to our most valuable resource.

Please accept my comments as a desperate outreach and attempt to right what could be a possible and terrible wrong. Thank you.

Dear Senators

Please recommend, approve, and pass SB 84 in 2011. For more than ten years Alaska vocational education and training providers have diligently pursued the ability to educate and prepare students for the world of work, by re-establishing and renewing vocational education programs that were abandoned in the 80's and 90's. Finally the right Bill, SB84, has reached the Capital. It is on the porch steps of your committee today. It has a State of Alaska CTE Plan to follow, unanimous Alaskan community support, and sustainable funding to make performance measurable in three years. Don't let the Juneau legislative process deny what Alaska wants, needs and is willing to sacrifice for. Pass Senate Bill 84 this year!

Attached is a presentation given to the joint House/Senate Anchorage Caucus earlier this month.

Good Morning,

Please support SB 84. Alaska needs long-term funding to support career, technical and vocational education (CTE). All students need the services provided by CTE and schools need the assurance that funding will be available to provide these services.

Our expectation as a society is that individuals will work to provide revenue to support their families. CTE helps students explore, develop career pathways, and develop skills for work. It is for all students, including those who will develop skills to go directly into the workforce, those who will seek short-term training after high school, those who complete an apprenticeship, and those who go to college.

Families, businesses, and students will benefit from direct support through legislation. If you or your staff are interested in success stories, please let me know.

Thank you for your time and attention.

The Honorable Joe Thomas
Senator_Joe_Thomas@legis.state.ak.us

Dear Senator:

As a member of the Alaska Workforce Investment Board (AWIB) as well as a concerned Alaskan, I am seeking your support of SB 84 as it designed to:

- Increase the base student allocation (BSA) for the next school year
- Specify the BSA increases for the next three years
- Add additional funds for Career and Technical Education

Last year the AWIB passed a resolution in support of the Alaska Career and Technical Education (CTE) Plan (Resolution #10-03). SB 84 has the intent of providing funding for CTE as well as allowing school districts to better manage the planning process by providing specificity about the next three years BSA.

Although the proposed substitute SB 97 would most likely increase education funding in the short term; as a community revenue sharing allocation tied to oil price (revenues), there is no predictability for the future. It also does not directly support CTE as there are no directions for spending the funds.

To sum up, the predictability and direction for the funding in SB84 makes more sense than a one time or short term influx of money with no guidelines for spending attached.

Thank you for your time and consideration. I hope you choose to support SB 84.

Regards,
Michelle M. Zenger
Alaska Workforce Investment Board – Vice Chair (Business & Industry seat)

Subject: SB84

My name is Jackie Smith. I live in Rural Alaska. I have a child who is in Jr High. I am a concerned parent.

I am asking you to please pass SB84.

Alaska is receiving a strong financial return from high oil prices and it is appropriate to invest more in Alaska's future through K-12 education.

The tremendous benefits that districts, teachers, support staff, families and students enjoyed with our recent three-year forward funding package that allowed for more precise budget planning and eliminated much of the upheaval that occurs with staff layoffs and program reductions.

SB 84 provides additional funding over 3-years that will assist all districts in addressing ever increasing inflationary costs and help invigorate vocational/career tech.

SB97 is a good solution for high energy costs and when available in FY13 would be a welcome tool to assist school districts and communities with high energy costs.

The cost of living in Rural Alaska is outrageous. We are paying $8.99 for gas & heating fuel in Noatak. When we get our next load of fuel our cost is going up. We will be paying over $10 a gallon for gas & heating fuel. They are going to cut 2 teacher positions in our school next year. They are both Jr High teachers. Like I said I have a child who is in 7th grade. Next year they are going to be 36 students in Jr. High and one teacher. I don't see how my Son will get the adequate education he needs to enter high school.

Thanks for your consideration,

Jackie Smith
Noatak, AK

April 5, 2011
Senate President Stevens and Finance Committee Members:

As the principal of Service High School in Anchorage, and I write to encourage the passage of essential K-12 education bills, SB 84 and SB 97. Both pieces of legislation, in their original forms, will help offset inflation and enable school districts across the Alaska to continue at least three key practices that serve Alaska's children well:

1. Early hiring of teachers. The Anchorage School District hires approximately 70 percent of its teachers from Outside. With forward funding, and the ability to offer competitive but reasonable compensation packages, we have been able to successfully compete for the best teachers in our nation. Alaska, just as it does for the oil industry, needs to be an attractive option for professional educators in which to invest.

2. Re-emphasis on Career, Technical, and Vocational Education. Designated funding for C&TE, rather than block grant funding that needs to be spread thinly, will allow us to capture more students whose acumen and interest lies in the vocational fields. Concentration on college readiness will continue, but through the vocational programs both current and in development, we will be able to accelerate more students' readiness to learn by offering them increased relevant curricula. The result will be a more prepared workforce.

3. Extended school day and school year. With the sharp increase in public education students coming from economically disadvantaged families (see ASD Profile of Performance, p.9: http://www.asdk12.org/depts/assess_eval/POP/0910/POP_0910_District.pdf) the need is greater than ever to extend the school day and year. Non-traditional, C&TE (again), and remedial programs are essential to meet the needs of this often underprepared population. The modest increase in the BSA in SB 84 will help provide resources to continue our programs that extend beyond the regular school day.

After regular school hours, Service High School currently offers carpentry, Certified Nursing Assistant, Personal Care Assistant, physical education, and credit recovery classes. We scramble for dollars to fund teachers, materials, and transportation – all necessary to sustain the programs. Keeping students here at school after hours engaged in learning has been a huge benefit. Finding resources to sustain these programs has been a challenge.

Passage of SB 84 and SB 97 will help offset inflation and allow districts in Alaska to continue to meet the needs of our changing public school population. I urge you to act in support of both bills.

Most Respectfully,

Lou Pondolfino
Principal
Robert Service High School
742-8123

Subject: Our community implores your help

Senators, Donny, Bert, Lyman, Joe, Lesil, Dennis, Johnny, and Gary:

Please read these 3 short paragraphs that I've written following a Alaska School Council meeting just yesterday and incorporate them into the bigger picture of our great State's need for educational support and the passing of SB84. When it gets to paragraph 3, I am practically in tears and despair as I contemplate the struggle that our community(ies) face with an enormous imbalance of resources to unmet need. We need YOUR help.

Tina, Please include these comments from the community concerns of the ASC Napaaqtugmiut School meeting held on April 4, 2011.

As a parent when I went to the school at the end of the school day I was approached by 2 community members that said a School Board meeting was in progress that regarded 2 teachers being cut. I assumed one to be Jr.
High teacher Darlene Campbell who had spoken of taking a sabbatical and was told the other was Timm Nelson, Jr. High/High School teacher. Seeing that the library was quite full including students, I was prompted to take part since I knew that our students and staff needed help, not "cuts". I had volunteered and subbed for the school this year and last year did school practicums, with any less help our children would have little chance of meeting adequate progress goals and in my opinion actually recieve less than adequate education.

2 things I heard were quite appalling to me: 1, that Timm Nelson had received only this morning an e-mail from the NWABSD that said he was being offered either a volunteer transfer to Buckland or to accept an involuntary transfer if he wished to remain in the district. The appalling/shocking part of this news was he had only 24 hours in which to respond; I am sure there are many reasons and other sides we might not be privy to know, but where is the courtesy in this? Timm is highly involved in our students and community lives. He is well accepted and just now getting to a point of where after a couple of years of learning can make a tremendous impact; longevity and less turnover is proven to be a key factor in being able to reach a population effectively.

The other detriment to this happening, is it appears that "ok...Darlene Campbell is leaving, so let's not fill that position". Losing one junior high teacher could be bad enough and is unacceptable but cut another one who also happens to teach high school would leave only 1 teacher to cover our entire junior high population and only 2 teachers to cover all of the high school. 3 teachers in a village of 500+ to adequately instruct all of our jr

high/senior high students? We want our kids to be ready and succeed in college? We want our kids to grab a hold of professions and role model success for future generations? I'm sorry, but 3 teachers do not have the resources, time or expertise in areas to give adequate education to our most valuable resource.

Please accept my comments as a desperate outreach and attempt to right what could be a possible and terrible wrong. Thank you.

Subject: HB 84

I am writing to urge you to support HB 84. It does three very important things:
1) Increases the base student allocation (BSA) by $110 for the next school year
2) Specifies the BSA increases for the next three years (very helpful for planning purposes)
3) Adds additional funds for Career Tech and Vocational education (1% of the BSA each year)
Our schools already face cuts due to the loss of stimulus funds. The SBA increases covers the cost of inflation in wages and materials. Textbooks cost at least $100 each and schools must supply them. Students must have heat and electricity, which are both expensive in this state and with the current state of affairs those costs will outstrip inflation. Without the increase this year, pupil to teacher ratios will need to be increased. Our schools also need dedicated career and vocational funds to create sustainable programs to meet the diverse needs of Alaska.

Thank you for your time.
Sincerely,
Kathleen Iler Galau

Dear Senator Thomas,

I write to you as a voting resident of Alaska and educator of our future adult citizens. Our state is not in a budget deficit and currently proposed budget cuts impacting education are severe and uncalled for. SB 84 is about kids. Reasonable class sizes (25-30) and critical tutoring programs are at stake and so is the student drop out rate. Programs that support transition to high school, like the 9th grade teaming program, have influenced a lowered drop-out rate in our local high schools. Programs like these and many more which foster student success hang in the balance. I implore you to continue to be an advocate for our youth and their future. Please support Senate Bill 84.

Thank you,

Tommy Thompson
Juneau, Alaska 99803
Supporting SB 84 and Increased Education Funding
Dear Senator Thomas:

I am a 47 year resident of Southeast Alaska and have worked in the fisheries industry and in the education field. My grandfathers came to Alaska in the early 1900's and had successful careers in the fish business and the medical field.

Knut Thompson in Petersburg and Dr. Joe Rude in Juneau were both men who worked in private practice and held SE Alaska and their communities in highest regard. Both of them also knew how important education was for their own children and for developing and sustaining an informed, involved, and contributing citizenry.

I am a father of two students in the Juneau School District and I know first hand from the district budget meetings that flat funding for our district means the loss of important programs and jobs. Already the district has cut funding for needed high school counselors and extended learning programs (to name just two) that are detrimental to the education of our children. Further cuts, due to flat funding, will erode our programs and what we can offer to our students even more so.

Investment. It is a choice. I believe supporting, encouraging, and funding our educational system to fullest extent is an investment we can't ignore. My children's teachers have been fantastic, caring, involved, and empowering. Flat funding education, I believe, sends a message from the legislature to the public NOT that you are tightening your belts, but that you don't believe investment in our children is worth it.

Please increase the student allocation in Alaska and continue to support our very diverse state that has so many kids from so many places depending on you.

I appreciate all the work you do, and I hope you make the right choice regarding education.

Sincerely,

Tommy Thompson

Dear Senators

PLEASE pass SB 84 Today! I have put in decades of work toward better preparing our youth to live, WORK and succeed in Alaska. Our best economic driver is the young adults today! We absolutely must provide the early training in career awareness and industry skills in order for youth to see how they fit into the Alaskan economy. Without this, we will continue high non-Alaskan employment rates. In construction alone, 21% of the workforce DO NOT live here. What a drain on our economy- millions of dollars leaving our state every month! Career & vocational education are the key to our economy! This is much more than funding for schools - this is Alaska's future! Thank you. Karen Martinsen

I am concerned parent and community member of Noatak. Just yesterday I was informed of major teacher cuts across our school district. My heart goes out to these young people who want to have the opportunity to better their lives with education and training options after high school. If our district if forced to cut teaching positions, it will great impact the quality of education our children will have. teachers are already overworked and going the extra mile to help students be successful, cutting more teacher positions would be detrimental to their education.
With that being said, I am requesting that you support the Base student allocation. Our schools and teacher need this support and our children and students deserve the benefits of having a chance at the best possible education. I want to help provide that for them. I trust you do as well.

Southeast Conference

April 5, 2011

Alaska State Legislature
State Capitol Building
Juneau Alaska 99811

RE: Support for SB 84 "An Act relating to funding for high school vocational and technical instruction as a component of funding for public schools; increasing the base student allocation used in the public school funding formula; and providing for an effective date."

Dear Legislator;

Southeast Conference is an organization that promotes workforce development and encourages entrepreneurial success and resource development for Southeast Alaska. Because of these goals we fully support SB84.

SB84 is the most promising of the school funding bills currently before the legislature. It does three things that we feel are very important:

- Increases the base student allocation (BSA) by $110 for the next school year.
- Specifies the BSA increases for the next three years which is very helpful for planning purposes. BSA increase allows school districts the opportunity to plan better for future years and budget more wisely.
- Adds security as well as additional funds for Career Technical and Vocational education. (1% of the BSA each year) This component will offer school districts more security to further develop the options that are so desperately needed for our region and around the state. There are significant advantages to the increase in funding for Career Tech, but the security in having a "permanent" increase is invaluable to our students -- a one-time or short term influx of money is not enough to allow districts to develop viable career tech programs.

Southeast Conference is a regional, nonprofit corporation that advances the collective interest of the people, communities and businesses in Southeast Alaska. Members include municipalities, native corporations and village councils, regional and local businesses, civic organizations and individuals throughout the region. Our goal is to support policies that promote strong economies, healthy communities, and a quality environment for Southeast Alaska. We are the State-designated Alaska Regional Development Organization (ARDOR), the federally-designated Economic Development District (EDD), and the federally designated Resource Conservation and Development Council for Southeast Alaska. Each of these designations requires Southeast Conference to take an active role in regional resource management and economic development planning.

We thank you for your service to our state and strongly encourage you to support SB84. Our state is in a precarious situation, our population is aging and our young people are not prepared to continue the resource development that is so important to our future success. It is imperative we give them the education and training they need. SB84 will put us another step closer to this goal.

Sincerely,

Shelly Wright

Subject: SB 84

Honorable Senator Thomas:

I am writing in support of SB 84. This bill provides essential funding to create permanent funding for Career Tech and Vocational education. Making this funding permanent will provide educators with the ability to engage a long term planning process. This will result in the creation of new and innovative educational opportunities that will keep Alaska competitive.

This bill will also support a more effective budgeting process for elementary and secondary education. By raising the base student allocation districts will be able to temper the anticipated cuts and retain key staff and programs.

I encourage you to support passage of SB 84.

Dear Senator Hoffman,

I am writing in support of SB84. Due to high returns from oil profits, the increase in education funding should be affordable and should be a priority to our state. Forward funding only makes sense. It allows schools to do sensible future planning that avoids staff layoffs and limiting program offerings for our students, including the vocational education that is so important to our state's workforce. While SB 97 will be a help offset rising energy costs when it's available in 2013, it will not offset those increasing costs that our schools are experiencing now.

Thank you,

Janet Reed

Subject: SB 84

Dear Senator Thomas,

I write to urge your support of SB 84, which will increase the base student allocation and includes a high school vocational/technical education funding factor, and a tax credit for businesses contributing to educational institutions.

It is vitally important that Alaska's schools realize an increase in the BSA in order to continue serving our students in a manner that furthers their learning and development. In Anchorage, this additional funding will allow us to recommend restoration of programs with demonstrated effectiveness that have been cut due to funding limitations in our recently approved budget for 2011-12, programs our students need.

Thank you for your consideration,
Heather Mildon

Subject: Please vote FOR SB#84

Imagine the following editorial cartoon:

A bunch of fat, corporate oil men with $1 billion spilling out of their pockets,

Stomping over a bunch of school children with signs that say, "We only wanted an extra $20 million."

With legislators in the background saying, "Because that's how we decided to vote."

PLEASE, invest in our school children. Money spent on education will save in the long run. By cutting spending in education, you will see an even *higher* drop-out rate, and, for those who graduate, higher numbers of children with poor preparedness for jobs.

The increase in the base student allocation in the last few years has helped our school district fund programs that are making a huge difference in our kids lives. Students fail to learn when class sizes are too large, and it becomes classroom management, rather than a learning environment.
Schools, like any financial structure, will go backwards if this allocation does not keep up with inflation.

Kids are Alaska's future. We should fund programs that are making all the difference in our children's lives NOW and in the future.

Vocational and technical training are critical to Alaska's future. These programs not only keep kids in school, they also provide a trained
workforce for our economy and support business. If vocational and technical training is not funded, individuals will suffer and Alaska's
economy will suffer.

Subject: Please pass SB84 this year.

Dear Senator Thomas,

Please recommend, approve, and pass SB 84 in 2011. As an Alaskan vocational educator, I know that we work hard to prepare students for the world of work. In our school we have re-established vocational education programs that were abandoned in the 80's and 90's. This looks like the right bill to provide sustainable funding and to make performance measurable in three years. It also provides a State of Alaska CTE Plan to follow.

Pass Senate Bill 84 this year!

Thank you.

Senator Thomas,

I would like to thank you for your work on the Senate Finance Committee and ask for your continued support of SB84 and SB97.
I am a teacher in the Mat-Su School District as well as a parent. It is budget time and we are feeling the impacts of possible cuts throughout our district.
This causes a tremendous amount of anxiety each year and anything we can do to make the budgeting process more consistent and stable the more people will be able to focus on their jobs as they relate to students, instead of worrying about what to do when cuts are made.

Again I thank you for your work. I am grateful for the forethought of the people who created SB84 and SB97. I would like to see these two bills move forward to the full senate.

Subject: SB84

I would like to ask that you support and pass out of committee SB84. The additional funding is needed to support vital programs that will be cut from school district budgets. I recently testified at the Juneau School Board meeting for the need to reinstate the literacy coaches at the middle and high school levels. Many teachers who have been coached testified to the quality of the program and the benefit of having on going professional development. This program and the vocational education funds are vital if we are going to meet the needs of all students as well as increase the high school graduation rate.

Thank you for all your work to support literacy for all Alaskans.

Subject: SB84

Please support Senate Bill 84. The cost of education has continued to increase and the money available does not meet all of the needs of the educators and the students. Fees for classes and programs continue to increase. Fees for extracurricular activities increase as well. Students and athletes rely increasingly on donations from businesses in the community and fundraising (garage sales, door to door collection of change, raffles) to meet the financial needs of the various programs. How many of you must work 2 - 3 jobs and engage in fundraising so children can attend and participate in school programs or pay your own salaries? Many programs all students should have access to have become programs for students of well to do families. Education is less and less for all people and only for those students of families who can afford to pay the additional fees. These last few years have presented may financial challenges for myself, my family, and others Sitka families. No children should be excluded from opportunities for financial reasons. I have received school fee bills stamped with a message stating if the school fees are not paid by graduation my children will not be able to graduate. This month we have been asked to pay $115.00 per child so they can attend music fest in Ketchikan. We have 2 children attending. I asked for a scholarship and was then asked to chaperon. Chaperoning will cost me 5 days of wages. Neither of my employment situations offer paid vacation time. Soccer fees are $250.00 paid this month as well. How many more fees will be asked of parents? How many more programs will be cut or substantially reduced? How many more positions will be cut? Please support Senate Bill 84. If we want our children to succeed they need to be offered a quality education. If we want people to want to move to Alaska we need to offer a quality education. If we want to keep people here we need to offer a quality education. Our schools need funding they can count on, not funding that fluctuates with the flow of oil. Please increase funding for the education of our children and for the future of this state and our country. Two foreign exchange students sat at our dinner table this weekend and said they are just getting dumber the longer they are here. I have heard this from several exchange students and from students who have moved here from the Lower 48. The education we offer our children in the state of Alaska must keep pace with the education offered to students from the Lower 48 and around the world. We cannot afford to teach to the lowest common denominator any longer. Thank you for your time. Bridget Kauffman

Dear Senator Thomas,

I hope you will support SB 84. Funding for our schools is so important for our future.

My wife and I adopted two boys from Bulgaria. The school here in Haines has done an incredible job with our kids. Starting with English as a Second Language classes and moving on through remedial and special ed, the teachers and staff have given our kids a future they would not have had. Our older son will graduate this May, and will go to UAS Juneau next year to major in computer science.

Please don't shortchange our kids' futures. Please support SB 84. Thank you.

Subject: Education Funding

Dear Senate Finance Committee Members:

I am writing in support of increasing per pupil spending for the 2011 - 2012 school year. With this additional funding, our students at Mendenhall River Community School in Juneau will continue to be provided smaller class sizes, extra support (both extended learning and lower achieving) and most of the services being offered presently.

I understand there are concerns being voiced in the legislature about achievement levels throughout the state. Teaching is not an easy task when you have a varied group of backgrounds, academic, social and emotional needs enter your classroom each and every day. I know as an educator, I strive to provide my students with an educational experience that meets their needs and addresses the standards set forth by the state. This becomes extremely difficult when services are being cut all around you and you are unable, as one individual, to provide support to all children or to have collegial support to do so because the specialists are no longer in your building due to budget cuts based on the per pupil allotment.

I invite each of you as well as all your colleagues to come visit our school (meeting AYP) and those throughout the state to see what transpires throughout the course of a day needless to say the year. You will see the devotion, dedication, focus on learning and all out desire to provide environments (though varied) that support each child's individual needs to succeed not only academically, but socially and emotionally. I strongly encourage and ask that you support the increase in per pupil spending and to work with the Department of Education and Early Development to continue to help those failing districts and schools to support the concerns being voiced by your colleagues.

Again, I ask you to show your support of education in Alaska by providing an increase in per pupil spending this year. This money supports Alaska's future and allows the teachers, like myself, to continue the job of educating students to our best ability

Thank you for your time and consideration.

Sincerely,

Ruth Baumgartner

Subject: education funding

Good Morning,

It is always interesting and depressing to me when our legislators gather and bash our education system and teachers. They proceed to put more requirements on educators, talk about how we are failing as teachers, and then turn around and expect us to be even better with more work and less funding. If you were continually bashed like that, what would you do? You have a huge voice- why not use it for good? There are some absolutely amazing things happening across this state educationally. Yet, the majority of legislators looks at faulty statistics and has no idea how the educational process works. How many legislators have any experience in education? Have any of you been a teacher? Do you know what it is like to come to work every day and give all that you have to your students? At the end of the day, teachers return home spent and exhausted only to turn on the television and hear that they are lazy or that those who can't, teach. Words and attitudes like this do nothing for education. It does not help the teachers and more importantly, it does not help the students. I beg of you to think before you bash the people who have given their life to the kids of this state. Give teachers the respect that they deserve, I am certain that they have earned it.

Before assuming that all the statistics you read are true, it would behoove you to take a closer look at them. When you look at drop out numbers in the state, do you really know how they are determined? I do. The dropout rate in this state is nowhere near what legislators are claiming it is. If you were to track students when they transfer schools, you will have a moreaccurate number. Please remember that Alaska is a transient state. It is very common to find that a student will begin high school in Kodiak and change schools partway through their high school career because their parents are transferred. The student has not dropped out but rather is transferring to Sitka High School; however this is recorded as a dropout according to faulty statistical methods. This is just one case where legislators have taken a random number and used it to bash our educational system without fully understanding how the number was obtained. Can teachers do better? Yes, teachers can always improve and are constantly looking at ways to improve how students are educated. I ask you to listen to what the teachers are doing, listen to what they need, and listen to what works and what does not work. Legislators are not there, legislators are not doing the teaching. Please stop making judgments without having a full understanding of what is really happening. I beg of you- talk to teachers! As a teacher of 14 years, I can tell you that every morning when I get up for work, I am excited to be a teacher. I am so happy to know that I get to work with bright and excited students. Not all of these students will go to college but because of all the teachers who have spent countless hours working withthem, they will be a productive member of some lucky community. We are proud of the products we are delivering and we are improving those products year after year. Cutting funding is not the way to do it. It is extremely difficult to continue educating the students with the same level of enthusiasm and devotion when more is required of teachers but we are given less funding with which to do it with. Respect the profession. Teachers help to mold the future and we love our jobs.

http://www.washingtonpost.com/blogs/answer-sheet/post/darling-hammond-us-vs-highest-achieving-nations-in-education/2011/03/22/ABkNeaCB_blog.html

Please do the right thing and put solid funding for education in place. Do not rely on a dying oil industry to fund the future of the state. Take a stand and do the right thing.

Thank you for your time,
Sami King

Subject: Senate Bill 84

Dear Members of the Senate Finance Committee:
Once again, I want to thank you for your past support for funding education. We have been able to make major strides forward because of the past three years of education funding increases in the BSA and for Intensive Needs students. We are very excited about the possibility of an increase to the BSA and to Career and Technical Education in Senate Bill 84. The Anchorage voters clearly supported our Career and Technical Education bond yesterday, and we are hoping that an increase to the C and TE funding in SB 84 will allow us to enhance our C and TE program. We firmly believe that will lead to a higher graduation rate, and lower drop out rate, for our students.
I realize that there are many issues surrounding education funding, and I hope that some increase to the BSA and C and TE is possible for school year 2011-2012 and beyond.
Thank you all for your service and consideration.

Subject: SUPPORT SENATE BILL 84

Dear Senators and Representatives,

Please consider supporting Senate Bill 84. I am a Special Education Teacher in the State of Alaska. I have seen the benefit of the math tutoring first hand. I also see a need to support Vocational and Technical Programs and promote them in the schools.

I work in a math class with a math tutor, and have had the math tutor in my Study Hall. Students have difficulty and anxiety about math and it makes an amazing difference with student performance and confidence to have 1:1 support in the math area. Students who have difficulty also go and work with our Math Tutor before school. These students come in on their own time to be better learners and master math content. Students want to do well and learn, it is our responsibility as community members and educators to create those opportunities for all students.

Technical and Vocational training are critical to Alaska's future. It is important that we have well-educated, and skilled workers that will stay and work in Alaska. I have personally written letter's of recommendation for students that are excited to apply to the high school vocational and technical program. We need to give students a wide variety of options for their future.

If we do not continue to fund tutoring and vocational programs and have the ability to keep class sizes smaller, our Alaskan community will suffer. Let us support a strong community by educating our students to the best of our ability, by giving them the confidence and the options to let them be all they can be in their lives.

Please Support Senate Bill 84, thank you for your time.

Sincerely,

Kristen Olive

Subject: ALASKA PERFORMANCE SCHOLARSHIPS and SB84

Dear Sirs and MS,

I am concerned that if the Senate does not fund the **ALASKA PERFORMANCE SCHOLARSHIPS** that a lot of our most talented Seniors will leave the state to go to school outside and not return.

The Alaska Scholars Scholarship for the top 10% is awarded and not used by most of those that receive them because they are heavily recruited by schools outside. Those that are only a few grade points below the top 10%, even those with 4.00GPA, are left without the same options to go to school in state, funded by the state.

What we are effectively doing is exporting our future.

I also would like to say I do Support SB84.

The increase in the base student allocation in the last few years has helped our school district fund programs that are making huge differences in our children's lives. Math is the best example I can give. In my school there are a number of students who fail to learn when class sizes are too large. Every day I see 5-6 different at-risk students going to math tutoring class at 8:30 a.m.--their own time! They WOULD NOT be passing a math class without this one-on-one instruction.

. We will go backwards if this allocation does not keep up with
inflation. Understand that every child is unique, they do not learn new concepts in a one mold-fits-all concept.

. Kids are Alaska's future. We should fund programs that

are making
all the difference in our children's lives now, and in the future.

. Vocational and technical training are critical to Alaska's future.
These programs not only keep kids in school, they also provide a trained
workforce for our economy and support business. If vocational and technical
training is not funded, individuals will suffer, and Alaska's economy will
suffer. Every year I am asked to write a letter of recommendation for a student who wants to be admitted to a school to learn auto mechanics, or nursing. Not every student wishes to pursue college, we need to keep the appropriate curriculum open for them to succeed.

. Please support Senate Bill 84.

Sincerely,

Roland Ginnaty

Subject: SB 84 support

Dear Senators,

I am writing in support of SB84. I believe it is important to do forward funding for schools so they can plan their budget in advance. Schools need adequate funding in order to operate all their programs. Our school in Haines is down to a bare bones operating budget. If our district takes cuts in the form of increasing costs, we would have to cut major programs or grade level teachers.

It is important to put our resources into educating our future.

Thank you for listening to me,
Lisa Andriesen

Subject: Increasing Student Allocations

Dear Senator,

Thank you for considering increasing the student allocation for Alaskan students. As you know, many students struggle to gain the academic skills needed to compete in the job market. There are many reasons why; but I will speak about two in my letter.

Increasing student achievement must be a team effort. When I attended college, one of the theorists I studied was Maslow. Maslow said that before students can learn, they must have their primary needs met and feel safe. This is referred to as "Maslow's Hierarchy". Students coming to school from safe environments where they are well fed, provided adequate clothing to keep warm, and given encouragement to "do your best" goes along way to support student growth. Educators, legislators, health and welfare providers need to come together so we can all raise a child to meet their potential. It is a community effort. Big Brothers Big Sisters has come to Kodiak through the and I am thankful we have a program like this to help us "raise" our kids. This effort came through the efforts of the Kodiak Area Native Association as well as with people at the Child Abuse Prevention Summit. They are coordinating efforts with other agencies in our community. This is an excellent example of team work. This involves a system that works together efficiently to serve the needs of all. Legislative funding needs to encourage agencies working together.

We need dedicated educators who are well trained to work with a variety of cultures and in a variety of settings. We need to be competitive with other states in drawing the best teachers to Alaska. We need to grow our own Alaskan teachers who already understand the critical needs of our communities. This does mean adequate salaries, health compensation, and housing for teachers in communities around our state. It means on-going training so our teachers can reaffirm skills or learn new skills. Teachers do make a difference in a young person's life because they work with them daily not only to improve academic skills, but to help nurture a child in becoming a productive citizen. We need the best teachers in front of our students who are willing to work together to increase student achievement so all Alaskan's will be productive in the work place.

Education is expensive, but the results of a good education can make our state a strong competitive environment. Good teachers and administrators are worth every cent. As I reading teacher, I have had students come into my program four to five years behind. Within two years I have caught them up to their peers or advanced them beyond their peers in the area of reading. I have improved my skill through continued training and on-going education. I am

dedicated to our students. I have worked in this profession for over 30 years and am passionate about student achievement. Other less veteran teachers are coming into the profession with no less passion, but will continue to need ongoing training and support to meet the needs of every student. We need to attract the best educators to this profession.

Thanks,

Fran Yates-March

Subject: support for SB84

Dear Senator Thomas,

I am writing regarding SB84 to strive for more consistent school funding. This bill is so important for the quality of education in our state and I respectfully urge you to support the passage of this bill. I am a parent and PTA board member at Talkeetna Elementary. Our school is doing so much with so little resources, and as it is budget time again our small school is facing yet more cuts its teaching staff. I am deeply concerned that the school will not be able to function as it is suppose to in the face of more cuts. We need investment in education to ensure that our children have the smallest class size possible. With so much focus on oil and gas issues, we tend to forget that our greatest resource is our children. Alaska can afford to to this for our children and should be proud to do so.

As a small rural school our community has very few resources to tap into when school funds are cut. We are already doing a lot with a little. I am so proud and constantly impressed with our teachers as I see how dedicated they are to our children. Please put education funding as a high priority.

I thank you for the work you do, as I know this is a busy and hectic time for you.

Thank you for the opportunity to comment.

Sincerely,

Noelle Carbone

Dear Senators,

I am writing to ask you to support Senate Bill 84, which aids school funding in keeping up with inflation. It's unconscionable to have our school districts with budget shortfalls while the State now projects a 3.4 billion dollar surplus. Our schools really do ensure the future of Alaska, and our childrens' education should not be vulnerable because of political machinations.

Increasing the base student allocation does valuable things for our children and our community. The math and reading tutors are fantastic resources, and smaller class sizes benefit every child. Last year my child was in a kindergarten class that was 31 children during the part of the day when afternoon and morning kids were together. It was way too many children - not just for the teacher to teach, but even for the classroom's square footage. This year she is in a class of 20-24 first graders, and there is an enormous difference! Smaller class sizes should be our priority, not larger! With approximately half of entering UA students needing remedial math and reading, I'm dumbfounded about why we would want to not better fund our elemenatary, middle, and secondary school programs.

Thank you for your work representing us in Juneau - please support SB 84.

Subject: SB84

Dear Senator McGuire and honorable senators,

Funding Alaska's public schools well is the best investment the senate can make in our state's future. All five of my children attended the Haines School, two are college graduates, one will graduate from the University of Colorado in May and two are enrolled at UAA. All of them make Alaska home or plan to after graduation. I have a granddaughter who is a few years away from kindergarten and a big reason her parents live in Haines is because of the school. Our community supports it as much as we are able through property tax, sales tax, donations, volunteers, and booster clubs. Please make sure the state contributes at least as well. I'd hate to see young families leave Alaska for better opportunities for their children. This is a wonderful place to live and work, and for many Alaskans, especially in rural areas, the only option for education remains the public school system. Weak schools lead to unstable communities. You don't have to be a college grad to know stable communities make for a stronger Alaska socially and economically. I trust you'll agree with me and the Haines school board and support SB 84.

Thank you,

Heather Lende

Dear Senators,

I am writing to ask you to support Senate Bill 84, which aids school funding in keeping up with inflation.

In a very fundamental way, the economic future of Alaskan communities rests entirely on the skills we teach our children today. The future innovators and leaders of Alaska are today working hard to learn how to read, how to add, how to understand science. The world will judge Alaska by measuring our student's skills and abilities as they take over from us.

Which of them should we not teach?

As inflation acts to reduce the real per-student investment we provide to our schools, to which child should we say "Sorry, we can't afford to teach you how to read well"? As we stash billions of dollars from the budget surplus into savings accounts, to which parent should we say "We could help you prepare your child for college, but we think it is better to put the money in the bank instead"? As oil companies can find fewer and fewer qualified Alaskans to fill their "highly skilled, highly paid" jobs, forcing them to hire people from outside who will bring their salaries back to their home state, should we really say "yeah, but look at how big our surplus was!" ?

Our children are our future. Our schools require more funding to meet current educational needs, not less. The money we spend on education will come back to us many times over in ecconomic growth.

Thank you for all your hard work, and for being my voice in Juneau. Please support Senate Bill 84

Dear Senators,

I am writing to ask you to support Senate Bill 84, which aids school funding in keeping up with inflation. It's unconscionable to have our school districts with budget shortfalls while the State now projects a 3.4 billion dollar surplus. Our schools really do ensure the future of Alaska, and our childrens' education should not be vulnerable because of political machinations.

Increasing the base student allocation does valuable things for our children and our community. The math and reading tutors are fantastic resources, and smaller class sizes benefit every child. Last year my child was in a kindergarten class that was 31 children during the part of the day when afternoon and morning kids were together. It was way too many children - not just for the teacher to teach, but even for the classroom's square footage. This year she is in a class of 20-24 first graders, and there is an enormous difference! Smaller class sizes should be our priority, not larger! With approximately half of entering UA students needing remedial math and reading, I'm dumbfounded about why we would want to not better fund our elemenatary, middle, and secondary school programs.

Thank you for your work representing us in Juneau - please support SB 84.

Members of the Senate Education Committee. I am writing to express my support for CS Senate Bill 84, and act related to funding High School vocational and technical instruction. SB 84 is the right investment at the right time. Providing School Districts funds for high school vocational and technical education will increase high school completion rates and prepare more students for success in future education, work and career training.

RE: Letter of Support for SB84 for use in the legislative committee process

Dear Senator:

Laborers' Local 341 representing over 2,000 Alaskan workers, strongly supports passage of SB 84. Our public schools are the foundation of our nation's greatness. The small annual increases to the base student allocation (BSA), included in SB 84, are essential to maintain a basic level of K-12 education for Alaska's children. We additionally fully support the statutory changes contained in SB 84 regarding vocational instruction funding.

An excellent K-12 education system is essential to economic development of all kinds and a crucial element to ensure a strong state economy. Good schools attract employers and improve employment opportunities. Funding for Alaska's K-12 schools has barely kept pace with inflation over the past 12 years. Adequate funding is an essential component of a good K-12 education system. Without the BSA increases included in SB 84, our real value school funding will decline significantly as inflation rises over the next several years. Providing K-12 education is a constitutional duty of the State of Alaska.

> **Article 7 - Health, Education and Welfare**
> § 1. Public Education
> The legislature shall by general law establish and maintain a system of public schools open to all children of the State . . .

Education funding should accordingly be prioritized not to decrease in real value. In fact, we support a real increase in state education funding, but SB 84 is a good first step.

Serving on the Alaska Workforce Development Investment Board, the AGIA Steering Committee, and as an active member of many civic organizations, I can confidently say that there is overwhelming public support for increasing vocational education opportunities in our high schools. Unfortunately, the structure of the current school funding formula is inhibiting improvements to vocational education. We strongly support the revisions proposed by SB 84 to create a separate "high school vocational and technical instruction" funding component within the formula. This is an absolutely necessary first step toward addressing the growing demand for vocational training.

We request the support of all Alaskan legislators and executive branch officials toward the passage of SB 84.

Sincerely,

A.J. "Joey" Merrick II

SENATE EDUCATION COMMITTEE

April 4, 2011

Commissioner Hanley, Co-Chair
Commissioner Streur, Co-Chair
Alaska Early Childhood Coordinating Council
Alaska Department of Education
& Early Development
PO Box 110500
Juneau, AK 99811-0500

Commissioners Hanley and Streur:

On behalf of the Senate Education Committee, co-chair Senator Thomas and I would like to thank the Department for the presentation Director Curran gave on Friday, April 1. The data provided on Alaska's pre-kindergarten pilot program was very thorough and informative. We are glad to see the program has had such positive results.

Over the interim, co-chair Thomas and I will continue the committee's work on studying pre-kindergarten programs in the state. The recently formed Early Childhood Coordinating Council is of particular interest to us, and we welcome any opportunity to participate in council meetings or events. We would also like to request periodic updates on the work being conducted, and hope to have regular communication with council members for the purpose of information sharing.

With that in mind, we would appreciate notification of your ECCC meeting schedule when it is developed and would appreciate an opportunity to meet in September and November to keep our committee apprised of the ECCC progress and to lend any assistance deemed helpful.

Best Regards,

Senator Kevin Meyer, Co-Chair

Subject: TRS - Daniel Walsh question

Dear Senator Thomas,

I have worked with my staff colleague Willie Anderson (NEA-Alaska since 1987) to research the question you presented me last week via a Daniel Walsh. This questions deals with NEA-Alaska service for the union and how that can be attributed to retirement.

During the SB 141 fight in 2005 they did bring up and drive a nail into the coffin to no longer have service for NEA-Alaska be TRS able. We did not really protest because this was clean up language that had been on the books since I believe 1974 but inactive since the early 80's. The last grandfathered NEA-Alaska employee (Jim Alter) retired in 2000.

Our locals with full time release presidents (Anchorage, Fairbanks, Mat-Su, Kenai) are able to stay in the system because they are still considered employees of the school district and their salary is reimbursed by the local. When one becomes NEA-Alaska President an agreement must be reached with the local school district where the President comes from (Currently Lower Kuskokwim – Barb Angaiak) and NEA-Alaska. I believe Bill Bjork -Fairbanks and Rich Kornberg-Anchorage and others before them (and my time) were under this agreement

The statute that was repealed was **AS 14.25.045** in 2007.

I have not heard of a TRS audit attempting deny NEA members years for *Past NEA Employment time*. I can't imagine this type of attempt passing legal and constitutional muster, but I am not an attorney.

If you wish for me to do more research or to have further discussions please let me know. I will return to Juneau on April 3 and will be in Juneau until April 19. My cell is 354-3765 and my number in Juneau is 907-586-3090 Ext: 328.

Thanks for all that you do for NEA-Alaska members!

Dear Senator Thomas,

Please support Senate Bill 84 that would increase the BSA (not SB 97).

I have 3 children in the Sitka School District & I myself attended Sitka's schools from kindergarten through 12th grade. The lack of funding is quite evident in the lack of programs that I benefited from versus what is available to my children.

All of Alaska's schools need more money to better serve our students.

Sincerely,
Richelle Murphy

Co-Chairs, Senate Education Committee

FROM: **Senator Johnny Ellis**

RE: **Hearing Request for Senate Bill 107 – An Act making special appropriations for new engineering buildings for the University of Alaska in Anchorage and Fairbanks.**

I am respectfully requesting that SB 107 be scheduled for a hearing in the Senate Education Committee at your earliest convenience.

SB 107 offers an important opportunity to invest in Alaska's development and progress by supporting new engineering facilities at the University of Alaska Anchorage and University of Alaska Fairbanks.

Included in this packet:

- A current version of SB 107 27-LS0462\M
- Sponsor Statement
- Letters of support
- Supporting Material

Other back up will be provided soon.

Thank you.

Senator Johnny Ellis, State Capitol, Rm. 119, Juneau, AK 99801, Phone: (907) 465-3704, Fax: (907) 465-2529, email: Senator.Johnny.Ellis@akleg.gov

SENATOR JOHNNY ELLIS
RULES COMMITTEE CHAIR

SPONSOR STATEMENT – SENATE BILL 107

SB 107 – An Act making special appropriations for new engineering buildings for the University of Alaska in Anchorage and Fairbanks.

SB 107 will keep engineers living and working within our state by appropriating $50 million for the design and construction of new engineering facilities at the University of Alaska Fairbanks and $75 million for the design and construction of new engineering facilities at the University of Alaska Anchorage.

Alaska faces a shortage of qualified engineers and some companies are resorting to sending Alaska's engineering design work outside. Shortages are especially apparent for surveyors and electrical, mechanical, mining and petroleum engineers:

- Many of the engineers working in Alaska now are not Alaska residents, up to 35% in some fields
- Only 18% of engineers working in Alaska have degrees from an Alaska institution
- Alaska is nearly last in the US for graduating engineers

To respond to the state's need, the University of Alaska Board of Regents set a priority to double annual engineering graduates by 2014, to 200 per year. UA baccalaureate engineering majors have grown significantly, nearly doubling from just over 500 in FY03 to more than 1000 in FY10. UA engineering programs are succeeding at recruiting and training more engineers, but are facing daunting shortages of lab and classroom space.

The space shortages UA engineering programs face are severe. Engineering programs across the country offer on average 120 gross square feet (GSF) per student. UAA's program currently has access to only one-third the average at 44 (GSF). The recent UA funded UA Engineering Plan by consultant Ira Fink and Associates details the additional space needs at each of the UAA and UAF campuses. The recommendation was a minimum of 74,968 (GSF) is needed at UAA and 43,058 (GSF) at UAF.

More engineering resources are a critical component of economic development and growing our own Alaskan workforce. Engineers and surveyors play key roles in the planning, design and management of any resource development, construction or development projects. For Alaska to move forward and keep our promise to develop our resources, we will need "Alaska Grown" engineers.

University of Alaska
UA Engineering Plan 2010

DRAFT REPORT (Presented to Regents February 17-18, 2011)
January 24, 2011 (Draft E1)
By UA hired consultant, Ira Fink and Associates, Inc.
See http://www.alaska.edu/bor/agendas/2011/feb17_18/110217rel01.pdf
Extracted Text

Page ES-9

• **Degree Increases:** Based on historical enrollments and projections in the Engineering Plan 2010, baccalaureate engineering degrees are expected to increase to 103 by spring 2014 at UAA and to 99 by spring 2014 at UAF. The Regents' target of 200 undergraduate baccalaureate degrees being awarded at the University of Alaska should be reached in spring 2014.

Page ES-11

• **UAA Engineering Space Needs Projection:** For projection purposes, space needs were projected for both campuses at 1,676 asf per faculty based on a benchmark analysis of ten other schools and colleges of engineering. Based on this benchmark, the UAA School of Engineering should have 64,526 asf (107,543 gross square feet) of space. With its current existing space of 15,309 square feet, and the ability to gain back 4,278 square feet used for other programs in the UAA Engineering Building, the current space deficit for engineering at UAA is 44,939 asf, or about 74,898 gross square feet. Registrar-assigned classroom space used by UAA would add another 2,194 asf (3,657 gross square feet). The total space needs deficit is 78,555 gross square feet.

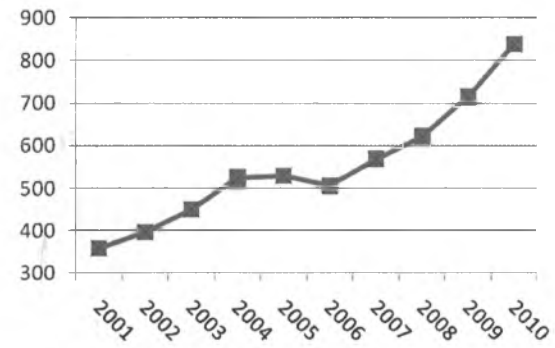
• **UAF Engineering Space Needs Projection:** At UAF, the 43.5 faculty at 1,676 asf per faculty would lead to a current space need of 72,906 asf. Deducting the current CEM space of 47,071 square feet leaves a CEM space deficit of 25,835 asf, or about 43,058 gross square feet. With the addition of Registrar-assigned classroom space of 6,730 square feet, the total UAF CEM space needs is 32,565 asf, or about 54,275 gross square feet.

Pages R-3 to R-4

RECOMMENDATIONS

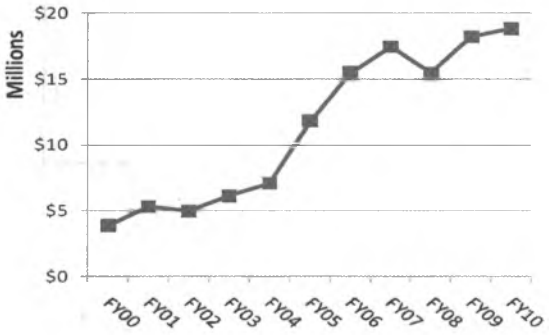
1. Bachelor of Science Degrees: UAA and UAF should maintain a minimum of graduating 200 undergraduate trained engineers annually.

2. New Facilities: UAA and UAF should begin detailed facility programming and conceptual design for new engineering buildings on their campuses.



A major challenge to the UAA and UAF programs is the inadequacy of space devoted to engineering in general and engineering teaching laboratories in particular. As the photographs in this report indicate, the engineering laboratories themselves are cramped and full. Providing adequate space for hands-on learning, for the ability to set up and maintain projects, and for the opportunity to be in the laboratory in off hours, constitute opportunities that cannot be had at present because of the lack of space.

This study calculates the space deficit at UAA SOE to total 44,939 assignable square feet (asf) (74,898 gross square feet). This is in addition to the existing School of Engineering space, which totals 15,309 asf (25,515 gsf) plus an additional 4,278 asf (7,130 gsf) from space in the UAA Engineering Building that is currently assigned to the College of Health and Social Welfare for the WWAMI medical program.



At UAF, the CEM space deficit is computed to be 25,835 asf (43,058 gsf). This is in addition to the 47,071 asf (78,452 gsf) of existing CEM space and 6,730 asf (11,217 gsf) of Registrar-assigned classrooms.

UAF College of Engineering and Mines
Update and Briefing - April 2011

CEM Student Enrollment

INE Research Funding

UAF Engineering Space Projection

Total UAF Engineering Space Need (43.5 UAF Faculty × 1,676 asf/Faculty)	72,906 asf	=	121,510 gross square feet
Existing CEM Space	− 47,071	=	− 78,452
CEM Space Deficit	25,835 asf	=	43,058 gross square feet
Plus Registrar-Assigned Classroom Space	+ 6,920	=	+ 11,533
Total Net Additional UAF CEM Space Needs	32,755 asf	=	54,591 gross square feet
$18 Million Research Income/$200 per sf	90,000 gsf		
GSF to ASF Conversion at 0.60	54,000 asf		
Existing INE Space	35,040 asf		
INE Space Deficit	18,960 asf	=	31,600 gross square feet

Teaching Need

Research Need

College of Engineering and Mines & Institute of Northern Engineering

The College of Engineering and Mines (CEM) is growing fast, extending its ability to serve Alaska. CEM, formed in 2004, incorporated the resource-based and traditional engineering programs along with the Institute of Northern Engineering (INE - UAF's engineering research arm) into one strong unit.

Program Growth

- In 2006 UA President Hamilton announced the goal of doubling the graduation rate of engineers. CEM is well on the way to achieving that goal with a 70% increase in enrollment since 2006.
- The UAF computer science program joined CEM in 2010.

Research Accomplishments

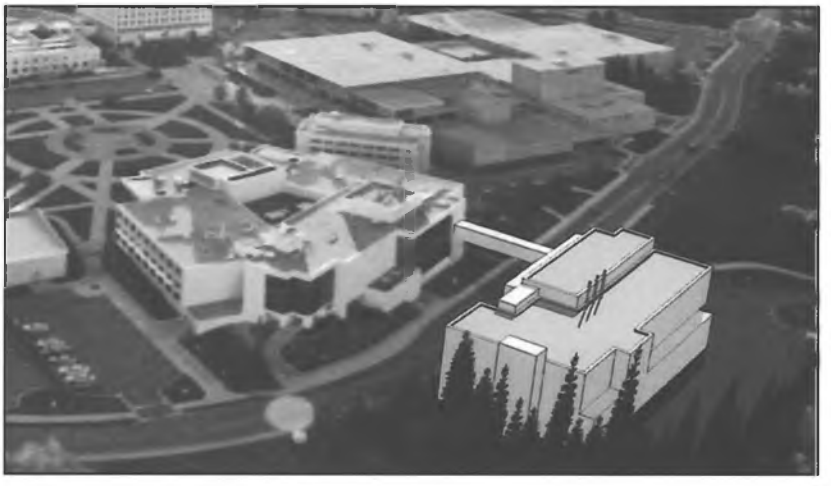
- INE research funding is on a growth trend toward $24M over the next few years after starting at $6M when the college was formed in 2004.
- The newly formed Alaska Center for Energy and Power is addressing State needs for energy through applied research and testing.

Facilities Needs

- **The recently completed UA Engineering Plan 2010 identified an additional 86,200 gross square feet of additional engineering space needs at the UAF campus in order to accommodate current teaching and research activities.**
- FY10 funding for engineering facilities planning is being used to carry out programming and planning for the new UAF engineering building. The RFP for planning and design services has been issued and proposals are due back mid-April.

Student Success

- The NASA-funded Student Rocket Project launched its fifth sounding rocket from Poker Flat Research Range in January 2009.
- The UAF ASCE Steel Bridge Team just won the 2011 Northwest Regional Title and will be attending Nationals later this spring.
- UAF's team entered the 2011 Society of Automotive Engineers Clean Snowmobile Challenge and won 1st place in the design competition, unseating U of Wisconsin (first place title winner three years in a row).
- For the last two years, CEM students from the UAF Microgravity project have won flight time on NASA's zero-G aircraft. They are now scheduled to launch a "CubeSAT" in 2013 as part of a NASA-funded program.



SRP-5 is launched from Poker Flat, Jan 2009

UAF to launch its own "CubeSAT" in 2013 as part of a NASA program

Senator Johnny Ellis
Alaska Senate
State Capitol Room 119
Juneau, AK 99801

Forwarded by email

Dear Senator Ellis:

Funding is urgently needed for a new engineering building at the University of Alaska Anchorage.

Ballooning School of Engineering enrollments have created a space crisis. If funding was available today, the time consuming process of design, procurement, and construction would not allow a new building to be occupied for upwards of 10 years. Enrollments have tripled in the last 10 years. The word **crisis** is well justified.

The UAA School of Engineering (SOE) provides direct ready access to an engineering education for the more than 50 percent of Alaska's population located in Anchorage and Mat-Su. It also draws from the entire state. Enrollments will continue to grow, if faculty and facilities keep pace to accommodate them.

Beginning about 1998, a concentrated seven-year effort resulted in accredited programs in computer, electrical, and mechanical engineering. Prior to 2005, it was necessary to leave the area to obtain this type of higher education. High School graduates and working residents seeking continuing education are only beginning to recognize and take advantage of the new programs. Enrollment demands must be served.

Unfortunately, the UA 2010 Engineering Report initiated by Regents in response to this dramatic enrollment growth is only marginally competent. UAA needs 140,000 sq.ft. of additional engineering classroom and laboratory space by 2015, which is greatly understated in the Report. This is another example of typical regional politics, which have compromised development at UAA since the beginning.

At the UAA SOE, laboratory equipment is now rotated in and out of storage to meet multi-disciplinary class schedules. This compromising handicap is no way to operate a school of engineering. Accreditation is at risk. Hiring and retention of high quality faculty will suffer. Enrollments may have to be capped.

I have helped to push development of higher education in Anchorage and Southcentral Alaska, since Anchorage Community College only existed in evenings at West High School and on Elmendorf Air Force Base. Since the late '90s, my efforts have been focused upon providing local access to contemporary engineering educations. I have a unique perspective about this from long-time engagement as a physical scientist and engineer, and also as a senior official in the Alaska Section of the Institute of Electrical and Electronics Engineers (IEEE). It is extremely important to meet the public demand for higher education where it exists.

If we don't provide ready local access, the majority of our youth seeking an engineering education will attend universities Outside. After graduation, they seek nearby employment and get married, resulting in a lost resource to Alaska. Our youths are one natural resource we cannot afford to keep shipping Outside. Home-grown Alaskan engineering graduates provide a stable workforce that does not constantly transfer in and out of the state. Important economic factors are involved.

A stable engineering workforce contributes to the existing economy, and importantly to a developing economy. There is a need to move away from an economy almost totally based on extraction of natural resources. Resident engineers can also establish new industries based on innovative products. Ready access to a public higher education is necessary to bring this about. The key word is Access!

I am well connected from past service on a number of internal UAA bodies dating to 1980, including Chair of the Chancellor's Advisory Council and founder of the SOE Advisory Board. However at the present time I am not a member of an internal body, which provides latitude to independently represent the public's best interest. My background offers insight about current and future university program needs, and also the legislative process. I am aware of the internal push for funding.

I know you have strongly supported UAA in the past, and unfortunately the UA Administration is only now beginning to utilize $2M of your prior $10M appropriation for additional engineering planning at UAA and UAF. Again, regional politics are at work, and UA President Gamble's unwise Fisher Report is going to greatly complicate matters. Over the many years, this has been highly frustrating.

While contacting you I have felt a need to re-establish credibility, because it has been some time since I've worked directly with the Legislature on university matters. This was ongoing in earlier years. I will be happy to serve as a resource for coordination and in-depth information, on or off the radar. Please support the urgent need to fund a new engineering building at UAA.

Sincerely,

Robert L. Baldwin

Subject: UAA Facility and Funding

Dear Senator Ellis,

It has come to my attention that you submitted legislation that would fund new facilities and infrastructure at the University of Alaska. As a Director of Human Resources at USKH, Inc I often recruit and hire engineers from various disciplines. Too many times I have had to hire individuals from outside of Alaska due to a void in the local applicant pool. An investment in UAA would help remedy this and allow my company and other local firms the opportunity to hire locally and provide graduates with opportunities here in our great state.

Thank you for introducing the legislation. It is my sincere hope that it gains the needed support.

Regards,

Fred S. Millen, SPHR
Director of Human Resources

Subject: Re: Seeking your support for Engineering Facilities - SB107

Dear Senator Ellis,
I am writing to let you know I am in full support of Senate Bill SB107 to fund the construction of new engineering buildings at UAF and UAA. As a 15-year engineer working in Alaska, I have watched the market for engineers increase over the years. The current engineering facilities at UAF and UAA are inadequate to support the demand for engineering graduates in this state.
Thank you for your sponsorship of this bill.
Sincerely,
Mike Hendee

University of Alaska
UA Engineering Plan 2010

DRAFT REPORT (Presented to Regents February 17-18, 2011)
January 24, 2011 (Draft E1)
By UA hired consultant, Ira Fink and Associates, Inc.
See http://www.alaska.edu/bor/agendas/2011/feb17-18/110217ref01.pdf
Extracted Text

Page ES-9

• **Degree Increases:** Based on historical enrollments and projections in the Engineering Plan 2010, baccalaureate engineering degrees are expected to increase to 103 by spring 2014 at UAA and to 99 by spring 2014 at UAF. The Regents' target of 200 undergraduate baccalaureate degrees being awarded at the University of Alaska should be reached in spring 2014.

Page ES-11

• **UAA Engineering Space Needs Projection:** For projection purposes, space needs were projected for both campuses at 1,676 asf per faculty based on a benchmark analysis of ten other schools and colleges of engineering. Based on this benchmark, the UAA School of Engineering should have 64,526 asf (107,543 gross square feet) of space. With its current existing space of 15,309 square feet, and the ability to gain back 4,278 square feet used for other programs in the UAA Engineering Building, the current space deficit for engineering at UAA is 44,939 asf, or about 74,898 gross square feet. Registrar-assigned classroom space used by UAA would add another 2,194 asf (3,657 gross square feet). The total space needs deficit is 78,555 gross square feet.

• **UAF Engineering Space Needs Projection:** At UAF, the 43.5 faculty at 1,676 asf per faculty would lead to a current space need of 72,906 asf. Deducting the current CEM space of 47,071 square feet leaves a CEM space deficit of 25,835 asf, or about 43,058 gross square feet. With the addition of Registrar-assigned classroom space of 6,730 square feet, the total UAF CEM space needs is 32,565 asf, or about 54,275 gross square feet.

Pages R-3 to R-4

RECOMMENDATIONS

1. Bachelor of Science Degrees: UAA and UAF should maintain a minimum of graduating 200 undergraduate trained engineers annually.

. . . . .

2. New Facilities: UAA and UAF should begin detailed facility programming and conceptual design for new engineering buildings on their campuses.

A major challenge to the UAA and UAF programs is the inadequacy of space devoted to engineering in general and engineering teaching laboratories in particular. As the photographs in this report indicate, the engineering laboratories themselves are cramped and full. Providing adequate space for hands-on learning, for the ability to set up and maintain projects, and for the opportunity to be in the laboratory in off hours, constitute opportunities that cannot be had at present because of the lack of space.

. . . . .

This study calculates the space deficit at UAA SOE to total 44,939 assignable square feet (asf) (74,898 gross square feet). This is in addition to the existing School of Engineering space, which totals 15,309 asf (25,515 gsf) plus an additional 4,278 asf (7,130 gsf) from space in the UAA Engineering Building that is currently assigned to the College of Health and Social Welfare for the WWAMI medical program.

At UAF, the CEM space deficit is computed to be 25,835 asf (43,058 gsf). This is in addition to the 47,071 asf (78,452 gsf) of existing CEM space and 6,730 asf (11,217 gsf) of Registrar-assigned classrooms.

Alaska Professional Design Council PO Box 100515 Anchorage AK 99510-0515

LEGISLATIVE LIAISON COMMITTEE
2011 POSITION STATEMENT

MEMBER SOCIETIES

Alaska Society of Professional Engineers

Alaska Society of Professional Land Surveyors

American Congress on Surveying & Mapping Alaska Section

American Institute of Architects Alaska Chapter

American Society of Civil Engineers Alaska Section

American Society of Landscape Architects Alaska Chapter

American Council of Engineering Companies of Alaska

Professional Engineers in Private Practice Alaska Chapter

American Society of Interior Designers

Structural Engineers Association of Alaska

The Alaska Professional Design Council (APDC) is a consortium of professional societies representing architects, engineers, land surveyors, landscape architects and other design professionals. Our member organizations have a combined membership of over 1,500 and represent approximately 5,000 licensed professionals. APDC addresses issues of concern to the various design professions through workshops, seminars, ad-hoc committees, standing committees, and governmental task forces. APDC also receives sustaining member support from 30 Architectural and Engineering firms throughout the State of Alaska.

One component of APDC activity is the Legislative Liaison Committee (LLC). The LLC is a standing committee that has been actively involved in legislation affecting the design community since the 1970's (actually predating APDC).

APDC works very closely with the Architects, Engineers, and Land Surveyors (AELS) Board to further the interests of the regulated design professions in keeping with the protection of the health, safety and welfare of the public. APDC generally supports the efforts of the AELS Board.

The following is a discussion of the primary issues of concern to APDC and our membership this legislative session:

Expand QBS to cover all recipients of state funds (APDC, ACEC) – The State of Alaska currently requires that designers on state funded public works projects be selected using a Qualifications Based Selection (QBS) criteria. This methodology results in the best qualified designer being selected for public projects. Political subdivisions of the state also design and construct public projects, and some of those entities attempt to utilize design fee, or cost as a component of the selection process. Due to the complex nature of design projects, APDC and ACEC strongly believe that it is in the public's interest to utilize QBS for all public projects, and are therefore working to extend the state requirement to use QBS on public works projects to political subdivisions receiving state funding for public works projects.

Specialty contractor exemption provision modification (AELS Board issue) – The AELS Board has expressed a concern that some work is being designed and installed without the appropriate oversight of a registered design professional. The Board is considering legislation that is intended to insure that the work completed by a specialty contractor under the exemption that exists in statute, is appropriately designed, and has the appropriate level of design professional involvement.

Alaska Professional Design Council
PO Box 100515
Anchorage AK 99510-0515

Support a state funded transportation program (APDC) – Alaska's essential transportation infrastructure is highly dependent on federal funding. In order to insure that Alaskans will have a safe, secure transportation system, it is vitally important for the state to implement a stable state funded transportation infrastructure program.

Support capital funding for deferred maintenance and repair of the state's public infrastructure (APDC) – APDC supports state funding for funding of capital projects that decrease the level of deferred maintenance and contribute to the repair of public facilities.

University of Alaska Design Programs and Funding (APDC) – APDC supports state funding for education in the engineering, surveying programs at the University of Alaska. Alaska faces a serious shortage of design professionals, especially in anticipation of major projects that may be occurring in the near future such as a gas line and other such projects. This is an issue of national proportion as evidenced by national professional organizations and major US engineering companies repeatedly emphasizing the declining number of engineering and design profession graduates nationwide. In order to keep the labor supply up with the demand, the University of Alaska system should be graduating about 200 entry level engineers each year. Currently, the University is producing roughly have of that demand. The University of Alaska system has had recent success in recruitment through programs such as the Alaska Native Science and Engineering Program [ANSEP], and the Bachelor of Science in Engineering [BSE] program. The University also has developed an increased number of pathways into engineering programs from all UA campuses. There has been a surge of lower division enrollment in the UA engineering programs, and this trend is expected to continue. The University also has a growing Geomatics (Surveying) program that needs additional support. The program has had to turn away applicants in recent years due to lack of space. There is also an interest in developing a School of Architecture in Alaska, and increasing technical support program offerings such as drafting, construction technology, and project management. While no specific proposal for a School of Architecture exists, APDC supports ongoing discussions between architects and University officials regarding establishment of an architectural program that can respond to growing demand in Alaska.

A steady supply of engineers, architects, surveyors and related design professionals into the Alaska workforce will have a multiplying effect on economic development in the State. This requires an increased investment in the UA design programs, and a look to the future for development of new programs.

During the last session of the State Legislature funds were provided for the University of Alaska to accomplish a Planning Study and Design for engineering facilities at the Fairbanks and Anchorage campuses. With the engineering planning study concluding and the designs for the two facilities about to begin, construction funding is the next step to assure that funds are available for continuous of our much needed investment into future.

Convert Landscape Architect position on AELS Board from non-voting, to full voting member (ASLA) – The Alaska Society of Landscape Architects supports the conversion of the current non-voting position on the AELS Board to full voting status. The current position requires a significant commitment of time and energy for the individual appointed to the position, but provides no ability to impact the decisions of the AELS Board.

Senator Bettye Davis
State Capitol Room 30
Juneau, Ak 99801

Re: SB 107: UAA Engineering Building

Dear Senator Davis:

I have been on the University of Alaska Anchorage School of Engineering Advisory Board since its inception. Since our involvement, we have seen engineering enrollments increase exponentially at UAF, especially in the mechanical and electrical engineering areas since the introduction of the BSE program in engineering. The program has attracted so many students that the classrooms and labs are totally overwhelmed, and not adequate to properly provide the instruction needed for the program.

I understand that you are a champion of education, so I urge you to support SB 107 which addresses appropriation of $75 million for the design and construction of a new engineering building at the UAA campus, in addition to $50 million for engineering facilities at the UAF campus.

The building will enable many of our students to get their engineering education right here in Anchorage, so they do not have to move elsewhere, or abandon their desire to become engineers. Additionally, the graduates of the engineering programs at UAA will fill open jobs that are presently going to out of state engineers because there are not enough people to fill the engineering positions.

Thank you in advance for your support of this essential bill.

Very truly yours,

Richard S. Armstrong, P.E.

Cc: Senator Johnny Ellis

March 9, 2011

Senator Kevin Meyer
State Capitol Room 103
Juneau, AK 99801

RE: Support for UAA and UAF Engineering Facilities Construction Funding

Honorable Senator Meyer,

I am writing you today to request your support in meeting the critical needs for engineering related professionals in Alaska. As you may be aware, there is a tremendous demand for engineering professionals not only in our state, but nationwide. As a resource development state, Alaska must recognize the vital role that engineers, architects, surveyors and construction managers play in the development of our state. With many high profile Alaska projects planned for the future, combined with the critical need to address vital infrastructure upgrades throughout the state, the demands on our professional industry are so great that we must often look outside of the state to find professional and technical resources needed to perform the work.

I am proud to state that I am a lifelong Alaskan, having been born, raised and educated in Alaska. I earned my civil engineering degree from UAF and my MBA degree from UAA, and I have been working on engineering projects in Alaska for well over 30 years. As I advanced in my engineering and management career, I recognized the value that graduates from either UAF or UAA engineering programs had over other out-of-state graduates. Many of the projects that I have been involved with are rural in nature since I am Inupiaq from Barrow, Alaska and I have worked for Alaska Native Corporations or the North Slope Borough throughout my career. Graduates from either UAF or UAA have a fundamental understanding of the challenges of working in a rural community, whether it has to do with awareness of Alaska Native cultures, environmental extremes, permafrost or logistical challenges in construction.

Unfortunately, the University of Alaska (UA) is not meeting the current or projected needs of our engineering industry. A recent study was commissioned by the UA to look at the overall UA engineering program and it made the recommendation that both the UAA and UAF engineering programs require additional facilities to meet the demands of industry. I have heard that a Bill may be introduced soon for supporting the construction of engineering facilities at both UAA and UAF. I strongly support this effort and as one of your constituents, I would request your assistance by co-sponsoring this proposed Bill and supporting it too.

Respectfully,

Richard S. Reich

6771 Lauden Circle
Anchorage, AK 99502-3973

April 2, 2011

Senator Lesil McGuire
State Capitol, Room 125
Juneau, AK 99801-1182

RE: In support of construction of University of Alaska Engineering facilities:

Dear Senator McGuire:

I have been involved with the history of this particular project for many years now, first through my actions on the Board of the Alaska Chapter of the American Institute of Architects, and now also as a member of the Alaska Professional Design Council and the UAA School of Engineering Advisory Board.

I encourage you to support legislation for building funds for new Engineering facilities at ***BOTH*** UAA and UAF. Construction funds are needed almost immediately since lack of space and adequate technology in existing spaces is making it hard for students to graduate in a timely fashion, even threatening the accreditation of the UAA program. The existing buildings at both UAA and UAF are more than 30 years old, are under sized, and do not contain appropriate laboratories for undergraduate programs.

The UA Board of Regents recognized the need for expanding engineering education in the state and set objectives for the programs in 2007. This included the annual graduation of 200 undergraduate trained engineers, 20 baccalaureate construction manager graduates and 40-60 certificate and construction technology graduates by 2012. The UA Engineering Report 2010 prepared by Ira Fink and Associates cites industry demand for 200 Bachelor of Science engineering graduates per year by 2014. In the past five years both programs together have graduated between 50 and 100 students each year. It will take both programs to meet industry need.

Enrollment in the newly accredited UAA programs (accredited in 2009) has sky rocketed from under 10 in 2004 to over 70 in 2010. There are currently almost 200 seniors with engineering majors trying to graduate, but they can't get the courses they need. The Fink report found that 75,000 square feet of building are needed at UAA to meet current enrollment requirements for accreditation, and 54,000 square feet for the UAF program. This is to meet current need, not some projection of future growth.

Alaska is a developing state, with a large demand for engineers and other design and construction professionals to build the infrastructure and access the state's resources. Student and industry demand exists for the programs. Please support this growth industry through funding education facilities to meet the need, facilities adequate to the task, meeting national standards for accreditation, student and faculty retention.

Sincerely,

Catherine Call, AIA

Forwarded by email

Dear Senator Ellis:

Funding is urgently needed for a new engineering building at the University of Alaska Anchorage.

Ballooning School of Engineering enrollments have created a space crisis. If funding was available today, the time consuming process of design, procurement, and construction would not allow a new building to be occupied for upwards of 10 years. Enrollments have tripled in the last 10 years. The word **crisis** is well justified.

The UAA School of Engineering (SOE) provides direct ready access to an engineering education for the more than 50 percent of Alaska's population located in Anchorage and Mat-Su. It also draws from the entire state. Enrollments will continue to grow, if faculty and facilities keep pace to accommodate them.

Beginning about 1998, a concentrated seven-year effort resulted in accredited programs in computer, electrical, and mechanical engineering. Prior to 2005, it was necessary to leave the area to obtain this type of higher education. High School graduates and working residents seeking continuing education are only beginning to recognize and take advantage of the new programs. Enrollment demands must be served.

Unfortunately, the UA 2010 Engineering Report initiated by Regents in response to this dramatic enrollment growth is only marginally competent. UAA needs 140,000 sq.ft. of additional engineering classroom and laboratory space by 2015, which is greatly understated in the Report. This is another example of typical regional politics, which have compromised development at UAA since the beginning.

At the UAA SOE, laboratory equipment is now rotated in and out of storage to meet multi-disciplinary class schedules. This compromising handicap is no way to operate a school of engineering. Accreditation is at risk. Hiring and retention of high quality faculty will suffer. Enrollments may have to be capped.

I have helped to push development of higher education in Anchorage and Southcentral Alaska, since Anchorage Community College only existed in evenings at West High School and on Elmendorf Air Force Base. Since the late '90s, my efforts have been focused upon providing local access to contemporary engineering educations. I have a unique perspective about this from long-time engagement as a physical scientist and engineer, and also as a senior official in the Alaska Section of the Institute of Electrical and Electronics Engineers (IEEE). It is extremely important to meet the public demand for higher education where it exists.

If we don't provide ready local access, the majority of our youth seeking an engineering education will attend universities Outside. After graduation, they seek nearby employment and get married, resulting in a lost resource to Alaska. Our youths are one natural resource we cannot afford to keep shipping Outside. Home-grown Alaskan engineering graduates provide a stable workforce that does not constantly transfer in and out of the state. Important economic factors are involved.

A stable engineering workforce contributes to the existing economy, and importantly to a developing economy. There is a need to move away from an economy almost totally based on extraction of natural resources. Resident engineers can also establish new industries based on innovative products. Ready access to a public higher education is necessary to bring this about. The key word is Access!

I am well connected from past service on a number of internal UAA bodies dating to 1980, including Chair of the Chancellor's Advisory Council and founder of the SOE Advisory Board. However at the present time I am not a member of an internal body, which provides latitude to independently represent the public's best interest. My background offers insight about current and future university program needs, and also the legislative process. I am aware of the internal push for funding.

I know you have strongly supported UAA in the past, and unfortunately the UA Administration is only now beginning to utilize $2M of your prior $10M appropriation for additional engineering planning at UAA and UAF. Again, regional politics are at work, and UA President Gamble's unwise Fisher Report is going to greatly complicate matters. Over the many years, this has been highly frustrating.

While contacting you I have felt a need to re-establish credibility, because it has been some time since I've worked directly with the Legislature on university matters. This was ongoing in earlier years. I will be happy to serve as a resource for coordination and in-depth information, on or off the radar. Subject: Support for SB107: Engineering Building at UAA

Hello Senator Lesil McGuire. I am a resident in the Sand Lake Area and a student at UAA in the School of Engineering. I ask that you support this bill. After 4 years it is very clear that we need better facilities for engineering education.
There is a lack of proper lab space and insufficient/inappropriate classrooms available. For example, having a programming course in a room without computers to learn/practice on.

Thank you for your consideration.

Subject: SB107 engineering building yesterday

Please share my comments with others on the committee...

We recently competed in this competition:
http://www.newsminer.com/view/full_story/12475090/article-Fairbanks-engineering-students-compete-in-12th-Annual-Clean-Snowmobile-Challenge?

We could not work on the snow machine in our current UAF Engineering Building due to not having adequate work space and there is no space that meets current fire codes for vehicles.

Currently we have to do this work off-campus with team member's private garages.

Compared with other schools at this competition we are embarrassed to have this lack of support.

As the story illustrates we finished 8th out of eleven teams. If we had a convenient and dedicated work space I promise you we would have done much better.

I believe it is important to compete and do well in these academic competitions because it inexpensively adds value to the UAF diploma.

This would be direct consequence in funding an engineering building in Fairbanks.

ENGINEERING
SPECIAL SECTION

On the Front Lines:
Engineers Critical to Alaska's Development
Huge potential for local graduates

By Vanessa Orr

In a state as underdeveloped as Alaska, the need for engineers is crucial. From developing natural resources to building infrastructure to creating communications systems that link remote villages, the jobs that engineers perform are required to move Alaska forward.

"Only one and a half percent of the state is fully developed, and it is critical that engineers be on the front lines of that process," explains Architects, Engineers and Land Surveyors Board Chair Richard Heieren, PS, RCH Surveys, Ltd. "There is a big push for the continued creation of infrastructure to develop our natural resources, and telecommunications are critical because we have so many isolated communities. Whether you are talking about electrical engineers, civil engineers or environmental engineers, they are all critical in the whole process."

To this end, universities within the state are working to educate the next generation of engineers. And the State's Architects, Engineers and Land Surveyors Board, which licenses all engineers within the state, is considering changing its licensing structure to add to the number of branches of engineering for which it provides examinations.

"Alaska presently licenses six branches of engineering: chemical, civil, electrical, mechanical, mining and petroleum, and three of the branches are comprised of several disciplines," explained Richard V. Jones, executive administrator, Architects, Engineers and Land Surveyors Board. "The board is considering going to a general license structure, which would add all of the branches of engineering that the National Council of Examiners for Engineers and Surveyors (NCEES) has an examination for. There would then be a total of 16 branches licensed by Alaska." This idea is currently out for public comment.

The State currently licenses engineers in civil engineering, which includes construction, geotechnical, structural, transportation, water resources and environmental; electrical engineering, which includes control systems, computer, electrical and electronics and power; and mechanical engineering, which includes HVAC and refrigeration, mechanical systems

Alaska Engineering Academies Plan – Overview v1

What is the Alaska Engineering Academies Plan?
Alaska Engineering Academies Plan is a comprehensive mechanism for improving STEM (Science, Technology, Engineering, and Math) performance in high schools across Alaska. It focuses on empowering students to become engineers. However, the pathway to engineering is built upon learning science, technology, and math. So, it is an effective plan for improving student performance in all STEM fields. Also, the PLAN is an excellent mechanism for better preparing students for entering the workforce particularly in areas dependent upon having solid skills in STEM. The Plan includes a procedure for implementing Engineering Academies in secondary schools throughout Alaska in rural and urban areas.

Why are Engineering Academies important?
Engineering is one of the unique professions directly tied to generating economic income. Every construction project for new developmental or infrastructure support depends upon engineers. Thus, it is important to the future of Alaska to keep engineering jobs in the State. It is also important to produce enough home grown engineers to keep entire projects from leaving the State and attract new projects to the State. Increasing the number of students taking STEM courses and improving performance in STEM areas is important to the future of Alaska and our students. A major goal is to improve the competiveness of Alaska and to improve and diversify its ability to compete in the world marketplace.

How was the Engineering Academies Plan created?
The Alaska Engineering Academies Plan resulted from a Memorandum of Understanding agreement titled "Alaska Secondary Engineering Academies" signed on November 17, 2009 by the Alaska Department of Education and Early Development, Alaska Department of Labor and Workforce Development, the Chancellors of UAA, UAF, and UAS, and industry (represented by APICC-Alaska Process Industry Career Consortium). A working group comprised of many representatives including from all signing groups, and from K12 schools districts and programs, developed the Plan over a period of more than a year.

What is an Engineering Academy?
An Engineering Academy is a group of teachers within a school, usually around four or five, that teach a curriculum with an engineering focus. Specific engineering courses are taught each year in grades 9 through 12 that are outcomes based with a high level of quality control. One national model used successfully in Alaska is the Project Lead the Way (PLTW) program. As its name suggests, students learn and apply technical skills to design and construct projects.

How do Engineering Academies attract students to STEM areas and enhance performance?
Obtaining college credit is a major incentive for high school students to take more math and science. Because of the high level of quality control, the engineering courses can be articulated to count for college credit courses for an engineering degree. Often, the engineering courses can be bundled with other courses, such as math and physics, that is then articulated for college credit. Thus, the Engineering Academy becomes a wonderful mechanism for encouraging student to enter STEM areas and empowers them to perform better. In addition to engineering and math, an Engineering Academy can include technical writing course which enables students to write professional communications as well as effective prepare resumes.

What are the Components of an Engineering Academy?
The desired components of an Engineering Academy are listed Table 9 in the Plan (also see below). A few of key elements are the following: 1) attracts students to engineering and other STEM fields, 2) enhances student performance in STEM areas, 3) open to all students, 4) includes current teachers-empowers not replace, 5) provides specialized teacher training, 6) develops capacity for turnkey-operation expandable and adoptable in rural and urban areas, 7) offers a sequence of high quality controlled courses which address state and national standards, 8) articulates standardized courses which are eligible for college credit or transferable between high schools, 9) uses model which is cost efficient per student, and 10) monitors progress toward outcomes based with procedures for national standardized testing and measurement of performance.

What is an example high School course sequence for an Engineering Academy?

What are the desired components and characteristics of an Engineering Academy?

Desired components and characteristics of an Engineering Academy (as derived from literature review, national academies model and experience of Engineering Academies Working Group)
Attracts & Empowers Students
Attracts students to enter engineering and other STEM fields
Enhances student performance in STEM Areas
Availability
Available to all students regardless of race or financial status
Work with existing educational structure and teachers - empowerment of teachers, not replacement
Can be implemented in rural and urban areas
Quality Controlled
Curricula include standards, learning outcomes, sequence and schedule, problems, projects, integrated activities, assessments, and support
Quality controlled to enable articulation for college credit
National standards for quality control and assessment testing
Adoptability & Expandability
Adoptability - can be adopted by schools with a clear pathway for how to proceed
Expandable: can increase student capacity to accommodate large numbers
Summer Camps: adoptable and applicable model for summer camps
Collaborative integration with existing programs: Offered full year and multi-year for middle and high schools with tracks dovetail with current class offerings
Scalable - can be expanded to large number of participating students and teachers in a cost efficient manner
Cost efficient per student compared with other programs i.e. best bang for the buck
Curricula include standards, learning outcomes, sequence and schedule, problems, projects, integrated activities, assessments, and support
Turnkey type program that is comprehensive with a quick implementation ability and support for smooth and efficient operation
Transferability: Quality control in place to enable tranferability of credit from other states to Alaska or between high schools within Alaska
Sufficient number of courses to span across several years of curriculum in a continuous and coordinated manner so that implementation is uninterrupted throughout high school and with ability to span across middle school and reach K6 schools
Measurable Outcomes
Measureable outcomes: Improved GPA, higher performance in STEM areas than non-academy students, higher probability to enter STEM employment fields than non-academy students, higher probability to enter STEM degree programs than non-academy students
National Standardized testing & Assessment
Teacher and Counselor Participation & Training
Teachers receive comprehensive training from a partner university
Training gives teachers full proficiency regardless of previous experience
Professional Development updates for teachers assessible repository of information and references.
Counselor conferences to provide high school guidance counselors with a clear understanding of the program and how it fits within a student's scholastic/academic career path
Integrates teachers and counselors as part of the Academy
Support Network
Affiliated with State and/or National Organization with access to information, support, sourcing, and purchasing
Affiliated with a university degree program
Involvement and participation of teachers and counselors

Engineers Critical to Alaska's Development

Huge potential for local graduates

By Vanessa Orr

In a state as underdeveloped as Alaska, the need for engineers is crucial. From developing natural resources to building infrastructure to creating communications systems that link remote villages, the jobs that engineers perform are required to move Alaska forward.

"Only one and a half percent of the state is fully developed, and it is critical that engineers be on the front lines of that process," explains Architects, Engineers and Land Surveyors Board Chair Richard Heieren, PS, RCH Surveys, Ltd. "There is a big push for the continued creation of infrastructure to develop our natural resources, and telecommunications are critical because we have so many isolated communities. Whether you are talking about electrical engineers, civil engineers or environmental engineers, they are all critical in the whole process."

Photo courtesy of Richard Heieren

To this end, universities within the state are working to educate the next generation of engineers. And the State's Architects, Engineers and Land Surveyors Board, which licenses all engineers within the state, is considering changing its licensing structure to add to the number of branches of engineering for which it provides examinations.

"Alaska presently licenses six branches of engineering: chemical, civil, electrical, mechanical, mining and petroleum, and three of the branches are comprised of several disciplines," explained Richard V. Jones, executive administrator, Architects, Engineers and Land Surveyors Board. "The board is considering going to a general license structure, which would add all of the branches of engineering that the National Council of Examiners for Engineers and Surveyors (NCEES) has an examination for. There would then be a total of 16 branches licensed by Alaska." This idea is currently out for public comment.

The State currently licenses engineers in civil engineering, which includes construction, geotechnical, structural, transportation, water resources and environmental; electrical engineering, which includes control systems, computer, electrical and electronics and power; and mechanical engineering, which includes HVAC and refrigeration, mechanical systems

Left: Richard Heieren, PS RCH Surveys Ltd., Chairman of Architects, Engineers and Land Surveyors Board

and materials, and thermal and fluids systems. It also licenses chemical, mining and petroleum engineers.

If a general licensing structure is approved, the board will begin licensing engineers in 10 other branches including agriculture; architectural; control systems; environmental; fire protection; industrial; metallurgical and material; naval architecture; marine, nuclear and petroleum; and structural.

Engineering as a Career

As the need for engineers in a variety of disciplines continues to grow, so does the need for students interested in an engineering career. Fortunately, that number continues to increase. "Schools that provide engineering and surveying programs are seeing enrollments increase, which is very promising," said Heieren. "And for every engineer who gets through the system here in Alaska, there's another engineer outside the state who wants to move to Alaska. I'd estimate that half of the engineers currently working in the state are from Alaska, and half have come from Outside."

Students looking for a career in the field don't have to look very far. The University of Alaska Anchorage (UAA), for example, offers both undergraduate and graduate programs in the field. "On the undergraduate level, we offer degrees in civil, electrical, mechanical, computer systems and geometrics," explained Rob Lang, Ph.D., PE, dean and professor of civil engineering at UAA. "On the graduate level, we offer master's programs in civil engineering, Arctic engineering, engineering management and project management."

According to Lang, the university's civil engineering program concentrates on basic infrastructure needs such as roads, bridges, buildings, water treatment and wastewater treatment. Its electrical engineering degree focuses on power generation and transmission, and its mechanical engineering degree focuses mainly on HVAC systems for Alaska.

"The computer systems degree concentrates on software programming with an emphasis on hardware utilized, and the geomatics program focuses on land surveying on a broad scale from property boundaries to construction

CELEBRATING 50 YEARS in 2010

How do you develop resources in Alaska's harsh environment?
Ask Golder

When you need proven cold-regions technical expertise related to earth, air, and water, Golder Associates can help. Our engineers and scientists deliver technical understanding, cross-disciplinary thinking and a passion to help our clients succeed. From pre-feasibility to mine closure, our mining services cover all mining-related cultural, environmental, geological and mining engineering disciplines.

Engineering Earth's Development. Preserving Earth's Integrity.

surveys to route alignment surveys," explained Lang. "Being able to create and interpret maps utilizing satellite and aerial photography is very important in Alaska, where there is such a large expanse of area to cover."

One program relatively unique to Alaska is Arctic engineering, which focuses on how to design and build in specific conditions of the Arctic environment, such as frozen ground, snow loads, ice loads and Arctic utilities.

In addition to graduate Arctic engineering and civil engineering degrees, UAA also offers an engineering management degree that teaches students how to manage large engineering projects. "This has become increasingly important as more multinational engineering companies begin working in Alaska," said Lang. "Engineers increasingly find themselves working on teams and on projects that span across states."

The school's popular project management degree focuses on the design, execution and tracking of individual projects such as gas pipelines or power plants, which have a finite beginning and end. "Students learn how to muster all of the available resources and control costs and schedules on an individual project," said Lang.

Since expanding its engineering programs five years ago to include electrical, mechanical and computer systems degrees, UAA has seen a huge spike in enrollment, going from 450 students in 2002 to close to 1,000 now. About half of its students come straight out of high school, and half are nontraditional students who have already been out in the work force. Through the Alaska Native Science & Engineering program (ANSEP), a longitudinal model that works with students from the time they are in middle school all the way through to a Ph.D., more than 100 students from villages throughout the state are enrolled at the university in engineering and science programs.

Approximately 90 percent of its engineering students are from Alaska, and a high percentage stay in the state to work.

"In Alaska, there is a continuous backlog of projects and a great demand for people with technical skills," said Lang. "When you compare Alaska with other states, there is still so much development of basic infrastructure that needs to happen. In Juneau, there are no roads that lead out, and there are a number of cities in that same situation. In some areas, the amount of bandwidth available for Internet connections is very limited, and many of the villages still need access to clean water and sanitation. These are perennial problems that have challenged Alaska from statehood and even before, and they are not tackled easily."

Becoming an Engineer in Alaska

To become an engineer in Alaska, all applicants must be approved by the Architects, Engineers and Land Surveyors Board, who review applications at quarterly meetings in February, May, August and November. Applicants can apply by examination or, if they're already licensed in another jurisdiction, by commity for reciprocity.

"The board compares how they were licensed in the other jurisdiction to our regulations at the time they obtained licensure in the other jurisdiction," explained Jones. "If they are equal to or exceed our requirements, we issue them a license; if not, we let them know what they need to do to meet our requirements." All applicants must also pass a board-approved Arctic engineering course, which covers the extreme conditions in Alaska and dealing with permafrost.

To qualify by examination, applicants need to pass the NCEES Fundamentals of Engineering (FE) examination and the NCEES Principles and Practice of Engineering (PE) examination for the branch in which they want to be licensed. Once the FE is passed, the applicant is considered an engineer in training (EIT).

"Once the EIT has accrued the required experience under a licensed engineer, he or she can apply for the PE exam," explained Jones. "The amount of experience required depends on the amount of education the applicant has. With a Bachelor of Science, it would be four or five years, depending on the degree. A Master of Science would take a year off of the required experience."

To date, approximately 5,400 engineers have been licensed by the board and more are expected to join the ranks as the need for qualified engineers continues to grow. "I would anticipate that the gas line could create quite a few jobs, and I feel that there's about a 50/50 chance that it's going to happen," said Heieren. "If we're lucky, it will happen in the next 10 years, though it could be 20 years.

"There are actually other things happening across the state that will have a bigger impact," he continued. "Right now, one of our biggest problems is energy needs; it's ironic that we are the richest energy state in the U.S., but the per capita expenses are also the greatest for individuals. Engineers and surveyors have a huge role to play in the state's infrastructure, and since housing prices have dropped, there's a need for residential development. There also been a positive upswing in military spending, which will help sustain jobs."

As Alaska continues to grow, so does the opportunity for those who seek a career in the engineering field. "As an engineer or surveyor in Alaska, you have the ability to do little better than in other states and to make decent money," said Heieren. "There's such huge potential here, but it can't be realized without engineers."

Alaska Universities Engineer the Economy

Statewide entrepreneurship programs foster change

Photo courtesy of College of Business & Public Policy at UAA

Dean of the College of Business & Public Policy at the University of Alaska Anchorage Elisha R. "Bear" Baker IV welcomed and introduced a presentation by Hong Kong Commissioner, Donald Tong, "Hong Kong: A Destination & Gateway to China for the U.S." last September.

By Heidi Bohi

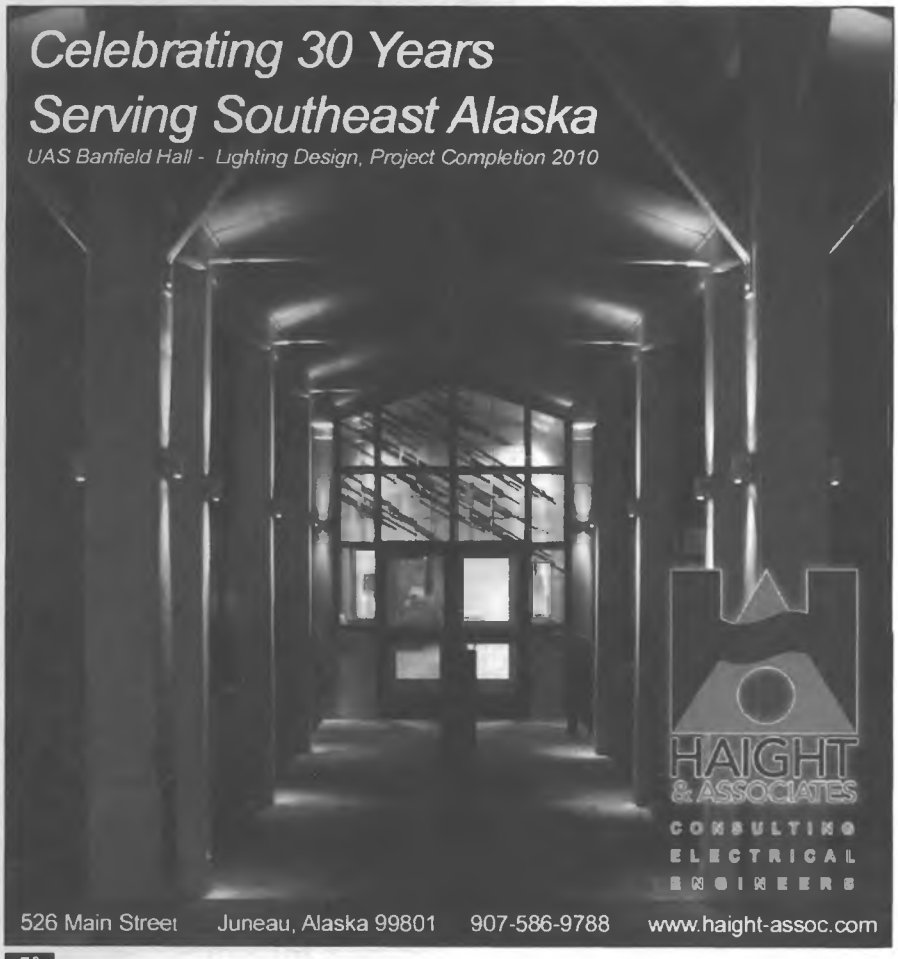
As big oil saddles up and starts making its way into the sunset, leaving Alaska with memories of "back in the day," the state is learning a painful lesson on the importance of what happens when there is a lack of economic diversification.

The University of Alaska system is investing in developing a statewide entrepreneurship program, with hopes that it will become a critical contributor to part of the solution. Efforts ranging from business plan competitions to adding curriculum that teaches an entrepreneurial way of thinking are being promoted so the public and private sectors can start to see how they can cooperatively develop opportunities in business ventures that may lead to the development of new industries, marketplaces and sectors.

About two years ago, an informal group of faculty from all three major campuses began meeting to talk about how the university could better apply its resources to foster economic and business development in Alaska. Last spring, it became an official statewide economic development work force that started by inventorying the university's activities in economics and business development.

50-Year Plan

Elisha R "Bear" Baker, dean of the College of Business and Public Policy at the University of Alaska Anchorage (UAA) said, "First, even within the university system, we had to get people talking to each other. In many cases, people don't know what others are doing." Efforts such as the business plan competition and the Arctic-innovation competition were a way to link the various campuses.



But economic development takes time, especially in a state that is relatively young, geographically isolated, has no manufacturing, a small population base, and has been dependent on mostly the petroleum industry and federal government for most of its existence. While university faculty and staff remain optimistic about the long-term possibilities, the reality is that measurable results will take decades to realize.

"It is a problem of generations," says Jim Collins, University of Alaska Fairbanks director of entrepreneurship. "It's not something that will be solved in 10 years and it will not happen by waving a governmental wand. It will happen by creating a context in which private individuals invest on their own." He estimates it could take 25 to 50 years to develop an alternate economic base equal in scale to the oil industry.

In the meantime, he adds, if in the next decade the university can point to a handful of firms the university's efforts helped start or grow, then that will be a measure of success.

Some progress has been made to make the business community aware of the university's $123 million research effort, which Collins says, most people are not aware of, resulting in valuable research "that ends up in binders stuck on shelves and never transitions into the private sector." In the past year, though, local entrepreneurs have started paying attention to what faculty is doing and in a few cases decided to invest in the university's efforts to grow and diversify the economy.

Academic Exercises

In one case, an investor who learned about the university's work in the mining industry, invested in a sizeable chunk of land that the State's geological data and UAF's satellite imaging resources suggest may have valuable mineral deposits. This is a classic case of how public and private resources resulted in an entrepreneurial venture.

The Alaska Peony Growers Association also is working with the Alaska Division of Agriculture and the university to gather research data and information to help develop international markets for peonies and expand Alaska's agricultural export industry. Peonies bloom at a time when they are not available elsewhere and, because of the state's geographical location, allows fresh flowers to be quickly air-freighted to U.S., European and Asian markets. Currently, peony growers are working with the university and its land grant mission to see if the idea is feasible.

All three campuses of the university are, in varying degrees, starting to implement entrepreneurship efforts on their respective campuses. Rick Wolk, assistant professor of marketing and entrepreneurship at the University of Alaska Southeast (UAS), teaches classes in this discipline and is involved in the annual system-wide business plan competition, which is entering its 11th year. The idea behind the program is to give students the chance to practice being an entrepreneur and make mistakes when there is no money on the table, while also helping them decide if they have the entrepreneurial spirit, Wolk says. Although some of the ideas in the competition lead to the development of actual businesses, to date most of them have simply been academic exercises.

Entrepreneurial Thinking

Matthew McDaniel and Krag Johnsen were part of a team that entered the business plan competition in 2001 as MBA students at Alaska Pacific University (APU). Their idea was to develop a distribution channel for selling Alaska Native arts and crafts so more of the profits stayed with the artist, creating more wealth in rural communities. At the time, developing a website to do this was considered an innovative way

to broker the artwork. The business model also included a way to supervise production and collect raw materials in the communities such as baleen, bone, fur and ivory.

Local investors expressed interest and Johnsen believes there still might be potential for the idea, but nothing ever happened with the business venture as he and the other participants were launching successful careers at the time and have since started families, making the risk factor that goes with being an entrepreneur less appealing.

Still, McDaniel and Johnsen agree, the competition left both of them with an entrepreneurial mindset they have used in previous and current professional capacities. McDaniel is finance director for the Pebble Partnership and Johnsen is rural broadband development director for GCI.

"We need to keep creating an environment where new business start ups can happen in Alaska and we're not just relying on the oil industry," Johnsen says, adding that GCI, today the third-largest employer in the state, was started in 1979 by Ron Duncan and a few others who were committed to increasing competition in Alaska's telephone business. Today Alaskans are benefiting from greater service, lower costs and the statewide jobs created by the company born from entrepreneurial thinking.

Both Johnsen and McDaniel continue to support efforts like these by donating money and participating as judges. "What I loved about the experience was we created something out of nothing," McDaniel says. "As I moved on in my career, the experience was a big light bulb for me. It got me to the point where I thought of every single angle and could answer investors' questions before they had them, which is useful for a business start-up or a transition."

Angel Investors Needed

As part of his role teaching entrepreneurship at the UAA campus, Al Hermann is working on several entrepreneurship programs within the College of Business and Public Policy, including establishing Alaska Angel Investors, an angel-investing group that assists companies in their efforts to start doing business in Alaska, which is the only state without an Angel Network.

Control Systems for Critical Equipment

Critical equipment requires sophisticated safety controls. Dowland-Bach has the right stuff, employing mechanical and electrical engineers, PLC/HMI software programmers and developers, licensed electricians and certified welders. Our world headquarters in Anchorage, Alaska houses our command center and fabrication facility where our team of skilled professionals work together for you, ensuring every mission is a success.

We manufacture control systems and products, including:

Chemical Injection Modules/Skids – Well Head Safety Control Panels
Industrial Control Panels for Termination Boxes for Ordinary and Hazardous Locations
Flexible Cordsets for Hazardous Locations

Underwriters Laboratories (UL) and Intertek/ETL authorize Dowland-Bach to mark its products according to the following safety standards: UL 508A, UL 698A, UL 1203, UL 1773, UL 62, UL 2225, ANSI/ISA-12.12.01-2007

School of Engineering
University of Alaska Anchorage

The group recently completed the funding of Bare Distillery, the first of six to 12 companies the network expects to fund in the next two years as it grows the number of angel investors to about 70 people who are current or former entrepreneurs. Typically, these individuals invest between $25,000 and $250,000 into a business with hopes of making a return on their money, or simply because they are interested in the project, Hermann says. To qualify, "angels" need to have between $200,000 and $1 million in assets.

In the case of Bare Distillery, started by two Alaskans, the product line will be spirits that are made with 100 percent Alaska water and other ingredients. Although the project started about three years ago, by the time the company was ready to start producing it had run out of money and needed $400,000 to go into operations. The Small Business Administration referred them to the Angel Network and currently the company is in product development and final marketing stages and expects spirits to be on the shelves by April. There will be a board of directors and an advisory board, Hermann says, and investors are hoping to make back five to seven times their investment within a five-year timeframe.

Innovation, Support, Marketing

Entrepreneurial efforts rely on three components to be successful: innovation, which can come from any program within the university although perhaps most often from engineering, science and agricultural programs, which develop ideas for commercialization; private industry support; and the School of Business, which heads up marketing efforts. One of the newest additions to advance the university's entrepreneurship efforts is through UAA's Engineering Department, which recently completed the Rapid Prototype and Manufacturing (RPM) Lab at its School of Engineering. The lab includes computers, scanners, milling machines, a laser engraver and other manufacturing equipment, allowing students to build prototypes of surgical instruments, personalized joint replacements, model aircraft and vehicles, buildings, bridges and pipelines.

A special 3D printer also allows students to take computer-aided drawings to create 3D prototypes using the latest technology available for civil, computer, electrical or mechanical engineering assignments. The lab reduces the amount of time required to design and manufacture a new, patentable prototype from weeks or months to hours, says Grant Baker, associate dean of the School of Engineering. At the same time, the multiplier effect is very significant in terms of the economic impact: there is about five support staff for every engineer working on a project. Several designs show great potential for being patented and marketed and are in the process of being advanced through the university system, he says. A robotic hand, operated by remote control, can be used during surgery and other processes, and can also be used as a prosthetic. Also in the health care industry is a nonintrusive sensor used in dentistry to measure gum thickness. Rather than using a probe to measure pockets that may indicate periodontal disease, a sensor is run along the gum line. A spinal rod bender is another invention in the industry. Titanium rods are typically used to treat ailments such as curvature of the spine, by bending them to fit the patient's back during surgery. The university's invention is a one-handed device that allows physicians to bend the rod with one hand instead of two.

Alaska Research Potential

Engineering plays a critical role in the university's entrepreneurship efforts because prototypes that are patented through the school and marketed may be profitable for both the student and the university, while also adding prestige to the campus, Grant Baker says. In general, research is big business for higher learning institutions and Anchorage is especially well situated for these opportunities with about 100 companies and agencies within just a few miles of the university, allowing academics and industry to work in tandem. This is critical in advancing entrepreneurial efforts because receiving federal funding is contingent on also having partnerships with private industry in areas ranging from technology, to health care and alternative energy.

Photo by Grant Baker

UAA Mechanical Engineering student Andrew Cochran and the Baja competition vehicle entered into 2010 National Baja design competition shown at the biannual UAA Engineering Design Competition.

Currently, UAA alone brings in about $15 million a year in research funds. "There is no reason we cannot bloom that to $200 million a year from federal government and industry," he says, adding that the government has billions of dollars in research funding available. "Alaska's portion has been small, which is why there is such big potential."

Although the entrepreneurship efforts at the university are just beginning, Grant Baker says faculty and administration in the Engineering Department and the College of Business and Public Policy are committed to developing projects-based curriculum that apply theory to help develop projects that create an environment of innovation similar to a think tank.

"Although they are not massive projects, they all need engineers, which keeps a lot of high paying jobs and projects in the state," Grant Baker says.

STEM occupations help grow Alaska's economy

By Commissioner Click Bishop

This month's Trends focuses on STEM occupations — those requiring specialized skills in science, technology, engineering, and math. The list is varied, from surveyors to engineers and auditors to computer programmers.

STEM jobs generate products and services that have become part of our everyday lives, such as airplanes, smart phones, CT scans, and — especially convenient in Alaska — remote starters for your favorite auto.

Workers in STEM jobs require more formal education — 75 percent require a bachelor's degree or higher. But STEM workers are also among the highest paid, averaging $73,000 a year while non-STEM workers average about $45,000.

In 2008, almost 25,000 of Alaska's nearly 322,000 jobs were STEM-related jobs. The Alaska Department of Labor and Workforce Development predicts that by 2018, we'll see more than 2,700 new STEM jobs and nearly 5,400 more openings as workers retire or change occupations.

Alaska Performance Scholarship

One way we're preparing Alaskans to fill these 8,000-plus projected vacancies is through an Alaska Performance Scholarship. This new program, approved by the Alaska Legislature, would invest in Alaska's students who are attending in-state university or vocational programs. Gov. Parnell has proposed a sustainable funding mechanism for the scholarship program based on recommendations from the Legislature's Joint Higher Education Scholarship Funding Task Force.

"The Alaska Performance Scholarship will lead to increased academic rigor in our high schools as students earn these scholarships," Parnell has said. "The scholarship helps a variety of students — those who seek career and technical training as well as university-level studies — to realize their dreams through their own hard work."

The graduating class of 2011 will be the first eligible for this opportunity.

Alaska Education Tax Credit

The Alaska Legislature expanded the Alaska Education Tax Credit to include more institutions and also for capital projects. The credit provides tax incentives and rewards for businesses that make contributions for vocational courses, programs, and facilities, including those offered at AVTEC: Alaska's Institute of Technology, the University of Alaska, some of Alaska's regional training centers, and Alaska's K-12 schools.

Companies that pay corporate, fisheries business, fisheries landing, insurance premium/title insurance premium, mining license, oil and gas production, and transportation or oil and gas property taxes are eligible.

Donors can receive a credit equal to 50 percent of contributions up to $100,000, and an additional 100 percent for donations between $100,000 and $300,000. Cash donations greater than $300,000 and up to $10 million earn tax credits of 50 percent, with a maximum Alaska state tax credit of $5 million.

In addition to the state tax credit, businesses may qualify for federal tax savings by making charitable cash donations. Business representatives should contact their tax consultants to determine the tax credit benefit of any donation.

Unemployment benefits

Also in this issue is a report on Alaska's unemployment insurance program. More than 63,000 claimants in 2009 received about $130 million in federal and state benefits, which were directly injected into Alaska's economy. This doesn't include the "trickle-down" effect of those dollars in our economy. The U.S. Department of Labor estimates that every dollar paid in UI benefits generates an additional 60 cents of local economic activity.

Science, Tech, Engineering, and Math

Knowledge-based workers in Alaska

Science and engineering are embedded into the fabric of our lives, from improving everyday activities to developing our economy.

Even during the coldest winter days, we remain warm in comfortably heated buildings and connected to the outside world by television, Internet, and cell phones. Science and technology operate behind the scenes, quietly and efficiently providing most of the comforts of modern living.

This article focuses on the state's scientists, engineers, surveyors, mathematicians, computer programmers, architects, and other workers who need highly specialized skills to do their jobs. These science, technology, engineering, and math occupations are collectively referred to as STEM occupations.

STEM workers' contributions to Alaska's economy are numerous. Geologists search for mineral deposits, and environmental scientists obtain permits before a new mine can operate. In the fishing industry, biologists research ways to raise king crab in hatcheries and determine how many salmon can be harvested each year while ensuring their return in the years ahead. These are just a few examples of STEM activities; science and technology are everywhere in Alaska's industries.

Defining the STEM workforce

Describing Alaska's STEM workforce is a challenge. There is no accepted national list of STEM occupations, and definitions vary depending on the source and the purpose of the research.

For this article, the Research and Analysis section of the Alaska Department of Labor and Workforce Development created a working definition for STEM occupations as a contribution to the ongoing discussion.

For an explanation of our criteria, refer to the methodology on page 12. Based on these criteria, we identified 135 STEM positions, 132 of which had employment in Alaska in 2008. (See Exhibit 1.)

We organized STEM occupations into eight broad categories: business and finance; computer and math science; architects, surveyors, and cartographers; engineers; social scientists; life and physical scientists; and postsecondary teachers. STEM occupations that did not fit into any of these categories were grouped into "all other."

Forecasted STEM openings

In 2008, Alaska had roughly 24,441 STEM-related jobs, and this number is projected to increase to 27,174 by 2018. (See Exhibit 2.)

An estimated 2,748 new STEM-related positions will be created during the forecast period, and an additional 5,376 will open as workers retire, change occupations, or leave the labor force. All together, more than 8,100 projected STEM openings will need to be filled.

In 2008, the highest STEM employment was in engineering, life and physical sciences, and computer and math science, in that order. (See Exhibits 2 and 3.) Occupations in these categories, as well as in business and finance, are each expected to generate more than 1,000 openings by 2018, and taken together will account for over 77 percent of STEM openings. Engineering-related occupations are expected to produce slightly more than 2,000 openings — the highest of any category.

STEM Occupations (continued) 1

Alaska, 2008

LIFE AND PHYSICAL SCIENTISTS (continued)	
Chemical Technicians (141)	Materials Scientists (<50)
Chemists (112)	Medical Scientists, Except Epidemiologists (<50)
Conservation Scientists (210)	Microbiologists (<50)
Environmental Science and Protection Technicians, Including Health (189)	Nuclear Technicians (0)
Environmental Scientists and Specialists, Including Health (595)	Physical Scientists, All Other (126)
Epidemiologists (<50)	Physicists (<50)
Food Scientists and Technologists (<50)	Soil and Plant Scientists (<50)
Forensic Science Technicians (<50)	Zoologists and Wildlife Biologists (635)

POSTSECONDARY TEACHERS (834)[1]

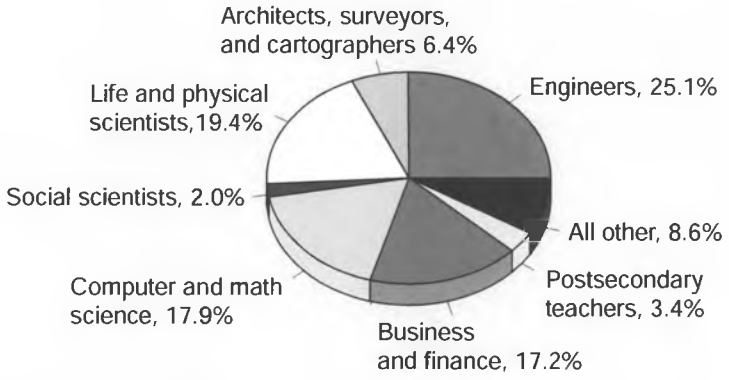
Help wanted: Seeking skilled workers

Over the next ten years, STEM workers will be in demand for a range of occupations. Exhibit 4 lists the STEM occupations forecasted to generate the most job openings from growth and replacements.[1] Accountants and auditors top the list with about 580 total openings. STEM postsecondary teachers

[1]Growth openings are equal to the positive change in employment (i.e., new jobs). Replacement openings are vacancies left by workers who choose another occupation or exit the workforce.



2 Projected STEM Employment by Category
Alaska, 2008 to 2018

	Employment			Openings, 2008 to 2018		
Occupational Categories	2008	2018	Percent change	Growth[1]	Replacement[2]	Total
Business and Finance	4,212	4,681	11.1%	469	763	1,232
Computer and Math Science	4,385	4,945	12.8%	560	607	1,167
Architects, Surveyors, and Cartographers	1,554	1,757	13.1%	203	520	723
Engineers	6,145	6,755	9.9%	610	1,430	2,040
Social Scientists	478	537	12.3%	59	160	219
Life and Physical Scientists	4,739	5,273	11.3%	535	1,244	1,779
Postsecondary Teachers	834	959	15.0%	125	208	333
All Other[2]	2,094	2,267	8.3%	187	444	631
Total for All STEM:	24,441	27,174	11.2%	2,748	5,376	8,124

[1]Growth openings are equal to the positive change in employment (i.e., new jobs).
[2]Replacement openings are vacancies left by workers who choose another occupation or exit the workforce.

are next, with estimated job vacancies of 300-plus.

Engineering-related occupations accounted for eight of the 30 occupations on the list. Civil and petroleum engineers are expected to generate more than 200 openings each, and both professions pay excellent annual wages. Openings for civil engineering technicians may exceed 160 positions, and these workers often train to become fully licensed engineers.

Seven computer science-related occupations made the list, and taken together they account for more than 1,000 job openings. Of this group, computer support specialists topped the list at more than 260 potential openings.

Education is essential

An estimated 95 percent of STEM workers need more than a high school diploma for their positions, compared to just 47 percent of non-STEM workers.[2] About 75 percent of STEM workers need a bachelor's or graduate degree, compared to only 20 percent of non-STEM workers. (See Exhibit 5.)

College degrees that prepare workers for STEM occupations require more math and science courses, and preparation for those classes begins in grade school.

Because an educated workforce is fundamental to STEM jobs, emphasis at the national level is on improving math and science education for students in kindergarten through 12th grade. This push includes getting kids interested in math and science careers as well as maximizing teacher and student performance.

Americans have known for some time that our high

[2]Based on O*NET surveys of occupation incumbent workers, applied to Alaska 2008 employment estimates.

school students lag behind other countries in math and science. Every three years, the Program for International Student Assessment reports test scores in math and science for 15-year-olds, and the 2009 results are not much different from previous years. In math, students in 17 of 33 countries performed better than Americans, and in science, 12 of 33 countries outranked the U.S.

One encouraging sign for Alaska is that more high school students are taking STEM-related courses at the University of Alaska. These dually enrolled students receive high school and college credits for attending college classes.

Between 2002 and 2010, the number of dually enrolled students in STEM-related classes increased from 35 to 417.[3] In 2010, there were 203 students enrolled in math and 101 students taking engineering technology courses. The remainder were enrolled in a variety of STEM-related disciplines such as computer science, biology, biomedical science, physical science, and natural resource management.

STEM jobs pay well

The average annual wage for STEM workers is $73,251 — almost $28,000 higher than for non-STEM workers. As in most professions, STEM occupations that require a higher level of education typically have more earning power.

Workers in STEM occupations earn higher average wages than their non-STEM counterparts at every level of education. (See Exhibit 6.) The difference is greatest at the lower levels of education attainment, where STEM-related technical certificates apparently trump general associate degrees and other certificates.

The wage gap between STEM and non-STEM occupations diminishes with higher levels of education. Still, on average, STEM jobs requir-

7 Ten Highest-Paying STEM Jobs
Alaska, 2009

Occupation	Annual Wages
Petroleum Engineers	$154,500
Chemical Engineers	$125,820
Engineering Managers	$118,440
Materials Engineers	$108,180
Geoscientists, Except Hydrologists and Geographers	$104,410
Electrical Engineers	$100,250
Industrial Engineers	$98,790
Mechanical Engineers	$98,790
Mining and Geological Engineers, Including Mining Safety Engineers	$95,200
Natural Sciences Managers	$92,340

Note: Based on May 2009 OES wage estimates.
Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

ing a bachelor's degree pay 20 percent more than those in non-STEM categories, and those needing a master's degree pay 13 percent more.

As a group, STEM postsecondary teachers had the highest wages, with an average salary of about $92,000. (See Exhibit 8.)

For individual occupations, petroleum engineers top the list with average earnings of $154,500, and eight of the ten highest paying occupations are engineering-related. (See Exhibit 7.)

Engineers typically earn a bachelor's degree and spend several years gaining on-the-job experience before they can take an exam to become fully licensed and start earning top-dollar wages.

An aging STEM workforce

There are relatively few young STEM workers. In 2008, only about 9 percent were under the age of 25 (see Exhibit 9), compared to 20 percent of non-STEM workers. This is likely because it takes time to obtain the necessary postsecondary education or training for STEM employment.

Alaska's STEM workforce is aging, and replacements will be needed as these workers retire. About 41 percent of Alaska's STEM workers were ages 45 to 64 in 2008, and many of these workers will retire in the near future. It will be a challenge to replace them, because these workers typically have many years of experience, education, knowledge, and skills built up over a career. However, the large number of aging workers also means continued opportunities for younger workers just starting their careers, provided they have the required education and training.

Most STEM workers are men

STEM workers in Alaska are predominately male, a long-time trend that mirrors the rest of the nation. Business and finance was the only category with significantly more women than men. (See Exhibit 10.) Social sciences had an almost even split of males and females. But in nearly every other category, there were significantly more men.

Engineering had the highest difference, with four males to every female.

However, data from the National Science Foundation suggest that the number of women choosing STEM careers is on the rise. Women made up 27 percent of the nation's science and engineering workforce in 2007, compared to only 12 percent in 1980.[4]

Despite the apparent gender gap in science and engineering, Alaska's women are closing the gap in some individual occupations.

Eight of the top 15 STEM occupations with the highest percentage of females require a background in science. (See Exhibit 11.) Four of those are in the environmental sciences. Conservation scientists are 52 percent female, followed by environmental technicians (48 percent), environmental scientists (47 percent), and environmental engineers (36 percent). In contrast, only 20 percent of engineers overall are women.

Finding qualified workers

Employers who can't find workers locally have to look outside the state. In 2008, about 16 percent of workers in STEM-related jobs were nonresidents, compared to 20 percent nonresidency for non-STEM positions.

Finding qualified Alaska residents is a challenge for employers in a variety of industries. Because most STEM workers need a bachelor's degree or higher, short-term training programs are less likely to provide a quick fix for any worker shortages.

Among STEM occupations, the life and physical sciences category had the highest percentage of nonresidents; about 23 percent of its workers were from outside the state. However, rates for individual occupations can vary widely.

For residency information for specific occupations, refer to the Alaska Occupations Web site, which provides data on more than 500 occupations.[5]

The national push for STEM

In 2007, Congress passed the America Competes Act, with the goals of promoting scientific research and development and helping the U.S. stay competitive. The act was partly in response to a 2007 federal report titled "Rising Above the Gathering Storm."

The report concluded that although the United

States was still among the world's leaders in scientific research, discovery, and innovation, it was in danger of losing its global technological edge.

The act increased funding for scientific research and development, promoted STEM-related education, and extended tax credits for companies engaged in scientific research.

In late December of 2010, the America Competes Act was reauthorized with bipartisan support and was signed into law on Jan. 4. The act includes research and development tax credits for private companies and more than $40 billion in funding for the National Science Foundation, the Department of Energy, and the National Institute of Standards and Technology.

The America Competes Act is just one example of U.S. efforts to promote STEM-related education. One of the largest is led by a nonprofit group called Change the Equation. This umbrella organization's 110 corporate partners have pledged millions of dollars worth of funding and in-kind contributions to promote STEM-related education.

Research dollars for Alaska

It is difficult to obtain data on the research expenditures of private companies, but information on government funding awarded to the University of Alaska is quantifiable and a good example of how these dollars filter into the state economy.

In 2009, the National Science Foundation awarded $40.5 million for research and $162.2 million for major research equipment to the University of Alaska Fairbanks.[6] Most of the equipment funding was for the construction of a new research vessel, the R/V Sikuliaq, which is scheduled to begin operations in 2014 and will port in Seward.

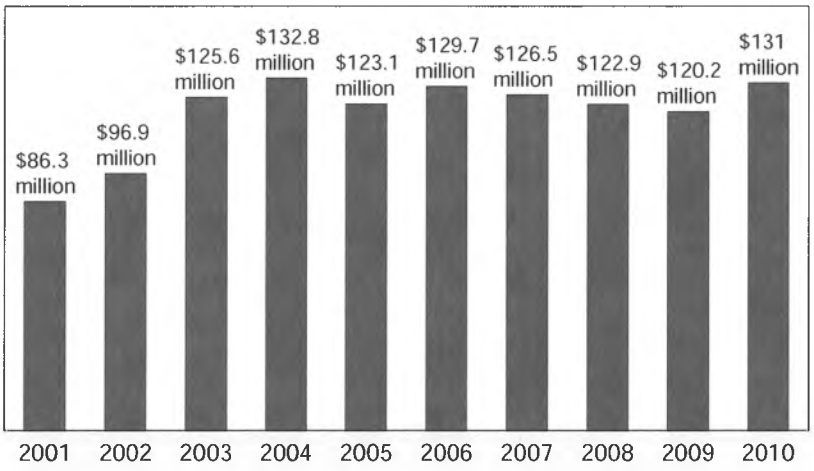
UAF will operate the 254-foot, $123 million ship, which will be owned by the National Science Foundation and is under construction in Marinette, Wisc. Scientists from Alaska and

[6]Source: The National Science Foundation's Budget Internet Information System, http://dellweb.bfa.nsf.gov/

around the world will have a new platform to study climate change, sea ice, fisheries, and sub-sea volcanic activity.

Research resembles an industry

Scott Goldsmith, an economics professor at the University of Alaska Anchorage, has studied the benefits of scientific research and development conducted by the university. He wrote that research is an economic enterprise comparable to mining, seafood, timber, or oil and gas.[7] Research brings money into Alaska and creates jobs.



Goldsmith estimated that in 2006, university research money helped fund $52.6 million in payroll — or 1,292 jobs — within the university and an additional 1,100 jobs in Alaska's private sector, or $39.5 million in wages. Research expenditures have increased since these 2006 data.

Research dollars support more than just science. During fiscal year 2010, the University of Alaska spent $131 million on research-related activities. (See Exhibit 12.) These expenditures include wages for employees and the purchase of goods and services from local businesses. The university spends additional money when building new science labs, which provides jobs for construction workers.

Most of the university's research budget comes from nonstate funds. According to the University of Alaska in Review 2010 Report, the university system leveraged $5.70 in external funding for every dollar of state funding provided during fiscal year 2009.

A large portion of that funding came from the federal government, but private grants and donations also contributed significantly. During FY 2009, the federal government provided roughly 86 percent of the funding for UA research; private, local, and other sources funded 12 percent; and 2 percent came from state government.[8]

University Research Expenditures **12**

STEM for Alaska's future

The contributions that engineers, scientists, and other STEM workers make to the state are multifaceted, as they solve problems and bolster the economy throughout Alaska's industries. As we move into the future, we need an educated and highly skilled STEM workforce to provide solutions for short-term and long-term challenges of life in Alaska.

SB 120

<TARGET><BILL>SB 120</BILL><SUBJECT>SB 120</SUBJECT><COMM>SEDC27</COMM></TARGET>

Alaska State Legislature

Senator Hollis French

SB 120 – Alaska Parents as Teachers Act
Sponsor Statement

Parents are a child's first and most important teachers. Research has clearly shown that parental involvement in a child's early years lays the foundation for success in school and in life.

SB 120, the Alaska Parents as Teachers Act, will empower parents with knowledge and resources to help their children develop into successful students with stronger scholastic achievements.

The bill allows the Department of Education and Early Childhood Development to offer the successful Parents as Teachers program as an education option for families with children ages 0-5.

SB 120:

- Requires evidence-based education, parental involvement, and adherence to accepted best practices and early learning guidelines;
- Directs the Department of Education and Early Development to develop local partnerships to implement Parents as Teachers; and
- Includes a 3-year sunset clause.

Parents as Teachers is completely voluntary for families. It succeeds by engaging families and communities in understanding the way children's brains develop and how to create a learning environment for the child. Because Parents as Teachers is about how children learn, not what they learn, it fits with any educational philosophy and mode, from religious, charter and public school, to home schooling or other types of education. Parents as Teachers helps build a community of learning, and assists in early detecting of learning impairments.

Parents as Teachers is the most cost-effective early education model available in Alaska. Further, it enhances local control and involvement, with partnerships ensuring cooperation towards education goals.

Funds invested in early education pay dividends in the long run. Research shows that children who receive early education earn more money as adults than their peers lacking early education. Children who receive early education also enter the job market in much larger numbers, obtain college education in higher numbers, and remain off public assistance and out of jail in greater numbers.

Alaska's children are our future workforce, and the key to our state's prosperity. Alaska's plumbers, doctors and teachers of tomorrow are the youth in our neighborhoods today. Helping parents boost the skills and natural ingenuity of their children will point the way to Alaska's growth.

Parents as Teachers enjoys statewide support and will help grow stronger Alaskan families, better students and safer communities. It is a proven successful solution for our children and our state's future.

Thank you for your support of SB 120, the Alaska Parents as Teachers Act.

Alaska State Legislature

Senator Hollis French

Sectional Analysis for SB 120
(27-LS0788\A)
Alaska Parents as Teachers Act

Section 1. Provides a short title for the bill, "Alaska Parents as Teachers Act."

Section 2. Establishes a statewide voluntary Parents as Teachers early learning system.

Subsection (a) requires evidence-based education, parental involvement, and adherence to accepted best practices and early learning guidelines.

Subsection (b) requires school districts to offer space if needed and available in local facilities.

Subsection (c) directs the Department of Education and Early Development to develop local partnerships to implement Parents as Teachers.

Subsection (d) directs the Department to report on the program's effectiveness and participation rates on or before January 15, 2014.

Subsection (e) adds a 3-year sunset clause, to terminate the program on July 1, 2014.

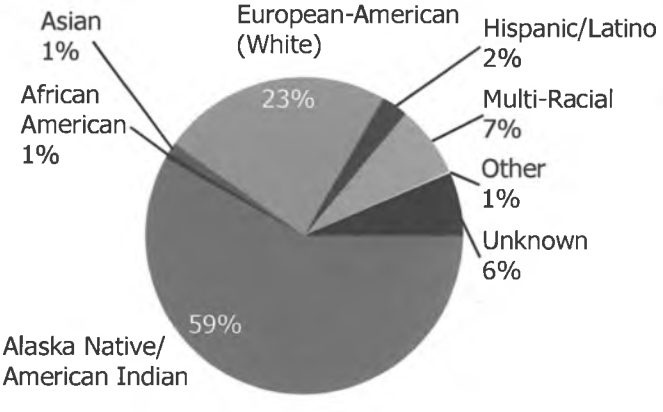
Parents as Teachers Alaska



2010 FACT SHEET

Parents as Teachers (PAT) is an evidence based international home visitation program dedicated to providing parent education services to families with children prenatal to five years of age through personal visits and group meetings. Families enrolled in Parents as Teachers programs receive personal visits, parent group meetings, and screenings resource referrals.

Esther Rivers reads to her daughter, Goosie, in Chevak.

ETHNICITY OF CHILDREN SERVED

2010 HIGHLIGHTS

Services for Children and Families 2009-2010:

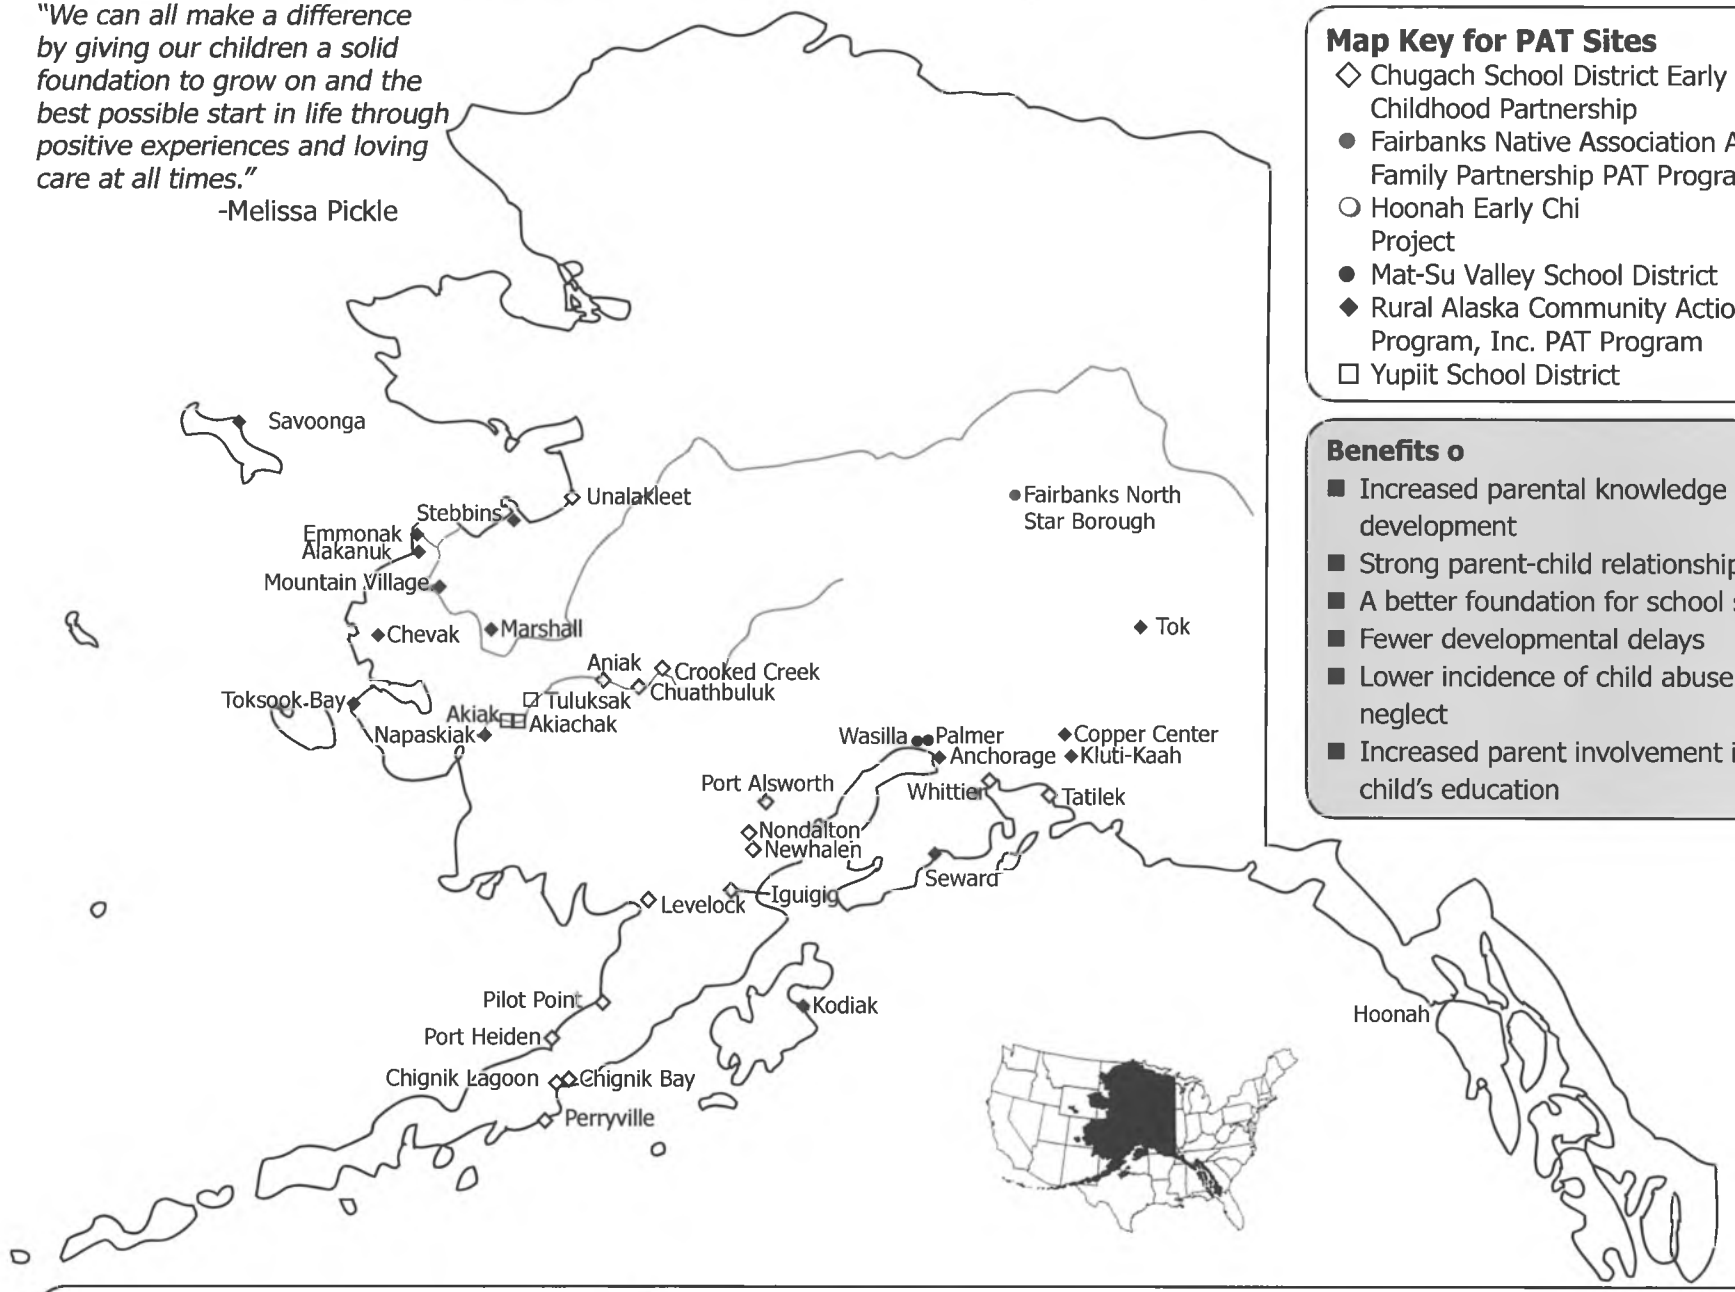
- 5,978 personalized personal visits
- 967 children served
- 885 children received developmental screenings with 113 found to need further evaluation
- 781 families served
- 586 Alaska Native/American Indian children served
- 498 parent-child group meetings
- 236 families linked to other services
- 44 prenatal women served
- 39 communities served
- 24 teen parents served

Percentages of Enrolled Children by Agency/Organization:

- 29% school districts
- 71% non-profit organizations

Professional Development:

- Trained and certified 41 Parent Educators and 9 supervisors in the Prenatal to 3 Years Curriculum
- Certified and trained 27 Parent Educators in the 3 Years to Kindergarten Curriculum
- 249 participants from 49 communities attended PAT workshops/training institutes



This information is provided by the PAT Alaska State Office. The PAT Alaska State Office is located within the Child Development Division of the Rural Alaska Community Action Program, Inc. and funded through the Alaska Parent Information and Resource Center. The role of the State Office is to plan and coordinate curriculum training institutes, conduct annual recertification, collate data for statewide reports and provide on-going communication and technical assistance for affiliated programs.

Benefits o

- Increased parental knowledge of child development
- Strong parent-child relationships
- A better foundation for school success
- Fewer developmental delays
- Lower incidence of child abuse and neglect
- Increased parent involvement in their child's education

Parents as Teachers State Office | Lisa Goneau-Danielson, PAT Alaska State Coordinator, ldanielson@ruralcap.com, c/o RurAL CAP; PO Box 200908; Anchorage, AK 99520-0908; Phone (907) 865-7334, www.ruralcap.com

What is Parents as Teachers?

Parents as Teachers is:

- A parent education and family support program serving families through out pregnancy until their child enters kindergarten. Services to families include personal visits, group socialization opportunities with other families, developmental screenings to ensure a child's development is on track, and referrals to other services as appropriate.
- Designed to enhance child development and school achievement through parent education.
- A free voluntary program for families.

Why Parents as Teachers?

- Research has clearly shown that the early years are critical in a child's development and lay the foundation for success in school and in life.
- Parents are the most influential people in their children's lives; they are their children's first teachers. If we want to make a positive difference in the lives of children, we must make an impact with their parents.
- Extensive analysis by economists has shown that investing in effective early childhood programs, such as Parents as Teachers, produces great returns. These returns benefit the community through reduced crime, welfare and educational remediation.

Why Focus on the Years Before School Starts?

- Brain development that takes place before age 1 is rapid and extensive; the influence of the early environment on brain development is long lasting.
- Developmental "windows of opportunity" are periods of time when children are especially adept at learning specific skills including:
    - Motor skills such as turning over, walking, drawing;
    - Sensory skills such as seeing and hearing;
    - Communication skills including language; and
    - Social skills such as playing and interacting with other children.
- During these windows of opportunity, it is important to provide positive experiences for young children at the appropriate times to ensure optimal development.

Why Focus on the Parent?

- Parent education helps parents to understand what to expect during each stage of development and how to promote the best development in their child.
- Research shows that parental involvement in their child's learning is linked to the development of the child's academic skills, including reading and writing.

How is Parents as Teachers Adapted for Alaska?

- The majority of Parents as Teachers programs in Alaska hire people from within the communities being served to be trained as Parent Educators. This helps to ensure the people presenting the curriculum have a solid understanding of the community and the local culture.
- Alaska has its own Nationally Certified Parents as Teachers Curriculum Training Team. These trainers reside in Alaska and are experienced in providing Parents as Teachers services to families from a wide range of cultural backgrounds.
- Parent Educators are trained to adapt activities from the Parents as Teachers Curriculum to reflect the local community and culture of the family.
- Visits are provided in the family's home language.

What Outcomes has Parents as Teachers Achieved?

- At age 3, children who have been enrolled in Parents as Teachers are more advanced in language, social development, problem solving and other cognitive abilities.
- Children enrolled in Parents as Teachers score higher on kindergarten readiness tests.
- Children who participate in Parents as Teachers score higher standardized measures of reading, math and language in grades first through fourth.
- Parents who participate in Parents as Teachers are more confident about their parenting skills.
- Parents who participate in Parents as Teachers are involved in their child's education beginning at birth and they maintain this involvement in their child's schooling. Parent involvement has been shown to be a key component of a child's success in school.

For more information on Parents as Teachers, contact Lisa Danielson, Parents as Teachers Alaska State Coordinator at ldanielson@ruralcap.com or 907-865-7334.

Parents as Teachers™

HOW DOES PARENTS AS TEACHERS SUPPORT SCHOOL READINESS?

Parents as Teachers helps all children enter school ready to learn.

Children who are prepared for kindergarten continue to do well in the early grades of elementary school, are more likely to graduate from high school and to go on to be successful in life.

Parents who participate in Parents as Teachers are more confident about their parenting and are more involved in their children's schooling…a key component of a child's success in school.

Research shows that participation in Parents as Teachers, together with preschool, not only positively impacts children's school readiness and school achievement scores, but also narrows the achievement gap between children in poverty and non-poverty households.

When children had at least two years of Parents as Teachers combined with a year of preschool, 82 percent of poor children were ready for school at kindergarten entry—a level identical to non-poverty children who had no Parents as Teachers or preschool experience.[1]

Parents as Teachers children continue to achieve beyond kindergarten:

> They scored significantly higher on standardized measures of reading and math at the end of first grade than did comparison children. In addition, teachers rated Parents as Teachers children's achievement progress higher than control group children's progress in all areas.[2]

> They continued to perform better than non-Parents as Teachers children on standardized tests of reading and math achievement in second grade. Compared to non-Parents as Teachers children, PAT children required half the rate of remedial and special education placements in third grade.[3]

Did You Know…

Children who participate in Parents as Teachers:

> Are more advanced at age 3 in language, social development, problem solving and other cognitive abilities;

> Score higher on kindergarten readiness tests;

> Score higher on standardized measures;

> Show better school readiness at the start of kindergarten;

> Achieve higher reading and math readiness at the end of kindergarten;

> Achieve higher kindergarten grades; and

> Require fewer remedial education placements in first grade.[4]

Our vision is that all children will learn, grow and develop to realize their full potential.

Parents as Teachers (SB 120) is good for Alaska's military families

Passing SB 120 will greatly help our military families with the sacrifice and stress they face with frequent moves and deployment.

SB 120 could help 8602 active duty children in Alaska between under the age of 5, plus the children of active members of the guard and reserve.

1. **Parents as Teachers helps families cope with deployment**

    - Military deployments take a toll on families, especially those with young children. Behavior is a key communicator for very young children, so being prepared for potential behavioral changes, and having places to turn to and ideas to try with the youngest members of military families is crucial to 'dealing' with separation that's part of many terms of service for our military families.

    - Families parenting singly because of deployment often struggle with regimented, school-based programs because of financial and scheduling constraints. Providing parents with resources to create a learning environment in any situation helps their children gain the fundamentals needed to enter school at par with their peers.

    - The Parents as Teachers social evenings offer isolated parents an excellent opportunity to form connections with other families. Social time also helps parents develop support networks necessary for dealing with deployment, frequent moves and other stresses unique to military families.

2. **Parents as Teaches helps reduce barriers facing children of military personnel as they transition from one school system to another.**

    - The average military family student will move from six to nine times from kindergarten to 12th grade. When parents are equipped to engage in their children's education, they can better stabilize their families through the moves and help their children transition through difficult changes.

    - While the armed services has done much to ease the transition for children of military personnel, there is much that can be done at the state and local levels to ensure that these children are afforded the same opportunities for educational success as other children.

3. **Parents as Teachers had been operating on Fort Wainwright for years, but is now gone.** Staff say that the Parents as Teachers system is essential for helping Guard members and their families cope with the stress and confusion of deployment and the absence of a loved one.

Information based on conversations with specialists on education for military families, including the United States Department of Defense, DUSD (Military Community and Family Policy), Alaska National Guard, Alaska Department of Military and Veterans Affairs, Alaska's Congressional Delegation, Fort Wainwright Parents as Teachers program, Anchorage School District Liaisons for Military Families, and elementary schools serving military families. (Pursuant to the prohibitions set forth in 18 U.S.C. 1913, the Joint Ethic Regulations, Part 6-202, 5 C.F.R. 2635, and DoD Directive 1344.10, active duty members of the military are not permitted to engage in lobbying on legislation.)

Investing in Alaska's Young Children

Alaska Early Care and Learning: Public Policy Priorities for 2011

A coalition of early childhood experts and leading organizations with representation across the state agree on these next steps to move toward healthy children ready to succeed in school, and toward a healthy workforce and economy in our state. Young children do best when they are served by a statewide early childhood system that empowers families, links service providers, and engages communities on behalf of young children. These priorities are recommendations articulated in no particular order, to build a comprehensive approach in our early care and learning system.

Innovation, Accountability, and Statewide Coordination

Alaska needs effective programs that are implemented well, evaluated regularly, and improved continually.

Action for FY12	Background
Support local community efforts to address early care and learning priorities through Best Beginnings.	**Best Beginnings Local Partnerships:** Through Best Beginnings, increase support for community-based early childhood partnerships. With support from Best Beginnings, early childhood partnerships in 11 communities are working to improve coordination of programs and services, and promote better use of resources. All young children have the same basic needs. But their needs can be met in different ways, depending on a community's values, resources, interests, and culture. People in a community are in the best position to identify what children in their town or region need and how to fill the gaps. Funding for Best Beginnings leverages funding from the private sector and helps support the public-private partnership working to create and sustain a comprehensive statewide early childhood system.

Early Literacy and Family Engagement

Helping parents establish and maintain healthy, strong bonds with their children right from the start is an effective and cost-efficient way to reduce later costs such as unemployment, corrections, and remedial education.

Action for FY12	Background
Fund Home Visiting through Parents As Teachers (PAT)	**Home Visiting:** Fund statewide coordination and increase access to Parents As Teachers (PAT). PAT is an established home visiting program in communities throughout Alaska. Families involved in PAT programs increase their knowledge of child development, improve parenting practices, promote early literacy experiences, provide early detection of developmental delays and health issues, and increase children's school readiness and success.
Increase enrollment of eligible children in the Imagination Library (IL)	**Best Beginnings: Imagination Library Early Literacy and Family Engagement:** Through Best Beginnings, increase statewide support for Imagination Library, which mails a new book each month to Alaska children from birth to age 5. Best Beginnings leverages public and private dollars to match locally-generated funds and provide technical assistance to local Imagination Libraries. Research shows children who begin school without some basic literacy skills by the time they enter school are three to four times more likely to drop out in later years. Evaluation of this program in Alaska says children are read to more and are more enthusiastic about books and reading.

continued...

Access to Quality Early Care and Learning Programs

Over 62% of children under age 6 in Alaska (43,000) have all the adults in the workforce, yet there are only spaces for 18,357 in recognized child care programs. Over half of children are in unknown care.

Action for FY12	Background
Reinstate thread ROOTS Awards (Retaining Our Outstanding Teachers)	**Professional Development and Retention of Early Educators**: Provide funding to **thread**, Alaska's Child Care Resource and Referral Network, to reinstate the ROOTS (Retaining Our Outstanding Teachers) Awards to recognize and incentivize people working in licensed child care programs with credentials in early education. Teachers and caregivers are the leading indicator of quality in early childhood programs. It is difficult for individuals working full-time and earning low wages to afford the cost of education. In addition, due to low wages and lack of recognition, the teacher turnover rate in Alaska in early care and education programs is approximately 46%. By providing these incentives, the early care and education field would be able to recruit and retain a more qualified and stable workforce.
Increase thread support for parents seeking child care for children with special needs through the AK IN! program	**Inclusion of Children with special needs in child care:** Fund **thread**, to increase support for parents seeking child care for children with special needs, and to increase the ability of child care programs to offer appropriate services through the existing Alaska IN! program. Accommodations are assessed to qualify for a supplement to child care assistance rates. Additional funding is needed to provide case management, on-site consultation, and to provide supplements for children served by the Office of Children's Services, who are currently not covered under the program.
Increase State of Alaska Investment in Head Start	**Head Start:** Head Start programs in Alaska have a long and successful history of providing at-risk children and families the tools and support necessary to promote school readiness. Programs operate in communities across the state and face various challenges. Rural and remote programs typically encounter challenges with facility upkeep and increased operational costs, programs in more populated areas cannot keep up with growing waiting lists and the need for increased services, and all programs struggle to meet unfunded federal professional development mandates and deadlines. By increasing investment in Head Start we will continue to make progress in decreasing waiting lists and increasing school readiness efforts.

Access to Health Care

Action for FY12	Background
Increase income eligibility guidelines for Denali Kid Care	**Denali Kid Care (DKC):** Increase the income eligibility guidelines for DKC from 175% to a minimum of 200% of Alaska's federal poverty level (FPL). This change would restore eligibility to 1,300 children. Children with access to preventative health care and developmental screenings have better outcomes for health and learning abilities throughout their lives.

"Early childhood education is the driver of better outcomes and returns in secondary and higher education, health and economic development."
-James Heckman, Nobel Laureate Economist, University of Chicago

All children will learn, grow and develop to realize their full potential.

The Parents as Teachers program: its impact on school readiness and later school achievement

A Research Summary

Based on a report[1] by:

Judy Pfannenstiel, M.A., President and Senior Research Associate, Research & Training Associates, Inc.

Edward Zigler, Ph.D., Sterling Professor of Psychology, Emeritus, Yale University

Parents as Teachers
national center

April 2007

Schools, communities and families all share the common goal of wanting children to succeed in school. Being a competent reader by third grade is one key indicator of children's academic success. Children who do well in the early grades of elementary school are more likely to graduate from high school and to go on to be successful in life.[2]

How can we increase the likelihood that children will do well in elementary school? Research shows that school readiness predicts later school achievement. **Therefore, we should provide positive experiences for children, starting at birth or earlier, that maximize school readiness.**

Since education begins at home and parents are their children's first and most influential teachers, supporting and educating parents is a logical strategy. Parents who are involved in their children's early care and education have children who are better prepared for school. The Parents as Teachers *Born to Learn*™ program is one key way to ensure that children enter school ready to learn.[3]

This research summary reports results from a 2006 study of Missouri children who participated in Parents as Teachers and other early childhood experiences. Researchers investigated the impact of pre-kindergarten services on 7,710 Missouri children's readiness for school and performance on state assessments at the end of the early elementary years.

Key Findings

Participation in Parents as Teachers predicts children's school readiness and third grade achievement, regardless of income level.

- Parents in the Parents as Teachers program read more frequently to their young children and were more likely to enroll their children in preschool, both of which were positively linked to school readiness and later school achievement.
- A large percentage (82%) of poor children who participated with high intensity in both Parents as Teachers and preschool entered kindergarten ready to learn, as compared to only 64% of poor children who had no involvement in either service. A similar pattern emerged for more affluent children (93% vs. 81%).
- At third grade, 88% of poor children who participated with high intensity in both Parents as Teachers and preschool reached a benchmark level of performance on the Missouri Assessment Program (MAP) Communication Arts test, as compared to 77% of poor children who had no involvement in either service Here again, the pattern of results was similar for more affluent children (97% vs. 93%).

In addition, Parents as Teachers combined with preschool shows promise for narrowing the much-discussed achievement gap between low income students and more affluent students.

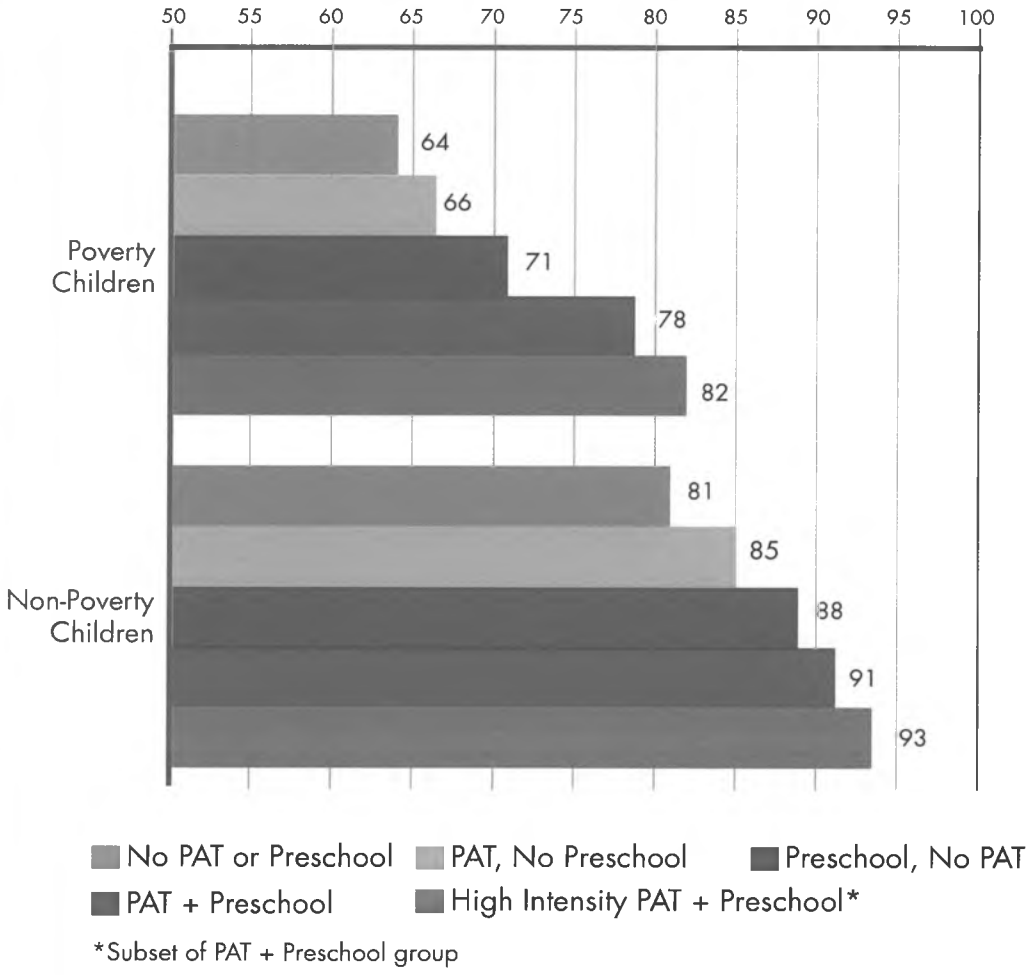
- For poor children, high intensity Parents as Teachers and preschool participation appears to narrow the achievement gap at kindergarten entry and third grade. Eighty-two percent of these poor children were ready for kindergarten, as compared to 81% of their more affluent peers with no preschool experience or Parents as Teachers participation. At third grade, a similar pattern emerged (88% vs. 93%).

Participants and Study Design

This study involved public school students from a stratified random sample of Missouri districts and schools who entered kindergarten between 1998 and 2000. Of 9,410 kindergartners assessed at school entry, 82% were matched to the third-grade MAP state assessment in Communication Arts, yielding a combined sample of 7,710 children who were assessed at kindergarten entry and again in third grade.

A secondary analysis of two existing multi-year data sets—the Missouri School Entry Assessment data and the MAP state assessment data—was used to examine the impact of pre-kindergarten services, including the Parents as Teachers program, on the school readiness and later school success of children in the early elementary years. Path analysis was used to test and support a causal model that predicts that Parents as Teachers has both direct and indirect effects on school readiness and third grade achievement.

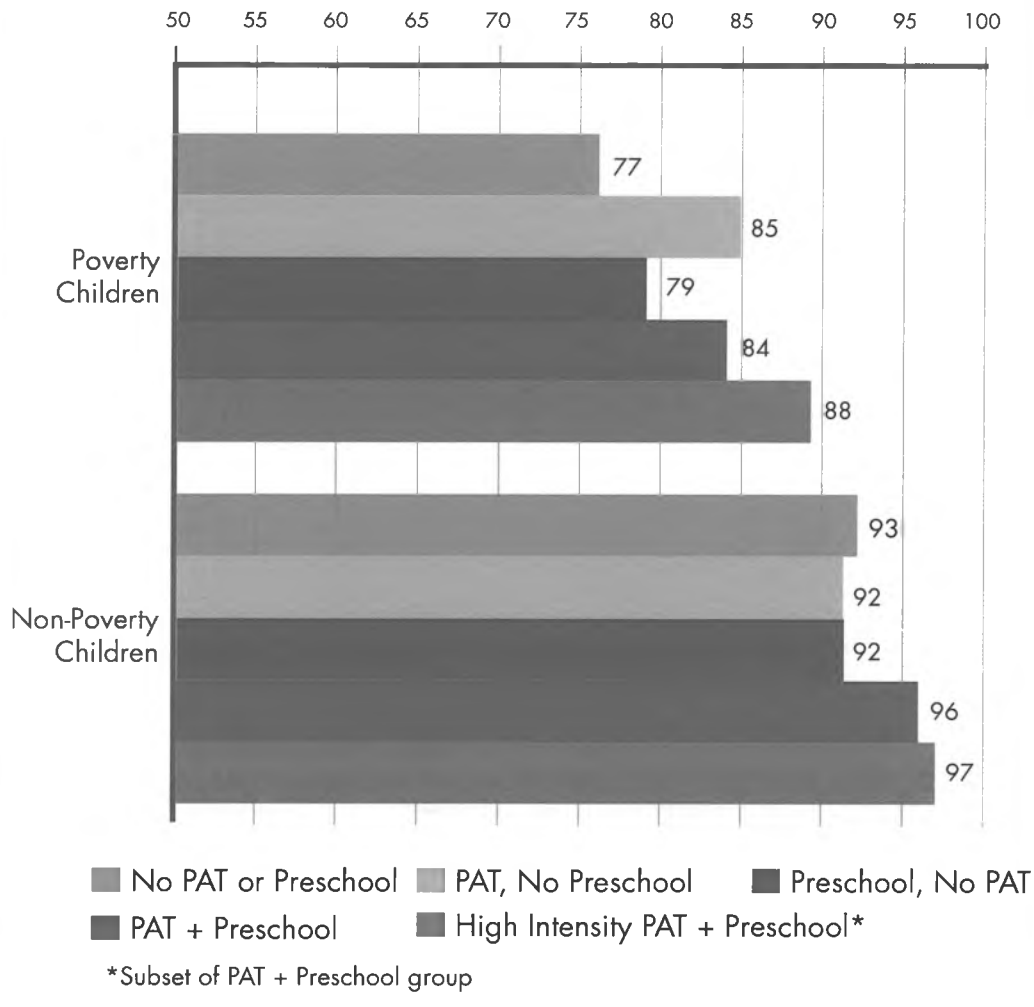
Measures



Children's preparation for kindergarten was assessed by their kindergarten teachers using a 65-item School Entry Profile. The School Entry Profile reflects areas of performance and skills appropriate to kindergarten entry that are observable within the first six to eight weeks of school. Teachers used a three-point scale—almost always, occasionally/sometimes, and not yet/almost never—to measure (1) symbolic development, (2) communication, (3) working with others, (4) mathematical/physical knowledge, and (5) learning to learn. They scored items yes or no in (6) physical development and (7) conventional knowledge. To maintain consistency, the teachers focused on one domain at a time, rating all children in their class on those items before proceeding to the next domain. Because of high inter-correlations among the seven scales, the ratings were summed to form an overall school readiness score with high reliability.

The MAP is a standardized performance-based assessment system used by all public schools in the state. The data reported here are from the MAP Communication Arts test given to all public school third graders in the spring of each year.

Parents completed a survey about their children's health issues, preschool attendance and home literacy activities prior to kindergarten entry. Parents reported whether, and the number of years, children had participated in a number of preschool experiences, including Parents as Teachers, First Steps, Early Childhood Special Education, Early Head Start, Head Start, public preschool, private preschool, center-based child care, child care in own home, child care in other private home, and remained at home with parent. Parents reported on how often someone in the home read to the child and how often their child read or looked at books.



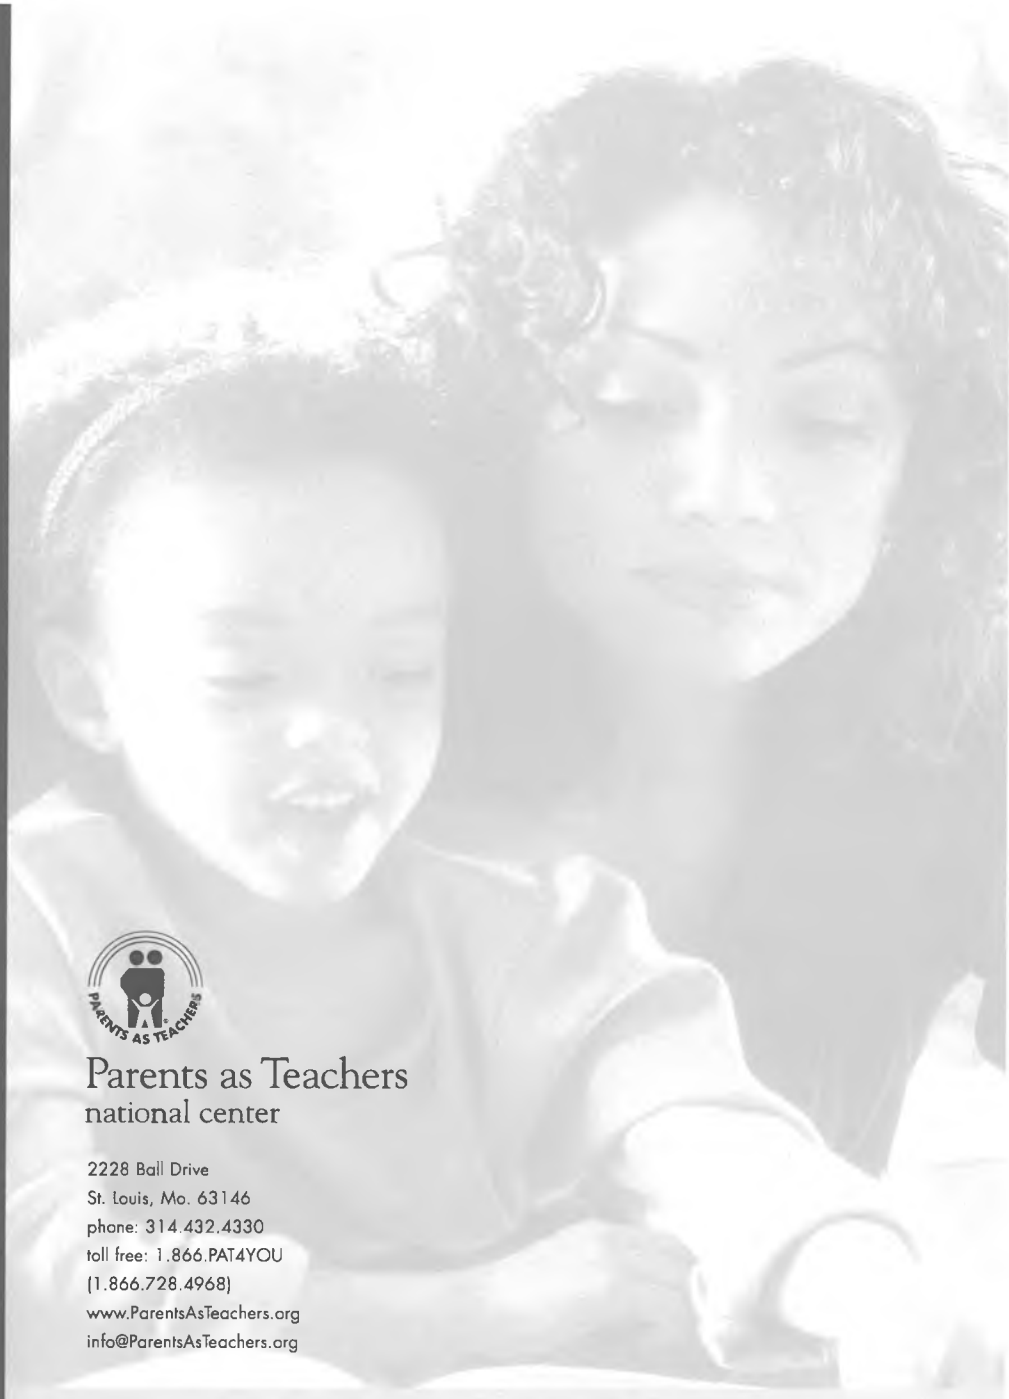
The figures show the impact of Parents as Teachers (PAT) and preschool participation on children's school readiness and later success. For this study, children assessed as "not ready" for kindergarten scored one standard deviation below the average entering kindergartner. Children scoring at the lowest level on the third grade MAP Communication Arts test scored one standard deviation below the average third grader.

Figure 1. Percentage of Children Entering Kindergarten "Ready" by Poverty Status and Pre-K Experiences

The graph illustrates that increasing percentages of both poverty and non-poverty children are ready for school with more intensive participation in Parents as Teachers and preschool. Specifically, if children in poverty participated with high intensity in Parents as Teachers and preschool (a minimum of two years in Parents as Teachers and one year in preschool), virtually the same percentage of them (82%) were ready for kindergarten as were their non-poverty peers with no preschool experience or Parents as Teachers participation (81%).

Figure 2. Percentage of Children Scoring Above the Lowest Levels of the Third Grade MAP Communication Arts Test by Poverty Status and Pre-K Experiences

The added value of Parents as Teachers carries over to third grade achievement, particularly for poor children. Again, more intensive participation in both Parents as Teachers and preschool resulted in a similar percentage of poverty children (88%) scoring above the lowest level on the MAP Communication Arts test as non-poverty children with no Parents as Teachers or preschool (93%).



The concept for Parents as Teachers was developed in the 1970s when Missouri educators noted that children were beginning kindergarten with varying levels of learning readiness. With funding from the Missouri Department of Elementary and Secondary Education and the Danforth Foundation, Parents as Teachers began in 1981 in Missouri as a pilot project for first-time parents of newborns. Convinced of the program's benefits and cost effectiveness, the state has offered Parents as Teachers services to all residents through every school district since 1985.

Parents as Teachers Goals

- Increase parent knowledge of early childhood development and improve parenting practices.
- Provide early detection of developmental delays and health issues.
- Prevent child abuse and neglect.
- Increase children's school readiness and school success.

The Parents as Teachers *Born to Learn*™ model includes four components

- Personal visits
- Group meetings
- Screening
- Resource network

Meeting Script – Wednesday, February 29 – SB 6, SB 120

CHAIRMAN THOMAS

The Senate Education Committee meeting is called to order.

Today is Wednesday, February 29th, and the time is 8:00 a.m. In attendance are:

- Co-Chair Meyer
- Vice-Chair Davis
- Senator Stevens
- Senator French
- and myself, Senator Thomas.

We have a quorum to conduct business.

Welcome, everyone. First, is there any business to come before the committee before we begin? Seeing none…we'll go ahead and get started.

We have two items of business before us today; SB 6, a Pre-K bill sponsored by Senator Davis and Senator French. We heard this bill on Monday, and still have some questions regarding the fiscal note and any impact the bill might have on the Moore settlement.

On Monday we moved to adopt the CS, and I objected for the purposes of discussion. In order for us to get an updated fiscal note, the committee must adopt the CS. This does not mean we are moving it out of committee [yet]. But in order to get updated fiscal information, we have to adopt the Committee Substitute.

At this time I will remove my objection to adopting Committee Substitute for SB 6, version 27-LS0058\I.

Is there any further objection? Seeing none, Committee Substitute for SB 6, version 27-LS0058\I, is adopted.

SENATOR THOMAS: First we will take up an amendment, suggested to us by the department. My aide will pass out the amendment to the members. Do we have a motion to adopt the amendment? Senator Meyer?

SENATOR MEYER: I move that we adopt the Amendment to the Committee Substitute for SB 6, version 27-LS0058\I.

SENATOR THOMAS: I object for purposes of discussion. I will call on Deputy Commissioner Morse to come up and explain the amendment.

{DEPUTY COMMISSIONER MORSE PRESENTS THE AMENDMENT}

SENATOR THOMAS: I remove my objection, Are there any other objections? Seeing none, the amendment to the Committee Substitute for SB 6, version 27-LS0058\I is adopted.

We also had some questions as to how SB 6 might affect the Moore settlement. Deputy Commissioner Morse, would you please come up, put yourself on the record, and tell us about how SB 6 relates to the Moore settlement and give us any information you might have about the fiscal note.

{QUESTIONS}

SENATOR THOMAS: We also had a question from Senator Stevens about data from the crime summit and the economic savings from Pre-K education. I understand Senator French has some more information for us. Senator French?

{SENATOR FRENCH}

Are there any more questions about the bill? If not, then Senator Meyer, would you like to make a motion?

SENATOR MEYER: Mr. Chair, I will make a motion that we move the Committee Substitute for Senate Bill 6, version 27-LS0058\I, as amended, to the next committee of referral, with individual recommendations and forthcoming fiscal note.

SENATOR THOMAS: Seeing no objection, the bill passes.
Our next order of business is SB 120, **Senator French's** Parents As Teachers bill. This bill was introduced by Senator French at the end of the last session. Since then, there have been some changes to the bill, and we will be looking at a Committee Substitute. Senator Meyer?

SENATOR MEYER: Mr. Chair, I move that we adopt the Committee Substitute for Senate Bill 120, version 27-LS0788\M.

SENATOR THOMAS: I object for the purposes of discussion. Senator French, we turn the meeting over to you. Will you and your assistant Lila Hobbes please introduce the bill.

{SENATOR FRENCH AND LILA PRESENT THE BILL}

Thank you. Are there any questions for Ms. Hobbes or Senator French?

{QUESTIONS}

SENATOR THOMAS: I understand that you have invited Debbi Baldwin from RuralCap to present testimony for us today. Ms. Baldwin, please come up, and put yourself on the record and commence with your testimony.

{DEBBI BALDWIN}

SENATOR THOMAS: Do we have any questions for Ms. Baldwin? Senator Meyer?

IF TIME ALLOWS: We will now open the bill up to public testimony. (We have some people online, and some here in Juneau.)

Please put yourself on the record by stating your name and your affiliation.

{WHEN TIME RUNS OUT}

Thank you for your testimony. We are at the end of the hour. We will continue hearing public testimony on Friday. I am sorry if we did not get to you today.

IF TIME IS SHORT: We will continue hearing this bill by opening up public testimony on Friday.

Our next meeting will be on Friday, March 2nd at 8:00 a.m., **here in the Beltz Room.** We will finish SB 120 and start hearing SB 197, Excellence in Schools.

With that, if there's nothing else to come before the committee, we are adjourned.

Alaska State Legislature

Senator Hollis French

SB 120 – Early Childhood Education: Parents as Teachers

Sponsor Statement

Education begins at home, and parents are a child's first and most important teachers. Engaging families in understanding the way their child's brain develops and how to create the best possible learning environment for their child is extremely beneficial. Encouraging parental involvement and fostering strong parent-child interactions before a child starts school creates positive outcomes that are long-lasting.

As a home visiting program, Parents as Teachers (PAT) is designed to provide education services to newborns and continue until the child reaches the age of five. The services offered include personal visits, group socialization opportunities with other families, developmental screenings to ensure a child's development is on-track, and referrals to other services as needed. PAT began in Alaska in 1995 when it was first implemented in Hoonah. Now, PAT operates in 47 communities around the state. It is a proven, successful program serving over 900 children in 2011.

Research from both the PAT National Center and state office indicate a multitude of benefits from participation in the program that range from short to long term. By age three, children who have been enrolled in PAT are more advanced in language and problem solving, scoring higher on kindergarten readiness tests. In addition, children who have participated in PAT also score higher on standardized reading, math, and language tests from first through fourth grade. Those students also presented a higher likelihood to graduate from high school. Participants in early childhood programs such as PAT show reduced criminal and delinquent behavior and need for public assistance, while also exhibiting greater employment rates.

Fostering positive learning experiences during the critical years of a child's brain development produces lifelong results. PAT is a voluntary program, empowering parents with the knowledge and resources to help their children develop into capable, successful students. I urge your support of this legislation.

CS FOR SENATE BILL NO. 120( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATORS FRENCH, Hoffman, Thomas, Stevens

A BILL

FOR AN ACT ENTITLED

"An Act establishing in the Department of Education and Early Development a voluntary parent and early childhood education program for pre-elementary aged children."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SHORT TITLE. This Act may be known as the Alaska Parents as Teachers Act.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

PARENTS AS TEACHERS PROGRAM ESTABLISHED. (a) The department shall devise and implement a statewide parents as teachers program for the benefit of children who are under five years of age. The program must provide a system of early childhood education that

(1) is evidence-based;

(2) involves parents;

(3) is consistent with available research and best practices for high quality early childhood education;

(4) incorporates guidelines adopted by the department for early learning that

(A) enhances school readiness;

(B) increases parent understanding of child development and developmental milestones;

(C) reduces the incidence of child abuse and neglect;

(D) increases identification of health problems and developmental delays through regular screenings;

(E) improves child health indicators, including immunization rates;

(F) increases parental involvement; and

(5) provides for effective and efficient coordination with or expansion of pre-elementary education programs operating in the state, to the extent permitted by law.

(b) A school district shall, to the extent space is needed and available, provide for the use of a room in a school at no charge to support the program established under this section.

(c) The department may develop and enter into local partnerships to implement the program established under this section.

(d) On or before January 15, 2015, the department shall provide a report to the legislature on the effectiveness and participation rates of the program established in this section. The report must include a comparison of performance of participants and nonparticipants.

(e) The program established under this section terminates on July 1, 2015.

(f) In this section, "department" means the Department of Education and Early Development.

Alaska State Legislature

Senator Hollis French

SB 120 – Early Childhood Education: Parents as Teachers

Sectional Analysis

Section 1. Provides a short title for the bill, "Alaska Parents as Teachers Act."

Section 2. Establishes a statewide voluntary Parents as Teachers early learning system.

Subsection (a) requires evidence-based education, parental involvement, and adherence to accepted best practices and early learning guidelines.

Subsection (b) requires school districts to offer space if needed and available in local facilities.

Subsection (c) directs the Department of Education and Early Development to develop local partnerships to implement Parents as Teachers.

Subsection (d) directs the Department to report on the program's effectiveness and participation rates on or before January 15, 2015.

Subsection (e) adds a 3-year sunset clause, to terminate the program on July 1, 2015.

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB120

Analysis

This bill establishes a statewide parents as teachers program for children who are under 5 years of age. The department is charged with developing and entering into local partnerships to implement the program.

Costs were determined as follows:
FY12-FY13:
53,000 children ÷ 1.34 average Pre-K per household = 39,552 families
39,552 families x 4.4% qualifying families = 1,740 families
1,740 families - 800 Federally funded families = 940 families
940 families x $4,000 = **$3,760,000 Total Grant.**

In addition to the grant the department will need to hire one position to oversee and service this program.
Education Administrator I at $109,800 plus travel at $20,000 = **$129,800**
Contractual Services costs allocated to position counts for centralized services = **$8,500**
Supplies to support general office activities of the program = **$2,500**

The program will sunset at the end of FY2014.

February 24, 2012

Senator French
Alaska State Legislature
State Capitol Building
Juneau, AK 99801

Dear Senator French:

I'm writing on behalf of the Alaska Staff Development Network, in support of establishing state funding and coordination for Parents As Teachers programs.

The Alaska Staff Development Network provides professional development for more than 4,000 educators across the state annually. One of the major areas of need is positive behavioral and remediation support for children that enter school unprepared and with undeveloped social skills.

James Heckman, a Nobel Prize-winning economist from the University of Chicago makes the case that the most cost effective way to improve schools is to support early childhood programs in his February, 2011 report "The American Family in Black and White."

> "Schools do little to reduce or enlarge the gaps in skills that are present when children enter school. Parenting matters, and the true measure of child advantage and disadvantage is the quality of parenting received. A growing fraction of American children across all race and ethnic groups is being raised in dysfunctional families.
>
> Investment in the early lives of children in disadvantaged families will help close achievement gaps. America currently relies too much on schools and adolescent remediation strategies to solve problems that start in the preschool years. Policy should prevent rather than remediate. Voluntary, culturally sensitive support for parenting is a politically and economically palatable strategy that addresses problems common to all racial and ethnic groups."

We urge the Alaska State Legislature to invest in proven programs such as Parent As Teachers to ensure more children are ready to succeed by the time they enter school.

Sincerely,

J. Kelly Tonsmeire, Director

BEST BEGINNINGS

Alaska's Early Childhood Investment

February 22, 2012

The Honorable Hollis French
State Senate
Alaska State Capitol
Juneau, Alaska 99801

Dear Senator French:

I am pleased to write in support of SB120 currently under consideration.

Best Beginnings' vision is that all Alaska children begin school ready to succeed. While it may seem easy and efficient to develop a one-size-fits-all program, in reality we need a variety of high quality programs and learning experiences for young children in our state.

A large and growing body of research provides increasing evidence of three related tenets: (1) brain growth and development occur at an astonishing pace in young children; (2) nurturing and brain stimulation during those years have a profound impact on how children fare in school; and, (3) a child's readiness for school is a powerful determinant of how he will do later in life.

Parents and other concerned community members are in the best position to identify problems, design solutions, and improve coordination to meet local needs. Personal visiting programs such as Parents as Teachers can be a critical component of a menu of services offered to assist parents in preparing their children to be ready to succeed in school and in life.

Best Beginnings has been working with a variety of partners at the state and local level to develop a comprehensive and integrated early childhood system. There is a definite need for personal visiting in this kind of coordinated system.

Please let me know if I can provide any additional information. Thank you.

Sincerely,

Abbe Hensley

February 15, 2012

Senator French
Alaska State Capitol
Juneau AK 99801

Greetings,

This letter is to inform the legislative body of the widespread support across the state to establish a voluntary Parents As Teachers home visiting program for families with children ages birth to kindergarten entry. Our membership represents nearly a thousand early childhood educators across the state, devoted to increasing the quality of early learning experiences for young children in order to prepare them for success in school and life.

Parents are their children's first and most influential teachers. Voluntary family visiting programs provide the information, support, and encouragement parents need to increase their knowledge of child development, promote early literacy experiences, provide early detection of developmental delays and health issues, and increase children's school readiness and school success. Through these preventative programs, future costs such as special education and remedial education, have been shown to be reduced.

- In Alaska, 40% of children entering kindergarten are not ready for school. Children who begin school behind rarely catch up and are less likely to graduate from high school, attend college, or acquire the skills necessary to obtain a job that pays a living wage.
- Alaska's graduation rate according to the Alaska Department of Education and Early Development is around 60%. The lack of school readiness at kindergarten leads to low graduation rates.
- Families involved with home visitation programs such as Parents as Teachers are more involved in their children's later school experiences, leading to more positive outcomes for their children's education.

Establishment of such programs is an investment in the young children of Alaska and their families, with positive outcomes for years to come.

Gara Bridwell

Gara Bridwell, M.A.
Alaska AEYC Public Policy Chair

The Honorable Hollis French
Alaska State Senate
State Capitol, Room 417
Juneau, AK. 99801

February 15, 2012

Dear Senator French,

AASB members have long expressed unanimous support for additional state investment in early childhood development programs, including Parents As Teachers. Education leaders know that far too many children enter kindergarten lagging behind in skills necessary to be proficient in reading and math. And far too many of those children never catch up.

AASB believes that initiatives such as Parents As Teachers are essential to raising student achievement in Alaska school children without adding to the cost and size of government. Money invested in our youngest Alaskans is returned many times over again in improved earning power and lower rates of social problems.

I would like to thank you for your efforts on Senate Bill 120 and would encourage the Alaska Legislature to enact and fund this important legislation.

Sincerely,

Carl Rose
Executive Director

thread connecting early care & education to alaska

February 15, 2012

Senator French
Alaska State Legislature

Dear Senator French,

This letter is in support of establishing funding and state coordination for existing and new Parents as Teachers programs in communities throughout Alaska. AEYC Southeast Alaska is part of the thread Child Care Resource and Referral Network, serving early care and learning programs and assisting parents in finding child care in order to work. We are also the lead agency in our Best Beginnings Partnership, and coordinate the Dolly Parton Imagination Library in Southeast Alaska.

With support from Best Beginnings and the Alaska Children's Trust, we are piloting a small program of 20 parents in Juneau this year. The response from participating families has been overwhelmingly positive. It is appreciated by military families, single parents, first time parents, and two parents adjusting to the sometimes stressful job of parenting.

This evidence based program is well suited to delivery through Early Head Start programs, Infant Learning programs, child care programs, and in collaboration with elementary schools. In rural communities it may be the only early learning support available. In larger communities it helps reduce the isolation and connects parents to a positive social support system.

We appreciate your continued support in working toward this highly effective approach to strengthen families and promote kindergarten readiness.

Joy Lyon, M.A.
Executive Director

Southeast Alaska | 3100 Channel Drive, Suite 215, Juneau, AK 99801 | www.threadalaska.org | 907.789.1235 | 888.785.1235

thread connecting early care & education to alaska

February 24, 2012

Dear Senator Hollis French,

I am writing this letter in support of SB 120, which will expand support and resources for the Parents as Teachers home visiting program. This legislation makes it possible for parents and families to receive the necessary supports needed to ensure their child's healthy development. Home visiting programs and support for families with young children addresses a critical need throughout Alaska.

As the Child Care Resource and Referral Network in Alaska, thread works to strengthen early care and education. Specifically, we work with parents to assist them in finding early care and education programs; we provide training to early care and education professionals to help prepare them for their work with children; and we work with the community to develop resources for the industry. This work enables us to keep a pulse on the needs and issues families are facing. Over the past several years we have seen an increase in families' struggling to meet basic needs for their family including necessary resources to support their child's healthy development. Senate Bill 120 would be a positive step toward meeting the needs of young children and ensuring that Alaska's families can find and access the services they need.

Several studies have demonstrated the long-term implications to high quality early learning, including home visiting programming. Specifically, research shows that parental involvement in their child's learning is linked to the development of the child's academic skills, including reading and writing. Investment in early childhood and family supports is critical as we now know through brain development research that brain development that occurs in the first six years of life, especially between birth and three years of age, is the most extensive and the most important that occurs in our lifetime. This time in life is when the brain is being developed and hardwired for future learning.

thread supports parents as their child's first and most important teacher. We know parents are the most influential people in their children's lives and that is why we support Senate Bill 120 and investments in Parents as Teachers. If we want to develop a healthy and productive society in our state, we must support parents of young children and invest in them. It is without reservation that I recommend the adoption of Senate Bill 120. Please feel free to contact me if you have further questions or if you would like additional comments. Thank you for considering this important legislation that will help support families and children throughout Alaska.

Sincerely,

Stephanie Berglund

2011 Parents as Teachers Communities in Alaska

Parents as Teachers
State Office

Parents as Teachers Timeline

1981 – Parents as Teachers begins as a pilot project for first time parents of newborns in Missouri.

1985 – Missouri Legislature provides state funding to implement Parents as Teachers programs in all Missouri school districts.

1995 – Hoonah City School District implements the first Parents as Teachers program in Alaska.

1998 – Fairbanks Native Association begins its Alaska Family Partnership Parents as Teachers program and establishes the first Parents as Teachers Alaska State Office.

1999 – Rural Alaska Community Action Program, Inc. in partnership with the University of Alaska Anchorage establishes the Project Northern Lights/Parents as Teachers program serving 27 families.

2004 – The Parents as Teachers Alaska State Office closes due to lack of funding.

2006 – Rural Alaska Community Action Program, Inc. reestablishes the Parents as Teachers Alaska State Office.

2007 – Seven agencies and school districts operate Parents as Teachers programs serving 818 in 32 communities statewide.

2008 – Ten agencies and school districts operate Parents as Teachers programs serving 963 children in 46 communities statewide.

2009 – Six agencies and school districts operate Parents as Teachers programs serving 948 children in 39 communities statewide.

2010 – The Alaska State Legislature establishes $300,000 for funding Parents as Teachers programs in Alaska. Six agencies and school districts operate Parents as Teachers programs serving 967 children in 42 communities statewide.

2011 – Seven agencies and school districts operate Parents as Teachers programs serving 928 children in 43 communities statewide. One school district's federal funding for Parents as Teachers ends resulting in the discontinuation of Parents as Teachers services in 14 communities. Funding for Parents as Teachers Alaska State Office reduced to 10 hours per week.

2012 – Eight agencies and school districts operate Parents as Teachers programs in 31 communities.

Document created by Rural Alaska Community Action Program, Inc. February, 2012.

What is Parents as Teachers?

Parents as Teachers is:

- A parent education and family support program serving families through out pregnancy until their child enters kindergarten. Services to families include personal visits, group socialization opportunities with other families, developmental screenings to ensure a child's development is on track, and referrals to other services as appropriate.
- Designed to enhance child development and school achievement through parent education.
- A free voluntary program for families.

Why Parents as Teachers?

- Research has clearly shown that the early years are critical in a child's development and lay the foundation for success in school and in life.
- Parents are the most influential people in their children's lives; they are their children's first teachers. If we want to make a positive difference in the lives of children, we must make an impact with their parents.
- Extensive analysis by economists has shown that investing in effective early childhood programs, such as Parents as Teachers, produces great returns. These returns benefit the community through reduced crime, welfare and educational remediation.

Why Focus on the Years Before School Starts?

- Brain development that takes place before age 1 is rapid and extensive; the influence of the early environment on brain development is long lasting.
- Developmental "windows of opportunity" are periods of time when children are especially adept at learning specific skills including:
    - Motor skills such as turning over, walking, drawing;
    - Sensory skills such as seeing and hearing;
    - Communication skills including language; and
    - Social skills such as playing and interacting with other children.
- During these windows of opportunity, it is important to provide positive experiences for young children at the appropriate times to ensure optimal development.

Why Focus on the Parent?

- Parent education helps parents to understand what to expect during each stage of development and how to promote the best development in their child.
- Research shows that parental involvement in their child's learning is linked to the development of the child's academic skills, including reading and writing.

How is Parents as Teachers Adapted for Alaska?

- The majority of Parents as Teachers programs in Alaska hire people from within the communities being served to be trained as Parent Educators. This helps to ensure the people presenting the curriculum have a solid understanding of the community and the local culture.
- Alaska has its own Nationally Certified Parents as Teachers Curriculum Training Team. These trainers reside in Alaska and are experienced in providing Parents as Teachers services to families from a wide range of cultural backgrounds.
- Parent Educators are trained to adapt activities from the Parents as Teachers Curriculum to reflect the local community and culture of the family.
- Visits are provided in the family's home language.

What Outcomes has Parents as Teachers Achieved?

- At age 3, children who have been enrolled in Parents as Teachers are more advanced in language, social development, problem solving and other cognitive abilities.
- Children enrolled in Parents as Teachers score higher on kindergarten readiness tests.
- Children who participate in Parents as Teachers score higher standardized measures of reading, math and language in grades first through fourth.
- Parents who participate in Parents as Teachers are more confident about their parenting skills.
- Parents who participate in Parents as Teachers are involved in their child's education beginning at birth and they maintain this involvement in their child's schooling. Parent involvement has been shown to be a key component of a child's success in school.

For more information on Parents as Teachers, contact Lisa Danielson, Parents as Teachers Alaska State Coordinator at ldanielson@ruralcap.com or 907-865-7334.

Parents as Teachers (SB 120) is good for Alaska's military families

Passing SB 120 will greatly help our military families with the sacrifice and stress they face with frequent moves and deployment.

SB 120 could help 8602 active duty children in Alaska between under the age of 5, plus the children of active members of the guard and reserve.

1. **Parents as Teachers helps families cope with deployment**

    - Military deployments take a toll on families, especially those with young children. Behavior is a key communicator for very young children, so being prepared for potential behavioral changes, and having places to turn to and ideas to try with the youngest members of military families is crucial to 'dealing' with separation that's part of many terms of service for our military families.

    - Families parenting singly because of deployment often struggle with regimented, school-based programs because of financial and scheduling constraints. Providing parents with resources to create a learning environment in any situation helps their children gain the fundamentals needed to enter school at par with their peers.

    - The Parents as Teachers social evenings offer isolated parents an excellent opportunity to form connections with other families. Social time also helps parents develop support networks necessary for dealing with deployment, frequent moves and other stresses unique to military families.

2. **Parents as Teaches helps reduce barriers facing children of military personnel as they transition from one school system to another.**

    - The average military family student will move from six to nine times from kindergarten to 12th grade. When parents are equipped to engage in their children's education, they can better stabilize their families through the moves and help their children transition through difficult changes.

    - While the armed services has done much to ease the transition for children of military personnel, there is much that can be done at the state and local levels to ensure that these children are afforded the same opportunities for educational success as other children.

3. **Parents as Teachers had been operating on Fort Wainwright for years, but is now gone.** Staff say that the Parents as Teachers system is essential for helping Guard members and their families cope with the stress and confusion of deployment and the absence of a loved one.

Information based on conversations with specialists on education for military families, including the United States Department of Defense, DUSD (Military Community and Family Policy), Alaska National Guard, Alaska Department of Military and Veterans Affairs, Alaska's Congressional Delegation, Fort Wainwright Parents as Teachers program, Anchorage School District Liaisons for Military Families, and elementary schools serving military families. (Pursuant to the prohibitions set forth in 18 U.S.C. 1913, the Joint Ethic Regulations, Part 6-202, 5 C.F.R. 2635, and DoD Directive 1344.10, active duty members of the military are not permitted to engage in lobbying on legislation.)

Parents as Teachers™

FACT SHEET

WHY INVEST IN PARENTS AS TEACHERS?

An evidence-based home visiting approach builds strong families and promotes positive parent-child interaction so children are healthy, safe and ready to learn.

Few investments have the rate of return of early childhood programs. Investing in children, starting with the earliest years, produces significant long-term impacts for individuals and communities.[1] Children who participate in early education programs receive immediate benefits from improved kindergarten readiness and long-term benefits from school success, better employment, and reduced delinquent and criminal behavior.[2]

What experts say: An independent cost-benefit analysis

A 2004 study conducted by the Washington State Institute for Public Policy titled "Benefits and Costs of Prevention and Early Intervention Programs for Youth"[3] found that:

> Parents as Teachers realized an **$800** per child return on investment for communities (**$4,300 in benefits** of the program minus costs over 2.5 years).

> Parents as Teachers had the largest benefit per dollar of cost (**$1.23**) of all reviewed pre-kindergarten education programs for children up to age 3.

The difference

Home visiting is critical to high-quality preschool programs. Parents as Teachers curriculum are often selected by preschool programs as the resource on home visiting to support their early childhood services.

Parents as Teachers is designed to:

1. **Enhance parent knowledge of child development and improve parenting practices.**
   - Most brain development occurs in the first few years of life and parents

(continued)

Every year 4 million children are born in the United States; if each of these children participated in Parents as Teachers, more than $17 billion in benefits could be realized.[12,13]

Our vision is that all children will learn, grow and develop to realize their full potential.

FACT SHEET
(continued)

are the most important influence on children during this critical period.

- Parents who participated in Parents as Teachers were more involved in their child's school, increasing the chances of long-term academic success.[4]

2. **Increase early detection of developmental delays and health issues.**
   - Parents as Teachers detects delays and refers children to appropriate resources for early intervention which results in long-term savings.[5,6]
     - Annual special education costs per student = **$8,080**[7]
     - Annual cost for non-special education student = **$4,394**
   - In the 2009-2010 program year, Parents as Teachers parent educators identified thousands of delays:[8]
     - 3,000 social emotional problems
     - 2,400 vision problems
     - 2,600 physical delays and health problems
     - 3,400 hearing problems
     - 18,000 developmental delays
   - Nearly 10,000 children with developmental delays received access to specialized follow-up services.
3. **Promote safe and healthy relationships to prevent child abuse and neglect.**
   - Children who are safe, healthy and ready to learn are able to achieve success in school. Children who have been abused and neglected have higher rates of juvenile delinquency, teen pregnancy, school failure, alcohol use and psychiatric illness.[9]
   - Parents as Teachers equips families with the information and tools necessary to provide a healthy and safe home using five protective factors to strengthen families: parental resilience, social connections, knowledge of parenting and child development, concrete support in times of need, and children's social and emotional development.
4. **Improve school readiness and school success.**
   - Children who are prepared for kindergarten continue to do well in the early grades of elementary school, are more likely to graduate from high school and achieve success in life.[10]
   - Parents as Teachers, combined with preschool, narrows the achievement gap between low-income and more affluent students both at kindergarten entry and at third grade.[11]

Our vision is that all children will learn, grow and develop to realize their full potential.

Sponsor(s): SENATORS FRENCH, Hoffman, Thomas, Stevens

A BILL

FOR AN ACT ENTITLED

"An Act establishing in the Department of Education and Early Development a voluntary parent and early childhood education program for pre-elementary aged children."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SHORT TITLE. This Act may be known as the Alaska Parents as Teachers Act.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

PARENTS AS TEACHERS PROGRAM ESTABLISHED. (a) The department shall devise and implement a statewide parents as teachers program for the benefit of children who are under five years of age. The program must provide a system of early childhood education that

(1) is evidence-based;

Book 586 1515 6451

(2) involves parents;

(3) is consistent with available research and best practices for high quality early childhood education;

(4) incorporates guidelines adopted by the department for early learning that

(A) enhances school readiness;

(B) increases parent understanding of child development and developmental milestones;

(C) reduces the incidence of child abuse and neglect;

(D) increases identification of health problems and developmental delays through regular screenings;

(E) improves child health indicators, including immunization rates;

(F) increases parental involvement; and

(5) provides for effective and efficient coordination with or expansion of pre-elementary education programs operating in the state, to the extent permitted by law.

(b) A school district shall, to the extent space is needed and available, provide for the use of a room in a school at no charge to support the program established under this section.

(c) The department may develop and enter into local partnerships to implement the program established under this section.

(d) On or before January 15, 2015, the department shall provide a report to the legislature on the effectiveness and participation rates of the program established in this section. The report must include a comparison of performance of participants and nonparticipants.

(e) The program established under this section terminates on July 1, 2015.

(f) In this section, "department" means the Department of Education and Early Development.

MEMORANDUM

Date: April 15, 2011

To: Senators Meyer & Thomas
Co-Chairs, Senate Education Committee

From: Senator Hollis French HSF

RE: Hearing Request

I respectfully request a hearing for SB 120 – Early Childhood Education: Parents as Teachers. I understand that the Senate Education Committee is no longer hearing bills this session, but I would like to add this bill to the queue for next session.

Included in this packet is a sponsor statement, a copy of the bill, a sectional analysis, sampling of letters of support, a list of potential witnesses, and support material. No audio/visual equipment will be necessary for a bill hearing.

If you have any questions about this legislation, please contact Lila Hobbs in my office at 465-3892.

I appreciate your consideration.

need to be. Being a military family means that we move often and otherwise, might fall through the cracks."

"As a first time mother, I'm finding out that knowledge is power. Having the support and additional information about things to do with him helps me to be a more confident parent.'

"Being first time parents, PAT has really helped us to know what is going on with his development and understand why he's doing stuff. Now we know what is coming next and learn new techniques for helping him. It is nice that the home visits are personalized to our needs and one on one."

"The visits are convenient and comfortable- we don't have to be in a big hurry or rush to be somewhere on time. Also, it can be hard to meet people in Juneau and the Group Connection meetings have been great for meeting other people with young children."

"The visit teaches, reinforces and truthfully, sets aside a time to learn as a parent. Parents are so busy that I can't imagine finding the time to research certain topics. It reinforces it more when someone is coming to the house to learn about your child."

"Parents as Teachers has been a rewarding program for us as first-time parents. It reassures us about the development of our baby and prepares us for what comes next, teaches us ways to interact with the baby that matches her development, and provides a supportive community."

"My first child was in the PAT program when he was a baby and it's neat to see the differences in the program and to learn new techniques."

Meeting Script – Monday, January 23 – SB 137

CHAIRMAN MEYER

The Senate Education Committee meeting is called to order.

Today is Monday, January 23, and the time is 8:00 a.m. In attendance are:

- Co-Chair Thomas
- Senator Davis
- Senator Stevens
- Senator French
- and myself, Senator Meyer.

We have a quorum to conduct business.

Welcome everyone! This is the first meeting of the Senate Education Committee, for the 2nd Session of the 27th Alaska Legislature.

As a short recap, last session we heard a total of 9 bills -- 8 of which we moved out of committee. We held ONE of the bills, Senator Davis' and Senator French's prekindergarten school programs bill (SB 6). In future hearings this session, we will take up the subject of early childhood education, at which time the committee will have an opportunity to revisit SB 6. Also, we will have a presentation on this subject on Wednesday in a joint hearing with the House Education Committee.

So, with that said, today the committee will hear SENATE BILL 137, Senator Davis' SUICIDE AWARENESS AND PREVENTION bill. Our general practice has been to hear a bill during one meeting, and hold it over and move it out of committee at a following meeting. HOWEVER, this is a pretty straightforward piece of legislation, and so our intention, or HOPE, is to move this bill out today, and on to its next committee of referral.

Senator Davis, would you like to introduce your legislation?

{Senator Davis, she'll request Tom Obermeyer come forward}

Mr. Obermeyer, please put yourself on the record and go ahead with the introduction of SENATE BILL 137.

Are there any comments, questions, discussion amongst committee members?

{Committee Questions}

Any further comments, questions, discussion? Seeing none, we will now open up the meeting for public testimony.

Signed up in the audience we have _____. Do you care to testify on SB 137 today? *(Might be on the list for questions only)*

Please come forward, put yourself on the record and proceed with your testimony.

{Audience Testimony}

Thank you. Are there any questions or comments from committee members? **Senator Thomas**?

{Committee Questions}

Are there any further questions from committee members? Seeing none, we'll go to the folks online; we have _____. Do you care to testify on SB 137?

Please put yourself on the record and proceed.

{Teleconference Testimony}

Thank you. Are there any questions or comments from committee members? **Senator Thomas**?

{Committee Questions}

Thank you. Is there anyone else wishing to testify?

Seeing no one else, we will **close public testimony** and allow the committee an opportunity to discuss the bill.

{Committee Questions/Comments/Discussion}

Is there any other discussion? Comments? Questions?

What is the will of the committee? **Senator Thomas**?

SENATOR THOMAS

Mr. Chair, I move that we move SB 137 from committee with individual recommendations and attached fiscal note.

SENATOR MEYER

Seeing no objection, SB 137 is moved from committee.

Our next meeting will be Wednesday, January 25th at 8:00 a.m., **in room 124 of the Capitol (Ramona Barnes Committee Room).** This is a JOINT MEETING with the HOUSE EDUCATION COMMITTEE. We will be hearing from the **Alaska Early Childhood Coordinating Council**, the group that was formed last year to look at the various early childhood education programs throughout the state, and will be reporting their findings to us. The Senate Committee will adjourn at 9:00 a.m. as usual, *however* we are invited to stay throughout the remainder of the House's committee meeting.

With that, we are adjourned at _____ a.m.

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): THE SENATE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act providing for education funding for distance delivery courses offered by a school district."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.17.410(b) is amended to read:

(b) Public school funding consists of state aid, a required local contribution, and eligible federal impact aid determined as follows:

(1) state aid equals basic need minus a required local contribution and 90 percent of eligible federal impact aid for that fiscal year; basic need equals the sum obtained under (D) of this paragraph, multiplied by the base student allocation set out in AS 14.17.470; district adjusted ADM is calculated as follows:

(A) the ADM of each school in the district is calculated by applying the school size factor to the student count as set out in AS 14.17.450;

(B) the number obtained under (A) of this paragraph is multiplied by the district cost factor described in AS 14.17.460;

(C) the ADMs of each school in a district, as adjusted according to (A) and (B) of this paragraph, are added; the sum is then multiplied by the special needs factor set out in AS 14.17.420(a)(1) and the high school vocational education factor set out in AS 14.17.420(a)(3);

(D) the number obtained for intensive services under AS 14.17.420(a)(2)**, the number obtained for distance delivery courses under AS 14.17.422,** and the number obtained for correspondence study under AS 14.17.430 are added to the number obtained under (C) of this paragraph;

(E) notwithstanding (A) - (C) of this paragraph, if a school district's ADM adjusted for school size under (A) of this paragraph decreases by five percent or more from one fiscal year to the next fiscal year, the school district may use the last fiscal year before the decrease as a base fiscal year to offset the decrease, according to the following method:

(i) for the first fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 75 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the first fiscal year after the base fiscal year;

(ii) for the second fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 50 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the second fiscal year after the base fiscal year;

(iii) for the third fiscal year after the base fiscal year determined under this subparagraph, the school district's ADM adjusted for school size determined under (A) of this paragraph is calculated as the district's ADM adjusted for school size, plus 25 percent of the difference in the district's ADM adjusted for school size between the base fiscal year and the third fiscal year after the base fiscal year;

(F) the method established in (E) of this paragraph is available to a school district for the three fiscal years following the base fiscal year determined under (E) of this paragraph only if the district's ADM adjusted for school size determined under (A) of this paragraph for each fiscal year is less than the district's ADM adjusted for school size in the base fiscal year;

(G) the method established in (E) of this paragraph does not apply to a decrease in the district's ADM adjusted for school size resulting from a loss of enrollment that occurs as a result of a boundary change under AS 29;

(2) the required local contribution of a city or borough school district is the equivalent of a four mill tax levy on the full and true value of the taxable real and personal property in the district as of January 1 of the second preceding fiscal year, as determined by the Department of Commerce, Community, and Economic Development under AS 14.17.510 and AS 29.45.110, not to exceed 45 percent of a district's basic need for the preceding fiscal year as determined under (1) of this subsection.

* **Sec. 2.** AS 14.17 is amended by adding a new section to read:

Sec. 14.17.422. Distance delivery funding. (a) As a component of public school funding, a district is eligible for distance delivery funding in the amount obtained by multiplying a factor of 0.5 by the number of students who enroll in one or more courses by distance delivery if

(1) the course is part of the core academic curriculum required for eligibility for a scholarship under AS 14.43.820 and the district did not provide the course at a school in the district;

(2) the district provides the course to the student only by distance delivery; and

(3) an accredited public postsecondary institution located in the state provides the course.

(b) In this section, "distance delivery" means an online course that is taught in a central location and simultaneously relayed by technologic means to one or more distant locations.

variability for payment

Senate Bill 169

When the Alaska Performance Scholarship was established in 2010, 81 schools and seven districts were not able to offer the courses needed for students to qualify for the scholarship. All were smaller schools in rural districts. Sixty-three schools did not offer the full complement of science courses, and 32 schools did not offer the full complement of math courses. (Sixteen of these overlap, leaving a total of 81.)

Some students in these schools are able to take courses by distance delivery. While distance delivery is not an optimal way to take a math or science course, the quality of offerings is improving. There are a variety of options and styles of coursework available both privately and through the Department of Education and Early Development.

One option is for students to take dual-credit courses. In a dual-credit course, the student receives high school and college credit. When they come to college, they will already have some course credits.

Studies have shown that students who pass dual credit-courses tend to do better in post-secondary education than those with no dual credits. According to one researcher, "dual enrollment fosters more positive attitudes towards earning post-secondary degrees in students who did not previously hold these attitudes; dual enrollment participation greatly improves students' propensity to persist in college; and this persistence in turn improved greatly dual enrollment students' likelihood and odds to graduate from college with bachelor's or graduate level degrees." (*The Impact of Dual and Articulated Credit on College Readiness and Total Credit Hours in Four Selected Community Colleges* by Johyun Kim)

Senate Bill 169 provides funding for students without access to the coursework required for the Alaska Performance Scholarship to take courses from Alaskan post-secondary institutions that offer dual credit programs.

Currently students have to pay full university prices to take dual-credit courses. The least expensive course is $430, but most courses will run between $580 and $870, not including fees which can be up to $500. Often there is a travel component so the student can do labs, which can be as much as $1000. This is prohibitive for many students. SB 169 levels the playing field so that all Alaskan students can compete for the Alaska Performance Scholarship regardless of geography or family financial limitations.

We urge you to support SB 171, and vote for its passage.

Proposed Changes

(1) the course is part of the core academic curriculum required for eligibility for a scholarship under AS 14.43.820;
(2) the district has not provided the required course on site for at least the previous two years to the student; and
(3) no other courses offered on site by the district will satisfy the curriculum requirement;
(4) an accredited public postsecondary institution located in the state provides the course.

(b) In this section, "distance delivery" means an online course that is taught in a central location and simultaneously relayed by technologic means to one or more distant locations.

To: Murray Richmond
Cc: Bernice Joseph; Daniel Solie
Subject: Re: Tech Prep and dual HS courses

Murray-
3 credit math class (about 430 tuition)
4 credit science (about 580 tuition) + Lab Fee and Travel if student must go to where lab segment is offered (current model)
my 6 credit course (about 870 tuition) + Lab Fee (kit is approx $500 bus is returned and is reusable) + Travel (either student or lab instructor to school)

NOTE ON TRAVEL: While it is nice to imagine a totally distance delivered model for science courses - that is really not practical for most student learning - generally students come to a central location for a lab intensive (travel and perdeim for a week - figure $1K/ student - less if the students can come to a hub location for the region)
or: our Bush Physics model: we travel out to the schools for a 2 or three days (instructor then works with students in class for a more indepth lab experiment, and then spends much time in other classes as a "scientist in residence" - bringing science out to village schools (roughly $1K/location)

Thanks,
Dan.

Dan - This is a good outline and I can reference how many dual credit offerings we've had at the rural sites as well as the collaborative teaching model we've developed through the Center for Distance Education with Victor Zinger, math faculty.

FISCAL NOTE

STATE OF ALASKA **BILL NO.** SB169
2012 LEGISLATIVE SESSION

Analysis

This bill adds an additional funding factor into the Public School Funding (Foundation) formula .

The factor provides funding for eligible high school students that are enrolled in eligible distance delivery courses which are provided through an accredited public postsecondary institution located in the state.

The bill provides additional funding of .50 base student allocation (.50 * $5.680 = $2,840 for fiscal year 2013) when a student enrolls in one or more distance delivery courses if:

the course is part of the core academic curriculum required for eligibility for a scholarship under AS 14.43.820 (Alaska Performance Scholarship;)

the district provides the course to the student only by distance delivery; and

an accredited public postsecondary institution located in the state provides the course.

Based on the bill language the possible enrollment is unknown. The language does not limit eligible students beyond those in grades 9 - 12, enrolled in a course necessary for the scholarship at 14.43.820,where the district provides the course to the student only by distance delivery, and the course is provided by an accredited public postsecondary institution in the state.

Section 1 of this bill amends the foundation formula to generate funding based on counting those students enrolled in eligible courses. The formula would apply a factor of .50 to the eligible distance delivery enrollment and then multiply by the base student allocation (BSA) of $5,680. One student participating in this program would generate $2,840 in funding in FY2013.

Section 2 provides eligibility as follows:

the course must be a part of the core academic curriculum as outlined in the scholarship program under AS 14.43.820.

the district provides the course to the student only by distance delivery; and

an accredited public postsecondary institution located in the state provides the course.

Governor's Performance Scholarship
Math and Science Four Year Course Offerings

How many schools do not currently offer the four years of math and science required in the GPS bill?

School Course Offering Counts for Mathematics and Science

339 schools were considered because they enroll high school students.

• Offer less than four years of mathematics		32
○ 2 math courses	16	
○ 3 math courses	16	
• Offer less than four years of science		65
○ 2 science courses	32	
○ 3 science courses	33	

Of the total 97 schools listed above 16 are the same schools, from 7 districts, that do not offer either four years of math and science.

University of Alaska Fairbanks

Support for SB0169A

Rural Student Need and Potential number of Students Impacted:

•Few Small Rural Schools offer math and hard-science courses that successfully prepare students for degree programs in science, technology, engineering or math.

•Without those math and science courses students do not qualify for the AK Merit Scholarship (4 years of math and 3 of science or 3 years of math and 4 of science)

Estimated Potential Pool: A sum of the students who graduated from AK secondary schools with 10 or fewer graduates in 2011 (excluding the Anchorage, Fairbanks, Juneau and Ketchikan districts) gives a rough estimate of the potential number of students impacted. 548 students graduated from AK secondary schools with 10 or fewer graduates in 2011. Roughly 350 graduated from the regions served by UAF CRCD campuses. A subset of these students would potentially need distance delivered courses in their junior and senior years to qualify for the AK Merit based scholarship. (Data used are from http://www.eed.state.ak.us/stats/ 2011 high school graduates by District by school)

UA Dual-Credit Distance Delivery

•Currently, UA (CRCD and others) delivers dual-credit course math and science interactively via internet to rural secondary students in small schools (primarily math and Tech Prep). This could be expanded to accommodate more students.

•No other institution has the instructor and knowledge base, along with the delivery infrastructure to deliver math and science courses via distance to rural villages as effectively.

•However: UA Tuition costs are a barrier for many rural HS students; tuition support for secondary students is currently not consistent across school districts.

•SB0169A addresses tuition need for rural students, as well as providing tuition revenue the university to support expansion of delivery of the needed courses.

Description of a current course that is addressing the need for physical science in small secondary schools (developed and delivered through Interior-Aleutians Campus, CRCD, UAF):

Bush Physics for the 21st Century, (after the Northern colloquial term "*Bush*" meaning wilderness), is aimed at early college and high school students in the remote and often road-less villages of Alaska.

•Introduces the basic physics that explains the natural world with examples familiar to students in modern rural Alaska.

•Cultural and place-based connection.

•Stresses problem solving necessary for success in university science and math

•Direct delivery via Video-conference course content posted on web-based Black-Board™ , lecture videos available for download.

•Tutorial homework sessions using interactive internet classroom e-live™ (interaction is important for success.

•Course bridges semesters: late-start/early-end with a two week spring break to fit varied school schedules.

• 6 credit course translates to one year of high school science.

•Three-part laboratory component to give students a more complete laboratory experience at a distance.

Dual Credit and Other College Prep Coursework for Oregon High School Students

Overview Dual Credit is one of several types of Accelerated Options that Oregon high school students can use to participate in college-level courses and earn college credit. These programs, which serve a wide range of students across Oregon, constitute an effective way to strengthen preparation for college and to ensure that students are work-ready. Accelerated Options increase rates of college entry, academic success in college, and college retention rates, and have the potential to keep Oregon's top performing high school graduates in state.

Accelerated Options Prepare Students for College Oregon secondary and postsecondary institutions jointly share responsibility for the success of Accelerated Options provided in high schools. Offering Dual Credit and other college prep options is part of Oregon's agenda to increase the rigor of the Oregon Diploma and align standards with postsecondary academic requirements. Many college prep options offer some form of **tuition assistance and allow students to affordably start investing in their college education**. As a lower-cost way of getting postsecondary credit, Accelerated Options programs can bring savings in tuition and fees once students enter college as they can start well into their freshman year, or in some cases, even skip freshman year, saving thousands of dollars in tuition.

A 2010 study[1] completed by the Oregon University System showed that **students who participate in Dual Credit programs are more successful in college**. They:

- Have higher college participation rates of 81.4% compared to 72.6% of students who did not participate;
- Continue on to their second year of college at higher rates, 87% for those who took Dual Credit versus 79.9% for those who did not;
- Earn a higher GPA in their freshman year of college of 3.13 versus 2.97 for those who did not participate; and
- Accumulate more college credit by the second year in college of 61.3 credits on average versus 49.8 credits for those who did not participate in Dual Credit.

Source: College Board, State Reports

The study also verified that Dual Credit instruction prepares students for subsequent college coursework just as effectively as college-situated instruction.

A 2010 College Board report shows encouraging news of **increases in AP participation in Oregon.** Between 2007-08 and 2009-10, the number of AP exams taken by Oregon students, including low-income and minority students, increased by almost 30%. The number of examinations with grades of 3, 4, and 5 (5 is the top grade) increased by 26% in that same period.

[1] Dual Credit in Oregon, 2010 Follow-up: An Analysis of Students Taking Dual Credit in High School in 2007-08 with Subsequent Performance in College; OUS, Office of Institutional Research; September 2010

Campuses Active in Accelerated Options Accelerated Options are a common service provided by postsecondary institutions in Oregon and across the country. **All seven OUS institutions offer such opportunities to high school students,** spanning a wide variety of program types, delivered on OUS campuses, at high schools, or through distance education. Three of these types of programs – Dual Credit, Advanced Placement (AP), and International Baccalaureate (IB) – have program specific, statewide standards that are established by national or international academic organizations that define the programs' instructor qualifications and level of the curriculum. These standards ensure the rigor of the courses, which is reinforced for AP and IB courses by the external assessment provided by the AP and IB exams.

OUS and Oregon community colleges have worked to ensure consistency of Dual Credit, AP, and IB across the state. For Dual Credit programs, all 7 OUS institutions and 17 community colleges agreed to adopt the national standards and program approval process; and for both AP and IB, all OUS institutions and community colleges award students the same number of credits for a given score on an AP or IB exam. In addition to the formal Dual Credit, AP, and IB programs, Accelerated Options programs available to Oregon high school students include the Oregon specific Expanded Options program (see sidebar).

Programs Delivered at OUS Campuses A variety of OUS programs allow high school students to take college coursework, along with college students, via distance learning or on an OUS campus. OUS dual credit programs also offer students **college-level courses taught by qualified college- or university-approved high school teachers within high schools**. Most of these programs offer concurrent high school and college credits, reduced tuition rates, and support services such as advising. Examples include:

- **Eastern Oregon University**: Weekend College and Summer Institute Programs provide credit-bearing and early start for high school students
- **Portland State University:** LINK (Leap Into New Knowledge) Program makes it possible for intellectually gifted high school students to attend the University for part-time advanced study.
- **Oregon Institute of Technology:** High School Transition Program allows high school students to get a head start on college studies by taking appropriate 100 and 200 level courses on campus.
- **Oregon State University:** Expanded Options Program (XOP) provides opportunities for high school juniors and seniors to take classes either on-campus or on-line through extended campus.
- **Southern Oregon University:** Early Entry Program, offering concurrent high school and college coursework.
- **University of Oregon**: DuckLink program offering UO courses to area high school students.
- **Western Oregon University:** High School Dual Enrollment program offering concurrent high school and college coursework.

Expanded Options

Expanded Options, established by the 2005 Legislature in Senate Bill 300, increases the likelihood that all students will have access to accelerated academic and professional/technical courses by requiring that high schools offer such opportunities.

Expanded Options provides opportunities for eligible high school students (juniors and seniors) to take postsecondary classes at Oregon public community colleges and universities, paid for by their school district. The program gives priority to academically able students who are at-risk for socio-economic reasons, or who have left school prematurely.

In 2009-10, 10,939 college/university credits were earned under the Expanded Options program, and there was a total tuition cost savings of $942,772*.

Frequently Asked Questions about Dual Credit

Updated 4/13/07

1. **What are dual credit courses?** Dual credit courses are college courses that also count toward high school requirements. These courses may be taken at the high school or at a college and are taught by a high school teacher with appropriate credentials or by regular college faculty. The student earns college credit and high school credit for the course. The high school and college work together to determine appropriate high school credit to be awarded upon successful completion of the course.

2. **What is the difference between dual credit and concurrent enrollment?** Concurrent enrollment means that a high school student is enrolled in and taking one or more courses at a college. Dual Credit may be viewed as a form of concurrent enrollment. Students may earn college credit through simple concurrent enrollment, but may only earn high school credit through the dual credit agreement between the high school and college.

3. **Can a student earn high school credit for any college course?** No. It is the responsibility of the institutions entering into a dual credit agreement to ensure the following requirements are met:

   - Courses offered for dual credit by public two-year associate degree granting institutions must be identified as college-level academic courses in the current edition of the Lower Division Academic Course Guide Manual adopted by the Board or as college-level technical education courses in the current edition of the Workforce Education Course Manual adopted by the Texas Higher Education Coordinating Board (THECB).

   - Courses offered for dual credit by public universities must be in the approved undergraduate course inventory of the university. Public colleges may not offer remedial or developmental courses for dual credit.

   - Courses offered for dual credit must provide advanced academic instruction that allows for mastery of the Texas Essential Knowledge and Skills for the appropriate high school course and that also goes beyond or into greater depth than those TEKS.

4. **What kind of agreement is required for an institution to offer dual credit courses?** Each high school that offers dual credit must enter into an agreement with the institution of higher education to offer the courses. This agreement must be updated and approved by the governing board of each institution annually. Specific elements of the dual credit partnership must be addressed in the agreement, such as the courses available, student

eligibility criteria, class location, faculty specifications, course curriculum, grading, assessments, and transcription of credit.

5. **Can any student enroll in dual credit courses?** No. Dual credit students must have the approval of the high school principal or other official designated by the school district, must meet the entrance requirements of the participating institution of higher learning, and must be in the 11th or 12th grade or enrolled in an Early College High School. (See http://www.tea.state.tx.us/ed_init/sec/thsp/echs.html.) Additionally, dual credit students must demonstrate college readiness. More information on the details of college readiness requirements and exemptions from specific eligibility requirements can be viewed at http://www.thecb.state.tx.us/Rules/tac3.cfm?Chapter_ID=4&SubChapter=D.

6. **How many dual credit courses may a student take?** High school students may not be enrolled in more than two dual credit courses per semester. Exceptions to this requirement for students with demonstrated outstanding academic performance and capability (as evidenced by grade point average, ACT or SAT scores, or other assessment indicators) may be approved by the principal of the high school and the chief academic officer of the college.

7. **Who teaches and assigns a grade in a dual credit course?** Dual credit teachers must be regularly employed faculty members of the college or must meet the same standards (including minimal requirements of the Southern Association of Colleges and Schools) and approval procedures used by the college to select faculty responsible for teaching the same courses at the main campus of the college. The participating college selects instructors of dual credit courses, and these instructors assign student grades. The method of providing that grade to the high school campus must be stated in the institutional agreement approved annually by both boards.

8. **Where are dual credit courses taught?** Dual credit courses may be taught on the college campus or on the high school campus.

9. **If a student takes dual credit courses on the college campus, does the time count toward a district's Average Daily Attendance (ADA)?** Time spent in dual credit courses counts toward a district's ADA. It is important to note, however, that for a district to receive FSP funding for a student taking a college course, documentation of the agreement between the school and college must be available (2006-07 Student Attendance Accounting Handbook, Section III(5-10)). Also, the student should not be charged tuition or for textbooks required for the course.

10. **Can a course be both a dual credit and an Advanced Placement (AP) course?** Yes, if the course meets the requirements of both. A College Board-approved Advanced Placement (AP) course must adhere to the AP course descriptions and be approved through the AP audit process.

11. **Who pays for the college courses?** Unless enrolled in an Early College High School, the student is responsible for all required college fees and tuition. Some districts choose to pay all or part of the tuition or the college may waive tuition. (See question 9.)

12. **What are the benefits of taking a dual credit course?** The student may earn college credit prior to graduating from high school. Additionally, if the student completes the course with a 3.0 or higher (B), it can be counted as an advanced measure for the

Distinguished Achievement Program (DAP). Students benefit most from earning dual credit for courses that help them meet graduation requirements established by the State Board of Education (SBOE). (See appropriate subchapter of TAC Chapter 74 Graduation Requirements here: http://www.tea.state.tx.us/rules/tac/chapter074/index.html.)

13. **Is a district required to offer dual credit courses?** No. However, legislation passed in 2006 (House Bill 1) includes provisions which require all school districts to implement a program by the fall of 2008 in which students will be able to earn the equivalent of 12 hours of college credit while in high school. These requirements may be met by offering dual credit for college courses, advanced technical courses, Advanced Placement courses, and/or International Baccalaureate courses.

14. **What does HB 1 require of colleges regarding dual credit?** On request, a public institution of higher education in this state shall assist a school district in developing and implementing a program designed to provide students with the opportunity to earn the equivalent of 12 hours of college credit while in high school. Colleges should work with districts to identify and provide opportunities for dual credit courses.

Closing the Education Gap in Math and Science for Rural High School Students with SB0169A

Bernice Joseph, Vice Chancellor for Rural, Community and Native Education

Daniel Solie, Assistant Professor,

College of Rural and Community Development (CRCD), University of Alaska Fairbanks

Rural Student Need and Potential Number of Students Impacted

- Few Small Rural Schools offer math and hard-science courses that successfully prepare students for degree programs in science technology, engineering or math.
- Without those math and science courses students do not qualify for the AK Merit Scholarship (4 years of math and 3 of science or 3 years of math and 4 of science)

- Estimated Potential Pool: 548 students graduated from AK secondary schools with 10 or fewer graduates in 2011 (excluding the Anchorage, Fairbanks, Juneau and Ketchikan districts). Roughly 350 from the UAF CRCD Region. (http://www.eed.state.ak.us/stats/)

UA dual-credit distance delivery:

- Currently, UA (CRCD and others) delivers dual-credit course math and science interactively via internet to rural secondary students in small schools (primarily math and Tech Prep). This could be expanded to accommodate more students.

Supporting the Education of Rural Students Across the State for Careers in Science, Technology, Engineering and Mathematics for the Future of All of Alaska

SB 170

<TARGET><BILL>SB 170</BILL><SUBJECT>SB 170</SUBJECT><COMM>SEDC27</COMM></TARGET>

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Senate Bill 170

"An Act requiring vocational education counseling in public schools."

One of the major functions of public education is to prepare our future workforce. During their school years young people make critical decisions which will ultimately affect their choice of a career later in life. Some young people have a clear idea of what they want to be doing after graduation, but many do not.

The adolescent years in particular are filled with many changes, making it a one of the critical phases of a person's life. If childhood is like traveling down a busy street, seventh grade is the junction. Recent research has specifically targeted the early adolescent years as a crucial point in development. It is a perfect time to introduce realistic career options.

Senate Bill 170 recognizes this junction in a young person's life, and provides for career counseling for every student in seventh, ninth and eleventh grades. Many schools are already offering this for all secondary students, but it should be available to every student in our state. The Department of Education and Early Development already has resources that can be directed toward this important task.

This bill would not prevent schools or districts from providing a more comprehensive program. It sets the minimum standards for career counseling, starting at seventh grade and continuing in ninth and eleventh grades. Seventh grade is when students start making important life choices. Ninth grade is the beginning of high school, when they are choosing courses which will affect their readiness for the workforce. In eleventh grade they are starting to look ahead to high school graduation, and what will come after commencement.

It is vital that we give our children the tools they need to prepare for their future, and to become a productive part of our workforce. SB 170 provides this for our students.

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

Senate Bill 170

"An Act requiring vocational education counseling in public schools."

One of the major functions of public education is to prepare our future workforce. During their school years young people make critical decisions which will ultimately affect their choice of a career later in life. Some young people have a clear idea of what they want to be doing after graduation, but many do not.

The adolescent years in particular are filled with many changes, making it a one of the critical phases of a person's life. If childhood is like traveling down a busy street, seventh grade is the junction. Recent research has specifically targeted the early adolescent years as a crucial point in development. It is a perfect time to introduce realistic career options.

Senate Bill 170 recognizes this junction in a young person's life, and provides for career counseling for every student in seventh, ninth and eleventh grades. Many schools are already offering this for all secondary students, but it should be available to every student in our state. The Department of Education and Early Development already has resources that can be directed toward this important task.

This bill would not prevent schools or districts from providing a more comprehensive program. It sets the minimum standards for career counseling, starting at seventh grade and continuing in ninth and eleventh grades. Seventh grade is when students start making important life choices. Studies show this is when students either start taking school more seriously or start their academic decline. If they want to pursue a specific career, this is the time they need to start thinking about what they need to do to be successful in that occupation.

Ninth grade is the beginning of high school, when they are choosing courses which will affect their readiness for the workforce. The coursework they choose at this time will probably determine whether they are college bound or whether they would need to take in-depth career tech courses.

In eleventh grade they are starting to look ahead to high school graduation, and what will come after commencement. They are putting the finishing touches on their secondary education, and need to know which courses to take to make sure they are prepared for life after high school.

It is vital that we give our children the tools they need to prepare for their future, and to become a productive part of our workforce. SB 170 provides this for our students.

January – May: State Capitol – Juneau, Alaska 99801 – (907) 465-2327 – 1 (800) 336-7383 – Fax (907) 465-5241

Senator.Joe.Thomas@legis.state.ak.us

SB 170

One of the major efforts of our schools is to prepare our children for the workforce. Most of our schools are doing a very good job at this. They offer a wide variety of programs to help kids investigate what kind of jobs they want to do when the graduate. We have heard from many schools about how helpful SB 84 has been.

However not every school offers a comprehensive vocational counseling program. Senate Bill 170 assures that our young people will have the tools they need to make career choices by offering career counseling in the seventh, ninth and eleventh grades.

If a school already has a program in place, it is not affected by this bill. The bill gives guidance to districts that are not offering a comprehensive program.

Focusing kids on their education and potential career is probably more important today than in the past and will be increasingly important going forward. Often times the student's concept or knowledge of an occupation is not well founded or based on accurate knowledge or information of a specific career.

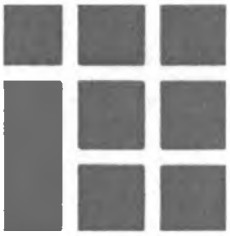
SB 170 starts in seventh grade because that is when students begin to make critical choices. Ninth grade is when they start high school, and if they have an idea of what they want to do, they may need help in choosing the courses they need to be prepared for the work they want to do. By eleventh grade they are thinking about graduation, and what they will be doing after high school.

We don't want our students to miss out on taking the courses they need to succeed in life.

As I said, many schools are already offering this for all secondary students, but it should be available to every student in our state. The

Department of Education and Early Development has indicated in their fiscal note that they already have the resources they need to carry this out.

It is vital that we give our children the tools they need to prepare for their future, and to become a productive member of our workforce. SB 170 provides this for our students.



School-Based Career Development: A Synthesis of the Literature

Katherine L. Hughes
and
Melinda Mechur Karp

Institute on Education and the Economy
Teachers College, Columbia University

February 2004

Abstract

The Carl D. Perkins Vocational and Applied Technology Education Amendments of 1998 extended support for "career guidance and academic counseling." A wide variety of such interventions are in existence. Since the No Child Left Behind Act of 2001 emphasizes evidence-based education, it is important to examine the research to determine the value of these programs. This synthesis of the research literature, covering meta-analyses and individual studies on comprehensive guidance programs, career courses, counseling interventions and computer-assisted career guidance, finds many benefits to students of career guidance and academic counseling interventions. On a variety of career-related and academic measures, student subjects did have increased outcomes. However, there are also limitations to the interventions and to the research methods studying them. Many of the interventions are short-term, low-dosage activities, with lasting benefits unclear. In addition, much of the research relies on self-reported responses to psychological inventories. Based on the findings of the research review, recommendations are to focus practice and research on middle-school students, and target resources towards ensuring that all middle- and high-school students have regular conferences with counselors to discuss their current and future academic programs. Finally, research should focus on exploring the relationships between guidance interventions and positive student behaviors, rather than attitudes.

Conclusion and Recommendations

In general, this review of the career guidance and academic counseling literature has produced many positive findings. Meta-analyses have found positive impacts of career guidance. Researchers have found benefits to students of comprehensive guidance programs, career courses, academic counseling and computer-based guidance systems. However, there are also limitations to these interventions and to the research methods studying them.

With regard to comprehensive guidance programs, much more research is needed. The attempts of Lapan, Gysbers and their colleagues to use statewide data to uncover relationships between the implementation of such programs and student outcomes are admirable. However, their research relies on self-report of variables such as student GPA, which would be better reported through transcripts. In addition, it would be useful to have a conceptual model explaining how the different elements of comprehensive guidance programs might impact students' grades and other variables.

Students do seem to benefit, both vocationally and academically, from participation in career courses. In particular, they seem to increase their knowledge of careers and their ability to make career-related decisions. On most career-related measures, students did see increased outcomes when compared with students not enrolled in a career course. In the one study exploring academic measures (Fouad, 1995), participants in a career course did improve academically. However, there is little evidence that any gains—either academic or career-related—are maintained over time.

The few studies on academic counseling or advising showed positive findings. It is interesting that this very common but rather low-profile intervention, helping students

plan their secondary school program, appears to be valuable according to certain academic measures. And the meta-analyses found that, of the different types of career guidance interventions, individual counseling interventions were most effective. This simple planning intervention may help students understand the connections between their goals and the necessary steps to take towards them. Thus this intervention is potentially very effective, but more research is needed.

Computer-assisted career guidance programs appear to contribute to students' career development, according to some career-focused inventories. However, these interventions were very short-term and the research tended to consist solely of pre- and post-test inventories, sometimes administered less than a week apart. As more than one author pointed out, the level of dosage of some of the interventions was quite low. With such small amounts of treatment, it is unclear what long-term benefits students might gain. It is also unclear whether computer-assisted programs alone or in combination with other interventions are most effective. Some have found that computer-based interventions by themselves fail to match outcomes produced in combination with some other intervention (Meier, 1991), while others have found that adding a computer program to a career course produces no additional benefits beyond the course alone (Garis & Niles, 1990).

One limitation found in common to many of the interventions and the research is that they focus on change in students' knowledge, and even more commonly, their attitudes. Students' actual behaviors were a minor focus, as in the studies that examined the effects of career courses on students' later course-taking, or research examining the relationship between academic counseling and later academic achievement. The element

of time was also a weakness in much of the research. Much like a history test that measures what students have learned in a half-semester of a history course, inventories were used to measure the digestion of career information, or a change in an attitude. In most cases no follow-up research was conducted over time to see the lasting nature of any knowledge gain or attitude change, or the relationship of these with actions taken later.

There is general agreement that career development is a desirable part of schooling, and there is evidence that many different types of career guidance interventions are effective, according to the measures chosen. Yet, the research overall does not help us in determining the optimum content of or method of delivery of career guidance. We have reviewed various interventions, but because of the diversity of goals, methods and measures, a clear direction for policy in this area is still unclear. We can, however, recommend the following:

Other career development activities that are more experiential in nature have been found to positively influence such variables as school attendance and completion. Compared to these types of activities, many of the guidance interventions reviewed seem inauthentic and artificial. Until additional research is done, students should engage in a variety of career development activities that complement one another.

Given the finding that career guidance and academic counseling is potentially very effective with middle school students, a greater investment in these activities in the middle schools should be made, and future research should be focused there as well.

Academic counseling appears to be a straightforward and cost-effective way to improve student outcomes. Resources should be targeted to ensure that all middle- and

high-school students have regular conferences with counselors to discuss their current and future academic programs.

Finally, research should focus on exploring the relationships between guidance interventions and positive student behaviors.

Meeting Script – Wednesday, February 22

CHAIRMAN MEYER

The Senate Education Committee meeting is called to order.

Today is Wednesday, February 22nd, and the time is 8:00 a.m. In attendance are:

- Co-Chair Thomas
- Vice-Chair Davis
- Senator Stevens
- Senator French
- and myself, Senator Meyer.

We do have a quorum to conduct business.

Welcome, everyone. First, is there any business to come before the committee before we get started? Seeing none…we'll go ahead and begin.

First on the agenda today is SENATE BILL 170, *Sponsored by Senator Thomas*, relating to vocational education counseling in schools. We will then hear SENATE BILL 199 *(which I sponsored)*, relating to the vocational education funding factor.

It is our general practice to hold bills over so that committee members have more time to consider them, so we'll hear the two bills today and set them aside.

We'll go ahead and get started on SB 170; Senator Thomas, would you like to speak to the bill? *(He may make some comments, but will ask Murray to present the bill.)*

Mr. Richmond, please join us, put yourself on the record and proceed with your presentation.

{Murray's Presentation}

Thank you.

Are there any questions from committee members?

{Committee Questions/Comments}

Seeing none, we will open public testimony.

Signed up in the audience we have _____. Do you care to testify on SB 170 today? *(Might be on the list for questions only)*

Please come forward, put yourself on the record and proceed with your testimony.

{Audience Testimony}

Thank you. Are there any questions or comments from committee members? **Senator Thomas**?

{Committee Questions/Comments}

Are there any further questions from committee members? Seeing none, we'll go to the folks online; we have _____. Do you care to testify on SB 170?

Please put yourself on the record and proceed.

{Teleconference Testimony}

Thank you. Are there any questions or comments from committee members? **Senator Thomas**?

{Committee Questions/Comments}

Thank you. Is there anyone else who wishes to testify?

Seeing no one else, we will **close public testimony** and allow the committee an opportunity to discuss the bill.

{Committee Questions/Comments/Discussion}

Is there any other discussion? Comments? Questions?

Seeing none, we will set SENATE BILL 170 aside for now.

Next, the committee will hear SB 199, which allows the vocational education funding stream in the BSA to be used for 7th and 8th grade programs, as well as for 9th through 12th grades as it does now. My staff will present the bill, Edra…

{Edra's Presentation}

Thank you.

Are there any questions from committee members?

{Committee Questions/Comments}

Seeing none, we will open public testimony.

Signed up in the audience we have _____. Do you care to testify on SB 199 today? *(Might be on the list for questions only)*

Please come forward, put yourself on the record and proceed with your testimony.

{Audience Testimony}

Thank you. Are there any questions or comments from committee members? **Senator Thomas**?

{Committee Questions/Comments}

Are there any further questions from committee members? Seeing none, we'll go to the folks online; we have _____. Do you care to testify on SB 199?

Please put yourself on the record and proceed.

{Teleconference Testimony}

Thank you. Are there any questions or comments from committee members? **Senator Thomas**?

{Committee Questions/Comments}

Thank you. Is there anyone else wishing to testify?

Seeing no one else, we will **close public testimony** and allow the committee an opportunity to discuss the bill.

{Committee Questions/Comments/Discussion}

Is there any other discussion? Comments? Questions?

Seeing none, we will set SENATE BILL 199 aside for now.

Our next meeting will be Friday, February 24th, at 8:00 a.m., **here in the Beltz room** We will take Senate Bill 182 back up, which is the Pupil Transportation bill.

With that, if there's nothing further to come before the committee, we are adjourned.

2011 Senate Bill 84

"How did you spend the money?"

During the February 4th 2012 CTE state coordinators' workshop, two questions were asked of all participants. "How did your district use the SB84 funds this year, and what would you do if you could also spend the funds 6-12?" The following information and testimonies were collected and listed in the order that they were received.

Kuspuk School District $74,000.00

- Kuspuk used some of the money - have not spent it all - to help purchase materials and supplies for high school students to participate in wood and metal shop programs - wood shop they worked on construction of small sheds, dog houses and other basic carpentry types of projects. In metal shop, they use the materials to manufacture metal framed cargo wagons (welded) that could be pulled behind 4 wheelers for carrying freight, possibly passengers, as well as practicing their welding and metal working skills on repairs to snow machines and 4 wheelers. Items that were manufactured were sold to community members in an attempt to put money back into the program. We have also offered some culinary arts coursework to students where they work on food service and use the materials to fund programs such as a "dinner night out" or selling products at local sporting events - again the money goes back into the system to supplement the cost of the program.

- If the program was allowed to be expanded to ***middle school*** students, we would offer more courses such as this to work down to the middle school aged students in our sites. Being that we are a small district, exclusion of our 7th and 8th grade students from our 9th-12th grade students is difficult due to the secondary settings that we offer versus traditional high school and middle school facility settings. Inclusion of this age group would just make the program more seamless.

- Probably the most important thing would be to get a full time CTE person to instruct these programs in our district. At this point, we utilize personnel with some background and/or interest in these subject areas: wood shop/carpentry, metal shop/welding, culinary arts, etc. We can't afford to staff a person that just does CTE items, the staff we utilize have other core areas that they teach and the CTE offerings are a secondary subject area that they are able to offer instructionally to the district and students.

- The SB84 money was very useful but we all know that there is so much more that we could be doing in this area if we got more than a one-time shot of money that had strings attached (not to be used for administrative purposes and to only be used for 9-12 grades).

Craig City School District $38,567

- Fund used for consumables for the CTE programs (not covered by Perkins grant), partial CTE teacher salary and benefits, CTE professional development travel expenses

- Professional development for ***middle school counselors*** and teachers to help all students create Programs of Study for HS and Postsecondary, so they can focus their energy on preparing for education and training needed to get and keep a job after their education is complete.

Unalaska **$**

- Here in Unalaska we used much of the money to develop Tech Prep programs in Welding, and Computer Aided Drafting (AutoCAD 2012) and the CADD program is updated every year for the next 5 years. We are currently trying to figure out how to create a Carpentry Tech Prep program.

- If new monies were available it would be nice hire another teacher to teach Junior High CTE programs so all the students have the opportunity to experience CTE, as it is now we only see about 25%.

Cordova Public Schools $38,340

- District Business Manager "The money is in the general fund and will be spent on salaries, benefits, and supplies for the vocational technical program."

- Our districts CTE staff have taught and lived in the community of Cordova for many years. We can envision multiple ways in which CTE could grow and evolve in our district thereby better serving our students and community.

Klawock City School District $19.024

- The funds have been used for travel for Staff Development, Supplies and Materials including wood for our construction program, food for our food and nutrition program, and software for computer applications.

- Should SB 84 be expanded to include Middle School we would use the funds to increase opportunities / offerings in Middle School.

Yukon School District $69,262

- The funds were used to enhance our CTE program. The funds were spent on providing intensive sessions in CTE courses for students through partnerships with the local communities, Yukon Flats School District, Kuspuk School District, and Galena City Schools. New CTE courses were developed and are continuing to be developed.

- Career exploration by offering a camp or intensive session to ***allow middle school*** students to do activities to learn about careers they would be good at, they would enjoy and provide job shadow opportunities for these students and guest speakers in their classrooms.

- More options which means more teachers and more money to provide travel opportunities for students to learn more about different careers.

Pelican $

- The district chose to use the funds to purchase consumable materials (wood) for the new CTE course in construction. The students are getting NCCER training.

- Additional funds would be used to support the ***middle school*** students in the construction trades.

Copper River School District $63,332

- How did you spend the funds? Support Personnel

- What would you do if they could expand the use of SB84 funds to include ***middle school students***? Offer more Vocational Education classes and choices.

Sitka $124,000

Support of CTE teaching position what would have been lost without SB84 funds.

Anchorage School District $3,600,068

- More than 2400 student class/course opportunities were provided with more than 60% occupancy in the first semester.
- After-school CTE classes were provided including transportation home from all eight comprehensive high schools.
- Additional high school funding allowed CTE teachers to teach full time in their subject area. CTE teachers no longer must teach outside their content area in order to accommodate the school FTE budget.
- After-school King Career Center exploratory as well as intensive capstone classes are offered during both first and second semester.
- Summer Career Camp is planned for up to 700 students at both KCC and comprehensive high school sites.
- Additional teaching positions were created for Career Engineering and Health Academies at certain highs schools.
- Professional development and training for HQT academic teachers to acquire professional certifications in health, engineering and construction.
-

(Anchorage continued)

- Computer On-line CTE credits and certificates with WorkKeys assessments, and ACT Career Ready 101 tutorials training were offered.
- Materials, equipment and supplies were provided to support the more than 14 new full-time equivalents, FTE, CTE teaching positions.
- New courses and programs developed and offered such as Robotic Engineering, Bio-Tech Research, Bio Med Service School Academy, and Heavy-Equipment Simulation.

Anchorage ***Middle School*** PLCP Program:

- ***Middle school*** career guide program provides students with a Personal Learning and Career Plans PLCP.
- If additional funding was provided to middle schools, Career Guides would be able to continue their mission of providing the above goals and more. If the positions are cut, the possibility that the PLCP's development will flounder or go away is a reality. We are on the cusp of being able to integrate this. At risk students are able to focus on a career and set goals for their future and perhaps prevent dropping out of school.
- Currently there are 10 career guides serving over sixty-thousand 7th & 8th graders. Approximately 80% of all 8th graders enter high school with a PLCP.
- ***Middle School*** Career Guides provide opportunities and resources to help students explore their interests and plan goals for the future. A few of the goals include:
  - Guiding students in writing a Personal Learning and Career Plan (PLCP) which is a state CTE goal.
  - Preparing 8th graders to transition to high school. They review graduation requirements and discuss career goals and how to develop a career pathway throughout high school using the information they developed on the PLCP's.
  - Reinforcing the career clusters as they work with students on their career interests.
  - Supporting classroom instructors with guest speakers and subject related career lessons, career fairs, and parent meetings.

Mat-Su Borough School District $

All expenditures of SB 84 funds were aligned with strategies outlined in three guiding documents for the State of Alaska, Alaska Career and Technical Education Plan, Alaska Health Workforce Plan, and The Alaska Gas Line Inducement Act.

Matanuska Susitna Borough School District Career Technical Education new district- wide programs include:

- New aviation program located at Palmer High School.
- New architectural, technical drafting program located at Colony High School.
- Extended day session, career and technical education course offerings spring semester at several high school sites.
- New process technology program to be located at Career and Technical High School.
- New biomedical sciences program to be located at Houston High School and Career and Technical High School.

Matanuska Susitna Borough School District Career Technical Education program improvements:

- Expansion of welding program at Houston High School.
- Upgrade tools and equipment for welding/construction/woods labs at each high school site.
- Technology upgrades at each comprehensive high school to support all career and technical education programs; as well as, Accuplacer and WorkKeys assessments labs.

Kenai Peninsula School District $840,000

How much SB84 funds did your district or school receive and how did you spend it on CTE initiatives and projects

- Equipment for Poly Com, Distance Education Bridge, Server and Green House Supplies
- After School Academies
- Hiring of "Industry Experts to offer Tech support/advice in the CTE classrooms
- Hiring of "Fractional" CTE staff for one-two hour blocks during school day

(Kenai continued)

- Capital Improvements to update/construct/improve our current CTE facilities
- Supplies for Health, Natural Resources and Transportation pathways
- MOA for Nautical Science class with AVTEC
- Travel/Training for our Type "M" certificated teachers and to assist Economically disadvantaged

What would you do if they could expand the use of SB84 funds to include middle school students?

- Unless we received additional funding we are only using the funds for high school. If we received funds above and beyond our $840,000 yearly allocation, then we would be interested in hiring additional ***middle school*** CTE teachers as exploratory courses for our high school CTE pathways. We would also use funds to update/improve/enhance equipment/supplies for these middle school programs.

Juneau School District $427,000

- Restored programs and expanded CTE course offerings in all high schools including before and after school classes supporting the following career pathways: Health Sciences, Business and Media Arts-Accounting, Desktop Publishing, Video Production, Culinary Arts, Trades-Construction, Mechanics, Natural Resources and STEM-Oceanography, GIS
- Purchased 12 passenger van to transport CTE students to work sites including house build project, business and industry visits
- Purchased instructional materials to support CTE courses and programs

Possible ***middle school*** funding:

- Career exploration including counseling and career pathway skill exploratory and skill building courses

4-Greatest CTE needs:

- Funding for CTE teachers to maintain and build career pathways in this time of deep budget cuts
- Connecting CTE courses to align with APS that provide science/math/LA/SS credit for CTE courses
- Technology upgrades;
- ***Middle school*** exploratory courses
- Career guides

Fairbanks North Star Borough School District $1,600,000

- 4.8 FTE high school teachers in diversified cooperative education, culinary arts, woods, and graphic design/multimedia design.
- ProStart supplies and instructional materials; general culinary arts supplies and equipment; distance delivery equipment.
- ProStart summer training for teachers
- Buses for the Department of Labor Career Expo
- Project Lead the Way Biomedical Sciences supplies
- Welding equipment for Hutchison HS
- We are finalizing a comprehensive equipment replacement plan for the next few years. We anticipate spending all allocated funds this year.
- If we could utilize funds at the ***middle school level*** we would consider positions and equipment to provide exploration and instruction in the areas of woods/construction, computer applications and technology, auto mechanics, and culinary arts.

Southwest Region School District **$119,000**

On what CTE projects did you spend any or all of the funds?

- Upgrade facilities in improve safety, infrastructure, and equipment so vocational education programs could be expanded.

If new SB84 legislation allowed for the use for ***middle school*** students, what would your district do?

- Expand course offerings to ***middle school*** students to better prepare them for the high school curriculum, allowing for further progress in courses of study.

What is your greatest CTE need?

- Continue facility upgrade to ensure the safety of students and expand current programs.
- The development other programs of study in the areas of technology, health care, industry (emphasis on local careers), business, and education.
- Increase staffing to meet to the other courses of study outlined above.

Alaska ACTE

Alaska Association for Career & Technical Education

Preparing Alaskans for Successful Careers

www.actealaska.org

RESOLUTION 11-2
IMPACT OF SB 84

WHEREAS, the Alaska State Legislature provided dedicated funds for CTE in Alaska, and those funds have provided for immediate and positive impact across the State, allowing for extended day offerings with staffing, supplies, and transportation; and

WHEREAS, the current language of SB 84 is exclusive to high school; and

WHEREAS, the teaching and learning of CTE Career Pathways, Personal Learning and Career Plans (PLCP), and other career exploration activities are needed at the middle school or earlier grades.

THEREFORE BE IT RESOLVED that AACTE thank the legislators and other shareholders who supported SB 84 and further encourage the Alaska State Legislature to broaden the use of dedicated funds to include grades 6-12 to continue to build the needed CTE system throughout Alaska.

WHAT IS A CAREER PATHWAY? A plan that includes a wide range of occupations that use common skills and knowledge. In Alaska, it includes a six-year plan that is tailored to each student's needs as mapped out in a Plan of Study.

WHAT IS A PLAN OF STUDY? Suggested classes within a career pathway that aligns high school and postsecondary options. This may include college education, apprenticeship, or other training that leads students to an industry-recognized credential or certificate.

PLAN AND ORGANIZE YOUR FUTURE CHECKLIST:

- ☐ Keep your grade reports; know your GPA
- ☐ Print out your Tech Prep college transcripts
- ☐ Gather info from colleges and other training programs
- ☐ Include your best high school work
- ☐ Track community service or volunteer work
- ☐ Take placement tests (Accuplacer, SAT and/or ACT)
- ☐ Apply for college or other training
- ☐ Apply for financial aid at: www.fafsa.ed.gov
- ☐ Figure out school and housing costs
- ☐ Meet with an advisor
- ☐ Register for classes and attend orientation

List potential employment options based on your interests, abilities and/or skills. For help go to www.careerclusters.org. Click on the Resources tab and then Career Clusters Models to find sample career occupations. Other helpful resources can be found at: akcis.intocareers.org or alexsys.labor.state.ak.us.

Career Clusters Interest Survey

Name _____

School _____ **Date** _____

Directions: Circle the items in each box that best describe you. You may make as many or as few circles in each box as you choose. Add up the number of circles in each box. Look to see which three boxes have the highest numbers. Find the corresponding Career Clusters on the pages immediately following this survey to see which Career Clusters you may want to explore.

BOX 1	**Activities that describe what I like to do:**	**Personal qualities that describe me:**	**School subjects that I like:**	**Total number circled in Box 1**
	1. Learn how things grow and stay alive. 2. Make the best use of the earth's natural resources. 3. Hunt and/or fish. 4. Protect the environment. 5. Be outdoors in all kinds of weather. 6. Plan, budget, and keep records. 7. Operate machines and keep them in good repair.	1. Self-reliant 2. Nature lover 3. Physically active 4. Planner 5. Creative problem solver	1. Math 2. Life Sciences 3. Earth Sciences 4. Chemistry 5. Agriculture	

BOX 2	**Activities that describe what I like to do:**	**Personal qualities that describe me:**	**School subjects that I like:**	**Total number circled in Box 2**
	1. Read and follow blueprints and/or instructions. 2. Picture in my mind what a finished product looks like. 3. Work with my hands. 4. Perform work that requires precise results. 5. Solve technical problems. 6. Visit and learn from beautiful, historic, or interesting buildings. 7. Follow logical, step-by-step procedures.	1. Curious 2. Good at following directions 3. Pay attention to detail 4. Good at visualizing possibilities 5. Patient and persistent	1. Math 2. Drafting 3. Physical Sciences 4. Construction Trades 5. Electrical Trades/Heat, Air Conditioning and Refrigeration/ Technology Education	

BOX 3	**Activities that describe what I like to do:**	**Personal qualities that describe me:**	**School subjects that I like:**	**Total number circled in Box 3**
	1. Use my imagination to communicate new information to others. 2. Perform in front of others. 3. Read and write. 4. Play a musical instrument. 5. Perform creative, artistic activities. 6. Use video and recording technology. 7. Design brochures and posters.	1. Creative and imaginative 2. Good communicator/good vocabulary 3. Curious about new technology 4. Relate well to feelings and thoughts of others 5. Determined/tenacious	1. Art/Graphic design 2. Music 3. Speech and Drama 4. Journalism/Literature 5. Audiovisual Technologies	

Source: Adapted from the Guidance Division Survey, Oklahoma Department of Career and Technology Education (2005)

Note: *This survey does not make any claims of statistical reliability and has not been normed. It is intended for use as a guidance tool to generate discussion regarding careers and is valid for that purpose.*

BOX 4	Activities that describe what I like to do:	Personal qualities that describe me:	School subjects that I like:	Total number circled in Box 4
	1. Perform routine, organized activities but can be flexible. 2. Work with numbers and detailed information. 3. Be the leader in a group. 4. Make business contact with people. 5. Work with computer programs. 6. Create reports and communicate ideas. 7. Plan my work and follow instructions without close supervision.	1. Organized 2. Practical and logical 3. Patient 4. Tactful 5. Responsible	1. Computer Applications/Business and Information Technology 2. Accounting 3. Math 4. English 5. Economics	

BOX 5	Activities that describe what I like to do:	Personal qualities that describe me:	School subjects that I like:	Total number circled in Box 5
	1. Communicate with different types of people. 2. Help others with their homework or to learn new things. 3. Go to school. 4. Direct and plan activities for others. 5. Handle several responsibilities at once. 6. Acquire new information. 7. Help people overcome their challenges.	1. Friendly 2. Decision maker 3. Helpful 4. Innovative/Inquisitive 5. Good listener	1. Language Arts 2. Social Studies 3. Math 4. Science 5. Psychology	

BOX 6	Activities that describe what I like to do:	Personal qualities that describe me:	School subjects that I like:	Total number circled in Box 6
	1. Work with numbers. 2. Work to meet a deadline. 3. Make predictions based on existing facts. 4. Have a framework of rules by which to operate. 5. Analyze financial information and interpret it to others. 6. Handle money with accuracy and reliability. 7. Take pride in the way I dress and look.	1. Trustworthy 2. Orderly 3. Self-confident 4. Logical 5. Methodical or efficient	1. Accounting 2. Math 3. Economics 4. Banking/Financial Services 5. Business Law	

BOX 7	Activities that describe what I like to do:	Personal qualities that describe me:	School subjects that I like:	Total number circled in Box 7
	1. Be involved in politics. 2. Negotiate, defend, and debate ideas and topics. 3. Plan activities and work cooperatively with others. 4. Work with details. 5. Perform a variety of duties that may change often. 6. Analyze information and interpret it to others. 7. Travel and see things that are new to me.	1. Good communicator 2. Competitive 3. Service-minded 4. Well-organized 5. Problem solver	1. Government 2. Language Arts 3. History 4. Math 5. Foreign Language	

	Activities that describe what I like to do:	Personal qualities that describe me:	School subjects that I like:	Total number circled in Box 8
BOX 8	1. Work under pressure. 2. Help sick people and animals. 3. Make decisions based on logic and information. 4. Participate in health and science classes. 5. Respond quickly and calmly in emergencies. 6. Work as a member of a team. 7. Follow guidelines precisely and meet strict standards of accuracy.	1. Compassionate and caring 2. Good at following directions 3. Conscientious and careful 4. Patient 5. Good listener	1. Biological Sciences 2. Chemistry 3. Math 4. Occupational Health classes 5. Language Arts	
BOX 9	1. Investigate new places and activities. 2. Work with all ages and types of people. 3. Organize activities in which other people enjoy themselves. 4. Have a flexible schedule. 5. Help people make up their minds. 6. Communicate easily, tactfully, and courteously. 7. Learn about other cultures.	1. Tactful 2. Self-motivated 3. Works well with others 4. Outgoing 5. Slow to anger	1. Language Arts/Speech 2. Foreign Language 3. Social Sciences 4. Marketing 5. Food Services	Total number circled in Box 9
BOX 10	1. Care about people, their needs, and their problems. 2. Participate in community services and/or volunteering. 3. Listen to other people's viewpoints. 4. Help people be at their best. 5. Work with people from preschool age to old age. 6. Think of new ways to do things. 7. Make friends with different kinds of people.	1. Good communicator/good listener 2. Caring 3. Non-materialistic 4. Intuitive and logical 5. Non-judgmental	1. Language Arts 2. Psychology/ Sociology 3. Family and Consumer Sciences 4. Finance 5. Foreign Language	Total number circled in Box 10
BOX 11	1. Work with computers. 2. Reason clearly and logically to solve complex problems. 3. Use machines, techniques, and processes. 4. Read technical materials and diagrams and solve technical problems. 5. Adapt to change. 6. Play video games and figure out how they work. 7. Concentrate for long periods without being distracted.	1. Logical/analytical thinker 2. See details in the big picture 3. Persistent 4. Good concentration skills 5. Precise and accurate	1. Math 2. Science 3. Computer Tech/ Applications 4. Communications 5. Graphic Design	Total number circled in Box 11
BOX 12	1. Work under pressure or in the face of danger. 2. Make decisions based on my own observations. 3. Interact with other people. 4. Be in positions of authority. 5. Respect rules and regulations. 6. Debate and win arguments. 7. Observe and analyze people's behavior.	1. Adventurous 2. Dependable 3. Community-minded 4. Decisive 5. Optimistic	1. Language Arts 2. Psychology/Sociology 3. Government/History 4. Law Enforcement 5. First Aid/First Responder	Total number circled in Box 12

BOX 13	Activities that describe what I like to do:	Personal qualities that describe me:	School subjects that I like:	Total number circled in Box 13
	1. Work with my hands and learn that way. 2. Put things together. 3. Do routine, organized and accurate work. 4. Perform activities that produce tangible results. 5. Apply math to work out solutions. 6. Use hand and power tools and operate equipment/machinery. 7. Visualize objects in three dimensions from flat drawings.	1. Practical 2. Observant 3. Physically active 4. Step-by-step thinker 5. Coordinated	1. Math-Geometry 2. Chemistry 3. Trade and Industry courses 4. Physics 5. Language Arts	

BOX 14	Activities that describe what I like to do:	Personal qualities that describe me:	School subjects that I like:	Total number circled in Box 14
	1. Shop and go to the mall. 2. Be in charge. 3. Make displays and promote ideas. 4. Give presentations and enjoy public speaking. 5. Persuade people to buy products or to participate in activities. 6. Communicate my ideas to other people. 7. Take advantage of opportunities to make extra money.	1. Enthusiastic 2. Competitive 3. Creative 4. Self-motivated 5. Persuasive	1. Language Arts 2. Math 3. Business Education/ Marketing 4. Economics 5. Computer Applications

	1. Travel. 2. See well and have quick reflexes. 3. Solve mechanical problems. 4. Design efficient processes. 5. Anticipate needs and prepare to meet them. 6. Drive or ride. 7. Move things from one place to another.	1. Realistic 2. Mechanical 3. Coordinated 4. Observant 5. Planner	1. Math 2. Trade and Industry courses 3. Physical Sciences 4. Economics 5. Foreign Language	

Disclaimer: *Your interests may change over time. These survey results are intended to assist you with informal career exploration. Consider more formal assessments and other resources or services to help you plan your career. This survey does not make any claims of statistical reliability.*

The 16 Career Clusters

	The production, processing, marketing, distribution, financing, and development of agricultural commodities and resources including food, fiber, wood products, natural resources, horticulture, and other plant and animal products/resources.
	Careers in designing, planning, managing, building and maintaining the built environment.
	Designing, producing, exhibiting, performing, writing, and publishing multimedia content including visual and performing arts and design, journalism, and entertainment services.
	Business Management and Administration careers encompass planning, organizing, directing and evaluating business functions essential to efficient and productive business operations. Business Management and Administration career opportunities are available in every sector of the economy.
	Planning, managing and providing education and training services, and related learning support services.
	Planning, services for financial and investment planning, banking, insurance, and business financial management.
	Executing governmental functions to include Governance; National Security; Foreign Service; Planning; Revenue and Taxation; Regulation; and Management and Administration at the local, state, and federal levels.
	Planning, managing, and providing therapeutic services, diagnostic services, health informatics, support services, and biotechnology research and development.
	Hospitality & Tourism encompasses the management, marketing and operations of restaurants and other foodservices, lodging, attractions, recreation events and travel related services.
	Preparing individuals for employment in career pathways that relate to families and human needs.
	Building Linkages in IT Occupations Framework: For Entry Level, Technical, and Professional Careers Related to the Design, Development, Support and Management of Hardware, Software, Multimedia, and Systems Integration Services.

	Planning, managing, and providing legal, public safety, protective services and homeland security, including professional and technical support services.
	Planning, managing and performing the processing of materials into intermediate or final products and related professional and technical support activities such as production planning and control, maintenance and manufacturing/process engineering.
	Planning, managing, and performing marketing activities to reach organizational objectives.
	Planning, managing, and providing scientific research and professional and technical services (e.g., physical science, social science, engineering) including laboratory and testing services, and research and development services.
	Planning, management, and movement of people, materials, and goods by road, pipeline, air, rail and water and related professional and technical support services such as transportation infrastructure planning and management, logistics services, mobile equipment and facility maintenance.

FOUR MINUTES FOR YOUR FUTURE (8th grade ILCP) Name_____

Guided Dialogue Prompts for Student-Led Conferences Team_____ Date_____

You will be sharing your 8th grade Individualized Learning and Career Plan (ILCP) with your parents/guardians during Student-Led Conferences third quarter. You will share five items:

A. Who am I?

_____

_____

B. Where am I going?

_____

_____

C. How will I get there?

_____

_____

*If time permits, please discuss other items from your ILCP. We want to honor the conferences time frame and limit your sharing to 3-4 minutes. After that time, you are encouraged to share additional information at home.

Describe your biggest challenge in achieving your dream and an idea (or two) that might help you meet or surpass that challenge.

_____

_____

Please remove this section and turn it into the box in the front office for a prize drawing!

Student Name _____ Team _____

Yes, I have discussed my child's Individualized Learning and Career Plan.

News From Mrs. Gould's CAREER CORNER...

Please join me during Student-Led Conferences for a Parent Presentation on:

Preparing Your 8th Grade Student For High School

For your convenience four sessions will be offered!

Dates: Wednesday, Feb. 16th and Thursday, Feb. 17th
Times: 1:30 – 2:00pm or 4:30 – 5:00pm
Where: Pre-Med Lab/Health Academy

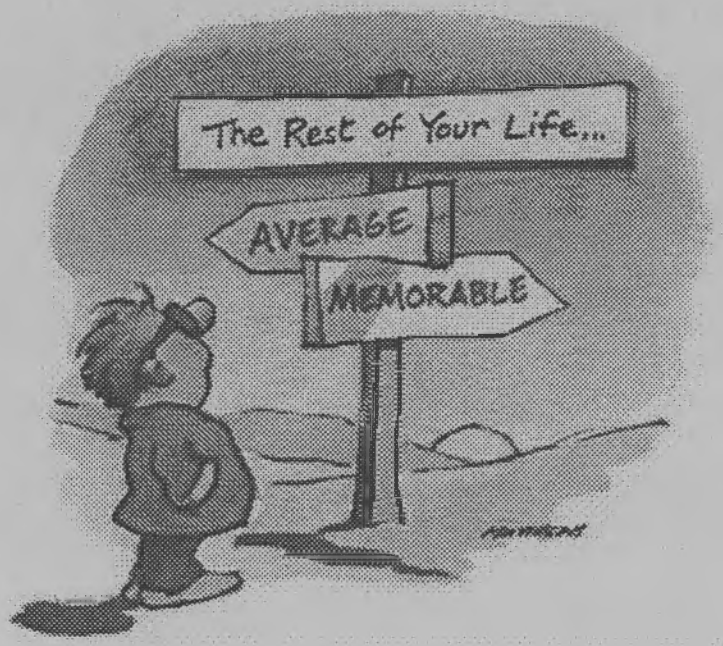
Topics:
- Using the EXPLORE Score Report to inform your choices
- The importance of choosing a career area of preference
- The importance of planning now for high school and beyond
- Freshmen grades and GPA
- Barriers to success

Career Development Tips for Parents of Middle School Students

1. Make a phone call or stop by school and get to know your Middle School Career Guide.
2. Encourage your child to use the library and online resources to gather information. Invite your child to help you do research if you are conducting a job search yourself.
3. Participate in parent involvement activities at your child's school, particularly those relating to career exploration.
4. Have your employer sponsor learning activities at your child's school. For example, ask your employer to agree to present at a Power Lunch Presentation, Career Fair, or After-School-Academy activity.
5. Look for opportunities for your child to volunteer for a charity or a community organization. This will encourage your child to be of service to the community and

to develop interpersonal and organizational skills. The experience will look great on a resume.

6. Make your child aware of the connections between education and careers. Talk about how you apply your own education to your work.



7. Discuss with your child the changing nature of the job market. Discuss the shift toward downsizing and the rise in temporary workers as compared to the past.

8. Encourage your child to find summer and seasonal employment. Evaluate the job application and give feedback on communication skills if an interview is involved.

9. Plan leisure time activities that explore interests, abilities and skills.

10. During vacations, work with your child to explore the occupations and careers that are abundant in the community. Seek out colleges and tour their campuses.

11. Consider allowing your child or other students to shadow you for a day at your work place to help them learn about your job.

If you have questions, comments or concerns please contact:
Jill Gould - CMSS Career Guide

Career Guide folder at a glance . . . .

Left side of folder . . . .

Career Clusters Interest Inventory (Green Sheet)

Seventh grade students are introduced to the 16 National Career Clusters by taking this activity. They circle activities they like, personal qualities that describe themselves and school subjects they like. Once done, they tally their numbers and find their top 3 career clusters. This begins the exploration into their future.

16 Career Clusters (yellow sheet)

A comprehensive list of the 16 National Career Clusters and a brief summary of careers in each area.

Four Minutes for your Future (blue sheet)

Just one example to help students during their student led conferences. Students organize their thoughts as they present their future plans to a significant adult.

News from Mrs. Gould's Career Corner (pink sheet)

An example of how the Middle School Career Guides get information to parents. It may include upcoming events, parent workshops, or tips to help parents in their career conversations with their students.

Right side of folder . . . .

ASD Middle School Career Guides pamphlet

An overview of what a career guide does and some duties.

ACKIS pamphlet

The Alaska Career Information System is an interactive web-based program. It is a great way for students, staff and parents to explore colleges, careers, create resumes, and create a portfolio to house the work that they do.

8th Grade Personal Learning Career Plan (PLCP)

Once 8th graders take the EXPLORE and review their results, they will think and reflect in the sections labeled: Who am I, Where am I going, and How will I get there? Students now have a 7th grade and 8th grade personal plan to compare and see their growth.

7th Grade Personal Learning Career Plan (PLCP)

Once 7th graders have a grasp of the career clusters they scored highest in, they begin the process of exploring Who am I, Where am I going, and How will I get there. This begins the process of career exploration for them.

College and Career Ready Initiative (blue sheet)

An overview of the EXPLORE assessment and what it involves. Frequently asked questions are answered on the back.

Go EXPLORE

The EXPLORE Assessment is a major tool in our career guide kit. The results are used to...

- Guide students in writing a Personal Learning and Career Plan (PLCP), which will also sharpen their goal setting skills.
- Prepare 8th graders for high school by reviewing requirements, demonstrating readiness for class placement, and showing them how they can facilitate improvements.
- Reinforce the application of Career Clusters as they match their Interest Inventory results to their career choices.
- Explain the World-of-Work Map through which we open doors to related occupations, job descriptions, educational requirements, salary expectations and job growth trends.
- Share intervention information with teaching colleagues in an effort to design an action plan.
- Meet with parents in informal settings such as workshops and Student Led Conferences.
- Invite presenters for luncheons, career days and intensive training in an effort to help students connect with mentors.

Within the school day Career Guides...

- Help each student create a Personal Learning and Career Plan for their future.
- Provide students and teachers with online career resources and other opportunities for exploration.
- Instruct students on the 16 National Career Clusters terminology, identification and synthesis.
- Help to ease the transition to high school for our 8th graders through ILCP lessons and tours.
- Instruct students in the use of portfolios and resumes as part of goal setting.
- Forge connections with School Business Partners.
- Implement the Explore test, with follow-up lessons and interest inventory. Facilitate student/parent dialogue on this topic.
- Support classroom educators with guest speakers and subject related career lessons.
- Facilitate and coordinate career fairs, themed luncheons, intensives and career focused game sessions.
- Organize events designed to promote goal setting related to post secondary education.
- Produce video and radio broadcasts on topics related to college and career readiness.

Beyond the school day Career Guides...

- Bring students to tour the King Career Center, university campuses, high schools, and work sites within their field of interest.
- Host parent workshops on college and career readiness topics.
- Collaborate with teaching colleagues to utilize Explore results.
- Orchestrate mentorships and apprenticeship opportunities whenever possible.
- Take part in Teacher Industry Externships (TIE), OJT collaboration with a variety of careers in the workforce.
- Connect with educators and counselors, at middle and high school levels to discuss student plans.
- Attend conferences dealing with career exploration and readiness.
- Assist our communities with workshops and resources to help students.

I am your...

Career Guides
Enriching the Middle School Experience

Middle school career guides work closely with students, parents, teachers and the community to connect career education to the core curriculum and to each student's life. This helps our students see the relevance of their education for their future. It inspires them to consider the wide variety of career options and helps them to set goals towards their dream.

"With the addition of a career guide on staff, students are more motivated and inspired to set goals, research career resources, and engage in a mentorship to prepare for their future."

—Jeanne Fischer, Principal

Insights & Perspectives

Josh, 8th grade student

"I think I have found something that even I can do! I have so much trouble with school, I didn't think that was ever going to happen to me!"

Alan Bolton, Exxon Mobil, AK

"We had a great time with the kids. It is rewarding for us also to see their interest and questions about what jobs we do. Thanks again for the opportunity to volunteer."

Shannon Gallagher, Assistant Principal

"Having a career guide to collaborate with the administration and provide immediate interventions for struggling students has been an invaluable asset."

Lauren Bradley, 8th grade teacher

"If anyone wants to know what a career guide does; I have 120 students planning on getting to school early tomorrow so they can sign up for 4 of 21 different choices of career seminars—their only complaint is that they can't do more!"

Kim, middle school parent

"Did you know that...
...a police officer's starting pay is over $22 an hour?
...tourism is one of the largest career fields in Alaska?
...you can get paid to guide someone on a hunting trip?
Who knew there were so many jobs in the film business?"
"These are just a few of the comments from my son Eric. He had a great day learning about careers and it opened his eyes to some careers he had no idea were out there."

Malisa Johnson, 8th grade counselor

Career guides introduce a world of career exploration to students who would otherwise not know about their available opportunities.

Career Guides

Providing opportunities and resources to help students explore their interests and plan goals for the future.

Aren't sure what you want to do?

Might want to work in healthcare... or business... or possibly law?

- Pick an Occupation Cluster from the AKCIS Index and explore more possibilities than you can imagine.
- Check out these careers and many more. Includes real world interviews with people working at these jobs every day!

Wondering what careers are the best fit for your personal skills and interests?

AKCIS interactive self-assessment tools help you find the perfect match.

Wondering which school is the right one for your major field of study?

Narrow down the options with your personal search criteria:

- AKCIS provides information on more than 4,000 institutions
  - ✓ accredited two- and four-year colleges & universities
  - ✓ technical & vocational schools
- AKCIS describes registered apprenticeship programs
- Search Alaska and nationwide

Aren't sure how to pay for college?

Create a customized list of scholarships & loans matching your:

- educational plans
- abilities
- background

Need a little help on job search skills?

AKCIS tools include:

- tips for completing application forms
- a personal resume generator
- preparation and tips for interviews

To create your own AKCIS portfolio & explore your future, talk with your school counselor or career resource advisor.

Access and update your portfolio online 24/7 from anywhere. Ask your school counselor or career resource advisor for the site username and password.

To locate an AKCIS site near you, check out *www.akcis.org* and click on **list of AKCIS sites** or call the AKCIS Helpline at (877) 269-7974 or 269-6929 in Anchorage.

____	____	Play/Drama
____	____	After school activity

ANCHORAGE SCHOOL DISTRICT

College and Career Ready Initiative

Helping All Students Prepare for the Future

Eighth-grade students will take the EXPLORE assessment during first quarter of the school year. Middle schools will determine a test date during the fall testing window. For more information contact your middle school Career Guide.

"Who am I?"

Take a realistic look at academic strengths, weaknesses and career-related interests.

"Where am I going?"

Explore educational and career pathways.
Engage in conversations about career possibilities and educational/training pathways.

"How will I get there?"

Career planning is a continuous process. Develop initial high school plans that meet interests and career-related goals. It's not too early to start planning!

Eighth-grade Emphasis:

The importance of students doing their best on the EXPLORE

The EXPLORE results contain information about work-related interests, educational plans, career goals, and academic skills. Teachers, counselors, career guides and parents can use EXPLORE results to help students make plans for high school and their future.

EXPLORE at a Glance

Educational & Career Planning Component (45 minutes)

- Career Interest Inventory – helps students explore personally relevant career options
- Plans & Background Information – gathers information about students' school coursework plans, educational and career plans after high school
- Needs Assessment – collects information about students' perceived needs

English Test
30 minutes – 40 questions
Usage/mechanics and rhetorical skills
(punctuation, grammar and usage, sentence structure, strategy, organization and style)

Reading Test
30 minutes – 30 questions
Prose, fiction, humanities and social studies

Mathematics Test
30 minutes – 30 questions
Pre-algebra, elementary algebra, geometry and statistics/probability

Science Test
30 minutes – 28 questions
Earth/space sciences, life sciences and physical sciences (Format: data representation, research summaries and conflicting viewpoints)

Turn over for frequently asked questions and answers

Frequently Asked Questions About the EXPLORE

Q: *Do the EXPLORE results tell students what type of career they should pursue?*
A: No. The results will indicate the students' self-reported career area preference. It will also encourage students to explore specific career clusters based on student answers on the career interest inventory.

Q: *What does the career interest inventory assess?*
A: The personalized EXPLORE score report (results) encourages students to investigate careers that are consistent with their work-related interests. This information is identified on the World-of-Work Map that identifies career areas based on primary work task interests – data, ideas, people, and things.

Q: *Are the EXPLORE results intended to determine if a student should or should not consider going to college?*
A: Absolutely not. The purpose of this assessment is to identify current academic progress and career-related plans and goals. This will allow students to investigate career possibilities and identify a plan for achieving their post-secondary plans. It is not intended to discourage students from obtaining their educational and career goals.

If results indicate that interests are stronger than skills, students should be encouraged to consider future course-work and/or strategies for improvement. With guidance from parents and school staff, students can map out a plan for obtaining their desired career-related goals.

Q: *Are there additional online resources available to students and parents that provide more information on the EXPLORE assessment and the World-of-Work Map?*
A: Yes. More information can be obtained at www.explorestudent.org. Families are encouraged to investigate the quick link World-of-Work Map at the above website. This can be a helpful tool prior to and after the EXPLORE is administered. The quick link can provide extensive information on career areas, occupations, and specific work-tasks (annual average salary, employment size and growth, entry requirements and related occupations and majors for each career area.

Q: *How can students best prepare for the EXPLORE assessment?*
A: Students are encouraged to answer test questions to their best ability and not rush through the career-interest questions when it is being administered. The personalized EXPLORE score report can only be fully utilized if students answer questions to the best of their ability. In doing so, there is a much better chance that the results can be useful in future educational and career planning.

An important reminder:
Families are encouraged to save all assessment results, including the EXPLORE score report that will be mailed home at the beginning of January. Because career planning is an ongoing process, it will be helpful to retain the paperwork in order to refer to it throughout your child's academic career.

I want a job in the earth sciences...

"I love the outdoors."

High School Graduated:
West Anchorage HS, Anchorage, AK

College Graduated:
University of Alaska Fairbanks: B.S. Geography & Environmental Studies

Current College:
University of Alaska Fairbanks

Major:
Chemical Oceanography

KRISTEN SHAKE

"I grew up in Anchorage and Girdwood along with my two younger brothers and sister. I was a pretty rambunctious kid and didn't really enjoy being at school up until the 3rd grade. I had an excellent 3rd grade teacher, Mrs. Hager. I was full of energy all the time, but she was able to spark my interest in learning. I will always be grateful for her guidance because I don't think I would be as successful as I have been thus far in my educational career if it weren't for her."

What do you currently study?

"I am a Chemical Oceanography graduate student with the School of Fisheries and Ocean Sciences at UAF. I really enjoy the fact that I was able to get such a great education relatively near my hometown of Anchorage. My family has been incredibly supportive and without their guidance and help, I don't think I'd be where I am today."

Do you have any advice for students?

"I think students need to ask themselves where they feel happiest. If they feel happy in the classroom, learning about the world around them, then they should pursue that interest. If they feel happy with their dad in the garage fixing up an old car, then they should learn more about fixing cars. Whatever students decide to do, it is important that they incorporate higher learning into their plans. Broadening one's horizons is a key step in becoming an adult."

"A little bit of enthusiasm and curiosity goes a long, long way."

"My childhood was split between growing up in Anchorage and spending time with my family in a small farming town in Austria where I spent most of my time outdoors. In high school, I took my first biology class and loved it. I think even then I realized that there were endless possibilities for travel and adventure for someone interested in biology.

After taking a scientific diving class through the marine science program at UAF, I was hooked on marine biology. Swimming through kelp forests and seeing firsthand how much life we have in our waters was one of the most amazing experiences in my life to that point. Since then, I have photographed leopard seals and penguins in the Antarctic, trawled the Chukchi Sea for benthic invertebrates, and cruised the Bering Sea in a U.S. Coast Guard Icebreaker. My next goal is to travel to the Antarctic again and dive under the massive ice sheets that extend from the glaciers over the ocean."

Who helped you along the way?

"My father influenced me the most, teaching me to work hard and not complain. This has served me well in my field work experiences because when you are out on an expensive and time-limited project, you either work hard or you don't get asked to come out again."

Advice about career training?

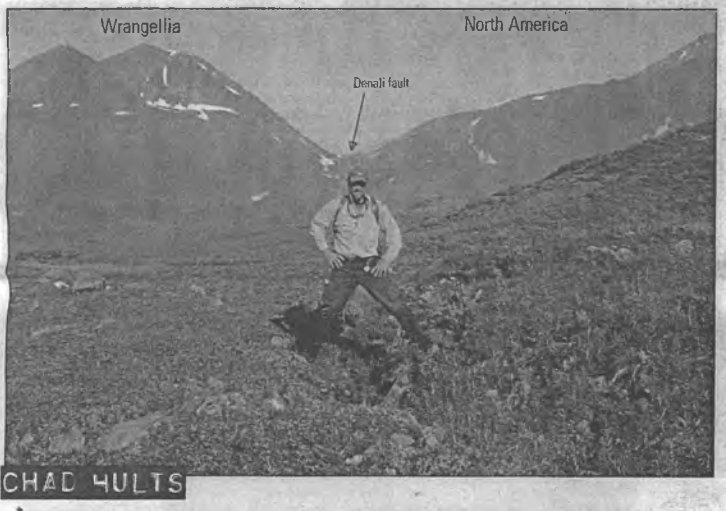
"Don't be intimidated by college. Find someone, either a student or a professor, in a field you might be interested in and ask them questions about their work."

High School Graduated:
Robert Service HS, Anchorage, AK

College Graduated:
University of Alaska Fairbanks: B.S. in Biology

Current College:
University of Alaska Fairbanks

Major:
Marine Biology



8th Grade, Seward MS, Seward

"The decisions you make add up to your life."

Colleges Graduated:
Shoreline Community College, Seattle, WA: Associate of Art and Sciences

Western Washington University, Bellingham, WA: B.S. and M.S. in Geology

Current Career:
Geologist for US Geological Survey, Anchorage

Photo: East of Paxson along the Denali Fault, Chad is standing on the rupture caused by the November 3, 2002 7.9 magnitude earthquake. This is the line where the edge of North America meets with "exotic" rocks to the south. The fault moved rocks 8 feet horizontally.

"I work as a geologist with the US Geological Survey at the Alaska Science Center. My main duty is to compile a geologic map of Alaska. This effort has been underway for over a decade so the complexity is mind-blowing."

What schooling did you take to enter your career?

"To become a geologist I had to obtain a Bachelor of Science in geology. To become a well-paid geologist I also got a Master of Science in geology. These degrees required many advanced math, physics, and chemistry courses."

What do you like best about your career?

"I have many opportunities to shape my career because the topics available to study are endless. I have freedom to use my imagination to figure out the geology of Alaska. To do my research, I get to hike in the mountains, boat in the ocean, and fly in a helicopter around the state. The office work is intellectually stimulating--literature research, computer analysis, and laboratory work."

Words of wisdom for those about to enter high school?

"Although getting excited about math or English while in middle school or high school is hard to do, these are the tools you will use in any career you choose.

A great man said to me, 'The decisions you make add up to your life.' The decisions you make, whether large or small (when to wake up in the morning, what to wear, whether or not to do your homework), shape your life. If you take control of your decisions you will have control of your quality of life."

Science

Answers to the "why" and "how" of life!

Science is about asking questions and finding out the answers through research and testing, as well as trial and error. Scientists discover truths about the world around us that inspire them to create new technologies and new ways of doing things.

From the invention of the cell phone, to the discovery that DNA can be used to identify crime suspects, science is changing the way we live every day.

Also, three to four years of science in high school will help you qualify for the Alaska Performance Scholarship!

(See page 6.)

I want a career in computer technology...

High School Graduated:
Colony HS, Palmer, AK

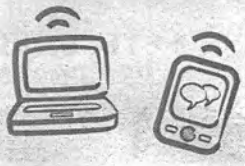
Current College:
AVTEC - Alaska Institute of Technology, Seward

Major:
IT - Network Technician

"I was born in Alaska and attended middle and high school in the Matanuska-Susitna Valley where I developed an interest in computers and decided to attend AVTEC."

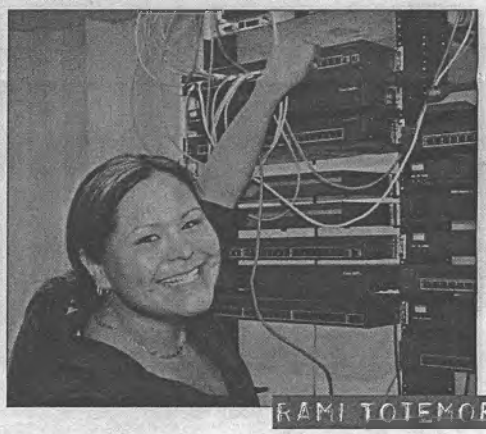
What did you want to be when you were young?

"When I was younger, I thought I wanted to be a crime scene investigator (CSI). That changed when I got into high school. My aunt, Stephanie, inspired me to pursue a career in computers."



Advice for students?

"If you are not quite sure of what you want to do, go to college and you'll get to experience a little bit of everything. If you know what you want to do, try going to a career school."



8th Grade, Mears MS, Anchorage

"Education & training after high school is very important!"

High School Graduated:
Tatitlek Communi
School, Tatitlek, A

Current College:
AVTEC - Alaska Institute of Technology, Sewa

Major:
IT - Network Technician

"I grew up in the small secluded village of Tatitlek in the Prince William Sound, where I graduated with a class of five."

What are you studying?

"I am attending the Information Technology training at AVTEC in Seward. The training is eight hours a day, focusing on what I want and need to learn."

How did you end up there?

"I always knew I was going to continue my education after high school, but I did not know what I wanted to do. I attended the University of Alaska Anchorage for three years and took a break by working as an intern at the Chenega Corporation in Anchorage, in the Information Technology Department. One of the employees encouraged me to enhance my training and education at AVTEC."

Do you have any advice for students?

"Just do it! Education and training after high school is very important!"

CHECK OUT AVTEC!

AVTEC (Alaska's Institute of Technology), located in Seward (south of Anchorage on the Kenai Peninsula), is a component of the Alaska Department of Labor and Workforce Development. To learn more about this school and its many programs, visit AVTEC's Web site at www.avtec.edu.

MARIA HERNANDEZ

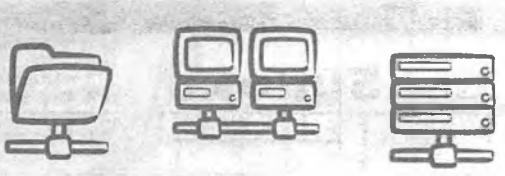
"During my middle and high school years, I was interested in a lot of different things, like photography and traveling, but I was already a computer geek. While I was in school, I worked for a hospital doing data entry and analysis for a study on children born to drug-addicted mothers. That's when I realized I wanted to learn more about how databases can help analyze information that will impact peoples' lives.

I have a Bachelor's degree in Psychology with a minor in Computer Information Systems. For me, these two degrees combined my interest in working with people with my secret love for computers."

Colleges Graduated:
University of Miami, FL:
B.A. in Psychology, Minors in Computer Information Systems and Photography

University of Pennsylvania, PA:
Master of Social Work

Current Career:
Information Technology (IT) Training Supervisor, Anchorage School District



What do you do in your job?

"I am an IT Applications Training Supervisor. My team helps school district staff use computer systems and applications. We also work with the technical staff to make sure that the databases and programs we have are accurate, useful, and are accomplishing their business purpose."

"Technology grows and develops so quickly."

What do you like best about your career?

"Technology grows and develops so quickly--it's exciting that we get to be the first to try out new things and help determine if they would be of benefit to the school district."

DAVID O. BRAND

"Carpe diem! Seize the day!"

High School Graduated:
Chugiak HS, Anchorage, AK

College Graduated:
University of Alaska Anchorage and American InterContinental University: B.S. in Computer Science

Current Career:
CISSP, Chief Information Officer for US Air Force 673 Civil Engineer Group, Anchorage

"I grew up in Anchorage and Eagle River and went to Gruening Middle School and Chugiak High School. I loved all sorts of games, from board games to computer games.

When I was 13, I wanted a computer, so my uncle showed me how to build one. While working for my neighbor's company, I built a computer from the ground up all by myself. I was very proud of that accomplishment. When I started formal training I was the star of the class because I had already gotten my feet wet and wasn't afraid of computers.

Now, I am a Chief Information Officer for the US Air Force, working on Elmendorf Air Force Base. My team can accomplish almost anything. We help users when they have problems, manage how data travels, and are in charge of the large servers that help my organization get its work done. The most difficult thing in my job is explaining to people why we have different levels of security, and that you need to take precautions to keep information safe."

What education and training do you have in IT?

"I have a Bachelor's degree in Computer Science. I am also a Certified Information Systems Security Professional, which is one of the hardest certifications to get in the IT world."

Any advice for Alaska's middle school students?

"Carpe diem! Seize the day! But be responsible in doing it, for every action has a reaction."

Alaska Performance SCHOLARSHIP

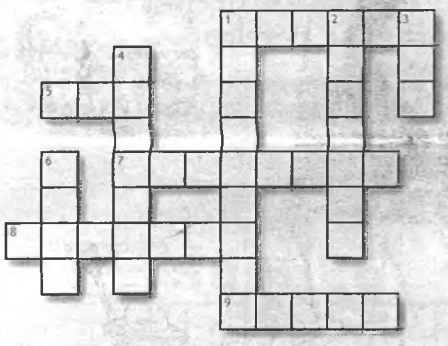
Did you know there's a new scholarship for college or career training in the state that any Alaskan can earn by taking challenging classes in high school, earning good grades and test scores?

HOW DO YOU GET IT?

Get started off in high school on the right foot! Plan to follow one of these two pathways to success:

- **Math and Sciences** - Four years of math, four years of English, four years of science, and four years of social studies (one of which can be a world language, fine arts, or cultural heritage).
- **Social Sciences and Language** - Three years of math, four years of English, three years of science, four years of social studies, and two years of the same world language.

Make sure you study hard and earn the highest grade point average (GPA) and test scores you can--the better your results, the larger your scholarship! To learn more about the Alaska Performance Scholarship, go to *APS.alaska.gov*.



Crossword Puzzle

Across:
1. 49th state
5. Grade Point Average (abbr.)
7. Joshua wants to be a chemical ___.
8. College takes a little ___ and determination.
9. Joseph wants to ___ Tae Kwon Do to blind kids.

Down:
1. Emily wants to be an ___.
2. Rachel wants to work in sports medicine as a doctor or ___.
3. Alaska Pacific Univercity (abbr.)
4. AKCIS is where you can learn about different ___.
6. Manon wants to be a ___ critic.

DO YOU KNOW

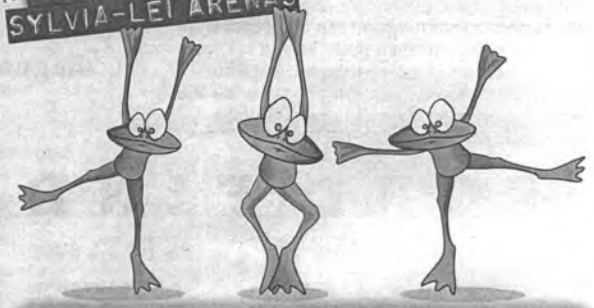
which Alaska college campus this is?

Can you picture yourself here?

Answer: Alaska Pacific University in Anchorage

Be the first person in your family to go to college!

Even if no one in your family ever went to college, that doesn't mean that you can't. It takes just one person in a family to act upon that dream and be the example for others to follow. It may seem scary at first, but all it takes is a little courage and determination. Talk to your teachers, counselor or principal about what college is and how to prepare. Ask questions! Find out what you can do now to get ready. Take high school classes that will help prepare you. Did you know there's a new scholarship that rewards taking challenging classes? (See above.) Find out about mentoring or enrichment programs to help you succeed in education during and after high school. Seek role models. Surround yourself with other people who have succeeded and ask how they did it. You may find someone else who was also the first to go to college!



MUSICIAN DOCTOR PLUMBER CARPENTER ACCOUNTANT DESIGNER PROFESSOR

AKCIS

Careers, Careers, Careers....

A great place to learn all about hundreds of different careers. Ask your teacher or counselor if your school has an active Alaska Career Information System (AKCIS) account. AKCIS is free to all Alaska schools! If your teacher or principal needs more information, tell them they can call the AKCIS Helpline (877) 269-7974 or in Anchorage at 269-6929, or by email at *akcis@alaska.gov*.

I want a career working with animals...

LINDSAY WINGERTER, DVM

High School Graduated:
Monroe Catholic High School, Fairbanks, AK

Colleges Graduated:
Montana State University: B.S. in Animal Science

Washington State University: Doctor of Veterinary Medicine

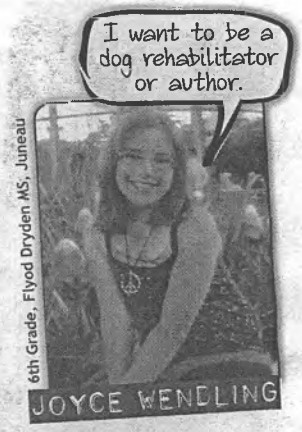
Current Career:
Veterinarian, Alaska Veterinary Clinic, Anchorage

"I was always interested in animals. My first word was 'dog'! I mushed dogs since kindergarten and I raised sheep and goats for 4-H."

What postsecondary education did you take?

"After completing four years of undergraduate study to get a Bachelor of Science in Animal Science, I had four years of intense veterinary medical school."

Tell us about your job.



"I love it when I can diagnose, treat and cure diseases--especially since my patients can't talk! And puppy breath is one of my favorite smells.

A big part of my job is teaching and communicating with owners. I love it when I can let people know how best to care for their pets. To be a vet, you need to take lots of science classes, but also develop your people skills. This job is mostly about animal health, but I've never seen a German Shepherd drive himself to the clinic."

8-week-old Louis gets an exam from Dr. Wingerter.

"I love it when I can diagnose, treat and cure diseases."

What is the Center for Alaska Coastal Studies?

CACS has been learning and teaching about the marine and coastal ecosystems of beautiful Kachemak Bay, on the Kenai Peninsula, since 1982. The Center holds Junior Naturalist Summer Camp, Alaska Whale Camp, and EcoAdventure Camp each summer.

Learn more about the Center and these summer opportunities for students at www.akcoastalstudies.org.

How long does it take to become a veterinarian?

Veterinary school usually takes four years beyond the bachelor's degree. The fourth year is usually spent in a veterinary clinic, helping to treat animals. There are currently 28 veterinary schools in the United States accredited by the American Veterinary Medical Association (AVMA).

Do you like to help others?

Would you like to learn about another culture?

Want to learn a new skill?

The Alaska 4-H Youth Development Program

4H is a nationwide program where you can work on projects that interest you. Not only can you learn, make new friends and have a lot of fun with 4-H, but 4-H high school seniors are eligible to apply for a scholarship to the University of Alaska which could cover one whole year of tuition!

Through 4-H, you will find special projects, activities, clubs, and even camping opportunities. 4-H gives you the opportunity to meet new friends who share your interests, become more confident through problem solving and overcoming challenges. You can give back to the community through service projects, and gain independence and leadership by making important decisions on your own.

4-H in Alaska currently has programs in Anchorage, Bethel, Fairbanks/Tanana, Kenai Peninsula, and Mat-Su/Copper River areas. If there isn't yet a program near you, or if you want to learn something that isn't currently offered, 4-H can help you start your own project or club. Now is a great time to learn project development and leadership skills that will help you be successful in life.

Current 4-H projects and activities include: training your dog, raising livestock, cooking, sewing, crafts, health & nutrition, gardening, leadership development & public speaking, recycling & sustainability, babysitting & childcare development, civics & governance, career awareness & exploration. 4-H even has a foreign exchange program, and more!

Learn more about Alaska's 4-H: www.alaska4h.org

Alaska SeaLife Center

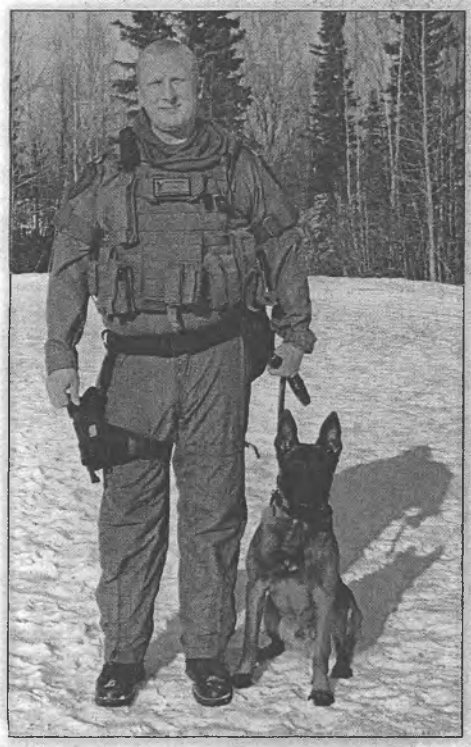

Photo courtesy of the Alaska SeaLife Center

The Alaska SeaLife Center, located on the shores of Resurrection Bay in Seward, is Alaska's only public aquarium and ocean wildlife rescue center. Visitors to this "window on the sea" have close encounters with puffins, octopuses, sea lions and other sealife while peeking over the shoulders of ocean scientists studying Alaska's rich seas and diverse sealife.

Research projects help scientists discover reasons for declining marine animal populations and environmental changes. In the picture above, researcher Jo-Ann Mellish from the Alaska SeaLife Center releases a Steller sea lion after fitting it with high tech tracking devices.

Marine mammal research conducted under NMFS permit no. 881-1668.

I want to work in public safety...

Jason Whetsell in SWAT Gear and Alex

Alex (a one-and-a-half-year-old Belgian Malinois) just recently finished both his patrol training and drug training. He is Jason's third dog. Jason's previous dogs, Bosco and Dutch, are retired and live with Jason and his family, along with Alex.

Jason and his dogs have visited many classrooms, talking about what they do and answering students' questions. If you would like Jason and Alex to visit your classroom, have your teacher contact Jason at: *JWhetsell@muni.org*.

More about APD's canine unit at: *dollarsfordogs.org*.

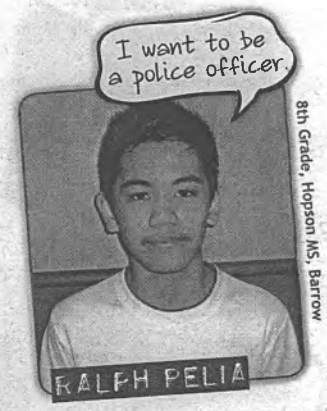
High School Graduated:
Cordova High School, Cordova, AK

Colleges Graduated:
University of Alaska Anchorage,
Wayland Baptist University, Anchorage

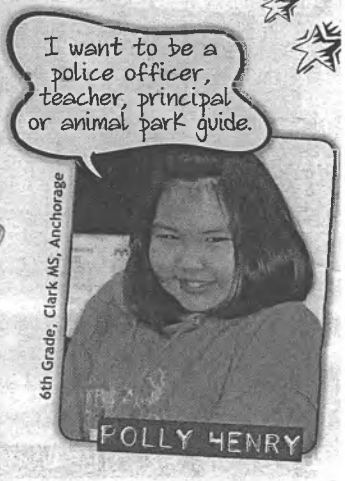
Current Career:
Police K-9 Officer, Municipality of Anchorage

JASON WHETSELL

"I grew up in Cordova, Alaska. I was always interested in firefighting and I enjoyed playing basketball. My postsecondary education was focused on being a firefighter/medic. Once I chose to get into law enforcement, I applied to and attended the police academy."



"This is the best job in the world."



What do you do?

"I am a police officer who handles a canine. I train the dogs and am also on the SWAT team and work as the tactical K-9. We assist other units in the police department in catching bad guys. I feel this is the best job in the world and I wouldn't want to do anything else."

Words of wisdom for those about to enter high school?

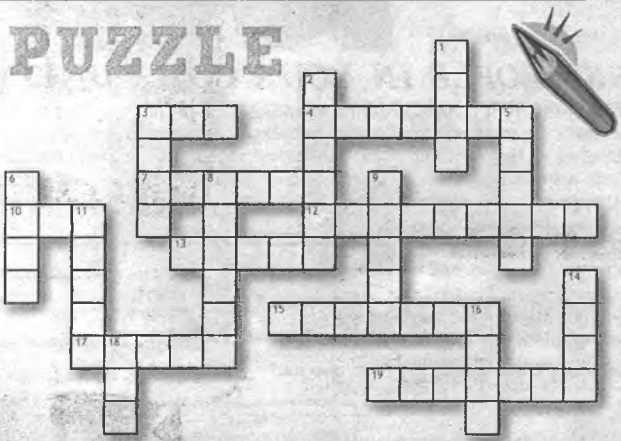
"Work hard at everything you do. I became a police officer to get into the K-9 unit. I set that goal for myself, worked hard, and took pride in what I did. That approach made things fun and I had a great time while I worked to get where I am."

Working Dogs

Besides being man's best friend, dogs can play many other important roles in our lives and in some careers.

- ✓ **Service Animals:** trained dogs can help those who are not able to see or hear, or who experience other challenges that dogs can assist with.
- ✓ **Scent Detection:** with their keen sense of smell, dogs are trained to detect bombs or other suspicious substances.
- ✓ **Search & Rescue:** dogs can help find people after natural disasters or during emergencies.
- ✓ **K-9:** dogs can be useful in law enforcement by tracking or taking down suspects, as well as detecting illegal substances.

Public Safety Training Academy



The Alaska Law Enforcement Training Program in Sitka provides specialized classes and practical training for a variety of law enforcement careers, including instruction in criminal investigation, police procedure, laws, and physical skills.

The course meets the requirements of the Alaska Police Standards Council, which certifies officers in Alaska. Students who complete the program also earn 12 credits from the University of Alaska Southeast.

www.dps.state.ak.us/ast/academy

13. Capt. Kuiper says they have to be trained in many areas, including ___ rescue.
15. Jason has ___ three dogs.
17. Jason's retired dogs are Bosco and ___.
19. Alex is a ___ Malinois.

CAPTAIN FORREST KUIPER

"I grew up on the Kenai Peninsula and attended Sterling Elementary, Soldotna Middle School and Skyview High School. Like many Alaskans, my interests and hobbies while growing up revolved around the outdoors. I enjoyed skiing, camping, hunting and fishing. I am the Captain of the University Fire Department on the UAF campus and am working towards a Bachelor's of Emergency Management at UAF.

The most rewarding aspect of emergency services for me is the opportunity to help the citizens of the community who are in need. The most challenging aspect is the fact that we have to be knowledgeable and skilled in so many different areas: emergency medical services, firefighting, hazardous materials, vehicle extrication, water rescue, and more."

High School Graduated:
Skyview HS, Soldotna, AK

College Graduated:
University of Alaska Fairbanks:
A.A.S. in Municipal Fire Control & Hazardous Materials Control

Current College:
University of Alaska Fairbanks

Major:
Emergency Management

High School Graduated:
New Horizons High School, Delta Junction, AK

College Graduated:
University of Alaska Fairbanks:
A.A.S. in Municipal Fire Suppression and B.S. in Biological Sciences

Current Career:
Firefighter for Fairbanks Fire Department

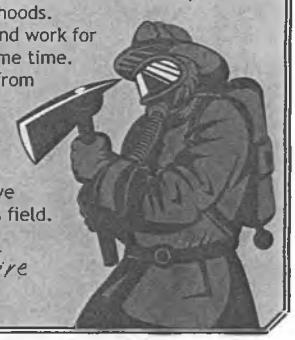
JOY MOSER

"I plan to serve Alaskans for many years."

"I was born in Nome and raised in Delta Junction. During my senior year in high school I worked several jobs and volunteered for the Delta Junction Fire Department. I was a UA Scholar and also received two British Petroleum scholarships because of my academic achievements."

How did you get to the career you're in today?

"Initially, I worked for the University Police Department in a student position as a community service officer. While working towards my employment with the University Fire Department (UFD), I volunteered for the Chena-Goldstream Fire and Rescue, a volunteer fire department adjacent to the university. After being hired in 2001, I became a lead medic for the UFD. The experiences I gained prepared me for the challenges and stresses of a fire service career.



Since graduating, I've become involved as a program assistant at the University of Alaska Fairbanks, and plan to continue teaching and attending college classes as a way of refreshing my skills and giving back to the community to which I owe so much. I plan to serve Alaskans locally for many years."

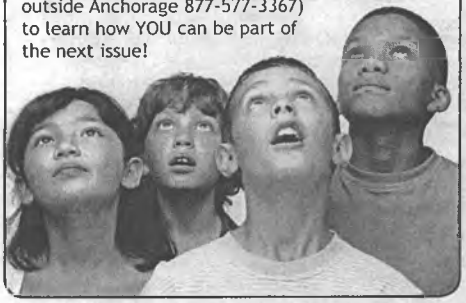
What advice can you offer to students?

"Actively seek learning experiences throughout the rest of your lives."

Want to learn firefighting or emergency services skills while going to school?

The UAF Fire Department is open to anyone who is interested in getting into emergency services. The student firefighter program serves the UAF campus and surrounding neighborhoods. Students attend college and work for the department at the same time. The experience they get from real world emergency responses, as well as the academic studies at UAF, makes graduates of the program highly competitive in the emergency services field.

www.uaf.edu/fire



What will your story be?

Have you started writing your own story? You can start by doing the following:

1. Set goals for your future;
2. Learn and work towards those goals; AND,
3. Ask for help from others (parents, friends, teachers, counselors, principals and anyone who you know and trust) who want to support you in reaching your goals.

Your actions and attitude can help you create a satisfying and successful life story.

Interested in sharing your story? Ask your teacher or parent to call 269-7980 (toll-free outside Anchorage 877-577-3367) to learn how YOU can be part of the next issue!

Alaska Commission on Postsecondary Education
Your State Higher Education Agency

The Alaska Commission on Postsecondary Education--funded by the Alaska Student Loan Corporation--promotes access to and success in education and career training beyond high school.

This ***What's your Story?*** Middle School Newspaper, published twice a year, provides encouragement and resources for students about to enter high school.

AKadvantage.alaska.gov

Unsure of What You Want To Be When You Grow Up ???

ASK PEOPLE IN YOUR COMMUNITY!

There are many different careers in our communities. One of the best ways to learn about your options is from people who work in them. That person might be a parent, relative, teacher, or family friend. If you don't know anyone who works in the area that interests you, ask your parents or teachers for some ideas on who you could ask about the work they do.

You can ask:

- What do you do in your career? _____
- What do you like most and least about your job? _____
- What did you do to prepare for your career? _____
- What subjects/activities help prepare for this career? _____
- Is there any other advice you can give me? _____

Ms. Perkins' 8th grade students at Mears Middle School participate in a geocaching unit as part of a P.E. and science collaborative. This course encourages outdoor activity and investigative science. Students learn to use a GPS as they enter and read coordinates. Then, they participate in a 10-station race, competing against each other to find the most geocaches, using clues contained in one to find another. Students also spend time in the computer lab setting up investigative scenarios in which a mock wilderness crime scene is created. Students use their GPS and research skills to find out what happened, like real crime scene investigators.

SENATE EDUCATION COMMITTEE

Senators Kevin Meyer & Joe Thomas, Co-Chairs

Senate Bill 171

The legislature shall by general law establish and maintain a system of public schools open to all children of the State, and may provide for other public educational institutions.—Article VIII, Section 1 Alaska Constitution

Every Spring school districts around the state have the unenviable task of developing their budgets—sometimes without complete knowledge of the amount of funding they will receive for the next academic year.

SB 171 gives districts the ability to craft responsible and conservative budgets. It establishes a three-year plan of modest increases—lower than the inflation rate—so districts know the financial parameters they must work within as they plan for sustainability. Forcing districts to rely on unpredictable one year bumps in funding undercuts their ability to do long range, responsible financial and programmatic planning.

This provides districts with a three-year financial plan. Districts will know well in advance how to plan for the education of our children, how to staff the schools, and how to maintain fiscal security over time. Instead of working out whom to layoff each spring, they can budget over a longer period of time, knowing how much money they have to work with.

This additional annual amount added to the BSA allows schools to keep up with the rising cost of educating our children. When a student enters a school, we expect they will receive a quality education. They need an environment t conducive to learning—curriculum that meets high standards, a safe, warm building, reliable transportation to and from the facility, and the best teachers possible. Some students have special needs that must be met. If we are going to increase our graduation rates, we must reach out to at risk students.

Failure to increase the Base Student Allocation will lead to lay-offs at school district around the state, program and curriculum reductions, or result in more education costs being borne by local taxpayers.

Because of our unique conditions, delivery of a quality education is more expensive in Alaska than in other states. However, in comparison to other states we are spending less and less to educate our students. In 2009-2010 we ranked 22nd in the nation in per pupil spending. This additional annual amount added to the BSA allows schools to keep up with the rising cost of educating our children. The incremental increases represent less than two percent a year, which is below the current inflation rate.

Alaska must invest in its resources, and the education of our residents is one of the most important investments we can make.

We urge you to support SB 171, and vote for its passage.

Report of the Alaska Council of School Administrators (ACSA) FY13 Funding Review Committee - October 2011

Background
At the August meeting of the Alaska Association of School Administrators (AASA), Education Commissioner Mike Hanley asked district superintendents how much funding would be needed in FY13 to maintain current programs.

AASA/ACSA Executive Director Bruce Johnson suggested a joint project with the Alaska Association of School Business Officials (ALASBO) to study this question. The ALASBO Executive Board appointed the following ALASBO members to work with Bruce Johnson on this committee: Luke Fulp, Kodiak; Chad Stiteler, Anchorage; David Arp, Sitka; Yodean Armour, Klawock; and Amy Lujan, ALASBO Executive Director.

Process
With the help of Education and Early Development staff, budget templates pre-loaded with FY12 information were sent out to each school district, with a request for early estimates of FY13 budget needs. A commitment was made to the confidentiality of district data, due to the preliminary nature of the budget estimates. Using the ALASBO network, data was received directly from 48 of the 54 school districts. Estimates were created for the remaining districts.

Findings
Districts are expecting serious shortfalls in FY13, due to declining federal revenues as well as increased costs.

- health plan costs are expected to increase 7-15%, which is in line with industry estimates
- wage make up 47% of district budgets; many districts have negotiated agreements in place already for FY13; those entering negotiations anticipate modest increases
- energy costs have continued to increase; these higher costs also impact travel and shipping on all goods, from instructional supplies to food for school lunches
- overall expenses are forecast to increase due to inflation, which for the Anchorage CPI has averaged 2.7% since 1990
- the federal program for timber compensation to rural schools and communities (SRSCA) may not be reauthorized; this would reduce funding to schools and municipalities by $18.5 million, hitting 24 district budgets directly in some cases, and/or the ability of municipalities to provide local funding to school districts
- federal ARRA and Education Jobs Bill funding, which provided $35 million in unrestricted funding to be spent in FY12 and FY13, will be exhausted by the first quarter of FY13, resulting in program cuts in FY13 and FY14

State Funding Implications
While it is not expected that state funding can make up for all the reductions in federal funding, it is reasonable to expect that state funding can help districts deal with cost increases and ensure a continued quality educational program. The following estimates of funding needs are provided by this committee for guidance to achieve this goal.

- extending the FY12 grant provided by HB108 ($20 million) is critical to enabling districts to keep up with energy costs, in addition to the BSA increases suggested below
- a $320 BSA increase would enable districts to keep pace with expected cost increases, though it is possible that program cuts would be necessary, due to flat or declining local and federal revenues NOT funded by this BSA calculation
    - a $225 BSA increase would maintain the state's proportionate share of district funding, in relation to local and federal funding; however, program cuts would occur if local and federal revenues are flat or reduced

FAIRBANKS NORTH STAR BOROUGH SCHOOL DISTRICT
2012-13 SCHOOL YEAR

WHAT BUDGET ESTIMATES GIVE RISE TO THE DISTRICT'S SHORTFALL?

Revenue:	
Loss of state one-time energy funding	$ 2,137,890
Loss of unassigned fund balance [1]	229,820
Shortfall due to loss of revenue/financing sources	$ 2,367,710
Expenditure:	
Increased costs due to adding back in "jobs bill" teachers	$ 2,155,000
Increased costs for curriculum materials purchase	1,484,370
Increased subsidy to Pupil Transportation	1,246,990
Increased utility costs	335,700
Increased support for special education	2,433,170
Increased employee costs	3,852,150
Increased costs in other areas	722,290
Shortfall due to increased costs	$ 12,229,670
Estimated 2012-13 budget shortfall as of January	$ 14,597,380

BUDGET ASSUMPTIONS

- Student enrollments increase slightly and our military student population remains steady.
- The local contribution to education is flat funded, unchanged from the current year.
- The district loses $2.1m in one-time State energy funding provided for in the current year.
- The base student allocation amount (BSA) of $5,680 remains unchanged from the current year.
- The State continues to provide supplemental funding for retirement system contributions and the employer contribution rates remain unchanged from the current year.
- Pupil Transportation will continue to be funded at rates unchanged from the current year.

[1] The district had $ -0- unassigned audited fund balance at June 30, 2011. The district is estimating that with some additional foundation funding in the current year, along with savings from unfilled reserve teaching positions, that we will have $1.85m in fund balance available to supplement next year's budget. This can change depending on the high variability of current utility, health care, and other costs.

Funding gap halts drop-out program in Fairbanks schools

by Reba Lean / rlean@newsminer.com
01.23.12 - 12:00 am

FAIRBANKS — A program that paired guidance coaches with struggling students decreased high school dropout rates during the past five years, but the local school district ended the effort last year.

Through the now-defunct program, students at risk of dropping out of school met with "graduation success coaches" to get more engaged in school and earn better grades. The program reduced the dropout rate in grades 7 through 12. It also attempted to increase attendance rates in primary schools, but was not able to do so. About 1,500 students went through the program.

Though there are no longer coaches, a model that was created as part of the program will continue to help identify at-risk students. Teachers then can find support for those students, according to district officials.

The program ended when it ran out of grant funding. In its last year, it was funded through the American Recovery and Reinvestment Act of 2009. In its early years, local funding covered the cost. The last year, the program's most expensive, it cost almost $800,000 to operate, according to district spokesman Bill Bailey.

There were 19 graduation success coaches in the school district, and they were laid off when the program ended in June.

Education Support Staff Association President Chrya Sanderson was a coach with the program. She said she helped students by finding poster board for a science project or a classroom in which to work.

Once students were provided with the resources and her tutoring, they had a better chance at succeeding, she said.

"They want to be in schools because they're doing better," she said.

At the Dec. 6 school board meeting, Kathy Hughes and Heather Rauenhorst from the district's Research and Accountability Department presented a report on the program to the board.

The program began in the district in the 2006-07 school year as the Dropout Prevention Program. Teachers and administrators would refer students to the program to receive help from the coaches.

Ellis Ott, coordinator at the Research and Accountability Department, came up

with a model to identify students who were more likely to drop out. It highlighted students based on attendance rates, grades, out-of-school suspensions and standards-based assessment scores. He was able to group students into high-, medium- and low-risk categories based on the data. Schools were provided with the names of the students and were able to determine who would benefit most from the program.

According to the report, some who were determined as being high-risk students went unserved by the program for several different reasons — they were in alternative schools where there was no coach position, they were new transfer students with little background information, they had scheduling conflicts or their parents refused the services.

Rauenhorst said those who went unserved dropped out at higher rates than those who met with coaches.

Among at-risk seventh to 12th grade students, Graduation Success Program participants had an annual dropout rate of 10.8 percent. A comparison group of unserved, at-risk students had a dropout rate of 21.2 percent.

Since the school year 2004-05, annual overall dropout rates in middle and high schools have decreased from 7.6 percent to 3.9 percent, nearly half.

After the Dec. 6 presentation, school board member Wendy Dominique lamented the loss of the program and its coaches.

"We lost the bulk of the people that got that rate down," she said.

Kristina Brophy, president of the board, told the News-Miner the administration submitted a draft budget to the board that didn't include the program. She said while the secondary schools' dropout rates were reduced, the attendance rates in primary schools didn't change. After reviewing the draft, Brophy said, the board approved the budget without the program.

Sanderson said program proponents appealed to the board to find funding.

"The school board themselves saw the value of the program, but maybe couldn't see how to fund that," she said.

Hughes said the district chose not to keep the Graduation Success Program, in part, because at-risk students still have ways to get help. Counselors, Alaska Native Education tutors and other tutors are available for students, she said.

The Honorable Sean Parnell
Governor
State of Alaska
P.O. Box 110001
Juneau, AK 99811-0001

Dear Governor Parnell:

On behalf of the 49,000 students, and over 5500 school district employees, I want to thank you for your support and leadership in support of the Alaska Performance Scholarship and the increased funding for Career and Technical Education in the Base Student Allocation. I believe that all students will benefit from the increased focus on more rigorous academics as well as developing college and career readiness skills.

The voters in Anchorage strongly supported increasing Career and Technical Education opportunities at all of our comprehensive high schools, middle schools, and our alternative schools over the next few years. The additional funding in the BSA for our high school students will truly benefit our students; we hope the additional funding will include middle school students in the future as we know that students in sixth grade forward can truly benefit from exploring of various career pathways.

We have a comprehensive plan to expand learning opportunities for our students in various career pathways that are relevant for 21st century career opportunities. We have tremendous partnerships with both the Department of Labor and Workforce Development and the Department of Education and Early Development as we advance these initiatives. I would be happy to share these increased offerings for our students with you, and/or your staff during this school year when you are in Anchorage. Our administration will be bringing forward a Five Year Comprehensive Career and Technical Education Plan for Anchorage School Board approval in the spring of 2012; our plan will definitely fit under the State's CTE umbrella which has been adopted by the Alaska State Board of Education and Early Development.

Our students and staff have been focusing on increasing the high school graduation rates over the past few years; much progress has been made in the Anchorage School District because of our ability to develop new programs and interventions, to monitor progress more frequently, to use online credit recovery and acceleration options, and by expanding our summer school options. Our four year graduation rate for last years' students was over 72%; for our five year seniors, the rate was 75%. We are

very proud of the fact that, regardless of the time needed, more Anchorage School District students are graduating with a high school diploma, not a GED.

The ability to offer these new programs was as a result of the three-year increases to the Base Student Allocation and the Intensive Needs Funding to the Foundation Formula. Last year, for the first time, the Anchorage School District was able to pay for our Intensive Needs Program with the funding generated from the State and Federal sources, not by diverting funding from our other students programs to pay for mandated services. We are very grateful to the legislature and to you, as governor, for supporting these increases in funding.

Because of our academic progress, I was very disheartened to read in various news reports, that you do not support increasing funding for education in your budget for FY 13 because of the lack of progress by our students. I know that we MUST do better, and we are committed to continuous improvement, but many of our new initiatives that have come about because of increased BSA funding, and the one-time funding for FY12, are in danger of reduction or elimination if we do not receive an increase in the BSA going forward. We have been struggling to plan for continuation of our initiatives, and to maintain some programmatic staff, when our funding is not set until late spring (July 2011 this year). We know that the ability to plan ahead for two and three years assisted all school districts in the past, and I would hope that you could support that kind of progressive funding in your budgetary planning.

In addition, I know that you know, we must support children and families in our various communities. I have been an active participant of the United Way's Anchorage United for Youth Leadership Team since its inception. We have adopted an ambitious aspirational goal of attaining a 90% graduation rate by 2020 for this year's third grade class! We had a wonderful rally last week at the Nicholas Joseph Begich Middle School; many hundreds of community members came to "surround" our middle schoolers with a circle of support so that they know that the whole community is committed to supporting our youth in getting a high quality education and a high school diploma! We know that it truly takes all of us to support our students and families so that our students can focus on learning, and not the many economic and emotional challenges that confront them in their daily lives. We are grateful to you for your leadership in the area of reducing child abuse, domestic violence, and substance abuse, and we know that when these efforts are successful, then our students will have a much better chance in their education. I truly believe that investing in families, early learning, and K-12 education is truly the ticket to Alaska's future success.

I would like the opportunity to meet with you to share with you our academic progress, and how we are using our educational funding currently. We want to continue to progress, but we are fearful that flat funding will erode our efforts in supporting our students and staff and families. I will contact your office to see if we can arrange a meeting when you are in Anchorage.

Sincerely yours,

Carol Comeau

Schools seek less funding than this year

SHORT: Class size, summer school, staff cuts all part of cost reductions.

By ROSEMARY SHINOHARA

(01/22/12 23:08:26)

Anchorage School District administrators are proposing a 2012-2013 budget today that is $6.2 million smaller than this year's, and about $20 million short of continuing the same level of services.

Next year's plan calls for spending $726.8 million, compared with $733.1 million this year. If the School Board agrees, class sizes will rise, summer school will disappear, special education staff will be trimmed, and some of the same positions that narrowly escaped being cut last year, such as graduation coaches who intervene on behalf of students at risk of not graduating, will be gone.

While some positions would be added, 88 net positions would be eliminated -- some maintenance workers, a few librarians and some teacher assistants, for example.

"I don't like this budget, but I think it's as responsible as we could make it," school Superintendent Carol Comeau said in an interview.

The district serves roughly 49,000 students.

The School Board begins considering the proposal in a meeting from 9 a.m. to 4 p.m. today at school district headquarters at Northern Lights Boulevard and Boniface Parkway.

The total is based on expected flat funding from the state, which pays about half of local school costs, and a 1 percent increase in local tax revenues. Local taxes pay about a third of school expenses. The rest comes from federal grants and other sources.

While revenues are down, salaries and benefits are up by $14.6 million.

Other rising costs:

• The district also chose to add $1.2 million for a program called "Response to Instruction," a system for checking whether students are learning critical skills, and adapting instruction to fill in gaps.

• The district wants to add $967,987 to an equipment fund to be used for such things as replacing aging school buses.

• The administration wants to absorb the cost of paying for 81 classroom teachers that were funded through a $7.6 million federal jobs bill that runs out this school year. Other positions would be cut to make up for it.

A big problem, said Comeau and the district's chief financial officer, Chad Stiteler, is that the amount of state money dedicated to schools isn't known until the Legislature adjourns and the governor signs off on state appropriations, in early summer, but long after the district must complete its budget.

As a result, the district this year and last year had to propose heavy-duty cuts. When the state adds money late in the game, drastic cuts are sometimes reversed. The system undermines the district's

credibility, Comeau said.

That happened last year, when the state came up with $9.7 million that hadn't been expected. In August, the district reinstated some teaching positions, $2.8 million to replace computers, and other jobs and programs that had been eliminated.

With no increases expected in state funds, the Anchorage district isn't the only one in Alaska facing cuts this year.

Fairbanks superintendent Pete Lewis warned earlier this month that the district there expects a $14 million shortfall, the Fairbanks News Miner reported. The Fairbanks budget proposal is due out by Feb. 1. The Juneau School District superintendent recently announced that 66 positions could be slashed next school year, according to the Juneau Empire.

The Anchorage district changed its presentation of the budget this year by not including one gigantic expense that had been part of prior budgets: an unfunded liability for the state retirement programs that cover district employees. It amounts to $100 million-plus. But the state pays it. The school district in the past included the number in its budget total, but now has taken it out to match the way the municipality prepares its budget. The district also removed the liability numbers from past budgets for comparison purposes.

Here's a list of some of the proposed cuts:

• .5-student increase in class size for third grade, 1-student increase in grades 4-6, $1.4 million savings.

• 1-student class size increase for middle-schoolers, $908,242.

• 1.5 student class size increase for high schools, $2.3 million.

• Six elementary school counselor positions and four librarian positions, about $950,000.

• Thirty-five special education positions, including nine secondary counselor positions, $2.8 million.

• Seven graduation coaches, $641,912.

• Ten middle school career guides, $956,044.

• Summer school elimination: elementary schools, $1.1 million; middle schools, $459,791; high schools,

$1.2 million.

• Replacement computers, $2.3 million.

• Six maintenance positions, $535,457.

• Three warehouse maintenance positions, $286,421.

JUNEAU SCHOOL DISTRICT
CITY AND BOROUGH OF JUNEAU

FY 2013 Juneau School District Budget Information
January 17, 2012

HOW DID THE SCHOOL DISTRICT GET HERE?

Loss of one-time aid to school districts from the State of Alaska	$ 737,000
Elimination of federal jobs funding	460,000
Use of fund balance (reserve) last year	1,687,000
Grants expiring	865,000
Increased energy costs	221,000
Less indirect cost recovery from grants	207,000
Increased employee costs	900,000
Instructional and Technology needs	587,000
Other increases	123,445
	$5,787,445

WHAT THE DISTRICT KNOWS:

- The Governor of Alaska has not included any increase in the amount school districts receive as part of the funding formula.
- Utility rates will increase.

ASSUMPTIONS USED TO DEVELOP THE FY 2013 BUDGET:

- The Base Student Allocation (BSA) will remain at $5,680.
- JSD student enrollment will decrease by 26 students to 4,916 next year.
- Juneau students will continue to benefit from the same level of generous support from the City and Borough of Juneau.
- Pupil transportation will continue to be funded at the same level as FY 12 by the State of Alaska.

WHAT THE DISTRICT DOESN'T YET KNOW:

- What level of funding the Legislature will approve.
- Outcomes of the collective bargaining process.

JuneauEmpire.com

JSD budget could cut more than 66 positions

Board member calls state action "criminal"

Posted: January 18, 2012 12:02am

By Sarah Day

JUNEAU EMPIRE

The Juneau School District got it's first look at what $3.6 million to $5.9 million in cuts look like, with many cuts hitting administration, classroom sizes and other programming.

Superintendent Glenn Gelbrich introduced the heavy topic Tuesday night at Juneau-Douglas High School for the budget committee meeting. Among the packed room of about 50 people included Assemblywoman Karen Crane and Alaska Department of Education and Early Development Commissioner Mike Hanley.

Gelbrich spoke of the success the district has had in increased graduation rates at both comprehensive high schools, increased reading achievement and significantly higher math achievement results.

"Tonight, I bring you a budget that could seriously undermine our progress," Gelbrich said.

The committee asked many questions for clarification, and several chose to also include commentary.

Board member Mark Choate was the first to pipe in his displeasure of the funding situation.

"This feels like we're at a funeral right now," he said. "I have an image of a room filled with food, flowing out the windows and flowing out the doors. Someone outside is saying there's no food, there's nothing to eat but stone soup. This is criminal, this is about as bad as it can be that a state with an $18 billion excess this year is taking money from children. To take the jobs from this district is simply wrong. I'll do what I can as a community member to say this up on the hill. There's lots of things we can talk about and do to improve. But we should not be sitting here talking about being broke with the resources the state has."

Board member Sally Saddler shared the same sentiment. She said she thought she knew what she was getting into with the estimated deficit, but to see the proposed cuts is sad.

"I feel like I've been sucker punched," Saddler said. "There is a perception out there that there is a lot of waste. As I sat and listened ... it's clear we're cutting to the bone. We need to be rallying. I'm getting over my sad and getting into my mad."

Superintendent Gelbrich also addressed state funding. He said the Alaska Association of School Business Officials have said an increase in the Base Student Allocation would need to be by $320 per student. Gelbrich said that kind of funding level in Alaska is unprecedented and unlikely to come to fruition. He said the governor's budget proposal maintains flat funding levels for the next three fiscal years for education funding.

"...I want to emphasize that the current level of funding for public education is detrimental to the future of Alaska, to its economic development, to the strength of our communities, and to the future of our students," Gelbrich said. "Unless we are willing to further invest in the greatest resources we have — the capacity of our state's children — we are undermining the potential of Alaska."

Gelbrich talked about estimates gathered by Juneau Economic Development Council Director Brian Holst — who is also on the committee. JEDC estimates that the cutting of those positions will have an economic impact of -$11.4 million on Juneau.

The operating fund budget revenues for FY12 are $75.3 million, with $74.8 million in expenditures. Estimated FY13 revenues are at $73 million, with $72.4 million in expenditures including budget reductions.

The FY13 budget proposal includes $3.3 million in additions to the operating fund budget — but that figure is a bit deceptive. For example, $1.2 million of those "additions" are positions and programs that already exist in the district, but were not previously part of the operating fund. They are being moved into the central part of the budget because their funding sources were from grants or federal dollars. Another assumption in that $3.3 million is an estimated $900,000 increase in salaries and benefits as the district is currently negotiating with its two largest unions. Gelbrich said they can't put the number at zero because the district has to negotiate in good faith, however that doesn't mean the nearly $900,000 will be that much — or that little.

Aside from those two top dollar budgetary additions, the rest include things like adjusting cost allocation to Juneau Community Charter School, increased costs to try and stabilize Internet services and computers, unemployment compensation, AEL&P rate increase, fuel oil increase, educational leadership center and similar expenditures.

The cut list hits administration pretty hard this year, Gelbrich said — at least compared to percentage of that sector's budget — but students will still be impacted. Approximately 66.3 FTE (Full Time Equivalent) positions are expected to be eliminated given the "worst case" scenario.

Gelbrich said five of 23 jobs at the central office are being eliminated (22 percent).

Cuts by employee group consist of 1 position from the cabinet at 17 percent of the cabinet FTE — $80,000.

- 3 FTE from the JSAA (Juneau Administrative Association) for 12.7 percent — $452,000.
- 11 percent from JESS (Juneau Educational Support Staff) for 34.8 FTE — $2.2 million.
- 26.5 FTE from the Juneau Education Association for 7 percent (teachers) — $2.6 million.
- 1 FTE from a non-union, non-cabinet position for $123,000 at 6.25 percent.

On a school level to school level basis, cuts also were broken down.

- $706,000 at all schools.
- $1.4 million from elementary schools.
- $791,000 from middle schools.
- $1.4 million from high schools.
- $214,000 from optional programs.
- and $1.3 million from the district level.

Cuts include reduction for declining enrollment (estimated by 26 students), reducing legal services to $100,000 max, elimination of a student services coordinator, elimination of one high school assistant principal (leaving one each) but also adding in one teacher for the activities program (still a net loss), six positions between maintenance and custodial staff — merging custodian and maintenance supervisor positions, reducing elementary specialists by .50 FTE at each school, and eliminating a data technician.

They also reduce high school activities fund, cut a finance support staff position, cut high school assistant librarian positions, eliminate secondary instructional coaches, reduce Extended Learning staff by three, reduce site budgets by 5 percent, reduce district supply budgets by 5 percent, reduce HomeBRIDGE supply by $20,000, reduce special education para educators, increase Pupil-to-Teacher ratio at all schools by one, eliminate truancy officer, eliminate assistant superintendent position (Assistant Superintendent Laury Scandling offered to retire in December. (That position won't be refilled, and her office assistant will be cut thereafter as well. One art specialist will be eliminated. Last year that area was reduced by one as well.

Cuts will also eliminate six of 10 full time school nurses and replace them with health assistants.

Gelbrich and Director of Administrative Services David Means also included "add-backs" in case more revenues come in than projected.

Those add-backs include — in no particular order — cultural para-educators, middle school counselors (1 FTE is proposed to be cut from each), lower PTR by 1, elimination of drug testing contract services at the high school ($45,000), add 2.0 FTE back from custodial. Total add-backs are about $1.1 million.

Gelbrich said that with last year's cuts they were lucky because the staff losses were through attrition. He said the number of cuts required this year make that unlikely this year.

Assumptions:

Revenues:

A City and Borough Appropriation remains unchanged from FY2012 to FY2013
B Misc Local Revenue remains unchanged from FY2012 to FY2013
C E-Rate reimbursement remains unchanged from FY2012 to FY2013
D Quality Schools is adjusted to reflect the decrease in enrollment, 34 intensive students, and the final ISER incre
E State of AK HB108 Allocation is reduced to zero assuming it will not be reauthorized
F Foundation is adjusted to reflect the decrease in enrollment, 34 intensive students, and the final ISER increase
G Federal Impact Aid remains unchanged from FY2012 to FY2013
H Federal Secure Rural Schools funding is reduced to zero assuming it will not be reauthorized

Expenditures:

I Salaries and related benefits are adjusted to account for current employees rolled into the FY2013 negotiated agreement scales. Health Insurance premiums remain unchanged from FY2012 to FY2013. Workers Compensation Insurance is increased by 12.5% and all others insurances (non-health) are increased by 2.5% based on estimates from agents
J Heating fuel costs are increased by $20,000 as fuel prices are currently forecasted to drop in FY2013. The increase is from the anticipation of using more diesel fuel vs. heating electricity. Electricity is increased by $15,035 to prepare for anticipated increases from the City Electric Department
The custodial contract is increased by 5% from FY2012
K School and Program discretionary budgets remain unchanged from FY2012 to FY2013
L Technology includes a $75,000 increase to continue the School Board's 5 year plan
M Activities budgets are set at the FY2012 budget process level (reduced by $50,000 from FY2011)

Note: The $1.29MM anticipated deficit for FY2013 equates to 14.26 full time certified teaching positons

HAINES BOROUGH SCHOOLS

P.O. Box 1289

Haines, Alaska 99827

December 13, 2011

Dear Honorable Governor Parnell,

In the FY2013 budget you just released, you call for "full funding" of education at $1.1 billion and for forward funding for FY2014 at $1.1 billion. Thank you for acknowledging the need for forward funding. That would be a tremendous assistance.

However, since the recommendation you made for the current fiscal year was also at $1.1 billion, if I'm not mistaken that would make three years of flat funding within the funding formula. Currently inflation is running around 3% as computed by the Anchorage CPI. For different rural communities that number might be somewhat higher. For Haines, with a budget of around $5.7 million, 3% would represent about a $170,000 increase in costs of goods and services. We are currently projecting just about that kind of increase in order to keep the student programs and staff in place for FY2013.

Haines was one of 12 districts in the state to make AYP this year. We were one of three districts where our students with special needs made AYP. We have been working hard to continually improve how we educate our students. We've instituted more vocational education classes, we are stressing more school to work connections, we are instituting more early elementary reading interventions, we are making sure our high school students have access to the classes they need to qualify for the Performance Scholarship (thank you for that) and we are giving more attention to helping our special education students do better. All this has resulted in an over all increase in our graduation rate of over 15% over the last four years. For 2010/11 our graduation rate was 88%.

The Haines Borough School District runs pretty lean. If we experience reductions in the amount of services our funding can cover we will immediately be cutting into the muscle that delivers services to our students. Our programs will immediately suffer and will be driven backwards. We need your support to make sure we will be able to continue the good work we have in place.

Governor, it is respectfully requested you add an amount to the funding formula that will cover the inflationary pressures on the costs of goods and services. Along with forward funding, that would mean volumes in our ability to: 1) retain our staff and not have to keep them on pins and needles about their next year's employment until June; 2) better plan and schedule for the next year; and 3) keep morale up, which helps our entire organization.

Thank you,

Carol Kelly

Carol Kelly, President
Haines Borough School Board

The Nation's Report Card Reading 2011 State Snapshot Report

Alaska
Grade 4
Public Schools

Overall Results

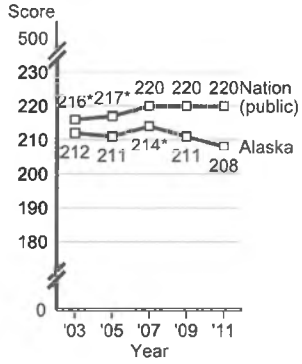
- In 2011, the average score of fourth-grade students in Alaska was 208. This was lower than the average score of 220 for public school students in the nation.
- The average score for students in Alaska in 2011 (208) was not significantly different from their average score in 2009 (211) and was not significantly different from their average score in 2003 (212).
- In 2011, the score gap between students in Alaska at the 75th percentile and students at the 25th percentile was 55 points. This performance gap was not significantly different from that of 2003 (55 points).
- The percentage of students in Alaska who performed at or above the NAEP *Proficient* level was 26 percent in 2011. This percentage was not significantly different from that in 2009 (27 percent) and was not significantly different from that in 2003 (28 percent).
- The percentage of students in Alaska who performed at or above the NAEP *Basic* level was 56 percent in 2011. This percentage was not significantly different from that in 2009 (59 percent) and was not significantly different from that in 2003 (58 percent).

Achievement-Level Percentages and Average Score Results

* Significantly different ($p < .05$) from state's results in 2011. Significance tests were performed using unrounded numbers.

NOTE: Detail may not sum to totals because of rounding.

Compare the Average Score in 2011 to Other States/Jurisdictions



¹ Department of Defense Education Activity (overseas and domestic schools).

In 2011, the average score in Alaska (208) was

- lower than those in 46 states/jurisdictions
- higher than that in 1 state/jurisdiction
- not significantly different from those in 4 states/jurisdictions

Average Scores for State/Jurisdiction and Nation (public)

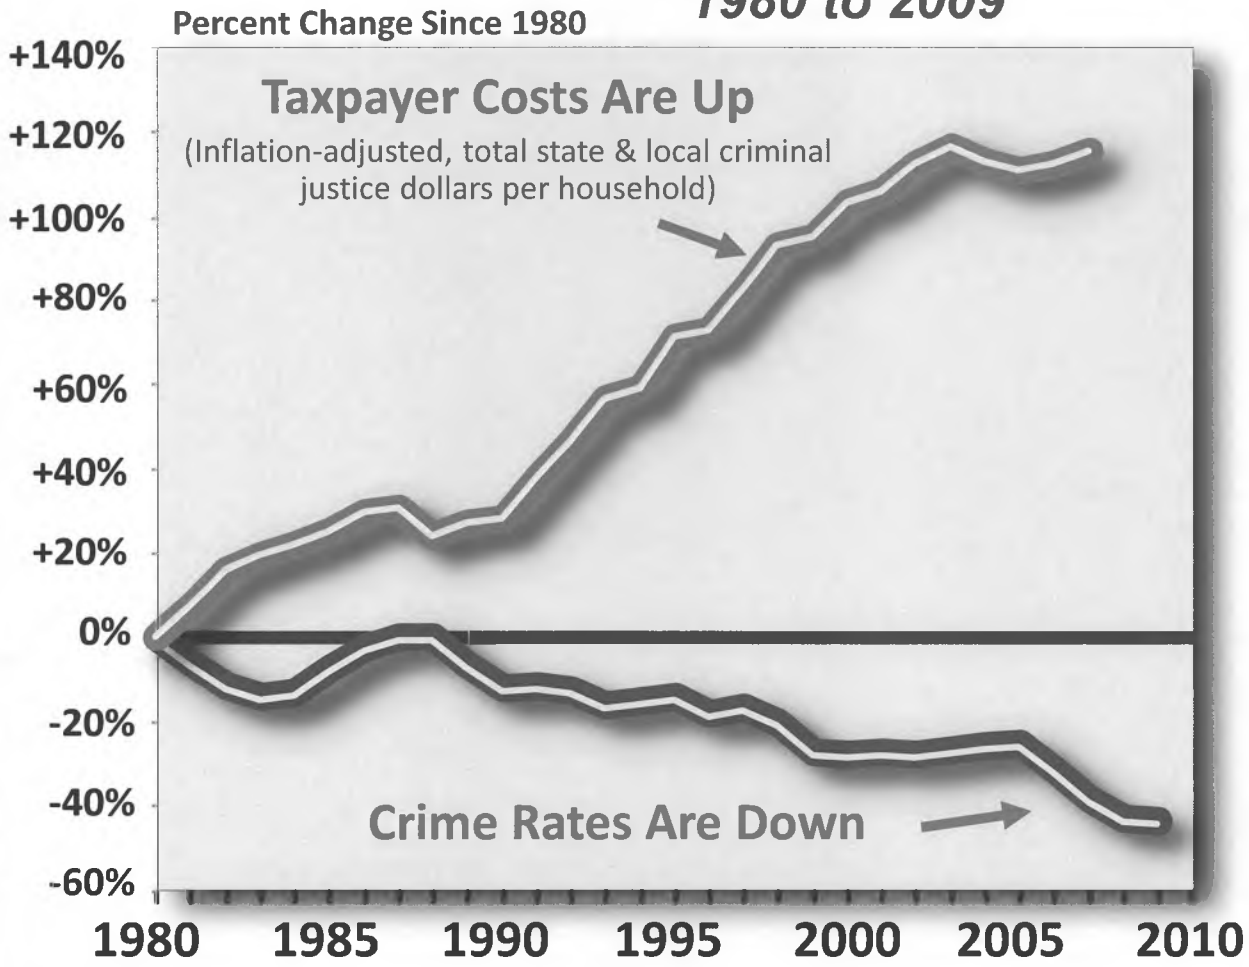
Program types in need of additional research & development before we can conclude they do or do not reduce crime outcomes:

Programs needing more research for people in the adult offender system		Comment
Case management in the community for drug offenders	0% (13)	Findings are mixed for this broad grouping of programs.
COSA (Faith-based supervision of sex offenders)	-22.3% (1)	Too few evaluations to date.
Day fines (compared to standard probation)	0% (1)	Too few evaluations to date.
Domestic violence courts	0% (2)	Too few evaluations to date.
Faith-based programs	0% (5)	Too few evaluations to date.
Intensive supervision of sex offenders in the community	0% (4)	Findings are mixed for this broad grouping of programs.
Medical treatment of sex offenders	-21.4% (1)	Too few evaluations to date.
Mixed treatment of sex offenders in the community	0% (2)	Too few evaluations to date.
Regular parole supervision vs. no parole supervision	0% (1)	Too few evaluations to date.
Restorative justice programs for lower risk adult offenders	0% (6)	Findings are mixed for this broad grouping of programs.
Therapeutic community programs for mentally ill offenders	-20.8% (2)	Too few evaluations to date.
Work release programs (from prison)	-4.3% (4)	Too few recent evaluations.
Programs needing more research for youth in the juvenile offender system		
Dialectical Behavior Therapy	0% (1)	Too few evaluations to date.
Increased drug testing (on parole) vs. minimal drug testing	0% (1)	Too few evaluations to date.
Juvenile curfews	0% (1)	Too few evaluations to date.
Juvenile day reporting	0% (2)	Too few evaluations to date.
Juvenile jobs programs	0% (3)	Too few recent evaluations.
Juvenile therapeutic communities	0% (1)	Too few evaluations to date.
Mentoring in juvenile justice	0% (1)	Too few evaluations to date.

A "Consumer Reports" List:

What works?



What doesn't?

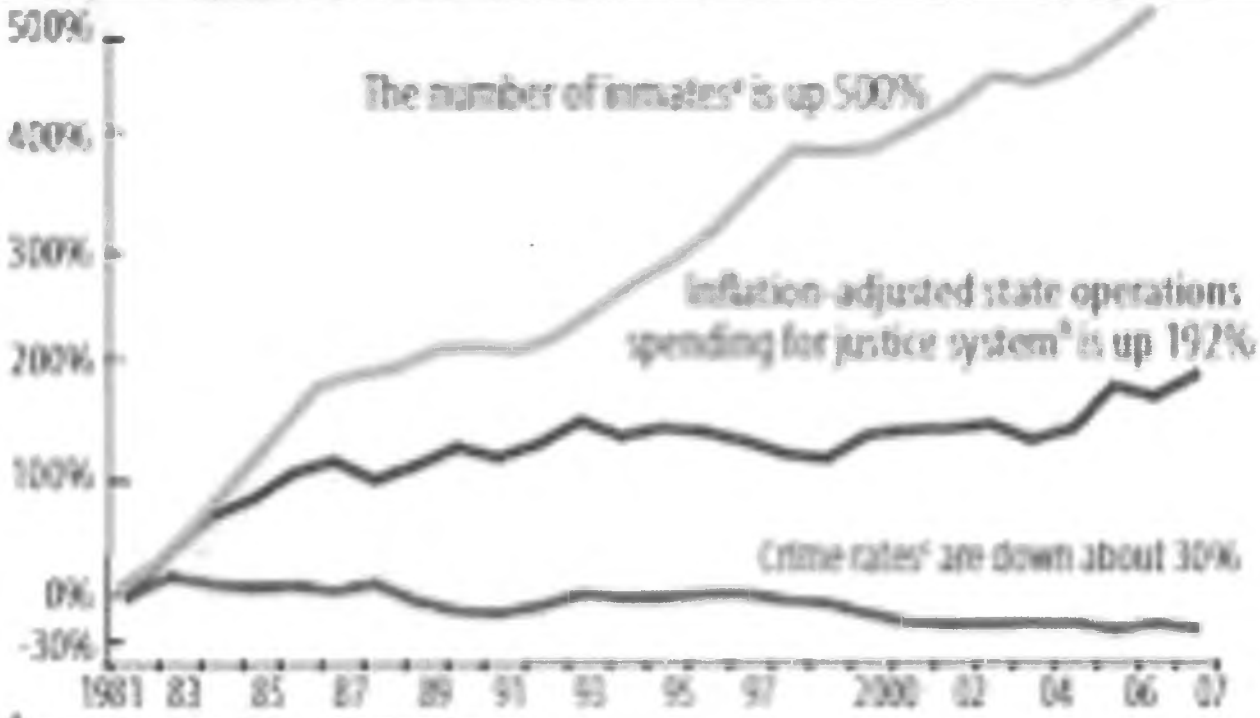
What can give Washington taxpayers a good return on their money?

Given the current level of rigorous research, what don't we know?

Crime: The Big Picture

Keeping Track of Crime Rates & Taxpayer Costs in Washington: 1980 to 2009

In 1980, taxpayers spent $575 per household on the criminal justice system in WA.



Today they spend $1,250 per year.

A 117% increase.

In 2009, crime rates were 43% lower than they were in 1980.

Source: Washington State Institute for Public Policy. Data are for Washington State. Monetary values in 2008 dollars. Crime rates cover major felony crimes as reported to police.

Figure 1. Percentage Changes in Alaska Crime Rate, Spending for Justice System, and Number of Inmates, 1981-2007

[a] Inmates in prisons, jails, and halfway houses.
[b] Spending for Department of Corrections, Public Safety, and Law; court system; Division of Juvenile Justice; Public Defender Agency; and Office of Public Advocacy. Does not include capital spending or payment on debt.
[c] Rates per 100,000 for murder, rape, robbery, aggravated assault, burglary, larceny, and motor vehicle theft.

From: Martin, S. & Colt, S. (2009). *The Cost of Crime: Could The State Reduce Future Crime and Save Money by Expanding Education and Treatment Programs?* Institute of Social and Economic Research, University of Alaska Anchorage, R.S. No. 71.

Are There Evidence-Based Policy Options That Improve Public Outcomes and Save Money?

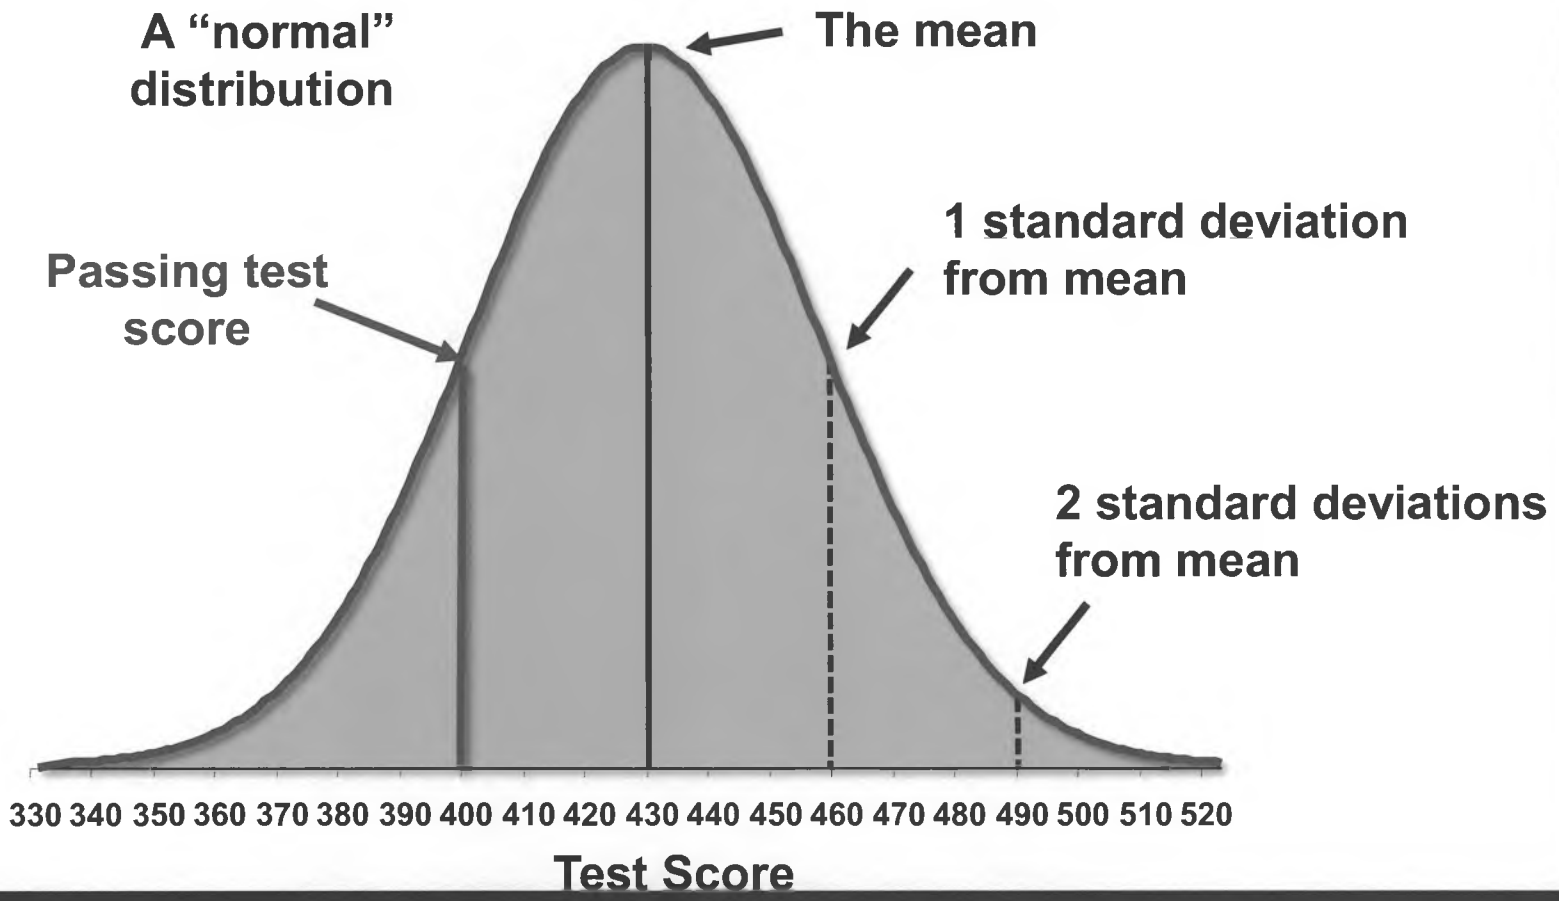
Our 3-Step Research Approach

1. **What works (to improve outcomes); what doesn't?**

   We analyze all, rigorous evaluations of real world ways to improve the key public outcomes.

2. **What are the economics?**

   We compute benefits and costs to the people of Washington using a consistent approach.



3. **What is the risk of success/failure?**

How Do We Determine What Works?

1. **We gather all the studies we can locate on a topic**
2. **We apply "standards of evidence" to identify the high quality studies**
3. **We analyze all of the higher quality studies to estimate an average effect**

Average Effect = Effect Sizes

- ✓ **Standard deviation = average distance of values from the mean.**
- ✓ **Effect sizes = impacts expressed in magnitude of standard deviations.**

What are the Long-Term Economics?

- **What is the magnitude and timing for each measured outcome (effect size)?**
- **Does the measured outcome have a causal link to another, unmeasured outcome?**
- **What are the long-term impacts on:**
  1. **The participant**
     - ✓ Increased education
     - ✓ Reduced abuse/neglect
  2. **The taxpayer**
     - ✓ Avoided incarceration costs
     - ✓ Avoided child welfare system costs
  3. **Other people in society**
     - ✓ Reduced victimization

Road Map: Overview of WSIPP Benefit-Cost Model

1. Compute Effect Sizes (from 2 literatures)

Program Evaluations: What Works?

Method: Meta-analytic reviews

Example: Does Early Childhood Education reduce crime?

ES & SE

Linkages Between Two Outcomes

Method: Meta-analytic reviews

Example: Does more high school graduation cause reduced crime rates?

ES & SE

2. Compute Unit Changes (from "Base" Info)

Example:

Obtain base crime probability for this population

Compute unit change in crime probability:

ECE on crime: (crimeΔ)

ECE on HSGrad: = ECEΔ X HSGradΔ

HSGrad on Crime: (CrimeΔ)

Compute unit change in Crimeprobability: (via Dcox and RR)

Obtain base HSGrad probability for pop.

3. Apply Monetary Valuation (to Unit Changes)

Direct Monetization of Benefits, Example:

Effect of crime unit change on:

1. Crime victim costs
2. Criminal justice system costs

PV $

Indirect Monetization Example:

Effect of change in HSGrad probability:

1. Lifetime labor market earnings
2. Taxes paid

PV $

4. Compute Benefit-Cost Statistics

Additional Information

1. Cost of program
2. Discount rates
3. Dead-weight costs
4. Tax rates
5. Inflation index

Convert all nominal dollars to base year.

Arrange cash flows from investment year.

Compute:

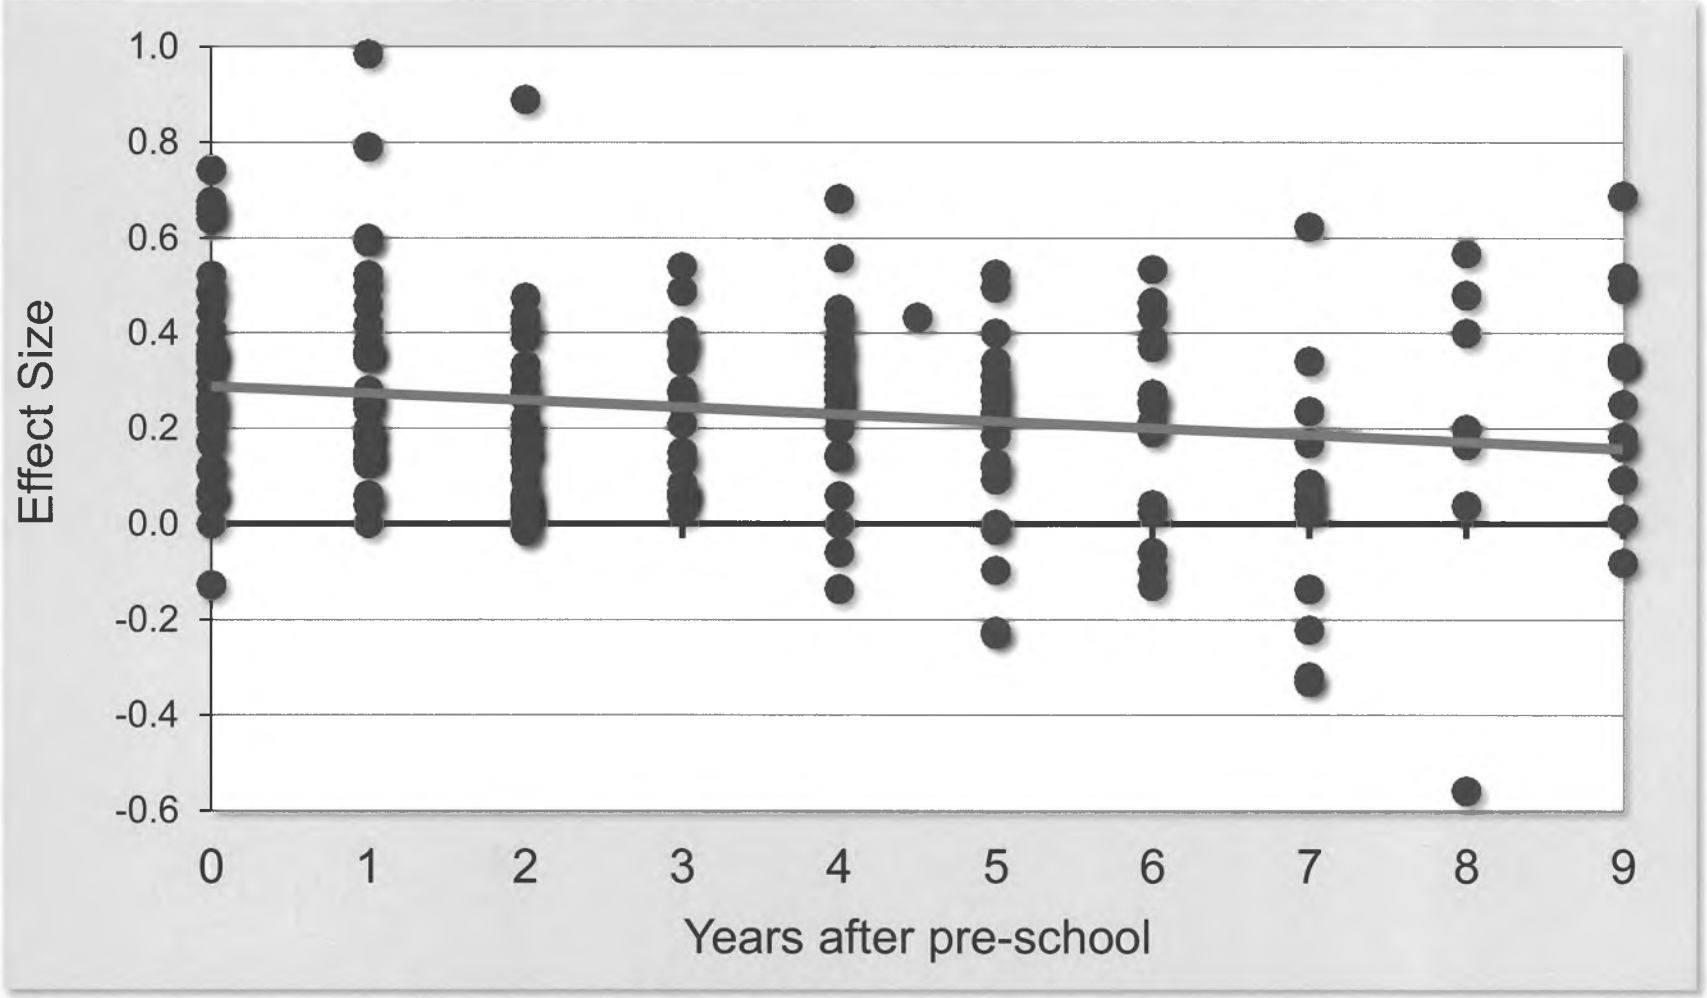
1. Net Present Value,
2. Benefit-Cost Ratio
3. Internal Rate of Return

Perform Monte Carlo Simulation:

1. Vary all inputs randomly, run the model many times
2. Compute risk: the odds that an investment will not break-even.

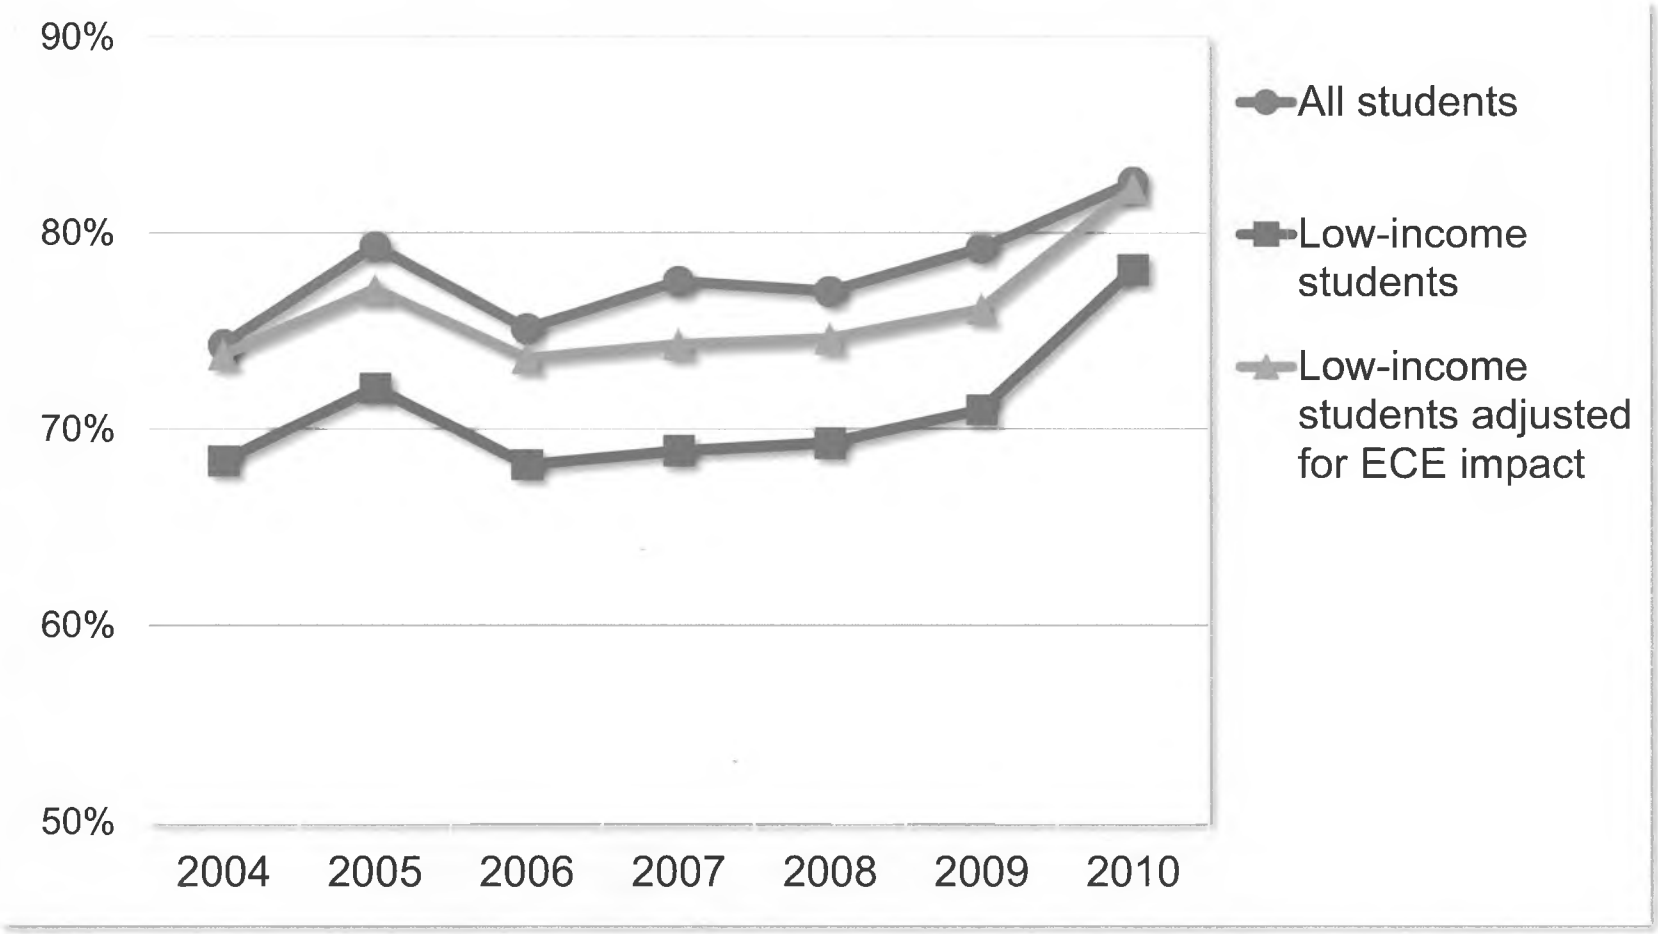
NPV $ or IRR

An Example of Prevention: Early Childhood Education (ECE) For Low-income 3 & 4 Year-Olds



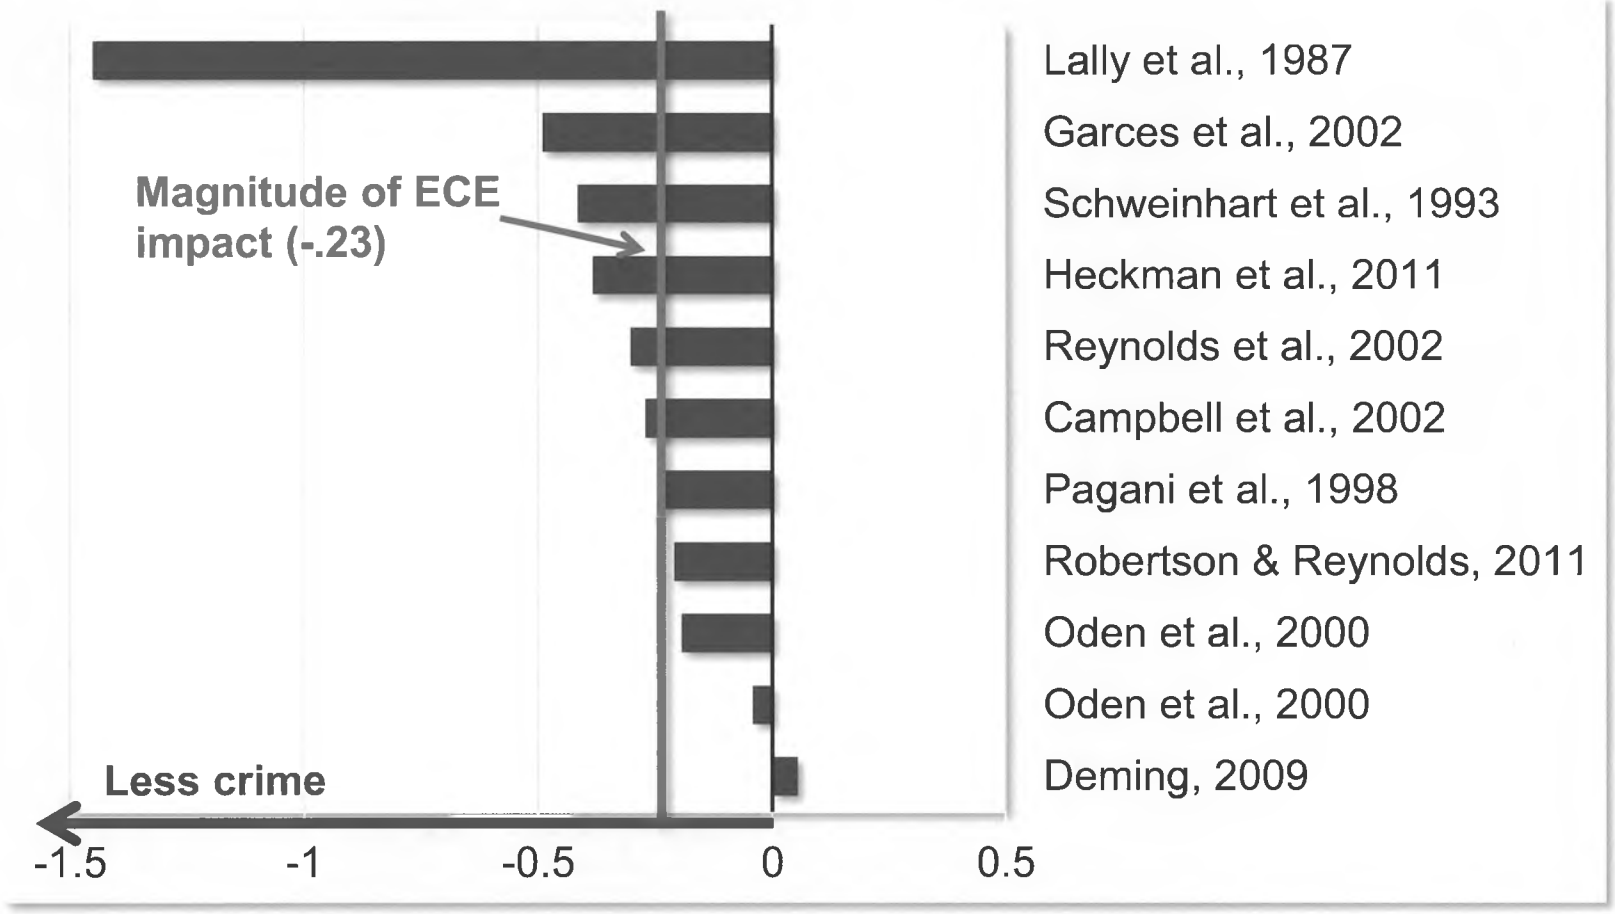
- 66 studies included in the meta-analysis
- Population: low-income 3 & 4 year-olds
- Range of programs: federal Head Start, state pre-school programs, Perry Preschool, Abecedarian, Chicago Parent Child Centers
- Comparison: in program vs. no program
- Follow-up period of students: immediately after program to age 40

An Example of Prevention: ECE For Low-income 3 & 4 Year-Olds

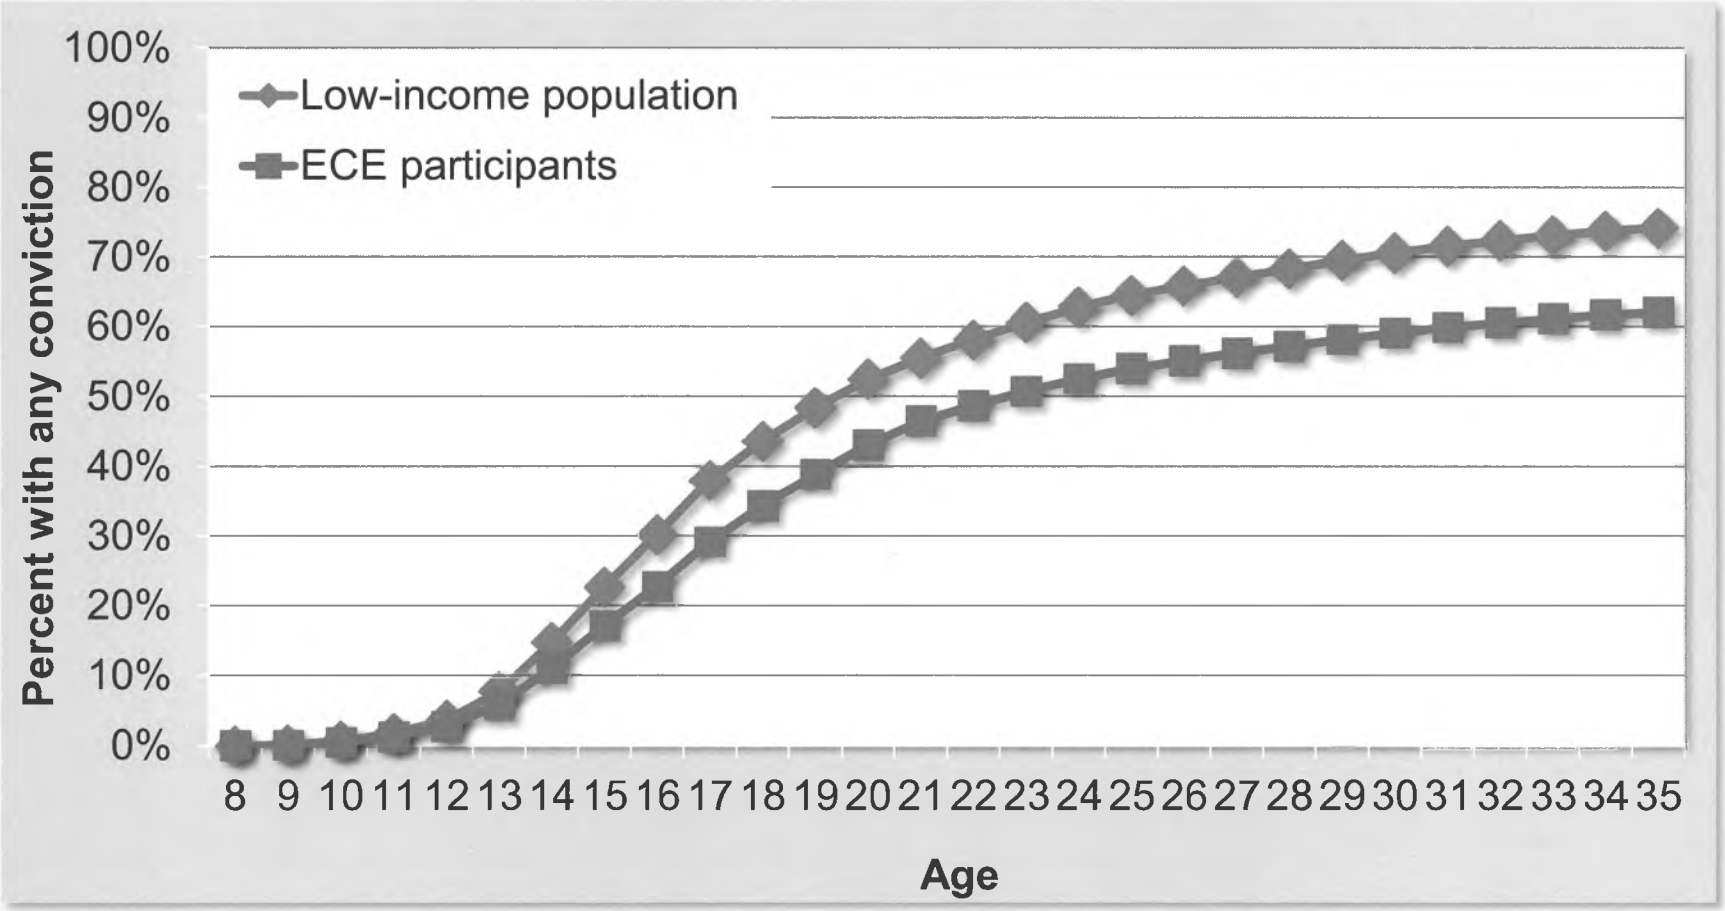


Does Early Childhood Education for 3 & 4 Year-old Low-income Children Affect These Outcomes?	Statistically Significant Impacts
Standardized Test Scores	Increase
High School Graduation	Increase
Crime Rates Later in the Youth's Life	Decrease
K-12 Special Education Placement	Decrease
K-12 Grade Repetition	Decrease
Child Abuse and Neglect	Decrease
Out-of-home Placement	Decrease

Also measured but insufficient data to draw conclusions:
use of public assistance, teen births, college attendance, employment rates

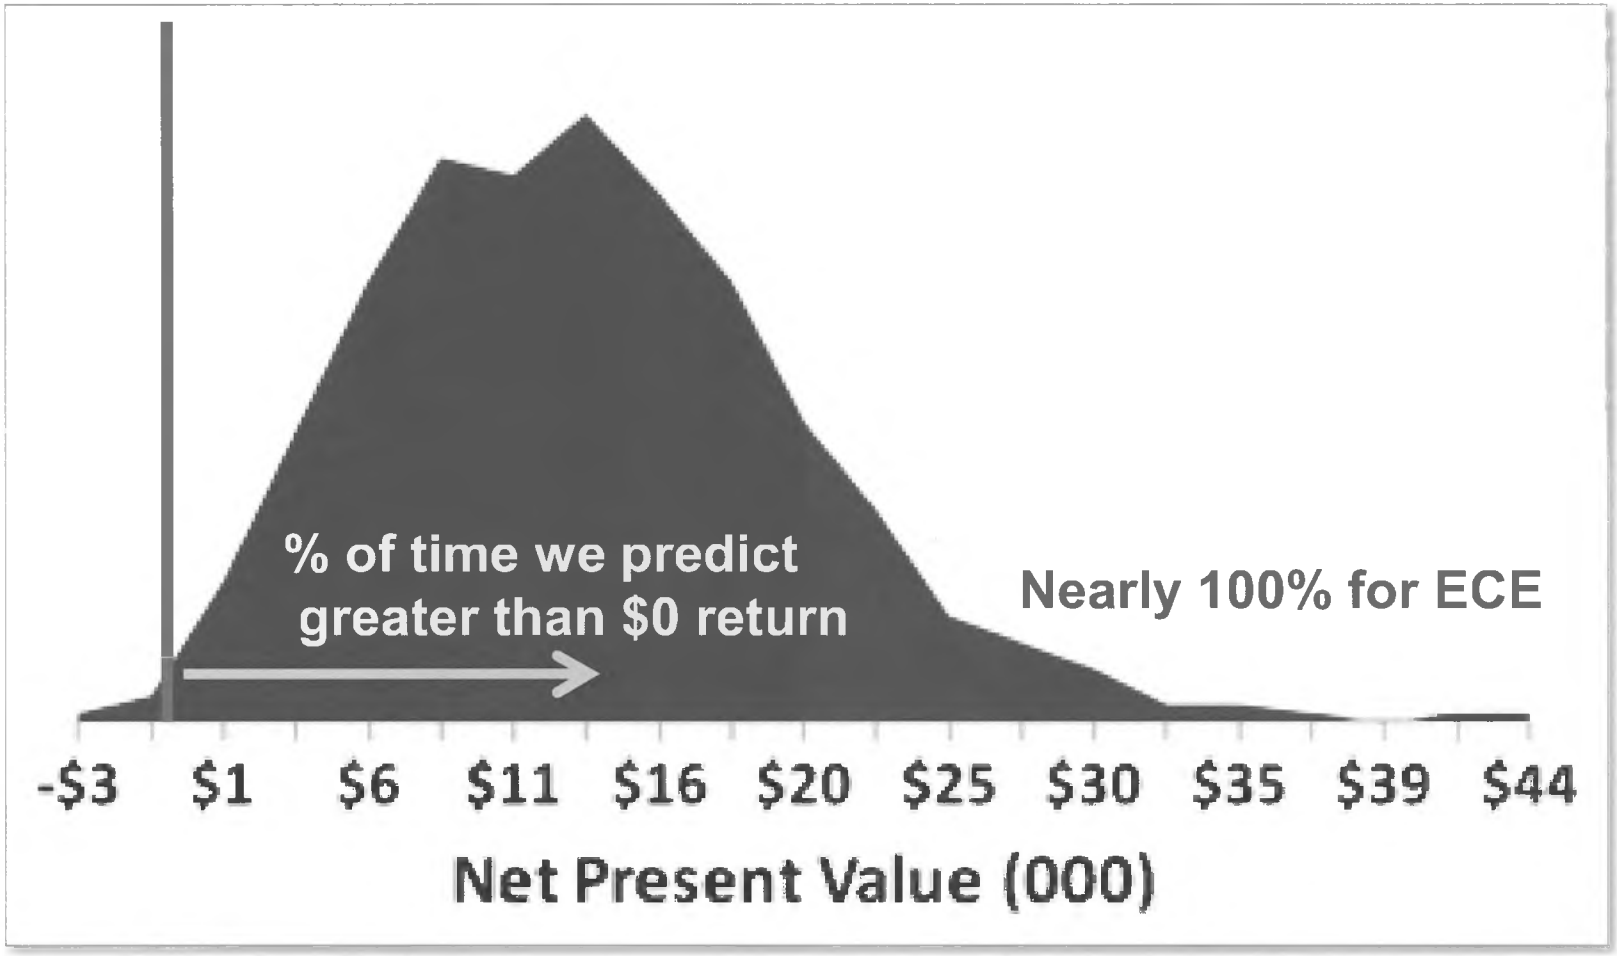


ECE for Low-income 3 & 4 Year-olds: Test Score Impacts and "Fadeout"



ECE for Low-income 3 & 4 Year-olds: Washington State High School Graduation Rates

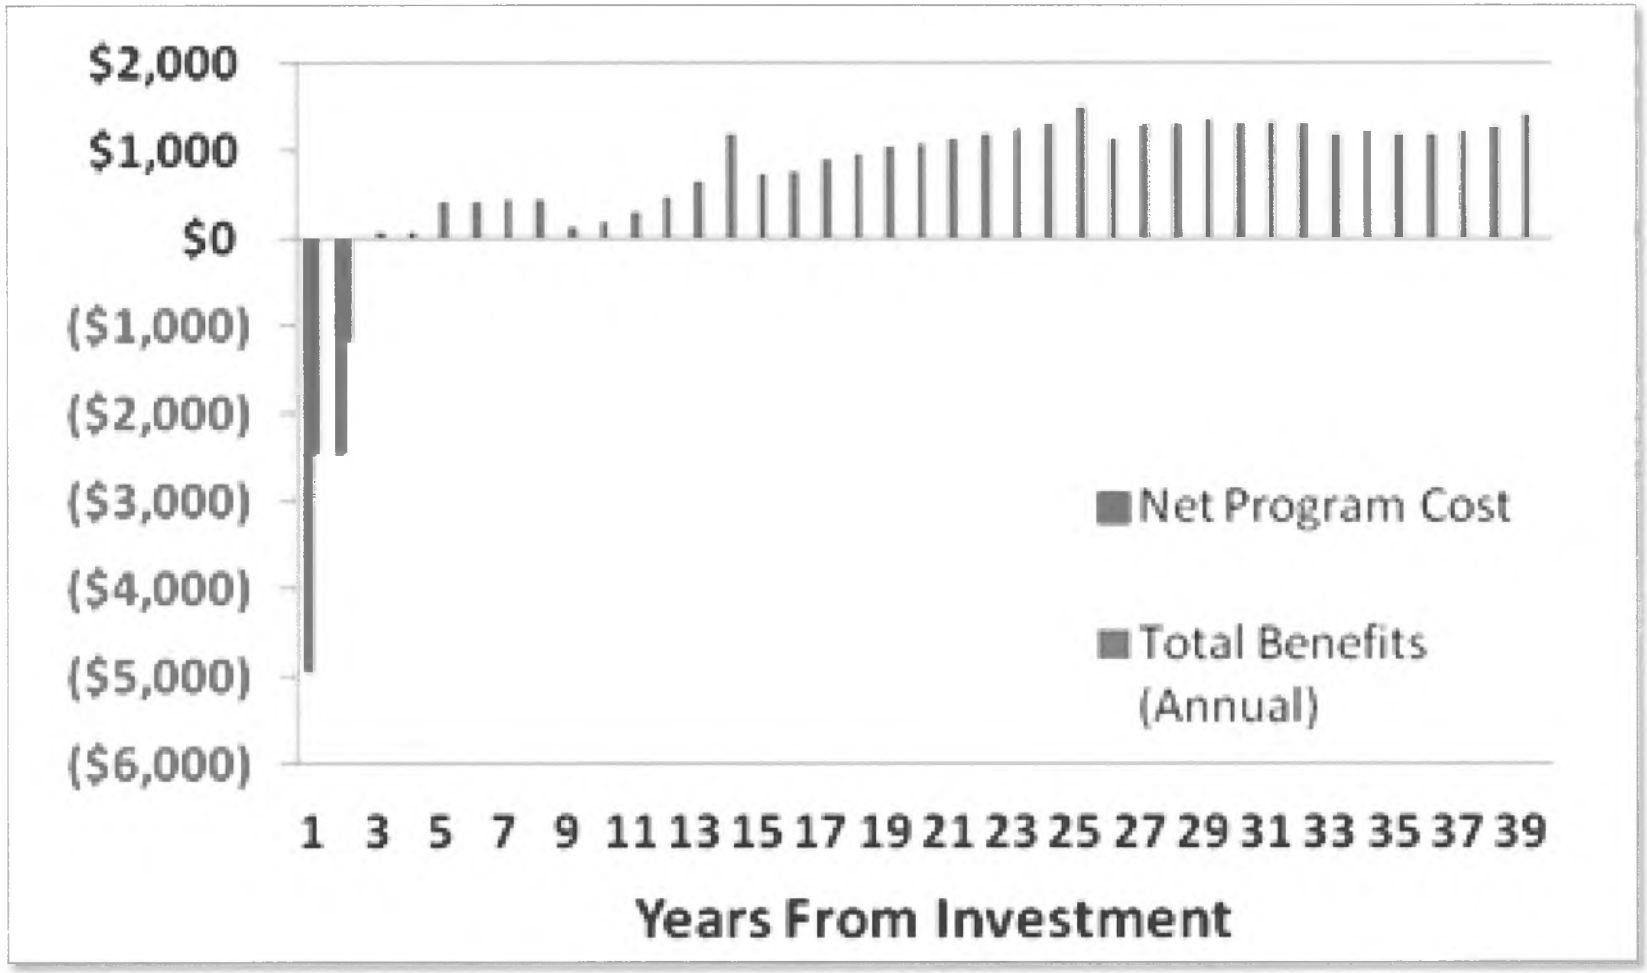
ECE for Low-income 3 & 4 Year-olds: Crime Impacts



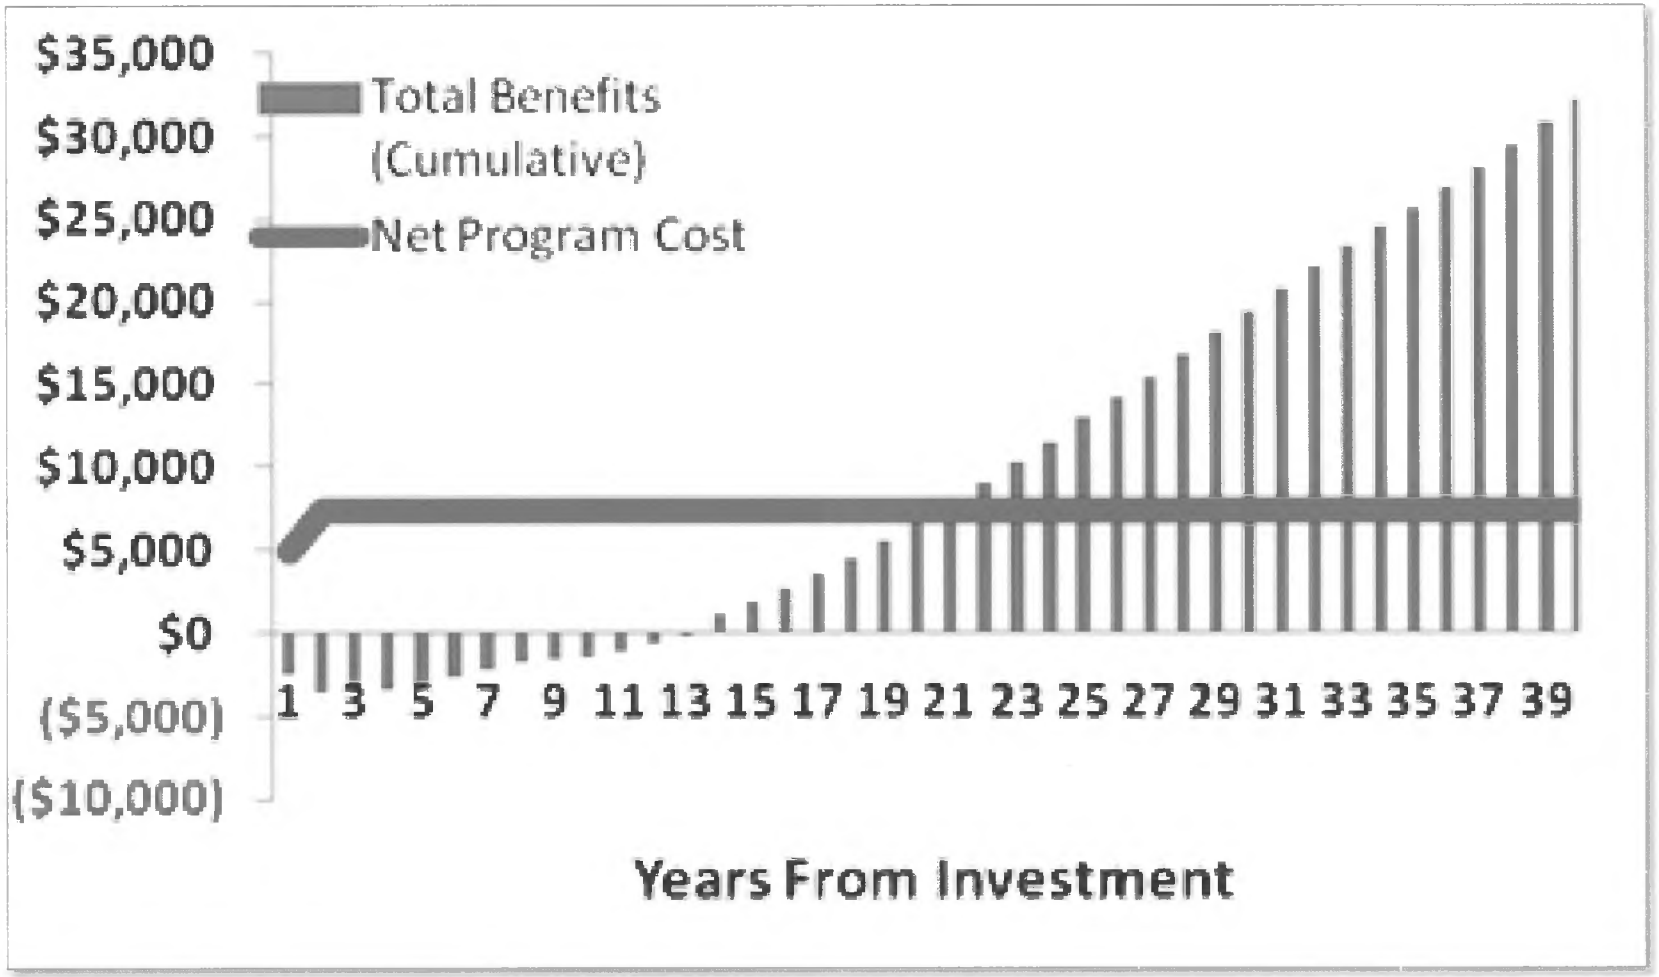
ECE for Low-income 3 & 4 Year-olds: Expected Crime Rates

ECE for Low-Income 3 & 4 Year-Olds: Return on Investment

Benefits Per Individual		**Main Source of Benefits**
Reduced crime	$6,066	**Lower CJ / victim costs**
Educational gains	$9,887	**Increased earnings**
Special ed reduction	$1,098	**Lower K-12 costs**
Grade repetition reduction	$310	**Lower K-12 costs**
Less child abuse & neglect	$637	**Lower CW / victim costs**
Fewer out-of-home placements	$379	**Lower CW / victim costs**
Lower health care system costs	$662	**Lower Medicaid enroll.**
Total Benefits Per Individual	**$21,667**	
Cost Per Individual	**$7,295**	
Benefits Per Dollar of Cost	**$3.01**	**(= 6% ROI)**



ECE for Low-Income 3 & 4 Year-olds: Investment Risk



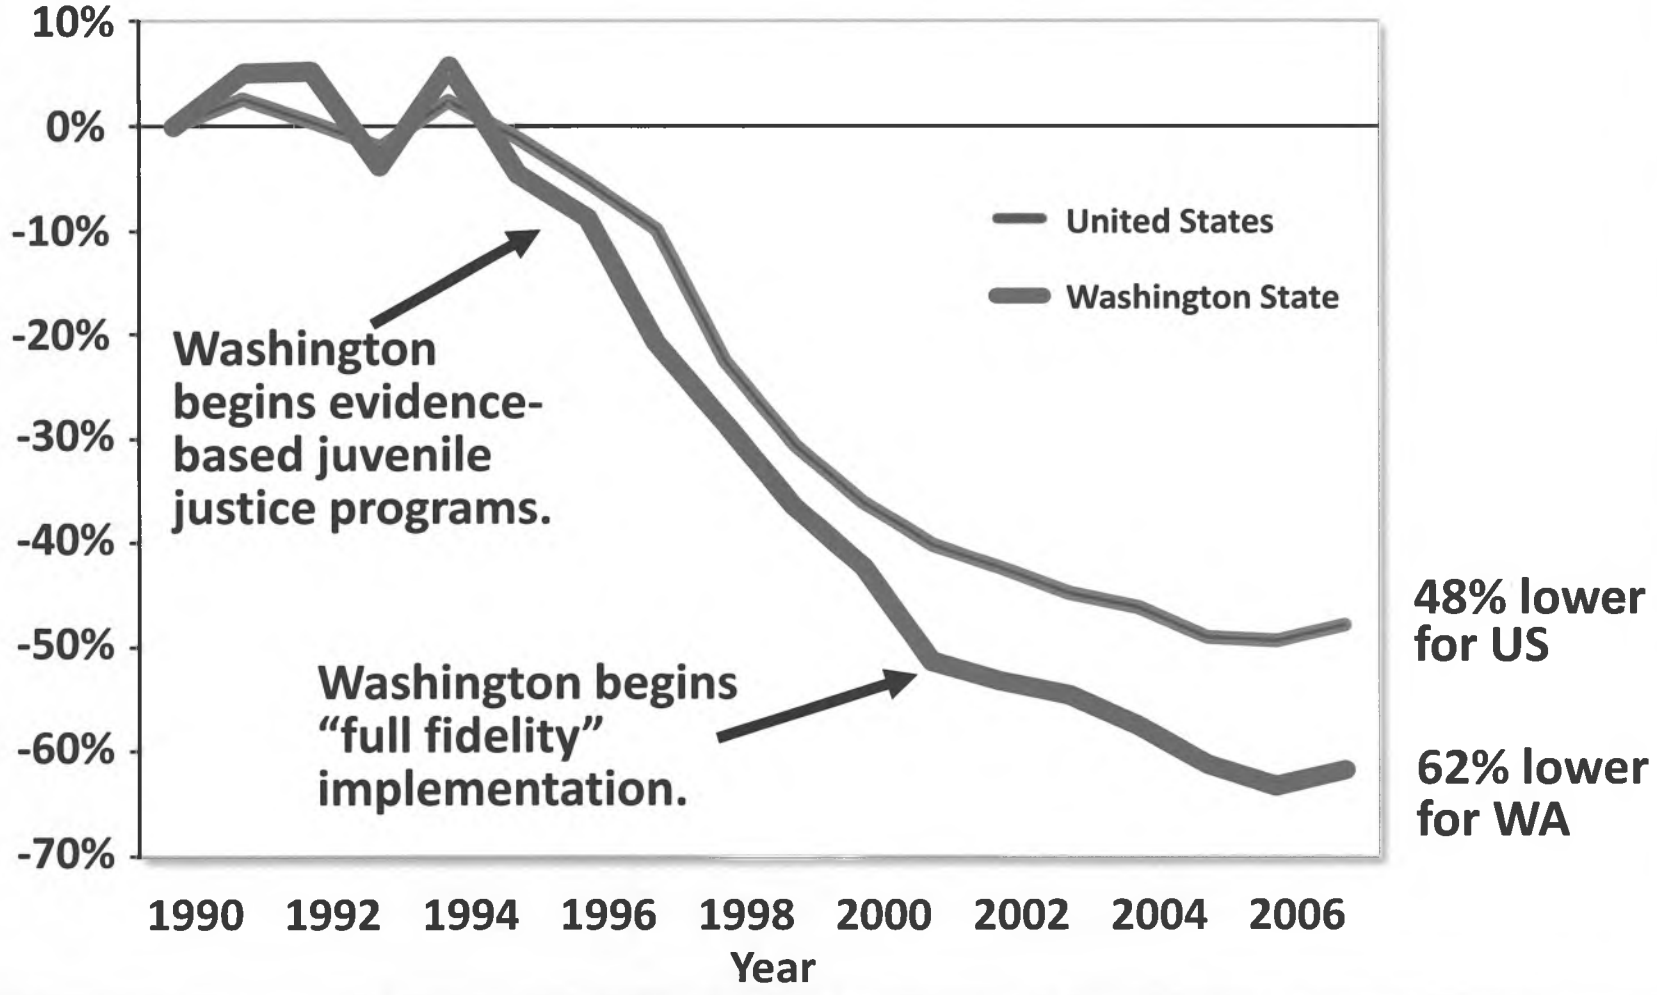
ECE for Low-Income 3 & 4 Year-olds: Estimates of Benefits

Benefit	To participant	To taxpayers	To others	Other indirect	Total
Crime	$0	$1,352	$4,031	$683	**$6,066**
Earnings via hsgrad	$1,431	$527	$0	$265	**$2,223**
Earnings via test scores	$6,353	$2,342	$0	$1,182	**$9,887**
Health care costs via hsgrad	-$136	$1,059	-$792	$532	**$662**
Special education	$0	$730	$0	$368	**$1,098**
Grade repetition	$0	$206	$0	$103	**$310**
Child abuse & negl.	$854	$131	$0	$66	**$1,051**
Out-of-home plcmt.	$0	$251	$0	$128	**$379**

ECE for Low-Income 3 & 4 Year-olds: Investment Returns, Annual

ECE for Low-Income 3 & 4 Year-olds: Investment Returns, Cumulative

ECE for Low-Income 3 & 4 Year-olds: Summary



- **The evidence: ECE improves outcomes across multiple dimensions (education, crime, child welfare, health care).**
  - Crime rates among participants are reduced by 20 percent;
  - Earlier educational interventions (preschool vs. high school) have stronger impact on crime.
- **The economics: ECE pays off ($3 per $1 investment).**
- **The risk = low. ECE nearly always breaks even.**

Some Major Washington Legislative Actions

- ✓ **Began funding several evidence-based juvenile justice programs in late 1990s and early 2000s.**
- ✓ **2002 Legislature cut prison sentences (for drug offenders) and diverted some of the fiscal savings to drug courts (from the WSIPP list).**
- ✓ **2007 Legislature funded a portfolio of evidence-based criminal justice programs in adult and juvenile corrections, and prevention.**
- ✓ **2006-present: Early childhood education passes the economic test and the legislature has taken steps to include it as part of Washington's basic education program.**

Keeping Track of Results: Juvenile Arrest Rates

The change since 1990 in the United States and in Washington (WA) State

Three Implementation Issues

- ✓ **Formal Assessment Process (Tools)**
  to align participants with the right programs, and to focus resources on higher-risk populations

- ✓ **State-Funded Quality/Fidelity System**
  to assure better adherence to the:
  — assessment system, and
  — the intervention program models

- ✓ **Funding Formulas with the Right Incentives**
  to encourage interest, adherence, and innovations in evidence-based programs

Early Childhood Education in Washington State: Recent Developments

- **Department of Early Learning (created 2006)**
- **State-funded voluntary ECE: full phase-in by 2018**
- **WaKIDS: pilot kindergarten assessment**
- **2011 Race to the Top $60 million grant to:**
  - Implement Quality Rating and Improvement System
  - Expand WaKIDS
  - Provide professional development incentives
  - Strengthen data system

Dear Senators:
I am not able to testify on Senate Bills 139 or 171 tomorrow morning due to another commitment so I hope these comments can be entered into the record for your consideration.

First of all, I want to thank **all** of you for being such outstanding advocates for our public schools in Anchorage, and in the state. We sincerely appreciate your support, both financial and in so many other ways! We applaud your service by being on the Senate Education committee.

As you probably know, I have just released my preliminary budget to the public and to the School Board for their consideration. This budget will have two more public hearings on February 1 and February 9; the School Board will probably make some changes to my preliminary budget. After they complete their work, our budget is transmitted to the Municipality and the Assembly by March 5 which is required by our municipal charter. Our Assembly public hearing is scheduled for March 27 where they will set the upper limit of spending and the level of local contribution to the Anchorage School District. After that time, we have to wait until the legislature and the governor complete your work to determine the level of funding we will have access to. If an increase occurs, we revise our budget again, and reinstate what we can, and then we have to go back to the Assembly for permission to spend the funds if they exceed the already approved upper limit.

As you can imagine. This budget cycle undermines our credibility, and takes a great deal of time and energy to continually revise our budgets. The emotional turmoil on potentially impacted employees is destructive to their morale and ability to focus on their important work of educating our students, and doing their jobs.

We are making excellent use of the additional C and TE funds from SB 84 last year and encourage you to visit some of our high schools to see how these funds are being used to expand our career pathway programs. We would ask that you give serious consideration to expanding the flexibility for the use of these funds for at least middle schools and high schools (grades 6-12) so that we can support our career planning in the middle schools. We have had to recommend the deletion of our career guides in the middle schools for next year, and having the flexibility to use the C and TE funds for the middle grades would allow more expansion of our construction, health and pre-engineering academies.

I urge you to support the funding for the next three years as proposed by the Education Committee in SB 171. The years that we had advance notice of our funding increases as a result of the Education Funding Task Force which was co-chaired by Rep. Mike Hawker and Sen. Bert Stedman allowed us to plan and avoid our annual "guessing as to our funding" as I described above. All districts in the state benefitted from this funding and would urge you to reinstate a three year BSA increase that allowed us to compensate, at a minimum, for inflation and increased costs of doing our work.

Additionally, we are urging you to consider reinstating the COLA to the Pupil Transportation funding for all districts which provide pupil transportation. All districts are having to use their instructional revenue to pay the costs of their transportation contracts. Costs are going up for fuel, tires, repairs, and bus purchases.

Again, my sincere thank you for your long-standing support for education. Please let me know if you have any questions or concerns about these statements, or if you have a need for more information.

Sincerely,
Carol Comeau
Superintendent
Anchorage School District

Subject: BSA Increase

Dear Senate Education Committee,

I am a parent of a Juneau School District elementary student and an active member of the Native Cultural education community. I am writing to encourage you to increase educational funding through raising the base student allocation, in addition to other proposed funding increases.

The proposed JSD budget cuts will negatively impact the quality of education our children currently receive. As a Native parent who is actively involved in my child's education I have noticed, at Mendenhall River Community school in particular, the positive impact both the classroom Para educators and the cultural Para educator has had on student learning. These educators give our students the additional one-on-one instruction from an adult that a single teacher cannot provide with large classroom numbers. This is not only a funding issue, but an issue of equity and quality education for our students.

By raising the BSA and other purposed funding increases, you will ensure our children are given the support they need to thrive in school. Please support our schools, our educators and our future, for that is exactly what our children are.
Gunalchéesh!

Subject: Increase in School Funding

To: Senator Joe Thomas,

I am writing this email because of my interest regarding future budget cuts within the Juneau School District.

My concern and desire to write this email came after I learned that the district is considering cutting 6 of the 10 nurse positions currently being held in the district. I very much understand the need of budget cutting, however, I am not at all in favor of cutting positions that will effect the health and well being of all students while attending school.

My daughter, started kindergarten at MRCS and is now a junior at TMHS, She has Type 1 Diabetes (her pancreas no longer produces insulin) and Celiac disease (not able to digest and process wheat).
When first diagnosed, with Diabetes, my daughter was in the 4th grade.

I spent a great deal of time with the school nurse learning how we would best manage my daughters chronic condition while she was attending school. The first year of treatment required 5 injections of insulin a day, frequent blood sugar checks and readily available snacks - all required to control and bring blood sugar levels to "normal" range. I was at the mercy of the school nurse to provide the needed care, including injections, that my daughter could not self administer and to help guide her with the proper care in order to sustain normal range blood sugar levels. My daughters already restricted diet became even more challenging when she was diagnosed with Celiac Disease in the 9th grade.
A further restricted diet alters her care, most "snacks" to raise blood sugars contain wheat. The knowledge and professional care provided by a nurse, someone a parent can trust, allows me to "breathe"
leaving my child 7-8 hours a day out of my own personal care.
Confident that the proper care is being administered by a nurse and with the assurance of my child's safety gives me peace of mind daily. (To be blunt and truthful, a diabetic, if not properly treated, within
15 minutes can become unconsciousness, have a seizure or even die.)

Diabetes/Celiac Disease is only one of the many major medical condition in which nurses play a valuable part of during the course of a work day.

Please reconsider the budget cuts in the area of school nurses, the con's far outweigh the pro's.

KEEP OUR SCHOOL NURSES to care for our loved ones who have daily challenges and are entitled to the same education as a healthy child.
The nurses see too it that this is possible!

Please consider an increase in school funding to keep our children safe, and even possibly saving their lives.

Thank you,

Sincerely,

Brenda Pagano

Subject: Re: Increase in School Funding

Dear Governor Parnell & Alaska State Legislators,

My husband & I live in Sitka and have 3 children attending the Sitka School District.

Please pass legislation this session that increases the Base Student Allocation.

In Sitka our school district is facing a severe budget shortfall that will translate into fewer teachers and significant cuts in extracurricular activities. One of our state's priorities must be education. Graduates of schools with low student to teacher ratios & opportunities to participate in a wide range of school related activities will become the work force of the future our great state needs. In turn this workforce will want to remain in Alaska raising their children here in order to have them attend our state supported schools.

Thank you for putting education first in Alaska.

Sincerely,
Gerald & Richelle Murphy

Subject: Increase in School Funding
Dear Parents, Teachers, Administrators and others who care about our children,

You are receiving this letter because you wrote us last year concerning an increase in school funding through raising the Base Student Allocation (BSA). As you probably know, the measure passed the Senate, but was stripped out of the House bill. There was a one-time $20 million put in, but that did not affect the overall BSA.

Senator Thomas and the Senate Education Committee will be introducing another BSA bill this year, and we welcome your support. Currently the bill is being introduced, and does not have a number at this time. (There is a funding increase bill from Senator Davis's office, but we are going to ask for more than the amounts in her bill.)

The bill is currently scheduled to be heard in the Senate Education Committee on January 27 at 8:00 am. We will be looking for some people to testify on that morning, but more important, we can use emails from supporters of school funding. You can send them to me at this email address, and they will be included in the Senate packet for the bill. We are ESPECIALLY looking for letters from parents. It is very effective to present a package of emails to the committee, and to say that a large percentage are from parents. But if you are a teacher, school board member or administrator, please go ahead and send us an email of support. Just try to get a parent to send one as well!

We appreciate your support and time. I will keep you posted on the status of the bill. If you do NOT want to receive emails from me regarding this issue, please let me know and I will take you off the distribution list. If you know of someone who should be getting these emails, then forward their address to me.

Again, thank you for your time and efforts.

Subject: Support of BSA increase

I understand Senator Thomas is introducing legislation to increase the Base Student Allocation (BSA) for K-12 Education. I am a parent of two boys (elementary and high school) in the Juneau school system and I support the increase.

I have worked with school budgets at the elementary school site council level and Juneau district level and I know the school system is not perfect. However, the JSD is facing a large budget deficit due to increasing costs and flat revenues. The JSD budget gets about 63 percent of revenue from the state (includes PERS) and the rest from the city, feds and other grants. The JSD budget is about 90 percent personal services and most of that is invested in the actual schools, including teachers, principals, counselors, librarians, janitors, etc. Even with all this state and federal funding, parents and teachers are constantly doing fund raisers to pay for activities and school supplies. JSD is trying to make changes to improve their programs but it takes monies funded from the BSA. It seems like more funds are needed each year due to federal requirements and to replace lost grant monies (federal and other types). Increasing the BSA is very important to keep the school system stable.

Keeping students engage in the classroom in the 21st century takes more technology (and monies) than in the past - pens and paper are far cheaper than computers. It is also important to have a low pupil to teacher ratio as kids get more exposure to the teacher and can learn much more. Both of my kids are good students and I can personally say it was due to good and committed teachers leading small classrooms. It is amazing to think teachers are trying to teach our kids when the odds are 26 (or more) to 1. I have a hard enough time teaching my 2 boys at the same time let alone 24 other kids. I don't think we appreciate teachers enough and I don't think they are overpaid for the work they are doing with our kids. They may not work all year, but the time they spend in the classroom is well worth the investment in education.

Thank-you for your support of education.

Subject: FW: BSA before the legislature and school board

Hi Murray,

Here is a letter from a parent asking me to forward this to you for the Senate Education Committee's attention. Please let me know that you got her letter. Her name is Donna Leigh. I will copy her on this letter so you can hit reply all. Thank you, Andi Story, Juneau School Board member

-------- Begin forwarded message --------
Subject: BSA before the legislature and school board
Date: 1/24/12 9:20:04 AM
From: "D Leigh"
To:"Story Andi"

Andi,
I got a letter from Jetta from the parent group at JDHS about writing our concerns about the budget and BSA.
The link to send e-mails didn't go through with the message. I am hoping you can send my message on to those who are involved with this issue.

I am also sending this letter on to the school board and district.

Donna Leigh

Hello fellow Alaskans,

I am writing in concern of the budget proposals before the 2012 legislature regarding the Base Student Allocation.
As the parent of high school student in Juneau and the state of Alaska I am becoming increasingly alarmed at the de-emphasis placed on the education of our students.
Our 10th grade student has three classes this semester that are overcrowde, at one time a geometry class had 40 students!. I highly respect the teachers who are trying to raise the bar of education in our schools as they struggle with overload and over crowding with limited support and resources.

In Juneau the School District is proposing to cut 66 teachers which equates to increased class sizes. They are also proposing to cut custodial services, class room aides,

library assistants, assistant high school principals and activities and optional subjects. These may at first glimpse seem like overall broad based cuts, but they will each specifically and deeply cut my student and his educational experience.

Out student's learning environment is impacted by dirty hallways and wear and tear on facilities that need maintenance and custodial services to maintain a wholesome physical atmosphere.Our high school student attends school willingly each day looking forward to the "optional classes" such as band that keep him motivated and make him a more rounded student and community member. Without classes such as band he would quickly lose his enthusiasm for school. He is currently enrolled in an "study hall" class that allows students to go to the library to work on independent study classes not offered at the high school. Without a library assistant this learning opportunity could be eliminated. Our student supports the basketball program as a member of the Pep band. He also attends events such Music Fest. As a parent I have come to highly value and rely on the assistant principals to help assure safety at these activities.

It is like a circle domino effect that just keeps compounding and circling with no particular starting point..... larger class sizes lead to more discipline problems, more discipline problems lead to sorely needed staff support which leads to overloaded teachers, which leads to a poor attitude and decreased motivation, which leads to frustrated students and teachers which leads to poor learning which leads to a seriously jeopardized educational experience which leads to a sad future for our precious next generation.

Break the circl!, Help to stop the domino effect! Support education and consider raising the BSA for students and our future.

Thank you for listening,
Donna Leigh

Subject: education funding

To: Alan Dick, Chairman House Education Committee

Last week I sent this letter to Joe Thomas, Co-chair of the Senate Education Committee. Since you are the Chairperson of the House Committee for Education, my District representative, and a concerned educator I believe it is appropriate that I send you a copy of the letter. I noticed with interest that you have taught in the bush but very little about you is on your web page. From your web page I did read an editorial that you wrote on educational reform and learned that you seem interested and knowledgeable about educational issues, especially rural issues. I could not help but notice that you have visited several schools in our area, Delta, Chistochina and Mentasta, in the little time you have been our representative. I realize that you have 46 communities in your district and I think that you know a cook book approach will not work in providing educational services District wide. But I do believe much can be learned by observing and copying what is being done in successful schools, therefore next time you are on a road trip stop in at Kenny Lake. Talk to the teachers, parents and students and I believe you will be pleasantly rewarded with the experience. I further encourage you to use your experience and knowledge in education to help Alaskans to receive the fair and necessary school funding for success in this ever changing world.

Thank you,

Denny Wallace
Kenny Lake, AK.

To: Joe Thomas, Co-chair Senate Education Committee
Thank you for the opportunity to give my opinion on increasing the basic foundation formula for schools. I have lived in Alaska for over 30 years and have been encouraged with the school funding until now. It is important to know that I spent much of the previous 30 years residing in Valdez. They have adequate funding to run their schools and in the rare instances that they require addition funds they can request it from the city. To my knowledge every time they requested it they received needed funds from the city. As evidenced by their funding level I believe Valdez loves and **supports** their schools.

Two years ago our family moved to Kenny Lake, a rural community of 110 students who travel from 20+ miles in all directions to attend school. Several families who attend Kenny Lake Schools drive 12 miles on an unmaintained road to get to Chitna where the school bus picks them up for an hour trip to school. I asked one of the mothers "why not home school them?" and she said Kenny Lake was such a good school that it was worth her effort to make sure her kids got to school.

In Kenny Lake there is no budget reserve or waste to cut to absorb a lack of school funding from the State. Kenny Lake has no "city" from which we can request additional funds to help run our schools. My wife is currently a teacher at Kenny Lake Schools (Copper River School District) and because I am retired I have spend many hours observing and volunteering at the school. I know how much money she spends on supplies, food, prizes and equipment for her students; most of this is not reimbursed by the school. My wife recently told me that she has never worked so hard or loved a job so much as the one she currently has. After 25 years of teaching I believe the reason she loves her job so much is she sees how hard everyone in this community works to provide quality experiences for their children and she likes being on that team. While at school I have observed a vast volunteer network that cooks meals for extra-curricular activities, sells concessions, fund raises, drives hockey players to games, volunteers in classrooms and conducts school activities such as spelling bees, music concerts and other special events. There is a level of "supporting the schools" like I have never observed, and I have been observing for 65 years. I guess what I am saying is our community is giving all they can to help provide a quality education to our students. At this time there is no waste in our school. The parents have no more money or time to give. We need help from the only funding source that we currently have....the State. We know what to do, we just need to be allowed to do it. Kenny Lake loves and **supports** their schools but like other communities within Alaska we need the necessary funds to adequately operate them.

thank you,

Denny Wallace

Subject: SB 171

Dear Senator Thomas:

I'm writing in support of SB 171 for many reasons. As a resident of Juneau, a parent of two elementary JSD students (one of which is both medically fragile and has a federal IEP and 504), and a spouse of a JSD teacher, I would truly appreciate your support for an increase in the BSA. The proposed budget cuts for JSD are ridiculous and embarrassing and hurt "the least of these" among the student population. It's encouraging and essential to hear school board members and budget committee members realizing the need for creative funding and less dependance on the State's BSA. In the mean time, medically fragile students, students with disabilities, students with exceptional academic performance, culturally neglected and at-risk students, students invested in nearly every area of the arts, all stand to suffer a significant loss in their education without an increase of the BSA.
Please appreciate the fact that there is nothing more important then the education and empowerment of a child. Thank you for your support!

Sincerely,
Jessica Dean

Subject: School Funding

Dear Senator Stedman,

Thank you so much for your service to our state and for making education one of your top priorities. I'm writing as a concerned Southeast Alaskan parent. My five year old son will be starting kindergarten this fall. As you know, Alaskan schools are hurting and are being forced to make far-reaching cuts. In Juneau along with 66 other positions school nurses are on the chopping block. My son has type 1 diabetes and requires medical care at school. In a matter of a few weeks I've gone from being confident and excited about my son starting kindergarten to feeling uncertain about his health and safety at school.

If children are truly Alaska's greatest resource it's time for the state to show that we care about our kids and schools by increasing the BSA. Every Alaskan wants to see our schools, achieve more, reduce waste, and be accountable for academic performance but withholding state funds does not fix schools. The sad fact is that withholding funds impacts the students not the system nor the administrators responsible for the state of our schools.

Please help our schools and schedule SB 171 in a timely manner. Again, thank you for your dedication and commitment to our state and to our kids.

Sincerely,
Jenny Malecha

To: Sen. Joe Thomas
Subject: Porposed school budget cuts

Sir,

I'm writing this email to let you know that I DO NOT support any proposed school budget cuts. I have three children attending Woodriver elementary school and I don't feel that cuts to the school budget are warranted at this time. All three of my children are already in classes that are overcrowded. These proposed budget cuts would increase the number of students in the classrooms even more. As I'm sure you are aware, countless studies have shown that overcrowding in classrooms leads to poor grades, less student-teacher one-on-one time, poor scores on state tests, higher dropout rates, health issues, higher crime rates, and many other issues that will and are having an enormous effect on our state. Cuts in education is never the answer, it is the problem. A recent study published in the *American Journal of Public Health* showed that decreasing the number of kids in elementary classrooms is more cost-effective in the long run because smaller class sizes produces a larger number of students that graduate from high school, a greater number of students that go on to seek higher education, less crime, better overall health and life styles, and a well educated and productive workforce. All of these benefits are due to properly funding early education, not cutting early education. Our state pays more to treat substance abusers and house criminals than it does to educate our children. **Alaska pays FOUR TIMES as much money to house a criminal than it does to educate a student per year!** You have the chance to start reversing that trend by opposing these cuts to our children's education. Better education is the answer to so many problems that cost so much money.
So, please do the right thing and oppose any cuts to our children's education. You and all the other elected officials in Juneau should be spearheading a bill to create more money for our children's education not discussing ways to cut the little money that we spend on our state's future.

Thank you,
Michael Annunziato

Subject: Parent suppporting SB 171

Dear Senators,

As the parent of two boys in the Juneau School District, and as the chair of the Juneau Douglas High School Site Council, I ask your support for SB 171.

Costs are increasing throughout our educational system—costs that the school districts cannot control or contain. As a result, each year our schools offer less and less. In Juneau, valuable programs that help our children succeed are being cut and are disappearing, one by one, as the budget (in real dollar terms) sinks. Foreign language programs have been slashed; cultural education programs for Native students are being eliminated; the gifted and talented program has been cut to the point where it really doesn't exist any longer.

There is no reason for this. As a parent, I believe that all children are entitled to a high quality public education. The future of Alaska and of our country depends on well-educated, knowledgeable citizens. Every student counts!

Please support SB 171. The increase in the base student allocation is critical, and forward funding SB 171 provides will allow our school districts to plan ahead.

Thank you.

Subject: SB 171 Increase in Student Base Allocation

Dear Legislators:

I spent a good part of two days watching the Anchorage School Board have their working session on the Superintendent-proposed school budget. Because Governor Sean Parnell has flat-funded education in his proposed budget, the cuts to the ASD could be deep and debilitating. The educator testifying in regards to proposed cuts for the high schools stated that we would lose ground gained the last several years in both drop-out rates and graduation rates. All summer school programs would be eliminated and that includes the methods by which high school students can get "credit-recovery" in order to graduate.

My understanding is that the Fairbanks and Juneau School Districts are in much the same shape. I also understand that some of the rural schools aren't sure how they are going to make it through the year.

There is something very wrong with our Alaska State Schools not being funded to cover inflation and other rising costs (like energy) so that they must dig into their education programs just to survive.

Senator Thomas has created a good bill in SB 171. The $125.00 Student Base Allocation increase is desperately needed. I hope the rest of the Senate is able to see that as well.

Subject: Student Allocation Funds

Dear Mr. Richmond-

I am writing because I am extremely concerned with the lack of support for public education in Alaska! I was raised in Fairbanks and am now a teacher here because I received a great education here in Alaska. I taught my first year out of college in Portland, Oregon and that showed me right away that I wanted to teach in a community and state that supports public education. I moved back to Alaska because public education has been supported so it has be successful. The smartest way we can invest in the future of Alaska is through educating our youth!

The rising cost of utility bills alone in Fairbanks shows that the cost per child needs to increase. The electrical cost has gone up 23% in Fairbanks in the calendar year of 2010. The price of fuel; vehicle and house continues to be higher then Anchorage by 15-20 cents a gallon. If you keep the cost per child the same this is really a cut because operations cost continue to rise when the money allotment per child does not.

Please support an increase in student allocated funds for Alaska.

Thank you for your Time.

Sincerely,
Sara Wood
FNSBSD Teacher

Subject: SB171 - In support of...

Good Morning Senator Thomas,

My name is Cindy Jorgensen, I live in Fairbanks, AK and I am a parent of 3 kids. I was at Alaska Legislative Office in Fairbanks on Friday to testify on behalf of supporting SB171; however, due to many testimonies we were unable to speak at that time – and due to having to work, I was again unable to attend the Monday session. As you know, our district (along with many others I learned at the meeting) is facing large budget cuts this spring. SB 171 will help to restore some of the cuts. I also think it is wise of the legislature to forward fund, as this bill does...for three years. Without the help of the legislature, we are going to see services to students affected. I appreciate your support of this bill.

PS – I would appreciate that the time limits on testimony not be removed to provide everyone an opportunity; however, I appreciate the opportunity to be able to attend, listen, and to voice my support.

Sincerely, Cindy Jorgensen

To: Murray Richmond
Subject: RE: Increase in School Funding

Dear Senator Thomas,

Thank you Senator Thomas for your commitment to the children of Alaska!

My name is Kathy Gearhart and I am the Superintendent/Board Secretary at Copper River School District (CRSD). As you know, there has been a significant increase in energy costs, and up to a 20% increase in health insurance. That, along with pay increases required by negotiations with teachers and classified staff, has put a huge strain on the budget for CRSD next year.

Being on the Senate Education Committee, I'm sure that you are aware of the predicament that school districts are in across the State. Unlike private sector companies that have control over wages and benefits, school districts must negotiate with teachers and classified staff and are bound by State law to do so. I personally think that it would be in the State's best interest to take a good look at the laws concerning teacher's in the State. Being from Wisconsin, I have respect for Governor Scott Walker tackling this difficult issue to address the budget in Wisconsin. In the meantime, there is a crisis that needs immediate attention for school district budgets. If CRSD receives the same budget as this year, the district will be forced to cut 4 of our 35 teachers. In a rural REAA community with six schools, that will be a devastating blow to students. Another area the CRSD has suffered greatly is transportation. The funding for transportation each year always sees a shortfall and the district was forced to cut a route this year. Requiring some of our students to be on the bus for 3 – 4 hours per day. Then there are fuel costs, and we all know the hardships they have brought on everyone.

I ask that the Senate Education Committee please consider school funding as a top priority this year. Alaska's and our Countries future depends on it!

Sincerely,

Kathy Gearhart

Subject: Increase in School Funding

Dear Parents, Teachers, Administrators and others who care about our children,

You are receiving this letter because you wrote us last year concerning an increase in school funding through raising the Base Student Allocation (BSA). As you probably know, the measure passed the Senate, but was stripped out of the House bill. There was a one-time $20 million put in, but that did not affect the overall BSA.

Senator Thomas and the Senate Education Committee will be introducing another BSA bill this year, and we welcome your support. Currently the bill is being introduced, and does not have a number at this time. (There is a funding increase bill from Senator Davis's office, but we are going to ask for more than the amounts in her bill.)

The bill is currently scheduled to be heard in the Senate Education Committee on January 27 at 8:00 am. We will be looking for some people to testify on that morning, but more important, we can use emails from supporters of school funding. You can send them to me at this email address, and they will be included in the Senate packet for the bill. We are ESPECIALLY looking for letters from parents. It is very effective to present a package of emails to the committee, and to say that a large percentage are from parents. But if you are a teacher, school board member or administrator, please go ahead and send us an email of support. Just try to get a parent to send one as well!

We appreciate your support and time. I will keep you posted on the status of the bill. If you do NOT want to receive emails from me regarding this issue, please let me know and I will take you off the distribution list. If you know of someone who should be getting these emails, then forward their address to me.

Again, thank you for your time and efforts.

Subject: For Senate Education Committee

Dear Senator Thomas:

I am a parent of a middle school student. I have worked at the high school as a long-term science substitute. I have volunteered at my child's elementary and middle schools. I have volunteered to assist the school district develop a five-year plan in concert with various funding scenarios. With my exposure to public schools and the school district budgeting process, I want to urge you to propose an increase in the Base Student Allocation for public school funding.

It is heartbreaking to see the need for basic services, supplies, and staff in our public schools. For example, at the elementary school one year, the administration asked the PTA for funding to replace a worn entry rug because the school couldn't afford it. At the middle school, needed teaching positions have been deleted due to the lack of funds. At our high school, a counselor position was cut, leaving the remaining two counselors frazzled and unable to keep up with the demands of their jobs. Last year, our district cut about $4 million dollars and is proposing a similar level of cuts again this year.

In addition to more funding for Alaskan schools please work to change the funding process from the current year-to-year system. The uncertainty of not knowing the next year's funding is really difficult. The district starts to develop a budget long before the legislative session ends. I believe an increase in the BSA will accomplish this goal as well.

Sincerely,
Kristine Benson

Subject: Re: Increase in School Funding

Dear Senators,

Once again you are asked to increase the SBA for education in this state. Why are you being asked again? Because the state has never kept up with the rate of inflation alone for the SBA. I have lobbied for years for the state to keep education at a high priority and keep the SBA inflation proof. This has not happened.

I read that the Governor wants to put a one time add on in funds for education, but not change the SBA foundation formula as that would mean the money would be present every year. What a novel idea, a school would actually be able to count on money for the upcoming year and not look at cuts.

I have raised three children in the Haines and Juneau school districts. My first child made it through and went on to Dartmouth. My middle child is going to graduate this year and I am thankful for that as I see that 4 more million will be cut from our schools again next year. I fought tirelessly in so many ways for the public system. Well, it has finally worn me down. I am presently looking at a private school for my third child if the cuts happen. He already can't get four years of a language in this town. Art, theatre and EL have been cut in the last year.

I am a parent that helps more with children that aren't mine in this district, but I am getting totally dismayed with the public system.

It makes no sense to me why the legislature does not make and education endowment program like the permanent fund. The money could be put in every year and maybe in 30 years from now this fund would support the best education in the country.

We really have no excuses why are schools are failing families. We are a rich state, have oil money and have forward thinkers in the past. Think ahead and raise the SBA this year and start an education endowment program where money is being invested for the future. Our schools rate dismally nation wide. Yet, we have amazing people in this state. Rise up and fight for the ones who will be caring for you when you are old.

Dear Parents, Teachers, Administrators and others who care about our children,

You are receiving this letter because you wrote us last year concerning an increase in school funding through raising the Base Student Allocation (BSA). As you probably know, the measure passed the Senate, but was stripped out of the House bill. There was a one-time $20 million put in, but that did not affect the overall BSA.

Senator Thomas and the Senate Education Committee will be introducing another BSA bill this year, and we welcome your support. Currently the bill is being introduced, and does not have a number at this time. (There is a funding increase bill from Senator Davis's office, but we are going to ask for more than the amounts in her bill.)

The bill is currently scheduled to be heard in the Senate Education Committee on January 27 at 8:00 am. We will be looking for some people to testify on that morning, but more important, we can use emails from supporters of school funding. You can send them to me at this email address, and they will be included in the Senate packet for the bill. We are ESPECIALLY looking for letters from parents. It is very effective to present a package of emails to the committee, and to say that a large percentage are from parents. But if you are a teacher, school board member or administrator, please go ahead and send us an email of support. Just try to get a parent to send one as well!

We appreciate your support and time. I will keep you posted on the status of the bill. If you do NOT want to receive emails from me regarding this issue, please let me know and I will take you off the distribution list. If you know of someone who should be getting these emails, then forward their address to me.

Again, thank you for your time and efforts.

Subject: Letter of Support for BSA Increase

To: Senate Education Committee
From: Jennifer Malecha (Juneau Resident)

My five year old son will be starting kindergarten in the Juneau School District this fall. I'm writing in support of increasing school funding. Like many school districts throughout the state Juneau is facing big budget cuts for FY2013. These cuts are deep and wide and will directly impact students and families. I'm particularly concerned about cutting school nurses in Juneau. My son has type 1 diabetes and will require testing, monitoring, and treatment throughout the school day when he starts kindergarten. In a matter of a few days I've gone from being confident and excited about my son starting kindergarten to feeling very concerned and unsure about his health and safety at school.

An increase the Base Student Allocation for FY2013 would help solve some of these budget shortfalls and hopefully keep nurses in Alaska's schools. If we truly consider children Alaska's most valuable resource we need to fund our schools adequately.

Sincerely,
Jennifer Malecha

Subject: I am a parent and support education funding!

Dear Members of the Senate Education Committee:

I am a parent of a student at Thunder Mountain High School , and have put two now-grown children through the Juneau school system as well. I write to implore you to advocate for a large increase to the BSA. The proposed budget cuts are horrific and just plain **wrong,** given that our state has plenty of money.

I have spoken with many teachers and school staff over the last several years about education. They all say the same thing - that the kids coming to school today are often not as ready to learn as in years gone by. The behavior problems are more common and more severe. Our society has many forces, including toxic, overwhelming media, rampant substance abuse and overstretched parents that are creating this problem of kids not being as prepared to learn these days. Too many kids are spending way too much of their free time on electronic media instead of getting outdoors, being active, or even - studying. Is it any wonder that the drop out rate is high, and continues to be so, **in spite of much good work our schools do?**

Our drop out rate is too high. But I am certain the schools themselves are not to blame. They are filled with wonderful, dedicated staff who do the best they can with often inadequate resources. And now, it's going to get much worse, courtesy of a legislature that does not support children.

Let's stop blaming the schools for what we are all responsible for - a toxic society that is damaging our children. Let's fund the schools so that they can adequately meet the needs of all students. Don't punish the schools by not increasing the BSA **again.** And most importantly , don't punish our kids, our future, by not giving the schools the money they need to educate our kids well.

Sincerly,
Ellen Pavitt
parent and small business owner in Juneau

Subject: RE: Increase in School Funding

Senator Thomas: I am writing regarding the Base Student Allocation. I support raising the BSA at this crucial time when funding is rapidly eroding from the federal level. It is critical to our schools, particularly in Southeast Alaska, that the State step in to alleviate the tremendous pressure that will be applied to our districts as the funds from Forestry Receipts disappears. Our district simply cannot continue providing the same high quality of education to the students of our community with such a huge chunk of our budget ripped out. My daughters graduated from the Klawock City School District in the last few years and are finishing their college degrees at the University of Alaska Fairbanks and the University of Alaska Southeast Juneau. Coming from a village into a larger setting academically is extremely difficult for Alaska students, but thanks to the competitive, well-rounded education provided by our school district, my girls are being successful in post-secondary education. To see the ability of our school district to provide a high quality education for the next round of students drastically diminish because the State would not step up to the plate with this much needed funding would be a disservice to the youth of our State. I would urge our legislators to raise the BSA as an investment in our kids. Valerie Steward, P.O. Box 181, Klawock, AK 99925.

Subject: Please support SB171

I am encouraging you to fully support the most important resource in our state-Education.

A great start would be to support **SB 171** which increases the yearly BSA formula in our public school districts.

Without that financial support the Mat-Su School District will face even more instructional and operational cutbacks to an already drastically trimmed budget. Our district eliminated 200 jobs last year through efficiencies, attrition, careful planning and stewardship of the public money. At the same time the district has improved reading and math skills, increased graduation rates and made impressive strides in resolving the dropout rate. They have built a vocational program which they continue to foster that districts all over the state and country are envious of. These were all tasks leaders have asked them to do better. Our district is keeping its part of the educational bargain in a big way.

Raising the BSA to $125.00 per student as SB 171 allows for particularly after flat funding last year is a very reasonable request. I would like to see even more monetary support from the state for public education. I do think most agree a commitment from our legislature in a more stable long ranged expectation of increases would be a better solution. While that is a goal we should all work towards I am insisting upon your support of SB 171 this session to meet the current needs and challenges in districts.

Last October the voters of Mat-Su approved a five year bond for investment in our borough schools. I worked hard with a group of volunteers to educate the public about the importance of that investment and the return to communities about the issue. The message was received loud and clear! They voted to reach in their own pockets and raise their mill rate for their portion of the bond which reflects their overwhelming confidence in the job our district is doing to educate our children. Now it is your turn to vote to do the same by **supporting SB 171**.

Thank you for your service and consideration in advance,

Terry Snyder

TO: The Honorable Joe Thomas, The Alaska State Senate

Dear Senator Thomas,

Our understanding is that you are working to move SB 171 which will increase this year's Base Student Allocation by $125 with another increase next year.

Good on you and you sure have our full support in your efforts. There are many citizens around here who understand that Alaska's future prosperity will be determined by investing in the education of her children.

Our Founding Fathers understood the importance of public education and our Country has prospered in large measure because we invested in "little school houses on the prairie". Let us make certain the same opportunities are available to Alaskans on the Tundra and elsewhere in our Great State.

Stinginess to our children by refusing to fund our public education system in times of plenty is foolish ideology trumping the common good.

We know your support for training and educating Alaskans is strong and has been throughout your career.

Thank you for leading the charge once again.

Best Regards,

Michael & Valerie Kenny

Subject: School funding

Represenative Kawasaki

I am the mother of a wonderful second grader at Watershed Elementary in Fairbanks. My child excels socially, but has a harder time in reading and math. I would say that he has ADHD, and I am sure his Teachers and Principal would agree. He is in a class with twenty-two other students with their own strengths and weaknesses. There are children that are reading and writing two grades higher than my son and there are children who are behind him. I watch some of the students sit still and listen to the teacher; and I see how hard it is for others to focus. Mrs. Barnes, Mrs. Chavez, and Mrs. McDermott have been great teachers and my son can read, add, subtract, and write. He loves science and wants to study sharks when he gets older. I however, think he will be a politician. His highest grades are in social studies. I have been very impressed with the education that he has received so far.

I am worried that because education is currently flat funded in Alaska (SEA), the quality of education is going to decrease. The Fairbanks North Star Borough is asking teachers to add two students to their classrooms. That can add up to an additional 40 students per day. They are also being asked to add fifty more minutes into their school day. In the North Slope Borough, they are still using a science book from 1996. We have come too far in the last 16 years to be using the same book. Teacher's salaries are not keeping up with the cost of living. I'm worried that we will not be able to retain our quality teachers or replace those who leave. There is an easy solution to the problems our schools in Alaska are facing. They should be at the top of list for funding, not at the bottom. Please increase the funding that they receive. Our children's education depends on it.

Subject: SB 171

As parents of a 2nd grader and soon to be Kindergartner, we are writing to express our support for SB 171. The Governor's budget proposal makes no increase in the base student allocation for the next 3 years. Flat funding for schools essentially means cutting education, as costs continue to rise. The Juneau School District had to make painful cuts last year, and is again looking at making significant cuts in its budget for 2013, cuts that will directly impact our children in their classrooms. Extended learning is on the chopping block. Class sizes will rise. Essential Para-educator support will be cut. The Governor says that without tangible improvements in school results, funding should not be increased. This makes no sense to us. How is cutting teaching staff going to help? And in fact, achievements have been increasing. Reading and math results have climbed steadily for 4 years.

A one-time injection of funds like the energy funds last year is welcome, but is not consistent with building a long term systematic approach to education. Nor is it conducive to morale for school districts to lurch from year to year in uncertainty as we have been doing. Increasing the BSA will restore some consistency and certainty to the budget process and help our educators plan for the future.

Investment in schools is an investment in our community and our state's future. We support this bill and urge the Legislature to pass it.

Jim and Kate Hudson

Subject: Children MATTER, DON'T TAKE AWAY OUR NURSES!!!!

Children MATTER, so who WILL CARE!

I will be attending the meeting this coming Tuesday (Attend the budget meeting Tuesday, January 24, at 6:00 pm in the Dzantik'i Heeni Middle School Library).

Sacrificing our children's safety to save money does not sit well with my family!

As many of you know our son, Lucas has severe nut allergies; we are required to have an Epi-Pen and other medicines with us at ALL TIMES in case he goes into anaphylactic shock! When Lucas started kindergarten this year, I was concerned enough since he attends a non nut- free school. This was only compounded when I went to hand the teacher an Epi-Pen, additional medication, and an instructional letter, and was met with a reply of, "Oh, all medicine is kept with the nurse". After many meetings with the nurse and many months of staring at my cell phone expecting it to ring at snack and lunch time...I began to relax as much as one can, when dealing with the health of a child.

When budget cuts were mentioned, and the possibility of nurses being cut I said, "They would never risk our kids like that"! But they are indeed looking at replacing our nurses with "Health Assistants".

This poses the following questions.

What qualifications and training do non-licensed personnel who are assigned to the school health office in the absence of a school nurse have? At this time there is no definition given to "Health Assistant/Aid" by the Superintendant. Will they be able to give injections?

We take for granted the role nurses have in our schools: In addition to assessing student health status, making referrals, administering injections, and delivering emergency care, nurses also manage insulin pumps, check blood sugar levels, identify vision and hearing problems, insert tubes, suction children on ventilators, administer medication (in some cases vaccines), counsel pregnant teens, notice cases of abuse/neglect, to name just a few. We have a diverse population of students that the school nurse is the only health care professional that many can afford to see. By allowing these nurses to be cut out of the school budget the message we are allowing to be sent to these families is that their children's health is of no concern to us!

To make sure children's health care needs are met so they can achieve what they need to do in the classrooms, we MUST keep repeating the message that, HEALTH AND LEARNING GO TOGETHER!!!

Thanks,

Lisa KS Mattson

Please pass SB171! Without this per-pupil increase, student performance will be impacted in a negative way!
ASD is considering cuts that eliminate graduation support (special education counselors and graduation coaches) reduce library services to elementary schools and cripple the maintenance department.
I am writing as a concerned parent and ASD employee to encourage you to support SB 171.

Please increase education funding. Juneau must consider a 50 percent reduction in teachers in the elementary school Extended Learning Program. Grade school EL children need special support. Without challenge, these children are likely to become disengaged in school, and to wind up lost to the education system. Please help!

1528 Bluegrass Drive

Fairbanks, AK 99709

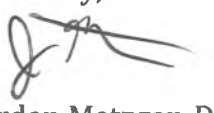
Senator Joe Thomas

State Capitol Room 514

Juneau AK, 99801

January 25, 2012

Dear Senator Thomas,



I am writing to you today regarding my concerns about the Alaska state budget proposed by Gov. Parnell. In particular, I am worried by the lack of an increase in per student education funding and in the stagnation in the overall amount of state support supplementing our public schools' funding.

I feel strongly that this is unacceptable and poses a threat to the future health of Alaska. The stagnant funding for our schools will lead to teacher layoffs and reduced education opportunities. Fewer teachers will lead to larger class sizes, reducing the attention each pupil receives and result in a decline in student performance. Ultimately our schools will graduate students less prepared to succeed in the world.

To ensure the future success of our state, we must ensure the next generation is well-educated and primed to excel in the workface. Many high paying jobs in various extractive industries, government agencies and medical facilities will continue to be filled by non-Alaskans if we cannot supply students who are well-versed in science, math and other fields.

For these reasons, I am asking you to work your hardest to increase the state's education funding in the proposed budget, especially the per student funding rate. If the budget is left unaltered, I hope that you will vote against its passage.

Sincerely,

Jordan Metzgar, District D resident

Subject: Parent Support for BSA

Dear Senate Education Committee,
I am a parent of a Juneau School District elementary student and I am writing to encourage you to increase school funding through raising the base student allocation in addition to other proposed funding increases. Obviously the proposed JSD budget cuts will negatively impact the quality of education our children currently receive. By raising the BSA you become part of the village we need to ensure our children thrive in school. Please support our schools and our children.

Subject: Education Funding

Senator Thomas,

I applaud your move to increase per student base rate funding for education! I am a senior who, looking back on my life, realize how important my education was, not only in my ability be an active citizen but also to add to our family income and even to support myself as a widow.

Alaska needs to invest in today's children so they can become successful graduates and contribute to our communities and state.

Alaska's wealth make this easily affordable.

Thank you,

Lillian Wilder

It would be beneficial to everyone in the state to increase the base student funding allocation so that school districts have adequate resources to meet the requirements of No Child Left Behind as well as continuing to provide high quality educational opportunities for our children.

January 27, 2012

Dear Senate Education Committee: Members:

My name is Debbie Lowenthal and I am a parent of two children in the Juneau School District. I am here today to represent the Gastineau Community School Site Council. The Gastineau Site Council appreciates the opportunity to testify today in support of Senate Bill 171 which will increase the BSA in each of the next three years. This will help the Juneau School District continue to provide small classroom sizes which has been shown to be one of the greatest ways to ensure that children succeed in school. Furthermore, services for children in extended learning could continue, ensuring appropriate challenges for the highest achieving students. Paraeducators are a crucial part of the education team at Gastineau and support students who have extra educational needs. Our specialists at Gastineau and the other elementary schools give children rich experiences in music, art, literature and physical education, all which have been shown to improve student achievement. School nurses are a vital part of each schools education team and help keep all children healthy and safe, and this BSA increase would keep school nurses at each school site. For some children the school nurse is their only link to health care. Thank you for recognizing the need for more funding for education in Alaska schools.

Sincerely,

Gastineau Site Council

SENATE EDUCATION COMMITTEE
Senators Kevin Meyer & Joe Thomas, Co-Chairs

Senate Bill 182

School districts in the state of Alaska are facing shortfalls in overall funding, in part due to the rising cost of pupil transportation programs. It is costing more each year to transport our students safely to and from school. Senate Bill 182 changes the pupil transportation funding, which allows school districts to keep more of their foundation funding in the classroom. Currently most districts have to subsidize their pupil transportation programs, which takes foundation formula dollars out of the classroom.

This legislation recalibrates the funding for pupil transportation based on the most recent audits by the Department of Education and Early Development. The amounts will be adjusted annually according to the Consumer Price Index (CPI) for Anchorage. This change allows the funding to match the amounts agreed to in their most recent contract negotiations, providing a more realistic figure for the actual cost of pupil transportation.

Although pupil transportation is an indirect cost of education, it is extremely important in Alaska. Road conditions are often dangerous, daylight during the school year is minimal, and sometimes the distance of transporting students is immense. If we cannot get the students to school, we cannot give them the education they need to thrive.

MEMORANDUM January 31, 2012

SUBJECT: Sectional Summary for SB 182 (Work Order No. 27-LS1283\M)

TO: Senator Kevin Meyer
Chair of the Senate Education Committee
Attn: Edra Morledge

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Beginning in fiscal year 2013, modifies the funding provided by the state to school districts for pupil transportation to the amount reported by the district in fiscal year 2012, as adjusted for inflation under sec. 2 of the bill.

Section 2. Provides for an inflation adjustment to pupil transportation funding provided under sec. 1 of the bill.

Section 3. Repeals AS 14.09.010(b), which provided state funding for pupil transportation as a per student amount for each school district in the state.

Section 4. Provides a one year retrospective per student amount for each school district in the state for pupil transportation based on adjusted amounts to former AS 14.09.010(b) for the current school year.

CS FOR SENATE BILL NO. 182( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act amending the amount of state funding provided to school districts for pupil transportation."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.09.010(a) is repealed and reenacted to read:

(a) A school district that provides student transportation services is eligible to receive funding for operating the student transportation system. Beginning July 1, 2013, and subject to appropriation, the amount of funding provided by the state under this section is the amount reported to the department in the audited financial statement of the school district as actual pupil transportation expenditures for the school year ending June 30, 2013, as adjusted for inflation under (d) of this section.

*** Sec. 2.** AS 14.09.010 is amended by adding new subsections to read:

(d) Funding provided to a school district under (a) of this section shall be adjusted annually on October 1 according to changes in the Consumer Price Index for all urban consumers for the Anchorage metropolitan area compiled by the United

Joan McBurn SB27

States Department of Labor, Bureau of Labor Statistics. The index for 1982 to 1984 is the reference base index for an adjustment made under this subsection.

(e) The department shall adopt regulations that provide for oversight of and support to school districts in achieving a safe and cost-effective student transportation system. The regulations must include a requirement for contract terms of not less than three years, if feasible, standardized conditions and bid periods, and standards that ensure cost efficiencies and exclusions.

*** Sec. 3.** AS 14.09.010(b) is repealed.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

PUPIL TRANSPORTATION. (a) Subject to appropriation, the amount of funding provided by the state for operating the student transportation system is the amount of a school district's ADM, less the ADM for the district's correspondence programs during the current fiscal year, multiplied by the per student amount for the school district as follows:

DISTRICT	PER STUDENT AMOUNT	
	(1)	(2)
	for the school year beginning July 1, 2011	for the school year beginning July 1, 2012

(b) In this section,

(1) "ADM" has the meaning given in AS 14.17.990;

(2) "district's ADM" means the sum of the ADMs in the district.

Meeting Script – Friday, February 24 – SB 182

CHAIRMAN MEYER

The Senate Education Committee meeting is called to order.

Today is Friday, February 24th, and the time is 8:00 a.m. In attendance are:

- Co-Chair Thomas
- ~~Vice-Chair Davis~~ *(absent)*
- Senator Stevens
- Senator French
- and myself, Senator Meyer.

We have a quorum to conduct business.

Welcome, everyone. First, is there any business to come before the committee before we begin? Seeing none…we'll go ahead and get started.

The only item of business before us today is SB 182, the pupil transportation committee bill. We last heard SB 182 on February 6 – we closed public testimony at that meeting but the committee was interested in hearing from a couple more school districts about their pupil transportation programs, so we have invited testimony from several school districts today and asked them to be available for any questions the committee might have. *(They are all teleconferencing in.)*

If there is anyone here in the room or online, *aside from those who were invited*, that wished to testify today, you can submit your comments in writing to the committee, or testify when the bill is heard in Finance.

Our intention is to move SB 182 on to its next committee of referral today.

We have a work draft of a committee substitute before us this morning, and my staff will go through the changes once we've adopted the Committee Substitute. **Senator Thomas?**

SENATOR THOMAS: Mr. Chair, I move that we adopt the Committee Substitute for Senate Bill 182, version 27-LS1283\E.

SENATOR MEYER: I will object for the purposes of discussion. CS for SB 182 is before us.

Before my staff goes through the changes in the Committee Substitute, I'll just refresh everyone's memory that this bill does several things to address the costs of providing pupil transportation within school districts in Alaska:

1. It "recalibrates" the per-pupil amount school districts receive for their pupil transportation programs for FY12 and FY13,

2. It changes the current per-pupil grant program to a reimbursable program based upon actual financial audits, beginning inFY14, and

3. It puts into place oversight and support by the Department, so that those costs are controlled.

My staff will go through the changes in the Committee Substitute. Edra, please put yourself on the record and proceed with your presentation.

{Edra's Presentation}

Thank you.

Are there any questions from committee members?

{Committee Questions/}

Any further comments, questions, discussion?

Seeing none, we will go to **Dr. Deena Paramo, Superintendent** of the **Mat-Su School District**, who is going to walk us through a presentation. **Dr. Paramo** is with us online, each member should have a copy of the short presentation she is going to give.

{Dr. Paramo's Presentation}

Thank you. Are there any questions or comments from committee members?

{Committee Questions}

Next we will go to **Steve Kalmes, Transportation Director** with the **Anchorage School District.**

Please put yourself on the record and proceed with your testimony.

{Steve's Presentation}

Thank you. Are there any questions or comments from committee members?

{Committee Questions}

Are there any further questions? Seeing none…

Next we will go to **Luke Fulp, Chief Financial Officer** and **Transportation Supervisor** with the **Kodiak Island Borough School District**.

Please put yourself on the record and proceed with your testimony.

{Luke's Presentation}

Thank you. Are there any questions or comments from committee members?

{Committee Questions}

Are there any further questions? Seeing none…

Let's hear from the Administration
(Elizabeth Nudelman & Les Morse)

Amy Lujan, Executive Director of the Alaska Association of School Business Officials (**ALASBO**), is also here to testify.

ALASBO collected and organized the data which led to the per pupil numbers in the current CS.

{Administration}

Thank you. Are there any questions for the Administration?

{Committee Questions}

Is there any other discussion? Comments? Questions?

Seeing none, I will remove my objection.

If there are no other objections to Committee Substitute for SB 182, what is the will of the committee? **Senator Thomas?**

SENATOR THOMAS: Mr. Chair, I move that we move CS for SB 182 version BACKSLASH E from committee with individual recommendations and attached *(or forthcoming)* fiscal note.

SENATOR MEYER: Seeing no objection, Committee Substitute for Senate Bill 182 version BACKSLASH E is moved from committee with individual recommendations and attached *(or forthcoming)* fiscal note.

Members please take a moment to sign the committee report being passed around.

Our next meeting will be on Monday, February 27th at 8:00 a.m., **here in the Beltz Room.** We will be taking up SB 6, **Senator Davis** and **Senator French's** Pre-Kindergarten Program bill.

On Wednesday we will hear SB 120, **Senator French's** Parents as Teachers, and depending on how far we get with those 2 bills, we may or may not hear **Senator Thomas's** SB 197 regarding an "Excellency in Schools" Grant Program on Friday.

With that, if there's nothing else to come before the committee, we are adjourned.

SENATE EDUCATION COMMITTEE

LETTER OF INTENT FOR SENATE BILL 182

It is the intent of the Senate Education Committee that the Department of Education and Early Development establish minimum standards for proposals and contracts entered into by school districts to provide pupil transportation services. It is also the intent of the Senate Education Committee that the minimum standards include (1) a standardized time frame for the issuance and acceptance of requests for proposals; (2) minimum terms of requests for proposals and contracts that take into account unique regional conditions, including climate patterns; (3) the opportunity for departmental review of the terms of the requests for proposals and contracts, before issuance, for consistency with statewide standards; (4) alignment of contract terms, by July 1, 2016, with statewide standards for the Anchorage, Fairbanks, Juneau, Kenai, Ketchikan, Kodiak, and Matanuska-Susitna areas; and (5) alignment of contract terms, when feasible, with statewide standards for all other areas of the state not covered in (4).

CS FOR SENATE BILL NO. 182(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act amending the amount of state funding provided to school districts for pupil transportation."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.09.010(a) is repealed and reenacted to read:

(a) A school district that provides student transportation services is eligible to receive funding for operating the student transportation system. Beginning July 1, 2013, and subject to appropriation, the amount of funding provided by the state under this section is the amount reported to the department in the audited financial statement of the school district as actual pupil transportation expenditures for the school year ending June 30, 2013, as adjusted for inflation under (d) of this section.

*** Sec. 2.** AS 14.09.010 is amended by adding new subsections to read:

(d) Funding provided to a school district under (a) of this section shall be adjusted annually on October 1 according to changes in the Consumer Price Index for all urban consumers for the Anchorage metropolitan area compiled by the United

States Department of Labor, Bureau of Labor Statistics. The index for 1982 to 1984 is the reference base index for an adjustment made under this subsection.

(e) The department shall adopt regulations that provide for oversight of and support to school districts in achieving a safe and cost-effective student transportation system. The regulations must include a requirement for contract terms of not less than three years, if feasible, standardized conditions and bid periods, and standards that ensure cost efficiencies and exclusions.

*** Sec. 3.** AS 14.09.010(b) is repealed.

*** Sec. 4.** The uncodified law of the State of Alaska is amended by adding a new section to read:

PUPIL TRANSPORTATION. (a) Subject to appropriation, the amount of funding provided by the state for operating the student transportation system is the amount of a school district's ADM, less the ADM for the district's correspondence programs during the current fiscal year, multiplied by the per student amount for the school district as follows:

DISTRICT	PER STUDENT AMOUNT	
	(1)	(2)
	for the school year beginning July 1, 2011	for the school year beginning July 1, 2012
Alaska Gateway	$2,081	$2,148
Aleutians East	311	321

Matanuska-Susitna Borough School District

Senate Bill 182

Testimony

Senate Bill 182 Testimony

- **Good morning my name is Dr. Deena Paramo and I am the Superintendent of the Mat-Su Borough School District.**

- **Thank you considering this bill to provide additional reimbursement for Home To School Transportation and for giving me the opportunity to provide brief testimony in support of Senate Bill 182 and answer any questions you may have regarding our current Home To School Transportation Contract & Operations.**

Senate Bill 182 Testimony

- **Some quick facts about the Mat-Su Borough School District:**
  - **Located approximately 35 miles north of Anchorage in an area commonly known as the "Valley."**
  - **The district spans approximately 25,000 square miles, an area larger than the entire state of West Virginia.**
  - **The MSBSD is home to 44 schools ranging in size from 20 to more than 1,300 students.**
  - **With a district wide enrollment of approximately 17,330 students, Mat-Su is the second largest school District in Alaska--behind Anchorage.**

Senate Bill 182 Testimony

- We support the retrospective expense reimbursement model proposed in the language of Senate Bill 182.
  - This language recognizes that transportation operations are unique for all school districts and allows for the individualization required to address the vast difference in student transportation challenges found within Alaska.
    - Extreme weather differences
      - As an example some Districts need indoor storage to make sure that their buses will be warm enough to carry students.
    - Number of buses and routes necessary to meet the needs of a district's students.
    - Size of the district and unique difficulties posed by its road network.

Senate Bill 182 Testimony

- We believe that reimbursing audited Home To School transportation expenditures:
  - Recognizes the need within Alaska to support providing a safe and reliable, method to ensure that students attend our schools.
  - Ensures that only allowable Home To School transportation expenditures are being reimbursed by the State.
  - Provides adequate visibility of Home To School transportation expenditures for all districts claiming reimbursement.

Senate Bill 182 Testimony

- **Mat-Su is a good steward of taxpayer funds:**
  - **Our District issued an extremely detailed competitive bid to ensure that we were obtaining the best possible value in providing Home To School transportation services. Our bid was:**
    - **Prepared in coordination with the District's attorney.**
    - **Was 70 very detailed pages.**
    - **Tied any increases in charges to the Anchorage CPI.**
    - **Had no fuel escalator charge eliminating that cost risk.**
    - **District contracted with low bidder saving over $11 million.**

Year	First Student	With all 3 service areas	Durham Only	With all 3 service areas	Annual Savings
FY12	$12,404,662	$13,902,810	$14,451,782	$15,949,930	$2,047,120
FY13	$12,801,611	$14,347,700	$14,914,239	$16,460,328	$2,112,628
FY14	$13,313,676	$14,921,608	$15,510,809	$17,118,741	$2,197,133
FY15	$13,846,223	$15,518,473	$16,131,241	$17,803,491	$2,285,018
FY16	$14,400,072	$16,139,211	$16,776,491	$18,515,630	$2,376,419
Totals	**$66,766,244**	**$74,829,803**	**$77,784,561**	**$85,848,121**	**$11,018,318**

Senate Bill 182 Testimony

- Mat-Su is a good steward of taxpayer funds:
  - Experienced professionals supervise our transportation operations.
    - Our Transportation Supervisor has 19 years of experience in K-12 Transportation Operations.
    - Our Chief Business Official has over 35 years of large fleet supervision experience with over 26 years of K-12 experience.
    - We are continually seeking ways to reduce our costs, today we are running two routes less on a daily basis than last school year while adding 291 more transportation eligible students and providing additional new service to our charter schools.

Senate Bill 182 Testimony

- Mat-Su is a good steward of taxpayer funds:
  - Our Transportation professionals are currently engaged in a comprehensive route optimization study designed to decrease the number of buses and routes required to provide adequate Home To School services next school year.
  - We are continuing negotiations with our contractor in an effort to reduce operating costs by evaluating the advantage of a possible second terminal, consolidation of routes, and other operational efficiencies.
  - We are investigating possible changes to school schedules that might allow additional cost savings.

Senate Bill 182 Testimony

- What drove up the costs of our new contract?
  - Alaska Statute 23.10.065 (b) states in the pertinent part that "an employer shall pay to each person employed as a public school bus driver wages at a rate of not less than two times the minimum wage…"
    - This was the single largest requirement increasing our costs in the new contract.
  - Our contractors fleet is old. To eliminate service disruptions our new contract requires that the average age of the fleet not exceed 10 years and no bus may be more than 12 years old.
  - To ensure student safety we now require two digital cameras on all buses. This significantly improves student behavior making the bus environment much safer for both students and drivers.

Senate Bill 182 Testimony

- We support:
  - Efforts to reduce Home To School transportation costs by:
    - Assisting districts in developing comprehensive bid documents.
    - Consolidating bids statewide.
    - Providing a review and assistance of district Home To School procedures and operations.
    - Holding all districts harmless and ensuring that both current fiscal year and future fiscal year allowable Home To School expenditures are reimbursed.
- Thank you for your time today. I am prepared to answer any questions you may have.

Other Comments:

- Increased amount of insurance at the recommendation of attorney and risk management consultant.
- Standby buses necessary to ensure that students are not stranded when other buses are involved in an accident or breakdown.
- We are a growing district facing significant transportation challenges with no urban support.

Why this fiscal note differs from previous version (if initial version, please note as such)

The CS changes the per pupil amounts for 2012 and places those amounts in Sec. 4 The CS adds per pupil amounts for 2013 in Sec. 4. The CS changes the effective date to FY2014 to begin using total district dollars for a funding mechanism at Sec. 1. The CS adds direction on department oversignt at Sec 2. (e.) The department has recalculated the annual cost estimates and added a pcn for pupil transportatin program oversight. FY2013 govenor's request was corrected to $62,202.7

(Revised 8/17/2011 OMB)

Analysis

This bill, CSSB182, amends the amount of funding provided to districts through the pupil transportation funding formula at AS 14.09.010. The current program provides state funding for pupil transportation by assigning each participating district an individual per student factor, and then multiplying the factor by the current annual average daily membership (ADM) to arrive at each districts annual funding. The bill also directs the department to set regulation for oversight and support in achieving safe and cost-effective student transportation.

In section 4 the bill sets new per student rates for FY2012 and FY2013.

In section 1, the bill provides that beginning in FY2014 the funding will be distributed as a total dollar amount per district. The bill sets FY2014 funding at the amount districts will report as their year ended June 30, 2013 audited pupil transportation expenditures.

In section 1 the bill adds an annual Anchorage Consumer Price Index percentage increase each year.

Calculations Overview:

The fiscal note increase of $8.1 million for FY2012 was calculated by using the new per student amounts in for FY2012 multiplied by FY2012 projected ADM.

The fiscal note increase of $10.4 million for FY2013 was calculated by using the new per student amounts in for FY2013 multiplied by FY2013 projected ADM.

The fiscal note increase of $12.7 for FY2014 is calculated by estimating what districts will report as FY2013 expenditures; the FY2013 fiscal note funding was used as an estimate, actual expenditures could be different. Plus, a consumer price index was applied as set out in Section 1.

The fiscal note increases for FY2015 - 2018 were calculated by adding an estimated 3.2% consumer price index increase to the prior year funding.

The fiscal note adds one school finance specialist II position at a range 18 A for a cost of $95.3. This position is necessary to implement regulations and accountability measures as directed in section 2 part (e) of the bill.

Section 3 repeals the definition for ADM and district ADM in the old law.

The current annual cost of the pupil transportation program is $62,274.5 for FY2012; under CSSB182 the total program costs are estimated to be:

$70,377.8	FY2012
$72,557.6	FY2013
$74,879.5	FY2014
$77,275.6	FY2015
$79,748.5	FY2016
$82,300.4	FY2017
$84,934.0	FY2018

SENATE EDUCATION COMMITTEE

Senators Kevin Meyer & Joe Thomas, Co-Chairs

Senate Bill 194

Although the record demonstrates some recent improvements, the Department's imposition of the initial improvement plans, its manner of selection of coaches, and other actions were undertaken with insufficient input from the districts thereby negatively impacting the likelihood of prompt and significant improvement in student achievement. --Moore vs. The State of Alaska (2009)

In 2008 the Legislature voted to insert intervention guidelines into state statute, partly as a result of the court case in Moore vs. the State Alaska. These guidelines provided the basic framework for school interventions by the Department of Education and Early Development.

Since that time the Department of Education and Early Development has intervened in five school districts. Three of those districts are still in intervention status. This has been a learning time for the Department of Education and Early Development as well as the intervention school districts. One of the things consistently pointed out in the three interim rulings of the Moore case is that there is a disconnect between the hard work of the Department and the real needs of the intervention districts.

SB 194 sets forth a collaborative process that occurs before intervention. It respects the concept of local authority by providing that local groups interact with school boards and the Department. It sets out audit procedures that take into account the economic and social conditions of the district as well as the academic performance of schools within the district. It establishes district superintendent cohorts for mutual support, and includes community leaders, parents, teachers, principals and school board members in the process of improving education in communities.

In many ways. SB 194 is not an "intervention" bill—it is a bill to make interventions unnecessary. The process laid out in the bill—identifying districts, providing extensive audits, setting up local school governance councils, and district superintendent cohorts—is designed to deal with as many problems as possible without having to resort to an intervention.

We urge your support of SB 194.

CS FOR SENATE BILL NO. 194(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act providing for a school improvement and revitalization procedure in the Department of Education and Early Development; establishing advisory councils for school improvement; and requiring reports to the legislature."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03.123(d) is amended to read:

(d) A public school or district that **is designated as a low-performing school or district** [RECEIVES A LOW PERFORMANCE DESIGNATION UNDER THIS SECTION] shall prepare and submit to the department a school or district improvement plan, as applicable, **and shall cooperate with the department,** in accordance with **AS 14.03.124 and** regulations adopted by the board. The improvement plan must be prepared with the maximum feasible public participation of the community**,** including, as appropriate, interested individuals, teachers, parents, parent organizations, students, tribal organizations, local government representatives, and other community groups.

* **Sec. 2.** AS 14.03.123(g) is amended by adding a new paragraph to read:

(3) "low-performing" means the bottom three percent in the state for performance based on the accountability measures described in (f)(2) of this section.

* **Sec. 3.** AS 14.03.123 is amended by adding new subsections to read:

(h) The department shall work with and evaluate a public school or district that receives a low performance designation under (d) of this section to improve the school or district as follows:

(1) supply the school or district with a person who has training and experience in education and who can provide one-on-one assistance to enhance the quality of education in the school or district;

(2) provide an operations audit to identify possible programmatic savings and review the manner in which financial resources are being directed;

(3) direct the local school board to use state and federal funds for critical needs, as directed by the state Board of Education and Early Development;

(4) provide incentives to attract and retain high quality teachers and principals;

(5) provide additional training and technical assistance for parents and guardians of children attending the school or schools in the district and for teachers, principals, and central office staff hired by the district;

(6) provide targeted resources for graduation success as requested by the local school board;

(7) direct the local school board to identify model curriculum, including recommended textbooks, materials, and supplies approved by the department; if a new curriculum is required, the department shall provide technical assistance to implement the curriculum;

(8) work with the local school board to develop and implement a plan to address deficits in achievement and in the learning environment as recommended in the academic performance audit conducted under (j) of this section;

(9) assign a technical assistance team to the school or district to guide school or district initiatives and report progress to the commissioner;

(10) establish instructional and learning environment benchmarks for

the school or district to meet as it progresses toward removal of the designation of low-performing schools or districts;

(11) direct the establishment of learning cohorts in schools that require continuous monitoring of student performance by teacher groups;

(12) provide training to local school boards through the Association of Alaska School Boards to improve their operational efficiency and effectiveness as leaders of their districts in ensuring delivery of quality education, and require local school boards to submit to the commissioner an annual action plan that outlines when and the manner in which the local school board's effectiveness will be monitored.

(i) For two years following a designation of a school or district as low performing, the department shall contract with an external review team to conduct an academic performance audit of the district and each low-performing school in the district to identify the potential reasons for the school's low performance and lack of progress. The review team shall consist of persons who have expertise in comprehensive school and district reform. A review team may not include staff of the school district that is the subject of the audit or staff of the department. The review team shall meet with and report to the department and the superintendent of the district.

(j) The audit required under (i) of this section shall be conducted based on criteria developed by the department in the areas of curriculum, assessment, instruction, learning environment, professional development, and leadership and must include an examination of the following:

(1) student demographics;

(2) mobility patterns;

(3) school feeder patterns;

(4) strategic allocation of resources;

(5) the degree of high standards and expectations for all students;

(6) the degree of collaboration and communication;

(7) frequency of monitoring of learning and teaching;

(8) the degree of family and community involvement;

(9) alternative secondary schools best practices; and

(10) any unique circumstances or characteristics of the school or district, including substance abuse and other social factors.

(k) The department shall make audit findings available to the audited school district and staff, the local community, and the state Board of Education and Early Development.

* **Sec. 4.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.124. Revitalization designation; plan; revitalization advisory council. (a) For a public school that, after three consecutive years of school improvement efforts under AS 14.03.123(d) and (h) - (k), continues to be a low-performing school, as described in AS 14.03.123, the department, in conjunction with the local school board and the district superintendent, may

(1) designate the school as a revitalization school;

(2) continue to identify a revitalization school and operate under a school revitalization plan developed by the department and the district until taken off revitalization status;

(3) assist the local school board with developing and implementing a revitalization plan as provided under this section;

(4) maintain eligibility of the school for available federal and state aid; and

(5) establish a superintendent cohort made up of the superintendent of the district in which the revitalization school is located and two superintendents of districts in the state that have no schools in revitalization status; the superintendent cohort shall meet regularly and, within nine months after the revitalization designation, report to the revitalization advisory council established under this section.

(b) A school that has not been designated as a revitalization school may request the local school board to establish a revitalization advisory council for a school in the district consistent with this section.

(c) A local school board that governs a school that has been designated as a revitalization school shall establish a revitalization advisory council for each school designated for revitalization. Except as provided in (e) of this section, a revitalization advisory council for a school shall consist of 13 members appointed by the local

school board, as follows:

(1) four parents or guardians of students attending the school, nominated by parents or guardians of the school;

(2) four community leaders residing within the school district, nominated by the members selected under (1) and (3) of this subsection;

(3) two teachers at the school, nominated by teachers at the school;

(4) one representative from the department;

(5) the principal of the school; and

(6) the superintendent of the district or a representative of the superintendent cohort established under (a)(5) of this section.

(d) For a local school board consisting of more than five members, the board may appoint not more than three of its members to a revitalization advisory council. For a local school board consisting of five or fewer members, the board may appoint not more than two of its members to a revitalization advisory council.

(e) If a district has only one operating school, the district may petition the department for a reduction of the revitalization advisory council membership from four parents to two parents, from four community leaders to one community leader, and from two teachers to one teacher.

(f) Terms of members of the revitalization advisory council selected under (c) or (e) of this section shall be for two years, and a member may not serve more than two terms on the council. Members of the revitalization advisory council serve without compensation but are entitled to per diem and other expenses authorized for boards and commissions under AS 39.20.180.

(g) A revitalization advisory council may, in conjunction with the department and the superintendent cohort established under (a)(5) of this section,

(1) analyze school achievement data and school needs related to the improvement plan for the school prepared under AS 14.03.123(d);

(2) meet with and review the report of the superintendent cohort established under (a)(5) of this section;

(3) participate in the hiring process of the school principal or other administrators of the school by conducting interviews of candidates and reporting the

results of the interviews to the superintendent of schools for the school district and to the local school board;

(4) assist the principal of the school in making programmatic and operational changes to improve the school's achievement, including adjustments in program, school hours and days of operation, and enrollment goals for the school;

(5) work with the school administration to develop and approve a school compact for parents and legal guardians and students that includes an outline of the criteria and responsibilities for enrollment and school membership consistent with the school's goals and academic focus, including means by which parents and school personnel may build a partnership to improve student learning;

(6) develop and approve a written parent involvement policy that outlines the role of parents and legal guardians in the school;

(7) if intervention by the department is required, the revitalization advisory council shall work with the department and the local school board to develop an intervention plan for the school involving available local, regional, and statewide resources;

(8) prepare a revitalization model that takes into account recommendations consistent with the duties in (1) - (7) of this subsection for review and a vote as provided under (j) of this section.

(h) A revitalization advisory council may

(1) review the annual draft prepared under AS 14.03.120(a) detailing the goals described in the education plan and provide advice to the principal of the school before submitting the report to the superintendent of schools;

(2) assist the principal of the school in developing a revitalization plan before the plan is submitted to the superintendent of schools and cooperate with the department in developing a revitalization plan;

(3) assist the principal of the school in developing, conducting, and reporting the results of an annual survey of parents, guardians, and teachers on issues related to the school climate and conditions; and

(4) provide advice to the principal of the school on any other major policy matters affecting the school, except on any matters relating to a collective

bargaining agreement between the exclusive bargaining unit for teachers.

(i) A local school board, in conjunction with the department, shall provide appropriate training and instruction to members of the revitalization advisory council to aid them in the execution of their duties.

(j) Not later than 30 days after a revitalization advisory council informs the local school board of the completion of a revitalization model under (g) of this section, the local school board shall hold a public hearing to discuss the revitalization model and shall, at the next regularly scheduled meeting, conduct a vote to accept the model recommended by the revitalization advisory council, select an alternative model, or maintain the current school status, as follows:

(1) if the local school board selects an alternative model, not later than 10 days after the vote of the local school board, the local school board shall meet with the revitalization advisory council to discuss an agreement on the local school board's alternative revitalization model;

(2) if no agreement can be achieved, not later than 45 days after the last meeting between the local school board and the revitalization advisory council, the local school board shall report to the department the reasons for rejecting the revitalization model developed by the revitalization advisory council;

(3) if the final decision of the local school board is to adopt all or part of the revitalization model, the local school board shall implement the approved model during the subsequent school year in conformance with state statutes and regulations and the provisions specified in federal regulations and guidelines for schools subject to corrective action under 20 U.S.C. 6316(b)(7) (Elementary and Secondary Education Act of 1965), as amended, or other applicable federal laws or regulations.

(k) Within two years after a local school board votes on a revitalization model, the department shall, within available appropriations, monitor the schools that have been designated as revitalization schools for demonstrable progress, applying the following indicators:

(1) the revitalization model adopted by the school;

(2) the number and type of disciplinary incidents;

(3) the number of truants;

(4) the dropout rate;

(5) the student attendance rate;

(6) the average scale scores on the statewide secondary school graduation qualifying examination;

(7) for high schools, the number and percentage of students completing advanced placement coursework;

(8) the teacher retention rate; and

(9) the existence and size of the parent-teacher organization for the school.

(*l*) On or before July 1 of each odd-numbered year, the department shall report to the standing committees of the legislature having jurisdiction over education

(1) the number of local school boards that have implemented a revitalization model;

(2) a comparison of the school status after local school boards have initiated a revitalization model and the school status after local school boards have rejected a revitalization model; and

(3) whether parental involvement has increased at schools with revitalization advisory councils.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SCHOOL REVITALIZATION; REPORTS TO THE LEGISLATURE. (a) On or before January 1, 2014, the Department of Education and Early Development shall report to the standing committees of the legislature having jurisdiction over education on

(1) the monitoring conducted under AS 14.03.124(k), added by sec. 4 of this Act;

(2) recommendations relating to changes in the revitalization options available to schools, including whether revitalization advisory councils may continue to recommend revitalization;

(3) comparison of the revitalization models adopted; and

(4) the level of progress of schools adopting each revitalization model in relation to the indicators described in AS 14.03.124, added by sec. 4 of this Act.

(b) On or before January 1, 2018, the Department of Education and Early Development shall evaluate the revitalization advisory councils established under AS 14.03.124, added by sec. 4 of this Act, for compliance with that section. On or before October 1, 2019, the department shall report to the standing committees with jurisdiction over education on the evaluation conducted under this subsection. The report must also include recommendations on whether to continue to authorize revitalization advisory councils to recommend revitalization models.

MEMORANDUM February 13, 2012

SUBJECT: Sectional Summary (SB 194 (Work Order No. 27-LS1190\B))

TO: Senator Joe Thomas
Co-Chair of the Senate Education Committee
Attn: Murray Richmond

FROM: Jean M. Mischel
Legislative Counsel

You have requested a sectional summary of the above-described bill.

As a preliminary matter, note that a sectional summary of a bill should not be considered an authoritative interpretation of the bill and the bill itself is the best statement of its contents. If you would like an interpretation of the bill as it may apply to a particular set of circumstances, please advise.

Section 1. Amends accountability procedure for low-performing schools and districts to require cooperation with the Department of Education and Early Development and compliance with sec. 4 of the bill providing for revitalization efforts.

Section 2. Defines "low performing" for purposes of school accountability measures.

Section 3. Adds departmental duties, including auditing and coaching, and amends procedures for low-performing schools and districts.

Section 4. Creates a new designation as "revitalization" for consistently low-performing schools and districts and describes revitalization procedures and standards. Establishes advisory councils to develop models for, and conduct reviews of revitalization effort for a school or district. Requires biennial reporting to the legislature.

Section 5. Requires first report to the legislature by January 1, 2014, on monitoring and effects of revitalization efforts provided for in the bill.

ACKNOWLEDGMENTS

The Washington Academic Achievement and Accountability Commission contracted with the Education Commission of the States (ECS) to produce this report. The report was written by researcher Carl Krueger, project manager Ravay Snow-Renner and program director Todd Ziebarth.

EXECUTIVE SUMMARY

State policymakers are increasingly focusing their attention on holding schools and school districts accountable for the performance of their students. One mechanism for ensuring such accountability is state intervention in low-performing schools and school districts. As states create and implement interventions, they seek clarity and understanding about what is known, and what is unknown, about them. This report attempts to provide such clarity and understanding.

State Policies and Experiences with Interventions in Low-Performing Schools and School Districts

Based upon our research, 33 states have enacted policies that allow them to intervene in low-performing schools, while 30 states have enacted policies that allow them to intervene in low-performing school districts. These state policies cover a wide variety of interventions, including the following:

- Written warnings
- Technical assistance
- Additional funding
- Improvement plans by schools and school districts
- Improvement plans by another entity
- Placement on probation
- Removal of accreditation
- Withholding of funding
- Reconstitution
- Closure
- Reorganization
- Takeover.

Additionally, as a result of the No Child Left Behind Act of 2001, a federally imposed intervention policy requires school districts to allow students in certain low-performing schools to transfer to higher-performing schools in the school district. It also requires school districts to provide transportation for the transferring students to the higher-performing schools.

The development of state interventions in low-performing schools and school districts is a work in progress. To identify the policy challenges and opportunities for states developing their own interventions, we interviewed practitioners in 11 states with intervention experiences. These states are California, Connecticut, Kentucky, Maryland, Massachusetts, New Jersey, New York, North Carolina, Rhode Island, Texas and West Virginia.

Based upon our research:

- Each of the 11 states provides technical assistance to low-performing schools and/or school districts, although only some of them have enacted policies that require them to do so.
- Although the correlation between additional funding and increased achievement remains unclear, most of the 11 states believe there is some benefit to providing extra resources to troubled schools and school districts. In fact, many of them provide additional funding to low-performing schools and/or school districts, although only some of them have enacted policies that require them to do so.
- Each of the 11 states requires some form of improvement planning for low-performing schools and school districts, though the process for creating and implementing such plans varies.
- Each of the 11 states imposes sanctions on consistently low-performing schools and school districts. Such sanctions take many forms, including written warnings, probation, reconstitution, closure and takeover.

- Several of the 11 states provide written warnings to low-performing schools and/or school districts, although only some of them have enacted policies that require them to do so.
- Most of the 11 states place low-performing schools and/or school districts on probation.
- While most of the 11 states have enacted policies that allow them to reconstitute and/or close low-performing schools, only two (Maryland and New York) have taken such drastic steps.
- While several of the 11 states have enacted policies that allow them to take over low-performing schools, only one state (Maryland) has actually implemented this policy.
- Each of the 11 states has enacted policies that allow the state to take over a low-performing school district. There have been takeovers of school districts in 10 of the 11 states studied.

A Review of the Research on the Impact of State Interventions on Low-Performing Schools and School Districts

The research about the impact of state interventions on low-performing schools and school districts is just beginning to emerge, especially as these interventions impact school and district operations and student achievement. There are two reasons for the current shortage of definitive research on state interventions. The first reason is the relative infancy of most state interventions. The second reason is that many interventions are implemented in combination with other interventions, and therefore the research seldom examines the impact of a single intervention.

What little research does exist suggests that interventions shouldn't be expected to equally affect low-performing schools and school districts. One of the main reasons is that many schools or districts simply do not have the resources to implement changes. From the body of research about schools' and districts' abilities to implement reforms, often referred to as "local capacity," it is clear that local context plays a critical role in how well interventions take root in schools and districts.[1]

With these issues in mind, the following research findings are particularly relevant for states creating and refining interventions for low-performing schools and school districts:

- Kentucky and North Carolina provide two notable examples of state-provided technical assistance, and early research on these efforts shows a positive impact on student achievement.
- At this point, research does not show a clear impact on instruction or achievement from providing additional funding to low-performing schools and school districts, primarily for two reasons. First, such provision is relatively new, and the research is just beginning to emerge. Second, additional funding is generally provided in combination with other interventions, so it is impossible to link improvement directly and solely to the influence of additional funds. Still, early research on California's Immediate Intervention/Underperforming Schools Program shows promising results from providing additional funding to low-performing schools.
- The evidence linking mandated improvement plans for low-performing schools and school districts to increases in achievement is mixed. Some schools and school districts increase achievement, while others do not.
- Although little systematic evidence about the effects of reconstitutions on student achievement exists, anecdotal information suggests that reconstitutions may improve school order, stability and community involvement.
- There is limited research on the effects of takeovers of school districts. For the most part, they seem to be yielding more improvements in central-office financial and management practices than in classroom instructional practices. In some cases, takeovers have produced negative effects, including deficits and labor strife, and in most cases, the results in terms of student achievement have been mixed at best. The bottom line is that takeovers, for the most part, have yet to produce dramatic and consistent increases in student performance, as is necessary in many of the school districts that are taken over. Two promising takeovers are Logan County Public Schools in West Virginia and the Chicago Public Schools in Illinois.

- Because the federal government's policy that requires school districts to allow students in low-performing schools to transfer to higher performing schools is new, there is no evidence about its impact. There is evidence, though, about the impact of other school choice policies. According to this research, the attempts of magnet schools, open enrollment programs and charter schools to provide disadvantaged students with greater educational options have produced mixed results. In addition, the impact of these policies on student achievement is undecided.
- Research does not provide strong conclusions about the effects of various state interventions on school and school district operations and on student achievement, largely because local responses to state interventions vary widely. Given the interplay of the different factors that contribute to this variation, researchers note that low-performing schools and school districts may have increased or reduced motivation to make changes, depending on their circumstances and ability to implement reforms.[2]

Policy Recommendations and State Practitioner Advice

Based on our review of state policies and experiences as well as our review of the research, it appears that state interventions designed to assess and maximize existing abilities in low-performing schools and districts and to exert appropriate pressure for change may be the most likely to improve school and district operations and raise student achievement. Within the context of this observation, we offer the following recommendations:

- For the greatest impact on school and school district performance, states should target technical assistance to the individual needs of schools and school districts.
- States should develop a pool of technical-assistance providers for low-performing schools and districts, and a pool of supplemental-services providers for students in low-performing schools.
- State intervention policies for school and school district improvement plans should focus on improving student achievement, setting realistic improvement goals and requiring regular monitoring of school and district progress.

- If states create and implement takeover policies, they should ensure that takeover efforts focus on: establishing clear performance goals and measures, especially concerning academics; creating and implementing improvement strategies specific to the problems in the school or school district in question, particularly regarding improved instruction; defining the conditions under which the state will return control of the school or school district to local officials; and, when possible, partnering with local officials in the improvement effort.
- In creating and refining state intervention policies for low-performing schools and school districts, states should take into account the requirements and implications of the No Child Left Behind Act of 2001, particularly as they relate to providing assistance to low-performing schools.

As we gathered information for this report, a number of accountability officials from states with established intervention programs offered several recommendations, including the following:

- Technical assistance should be in-depth and targeted to the individual needs of schools and school districts. Allowing improvement teams or technical experts to assist a school on a daily basis – like in Kentucky and Connecticut – for a lengthy period of time allows the intervention process to grow and respond to a school's unique needs.
- Professional development is an essential part of the intervention process. For example, establishing leadership academies for principals and mentoring programs for teachers may provide school staff with rigorous training in new forms of instruction, curriculum development, data analysis and school improvement plans. Also, building strong relationships with the principals of low-performing schools is especially beneficial to the intervention process.
- As part of the intervention process, states should focus on specific changes that directly affect the teaching and learning experiences in classrooms. For example, in a few states, such as North Carolina, interventions included targeted class-size reductions, which helped to raise student achievement.

- Some states believe in a tough approach to low-performing schools. In particular, Maryland, New York and Texas find that threatening schools with reconstitution or closure spurs improvement. Other states, like Connecticut and Massachusetts, find that technical assistance, fact-finding and funding give a school the time and support it needs to increase student achievement. While these approaches are not mutually exclusive, some states place more emphasis on one approach, while other states place more emphasis on the other approach.
- Although it is too early to tell, state accountability officials in California think that their use of outside evaluators will yield positive results and facilitate school achievement. According to these officials, using more of a free-market model in providing technical assistance to low-performing schools -- which forces outside providers to compete for the chance to provide such assistance -- will ensure the highest quality of service to these schools.
- Adequate funding for interventions is perhaps the most important factor of all. Even the best-designed set of interventions will fail if they are not adequately funded. Many of the lowest-performing schools need the greatest number of resources to improve, and states must take these needs into account when designing and funding interventions.

INTRODUCTION

State policymakers are increasingly focusing their attention on holding schools and school districts accountable for the performance of their students. One mechanism for ensuring such accountability is state intervention in low-performing schools and school districts. As states create and implement interventions, they seek clarity and understanding about what is known, and what is unknown, about them. This report attempts to provide such clarity and understanding.

The first section of this report provides a general overview of state policies on interventions in low-performing schools and school districts. It also provides a more detailed examination of the state intervention policies and experiences in 11 states. The second section of the report discusses the emerging research about the impact of state interventions on low-performing schools and school districts.

The third, and final, section of this report offers five recommendations based on the experiences of the 11 states studied, as well as on the emerging research reviewed for Washington policymakers to consider as they design intervention policies. It also offers several recommendations from state practitioners whom we interviewed in the course of gathering information for this report.

The report also contains two appendices. The first appendix presents three tables on state policies on interventions in low-performing schools and school districts, and the second presents state narratives for each of the 11 states studied.

I. STATE POLICIES AND EXPERIENCES WITH INTERVENTIONS IN LOW-PERFORMING SCHOOLS AND SCHOOL DISTRICTS

Based upon our research, 33 states have enacted policies that allow them to intervene in low-performing schools, while 30 states have enacted policies that allow them to intervene in low-performing school districts.

These state policies cover a wide variety of interventions, including the following:

- **Written warning:** Twelve states have enacted policies requiring the state to provide written warnings to low-performing schools, and nine states have enacted policies requiring written warnings to low-performing school districts. In several other states, the state provides a written warning to schools and/or school districts, but is not required to do so by state policy.
- **Technical assistance:** Twenty-six states have enacted policies that require the state or another entity to provide technical assistance to low-performing schools, and 16 states have enacted policies that require the state to provide technical assistance to low-performing school districts. In several other states, the state or another entity provides such assistance to schools and/or school districts, but are not required to do so by state policy.
- **Additional funding:** Eleven states have enacted policies that require the state to provide additional funding to low-performing schools, and nine states have enacted policies that require the state to provide additional funding to low-performing school districts. In several other states, the state provides such funding to schools and/or school districts, but is not required to do so by state policy.
- **Improvement plans by schools and school districts:** Thirty-one states have enacted policies that require a low-performing school to create and implement an improvement plan, and 23 states have enacted policies that require a low-performing school district to create and implement an improvement plan.
- **Improvement plans by another entity:** Twenty-one states have enacted policies that require another entity, such as the state or a school district, to create an improvement plan for a low-performing school, and 15 states have enacted policies that require

another entity, such as the state, to create an improvement plan for a low-performing school district.

- **Placement on probation:** Seventeen states have enacted policies that allow them to place a low-performing school on probation, while fourteen states have enacted policies that allow them to place a low-performing school district on probation.
- **Removal of accreditation:** Fifteen states have enacted policies that allow them to remove a low-performing school's accreditation, while 14 states have enacted policies that allow them to remove a low-performing school district's accreditation.
- **Withholding of funding:** Five states have enacted policies that allow them to withhold funding from a low-performing school, while five states have enacted policies that allow them to withhold funding from a low-performing school district.
- **Reconstitution:** Nineteen states have enacted policies that allow them to reconstitute a low-performing school.
- **Closure:** Ten states have enacted policies that allow them to close a low-performing school.
- **Reorganization:** Ten states have enacted policies that allow them to reorganize a low-performing school district.
- **Takeover:** Seventeen states have enacted policies that allow a takeover of a low-performing school, while 24 states have enacted policies that allow the takeover a low-performing school district.

In addition, as a result of the No Child Left Behind Act of 2001, a federally imposed intervention policy requires school districts to allow students in certain low-performing schools to transfer to higher-performing schools in the school district. Students in low-performing schools that have failed to meet their state's requirements for adequate yearly progress (AYP) for two consecutive years are allowed to transfer. This policy also requires school districts to provide transportation for the transferring students to the higher-performing schools.

An Examination of Intervention Experiences in 11 States

The development of state interventions in low-performing schools and school districts is a work in progress. To identify the policy challenges and opportunities for states developing their own interventions, we interviewed practitioners in 11 states with intervention experiences. These states are California, Connecticut, Kentucky, Maryland, Massachusetts, New Jersey, New York, North Carolina, Rhode Island, Texas and West Virginia. This section examines these states within the context of the intervention categories of technical assistance, additional funding, improvement planning and sanctions.

Technical Assistance

Each of the 11 states studied provides technical assistance to low-performing schools and/or school districts, although only some of them have enacted policies requiring them to do so. The provision of technical assistance typically begins with a site visit, or visits, to assess the condition of the school or district in question. From these initial visits often come recommendations for improvement, usually in the form of an improvement plan, as well as the implementation of specific actions to raise the performance levels in a school or district, such as curriculum alignment or professional development for staff.

The delivery and duration of technical assistance, however, varies from state to state. In New York, teams of administrators, curriculum specialists, experienced educators, school board members and parents conduct four-day observation visits to assess a troubled school's condition and develop a long-term plan for the school.

In Connecticut, a "critical friend," designated by the state, partners with principals in low-performing schools to assist in the implementation of improvement plans over the course of one school year. North Carolina requires an entire assistance team to spend one full year at its assigned school and provide technical assistance on a daily basis. In Texas,

monitoring teams conduct several one-day site visits to best determine how to help a particular low-performing school.

Through its School Transformation, Assistance and Renewal (STAR) program, Kentucky assigns a distinguished educator to spend up to two years in a school, providing assistance and helping to monitor and implement improvement plans. In Massachusetts, representatives of the state conduct numerous site visits and study the deficiencies of low-performing schools, hoping to resolve the problems that hinder student achievement.

In California, rather than rely on internal resources in the state department of education, the state allows teams of outside evaluators – private consultants, universities, regional educational laboratories or county offices of education – to compete for the chance to assist low-performing schools.

Additional Funding

Although the correlation between additional funding and increased achievement remains unclear, most of the 11 states studied believe there is some benefit to providing extra resources to troubled schools and districts. In fact, many of them provide additional funding to low-performing schools and/or districts, although only some of them have enacted policies requiring them to do so. In most cases, before the state provides such funding, schools or districts must qualify as underachieving or failing, and create improvement plans.

How states provide such funding varies. California allocates $50,000 to schools that qualify for the state's Immediate Intervention/Underperforming Schools Program (II/USP). For the 2001-02 school year, Massachusetts allocated $40 million for its Academic Support Services Program and $5 million for its After School Grant Program, both of which provide additional funding to low-performing schools and school districts.

In New York, extra funding for low-performing schools comes from school districts rather than the state, while Texas does not provide any additional funds to low-performing schools and districts. Although Rhode Island has yet to distribute additional funds to low-performing schools or districts, the State Department of Education made a budget request for $1 million in funding for low-performing schools in 2003.

How low-performing schools and school districts use additional funds also varies. School districts in Massachusetts use the extra money to extend student-learning time before and after school and on weekends. North Carolina schools use additional funding to purchase instructional materials and bolster professional development programs for staff, and in Connecticut schools may spend extra funds on any activity listed on their school-improvement plans.

Improvement Planning

The creation of improvement plans for low-performing schools and school districts is an important step in the intervention process. In fact, each of the 11 states studied requires some form of improvement planning, though the process for creating and implementing such plans varies. In some states, the school or district in question must create and implement an improvement plan. In others, the state, or another entity, creates an improvement plan for the school or district, which then must implement it.

While the improvement planning process varies from state to state, there are several constants. Essentially, improvement plans are blueprints for increasing the academic health of individual schools or school districts. Also, as stated earlier, states usually require low-performing schools or districts to submit an improvement plan in order to receive additional funding from the state.

In most cases, improvement plans identify academic or systemic deficiencies and lay out an agenda for improvement. More specifically, improvement plans usually address problems of instruction or leadership, encourage the use of data and student tracking

systems, and set measurable outcomes for the school or district to meet. If a school or district does not meet the goals laid out in the improvement plan, it is then usually subject to sanctions.

Sanctions

Each of the 11 states studied imposes sanctions on consistently low-performing schools and/or school districts. Such sanctions take many forms. This section highlights the five sanctions of written warnings, probation, reconstitution, closure and takeover.

Several of the 11 states provide written warnings to low-performing schools and/or districts, although only some of them have enacted policies that require them to do so. Written warnings usually inform such schools and districts of their academic deficiencies and demand a change in the near future if the school or district is to avoid more severe sanctions. Written warnings usually precede other interventions, such as technical assistance, improvement plans and additional sanctions.

Massachusetts and West Virginia provide written warnings to underachieving schools and school districts before further action is taken. New Jersey provides written warnings to low-performing districts only, and not schools. New York provides written warnings to low-performing schools only, and not school districts.

Most of the 11 states studied place low-performing schools and/or school districts on probation. For example, West Virginia places low-performing schools and districts on probation before enacting tougher sanctions. During the probationary period, schools and districts are given a specific period of time to improve or risk further penalties. If improvement is demonstrated over time, the state removes the schools or districts from probationary status. Maryland, Massachusetts, New Jersey, New York, North Carolina, Rhode Island and Texas also place low-performing schools and/or districts on probation.

While most of the 11 states studied have enacted policies that allow them to reconstitute and/or close low-performing schools, only two states, Maryland and New York, have taken such drastic steps. A reconstitution usually involves creating a new philosophy, developing a new curriculum and hiring new staff at a low-performing school. In 2000, Maryland took over and reconstituted three low-performing schools in the Baltimore City Public School System, and then contracted with Edison Schools Inc. to manage the schools. Since 1990, New York has reconstituted 46 schools as well as closed three schools.

While several of the 11 states studied have enacted policies that allow the state to take over low-performing schools, only one state, Maryland, has actually implemented this policy, as detailed in the previous paragraph.

Each of the 11 states studied has enacted policies allowing the state to take over a low-performing school district. In a state takeover of a school district, either the state legislature, the state board of education or a federal court charges the state department of education or another designated entity, such as a city's mayor, with managing a school district, usually for a certain amount of time, such as five years.

There have been takeovers of school districts in 10 of the 11 states studied. There has been one takeover in Rhode Island; two takeovers in Maryland, New York and Texas; three takeovers in New Jersey; four takeovers in California, Connecticut and West Virginia; and five takeovers in Kentucky.

II. Research on the Impact of State Interventions on Low-Performing Schools and School Districts

Research into the impact of state interventions on low-performing schools and school districts is just beginning to emerge, especially as these interventions affect school and district operations and student achievement. There are two reasons for the current shortage of definitive research on state interventions. The first reason is the relative infancy of most state interventions. Since many state accountability systems that contain state interventions, such as California's, Connecticut's and Rhode Island's, are only a few years old, there simply has not been enough time to study and understand the impact of state interventions on low-performing schools and districts.

The second reason for the current shortage of definitive research is that many interventions are implemented in combination with other interventions, and therefore the research seldom examines the impact of a single intervention. While there is considerable anecdotal evidence that some interventions have powerful effects, the research does not yet shed consistent light on the efficacy of particular interventions in low-performing schools and districts.

What little research does exist suggests that interventions shouldn't be expected to equally affect low-performing schools and school districts. One of the main reasons is that many schools or schools districts simply do not have the resources to implement changes. From the body of research about schools' and school districts' abilities to implement reforms, often referred to as "local capacity," it is clear that local context plays a critical role in how well interventions take root in schools and districts. According to this research, schools' or districts' varying ability to implement reforms is an important reason why interventions have different results in different places.[3]

With these issues in mind, this section of the report considers the available research about the state interventions of technical assistance, additional funding, improvement plans, reconstitutions and takeovers, as well as about the federal intervention of school choice.

It also provides a brief summary of the research about schools' and districts' abilities to implement reforms.

Technical Assistance

Kentucky and North Carolina provide two notable examples of state-provided technical assistance, and early research on these efforts shows a positive impact on student achievement.

Kentucky's STAR program sends a distinguished educator to each low-performing school. These individuals spend up to two years at each site, helping to guide lessons and mentor staff. All 53 Kentucky schools that participated in the STAR program's first cycle in 1994 reversed a declining performance trend after two years, and 63% showed student growth beyond the expected rate for the school. In the second STAR cycle, approximately 200 schools participated, with 91% reversing their downward trend after two years.

North Carolina's approach is similar, but uses technical assistance teams rather than distinguished educators. Of the 15 low-performing schools that were assigned such teams in 1997-1998, all of them moved out of the low-performing category, and 13 showed exemplary growth.[4]

One explanation for the success of these approaches lies in their comprehensive nature. Each state carefully screens, selects, trains and provides ongoing support for the technical assistance providers. Each state has also emphasized the goal of building schools' and districts' abilities to identify and solve school- and district-specific problems and to track school and district progress toward achievement goals.

Additional Funding

At this point, research does not show a clear impact on instruction or achievement from providing additional funding to low-performing schools and school districts, primarily for two reasons. First, such provision is relatively new, and the research is just beginning to emerge. Second, additional funding is generally provided in combination with other interventions, so it is impossible to link improvement directly and solely to the influence of additional funds.

Still, early research on California's Immediate Intervention/Underperforming Schools Program (II/USP) shows promising results from providing additional funding to low-performing schools. The II/USP provides additional resources to low-performing schools that choose to participate in the program, but these resources come with strings attached.

Participating schools must draft an action plan in the first year of the program and work to implement the plan in the second and third years. Additional resources are provided to schools – planning grants of $50,000 in the first year, and $200 per student in the second and third years -- to be spent as needed. After 24 months, if a school has not met its Academic Performance Index (API) growth targets, it is subject to a series of sanctions that may culminate in a state takeover of the school.

The first cohort of II/USP schools was selected in 1999. Data on the success of this initial cohort is conflicting. According to a 2002 study of the program by Hoover Institution researchers, the II/USP has great potential for raising student achievement *in the types of schools that take the initiative to participate in this type of reform effort*. II/USP schools raised their APIs significantly more in two years than other schools that applied for the program but were not selected, but not more than other schools who were eligible but did not apply. It appears that randomly selecting a low-performing school for the program does not automatically ensure improvement. Only schools that are apt or prepared to apply for such programs can expect to consistently succeed. The identification of factors that play a role in whether schools participate in this type of program, such as ambitious school leadership, is a key step in targeting such interventions to those schools where they will have the greatest chance of succeeding.[5]

Improvement Plans

The evidence linking mandated improvement plans for low-performing schools and school districts to increases in achievement is mixed. Some schools and districts increase achievement, while others do not. One explanation for this variation is that low-performing schools and districts frequently focus on the form of improvement planning, such as holding meetings, rather than on the substance, such as focusing on goals for student achievement, gathering data to examine progress toward those goals, and providing supports and pressures so that teachers meet those goals.

According to Mike Schmoker, an educational consultant who specializes in school improvement, improvement planning often does not address key needs such as strengthening teachers' assessment skills, aligning instruction with assessments, and supporting collaborative professional development for teachers. Instead, they set off a riot of activities that, in worst-case scenarios, distract schools from the problem of improving instruction.[6]

Another potential problem with improvement plans is getting school and district staff to buy into them. If administrators and teachers are not on board with the improvement plan, successful implementation may be extremely difficult.

Reconstitutions

A reconstitution usually involves creating a new philosophy, developing a new curriculum and hiring new staff at a low-performing school. Much of the research evidence about reconstituting low-performing schools comes from large urban school districts. Although little systematic evidence about the effects of reconstitutions on student achievement exists, anecdotal information suggests that reconstitutions may improve school order, stability and community involvement.

A 1992 study of the San Francisco Unified School District's school improvement program initiated in 1983 found improved student achievement in reconstituted schools with high proportions of poor or minority students. But in the schools reconstituted since 1994 in the district, there is little, if any, improvement in scores on standardized tests.[7] Further, teachers called the reconstitution "degrading" and said that it "sent morale down the tubes." [8]

New York's reconstitution efforts provide a similarly mixed picture. In New York, a reconstitution involves replacing up to 50% of the staff and creating a new instructional approach in a low-performing school. During the 1997-98 school year, only 16 of 86 low-performing schools, or Schools Under Registration Review (SURR) as they are called, met all performance targets, although most SURR schools improved their performance from the prior year in their problem areas.[9]

Takeovers

There is limited research on the effects of takeovers of school districts. For the most part, they seem to be yielding more improvement in central-office financial and management practices than in classroom instructional practices. As evidence, takeovers are credited with the following:

- Eliminating nepotism from a school district's decision-making processes
- Improving a school district's administrative and financial management practices
- Removing the threat of teachers' strikes within a school district
- Upgrading the physical condition of schools within a school district
- Implementing innovative programs within a school district, such as small-schools programs and cooperative arrangements between schools and social service agencies.

In some cases, however, takeovers have produced negative results, such as the $70 million deficit incurred by state-appointed administrators in Newark, New Jersey, and the

10-day teachers' strike in Detroit, Michigan, which occurred six months after the mayor assumed control of the school district.

Perhaps more important, student achievement still oftentimes falls short of expectations after a takeover. In most cases, academic results are usually mixed at best, with increases in student performance in some areas, such as 4th grade reading, and decreases in student performance in other areas, such as 8th grade mathematics. The bottom line is that takeovers, for the most part, have yet to produce dramatic and consistent increases in student performance, as is necessary in many of the school districts that are taken over.

Still, a recent study by Vanderbilt University and Harvard University researchers produced four broad conclusions regarding the relationship between takeovers and academic performance:

- Takeovers placing mayors in charge of school districts are linked to increases in student achievement at the elementary grades.
- Gains in achievement are especially large for the lowest-performing schools in these school districts, suggesting that takeovers involving mayors include a special focus on these failing schools.
- Takeovers placing mayors in charge of school districts seem less effective for the upper grades, where the cumulative effects of many years of poor schooling are not easily reversible.
- When takeovers placing the state department of education in charge of school districts produce administrative and political turmoil, student achievement suffers. After a period of adjustment, however, these takeovers may also be able to produce positive achievement gains.[10]

Further, two promising experiences stand out among the various takeovers of school districts. First, as a result of a takeover of the Logan County, West Virginia, school district, test scores increased, management improved and local support was strengthened. According to the former West Virginia Superintendent of Schools, the takeover

succeeded in Logan County because it kept the school board in place, albeit with reduced powers. State officials felt that the school district's decision-makers needed to be a part of the recovery process, largely so they would know what to do when the school district regained sole control of its operations. Results of the takeover include:

- Performance, attendance and dropout rates improved dramatically.
- Administrative difficulties and budget problems were resolved.
- Personnel policies and practices now comply with the law (e.g., all of the school district's teachers now have valid teacher licenses).

Second, in 1995, the Illinois legislature shifted control of the Chicago Public Schools to the mayor and charged him with appointing school board members, the school board president and the school district's chief executive officer. According to 1997 and 1998 studies by the University of Chicago, these changes have improved managerial efficiencies within the school district.[11] In addition, according to a 1998 study by the Consortium on Chicago School Research, standardized test scores strongly suggest that the 1995 changes, along with earlier reforms such as the 1988 Chicago School Reform Act, have precipitated substantial improvements in achievement in a large number of Chicago public elementary schools.[12]

School Choice

As a result of the No Child Left Behind Act of 2001, a federally imposed intervention policy requires school districts to allow students in low-performing schools to transfer to higher-performing schools in the district. This policy also requires school districts to provide transportation for the transferring students to the higher-performing schools.

At the same time, the No Child Left Behind Act increases federal support for voluntary public school choice programs, such as magnet schools and open enrollment, as well as for charter schools.

Because the federal government's policy that requires school districts to allow students in low-performing schools to transfer to higher performing schools is new, there is no evidence about its impact. There is evidence, though, about the impact of other school choice policies. According to this research, the attempts of magnet schools, open enrollment programs and charter schools to provide disadvantaged students with greater educational options have produced mixed results.

Although designed initially to reduce ethnic segregation and promote a diverse student body, magnet schools primarily attract higher-income students. According to the U.S. Department of Education, although enrollment in magnet schools has tripled in the past decade, low-income students remain underrepresented in most programs.[13]

Such underrepresentation is attributed to the proposition that families with the greatest amount of resources typically have access to information regarding magnet programs that poorer families lack. One researcher found that even knowing of the term "magnet school" depended on a parent's ethnicity and income level.[14]

In addition, since academic magnets often apply a high degree of selectivity to the admissions process, high-achieving students are often separated from lower-achieving peers, clustering struggling students in low-performing schools. However, career magnets in places like New York City reduce ethnic and class separation through a lottery system that accepts students randomly.

In open enrollment programs, despite efforts to reach out to low-income and minority children, middle- and upper-class students still constitute the bulk of participants. Similar to parents who choose magnet programs, middle- or upper-income families typically have the time, resources and education levels necessary to investigate open enrollment options. Simply knowing what choices exist and how to apply for them contributes to increased participation in the programs.

For example, a study of the New York City open enrollment program found a lack of publicity and a complex application process limited the effectiveness of the plan in reaching out to low-income families.[15] A study of the Boulder Valley School District's open enrollment system found that high-achieving white students tended to be the ones fleeing low-performing public schools for charter or wealthier neighborhood schools.[16] This is mainly the result of a familiarity with the options and an understanding of how to navigate the system. Minnesota seems to be having the greatest success in involving minority students with its statewide open enrollment plan, with 40% minority student participation.[17]

Of the three public school choice programs discussed, charter schools serve the greatest number of minority and low-income children. According to figures from the U.S. Department of Education, charter schools enrolled a larger percentage of students of color than all public schools in the states with charter schools. Charter schools in Connecticut, Illinois, Louisiana, Massachusetts, Michigan, Minnesota, New Jersey, North Carolina and Texas actually enroll a much higher percentage of minority students than all public schools in those states. In the states that have charter programs, charter schools also enroll a slightly higher percentage of students eligible for free or reduced-price lunches.[18] On the flip side, charter schools have served a slightly lower proportion of students with disabilities than all public schools in the states with charter schools.

The impact of school choice programs on student achievement is undecided. Preliminary research suggests that magnet schools, open enrollment programs and charter schools experience varying levels of achievement. But the choice movement is too young to yield any definitive results. More research and evidence are needed before anyone truly understands the real long-term benefits or detriments of public school choice programs' effects on student learning.

Schools' and Districts' Abilities to Implement Reforms

As the above sections illustrate, the research does not provide strong conclusions about the effects of various state interventions on school and district operations and on student achievement, largely because local responses to state interventions vary widely. Factors that contribute to this variation include:

- The particular combination of interventions that are applied to low-performing schools and districts
- The amount of time that low-performing schools and districts are given to raise their performance
- The amount of support provided to low-performing schools and districts, and the perceived relevance of that support to local needs
- Whether the school, district or state initiates the improvement process
- The extent to which local stakeholders buy into any external intervention process.

Given the interplay of these factors, researchers note that low-performing schools and school districts may have increased or reduced motivation to make changes, depending on their circumstances and ability to implement reforms.[19]

In 1995, the Center for Policy Research in Education (CPRE) developed a helpful framework that describes where local barriers to improvement may be located. By identifying school and district needs in relation to the barriers in this framework, states may target interventions with a better likelihood of success. This framework contains five key dimensions:

- Vision and leadership, in which district and school leadership and staff share a common purpose. This purpose is focused on (1) improved achievement for all students, (2) curriculum and instruction, and (3) teacher responsibility for student learning. Schools with problems in this area, for instance, might suffer from chronic leadership turnover or a non-achievement-oriented focus for students.

- Collective commitment and cultural norms to realize the vision. The most actively reforming schools in the CPRE study were characterized by a sense of schoolwide responsibility for student learning. In addition, the schools demonstrated a set of cultural norms that stressed ongoing improvement, and they used data to monitor constant progress. Schools that have problems in this area may suffer from high staff turnover, lack of staff cohesion, or norms where "anything goes" in the classroom.
- Knowledge or access to knowledge about specific strategies for improvement, such as targeted, sustained professional development. District and school personnel must be able to access this knowledge to improve student achievement. Schools with problems in this area may lack funds or time for targeted, sustained professional development designed to raise student achievement, or they may be participating in the wrong kind of professional development. They also may lack adequate, timely performance information about their students.
- Organizational structures that support better instruction. These include common planning time for teacher collaboration, extended class schedules, and extended day or year programs. The common denominator is that structures are designed and targeted to support improved student learning. Some problems in this area are obstacles to after-school programs, such as a lack of space, and union agreements that specify the maximum number of hours that teachers may work.
- Adequate resources, including funds, time, personnel and materials.[20] Schools with problems in this area may lack adequate funds for professional development, a supply of well-prepared teachers, or appropriate materials.

III. Policy Recommendations and State Practitioner Advice

Based on our review of state policies and experiences as well as a review of the research, it appears that state interventions designed to assess and maximize existing abilities in low-performing schools and districts and to exert appropriate pressure for change may be the most likely to improve school and district operations and to raise student achievement. Within the context of this observation, we offer five recommendations. In addition, we provide the advice of state practitioners whom we interviewed in the course of gathering information for this study.

Policy Recommendations

Recommendation #1: For the greatest impact on school and school district performance, states should target technical assistance to the individual needs of schools and districts.

It does not make sense for a school to buy new textbooks if what it lacks is good leadership. But a one-size-fits-all intervention does just that type of thing. Promising state models for targeted technical assistance include Connecticut, Kentucky and North Carolina. The approaches in these states link technical-assistance providers with local practitioners to assess specific school needs and plan accordingly.

Similarly, the strong-schools accountability model, developed by University of Washington researchers, encourages interventions that are specific to particular site needs. States identify low-performing schools using state test scores, but a deeper examination of those schools takes place in a triage approach. Site visits are conducted to assess particular problems, and information gathered from those site visits is used to create specific school improvement plans.[21]

States must consider the cost implications in a targeted approach to technical assistance, though. Such assistance uses more resources in fewer sites, while providing a greater chance that those sites will substantially improve. States must weigh the relative benefits

of such an approach against the available amount of resources for technical assistance efforts, and should consider the following questions in making resource allocation decisions:

- How many low-performing schools are in the state? How much pressure is there to improve them?
- Where are low-performing schools in relation to the cutoff point for reaching the state's academic standards? Are they relatively close to this point, or are they extremely low-performing?
- Do low-performing schools serve particular populations that may require more intensive interventions?

Recommendation #2: States should develop a pool of technical- assistance providers for low-performing schools and districts, and a pool of supplemental-services providers for low-income students in low-performing schools.

In general, states do not have the resources to provide adequate technical assistance to all of their low-performing schools and districts. Therefore, it is important to ensure that such schools and districts have access to a variety of assistance providers from the public and private sectors.

This issue is particularly relevant in light of certain provisions of the No Child Left Behind Act of 2001. As part of this law, the federal government requires certain low-performing schools to offer their low-income students the opportunity to receive instruction from a supplemental-services provider of their choice. Under the law, students in low-performing schools that have failed to meet their state's requirements for AYP for three consecutive years are allowed to obtain such instruction. The law also requires that states approve the supplemental-services providers.

States should coordinate the development of a pool of technical-assistance providers for schools and districts and a pool of supplemental-services providers for students, as well as establish criteria for providers to be included in such pools.

These criteria should be tied to evidence of effectiveness, using the federal government's definition of "scientifically based research" evidence as much as possible. States should also take into account the variety of student, school and school district needs across the state. Because of geographic constraints, states may want to consider the efficacy of technology-based services, particularly for remote rural areas. Finally, the criteria should maintain a focus on improving student achievement.

Recommendation #3: State intervention policies for school and school district improvement plans should focus on improving student achievement, setting realistic improvement goals and requiring regular monitoring of school and district progress.

As mentioned earlier in this report, tying improvement plan requirements directly to the use of student achievement data helps to focus schools and districts directly on student learning. By focusing on improving student achievement, setting realistic improvement goals and requiring regular monitoring of progress toward goals, state policies help to ensure that ongoing improvement becomes part of the culture of schools and districts.

Focusing improvement policies in these ways helps school and district officials target areas where students are having particular problems. Further, improvement policies requiring schools and districts to target professional development to classroom strategies specific to these problem areas provides help to teachers where it is most needed and where improvement will be seen most quickly.

Recommendation #4: If states create and implement takeover policies, they should ensure that takeover efforts focus on: establishing clear performance goals and measures, especially concerning academics; creating and implementing improvement strategies

specific to the problems in the school or school district in question, particularly regarding improved instruction; defining the conditions under which the state will return control of the school or school district to local officials; and, when possible, partnering with local officials in the improvement effort.

Although the research evidence about takeovers is relatively limited, several lessons are emerging from the states' experiences with takeovers. First, it appears that those places that are achieving the greatest success placed a high priority on improving academic performance at the outset of the takeover. While it is important to address financial problems, such as budget deficits, as well as management problems in school districts, officials should tackle these problems in the context of their larger goal of improving student achievement.

Second, takeovers are simply governance changes for the sake of governance changes if they are not connected to the implementation of strategies that directly impact the teaching and learning experience in classrooms. Therefore, after a takeover, officials should study and identify the specific problems in a school or school district, establish clear performance goals and measure and create and implement improvement strategies specific to the problems in the school or school district in question, particularly regarding improved instruction.

Third, many states that have taken over school districts have struggled to return control to local officials. This fact is oftentimes due to states' failing to set clear terms for giving the power over the school district's operations back to the locally elected school board and local superintendent. Also, states are sometimes concerned about the ability of local officials to continue improvement efforts and not revert back to unproductive practices.

Therefore, after studying and identifying the specific problems in a school or school district, states should define the conditions under which the state will return control of the school or school district to local officials. Also, when possible, states should partner with local officials in the improvement effort. Such a partnership should build the knowledge

and skills of these officials so that they know what to do when the school or school district regains sole control of its operations.

Recommendation #5: In creating and refining state intervention policies for low-performing schools and districts, states should take into account the requirements and implications of the No Child Left Behind Act of 2001, particularly as they relate to providing assistance to low-performing schools.

As states create and refine intervention policies for low-performing schools and districts, they should take into account the requirements of the No Child Left Behind Act of 2001:

- **State Academic Standards and Student Achievement Standards** (Title 1, Part A, Sec. 1111, Subsection (b)): Requires states to demonstrate that they have adopted challenging academic content and student achievement standards for all children.
- **Adequate Yearly Progress** (AYP) (Title 1, Part A, Sec. 1111, Subsection (b)): Requires states to demonstrate that they have adopted a single statewide accountability system for defining "adequate yearly progress" for all public school students.
- **Annual Student Testing** (Title 1, Part A, Sec. 1111, Subsection b (3,4,5): Beginning in 2005-06, states are required to test all students annually in grades 3-8 in mathematics and reading or language arts, with reasonable adaptations and accommodations for students with disabilities and students of limited-English proficiency.
- **Participation in Biennial NAEP** (Title 1, Part A, Sec. 1111): States are required to participate in the National Assessment of Educational Progress (NAEP) every other year in grades 4 and 8 for reading and mathematics, beginning in the 2002-03 school year.
- **State Report Cards** (Title 1, Part A, Sec. 1111): Not later than the beginning of the 2002-03 school year, states and school districts that receive Title I funding must prepare and disseminate annual report cards.

- **Consequences for Low-Performing Schools/School Districts** (Title I, Part A, Sec. 1116): For states and school districts receiving Title I funds, ESEA outlines requirements for setting a timeline and establishing consequences for school and district performance relative to adequate yearly progress. School districts and state departments of education have parallel responsibilities in the intervention process for schools and districts, respectively.
- **School Support and Recognition** (Title I, Part A, Sec. 1117): States are to develop support systems for schools using resources from regional centers and laboratories, as well as other technical-assistance providers. Priority goes to districts with schools subject to corrective action and school improvement policies.

In particular, states should consider the implications of the requirement that the tests and formulas that states use to designate schools as low-performing, or not meeting their state's AYP requirements, are the same for all schools in the state. Only low-performing schools that receive money from the federal Title I program, however, are required to participate in the interventions specified in NCLB, as long as they are consistent with state law.

The pressing implications of this requirement include:

- The number of schools that have been identified as low-performing, and whether or not they receive money from the federal Title I program
- The federal requirements for interventions in those schools
- Federal and state resources for assisting low-performing schools.

For states with large numbers of low-performing schools, one potential problem is the amount of resources necessary to adequately address the problems in these schools. Not only will such a situation dilute resources, but it may also diminish the effects of the various state interventions spread out across a large number of schools. Therefore, states must decide about the trade-offs between focusing resources in a smaller number of schools and diffusing resources across a larger number of schools.

Advice from State Practitioners

As we gathered information for this report, a number of accountability officials from states with established intervention programs offered several recommendations, including the following:

- Technical assistance should be in-depth and targeted to the individual needs of schools and school districts. Allowing improvement teams or technical experts to assist a school on a daily basis – like in Kentucky and Connecticut – for a lengthy period of time allows the intervention process to grow and respond to a school's unique needs.
- Professional development is an essential part of the intervention process. For example, establishing leadership academies for principals and mentoring programs for teachers may provide school staff with rigorous training in new forms of instruction, curriculum development, data analysis and school improvement plans. Also, building strong relationships with the principals of low-performing schools is especially beneficial to the intervention process.
- As part of the intervention process, states should include specific changes that directly affect the teaching and learning experiences in classrooms. For example, in a few states, such as North Carolina, interventions included targeted class-size reductions, which, according to state officials, helped raise student achievement in these states. The research on class size reduction is mixed, however, and most researchers agree that class reduction is effective only when it is one piece of a larger, teaching quality reform effort.
- Some states believe in a tough approach to low-performing schools. In particular, Maryland, New York and Texas find that threatening schools with reconstitution or closure spurs improvement. Other states, like Connecticut and Massachusetts, find technical assistance, fact-finding and funding give a school the time and support it needs to increase student achievement. While these approaches are not mutually

exclusive, some states place more emphasis on one approach, while other states place more emphasis on the other approach.

- Although it is too early to tell, state accountability officials in California think that their use of outside evaluators will yield positive results and facilitate school achievement. According to these officials, using more of a free-market model in providing technical assistance to low-performing schools -- which forces outside providers to compete for the chance to provide such assistance -- will ensure the highest quality of service to these schools.
- Adequate funding for interventions is perhaps the most important factor of all. Even the best-designed set of interventions will fail if they are not adequately funded. How much a school or a district needs will vary from state to state and situation to situation. The needs of individual schools and districts are often very different, as are the levels of funding required for improvement. Often – but certainly not always – the best measure is that schools that perform the lowest, or fail to improve after the first year, need extra resources. Many of the lowest-performing schools need the greatest number of resources to improve, and states must take these needs into account when designing and funding interventions.

Appendix A: State Policies on Interventions in Low-Performing Schools and School Districts

Overview of State Policies on Interventions in Low-Performing Schools and School Districts

According to our research, 33 states have enacted policies that allow them to intervene in low-performing schools, while 30 states have enacted policies that allow them to intervene in low-performing school districts.

State	Has the State Enacted Policies that Allow the State to Intervene in Schools on the Basis of Performance?	Has the State Enacted Policies that Allow the State to Intervene in School Districts on the Basis of Performance?
Alabama	Yes	Yes
Alaska	Yes	No
Arizona	Yes	No
Arkansas	Yes	Yes
California	Yes	Yes
Colorado	Yes	Yes
Connecticut	Yes	Yes
Delaware	Yes	Yes
Florida	Yes	Yes
Georgia	Yes	No
Hawaii	No	No
Idaho	No	No
Illinois	Yes	Yes
Indiana	Yes	Yes
Iowa	No	Yes
Kansas	Yes	Yes
Kentucky	Yes	Yes
Louisiana	Yes	No
Maine	No	No
Maryland	Yes	Yes
Massachusetts	Yes	Yes

State	Has the State Enacted Policies that Allow the State to Intervene in Schools on the Basis of Performance?	Has the State Enacted Policies that Allow the State to Intervene in School Districts on the Basis of Performance?
Michigan	Yes	Yes

Wisconsin	No	No
Wyoming	Yes	Yes

State Policies for Interventions in Low-Performing Schools

The following chart addresses the following questions concerning interventions in schools based on performance:

1. Has the state enacted a policy that requires the state to provide written warnings to low-performing schools?
2. Has the state enacted a policy that requires the state or another entity to provide technical assistance to low-performing schools?
3. Has the state enacted a policy that requires the state to provide additional funding to low-performing schools?
4. Has the state enacted a policy that requires low-performing schools to create and implement improvement plans?
5. Has the state enacted a policy that requires another entity, such as the state or a school district, to create improvement plans for low-performing schools?
6. Has the state enacted a policy that allows the state to place low-performing schools on probation?
7. Has the state enacted a policy that allows the state to remove a low-performing school's accreditation?
8. Has the state enacted a policy that allows the state to withhold funding from low-performing schools?
9. Has the state enacted a policy that allows the state to reconstitute low-performing schools?
10. Has the state enacted a policy that allows the state to close low-performing schools?
11. Has the state enacted a policy that allows the state to take over low-performing schools?

State	1.Written Warning?	2.Technical Assistance?	3.More Funding?	4.Plan by School?	5.Plan by Other Entity?	6.Place on Probation?	7.Remove Accreditation?	8.Withhold Funding?	9.Reconstitute School?	10.Close School?	11.Take Over School?

West Virginia	Yes	Yes	Yes	Yes	Yes	Yes	Yes	No	No	No	Yes
Wyoming	No	Yes	No	Yes	No	No	Yes	No	No	No	No

According to our research:

1. 12 states have enacted policies that require the state to provide written warnings to low-performing schools. In several other states, the state provides a written warning to schools, but is not required to do so by state policy.
2. 26 states have enacted policies that require the state or another entity to provide technical assistance to low-performing schools. In several other states, the state or another entity provides such assistance to schools, but are not required to do so by state policy.
3. 11 states have enacted policies that require the state to provide additional funding to low-performing schools. In several other states, the state provides such funding to schools, but is not required to do so by state policy.
4. 31 states have enacted policies that require low-performing schools to create and implement an improvement plan.
5. 21 states have enacted policies that require another entity, such as the state or a school district, to create an improvement plan for low-performing schools.
6. 17 states have enacted policies that allow the state to place low-performing schools on probation.
7. 15 states have enacted policies that allow the state to remove a low-performing school's accreditation.
8. 5 states have enacted policies that allow the state to withhold funding from low-performing schools.
9. 19 states have enacted policies that allow the state to reconstitute low-performing schools.
10. 10 states have enacted policies that allow the state to close low-performing schools.
11. 17 states have enacted policies that allow the state to take over low-performing schools.

State Policies for Interventions in Low-Performing School Districts

The following chart addresses the following questions concerning interventions in school districts based on performance:

1. Has the state enacted a policy that requires the state to provide written warnings to low-performing school districts?
2. Has the state enacted a policy that requires the state or another entity to provide technical assistance to low-performing school districts?
3. Has the state enacted a policy that requires the state to provide additional funding to low-performing school districts?
4. Has the state enacted a policy that requires low-performing school districts to create and implement improvement plans?
5. Has the state enacted a policy that requires another entity, such as the state, to create improvement plans for low-performing school districts?
6. Has the state enacted a policy that allows the state to place low-performing school districts on probation?
7. Has the state enacted a policy that allows the state to remove a low-performing school district's accreditation?
8. Has the state enacted a policy that allows the state to withhold funding from low-performing school districts?
9. Has the state enacted a policy that allows the state to reorganize low-performing school districts?
10. Has the state enacted a policy that allows the state to take over low-performing school districts?

State	1.Written Warning?	2.Technical Assistance?	3.More Funding?	4.Plan by School District?	5.Plan by Other Entity?	6.Place on Probation?	7.Removal of Accreditation?	8.Withhold Funding?	9.Reorganize School District?	10.Take Over School District?

According to our research:

1. Nine states have enacted policies that require the state to provide written warnings to low-performing school districts. In several other states, the state provides a written warning to school districts, but is not required to do so by state policy.
2. Sixteen states have enacted policies that require the state or another entity to provide technical assistance to low-performing school districts. In several other states, the state or another entity provides such assistance to school districts, but are not required to do so by state policy.
3. Nine states have enacted policies that require the state to provide additional funding to low-performing school districts. In several other states, the state provides such funding to school districts, but is not required to do so by state policy.
4. Twenty-three states have enacted policies that require low-performing school districts to create and implement an improvement plan.
5. Fifteen states have enacted policies that require another entity, such as the state, to create an improvement plan for low-performing school districts.
6. Fourteen states have enacted policies that allow the state to place low-performing school districts on probation.
7. Fourteen states have enacted policies that allow the state to remove a low-performing school district's accreditation.
8. Five states have enacted policies that allow the state to withhold funding from low-performing school districts.
9. Ten states have enacted policies that allow the state to reorganize low-performing school districts.
10. Twenty-four states have enacted policies that allow the state to take over low-performing school districts.

Appendix B: State Narratives

California

In 1999, California started the Immediate Intervention/Underperforming Schools Program (II/USP), and allowed schools that scored below the 50th percentile on state assessments during the 1998-99 school year to apply to this program.[22] With II/USP, California is taking a unique approach to intervention that sets it apart from other states. Rather than rely on internal resources in the state department of education, the state allows teams of outside evaluators – private consultants, universities, regional educational laboratories or county offices of education – to compete for the chance to assist low-performing schools. These teams provide technical assistance to troubled schools and assist in the writing of school improvement plans.

The state selected 430 schools, and each school chose its team of outside evaluators from a list of 80 such evaluators. These schools also created improvement committees comprised of school staff, non-school personnel and parents. Over the course of one year, the schools developed an improvement plan. Once the team of outside evaluators, the school district and the state approved a school's improvement plan, the state gave $50,000 to each school.

If the improvement process fails to improve a school's results, a school is subject to a wide range of state sanctions, including removal of staff, reorganization of the school, including reconstitution as a charter school, public school choice for students and closure.

Since the implementation of the II/USP, test scores in general have risen, but achievement gaps seem to be growing due to a lack of qualified teachers in at-risk schools. There is also some question about whether funding and assistance are reaching the schools in the most difficult situations.[23] Reactions to the II/USP have been fairly positive, however, with principals and teachers approving of the professional

development opportunities and the overall improvement planning process. This buy-in from school staff may spell success for the program's future.

Finally, California has taken over four school districts since 1991:

- In 1991, the state took over the Richmond Unified School District (now known as the West Contra Costa Unified School District) due to financial problems within the district, and hired an administrator to run the district. In 1992, the state removed the administrator, and designated a trustee to monitor the district's financial performance.
- In 1992, the state took over the Coachella Unified School District due to financial problems within the district, and hired an administrator to run the district. In 1996, the state removed the administrator, and designated a trustee to monitor the district's financial performance.
- In 1993, the state took over the Compton Unified School District due to financial problems within the district. In 1993, the state legislature passed a law that required the takeover to also address inadequate student performance n the school district. In 2001, the state removed the administrator, and designated a trustee to monitor the academic and financial performance of the school district.
- In 2001, the state took over the Emery Unified School District due to financial problems within the school district, and hired an administrator to run the school district.

Connecticut

Connecticut's school accountability program dates back to 1999. Since that time, the state has provided technical assistance and additional funding to low-performing schools in an effort to improve student performance.

Under the guidance of the state department of education, a team from each of the state's 28 low-performing schools wrote a school improvement plan designed to address inadequacies at each school. The state assigned an individual known as a critical friend to the principals at each of the schools to assist in the implementation of the school improvement plans. Among other things, these individuals sit in on school improvement team meetings, review grants and provide training to school staff.

The state also established a principal's training academy for the principals at each of the schools. This academy provides rigorous training in data analysis, school reform, early learning plans and school improvement plans. In addition, Brown University carried out site visits to each of the schools, as well as analyzed the data surrounding student achievement and progress on the school improvement plans.

The state provided student assessment data to each school so they may monitor student progress and adjust the curriculum as necessary. The state also allotted $232,353 in fiscal year 2000-01 and $50,000 in fiscal year 2001-02 to assist low-performing schools. These funds were shared by all of the low-performing schools, to be used for any activity listed on the school's improvement plan.

Connecticut has yet to implement sanctions as part of this program. If schools do not demonstrate sufficient progress by February 2003, however, the state may implement sanctions, including school reconstitutions and closures.

State officials believe that threatening low-performing schools and withholding funding from them is counterproductive to the school improvement process. Instead, they

recommend being supportive of principals and staff, and clearly outlining indicators, objectives and outcomes in the school improvement plans as the best way to ensure improvement.

More specifically, state officials have found the following approaches to be particularly useful in helping schools improve their performance: providing comprehensive technical assistance; developing and implementing specific school improvement plans; conducting workshops for principals and staff, helping them to understand data analysis, student assessment trends and performance measures; and building strong relationships between critical friends and principals in low-performing schools.

Since the program is only two years old, it is difficult to measure the impact of the state's intervention. In 2003, when the state may implement sanctions, state officials will have their first chance to determine if their policies are having any effect on performance.

Finally, Connecticut has taken over four school districts since 1988:

- In 1988, the state took over the town and school district of Bridgeport due to financial problems. The state returned power to the town and school district in 1996.
- In 1992, the state took over the town and school district of West Haven due to financial difficulties. The state returned power to the town and school district in 1995.
- In 1997, due to a variety of problems within the Hartford School District, the state legislature enacted a law to abolish the locally elected school board and empower the governor to appoint a new one.
- In 2001, the state took over the town and school district of Waterbury due to financial problems.

Kentucky

With school accountability legislation dating back to 1990, Kentucky has the longest history of state intervention into low-performing schools and school districts. Kentucky also provides a good example of a state that is reassessing and revising its accountability plan, hoping to learn from its past experiences.

In 1994, Kentucky established the School Transformation Assistance and Renewal (STAR) program in an effort to provide technical assistance to low-performing schools. Under this program, about 60 technical experts, known as distinguished educators, provide mentoring to the staffs of low-performing schools. Distinguished educators must complete a training program in preparation for providing assistance to low-performing schools. After the training program, distinguished educators spend up to two years in a school, helping to create and implement a school improvement plan with the input of the school's staff. More specifically, they facilitate change at these schools through classroom observation, careful planning, curriculum alignment and a focus on teaching and learning.

To strengthen the STAR program, Kentucky is implementing a scholastic audit program in 2002, which will determine the specific needs of each of the lowest-performing schools. As part of this program, an audit team will conduct on site visits and make recommendations toward improving student achievement at each low-performing school.

Furthermore, Kentucky revised its school accountability system to include rankings of schools. The level of assistance – or the severity of the sanction – from the state will match the level of performance at the school.

For example, the state will give additional funding and conduct a scholastic audit of low-performing "Level 3" schools, and teachers and principals in these schools will be subject to review. If members of a school's staff do not comply with or are unable to fulfill the stipulations of a recommended professional growth plan, the state may remove or transfer

them to another school. The state may also remove local school council members. If the school fails to improve after two years, students may attend a higher-performing school.

Kentucky's interventions have produced some positive results. Of the 53 schools that received technical assistance in 1994, all showed improvement, with 66% of them eligible to receive rewards for performance. According to state officials, on site visits and mentoring of staff seem to have the greatest impact on low-performing schools.

This success did not come without controversy, however. Public pressure and criticism of the state's testing system, the Kentucky Instructional Results Information System (KIRIS), forced state leaders to modify the system. The state replaced the KIRIS with a new testing system, the Commonwealth Accountability Testing System (CATS), and offered more technical assistance to low-performing schools, with an emphasis on teaching and learning.

Therefore, one important lesson to learn from Kentucky is the necessity of growth and change in state accountability systems. The ultimate goal is student achievement – if one approach fails, then others must be tried.

Finally, Kentucky has taken over five school districts since 1988:

- In 1988, state officials took over the Pike County School District due to financial problems within the district. In 1990, the state returned control to the school district. In 1998, the state board of education voted to place the school district under a declaration of financial emergency because it ended the fiscal year with a deficit budget. In 1999, the state released the school district from the declaration of emergency.
- In 1989, state officials took over the Whitley County School District and the Floyd County School District due to financial and management problems within the school districts. In 1990, the state board of education returned control to the districts. In 1997, state officials again assumed control of the Floyd County School District due to financial and management problems.

- In 1992, state officials assumed control of the Harlan County School District due to financial and management problems within the district. In 1996, state officials returned control to the district.
- In 1994, state officials assumed control of the Letcher County School District due to financial and management problems within the district. In 1997, state officials returned control to the district.

Maryland

Maryland's Schools for Success program includes state intervention for low-performing schools. The state's intervention program attempts to change the decisionmaking processes at schools, as well as provide them with resources to support improvement.

In partnership with the state department of education, low-performing schools create school improvement teams, which help principals and staff by assisting with data analysis, creating and implementing school improvement plans and providing professional development services.

The state department of education provides school improvement leadership training to teachers, administrators and school district personnel. The training helps them set improvement goals, use data to identify performance problems and find strategies to turn the school around. The state also provides approximately $100,000 to each low-performing school, to be spent on professional development, class-size reduction, purchase of instructional materials and other staff needs.

After each school submits an improvement plan, they must provide annual updates and demonstrate significant improvement. If they fail to improve, they face sanctions.

Since 1994, Maryland has identified 119 schools as eligible for reconstitution, though so far only four schools have been named for reconstitution and another four have closed. In 2001, the state board of education voted to take over and reconstitute three elementary schools in the Baltimore City Public School System (BCPSS). Subsequently, the state contracted with Edison Schools, Inc. to manage the schools. Also in 2001, the state board of education voted to reconstitute Westport Elementary/Middle School in the BCPSS. Currently, 107 schools are on the reconstitution-eligible list.

Like New York and Texas, Maryland's tough stance towards school accountability has produced some positive results. State officials believe that collaborative efforts between the state and low-performing schools have been beneficial to improving school performance in the state, and that increasing the quality of leadership in the schools has

helped to improve teaching practices and raise student achievement. From their perspective, because their approach allows the school to remain part of the school systems and the community, it keeps the pressure on a school without completely ostracizing staff and students.

In addition, they assert that the implementation of school improvement plans has gone smoothly under the guidance of school improvement teams, although the timeline for submitting school improvement plans needs refinement. Such plans are currently due on August 31 of each year, and getting the appropriate parties together over the summer is sometimes a challenge.

Finally, Maryland has taken over two school districts since 1997:

- In 1997, due to a variety of problems within the Baltimore City Public Schools (BCPS), the state legislature entered into a partnership with the city of Baltimore to run BCPS. From this partnership, a new, nine-member board of school commissioners was created, with members jointly appointed by the governor and the mayor.
- In 2002, the state intervened in the Prince George's County School District. The state enacted legislation that abolished the locally elected school board and created a nine-member school board appointed by the governor and the county executive.

Massachusetts

In 1999, the Massachusetts board of education adopted a comprehensive accountability system for schools and school districts, which assesses schools and school districts to determine if they meet state standards. The state first published school performance ratings in 2000, and found four junior high schools to be underperforming. A panel reviewed and conducted a fact-finding effort in these schools, which, up to this point, have not faced any sanctions. The state will publish school performance ratings again in 2002.

To more specifically support low-performing students, the state created the academic support services program (ASSP) in 1998. The ASSP addresses the needs of students scoring in the failing and needs improvement categories on the Massachusetts Comprehensive Assessment System (MCAS). The state also created an after-school grant program (ASGP) to support efforts to strengthen the coordination between the instruction that occurs during the school day and the activities that take place outside of the school day.

For the 2001-02 school year, the state appropriated $40 million for ASSP and over $5 million was provided for ASGP. School districts are using ASSP funds to extend student-learning time before and after school, on weekends and school vacations and during the summer. They are also using these funds to provide intensive, small group instruction and innovative programming. School districts report student-level data on ASSP program participation and progress. In addition, ASSP staff provides training and resources for school districts with high percentages of low-performing students and present promising program models at statewide conferences.

Massachusetts intends to implement a school and school district improvement planning process in the next two years, as well as expand services to further support low-performing students.

New Jersey

New Jersey has received a great deal of attention for its school district accountability system, particularly for its takeovers of low-performing school districts. Seen by many as a pioneer in the realm of school district takeovers, New Jersey's efforts have produced mixed results.

In May 1988, New Jersey began proceedings to take control of the Jersey City Public Schools due to financial, management and academic problems in the school district. Despite resistance from the school district, Jersey City became the first urban school district in the nation to come under full state control in 1989. In subsequent years, the state took over the Paterson Public Schools (1991) and the Newark Public Schools (1995), and assumed management of these school districts.

Despite its aggressive approach to taking over low-performing school districts, New Jersey is still struggling to bring troubled school districts up to state standards in student achievement. For example, while conditions in Newark's elementary, middle and high schools have improved, the gains are modest compared with the rest of the state. The number of high school students who passed the reading section of the state's "High School Proficiency Test" only rose from 41.1% in 1995 to 42.3% in 1998 (more recent data is not available). The math scores for high school students were better, with 46.1% of students passing in 1998, compared with 40% in 1995. The number of 8th graders who scored in the top level of the reading portion on the state's "Early Warning Test" rose from 15.8% in the 1995-96 school year to 19.3% in the 1997-98 school year. Scores also rose from 7.6% to 11% of students on the mathematics portion during the same time period. While still far below the state average of 54% in reading and 44% in math, students in Newark are showing improvement under the intervention system. Perhaps this is why a substantial number of parents in Newark support the takeover, citing upgrades in school planning, availability of resources and an improved learning atmosphere.[24]

At the forefront of taking over low-performing school districts, New Jersey has experienced its share of frustration, and state officials continue to refine the intervention process in search for improved student results.

New York

New York's Schools Under Registration Review (SURR) program, established in 1989, identifies schools that do not meet state academic performance standards. A team of educators visits and helps these schools develop an improvement plan. Such teams are comprised of administrators, curriculum specialists, experienced educators, state staffers, school board members and parents. Site visits usually last four days, during which time team members observe and assess instruction, leadership and management, professional development plans, classroom materials, disciplinary procedures and parental involvement.

Following site visits, team members decide if the school has a productive learning environment and which classroom practices need to be changed to raise student achievement. Once a plan is submitted, the school district provides assistance and support to the low-performing school. At this point, the only involvement from the state is a liaison from the state department of education who monitors the implementation of the school improvement plan. Additional funding for the school comes from the school district, not the state.

SURR schools have three years to show improvement. If a school does not make required progress towards meeting performance standards during this time, the state may revoke registration and close the school. If the state revokes a school's registration and closes the school, it must then find space at other schools for the displaced students. Another option is school reconstitution, which involves replacing up to 50% of the staff and creating a new instructional approach at a low-performing school.

According to state officials, New York has reconstituted 46 schools and closed three others since 1990. The majority of these schools are located in the New York City Public Schools, and most state interventions and sanctions have been directed at these schools.

Meeting Script – Friday, February 17 –

CHAIRMAN THOMAS

The Senate Education Committee meeting is called to order.

Today is Friday, February 17, and the time is 8:00 a.m. In attendance are:

- Co-Chair Senator Meyer
- Vice-Chair, Senator Davis
- Senator Stevens
- Senator French
- and myself, Senator Thomas.

We have a quorum to conduct business.

Welcome, everyone. First, is there any business to come before the committee before we get started?

Today will continue our discussion of SB 194. We went through the bill on Monday and Wednesday, and we began hearing public testimony. We have taken your concerns into account, and today we are ready to hear the Committee Substitute.

I would be willing to entertain a motion to adopt the CS.

SENATOR MEYER: Mr. Chair, I move that we adopt the Committee Substitute for Senate Bill 194, version 27-LS1190\I

SENATOR THOMAS: I object for the purposes of discussion. My aide, Murray Richmond will now come up and present the changes in the CS for us.

{MURRAY COMES UP, GOES THROUGH THE CS}

SENATOR THOMAS: I remove my objection. Are there other objections?

Are there any questions? Senator Meyer?

{AFTER QUESTIONS}

We left public testimony open on Wednesday. Is there anyone signed up to testify to this bill?

{AFTER PUBLIC TESTIMONY}

SENATOR THOMAS: Public testimony is now closed. There is a fiscal note for the bill. We do not have a fiscal note for the CS, but it should not differ significantly from note for the bill. Is there someone from the department to present the fiscal note for us?

{EITHER LES OR ELIZABETH WILL PRESENT THE FISCAL NOTE}

We now turn to the committee for discussion. Senator Meyer?

{AFTER DISCUSSION IF THE BILL IS READY TO PASS OUT}

I believe we are ready to hear a motion. Senator Meyer.

SENATOR MEYER: Mr. Chair, I move that we move the Committee Substitute for Senate Bill 194, version 27-LS1190\I (*"as amended"*), with attached fiscal note (*or "DEED fiscal note forthcoming"*), and individual recommendations.

That concludes our business for the day.

Our next meeting will be Wednesday, February 2th at 8:00 a.m., **here in the Beltz Committee Room.** We will NOT be meeting on Monday of next week because of Presidents' Day. On Wednesday we will hear two bills related to Vocational Education, SB 170, a bill requiring vocational counseling in schools and a bill dealing with the funding stream for vocational education.

And with that, we are adjourned at _____ a.m.

SENATE BILL NO. 194

"An Act providing for a school improvement and revitalization procedure in the Department of Education and Early Development; establishing advisory councils for school improvement; and requiring reports to the legislature."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03.123(d) is amended to read:

(d) A public school or district that **is designated as a low-performing school or district** [RECEIVES A LOW PERFORMANCE DESIGNATION UNDER THIS SECTION] shall prepare and submit to the department a school or district improvement plan, as applicable, **and shall cooperate with the department,** in accordance with **AS 14.03.124 and** regulations adopted by the board. The improvement plan must be prepared with the maximum feasible public participation of the community, including, as appropriate, interested individuals, teachers, parents, parent organizations, students, tribal organizations, local government representatives, and other community groups.

* **Sec. 2.** AS 14.03.123(g) is amended by adding a new paragraph to read:

(3) "low-performing" means the bottom three percent in the state for performance based on the accountability measures described in (f)(2) of this section.

* **Sec. 3.** AS 14.03.123 is amended by adding new subsections to read:

(h) The department shall work with and evaluate a public school or district that receives a low performance designation under (d) of this section to improve the school or district as follows:

(1) supply the school or district with a person who has training and experience in education and who can provide one-on-one assistance to enhance the quality of education in the school or district;

(2) provide an operations audit to identify possible programmatic savings and review the manner in which financial resources are being directed;

(3) direct the local school board to use state and federal funds for critical needs, as directed by the state Board of Education and Early Development;

(4) provide incentives to attract highly qualified teachers and principals;

Legal Term so need definition & possibly

(5) provide additional training and technical assistance for parents and guardians of children attending the school or schools in the district and for teachers, principals, and central office staff hired by the district;

(6) provide targeted resources for graduation success as requested by the local school board;

(7) direct the local school board to identify model curriculum, including recommended textbooks, materials, and supplies approved by the department; if a new curriculum is required, the department shall provide technical assistance to implement the curriculum;

(8) work with the local school board to develop and implement a plan to address deficits in achievement and in the learning environment as recommended in the academic performance audit conducted under (i) of this section;

(9) assign a technical assistance team to the school or district to guide school or district initiatives and report progress to the commissioner;

(10) establish instructional and learning environment benchmarks for the school or district to meet as it progresses toward removal of the designation of low-performing schools or districts;

(11) direct the establishment of learning cohorts in schools that require continuous monitoring of student performance by teacher groups;

(12) provide training to local school boards through the Association of Alaska School Boards to improve their operational efficiency and effectiveness as leaders of their districts in ensuring delivery of quality education, and require local school boards to submit to the commissioner an annual action plan that outlines when and the manner in which the local school board's effectiveness will be monitored.

(i) For two years following a designation of a school or district as low performing, the department shall contract with an external review team to conduct an academic performance audit of the district and each low-performing school in the district to identify the potential reasons for the school's low performance and lack of progress. The review team shall consist of persons who have expertise in comprehensive school and district reform. A review team may not include staff of the school district that is the subject of the audit or staff of the department. The review team shall meet with and report to the department and the superintendent of the district.

(j) The audit required under (i) of this section shall be conducted based on criteria developed by the department in the areas of curriculum, assessment, instruction, learning environment, professional development, and leadership and must include an examination of the following:

(1) student demographics;

(2) mobility patterns;

(3) school feeder patterns;

(4) strategic allocation of resources;

(5) the degree of high standards and expectations for all students;

(6) the degree of ~~high level of~~ collaboration and communication;

(7) frequency of monitoring of learning and teaching;

(8) ~~high level~~ the degree of family and community involvement;

(9) alternative secondary schools best practices; and

(10) any unique circumstances or characteristics of the school or district, including substance abuse and other social factors.

(k) The department shall make audit findings available to the audited school

district and staff, the local community, and the state Board of Education and Early Development.

* **Sec. 4.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.124. Revitalization designation; plan; governance council. (a) For a public school ~~or district~~ that, after three consecutive years of school improvement efforts under AS 14.03.123(d) and (h) - (k), continues to be a low-performing school, as described in AS 14.03.123, the department, in conjunction with the local school board and the district superintendent may ~~shall~~

(1) designate the school ~~or district~~ as a revitalization school or district;

(2) continue to identify a revitalization school ~~or district~~ and operate under a school revitalization plan developed by the department and the district until taken off revitalization status;

(3) assist the local school board with developing and implementing a revitalization plan as provided under this section;

(4) maintain eligibility of the school or district for available federal and state aid; and

(5) establish a superintendent cohort made up of the superintendent of the revitalization district and two superintendents of districts in the state that are not in revitalization status; the superintendent cohort shall meet regularly and, within nine months after the revitalization designation, report to the governance council established under this section.

(b) A school ~~or district~~ that has not been designated as a revitalization school or district may, through the school board, request the establishment of a revitalization advisory ~~governance~~ council for a school in the district ~~or for the district~~ consistent with this section.

(c) A local school board that governs a school ~~or district~~ that has been designated as a revitalization school ~~or district~~ shall establish a governance council for each school designated for revitalization. Except as provided in (d) of this section, a ~~governance~~ revitalization council for a school shall consist of members appointed by the local school board, only ~~one~~ three of whom may be a current school board member, as follows:

(1) four parents or guardians of students attending the school, nominated by parents or guardians of the school;

(2) four community leaders residing within the school district, nominated by the members selected under (1) and (3) of this subsection;

(3) two teachers at the school, nominated by teachers at the school;

(4) one representative from the department;

(5) one to four principals of the schools in the district or the principals' designees; and

(6) the superintendent of the district or a representative of the

2 in 5 must
Board 3 in
the last 2, 9dll

superintendent cohort established under (a)(5) of this section.

(d) If a district has only one operating school, the district may petition the department for a reduction of the ~~governance~~ revitalization council membership from four parents to two parents, from four community leaders to one community leader, and from two teachers to one teacher.

(e) Terms of members of the governance council selected under (c) or (d) of this section shall be for two years, and no member shall serve more than two terms on the council. Members of the ~~governance~~ revitalization council serve without compensation but are entitled to per diem and other expenses authorized for boards and commissions under AS 39.20.180.

(f) A ~~governance~~ revitalization council may ~~shall~~, in conjunction with the department and the superintendent cohort established under (a)(5) of this section,

(1) analyze school achievement data and school needs related to the improvement plan for the school prepared under AS 14.03.123(d);

(2) meet with and review the report of the superintendent cohort established under (a)(5) of this section;

(3) participate in the hiring process of the school principal or other administrators of the school by conducting interviews of candidates and reporting the results of the interviews to the superintendent of schools for the school district and to the local school board;

(4) assist the principal of the school in making programmatic and operational changes to improve the school's achievement, including adjustments in program, school hours and days of operation, and enrollment goals for the school;

(5) work with the school administration to develop and approve a school compact for parents and legal guardians and students that includes an outline of the criteria and responsibilities for enrollment and school membership consistent with the school's goals and academic focus, including means by which parents and school personnel may build a partnership to improve student learning;

(6) develop and approve a written parent involvement policy that outlines the role of parents and legal guardians in the school;

(7) if the ~~governance~~ revitalization council determines it necessary to recommend intervention by the department, work with the department to develop an intervention plan for the school involving available local, regional, and statewide resources;

(8) prepare a revitalization model that takes into account recommendations consistent with the duties in (1) - (7) of this subsection for review and a vote as provided under (i) of this section.

(g) A ~~governance~~ revitalization council may

Board should put forth goal, not council

(1) review the annual draft prepared under AS 14.03.120(a) detailing the goals described in the education plan and provide advice to the principal of the school before submitting the report to the superintendent of schools;

(2) assist the principal of the school in developing a revitalization plan before the plan is submitted to the superintendent of schools and cooperate with the department in developing a revitalization plan;

(3) assist the principal of the school in developing, conducting, and reporting the results of an annual survey of parents, guardians, and teachers on issues related to the school climate and conditions; and

(4) provide advice to the principal of the school on any other major policy matters affecting the school, except on any matters relating to a collective bargaining agreement between the exclusive bargaining unit for teachers.

(h) A local school board, in conjunction with the department shall provide appropriate training and instruction to members of the governance council to aid them in the execution of their duties.

(i) Not later than 30 days after a ~~governance~~ revitalization council informs the local school board of the completion of a revitalization model under (f) of this section, the local school board shall hold a public hearing to discuss the revitalization model and shall, at the next regularly scheduled meeting, conduct a vote to accept the model recommended by the ~~governance~~ revitalization council, select an alternative model, or maintain the current school status, as follows:

(1) if the local school board selects an alternative model, not later than 10 days after the vote of the local school board, the board shall meet with the governance council to discuss an agreement on the local school board's alternative revitalization model;

(2) if no agreement can be achieved, not later than 45 days after the last meeting between the local school board and the revitalization ~~governance~~ council, the department shall decide whether to adopt the council's revitalization model, ~~or~~ the local school board's alternative ~~revitalization model~~ ~~or a mixture of the two~~ to implement;

(3) if the local school board votes to maintain the current school status, not later than 45 days after a vote of the local school board, the department shall decide whether to implement the revitalization model recommended by the revitalization ~~governance~~ council or to maintain the current school status; if the final decision of the local school board is to adopt the revitalization model, or parts of the model, the local school board shall implement the approved model during the subsequent school year in conformance with state statutes and regulations and the provisions specified in federal regulations and guidelines for schools subject to corrective action under 20 U.S.C. 6316(b)(7)

(Elementary and Secondary Education Act of 1965), as amended, or other applicable federal laws or regulations.

(j) Within two years after a local school board votes on a revitalization model, the department shall, within available appropriations, monitor the schools and districts that have been designated as revitalization schools or districts for demonstrable progress, applying the following indicators:

(1) the revitalization model adopted by the school;

(2) the number and type of disciplinary incidents;

(3) the number of truants;

(4) the dropout rate;

(5) the student attendance rate;

(6) the average scale scores on the statewide secondary school graduation qualifying examination;

(7) for high schools, the number and percentage of students completing advanced placement coursework;

(8) the teacher retention rate; and

(9) the existence and size of the parent-teacher organization for the school.

(k) On or before July 1 of each odd-numbered year, the department shall report to the standing committees of the legislature having jurisdiction over education

(1) the number of ~~governance~~ revitalization councils that have initiated revitalization;

(2) a comparison of the ~~governance~~ revitalization councils that have initiated revitalization and those that have not; and

(3) whether parental involvement has increased at schools with ~~governance~~ revitalization councils.

* **Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SCHOOL REVITALIZATION; REPORTS TO THE LEGISLATURE. (a) On or before January 1, 2014, the Department of Education and Early Development shall report to the standing committees of the legislature having jurisdiction over education on

(1) the monitoring conducted under AS 14.03.124(j), added by sec. 4 of this Act;

(2) recommendations relating to changes in the revitalization options available to schools, including whether ~~governance~~ revitalization councils may continue to recommend revitalization;

(3) comparison of the revitalization models adopted; and

(4) the level of progress of schools adopting each revitalization model in relation to the indicators described in AS 14.03.124, added by sec. 4 of this Act.

(b) On or before January 1, 2018, the Department of Education and Early

Development shall evaluate the ~~governance~~ revitalization councils established under AS 14.03.124, added by sec. 4 of this Act, for compliance with that section. On or before October 1, 2019, the department shall report to the standing committees with jurisdiction over education on the evaluation conducted under this subsection. The report must also include recommendations on whether to continue to authorize ~~governance~~ revitalization councils to recommend revitalization models.

SENATE BILL NO. 194

"An Act providing for a school improvement and revitalization procedure in the Department of Education and Early Development; establishing advisory councils for school improvement; and requiring reports to the legislature."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03.123(d) is amended to read:

(d) A public school or district that **is designated as a low-performing school or district** [RECEIVES A LOW PERFORMANCE DESIGNATION UNDER THIS SECTION] shall prepare and submit to the department a school or district improvement plan, as applicable, **and shall cooperate with the department,** in accordance with **AS 14.03.124 and** regulations adopted by the board. The improvement plan must be prepared with the maximum feasible public participation of the community, including, as appropriate, interested individuals, teachers, parents, parent organizations, students, tribal organizations, local government representatives, and other community groups.

* **Sec. 2.** AS 14.03.123(g) is amended by adding a new paragraph to read:

(3) "low-performing" means the bottom three percent in the state for performance based on the accountability measures described in (f)(2) of this section.

* **Sec. 3.** AS 14.03.123 is amended by adding new subsections to read:

(h) The department shall work with and evaluate a public school or district that receives a low performance designation under (d) of this section to improve the school or district as follows:

(1) supply the school or district with a person who has training and experience in education and who can provide one-on-one assistance to enhance the quality of education in the school or district;

(2) provide an operations audit to identify possible programmatic savings and review the manner in which financial resources are being directed;

(3) direct the local school board to use state and federal funds for critical needs, as directed by the state Board of Education and Early Development;

(4) provide incentives to attract highly qualified teachers and principals; - choose another term - and retain h quality

(5) provide additional training and technical assistance for parents and guardians of children attending the school or schools in the district and for teachers, principals, and central office staff hired by the district;

(6) provide targeted resources for graduation success as requested by the local school board;

(7) direct the local school board to identify model curriculum, including recommended textbooks, materials, and supplies approved by the department; if a new curriculum is required, the department shall provide technical assistance to implement the curriculum;

(8) work with the local school board to develop and implement a plan to address deficits in achievement and in the learning environment as recommended in the academic performance audit conducted under (i) of this section;

(9) assign a technical assistance team to the school or district to guide school or district initiatives and report progress to the commissioner;

(10) establish instructional and learning environment benchmarks for the school or district to meet as it progresses toward removal of the designation of low-performing schools or districts;

(11) direct the establishment of learning cohorts in schools that require continuous monitoring of student performance by teacher groups;

(12) provide training to local school boards through the Association of Alaska School Boards to improve their operational efficiency and effectiveness as leaders of their districts in ensuring delivery of quality education, and require local school boards to submit to the commissioner an annual action plan that outlines when and the manner in which the local school board's effectiveness will be monitored.

(i) For two years following a designation of a school or district as low performing, the department shall contract with an external review team to conduct an academic performance audit of the district and each low-performing school in the district to identify the potential reasons for the school's low performance and lack of progress. The review team shall consist of persons who have expertise in comprehensive school and district reform. A review team may not include staff of the school district that is the subject of the audit or staff of the department. The review team shall meet with and report to the department and the superintendent of the district.

(j) The audit required under (i) of this section shall be conducted based on criteria developed by the department in the areas of curriculum, assessment, instruction, learning environment, professional development, and leadership and must include an examination of the following:

(1) student demographics;

(2) mobility patterns;

(3) school feeder patterns;

(4) strategic allocation of resources;

(5) the degree of high standards and expectations for all students;

(6) the degree of ~~high level of~~ collaboration and communication;

(7) frequency of monitoring of learning and teaching;

(8) ~~high level~~ the degree of family and community involvement;

(9) alternative secondary schools best practices; and

(10) any unique circumstances or characteristics of the school or district, including substance abuse and other social factors.

(k) The department shall make audit findings available to the audited school

district and staff, the local community, and the state Board of Education and Early Development.

* **Sec. 4.** AS 14.03 is amended by adding a new section ~~to read~~:

Sec. 14.03.124. Revitalization designation; plan; governance council. (a) For a public school ~~or district~~ that, after three consecutive years of school improvement efforts under AS 14.03.123(d) and (h) - (k), continues to be a low-performing school, as described in AS 14.03.123, the department, in conjunction with the local school board and the district superintendent may ~~shall~~

(1) designate the school ~~or district~~ as a revitalization school or district;

(2) continue to identify a revitalization school ~~or district~~ and operate under a school revitalization plan developed by the department and the district until taken off revitalization status;

(3) assist the local school board with developing and implementing a revitalization plan as provided under this section;

(4) maintain eligibility of the school or district for available federal and state aid; and

(5) establish a superintendent cohort made up of the superintendent of the revitalization district and two superintendents of districts in the state that are not in revitalization status; the superintendent cohort shall meet regularly and, within nine months after the revitalization designation, report to the governance council established under this section.

(b) A school ~~or district~~ that has not been designated as a revitalization school or district may, through the school board, request the establishment of a revitalization advisory ~~governance~~ council for a school in the district ~~or for the district~~ consistent with this section.

(c) A local school board that governs a school ~~or district~~ that has been designated as a revitalization school ~~or district~~ shall establish a governance council for each school designated for revitalization. Except as provided in (d) of this section, a ~~governance~~ revitalization council for a school shall consist of members appointed by the local school board, only ~~one~~ three of whom may be a current school board member, as follows: except for 5 member Boards.

(1) four parents or guardians of students attending the school, nominated by parents or guardians of the school;

(2) four community leaders residing within the school district, nominated by the members selected under (1) and (3) of this subsection;

(3) two teachers at the school, nominated by teachers at the school;

(4) one representative from the department;

(5) one to four principals of the schools in the district or the principals' designees; and

(6) the superintendent of the district or a representative of the

superintendent cohort established under (a)(5) of this section.

(d) If a district has only one operating school, the district may petition the department for a reduction of the ~~governance~~ revitalization council membership from four parents to two parents, from four community leaders to one community leader, and from two teachers to one teacher.

(e) Terms of members of the governance council selected under (c) or (d) of this section shall be for two years, and no member shall serve more than two terms on the council. Members of the ~~governance~~ revitalization council serve without compensation but are entitled to per diem and other expenses authorized for boards and commissions under AS 39.20.180.

(f) A ~~governance~~ revitalization council may ~~shall~~, in conjunction with the department and the superintendent cohort established under (a)(5) of this section,

(1) analyze school achievement data and school needs related to the improvement plan for the school prepared under AS 14.03.123(d);

(2) meet with and review the report of the superintendent cohort established under (a)(5) of this section;

(3) participate in the hiring process of the school principal or other administrators of the school by conducting interviews of candidates and reporting the results of the interviews to the superintendent of schools for the school district and to the local school board;

(4) assist the principal of the school in making programmatic and operational changes to improve the school's achievement, including adjustments in program, school hours and days of operation, and enrollment goals for the school;

(5) work with the school administration to develop and approve a school compact for parents and legal guardians and students that includes an outline of the criteria and responsibilities for enrollment and school membership consistent with the school's goals and academic focus, including means by which parents and school personnel may build a partnership to improve student learning;

(6) develop and approve a written parent involvement policy that outlines the role of parents and legal guardians in the school;

(7) if the ~~governance~~ revitalization council determines it necessary to recommend intervention by the department, work with the department to develop an intervention plan for the school involving available local, regional, and statewide resources;

(8) prepare a revitalization model that takes into account recommendations consistent with the duties in (1) - (7) of this subsection for review and a vote as provided under (i) of this section.

(g) A ~~governance~~ revitalization council may

(1) review the annual draft prepared under AS 14.03.120(a) detailing the goals described in the education plan and provide advice to the principal of the school before submitting the report to the superintendent of schools;

(2) assist the principal of the school in developing a revitalization plan before the plan is submitted to the superintendent of schools and cooperate with the department in developing a revitalization plan;

(3) assist the principal of the school in developing, conducting, and reporting the results of an annual survey of parents, guardians, and teachers on issues related to the school climate and conditions; and

(4) provide advice to the principal of the school on any other major policy matters affecting the school, except on any matters relating to a collective bargaining agreement between the exclusive bargaining unit for teachers.

(h) A local school board, in conjunction with the department shall provide appropriate training and instruction to members of the governance council to aid them in the execution of their duties.

(i) Not later than 30 days after a ~~governance~~ revitalization council informs the local school board of the completion of a revitalization model under (f) of this section, the local school board shall hold a public hearing to discuss the revitalization model and shall, at the next regularly scheduled meeting, conduct a vote to accept the model recommended by the ~~governance~~ revitalization council, select an alternative model, or maintain the current school status, as follows:

(1) if the local school board selects an alternative model, not later than 10 days after the vote of the local school board, the board shall meet with the governance council to discuss an agreement on the local school board's alternative revitalization model;

(2) if no agreement can be achieved, not later than 45 days after the last meeting between the local school board and the revitalization ~~governance~~ council, the department shall decide whether to adopt the council's revitalization model, ~~or~~ the local school board's alternative revitalization model or a mixture of the two to implement;

(3) if the local school board votes to maintain the current school status, not later than 45 days after a vote of the local school board, the department shall decide whether to implement the revitalization model recommended by the revitalization ~~governance~~ council or to maintain the current school status; if the final decision of the local school board is to adopt the revitalization model, or parts of the model, the local school board shall implement the approved model during the subsequent school year in conformance with state statutes and regulations and the provisions specified in federal regulations and guidelines for schools subject to corrective action under 20 U.S.C. 6316(b)(7)

(Elementary and Secondary Education Act of 1965), as amended, or other applicable federal laws or regulations.

(j) Within two years after a local school board votes on a revitalization model, the department shall, within available appropriations, monitor the schools and districts that have been designated as revitalization schools or districts for demonstrable progress, applying the following indicators:

(1) the revitalization model adopted by the school;

(2) the number and type of disciplinary incidents;

(3) the number of truants;

(4) the dropout rate;

(5) the student attendance rate;

(6) the average scale scores on the statewide secondary school graduation qualifying examination;

(7) for high schools, the number and percentage of students completing advanced placement coursework;

(8) the teacher retention rate; and

(9) the existence and size of the parent-teacher organization for the school.

(k) On or before July 1 of each odd-numbered year, the department shall report to the standing committees of the legislature having jurisdiction over education

(1) the number of ~~governance~~ revitalization councils that have initiated revitalization;

(2) a comparison of the ~~governance~~ revitalization councils that have initiated revitalization and those that have not; and

(3) whether parental involvement has increased at schools with ~~governance~~ revitalization councils.

*** Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SCHOOL REVITALIZATION; REPORTS TO THE LEGISLATURE. (a) On or before January 1, 2014, the Department of Education and Early Development shall report to the standing committees of the legislature having jurisdiction over education on

(1) the monitoring conducted under AS 14.03.124(j), added by sec. 4 of this Act;

(2) recommendations relating to changes in the revitalization options available to schools, including whether ~~governance~~ revitalization councils may continue to recommend revitalization;

(3) comparison of the revitalization models adopted; and

(4) the level of progress of schools adopting each revitalization model in relation to the indicators described in AS 14.03.124, added by sec. 4 of this Act.

(b) On or before January 1, 2018, the Department of Education and Early

30 Development shall evaluate the ~~governance~~ revitalization councils established under AS 14.03.124, added
31 by sec. 4 of this Act, for compliance with that section. On or before October 1, 2019, the
01 department shall report to the standing committees with jurisdiction over education on the
02 evaluation conducted under this subsection. The report must also include recommendations on
03 whether to continue to authorize ~~governance~~ revitalization councils to recommend revitalization models.

(Revised 1/17/2012 OMB)

Analysis

Sec. 2. As 14.03.123(g) amendment defines "low performing" and the bottom 3% in the state. Currently, this would be 17 schools. Therefore, this fiscal note includes cost estimates for providing the services and task as outlined in Sec. 3 AS 14.03.123 amendments and Sec. 14.03.124 for up to 17 schools.

Sec. 3. AS 14.03.123 cost estimates

(1) supply the school or district with a person who has training and experience in education and who can provide one-on-one assistance to enhance the quality of education in the school or district;
14 coaches at current rate of $69,000; **$966,000.00**

(2)provide an operations audit to identify possible programmatic savings and review the manner in which financial resources are being directed; Our current audit process expanded to include fiscal; 5 contractors (3 instructional auditors, 2 Fiscal) onsite at the district office and schools for 5 days; 3 report writing days at $600.00 per day x 5contractors x 8 days= $24,000 per audit x 14 audits= **$336,000**

(3) **No additional cost**;

(4) Provide Incentives to attract highly qualified teachers; 14 schools with and average of 15 teachers= 210 teachers with a $5,000 Incentive= **$1,050,000**

(5) provide additional training and technical assistance for parents and guardians of children attending the school or schools in the district and for teachers, principals, and central office staff hired by the district; **New SSOS staff**

(6) provide targeted resources for graduation success as requested by the local school board;
New and Current SSOS staff

(7) Identify Model curriculum and the department shall provide technical assistance to implement the curriculum; curriculum specific consultant grant to districts for up to $25,000 per districts , 8 district estimate with 14 revitalization schools.= **$200,000**

(8) Work with the local school board to develop and implement a plan to address deficits in achievement and in the learning environment as recommended in the academic performance audit conducted under; AASB consulting contract for 8 boards- **$69,000**

(9) Assign a technical assistance team to the school or district to guide school or district initiatives and report progress to the commissioner; 4 Technical assistance team consultants for all 8 districts at contract rate of $69,000= **$552,000** (10) Establish instructional and learning environment benchmarks; **New and Current SSOS staff**

(11) Direct the establishment of learning cohorts in schools that require continuous monitoring of student performance by teacher groups; **New and Current SSOS staff**

(12) provide training to local school boards through the Association of Alaska School Boards to improve their operational efficiency and effectiveness as leaders of their districts in ensuring delivery of quality education, and require local school boards to submit to the commissioner an annual action plan that outlines when and the manner in which the local school board's effectiveness will be monitored, **see (8)**

(i) (j) and (k) external review team to conduct an academic performance audit of the district and report of audit findings.Our current audit process expanded to include fiscal; 5 contractors (3 instructional auditors, 2 Fiscal) onsite at the district office and schools for 5 days; 3 report writing days at $600.00 per day x 5 contractors x 8 days= $24,000 per audit x 8 audits= **$192,000**

Analysis Continued

Sec. 4. 14.03.124. Revitalization designation; plan; governance council

(5) Establish a superintendent cohort made up of the superintendent of the revitalization district and two superintendents of districts in the state that are not in revitalization status; the superintendent cohort shall meet regularly and, within nine months after the revitalization designation, report to the governance council established under this section.

Travel and perdiem for 2 superintendents for 7, 2 day meetings: $265 per day (perdiem and hotel) x 2= $530.00; airfare $1,000 x 2= 2,530 x8 districts = 20,240 x 7 meetings= **$141,680.00**

(c) A local school board that governs a school or district that has been designated as a revitalization school or district shall establish a governance council for each school designated for revitalization

Governance perdiem based on a council team of 12 members meeting 3 times per year for 5 days (1 travel day). $265 per day (perdiem and hotel) x 5 days x 12 members x 3 meetings = $47,700 x 14 councils= $658,000; airfare $1,000 X 3 meetings X 12 members= 36,000 x 14 councils= $504,000.00 **Total $1,162,000.00**

Sec. 5. SCHOOL REVITALIZATION; REPORTS TO THE LEGISLATURE

1 full time staff member, Education Specialist II, to coordinated and ensure legislative reports and timelines are meet; $92,378.27, staff travel: 17 trips x $1,000 per trip= 14,000; **Total $106,378.00**

Changes to SB 194

1) Page. 2, line 15; added "and retain" and changed language to "high quality" to subsection (4)

2) Page. 3, lines 27, 28 and 30; added "the degree of" to subsections (5), (6) and (8)

3) Page 4, line 7; changed "goverance" to "revitalization advisory" (This change occurs throughout the entire bill; specific instances will not be addressed individually.)

4) Page 4, line 8; deleted "or district" "(This change also occurs throughout the entire bill; specific instances will not be addressed individually.)

5) Page 4, lines 10, 11; the phrase "in conjunction with the local school board and the district superintendent" are added.

6) Page 4, Line 11; "shall" is changed to "may"

7) Page 4, Lines 25, 26; "request the establishment of a governance council for a school" is changed to "may request the local school board to establish a revitalization advisory council for a school"

8) Page 4, line 31; "shall consist of 13 members" adds 13 as a total.

9) Page 5, lines 11-14; adds (d) "For a local school board consisting of more than five members, the board may appoint not more than three of its members to a revitalization advisory council. For a local school board consisting of five or fewer members, the board may appoint not more than two of its members to a revitalization advisory council."

10) Page 7, lines 15-18; Edited and deleted parts of the previous section. Replaced with "(2) if no agreement can be achieved, not later than 45 days after the last meeting between the local school board and the revitalization advisory council, the local school board shall report to the department the reasons for rejecting the revitalization model developed by the revitalization advisory council;

11) Page 7, lines 19-24; Deleted section that required departmental decision making if board elects to maintain current status. Added ""or part" to the sentence concerning the boards adoption of a revitalization model.

CS FOR SENATE BILL NO. 194(EDC)

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY THE SENATE EDUCATION COMMITTEE

Offered:
Referred:

Sponsor(s): SENATE EDUCATION COMMITTEE

A BILL

FOR AN ACT ENTITLED

"An Act providing for a school improvement and revitalization procedure in the Department of Education and Early Development; establishing advisory councils for school improvement; and requiring reports to the legislature."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.03.123(d) is amended to read:

(d) A public school or district that **is designated as a low-performing school or district** [RECEIVES A LOW PERFORMANCE DESIGNATION UNDER THIS SECTION] shall prepare and submit to the department a school or district improvement plan, as applicable, **and shall cooperate with the department,** in accordance with **AS 14.03.124 and** regulations adopted by the board. The improvement plan must be prepared with the maximum feasible public participation of the community, including, as appropriate, interested individuals, teachers, parents, parent organizations, students, tribal organizations, local government representatives, and other community groups.

* **Sec. 2.** AS 14.03.123(g) is amended by adding a new paragraph to read:

(3) "low-performing" means the bottom three percent in the state for performance based on the accountability measures described in (f)(2) of this section.

* **Sec. 3.** AS 14.03.123 is amended by adding new subsections to read:

(h) The department shall work with and evaluate a public school or district that receives a low performance designation under (d) of this section to improve the school or district as follows:

(1) supply the school or district with a person who has training and experience in education and who can provide one-on-one assistance to enhance the quality of education in the school or district;

(2) provide an operations audit to identify possible programmatic savings and review the manner in which financial resources are being directed;

(3) direct the local school board to use state and federal funds for critical needs, as directed by the state Board of Education and Early Development;

(4) provide incentives to attract and retain high quality teachers and principals;

(5) provide additional training and technical assistance for parents and guardians of children attending the school or schools in the district and for teachers, principals, and central office staff hired by the district;

(6) provide targeted resources for graduation success as requested by the local school board;

(7) direct the local school board to identify model curriculum, including recommended textbooks, materials, and supplies approved by the department; if a new curriculum is required, the department shall provide technical assistance to implement the curriculum;

(8) work with the local school board to develop and implement a plan to address deficits in achievement and in the learning environment as recommended in the academic performance audit conducted under (j) of this section;

(9) assign a technical assistance team to the school or district to guide school or district initiatives and report progress to the commissioner;

(10) establish instructional and learning environment benchmarks for

the school or district to meet as it progresses toward removal of the designation of low-performing schools or districts;

(11) direct the establishment of learning cohorts in schools that require continuous monitoring of student performance by teacher groups;

(12) provide training to local school boards through the Association of Alaska School Boards to improve their operational efficiency and effectiveness as leaders of their districts in ensuring delivery of quality education, and require local school boards to submit to the commissioner an annual action plan that outlines when and the manner in which the local school board's effectiveness will be monitored.

(i) For two years following a designation of a school or district as low performing, the department shall contract with an external review team to conduct an academic performance audit of the district and each low-performing school in the district to identify the potential reasons for the school's low performance and lack of progress. The review team shall consist of persons who have expertise in comprehensive school and district reform. A review team may not include staff of the school district that is the subject of the audit or staff of the department. The review team shall meet with and report to the department and the superintendent of the district.

(j) The audit required under (i) of this section shall be conducted based on criteria developed by the department in the areas of curriculum, assessment, instruction, learning environment, professional development, and leadership and must include an examination of the following:

(1) student demographics;

(2) mobility patterns;

(3) school feeder patterns;

(4) strategic allocation of resources;

(5) the degree of high standards and expectations for all students;

(6) the degree of collaboration and communication;

(7) frequency of monitoring of learning and teaching;

(8) the degree of family and community involvement;

(9) alternative secondary schools best practices; and

(10) any unique circumstances or characteristics of the school or district, including substance abuse and other social factors.

(k) The department shall make audit findings available to the audited school district and staff, the local community, and the state Board of Education and Early Development.

*** Sec. 4.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.124. Revitalization designation; plan; revitalization advisory council. (a) For a public school that, after three consecutive years of school improvement efforts under AS 14.03.123(d) and (h) - (k), continues to be a low-performing school, as described in AS 14.03.123, the department, in conjunction with the local school board and the district superintendent, may

(1) designate the school as a revitalization school;

(2) continue to identify a revitalization school and operate under a school revitalization plan developed by the department and the district until taken off revitalization status;

(3) assist the local school board with developing and implementing a revitalization plan as provided under this section;

(4) maintain eligibility of the school for available federal and state aid; and

(5) establish a superintendent cohort made up of the superintendent of the district in which the revitalization school is located and two superintendents of districts in the state that have no schools in revitalization status; the superintendent cohort shall meet regularly and, within nine months after the revitalization designation, report to the revitalization advisory council established under this section.

(b) A school that has not been designated as a revitalization school may request the local school board to establish a revitalization advisory council for a school in the district consistent with this section.

(c) A local school board that governs a school that has been designated as a revitalization school shall establish a revitalization advisory council for each school designated for revitalization. Except as provided in (e) of this section, a revitalization advisory council for a school shall consist of ~~13~~ up to members appointed by the local

school board, as follows:

(1) ~~four~~ parents or guardians of students attending the school, ~~nominated by parents or guardians of the school;~~

(2) ~~four~~ community leaders residing within the school district, ~~nominated by the members selected under (1) and (3) of this subsection;~~

(3) ~~two~~ teachers at the school, ~~nominated by teachers at the school~~;

(4) one representative from the department;

(5) the principal of the school; and

(6) the superintendent of the district or a representative of the superintendent cohort established under (a)(5) of this section.

(d) For a local school board consisting of more than five members, the board may appoint not more than three of its members to a revitalization advisory council. For a local school board consisting of five or fewer members, the board may appoint not more than two of its members to a revitalization advisory council.

(e) If a district has only one operating school, the district may petition the department for a reduction of the revitalization advisory council membership from four parents to two parents, from four community leaders to one community leader, and from two teachers to one teacher.

(f) Terms of members of the revitalization advisory council selected under (c) or (e) of this section shall be for two years, and a member may not serve more than two terms on the council. Members of the revitalization advisory council serve without compensation but are entitled to per diem and other expenses authorized for boards and commissions under AS 39.20.180.

(g) A revitalization advisory council may, in conjunction with the department and the superintendent cohort established under (a)(5) of this section,

(1) analyze school achievement data and school needs related to the improvement plan for the school prepared under AS 14.03.123(d);

(2) meet with and review the report of the superintendent cohort established under (a)(5) of this section;

(3) participate in the hiring process of the school principal or other administrators of the school by conducting interviews of candidates and reporting the

results of the interviews to the superintendent of schools for the school district and to the local school board;

(4) assist the principal of the school in making programmatic and operational changes to improve the school's achievement, including adjustments in program, school hours and days of operation, and enrollment goals for the school;

(5) work with the school administration to develop and approve a school compact for parents and legal guardians and students that includes an outline of the criteria and responsibilities for enrollment and school membership consistent with the school's goals and academic focus, including means by which parents and school personnel may build a partnership to improve student learning;

(6) develop and approve a written parent involvement policy that outlines the role of parents and legal guardians in the school;

(7) if intervention by the department is required, the revitalization advisory council shall work with the department and the local school board to develop an intervention plan for the school involving available local, regional, and statewide resources;

(8) prepare a revitalization model that takes into account recommendations consistent with the duties in (1) - (7) of this subsection for review and a vote as provided under (j) of this section.

(h) A revitalization advisory council may

(1) review the annual draft prepared under AS 14.03.120(a) detailing the goals described in the education plan and provide advice to the principal of the school before submitting the report to the superintendent of schools;

(2) assist the principal of the school in developing a revitalization plan before the plan is submitted to the superintendent of schools and cooperate with the department in developing a revitalization plan;

(3) assist the principal of the school in developing, conducting, and reporting the results of an annual survey of parents, guardians, and teachers on issues related to the school climate and conditions; and

(4) provide advice to the principal of the school on any other major policy matters affecting the school, except on any matters relating to a collective

bargaining agreement between the exclusive bargaining unit for teachers.

(i) A local school board, in conjunction with the department, shall provide appropriate training and instruction to members of the revitalization advisory council to aid them in the execution of their duties.

(j) Not later than 30 days after a revitalization advisory council informs the local school board of the completion of a revitalization model under (g) of this section, the local school board shall hold a public hearing to discuss the revitalization model and shall, at the next regularly scheduled meeting, conduct a vote to accept the model recommended by the revitalization advisory council, select an alternative model, or maintain the current school status, as follows:

(1) if the local school board selects an alternative model, not later than 10 days after the vote of the local school board, the local school board shall meet with the revitalization advisory council to discuss an agreement on the local school board's alternative revitalization model;

(2) if no agreement can be achieved, not later than 45 days after the last meeting between the local school board and the revitalization advisory council, the local school board shall report to the department the reasons for rejecting the revitalization model developed by the revitalization advisory council;

(3) if the final decision of the local school board is to adopt all or part of the revitalization model, the local school board shall implement the approved model during the subsequent school year in conformance with state statutes and regulations and the provisions specified in federal regulations and guidelines for schools subject to corrective action under 20 U.S.C. 6316(b)(7) (Elementary and Secondary Education Act of 1965), as amended, or other applicable federal laws or regulations.

(k) Within two years after a local school board votes on a revitalization model, the department shall, within available appropriations, monitor the schools that have been designated as revitalization schools for demonstrable progress, applying the following indicators:

(1) the revitalization model adopted by the school;

(2) the number and type of disciplinary incidents;

(3) the number of truants;

(4) the dropout rate;

(5) the student attendance rate;

(6) the average scale scores on the statewide secondary school graduation qualifying examination;

(7) for high schools, the number and percentage of students completing advanced placement coursework;

(8) the teacher retention rate; and

(9) the existence and size of the parent-teacher organization for the school.

(*l*) On or before July 1 of each odd-numbered year, the department shall report to the standing committees of the legislature having jurisdiction over education

(1) the number of local school boards that have implemented a revitalization model;

(2) a comparison of the school status after local school boards have initiated a revitalization model and the school status after local school boards have rejected a revitalization model; and

(3) whether parental involvement has increased at schools with revitalization advisory councils.

* **Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SCHOOL REVITALIZATION; REPORTS TO THE LEGISLATURE. (a) On or before January 1, 2014, the Department of Education and Early Development shall report to the standing committees of the legislature having jurisdiction over education on

(1) the monitoring conducted under AS 14.03.124(k), added by sec. 4 of this Act;

(2) recommendations relating to changes in the revitalization options available to schools, including whether revitalization advisory councils may continue to recommend revitalization;

(3) comparison of the revitalization models adopted; and

(4) the level of progress of schools adopting each revitalization model in relation to the indicators described in AS 14.03.124, added by sec. 4 of this Act.

(b) On or before January 1, 2018, the Department of Education and Early Development shall evaluate the revitalization advisory councils established under AS 14.03.124, added by sec. 4 of this Act, for compliance with that section. On or before October 1, 2019, the department shall report to the standing committees with jurisdiction over education on the evaluation conducted under this subsection. The report must also include recommendations on whether to continue to authorize revitalization advisory councils to recommend revitalization models.

Meeting Script – Wednesday, February 15 –

CHAIRMAN THOMAS

The Senate Education Committee meeting is called to order.

Today is Wednesday, February 15, and the time is 8:00 a.m. In attendance are:

- Co-Chair Senator Meyer
- Vice-Chair, Senator Davis
- Senator Stevens
- Senator French
- and myself, Senator Thomas.

We have a quorum to conduct business.

Welcome, everyone. First, is there any business to come before the committee before we get started?

Today will continue our discussion of SB 194. We went through the bill on Monday, and there were some significant questions raised during the presentation. We have taken your concerns into account, and today staff will present some suggested changes based on your comments. We will also hear public testimony today.

Many states struggle with how to help their lower performing schools. Some states have active plans to help their schools. In Alaska we have local control, which works extremely well for the majority of our districts. However there are some cases where assistance is needed to help districts give our children a quality education.

SB 194 targets our lowest performing schools for additional help from the Department of Education and their local communities. While there is no silver bullet for fixing all our educational problems, we cannot afford to stand by idly and let low performing districts continue to struggle on their own. SB 194 gives the department, local communities and district superintendents the tools they need to help our students succeed.

My aide, Murray Richmond will walk us through the suggested changes in the bill. We are not offering a CS yet, but will do so when we are sure that your concerns about the bill are adequately addressed. Today we will hear the suggested changes, and hear public testimony concerning the bill, and then set it aside for further review.

Murray please come up and put yourself on the record:

{Murray comes up, walks committee through the bill}

Thank you. Are there any remaining questions? Senator Meyer?

{AFTER QUESTIONS}

Thank you. And now we will open this up to public testimony.

{IF TIME, and if Elizabeth is here}

There is a fiscal note for the bill, and Elizabeth Nudelman is here to answer questions about that.

We will have a revised fiscal note & a CS Friday to follow

Our next meeting will be Friday, February 17th at 8:00 a.m., **here in the Beltz Committee Room.** We will hear public testimony for SB 182, "An Act amending the amount of state funding provided to school districts for pupil transportation." .

And with that, we are adjourned at _____ a.m.

SENATE BILL NO. 194

"An Act providing for a school improvement and revitalization procedure in the Department of Education and Early Development; establishing advisory councils for school improvement; and requiring reports to the legislature."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

* **Section 1.** AS 14.03.123(d) is amended to read:

(d) A public school or district that **is designated as a low-performing school or district** [RECEIVES A LOW PERFORMANCE DESIGNATION UNDER THIS SECTION] shall prepare and submit to the department a school or district improvement plan, as applicable, **and shall cooperate with the department,** in accordance with **AS 14.03.124 and** regulations adopted by the board. The improvement plan must be prepared with the maximum feasible public participation of the community, including, as appropriate, interested individuals, teachers, parents, parent organizations, students, tribal organizations, local government representatives, and other community groups.

* **Sec. 2.** AS 14.03.123(g) is amended by adding a new paragraph to read:

(3) "low-performing" means the bottom three percent in the state for performance based on the accountability measures described in (f)(2) of this section.

* **Sec. 3.** AS 14.03.123 is amended by adding new subsections to read:

(h) The department shall work with and evaluate a public school or district that receives a low performance designation under (d) of this section to improve the school or district as follows:

(1) supply the school or district with a person who has training and experience in education and who can provide one-on-one assistance to enhance the quality of education in the school or district;

(2) provide an operations audit to identify possible programmatic savings and review the manner in which financial resources are being directed;

(3) direct the local school board to use state and federal funds for critical needs, as directed by the state Board of Education and Early Development;

(4) provide incentives to attract highly qualified teachers and principals;

(5) provide additional training and technical assistance for parents and guardians of children attending the school or schools in the district and for teachers, principals, and central office staff hired by the district;

(6) provide targeted resources for graduation success as requested by the local school board;

(7) direct the local school board to identify model curriculum, including recommended textbooks, materials, and supplies approved by the department; if a new curriculum is required, the department shall provide technical assistance to implement the curriculum;

(8) work with the local school board to develop and implement a plan to address deficits in achievement and in the learning environment as recommended in the academic performance audit conducted under (i) of this section;

(9) assign a technical assistance team to the school or district to guide school or district initiatives and report progress to the commissioner;

(10) establish instructional and learning environment benchmarks for the school or district to meet as it progresses toward removal of the designation of low-performing schools or districts;

(11) direct the establishment of learning cohorts in schools that require continuous monitoring of student performance by teacher groups;

(12) provide training to local school boards through the Association of Alaska School Boards to improve their operational efficiency and effectiveness as leaders of their districts in ensuring delivery of quality education, and require local school boards to submit to the commissioner an annual action plan that outlines when and the manner in which the local school board's effectiveness will be monitored.

(i) For two years following a designation of a school or district as low performing, the department shall contract with an external review team to conduct an academic performance audit of the district and each low-performing school in the district to identify the potential reasons for the school's low performance and lack of progress. The review team shall consist of persons who have expertise in comprehensive school and district reform. A review team may not include staff of the school district that is the subject of the audit or staff of the department. The review team shall meet with and report to the department and the superintendent of the district.

(j) The audit required under (i) of this section shall be conducted based on criteria developed by the department in the areas of curriculum, assessment, instruction, learning environment, professional development, and leadership and must include an examination of the following:

(1) student demographics;

(2) mobility patterns;

(3) school feeder patterns;

(4) strategic allocation of resources;

(5) the degree of high standards and expectations for all students;

(6) the degree of ~~high level of~~ collaboration and communication;

(7) frequency of monitoring of learning and teaching;

(8) ~~high level~~ the degree of family and community involvement;

(9) alternative secondary schools best practices; and

(10) any unique circumstances or characteristics of the school or district, including substance abuse and other social factors.

(k) The department shall make audit findings available to the audited school

district and staff, the local community, and the state Board of Education and Early Development.

* **Sec. 4.** AS 14.03 is amended by adding a new section to read:

Sec. 14.03.124. Revitalization designation; plan; governance council. (a) For a public school ~~or district~~ that, after three consecutive years of school improvement efforts under AS 14.03.123(d) and (h) - (k), continues to be a low-performing school, as described in AS 14.03.123, the department, in conjunction with the local school board and the district superintendent may ~~shall~~

(1) designate the school ~~or district~~ as a revitalization school or district;

(2) continue to identify a revitalization school ~~or district~~ and operate under a school revitalization plan developed by the department and the district until taken off revitalization status;

(3) assist the local school board with developing and implementing a revitalization plan as provided under this section;

(4) maintain eligibility of the school or district for available federal and state aid; and

(5) establish a superintendent cohort made up of the superintendent of the revitalization district and two superintendents of districts in the state that are not in revitalization status; the superintendent cohort shall meet regularly and, within nine months after the revitalization designation, report to the governance council established under this section.

(b) A school ~~or district~~ that has not been designated as a revitalization school or district may, through the school board, request the establishment of a revitalization advisory ~~governance~~ council for a school in the district ~~or for the district~~ consistent with this section.

(c) A local school board that governs a school ~~or district~~ that has been designated as a revitalization school ~~or district~~ shall establish a governance council for each school designated for revitalization. Except as provided in (d) of this section, a ~~governance~~ revitalization council for a school shall consist of members appointed by the local school board, only ~~one~~ three of whom may be a current school board member, as follows:

(1) four parents or guardians of students attending the school, nominated by parents or guardians of the school;

(2) four community leaders residing within the school district, nominated by the members selected under (1) and (3) of this subsection;

(3) two teachers at the school, nominated by teachers at the school;

(4) one representative from the department;

(5) one to four principals of the schools in the district or the principals' designees; and

(6) the superintendent of the district or a representative of the

superintendent cohort established under (a)(5) of this section.

(d) If a district has only one operating school, the district may petition the department for a reduction of the ~~governance~~ revitalization council membership from four parents to two parents, from four community leaders to one community leader, and from two teachers to one teacher.

(e) Terms of members of the governance council selected under (c) or (d) of this section shall be for two years, and no member shall serve more than two terms on the council. Members of the ~~governance~~ revitalization council serve without compensation but are entitled to per diem and other expenses authorized for boards and commissions under AS 39.20.180.

(f) A ~~governance~~ revitalization council may ~~shall~~, in conjunction with the department and the superintendent cohort established under (a)(5) of this section,

(1) analyze school achievement data and school needs related to the improvement plan for the school prepared under AS 14.03.123(d);

(2) meet with and review the report of the superintendent cohort established under (a)(5) of this section;

(3) participate in the hiring process of the school principal or other administrators of the school by conducting interviews of candidates and reporting the results of the interviews to the superintendent of schools for the school district and to the local school board;

(4) assist the principal of the school in making programmatic and operational changes to improve the school's achievement, including adjustments in program, school hours and days of operation, and enrollment goals for the school;

(5) work with the school administration to develop and approve a school compact for parents and legal guardians and students that includes an outline of the criteria and responsibilities for enrollment and school membership consistent with the school's goals and academic focus, including means by which parents and school personnel may build a partnership to improve student learning;

(6) develop and approve a written parent involvement policy that outlines the role of parents and legal guardians in the school;

(7) if the governance council determines it necessary to recommend intervention by the department, work with the department to develop an intervention plan for the school involving available local, regional, and statewide resources;

(8) prepare a revitalization model that takes into account recommendations consistent with the duties in (1) - (7) of this subsection for review and a vote as provided under (i) of this section.

(g) A ~~governance~~ revitalization council may

(1) review the annual draft prepared under AS 14.03.120(a) detailing the goals described in the education plan and provide advice to the principal of the school before submitting the report to the superintendent of schools;

(2) assist the principal of the school in developing a revitalization plan before the plan is submitted to the superintendent of schools and cooperate with the department in developing a revitalization plan;

(3) assist the principal of the school in developing, conducting, and reporting the results of an annual survey of parents, guardians, and teachers on issues related to the school climate and conditions; and

(4) provide advice to the principal of the school on any other major policy matters affecting the school, except on any matters relating to a collective bargaining agreement between the exclusive bargaining unit for teachers.

(h) A local school board, in conjunction with the department shall provide appropriate training and instruction to members of the governance council to aid them in the execution of their duties.

(i) Not later than 30 days after a ~~governance~~ revitalization council informs the local school board of the completion of a revitalization model under (f) of this section, the local school board shall hold a public hearing to discuss the revitalization model and shall, at the next regularly scheduled meeting, conduct a vote to accept the model recommended by the ~~governance~~ revitalization council, select an alternative model, or maintain the current school status, as follows:

(1) if the local school board selects an alternative model, not later than 10 days after the vote of the local school board, the board shall meet with the governance council to discuss an agreement on the local school board's alternative revitalization model;

(2) if no agreement can be achieved, not later than 45 days after the last meeting between the local school board and the governance council, the department shall decide whether to adopt the council's revitalization model or the local school board's alternative revitalization model to implement;

(3) if the local school board votes to maintain the current school status, not later than 45 days after a vote of the local school board, the department shall decide whether to implement the revitalization model recommended by the governance council or to maintain the current school status; if the final decision of the local school board is to adopt the revitalization model, the local school board shall implement the approved model during the subsequent school year in conformance with state statutes and regulations and the provisions specified in federal regulations and guidelines for schools subject to corrective action under 20 U.S.C. 6316(b)(7) (Elementary and Secondary Education Act of 1965), as amended, or other applicable

federal laws or regulations.

(j) Within two years after a local school board votes on a revitalization model, the department shall, within available appropriations, monitor the schools and districts that have been designated as revitalization schools or districts for demonstrable progress, applying the following indicators:

(1) the revitalization model adopted by the school;

(2) the number and type of disciplinary incidents;

(3) the number of truants;

(4) the dropout rate;

(5) the student attendance rate;

(6) the average scale scores on the statewide secondary school graduation qualifying examination;

(7) for high schools, the number and percentage of students completing advanced placement coursework;

(8) the teacher retention rate; and

(9) the existence and size of the parent-teacher organization for the school.

(k) On or before July 1 of each odd-numbered year, the department shall report to the standing committees of the legislature having jurisdiction over education

(1) the number of governance councils that have initiated revitalization;

(2) a comparison of the governance councils that have initiated revitalization and those that have not; and

(3) whether parental involvement has increased at schools with governance councils.

* **Sec. 5.** The uncodified law of the State of Alaska is amended by adding a new section to read:

SCHOOL REVITALIZATION; REPORTS TO THE LEGISLATURE. (a) On or before January 1, 2014, the Department of Education and Early Development shall report to the standing committees of the legislature having jurisdiction over education on

(1) the monitoring conducted under AS 14.03.124(j), added by sec. 4 of this Act;

(2) recommendations relating to changes in the revitalization options available to schools, including whether governance councils may continue to recommend revitalization;

(3) comparison of the revitalization models adopted; and

(4) the level of progress of schools adopting each revitalization model in relation to the indicators described in AS 14.03.124, added by sec. 4 of this Act.

(b) On or before January 1, 2018, the Department of Education and Early Development shall evaluate the governance councils established under AS 14.03.124, added by sec. 4 of this Act, for compliance with that section. On or before October 1, 2019, the

01 department shall report to the standing committees with jurisdiction over education on the
02 evaluation conducted under this subsection. The report must also include recommendations
on
03 whether to continue to authorize governance councils to recommend revitalization models.

Gainesville school board wants more input from governance councils

Dallas Duncan
dduncan@gainesvilletimes.com
January 2, 2012

Gainesville City Schools board members are looking to have more input from parents and school leaders in policy development.

At a previous board meeting, members asked to set up a policy development process that increases involvement from school governance councils.

"It's been in place but they want to make sure there's a formal checkoff," Superintendent Merrianne Dyer said. "A policy would be up to be reviewed by the board. If there's no changes, then we would send it to the governance councils and say, 'The board has done first reading and seen no changes to be made. We want your feedback.'"

Now the school board wants a formal policy review by the governance councils, complete with a written report. With the existing policy review process, the only things that require a formal report from the governance councils are school calendars and reduced work schedule days, Dyer said.

"The Georgia School Boards Association says your policy should be reviewed on a rolling basis. Every now and then something changes with legislation or federal policy, or it could be a practice that changes. The board wants to be sure that our policies are kept current," Dyer said. "They seek input from constituents. Our school board wanted to be sure that our governance councils were formally made a part of that."

School governance councils consist of the principal, two teachers, two to six parents and two business partners and community leaders. All but the principal are elected by faculty and other parents, Dyer said.

State law requires all schools to have a school council to review student achievement data, engage parents and advise the principal.

"A school governance council like we have, they are actually a decision-making

body about items that are in the charter," Dyer said.

The governance councils can make decisions about extracurricular activities, which include athletics, after-school programs, tutoring and clubs. They are also in charge of surveying their school community and interviewing and recommending new administrative personnel to the school board.

The only exception to that is when an administrator is transferred between schools. The school board, school governance council and Dyer are involved in that process.

Though it's not explicit in the school system charter, school governance councils also have some say in the school budgets, which are developed by the principal. Dyer said the community leaders in the governance council are good assets with that process, as they have financial planning experience.

"It just increases the decision-making force and the involvement of all the stakeholders. It also, in my opinion, takes some of the pressure off the board and superintendent because it shares the decisions," Dyer said.

Empowering Parents and Building Communities: The Role of School-based Councils in Educational Governance and Accountability

(First Draft)

May 31, 2002

Alec Ian Gershberg, New School University
Gavin Shatkin, University of Michigan

New York: The New School University, Community Development Research Center, Working Paper #2002-004

Introduction

In recent years, policy-makers and educators have increasingly recognized that parents can play an important role in school governance. This recognition has coincided with a global trend towards decentralization of the education sector and reforms for greater decision-making autonomy at the school level, reforms that have usually been premised on the need for improved school performance and accountability. Most commonly termed school-based management, or SBM, such reforms have been adopted by school systems as diverse as those in Victoria, Australia; Memphis, Tennessee; Chicago, Illinois; Nicaragua; and Minas Gerias, Brazil. These reform efforts have institutionalized the participation of parents, community-members, teachers, students, and other role groups through school-site councils (SSCs) while holding principals responsible for academic performance. The formation of SSCs is premised on the theory that providing a voice for various stakeholders in schools will lead to better decision-making and a greater commitment from all groups to improved educational outcomes (Odden et al 199?; Gershberg 1999b).

These reforms have implications for community development that have largely been disregarded in both the education and community development literatures (Stone et al 1999). Particularly in low-income communities, schools influence the socioeconomic and cultural fortunes of communities both because they are often one of the few viable institutions that remain when neighborhoods experience decline, and because upwardly mobile families often cite the decline of schools as a reason for leaving a neighborhood. If the proponents of SBM are correct in their assessment of the benefits of such reforms, parent participation has the potential to create a virtuous circle of school improvement and community development in several ways:

- Parent participation may lead to new initiatives in schools that provide needed services to community residents such as health care, counseling, literacy assistance, or English as a second language;
- Participation may provide parents with opportunities to develop leadership skills, thereby acting as an impetus for leadership development in communities;
- Collaborative decision-making may strengthen ties between schools and communities, leading to a greater commitment of resources to schools by local businesses and individuals;
- SBM may lead to curriculum and instruction that is better suited to community strengths and capabilities, thereby leading to improved educational achievement and reducing or reversing the flight of middle-class families.

We know little, however, about when parent participation is successful, and the circumstances under which the outcomes listed above may occur. Reform models vary significantly in the composition of SSCs and the extent of decentralization. Some councils have a majority of parents while others are led by school staff with some parental and community representation. Some have advisory or even perfunctory powers while others can hire and dismiss the principal and set important school policies. Several questions remain: What circumstances and reform models lead to effective parent participation? Does such participation have the desired impact on educational performance? And, finally, does participation lead to the outcomes for community development listed above?

This paper argues that SBM reforms can, under certain circumstances, result in effective parent participation and that when it does, community development benefits can be realized. It does so through an examination of SBM in four jurisdictions—Kentucky, Hawaii, Chicago, and the Ysleta Independent School District in El Paso, Texas—that have undertaken particularly ambitious experiments with SBM. Data for the paper are derived from secondary sources and interviews with key actors in school reform in each of the four places including public officials, representatives of non-profit organizations, academics, as well as parents, principals, and teachers who have participated in SSCs. Interviews were conducted during visits to the four places between April of 2000 and March of 2001.

In the first section of the paper, we review the literature on SBM and develop a framework for analyzing the relationship between SBM, the role of parents on SSCs, and community development outcomes. We then discuss the extent of parental participation in schools in the two states and two cities and the impact of these reforms on school decision-making and educational outcomes. In the final section, we discuss the relationship between SBM and community development.

Parent Participation in School-Based Management: A Review of the Literature

The emergence of school site councils represents a fundamental departure from conventional relations between parents and school professionals. As such the literature on the subject is in a formative stage,

primarily consisting of case studies of a handful of well-publicized examples of SBM, most notably Chicago and Kentucky (Hess ed. 1992; Pankratz and Petrosko 2000). Few have attempted to synthesize lessons and develop a generalizable framework with which to assess experiences with SBM (Summers and Johnson 1996; Wohlstetter et al 1995). Fewer still have focused on the implications of such reforms for disadvantaged communities. This section will develop a comparative framework for analyzing the role of parent participation in school governance and the implications of such participation for school improvement and school-community relations.

The earliest experiments with SBM were initiated in the late 1980s, and were a response to the perceived failures of school systems. Popular perceptions viewed a lack of accountability in schools as contributing to a waste of funds, inappropriate and outdated curriculum and instructional practices, and a lack of responsiveness of schools to parents and children (Hess and Easton 1992; Pankratz 2000). SBM has frequently been implemented alongside measures to use standardized testing to determine school funding and teacher assignments—the rationale is to provide schools with the flexibility to be innovative, while holding them accountable for the results (Pankratz 2000). By the mid-1990s statewide mandates for SBM had been instituted in Kentucky, Hawaii, Texas, Colorado, and North Carolina. City or countywide mandates were in place in Chicago, Miami, Memphis, Los Angeles, San Diego, Rochester, and Cincinnati, among others.

Models of SBM vary widely. In some cases, SSCs are empowered to make binding decisions and establish policy regarding personnel, budget, curriculum, and extra-curricular activities (Table 1). Chicago's SSCs have perhaps the widest range of powers, including the authority to hire and dismiss principals, develop and implement school improvement plans, and set the school budget (Bryk et al 1997). In other cases, council powers are merely advisory, and the scope of their authority is more limited. Councils also differ in the groups they represent, which may include principals, teachers, parents, community residents, students, and school staff. In most cases, teachers and the principal form the majority; Chicago is the only large school system in which parents and community representatives are mandated by law to have

majority membership on councils. The proportion of representatives from each group on councils has obvious implications for their relative influence; weak representation of parents is often a significant obstacle to their effective participation.

Table 1: Types of Decisions that may be Decentralized to School-Site Councils

Organization of Instruction	Set instruction time. Choose textbooks Define curriculum content Determine teaching methods
Personnel Management	Hire and fire school principal Recruit and hire teachers Set or augment teacher pay scale Assign teaching responsibilities Determine provision of in-service training
Planning and Structures	Create or close a school Select programs offered in school Define course content Set examinations to monitor school performance
Resources	Develop school improvement plan Allocate personnel budget Allocate non-personnel budget Allocate resources for in-service teacher training

The main rationale for the adoption of SBM is that it will lead to improved student academic performance. A growing qualitative and quantitative research literature has emerged on the characteristics of high-performing or effective schools (Mohrman and Wohlstetter 1994; Creemers 1994; Darling-Hammond 1997) that mirrors the much larger literature on successful organizations (Barzelay 1992; Lawler 1992). This literature concludes that strong leadership, highly qualified and committed staff, a focus on learning, and responsibility for results characterize high-performing schools. Another set of literature reviews the evidence on the process by which schools improve, and yields conclusions that are consistent with the effective schools research. For example, in an evaluation of school improvement on three continents, Dalin et al (1994) concludes that essential ingredients in successful reforms are a sustained commitment to quality improvement, local empowerment to adapt programs to local conditions, strong emphasis on school and classroom practice, and strong support linkages between education authorities and the school "via information, assistance, pressure and rewards."

Advocates for SBM and SSCs argue that these reforms contribute to these outcomes in several ways. First, SBM may stimulate leadership development among principals by enabling them to effectively develop and communicate a school-wide and community-wide commitment to a common mission and vision for the school, which can be managed by the implementation of the school improvement plan. Second, SBM and school site councils can contribute to excellent teaching in a variety of ways. When decisions on significant pedagogic matters are transferred to schools, teachers are empowered and motivated to work collectively to improve services delivered to students. When school principals are given the authority to carry out meaningful evaluations of teaching staff, teachers can focus their training on what they need to improve. When resources for training and training decisions are given to the school, teachers and principals can be demand-driven in purchasing the training they need, rather than being supply-driven in accessing training provided by centralized bureaucracies. Third, SBM can facilitate and reinforce a focus on student learning by providing the information required to assess learning problems, devolving appropriate pedagogic decision-making to the school, and allocating additional resources to schools with special needs. The visible product of this process is a solid school improvement plan, constructed with the active participation of teachers and the community, and with real possibilities of being implemented.

Finally, when implemented along with measures to assert standards for educational achievement, SBM can also enhance accountability in two ways. First, it provides a mechanism for 'accountability from below' from parents, community representatives and students to complement the 'accountability from above' from the Board of Education and other school bureaucracies. Providing all stakeholders with a voice in school decisions also makes politically sensitive measures to increase accountability more palatable. For example, the decentralization reform in Chicago replaced tenure for school principals with four-year contracts and required each principal to sign an annual performance contract with the system specifying measurable goals for the year. Schools that consistently fail to meet goals may see their principal dismissed and teaching staff reassigned (Hess and Easton 1992; Bryk et al. 1997). In Kentucky,

a school's level of funding may rise or fall based on its ability to meet biennial improvement goals on statewide standardized tests (Foster 2000).

While the focus of past analyses has been on these educational outcomes, SBM has implications for school-community relations that are less frequently discussed. Students in low-income communities face obstacles to academic achievement beyond deficiencies in curriculum and instruction caused by inadequate funding, high staff turnover and inefficiency. Research has persistently shown that, in poor communities, the prevalence of single-parent households, the lack of formal education among parents, the stresses of poverty, crowded and inadequate housing, and other factors conspire to create a home and community situation that inhibits academic achievement (Wilson 1996; Kaufman 1994). These conditions are exacerbated by the sense of alienation that many parents feel towards schools due either to linguistic obstacles (in the case of some immigrant families) or a general perception that school employees do not represent the interests of the community. As Stone et al (1999) state:

> Particularly in low-income communities, teachers voice concerns that parents fail to help educators do their jobs. For their part, many parents and community members experience the school as an alienating institution.... Enlisting schools in community development means first reversing the dissociation between schools and poor neighborhoods.... These initiatives call for engaging parents in the life of the school, sometimes in school governance itself.

Recognizing the implications of the community context in which schools are embedded allows us to identify a number of ways in which educational performance can be improved, and to understand the implications of school improvement for community development. Figure 1 provides a graphical representation describing three impacts of parent participation on educational outcomes, school-community relations, and community development. The first reflects the arguments discussed above—parental influence may lead to curriculum and instruction that better meets the needs and capacities of communities. Second, collaborative decision-making between parents and community members on the one hand, and principals, teachers, and school staff on the other, may enhance school community relations. This may lead to improved educational performance both because parents may become more aware of their role in their children's education and educated about the influence of the home

environment on student achievement, and because parents and community members may commit increasing time and financial resources to schools. In addition, parent participation may have a direct influence on the physical, social and economic development of communities in three ways. First, participation in schools may lead parents to develop skills that may enable them to take on leadership roles elsewhere in their communities. Second, perceptions of improvements in schools, as well as the sense of investment in the process that comes with participation, may help to slow or reverse the flight of families out of low-income neighborhoods. Third, participation in school improvement may act to facilitate community involvement around other issues, be they physical redevelopment, the lack of social services, or others.

Such outcomes are not a foregone conclusion—they are dependent on parents being able to participate effectively and assert meaningful influence on decision-making. Shaeffer (1994: 16) highlights the useful distinction between parent participation, which implies a relatively strong and active role on the part of parents and other stakeholders, and parent involvement, which connotes "passive collaboration." For this study, participation by a stakeholder group means that the group gains some power that its members consider important, and can make decisions autonomously. Yet parents face a number of obstacles to participation, including resistance from teachers and principals, and the lack of access to relevant information, that may thwart their influence and render their experience demoralizing rather than empowering. Thus an understanding of when and why parents are able to participate is essential to an analysis of the impact of SBM on school-community relations.

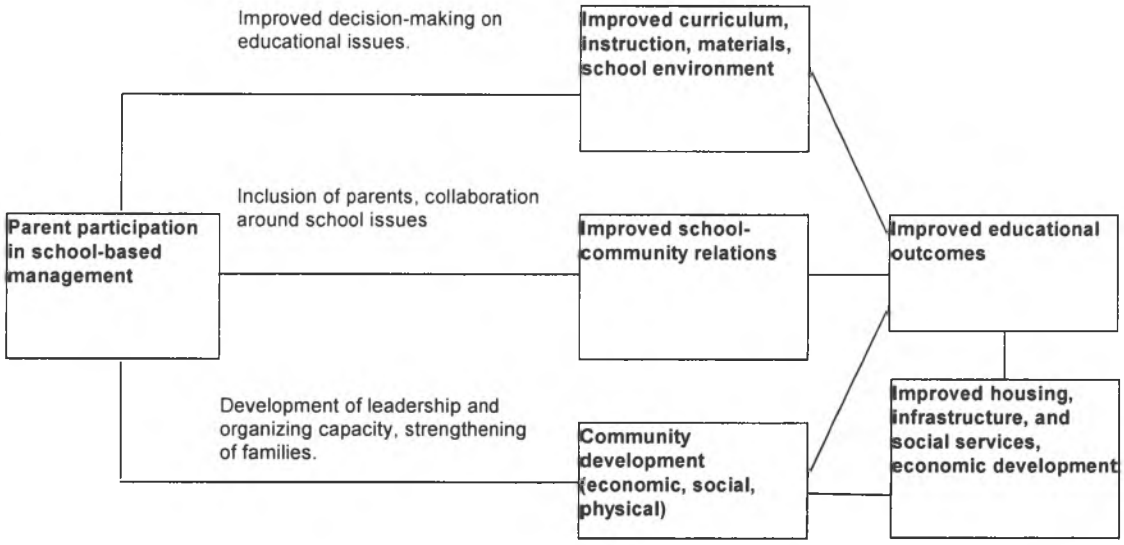

Figure 1:
The Impact of Parent Participation in School Based Management on Educational Outcomes

Research points to a number of factors at the school level that affect parent participation. Perhaps the most important factor is principal leadership—principals who are effective leaders and employ a collaborative model of decision making may successfully engage parent participation even where SBM has not been implemented. Second, parents are likely to exercise much more influence where they are organized and assert a common agenda, and particularly where they have technical and political support from independent non-profit organizations that work on issues of school governance. Finally, the relative representation of parents on SSCs and the degree of authority of SSCs have important implications for parent influence for obvious reasons.

Table 2 describes four organizational models of SBM that can be observed in practice that have quite different implications for parent participation. Three parameters define the degree of parent influence in each model. The first is the degree of authority decentralized to the school level, including the degree of autonomy in allocating the school budget, the extent to which important decisions can be made at the school level, and the degree to which schools are restricted by Board of Education regulations, or collective bargaining agreements regarding wages, personnel decisions, or uses of school buildings. The

second is the degree of authority of SSCs relative to principals—whether they are empowered to set policy, and the extent of their mandate. The third is the representation of parents on SSCs relative to other groups. Where parents are a majority or plurality they are likely to exercise greater influence, and are also likely to be empowered by the recognition of their preeminent role to play a more active part in leading and making decisions.

Table 2. Four Models of Parent Participation on School-Site Councils

Model of SBM	Degree of authority at school level	Degree of authority of councils	Parent representation in decision-making
Parent participation	High	High	High
School accountability	High	High	Low
Principal-centered	High	Low	Low
Bureaucratic oversight	Low	Low	Low

The four models defined by the table are abstractions—no actual experience with SBM corresponds perfectly with any one of them. Nonetheless, they are useful for analyzing the models implemented in practice. Under the parent participation model of SBM, councils have a broad mandate to institute and implement changes in many aspects of school management. Parents have a majority on councils, and are elected by parents or community residents. Such an arrangement creates the potential for participatory democracy within schools, although this outcome is dependent on a high degree of parent commitment and organization. Due to political resistance from principals and teachers, and skepticism regarding parent participation among lawmakers, this model is relatively rare, with Chicago being the sole example in a major school system. The school accountability model tends to coincide with measures for increased accountability, such as high-stakes testing. It is premised on the need to give various school-level stakeholders a voice in order to gain their acceptance of politically sensitive attempts to hold them accountable—Kentucky's experience corresponds most closely with this model (Pankratz and Petrosko 2000). Under the principal-centered model, power is decentralized but school councils are merely advisory, leaving other stakeholders with little formal authority over principals. This model corresponds most closely to El Paso, where SSCs have no power to implement school policy. In the final, district

centered model, reforms bring little change as the educational bureaucracy gives up little budgetary discretion or decision-making power, limiting the authority of both principals and SSCs.

The implications of these various models for school-community relations and community development are apparent. Where councils have little authority and school autonomy is limited, there is little potential for collaborative decision-making. Where parents have limited influence, they are unlikely to gain leadership skills or to feel empowered by their experience on councils. However, even where the parent participation model prevails, the implications for community development are dependent on the success of SBM—where the model leads to conflict or has a negative or neutral impact on school performance, it is unlikely to lead to positive outcomes for communities.

The Origins of School-Based Management in Chicago, Kentucky, Hawaii, and El Paso

The following discussion will provide an historical overview of reforms for SBM in each case study jurisdiction, as a prelude to the analysis of the role of parent participation in each. The purpose is to understand the ways that locality-specific contexts shape the model of SBM that is adopted. While SBM is usually seen as a means to improve educational performance, the models adopted reflect different judgments as to the causes of school failure, and differences in the political clout of parents, teachers, principals, and other groups. Thus, for example, the reforms in Chicago were implemented with the explicit objective of addressing the frustration and alienation of low-income communities towards the school system—a motivation that was largely absent in the other three cases. Variations in the motives behind the reforms had profound implications in each case for the model of SBM adopted, and by extension for school-community relations. Table 1 describes the characteristics of SBM in each case.

Table 1. Summary of Characteristics of SBM in Chicago, Kentucky, Hawaii and Ysleta

	Composition of school-site council	Method of selecting parent members	Extent of school-site council authority
Chicago	6 parents, 2 community residents, 2 teachers, the principal, one student (in high school).	Elected by community residents.	Sets policy regarding curriculum and instruction and extra-curricular activities. Responsible for hiring and dismissal of principals, establishing school improvement plan, and allocating budget.
Kentucky	Principal or head teacher, three teachers, two parents.	Selected by largest parent organization in school.	Sets policy regarding curriculum and instruction and extra-curricular activities, although they must work within curriculum guidelines established by standardized tests. Responsible for budget allocation and establishment of school improvement plan.
Hawaii	To be determined by at school level. Must include principal, and representatives of teachers, parents, community members, school staff and students.	To be determined at school level.	Responsible for all aspects of school decision-making, although the precise responsibilities and power of SSCs is determined at the school level. SSCs must apply for waivers and exceptions where decisions contravene Department of Education regulations.
El Paso	Half school professionals, half parents and community representatives. Actual size and composition to be determined at the school level.	Selected by principal with advisory assistance of school council.	SSC's role is purely advisory, and covers curriculum and instruction, personnel decisions, establishment of school improvement plans, and extra-curricular activities.

Chicago

Chicago is by far the most frequently cited case study in SBM, and its reforms are the most far-reaching. It is the only large city or state in which legislation mandates that parents must represent a majority of members of councils, which are referred to in Chicago as Local School Councils (LSCs).[1] These councils are responsible for hiring or dismissing principals, and developing school improvement plans that establish school policies regarding curriculum and instruction, use of the school building, and extra-curricular activities (Bryk et al 1997). They also have considerable flexibility in managing the school budget. Despite recent efforts to curb SSC powers, Chicago's experience continues to be the most radical experiment with SBM yet undertaken. The following account describes the distinct set of factors—an acute educational crisis, socioeconomic and demographic change, the emergence of black political power, and an active set of non-profit and community-based organizations working on educational issues—that brought the reforms into being.

Chicago's school system is predominantly minority (53 percent of students are African-American and 34 percent are Latino) with **X percent** of children eligible for free lunch. Like many urban school systems in 'rust belt' cities, the Chicago school system experienced a crisis in the 1970s and 80s brought on by increasing poverty, the flight of middle-class families to the suburbs, and a declining tax base. The result was persistent budget shortfalls and an increasingly impoverished student population. Between 1978 and 1984, the dropout rate stood at about 43 percent, reaching two-thirds in some low-income neighborhoods, and half of graduates were reading below the 9th grade level (Bryk et al 1997). Two events in 1987 acted to galvanize support for educational reform. The first was the death of Mayor Harold Washington, who had been elected three years earlier as the city's first African-American mayor on a platform of neighborhood development. Educational issues had become associated with Washington's legacy following a series of educational summits that he convened in the mid-1980s. The second event was a 19-day teachers strike that shut down the schools. Pervasive distrust in low-income communities of city government and school professionals, and concern for the poor performance of

students, created a groundswell of support for greater community control of schools. An effective grassroots campaign championed by a coalition of non-profit organizations, academics, and business leaders led to the passage of the Chicago School Reform Act (CSRA) of 1988.

The hallmarks of the CSRA were its mandate of a high degree of parent and community participation, measures for teacher and principal accountability, and increased resources for schools (Hess 1992). Principals were to be hired under four-year performance contracts. Greater budgetary discretion at the school level was combined with a requirement that schools undertake more intensive planning efforts, specifically to develop three-year improvement plans to be updated yearly. Funding was to be directly allocated to schools based on a formula accounting for the number of disadvantaged students in a district, resulting in a significant budget increase for schools with large numbers of low-income students. The reforms also changed the school board membership from a system of 11 school board members nominated by the mayor, to a 15-member board with representatives nominated by a School Board Nominating Commission that was dominated by parent and community representatives from LSCs. Most significantly, however, was the creation of the SSCs, which left significant power at the school level in the hands of parents and community residents. The reforms met with considerable enthusiasm in communities—in the first elections for SSC representatives in October of 1989, 313,000 people turned out to vote for17,000 candidates for 5,420 LSC members in 542 Chicago schools.

Implementation of SBM in Chicago has continued to engender controversy, and in recent years Mayor Richard Daley and the successive superintendents have attempted to reduce the influence of parents. These efforts are premised on the assessment that SBM has not led to improvements in academic performance, although advocates contend that they have (Designs for Change 2001). In 1995 and 1996 a series of reforms were initiated. The school board was pared to five members to be selected by the mayor. The authority of LSC was also reduced, and the board was given expanded authority to take over failing schools and reassign principals and teachers. Responsibility for the training of SSC parent

[1] While councils go by different names in the four case study school systems, the term school-site council will be used throughout

members was placed in the hands of the Board of Education—prior to these changes training had largely been conducted by independent non-profit organizations, many of which had been formed by advocates who had been involved in the school reform movement. Soon after the reform, the Board of Education placed 109 schools under probation. Since that time the Board and nonprofit education advocacy groups have engaged in a continuous debate about the outcomes of this experiment with Board intervention for school performance (Designs for Change 2001).

Kentucky

While Chicago's school reform is notable for its focus on school-community relations, Kentucky's is notable for its focus on improved educational performance as measured by standardized tests. The reforms were initiated in response to a ruling of the state supreme court that found the state's educational financing system unconstitutional. The state had long had one of the most ineffective educational systems in the country. In the 1980s, Kentucky ranked 50th among states in adult literacy and adults with a high school diploma, 49th in the percent of people who went on to college, and 48th in per pupil educational expenditure (Hunter 1999). The system was also marked by disparity in access to educational resources, with the highest spending districts spending two and a half times more per pupil than the lowest spending districts. The state supreme court finding created a political movement for reform that differed from the one in Chicago in that it was largely elite-based. The most prominent advocacy organization in the school reform movement was the Prichard Committee for Academic Excellence, formed by attorney Edward Prichard and consisting of a group of government-appointed members of a citizen's committee on educational reform (Sexton 2000). Although the group attempted to stimulate greater public involvement in the issue through televised public meetings on the school system and other means, it depended largely on support from prominent politicians and newspaper editorials in its lobbying effort.

The Kentucky Educational Reform Act (KERA), which was passed in 1990, led to extensive changes in school financing and governance. Funding for schools increased dramatically, and the state's rank in

---

this paper for purposes of clarity.

funding per pupil rose to 21st in the country by the mid-1990s (Hunter 1999). KERA also created Family Resource Centers to provide a variety of social services to families. Finally, it institutionalized SBM and SSCs, although their authority is more limited than in Chicago. Schools have the authority to shape curriculum and instruction and set the hours of instruction, but must achieve certain goals in standardized testing or face restructuring by the state. The mandate for parent participation under KERA is much more modest than in Chicago. They are a minority and, where no strong independent parent organization exists, principals often exercise considerable influence in the choosing of parent representatives.

The Kentucky model of SBM reflects the focus of the reforms on educational achievement, as well as the influence of teachers' and principals' organizations on the legislation. There was a conscious effort in the drafting of KERA to use SBM to overcome political obstacles to increasing the accountability of educators and school administrations. This motive was accepted both by policy-makers and non-profit advocacy groups. As one activist who was involved in the lobbying effort stated:

> The parents were involved for the standard reason that parents are involved, that they should have a voice. But essentially there was a political bargain—teachers will accept responsibility, and accept accountability, in return for some control over the local decisions. I think Chicago started out with a different set of purposes, to return the schools to the community and deal with political frustration on the part of parents. We had that, but at the state level you are not going to come up with the same rationale you come up with in a city. We might have had community and parental frustration with the schools, but there was never an argument that called for the creation of mini school boards elected from the community.

The limited mandate for parent participation in KERA also reflects skepticism about community control that partially reflects popular stereotypes of rural communities in Kentucky, and particularly the Appalachian communities in the eastern part of the state. Scholars who follow the reform movement highlight the fact that, while KERA sought to establish some balance of power between parents, teachers, and principals at the school level, there was broad acceptance among advocates and policy-makers that principals should remain the dominant power, and that the state should remain the final arbiter of change.

> There's an element of paternalism in the reform. Everyone has the image of Eastern Kentucky as a bunch of hillbillies sitting around drinking moonshine. These are distasteful stereotypes, but people locally know about them. People felt that school achievement in certain areas, especially Eastern Kentucky, was so abysmal, that there was such an ingrained sense of good old boyism, that we had to break through all this. Even at an unconscious level, the mindset was that we've got to drag those people, kicking and screaming, into the 20th and 21st centuries. And the only way we can get their attention is to say "you've got to improve your school achievement or we will take over your school and send somebody over there to tell you what to do." So it was an attempt to try to pull achievement up, push it pull it, cajole it, threaten, do something to pull us out of this lethargic situation.

Hence schools have significant responsibility for setting curriculum and instruction, yet have to follow strict guidelines set by the state. They can set the number of hours of instruction, but must retain enough instructional time to cover the considerable amount of material covered by the standardized tests. In practice, the outcome is that schools are increasing the number of instructional hours, and in some cases cutting time devoted to music and physical education classes, to ensure that students are prepared for exams. While these changes have raised some concern, Kentucky's success in raising scores on standardized tests have muted any criticism of the reform.

Hawaii

Hawaii's school system is marked by considerable ethnic diversity—(demographics on student body?). Those claiming native Hawaiian ancestry are disproportionately low-income, and are concentrated in rural communities such as the Waianae district on the island of Oahu. As in Chicago, the reforms for SBM were implemented in the context of considerable tension between communities and the state, and for some activists educational issues are inextricably linked with the movement for Hawaiian sovereignty. This link is explicitly manifest in the emergence of Hawaiian language charter schools—this phenomenon will be discussed in the next section.

The Hawaiian experience with SBM is distinct in a number of ways. Unlike the other case studies, it was instituted from within the Hawaii Department of Education without significant outside pressure following a visit to observe SBM in Miami-Dade County by then Superintendent Charles Taguchi in 1988. SBM was instituted statewide in 1989, and although it has never been mandatory, about 86 percent of schools

have implemented it since. The legislation also leaves considerable room for flexibility in the type of SBM model schools choose, stating simply that schools should have a process that incorporates input from six stakeholder groups—principals, teachers, support staff, students, parents, and other community members. The most common arrangement adopted has been the formation of a school site council with a single representative of each group. However, some schools have chosen different mixes of representatives, and a few have adopted other decision-making frameworks, such as open meetings, that do not involve the formation of councils (Pacific Educational Research Laboratory 1992). The reforms are also distinct in that they have not accompanied other dramatic changes, such as substantial increases in educational funding or the institution of high-stakes testing. They are a modest, stand-alone effort to bring new actors into school governance.

Schools have been given considerable authority under SBM legislation in areas such as curriculum and instruction, school hours, extra-curricular activities, and others. Changes that contravene Board of Education regulations must go through a waivers and exceptions process. Although this process has been the source of some frustration, some schools have been able to make significant changes, including major changes in curriculum and instruction, changes in the school calendar (such as adopting a calendar year school schedule), and hiring for new instructional programs.

Ysleta School District (YISD), El Paso

The Ysleta School District is one of nine school districts in El Paso County. The prevalence of Mexican immigrants in the district creates a unique set of issues—of the district's almost 50,000 students, 86 percent are Latino, 27 percent have limited English proficiency, and 33 percent are low-income (citation?). Thus students face unique issues with language and acculturation. The district also has an unusually large population of migrant workers whose children may change schools several times a year. Despite these issues, in 1998 Ysleta was the first urban district to be declared a Recognized District by the state for its improvements on the Texas Assessment of Academic Skills (TAAS) test.

Texas mandated SBM at the state level in 1995. As with Kentucky, Texas' model of SBM is largely focused on improving educational achievement and implementing standards-based reform. The Texas Educational Code establishes the use of monetary rewards and sanctions for schools based on performance. The Code also establishes minimum requirements for SBM, and makes SSCs responsible for establishing and reviewing campus educational plans, performance objectives, and classroom instructional programs. However, districts establish specific guidelines for the structure of councils and the extent of their authority.

In the YISD, the mandate for SBM is generally weaker than in the other three cases. Most importantly, the SSC's advisory role means that principals are the final authority in most decisions. SSCs, referred to as Campus Educational Improvement Committees (CEICs) in El Paso, are comprised of 50 percent professional staff, and 50 percent parents, community members and business representatives. Of the professional members, two-thirds must be teachers, with the remaining one-third composed of other campus or district level staff. The parent and community members are selected by principles with the advisory assistance of the SSC. The actual size of the SSC is established by the SSC itself. In practice, SSCs have had a limited impact on school policy in most cases due to their marginal role and lack of formal power.

Comparison of site-based management models

A number of insights emerge from the previous discussion. First, it is notable that movements for parent participation based in civil society was instrumental in ensuring the relatively high degree of decentralization and parent representation in Chicago, and to a lesser degree in Kentucky. Organizations of civil society played a role not only in shaping the legislation, but also in galvanizing public interest in reform, and in bringing various actors at the school level to the table and ensuring that their voice was represented. Second, the profiles of each case indicate that a cookie-cutter approach to school reform is inappropriate—in each case SBM models were designed to address distinctive local educational issues and political obstacles.

In each of the above cases, the primary rationale for SBM was the need to improve educational performance. In fact, such improvement has been recorded, particularly in Kentucky and Ysleta. In YISD, the district went from having only one of its 49 schools rated 'recognized' or 'exemplary' (the two highest ratings accorded by the Texas Department of Education) in 1994, to 44 of 50 in 1998. Kentucky was one of only three of 38 states to show statistically significant improvement on the NAEP tests between 1993 and 1998. In Chicago, the results have been more mixed—a study by Bryk et al (1997) found that, while math scores have trended up at the elementary school level since reform, reading scores have trended up only in the earlier grades, while trending down afterwards. Furthermore it is impossible to determine to what degree these changes are attributable to SBM as opposed to other reforms, such as high-stakes testing and school choice, that have been implemented during the same period. In fact a statistical analysis in Kentucky found no relationship between the implementation of SBM and test scores (Petrosko and Lindle 2000).

Parent Participation and Decision-Making: Outcomes for School Improvement

While this paper has argued that successful collaboration around school improvement may influence community development, such success is not a foregone conclusion. SBM is premised on the assumption that parent participation will enhance mutual understanding between various role groups and lead to a freer flow of ideas, yet an alternative hypothesis is that the opposite will occur. Parents may have perspectives on curriculum and instruction, school hours and other issues that conflict with those of principals and teachers, and may even contravene collective bargaining agreements. Obstacles to effective communication based on linguistic and cultural barriers, and different communication styles, may cause misunderstanding and exacerbate parents' sense of alienation. The result may be inactive or conflict-ridden SSCs, and a deterioration of school performance. This section will discuss experiences with parent participation in Chicago, Kentucky, Hawaii and El Paso. It will argue that, while the relative authority of SSCs and the representation of parents on SSCs are the most important factors affecting successful parent participation, two other factors also play a key role—the leadership style of principals,

and the existence of civic capacity in the community at large. It will then discuss the impact of parent participation on school improvement, and on school-community relations.

Previous studies have identified a number of issues that emerge in parent participation. Principals and teachers often initially resist parent participation out of concern that parents may make ill-informed or capricious decisions (Wohlstetter et al 1995). They may also feel that their job security is threatened if parents are given authority over personnel decisions. There was some teacher and principal resistance to parent representation on SSCs in all of the case study cities and states. However, research indicates that SBM and parent participation are usually accepted once implemented. In Chicago, for example, surveys indicated that 75.6 percent of teachers on councils expressed positive feelings about councils (Ryan et al 1997). In Kentucky, a 1999 survey found that 82 percent of principals, 76 percent of teachers, and 85 percent of parents said that SBM was functioning well (Kentucky Institute for Educational Research 1999). Thus while conflict between parents and other SSC representatives are an issue, it tends to be the exception and decreases over time.

An additional concern regarding SBM is that parents may not have the time or capacity to participate effectively. Survey research tends to dispel this concern as well. In Chicago, a survey of parent LSC members found that 83 percent of parent representatives spent 5 hours or more per month, and one-third spent 10 hours or more per month on SSC related duties (Ryan et al 1997). In addition, about 48 percent of these same parents reported spending 10 or more hours per month in school outside of their LSC duties. Thus many parents are willing and able to commit a significant amount of time to school-related responsibilities. Survey research in Chicago and Kentucky also indicates that parent members of councils are uniformly more educated than the population at large, and are much more likely to be professionals (Ryan et al 1997).

The actual effectiveness of councils, and the ability of parents to influence decisions, are much harder to assess. In a 1997 study, Bryk et al found significant variations in SSCs' performance following Chicago's

dramatic reforms. They describe three categories of schools. The first are those that have focused on specific issues, such as safety and security, school uniforms, peripheral educational changes, or 'Christmas tree' programs that are not conceptualized within a broader educational philosophy. The second consists of SSCs that are largely nonfunctional, meaning that they frequently do not meet quorum, meet for less than an hour, experience significant conflicts between role groups, and spend most of the time during meetings discussing procedural issues. The final set of SSCs, which the authors represent as an ideal, are those that systematically plan for a coherent agenda of school reform based on a well-defined educational philosophy. They term these 'emergent restructuring' schools, and find that they represent about one-third of all schools. Interviewees in Kentucky, El Paso, and Hawaii discussed similar categorizations, although the issues and approaches differed. The following are some of the more notable changes to school policy and practices that have been put into place by SSCs:

- In Hawaii, a number of schools have extended the school year to a calendar year, and have made other innovative changes in scheduling;
- In Chicago, SSCs have substantially increased the number of African-American principals (numbers?);
- In all cases, SSCs have led to schools adopting national models of school improvement, such as...

In addition to changes in curriculum and instruction, some schools have initiated programs to involve parents directly in the classroom. A notable example is the efforts of Community Organizing for Family Issues (COFI), a consulting group that works with community-based organizations in Chicago to train parents to be more involved in their communities. COFI has organized parents in several schools to implement the Parent-Teacher Mentoring program, which places parents in the classroom as assistants to teachers. The objective of the program is both to assist teachers who are often burdened with large class sizes, and to empower parents to become more involved in their children's education. While parents initially struggled in many schools to find enough teachers who would volunteer to mentor a parent, the program has gradually gained acceptance, and in some instances teachers have requested that SSCs make the program mandatory. The program has resulted in significant improvements in students' achievement on standardized reading tests. About 14 schools are in various phases of implementing the program. This model also has implications for school-community relations, as will be discussed later in this paper.

While the above changes have most certainly been shaped to some degree by parent participation, it is difficult to determine precisely how much influence parents have on councils. Determining conclusively the extent of parent influence would involve a content analysis of a sample of minutes from SSC meetings, and an analysis of the decisions that resulted from these meetings—a task that is beyond the scope of this study. However, research does provide some evidence regarding parent influence, and how parents and other role groups perceive their influence. An evaluation of the YISD's model of SBM, for example, concluded that a significant proportion of schools have become 'democratic dictatorships' in which SSCs coexist with the reality of principal dominance of decision-making (Texas Comptroller of Public Accounts 1998). In Hawaii 42 percent of parents, as compared to 75 percent of teachers, rate their influence on curriculum decisions as a five or six on a scale of six (Izu et al 1996). In Chicago, in contrast, parents are more confident of their role in decision-making. A study conducted in 1997 found that 91 percent of SSC members agree with the statement that the principal asks the SSC for its input, and 80 percent agree that the SSC is highly or moderately involved in the budget process (Ryan et al 1997). This almost certainly reflects the greater representation of parents on SSCs in Chicago.

What, however, explains the differences in levels of parent input between schools within the same district, city or state? Research points to two factors. First, Bryk et al (1997) argue that the presence of a principal who is a good leader and successfully engages in a collaborative leadership style is the single most important school-level factor that enhances parent participation. As supervisors in the school setting, principals enjoy a particularly powerful position relative to other SSC members. The dominance of principals is even apparent in some Chicago schools, despite the fact that the principal is hired by SSCs on which parents are a majority. Even where principals and teachers have good intentions towards parent participation, their professional position, familiarity with school issues and frequent interaction may bias decision-making. A Kentucky principal expressed this concern:

> Parents aren't on the premises, so even the most scrupulous educator who would never claim to have made a decision before the (SSC) met, nonetheless has more insider knowledge than the parents do. As a result, parents feel left out or misdirected or uninformed when it comes time to talk about particular issues. Even if they are

> consciously not doing it the fact is that proximity gives them more information, more data on which to base their analysis of the problem than what parents have.... There are a ton of intangible things that happen during the day that educators don't think of. So it's the insiders versus the outsiders, and the outsiders are outnumbered.

Overcoming this dynamic requires a principal who finds ways to systematically incorporate input from parents (for example by organizing community meetings), and can act as an advocate for parents and a mediator between parents and other members of SSCs. Thus a principal who can establish a vision and process for school change is essential to effective parent participation on SSCs.

A second important factor in the effectiveness of councils is the presence of civic capacity in the community at large (Stone et al 1999). Where recognized community organizations are present, they can help parent members of councils to develop a unified agenda, and train them to understand educational and budget issues and articulate their positions. In Chicago, parent mobilization around school reform led to the formation of a number of organizations that have since focused on organizing and training parents and advocating for a strong parent role on SSCs. Their role has been controversial. Since the mid-1990s, organizations such as Parents United for a Responsible Education (PURE), and the Chicago Association of Local School Councils, have lost the right to train parent SSC members, most likely due to their vocal opposition to many school board policies. Other organizations, most notably Designs for Change, have played a critical role in research and advocacy for a continued strong role for parents.

Where at least one of these two conditions exist, substantial parent participation is possible even where SBM legislation does not focus on the role of parents. An example is the Waialae Elementary School in Honolulu, Hawaii. Located in an upper-middle class neighborhood of predominantly single-family homes, Waialae was the first school in Hawaii to submit a letter of intent to implement SBM (Izu et al 1996; Pacific Region Educational Laboratory 1992). It has since initiated a number of changes, including experimenting with portfolio-based assessment, replacing report cards with parent-teacher conferences, and significant changes in curriculum. Waialae's early adoption of SBM was initiated through collaboration between a community-based organization called Friends of Waialae School (FWS) and a

principal who was unusually facilitative in her leadership style. Through the efforts of FWS and the principal, all major changes were discussed at length in open forum meetings to which all community residents were invited. The level of mobilization in the community was such that, in 1995, 90 percent of parents were aware of SBM, and more than half had been to an SBM open forum meeting (Izu et al 1996). In sum, the changes that were made reflected the convergence of a number of fortuitous events and an exceptional level of commitment from both parents and educators. Particularly in Hawaii, where evaluations of SBM record high levels of frustration with the difficulty of attaining the necessary waivers and exceptions from Board of Education regulations, few schools have undertaken such significant efforts at reform.

Where neither of these conditions exist, parent input is generally limited. In Kentucky, Hawaii, and Ysleta, even where parents are confident and articulate, their role is primarily one of gadfly and watchdog, ensuring that funds are used responsibly, school professionals remain accountable, and that a parent perspective is represented. These roles are important, but do not represent a potential for dramatic improvement in school-community relations.

In school systems where SBM has not created opportunity for significant parent voice in school policy, alternative models of school governance have sometimes emerged. Two such models are the charter school movement in Hawaii and the Alliance School movement in El Paso. The charter school movement in Hawaii is in many ways a direct outcome of disenchantment over the model of SBM implemented by the Department of Education. Many principals, teachers and parents in Hawaii have expressed frustration with the waivers and exceptions process, and some have accused the Department of Education of using its resources to try to continue to direct school-level policy (Auditor, State of Hawaii 1998). In addition, the lack of state guidelines for SSCs has resulted in limited parent participation in most schools. Since the legislation mandating charter schools was passed, many communities have seized upon the rather vague guidelines to develop highly inventive new models of school management and curriculum. Of the 24 new schools created about half have Hawaiian language and cultural programs. This represents a sentiment

that the existing school system has not adequately served the native Hawaiian community, and the belief that education must have a strong base in local culture if it is to have an empowering affect on native Hawaiian communities. Most notably, a number of Hawaiian language immersion schools have been formed in which instruction is entirely in the Hawaiian language. These schools represent in part an effort to revive the Hawaiian language, and have required the translation of a large amount of instructional material.

The Alliance School initiative was organized by the Industrial Areas Foundation (IAF), and is currently being implemented in approximately 100 schools in Texas (Shirley 1997). In El Paso, the El Paso Interreligious Service Organization (EPISO), a community organizing entity that is affiliated with the IAF, has been the main actor. Like IAF organizations elsewhere in Texas, EPISO has been active in a number of community development and infrastructure delivery issues in the local colonias, low-income areas on the fringe of the city that are populated primarily by first and second-generation Mexican immigrants. The IAF employs a model of organizing based on the principals Saul Alinsky, the famed Chicago organizer. The Alinsky method is premised on the need to develop the political consciousness of communities so that they will eventually undertake radical political activism of their own accord.

Organizing around school improvement was a natural outgrowth of EPISOs community development activities, as educational achievement was perceived among many low-income Mexican immigrants as critical to the economic success of the community. The Alliance school model involves much more intensive parental involvement than conventional SBM models. Community organizers first identify potential leaders among parents, and encourage them to organize 'house meetings' of 10 to 15 people to discuss issues of concern to them. These meetings are meant to broaden the dialogue regarding school policies, and increase awareness of educational issues. Frequent public meetings are held to discuss issues and provide parents with an opportunity to raise concerns. 'Parent academies' are held with prominent speakers on educational, social, economic and political issues in an effort to enhance understanding of how these issues might inform decisions in local schools. 'Accountability sessions' are

also held with local political leaders and representatives of the school district so that parents have an opportunity to articulate their concerns in a forum explicitly designed to their advantage. Parent leaders also become active in the lobbying efforts of the Alliance School Initiative. The model puts parents at the forefront of policy-making at the school level, and in political lobbying efforts at the district and state levels.

The initiative has resulted in several major educational innovations. Among them is the NetSchools Constellation program, a remarkable initiative that was initiated by the SSC at Ysleta Elementary School. By a unanimous vote at an open meeting attended by approximately 500 parents, teachers, students and community activists, the school decided to provide all students between the third and sixth grade with a personal laptop computer. The initiative came about when parents identified the lack of computers in the predominantly low-income households in the neighborhood as a major obstacle to academic achievement. The NetSchools initiative is now being implemented throughout the YISD. Ysleta Elementary has also constructed a new school building with significant design input from parents. Parents in several middle schools have also successfully requested an increase in the number of advanced placement (AP) courses in order that students be eligible for college. Evaluations have shown that Alliance Schools have experienced above average improvement on the Texas Assessment of Academic Skills (TAAS) test.
The implementation of the Alliance Schools project requires both strong leadership from the principal, and the presence of strong community organizations, in this case one with a faith-based component. As stated by an EPISO organizer:

> The reason there is a relationship with a community-based organization, like EPISO or Austin Interfaith or another group, is that principals are constantly being told to control their parents. And there has got to be an independent base of power that can hold the school district accountable and allow talented principals to take some risks in organizing their parents. The congregation base in EPISO provides that independent political base.

In sum, building stronger schools and stronger communities cannot be viewed separately—they are part of an iterative process. Strong SSCs require a certain extent of awareness and mobilization within the

broader community, and can be further strengthened where the mobilization of parents meets with a cooperative and facilitative attitude from a progressive principal.

SBM and Community Development

The final section of this paper will assess the direct impact of SBM on community development. We have already listed a number of ways in which such an impact may occur: by enhancing leadership skills among parents; by raising awareness of issues in the socioeconomic and physical environment of the community that discourage educational achievement; by opening up schools for a number of functions that may benefit communities, including the delivery of public health and social services, literacy assistance and English as a second language programs, after-school programs, and others; and by improving school-community relations, thereby helping communities to retain population. We will address each of these issues in turn.

There is little doubt that leadership development is a beneficial externality of SBM. In the four case study areas, at any given time 5400 parents and community residents in Chicago, 2500 in Kentucky, and hundreds more in Hawaii and El Paso are playing leadership roles in school governance. For many of these people this is a first experience in a leadership role. Whether the SSC experience leads to a true sense of empowerment, however, rests on the question of how much influence parents can realistically exercise, and how much support they receive in their efforts from other council members, other parents, and the broader community. In all four case study areas, interviewees related anecdotes about parents who had gone on from SSCs to play leadership roles at the community, and sometimes at the city level. These include cases of parent SSC members who ran for local school board or other elective posts; who found employment in community development organizations or social service agencies; who became teachers or other school professionals; or who simply played a much greater role in their community though informal organizing, attendance at community meetings, and other activities.

Once again, Chicago provides the paradigmatic example. The strong parent role in school governance creates an incentive for parents to participate, and the city's dense infrastructure of community and civic organizations has capitalized on the reforms as a potent issue around which to organize parents for involvement in schools and other community issues. The Community Leadership and Family Issues (COFI) group, discussed earlier, has explicitly attempted to capitalize on the synergy between neighborhood organizing and SBM. Likewise, PURE and other non-profit organizations have recruited staff from among SBM members to engage in lobbying efforts.

Based as it is upon an Alinsky model of organizing, the Alliance School Initiative in Texas makes leadership development an explicit goal. It deliberately places parents in roles that require them to exhibit leadership (such as in house meetings) and confront people in leadership positions (such as in accountability sessions). Many parents who have been associated with Alliance Schools attribute a personal transformation to the experience, and take pleasure in recounting their conversion from passive parent to active advocate for their children. One parent recounted her role in EPISO's efforts to lobby for expanded funding for arts programs:

> Before the Alliance School initiative came along, I was the one who would just park in front to drop off my kids, and pick them up when it was time to go home. Now I am running down the hallway with a senator telling him how important this money is for this for the school, I am fighting for my kids. They are getting ready to vote on this bill, and we are pulling them off the senate floor.

Particularly in predominantly Latino immigrant communities, where linguistic and cultural issues can present obstacles to civic participation, such experiences can play a critical role in building the foundation for broader civic and political participation.

With regards to the role of parent participation in schools as a means to raise awareness about other community issues, the Alliance School model again provides an intriguing case. The Alinsky model of organizing is premised on the belief that once people are organized to solve an issue in their community, they will inevitably come to recognize the interconnectedness of this issue with other problems they face. The task of the organizer is therefore to identify those issues that are most likely to stimulate interest

with the intent of using that issue as a catalyst for community activism (Alinsky 19??). This approach has experienced considerable success in El Paso. In Ysleta Elementary School, for example, parents lobbied successfully to change traffic patterns and increase the number of stoplights in their neighborhood after a girl was struck and killed by a truck on her way home from school. A number of Alliance Schools have developed other initiatives, including adult education, health screenings for community residents, and a pre-kindergarten programs, after parents identified the importance of the health and well-being of the family in childrens' education. Parents from Alliance Schools in the colonias of Socorro, one of the poorest parts of El Paso, were instrumental in having the local streets paved and widened. They raised the issue of school busses' inability to navigate local streets in their lobbying effort. More generally, the Alliance school initiative has allowed EPISO to gain greater recognition both in communities and citywide, and it has been able to capitalize on this to advance its community development agenda.

Concerning the hypothesis that SBM leads to schools being used for functions that benefit communities, this has taken place to some degree in all four of the case studies. In Hawaii and Kentucky, separate initiatives have been established to provide social and health services through schools. Under KERA, schools with at least 20 percent of children eligible for free lunch can apply to receive grants from the state for Family Resource and Youth Services Centers (FRYSCs). The services that are to be delivered by these Centers are determined at the school level, and can include reading programs to prepare young children for school, services to connect children to eye care or health care, after school care, education for new or expectant parents, drug and alcohol counseling, job training and placement, or others. By 1999, 702 schools—93 percent of those eligible—had established such centers (Kentucky General Assembly 2000). The most common services provided were health services and referrals, and counseling for family crisis and mental health. In Hawaii, Parent-Community Networking Centers have been established to organize volunteers at the community level to provide tutoring and other services (Ing 1999).

The COFI project in Chicago has also led to the development of new functions in schools. In addition to the parent-teacher mentoring program mentioned earlier, parents trained under the program have initiated community centers in schools which are centers for ESL and GED classes and other educational programs for parents, recreational activities for children, and a number of social service programs. SSCs have played a critical role in this initiative both because many parents associated with COFI are SSC members, and because parent representatives on SSCs provide a source of support for such initiatives. In El Paso, SSCs have initiated classes in ESL and preparation for citizenship, among others.

Finally, it is impossible to determine from existing evidence what impact SBM has had on the stability of communities. As SBM has coincided in most cases with a broader movement for educational reform, as well as major political and social change, it is not possible to determine whether parent participation is responsible for enhancing community stability to any significant degree. It seems reasonable to speculate, however, that the combination of improved academic achievement and increased opportunities to interact with school professionals have influenced such relations. In our discussions with parent representatives on SSCs, most expressed satisfaction, and in some case surprise, at the level of professionalism of teachers and principals. An EPISO organizer recounted the interaction between parents and teachers at a house meeting at Ysleta Middle School:

> We had about 200 parents and teachers sitting around talking about what their experience in education had been and why they wanted their students to go to college. And the parents were so shocked to learn that most of the teachers were the first in their family to go to college, and that they had struggled to do it. And you just saw the ice breaking in the way people began interacting with each other. Because they had assumed that the teachers had been born with a silver spoon in their mouth, and that wasn't the case. And that allowed them to see each other as human beings.

Countless less dramatic revelations have occurred in SSC meetings, and through the day-to-day interactions of parents, teachers, principals, community representatives, and students.

Conclusion

The preceding analysis has highlighted a number of potential impacts of parent participation on SBM on community development. Some caution is required in drawing conclusions from the evidence presented. SBM alone is not sufficient to bring about significant change—certain facilitating conditions must be present. Most notably, parent participation is unlikely to be successful in the absence of a strong civil society or an activist principal. It is also notable that schools that succeed under SBM reforms tend to have collaborative decision-making processes in place already. In Hawaii, for example, an evaluation of SBM found that the first 9 schools that implemented SBM were already moving towards participatory decision-making models prior to the reform (Izu et al 1996). Nevertheless, SBM can play an important role in realizing the potential of schools as critical institution in reversing decline in low-income communities.

Hartford Public Schools
School Governance Councils

A Promising First Year

A key element of the Hartford Public Schools' Strategic Operating Plan is the creation of School Governance Councils (SGCs), guided by the SGC Policy adopted by the Board of Education (the Board) in May 2009. These councils represent an important effort by the Hartford Public School District (the District) to institutionalize parent and community involvement in the governance of its higher performing, autonomous schools. During this first policy year, Achieve Hartford! conducted an independent evaluation of SGC implementation and performance. Our results are summarized here.

While part I of this report, released in March 2010, addressed the ability of eligible schools to successfully launch SGCs and demonstrate compliance with Board policy through January 2010, this report evaluates the entire first year of SGC implementation, assessing both the ability of SGCs to maintain policy compliance as well as function effectively as a governing body.

Executive Summary

Overall, the implementation and performance of SGCs in Hartford during this first year of the Board's adopted policy can be considered positive. Based on our research, the initial goal of a full launch of SGCs in Year 1 was ambitious, as implementation in other cities operating with similar school-based councils has occurred over several years. While not perfect, compliance and performance results during this first year indicate a strong start. Highlights of Year 1 implementation include the following:

- A total of 28 out of 40 eligible schools operated governance councils in 2009-2010, 27 of which operated under the provisions of the Board's SGC Policy;
- Most SGCs accomplished their primary tasks of finalizing a school compact (24 of 27), approving and submitting a school budget on time (27 of 27), and addressing their school's accountability plan at some level (20 of 27).
- Survey results noted that council members felt generally well-prepared, operated with a high focus on student achievement, and worked well as a team. However, survey results also suggested that members felt minimally empowered on certain budget issues and that greater parent involvement is needed.
- Training for SGCs was provided by Leadership Greater Hartford and proved largely beneficial. More targeted, content specific training is being designed for year 2;
- The average attendance rate for all SGCs over the initial four training sessions was 72%;
- The average attendance rate for all SGCs over their regular meetings increased to 79%;
- Only 20 out of 27 SGCs, or 74%, held the minimum of 6 meetings over Year 1; and
- Only 52% of newly formed SGCs achieved 50% parent membership levels.

SGCs operated in 28 schools this past year and, while some are operating at different levels than others, the majority represent strong decision-making bodies, each made up of parents, school staff, community members and the principal working together to improve their school. Taking into account the expected room for improvement for any initiative this size, the first year of SGC implementation demonstrated a positive first year.

The School Governance Council Policy

Adopted in May 2009, the Hartford Public Schools School Governance Council Policy applies to all "Autonomous Schools as defined by the Board's Accountability Policy and School Performance Matrix." To guide the formation and operation of SGCs, the policy stipulates, among other things, the following:

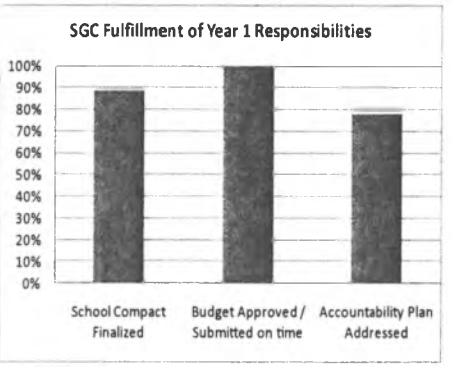
- SGC duties include establishing a process and timeline for (1) the development and approval of the school's budget, (2) the development and approval of a School Compact, and (3) the analysis of school needs relative to the school accountability plan;
- All members are required to participate in initial and annual training;
- SGC's shall be comprised of no more than 12 members, with parents comprising 50%;
- The process for parent selection shall be led by the principal in collaboration with the PTO;
- All members are equal partners in decision-making and all decisions must be made by consensus (or 2/3 majority vote where consensus is not achieved); and
- One parent co-chairperson shall be elected by the SGC and, along with the principal, is charged with setting meeting agendas, presiding over meetings, and attending district meetings.

It should be noted that in May 2010, the Connecticut State legislature passed laws requiring that SGCs be formed in certain low performing schools across the state. Such laws, and the structure of the mandated SGCs, were based largely on the policy implemented by in Hartford.

Summary of our Part I Evaluation

Out of 40 eligible schools, 28 schools operated SGCs this past school year, 27 of which operated under the provisions outlined in the Board's SGC policy. Each newly launched SGC went through a training process facilitated by Leadership Greater Hartford (LGH). The training was conducted in four parts, three of which focused on developing a strong team dynamic within SGCs, and one that focused on content-specific training related to SGC Year 1 responsibilities. Survey results from our Part 1 research indicated that the initial trainings were largely beneficial and, in particular, increased members' understanding of the role of SGCs and their responsibilities as a member. Each council was also paired with an LGH coach who could help ensure the process of getting up and running moved as smoothly as possible. Involvement of coaches ranged from one SGC including the coach as a decision-making member of their council, to another SGC deciding that no help from their coach was needed.

In comparison to three other cities which have created SGCs - Boston, Cincinnati and Chicago - Hartford's launch of new SGCs at nearly half its schools in Year 1 represented a meaningful accomplishment. Our research noted that, in Chicago for example, it took over five years for councils to get effectively implemented and operate with consistent authority. The District's accomplishment is noteworthy, as it helps demonstrate the importance the District has placed in SGCs as part its overall reform plan.



Our Part 1 evaluation highlighted some suggestions for the improvement of SGC implementation:

1. Modify the SGC Policy to reflect the need for Superintendent discretion to defer formation of SGCs at a particular school based on unique operating circumstances;
2. Provide increased guidance to principals on how to fill membership openings, especially in the recruitment of parents, since only 14 SGCs (or 55%) reached the required 50% parent membership by January 2010; and
3. Focus the training of new SGC members more on content-related tasks to better prepare council members to carry out their specific roles and responsibilities.

Year 1 Performance

SGC Performance Relative to Policy Provisions

A key aspect of the Board's SGC Policy directs SGCs to focus "on the analysis of student achievement, development of improvement plans, allocation of resources and programmatic and operational changes [...]." Consequently, the District charged SGCs with three major Year 1 responsibilities which included finalizing a school compact, preparing and submitting a school budget, and addressing at some level the school's Accountability Plan. Aggregate SGC performance in these areas is presented in the graph on the right.

Insert A presents the performance of each SGC against the three main deliverables as well as certain other policy provisions, based on self-reported data by principals. Areas of favorable performance include:

- 24 of 27 SGCs finalized a School Compact;
- 27 of 27 SGCs submitted an approved budget on time;
- 21 of 27 addressed the school accountability plan;
- Five SGCs reported perfect attendance at all meetings, with the average attendance for all SGCs being 79%.

Areas subject to further improvement include:

- Only 52% of required SGCs achieved the 50% parent membership level; and
- Only 72% of required SGCs held the minimum of 6 regular meetings.

SGC Performance and Site Based Management

Both the SGC Policy and the initial training of SGC members reflect an effort by the District to make SGCs in Hartford models of effective "Site Based Management". Site based management is defined as the delegation of decision-making authority to individual schools in a way that enables shared decision-making among the principal, teachers, parents, community members and students[1]. Achieve Hartford! conducted a survey to assess the degree that effective site based management was practiced throughout SGCs in Year 1. Specific Results of the survey are displayed in **Insert B**. Research criteria that guided the development of our questions along with survey takeaways are noted below:

Key Element	Criteria for Success	Key Takeaways
Council Preparedness	Councils understand their role in policy making and have received sufficient training to fulfill that role.[2]	• Council members and principals generally agreed that knowledge of needed subject matter was sufficient to fully contribute. • However, council members also expressed the need for more in depth training and time spent understanding the budget.
Real Authority	People at the school site must have "real" authority over resources and policies that affect teaching and learning.[3]	• Council members and principals reported good sharing of authority between parent and principal co-chairs. • Council members and principals felt less empowered to make real change during the budget process because of a lack of budget flexibility. • Collaboration between principals and PTOs in the selection of parent members varied greatly from one SGC to another.
Team Dynamic	Effective councils have an internal dynamic that is cooperative, collaborative, and values the voice of each member.[4]	• Council members felt very comfortable sharing their opinions during meetings. • Council members and principals agreed strongly that SGCs functioned well as a team.
Focus on Student Achievement	In order to improve school performance, a council's attention should be focused towards that end.[5]	• Council members and principals reported considering the impact on student achievement in their decisions.

Recommendations and a Look Forward

School Governance Councils operated at 28 schools this past year, and while areas for improvement exist, the vast majority of SGCs represent strong decision-making bodies, each made up of parents, school staff, community members and the principal working together to improve their school. Given the length of time needed for impactful reform initiatives, the launch this past year can be considered a success. Looking forward is now a priority.

The District's focus for next year shifts from solely launching new SGCs to simultaneously providing continued training to those SGCs already up and running. Also of note, many existing SGCs are expected to continue bringing on new members that will necessitate initial training. The District must plan for the expansion of SGCs to the 12 eligible schools not launched this year, as well as others that may become eligible based upon their performance on 2010 state tests. Additionally, because sustaining reform in Hartford is dependent upon maintaining a standard of excellence across all schools, the District must wok to ensure that each SGC is functioning at a high level.

As we have noted in this report, there have been a number of positive results to the Year 1 launch. Those results must continue and improve over time. In addition, the following table represents recommendations for improving SGC implementation in Year 2 and beyond, categorized into five important areas. The recommendations stem from the evaluation work completed this year by Achieve Hartford! and from suggestions provided by SGC council members and principals via open-ended survey questions.

Data Tracking	• The District has manual and sporadic processes for tracking data relative to key SGC policy provisions. A consistent process for recording attendance, membership makeup and other policy compliance data should be established for each SGC and the aggregation of such data assigned to a district staff person for tracking and analysis. • Standard and simple compliance metrics (similar to those reported in **Insert A**) should be established and regularly reported to allow for consistent SGC evaluation and performance measurement.
Communication	• Increased communication should flow from the SGC to the school community to allow for improved access to SGC activities and discussions. • At the school level, publicizing council member make-up, meeting times and locations, and agenda items would be helpful for stakeholders within the school community to engage with SGCs and monitor progress.
Engaging Parents more Consistently	• Both quantitative and survey data suggests that many SGCs need to better engage parents. Efforts should be directed towards policy provisions that require SGCs to work with PTOs to select parent members.
Sharing Best Practices	• Both quantitative and survey data suggest varying levels of performance among SGCs. While such variance is not unexpected in Year 1, a means for sharing best practices among SGCs should be developed and promoted. • Though the utilization of coaches varied widely among SGCs, having a coach was generally well received. Moving forward, best practices for how to utilize a coach should be documented and shared to ensure effective site based management is being practiced within all SGCs.
Additional Training	• The District should make available more focused budget training to enable maximum participation among SGC members in budget related discussions. • In addition to upfront training, ongoing, task-specific training should be made available throughout the year.

Notes:

1. Percent attendance for the SGC at Breakthrough Magnet School was not available.

2. The SGC at Rawson originally approved and submitted a budget on time, though that budget was put back under review.

3. The SGC at the Sports and Medical Sciences Academy maintains membership and meeting structures distinct from what is outlined in the SGC Policy, and therefore is not included in *average* calculations other than "% Attendance."

4. Because of its unique school model, the governance council at MD Fox CommPACT maintains distinct responsibilities and structure relevant to the CommPACT model.

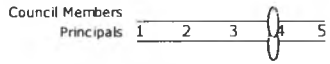
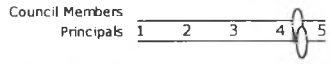
Survey Results regarding Site Based Management



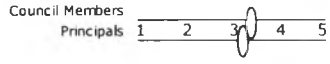
Scale of "1" (strongly disagree) to "5" (strongly agree)

Council Preparedness

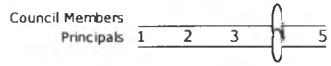


During preparation of my school's budget, my knowledge of the subject matter was sufficient enough for me to recommend changes.

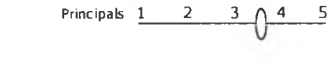
During preparation of my school's accountability plan, my knowledge of the subject matter was sufficient enough for me to recommend changes.



During preparation of my school's school compact, my knowledge of the subject matter was sufficient enough for me to recommend changes.

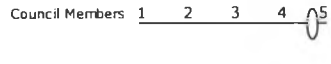


Real Authority

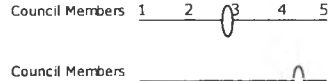


My school's budget had enough flexibility for our SGC to make significant decisions about how to allocate our school's resources.

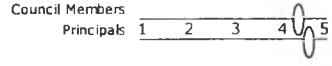
Our parent co-chair shares authority with the principal and sets meeting agendas.



Council members were selected in consultation with my school's PTO or other parent organization.

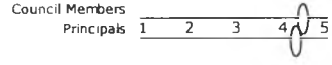


Team Dynamic

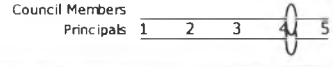


I am comfortable with sharing my opinions at council meetings.

The most dominant voice during SGC meetings is the principal.



As a whole, I believe our SGC functions well as a team.



Focus on Student Achievement

My SGC considers how every decision made by the council will impact student achievement.

I am confident that because of actions taken by our SGC, student achievement at our school will improve.

Local School Councils

Forsyth County Schools has a strong tradition of local school governance involving staff, parent and community partners. Originally called Local School Advisory Councils (LSACs), FCS converted to Local School Councils (LSCs) in 2000 under Georgia's the A+ Education Reform Act.

FCS has active LSCS in all schools, with the exception of those school that have been open for less than a year. Councils are comprised of a minimum of seven council members, including the principal, at least two certified teachers elected by teachers, parents (who make up the majority of the council, with at least 2 being businesspersons) and other members as specified in the bylaws.

LSCs are advisory bodies that provide recommendations to the school principal and FC Board of Education. Councils meet at least four times a year annually. All meetings and corresponding minutes are open to the public.

LSC meeting agendas and minutes are located in **eBoard** by selecting "meetings" from the channel bar that runs horizontally across the top of the page. From the drop down menu, select the name of the LSC you are seeking.

LSC meeting minutes are also included in monthly BOE meeting agendas and annual LSC recommendations are presented to the BOE each spring. Both the minutes and recommendations can be viewed at **eBoard**. To view the minutes, select "meetings" from the channel bar and then select a BOE regular meeting date. When the agenda appears, scroll to the bottom of it and select "Local School Council Minutes".

CONNECTICUT STATE DEPARTMENT OF EDUCATION

School Governance Councils

Guidance on Election Procedures

School Governance Councils (councils) provide a remarkable opportunity for Connecticut schools to engage with families and community members in a partnership to make our schools centers of excellence that prepare all students for success. Councils are intended to represent the diverse interests of the families, teachers, students and community members that make up the school population. *To that end, every effort should be made to engage broad participation in a fair and open council election process.*

The law that created School Governance Councils (Public Act 10-111, Section 21(g)) states that the parents, teachers, students and community members who serve on local councils must be elected in the numbers indicted in the table below. The law, however, does not specify a process for conducting the elections. A School Governance Council should develop bylaws to provide them with guidance for conducting elections and other council business. The development of operating bylaws should begin as soon as possible after a council meets for the first time.

The first councils established will not have the benefit of bylaws to guide their elections because they must be elected before bylaws are put in place. The purpose of this document is to provide guidance to assist schools in conducting the election process for those initial council members. The following pages provide advice on the election process, term length for council members and a sample process and checklist for elections.

School Governance Council Membership and Election Process

The councils consist of 14 voting members plus up to three nonvoting members depending on the type of school involved. The following tables describe the category of membership, the number of members and how they are elected.

Member	*Number*	*Election Process*
Parents or guardians of students at the school	7	Elected by the parents or guardians of students attending the school, each household with a student attending the school will have one vote.
Teachers at the school	5	Elected by the teachers of the school.
Community leaders within the school district	2	Elected by the parent or guardian members and teacher members of the council.
School principal or designee (nonvoting)	1	Principal may participate directly or name a designee.

Additional members and election process in high schools:

Member	*Number*	*Election Process*
Students, high school council members only (nonvoting)	2	Elected by the school's student body.

Creating a Valid Election Process

The election process should signal to the entire school community that the School Governance Council will be a collaborative body that represents the diversity of the students they serve. The following steps are intended as suggestions to help ensure an inclusive and valid election process.

Election Committee

- It is recommended that an election committee be formed that is representative of the diversity of the school and is unaffiliated with any potential candidates. The principal may serve as the coordinator of this committee.
- The election committee should assist in conducting the election activities such as scheduling dates, posting announcements, collecting nominations, overseeing the voting itself and formally announcing the results.
- Representatives of existing groups should be enlisted to help with the election process (for example, the Parent Teacher Student Association (PTSA), the Parent Teacher Organization (PTO) and the teachers' unions).

Call for Nominations for Parents and Teachers

- A call for nominations should be sent to all parents or guardians in the school to nominate themselves or other parents or guardians for the seven available positions on the council. Every effort should be made to provide nomination and election materials to parents in a language they understand.
- A call for nominations should also be sent to all teachers to nominate themselves or others for the five positions on the council.
- The election committee should verify that those nominated are eligible and willing to serve.

Voting

- The ballot for the parent or guardian election should be distributed to each household.
- The ballot for the teacher election should be distributed to all teachers.
- Voting procedures that will maximize participation should be determined by the election committee. For example, parents and teachers should be given sufficient time and multiple opportunities to cast their ballot – whether through dropping the ballot off at the school office or another community location outside of school hours to accommodate work schedules or through the U.S. mail.

Results

- Immediately following the election, ballots should be counted with supervision by either the election committee or, if no committee was formed, at least a school administrator, one parent and one teacher who are unaffiliated with any candidates.
- The principal should announce the results in a newsletter or other publication and post the new membership of the council on the school's Web site and key locations in the school.

Term Length for School Governance Council Members

P.A. 10-111 requires that voting members serve two-year terms and that no member can serve more than two terms on a council. The nonvoting student members serve a one-year term and no student member can serve more than two terms.

All council members' terms will expire in two years, potentially causing significant disruption to a council's ability to function effectively. To avoid having the terms of all council members expire at the same time, it is recommended that the first elections create staggered terms of office. One strategy for doing this is to use a lottery system, such as drawing straws, to establish two-year terms for half of the council and one-year terms for the other half. For example, the four parents, three teachers and one community member who drew a long straw would serve two-year terms, and the remaining three parents, two teachers and community member who drew short straws would serve a one-year term. Under this example, an election process would then continue each year.

Voting and Ballots: Frequently Asked Questions

PARENTS OR GUARDIANS

What names will appear on a school's ballot?

All of the names of parents who were nominated and who have a child enrolled in the school the council serves are included on the ballot. A parent is a person who is the natural, adoptive or stepparent of a child enrolled in the school and includes those people acting as legal guardian or registered custodian of the child, such as grandparents.

How many candidates can a household vote for on the ballot?

A household can cast a vote for each open parent seat on the council. For the first election, all seven seats are open. For example, if ten names appear on the ballot, each household may vote for up to seven parents on the ballot.

How are ballots distributed?

P.A. 10-111 requires that each household with a student attending the school shall have one vote to elect the parent or guardian members of the council. The law is silent as to how ballots should be distributed. One potential distribution method is to mail a ballot to each household via U.S. mail. If more than one family resides at the same location, each family should be sent their own ballot. Another alternative to mailing out ballots is to ask the parents or guardians to come to the school and vote over a period of a few days or evenings. Schools should consider using public service announcements through radio, newspapers and other means to inform families that ballots have been distributed.

Who receives a ballot?

Each household with a student or students enrolled in the school for the current school year should receive one ballot.

What happens if the number of candidates is less than or equal to the number of positions?

The council's membership must comply with the provisions in P.A. 10-111. Therefore, if there are not enough nominees received during for the first election, the full membership of the council will be completed by repeating the process of seeking nominations and holding a second election.

Is there a minimum number of voters required to consider the election fair?

While not required, schools should consider setting a threshold of participation they hope to achieve in order to encourage maximum outreach and participation in the process.

TEACHERS

How are the teacher representatives determined?

P.A. 10-111 requires that the teacher members of the council be elected by the teachers of the school. A nomination process should be conducted, followed by a vote. It is recommended that the teachers eligible to serve on the council be those certified staff who perform the majority of their duties in a teaching capacity at that school. Paraprofessionals are not eligible to serve as teacher members of the council.

STUDENTS

How are student representatives determined?

P.A. 10-111 requires that the nonvoting student members on the high school councils shall be elected by the student body of the school. It is recommended that these representatives be elected by the student body through existing student government procedures. If no student government exists, students may be permitted to campaign for the position of council representative at a general assembly of the student body and the student body may make their selection by voting.

COMMUNITY MEMBERS

How are community members elected to the council?

P.A. 10-111 requires that the community leader members be elected by the parent or guardian members and teacher members of the School Governance Council. The parent and teacher representatives should determine a process for soliciting interest from community members. P.A. 10-111 requires only that the community members of the council be a leader within the school district and that they be elected by the parent and teacher members of the council. This definition was intentionally left open by the drafters of the legislation and it is intended to incorporate community leaders of influence in each community, including, but not limited to, religious leaders, nonprofit leaders and business leaders.

Sample Process and Checklist for Parent Elections

The table below presents a sample process for conducting School Governance Council elections. Schools should determine the timeline they will use to solicit nominations and conduct the election.

PROCESS	INSERT DATE	
1. Notice of election and call for nominations distributed to all parents.		☑
2. Closing date for nominations. Once the nomination forms come back, notify the persons(s) and determine if they are eligible and if they accept or decline.		☑
3. Date by which the list of candidates will be displayed. Prepare your ballot with all names of nominees.		☑
4. Date by which voting ballots will be prepared and distributed. Send out ballots to every household with deadline for return.		☑
5. Provide an opportunity for parents to meet the candidates.		☑
6. Close of ballot. Provide various times and methods for parents to cast their ballots.		☑
7. Vote count. Once ballots are returned, determine election results.		☑
8. Announcement of new council members. Send election results out to school community and post on Web site.		☑
9. First council meeting to elect community members (principal will preside). Introduce new members at the council meeting and document in minutes.		☑
10. Second council meeting to elect office holders and begin to adopt bylaws (principal will preside).		☑

Resources for Conducting School Governance Council Elections

The following resources from other states may be helpful in structuring your school's election process:

- The Georgia School Council Institute has produced a guide book related to multiple functions of councils. Chapter 5 is particularly relevant to the election process. It is available by clicking here or by going to http://tinyurl.com/348exsc.
- The Local School Council Election Guide developed by Chicago Public Schools is available by clicking here or going to http://tinyurl.com/39yphrj.

Excellent models are also available internationally:

- The Principals Guide to School Council Elections, developed by the Department of Education in Victoria, Australia is available by clicking here or going to http://tinyurl.com/238pbzz.
- Ontario's guidance for school council members provides detailed materials for conducting elections and is available by clicking here or going to http://tinyurl.com/26ihg4p.

Connecticut Public Act 10-111 and guidance documents created by the Connecticut State Department of Education can be found on the Department's web site at http://www.sde.ct.gov/sde/SCG.

For additional information: Judy Carson, Ph.D., Connecticut State Department of Education, 25 Industrial Park Road, Middletown, CT 06457. Phone: 860-807-2122. E-mail: judy.carson@ct.gov.

HARTFORD Public Schools

CHOOSE. ACHIEVE. SUCCEED.

School Governance Council Basics

September 23, 2009

www.hartfordschools.org/councils

What are School Governance Councils?

The Hartford Board of Education believes that the success of the school and the students it serves is the shared responsibility of school staff, parents or legal guardians and community members. As such, the creation of School Governance Councils was approved in the Spring of 2009.

School Governance Councils are the primary, local school decision-making body of a school devoted to achieve its mission and vision. Toward this end, the SGC will focus on the analysis of student achievement, development of improvement plans, allocation of resources and programmatic and operational changes which enhance the quality of the school and the achievement of its students.

Councils will be made up of up to 12 members, with parents representing 50% of the membership and the other half being made up of a combination of the following:

1. Students (9-12)
2. Teachers
3. Support Staff
4. Religious & Faith-Based Institutions
5. Community Organizations
6. Higher Education Partners
7. Business Partners
8. Lead Agency
9. Design Partner Organization

For more detail on their duties, you can get a copy of the approved Hartford Board of Education Policy on School Governance Councils at www.hartfordschools.org/councils

If you have any questions you can email us at: councils@hartfordschools.org or call 860-695-8653.

SGC Schools and Training Dates

The following is a list of schools that will have School Governance Councils this year, and the dates for training that the school's principal has selected. Use links below to contact your principal if you'd like to participate in your school's council. Note that **child care and food will be provided** for the training sessions:

School Governance Councils in Connecticut

Robert Rader and Patrice McCarthy

A new, largely parent-led initiative to improve the education of public school children has started in several states, and ultimately could affect how schools and districts are structured.

The initiative, which has resulted in the creation of school governance councils, could help districts as they focus on improving student achievement. The potential downside is they could become another state mandate that will blur and possibly erode the current structure of local school governance.

As part of legislation signed into law last spring, 14 Connecticut schools—including a charter—in five underperforming districts were required to establish governance councils. By Nov. 15, another 184 low-performing schools in the state will have to set up these councils, and former Education Commissioner Mark McQuillan has predicted they will eventually be in place in every school in Connecticut.

School governance councils have taken hold in California, where their authority is much greater than in Connecticut, as well as in Kentucky. The Chicago Public Schools, the nation's third-largest district, also uses the model.

Much like other reform movements, judging their value will take time and careful evaluation.

How councils are set up

Connecticut's school governance councils are made up of seven parents, five teachers, two community leaders, and the principal—who does not vote. The exact composition of each council depends on whether it is an elementary or high school—at the higher grades, two nonvoting student members must be included.

The councils are advisory and have no actual "governance" authority. Much confusion could have been avoided if they were, in fact, called school advisory councils. However, the active parents, teachers, and community members on the council can have quite an impact on local decision-making.

Our organization, the Connecticut Association of Boards of Education (CABE), believes the councils can help in increasing student performance, as long as they are organized properly, work in a collegial manner, and make appropriate decisions. In fact, this is an opportunity to increase parent involvement, which has been discussed by boards for years.

The councils are charged with:

- Analyzing achievement data and needs, relative to the school's improvement plan.
- Reviewing the fiscal objectives of the school's draft budget and advising the principal before it is submitted to the superintendent.
- Participating in the hiring of the principal or other administrators by interviewing candidates and providing feedback to the superintendent.
- Helping the principal make changes to increase student achievement, including program changes and adjusting the school hours and days of operation.
- Working with administrators to develop and approve a school compact for parents, legal guardians, and students that includes an outline of criteria and responsibilities for enrollment and participation.
- Developing and approving a written parent involvement policy.

In some situations, the governance council can recommend that its school be reconstituted. It also can recommend a model for turning around the school.

Working with the councils

Connecticut's law requires that local school boards must provide training for these councils. Our state department of education turned to CABE to provide the training.

CABE is providing advice to the councils on the many issues they will face, including members' roles and responsibilities, how to analyze and review student achievement and financial data, and ways to engage parents and community members. We also have provided draft bylaws so council members—who share a lot in common with new school board members in learning their roles and responsibilities—understand the process and the necessity of working together.

The training started in June. Since the first 14 schools are underperforming, naturally there is some skepticism about the jobs that administrators, teachers, and others are doing. However, we believe bringing everyone together may help us see all the obstacles faced by the schools, the staff, and parents.

The jury is still out on whether governance councils will have a long-term effect on achievement, but having a tough conversation in a rational, thoughtful way may help strengthen our weakest schools as we work to increase parent involvement and student achievement.

Robert Rader (rrader@cabe.org) is executive director of the Connecticut Association of Boards of Education. Patrice McCarthy (pmccarthy@cabe.org) is deputy director and general counsel for CABE and the chairwoman of NSBA's Council of School Attorneys.

School Governance Councils

Frequently Asked Questions

Updated June 1, 2011

Contents:

I. Election of Councils
II. Operation of Councils
III. School Status
IV. Other

Note: Recently added questions are marked as NEW.

I. ELECTION OF COUNCILS

1. **Who is responsible for conducting the election?**
   A. Pursuant to C.G.S. Sec. 10-223e, the local and regional board of education is the entity required to establish the School Governance Council (council). The Department expects that the local and regional board of education will delegate this task at the school level to the principal and the principal's responsibilities will include coordinating the election with a variety of interested stakeholders.

2. **Must an election be held if there are fewer nominees than available parent seats on the School Governance Council?**
   A. Yes.

3. **What process should be used to fill vacant parent positions if there are an insufficient number of candidates on the ballot?**
   A. The full membership of the council will be completed by a continuing process of soliciting nominations and an eventual second election.

4. **What process should be used to fill parent, teacher, student and community member positions that become vacant following the election?**
   A. The members of the council should determine this process once the council is established.

5. **How are community members nominated?**
   A. C.G.S. Sec. 10-223e requires that each council have two members that shall be community leaders within the school district. The community leader members are elected by the parent and teacher members of the council and therefore these members may determine the nomination process once the council is established.

6. **What constitutes a "community member?"**
   A. C.G.S. Sec. 10-223e requires only that the community members of the council be a leader within the school district and that they be elected by the parent and teacher members of the council. This definition was intentionally left open by the drafters of the legislation and it is intended to incorporate community leaders of influence in each community, including, but not limited to, religious leaders, nonprofit leaders and business leaders.

7. **Can the school use its Parent Teacher Organization (PTO) to nominate parents to serve on the council?**
    A. C.G.S. Sec. 10-223e requires that the parent or guardian members of the council shall be elected by the parents or guardians of students attending the school. Therefore, the nomination process has to be fair and open to the entire parent community (not just members of the PTO). However, the PTO could assist in organizing and staffing the nomination/election process with involvement from administration and staff.

8. **Can the school use its data team as the representation for the teacher members of the council?**
    A. The teacher members have to be elected to the council by the teachers of the school. If members of the data team are nominated and elected by their peers, then yes.

9. **Before C.G.S. Sec. 10-223e was passed, a school has been operating with another type of governance council, for example it may be called a school leadership team. Does this existing council or team meet the requirements of C.G.S. Sec. 10-223e?**
    A. The School Governance Councils required under C.G.S. Sec. 10-223e must be established through school-wide elections and they have very specific membership requirements. If the membership of the previous school leadership team was not elected pursuant to the requirements of the new law and if the membership composition does not conform to the law, the school must establish a new council. There is no provision in the law to grandfather members of existing councils into the state's model.

10. **Can the school use its teachers union to nominate teachers to serve on the council?** *(added December 7, 2010)*
    A. C.G.S. SEC. 10-223e requires that the teacher members of the councul shall be elected by the teachers who work in the school. Therefore, the nomination and election process could be assisted by teacher's union of the school.

11. **A school has been reconstituted as a COMMPACT school under state law. Under the provisions of the COMMPACT state statute, there is a school council. The council does not meet the statutory requirements of the School Governance Council described in C.G.S. Sec. 10-223e but serves a similar function. Should there be two distinct councils in the school?** *(added December 7, 2010)*
    A. Under the COMMPACT School model, the council may not be elected and the membership does not mirror the requirements written in C.G.S. Sec. 10-223e. In fact, the SGC's are tasked with specific responsibilities in the law with limited flexibility for the SGC to conduct other tasks. Given these restrictions and a lack of flexibility in the law, it makes sense for there to be two different bodies to ensure that the council complies with the law and to allow the current council to continue the work that it has been doing.

12. **If a school has a council in place and they used election procedures that conform to the state statute, can those persons continue to serve out their term as that council becomes the school governance council for the purposes of C.G.S. Sec. 10-223e?** *(added December 7, 2010)*
    A. The school governance council required under C.G.S. Sec. 10-223e should start a-new and those members should be encouraged to run for election.

13. **Can a parent whose child has been placed by the school district in an out-of-district education setting be nominated and elected to serve on a council?** *(added June 1, 2011)*
    A. The law says the parent member has to be a parent or guardian of a student attending the school.

14. **Can a teacher of a school who is also the parent of a child attending that school be nominated and elected as a parent member of a council?** *(added June 1, 2011)*
    A. The law does not specify whether a parent who works at the school can also serve on the school governance council. However, the intent of the law is to broaden the participation in the school. While not specifically prohibited, having a teacher serve in the role of parent on the council is not the intent of the law. Each school governance council should create bylaws to address such situations.

15. **Can a community member elected to a council be a parent or teacher in that school?** *(added June 1, 2011)*
    B. Since the law does not define community member it does not exclude that person from being a parent or teacher in the school. However, the intent of the law is to broaden the participation in the school to include people that are in addition to parents and teachers. So while not specifically prohibited, having a teacher or parent serve in the role of community member is not the intent of the law. Each school governance council should create bylaws to address such situations.

II. OPERATION OF COUNCILS

16. **Are School Governance Councils required to develop bylaws?**
    A. C.G.S. SEC. 10-223e does not require that a council develop bylaws. However, the State Department of Education (SDE) recommends that each council do so and will be working with the Connecticut Association of Boards of Education (CABE) and other stakeholders to develop model bylaws.

17. **Should councils elect an executive committee (chair, vice-chair, recording secretary, and corresponding secretary)?**
    A. C.G.S. SEC. 10-223e does not require that a council elect an executive committee. However, SDE recommends that each council do so.

18. **Must councils use Robert's Rules of Order?**
    A. C.G.S. Sec. 10-223e does not make a recommendation as to the procedural rules that a council must follow. However, SDE recommends that each council follow Robert's Rules of Order or a similar process for ensuring that meetings are run in a fair and equitable manner. For more information see www.robertsrules.com.

19. **Are meetings subject to the Open Meetings Act? If so, is there a Web site or document that provides specific guidance?**
    A. Yes, meetings of each council are subject to the provisions of the Connecticut Freedom of Information Act, Connecticut General Statutes Section 1-200 et seq. The Connecticut Freedom of Information Commission has a Web site with various relevant resources located at www.state.ct.us/foi/.

20. **Are records subject to the Open Records Act? If so, is there a Web site or document that provides specific guidance?**
    A. Yes, documents created or maintained by each council are subject to the provisions of the Connecticut Freedom of Information Act, Connecticut General Statutes Section 1-200 et seq. The Connecticut Freedom of Information Commission has a Web site with various relevant resources located at www.state.ct.us/foi/.

21. **Do community members of the School Governance Council vote?**
    A. Yes

22. **We have let our student members (on our current school councils) vote. Can we still do this?**
    A. No, C.G.S. Sec. 10-223e requires that the student members of the council be nonvoting members. If a separate council is established to perform tasks not under the purview of the council pursuant to C.G.S. Sec. 10-223e, the student members may vote.

23. **Our current governing board also hears many discipline appeals. Would the new School Governance Council still be able to do this?**
    A. No. The councils established pursuant to C.G.S. Sec. 10-223e are tasked with specific responsibilities in the public act. While there is some flexibility in the act for the council to "provide advice on any other major policy matters affecting the school to the principal of the school, except on matters relating to the provisions of any collective bargaining agreement," this language would not encompass ruling on disciplinary appeals.

24. **If a school is required to institute a School Governance Council and that school does not receive Title 1 funds, does it have to develop the parent involvement policy and school-parent compact which are required under the Federal Title 1 Program?**
    A. Yes. The council under C.G.S. Sec. 10-223e is required to develop both regardless of the school's Title 1 eligibility.

25. **Do School Governance Councils need to carry indemnity insurance similar to what local boards of education carry?** *(added June 1, 2011)*
    A. There is no express requirement in C.G.S. Sec. 10-223e for councils to carry indemnity insurance. Each local board of education should make its own determination.

26. **The law says that School Governance Councils "shall" advise in particular areas including "reviewing the fiscal objectives of the school's draft budget and advise the principal before the budget is submitted to the superintendent." What about the case where a school has no input into its budget; all budget decisions are handled at the central office. Is the council out of compliance because they will never advise in this area?** *(added June 1, 2011)*
    A. In a situation where a draft budget is not developed at the school level, the council should work with the board to determine other avenues to advise the district in the development of the budget impacting the school. Such efforts could include but not be limited to review and analysis of the prior year's budget and its fiscal objectives. The council, board and district should participate in developing a process for allowing school governance councils to provide their recommendation regarding the budget.

27. **Some schools that are required to have councils by November 1, 2011 may choose to have elections and constitute their councils earlier, for example before school ends in June. For administrative purposes, can SDE identify their start date as the required date of November 1? This will have implications for tracking schools and the three year clock on recommending reconstitution.** *(added June 1, 2011)*
    A. The councils that commence earlier will have an official start date of November 1, 2011.

28. **The law says that the council shall participate in the hiring process of the school principal or other administrators of the school by conducting interviews of candidates and reporting on such interviews to the superintendent and the local board of education. Does this mean that the council serves on the interview committee?** *(added June 1, 2011)*
    A. The School Governance Council must be involved in conducting interviews; however, the law does not require that the council serve on or as the board of education's interview committee. The council should work with the board of education to determine an appropriate role consistent with the local board of education's hiring practices ensuring that the council's recommendation is shared with the superintendent and local board of education as a formal part of the process.

III. SCHOOL STATUS

29. **Are the School Governance Councils permanent once a school is identified? If not, how does a school get released from this requirement?**
    A. As the law is written, there is no provision for ceasing the operation of a council. However, only those local and regional school boards with a low achieving school due to failing to make adequate yearly progress in mathematics and reading at the whole school level are required to establish such councils.

30. **If a school has been reconstituted previously, can the School Governance Council recommend that it be reconstituted again? What constitutes reconstitution? Does this provision apply only to the schools receiving the School Improvement Grant? Or does it also apply to schools that have been through substantial changes as a result of No Child Left Behind sanctions (restructured, redesigned, etc)?**
    A. Pursuant to C.G.S. Sec. 10-223e, the council may not vote to reconstitute if: (1) the school was already reconstituted as a result of receiving a federal school improvement grant that was contingent on reconstitution; or (2) a reconstitution of the school was initiated by another source. Therefore, a council may not vote to reconstitute a school that has already been reconstituted by an outside source, such as the State Board of Education or the local or regional board of education. For this purpose, reconstitution is defined as one of the six models included in the act: (1) turnaround; (2) restart; (3) transformation; (4) CommPACT school; (5) innovation school; and (6) any other model developed under federal law.

31. **A school is on the list that requires the formation of a School Governance Council. The school's overall performance on either the 2010 Connecticut Mastery Test (CMT) or Connecticut Achievement Proficiency Test (CAPT) has improved leading it to Safe Harbor status. Does the new status mean that the school does not have to form a School Governance Council?**
    A. C.G.S. Sec. 10-223e requires that all schools that have not made adequate yearly progress in mathematics and reading at the whole school level prior to July 1, 2010,

must form a council. Safe Harbor reached based on the school's performance on the 2010 CMT(s) or CAPT would not allow a school to be exempt from this requirement.

32. **If a school voluntarily establishes a School Governance Council, does that council have the same powers that are given to the councils in the schools that are mandated (in other words, if a school that is not on the list establishes a council, can that council recommend reconstitution after it has been in place for three years)?** *(added June 1, 2011)*

A. School Governance Councils established voluntarily are not bound by the state statute. A voluntary school governance council is governed by the local board of education's policy.

IV. OTHER

33. **What are the consequences/implications for schools that are required to implement school governance councils but do not do so?**

A. Noncompliance with the school governance council requirements falls within the same penalty as noncompliance with any other state education law. Connecticut General Statutes Sec. 10-4b provides general enforcement provisions for noncompliance with state education laws. Remedies would include enforcement orders by the Connecticut State Board of Education.

School governance councils meet

Maggie Gordon, Staff Writer
Published 11:05 p.m., Thursday, December 1, 2011

STAMFORD -- More than 150 parents, teachers, administrators and other members of the community from 11 city schools came to the University of Connecticut Stamford on Monday night to participate in Stamford's first meeting of School Governance Councils, with representatives from each school working together to understand their roles.

The councils were created earlier this academic year as a result of 2009 test scores that identified the 11 schools as "low achieving."

As a result of new state regulations, these schools were required to form the councils, which are advisory boards dedicated to improving student achievement and helping school principals lead, according to Mike Meyer, the district's director of student support services.

Councils have been formed at K.T. Murphy, Roxbury, Springdale, Julia A. Stark, Davenport Ridge, Hart, Dolan, Turn of River, Rippowam, Stamford High and Westhill High schools.

er told council members.

Patti Avalone, a representative from the state, led the meeting.

"The research shows that if people are involved in school, it's like a bigger family. It really is. It's better for morale," Avalone said. Parent and community involvement, like the involvement that will be produced through the councils, has been proven to lead to a higher graduation rate and fewer suspensions and expulsions, she said.

"And schools with high engagement have a better reputation in the community," she said, "because those parents will go out to the soccer field, the nail parlor or the barbershop and talk about the great things that go on in that school."

While Avalone explained that council members will be responsible for examining school achievement and the goals used to improve it -- as well as evaluating budget objectives and engaging parents -- she explained that the groups' purpose is not to "manage" the administration.

"We can't step in and say, `Step aside, principal, there's a new sheriff in town.' "

During the meeting, representatives from the schools came up with norms for their councils. A member of Hart's council said a main goal should be "to keep the focus on the students," while a Turn of River member said members should remember "to have fun."

BERKELEY UNIFIED SCHOOL DISTRICT

BYLAWS FOR SCHOOL GOVERNANCE COUNCILS (SGC)

I. Purpose and Philosophy

The success of a school and the students it serves comes through the shared responsibility of the staff and entire school community.

II. Charge of the School Governance Council

A School Governance Council (SGC), composed of the school's principal, teachers, staff members, parents/guardians, residents, or community members, shall be established at each pre-K-12 school site or designated program in accordance with California law, local statute, and policies and bylaws adopted by the Board of Education.

Each School Governance Council shall develop a *Single Plan for Student Achievement* (*School Plan*) which shall be focused on improving student learning and shall direct the revenues from the *Berkeley Public Schools Educational Excellence Act of 2006* (BSEP/Measure A), together with State and Federal Program funds allocated to the school such as Title I, EIA, SIP, and other funds, to implement the Board-approved *School Plan.*

The School Governance Council shall have as its major responsibility the monitoring and evaluation of the elements of the *School Plan* to ensure that BSEP funds, Title I, EIA, SIP, and other resources, are improving student success and being spent appropriately. The School Governance Council shall insure that the BSEP/Measure A funds in the *School Plan* are clearly delineated from all other funds in the Plan. At least annually, the School Governance Council must formally review the Plan goals, outcomes, expenditures and data, before submission to the Board of Education for annual approval.

The School Governance Council shall also have as its responsibility the recommendation of alternative methods of class size reduction at the school, should this be necessary or desirable in a particular year (pursuant to Section 3.A.ii, *Berkeley Public Schools Excellence Act of 2006*). In such an instance the recommendation shall be forwarded to the Board of Education for action.

Responsibilities of the District

As per Board policy, the Superintendent or designee will provide training and information to the members of School Governance Councils that will facilitate their ability to collaboratively analyze data, design measurable goals, and

develop, monitor, and evaluate programs. This training will include a written handbook distributed to all School Governance Council members.
The District will also make available regularly to the Principal and the School Governance Councils revenue and expenditure reports, including an annual revenue and expenditure report, to enable the School Governance Council to prepare its *Single Plan for Student Achievement.* The District will provide student data to the Principal to be shared with the SGC in a format that allows the data to be used as a basis for decision-making in developing the *School Plan.*

The District will also make available to the BSEP Planning & Oversight Committee (P&O) information needed to demonstrate that SGCs are properly constituted and also actively and properly involved in the development, monitoring, and evaluation of the *School Plan.*

Responsibilities of the School Principal
A principal's leadership is critical to the success of the School Governance Council. The greater the principal's ability to engage and involve the SGC and other members of the community in planning, program and budget development, the more effectively student learning will be improved at that site.

The principal is a voting member of the School Governance Council, and vital to the success of the planning and implementation of the *School Plan.* By law, the principal has no administrative authority over the SGC and therefore may not veto decisions made by the SGC nor make changes to the *School Plan* after it has been approved by the School Governance Council. Because it is the principal's responsibility to implement the *School Plan,* the School Governance Council should give weight and consideration to the principal's view.

The principal has the following duties with respect to the development of the School Plan:

- Provide vision, leadership and information to the School Governance Council.
- Provide student data to the SGC in a format that allows the data to be used as a basis for decision-making in developing the *School Plan.*
- Provide clear revenue and expenditure information for the SGC to use in developing a realistic and accountable *School Plan.*
- Administer the school-level activities of the approved *Single Plan for Student Achievement.*
- Ensure that District guidelines with respect to hiring, procurement of materials and conflict of interest are followed.
- Together with members of the previously elected SGC, ensure that elections for the School Governance Council are open, widely publicized, and timely.

Responsibilities of School Governance Council Members

The School Governance Council must demonstrate that they have disseminated information about their work widely in the school community and that they have solicited input from all groups *and individuals* included in their community. While the School Governance Council may not, in every case, include members representing each group comprising the school community, the elected members must consider the needs of the children of all the various school groups and individuals, and must demonstrate the means by which the needs of all children have been considered in developing and implementing the *Single Plan for Student Achievement.* All members of the school community must have opportunities to bring their interests and concerns before the SGC.

School Governance Council members are strongly encouraged to attend the annual SGC orientation meeting, and other workshops provided by District staff relevant to the SGC's charge and responsibilities.

Responsibilities of School Governance Council Chair/Co-Chairs

Responsibilities of the SGG Chair/Co-Chairs:

- Preside over the meetings of the School Governance Council.
- Make arrangements for an alternate Chair or Co-Chair to preside over any meetings which the Chair is unable to attend.
- Communicate regularly with the school's Planning and Oversight Committee Representative.
- With the SGC membership, publicize the upcoming SGC election each year, via a welcoming letter to parents and staff, announcements and tables at PTA meetings and Back-to-School Night, encouraging parents and staff to participate on the School Governance Council.
- Attend SGC orientations and training meetings as provided by District staff.

And, in collaboration with the Principal:

- Set the SGC meeting agendas.
- Assure the SGC's compliance with the Brown Act (e.g. SGC meeting notices and agendas widely disseminated to the school community at least 72 hours in advance of the meeting, meeting minutes kept, records properly kept, etc.).
- Submit the SGC election report and membership roster, and the contact information for school's Planning and Oversight Committee Representative(s) to the appropriate District office.
- With the support of District staff, guide the SGC to analyze student data, assess school needs, review school budgets, and develop school goals and the *Single Plan for Student Achievement.*
- Submit any requested changes to the *School Plan* in the required manner.
- With the SGC membership, publicize the role and work of the School Governance Council and the contents of the *School Plan* throughout the year.

III. Election and Term of Office of School Governance Council Members

Election Period and Term of Office
A well-publicized election to the School Governance Council shall be conducted by each school during September each year, with the elections completed by October 1. The term of office is October 1 through September 30 of the following year. Staggered two year terms are allowed if the site so chooses, with the terms ending September 30. To ensure a fully constituted School Governance Council throughout the school year, non-voting Alternates from each represented group (parents, classified and certificated staff, and students for 9-12 schools) shall also be elected at this time. Elected alternate members should attend all meetings, so that they may be prepared to fully participate as voting members should the need arise. In the absence of voting members, Alternates may be counted for the quorum and may vote in their place. A School Governance Council member may be re-elected for subsequent terms, without limit.

Parent Election
Parents/guardians, residents, or community members shall be elected from the school at large, in an election conducted by the Principal or designee and outgoing School Governance Council members.

Recruitment of candidates and election of members should be conducted in such a manner as to promote a SGC which reflects the ethnic, linguistic, socioeconomic and programmatic composition of the site. As an example, members might be those from diverse ethnic backgrounds, and those participating in special programs such as bilingual education, special education, gifted and talented, and compensatory education. To this end, efforts should be made to ensure that information is disseminated and the election process is made accessible to all members of the school community. Parents nominated for re-election may not be involved in the supervision and oversight of the election process, i.e., chairing the election meeting, counting the votes, distributing fliers, and so forth.

Staff Elections
Representatives of the teachers, selected by teachers, and other school personnel, selected by other school personnel, shall constitute staff representatives to the School Governance Council. They shall be selected using the school's normal process for selecting committee members, as coordinated by the Principal. This process shall be completed during the month of September.

Student Election
Student members of the BSEP Site Committee shall be elected from Berkeley High School. Student members of the School Governance Council shall be elected from Berkeley Technology Academy (B-Tech) and the Independent Study Program. Non-voting student representatives to the School Governance Council may be elected from the three Middle Schools.

Composition & Quorum Requirements
The size, composition and quorum requirements of the School Governance Council vary by school type (see page 14).

Conduct of Elections
For suggestions about how to conduct a School Governance Council election see Appendix.

IV. Selection of Planning & Oversight Committee Representative(s)

Upon completion of the School Governance Council election, the SGC shall select the school's Representative(s) to the district-wide BSEP Planning and Oversight Committee (P&O Committee). The number of P&O Committee Representatives varies by school type (see chart). An equal number of Alternates shall be chosen by the SGC to represent the school in the absence of the Representative(s).

Planning and Oversight Committee Representatives need not sit on the school's School Governance Council, but they are required to communicate regularly with the SGC. It is generally expected that Planning and Oversight Committee Representatives will have a definite connection to the school that they represent, such as being a parent or staff member at that school.

The term of office of Planning and Oversight Committee Representatives is one year, from October 1 until September 30 of the following year. There is no limit to the number of terms, consecutive or interrupted, which Planning and Oversight Representatives may serve.

For more details regarding the responsibilities of Planning and Oversight Committee Representatives, see the *BSEP Planning and Oversight Committee Bylaws.*

Submission of SGC Roster
Upon completion of the School Governance Council election and the selection of the school's Planning and Oversight Committee Representative(s), the Principal or Chairperson shall submit an election report and membership roster of the School Governance Council and the P&O Representatives to the appropriate District office.

V. Operations of the School Governance Councils

The School Governance Councils are governed by the State of California Brown Act and these Bylaws. School site rules consistent with these Bylaws should be established by individual sites to cover such operating agreements as:

- the term and election procedures of SGC members and officers
- the SGC's regular meeting times

- quorum requirement if the size of the SGC exceeds the minimum
- minimum attendance required of members
- other operating agreements.

Meeting notice, time and place
School Governance Council meetings shall be in a public place, open to the public, and noticed at least 72 hours in advance (preferably longer). Such notice could be given in the Principal's bulletin, on the school e-tree, sent home with students where appropriate, etc. The day and time of SGC meetings shall be agreed upon among the Council members (both parents and staff). Meeting times should be regular, preferably set times, (for example, the first Tuesday of each month at a particular time), and a calendar of meetings should be established at the first meeting and then published, to allow maximum community participation.

Election of officers
The SGC needs to elect officers with stated responsibilities and authority, including:

- Chair or co-Chairs to preside over SGC meetings. If co-Chairs are elected, at least one should be a parent. It is strongly recommended that the principal not be the Chair.
- Secretary, to insure meeting minutes are recorded.

Filling Vacancies
Every effort should be made to have a complete SGC. Alternates fill in automatically when there is a vacancy. In the event that a vacancy occurs and there is no Alternate, consideration should be given to the need for representation from the entire school community.

Accessible meetings
Effort should be made to arrange child care for meetings, if requested by the participants. Likewise, effort should be made to provide an interpreter in the event that non-English speaking individuals wish to participate in School Governance Council meetings.

Conduct of meetings
School Governance Council meetings are public meetings; the regulations and procedures governing meetings of other public bodies (such as the Brown Act and Roberts Rules of Order) generally apply to meetings of the School Governance Council. *SGC* meetings should be conducted in an open, civil manner.

Rules of Order
School Governance Council meetings must operate according to the following rules:

- Meetings must be open to the public.
- The public may address the SGC on any item within the jurisdiction of the SGC.
- Notice of the meeting must be posted at the school site at least 72 hours before the meeting (preferably longer).
- The notice must specify the date, time, and place of the meeting and the agenda.
- The SGC cannot take action on an item not described on the posted agenda.
- Questions and brief statements of no impact on students or employees that can be resolved by providing information need not be described on the posted agenda.
- If these procedures are violated, upon demand of any person, the SGC must reconsider the item at its next meeting, after allowing for public input on the item.

Voting

Although reaching consensus in decision-making is desirable, when a vote is taken it must be open and recorded; secret ballots are not permitted.

Record keeping

The School Governance Council shall maintain records of the following:

- elections
- official correspondence
- agendas of SGC meetings
- evidence of input from school advisory committees and groups
- minutes of meetings, copies of current and prior year *School Plans.*

All records pertinent to a funded project must be retained for three years. SGC records must be kept available for public review upon request.

After each SGC meeting a School Governance Council "Meeting Summary Report" recording attendance, discussions, recommendations, and actions shall be submitted to the District office.

Annual Timeline of School Governance Council Activities

Tasks	Responsible	Date
Conduct elections for School Governance Council (SGC) at each school site	School Principal and outgoing SGC Chair person or designee	September 30
Collect SGC membership, election data, and select P&O Rep(s); submit to District Office for review	School Principal and SGC Chair or designee	mid-October
Participate in orientation / training	All new and returning SGC members; District staff coordinate	Fall-Winter
Review each SGC to certify the election and compliance with the guidelines; submit membership rosters to the Board of Education	District staff with P&O Committee representatives	October – November
Conduct regular meetings of the SGC to review all pertinent information about the effectiveness of the strategies adopted in the *School Plan*; submit minutes of meetings	SGC Chairperson & School Principal; District staff to implement budget changes	ongoing
Collect and review student evaluation data from prior year and draw conclusions; prepare a report for the Board	Each SGC with school's Principal and District staff support	October thru December
Review school's student data analysis with selected School Board members & Educational Services Department staff	SGC Chairperson, members and Principal	January
Solicit input from school community re: the status, performance, and needs of the students and school	SGC Chair and members	January
Discuss funding priorities and possible new programs for the new year; develop (every 3 years) or revise the school's Action Plans and Strategies to meet the three year Goals	Each SGC	February-March
Develop budgets based on the Action Plans of the *Single Plan for Student Achievement*	Each SGC	March
Submit the *Single Plan for Student Achievement* with budgets for administrative review	Each SGC	March-April (deadline varies)
Adopt each school's *Single Plan for Student Achievement* (after 2 readings)	School Board	May-June
Prepare recruitment activities for election of next year's SGC members	Each SGC	May-August
Publish BSEP Annual Plan, including Site Plans	District Staff	June-September

VI. Development of the *Single Plan for Student Achievement (School Plan)*

The Single Plan for Student Achievement involves a continuous development, implementation, and monitoring cycle, shown in the following six steps:

- Step One: Measure effectiveness of improvement strategies at the school
- Step Two: Seek input from school advisory committees/school community
- Step Three: Reaffirm or revise school goals
- Step Four: Review improvement strategies and expenditures
- Step Five: Recommend the approved School Plan to the School Board
- Step Six: Monitor implementation of the School Plan.

These six steps are elaborated in the *Guide and Template for the Single Plan for Student Achievement, A Handbook for School Site Councils*, published by the California Department of Education.

Soliciting Input from School Community

Prior to plan development, the School Governance Council shall solicit input from members of the school community, advisory groups, teachers, administrators, parents and students, when appropriate, regarding the status, performance and needs of the students and school. Such solicitation may come through surveys, informational meetings, and the exchange of information with other sites.

All Students versus Targeted Groups of Students

The *Single Plan for Student Achievement* must benefit all the children at a school, although particular site funds may be targeted toward special purposes. Not every program that a site develops must directly benefit every child. Site decisions related to program development and financial allocations should consider qualitative and quantitative data that may determine the needs of each school.

Two Readings of *School Plan* and Budget

To ensure a more collaborative process in development of the *School Plan*, the budget presented by the Principal to the SGC must be presented for review and discussion at a meeting of the SGC at least one week prior to the meeting where the vote for approval of the entire plan will take place. Therefore, the final approval of the *School Plan,* including final budget allocations, may not be approved by a vote of the Council at the same meeting at which it was presented for the first time.

Conflict of Interest

A "Conflict of Interest" occurs when a School Governance Council member or an individual in the member's immediate family **stands to gain financially from adoption of a particular proposal** submitted to the School Governance Council. Avoidance of a "conflict of interest" position should be taken into account during the election of School Governance Council members, e.g., personnel paid by

funds to be allocated by the SGC should not be elected to the School Governance Council, since funding for their position will need to be reconsidered and approved each year by the School Governance Council.

When a "conflict of interest" occurs, the "Interested Member" must resign from the Council and be replaced by an Alternate.

An exception to the above-stated rule shall exist in the case of programs that are generally available to a substantial number of teachers at the school. If needed, arbitration of conflict of interest disputes shall be conducted by the Superintendent or designee.

Delineation of BSEP/Measure A funds in the School Plan
The School Plan must clearly delineate the use of the BSEP/Measure A revenues from all other revenues in the Plan.

VII. Mid-year Changes to the School Plan

Any of the following factors may indicate a need to amend the *School Plan* during the school year:

- A major service or activity proves ineffective, and students are at risk.
- Material changes occur that affect the academic programs.
- Staff, equipment, or materials essential to the *School Plan* cannot be procured.
- School boundaries or demographics suddenly change.
- An activity is found to be non-compliant with state or federal law.
- A planned activity is not supported by staff, parents, or students.

The SGC may amend the *School Plan* at any time, in accordance with Board policy and SGC Bylaws. Whenever the SGC makes a material change to the Plan, the School Board must approve the change.

VIII. Dispute Resolution & Accountability

Because the School Board, administration, and School Governance Council have separate but related responsibilities for the *School Plan*, they need to work cooperatively. Every effort should be made to resolve disputes regarding the development and implementation of the *School Plan* and SGC compliance issues. Should an impasse occur, several remedies are available:

- The School Governance Council or an individual member of the SGC may communicate with the Educational Services Office in an effort to clarify policy or resolve a dispute.
- The P&O Committee or its designee may offer support to a School Governance Council seeking clarification.
- Individuals may file a formal complaint under the district's Uniform Complaint Procedure.

- The School Governance Council may appeal to the School Board to resolve issues of planning or implementation, to clarify an issue in doubt, or to establish a needed policy.
- The administration may recommend that the Board not approve a Single Plan believed to be flawed.
- The School Board may develop policies to regulate or inform School Governance Councils and staff in the performance of their duties.

IX. Berkeley High School BSEP Committee and School Governance Council

Effective in the 2007-08 school year, each school except Berkeley High School combined the former BSEP Site Committee and School Site Council into a single body, the School Governance Council. At Berkeley High, due to its size and complexity, the BSEP Committee remains a discrete committee, focused on the school's BSEP/Measure A Site Discretionary Funds. The Berkeley High School Governance Council acts as the School Site Council (SSC), allocating state and federal categorical funds.

The Berkeley High School BSEP Committee shall be composed of elected parents, community members, students, staff, and teachers. The charge of the Berkeley High BSEP Committee is to develop a budget to allocate BSEP/Measure A School Site Discretionary Funds for the personnel, services and materials required to deliver effective activities leading to improved student performance as outlined in the *Single Plan for Student Achievement.* The BSEP Committee's proposed Plan and Budget will be sent to the Berkeley High School Governance Council where it will receive a vote to approve or disapprove. If disapproved, the BSEP Committee will subsequently submit another Plan and budget for approval.

In the event that the BHS School Governance Council rejects the BSEP Committee recommendations in whole or in part, the BSEP Committee shall have an opportunity to respond directly to the concerns of the SGC, and if the BHS SGC insists on changes contested by the BSEP Committee, the Plan shall be forwarded to the Board with a written BSEP Committee response to the proposed changes to their recommendations.

The BHS BSEP Committee will have at least two joint meetings with the School Governance Council: one in the fall, once both new committees are constituted, to review the Berkeley High School *Single Plan for Student Achievement (SPSA)* for the current year, and once in the Spring when the School governance Council is considering adopting the budget proposed by the BSEP Site Committee. Additional meetings will be scheduled as needed to insure collaborative planning. Toward this end, the SGC shall notify the BHS BSEP Site Committee when revisions to the Single Plan are taking place.

The BHS BSEP Committee composition, quorum, and P&O Representative allocation is shown on the *SGC Composition, Quorum & P&O Representation Chart* (attached following).

Regarding elections:

- Parents/guardians, residents, or other community members will be elected in September at the first PTSA meeting of the school year. Such members may not all reside in the same BUSD attendance zone, or have children who all attend the same BHS Small School or Program,
- Student members will be elected by the student body during the spring prior to the school year in which they will serve,
- Administrative/Classified staff will be appointed by the Principal,
- Teacher members will be elected by the certificated staff.

The BHS BSEP Committee will elect one parent, one student member, and Alternates for each to non-voting seats on the School Governance Council.

At least two of the four BHS P&O Committee Representatives shall be parents or community members.

X. Amendment or Suspension of Bylaws

Amendment or suspension of these bylaws must be authorized by the School Board. These bylaws shall remain in effect until amended or rescinded by the Berkeley School Board.

School Governance Council Composition, Quorum & P&O Committee Representation

School/Program Type	Parent* Members	Staff Members	Student Members	Minimum Size	Quorum**	P&O Committee Representatives
Elementary	**6 parents** **+ 2 Alternates** (elected at large)	**6 staff** **+ 2 Alternates** (includes Principal & at least 1 Classified staff member)	N/A	**12**	**7 = quorum**** At least: • 3 parent members & • 3 staff members	**1** **+ Alternate(s)**
Middle	**6 parents** **+ 2 Alternates** (elected at large)	**6 staff** **+ 2 Alternates** (includes Principal & at least 1 Classified staff member)	2 students may serve as non-voting members	**12**	**7 = quorum**** At least: • 3 parent members & • 3 staff members	**2** **+ Alternate(s)**
Berkeley High BSEP Committee	**5 parents** **+ 2 Alternates** (elected at large)	**5 staff** **+ 2 Alternates** (includes Principal or designee & at least 1 Classified staff member)	**5 students** **+ 2 Alternates**	**15**	**8 = quorum**** At least: • 2 parent members • 2 staff members & • 2 student members	**4** (minimum 2 must be parents/community) **+ 2 Alternates**
B-Tech	**2 parents** **(+ Alternate)**	**4 staff** **(+ Alternate)** (includes Principal or designee; Classified staff optional)	**2 students** **(+ Alternate?)**	**8**	**5 = quorum**** At least: • 1 parent member • 2 staff members & • 1 student member	**1** **+Alternate(s)**
Independent Study Program	**3-4 parents** **(+ Alternate)** (parents + students = 5; minimum 1 student)	**5 staff** **(+ Alternate)** (includes Principal or designee; Classified staff optional)	**1-2 students** **(+ Alternate)** (parents + students = 5; minimum 1 student)	**10**	**6 = quorum**** At least: • 2 parent members • 2 staff members & • 1 student member	**1** **+ Alternate(s)**
Pre-K Program	**4 parents** **(+ Alternate)**	**4 staff (+ Alternate)** (includes Principal or designee and both Certificated & Classified staff)	N/A	**8**	**5 = quorum**** At least: • 2 parents + 2 staff	**1** **+ Alternate(s)**

* Per Measure A of 2006 Section 5-B-ii: "Parents/guardians, residents, or community members."

**Quorum must include Principal or designee.

ALASKA PUBLIC TELECOMMUNICATIONS, INC.
PROPOSED CAPITAL PROJECTS
UNIFIED PUBLIC TELEVISION SERVICES
Total $2,400,000

Alaska is served by four community public television stations – KTOO in Juneau, KUAC in Fairbanks, KYUK in Bethel and KAKM in Anchorage. All but KAKM are mired in analog worlds, even as digital environments become more and more prevalent in the industry. And as technology changes swiftly, it becomes more and more necessary for these stations to collaborate formally to rationalize infrastructure, provide for innovation, and share production costs. This proposal supports systemwide efforts to standardize equipment, share technical training and standards, and gain efficiencies from centralizing infrastructure. This proposal also would equip a new team of public affairs producers expanding the reach of state and local programming, especially on the road system. State support for equipment costs totaling $2.4 million is requested to achieve these improvements.

KAKM has the digital technology and server capacity to provide both statewide and individualized programming streams from a single location. The stations anticipate moving to this system in July and soon will conclude formal agreements implementing the change. This proposal, if funded, will provide the required infrastructure for the other three stations to produce, share and broadcast digital content. It will provide an automated monitoring system for the statewide television feed to save operating costs. Finally, this request would rebuild key pieces of the Alaska Public Radio Network distribution network for 26 member stations. A key benefit of the system collaboration envisioned here will be common technical standards, equipment purchases, shared maintenance and spare parts, and training support. Engineers estimate between 5 percent and 10 percent of the overall cost of these improvements will be saved by combining them into a shared initiative. Here are brief descriptions of the projects for which support is requested.

- **KYUK-Bethel, KUAC-Fairbanks and KTOO-Juneau Digital Production Facilities:** Each of the facilities outside Anchorage is in need of modern equipment for a digital era. While some infrastructure is being centralized to save overall costs, it is imperative to refresh technology and equipment at each location.

  KYUK has virtually no studio production capacity at present, despite an honored tradition of video production for rural audiences. 1990s vintage production studio and control room equipment is now either unreliable or totally nonfunctional. This request would permit KYUK to establish a local studio capable of producing programs for local or statewide consumption; establish a production control area capable of receiving and retransmitting a statewide program stream from KAKM customized for Bethel; allow KYUK to receive and transmit KTOO's *360 North,* including *Gavel Alaska;* provide a studio for local students or other media training; provide a studio for community groups and local events; and reestablish the ability of KYUK to participate in co-productions with its sister stations such as statewide pledge drives, candidate forums or cultural events from the region.

  KUAC, the UAF-licensed TV station in Fairbanks, currently does not have a production facility. An out-of-date analog production facility was dismantled years ago. A digital production facility and television studio is required to produce programs representing events and activities at the University of Alaska, Fairbanks and Interior communities. KUAC would enjoy the same benefits of a digital studio as those described above for KYUK, and the facility also would be in place to help serve the needs of journalism or film students at the University of Alaska Fairbanks.

  KTOO currently has a standard definition production facility but needs to upgrade to a high definition digital facility to meet the needs of both Juneau/Southeast Alaska and the rest of the state through operations of *360 North* and *Gavel Alaska*. This improvement will provide for compatible real-time audio and video between the Juneau studio and other television facilities around the state. This connectivity will allow for increased sharing of important news and events such as the Legislature and

state government through programs like *Capitol Views, AARP Alaska* and statewide public affairs specials.

- **Mobile TV Transmission Capability for KAKM-Anchorage, KUAC-Fairbanks and KTOO-Juneau:** The three major public TV stations need to upgrade their transmission facilities in order to meet the growing demand for content on mobile platforms such as smartphones and tablet computers. Alaska lags national trends in this area: Approximately 140 stations and all major markets nationally now provide this service. But broadband penetration in our state is high and consumers increasingly expect mobile video service.

- **Mobile Production Trucks for Juneau and Anchorage:** KTOO and KAKM have developed a joint venture to produce content and cover news developments for distribution to radio and television member stations, as well as PBS and NPR affiliates nationally. This mobile "road team" will produce coverage of important public proceedings and cultural events across Alaska. Its work will extend the reach of current local and state programming, provide access to quality programming in more regions of the state, and share local stories that are currently going untold. The team would be responsible for a minimum of one complex multi-day event per week or three to five short-form events such as luncheons, cultural forums, lectures, news conferences or interviews. Such events might include: state government hearings or public forums; town hall meetings; association conferences such as the Alaska Miners Association or Alaska Federation of Natives; or arts programs such as the Anchorage International Film Festival. The mobile production unit based in Juneau would be used to provide more Legislative coverage of events outside the Capitol, plus government and cultural offerings throughout Southeast Alaska and occasionally the Yukon. The team would generate programs for Gavel to Gavel Alaska, 360 North, all four Alaska public television stations, 26 members of the Alaska Public Radio Network, and the Web.

  This highly specialized team will work across all media platforms and generate video for television; audio for radio; and audio, video and photographs for the Web. Members of the team will be deployed in Juneau for capitol and related coverage and in Anchorage for operations on the road system. Their work will be supported by engineering, news and programming teams in Juneau and Anchorage. This request supports trucks and equipment – portable cameras, switcher, audio boards, microphones, editing hardware and software, computers and microwave transmitter and antenna – required for mobile operations.

- **Monitoring System for Centralcast Facility:** Centralcast television operations from KAKM will begin July 1 and lower costs for all system participants. To build reliability and provide swift response to breakdowns, an automated "exception based" monitoring system is needed. Staffing limits require automated monitoring of the various broadcast streams to different locations, and in fact automated systems in many cases are more reliable than human oversight. This capability will provide 24/7 confidence monitoring of signals going out to the entire system.

- **Radio Distribution Rebuild for APRN:** Aging and inconsistent receiver equipment among the 26 separately owned and operated stations of the Alaska Public Radio Network creates frequent maintenance and distribution problems and expense. This request would support installation of similar, modern equipment at all locations, lowering costs and reducing operating difficulties. It also would support enhancements to the APRN satellite uplink facility, improving reliability for the entire network.

Public broadcasting brings Alaskans closer and gives them unique insight into their government and their surroundings. *Gavel to Gavel Alaska*, *Alaska News Nightly* and many other public affairs programs allow the people of our state to participate more easily in their state government and issues important to them. Equipment provided by this capital request would extend services, provide the means for cooperation among the stations, share facilities, lower infrastructure costs, ease maintenance and upgrade expenses, and greatly increase public affairs programming in the Railbelt and statewide.

Unified Public Television Service Capital Projects

Statewide Services		
Alaska Public Radio Network Distribution Upgrade	$150,000	
Centralcast Facility Automated Monitoring System	$125,000	
Road Team Equipment	$500,000

Contract Ref.			
Cross Ref.	*Admin. Policy*	*1.03*	*Parent Empowerment*
		8.18	*Student Involvement in Decision Making*
		9.04	*Community Involvement in Decision Making*
		2.12	*Advisory Committees*

(1) PREAMBLE

(a) It is the policy of the Milwaukee Board of School Directors to endorse and support parent, staff, student, and community involvement in school governance. It is the intent of the Board of School Directors that every school will have a school governance council that enables parents, school staff, students (when appropriate), and community to work together in facilitating quality educational plans that engender continuous improvement of student achievement. It is the responsibility of the principal to develop and maintain effective organizational structures and processes for advisement in each school in conjunction with its school governance council.

(b) The following guidelines are designed to facilitate the development and operations of school governance councils.

(2) PURPOSE OF SCHOOL GOVERNANCE COUNCILS

The purpose of a school governance council is to provide a forum for parents, teachers, community members, students, and principals to work together in providing continued analysis and improvement of public school policies, curriculum, educational plan goals, and general student well-being. the council shall also be a clearinghouse for information collected from outside organizations, including student groups, parent-teacher groups, teacher associations, etc. the council's decision-making authority is advisory with respect to all duties, powers, and responsibilities, with the sole exception of the council's authority and responsibility to submit a cover letter with its school's annual budget and the school's annual educational plan. Council participation shall be on a voluntary basis via a school-based election process. Councils are not intended to replace parent organizations.

(3) SCHOOL GOVERNANCE COUNCIL MEMBERSHIP

(a) School governance council membership shall include at least 51% parent representation, at least one student at the middle (including K-8 schools) and high schools, community representatives, staff members, and the principal. The size of the school governance council will be based upon a percentage of total student enrollment at a given school.

1. The number of council participants shall equal one percent (1%) of the total student enrollment, or a minimum of nine (9) members, including the principal; however, the size of the council may exceed 1% where desired by the individual school.
2. If the percentage results in an even number of participants (e.g., 1,100 students x 1% = 11 + principal = 12 members), the number of participants shall be increased by one member (e.g., 12 + 1 = 13 members).

(b) Members shall be defined as follows:

1. Parent: A parent is a person at least 18 years of age who is the natural, adopted, or stepparent of a child enrolled or about to be enrolled in the school at which the council serves, and includes those people acting as legal guardian or registered custodian of the child, such as grandparents. A parent who is also a paid employee of his/her child's school shall not serve in the capacity of "parent member" on the council, but may serve as a teacher representative or support-staff representative.

2. Teacher/Support Staff: All teachers and support staff are eligible to participate on the council in this category.
3. Student: A student enrolled at a school with a middle school component (grades 6-8) or high school at the time of the election process is eligible to serve on the council for that particular school.
4. Community Member: Any resident of the City of Milwaukee is eligible to serve on a council.
5. Principal: The principal or employee serving as the leader of the school shall serve on its council.

(c) There are to be good-faith efforts to secure representation; however, a school governance council will continue to function even if full representation cannot be achieved. Every effort will be made to ensure that each school governance council has full representation.

(d) Even though representatives will be selected from various categories (e.g., parents, school staff, students, business, community), it is the responsibility of every member on the school governance council to communicate with, and represent, all segments of the school population.

(4) SCHOOL GOVERNANCE COUNCIL ELECTIONS — MEMBERSHIP

Members will be selected through a fair and open election process. Each constituent group (parents, teachers, non-certificated staff, students) will oversee the process for electing school governance council representatives. The process for the election of representatives will be as follows:

(a) PARENT REPRESENTATIVES

1. Every year, no later than the third week of March, the principal/designated administrative leader of each school shall mail, via first-class postal service, information sheets regarding the school governance council and the school election timeline to all households of the school's student body (one mailing per household) for the purpose of soliciting parent/guardian nominations for Council membership. Parents who are interested in serving on the council shall complete a ballot information sheet and return it either by mail or in person on or before April 15. All eligible parents shall be included on the ballot.

2. The ballots (bearing a specific logo) shall be mailed via first-class postal service to all parents during the first week in May, with all of the nominees listed. Ballots shall be numbered sequentially for accountability purposes only. In addition, the principal/designated administrative leader is to plan an open meeting for nominees to speak relative to their candidacy for election to the council. Parents shall return either in person or by mail the completed ballots to the school on or before May 31. The number of parents to be elected shall be at least 51% of the total number of participants on the council.

3. Two members of the established parent group will assist the principal with the counting of the parents' ballots.

4. A record of the number of votes for each candidate shall be maintained at the local school until the end of the following school year. In the case of resignation, recall, or death, a parent member shall be replaced by the runner-up candidate not elected to the council the previous election period.

(b) TEACHER/STAFF REPRESENTATIVES

The faculty and support staff at a given school shall be responsible for selecting its representatives to the council. Selection shall be completed on or before May 31.

(c) STUDENT REPRESENTATIVES

Schools with grades 6-8 (middle and K-8) and high school student representatives of the council shall be elected by the student body through existing student government procedures. If no student government exists, students shall be permitted to campaign for the position of Council representative at a general assembly of the student body, and the student body shall make their selection by voice vote or ballot during the general assembly.

(d) COMMUNITY REPRESENTATIVES

Community representatives interested in participating on the council shall make their interest known at the open meeting held for parent nominations, although community members shall not be selected by the public at large. Community representatives shall be elected at the first meeting of the incoming Council held at the beginning of the new school year.

(e) PRINCIPAL REPRESENTATIVES

The principal of the school is entitled to automatic participation on the council at that school.

(5) SCHOOL GOVERNANCE COUNCIL ELECTIONS — PROCESS

(a) Following the initial election process, the council shall manage the election process.

(b) The school governance council must be in place by the end of September each school year. The term of office for the smallest number greater than half of the council shall be elected for two (2) years at the first election. All other members of the council shall be elected for a 1-year term at the first election. All Council members thereafter shall be elected to 2-year overlapping, staggered terms. The candidates receiving the fewest votes serve l-year terms after the first election. All candidates thereafter will serve 2-year overlapping, staggered terms.

(6) AUTHORITY AND RESPONSIBILITIES OF SCHOOL GOVERNANCE COUNCILS

(a) School governance councils are empowered and limited in function by policies and procedures adopted by the Milwaukee Board of School Directors. If current policies and procedures, contracts, laws and regulations, or district agreements impede a school's restructuring process or strategic planning, the principal will obtain the support of the appropriate Central Services personnel to assist the school governance council with requests for adjustments, waivers, or memoranda of understanding from the appropriate body. School governance councils shall not discuss wages, hours, or working conditions unless a bargaining unit waiver has been secured. The Division of Labor Relations will assist schools in securing requested waivers.

(b) The role of the principal in terms of authority and responsibility for school management is not changed by this policy. Ultimately the principal is responsible and accountable to the superintendent.

(c) The Milwaukee Public Schools' Code of Ethics applies to all employees. Non-employees will be required to sign a statement that they will not participate in advisement which represents a conflict of interest. School governance councils shall establish procedures to be followed by members to ensure that conflicts of interest are prevented.

(d) All newly elected council members will participate in inservice/training sessions. Related costs for these sessions shall be funded by local school funds. Inservice/training sessions will focus on the development of quality educational programs and high standards with respect to team building, school policies and procedures, increasing parental involvement, consensus building, leadership skills, financial procedures (audits, budgets), committee work, and other issues that affect student achievement. Common documents (cover letters for the schools' annual educational plans and annual budgets, formats for agendas and written records of council meetings, etc.) will be developed by the Office of the Deputy superintendent – Operational Leadership.

(e) School governance councils shall develop and publish their own bylaws. Bylaws shall be guided by the principles of the Open Meetings Law, and all meetings shall be open to the public unless permitted to be closed under the law. The Department of Human Resources, in consultation with the Office of the City of Attorney, shall provide assistance in this regard. The definition of a meeting shall be included in each school's bylaws and shall be consistent with the Open Meetings Law definition. Written records for all school governance council meetings shall be taken at each council meeting and maintained in one binder. Minutes shall be on file and available for review at each school.

(f) Council authority and responsibilities will be advisory as referenced below:

1. The council shall participate in the selection and evaluation of school staff in a manner consistent with federal and state statutes, Board policy, and collective-bargaining agreements. Members of school governance councils shall interview and recommend

principal appointments to the superintendent in a manner consistent with Administrative Policy 6.23: "The superintendent shall have the sole right of nomination for employment and promotion of certificated personnel, and the appointment of any nominated candidates shall be effected only with the approval of the Board. In the case of rejection, the Board may request another nomination."

2. The council shall participate in the development of the annual school educational plan and the annual school budget.
3. The council shall regularly review and assess the annual school educational plan and the annual school budget. The council shall have the authority and responsibility to submit an accompanying cover letter when its school submits its annual educational plan and annual school budget to the superintendent. The cover letter will bear the signatures of each council member, thereby indicating the council's participation in the development of both documents.
4. The council will regularly review and assess school performance with respect to:
   a. student achievement;
   b. parental involvement;
   c. dress-code expectations;
   d. character and value building;
   e. behavioral concerns;
   f. scheduling procedures;
   g. building maintenance;
   h. suspension/disciplinary procedures.
5. The council, in cases in which the principal of the school has volunteered in writing to have the council's evaluation included in his or her professional evaluation, shall conduct such an evaluation of the principal's performance.
6. In the absence of a coordinated health team, the School Governance Council will function in that capacity.

(7) COUNCIL PROTOCOL

(a) The first council meeting of the new school year shall take place during the month of September, at a date and time agreed upon by all elected members. During the first meeting, the council shall select at least one person in the community to participate as a member of the council, based upon interest previously shown by eligible parties. Thereafter, the council shall have at least nine (9) monthly meetings during the school year.

(b) During the first meeting, council members shall elect an executive committee, which shall include a chair, vice-chair, recording secretary, and corresponding secretary. The principal will serve as a resource to the executive committee of the school council.

1. The chair shall conduct each meeting and shall execute all business necessary between meetings to ensure that each meeting is run in a smooth and orderly process.
2. The vice-chair shall assist the chair with his/her responsibilities and shall assume the responsibilities of the chair upon his/her absence.
3. The chair and vice-chair shall make themselves available to answer questions from the public in general, including from members of other organizations.
5. The recording secretary shall keep the written notes of each meeting, and make sure the minutes of the previous meeting are distributed to members of the council prior to each subsequent meeting, together with a reminder of the time and place of the next meeting. The corresponding secretary shall be responsible for making available to the public, by whatever means agreed upon by the council, the agenda of each upcoming meeting and the minutes of the previous meeting. Members of the public wishing to speak at any upcoming meeting with regard to a particular agenda item may contact the corresponding secretary to ask to be added to the agenda.

(8) DUTIES OF COUNCIL MEMBERS

The Council will be made up of parents, teachers, students, community members, and the principal. Each constituency represented shall have a corresponding set of responsibilities.

(a) PARENTS

Council parents are responsible for soliciting input from the parental community with respect to issues of concern to the council. Parent members shall relay council activities to the parent community at large, as well as to parent organizations. The council shall have the responsibility of training and informing incoming parents elected to a subsequent council. Parent members shall have the responsibility of promoting the organization of a parent group where none is in existence for the particular school at which they serve.

(b) TEACHERS/SUPPORT STAFF

School-staff council members are responsible for soliciting input from the faculty and support staff with respect to issues of concern to the council. School-staff members shall report to faculty and support staff, as well as outside teacher/staff organizations. Faculty members shall present the school's educational plan to the council for input. Faculty members shall be responsible for playing an active role in addressing issues such as curriculum additions and deletions, grading practices and standards, test scores, building concerns, staffing needs, and resource/budget concerns.

(c) STUDENTS

Student members shall report council activities to the student body and shall solicit student input and areas of concern for presentation to the council. Student members shall be responsible for organizing student government associations where there are none.

(d) PRINCIPAL

The principal is responsible for keeping the council informed of all relevant school information. The principal shall take the lead role in promoting new programs at the school. The principal shall report to the council with respect to principal meetings, building meetings, etc. The principal shall seek the active participation of the council in deciding all school budget matters and shall present to the council in a timely fashion all information dealing with programming and budget items. The principal shall be responsible for creating and distributing a newsletter of council activities and agendas to school members, and shall provide administrative service support for council members needing supplies or resources. The principal may not serve on the executive committee, but shall have a vote equal to all other council members.

(9) REIMBURSEMENT OF EXPENSES

No members of school governance councils are to receive compensation or additional compensation for their service, with the exception of reasonable reimbursement for expenses resulting from their work on school governance councils. The expenses are to be paid from the school budget. Reasonable parameters shall be determined by the principal.

(10) COUNCIL LIAISON

The superintendent shall appoint the deputy superintendent, Operations Leadership, to oversee all councils and their operations. Council members shall have the right to request the liaison's involvement in dispute resolution between council members. The liaison shall have the responsibility of enforcing council decisions in cases of dissent and of ensuring the continuity and effectiveness of each council.

(11) EXCEPTIONS TO PROCEDURES

Exceptions to procedures outlined in this policy may be submitted to the superintendent for review and approval, with such action to be reported to the Board.

(12) Relation to Existing Agreements

(a) Nothing in this policy shall in any way reduce the powers or responsibilities already authorized at schools with ongoing governing councils, including Andrew Douglass School, Fritsche Middle School, La Escuela Fratney, HiMount Community School, Madison University High School, Malcolm X Middle School, North Division High School, Palmer Street School, South Division High School, or any other MPS school that already has such powers or responsibilities.

(b) Nor shall anything in this policy in any way reduce powers or responsibilities assumed by school governance councils consistent with federal and Wisconsin statutes, Board policy, or collective-bargaining agreements, as proposed by school governance councils and authorized by the superintendent.

(c) All schools, however, including these, are expected to adhere to all provisions of this policy regarding school governance councils with regard to the manner of representation and conduct of elections.

School Governance Councils take shape in region

Updated 11:27 p.m., Tuesday, October 18, 2011

Once a month, a group of seven parents, five teachers and two community members meets with Ralph Paladino, principal of Barnum School in Bridgeport. The group is not about fundraising.

Instead, the group, in existence for about a year, is there to help improve one of the state's lowest-performing schools.

"The School Governance Council is the over-arching group," Paladino said. "There could be some crossover with the Parent Advisory Council, or School Leadership Team, but if I thought there was an issue that needed further research, the School Governance Council would be the one I go to."

Under state law, more than 180 schools must have such councils by Nov. 1, joining the one at Barnum and 13 others created last winter in the state's lowest-performing schools. The councils are required in all schools that failed to meet yearly progress benchmarks as of July 1, 2010, in math and reading on state standardized tests.

The deadline, which some districts have already met, marks a major step in Connecticut lawmakers' efforts to ensure more parents and teachers are included in reform efforts at the state's worst-performing schools.

Several districts have said they welcome the advisory councils. Others call them unfunded mandates and their potential power have made still others nervous -- enough, in fact, that a report says a Waterbury principal orchestrated a scheme last spring to boost test scores to avoid being ordered to create a governance council.

Gwen Samuel, a parent activist from Meriden who has nominated herself to serve on the School Governance Council at her son's middle school, said she and other parents hope that is a rare instance and not an indication of hidden reservations among other administrators.

Samuel has traveled throughout Connecticut to reach other parents about provisions of the law, showing them how to nominate themselves and others, and pushing schools to plan for the time when today's members must be replaced as their children age and move to other schools.

"As parents, this is going to be the best thing we have so far to help ourselves and help our children," said Samuel, who founded the Connecticut Parents Union education advocacy group and pushed for the law creating the governance councils.

Under the law, the councils' work includes watching test score trends, advising principals on whether budget proposals fall in line with reform priorities and participating in the hiring process for principals and top administrators.

The councils don't make day-to-day decisions about running the schools, managing employees, determining class sizes or dealing with contracts.

In Bridgeport, both Bassick and Harding high schools formed their councils last year, recruiting parent members who attended evening parent meetings. The state requires them to be established at 19 other Bridgeport schools by November, but an effort is under way to establish them in all city schools, even those not deemed in need of improvement.

"It's because (Schools Superintendent John Ramos) says we're one district and he believes in the concept," said Lisa Jones, director of grant programs for the district.

The councils are also being formed at Irving School in Derby and Ansonia High School.

At Irving School, most School Governance Council members are in place, said Principal Francis Gallo.

"We are looking forward to the council and the changes it can make," he said, adding the council still needs to discuss specific goals and bylaws.

"We do know what is expected of us," he said, adding a major goal is to increase Connecticut Mastery Test scores. In fact, Irving School was mandated to develop a governance council after it didn't make the required progress in CMT testing.

"My thought is that a lot of good can come from the council," he said. "We have people on it who aren't educators and they may have an alternative way of seeing things."

The goal for the governance council at Ansonia High School will also be to raise test scores, said Joseph Dobbins, who is assistant principal there and at Ansonia Middle School. "We want to close the gap," he said.

At Barnum, Paladino said it took most of last year to set up bylaws and an agenda. This year, the group will look at community relations and various issues that affect the school. It could be parent involvement, it could be academic issues.

"It depends on the need," he said. Paladino sees the group as a resource he can use to research an issue. It also will serve as a bridge between the school's parent group, leadership team and data teams.

Jones said the state this year made it clearer what it expects from the councils, but she called it an unfunded mandate.

Samuel disagrees, saying the biggest challenge is making districts see this as a best practice, not an additional expense.

"Parents and the community are an untapped resource to make a real difference," she said.

Most of the 184 schools mandated to establish councils are in the state's poor inner cities or

bordering suburbs that have a blend of middle-class and low-income families. A few magnet and charter schools also made the list, along with two state-run technical high schools and Hamilton Avenue School in Greenwich.

Hamilton Avenue, which has many poor students despite the community's wealth, was among schools that already had their councils in place.

The Associated Press and Staff Writers Linda Conner Lambeck and Anne M. Amato contributed to this report.

SB 197

<TARGET><BILL>SB 197</BILL><SUBJECT>SB 197</SUBJECT><COMM>SEDC27</COMM></TARGET>

ALASKA STATE LEGISLATURE

SENATOR JOE THOMAS

SB 197

"An Act establishing a grant program in the Department of Education and Early Development for achieving excellence in public schools."

Improving academic performance in our schools is a complicated process, and there is no one approach that will fix all our problems. Commitment to positive change requires a variety of initiatives, which must often be uniquely designed to work within specific districts.

Senate Bill 197 provides districts with the tools they need to make substantial progress toward improving student achievement by providing competitive grants for schools that have innovative programs for raising the bar.

The grants must address known causes of low academic performance in a school, and must apply research-based solutions based on best practices. The programs that are funded must have measurable goals. The districts will have to demonstrate that the programs will be sustainable beyond the initial grant period, and they will have to supply on-going progress reports.

If a program is not producing desired results that lead to improvements in student achievement, the program will be discontinued. There are allowances for successful programs to continue to receive funding, but they must show proven, measurable results first.

If a district chooses to use their grant to run a pre-kindergarten program, they have to maintain the same standards as the pilot pre-k program currently run by the department.

Total funding for the grant is based on the number of dropouts in the state. As the number of dropouts decreases, the amount of money in the grant fund also decreases.

I urge your support of SB 197.

CS FOR SENATE BILL NO. 197( )

IN THE LEGISLATURE OF THE STATE OF ALASKA

TWENTY-SEVENTH LEGISLATURE - SECOND SESSION

BY

Offered:
Referred:

Sponsor(s): SENATOR THOMAS

A BILL

FOR AN ACT ENTITLED

"An Act establishing a grant program in the Department of Education and Early Development for achieving excellence in public schools."

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF ALASKA:

*** Section 1.** AS 14.17 is amended by adding a new section to read:

Sec. 14.17.485. Achieving excellence grant program. (a) A grant program is established in the department for the purpose of awarding competitive grants to achieve excellence in public schools that have been designated as low performing under AS 14.03.123. The program is subject to appropriation. Total annual awards may not exceed an amount equal to the number of students who drop out of school in the fiscal year in which the grants are awarded, multiplied by $400.

(b) A school district may apply for a project grant under this section on a form approved by the department. The district shall provide a matching cash amount equal to not less than 10 percent or more than 40 percent of the total project cost from any source of funds available to the district. The department shall annually determine the

percentage for the match required for all districts on the basis of the availability of state funding for the program so that a higher match will result from lower state funding.

(c) The department may not approve a grant application for a proposed grant project unless the district provides persuasive evidence that the project

(1) addresses known causes for designation of a school in the district as low performing under AS 14.03.123;

(2) applies best practices that are research-based;

(3) will be sustainable beyond the grant funding period;

(4) establishes locally determined and measurable goals for success that include improvements in student achievement, academic interest, attendance, and graduation rates;

(5) includes a process for providing regular evaluations and reporting to the department.

(d) A grant to a district under (c) of this section may include a grant for a pre-elementary program. If the department awards a grant under this section for a pre-elementary program, the program must

(1) utilize the Alaska Early Learning Guidelines;

(2) demonstrate, based on testing by the department, improvement in specific child outcomes in all developmental domains;

(3) be certified as a pre-elementary school under AS 14.07.020; and

(4) prioritize family and community engagement and involvement.

(e) The department shall review the progress of a grant project funded under this section at least once every two years. A project that the department determines is making sufficient progress toward the short-term and long-term goals established for the project may, at the discretion of the department, be continued for not more than two additional years on request of the grantee. Thirty days after notice to the grantee, the department shall discontinue a project that is failing to make sufficient progress toward the short-term and long-term goals established for the project.

(f) The department may provide grant funding beyond an initial four-year grant period if the district reapplies and the department determines the project is

demonstrating significant success.

(g) If appropriations are insufficient to fund all qualified grant projects in a year, the department shall allocate annual appropriations to the program established under this section to qualified grant projects on a pro rata basis.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ACHIEVING EXCELLENCE GRANT PROGRAM; FIRST YEAR. Notwithstanding the maximum amount established for annual grant awards under AS 14.17.485, added by sec. 1 of this Act, the maximum cumulative grants awarded by the Department of Education and Early Development for the first year of the program shall be calculated by multiplying the number of students who drop out of school each year, averaged over the 10 years preceding the effective date of this Act, by $4,800. If insufficient money is appropriated for the first year of the program to meet the number of qualified grant projects, the department shall allocate the awards on a pro rata basis.

FISCAL NOTE

STATE OF ALASKA
2012 LEGISLATIVE SESSION

BILL NO. SB197

Analysis

Sec. 1 This bill repeals the Quality Schools Grant money under AS 14.17.480 and establishes a new program, "Achieving Excellence Grant Program," for the purpose of awarding grants to achieve excellence to public schools that have failed to meet adequate yearly progress (AYP). The annual awards would be based on the number of students who drop out of school multiplied by $400. Under the current Quality Schools Grant program, all school districts are eligible for funding which is calculated by multiplying a school district's ADM by $16.

School districts who have public schools that failed to meet AYP can apply for a project under this grant. School districts would then need to provide a matching cash amount equal to not less than 10 percent or more than 40 percent of the total project cost. The department would annually determine the percentage for the match required from all school districts based on the availability of state funding for this program. Under the current Quality Schools Grant program, there is no matching cash requirement.

The bill prescribes the uses of the grant funds and requires the department to competitively award funds and review granted project's progress at least once every two years, which is more oversight than required under the current Quality Schools Grant program. Therefore, 1 FTE Education Specialist II would be needed to provide program oversight= 92,378. Travel 6 trips at $1,000 per trip= 6,000; **Total: $98,378**

The total available funding for school districts under this new program would be $1.1 million. This amount is calculated using the most current statewide drop out counts (2,779), from the 2010-2011 , multiplied by $400. Drop out counts from the 2011-2012 school year are not available until November 2012, so grants awarded under this program would need to be based on the prior year data. 2,779 x $400= **Total $ 1,111,6000**

Section 2 of the bill establishes the maximum cumulative grants for the first year of the program, which is calculated by multiplying the number of students who drop out of school each year, averaged over the 10 years preceding the effective date of the Act, by $4,800. Currently, the 10 year average is 3,295 students; 3295 x $4,800= $15,816,000 - $3,918,495 in repealed QSI funding **Total: $11,898,505** for the first year.

percentage for the match required for all districts on the basis of the availability of state funding for the program so that a higher match will result from lower state funding.

(c) The department may not approve a grant application for a proposed grant project unless the district provides persuasive evidence that the project

(1) addresses known causes for designation of a school in the district as low performing under AS 14.03.123;

(2) applies best practices that are research-based;

(3) will be sustainable beyond the grant funding period;

(4) establishes locally determined and measurable goals for success that include improvements in student achievement, academic interest, attendance, and graduation rates;

(5) includes a process for providing regular evaluations and reporting to the department.

(d) A grant to a district under (c) of this section may include a grant for a pre-elementary program. If the department awards a grant under this section for a pre-elementary program, the program must

(1) utilize the Alaska Early Learning Guidelines;

(2) demonstrate, based on testing by the department, improvement in specific child outcomes in all developmental domains;

(3) be certified as a pre-elementary school under AS 14.07.020; and

(4) prioritize family and community engagement and involvement.

(e) The department shall review the progress of a grant project funded under this section at least once every two years. A project that the department determines is making sufficient progress toward the short-term and long-term goals established for the project may, at the discretion of the department, be continued for not more than two additional years on request of the grantee. Thirty days after notice to the grantee, the department shall discontinue a project that is failing to make sufficient progress toward the short-term and long-term goals established for the project.

(f) The department may provide grant funding beyond an initial four-year grant period if the district reapplies and the department determines the project is

demonstrating significant success.

(g) If appropriations are insufficient to fund all qualified grant projects in a year, the department shall allocate annual appropriations to the program established under this section to qualified grant projects on a pro rata basis.

*** Sec. 2.** The uncodified law of the State of Alaska is amended by adding a new section to read:

ACHIEVING EXCELLENCE GRANT PROGRAM; FIRST YEAR. Notwithstanding the maximum amount established for annual grant awards under AS 14.17.485, added by sec. 1 of this Act, the maximum cumulative grants awarded by the Department of Education and Early Development for the first year of the program shall be calculated by multiplying the number of students who drop out of school each year, averaged over the 10 years preceding the effective date of this Act, by $1,800. If insufficient money is appropriated for the first year of the program to meet the number of qualified grant projects, the department shall allocate the awards on a pro rata basis.

Comparison of Kindergarten Students
Pre K Attendees
To
Non Pre K Attendees

The 2010-2011 school year was the second year of the Nome Public Schools Pre K Pilot Grant. Nearly 50% of students entering Kindergarten had participated in the Pilot Pre-K Program. The remaining students entering Kindergarten had attended either a pre-school program, a home preschool program or no preschool. At the beginning of the 2011-2012 school year, students entering Kindergarten received a DIBELS assessment measuring academic readiness. Provided below are the scores of PreK Attendees compared to Non PreK Attendees.

Score Descriptions:
No Score = students scored too low to be measurable
Intensive = the lowest score measurable indicating intense need of supports
Strategic = the mid-level score indicating extra supports needed
Benchmark = the on grade level score

Indicator 19

Public High School Graduation Rates

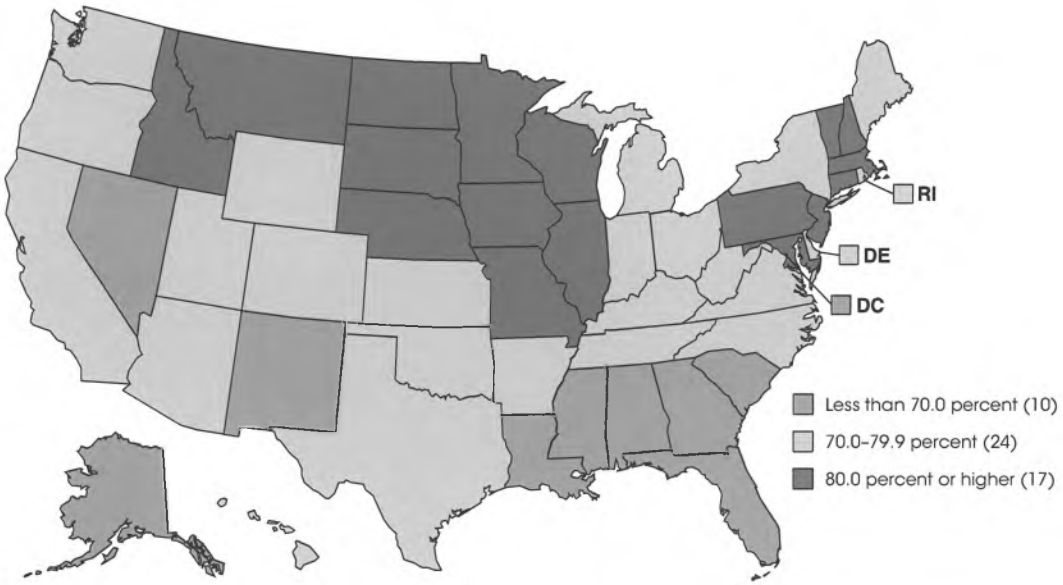
In 2007–08, about three-quarters of public high school students graduated on time with a regular diploma.

This indicator examines the percentage of public high school students who graduate on time with a regular diploma. To do so, it uses the *averaged freshman graduation rate*—an estimate of the number of regular diplomas issued in a given year divided by an estimate of the averaged enrollment base for the freshman class four years earlier. For each year, the averaged freshman enrollment count is the sum of the number of 8th-graders 5 years earlier, the number of 9th-graders 4 years earlier (when current-year seniors were freshmen), and the number of 10th-graders 3 years earlier, divided by 3. The intent of this averaging is to account for the high rate of grade retention in the freshman year, which adds 9th-grade repeaters from the previous year to the number of students in the incoming freshman class each year.

Among public high school students in the class of 2007–08, the averaged freshman graduation rate was 74.7 percent; that is, 3 million students graduated on time (see table A-19-1). Wisconsin had the highest graduation rate, at 89.6 percent. Sixteen other states had rates of 80 percent or more (ordered from high to low): Vermont, Minnesota, Iowa, New Jersey, South Dakota, North Dakota, Nebraska, New Hampshire, Pennsylvania, Missouri, Connecticut, Montana, Massachusetts, Maryland, Illinois, and Idaho. The District of Columbia had the lowest rate, at 56.0 percent. Nine other states had graduation rates below 70 percent (ordered from high to low): Alaska, Alabama, Florida, New Mexico, Georgia, Mississippi, Louisiana, South Carolina, and Nevada.

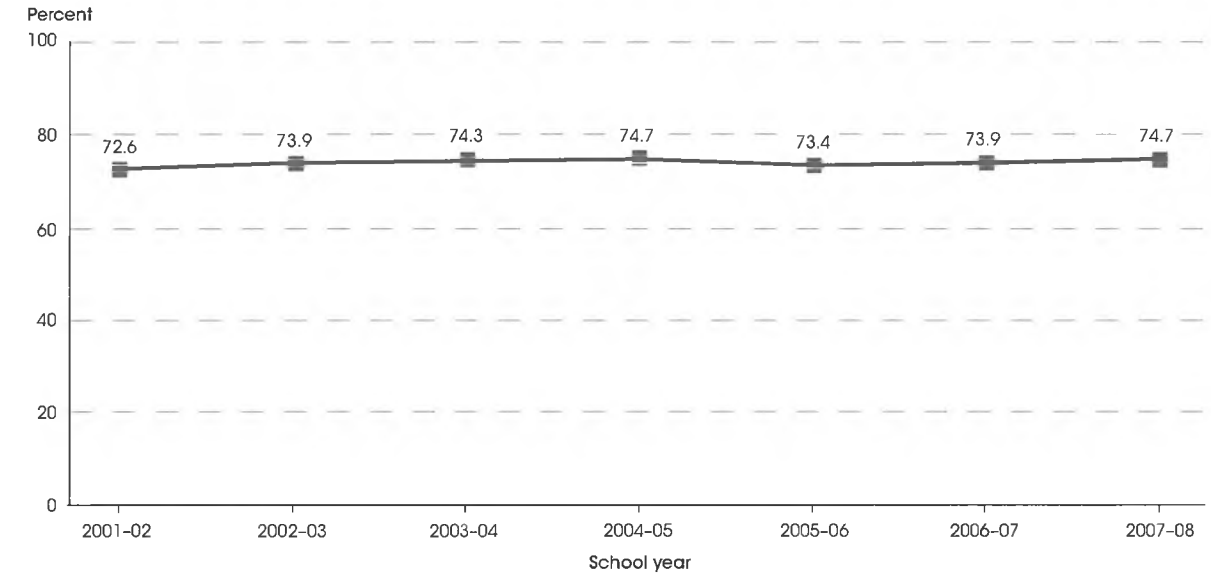
The overall averaged freshman graduation rate was higher for the graduating class of 2007–08 (74.7 percent) than it was for the graduating class of 2001–02 (72.6 percent). However, from 2004–05 to 2005–06, the overall averaged freshman graduation rate decreased from 74.7 percent to 73.4 percent. Looking at changes by state, there was an increase in the graduation rate in 40 states from school year 2001–02 to 2007–08; in 8 of these states (Alabama, Missouri, New Hampshire, New York, Oregon, South Dakota, Tennessee, and Vermont) rates increased by more than 5 percentage points. The graduation rate decreased in 11 states (Arizona, California, Louisiana, Nebraska, Nevada, New Jersey, New Mexico, North Dakota, Texas, Utah, and Washington) and the District of Columbia, with decreases of greater than 5 percentage points observed in Utah (6 percent), the District of Columbia (12 percent), and Nevada (16 percent).



For more information: *Table A-19-1*
Glossary: *High school, High school diploma, Public school*

Technical Notes

Ungraded students were allocated to individual grades proportional to each state's enrollment in those grades. Graduates include only those who earned regular diplomas or diplomas for advanced academic achievement (e.g., honors diploma) as defined by the state or jurisdiction. The 2003–04 national estimates include imputed data for New York and Wisconsin.



The 2005–06 national estimates include imputed data for the District of Columbia, Pennsylvania, and South Carolina. The 2007–08 estimate includes graduates of semi-private schools in Maine. For more information on the Common Core of Data (CCD), see *supplemental note 3*. For more information on measures of student progress and persistence, see *supplemental note 6*.

Figure 19-1. Averaged freshman graduation rate for public high school students, by state or jurisdiction: School year 2007–08

NOTE: The rate is the number of graduates divided by the estimated freshman enrollment count 4 years earlier. This count is the sum of the number of 8th-graders 5 years earlier, the number of 9th-graders 4 years earlier, and the number of 10th-graders 3 years earlier, divided by 3. Ungraded students were allocated to individual grades proportional to each state's enrollment in those grades. The estimate for Maine includes graduates of semi-private schools. For more information on the Common Core of Data (CCD), see *supplemental note 3*. For more information on measures of student progress and persistence, see *supplemental note 6*.

West Virginia	74.2	75.7	76.9	77.3	76.9	78.2	77.3
Wisconsin	84.8	85.8	85.8	86.7	87.5	88.5	89.6
Wyoming	74.4	73.9	76.0	76.7	76.1	75.8	76.0

See notes at end of table.

Table A-19-1. Averaged freshman graduation rate for public high school students and number of graduates, by state or jurisdiction: School years 2001–02 through 2007–08—Continued

State or jurisdiction	Number of graduates						
	2001–02	2002–03	2003–04	2004–05	2005–06	2006–07	2007–08
United States	**2,621,534**	**2,719,947**	**2,753,438**[1]	**2,799,250**	**2,815,544**[1]	**2,892,351**	**2,999,508**[1]
New Jersey	77,664	81,391	83,826	86,502	90,049	93,013	94,994
New Mexico	18,094	16,923	17,892	17,353	17,822	16,131	18,264
New York	140,139	143,818	142,526	153,203	161,817	168,333	176,310
North Carolina	65,955	69,696	72,126	75,010	76,710	76,031	83,307
North Dakota	8,114	8,169	7,888	7,555	7,192	7,159	6,999
Ohio	110,608	115,762	119,029	116,702	117,356	117,658	120,758
Oklahoma	36,852	36,694	36,799	36,227	36,497	37,100	37,630
Oregon	31,153	32,587	32,958	32,602	32,394	33,446	34,949
Pennsylvania	114,943	119,933	123,474	124,758	127,830	128,603	130,298
Rhode Island	9,006	9,318	9,258	9,881	10,108	10,384	10,347
South Carolina	31,302	32,482	33,235	33,439	34,970	35,108	35,303
South Dakota	8,796	8,999	9,001	8,585	8,589	8,346	8,582
Tennessee	40,894	44,113	46,096	47,967	50,880	54,502	57,486
Texas	225,167	238,111	244,165	239,717	240,485	241,193	252,121
Utah	30,183	29,527	30,252	30,253	29,050	28,276	28,167
Vermont	7,083	6,970	7,100	7,152	6,779	7,317	7,392
Virginia	66,519	72,943	72,042	73,667	69,597	73,997	77,369
Washington	58,311	60,435	61,274	61,094	60,213	62,801	61,625
West Virginia	17,128	17,287	17,339	17,137	16,763	17,407	17,489
Wisconsin	60,575	63,272	62,784	63,229	63,003	63,968	65,183
Wyoming	6,106	5,845	5,833	5,616	5,527	5,441	5,494

[1] The 2003–04 national estimates include imputed data for New York and Wisconsin. The 2005–06 national estimates include imputed data for the District of Columbia, Pennsylvania, and South Carolina. The 2007–08 estimate for Maine includes graduates of semi-private schools.
NOTE: The averaged freshman graduation rate is the number of graduates divided by the estimated freshman enrollment count 4 years earlier. This count is the sum of the number of 8th-graders 5 years earlier, the number of 9th-graders 4 years earlier, and the number of 10th-graders 3 years earlier, divided by 3. Ungraded students were allocated to individual grades proportional to each state's enrollment in those grades. Graduates include only those who earned regular diplomas or diplomas for advanced academic achievement (e.g., honors diploma) as defined by the state or jurisdiction. For more information on the Common Core of Data (CCD), see *supplemental note 3*. For more information on measures of student progress and persistence, see *supplemental note 6*.

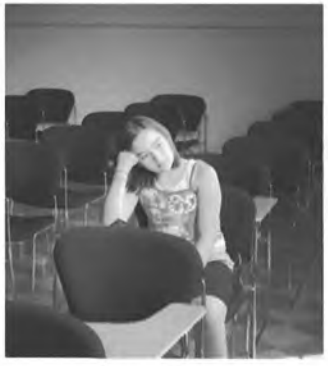
Sectional Analysis

Section One: Establishes the Achieving Excellence Grant

a) For low performing schools (currently schools that do not meet AYP), annual funding based on the dropout rate
b) Mandates a local match of between 10 and 40 percent.
c) The grants must
    a. Address known causes for low performance
    b. Be research based and apply best practices
    c. Be sustainable beyond the grant period
    d. Have measureable goals for evaluation that pertain to student achievement.
    e. Include process for providing regular evaluation and reporting
d) Pre-K grants must conform to standards already set in the Pilot Pre-K project.
e) Grant program are evaluated every two years. If they are successful, they may continue another two years. If not, they are shut down.
f) If a grant is successful, they may apply for a continuation beyond the four years.
g) Grants may be allocated on a pro-rata basis.

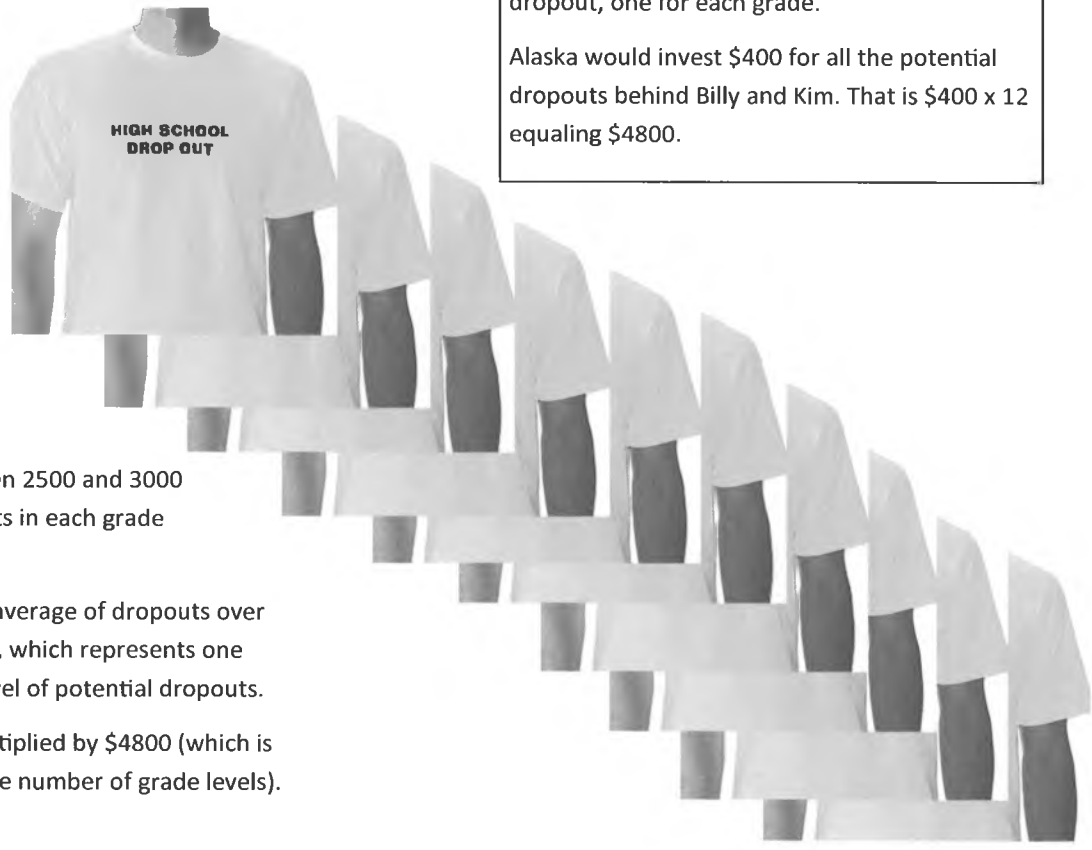
Section 2. Establishes the fund amount for the first year of the grant.

Prepared by the office of Senator Joe Thomas



Determining the Initial Amount of the Excellence in Schools Grant Fund

Billy in in his senior year. He has not yet passed the HSQGE and is planning to drop out. Billy counts as one dropout. Alaska invests $400 in Billy,



Behind Billy is Kim in the eleventh grade. Kim has not dropped out yet. But she is heading that way.

Alaska invests $400 based on Kim.

Behind Billy and Kim are ten other potential dropout, one for each grade.

Alaska would invest $400 for all the potential dropouts behind Billy and Kim. That is $400 x 12 equaling $4800.

There are between 2500 and 3000 potential dropouts in each grade cohort.

Alaska takes the average of dropouts over the last ten years, which represents one average grade level of potential dropouts.

That figure is multiplied by $4800 (which is $400 times 12, the number of grade levels).

If there are an average of 2500 dropouts then the formula would be:

($400 x 4800) x 2500

SB 197: Calculating the Initial Amount of the Grant Fund

	As calculated in SB 197	If looked at on a year by year basis
1	$400 for each potential dropout in the First Grade	2500 potential dropouts x $400 =$1,000,000
2	$400 for each potential dropout in the Second Grade	2500 potential dropouts x $400=$1,000,000
3	$400 for each potential dropout in the Third Grade	2500 potential dropouts x $400=$1,000,000
4	$400 for each potential dropout in the Fourth Grade	2500 potential dropouts x $400=$1,000,000
5	$400 for each potential dropout in the Fifth Grade	2500 potential dropouts x $400=$1,000,000
6	$400 for each potential dropout in the Sixth Grade	2500 potential dropouts x $400=$1,000,000
7	$400 for each potential dropout in the Seventh Grade	2500 potential dropouts x $400=$1,000,000
8	$400 for each potential dropout in the Eighth Grade	2500 potential dropouts x $400=$1,000,000
9	$400 for each potential dropout in the Ninth Grade	2500 potential dropouts x $400=$1,000,000
10	$400 for each potential dropout in the Tenth Grade	2500 potential dropouts x $400=$1,000,000
11	$400 for each potential dropout in the Eleventh Grade	2500 potential dropouts x $400=$1,000,000
12	$400 for each potential dropout in the Twelfth Grade	2500 potential dropouts x $400=$1,000,000
	$4800 for each potential dropout in the system	$12,000,000

$4800 x 2500 = $12,000,000

Evaluating the Impact of Education Grants

MEMBER BRIEFING
November 14-15, 2007

grantmakers for education

grantmakers for education

Grantmakers for Education is philanthropy's knowledge source for achieving results in education. Our mission is to strengthen philanthropy's capacity to improve educational outcomes for all students, which we achieve by:

- Sharing successful grantmaking strategies, best practices, and lessons learned that exemplify responsive and responsible grantmaking in education.
- Creating venues to collaborate on projects, share knowledge, develop leadership, advocate for change and debate strategies with other education grantmakers.
- Interpreting data, illustrating trends, and conducting research to improve the effectiveness of education grantmaking and to highlight innovative educational approaches.

Our efforts are informed by eight *Principles for Effective Education Grantmaking*, designed both to guide funders in increasing their impact and to ensure GFE's services and programs help funders accomplish their goals for change.

ACKNOWLEDGEMENTS

Evaluating the Impact of Education Grants

CONTENTS

Foreword

SECTION 1: Beginning with the end in mind: A grantmakers guide to evaluation

SECTION 2: Managing practical evaluation challenges: A discussion between a grantmaker, grantee and evaluator

SECTION 3: Measuring changes in student achievement: Reflections by two evaluators on competing ideas and different approaches

SECTION 4: Evaluation with a small "e": How to gather useful information when you can't afford an evaluation

SECTION 5: Making the most of your evaluation resources: A case study of one foundation's options

SECTION 6: Parting thoughts

grantmakers education

In today's climate of accountability, many grantmakers struggle to determine the impact of the activities they support. This report seeks to summarize and make available much of the information from a special member briefing Grantmakers for Education organized to help funders—especially those from foundations with modest budgets—confront this challenge.

Held in November 2007, the program provided tools and framework for how funders can make the best use of evaluation to match their objectives and resources. Although the unique learning format of the event and the give-and-take among participants are difficult to capture in a written document, we've endeavored to organize this report to capture key lessons and advice for grantmakers.

The program—and this report as well—was designed to meet the following learning objectives, identified through a survey of GFE members:

- Understand why and when to evaluate—including calibrating evaluation costs with the scope of a project and a funder's ability to pay—and how to frame useful evaluation questions.
- Help participants determine what counts as persuasive evidence and how to gather and use it.
- Explore different approaches for evaluating the results of grants to understand the trade-offs associated with them.
- Offer advice on how to talk with foundation boards to clarify expectations about what an evaluation can tell them and how long it will take to see results.
- Share strategies on how to identify and select a good evaluator, manage costs and determine who is the "client" of the evaluation.

The program was not designed as a technical seminar focused on methodologies, but as a practical seminar to help frame grantmakers' evaluation options and provide a disciplined way to think about whether and how to evaluate initiatives in light of their foundation's resources.

The sessions followed a variety of formats, including formal presentations, panel discussions, small-group analysis of case scenarios and a "fishbowl" conversation in which the group observed an evaluator interviewing a grantmaker about her evaluation needs. What made the briefing unusual, participants agreed, was the high level of candor among the grantmakers and evaluators who attended.

It was a rare opportunity to learn about the practical side of evaluation, its strengths and limits, and its potential to sharpen grantmakers' thinking.

To help readers navigate the report and to probe topics where they want to learn more, each section of this report opens with a set of key questions to be answered and includes sidebars or text sub-heads to clearly flag suggested advice to grantmakers.

WHAT IS A THEORY OF CHANGE?

In framing questions for funders about what and how to evaluate, several speakers pointed to the importance of a "theory of change."

Simply, a theory of change is a statement or flowchart or plan that explains how an organization's intended impact will actually happen—the cause-and-effect logic by which organizational and financial resources will be converted into desired social results. For a grantmaker, a theory of change makes clear what "success" looks like and the assumptions behind how certain grants will lead to certain impacts.

Used often by funders as a way of clarifying their grantmaking strategy and to help drive choices about strategic trade-offs, speakers said a theory of change also was an essential tool for making decisions about evaluations.

RESOURCES

More information about what a theory of change is and how to craft one is described in the section of the report beginning on page 16.

In addition, grantmakers may find the following resources helpful:

ActKnowledge and the Aspen Institute Roundtable on Community Change.
In an ongoing partnership, the two organizations have assembled an extensive online library of materials, tools, and background reading on theory of change and strategic planning. See www.theoryofchange.org.

[illegible] a Theory of Change to Guide [illegible]
This brief guide from GrantCraft explains how grantmakers can use a theory of change approach in their work, with grantees and inside their foundations. Available for purchase or free download at www.grantcraft.org.

[illegible]
This report from Grantmakers for Education summarizes discussions during a special program track at the GFE annual conference in 2006 on crafting a theory of change and using it to increase strategic clarity and impact. See www.edfunders.org.

opened the meeting with a primer on key questions and concepts to understand in deciding when and how to evaluate an effort. His observations are summarized in this chapter.

Bangser's presentation identified the questions that every grantmaker should ask up front—before deciding to evaluate—to make sure that evaluation findings are useful and scarce resources are used wisely. What kinds of evaluation approaches are most commonly used, and which are best suited to which purposes? When does it make sense not to evaluate?

Bangser is a consultant who is a former senior vice president of MDRC and former president of the Hartford Foundation for Public Giving.

Simply, evaluation is learning with a purpose.

And, specifically, it is a structured, cost-effective process that produces reliable answers to important questions and then uses those answers to help make better decisions. Ideally, funders should consider each of these components of this definition when they develop an evaluation plan.

Evaluation should be a *structured process*—one that starts at the beginning and not at the end.

All foundations process information—anecdotal or otherwise—before they make decisions. It only makes sense to think about how to collect, process and analyze information in a structured and purposeful way. Timing also is important; funders should think of this issue from the outset, embedding a clear timeframe into their grantmaking decisions and their discussions with grantees.

Evaluation should answer *important questions.*

As American humorist James Thurber once said, "It's better to know some of the questions than all of the answers." Some of the questions that need to be answered include:

Individual grants? Clusters of grants? The entire portfolio? Non-grant aspects of the funder's operations, such as its role in advocacy or convening?

Since grantmakers often have multiple goals, they need to clarify at the outset what they truly want to learn and how they will define success. Here are possible—sometimes complementary, but very different—goals for an evaluation to learn about needs and opportunities, to figure out whether or not advocacy efforts

affected public policy; to gauge the effectiveness of specific program interventions or policy changes; to improve program operations (see sidebar for more information).

Some questions aren't readily measured or quantified. "Not everything that counts can be counted," said physicist Albert Einstein, "and not everything that can be counted counts." Be wary of the tendency to evaluate what's most measurable rather than what's most important. For example, evaluations often measure activity levels or outputs rather than outcomes or impacts.

Evaluation should yield *reliable answers.*

According to the journalist Janet Malcolm, "Almost everything we know, we know incompletely." Yet it's important to distinguish between incomplete information that is nonetheless informative and incomplete information that is misleading and therefore counterproductive. Here again, a few questions can bring things into focus:

To distinguish important information (and gaps) from unimportant ones, grantmakers need to be clear about what they think will cause the change they want to see. And then there's the counterfactual: Might the change have occurred anyway, absent the intervention?

By articulating a theory about how the change is likely to happen, grantmakers can increase the chances that an evaluation will consider the right indicators at the right points of time (see report chapter beginning on page 16 for more information about a theory of change).

Are high-quality, reliable data available? How will the foundation (or someone else) gather and store them?

Grantmakers need to be rigorous about the significance of findings—and also distinguish among types of significance. Results that are significant statistically might not be significant in terms of policy. It's also important to manage one's own expectations, remain aware of uncertainty and consider the importance of looking at subgroups. Avoid the "lure of simplicity," evaluator Patti Patrizi has warned, but don't get bogged down in technicalities.

Evaluation should lead to *better decisions.*

Of course better decisions are good, but it also pays to ask about the importance of the decisions at hand and the consequences of getting them wrong. Is an evaluation a diversion of resources from other work, or is it a means to strengthen grantmaking? Think of an evaluation as the beginning rather than the end of the discussion; use the evaluation to frame questions, choices and areas for improvement rather than (necessarily) providing definitive answers. Questions that lead to better decisions include:

Will the funder's board or staff use the evaluation to improve grantmaking decisions? Or is the evaluation really aimed at grantees, policymakers or practitioners?

What evidence will be persuasive to the intended audience? How reliable and timely do the findings need to be? Is the project "mature" enough to draw firm conclusions? Will the audience base decisions on research evidence, or does it need other sorts of information as well?

DIFFERENT EVALUATIONS FOR DIFFERENT QUESTIONS

- **Monitoring grantee performance: Did grantees do what they said they'd do?**
- **Formative or process evaluation: Did grantees implement the project effectively and as intended? Can the implementation be improved?**
- **Summative or outcome evaluation: Did grantees achieve the impacts they intended? Why or why not?**
- **Cost analyses: How much did the project cost financially? What about the opportunity costs?**
- **Synthesizing previous evaluations: Can we learn what we need to know by looking at existing data in a new way?**

Are the findings generalizable?

How relevant are the findings to other locations or conditions?

If an evaluation is going to influence decisions, people need to know the results. Make a point of developing a communications strategy early in the evaluation process.

Evaluation should be *cost-effective.*

Certain factors affect both the cost of an evaluation and its ultimate value. A lot depends on who carries out the tasks associated with the evaluation. Foundation staff? Evaluators? Grantees? Other questions include:

Consider the cost of the evaluation in relation to the size and importance of the grant, how it fits within the foundation's overall grantmaking portfolio and the importance of the decisions to be made.

Engaging grantees in the evaluation is good, but it's also good to do so without unreasonably shifting the evaluation costs onto them.

Is it necessary to involve an independent evaluator? Or can the grantee or foundation carry out the necessary work? What about increasing ongoing capacity to "think evaluatively" within the foundation and among grantees?

LESSONS LEARNED

The challenges associated with evaluation are real, but they're closely related to the challenges of grantmaking itself. These simple lessons are worth remembering, according to Bangser:

- **Ask the right questions, even if they can't be answered definitively.**
- **Appropriate short-term and intermediate outcomes can be useful, even if partial, measures of success.**
- **Know what you don't know.**
- **Do selected evaluations well rather than many evaluations poorly.**

Applying the right evaluation questions to different situations

To apply general observations about evaluation to the kinds of situations grantmakers confront regularly, participants examined and discussed three typical scenarios. Questions about evidence lie at the heart of every evaluation: How good does the evidence have to be for the kinds of questions you're trying to answer?

In each scenario, a grantmaker is faced with a decision about whether, and how, to support evaluation. Working in small groups, participants at the briefing analyzed each scenario. This section captures their collective advice about how best to navigate each situation and find a path forward.

, vice president of The Spencer Foundation, , president of the William T. Grant Foundation, and , deputy director of Grantmakers for Education, designed and led the session.

Summarized on the following pages are the scenarios and a set of suggested opening questions a grantmaker could use to work through the choices at hand.

SCENARIO 1:

THE BOTTOM-LINE BOARD

This scenario rang true to many participants. "It reflects reality!" one exclaimed. "Boards want information like this, and they want it now." Indeed, several grantmakers had dealt with similar situations in their organizations. The group suggested that a grantmaker in this position start by working through a handful of initial questions:

> What does the board really want to know? What sort of data will answer their questions?
>
> Could a tighter logic model help align the foundation's resources with the board's expectations?
>
> If the foundation ultimately decides to commission an evaluation of its work, who would be the primary client? The whole board? The board and staff?
>
> What information would be collected in any evaluation? What information would be necessary, and what information would be "nice" to collect?
>
> How can the foundation create a reasonable match between the direct and opportunity costs of the evaluation and the decisions on the table?

A grantmaker who recently received a similar request from her board explained that she and her colleagues developed five "impact target areas" that board members care about. She and her colleagues are now figuring out where and how to get information that shows impact in those areas.

SCENARIO 2:

FANTASTIC FINDINGS

In this case, the group zeroed in immediately on a key question: What does 95 percent really mean? Getting a firm answer to that question—a necessary step before making any funding decisions—would probably mean digging deeper in the following areas:

> Which students are served, and how selective is the program? The more selective and voluntary it is, the less likely it is that the outcomes represent the program's true effects.
>
> What does the intervention entail, and what is its logic model? Do program activities match program goals and the target population? In other words, is there a logical connection between the program's services (inputs) and results (outputs)?
>
> How can we know the program is making a difference? What is the benchmark for comparison? How strong is that benchmark given concerns about selectivity?

Beyond those questions, participants said they'd want to know more about certain subjective issues regarding the organization and the model. To many, the grantseeker's extravagant claims and thin evidence suggested a need for caution.

SCENARIO 3:

SIGNIFICANT STAKES

As they began to discuss this scenario, participants found that they would need much more information about the intervention itself before they could move to replication and scale-up issues. They also realized that good decisions would depend on having answers to some key background questions: Who are the teachers? What are the schools like?

Assuming a grantmaker could get answers to those questions, they imagined planning an evaluation with a series of further questions that might look something like this:

- The project's logic model says the intervention will increase teachers' knowledge. How will we know if that has actually happened?
- How will we measure change in student achievement? How much change will be necessary to call the program a success?
- What are the classrooms like after teachers go through the program? What will have changed, and how do those changes raise student achievement?
- How much will it cost? $5,000 per teacher? $10,000? How much does it cost to make a significant difference? Do high-cost and low-cost models yield significantly different results?

A lot could be learned from a formal evaluation of a program like this, they concluded, and advice from a researcher would be enormously helpful in clarifying what data can be gathered and assessed and how any data should be judged. Also, it's important to ask rigorously how much you would really need to know to justify replication of the program and ongoing expenditure by the school district—maybe more than initially appears to be the case, maybe less.

CLOSING ADVICE:

WHAT DECISIONS ARE ACTUALLY AT STAKE?

Robert Granger summed up the session with thoughts about clarifying initial questions. "It's helpful," he said, "to keep in mind what's actually at stake. Figure out what decision is actually on the table."

To do that, he advised, find out what key people really want to know—and do it "in a low-stakes environment." Check in privately with your board, your staff, potential grantees, educators and school-district officials before putting them together with an evaluator: "People don't want to feel stupid publicly," he said, "but in fact they rarely want to know as much as an evaluator thinks they do."

Granger closed with an observation about evaluation as a tool for policy advocacy. "People in Washington say you need a big research study to communicate with policymakers," he explained, but it's not true. "In my experience," Granger said, "people in government have low standards of evidence. They want to know fairly simple things about what works, where it works and how much it's going to cost." Formal evaluation can help answer those questions, but only if the evaluation fits within a wider effort to have an effect on policy.

2 Navigating practical evaluation challenges: A discussion between a grantmaker, grantee and evaluator

Designing an evaluation is clearly a lot of work. Using a roundtable-discussion format, program participants got to listen in as three people who approach evaluation from different perspectives—a program officer, a grantee and an evaluator—described the nuts and bolts of the process. Their advice covered selecting an evaluator, estimating costs, establishing relationships and handling controversial findings.

We've summarized highlights from this discussion in this chapter. The section headings in boldface flag the key take-aways and the speakers' advice to grantmakers.

Roundtable participants included [redacted], director of BTW informing change, [redacted], program director of The Cleveland Foundation, and [redacted], executive director of the Consortium on Chicago School Research. [redacted] moderated the discussion.

Choose the right evaluator.

[redacted] Helen, you're a grantmaker. What are some of the factors that go into your decision to use an external evaluator?

[redacted] Using an external evaluator is a huge investment, so you need to be clear about what value an evaluation is going to add to the process and what you hope to accomplish. Evaluators add value in three major ways: first, they bring credibility to the process and the results; second, they have expertise and knowledge that's relevant to the field; and third, they do the work so the grantee doesn't have to. If you're going to capitalize on that value, it helps to be clear from the start that you're going to be willing to accept the results of the evaluation and take it to the next level. There's no point in funding a report that just sits on the shelf.

[redacted] How do you choose an evaluator?

[redacted] I look at evaluation reports in the relevant field to see how different evaluators are reporting and framing the issues. I also talk with people who are networked with evaluators to see what they think. After that, I choose two or three potential evaluators and talk with them systematically about the scope of work and what the foundation wants. Then I invite proposals. I involve others in reviewing the proposals, including the grantee, some of my colleagues at the foundation and other funders.

[redacted] Helen, have you ever done an RFP for an evaluation?

[redacted] We did one for a study of charter schools. It worked out all right because there's not a huge universe of people out there who are capable of the sort of work we wanted. We figured out the universe and sent letters of inquiry. Another idea is to do an RFP but don't ask for full proposals. Specify clearly what you

want to learn and ask for a two-to-three-page letter. It doesn't take too much of an evaluator's time to respond, and what they send is useful to you and to them.

What are some things you ask about an evaluator's qualifications?

I ask for references from funders and from grantees. I also want to know specifically who from the firm will do the work. And I check into their communication skills. Are they going to come in and say, "I'm the expert"?

I think it makes sense to do interviews. Talk to as many people as possible and find out about their people skills.

What about an initiative with other funders involved?

We did one project that involved three funders. Our first job was to put them on the same page. My advice is to look for an evaluator who can occasionally recognize the need to stop and get things straight. Sometimes that means standing up to the funder.

Agree on clear expectations for what is being evaluated.

Lande, imagine you've been chosen by Helen to evaluate a project. What's in your mind? Are you and Helen thinking alike, or is there tension between your points of view?

There might be some tensions or differences at the beginning. I need to get those out in the open so we can discuss them and come to agreement. So, for me, the big "E" is expectations. I try to use our first conversation to frame those. We're both looking for defensible results. We can agree on that. Then there might be divergence in how we're thinking about time and resources. Sometimes a foundation doesn't want to invest time up front. They're often eager to get results too soon, and we need to address that. The objective is to "right size" the project up front, to ensure it's the right scale and scope for the information the funders needs. If you want to build the field, you need a lot of investment on the front end. Also, you'll want to be mindful that, later on, there might be tension about disseminating the results, especially if we uncover unflattering findings.

What are the key drivers of cost?

The biggest item is data collection—and it almost always takes more money to get defensible results than funders want to pay or can pay. Interviews, for example, are always much more expensive than funders think they're going to be because there are a lot of steps: you need to design the instrument, conduct the interviews, report on them, analyze your findings. It adds up.

Figure out the right measurements.

When we talk about evaluation, there's a tendency to look for numbers. People want to go to the quantitative side, but sometimes qualitative methods go deeper. Lande, how do you talk with clients about what to emphasize?

Quantitative and qualitative methods produce different information. Do both, if you can. We ask our clients, "What do you want?" Very often, the answer is "a good story and data to back it up." Does that mean a data set? Ongoing analysis? Maybe. It depends on so many factors. Recently, everyone has been saying that their board wants a "dashboard." Personally, I have a preference for really well-done case studies. You can get a lot of data into a case study. You can present a wealth of nuanced information from many perspectives.

- **Get clarity about what you want to learn and what you will do with the results.**
- **Find an evaluator with both technical and people skills.**
- **Get the relationships right. Who's the client—the foundation, the grantee or policymakers?**
- **Clarify expectations about time and resources. Make sure you and your evaluator are on the right page. Look closely at the work plan to "right size" the project, if needed.**
- **Recognize that qualitative and quantitative methods produce different information; think about ways of collecting both types of data.**
- **Talk in advance about how findings will be reviewed and reported. What happens if the results are negative or controversial?**

Establish trust—especially when the results are negative.

John, you're in an interesting spot because you're an evaluator and a grantee. How do the parties involved in an evaluation develop trust and relationships, given power differentials?

Funders want successful grantees, so there's a basis for trust right there. But it can be very hard if there's an us vs. them dynamic between the funder and the grantee. The relationship between funder and grantee builds over time. It's harder to establish if you're a one-time, short-term funder, easier if you do multiple grants over a longer period. It's also helpful if future funding doesn't hinge on the outcome of the evaluation.

Can you talk a little about establishing trust?

The main thing is to be clear from the start about who the client is, whether it's the grantee or the foundation or someone else. We try hard to define the client up front. We ask the funder, "Is it you? Are you the client? Or is it the grantee?" We don't allow dual clients. In one case, a funder gave grantees 10 percent of the amount of their project grants and told them to choose an evaluator from a list of three. One organization chose us, and we had a conversation about what the grantee wanted to know. The arrangement put the grantee firmly in the role of client.

As a funder, you need a "contract" up front with grantees about what you want to know and how it will be used. We've had grantees who have been funded for years without any questions from us about things we'd like to know. When we change that pattern by suggesting an evaluation, they sometimes see it as changing the game. It's not always easy.

How do you handle controversial findings?

We try to adhere to a "no surprises" rule. We agree in advance that we won't put out a study until top leadership has seen it. We also get lots of input from constituencies that matter—the school district, parents, the funders—before we release a report. We require a very careful review, but we have a firm policy that the author has the final say. If an author chooses not to make a suggested change, we require a written explanation of why not.

I was involved in the release of one controversial report, and we realized that we needed to get buy-in during the review process. We drafted the report and got feedback from all parties. It seemed like a long vetting process: it took about three months. But people needed a chance to look at our findings closely and say, "We think this is wrong." That gave us a chance to go back to the data and say, "We know you think it's wrong. But it's right, and here's why." The situation can get tricky earlier than that if the evaluator sees a big problem. Sometimes we shift from being the evaluator to being an organizational coach if we see very devastating stuff.

Many education grantmakers ultimately aim to increase achievement gains, but measuring student achievement in an evaluation is anything but straightforward. To help participants understand different ways of measuring achievement and interpreting any results, the program included an exchange between researchers [redacted], executive director of the Consortium on Chicago School Research, and [redacted], co-director of Stanford University's Center for Research on the Context of Teaching. Easton works primarily with quantitative methods, while Talbert works mainly with qualitative approaches.

At the program, these two leading researchers talked about different approaches for measuring achievement, the kinds of information those approaches yield and how to interpret the results. The speakers also looked at the question of persuasive evidence: How much information, and what kind, is sufficient to make a difference in important practical decisions?

This section summarizes their observations and suggestions for grantmakers.

Be clear about how resources link to results.

To measure change in a meaningful way, it's important to ask by what mechanisms we think student achievement will go up. What's our theory of change? The assumptions are often implicit, not stated, and evaluators need to work with stakeholders to clarify those assumptions as part of the research. What's the theory? Is it tight? Or, if an intervention is not successful, where did it break down?

Why, for example, do people think small schools will make a difference? The theory of change for small schools goes something like this:

Small schools have some autonomy and freedom.

↓

Kids get to know teachers; teachers work together.

↓

Instruction and student engagement improve.

↓

Student achievement increases.

We did a study of small schools and found that they got better attendance but no change in student achievement. A theory of change lets us look for measures at each step, to see what activities are making a difference or not.

We tend to focus on how to measure that last step. In John's framework, we ask, "What changes in student achievement do we expect to see as a result of better instruction and improved student engagement? And how can we measure those changes?"

One thing we look at is the quality of implementation. Interventions that are implemented in a lot of schools (10 or more) are inevitably implemented unevenly. It's possible to look at variations in implementation and connect those to student outcomes.

Another possibility is to look at measures from sources other than tests. For example, we sometimes identify relevant indicators from national studies and surveys. In one case, we used a survey with items about student effort and attitudes that we could compare with national norms. The data were soft, but people actually care a lot about those outcomes. The funders were also pleased to see comparisons with national norms.

Determine the best—and most realistic—experimental design.

As an evaluator, you need to have a way of knowing what would have happened without the intervention. Randomized-control designs (often called the "gold standard" of research because they test the efficacy of an intervention or treatment by randomly assigning them to some subjects and not others) are very unusual in education. There are serious questions about feasibility, cost effectiveness and ethics. You also need to ask if the "treatment" will be stable enough to study it and make no refinements.

But there are some other, less intensive, less expensive evaluation designs that can add very useful insights into how a program is affecting student achievement:

If you have good measures of the things you care about, you can often look at matched pairs of schools and compare the results. This works best if you have lots of cases—20 or so—to gauge whether students are learning more.

You can also look at change over time, as long as you have consistent data over time. In California, for example, the data systems have changed numerous times, which limits our work. As evaluators often say, "If you want to measure change, don't change the measures."

You can also look repeatedly at a single point in the continuum. One study looked at fifth-graders each year for several years. This can be a good alternative to following one cohort, and it's sometimes easier to get reliable data.

Every two years, we do a survey of all Chicago teachers and students in many grades. It helps us see the effects of interventions, even if we don't learn about ultimate outcomes. But early survey results suggest that we can expect future growth in student achievement.

The truth is, there's always a "tortured link" between an intervention and student achievement, but survey information can tell you things with real policy implications. For example, teacher surveys can give important feedback about how much teachers trust each other and their schools. The results help foundation leaders see the value of actions designed to strengthen the professional community.

Decide what's good enough: How much change is enough change?

You need to think about the long term. Is change at this rate likely to get us where we want to go? You also need to think about the quality of the measures. In Chicago, test scores have gone up. Is that a victory? Maybe, maybe not. They're lousy tests.

Only a fully rounded portrait can answer that question. You need statistical evidence, and you also need case studies. A successful case lets you look at how forces come together when an intervention works well. If you can describe what it took in that successful case, you can then ask how likely it is that those components can be replicated or spread. What if it takes a strong principal? How many strong principals are out there? Can you grow enough principals to support the intervention?

Use results to improve the program.

If you're a funder and you've invested a lot in an intervention, evaluation can validate the resources you've already spent. But the field has changed. No one wants an evaluation report at the end of the process anymore. More evaluation is being done earlier, when it can affect the intervention.

It seems as if a shift has taken place in how we think about evaluation. We used to ask, "Is the intervention working?" Now, we're more likely to ask, "How well is the intervention working?" and "Can it work outside a certain narrow set of conditions?"

4

[illegible]
How to gather useful information when you can't afford an evaluation

Recognizing that many meeting participants come from smaller organizations with no or limited evaluation budgets, another session offered ideas for how grantmakers can use their grant-reporting process—a process already in place at most foundations—to answer questions about performance and results. [illegible], director of BTW informing change, provided key frameworks and ideas—all summarized in this section.

Key questions covered by Ajose included: How can you learn from your grantmaking if your foundation doesn't have an evaluation budget? How do you capture meaningful information regarding small grants when an independent evaluation would cost more than the grant?

Identify the challenge and get clear about expectations.

The session opened with participants naming some of the evaluation challenges they face as grantmakers, especially in smaller foundations, including:

> As a new foundation, we didn't have specific reporting requirements, so we didn t get back useful results.
>
> Our trustees are impatient. They expect too much, too quickly.
>
> It's hard to find a balance so you can get enough information but don't spend too much time on evaluation.
>
> We have different values about evaluation among our staff and between our staff and board. It seems as if leadership is comfortable making decisions based on gut instinct.
>
> We'd like to find a way to measure the cumulative impact of small grants made over many years.
>
> It's hard to find appropriate evaluation techniques when your organization makes small one-year grants.

The group confirmed that expectations are the main issue in most of the challenges they mentioned. It's important, they agreed, to try to clarify expectations and align the scope of your evaluative efforts with the resources available and the stakes involved. It's also important to be sure expectations are clear both among staff members and between the staff and the board.

As part of this session, speaker Lande Ajose reviewed the components of a sample theory of change with participants (see figure 1 below), noting that the exact components of a theory can vary; at its simplest level, a theory of change should show how resources a nd activities will yield specific results and outcomes. She then showed how one foundation had filled in this framework for its arts program (see figure 2 below) and other programs. In addition, she discussed how the foundation finally aggregated its individual program strategies to develop a single theory of change to guide the foundation's entire approach; the goal was to cut across silos to see if the foundation's approach was consistent.

Articulate the outcomes you expect to see.

Having a clear theory of change is at the heart of taking an evaluative approach to your work, even if you don't have the funds for an independent evaluation. A theory of change enables a foundation to articulate the outcomes it seeks.

The byproduct is more clarity about what you're doing and what you shouldn't be doing. It becomes a valuable planning tool. A funder can develop a theory of change for an individual grant, an initiative or an entire program area. When developing a theory of change, defining the problems to be addressed, or the purpose statement, is a crucial first step, according to Ajose. Evaluators typically spend more time on the purpose statement than on any other part of a theory of change. The purpose statement usually looks a lot like the desired ultimate result: the neighborhood or community impacts toward which the foundation is aiming.

Also, often board members focus on indicators rather than on broader social impacts. This is understandable: indicators help them define what they're trying to accomplish, and they're hungry for data. But a board's job is not to identify indicators; it's to identify outcomes. Getting the board to name the problems the foundation is trying to address and the ultimate results it wants to advance can help clarify the distinction between outputs and outcomes. It's all right for a foundation's stated desired outcomes to be broad: no single foundation can achieve ultimate results; at best, those will be accomplished through the efforts of many organizations.

Link your theory of change with grant reporting.

For a foundation, linking the theory of change with grant-reporting requirements has several benefits. First, it communicates the foundation's broader goals to its grantees. It also helps the foundation get more information about how a specific grant is contributing to a foundation's desired impact.

One foundation created a brief checklist that grantees and program officers use as a tool to gather qualitative data on how grants contribute to the foundation's intended outcomes. Without overburdening grantees, the reporting tool generates data on how the foundation's investments are influencing individual young people, schools, community organizations and the community as a whole.

Speaker Lande Ajose shared this example of one foundation's efforts to link its theory of change to a grantee report. In this report, grantees are asked to reflect on how their work is affecting individual, organizational and community outcomes that the foundation has identified in its theory of change.

Supplemental Grantee Reporting Form

Arts Program Investment

This profile is to be completed by each grantee as a supplement to their Grant Reporting form.

Name of Organization and/or Grant: _____

Grant Number: _____ **Date Completed:** ___/___/___ (mm dd yy)

Period of Review: _____

1. Did this grant achieve the following individual-level results? *(check one box for each result)*

a. Low income children had expanded access to quality arts and arts education	❑	❑	❑
b. Youth were more connected to each other and to community arts institutions	❑	❑	❑
c. Individuals were more connected to their cultural heritage	❑	❑	❑
d. Individuals were more aware and appreciative of the cultures of others	❑	❑	❑
e. Relationships formed that crossed familiar lines of age, culture or socio-economic status	❑	❑	❑

*If your program did not intend to achieve this result, please check this box.

2. Did this grant achieve the following organizational-level results? *(check one box for each result)*

a. Schools and community organizations grew capable of and positioned to use the arts as a means of building new or stronger connections among people with shared cultural backgrounds	❑	❑	❑
b. Schools and community organizations were capable of and positioned to use the arts as a means of building new or stronger connections across cultural divides	❑	❑	❑

*If your program did not intend to achieve this result, please check this box

c. Schools and community organizations grew better positioned to sustain arts education	❑	❑	❑
d. Organizational relationships were sustained and evolve over time	❑	❑	❑

*If your program did not intend to achieve this result, please check this box.

3. Did this grant achieve the following community-level results? *(check one box for each result)*

a. Arts programs serving low-income children were actively supported by the community	❑	❑	❑
b. Artists and arts organizations became part of community and neighborhood improvement efforts	❑	❑	❑
c. Cross-cultural social networks began to be built	❑	❑	❑

*If your program did not intend to achieve this result, please check this box

To tease out and model the sorts of question a funder might consider when deciding whether or not to embark on an evaluation of a particular project, the program created a "fishbowl" conversation between seasoned evaluator [redacted], co-director of the Center for Research on the Context of Teaching at Stanford University, and trustee [redacted] of the Steans Family Foundation in Chicago.

Looking at the Steans Family Foundation's education portfolio, they considered opportunities for meaningful evaluation and examined the trade-offs involved in terms of cost, effort and possible impact, using a matrix Talbert distributed to session participants. The conversation was wide-ranging, approximating the sort of initial interview Talbert might have with a prospective client.

In this section, we've captured highlights from their conversation that offer especially practical advice for how to make decisions about evaluation.

Profile: The Steans Family Foundation and North Lawndale

The Steans Family Foundation is a small family foundation that has concentrated for the past dozen years on improving the quality of life in North Lawndale, a low-income Chicago neighborhood. The foundation has worked across sectors, but much of its support has focused on education.

The North Lawndale neighborhood includes 27 schools, most of which struggle with the problems that typically beset urban schools: high student mobility (60 percent in some high schools), high teacher turnover and a concentration of the least experienced teachers in the school system. The neighborhood has high rates of violence, unemployment and other challenging factors that influence children's lives. Eighty percent of men have some contact with the criminal justice system, and only four percent of adults have been to college. The foundation sees the value of stabilizing the school environment to benefit children who are subject to many negative, destabilizing forces.

The foundation is supporting three education initiatives that might warrant evaluation:

- A program based in a charter high school that provides students with more consistent, sustained attention from school guidance counselors.
- The Umoja Program, located in a large public high school that is designed to increase student engagement, improve school culture and help students prepare for college.
- The Building Bridges project (which the foundation sponsors with two other funders in collaboration with Chicago's Juvenile Protective Association) that places trainee mental-health counselors in participating schools.

Evaluation Purpose	Evaluation Questions	Evaluation Design	Considerations/ Issues*
Measure impact of the initiative; summative evaluation.	To what extent did the target group(s) benefit from the initiative? Was the design effective on the whole?	Use one of three general approaches: - experimental (randomized control group) - quasi-experimental (comparison group; trend analysis) - non-experimental (statistical estimation)	How well are the outcomes measured (beyond state tests)? Is it feasible to obtain a control or comparison group? Is selection bias controlled?
Monitor grantee performance.	Are the grantees doing what they said they would do? Is the work high-quality?	Measure and report all facets of the program design (quantity and quality indicators).	Do grantees have reliable mechanisms for tracking their work? How well is quality being assessed?
Test assumptions of the initiative; build knowledge to inform future initiatives.	Did the assumed cause-effect relationships hold up? Under what context conditions; through what processes? What were unintended outcomes?	Develop logic model linking design to outcomes. Measure each fact of the model and evaluate expected relationships. Document processes within and across diverse cases.	Do stakeholders agree on the model? Are all facets of the model measured well, over time? Is there sufficient breadth and depth of longitudinal data?
Ensure ongoing feedback to improve the project.	Are participants experiencing the project in the intended way? Does this vary across participants/ sites?	Monitor participant responses to facets of the program. Develop and use "warning indicators."	How reliable and predictive is short-term information? What structures and norms support ongoing learning?

SOURCE: Joan E. Talbert, November 15, 2007. Distributed at the Grantmakers For Education briefing on evaluation, Chicago, Illinois.

* Considerations of cost and feasibility apply across the evaluation types.

After a quick analysis, Talbert and Steans zeroed in on Building Bridges, which seemed most ripe for evaluation and most likely to produce lessons of value to the foundation and others.

Originally based in three elementary schools and recently expanded to four, Building Bridges places trainee mental-health counselors in participating schools for extended residencies supervised by senior counselors. The schools get the benefit of the additional services; the Juvenile Protection Association gets entrée to schools and training opportunities. The association believes that families underuse mental-health services and that the project could increase access.

Throughout the discussion, Talbert and Steans checked their thinking about a possible evaluation against a matrix of evaluation types that Talbert distributed to session participants.

Before conducting an evaluation, a funder needs to build consensus on three issues: Why evaluate? What would we evaluate? And how would we evaluate, or what would we hope to learn?

Here's why we might be interested in evaluating Building Bridges. We know there's not enough money in the system to put more counselors into elementary schools. So, does the counselor-and-intern combination make a difference? It stretches dollars, but do we get traction? What accounts for variation among schools? And how do we know if we're having an impact? The schools are so troubled, and the kids so needy, but does the program raise student achievement?

The Juvenile Protection Association probably has questions, too. Staff there might want to know if they get more reach into communities and with families, but those are not necessarily the outcomes that interest you. One might want to know about how the counselors influence classroom environment. What comes first, classroom change or kids' resilience and capacity? You'd need to work out a detailed logic model. What about teachers' capacity to reach kids? Is that part of the model?

Teachers seem to be weaving things from the project into their classrooms. That wasn't built into the grant, but it seems to be happening anyway. We're encouraging them to make that aspect of the work more intentional. Now that the Juvenile Protection Association has a presence in the schools, it's doing things like offering workshops for teachers or providing interventions after a child dies. Teachers are going to the counselor's office to talk about their own issues. This sort of development was expected and hoped for, but it wasn't planned for.

This is a perfect example of an important lesson: Leave room for unanticipated outcomes.

It sounds as if some of the preconditions for evaluation are present with this project. The grantee is capable and well-equipped. There's an appetite for learning among the partners. There seems to be a safe learning space. The grantee is probably already collecting some data, although they might not know much about why changes are happening. They might want better information on their training program.

Here are two ideas for what might be possible and valuable with relatively little money:

First, an evaluator might look at things that are at a distance from the actual intervention—things that would be hard for the grantee to see on its own, such as partnerships that allow the program to

work in different schools. An evaluator could look at student data across schools to get a better picture of preconditions in the range of schools.

An evaluator might also look for "warning indicators" that show when an intervention is in danger of running into trouble. This could be very helpful if you're interested in replicating the project. In one formative evaluation, for example, we identified signs that an implementation was beginning to play out in bad ways. We helped the district develop a tracking system that focused on translation problems that people at the top rarely think about. For example, do teachers see counselors as the solution to all their problems? Do they concede responsibility? Your story about teachers seeking counselors out for their own therapeutic issues sounds good to me; but, on second thought, what does it really mean? You probably also have questions about impact. Are there schools in comparable situations that aren't doing this?

There are also variations among the schools in the project. All of them have similar demographics, but there are large variations in environment. How do you explain that?

You might want to look across schools to learn from those variations without trying to assess student achievement outcomes. For example, you might see a connection between school climate and kids' social-emotional data or on-the-ground developmental outcomes. You might find some test-score outcomes that seem relevant, but in fact those would be pretty far down the logic chain.

Is there an affordable way for us to sustain a dialogue with an evaluator and also conduct a useful evaluation?

It's important not to lose track of the importance of developing the capacity of grantees to measure their own work—partly because that capacity can improve their work, and partly because of cost. For example, if we wanted to do good case studies of the four Building Bridges schools—even if the evaluator were based in Chicago and had no travel expenses and even if the researchers were simply interviewing principals, counselors, and association staff and doing little or no classroom observation—the project would cost about $90,000 for one year.

With a project budget of $180,000, $90,000 seems very expensive. The evaluation would need to be much more valuable than what we get from site visits by the program officer. Is the difference worth $90,000?

Projects tend to be perceived in terms of personalities, but it does sound as if this model could be operationalized. A case study could be helpful at capturing what needs to be part of the principal's job, what needs to be part of the counselor's job, what resources are necessary and other factors that would need to be in place for replication.

6 Parting thoughts

At the close of the program, participants came up with this compelling list of observations and pieces of advice for funders on evaluation:

Ask the right questions even if you can't get the answers.

Ask two big questions upfront: What should we measure? And how do we define success?

Be aware of trade-offs in terms of time, money and buy-in.

Theories of change and logic models have come of age. Look past the jargon to see what's helpful, probing "What are we trying to do? With what resources? How will we follow what happened over time?" The time dimension is crucial and needs to be connected to the evaluation.

Integrating evaluation within grantmaking strategy helps frame your decision-making. Or, looked at from the other direction, the more you go down the path of evaluation, the more impact it will have on your grantmaking.

Implementation matters. It's common to expect results too early, which can compromise quality. There's a tendency to think that the sites with the smoothest implementation will have the best outcomes. That may be the case, but it's not always true—especially if smooth implementation occurs because the program avoids serving challenging students.

Even if you can't afford to evaluate, learn from other evaluations. Could larger foundations do more to fund learning for the field?

Costs are variable. Some foundations assign flat percentages of their grantmaking to evaluation, but that doesn't always fit the need.

Keep plugging away. Integrate evaluation into your work where you can.

Why Students Drop Out

Bridgeland, DiIulio, and Morison (2006) interviewed high school dropouts to find out why they didn't finish school.

Percentage of NELS:88 8th to 10th grade dropouts who reported that various reasons for dropping out of school applied to them.

Reason	Total	Male	Female
School Related:			
Did not like school	51.2	57.8	44.2
Could not get along with teachers	35.0	51.6	17.2
Could not get along with students	20.1	18.3	21.9
Was suspended too often	16.1	19.2	12.7
Did not feel safe at school	12.1	11.5	12.8
Was expelled	13.4	17.6	8.9
Felt I didn't belong	23.2	31.5	14.4
Could not keep up with school work	31.3	37.6	24.7
Was failing school	39.9	46.2	33.1
Changed school, didn't like new one	13.2	10.8	15.8
Job Related:			
Couldn't work and go to school at same time	14.1	20.0	7.8
Had to get a job	15.3	14.7	16.0
Found a job	15.3	18.6	
Family Related:			
Had to support family	9.2	4.8	14.0
Wanted to have family	6.2	4.2	8.4
Was pregnant	31.0		31.0
Became pregnant	13.6	5.1	22.6
Got married	13.1	3.4	23.6
Had to care for family member	8.3	4.6	12.2
Other:			
Wanted to travel	2.1	2.5	1.7
Friends dropped out	14.1	16.8	11.3

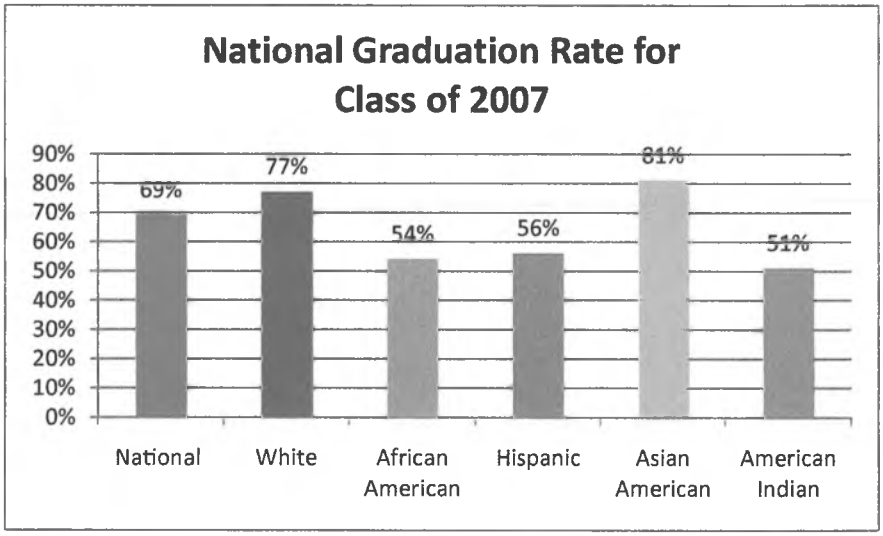
ALLIANCE FOR EXCELLENT EDUCATION

FactSheet

Updated September 2010

High School Dropouts in America



Nationwide, about seven thousand students drop out every school day. This statistic may not have been noticed fifty years ago, but the era during which a high school dropout could earn a living wage has ended in the United States. By dropping out, these individuals significantly diminish their chances to secure a good job and a promising future. Moreover, each class of dropouts is responsible for substantial financial and social costs to their communities, states, and country in which they live.

Although graduation rates are a fundamental indicator of how schools are ultimately performing, only recently have those rates been rigorously scrutinized, revealing the extent of the crisis in America's high schools. For decades, schools and districts published misleading or inaccurate graduation rates, and as a result, the American public knew little of the scope and gravity of the problems faced by far too many of the nation's high schools. Reputable, independent research has exposed alarmingly low graduation rates that were previously hidden behind inaccurate calculations and inadequate data.

Who Is Dropping Out?

Overall, far too many students are not graduating on time with a regular diploma; low-income and students of color fare the worst in the dropout epidemic.

- Each year, approximately **1.3 million students** fail to graduate from high school; more than half are students of color.[1] The graduation rate among students of color is as much as twenty-five percentage points below their white peers.
- A student within the age range of sixteen to twenty-four years old who comes from the lowest quartile of family income is about **seven times more likely** to have dropped out of high school than his/her counterpart who comes from the highest quartile.[2]

Source: Editorial Projects in Education, "Diplomas Count 2010: Graduating by the Number: Putting Data to Work for Student Success," special issue, *Education Week* 29, no. 34 (2010).

Where Are Students Dropping Out?

A relatively small number of chronically underperforming high schools are responsible for more than half of the nation's dropouts.

- Approximately two thousand high schools (about 12 percent), known as the nation's lowest performing high schools, produce nearly half of the nation's dropouts. In these schools, the number of seniors enrolled is routinely 60 percent or less than the number of freshmen three years earlier.[3]

- The nation's lowest-performing high schools produce 58 percent of all African American dropouts and 50 percent of all Hispanic dropouts, compared to 22 percent of all white dropouts.[4]

Geographic Location of Lowest-Performing High Schools By Largest Student Subgroup

Why Do Students Drop Out?

While there is no single reason for why students drop out, research indicates that difficult transitions to high school, deficient basic skills, and a lack of engagement all serve as prominent barriers to graduation.

- **Low attendance or a failing grade can identify future dropouts, and in some cases as early as sixth grade.**[5] Most dropouts are already on the path to failure in the middle grades and engage in behaviors that strongly correlate to dropping out in high school. Various researchers have identified low attendance or a failing grade as specific risk factors.

- **Up to 40 percent of ninth-grade students in cities with the highest dropout rates repeat ninth grade; only 10 to 15 percent of those repeaters go on to graduate.**[6] Ninth grade serves as a bottleneck for many students who begin their first year only to find that their academic skills are insufficient for high school-level work.

- **Over one third of all dropouts are lost in ninth grade.**[7] Academic success in ninth-grade coursework is highly predictive of eventual graduation; this is even more so than demographic characteristics or prior academic achievement.[8] Unfortunately, many students are not given the extra support they need to make a successful transition to high school and are lost in ninth grade.

- **The six million secondary students who comprise the lowest 25 percent of achievement are twenty times more likely to drop out of high school than students in the top-performing quartile.**[9] Among high school students whose test scores were in the top quartile of their senior class, less than one percent dropped out. Among the high school students whose test scores were in the bottom quartile of their senior class, twenty percent dropped out.

- **Research shows that a lack of student engagement is predictive of dropping out even after controlling for academic achievement and student background.**[10] Both academic and social engagement are integral components of successfully navigating the education pipeline.

What Are the Costs of Dropping Out of High School?

Dropouts suffer from reduced earnings and lost opportunities; there are also significant social and economic costs to the rest of the nation.

- Over the course of his or her lifetime, a high school dropout earns, on average, about **$260,000 less** than a high school graduate.[11]
- Dropouts from the Class of 2010 alone will cost the nation more than **$337 billion** in lost wages over the course of their lifetimes.[12]
- If the United States' likely dropouts from the Class of 2006 had graduated, the nation could have saved more than **$17 billion** in Medicaid and expenditures for uninsured health care over the course of those young people's lifetimes.[13]
- If U.S. high schools and colleges were to raise the graduation rates of Hispanic, African American, and Native American students to the levels of white students by 2020, the potential increase in personal income would add more than **$310 billion** to the U.S. economy.[14]
- Increasing the graduation rate and college matriculation of male students in the United States by just 5 percent could lead to combined savings and revenue of almost **$8 billion** each year by reducing crime-related costs.[15]

POLICY BRIEF 15 October 2008

Why Students Drop Out of School: A Review of 25 Years of Research

Russell Rumberger and Sun Ah Lim

Highlights:

- **Dropping out is more of a process than an event—a process that, for some students, begins in early elementary school.**
- **Poor academic achievement, as early as elementary school, is one of the strongest predictors of dropping out.**
- **Preschool improves school readiness and early school success, positively affecting student outcomes, including high school completion.**
- **Grades are more consistent than test scores in predicting which students will leave school without graduating.**
- **Several behaviors both in and out of school—including absenteeism, delinquency, and substance abuse—are strong indicators of dropping out.**
- **A stable home environment and access to social and financial resources strongly influence the likelihood that a student will graduate.**

California and the nation are facing a dropout crisis. About one-quarter of all students who enter the ninth grade fail to earn a diploma four years later. To address this crisis requires a better understanding of why students drop out.

Dropouts themselves report a variety of reasons for leaving school (*see CDRP Statistical Brief 2*), but these reasons do not reveal the underlying causes. Multiple factors in elementary or middle school may influence students' attitudes, behaviors, and performance in high school prior to dropping out.

To better understand the underlying causes behind students' decisions for dropping out, we reviewed the past 25 years of research on dropouts. The review was based on 203 published studies that analyzed a variety of national, state, and local data to identify statistically significant predictors of high school dropout and graduation. Although in any particular study it is difficult to demonstrate a causal relationship between any single factor and the decision to quit school, a large number of studies with similar findings does suggest a strong connection.

The research review identified two types of factors that predict whether students drop out or graduate from high school: factors associated with ***individual characteristics*** of students, and factors associated with the ***institutional characteristics*** of their families, schools, and communities.

Individual Predictors

Individual factors that predict whether students drop out or graduate from high school fall into four areas: (1) educational performance, (2) behaviors, (3) attitudes, and (4) background.

Educational Performance. Several aspects of educational performance have been widely identified in the research literature as strong predictors of dropping out or graduating:

- test scores and grades in high school;
- academic achievement in both middle and elementary school (with grades a more consistent predictor than test scores);
- non-promotional school changes (student mobility) during middle and high school; and,
- retention (being held back one or more grades), in elementary, middle, and high school.

Read the full report at: *lmri.ucsb.edu/dropouts*

Behaviors. A wide range of behaviors both in and out of school have been shown to predict dropout and graduation. One of the most important is student engagement, which includes students' active involvement in academic work (e.g., coming to class, doing homework) and the social aspects of school (e.g., participating in sports or other extracurricular activities).

Research consistently finds that high absenteeism—one specific indicator of engagement—is associated with higher dropout rates. Misbehavior in high school and delinquent behavior outside of high school are both significantly associated with higher dropout and lower graduation rates. In addition, drug or alcohol use during high school is associated with higher dropout rates. Teenage parenting and childbearing increase the odds of dropping out. Having friends who engage in criminal behavior or friends who have dropped out also increases the odds of dropping out, with such associations appearing as early as the seventh grade.

Finally, a number of studies have found that students who work more than 20 hours a week are significantly more likely to drop out.

Attitudes. Although a substantial body of research has explored the relationship between student achievement and a wide range of student beliefs, values, and attitudes, far less research has explored the links between these factors and dropping out. The dropout literature has generally focused on a single indicator—educational expectations (how far in school a student expects to go)—and has found that higher levels of educational expectations are associated with lower dropout rates.

Background. A number of student background characteristics—including demographics and past experiences—are linked to whether students drop out or graduate. Dropout rates are generally higher for males than for females, and they are higher for Blacks, Hispanics, and Native Americans than for Asians and Whites; yet these differences may be related to other characteristics of students as well as characteristics of their families, schools, and communities.

Some studies have found that second generation students (one parent foreign-born), especially Latino students, have higher graduation rates than either first generation (foreign-born) or third generation (native-born students and parents). Higher English language proficiency also lowers the odds of dropping out.

One past experience—participation in preschool—has been the subject of extensive, rigorous research and has been shown to not only improve school readiness and early school success, but also to affect a wide range of adolescent and adult outcomes, including high school completion, crime, welfare, and teen parenting.

Institutional Predictors

Research on dropouts has identified a number of factors within students' families, schools, and communities that predict dropping out and graduating.

Families. Three aspects of families predict whether students drop out or graduate: (1) family structure, (2) family resources, and (3) family practices.

Students living with both parents have lower dropout rates and higher graduation rates, compared to students living in other family arrangements. More important, changes in family structure, along with other potentially stressful events (such as a family move, illness, death, adults entering and leaving the households, and marital disruptions) increase the odds of dropping out.

Students in homes with more family resources—as measured by parental education, parents' occupational status, and family income—are less likely to drop out of school. A number of parenting practices—sometimes referred to as *social resources* or *social capital*—have been shown to reduce the odds of dropping out, including:

- having high educational aspirations for their children;
- monitoring their children's school progress;
- communicating with the school; and,
- knowing the parents of their children's friends.

Finally, students are more likely to drop out if they have a sibling who dropped out.

Schools. Although student and family characteristics account for most of the variability in dropout rates, about 20 percent can be attributed to four characteristics of schools: (1) the composition of the student body, (2) resources, (3) structural features, and (4) policies and practices.

Research finds that the odds of dropping out are lower in schools

with more advantaged students, but the effects appear to be indirect, through the association with other school characteristics.

Research does not find that school size has a consistent effect on dropout and graduation rates.

Attending a Catholic high school improves the odds of graduating; yet studies have also found that Catholic and other private schools lose as many students as public schools because students attending private schools typically transfer to public schools instead of dropping out.

Relatively few studies found significant effects of school resources on dropout and graduation rates, at least in high school. But there is strong evidence that small classes (15:1) in grades K-3 improve high school graduation rates.

School policies and practices in high school do matter. Students are less likely to drop out if they attend schools with a stronger academic climate, as measured by more students taking academic courses and doing homework. On the other hand, students are more likely to drop out in schools with a poor disciplinary climate, as measured by student disruptions in class or in school.

There does not appear to be a consistent effect of exit exams on dropout rates, although more recent high school exams appear to lower high school completion rates.

Additionally, requiring students to attend school beyond age 16 leads to lower dropout and higher completion rates.

Communities. Communities play a crucial role in adolescent development along with families, schools, and peers. Population characteristics of communities are associated with dropping out, but not in a straightforward manner: living in a high-poverty neighborhood is not necessarily detrimental to completing high school, but rather living in an affluent neighborhood is beneficial to school success. This suggests that affluent neighborhoods provide more access to community resources and positive role models from affluent neighbors.

Summary and Implications

As interest in the topic of dropping out has grown, so has the research literature, especially in the last 10 years; yet most research studies focus only on specific aspects of the problem. In contrast, this review of the research—the most comprehensive to date—examines *all* the factors that have been studied over the last 25 years, from individual factors to institutional factors in families, school and communities.

The review yielded valuable insights:

1) No single factor can completely account for a student's decision to continue in school until graduation. Just as students themselves report a variety of reasons for quitting school, the research literature also identifies a number of factors that appear to influence the decision.
2) The decision to drop out is not simply a result of what happens in school. Clearly students' behavior and performance in school influences their decision to stay or leave, but students' activities and behaviors outside of school—particularly engaging in deviant and criminal behavior—also influences their likelihood of remaining in school.
3) Dropping out is more of a process than an event; for many students, the process begins in early elementary school. A number of long-term studies that tracked groups of students from preschool or early elementary school through the end of high school were able to identify early indicators that could significantly predict whether students were likely to drop out or finish high school. The two most consistent indicators were early academic performance and academic and social behaviors.
4) Contexts matter. The research literature has identified a number of factors within families, schools, and communities that affect whether students are likely to drop out or graduate from high school. They include access to not only fiscal and material resources, but also social resources in the form of supportive relationships in families, schools, and communities.

One implication of this review is that there are a variety of leverage points for addressing the problem of high dropout rates. Intervention in preschool and early elementary school is clearly warranted. Rigorous experimental evaluations of high quality preschool programs and small classes in early elementary school have proven to improve high school graduation rates. Such programs are also cost-effective—they generate two to four dollars in economic benefits for every dollar invested.

But there are other leverage points as well. Even high school is not too late—both targeted programs serving a limited number of high-risk students and comprehensive school reform models have been proven to increase graduation rates and are also cost-effective.

Subject: Re: SB 197

Hi Murray,

Thank you for the updated explanation of SB 197 and how it is projected to be funded and implemented that you shared with me today. Please share the following views I am submitting to Senator Thomas and his committee members scheduled to meet this Wednesday. I strongly encourage a funding mechanism that focuses on specific schools that have accountability challenges, are of high need for improvement, and can access an in state funding initiative that will help address their needs. Characteristics that will facilitate this process would be:

1. An in state funded mechanism such as SB 197 that is focused on schools in need.
2. A competitive application process that will enable Alaska school districts to identify local needs and a means to address them.
3. Funding on scale that encourages districts to make an application.
4. A process that is easy, simple, and has some user friendly templates to follow.
5. A process that smaller districts with limited staffing for grant writing can access with state (DEED) technical support.
6. A process that allows "home grown" plans, based off current best practices and research that a district can develop to specifically address what they identify as an area of high need and sustainability.
7. A state review committee that is representative of Alaska citizens that understand the challenges of rural Alaska specifically and our unique needs state wide to determine the quality of the applications and the awarding of grants.

A wide variety of good grants will be submitted under an initiative with these features. Grants that might address areas such as early childhood intervention for literacy, attendance issues, drop out prevention, additional academic supports to help non-proficient kids to "get back on track" as fast as possible, implementing model programs to improve curriculum, professional staff development, assessment and interventions for success to mention a few. I applaud this effort and look forward to an opportunity to submit a grant when it is passed by the legislature and signed off by the governor.

Sincerely,

Bill McLeod,
Superintendent DCSD

National Center for Education Statistics

— Not available. State or jurisdiction did not report diploma count.

[1] The enrollment base for estimated first-time 9th-graders for the rate was estimated as the average of student membership in grades 8, 9, and 10 in 3 consecutive years.

[2] AFGR is an estimate of the percentage of an entering freshman class graduating in 4 years. For 2008–09, it equals the total number of diploma recipients in 2008–09 divided by the average membership of the 8th-grade class in 2004–05, the 9th-grade class in 2005–06, and the 10th-grade class in 2006–07.

[3] Totals include the 50 states and the District of Columbia.

[4] Maine reported 1,169 diplomas that were awarded to students attending private high schools that received a majority of their funding from public sources. These 1,169 diplomas were included in the Maine and the Total counts but were not included in the AFGR calculations for Maine and for the Total AFGR. The diploma counts used to calculate the AFGR for Maine and for the reporting states were 12,924 and 3,036,757, respectively.

[5] Due to item non-response, data for California and Nevada were imputed based on prior year reported data.

[6] DoDDS and DDESS are the Department of Defense Overseas Dependent Elementary and Secondary Schools and the Department of Defense Domestic Dependent Elementary and Secondary Schools, respectively.

NOTE: Ungraded students were allocated to individual grades proportional to each state's enrollment in those grades.

SENATE EDUCATION COMMITTEE
Senators Kevin Meyer & Joe Thomas, Co-Chairs

Senate Concurrent Resolution 21

In 2008 the Alaska Legislature changed the Uniform Rules by creating a stand-alone Education Committee, separate from the Health and Social Services Committee in both bodies. Due to uncertainty of the logistics of successfully maintaining another standing committee in the Senate, there was a 5-year sunset provision established, such that, effective on the first day of the 28th Legislature (January 15, 2013), jurisdiction over education issues will revert back to a merged "Health, Education, and Social Services Committee."

SCR 21 will make permanent the stand-alone Education Committees in both bodies of the Legislature. The work of the committees over the past four years has encompassed a wide array of issues in education, some of which have even warranted the creation of legislative task forces in order to study and make recommendations on the complex nature of providing quality education in our state. There are many challenges we face in education that are unique to Alaska, and it is the belief of the Senate Education Committee that in order to research and develop the best education policies possible to address these challenges, a permanent standing Education Committee is appropriate.
